17. But in addition to the attractions to colonization offered by a genial climate and fertile soil, I am strongly of opinion the District of Port Curtis will prove to be of importance from its mineral resources.

18. Gold has been discovered in so many different localities, and scattered over so large a tract of country, that its search may now be looked upon as one of the permanent occupations of the district; and, although it is impossible to pronounce with any positiveness on the probable productiveness of this metal, I cannot but believe, from its wide diffusion and the rough heavy character of many of the deposits found, that its search will for many years yet to come give employment to a considerable population; and I would beg to point out also, that whereas there were at this time last year but three persons so engaged, there may now be presumed to be about 200 in different places, using their endeavours to develop the resources of the district, in relation to its productiveness in Gold.

19. Besides gold, however, I have every reason to believe that as the country progresses in population, and more persons are enabled to examine its resources, it will prove to be rich in other metals requiring the aid of capital in their extraction from their ores.

20. I am led to this opinion from the geological formation of many portions of the district, where porphyries, clay slates, and limestones present a close analogy in geological structure to those parts of Mexico and of South America, which have long been famous for their mines, and also from knowing that indications of copper and lead have been traced in several places in these rocks. There are also in this district extensive deposits of marble laying within easy distance of water carriage, and which eventually must become valuable both for home use, and for exportation.

21. Such are the inducements which it seems to me this portion of New South Wales holds out to colonization, and I shall have formed a very wrong estimate of the energy and enterprise of our countrymen if within a very few years those inducements do not prove attractive to population.

22. I now enter on the next subject I have been requested to report on, viz.:—the Public Works most likely to tend to the advancement of this Settlement, and more particularly those called for at the present moment, and, in doing so, I will briefly glance at what has always appeared to me the ultimate aim and object of this Settlement, and at the policy of its formation, because these involve considerations which guide me in many of the recommendations I make.

23. I beg to append also an outline sketch of the residency of Port Curtis, shewing its more prominent geographical features, to serve as an aid in illustrating my arguments. 744 Appendix
No. 2.

24. I do not put this map before the Government as being accurate in all its details, for a very small portion of this country has been laid down from actual survey, but it is compiled from the best information attainable at present, and is in fact, with very trifling additions, a copy of the Government Electoral District's map of last Session—it will, however, shew approximately the relative positions of places, the extent to which the occupation of the district has progressed, and the general directions of the lines of communication to be opened up.

25. I have always looked upon the occupation of the Harbour of Port Curtis in advance of interior settlement, as a politic seizure of one of those points of high natural capabilities presented by the coast, with a view to the establishment of another great centre of Australian colonization, and a seat of exterior commerce for the extent of country it would drain of its trade, whenever population and capital multiplied sufficiently to call for direct intercourse with distant portions of the Globe; and increased knowledge and experience of the

the resources of the country have confirmed me in a belief in the wisdom of this measure, for independently of the original object of the formation of this Settlement it is now evident it has advanced by many years over its ordinary progress, the march of occupation in that direction, in which it is of most importance to New South Wales to establish it, viz. ;— towards the shores of the Gulf of Carpentaria.

26. This occupation once completed it will not be long ere a railroad follows, to bring New South Wales on its shortest possible line of communication with our Indian Empire, and with the Mother Country, thus avoiding the boisterous passage round the southern shores of New Holland, and reducing by several days the period of time now required to communicate with Great Britain.

27. This latter is too wide a question, however, to introduce here otherwise than incidentally, and I only allude to it as one of the ulterior views which it seems to me the Government should not lose sight of.

28. To resume my argument then on the more immediate aim of this Settlement, and the policy likely to promote its welfare, I would beg to point out that the residency of Port Curtis, having a sea coast line of about 400 miles, has likewise a radius, nearly equal in all directions inland from Gladstone, of 200 miles, and that this is the minimum extent of country likely to pour its trade through the Harbour of Port Curtis, whenever that trade has assumed sufficiently large dimensions to warrant its seeking direct intercourse with other countries. I assume it, as an axiom, that trade will always, as a matter of certainty, sooner or later seek its most direct and most economical avenues, and when I mention, that here and throughout the residency the cost of the coasting trade nearly, if not quite, doubles the cost of carriage on all those articles which might be imported direct, it will be evident that with increase of business and accumulated wealth those who now pay this extra charge will surely get rid of it.

29. With this eventuality in the future, and under the policy which led to the formation of this Settlement, it seems to me of the utmost importance, in order to avoid unnecessary expense in changes hereafter, and that annoyance to its individual officers, and those fluctuations in the value of property, which such changes certainly create, that Government should, as early as possible, determine where, within this residency, shall be the chief seat of its establishments; and as recent events have somewhat shaken previous opinions on this point, from the fact of the great preponderance of Government Establishments being now at Rockhampton, I will endeavour to lay before the Colonial Secretary, as clearly as I can, those reasons which seem to me to point to Gladstone as being, beyond all question, the proper site for the location of the principal Departments of Government, within the residency of Port Curtis.

30. It will be apparent from the accompanying map, that so far as the advantages of a central position are desirable, no place could be more conveniently situated than is Gladstone, in reference to the inland portions of the residency, it being, as nearly as possible, equi-distant from its boundaries on all sides; therefore, as the seat of its Criminal and Civil jurisdiction, it seems the preferable spot for selection.

31. There are within this residency already established five Courts of Petty Sessions in addition to that of Gladstone, and from these Courts, at present, all Criminal cases are sent to Brisbane, and all Civil causes arising within the same bounds, are likewise tried there; but this arrangement is a source of much inconvenience and unnecessary expense, because prisoners and witnesses from every one of those Benches, with the exception of that at Nanango, being sent by sea from either of the ports of Maryborough, Gladstone, or Rockhampton, are almost invariably compelled, from want of direct communication between the places, to pass by Sydney to Moreton Bay, thus incurring the expense of a second passage and the delay of a double voyage, over some four hundred miles of sea.

32. I cannot think this arrangement a desirable one under any view it can be regarded in, and would submit to the Government the propriety of repealing so much of the Moreton Bay Courts Act as enforces it, and to substitute instead, a Circuit and District Court within this residency, for the trial of all issues, Civil or Criminal, arising within it.

33. I do not anticipate that the adoption of this measure need lead to any increased expenditure, even at the present moment, as the average actual cost of conveying a prisoner from

Courts of Petty Sessions at Gladstone, Maryborough, Rockhampton, Gayndah, Taroom, Nanango.

from hence to Sydney alone, may be taken at £15,—and as population increases and cases become more numerous, it is evident it will be a much more economical plan to bring the Court to the prisoner than to carry the latter to the Court. *Vide Appendix No. 3.*

34. I may mention also, that at Gladstone, and I believe at Maryborough, there is now existing a Court House quite equal to the requirements of the present time, for the above purpose, and that there is to be a like building,—in course of construction,—during the present year, at Rockhampton; the only additions required would be some extra cells to either of the lock-ups at the places mentioned.

35. I have named Gladstone as the most eligible locality for the establishment thereof of Courts of Criminal and Civil Judicature, from its central position, and from its being, in my opinion, the future seat of the more important commercial and trading interests of this community; but there would be, I think, a saving of expense, and certainly a great convenience afforded to witnesses by the establishment of such Courts anywhere within the residency.

36. Should the Government approve of this measure I would recommend a provision of £600 being made to provide additional cells and security for keeping prisoners under confinement.

37. Next in importance to the establishment of Courts of Judicature and their position for internal convenience, it seems to me follows the consideration of where ought to be the seat of the Customs Department, and what its adaptation in affording facilities to commerce whilst protecting the Revenue;—and here again I must pronounce in favour of Gladstone, for the following reasons:—

38. If a Customs Department is necessary at all it is to meet the requirements of a foreign and not of a home coasting trade; but a foreign trade implies the possession of a harbour of sufficient capacity to receive vessels of considerable draught of water, and of such there are as yet only known here—Port Curtis, Keppel Bay, and Port Bowen,—the navigation of the Fitz Roy, and the same may be said of the Mary, being limited to vessels not drawing more than ten feet.

39. The selection is therefore confined to the three places I have mentioned, and of these, one—Port Bowen—is as yet beyond the limits of occupation, but it has been surveyed, and as a harbour is well spoken of, although having a bar across its mouth. It appears, however, to be difficult of access from the landward, and as far as it is possible to form an opinion at present, is not likely to be used as a port but from a very small circle of surrounding country.

40. The other two ports mentioned, Port Curtis and Keppel Bay, are, both of them, entrances to the river Fitz Roy,—the latter the more direct and available one, unless the Strait between Curtis Island and the main land were improved, when the former would become the preferable entrance for all vessels coming from the southward; but, as between the two ports there is this great distinction, in so far as the choice of either for the site of a Customs Department is concerned. In Keppel Bay the town can only be on Curtis Island, whilst in Port Curtis it is on the main land.

41. Irrespective of all other considerations this seems to me to decide the question between the two places, and so far as I am capable of forming an opinion on this subject, there can be no doubt of the greater convenience, for the purposes of trade, of establishing the Custom House, at Gladstone.

42. To illustrate my meaning I will point to what took place at the end of last year when the great rush to the Fitz Roy Gold Fields was at its height; those vessels, which were of greater draught than allowed of their ascending the river, came to anchor in Keppel Bay, and from thence, the Custom House being in Rockhampton, it took the masters at least three days to pass the necessary entries, having to steam or sail nearly 100 miles to accomplish this duty; whilst, notwithstanding there were at times fifty sail in the bay, from there being no Township there, not a trace of the passing of so large a number of people has remained; not a building was constructed or even a hut raised; there was no inducement of any sort to the occupation of the Island; whereas, had the same fleet of vessels gone through Port Curtis, Custom House entries could have been passed, without any delay, and it is highly improbable so great an influx of population should have receded without lending an important impulse to the

the

the development of the resources of the district, in addition to that which it gave in and about Rockhampton.

43. I am quite ready to confess, however, that under the peculiar circumstances of the period I allude to, it was fortunate such an arrangement had been made, as the delay thereby occurring enabled me to secure the returning vessels in time to take back the disappointed diggers from Port Phillip, at a great saving of cost over what that otherwise would have been; but, in ordinary times, such delay would be an intolerable annoyance and hindrance to the course of business.

44. With a Custom House at Rockhampton vessels in Keppel Bay would anchor at from forty-five to fifty miles from it, and vessels in Port Curtis at from seventy-five to eighty, the time required for despatch of business being, on an average, from three to five days, with present means of communication. With the same establishment, either in Keppel Bay or Port Curtis, vessels anchoring in the harbour where the Custom House was not, would be at about thirty miles distant from it and would require two days to communicate and return, the chief ground of preference of the one place over the other being that in Port Curtis the Settlement is on the main land with a township already formed; whilst, in Keppel Bay, a town could only be placed on Curtis Island, and there for years yet to come would add little to the extension of colonization.

45. I must point out, moreover, that Port Curtis is by far the better harbour, and that it has the advantage of having been elaborately surveyed by the late Captain Owen Stanley, and of having that survey published by the Admiralty.

46. I think also it is but right for the Government to look somewhat in advance of the present time, and keep in view the progress which increase of population and trade are certain to create in a new country like this, where there are great natural facilities for the construction of railroads to carry its produce to the sea.

47. There is no doubt on my mind that when the time arrives for the construction of these works, the whole produce of this residency will find its outlet from the harbour of Port Curtis; and, I think, this future contingency well worthy to be weighed as an item in the consideration of this question.

48. If my arguments meet with approval, I would ask for £500 towards building a Custom House in Gladstone, in 1860.

49. The next item of expenditure I would propose for the consideration of the Government is the sum of £300, towards the establishment of a Pilot Station at Gatcombe Head, that is to say, towards building Huts and erecting a Flag Staff, and Signal Station.

50. With a Pilot Station in this locality vessels coming in from seaward could obtain a pilot either for Port Curtis, the inner passage to the Fitz Roy, or for Keppel Bay and the river, whereas with this station where it was before, viz., on the northern end of Curtis Island—this aid could be rendered only to vessels bound direct to the Fitz Roy River—moreover, on Facing Island, the Pilot Establishment would be more conveniently situated for obtaining supplies, being within seven miles of the town of Gladstone, instead of at a distance of thirty from the same place, and forty-five or fifty from Rockhampton, as was the case from its former position in Keppel Bay. I am of opinion also that at Gatcombe Head, or some where in its vicinity, must eventually be selected the site for a Light House, and I apprehend that in the event of war breaking out there will have to be established there a Signal Station. It seems to me, therefore, that looking to either future wants, or present requirements, this is the most eligible spot to fix upon for a Pilot Station.

51. I do not propose any great increase of expenditure under this head. I think by adding three men to the two now forming the crew of the Government schooner "Satellite," the master of that vessel would be equal to all the requirements of the present trade of this port, and could undertake the entire management of the Harbour, Pilot, and Signal Departments, besides occasionally surveying the various bays and inlets on the coast, which are both numerous and likely to be available to the coasting trade.

52. I would then ask in aid of Harbour and River Navigation for a sum of £100 towards laying down buoys, and £200 towards removing obstructions in and improving the inner passage between Port Curtis and Keppel Bay.

53. In reference to the first of these items, I would mention that buoys have already to some extent been laid down in the river Fitz Roy and in Keppel Bay, but more are required, and their aid ought to be extended to the navigation of the Strait between Curtis Island and the main land, and also to that of the harbour of Port Curtis.

54. With regard to the other item I have to observe that, with the exception of about two miles, the Strait between Curtis Island and the opposite shore is navigable to vessels of the greatest draught of water, and that if the obstructions occurring at the place called The Narrows could be removed, and there is reason to believe they are easily removable, a delay of one or two days would be saved to steamers and other vessels trading between Sydney and Rockhampton, and calling at Port Curtis. I may add that Commodore Loring was good enough, at my request, to have the obstructions I allude to examined by the boats of H. M. S. "Iris," when in Keppel Bay last year, but that I have not learnt the result of this survey.

55. The next subject I have to bring under the consideration of the Government is one which seems to me of great importance to the development of the trade of this Port and Settlement, and that is providing means to facilitate the supply of water to shipping.

56. At the present moment this is the greatest existing obstacle to the establishment of a direct export and import trade, water being only obtainable by ships in an expensive and tedious manner by carriage in water carts from the reservoir; and the same inconvenience, though in a much enlarged degree, exists also in Keppel Bay, where it has to be brought from Rockhampton, or from some considerable distance up the Fitz Roy River—an inconvenience I may mention experienced by Commodore Loring in November last.

57. This is so serious a drawback to the resort of shipping to any port that I would recommend to the Government to make provision for the enlargement of the Victoria Reservoir, at Gladstone, and for carrying the water from thence to Auckland Inlet, a distance of about three-quarters of a mile, in pipes, from whence boats or vessels could receive it on board in the most convenient manner.

58. I enclose a sketch of that portion of the town through which I propose this work should be carried, but I am unable to form any estimate of the expenditure beyond suggesting that in addition to the expense of the pipes (which need be only of a small diameter), a force-pump, and cistern; the labor of twenty men for twelve months may be taken as a criterion of its amount. *Vide Appendix No. 4.*

59. Should the Government not approve of the above recommendation, I would urge that a vote be taken, at any rate, for the maintenance of the reservoir by repacking portions of the clay puddling in the dam, which always meets with some injury on the overflow of the creek, owing to openings between the planking, unavoidable from the shrinking of the timber under exposure to sun and weather.

60. In addition to the foregoing recommendations which, with the exception of the items for a Custom House and the establishment of Courts of Judicature, may all be taken under the head of aids to Harbour and River Navigation, I have now to propose a sum of £1,300 to finish the Government Residency, and fence in the portion of land reserved as a Domain, that is to say,—£1,000 for the house, and £300 for the Domain; but, as I have already anticipated some portion of this expenditure, I will address you in a separate communication in reference to it.

61. I next beg to bring under the consideration of the Government the requirements for expenditure on account of public works in and about the town of Rockhampton, which from its rapid growth, the large quantity of fertile land in its vicinity, and its position at the head of the navigation of the River Fitz Roy, promises to become speedily, in respect to population and trade, a place of considerable importance.

62. As votes were taken last Session towards building a Court House and Lock-up, I need not allude to these, and, I presume, the construction of the Court House will proceed without further delay; but the shipping trade of the town of Rockhampton greatly needs the aid of a Public Wharf, and I would propose to the Government to provide a sum of six hundred pounds for this purpose, or a larger sum, if on consultation with Mr. Moore, the Clerk of Works, whose opinion from his personal knowledge of the locality would be of value
in

in this matter, the sum I have named should not be sufficient. The slippery and slimy nature of the soil on the banks of the Fitz Roy in wet weather, render the construction of a work of this nature at Rockhampton very desirable.

63. I will next ask to have a provision made for metalling about half a mile of road in the neighbourhood of Rockhampton, on the line of traffic to the Dawson; this portion of road crosses a piece of very swampy ground, which in wet seasons is quite impassable to drays, and I had some improvement effected on it last year, by draining and making the road, but the heavy black clay soil is always liable to become in rainy seasons a serious hindrance to traffic, and a good supply of stone for metalling existing in the immediate vicinity, even within a few hundred yards, I would recommend that advantage be taken of this circumstance, and the road be properly metalled. I beg to suggest £400 for this service, but would again refer to Mr. Moore's opinion on the sufficiency of this amount.

64. Lastly I would propose to devote £200 each, to the roads from Gladstone to Gayndah, and from Gladstone to Taroom, to aid in opening up these lines of communication; and I append a Schedule, to shew in one view, the total amount of expenditure I have recommended.

Vide Appendix No. 5.

65. In laying this Report before the Colonial Secretary, I have endeavoured to explain the views of policy which have guided me in making the recommendations I conclude it with; and I would wish here to repeat my belief, that relatively to the effect it may have on the progress of New South Wales, the establishment of this Settlement will prove most beneficial as its resources and energies are most concentrated, and it becomes a fresh depôt from whence Australian colonization, with renewed force, can make a further spring on the avenues leading most immediately and most directly to the Mother Country, and to the older and more densely peopled portions of the Globe.

I have, &c.,

M. C. O'CONNELL,

Government Resident.

THE PRINCIPAL

UNDER SECRETARY.

APPENDIX No. 1.

STATISTICAL TABLE of Progress in the Settlement of Port Curtis.

DATE.	POPULATION.	STOCK.			COASTING TRADE.

Legislative Assembly.

NEW SOUTH WALES.

RESCUE OF TWO FEMALE CHILDREN, FROM FRAZER'S ISLAND.

Presented to both Houses of Parliament, by Command.

REPORT of a Sub-Committee of the Pilot Board, assisted by the Health Officer and the Water Police Magistrate, to the Honorable the Colonial Treasurer, on the subject of the Rescue of Two Female Children, from the Natives of Frazer's Island, by the Officers and Crew of the Schooner "Coquette."

WE have the honor to report, for the information of the Honorable the Minister for Finance and Trade, that, having examined all the available witnesses likely to throw light upon the previous history of the two children recently rescued from the natives at Frazer's Island, we now beg to forward copies of the evidence taken at the inquiry, as also of the communications which have been received from several persons whom the Board considered likely to afford information.

2. The expedition, undertaken in search of these persons, was originated in consequence of a paragraph which appeared in the *Empire* newspaper, of the 19th of August, notifying the probable existence of some white persons on Frazer's Island; and an offer was made by Messrs. Molison and Black, the agents of the schooner "Coquette," to undertake the service on terms accepted by the Executive Government, viz., £100 if unsuccessful, and £300 if accomplishing the object for which it set out.

3. From the evidence adduced, it seems that Mr. Sawyer, the owner of the vessel, undertook the conduct of the expedition himself, and he appears to have spared no trouble in making a diligent examination of the Island, or expense in the distribution of presents to conciliate the natives.

4. The persons rescued consist of two females; the elder probably about sixteen or seventeen years of age, the younger about seven or eight. They were in a frightful state of emaciation when discovered, and their bodies were covered with a pigment of a brown color, rendering it almost impossible to distinguish the true color of their skin; their noses, also, were flattened, and their faces otherwise slightly disfigured.

5. It having been presumed that these persons were probably a portion of the passengers who embarked, at Port Curtis, on board of the ill-fated "Sea Belle," in 1857, which vessel was never afterwards heard of, it was considered advisable to seek out some person who had been acquainted with the late Chief Constable's family at Port Curtis, who, it appears, were the only females who embarked in that vessel; and John Hourigan and his wife, who were at that time resident at Gladstone, were accordingly examined.

6. The testimony of these persons goes to some extent in identification of the younger child as that of the late Mrs. Harty, but has no reference to the elder one, Mrs. Harty's other child being an infant in arms.

2 RESCUE OF TWO FEMALE CHILDREN FROM FRAZER'S ISLAND.

7. A feeling having existed in the minds of the rescuers, and also in those of other persons, that the mother of these children was still in captivity on the Island, the Board placed themselves in communication with the Government Residents at Moreton Bay and Port Curtis, as also with the Police Magistrate at Maryborough, with a view of ascertaining whether any person could be obtained likely to be sufficiently conversant with the language of the Frazer's Island blacks to obtain from the children themselves the information which it was so desirable to establish.

8. The Government Resident at Moreton Bay having reported that a person named Davis, residing there, who had been a resident with the blacks in the neighborhood of Frazer's Island for some years, was willing to proceed to Sydney on condition of receiving a sum of £20 for his trouble, and the cost of his passage to and from Brisbane, and the Government having acquiesced in the measure, Davis was invited to Sydney, and arrived on the 26th November.

9. He stated that he could freely converse with the two girls, but at the same time observed that he was unable to obtain much information from them, in consequence of their disinclination to make any disclosures, and their entire ignorance of all that had transpired on the Island,—accounted for by Davis as being occasioned by their being treated as a degraded race by the blacks, and therefore excluded from all participation in the feasts, fishing excursions, or wrecking expeditions, and thus purposely kept ignorant.

10. Davis' examination of these children went little way in illustrating how they originally came on the Island, but to a considerable extent shook the testimony of Hourigan as to the probability of the younger one being Harty's daughter—the elder child stating that she had known the younger one from infancy, even at the time that it was nursed by a black mother.

11. It however sets at rest one point of importance, which is as to the existence of any other white persons on the Island; and on this head the girls are both consistent in their replies.

12. Seeing that the whole matter was in so unsatisfactory a state, the Board determined on ascertaining, if possible, whether a person named Fahey could be obtained to test the interpretation made by Davis, he being a person well conversant with the language of the Frazer's Island blacks; but although the Inspector General of Police has done all in his power to discover this person, he has not as yet been able to trace him, and the Board feel that they must close their proceedings without this corroboration of evidence.

13. Soon after the arrival of these children in Sydney they were received into the Female Immigration Depôt, at Hyde Park, and have been under the care of the Matron of that institution ever since. They have now, under kind treatment and attention to cleanliness, much improved in appearance, and much of the paint with which they were covered has now worn off. They now speak a little English; the younger one, who is the most intelligent of the two, picking it up fast.

14. During their residence in Hyde Park Barracks they have been visited by many persons—some from the neighborhood of Wide Bay, as also by several medical men—and almost all have expressed one opinion as to their European origin.

15. We have therefore to report, that in our opinion the children rescued by Mr. Sawyer and the crew of the schooner "Coquette" are the children of white parents, but how they became residents on Frazer's Island there is no evidence to prove.

16. That the eldest is certainly not the child of Harty, and there is also considerable doubt whether the younger is either.

17. That there are no white persons on Frazer's Island now, in captivity amongst the blacks, and consequently no necessity to renew the expedition.

18. That the service accomplished by Mr. Sawyer is not exactly the one which he undertook when the engagement was entered into, that being for the rescue of a white woman and her two children, whereas the white woman does not seem to have had any existence whatever, but the two children were rescued.

19. Under these circumstances, therefore, it appears to the Board that the service has been performed in the spirit in which it was undertaken, although not strictly in deed.

RESCUE OF TWO FEMALE CHILDREN FROM FRAZER'S ISLAND. 3

20. These children having now been brought to Sydney, it becomes a matter for consideration as to what course would be the best to adopt for their future education and maintenance. The elder is so completely habituated to native life, is somewhat imbecile, and is likely for many years to yearn for a return to her old companions; the younger one is, however, far more tractable and intelligent, and already is inclined to take kindly to the Matron.

21. It seems, therefore, to the Board, that there are only two places in which they could be received—the Orphan School, at Parramatta, and the Destitute Children's Asylum; either of which institutions would afford them all necessary protection and education.

H. H. BROWNE.
S. NORTH, W.P.M.
W. S. DELOITTE, J.P.
THOS. WATSON.

Sydney, 25 January, 1860.

H. G. ALLEYNE.

Sydney, 17 October, 1859.

Dear Sir,

Referring to Messrs. Molison and Black's letter, dated 31st August, I do myself the honor to report that the expedition which I undertook has been successful, having rescued the white children and ascertained the fate of their mother.

It may be interesting to the Board to be placed in possession of the circumstances attending the rescue, and I therefore send you the following necessarily condensed narrative.

The schooner "Coquette" being fully manned, and having on board besides myself, Mr. Preddy, of Wide Bay, (who acted as interpreter, and from whom we obtained the use of a whale boat) together with several Wide Bay blacks, left the river Mary on the morning of the 27th September and proceeded to Woody Island—our intention being to communicate with the natives, whom we found to be in ignorance of the cause of our search—and anchored for the night. On the 28th got under-way for Break Sea Spit, and came to anchor the following morning. About seven miles from the north end of Frazer's Island (west side) observing the natives on the beach, we landed, and after a conversation, considered it prudent to return to the vessel. We then got under-way and returned in a south-east direction for about twelve miles. Captain Arnold, Mr. Preddy, and myself landed, and in company with several natives, who led us to believe that the white people would be found within a few miles, crossed the island and travelled until dark. At this time our guides absconded, and we determined to remain in the scrub all night in case of attack. Next morning, notwithstanding our strong conviction that the story of the natives was in the main correct, we decided to return to the vessel, which we reached at 2 p.m. of the 30th. Changing our tactics, we got the vessel under-way, and as a feint stood across Harvey's Bay with the intention of returning to Woody Island, where we anchored on the 2nd instant. We were here joined by twelve of the tribe inhabiting the southern portion of the island, and preparing all for a campaign, we started at daylight of 3rd inst., proceeding in a north-eastern direction across the island, and at sundown of the 5th came upon the camp of natives in whose custody the white people were. Having observed the white children, a rush was made—they were seized and carried off—the tribe being panic-stricken and offering no resistance. Afterwards we travelled, it being fine moonlight, about ten miles to the southward, and camped for the night. At near midnight an alarm was raised that strange blacks were watching our movements; a volley of musketry was fired for intimidation, and we were not further molested. Next day we travelled about twenty-seven miles, the youngest girl having to be carried the greatest portion of the way. On the day following, the bush having been fired by the natives, our walking was rendered very difficult, but we were able to regain the vessel. The same evening four of the natives who assisted were received on board as delegates from the others, and received as compensation for services performed several bags of flour, biscuits, tea, sugar, tobacco, clothing, &c., which there is reason to believe was by them fairly distributed. We then set sail for Sydney, but owing to contrary winds we put into Newcastle, from whence the children were conveyed to Sydney per steamer.

From all I could learn, I have every reason to believe that the mother of these girls died about twelve months ago.

The girls, aged respectively about fifteen and ten years, are now in my house at Balmain, and are receiving every possible attention, but I wish to be relieved of them. Their future care must be a matter of great consideration, and as far as my experience teaches me I would not recommend their being placed in any of the charitable institutions of the city until such time as they regain lost habits and their mother tongue.

I fear the elder girl will turn out silly in disposition; the other, with kind treatment, will have all her senses.

I may be permitted to mention that the aboriginals Charley and Boney (the former now in Sydney) have rendered me great assistance, and it might be worth while Govern-
ment

4 RESCUE OF TWO FEMALE CHILDREN FROM FRAZER'S ISLAND.

ment considering whether some special mark of approbation might not lead to good results in shewing these people that, in case of any disaster on their coast, kind treatment will meet with its reward.

I beg to claim the amount of premium for the above services—three hundred pounds, and remain,

W. J. Wilshire, Esq.,
Secretary to the Pilot Board.

Yours, &c.,
W. H. SAWYER.

William Harry Sawyer states:—The statement produced is the one furnished by me to the Secretary of the Pilot Board. I have no means, of my own knowledge, of connecting the two females I brought with me with those I went to rescue; I have only information which I received from a person named Hourigan, now resident at Sydney, but formerly District Constable at Port Curtis, who saw the children in company with his wife, and, to a certain extent, identified the younger girl as being the elder child of Harty, the late Chief Constable of Port Curtis, and, if she was that child, her name was Ellen Harty, and was about four years old when she left Port Curtis. Neither Hourigan nor his wife recognised the elder child; neither had Harty one of that age; but he had a son, younger, named Morris, and born at Port Curtis, aged about twenty months. Mr. Harty and his family were known to have been passengers in the "Sea Belle," which vessel left Port Curtis about the 4th April, 1857, and has never been heard of since. In my interview with the natives at Frazer's Island, during the late expedition, I was not led to believe there were any other white people on the island; but, since my arrival in Sydney, I have received information from a native of the island, named Charley, belonging to a tribe adjacent to the one from which we recovered the children, that a white woman, whom they called their mother, was still on the island, and only a short distance from them when they were captured. We found no difficulty in discovering the white children, they were so diminutive, from the tribe of blacks—that tribe of blacks being much larger in stature than any other tribe I have seen in Australia. I believe the children were left to their own resources, which might account for their emaciated condition. Charley, the black, understands English very well; he knew what I meant by mother.

W. H. SAWYER.

THOS. WATSON,
H. G. ALLEYNE,
W. S. DELOITTE,
S. NORTH.

Richard Arnold states:—I am master of the "Coquette," and was master of her when the two children were rescued from Frazer's Island.* The statement produced is a true account of what took place on that expedition. I have no means of knowing who the children are, but I believe they are white children. I do not believe there are other white people on the island. From the description given by the natives I believe the two persons rescued are those mentioned. Charley, the native, speaks a little English, but I do not think you could understand him. The foot-print in the sand of the woman with the broken toe corresponds with the foot-print of the elder girl rescued. We observed it in the sand mixed with a hundred of others; but it was going in the contrary way to that which we were.

R. ARNOLD.

Schooner "Coquette," October, 1859.

* *REPORT of the Rescue of Two White Girls, supposed to be of European Parentage, from the Blacks of Great Sandy Island, commonly known as Frazer's Island, by Captain R. Arnold, Master of the Schooner "Coquette," a regular trader to Wide Bay, and other parts of Terra Australia.*

HAVING discharged cargo at Maryborough on the 24th September, proceeded down the river with usual crew to Frazer's Island, accompanied by Mr. Sawyer, the owner, who joined the vessel at Maryborough; Edward Pretty, an old resident at Maryborough; two blacks, Toby and Tommy, the same Toby having previously been a voyage with me from Maryborough to Port Curtis and Sydney in the "Coquette," and from whom I had received the first information of the existence of white people on Frazer's Island, supposed to be the survivors of the ill-fated "Sea Belle,"—the greater part of the crew and passengers had been cruelly murdered. On the afternoon of the 27th of September anchored under little Woody Island, and took in four boat loads of ballast, and here it was hoped we should gain some information. The blacks, however, though seen at a distance, did not approach us. On the morning of the 28th made sail and proceeded towards a bay situated 11 miles S. W. of Break Sea Spit, where we anchored on the morning of the 29th. A crowd of natives were on the beach, watching us and making signs to come on shore. Leaving the mate in charge, I, with Mr. Sawyer, Mr. Pretty, and the two blacks, went on shore in the whaleboat; and, on landing on the beach, found the blacks perfectly wild, one of them so excited as to be frothing at the mouth like a mad dog. He instantly made towards me, took off my neckcloth,

neckcloth, and put it round his neck with as much coolness as though it was his own. I allowed him to do this without offering the slightest resistance, being desirous of keeping on good terms with all of them. The blacks having now surrounded us, tobacco and pipes were distributed liberally amongst them, which seemed to give satisfaction and keep them in good humour. Our two blacks now communicated (the object of) our visit, viz., our wish to recover any white people that we had heard were living on the Island, explaining to them if they would bring and release (them) they would be liberally rewarded. After a good deal of talking we ascertained that there were two girls in the next camp, about six or seven miles to the southward, and they expressed their willingness to accompany us if rewarded. This was agreed to, and we then took a number of blacks on board to shew the articles that would be given them in exchange for the white people, and they appeared quite satisfied. The vessel was now got under weigh, and we proceeded with the blacks on board, steering according to their directions further in the bay to the southward, and anchored opposite a beaten track used by the blacks for crossing the country to the opposite coast. After dinner, went on shore again, the party this time consisting of myself, Mr. Sawyer, Mr. Pretty, our two faithful blacks, with six of the strange blacks, leaving the remaining blacks on board till our return. Bent our course to the east coast without delay, and reached there about 3-30 p.m. As it was deemed advisable not to appear hostile, but on the contrary as friendly as possible, none of the party were armed; the only firearm was a fowling-piece, which I brought with me to have a stray shot on my journey through the bush. On reaching the opposite side we came up to an old black gin who was gathering shell fish, who informed us the tribe with whom the white people were had removed their encampment from this locality to one further to the southward, on the Head, which, as far as I could judge, was seven miles distant. Here Mr. Sawyer wished to return to the vessel, remarking that the blacks were leading us astray, and that he had heard quite sufficient from Mr. Allen, the Commissioner of Maryborough, that there were no white people there. I, however, was of a different opinion, and as night was coming on—but thinking little of that—and feeling that the safety of the poor creatures we were in search of was now almost within our grasp, I was determined, whatever was the consequence, not to lose my opportunity; and I was glad to find that Mr. Pretty was as anxious to proceed as I was. So on we went, the blacks cheerful and willing and encouraging all the way till late at night, when we came to a halt from sheer fatigue and exhaustion. Passed the night without water or provision, and the whole of us being but thinly clad, spent a restless and uncomfortable night—the weather boisterous and cold, but fortunately no rain. Morning of the 30th September, started early in the direction of Indian Head, travelled on for a few miles, but the blacks continuing to tell us of the long distance we had still to go, and finding ourselves exhausted for want of provisions for so long a journey, I at last agreed, though very reluctantly, to return to the ship and prepare for another opportunity; arrived on board at 2 p.m. Mr. Sawyer now wished to abandon the search altogether, and stated as before that he was quite satisfied that there were no white people on the island, upon which I remonstrated, and remarked, “Surely you are not going to give up the search already.” His answer to me was, “You are not game to go again,” which annoyed me, especially as it was said in the presence of Mr. Pretty and the mate. My simple answer was, “Try me, if I am not game to go again.” He then requested me to take the vessel to little Woody Island. The blacks who had remained on board until now were sent on shore. Proceeded to little Woody Island, where we arrived at 2 p.m. on Sunday, 2nd October. A canoe with six or seven blacks came alongside, and offered to accompany us on shore in search of the white people. Several blacks swam off to us from the shore during the afternoon. Among them there was one called “Charley,” a very intelligent fellow, from whom I had on previous occasions received information in this matter, and who accompanied me in the vessel to Sydney, and is now in Balmain with the two rescued girls. The same afternoon every preparation was made for the following day’s march on the island, which I knew would be an arduous one, and we packed up supplies of bread, beef, tea, sugar, sufficient for the journey. Left the ship the following morning, and landed on Frazer’s Island about 6 o’clock, our party consisting of myself, Mr. Sawyer, Mr. Pretty, Frank Gillard—one of my seamen, a very efficient hand—our two blacks, and about twenty other blacks, some of the latter well known to me on former voyages. On this occasion we armed ourselves, which we were advised to do by the blacks; and we proceeded to the east side of the island at a rapid march over a very difficult country, reaching the east coast about 3 p.m. Travelling along the beach, we came to a watering hole, where we found traces of a recent encampment hastily abandoned; proceeded along the beach for several miles until sundown, when we were joined by a party of blacks, who confirmed the report previously received that the white people were still at Indian Head, to which place they offered to take us. Encamped for the night; passed a miserable time of it, and at daybreak started on our journey, our party having by this time been reinforced by blacks to the number of sixty or seventy; but whether these were friends or foes was a doubtful question at the time. Came to a halt at dinner time, and after a rest of about an hour proceeded onwards, when at 2 p.m. discovered a number of blacks at a considerable distance. This was the tribe we were in search of. It was here that the blacks pointed out the tracks of a woman with a broken toe, which they said was the white woman, and they now divided themselves into two parties, each taking a different direction; one party shewing themselves openly to the tribe in the distance by diverting their attention, and making friendly signs, the other party, with whom I and my associates were, kept out of sight under the lee of a mountain, at the same time travelling fast towards them. It was sundown when we came suddenly on two of these camps, and caught them quite unawares, they not having been aware of our approach; the rush surprised and scattered them in all directions without having recourse to firearms or force of any kind. The two girls were left standing by themselves, the younger one in a state of nudity, the elder one nearly, having only an English worsted net jacket covering her down to the waist. The sight of these two poor creatures was heart-rending. Frank Gillard took off his shirt and clothed the elder one with it. We then lost no time taking the girls in our charge, and making our way to the southward along the sea coast. Travelled about six or seven miles, and then camped for the night. Every preparation was now made for our safety during the night by loading our guns and setting a watch to be relieved every two hours. Between ten and eleven o’clock there was a cry among the blacks in our encampment that another party of blacks were in pursuit, as they could see them coming over the hill where we were camped in the valley. Our guns were quickly got out, and we were all ready for action. The blacks pointed to us the direction where they were seen. We then discharged our pieces in that direction to let them know that we were ready for them. We all stood before the camp till about midnight, in a state of alarm, not knowing what moment we might be attacked; but by this time things seemed to have a more peaceable appearance, and we once more laid down to rest. Nothing more occurred that night. Started next morning with our charges about half-past six o’clock, accompanied by about 100 blacks. Nothing particular occurred during this day’s march. Camped shortly after sundown, having travelled about twenty-five miles; kept a good lookout all night, relieving every two hours; little alarmed once or twice by the corroboreeing of the blacks, but all went well. The next day reached the ship about 5 p.m. much fatigued; foot sore. The following presents were given to the blacks:—2 cwt. flour, 1 bag sugar, 1 bag bread, a few knives, tomahawk, scissors, looking-glasses, fish-hooks, combs, needles, and about 20 lbs. of tobacco.

6 RESCUE OF TWO FEMALE CHILDREN FROM FRAZER'S ISLAND.

John Hourigan, of Sydney, states:—I formerly resided at Port Curtis. I left that district last March. I was resident there about six years. I remember the "Sea Belle" leaving there about two years and a half ago. The chief constable, Mr. Harty, and his wife and family, left in her. I was in the police at the time, and serving under Mr. Harty,—so I frequently saw him. His family consisted of a girl aged about four years, and a boy aged about two years. I frequently saw the children. We lived in adjoining houses. I do not know if any other females embarked in the "Sea Belle." Mr. Norman Leith Hay was a passenger in her. The little girl could speak a little when she left; she was born in Calcutta. Her father and mother were Europeans. I have seen the two children brought up by the "Coquette." The youngest, I think, resembles Mr. Harty's little girl; the color of the hair and eyes, and the largeness of her eyes, correspond exactly; she had sandy hair and hazel eyes. The daguerreotype likeness produced is like the little girl. I do not know anything of the elder of the girls brought up by the "Coquette." The child was at the breast when she was brought to Port Curtis. I think she was vaccinated at Port Curtis by Doctor Roberts. I am under a strong impression that the younger child brought up by the "Coquette" is the daughter of Mr. Harty. I am led to that conclusion chiefly by the color of her hair and eyes, and the largeness of her eyes. Her name was Ellen. I believe she was baptised in India. I am not aware of any vessels having been wrecked on the coast except the "Sea Belle." While I was at Port Curtis two portions of crews of other wrecks, which had been wrecked on the adjacent reefs, came in there. Shortly after the "Sea Belle" was missing some blacks came in and reported that they had seen Mrs. Harty and her children on the islands off Port Curtis. I believe there are blacks in the Native Police at Wide Bay who can understand the language of the blacks at Frazer's Island.

JOHN HOURIGAN.

H. H. BROWNE.

Catherine Hourigan states:—I am the wife of John Hourigan. I was for some time at Port Curtis. I went there with Mr. and Mrs. Harty. Mrs. Harty had only one little girl. Mr. Harty and his wife and that little girl, and another child, a boy, left Port Curtis in the "Sea Belle," in the month of April. Their little girl was four years old the December before they left in the "Sea Belle," which was in the month of April. I think she was vaccinated at Port Curtis. I have seen the children who were brought down by the "Coquette;" from the color of her hair and eyes, and the size of her eyes, I think the younger of the girls brought down by the "Coquette" is Mr. Harty's little girl. I do not know whether any other females embarked in the "Sea Belle" or not. I have heard, from the Port Curtis blacks, that Mrs. Harty is still on the island; and they describe her as having a sore foot. I am aware that Mrs. Harty had a very sore foot when she left, and used to wear a slipper. The child spoke very well when she left in the ship. She was a very fair child, and her hair light, and her eyes grey. The features of the child brought by the "Coquette" are so much disfigured and changed it would be impossible to say positively that it is Mrs. Harty's child. I do not know if Mrs. Harty was in the family way or not when she left Port Curtis.

H. H. BROWNE.

Government Resident's Office,
Brisbane, 7 November, 1859.

Sir,

In reply to your letter of the 2nd instant, I have the honor to inform you that I have sent for James Davies—the man alluded to in Mr. Russell's letter—who informs me that he perfectly understands the languages of the different tribes of natives of Frazer's Island and of Wide Bay, and of the country at a considerable distance from those localities. He appears to be quite conversant with the circumstance of Mrs. Frazer's release from the natives, and is perfectly willing to act as an interpreter, and give all the information in his power, provided that the expense of his passage to and from Sydney be defrayed by the Government, and a sum of Twenty Pounds guaranteed to him for loss of time, &c., as he will be obliged to leave his business as a blacksmith during his absence from Brisbane.

I have, &c.,

JOHN C. WICKHAM,
G. R.The Immigration Agent,
Sydney.*Commissioner's*

RESCUE OF TWO FEMALE CHILDREN FROM FRAZER'S ISLAND. 7

*Commissioner's Office,
Turana, 15 November, 1859.*

Sir,

I do myself the honor to acknowledge the receipt of your letter of the 25th ultimo, requesting to know if there is any trooper of the Native Police here who could act as interpreter and assist the Board in their investigation respecting the two children recently rescued from Frazer's Island, and in reply I beg to acquaint you, that immediately on the receipt of your letter (which I handed over to the Bench) I proceeded to the Native Police Barracks, at Cooper's Plains, and examined the few troopers there, and I am sorry to say there is not one of the troopers who would be of any service to you in investigating the matter.

There is a man named Davis, residing in Brisbane, who was for many years living amongst the blacks, about fifty miles from Maryborough, who is generally employed as interpreter at the Criminal Court, Brisbane, and I believe speaks the language of the natives of this part well, who might be of service to the Board; and there is also another man named John Fahey, who was residing amongst the blacks on the head of the Mary for thirteen years, and who was captured in December, 1854, by a party of Native Police, who were in company with me. This man speaks the language fluently, and is, I believe, now living in Sydney; he accompanied Mr. Gregory, I believe, on his last exploring expedition.

I beg to add, that several of the natives to whom I have spoken persist in asserting that the mother of these two children is a black woman, and that there is a brother of theirs, of the same color as the girls, now on the island; and it is also stated by the blacks, that there are two lads, also of the same color, children of black parents, now living in the neighbourhood of Double Island Point.

I have, &c.,

ARTHUR E. HALLORAN,
C. C. Lands.

H. H. Browne, Esq.,
Chairman.

P.S.—The greater number of the Native Police are now absent on patrol; when they come in, should there be one of them who would be of service in the matter, I will request the officer in charge to send him by next steamer, but I suspect he will require an order from the Commandant before he will feel justified in sending to Sydney any one of the troopers, and the Commandant is now absent on duty.

*Government Resident's Office,
Gladstone, 11 November, 1859.*

Sir,

I have the honor to acknowledge the receipt, yesterday, of your letter of the 29th October, applying to me, on the part of the Board appointed to investigate the circumstances attending the rescue of two females from the natives on Frazer's Island, for any information I may be able to afford at all likely to throw light upon its proceedings.

2. In attention to your request, and as the case of the "Sea Belle" is the only one known here having any probable connection with this matter, I beg to state that the above-named vessel left Port Curtis on the 2nd of April, 1857, having as the only female passengers on board Mrs. Harty and her daughter Ellen.

3. Mrs. Harty, the wife of a former chief constable of Gladstone, was a woman, I suppose, about forty years of age, and her daughter would be now, if alive, between six and seven years old; she was a fair child, with large blue eyes, and remarkably stout; she could hardly, I should say, by this time, have forgotten her name, and as before she left this she had commenced to learn her alphabet, it is equally unlikely she should have lost all recollection of her mother tongue.

4. Mrs. Harty's other child was an infant at the breast, and a boy, so that it does not appear at all probable the children whose case the Board are investigating can be survivors from the "Sea Belle."

5. I would recommend, however, your asking Mr. F. Garland Mylrea, now in Sydney, who was formerly my clerk, if he has any recollection of the personal appearance of Ellen Harty.

6. I think it probable he may be able to give a positive opinion on the question of the younger female's identity, or otherwise, with Harty's child.

7. There are also in Sydney two men who were constables with Harty in the Gladstone Police; one, John Horrigan, whom I perceive by the papers the Board has already examined; the other is Lawrence Finnegan, to be heard of most likely from Captain M'Leerie.

I have, &c.,

H. H. Browne, Esq.,
Government Immigration Office,
Sydney.

M. C. O'CONNELL,
Government Resident.

STATEMENT OF JAMES DAVIS.

James Davis states that he questioned Billy the black boy, whom he supposes to belong to Frazer's Island, on the mainland adjacent; Billy said he came in a boat from the island to Sydney; asked if he came by himself, and he said he did, but that there were two girls in the town, pointing in the direction of the building; I asked him if they were black girls, and he laughed; asked him what he laughed at; he replied, at his asking the question;

8 RESCUE OF TWO FEMALE CHILDREN FROM FRAZER'S ISLAND.

question; asked again, were they black? he said, "No"; asked if they were natives of the island; he said, "Yes"; asked who brought them from the island, and whether their parents were alive; he said, "Yes"; asked what color they were; he said black; told him I wished to see them, and he pointed in the direction where I could see them, and asked me to see him in the afternoon as he was about returning to the island; saw the two girls and have conversed with them, and can understand all they say; both girls say they are sisters, and were taken from the island by white men in a boat; said that their parents were on the island and were blacks, and that they wished to go back to them; said he would come and see them the next morning; states that he is sure and certain that the girls are neither blacks nor half-castes.

Witness—

Thos. J. Moppett.

his
JAMES + DAVIS.
mark.

How long they can remember being on the island? Have been on the island from infancy; cannot recollect how they got there.

How long does the elder girl remember the young one? From infancy; recollects her when at the breast.

Was she born on the island, or did she know her as a small child? Says she was born on the island, at a place called Duckera.

Had either of them any white parents or relatives on the island, or are there any white people now there? No.

Do they know anything about any people who came ashore from any wreck, and, if so, what became of them? No.

Have they any white brothers and sisters on the island? No.

James Davis further states that having remarked to the blackfellow, Billy, that he had seen the two girls, and that he thought he told him they were blacks, Billy said, "Oh, no, they are ghosts," meaning white people.

MINUTE.

Board met pursuant to summons. *Present*:—H. H. Browne, W. S. Deloitte, S. North, Thomas Watson, and Dr. Alleyne.

Davis, the interpreter from Moreton Bay, having been called in, the statements which he made as emanating from the girls, were read; and he further interrogated the girls in the presence of the Board, and they expressed themselves to the following effect—That they wished to go back to the Island.

He informed the Board that he was quite satisfied that they were white children, and that it would be impossible to obtain any further information, unless a party were sent to Frazer's Island to communicate with the native man and woman whom they supposed to be their parents. He thinks there are no other white persons on the island.

It was not considered necessary to detain him any longer, but it was resolved that, if possible, Fahey should be obtained, to see if any further clue to their origin can be obtained.

Immigration Office,
28 November, 1859.

Memorandum forwarded to the Inspector General of Police.

About twelve months since a small vessel called the "Swan," commanded by Captain Anderson, belonging to Lane & Co., touched at Frazer's Island on her way from Sydney to Rockhampton—some of the passengers and crew landed frequently at the north end—and were informed by the natives that three white women were with a tribe of blacks not far off. The natives exhibited various little things which once belonged to Europeans evidently—such as a knife, glass, &c., which they said they got from the white women—and amongst them a pocket-book containing a Chinaman's receipt for £20 for a horse sold—a bank note or two, and Mr. Walsh's informant thinks a cheque drawn by Messrs. Gilchrist, Watt, & Co. upon the Commercial Bank, all of which the master of the vessel secured, and probably appropriated. Mr. Walsh's informant was a gentleman who was staying at the Northumberland Hotel, Maitland, on Wednesday night last.

Detective Office,
Sydney, 8 November, 1859.

Sir,

I succeeded in finding Captain John Anderson on board the brig "Maria," now lying at the Grafton Wharf. He states that in October, 1858, he landed on Frazer's Island, and while there one of the natives gave him an old portmonnaie, a receipt for a horse signed by a Chinaman, a one pound note, having, he believes, the signature "Clarence Holt," and a one pound order on Gilchrist, Watt, & Co. The papers were much worn and almost illegible, but they were of recent date when he saw them, they were about twelve months old. His wife who also saw them remembers the same particulars respecting them. The order appeared to be such an one as a shepherd or a bushman would have given. Whilst on the

the island he also saw some articles of European manufacture, but does not remember what they were. The natives told him that there were some white "Mary's" on the island with the tribe, and they held up three fingers to denote the number. When Captain Anderson arrived in Sydney he showed the articles to several people, and offered to give them to Mr. Sawyer, the owner of the "Maria."

Captain Anderson brought a little boy from the island that trip. This lad learned to speak English, and frequently told him there were some white "Mary's" on the island. Captain Anderson could identify the islander from whom he received the articles. He says his reason for not giving greater publicity to the matter was that he placed very little dependence on what the islanders said, and when he came to Sydney having made the affair known to his owners he thought nothing more of it. He searched his boxes to see if he could find either of the papers, but did not succeed in the search.

I have, &c.,

THOMAS ABCOTT,

Sub-Inspector, Detective Police.

The Inspector General of Police, Sydney.

ANOTHER WHITE WOMAN WITH THE BLACKS.—Captain Arnold, of the "Coquette," schooner, which arrived from Wide Bay yesterday afternoon, furnishes us with the following accounts received from the blacks of Frazer's Island, which is situated at the mouth of Wide Bay :—They stated, that a white woman and two young children, females, had been living with the blacks on Frazer's Island for a length of time. From this account, it appears that the vessel by which they came, was wrecked on Break-Sea Spit. The crew and passengers came on shore with the boat to the island, and immediately on landing were surrounded by a great number of the blacks. By some cause, one of the natives was killed by one of the crew of the vessel ; and, to have revenge for the death of one of their number, the blacks watched an opportunity, and killed the whole of the whites, with the exception of this woman and two children. The only description given of the woman is, that one of her large toes had been injured before her arrival on the island ; that she winks, as though her eyes were also bad ; she has two rings on her finger, and a spyglass in her possession. From the description given of the children, Captain Arnold supposes the eldest to be about ten or twelve years of age, and the youngest about six years. There was beef and biscuit came on shore in the boat, but no tobacco. This account agrees with that given by twenty or thirty other blacks to Mr. Neil, of Maryborough, and who proffered to take him and Captain Arnold to the place where she is. Mr. Neil would render every assistance in getting her, but as Captain Arnold could not leave his vessel, he did not accompany them. The blacks further stated, that the woman cannot understand them, or they her, and Captain Arnold is of opinion that she is a foreigner, as the most of the blacks on this island can speak good English ; they say that her name is "Manti." It is to be hoped that the Government will cause search to be made without delay for this woman, who, probably, has been under the control of the blacks for a length of time.—*Empire*, August 19.

TENDER FOR THE RESCUE OF FEMALE AND TWO CHILDREN, SAID TO BE ON
FRAZER'S ISLAND.

Sydney, 26 August, 1859.

Sir,

Under instructions from Mr. W. H. Sawyer, owner of the schooner "Coquette," we have the honor to tender the services of that vessel for the rescue of a white female and two children reported to be on Frazer's Island, upon the following terms :—

1. The schooner "Coquette" to proceed within a week from Sydney to Wide Bay, and there obtain the necessary assistance, including an interpreter. And as soon after as possible to go from Wide Bay to Frazer's Island to make search for and rescue if possible the above-named people.

2. The said vessel to be furnished with everything necessary for the expedition, together with "peace offerings" to the aborigines, at the expense of the owner.

3. Payment for said services to be made as follows:—The sum of £150 sterling should the woman and children not be recovered, on proof of due exertion having been made. The sum of £300 sterling if they are rescued and landed in Sydney.

4. Bond given if required for the due performance of the above.

We are, &c.,

MOLISON & BLACK.

The Hon. E. C. Weekes,
Colonial Treasurer.

The Cabinet have decided to allow a premium of £100, on satisfactory proof being adduced to the Pilot Board that the schooner had visited Frazer's Island, and that every exertion had been used for the discovery and rescue of the woman and children, even although the result be unsuccessful.

If, however, the people be recovered, and landed in Sydney, the Cabinet authorise the increase of the premium, from £100 to £300.

10 RESCUE OF TWO FEMALE CHILDREN FROM FRAZER'S ISLAND.

The Board will have the goodness to communicate with Messrs. Molison and Black, and in the event of an agreement being made, and the minimum premium afterwards claimed, will take measures to satisfy themselves that the service has been effectively performed.

29 May.

H. L.

Mr. W. Wilshire.

The Office of the Pilot Board,
30 August, 1859.

Gentlemen,

With reference to your letter of the 26th instant, I am directed to inform you that the Government have decided to allow you a premium of one hundred pounds on satisfactory proof being adduced to the Pilot Board that the "Coquette" had visited Frazer's Island, and that every exertion had been made for the discovery and rescue of the women and children, even although the result be unsuccessful.

If, however, they be recovered and landed in Sydney, the Government authorize the increase of the premium from one to three hundred pounds. An agreement to this effect will have to be entered into.

If you agree to these terms, will you be kind enough to state how you intend to obtain access to the camp of the natives, what preparation you are about to make, and when you will be prepared to carry the same into effect.

I have, &c.,

W. J. WILSHIRE,

Secretary.

Messrs. Molison and Black.

No. 4, Bridge-street, Sydney,
31 August, 1859.

Dear Sir,

We have the pleasure to acknowledge your communication of yesterday's date, and, on behalf of Mr. W. H. Sawyer, agree to the terms therein proposed, in reference to the discovery and rescue of the woman and children supposed to be on Frazer's Island.

The means which Mr. Sawyer proposes to adopt are as follows:—

After discharge of the "Coquette's" inward cargo, at Wide Bay, he will proceed to Frazer's Island, accompanied by a white man (who understands the language spoken by these people, and is acquainted with the locality), together with several blacks; and, by means of offering presents of tea, sugar, and tobacco, obtain access to the camp of the natives. It is also his intention to traverse the island.

Mr. Sawyer's idea is, that the desired result will be best attained by acts of kindness; at the same time, to provide against surprise, he would solicit from the Government the use of *three* or *four* revolvers, to be paid for or returned. Likewise, should the assistance of the Police be required, the Government to instruct the Police Magistrate at Maryborough to act in concert and assist Mr. Sawyer in this matter.

The "Coquette" will sail from Sydney on the 3rd of September, and will be joined by Mr. Sawyer, at Wide Bay, on the 15th of September.

We are, &c.,

MOLISON & BLACK.

W. J. Wilshire, Esq.,
Secretary of the Pilot Board.

Although the Board are of opinion that such a delicate undertaking as this should not be accomplished by the use of arms and police, they cannot object to proper precaution being taken, and recommend that four revolvers be supplied from the Government stores, to be returned or paid for out of any amount coming to Messrs. Molison and Black; and that the Bench at Maryborough be instructed to assist with the Police, should they be required.

W. J. W.

Approved,

E. C. W.

5 Sept., 1859.

The Bench at Maryborough will be written to.

W. E.

5th.

Mr. Wilshire.

5. H. L.

Legislative Assembly.

NEW SOUTH WALES.

FIJIAN ISLANDS.

(DESPATCH RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 3 April, 1860.

W. DENISON,
Governor General.

Message No. 29.

The Governor General lays before the Legislative Assembly a copy of a Despatch with which he has been honored by the Secretary of State in reply to the Despatch bringing under the notice of Her Majesty's Government the Resolutions of the Assembly, of the 11th October last, on the subject of the Fiji Islands.

*Government House,
Sydney, 3 April, 1860.*

SECRETARY OF STATE FOR THE COLONIES to GOVERNOR GENERAL.

(No. 7.)

*Downing-street,
17 January, 1860.*

SIR,

I have to acknowledge your Despatch, No. 100, of the 17th of October, accompanied by Resolutions of the Legislative Assembly, recommending the acceptance of the offer which has been made to cede the sovereignty of the Fijis to Great Britain. You will intimate to the Assembly, in reply to this Address, that Colonel Smythe, R.A., an officer of experience and ability, in whose judgment Her Majesty's Government repose great confidence, has been appointed to proceed on a mission to the Fiji Islands, in order to inquire into and report fully upon the results which might attend an acceptance of the proposed cession.

I have, &c.,

NEWCASTLE.

1859.

NEW SOUTH WALES.

ALPACAS.

(CORRESPONDENCE RESPECTING.)

Presented to both Houses of Parliament, by Command.

SCHEDULE.

No.	PAGE.
1. C. Ledger, Esq., to Secretary for Lands and Public Works, furnishing statement as to number, condition, &c., of Alpacas. 16 April, 1859	2
2. Under Secretary Lands and Public Works to C. Ledger, Esq., respecting his appointment as Superintendent of Alpacas. 28 April, 1859	2
3. Same to the same, to proceed into interior in search of suitable run. 10 May, 1859	3
4. Superintendent to Secretary Lands and Public Works, upon the above subject, and requesting allowance for expenses. 13 May, 1859	3
5. Under Secretary in reply, and stating that the sum of £100 had been authorised. 17 May, 1859	4
6. Superintendent to Secretary for Lands and Public Works, requesting assistance of one of his overseers during his journey, &c. 23 May, 1859	4
7. Same to the same, respecting arrangements for depasturing the animals during the Winter months, and proposing change of route. 7 June, 1859	4
8. Under Secretary in reply to the above. 18 June, 1859	5
9. Superintendent to Secretary for Lands and Public Works, stating further arrangements made by him, (with Enclosure.) 15 June, 1859	5
10. Under Secretary in reply. 24 June, 1859	6
11. Superintendent to Secretary Lands and Public Works, further on the same subject. 9 July, 1859	7
12. Same to the same, reporting result of his tour of inspection. 23 August, 1859	7
13. Same to the same, recommending early removal of the animals to their destination, and applying for necessary equipments. (Extract.) 29 August, 1859	8
14. Under Secretary in reply. (Extract.) 3 September, 1859	8
15. Superintendent to Secretary Lands and Public Works, respecting purchase of artificial food. 30 August, 1859	9
16. Under Secretary in reply. 6 September, 1859	9
17. Same to the same, conveying authority to shear Alpacas before leaving Liverpool. 22 September, 1859	9

2. I am therefore to request that you will take charge of the flock of Alpacas, Llamas, Vicunas, &c., now in the custody of Mr. Commissioner Halloran, at Liverpool, who has been duly instructed to hand them over to you.

3. To provide for the proper care of those animals you will be at liberty to employ an overseer at the rate of £60 per annum, and 8 men, at £50 per annum each.

I have, &c.,

MICL. FITZPATRICK.

CHARLES LEDGER, Esq.,
Collingwood.

No. 3.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to CHARLES LEDGER, Esq.

*Department of Lands and Public Works,
Sydney, 10 May, 1859.*

SIR,

Adverting to my letter of the 28th ultimo, respecting your appointment as Superintendent of Alpacas, I am now instructed to inform you that your first duty will be to take a trip into the Interior with the view of ascertaining the most favorable part of the Colony for the depasturing of these animals; I am therefore directed by the Secretary for Lands and Public Works to request that you will now proceed to Maneroo, returning by Yass and Binalong, Cowra, Carcor, and Bathurst, to Sydney, and that, on your return, you will proceed *vid* Stroud and Gloster to New England, passing Armidale, Bundarra, Bingara, Barraba, Tamworth, and Breeza, to Sydney, by the Hunter and Bulga Road; you will then report where, in your opinion, the best position for the Alpaca Establishment is to be found, upon the settlement of which question a sum will be placed at your disposal, for the erection of such huts or other buildings as may be necessary in connexion with the management of the flock.

I have, &c.,

MICL. FITZPATRICK.

CHARLES LEDGER, Esq.,
Collingwood.

No. 4.

THE SUPERINTENDENT OF ALPACAS to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Liverpool, 13 May, 1859.

SIR,

I have the honor of replying to your communication of the 10th.

The instructions conveyed to me shall be duly carried out, by my starting on the exploring expedition indicated, within eight days from date.

I beg to request you will favor me with recommendations along the road *vid* Goulburn to Maneroo.

I have also to solicit pecuniary advances wherewith to meet unavoidable expenses, attendant on outfit and during the journey.

I have, &c.,

C. LEDGER.

THE HONORABLE
THE SECRETARY FOR LANDS
AND PUBLIC WORKS.

No. 5.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SUPERINTENDENT OF ALPACAS.

*Department of Lands and Public Works,
Sydney, 17 May, 1859.*

SIR,

In acknowledging the receipt of your letter of the 13th instant, on the subject of your intended expedition into the country, and applying for an advance to meet certain unavoidable expenses attendant on the outfit of your party, and during the journey, I am directed to inform you that the Colonial Treasurer has been requested to cause the sum of one hundred pounds to be placed without delay to your credit in the Joint Stock Bank, for the purposes required.

£100.

I have, &c.,

MICL. FITZPATRICK.

THE SUPERINTENDENT OF ALPACAS,
Liverpool.

No. 6.

THE SUPERINTENDENT OF ALPACAS to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Liverpool, 23 May, 1859

SIR,

I have the honor to advise receipt of your communication placing one hundred pounds at my disposal, said sum being an advance wherewith to meet the expenses of outfit, &c., during my journey into the interior in search of suitable "Run" whereon to permanently place the Alpacas, Llamas, &c.

It was my intention to have started before this, and the reason for not having done so is on account of my anxiety to secure, previous to my departure, a quantity of artificial food for the animals during the winter, if, as I anticipate by present appearances will be the case, the natural grasses in the paddocks at my disposal be insufficient to maintain the flocks in good condition. The Domain at Parramatta can afford no relief during the winter; this I have ascertained by personal inspection.

I am very desirous that one of my overseers should accompany me during the journey into the interior. His practical knowledge as to suitable pasture, &c., would be of very great assistance to me. I have to request that the Government will inform me whether it would allow this, and how much daily for such personal expenses.

I have, &c.,

C. LEDGER.

THE HONORABLE
THE SECRETARY FOR LANDS
AND PUBLIC WORKS.

No. 7.

THE SUPERINTENDENT OF ALPACAS to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Liverpool, 7 June, 1859.

SIR,

I am without a reply to my letter of the 23rd May that I had the honor of addressing you, requesting permission to take with me a person to assist in selecting a suitable Run for the Alpacas, &c.

Since that date I have been engaged in looking about for paddocks in which to graze the flocks during my absence, as the ones at my disposal are becoming very bare, and I consider it of importance that the animals be kept in good condition all through the winter, and ready for moving in the spring to such parts of the country as may finally be determined on.

The large flock comprising Female Llamas and Male Alpacas I removed from the Collingwood paddock on the 3rd instant, and placed them in a large paddock on the Moorbank Estate, situate on the other side of George's River, distant about a mile from the Liverpool Railway Station. I have agreed with Mr. Lackey to pay ten pounds per month for the use of the paddock, and I hope that this step will merit your approval.

I

I am desirous that you should authorise me, and allow me discretionary power to purchase from time to time such artificial food as I consider necessary for the maintenance of several animals that have recently dropped lambs, as the poor natural grasses in the district at this season of the year do not afford sufficient nourishment to the mothers rearing lambs; this expense will be trifling, and it is imperative on my part to have this matter arranged.

During your absence from Sydney I consulted with Mr. Fitzpatrick as to whether I should be allowed to proceed by land to Maneroo, stating as a reason for this alteration of the route ordered to be taken in your note of the 10th May, the desirability of personally inspecting, both going and returning, the road that hereafter I may have to drive the flocks; that gentleman led me to understand that the Government would not object to the change if I considered it preferable. I have therefore to request that you will please to approve of my proceeding *vid* Camden, Berrima, Goulburn, Yass, and Gundagai to Maneroo, returning by Cowra and Bathurst, and, after handing in my report, to proceed to New England as directed in the aforesaid note of the 10th May.

My object in soliciting permission to effect this change of going by land to Maneroo is that I may become intimately acquainted with the road, &c., of which too much cannot be known by me if I am afterwards ordered to drive the Alpacas, &c., in that direction.

I have, &c.,

C. LEDGER.

THE HONORABLE
THE SECRETARY FOR LANDS
AND PUBLIC WORKS.

No. 8.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SUPERINTENDENT
OF ALPACAS.

*Department of Lands and Public Works,
Sydney, 13 June, 1859.*

SIR,

In reply to your letter of the 7th instant, I am directed to inform you that the Secretary for Lands and Public Works approves of the arrangement entered into by you with Mr. Lackey, for depasturing a portion of the Alpacas, &c., in a paddock belonging to him near George's River, at a rental of ten pounds per month.

2. I am also to convey to you the authority of Mr. Secretary Robertson for purchasing from time to time such artificial food as you may consider necessary for the nourishment of the animals which have lately dropped lambs.

3. Mr. Robertson further approves of your proceeding to Maneroo by land, returning by Cowra and Bathurst, instead of by the route laid down in my communication of the 10th ultimo.

I have, &c.,

THE SUPERINTENDENT OF ALPACAS.
Liverpool.

MICL. FITZPATRICK.

No. 9.

THE SUPERINTENDENT OF ALPACAS to THE SECRETARY FOR LANDS AND
PUBLIC WORKS.

Liverpool, 15 June, 1859.

SIR,

I have the honor to advise receipt of your communication, 13th instant. I am glad to see that the steps taken by me for the preservation of the Alpacas, &c., during the winter months, as also the suggestion that I considered it my duty to lay before you respecting the change in my route to Maneroo, has met with your approbation.

Owing to the difference in the seasons in this country, the dropping of lambs at present time is injurious to their preservation, as nature does not admit of the mothers supplying sufficient nourishment, consequently both suffer accordingly, whereby I have lost several of the former.

The

The animals are healthy and playful, generally speaking, the timely supply of green fodder and barley will, I doubt not, preserve a few that are much reduced.

During my absence J. H. Atkinson, Esquire, has kindly consented to supply my place to a certain extent, but the party directly responsible is Pedro Cabrera, the Overseer, who has accompanied me the last seven years.

The said Cabrera has my written instructions, in Spanish (a copy duly translated I have now the honor to enclose), to call on Mr. Atkinson for any assistance that he may require, and, so as to facilitate his intercourse with the said gentleman, I have left him an interpreter, the former speaking Spanish only.

In former communication I requested permission to take with me a party to assist in the selection of fit "Run" for locating the animals on; I now beg leave to reiterate said request, and beg you will be so kind as to acquiesce therein by apportioning so much per diem as is customary, or you may deem fit.

If in order, I would also solicit you to have forwarded to me, at Goulburn, some introductory Circular to Magistrates, Commissioners, &c., so that I may obtain information and assistance, if required.

I have, &c.,

C. LEDGER.

THE HONORABLE
THE SECRETARY FOR LANDS
AND PUBLIC WORKS.

[Enclosure in No. 9.]

(Translation from Spanish.)

Liverpool, 15 June, 1859.

Sir,

In conformity with orders from the Government, I start in search of suitable "Run" whereon to permanently depasture the Alpacas, Llamas, &c.

During my absence you remain in charge of the animals.

Mr. Atkinson has kindly offered every assistance that you may require; and, so that you may freely make your wants known, I leave with you, and under your orders, the interpreter (Alexander), in case of necessity to be of service to you.

Although I have purchased a patch of green barley, I think you will be obliged to purchase more, so that with this help you may be enabled to save the few that are in very poor condition. Respecting this, I would advise you to consult with Mr. Atkinson, who can himself supply your wants; yet, if you can obtain it nearer to your encampment, and at a moderate price, you have my authority to do so.

You know as well as I do the wants and customs (habits) of the animals, consequently I am not called upon to say more than to recommend them to your best care.

You will not allow the shepherds to leave the flocks for a single moment, except of a Sunday, when I trust you will send them by turns to Mass.

Alexander will go to market and do all you may require in the town of Liverpool.

C. LEDGER.

Don Pedro Cabrera.

No. 10.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE SUPERINTENDENT OF ALPACAS.

Department of Lands and Public Works
Sydney, 24 June, 1859.

SIR,

Referring to your letter of the 15th instant, I am directed to inform you that your application to be allowed to take a person with you to assist in the selection of a Run, suitable for the Alpacas, &c., under your charge has been approved, and I am to request you will propose the allowance to be made to the person whom you may take with you.

2. In compliance with the wish expressed in your letter under reply, I forward herewith an introductory letter in your favor.

I have, &c.,

MICL. FITZPATRICK.

THE SUPERINTENDENT OF ALPACAS,
Goulburn.

(Circular.)

(Circular.)

*Department of Lands and Public Works,
Sydney, 24 June, 1859.*

Mr. Charles Ledger, Superintendent of Alpacas, being about to proceed in search of a suitable Run whereon permanently to depasture these animals, I am directed to request that the Benches of Magistrates, Commissioners of Crown Lands, and other officers of the Government, will be so good as to afford Mr. Ledger any information which he may desire, or which may be deemed of service to him in the performance of this duty.

MICL. FITZPATRICK,
Under Secretary for Lands and Public Works.

No. 11.

SUPERINTENDENT OF ALPACAS to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Goulburn, 9 July, 1859.

SIR,

I have to state, in reply to your communication of 24th ultimo, that the party accompanying me in my tour of inspection incurs the same expenses as myself, as also that only the greatest economy permits of my allowance meeting most necessary and urgent expenses.

I left Liverpool on the 5th, arrived here this day, after most minute inspection of road all the way.

Thanking you for your introductory Circular,

I have, &c.,

THE HONORABLE

C. LEDGER.

THE SECRETARY FOR LANDS

AND PUBLIC WORKS.

No. 12.

THE SUPERINTENDENT OF ALPACAS to SECRETARY FOR LANDS AND PUBLIC WORKS.

Liverpool, 23 August, 1859.

SIR,

I do myself the honor to lay before you a Report of my tour of inspection of a portion of this Colony, undertaken by your direction, in search of suitable country for permanently locating the Flock of Alpacas, Llamas, and Vicunas.

In doing so, I beg to state that my own observations of the capabilities of the country, or districts thereof, I visited for affording pasturage to the Flock, are confirmed by the opinion of a Peruvian gentleman, who, with the sanction of the Government, accompanied me on my tour.

I started from Liverpool on the 6th July last, and proceeded along the Southern Road as far as Yass, extending my observations of the country over an area of four or five miles, and occasionally a greater distance, on either side of the road. From Yass I directed my course to the Murrumbidgee, whence *vid* Queanbeyan, Micaliago, and Bredbo, I entered Maneroo. A careful examination of the Breadalbane and Yass Plains convinced me of their suitability to the rearing of the Alpacas; the neighbourhood of Micaliago, Bredbo, struck me as no less suitable. My opinion of the adaptation of these places to the above purpose is based chiefly on the marked identity of the natural features of the country with those of that part of South America from which the Alpacas came. The country all through Maneroo indeed corresponded so exactly with those of Peru and Bolivia, that I could easily have believed myself back again in those countries. This similarity was still more apparent with respect to the Snowy Mountains, as that magnificent range appeared clad in their winter garb; Koskiusko reminded us of the strata or Illionari, and, with the Australian Cordilleras in full view, we remembered our trials and hardships among the ranges of their more stupendous and more terrible counterparts of South America.

But it was, of course, on the natural pasturage of these places, as the most important object in our examination, that we bestowed the greatest attention. Not only are the pasturage and herbage, rocks and stones, identical with those of Peru, but I found throughout the districts I have indicated abundance of a description of wiry grass known as the "ichu"

of

of South America. It is upon this grass that the Llama tribe mostly feed, being extremely palatable and nourishing, and of which they are immoderately fond. The great importance of furnishing the Alpacas with fodder as closely as possible resembling that on which they have been accustomed to feed in their native country, need scarcely be pointed out. It was accordingly my deliberate conviction, and also that of my companion, that the Maneroo district was admirably adapted for the location of the Alpacas. Should the Government determine on locating the Flock in that district, I would recommend for the purpose the country contiguous to the Snowy River, on account of the facilities which the undulating plains and mountain ranges would afford in obtaining a change of temperature whenever the removal of the Flock to a warmer or cooler spot should be desirable. By continual thermometrical observations I found that a similarity of temperature existed in the months of July and August at Maneroo, as in the country from which the Alpacas were extracted. The thermometer at 7h. 30m. A.M., varying from 24 to 31 degrees.

The only thing I found to cause any apprehension was the existence of "fluke" in the sheep; in South America its ravages are counteracted by not allowing sheep, cattle, or Llamas, to drink the stagnant waters that might be formed from springs; lakes, ponds, or puddles formed by rain, are not supposed to cause the disease.

I cannot refrain from expressing my warm acknowledgments for the very uniform kindness and hospitality everywhere met with in my line of journey, and I particularly mention the willing assistance and valuable information received from Messrs. Calvert, C. and H. Hale, Freestone, Cosgrove, Smith, Ryrie, Wright, Windeyer, Hebden, Massey, Gunn, Manning, and Dr. Haley.

I beg to recommend that the animals be moved up to Maneroo with as little delay as possible; and as my personal attention is necessary, I beg to request you will think fit to relieve me from my intended journey to New England, at least for the present.

I have, &c.,

C. LEDGER.

Legislative Assembly.

NEW SOUTH WALES.

COLONIAL AGENCY IN LONDON.

(CORRESPONDENCE RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 30 November, 1859.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 18 October, 1859, That there be laid upon the Table of this House,—

“Copies of all Correspondence between the Executive Government and any person or persons relative to the recent termination of the Colonial Agency for this Colony, in London, and to the terms on which the existing Agency has been accepted.”

(*Mr. Forster.*)

COLONIAL AGENCY IN LONDON.

MESSRS. LLOYD, BEILBY, AND Co., to THE COLONIAL SECRETARY.

(Via Marseilles.)

London, 18 May, 1859.

SIR,

It becomes our painful duty to acquaint you that events have occurred since we last had the honor of addressing you, so materially affecting our position, that in justice to our creditors we decided to suspend payment on the 4th instant.

In making this unpleasant communication, we may express our full persuasion that the suspension of our Firm, which we trust will only be temporary, does not in any way compromise the Government Business entrusted to our hands.

We may mention for your information, that so soon as our senior had the slightest presentiment of coming difficulty he felt most solicitous of protecting the important railway interests, &c., confided to him; and not knowing whether the Oriental Bank would consent to honor any more cheques after their suspension was announced, we decided to draw out £15,000, which was promptly invested in Stock with a Government guarantee, so as to meet the payment of rails, &c., coming forward, forming a reserve fund, and thus preventing disappointment either to the Colonial Government or the English contractors.

In consequence of the extraordinary panic that ensued, causing a fall of five per cent. even in New South Wales Government Debentures, these securities, like all other stock have somewhat declined in value; but we have little doubt but they will recover the original value before the money is required. We, however, hold ourselves bound to bear any loss that may accrue on the same, and to allow interest at and after the rate the Government would have received from the Oriental Bank.

To afford you the fullest information respecting the Firm's affairs, we now enclose a summary of the proceedings that took place at the meeting of creditors, held on the 16th instant, when it was decided that the Firm should go into liquidation.

This step will not in any way interrupt the shipment of your railway iron, as Mr. B. S. Lloyd is our officer, who has already taken an active part in the details of the Government Business, will continue the management on behalf of the Firm; and we have the satisfaction of intimating that the Oriental Bank have consented to continue the payments to the contractors upon our passing Invoices and Bills of Lading through their hands for transmission to your Government, as per copy of letter that now accompanies this.

Under these circumstances it behoves us to place our resignation in your hands, which we hereby do accordingly, that you may deal with it as you think proper; and if upon due consideration you are of opinion that the business has been so well conducted as to render immediate change unnecessary, you may rely upon the same amount of zealous exertion as we have hitherto displayed in your service.

We have, &c.,

LLOYD, BEILBY, & CO.

THE HONORABLE

CHARLES COWPER, ESQ.,

Chief Secretary,

Sydney, N. S. W.

THE UNDER SECRETARY, TREASURY, to G. K. INGELOW, ESQ.

The Treasury, New South Wales,

13 July, 1859.

SIR,

In a letter received by the Principal Secretary from Messrs. Lloyd, Beilby, and Co., of London, dated 18th May, 1859, the following paragraphs occur, viz. :—

“ We may mention for your information, that so soon as our senior had the slightest presentiment of coming difficulty he felt most solicitous of protecting the important railway interests, &c., confided to him; and not knowing whether the Oriental Bank would consent to honor any more cheques after their suspension was announced, we decided

“decided to draw out £15,000, which was promptly invested in stock, with a Government guarantee, so as to meet the payment of rails, &c., coming forward, forming a reserve fund, and thus preventing disappointment either to the Colonial Government or the English contractors.

“In consequence of the extraordinary panic that ensued, causing a fall of five per cent. even in New South Wales Government Debentures, these securities, like all other stock, have somewhat declined in value; but we have little doubt but they will recover the original value before the money is required. We, however, hold ourselves bound to bear any loss that may accrue on the same, and to allow interest at and after the rate the Government would have received from the Oriental Bank.”

As it would appear from the concluding part of the letter that your Bank had subsequently consented to continue the payments to the contractors, upon receiving for transmission to this Government the Invoices and Bills of Lading, and as it does not appear that the stock mentioned in the above paragraphs was surrendered to the Bank, I am instructed by the Secretary for Finance and Trade to request that you will move your Chief Manager in London to call upon Messrs. Lloyd, Beilby, and Co. to hand over to you the securities referred to.

G. K. INGELOW, Esq.,
Chief Manager, Oriental Bank,
Sydney.

I have, &c.,
HENRY LANE,
Under Secretary.

THE UNDER SECRETARY, TREASURY, to G. K. INGELOW, Esq.

The Treasury, New South Wales,
13 August, 1859.

SIR,

I beg to return Letter of Credit No. 9-32, N. S. W. G., £24,235, for transmission to London, the same having been duly noted in this office.

I also enclose the following Indent, referred to in the Schedule annexed to my letter, No. 152 of this date, viz:—

Rifles, Postage Stamp Plate,
Binding Materials,
Letter Balances, Paper, &c.

As regards the expenditure of the sum of £10,000 (included in the L/c.) for the purchase of the *Rifles*, you will have the goodness to instruct your Head Officer to honor the drafts against this credit of Major-General Hay, of the School of Musketry, Hythe, who has been requested to act for the Colonial Government in the matter.

As respects the other articles provided for in the Letter of Credit, I am to inform you that, owing to the embarrassment of the affairs of Messrs. Lloyd, Beilby, and Co., this Government is not yet prepared to make definite arrangements for the future conduct of the agency; and to request that your Head Office will not pass the amount, viz., £14,235, to the debit of the general account until further instructions are conveyed.

G. K. INGELOW, Esq.,
Manager, Oriental Bank Corporation.

I have, &c.,
HENRY LANE,
Under Secretary.

THE UNDER SECRETARY, TREASURY, to G. K. INGELOW, Esq.

The Treasury, New South Wales,
15 August, 1859.

SIR,

With reference to my letter (S. 156) of the 13th instant, enclosing Indents for Stores, &c., for the service of this Colony, and requesting that your head establishment would hold them until further instructed; I am now to inform you that temporary arrangements having been made with Messrs. Lloyd, Beilby, and Co., you will have the goodness to request the Chief Manager in London to hand over the whole of the said Indents to that Firm.

In

In respect of the instruction in the third paragraph of the letter aforesaid, to honor the drafts of Major-General Hay, to the extent of £10,000 for the purchase of Rifles, I am to inform you, that this money will be disbursed through the agency of Messrs. Lloyd, Beilby, and Co., on the production by them of the account certified by Major-General Hay, and of the Bills of Lading and Invoices of the Rifles.

You will also have the goodness to instruct your Head Office, that payment for other services enumerated in the inclosed and former Indents may be made to Messrs. Lloyd, Beilby, and Co., only upon their producing Invoices and Bills of Lading of the articles as shipped for the Colony.

I have, &c.,

HENRY LANE,

Under Secretary.

P.S.—The Treasurer is informed by Mr. George Lloyd, that the firm of Messrs. Lloyd, Beilby, and Co., in London, is now represented by Mr. Benjamin S. Lloyd.

HENRY LANE.

G. K. INGELOW, Esq.,
Manager, Oriental Bank Corporation.

G. K. INGELOW, Esq., to THE COLONIAL TREASURER.

The Oriental Bank Corporation,

Sydney, 13 September, 1859.

SIR,

I beg to be allowed to call your attention to the letter from the Treasury, No. 157, of 15th August, where, after requesting us to instruct our London Office to continue to make payments to Messrs. Lloyd, Beilby, and Co., on certain conditions, it is further stated in the postscript, that Mr. B. S. Lloyd represents the Firm.

The Partners having yesterday declared themselves bankrupt, and surrendered their estate into the hands of the Insolvent Court, it becomes a matter for the consideration of the Government, what steps they will pursue in the conduct of their business, seeing that Messrs. Lloyd, Beilby, and Co. will be unable to enter into any contract, or give a discharge, and also unable to delegate such power to any other person.

I have, &c.,

THE HONORABLE
THE TREASURER.

GEO. K. INGELOW,
Manager.

THE UNDER SECRETARY, TREASURY, to G. K. INGELOW, Esq.

The Treasury, New South Wales,

14 September, 1859.

SIR,

I have the honor to acknowledge the receipt of your letter of this date, No. 9-43, referring to one from this Office of the 15th ultimo, in which you are requested to instruct your Head Office to continue to make payments to Messrs. Lloyd, Beilby, and Co., the Government Commercial Agents in London, on certain conditions; and, in reply, I am directed to inform you, that in terms of the last clause of the agreement entered into by Messrs. G. A. Lloyd and Co. with this Government, it is expressly set forth "that in case the said Agents shall become insolvent or bankrupt, or shall make any Deed of Arrangement or Assignment, for the benefit of their creditors, then these presents shall thenceforth cease and be void, and the authority hereby given to the said Agents, be at an end."

As

As this event has actually taken place, Messrs. G. A. Lloyd and Co. having, on the 12th instant, surrendered their estate into the hands of the Insolvent Court, I am further instructed to state, that the agency of that Firm, in terms of the agreement above quoted, ceased and became void on that date.

The termination in this manner of the contract with Messrs. Lloyd, Beilby, and Co., having made it necessary to arrange for the conduct of the Commercial Business of the Government, the Treasurer directs me to inform you that, as a temporary measure, the purchase and shipment of Railway Materials will be effected under the supervision of Captain Galton, to whom special instructions on the subject have been given by the Commissioner of Internal Communications in this Colony, Captain Martindale, R.E. ; and that the purchase and supply of the Rifles, mentioned in my letter to you of the 13th ultimo, will be completed under the order of Major-General Hay, as at first intended, and indicated to you in the said letter.

I am, therefore, to request that you will disburse all charges for the service of this Government, when certified by either of the above-named officers, and accompanied by such Vouchers, Bills of Lading, or Invoices, as the nature of the service may, in your judgment, require.

G. K. INGELOW, Esq.,
Manager Oriental Bank.

I have, &c.,
HENRY LANE,
Under Secretary.

THE UNDER SECRETARY, TREASURY, to MESSRS. G. A. LLOYD AND Co.

The Treasury, New South Wales,
14 September, 1859.

GENTLEMEN,

In terms of the last clause of the agreement entered into by your firm on the 18th of August, 1857, to conduct the Government Commercial Agency of this Colony for a period of three years, through your constituents in London, Messrs. Lloyd, Beilby, and Co., it is set forth—

“That in case the said Agents shall become insolvent or bankrupt, or shall make any Deed of Arrangement or Assignment for the benefit of their creditors, then these presents shall thenceforth cease and be void, and the authority hereby given to the said Agents be at an end.”

As the contingency thus provided against has actually taken place, by your having on the 12th instant declared yourselves bankrupt, and surrendered your estate into the hands of the Chief Commissioner of the Insolvent Court, I am instructed by the Honorable the Treasurer to give you notice, that, in accordance with the conditions of the contract above quoted, the powers of your House as the Commercial Agents of the Government of this Colony ceased and became void on the 12th instant.

I am at the same time to express the regret of Mr. Weekes that circumstances constrain this Government to take the course thus indicated.

The Commercial Business of the Government will, for the present, be conducted under the superintendence of Captain Galton, to whom the Treasurer trusts your House will afford their co-operation and advice.

MESSRS. GEORGE A. LLOYD AND Co.,
Sydney.

I have, &c.,
HENRY LANE,
Under Secretary.

MESSRS. G. A. LLOYD AND Co. to THE UNDER SECRETARY, TREASURY.

Sydney, New South Wales,
15 September, 1859.

SIR,

We have the honor to acknowledge receipt of your letter of the 14th instant, intimating that in consequence of our having declared ourselves bankrupt, the agreement we entered into 18th August, 1857, for the Commercial Agency of the Government of this Colony, in London, became cancelled, and that the powers of our House in London, as such Commercial Agents, became void on the 12th instant.

We

We deeply regret the necessity which has induced this decision, but are fully aware that the Government had no alternative.

It is a source of much gratification that during the whole period we have held this important appointment no cause has arisen to invite an expression of dissatisfaction, and that the Government are not in any way compromised by our failure.

We communicated by yesterday's mail the necessary instructions to our present London Agent, Mr. B. S. Lloyd, and beg to give you assurance on his behalf that he will gladly afford your representative all the assistance in his power to forward the interests of the Government.

We beg to express our sense of obligation for the uniform attention we have received, and also for the consideration manifested towards us subsequent to the knowledge of our London Firm's suspension.

We have, &c.,

GEO. A. LLOYD AND CO.

HENRY LANE, Esq.,

Under Secretary, Treasury.

*The Treasury, New South Wales,
26 September, 1859.*

GOVERNMENT COMMERCIAL AGENCY.
TO MERCHANTS AND OTHERS.

NOTICE is hereby given, that Tenders will be received at this Office until noon of Friday, the 7th day of October, 1859, from parties willing to undertake the conduct of all the Commercial Business of the Government of this Colony, in London, during the term of three years, commencing on the first day of January, 1860, upon the conditions hereafter specified.

2. The business to be conducted will be strictly confined to such transactions as any mercantile house may properly undertake; it will not include those usually classed as Banking transactions, or those connected with Immigration.

3. The whole of the supplies for the Colonial Storekeeper's Department, as well as all Railway Plant and Rolling Stock, will be included in this arrangement.

4. Funds will be provided in London by the Government to the extent of the various indents, to be drawn for by the Agent, in such sums only as may from time to time be required, by his drafts on the Oriental Bank Corporation, London.

5. As the Agent will thus be placed in a position to transact business to the greatest advantage, and to purchase on the most favorable terms, all allowances, deductions, or rebates of every kind and description, must be credited to the Government. Any departure from this condition shall at once terminate the agreement. All documents connected with purchases made by the Agent (such as bills of lading, invoices, &c.,) shall be handed in to the Bank, for transmission to this Government, prior to the departure of the monthly mail.

6. Freight for the various shipments must be arranged for at the lowest current rates.

7. The party whose tender may be accepted, will be required to furnish security in the Colony, to the extent of £25,000, for the due performance of the Contract.

8. Any further particulars, and information in matters of detail which may be required, can be obtained on application at this Office.

9. It is requested that all Tenders sent in may be endorsed on the envelope, "*Government Commercial Agency in London.*"

10. The Government do not bind themselves to accept the lowest, or indeed any Tender, unless it shall appear to be clearly advantageous to the public interest.

E. C. WEEKES.

GENTLEMEN,

In reply to your Tender for the Government Commercial Agency, I am directed to inform you that, it having been found advisable to modify the terms of the advertisement dated the 26th ultimo, fresh Tenders are invited, and a notice to that effect inserted in the *Government Gazette* of this date.

I have, &c.,

HENRY LANE,
Under Secretary.

*The Treasury, New South Wales,
7 October, 1859.*

GOVERNMENT COMMERCIAL AGENCY.
TO MERCHANTS AND OTHERS.

It being considered advisable to modify the terms relating to the Government Commercial Agency, notice is hereby given, that fresh Tenders will be received at this Office until noon of Tuesday, the 11th instant, from parties willing to undertake the conduct of all the Commercial Business of the Government of this Colony, in London, during the term of three years, commencing on the first day of January, 1860, upon the conditions hereinafter specified.

2. The business to be conducted will be strictly confined to such transactions as any mercantile house may properly undertake; it will not include those usually classed as Banking transactions, or those connected with Immigration

3. The whole of the supplies for the Colonial Storekeeper's Department, as well as all Railway Plant and Rolling Stock, will be included in this arrangement.

4. Payments on account of the several Indents will be made to the Vendors monthly, by the Oriental Bank, London, on production of Invoices and Bills of Lading, duly certified by the Agent; or, if preferred, the Agent may make cash purchases of all the supplies and pay for the same out of his own funds, repayment being afterwards made through the Oriental Bank, on the production, by the Agent, of receipted Invoices and Bills of Lading.

5. As the Agent will thus be placed in a position to transact business to the greatest advantage, and to purchase on the most favorable terms, all allowances, deductions, or rebates of every kind and description, must be credited to the Government. Any departure from this condition shall at once terminate the agreement. All documents connected with purchases made by the Agent, (such as bills of lading, invoices, &c.,) shall be handed in to the Bank, for transmission to this Government, prior to the departure of the monthly mail.

6. Any further particulars, and information in matters of detail which may be required, can be obtained on application at this Office.

7. It is requested that all Tenders sent in may be endorsed on the envelope, "*Government Commercial Agency in London.*"

8. The Government do not bind themselves to accept the lowest, or indeed any Tender, unless it shall appear to be clearly advantageous to the public interest.

The Treasury, New South Wales,
12 October, 1859.

GENTLEMEN,

I am directed to acknowledge the receipt of your letter in reply to the Treasury Notice of the 7th instant, inserted in the *Government Gazette* of that date, in reference to the Government Commercial Agency, and to inform you that, more advantageous terms having been offered to the Government, your proposal is declined.

I have, &c.,

HENRY LANE,
Under Secretary.

MESSRS. WILLIS, MERRY, AND Co., to THE COLONIAL TREASURER.

Sydney, 11 October, 1859.

SIR,

We have the honor to tender for the conduct of the Commercial Business of the Government of this Colony in London, in terms of, and subject to the conditions named in, the Treasury Notice dated 7th October.

For transacting such business we would pay to the Government an amount equal to £1 per cent.—say one per cent.—on the value of all Indents executed for them, which assuming the annual amount to be £70,000, would be equivalent to an annual payment of £700, or for the three years to a Bonus of £2,100.

We have, &c.,

THE HONORABLE
THE COLONIAL TREASURER.

WILLIS, MERRY, & CO.

COLONIAL AGENCY IN LONDON.

9

THE UNDER SECRETARY, TREASURY, to MESSRS. WILLIS, MERRY, AND CO.

The Treasury, New South Wales,
12 October, 1859.

GENTLEMEN,

I am directed to acknowledge the receipt of your letter of the 11th instant, in reply to the Treasury Notice of the 7th of October, as inserted in the *Government Gazette* of that date, in reference to the Government Commercial Agency, and to inform you, that the proposal made by you, viz., "that you will pay to the Government an amount equal to one per cent. on the value of all Indents executed for them," being considered the most advantageous, has been recommended to the Executive Council for acceptance.

I have, &c.,

MESSRS. WILLIS, MERRY, AND CO.,
Sydney.

HENRY LANE,
Under Secretary.

THE UNDER SECRETARY, TREASURY, to G. K. INGELOW, Esq.

The Treasury, New South Wales,
13 October, 1859.

SIR,

Referring to my letter of the 14th ultimo, in which you were informed that the agreement of Messrs. Lloyd, Beilby, and Co., as Commercial Agents of this Government, terminated on the 12th ultimo, owing to the insolvency of that Firm; I am now directed to inform you, that in consequence of such event, the Honorable the Treasurer called for fresh Tenders for the conduct of this business for the term of three years, which Tenders were opened at this Office on the 12th instant; and that of Messrs. Willis, Merry, and Co., being considered the most advantageous to the public service, was accepted.

You are, therefore, requested to acknowledge that Firm as the Government Commercial Agents from this date.

It having been determined that this Agency shall be conducted upon somewhat different principles to that lately terminated, I am also instructed to inform you, that the proposed method of proceeding with reference to drafts on your Bank will be as follows: Payments on account of the several Indents will be made to the Vendors monthly, by your Bank in London, on the production by them of Invoices and Bills of Lading, duly certified by the Agents; or, if preferred, the Agents may make cash purchases of all the supplies, and pay for the same out of their own funds, repayment being made through your Bank on the production, by the Agents, of receipted Invoices and Bills of Lading.

As the production, by the Agents or the Vendors, of receipted Invoices or Bills of Lading will relieve your Bank of any additional responsibility, the Treasurer hopes for the concurrence of your Head Office in this new arrangement.

I have, &c.,

G. K. INGELOW, Esq.,
Manager, Oriental Bank Corporation.

HENRY LANE,
Under Secretary.

SYDNEY INSURANCE COMPANY'S ACT AMENDMENT BILL.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and Report was referred, on the 3rd February, 1860, the "*Sydney Insurance Company's Act Amendment Bill*," beg leave to report to your Honorable House,—

That they have carefully perused the Bill referred for their consideration, and examined the Secretary to the Company* (whose evidence will be found appended hereto), and that the Preamble of the Bill having been satisfactorily proved by the evidence of that gentleman, they proceeded with the several clauses of the Bill, in the consideration of which they have not found it necessary to make any amendment.

And your Committee now beg to lay before your Honorable House the Bill without amendment.

E. C. WEEKES,
Chairman.

COLONIAL CIVIL SERVICE.

(PENSIONS AND GRATUITIES TO OFFICERS OF, ON SUPERANNUATION, REDUCTION,
OR ABOLITION OF OFFICE.)

Presented to both Houses of Parliament, by Command.

No. 1.

SECRETARY OF STATE FOR THE COLONIES to GOVERNOR GENERAL.

(Circular.)

Downing-street, 19 May, 1859.

SIR,

I transmit herewith, for your information, a copy of the New Superannuation Act, 22 Vict., cap. 26, together with a new form of Return, which the Lords Commissioners of the Treasury have adopted, to be used in all cases of claims to pensions which may be submitted for their consideration.

I have, &c.,

CARNARVON,

(In the absence of Sir E. B. Lytton.)

GOVERNOR SIR W. T. DENISON, K.C.B.,
&c., &c., &c.
New South Wales.

[Enclosure 1 in No. 1]

An Act to amend the Laws concerning Superannuations and other allowances to Persons having held Civil Offices in the Public Service. [19 April, 1859.]

WHEREAS an Act was passed in the Session holden in the fourth and fifth years of King ^{4 and 5 W. 4.} William the Fourth, chapter twenty-four, "to alter, amend, and consolidate the Laws for ^{c. 24.} regulating the pensions, compensations, and allowances to be made to persons in respect of "their having held Civil Offices in His Majesty's service:" And whereas by an Act of the Session holden in the twentieth and twenty-first years of Her Majesty, chapter thirty-^{20 and 21 Vict.} seven, section twenty-seven of the first recited Act, by which an abatement was directed to be made from the salaries of civil servants entitled to superannuation allowance, was repealed: And whereas it is desirable further to amend the said Act as hereinafter mentioned: Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

I. Sections ten, eleven, thirteen, fourteen, fifteen, seventeen, nineteen, and twenty-four of the said Act of the fourth and fifth years of King *William* the Fourth are hereby repealed, but such repeal shall not affect any pension, compensation, or superannuation allowance granted or act done before the passing of this Act. ^{Sections 10, 11, 13, 14, 15, 17, 19, and 24 of 4 and 5 W. 4, c. 24, repealed.}

II. Subject to the exceptions and provisions hereinafter contained, the superannuation allowance to be granted after the commencement of this Act to persons who shall have served in an established capacity in the permanent civil service of the State, whether their remuneration be computed by day pay, weekly wages, or annual salary, and for whom provision shall not otherwise have been made by Act of Parliament, or who may not be specially excepted by the authority of Parliament, shall be as follows: (that is to say:)

To any person who shall have served ten years and upwards, and under eleven years, an annual allowance of ten sixtieths of the annual salary and emoluments of his office:

For

NOTE.—Former Paper, 150 A, laid before the Legislative Assembly on the 5th of April, 1859.

For eleven years, and under twelve years, an annual allowance of eleven sixtieths of such salary and emoluments :

And in like manner a further addition to the annual allowance of one sixtieth in respect of each additional year of such service, until the completion of a period of service of forty years, when the annual allowance of forty sixtieths may be granted ; and no addition shall be made in respect of any service beyond forty years :

Provided always that if any question should arise in any department of the public service as to the claim of any person or class of persons for superannuation under this clause, it shall be referred to the Commissioners of the Treasury, whose decision shall be final.

This Act to apply to persons already in the civil service, but without prejudice to existing rights.

III. Nothing herein contained shall interfere with the grant to the officers and clerks who entered the public service prior to the fifth day of *August* one thousand eight hundred and twenty-nine, of such superannuation allowances as might hereafter have been granted to them under section nine of the said Act of the fourth and fifth years of King *William* the Fourth, or shall prevent, restrict, or diminish any other superannuation allowance, pension, gratuity, or compensation which, if this Act had not been passed, might hereafter have been granted to any person who shall have entered the public service before the passing of this Act ; but, except as aforesaid, the provisions hereinafter contained shall apply as well to persons who have already entered the public service, whether before or after the said fifth day of *August* one thousand eight hundred and twenty-nine, as to those who may hereafter enter the public service.

Provision for computing amount of superannuation to persons holding professional and other special offices.

IV. It shall be lawful for the Commissioners of the Treasury from time to time, by any order or warrant, to declare that for the due and efficient discharge of the duties of any office or class of offices to be specified in such order or warrant, professional or other peculiar qualifications, not ordinarily to be acquired in the public service, are required, and that it is for the interest of the public that persons should be appointed thereto at an age exceeding that at which the public service ordinarily begins ; and by the same or any other order or warrant to direct that when any person now holding or who may hereafter be appointed to such office or any of such class of offices shall retire from the public service, a number of years not exceeding twenty, to be specified in the said order or warrant, shall, in computing the amount of superannuation allowance, which may be granted to him under the foregoing section of this Act, be added to the number of years during which he may have actually served, and also to direct that in respect of such office or class of offices the period of service required to entitle the holders to superannuation may be a period less than ten years, to be specified in the order or warrant ; and also to direct that, in respect of such office or class of offices, the holder may be entitled to superannuation, though he may not hold his appointment directly from the Crown, and may not have entered the service with a certificate from the Civil Service Commissioners : provided always, that every order or warrant made under this enactment shall be laid before Parliament.

Allowances in cases of bodily injury.

V. It shall be lawful for the Commissioners of the Treasury to grant to any person who, being the holder of an office in respect of which a superannuation allowance may be granted, but not having completed the period which would have entitled him to a superannuation allowance, is compelled to quit the public service by reason of severe bodily injury, occasioned, without his own default, in the discharge of his public duty, a gratuity not exceeding three month pay for every two years of service, or a superannuation allowance not exceeding ten sixtieths of the annual salary and emoluments of his office.

Power to Treasury to grant gratuities in case of short service.

VI. It shall be lawful for the Commissioners of the Treasury to grant to any person who, being the holder of an office in respect of which a superannuation allowance may be granted, is constrained, from infirmity of mind or body, to leave the public service before the completion of the period which would entitle him to a superannuation allowance, such sum of money by way of gratuity as the said Commissioners may think proper, but so as that no such gratuity shall exceed the amount of one month's pay for each year of service.

Power to Treasury to grant allowances on abolition of offices.

VII. It shall be lawful for the Commissioners of the Treasury to grant to any person retiring or removed from the public service in consequence of the abolition of his office, or for the purpose of facilitating improvements in the organization of the department to which he belongs, by which greater efficiency and economy can be effected, such special annual allowance by way of compensation as on a full consideration of the circumstances of the case may seem to the said Commissioners to be a reasonable and just compensation for the loss of office ; and if the compensation shall exceed the amount to which such person would have been entitled under the scale of superannuation provided by this Act if ten years were added to the number of years which he may have actually served, such allowance shall be granted by Special Minute, stating the special grounds for granting such allowance, which minute shall be laid before Parliament, and no such allowance shall exceed two thirds of the salary and emoluments of the office.

Condition of grant of full superannuations to public servants not heads of departments.

VIII. It shall not be lawful for the Commissioners of the Treasury to grant the full amount of superannuation allowance which can be granted under this Act to any person not being the head officer or one of the head officers of a department, unless upon production of a certificate (signed by the head officer of the department, or by two head officers, if there be more than one) that he has served with diligence and fidelity to the satisfaction of such head officer or officers ; and in every case in which any superannuation allowance is granted, after the refusal of such certificate, the minute granting it shall state such refusal and the grounds on which the allowance is granted.

Power to Treasury to grant allowances for special services.

IX. Provided, that it shall be lawful for the Commissioners of the Treasury to grant to any person any superannuation, compensation, gratuity, or other allowance of greater amount than the amount which might be awarded to him under the foregoing provisions, when special services rendered by such person, and requiring special reward, shall

shall appear to them to justify such increase, but so that such allowance shall in no case exceed the salary and emoluments enjoyed by the grantee at the time of retirement, and the grounds of every such increase shall be stated in a Minute of the Treasury, which shall be laid before Parliament; and it shall be lawful for the said Commissioners to grant to any person any such allowance of less amount than otherwise would have been awarded to him where his defaults or demerit in relation to the public service appear to them to justify such diminution.

and for demerits in individual cases.

X. It shall not be lawful to grant any superannuation allowance under the provisions of this Act to any person who shall be under sixty years, unless upon medical certificate to the satisfaction of the Commissioners of the Treasury that he is incapable, from infirmity of mind or body, to discharge the duties of his situation, and that such infirmity is likely to be permanent.

Evidence of infirmity of persons under sixty.

XI. Every person to whom a superannuation or compensation allowance shall have been granted before he shall have attained the age of sixty years shall, until he has attained that age, be liable to be called upon to fill, in any part of Her Majesty's dominions in which he shall before have served, any public office or situation under the Crown for which his previous public services may render him eligible; and if he shall decline, when called upon to do so, to take upon him such office or situation, or shall decline or neglect to execute the duties thereof satisfactorily, being in a competent state of health, he shall forfeit his right to the compensation or superannuation allowance which had been granted to him.

Persons superannuated under sixty may be required to serve again.

XII. And whereas it will be for the advantage of the public service that officers holding employments entitling them to superannuation allowances under this or other Acts shall be eligible for other public employments at home and abroad, without forfeiting their claims to such allowances:

Persons to retain right to superannuation on transfer to other employment under the Crown.

Every officer already or hereafter to be transferred from employment entitling him to superannuation allowance to public employment under the Crown not so entitling him shall be entitled, on his ultimate retirement from the public service, to the same allowance as if he had continued to hold the vacated appointment and at the same rate of salary as when the same was vacated, subject nevertheless to the conditions which would in that case have been applicable with respect to the grant of such allowance; provided that it shall be lawful for the Commissioners of the Treasury, in the case of officers transferred to Governorships and Lieutenant-Governorships of Colonies, and other high offices abroad, conferred for a limited period, to grant such superannuation allowance to such officers on the expiration of such term of service without a renewal of public employment; but any officer to whom such grant is made while under the age of sixty years shall be subject to the same liability to be called upon to fill office under the Crown, as herein provided concerning other persons under that age to whom like allowances are granted.

XIII. All orders, warrants, and minutes by this Act directed to be laid before Parliament shall be laid before both houses of Parliament within fourteen days after the making thereof if Parliament be sitting, and if Parliament be not sitting then within fourteen days after the next meeting thereof.

Orders, &c., within what time to be laid before Parliament.

XIV. No pension shall be granted under the provisions of section six of the Act of the fifty-seventh year of King *George* the Third, chapter sixty-five, to any person who shall not have had a seat in one of the Houses of Parliament during the period or one half of the period for which he has held office, as in the said section is mentioned.

Section 6 of 57 G. 3, c. 65, only to apply to officers having had seats in Parliament.

XV. The several sections mentioned in the schedule hereto of the several Acts of Parliament, also therein mentioned, shall be construed as if this Act, instead of the said Act of the fourth and fifth years of the reign of King *William* the Fourth, had been referred to in the said sections; and such other enactments as refer to the scale of superannuation allowance established by the provisions hereby repealed of the said Act of King *William* the Fourth shall be construed as if the scale established by this Act had been referred to.

Acts in schedule to be construed as referring to this Act.

XVI. All superannuations, compensations, gratuities, and other allowances granted or hereafter under this Act to be granted shall be paid to the persons entitled to receive the same without any abatement or deduction in respect of any taxes or duties whatever at present existing, except the tax upon property or income.

Allowances to be paid free from taxes.

XVII. For the purposes of this Act, no person hereafter to be appointed shall be deemed to have served in the permanent civil service of the State unless such person holds his appointment directly from the Crown, or has been admitted into the civil service with a certificate from the Civil Service Commissioners; nor shall any person, already appointed to any office, be held to have served in the permanent civil service as aforesaid, unless such person belong to a class which is already entitled to superannuation allowance, or to a class in which, if he had been appointed thereto subsequently to the passing of this Act, he would, as holding his appointment directly from the Crown, or as having been admitted into the civil service with such certificate as aforesaid, have become entitled to such allowance; and no person shall be entitled to any superannuation allowance under this Act, unless his salary or remuneration has been provided out of the consolidated fund of the United Kingdom of *Great Britain* and *Ireland*, or out of moneys voted by Parliament.

Who to be deemed civil servants.

XVIII. So much of the said Act of the fourth and fifth years of King *William* the Fourth, chapter twenty-four, as is now in force and not hereby repealed, and this Act, shall be construed together as one Act.

4 & 5 W. 4., c. 24., and this Act to be construed together.

XIX. It shall be sufficient, in citing this Act, to use the expression, "The Superannuation Act, 1859."

Short title.

Statement, in terms of sec. 8 of the Superannuation Act of 1859, that the applicant "has discharged his duties with diligence and fidelity, to the satisfaction of the head officer or officers of his department," to be signed by any two of such head officers, if there shall be more than one, or by such head officer, if there should be but one, together with "such a statement as will exhibit the merit, and value, and labor of the services of the person recommended, embracing as long a period of his public service as can be authentically stated," together with observations as to special services, suspension, reprimand, &c., with full particulars of any injuries received on duty, or other claims or matters for consideration.

No. 2.

SECRETARY OF STATE FOR THE COLONIES to GOVERNOR GENERAL.

(Circular.)

Downing-street, 27 June, 1859.

SIR,

26 May, 1859.

I transmit, for your information and guidance, a copy of a letter which has been received from the Assistant Secretary to the Treasury, relating to the amounts of pension to be awarded to Colonial officers under the New Superannuation Act, 22 Vict., cap. 26.

In

* Here state the description of allowance for which the applicant is recommended, viz., superannuation, compensation, or gratuity. In the case of persons claiming under the 4th clause of the Act of 1859, this should be stated, and reference should be made to the warrant or order under which the claim is made.

28 December,
1859.

awarding of compensation allowances on abolition of office. You will bear in mind that the new Act applies in terms to salaries paid out of home funds only; but that in Crown Colonies, the Board of Treasury adopts the Act as a guide in determining questions of pensions. In representative Colonies the same rules should be considered as binding so far as they may not be modified by local law. I also transmit to you a copy of a further letter from the Board of Treasury containing observations which the Lords Commissioners consider may be useful in applying the regulations laid down in their Minute of the 14th of June last.

GOVERNOR SIR W. T. DENISON, K.C.B.,
&c., &c., &c.

I have, &c.,
NEWCASTLE.

[Enclosure 1 in No. 3.]

Treasury Chambers, 2 July, 1859.

Sir,

I am commanded by the Lords Commissioners of Her Majesty's Treasury to transmit herewith to you, for the information of the Duke of Newcastle, copy of their Lordships' Minute, dated 14th ultimo, on the subject of retiring allowances to be granted to persons who may have entered the public service previous to the passing of the Act 22 Victoria, cap. 26, whether before or after the 5th of August, 1829, also for awarding compensation allowances for abolition of office, &c.

I am, &c.,
W. H. STEPHENSON.

Herman Merivale, Esq.,
&c., &c., &c.

[Enclosure in No. 3.]

TREASURY MINUTE.—Dated 14 June, 1859.

My Lords have under consideration the report of the Committee appointed under the Board Minute of 20th May, 1859, upon the provisions of the Superannuation Act, 22 Vict., c. 26.

My Lords approve of the Regulations proposed by the Committee for ascertaining the amount of retiring allowances to be granted to persons who may have entered the civil service previous to the passing of the Act, and whether before or after the 5th August, 1829; also for awarding compensation allowances for abolition of office.

These regulations are as follow :—

I. As regards those who may have entered the civil service before 5th August, 1829.

1. That the maximum amount of the superannuation allowance for the quinquennial period, under the 4 and 5 Wm. IV., cap. 24, sec. 9, preceding that through which the applicant is passing be estimated.
2. That to that maximum there be added for each year in excess of the preceding quinquennial period, $\frac{1}{2}$ of $\frac{1}{2}$ equal to $\frac{1}{4}$ of the applicant's salary and emoluments.
3. That the applicant be considered entitled to this amount under ordinary circumstances.

A larger amount may be awarded in cases of special merit, but within the maximum of the quinquennial period.

A smaller amount may be awarded in case of demerit.

In either of these cases the claim to be submitted to the full Superannuation Committee, and a note to be made of the grounds of the decision.

II. As regards those who may have entered the service since 5th August, 1829 :—

1. That the maximum amount of the superannuation allowance for the septennial period, under the 4 and 5 Wm. IV., cap. 24, sec. 10, preceding that through which the applicant is passing be estimated.
2. That to that maximum there be added for each year in excess of the preceding septennial period $\frac{1}{2}$ of $\frac{1}{2}$ equal to $\frac{1}{4}$ of the applicant's salary and emoluments.
3. As in the former cases, the applicant shall be considered entitled to this amount under ordinary circumstances.

A larger amount may be awarded in case of special merit, but within the maximum of the septennial period.

A smaller amount may be awarded in case of demerit.

In either of these cases the claim shall be submitted to the full Superannuation Committee, and a note be made of the grounds of the decision.

4. When a higher rate of superannuation would accrue under the 22nd Vict., cap. 26, that higher rate shall be allowed.

III. That in no case shall any fractional part of the year be allowed.

IV. That with respect to cases of abolition of office which may arise under clause 7 of the 22nd Vict., cap. 26, persons who shall have served *twenty* years and upwards, a period of

ten

ten years shall be added to their actual service in computing their retiring allowance under the circumstances described in the clause in question :—

To persons who shall have served under twenty years and not less than *fifteen* years, a period of *seven* years shall be added.

To persons who shall have served under fifteen years, and not less than *ten*, a period of *five* years shall be added.

To persons who shall have served under ten years and not less than *five*, a period of *three* years shall be added.

To persons who shall have served *less than five* years an allowance shall be awarded calculated at the rate of one sixtieth for each year of service, with an addition of one year or one sixtieth.

In consideration, however, of the very small allowances which would frequently have to be granted in these latter cases, my Lords will be prepared to entertain any application which may be made to them to commute such annual allowances for fixed payments, calculated at five years' purchase.

With regard to persons appointed or to be appointed subsequently to the passing of the Act of 22 Vic., my Lords observe that the language of the Act is precise, and that such persons are to be held entitled to the retiring allowances prescribed by the 2nd section of the Act, provided they fulfil the condition of the 17th section, and provided my Lords do not find it necessary to exercise the power conferred on them by the 9th section, of reducing the allowance, on account of the demerits of the person claiming it.

The parties entitled to be considered civil servants under the 17th clause, are accurately stated in the Report of the Committee as follows, viz. :—

I. Persons hereafter to be appointed :—

A.—Those holding appointments directly from the Crown.

B.—Those admitted into the civil service with a certificate from the Civil Service Commissioners.

II. Persons appointed to office before 19th April, 1859,—the date of the passing of Superannuation Act of 1859 :—

A.—Those belonging to a class already entitled to superannuation allowance.

B.—Those holding appointments directly from the Crown.

C.—Those admitted into the civil service with a certificate from the Civil Service Commissioners, or belonging to a class which is hereafter to be admitted.

As regards the provisions of the 4th section of the Act, under which my Lords are empowered to admit the claims to superannuation of persons not fulfilling the conditions of the 17th section, and to add a number of years, not exceeding twenty, to the period of service in certain cases, for the purpose of computing the amount of the retiring allowance, my Lords are pleased to declare that the following offices should be considered as entitling their holders to the benefits of the Act, though they may not have fulfilled the conditions of the 17th section, and that the number of years to be added to the service of the officers for the purpose of computation, should be—

For the 1st class, ten years.

For the 2nd „ seven years.

For the 3rd „ five years.

First Class (ten years.)

Under Secretaries of State,
Assistant Secretary to the Treasury,
Counsel for Drawing Bills,
Solicitors to Public Departments,
Police and Stipendiary Magistrates,
Chief Commissioner of Police,
Medical Officers attached to the Privy Council.
Chairman of Directors of Convict Prisons,
Inspector General for Art,
Director of the National Gallery.

Second Class (seven years).

Legal Assistants at—

Board of Trade,
Colonial Office,
Poor Law Board,
And other Departments ;

Directors of Convict Prisons,
Commissioners of Police,
Professors and Masters of the Royal Military
College and similar Establishments ;
Medical men employed in the Civil Service, and
giving their whole time ;

Inspectors

Inspectors of Mines,
 " Factories,
 " Coal-mines,
 " Anatomy,
 " Constabulary,
 " Prisons and Reformatories,
 " Poor Law.

Third Class (five years).

Government Chaplains of Convict Prisons,
 Inspectors of Schools,
 " Art,
 Translator at the Foreign Office.

My Lords will add to the foregoing list any other offices, which may, on full consideration, appear to be properly within the scope of the 4th section of the Act.

[Enclosure 3 in No. 3.]

Treasury Chambers, 28 December, 1859.

Sir,

With reference to the letter of this Board, dated the 2nd July last, enclosing a copy of the Minute of the Lords Commissioners of Her Majesty's Treasury, of the 14th June, 1859, upon the report of the Committee of this Department, on the provisions of the Superannuation Act 22 Vic., cap. 26, I am directed by their lordships to request that you will state to the Duke of Newcastle that they are of opinion that the Minute in question should be communicated to the Governors of the several Colonies, with reference to the Circular addressed to them on the 31st May last, with the following observations, which their lordships consider may be useful in applying the regulations therein laid down.

The two first regulations, relating to the mode of calculating the pensions, and the allowance of the proportions of fifths and sevenths, are identical with the instructions contained in the Circular of the 20th July, 1849.

The third regulation, that no fractional part of a year be allowed in applying the scale of sixtieths, has been rendered necessary by the second section of the Act above quoted.

The fourth regulation, relating to the pensions to be granted on abolition of office, defines the additional proportions to be granted on account of such abolition.

The next clause of the Minute defines the class of civil servants entitled to the benefit of the Act, and although it has reference, in the form presented, only to persons appointed to offices in this country, the regulations may properly be applied, as far as practicable, to the civil officers in the service of Colonial Governments.

The latter portion of the Minute regulates the grant of pensions to professional officers, under the fourth section of the Act.

Their lordships are not aware of any reason why the provisions of this section, as part of the general measure, should not be applied to cases that may arise in the Colonies.

The classification of the offices in this Minute has been drawn up with reference to the offices in existence in this country.

A similar classification may be applied to corresponding offices in the Colonies; and the Governors should be instructed, in submitting cases of professional officers, under the fourth section of the Act, to report their opinion in regard to the class under which such officer should come.

I am, &c.,

G. ARBUTHNOT.

H. Merivale, Esq.

1859.

NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(REPORT OF TRUSTEES FOR 1858.)

Presented to both Houses of Parliament, by Command.

REPORT OF THE TRUSTEES OF THE AUSTRALIAN MUSEUM, FOR THE YEAR ENDING 31 DECEMBER, 1858.

TO HIS EXCELLENCY THE GOVERNOR GENERAL,
&c., &c., &c.

1. The Trustees of the Australian Museum have the honor to submit to your Excellency this, their fifth Annual Report.

2. Throughout the past year the Museum has been open to the public during three days of the week, from noon till 4 P.M. from May till September, and from noon till 5 P.M. from September till May; during that period it has been visited by seventeen thousand and eighty-eight (17,088) persons, without any detriment to the specimens contained in the Institution.

3. The Trustees have entered into a system of exchange of specimens with various foreign Museums, and they have already despatched cases of such duplicates as the Museum can spare to the following Institutions, viz. :—to the Royal Museum of Copenhagen, the Royal University Museum of Copenhagen, the Museum of Natural History of Hamburg, and the South African Museum at Cape Town; also to Monsr. Verreaux, of Paris, and Dr. Frick, of Honolulu, in return for specimens already received from them.

The arrival in Port Jackson of H. I. R. Majesty's Austrian Frigate "Novara," on a scientific mission, has enabled the Trustees to open a communication with the Austrian Government, and the Imperial Museum of Vienna. The Trustees despatched, by the "Novara," a large collection of Mammalia, Aves, and Ethnographical specimens, together with casts of the fossil skull and bones of the *Diprotodon*, and other extinct Australian Mammals. In exchange for these specimens the Trustees expect to receive from the Imperial Museum at Vienna an equivalent in such desiderata as the Australian Museum is most in need of.

In return for a series of casts of Australian fossil animals, kindly taken to the British Museum, on behalf of the Trustees, by Randolph J. Want, Esquire, they have received from the Trustees of the British Museum, through Professor Owen, casts of the skulls of *Sivatherium giganteum*; *Megatherium Americanum*; *Ursus spelæus*; of the foot of *Didus ineptus*; and bones of the *Deinornis* or "Moa" of New Zealand. A large collection of Chilean birds (unfortunately in bad condition), and an interesting series of the Mollusca of Chili, have been received from Dr. R. Philippi, the Director of the Museum of Santiago de Chili, in exchange for specimens transmitted last year from this Institution.

4. The donations during the past twelve months have added many new objects to the Museum; amongst the most important of which may be recorded the following, viz. :—An

extensive collection of rocks and minerals from Victoria and South Australia, &c., presented by His Excellency the Governor General; a collection of Miocene fossils from Europe, by the Geologist of H. I. R. Majesty's Frigate "Novara," on behalf of the Imperial Museum of Vienna; two valuable series of fossil bones,—one by F. N. Isaac, Esq., of Gowrie, Darling Downs, and the other by F. W. Roche, Esq., of Dalby; a sea-bear (*Arctocephalus Australis*), by Mr. T. Savage; a large *Carcharias*, by Messrs. Roylance & King; and a valuable set of geological works, by Professor Haidinger, of Vienna. Upwards of three hundred persons have also become donors to the Museum during the past year, of specimens of more or less value to the Institution.

5. The Trustees have expended the sum of £99 5s. 10d., in securing to the Museum such objects of value and interest as have from time to time been presented to them on favorable terms. Of this sum, £60 was devoted to the purchase of an extensive collection of recent and fossil mollusca, from Capt. Radou.

Owing to the liberality of the Government, in granting the sum of ninety-seven pounds (£97), the Trustees have been enabled to possess themselves by purchase, of the scientific library of the late William Swainson, Esq., F.R.S., amounting, in all, to 227 volumes.

The Trustees have also to acknowledge a liberal grant from the Legislature of five hundred pounds for the purchase of scientific works. They have prepared a list of books suitable to the requirements of the Institution, and have placed it in the hands of Professor Owen, George Bennett, Esq., and George Macleay, Esq., with a request that they, being in England, would kindly select the same, or such other works of a similar character as they may deem more advantageous.

6. The Trustees desire also to record the liberality of the Government in undertaking the repairs of the building which become necessary from time to time; also in granting the sum of £140 for the erection of book cases; and an addition of £200 to the annual endowment of the Museum.

7. The Trustees have to record the resignation of Randolph John Want, Esq., the Reverend Robert Lethbridge King, and Frederick Orme Darvall, Esq., as Elective Trustees of the Museum, and the election in their stead of Alfred Denison, Esq., Sir William Macarthur, and Alfred Roberts, Esq. The following gentlemen have been elected Honorary Correspondents on account of their important donations to the Museum, viz., Frederick Rayner, Esq., M.D., H.M.S. "Herald;" John Denis Macdonald, Esq., Assistant Surgeon, H.M.S. "Herald;" Lindsay Buckle Young, Esq., of Gladstone, Port Curtis; and Frederick Neville Isaac, Esq., of Gowrie, Darling Downs.

8. The Trustees are fully impressed with the necessity of having all the specimens properly classified and catalogued, as well as ticketed with their scientific and common names, &c. This important undertaking has been commenced, and has been carried on with as much rapidity as the present limited staff of the Institution will permit.

9. Having given this brief statement of the proceedings of the past year, the Trustees feel that they would not perform their duty to the Institution placed under their care, or to the public generally, for whose benefit it was established, were they not to call the attention of the Government to the deficient accommodation provided in the present building for even the existing specimens; and to the want of means at the disposal of the Trustees to enable them to secure the services of persons competent to undertake the classification of those specimens. The existing building contains only one large room fitted for the exhibition of specimens of Natural History. Into this space are crowded animals, birds, reptiles, fishes, a large collection of insects, crustacea, shells, and geological specimens; also, a variety of ethnographical objects, illustrative of the history of the Aborigines of Australia and of the Polynesian Archipelago; while a collection of casts from the antique, most valuable as illustrative of the highest condition of art, can only be seen in detached positions, in bad lights, and other interesting collections cannot be seen at all. The result of this state of things is, that while each department of Natural History is insufficiently represented, a large number of specimens being necessarily packed away in drawers, out of sight of the public, admission can only be given to see these during three days in the week, and that for a shorter period than is desirable. Were the building even capacious enough to receive
and

and exhibit in one room all the specimens at present in the possession of the Trustees, this latter inconvenience would still remain, as it would be absolutely necessary to keep the Museum closed during two or three days in the week, to enable those gentlemen upon whose gratuitous services the Trustees are obliged to rely for the classification of the specimens in particular branches of Natural History, to pursue their labors without interruption. The Trustees have already brought this subject under the notice of the Government, and have submitted a plan, by which, while the appearance of the present building would be improved, space would be given for the separate classification of all the existing specimens, and for the large additions which may reasonably be expected to flow into the Museum from New South Wales itself, as well as from other countries with which the Trustees are in correspondence. There can be little doubt that the amount of accommodation provided in the plan submitted by the Trustees, will not be in excess of the demands of the Institution.

As soon as the public are aware that a proper and convenient building is prepared for the reception of specimens, it is expected that contributions will pour in from all parts, and that collections will be offered for sale upon favorable terms. The Trustees beg, therefore, to urge upon the Government the necessity of commencing the erection of the additions to the present building with as little delay as possible.

With reference to the want of means at the disposal of the Trustees to enable them to procure the services of persons competent to carry out the proper classification of specimens, it is evident that this, which was not urgently felt until the building was in a state to admit of an attempt at scientific arrangement, will become more and more pressing every day.

The Trustees feel, indeed, that the time has already arrived when the services of a scientific Curator are indispensable to the Institution, and regret that the annual sum now at their disposal is inadequate to pay the salary of such an officer, in addition to those of the other necessary servants of the establishment. In reference to this point, it must also be borne in mind that, owing to the comparatively unexplored state of this portion of the Globe, specimens in every department of Natural History, hitherto undescribed, are being frequently discovered, and presented to the Museum; and it is highly desirable that the Curator should be possessed of sufficient learning, skill, and experience, to enable him to describe and classify such new contributions with accuracy.

In connection with the duties of Curator, the Trustees do not conceive they are overstepping the proper limit of their responsibility in suggesting to the Government the appointment of a competent Geologist and Mineralogist, whose services during a portion of the year could be made available to assist in the classification and arrangement of the minerals in the Museum, while during the remainder of the year he might be prosecuting his researches in the field, in connection with the Survey Department.

The Trustees may be allowed to remark that even now applications are being constantly made by persons visiting the Museum to see the collection of minerals. These applications indicate the existence of a want which could be only adequately supplied by the completion and proper classification of a series of specimens.

10. The Appendix contains an abstract of the Receipts and Expenditure of the Trustees on behalf of the Museum, during the year 1858.

11. Appendix No. 2 contains a list of the various donations to the Museum during the year 1858, with the names of the donors.

12. The Board have the honor to submit this as their Report for the year 1858, and in testimony thereof have caused their Corporate Seal to be hereunto affixed, this seventh day of April, one thousand eight hundred and fifty-nine.

(L.S.) E. DEAS THOMSON,
Chairman.

By order of the Trustees,
GEORGE FRENCH ANGAS,
Secretary.

APPENDIX No. 1.

CURRENT EXPENDITURE of the Trustees of the AUSTRALIAN MUSEUM, during the year 1858.

1858.		£ s. d.	1858.		£ s. d.

January 1	By Balance from last year	196 2 7

APPENDIX No. 2.

DONATIONS TO THE AUSTRALIAN MUSEUM, RECEIVED DURING THE YEAR 1858.

MAMMALIA.

	Presented by
Tail of <i>Delphinus metis</i> (Porpoise)	Master O'Brien.
A two-headed Calf (<i>Iusus naturæ</i>)	Mr. Peter Tancred.
A Mole (<i>Talpa</i>) from California	Mr. J. T. Thornton.
A Sea Bear (<i>Arctocephalus Australis</i>), Shoalhaven	Mr. Thomas Savage.
A young Bandicoot (<i>Perameles nasuta</i>), N. S. Wales	Master Wall.
A Porcupine Ant-eater (<i>Echidna Hystrix</i>), Illawarra	Mr. G. W. Brown.
A Native Bear (<i>Phascogale fuscus</i>), N. S. Wales	A. M'Lean, Esq.
An Opossum (<i>Phalangista vulpina</i>), N. S. Wales	W. S. Macleay, Esq.
Two specimens of the Pigmy Squirrel (<i>Acrobates pygmaeus</i>)	Miss Mackintosh.
An Opossum (<i>Phalangista vulpina</i>)	Mr. Trickett.
Two Opossums (<i>Phalangista vulpina</i>)	Mr. J. Turton.
A brush-tailed Phascogale (<i>Phascogale penicillata</i>)	Charles Blaxland, Esq.
A white variety of the vulpine Opossum	Mr. W. Dind.
A white-bellied Beaver-rat (<i>Hydromis leucogaster</i>)	Mr. W. Mayne.
A long-nosed Bandicoot (<i>Perameles nasuta</i>)	Mr. James Palmer.
A young <i>Perameles nasuta</i>	Mr. George Frost.
A black Opossum (<i>Phalangista</i>), Tasmania	Mr. James Palmer.
A Musang (<i>Viverra musanqa</i>), from Java	Mr. W. Beaumont.
A Brush-tailed rock Wallaby (<i>Petrogale penicillata</i>)	Mrs. George Bennett.
A Porcupine Ant-eater (<i>Echidna Hystrix</i>)	Mr. Walter Scott.
A Native Cat (<i>Dasyurus Maugei</i>), black variety	Mr. George Uhr.
Skeletons of an <i>Antechinus</i> , and a Bat (<i>Plecotus</i>)	Master J. A. Broughton.
An Axis Deer (<i>Cervus Axis</i>), from India	Mr. James Palmer.
A female and young of <i>Dasyurus Maugei</i>	Mr. J. B. Rodd.
Skeleton of the Dugong (<i>Halicore Dugong</i>), Moreton Bay	W. B. Tooth, Esq.
An Opossum (<i>Phalangista vulpina</i>), and a Native Cat (<i>Dasyurus Maugei</i>)	Mr. G. F. Sandrock.
3 specimens (one male and two females) of the Water Mole (<i>Ornitho- rhyinchus paradoxus</i>)	Dr. Bennett.
A Rock Wallaby (<i>Petrogale</i>)	Alfred Denison, Esq.
A Porcupine Ant-eater (<i>Echidna Hystrix</i>)	Mr. J. Barlow.
A Porcupine Ant-eater (<i>Echidna Hystrix</i>)	Mr. R. Macintosh.
A Great Kangaroo (<i>Macropus Major</i>)	Mr. H. R. Webb.
A female Wallaby (<i>Petrogale</i>)	E. S. Hill, Esq.
An <i>Echidna Hystrix</i>	Mr. J. Phegan.

AVES.

A Hornbill Cuckoo (<i>Scythrops Nova Hollandia</i>)	Master Reginald Blaxland.
A Green Parrot (<i>Lorius</i>); two specimens (male and female) of the } Indian Partridge; a small Lory from S. Sea Islands; a Parson } Bird (<i>Prothemadera Nova Zelandia</i>); a New Zealand Sheldrake } (<i>Tadorna</i>); an <i>Emberiza schaniculus</i> , or Black Headed Bunting. }	Alfred Denison, Esq.

AVES—(Continued).

Presented by

A Spine-tailed Swallow (<i>Acanthylis caudacuta</i>); a spotless Gallinule (<i>Porzana immaculata</i>), and an Allied Harrier (<i>Circus assimilis</i>); a Bittern (<i>Botaurus melanotus</i>); a Chinese Quail (<i>Synoicus Chinensis</i>); a black backed Porphyrio (<i>Porphyrio melanotus</i>); a Water Rail (<i>Porzana fluminea</i>); a <i>Rallus aquaticus</i> ; a Ground Parroquet (<i>Pezoporus formosus</i>), and a <i>Phalacrocorax sulcirostris</i> , from N. S. Wales	Mr. George Frost.
A <i>Hamatopus fuliginosus</i> , or Sooty Oyster Catcher	Mr. C. Kidman.
A <i>Craeticus negrogularis</i> , or black throated Crow Shrike; 2 specimens of an Owl (<i>Athene rufa</i>); and 3 Javanese Birds, viz.:— 1 <i>Artamus</i> , 1 <i>Dierurus</i> , and 1 <i>Myophonus flavirastris</i>	Mr. James Palmer.
An Australian Cormorant (<i>Phalacrocorax carboideus</i>)	Master George Palmer.
A <i>Scythrops Nova Hollandia</i> , or Hornbill Cuckoo; 2 <i>Xema Jamesonii</i> , or Jameson's Gulls; a Musk Duck (<i>Biziura lobata</i>); a large Bittern (<i>Botaurus melanotus</i>); a New Holland Dartar (<i>Plotus Nova Hollandia</i>).	Dr. William Houston.
60 Eggs of various Australian Birds	Master E. T. Wills.
A Honey-eater (<i>Meliphaga Nova Hollandia</i>)	Alfred Broughton, Esq.
A Australian Goshawk (<i>Astur approximans</i>)	Mr. Michael Gannon.
A little Bittern (<i>Ardetta pusilla</i>); a black-throated Grebe (<i>Podiceps gularis</i>); a large Bittern (<i>Botaurus melanotus</i>), New South Wales.	Mr. John Morgan.
An Owl (<i>Athene strenua</i>)	Mr. James Clarke.
3 specimens of <i>Lobivanellus personatus</i> , and an Australian Roller (<i>Eurystomus Australis</i>)	Master J. Connolly.
A Tawney-shouldered Podargus (<i>Podargus humeralis</i>)	Master L. O'Brien.
A <i>Porphyrio melanotus</i> , or Black-backed Porphyrio	Mr. Francis O'Brien.
A Peacock and Peahen (<i>Pavo muticus</i>), pied variety	Mr. Eli Waller.
An Australian Gannett (<i>Sula Australis</i>), and a Java Sparrow	Mr. Eli Bunting.
A Spotted Goatsucker (<i>Eurystopodus guttatus</i>)	Mrs. Blair.
A pied Crow-shrike (<i>Strepera graculina</i>); a Coach-whip bird (<i>Psophodes crepitans</i>); and a Porphyry-crowned Finch (<i>Amadina castanotis</i>)	Mr. George Hudson.
A <i>cuulus cinereus</i> ; a <i>Pardalotus punctatus</i> ; a <i>Malurus Lamberti</i> ; 2 <i>Meliphaga Nova Hollandia</i> ; a <i>Zosterops dorsalis</i> ; a <i>Pachycephala gutturalis</i> ; a <i>Meliphaga sericea</i> ; 2 <i>Anthus Australis</i> ; 3 <i>Estrelida temporalis</i> ; an <i>Anthochaera mellivora</i> ; and a <i>Glyciphila</i>	Geo. Macleay, Esq., M.L.A.
An Owl (<i>Strix delicatulus</i>)	Mr. Allan.
Two eggs of the African Ostrich (<i>Struthio camelus</i>)	Mr. M. Burdekin.
A musky Parroquet (<i>Tricoglossus concinnus</i>)	Dr. Bennett.
A <i>Melopsittacus undulatus</i> , or Warbling grass Parroquet	Master J. Hudson.
An <i>Ephianura albifrons</i> ; 3 <i>Halcyon sanctus</i> ; a <i>Chrysococcyx lucidus</i> ; and a <i>Tringa</i>	Mr. Richard Harnett.
Two specimens of <i>Grallina Australis</i> ; 4 <i>Ptilotis leucotis</i> ; and a <i>Hiaticula nigrifrons</i>	Mr. J. Wheeler.
A specimen of <i>Anas punctata</i> (white variety)	Mr. G. W. Brown.
A <i>Talegalla Lathamii</i> , or Brush Turkey	Master Charles Blaxland.
Two specimens of the <i>Malurus cyaneus</i> , or blue Wren	Mr. Joseph Clark.
An <i>Ichtheætus leucogaster</i> , or white-bellied Sea Eagle	Mr. J. J. Clarke.
A <i>Nycticorax Caledonicus</i> , or nankeen Heron	Mr. John Jones.
A <i>Xema Jamesonii</i> , or Jameson's Gull	Capt. Prout.
A species of Porphyrio (allied to <i>P. Melanotus</i>), New Caledonia	Mrs. Angas.
A Canary (<i>Fringilla canaria</i>)	Mr. J. Armstrong.
A Turkey Chick with four legs	Mr. Richard Banks.
A black eye-browed Albatross (<i>Diomedea melanophrys</i>)	Mr. H. J. Marr.
A specimen of <i>Mycteria Australis</i>	Mr. T. A. Newall.
A red-necked Avocet (<i>Precurvirostra rubricollis</i>)	Captain Patullo.
A great-billed Heron (<i>Ardea rectirostris</i>)	Mr. John Tanner.
A Bass' Straits Tern (<i>Thalasseus poliscercus</i>)	Mr. G. H. Deering.
Male and female of the double banded Dottral (<i>Hiaticula bicincta</i>)	Master M'Crane.
A Chicken with four legs	Mr. John Scott.
Three very small eggs of the Common Fowl	Mr. James Wheeler.
A white Heron (<i>Herodias syrmatophorus</i>)	Mr. Ward.
A white Heron (<i>Herodias syrmatophorus</i>)	Mr. S. Harris.
A young Duck with four legs and two heads	Mr. F. J. Lander.
A Lory, from New Caledonia	Mr. Hugh Davis.
A <i>Janagra citrinella</i> and a <i>Trochilus glaucopsis</i> , or blue fronted Humming Bird, from South America	A. A. Leycester, Esq.
A <i>Mycteria Australis</i>	Mr. John Paris.
A <i>Menura Alerti</i> , from Richmond River	Mr. W. Beaumont.
A Cape Pigeon (<i>Daption Capensis</i>)	W. S. Macleay, Esq.
A white Swan (<i>Cygnus olar</i>)	Mr. John Miller.
Nest and egg of the yellow Robin (<i>Eopsaltria Australis</i>), and skull of <i>Strigops haloptilus</i> , from New Zealand	Mr. George Smith.
Three specimens of black eye-browed Albatross (<i>Diomedea melanophrys</i>)	Mr. L. H. Sibthorpe.
A double egg, laid by a Common Fowl	
Do. do. do.	

REPTILIA.

A Snake (<i>Furina</i>)	Mr. Ed. Byers.
A Black Snake (<i>Trimoresurus</i>)	Mr. Peter Collins.
A Gecko, or Night Lizard	Mr. Delohery.
A Diamond Snake (<i>Morelia punctata</i>)	Master J. Frazer.
An <i>Amphisbæna</i>	Master J. Jones.
A <i>Morelia punctata</i> or Diamond Snake	Master F. O'Brien.
Three tails of the Rattlesnake (<i>Crotalus horridus</i>), from California	Mr. J. T. Thornton.
A Banded Snake (<i>Tortrix</i>)	Mr. Williams.
An <i>Amphisbæna</i> and a Gecko Lizard	Mr. J. W. Andrews.
A Diamond Snake (<i>Morelia punctata</i>)	Mr. J. M. Chapman.
Three specimens of <i>Furina</i>	W. S. Macleay, Esq.
Two specimens of <i>Amphisbæna</i>	Chas. Moore, Esq.
Jaws of the Indian Gavial (<i>Gavialis Gangetius</i>)	Mr. J. Russell.
A Long-necked Tortoise (<i>Emys longicollis</i>)	Mr. John Hanlon.
A Brown Snake	Mons. C. E. Jeannerat.
A Gecko Lizard (<i>Phyllurus</i>)	Mr. W. Meek.

REPTILIA—(Continued).

Presented by

A Lizard allied to <i>Chlamydosaurus</i>	Mr. R. W. Newman.
A Diamond Snake (<i>Morelia punctata</i>)	Miss Newman.
A Lizard (<i>Chlamydasaurus</i>)	Mr. George Sherrar.
A Carpet Snake (<i>Morelia</i>)	Edmund Day, Esq.
Two Lizards of the Genus <i>Gecko</i> , from Vannicolo	W. S. Macleay, Esq.
A specimen of <i>Chlamydosaurus Kingii</i> , Wide Bay	Mr. Hugh Houston.
Eggs of <i>Varanus Australis</i>	Mr. J. M'Call.
A Slow Worm (<i>Amphisbæna</i>)	Mr. W. Wright.
A Diamond Snake (<i>Morelia punctata</i>)	Mr. C. Evans.
2 specimens of (<i>Amphisbæna</i>)	Mr. James Evans.
A Brown Snake	Mr. Thos. Hart.
Two Snakes from San Christoval	Nelson Ramsay, Esq.
A Diamond Snake (<i>Morelia punctata</i>)	Mr. Venables.
Skull and 7 Vertebrae of <i>Crocodylus Vitorcatus</i> , from the Fitz Roy River	Mr. Joseph Wilmot.
A Gecko (<i>Phyllurus</i>)	Mr. A. Blaxland.
A Sleeping Lizard (<i>Trachydosaurus Whitei</i>)	Mr. B. P. Rodd.
A Monitor Lizard (<i>Varanus Australis</i>)	Mr. Alderton.
Two <i>Chalcides</i> and a Rock Lizard	Master W. Wall.
Two Water Snakes (<i>Hydrophis</i>), New Caledonia	Mr. W. C. Brown.
A large <i>Python</i> from Batavia	Dr. Roberts.
An <i>Amphisbæna</i>	Mr. W. Beer.
An <i>Amphisbæna</i>	Mr. Reuben Dennis.
A Lizard (<i>Trachydosaurus Whitei</i>)	Mr. S. Parkins.
A <i>Varanus Australis</i> or Monitor Lizard	Rev. G. E. Turner.
A Lizard allied to <i>Chlamydosaurus</i>	Mr. W. Tulle.

PISCES.

A Sucking Fish (<i>Echeneis</i>)	Mr. George Johnson.
Two small Fish belonging to the family <i>Clupeidae</i>	Mr. G. W. Hudson.
Jaws of a Shark from Moreton Bay	Henry Lane, Esq.
A Porcupine Fish (<i>Diodon</i>)	Mr. Thomas Leggatt.
A Fish of the genus <i>Ostracion</i>	Miss Brennan.
A Fish of the family <i>Scombridae</i>	Mr. T. Dunn
An Eel allied to the genus <i>Ophisaurus</i>	Mr. R. Heany.
A Butterfly Gurnard (<i>Trigla</i>)	Master R. Hayes.
A Fish of the genus <i>Saurus</i>	Mr. Nobbs.
A Sucking Fish (<i>Echeneis</i>)	Master W. Smart.
A Fish of the genus <i>Serranus</i>	Mr. James Clayton.
Skeleton of a <i>Monacanthus</i>	Miss M. Cox.
An <i>Ostracion</i>	Master J. W. Smart.
A specimen of <i>Blepharis fasciatus</i> , and a <i>Seolopsis</i>	George Thornton, Esq.
A <i>Seolopsis</i>	Mr. W. Bartlett.
A Fish (one of the <i>Cyclopteridae</i>)	Captain Loring, R.N.
A Fish of the family <i>Gadidae</i>	W. S. Macleay, Esq.
A <i>Chironectes</i>	Mr. Job Reece.
An <i>Ostracion</i>	Mr. F. Sisemore.
A <i>Tetraodon</i>	Mr. B. Skinner.
A Fish of the genus <i>Syngnathus</i>	Mr. Duncan MacKellar.
Five Specimens of Fish, from San Christoval	Nelson Ramsay, Esq.
A small Shark (<i>Scyllium</i>)	Mr. Charles Catlett.
A <i>Chironectes</i>	Mr. Richard Banks.
A <i>Platycephalus</i>	Master Smart.
An <i>Ostracion</i> , and 4 <i>Hippocampi</i> , from Tasmania	Henry Edwards, Esq.
A Shark (13 feet in length) belonging to the genus <i>Carcharias</i> , caught } in Port Jackson	Messrs. Roylance and King.
A Flying Fish (<i>Exocoetus</i>), New Caledonia	Master W. C. Brown.
A <i>Hippocampus</i>	Mr. E. Johnson.
A Percoid Fish	Mr. Richard Banks.
A <i>Tetraodon</i>	Mr. H. Fitzhardinge.
A young Shark (<i>Scyllium</i>)	Mr. James Graham.
A Flying Fish (<i>Exocoetus volitans</i>), India	Mr. John Miller.
A sample of tanned Shark's Skin	Mr. Horatio Tozer.
A Clupeoid Fish	Mr. Obed West.

MOLLUSCA, ZOOPHYTES, &c.

Four Specimens of <i>Cleidotherus Chamoides</i>	Master W. Wall.
Forty Shells, from various localities	Mr. John T. Brown.
An <i>Octopus</i> , or Cuttle Fish	Mr. John Hayes.
Two Specimens of <i>Pecten irradians</i> , from North America, and 2 of a } new species of <i>Bulinus</i> , from New Caledonia	Mrs. Angas.
A <i>Loligo</i> , from the Cape of Good Hope	Mr. James Stewart.
A collection of the common Marine Shells of Honolulu, Sandwich Islands	Dr. Frick, L.L.D.
The following Shells from New Zealand, viz.:— <i>Helix Busbii</i> , 2 species } of <i>Psammobia terebratula</i> , <i>Pectunculus</i> , <i>Amphibola avellana</i> , <i>Mela-</i> <i>nopsis</i> , <i>Docina</i> , and <i>Elenchus</i>	Professor Smith, M.D.
A large <i>Spondylus</i> , S. S. Islands	Mr. W. Andrews.
A <i>Parmacella</i> , Middle Harbour	Capt. Loring, R.N.
A <i>Mondonta</i> , Long Bay	Mr. R. Elley.
Two Specimens of <i>Oliva porphyris</i> , from Panama	Mr. J. J. Kyle.
Portion of Wood destroyed by the attacks of <i>Teredo navalis</i> , from the } Wharf at Newcastle, New South Wales	B. H. Martindale, Esq.
A specimen of <i>Ostræa</i> , curiously deformed	Mr. T. Wilson.
Specimens of <i>Velutella</i> , <i>Ianthina exigua</i> , and <i>Glaucus</i> , from Norfolk Island	Captain Loring, R.N.
The following Shells from the Channel Islands, viz.:— <i>Trachus magus</i> , } <i>Tapes virginea</i> , <i>Pectunculus glycymeris</i> , <i>Trivia Europea</i> , &c.	Mr. James Snow.
Specimens of a <i>Paludina</i> , from the Namoi	Mr. C. W. Birch.
Twenty-four shells from Ceylon, viz.:—5 <i>Pyrula rapa</i> , 2 <i>Pyrula fca</i> , 1 } <i>Rapana</i> , 2 <i>Bulla ampulla</i> , 2 <i>Murex haustillum</i> , 2 <i>Murex anguliferus</i> , 2 <i>Ranella Elegans</i> , 1 <i>Conus hebraes</i> , 1 <i>Purpura fca</i> , 1 <i>Fulgur</i> , 2 <i>Oliua</i> . }	Mrs. Harriet Miller.

CRUSTACEA, &c.

	Presented by
A Crab of the genus <i>Porcellana</i> , from Tasmania.....	Rev. H. Savigny.
30 specimens of Crustacea, of the genera <i>Hippolyte</i> , <i>Alpheus</i> , <i>Callinidæa</i> , <i>Pagurus</i> , <i>Pilumnus</i> , <i>Dorippe</i> , <i>Maia</i> , &c.	The Secretary.
A large <i>Nereis</i> , from Manly	Mr. A. Macdonnell.
An <i>Astacus</i> , 4 <i>Gelasinus</i> , and 1 <i>Sesarma</i>	Master W. Wall.
A <i>Nereis</i> from Newcastle, New South Wales	Mr. A. Flood.
Portion of a <i>Palumnus</i> from Vannicolo	Mr. Frank Mitchell.
A Swimming Crab (<i>Neptunus pelagicus</i>)	Dr. McEwen.
A <i>Portunus</i>	Mr. George Hudson.
4 samples of Becho-le-mer, from New Calidonia	Captain Prout.
A Crab of the genus <i>Xantho</i> , from Nca-foo	Mrs. Angas.
A <i>Potomobius serratus</i> , from Goulburn River	Mr. Charles Thatcher.
A Crab of the genus <i>Maia</i> , a new species <i>Remina</i> , and 4 specimens of <i>Macrop thalmus</i> , from New Caledonia	Captain Todd.
A Crab from Chowder Bay	Master J. W. Smart.

INSECTA, &c.

A specimen of <i>Trigonoderus Childreni</i>	Miss Byrnes.
A specimen of <i>Podocanthus Typhon</i>	Miss T. Coffie.
Ditto ditto ditto	Mrs. Robberds.
A <i>Trigonoderus Childreni</i>	Mr. T. Simpson.
A <i>Sphinx Australasicus</i>	Mrs. W. Harvey.
A <i>Phasma</i>	Mr. John Sherrar.
A <i>Podocanthus Typhon</i>	Mr. Way.
A <i>Diura Titan</i> , or Titan-tailed Spectre	Mr. John Folkhard.
A <i>Sphinx triangularis</i>	Miss Macdonald.
A <i>Mantis</i>	Master T. O'Brien.
A collection of <i>Lepidopterous</i> and <i>Coleopterous</i> insects from the Brazils..	Mr. A. Polack.
A <i>Diura violescens</i> , or Violet-winged Spectre	Mr. Eli Waller.
A specimen of <i>Sphæria Taylori</i> from the Manning, and an Insect of the family <i>Stenecoridae</i>	Dr. Stephenson.
44 diurnal and 28 nocturnal <i>Lepidopterous</i> Insects of New South Wales, collected at Ash Island	The Misses Scott.
100 Australian Insects	Mr. G. Hudson.
A <i>Phasma</i>	Master F. Scarr.
A specimen of the Hercules Beetle, <i>Scarabeus Hercules</i> , from Guiana ..	Mrs. Steventon.
An <i>Exaltosoma tiarata</i> , or Dilated-bodied Spectre	Master Charles Harpur.
A small insect of the family <i>Fulgoridæ</i>	Mr. G. Woodcock.

GEOLOGICAL AND MINERALOGICAL SPECIMENS.

A specimen of Flinty Opal, from Moreton Bay.....	H. Killier, Esq.
21 mineral specimens, from California	Mr. J. T. Thornton.
Fossil impressions of plants, from Newcastle	Master E. T. Wills.
3 Fossil bones of <i>Dinornis</i> , from New Zealand	Mr. Edward Ford.
4 Fossil bones of <i>Dinornis</i> , and 8 Stalactites, from the caves of Massacre Bay, New Zealand	Mr. Richard Mackay.
Eight Stalactites, from Massacre Bay, New Zealand	Mr. Daniel Mackay.
A specimen of indurated clay, from Hunter River	Mr. Joseph Turton.
Specimens of Auriferous Quartz, from Clunes, Victoria.....	Hon. E. Deas Thomson.
Manganese ore, Port Curtis	D. De Bohn.
Specimens of Gold and Quartz, from Adelong	Mr. T. J. Bryan
Tooth of <i>Diprotodon</i>	Mr. E. A. Bell.
Two specimens of Columnar Sandstone, from Pymont.....	Dr. Salter.
Mineral specimens, from Richmond River	W. Wilson, Esq.
Coal, with Kauri Gum, and coloured earth, from New Zealand; 153 mineral specimens, from Victoria and South Australia; also, 8 casts of fossil bones of marsupial animals, from Darling Downs, and a bone of <i>Dinornis didiformis</i> , and 90 fossils from Illawarra..	His Excellency the Governor General.
Tarsal bone of <i>Dinornis didiformis</i> , New Zealand	W. S. Macleay, Esq.
Four specimens of Chalcedony, from Moreton Bay	Mr. J. Williams.
Two specimens of fossil wood, from the petrified forest, near Cairo, Egypt	Mr. L. Spyer.
Right <i>ramus</i> of lower jaw of a <i>Zygomaturus</i> , and 11 fragments of various bones of the same animal; upper jaw of <i>Macropus</i> , with 25 other fossil bones, from Darling Downs, &c.	F. W. Roche, Esq.
30 Fossil shells, from Illawarra	Mr. W. Steventon.
Portion of the jaws of a fossil Wombat	Mr. James Wilson.
130 Specimens of fossil bones, from King's Creek, Darling Downs.....	F. N. Isaac, Esq.
5 Specimens of fossil shells of the genus <i>Spirifer</i>	Mr. Ferrot.
A specimen of coal, from Borneo	Henry Moore, Esq.
2 <i>Stalactites</i> from Wellington	Mr. A. C. Baird.
Geological specimens (1 to 31) illustrating the geological formation of the country from Rockhampton to South Australia, collected by the Expedition in Search of Dr. Leichhardt	A. C. Gregory, Esq.
A sample of Burwood clay	Dr. W. Houston.

BOTANICAL SPECIMENS.

Specimen of Acacia gum, on the branch	Mr. W. Newell.
Blossom of the Cocoa-nut Palm	Dr. Roberts.
8 specimens of Indigenous Woods, from Shark's Bay	Lieut. Onslow, R. N.
34 specimens of <i>Algae</i> , from Manly and Pittwater	Miss Berkelman.
Specimens of Gum Resin, from Isle of Pines	Capt. Loring, H.M.S. "Iria."

ETHNOGRAPHICAL SPECIMENS, &c.

Indian Spear, and Bone Ornament, from California	J. T. Thornton, Esq.
A Paper-knife made from the wood, &c., of York Minster	Mr. E. H. Lomas.
A Russian Policeman's cap and jacket; a pair of Russian leg-irons; shears, and latch, from Kertch; also Chinese shoes	Mrs. Leslie.
An Aboriginal Stone Adze, Murrumbidgee	Master F. Broughton.
A "Momo," or carved Mask, New Caledonia	W. Ramsay, Esq.
Head-dress and Ornaments of opossum fur, from the Aborigines of Shark's Bay.....	Lieut. Onslow, R. N.

ETHNOGRAPHICAL SPECIMENS, &c.—(Continued.)	<i>Presented by</i>
Pouch, with sling and stones, from San Christoval; and a Native Dress from Mallicollo	N. Ramsay, Esq.
4 Aboriginal weapons, and 2 Shields (Port Curtis)	Mr. J. Wilmot.
Portion of William Tell's Temple at Lake Lucerne	Mr. W. H. Grant.
A Flute, from the natives of New Caledonia	Master W. C. Brown.
An Aboriginal Fishing Net, from Cooper's Creek	Mr. C. F. Gregory.

COINS, BOOKS, &c.

Two copper coins (British), A.D. 1757 & 1765	Mr. W. South.
A conglomerate mass of coins, from the remains of a fire in California ..	Mrs. Barnett.
A half-crown piece of William and Mary (1689)	Mr. Benjamin Simms.
A certificate of membership of the Vigilance Committee of San Francisco	Mr. G. H. Smith.
A small Dutch coin	Mrs. Mayne.
A 2d. of George III., and a farthing of George II.	Mr. J. S. Dobson.
A reichs thaler of Frederick the Great (A.D. 1765), and a shilling of George III. (A.D. 1787).....	Mr. S. J. Cohen.
84 copper coins, of various periods.....	Mr. Obed West.
A Portuguese copper coin	Master G. R. Sotheron.
A copper coin of George II., A.D. 1736	Mr. John Pierce.
5 silver and 20 copper coins of various periods	Mr. C. H. Grant.
A French assignat, A.D. 1791	Mr. George Hall.
A Pamphlet "On Measurements, as a Diagnostic Means for distinguish- ing the Human Races"	Messrs. Scherzer and Schwartz, H.I.R.M. Fri- gate "Novara."
Report of the Museum of Santiago de Chili.....	The Chilean Consul.
A Series of 13 elaborate Drawings made by Mr. Rhodius from the Elgin Marbles, in 1826	Mr. Charles Rhodius.
A Pamphlet entitled "Facts for Factories," Bombay, 1857	The Hon. the Colonial Se- cretary.

GEORGE FRENCH ANGAS,

Secretary to the Trustees.

Australian Museum,
7 April, 1859.

1860.

NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(REPORT FROM TRUSTEES.)

Presented to both Houses of Parliament, by Command.

REPORT OF THE TRUSTEES OF THE AUSTRALIAN MUSEUM, FOR THE
YEAR ENDING 31 DECEMBER, 1859.TO HIS EXCELLENCY THE GOVERNOR GENERAL,
&c., &c., &c.

1. The Trustees of the Australian Museum have the honor to submit to your Excellency this their Sixth Annual Report.

2. The Museum is now open to the public daily (Sunday's excepted), from noon till 4 P.M., from May till September; and from noon till 5 P.M., from September till May. During the past year it has been visited by 17,953 persons of all classes, without any detriment to the specimens contained in the Institution.

3. The Trustees have continued to carry on their system of exchange of specimens with Foreign Museums, and have to announce the receipt of a valuable collection of upwards of 200 specimens of North American mammalia and aves, from the Niagara Falls Museum, in excellent condition; also, skins and skeletons of many interesting genera of European and South American animals (the types of which were wanting in the Australian Museum) from the Museum of Natural History of Hamburg. Cases of specimens, in various branches of zoology and ethnology, are on their way from the Royal Copenhagen Museum, and from the Museum of the University of Bologna. In addition to these acquisitions the Trustees have to announce the arrival, in Port Jackson, of five large cases, containing the whole of the casts prepared by the British Museum, of the fossil remains of extinct animals in the National collection; for these the Museum is indebted to the good services of Professor Owen, through the exertions of George Macleay, Esq., and Dr. Bennett.

4. Throughout the year two efficient taxidermists have been employed in setting up and mounting the skins of mammalia and aves; in preparing the various specimens continually presented to the Museum; and in cleaning and preserving from decay the collections already displayed for public inspection.

5. Since their last Report the Trustees have to announce a large addition to the number of mounted specimens exhibited in the large Hall. The number of these is now as follows, viz. :—Of mammalia, 177; skeleton of mammalia, 15; casts of fossil bones, &c., 70; skins of birds, 1,601; skeletons of birds, 9; reptiles, 195; fish, 470; besides the collections of mollusca, insects, radiata, zoophytes, fossils, and minerals; also, ethnographical specimens of various kinds,—a small portion only of which can be made available to the public on account of the want of space necessary for their display.

6. The donations during the past year, from private individuals, have also added many objects of interest to the collection. Amongst these may be recorded a specimen of the hogax is deer (*Axis porcinus*), from India, and a collection of crustacea and algæ, &c., by His Excellency the Governor General; a young alpaca (*Auchenia Llama*), by Charles Ledger, Esq.; a hunting leopard (*Gueparda jubata*), and an Indian bear (*Ursus labiatus*), by W. Beaumont, Esq., of Botany; a full-grown female sea leopard (*Stenorhynchus leptonyx*), by J. Thomson, Esq., of Shoalhaven; a collection of fossil bones, by F. N. Isaac, Esq., of

Darling Downs; a fine specimen of the great grey kangaroo (*Macropus major*), together with a collection of reptilia, pisces, and insecta from Clarence River, by J. F. Wilcox, Esq.; a New Zealand owl parrot (*Strigops habroptilus*), by Dr. Renwick; a collection of coins, antiquities, fossils, &c., by the Rev. Dr. Mackay; several rare and beautiful birds, by Alfred Denison, Esq.; and a collection of specimens of various kinds, from Erumanga, &c., by J. B. Turner, Esq. Besides these acquisitions, there have been presented to the Museum during the past year, from various individuals, 25 specimens of mammalia, 54 birds, 45 reptilia, 48 fishes, 74 mollusca, 56 crustacea, 75 insects, 19 radiata, upwards of 200 fossils and geological specimens, 23 botanical specimens, 32 ethnographical specimens, 154 coins, and several other miscellaneous articles.

Amongst the donations to the Library, the Trustees would especially mention a copy of Gay's "Historia de Chili," 22 vols. with 2 vols., of colored plates, from the Colonial Government; and the publications of the Geological Survey of Great Britain, and Museum of Practical Geology, through Sir Roderick Murchison.

7. The Trustees have, as occasion presented, expended such small sums as the means at their disposal would permit in the purchase of such specimens of interest as have presented themselves, but these opportunities do not occur frequently; and it would be a matter worthy of consideration of the Government and the Legislature, whether, looking to the very scanty representation of the class mammalia in the Museum, it would not be desirable that a sum should be specially appropriated annually to the purchase of such specimens as are required to afford to the people of New South Wales an opportunity of examining the representatives or types of the various families belonging to this class, which are found in other portions of the globe, and of comparing them with those belonging to Australia.

8. A set of brief instructions has been drawn up, containing hints for the collection and preservation of specimens in various branches of natural history; these have been printed with a view to their being gratuitously circulated throughout the Colonies.

9. The sum of £500 granted by the Legislature during last year, for the purchase of scientific works for the Museum Library, has been placed at the disposal of Dr. Bennett, George Macleay, Esq., and Professor Owen, in England, with a request that those gentlemen should expend the amount in the best manner possible. The execution by these gentlemen of the duty imposed upon them has fully justified the confidence placed in them by the Trustees. A very valuable collection of books purchased at a very cheap rate has already been transmitted to the Museum, and large consignments are still expected.

10. With a view to rendering the mineralogical collections, or at least a portion of them, available to the public, the Trustees employed a practical mineralogist to name and classify them; owing, however, to that gentleman's lamented decease shortly after he commenced his labors, the work was discontinued. A general collection, according to the classification of Phillips, has, however, been temporarily arranged, as far as practicable, by the Secretary.

11. The Trustees have to record the resignation of George Macleay, Esq., and Dr. Bennett, as Elective Trustees of the Museum, and the election in their stead of Sir Charles Nicholson, Bart., and the Honorable R. J. Want, Esq.

12. The Trustees beg to refer to their paragraph in their last Report in which allusion was made to the limited amount of space in the present building, and the urgent necessity which existed, even then, for a large extension of accommodation, should it be the wish of the Government that the Museum should hold out to the public of New South Wales the means of amusement and instruction, which such institutions are so admirably calculated to afford.

The additions made to the collections during the past year have increased the urgency of the necessity for more accommodation, which has for the few last years pressed itself upon the notice of the Trustees. There is, as stated last year, no space for the exhibition of the casts from the antique, for which the Colony is indebted to the generosity of Sir Charles Nicholson. The casts which have just been received from the British Museum, and which are especially interesting, as enabling the geologist and zoologist to compare specimens of past existences with those of the present day, must remain in casks in the basement, for the simple reason that there is no space in the existing Museum where they can

be

AUSTRALIAN MUSEUM.

3

be properly arranged and exhibited. In the same way with reference to other departments of natural history, space is wanted for the display of the specimens actually in the possession of the Trustees; and, as every year must necessarily add largely to our stores, so it must add to the number of specimens withdrawn from the curiosity of the public, and left to moulder and decay in places where no possible use can be made of them.

The books too, which have been purchased with the funds appropriated by the Legislature to this purpose, cannot be properly arranged or classified in the present building, neither can the public have the means of consulting them.

The Trustees trust, therefore, that application will be made to the Legislature to provide funds for the erection of a building which, while it will be an ornament to the City, will at the same time afford to all classes the means of inspecting the whole of the treasures which have been accumulating for so many years in the Museum, and which, when properly arranged in a building constructed for the purpose of exhibiting them, will prove of great advantage to science.

The Trustees must reiterate the expression of their opinion of the desirability of the appointment of a geologist and mineralogist in connection with the Survey Department. The Museum is very rich in mineralogical specimens, but these can only be properly arranged by a person thoroughly conversant with composition, structure, and classification. An effort was made, as already stated in this Report, to secure the services of a competent mineralogist, and the result of his labors, for the short time he was able to devote himself to the work, is seen in the classification of a portion only of the minerals in possession of the Trustees.

13. The Appendix contains an Abstract of the Receipts and Expenditure of the Trustees on behalf of the Museum, during the year 1859. Appendix No. 2 contains a list of the various donations to the Museum, during the same year, with the names of the donors.

14. The Trustees have the honor to submit this their Report for the year one thousand eight hundred and fifty-nine, and in testimony thereof have caused their corporate seal to be hereunto affixed, this first day of March, one thousand eight hundred and sixty.

(L.S.)

W. S. MACLEAY,

Chairman.

By order of the Trustees,

GEORGE FRENCH ANGAS,

Secretary.

APPENDIX No. 2.

DONATIONS TO THE AUSTRALIAN MUSEUM, RECEIVED DURING THE
YEAR 1859.

MAMMALIA.

PRESENTED BY

A species of <i>Dipus</i> from the Desert, near Lake Torrens	A. C. Gregory, Esq.
A <i>Pteropus poliocephalus</i> (Flying Fox)	Master W. Nathan.
A ditto ditto ditto	Mr. Saul Lyons.
A <i>Macropus major</i> (young female)	His Excellency the Governor General, &c.
A young Alpaca (<i>Auchenia Llama</i>)	Charles Ledger, Esq.
Malformation of the Horns of a Bullock	Mr. George Macintosh.
An Aboriginal Skull, from Shoalhaven	Mr. W. A. Hines.
Skull of Lynch (the notorious Murderer)	Dr. Sherwin.
A <i>Pteropus poliocephalus</i>	Alfred Denison, Esq.
A Calf with two Heads, from Braidwood	Mr. S. Gould.
Fœtus of a Calf	Mr. Galvin.
A <i>Mus melas</i>	W. S. Macleay, Esq.
A <i>Belidens</i>	Master Mason.
Skull of a Native of Erumanga	John Turner, Esq.
Nest of a Field Mouse	Mr. Baxter.
An Albino (<i>Petaurista Taguanoides</i>)	J. H. Thee, Esq., J.P.
A Cheetah or Hunting Leopard (<i>Gueparda jubata</i>)	Mr. W. Beaumont.
Skull of <i>Diabolus ursinus</i> , from Tasmania	Henry Edwards, Esq.
Skull of an Aboriginal Female	J. S. Norrie, Esq.
Two species of <i>Mus</i> , from Aneitium and Erumanga	J. B. Turner, Esq.
A male of the great Grey Kangaroo (<i>Macropus major</i>)	J. F. Wilcox, Esq.
A <i>Dasyurus viverrinus</i>	Mr. H. Newman.
Two young ditto ditto	Master A. F. Newman.
An <i>Echidna Hystrix</i>	Mr. James Garner.
An adult female Sea Leopard (<i>Stenorhynchus Leptonyx</i>) from Shoalhaven	James Thomson, Esq.
A Porcine Axis Deer (<i>Azis porcinus</i>), from India	His Excellency the Governor General.
<i>Echidna Hystrix</i> and <i>Phaseogale lanigera</i>	Master James Buchanan.
A <i>Pteropus poliocephalus</i>	W. S. Macleay, Esq.
<i>Ursus labiatus</i> , from India	W. Beaumont, Esq.
A young <i>Macropus major</i>	Lewis Samuel, Esq.

AVES.

A <i>Leptotarsus Javanicus</i> (chestnut-shouldered Duck)	Alfred Denison, Esq.
A Chicken with four wings and four legs (<i>Iusus nature</i>)	Mr. A. Macdonnell.
An <i>Aquila leucogaster</i> , an <i>Halcyon Macleayi</i> , a <i>Merops ornatus</i> , a <i>Malurus melanocephalus</i>	Monsieur Thozët.
A Nicobar Ground Pigeon (<i>Geophilus Nicobaricus</i>) and a minor Grackle (<i>Gracula religiosa</i>), from Java	Alfred Denison, Esq.
A young <i>Pavo cristatus</i>	Master O'Brien.
A New Zealand Owl Parrot (<i>Strigops haloptilus</i>)	Dr. Renwick.
Two Australian Swifts (<i>Cypselus Australis</i>)	Rev. Mr. Turner.
A black-headed Tern (<i>Sterna melanocephala</i>)	Mr. T. T. Brown.
A Cormorant (<i>Phalacrocorax</i>)	Monsieur Thozët.
A <i>Ptilinopus</i> , two <i>Carpophaga</i> , and a <i>Chalcophaps</i>	Alfred Denison, Esq.
Two specimens (male and female) of <i>Pœphila Paddonii</i> , from New Caledonia	John Turner, Esq.
A Hybrid Duck	Mr. W. Beaumont.
A <i>Rallus Lewini</i>	Mr. George Frost.
Two <i>Dacelo giganteus</i> , or Laughing Jackass	Mr. Thomas Laury.
A Starling (<i>Sturnus vulgaris</i>), from England	Mr. James Palmer.
A Red-breasted Turtle (<i>Columba cruenta</i>), from Manila	Alfred Denison, Esq.
A Goatsucker (<i>Eurystopodus albogularis</i>)	Mr. George Frost.
A double Egg of a Fowl	Edward Hill, Esq.
Two nests and egg of Esculent Swallow, and four eggs of <i>Sturna gracilis</i> , from Erumanga	J. B. Turner, Esq.
Two <i>Parra gallinacea</i>	J. F. Wilcox, Esq.
A female <i>Petroica multicolor</i>	Master C. Hooper.
A <i>Thalassidroma Wilsoni</i> or Wilson's Petrel	Mr. G. F. Angas.
A <i>Petroica multicolor</i> (male) and a <i>Falcunculus frontatus</i>	Rev. G. E. Turner.
A <i>Platycercus semi-torquatus</i> , or Yellow-collared Parroquet, and a <i>Macropygia phasianella</i> , or Pheasant-tailed Pigeon	Alfred Denison, Esq.
A <i>Daption Capensis</i>	Mr. Leggatt.
Male and Female of the <i>Nettapus albigennis</i>	Mr. J. F. Wilcox.
An <i>Ardea cinerea</i> , or Grey Heron	Mr. James Butler.
A full-grown domestic Fowl, with 4 legs	Mr. Hamilton.
A Fish Hawk (<i>Haliastur sphenurus</i>)	Master Quarry.
A Straw-necked Ibis (<i>Geronticus spinicollis</i>)	Mr. John Walton.
Two specimens of a new species of <i>Melithreptes</i>	Mr. Eli Waller.
A Starling (<i>Sturnus vulgaris</i>)	Mr. John Briley.
A male Rifle Bird (<i>Ptiloris paradiseus</i>)	Mr. E. Maides.
A Nankeen Night Heron (<i>Nycticorax Caledonicus</i>)	Mr. H. Moggridge.
A male Flinder's Cuckoo (<i>Eudynamys Flindersii</i>)	Mr. H. J. Bate.
A <i>Falco</i> , from India, and a <i>Bucco</i> , from Brazil	Mr. Adam Becker.
A <i>Circus Jardinei</i> , or Jardine's Harrier	Mr. George Frost.
Five very small Eggs, laid by a domestic Fowl	Master T. Ironside.
A <i>Sceloglaux Albifacies</i> , and another species of Owl, from Middle Island of New Zealand	Alexr. Macdonald, Esq.
A Black Swan (<i>Cygnus atratus</i>)	His Excellency the Governor General.
A Rose Cockatoo (<i>Catutua Eos</i>)	Mr. George Macleay.

REPTILIA.

PRESENTED BY

A Turtle (<i>Testudo</i>), from the Figis	} His Excellency the Governor General.
A Black Snake (<i>Trimeresurus</i>)	
A <i>Tiliqua Whitei</i>	Master J. Abbott.
A Tree Frog (<i>Hyla</i>)	Master G. Abbott.
A Death Adder (<i>Acanthopis Brownii</i>)	Mr. John Purkis.
An <i>Amphisbæna</i>	Master J. W. Abbott.
Eggs of the <i>Varanus Australis</i> , or Monitor Lizard	Mr. Isaac Chapple.
A Snake (<i>Furina</i>), from Rockhampton	Mr. Horatio Tozer.
A <i>Varanus Australis</i>	Monsieur Thozët.
A <i>Trachydosaurus</i> (young specimen)	Mr. H. B. Alderton.
A <i>Tortrix</i> , from the South Sea Islands	Dr. George Bennett.
A Diamond Snake (<i>Morelia punctata</i>)	Dr. Roberts.
Ditto ditto ditto	Mr. James Buchanan.
A <i>Phyllurus</i> , a broad-tailed Lizard	Master J. Bayliss.
Three <i>Ophidians</i> and five <i>Batrachians</i> , from Clarence River	Mr. Ferris.
An <i>Amphisbæna</i>	Mr. J. F. Wilcox.
A <i>Phyllurus</i>	Mr. Jordan Wainwright.
An <i>Amphisbæna</i>	Mr. James Martin, M.L.A.
An <i>Amphisbæna</i>	Mr. George Frost.
A Snake, from the Clarence River	Mr. Arthur Blaxland.
A <i>Phyllurus</i>	Mr. Baldock.
A <i>Morelia punctata</i>	Captain Thomas Brown.
A Grass Snake (<i>Ophisaurus</i>)	Master Conlon.
The following Snakes, viz.—Two <i>Hydrophis dohata</i> ; one <i>Ophisaurus</i> ; one <i>Morelia variegata</i> ; one <i>Acanthopis Brownii</i> ; five varieties of <i>Lapemis</i> ; one <i>Pelamis bicolor</i> ; and four other species	Master M. Clinton.
A Brown Snake	Dr. Roberts.
Eggs of <i>Ophisaurus</i>	Master Stokes.
An <i>Ophisaurus</i>	Dr. Roberts.
Eight Lizards, from the Clarence	Master J. Westbrook.
Two specimens (living) of an <i>Emys</i>	Mr. J. F. Wilcox.
A <i>Phyllurus</i>	Captain O'Reilly.
A Diamond Snake (<i>Morelia punctata</i>)	Mr. E. O'Brien.
A small Tortoise, found imbedded in a rock near Maitland	Miss C. S. Raphael.
	} His Excellency the Governor General.

PISCES.

An <i>Ostracion</i>	Mrs. Shell.
A <i>Zeus</i> , a <i>Pleuronectes</i> , and a <i>Solea</i>	} His Excellency the Governor General.
A <i>Hippocampus</i>	
A <i>Torpedo</i>	Mr. Robert Cropley.
A <i>Muræna</i>	Mr. G. F. Angas.
Jaws of a <i>Pereoid</i> Fish	Mr. W. Weaver.
A <i>Priacanthus</i>	Mr. Bough.
A <i>Sphyrana flavicanda</i>	Edward Hill, Esq.
A <i>Remora</i> (<i>Echeneis Naucratius</i>)	Dr. Roberts.
A <i>Diodon</i>	Mr. R. Sandler.
Two <i>Syngnathidae</i>	Mr. W. Smith.
A Clupeoid Fish	Dr. Foulis.
Two <i>Echeneis Naucratius</i>	Mr. Mackay.
A <i>Macquaria Peeltii</i> , from the Clarence River	Mr. George Mulhall.
A Banded <i>Chætodon</i>	Mr. J. F. Wilcox.
A <i>Coryphina</i> , a <i>Psettus</i> , a <i>Plotosus</i> , and a <i>Chætodon</i>	Master W. G. Kirchner.
A <i>Chironectes</i>	Mr. J. F. Wilcox.
A <i>Syngnathus</i>	Mr. S. Brown.
A <i>Pristis serratus</i>	Messrs. Bedford and Buckley.
An <i>Acanthurus</i>	Henry Edwards, Esq.
An <i>Eques</i>	Mr. T. Lawn.
Four specimens of <i>Plotosus Ikapor</i> , from New Caledonia	Master E. Kirchner.
A <i>Cheilodactylus</i>	Mr. J. B. Turner.
A <i>Chironectes</i>	Mr. S. Brown.
A black <i>Chironectes</i>	Revd. W. B. Clarke.
A <i>Muræna</i>	Mr. T. K. Craner.
A <i>Labrus</i> and a <i>Balistes</i>	Mr. John Hunter.
A striped <i>Chironectes</i>	Master A. Kirchner.
A black <i>Chironectes</i>	W. Macleay, Esq.
A <i>Muræna</i>	Mr. R. Melville.
An <i>Amphisile</i> from New Caledonia	Master F. O'Brien.
Ten Fish from Port Jackson	Mr. J. B. Turner.
A <i>Hippocampus</i>	Master Dunn.
An Eel from South Sea Islands	Master J. Soloman.
A <i>Balistes</i>	Mr. Tilley, H.M.S. "Cordelia"
A Saw Fish (<i>Pristis serratus</i>) and 5 young ones	Mr. H. Wulff.
A <i>Syngnathus</i>	Mr. Isaac Joseph.
A <i>Carcharias</i>	Mr. James Beattie.
	Master Mulligan.

MOLLUSCA, &c.

Three specimens of a <i>Fusus</i> from Figis	Mrs. Shell.
Two specimens of <i>Harpa ventricosa</i> and a <i>Cypræa argus</i>	Dr. Bennett.
Eighteen Tasmanian Shells and ova cells of <i>Fusus</i>	H. Edwards, Esq.
Four specimens of a <i>Mesodesma</i> , New Zealand	Master H. Miller.
Two <i>Harpa ventricosa</i> , two <i>Cassidea</i> , two <i>Bulla ovum</i> , two <i>Strombus canarium</i> , two <i>Natica</i> , and a <i>Vermetus</i>	} Rev. Dr. Mackay.
<i>Planorbis</i> and <i>Helix</i> from Clarence River	
Twelve specimens of <i>Helix Cunninghamsi</i> and <i>H. Frazeri</i>	Mr. J. F. Wilcox.
Four specimens of <i>Fissurella</i> from Newcastle	Monsr. Thozët.
A <i>Triumphalia Comingii</i> from New Caledonia	Henry Edwards, Esq.
<i>Pyrula canaliculata</i> , from Florida; <i>Pyrula carica</i> , New York; <i>Haliotis ruber</i> , California; <i>Haliotis Californicus</i> , from Upper California; <i>Mya arenaria</i> , from New York; <i>Unio Housei</i> , from Siam; and <i>Alasmodont complanata</i> , from the Ohio River	Rev. R. L. King.
	Mr. George F. Angas.

CRUSTACEA.

PRESENTED BY

A <i>Neptunus pelagicus</i> , and thirty-one specimens of <i>Crustacea</i> dredged off the Coast	} His Excellency the Governor General.
Eight <i>Crustacea</i> , from Tasmania	
A <i>Megalopa</i> , a <i>Ranina</i> , and a <i>Serolis</i>	} His Excellency the Governor General.
A <i>Cardiosoma</i> , two <i>Gelasimus</i> , two <i>Pagurus</i> , one <i>Cyclograpsus</i> , and two <i>Pinnotheres</i> , &c., from New Caledonia	
An <i>Acanthonyx</i>	} J. B. Turner, Esq. Mr. R. M. Pearson.

INSECTA.

A <i>Podacanthus Typhon</i> and a <i>Saturnia</i>	Master Levinge.
A <i>Saturnia</i>	Mr. Charles Moore.
A <i>Charaxes</i>	Rev. G. E. Turner.
A <i>Sphinx Australasicus</i>	Miss M. L. Baxter.
An <i>Arkys</i>	Mr. Valentine Hermann.
A <i>Sphinx Australasicus</i>	Mr. Laury.
A <i>Diura japetus</i>	Miss Keyes.
A <i>Ctenomorpha</i>	Mrs. A. Miles.
Fourteen <i>Lepidoptera</i> , twenty-two <i>Coleoptera</i> , nine <i>Neuroptera</i> , five <i>Hymenoptera</i> , two <i>Orthoptera</i> , four <i>Diptera</i> , from Clarence River District	} Mr. J. F. Wilcox.
Male and Female of <i>Ornithoptera Richmondia</i> , and two specimens of <i>Orthorinus</i> , from the Richmond	
Lava cases of a <i>Trichopterous</i> insect from New Caledonia	Mr. J. B. Turner.
A <i>Diura Titan</i> , from Fitz Roy River	Mr. John Watson.
A <i>Saturnia</i>	Miss Levinge.
Two Centipedes	Master John Griffiths.
Two Beetles of the genus <i>Curculio</i>	Mr. A. Becker.
A <i>Podacanthus Typhon</i>	Mrs. Burdekin.
A <i>Cossus</i>	Mrs. Dyer.

GEOLOGY AND MINERALOGY.

A fossil plant (<i>Glossopteris</i>)	Rev. Mr. Cooper.
Twenty-six specimens of Rocks, and fossil wood	Mons. Thozét.
Fragments of rock, shewing part of the cavity from whence a small living Tortoise was extricated, from the Railway cutting near Maitland; also fossils from the carboniferous beds in the same locality	} W. Keene, Esq., Government Examiner of Coal Fields.
Thirteen specimens of fossil ferns, Manganese, Gypsum, Silica, Meteorolites, and Betroidal Limestone	
Two fossil <i>Echinodermata</i> , <i>Orbitulites</i> ; fossil wood from Egypt; <i>Pterichthys</i> , from Banffshire; two specimens of Blood-stone, six specimens of granite (polished) from Aberdeen	Rev. Dr. Mackay.
Fossil <i>Brachiopoda</i> , from Tasmania	Master W. Boyd.
Ninety-six fossil bones, from Darling Downs	F. N. Isaac, Esq.
Fossil wood, from Richmond River	Mr. W. Orr.
Two specimens of coal, and three of fossil wood, from Illawarra	Mr. S. B. Newton.
Tufa, <i>Stalactites</i> , Quartz and Agate, and cast of <i>Eurydesmus</i>	Miss Blaxland.
Fossil <i>Entomotraca</i> from the shale of the mountain limestone, River Don, Tasmania; and concretions of sand and shell, from Middle Harbor	} Rev. W. B. Clarke.
Gigantic crystals of Quartz, from Wide Bay	
Eight geological specimens, from Carwell, New South Wales	W. H. Walsh, Esq.
Four specimens of silver lead ore, from South Australia	The late Dr. Gygax.
Specimens of quartz and gold in the matrix, &c., from Adelong Quartz Reef	A. McLean, Esq.
Specimen of trachite and feldspar	J. Fairfax, Esq.
A fossil bone, from Darling Downs	Master O'Reilly.
A specimen of Landscape stone	The Hon. Louis Hope. Dr. Bennett.

BOTANICAL SPECIMENS.

A cone and sample of wood from the Lebanon cedar; specimens of Irish flax, shewing the several processes of manufacture	} Rev. Dr. Mackay.
Twenty specimens of indigenous woods, from Port Curtis	
Fungus, from an Ironbark Tree	Mons. Thozét.
Twenty-nine samples of New Zealand timber	Miss Blaxland. His Excellency the Governor General.

ETHNOGRAPHICAL SPECIMENS.

An Aboriginal Tomahawk	Mr. H. L. Wilson.
A Spear, and four reed Flutes	A native of Ware.
A Peruvian "Inca Plate," and a Sling of Alpaca wool	Charles Ledger, Esq.
An Australian Boomerang	Mr. J. Riordan.
Italian Mosaic work, Tessellated pavement, Ancient Pottery, Mummy Cloth, Russian Relics from the War, &c.	} Rev. Dr. Mackay.
A Stink-pot, a Gingal, and a Matchlock, from China	
A Pigan Dress	Captain Sullivan.
Indian Writing, on a Pandanus leaf, and ear ornament	Mr. W. Hunt.
Model of a War Canoe, 16 feet long, from New Hanover; Carvings from Admiralty Islands; Malay Slippers, Carved* Betel Box, from Balli; Spear with obsidian head, from Port Essington	Miss Blaxland.
Two pearl fish-hooks, from the S. S. Islands	Mr. John T. Brown.
Six Chinese Syce silver Buttons, from the Pirates at Coolan	Miss Tanner.
A Chief's wig, from Ovalau, Figis	Sergeant Medcalf, H. M. S. "Niger." Hon. Mrs. Hope.

AUSTRALIAN MUSEUM.

7

COINS, &c.	PRESENTED BY
One hundred Greek and Roman, and Græco-Egyptian coins, in copper, three ancient Roman silver coins, one ancient Greek silver coin, one gold Turkish coin, twenty-one English silver coins, from Elizabeth to George III.	} Rev. Dr. Mackay.
A silver franc of Napoleon I., a four real piece of Isabella II., and fifteen copper coins	
Nineteen copper coins	} Mr. A. C. West. } Mr. Edwin Tunks.

BOOKS.	
Gay's "Historia de Chili," 22 vols., and 2 vols. of colored plates	The Colonial Government.
Acts and Ordinances of New South Wales, for 1858	The Colonial Government.
Professor Jamieson's directions for collecting and preserving specimens of Natural History	} W. S. Macleay, Esq.
Botanical Reports, by Dr. Muller; "Synopsis Filicum Africæ Australis," by Dr. Pappe; Dr. Hochstetter's Lecture on the Geology of the Province of Auckland, New Zealand	
Professor Owen's Address to the British Association, and a Paper on the <i>Nototherium</i> , by Professor Owen	} Professor Owen, V. P. R. S. &c., British Museum.
The Natural History Catalogues, published by the British Museum, 105 volumes	
The publications of the Geological Survey of Great Britain, and of the Museum of Practical Geology	} The Trustees of the British Museum, per Dr. J. E. Gray, F.R.S. } Sir Roderick Murchison, on behalf of Her Majesty's Government.
The publications of the Philosophical and Literary Society of Leeds....	

GEORGE FRENCH ANGAS,
Secretary to the Trustees.

Australian Museum,
1 March, 1860.

1859.

NEW SOUTH WALES.

OBSERVATORY AT SYDNEY.

(SECOND REPORT.)

Presented to both Houses of Parliament, by Command.

*Sydney Observatory,
September 23, 1859.*

THE Report which I am now enabled to make on the state and progress of the Observatory is of a far more satisfactory character than that which was read at the first meeting of the Board in 1858, at which time the building was incomplete, and the Observatory unprovided with a single Astronomical Instrument worthy of the name.

A good Meridian Instrument has now been received, and has been for several months in constant use; an Equatorial Instrument, on a large scale, has been ordered, and is in progress; and a considerable number of observations have been made and reduced, and are now ready for publication.

PERSONAL ESTABLISHMENT.

This consists, as before, of the Astronomer and one Computer, the only difference being that, when the last Report was read, the appointment of a Computer had been authorised, but had not yet taken place.

The office of Computer was thrown open to public competition; a considerable number of candidates offered themselves for examination, and the choice fell on Mr. H. C. Russell, B.A., of the Sydney University. The diligence with which Mr. Russell has performed the duties of his office fully justifies the choice.

The apportionment of the duties of the Astronomer and Computer is much the same as in the last Report; hitherto all the observations intended for publication have been made by myself; but Mr. Russell has had sufficient practice in making observations to take my place in case of illness or temporary absence.

There are also, in connection with the Observatory, eleven Meteorological Observers in different parts of the Colony, ten of whom are in receipt of the small salaries provided for that purpose, and one (Dr. Barker of Casino) gives his services gratuitously.

BUILDINGS.

These are now complete and in good order. The roof shutters over the old Transit Instrument defy all attempts perfectly to exclude the rain; but, fortunately, the shutters over the Meridian Circle, though apparently exactly similar, are perfectly watertight.

The arrangements for turning the dome of the Equatorial room and opening its shutters are incomplete, and will remain so until the arrival of the Equatorial Telescope.

In consequence of the difficulty experienced in the Southern Hemisphere in obtaining good observations for the Azimuth adjustments, it is of great importance that a permanent Meridian mark should be set up at a considerable distance from the Observatory. I have determined the position of a suitable site for such an erection on the North Shore, and have applied to the Government for the necessary sum.

LIBRARY.

The Library has been increased by donations from the Admiralty, the Ordnance Department, and the Radcliffe Observatory, also by the purchase of a few books with the small sum placed at my disposal for that purpose.

INSTRUMENTS.

The old instruments described in the last Report are still in the Observatory, but none of them are used, with the exception of the Clocks and the Box Chronometer.

The Transit Clock (by Hardy) is subject to considerable changes in rate, amounting sometimes to more than half-a-second in a day. I had reason to attribute this variation, in part, to insufficient compensation, and have diminished it by the addition of a small quantity of quicksilver; still, I am convinced of the existence of irregularities, independent of changes of temperature, such as may render it necessary, or at least desirable to purchase a new clock to take its place in the Transit Room.

The Transit Circle arrived about the end of December last, and instructions were immediately given for the construction of the necessary piers.

The building of the four Piers for the Circle, and for its Collimators, mounting the instrument, fixing its Microscopes, performing the necessary adjustments, determining the values of its different Micrometers, constructing machinery for its removal, and making and attaching the gas fittings, without at the same time interrupting the regular work of the Observatory, occupied several months, so that the regular series of observations was not commenced until the 17th of May.

This instrument was made by Jones, for the Parramatta Observatory, but was never used; it has been considerably modified and improved by Troughton and Simms, and may now be considered a really good instrument. It possesses all the latest improvements; the arrangements of its Collimators, Microscopes, and Micrometers, being in most respects similar to those of the Greenwich Transit Circle, though on a smaller scale.

The diameter of the Object Glass is $3\frac{3}{4}$ inches, and its focal length 62 inches. The diameter of the Divided Circle is 42 inches.

The only defects which I can complain of are an instability in the position of the plane of Collimation, owing to some flexibility of the axis or Telescope Tube; and an inequality in the divisions of the Circle, owing I believe to a slight eccentricity of the eastern pivot with reference to the divided arc. There were other defects which I have succeeded in remedying; thus one of the bearings was perceptibly loose, the clamping apparatus was imperfect, and the connecting rod of the counterpoise was so slender as to communicate a very perceptible vibration to the instrument when turned.

I also found it necessary to substitute concave reflectors for the plane reflectors accompanying the Microscopes. There is reason to believe that the Microscopes sent to England with the Circle for repairs belonged to the old Mural Circle; this, however, is of no importance, as they have been thoroughly repaired, and work satisfactorily.

The Piers, being of sandstone lately quarried, were found by their contraction to produce great and irregular fluctuations in the level of the axis of the Circle, and in the directions of the axes of the Collimators; this difficulty has been almost, if not wholly, overcome by painting all the Piers.

The Main Pier of the Transit Room, resting on the sandstone rock on which the whole of Sydney is built, is perceptibly affected by the passage of carriages along the neighbouring streets. This effect is only noticeable in the reflection observations for determining the level error and zenith point. The difficulty is overcome by making those observations at a late hour. It is also found impossible to make them during a strong wind.

TIME

TIME BALL.

In consequence of the irregularity of the bore of the air vessel, mentioned in my last Report, it has been found necessary to attach a thick disc of india rubber to the piston; this has been found to produce the desired effect. A simple apparatus has recently been constructed whereby the Ball will be dropped by the Mean Time Clock by the aid of an Electro Magnet. I found considerable difficulty in carrying out this arrangement, owing to the motive power of the Clock being so small that a very slight touch is sufficient to stop it; this difficulty I hope has now been overcome.

WORK OF THE OBSERVATORY.

The Astronomical portion of the work is necessarily very limited in kind though not in quantity, consisting entirely of determinations of time, and of the right ascensions and declinations of such objects as are visible at the time of transit.

Understanding that the attention of the Astronomer Royal at the Cape of Good Hope is especially directed to meridian observations of the sun, moon, and planets in the southern portions of their orbits, I have confined my attention hitherto almost exclusively to star observations, more particularly to those stars which are within 5° of the zenith, or within 15° of the South Pole. I make it a rule not to make more observations than I can reasonably hope to reduce to a fit form for publication; everything beyond this being a mere waste of time and labor. The computations form by far the heaviest portion of the work of the Observatory, particularly as I think it right (in accordance with invariable practice) not to make public any result the computation of which has not been gone through twice, either by the same or by different persons.

In addition to the star observations, the transit of the moon is observed at whatever hour it crosses the Meridian, with a view to a more accurate determination of the longitude. The longitude as determined by observations with the old transit appears to have been considerably in error.

Previous to the completion of the adjustments of the transit circle, when there was but little astronomical computation required, the Computer's time was occupied by an elaborate reduction of the meteorological returns from the various stations, and by the computation of certain auxiliary tables; recently, however, I have adopted a modification of the mode of rendering the Returns and computing the results, which will diminish the labor by perhaps two-thirds, without materially affecting the value of the mean results.

ASTRONOMICAL RESULTS.

As soon as possible after the close of the present year, I propose to publish a small volume, of which the following will be the principal contents:—

1. Description of the Circle and of its adjustments, and of the mode of observation, and reduction of the results.
2. Determination of the latitude of the Observatory.
3. Determination of the longitude.
4. Abstract of observations of transits and zenith distances during the year 1859.
5. Catalogue of observed stars with their mean right ascensions and North Polar distances reduced to January 1st, 1859.
6. Meteorological results for 1859.

CONCLUDING REMARKS.

It is evident that there is only one kind of Astronomical work that can be carried on in this Observatory with the instrument now in my possession, namely, the determination of the Right Ascensions and Declinations of the heavenly bodies. To this work I devote myself to the full extent of my powers; it is a work by no means suited to the popular taste, and some impatience is felt by those who prefer the more showy and more interesting departments of Astronomy; this impatience will probably be increased when they become acquainted with the contents of a letter lately received from the Astronomer Royal, respecting

ing

ing the Equatorial Telescope, for the purchase of which the sum of £1,000 was voted early in the present year. On this head Mr. Airy writes:—"I have opened a communication with Messrs. Mertz and Son (of Munich) and finally ordered an Equatorial, 7 inches (French) in aperture, and 9 feet 8 inches focal length; price 17390 francs; they do not profess to be able to make it in a hurry; the time occupied will be more than one year, perhaps nearly two; but they undertake to use all possible means for hastening it."

Thence it appears that we cannot expect to have the Telescope here and mounted within two years, and there seems to be no alternative but to continue steadily as I am now doing with the construction of a catalogue of Southern Stars.

Such being the case I am anxious to call the attention of the Board, and through them of the Government, to a question which has often occurred to my own mind, and I believe to that of many others—Can anything be done in the meantime towards the promotion of a popular taste for Astronomy, or any other science? Perhaps something may be done, and I am ready, if duly authorized, to make the experiment.

Placed in charge of an Observatory, with one instrument and no particular instructions, my duty is clearly this—To make such use of that instrument as I believe to be most conducive to the service of Astronomy; at the same time it is probable that the Government may have some other undefined views as to the benefits which may be expected from an institution of this kind. I can only invite an expression of such views by repeating a passage in my first Report, wherein, after expressing my views of the duties of the Astronomer, I concluded with these words:—"And his services are at the disposal of the Government in all cases in which his knowledge of Mathematical and Physical Science can be made available."

W. SCOTT.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

DRY DOCK, WATERVIEW BAY.

(PETITION OF T. S. ROUNTREE.)

Ordered by the Legislative Assembly to be Printed, 10 February, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Thomas S. Rountree, Lessee of Mort's Dry Dock, Waterview Bay, Balmain,—

SH EWETH :—

That your Petitioner respectfully submits to your Honorable House, that Mort's Dry Dock, in Waterview Bay, Balmain, of which your Petitioner is lessee, having been constructed at a cost approaching one hundred thousand pounds, was open for the reception and refitting of sailing and steam ships of heavy tonnage in March, one thousand eight hundred and fifty-four.

That the construction of this graving dock was regarded as a work of the utmost importance to the owners and masters of vessels sailing from all ports of the world to the South Seas, and their attention was immediately directed to the great facilities for the repair and refitting of ships which were thus afforded in the Port of Sydney.

That, before the European and Australian Steam Navigation Company entered into a contract for the conveyance of Mails between England and the Colonies of Australasia, they made careful inquiries as to the means of docking their steam-ships in Sydney, and would not have made the arrangements which they did had they not been officially apprised of the capacity of your Petitioner's dock; the great value of which since its opening has been repeatedly attested to by owners and masters of ships which have been speedily repaired and refitted, under circumstances of the greatest emergency.

That, about eighteen months ago, the Government Fitz Roy Dock, at the penal establishment at Cockatoo Island, was opened, and, having been constructed entirely by convict labor, its cost to the public was infinitely less than that which was incurred in the construction of your Petitioner's dock by free labor paid by private capital.

That, in the Parliamentary Session of one thousand eight hundred and fifty-five, the Legislative Council being in a Committee of Supply, the sum of fourteen thousand five hundred and seventeen pounds three shillings and sixpence was asked towards the completion of Fitz Roy Dock. The Acting Colonial Secretary, Mr. Riddell, then gave a distinct pledge (as had His Excellency the late Sir Charles Fitz Roy on various occasions) that this dock would be exclusively reserved for the requirements of ships of the British Royal Navy, or of men-of-war of other powers in alliance with Great Britain; and he, Mr. Riddell, assured the Committee that no competition with the dry dock in Waterview Bay, or with other graving establishments in the Port of Sydney, would be allowed.

That,

That, had it not been for this pledge, your Petitioner believes that the sum asked for would not have been voted by the Committee; that long previous to this date, in various conversations with Sir Charles Fitz Roy and Mr. Riddell, during their frequent visits to the Waterview Bay during the construction of the dock, they expressed their hopes to your Petitioner that no feelings of jealousy in respect to the Government and private graving establishments might be called forth, as it was the intention of the Government to provide fully against complaints as to private and public competition.

That, notwithstanding these pledges and promises, they have been directly violated, the Fitz Roy Dock being let to private individuals, for the purpose of repairing and refitting private ships—the injustice of which may be clearly shewn. For example, a vessel requiring repairs enters the Port of Sydney, and a contractor, having neither dry dock or patent slip of his own, nor any standing staff of overseers and workmen, can tender for its repairs on lower terms than your Petitioner or other lessees or owners of patent slips can engage shipwrights just for the temporary occasion, obtains permission to take the ship into the Government Dock, and enjoy the full benefit of the surveillance of the Superintendent and Engineer in Chief, the Civil Engineer and Assistant Superintendent and Clerk of Works, during the time that the vessel may remain in dock, their salaries in the meanwhile being paid by the public.

That your Petitioner has a large and expensive staff in constant pay, whether he has ships in dock or not; he, therefore, has to contend with a most ruinous competition, which he respectfully but earnestly submits to your Honorable House is unjust in the extreme.

That, in the United Kingdom, the Government Dry Docks receive no private ships, except under special emergencies; as, for example, a merchantman of large tonnage requiring immediate repairs enters a port, but it is found that the private graving establishments are not of sufficient capacity to dock her; the owners of these establishments sign statements to that effect, in accordance with printed official forms; these the master of the ship presents to the Superintendent of the Government Dry Dock, and requests that his ship may be received and repaired in it; this request, with the certificates of the private dock-owners, is telegraphed to the Admiralty, and permission is formally granted. It is thus shewn how tenacious the British Government is in interfering or competing with private enterprise; whereas, in the case of the competition which your Petitioner has to contend with, the parties to whom the Fitz Roy Dock is let by the Government for short-terms have an unfair and undue advantage over your Petitioner in every respect.

Your Petitioner respectfully submits that, by a great recognised principle of the British Constitution, a pledge or promise given, whether orally or verbally, by a Minister of the Crown, and having reference either to the advantage or disadvantage of individuals, cannot be repudiated by any succeeding Ministry, unless under the authority of a Special Legislative Enactment.

Your Petitioner, therefore, prays your Honorable House to take the premises into consideration, and to adopt such measures as may be deemed meet to relieve your Petitioner from the ruinous competition of which he complains.

And your Petitioner, as in duty bound, will ever pray.

THOS. S. ROUNTREE.

Legislative Assembly.
 NEW SOUTH WALES.

—
FITZ ROY DRY DOCK.

(PETITION OF CERTAIN MERCHANTS, SHIPWRIGHTS, AND OTHERS.)

—
Ordered by the Legislative Assembly to be Printed, 3 April, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Council assembled.

The Petition of the undersigned Merchants, Owners, Agents, Masters of Vessels,
 Shipwrights, and others, interested in the trade of the Port of Sydney,—

HUMBLY SHEWETH:—

That your Petitioners deeply regret that a memorial has been presented to your Honorable House, with a view to prevent the public from using the Government Dry Dock for the repairs of vessels.

That the Government Dry Dock is the only establishment at this port where shipmasters can take large vessels and employ what workmen they please in effecting the repairs thereon.

That your Petitioners are fully convinced, that if the said Dock is left open for the use of the public, by paying as at present a reasonable rate for the occupation thereof, it will prove a great saving to the shipowner and the community at large, by preventing any monopoly in future.

Your Petitioners would respectfully solicit the favorable consideration of your Honorable House to their Petition herein set forth.

And your Petitioners, as in duty bound, will ever pray.

Sydney, 1st March, 1860.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

FITZ ROY DRY DOCK.

(PETITION OF JOHN CUTHBERT.)

Ordered by the Legislative Assembly to be Printed, 10 April, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of John Cuthbert, of Sydney, shipbuilder,—

SHEWETH :—

That your Petitioner is the lessee of the Patent Slip, at Pymont, the property of the Australasian Steam Navigation Company.

That, in embarking in so extensive an undertaking, your Petitioner did so under the full belief that the only competition he should have to sustain was that with the present and any future private graving establishments of Port Jackson, His Excellency the late Governor General, Sir Charles Fitz Roy, having, on several occasions—more particularly when laying the first stone of the site of the Fitz Roy Dry Dock, at Cockatoo Island—expressed his confident hope that no feeling of jealousy would be excited on the part of the owners of the private Dock at Waterview Bay and the Patent Slips in Darling Harbor, as it was his intention to provide, equitably and fully, against any complaint as to public and private competition. In the Session of the old Legislative Council of one thousand eight hundred and fifty-five (the House being in Committee of Supply, and a vote of money being asked towards the completion of the Fitz Roy Dock), the Acting Colonial Treasurer, Mr. Riddell, in answer to a question put by the late Mr. Robert Campbell, then one of the Members for Sydney, distinctly assured the Committee that the Dock would be exclusively used for the reception and refitting ships of the Royal Navy, or Men-of-War belonging to friendly Maritime Powers; and, on this assurance, the vote was granted.

That notwithstanding these assurances, which mainly guided your Petitioner in leasing the Patent Slip, at Pymont, which had been constructed by an Incorporated Company, at very large cost, and by free labor, they were repudiated by the late Ministry; and the Fitz Roy Dock, constructed by convict labor alone, and at comparatively small outlay for machinery, paid out of the public revenues, has been let to private individuals, for the purpose of repairing private merchant ships; Ministers defending this violation of distinct promises made by a former Government, first, on the ground that no written registry of such promises are to be found in the public records; and, secondly, that even if any such registers were in existence, the promises of their predecessors were not binding upon them.

That this repudiation is at direct variance with an established principle of the British Constitution, and, if recognised by the Parliament of this Colony, it must inevitably deter individuals from embarking in large undertakings in which they may meet with Government rivalry, although assured by one Ministry that no such unfair impediment to the success of private enterprise would be thrown in their way by any future Government.

That your Petitioner has learnt that a Petition, purporting to be from certain merchants, owners, agents, masters of vessels, shipwrights, and others interested in the trade of the Port of Sydney, was presented to your Honorable House on Friday last, referring to a previous Petition for the exclusion of the public from the use of the Government Dock, and praying that the Dock may still be left open to the public; that those Petitioners complain of the private graving establishments of the port as monopolies; and of the rates charged by the lessees as excessive.

That, from the said Petition, your Honorable House may be led to suppose that *our* unreasonably high scale of charges has been mutually established by your Petitioner and the lessees of the other private graving establishments—an assumed combined monopoly which the said Petitioners have prayed your Honorable House to put an end to, by sanctioning the letting of the Government Dock to private individuals. That, so far from the existence of any such mutual understanding, there has always been, particularly in regard to the refitting of vessels of heavy tonnage, a very keen competition between your Petitioner and the lessee of Mort's Dry Dock, a competition which insures to shipowners and masters the performance of shipping repairs of every kind, at the lowest remunerative rates possible. Indeed, it is patent to all who are interested in the trade of this port, or of any other in the Southern Hemisphere, that in no private graving establishments out of the United Kingdom can vessels of the heaviest tonnage be refitted at less cost and in less time.

That, by letting the Fitz Roy Dock to private individuals, for short terms, and allowing the services of the staff of engineer officers at Cockatoo Island to be made gratuitously available by the temporary lessees, the latter can, of course, execute repairs at lower rates than your Petitioner, who is obliged to keep a staff of superintendents and other officers in constant pay.

That if it be deemed by your Honorable House that the requirements of the Port of Sydney demand greater facilities for re-fitting ships than the existing private Patent Slips and Dock can afford—a proposition, however, which your Petitioner does not accede to—then he would respectfully submit, that an annual lease of the Government Dock should be offered to the competition of responsible parties by public auction. By this means, a very considerable and certain yearly amount would be secured for the public revenue; whereas, by letting the Dock to irresponsible persons, for temporary jobs, and merely charging them a small fee for letting the water in, pumping it out, and letting it in again, the revenue receives no perceptible increase, whilst serious injury is done to those whose enterprise, industry, and capital, have obtained for Sydney the high reputation of being the only great graving port in the Southern Seas.

That for the mode of letting the Dock on annual lease by auction, as suggested by your Petitioner, a precedent is to be found in the letting of the Semi-Circular Quay under the same system; and by which means a large yearly rental has for many years been obtained.

Your Petitioner, therefore, prays your Honorable House to take the premises into consideration, and to adopt such measures as you may deem fit for preventing the Fitz Roy Dock from being let for short terms for private purposes, unless in cases of emergency, when the private Patent Slips and Dock may not, from present and prior engagements, be enabled to execute repairs or re-fitting which may be immediately and pressingly required.

And your Petitioner, as in duty bound, will ever pray.

JOHN CUTHBERT,

Shipbuilder.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES, No. 77. TUESDAY, 10 APRIL, 1860.

14. Fitz Roy Dry Dock:—

(1.) Mr. Parkes moved, pursuant to *amended* notice,—

(1.) That the Petition of Thomas Rowntree, presented by Mr. Parkes,—the Petition of certain Merchants, Shipowners, and others, presented by Dr. Lang,—and the Petition of John Cuthbert, presented by Mr. Parkes, respecting the practice of letting the Fitz Roy Graving Dock at Cockatoo Island,—be referred for the consideration of a Select Committee, with instruction to inquire into and report upon the general subject.

(2.) That such Committee consist of Mr. Arnold, Mr. Alexander Campbell, Mr. Egan, Mr. Gordon, Mr. Hodgson, Mr. Black, Dr. Lang, Mr. Samuel, Mr. Walker, and the Mover.

And Mr. Hoskins requiring that the proposed Committee be appointed by Ballot,—
Question,—(1.) That the Petition of Thomas Rowntree, presented by Mr. Parkes,—the Petition of certain Merchants, Shipowners, and others, presented by Dr. Lang,—and the Petition of John Cuthbert, presented by Mr. Parkes, respecting the practice of letting the Fitz Roy Graving Dock at Cockatoo Island,—be referred for the consideration of a Select Committee, with instruction to inquire into and report upon the general subject,—put and passed.

Whereupon the House proceeded to the Ballot, and the Speaker declared the following Members to be the Committee duly appointed:—Mr. Hoskins, Mr. Arnold, Mr. A. Campbell, Mr. Gordon, Mr. Parkes, Mr. Egan, Dr. Lang, Mr. Hodgson, Mr. Walker, and Mr. Samuel.

1859-60.

FITZ ROY DRY DOCK.**REPORT.**

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 10th April last, for whose consideration were referred the respective Petitions of *Thomas Rountree, of certain Merchants, Shipowners and others*, and of *John Cuthbert*,—“*respecting the practice of letting the Fitz Roy Graving Dock at Cockatoo Island, with instruction to inquire into and report upon the general subject,*” have agreed to the following Report:—

Your Committee have considered the petitions presented to your Honourable House,—two from Mr. Rountree and Mr. Cuthbert, stating various objections to the practice of temporarily letting the Fitz Roy Dock for the purposes of private shipbuilders,—and one from a number of persons interested in the shipping trade, praying that such practice may be continued for the public convenience and benefit; and they have also taken the evidence of the principal petitioners and others on the subject.

Your Committee have failed to discover any admissible evidence that a pledge was given, as alleged, by the late Governor, Sir Charles Fitz Roy, that the Fitz Roy Dock should not be brought into competition with private establishments of a similar character. And as this dock was in course of construction several years before any private works of the same kind were undertaken, it is not unfair to infer that such investments of private capital were made with a full knowledge of the liability to a competition that seems a necessary concomitant of the Government establishment being beneficially employed. The management of the Royal Docks in Great Britain do not appear to offer any data from which an analogy may be drawn to apply in the present instance. While we have no navy nor war-like preparations to occupy a Government dockyard, a large amount of money, in the construction of the Fitz Roy Dock, has been diverted from other objects on which our revenue might have been profitably expended; and the public interest requires that so costly a work, when completed, should be rendered available for the general shipping demands of the port.

Your Committee, however, are not insensible to the grounds of complaint of those persons who have largely engaged in private undertakings of the same kind, and they have been anxious to offer some recommendation for permanently leasing the dock, by which the proprietors of large private establishments would not have to contend with the

the unequal competition to which they are undoubtedly subjected by the temporary letting. But the proposal to lease the Fitz Roy Dock for a term of years is at once met by formidable difficulties—such as the management of the penal establishment of Cockatoo Island, the necessary reserve of the use of the dock for Government purposes, and the preservation of the expensive machinery in the workshops; and in the face of these difficulties your Committee have felt that they cannot recommend what otherwise they are of opinion would be the proper course to be taken,—the leasing of the dock by public competition.

It has occurred to your Committee that Cockatoo Island offers many advantages for a great central prison on the most improved plan of discipline. Its healthy situation, its isolation, and the easy access to it are obvious advantages for such a purpose; and, if the prisoners were employed for a few years in building workshops, and in other necessary alterations to prepare it for an industrial prison in connection with an extensive dockyard, they might afterwards be converted into a classified, partially skilled, and thoroughly disciplined body of workmen for a great national use, at the same time that the most that were possible would be done for their individual instruction and reformation.

Your Committee, under all the circumstances, do not feel justified in suggesting any specific alteration in the management of the Fitz Roy Dock; and they, therefore, report the evidence they have taken to your Honorable House, with the recommendation that a Committee may be appointed in the next Session of Parliament to consider the whole question of the management of Cockatoo Island, including both the penal and engineering departments.

HENRY PARKES,
Chairman.

*Legislative Assembly Chamber,
Sydney, 22 May, 1860.*

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 20 APRIL, 1860.

MEMBERS PRESENT:—

Rev. Dr. Lang, | Mr. Parkes,
Mr. Samuel.

H. Parkes, Esq., called to the Chair.

Resolution of the House, dated the 10th instant, appointing the Committee, and referring the several Petitions upon the subject of the Fitz Roy Dock, read. Committee deliberated relative to their course of procedure.

It was Resolved,—

“ That Messrs. Rountree, Cuthbert, and Drake, Petitioners respectively, be summoned to give evidence at the next meeting.”

It was further Resolved,—

“ That the Chairman do move in the House for a Return of certain Correspondence touching the subject of inquiry, with a view to the reference thereof to this Committee.”

[Adjourned to Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 25 APRIL, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Mr. Hodgson, | Rev. Dr. Lang,
Mr. Hoskins, | Mr. Samuel.

Mr. T. S. Rountree, *Lessee of Mort's Dry Dock, Waterview Bay, Balmain*, called in and examined.

Witness withdrew.

Mr. J. Cuthbert, *Shipbuilder, Lessee of A. S. N. Co's Patent Slip, Pyrmont*, called in and examined.

Witness withdrew.

Mr. H. Drake (*Messrs. Hely, Drake, and Harper, Shipbuilders*), called in and examined.

Witness withdrew.

Committee

[Adjourned to Tuesday next, at *Eleven* o'clock.]

TUESDAY, 1 MAY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Mr. Hoskins, | Mr. Samuel.

Captain G. K. Mann, R.E., *Engineer-in-Chief and Superintendent, Cockatoo Island*, called in and examined.

Witness withdrew.

J. Williamson, Esq., called in and examined.

Witness withdrew.

Committee

[Adjourned.]

THURSDAY, 10 MAY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Rev. Dr. Lang, | Mr. Samuel.

Committee deliberated.

It was Resolved,—

“ That further Evidence is unnecessary for the purposes of this inquiry.”

Committee deliberated relative to the recommendations to be contained in the Report. Deliberation adjourned.

[Adjourned to Wednesday next, at *Eleven* o'clock.]

WEDNESDAY,

WEDNESDAY, 16 MAY, 1860.

By direction of the Chairman, the meeting of the Committee appointed for *this day* convened to-morrow at *Eleven o'clock*.

THURSDAY, 17 MAY, 1860.

MEMBERS PRESENT :—

H. Parkes, Esq., in the Chair.
 Mr. Hoskins, | Rev. Dr. Lang,
 Mr. Samuel.

Deliberation relative to the views to be expressed in the Report resumed.
 Committee further deliberated, and instructed the Chairman to prepare a draft for consideration at the subsequent meeting.

[Adjourned to Tuesday next, at *Eleven o'clock*.]

TUESDAY, 22 MAY, 1860.

MEMBERS PRESENT :—

H. Parkes, Esq., in the Chair.
 Rev. Dr. Lang, | Mr. Samuel.

Committee having met,
 The Chairman laid before Committee a Draft Report, pursuant to instruction on the 17th instant.

Draft Report read.

Committee deliberated.

Motion made (*Mr. Samuel*) and *Question*—"That the Draft Report, as read, be the "Report of this Committee"—*agreed to*.

Committee, referring to Resolution on the 20th ultimo, instructing the Chairman to move in the House for a Return of certain Correspondence respecting the private employment of the Fitz Roy Dock, the information anticipated therefrom having been obtained in the course of the evidence of Captain Mann,—

Resolved,—"That such Resolution be rescinded."

Chairman requested to report to the House.

List of Vessels docked in the Fitz Roy Dry Dock, with dates of entry and exit	17

1859-60.

Legislative Assembly.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

FITZ ROY DRY DOCK.

WEDNESDAY, 25 APRIL, 1860.

Present:—

MR. SAMUEL,	MR. PARKES,
MR. HOSKINS,	DR. LANG,
MR. HODGSON.	

HENRY PARKES, ESQ., IN THE CHAIR.

Mr. T. S. Rountree called in and examined:—

1. *By the Chairman*: You are the lessee of a private dry dock, known as Mort's Dry Dock, in Waterview Bay? I am.
2. You have petitioned the Legislative Assembly lately respecting the management of the Government Fitz Roy Dock? I have.
3. Is the signature to the petition produced in your handwriting? It is.
4. The substance of your complaint, as I gather it from your petition, is that you consider the manner in which this dock is now let acts injuriously, and in an unfair way upon your private undertaking? That is my complaint.
5. Will you be good enough to state particularly the nature of the grievance of which you conceive you have a right to complain? In the first place, I am paying, and have been since 1854, £3,000 a year for the Waterview Dock, and this, together with the expense of maintaining it, entails on me a charge of something like £5,000 a year. This expense is absolutely necessary to be gone to, in order that the dock shall be always available at any moment. What I complain of is, that after having to go to all this expense to maintain the Waterview Dock, the Fitz Roy Government Dock should be available for any party, who, without going to the expense that I am under, can engage it at any moment, can employ their own men to do the necessary repairs, and so shut me out from competing with them, and prevent me from being able to pay the large amount of rent, taxes, and wages that I am under. The fact is, that any idle shipwright on the streets can engage the dock, take a vessel in and repair her, at a much lower rate than I could possibly do, seeing that he is under no expense beyond the time the vessel is in the dock, whilst my expenses continue all the year through. I am thus not allowed a chance of competing fairly with them.
6. Had you any interest in the Waterview Dry Dock, in the first instance? I had.
7. Had you any beneficial interest in the originating of the undertaking? Yes.
8. To what extent? I had eighteen sixty-fourths of the venture.
9. You were one of the parties who first conceived the idea of constructing this work? I was.
10. At the time of your conceiving the idea, was not the Fitz Roy Dock under construction? Certainly. It was commenced previous to my arriving in the Colony.
11. Then the Fitz Roy Dock was in course of construction at the time that you and others formed the project of making a second dock? It was.
12. Have you any objection to state to the Committee to what extent the future operations

Mr. T. S.
Rountree.
25 April, 1860.

Mr. T. S.
Rountree.
25 April, 1860.

of the Government Dock entered into your calculations, when the feasibility of your plan was canvassed? Of course we had numerous conversations upon the matter before entering on the undertaking.

13. You misunderstand me. What I wish you to state is, how far you considered the position of the Government Dock to militate against your undertaking, and the degree to which it was thereafter likely to affect your interests? We never took it into account at all, as we always understood that the Fitz Roy Dock would be used by Government vessels only.

14. Were you given to understand that the Fitz Roy Dry Dock would not be brought into competition with yours? We were. We should certainly never have constructed the Waterview Dock had we not been positively assured by the Governor General, Sir Charles Fitz Roy, that the Government Dock would never come into competition with ours.

15. Did you receive this assurance previous to your forming the plan of constructing the Waterview Dock? No, not previous to our forming our purpose, but within the first few months of our commencing operations.

16. That is to say, that so soon as you commenced work you received the assurance of the Governor General that the Fitz Roy Dock should not be brought into competition with yours? Yes. His Excellency, when he visited our works shortly after we had commenced operations, declared that the Government Dock should never come into competition with us.

17. Then you were under the impression that such would be the case? Certainly. Had we known at the time of our commencing the Waterview Dock that the Government Dock would have been open to competition, we should have given our dock up; but we took it for granted, after what the Governor General had assured us, that it would be a Government Dock and nothing else.

18. Will you state precisely the nature of the assurance you received from the then Governor General? It was merely a verbal assurance.

19. Did you hear it given? Yes; I heard it with my own ears, at my own table. The Governor General and some other officials used to come over at different times during the progress of the work to look at the dock. On one occasion that His Excellency was there, Mr. Mort happened to be there also, and he put the question distinctly to His Excellency at that time.

20. In what form was the question to His Excellency put? If I recollect right, they were sitting round the table in my house, at lunch, and Mr. Mort introduced the matter casually, and it was discussed.

21. And what answer did Sir Charles Fitz Roy give? He said that he would take care that at no future time the dock should come into competition with private enterprise.

22. Did you ever have any further assurance on the point? No; that is the only time that I recollect the Governor General speaking on the subject.

23. When was your dock completed? In March, 1854, we docked the first ship.

24. What was her name? I forget just at the present moment.

25. When was the Fitz Roy Dock opened? I cannot say exactly, but it was about twelve or fifteen months after ours.

26. How long was the Waterview Dry Dock in course of construction? We started in 1853, in February, and we opened in March, 1854.

27. And how long was the Fitz Roy Dock in course of construction? Somewhere about nine or ten years.

28. Do you happen to know the dimensions of the two docks respectively? Yes. My own dock is 375 feet in length, with 72 feet gateway, and a depth of water at the doors of 20 feet 6 inches; the Fitz Roy Dock is 300 feet long, 60 feet gateway, and the same depth of water.

29. Then your dock is longer, and with a greater width of gateway? Yes; there is about 10 feet difference of gateway between the two.

30. Then, although the Fitz Roy Dock was commenced eight years before yours, it was not completed until after yours? Yes. It was opened about twelve months after ours.

31. When was the Fitz Roy Government Dock first let out to private shipbuilders? The "Benares" was the first private ship which went in, and that was about six months ago; she came to us first, but we could not receive her, as we had the "Oneida" in our dock at the time. As she was pressed for time, the Government gave her permission to go into the Fitz Roy Dock.

32. Was the "Benares" the first private vessel that ever went into the dock? I never recollect a private ship going in before that.

33. Will you state minutely the system by which the Government Dock is let? I only know it from Mr. Hely, who has several times engaged the dock for his firm. What he told me was, that the dock was let out to any one applying for it, on the same terms as we charge for ours, that is one shilling per ton for docking, and sixpence per ton per day during the time the vessel remains in dock. So that the parties renting the dock only use it for a few days, so long as they require it, and then throw it up when their job is done.

34. Then, do you mean to say that if A or B, being a shipbuilder, wanted to dock a vessel he was at work upon, for three, five, or seven days, that he could get the Government Dock for that short period at the same rate which you now charge at your dock? Yes; that is exactly the system that I complain of.

35. But if they charge only the same rate as you do, how does that affect your establishment? Because I have to keep up a very large establishment, in order to be always prepared for any work that may come in, whilst the men who take the Government Dock have no such establishment to keep up, require no outlay of capital, and can get up from the streets the necessary hands to do the work. This leaves me no chance of competition.

36. Do the Committee understand you to say that the person temporarily renting the dock can

can be accommodated with men also? No; he has to take his own men with him. He is, however, accommodated with labor to the extent necessary to work the engine? He has to take with him all the labor necessary for the work he has to do. The Government engineers pump the dock out, work the engine, and find the coals, the party renting having no responsibility in the docking of the ship, which is done entirely by the Government engineers.

Mr. T. S.
Rountree.

25 April, 1869.

37. Will you inform the Committee what it is that you wish to have done with this dock? What I wish is just this, that if the Government Dock is to be brought into competition with the private establishments, then that the competition should be a fair one. Let the dock be put up to auction and be leased to the highest bidder.

38. Then you do not object to competition so long as it is fair and legitimate? Not at all, provided it is put up to auction and let to the highest bidder I should make no objection.

39. You do not want the dock to be shut up to all but Government vessels? Not at all. If revenue is wanted I see no reason why it should not be derived from the Dry Dock as from anything else. But, then, let it be in such a way that all the establishments shall have a fair field and come on an equal footing before the public.

40. You would wish it to be leased so as to become in effect a private establishment? Exactly.

41. With the same risks as regards outlay that you are yourself under? Yes.

42. And the dock might be let, you think, subject to the condition that Government vessels requiring to use it should have the preference? Yes, in the same way as the Waterview Dock. There the mail steamers have the preference, and the same provision could be made at the Fitz Roy Dock for Government ships.

43. *By Mr. Samuel*: You have no objection, then, to the dock being let by auction? None whatever.

44. But you complain at its being let for short periods? Yes, and that it is let to any man off the streets who may choose to apply for it.

45. But, supposing the dock to be leased in the way you describe, what is to prevent the lessee from letting it out in the same manner for short periods? Nothing. No doubt he could do so if he wished, but when he is under heavy rent and expenses he has his pocket to look at.

46. But the party leasing the dock, if he did so merely for the purpose of letting it out for short periods to others, need keep up no establishment? He would be obliged to do so, because he could not keep the dock available unless at great expense. And, on the other hand, if he kept no establishment, these parties off the street would not be able to make use of the dock if any great outlay were required from them.

47. *By the Chairman*: You are, however, willing to take your chance of whatever plan the lessee may choose to follow? Certainly. Let it be in private hands and we can compete fairly upon our merits, in the same way as we now have to do with the Patent Slip.

48. *By Mr. Samuel*: Are you certain that the charge made at the Fitz Roy Dock is exactly the same as that made at yours? I have been given to understand that it is, but I am not certain, as I do not know of my own knowledge what the charges are. We charge for a 1,000 ton ship, docking and undocking, one shilling per ton, and sixpence per ton for each day that she is in dock; and I believe that is the charge made at the Fitz Roy Dock.

49. *By Mr. Hoskins*: You do not effect repairs to vessels—you merely rent the dock? On the contrary, I am a shipwright by business, and it is the trade that the dock brings me that I look to more than to the tolls of vessels lying there. It is not to the renting of the dock so much as the employment at my own business that I look to repay my rent.

50. Then you, being a shipwright, of course allow no one to perform repairs in the Waterview Dock but yourself? No, I do not.

51. Is not that something like monopoly? No; because I do the work upon precisely the same terms as it would be done elsewhere.

52. Then your petition to the Assembly is not so much a complaint of the renting of the dock for short periods as of the loss of your trade in consequence of the letting? Yes; I am keeping up an establishment in order to have my dock available at any moment, and the Government, by the plan they pursue, permit any man off the streets to come in and compete with me for a job.

53. Are you aware that in Bombay there are Government Dry Docks? I know that there is one there.

54. And are not private vessels allowed to go in there? In cases of emergency they are, but not otherwise. I believe that the Peninsular and Oriental Company have now rented these docks, and that they are open in the same way that the Waterview Dock is, the Company's ships having the preference. The charges, however, are very much in excess of those of Sydney.

55. Then I suppose that if a vessel put into the harbor in distress, you would consider that to be a sufficient case of emergency to justify her being received into the Government Dry Dock? Yes, of course; but if the dock were let by public auction, all difficulties would be got over.

56. When you commenced the construction of your dock, you were aware that it was the intention of the Government to construct a dock? Yes; the Government had been at work at it some years before we commenced.

57. And you had only a verbal assurance from Sir Charles Fitz Roy that the Government Dock would not be brought into competition with private establishments? That was all.

58. *By Dr. Lang*: Did you make any proposal to the Government, in order to obtain documentary evidence of this pledge? No; we made no proposal of the kind.

59. Do you not think that it must seem strange to find parties risking so much capital on an adventure, knowing that a Government Dock was in course of construction that might be brought

- Mr. T. S. Rountree.
 25 April, 1860.
- brought into competition with their undertaking, without their applying for a written guarantee of what had been promised them? No doubt. There may have been some neglect in that respect; but, as regarded myself, I was so busy arranging for the work, and supervising the workmen, that I had time to think of little else. There was such an incessant demand upon me, and my thoughts were so completely kept to the construction of the works, that the idea of getting a written guarantee quite escaped me.
60. *By the Chairman*: Was there not a general feeling in the community that the Fitz Roy Dock had been so long in hand, that it was almost hopeless to expect its completion? Yes; I believe that such was the general impression.
61. Were not complaints made in the Legislature, session after session, at the slow progress of the work, and at the almost hopelessness of its completion? There were.
62. *By Mr. Hoskins*: You are acquainted with the English ports? I am.
63. Are there no public establishments at any of them into which a vessel could be taken, either dry dock or graving dock, to have repairs effected? No, only the incorporated docks, such as the Southampton Docks. But the fact is, that all the docks in England are now getting up lifts for the purposes of examining and repairing vessels bottoms. If one dock has anything of the kind, the others are obliged to have it also; because, if a vessel leaves one dock in order to go to another to have her bottom examined or repaired, the chances are that she will not go back again; and thus the dock loses a large sum, not merely dock dues, but other contingent advantages, such as wharfage, storage, and many other things. But in London there are no docks but those that are worked by a proprietary, and it is the same thing in Liverpool.
64. *By Mr. Samuel*: As things now stand, the Patent Slip and your dock exercise a monopoly of the trade? No; I think not. I cannot see how we can have a monopoly, when I have not had a job for the last three months.
65. But you, being a shipwright, will not rent your dock to another person in the same business? If a person comes to me I will rent him the dock, but certainly not at the price I charge myself to ships. It would be a hard thing indeed upon me, if I had to lay out £8,000 a year to keep my dock in a state of efficiency, and then had to give it up to another person to take the bread out of my mouth.
66. But do not your dock and the Patent Slip virtually exercise a monopoly? To a certain extent we do; for instance, all the large vessels or steamers that cannot be hove down must come to the dock or the slip, but then to provide for them we have gone to very great expense. With the facilities that the Government give in their dock any of my men can now go and underbid me and take a ship away from me, by taking her into the Fitz Roy Dock.
67. *By Mr. Hodgson*: You have made some allusion to an existing agreement between yourself and the P. & O. Company, have you any objection to state to the Committee what that agreement is? None whatever. The dock is let directly to the P. & O. Company. They rent the whole of the dock and premises for £6,000 a year. I rent under the Company, and pay £1,500 a year for the use of the dock at such times as they may be unoccupied by the Company. I have the free use of the whole place, but the P. & O. Company can command them for any of their vessels whenever they like.
68. Then the P. & O. Company pay £6,000 a year to Mr. Mort? Yes.
69. And afterwards there is an understanding between you and the Company? Yes. I pay them £1,500 a year for the unoccupied time of the dock, that is, for such time as it is not required for their vessels.
70. They have a priority of claim for their own vessels? They have.
71. And, if they find it necessary, can occupy it for three weeks out of a month? They can.
72. Do you consider yourself the lessee of the dock? Yes, under the P. & O. Company.
73. *By the Chairman*: You are aware that there has been an argument in favor of letting the Government Dock, that by so doing it would restrain all monopoly? I cannot see what monopoly there is. I have not had a job this three months, and until within this last few weeks the slip has been in the same condition.
74. But have you ever heard it said, as an argument in favor of letting the Fitz Roy Dock, that it would tend to keep down monopoly? I cannot say that I have ever heard such an argument used; but if it has, there is no foundation for it, for I have done work at my dock as cheap as it has been done in any part of the world.
75. In the petition presented to the Assembly and signed by seventy-nine persons, this paragraph occurs:—"That your petitioners are fully convinced that if the said dock is left open for the use of the public, by paying, as at present, a reasonable rate for the occupation thereof, it will prove a great saving to the shipowner and the community at large, by preventing any monopoly in future." Now, I wish to ask you in reference to this point, whether you consider the Government have anything to do with the prevention of monopoly; or rather, whether the Government taking upon itself to prevent monopoly is not equally a violation of the principles of free trade as would be the taking steps to create a monopoly? I do not think the Government ought to interfere.
76. But as a question of principle,—do you conceive that it would be wrong in principle for the Government to authorize a monopoly? I certainly think it would.
77. Then, is it not equally as wrong in principle for the Government to interfere to prevent a monopoly? I have no doubt of it.
78. Then you consider that it is not the duty of the Government to interfere either by way of authorizing or preventing a monopoly? I think they ought not to do so. The Government would have done a great deal better, if they wished to derive a revenue from their dock, by laying the whole matter before the Chamber of Commerce, and taking their advice on the point.

79. *By Mr. Samuel:* Do you think it would be more likely to benefit the port of Sydney and to add to our trade, if increased accommodation were afforded to vessels desirous of refitting or if the whole accommodation was to be confined to one dock? If there was any necessity for two or even more docks they ought to be opened, but if the Government Dock is to be made public, let it be made so by public competition. If it is to be used publicly, it ought not to be let under the present form.

Mr. T. S.
Rountree.

25 April, 1860.

80. Do you not think that the greater the facilities that are given for the repair of ships in this port, the more likely we shall be to attract ships here, thus adding to our trade and to the public benefit? I have no doubt that the greater facilities you give vessels the larger number of vessels will come here.

81. That being the case, is it not the duty of a wise Government to add to those facilities? Yes, but not to the injury of individual enterprise.

82. The same argument might be used in the case of all public works;—for instance, it might be said that the construction of the Circular Quay was an injury to those persons who had previously constructed wharfs of their own? No; because the Circular Quay was let by public competition, and the parties who fancied themselves aggrieved had an opportunity of renting it if they wished.

83. *By Mr. Hoskins:* Can you tell me how many vessels have been docked in the Fitz Roy Dock since it has been opened? Not more than ten I should say.

84. *By Mr. Samuel:* It has only been thrown open within the last six months? That is all.

85. *By Mr. Hoskins:* You say that you have had no vessel in your dock for the last three months? Such is the case.

86. But is it not the fact that Patent Slips are used in preference to Dry Docks in all ports in the world? Yes; but it has not been owing entirely to that that I have had no ships. The Patent Slip has certainly been pretty busy during the last two months, but before that it was idle for some three months.

87. Still Patent Slips are preferred to Dry Docks? Perhaps they are, on account of the quickness with which the whole thing is done. Yes; no doubt they get up quicker, and perhaps they lay drier afterwards to be worked at.

Mr. J. Cuthbert called in and examined:—

88. *By the Chairman:* You are a shipbuilder, carrying on business in this city? I am.

Mr. J.
Cuthbert.

89. How long have you been established in that business? Either seven or eight years last January.

25 April, 1860.

90. Where is the establishment situated in which you carry on your business? Next to the Gas Works, and at the Patent Slip.

91. You mean the Patent Slip belonging to the Australasian Steam Navigation Company at Pyrmont? The Patent Slip, at Pyrmont, of which I am the lessee.

92. Have you petitioned the Legislative Assembly with respect to the manner in which the Fitz Roy Dry Dock is now let by the Government? I have.

93. In that petition you allege that some assurances were given by a former Government that the Fitz Roy Dock should not be used in competition with private establishments? I have been informed, on what I consider to be very good authority, that such assurances have been given.

94. It does not come within your own knowledge, then, that any such pledges have been given? No; but I have it upon good authority.

95. No such pledges were given to you, or given to others in your hearing? No.

96. Will you now state to the Committee what is the particular nature of the grievance of which you consider you have cause to complain? The complaint is set out very fully in the petition.

97. But we want to ask you more particularly upon the subject. We wish to know whether your objection is made against the manner of letting the dock at present followed, or against the letting it at all? It is against the way in which the Government now let it to irresponsible persons.

98. Do you consider that the Fitz Roy Government Dock should be altogether excluded from competing with private establishments, or do you think it may be brought into competition with them, if it be worked by a different process? I am decidedly of opinion that the dock ought to be let by public competition, if it is to be let at all.

99. You think, then, that it ought to be put up, like any other public work from which revenue is derived, to public auction? Yes; and let the highest bidder have it.

100. So that if the mode of letting be that for which a precedent is found in the letting of the Circular Quay, and from which it may be anticipated that like the Circular Quay a large annual rental may be obtained, you would offer no objection? No; I do not object to the dock being let; but if it is let it should be for lengthened periods, and to responsible persons.

101. You would not object to its being let on annual lease, with a provision in the lease that Government vessels requiring its use should have the preference over all others? Certainly not; I should never think of objecting under such circumstances.

102. That is not the mode in which it is now let? No; any person sends in an application, and gets it for as long a term as he wants it.

103. Then it is now given to any person who may choose to apply for it, for just so long as he requires it? Exactly.

104. Can you mention any cases in which this has been done? Yes; I have one instance that happened entirely within my own knowledge, in the case of the "Granite City."

Mr. J.
Cuthbert.
25 April, 1860.

105. Will you detail to the Committee the circumstances of that case in so far as they have come within your own knowledge? I will. The captain of the "Granite City" was in treaty with me to take his vessel on to the slip, and have her repaired, and at the same time that he was in treaty with me he must have been in treaty for the Fitz Roy Government Dock. Just as I thought that I had arranged with him about his repairs, I found that he had made application to the Government to get the use of the Fitz Roy Dock to perform his repairs in, and had got it.
106. Was he going to do the repairs himself, that is, by his own men? No; he only got the use of the dock, other parties undertook the repairs of the vessel.
107. Who were they? They were shipwrights in the town.
108. What were their names? Healey, Drake, and Harper. They have got a place near to mine.
109. What course did the captain take to obtain the use of the dock? He just sent in an application for it, and it was granted to him.
110. Did it come to your knowledge that he sent in the application? I was given to understand that the captain got some one to apply for him; and I understood that it was Mr. Charles Smith who made the application for the dock, and that Mr. Black, or some of the other Ministers, gave leave to dock the vessel there during the time it was under repair by Healey, Drake, and Harper.
111. Then the permission was given to Healey, Drake, and Harper? Yes; I believe they got permission to take in a ship and repair her there.
112. And they did so? Yes; they had her in, and executed all the necessary work.
113. How long was she in the dock? That I cannot say, precisely.
114. Three or five days? I think not more than five days.
115. Do you know what they had to pay? No, they never informed me.
116. Can you not form an opinion upon the subject? I do not know what they paid, but since they used it, I have had put in my hands a scale of the charges made at the Government Dock. They charge for a ship of a thousand tons, at the rate of 1s. per ton for docking, and 6d. per ton per day during the time she is in dock. The scale then decreases, I believe about an eighth of a penny at a time according to the tonnage, down to small ships of 100 tons.
117. Will you be good enough to describe to the Committee the way in which you conceive this system of letting operates injuriously to you? I can explain it very easily; for instance, suppose any shipwrights get a ship to repair, they at once go about the town and employ a large number of men for that job; but when that job is done there is no other work for the men, and they are all started off; thus the men they employ are only taken on for a few days as they are wanted, whilst I have to keep up a large establishment.
118. Confining your answer to the particular case you have chosen to allude to, did it come within your knowledge that men were employed as you describe? To the best of my knowledge and belief they were so.
119. But supposing you got a vessel requiring extensive repairs, would you not also employ a large number of hands in the same temporary way? Yes; if the work was so extensive or so pressing that I had not sufficient with my ordinary shop hands.
120. You keep a large number of permanent hands on your establishment? Yes, a large number.
121. Not only when you have an extensive work on hand, but when you have not? Yes, constantly.
122. You find them work of some kind or other to do, even though you have to do work on speculation? Yes; if I have not something on hand I do something for myself.
123. You find it absolutely necessary to do work on speculation, in order to keep your establishment together, rather than to part with good men when you have them? Yes; I must do so, and that is the way in which this Government arrangement is so bad for me. I built the "Lady Denison" brig in this way, merely to keep my men employed; and I had to sail her two voyages on my own account before I sold her.
124. Do not these persons who take the Fitz Roy Dock temporarily keep up any establishment? Not by any means extensive ones.
125. You do not, however, object to the dock being let, provided that it is by public competition, and for a stated period? No; it should be let for some lengthened period—say one, two, or three years.
126. You consider, however, that you are exposed to unfair competition, if an establishment supported at the Government expense is let in the manner it now is, because it enables persons without capital, and without establishments, to get an advantage over you that you cannot fairly meet? Exactly.
127. Is there any other reason you would urge? Another reason is this,—say, for instance, I have a very heavy job, and my men may take that opportunity of combining for a rise in wages, perhaps on account of a new gold field being opened, or because there is a great demand for their labor. Well, I have a ship to be repaired and I want a good many hands, my men combine together, and, if I do not give them the wages they require, they go and get the Fitz Roy Dock from the Government, and take away from me the ship that I should have had to repair.
128. Is this likely to be the case? I have no doubt of it. I see, in this petition that has been sent in to the Assembly, that the persons signing it are mostly men who are in my employ.
129. To what petition do you refer? The petition in favor of letting the Fitz Roy Dock.
130. The counter petition presented in opposition to yours? In opposition to Captain Rountree's.

Mr. J.
Cuthbert.

25 April, 1860.

131. Have you seen the signatures to that petition? I have.
132. Where? In the Legislative Assembly Offices, up stairs.
133. And, having seen the signatures, you now affirm that a number of them are those of men who are now in your employment? I do.
134. Will you look at the signatures to the petition I now put in your hands, which is the one to which you refer, and mention some of the names belonging to men in your employ? I see the names of John Eason, Thomas Acton, Thomas Robertson, and Alexander Turnbull. These men are all in my employ.
135. Were they in your employment when they signed this petition? No; I believe they were not.
136. Are there any other names? Yes; there are Isaac Forrest, Robert Griffith, William Fletcher, Thomas Hatfield, William West, Richard Dearing, and I have no doubt there are a good many more whose names I do not know. If my clerk was here he knows all their names, and would point them all out to the Committee.
137. *By Mr. Samuel:* You complain that you are subjected to an unfair competition by reason of the Government Dock being let for short periods? Yes.
138. And if it were let for a longer term you would not object? No.
139. But what is to prevent the lessee of the wharf from renting it for short periods to persons desirous of executing repairs? I do not believe that he could do so.
140. But why should he not; what is to prevent him? He would not do it, because it would not pay him.
141. *By the Chairman:* Would you let the Patent Slip for a few days to any person desirous of repairing a vessel? No; certainly not.
142. *By Mr. Samuel:* At present, then, you would not allow any person to repair a vessel upon the Patent Slip except yourself? No, I would not.
143. And Captain Rountree has the same regulation, and performs all the repairs required by vessels coming into the Waterview Bay Dock? Yes.
144. Do you think that fair towards the rest of the trade? Yes. The Patent Slip and the Waterview Dock are quite sufficient for all the business of the port. I know that I have not cleared three months rent out of the slip for the twelve months previous to the last three months.
145. Are there the same facilities for repairing vessels in other Colonies that we have here? There are not.
146. They have a Patent Slip in Victoria? Yes; a very good one.
147. Is it a large one? Yes, a very fine one, but not at all equal to the one we have here.
148. There is no Dry Dock there? No.
149. Then none of the other Colonies have the same facilities that we have for the repair of vessels? No.
150. Do you think if there were greater competition in docking than there is now, or rather if modes of increased competition were given, that they would be likely to cause a reduction in the prices now charged for repairs? That would depend upon whether work was plentiful or not.
151. Let me ask you, as a matter of fact, whether the people who employ the Government Dry Dock for these short periods do the work at a lower price than you do? No, I do not believe that they could do so. Every captain who has had his vessel on my slip has expressed himself perfectly satisfied with our work and our charges; and I know that captains requiring repairs to their ships prefer this port to any in the world, except the chief ports of Europe and North America.
152. But what I ask is, have these persons who have rented the Fitz Roy Dock from the Government done work at a lower rate than you and Captain Rountree have been doing it at? I cannot say for certain, but I will mention this circumstance;—I had nearly arranged, as I thought, with the agents of the "Granite City" to take her on the slip and do certain repairs to her. Instead of her coming on to the slip she was taken into the Government Dock, and repaired by other parties. Whether they took the work at a lower price or not I cannot say.
153. But by her not coming to you after you had arranged as to price, and by her going to another, you imagine, I presume, that the work was done at a lower rate? Yes. It must have been something of the sort or I should have got the vessel.
154. Then let me ask you whether you think that if repairs to vessels could be done at a lower rate than you and Captain Rountree are now doing them at, it would be likely, when it became generally known, to attract a greater number of ships to our port than now visit it? No, I think not. Our present prices for docking and material are as low as in any port of the world out of Europe or North America.
155. Suppose the charges at the Government Dock were made higher than those at Waterview Dock, in such a ratio as to make up the difference for the charges of keeping up an establishment, would you then consider that you were treated unfairly? I should.
156. Understand me; suppose the charge made at the Government Dock was a higher one than that made by Captain Rountree or yourself, by so much as would be considered equivalent to the keeping up of an establishment, would you consider that you were dealt with unfairly by the letting of the dock? I should under any circumstances.
157. Simply because you consider that the Government ought not to come into competition with you? Yes.
158. And because it is a Government property that ought not to be brought into competition with a private one? Yes; and because they have facilities and accommodation at the Government Dock that we have not.
159. But a private company may have that, as well as a Government? Very true, but with a private company we take our chances in competition.

- Mr. J. Cuthbert.
25 April, 1860.
160. *By Mr. Hoskins*: What greater facilities has the Government Dock than you have? In the first place they have all the convict labor free.
161. For what purpose? For all they require it for.
162. They do not work as shipwrights? No; but when the vessel is in the dock the convicts block her up and shore her.
163. Are you sure of that? I think they do; I have been given to understand so.
164. Do they employ convict labor in pumping out the dock? Yes; and to block and shore the ships.
165. You say that if the expense of repairing vessels were reduced, that would not have the effect of increasing the traffic to the port? It would not.
166. Why do you imagine so? Because vessels come here now in preference to going elsewhere.
167. But would not cheapening the price of repairs have the effect of bringing others here who now go elsewhere? No. The prices for docking are now as low as they can be in fairness to all parties.
168. Another reason why you object is, that by letting the dock in this way the working man will have an opportunity of going to work upon a job for himself,—is that an evil? My objection is, that it gives my own men an opportunity of combining together, and of going in to work against me.
169. Do you think then that it is better for the interests of the port that yourself and Captain Rountree should have the whole work of the port than that working men should be allowed to come in and compete with you? Let them come in by all means, but let it be on the same footing as myself. Let them work their way up by industry and perseverance as I have done, and not by getting the Government to furnish a dock for them in order to enable them to compete with men who, by their hard work and carefulness, have got all the appliances of their trade around them. I can assure you that I have had to work and struggle hard in order to gain the position I now hold in the trade, and no Government aid was ever given to me, and I see no reason why it should now be given to another to enable him to compete with me.
170. The men who are employed upon the jobs that go into the Government Dry Dock are only employed temporarily? Yes, that is all.
171. But do you not do the same thing as these parties—that is, do you not employ a number of extra hands when you get a job on the slip, and do you not discharge them so soon as that job is completed? Yes; I am sometimes obliged to employ a number of extra hands, but then I always have a large number in constant employment. I have now between ninety and a hundred men at work for me, but it is impossible that I can keep together all the men that I sometimes require. There are, however, between thirty and forty of these that I mostly keep on. They are my picked men, whose services I do not wish to lose.
172. You mentioned a Mr. Charles Smith, as having interested himself to obtain the Fitz Roy Dock for the “Granite City,”—is that Captain Smith, the shipowner, of Miller’s Point? It is.
173. Did he apply for the dock on his own account? No, only as a friend of the shipwrights and of the captain of the vessel.
174. He is interested in shipping matters? He is.
175. And is the owner of a large number of vessels? Yes; I believe he is.
176. He is, I believe, a pretty good judge of what is necessary in the repairs of ships? I have no doubt he is, for he has had a good deal of experience.
177. *By Dr. Lang*: What rent do these people pay who engage the Government Dock? The charge is made in accordance with the size of the vessel.
178. Is that the way you charge? Yes; that is the ordinary mode of charging at all docks.
179. And are the prices less than yours? No; they are about equal to mine until they are for very large ships when they are a trifle higher; but they are also a little lower than my charges for small ships. I cannot take a vessel upon the slip under a cost to myself of from £5 to £25, and that cost is necessary whether the ship be large or small. For that reason I cannot take up small vessels at so low a figure as the Fitz Roy Dock.
180. You are aware that an arrangement has been made by Captain Rountree with the P. and O. Company, by which he leases from them the Waterview Bay Dry Dock, on condition that he shall have the use of it at such times only as they may not require it for their own vessels? Yes; it is the same kind of arrangement that I have with the Australasian Steam Navigation Company.
181. Could not some such an arrangement be made with the Fitz Roy Dock—the Government retaining power over it in such a way as to ensure a prior claim to docking for ships of war, or Government vessels, and letting the use of it for the overtime,—that is, when not so employed? Yes; that is the very plan that I have mentioned in my petition; but, instead of its being let as it now is, it should be put up to public competition, so that it should be in the hands of some responsible person.
182. Do you not think that it must be a very grievous loss to the community that has had to pay so very large a sum for the construction of this dock, that a valuable public establishment of the kind should not be made the most of? It ought, no doubt, to be made to bring in a revenue to the Government; and I have no objection whatever to its being made to do so; but what I say is, that it ought to be done in a proper manner.
183. All you contend for then is, that it shall be let upon some fair and equitable principle? Yes; let it be brought into competition with us upon some fair and equitable arrangement and I am content; but do not let it be as it is now, in such a way that any person having a dislike to me can take his ship there and get her repaired.
184. *By Mr. Hoskins*: Have no persons besides yourself and Captain Rountree the means of repairing

repairing vessels bottoms? Yes; there are some who have them, but not to the same extent that we have. Captain Darley has a small slip for vessels of 150 or 200 tons.

185. Will it not take up a larger vessel than that? No; it is not equal to more than 200 or 250 tons at the present time.

186. I have seen much larger vessels than that on it? Not lately. Some years ago it would take up vessels of 300 or 400 tons; but it has got out of repair of late years, and is now barely equal to the getting up a vessel of 200 tons.

187. *By the Chairman*: With regard to this counter petition, bearing 79 signatures, had you any knowledge of its progress at the time it was in the course of signature? I had.

188. Are you acquainted with the names of the mercantile firms of Sydney who are interested in the shipping of the port? I am.

189. Do you happen to know their signatures when you see them? I do.

190. Will you look at the signatures to this petition and tell the Committee if you find the names of any of the large shipping firms of Sydney signed there? I have examined the signatures, and do not see amongst them those of any of the large mercantile firms of Sydney.

191. Do you know whether the petition was taken to any of these large mercantile firms for their signature? Yes; I know it was. It was taken round to many of these firms and also to many captains of vessels, and they refused to sign.

192. How do you know this? The parties themselves have told me they refused to sign.

193. Will you mention some of their names? Mr. Macnamara told me that it was taken to him and that he refused to sign it.

194. Any one else? He is the only one that I can recollect just now.

Mr. J.
Cuthbert

25 April, 1866.

Mr. Henry Drake called in and examined:—

195. *By the Chairman*: Are you a member of the firm of Hely, Drake, and Harper? I am. Mr. H. Drake.

196. Is this your signature to the petition produced? It is the signature of the firm.

25 April, 1866.

197. You know the nature of the petition to which that signature is appended? I do.

198. Then it appears that you in connection with other persons have petitioned the Legislature in favor of continuing the present system of temporarily letting the Fitz Roy Dry Dock? I have.

199. Have your firm at any time rented the Fitz Roy Dock? Yes, we have had the "Granite City" in there, and another vessel belonging to Mr. Andrews.

200. How many vessels have you had in there? I think, five.

201. Will you be good enough to name them? Yes; the first was the "Granite City," then we had the "Eli Whitney," then the "Susan," and we had besides the schooner "Adolphus Yates," and the barque "Woodlark."

202. When was it that you had the first vessel, the "Granite City," in the Government Dock? About three months or three months and a half ago.

203. How long was she in? Four days and a half or five days.

204. Allow me to ask you how long you have been established in business as a shipwright in this city? Five years and a half, or nearly six years.

205. That, I presume, is the date on which your firm was established? Yes.

206. Have you been carrying on business on your own account longer than that, or did you first commence business as a master shipwright in conjunction with the firm? Oh, dear no, I have been a shipwright from a boy, ever since I could first handle a tool.

207. But did you carry on business on your own account as a master shipwright before you entered into the partnership with Messrs. Hely and Harper? No, I did not.

208. So that the commencement of your carrying on business on your own account dates from the time of the commencement of your present firm? Yes.

209. Will you state to the Committee the manner in which you went about obtaining the use of the Fitz Roy Dock? I did not do it, my partner managed the business.

210. But surely you must have heard him say how it was done? I did not go about it at all. Healey applied for it, but I don't know how he went about it.

211. Did he never talk to you about it and say how he had managed? I don't recollect; but I think the party he first went to was Mr. Mann.

212. However, the result of the application was, that you got the use of the dock? Yes.

213. And what did you pay for it, on the occasion of your taking in the "Granite City"? We paid 1s. per ton for going in, and 6d. per ton per day, laying days.

214. What assistance did you have from the establishment to facilitate you in the operation of taking the vessel into the dock, either by the gangs, by the officers on the island, by the engineering staff, or by others? There were parties there who helped to get the shores up under the vessel when she was in.

215. What parties do you allude to? I think they were the prison gangs.

216. And they assisted you? Yes; they helped to get the shores up under the vessel, but our men were with them.

217. You employed the Government engine also in getting the vessel in and in pumping out the water? Yes, we did.

218. Was it worked by the Government staff? Well, as far as I know of, it was.

219. Did you pay anything extra for that? I don't think our firm did, but I don't know if the captain made any arrangement with them; he may have done so.

220. All you had to do in the matter then was to take your men there and repair the ship? Yes; that was all I did in it.

Mr. H. Drake. 221. You say in your petition (*the Chairman here read the petition*)—now allow me to ask you whether the Government Dry Dock is of greater capacity than the Waterview Bay Dock?
 25 April, 1860. Oh yes, a great deal.

222. Can you inform the Committee what the difference is? Why the thing is that the Government Dock is properly cut as a dry dock ought to be, whilst the Waterview Bay Dock is only a kind of a one-sided dock.

223. How do you mean by a one-sided dock? I mean this, that at the Government Dock you can breast shore the ship on both sides, and that you cannot do so at the other dock.

224. It has been given in evidence that the Waterview Bay Dock is 375 feet long, and that the Fitz Roy Dock is only 300 feet long, and that the one has 72 feet gateway, whilst the other has only 60 feet; now how can you have a greater capacity in the Fitz Roy than in the other dock? As far as I could see, the gateway of the Government Dock is wide enough to take in any size of vessel that is likely to come to this port; of course a very large paddle steamer with her paddle boxes, would find it difficult to get in, but the dock was not made for them.

225. Do you recollect that some time ago, the Fitz Roy Dock was lengthened for the purpose of enabling it to take in longer vessels? Do not recollect the Fitz Roy Dock being lengthened, but do recollect that the Waterview Dock was; and it is now longer than any vessel that comes into this harbor.

226. But, if the figures I have quoted be correct, thereby shewing that, with the same depth of water, the Waterview Bay Dock is 75 feet longer, and 12 feet wider than the Government Dock, you must acknowledge that you are in error in stating that the Fitz Roy Dock is of greater capacity than the Waterview Bay Dock? But what advantage is there in this additional size, when the Government Dock is big enough for any vessel that is likely to come here?

227. Still, as a matter of fact, or rather of calculation, will you still assert that it is of greater capacity? No, perhaps it is not; but I will say this, that the Fitz Roy Dock is long enough to take in any man-of-war.

228. Upon what data did you form your opinion that the Fitz Roy Dock was of greater capacity than the Waterview Dock? I only go from seeing the "Granite City" there. She is a large vessel, and from her appearance in the dock, there was length enough for another vessel of the same size along with her.

229. You say in your petition, "that if the said dock is left open for the use of the public, "by paying, as at present, a reasonable rate for the occupation thereof, it will prove a great "saving to the shipowner and the community at large, by preventing any monopoly in "future." Allow me to ask you whether you consider that there is anything like a monopoly existing at the present time? I think it is a great monopoly at the present time.

230. In what respect? If the Government Dock is shut up, there is only one dry dock open.

231. But there is the Patent Slip? Yes; there is a very large and a very good slip.

232. You know the Patent Slip at Pymont? I do.

233. You have seen other slips in different places? Yes, I have seen a good many.

234. And is the Australasian Steam Navigation Company's Slip, at Pymont, equal to any you have seen in any part of the world? It is. It is as large a one as I have seen anywhere, and the machinery connected with it is all very good.

235. Now would not the Waterview Bay Dry Dock and the Australian Steam Navigation Company's Slip afford sufficient competition, the one working against the other, for all the purposes of legitimate trade? That would depend entirely upon circumstances. Of course I speak for myself, and I know this, that we have had ships put into our hands to repair their upper works, and afterwards it has been found that they would have to be repaired below, to do which of course it has been necessary to dock her. When this was the case, the vessel has been taken out of our hands, and the work given either to Captain Rountree or to Mr. Cuthbert. That was just the way it was with the "Granite City;" we got the job to repair her upper works, and afterwards when they found she wanted to be repaired below, we should not have got the job if we had not got the Fitz Roy Dock.

236. Would not Captain Rountree have taken her in for you, on payment of his dock charges? No, I do not think he would. He has never done so.

237. Would he not take her in on the understanding that you should repair the upper works and he the lower? No, I think not. He does all the work that is done in the Waterview Dock.

238. Then, unless he can have the whole of the work, he will have none? No, he will not.

239. So that if you undertake the necessary repairs to a ship, and you find it necessary to repair her lower works, he will not assist you with the latter, but will insist upon having the whole work to himself? I know he never would assist any one, I don't know what he may do now.

240. Ships are never taken into Captain Rountree's Dock in the same manner as they are now taken into the Government Dock, merely on payment of the dues demanded? I don't think so. I never worked at a ship there.

241. Do you know what Captain Rountree charges for ships using his dock? The same price that I have stated we paid for the "Granite City"—a shilling per ton for docking, and sixpence per ton per day for the time she is in dock—I believe, but am not sure.

242. The Government charges now are higher for small than they are for large vessels? Yes, because the expense of getting a small vessel into dock is quite as large as that of getting in a large one; and then when in dock, the smaller the vessel the more water has to be pumped out.

243. By Mr. Hoskins: And do the private establishments charge a lower price to correspond with the size of the vessel? No, I believe not. Captain Rountree's is a standing price, by the ton.

244. Then the Government ought to adopt the same plan? Yes, I believe they will do so. *Mr. H. Drake*
The small vessel now pays more in proportion than the large one.
245. Let me now ask you with reference to the convict gangs; was every person engaged about the vessel you took in, and who was not employed by you, a prisoner? As far as I know they were all prisoners. *25 April 1860*
246. And your men that you took with you were not sufficient to do the work of shoring up the vessel? Yes they were, quite sufficient. I took all the necessary hands over with me.
247. Then why have these men? I do not know; they came down, and began helping to shore up.
248. Did you apply for them? No, I did not.
249. Did your partner? I do not know what he may have done, but I think not.
250. *By Mr. Samuel*: Did you take shores over with you? No. The Government have them there all ready, and there was no occasion to take any over.
251. So that you had the use of shores, as well as of the men to place them? Yes.
252. *By Mr. Hoskins*: How many vessels do you say you have taken into the Government Dock? Five.
253. And on each occasion had you prison labor to assist you in shoring up? Yes.
254. So that by that means you were enabled to dispense with free labor that you would have otherwise employed? Yes, but only to a very small extent. It saved us the day's work of perhaps four men, and that is nothing to speak about.
255. You said, I believe, that the Government Dock was a much more complete establishment than the one at Balmain? It is.
256. In what respect? It is a complete and a finished dock, such as a dock ought to be, where you can support a vessel in every direction.
257. Cannot you shore up a vessel securely and minutely at the Waterview Dock? No, that I am sure you can't.
258. In what does the difference consist? The Waterview Dock has not got altars built in all round in the same way as the Government Dock has. By means of these you can bring your breast shores and diagonal shores up to the vessel in any way you please to support it securely. The Waterview Dock is not arranged in this way, but it is cut down quite straight on one side, so that when you have shored up one side you have to use long shores on the other in order to get a purchase to support the ship. It is rather a difficult thing to explain properly, but if you looked at the two docks when vessels were in them you would soon see the difference.
259. Then, if I understand you, what you mean is this—that if you were the owner of a vessel you would sooner have her in the Fitz Roy Dock, because after the water has been pumped out there is nothing there to strain her? Yes, because she is there supported with shores as she ought to be. Mind, I do not wish to run down the Waterview Dock, but only to explain why I think the Government Dock preferable.
260. *By Mr. Samuel*: You think it would be a great advantage to the port to throw open the Fitz Roy Dock to be rented when required by shipbuilders? Yes, I do—a very great advantage.
261. In what would the advantage consist? Take the case of the "Granite City." She wanted to go into dock, but at the time it was engaged, and she was under engagement to sail, and could not be delayed. Then again there was the "Eli Whitney," exactly in the same way; she was under charter, and was bound to go away by a certain day. The Dry Dock and the Slip were both engaged, and if we could not have got the Government Dock she would have had to have gone away without repair. Mr. Andrews, the owner, tried to get her on the Slip, but when he found the berths engaged he applied through our firm to the Government for leave to use their dock.
262. Does the increased competition, consequent upon throwing open the Fitz Roy Dock, cause work to be done at a cheaper rate? That will be shewn in a short time, when it is known for certain that it is thrown open.
263. Has it had that effect as yet? I cannot say, because the Government charging so much higher for small vessels in proportion to large ones has prevented them from using the dock.
264. *By Mr. Hoskins*: In the event of the Government Dock being thrown open, would you be prepared to find all the labor necessary for docking the vessel? Yes, of course I would.
265. I think you said that the prison labor you were furnished with at the dock did not enable you to dispense to any extent with the labor of other persons? No. Four or five more men would have done all that we required.
266. At all events, if the prisoners are not there you will require to employ several more men? Only some four or five more, and their wages for a day's work will not make any great difference in a job.
267. *By Mr. Samuel*: It has been suggested that it would be more advantageous if the Fitz Roy Dock were to be let publicly—in the same way, for instance, as the Circular Quay, and from year to year—what is your opinion upon that? No doubt it would be the best way, but then it would fall into one party's hands.
268. Of course; but all would have a chance of competing for it—your firm might take it? I should be sorry to do so, in the way things are now. I should not like to have anything to do with it.
269. *By Dr. Lang*: Are you aware of the nature of the arrangement that Captain Rountree has made with regard to his lease of the Waterview Bay Dock? I am.
270. You know then that he is a sub-tenant of the Peninsular and Oriental Company, leasing the dock for such time only as it may not be required by the vessels of that Company? Yes, I am aware of it.

- Mr. H. Drake.** 271. Could not some such an arrangement be made with regard to the Government Dry Dock—the Government retaining to themselves the power of occupying the dock whenever it was required for a vessel of war, and letting it for the time only when it is not so required? Yes; no doubt they could do so.
272. Would that be an equitable arrangement? Yes, I think it would.
273. The Peninsular and Oriental Company pay Mr. Mort £6,000 a year for the Waterview Bay Dock, and Captain Rountree pays the Company £1,500 a year for the time during which the dock is not required for their vessels. Now, suppose the Government retain the same power over the Fitz Roy Dock for the repair of vessels of war, do you not think that a similar arrangement might be made by letting the overtime of the dock by public auction? Yes, it could be done.
274. And you think that would be an equitable arrangement for the community at large? I think myself that it would be quite as good and as well for the dock to be thrown open to any one who gets a job to put a vessel into it. There would be more benefit to the community by this plan, than by letting it yearly; because, if (for instance) I take the dock yearly, I will not allow another firm to bring vessels in and do their work there; and so it would be if anybody else took it. By the present plan, if I or if anybody else gets a job, I can put the vessel in the dock and employ what hands I think proper, and do my work as I like, so long as I satisfy my employer. In this way I consider the Government would get a much better revenue than they would by letting the dock to an individual.
275. *By the Chairman:* But you said just now that if the dock were to be let annually you would not take it? No, no more I would.
276. You would not run the risk, where probably there would be a serious loss at the year's end? No, I would not.
277. And yet you advise that the Government should let it out in detail, as a means of obtaining a larger revenue than from the letting by the year? I do.
278. But do you not think that your assertion that you would be unwilling to take the dock by the year furnishes a forcible argument against the continuance of the present system; since if, as you seem to think, it would not pay you to rent the dock by the year, how can it pay other persons who are now keeping up permanent establishments, if the Government Dock be let in the way you suggest, to persons who have no permanent establishment to keep up? I do not know whether it pays them or not to keep up their establishments; but I know this—that if the Government Dock is let yearly at anything like the same rate that Captain Rountree pays for his, neither I nor anyone like me will take it.
279. *By Mr. Hoskins:* Have you ever been engaged working at your trade in India? No. I served my time in Plymouth, and I came here direct from there.
280. And you seem to think, that if you could get the occasional use of the dock, you could perform work cheaper than at the other two establishments, even though you have to go round and get all the necessary labor when you require it? No, I do not say I could do it cheaper, because Mr. Cuthbert and Captain Rountree get men at the same rate of wages as I do, and so can work at the same price; but what I mean is, that I could compete with them.
281. *By Mr. Samuel:* But your taking the dock puts you on a better footing than Captain Rountree or Mr. Cuthbert; since they have large establishments to keep up, whilst you have none? We have no establishment in connection with the dock, but our ship-building establishment is quite as large as that of Mr. Cuthbert.
282. *By the Chairman:* And though you have such an establishment, you would not take the Fitz Roy Dock if it were put up to auction? I would not.
283. Would you have taken the Patent Slip if the opportunity had been afforded you? That is a different question. At that time the Government Dock was closed.
284. *By Mr. Samuel:* Supposing the dock to be thrown open in the way you wish, can you form any idea of the amount that you would be likely to pay the Government for the use of the dock in the course of a year? It would depend entirely upon the number of vessels we got to repair. My belief is—that if the dock was thrown open, where we now have one vessel coming in here for repairs we should have two. It would be sure to spread far and near that the Government Dock was open, and that anyone could use it; and many would come here when they found this was the case, and that they could employ their own hands to do what repairs they required.
285. *By Dr. Lang:* Have you ever been engaged in your trade in Plymouth? I have.
286. There are Government Docks there? Yes, there are.
287. Do you know if they are open to the public, in the way you wish the Fitz Roy Dock to be? That I cannot say. I was only an apprentice at the time I was there, and apprentices generally know very little about Government matters. I served my time, however, in a yard where there was a dock, and we took vessels in.

TUESDAY, 1 MAY, 1860.

Present:—

MR. HOSKINS, | MR. SAMUEL. ;
HENRY PARKES, Esq., IN THE CHAIR.

Captain G. K. Mann called in and examined:—

288. *By the Chairman:* You are Superintendent of Cockatoo Island, I believe? I am.
289. Does your superintendence extend over the whole of the engineering as well as over the criminal department? Over both the engineering and criminal department. The designation of my office is Engineer-in-Chief and Superintendent of Cockatoo Island.
290. How long has the Fitz Roy Dock been done, from the first time a vessel was taken in after its construction? Her Majesty's ship "Herald" was the first vessel taken in, and this was about two years ago.
291. How many vessels have been taken in since? Altogether about nineteen or twenty vessels.
292. What have they consisted of—chiefly vessels belonging to the Crown, or private vessels? I cannot from memory enumerate them.
293. Can you state the proportion of private vessels? I think I can.
294. What proportion of private vessels have been received into the dock? I think about two-thirds were Colonial or Imperial vessels, and the other third private vessels.
295. Can you recollect when the first private vessel was received into the dock? The "Benares" mail steamer was the first.
296. How long was that ago? About ten or eleven months ago.
297. Upon what terms was the "Benares" received into the dock? I believe a communication was made to the Government, it being a case of emergency, when the private dock could not take her in; and, they applied to be allowed to enter the Fitz Roy Dock. The question of rates and charges had been mooted before that time, but nothing definite had been settled. The "Benares" was taken in at 6d. per ton per diem.
298. Was there any entrance fee? A double fee; 1s. per ton for the day of entrance, and 6d. per ton per diem afterwards; and I think the "Benares" was charged double on the day of coming out also.
299. Was the correspondence which took place previous to the "Benares" going into the dock on the subject of fixing the terms for docking vessels, and was it between yourself and the Government? Yes. I offered suggestions on that matter, and proposing to the Government scales which I thought would remunerate them for the outlay.
300. I asked this question with a view to eliciting your views as to the propriety of letting out the dock—will you be pleased to state them? It is a subject to which I have given great consideration, and I will state my suggestions and recommendations. They are as follow:—That the Government should render that dock available for the services of this port by fixing a dock rate; that this dock rate should be decidedly and distinctly higher than any private rate; that it should be open to all parties to take in their vessels upon payment of this fixed rate; that the machinery in the machine shops should also be open to the establishments of the city upon the payment of a fixed rate for the use of it. For these dues I propose that the Government should provide shoring, pumping, wedges, and all the necessary materials for docking a vessel; but that they should not on any account undertake the repairs of vessels, merely to give the use of the dock, for which they should charge a rate. This was the basis of the proposal.
301. Did you contemplate, in this proposal, that the work of shoring and pumping should be done by the prisoners on the island? The work of pumping, shoring, and docking was to have been done by the Government at a fixed rate that would certainly cover the expenses.
302. To be done by the people on the island? Much could be done by them; they could be employed in bringing materials, lifting the shores, cleaning the dock; in fact, in the same way as they are employed in the Mother Country. We have docked vessels by prison labor; but I do not think it could be depended upon; but I should be sorry to take the responsibility of docking with prison labor entirely as a permanent arrangement.
303. Your views when making these recommendations to the Government were that the dock which had been constructed at a large public expenditure should be made available for the convenience of the community, and return some interest upon the outlay? Yes; and I believe a large return might be recovered from it.
304. There have been two petitions presented to the Legislative Assembly, one from Mr. Rountree, the lessee, I believe, of the Waterview Dry Dock, and one from Mr. Cuthbert, a gentleman well known in Sydney, and, lessee, I believe, of the Australasian Steam Company's Slip at Pyrmont; and these petitioners complain of the system of letting the Fitz Roy Dry Dock for short periods to shipbuilders who have no large establishment like theirs; and they allege that you let the dock to persons who do not keep up a large permanent establishment, or a large permanent laboring staff, and that these persons have advantages which enable them to work so much cheaper that they cannot compete with them,—has the dock been let in the manner alluded to, has been let for private vessels two or three days? The dock, in the cases I have alluded to, was authorized as a temporary measure. They were applied for the use of the dock; the vessels were taken in, and, when in dock, they were charged a certain rate.
305. Do you remember the "Granite City" being taken in? I do.
306. The work was undertaken, I believe, by Messrs. Hely, Drake, and Harper? Yes.

Captain
G. K. Mann.
1 May, 1860.

- Captain
G. K. Mann.
- 1 May, 1860.
307. This was the first vessel they had in the dock? None before.
308. Did they apply to you? Yes; and I forwarded their application to the Secretary of Public Works, recommending that the vessel should be allowed to dock upon the proposed terms, which was acceded to.
309. I think Mr Drake states in his evidence that the vessel was in the dock for five days; that he paid 1s. per ton for entrance fee, and 6d. per ton afterwards? That brings something to my memory, and I will make a slight correction of my former statement, as 6d. per ton per diem is something under the rate that I proposed, which was 7½d. per ton; but 6d. had been named by the Minister to Messrs. Hely, Drake, and Co., and it was consequently adhered to. I can furnish you with a correct copy of the draft conditions and rates as adhered to afterwards. (*Vide Appendix A.*)
310. What do you think of the objection raised by these petitioners, as to the dock coming into unfair competition with them by this unfair mode of letting? My opinion is, that so far from it being detrimental to them, the effect of throwing open this dock for the benefit of this port, would be the means of drawing into it such a largely increased amount of shipping for the express purpose of repairs, that, if they are shipwrights of standing, as I believe them to be, instead of suffering from it it would ultimately be a considerable gain to them. I express this opinion not only as engineer but as a colonist. I think the additional public advantage of throwing open that dock would be so great that private interests cannot really be taken into consideration in connexion with it; they must give way. From conversations I have had with officers of the navy, and of private vessels coming from India, they have invariably said that the difficulty in docking here was the cost of shipwrights' labor, which was a drawback to vessels coming to the port so great that the whole of the vessels of the India and China fleet were docked in India, though, but for the extra cost, they would come down here in preference. The advantage would be so great, not only for the means of repairing their vessels, but as a means of recruiting the health of their crews in this fine climate. It is the wages of the shipwrights here that drives them away.
311. But throwing open the dock as you propose would not increase the attractions to ships on the China and India stations, because, when they come here, they find it an exclusively Government establishment? The Government have no dockyard establishment here for effecting repairs, and vessels using the dock would have to make applications for repairs to Mr. Cuthbert, or Mr. Rountree, or other private firms.
312. Did your proposal go the length of keeping up a Government establishment for docking like a regular dockyard? No; that would include carpenters. I should propose that there be kept up a sufficient staff for docking vessels, not repairing them; except when the vessels are in dock, I would not keep up a large staff.
313. You would keep a sufficient establishment for docking purposes? Yes; that would require but a trifling addition to the present establishment.
314. How long have you been connected with the island as engineer? About twelve years.
315. You say that the dock was constructed under your superintendence? Entirely; I drew the original plans.
316. These petitioners (Mr. Rountree and Mr. Cuthbert) allege in the petition, that on one occasion when Sir Charles Fitz Roy, the Governor General, visited the dock to lay the foundation of the sill, His Excellency made a direct statement, which they considered a pledge, that the dock should not be brought into competition with private establishments? I was present; but I do not recollect such a pledge being made.
317. In the petition Mr. Cuthbert says:—"That in embarking in so extensive an undertaking, your Petitioner did so under the full belief that the only competition he should have to sustain was that with the present and any future private graving establishments of Port Jackson. His Excellency, the late Governor General, Sir Charles Fitz Roy, having on several occasions, more particularly when laying the first stone of the sill of the Fitz Roy Dry Dock at Cockatoo Island, expressed his confident hope that no feeling of jealousy would be excited on the part of owners of the private dock at Waterview Bay and the Patent Slips in Darling Harbor, as it was his intention to provide equitably and fully against any complaint as to the public and private competition?" I am under the impression that the ceremony of laying the first stone of the sill of the Fitz Roy Dock took place before the construction of the Waterview Dock was commenced. It was on the 5th June, 1854, that this stone was laid.
318. At all events, you have been superintendent of the island during the whole work of the construction of the dock? I have not been superintendent of the island, but engineer of the works.
319. Superintendent engineer? Chief engineer from the commencement.
320. I suppose Sir Charles Fitz Roy was never on the island without you being there too? No, I am not aware that he was.
321. Not upon any public occasion? Certainly not.
322. And you never heard anything of this kind said? Never.
323. Nothing of the kind from the Colonial Secretary of the time? Nothing.
324. You never heard anything of it until reading of it in this petition? Never. But I may say I heard that it was mooted, talked about, and inserted in the public papers, and in this way I read it; from no other source do I know anything about it. It is my opinion that no such pledge could have been made.
325. These petitioners propose that if the dock is let at all it should be let by public auction in the same manner as the Circular Quay, and let for a term of years; to which they do not object? I think that would be objectionable.
326. Would you be kind enough to state upon what grounds you consider it would be objectionable? In the first place, although now to a great extent available for shipping, the dock

dock is incomplete. Additions are being made, and the works must be continued. There are various kinds of works to be done yet in connexion with the lengthening of the dock. It is available for vessels to the extent of 220 to 230 feet in length. It would be very difficult to carry on these works at the same time that the dock was let exclusively to an individual. Another reason, and perhaps a better one, is that I do not think it would meet the ideas I have held for making the dock available for the harbor generally if it is let to an individual, because it is closed immediately against all the other shipping except through the hands of that one individual; and hence it would become a monopoly to a certain extent just the same as a private establishment would be.

Captain
G. K. Mann.
1 May, 1860.

327. You think its greatest utility to the public would be in having the fullest and freest accommodation by the dock, without regard to other considerations? I do, and on that ground alone I think the Government ought to throw it open. Again, I do not see how the valuable machinery and property could be properly looked after if they were let to an individual. It would be his object to get the most out of them without regard to their safe keeping. If the dock is let out on a rate as proposed, and kept under the supervision of the Government, the machinery is properly taken care of, properly worked, and not overtasked.

328. As an engineer, have you had much personal experience of other docks? I have seen many, but have not had the construction of them, though I am well acquainted with their construction.

329. What is your opinion of this dock you have constructed at Cockatoo Island as to its capacity and general character in comparison with other docks? I think it will rank with the first class docks in the Mother Country, with this exception that it is constructed of sandstone, which, though compact and good, is not nearly equal to the granite of which most of the docks in England are constructed. Of course it cannot be considered as having the same amount of durability in it; but I find the stone of which it is constructed is not only improving and hardening, but is shewing no indications of disintegration.

330. You are still carrying on the works? Yes; in lengthening it.

331. Are the prisoners employed in that labor? Yes.

332. Are any prisoners employed in the machinery room? Yes; in the machine shop, four or five—one or two I have instructed.

333. Are they as good as original tradesmen? The best tradesman that we have, and a very clever tradesman he is, was turned out of the machine shop on account of his character; the others are particularly handy men, and men desirous of acquiring the trade. It is a great punishment to be turned out of the machine shop.

334. What are these men engaged upon? At the turning lathes, planing machines, heaving, setting up work, and such like employment.

335. Do you allow them to turn axles? For instance, a piece of work is put upon the machine. A free mechanic sets in the work, and shews them what they have to do. All that they have then to do is to attend to, oil, stop the machine when ordered, take out the work, and report. They are mostly handy men, but not persons who could be trusted to put in the work themselves. Some of them have become very handy indeed.

336. I suppose they are nearly all employed about the dock—are there any weak-bodied men among them? We employ these when we can with hand carts, and other light work; but they are really a clog upon the works.

337. How many prisoners are there there now? Two hundred and fifty-eight prisoners.

338. *By Mr. Samuel:* At the time the "Benares" was taken into the dock had it been decided to throw the dock open to the public? It was a question under contemplation; indeed, at the present moment, there is no distinct decision upon that matter.

339. Did not the late Government determine upon throwing the dock open? Not decidedly, but as a temporary measure. They intimated that special application must be made in every instance for permission to enter the dock; and in a conversation which I had with the Minister for Works, in which I proposed that he should come to some decision so that an equitable charge for all parties might be made, the rates proposed were determined upon.

340. What was the date of that conversation? So late as the last month of March. The scale proposed to be adopted as a charge for docking was as follows:—For vessels of 1,500 tons, and over 1,500 tons, 6d. per ton per diem, with an increase of $\frac{1}{8}$ th of a penny for every decrease of 50 tons or portion of 50 tons down to 300 tons, the rate for which would thus be 9d. I think that experience will shew that this increase of rate on decrease of tonnage is not sufficient; it should be double the increase, or $\frac{1}{4}$ d. on every decrease of 50 tons, making the charge for a vessel of 300 tons 1s. per ton per diem. (*Vide Appendix A.*)

341. I see you start with vessels of 1,500 tons, for which you charge 6d. a ton per diem—is not that the rate charged by the lessees of the patent slip and dock at Waterview Bay? I understand it is 6d. per ton for all vessels of every class, and we have an increasing scale you see.

342. For vessels of 1,500 tons you propose the same rate of charge? Yes.

343. And if over 1,500 tons you charge 6d. still? Yes; the scale varies between 1,500 tons and 300 tons.

344. For all vessels below 300 tons you would charge the same rate? Yes.

345. You think it desirable, if I understand you right, that we should in every case charge something beyond the rates charged by private establishments? I think so. It would only be fair to charge a rate above these of the private establishments. That would meet the question of the dock coming into competition with shipwrights who have to keep up large establishments, if the Government charged an extra rate.

346. I think you said vessels were prevented from coming down here from India and China for repairs on account of the high price of shipwrights' wages? I have been told by officers of the navy, and masters in the merchant service that that was the cause.

Captain
G. K. Mann:
1 May, 1860.

347. Do you not think that there being only one private dock and patent slip, this is calculated to keep up the rates for the repairs of ships? I think so; from this cause, that it necessarily follows that if there are only two establishments, all vessels requiring repairs must be constrained to go to one or the other of them.

348. By throwing open the dock to the public in the way you propose, you think it would tend to reduce the cost of repairs, and increase the number of vessels coming into the port by offering facilities to other shipwrights to perform repairs? It would enable other shipwrights to undertake the work.

349. Do you recollect when the private vessel next after the "Benares" came into the dock? I cannot speak from memory. (*Vide Appendix B.*)

350. Do you know the name of the ship? I think it was the "Granite City," then the "Woodlark" and some other vessels came in.

351. Does it interfere at all with the arrangements for the management of the prisoners on the island in working the dock in the way you propose? If it was to become a large docking establishment the class of prisoners now on the island could not be retained there. At the same time that I say this I may state that it would not be possible to retain them, even supposing the dock is not thrown open? I do not think the place is fitted for them.

352. *By the Chairman:* Have you been in communication with the Government as to the policy of retaining the prisoners there? Yes; there has been a large amount of correspondence on that subject.

353. *By Mr. Samuel:* The island is no longer suited for a penal settlement? For the class of prisoners on the establishment it is very defective—more so than ever. It was built for a convict stockade, and it has become the principal penal establishment of the Colony, but with no means of carrying out what I consider proper prison discipline.

354. *By the Chairman:* Have you pressed that upon the Government since you have been penal superintendent? I have, and continue to do so.

355. *By Mr. Hoskins:* You consider the prisoners express anxiety for learning trades? Many of them do, particularly stone-cutting and working in the machine shop, and I give encouragement to them, as some of them are capable of being made efficient and good tradesmen; in fact, I have known instances of men who were taught stone-cutting upon Cockatoo Island earning 16s. and 17s. a day in Sydney. They work in order that when they leave the place they might have the means of earning a livelihood. Many persons entertain the same idea as I do, though by some it is questioned,—that is, to induce habits of industry among prisoners is the first step towards reformation. I say you cannot coerce them into habits of industry; you must induce them, and must take steps to carry that out. So firmly is that system impressed on my mind, that all my suggestions have been based upon that principle.

356. You have known instances in which prisoners have learned trades, and have become reputable citizens afterwards? I will not say that; but I have known prisoners who have learned trades being thereby enabled to earn a livelihood respectably.

357. With regard to the tariff of charges—are the Government prepared to adopt it? I have no further information than I received from the late Minister for Works (Mr. Eagar), approving of the scale as a temporary rate of charges. Any person applying to the Secretary for Works, with the approval of that officer of the Government, might dock their vessels, subject to this scale of charges.

358. The charge you recommended for vessels of 1500 tons was 6d. per ton for the laying days? This was the case in the scale I proposed, but it is capable of being adjusted; in fact, this scale proposed by me was more experimental than otherwise. There were few data upon which to form a scale; but after due consideration I conceived this to be suited to the circumstances of the case. I may mention also that applications have been made for the use of the machinery by engineering establishments in the city. The machinery is large and powerful, and not of that class worth their while keeping up, though it is necessary at times for the repair of large ocean steamers. Already the large lathe has been applied for and used by one firm in this city (Messrs. Russell and Co.), and also another firm has applied for its use (Mr. Dawson). Messrs. Russell paid the Government 5s. an hour for the use of it.

359. *By the Chairman:* What weight of shaft is this lathe capable of taking? We could repair the machinery of a line-of-battle ship.

360. Can you state to the Committee the total cost of the dock? The total amount of votes came to £73,000, with some odd pounds, I think.

361. Is that exclusive of machinery? That amount includes the cost of workshops, machinery, and everything.

362. That does not include the penal establishment? Not the keep of the prisoners.

363. The £73,000 is exclusive of the prison labor—the prisoners being of course supported by the annual votes granted for the prisons? Yes. It includes the gratuity which we are in the habit of giving to prisoners for extra work.

364. You state, if I understand you correctly, upon the whole question, the throwing open of the Fitz Roy Dock would improve the character of the port and make it more attractive for ships, more especially to those on the eastern stations, and also be a convenience to the public. Would not that argument, pushed a little further, go to the length of this state of things—the making and opening of another dock? I have already asserted that the Government would not be wrong in commencing another dock forthwith; and my grounds are, that it will take from eight to ten years to complete a dock, and it is difficult to say what the requirements of this port may then be. I think it a judicious step to provide for the growth of the port. A dock is not built in a day, and I do not think it too soon to begin now, for this port to maintain the rank it now holds, of first in this hemisphere.

365. *By Mr. Hoskins:* Are the parties who use the dock allowed to use the machinery? By paying an extra rate for it.

366. They would have the use of some of the prison labor in docking vessels? Yes, they would have that. What I propose is, that a certain amount of work shall be given for these dock rates. The vessel will be taken into dock, and pumping, shoring, wedges, and blockings be found, embodying a certain amount of labor. After that the Government have nothing at all to do with her. The average actual cost of docking a large vessel would be something like, with free labor, from £28 to £30, not more; with prison labor, in some instances, it has not exceeded £15. These sums do not include interest, depreciation, &c.

Captain
G. K. Mann.
1 May, 1860.

367. Can you say that, in the Mother Country, or in any other part of the world, merchant ships are allowed to use public docks? I can only speak from having heard of it. When in England I lived near Woolwich, and have some recollection of a private ship having been in the Government Dock there. I believe it is allowed on special application; but there are sufficient private docks to meet the wants of the merchant navy, and the Government yards are fully occupied by the men-of-war. It was a practice in Bombay to admit private ships to the Government Docks.

368. *By Mr. Samuel:* Have you had any application lately for docking? Not lately. The steam-dredge, a Government vessel, is in at present.

369. *By the Chairman:* If there is any further information you would desire to lay before the Committee you will be pleased to do so? Very well, sir. I append a list of the ships that have been taken into the Fitz Roy Dock up to the present date. (*Vide Appendix B.*)

APPENDIX A.

CONDITIONS on which Vessels will be admitted to the Fitz Roy Dry Dock.

1. All Vessels belonging to Her Majesty's Navy, the Colonial Government, and Men-of-War of other Nations will be admitted free of any Dock Dues or Rates, but they will be required to repay all actual expenditure for stores, rations, wages, &c., &c.
2. All other Vessels will be liable to a minimum dock rate of 6d. per ton per diem if of 1,500 tons register and upwards, and an additional ¼d. for every decrease of 50 tons or portion of 50 tons, down to a maximum rate of 9d. per ton for vessels of 300 tons and all below.
3. On the day of docking, double rates will be charged.
4. The dock dues will include the cost of pumping, shoring, wedges, and blockings, and the cost of all labor connected with the opening and closing of the dock, and in the actual operation of docking a vessel.
5. The Government will not undertake the repairs of a vessel, and all parties availing themselves of the use of the dock will be required to make their own arrangements for this service, and provide all necessary labor and material for the same.
6. The Government will not hold themselves responsible for any accident occurring to a vessel whilst docking or undocking, or in dock.
7. The officers and crew of any vessel while in dock, will be required to adhere strictly to the Regulations of the Establishment.
8. The captain, master, or pilot of a vessel after making fast to any buoy or bollard off the mouth of the dock, for the purpose of entering, will thenceforth be required to attend to the directions of the officer of the dockyard, superintending the docking or undocking of a vessel.

WORKSHOPS AND MACHINERY.

9. Vessels in dock, and private engineering establishments will be permitted to avail themselves of the use of any portion of the machinery of the workshops, on payment of a rate per hour as per schedule, preference being given to a vessel in dock. These charges will be in addition to dock dues.
10. All parties using the machinery will be permitted to employ thereat such skilled labor as may be deemed by them requisite, but the officer in charge of the Establishment will retain full power at once to dismiss any incompetent workman, or reject any work that he may deem injurious to the machinery.
11. The rate for the use of the machinery will include the cost of putting and maintaining the machine in motion, and the use of all tools belonging to it, but nothing further.

APPENDIX B.

LIST of Vessels docked in the Fitz Roy Dry Dock.

NAME.	DATE OF DOCKING.	DATE OF UNDOCKING.
Punt of Colonial Steam Dredge "Hercules" ..	30th September, 1857 ..	8th October, 1857.
H. M. S. "Herald"	1st December	5th December.
Colonial Steam Dredge "Hercules"	10th March, 1858	24th March, 1858.
H. M. S. "Iris"	29th March	31st March.
Quarantine Hulk "Harmony"	29th June	7th September.
Colonial Steam Dredge "Hunter"	14th September	23rd September.
H. I. M. Austrian Frigate "Novara"	13th November	20th November.
Colonial Government Steamer "Victoria"	1st December	2nd December.
H. M. S. "Elk"	28th December	7th January, 1859.
H. I. M. Storeship "Herauld"	22nd February, 1859	7th March.
H. M. S. "Herald"	15th March	19th March.
H. M. S. "Cordelia"	30th March	2nd April.
H. M. S. "Iris"	18th May	20th May.
Peninsular and Oriental Co.'s Steamer "Benares" ..	26th May	1st June.
H. M. S. "Pelorus"	16th August	4th September.
H. M. S. "Niger"	8th September	10th September.
H. I. M. Schooner "Caledonienne"	17th November	23rd November.
"Granite City"	11th January, 1860	17th January, 1860.
"Woodlark"	2nd February	9th February.
Colonial Steam Dredge "Hunter"	2nd February	9th February.
H. M. S. "Cordelia"	27th February	8th March.
"Eli Whitney"	12th March	15th March.
"Susan"	28th March	31st March.
"Adolphus Yates"	28th March	31st March.
Colonial Steam Dredge "Hercules"	11th April	8th May.

James Williamson, Esq., called in and examined:—

- J. Williamson, Esq.
 1 May, 1860.
370. *By the Chairman*: You are a merchant residing in this city? I am.
371. And have been acquainted with the port for many years? Yes.
372. Part of the time as a master mariner? Yes.
373. Petitions have been presented to the Legislative Assembly, from the lessee of the Waterview Dry Dock, Balmain, and the lessee of the Patent Slip, Pyrmont, complaining of the practice that is growing up at the Fitz Roy Dry Dock, Cockatoo Island, by letting that establishment for short periods only to shipwrights; the practice being, that a shipwright undertaking the repairs of a vessel can have the convenience for carrying them on by engaging the dock for three or four days, at a rate of 1s. per ton for entrance and 6d. per ton for laying days. The lessees of these other establishments say—that having to support a permanent staff and incur all the heavy responsibilities of maintaining their large establishments, they cannot meet this kind of competition; and they allege that it is unfair for the Government establishment in this manner to be brought into competition with them. They go on to state, that if the Fitz Roy Dock establishment is to be let, the best way would be to let it by public competition for a term of years, as in the case of the Circular Quay at the present time. The Committee thought that, from your position and experience, you would be able to state your views upon this subject? It is a difficult question to answer. If the question were simply whether the Government should supply a dry dock for the convenience of the shipping, in opposition to those already established, the answer would be very simple.
374. What would the answer be? That the Government have no right to interfere with private individuals. But the Government of the Colony having expended a large sum of money on an undertaking that was commenced, I may say, before private docks were begun, there appears to be an excuse for making some use of it now; more especially as, if some use is not made of it the money will be wasted. But if it be made use of, I think it objectionable to lease or let it from day to day to anyone wishing to employ it. There is great force in the objection of the petitioners, stating that, inasmuch as they have a heavy staff to keep up, they cannot compete with those establishments which have none. Of course the head of a private establishment like this has to pay his officers and men whether there is employment for the dock or not, and likewise has to provide for the wear and tear of his dock. He therefore looks for some accession to his business from the fact of his having a dock; that is, he expects other little profits, such as are made out of shifting blocks and stages, caulking, &c.; these charges being added to the regular dock charges. If the Government supply laborers, or keep a staff to assist those who occasionally hire the dock for a day or two, they place them in a better position than the capitalist who makes a dock or rents one. If the dock is to be let for public purposes it ought to be for a certain time, as in the case of the Circular Quay.
375. Mr. Drake, of the firm of Hely, Drake, & Harper, having employed the Government Dock in this manner with a ship called the "Granite City," which was only there five days—perhaps that will give you an idea of the short period for which they can take them into the dock—Mr. Drake was asked whether, if the dock was to be leased by public competition, he could not go in and bid for it; to which he replied, he should be exceedingly sorry to incur the responsibility? This answer I conceive is an admission of the whole force of the objections raised by the petitioners, whose responsibility is being made greater by this kind of competition. I think his answer confirms those objections. The Government ought to take into consideration first, the object in constructing the dock. If the object was, for instance, to supply a convenience for docking when the private docks are occupied, then there might be some excuse for using it; but if the object of the Government is to raise a revenue from it, they can raise a much greater revenue by leasing it, although it may be for a small sum. On the present system, at the first off-go a few vessels may be taken in; but it will gradually cure itself, if they continue to do the work cheaper than the proprietors of the docks usually do, and at a profit. The proprietors of the other establishments will lower their charges, and the dock will cease to be employed. The inconvenience of going to that dock is, however, an objection in connection with its being leased to a private party. There being no communication with the city direct, the men in going to their work would lose an hour, and in coming back lose another hour; and if they have not some commensurate advantage, such as assistance from the convicts, I cannot see what inducement they would have to employ themselves there.
376. *By Mr. Samuel*: You think the other parties would not be injured by it? No.
377. *By Mr. Hoskins*: Provided the tariff of charges for the docking of vessels were higher at this dock than at private establishments, would it be brought into competition with them? I do not think the object could be gained—I do not think the carpenters would hire it.
378. You think the owners of private establishments can compete with them? Not as at present.
379. The engineer of the dock proposes to have a tariff of charges higher than the rate charged at private establishments—do you think there would then be any unnecessary competition? I think the principle is bad for Government to use any public institution for private purposes, except in cases of necessity or emergency. With regard to the Circular Wharf it was different, there there was a large extent of ground of the greatest use to the public; and although I did not approve of the Government leasing that ground, still that instance can be more easily reconciled with public justice than it would be in the case of the Fitz Roy Dock being put into competition with private establishments. If it is let it will not cover one-half the interest on the cost.
380. *By Mr. Samuel*: Would not the principle which you allude to as bad also apply to railways? Yes. I am an advocate for putting the railway into private hands; and have always objected to railways being carried on by the Government.

381. If the charges are higher the owners of private establishments cannot reasonably complain? They may complain, but whether there is cause for complaint is another thing. I do not think the establishment will be patronised. J. Williamson,
Esq.
382. *By the Chairman*: Would not that altogether depend upon the proportion in which the charges were higher—if only higher in a degree so as to leave an advantage in docking in this temporary way—it would be taken still; but if higher to a degree so as to eat up all advantage then it would not be occupied? No doubt. The old established docks have a great advantage over it from their situation. Still there are many acquisitions, such as the use of labor which has not to be paid for on the Government establishment, to make up for it.
383. Do you think it a right mode of employing prisoners in a dock that would be frequented by strange vessels? With reference to their profitable employment I think they ought to be so engaged as long as they can be kept in safe custody. If you ask the question specially in regard to the Fitz Roy Dock, I think the Government ought to take into consideration what was the ulterior object of building the dock. They have gone within the last few years to a great expense (I think £20,000) for very fine machinery, but such machinery is not of use except to private individuals; and unless the object be for the Colonial Government to turn steamboat builders in fitting up this large machinery, they must hand over the dock to the British Government, either one thing or the other. They must make up their minds as to what is to be done. If they hand it over to the British Government to induce them to form a naval station here, the sooner the better.
384. *By Mr. Hoskins*: Was it first contemplated to be used for ships-of-war? I think it was constructed in order to employ the prisoners.
385. *By the Chairman*: What do you think of the dock being sold out and out? I do not think you would find a buyer.
386. *By Mr. Hoskins*: These shipwrights who employ the dock in repairing vessels necessarily employ large capital? No; they do not employ large capital. They are enabled to do many things cheaper by not using large capital.
387. We have in evidence by Mr. Drake, that as far as regards ship carpentering, he employs as many as Mr. Rountree? He may employ as many carpenters, which does not involve a large amount of capital to pay them; but as to the investment of capital as lessee of a dock, such as in keeping up stock in timber to be used by carpenters, I do not think he has near so much. I do not know that this statement is right, but I should think so. I think it might be of use if this Committee would call the attention of the Government to the necessity of deciding what is to be done with the dock. If they intend finally to make a present of it to the British Government for the establishment of a naval station it would be of advantage to the Colony, and the sooner it was done the better. Cockatoo Island would make an excellent station; and it would afford a great inducement for the Admiralty to send their vessels here.
388. *By the Chairman*: What do you think of it as a station for ocean steamers? It is an admirable dock for the purposes of steamers; there is every convenience.
389. *By Mr. Hoskins*: The prisoners are now employed in lengthening the dock? Yes.
390. *By the Chairman*: Do you not think it might not, as part subsidy, be handed over to a company who would establish a line of postal steamers to this Colony? Yes; I have suggested it.
391. *By Mr. Samuel*: Do you think any company would take it as part subsidy? I think so.
392. One part of the present system of letting the dock for short periods you think is objectionable, because it subjects the owners of private establishments to unfair competition? I do.
393. There is nothing to prevent them letting it out for short periods? But upon their own responsibility. The Government seldom do well in enterprises that require supervision, such as being landlords of a dock; it would be much better for them to lease it even for a small sum, and allow some one to work it for them.
394. Captain Mann, the superintendent of the island, is of opinion that the dock is best let out in the manner in which it is now let out, for short periods; because, he says, if you let it out for a term of years it would be injurious to the costly machinery, as the object of the lessee would be to get the most out of it without trying to keep it in proper order; and that in letting it out in the present way, it affords accommodation such as is likely to attract ships to the port, when they know of these facilities for docking, and they would come from the China and Indian stations purposely to be docked here. When asked whether if it would have this good effect in itself it would have a still better effect if we had two docks constructed, he said he should be prepared to advise the Government to construct another dock—what do you think of that? I think Captain Mann in that respect will be biased a good deal by his own situation. I agree with him with regard to the machinery, as anyone who rents the dock must know that they must keep some one to keep the machinery in good order. Some of the valuable machinery would scarcely ever be available.
395. It would require an inspector to see that it was kept clean? No doubt. As to attracting ships here for repairs, that is a fallacy that exists, because ships in India, where there are so many conveniences for repairing, will never come here until it is cheaper; as they can get the work done there for one-fourth or one-half less than here. Any parties sending a ship here to be repaired, will only do so when they cannot help it; and the same with the commanders of sailing ships. The expense of repairing a ship here is so great, that no master who can possibly avoid it will send a carpenter on board his ship.
396. Where do they repair their ships? At Singapore, Java, China, Bombay, Calcutta, and Hongkong, where the repairs can be done for one-fourth of the cost here.
397. *By Mr. Hoskins*: Are not private vessels allowed to use the public establishments in Bombay? I think not; but there are numerous private establishments, some of them owned by natives, Parsees, and other private parties. At Tahiti there is also a patent slip, kept by the French Government.

Legislative Assembly.
NEW SOUTH WALES.

SHELL HARBOR.

(PETITION RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 7 June, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned, the residents of the Municipality of Shell Harbor and the outskirts thereof,—

RESPECTFULLY SHEWETH :—

That it is of great importance to the welfare and progress of this portion of the District of Illawarra that the Harbor of this place should be surveyed, with a view to its improvement.

That competent judges state that the Harbor of this place would afford safer anchorage than most of the harbors of the south coast.

That your Petitioners respectfully submit to the consideration of your Honorable House the fact that they are denied the use of a Harbor, safe and commodious, on account of the bar thereof presenting an obstruction to the entrance of vessels of sufficient tonnage to meet the requirements of the trade from this port.

That a comparatively small sum of money would suffice to remove the bar and effect such other improvements as may be deemed necessary, and thus enable your Petitioners to enjoy the full advantages of the natural excellency of the Harbor.

That your Petitioners, therefore, most respectfully submit that they conceive themselves entitled to a favorable consideration of their Petition—1st.—Because the port of Shell Harbor is the only available outlet for the shipment of their produce to the Sydney markets. 2nd.—Because large sums of money have been granted by Government for the purpose of improving other harbors on the south coast, and for other public works, from which your Petitioners derive no benefit, whilst not one shilling has been laid out for the improvement of this portion of the district. 3rd.—Because the safe and well-sheltered anchorage, and many natural advantages of the Harbor are rendered void, useless, and unavailable for the requirements of your Petitioners, for want of a trifling outlay. 4th.—Because the purchasers of Crown Lands situated in this portion of the district find that the value of their purchases are considerably depreciated for want of more speedy and safe shipment for their produce. 5th.—Because the prosperity of your Petitioners is checked and hindered for want of regular steam communication, particularly so on account of the perishable nature of their dairy produce, and the difficulty of shipping live stock. 6th.—Because your Petitioners have contributed their full share toward the Revenue by the purchase of Crown Lands and otherwise.

Your Petitioners, therefore, earnestly trust that your Honorable House will direct that such steps be taken as shall secure to them the harbor accommodation they so much require and so urgently crave for.

And your Petitioners will ever pray, as in duty bound, &c.

[Here follow 204 Signatures.]

1859.

Legislative Assembly.**NEW SOUTH WALES.****MESSRS. JAMES AND ALEXANDER BROWN.**

(PETITION CONCERNING WHARFAGE ACCOMMODATION.)

Ordered by the Legislative Assembly to be Printed, 9 September, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of James and Alexander Brown, of Minmi and Newcastle, in the said Colony, Coal Proprietors,—

HUMBLY SHEWETH:—

That your Petitioners are the owners of the Minmi Collieries, in the District of Newcastle.

That, having been desirous of shipping their coals at the Port of Newcastle, your Petitioners applied a considerable time since to the Honorable the Minister for Land and Public Works for the necessary wharfage accommodation there for that purpose, and that, in consequence of that accommodation having been then promised to them by the Executive Government, your Petitioners, in performance of their part of the arrangement, proceeded at a heavy expense to form a junction between their own Railway and the Great Northern Line at Hexham, about ten miles from Newcastle.

That although that junction has been several months completed, and although your Petitioners have been since prepared with the appliances for forwarding three hundred tons of coal per day to Newcastle, for shipment, (which large accession of traffic to the Great Northern Line your Petitioners had hoped would have expedited the completion of the arrangement by the Executive) the promised wharfage accommodation has not, as yet, been provided, nor have any means been taken, as far as your Petitioners can learn, for that purpose.

That although a large demand for coals has existed at Newcastle since your Petitioners completed the junction of their Railway with the Great Northern Line, at Hexham aforesaid, which demand was the inducement for their arrangement with the Executive Government, your Petitioners have for the reason mentioned been unable to avail themselves of it, and that from the same cause the junction itself, upon which and the appliances connected with it your Petitioners had expended several thousand pounds, has been rendered comparatively useless, your Petitioners being prevented from using it to any extent in consequence of the difficulty and expense under present circumstances attendant on their shipment of their coals at Newcastle.

That your Petitioners deem this the proper place to submit to the notice of your Honorable House the fact, that the Great Northern Line itself is considerably out of gauge, ranging, as it does, from four feet seven and three-quarter inches, to four feet nine inches, and that another impediment has thus occurred to the arrangement entered into with your Petitioners; the narrow portions of the line being unsafe, and destructive to the flanges of the wheels of your Petitioners' coal waggons, which are of the correct width, according to the narrow-gauged rolling stock of England, by which the gauge of the Great Northern Line is supposed to be regulated; and that your Petitioners have represented this serious evil to the Chief Commissioner of Railways, but have failed to get it remedied.

That your Petitioners therefore pray your Honorable House, that your Honorable House will be pleased to cause inquiry to be made into the circumstances set forth in this their Petition, and to adopt such measures as to your Honorable House shall seem meet.

And your Petitioners will pray.

JAMES AND ALEXANDER BROWN.

NEW SOUTH WALES.

WHARFAGE RATES.

(PETITION OF CERTAIN MERCHANTS, TRADERS, &c., OF THE CITY OF SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 6 December, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Merchants, Traders, and others, of the
City of Sydney,—

HUMBLY SHEWETH :—

That your Petitioners have seen an advertisement in the newspapers stating that the lease of the Circular Quay is to be sold by public auction for a period of three years from the first day of January next, and subject to the rates and dues at present authorised and collected.

That your Petitioners believe the present scale of Wharfage Rates is much too high, as well as inequitable in its operation, and that before a new lease is granted it should be reduced and revised, for the following reasons :—

- 1st.—From competition with private wharfs captains of vessels are paid a considerable sum of money, varying from one-half to three-fourths of the whole amount of the wharfage to be collected from the inward cargo, before they bring their ship alongside.
- 2nd.—That the future Lessee will estimate in the rent to be given for the wharf only to receive a small portion for himself of the rates he levies on the public.
- 3rd.—That the present scale of Wharfage charges makes no distinction in regard to case goods, whether they measure a cubic foot or more than a ton, and in other respects requires amendment.

Your Petitioners humbly pray your Honorable House will be pleased to take the premises into consideration and give relief accordingly.

And your Petitioners will ever pray, &c.

Legislative Assembly.
NEW SOUTH WALES.

BILLABONG DAMS.
(LICENSED OCCUPANTS OF CROWN LANDS, COLOMBO CREEK.)

Ordered by the Legislative Assembly to be Printed, 12 October, 1859.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Licensed Occupants of Crown Lands, situated on
the banks of the Colombo Creek, Murrumbidgee District,—

HUMBLY SHEWETH:—

That your Petitioners have heard that a measure to regulate the erection of dams on the Billabong is about to be submitted to the consideration of your Honorable House, in which it is proposed to enact “That no permanent dams shall be erected on the Colombo Creek; that temporary dams may be erected,” on certain specified conditions, amongst which are these:—“No such dam shall be erected in any year until the water has run for one clear calendar month into the Billabong Creek;”—“All such temporary dams shall be removed on the first day of August in each year, and the site levelled to the ordinary level of the creek.”

That such clauses if passed into law would, as regards the settlers on the Colombo, be tantamount to declaring that they must not (except perhaps once in seven years) construct dams of any sort to secure water for their stock during the summer months.

That since June, one thousand eight hundred and fifty, the waters of the Murrumbidgee only twice made their way through the Colombo into the Billabong during very high floods, when such water was not required for any practical purpose by the residents on the Billabong.

That any such enactment would be based upon the erroneous assumption that the Colombo runs through annually into the Billabong, whereas all experience during the time the country has been occupied for grazing purposes proves the contrary, except in the two instances already named.

That a station on the Colombo is of as much importance to its occupant as a run in any other locality is to its occupant, if equal facilities be allowed for securing water for the summer months.

That this object can only be effected by the formation of permanent dams to catch the surface water from the adjoining plains after rain, a proceeding doubly necessary when it is considered that there are no natural waterholes in the Colombo capable of retaining a greater depth than two feet of water, whereas the reaches are frequently more than a mile in length; these long shallow reaches, when exposed to the hot summer sun, quickly evaporate, and, until the construction of dams, the stockholders on the Colombo were annually reduced to the necessity of shifting their stock from November to May, thus losing the benefit of their runs during six months in each year.

That

That if the proposed clauses become law such a state of things must continue to be of annual occurrence.

Your Petitioners therefore humbly pray, that in any Act passed by your Honorable House to regulate the construction of Billabong Dams, full permission may be given to the residents on the Colombo Creek to erect therein permanent dams capable of stopping four feet in perpendicular depth of water, such being determined, not by the height of the dam, but by the depth of the race whether natural or artificial; and that when, in any season during high flood in the Murrumbidgee River, the Colombo has run through its whole course into the Billabong, the latter having run through its course into the Edward, they may be permitted to construct floodgates on their races to stop an additional depth of water, subject to the same measurement as in the case of dams on the Billabong Creek, below the junction of the Colombo.

And your Petitioners, as in duty bound, will ever pray, &c.

Legislative Assembly.
NEW SOUTH WALES.

JOSEPH NOBBS.
(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 3 May, 1860.

To the Honorable the Legislative Assembly of New South Wales, now sitting.

The humble Petition of Joseph Nobbs, of Cook's River, Settler,—

RESPECTFULLY SHEWETH:—

That your Petitioner's grandfather, upwards of thirty years ago, acquired by purchase from one Tyrrel, the promisee thereof, the fee simple of a piece of land (containing about sixty acres) situate on the banks of Cook's River, opposite to the Petersham Estate, and such land subsequently descended to your Petitioner's father, and from him to your Petitioner. The grant was issued to your Petitioner's grandfather.

That your Petitioner's grandfather, father, and himself have expended large sums of money, and have also bestowed their own individual labor in erecting buildings and fences, and in clearing and in planting an orchard upon the said land, and in bringing the land on the river bank into a high state of cultivation, and they have derived considerable profit from the fruit and produce raised upon the said land; and, during the time of your Petitioner's grandfather, and his father, the river was navigable by sea, and five-ton boats used to trade up the river which was also a source of considerable profit to them.

That, about the time that the land descended to your Petitioner, Her Majesty's Government of the day commenced the construction of the dam over the river at the foot of the present Cook's River Road, the principal object of the said dam being, as your Petitioner understood, to freshen the waters of Cook's River, with the ultimate object of supplying Sydney and its vicinity with fresh water.

That the dam has wholly failed to accomplish that object, and the water for all practical purposes is the same as though it were sea water.

That, before the dam was constructed, the said land was to the best of his belief never flooded; but since then it has been subjected to a succession of floods, entailing heavy loss to your Petitioner, who has had several crops destroyed, and, in consequence of which, your Petitioner has been compelled to cease to cultivate. And by the flood which happened a few days back, he has had a great part of his orchard washed away, and trees, the fruit of which last year yielded him upwards of twenty pounds in money, have been torn up by the roots or otherwise destroyed; and his stable, fencing, and personal effects have also been washed away; and his house has been materially injured, and he was compelled with his family to seek shelter elsewhere, and does not deem it safe to return for the present.

That your Petitioner estimates his loss by the last flood at two hundred pounds, which, if he does not obtain redress, will entail absolute ruin upon him.

That your Petitioner has never received any compensation or allowance from Her Majesty.

Your Petitioner, therefore, humbly prays that your Honorable House will take his case into your consideration, and deal with it in such manner as in your wisdom you may deem best. And your Petitioner will ever pray, &c., &c.

JOSEPH NOBBS.

Legislative Assembly.

NEW SOUTH WALES.

YELLA MUNDA LAGOON.

(PETITION RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 25 May, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Landholders and Farmers in Lower Richmond and Cornwallis,—

RESPECTFULLY SHEWETH :—

That the natural outlet into the Hawkesbury River (which drains the superfluous waters of the Yella Munda and the chain of lagoons in Upper and Lower Richmond) having been filled up by some of the farmers near its confluence with the river, by which the waters of the late flood have been prevented from passing off, and have submerged large portions of their cultivated lands; has cut off their communication with the town of Richmond, except by a long and circuitous route; prevents the children getting to school; and threatens to reduce this once beautiful locality into a morass.

That Coolies' Creek, in the Cornwallis, which carries the flood-waters from Baker's Lagoon and the low grounds adjacent, has been partially filled up to the detriment of the Landholders in that locality.

Your Petitioners therefore pray such relief as your Honorable House may deem meet.

Legislative Assembly.

NEW SOUTH WALES.

FERRY DUES AT WINDSOR.

(PETITION FROM WILBERFORCE AND WINDSOR.)

Ordered by the Legislative Assembly to be Printed, 25 January, 1860.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled, &c., &c., &c.

The humble Petition of the undersigned, Inhabitants of Wilberforce and Windsor,—

RESPECTFULLY SHEWETH :—

That since the establishment—on the first day of November last—of a new punt at Windsor, under the lesseeship of Mr. George A. Davis, your Petitioners have been subjected to much hardship, in consequence of the imposition, by Mr. Davis, of what he considers the full charges for ferry dues, authorised by the Act of Council, 2 William IV., No. 12, section 7, namely, the sum of two-pence for crossing, and the like for re-crossing on the same day, making the sum of four-pence for crossing and re-crossing by a foot passenger; whereas, formerly, for such, only two-pence has been exacted. Also, the sum of one shilling and sixpence for crossing, and the same for re-crossing the same day, making three shillings for a horse and cart, instead of only one shilling as formerly charged; and the sum of sixpence for a trace-horse, instead of two-pence as charged by the former lessee.

Your Petitioners particularly complain of being compelled to pay going and returning, instead of only once for both, during the same day, as is charged at toll gates. And your Wilberforce Petitioners feel the charges to be very burdensome, especially when they visit Sydney, as, after crossing the ferry, they then have almost immediately to pay fresh toll at the Fitzroy Bridge, Windsor.

Your Petitioners, therefore, humbly pray your Honorable House to take the premises into consideration, and to take immediate measures for the amendment of the aforesaid Act, so far as to alter and reduce the scale of charges for ferries, or otherwise, as to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 160 Signatures.]

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

FREIGHT AND CHARGES BILL.

(PETITION AGAINST THE PASSING OF.)

Ordered by the Legislative Assembly to be Printed, 10 April, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Merchants and Traders of the City of Sydney,—

SHEWETH :—

That your Petitioners have observed, with some anxiety, the introduction into the Legislative Assembly of a Bill entitled, "*An Act to enable Owners and Masters of ships, in certain cases, to recover payments of certain charges incurred in reference to Goods and Merchandise on which they have a lien.*"

Your Petitioners respectfully submit that no necessity has been shewn for such a measure, and beg to lay before your Honorable House the following objections thereto :—

First—Because, under the law as it stands at present, your Petitioners believe no loss has ever been sustained by any captain or owner of ships in the collection of freight.

Second—Because a most dangerous and arbitrary power would thereby be placed in the hands of masters of vessels, whereby your Petitioners' rights and interests would be seriously affected, and their importations subjected to heavy expenses.

Third—Because the wharf accommodations in the Port of Sydney are altogether different from those at the Docks in the Port of London, where your Petitioners are informed a similar law exists, but where, owing to the aforesaid dock accommodation, consignees are subjected, by its operations, to a very trifling (if any) expense.

Your Petitioners, therefore, pray that your Honorable House will prevent the said Bill from passing into Law.

And your Petitioners will ever pray.

[Here follow 57 Signatures.]

Sydney: Thomas Richards, Government Printer.—1860.

1859.

Legislative Assembly.

NEW SOUTH WALES.

HUNTER RIVER TONNAGE DUES.

(PETITION OF NEWCASTLE CHAMBER OF COMMERCE.)

Ordered by the Legislative Assembly to be Printed, 16 December, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Newcastle Chamber of Commerce,—

HUMBLY SHEWETH :—

That an Act was passed by the Legislature of this Colony, in the Sessions of 1855, entitled, “ *An Act to provide Funds, by means of a Tonnage Duty, for making improvements to the navigation of the River Hunter, and to the Ports of Newcastle and Morpeth,*” 19 Victoria, No. 25; and that by that Act certain dues were imposed on the Trade of Newcastle, and of the Hunter generally, for the purposes therein mentioned.

That the said measure was initiated at the instance of the highest personage in the Colony, and that on his assurance (given, as your Petitioners are convinced, in perfect good faith) that the principle of providing for local improvements by local dues would thenceforth be exclusively adopted, as well in matters of internal navigation as otherwise, the inhabitants of Newcastle were induced to petition the Legislature to tax their Trade by a Tonnage Duty, as already mentioned.

That since that period no other instance has occurred of the application of the principle of effecting navigable improvements out of Local Funds, and that while the trade of the Port of Newcastle and of the River Hunter is now being taxed by a Tonnage Duty for such purposes, improvements have been, and continue to be, effected in other ports of the Colony out of the General Revenue, to which also the inhabitants of the Hunter District equally contribute.

That the continuance of the Tonnage Dues, under such circumstances, is a serious hardship and injustice, besides being a heavy burthen on the commerce of Newcastle and the River Hunter, and that your Petitioners, therefore, pray that your Honorable House will be pleased to afford the necessary relief by the introduction of a measure for the repeal of the said Act, 19 Victoria, No. 25, by which the said dues are levied.

And your Petitioners will ever pray.

GEORGE TULLY,
Chairman.

NEWCASTLE WALLSEND COAL COMPANY'S INCORPORATION BILL.

REPORT

THE SELECT COMMITTEE of the Legislative Assembly for whose consideration and Report was referred on the 20th September, 1859, the "Newcastle Wallsend Coal Company's Incorporation Bill," beg leave to report to your Honorable House,—

That they examined the ~~Managing Director of the Company~~ ^{those} (whose evidence will be found appended hereto), and that the Preamble ^{A. Campbell, Esq.} having been satisfactorily proved by the evidence of ~~that~~ gentleman, they proceeded with the several clauses of the Bill, all of which they agreed to, without amendment.

And your Committee now beg to lay before your Honorable House the Bill, without amendment.

R. JONES,
Chairman.

Legislative Assembly Chamber,
Sydney, 2 December, 1859.

Introduction to the Bill, I see if other returns
introduced a new clause
to have a similar one
referred to amendments
in other houses

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 2 DECEMBER, 1859.

MEMBERS PRESENT:—

Mr. Jones,		Mr. Jenkins,
Mr. Lyons,		Mr. Close.

R. Jones, Esquire, called to the Chair.

Present for the Promoters:—

W. W. Billyard, Esq., *Solicitor*.

Alexander Campbell, Esq., *Managing Director*.

The Clerk, by direction of the Chairman, read the Petition applying for leave to introduce the Bill under consideration.

A. Campbell, Esquire, examined.

Preamble read by the Chairman, and the Committee being of opinion that the allegations contained therein were satisfactorily proved by the evidence of Mr. Campbell.

Motion made (The Chairman) and Question,—That the Preamble stand part of the Bill—*agreed to*.

Clauses 1 to 17 read, and *agreed to*.

The Chairman then read a Report, which was unanimously adopted.

Motion made and Question (Mr. Close,)—That the Chairman report the Bill to the House without amendment—*carried*.

WITNESS.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

NEWCASTLE WALLSEND COAL COMPANY'S
INCORPORATION BILL.

FRIDAY, 2 DECEMBER, 1859.

Present:—

MR. CLOSE,
MR. JENKINS,MR. JONES,
MR. LYONS.

R. JONES, Esq., IN THE CHAIR.

W. W. Billyard, Esq., appeared as Solicitor on behalf of the promoters of the Bill.

Alexander Campbell, Esq., examined:—

1. *By Mr. Billyard:* Are you the Manager of the Newcastle Wallsend Coal Company? I A. Campbell, Esq.
 am Managing Director at present.
2. Has a Joint Stock Company, called "the Newcastle Wallsend Coal Company," been lately established at Sydney, under and subject to the rules, regulations, and provisions contained in a certain Deed of Settlement, bearing date the 20th January, 1859, purporting to be a Deed of Settlement of the said Company? Yes, there has been such a Company formed. 2 Dec., 1859.
3. By that Deed of Settlement, have the several parties thereto respectively "mutually covenanted and agreed that they, whilst holding shares in the capital of the said Company, should be and continue until dissolved, under the provisions in that behalf therein contained, a Joint Stock Company or partnership under the name and title of 'The Newcastle Wallsend Coal Company,' for working the coal or other mines in or upon any land of which the said Company might from time to time be owners or lessees, for the purchase or leasing of coal or other mineral lands, for following up and acting upon any trade or purpose mentioned in any regulations for the management or conduct of coal or other mines in the said Colony, then promulgated or thereafter to be promulgated for purchasing the necessary machinery for working the said mines, or for testing the mining capabilities of any land purchased or intended to be purchased by the Company, or for draining any mines or any other purpose in connexion therewith, for exporting, selling, or otherwise disposing of all coal or other minerals to be raised from any land belonging to or leased by the said Company, for disposing of the timber on any such land, for leasing or selling any such lands, and for constructing railways, roads, wharves, and other matters necessary for the promotion of the objects of the said Company."—Has the Company been formed for these purposes? It has been formed for these and other purposes, which are more fully set forth in the Deed of Settlement, a copy of which I produce. (*The witness produced the same.*) That has been executed by the shareholders.

NEWCASTLE WALLSEND COAL COMPANY'S INCORPORATION BILL.

- A. Campbell, Esq.
 2 Dec., 1859.
4. Is it by the Deed of Settlement provided that the capital of the Company shall consist of £100,000, to be contributed in 10,000 shares of £10 each, and of such further sum or sums as may hereafter be raised by the creation and sale of new shares of the like amount, as therein provided? Yes.
5. Has that capital all been subscribed for? The whole of the shares have been allotted by the Directors, and within a few pounds of £45,600 have been paid up. There are two or three of the last calls which would make up this amount, but upwards of £45,000 have been paid on the whole of the shares subscribed for.
6. By the deed of settlement has provision been made for the due management of the affairs of the Company by certain Directors already appointed, and by other Directors to be from time to time appointed and elected as their successors by the shareholders of the Company? The Directors to be appointed under the deed have not yet been appointed, nor can they be until this Bill is passed, but there is a provision in the deed for their appointment.
7. *By the Chairman*: Has temporary provision been made for the appointment of Directors? Yes; who are managing the affairs of the Company until the permanent Directors are appointed.
8. *By Mr. Billyard*: Is the Company desirous of being incorporated? Yes.
9. Is it expedient that the Company should be incorporated? It is.
10. *By the Chairman*: It is, I presume, necessary, for the purpose of carrying out the objects of the Company, that it should be incorporated? It was upon the condition that it should be an incorporated Company that the shares were subscribed for.

NEWCASTLE WALLSEND COAL COMPANY'S RAILWAY BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and Report was referred, on the 20th September last, the "*Newcastle Wallsend Coal Company's Railway Bill*," and to whom was referred, on the 27th September last, a *Petition from Arthur Hodgson, Esquire, as authorised Agent of the A. A. Company, praying certain amendments in the Bill*;—and to whom was also referred, on the 4th October last, a *Petition from J. W. Stevens, Esquire, (by his Attorney, G. E. Darby,) praying certain amendments in the Bill*, beg leave to report to your Honorable House,—

That having taken the necessary Evidence (which will be found appended hereto) to enable them to come to the conclusion that the Preamble had been satisfactorily proved, they then proceeded to consider the allegations contained in the two Petitions referred to them by your Honorable House on 27th September and the 4th October last, respectively, representing certain grievances, and praying for certain amendments in the Bill; and the Solicitor for the Petitioners having produced fifteen new clauses—having for their objects the redress of the grievances complained of by the said Petitioners—they were submitted to the Solicitor for the Promoters, and after certain verbal amendments were adopted by the Committee and ordered to be introduced into the Bill.

And your Committee now beg to lay before your Honorable House the Bill as amended and agreed to by them.

R. JONES,
Chairman.

*Legislative Assembly Chamber,
Sydney, 6 December, 1859.*

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 23 SEPTEMBER, 1859.

MEMBERS PRESENT:—

Mr. Nott,		Mr. Elliott,
Mr. Close,		Mr. Jenkins.
	Mr. Jones.	

R. Jones, Esquire, called to the Chair.

Present for the Promoters of the Bill:—

W. W. Billyard, Esquire, Solicitor.
J. B. Darvall, Esq., Q.C.

(1.) Mr. Billyard having informed the Committee that he understood there was to be some opposition to the passing of this Bill—and Mr. H. B. Bradley being admitted, and informed of Mr. Billyard's statement, informed the Committee that he attended on behalf of the Australian Agricultural Company, who were opposed to certain details of the Bill. The Chairman stated that no Petition having been presented to the House against the Bill now under consideration, he could not be allowed to take any part in the Proceedings, but might be present at the Meetings of the Committee.

(2.) W. W. Billyard, *Solicitor*, examined.

(3.) Captain Martindale, R.E., in compliance with a letter received by him from the Clerk of the House, being in attendance, was called in, and requested to watch the Proceedings on behalf of the Government.

(4.) Motion made and Question (Mr. *Jenkins*),—That Captain Martindale be requested to furnish a Report to the Committee upon the provisions set forth in this Bill, such being the more proper and expeditious course, and that the evidence taken and the plans produced be also referred to that gentleman—*agreed to*.

(5.) W. Weaver, Esquire, C.E., called in and examined.

(6.) S. Samuel, Esq., M.P., examined.

(7.) Motion made and Question (Mr. *Jenkins*),—That the Preamble be amended in the eighth line by the omission of the word "must," and the substitution of the words "is intended to be"—*agreed to*.

(8.) Motion made and Question (Mr. *Jenkins*),—That the Preamble be further amended in the ninth line by the insertion after the word "Country," of the words "believed to be"—*agreed to*.

(9.) W. Weaver, Esq., C.E., further examined.

(10.) Clark Irving, Esq., M.P., examined.

Committee deliberated, and adjourned to Friday, 28th September.

FRIDAY, 28 SEPTEMBER, 1859.

Memo:

The Meeting called for this day was, by direction of the Chairman, postponed to Tuesday, the 4th October, 1859.

TUESDAY, 4 OCTOBER, 1859.

MEMBERS PRESENT:—

R. Jones, Esquire, in the Chair.

Mr. Elliott,		Mr. Nott,
Mr. Close,		Mr. Jenkins.

Present for the Promoters:—

W. W. Billyard, Esq., *Solicitor*.

Present for the Petitioner:—

H. B. Bradley, Esq., *Solicitor*.

(1.) The Clerk, by direction of the Chairman, read the Petition of A. Hodgson, Esquire, on behalf of the Australian Agricultural Company, against the provisions of the Bill, which was referred to the Committee by the House on the 27th September last.

(2.) The Chairman informed the *Solicitor* for the Petitioner, that the Committee were now prepared to hear any observations he may have to address to them upon the subject under consideration, or to examine any Witnesses he may desire to bring before the Committee to support the allegations contained in the said Petition;—

Whereupon Mr. Bradley proceeded to address the Committee, and declined calling any Witnesses at present.

(3.) The Chairman then laid before the Committee two Reports received from Captain Martindale, in compliance with the Resolution passed on the 23rd September last, upon the provisions of the proposed Bill, and the Evidence given in its favor.

Strangers having been requested to withdraw, and having withdrawn accordingly,—

Committee deliberated upon the matter contained in the Reports, (and in compliance with a request of the *Solicitor* for the Promoters,) agreed to allow copies of them to be taken by the parties interested, and strangers being again admitted, the above decision was communicated to them.

Committee then adjourned.

THURSDAY,

THURSDAY, 13 OCTOBER, 1859.

MEMBERS PRESENT:—

R. Jones, Esquire, in the Chair.

Mr. Jenkins,
Mr. Close,

Mr. Rotton,
Mr. Elliott.

Present for the Promoters:—

W. W. Billyard, Esq., *Solicitor*.

Present for the Petitioners:—

H. B. Bradley, Esq., *Solicitor*.

(1.) The Clerk having produced a Petition from J. Whitehill Stevens, Esquire, in opposition to the provisions of the Bill which was referred to the Committee by the House, on the 4th October, it was read by the Chairman.

(2.) The Chairman inquired of the Solicitors present whether they were desirous of offering any further Evidence, and being informed that such was not their desire, requested strangers to withdraw, and in compliance strangers having withdrawn, Committee proceeded to deliberate upon the Preamble, after which Motion made and Question (Mr. Rotton),—

That the Preamble, as amended, has been proved,—*agreed to*.
Strangers being again admitted,—

The foregoing Resolution was communicated to them, whereupon Mr. Bradley handed in several new clauses, which he had been instructed to propose to the Committee for insertion in the Bill, the consideration of which was postponed till next meeting, with the understanding that they would be in the hands of Members printed before then.

Mr. Billyard then handed in a copy of the Bill, with certain amendments and additions, the consideration of which was also postponed to the same day, with the same understanding. The Clerk, by direction of the Chairman, read the Reports from the Chief Commissioner for Railways, and it was decided by the Committee to have them printed before the next meeting.

Committee adjourned till Tuesday, 18 October, 1859.

TUESDAY, 18 OCTOBER, 1859.

MEMBERS PRESENT:—

R. Jones, Esquire, in the Chair.

Mr. Elliott,

Mr. Jenkins.

Mr. Close,

Present for the Promoters:—

W. W. Billiard, Esq., *Solicitor*.

For the Petitioners:—

H. B. Bradley, Esq., *Solicitor*.

The Committee after deliberation proceeded to consider the Clauses of the Bill.
Motion made and Question (Mr. Jenkins.)

Clause 1:—

That in the 35th line of the Bill as reprinted, the Clause be amended by the insertion after "Railway" of the words "in accordance with section ninety-nine of the Government Railways Act of 1858"—*agreed to*.

Motion made and Question (Mr. Jenkins),—That the Clause be further amended in the 39th line, by the insertion after "ninety-nine" of the words "excepting at a Creek on the Australian Agricultural Company's property at twenty-eight chains from the junction with the Great Northern Railway, where the width will be one hundred and fifty feet"—*agreed to*.

Motion made and Question (Mr. Jenkins),—That the Clause be further amended by the insertion in line 5, page 2, after "in" of the words "constructing and"—*agreed to*.

Clause as amended *agreed to*.

Clause 2:—

Motion made and Question (Mr. Jenkins),—That the Clause be amended in the 13th line by the insertion after "Railways" of the words "Provided that no lands vested in the Commissioner for Railways shall by virtue of this Act be vested in the Company"—*agreed to*.

Motion made and Question (Mr. Jenkins),—That the Clause be further amended in the fourteenth line, by the insertion after "Provided" of the word "also"—*agreed to*.

Motion made, and Question (Mr. Jenkins),—That the Clause be further amended in the 31st line, by the insertion after "gates such" of the words "fences and"—*agreed to*.

Clause as amended *agreed to*.

Clause 3 postponed.

Clause 4 *agreed to*.

Clause 5. Motion made, and Question (Mr. Jenkins),—That the Clause be amended, by the omission in line 36 of the words "two Justices as aftermentioned" and the insertion in their place of "the Governor with the advice of the Executive Council"—*agreed to*.

Clause as amended "agreed to"

Clause 6. Motion made and Question (Mr. Jenkins),—That the Clause be amended, by the omission from the 52nd and 53rd lines, of the words "Government Inspector of Railways if any" and the insertion in their place of the words "Secretary for Public Works"—*agreed to*.

Clause as amended *agreed to*.

Committee then adjourned till Wednesday, the 19th instant, at 12 o'clock.

WEDNESDAY,

WEDNESDAY, 19 OCTOBER, 1859.

MEMBERS PRESENT:—

R. Jones, Esq., in the Chair.

Mr. Elliott, | Mr. Rotton,
Mr. Close.

Committee resumed the consideration of the Clauses of the Bill.

Clause 7, Motion made and Question (Mr. Rotton),—

That the Clause be amended in the 9th and 10th lines by the omission of the words "*Government Inspector of Railways, if any, and if not then to the nearest Bench of Magistrates,*" and the insertion in the 11th line in lieu thereof of the words "*Secretary for Public Works,*"—*agreed to.*

Motion made and Question (Mr. Rotton),—

That the Clause be further amended in the 13th and 14th lines by the omission of the words "*Government Inspector or Bench of Magistrates,*" and the insertion in lieu thereof of the word "*Secretary,*"—*agreed to.*

Clause as amended *agreed to.*

Clauses 8 to 12 inclusive *agreed to.*

Clause 13, Motion made and Question (Mr. Rotton),—

That the Clause be amended in the 11th line by the omission of the words "*forty shillings,*" and the insertion in lieu thereof of the words "*ten pounds,*"—*agreed to.*

Clause as amended *agreed to.*

Clauses 14 to 23 *agreed to.*

Clause 24, Motion made and Question (Mr. Rotton),—

That the Clause be amended by the addition at the end thereof of the words "*and the amount awarded shall be paid within sixty days after the publication of such award,*"—*agreed to.*

Clause as amended *agreed to.*

Clauses 25 and 26 *agreed to.*

Clause 27, Motion made and Question (Mr. Rotton),—

That the Clause be amended in the 12th and 13th lines by the omission of the words "*and who shall not be interested in the matter requiring the cognizance of such Justice,*"—*agreed to.*

Clause 28 *agreed to.*

Schedule, Motion made and Question (Mr. Rotton),—

That the Schedule be amended in the 31st line by the omission of the word "*the*" and the insertion after "*land*" of the words "*believed to be the property of,*"—*agreed to.*

Motion made and Question (Mr. Rotton),—That the Schedule be further amended in the 35th line by the insertion after the word "*to*" of the words "*and through,*"—*agreed to.*

Schedule, as amended, *agreed to.*

Committee adjourned till Friday, 21 October, 1859.

FRIDAY, 21 OCTOBER, 1859.

The House being adjourned from the 20th to the 25th instant, no meeting of the Committee was held on this day.

TUESDAY, 29 NOVEMBER, 1859.

MEMBERS PRESENT:—

Mr. Jones, | Mr. Elliott.

There not being a Quorum present, there was no meeting of the Committee this day.

WEDNESDAY, 30 NOVEMBER, 1859.

MEMBERS PRESENT:—

R. Jones, Esq., in the Chair.

Mr. Elliott, | Mr. Close,
Mr. Jenkins.

Present for the Promoters:—

W. W. Billyard, Esq., *Solicitor.*

A. Campbell, Esq., *Managing Director.*

J. Brown, Esq.

Present for the Petitioners:—

H. B. Bradley, Esq., *Solicitor.*

Committee proceeded to consider the Postponed Clause 3, and the various new Clauses proposed to be inserted.

Motion made and Question (Mr. Close),—That Clause 3 be amended in the 34th line by the insertion after "*Railway*" of the words "*and Locomotives,*" and by the omission of

of the words "at all times" after "be," and also by the omission of the word "the" after "to,"—*agreed to.*

Motion made and Question (Mr. Close),—That the Clause be further amended in the 35th line by the insertion of the word "use" after "public," and by the substitution of the word "threepence" for "sixpence,"—*agreed to.*

Motion made and Question (Mr. Close),—That the Clause be further amended in the 36th line by the omission of the words "in respect of every ton of goods for every transit,"—*agreed to.*

Motion made and Question (Mr. Close),—That the Clause be further amended in the 37th line by the insertion of the words "and loading" after "supplying,"—*agreed to.*

Motion made and question (Mr. Close),—That the Clause be further amended by the omission of all the words after "waggons" in the 37th line, to "work" in the 44th line inclusive,—*agreed to.*

Motion made and question (Mr. Close),—That the Clause be further amended by the omission of all the words after "cost" in the 45th line to the end of the Clause,—*agreed to.*

Clause as amended, *agreed to.*

Committee deliberated as to the proper numbers to be given to the new Clauses, and decided that the Clauses should be considered consecutively, regardless of numbers, and the proper arrangement of their position and numbers in the Bill should be left to the Chairman, assisted by the Clerk.

New Clauses numbered 15, 43, 54,—*agreed to.*

Motion made and Question (Mr. Close).

That the blank in the ninth line of the Clause now Number 58, be filled up with the word "ten,"—*agreed to.*

Clause as amended,—*agreed to.*

New Clauses Numbered 74, 76, 77, 78, 79, 80, 81, 82, 83, 84, and 85,—*agreed to.*

Strangers having withdrawn, Committee deliberated on their further proceedings, and decided on meeting on Tuesday, the 6th December next, to consider Report, and the Clerk was instructed to have the Bill re-printed, shewing all its amendments by that day.

Committee then adjourned.

TUESDAY, 6 DECEMBER, 1859.

MEMBERS PRESENT :—

R. Jones, Esquire, in the Chair.

Mr. Rotton,

| Mr. Close.

Present for the Promoters :—

A. Campbell, Esq.

The Chairman laid before the Committee a draft Report which having been read and verbally amended.

Motion made and Question (Mr. Close),—That this Report be adopted as the Report of the Committee,—*agreed to.*

Motion made and Question (Mr. Rotton),—That the Chairman Report the Bill to the House as amended,—*agreed to.*

Legislative Assembly.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

NEWCASTLE WALLSEND COAL COMPANY'S
RAILWAY BILL.

FRIDAY, 23 SEPTEMBER, 1859.

Present:—

MR. CLOSE,
MR. ELIOTT,
MR. JENKINS,

MR. JONES,
MR. LYONS,
MR. NOTT.

R. JONES, ESQUIRE, IN THE CHAIR.

W. W. Billyard, Esq., appeared as Solicitor, and J. B. Darvall, Esq., M. P., as Counsel for the promoters of the Bill.

William Whaley Billyard, Esquire, examined:—

1. *By Mr. Darvall:* What are you? I am a Solicitor.
2. Are you Solicitor for the Newcastle Wallsend Coal Company? Yes.
3. Do you produce the Deed of Settlement of that Company? I do. (*The witness produced the same.*)
4. Are you aware whether it has been duly executed by the parties purporting to be the parties to it? Yes.
5. What is the style of the Company? The Newcastle Wallsend Coal Company.
6. Are you aware whether the Company have opened coal mines and established collieries near Newcastle? Yes, I am; I have seen the coal.
7. Do you know whether the Company are desirous of constructing a railway from their coal mines to the Great Northern Railway? They are.

W. W. Billyard
Esq.

23 Sept., 1859.

William Weaver, Esq., examined:—

8. *By Mr. Darvall:* What are you? An Engineer and Architect.
9. Have you been employed by the Newcastle Wallsend Coal Company? Yes.
10. Do you produce plans shewing the situation of the mine and the position of the lands through which the Company desire to pass in order to reach the Great Northern Railway? Yes.
11. Where about is the colliery? On a piece of ground known as Magiere's grant, on the road to Brisbane Water from Newcastle.
12. How far from Newcastle? By the Northern Railway, and the proposed line of railway, it would be about eight miles and a-half.
13. In what county is that? Northumberland.

W. Weaver,
Esq.

23 Sept., 1859.

W. Weaver,
Esq.
23 Sept., 1859.

14. Can you say what is the readiest mode of exporting coals from this mine,—I mean to put them on ship board? By connecting the works with the Northern Railway at the nearest point by a branch railway, similar to the Northern Railway, and traversing it from the junction to Newcastle.

15. What length is the proposed junction line of railway? The line proposed to be constructed by the Company is three miles and a-half.

16. Will the construction of that line greatly facilitate the communication of the coal mines with the Northern Railway? It is only to communicate with the Northern Railway that it is required.

17. Is the communication at the nearest point of the Great Northern Railway? It is the nearest practicable point.

18. What is the course of the proposed railway from the mine to the Great Northern Railway—over what and whose land does it pass? It leaves the Company's land, formerly a grant to Magiere, passes through Brooks' property, then through land known as Weller's grant, supposed now to belong to Stevens, then through a very small piece of Crown Land for a distance of about five or six chains only, which is known as commonage reserve, then through land granted to Platt, known as Platt's farm, but now the property of the Australian Agricultural Company,—on which land it joins the Northern Railway.

19. In what county are these lands? In Northumberland.

20. Can you state why you made the selection of that particular land? It is the shortest practicable road from the Company's mine to the Northern Railway.

21. What is the character of the land it passes over? The land is very barren, almost the whole of it ironbark ranges. The surface value of it is very inconsiderable, though I believe there are minerals under it.

22. Are you aware whether the line can be made without Legislative authority? I believe not.

23. *By Mr. Jenkins:* Has any attempt been made? Yes, there have been attempts made to make private agreements with the proprietors.

24. *By the Chairman:* And these attempts have failed? Yes, the Company have failed to make any satisfactory terms with them.

25. *By Mr. Darvall:* Can you state whether the proposed mines are likely to be a benefit to the Colony and to the public? Yes, I believe they are; I believe the seam of coal is a very valuable one.

26. Do you believe it will promote facilities for the supply of coal for local consumption, for steam navigation, and for export generally? Yes, I should say so; it is apparent.

27. Would the opening of this line have a tendency to increase the traffic on the Great Northern Railway? Certainly.

28. *By the Chairman:* Do the plans produced clearly shew the land over which this railway is to pass? Yes; here is a plan on a large scale, a working plan I may call it, on a scale of four chains to an inch, which shews the boundaries of the various land I have named, and the course of the line. (*The witness produced the plan.*)

29. Does the plan shew the nature of the works? Yes, they do; there is the longitudinal section shewing the gradients of the works generally, and here are the drawings of the bridges, &c. (*The witness produced the same.*)

30. Do the plans shew how and where it is proposed to connect with the Great Northern Railway? Yes.

31. *By Mr. Darvall:* Are you aware whether some of the lands proposed to be passed over are held in trust, and some in the hands of persons in the Colony? Yes.

32. *By the Chairman:* Where does the distance of four-miles fifty-three and a half chains measure from? From the four mile post on the railway; I take the distance from the miles on the railway and from the fourth mile post on the Northern Railway; our junction is at the distance stated.

33. Is it proposed that the Government should run their engines or waggons over the proposed line of railway? I believe the Company has it in contemplation to make that arrangement with the Government.

34. What is the weight of the rails, the chairs, and the general construction of the permanent way? The rails are 75 lbs. to the yard—the same as the Government rails; we do not propose to use chairs; the rails are similar to rails which have been imported by the Government; and the general construction of the permanent way is similar to what is now being constructed for the Government.

35. What is the steepest gradient to be upon the railway? We have one gradient as steep as one in fifty-five; but I may state that that inclination is with loading; in getting up the inclination of one in fifty-five they will have none but empty trucks.

36. What is the smallest radius of a curve? The smallest radius of a curve is at the junction with the Northern Railway, that is fifteen chains, there is a double curve of that radius, but in no other case have you so sharp a curve as that.

37. Is it proposed that that the Company shall run their own engines, or the Government? I cannot say what arrangement may be made for working the line in detail, but I believe it has been proposed that the Company should find their own waggons, but make arrangements with the Government to provide locomotives.

38. What is the scale of the plans and sections? The scale of the plan is four chains to one inch, the horizontal section is the same; and the vertical is forty feet to one inch.

39. Does the plan shew the streets or roads to be crossed by the railway? There is no street to be crossed, there are two bush roads, which are shewn on the plan and section.

40. Does it also shew how these are to be crossed? The section shews that they are to be diverted and crossed on the level.

41. When you say that there are no chairs to be used, I presume you mean that the line is to be fish jointed? Yes, that fish joints shall be used without chairs. W. Weaver,
Esq.
23 Sept., 1859.
42. *By Mr. Close*: When the coals arrive at Newcastle is there any provision made for the railway diverging to a wharf? The Company have not made any arrangements at present, but I believe some arrangement will have to be made for wharfage hereafter, I am not aware of any at present.

Saul Samuel, Esq., M.P., examined:—

43. *By Mr. Darvall*: You are one of the Shareholders in this Company? Yes, and one of the Directors. Saul Samuel,
Esq., M.P.
23 Sept., 1859.
44. Can you state whether the Company has entered into contracts for the construction of this railway? They have.
45. In conformity with the description given by Mr. Weaver? Yes, according to the specification and plans prepared by him.
46. Can you state what are the proposed advantages to the public to be derived from the carrying out of this undertaking? We anticipate having ready for shipment and being ready to ship at the rate of 100,000 tons of coal annually, and that of course must benefit the public by throwing a large quantity of coal into competition with the coal at present produced.
47. Can you state whether the demand for coal has been increasing of late years? It is an increasing demand, and has increased greatly within this last year.
48. For the supply of what places? For the supply not only of the Colonies, but for places in the East—California.
49. New Caledonia? Yes, and the west coast of South America.
50. Then I understand you to be of opinion that it will increase the production of coal, and diminish the price? I have no doubt of it.
51. Are you aware whether it has been found impossible, without the assistance of the Legislature, to carry out the proposed line? I am, it is impossible; some of the owners of property through which the line of railway passes not being resident in the Colony, and their agents having no power to sell.
52. *By Mr. Jenkins*: Has there been any communication made to the parties at Home though their agents—has time been allowed for a reply? We have adopted the course required by law, that of giving notice; and I am not aware of any other course being necessary.
53. *By Mr. Darvall*: Have you taken an opinion as to whether you could carry out this object without an Act? We have endeavored to do so by treating with the agents, but found it impossible.
54. *By Mr. Jenkins*: Do you know who are the agents of the parties? We have ascertained as far as we have been able.
55. No communications have been received from the principals? None; of course communication with them would cause delay, retard the operations of the Company, and greatly effect the benefit the public should derive from it.
56. *By the Chairman*: It is essential to the business of the Company that no delay should take place in the formation of the railway? Yes.
57. Inasmuch as you have opened mines, and have entered into contracts for the formation of the railway? Yes; I may say that the engine is erected over the pit, that the sinking of the pit is nearly completed, and that I have myself been down one of the pits and seen the seam of coal.

Clark Irving, Esquire, M.P., examined:—

58. *By the Chairman*: You are one of the Directors of this Company? I am.
59. Do you know what steps have been taken to obtain, if possible, assent to pass through these lands, from the owners? Immediately upon the formation of this Company, twelve months ago, we put ourselves—or Mr. Brown more particularly put himself—in communication with Mr. Darby, the representative of Mr. Stevens, who stated that he would communicate with his principal, who is in England, and that he had no doubt he would give every facility in his power to our making the railway, inasmuch as he considered it improved the property. Clark Irving,
Esq., M.P.
23 Sept., 1859.
60. But no consent has been obtained? No consent has been obtained. We made a last effort to arrange not only with him, but also with the Australian Agricultural Company, before we applied for this Act, in order that we might commence at once, but found it impossible to succeed.
61. You are aware that the line passes also over some Crown Lands? It does over a small quantity.
62. Are you aware that there is no mode of alienating such lands but by putting them up to auction? As the law now stands that is the only mode.
63. It could not be arranged except by means of an Act? I know of no other means myself.
64. Did you make application to the Government upon that point? We did; and they said they would do all they could, but they found that the regulations stood in their way.
65. Will you state in what way, according to your opinion, the Company is likely to prove beneficial to the public? In consequence of the increased consumption, the Colony needs a larger supply of coal for its own use. I may state that five or six vessels have come for coal from

Clark Irving, from Java on account of the Dutch Government; orders have also come from South America, and it is supposed that in another twelve months, when all the pits are open, we shall scarcely have sufficient to execute all the orders that are likely to arrive.

- 23 Sept., 1859. *By Mr. Nott*: What is the depth of the seam now opened? About nine feet, one seam.
67. *By Mr. Close*: Of pure coal? Pure coal; it has been analysed.
68. Are there no bands of clay? No; there is a kind of seam about the eighth of an inch thick shewing the separation.
69. *By Mr. Jenkins*: What is the extent of the coal field? It is very extensive.
70. There is other property besides that held by the Company which is also valuable on account of its coal? Yes.
71. Is it alienated or unalienated property? I am not aware.

William Weaver, Esq., further examined:—

- W. Weaver, Esq.
23 Sept., 1859.
72. *By Mr. Darvall*: Is any alteration necessary in the wording of the first section of the Bill to enable the railway to be carried out? Yes; we require in one particular part of the line a greater width than ninety-nine feet, which was provided in the Bill, in consequence of alterations on the works proposed since the Bill has been drawn.
73. What is the alteration that has led to that necessity? The substitution of a high embankment, which will have a very broad base across a creek, instead of a bridge as originally provided.
74. Where is the particular place where you require this change? It is a deep creek on the property of the Australian Agricultural Company, situated twenty-eight chains from the junction of the proposed railway, and from that distance, namely, twenty-eight chains from the junction, we shall require a width of one hundred and thirty-two feet or two chains instead of one and half chains, for the length of five chains; in every other part of the line the width of ninety-nine feet will be sufficient.

1860.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 25. THURSDAY, 13 OCTOBER, 1859.

8. Mount Keira Tramroad Bill :—Mr. Garrett moved, pursuant to *amended* notice,—
 (1.) That the Mount Keira Tramroad Bill be referred to a Select Committee.
 (2.) That such Committee consist of the following Members, viz. :—Mr. Byrnes, Mr. McArthur, Mr. Richardson, Mr. Laycock, Mr. Ryan, Mr. Laidlaw, Mr. Wisdom, Mr. Robertson, and the Mover.
 Question put and passed.
-

VOTES No. 33. TUESDAY, 29 NOVEMBER, 1859.

19. Mount Keira Tramroad Bill :—Mr. Hay presented a Petition from Charles Throsby Smith, of Wollongong, landowner, praying that this Bill may not be allowed to pass, and to be heard, by himself or his attorney, at the Bar of the House.
 Petition received, and referred to the Select Committee on the Bill.
-

VOTES No. 68. TUESDAY, 28 FEBRUARY, 1860.

5. Mount Keira Tramroad Bill :—Mr. Garrett, as Chairman, brought up the Report from, and laid upon the Table the Evidence taken before, the Select Committee for whose consideration and Report this Bill was referred on the 13th October last, together with the Bill, as amended in the Committee.
 Ordered to be printed ;—
 Mr. Garrett then moved, That the second reading of this Bill stand an Order of the Day for Friday next.
 Question put and passed.

MOUNT KEIRA TRAMROAD BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and Report was referred, on the 13th October last, the "*Mount Keira Tramroad Bill*," and to whom was referred, on the 29th November last, a "*Petition from Charles Throsby Smith, Esquire*," proprietor of certain Lands through which it is proposed by the Bill for the said Tramroad to pass, praying "*that the said Bill may not be permitted to pass into Law*," report to your Honorable House:—

That, having taken the necessary Evidence (which will be found appended *hereto*) to enable them to come to the conclusion that the Preamble had been satisfactorily proved, they then proceeded to consider the allegations contained in the Petition referred to them by your Honorable House, on the 29th November last, representing "*that the passing of the said Tramroad through his property would inflict great loss and injury on Petitioner*," and praying "*that the said Bill may not be permitted to pass into Law*"; and David Johnstone (a Trustee of the land belonging to the said Charles Throsby Smith) having given evidence as to the nature of the objections of the said Charles Throsby Smith, they were submitted to the Solicitor for the Promoters of the Bill, who thereupon produced certain new Clauses, which, after consideration, were agreed to and adopted by the Committee.

And your Committee now beg to lay before your Honorable House the Bill as amended and agreed to by them.

JOHN GARRETT,

Chairman.

Legislative Assembly Chamber,

Sydney, 28 February, 1860.

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 14 OCTOBER, 1859.

MEMBERS PRESENT:—

Mr. Garrett,		Mr. Wisdom,
Mr. Laidlaw,		Mr. Laycock,
		Mr. Ryan.

J. Garrett, Esq., called to the Chair.

The Clerk, by direction of the Chairman, read the Petition, asking leave to introduce the Bill, which was referred to the Committee for consideration and report on 13th October.

Motion made and Question (*Mr. Laidlaw*)—That a copy of the Bill be furnished to the Chief Commissioner of Railways, requesting him to furnish the Committee with a report on its provisions previous to next meeting—*agreed to*

Committee deliberated and adjourned

THURSDAY, 20 OCTOBER, 1859.

MEMBERS PRESENT:—

J. Garrett, Esq., in the Chair.

Mr. Garrett,		Mr. Laycock,
Mr. Wisdom,		Mr. Ryan,
		Mr. McArthur.

P. Owen, Esq., *solicitor for the promoters*, examined.

W. Robson, Esq., called in and examined.

The Clerk informed the Committee that, in compliance with a Resolution passed at last meeting, he had forwarded to Captain Martindale a copy of the Bill and Plan of the proposed Tramroad, requesting his Report thereon, and produced and read a letter from that gentleman in reply, as follows:—

*Department of Public Works,
Sydney, 20 October, 1859.*

My dear Sir,

I shall be unable to let you have my Report to-day, as requested, on the Mount Keira Tramroad Bill:—1st. Because, from pressure of other work, I have been unable to give sufficient attention to it; and, 2ndly, because the Secretary for Public Works wishes to obtain some information about it. I will, however, send in a Report with as little delay as I can help.

Yours truly,

B. H. MARTINDALE.

R. O'Connor, Esq.

Whereupon the Committee deliberated as to the advisability of postponing any further proceeding in the matter until Captain Martindale's Report is sent in.

Motion made and Question (*Mr. Laycock*)—That all further proceedings be suspended until the receipt (by the Clerk) of Captain Martindale's Report upon the Bill under consideration—*agreed to*.

Question put,—That it be an instruction to the Clerk to communicate with Captain Martindale, with the view of obtaining that gentleman's Report with all possible dispatch; and further, that immediately on receipt of such Report, he will inform the Chairman thereof,—*agreed to*.

Committee then adjourned.

THURSDAY, 15 DECEMBER, 1859.

MEMBERS PRESENT:—

J. Garrett, Esq., in the Chair.

Mr. Ryan,		Mr. McArthur.
-----------	--	---------------

1. The Clerk produced, and, by direction of the Chairman, read the Petition of C. T. Smith, Esq., referred to them by the House on the 29th November last.

2. The Clerk produced a Report from Captain Martindale, and also one from E. O. Moriarty, Esq., *Engineer-in-Chief for Harbors*, both of which were, by direction of the Chairman, read to the Committee, after which strangers were admitted.

Present

Present for the Promoters—
C. E. Stafford, Esq., *Solicitor*.
W. Robson, Esq.

Present for the Petitioners—
David Johnstone, Esq.

The documents previously referred to as produced before the Committee were again read by the Clerk.

Motion made and Question (*Mr. McArthur*)—That the Reports of Messrs. Martindale and Moriarty be printed for the use of the Committee, and entered on the Minutes of the Proceedings—*carried*.

MOUNT KEIRA TRAMROAD BILL.

Railway Branch,
Department of Internal Communication,
Sydney, 15 December, 1859.

Sir,

In compliance with the Resolution of the Select Committee, I have the honor to submit the following observations on the "Mount Keira Tramroad Bill."

1. Preamble. It appears desirable to afford every facility for the working and shipment of coal in the Wollongong district.

2. Clause 1. The powers sought appear too general; they might be limited to the construction of a tramroad in accordance with the plans, sections, and books of reference exhibited to, and approved of, by the Select Committee. The gauge of the tramroad should also be determined. The plans transmitted to me, and returned herewith, are not prepared with sufficient care to be of any service. The Engineer-in-Chief for Harbours has, in a Report addressed to the Secretary for Public Works, and transmitted for the information of the Committee, objected, for reasons stated in his Report, to the Company receiving powers to pass over and through the Crown Lands referred to in Schedule B. The streets or roads to be crossed, diverted, or altered, and the exact arrangements proposed for crossing, altering, or diverting, should be defined in the schedule to the Bill, and shewn on plans and sections drawn to a proper scale, and the powers given be conferred to them. Where the tramroad passes along any road, street, or other public way, the Act should require sufficient fencing should be erected. Where it crosses any road, street, or other public way, that sufficient gates should be provided, and proper arrangements made for their being opened and shut as required. The Governor and Executive Council to decide as the sufficiency of the fencing and gates, and the arrangements for their being opened and shut. If any road, street, or other public way, be raised above and over the tramroad, or if the tramroad be carried over any road, street, or other public way, the *clear* height between such road and tramroad should *nowhere* be less than fifteen feet. In case of any dispute relative to any road, or any part of the tramroad so raised, or relative to the connection therewith to insure the public safety, the Governor and Executive Council to decide.

3. Clause 2. I have already drawn attention to the objections entertained to "such portions of the lands of the Crown as are described in Schedule B" being vested in the Company. The rights of ingress and egress upon and over the adjacent lands for the repair of the Tramroad sought to be obtained are greater than are given under the 5th and 6th Victoria, c. 55, clause 14. To restrict them in accordance with that Act it would be necessary to furnish that in case of accidents or slips happening or being apprehended, the Secretary for Public Works for the time being may give sanction to enter upon land, &c., provided that in case of necessity the promoters or their agents may enter, &c., &c.

Under the Government Railways Act, clause 18, conveyance of land is necessary.

4. I am not acquainted with the Wollongong District, and cannot, therefore, say whether it is necessary to provide that the public should have power to run over or otherwise use the whole or any part of the proposed Tramroad under arrangements to be determined by Parliament. Such powers are, as a rule, a safeguard to the public.

5. In the event of the Company having to run over any portion of a line constructed by the Government, the Government would no doubt retain the right of deciding the description of waggons to be used, and of inspecting those in use.

I have the honor to be Sir,

The Chairman of the
Select Committee,
"Mount Keira Tramroad Bill."

Your most obedient servant,
B. H. MARTINDALE.

Department of Public Works,
Sydney, 15 December, 1859.

Sir,

I am directed by the Secretary for Public Works to transmit herewith, for the information of the Select Committee on the "Mount Keira Tramroad Bill," a Report from the Engineer-in-Chief for Harbours, by which the Committee will perceive that that officer considers that it would be objectionable to vest in the promoters of that Bill such portions of the lands of the Crown as are described in Schedule B of the Bill.

I have the honor to be, Sir,

The Chairman of the
Select Committee,
"Mount Keira Tramroad Bill."

Your most obedient servant,
B. H. MARTINDALE.

MOUNT KEIRA TRAMROAD BILL.

I have underlined with red ink, on the accompanying copy of this Act, all those portions of the Mount Keira Company's Bill which in my opinion should be opposed by the Government.

As a very large export of coals may reasonably be expected from Wollongong at no distant date, the whole of the coast range in its neighborhood presenting indications of the existence of extensive coal beds, and as the space available for its shipment is very limited, I think it would be injudicious to sanction that part of the Mount Keira Company's Bill wherein power is sought to appropriate land on the Government Reserve to the exclusive use of that Company, the effect of which would be to give them a monopoly, which would operate injuriously against any other Companies engaged in the same trade which may hereafter come into existence. In order, however, that no unnecessary obstacles should be interposed to the free development of the coal trade, by which the District of Wollongong and the community at large must necessarily be benefited, I think a certain extent of the water frontage of the Port should be set aside solely for the shipment of coals, and that a convenient approach thereto from the various lines of Tramway should be preserved, Government forming it in the first instance, and allowing the permissive use of it to the different Coal Companies requiring to ship coals, charging them if necessary a rate per ton for the wear and tear.

If Government decide on improving the Harbour of Wollongong by the construction of Wharfs and other works, it would manifestly be unwise at the same time to diminish the value of such works to the Public, and the inhabitants of the District, by giving to any individuals or Company a monopoly of the approaches thereto.

It appears to me, therefore, that the better course will be to oppose all that part of the Mount Keira Tramroad Company's Bill wherein power is sought to appropriate any part of the Government Reserve described in Schedule B to the sole use of that Company, but at the same time to lay down a line of access to the water along which they in common with all others will be permitted to run their coals, subject to such regulations or restrictions as the Government may impose.

E. O. MORIARTY.

1 Nov., 1859.

The Honorable

The Secretary for Public Works.

D. Johnstone, Esq., examined.
Committee then adjourned.

WEDNESDAY, 22 FEBRUARY, 1860.

There not being a Quorum present, there was no meeting of the Committee this day.

THURSDAY, 23 FEBRUARY, 1860.

MEMBERS PRESENT:—

J. Garrett, Esq., in the Chair.

Mr. McArthur, | Mr. Ryan.

The Clerk, by direction of the Chairman, read the whole of the Evidence given before the Committee, whereupon—

Motion made and Question (*Mr. McArthur*)—That the Preamble be amended in the fourteenth and fifteenth lines by the omission of the words "*of the Crown hereinafter described and through certain other lands*"—*agreed to.*

W. Robson, Esq., called in and further examined.

Motion made and Question put,—That the Preamble, as amended, stand part of the Bill,—*agreed to.*

Committee deliberated, and proceeded to consider the clauses of the Bill.

Clauses 1 and 2 postponed.

Clause 3.

Motion made and Question (*Mr. McArthur*)—That the clause be amended by the omission of the letter "C," after the word Schedule, in the second line, and the insertion in its place of the letter "B."—*agreed to.*

Clause, as amended—*agreed to.*

Schedules B and C postponed.

Postponed clauses 1, 2, and 4.

Motion made and Question (*Mr. McArthur*)—That the new clauses, numbered 1 and 2, stand clauses 1 and 2 of the Bill in place of the original clauses,—*agreed to.*

Motion made and Question (*Mr. McArthur*)—That the new clause 4 stand clause 4 of the Bill, in place of the original clause,—*agreed to.*

Postponed Schedules B and C.

Motion

Motion made and Question (*Mr. McArthur*)—That the new Schedules A and B stand Schedules A and B of the Bill, in place of the original Schedules,—*agreed to.*

New Clauses numbered, respectively, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, and 18,—*agreed to.*

Motion made and Question (*Mr. McArthur*)—That the new clauses so numbered be added to, and stand part of, the Bill,—*agreed to.*

Committee deliberated, and having decided upon considering Report at next meeting, Adjourned till Monday next, at 12 o'clock.

TUESDAY, 28 FEBRUARY, 1860.

MEMBERS PRESENT:—

J. Garrett, Esq., in the Chair.

Mr. Ryan, | Mr. McArthur.

The Chairman produced and read a Draft Report, whereupon,—

Motion made and Question (*Mr. McArthur*)—That this Report be now adopted,—*agreed to.*

Motion made and Question (*Mr. McArthur*)—That the Chairman report the Bill, as amended to the House,—*agreed to.*

1859-60.

Legislative Assembly.
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

MOUNT KEIRA AND WOLLONGONG
TRAMROAD BILL.

THURSDAY, 20 OCTOBER, 1859.

Present:—

Mr. LAYCOCK, Mr. WISDOM,		Mr. GARRETT, Mr. RYAN, Mr. McARTHUR.
-----------------------------	--	--

JOHN GARRETT, Esq., IN THE CHAIR.

Mr. Percy Owen called in and examined:—

1. *By the Chairman:* You are the Solicitor for the Mount Keira Tramroad Bill? I am. Mr. P. Owen.
2. You consider this Bill necessary for the completion of this tramway? It is.
3. It will be a public benefit to have this tramway completed? I think it would be a great public benefit for the Colony at large. 20 Oct., 1859.
4. Will you look at Schedule C of the Bill—have you any knowledge of the land named in Schedule C, through which the tramroad is to pass? I believe the land through which the tramroad, as far as it is made, passes belongs to the Company; and from that to the Government land is land belonging to Mr. Charles Throsby Smith.
5. The Government land comprises streets surrounding the harbor? Part of the frontage to the bay and streets surrounding the harbor.
6. Are you aware of effort having been made to purchase the land which is purely necessary to the completion of this work? I am aware that such an effort has been made and failed.
7. Are you aware of the grounds of objection to sell it? I am not; I was not employed upon the Bill when the application was made.
8. *By Mr. Laycock:* But you are likely to meet with opposition? I believe so.
9. *By the Chairman:* You know the firm here designated as Robson & Company? Yes.
10. They are the reputed proprietors of these mines? They are, I believe, the reputed proprietors.

Mr. William Robson called in and examined:—

11. *By the Chairman:* You are in partnership with Messrs. T. W. Jackson, A. Tulip, and J. Nixon? Yes, sir. Mr. William Robson.
12. Proprietors of the Mount Keira Wallsend Coal Mines as a Company? Yes, sir. 20 Oct., 1859.
13. What extent of this tramway is now completed? The extent of the tramway completed is two miles, twenty-two chains, and ninety-four links.*
14. What is the length from the termination of the completed portion to the proposed termination at the harbor? It is one mile, three chains, and six links.
15. And the completion of this tramway you conceive would be a public benefit? Yes, sir, a great public benefit. Indeed, in respect to that, I may mention that until last year, on account of the expense of carting coals we were not able to send coals to any market, thus having nothing but the local consumption to supply, except the steamers plying between Sydney and Illawarra. This tramway would enable us to compete with other places which have facilities like those we seek for, and without which we should be shut up from the market when coals were at a lower figure.

- Mr. William Robson. 16. You could not develop your mines? No.
- 20 Oct., 1859. 17. And there is a great demand for these coals if you could compete with the produce of other mines as to price? Yes, and that we could do if we had such facilities as railways and tramways.
18. *By Mr. Ryan*: Has any portion of the property been purchased? Yes, sir; part of it has been purchased by the Company from a person named Thompson.
19. What kind of locomotion do you intend to use? Horse-traction.
20. It is your intention to use horse-power, and horse-power only? Yes, at present.
21. From what I can gather it would be necessary for the promoters of this work to make their selection of the kind of traction to be used? We wish to have the liberty to do that; but of course if the Committee does not think it right we must submit to other terms.
22. *By Mr. Wisdom*: Does not part of the tramroad pass over streets? Yes, it crosses the Bulli Road. But I do not believe the engine would be so objectionable as the horse trams; as the former, from its being capable of taking twelve times as much as the latter, it would, with the same quantity to carry, only go along the road once, whilst the horse trams passed twelve times.
23. You are not in a position to place an engine at once upon the line? No. We have made our railway with light rails for horse traction; but if the demand for coals increased so as to make it necessary, we could lay down heavier rails, and use the lighter rails at the mines.
24. Your present intention is only to use horse-power? Yes, only horse-power.
25. The lands enumerated in Schedule C extend to where the tramway is at present completed, and have been purchased by you? Yes, sir.
26. Have you now reached the margin of Mr. Smith's land? Yes, sir, within two or three chains.
27. Have you endeavored to purchase or lease the land which is required for that part of the tramway which passes through Mr. Smith's ground? Yes. We applied to purchase the ground, and the objection to selling was that Mr. Smith had vested the land in trust for his wife and children, who had no wish to sell. Mr. Smith himself felt inclined to sell, but the power was taken out of his hands, and we had to deal with Mrs. Smith and her family; and they made a proposal to lease the land, and said they were willing to give a lease for ninety-nine years. We said we would take a lease for that term, but on coming to the point they would not give one for more than fifty years. After a further consideration of the matter among ourselves, we agreed to take out a lease for fifty years; but they then brought the term for which they would lease down to twenty-one years, and I believe they subsequently said they could not give a lease for more than seven years. Seeing how unadvisable it would be to go to the expense of constructing a tramway which at the end of seven years might be left in their hands, and seeing also, that they were so shrinking from any arrangement to lease for a longer period, we thought it best to try to get a Bill.
28. *By Mr. Laycock*: When completed, the tramway is likely to be permanent? Yes; there is sufficient coal to last for fifty years, at a consumption of 30,000 tons a year. The seam is from seven to eight feet thick.
29. Are you aware that Mr. Smith intends to offer opposition? He said he would not offer any opposition to our obtaining the tramway. I told him we did not want his land without paying for it.
30. After it passes through Mr. Smith's ground, whose does it enter? It comes into ground of our own.
31. How far does that extend? Two and a-half acres.
32. And then comes to the Government ground? Then comes to the Government ground, crosses a street, and running along the beach, comes level with the street, and crosses level with the other street running parallel with the harbor. It must be either on a level, or a certain height above, or depth below the streets, and our plans are for the level.
33. Do you contemplate coming level with the basin? Yes, sir; we have land of our own there, and it will be necessary to come to the level at the basin, because it will be convenient for weighing machines, double road, and other requisites of that kind.
34. *By the Chairman*: You are aware that it is in contemplation to enlarge the harbor? Yes, sir.
35. If your terminus is completed before that enlargement takes place, would it not be necessary to remove some of your buildings or rails when that improvement does take place? I believe it will, if we should get the tramway laid down on that part before the contemplated improvement begins, which I do not expect. If we did, the road would be laid down to the intended new dock, but we only intend to lay it down in a temporary way, not going to much expense for shoots, so that we should remove our rails with the least inconvenience.
36. You would not consider yourselves entitled to compensation in the event of being required to remove them? No.
37. *By Mr. Laycock*: You will have to cross the main street from the basin to Wollongong? Yes, with one branch.
38. Is there likely to be any opposition to that, supposing you use an engine? There may be; but if we use an engine we could stop it after passing through our own land.
39. Have you any objection to being restricted to the use of horse-power? I have no objection. We stand 600 feet above the level, and in consequence of the upper part of the tramway being so elevated we shall not have above two miles of plain.
40. *By Mr. McArthur*: You say you do not mind whether you are restricted to horse-power or not? No; but if we look forward to any improvement in the harbor, we should like to be at liberty to put on steam-power if we thought it beneficial.
41. In that case you would have to make provision for it in the Bill? We have no objection to being restricted to the use of horse-power on the Government land, so as not to cross the streets with an engine. We only cross one main road before we come to that, that is the Bulli Road.

42. *By the Chairman*: Are you in a position to inform us as to the weight of the rail that you intend to use, or are using, on the tramway? Yes, sir. The weight of the rail is 20 lbs. to the yard, which is a light rail. Mr. William Robson.
43. Are you aware of the weight of the rail used on railways where steam power is used? Yes, sir. It varies from 35 lbs. to 70 lbs. per yard. 20 Oct., 1859.
44. Would the rail you now use bear the weight of a locomotive engine? No. But I think if the Bill stands as it is we should have the liberty, if we liked to exercise it, of going through our own land with an engine, and then to use other power in crossing the streets to the harbor.
45. *By Mr. Laycock*: There might be an objection to your crossing the Bulli Road? I do not know that there would be.

THURSDAY, 15 DECEMBER, 1859.

Present:—

MR. MCARTHUR,

MR. RYAN.

JOHN GARRETT, ESQ., IN THE CHAIR.

David Johnstone, Esq., called in and examined:—

46. *By the Chairman*: You are a trustee of the land referred to in the petition against the Mount Keira Tramroad Bill? I am a trustee of Mr. Smith's land now in question. D. Johnstone, Esq.
47. Will you state to the Committee the nature of the objections you have to this Tramroad passing through the ground at Bustle Farm? The objection I have is, that it will deteriorate the value of the farm considerably, by cutting through the whole allotments, and making one portion invaluable and useless. 15 Dec., 1859.
48. Is it not possible to divert the line as at present indicated;—that such a line might be adopted as would not produce those effects which you have stated? Yes; which would not so seriously produce those effects. A line might be adopted in the way you now speak of, by taking it out on the opposite side of the water-holes from Mr. Smith's further down the allotments near to Smith-street.
49. This is the plan [*produced*]? Yes; that is a plan shewing the township and the allotments altogether.
50. And this is a mark shewing the line they now intend using for the tramway? Yes; a line running from Bulli Road down to Wilson's allotment.
51. You wish the tramway to run along that line? Yes; when the line connects itself with Keira-street, I wish it to run due east on the line dividing the allotments in Campbell-street and Smith-street, until it reaches the centre of section 12; then it may diverge to the north in order to enable them to get their curve—that curve not to encroach on Campbell-street.
52. A line taken in that direction would satisfy you? A line taken in that direction, if it is allowed, would satisfy us.

THURSDAY, 23 FEBRUARY, 1860.

Present:—

MR. MCARTHUR,

MR. RYAN.

JOHN GARRETT, ESQ., IN THE CHAIR.

Mr. William Robson called in and examined:—

53. *By the Chairman*: In the clause now under the consideration of the Committee there is a blank space to be filled up with the price per ton per mile for the use of your proposed tramway—what is the amount you propose to charge? On account of the peculiar situation of the tramroad, that is, that there is no probability of any other Company coming in upon it, except where it passes through a part of the town where its formation will be very expensive, and as the distance will be only about a mile at the most, I think sixpence a ton would be a fair thing; but, however, while I suggest that, I leave it in the hands of the Committee, and whatever they agree to I shall acquiesce in. The Chairman is well acquainted with the situation and the expensive nature of that part of the tramroad, where it would only be probable that any one will come on to it. I see that, in the case of Mr. Eales and Mr. Brown, on the Minmi Tramroad, sixpence a ton was the toll agreed to between them. Mr. William Robson.
54. *By Mr. McArthur*: Was that for a similar distance? For six miles, and the longer the distance, of course, the better it is. 23 Feb., 1860.
55. *By the Chairman*: You do not anticipate a large amount of traffic on this tramway? No; if there was a probability of fifty or a hundred tons a day coming down it, that would alter the case; but as this tramway will be open, not only for coal, but for other produce, farming produce particularly, such small matters as a ton of corn or potatoes would be scarcely worth carrying.
56. You think sixpence a fair charge—doing justice to yourself and to the public? I think so.

NEW SOUTH WALES.

THISTLES.

(PETITION FROM EDEN, PANBULA, AND BEGA.)

Ordered by the Legislative Assembly to be Printed, 9 December, 1859.

To the Honorable Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned Inhabitants and Freeholders of Eden, Panbula, and Bega,—

HUMBLY SHEWETH :—

That this District is in imminent danger of being inundated with “Thistles,” if immediate means be not adopted to stem their progress before the ensuing seeding season ; up to the present time, many acres of the best land in these neighborhoods are rendered literally useless by allowing them to spread indiscriminately, and which evidences the urgent necessity of taking prompt measures to save the district from the awful consequences of their further extension.

Petitioners also beg to represent, that several owners of private property used the necessary means to guard against their baneful results ; and others, equally interested, but more careless, have allowed them to seed and scatter, to the great annoyance and injury of those who timely eradicated them.

Petitioners most imploringly request that your Honorable House will take the matter into your serious consideration, and enact such measures as will save, not only this district, but the colony at large, from the annual ascendant injury which will be caused by the dispersion of Thistles with impunity.

And your Petitioners, as in duty bound, will ever pray.

Panbula, 24 October, 1859.

Legislative Assembly.

NEW SOUTH WALES.

IMPOUNDING LAWS.

(PETITION RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 29 November, 1859.

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of John Brien, the elder, and John Brien, the younger,
of the Town of Bathurst, Farmers,—

SH EWETH :—

That the frequent practice resorted to by the proprietors and lessees of *unenclosed purchased lands* around the town of Bathurst, of impounding cattle depasturing on such lands, is productive of serious loss and inconvenience to your Petitioners and others, inasmuch as not only is a charge for trespass made, but one is also made for driving such cattle to the Pound.

That there is not sufficient Commonage near the Town of Bathurst for the town cattle, and consequently frequent advantage is taken from this circumstance, to impound such town cattle for trespass upon *unenclosed lands*.

Your Petitioners therefore humbly pray that your Honorable House will be pleased so to amend the present Impounding Act, by preserving from being impounded all town cattle found upon *unenclosed purchased lands*, within two miles of the Town of Bathurst, and thus relieve your Petitioners and others from a grievous hardship and frequent pecuniary loss.

And your Petitioners, as in duty bound, will ever pray, &c.

NEW SOUTH WALES.

LAWS FOR PREVENTION OF NUISANCES.

(PETITION OF CERTAIN TANNERS AND CURRIERS OF THE CITY OF SYDNEY.)

Ordered by the Legislative Assembly to be Printed, 6 December, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament Assembled.

The humble Petition of the undersigned Tanners and Curriers of the City of Sydney,—

SHEWETH :—

That in the year 1849 an Act was passed by the then Legislative Council of this Colony, intituled “ An Act to amend the law relating to the Licensing of Slaughter Houses within the City and Suburbs of Sydney, and for the prevention of other nuisances within the same.”

That the said Act contains the following clause, that is to say,—“ And be it enacted that the business of a soap boiler tallow melter tripe boiler tanner or currier shall not be newly established or carried on in any building or place within the said limits of the said city after the passing of this Act and that from and after the first day of January in the year of our Lord one thousand eight hundred and sixty the business of a tallow melter soap boiler tripe boiler tanner or currier which has been already established shall not be continued or carried on in any building or place within the said limits of the said city and whosoever offends against this enactment shall be liable to forfeit and pay on conviction for every such offence before any two or more Justices of the Peace in a summary way any sum not exceeding fifty pounds and a further penalty of forty shillings for each day during which the offence is committed.”

That your Petitioners believe that the said Act was founded upon a Report of a Select Committee appointed “ to take into consideration the propriety of removing slaughter houses beyond the boundaries of the City of Sydney.”

That your Petitioners have read the said Report and the evidence taken before the said Committee, who examined twenty-seven witnesses, with reference to the matters referred to them, and your Petitioners are unable to discover, in such evidence, any allegation or suggestion that the trade of tanner and currier was, in anywise, injurious to the health and comfort of the inhabitants of this city; or, as reported by the Committee, that an amendment of the Police Act with reference to tanneries within the boundaries of the city was necessary or called for, and they consider that the said Report was, in the above respect, wholly unwarranted by the evidence.

That your Petitioners, the undersigned, James Robert Wilshire, and Austin Forrest Wilshire, while the Bill was before the said Legislative Council, petitioned that Honorable House that its provisions in the matter of which your Petitioners now complain, might not become law.

That

LAWS FOR PREVENTION OF NUISANCES.—PETITION.

That your Petitioners have large capitals invested in tanneries within the boundaries of the City of Sydney, and unless the said Act be repealed, as regards the trade of your Petitioners, a very heavy loss will be inflicted upon them, without any corresponding benefit to the public, for which, it is respectfully submitted, they would be entitled in justice and equity, to compensation from the public Treasury.

That your Petitioners respectfully submit that the said Act was, as to the matter now complained of, passed improvidently ; and that it was unsupported by any evidence to shew that your Petitioners said trade is in anywise injurious to the public health ;—whereas, your Petitioners believe, on the contrary, that such trade is rather beneficial than otherwise.

That your Petitioners respectfully submit that it would be a short sighted and most injurious policy to cripple in anywise, by unnecessary legislative restrictions, the operations of capital in the infant manufactures of this colony.

Your Petitioners humbly pray that your Honorable House will take the premises into their favorable consideration, and afford them such relief as the justice of their case consistently with the public interest demands.

And your Petitioners will ever pray.

NEW SOUTH WALES.

TANNERS' AND CURRIERS' BILL.

(PETITION OF J. E. BEGG AND OTHERS.)

Ordered by the Legislative Assembly to be Printed, 3 April, 1860.

To the Honorable the Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the undersigned Tanner and Currier, and of other persons
residing adjacent to his Tannery, in the City of Sydney,—

RESPECTFULLY SHEWETH:—

That your Petitioners perceive a Bill has been or is about to be introduced into your Honorable House by Mr. Parkes, the object of which is to exempt Tanners and Curriers from the operation of the Act, 13 Victoria, No. 24.

That your Petitioners, from long experience of the character and effect of tanneries, are of opinion that they are not injurious to public health, and in no way inconvenient or annoying to the inhabitants adjacent thereto.

That the manufactory of your Petitioner—the said John E. Begg—is situated on the east side of Phillip-street, between Hunter and Bent streets, in the City of Sydney aforesaid, and has been established for upwards of thirty years.

That, to compel Tanners and Curriers to carry on their business out of the limits of any city or town would be a grievous hardship to the manufacturers, and would greatly tend to discourage the promotion of the trade; and your Petitioners respectfully submit that, in any such case, unless the necessity for their removal is clearly established, such manufacturers would be entitled to compensation.

Your Petitioners therefore pray that the Bill before referred to may be allowed to pass your Honorable House, otherwise that such steps may be taken for the relief of Tanners and Curriers as, after a full consideration of the premises, to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 22 Signatures.]

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

TANNERS' AND CURRIERS' BILL.

(PETITION OF WILLIAM PAWLEY AND OTHERS.)

Ordered by the Legislative Assembly to be Printed, 3 April, 1860.

To the Honorable the Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the undersigned William Pawley, Tanner and Currier, and
of other persons residing adjacent to his Tannery, situated on the Surry Hills,
in the City of Sydney,—

RESPECTFULLY SHEWETH :—

That your Petitioners perceive a Bill has been or is about to be introduced
into your Honorable House by Mr. Parkes, the object of which is to exempt Tanners and
Curriers from the operation of the Act, 13 Victoria, No. 24.

That your Petitioners, from long experience of the character and effect of tanneries,
are of opinion that they are not injurious to public health, and in no way inconvenient or
annoying to the inhabitants adjacent thereto.

That the manufactory of your Petitioner—the said William Pawley—comprising an
area of nearly three acres of land, has been established upwards of twenty-seven years, and
is situated on the Surry Hills aforesaid, being divided by a vacant allotment of ground from
the southern boundary of the said city, and adjacent to the Sydney Common on the east ;
and on the north and west by a thinly-populated neighborhood.

That, to compel Tanners and Curriers to carry on their business out of the limits of
any city or town would be a grievous hardship to the manufacturers, and would greatly tend
to discourage the promotion of the trade ; and your Petitioners respectfully submit that, in
any such case, unless the necessity for their removal is clearly established, such manufacturers
would be entitled to compensation.

Your Petitioners therefore pray that the Bill before referred to may be allowed to
pass your Honorable House, otherwise that such steps may be taken for the relief of Tanners
and Curriers as, after a full consideration of the premises, to your Honorable House shall
seem meet.

And your Petitioners, as in duty bound, will ever pray.

SOAP MANUFACTURERS.

(PETITION OF OWEN JOSEPH CARAHER.)

Ordered by the Legislative Assembly to be Printed, 16 December, 1859.

To the Honorable the Legislative Assembly, in Parliament assembled.

The humble Petition of Owen Joseph Caraher, of Gloucester-street, Sydney, Soap
Manufacturer,—

MOST HUMBLY SHEWETH:—

That by the Act of Council passed in the thirteenth year of the Reign of Her present Majesty, and numbered forty-two, it is enacted, “That from and after the first day of January, in the year of our Lord one thousand eight hundred and sixty, the business of a soap-boiler, tallow-melter, tripe-boiler, tanner, or currier, which has been already established, shall not be continued or carried on in any building or place within the said limits of the said city.”

That your Petitioner is informed that a Petition has been presented to your Honorable House on behalf of certain tanners and carriers of the said City of Sydney, praying that they may be exempted from the operation of the said Act of Council. Your Petitioner is desirous that the soap-manufacturers of the said City of Sydney may be exempted from the operation of the said Act of Council for a further period of years.

Your Petitioner, therefore, humbly prays that your Honorable House, in the consideration of the Petition presented by the said tanners and carriers, will be graciously pleased to award to the soap-manufacturers in the said City of Sydney the same measure of indulgence, by exemption from the operation of the said Act of Council, which your Honorable House may be pleased to extend to the carriers and tanners in their said Petition.

And your Petitioner will ever pray, &c.

OWEN J. CARAHER.

TANNERS' AND CURRIERS' BILL.

(PETITION FROM WINDSOR AND RICHMOND.)

Ordered by the Legislative Assembly to be Printed, 27 January, 1860.

To the Honorable the Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the undersigned Tanners and Curriers, and other persons
residing adjacent to Tanneries, in the Towns of Windsor and Richmond,—

RESPECTFULLY SHEWETH :—

That your Petitioners perceive a Bill has been or is about to be introduced
into your Honorable House by Mr. Parkes, the object of which is to exempt Tanners and
Curriers from the operation of the Act 13 Victoria, No. 24.

That your Petitioners, from long experience of the character and effect of Tanneries
in the towns of Windsor and Richmond, are of opinion that they are not injurious to public
health, and in no way inconvenient or annoying to the inhabitants adjacent to such
Tanneries.

That to compel Tanners and Curriers to carry on their business out of the limits of
any city or town would be most grievous, and a matter of much hardship to the manufac-
turers; and would greatly tend to discourage the promotion of the trade.

Your Petitioners therefore pray that the Bill of Mr. Parkes before referred to may
be allowed to pass your Honorable House; otherwise compensation should be granted to
those Tanners and Curriers who may be compelled to remove their manufactories; or
otherwise as to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray.

SLAUGHTER HOUSES.

(REMOVAL OF FROM PRECINCTS OF THE CITY.)

Ordered by the Legislative Assembly to be Printed, 3 February, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Inhabitants of Sydney and Suburbs,—

HUMBLY SHEWETH :—

That an Act to amend the law relating to the Licensing of Slaughter Houses within the City and Suburbs of Sydney, and for the prevention of other Nuisances within the same, was assented to 12th October, 1849. (13th Victoria, No. 42.)

Your Petitioners respectfully submit that your Honorable House will take steps to compel the immediate removal of the Slaughter Houses from the precincts of the City, and also for carrying out the provisions of the said Act (13th Victoria, No. 42) with reference to the removal, after the close of the year eighteen hundred and fifty-nine, of Trades and Factories—such as Soapboilers, Tallowmelters, Tanners, Carriers, and Tripeboilers—declared by the said Act, and by the Health Officer of Sydney and other members of the Medical Profession, noxious and injurious to public health.

Your Petitioners, therefore, pray that the said Act may be enforced; a long term of years having been allowed for the removal of these nuisances from the City.

And your Petitioners, as in duty bound, will ever pray, &c.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

CAMPERDOWN CEMETERY.

(PETITION RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 28 February, 1860.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned landed proprietors and residents of New South Wales, namely, of Kingston, O'Connell Town, and Camperdown, Suburban to Sydney, and chiefly of Newtown,—

HUMBLY SHEWETH:—

That a large private Cemetery is now open for interments in the midst of their increasing population, and therefore respectfully pray your Honorable House may be pleased to take into consideration the serious evil under which they labor. That the Cemetery in question is established on the highest ground between Newtown, Kingston, and O'Connell Town, so that the drainage is conveyed into the wells and watercourses, especially towards Camperdown, and that the effluvia therefrom vitiates the atmosphere.

When the Cemetery in question was formed the population of the above-mentioned districts was limited, but now that a larger population has been concentrated around it—the Cemetery in question containing upwards of 8,200 bodies (the old burial grounds of the City having been closed)—the evil is daily increasing.

Your Petitioners need not impress upon your Honorable House the fact that the Imperial Legislature has found it necessary to prohibit intermural interments, and have closed up almost all the burial grounds within towns; and further, the fact that large masses of decomposing animal matter contained in Cemeteries is most dangerous to health and life, “the dead destroying the living.”

Considering the nature of our climate, and the very unhealthy character of Sydney and the Suburbs, your Petitioners conceive that the English Law relating to Cemeteries should be brought into speedy operation in this Colony, otherwise life and health must become more and more insecure.

Your Honorable House has already had the subject under consideration, and much important information has been collected by a Committee moved for by the late Mr. Robert Nichols.

Wherefore your Petitioners pray the early attention of your Honorable House to this increasing evil, the Cemetery in question at Camperdown being less a public convenience than a source of revenue to a private Company.

And your Petitioners will, as in duty bound, ever pray, &c.

[Here follow 145 Signatures.]

HUMBLY SHEWETH:—

That a large Private Cemetery is now open for interments in the midst of their increasing population, and therefore respectfully pray your Honorable House may be pleased to take into consideration the serious evil under which they labor.

That the Cemetery in question is established on the highest ground between Newtown, Kingston, and O'Connell Town, so that the drainage is conveyed into the wells and watercourses, especially towards Camperdown, and saturates the Land around; also, the effluvia vitiates the atmosphere.

When the Cemetery was formed the population was limited, but now that a large population has been concentrated around the Cemetery, which contains upwards of 9,000 bodies, and that, as the Old Burial Grounds of the City have been closed up, the evil is daily increasing.

Your Petitioners need not impress upon your Honorable House the fact that the Imperial Legislature has found it necessary to prohibit intermural interments, and have closed up almost all the places of interment within towns; and, further, the fact that large masses of decomposing animal matter contained in Cemeteries is most dangerous to health and life—the dead destroying the living.

Considering the nature of our climate, and the very unhealthy character of Sydney and the suburbs, your Petitioners conceive that the English law relating to Cemeteries should be brought into speedy operation in this Colony, otherwise life and health must become more and more insecure.

Your Honorable House has already had the subject under consideration, and much important information has been collected by a Committee moved for by the late Mr. Robert Nichols.

Wherefore your Petitioners pray the early attention of your Honorable House to this increasing evil, the Cemetery being less a Public convenience, than a source of Revenue to a Private Company.

And your Petitioners, as in duty bound, will ever pray, &c.

5. Decision thereon. 9 August, 1859	5

THE SYDNEY NECROPOLIS.

No. 1.

THE COLONIAL ARCHITECT AND THE DIRECTOR OF THE BOTANIC GARDENS to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Colonial Architect's Office,

Sydney, 5 September, 1857.

SIR,

In attention to your letter of the 11th ultimo, requesting us to visit the locality reserved as a Necropolis, and to report generally as to the state and fitness of the place for the purpose to which it has been devoted,—

2. We do ourselves the honor to report that we have visited and examined the ground referred to, and beg to submit the following observations in reply to the questions proposed to us.

3. The ground, as well as the adjoining land, is covered with a thick brush vegetation,—the lower part of the ground being covered with water. On the north, east, and west sides the land appropriated for a Cemetery is partly enclosed by a stone wall eight feet high, forming about one-third of the entire boundary. Portions of this wall are in an unfinished state, and in parts it is in a delapidated condition from the action of the weather upon the exposed face of the stone, which is of an inferior quality. No fences have been erected; and in several places on the exterior sand has drifted to nearly the height of the walls, in consequence, as we believe, of the brushwood which formerly surrounded the walls having been cleared for the purpose of forming a roadway. On the north side the sand has been prevented from drifting by the shelter afforded by the growing shrubs.

4. As regards fitness, the locality appears to us to be admirably adapted for a Necropolis; it is in a retired situation, and surrounded by a considerable area of Public Land, of which a sufficient portion might be reserved to prevent encroachments, the soil throughout is of sufficient depth for the purpose of interments. At present there are no roads from the main road to the Cemetery. It can, however, be approached either by Bourke-street, or by the road to Randwick, the latter being preferable as it is in good condition, easy of access, and passing within 100 yards of the north-east corner of the Cemetery, at which place, in our opinion, one general entrance should be made, and, if necessary, a side entrance could be formed for access by the road from Bourke-street.

5. A Main Central Road inside the enclosure will require to be formed, to give access to the various divisions of the Cemetery, as well as branch paths through the several portions; the side channels of these will be sufficient to carry off surface water, the formation of the ground presenting great facilities for drainage to its lowest level, from whence the water may be conveyed by an under-ground drain, or culvert, to the lagoon situated on the low ground southward of the Cemetery.

6. In our opinion, the quantity of land proposed to be enclosed is altogether inadequate, considering the present and probable increase in the population of Sydney and its Suburbs. We would therefore recommend that the quantity of ground appropriated for a Necropolis be materially increased, giving to each denominational body a proportion of the additional space; and that, where not already fenced in, the ground be enclosed by a substantial close paling or brushwood fence. The brush vegetation within the enclosure will require to be removed, the ground levelled in various parts, and the whole space manured and planted with couch or other grasses.

7. The expense of carrying out these suggestions contained in this Report will not, in our opinion, be very great, and, if required, we will prepare and submit a detailed Estimate.

We have, &c.,

ALEXANDER DAWSON,
Colonial Architect.

C. MOORE.

THE HONORABLE
THE SECRETARY FOR LANDS
AND PUBLIC WORKS.

No. 2.

No. 2.

PROCEEDINGS of the Executive Council of the 7th June, 1858, with respect to the establishment of a Necropolis in the neighbourhood of Sydney.

Minute No. 58-24. Confirmed 14 June, 1858.

HIS Excellency the Governor General, at the instance of the Honorable the Secretary for Lands and Public Works, next invites the attention of the Council to the question of the establishment of a Necropolis in the neighbourhood of Sydney; the pressing necessity for taking some steps in the matter without delay, being almost daily brought under the notice of the Government by applications, written or oral, for suitable provision for the interment of the dead.

2. So long back as the year 1847, an Act passed the Legislature for the establishment of a General Cemetery near the City of Sydney, and subsequently a site, which at the time of its selection was considered an eminently suitable one, was allotted for the purpose. It appears, however, that so strongly felt were the objections to the mode of management provided under the Act alluded to, that no benefit whatever has up to this time resulted from the liberality of the Government in setting apart land appropriated for the purpose. During the last few years, also, doubts have been entertained as to the suitability of the spot selected, and in August last, when the subject was under the consideration of a previous administration, the Council recommended that the Colonial Architect and the Superintendent of the Botanic Gardens should inspect the site, and report generally as to its state and fitness for the purpose to which it had been devoted.

3. His Excellency now lays before the Council the Report prepared by those Officers, together with all the previous papers on the subject, and a Minute by the Honorable the Secretary for Lands and Public Works, expressive of his views with respect to it.

4. It is not necessary here to advert to the several suggestions which have at different times been made, as to the most convenient position for the Necropolis; it is sufficient to state that the Report of the Colonial Architect and the Superintendent of the Botanic Gardens is decidedly favorable to the site originally proposed, which forms part of the Old Sydney Common, and is situated at or near Randwick, about a mile from Sydney;—the Honorable the Secretary for Lands and Public Works, concurring in that view, submits in his present Minute certain arrangements by which he conceives that collision with the conscientious scruples, or even prejudices of the various sects of religionists may be avoided.

5. Having carefully weighed these arrangements, and given to the whole question that full consideration which its importance demands, the Council concur generally in the views expressed by the Honorable the Secretary for Lands and Public Works, and advise as follows:—

(1.) That the site originally selected at Randwick for the Necropolis be adhered to, and be increased in area, so as to embrace the land lying between it, the Randwick Road, and Cleveland and Dowling Streets.

(2.) That the whole be forthwith fenced in with eight feet paling, and that the Legislative Assembly be invited to make provision for this expense, and for any further expenditure that may be required for laying out and planting the main intersecting avenues.

(3.) That one-third part of the land be placed in the hands of lay Trustees, for a General Cemetery, properly so called.

(4.) That the remaining two-thirds part of the land be divided amongst the various Religious Bodies, according to the last Census, and handed over to Trustees, to be recommended by such Religious Bodies.

(5.) That a Grant of each portion of land so allotted be made to such Trustees, who shall have the right, if they so think fit, to fence off the same, and, indeed, to exercise complete control over it, with the distinct understanding, however, that the ground is to be used alone as a place of interment, and that no charges for burial, in so far as the use of the land is concerned, be exacted, unless such as may be provided for in Rules to be submitted to, and approved by the Governor General and Executive Council.

(6.) That no such Rules be so submitted for approval until notice thereof shall have been given in the *Government Gazette* at least one month.

(7.)

(7.) That any such grant be held void if the land be not *bona fide* used for the purpose contemplated within two years from the date of the Deed of Grant.

(8.) That such portions of the area of any division of the land as may prove unfit for the purpose of burial, shall not be taken into account in apportioning the land, but shall nevertheless in each case pass into the care of the Trusts.

(9.) That in the event of these arrangements being inconsistent with the provisions of the existing Necropolis Act, 11th Viet., No. 11, a Bill be introduced into Parliament for repealing the said Act.

(10.) That the stone wall partially enclosing the 23 acres first appropriated as the site for a Cemetery be sold, except that portion of it against which is built a hut at present occupied by the person who has charge of the Crown Lands in the neighbourhood.

6. During the consideration of this question, the attention of the Council is directed to a suggestion emanating from the Honorable the Attorney General, that the south side of Botany Bay is the most suitable site for the interment of the dead, and that the same may be made easily accessible by means of a tramway to the north shore of Botany. Although, therefore, they adhere to the opinion that the position now adopted is that best suited to satisfy the present requirements of the Colony, the Council consider it not undesirable that whilst it is yet in the power of the Government to effect it, ample provision should be made for the future, and they accordingly advise that an area not exceeding 150 acres be reserved in the locality in question, to be hereafter used for the interment of the dead.

7. Finally, the Council desire to place on record their decided opinion that no grants of land for burial purposes should be issued, except with the provision as to charges set out in the 5th and 6th recommendations of this Minute.

EDWARD C. MEREWETHER,

Clerk of the Council.

*Executive Council Office,
Sydney, 16 June, 1858.*

No. 3.

THE CIVIL CROWN SOLICITOR to THE PRINCIPAL UNDER SECRETARY.

Civil Crown Solicitor's Office,

Sydney, 22 September, 1858.

SIR,

Referring to your letter to me of the 21st June last, in which you forwarded for my information an extract from the Minute of the Executive Council, relative to the proposed establishment of a Necropolis in the neighbourhood of Sydney, I have the honor to inform you that I have now obtained, as requested by you, the opinion of the Honorable the Solicitor General as to whether the arrangements mentioned in such Minute are compatible with the Act of Council 11 Vic., No. 11.

A copy of that opinion I now enclose, from a perusal of which you will perceive that Mr. Solicitor General considers that the arrangements as proposed cannot be carried out under the Act just above referred to; and that it will be necessary, therefore, to repeal that Act, and to bring in a new Bill to effectuate the objects contemplated.

The extract already referred to I now return to you, enclosed.

I have, &c.,

THE PRINCIPAL
UNDER SECRETARY.

WM. W. BILLYARD,
C. C. Solicitor.
(*per J. J. Jackson.*)

OPINION.

I think that the arrangements proposed to be carried out, as detailed in the Minute of the Executive Council, cannot be effected under the provisions of the Act 11 Vic., No. 11. The appointment of Trustees under the Act conflicts with the scheme laid down in the Minute of the Executive Council; and further, the increased area cannot be obtained without the authority of the Legislature, conveyed either under a general Act or a special Act passed for the purpose.

I am of opinion, therefore, that it will be necessary to repeal the Necropolis Act of 1847, and to bring in a new Bill to effectuate the objects contemplated.

21 Sept., 1858.

ALFRED P. LUTWYCHE,
Solicitor General.

No. 4.

No. 4.

MEMORIAL of the undersigned Inhabitants of Sydney, Surry Hills, and the adjacent localities, to the Honorable the Secretary for Lands and Public Works, against the proposed erection of the Necropolis on the reserve at Surry Hills.

THE Subscribers most earnestly protest against it for the following amongst other reasons:—

Because the proposed site commences sixty feet within the City boundary, and is in close proximity to the properties of some of the Memorialists, and it is contrary to all sanitary regulations that Cemeteries shall be erected within a city, or adjoining the dwellings of the people.

2. That the water which filters through the sands of this part of the Surry Hills, forms a portion of the water used by the Memorialists, and many others, and must consequently become contaminated if the same sands are to be the burying-place of the Metropolis, and cannot but be the cause of disease and death.

3. That in many places the proposed site is wholly unfit for the purpose contemplated, inasmuch as there is almost permanent water to be found a few feet under the sandy surface, rendering burial in such positions, without the most expensive system of drainage, manifestly impossible.

For these, irrespective of all other reasons, the undersigned respectfully urge upon the Honorable the Secretary for Lands and Public Works the necessity for abandoning the proposed site, for some one of many spots that could be chosen presenting none of these objections.

[Here follow 28 Signatures.]

No. 5.

MINUTE of the Secretary for Lands and Public Works, on Memorial from Inhabitants of Surry Hills, and adjacent localities, protesting against the present reserve for a Necropolis there being used for that purpose.

THE contract for fencing is taken, and the whole matter has been so long determined on by the Government, that any objections on the grounds of contiguity to certain dwellings can scarcely be fairly put forward, as the dwellings alluded to were erected since the site was chosen, not before. Besides this, those who have taken the most trouble to inquire into the matter, including the Mayor and Corporation of the City, have withdrawn their objection. The Surveyor General may however be requested to hold back from apportionment for burial purposes, a belt of the land along Dowling-street, which may be at some future time planted with trees, and thus to some extent meet the views of the Petitioners.

JOHN ROBERTSON.

Legislative Assembly.

NEW SOUTH WALES.

STORAGE OF GUNPOWDER.

(PETITION OF CERTAIN MERCHANTS AND TRADERS.)

Ordered by the Legislative Assembly to be Printed, 6 December, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Merchants and Traders,—

WHO PRAY,—

That your Honorable House will take into consideration the heavy tax at present imposed upon what is termed *Merchants' Powder*,—an article of commerce imported into this Colony from the United Kingdom and elsewhere, and upon which a heavy rent is charged, which far exceeds the cost of storing the same.

Every package once received into the Powder Magazine is liable to six weeks' rent if it remains there only one day, and at the following rates:—

Every package under 50 lbs.	Id. per week.
" " of 50 lbs. and over	2d. "

Equal to a receiving and delivery charge of 6d. on all packages under 50 lbs., and of 1s. over that weight.

Your Petitioners are of opinion that it never was contemplated by Government to make a profit out of the charges on powder, which has been found very oppressive, causing the frequent abandonment of this article to the Government,—the rent so soon accumulating to beyond the value of the article. The usual charge in Sydney for receiving and delivering goods is only 5s. per ton,—whereas 6d. per package is charged at the Magazine on all powder taken out within six weeks from date of receipt, equal to 22s. per ton; and the charge of 1d. per package per week for rent amounts to nearly 3s. 4d. per ton, whilst the charge on merchandize in Sydney does not exceed 6d. per ton per week.

Your Petitioners further respectfully submit, that while this inequitable system obtains in New South Wales, the merchants of Victoria have had a considerable reduction made in the storage rent of powder imported into that Colony.

Your Petitioners, therefore, pray that this matter may be taken into the consideration of your Honorable House, with the view of granting such relief as the case on its merits may appear to demand.

And your Petitioners, as in duty bound, will ever pray.

Legislative Assembly.
NEW SOUTH WALES.

SITE FOR ODD-FELLOWS' HALL, GOULBURN.
(PETITION OF CERTAIN MEMBERS OF ODD-FELLOWS SOCIETY.)

Ordered by the Legislative Assembly to be Printed, 16 February, 1860.

To the Honorable the Members of the Legislative Assembly of the Colony of New South Wales.

The Petition of the undersigned Office-bearers and Members of "The Loyal " Strangers' Friend Lodge," of the Independent Order of Odd Fellows, Manchester Unity Friendly Society, held at Goulburn, County of Argyle,—

RESPECTFULLY SHEWETH :—

That the Loyal Strangers' Friend Lodge has been in existence for a period of upwards of eleven years, and there are now enrolled on the Books one hundred and twenty Members.

That the meetings of the Members of the said Lodge have hitherto been held in an Inn, and the constantly increasing number of Members renders such accommodation (independent of the evil tendency of their being there convened) unsuitable and inconvenient.

That the Society has been the means of relieving many cases of sickness and distress, as well as widows and orphans, which cases would, but for the existence of the Society, have pressed severely upon the sympathy and assistance of the charitable inhabitants of the Town.

That the funds of the Society are in a flourishing condition.

Your Petitioners, therefore, intreat your Honorable House to be pleased to recommend His Excellency the Governor General, with the advice and consent of the Honorable the Executive Council, to grant to the Members of the said Lodge a suitable piece of Ground, on which to erect an Odd-Fellows' Hall, in which to hold their meetings and transact their business.

And your Petitioners will, as in duty bound, ever pray, &c., &c.

1859.

Legislative Assembly.
NEW SOUTH WALES.

SYDNEY DRAYMEN.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 18 October, 1859.

To the Honorable the Legislative Assembly of New South Wales.

The Memorial of the undersigned Licensed Owners or Proprietors of Drays in the
City of Sydney,—

HUMBLY SHEWETH :—

That the eighth section of the Act of the Legislative Council of New South Wales, 18th Victoria, No. 28, intituled, "*An Act for the Licensing and Regulation of Carters plying for hire within the City of Sydney,*" which "authorises and compels the payment for every proprietor license to the City Treasurer of the Municipal Council of the sum of two pounds annually for the benefit of the City Fund, if the license be granted on and after the thirty-first day of January, and on or before the thirty-first day of March in any year, and if after that date then in the proportions as in this section is particularly mentioned," has been found to operate most oppressively and injuriously upon your Memorialists as proprietors of licensed drays.

That the annual fees formerly demandable and paid by licensed owners and drivers of drays under the Police Act were of a comparatively trifling amount.

That your Memorialists are advised it is not in the power of the Municipal Council to remit or reduce the license fee so annually payable by licensed proprietors under the provisions of the said Act of Council; but that redress can only be afforded through your Honorable House.

That your Memorialists, since the passing of the Act 18th Victoria, No. 28, have suffered in a pecuniary point of view from a want of sufficient employment, arising from the general depression of the times, and the small rate of charges your Memorialists are permitted to make under the By-laws of the Municipal Council in that behalf; and as your Memorialists cannot now obtain a livelihood, and have so many difficulties to contend with, they are, consequently, compelled to seek either for the abolition of the present annual license fee of two pounds, or its reduction to the amount originally imposed under the Police Act.

That your Memorialists are also subject to serious loss and inconvenience from being compelled to obtain and pay for licenses from time to time for the drivers of their said licensed drays, and they beg most respectfully to suggest that one annual fee of five shillings be fixed in respect of the drivers thereof, and that the law may be so amended as to enable the owners of every licensed dray either to drive it themselves or to employ any other person to drive it for them under the same license during the year, and without the necessity upon every occasion of the new employment or engagement of a driver for the same vehicle of procuring fresh licenses and paying the same license fee of five shillings.

Your Memorialists therefore respectfully submit to your Honorable House the several matters herein set forth, with the earnest hope that the same will hereafter be deemed worthy of consideration, and that such amendments in the law may be passed as will relieve your Memorialists from the payment and burdens complained of.

And your Memorialists, as in duty bound, will ever pray, &c.

Dated at Sydney, this sixth day of October, 1859.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

LICENSED HAWKERS.

(PETITION FROM.)

Ordered by the Legislative Assembly to be Printed, 10 April, 1860.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Licensed Hawkers of the Colony of New South Wales,—

HUMBLY SHEWETH, AS FOLLOWS:—

1. That your Petitioners are aggrieved by the laws now in existence with regard to their trade. Under the provisions of the present Act of Council, licenses to persons as Hawkers are only granted for particular districts, confining each individual to whom a license is granted to one district, and restraining him from carrying on his trade in any other part of the Colony.

2. That, taking into consideration the great increase in trade, and the progressive settlement of the interior of the Colony since the last-mentioned Act came in force, not only the public residing in parts of the Colony far distant from the metropolis or chief towns suffer considerable inconvenience, but your Petitioners also suffer great hardship from having the natural outlets for their trade and industry shut out from them.

3. That by the Imperial Act 50 Geo. 3, chapter 3, s. 41, the Licensed Hawkers of England and Wales are enabled to carry on their business in any portion of the Kingdom—and your Petitioners respectfully submit that in a Colony like this, where the inhabitants are so scattered, and where under the circumstances the trade of hawking is an absolute necessity to the settlers, such a provision is much more requisite.

Your Petitioners, therefore, humbly pray that your Honorable House will be pleased to review the enactments affecting the trade of your Petitioners, and to repeal such portion of said enactments as confine your Petitioners to the exercise of their calling in one district of the Colony only, and extend the privilege of each member of their body to the whole of the Colony.

And your Petitioners, as in duty bound, will ever pray.

NEW SOUTH WALES.

DIVORCE AND MATRIMONIAL CAUSES.

(DESPATCH RELATIVE TO.)

Presented to both Houses of Parliament, by Command.

THE SECRETARY OF STATE FOR THE COLONIES to GOVERNOR SIR W. T. DENISON.
(Circular.)

Downing-street,
12 April, 1858.

SIR,

In transmitting to you a copy of the "Act to amend the law relating to (20 & 21 Vict.,
"Divorce and Matrimonial Causes in *England*," I wish to call your attention to the great cap. 85.)
importance of the subject.

Her Majesty's Government regard this subject as within the general class of internal affairs which the duty and right of regulating belong to the Colonial Legislatures under free institutions.

But they are at the same time fully sensible of the great importance of uniformity of legislation on this head, so far as it can be attained without injury to these principles of Colonial Government, and the danger, as well to public morality as to family interests, which might arise from the law of the Colonies on the subject of Marriage and Divorce differing materially from that of the Mother Country, and of each other.

It is, therefore, the wish of Her Majesty's Government that you should consult your Council as to the expediency of at once introducing a measure which shall incorporate, as nearly as the circumstances of the Colony will admit, the provisions of the Act recently passed in England.

Some of the minor provisions of the Act may, probably, prove incompatible with the requirements of the Colony; nor is it my wish to prescribe uniformity in such unessential particulars. But the serious questions which might arise from difference of legislation on that portion of the subject which relates to dissolution of marriage, or *Divorce a vinculo*—questions possibly affecting the validity of marriages contracted in one part of the Empire after divorce in another, and consequent legitimacy of offspring—render it advisable that, if the Legislature should pass any Act varying to an important degree from the present Law of England in this particular, you should reserve it for the consideration of Her Majesty.

The clause in most Governors' Instructions relating to Divorce Acts has been usually held to apply only to special Bills for the divorce of named persons, and you need not consider yourself in any way fettered by its provisions.

I find from communications received from parts of Her Majesty's Colonial Possessions, that an impression existed that the late Government designed to propose to Parliament measures for extending the law to the Dominions of the Crown in general. I am not aware on what ground this has been supposed, and can only state that no such measure is in contemplation.

I have, &c.,
STANLEY.

GOVERNOR SIR W. T. DENISON, K.C. B.,
&c., &c., &c.

1859.

Legislative Assembly.
NEW SOUTH WALES.

LIEUTENANT C. SEAVER, R.N.
(DISMISSAL OF FROM OFFICE)

Ordered by the Legislative Assembly to be Printed, 27 September, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Lieutenant Charles Seaver, R.N., late Shipping Master and
Assistant Harbor Master of the Port of Newcastle,—

SHEWETH :—

That your Petitioner humbly submits his case for the reconsideration of your Honorable House.

That your Petitioner did fill the above two situations with strict attention and without fault, from the 1st of January, 1854, as Shipping Master, and from the 1st of July, 1857, up to the 16th of April, 1858, that also of Assistant Harbor Master, when your Petitioner received the accompanying letter, No. 1, and an inquiry was ordered respecting the efficiency of your Petitioner, and also any charges that your Petitioner might have against the general working of the Harbor Department.

That the two Judges appointed for the inquiry were both laymen, quite unacquainted with nautical matters; that your Petitioner, in his charges about the working of the Department, clearly proved by the Sub-Collector of Customs, that the financial irregularities which your Petitioner mentioned in the course of his defence were correct, and the Clerk of Mr. Livingstone was dismissed. That your Petitioner, a Magistrate, was in the habit of taking frequently the said Mr. Livingstone's monthly declarations for all collections made by him, and that he, Mr. Livingstone, must have been well aware that much more money was received in his Department than had been forwarded to the Treasury;—a deficiency of £109 2s. 6d. was proved in 1857.

That your Petitioner, without any charges having been proved against him, received the letter No. 2, dispensing with his further services in both offices; had your Petitioner been guilty of any misconduct, neglect of duty, or disobedience of orders, he might have expected such a dismissal; but all the papers have been called for, and your Honorable House will clearly see that not one charge has been substantiated.

Frequently from want, at that time, of Magistrates, your Petitioner has been obliged to attend the Bench with your Petitioner's departed friend, Major Innes.

Your Petitioner therefore prays that your Honorable House will reconsider the premises, and take the subject of his prayer into your favorable consideration.

CHAS. SEAVER,
Lieutenant, R.N.

1859.

Legislative Assembly.

NEW SOUTH WALES.

LIEUTENANT C. SEAVER, R. N.

(PETITION FROM INHABITANTS OF NEWCASTLE.)

Ordered by the Legislative Assembly to be Printed, 14 October, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Inhabitants of the City of Newcastle,—

HUMBLY SHEWETH :—

That Lieutenant Seaver, who was for many years and is an Officer of Her Majesty's Navy, subsequently filled for some years the office of Shipping Master at Newcastle.

That while thus employed as Shipping Master, your Petitioners never heard any complaint of the manner in which he filled the office, but have, on the contrary, every reason to believe that the duties were satisfactorily performed.

That some two or three years since, Lieutenant Seaver's salary as Shipping Master was suddenly reduced to an almost nominal amount, without any imputed blame to him, and for supposed reasons over which he could have had no control.

That after the adoption of this (to him) harsh proceeding, and ostensibly in mitigation of its severity, Lieutenant Seaver was appointed to the much inferior office of Harbor Master's Assistant at Newcastle, the duties of which were practically incompatible with those of Shipping Master which he had at the same time to perform.

That mainly (as your Petitioners believe) from causes arising out of this incompatibility, Lieutenant Seaver was afterwards removed from both offices without any compensation having been given to him.

That—as your Petitioners believe that in these transactions Lieutenant Seaver has been treated with undeserved severity—they pray that your Honorable House will be pleased to take the circumstances into your favorable consideration, and to order to be made to Lieutenant Seaver such just compensation as to your Honorable House may seem fit.

And your Petitioners will pray.

[Here follow 102 Signatures.]

PORTIONS OF THE RETURN to the *Address* respecting Lieutenant Seaver, R.N., laid upon the Table of this House by the Colonial Treasurer on the 24th January.

—
 M. MORIARTY, ESQ., to ASSISTANT HARBOR MASTER, NEWCASTLE.

*Harbor Master's Office,
 Newcastle, 15 July, 1857.*

SIR,

Having received instructions of your appointment as Assistant Harbor Master at Newcastle, I have the honor to request that you will place yourself immediately in communication with Mr. Livingstone, from whom you are to receive instructions for your guidance, in conformity with my directions to that officer.

I have informed him that I consider it advisable that all removals in the Harbor, when the services of a Harbor Master are required, should take place in the personal charge of either himself or you, and that the duty is to be performed by you alternately.

I have, &c.,
 M. MORIARTY.

—
 SUPERINTENDENT OF LIGHTS, PILOTS, AND NAVIGATION, to ASSISTANT HARBOR MASTER,
 NEWCASTLE.

Sydney, 25 September, 1857.

SIR,

I have the honor to inform you, that a letter has been received by me from the head of your department, Mr. Livingstone, complaining of your inefficiency as Assistant Harbor Master of the Port of Newcastle, a copy of which I herewith transmit. I have, therefore, to request, that you will forward to me, through the Harbor Master, any explanation you may think proper, that I may be enabled to bring the matter under the immediate consideration of the Light, Pilot, and Navigation Board.

R. F. POCKLEY,
 Superintendent of Lights, Pilots, and Navigation.

SECRETARY TO LIGHT, PILOT, AND NAVIGATION BOARD to SECRETARY TO THE
TREASURY.

(No. 140.)

*Light, Pilot, and Navigation Board,
Sydney, 7 October, 1857.*

SIR,

I am instructed by the Light, Pilot, and Navigation Board to forward to you, for the information of the Honorable the Finance Minister, a copy of a letter of complaint received by the Superintendent from the Harbor Master at Newcastle, against Mr. Seaver, Assistant Harbor Master at that port, together with a copy of the latter officer's reply; and I am directed to state that the Board consider that an inquiry into the efficiency of Mr. Seaver should be made at Newcastle, and they would suggest that the Police Magistrate, the Sub-Collector of Customs, and Mr. Bingle, might be requested to conduct such inquiry.

I have, &c.,

WM. L. G. DREW,
Secretary.

Approved, but as the Assistant Harbor Master prefers a complaint against the Harbor Master, the inquiry will have to be into the general efficiency of both officers, and should extend to any specific charges made against either of them.

9 October, 1857.

R. J.

[Enclosure 1.]

*Harbor Master's Office,
Newcastle, 14 September, 1857.*

Sir,

I have the honor to inform you that by the six weeks' trial I have had of the service of Mr. Seaver, I am convinced he is entirely unfit for the appointment he holds.

In the first place, he is Shipping Master, and cannot attend to the duties at one time; and secondly, he is an invalid, and incapable of enduring the exposure incident to the situation, for the work must be done at tide time, and often at night, in all weather. Under these circumstances, I consider it my duty to request that some steps be taken to examine into his efficiency as soon as may be found convenient.

The Superintendent of Lights, Pilots,
and Navigation, Sydney.I have, &c.,
ALEXANDER LIVINGSTONE,
Harbor Master.

[Enclosure 2.]

*Shipping Master's Office,
Newcastle, 30 September, 1857.*

Sir,

I have the honor to acknowledge the receipt of your letter of the 25th September, wherein you enclose one from Captain Livingstone, complaining of my inefficiency as Assistant Harbor Master, also of my being an invalid, both of which I deny: he, Mr. Livingstone, might say so of himself, for he is frequently confined from bad health; I have never been one day absent since my appointment, and have taken heavy ships up and down this very intricate harbor, with no assistance. There is one boat and two men only allowed to attend sometimes upon eight ships. I take my turn, and have never refused at any time, day or night, to do my duty; but have often been told by Mr. Livingstone I might go home, as it was coming on night.

I beg to enclose you a copy of Captain Moriarty's instructions to me, and can assure you Mr. Livingstone never once went to move one ship, but sent a Mr. Johnston, who committed much damage to different ships at anchor.

It will be gratifying to me, an old sailor, to have that examination as soon as your convenience will allow it.

As to my filling the two situations, that of Shipping Master and Assistant Harbor Master, I have most of my Shipping Master's duty performed before I am required for other duties, and so arrange matters to meet my duties.

This is quite an unexpected attack upon my nautical experience, after being first lieutenant of five frigates, and commanding some ships. Mr. Donaldson would never have given me this appointment had he not known and seen the order and seamanlike manner H.M.S. "Racehorse" was when in Sydney Harbor in 1856, when I had the honor of being her senior lieutenant.

The Superintendent of
Lights, Pilots, &c.I have, &c.,
CHAS. SEAVER.SECRETARY TO LIGHT, PILOT, AND NAVIGATION BOARD to POLICE MAGISTRATE, SUB-
COLLECTOR OF CUSTOMS, AND CHAIRMAN OF CHAMBER OF COMMERCE, NEWCASTLE.

(57-155.)

Sydney, 13 October, 1857.

GENTLEMEN,

I am instructed by the Light, Pilot, and Navigation Board, to forward to you a correspondence which has taken place respecting a complaint made by Mr. Alexander Livingstone, Harbor Master, Newcastle, against Mr. Charles Seaver, Assistant Harbor Master at that port, as to the inefficiency of the latter officer.

2. I would also draw your attention to the Minute of the Honorable the Finance Minister, in which he considers that, in consequence of the counter charges brought by Mr. Seaver against Mr. Livingstone, inquiry should be made into the general efficiency of both officers, and should extend to any specific charges made against either of them.

3.

3. In forwarding to you the above correspondence, I am directed to request the favor of your conducting the proposed inquiry on behalf of the Government, and that you will be good enough to forward to the Light, Pilot, and Navigation Board, with your decision, the evidence taken therein.

4. The Superintendent has directed both Mr. Livingstone and Mr. Seaver to attend at such time and places as you may direct.

WM. L. G. DREW,
Secretary.

POLICE MAGISTRATE, AND SUB-COLLECTOR OF CUSTOMS, NEWCASTLE, to SECRETARY TO
LIGHT, PILOT, AND NAVIGATION BOARD.

Police Office,
Newcastle, 22 January, 1858.

SIR,

We have the honor to report that, in compliance with your instructions of date 14th November last, No. 57-4535, and also in obedience to instructions contained in a marginal note of 9th October last, by the Honorable the Colonial Treasurer, to a letter from the Light, Pilot, and Navigation Board to the Secretary to the Treasury, dated 7th October, we have investigated into the efficiency of the Harbor Master and of the Assistant Harbor Master, and for this purpose have examined all the witnesses brought forward by both these officers, and also other witnesses, who have attended at our own request; and these documents, contained in forty-nine pages, and the exhibits thereto, we have now the honor to forward. Returned under separate cover.
Forwarded under separate cover.

2. There has been considerable delay in producing some of the witnesses, caused by their absence for some time at other ports and an unwillingness to attend such inquiries. There are still many absent who have been named and for whom we have waited, but both Mr. Livingstone and Mr. Seaver now decline to bring forward further evidence.

3. We have come to the conclusion from the evidence taken—

1st. That the two situations of Assistant Harbor Master and Shipping Master are incompatible with each other, and that the duties of the one do and must interfere with the duties of the other.

2nd. That Mr. Seaver is not qualified for the situation of Assistant Harbor Master, the duties of which are peculiar and require more local experience than from the evidence taken he appears to possess; nor do his qualifications as an able officer of the Royal Navy fit him for the situation.

3rd. That we have nothing in the evidence to prove that either the Harbor Master or his Assistant is incapacitated by ill health from performing his duties.

4th. That it appears the Harbor Master is personally both efficient and attentive in the performance of his duties, but that he does not (or, if so, does not appear to) exercise sufficient control over his subordinates, nor enforce that regularity of attendance at his office which the public importance of such a department appears to us to require.

4. We beg, in conclusion, to bring under your notice those parts of the evidence of both the Harbor Master and of his Assistant that shew the want of proper Harbor Regulations.

We have, &c.,
HELENUS SCOTT, P.M.
C. BOLTON, Sub-Collector.

Newcastle, 16 October, 1857.

I certify that I have known Lieutenant Seaver for the last three years, and since he has been appointed Harbor Master's Assistant I have had opportunities of seeing him moving ships about the Harbor, and consider him equal to the task.

JAMES McCLURE,
Master of the "Rose," schooner.

16 October, 1857.

I have had frequent opportunities of observing Mr. Seaver moving ships about this Harbor, and can say, for the time he has been Assistant Harbor Master and the difficulties to be encountered among so many small vessels, I think he has conducted himself as a seaman.

GEORGE KENNY,
"Speculant," schooner.

I have known Lieutenant Seaver for the last three years, and have observed him moving ships about the Harbor, in my opinion, like a seaman.

JAMES TASK,
Master "Wm. Buchanan."

16 October, 1857.

I hereby certify that Lieutenant Seaver, Assistant Harbor Master, brought my barque from the coal shoots to the Horse-shoe, during a very heavy squall, and I think I may say in a very seamanlike manner, and at all times when I have observed him moving other ships he has performed the duty like a practical seaman.

JOHN M. DOBB,
Master of the barque "Miami."

Newcastle,

LIEUTENANT SEAVER, R.N.

Newcastle, 8 December, 1857.

I hereby certify that Mr. Seaver has moved my schooner twice to my satisfaction, and without any damage.

JOHN M'ALPIN,
Master of "Vihilia."

Newcastle, 9 December, 1857.

I hereby certify that Mr. Seaver has piloted the schooner "Abbey" through the Blind Channel to my satisfaction.

JAMES HUGHES.

I certify that I have known Mr. Seaver for the last three years, and have seen him moving ships up and down the Harbor without committing any damage.

MARTIN CONNELL.

Newcastle, 26 November, 1857.

I hereby certify that Charles Seaver has several times piloted the brig "Deva" up and down the Coal Channel without doing any injury or casualty whatever.

ROBERT BRACKENRIDGE,
Master, brig "Deva."

24 November, 1857.

I certify that Mr. Seaver brought my brig from the shoots and anchored her in the Horse-shoe in safety.

JOHN WILSON,
Master, brig "Boundry."

23 November, 1857.

I hereby certify that I have known Mr. Seaver for some months, and he has moved my schooner from the shoots, and gave every satisfaction as a seaman.

JOHN THOMAS ROLLS,
Schooner "Notion."

Newcastle, 24 November, 1857.

I hereby certify that I have known Lieut. Seaver since his appointment as Deputy Harbor Master, and have seen him bringing down several vessels from the coal wharfs down to the Horse-shoe, without any accident or getting any of them aground.

PETER KAHLER,
Brig "Janet."

SECRETARY TO LIGHT, PILOT, AND NAVIGATION BOARD to SECRETARY TO THE TREASURY.

(No. 10.)

Light, Pilot, and Navigation Board,
Sydney, 2 February, 1858.

SIR,

I have the honor to acquaint you, that the Light, Pilot, and Navigation Board, having gone through the evidence taken by Messrs. Scott and Bolton, in course of their inquiry into the conduct and efficiency of the Harbor Master and Assistant Harbor Master, at Newcastle, are of opinion that the Pilot and Harbor Establishments of that Port, are in a very unsatisfactory state.

From the evidence of Captain Livingstone (herewith) it appears that he is in the habit of employing persons not licensed to pilot vessels in the port, and occasionally paying them out of the moneys received on account of Pilotage; also, that the moneys so received, are placed to the private account of his clerk.

The Board would wish to see a statement of the sums so paid by Captain Livingstone, and his authority for so doing; and also the Bank's pass or other books, in which the amount received by the clerk have been entered.

I have, &c.,
WM. L. G. DREW,
Secretary.

NOTE.—Send copy to the Harbor Master, and call upon him at once to furnish the information required by the Board.

2 February.
H.G.

ASSISTANT HARBOR MASTER, NEWCASTLE, to SUPERINTENDENT OF LIGHTS, PILOTS,
AND NAVIGATION.

Assistant and Harbor Master's Office,
Shipping Master's Office,
Newcastle, 11 February, 1858.

SIR,

As Mr. Livingstone has brought charges against me as Assistant Harbor Master, which I hope have entirely failed, I now call upon your attention to know why Mr. Livingstone did not attend to your letter and order of the 7th November, No. 191, wherein you direct that I shall be invested with the control of this department in his, the Harbor Master's, absence on duty.

Prior

Prior to Mr. Simpson's departure from our establishment as clerk to the Harbor Master, I most strongly request a strict account of all the moneys collected, and the irregularity of the boat's crew and payments may be brought before the public, for we have often been weeks after the money has been received at the Bank of New South Wales to the private credit of Mr. Livingstone, and the reply at the bank was overdrawn account; and so it remains until more collection of pilot dues were paid in.

I have, &c.,

CHARLES SEAVER.

REPORT of the Light, Pilot, and Navigation Board on the Newcastle Harbor Department.

THE Board having fully considered the correspondence and documents laid before them, have agreed to the following Report:—

1. The Board deem it objectionable that the offices of Shipping Master and Deputy Harbor Master should be vested in the same person; and they recommend that some one well acquainted with the intricacies of the port, and competent to discharge the onerous duties of the office, be appointed Deputy Harbor Master in lieu of Mr. Seaver.

2. The charge brought by Mr. Seaver against Captain Livingstone, that cheques given by him to persons in his department in payment of salaries, have been dishonored, is not true, nor is it shewn that these persons were not duly paid.

3. Nevertheless, the public accounts of the Harbor Master and his clerk have been kept in such a loose and improper manner that it is impossible to ascertain the precise dates of receipts and payments.

4. From the evidence of Captain Livingstone and Mr. Simpson, given before the Sub-Collector of Customs on the 2nd March, to which the Board beg to refer, it appears that Captain Livingstone, during the year 1857, retained out of the funds he received for pilotage the sum of £109 2s. 6d., and, consequently, that the declarations attached to the documents accompanying his monthly payments into the Treasury were untrue.

Captain Livingstone states, that the amount retained was paid to persons employed piloting vessels in or out of Newcastle, or moving vessels within the port; but no vouchers have been produced in support of this statement, and the only authority for the extraordinary course pursued by Captain Livingstone is said to be a sanction verbally given by the late Port Master, Captain Moriarty.

5. In so far as the Board can judge from the evidence before them, Captain Livingstone appears to discharge his duties with zeal and considerable ability, but he does not seem to exercise a proper control over the people employed under him, and in the clerical department there is no doubt that gross negligence has prevailed.

6. The Board are of opinion that Mr. Simpson ought not to be continued in the office of clerk, and, seeing how very unsatisfactory the business of the port has been conducted, they submit to the consideration of the Finance Minister the necessity for a general reform in the establishment.

By order of the Board,

WM. L. G. DREW,

Secretary.

Port Office, Sydney, 15 March, 1858.

MINUTE.

Having carefully perused the enclosed report and accompanying papers, the Executive Council concur in the opinions expressed by the Board, and, in accordance with their recommendations, advise that the services of Lieutenant Seaver, as Deputy Harbor Master, be dispensed with, and that some person well acquainted with the intricacies of the port of Newcastle, and competent to discharge the onerous duties of the office, be appointed in his stead; and that the services of Mr. Simpson, the clerk in the department, be also dispensed with.

The Council further advise that, under the circumstances set forth in the third, fourth, and fifth paragraphs of the Report, Captain Livingstone be called upon to shew cause why he should not be dismissed from the public service.

Confirmed 29 March, 1858.

EDWARD C. MEREWETHER,

No. 58-181.

Clerk of the Council.

Approved.—W. D.

31 March.

PROCEEDINGS of the Executive Council on the 12th April, 1858, with respect to explanation of charges preferred against the Harbor Master at Newcastle, and appointment of Mr. Kenrick as Clerk and Shipping Master at that Port.

Minute No. 58-16. Confirmed 19 April, 1858.

REFERRING to the proceedings on the 22nd March last, when the Council had before them a Report from the Light, Pilot, and Navigation Board, relative to the Harbor Department at Newcastle, and advised that Captain Livingstone, the Harbor Master, should be called upon to shew cause why he should not be dismissed from the public service, His Excellency

LIEUTENANT SEAVER, R.N.

Excellency the Governor General now lays before the Council a letter from Captain Livingstone, replying to the several matters charged against him, and enclosing certain documents in support of his explanation.

Having carefully perused this letter and its enclosures, the Council regard the explanation afforded by Captain Livingstone as sufficiently satisfactory to relieve him from the extreme penalty of dismissal; they consider, however, that his conduct in all the matters which form the subject of the charges against him has been highly irregular and reprehensible, and that they advise, accordingly, that he be severely reprimanded, and warned that any repetition of the irregularities will be followed by immediate dismissal from the public service.

In connection with this matter, the Council further advise that for the future the duties of Clerk to the Harbor Master and of Shipping Master be performed by the same person, and as this arrangement will render it necessary to dispense with the services of Mr. Seaver in the latter capacity, they recommend that his services be now dispensed with accordingly, and that Mr. A. Kenrick be appointed such Clerk and Shipping Master, with salary at the rate of £150 a year for the former office, and £50 for the latter.

EDWARD C. MEREWETHER.

Clerk of the Council.

Executive Council Office,
Sydney, 20 April, 1858.
No. 58-221.

Approved—W. D.
21 April, 1858.

SECRETARY TO THE TREASURY to HARBOR MASTER, NEWCASTLE.

The Treasury, New South Wales,
14 April, 1858.

(No. 363.)
SIR,

I am directed to notify to you the dismissal from the public service of Mr. Charles Seaver, lately holding the appointments of Assistant Harbor Master and Shipping Master for the Port of Newcastle, and of Mr. D. G. Simpson, clerk in your department, and to inform you that Mr. Atwill Kenrick has been appointed to fill the vacancies caused by Mr. Simpson's removal, at a salary of £150 a year, combining therewith the duties of the Shipping Office, at £50 per annum.

I have, &c.,

HENRY LANE.

SECRETARY TO THE TREASURY to LIEUTENANT SEAVER, R.N., NEWCASTLE.

The Treasury, New South Wales,
14 April, 1858.

(No. 364.)
SIR,

With reference to the recent investigation into the department of the Harbor Master at Newcastle, I am now directed to inform you that the Executive Council having had under their consideration the Report of the Board appointed to conduct the inquiry, as well as all the papers relating thereto, have decided that your services as Shipping Master and Assistant Harbor Master shall be forthwith dispensed with.

Mr. Atwill Kenrick will in future discharge the duties connected with the Shipping Office, and you will therefore have the goodness to deliver to that gentleman all books, records, and papers at present confided to your charge.

I have, &c.,

HENRY LANE.

LIEUTENANT SEAVER, R.N., to SECRETARY TO THE TREASURY.

Newcastle, 16 April, 1858.

SIR,

I have the honor to acknowledge the receipt of yours of the 14th, No. 364, wherein you inform me that my services are dispensed with both as Shipping Master and Assistant Harbor Master.

I certainly am at a loss to understand the circumstance. If it be a dismissal it cannot be from a neglect of duty or disobedience of orders. I was accused of holding two situations, and being an *invalid*; the last has clearly been proven was incorrect.

I was on my defence against those charges brought by the Harbor Master, which I am happy to say to my own satisfaction, nothing was proved.

May I have the honor to ask if such a dismissal bars my future prospect with the Colonial Government.

May I request to know if I am to draw my salary up to the day I give over the books, &c., to Mr. Kenrick.

I have, &c.,

CHARLES SEAVER.

MINUTE.

Salary to be paid to him the day of transferring charge to his successor.

19 April.

SECRETARY TO THE TREASURY to LIEUTENANT SEAVER, R.N.

(No. 296.)

*The Treasury, New South Wales,
20 April, 1858.*

SIR,

I am directed by the Honorable the Treasurer to acknowledge the receipt of your letter of the 16th instant, and in reply to inform you that you will be allowed to draw your salary up to the date of your relinquishing office.

I have, &c.,
HENRY LANE.

LIEUTENANT SEAVER, R.N., to SECRETARY TO THE TREASURY.

Newcastle, 27 April, 1858.

SIR,

As I am superseded from the Government employment, I have to request you will be good enough to lay my claims before the Honorable Treasurer, that I may be allowed the compensation money for four years and four months, at £21 5s. per month, for my services to the Colony, as by law established.

I have, &c.,
CHARLES SEAVER.

MINUTE.
Seen, RT. C.
29 April.

MINUTE.

Mr. McKoy.—Look carefully into the papers. Is Mr. Seaver's displacement to be looked upon as a dismissal for inefficiency or misconduct, or as a supersedure consequent upon the reconstruction of the harbor department.

11 May,
H. L.

SECRETARY TO THE TREASURY to LIEUTENANT SEAVER, R.N.

*The Treasury,
Sydney, 19 June, 1858.*

SIR,

In acknowledging the receipt of your communication of the 2nd instant, applying for compensation for your past services under the Colonial Government, of 4 years and 4 months, I am directed to acquaint you that as there is no precedent for granting remuneration to officers who have left the service under circumstances similar to yours, the Honorable the Treasurer regrets that he cannot entertain your application.

I have, &c.,
HENRY LANE.

LIEUTENANT SEAVER, R.N., to COLONIAL SECRETARY.

Newcastle, 22 March, 1859.

SIR,

I observe in your speech of the 18th ultimo, in reference to the Compensation of Government Officers, you mention the loss of situation to Mr. Venour, as Shipping Master, and appear to sympathise with him; may I request to know why I should not be allowed the same justice? My office was established at the same date, 1854, and I am not aware of any impropriety having occurred, that would not make our cases exactly analogous; therefore, why not the same result?

I have, &c.,
CHARLES SEAVER.

Mr. Venour has relinquished all claims for re-employment.

1859.

Legislative Assembly.
NEW SOUTH WALES.

TAMWORTH TOWN RESERVE.

(PETITION OF JAMES BAILEY.)

Ordered by the Legislative Assembly to be Printed, 27 September, 1859.

To the Honorable the Legislative Assembly of the Colony of New South Wales, in
Parliament assembled, &c.

The humble Petition of James Bailey, of Tamworth, in the Colony of New South
Wales, Gentleman, &c.,—

SH EWETH :—

1. Your Petitioner is an inhabitant of the Town of Tamworth, in the County of Inglis, in the District of Liverpool Plains, and is the owner of several allotments situate within, and of two farms adjoining the said Town, all which your Petitioner purchased direct from the Crown.

2. By a Proclamation in the *Government Gazette* of first January, one thousand eight hundred and fifty (of which the following is a copy), Tamworth was proclaimed as a Township:—"Colonial Secretary's Office, Sydney, 28th December, 1849.—Tamworth.—"Notice is hereby given, that a site has been fixed upon for a Township at the under-mentioned place, and that a copy of the approved plan may be seen at the Office of the Surveyor General, Sydney, or at the Police Office, Tamworth,—viz.: Tamworth, in the County of Inglis. By His Excellency's Command, E. DEAS THOMSON."

3. The following Regulations for the occupation of Town Reserves were published in the *Government Gazette* of the twenty-fourth January, one thousand eight hundred and fifty-four:—"Colonial Secretary's Office, Sydney, 23rd January, 1854.—Occupation of Reserves.—His Excellency the Governor General is pleased to direct to be notified, for the information of parties interested, the following Regulations, which have been adopted under the advice of the Executive Council, for the temporary occupation of Reserves made for public purposes out of pastoral runs beyond the Settled Districts of the Colony. 1.—In every case where a Reserve has been, or shall hereafter be formed, out of a pastoral run beyond the Settled Districts, except in any unforeseen case, where this permission may be clearly inconsistent with the public interests, the licensee of the run will be allowed an annual lease, entitling him to the exclusive occupancy of the Reserve, or of any part thereof, so long as the same is not required for sale or for any public purpose. 2.—This lease will be renewed annually for the whole Reserve, or for so much thereof as may not be required for sale or for any public purpose. 3.—For this advantage the lessee will be required to pay rent on the terms laid down in the 22nd and 23rd clauses of the Regulations of the 29th March, 1848, that is to say,—at the rate of £1 per annum for each square mile. 4.—These leases will carry with them no pre-emptive right whatsoever; the licensee of the run will, of course, have had an opportunity of exercising, in the first instance, the general pre-emptive right conferred on him by the Order in Council of 9th March, 1847, before the reservation in question shall have become indefeasible. By His Excellency's Command, E. DEAS THOMSON."

4. A Reserve was proclaimed for the inhabitants of the Town of Tamworth in the Supplement to the *Government Gazette* of March fifth, one thousand eight hundred and fifty-eight. The following is the description of the reserve thus proclaimed:—"Crown Lands Office, Sydney, 9th March, 1858.—Crown Lands beyond the Settled Districts.—Reserve.—It is hereby notified for general information that His Excellency the Governor

“General, with the advice of the Executive Council, has been pleased to direct that the portion of land hereinafter described shall be reserved for public purposes, in accordance with the provisions contained in the 8th and 9th sections of Her Majesty’s Orders in Council of 9th March, 1847, and excluding from the Lease of the Pastoral Run of which it now forms a part. 2. No pre-emptive rights will be admitted in respect to this land save to such allotments as may be found actually to contain improvements effected by the present licensed occupant, of a value exceeding the minimum upset price of the lands in an unimproved state. 3. The allotments containing valuable improvements will be leased to the licensed occupant for one year, in accordance with the terms of the Order in Council of 19th June, 1850, and during the currency of this lease the lessee will be permitted to secure the fee simple of his improvements by purchase, under the right of pre-emption, at the usual upset price, viz.:—For town allotments, £8 per acre, and for suburban allotments, £4 per acre.—GEORGE BARNEY, Chief Commissioner of Crown Lands.”

“No. 1.—Tamworth, County of Inglis, at the confluence of the Cockburn and Peel Rivers, containing about 16,000 acres; commencing on the right bank of the Peel River, at the south-west corner of S. W. Cook’s 790 acres, and bounded thence on part of the east by the west boundary of that 790 acres, and its northerly extension being a line in all bearing north 1 mile 65 chains; on part of the south by a line bearing east 25 chains, again on the east by a line bearing north about 85 chains to the Cockburn River, thence by that river upwards to a point bearing due north from the north-east corner of S. W. Cook’s 790 acres aforesaid; thence on part of the north by a line bearing west 5 miles, parallel with and distant about $2\frac{3}{4}$ miles from the north boundary of the 790 acres aforesaid; again on the east by a line bearing north $1\frac{1}{2}$ miles; again on the north by a line bearing west 3 miles; on the west by a line bearing south about $1\frac{1}{2}$ miles to the Peel River, and thence by that river upwards to the south-west corner of S. W. Cook’s 790 acres aforesaid.” This Reserve is supposed to form part of the Woolomol and Moonbi Runs. The Town of Tamworth has been laid out within this Reserve. These runs are described as follows in vol. 24, No. 48, page 1231 of *Government Gazette* of 20th September, 1848:—“Moonbi Run—Henry Dangar—Estimated area, 25,600 acres; estimated grazing capabilities, 800 sheep; watered by the Moonbi Creek, and bounded on the west by Cohen’s Run, commencing at a deep gully running into the Moonbi at about $\frac{3}{4}$ of a mile above the hut occupied by Mr. George Kettle, on the said Cohen’s Run, and called the boundary gully, by that gully to the top of the range dividing the waters between the Moonbi and Mooni Creeks; on the north-west and north by that dividing range to the summit where the New England Road passes over it, thence on to the north-east by the range dividing the waters of Moonbi and Oaky Creeks; on the east by Brodie’s Oaky Creek Run, at one mile above the junction of that creek with the Moonbi Creek, dividing this from Mr. Cook’s Run to the commencing corner.”—Page 1,237, “No. 100,” vol. 24, of *Government Gazette* of 1848,—“Woolomol Run—George Jenkins—Estimated area, 12,000 acres—Estimated grazing capabilities, 500 cattle, 4,000 sheep; bounded on the west by Peel River, to which it has a frontage of 7 miles, and thus divided from the estate of the Australian Agricultural Company’s; on the south by a line running east from an old hut on the Peel River to the Tamworth Hills, about 3 miles in length; on the north by Moore’s Creek, from its junction with Peel River to the Limestone Ranges; and on the east by a line from these ranges to the Tamworth Hills, Mr. Bosley’s cattle run being on the northern, and Mr. Cohen’s stores on the southern side.” In page 1,231, No. 45—“Tuckerman Run—Cohen David—Estimated area, 6 square miles (or 23,040 acres)—Estimated grazing capabilities, 4,000 sheep; bounded on the south by Peel River, and the Cockburn and Moonbi Creeks, from an old hut on the former to a dry gully joining the latter; on the south-east by a boundary line of Mr. Dangar’s Moonbi station; on the west by a line running north from an old hut on the Peel River, about 800 yards from Mr. Levy’s Inn to the Tamworth Hills; and on the north by the Tamworth Hills.”

5. The Reserve thus proclaimed forms part of the Tuckerman Run, as described in page 1,231 of the *Government Gazette* of twentieth September, one thousand eight hundred and forty-eight, for on comparing the descriptions of the three runs above-mentioned and described (namely, Moonbi, Woolomol, and Tuckerman Runs,) with the description of the Tamworth Town Reserve, and with the maps and tracings of such Reserve in the Surveyor General’s Office, it has been found by two competent surveyors that these said three runs are situated on the north side of the confluence of the Peel and Cook-

burn

burn Rivers, that they form a bend at the confluence of these rivers, that these runs are within this bend; that the Tuckerman Run is in the centre, with Moonbi Run for its eastern boundary, Woolomol Run for its western boundary, and the confluence of the Peel and Cockburn Rivers for its southern boundary; but, the Tamworth Reserve having also the aforesaid confluence as its southern boundary, a portion of the Tamworth Reserve is, consequently, parcel of the Tuckerman Run.

6. The paragraph in the *Government Gazette* of fifth March, one thousand eight hundred and fifty-eight, stating that the Tamworth Reserve formed portion of the Woolomol and Moonbi Runs, is therefore incorrect; for, according to the description given of the Tuckerman Run (the licensee whereof is Mr. David Cohen, of Tamworth, storekeeper), the Tuckerman Run is placed between the Woolomol and Moonbi Runs, and there is no doubt whatever, therefore, *that a portion of the Tuckerman Run is part of the Tamworth Town Reserve.*

7. In the month of March last, your Petitioner was threatened by the said David Cohen with an action of trespass in the Supreme Court, in the event of your Petitioner's failing to remove his commonable cattle from depasturing on the Tamworth Town Reserve.

8. Your Petitioner communicated such threat to the Honorable the Secretary for Lands and Public Works, and received, in reply, a letter, of which the following is a copy :—“ Department of Land and Public Works, Sydney, 23rd March, 1859. Sir,—With reference to your letter of the 4th instant, stating that you have been threatened by Mr. D. Cohen with an action in the Supreme Court, in the event of your failing to remove your cattle from depasturing on the Tamworth Reserve, I am directed, by the Secretary for Land and Public Works, to inform you, that, although no right has been given to the inhabitants of Tamworth for the use of the pasture on the Reserve in question (embracing 16,000 acres), the Government do not interfere with their use of it, and the Secretary for Lands and Public Works does not conceive that the lessee of the run out of which the Reserve has been formed, can claim compensation from you or any one else for pasturing stock on it.

“ 2. The Government, I am to add, purposes as early as practicable to frame regulations for the beneficial occupation by the inhabitants of the various pasturage reserves throughout the Colony, and in the meantime the townspeople of Tamworth have nothing to fear in depasturing their stock on the 16,000 acres referred to.

“ I have, &c.,

“ MICL. FITZPATRICK.”

“ Mr. James Bailey,

“ Tamworth.”

9. An action was subsequently brought by the said David Cohen against your Petitioner, for trespass on that portion of the Tuckerman Run which formed parcel of the Tamworth Town Reserve, and such trespass consisted in the depasturing thereon by your Petitioner of commonable stock (not exceeding at any one time more than thirty or forty head), and such trespass was committed by your Petitioner under the belief that he was authorized to depasture his commonable stock on the Tamworth Town Reserve; firstly, by the sale from the Crown of the said lands to your Petitioner; secondly, by the subsequent proclamation of the boundaries for the grazing of the town herds and commonable stock on the Tamworth Town Reserve; and, thirdly, by the ninth section of Her Majesty's Orders in Council of 9th March, 1847. (See printed Regulations relating to the occupation of Crown Lands, pages 73 and 74.)

10. Your Petitioner appeared and pleaded to the said action, and acting under the advice of the Honorable Edward Wise, his counsel, admitted the trespasses complained of, and paid twenty pounds into Court in full satisfaction thereof; this action is still pending.

11. The following is the copy of the opinion of the Honorable Edward Wise above referred to :—“ I have perused the correspondence between the defendant and the Government, and upon the facts stated in the case and correspondence, I do not perceive what legal defence there is to this action. As I understand the facts, the plaintiff has actually been in possession of the land in question, and although at the time of the alleged trespasses the Crown intended that the townspeople of Tamworth should enjoy commonage over it, they have not in any legal manner put the plaintiff out of possession. Even assuming that the Reserve had been proclaimed and set out, still the plaintiff would be in possession, and, according to the current of decisions (at present) in the Supreme Court the right of the

“ the Crown cannot be involved in an action of trespass by any act done against that position
 “ unless the person seeking to come in is clothed with an absolute legal right, the Crown
 “ should proceed against the plaintiff as an intruder, and *then* in some *legal* manner
 “ grant the commonage rights to the townspeople; I do not expect that anything has been
 “ done in such a way as that the Supreme Court will admit it, in proof of the entry by the
 “ defendant, by authority of the Crown. I shall be glad, however, to know what are the
 “ grounds for the opinion expressed by the Secretary of Lands and Works, that no one can
 “ claim compensation from a person using the Reserve; *Harpur v. Charlesworth*, 4
 “ B and C, 376, is a clear authority establishing the right of a person in possession of Crown
 “ Land, although *without title* to maintain trespass against any person *without title* interrupt-
 “ ing his possession. What might be the legal effect of the proposed Regulations of the
 “ Government I cannot give an opinion upon without seeing them.—EDWARD WISE.” The
 following is a copy of the further opinion of Mr. Wise:—“ I have again carefully considered
 “ the facts in this case, and I can see no legal right for the defendant to exercise a right of
 “ commonage. The occupiers of Crown Lands, even without a license, may maintain an
 “ action of trespass against a person who comes on the land (*Harpur v. Charlesworth*, 4 B.
 “ and Cresswell, 574.) I do not understand that the right is claimed under the 2nd Regu-
 “ lation of March 29, '48 (see printed regulations relating to the Occupation of Crown Lands,
 “ page 35), because the defendant is not the holder of purchased lands immediately contiguous
 “ to the vacant Crown Lands, but even if the Crown *had* cancelled the lease to the plaintiff,
 “ the plaintiff would not thereby lose his right to maintain an action. But Mr. David
 “ Cohen's lease has not, it appears, been cancelled, he is still a tenant and licensee of the
 “ Crown, the Government having accepted his rent and assessment. In the present case,
 “ no specific commonage right has been granted, or attempted to be granted, to the
 “ inhabitants generally, or to the defendant individually; on the facts, therefore, I still
 “ think that there is no defence. I don't suppose a jury would give any great damages,
 “ but these matters are always uncertain.—EDWARD WISE. August 1st '59.”

12. Many similar questions have arisen in various towns throughout the Colony, as to the respective rights of the Crown tenants and licensees, and the effect of the proclamation by the Crown of Town Reserves within the boundaries of such lands held by tenants under Crown Leases or Licenses to the Crown.

13. David Cohen has paid rent and assessment a twelvemonth in advance, in the beginning of this year, for the whole of the Tuckerman Run, portion whereof, has been proclaimed as parcel of the Tamworth Town Reserve as aforesaid.

14. Your Petitioner's solicitor by three several letters, dated respectively, twenty-eight June, fourth August, and third September last, has addressed the Secretary for Lands and Public Works, enclosing copies of the correspondence and proceedings in the above action, but these letters have met with neither reply or notice.

15. Your Petitioner has been misled by the Government, and is aggrieved thereby, inasmuch as he has been put to costs and expenses considerably exceeding one hundred pounds, and that from no fault of his own, *but from his implicit confidence in Her Majesty's Government.*

16. The matter does not prejudice your Petitioner exclusively, but effects the inhabitants of all other towns in the Colony, in respect of which Town Reserves have been proclaimed; but which Town Reserves are occupied by the tenants or licensees of the Crown, who not having been ejected by the Crown (which can only be accomplished by writ of intrusion), can, as against your Petitioner and others similarly circumstanced, maintain trespass.

Your Petitioner, therefore, humbly prays your Honorable House to take the premises into consideration, and either by referring the matters aforesaid to a Select Committee of your Honorable House, or otherwise, to inquire into and afford redress, as well to your Petitioner, in respect of his personal grievances, as having regard to the injurious consequences to the inhabitants of towns throughout the Colony, who are similarly circumstanced to him: And your Petitioner prays that your Honorable House will be pleased to cause justice to be done, and relief afforded, in the premises.

And your Petitioner will ever pray, &c.

JAMES BAILEY.

1859.

Legislative Assembly.

NEW SOUTH WALES.

MR. ADAM NIXON.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 18 October, 1859.

To the Honorable the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The Petition of Adam Nixon, of West Maitland, in the Colony of New South Wales, Contractor,—

HUMBLY SHEWETH :—

That your Petitioner, in the month of June, 1857, entered into a contract with the Colonial Architect (through Mr. Collett, the Government Road Surveyor,) to gravel 4,000 yards of road between Black Creek and Singleton, within 5 months from the day of signing the agreement ; but the floods set in and stopped the progress of the work at that period.

That your Petitioner had a great number of men procuring gravel, at a great outlay ; that they obtained the greater portion of the gravel required, which was laid down at convenient distances on the road. When the floods subsided your Petitioner again commenced the work, at a great loss and inconvenience (having other contracts to fulfil at the time,) being desirous of carrying out his part of the contract, and to leave the work completed within the time mentioned in his agreement.

That your Petitioner was ordered by Mr. Collett to proceed no further, but your Petitioner still continued to proceed with the work, when he tried to embarrass your Petitioner as much as he possibly could do ; when your Petitioner was in want of funds to pay his men, he was told by Mr. Collett that, from want of money and other causes, the Government were not in a position to carry out the contract ; but that if your Petitioner would stop the work he would again renew the contract in the beginning of the year 1858 ; that upon this promise your Petitioner stopped the work ; that Mr. Collett's men took the gravel, the property of your Petitioner, and used it for their own purposes on the road.

That your Petitioner, in the beginning of 1858, received a letter from Mr. Collett, saying that the Government were not in a position to renew the former contract, and declined to make any reasonable settlement for the work already done, or for the gravel which had been procured at a great cost, and laid down on the road at convenient distances.

That your Petitioner's affairs have been much embarrassed through Mr. Collett refusing to make some arrangement with him.

That your Petitioner, in the month of July, 1858, wrote to the Secretary of Lands and Public Works, laying the whole of the circumstances before him, and offering to accept of any reasonable terms, but could get no satisfaction.

That your Petitioner again, on or about the month of March, 1859, wrote to the Colonial Secretary on the subject, and at the same time requesting a copy of all correspondence between himself, the Government, and Mr. Collett, respecting his claim under the contract, but could not obtain the same.

That

That your Petitioner handed the whole of the original documents in his possession relating to the contract to G. B. White, Esq., who laid the documents before the Honorable the Secretary of Lands and Public Works, but could never get him to return them again, thereby depriving your Petitioner of the custody of those documents, not having kept copies of the same.

That your Petitioner prays that the papers and all other documents in any way relating to such contract may be laid upon the Table and printed, for the purpose of investigating the claim of your Petitioner.

That your Petitioner has made repeated appeals to the Minister of Lands and Public Works for copies of such documents but could not get the same, it being your Petitioner's intention to take legal proceedings against Mr. Collett for breach of contract and libel.

And your Petitioner, as in duty bound, will ever pray, &c.

ADAM NIXON.

1859.

Legislative Assembly.

NEW SOUTH WALES.

JAMES BUTLER.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 29 November, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble and respectful Petition of James Butler,—

MOST SUBMISSIVELY SHEWETH :—

That in the year 1845 Petitioner was in the service of the Rev. Mr. Rigney, of Wollongong, as cook and waiter; there was a new Church in a state of erection. Petitioner was desired by Mr. Rigney to help in lifting a large stone on the wall of the edifice; that Petitioner told Mr. Rigney he wished to be excused, as he was not accustomed to such work, but Mr. Rigney said that Petitioner must lift. Petitioner did lift, and the scaffolding gave way, whereby Petitioner was precipitated to the ground, the stone falling on his left leg, causing a compound fracture; and Petitioner's right arm was also broken four inches above the elbow.

His Grace the Archbishop came to Wollongong the day after this took place, and told Petitioner to have his leg amputated, as it would be the only means of saving life; and, said His Grace, "should you recover, proper means will be taken for your support;" and Mr. Rigney frequently said that, "whilst he had one shilling that Petitioner should " have part of it."

That amputation was performed by Dr. O'Brien, eight inches above the knee; but Petitioner is partly restored.

That Petitioner applied to His Grace and Mr. Rigney for some small remuneration, but was told by His Grace to go to the Benevolent Asylum.

That Petitioner, therefore, most humbly implores your Honorable House would be pleased to look at his doleful situation with compassion.

And he, as in duty bound, will ever pray.

JAMES BUTLER,

(Aged 62 Years.)

1859.

Legislative Assembly.
NEW SOUTH WALES.

MR. CHARLES SKERRETT.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 30 November, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Charles Skerrett, residing in Sussex-street, Sydney,—
RESPECTFULLY SHEWETH:—

That your Petitioner was tried and convicted of Cattle Stealing, at the Central Criminal Court, on 5th April, 1855, on the evidence of Isabella Mary Kelly, who swore that she had never sold your Petitioner any Cattle or Horses, and that a certain Bill of Sale and Receipt then produced were forgeries.

That on that Trial the Jury found your Petitioner guilty, and expressed an opinion that your Petitioner had forged the said Bill of Sale and Receipt, in consequence of Miss Kelly's evidence to that effect.

That your Petitioner was sentenced to ten years' hard labor on roads and public works; that your Petitioner was sent to Cockatoo Island about 11th April, 1855; and that your Petitioner was liberated from that place and received a full remission of the remainder of his sentence on the 14th July, 1859.

That immediately after your Petitioner's liberation he preferred a charge of Perjury against Miss Isabella Mary Kelly.

That the said Isabella Mary Kelly was tried and convicted at the Central Criminal Court, on 6th and 7th-days of October, on a charge of wilful and corrupt Perjury, as signed upon her evidence given against your Petitioner when he was tried and convicted as already stated, and that she was then sentenced to be imprisoned for twelve months and to pay a fine of £100 to the Queen.

That on the occasion when your Petitioner was tried the Bill of Sale, Receipt, and other documents belonging to your Petitioner, which was the only evidence he had of the sale of Miss Kelly's Cattle to him on the 6th June, 1854, were taken from your Petitioner, and that the whole of these documents have since been lost out of the Crown Law Office.

That your Petitioner has thus unjustly been deprived of his liberty for upwards of four years, and not only subjected to great loss of character and health, and his family to very great deprivation, but that your Petitioner has been most unjustly deprived of the whole of his property amounting at the time of his trial to about £1,000.

That in consequence of the loss of the documents above referred to your Petitioner will be put to great and otherwise unnecessary expense in proving his case in an action against Miss Kelly for the recovery of your Petitioner's property, to say nothing of the possibility of the non-production of these documents having an effect upon the trial detrimental to his interests.

Your Petitioner therefore prays that your Honorable House will take your Petitioner's case into your favorable consideration, and afford him such redress as to your Honorable House shall seem meet.

And your Petitioner will ever pray.

CHARLES SKERRETT.

1859-60.

Legislative Assembly.
NEW SOUTH WALES.

WILLIAM HENRY.
(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 10 February, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned William Henry, late of Millwood Farm, in the Parish of Gordon,—

MOST RESPECTFULLY SHEWETH:—

That in the year 1796, your Petitioner belonged to the Plymouth or Third Division of Royal Marines, and was attached to the Channel Fleet commanded by Admiral Colpoys, in H. M. S. "Duke," Captain Holloway.

That in the year 1797, your Petitioner was off Cherbourg, in H. M. S. "Flora," commanded by Captain Middleton; next off Cadiz, under command of Lord St. Vincent; next under Lord Nelson, in the Mediterranean, and was one of eighty-three volunteers who cut out the national brig "La Moudoir," of sixteen guns, from under a battery of seventeen pieces of heavy ordnance, in four open boats commanded by James Russel, First Lieutenant of H. M. S. "Flora," in the Harbor of Capsale, in the Island of Cerigo, one of the Ionian Islands.

That your Petitioner arrived in the Colony of New South Wales in H. M. S. "Investigator," Captain Flinders, during the administration of Governor King.

That, on the arrival of Governor Bligh, your Petitioner was employed as principal overseer of Public Works, which duty your Petitioner performed to the satisfaction of his superiors till the 26th of January, 1808, when His Excellency was put in close arrest by the officers of the New South Wales Corps.

That, previous to the rebels assuming the government of the Colony, Governor Bligh sent for your Petitioner and ordered him to find a proper person to fill your Petitioner's situation, as he wanted your Petitioner in Sydney, to act under Mr. Devine, then Superintendent of Convicts. His Excellency said—"Henry, you must do the duty, but I cannot give a salary to two people for doing one duty; all documents must go through his hands, but I will make it better for you. I will give you one thousand acres of land; four Government men to clear and work them; and four cows, in calf, from the Government herds, to be returned in kind after the lapse of three years; a horse and forage, and a man to groom it; and I'll appoint you Colonial gunner, with a salary of seven shillings and sixpence per diem, until I get an answer from the Secretary of State for the Colonies; then you'll have ten and sixpence per diem during your life."

That your Petitioner took immediate possession of a tract of land on the north side of the Lane Cove River.

That your Petitioner was, after this, told by one of the insurgent Magistrates, that his services were no longer required.

That, on His Excellency Governor Bligh taking command of H. M. S. "Porpoise," he sent for your Petitioner, and placing implicit confidence in your Petitioner, employed him to keep up a communication between himself, his officers, friends, and adherents, which duty your Petitioner performed, notwithstanding a system of the strictest and most rigorous espionage had been enforced by the Rebel Government.

That after His Excellency Governor Bligh had remained some time at the Derwent, (a project having been contemplated by the up-country settlers about that time, and about half the rebel regiment who seemed willing to return to their allegiance, by the persuasion of one Sergeant Champion, Sergeant Brumlow, and your Petitioner, to restore His Excellency to his government) your Petitioner was selected to take command of a small schooner—"Edwin,"—the property of John Palmer, Esquire, then Commissary General of the Colony, on a secret expedition, to recall the Governor and restore him to his government; but suspicion having been awakened in the minds of the rebel Government, your Petitioner was invited to call upon Captain Abbot, then Acting Judge Advocate for the insurgent Government, for the purpose of inducing him to divulge all such matters as had been confided to him by Governor Bligh or his adherents, but your Petitioner, steadfast in his allegiance to the representative of His Gracious Majesty King George the Third, spurned Abbot's insidious proposition with indignant contempt, although it was accompanied with extremely flattering conditions.

Your Petitioner was, however, very soon after doomed to suffer most dearly for his fidelity, the term of only one short day intervening. His house was entered by a body of ruffians after dark, under orders of a constable, who scarcely allowed him time to dress himself—put him in irons—tore him from his wife and infant family—dragged him under cover of the midnight darkness, through the streets—and forced him on board a vessel bound for Newcastle, then a penal settlement, without trial, hearing, or examination; nay, he was not charged by them with the commission of any crime, nor confronted by any witness. At Newcastle he was in like manner, without trial, subjected, at the capricious pleasure and for the gratification of a Lieutenant of the Botany Bay Corps, to the most merciless and degrading corporeal punishment, &c.

Your Petitioner was not recalled from Newcastle until the arrival of Governor Macquarie, when he was thence read out by Proclamation with the rest of the Civil Officers—commissioned and subordinate—then confined.

That in the year 1814 your Petitioner retook possession of his land, it having remained unnoticed during a period of seven years.

That in the years 1820-1 your Petitioner applied to the Governor to direct the surveyor to measure the one thousand acres promised him. The Governor replied he would order Mr. Meehan to perform that duty the very earliest opportunity, which has been proved (by Mr. Thurston, at that time Private Secretary to the Governor,) in the Court of Claims.

That Mr. Meehan has subsequently acknowledged he had received orders to measure it from the Governor, but was unable to do so at once, in consequence of the large grants he had to measure; but your Petitioner was told to take possession of any tract of land unlocated, and he would measure it as soon as possible, which has also been proved in the Court of Claims.

That on finding his improvements were coveted, your Petitioner immediately wrote to the proper authorities, stating his grievance, the prayer of his petition being, that his case might be laid before the Home Government, which was acceded to; but some doubt having arisen in the mind of Lord Glenelg, His Lordship sent a despatch to Governor Bourke, requiring some explanations, but your Petitioner never received any information from the Colonial Office, till he found by private information there was a letter on the subject, and something favorable in it; that your Petitioner waited on the Principal Clerk in the Colonial Secretary's Office, Mr. Newcombe, who denied having any letter, but on being close pressed acknowledged he had one, but it was at his house; on his return he said he had read the letter, but he must get the same gentlemen to sign similar documents to those they had signed before, and more fully explain the case than had been done in his former despatch.

That your Petitioner had to obtain those testimonials at considerable expense and trouble, some of the gentlemen then living at Bathurst, and other parts of the interior.

That Mr. Newcombe received this second petition, but never forwarded it, and when he thought this despatch had full time to return, your Petitioner waited upon Mr. Newcombe, who declared he never saw it.

That

That your Petitioner then got up a third petition, at the same expense and trouble, and was delayed until after the appointment of a new Secretary of State for the Colonies, and a new Governor, who knew nothing of the matter; and through Mr. Newcombe's wilful delay an unfavorable answer was returned.

That your Petitioner waited until Sir Maurice O'Connell assumed the Government of the Colony, who with the advice of the Attorney General recommended your Petitioner's case to the Court of Claims. The case was then postponed three separate months, running your Petitioner to still further expense, which your Petitioner could ill afford.

Meanwhile Governor Fitz Roy arrived, and after examining some of the witnesses, the Court awarded your Petitioner one hundred acres, which your Petitioner conscientiously refused.

Your Petitioner was next summoned by Mr. Pearce, the Commissioner of Crown Lands, into the Police Court, who remarked your Petitioner had left it out of his power to befriend him, by having accused a highly respectable officer of what he was certain he was incapable of doing; however the magistrates decided in favor of your Petitioner.

Mr. Pearce next brought the case before the Supreme Court, and judgment went by default, your Petitioner having no means to support him against so powerful an antagonist. Mr. Pearce then brought an ejection, broke into your Petitioner's house (ill with influenza and absent from home at the time), threw everything your Petitioner possessed into the open air, and lastly pulled down your Petitioner's house, two men carrying away the materials, whilst Mr. Pearce's subordinates stood by to protect them.

That your Petitioner further states he applied more than once for his discharge and pay from the Royal Marines, and that Lieutenant General Sir Maurice O'Connell received an answer; that your Petitioner's pay was kept for fourteen years at the Division, and was then sent to Greenwich, where your Petitioner must appear to recover it.

That your Petitioner having now been for so lengthened a period in this Colony, is borne down with old age (upwards of 82) and infirmities, and unable to undertake the fatigue and expense of the long voyage necessary to qualify him to recover his claims on the corps in which he served when he first landed in New South Wales.

That your Petitioner having resided on Millwood Farm for upwards of forty years, reared a large family, cultivated, planted vineyards, erected houses, &c., on the land he was promised upwards of half a century ago, and looked upon as his own, under the sanction of the constituted authorities of the Colony, appeals to your Honorable House that redress may be granted to him.

And your Petitioner trusting your Honorable House may be ever ruled only by a sense of what is due to your obligations to God and your country, will as in duty bound ever pray.

WILLIAM HENRY.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 37. TUESDAY, 6 DECEMBER, 1859.

15. Grievances:—Mr. Parkes moved, pursuant to *amended* notice,—
1. That a Select Committee be appointed to inquire into and report upon the allegations contained in the several undermentioned Petitions:—
 - (1.) The Petition of Cornelius Delohery, presented to the Legislative Assembly, December 9th, 1856.
 - (2.) The Petition of James Pegg, presented to the Legislative Assembly, August 18th, 1858.
 - (3.) The Petition of Frederick Dunbar, presented to the Legislative Assembly, September 1st, 1859; together with the Papers referred to in such Petition.
 - (4.) The Petition of John Malley, presented to the Legislative Assembly, September 16th, 1859.
 - (5.) The Petition of Edwin Tyler, presented to the Legislative Assembly, November 29th, 1859.
 2. That such Committee consist of Mr. Flood,* Mr. Rotton, Mr. Pemell, Dr. Lang, Mr. Macleay, Mr. Nott, Mr. Dickson, Mr. Laycock, Mr. Black, and the Mover.
- Debate ensued.
Question put and passed.

* Seat vacant, 16 January, 1860.

VOTES No. 55. FRIDAY, 3 FEBRUARY, 1860.

16. Mr. Isaac Nichols:—Mr. Parkes moved, pursuant to *amended* notice, That the Petition of Mr. Isaac Nichols, presented by him on the 1st instant, be printed and referred to the Select Committee now sitting on Grievances.
Question put and passed.
Ordered to be printed and referred accordingly.

VOTES No. 59. FRIDAY, 10 FEBRUARY, 1860.

19. William Henry:—Mr. Parkes moved, pursuant to *amended* notice, That the Petition of William Henry, presented by him on the 7th instant, be printed and referred for consideration to the Committee now sitting on Grievances.
Question put and passed.
Ordered to be printed and referred accordingly.

VOTES No. 61. WEDNESDAY, 15 FEBRUARY, 1860.

8. Grievances:—Mr. Parkes, as Chairman, brought up a Progress Report from the Select Committee on Grievances, in reference to the case of John Malley, whose Petition was referred to the Committee on the 6th December last.
Ordered to be printed.

VOTES No. 65. THURSDAY, 23 FEBRUARY, 1860. A.M.

14. Grievances:—Mr. Parkes moved, pursuant to notice, That Mr. Wisdom be added to the Committee on Grievances, in place of Mr. Flood.
Question put and passed.

VOTES

VOTES No. 87. FRIDAY, 27 APRIL, 1860.

1. * * * * *
- Committee on Grievances:—Mr. Parkes, by leave of the House, moved, without previous notice, That the Select Committee on Grievances have power to report the Minutes of Evidence taken before them, from time to time, to the House.
Question put and passed.
2. Mr. John Malley:—Mr. Parkes, pursuant to leave granted, brought up and laid upon the Table the Minutes of Evidence taken before the Select Committee on Grievances, in the case of Mr. John Malley, and moved that the same be printed.
Question put and passed.
Ordered to be printed.
-

VOTES No. 122. TUESDAY, 3 JULY, 1860.

6. Grievances:—Mr. Parkes, as Chairman, brought up a Second Progress Report from the Select Committee on Grievances, in reference to the Petitions of Edwin Tyler and William Henry, which were referred to the Committee on the 6th December, and 10th February last, respectively,—together with the Proceedings of the Committee and Minutes of Evidence.
Ordered to be printed.
-

1859-60.

GRIEVANCES.

(PETITIONS OF EDWIN TYLER AND WILLIAM HENRY.)

SECOND PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 6th December, 1859, "to inquire into and report upon the allegations contained in the several undermentioned Petitions:—

- (1.) "The Petition of Cornelius Delohery, presented to the Legislative Assembly, December 9th, 1856.
- (2.) "The Petition of James Pegg, presented to the Legislative Assembly, August 18th, 1858.
- (3.) "The Petition of Frederick Dunbar, presented to the Legislative Assembly, September 1st, 1859; together with Papers referred to in such Petition.
- (4.) "The Petition of John Malley, presented to the Legislative Assembly, September 16th, 1859.
- (5.) "The Petition of Edwin Tyler, presented to the Legislative Assembly, November 29th, 1859"—

also, on the 3rd and 10th February last, respectively,—

- (6.) "The Petition of *Isaac Nichols, presented" to the Legislative Assembly, February 1st, 1860.
- (7.) "The Petition of William Henry, presented" to the Legislative Assembly, February 7th, 1860,"—

and who, on the 15th February last, brought up a *Progress Report* in reference to the fourth of the said Petitions, and upon the 27th April after, when empowered "to report the Minutes of Evidence taken before them from time to time," also reported the Minutes of Evidence in respect of such fourth Petition,—have agreed to the following Second Progress Report:—

Your Committee have taken evidence in the matter of the Petition of Edwin Tyler, from which they find that the estate of Jesse Tyler, the Petitioner's uncle, who died intestate, in August, 1855, was in the hands of the Curator of Intestate Estates for several years, without being collected, until the Petitioner himself released it by obtaining Letters of Administration. The delay that occurred is attributed by the Acting Curator, Mr. Mackechnie, to various causes, such as the remoteness of the situation of the property, the difficulty of obtaining information in respect to it, the insufficiency of the funds authorized for the purpose by the
Judge's

Judge's order, and the interference of a relative of the deceased ; but the whole circumstances, in the opinion of your Committee, go far to establish the inefficient working of the Curator's office, which seems to be most felt in those cases where, for the protection of the humbler portion of society, it ought to be most effective.

In this case the Intestate, who was a servant on a station in the western interior, more than 350 miles from Sydney, left property consisting of twenty-five horses, £71 in cash, and some personal effects, which has not been collected up to the present time. But as it appeared from the evidence that the Petitioner had obtained Letters of Administration, your Committee considered the matter thereby removed from their inquiry.

The case of Mr. William Henry has also been considered by your Committee. The Petitioner claims the right to a grant of one thousand acres of land promised to him by Governor Bligh, which promise, he alleges and adduces some evidence to shew, was confirmed by Governor Macquarie. The claim put forth depends upon very frail links of positive evidence, and has been entangled by a correspondence and repeated investigations extending over a period of many years. It is now more than half a century since the promise, as alleged, was first made, and the land selected at Lane Cove ; and the Petitioner does not appear to have been exempt from the looseness in transactions of the kind which prevailed in those early days of the Colony. Your Committee have taken the evidence of Henry himself, and of several other witnesses, and they have also examined a mass of papers on the subject, placed before them by the Secretary to the Board of Claims, from which they have gathered the following as the principal facts of the case.

There is no doubt that William Henry, who, as stated by himself, was principal overseer of public works under Governor Bligh, was a person in whom His Excellency reposed much confidence, and that he was confidentially employed by him at the time of his arrest, and kept up a secret means of communication between him and his adherents on shore after he was deposed by the military insurgents. The identity of the Petitioner is proved by the evidence of Captain O'Connell, the grandson of Governor Bligh ; and the nature and value of his services appear to be established by the strong written testimony of the late Mr. William Gore, Provost Marshal of the Colony, as well as by other circumstances. It is also beyond doubt that he severely suffered for his fidelity, as he was arrested by the "Rebel Government," and carried away from his family to Newcastle, which was then a penal settlement, where he was confined until the arrival in the Colony of Governor Macquarie, and was subjected to the degrading punishment of one hundred lashes, inflicted upon him without form of trial and in violation of law. From these circumstances, it is submitted, the mere reasonableness of the Petitioner's allegation that a grant of land was promised him in consideration of his services and his sufferings is sufficiently apparent. It would have been strange indeed if he had met with no promise of reward in times when grants of land were so freely bestowed on others with little or no consideration.

The

The strongest evidence that Governor Bligh actually made this promise is that of Mr. Gore, who fully confirms Henry's own statement, in all respects except the extent of the promised grant. Though the Petitioner handed in to your Committee only a copy of Mr. Gore's memorandum, they have had an opportunity of examining the original among the papers in the possession of the Court of Claims, which also contain another certificate of Mr. Gore's, dated October 21, 1837, to the same effect. That Henry's claim to the thousand acres was acknowledged by Governor Macquarie has been distinctly sworn by Daniel Thurston, who, before the Court of Claims on the 19th of October, 1846, gave the following evidence:—"I was in the Colony in the year 1820, and some time " previously. I held the situation of Clerk of the Musters. I was present " at a muster held in 1820 at Sydney, in Hyde Park Barracks. I saw " William Henry, the claimant in this case, there. After William Henry " had given his account of his family, he made a complaint to Governor " Macquarie that 1,000 acres of land promised to him by Governor " Macquarie at Lane Cove had not been measured. Governor Macquarie " replied that he had given directions for the measurement—that he " thought it had been done, and that he would see that the 1,000 acres " was measured at the earliest opportunity—that he would give direction " to Meehan. I heard Governor Macquarie say to Sir John Jamison that " his reason for being so liberal to Henry was on account of the persecu- " tion he suffered from the Rebel Government." But perhaps the most convincing proof of the equity of his claim is to be found in the conduct of Henry himself, who, on his liberation from his illegal imprisonment at Newcastle in 1814, immediately retook possession of the land he had selected several years before under the alleged promise of a grant from Governor Bligh, settling upon it with his family, building huts, planting orchards, and treating the property in every way as his own, and making application to each successive Governor to get his title perfected. In this respect your Committee cannot understand the reasoning of the Commissioners of Claims who gave an adverse decision on his case. In 1821 Henry received from Governor Macquarie a grant of forty acres of land in the neighborhood of the thousand acres where he resided, and the Commissioners, without a tittle of evidence to support such a presumption, think it possible that he may have received this in fulfilment of some general promise of land in consequence of the hardships he had suffered. "The whole of Henry's subsequent actings," say the Commissioners, "negative the presumption that he ever received a promise of a thousand " acres of land. He sold his forty-acre grant, and went to reside on the " adjoining Government land, where he erected a log-house, and cleared " and planted a garden, and a small vineyard, and continued to fell the " Government timber, which he sold." The actings of Henry, as here described, in the opinion of your Committee, shew that he proceeded *bona fide* in holding possession of the land first selected, as does all his subsequent conduct, if considered in the light of the circumstances of suspense, disappointment, and uncertainty which accumulated upon him. On the other hand, if his services and sacrifices in the cause of Governor Bligh are admitted—and they appear to have been admitted by the Commissioners—

it is scarcely less than absurd to imagine that any Governor would have offered to reward him for them by a grant of forty acres of land at Lane Cove forty years ago.

The Petitioner was forcibly ejected from the land in 1850, by Mr. S. H. Pearce, Commissioner of Crown Lands for the County of Cumberland. Mr. Pearce has given evidence before your Committee, and they have carefully read that gentleman's report on the case addressed to the late Governor, Sir Charles Fitz Roy. Mr. Pearce principally relies, in support of his decision, on the alleged fact that Henry, in 1829, applied to the Government for a lease of the identical thousand acres of land which he claims to have been promised to him in fee. The Commissioners of Claims appear to have fallen into a similar error. But Henry himself clearly explains that the 1,000 acres which he selected under Governor Bligh's promise, and the 1,000 acres which he subsequently leased from the Government were in different localities; and the late Mr. W. H. Wells, an experienced surveyor, who, at the request of your Committee, visited the spot and made a superficial survey of the ground, exhibits their

After page 39. separate situations in a map appended to his evidence.

The evidence of the witnesses examined, in other particulars, corroborates the principal facts stated above, and directly rebuts some of the presumptions advanced in opposition to those facts. Some inconsistencies on the part of Henry are manifest in his later communications with the Government, and it is shewn that he at one time offered to purchase a portion of the land; but it does not appear to your Committee that the genuineness of his claim is materially affected thereby, while that claim certainly had the support of several persons of high respectability who lived nearer the times when it could have been more effectually tested, including the son-in-law of Governor Bligh, the late Sir Maurice O'Connell.

Your Committee consider that the fidelity of Henry to the Government of the day, in a time of successful rebellion, justly entitled him to the grant of land which he alleges was promised to him; and, looking at all the facts, and the reasonable probabilities of the case, they are of opinion that such promise was made as alleged. They, therefore, think he was wrongfully dispossessed, and is entitled to liberal compensation from the present Government for the injury he has sustained.

Your Committee have not been able to enter upon the cases of other Petitioners referred for their consideration. They recommend the appointment of another Committee in the next session of Parliament to consider their respective claims.

HENRY PARKES,
Chairman.

*Legislative Assembly Chamber,
Sydney, 3 July, 1860.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 8 DECEMBER, 1859.

MEMBERS PRESENT:—

Mr. Parkes, | Mr. Dickson,
Mr. Rotton, | Rev. Dr. Lang,
Mr. Pemell.

H. Parkes, Esq., called to the Chair.

Committee deliberated on the course of proceedings to be adopted in carrying on the various inquiries referred to them, and decided upon taking evidence and concluding each case separately, as far as practicable.

The Clerk, by direction of the Chairman, read the Petition of John Malley, referred to the Committee for consideration on the 6th December, 1859.

Mr. J. Malley, *Petitioner*, called in and examined.

The Witness handed in a copy of the agreement (*Vide Appendix A*) entered into by him with the Colonial Agent General,—read by the Clerk.

Examination resumed.—The Witness handed in sundry testimonials of competency and respectability from former employers. (*Vide Appendix B—H*.)

[Committee adjourned till Tuesday, 13th instant, at 10:30 o'clock.]

TUESDAY, 13 DECEMBER, 1859.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Mr. Pemell, | Mr. Laycock,
Mr. Rotton, | Rev. Dr. Lang.

J. Whitton, Esq., *M. Inst. C. E., Engineer-in-Chief of Railways*, called in and examined.

J. Robertson, Esq., *M. P.*, examined.

Captain Martindale, *R. E., Commissioner for Internal Communication*, called in and examined.

Mr. J. Grogan, *Surveyor*, called in and examined.

Committee deliberated, and decided upon bringing up a Progress Report in reference to the case of John Malley.

[Committee adjourned.]

THURSDAY, 2 FEBRUARY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Mr. Macleay, | Rev. Dr. Lang.

Committee met pursuant to summons.

The Clerk, by direction of the Chairman, read the Petition of Edwin Tyler, referred to the Committee for consideration on the 6th December, 1859.

Mr. E. Tyler, *Petitioner*, called in and examined.

The Witness handed in a letter received by him from Mr. Mackechnie, Agent for Curator of Intestate Estates, stating that it would be necessary to take out Letters of Administration to the effects of the deceased,—and the same, by direction of the Chairman, read by the Clerk. (*Vide Appendix (A.)*)

Examination resumed.

The Witness handed in a letter from Johnson and Johnson, attorneys in Sydney, dated 21 March, 1859, addressed to G. Smyth, Esq., barrister-at-law, Castlemaine, Victoria. (*Vide Appendix (B.)*)

Witness withdrew.

And the Committee

[Adjourned till Tuesday, 7th instant, at 10:30 o'clock.]

TUESDAY, 7 FEBRUARY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Rev. Dr. Lang, | Mr. Macleay.

E. A. Mackechnie, Esq., *Agent for Curator of Intestate Estates*, called in and examined.

[Committee adjourned till Friday, 10th instant, at 10:30 o'clock.]

FRIDAY, 10 FEBRUARY, 1860.

A Quorum not being present, no meeting of the Committee was held this day.

TUESDAY, 14 FEBRUARY, 1860.

MEMBERS PRESENT :—

H. Parkes, Esq., in the Chair.

Rev. Dr. Lang, | Mr. Pemell,
Mr. Nott.

Committee met pursuant to summons.

Committee deliberated upon the several cases of John Malley and Edwin Tyler, and decided upon taking the evidence of A. G. Shadforth, Esq., in respect of the latter.

[Adjourned till to-morrow, 15th instant, at 12:30 o'clock.]

WEDNESDAY, 15 FEBRUARY, 1860.

MEMBERS PRESENT :—

H. Parkes, Esq., in the Chair.

Mr. Dickson, | Mr. Pemell.

A. G. Shadforth, Esq., formerly C.P.S., &c., Bathurst, called in and examined.

Witness withdrew.

The Chairman laid before the Committee a Draft Progress Report in reference to the Petition of John Malley.

Committee deliberated.

Motion made (Mr. Pemell) and Question—That this be the Progress Report of the Committee upon the case of Mr. Malley—agreed to.

Chairman requested to report this day to the House.

[Committee adjourned.]

WEDNESDAY, 22 FEBRUARY, 1860.

MEMBERS PRESENT :—

H. Parkes, Esq., in the Chair.

Rev. Dr. Lang, | Mr. Pemell.

Committee met pursuant to summons.

Resolution of the House referring the Petition of William Henry for the consideration of the Committee, together with the Petition itself, read by the Clerk.

M. C. O'Connell, Esq., called in and examined.

[Committee adjourned.]

THURSDAY, 1 MARCH, 1860.

MEMBERS PRESENT :—

H. Parkes, Esq., in the Chair.

Rev. Dr. Lang, | Mr. Wisdom.

Committee met pursuant to summons.

Mr. W. Henry, *Petitioner*, called in and examined.

Witness handed in certain letters and documents for the information of Committee in considering his claim. (*Vide Appendix A, B, C, D.*)

Witness withdrew.

[Committee adjourned.]

THURSDAY, 5 APRIL, 1860.

MEMBER PRESENT :—

Mr. Parkes.

S. H. Pearee, Esq., a witness summoned by direction of the Chairman, attended thereto, but, in the absence of a quorum of the Committee, the meeting called for this day lapsed.

THURSDAY,

III

THURSDAY, 19 APRIL, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Mr. Black,		Mr. Pemell,
Rev. Dr. Lang,		Mr. Rotton.

Committee met pursuant to summons.
 S. H. Pearce, Esq., formerly C. C. L., County of Cumberland, called in and examined.
 Witness withdrew.

[Committee adjourned.]

WEDNESDAY, 2 MAY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Mr. Pemell,		Mr. Rotton.
-------------	--	-------------

Committee met pursuant to summons.
 Mr. W. H. Wells, Surveyor, called in and examined.
 Witness withdrew.
 Mr. W. Henry, Petitioner, called in and further examined.
 Witness withdrew.
 Mr. J. Pegg, a Petitioner whose Grievance stands referred to the Committee, attending in pursuance of summons, not examined to-day.

[Committee adjourned.]

WEDNESDAY, 16 MAY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Rev. Dr. Lang,		Mr. Rotton,
Mr. Pemell,		Mr. Wisdom.

Committee met pursuant to summons.
 W. G. Pennington, Esq., Secretary, Court of Claims, called in and examined.
 Witness produced the Papers in Case No. 1256 (so marked—11 otherwise) in re William Henry (Court of Claims, 1846).
 Witness withdrew.
 Mr. W. Crane, Assistant Clerk, Central Police Office, called in and examined.
 Witness produced Informations by S. H. Pearce, C. C. L., against James Henry and William Henry, dated 24 December, 1850 (former withdrawn 13 January, 1851), together with Depositions, &c., in the latter case v. W. Henry—dismissed 13 January, 1851 (Central Police Court, Sydney.)
 Witness withdrew.
 Evidence of Witnesses on 2nd instant, after revision:—Mr. W. H. Wells' correction in Answers 419 and 422 to be noted at foot of page.
 Copy Government Notice, 16 October, 1828, furnished by witness, having been referred to in his Evidence, ordered to be attached. (Vide Appendix A.)
 Mr. W. Henry—corrected form of answer 466 allowed.
 Addenda to Answers 440 and 490 to appear as Appendix A and B.
 Mr. W. H. Wells, Surveyor, summoned for an earlier hour, at length attending, accompanied by Mr. W. Henry, Petitioner, both parties called in.
 Mr. W. H. Wells, Surveyor, further examined.
 Witness produced two plans,—
 (1.) Survey of ten acres, Parish of Gordon (for Mr. Fuller, by Mr. T. Boyle, 12 May, 1846), being part of the land claimed by Petitioner.
 (2.) Map of the District (Lane Cove, Parish of Gordon, County of Cumberland), shewing the 1,000 acres (green) claimed, a similar extent of land (yellow) leased by Petitioner formerly, and his grant of 40 acres (red) from Governor Macquarie.
 Colored lithograph of the latter to be appended to the Evidence.
 Witness withdrew.
 Mr. W. Henry, Petitioner, present, further examined.
 Witness withdrew.
 Rev. R. Mansfield, called in and examined.
 Witness withdrew.
 Mr. W. Oliver, Settler, Broken Bay, a witness summoned for this day, not in attendance.

[Committee adjourned.]

FRIDAY,

FRIDAY, 8 JUNE, 1860.

MEMBERS PRESENT:—

None.

In the absence of a Quorum of Committee the meeting called for this day lapsed.

THURSDAY, 28 JUNE, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Rev. Dr. Lang, | Mr. Pemell.

Committee met pursuant to summons,
And having deliberated respecting the Evidence in cases of Petitioners Tyler and Henry,—

And settled the nature of report to the House thereon, respectively,—

Requested the Chairman to draft a further Progress Report for consideration to-morrow.

Chairman submitted certain objections to requiring *colored* lithographs of the Map distinguishing the land severally *leased* by, *promised*, and *granted* to Mr. Henry,—ordered to be annexed to the Evidence, at the previous sitting.

Method of delineation proposed in substitution for the coloring, viz.; variously dotting the respective boundaries, approved.

[Committee adjourned till to-morrow, 29th instant, at 12 o'clock.]

FRIDAY, 29 JUNE, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Rev. Dr. Lang, | Mr. Laycock,
Mr. Pemell.

The Chairman stated that he had been unable to devote sufficient time to complete a Report for consideration to-day, as proposed.

Draft of part Report read.

Committee further deliberated, chiefly in elucidation of the grounds of judgment on the claims of William Henry, forming the subject-matter of remaining portion.

[Committee adjourned till Tuesday, 3rd proximo.]

TUESDAY, 3 JULY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esq., in the Chair.

Rev. Dr. Lang, | Mr. Pemell.

Committee met to consider Draft Report.

Draft Report read and considered.

Motion made (*Rev. Dr. Lang*) and *Question*—That the draft, as read, be the Second Progress Report of this Committee—*agreed to*.

Chairman requested to report accordingly, together with the Proceedings of the Committee, and further Minutes of Evidence.

PETITIONS OF

EDWIN TYLER AND WILLIAM HENRY.

EDWIN TYLER—PETITION OF.

THURSDAY, 2 FEBRUARY, 1860.

Present:—

DR. LANG, | MR. LYONS,
MR. MACLEAY.

HENRY PARKES, ESQ., IN THE CHAIR.

Mr. Edwin Tyler called in and examined:—

- Mr. E. Tyler. 257. *By the Chairman:* This is your petition, is it not, which was presented to the Legislative Assembly (*handing a petition to witness*)? It is.
- 2 Feb., 1860. 258. You state in this petition that you arrived in this Colony in December, 1858? I did. Not exactly in this Colony, but in Melbourne.
259. As agent with power of attorney in the estate of Jesse Tyler, an uncle of yours, who died about the month of August, 1855, intestate? Yes.
260. What steps did you take when you first arrived in the Colony? I went to Melbourne, where I thought of finding my brother; but after some trouble I found he had gone to Castlemaine, and I wrote to him to say I had arrived in the Colony, and was going to Sydney about this affair of my uncle. He telegraphed that I had better not go to Sydney, but to Castlemaine, which I did, and I got there on Christmas Day, 1858. On the 27th December I sent two letters that I brought out from my attorney with the registry of my uncle's baptism, and a note from myself, to Mr. Mackechnie in Sydney.
261. What led you to come to the Colony? A letter I received from my brother, who had been in the Colony some time.
262. What did that letter represent? That my uncle had died worth a considerable amount of property.
263. Where did your uncle, Jesse Tyler, reside? He had a station, Enabba station, Lachlan River.
264. Was he a squatter? I cannot ascertain whether the station was his own or not, but I understand it was.
265. What was the character of the property he was said to be possessed of? He had a considerable amount of money about him, which my brother saw, and many horses and cattle, which my brother saw on the station; and he thought the station was his, but I cannot say whether it was or not.
266. What did this letter of your brother represent? That he was worth a considerable amount of property.
267. Will you state more in detail what the letter said? That my uncle had died some time since, and was worth a considerable amount of property, which was in the hands of the Curator of Intestate Estates, and that I had better see my father about it as the property belonged to him. I sent for my father, who was living some distance off, and he came to me, and we consulted together.
268. Where were you, and where was your father living? I was living at West Bromwich, and my father was living at Birmingham—about six miles distant. I received the letter on Sunday morning, and I sent off for him directly. I told him he had better go and see our solicitor about it in Gloucestershire.
269. Did you go from Birmingham to Gloucestershire for legal advice? My father did.
270. Did you both go? My father went and took his advice, and as I had business there in the course of another week I saw him myself, and he gave me the two letters which I have stated I sent to Mr. Mackechnie.
271. You sent those letters from Melbourne? From Castlemaine, with the registry of my uncle's baptism.
272. Did you receive any reply? I waited some weeks and received no reply, and I then wrote again, requesting a reply to my letter. I then received this from Mr. Mackechnie. (*The witness handed in the same. Vide Appendix.*)
273. What steps did you then take? I took that letter to an attorney at Castlemaine, Mr. Smyth, and asked him his advice; he said he could get me the property without my coming to Sydney. I was anxious he should do so, as I did not want to go to more expense. I told him to try to do so, and I paid him five guineas to start with. Well, it went on for some time, and then he received this letter from Johnson and Johnson. (*The witness handed in the same. Vide Appendix.*)
274. What did you do then? I came to Sydney. I landed here in April, 1859, and have been here ever since. I have applied to Mr. Mackechnie, but can make but little of him.
275. What did he say to you? Very little indeed.
276. Did he give you any particulars of the property? He told me I must take out letters of administration, and that I should be obliged to find bond to about treble the amount of whatever property my uncle had left, which he knew I could not do. I went several times to him. Sometimes he would speak; sometimes he would not. If I had been one of the worst men that was ever sent from England as a transport, I could not have been treated worse by him than I was. With that I goes to Johnson and Johnson. Well, it goes on for some time, and then Mr. Mackechnie said he would write to Captain Bagot—the gentleman who took possession of all the property when my uncle died. It then went on a considerable time; and I, from time to time, asked Mr. Mackechnie whether he had got any letter from
Captain

Captain Bagot, and he said "No." I went and went till I got tired, and then I went to Mr. Johnson; he said "It is of no use your going to Mr. Mackechnie, we will take out letters of administration," which accordingly was done. After letters of administration were taken out, Mr. Mackechnie said he had received a letter from Captain Bagot, who was then in Melbourne, and that Captain Bagot said he had turned all the property over to a man named Macdonald, who was on the station. My attorney wrote several letters to try to find out Captain Bagot, and also to the station to find out this Macdonald, but the letters all came back; no such man was to be found, and I do not believe there ever was such a man as Macdonald on the station at all.

277. Have you ever had any communication with Captain Bagot? No; I heard, about a fortnight ago, that he was at North Adelaide, and I have written to him, and expect an answer, if he is there, and will answer my letter in a week or a fortnight.

278. When did you last communicate with Mr. Mackechnie? I cannot tell the date; the last time I was with him I gave the list, of which this is a copy, to my attorney (*the witness handed in the same*):—"5 saddle-horses; 20 unbroken horses; 1 box wearing apparel; some old saddles; 2 guns, and 2 watches; about £71 cash; about £20; about 200 miles from Balranald; 240, Bathurst."

279. There appears to be some confusion as to whether that property has been realized or not? That is the statement of what he said there was, and it is a very small statement too—there was so much ready money.

280. Do you know whether this is in Mr. Mackechnie's handwriting—were you led to understand that from Mr. Johnson? That is the copy which Johnson & Johnson's clerk gave me from Mr. Mackechnie's statement.

281. As an enumeration of the property left by your uncle? ———

282. What was the final answer you got from Messrs. Johnson & Johnson? The last time I was with them they said they could not do any more for me—that they could not find out this Captain Bagot.

283. Can you state whether the property was ever formally taken possession of by the Curator of Intestate Estates, or not? He ought to have taken possession of it.

284. You do not know whether this statement represents what he ascertained officially, or whether it is what some one reported? I suppose it is the statement he got from Capt. Bagot.

285. Will you be good enough to state whether you have any business in this Colony, or whether you came here expressly to look after this property? I came here expressly as the agent for my father, to look after this property, believing that it would be sufficient to maintain my father in his old age. My money has been spent, my business lost at home, my health broken up, ———

286. Have you a wife and family at home? Yes.

287. What are you doing at present in the Colony? I am working for Mr. Russell as pattern-maker and joiner.

288. You have sought work just while you remain in the Colony? Yes; I have not worked before for years with my own hands, but I have been obliged to do so now, for I have spent all my money, and have no other means of subsistence.

289. If this matter had been settled you would have returned at once? Yes.

290. You have no intention of settling in the Colony? No; but I cannot go home now, and I cannot send for my family. There is something wrong about this, for Mr. Mackechnie said he did not receive my first power of attorney which I sent from Castlemaine, and I was obliged to send to England for this (*producing a power of attorney.*)

APPENDIX.

Jesse Tyler, deceased.

Supreme Court House,
Sydney, 24 January, 1859.

Sir,

In reply to your notes herein, I have the honor to inform you that it will be necessary for you to take out letters of administration to the effects of the deceased, whether you apply to the Court on your own behalf, or as attorney for your father.

Security for the due administration of the estate will be required.

Mr. Edwin Tyler,
Iron House, Barkley-street,
Castlemaine, Victoria.

I have, &c.,
E. A. MACKECHNIE,
Official Assignee.

181, Pitt-street,
Sydney, 21 March, 1859.

Re Jesse Tyler, deceased.

Dear Sir,

The notice to apply for letters of administration will appear in to-morrow's *Gazette*. The Term commences on the 11th April and ends the 4th May, and application may be made to the Primary Judge for administration on Tuesdays and Fridays in Term. Mr. Tyler can, therefore, make his arrangements to come here to suit his own convenience.

We again direct your attention to the necessity of each surety justifying by affidavit to the amount of the Administration Bond.

The Curator has not got Mr. Tyler's power of attorney, nor does he know anything about it; he suggests that it may be with Mr. Serjeant or Mr. Shadforth, at Bathurst; but as the Court will grant letters of administration to the next of kin within the jurisdiction of the Court, we have prepared the papers accordingly in Mr. Edwin Tyler's own name as the nephew and one of the next of kin.

The Curator says that the effects of deceased were estimated at about £300. Your letter says £900.

George Smyth, Esq.,
Barrister-at-Law,
Castlemaine, Victoria.

We are, &c.,
JOHNSON & JOHNSON.

TUESDAY, 7 FEBRUARY, 1860.

Present :—

DR. LANG, | MR. MACLEAY.

HENRY PARKES, ESQ., IN THE CHAIR.

Edmund Augustus Mackechnie, Esq., called in and examined :—

E. A. Mackechnie, Esq.
 291. *By the Chairman* : You are, I believe, Curator of Intestate Estates? I am only agent for the Curator. Even that appointment I resigned at the end of the year, and I am now merely carrying on the duties at the request of the Attorney General.

7 Feb., 1860. 292. Have you read the petition of Edwin Tyler? I have.

293. Will you be kind enough to state what you know of this case? Simply that in April, 1856, Mr. Serjeant, of Bathurst, wrote a letter stating that Jesse Tyler, the uncle of the petitioner, had died intestate, and requesting the Curator to interfere, at the same time he stated that there was a nephew in the Colony, Mr. John Tyler, and gave some account of the assets which are in the hands of Mr. Bagot, who, I believe, is a very wealthy squatter, and he said that the nephew from want of means could not act. He, therefore, requested the Curator to interfere.

294. Who is the Curator? Mr. Raymond at present.

295. What steps were taken? That letter I submitted to His Honor the Chief Justice, at the same time remarking, that as there appeared likely to be a great deal of trouble and expense in collecting the estate, the Curator should not interfere. His Honor made an order on this condition, which I communicated to Mr. Serjeant in the following terms :—
 “ I have submitted the document in question ”—that is, the affidavit—“ to His Honor the Chief Justice, and have obtained an order of Court authorising and empowering me to collect the estate of the said deceased. In making the order His Honor desired me to say that as there were no funds in hand belonging to the estate, no greater sum than £20 could be expended by the Court in recovering any property tortiously made away with, but that he was willing the Curator’s name should be used in contesting such matters, provided the necessary funds for law costs were furnished by those most interested. I have by this post written to Mr. A. G. Shadforth, the Curator’s agent at Bathurst, and I have no doubt he will be enabled to make some arrangement for the speedy collection of the estate.” I, by that same post, wrote to Mr. Shadforth, and said, “ I have this day written to Mr. Serjeant, to whom you had better apply should you require any information respecting the above matter not contained in the copy letter herewith enclosed. You will please take immediate steps for the due collection of the estate—and if not enabled personally to attend to it, a trustworthy collector had better be employed by you—perhaps one of the constabulary would be the most fit person. I transmit also a copy of the order of Court, as some trouble may be experienced in the matter.” After that order was obtained we received this letter from Mr. Bagot :—“ I beg to inform you that a storekeeper, named Jesse Tyler, in my employment, died intestate at my station of Enabba, on the Lachlan River, nearly six months since. He was, I believe, a native of Gloucester, in England, where he left some family—I think, a daughter—about 25 years since. He was transported to this country—poaching; and he has left the sundries mentioned beneath,—About 5 saddle horses, about 20 unbroken horses, a box of wearing apparel, some old saddles, 2 guns, and 2 old watches, and about £71 in cash. He owed about £20. My manager, Mr. Alexander M’Donald, has all the above in his charge at Enabba station, about 200 from Balranald, and 240 miles from Bathurst. I could obtain £15 a-head for the saddle, and £5 a-head for the unbroken, horses on this station, which I consider would be fair prices, as they are very wild, and a serious expense would be incurred in mustering and taking them to a distant market. In any circumstances I would recommend them being disposed of as early as possible. I shall be glad to facilitate your wishes, if possible.” I acknowledged the receipt of that letter, and informed Mr. Bagot that the estate was in the hands of Mr. Shadforth, the agent of the Curator at Bathurst; he being so much nearer to Mr. Bagot than myself. Mr. Shadforth then writes to me as follows :—“ In the estate of Jesse Tyler. I do myself the honor to inform you that I have written to Mr. M’Donald, Mr. Bagot’s superintendent at Enabba, requesting him to forward to me any moneys in his hands in this estate, as well as any papers that may have belonged to the deceased, and, on hearing from him, will communicate with you. I know the great distance at which Enabba, where the cattle (if any) and horses of the deceased are running, is from Bathurst, or any market to which the stock could be taken. I would beg strongly to recommend that Mr. Bagot’s offer of disposing of the stock for the estate privately be accepted, as, if the stock only consists of what Mr. Bagot mentions, the cost of collecting them by the court, and of selling them, would leave a far less sum as the net produce than that which Mr. Bagot says he can procure. I should mention that I have been informed that Mr. Bagot was largely indebted to the deceased for cattle which he had purchased from him; but, at present, my information is not derived from a reliable source, and, at present, I have no means of obtaining further knowledge of the matter. I believe Mr. Bagot is a person of high respectability.” Then he writes and asks me whether I will close with Mr. Bagot’s offer; and the reason I did not close is, that it is a standing rule that no property shall be sold by the Curator by private contract, but invariably by public auction. There was a case when Mr. Milford was Curator of Intestate Estates where he made a private sale; and although it was supported by the affidavits of two respectable persons, shewing that the price he obtained was fair and reasonable, there was a committee of inquiry about it, and I believe a good deal was said about the matter. That

was the reason I did not accept the offer on my own responsibility, but in deference to Mr. Shadforth's letter I submitted it to His Honor Mr. Justice Therry, and he directed me to accept it. I then wrote to Mr. Shadforth in these terms—"I do myself the honor to inform you that I have submitted the papers in the estate of the person named in the margin (Jesse Tyler) to His Honor Mr. Justice Therry, who is of opinion that under the circumstances no better course can be adopted for the disposal of the property than to accept Mr. Bagot's offer. His Honor also thought that Mr. Bagot should be called upon for a statement on oath as to the effects in his possession belonging to the estate of the deceased. As I have already apprised Mr. Bagot that the estate is in your hands for collection, and that you would communicate with him on the subject matter of his offer, I have now only to request that you will complete the collection of the estate in accordance with the opinion of His Honor as early as possible." Then Mr. Shadforth appears to have done nothing in the matter from August till December of the same year; and I wrote, as follows, to him, 16th December, 1856:—"As the year is drawing to a close, and it will be necessary for me before the beginning of the next to report to the Curator the reasons why the outstanding estates in my hands have not been collected, I have to request, to enable me to do so, that I may be informed of the steps you have taken towards collecting the estates of the persons named in the margin, and the present position of the same." He answers to that, "I received a letter from Mr. Bagot stating that he has sold the horses, the principal assets in this estate, to a Mr. M'Donald, for £5 a head, to be paid as soon as they can be collected, which Mr. Bagot is having done. And Mr. Bagot has also undertaken the disposal of the remainder of the deceased's effects—I have as yet received no money." So that we were prevented by the original condition, in which the order was granted, from exceeding £20 in collecting the estate; and as we had no money, we should have had to petition the Government, and state the circumstances very fully before we could have obtained even the £20. And that sum would not have been sufficient to have defrayed the expenses of proceeding to Mr. Bagot's station personally to collect the assets in the estate, or of employing any trustworthy person to do so. Another reason why we did not press this matter very much was that the nephew, young Mr. Tyler, was constantly endeavoring to obtain letters of administration. And it was daily expected the estate would be taken out of the hands of the Curator. Several letters were received from John Tyler, in one of which he said he had obtained letters of administration; but on making search in the prothonotary's office I found they had not been granted. I was in daily expectation that John Tyler would be able to act in the estate, and the property being at so great a distance from any of our agents, and having no funds in hand the Curator did not further interfere for some time, although the instruction given to Mr. Shadforth to complete the collection of the estate remained in full force.

296. Nothing further was done? No, except that a further communication was addressed by me to Mr. Bagot, and subsequently Edwin Tyler obtained letters of administration, but having no funds of his own he appeared to be under the impression that Government ought to find funds to enable him to obtain and realize the assets left by the deceased. The assets, or the proceeds thereof, can easily, I should imagine, be procured from Mr. Bagot by the administrator.

297. *By Mr. Macleay*: Mr. Bagot has not been applied to since? Yes; but I believe he is in England, and only Mr. M'Donald is on the station.

298. *By the Chairman*: Are you aware, as a fact, that he is in England? I have only heard so.

299. *By Dr. Lang*: The whole of the funds are in Mr. Bagot's hands? Yes; our agents have received nothing. Mr. Edwin Tyler has full power as administrator to act in the matter.

WEDNESDAY, 15 FEBRUARY, 1860.

Present:—

MR. DICKSON,

MR. PEMELL.

HENRY PARKES, ESQ., IN THE CHAIR.

A. G. Shadforth, Esq., called in and examined:—

300. *By the Chairman*: You filled an office of some public character at Bathurst? Yes.

301. Will you be kind enough to state what it was, and how long you held it? I held the office of Clerk of Petty Sessions, and several others, from September, 1851, to November, 1858.

302. Were you agent for the Curator of Intestate Estates? Yes.

303. Do you recollect any application being made to you from the office in Sydney respecting the property of a man named Tyler, who had died on the station of a Mr. Bagot? I remember the name of Mr. Bagot in connection with some application, I do not positively recollect the names of the parties concerned further than that.

304. Do you recollect writing to Mr. Bagot with respect to the property of this person? Yes, I do.

305. Can you state in substance what answer you got from Mr. Bagot? It is so long ago that I cannot tax my memory.

306. Did you write the substance of Mr. Bagot's answer to the agent in Sydney at the time? Yes.

307.

E. A.
Meehan,
Esq.
7 Feb., 1860.

A. G.
Shadforth,
Esq.

15 Feb., 1860.

- A. G. Shadforth, Esq.
15 Feb., 1860.
307. And it will be found in his possession I suppose? I suppose so.
308. Can you state to the Committee who Mr. Bagot is and where he is now to be found? No, I cannot; he was in the Melbourne district I think.
309. You cannot state to the Committee where he is at the present time? I know I wrote to Melbourne to him, but I cannot say where he is now. I think I received an answer from him, and that answer was sent to the agent of the Curator, and in it will, doubtless, be found his address.
310. Do you remember where his station was? I think on the Lachlan, but I cannot speak positively.

WILLIAM HENRY—PETITION OF.

WEDNESDAY, 22 FEBRUARY, 1860.

Present:—

DR. LANG,

MR. PEMELL.

HENRY PARKES, ESQUIRE, IN THE CHAIR.

Maurice Charles O'Connell, Esq., called in and examined:—

- M. C. O'Connell, Esq.
22 Feb., 1860.
311. *By the Chairman:* You are a son of the late Sir Maurice O'Connell, who formerly was Commander of the Forces here, and for some time administered the Government of this Colony? Yes.
312. The petition of William Henry, which you have just heard read, has been referred to this Committee to consider the various allegations in it, and to report to the House on the merits of the petitioner's case. Can you state to the Committee whether you have any knowledge of the petitioner? I have no knowledge of the facts of the case mentioned in his petition; but I perfectly recollect his person, and the circumstance of his having been frequently in attendance upon my father, with reference to the claim he had upon the Government; and I know that my father interested himself in his case, and endeavored to obtain for him what he supposed to be a just adjudication on his claim.
313. The petition states that Sir Maurice O'Connell recommended his claim for the land? I believe he did.
314. I believe Lady O'Connell was a daughter of Governor Bligh? She was.
315. Have you ever heard from Lady O'Connell, or from Sir Maurice, any statements as to this person having been in the employment of the Government in Governor Bligh's time, as he states in his petition? I cannot say I do recollect any conversation having reference to the subject. I can only state that I am aware generally that both Sir Maurice and Lady O'Connell were interested about the man.
316. You cannot say, then, that he was engaged in the confidential service in which he states he was employed at the time of Governor Bligh's expulsion? I cannot.
317. Nor can you speak as to his integrity during that period, with respect to the secret communications which he alleges he kept up between Governor Bligh and his adherents? I have no knowledge of the facts.
318. Except what you infer from the interest Sir Maurice and Lady O'Connell took in him? Exactly.
319. But you have no hesitation in giving your opinion as to the identity of this petitioner with the William Henry in whose case Sir Maurice O'Connell took this interest? None whatever.
320. I presume, then, that there is nothing further that you can state to the Committee to assist them in their inquiry? Nothing. I have no personal knowledge of the facts, they having occurred before I knew anything of the Colony.
321. You recollect this person applying to your father? Perfectly. I am afraid I do not know any person in the Colony who could aid you. There is an old servant of Governor Bligh's alive still, a woman, who was in his service at the time alluded to in the petition; but I have asked her if she recollected anything about Henry, and she could not call the name to her recollection.
322. When you have heard Sir Maurice and Lady O'Connell speak of this person, William Henry, did they ever speak of him as having been ill-treated by what is called in his petition the "Rebel Government;" you will observe that he alleges that he was illegally arrested and carried away to Newcastle, and that he there underwent the punishment of flogging; did you ever hear Sir Maurice or Lady O'Connell speak of anything of the sort? If they did, I cannot call it to my recollection at the present moment. The facts of which he speaks happened before I was born. I am quite aware that the impression on my father's mind was that he had been badly treated.
323. You must have heard him speak of the case more than once? I have heard him say it was a very hard case.
324. Sir Maurice appeared to be convinced that he was justly entitled to this land? Yes, I think so.

THURSDAY,

THURSDAY, 1 MARCH, 1860.

Present:—

DR. LANG,

MR. WISDOM.

HENRY PARKES, ESQ., IN THE CHAIR.

Mr. William Henry called in and examined:—

325. *By the Chairman*: Will you look at this document? (*Witness' petition to Legislative Assembly produced.*) I do. Mr. W. Henry.
1 Mar., 1860.
326. Is that your signature to the petition? Yes; that is my handwriting.
327. Is this your petition to the Legislative Assembly? It is.
328. Do you know its contents? Yes. I read it all over when I signed it.
329. When did you arrive in this Colony? I came out here first in the year 1800. I went home again, and arrived the second time in H.M.S. "Investigator."
330. You held some office under Governor Bligh? Yes, I was senior subordinate officer under Governor Bligh when he was arrested. When they had arrested him, the Rebel Government sent for me, and wanted me to sign the requisition to put Governor Bligh under arrest. It was Major Johnston who sent for me, and I said that Governor Bligh was arrested already, and how could I sign to put him under arrest.
331. You did not sign then? No; I would not, though he offered me very great proposals if I would do so.
332. What did he offer you? He told me that any station in the Government that I was capable of filling he would give me; or land, or cattle, or anything else I proposed. He said that I was a young man, and that I had a rising family, and that I had better take his offer, for that Governor Bligh would not be able to do anything for me.
333. Who was it made you these offers? Brevet Lieut.-Colonel Johnston.
334. And you refused them? Yes, I did, altogether refused them. I said that, as a private gentleman I would willingly render him any service I could, but that as Governor I could not do so. He gave me fourteen days to consider of his offer; but I told him I did not want that time, as my mind was made up. After that Dr. Harris sent for me, and told me that my services were required no longer. Judge Abbott sent for me after this and offered me ten times as much as Lieut.-Colonel Johnston had done. He said that I might have as much land granted to me as I wanted. I asked him who was to grant it to me, and he said Colonel Patterson would grant it to me. I said that if that was all the security I was to have, I could accept nothing from the Rebel Government. Governor Bligh by this time had hoisted his flag on board H. M. S. "Porpoise." I went to him, and, at his request, held communication for him with the officers of the civil service on shore, though at the hazard of my life. I used to lay out in Cockle Bay pretending to be fishing; and the constables used to come down and watch me over the rocks to see if I was pulling in the fish or not, when they were satisfied and went away I used to deliver my despatches. I used to have the despatches hidden in my boots in case of being overhauled, but I always went well prepared, and woe to the man who ventured to interfere with me.
335. You kept up the communication between Governor Bligh and his friends on shore? Yes, between the officers of the civil service who were under arrest, and Governor Bligh who was on board the "Porpoise." I had to do this, and, at the same time, to keep a sharp look out upon those who were paid, and well paid too, for watching me. Then Brevet Colonel Proveaux took command, and that was the reign of terror if ever there was one. I am sure there was never such a tyrannical Government in any other country. He had spies in every corner, and one hardly dare look, much less speak. At last it went to such a height that the up country settlers began to interfere; and I managed to get about half the regiment to return to their allegiance. Mr. Palmer, the Commissary, came to me and asked me to carry despatches to Governor Bligh requiring him to come back and resume his Government; I got all ready to do this, and I had a small vessel engaged, and I had hired three men for a crew, and we were going to take the despatches to the Governor, when that very night I was seized and dragged through the streets to the guard-house, and was then sent off to the Coal River, to Newcastle.
336. What time was this? At night.
337. At what date? Some time in 1809, I think.
338. *By Dr. Lang*: That would be about twelve months after the rebellion? It was not so long as that. It was just shortly after the rebellion.
339. The rebellion took place early in 1808, and your arrest must have been in the same year? I cannot tell the time exactly; but it was just shortly after Governor Johnston had gone home, and taken Captain Macarthur with him. They had gone just before I was arrested.
340. *By the Chairman*: Then you were arrested in consequence of the part you took in favor of Governor Bligh and of the legally constituted authorities? Yes, most undoubtedly I was.
341. Will you state the circumstances that occurred after you were arrested? I was sent down to Newcastle. They dragged me away, and did not give me time to get either my chest of clothes or my bedding. I was double-ironed, and sent down under the care of Lieut. Lawson.
342. What was it that the authorities laid to your charge—what were you arrested for? Because I was considered by the Rebel Government as a dangerous man to be at large.
343. What happened when you got to Newcastle? When I came to Newcastle I was ordered to go to work, but I refused, as I said I had not been guilty of any offence, and I was

Mr. W. Henry. was not going to work for any Government of rebels. When I said this Lieut. Lawson seized me and dragged me I don't know how far to the triangles. He dragged me along the ground, and tore my clothes off my back; and they tied me up to the triangles and gave me a hundred lashes. He was going to give me a second hundred, when the sergeant of the detachment interfered and prevented him. He told Lieut. Lawson that the man that laid another lash on my back was a dead man.

1 Mar., 1860.

344. And Lieut. Lawson gave you these hundred lashes without any trial? Without any trial, and without any cause of complaint whatever. He never so much as told me what he flogged me for. In the Court of Claims I produced witnesses of this, Mr. Sims and Mr. Crump, but the Commissioner would not hear a word they had to say.

345. What followed after the flogging? I remained at Newcastle until Governor Macquarie arrived, and then he read me out by proclamation.

346. Did Captain Bligh or any other Governor ever promise you a grant of land? Yes, Governor Bligh promised me a thousand acres of land, and four Government men as servants to work it; with four head of cattle from the Government herd, and a horse and forage. But I was to go and do the duty of Mr. Devine, as Superintendent of Convicts, as he was then going under the doctor's hands. He said he could not allow two salaries for the one office, that the Home Government would not allow him to pay two persons for the same thing; but he said he would make it better for me in the end. He told me I should have the thousand acres of land, and four Government men, and four head of cattle, and that he would appoint me Colonial Gunner, until he could get a return from the Secretary of State to the Colonies, to the memorial I had sent in; and then he said, "I will give you ten shillings a day till I get an answer from the Secretary of State—then you will have ten shillings or twelve and sixpence a day for life."

347. Was this before or after Governor Bligh was arrested? About a fortnight or three weeks before he was deposed. I had not taken Devine's place, but I was then looking out for a person to fill the post I then held; and Governor Bligh had told Mr. Gore to fit me up a house near to Government House.

348. Did you ever take any means for getting possession of the land promised? Yes; I took possession of a thousand acres immediately.

349. Where? Over on the North Shore at Lane Cove; but on account of my being sent to Newcastle I did not go and live upon the ground until 1814.

350. How long did you hold possession? I held possession until 1850.

351. Did you ever try to obtain a legal grant of this land? I applied repeatedly through the Government office to the Governor for a deed of grant, but I never got any reply. At last I was informed by Mr. Larcomb that it was of no use for me to send in these letters, because he had seen Mr. Secretary Campbell tear them up and stamp on them. Mr. Larcomb said that Mr. Campbell had promised Colonel Proveaux that I should never have any indulgence from the Government so long as he was Secretary. Now I never wished to injure Colonel Proveaux or Major Johnston, or any of them, and I promised never to mention their names in this matter; but they are all dead and gone now, and I consider I am at liberty to speak.

352. Then you never got a grant of land? No; but I am able to prove that Mr. Meehan, the surveyor (for there was no Surveyor General in those days), told me that I was to have it. He asked me in as I was passing his house, and said to me, "I have got orders to measure that thousand acres of land for you, but I am so busy just now in measuring the rebel grants that Governor Macquarie has confirmed, that I have not time to measure the land for you; but," says he, "do you go and take up any quantity of land you like, and where it suits you, and I will take care that it shall be confirmed to you."

353. Have you any witnesses of this? I had three witnesses, but only one of them is left. The other two are dead.

354. Who is the witness you now allude to? His name is William Oliver, and he is now living at Broken Bay. He was a boy, and was living with his father at the time Mr. Meehan told me this. I told him then that I had already taken possession of some land, and he said, "Very well, keep it, and I will measure it out to you as soon as I have got rid of these grants."

355. Have you any letters respecting this promised grant? No, not a word. It was never measured or any thing else, until Captain Bunn had it measured, under Governor Macquarie. Mr. Gore had also taken up some ground there, like myself, under a promise from the Governor, and when the land was measured at that time he brought his matter before the Court of Claims. He had no witness to make his case good, only myself; but my evidence was considered sufficient, and Mr. Gore got his ten acres granted to him. This was in the Court of Claims, and I think Mr. Therry was the Commissioner at that time.

356. Your case was also considered by the Court of Claims, was it not? Yes, it was; and they offered me a hundred acres of land to compromise the matter, but I would not accept them.

357. Because you considered yourself entitled to the thousand acres promised you by Governor Bligh? Yes, of course I did; and I utterly refused to take any thing else.

358. You went to live upon the land after your illegal arrest had been set aside by proclamation? Yes; but I had possession before that, and was seven years away from it.

359. And you kept possession until 1850? Yes.

360. How was it that you came to leave the land then? I was dispossessed by Mr. Commissioner Pearce. He brought me into the Police Court, and Mr. Dowling, I think it was, who was magistrate at the time, made Mr. Pearce pay me for my trouble and expense in coming down to Sydney. The magistrates did not hear the case; they said they had no jurisdiction. Then, after I went home, I was taken ill with the influenza, and whilst I was bad,

bad, and in my bed, he brought my case to the Supreme Court, and a judgment went against me by default. I was old and poor, and had no one to come forward and speak a word for me. Mr. W. Henry.

361. What followed then—did he eject you? Yes. He appeared in the Sydney Police Court against me, and then the magistrates decided for me; but he brought it first before the Supreme Court, when he found I was ill; and then he brought the authorities to my place, and they pulled down my house that I had built so long ago, and that I had lived in for so many years; and Mr. Pearce's deputy stood by, in full uniform, watching the men taking all the materials away. They took them all away, and whether they sold them or gave them away I cannot say. 1 Mar., 1860.

362. Have you resided in Sydney since that time? No; I have been living with my eldest daughter, at Kissing Point.

363. *By Dr. Lang:* Do you think the Colony was going on in a satisfactory way under the Government of Captain Bligh? I am sure, by what Governor Bligh told me; because, though I was only a subordinate officer, he placed more confidence in me than in many others that were my superiors, and used often to talk to me about what he was going to do. I verily believe, from what he said often to me, that he would have made the Colony maintain itself in three years after his arrival, if they had only left him alone; and if I was on my dying bed I would say the same thing. But when Governor Macquarie arrived in the Colony there was a heavy duty upon breadstuffs, and upon many other articles, and even upon the cedar and the rosewood that came into Sydney from the Coal River. They charged a duty of threepence a foot upon it. They also charged upon every convict whose time was elapsed—whether man or woman they made him or her pay five shillings for clerk's charges. All this was done under Mr. Secretary Campbell. He wanted the Treasury bag filled for his own purposes, and that was the way he did it.

364. Do you consider Governor Bligh to have been an honest man? He was a very strict disciplinarian, but there was not a sentiment in him but what was true and honest.

365. You would not, from what you knew of him, think him capable of committing an act of downright injustice upon any colonist of that period? No; if you had a complaint to make against any one he would hear your story, and then he would send for the other man and hear what he had to say, and would then do justice between the two of you.

366. Do you think the Colony was thrown back in consequence of his arrest, and of the proceedings that followed it? I have no doubt of it. I am confident that the Colony was thrown back ten years at least by Governor Bligh's arrest.

367. Was not the great majority of the free settlers of that period strongly in favor of the Government and against the rebels? Yes; because Governor Bligh was the only one that ever took an interest in them. He rode round after the heavy flood of 1806, when the cattle, the houses, and everything, were all swept away. He went round to see how matters really stood with the settlers. He found them all in the most utter distress, many of them without a bite to eat, all their grain and everything had been carried off by the flood; so much so that a great many had to turn their Government men in to Government, because they had not the means of feeding them; and they had to pay, for one bushel of wheat, two after harvest, and so in the like manner for tea and sugar. Well, he rode round and told some of the men to come up and meet him at the Green Hills (that is Windsor now), and he would see what could be done for them. He made inquiries then at the Commisariat Stores, and found that there was sufficient grain there to maintain the people until the harvest was gathered in. When he saw the people on Monday he told them this; and he gave them out of the King's store wheat enough to carry them on till harvest time; and took their bonds to pay for it by instalments. He also sent all the Government servants back to their masters. After his arrest, Mr. James Macarthur—that gentleman who wrote those lying books—rode round, after they had Governor Bligh in arrest, and he told the people that he would cancel the bonds they had given to the Government, if they would sign the requisition for the Governor's arrest. Some of the cowardly rascals were mean enough to do so, but not many of them.

368. Are you sure it was Mr. James Macarthur? Yes, I know him very well; and by the same token, he took a notorious vagabond—one Thomas Biggars—round with him, who was sent out here for the murder of a man in the presence of his wife and nine children. He was a great, big, ugly brute of a fellow, that was enough to frighten them into signing anything.

369. Is it true—as has been commonly alleged—that the particular cause of insurrection was the desire of the officers of the New South Wales corps to obtain for themselves the monopoly of the sale of rum in the Colony? Yes, that was it; it was nothing else but that that induced them to arrest him. There was Lieutenant Lawson and several more that returned to the Colony; and immediately on their return he placed them in situations in His Majesty's service; and not only that, but he gave them grants of land; and to such of them as chose to marry their kept ladies he gave marriage portions, so as to make honest women of their kept mistresses; and he also gave portions to their natural children. And in addition to that, he sent Lieutenant Lawson and William Charles Wentworth over the mountains upon Mr. Evans's track, to discover the plains of Bathurst; though they did not discover them, because Mr. Evans had made the discovery before them, and had left his mark there—a crown cut out in the solid rock. William Charles Wentworth might have been a very scientific man, but Lieutenant Lawson was another kind of man. When he came out here he was as ignorant as possible. His orthography was such that he could not spell a word of two syllables. I have seen him spell the word "convicts" in his letters "convix."

370. Where were you on the 26th January, 1808, when Governor Bligh was arrested? I was over at the North Shore, giving directions to my men, and just at sundown I looked over to Government House and saw the ragged dirty regiment all drawn up. I went over to see what

- Mr. W. Henry. what it was all about, and I found that Major Johnston had seized the Governor, and there was the Governor's daughter, Miss Bligh—she was afterwards Mrs. O'Connell—holding on by
 1 Mar., 1860. Major Johnston's chaise, and saying, "where my father goes there I will go." They were trying to get her away, but she insisted upon going with her father.
371. *By Mr. Parkes*: What age are you? I am now in my eighty-second year.
372. You came originally from the North of Ireland? I am from the town of Enniskillen.
373. How many children have you? I have had five; two are dead and three are now living.
374. How many grandchildren have you? Oh! goodness knows; the grandchildren and great grandchildren are too numerous to count just now. I am a great great grandfather. I am now looking on my fourth generation.
375. Is the following a correct list of your progeny: five children, twenty-one grandchildren, forty-one great grandchildren, and two great great grandchildren? Yes, I believe that is correct.
376. Do you know a Mr. Thurston at Parramatta? Yes; I do.
377. What was he? He was Private Secretary to Governor Macquarie.
378. Will you look at the letter produced. (*Letter dated 9th August, 1841, handed to witness*)? Yes, I received that letter. (*Letter read.*)
379. The letter just read was addressed to you by Mr. Thurston? Yes.
380. And he was at one time Private Secretary to Governor Macquarie? Yes, he was. He was Secretary to him about the year 1820 or 1821, and was sitting alongside of Governor Macquarie when he took the Census of the Colony at Hyde Park.
381. You wish to hand this letter in to the Committee in support of your claim? I do. (*Vide Appendix A.*)
382. Do you know one William Gore, who was at one time Provost Marshal of the Colony? I do.
383. Is this letter (*letter dated 8th December, 1842, handed to witness*) from him? No, it is a copy of his letter. I handed his original letter to Governor Gipps's Private Secretary when I laid my case before him. This is certified to be a true copy of that letter.
384. You hand this in also for the guidance of the Committee? Yes. (*Vide Appendix B.*)
385. With regard to this land which you occupied from 1814 to 1850, you have always, whilst in occupation, treated it as your own in every respect? I have.
386. And you have advertised it in the newspapers as your property, cautioning persons not to trespass, &c., upon it? Yes, I have.
387. Do you produce any advertisement of the kind? Yes; I hand in the copy of a newspaper, dated June 28th, 1817, in which is inserted an advertisement cautioning all persons not to trespass on my property, which is there described.
388. Did you insert that advertisement in the *Sydney Gazette* of that date? Yes, I did.
389. Then you treated the land as your own in a public way? Yes; and I laid out my money upon it, and the labor of myself, and my sons, and my Government servants.
390. Do you know Captain O'Connell? Yes, well. I was at his christening.
391. Is this letter now produced signed M. C. O'Connell, dated from Gladstone and directed to you from Captain O'Connell? Yes, it is.
392. And you wish to hand that in to the Committee also? I do. (*Vide Appendix C.*)
393. Here is a note—(*produced*)—from Mr. Newcombe to yourself, dated 14th December, 1838, with reference to your claim—is this his letter? It is.
394. At the time he wrote this he was Chief Clerk in the Colonial Secretary's Office? He was.
395. You hand that letter in also? Yes. (*Vide Appendix D.*)
396. *By Dr. Lang*: Are you aware whether there are any persons who arrived here by the first fleet still alive in the Colony? I do not know for certain; but there is one very old woman still living, who was in the Colony when I arrived.
397. What is her name? Her name is Pawley. She has been a long while in the Colony; and I do not know whether she came out in the first fleet or not, but I rather think she did. She is a Belgian woman, a native of Brussels.

APPENDIX.

A.

Parramatta, 9 August, 1841.

Sir,

In the year 1820, I attended His Excellency the late Governor Macquarie in taking a general Census of the Colony. And at that period I heard Mr. Wm. Henry ask the Governor to allow the surveyor, Mr. James Meehan, to measure the (1,000) one thousand acres of land, which His Excellency had been pleased to promise him, the said Wm. Henry, at Lane Cove. The Governor replied that he would order Mr. Meehan to perform that duty the very earliest opportunity.

Yours, obediently,

D. THURSTON.

B.

Artarmon, North Shore,
8 December, 1842.

HAVING been applied to this day by Mr. William Henry, of Milwood Farm, Parish of Gordon, Lane Cove, for my testimonial of his conduct during the subversion of the Government of this Colony in January, 1808, under the administration of His Excellency the late Governor Bligh, I do most willingly accord to the application of the aforesaid Mr. Henry, in consideration of various facts that have come within my knowledge and personal observation during the foregoing period, by stating that at the time, and several months before, the usurpation of the Government by a mutinous regiment, at that time denominated the Botany Bay, or New South Wales Corps, aided and abetted by a few and factious

factions individuals, who possessed considerable influence in consequence of the wealth they enjoyed in stock of every description, in land, and in money,—all or chiefly acquired by the officers, civil and military, having appropriated to themselves every source from which riches at the time could have been amassed, and enjoying the lucrative and disreputable privilege exclusively of selling spirits, wines, and malt liquors of all kinds,—slops, prints, calicoes, tobacco, soap, starch, candles, pins, needles, and tobacco pipes, and deriving at the same period no inconsiderable addition to their bulky hoards from the soldiers' pay, who were compelled to receive the foregoing articles in lieu of money. I further testify that the aforesaid Mr. Henry, notwithstanding a system of the strictest and most rigorous espionage had been enforced by the Rebel Government, was enabled and actually kept up a communication between Governor Bligh, his friends, and adherents. I likewise testify that it came within my actual knowledge, after His Excellency had been liberated from close arrest, and had proceeded to the Derwent in command of H. M. Ship "Porpoise," that William Henry had been selected by the late Commissary General, John Palmer, Esq., to take charge of a small vessel called the "Edwin," the property of Mr. Palmer, on a secret expedition to Governor Bligh; but suspicion having been awakened in the minds of the Rebel Government, Mr. Henry was invited to call on Major Abbott, then acting as Judge Advocate for the Insurgent Government, for the purpose of inducing him to divulge all such matters as had been confided to him by Governor Bligh, or his adherents—a project having been contemplated about that period, principally by the up-country settlers, to recal Governor Bligh from the Derwent, and to restore him to the Government—but Henry, steadfast in his allegiance and fidelity to H. M. Representative, shunned Abbott's insidious proposition with indignant contempt, although it had been accompanied by extremely flattering conditions. He was, however, very soon after doomed to suffer most dearly for his fidelity—the term of only one short day intervening—his house having been entered after dark by a body of ruffians, under the orders of a constable, who, scarcely allowing him time to dress himself, put him in irons, tore him from his wife and infant family, dragged him, under cover of the midnight darkness, through the streets, and forcing him on board a miserable river craft hired for the purpose, transported him to Newcastle, then a penal settlement, without trial, hearing, or examination. Nay, he was not charged by them with the commission of any offence, or confronted by any witness. At Newcastle he had, in like manner, without trial, been subjected, at the capricious pleasure and for the gratification of a Lieutenant of the Botany Bay Corps, to the most merciless and degrading persecution. This worthless Lieutenant had, in the first instance, been rewarded for the active and prominent part he had played in the revolt against the Government by the appointment of *Aide-de-Camp* to His Excellency Brevet Major Johnston, and in the second instance by having the Command of Newcastle conferred on him, from whence Mr. Henry had not been recalled until Governor Macquarie had assumed the Government of the Colony, by whom he was immediately restored to his home, to his wife, and to his children. Lastly, I testify that Governor Bligh has repeatedly told me he would reward Mr. Henry with a grant of land, as a mark of his gratitude for his fidelity, and, as His Excellency expressed himself at the time, for the sufferings and indignities he had endured on his account—a promise, I have no doubt, that His Excellency intended and would have fulfilled to the letter, had not Governor Bligh been at the Derwent when Governor Macquarie arrived here as Governor and in command of the 73rd Regiment. Governor Macquarie necessarily dispossessed the Insurgent Government of their illegally assumed authority, and being sworn into office on afternoon of the day he first landed, he invited the several civil officers who were then present to attend at Government House to witness the ceremony of his being sworn into office, after which he issued his proclamation, ordering that all the suspended civil officers should forthwith resume the charge of their respective offices. But it was not then possible for Governor Bligh to confirm his promise by bestowing the grant of land he had promised to Mr. Henry.

I do, however, testify that I have repeatedly heard Governor Bligh express his confidence, both in this Colony and in London, that Governor Macquarie would scrupulously confirm all the grants of land he (Governor Bligh) had promised to his friends and adherents, as fully and efficiently as if he had continued in the Government of the Colony.

Mr. W. Henry,
Millwood, Lane Cove.

(Signed) WILLIAM GORE,
Provost Marshal.

POSTSCRIPT.—I have omitted to mention in the foregoing statement that Mr. William Henry was in charge of the Government Establishment in this district at the period to which I have alluded.

C.

Gladstone, 13 December, 1856.

William Henry,

I very much regret I have not sent you your papers at an earlier moment, but the communication between this place and Sydney is so uncertain that I have had great difficulty in keeping up my correspondence, and could seldom prepare all the letters I had to forward by each opportunity as it unexpectedly arose. Your papers have been delayed much longer than they ought to have been in consequence, but I have done for you what perhaps you may find useful; I have thrown your statement into the form of a petition to the Legislative Assembly, and if you can get one of the members to present it and support your case, as the Parliament of New South Wales has now the entire control of Colonial lands, it is possible you may at last obtain justice. Wishing you success in this endeavor.

Mr. W. Henry,
Lane Cove, Sydney.

I am, &c.,
M. C. O'CONNELL.

D.

Colonial Secretary's Office,
14 December, 1838.

Mr. Newcombe has to inform William Henry, in reply to his inquiries, that the Governor has found it necessary to refer again to the Secretary of State his claim to certain land on the North Shore.

William Henry,
North Shore.

THURSDAY, 19 APRIL, 1860.

Present:—

MR. BLACK,
DR. LANG,MR. PEMELL,
MR. ROTTON.

HENRY PARKES, ESQ., IN THE CHAIR.

Simeon Henry Pearce, Esq., called in and examined:—

S. H. Pearce, Esq. 398. *By the Chairman*: You were for some years Commissioner of Crown Lands for the County of Cumberland? Yes; I was Commissioner about eight years.

19 April, 1860. 399. Did you resign your appointment? Yes; and received "the thanks of His Excellency the Governor General, for the zeal and efficiency with which I had performed my public duties."

400. When did you resign your appointment? In 1856.

401. What were your particular duties during the time—I believe your duties were somewhat dissimilar from those of Commissioners of Crown Lands in the interior, in consequence of your being in a metropolitan county? Previous to my appointment, in 1848, there had been no Commissioner of Crown Lands for the District of Sydney and County of Cumberland, and people did as they thought proper on lands belonging to the Crown. They occupied the Crown Lands, and no one had power to dispossess them; my special duty, therefore, was to obtain possession of the Crown Lands which were held illegally, and to prosecute, under certain Colonial Acts, persons whom I found destroying the timber, shrubs, &c.

402. In carrying out your duties what course did you generally take; did you perambulate the county? Yes, I did.

403. All through? Not all through, for it is so very intricate and difficult of access; but all through the County of Cumberland where I could go I did—to Windsor, Penrith, and all the outlying parts.

404. You made yourself perfectly acquainted with all the Crown Lands? As far as I could I did.

405. Did your duties involve the reporting upon eligible lands to be offered for sale? It did; I recommended to Government what lands I thought they ought to sell.

406. A person named William Henry has petitioned the Legislative Assembly in reference to many things; among others he alleges that you in your capacity of Commissioner of Crown Lands entered upon some land occupied by him, and forcibly ejected him—have you seen the petition of this person? I have.

407. Will you state what you know of this case, and what part you took in it? In answer to that question I beg to state that in 1850—I think it was, but I cannot speak positively in the absence of the papers—I waited upon Henry, having heard that he occupied lands that did not belong to him. I went to the place where he was residing, on Blue Gum Creek, near the Lane Cove River, in the parish of Gordon, County of Cumberland. I inquired what quantity of land he was in possession of, and he stated that he was in possession of 1,000 acres of land, which had been promised to him by Government, and from which he had never been ejected. I asked him to shew me the grant or document under which he held possession of the land; but he stated that he could not find it at present, but that he would do so; however, he did not find it at that time. I asked him when he would have the documents ready for me to examine them; for I told him that if he could shew me any title to the land I would not molest him. I gave him six weeks to furnish his title, and at the time appointed I went up to his residence again with the Lane Cove constable. I asked him for the documents which he had promised to furnish, and he brought out a copy of the *Sydney Morning Herald*, in which he shewed me a copy of the "Orders in Council," which had then lately arrived from England. It stated, as far as I remember, that where any person had been in occupation of Crown Lands for twenty years, the Commissioner of Crown Lands had no jurisdiction to dispossess them, or words to that effect. (*Vide Clause in 9th and 10th Victoria.*) However, finding from the correspondence that Henry had not occupied those premises for twenty years without molestation from Government, as the documents will shew; and as he set me at defiance, and told me I had no business on the premises, I thought it my duty, and under my oath of office I was bound, to sue Henry at the Police Court as a person in the unlawful occupation of Crown Lands at Lane Cove, namely, 1,000 acres. I instituted proceedings at the Police Court, and as you will be able to see from the evidence taken in the case, that the statement in his petition is not correct. I believe there were about fourteen witnesses subpoenaed in that case by me, including the Rev. Ralph Mansfield, who it appears in the early part of the matter was employed by Henry to write various petitions and letters which were sent to several Governors and Secretaries of State, respecting this subject. Mr. Miles, who had been Commissioner of Police, was also one of the witnesses. Mr. Mansfield swore that the letters, some of which I will now read to you, were in his handwriting, and were written by the authority of Henry. Perhaps it may be as well if I read the first part of my report to the Government with reference to this matter. This is in answer to a letter sent to me from the Colonial Secretary, requiring my report upon the petition which Henry had sent in after he was dispossessed:—"Blenheim House, Randwick, 23rd December, 1851. Sir,—In returning to you the accompanying memorial of William Henry, transmitted by your letter of the 18th instant, for my report thereon, I have the honor to state, for the information of His Excellency the Governor General, that I have examined all the correspondence connected with this case, and I do not find anything therein to warrant me in giving my decision in Henry's favor, as I consider the whole of
" his

" his statements nothing better than gross fabrications to obtain possession of the 1,000 acres of land, which I shall be able to shew by his own correspondence. 1st. It appears that, on the 30th October, 1813, a grant of 40 acres of land, situate at Lane Cove, was recorded in Henry's favor, which he subsequently sold to C. Pitman, Esq." Before I proceed any further in the matter, I would wish to inform the Committee that from the correspondence it appears this 40 acres was promised to him by a former Governor; and after he had received and disposed of this land he wished to make it appear that this promise was for 1,000 acres. That, however, I will be able to shew by his own letter was not the case; for I have here an application from Henry to the Government to lease to him the 1,000 acres he subsequently claimed.

S. H. Pearce,
Esq.
19 April, 1860.

Application referred to.

" Lane Cove,
" 30 June, 1829.

" Sir,

" I have been duly honored with your letter of the 6th instant, requesting that I would state my object in applying to rent so small a quantity as fifty acres of land adjoining my farm in this neighborhood. In compliance, I beg to state that I had no particular motive in applying for that quantity, other than my not being aware that there was any greater quantity unlocated; but as I am informed by your communication that there is a considerable quantity vacant, I now propose to rent 1,000 acres, bounded on the south by my farm and running in an easterly direction, on the terms specified in my letter of the 19th of last December.

" I am, Sir, &c.,
" WM. HENRY."

Now if you will be kind enough to look at this map you will see that the land he refers to in the above application is the *very land* he now claims. (*The witness produced the Government map.*) That letter was addressed to "The Honorable Alexr. McLeay, Colonial Secretary." "In compliance with this application a monthly lease was granted to Henry for the 1,000 acres as hereinafter described:—'1,000 acres, County of Cumberland, adjoining his (Henry's) farm, in the district of Hunter's Hill, situated between his grant of 40 acres and Lane Cove.' 3rd. In the year 1831, a portion of the 1,000 acres of land so rented by Henry was granted to Robert Ball, and on the 22nd of June in the same year, Henry petitioned His Excellency Governor Darling to be allowed 'to purchase 200 acres of the said land for the object of erecting a tide mill, for which it is adapted, for the possibility of forming a junction of three small creeks thereon.' 4th. In answer to this petition, Henry was informed that '100 acres of the land in question has been granted to Mr. Robert Ball, and that you cannot be allowed to retain any portion of the land. I, therefore, give you notice to deliver up the possession of the whole of the 1,000 acres of land so rented by you, and described in the Government notice of the 9th of September, 1829, as No. 106, within one month from this date, viz.,—William Henry. Bounded by his own land on the north, and extending in a westerly direction.'" So that the Committee will perceive that the land he had rented he had notice from the Government to deliver up. "5th. These letters of Henry's, and the answers I have quoted, clearly shew that His Excellency Governor Macquarie could never have promised him the 1,000 acres to which he has alluded, and that he had not at any time any claim, right, or title to the said land more than that of an ordinary tenant, and that right which he once enjoyed as a tenant of the Crown expired on the 31st of July, 1829, for at that time he was ordered to leave the premises, but he continued to disregard the orders of the Government, by unlawfully occupying and residing thereon. 6th. Henry has continued to petition every Governor who has arrived in this Colony, since the administration of His Excellency Sir Ralph Darling, to obtain a deed of grant for the said 1,000 acres of land, but without effect, as his last petition plainly shews. 7th. In the year 1835 Henry petitioned Lord Glenelg, the Secretary of State, to be compensated for the 100 acres of land which was deducted from the said 1,000 acres, and granted to Robert Ball. The answer to that petition was as follows:—

" ' Downing-street,
" ' 22nd May, 1839.

" ' Sir,

" ' I have received your Despatch, No. 167, of the 18th of October last, transmitting the additional information required by Lord Glenelg, on the representation of William Henry. On the full explanation of the case it appeared to be evident that Henry had no claim to retain possession of any portion of the land; and I can therefore only approve the course adopted by the local Government in this case.

" ' I have, &c.,
" ' NORMANBY.

" ' Sir George Gipps,
" ' &c., &c.'

" 8th. Notwithstanding this decision of the Honorable the Secretary of State, of which Henry was duly apprised, he remained in possession of the said land, and continued to petition the Government for a confirmation of his occupation; and in 1846 he submitted his case to the decision of the Commissioners in the Court of Claims, at which time they investigated all the circumstances connected with the case, and in deciding against him the Commissioners, after relating the other facts of the case, stated as follows:—'After these facts it is impossible to suppose that Henry really believed that he had any claim to the 1,000 acres of land included in this case. The Commissioners are, therefore, unanimously

" ' of

S. H. Pearce, Esq. " of opinion, that Henry entirely failed in proving any claim to the lands included in this case, and therefore rejected his claim." 9th.—Taking all these circumstances into consideration, and the evidence which has, at various times, been adduced to shew that Henry had no right or title whatever to the land in question, I cannot see in what way Henry has received any 'ill-treatment from the officers of the Crown;' but, on the contrary, I consider that he has received great indulgence from the Government in being allowed to occupy the land for twenty years, and to have destroyed all the valuable timber then growing thereon, without paying any rent or making any equivalent for the occupation of the said land; and I may also be permitted to state that it is my decided opinion that Henry has no claim whatever to the land in question, and that he ought not to be allowed to re-occupy any portion thereof.

19 April, 1860.

" I have, &c.,
" S. H. PEARCE, C.C.L."

408. Will you be good enough to state the steps you took to obtain the information embodied in that report? When I received my commission from the Government I was sworn to perform my duty with justice and impartiality to all persons, and I considered it to be my duty to find out all such cases as this. I applied to the Government to furnish me with tracings of all the maps of parishes placed under my care, especially the most important parishes. In the course of my perambulations through the county I found many persons residing on Crown lands who had no right of occupation; and in that way I found out Mr. Henry.

409. What steps did you take to get access to these papers from which you quote? I was instructed in such cases to refer to the Government documents; from those documents I found Henry in the unlawful occupation of that land; and as he could not produce any authority for such occupation, but the notice in the newspaper, I referred to the correspondence; and from it I found that he had no claim to the said land. He had no record of any claim in his possession then known to me, except the lease, an extract from which I have read. I was therefore instructed by the Government to proceed against Henry in a summary way, under the 9th and 10th Victoria. Accordingly I summoned him to the Police Court, and the case was heard before Mr. Dowling and Captain M'Leerie; a barrister and solicitor were employed against me, and, if I remember rightly, fourteen witnesses were subpoenaed in the case. The evidence all shewed that Henry had no right or title to the land; but as we could not prove the delivery of the letter which had been sent by the Colonial Secretary to Henry, requesting him to quit the premises, the case was dismissed. Henry's statement in the petition is, that the magistrates decided in his favor; but it was no such thing—they dismissed the case, because I could not prove that the letter of the Colonial Secretary to Henry had been received by him within twenty years from the time of occupancy to the time of prosecution. I then requested that the Attorney General would take up the matter, and the late Attorney General, Mr. Plunkett, did so; and he commenced an action against Henry, who, seeing no chance of obtaining the land, allowed judgment to go by default. I was then directed by the Sheriff to go with the bailiff and take possession of the land.

410. You have not yet answered my question, as to what steps you took to obtain the documents quoted in the report? I applied to the Colonial Secretary for the documents, and they were all sent to me under cover. I received notice from the Court to attend the Sheriff's bailiff, Mr. Brown, who went up with me to give me possession of the land; when we got there, there was no one in the house, and Mr. Brown turned the furniture out. Henry, understanding what was going to take place, had left the premises, and, as I was informed, was with his son.

411. He did not live on the original 40 acres grant? No; he had disposed of that, but he had a son living on the Crown land besides himself. Mr. Brown turned the things out of the house, and gave me possession; and in the name of the Queen I resumed and took possession of the land accordingly. Henry afterwards petitioned the Government to be allowed to enter the land, and his letter was sent to me by the Colonial Secretary, requesting me to report thereon. (*Letter referred to.*) "In transmitting to you the accompanying petition from Mr. William Henry, praying to be reinstated in possession of certain land on the North Shore, from which he has been ejected by you, I am directed by His Excellency to request that you will furnish me with your report thereon." The report I have read is my report in answer to that letter; and, I believe, if the Committee will refer to those documents, every statement in that report will be supported by the facts as there stated.

412. What are the particular documents you wish the Committee to have from the Colonial Secretary's office? The case of the Queen v. Henry, and also the whole correspondence in the above case.

WEDNESDAY, 2 MAY, 1860.

Present :—

MR. ROTTON,

MR. PEMELL.

HENRY PARKES, ESQ., IN THE CHAIR.

Mr. William Henry Wells called in and examined :—

413. *By the Chairman* : You are acquainted with a person named William Henry ? I am.
414. You are aware that he has addressed a petition to the Assembly respecting a claim to land ? I am.
415. Do you know any of the particulars of his claim, and if so by what means did you arrive at your knowledge ? I am aware that he has the claim, but I know nothing further than that which is contained in his petition and in the various papers that he has handed to me, and on which the petition is framed.
416. You have resided a long time in the Colony, I believe ? Yes, 25 years.
417. And during that period you have practised as a land surveyor ? I have. I was for some time in the Survey Department, and afterwards in the City Surveyor's office.
418. You are aware that Mr. Simeon Pearce was for a long time Crown Lands Commissioner for the County of Cumberland ? Yes, for the Sydney District of the County.
419. He has given evidence before this Committee to shew that Mr. Henry applied to the Government, some years subsequent to the time when he says this land was granted to him, to lease a portion of this land, in which application he makes no reference whatever to the grant to him, but treats the whole matter as if he were applying for a lease in the ordinary way ? I cannot see how this could be. I know that in 1826 or 1827, I forget the precise year, a proclamation* was issued, declaring that all parties in the possession of a freehold estate could lease the lands adjoining their properties on paying a rental of two shillings and sixpence per hundred acres to the Crown. Henry, I know, did apply to lease 1,000 acres alongside his own land—his own 1,000 acres.
420. How do you know this ? I know it from the Government advertisement which appeared in the Sydney *Government Gazette* almost immediately afterwards. All these applications for lease were advertised by the Crown, for general information, prior to their being granted by the Government ; and amongst others Henry's application appears, and in the advertisement the boundaries of the land proposed to be leased are set forth ; and this land is described as land adjoining the freehold of the said William Henry. Now, if Henry had not some right or claim to the land adjoining, the Government would never have inserted that in their advertisement.
421. Do we understand you to say that under the proclamation parties could claim to lease Government land acre for acre with the land they held in fee ? No, it was not necessary that they should have a freehold as large as the land they claimed to lease. Henry, for instance, might have asked for 2,000 acres if he required them ; whilst another person, having less land than him, might have claimed to lease 5,000 acres. Any person having a freehold, that being the only condition, could apply to have land leased to him.
422. From what sources of information do you now give this evidence ? From the *Government Gazette* in which this proclamation† was published.
423. Have you yourself seen that proclamation ? I have, repeatedly. Under it, all parties were allowed to rent ground adjoining their own freeholds to any extent. It was, however, understood that they could be turned off at any time when the land was wanted, on the Government giving one month's notice.
424. Mr. Pearce's evidence goes to shew—and I am under the impression that he quoted from Government documents to prove what he stated, though not having his evidence before me I am not sure upon this point—but he gave evidence to the effect that Henry applied to lease the identical ground which he now says had been granted to him years before ? If that had been the case, the Government would not have put in their advertisement the words “alongside his own ground.”
425. But that would not necessarily infer that there were 1,000 acres alongside ? Henry never had any other land there than the 1,000 acres at that time (1829).
426. Mr. Pearce gives evidence to the contrary. He states that Henry had a grant of 40 acres there, and that, as the grantee of these 40 acres, he applied to the Government to rent 1,000 acres in addition, and that this 1,000 acres thus applied for is the identical 1,000 acres that he now claims to have had granted to him many years before ? Mr. Henry, I think, very clearly explains this matter in his petition to the Government, sent in in 1837. I will read the passage in the petition that refers to this point. It is as follows :—“ That, it being known that your Petitioner had not any written title to the said land, several evil-disposed persons, but particularly Mr. Robert Ball, endeavored to obtain from General Darling a grant thereof in their own favor. That, on this fact coming to your memorialist's knowledge, he immediately made application to the Government, stating the circumstances of his having been so long in possession of the land, and expended so much money and labor in the improvement thereof, and offering to purchase it from the Crown if a grant could not otherwise be obtained.” That petition I now hand in. (*Vide Appendix B.*) As a further proof that Mr. Henry's claim was recognised by the Government, I may mention that

Mr. W. H. Wells.

2 May, 1860.

* NOTE (*by witness upon revision*).—This should be a “ Government notice,” not a “ proclamation.” (*Vide Appendix A.*)

† NOTE (*by witness upon revision*).—This should be a “ Government notice,” not a “ proclamation.” (*Vide Appendix A.*)

- Mr. W. H. Wells. on the 9th March, 1839, the Government advertised 20 acres of ground for sale, which they described in the advertisement as being bounded on the east by Ball's grant, and on the west by William Henry's land. When this advertisement appeared in the *Gazette*, Mr. Henry wrote a letter to the Governor protesting against the sale on the ground that the land advertised formed a portion of that which had been promised to him. In answer to that protest, Mr. Henry received the letter dated 18th March, 1839, which I now hand in.
- 2 May, 1860. 427. May not this advertisement allude to the 40 acres granted to Henry? I am not aware that there is any grant of 40 acres to Henry. I rather think there is not in that locality.
428. Mr. Pearce has shewn us the parish map, in which the grant to Henry is laid down? I am under the impression that the Henry marked in the parish map is a different person altogether. There is a family named Henry at Parramatta, and I think the grant was to one of its members.
429. Do you know all the parish maps of that date? Yes, I made the greater part of them.

APPENDIX.

A.

GOVERNMENT NOTICE.

Colonial Secretary's Office,
16 October, 1828.

WHEREAS, by an Act of the Governor and Council, of the present year, No. 11, intituled "An Act to authorize the Erection of Pounds, and for regulating the Impounding of Cattle," it is enacted, that all cattle found trespassing on the unlocated lands of the Colony are liable to be impounded; and whereas, with the view of further restraining unauthorized individuals from driving and depasturing their cattle in all parts of the Colony, to the great injury of the settled inhabitants, His Excellency the Governor has judged it expedient to permit settlers to occupy, during pleasure, the unlocated lands immediately adjoining their respective grants at a low rent.

Notice is hereby given that settlers in authorized possession of land, whether by grant or by purchase, will be allowed to occupy the unlocated Crown Lands *immediately adjoining* their respective possessions at the rent after the rate of two shillings and sixpence per annum for every hundred acres; but it is clearly to be understood that Government reserves to itself the right of disposing of all lands which shall be occupied under this tenure, and to give possession of them to any other party, upon giving one month's notice to the occupant.

Notice is hereby further given, that persons desirous of occupying land under this regulation are required to apply accordingly by letter, addressed to the Colonial Secretary, describing as distinctly as possible the boundaries and extent of the land applied for, and the extent of their adjoining possession, distinguishing whether the same be held by grant or by purchase.

By His Excellency's Command,
ALEXANDER M'LEAY.

B.

To His Excellency, &c., &c., &c.

The humble Memorial of William Henry, of Lane Cove, a free settler,—

SHEWETH:—

That in the year 1814 your Memorialist, by permission of Governor Macquarie, took possession of a piece of land on the north side of Lane Cove, a branch of the Parramatta River, and has retained possession thereof ever since, and made very considerable and expensive improvements thereon in farming and planting a vineyard.

That it being known that your Memorialist had not any written title to the said land, several evil-disposed persons, but particularly Mr. Robert Ball, endeavored to obtain from General Darling a grant thereof in their own favor.

That, on this fact coming to your Memorialist's knowledge, he immediately made application to the Government, stating the circumstances of his having been so long in possession of the land and expending so much money and labor in the improvement thereof, offering to purchase it from the Crown if a grant could not otherwise be obtained.

That to this application your Memorialist received an answer from the Honorable the Colonial Secretary, dated the 25th June, 1831, stating, by direction of His Excellency the Governor, that applications for the purchase of land could not be entertained at that time, but requesting your Memorialist would wait on the Surveyor General, and give him the particulars of the land, and of the improvements alleged to have been effected thereon. (*Vide Appendix A.*)

That, by some accident or mismanagement at the Post Office, your Memorialist did not receive this letter until the 3rd of September, being upwards of two months after its date; and consequently could not comply with its directions in time to avert the consequences which will appear in the sequel.

That, along with the said letter, your Memorialist also received another from the Honorable the Colonial Secretary, dated the 7th July, 1831, stating, by direction of His Excellency the Governor, that 100 acres of the land in your Memorialist's possession had been granted to Mr. Robert Ball, and that your Memorialist could not be allowed to retain any part of the land. (*Vide Appendix B.*)

That, on the receipt of these letters, your Memorialist, alarmed to find himself called upon to relinquish property which he had for so many years considered his own, and upon which he had expended his worldly all, addressed a petition to General Darling, earnestly and respectfully appealing against so unjust and ruinous a demand, and imploring His Excellency not to disturb your Memorialist's possession.

That, to this Petition, your Memorialist received from the Honorable the Colonial Secretary a reply, dated the 17th September, 1831, laconically stating, without assigning a single reason, that your Memorialist's request could not be complied with. (*Vide Appendix C.*)

That, on the 21st May, 1832, your Memorialist respectfully appealed to your Excellency against this unjust treatment, and in reply had the honor to receive from the Honorable the Colonial Secretary a letter, dated the 30th of the ensuing month, informing him that, as possession of the land in question had been regularly authorized for Mr. Ball, and as the report of the Surveyor General, upon which his (the Colonial Secretary's) letter of the 7th July, 1831, was addressed to your Memorialist, was also against him, it was not in your Excellency's power to do anything for his relief in the matter. (*Vide Appendix D.*)

That, on the 22nd November, 1833, your Memorialist again petitioned your Excellency, praying that he might be allowed to bring his claim under the investigation of the Commissioners for Claims to Grants

Grants of Land, appointed under the local Act, 4 William IV., No. 9; but was informed, by letter from the Honorable the Colonial Secretary, dated 24th February last, that the matter was not one of which the Commissioners could take cognizance, it appearing by your Memorialist's statement, that the land in question had been granted to Robert Ball. (*Vide Appendix E.*)

Mr. W. H.
Wells.

2 May, 1860.

That, after such decisions of your Excellency, your Memorialist would not again intrude upon your Excellency's notice but that he feels the strongest sense of the justice of his case, and is convinced that your Excellency requires only a full view of its merits to induce your Excellency to render him every redress in your Excellency's power; he therefore most earnestly implores your Excellency's impartial review of the following facts, viz. :—

1. That he has been in actual possession of the land for a period of twenty years, as is proved by the accompanying certificates of persons resident in its vicinity. (*Vide Appendices F. and G.*)
2. That he has made considerable improvements thereon, as is also proved by the same testimonials.
3. That the Surveyor General has acknowledged to your Memorialist, that had he known the fact of such improvements having been effected, he would have made a report different from that referred to in Appendix D.
4. That during the rebellion of 1808 your Memorialist suffered severely (even the degradation of corporal punishment) for his loyal adherence to His Majesty's Colonial Government.
5. That, with the proceeds of the land claimed, your Memorialist has reared a numerous family.
6. That Robert Ball obtained a promise of the said land under an erroneous impression on the part of General Darling, and that he has broken the conditions of such promise, not having ever had actual possession of the land, nor expended any money in its improvement, and having sold his interest therein to Mr. William Penday.

Wherefore your Memorialist humbly prays, that your Excellency will be pleased to take the premises into your most favorable consideration, and direct any investigation into the truth thereof which your Excellency may deem proper; and should it not be in your Excellency's power to afford him redress, either by cancelling the promise to Robert Ball in your Memorialist's favor, or by giving your Memorialist other land of equivalent value, that your Excellency will be pleased to recommend his case to the favorable consideration of His Majesty's Government.

And your Memorialist, &c.

16 December, 1834.

Please cause any answer hereto to be addressed, under cover, to my agent, the Rev. Ralph Mansfield.

[Copies of the several Appendices above referred to were not handed in with the foregoing.]

Mr. William Henry re-called and further examined :—

430. *By the Chairman* : Since you gave evidence before this Committee Mr. Pearce has been examined, and he has stated in his evidence that your grant of land, instead of being for 1,000 acres, was for 40 acres only; and that some years subsequent to Governor Bligh's time you applied to the Government of the day to have leased to you 1,000 acres adjoining your 40 acre grant; and that these 1,000 acres that you applied to have leased to you are the identical 1,000 acres which you say were promised you by Governor Bligh? Not at all. No such thing. That 40 acres was a subsequent grant. When I applied to them for a grant of my 1,000 acres, they thought to stop my mouth by giving me 40 acres.

Mr. W. Henry.

2 May, 1860.

431. By whom were the 40 acres granted to you? By Governor Macquarie. The land that I rented I got for a particular purpose. I had only four cows and three working bullocks, and I could have grazed them on my 40 acres, but at that time I was supplying the men-of-war and other ships with billet-wood, and the ships' boats could not come up to my place to load only at spring-tide. I supplied the "Warspite" and other men-of-war with billet-wood. This was in 1826; but their boats could not come up to my place to load, and so I had to move to where the boats could come to. I applied at first for 50 acres to make a wharf; but the Government said they would give me 1,000 acres if I liked, but they could not entertain an application for so small a quantity as 50 acres. I then sent in the application for the 1,000 acres, though I did not want that much. I only wanted a frontage, so that I might not be obstructed in bringing my wood down to deep water.

432. Was the 1,000 acres of land which you leased—is that the same, or in a different locality to that which you claimed to have granted to you? In quite a different locality altogether. They were down in a place called Murdering Bay, that was where I had my establishment, and where I had my men at work cutting wood.

433. And where was the land which you claim as having been granted to you? The land which I selected, after Governor Bligh's promise to me, is at a place called Blue Gum Creek, higher up the river. Murdering Bay is in a south-east direction from my 40 acre grant, whilst the other 1,000 acres are in a northerly direction.

434. What is the distance between the boundary of the land which you claim to have granted to you, and the land that you leased from the Government? I cannot say how far it is as the crow flies, because I had a bullock dray that I always took with me, and I could not go in a direct line. By the way in which I used to go, it would take me about three miles to go from one to the other.

435. From the boundary of the 1,000 acres rented, to the boundary of the 1,000 acres claimed? Yes. They were quite separate. My land was a different thing entirely. There were a good many grants of land between the two. Isaac Nichols's land was between them, and several others also.

436. Then Isaac Nichols's grant was between the land you rented and that which you selected? Yes, and several others also.

- Mr. W. Henry. 437. Were the 40 acres of land which were granted to you in a different locality to the 1,000 acres which you say you selected? Yes. The land I selected was in a northerly direction from the 40 acres; and this Murdering Bay, where I had the 1,000 acres leased, is in a south-easterly direction. I do not give the bearings exact, because I never took the compass with me to ascertain them, but to the best of my knowledge those were the bearings. (*Portions of Mr. Pearce's evidence were read over to witness.*)
- 2 May, 1860. 438. You still say that the land you leased, the land you claimed, and the 40 acres granted to you were all in different directions? Yes.
439. And quite separate? Yes. Mr. Pearce when he came on the land never once asked me to shew him the improvements I had made on it. What he wanted was the land and nothing else, and he brought some person with him when he came to me.
440. What person—one of his officers? I do not know who it was; some gentleman on horseback. The same person put the land up for sale soon after I was ejected, and he got it. (*Vide Appendix A.*)
441. *By Mr. Rotton:* You state in your petition that Mr. Pearce in his official capacity turned you off the land you now claim? Yes, and so he did. He bundled all my things out into the open air, and pulled my house down; and my son and family, turning them out also.
442. Is the land that he turned you off the land that you now claim? Yes, that was a portion of the land.
443. What has become of the 40 acres? It is there on the forest, but it was not enough to maintain me and my family, and I parted with it.
444. How did you part with it? I sold it, and laid out the money I got for it in improving the other land that I claimed.
445. *By the Chairman:* Who is the owner of the 40 acres now? I do not know.
446. *By Mr. Rotton:* Did you ever yourself live on the 40 acres? I did.
447. And that is not the land that you were turned off from? No.
448. Did you apply to rent 1,000 acres adjoining your own freehold land? No; all I applied for was for 50 acres; that was all I wanted, but I got an answer from the Government to say that they would not let less than 1,000 acres; I said I would take the 1,000 sooner than have none at all, because I wanted a landing-place, and boats could not come up to my place.
449. Was that 1,000 acres adjoining your own 40 acres? No; it was quite separate from it. It came down between Isaac Nichols's and the river, and of course I wanted it as near as possible to my timber, but with deep water for the ships' boats.
450. You did, however, rent 1,000 acres from the Government? I did.
451. Was that the same land as that which you now claim? Not at all.
452. The land you rented is you say in a S. E. direction from your 40 acres grant, whilst the land you claim is in a northerly direction? Yes, exactly.
453. Is the land you now claim the same piece which you state was originally promised to you by one Government and confirmed to you by another? Yes; Governor Bligh promised it to me first.
454. And then you afterwards applied to Governor Macquarie to grant it to you? Yes, I did. Governor Bligh, in my presence, asked Governor Macquarie to reinstate me in my situation under the Government, and to grant me the 1,000 acres of land that he had promised me; and I verily believe that he would have done so only for Mr. Secretary Campbell, who had promised the Rebel Government to do all he could against me.
455. Did you ever get possession of the land that was promised you by Governor Bligh? I did, and went and lived on it; but the Rebel Government came and seized me, and took me away, and sent me to Newcastle, where I was flogged and used shamefully.
456. *By the Chairman:* Your applications to subsequent Governors were always to have granted to you the same land which you selected under Governor Bligh's promise? Yes; and to have the possession of it confirmed to me.
457. You never asked for permission to select any other portion of land? No.
458. But you required to have the land legally made over to you, that you were already in possession of? Yes, that I had selected under Governor Bligh's promise. Even in Governor Macquarie's time, Mr. Meehan, the surveyor, told me that he had received orders to measure out the 1,000 acres for me, but that he was just then so busy in marking out the rebel grants that he had not time to attend to mine, but wished me to take possession of any portion I thought proper that was unlocated.
459. *By Mr. Rotton:* Did Governor Bligh promise you the land after his return to the Colony? No; he promised it to me before his arrest, and I selected it at once.
460. And did you occupy the land? Yes; I took immediate possession of it, in the presence of three or four persons.
461. Who were those persons? They are all dead now, except one, who was a boy at the time; he lives round by Pittwater.
462. In what year was it promised to you? In 1807 it was promised me.
463. And when did you take possession? I went immediately and selected the land and took possession; I was in possession when the Rebel Government had me seized and sent to Newcastle.
464. When did you retake possession? When Governor Macquarie read me out of the penal settlement by proclamation. In 1810 and in 1814 I retook possession; no person ever selecting any portion thereof for seven years, during which time I was away from it.
465. You say you sold your 40 acres of land? Yes; I sold them to Pitman, and spent the money in improvements upon the 1,000 acres.
466. *By the Chairman:* With regard to the main facts stated by Mr. Pearce, which appear to

to be:—First, that the land granted to you was 40 acres only, and not 1,000 as you state; ^{Mr. W. Henry.} second, that you applied to rent 1,000 acres, which 1,000 acres are those which you now say you were allowed to select under a promised grant from Governor Bligh; and third, that ² you memorialised the Secretary of State for the Colonies, and that you received the answer which he has given in evidence, and which you have heard read,—what answer have you to make? Mr. Newcombe had retained the answer to my first petition to Lord Glenelg, and never communicated to me that he had it, till I found out by private information that there was a letter from Lord Glenelg in the Colonial Office in my favor; and I had to go to the expense and trouble of getting out another petition, and this also Mr. Newcombe retained. When I waited on Mr. Newcombe, he said he had never received the petition, which I knew to be untrue; so I had to get a third petition, which he sent Home, and Lord Norbury was then Colonial Secretary, and Sir George Gipps Governor of the Colony, neither of whom knew anything of my case at that time. Mr. Campbell (secretary) had promised the Rebel Government to do all he could against me. Had the letters gone to Lord Glenelg I should have had an answer at once (while Governor Bourke was here), and have got a grant of my land. Governor Bourke had taken the trouble to inquire of such gentlemen who knew me, and all signed testimonials in my favor; but Mr. Newcombe retained the letters until a new man was in office, because he had an interest in keeping me out of the land; he had given 100 acres of it to Ball, who was doing work for him, and if I had got my grant Ball would have been turned out.

467. But they say that the grant you were promised was 40 acres, and that you got? If that was the case, why did they offer me 100 acres in the Court of Claims. They wanted me to take 100 acres there and give up my claim, but I would not accept them.

468. *By Mr. Rotton:* You understand the evidence of Mr. Pearce that you have heard read? I understand it well enough; but there is a great deal of it that I know nothing at all about.

469. Is that evidence true? If I was dying this moment, I should say, as I do now, that it is a fabrication throughout.

470. *By the Chairman:* And you still state that the 1,000 acres, which you selected under Governor Bligh's promise of grant, are not the same as those which you applied afterwards to have leased to you? Not at all. They are in opposite directions altogether.

471. And that the 1,000 acres which Mr. Pearce alludes to in his evidence, out of which the 100 acres were granted to Ball, are not the 1,000 acres which you consider yourself to be entitled to? Not at all. I had improved upon the land, and had made an orchard there. Ball coveted the land, and as he was doing work for Mr. Newcombe at the time, he was allowed to select 100 acres there.

472. Did you take no steps with regard to the issue of Ball's grant? Yes. I wrote to the Government about it; and Sir Thomas Mitchell, the Surveyor General, told the surveyor, when measuring Ball's grant, not to interfere with my improvements; but he did not cross the Blue Gum Creek, but measured that on the opposite side, which I claimed restitution for.

473. *By Mr. Rotton:* Were you living on the 1,000 which you leased, or upon those which you considered to be your own? I was living on the 1,000 acres promised me.

474. Where were you living when you applied to rent the 1,000 acres? On the land I had selected.

475. Not on your 40 acre grant? No; on the land I selected under Governor Bligh's promise.

476. And on the land from which Mr. Pearce subsequently ejected you? Yes.

477. *By the Chairman:* Were the 100 acres to Ball granted out of the 1,000 acres from which you were ejected, or out of those which you leased? Out of the 1,000 acres I rented.

478. Then you were not living on that land? No.

479. *By Mr. Rotton:* Then if this grant to Ball was made out of the land that you leased only, why did you protest against its being granted to him? Because a portion of my improvements were on it, and I considered I had a right to be paid for them.

480. *By the Chairman:* You considered that you were entitled to be compensated for the improvements you had made on the land? I did.

481. And was the purport of your letter to the Government, protesting against the sale, to that effect? Yes, it was.

482. Why did you effect improvements upon land which you only held on monthly lease? It was previous to renting the land that I made the improvements. I wanted deep water for the boats to come up, and I had to make a landing-place; then I could not come down to the water from my ground without making a bridge across the creek; and these improvements I expected to be paid for.

483. The Committee, however, cannot understand why you should make improvements upon land on which you had no valid claim beyond a monthly occupancy? I did so, because I expected fully that I should get the ground. I never dreamt that they would turn me off it. I had Governor Bligh's and Governor Macquarie's authority to take the land; and I had Mr. Meehan's promise to come and survey it, as he had been ordered to do; and in those days parties did not stand nice about an inch or two of ground.

484. *By Mr. Rotton:* Have you no letter or document to prove that you were promised these 1,000 acres by Governor Bligh? No such thing was required in those days. Everybody took up the land on the verbal promise of the Government that it would be granted to them. Thousands of acres were given in that way, and many of the grants have not been issued up to the present day.

485. Is Mr. Surveyor Meehan now living? No, he has been dead many years.

486. Do I fully understand you to say that the 1,000 acres you were ejected off of were not the 1,000 acres that Ball's grant was taken out of? It was not the same at all; one was in one direction and the other in another.

- Mr. W. Henry.** 487. What became of the remaining portion of these 1,000 acres after Ball's 100 acres were granted? It has been sold. My grandson has bought 100 acres of it.
- 2 May, 1860.** 488. Then it is all in the hands of private individuals? No; not all. A large portion of it has not been sold. It is all rocky scrubby land, and is of very little value except some small pieces of it.
489. *By the Chairman:* What is the value of the land now? I could not say. It is chiefly a mass of rock that nothing will grow on. The 100 acres bought by my grandson are about all that were worth anything.
490. What was the value of the 1,000 acres at the time when Mr. Pearce ejected you? I could not say. I looked upon it mainly as being likely to be of value to my family hereafter, but I never considered what its present value was. (*Vide Appendix B.*)

APPENDIX A.

Addendum to Answer 440.

I heard he belonged to the Survey Department, and was a land jobber; I understood his name was Mr. Gordon. My son-in-law bid as high as £6 per acre, and while engaged talking to some person he was outbid by Mr. Gordon, and my son-in-law said he would complain to the Governor that he was buying land to sell again—he (Mr. Gordon) got the deeds made out in another person's name.

APPENDIX B.

Addendum to Answer 490.

Some portions have been selected and sold, none less than the minimum price; and that portion Mr. Gordon purchased, between six and seven pounds.

WEDNESDAY, 16 MAY, 1860.

Present:—DR. LANG,
MR. ROTTON,MR. PEMELL,
MR. WISDOM.

HENRY PARKES, ESQ., IN THE CHAIR.

William George Pennington, Esq., called in and examined:—

- W. G. Pennington, Esq.** 491. *By the Chairman:* You are the Secretary to the Court of Claims, I believe? I am.
- 16 May, 1860.** 492. You have been summoned here to produce some papers in the case of William Henry (Case 1256)? I produce all the papers in reference to the case which I have been enabled to discover: They were not, in point of fact, in my possession, but in that of the Secretary for Lands; but I have obtained them for the purpose of this Committee. (*The witness handed in the same.*)
493. Do you know what was the result of that case? (*The witness referred to the papers.*) I see the Commissioners report that they are unanimously of opinion that Henry entirely failed in proving any claim to the land included in this case, and therefore rejected his claim; but, in the conclusion of their report they state, they think it possible that Henry may have received some general promise of land, in consequence of the hardships he suffered, and, although he entirely failed in proving his claim, the grant of forty acres of land on the 5th April may have been granted in consequence of that promise.
494. *By Mr. Rotton:* You were not Secretary I suppose when this case was investigated? No; I did not know the purpose for which the Committee required the evidence, otherwise I would have taken pains to investigate the case, but it is no part of my official duty.

Mr. William Crane called in and examined:—

- Mr. W. Crane.** 495. *By the Chairman:* You are clerk in the Central Police Court? Yes, I am.
- 16 May, 1860.** 496. Will you be kind enough to state what are your duties? I am keeper of the records, and occasionally act as deposition clerk.
497. Do you remember the case of ejection which came before the Court, brought by Commissioner Pearce against a person of the name of William Henry? No, that was previous to my time, but I produce the depositions taken in the case in the office. (*The witness produced the same.*)
498. These are the depositions? Yes, the original depositions, together with two letters or memoranda.
499. What was the result in this case? I have brought two cases, in one the complaint was withdrawn without evidence being taken, and the other is marked "Case dismissed." Heard before Mr. Dowling and Captain M'Levie.
500. Could you leave these papers to be returned to you? Yes.
501. *By Mr. Rotton:* What is the charge? The unlawful occupation of waste lands in the parish of Gordon, county of Cumberland.
502. That case was withdrawn? Yes; the other appears to be a similar case of unlawful occupation of waste lands in the parish of Gordon.
503. Who was the complainant? Simeon Henry Pearce, Commissioner of Crown Lands.
504. You know nothing of the case yourself? Nothing.

Mr.

Mr. William Henry Wells called in and further examined:—

505. *By the Chairman:* Since you were before the Committee you have, I believe, been upon the land claimed by Mr. Henry, have you not? I have. Mr. W. H. Wells.
506. When was that? Last Tuesday. 16 May, 1862.
507. What was your purpose in going there? To make a survey of the district, a superficial survey—I did not measure—and to see whether what Mr. Henry had stated with reference to the position of the houses, and various places, was correct.
508. You are aware that there is some confusion as to whether the thousand acres of land claimed by Henry are identical with another thousand acres of land he afterwards applied to the Government to lease? I am aware of that.
509. That there is an inconsistency between the statements of Mr. Commissioner Pearce and of Mr. Henry—Mr. Pearce stating that the land which he now claims is the very parcel which he afterwards applied to lease from the Government, and adducing that as proof that he had no freehold right? Yes.
510. Do you find that that is the case? I do not agree with that at all. I think I have evidence to rebut the whole of that. That is a plan of the district. (*The witness produced the plan. Vide Appendix.*) The portion of the ground colored red is the forty acres promised to William Henry by Governor Macquarie, in October, 1813. The parcel colored green is the grant of which, Henry says, Governor Bligh ordered him to select a thousand acres; and that colored yellow is the portion leased by Henry in 1829. The portion colored red, of forty acres, Henry sold to Mr. Pitman in 1828. He then left the ground immediately, and went to reside on the north side of Blue Gum Creek. At that time his son was living on this portion, numbered E, lately purchased by Mr. Gordon. When his son came to Sydney, a short time afterwards—about a week or two—he went to his own house. This was in 1828. Twelve months afterwards he applied to Government to lease a thousand acres, alongside his own land. At this time he had no other land but this portion, colored green, and he made this road (*referring to the plan*) to Murdering Bay. Mr. Pearce says that this 1,000 acres leased to Henry by the Government is this identical piece colored green; but this ground, colored red, was promised to Henry in 1813, at the same time that he occupied this portion, colored green. I have here the *Sydney Gazette*, published June 28th, 1817, in which there is the following caution—“All persons are hereby prohibited from trespassing on the farm and lands of William Henry, situate in the district of Lane Cove, nearest the vicinity of Sydney, being bounded on one side by an inlet called the Blue Gum Creek, being within Lane Cove, and all suspicious boats found thereat, supposed for the purpose of taking away wood, or any other illegal purpose, will be detained, and seized under penalty of seizure and rigid prosecution.” This alludes to the portion colored green, and it is in the official *Government Gazette*, published by authority of Government.
511. *By Mr. Rotton:* By whose authority is this advertisement inserted? By Henry himself. Then there is another advertisement which appears, signed by him, in the *Sydney Gazette* of July 15, 1817:—“Persons having been a length of time in the habit of trespassing by boats, &c., on my farm at Lane Cove, and felling and carrying away timber therefrom, this is to prohibit anyone from repeating the like depredations, as rigorous prosecution will be the consequence.” At the heading of this paper it is stated, “His Excellency the Governor and Commander-in-Chief has thought proper to direct that all public communications which may appear in the *Sydney Gazette* and *New South Wales Advertiser* signed with any official signature are to be considered as official communications made to those persons to whom they may relate.”
512. What distance is this land from the mouth of Lane Cove? Four or five miles. In proof that Henry was then known to have some claim to the land I may here draw the attention of the Committee to an advertisement which appeared, dated “Chief Engineer’s Office, Sydney, 13th November, 1819.—Notice is hereby given that no person or persons will in future be permitted to depasture cattle or stock of any kind at the Crown Lands at Lane Cove and Pennant Hills, the overseers of Government stock having strict orders to impound all that may be found trespassing thereon. Signed, George Druitt, Chief Engineer.” At this time Henry was in no way interfered with.
513. Did you go over the land? Yes.
514. Were the particular localities where Henry resided at different times pointed out to you as you have stated them to the Committee? Yes. When I was on the ground a lady gave me this plan (*producing a plan*), claiming, as she says, ten acres of ground—a portion of the thousand acres on which her husband had lived about 30 years ago, and made a present to her by her father. It was surveyed by Mr. Boyle in 1845; and the plan shews the two saw-pits and the road made by Henry from the 40 acres of land to the wharf at Lane Cove.
515. What lady do you refer to? Mrs. Fuller.
516. Who is Mrs. Fuller? Mrs. Fuller lives on a farm of Mr. Stubbs’, at Lane Cove, and is a daughter of Mr. Henry.
517. Is she there now? Yes, and her husband. Henry himself states that no one ever interfered with him while he was in occupancy of this land, although an Act of Parliament 10th George 4, No. 6, was passed in the time of Governor Darling for impounding cattle; 4th William 4, No. 10, passed in 1833,—“An Act for protecting the Crown Lands of this Colony from encroachment, intrusion, and trespass”; 5th William 4, No. 12,—“An Act to amend an Act”; 7th William 4, No. 4,—“An Act to restrain the unauthorized occupation of Crown Lands.” If he had been a trespasser he ought to have been turned off under these Acts, for they provide that no person shall cut timber or live on unoccupied land without having a license. Another Act, 2 Vic., No. 27, was passed in 1839, to restrain the unauthorized occupation of Crown Lands, of a more stringent nature.

- Mr. W. H. Wells.
16 May, 1860.
518. Have you examined these papers from the Court of Claims? I have not. The custodier will not allow any person to examine them without a letter from the Colonial Secretary.
519. They were produced at your request,—what did you suppose they would prove in the case of Henry? From the evidence of Mr. Carter they will contain some letters which Henry has lost.
520. Will you take those papers and see if you can find the letter you allude to? (*The witness examined the papers.*) Here are some letters, if I may open them.
521. Open them? This is the deposition of Daniel Thurston, “sworn 1st October, 1831, before Sydney Cotton, Police Magistrate. This deponent came before me, one of Her Majesty’s Justices of the Peace for the Colony of New South Wales aforesaid, maketh oath and saith, that he was the Clerk of General Musters, and attended the late Governor Macquarie at the taking of a general census in the year 1820–1, and at that time he, this deponent, heard Mr. William Henry ask the aforesaid Governor Macquarie to allow a surveyor to measure the thousand acres of land at Lane Cove, which his Excellency had been pleased to promise him; the Governor replied, that he would order Mr. Meehan, the surveyor, to perform that duty at the very earliest opportunity.—D. THURSTON.”
522. You said something about Mr. Carter? Mr. Carter, in his evidence at the Police Office, alluded to this letter.
523. Were you present when this case was heard at the Police Office? No.
524. Do you know anything at all about it? I have examined the whole of the evidence, and I believe the evidence of Mr. Bemis is correct.
525. What does Mr. Bemis’s evidence prove? It proves that Henry had been in possession of this land upwards of twenty years.
526. Does the evidence of Mr. Bemis accord with the plan you have handed in? It does. Mr. Bemis states in his deposition at the Police Office, that he was a Government surveyor, he then says, “defendant,” alluding to Mr. Henry, “claimed 1,000 acres of land; had known him to be possessed of that land for about twenty years, and is so still; he was never turned out of possession to my knowledge; I think I would have known it had he been; was there with Mr. Pearce on Thursday last; Mr. Pearce assisted my inquiries on the spot; Pearce walked with me along Blue Gum Creek; took memorandum; might have taken some memorandums from what Pearce said to me; defendant has a comfortable cottage and orchard; defendant’s son has a cottage on the same ground; that I believe the defendant claims; defendant resides about half a mile from him; there are huts near his son’s residence; there are fruit trees near defendant’s son’s orchard; defendant’s orchard attached to his house might be about two acres; the land between defendant’s house and his son’s has been cultivated in part; defendant’s son has, what appears to be, an orchard with full grown trees; saw Henry’s orchard twelve years ago; the land is fenced in part; knew defendant resided there upwards of twenty years ago; never heard he was turned out of possession of this land from that period up to the present time; there is another creek besides Blue Gum Creek; the land in Henry’s occupancy is on the northern side of Blue Gum Creek, and Ball’s land is on the southern side of the same creek; Henry told me he claimed Ball’s land as a portion of his; believe Ball’s land was in the occupation of defendant; know Burn’s Bay, it is on the southern side of Blue Gum Creek; defendant was in occupation at one time of a considerable quantity of land on the southern side of Blue Gum Creek leading towards Burn’s Bay, so defendant stated to me; defendant claimed land leading to Burn’s Bay, and he also stated he has land on both sides of Blue Gum Creek. He stated he had had a correspondence with the Government about Ball’s land; there might be roads on the land; the land is not waste land, it being in part cultivated; I would call waste land barren land; I know nothing about the land in question being Government land, save from Government charts; defendant resides in a weatherboarded house; should not say it was valuable; some portions of the land have been under cultivation; do not know that defendant cultivated the ground; the ground looked neglected; defendant stated that he had received correspondence from the Government about Ball’s land; he did not say how he received it.”
527. This does not identify the land in a very definite manner? It says that Henry was on land on the north side of Blue Gum Creek and that he had ground on the south side, that is the thousand acres he alludes to.
528. If there is anything you desire to add to your evidence you can, when it is sent to you, add anything in elucidation of what you have stated to the Committee.

APPENDIX.

A.

I beg to hand in the following Government and General Order from Government House, Sydney, dated 9 December, 1815:—

“CIVIL DEPARTMENT.

“THE Governor being informed that several settlers and others have, of late, sent their herds and flocks to different unassigned parts of the Crown Lands, and especially to those in remote situations, without having previously solicited or obtained permission so to do, His Excellency cannot refrain from expressing his surprise at, and disapprobation of, such unwarrantable and disrespectful conduct. And in order to mark the more fully that disapprobation, he now orders and directs that any such persons as have sent their cattle to any part of the Crown Lands, without due permission, shall immediately cause them to be removed from thence; and if cattle of any denomination be found grazing on any of the Crown Lands after the 1st day of January next, without such permission having been procured, they shall be secured and driven to the public pound nearest to the place where so found, and detained there until full compensation be made for the trespass so committed.

“Persons

"Persons tending or having in charge any herd or flock of cattle grazing on the Crown Lands, however distant, and in Sydney after the said 1st day of January next, without due authority for so doing, are to be apprehended by the constable of the district wherein the offence shall be committed, and sent hither to be dealt with according to law.

Mr. W. H. Wells.

16 May, 1860.

"Signed by Command of His Excellency,

"J. T. CAMPBELL,

"Secretary."

This order was advertised in the official *Gazette* of the 23rd December, 1815.

B.

I beg to remark to the Committee that William Henry was turned out of possession on the 5th September, 1851, and whilst the Act 9 and 10 Vic., c. 104—the Imperial Act to amend an Act for regulating the sale of waste lands belonging to the Crown in the Australian Colonies, and to make further provision for the management thereof, passed 28 August, 1846—was in force, and to draw your attention to the third clause of that Act, viz.:—(That Justices may dispossess persons unlawfully occupying waste lands.) The proviso stating, "Provided always, that nothing hereinbefore contained shall extend to any person having occupied waste lands within the boundary of location without interruption for the space of 'twenty years' next before the passing of this Act."

Mr. William Henry further examined:—

529. *By the Chairman*: Have you examined this plan (*handing witness the plan produced by Mr. Wells*)? I have examined it throughout, and believe it to be correct. Mr. W. Henry-
16 May, 1860.
530. Will you point out to the Committee, by the colors, the land you claim, as having been promised you by Governor Bligh? This land, colored green, was promised by Governor Bligh. Governor Bligh did not point out any portion of land to me, but this is the land I selected in 1807, and I occupied it in 1814. I was seven years absent.
531. And this you claim at the present time? Yes; I claim it at the present time.
532. Which is the forty acres? Here it is, painted red, between Fitzgerald and Jenkins.
533. Which is the land you applied to the Government to lease? This is it on the south side of Blue Gum Creek. Robert Ball got a portion of it away from me, with some of my improvements, with the wharf I made here. (*Pointing to the part of the plan colored yellow.*) I had to cross the creek with a bridge, and here is the road I made from my old farm of forty acres down to here and right across the creek. I made a wharf on the south side.
534. On the land you leased? On the land I leased.
535. Had you ever any tenants on this land? Yes; I had men cutting timber on it; and Hazlehurst rented a brickyard from me. I had to sue him for rent.
536. Does that describe the occasions when you sued him (*handing a paper to witness*)? Yes.
537. Is that memorandum correct? Yes.
538. Is that a copy of a Court memorandum? Yes; it is a copy taken from the Court of Requests, where I sued him.
539. Who is it signed by? By T. S. Brennand.
540. Do you hand it in to be appended to your evidence? Yes. (*The witness handed in the same. Vide Appendix A.*)
541. *By Mr. Rotton*: These are all cases against one individual? Yes.
542. Was the party sued these several times for one piece of land? Yes; for a house and brickyard.
543. Will you shew on the plan where it was situated? On the north side of the creek. I think 12s. or 15s. a week he paid me.
544. At the commencement of your evidence you stated that the first promise of this land was made in 1807? In 1807.
545. I want to know this particularly, because it appears from other portions of your evidence that you did not make any application to Governor Macquarie until 1820; that you allowed twelve years to elapse? I could not do so before, because Governor Macquarie was always surrounded by so many people. I tried to do so, and wrote repeatedly to Governor Macquarie; and at length I was told by his Secretary's clerk that it was of no use to send letters through the office, for the then Colonial Secretary—Mr. John Thomas Campbell—used to tear up my letters and trample them under his feet; so, consequently, I had no chance.
546. You had, in the meantime, applied for and obtained a grant of forty acres? That grant was given to me in the routine, the same as to any other deserving individual, but that was nothing at all. I had not intended to accept this unless I had the 1,000 acres, but was advised by my friends to accept it, and then continue my application for the said 1,000 acres. I think there was some trick of the Secretary.
547. But when you applied for forty acres, how was it you did not say anything about the grant of a thousand? I did, but I suppose the Secretary put that on one side the same as some of the others.
548. The reason you did not apply between 1807 and 1820 for this land you considered yourself entitled to was—the difficulty of getting your application entertained? That was exactly the case. I could not get even to speak to the Governor, but when he was taking the census, in 1820. That was the last census he took. I should not have then spoken to him if it had not been for Mr. Thurston, who was standing alongside of me. He said—"Henry, have not you the thousand acres of land measured that were promised by Governor Bligh?" I said, "No, and that it gave me great annoyance to keep persons from trespassing upon it, because I had nothing to shew that it was mine." Says the Governor—"I thought you were in full possession of it before this. I will order Mr. Meehan to measure it at the earliest opportunity."

Mr. W. Henry.

APPENDIX A.

16 May, 1860.

	1842.				
No. 1,004,	December,	Henry v. Hazlehurst,	sued for rent	£6 0 0
	1843.				
..	283, May,	Same v. Same,	for rent	10 0 0
..	378, June,	Same v. Same,	for rent	4 10 0

..	86, August,	Same v. Same,	for rent	3 0 0

The above is a Memo. applied for by Mr. Wells, of certain cases tried by the Commissioner of the Sydney Court of Requests, shewing the amount sued for and the cause of action.

T. S. BRENNAND.

District Court,
10 May, 1860.

The Rev. Ralph Mansfield called in and examined:—

The Rev.
R. Mansfield.
16 May, 1860.

549. *By the Chairman:* This Committee of the Legislative Assembly has been appointed to inquire, among other cases, into the case of one William Henry, now in the room, who claims a grant of one thousand acres of land situate on the Lane Cove River, which he states was promised to him by Governor Bligh for services which he performed during the time of what he calls the Rebel Government—the Committee understand that you have some knowledge of the case, and would therefore feel obliged if you will state to them the facts that have come to your knowledge—this is the petition setting forth the case (*handing the same to the witness*)? I think I have read it. About five and twenty years ago or more Henry put this case in my hands in order to my preparing for him an appeal to the British Government; but in the first instance I think we tried the Colonial Government—Sir Richard Bourke must have been the Governor at the time. The decision of the Colonial Government was unfavorable, and we then carried it to the Secretary of State; and a number of years were consumed in that appeal. I have searched among the papers in my custody, and was in hope I should have found some that might have been useful to the petitioner. I particularly remember a very considerable number of certificates signed by parties resident in the Lane Cove River District, corroborating the facts alleged in his petition, particularly with regard to his having been authorized to take possession of that land; and I think among the certificates was one from the district constable of the name of Forster—my memory retains that circumstance because it was so very strong a certificate, so directly bearing upon what I considered the merits of the case—of his having been authorized to take possession, and of his right of occupation having been recognised by Governor Macquarie, and, I think, by Governor Brisbane. However, the only document I can find is the draft of the final memorial which I prepared for Henry—I do not know whether the petitions are before you, those, I mean, which went into the Government, but this seems to have been the upshot of all our appeals to Downing-street. I think we sent three successive appeals to as many different Secretaries of State, consequent upon references back from Downing-street to Sydney, and the final decision is referred to in this memorial, which I prepared for Henry just twenty years ago. (*The witness handed in the same. Vide Appendix A.*)

550. I should, without reading this through now, infer that this covers a number of memorials and answers, and does not specifically set out all the facts? No, it does not.

551. I should imagine that one of the early memorials would set out in detail the facts of the case? It did, in full detail.

552. But this being merely for the purpose of combating replies, or of explaining new circumstances, does not do so? No, that does not.

553. Were you aware of there being two portions of land of 1,000 acres, one which Henry claimed as having been promised him, and another which he subsequently rented from another Governor—did you ever hear anything of that? No, I do not remember that point.

554. As far as you had to do with the case his claim was confined to a thousand acres of land? To a very large quantity of land.

555. Promised by Governor Bligh? Promised by Governor Bligh, and confirmed to him by Governor Macquarie, and Mr. Meehan, the Surveyor General of that day.

556. I presume you do not know anything about the precise situation of that land? I do not.

557. *By Mr. Rotton:* Had your applications, on behalf of Mr. Henry, reference to any particular portion of land? Yes, he was then in possession, and had been for many years.

558. *By the Chairman:* Do you recollect the names of any of the boundaries that Henry gave you at that time? No, I do not.

559. Perhaps if you looked over a plan you might remember some of them? (*The plan produced by Mr. Wells was handed to the witness.*)

560. *By Mr. Wisdom:* What quantity of land did Henry claim in these petitions? I think about a thousand acres—a very large quantity, certainly, considering the locality. It had never been measured, and, therefore, it was in a great degree conjectural. (*The witness examined the plan.*) I do remember the name of Ball. Mr. Ball was my clerk, and I think he purchased a part of Henry's land, or land close to Henry's.

561. *By the Chairman:* Do you remember Blue Gum Creek? No, I do not.

562. *By Mr. Rotton:* Can you recollect whether the petitions you prepared set out the boundaries of the land? They set out such a description as to identify it; I do not know whether

whether the boundaries were set out in the usual way of accurate description, but in such a way as to leave no doubt as to the land referred to. These petitions should be in the Colonial Secretary's Office with the replies of some of the Secretaries of State. If I remember rightly some of the Secretaries of State were inclined to be in his favor, and that was the reason the case lingered so.

The Rev.
R. Mansfield.
16 May, 1860.

563. Do you remember Henry objecting to that grant being made to Ball? Yes.

564. Do you remember the grounds of his objection? I think he filed a protest, and that the ground of objection was that it was his property; either that it was his property, or that it encroached upon his boundary.

565. Was it that it was included in the land which he claimed? I think it was, I am not sure; it was land to which he claimed a right, either in one form or other; either in virtue of Governor Bligh's authority to him to take possession, or in virtue of some subsequent authority. I know it was founded upon Mr. Ball's encroachment upon his rights.

566. *By the Chairman:* You do not know whether upon his leasehold or freehold rights? No; Mr. Ball had been my clerk, but he was not so at the time he made the purchase.

APPENDIX A.

To His Excellency, &c.

The humble Memorial of William Henry, of Lane Cove,—

Sheweth:—

That, about a fortnight ago, your Memorialist had the honor to receive a letter from the Honorable the Colonial Secretary, dated the 24th October last, informing him that the Right Honorable the Secretary of State had expressed an opinion that he had no valid claim to any portion of the land occupied by him at Lane Cove, and adding that it would therefore be necessary that he should vacate the land within one month from that date.

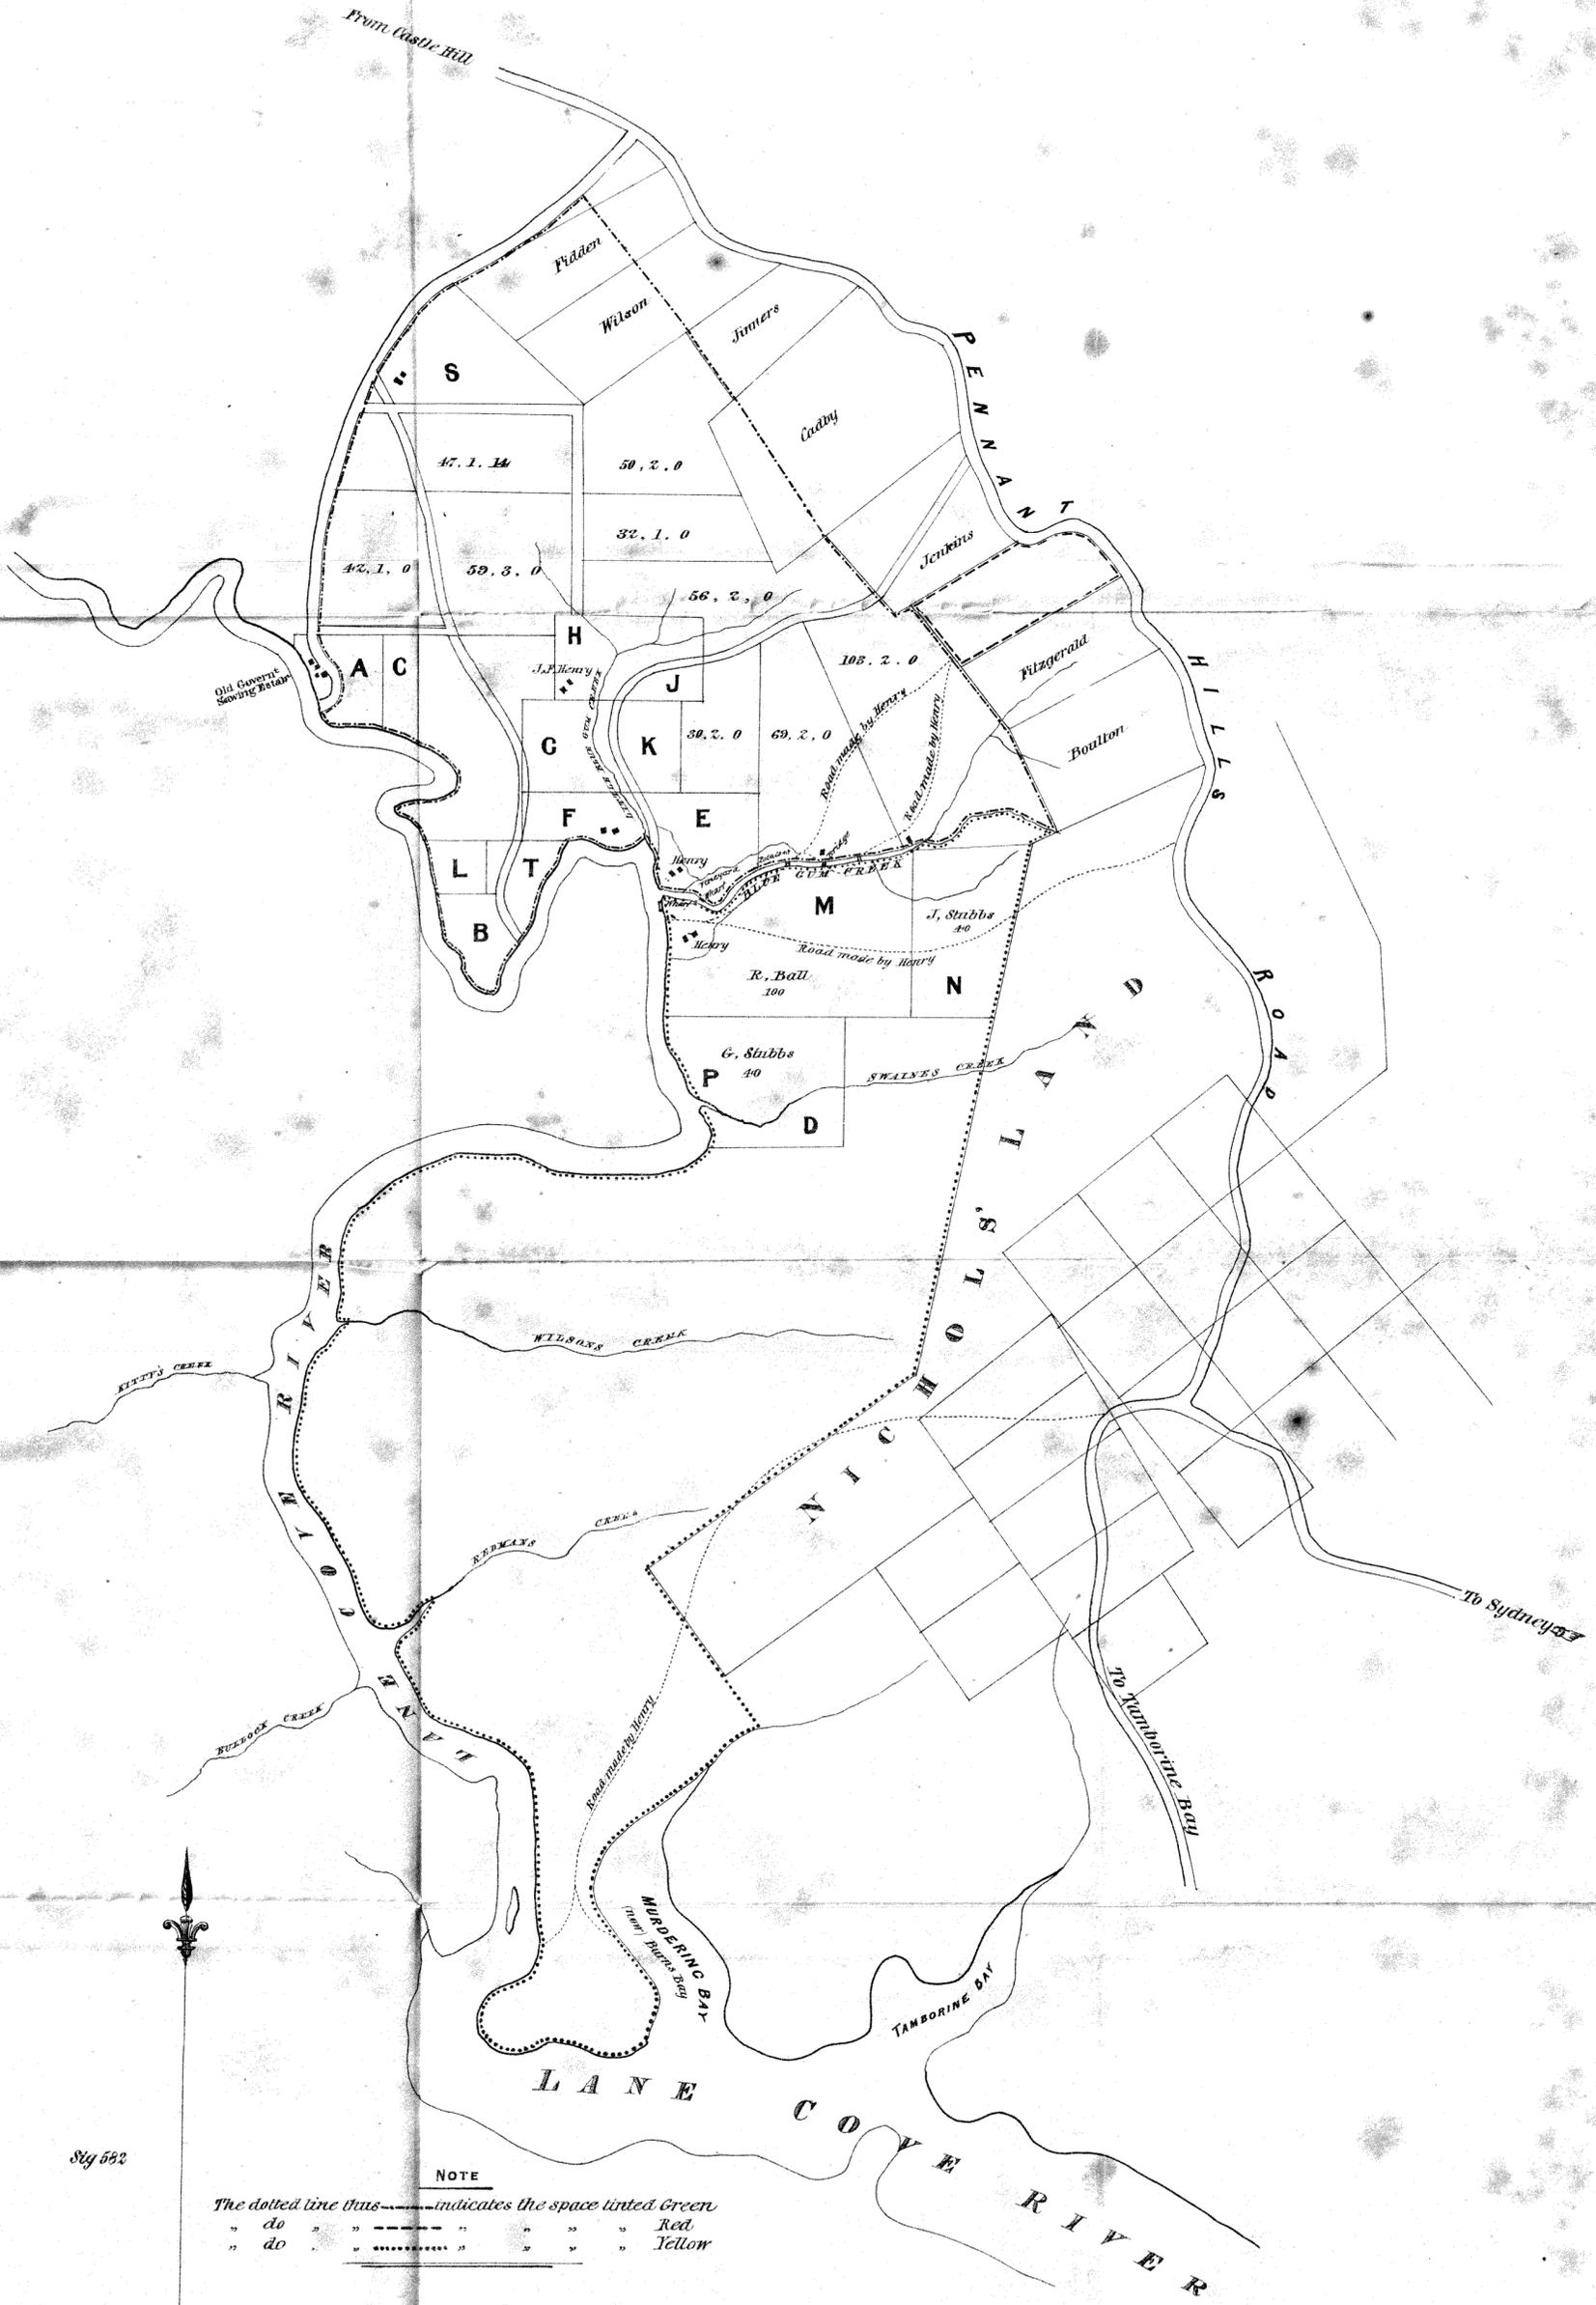

That, whilst your Memorialist has no alternative but to bow to the decision of the Secretary of State, he would earnestly appeal to your Excellency's humanity against so abrupt an expulsion from land of which he has been in peaceable and uninterrupted possession for *more than a quarter of a century*, and on which, during that long period, he has bestowed great bodily labor, and expended money, in clearing, fencing, cultivating, and buildings.

That the said land is the only means of subsistence for your Memorialist, who is 61 years of age, for his wife, who is 71, and an invalid; and for his son and six grandchildren, the eldest of whom is not 12 years old; and thus suddenly to expel them therefrom would be to cast them upon the world in a state of absolute destitution, and to consign your Memorialist and his aged wife to the Poor House.

Wherefore, your Memorialist humbly prays that your Excellency will be pleased to take his very hard case into your most merciful consideration, and allow him to hold peaceable possession of the said land during the short remainder of his life.

And your Memorialist will ever pray, &c., &c., &c.

5th February, 1840.

Legislative Assembly.
NEW SOUTH WALES.

—
BRYAN FITZGERALD.

(PETITION OF.)

—
Ordered by the Legislative Assembly to be Printed, 28 February, 1860.

To the Honorable the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned, Bryan Fitzgerald, of Sydney,—

SHEWETH :—

That your Petitioner was appointed light-keeper at the South Head Lighthouse on the first day of January, one thousand eight hundred and forty-nine, and continued in that capacity up to the first day of September, one thousand eight hundred and fifty-eight, when your Petitioner was removed to Newcastle Lighthouse, as first assistant light-keeper; and continued in the latter capacity until the first day of June last, when he resigned.

That during the whole time, and now, your Petitioner has borne an unimpeachable character.

That the removal of your Petitioner to Newcastle, as aforesaid, brought on bad health; so much so, that your Petitioner was confined, on one occasion, to his bed for eight days, and was off duty for a fortnight.

That your Petitioner, finding no improvement in his state of health, but, on the contrary, very likely by continuing in his situation to get worse, was forced to resign.

That your Petitioner has a wife depending upon him for support, and the wages attached to the situation mentioned being small, he was able only, even with strict economy, to save but little, and that is some time since exhausted, as your Petitioner has not yet been able to do anything towards his support since his resignation, which is now about nine months.

Your Petitioner, therefore, humbly prays your Honorable House to take into your consideration the above circumstances, and grant such relief to your Petitioner as your Honorable House shall think fit.

And your Petitioner will ever pray, &c.

BRYAN FITZGERALD.

Dated this 23rd day of February, A.D. 1860.

1859.

Legislative Assembly.
NEW SOUTH WALES.

WILLIAM MURPHY.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 9 December, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of William Murphy, of Newcastle,—

HUMBLY SHEWETH :—

That your Petitioner was, for the eleven years last previous to its discontinuance, keeper of the Beacon Light at Newcastle, during which no complaint had ever been made against him ; but that, on the contrary, his conduct while acting in that capacity had obtained for him a strong testimonial in his favor from the late Harbor Master of Newcastle, who had for many years previous to the removal of the light supervised his performance of the duties.

That on the discontinuance of the said Beacon Light, your Petitioner was appointed First Assistant Keeper at the new Light House at Newcastle, which office he filled for twelve months, without, as far as your Petitioner is aware, any complaint having been made against him—being until the first day of January last—when (without notice of any kind, and without alleged cause) your Petitioner was dismissed from the office.

That, while your Petitioner was perfectly competent for the duties of Assistant Light Keeper, an injury which some years since he received in his arm, by having been driven over a precipice while attending on the beacon, at night, during a violent storm, has incapacitated him for heavier work ; and that your Petitioner was thus (after twelve years' faithful service) dismissed from his employment under a degree of incapacity from injuries received in the performance of his duty, which prevented him from otherwise earning a livelihood.

That your Petitioner therefore prays that your Honorable House will be pleased to inquire into and take his humble case into consideration, and to order such relief to be afforded to him, or other suitable employment to be provided, as the justice of the case may require and to your Honorable House may seem fit.

And your Petitioner will ever pray.

WILLIAM MURPHY.

MR. JONATHAN CROFT.

(DESPATCHES RELATIVE TO PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 10 April, 1860.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 3 February, 1860, praying that His Excellency the Governor General would be pleased to cause to be laid upon the Table of this House,—

“Copies of all Despatches and Communications with the
“Imperial Government, relative to the Petition of Mr. Jonathan
“Croft.”

*(Mr. Dalley.)***SCHEDULE.**

NO.	PAGE.
1. The Governor General to the Right Honorable Sir E. B. Lytton, transmitting a Petition from Mr. Jonathan Croft, late Deputy-Purveyor for Convict, Civil, and Military Services, preferring certain claims for pay and allowances. 11 August, 1859	2
2. The Duke of Newcastle to Sir W. Denison in reply. 26 October, 1859	3

MR. JONATHAN CROFT.

No. 1.

GOVERNOR GENERAL to RIGHT HON. SIR E. B. LYTTON.

(No. 74.)

*Government House,
Sydney, 11 August, 1859.*

SIR,

I have the honor to forward herewith a Petition, addressed to the Secretary of State for the Colonies, by Mr. Jonathan Croft, late Deputy-Purveyor for Convict, Civil, and Military Services in New South Wales, bringing forward certain claims for pay and allowances to which he considers himself or his son entitled, and which he wishes to commute for land in this Colony.

The following brief comment upon his Petition will enable the Secretary of State to form an idea of the validity of the grounds upon which Mr. Croft bases his claims :—

Claim 1 is for the difference between full and half pay for two months, stated to have been ordered to be paid to him by the Governor when ordered Home, but which the Commissariat did not deem him entitled to.

There is nothing in the office to shew that this was ordered by the Governor.

Claim 2.—The residue of a grant of land of 1,600 acres, to which he alleges he was entitled (as apothecary) by regulation in existence on his landing in 1836.

On his retirement on half-pay, Mr. Croft received a remission order of £400 in the purchase of land. The regulations do not admit of grants to officers on full pay.

Claim 3 is a demand for 156 acres of land, alleged to be due to Mr. Croft's son, for salary as clerk from 1st August, 1848, to 31st May, 1849.

Mr. F. Croft ceased to be employed as clerk on 31st July, 1848; and on his reduction, he received a gratuity of three months' salary. He subsequently assisted his father in making up his accounts, but this service was uncalled for, and unauthorised by the Government.

Claim 4 is for £750, which Mr. Croft alleges he has lost by not being able to avail himself of the kind intentions of the Duke of Wellington towards him.

I need say nothing as to this.

Claim 5 is for compensation for loss of office, for which a grant of 3,400 acres is asked.

Mr. Croft was informed by my predecessor, in 1849, that the Government had no authority to grant gratuities to officers who remained on pay, or were merely ordered from one station to another, which was the case with Mr. Croft, who was ordered home from New South Wales; and I must observe that the claim seems to me most unreasonable, whether it be made upon the Imperial Government or that of the Colony.

Claim 6 is for £256 13s. 4d., being a concession of passage money to the wife and family of Mr. Croft, but which he of course could not receive, as his wife and family remained in Australia.

I cannot recognise the propriety of converting that which was a gratuitous kindness on the part of the Government into a debt.

With regard to claims Nos. 7 and 8, they appear to be based upon the regulations of the department at home, of which I have no cognizance; but I may observe, with reference

to

to the mode proposed by the Petitioner of satisfying these claims, that there is no instance on record of grants of land having been made for such a purpose; and that since the passing of 5 & 6 Victoria, chapter 36, no land could be granted unless for public purposes, or in fulfilment of promises previously made by the Governor.

I may say, generally, that I consider Mr. Croft's claim to be entirely without foundation.

I have, &c.,

W. DENISON.

No. 2.

DUKE OF NEWCASTLE to SIR W. DENISON.

(No. 33.)

Downing-street,

26 October, 1859.

SIR,

I have to acknowledge the receipt of your Despatch, No. 74, of the 11th August last, forwarding a Petition from Mr. Jonathan Croft, bringing forward certain claims for pay and allowances to which he considers himself entitled, and which he wishes to commute for land in New South Wales; and I have to request that you will inform Mr. Croft that I have considered his Petition, but that I cannot find that he has any claim upon the public which has not been satisfied, and that it is quite beyond the power of the Secretary of State to order a grant to be made to him of any of the lands of the Colony.

I have, &c.,

NEWCASTLE.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

JAMES DAVIDSON.

(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 24 April, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.
The humble Petition of James Davidson, of Sydney, Builder,—

SHEWETH:—

That your Petitioner entered into a contract as a sub-contractor under Messrs. Benjamin and Driver, for certain masonwork in the erection of the Observatory and Time Ball Tower.

That in so doing your Petitioner signed an agreement to abide by certain specifications prepared by Mr. Dawson, Colonial Architect, wherein it was expressly stipulated that all extra work over and above what is specified in the original contract shall be measured and valued by the said Mr. Dawson, and paid for in equivalent rate with that of any similar work done under the contract.

That in carrying out the said contract your Petitioner, at the instance of the said Colonial Architect, made certain large additions and expensive alterations in and to the works of the Observatory, under the immediate superintendence of the said Mr. Dawson, and was furnished with the necessary plans and details from his office.

That your Petitioner carried out and finished these extra works to the entire satisfaction of Mr. Dawson, in the full assurance that he would be paid for the same at the trade rates of Sydney at the time.

That after a long and unnecessary delay of a whole year after the work was completed, during which your Petitioner was subjected to the greatest inconvenience and hardship, being obliged to mortgage his own property to raise funds for the work he was then carrying on, and being ultimately driven into the Insolvent Court, and during which time also Mr. Dawson was repeatedly urged to measure the said extra work, and settle the claims of your Petitioner, Mr. Dawson at last measured and valued the work, at a rate out of all proportion below its actual cost, thereby entailing a ruinous loss upon your Petitioner of upwards of seven hundred pounds, and thus rendering him unable to repay those who had advanced the necessary funds for him to carry on the undertaking.

That your Petitioner is prepared to make this allegation good on the evidence of competent persons, and that Mr. Dawson has not only failed to furnish him with a detailed statement of the amounts due to him, but has entirely omitted certain important and expensive items of the work done under his own direction.

Your Petitioner therefore humbly prays that your Honorable House will take his case, as above detailed, into consideration, by directing such an inquiry into the matter as will elicit the truth, and ensure to him that justice which has hitherto been denied him.

And your Petitioner, as in duty bound, will ever pray.

JAMES DAVIDSON.

 Sydney: Thomas Richards, Government Printer.—1860.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

MR. JAMES BOYLE.
(PETITION OF.)

Ordered by the Legislative Assembly to be Printed, 4 May, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of James Boyle, of Newcastle, Master Mariner,—

HUMBLY SHEWETH:—

That your Petitioner has been, at several periods and during a number of years, employed in the public service in this Colony.

That, from the year 1834 until 1845, your Petitioner was employed in command of the Colonial Government vessels "Isabella" and "Governor Phillip" respectively, in the conveyance of troops, stores, and convicts between Sydney and the then penal settlements of Moreton Bay and Norfolk Island; during which period, while in the "Governor Phillip," two attempts were made by the convicts on board to take possession of the vessel, both of which attempts your Petitioner was happily the means of suppressing.

That in consideration of the length and nature of these services (which terminated only with the transfer of his vessel to the Colony of Van Diemen's Land) your Petitioner was encouraged to hope that a pension would have been granted to him, but that that expectation was never realised.

That subsequently your Petitioner was employed for a period of one year as Superintendent of Boats at Sydney, and afterwards, for nearly seven years, as Signal Master at Newcastle; the duties of which offices he has every reason to believe were satisfactorily performed—his employment in the latter office having only ceased in consequence of the removal of the Signal Station.

That your Petitioner is now sixty-eight years old, and without means of support, and believing that his services may be held to constitute a special claim, he submits that claim to the favorable consideration of your Honorable House, praying such relief therein as to your Honorable House may seem fit.

And your Petitioner will ever pray, &c.

JAMES BOYLE.

MR. PERCY SIMPSON.

No. 1.

MR. PERCY SIMPSON to COLONIAL SECRETARY.

Parramatta,

20 January, 1860.

SIR,

I do myself the honor of respectfully bringing under your notice a petition addressed by me to the Honorable the Speaker and Honorable Members of the Legislative Assembly, presented by Mr. James Byrnes, and ordered to be printed 23rd September, 1858, setting forth therein my services under Government since 1814.

In that petition I gave extracts of letters from the various Governors and Heads of Departments under whom I had served, all expressive of my efficiency, usefulness, and zeal in the discharge of my duties. The late General Sir Richard Bourke added, that on the late reduction he conceived and that at all times he should be ready to do me justice by expressing his favorable opinion of my capacity and conduct.

As I never received any compensation or temporary allowance, which I considered myself on the reduction of my appointment as Police Magistrate equitably entitled to, under the Government Regulations, as likewise the Act of Parliament, 4 and 5 William IV, Cap. 24, Clause IX, on the faith of which I had continued in the service for upwards of 17 years, during which period many other officers, with less favorable claims, received either temporary allowance on their reduction or superannuation.

I would most respectfully beg leave to request that you would be pleased to recommend to His Excellency the Governor General, in his liberality, to be graciously pleased to sanction that the sum of £150 be placed on the Supplementary Estimates for this year in my favor, agreeable to the IX Clause of the 4th and 5th William IV, applying to officers appointed prior to the 5 August, 1829, as being six-twelfths of £300 per annum, in consideration of my long and admitted useful service to the Government in this Colony for upwards of twenty years.

I have, &c.,

PERCY SIMPSON.

[Enclosure in No. 1.]

The Honorable the Speaker and Honorable Members of the Legislative Assembly, in Parliament sitting.

The Petition of Percy Simpson,—

MOST HUMBLY SHEWETH:—

That your Petitioner arrived in Sydney, November, 1822, bringing letters of introduction to Governor Sir Thomas Brisbane from the late Sir Henry Torrens, Adjutant-General, in which he states, "that your Petitioner has held the situation of Judge Advocate, and subsequently local Governor of one of the Ionian Islands for some years, and he returned to this country in consequence of the reduction of the Regiment to which he belonged, bringing with him a strong recommendation from Sir Thomas Maitland, with a request from the General that I would exert myself in the behalf of Mr. Simpson, and I feel assured that should you have an opportunity of serving him he will prove himself worthy of your favorable notice and protection." Also a letter from the late Lord Bathurst, then Secretary for the Colonies.

That on your Petitioner's return from the Ionian Islands to England he married; and with the permission of His Royal Highness the late Duke of York, then Commander-in-Chief, your Petitioner embarked for this Colony, bringing with him a capital of money that entitled him to a grant of land (2,000 acres), 20 head of breeding cattle, 20 assigned convict servants, and rations for himself and family for six months from the Commissariat Stores.

That your Petitioner, in December, 1822, entered into an engagement with the late Sir John Jamison, to take on thirds 700 head of cattle, the property of Colonel Mole, for whom Sir John was agent. Your Petitioner agreed also with the late Reverend Samuel Marsden to purchase 2,000 sheep on most reasonable terms, when your Petitioner was solicited by Governor Sir Thomas Brisbane to relinquish these advantages, and undertake on

account

Horse Guards,
16 March, 1822.

Downing-street,
13 May, 1822.
R. Wilmot to
Major General
Sir Herbert
Taylor, in reply,
&c., &c.
Government
Regulations.

account of Government the formation of a Penal Settlement at Wellington Valley, with a view to lessen the expense of maintaining about 8,000 convicts then rationed by the Commissariat Department in Sydney and elsewhere; and the successful formation of such an establishment was considered as being intimately connected with the rising interest of the Colony.

Colonial Secretary's letter, 10 February, 1823, and 2 April, 1823.

That your Petitioner, in order to carry out the views of Government, undertook the sole direction and management from Sydney of so difficult and cumbersome an expedition to be conducted 100 miles beyond Bathurst, through an unknown country that had never been previously explored or trodden over by a white man, an undertaking in those days of more than ordinary difficulty, great personal deprivation, and hardship to your Petitioner, who devoted his sole attention to the arduous duties intrusted to him for three and a half years, at Wellington Valley; after which period it was considered no longer desirable to continue, and which was therefore finally broken up, your Petitioner's agreement with Sir Thomas Brisbane annulled, and your Petitioner's services discontinued, without his claim on Government being liquidated or settled.

Government Gazette, 30 June, 1826.

That in the month of June, 1828, your Petitioner was offered and accepted the appointment of Assistant Surveyor of Roads and Bridges to proceed to Wiseman's Ferry, for the purpose of constructing some heavy works there, and also for the formation of the Great Northern Road, considered at that time very important—steam navigation with the Hunter not being then in existence.

That your Petitioner during a period of eleven years continued as Assistant Surveyor of Roads, superintending various public works in the Counties of Northumberland, Cumberland, and Westmoreland; designed and executed the alteration of the Road from Lapstone Hill to that of Mitchell's Pass at Emu Plains, the Government Wharf at Parramatta, Wollombi, Lansdowne, and other Bridges; placed portable wooden houses for housing convicts in iron gangs, and other useful undertakings. But without entering into detail of the various works executed under your Petitioner's superintendence, he most respectfully begs leave to submit to your Honorable House the written testimonials of the late Major Goulburn, General Sir Richard Bourke, Sir Thomas Mitchell, Deputy Surveyor General Perry, and Sir Ralph Darling. Sir Richard Bourke states that he cannot forget the very useful services your Petitioner rendered to the Government of New South Wales during the period he had charge of it, as many of your Petitioner's labors were performed in great measure under his own eye. The manner in which your Petitioner designed and executed works fully satisfied him of your Petitioner's competency to lay out public works and superintend their execution, and should be happy to hear of your Petitioner being again employed in this way either at home or in Australia, as he is sure the public in either hemisphere would be benefited by your Petitioner's exertions and knowledge; and regrets that after such long service in New South Wales your Petitioner should have been obliged to come to England to seek for new employment, as he should have conceived that on the late reduction your Petitioner was at least entitled to some retiring allowance; adding, that at all times he should be ready to do your Petitioner justice by expressing his favorable opinion of your Petitioner's capacity and conduct. Sir Richard Bourke's despatch to Downing-street also makes favorable mention of your Petitioner.

21 February, 1844.

To Lord Goderich, 24 March, 1834.

Sir Thomas Mitchell states that your Petitioner gave great satisfaction, not only in the manner of executing the public works, but, which was then of equal importance, in the progress made, and that he knows of no officer in the Colony to whom he could with better expectations as to the result intrust any works connected with the formation of roads or bridges, and tact in directing and arranging the means applicable to such public works.

7 August, 1850;
16 April, 1855;
20 March, 1848.

The late Captain Perry, Deputy Surveyor General, states that in all the transactions he had with your Petitioner he always found the duties intrusted to your Petitioner's superintendence were performed in a manner highly creditable to your Petitioner, and advantageous to the public.

Surveyor General's Office, 14 September, 1842.

The late Sir Ralph Darling also bears favorable testimony, by stating that your Petitioner always evinced the utmost zeal in the performance of his duties, which he discharged in a very satisfactory and efficient manner.

15 September, 1843.

The Road Department under the Surveyor General having been transferred to Colonel Barney, and Military Superintendence, your Petitioner's appointment ceased February, 1839, after which he was appointed successor to Captain Forbes, as Police Magistrate at Patrick's Plains, at a salary of £250, his salary as Assistant Surveyor of Roads being £300, exclusive of 2s. 6d. per diem forage money.

On the 31st December, 1842, your Petitioner's appointment as Police Magistrate, together with some twelve or more Police Magistrates, was discontinued, as a measure of public retrenchment by the late Sir George Gipps, who promised your Petitioner employment when an opportunity offered; but after waiting some months without any probability of being employed under that Governor, your Petitioner returned to England to obtain employment, in which he succeeded as Resident Engineer on two different Railways.

Colonial Secretary, 3 September, 1842.

Your Petitioner now humbly prays that your Honorable House may be graciously pleased to take into consideration his services under Government for a period exceeding seventeen years, without making any provision for support in his declining years, having invariably devoted his whole energies and attention to the Government Service, trusting that long and faithful service would not be unrewarded or ignored; and therefore now implores that your Honorable House may in its liberality take your Petitioner's case into favorable consideration, in accordance with the spirit of the Act of Parliament 4th and 5th William 4th, and Treasury Minute dated 21st June, 1831.

And your Petitioner, as in duty bound, will ever pray.

PERCY SIMPSON.

No. 2.

MR. PERCY SIMPSON to COLONIAL SECRETARY.

Parramatta,
28 January, 1860.

SIR,

Since my letter to you of the 20th instant, received to my Petition addressed to the Honorable the Speaker and the Honorable Members of the Legislative Assembly, 23rd September, 1858, I have considered it advisable to furnish you with copies of some official letters in regard thereto and their elucidation, which I now have the honor to transmit for your consideration herewith; at the sametime I most respectfully beg leave to observe, that I should long since have endeavored to seek other employment more profitable than that of Government, could I have anticipated or foreseen that it would ever become questionable whether its employes would be entitled to gratuity or pension after serving the public with fidelity and good conduct for a series of years, so long as the Act of Parliament, 4 and 5 of William IV., and the Right Honorable Secretary of State's letter to the Governor of this Colony, of 29th September, 1831, was in force or had not been annulled.

I have, &c.,

PERCY SIMPSON.

[Enclosure 1 in No. 2.]

Colonial Secretary's Office,
Sydney, 3 September, 1842.

Sir,

I have the honor to acknowledge the receipt of your memorial on the subject of the proposed discontinuance of the Police Magistrates of certain districts (that of Patrick's Plains being one), in consequence of the reductions which it is deemed expedient to effect in the Police Establishment of the Colony.

In reply, I am directed by His Excellency the Governor to inform you, that he very much regrets that circumstances compel him to discontinue the employment of a paid magistrate at Patrick's Plains, and he will be glad to appoint you to any equivalent situation whenever it may be in his power to do so; but His Excellency is sorry that it is not in his power to grant you compensation for the loss of the office which you now hold on its discontinuance.

I have, &c.,

E. DEAS THOMSON.

Percy Simpson, Esq., J.P.,
&c., &c., &c.,
Singleton.

[Enclosure 2 in No. 2.]

EXTRACT of a Despatch addressed by the Right Honorable the Secretary of State for the Colonies to His Excellency the Governor of New South Wales, dated Downing-street, 29 September, 1831.

Whenever it shall appear to you that the public business of any Department may by a different arrangement be carried on by a smaller number of persons than are actually employed, you will not wait until a vacancy shall occur, but you will immediately effect such a reduction as you may judge to be expedient, granting to the individuals who may be affected by it (unless you can usefully employ them in some other branch of the public service) compensation for the loss which they may sustain, according to the following rates.

Persons who have been born in the Colony, or who, having gone from this country, have obtained grants of land, or have devoted themselves to any gainful pursuits, which are likely to detain them in the Colony, you will consider as sufficiently provided for by a gratuity of one or of two year's salary, according as they have been more or less than ten years in the public service.

[Enclosure 3 in No. 2.]

CLAUSES of the Act of Parliament 4 & 5 Will. 4th, Cap 24, containing the Scales according to which Superannuation Allowances are computed.

Clause IX. Applying to Officers appointed prior to the 5th August, 1829.

And be it further enacted, That from and after the passing of this Act, the Superannuation Allowances to be granted to such Officers and Clerks who shall have entered the Public Service prior to the fifth day of August, 1829 (except only as hereinafter is authorized), shall not exceed the following proportions, with reference to the amount of their salaries, and the period of their services respectively, videlicet:—

To

To an officer, clerk, or person, who shall have served *ten years* and upwards, and under *fifteen years*, any annual allowance not exceeding in amount *four-twelfths* of the annual salary and emoluments of his office.

For *fifteen years* and upwards, and under *twenty years*, not exceeding *five-twelfths* of such salary and emoluments.

For *twenty years* and upwards, and under *twenty-five years*, not exceeding *six-twelfths* of such salary and emoluments.

For *twenty-five years* and upwards, and under *thirty years*, not exceeding *seven-twelfths* of such salary and emoluments.

For *thirty years* and upwards, and under *thirty-five years*, not exceeding *eight-twelfths* of such salary and emoluments.

For *thirty-five years* and upwards, and under *forty years*, not exceeding *nine-twelfths* of such salary and emoluments.

For *forty years* and upwards, and under *forty-five years*, not exceeding *ten-twelfths* of such salary and emoluments.

For *forty-five years* and upwards, and under *fifty years*, not exceeding *eleven-twelfths* of such salary and emoluments.

And for *fifty years* and upwards, any annual allowance not exceeding the *net amount* of the salary and emoluments of his office.

Clause X. Applying to Officers appointed subsequently to the 4th August, 1829.

And be it further enacted, That from and after the passing of this Act, it shall not be lawful to grant to any Officers or Clerks who shall have entered the Public Service subsequent to the fourth day of August, 1829 (except as hereinafter authorized), any Superannuation or Allowance exceeding the following proportions, with reference to the amount of their Salaries, and the periods of their services respectively, videlicet:—

To an officer, clerk, or person, who shall have served *ten years* and upwards, and under *seventeen years*, any annual allowance not exceeding in amount *three-twelfths* of the salary and emoluments of his office.

For *seventeen years'* service and upwards, and under *twenty four years*, not exceeding *four-twelfths* of such salary and emoluments.

For *twenty-four years'* service and upwards, and under *thirty-one years*, not exceeding *five-twelfths* of such salary and emoluments.

For *thirty-one years* and upwards, and under *thirty-eight years*, not exceeding *six-twelfths* of such salary and emoluments.

For *thirty-eight years* and upwards, and under *forty-five years*, not exceeding *seven-twelfths* of such salary and emoluments.

And for *forty-five years* and upwards, not exceeding *eight-twelfths* of such salary and emoluments.

And in no case, except as hereinafter is especially provided, shall any superannuation or allowance exceeding *two-thirds* of the salary and emoluments of any such officer, clerk, or person be granted.

[Enclosure 4 in No. 2.]

4 January, 1839.

My dear Sir,

Upon the subject of the breaking up of the Depôt I had some conversation with the Governor to-day, and I can assure you that His Excellency appeared to take a lively interest in your case. This is no more than I expected, and as I think I told you; but as to any retiring allowance, that is quite out of the question;—still, I think it possible that if you were to ask for appointment as Police Magistrate of one of the newly formed towns—connected with a Commissionership of Crown Lands—or if you could point any way in which your services could be continued with advantage to the public, there is good hope of success. But, of course, you must bear in mind that the situations are not all open to choice.

Yours, &c.,
S. A. PERRY.

Percy Simpson. Fsq.,
Parramatta.

[Enclosure 5 in No. 2.]

Surveyor General's Office,
14 September, 1842.

Dear Simpson,

I am sorry to find you among the public functionaries whose appointments are proposed to be abolished on the grounds of economy, as I always considered yours to have been made as a compensation for the loss of office in this Department, and as evidence that the Governor was satisfied with your conduct in the situations you formerly filled. That Sir Thomas Mitchell was equally satisfied is, I think, sufficiently apparent, from the favorable mention he makes of you in his journal, which is published to all the world. For my own part, in all the transactions I have had with you during the repeated and long absences of Sir Thomas Mitchell in the interior, I have found the duties intrusted to your charge performed in a manner highly creditable to yourself and advantageous to the Department; and if proof were wanting of my esteem for you it will be afforded by reference to the fact of the readiness with which I accepted the services of your late son as an assistant in the office, while you were at the same time in charge of the Transport Branch of the Department at Parramatta.

I should hope, however, that, although of course the Governor cannot pledge himself to provide for the officers who are displaced by the circumstances of the times, His Excellency will consider you as a claimant for a situation suited to your talents, and that he will avail himself of an early opportunity of re-enlisting you in the service of the Government.

Percy Simpson, Esq.,
Police Magistrate, Singleton.

Believe me, &c.,
S. A. PERRY.

[Enclosure 6 in No. 2.]

Wilton, Ross, Herefordshire,
21 February, 1844.

My dear Sir,

Your letter of the 8th instant reached me here, on my return from London last week. I regret exceedingly that I did not know of your being in town whilst I was there, as I might then have had the pleasure of seeing you; I had not, in truth, even heard of your being in England.

I should be most happy to learn that you succeeded in any of the objects you had in view on leaving Australia. I cannot, at this distance of time, call to mind the opinion I formed of your claims under the agreement with Sir Thomas Brisbane; but the letter I wrote on sending your papers to Downing-street is, doubtless, still to be found there. I cannot, however, forget the very useful services you rendered to the Government of New South Wales during the period I had charge of it, as many of your labors were performed under my own eye. The manner in which you designed and executed the wharf, and roads leading to it, at Parramatta fully satisfied me of your competency to lay out roads and public works, and to superintend their execution. I should be very happy to hear of your being again employed in this way, either in this country or Australia, as I am sure the public in either hemisphere would be benefited by your exertion and knowledge. I regret that, after such long service in New South Wales, you should have been obliged to come to this country to seek for employment, as I should have conceived that on the late reduction you were at least entitled to some retiring allowance.

If this testimony to your having rendered good service whilst I held the government of New South Wales shall prove of any use to you, I shall be extremely glad in having given it; and I beg to assure you that I shall be at all times ready to do you the justice of expressing my favorable opinion of your capacity and conduct.

Percy Simpson, Esq.,
&c., &c., &c.

I am, &c.,
RICHARD BOURKE.

[Enclosure 7 in No. 2.]

Surveyor General's Office,
Sydney, 13 August, 1846.

Dear Madam,

In acknowledging the receipt of your letter of the 7th instant I have the pleasure to state, that the services of Mr Simpson in this department extends over a period of eleven years, and that his judicious application of the labor placed under his superintendence for the construction of roads, in situations where considerable skill was requisite, gave satisfaction to the Governor and to the Surveyor General. Upon the transfer of the charge of the Roads and Bridges to another branch of the public service, Mr Simpson was (I believe at his own request) retained in this department to keep in a continued state of efficiency the field equipments and transport of all the surveyors employed in the interior; and it was consequent on a change of arrangements in this respect that his further services in this department were dispensed with by Sir George Gipps, who, as a compensation for the loss of his situation, appointed him to the Police Magistracy of Patrick's Plains, or Darlington.

What would have been the amount of Mr Simpson's emoluments had he continued a member of this department it is impossible to say, as the whole establishment has become almost disorganized; some of the oldest surveyors in the field receiving only one-third of their former pay, without contingent allowances, except at a very low rate, for each portion of work actually performed; others being placed on half-pay, and those who are retained on full pay being obliged to make their field arrangements upon a specific allowance. It is probable, however, that Mr Simpson would have been placed upon the half-pay list, but his having been appointed to the Darlington Bench precluded all claims upon this department. Mr Simpson's qualifications for conducting every branch of the road business having been fully recognised, it is also probable that, except for the removal above referred to, he would now be in the Superintendence of the Roads in the county of Cumberland, at a salary of £300 per annum, with an allowance for forage for two horses.

Mrs. Simpson.

Believe me, &c.,
S. A. PERRY.
Dy. Sr. Gl.

[Enclosure

MR. PERCY SIMPSON.

7

[Enclosure 8 in No. 2.]

Surveyor General's Office,
19 August, 1842.

My Dear Sir,

I should regret less the prospect of your removal from the Police Magisterial Bench if you were likely again to give the country the benefit of your experience in road-making, and tact in directing and arranging the means applicable to such Public Works. In this respect I value your ability so highly, that I consider your employment in any other capacity a loss to the Colony. Perhaps there may be an opening for your re-employment on the roads if convict labor is again conceded to this Colony for that purpose only, and for which soon a petition, numerous and respectably signed, is ready for transmission to Her Majesty's Government, and will, I hope, be sent by the first vessel for England.

I remain, &c.,
T. L. MITCHELL.Percy Simpson, Esq.,
Patrick's Plains.

[Enclosure 9 in No. 2.]

Brighton,
15 September, 1843.

Sir,

I beg to return herewith the several papers which you left with me yesterday, and assure you I have heard with sincere concern of the distressed state of the Colony of New South Wales, and of the cause of your return to this country. Without entering particularly into your services while I administered the Government of the Colony, I have much pleasure in stating that you always evinced the utmost zeal in the performance of your duties, which you discharged in a very satisfactory and efficient manner. I might instance, more especially, your services in the Road Department (to which I perceive the Surveyor General of the Colony bears testimony in his letter of the 19th of August, 1842). I wish you every success in the application you are about to make, and should be very glad if my testimony to your services should in any way prove instrumental to it.

RA. DARLING.

Percy Simpson, Esq.

[Enclosure 10 in No. 2.]

Surveyor General's Office,
7 August, 1850.

My dear Sir,

In attention to your note, I have much pleasure in certifying to your competency, in my humble opinion, to fill any such situation as that you now inform me it is your intention to apply for; but I must express my regret that your long and useful services in this country, with the experience you must have acquired more recently at home, have not opened to you some employment on a scale better proportioned to your qualifications and merits. I can only add, that in executing some of the most elaborate works on the roads of this Colony you gave me great satisfaction, not only in the manner of executing the works, but, which was then of equal importance, in the progress made; and I think it but due to you to say, that I know of no officer in the Colony to whom I could with better expectations as to the results, intrust any work connected with the formation of roads, bridges, or streets.

I remain, &c.,
T. L. MITCHELL.Percy Simpson, Esq.,
&c., &c., &c.

[Enclosure 11 in No. 2.]

Colonial Secretary's Office,
10 February, 1823.

Sir,

Having received accidental intelligence of your safe arrival at Bathurst, on the 2nd instant, I expect that you will be in as perfect readiness to proceed forward to Wellington Valley by the time this communication reaches you, as at the hour you left Sydney.

My long letter of instructions to you, bearing date the 1st January last, leaves scarcely any observation to be added on the present occasion. Your further route, from everything I am able to learn, will experience but little impediment. Mr. Oxley is the bearer of this, and has promised to employ every facility, which the presence of Mr. M'Brien will afford him, to render your future line of march easy and perspicuous; at all events with out any foreign assistance, and with nothing but the compass in your hand, by taking a westerly course until you bring a remarkable hill, named Mount Lachlan, to bear south by east half east and then steering north by west half west, you cannot fail to hit upon the confluence of the two rivers intended to be the site of your future settlement; and avoid, by keeping so far to the westward, a connected chain of very intersected and rocky country reported to extend along the left bank of the Macquarie and impede very much every attempt

attempt to reach Wellington Valley by a line perfectly straight. On this head, therefore, of your meeting with a plain and ready access to your intended destination I feel little alarm. Not so upon another. From the number of persons that accompany you, your party is composed, in my opinion, of more mouths than you will ever be able to victual, and imposes on me the necessity of requiring from you an implicit adherence to the following indispensable instruction:—"Not to quit Bathurst without three months unground, and three weeks ground, consumption of wheat for every soul in your detachment, and to leave every one behind accordingly for whom your means of conveyance may not enable this store to be carried." This one grand precaution punctually adopted, remembering too to travel slowly, was not to injure the animals, with moderate vigilance against the native dog at night and the straying of the cattle at all times; and with the important assistance you will be enabled to derive, in all the minor detail of your arrangements, from the long experience and indefatigable assiduity, in the public service, of Lieutenant Lawson, aided by the opinion I have formed of your own zeal and discretion, leave me, in conclusion, nothing more to annex than the expression of my confident anticipation that a settlement, in my opinion, most intimately connected with the rising interests of the Colony will, under your auspices, be established successfully.

Lieut. Percy Simpson,
Commandant, Wellington Valley.

I have, &c.,
F. GOULBURN,
Col. Secretary.

[Enclosure 12 in No. 2.]

Brisbane, Greenock,
17 August, 1843.

Sir,

I have been duly favored by your letter of the 14th instant, on the subject of pecuniary claims on Government, arising out of the appointment you held as Civil Commandant of Wellington Valley, New South Wales, while I was Governor.

I have also received the written agreement entered into with you as directed by me, and signed by the late Major Goulbourn, dated the 1st of January, 1823; and I beg to state, that the construction I then and now place on that arrangement was—that you were entitled to receive a per-centage on the amount of wheat raised by you while at that command, as a stimulus to induce you to exert to the utmost your endeavors to render them productive to the Government, and thereby lessen the expense of the convict to the Crown; and I regret that any other construction should have been placed on that agreement.

It is now a distant period since your claim existed, but I hope you may yet be able to get it adjusted to your satisfaction.

I return you all your original documents, as they will be of use to you in establishing what your agreement was at that time with the Colonial Government; and I have further to observe, that there was a marked difference between the commands at Wellington Valley and Bathurst.

I remain, &c.,
Percy Simpson, Esq.,
&c., &c., &c. THOS. MAKDOUGALL BRISBANE.

[Enclosure 13 in No. 2.]

Brisbane, Largs,
23 October, 1844.

Dear Sir,

Your letter having gone to Makerstown caused a delay in my receiving it; and enclosed I send you the copy of a note you wished for; and I sincerely regret you have been unable to obtain a settlement of what I consider your just claim, and which I trust may ultimately be accomplished to your wish.

I am happy to say we are all well, and hope you and family are in good health.

Believe me, &c.,
Percy Simpson, Esq.,
&c., &c., &c. THOS. MAKDOUGALL BRISBANE.

[Enclosure 14 in No. 2.]

9, Suffolk-st., Pall Mall, London,
10 December, 1847.

My dear Sir,

I assure you I was very glad to receive a letter from you, as I had been inquiring for you before I went to Spain, and had hoped to have had the pleasure of seeing you in England. I am glad, as far as the Colony is concerned, that you feel like me a yearning after the land of the glowing South. I am in hopes that your experience in the construction of railways here may yet be available in the Colony, both for your own advantage and that of the public; for I know of no officer on whom I could depend with more certainty for the construction of any public work. You are just the man for undertakings of that description in Australia.

MR. PERCY SIMPSON:

9

I am glad to see what Sir Richard Bourke has written of you, and I can fully bear him out, and can say much more besides of your useful services in New South Wales. You are right not to go without an appointment, and I should hope that Lord Grey, on the grounds of your own merits and length of services, will do you ample justice, and that the Colony will again have the benefit of your valuable labors. I came home for the recovery of my health, the excessive heats of the interior gives us all ophthalmia; my eyes will never be quite right. I am publishing my travels, and very busy here now, but I shall not leave London until the end of January. If I can be at all instrumental in forwarding your views to get back to Australia, pray let me know; meanwhile I remain

Percy Simpson, Esq.

Yours, &c.,
T. L. MITCHELL.

[Enclosure 15 in No. 2.]

Head Quarters,
Corfu, 1 July, 1814.

Sir,

In consequence of the departure of Major the Honorable Sir Charles Gordon for England on the public service, you are ordered, on the receipt of this official letter, to immediately proceed to Paxo and assume the administration of the government of that Island under the title of Capo di Governo, and to proclaim without loss of time to the public functionaries and inhabitants the character with which you are invested.

From the date of this letter you will receive four dollars per diem for the charge conferred on you from the public local treasury.

In your proclamation to the inhabitants and public functionaries assuming the authority vested in you, you will assure them of the beneficial intentions of the Government of His Britannic Majesty to promote their interests and prosperity, at the sametime make known to them that you will exact from them the most implicit obedience to the acts that may emanate from you in relation to the present delegated powers vested in you; and it is essential in a well regulated Government that no person whomsoever should arrogate or presume to interfere in any part of the Government under your administration, except by the methods and forms established by law, so you are enjoined on any such occasion to adopt the most prompt and decisive measures, in order to suppress all undue interference, making your report of the same to the Civil Commissioners of His Majesty for this information.

Lieutenant Percy Simpson,
Royal Corsican Rangers,
Santa Maura.

I have, &c.,
J. CAMPBELL.

[Enclosure 16 in No. 2.]

Horse Guards, 16 March, 1822.

My dear General,

I give this letter to Lieutenant Percy Simpson, who proceeds with his young family to New South Wales, in the hope of improving his prospects in life,—for, although he and Mrs. Simpson, I understand, are well connected, yet at this moment he finds it very difficult to get employed while reductions and retrenchments oppose so many obstacles to all such views in this country.

He has held the situation of Judge Advocate and subsequently local Governor of one of the Ionian islands for some years, and he returned to this country in consequence of the reduction of the regiment to which he belonged, bringing with him a strong recommendation to me from Sir Thomas Maitland, with a request from the General that I would exert myself in the behalf of Mr. Simpson; and I feel assured that, should you have an opportunity of serving him, he will prove himself worthy of your favorable notice and protection.

Major General Sir Thomas Brisbane, K.C.B.,
&c., &c., &c.

I remain, &c.,
H. TORRENS,
A. G.

[Enclosure 17 in No. 2.]

Downing-street, 13 May, 1822.

My dear Sir,

With reference to your letters of the 13th March and 10th ultimo, respecting a passage to New South Wales for Lieutenant Percy Simpson, I am now directed by Earl Bathurst to acquaint you that, in compliance with the request of His Royal Highness the Commander-in-Chief, directions have been given to the Agent for Transports at Cork for Lieutenant Simpson and his family to embark on board the first convict ship sailing from that port in which there may be room, provided he shall enter into an arrangement for defraying the expense of his voyage, so that no additional charge is in consequence incurred to the public on his account. I am at the same time to acquaint you that the great increase of applications has rendered it necessary to establish a regulation of not granting free passages except

except to officers on service ; and I am to express to you Lord Bathurst's regret that, under these circumstances, he is precluded from complying with that part of His Royal Highness's request in favor of Lieutenant Simpson.

Major General Sir Herbert Taylor,
&c., &c., &c.

I am, &c.,
R. WILMOT.

No. 3.

THE UNDER SECRETARY to MR. SIMPSON.

Colonial Secretary's Office,
Sydney, 14 February, 1860.

SIR,

I am directed by the Colonial Secretary to acknowledge the receipt of your letter of the 20th ultimo, in which you enclosed a Petition addressed by you to the Legislative Assembly on the subject of your past services under Government and submitted an application for a pension of £150 a year.

2. The Colonial Secretary desires me, in reply, to observe, that it appears that preceding Governments have declined to recognise the claim which you prefer, and that the Assembly, to which you have appealed, has hitherto taken no action in the matter. The present Administration has neither authority nor funds wherefrom to grant the allowance prayed for by you, and the Colonial Secretary cannot advise that the matter should be withdrawn from the tribunal to which you yourself have submitted it.

I have, &c.,
W. ELYARD.

Legislative Assembly.

NEW SOUTH WALES.

WYNYARD SQUARE.

(PETITION FROM INHABITANTS OF.)

Ordered by the Legislative Assembly to be Printed, 13 September, 1859.

To the Honorable the Members of the House of Assembly.

The Petition of Landed Proprietors and Residents in the vicinity of Wynyard Square, in the City of Sydney,—

RESPECTFULLY SHEWETH :—

That about ten years ago several of your Petitioners became purchasers of land in that locality from the Government, at a public sale, for which land they paid very high prices.

That several of your Petitioners have also erected large and costly buildings thereon.

That at such time when your Petitioners became purchasers as aforesaid, a plan was exhibited, by which it was shewn that it was intended to form a Public Square in front of several of the allotments so offered for sale.

That several of your Petitioners were thereby induced, not only to purchase, but to give high prices for their allotments so situated in Wynyard Square.

That notwithstanding so many years have elapsed, and notwithstanding some verbal promises by a former Government to carry out the first intention to form a Public Square in the place named, and notwithstanding the rights of the purchasers in respect hereof, the ground has not been formed into a Public Square even up to this time, and not only so, that by reason of it having been for some time past the depository for the street sweepings and other filth, it has become a public and dangerous nuisance, and has very much depreciated the value of property in the vicinity.

Your Petitioners therefore humbly pray that your Honorable House will take their grievances into your consideration, and render your Petitioners that justice in the premises which all the facts of the case may upon due inquiry be found to entitle them to.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 43 Signatures.]

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 19. FRIDAY, 30 SEPTEMBER, 1859.

4. Condition of the Working Classes of the Metropolis :—Mr. Parkes moved, pursuant to amended notice,—
1. That a Select Committee be appointed to take evidence and report upon the social condition of the working classes of this Metropolis, more especially in respect to the four following heads of inquiry :—
 - (1.) The number of mechanics and labourers respectively, who may be wholly or partially out of employment, the period during which such want of employment has been experienced, and the alleged causes thereof.
 - (2.) The course of wages in different trades and callings during the period of the last two years, and the rates obtained at the present time.
 - (3.) The class of house accommodation in its moral and sanitary relations, and the number of freehold dwellings occupied by working mechanics and labourers.
 - (4.) The existence and extent of juvenile vagrancy in the public streets, classifying, as far as may be practicable, any such returns, as to age, sex, parentage, religion, education, and place of birth.
 2. That such Committee consist of Mr. Plunkett, Mr. Walsh, Mr. Byrnes, Mr. Hay, Mr. Loder, Dr. Lang, Mr. Lyons, Mr. Windeyer, Mr. Pemell, and the Mover.
- Debate ensued.
Question put and passed.

VOTES No. 35. THURSDAY, 1 DECEMBER, 1859.

6. Attendance of Member of Legislative Council :—Mr. Parkes moved, without previous notice, That the following Message be carried to the Legislative Council :—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee to inquire into the Social Condition of the Working Classes of this Metropolis, and that Committee being desirous to examine the Honorable E. Wise, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

*Legislative Assembly Chamber,
Sydney, 1 December, 1859.*

Speaker.

Question put and passed.

* * * * *

12. Attendance of Member of Legislative Council :—The Speaker reported, that during the Debate of the Question last before the House, the following Message was received from the Legislative Council,—

MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated this day, requesting leave for the Honorable E. Wise, Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly to inquire into the Social Condition of the Working Classes of the Metropolis, the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee, if he think fit.

*Legislative Council Chamber,
Sydney, 1 December, 1859.*

W. W. BURTON,
President.

VOTES No. 54. THURSDAY, 2 FEBRUARY, 1860.

9. Condition of the Working Classes :—Mr. Parkes moved, pursuant to notice, That the undermentioned Documents be referred for consideration to the Select Committee now sitting on the Condition of the Working Classes of this Metropolis,—
- (1.) The Report and Evidence of the Select Committee appointed by the Legislative Council of 1854, on the motion of Mr. Parkes, to consider the subject of establishing a Nautical School in the Port of Sydney.
 - (2.) The Report and Evidence of the Select Committee appointed by the same body in the same year, on the motion of Mr. Martin, to take Evidence respecting Destitute Children.

(3.)

(3.) The Report and Evidence of the Select Committees appointed by the same body in 1854 and in 1855, on the motion of Mr. Cowper, to inquire into and report upon the Increase of Intemperance.

Question put and passed.

Ordered to be referred accordingly.

VOTES No. 55. FRIDAY, 3 FEBRUARY, 1860.

7. Attendance of Member of Legislative Council as Witness :—Mr. Parkes moved, That the following Message be carried to the Legislative Council :—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee to inquire into "The Condition of the Working Classes of the Metropolis," and that Committee being desirous to examine the Honorable Robert Fitzgerald, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

*Legislative Assembly Chamber,
Sydney, 3 February, 1860.*

Speaker.

Question put and passed.

VOTES No. 56. TUESDAY, 7 FEBRUARY, 1860.

21. Attendance of Member of Legislative Council as Witness :—Mr. Parkes moved, That the following Message be carried to the Legislative Council :—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee to inquire into the condition of the Working Classes of the Metropolis, and that Committee being desirous to examine the Honorable James Robert Wilshire, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

*Legislative Assembly Chamber,
Sydney, 7 February, 1860.*

T. A. MURRAY,
Speaker.

Question put and passed.

VOTES No. 61. WEDNESDAY, 15 FEBRUARY, 1860.

10. Members of the Legislative Council as Witnesses :—The Speaker reported the following Messages from the Legislative Council :—

* * * * *

- (2.) MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated the 3rd instant, requesting leave for the Honorable Robert Fitzgerald, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly, on the Condition of the Working Classes of the Metropolis, the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee, if he think fit.

*Legislative Council Chamber,
Sydney, 15 February, 1860.*

W. W. BURTON,
President.

- (3.) MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated the 7th instant, requesting leave for the Honorable James Robert Wilshire, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly, on the Condition of the Working Classes of the Metropolis, the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee, if he think fit.

*Legislative Council Chamber,
Sydney, 15 February, 1860.*

W. W. BURTON,
President.

VOTES No. 81. WEDNESDAY, 18 APRIL, 1860.

8. Condition of the Working Classes of the Metropolis :—Mr. Parkes, as Chairman, brought up the Report from, and laid upon the Table the Proceedings of, and Minutes of Evidence taken before, the Select Committee on the Condition of the Working Classes of the Metropolis, with Appendix, &c.
Ordered to be printed.

[1859-60.

CONDITION OF THE WORKING CLASSES OF THE METROPOLIS.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 30th September, 1859, "to take evidence and report upon the social condition of the working classes of this Metropolis, more especially in respect to the four following heads of inquiry:—

"(1.) The number of mechanics and laborers respectively, who may be wholly or partially out of employment, the period during which such want of employment has been experienced, and the alleged causes thereof.

"(2.) The course of wages in different trades and callings during the period of the last two years, and the rates obtained at the present time.

"(3.) The class of house accommodation in its moral and sanitary relations, and the number of freehold dwellings occupied by working mechanics and laborers.

"(4.) The existence and extent of juvenile vagrancy in the public streets, classifying, as far as may be practicable, any such returns, as to age, sex, parentage, religion, education, and place of birth"—

and for whose consideration were referred, on the 2nd February last:—

"(1.) The Report and Evidence of the Select Committee appointed by the Legislative Council of 1854, on the motion of Mr. Parkes, to consider the subject of establishing a Nautical School in the Port of Sydney.

"(2.) The Report and Evidence of the Select Committee appointed by the same body in the same year, on the motion of Mr. Martin, to take Evidence respecting Destitute Children.

"(3.) The Report and Evidence of the Select Committees appointed by the same body in 1854 and in 1855, on the motion of Mr. Cowper, to inquire into and report upon the Increase of Intemperance,"—

have agreed to the following Report:—

Your Committee have pursued, to a considerable length, the inquiry entrusted to them by your Honorable House, in the course of which they have held twenty-two meetings, and examined forty-one witnesses. They have also considered the results of other inquiries of a kindred character, as contained in the reports and evidence of Committees of a former Legislature, referred to them by your Honorable House. The evidence they have received, and upon which their Report is chiefly based, is unavoidably imperfect; several persons, whose knowledge of different branches of the subject appeared to be valuable, were summoned as witnesses who failed to give their attendance; and your Committee are sensible that important facts may have been lost through the absence of specific guidance in the conduct of their inquiry. The voluminous evidence appended to their Report has been collected, however, with an anxious desire to give an impartial scope to the inquiry, and to render it searching in its operations and valuable in its results. It is believed that the witnesses examined very fairly represent the different interests, the different conditions of life, the different stand-points of observation, and the different modes of thought which prevail in the community, and that the information thus amassed is deserving

of immediate and serious attention, not less for its trustworthiness than for the startling nature of its revelations. The witnesses may be classified as follows:—

City employers, including builders, tanners, soap-boilers, tailors, cloth manufacturers, engineers, and founders	11
Country employers, engaged in squatting and agriculture ...	4
Working tradesmen	6
Persons officially employed by the Corporation and Government	8
Medical practitioners	3
Clergymen and religious teachers	3
Labor agents	4
Pawnbrokers	2
Total	41

Your Committee will now proceed to give a condensed account of the social state of the working classes of Sydney, derived from the evidence of these witnesses; and in respect to the evils shewn to exist, they will then collect some of the opinions expressed as to the causes by which they have been produced, and the remedies by which they might be removed or mitigated, concluding with their own views on the general subject, and such recommendations as have been suggested by the various features of the inquiry.

A large number of persons belonging to the working classes are at present, and have been for some time past, suffering much distress from want of employment.* In too many instances this is attributable to intemperance or improvidence on the part of the sufferers;† but, supposing these cases to be undeserving of or beyond relief, there are still left several distinct forms of distress, arising from want of employment, which cannot be so easily explained, and ought not to be found in a well-ordered and progressive state of society. As might be expected in so large a city as Sydney—the principal seaport of a new country—there are many persons of better education and social habits, who are reduced to much suffering for want of any kind of employment for which they are fitted, and who make their distress the more severe by their struggles to conceal it.‡ And of this class there appears to be competent clerks and accountants, who cannot obtain situations.§ Since the discovery of gold, the unsettled courses of many working men, and their frequent absences from home, seeking their fortunes at the diggings, have left numbers of women and families in Sydney without protection or any regular means of subsistence, and the consequence is a large amount of destitution and misery.|| Still more unfortunately, we find that there are many men, both mechanics and laborers, of good character and sober habits, able and willing to work for their “daily bread,” who, nevertheless, cannot obtain employment.¶ There seems to be among those who have resided for any length of time in the city a feeling of unwillingness to accept employment as laborers in the country, which is not accounted for by some of the witnesses, and is variously accounted for by others.** Some raise objections because there are no schools for their children; others have heard unfavorable reports from the interior and are apprehensive of ill treatment; and others again prefer the cheap and ever present enjoyments of the town to any advantages that are remote and contingent. It is also shewn that some men will not accept reduced wages even when expressing their anxiety to obtain work††; but the refusal appears to be dictated by the fear of permanently injuring their class by the reduction, and a feeling that they would not be more secure of future employment

§ Ev.: Wilshire, qs. 2525 to 2529.

¶ Ev.: Clayton, q. 240; Cowper, q. 1524.

¶ Ev.: Clayton, qs. 249, 250, 252; Pidgeon, q. 424; Windeyer, q. 557; Cowper, qs. 1533 to 1535.

** Ev.: M'Levie, qs. 38, 39; Clayton, qs. 318, 319, 322; Harrison, qs. 337, 338; Windeyer, q. 566; White, q. 844; Allen, q. 904; Spence, qs. 986, 987; W. Robertson, qs. 2092 to 2103; Fitzgerald, qs. 2247 to 2251.

†† Ev.: M'Levie, qs. 53 to 57; Fitzgerald, q. 2356; Wilshire, qs. 2530, 2531.

employment themselves, if the lower rates were submitted to.* But in the face of this evidence there is the fact that wages have greatly receded—in some cases to about one-third of former rates—during the last few years; and it is admitted on one hand that neither the desire to keep up the present standard nor the feeling of reluctance to leave Sydney operates in all cases, while on the other, the prevalence of such feelings is strongly denied.†

As to the actual extent of this want of employment and consequent suffering, there is much difference of opinion; and one witness unhesitatingly doubts its existence altogether amongst deserving persons. But its existence is put beyond question by a tabular return compiled under the direction of the Inspector General of Police, from information acquired by his officers visiting the dwellings of the unemployed in their respective Divisions of the city on the 20th October, 1859. This return shews the following result‡:—

	Persons.
Unemployed one week	13
" two weeks	44
" three weeks	34
" one to three months... ..	331
" three to six months	367
Partially employed	250
Total... ..	1,039

Supposing that two-thirds of these persons were married and had families, at the low average of two children each, we have a total of 3,118 of the working population to be supported, while the productive power of their labor is lost to themselves and the community. But, though the accuracy of the return alluded to above cannot be doubted as to those included in it, it may reasonably be doubted that it includes all the persons similarly situated. It seems highly probable that there must have been numerous omissions from any return so prepared.

The callings of these 1,039 men are stated to be as follows:—

Carpenters and cabinetmakers	139
Masons, bricklayers, and plasterers	134
Tailors and shoemakers	68
Painters	53
Other trades	196
Seamen, &c.	19
Laborers	430
Total... ..	1,039

The course of wages in the principal trades for several years past and the rates obtainable at the present time are given in the following Table, which has been compiled from information supplied by different employers, and more fully detailed in their evidence§:—

DAILY RATE OF WAGES OF MECHANICS AND LABORERS.

TRADES.	1853.	1854.	1855.	1856.	1857.	1858.	1859.	1860.

§ See appendices to evidence of Mr. Brown, Mr. Spence, Mr. Sutherland, Mr. Russell, Mr. B. James, and Mr. Rhodes.

The quotations of labor agents do not shew much variation from these rates, but the prices reported by the employers themselves, in many instances confirmed by several witnesses, have been generally followed in the preceding table. The wages given by country employers, in cases not unfrequent, appear to be governed more by the character and capability of the person employed than by the nature of his employment.* The rates for the more common kinds of service are thus averaged by Mr. Glue :—Single farm servants, £35 a year, with rations ; married couples, £50, with rations ; single shepherds, £30, with rations ; smiths and carpenters, £60, with rations ; female servants, £18.†

The house accomodation of the working classes of Sydney is admitted on all hands to be deplorably bad ; even in the more recently erected dwellings the means of drainage and ventilation are almost entirely neglected, and many of the older tenements are so unfit for the occupation of human beings, that one witness declares them to be “ past remedy without a general fire.” The opinions of several of the witnesses on this subject are quoted in their own words :—

The Inspector General of Police : “ Houses of very defective character, both as to cleanliness and ventilation.”

The Health Officer : “ I think they are worse than in any part of the world that I have seen—worse than in London.”

I. Aaron, Esq., M.R.C.S.L. : “ Very badly constructed in a sanitary point of view. I have known in one of these places (a house of two rooms 10 by 12 feet) a man and his wife, five or six children, and very often a lodger or two, probably a servant girl out of place, to be living.”

J. H. Palmer, Esq. : “ In Sydney the houses occupied by this class are, in many instances, very small weatherboard buildings of two rooms, not more than 10 feet by 11 feet each, and with ceilings not more than 6 or 7 feet high, with no means of ventilation excepting the door and window, as few have chimneys save in one room. Around these places, too, are frequently gathered green pools of mud and putrid matter.”

Mr. Justice Wise : “ On my first arrival I was particularly struck with what seemed to me the deficient house accommodation. It appeared to me that the houses were not in the slightest degree adapted to the country.”

The Rev. P. Newman : “ These are of such a character, as far as my experience goes, as would lead me unhesitatingly to pronounce them dangerous to the health of the strongest.”

The Dean of Sydney : “ A very large proportion of the houses of the working classes in my parish have been in existence for a number of years, and I think they are built with very little regard to ventilation or other sanitary provisions.”

Alderman Sutherland : “ I think they are very injurious to the health and moral character of the inmates. I should say the deaths of at least half the children are caused by the badly ventilated houses.”

A. Roberts, Esq., M.R.C.S. : “ A total absence of the means of ventilation, or proportionate size of the rooms to the number of inmates ; and I believe the sacrifice of life in consequence is very great.”

The Hon. R. Fitzgerald, Esq., M.L.C. : “ I think the houses are very miserable—some of the places are shocking ; if you go down some of the places, you are obliged to put your handkerchief to your nose, the smell is so very bad.”

The Hon. J. R. Wilshire, Esq., M.L.C. : “ I consider them very bad ; indeed, the greater part of the houses occupied by the laboring classes are not fit to be called houses.”

Mr. S. W. Mansfield, Master of the Benevolent Asylum : “ Hundreds in Sydney are totally unfit for human habitations.”

These emphatic expressions of opinion—all concurring in the same disturbing truth—have been taken almost at random from the mass of condemnatory evidence on the character of

* See evidence of Mr. Walsh and Mr. Fitzgerald.

† See appendices to evidence of Mr. Glue, Mr. Ashlin, Mr. Haigh, and Mrs. Pawsey.

of the dwellings of the poorer citizens, which this inquiry has placed on record.* The suburbs to a great extent are as unhappily situated as the city; in both cases, one general description of the lowest class of houses is applicable. A block of twenty or twenty-five wretched hovels affords shelter for perhaps a hundred human beings.† The rooms, two in number, are ten or eleven feet square, and scarcely high enough for a man to stand erect; the floor is lower than the ground outside; the rain comes in through the roof, and filth of all kinds washes in at the door; the court or yard, that is common to all, is covered with pollution that must be endured by all; and, inside and out, everything is an object of disgust, and wears a look of loathsomeness that would terrify men away, if it were possible to meet with its resemblance not familiarised to their senses through being created by themselves. In smaller groups there is no provision for greater comfort. The houses are constructed as if they were not intended for homes; and, strange as it may appear, nothing has been gained by experience, except in a very limited degree, to lead persons in occupying new ground to make better provision for health, cleanliness, and comfort. In many parts of Woolloomooloo, which have been built over during the last fifteen or twenty years, there are narrow lanes of houses with all the evils inseparable from improvident construction, insufficient living room, confined space outside, and want of drainage, in forms as aggravated as in the old cities of Europe.‡ Nor does it appear that any of the superior contrivances for domestic convenience—such as indoor sinks, fitted pantries, suitable stoves, and clothes' closets, which are so great a comfort to the humble housewife in England—have been generally introduced into the better class of working men's houses, which, it is gratifying to learn, have been lately erected in some parts of the city.

The buildings, originally so ill-adapted for human habitations, are rendered still more unhealthy and wretched—in frequent cases to a degree perfectly frightful—by the general system of over-crowding which has been induced by high rents. Some cases, that are stated in detail, it is hoped, may be considered abnormal even in the condition of social life described. A den of two rooms is occupied by seven men and seven women§; seventy human beings are found herded together in a common lodging-house of six rooms||; and no fewer than 315 Chinamen are lodged in one building¶. Leaving the haunts of vice and promiscuous association, still we cannot leave behind us the types of similar misery and disease. Necessity often forces honest and striving families into dwelling-places so inadequate to their wants that their jostled and overloaded existence may be supposed to be lightened only by their higher range of moral qualities. The instances appear to be few where one of these miserable tenements is allotted to the exclusive use of one family.** The consequences of this state of things to the moral and physical well-being of the inhabitants is forcibly stated by two of the medical witnesses. "The want of proper accommodation," says Mr. Aaron, "has a direct effect on the moral sense of the occupants, because they are obliged to do everything in public, you may say; and the state of bodily feeling which is induced by the absence of sanitary conditions, no doubt, induces many of these people to resort to intemperance. They sleep in ill-ventilated and over-crowded apartments—get up in the morning, especially in the summer time, unrefreshed, and want something to rouse them. It is not, therefore, to be wondered at that they should go to the public-house for a morning dram." Such is the effect on the hard nature of the men; but there are others—the weaker members of the abject household—who are constantly exposed to the gradual process of human slaughter that is silently going on. This is the evidence of Mr. Roberts: "I should say it would be utterly impossible for a housewife to keep a bad house tidy. When she is placed in such a house, she soon ceases to strive to preserve order and cleanliness in her house; the husband does not care about coming home to his wife; she becomes careless and neglects her children; their diet is also neglected, and they are allowed to expose themselves to the sun. This all reacts, not
"only

“only upon the health of the man and the woman, but also upon that of the children, and ultimately upon the habits of the people. A large number of the deaths of children arise indirectly from the same cause.”

The streets of Sydney are infested by a large number of vagrant children, or children entirely neglected by their parents; and some of the revelations of juvenile depravity are appalling and almost incredible.* According to the evidence of an intelligent officer of the Metropolitan Police, the traffic in female prostitution has extended its meshes around unhappy children scarcely above the age of infancy, and the closest ties of nature are converted into the bonds of their perdition.† Cases of such extreme diabolicalness it is hoped are rare even among those precipitated into courses of early wickedness, but it can no longer be doubted that such cases are to be found among the many hideous forms of ignorance, squalor, and sin, that fill some of the lanes and alleys of this wealthy city. Female prostitution itself appears to have increased in undue proportion to the increase of the population during the last few years, and the accelerated increase has been largely fed by the sacrifice of girls of tender years‡ The vice is fostered by system, and there are wealthy persons who refuse to let their houses, except for its purposes.§ The number of boys in a vagrant state is variously estimated, and it may be doubted that there are many entirely destitute of home and kindred; but the evidence abundantly shews that a large class exist to whom the possession of parents is of no value in giving direction to their lives, and who are growing up to be an incumbrance and a curse to society. In the language of one witness, they are “floating about the streets and lanes like fish in a pond.” It has not been found practicable to obtain a classified return of these unfortunate children, but it is assumed, from the information collected, that the moral features of their condition which are susceptible of reformation are much the same in all cases.

Your Committee have considered it their duty to present, without softening the deeper colours, the worst features of the disordered state of things which is fast undermining the social happiness of the community. It is lamentable to discover this darkening mass of physical and moral disease—so much of it obviously arising from preventible causes—in a city where the natural aids to beauty and sanitary precaution in its streets and structures, the variety of land and water, and the brilliancy of climate, are all in favor of the largest amount of health and enjoyment; where wealth abounds, and the luxuries and refinements of Europe have been extensively introduced. It would seem that, in the short space of a lifetime, we had reproduced here all the criminal abnormities which have grown up through centuries of ignorance, pestilence, arbitrary government, and civil war in cities of the old World. But there is another side to the picture; the region of depravity and moral death is limited. The highest calculation numbers our destitute children at one thousand; and that would seem to indicate, though imperfectly, the extent of the worst state of human existence, as these “pariahs of the streets” must be supposed to belong to the most abandoned classes. These dark features do not belong to the character of the laboring masses of society. The witnesses, who have had the best opportunities of forming correct opinions respecting them, concur in assigning to the general body of the working classes of Sydney—the mechanics and others permanently settled as citizens—a high character for honesty, intelligence, and sobriety; and they are stated to be, on the authority of the Inspector General of Police, “a credit to the country.”||

The diminution of the comforts of life, and the positive distress which prevail among the well-ordered portion of the working population, are attributed to different causes, but chiefly, and by the greater unison of testimony, to the mal-administration of the public lands. If the land policy of the Colony had offered the easiest facilities of freehold occupation to the industrious and thrifty, it is contended that the continuous withdrawal of such families from the wages-receiving masses of the city would, by leaving fuller employment to their

their necessitous fellows, and by creating new demands for labour in their own operations, have obviated much of the evil. This view is taken, alike by witnesses who are thorough free-traders and those who are decided protectionists, in their opinions on purely fiscal questions; and on this subject your Committee would direct particular attention to the evidence of Mr. Walsh, an extensive squatter, Mr. Robertson, the present Premier, and Mr. White, an intelligent mechanic. The last-named witness, consistently with his free-trade opinions, traces the mischief in part to the "Government tampering with the labor market," or, in other words, supporting immigration from the public treasury, and maintains that the law of supply and demand in regulating labor, as in all other things, would work most healthily by being left entirely to itself. In answer to what he terms the "spasmodic demands" for labor in particular localities, he says, if the want was real, "Immediately men found there was something worth coming for, they would come." Others consider that nearly all the social derangement has been produced by the operation of the principles that regulate our trading intercourse with other countries, and argue that the only effectual remedy would be the imposition of protective duties, to foster our infant manufactures, and to sustain a remunerative market for our agriculturists against foreign competition. In support of these views they point to our perished manufactures of cloth, cordage, nails, pottery, and tobacco, and to our farmers unable to obtain for their wheat and potatoes the cost of carriage.

In respect to the evil of intemperance, which extensively aggravates the prevailing distress, Mr. Justice Wise and other witnesses, who appear to have bestowed much study on social subjects, consider it frequently rather the effect than the cause of the discomfort and misery in the houses of the poor. The remedies they suggest are increased means of public education, greater sanitary provisions for the regulation of buildings, more rational modes of popular recreation, and more active sympathy in the intercourse of classes. But your Committee cannot resist the conviction that intemperance has been a prolific instrumentality in producing the distress complained of, and they are of opinion that the present licensing system requires complete revision. The subject, however, is so vast, and involves so many subordinate questions, that they consider it should be referred for inquiry to a separate Committee of your Honorable House.

Your Committee entirely concur in the opinion that a wise and comprehensive system for promoting the settlement of industrious families on the public lands—the increase of producing power, and not the augmentation of current revenue to the treasury, being the principal object—would be to a great extent a remedy for such a state of things as they have had the painful duty to investigate. Without regard to the ultimate advantages to arise from any such measure, and solely in reference to the immediate subject of their inquiry, they respectfully recommend to your Honorable House the consideration of this question as early as possible.

Your Committee are also of opinion that the connection of cause and effect is in some measure to be traced between the fiscal laws of the Colony and the existing social evils, and they consider a revision of our entire taxation a matter of necessity. We have the authority of eminent economists in support of raising revenue in a new country by the imposition of duties that would tend to foster manufacturing enterprise, and such encouragement to our own people, within well considered limits, would not be inconsistent with practical freedom in our commercial intercourse with the World, while no nation affords us an example of the establishment of manufactures without such encouragement. But it is respectfully submitted that we are not to follow blindly the course of other countries, but to be guided in our economical arrangements by such principles as are most applicable in the peculiar circumstances of our own. An original thinker, in the department of Political Economy, observes, even of the Mother Country:—"England, I say it with regret, but without the very slightest hesitation, is not to be taken as a safe specimen of the career of a people developing their productive forces. Untoward events have dogged the progress of the nation; some connected with faults of legislation and administration; some arising out of circumstances over which neither legislators nor administrators exercised any influence, and which escaped perhaps any timely attempt to control them, because the annals of the world gave no warning of them, and afforded no opportunity of observing them elsewhere. If this suggest many regrets for the past, it still gives better hopes for the future. The evil that
" has

“ has mingled with our institutions or our habits may be weeded out ; the good influences we have missed may still be won to purify and protect us, and other nations, if they assume our economical organization and power, may escape many of the evils that have afflicted our progress, or from which we suffer now.”* The spirit of these reflections should be infused into any efforts to improve our institutions and laws, if we are to make the best of the resources placed at our disposal.

The amendment of our Customs laws, however, is not all that is required in this direction ; and your Committee are of opinion that any equitable reform of our fiscal system should include the introduction of the principles of direct taxation, based on the well-known axioms of Paley and Adam Smith—that the burden should be borne in just proportion to the ability to bear it, and the advantages enjoyed for which it is imposed.

The improvement of the dwellings of the working classes appears to your Committee a matter that admits of no delay, and cannot be over-estimated in importance. Accepting the definition of wealth—to which the expositions of economical science all tend—as the means of human happiness, and regarding the action of good government as directed to its attainment for all the members of society, it cannot be for a moment questioned that the moral and physical well-being of the greatest number of our households should be an object of the highest public concern. Not in a spirit of false philanthropy, but with an enlightend view of the ends of civilization, every danger should be anxiously eradicated which threatens the mental power and bodily vigour of the race. The members of the future nation can never be strong if the springs of life are suffered to be vitiated. Manly and contented citizens can hardly be expected to rise up from the arms of unhappy and unwomanly mothers. Attachment to the soil is of too delicate a growth to receive its nourishment from the desecrations of the family hearth.

Your Committee are of opinion that much might be done by legislative measures in mitigation of this evil. No apartment in houses within the City should be allowed to be built under certain dimensions determined to be necessary for the preservation of health in a close and constantly-respired atmosphere, and without sufficient means of ventilation. Blocks of houses should in all cases have adequate outdoor conveniences, including space for the exercise of children. Public baths and wash-houses should be established in different parts of the city. Common lodging-houses should be licensed and regulated by law. Some more effective means should be devised for the suppression of the odious traffic in vice which has been described. In all these respects, it is believed that remedial measures might be passed by the Legislature, which would be found to work beneficially.

With the view of directing private enterprise to a field which, if once fairly entered upon, it is believed would prove remunerative, and inducing the investment of capital in the erection of improved dwellings for the industrious classes, your Committee are of opinion that the Government might very properly offer public awards—medals or diplomas of distinction—to public-spirited persons building houses of the description required, in squares, terraces, or detached groups. The desirableness of awakening the public mind to an interest in the subject, and the smallness of the cost of trying the experiment suggested, will, it is hoped, go far in support of a recommendation which, though perhaps novel, has at least the value of appealing to a powerful principle of human nature.

In connection with this subject, your Committee are of opinion that a Government Health Officer should be appointed, with duties assimilated to those of the Board of Public Health in London. The office should be independent of municipal authority, and one of sufficient importance to secure the exclusive services of a gentleman of good professional standing, and of certified knowledge of the sanitary government of towns. His duties, though chiefly metropolitan, might include periodical visits of inspection to the other large towns of the Colony.

If searching improvement could be carried into the homes of the adult population, it is believed that one effect of it would be a decrease of the juvenile destitution found in the streets. But the evil is one pregnant with the most dangerous consequences to society, and should be combated wherever it is met ; and your Committee strongly recommend the early establishment of a reformatory for juvenile delinquents. At present it appears that these

* Lectures and Tracts on Political Economy by the late Rev. Richard Jones, Professor of Political Economy, at the East India College, Haileybury, page 411.

these young offenders are frequently discharged by the magistrates because there is no place for their confinement except the common gaol, where they would be associated with the adult prisoners, and the knowledge of this among the police often saves them from apprehension.* The great success of reformatory establishments in Europe does not leave the question in doubt as to the value of such an experiment here. La Mettray, near Tours, opened by M. De Metz in 1839, and Rauhe Haus, near Hamburgh, founded by Dr. Wichern in 1833, are about the oldest and most celebrated; and the many hundreds of young profligates who have passed through those establishments have, with few exceptions, been thoroughly reclaimed, and become respectable members of society.

As one means of reclaiming our vagrant children, which at the same time would meet a growing want in the maritime trade of the Colony, your Committee recommend the establishment of a Nautical School, separate from other educational institutions, in accordance with the report of a Select Committee of the Legislature in 1854, where boys with a propensity for the sea might be trained in all the arts of seamanship, and apprenticed out under respectable masters.

Your Committee further recommend that sufficient assistance be afforded by the Legislature to complete the Asylum for Destitute Children at Randwick which, it is stated, could then receive the whole of the children now suffering so severely in the overcrowded wards of the Benevolent Asylum.

Some interesting returns have been supplied by the Inspector General of Police, showing the state of crime in the metropolis for the last three years, the aggregated results of which are given below.

NUMBER OF PRISONERS TAKEN INTO CUSTODY.			
PRISONERS.	1857.	1858.	1859.
Discharged by magistrates	1,309	1,337	1,267
Summarily disposed of	5,695	6,757	6,182
Committed for trial	202	243	269
Total	7,206	8,337	7,718
VALUE OF PROPERTY STOLEN.			
PROPERTY.	1857.	1858.	1860.
	£ s. d.	£ s. d.	£ s. d.
Value stolen	10,038 18 9½	5,536 17 5	4,590 19 1
Value recovered	1,469 13 3½	1,535 11 7	1,949 13 7
Value of final loss	8,569 5 6	4,001 5 10	2,641 5 6

It is gratifying to notice that these returns shew a marked diminution of criminality,—a fact which confirms the testimony borne to the improved morals of the great body of the people. As the state of the gaols of the Colony is intimately connected with criminal reformation, your Committee recommend the appointment of visiting Committees, of a purely honorary character, and consisting of non-official persons, in all towns where prisons are established, to secure the better supervision and management of such prisons.

Lastly, your Committee are of opinion that the Government should afford assistance, by which their labor would be turned to productive account, to those mechanics and workmen who are suffering severe privations from the want of employment; and they conclude with the suggestion that it might not be an unwise expenditure, more as an example to private capitalists than otherwise, to employ those connected with the building trades in the erection of a model group of laborers' cottages.

*Legislative Assembly Chamber,
Sydney, 18 April, 1860.*

HENRY PARKES,
Chairman.

* Ev.: McLerie, qs. 131, 133, 134; Pidgeon, qs. 434, 435.

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 7 OCTOBER, 1859.

MEMBERS PRESENT :—

Mr. Parkes,		Rev. Dr. Lang,
Mr. Pemell,		Mr. Windeyer,
Mr. Walsh,		Mr. Loder,
Mr. Plunkett,		Mr. Lyons.

H. Parkes, Esquire, called to the Chair.

The Chairman informed the Committee of the objects he had in view in moving for this Committee, and the Committee proceeded to deliberate upon the class of persons most likely to aid them in carrying out the inquiry referred to them, and decided upon initiating their inquiry by the evidence of the Police authorities.

[Committee then adjourned till Tuesday, 11th instant, *Twelve o'clock.*]

TUESDAY, 11 OCTOBER, 1859.

MEMBERS PRESENT :—

H. Parkes, Esquire, in the Chair.

Mr. Loder,		Mr. Lyons,
Rev. Dr. Lang,		Mr. Windeyer,
Mr. Hay,		Mr. Pemell.

J. M'Lerie, Esq., *Inspector General of Police*, called in and examined.

[Committee adjourned till Thursday, 13th instant, *half-past Ten o'clock.*]

THURSDAY, 13 OCTOBER, 1859.

MEMBERS PRESENT :—

H. Parkes, Esquire, in the Chair.

Mr. Plunkett,		Mr. Walsh,
Mr. Pemell,		Rev. Dr. Lang,
		Mr. Windeyer.

W. H. Walsh, Esq., *a Member of the Committee*, examined in his place.

Mr. J. R. Clayton, called in and examined.

Mr. C. E. Harrison, *Detective Police Officer*, examined.

[Committee adjourned till Wednesday, 19th instant, *half-past Ten o'clock.*]

WEDNESDAY, 19 OCTOBER, 1859.

MEMBERS PRESENT :—

H. Parkes, Esquire, in the Chair.

Rev. Dr. Lang,		Mr. Loder,
Mr. Walsh,		Mr. Pemell,
Mr. Windeyer,		Mr. Plunkett.

The Clerk produced a letter from J. M'Lerie, Esq., covering the forms of certain Returns in course of preparation by the officers of the police for the information of the Committee, which were respectively submitted to the Committee.

Mr. N. Pigeon called in and examined.

Mr. W. H. Windeyer, called in and examined.

[Committee adjourned till Friday, 21st instant, *Ten o'clock.*]

FRIDAY, 21 OCTOBER, 1859.

The House having adjourned from the 20th to the 25th instant, there was no meeting of the Committee this day.

TUESDAY,

TUESDAY, 29 NOVEMBER, 1859.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Pemell,		Mr. Windeyer,
Mr. Walsh,		Mr. Plunkett,
	Rev. Dr. Lang.	

H. Graham, Esq., *M. R. S. C. L.*, called in and examined.

The Chairman laid before the Committee a letter covering a statement from Inspector Harrison (a witness examined before the Committee.)

Letter and statement, read.

Committee deliberated as to the advisability of publishing these documents.

Motion made (*Rev. Dr. Lang*) and *Question*, That the letter and statement just read by the Clerk be published as a separate appendix to the evidence taken before this Committee, and that it be an instruction to the Clerk to substitute the *initials* of the parties in all cases where names appear at length in such statements—*agreed to*

I. Aaron, Esq., *M. R. C. S. L.*, called in and examined.

[Committee adjourned.]

WEDNESDAY, 7 DECEMBER, 1859.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Lyons,		Mr. Windeyer,
Mr. Pemell,		Mr. Plunkett,
	Rev. Dr. Lang.	

Mr. John McDonald called in and examined.

Mr. G. Brown called in and examined.

Mr. J. G. White called in and examined.

[Committee adjourned till Friday, 9th instant, *half-past Ten* o'clock.]

FRIDAY, 9 DECEMBER, 1859.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Rev. Dr. Lang,		Mr. Plunkett,
Mr. Lyons,		Mr. Windeyer.

The witnesses summoned for this day not being in attendance the Committee adjourned till Thursday next, the 14th instant.

WEDNESDAY, 14 DECEMBER, 1859.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Plunkett,		Mr. Pemell,
Mr. Windeyer,		Rev. Dr. Lang.

Mr. W. B. Allen called in and examined.

Mr. T. Spence called in and examined.

[Committee adjourned.]

FRIDAY, 16 DECEMBER, 1859.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Hoskins,		Mr. Windeyer,
Rev. Dr. Lang,		Mr. Loder,
	Mr. Hay.	

Mr. J. E. Begg called in and examined.

Mr. E. James called in and examined.

[Committee adjourned till Tuesday, 20th instant, *Twelve* o'clock.]

TUESDAY,

TUESDAY, 20 DECEMBER, 1859.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Windeyer,		Mr. Plunkett,
Mr. Hoskins,		Mr. Lyons,
Rev. Dr. Lang,		Mr. Pemell.

J. H. Palmer, Esq., called in and examined.

Mr. W. Cox called in and examined.

Mr. S. Gleadall called in and examined.

[Committee adjourned till Friday, 23rd instant, *half-past Eleven* o'clock.]

FRIDAY, 23 DECEMBER, 1859.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Plunkett,		Mr. Lyons,
Mr. Hoskins,		Rev. Dr. Lang,
Mr. Windeyer.		

J. McLerie, Esq., *Inspector General of Police*, called in and further examined.

The Witness produced certain Returns for the information of the Committee, and the same were ordered to be printed as Appendix to his Evidence.

The Honorable E. Wise, Esq., *M.L.C., Attorney General*, attending by permission of the Legislative Council, examined.

The Witness handed in four Appendices, which were ordered to be printed as Addenda to his Evidence.

[Committee adjourned.]

TUESDAY, 24 JANUARY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Plunkett,		Rev. Dr. Lang,
Mr. Lyons,		Mr. Hoskins,
Mr. Pemell.		

Rev. P. Newman, called in and examined.

Very Rev. W. M. Cowper, *Dean of Sydney*, called in and examined.

[Committee adjourned till Friday, 27th instant, *Ten* o'clock.]

FRIDAY, 27 JANUARY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Rev. Dr. Lang,		Mr. Plunkett,
Mr. Hoskins,		Mr. Windeyer,
Mr. Lyons.		

Mr. J. C. Glue called in and examined.

Mr. S. Ashlin called in and examined.

Mr. B. Haigh called in and examined.

[Committee adjourned till Tuesday, 31st instant *Eleven* o'clock.]

TUESDAY, 31 JANUARY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Plunkett,		Mr. Windeyer,
Mr. Hoskins,		Mr. Pemell,
Rev. Dr. Lang.		

Mrs. Pawsey called in and examined.

Mr. J. Sutherland, *Alderman*, called in and examined.

Mr. J. Russell called in and examined.

Mr. B. James called in and examined.

[Committee adjourned till Friday 3rd proximo, *Eleven* o'clock.]

FRIDAY,

FRIDAY, 3 FEBRUARY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Hoskins,		Mr. Loder,
Mr. Lyons,		Mr. Pemell.

Mr. W. Robertson called in and examined.

A. Roberts, Esq., *M.R.C.S.*, called in and examined.

Mr. G. Kemp called in and examined.

[Committee adjourned till Tuesday, 7th instant, *Eleven o'clock.*]

TUESDAY, 7 FEBRUARY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Loder,		Rev. Dr. Lang,
Mr. Hoskins,		Mr. Plunkett.

The Honorable R. Fitzgerald, Esq., *M.L.C.*, attending by permission of the Legislative Council, examined.

Mr. M. M. Campbell called in and examined.

Mr. B. Rhodes called in and examined.

[Committee adjourned till Friday, 10th instant, *Eleven o'clock.*]

FRIDAY, 10 FEBRUARY, 1860.

A Quorum not being present, there was no meeting of the Committee held this day.

TUESDAY, 14 FEBRUARY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Loder,		Rev. Dr. Lang,
Mr. Plunkett,		Mr. Pemell,
Mr. Hoskins,		Mr. Windeyer.

The Honorable J. R. Wilshire, Esq., *M.L.C.*, attending by permission of the Legislative Council, examined.

Mr. S. W. Mansfield called in and examined.

Witness withdrew.

Committee deliberated, and having decided upon taking further evidence, so that all classes might be fairly represented in the list of Witnesses,—

[Adjourned till Friday, 17th instant, *Eleven o'clock.*]

FRIDAY, 17 FEBRUARY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Mr. Windeyer,		Rev. Dr. Lang,
Mr. Hoskins,		Mr. Pemell,
	Mr. Lyons.	

J. Robertson, Esquire, *M.P.*, examined.

Mr. G. O. Allan called in and examined.

Mr. T. Smith called in and examined.

[Committee adjourned till Thursday, 23rd instant, *Eleven o'clock.*]

THURSDAY, 23 FEBRUARY, 1860.

MEMBERS PRESENT:—

H. Parkes, Esquire, in the Chair.

Rev. Dr. Lang,		Mr. Windeyer,
Mr. Hay,		Mr. Hoskins.

Mr. J. Pye called in and examined.

Mr. B. Appleton called in and examined.

Mr. J. Speerin called in and examined.

[Committee adjourned.]

THURSDAY,

THURSDAY, 1 MARCH, 1860.

MEMBERS PRESENT :—

Henry Parkes, Esquire, in the Chair.

Rev. Dr. Lang, | Mr. Windeyer.

J. M'Levie, Esq., *Inspector General of Police*, called in and further examined. The witness produced certain returns, for the information of the Committee, and the same were ordered to be printed as Appendix to his Evidence.

[Committee adjourned.]

WEDNESDAY, 4 APRIL, 1860.

MEMBERS PRESENT :—

H. Parkes, Esquire, in the Chair.

Mr. Lyons, | Rev. Dr. Lang,
Mr. Pemell, | Mr. Plunkett,
Mr. Hoskins, | Mr. Windeyer.

Committee met pursuant to summons.

Committee deliberated upon the reception of further Evidence, and *Resolved*—That sufficient evidence has been taken for the purposes of this inquiry.

The Chairman submitted his views of the course to be pursued in framing a Report, proposing in the first instance to condense and classify, without comment, the information derived from the several witnesses; and, secondly, to elucidate the causes of the deranged state of things shewn to exist, at the same time viewing the subject generally, and especially in its politico-economical bearing.

Committee deliberated upon the further suggestion, whether the Report should conclude with any definite recommendations.

It was Resolved :—

That the Report contain specific recommendations for alleviating the lamentable state of things disclosed by the evidence.

As a guide for the recommendations of the Draft Report, the following questions were put from the Chair, with the understanding that Members would not be precluded from making any amendments in the Draft Report when submitted for adoption.

Questions put :—

- (1.) Is it expedient to make any specific recommendations for affording employment to distressed mechanics and laborers in Sydney, or for affording assistance where the number of families is an impediment to their removal into the country?—*Passed in the affirmative.*
- (2.) Is it expedient to recommend any amendment of the Building Acts in respect to the humbler class of dwellings which shall require certain dimensions and means of ventilation in the rooms, and certain outdoor conveniences for the preservation of health?—*Passed in the affirmative.*
- (3.) Is it expedient to recommend, in order to encourage the employment of private capital in that direction, the granting of medals or diplomas of distinction, or other public awards for the erection of improved dwellings for the working classes?—*Passed in the affirmative.*
- (4.) Is it expedient to recommend the appointment of a Government Health Officer, the office to be filled by a person of high professional standing, and of certified knowledge of sanitary questions, his duties to be exclusive, and to extend to the health of towns generally as well as to the health of the metropolis?—*Passed in the affirmative.*
- (5.) Is it expedient to recommend the introduction of any legislative measure for the regulation of common lodging-houses?—*Passed in the affirmative.*
- (6.) Is it expedient to recommend the establishment of a Nautical School in this port, separate from other educational institutions, as recommended by a Committee, and sanctioned by Resolutions of the late Legislative Council?—*Passed in the affirmative.*
- (7.) Is it expedient to recommend a grant for extending the accommodation of the Asylum for Destitute Children at Randwick?—*Passed in the affirmative.*
- (8.) Is it expedient to recommend the granting of aid in the establishment of Reformatories for juvenile criminals?—*Passed in the affirmative.*
- (9.) Is it expedient to recommend, in all towns where prisons are established, the appointment of Visiting Committees, consisting of non-official persons, to secure the better supervision and management of such prisons?—*Passed in the affirmative.*
- (10.) Is it expedient to recommend any more restrictive measures for the suppression of brothels and other places of evil resort?—*Passed in the affirmative.*

The Chairman invited the assistance of the Committee in furnishing other propositions which it might be thought desirable to embody in the Report.

Committee deliberated, and gave instructions for the distribution of proof copies of the Draft Report prior to their next meeting.

[Committee adjourned.]

WEDNESDAY,

WEDNESDAY, 18 APRIL, 1860.

MEMBERS PRESENT :—

H. Parkes, Esquire, in the Chair.

Mr. Lyons,
Mr. Hoskins,
Mr. Pemell,

Mr. Windeyer,
Mr. Plunkett,
Mr. Hay,

Rev. Dr. Lang.

The Committee met pursuant to summons.

The Chairman laid before the Committee a Draft Report, prepared pursuant to instructions at the last meeting.

Draft Report read.

Committee deliberated.

Motion made (*Mr. Hay*) and *Question*,—That the 1st paragraph on page 6, be amended by omitting (page-line 16), “wealthy persons are named,” and inserting “there are wealthy persons,”—*agreed to*.

Motion made (*Mr. Plunkett*) and *Question*,—That the 1st paragraph on page 7, be amended by adding at the end thereof (page-line 25),—“But your Committee cannot resist the conviction that intemperance has been a prolific instrumentality in producing the distress complained of, and they are of opinion that the present licensing system requires complete revision. The subject, however, is so vast, and involves so many subordinate questions, that they consider it should be referred for inquiry to a separate Committee of your Honorable House”—*put*.

Committee divided.

Ayes, 5.

Mr. Lyons,
Mr. Pemell,
Mr. Plunkett,
Mr. Hay,
Rev. Dr. Lang.

Noes, 2.

Mr. Windeyer,
Mr. Hoskins.

Amendment agreed to.

Motion made (*Mr. Hay*) and *Question*,—That the second paragraph on page 7, be amended by omitting (page-line 29), “the surest” and inserting “to a great extent a”—*put*.

Committee divided.

Ayes, 4.

Mr. Lyons,
Mr. Plunkett,
Mr. Hay,
Rev. Dr. Lang.

Noes, 3.

Mr. Pemell,
Mr. Windeyer,
Mr. Hoskins.

Amendment agreed to.

Motion made (*Mr. Plunkett*) and *Question*,—That the 3rd paragraph on pages 7 and 8 be amended (page-line 35), after the word “necessity,” by omitting the remainder of such paragraph—*put*.

Committee divided.

Ayes, 3.

Mr. Plunkett,
Mr. Hay,
Rev. Dr. Lang.

Noes, 4.

Mr. Pemell,
Mr. Windeyer,
Mr. Lyons,
Mr. Hoskins.

Amendment negatived.

Motion made and *Question*,—That the 2nd paragraph on page 9 be amended by omitting (page-line 11) “the grant of a sufficient sum of money,” and inserting “that sufficient assistance be afforded by the Legislature”—*agreed to*.

Motion made (*Rev. Dr. Lang*) and *Question*,—“That the Draft Report, as amended, be the Report of this Committee,—*put*.”

Committee divided.

Ayes, 6.

Mr. Lyons,
Mr. Hoskins,
Mr. Pemell,
Mr. Windeyer,
Mr. Plunkett,
Rev. Dr. Lang.

Noes, 1.

Mr. Hay,

Report agreed to.

Chairman requested to report to the House.

LIST OF WITNESSES.

1859.

Legislative Assembly.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

CONDITION OF THE WORKING CLASSES.

TUESDAY, 11 OCTOBER, 1859.

Present:—

MR. PARKES,
MR. LODER,
REV. DR. LANG,MR. WINDEYER,
MR. PEMELL,
MR. LYONS,

MR. HAY.

HENRY PARKES, ESQUIRE, IN THE CHAIR.

John McLerie, Esq., called in and examined:—

1. *By the Chairman:* You are Inspector General of Police? I am.
2. You have held that and other offices in the police for some years? I have held that office since October, 1856, but have been upwards of twelve years connected with the police of the Colony.
3. Your duties have, I presume, made you well acquainted with the city by this time? Yes.
4. Would you have the kindness to state to the Committee whether it is within your knowledge that there are at the present time, or have been at any time within the last two or three years, a number of persons suffering from want of employment in this city? I am.
5. Please state in your own way what class of persons. During the last two years there have been a good many persons suffering from want of employment, but the opinion I have formed from what I have seen of them in meeting in bodies is, that they were principally immigrants recently arrived, who had not settled down to any mode of life, and many others from my own knowledge were in want from their own improvidence and idleness.
6. You said you had formed an opinion from meeting with them in bodies—what do you mean? I have seen them assemble in bodies near my office.
7. Where is your office? Elizabeth-street, Hyde Park.
8. You have seen them assemble on the Racecourse? Yes; not in any considerable number during the last six or eight months.
9. Have you paid particular attention to these bodies on the Racecourse, so as to be able to state what were the principal elements there? No. I did not mix amongst them myself—I had persons there who described them to me; the principal share I have seen of them has been going and returning from the meeting; some of them I knew to be idle and improvident characters.
10. Those meetings were held at different times? Yes.
11. And extended over what period? Upwards of two years since they first took place, when they came in a body to this House; I must say they were perfectly orderly.

John McLerie,
Esq.
11 Oct., 1859.

- John M'Lerie, Esq.
11 Oct., 1859.
12. How many have you seen on those occasions? Never more than 300 according to my calculation; the number was exaggerated at the time.
13. Has it been reported to you or do you know if those bodies consisted from time to time of the same persons? The leaders were always the same persons—the spokesmen from first to last—therefore I concluded they made a trade of it.
14. How make a trade of it—they could not benefit? I know that one of them was charged on more than one occasion with making away with the money subscribed to carry out the objects of the meetings.
15. On all occasions they were orderly? Yes, always.
16. Was it ever reported to you that men of reputed bad character—men under the notice of the police—were amongst them? There were men there who had nothing to do with the meeting; persons whom you find wherever there is a gathering of people.
17. Not to the extent to interfere with the character of the meeting? No; not in a number to interfere with the character of the meeting.
18. Have you had an opportunity or means of judging, in your perambulations through the city, if distress in a more private form exists—distress in family circles? Yes, there is a great deal of concealed distress.
19. Will you be good enough to state any particular instances that occur to you of the kind? I can give no particular cases; instances of that kind are so numerous. I have frequent applications made to me, and many of them of so urgent a nature that although my means are limited I cannot help assisting.
20. In discharge of your police duties, do cases come under your notice where great distress is endured privately? I am more removed now from opportunities of observing it. When I was Superintendent of Police, and sat daily at the Police Office to hear complaints and grant warrants and summonses, such cases were brought more under my notice than they are now that my duties are of a more general nature, having reference to the whole Colony, as well as the Metropolitan District.
21. You, or the officers under you, must necessarily be well acquainted with those parts of the town where persons in indigent circumstances reside—in many cases, your duty would take you there, and I should imagine you would have great opportunities of noticing destitution, if it existed;—have you formed any opinion on this subject, as to the existence of destitution in particular quarters? The information is being prepared, to be laid before this Committee, by my Officers, but it is not completed.
22. I gather from you generally that there is a great deal of concealed distress? A great deal.
23. *By Mr. Lyons*: Do you not think that a great deal of that distress arises from parties having husbands addicted to intemperance? There is no doubt a considerable amount of distress does arise from that cause, from the drunken habits of the parents.
24. In those cases of distress that have come under your notice were the parties married or widows? Well, they are principally families who have arrived here with a little capital, and before they can employ it it has dwindled away and they have no means of establishing themselves. A case came under my notice the other day, where a family came out two years ago: they had £300; they started as market gardeners; they tried it in two neighborhoods near Sydney, and in both instances failed; their capital was gone, and the daughters, who were well educated at Home, commenced teaching, but distress came upon them so fast that they were obliged the other day to part with their piano, on which the daughters gave instruction, and they were left in misery.
25. Do you think there was no possibility of his getting work and earning a livelihood? Not any in his own business.
26. *By Mr. Windeyer*: Can you say what class of persons attended the meetings of the unemployed generally—were they laborers or mechanics? A few mechanics among them—principally laborers employed about the wharfs—men who depend on a day's work as laborers.
27. You say those meetings have not been so numerous lately? No.
28. Can you say, has there been any difference in the amount of crime in this city? There is very little increase in 1858 compared with 1857; for 1858, I have prepared a return which will be of assistance to the Committee; it shews the trades of the persons taken into custody during the year.
29. *By Dr. Lang*: Do you find particular trades affording a larger amount of criminals than others? Yes, in proportion to their numbers.
30. *By Mr. Windeyer*: Do you find them principally laborers or mechanics? The larger proportion is of no trade, or laborers. I find in 1858 the persons taken into custody in the Metropolitan District, who were of no trade, were 1,567; and who described themselves as laborers, 1,861—this is a very large proportion of the whole number of criminals for the year; the whole number was 5,063, out of this 1,801 were laborers.
31. The “no trade” are classed as laborers? We ask what trade they are when they are taken into custody, and they say no trade.
32. *By Mr. Lyons*: Do you not think that a great many of the emigrants that arrive here labor at a great disadvantage if they do not take the employment offered on their arrival, but come on shore and seek employment without any character? Yes.
33. *By Mr. Windeyer*: Does that return shew the length of time the people have been in the Colony? No. It shews *first*, the number of persons taken into custody in the years '57 and '58; *second*, the result of the magisterial inquiry in each case; *third*, the age and sex of the person taken into custody; *fourth*, the degree of education of the prisoner; and, *fifth*, the trade or occupation of the prisoner.
34. *By the Chairman*: How is the educational position of the prisoner arrived at? In every station-

station-house we have a charge book; it contains certain particulars—a man is asked his age, trade, calling, whether he can read and write—whether he can read or write only—whether he can do so well; of course we can judge if he is of superior education. If a man is not in a fit state, from drunkenness, to answer the question, the inquiry is deferred till he is sober. The *sixth* return is the value of property reported to be stolen, and the amount recovered.

John M. Lewis,
Esq.
11 Oct., 1859.

35. What was the value of property stolen in '58? £5,536; £1,535 was recovered—about £4,000 lost.

36. How much was it in 1857? About one-half.

37. *By Mr. Windeyer*: There were some large transactions in 1858, I believe? Yes; there are frequently reports of robberies which have not taken place—reports made for certain reasons. The *seventh* return is a comparative statement of the prisoners taken into custody in each year, from 1851 to 1858; this is the only statistical return I found in the records of the police when I took charge, the others I have added; I have no return shewing how long prisoners have been here. (*Handed in the return.*)

38. Do you think these persons out of employment would go up the country? They generally express an unwillingness to go into the country, I do not know why.

39. Are you aware that a great number of those persons who were provided with assistance by the Government to go up the country have returned? Some have returned with what they call a "pile," others have done very well in the Southern and Western Districts.

40. Do you not think it would be better if immigrants were taken into the country at once, instead of coming to Sydney at all? Yes, I think it would.

41. To send them to Newcastle or somewhere by the steamer? Yes.

42. *By Mr. Lyons*: You think there is an unwillingness to leave the city when they have once landed in it? Yes.

43. *By Mr. Windeyer*: If taken in the country they would be likely to remain there? Yes, first associations are everything.

44. *By Dr. Lang*: Do you think the number of persons of the industrial classes who have been unemployed during the last six months greater than usual? No, I think it was greater twelve or eighteen months ago; I judge a great deal from the number of applications made for employment; eighteen months ago they were more numerous than at any other time since I have been in charge of the police.

45. Does the number of persons out of employment consist, in any considerable degree, of mechanics? I think the greater proportion are not mechanics, they are laborers, dependent on the Corporation and the wharf work.

46. Is the demand for that species of chance employment equal to the supply at present? Not nearly; I have never seen the harbour with so few ships, but they are now arriving every day, and in the course of a month or so the supply of along-shore men will probably not equal the demand.

47. What do you consider to have been the cause of the want of employment? One cause was the rush to the Northern Diggings and the sudden collapse thereof, that was one cause. I think if the Unemployed Committee had not stepped in then the amount of distress would have been much greater than it was.

48. Is it not, can you say from your experience, a fact that we are here subject to periods of mercantile depression as well as of unnatural exaltation? Yes it is.

49. And such periods will always be accompanied by a want of employment among the working classes? Yes.

50. And whenever the mercantile affairs are depressed the laboring classes will suffer? Yes.

51. Have we not been passing through such a crisis recently? We have.

52. Have you reason to believe that the prospect for the future is brighter? At this season the prospects brighten, the wool comes down, the ships arrive, which creates a large amount of employment.

53. *By Mr. Pemell*: Has it ever struck you as singular that with the abundance of labor at the present time that wages do not fall lower? That is one of the peculiar facts connected with the unemployed. At the very time there were two or three hundred assembled in Hyde Park complaining of want of labor, if offered 5s. a day to do what they had been getting 6s. for they would turn round and walk off in disgust.

54. If any circumstance occurred by which the wages became reduced, so that all employers were paying less, do you not think more works would be proceeded with and all these men fully employed? I think some of them would stand out then.

55. It is usual when there is an abundance of labor for wages to fall? Yes; but as I have said, at the time of these meetings in Hyde Park, if a man had been offered 5s. per diem who had formerly got 6s., he would walk away in disgust.

56. If the prices were lower than are being paid in Sydney a greater number would go into the interior and accept an average wage—would they not? It is just possible.

57. Do you not think it would clear Sydney of its superfluous population? Yes. I was talking with a gentleman just arrived from the Murrumbidgee the other day, and he said that shepherds there would not take less than £50 or £60 a year.

58. Although there is not a demand for labor in Sydney there is in the interior? Yes.

59. *By Dr. Lang*: Do you not find that a very considerable proportion of the humbler classes in towns are indisposed to take any offer in the country? A great many—it is a general feeling.

60. Can you suggest to the Committee any reason why they are so anxious to stop in Sydney? It depends entirely on their previous occupations in life; if they have been residents at Home in the towns they will not go into the interior here; if they have lived in the rural districts at Home they will probably go into the country here with less hesitation.

- John M'Lerie, Esq.
11 Oct., 1859.
61. *By Mr. Loder*: Have you an opportunity of knowing how far these people call going into the bush? A new arrival looks upon going to Ashfield as going into the bush.
62. *By the Chairman*: Not in all cases? In a good many.
63. *By Dr. Lang*: I suppose these gregarious habits are imported with them and do not spring up in the Colony? Yes, imported.
64. *By Mr. Windeyer*: In those times of depression of which you have spoken, is it not a fact that for the general living of the working classes the expense continues high or comparatively high? Not the necessaries of life, the luxuries are. In the large towns of England I never saw the working classes indulge in more luxuries than they do here.
65. Do you know that they refuse the low rate of wages because they cannot live on them, the rate of living being so high? There is an old saying—"Half a loaf is better than no bread."
66. *By the Chairman*: Do they refuse the lower rate because they consider it would be an injury to their class that the rate would go down and not rise again? Yes.
67. When you stated there is a great deal of concealed distress, has that been more of late years or has it been observable, more or less, ever since you were first appointed? Yes, more or less, ever since I was appointed.
68. You have described what a gentleman from the Murrumbidgee told you, that the shepherds got £50 there a year? Yes, so I was told.
69. This going forth in evidence may be taken as a criterion of wages? I should not wish it to go as a criterion; he is not an employer of labor himself.
70. Is he connected with the district? He is a Government officer.
71. *By Mr. Loder*: Have you had an opportunity of judging if these men you have spoken of would accept employment if offered to them at the full rate of wages? The greater part would, from what I saw in the Unemployed Committee; I believe there is not an unwillingness to accept employment.
72. *By the Chairman*: There were a great many applications to that committee, more than you could supply? We supplied nearly all.
73. *By Mr. Windeyer*: Do you know how many were sent up the country? I cannot say; we sent them all over the country, and some of them sent the money back they had advanced to them.
74. *By Mr. Lyons*: Do you find this distress amongst the better educated class of persons? Principally amongst that description of persons who shrink from bringing their distress before the public.
75. *By the Chairman*: Are you able to give a general statement of the rates of wages in various trades? That is beyond my province.
76. Coming to the second portion of the inquiry, of course your knowledge of the city would enable you to state what kind of dwellings are occupied by the working classes generally, as to their sanitary condition, means of ventilation, and so on? The mechanics who reside in the city proper, the older part of the city, not including the suburbs, are in houses of a very defective character, both as to cleanliness and ventilation.
77. *By Mr. Windeyer*: The most of them live in the city? A great many live in the city; the most provident live at Woolloomooloo, and other places in the environs.
78. *By the Chairman*: What is the character of the residences in the back alleys, such as those off Sussex and Druitt Streets? Nothing worse. The description of dwellings occupied by the working classes in Druitt, Clarence, and Sussex Streets, and in the lanes and alleys abutting on those streets is, both as regards ventilation, drainage, and cleanliness, most defective.
79. What is the size of most of those houses? Small—two rooms.
80. In those dwellings is there frequently more than one family residing? It is within my knowledge that such is the case. In a case I was investigating yesterday I discovered that there resided in two small rooms seven men and seven women.
81. Perhaps that was a disorderly house? It was, no doubt.
82. Where men are engaged in honest occupations, do you know whether it is a general rule for more than one family to be crammed into these houses, owing to the high rents? Yes. The consequence is that children of mature years are compelled to sleep in the same room with their parents; children of fourteen or fifteen years in some instances sleeping in the same bed with their parents.
83. These places to which you are now alluding are mostly devoid of all precautions for sanitary purposes? Devoid of all. There are places not in the city worse than any part of the city, namely, at the Glebe.
84. What of Chippendale? It is not as bad as the Glebe.
85. Have you ever visited, personally, these places? I have not done so lately.
86. Have you come on houses presenting the appearance of absolute destitution? I have.
87. *By Mr. Loder*: Do you not think a great deal of this is owing to men deserting their wives? Not so much from that as from the drunken habits of either one or both parents.
88. *By the Chairman*: On the Riley Estate have not a better class of houses been put up? Yes; the laboring classes in that part of the city are better off than those in the city proper. In no large town in England are the working classes better housed than in Woolloomooloo.
89. With regard to the house accommodation of the working classes, have you any knowledge of the extent to which provident mechanics have purchased freeholds? A great number have done so at Redfern, Woolloomooloo, and some other suburbs—Newtown, for instance.
90. In connexion with the last question, are you in a position to state to the Committee what is the character of the permanent working population of the city who establish themselves,—are they provident and of industrious habits? I can speak from my own experience

as a Trustee of the Savings Bank that the respectable settled portion of the working classes are a credit to the country. John M'Leerie,
Esq.

91. Have you come in contact with that body? Yes.

92. Have you observed much intelligence amongst them? Yes, there is much intelligence to be found in the working classes of Sydney; many have raised themselves by their intelligence and industry to positions of independence. 11 Oct., 1859.

93. You think the freeholds of the working classes are numerous? Yes, and they are increasing.

94. *By Mr. Loder*: Do you not find that persons having money in the Savings Bank take it out to take advantage of the post dated bill system pursued in some of the banks? To some extent, but we give five per cent. on deposits remaining in twelve months, and two and a-half per cent. on others up to the amount of £100.

95. *By Mr. Windeyer*: Do you find many of the working classes living in lodging-houses? Not married, the single do.

96. What class of accommodation do they get in these lodging-houses? In the low lodging-houses very bad, they were such as it was undesirable any person should live in; but I have seen rooms occupied by mechanics in Sydney that for cleanliness and comfort might be looked upon as models of domestic neatness.

97. Do you know there has been a system of inspection in England in the large cities—do you think it should be done here? I do. I proposed such a thing last year, but it was looked on with suspicion by the House.

98. *By the Chairman*: You recollect the bill for the purpose being kicked out? Yes.

99. *By Mr. Windeyer*: Is it not a fact that the system is looked upon with favor at Home by those who are mainly concerned? Yes; in fact I have an officer here who was employed to carry out the provisions of the Act, in London, who says at first it was objected to, but after the Bill had existed for a year or two it was looked on with favor, and the lodging-house keepers vied with each other in the cleanliness and comfort of their houses.

100. *By Mr. Lyons*: Are there not many houses in this town that ought to be condemned? Yes, condemned as uninhabitable.

101. There are some much below the street? Yes, and others perched up in almost inaccessible places.

102. *By Mr. Windeyer*: Do you not think that a compulsory enactment for the inspection of these houses would have a beneficial effect morally and socially? Yes.

103. Do you not find herding persons together in such places without means of decently carrying on the vocations of life has morally a prejudicial effect? Yes, it tends to blunt the moral feelings.

104. You find the crime of Sydney concocted in such places? Yes, the majority—I may say all.

105. Then you think steps should be taken to make the landlords do that which is necessary to alter this state of things? Yes, it can only be done by legislative enactment.

106. *By Dr. Lang*: Are there any houses in which a considerable number of unmarried mechanics lodge together? Yes, there are large houses kept exclusively for the accommodation of that class.

107. Those places are not subject to the same objection as what is called the "bothy system" in Scotland? They are not; but we have no control over them.

108. Do you think it would be desirable to have legislative interference for their improvement? I think it would be most desirable, both in a moral and social point of view.

109. Of the character of the legislation respecting lodging-houses in England? Yes, it would give the authorities power of examination to enforce ventilation and cleanliness, and to regulate the number of persons to be allowed in one apartment.

110. These are lodging-houses? Yes.

111. Not like the bothys, where all the men cook for themselves? No.

112. *By Mr. Penell*: Do you not think that if abundance of water were supplied at the Glebe it would alter the state of things there? I think the Glebe requires re-arrangement, the drainage is the defect; some of the Glebe is below low-water mark, and the smell is dreadful.

113. That is occasioned by the slaughter-houses? Yes, that is one of the causes.

114. *By Mr. Hay*: Are there a large number living in the lodging-houses occupied by unmarried men? Twenty or thirty a night; sometimes of course in Sydney we have a very extensive migratory population which occupies those houses; on the rocks some of the houses contain twenty or thirty a night.

115. Those houses are more particularly tenanted by a migratory population than by mechanics or workmen of the city? Unmarried mechanics of the city generally live in permanent lodgings of a much better description.

116. Is there much drinking goes on in the lodging-houses? No doubt there is.

117. You could judge by appearances whether there was a great deal of that sort of thing going on? I think most of the drinking is done in the public-houses.

118. *By Dr. Lang*: Are there not some very low houses of accommodation used by the Chinese on the Rocks? Very bad; my notice has been called to them by the inspector of that district. I have no power to interfere—I sent to the Corporation; in one case the Chinese had cut a hole in the boards of the floor and made it a place for accommodation.

119. *By Mr. Lyons*: There are some objectionable houses at Miller's Point? Not so very bad.

120. Opposite the Observatory in Kent-street? Those are very good.

121. *By the Chairman*: In Wentworth and Clive Streets they are much crammed together? Yes; and rather a disorderly population.

122. *By Mr. Windeyer*: In these courts and places how are they off for water? In most instances

John M. Lerie, Esq. instances the landlord has one pipe for supplying the whole court; in most cases if the water is off for part of the day they are without, having no means to retain any.

11 Oct., 1859. 123. Is it within your knowledge that there are a great many children about the streets, male and female, in a state of vagrancy? I am sorry to say it is so.

124. Has your attention been drawn to it? Yes. In female prostitution I have observed, in the last six months, a marked increase.

125. Would you be good enough to state what number of children there are in that condition, and their probable ages? I am having a return prepared to approximate as near the truth as possible, and I would rather wait for it before I give an opinion; as far as the criminal return of the district shews there does not appear much juvenile crime—not in 1858. Out of all the persons taken into custody there were only 18 males and 21 females under 15.

126. *By the Chairman*: The return, to be prepared by your department, of children in a state of prostitution, would hardly embrace all, as you would not get a history of these girls? There is much hidden prostitution.

127. If you could, therefore, give us your opinion in general terms, it would be desirable you should do so? I think that generally prostitution is on the increase. I should not like to commit myself to the number without further information. I cannot say what proportion juvenile prostitution bears to the whole; judging from what I see going through the streets of the city at night, I should say more than half the prostitutes of Sydney are under 20.

128. What do you call juvenile prostitution—what age? Under 16.

129. You have met with no instances under 14? No. I think a considerable proportion of the prostitutes are from 14 to 16.

130. As to the boys in a state of vagrancy—are there many living by begging, with apparently no regular occupation, and with no regular home? The proportion that live by begging is small; many live by picking and stealing.

131. And they do not seem to come within the meshes of the police? The Magistrates discharge them; we have no means to punish them by separation in the gaols, they must go with the adults.

132. About the wharfs do you see many of this class? Yes; they are boys neglected by their parents; others who have parents and associate with the other boys.

133. *By Mr. Hay*: If the police find the Magistrates discharge this particular class of persons, it has a tendency to induce them rather to allow the boys to go free, and not bring them before the Bench? If a person is taken into custody by the police they have no power to discharge him.

134. But if the Magistrates are in the habit of discharging them, the police do not feel disposed to bring them up? The Police Officers when they have a charge have to attend the Court for three or four hours till it is heard in the morning, and if a practice of dismissing a class of cases prevail, they look upon it as unnecessary to bring those cases before the Court.

135. *By the Chairman*: Can you form any opinion as to whether the majority of these children are native-born, or are they immigrants? The greater portion are not of the immigrant class, although some of them are. The greater proportion are the native-born children of immigrants. I attribute a great deal of the misconduct of juvenile females to another cause; we have in the city a great deal of the old female convict element, a large proportion of women who are scarcely a day out of gaol or the custody of the police; they live in those low neighborhoods when out of gaol, and their example has a most pernicious effect on the growing-up female children. I found that in 1858 the total number of females that were committed was 3,274, and the number who were taken into custody only once was about 2,000. The others were confirmed offenders who were taken into custody two or three times, some 17 times; in fact, imprisonment of these degraded females has so little deterring effect upon them that children growing up among them have no fear of committing crime.

136. Can you form any idea as to the parentage of these juvenile vagrants? Most of the boys have parents alive.

137. Look at the portion of the resolution marked 4,—“The existence and extent of “juvenile vagrancy in the public streets, classifying, as far as may be practicable, any such “returns as to age, sex, parentage, religion, education, and place of birth.”—Will the return in your department furnish these particulars? As far as we can obtain them.

138. *By Mr. Windeyer*: How many young children are there, as far as you know, who have no settled home and sleep on wharfs and wherever they can? I should not like to give a number without I had some better data to go on, at present I could not give an approximate idea; the return will shew it as far as possible.

139. *By Dr. Lang*: Do you think the State should be empowered by legislation to interfere in the case of juvenile legislation? I have always been of opinion that the State should step in when the parent neglects the child, and take charge of it; the parent should be compelled to take care of his child; if he cannot or does not the State should step in, and if the parent is able and refuses to take care of his children he should be punished for his neglect.

140. *By Mr. Pemell*: You think a great portion of the females are led astray by the bad example of hardened offenders? Yes.

141. Do you think they go out of their way to try and draw on young females? Yes; I know they do.

142. *By Dr. Lang*: Do you think the bad accommodation with which they are furnished does not lead in a great measure to juvenile prostitution? I have no doubt it does. The constant association with grown persons blunts their feelings.

143. *By the Chairman*: I think the return you say will shew the amount of juvenile vagrancy, including the particulars mentioned in the resolution as far as possible? Yes.

THURSDAY, 13 OCTOBER, 1859.

Present:—

REV. DR. LANG,
MR. LYONS,
MR. PARKES,

MR. WINDEYER.

MR. PEMELL,
MR. PLUNKETT,
MR. WALSH,

HENRY PARKES, Esq., IN THE CHAIR.

William Henry Walsh, Esq., M.P., Member of the Committee, examined in his place:—

144. *By the Chairman*: You have been for some years settled in the farther northern district of the Colony? Yes. W. H. Walsh,
Esq., M.P.

145. How many years? Since 1847—twelve years.

146. Have you been during those twelve years in one district? Yes; I have been altogether living in one district, although constantly travelling in different parts of the Colony. 13 Oct., 1859.

147. In what part of the Colony? Burnett, and Wide Bay District.

148. How far is that from Sydney? Maryborough is about 700 miles from Sydney, and I reside about 50 miles from that port.

149. Will you state to the Committee the field which that particular district affords for the settlement of a working population, that is, how far it is already settled by men of capital, who are in the position of employers, and what rates of remuneration are given to their servants—the kind of accommodation generally afforded to them—in fact the kind of life which a family, say a man, his wife, and two or three children, would have to live there,—and, at the same time, whether there are any openings there apart from the state of mere servants; that is, whether the country is in a sufficiently advanced state for the settlement of men of small capital who wish to cultivate the land? The Burnett and Wide Bay District is now occupied fully by men decidedly of capital—men so well off that they would be very glad if they had opportunity to add to their comfort by improving their homesteads and property generally. Ever since I can remember, that is to say, ever since the formation of this district, they have been prevented doing so from the want of skilled labor, and I believe that want exists now, and to a greater extent, perhaps, than it ever did, because the owners of stations are more in a position to spend money than they were in former times—they are better off.

150. Will you go on to state what wages are paid, and the advantages which the place offers to working men themselves? I believe there would be a very large demand manifested for skilled labor, both in the Wide Bay and Burnett Districts—they were separate until lately, but are now one, and I believe now, that if it were thought possible to get skilled labor in our districts, that a great many persons who are anxious to build and improve their places would set about it at once; but, from the difficulty of obtaining such labor people do not trouble themselves. I may mention that I am the only person in the neighborhood in which I live who has gone to much trouble in improving his homestead, I am the only person who has had the opportunity of putting up stone buildings, and, since I have commenced doing so, I have received repeated applications from my neighbors, begging letters I may call them, requesting me to let them have my workmen.

151. *By Mr. Plunkett*: What do you include in skilled labor? House carpenters, bricklayers, brickmakers, and stonemasons—blacksmiths especially. I got up a blacksmith a few months since, and it was with difficulty I could get my own work done first, owing to the numerous applications made for his services.

152. *By the Chairman*: Still the demand for such labor would be very limited? Yes, it would be limited, comparatively speaking, to the excess of that kind of work which is in Sydney, but I am now speaking of only two districts, and, as far as my travels have gone, I believe the same wants we suffer from in that respect are felt elsewhere.

153. *By Dr. Lang*: What would be the prospect for labor of another description—agricultural labor? I think excellent; that is, there is an abundance of rich land in the shipping port, the town of Maryborough, and I believe as fine land as can be found on the banks of any other river, such as the Richmond or the Clarence Rivers.

154. *By the Chairman*: But there would scarcely be much opening for mere labor—for men desirous of laboring at their trades? I think there is a large opening for artizans; for instance, at the town of Gayndah, which is the nearest post town to where I live, contracts for a long time were left untaken from the Government, I believe because there was no one in the district to take them—I am alluding to public buildings. At last these contracts were taken by some Sydney resident, and although months have elapsed since nothing has been done for want of labor. Complaints have reached me since I have been in the Assembly from the district on the subject that although contracts had been entered into nothing had been done, the contractor having excused himself on the ground that he could not get labor in Sydney.

155. You yourself are a proprietor of sheep? Yes, of sheep and cattle.

156. Do you feel any inconvenience from want of persons to look after your stock? I do not to the extent that my neighbors do, for I make it a practice of constantly importing my men from Sydney.

157. What wages do you pay? £38 a year for shepherds.

158. Are your servants single men as a rule, or are they married? I think now there are an equal number of single and of married men.

159. Which do you prefer? I think single men as shepherds.

160. You pay them £38 a year? Some less; I think that is the average.

161.

- W. H. Walsh, 161. *By Mr. Windeyer*: With rations? Yes, and house.
 Esq., M.P. 162. *By the Chairman*: What flock does each man tend? I do not specificate as to the number, but I endeavor to average my flocks at about 1,400 sheep.
- 13 Oct., 1859. 163. Has each shepherd a hutkeeper? He either has or has not; if he has, I pay him from £35 to £38; if not, to give him £1 a month extra.
 164. What do you pay a hutkeeper? £30 a year; therefore perhaps it is a saving to us to have no hutkeeper, and the men prefer being without hutkeepers, because it pays them better.
 165. Can you give the Committee any account of what becomes of the men after they have passed through your hands; for I imagine you must have employed a great many men during the twelve years you have been resident there—my object is to ascertain whether your service has led to the settlement of men as small agriculturists? I can safely say it has not. I think I only know one man who has been in my service, who has regularly settled in the neighborhood; he is a married man, and he was induced to settle, I think, by the facility I offered him to obtain a piece of land for himself.
 166. Has he settled as a farmer? No, he is a carpenter.
 167. *By Dr. Lang*: The difficulty has been alleged to arise from the unsuitableness of the southern climate? Not at all; the great difficulty in the way of working men settling, especially as farmers, is the almost impossibility of getting hold of land; I have myself seen most painful instances of it.
 168. *By Mr. Windeyer*: People have manifested a desire to get it? I will relate one instance in which I was the unwilling—I will not say unwilling, because I was not aware of it at the time—but I was the unfortunate cause of several men not getting an opportunity of settling in the town of Maryborough; I did not know it until after the sale was over; I attended as a mere speculator in land at a Government sale at Maryborough, and having £200 or £300 to spare that day, I thought it would be a good investment to buy some town and also some country land. I noticed some strangers bidding against me, and as I thought I knew everybody in the town I could not understand who they were, and consequently felt no interest in them. I bought rather largely. After the sale a resident in the town, who is now in Sydney, and from whom the Committee may get valuable information with reference to the district, came to me and said—"You have done a deal of mischief to-day; there were a lot of men who were attending the sale who had come for the purpose of buying land, with a view to settling; some would have bought town, and others country lots." I said—"What will become of them?" He answered—"They are all disgusted, and are going back to Sydney."
 169. *By Mr. Plunkett*: What price did you give for the land? I think I gave about £20 an allotment for the town lots.
 170. Half-acre allotments? I think they are not quite half an acre.
 171. What did you pay for the country lots? I think I got them for about £6 an acre.
 172. *By Mr. Windeyer*: Were they all suitable for agricultural purposes? All the country lots.
 173. *By the Chairman*: How far were they from Maryborough? About two miles. I am satisfied that if I had known as much before the sale as I did afterwards that Maryborough would have had so many more inhabitants, and, I think, more useful ones than I have been.
 174. *By Mr. Plunkett*: Supposing a man wants to settle upon land, what proceedings must he take, and what time must elapse before he can get it? If a man wants to get a piece of land he asks the Government to put it up; he has to write to the Crown Lands Office and request such or such a lot to be put up.
 175. How long will that take? Between six and twelve months. It used to be twelve months, but I think now, with a little perseverance, he may get it put up in six months; but then the chances are a hundred to one against the man who asks for the land getting it, and, as far as my experience goes, he must propitiate every one in the neighbourhood, who has money to spare, to prevent their competition.
 176. *By the Chairman*: These men to whom you have referred must have looked upon you as a cormorant squatter? They did, no doubt. I do not mention it in justification of myself, but I told the person who had spoken to me on the subject, "If you can send in to me evidence to shew that they mean to occupy the land I have bidden for to-day, I will make it over to them for what it has cost me." He said "I will go and see them, and try to stop them." When he came back, he said, "I cannot do it; the land was run up to prices beyond the means of some of them, and others are disgusted."
 177. I should infer, from what you have stated just now, that the land about Maryborough is suitable for the settlement of small farmers? It is equal to any; it is asserted by some to be superior, but I should say it is equal, to any brush land in the colony.
 178. Can you state whether squatters in your district have availed themselves of the right of purchasing land to any extent? No, very few; they do not feel interest enough in the colony.
 179. *By Mr. Peme*: Do you get your supplies of flour from Sydney, or do you grow wheat? We get our flour from Sydney; there is no agriculture carried on; there is no land worth speaking of in the possession of the working man.
 180. *By Mr. Plunkett*: Do not any of the squatters grow anything for themselves? I do not think in the squatting districts the climate or the soil is suitable. The lands I have been speaking of are about the coast, where the climate is moister, and where it is proverbial things can be grown well. Now in the western part of the country, where sheep do well, gardens do not flourish. In the same way, as you may be aware, when you leave Sydney and go back as far as Wellington, you get into a drier climate, and very little cultivation is carried on there as compared with the County of Cumberland.

181. You depend upon Sydney for your supplies? Yes, even for maize.

182. *By the Chairman*: Have you formed any opinion as to persons being out of employment in Sydney? No.

183. You have heard that persons have been suffering in that respect? Not since I have been in Sydney, except from the remarks made in the House.

184. Supposing it to be the case—do you think if these people were to find their way to Maryborough, and to arrive there strangers and alone, they would be sure by proper perseverance to obtain employment? I think a limited number would get employment in the town of Maryborough, but I think the large number the district would consume would have difficulty in finding immediate employment, simply because the communication is not rapid between the places where the labor is required and Maryborough; and these people would have some difficulty in finding their way to those places.

185. *By Dr. Lang*: I suppose most of the wealthier squatters in the territory contemplate leaving the Colony eventually and going Home? Yes.

186. Do you not think that circumstance operates very unfavorably for the advancement and progress of the district? Nothing more; it appears to me to be the great blight of the district. Every man is striving to get out of the country, and is careless about improving the part in which he lives.

187. Is there anything in the climate of the district very unsuitable to Europeans? No; the climate is in winter the finest I was ever in, and the inhabitants generally express themselves as pleased with it. But I think it is only fair to tell you, that I believe if the squatters saw a better prospect than they do—if they could see any way by which they could secure a better tenure of their land—they would not be so anxious to leave the country. It is the uncertainty of the action of the Legislature which causes so much dissatisfaction. Legislation is perpetually in motion against them, and the strong feeling expressed against the squatters makes them unsettled, and to a great extent disgusted. It is a common remark among them, "We shall be hunted out of the place, and must go as soon as we can."

188. *By the Chairman*: Do you feel in any danger of being hunted out of the place? I do, I must confess. My feeling is this, that the squatters occupy such an unpopular position in the country, that I should gladly exchange my position for any in Sydney, or for farming. It is a feeling which has been growing on me for years. It is not a pleasant thing to be pointed at as belonging to an obnoxious class.

189. Did you ever suffer any personal inconvenience from feelings of this kind being manifested—were you ever pointed at in this way? No, except at elections, where I have heard the cry "Down with the squatters."

190. You did not hear much of that cry at Leichhardt? No; but I felt an interest in the return of Mr. Elliott, and at his election the cry was "Down with the squatters."

191. *By Mr. Plunkett*: I suppose from your answer to a previous question that you consider the present squatting system mars the progress of the settlement of the country; now, under such circumstances, is it surprising that squatting as a system should be unpopular? I do not think I said that exactly, nor do I think in reality, except for a certain purpose squatting is unpopular. Squatters, I believe, generally are liked; but it is only for an object, when a person of that class comes forward as a candidate for election, that shouts or remarks are made against the squatters.

192. *By the Chairman*: Do you not know that at elections people are licensed to say anything? I do not say that squatting is unpopular in our district; I think, as a body of gentlemen, the squatters are popular with the working classes. It is only with the residents in towns and in Sydney that the squatters are unpopular.

193. Do you not think some residents in Sydney are as unpopular with the squatters as the squatters are unpopular with the residents in Sydney—myself and Dr. Lang, for instance? I do not think you are particularly unpopular; as to Dr. Lang it may be so.

194. *By Mr. Plunkett*: Have squatters in that part of the country exercised the pre-emptive right to any extent? They have never to any extent exercised it, not in any single instance; nor do I think many intend to do so.

195. If they intended to remain in the country have they not in their own power, under the pre-emptive right, to get a fixity of tenure, to buy the fee simple of the country? I think not. I will tell you why;—I myself have for years been wishing to exercise a pre-emptive right, but have been afraid to ask for it, as I have not been certain whether I stood sufficiently well with "the powers that be," or with the officials of the district, who had the power to recommend the refusal of my application. I assure you that I have been for years prevented exercising that right from these reasons.

196. You think "kissing goes by favor"? No doubt.

197. *By Dr. Lang*: Did that delay originate with the present Ministry? No, it has been for years; but whenever we get what we consider a just official in the district—that is, a surveyor in the district who does not do what others have told me they have had to do, and which I will mention presently—I will try to get the pre-emptive right. If we wished for a particular piece of land at the bend of a river, at a particular waterhole, on the top of a mountain, or at any other place, the surveyor would feel it his duty to suggest that it should be reserved, and that suggestion would be invariably carried out, or it used to be so. Some time ago, I asked a surveyor the reason of this course of proceeding—this was in the time of Sir Thomas Mitchell—he said, "I am looked upon as a trump card in our office, and one of the reasons of my being so is that I never agree with the people; wherever I go, I manage to fight with the people, and I am thought well of by Sir Thomas in consequence."

198. *By Mr. Pemell*: If farming were carried on in the district to a limited extent, I suppose the people could easily sell their produce and get good prices for it? Yes. A neighbor of mine, who lives eighty miles in the interior, wrote to me only a short time since to send down some corn for his horses.

W. H. Walsh,
Esq., M.P.

13 Oct., 1859.

- W. H. Walsh, Esq., M.P.
18 Oct., 1859.
199. *By Mr. Plunkett*: Will maize grow there? As well as in any part of the Colony; in fact, some of the finest I have seen was grown on a small farm there.
200. Are the aboriginal inhabitants troublesome there? Not at all now, and the only agriculturists at Maryborough employ them largely.
201. Have you heard since you came to Sydney, or do you know as a fact, that there is a prejudice against the northern parts of the Colony among working men here, in consequence of the prevailing notion that the Aborigines are troublesome, vindictive, and cruel? I have experienced the inconvenience of that supposition for many years, and the belief still exists; for, when I go to a Registry Office to try to hire servants I am met with the remark—"Wide Bay! it is such a dreadful place"—the Registry Office keepers will tell you they have more difficulty in sending servants to Wide Bay than to places farther north, because Wide Bay has a bad name.
202. Is there any means of employing females in your district? There are growing means, inasmuch as the squatters are changing their habits; that is, they are turning from bachelors into Benedicts. Seven or eight years ago in the district we were not able to muster three or four married men—the rule now is to find the men married.
203. In hiring married people, is there any allowance made for the services of the females? The wife is invariably hired as hutkeeper.
204. Is an allowance made to her? Yes; the women are paid not quite so much as men would be, but a man and his wife get £60 a-year, some more.
205. What does the wife do? She keeps the hut; that is, cooks her husband's victuals, that is all I know—all I require mine to do.
206. Are there any schools at all in that part of the country? There is a school at Maryborough which is well attended.
207. What school is that? I believe it is peculiar to Maryborough; I think when it was started it was intended to be a Denominational School.
208. You mean under the Denominational Board? I believe it was started under that idea, but I do not think it is in communication with the Board now; and I am not sure whether the teacher gets aid in any way from the Government, but he gets a very good living I believe.
209. How many scholars has he? I cannot say; but the gentlemen whom I have referred to and who is now in Sydney has been long resident in Maryborough, and could give all the information.
210. Is that the only school in your district? No, there is another school at Gayndah, that is a private school, but is well attended I think.

Mr. Joseph Richard Clayton called in and examined:—

- Mr. J. R. Clayton.
18 Oct., 1859.
211. *By the Chairman*: You have been, I believe, for some years in the service of the Sydney Corporation? I have, ten years.
212. At first under the old Corporation, then under the Commissioners, and now under the present Municipal Council? Yes.
213. What have been your duties during the time you have been attached to the Corporation? During the first five years I was collector after rates, since then part of my duty has been to serve notices for the payment of city rates in four out of the eight wards of the city.
214. So that all through this period your duties have taken you a good deal about the city? Yes.
215. This Committee has been appointed to inquire into the condition of the working classes of this city, with particular reference to the alleged want of employment of a large number, to the house accommodation in its sanitary and moral effects upon their condition, and also as to whether there is or is not much juvenile vagrancy in the streets of the city? I know in many parts of the city, more particularly upon the Rocks and Kent-street, Hunt's buildings off Queen's-place, the houses are in a most filthy state. In many places, for instance, Malcolm's-place off George-street and Brougham-place, three and four families are living in a house where only one family should live.
216. You have been a resident of the city many years? I have never resided out of it; I am a native of it.
217. Then, probably, you have known these houses in Queen's-place for a long time? I have known them for about twenty years.
218. Just describe the accommodation they afford, and their situation? They are somewhat about six feet below the level of Queen-street, one end of them comes to the Old Tank Stream; there are about eighteen houses in the block; one part comes into Mr. Manning's property, and the other to a lot of stores; there is no yard accommodation; the houses have only two rooms, and I think the ceilings are not above seven feet from the floors. They are miserable places.
219. Have you ever had any means of forming an opinion whether more than one family lived in these dens? No; in Brougham-place there have been three or four families living in a house. I think they contain three or four rooms. I may state that I superintended the taking of the last Census for the Commissioners, and one of the parties engaged happening to fall through in his work I was compelled to take up his work of collecting a portion of the Census papers; and in one house in King-street I found no less than seventy individuals. That was a house of six rooms between Kent and George Streets. I took the block west of George-street, between Market and King Streets.
220. Can you state of what these seventy human beings consisted—how many were adults, and

- and how many children? They were nearly all adults. It was a regular lodging and eating house.
221. Were they males or females? Principally males; there were about three females out of the lot.
222. How many rooms were there? Five or six.
223. That would give above ten persons in a room for all the rooms in the house? Yes; my attention was particularly called to it by the fact of there being a person in the house of my own name. I reported the fact to the Commissioners. The names of the parties were given to me as having resided there, I believe, on the night of 28th February, 1855.
224. Did the inmates of this particular house present any appearance of marked squalor, destitution, or wretchedness? I did not see the whole of them because the householder was compelled to give me the information. He was supposed to have the list prepared, ready for me when I called, but I had to correct his list and to add a number of names which he said he had omitted. I did not see more than twenty.
225. What appearance did they present? Some looked very dirty and miserable; others were sailors in their usual sailor's dress. In Cambridge-street, at the present time, the houses are in a most filthy state from being occupied by Chinamen; it is almost enough to make an European sick to go anywhere near their doors.
226. Can you state how many houses are occupied by Chinamen? About seven in Cambridge-street altogether.
227. Are they very crowded? They appear to be; I saw something like twenty or five and twenty in a little bit of a place with not more than two rooms, two or three weeks back.
228. On going to the door—? The smell is very offensive. I inquired what was the cause of it and they told me it was some of their Chinese fish; whether it was or not I cannot say, but I know I went home very ill after it. I have seen as many as 150 of these people huddled together in one of Mrs. Underwood's buildings, all on one floor of a house.
229. *By Mr. Pemell:* In one of the very large houses at the bottom of George-street? Yes; near old Queen's Wharf.
230. *By the Chairman:* Those houses in Queen's-place, to which you alluded just now, I presume are occupied by permanent residents of Sydney, engaged in laboring work? Yes.
231. What is the condition of the houses in the neighbourhood of Miller's Point, the back of Sussex-street, the western side of the city, and the Glebe? I know nothing of the Glebe; that is out of the city.
232. The houses in other parts of the city—occupied by the same class of persons—are they much better? No; there are some worse even than these. In some of the lanes in Woolloomooloo—and there are lanes there not more than ten or twelve feet wide—there are some worse.
233. Can you give us more definite illustrations of what you mean? There is one place called Crown-lane, and another called Bone or Streamham-lane,—those places are in a fearful state from the filth and stuff allowed to accumulate in front of the houses. The people bring out the whole of their filth and throw it all down, and of course that keeps the place always in a mess.
234. Have not the Municipal Council the power to prevent that by their officers—the Inspectors of Nuisances? I do not know whether they have the power to prevent it as a nuisance, but I believe they have no authority to do anything in a lane under 20 feet wide.
235. In reality is it not prevented or checked? No.
236. The houses in these two lanes, for instance, Crown-lane and Bone-lane, have you ever noticed whether they are ill-constructed, whether they have low rooms, and are deficient in ventilation? They all have low rooms; none are more than about seven feet high.
237. Have you ever noticed at any time whether the houses occupied by the laboring population generally are fitted with means of cleanliness, such as sinks and drains, and whether they are constructed with a proper view to ventilation? Very few have drains; and I have seen many places where there has not been a water-closet on the premises. There was one place at the lower end of Wentworth-street where they had a water-closet without a cesspool, and the whole of the soil ran into the adjoining property. In fact, only the other day my brother, who is in the office, reported a number of houses in King-street West, which had the water in the water-closets, and, as there were no cesspools, the whole of the soil was washed through the drain into the streets.
238. I should gather, then, from your evidence that most of these small houses are not fitted up with any closets, sinks, or, in fact, any conveniences for the use of the occupants, and consist merely of four walls? Of the houses recently built at Woolloomooloo not more than one out of every hundred has a drain or sink.
239. There are some small houses, apparently of a better class, lately put up in Woolloomooloo? Yes, there are some better looking houses, but they are not provided with any comforts; they are more showy, and let better than the others, but there are no more conveniences to them.
240. In the performance of your duties in different parts of the city, especially when you are rate collecting, have you an opportunity of forming an opinion as to the pecuniary circumstances of the people—have you found much inability among them to pay the taxes which you have been collecting? There is a great amount of destitution at the present time—a great many are out of employment. I find there is a great amount of destitution among females in consequence of their husbands leaving them and going to the diggings, leaving their wives to support their families during their absence. I suppose during the past month I have come across fifty such cases.
241. Women whose husbands have either gone from the Colony or to the diggings? They have gone to the diggings, generally.

Mr. J. R.
Clayton.
13 Oct., 1859.

- Mr. J. R. Clayton.
13 Oct., 1859.
242. Can you give from your office a return of the number of cases where the Municipal Council have distrained for taxes, and have had to sell the effects of these people in consequence of there inability to pay? We have never since I have been in office—ten years this month—had but three sales, one was in my division and two were in Mr. Windeyer's.
243. The taxes have been paid? Yes; there is a Clause in the Act which gives the Council the power to exempt in cases of poverty, but I have always refused to certify to that where the landlord has compelled the party to pay the rent, as I have considered the landlord in such cases should be compelled to pay the rates.
244. Have you in such cases called upon the landlord to pay? I have compelled the landlord to pay, because power is given under the Act to enforce the landlord to pay, so long as he lives within seven miles of the city, that is in the event of there not being sufficient goods on the premises to pay the rates.
245. Have you noticed whether in many cases houses occupied by the working population are destitute of the necessary articles for household comfort—furniture? Yes; I have gone into many places which have not had cooking utensils even, or furniture. I went into one place on Surry Hills last week; there were five children in the house, none of them able to go out to earn anything towards their support. They had a bed, or at least a sort of bedstead for it was not a bed, made up of old clothes, a gridiron, and a saucepan, and that was all I saw in the place. I may state that in a great many of these places there is a want of water to enable the people to keep themselves or their places clean; in many instances the people would be clean if they had the means of keeping themselves so, but water is too expensive; the landlords will not go to the expense of laying on the water, so that the people have to buy it from the water-carts, and it costs them too much.
246. Does not that materially injure the atmosphere about the place, inasmuch as the water becomes to a certain extent stagnant, when kept for a time in casks? The people never purchase it in sufficient quantity for that, they rarely purchase more than four buckets at a time. I would suggest that for every house throughout the city, in the neighborhood of a main, the landlords should be compelled to pay a water rate whether he had it laid on to his house or not.
247. You probably have formed some opinion of the causes of distress you have noticed for these several years? I consider that it is from want of employment; capital is now shut up altogether.
248. Do you not think it arises in some cases from incurable intemperance? It may in one case out of a hundred, not more.
249. Your opinion is that a large proportion of this distress arises from want of employment among people who are willing to work, and who would avail themselves of it if an opportunity presented itself? Yes.
250. Are not many of these persons in various respects unfitted for the colony? Yes; but there are a number of mechanics who are now out of employment; it fact the town is overstocked with mechanics.
251. You think there are really more mechanics about Sydney than can find employment? Yes.
252. What kind of mechanics? Particularly wheelwrights and blacksmiths. I know that in one wheelwright's yard—one of the largest in Sydney—which has been in the habit of employing forty or five and forty hands, the employer has been obliged to reduce the number to about twenty; and only yesterday he told me that he should be obliged to turn off some more this week. For the last five weeks the men who have been turned off have been walking the streets of Sydney, unable to get employment. These are all steady men, who have been in the habit of making seven days a week by working overtime.
253. Have you been able to form an opinion whether there really is in the streets of Sydney a large amount of juvenile vagrancy, including juvenile prostitution? A very large amount; there are boys knocking about the streets thieving and blackguarding from eight years of age and upwards. I should say at the present time not less than a thousand of that description, including both sexes, in Sydney.
254. You think, speaking generally—of course without any precise data to go upon—that there are a thousand boys leading an irregular life in this way? Yes, that their parents have no control over.
255. Living in practical vagrancy, either without parents, or whose parents do not exercise control over? Yes; and as to juvenile prostitution I have been astonished lately, more especially during the last five or six months, to see young girls not over twelve years of age upon the town.
256. In a state of open prostitution? Yes, soliciting men. When I was taking the Census I found in one place no less than seven young girls.
257. All of the age of children? They were children; and one was so far gone with disease that I believe in about a fortnight she died.
258. At the tender age of twelve? No; that girl was about fifteen. The worst cases of poverty are to be seen in the back places, the lanes, and yards that lead off the main streets, and are not likely to be observed by a passer by.
259. Have you any knowledge of Chippendale? No. I think the Rocks and Kent-street, as far as Druitt-street, about the worst blocks in Sydney.
260. You could not, I suppose, give the Committee any information as to the course of wages for the last two or three years—it is hardly within your observation? No; but I can state what we have been paying our men. We have been paying them seven shillings a-day, but then on the average, taking the year through, they cannot make more than four, or four and a-half days a week, on account of the weather.
261. Have you been paying seven shillings a-day for any length of time? For the last two years and a-half. The highest wages we have paid was eight shillings a-day. 262.

262. May this rate be taken as the standard of the laborer's wages? No; I think these wages may be taken at a shilling less than is paid by private individuals.
263. How many men are employed by the Municipal Council at the present time? Very few. I do not think more than forty are employed as laborers.
264. Do you know what mechanics are getting in Sydney? You can get carpenters at from 10s. to 11s. a day. I have known bricklayers to get 32s. 6d. a day, but you may now get them at 12s. or 13s. You may get plasterers at the same rate, although at the time of the Gold Field rage they were also receiving 32s. 6d. Painters are about the worst paid.
265. What are they getting? About 9s. a-day.
266. *By Mr. Walsh*: Do you consider 9s. a day bad pay? I do at the present rate of rents for small places not fit for a dog to live in, together with the high price of food.
267. Do you consider food high? Yes. In 1836 bread was 2½ a loaf.
268. What were wages then? 5s. a-day.
269. *By Mr. Pemell*: For mechanics? Yes, and I have seen in 1842 mechanics employed at 2s. 6d. a-day.
270. *By Mr. Walsh*: You have attributed some part of the distress that exists in Sydney at the present moment to the want of water? To the want of cleanliness.
271. To the difficulty of getting water in consequence of its expense? Yes.
272. Do you not think street fountains would be very advantageous in such neighborhoods, and would relieve poor people of this difficulty? I may state that I recollect when we had street fountains here, and that they went a great way to increase prostitution in Sydney. When street fountains were about the town parents were too independent, too proud to go themselves or to send their children for water till after dark, and the consequence was that the girls formed a meeting place which led to improper intimacy. Some ten years back we had fountains all over the town.
273. Do you think if street fountains were now liberally scattered through Sydney, it would lead to prostitution? I think it would in the same way that it did then. The people of Sydney have that sort of pride that they do not like to be seen carrying water from the fountains to shew that they are poorer than their neighbors, and they would therefore send out their children at night to fetch it, and the allowing girls of tender years to go out at night is likely to lead to such a result. I see quite sufficient on Hyde Park now at night, even though it is lighted up, to convince me of that.
274. Then you think pride in the city leads to prostitution? No doubt it goes a great way.
275. I suppose the proper supervision of the police could prevent the evils which you anticipate? Even in Hyde Park, which is now lighted, there is a great amount of prostitution, and the police are supposed to be there all night.
276. In fact, you think the allowing young girls to go out at night would lead to it? Yes.
277. Then mere shopping would do that? They do not go out shopping—the shops are closed before the hours to which I allude.
278. *By Dr. Lang*: Would not the establishment of street fountains interfere with the revenue which the Corporation derives from the water? Yes, and it is only fair to those house proprietors who lay on the water to compel their neighbors to do the same, and if all landlords were compelled to pay for the water whether they laid it on or not, they they would soon go to the expense of laying it on.
279. *By Mr. Walsh*: Do you not think the imposition of these compulsory rates might prevent people building houses? We might say the same of the city rates.
280. One complaint you have spoken of is the crowded state of the houses, arising from their scarcity? There is no scarcity of houses. In the last month, in my service of notices in the four wards, which has 4,500 houses, I have come across upwards of 180 houses unoccupied.
281. *By Mr. Pemell*: Would not that have a tendency to reduce rent? No; the landlords hold out for high rents. There is one house on Surry Hills which I have known to be unoccupied for 18 months, because the landlord will take no lower rent than he got in former times.
282. *By Dr. Lang*: Has there been a very considerable diminution in the rate of house rent within a comparatively short period? Not within a short period. If you go back four years I may say that since then there has been a reduction of something like 50 per cent., but then wages are more than 50 per cent. below what they were.
283. *By Mr. Walsh*: If there are so many carpenters, bricklayers, and plasterers out of employment at the present moment, how is it that those who get employment are paid at the rate of 10, 11, and 12 shillings a day—how is it that they maintain such apparently good wages? I hardly know. I have myself, when I have been employing men, heard them refuse less than they have asked, and have said they would not take it, that they would rather walk about and do nothing than work for nothing. That has been their expression.
284. Do you think this arises from any combination among them? No, there is nothing of that kind at present.
285. Not from trades' unions? No, there are very few unions, and they are not supported.
286. Pride, perhaps, may have something to do with it? No, I do not think so.
287. *By the Chairman*: Does it not arise from a feeling which is fostered by all their habits of life that if they once submit to a reduction of their wages they could never get them up again? Yes, it is much easier to lower than to raise them.
288. Do they not feel that if they submitted to a reduction it would affect their whole class, and that ultimately, after this temporary employment, they would be no better off than before, and that when employed they would then have lower wages? No doubt. If a master builder can get a few men to go to work at a shilling a day less than the usual rate he will then turn off his old hands unless they will come down to what the new ones receive.

Mr. J. R.
Clayton.

13 Oct., 1859.

289. *By Mr. Pemell*: Do you think if they were to offer to take these wages they would find more employment? No.
290. *By the Chairman*: Then you confirm the judgment of the men themselves—you think they would be no better off if they were to reduce the rate of wages? I think they would get no more work, and that as the work they obtained would be paid for at a lower rate they would be worse off than before.
291. *By Mr. Walsh*: In other words, that there is a surplus of labor? There is more labor than there is capital to employ.
292. *By Mr. Pemell*: Then you think the scarcity of employment arises from scarcity of capital? Of capital in circulation.
293. If a man could see how to make twenty per cent. of his money there would be plenty in circulation? He cannot do that by building; he cannot make more than five.
294. *By Mr. Lyons*: Do you think any person erecting buildings could insure five per cent., taking into account repairs? No, if you take into account the purchase of the land, the building, wear and tear, with so much put past to repay the principal, I do not think he could. There are many buildings in Wynyard Square not paying one and a half per cent.
295. *By Mr. Walsh*: Do you think for the requirements of the Colony the trade of Sydney needs more buildings? No, I think not in Sydney.
296. Do you think Sydney is overgrown? I believe it has grown too fast. I may state that when I came into office, ten years ago, Cook and Fitzroy Wards were not formed, but there was one ward called Cook Ward that contained 800 houses. That ward is now divided, and in that part still so called there are 1,900 houses, while in Fitzroy Ward there are 2,200, so that in that part of the town the number of houses has increased 3,300, and in Chippendale and Pyrmont the increase has been proportionate.
297. *By Dr. Lang*: By whom are these houses generally built—by small proprietors as residences for themselves, or by speculators? By speculators chiefly. Nearly the whole of Woolloomooloo was built in this way, by builders, who the moment they were finished would put them up to auction and sell them.
298. *By the Chairman*: They were a sort of house manufacturers? Yes, they bought the ground having so many years to pay it, they then borrowed money upon the ground, built the houses, put them into auction, sold them, and perhaps cleared a hundred pounds or so by the transaction.
299. *By Mr. Lyons*: Have many of these builders become insolvent? Yes, by over-speculating, but in the first instance they made money.
300. *By Mr. Pemell*: Do you not think the practice of the banks of giving five, six, and six and a-half per cent. for money, is a means of locking up a great deal of capital? Yes, no doubt.
301. People having money can let it lie at interest in the banks, and draw it out when they please,—is not that a means of preventing persons embarking in undertakings which would give employment to labor? No doubt. If I had much money I should place it in the bank.
302. Then if five per cent. interest were not given by the banks for the moneys lying with them, you think employment would be given for a considerable portion of the labor now unemployed?—
303. *By Mr. Lyons*: Do you not think there is a desire, on the part of the humbler portion of the community, when they have any means to shew it, by the erection of houses for themselves? Among the humbler classes the moment a man gets a hundred pounds together, the first thing he does is to buy a piece of land, and to erect a house for himself. In many parts of Woolloomooloo all the little houses are owned by the people living in them.
304. *By Mr. Walsh*: They are stimulated by the laudable desire to have homes of their own? Yes.
305. *By the Chairman*: Have you ever noticed the diversities of the roofs, and their elevations, in the direction of Woolloomooloo seen from Hyde Park, indicating that they are separate properties? Yes, a great many of the small properties are built in that way, in consequence of the incline of the street.
306. Are you aware that of late years in England a great deal of attention has been paid to the building of model lodging-houses? I have heard so at the School of Arts.
307. That men of capital have erected very handsome blocks of buildings, wherein the principles of sanitary science have been brought to bear in their construction, so as to secure in a very small space all the conveniences of domestic life, and at the same time all the precautions for the preservation of health? Yes.
308. And that the proprietors have at the same time been enabled to let them at so low a rent as that they would be sure to be occupied, and secure a good return for the outlay? Yes; and I may state that the Committee of the School of Arts offered a premium to any of its members who would produce the model of a building suitable for the mechanics of Sydney, taking care, of course, that every attention should be paid to the sanitary arrangements. I believe all these small houses might be very easily ventilated by a small hole in the ceiling of the room, to allow the hot air to pass through the roof.
309. Suppose any gentleman were to build a block of houses on a plan similar to that which I have tried to indicate as existing in England—do you think, from the regularity with which they would be tenanted, they would in all probability pay him better than if he were to invest the money in such buildings as are now ordinarily erected? Yes.
310. Could you furnish from your office any return of the assessed value of houses in the city, that would shew the Committee how many houses of certain assessed values there were, rising from the lowest to the highest? Yes. (*Vide Appendix.*)
311. As a native of the city, and therefore having a very extensive acquaintance with the
general

general habits of the native population—can you state to the Committee whether there is any disposition growing up among the young men of the city to seek Government employment—any inordinate desire to get into the various Government departments? I believe that is the aim of all the educated natives.

Mr. J. B. Clayton.

13 Oct., 1859.

312. What, of the whole native population? Yes; they all look some time or other to having employment under the Government; that has been their aim for the last ten years.

313. Do you not think that is a very undesirable state of things; do you not think it would be better for them to become squatters? If they could become squatters and had capital sufficient to carry out their undertaking, no doubt it would be better for the interests of society; but, if not, it would be far better to get into the Government service than embarking in a trade.

314. *By Mr. Walsh*: What is the object of getting into the employment of Government? It is certain and regular.

315. Do you think the fact of 150 Chinese living, as you have stated, in Mrs. Underwood's house, was prejudicial to the health and morality of the neighborhood? No doubt. I made it my business to report the circumstance to the Inspector of Nuisances at once. They were a set of beastly fellows.

316. Did the same state of things continue after your report? The Inspector of Nuisances went and had the place cleaned, and that batch of Chinamen started off to the diggings, but in a fortnight or three weeks the place was occupied by another batch.

317. If the fountains were locked up from sun-set to sun-rise, would your objection to them be removed? Yes.

318. *By the Chairman*: Evidence has been given before the Committee that a limited number of mechanics could find employment in the remote northern districts; do you think if they had the means of conveyance to those parts they would avail themselves of it? I do not think a great number would avail themselves of a free passage unless there was some sort of depôt to receive them until they had an opportunity of getting employment. I know that at the time the Relief Committee were at work at the Town Hall a great number came to get assistance, but the evil was that they would leave their wives behind and go away, and at the end of a couple of months would return again. I think they should be compelled to take their wives and families with them.

319. *By Dr. Lang*: Is there not a great indisposition on the part of the laboring classes to leave Sydney? Yes; very great.

320. From what does that arise? The people can get more comforts here than in the country.

321. You refer to their town habits?—When I say comforts I mean they can get more amusement,—more clothing.

322. *By Mr. Walsh*: They are happier in town? Yes; they feel happier. They can get clothing at a much less rate than in the country. A great many object to leave Sydney because they say there are no schools in the country for the education of their children.

323. *By the Chairman*: I received a letter by the Mail which has just arrived from England which, among other things, speaks of a young man whom I knew many years ago, who recently removed himself to Canada; it is stated that he there bought 130 acres of rich land for £11, or two shillings an acre, and was about to clear it and build a home; that everything is very cheap, and that he has a very fair prospect of getting on in the world. If a man could buy land here at two shillings an acre, and get a farm of 130 acres for about £11, do you not think that would remove a good deal of the distress which exists? No doubt; but I happen to have a letter which came by the Mail before last, from a gentleman who left our office, and went to Canada with some £500 or £600, but he regrets having left Sydney at all.

324. Perhaps he did not buy land? No; but after paying his passage out he had £500 or £600 clear.

325. I dare say these two letters are not inconsistent with other facts in our experience—many have arrived in this Colony with money, and in a very little time have been no better off than those who have arrived without any? I have met with many such instances.

326. *By Mr. Lyons*: Do you not think the Legislature should interfere where so many houses are crowded together, and are in a state unfit for human habitation—I allude to Kent-street for instance, where the roofs of some of the houses are level with the kerbing—do you not think the Health Officer or some other person should have authority to report upon those places? Yes. There are some places in Robin Hood Lane which he reported upon, and compelled the parties to cleanse them.

327. Whether they are clean or not, do you not think the situation of some of these houses is so objectionable that they should not be allowed to be tenanted, but should be removed? I do not know whether the Legislature should go so far as that; but I think legislative power might be called in that future buildings should be of a certain size.

328. Are there not many houses which you have an opportunity of seeing that are unfit to be inhabited by any class of people? There are some houses in Cambridge-street, belonging to the Honorable Mr. Martin or his wife—three together, that are unfit for a dog to live in, half the roofs are off.

329. Do you not think it would be a very good thing if the Corporation had the power to prevent parties letting such places—do you not think they tend very much to create disease in the city? No doubt.

Mr. J. R.
Clayton.

APPENDIX.

Classification of Houses, prepared from the Assessment Books of the City of Sydney.

13 Oct., 1859.

ASSESSED ANNUAL VALUE.	NUMBER OF HOUSES IN								TOTAL.

NOTE.—This assessment was made when rents were fully 30 per cent. higher than at present, and does not include any houses built since the latter end of last year.

Inspector Charles Edward Harrison called in and examined:—

Inspector C. 330. *By the Chairman:* You are an Inspector of the Sydney Police Force? I am.

E. Harrison. 331. You are a detective officer, I believe? I am.

332. How long have you been performing the duty of that situation? Since the latter end of 1853, about five years in all, with the exception of a short time when I was absent up the country.

333. This Committee has been appointed to inquire into the condition of the working population of this city, with especial reference to the alleged want of employment among large numbers, and also to the alleged immorality and discomfort, disease and death, arising from bad house accommodation; and also to the extent of juvenile vagrancy (including juvenile prostitution) in the public streets,—can you give the Committee any information you may have collected incidentally in the discharge of your duties, upon these several heads? With regard to the want of employment, there were several meetings held at different times during the last twelve months, most of which I attended; and most of those whom I saw attending those meetings—although I cannot say that there were not men among them whom I believed to be actually in want of employment—yet most of them were men whom I have known to be hanging about Sydney, about the wharfs and markets—idle characters, not dishonest, but idle characters, who had been hanging about the city for a long time. Some few of them were out of employment, I do not doubt; but by far the greater number I noticed were men you may see assembling in any crowd.

334. I gather, at all events, that there were no really bad characters in those meetings? No really bad characters.

335. Without confining yourself to these meetings have you noticed, on your going about town in different directions, individual instances of destitution from want of employment? I have not; none have come under my notice; nor have I in the course of my experience at the Police Office met with such cases, with very few exceptions. I do not remember one case of larceny having been brought before the Court for three months where destitution was the real cause; it is a plea sometimes set up, but only by old offenders who have been frequently before the Court.

336. Has your attention been turned to the subject previously to your receiving the summons to attend this Committee? Yes.

337. Have you formed any opinion as to whether there really does exist any large proportion of suffering from want of employment? I do not think so. I have had frequent applications, in my capacity as Inspector, from parties in the country, to send up men to stations or farms, and I have inquired in Sydney and found many who have been out of employment, but they have refused to go into the country. In very few cases have I got men to leave Sydney and take employment up the country.

338. Has this experience extended over a lengthened period? Yes, for a considerable time back.

back. Even at the present time I could get situations up the country for six or eight if I could find the parties to go. Inspector C. E. Harrison.

339. Have your duties brought you in contact with cases of persons who have been in a better condition—what are called decayed gentlemen—who are suffering great distress, and who rather seek to conceal their poverty than to bring it before the public? I believe there are more cases of that description here than there are of distress among the working classes. 18 Oct., 1859.

340. Where persons of superior education, who have been accustomed to a better kind of life, who have been brought to a state of unassisted privation? Such cases have come under my notice; in fact several applications have been made to me for my interest to get them situations in some Government department, no matter how lowly the position.

341. With respect to the second head of our inquiry—the house accommodation of this class—I take it for granted your duties bring you into some of the lowest parts of the town—incidentally to your duties have you noticed the erections in which the working population are chiefly lodged—are they fitted with the necessary conveniences for domestic comfort and for the preservation of the health of the inmates; what, in other words, is the character of the house accommodation of the poorer portion of the community? The house accommodation is very indifferent, and the quarters where they are obliged to reside for cheapness are badly drained. The houses are generally very small weatherboard erections, consisting in many instances of only two rooms. The quarters where most of them reside are likely to do anything but contribute to the health of the inmates of these houses.

342. Of course if it affects the health of the inmates it must affect the public health? Yes. There are quarters of the city, especially the lanes leading out of Kent and Sussex Streets, where the stench is overpowering; it is so bad that you can smell it in the main streets. In some of these lanes there are six, eight, or ten houses crowded together; they are not drained at all, and the whole of the filth from them is thrown into the open lane.

343. That state of things must of course be very hurtful to the moral well-being of the inhabitants as well as to their physical health? Very much so.

344. It must also be very destructive to the lives of children? Very much so. I have visited a great many of these dens lately; indeed nearly every night after twelve o'clock I turn over a great many, and it is dreadful to see the number of persons crowded together in these houses. In one I found as many as seven in one small room, just divided by an old rug. These people did not reside in the place, but were only lodgers for the night; they consisted of several prostitutes, the keeper of the house, and two or three old barrowmen.

345. I was going to ask you whether you frequently visited the common lodging-houses of the city, those known as lodging-houses, the more pretentious of the class? There are not many of those. I presume you mean where parties, having only a small sum of money, can lodge at night, and get their meals elsewhere—comers and goers.

346. I do not mean family boarding-houses? There are not many common lodging-houses. The greater number of men who want a night's lodging pick up a common prostitute, and go to one of these dens.

347. Do you think there is a very large amount of juvenile vagrancy in the city? Among the girls especially, not so much among boys.

348. Do we understand from you that there are a number of girls of tender years—mere children, in a state of prostitution? Mere children. I have never, during the time I have been in the country, noticed so many juvenile prostitutes as at the present time.

349. Can you give us any idea what proportion these young children bear to the whole number of prostitutes in the city? I should say these young children form at least one-third.

350. Are there many boys living an irregular life on the streets of Sydney; the last witness, I may tell you, is of opinion that there is a very large number? They have, most of them, homes.

351. What he meant, and what I really mean by vagrancy, is either boys roaming about the streets without parents, or with parents who pay no attention to them, or direct their future life—who either beg, pilfer, or idle away their lives? There are many, but I do not think there are more than in any other city of the same population.

352. The last witness stated that, in his opinion, there were at least a thousand children who might be classed as vagrants in the streets of Sydney? I hardly think you could class them as vagrants, for most of them have parents; a great many of them are the children of men who are employed in coasters, or of parents who are earning a very precarious existence, but who still have homes to go to. There are not many houseless children about the streets.

353. Can you give us any information whether those girls, of whom you spoke just now, have any parents? Yes, most of them have parents; in many instances where I have inquired of the girls themselves—seeing them of tender years and on the streets I have questioned them—they have told me their fathers had deserted their mothers, and very often the mothers were drunkards, or the inmates of a gaol; these girls congregate in threes and fours, and there are a number of vagabonds in the city, such men as Rushton, who have a number of brothels at Woolloomooloo. There are at this moment a great many men of the same character who are carrying on a similar system of making money; they get these young girls and put them into low dens consisting of one or two rooms, without any furniture excepting a chair or two, a table, and a mattress which lies on the floor; and you may see at night three or four men, and three or four of these girls in one of these places; out of twenty of these girls you will not find one above seventeen years of age.

354. Were you concerned in the case against Rushton? I was not.

355. *By Mr. Walsh:* It is your opinion that poverty in this city is not an incentive to crime? I do not think it is. I know several cases of mothers themselves opening brothels for their two or three daughters; in one instance, the mother was a prostitute and the father was in gaol for a robbery; the woman opened a brothel in Phillip-street, and afterwards in

Inspector C. Kent-street, for her three daughters, the eldest was about seventeen, the next about fourteen, and the youngest about twelve; I have, myself, seen the mother in bed with one man, one of the daughters, about fourteen, with another, and the youngest, about twelve, in bed on the floor with another man, all in the same room.

E. Harrison.
13 Oct., 1859.

356. Was the mother with her daughters permitted to continue that occupation? If driven out of one place she would go to another.

357. Are there landlords in this city who let their houses knowingly to such people? Too many look upon it as a great source of profit.

358. *By the Chairman*: Is it not the fact that there are landlords who will not let their houses to any one else? There are parties in Sydney who will not, rich men. I know a block of houses, situate between Elizabeth and Castlereagh-streets, belonging to one man, which are let to these women. I knew a respectable person who took one of these houses, and she was annoyed till she had to leave it. It was then let to prostitutes and continues to be so.

359. Will you have the kindness to state where those houses are situated and to whom they belong? The houses belong to a man named Tom Douglass, an associate of Bill Nash, and they are situate in Elizabeth-street between Market and Park Streets through into Castlereagh-street. In most of the lanes leading out of Kent and Sussex Streets, the whole of the houses are leased by one individual, and he sub-lets those houses to prostitutes, or men who take them for the purpose of prostitution, at so much a week. The lane generally goes by the name of the party who leases the houses.

360. What is the mode adopted by the police for the purpose of inspecting and endeavoring to exterminate these places? The neighbors are obliged to lodge an information and to complain of the houses as nuisances; the party renting the house, not the landlord, is then summoned to appear, and on conviction is sentenced to a term of imprisonment or a fine; but as soon as one occupant is out of a house a fresh one is in it.

361. *By Mr. Walsh*: The landlord is not implicated? No.

362. *By Mr. Lyons*: Do you not think if it were proved the man you have named would lose his license? He is not a publican now, but has let his house to another.

363. *By Mr. Walsh*: I suppose you have known property in a neighborhood to be injured by the introduction of prostitutes? Yes. When the prostitutes were driven out of the heart of Sydney they took refuge in Woolloomooloo, and property there has been much injured in consequence.

364. Do you not think prostitution leads to prostitution—do you not think these unfortunates induce others to be equally unfortunate? Yes, I do think so, especially among the younger prostitutes. They have their companions among whom they have been brought up, or with whom they have associated in the same destitute condition, and they generally turn on to the town not singly but in threes and fours.

365. *By Mr. Lyons*: Has not this prostitution very much increased within the last two or three years? Yes, among young prostitutes.

366. *By Dr. Lang*: Is there any peculiar cause? I can think of none.

367. *By the Chairman*: Can you suggest any check upon it as far as it presents itself to the public? It would be a very difficult matter.

368. *By Mr. Walsh*: Is it within your knowledge that persons living in the position of gentlemen in Sydney live entirely at these brothels, or at the houses of women of well-known ill fame? A great many of the the up-country gentlemen during the time they are in Sydney reside at these places.

369. That is not what I mean;—is it within your knowledge that men who live in Sydney, and have lived in Sydney for months are kept by these women? Not gentlemen; some odd instances I know, but it is not a general rule.

370. *By the Chairman*: Could you suggest to the Committee any means by which an accurate return, or one approaching to accuracy could be obtained of the amount of juvenile vagrancy—could any mode be adopted that you could suggest by which the number of children in the street in a state of vagrancy could be collected; could the police in one day, or in two or three days, by inquiring all over the town of the boys they met with of this class, arrive at an approximate estimate? You could not rely upon the truth of the boys' statements. With regard to the girls, the number of juvenile prostitutes could be ascertained with very little trouble. I, myself, know, I think, nearly every brothel in the city, and it would not be much trouble to get the number of inmates and the ages of the girls.

371. Do you not think if Captain M'Leerie gave instructions to the police in all parts of the city for one day to stop all the boys who appeared in an idle vagrant state about the streets, and make inquiry, something like a satisfactory return could be made. The police could form their own opinion of the value of the statements of the boys? There are certain quarters of the city only where these boys congregate, and to those places they flock in scores; you do not meet with them in George, Pitt, or Castlereagh Streets, but in Sussex and Kent Streets, about the slaughter-houses, and in Parramatta-street. They are chiefly to be found about the wharfs and slaughter-houses.

372. Do you think you could get some returns by this means without much trouble? You might, but I do not think it would be a very correct one.

373. Could we by any other means get a more correct one? It can be arrived at in this way—in getting the number of prostitutes they can be asked the number of their brothers, their ages, and whether they are in employment or not.

374. *By Mr. Walsh*: That will not enable you to ascertain the number of idlers who have no sisters? No.

375. *By the Chairman*: I understand you that you can get the information respecting the girls pretty correctly—that you have the disagreeable knowledge of all these places? Yes.

376. *By Dr. Lang*: How many may there be in the city in these infamous receptacles? There are an immense number; there are lanes in the city where every house is a brothel. Inspector C. E. Harrison.

377. What lanes are these? I cannot tell you the names, they generally go by the names of the parties who rent the houses, Murphy's-lane, Edward's-lane, Erwin's-lane, and so on. I was in about twenty brothels up to four o'clock this morning; I was looking after a party, and turned out a great number of prostitutes from the houses in Kent-street. One of the brothels I visited was kept by a black man, it has only one room, and the flooring is a foot below the level of the lane; it has no drainage and everything is thrown out in the front. In this place, which is built of weatherboards, there were two beds; the landlord is a blackfellow, an old man of sixty years of age—he was lying on a mattress with an old barrowman; a girl and a sailor were lying in the same room, and behind a bit of a screen was a truckle bed with a woman on it twenty-three or twenty-four years of age; she had been hounded last Sunday,—had had some drug put into her drink by another inmate, a girl, for the purpose of stupifying her, and the drug had taken effect; she had never been out of her bed since Sunday, and all she could take was a little cold water which her stomach rejected as fast as she drank it; she had not seen a doctor, and was very ill; she had a child of about eighteen months old. On a mattress alongside the stretcher was a man who had been a sailor, and who has been knocking about Sydney for some time doing nothing; he said he was sleeping there for the night.

378. *By the Chairman*: Are there not a class of houses springing up in Sydney which were formerly unknown, cheap concerts, singing rooms, some in public and some in private houses, which are frequented by young persons? There are not so many as there were. There were a great many more about Sydney even in 1848, and up to 1853, and 1856. There were more in Sydney then than at the present time; at present there are not above four.

WEDNESDAY, 19 OCTOBER, 1859.

Present:—

REV. DR. LANG,
MR. LODER,
MR. PARKES,

MR. PEMELL,
MR. PLUNKETT,
MR. WINDEYER.

HENRY PARKES, ESQUIRE, IN THE CHAIR.

Mr. Nathanael Pigeon, called in and examined:—

379. *By the Chairman*: You have been resident some years in this Colony? Yes, about eighteen years, with a trifling exception of about eight months that I was at Maitland.

380. You have been employed a considerable part of that time in the capacity of a city missionary, I think? I have been employed in that capacity about nine years.

381. As a city missionary? Yes.

382. That is, as a lay missionary—you have not been ordained? No; I have not had human hands laid on me.

383. You have been entirely so engaged? For the last nine years. I have been partially so for the remaining part of the time, when I was engaged in other business.

384. Do you mean that you have been employed on all the seven days of the week? Yes; I have been entirely given up to the work of a missionary; preaching, and visiting in the houses in the lanes, courts, and alleys of the city; and also in preaching in the chapel where I have invited the people to come.

385. This Committee is appointed to inquire into the social condition of the working classes of this city, with reference to the alleged want of employment, which, no doubt, you have heard among a large number; also, with reference to their house accommodation and its effect, in a moral point of view, upon their character, and in a sanitary point of view upon their physical health and comfort; and, also, as to whether there exists any large proportion of juvenile vagrancy in the public streets. It was thought from the nature of your duties that you would be able to give the Committee some valuable information on several of these points. Perhaps, for the sake of convenience, you will state first whether it is within your knowledge that there is much want of employment, and consequent distress, among the working classes at the present time, or whether there has been at any time during the last two or three years? From what I have seen of the state of the city, going in and out among the people, conversing with them, and observing them, I believe there is a deal of distress at the present time; but I would state what I stated some years ago, when I was examined before a Committee of the Honorable House, on the subject of Intemperance—that I believe a great many respectable sober men are out of employment, and their families too; but a great deal of the distress is through intemperance.

386. Still you believe there are a great many sober men out of employment? I believe there are.

387. Will you state what particular districts of the city you are best acquainted with? I am in the habit of rambling over it all, here and there as I see my duty leads me; but where I devote most of my time is in Sussex, Clarence, and Liverpool Streets, and those parts of the city; I occasionally go to the outskirts.

388. What do you mean by the outskirts? About Bishopsgate, and in the direction of Chippendale and Waterloo, and out towards Darlinghurst and Surry Hills.

389.

Mr. N.
Pigeon.

19 Oct., 1859.

Mr. N.
Pigeon.
19 Oct., 1859.

389. When you say there are a number of sober and respectable men out of employment, and in a state of consequent suffering at the present time, can you explain to the Committee what class of persons these are, whether they are mechanics or laborers, and, if laborers, whether they are persons accustomed to agricultural pursuits, or persons accustomed to jobbing in stores and on the wharfs? They are mixed; of all sorts; some are mechanics, and others are laborers. I know one man, a bricklayer, who has been out of work a long time, a very sober man. There are some of that sort. I would not particularise, but I hear general complaints as I go about. There are a good many men where I call who complain of distress and want of employment.

390. What is your impression as to whether these persons might get employment in the country if they would only exert themselves and push their way into the interior? I do not know how the country is situated; but from what I have observed in the city I have no doubt there is too much centralization,—that there are too many people in the city for the wants of the country, in proportion to the country. It has been my impression for many years that the city will not be in a healthy state till the people have turned their attention to agriculture; things cannot be in a healthy state, I think, until there is some better arrangement of that; I have been thinking of that for some time.

391. I should infer from what you say, that you think the best remedy is the equalization of the population throughout the country? Yes; I believe there is an overplus of hands in the city.

392. You cannot form an estimate of the number of persons in an unemployed state? No, I cannot; if I had set myself about it I might have made inquiry; but as I go about in the streets, lanes, and houses, I hear complaints.

393. Of those who make complaints to you, should you suppose the proportion is one in ten, or one in a hundred? I do not think there is any great deal of real distress, I think it is partial, and that it was much worse some years ago; but yet there is a good deal of distress in the city, notwithstanding much of it, I would say again, is owing to intemperance.

394. It has been stated to the Committee that there are not only some, but many instances, where whole families are living in houses without any accommodation, without furniture, without common utensils, and in reality in great destitution? That is the case to a certain extent. I have thought, in looking into back lanes and places I have visited, there might be a great improvement in the buildings —

395. For the present confining your answer to the actual destitution, without reference to the buildings—? Well, there are poor families badly accommodated as regards their way of living. I have visited a good many families in these back lanes, which I consider in a very unhealthy state.

396. During the time you have been engaged as a city missionary, have you formed any calculation as to the proportion of persons so situated who are uneducated, or who live in a state of religious destitution? Yes, there are plenty of them.

397. What proportion of the persons you refer to attend churches or places of worship? On the Lord's Day when the churches open in Sydney, and the churchgoing people are on their way there, and when they are seated and attending divine service, I have been through the lanes, and it has been my impression that not scarcely one-half attend any place of worship, for I would scarcely miss one in those places at church-hours from eleven to one. In these back lanes the people seem to be lounging about, unclean, without any idea of going.

398. Have you observed much open desecration of the Sabbath—fighting, quarrelling, and drunkenness in the streets? There is an improvement in that respect latterly, I am thankful to say. There is not so much as there has been.

399. Are you acquainted with any of the large cities of England? With Liverpool and Manchester. I have been to those places as a visitor.

400. Did it ever occur to you to institute a comparison as to the orderliness of the city looking at them? I have thought Sydney would stand in competition with them.

401. Do you not think this a much more orderly city than Liverpool? I do indeed, or Manchester; at the same time I think it is bad enough; there is a great deal of drunkenness and Sabbath-breaking. I have thought for many years the use of intoxicating drinks causes much of the distress.

402. Are you acquainted with any of the seaports of England? Only with Liverpool. I am a native of Ireland.

403. With reference to the house accommodation in the lanes that go out of Sussex-street, and in the Glebe—I suppose you are acquainted with the Glebe? Yes.

404. And in Chippendale what is the state of the house accommodation? In many of the back lanes the houses are very bad. I have often been surprised that there has not been more sickness from the way the people are cooped up together, in the way of small accommodation with no yards, and in the way of inability to keep the places clean.

405. Will you describe the kind of dwelling that may be taken as an average dwelling; the size of the rooms, the means of ventilation, and the accommodation outside and inside? Many have no back yards.

406. How large are they—how many rooms have they generally? Some two, and perhaps a family in each room.

407. What is the height of these rooms, and the dimensions generally? The rooms are generally very small indeed, and then the people are so crowded together.

408. How many feet wide? They are of different dimensions; some perhaps seven or eight feet square, some ten, some may be twelve; but what makes them more unhealthy is that so many people are crowded together.

409. Will you give a description of the houses, as the average accommodation of the laboring classes? Generally there are two rooms, one over another, with a step-ladder from one to the other; or perhaps two rooms on the ground floor, one leading into the other.

410. What kind of accommodation have such houses out of doors, what outhouses are there? They are very bad in that respect, in general; perhaps the closets are close to the back door, and no way to drain off the bad water. They are very badly off for drainage.
411. What do you suppose is the general average of the rent paid for these tenements? From seven to ten shillings a-week. Mr. N. Pigeon.
19 Oct., 1859.
412. For the use of two rooms? Ten shillings, we will say, for the house. In some places they may be less, where the houses are of a worse description. There are some of these houses very old; in fact, not fit for human beings to live in.
413. Are you acquainted with Queen's-place? Yes.
414. Are you acquainted with a block of wooden buildings, known as Hunt's Buildings? Yes. I have not been there lately.
415. Are there many buildings as bad as those? Yes, many in the city.
416. As regards accommodation, situation, and want of sanitary convenience? Yes; there are many of the class of buildings you have referred to in the alleys and back lanes.
417. What rent do you suppose those houses would let for—would they let for ten shillings, judging of them from other houses? I suppose those houses, unless they have been repaired and put into good order lately, would let for five shillings a-week.
418. *By Mr. Plunkett*: Are you speaking of what you know, or from what you imagine? Judging from other places.
419. You do not know exactly what the tenants do pay? No.
420. *By the Chairman*: Will you state what is the fact from your experience as to the manner in which these houses are tenanted—whether these small houses you have already described are, in many cases, occupied by more than one family? Some are sub-divided, others are occupied by one family. The general run of such as Mr. Hunt's houses are occupied by one family. There are a great many of that class. There are a number of old-fashioned houses going to decay which are occupied by but one family, at a rent of five or six shillings a-week.
421. Are these houses generally kept in average cleanliness—are they supplied with the usual comforts, such as articles of domestic use? In some cases they are pretty well supplied, in others they are not, according to the sort of families occupying them. They are very badly accommodated if the house is a drunkard's; you cannot, then, expect much in it. It depends upon the class of people. If they are sober people they will try to be comfortable and clean, as far as their means will allow; but in case the man drinks the house is very uncomfortable.
422. That will be the natural consequence of drunkenness; but you stated just now that there were a number of sober people suffering from want of employment? There are; but in the general run of these houses drunkenness prevails.
423. These are the houses, then, that feed the splendid buildings we see for retailing drink? They are; and that is the cause of much of the poverty in Sydney at present.
424. I imagine that wherever there is a large number of these small, miserable dwellings, there is sure to be these gorgeous buildings? Yes, sure to be, because that is their Savings Bank. With that class of people it matters not whether business is good or bad; if good, they can get as much money in two days as will enable them to drink for a week, and they will spend their earnings in that way whether they are much or little; but there are many sober, industrious, well-inclined men, at present, who cannot get work.
425. Does your duty take you much to Redfern and the Riley Estate? Yes.
426. Are you not aware that in those localities there are many more comfortable residences, many of them the property of the occupants—steady, respectable mechanics—who have built them? Yes; in the outskirts the houses are much more comfortable. If the people have not houses of their own they can get for five shillings a week, out there, houses as good as they could in the city for double the money.
427. Can a comfortable house be got out in those places for five shillings a-week? Yes, of two, perhaps three rooms, and a very comfortable little yard.
428. In a healthy situation? Yes.
429. With water? Not in the outskirts; water is not laid on in these places; that is the only drawback. As far as house accommodation is concerned, it can be got in the outskirts very cheap now.
430. What is your opinion of the character of the more sober, settled, permanent working population of the city; is there not apart from the classes we have been speaking of, a sober, settled, permanent portion of the metropolitan community, who are manual laborers—either mechanics or day laborers—of very respectable character? Yes, certainly, a very great proportion of the inhabitants are of that class.
431. *By Dr. Lang*: The others constitute the exception rather than the rule? Yes; a great number of such as I have been referring to lately owe all their misfortune and trouble to the free use of intoxicating drinks.
432. *By the Chairman*: Have you formed any opinion as to the moral condition of the juvenile portion of the population of the poorer classes? I have. With a good deal of pain I have observed, notwithstanding all the Institutions for taking care of destitute children, there are a great number of youths now rambling about Sydney, who, I believe, are bringing up to be a pest to society.
433. A great number? A great number; they congregate together wherever they can from the eye of the police,—gambling, thieving, and lying out at night.
434. It has been given in evidence here by a gentleman connected with the police, that the convictions of juvenile offenders are very few; how do you reconcile that with the statement you have made, that a large number engage in gambling and thieving? As far as gambling is concerned, I have ocular demonstration. I constantly see it in going about in the back lanes

Mr. N.
Pigeon.

19 Oct., 1859.

lanes and corners, and I have gone to the lads and threatened to bring the police to interfere with them.

435. Do you suppose a very considerable amount of petty thieving might be carried on without its coming under the direct notice of the police? Yes, as much more, I believe, as comes under their notice. There are a great number of youths about Sydney who are idle, not at school, and not at work; they ramble about and try to get something to eat wherever they go, and if they can take anything they will.

436. How many do you suppose there are of this class? It is impossible for me to say.

437. A thousand? I could not attempt to make a calculation.

438. You say you see them congregated in groups together in the lanes and alleys? Yes, from five to a dozen.

439. *By Dr. Lang*: Of both sexes? Mostly lads; in the back lanes and streets there are a great many of the other sex that seem to be very idly brought up—badly educated.

440. *By the Chairman*: Do you think female prostitution in the streets of Sydney is growing to an alarming extent? I fear it is.

441. Have you any opportunity of judging? Yes, I have many opportunities of judging. I cannot help noticing them as I pass in and out; they are scattered all over the city now. It is different from what it was some years ago; they were then in the centre of the city in large houses, but now since the authorities have begun to interfere with them they are more scattered about—many of them live a more quiet sort of life, and are not so much noticed.

442. Have you any reason to believe that the number of these unfortunates includes any children—girls, of tender years? I do; there is a class of young girls—very young girls—I have noticed lately going about, of abandoned habits.

443. Of what ages? From perhaps fourteen to sixteen.

444. Have you noticed any younger than that? They seem to be very young; I should not like to say there are any under fourteen. There are a great number of that sort, who there is every reason to believe have commenced that sort of life.

445. You stated just now that in your opinion the best remedy for the distress felt in Sydney would be the equalization of the population over the country,—in your opinion, what would be the best means to bring that about? I have often thought over that subject, and it seems to me that in a large country of the extent of this, with the number of inhabitants in it, too many are collected in the city for the number in the country. I have thought we will never have a healthy state of things till we turn our attention to agriculture, till the people work the land and get their living out of it; and then instead of sending three quarters of a million out of the country for corn, we shall in a short time send that value of produce out of it. I have often been surprised that there should be such a quantity of land lying idle, and so many men be looking out for employment. I cannot tell the cause, it is a matter of surprise to me.

446. *By Dr. Lang*: Do you think the present concentration of the population in the City of Sydney and other large towns of the Colony, is unfavorable to the general morals of the community? I do.

447. Do you think a much better moral tone would be given by the dispersion of the population over the country generally? Yes.

448. In small towns, villages, and rural districts? Yes, that is my opinion.

449. You think this concentration is a great evil in the present condition of our community? I do.

450. What means do you think should be taken to bring about a different state of things? I am scarcely able to point out anything of that kind; but I can see so far into it as this, if the Government could so arrange as to get the people into the country to work the ground, and to get a living out of the ground, that it would raise the country in value, and settle it, and bring about a more healthy state of things. Things would not be running up to a high pitch at one time, and sinking to a low ebb at another. People now come to the colony and lounge about the city looking for employment, and there is not sufficient for the number; then they commence drinking, and then their morals are injured; but if they could be drafted off to the country, and settled, either in villages or on farms, they would get their own homesteads. A man who has a family, if he is an agricultural laborer and has a piece of ground, labors hard to get a homestead for himself, and to support his family; and it is a poor farm that a man cannot support his family on.

451. Are you aware whether the class of the population to which you refer consists, in a large portion, of persons who have arrived here as free immigrants? Yes; and I think there has been something wrong in the selection of immigrants; many have come here under the name of agricultural laborers and servants who are only broken drunken mechanics from the large towns; they come here and are of no use to the country. Those who are agricultural laborers should go into the country and pursue the kind of labor they are accustomed to. I think if Government could give them land—I do not mean bestow it upon them for nothing, but give it upon such terms as the people can pay—a more healthy state of things would be brought about. These are my impressions from what I have seen and heard.

452. You think the class of persons who have arrived in the colony as free immigrants, and who have descended to the condition you have spoken of, have been brought up in towns at Home? Many of them I believe have come out under false representations; they have got recommendations as farm servants, and have been shipped as such, but they do not prove to be of that class when they come here; they come chiefly from towns as mechanics or laborers.

453. They come out with the bad habits of a town population at Home, and they resume them when they come here? Yes, I think so; but there are a great many decent people who come out here, and I think it is a pity to see them lounging about the city where they

are

are not wanted, while the land is lying waste—good land that would bring forth abundance, and to spare. If a man settled upon a farm surely he could get enough to support a family.

Mr. N.
Pigeon.

454. Are you not aware that it has been very difficult for persons of that class to get land? 19 Oct., 1859.

Yes.

455. And that that has been the great objection on the part of these people to going into the country at all? I am aware of that, that there is something wanted to be done by the Legislature.

456. Are there not frequently complaints from persons who have come out, gone into the interior of the country, and returned to Sydney, of the treatment they have met with? Very many.

457. Do you not think the reports of these people, whether well or ill-founded, have a great effect in preventing others making trial of the country? I do; I know it to be the case—they bring a bad report. I have known many men who have returned from the country, who have brought back statements, whether true or false I cannot say, that they have been ill-treated, and obliged to return again; and it has had a bad effect upon those who have wished to settle and deterred them from going; they think if they go into the country they will be fixed, and will not be able to get back if things do not suit their expectations.

458. *By Mr. Walsh*: I think I understood you to say that you had not been at Home for eighteen years? I have been out here for eighteen years.

459. Then how are you able to institute a comparison between the morality of this town and that of Liverpool or Manchester—is it from what you read? It is from what I have known.

460. That is eighteen years ago? Yes, and from what I have heard and read.

461. You have acknowledged that the morality of this town has improved of late? No.

462. You do not know whether the morality of Liverpool has improved? No, except from what I gather from those who have come out from the Old Country.

463. How do you know that the rents you have mentioned are really paid for these miserable tenements—that they are the rents actually demanded and paid? On the average I think those are the rents.

464. Do you know only from hearsay, or from facts that have come before you? From inquiry—"What do you pay for this house?" The people tell me, and when I know the rent of one house I judge of others of the same class. I make it my business, sometimes, to inquire the rent of the house when I see a poor family in distress.

465. You say you have often wondered that the people of this town do not go into the country, and there carry on agricultural operations? Yes; I say I think if there could be some way of driving out people who have families, agriculturists, and farm laborers, with small capital into the country, in the place of their looking for a day's work in the city, it would be a great advantage. If they were to settle on land they would be induced to labor, and things would be more healthy.

466. Are you aware that when cereals fall below the prices at which they can profitably be imported, they do not pay growers in this country? That I dare say; but still I think things would come about to be very different if such a plan could be adopted.

467. You think if there were a greater production of cereals a greater price would be obtained for them? I think things would come round to a more healthy state. For instance, a man on a farm of his own would be able to produce as much as his own family would require; it would be a very poor farm if he could not.

468. Do you mean as much as they could eat? Yes, and a little to sell to get clothing. Then I have no doubt when the country was opened up a little and villages rise up, farmers would settle on the land, and then villages would spring up here and there; and then the railroads would facilitate the bringing of produce into the towns, and things would be improved. I know it was the case in the country some time back, that it was scarcely worth while sending things to market; but we are not to suppose that state of things will always exist.

469. Do you believe it is common in the country for employers to practise cruelty on their servants? I do not credit all I hear from people coming back from the country. I know there may be some employers who treat their servants badly, and others who treat them well, and at the same time be belied. I do not place confidence in everything I hear; a great deal depends upon the person I hear a thing from. A great many men are addicted to drink, and you cannot rely upon what they say in this respect.

470. From your experience of these drunkards, do you consider that they are liars generally? Yes, it generally accompanies it.

471. Falsehood accompanies intemperance? Yes.

472. That is peculiar to the drunkards of Sydney? It is. I do not think —

473. There is more lying in comparison with drunkenness? I do not speak of lying, but more drunkenness. From what I have seen in my own country and in England I think there is as much drunkenness in this city, for its size, as in any part of the world. That is the great source of misery; that is the grand hindrance to the happiness of the city. If there could be some way to reduce that it would improve the community very much. I think some good might be done by laying a heavy duty on drink.

474. Do you think this undue concentration of population conduces to intemperance? I do; because if a man remains in the city he has not proper employment; he lounges about the city, and at each corner meets with a companion; he walks in to take a glass; habits of illness and intemperance are formed. Not having employment, one influences another; they feel unsettled and uneasy.

475. Do you think intemperance in this city leads to prostitution? Decidedly I do; and idleness.

Mr. N.
Pigeon.
9 Oct., 1859.

476. Do you think there is a difference between want and affluence in inducing intemperance—that one exerts a stronger power than the other? I think want will have a stronger tendency to do it than the other; decidedly the poorest class of people, those who are really wretched, are drunkards.

477. You are not sure that it is not intemperance that has induced poverty? Drunkenness, no doubt, does induce poverty.

478. Then it is wealth—the ability to purchase drink—that has induced intemperance at first? That may be at first, but I am taking things as they are now seen.

479. *By Dr. Lang*: Are the means of intemperance much more accessible to the humbler classes here than at Home? I think they are, judging from the number of public-houses. I am in the habit of giving pledges to the people, and I have given them till I have been tired. A drunkard will come to me and ask me to give him the pledge, and in twenty-four hours, the next time I meet him, he will be drunk; but still it is something to save a man from drinking even for one day. Then the drunkard's family is uneducated; and I may mention this before the Honorable Committee, that there are a number of children in the city who are rambling about, who are sent to no school, and I have thought there should be some means to compel the parents to send their children to some of the schools in existence. I am glad I have an opportunity of mentioning this, for it has been long on my mind. Drunkards do not care whether their children go to school or not, and I think there ought to be something like compulsion, on the part of the authorities, when the Government provides the means of education.

480. *By the Chairman*: You are aware that that is something new to English? I do not like compulsion; but I think this would be a benefit to the children, to the parents, and to the community at large.

481. *By Dr. Lang*: You think it would be the lesser of two evils? Yes.

482. *By the Chairman*: Are you not aware that that is the argument of all persons who compel others to do things against their wills? I believe it is done in Germany.

483. Louis Napoleon thinks it best for France that he does the things he does? I think it is a pity there is nothing done. I do not see that it would be wrong to have some means of getting these children to school, in the room of allowing them to roam about the streets.

484. Do not you in the discharge of your duty induce numbers of them to send their children to school by moral suasion? I do.

485. Are you not successful? In many cases I am; but yet I am often pained to see that while there are so many schools there are so many children going about the streets without education.

486. You have said that intemperance leads to prostitution—you do not mean to say that these girls became drunkards before they became prostitutes? I think in most cases it is so. They get a fondness for drink from their parents; you may often see a little tattered girl sent to the corner public-house with a jug, and returning with drink for her drunken mother.

487. Have you ever known an instance of young children of abandoned parents being habitual drunkards? I cannot say that I ever saw one of them drunk, although I have heard people say that they have seen them; but as for drinking, they learn it from their parents.

488. Are there not other influences much more likely to precipitate young children entirely unprotected into prostitution than intemperance—are not the whole of the influences in which they live directed to that end? One thing is combined with another, united together, of course they help on the work. Idleness on the part of the girls, running in the streets, mixing up with lads, and the corruption of their minds, and learning to drink from their parents, all combine.

489. Do they learn to drink—are you sure they learn to drink from their parents? It is fully impressed upon my mind that they do. I have noticed them going to the public-houses for drink; and when a child is in the habit of being sent daily to the public-house for liquor, and of seeing their parents take it, they learn the habit of drinking.

490. Have you ever seen them rolling under the influence of drink—did you ever see one single instance? No, I have not.

491. Do you not think the fact of their being allowed to run about the streets without any protection or advice, and being allowed to mix with boys, as sufficient to account for their taking to vicious courses, without any other influences? I believe it is; but they are both combined, one thing with another tends to it.

492. *By Dr. Lang*: Are you not aware that many parents, from mistaken kindness on their parts, actually take their children to participate with them? Yes, I believe they give it them out of foolish kindness.

493. *By Mr. Walsh*: What is the earliest age at which you have known a child to have spirits given to it by its degraded parents? I have seen very little children indeed bringing liquor, and tasting it on their way home—I could not say—from six years upwards.

494. *By the Chairman*: When you said just now that you have seen parents teach their children to drink—? I do not say that they profess to teach their children to drink; but as a matter of course they learn from seeing their parents do so; they get to taste the liquor, and so acquire the habit.

495. Is not this the fact, that drunken parents are too fond of it themselves to give it to their children? I do not say that they give it, but the children taste it when they have the opportunity.

496. Are they not more likely to chastise them for taking it? I do not think so.

497. *By Mr. Plunkett*: Do you not think the very example of the parents teaches the children? Yes, from seeing their parents take it. They mix with other children in the same position, and I have seen little boys drinking together out of a ginger beer bottle.

498. *By Dr. Lang*: Do you think there is a greater or a lesser disposition to intemperance on the part of the native youth of this country, than on the part of the youth of the Mother Country? Greater; although I have known cases where children of the most abandoned drunken parents have detested drink, and grown up sober people, from what they have suffered and seen of its effects; but this is not the general rule.
499. *By Mr. Loder*: You stated a short time since that the bulk of these parties who are out of employment in the town are idle and drunkards? I think a great portion of them are persons who are addicted to drink, and idlers.
500. You also stated that you thought it would be advantageous to them if some scheme could be adopted for sending these parties into the country to cultivate farms? That class I do not think would do much on farms; but there is a class of people who have been accustomed to farm labor who would be better off if they were taken away and placed on land, but the class to which you have referred just now would not do anything with the ground, nor are they fit for it.
501. *By Dr. Lang*: You have stated that many of the humbler classes who have gone into the country have returned with a bad report of the interior? Yes.
502. And that that had a bad influence in deterring others from going into the country? Yes.
503. Do not such reports exert an evil influence, whether they are based on truth or not? Decidedly; they have a bad effect upon the people who arrive here and are not acquainted with the country; they are terrified at the idea of going.
504. *By Mr. Loder*: May I ask you what you consider the country—you stated just now that the railroads had gone into the country? I have never been fifty miles out of Sydney for the last eighteen years, but I refer to the agricultural parts of the country. When I spoke of the country I referred to a farming life.
505. *By Mr. Plunkett*: What is the general nature of the reports you refer to, that frighten people from going into the country? That the people have been badly treated by their employers, who have not fulfilled their engagements with them, have curtailed their wages, and have sometimes given them orders which orders were dishonored.
506. Did you ever make it your business to inquire into the truth of these statements? No, not having any reason to do so; I have heard these objections stated.
507. What, as against the employers particularly, or as against the law of masters and servants, or as against the Benches; what was the precise objections? What I have heard from these people is, that the persons who employed them have not fulfilled their engagements, and have treated them badly.
508. You are aware that when servants have any claims against their masters they can bring their masters before the Benches? Yes.
509. Did you ever tell them that? No, I never felt much interest in that; but I have heard people advance this as a reason.
510. Do you not think it would be well, as you mix so much with this class of people—go among them so much—to remind them of that circumstance, and to ascertain whether they had had recourse to law? They seem to think—I have heard some observations of that kind—that the law is entirely on the side of the master, and that they would not get fair play.
511. *By Mr. Loder*: You mentioned the word “order” just now, are you speaking of things that have occurred lately—have you heard men say that masters have paid their servants with orders lately? Not lately.
512. Have you within the last five years? Yes. I do not say whether this is true or false, but I have heard such conversation.
513. *By Mr. Plunkett*: Do you find that many of this class return from the country and lounge about the town in the way you describe? Yes, and I consider that an evil.
514. Have you not ascertained in any instance whether these complaints have been well founded or not? I have not been able to ascertain that only from their own lips; I have no opportunity of making inquiry.
515. You have said you thought there were a great many persons in Sydney who ought not to be here? I did; I have thought that for some time.
516. Do you think Sydney could bear an emigration from the town of 5,000 people with advantage to itself? Yes, I do.
517. In what part of the town are these miserable dwellings to which you have referred? I refer chiefly to the back streets and lanes where the working classes reside.
518. You have stated, I think, that you were surprised there is not more disease among them? Yes.
519. Do you know much about Sussex-street, where the slaughter-houses are? Yes.
520. Are the slaughter-houses there still? Yes; that is a very unhealthy part of Sydney, and it is very badly drained.
521. Who are the principal landlords there? I could not say; I hardly ever make it a point of inquiry. I think a great deal could be done in the way of improving it in point of cleanliness.
522. What would you recommend to bring about the change? I think there should be some mode of drainage to carry off the water from the back yards.
523. Did you ever tell the people to take that remedy? I do not know how that can be done by the people themselves.
524. We never hear of any memorials or petitions on the subject? It is my sorrowful conviction that there is nothing should call the attention of the Legislature more than that.
525. You are a missionary in the city? Yes.
526. Have you employed yourself as a volunteer missionary, or are you employed by any society? Not any society; there is a Committee of Management.

Mr. N.
Pigeon.

19 Oct., 1859.

Mr. N.
Pigeon.
19 Oct., 1859.

527. What is the society called? It is called the Sydney City Mission. There is a Committee of Management and the Mission is supported by the voluntary contributions of those who wish it well,—the members of different Churches. The object of the Mission is not to benefit any particular Church, but to do good in general.
528. To improve the habits of the people? Yes; and to persuade those who are not in the habit of attending any places of worship to attend them.
529. You have stated that it is your opinion that those in the poorest circumstances are the greatest drunkards? Yes.
530. How do people get the means of going to the public-houses and of getting drunk, when they are so poor? They will do without food to get drink; they will do without their breakfast to get a nobbler; they will resort to any means. There is a kind of net-work of them and they will treat one another. They will indeed sell all they have for drink.
531. Are these men of family? Yes; they will go so far as this,—they will even take their children's clothes and sell them for drink.
532. What do the children do? They may go naked or half-naked. You have no idea of the shifts they resort to for drink.
533. Does not that account for the juvenile vagrancy you have alluded to? Yes, it does in part.
534. Are they principally children of that class of persons? I think they are of the very lowest class of drunken, idle, parents.
535. Do you think if there were schools established throughout the city, at which parents would have nothing to pay for their children, that this class would attend? Something like the Ragged Schools in England?
536. Yes? I think such schools would be very useful. I know there are many children of that class who do not go anywhere.
537. Do you not think if there were schools of that class it would render the compulsion you have spoken of less necessary? I do; I said "compulsion," but it is against my principles to compel anybody in matters of that kind; yet, seeing people growing up in filth and idleness, and trained by their parents to drink, I have thought—could nothing be devised to remedy that?
538. You have stated the objects of your mission; have you been successful in that mission to any extent? Yes.
539. What are the fruits of it? Drunkards becoming sober; abandoned characters becoming chaste; swearer's giving up swearing; liars beginning to speak the truth; and neglecters of the House of Worship becoming regular attendants, and also becoming comfortable in their way of living—clothed and comfortable. There are many cases of that kind.
540. Can you trace these instances of reformation to your own influence? As an humble instrument I can. There is a chapel built for the City Missionary, and to that I invite these careless people to come, and through that means, though not entirely through that, a congregation of three hundred people assemble on the Sabbath night and morning. There are many of this class who come to the chapel raised from the very dregs of drunkenness and wretchedness, now clothed and in their right mind. When they leave us they join the churches abroad; for we do not hail as a church, but seek to reform and improve the people, and when they leave us they join some section of the church. I know they do so in many cases.
541. *By Mr. Windeyer*: These three hundred who generally come to this chapel are they constant attendants? There is a fluctuation. Many of them, perhaps half, may be considered as the stated congregation; then there is a constant change, some going, and others coming. Some after they are called away unite themselves to some section of the Christian Church.
542. *By Mr. Plunkett*: You have stated that there are a large number of the citizens who are to be seen at eleven o'clock, the usual time of worship at the various churches, who do not seem to be going to any place of worship—you know, I suppose, that some portion of the citizens attend early prayers? Yes I know, but I take that into account.
543. In comparing this city with some of the towns in England, are you aware of this fact which was proved before a Committee of the House of Commons very lately, that more than double the number of persons in all the churches in one particular parish, the parish of Marylebone, were found to be actually in the public-houses during the hours of prayers—have you ever heard that fact? I have. I draw my conclusion from seeing the people when I go down these lanes at the time of public worship, in a state which shewed they had not been, and had no idea of going to a place of worship, lounging about in dishabille, unshaven, and unclean.
544. Do you think if the number of public-houses were limited—say, to one-half the present number—it would diminish drunkenness to any great extent? I think it would very considerably.
545. Do you not think the people would drink in their own houses? No; the temptations are multiplied by every public-house that is opened; every public-house has an influence, the very smell of drink is a temptation, and then a man meets a companion, and at every corner there is a public-house, where he is asked "to come in and have a tall." By multiplying these places you multiply the temptations.
546. *By Mr. Loder*: You think the reduction of the number of public-houses would have a beneficial effect upon drunkards? I do.
547. *By Mr. Walsh*: Do you think raising the price of drink would? Yes.
548. Did it ever strike you that these people who returned from the country into Sydney and complained of their employers, and perhaps of the Benchers, are peculiarly of that class who like to live in a town such as Sydney? I think in many cases it is so.

549. Does it strike you that they are also fond of drinking? It is so in many cases; some people after lounging about Sydney for a time prefer remaining here half employed to going into the country.

Mr. N.
Pigeon.

550. *By Mr. Loder*: Even though they may get good wages in the country? Yes, particularly among the class devoted to drink. 19 Oct., 1859.

551. *By Mr. Pemell*: Do you know sufficient of the land law in this country to enable you to give every information to persons who might apply to you respecting the purchase of land? No.

552. Suppose a person had saved a little money and wished to purchase a piece of land, could you direct him how to proceed in the matter? No, unless by referring him to the Government sales.

553. And Government sales do not occur more frequently than once in three or six months? I know of no other way.

Mr. Walter Windeyer called in and examined:—

554. *By the Chairman*: Your duties take you a good deal among one portion of the population of this city? Yes; among all portions I may say.

Mr. Walter
Windeyer.

555. How many years have you been in your present situation? Roughly—twelve.

556. This Committee has been appointed to inquire into the condition of the working population of the city, with reference to the alleged want of employment among a considerable number, also with respect to the house accommodation, and its moral and sanitary influence upon their condition; and also with respect to the alleged extent of juvenile vagrancy in the public streets. Will you be kind enough to state, in the first place, whether it comes within your knowledge that there is any considerable number of persons suffering from want of employment? There are many; and I should infer from the many that I have met so suffering that there are many more; for, of course, I do not meet every one that so suffers.

19 Oct., 1859.

557. Do you think there are many men of sober habits and disposed to work, who are really suffering from want of regular employment at adequate remuneration? Doubtless the majority of them are persons of bad habits, or what you would call the inferior class of laborers. But there are good men so suffering to my knowledge.

558. What part of the town do you mostly visit in the discharge of your duties? If you know it, what is called Macquarie, Philip, Brisbane, and Denison Wards—that is to say from Margaret-place below George-street to the Glebe, and on the other side from King-street to Redfern.

559. You have to visit the houses from door to door? Very occasionally I have to pass each door or even to call at each door.

560. Do you stumble upon residences of the working classes where there are signs of great destitution, such as the want of necessary household furniture, proper utensils for domestic use, and articles of that kind? These wants are relative. There are many places I have seen within the last fortnight, where the want to us would appear dreadful, but I do not suppose these parties consider it so. When these people were better off I did not see that they had better conveniences.

561. But most persons would like a table and bed for instance? I do not think there is any want of that kind, not so evident as that. There are many men whom I have known who have been making money, and they have then had no tables, and of course they have none now that they have more difficulty in getting bread.

562. Are you aware that up to no later than yesterday a number of men—I think seventy or eighty—went in a body to the Railway Office to state to the Secretary for Public Works their want of employment? I was not aware of it.

563. You are aware that meetings have been held in the city within the last twelve months of persons who have stated they have been out of employment,—it has been publicly announced in the newspapers? Such things have floated through my mind, or through my ears, but I could give you no information as to it, for I have not attached any importance to these announcements. I have looked upon them as something very different from what they purported to be, and have dismissed them at once.

564. When you state that there are a number of persons in want of employment, will you explain what you mean. Do you mean that there is a larger proportion of such persons here than in other large cities? I can say, as compared with former times, they are wanting employment; but, as compared with other cities, my memory does not travel back to England, which I left thirty years ago; but, as compared with this city twelve years ago, there is want of employment.

565. What do you think that proceeds from? They are an improvident race, like a great many of their betters, as they may be called. In the good times, they lived up to their last farthing, and when bad times come they find it very difficult to reduce.

566. Take this state of things;—property is suffering from the want of the expenditure of labor upon it; there is scarcely any man possessed of property in the interior but whose property might be raised by the expenditure of labor; and not only that, but it is suffering from want of labor to keep it up to the state of cultivation or improvement into which it had been brought. If that state of things is really existing, how do you account for there being an amount of labor in Sydney unemployed, if the parties composing that amount of labor are willing and capable to work? There is a general dislike to leave the town. All who are willing to leave it have perhaps done so, and some are so ignorant as not to know how to set about it. I have procured employment in the country for more than

one

Mr. Walter
Windeyer.
19 Oct., 1859.

one who were willing to go, but who did not know how to set about it; others would not leave the town to make a fortune.

567. There are some who, under no conditions whatever, would leave the town? I think so.

568. With regard to the house accommodation of the working population generally, do you think it is very defective in the arrangements necessary for health,—want of ventilation? We have discussed this subject a good deal lately among ourselves at the office, before this Committee sat—

569. Perhaps you will be good enough to state, at this period, what is your position? I believe I am called Assistant City Treasurer, under the City Municipality, doing the duty of Collector till the Collectorship was abolished, but still travelling over the same ground as Collector.

570. When you say you have discussed the subject at the office, you mean at the office of the Municipal Council? Yes. I differed from my friends there as to the accommodation of the laboring classes; I thought it sufficient. I have lived many years in the bush, long before I came to Sydney, and I have observed that a very poor house is quite consistent with health,—a mere shell with three or four rooms is sufficient if it has drainage and ventilation; but the want of drainage and ventilation is a horrible evil. The houses are good enough, all of them. There are not twenty houses in Sydney that I should not be content to live in myself if they were cleaned, drained, and ventilated.

571. *By Dr. Lang:* You mean that they are suited to the climate? Yes; I could point out houses where the fee-simple is not worth forty shillings where people live comfortably—where the houses are isolated—from the place being drained. They are rather chill, certainly, but I do not see any objection to that.

572. What is the extent of this want of proper drainage and ventilation? Monstrous.

573. Does that affect a large proportion of the dwellings of the poorer classes? Yes.

574. Then you would have no hesitation in saying that that larger proportion of the dwellings of Sydney is unfavorable to health? They are; the people breathe a bad air, and their feet are on the damp soil.

575. Might not that be remedied with very little labor? Much might be done with very little labor; but some is past remedy without a general fire. It is within my knowledge that what were dreadful dens of iniquity ten or twelve years ago have been converted into decent places by a little gas, water, and whitewash. The squalid and wretched part of the population will not stop where there are those things. The lower part of Woolloomooloo has become the receptacle of vice; the most vicious class are now found in holes and lanes in Woolloomooloo which ought never to have been allowed to exist.

576. Are you acquainted with the northern part of the town? No, not beyond Margaret-place.

577. Will you be kind enough to state to the Committee whether it comes within your knowledge that there is any large proportion of juvenile vagrancy in the public streets of Sydney of both sexes? Not if by vagrancy you mean destitute youths, not a very large proportion.

578. I will explain what I mean. I mean children, say under the age of fifteen or sixteen, who are allowed to ramble about the streets without employment, without direction, without instructions, either parentless or with parents who are of no use to them, and who are allowed to follow the course of their own uninstructed nature? There is a large proportion of that class; it is the monster evil, I think.

579. A very large proportion? A large proportion from what we may consider to be the whole of the children of what we call the laboring classes; a very large proportion are vagrants in that sense.

580. At the last Census, if I remember rightly, there were about 28,000 children under the age I have mentioned; what proportion of those children should you imagine are in this state? Well, wandering about town without particularly attending to that point, I might be deceived myself, and deceive you if I were to tell you; these children are floating about the streets and lanes like fish in a pond, you cannot count them, still it does strike me there are a great many of that class.

581. You think there is a large proportion of this number in this state? Not a large proportion destitute of home or of some friends, but a large proportion free to wander where they please.

582. Morally destitute? Yes, that is what I would say. I think the physical destitution is not so great as one might fancy.

583. It has been stated before this Committee that there is a large number of female children in a state of prostitution; have you any means of forming an opinion upon that head from personal observation or from hearsay? I have not. There are some of these dens or nooks where they are to be met, but I should not say it was a crying evil. I have seen very young girls following the calling of a prostitute, if I may so term it, but not so young as to make it a worse sin than common. If by a female child you mean a girl of fourteen or fifteen, yes, many, but for that purpose she is no longer a child.

584. It has been given in evidence that there are children of the tender age of seven or eight years? That must be scarce. One such instance would so strike a man that he would look upon it as something to be noted.

585. An inspector of the police force—Inspector Harrison—who duties bring him a good deal into contact with the degraded portion of the population, states unhesitatingly that such instances are not very scarce? His opportunities of observing are much better than mine of course, but I must take leave to doubt the physical possibility.

586. You have been resident in this city some years? Twelve years.

587. Will you state what is your opinions of the character of the people of Sussex-street and

and the back streets of Sydney, the working population of the city, the regularly employed sober men, including both laborers and mechanics, as compared with the working populations of other cities? There I am abroad; for I left England a boy, caring little for such matters.

Mr. Walter
Windeyer.

19 Oct., 1859.

588. Without making a comparison you have no doubt had many opportunities of judging of the character of that numerous portion of the population. Looking to that portion of the working classes, which is of provident habits, and which has been settled in the city for years, can you form an opinion whether it embraces a fair amount of intelligence and respectability? I think it does more than a fair proportion; I think it is above the average—certainly above the average of what I recollect of London.

589. Are you not aware—and I ask you the question without knowing whether you are or are not—that there are many men among our mechanics of superior intelligence, highly educated, and who have amassed property as the fruits of their labor? Highly educated as compared with those around them; but I consider the standard of education is very low around, and that there is a neglect of education which is monstrous. That want is the great evil which they do not estimate—they do not know it—it does not come within the scope of their comprehension or belief.

590. Would you say, advisedly, that there is a general defect as regards the education of their children? They do not attach the importance to it; they do not see it, and realise it as it deserves. That “men must work, and women must weep” is their creed, but there is little thought of education, even among some of the better, and there are a many better.

591. *By Dr. Lang*: Do you think the concentration of so large a population as we have in the city, is unfavorable to its moral condition? I do not so see it.

592. Do you think the moral condition of a town population is as safe as that of the same population and scattered over an extensive country in small townships, villages, and rural districts? Well, no—“a little leaven leaveneth the whole”; but I think the influence for good, that is the education of the rising folks—the young ones, must be pressed upon the people from without, and that pressure may be brought to bear in the town better than in the bush.

593. You mention that there is an indisposition on the part of a large portion of the humbler classes to go into the country; does this arise from their having come out here—those who constitute the immigrant class—with town habits from the Mother Country? Partly that, no doubt, and partly from a reasonable doubt as to the advantage of the country being so immediate as they are sometimes taught. There are a great many little difficulties and expenses to beset the poor man in the country, and it requires a superior man to get over them; but they are to be got over, and then, as you no doubt know, they (the people moved into the bush) are infinitely better off. But ignorance is half at the root of it—they dread they know not what. The other day I helped a man off; he could not go to Parramatta where he was offered work, but by a little shoving on my part he went to New Zealand; that, however, is only one case in one hundred; a man cannot always have some one stronger than himself at his elbow.

594. *By Mr. Walsh*: Could he have got work at Parramatta? Yes, but he could not get his wife or his child to go, or his dog was not willing to go, or something.

595. *By Mr. Pemell*: Do you not think the great objection on the part of the better sort of people to go into the interior, is that there is a want of schools for the education of their children—have you not heard that? I must say I never did hear it.

596. You think the principal objection is that they do not see their way clear? *Vis inertiae*, they want shoving.

597. *By Dr. Lang*: Do you conceive that the bad reports brought back from the country of individuals who have made trial of the interior and been disappointed from any cause, have operated in preventing others from going? No doubt, timid men already beset by these little doubts and difficulties. A man comes back and says “its a shicer, its no good,” and others then say they will stop where they are, they will not face the difficulties.

598. The truth or falsehood of the reports does not effect the matter? Not a bit of it, the truth is in the other direction, but it needs a man to face the country.

599. *By Mr. Walsh*: What part of the interior were you in? The northerly branches of the Hunter, likewise New England.

TUESDAY, 29 NOVEMBER, 1859.

Present:—

REVD. DR. LANG,
MR. PARKES,
MR. PEMELL,

MR. PLUNKETT,
MR. WALSH,
MR. WINDEYER.

HENRY PARKES, Esq., IN THE CHAIR.

Henry Graham, Esquire, M.R.C.S.L., called in and examined:—

- H. Graham, Esq., M.R.C.S.L.
29 Nov., 1859.
600. *By the Chairman:* You are a member of the medical profession? Yes; I am a Member of the College of Surgeons of England.
601. How long have you been in the Colony? I have been in these Colonies since 1835, having been for many years in the Government service in Tasmania and Norfolk Island.
602. How long have you been residing continuously in this Colony, in the practice of your profession? I have been in private practice in this Colony for about two years.
603. You have recently been appointed Health Officer of the City of Sydney? Yes.
604. When did you receive that appointment? At the beginning of this year—in March, I think.
605. This Committee has been appointed to inquire into the social condition of the laboring population of this metropolis, with reference to the alleged want of employment in some instances, and more especially with reference to the sanitary condition of their dwellings, and the extent of juvenile vagrancy. It was thought that the duties pertaining to your position as Health Officer would necessarily bring you into considerable acquaintance with the sanitary condition of the people, and the state of vagrancy, if such exists; and you have been summoned with a view of eliciting from you any information you can supply to the Committee on these heads? So far as the dwelling-houses of the laboring classes are concerned, I have already, in my Report to the Municipal Council, specially brought the matter under their notice, stating that I look upon them as built in a manner calculated to produce and extend disease. There is a want of ventilation, a want of room, of cleanliness, of drainage, and all those things which it is necessary should be attended to in order to insure health.
606. You visit those parts of the city where the poorer classes mostly dwell, frequently? I do daily, I may say.
607. Could you give the Committee any specific examples of the general statement you have just made? I have in my memorandum book, at the Municipal Council, entries with reference to these places, but I cannot recollect particular instances just now.
608. Could you supply the Committee with definite descriptions of particular places, naming the streets, courts, and alleys, and accompanying your description with rough sketches of the houses? I could supply particulars as to the number of rooms, and so on, by reference to my memorandum book.
609. I mean descriptions and sketches similar to those of Mr. Sedgwick's reports, which I have no doubt you have seen? I could not profess to give those plans of the houses, but I could supply particulars as to the number of rooms in each house, and the peculiarities of each place or alley. There are many places in the city tenanted by poor people, where the houses are badly ventilated and ill-drained, and where there are several families living in some houses, each occupying a room.
610. An officer of the Municipal Council has stated that, on one occasion, when engaged in taking the Census returns, he came upon a house in which there were no less than seventy persons residing—have you become aware of any such case as that? I have seen nothing of that kind. I have noticed that many lodging-houses, particularly those occupied by Chinese, are kept in a most deplorably dirty state.
611. Have you ever been down into Queen's-place? Yes.
612. You have seen a number of houses there occupied by the poorer classes? I have. I know one family especially—the family of a tailor—living there, the members of which are always in bad health and sickly, which I attribute to over-crowding and the want of drainage.
613. Will you be good enough to describe those houses? There is one house in particular there, which is occupied by a man whose family I have been attending for the last eighteen months, on and off. All the children are scrofulous, and the aspect of the whole family is anything but healthy. I have always observed in going in most nauseous and offensive effluvia from want of drainage and from over-crowding, particularly the latter; that peculiar factor arising from the human body under such circumstances being clearly distinguishable. At the back of these houses there is a long lane called also Queen's Place or Lane, in which there are small cottages consisting of one room on the ground floor and a back room; the persons who live in these are principally occupied in washing, for I have always observed the yard spread with linen; these places are dreadfully crowded with poor people, who, from the nature of their employments, are compelled to live in the city; when I ask why they do not go to more healthy localities, they say,—what can a poor man do, we are obliged to live here because it is near our work. There are also other places of the same kind, one in particular on which I would remark, a place called Geddis' Lane or Alley, going out of Clarence-street, in which there were a number of German immigrants residing for some time; there is always a great deal of sickness there; the houses consist of one room upstairs and one down, with no ventilation through the back at all; the greater number of those who live there are men employed in the foundries at Pymont and at Mr. Russell's, and whose occupation is excessively dirty.
614. Have you noticed what is the general rule as to the number of persons in one house—whether a house of two rooms, for instance, is usually occupied by one family, or whether lodgers

lodgers are taken in? In many places, I believe, there are more than one family. I made inquiry whether lodging-houses were under any special regulation, whether there was any Lodging-houses Act, and I was informed there was not, and that a Bill introduced for the purpose had been thrown out.

H. Graham,
Esq.,
M.R.C.S.L.

29 Oct., 1859.

615. You think generally that the condition of the dwellings of the poorer persons in Sydney is such as to be calculated to bring about ill health? I think they are worse than in any part of the world that I have seen—worse than in London.

616. What cities are you acquainted with? I am acquainted with London, and I am also acquainted with other cities in these Colonies; for instance, Hobart Town and Launceston.

617. Are the poor worse off here for dwellings than in those cities? Far worse off than in either of those cities. The buildings occupied by the laboring class there are far superior to those occupied by the same class here.

618. Do you state that opinion after having had as good opportunities of judging of those places as you have had of judging of the state of this city? Yes, I have been resident in Launceston many years as Colonial Surgeon.

619. With regard to the alleged juvenile vagrancy can you give any opinion? I have seen a great many children in these alleys and places apparently in a very destitute condition, but when I look at their physical condition they appear to be strong and healthy. Some little time back I remarked, in my Report to the Municipal Council, upon the apparent healthiness of the children living among the slaughter-houses in Parramatta-street; a more healthy set of children I never saw.

620. Have you had opportunities of judging whether there are many girls of tender years in a state of prostitution? No; except what I see in my professional avocation, and what is open to the observation of everyone.

621. Will you be kind enough to prepare the statement already alluded to as to the condition of the houses of the poorer classes, and append it to your evidence? I think you will find such particulars as you require in my last Quarterly Report to the Municipal Council.

622. Perhaps you would be so kind as to prepare such a statement specially for this Committee, as it would be desirable to append it to your evidence? Yes. (*Vide Appendix.*) I have taken the Inspector of Nuisances to many of the places which I have brought under the notice of the Municipal Council, with the view of having improvements made, but I have always found the greatest difficulty in getting the landlords to do anything.

623. *By Mr. Plunkett:* Can you give any opinion as to the cause of the difference you have mentioned between the condition of the dwellings of the poor in Hobart Town and Launceston, and their condition here? I can only suppose that there has been a greater demand here for houses, and that they have consequently been rapidly run up. At the time the diggings were discovered in this Colony, a large portion of the working population left Hobart Town and Launceston, while here the population accumulated; houses were in demand, and on every available space buildings were run up as rapidly as possible. There is, however, an evident improvement in the condition of the buildings now erected for the occupation of the lower classes.

624. Can you say what rents are usually paid for these houses? Generally from twelve to fifteen shillings a-week for very small places. I know of a street within the city, called Kensington-street, in which the houses are in a most wretched condition, so far as ventilation and cleanliness are concerned, many cases of illness being the result.

625. Do you think that in houses that have been more recently erected, and in those which are in course of erection at the present time, ventilation and wholesomeness are sufficiently considered? In the few I have seen intended for the laboring class, there is certainly an improvement. I might witness some houses in Sussex-street, called Willow Terrace, which are really comfortable houses, and in which the ventilation is complete.

626. Would you think it within the scope of your duties, as Health Officer of the City, to make any representation to the landlords of those places which are not in a proper state? I have done so at times, but I am obliged to do so cautiously, for I have no authority or power to enforce cleanliness or any sanitary regulations at all. The Inspector of Nuisances can prosecute, it is true, if a nuisance exist, but the difficulty is in proving what is nuisance.

627. The landlords in many cases would probably remedy these evils if they were aware? I have in several instances made them aware of them, but they have failed to do it. In my diary, which is kept at the Municipal Council Chambers, I have pointed out the places to which I now allude—Queen's-place, a place called Geddis' Buildings, Kensington-lane, the neighborhood of Parramatta-street, near the slaughter-houses, the lower part of Bathurst-street, Durand's-alley, and Adams'-lane.

628. Do you know Brougham-place? I do. I also know a place called Holmes'-place, of which I saw a notice in the papers the other day as being unclean, but certainly I never saw a place of the kind more clean. I think Brougham-place is as bad as it can be. The houses which have been built in former times for the occupation of the laboring class are not adapted to the climate, and there is no drainage from them.

629. Are they capable of improvement? I fancy not, without pulling down the whole and rebuilding on a different plan.

630. Do you think the slaughter-houses affect the health of the inhabitants in their neighborhood? I think they may eventually, but I do not think they have done so as yet. I see a great deal of the poor classes in that neighborhood, but my impression is that there is very little endemic or epidemic sickness among them, and from my observation of the children I can say that a more stout and healthy race I never saw; they are peculiarly fine children; but at the same time I must say the presence of the slaughter-houses is calculated to produce illness, and if there were fever, it might become contagious or malignant from the fact of there being all the elements there to propagate disease.

631.

- H. Graham, Esq., M.R.C.S.L.
29 Nov., 1859.
631. You think it desirable they should be removed? Most decidedly. I have advocated their removal from my first appointment as Health Officer.
632. *By Dr. Lang*: Is it not the fact that the deleterious gases—those noxious to the human constitution—are evolved much more copiously from decaying vegetable than from animal matter? I think the combination of the two, which we have here, is worse.
633. You think, on the whole, there has been an improvement in the style of buildings for the lower classes? Undoubtedly. I think the necessity which did exist for rapid building has passed away, and the buildings now being put up, are greatly improved. I do not refer to the buildings for the middling class; everyone knows there is a great improvement taking place in them; but I do not think, with all the good buildings, unless sewerage and drainage are carried out, there will be any security for the health of the population.
634. Do you think any additional legislative regulations are required for the erection of houses for the poorer classes? Yes.
635. In what should those regulations consist? Persons who build houses should be compelled to adapt them more to the climate, and to provide means of cleanliness, and plenty of fresh air by ventilation.
636. Has your attention been directed to the subject of the introduction into this great city, of the process which has been carried out successfully to a considerable extent in London, and some other of the great cities at Home, of erecting large establishments containing a great number of houses for the working classes? Yes, in my last quarterly report to the Municipal Council I made special reference to that; and quoted from Dr. Southwood Smith and other authorities to the effect, that during the prevalence of cholera in London, these model lodging-houses were more exempt from the pestilence than other places.
637. You see no objection to the introduction of such a system here? On the contrary I think it one of the best things that could be adopted for the welfare of the laboring classes. There are many other places besides those I have mentioned in which the accommodation is of the worst kind; in Lower George-street, and by the tank stream for instance. In some instances I have urged the landlords to clean away the rubbish, but they refuse to do it, saying it is the business of the Corporation.

APPENDIX.

*City Council Chambers,
6 December, 1859.*

MEMORANDUM.

At the request of a Select Committee of the Legislative Assembly, on "Condition of the Working Classes of the Metropolis," I have the honor to submit some memoranda respecting the dwellings of the poor and laboring class, extracted from my diary kept for the information of the City Council, at the Town Hall.

"The proper ventilation of dwelling-houses, especially those of the poor and laboring class, does not receive that attention its importance to health deserves. In many parts of the City there are lanes and courts with numerous inhabitants—the houses are divided into tenements, a family in each, with one or two rooms for all purposes, deficient in ventilation and light. Living in such atmosphere renders the constitution susceptible of all diseases. The application of some remedy to improve the habitations of the working class is very desirable.

"Most of the public schools in Sydney are also defective in ventilation; some I have seen greatly over-crowded with children of all ages, and in many a great want of cleanliness is perceptible. The proper ventilation and cleanliness of schools is a matter of so much importance to the health of children, that I would suggest the establishing of some effectual regulation for this specific purpose."

In this I refer particularly to the schools for the laboring class:—"Many of the public schools (before alluded to) remain ill ventilated and over-crowded; this is very detrimental to the health of young children. I have seen many cases of fever result from this cause.

"Public Education is now under the consideration of the Legislature, and I would respectfully suggest, that ventilation and accommodation having so much influence on the physical condition of the children, is a question equally important as that of moral education, and should receive some attention from the Government."

There are many other such memorandums in my diary, but they are to the same effect. I shall be happy again to wait on the Committee, if desirable, and name the places particularly to which I have alluded in my notes to the City Council.

HENRY GRAHAM,
Officer of Health for the City.

Isaac Aaron, Esquire, M. R. C. S. L., called in and examined:—

- I. Aaron, Esq., M.R.C.S.L.
29 Nov., 1859.
638. *By the Chairman*: You are a Medical Practitioner? I am.
639. And have been for a number of years in practice? Upwards of twenty years, in this Colony.
640. For some period you held the office of Health Officer under the Municipal Council? Yes, for nearly two years.
641. This Committee has been appointed to inquire into the general condition of the working part of the population of Sydney, and it was thought that on some of the branches of the inquiry you might give valuable evidence, such, for example, as the sanitary condition of the dwellings

dwellings of the humbler classes, and the alleged vagrancy of the juvenile part of the population. It was thought that your duties as Health Officer, especially, would bring you into localities where you would have very good opportunities of forming opinions upon these points? I would say, in the first place, that I have had much longer opportunity than that you allude to, of knowing something of the condition of the working classes, from having been for nearly ten years District Visiting Surgeon to the Dispensary, which, during the whole of that time, has brought me into direct contact with them. I thought proper to mention that, because it covers a greater space of time than the office I held under the Corporation. With a view to the objects of this inquiry it may be well nominally to divide the working population into three classes. Of course I have been thinking over the subject since I received the summons to attend here, and it appears to me that that is one way of arriving at a satisfactory conclusion. The first class is that, the lowest of all, which lives in all manner of holes and corners, in most dilapidated places, paying little or no rent, and existing no one knows how. This, so far as my observation has gone, is rather a numerous class in Sydney. One circumstance which, no doubt, tends to add to its numbers is, that many of them are, either in their own persons, or are the descendants of, those who have been prisoners of the Crown. The places occupied by these people generally are of the worst possible description, such a place as that in Lower George-street where an old barrowman died recently—I think it is the same building in which Warne was murdered some years ago—an old dilapidated wooden building in the most unwholesome condition possible, where Chinamen some years ago used to congregate, and where there is an utter absence of all those conveniences and necessities which should be connected with the habitation of a human being. In fact, the people who occupy it live more like beasts of the field or pigs. There are many of these places in various parts of the City, some of them being places which are under law-suits, and where no rent is demanded; they are open to all the four winds of Heaven, and, of course, there is no outlay upon them for repairs or drainage or anything that is necessary with regard to the sanitary condition of the occupants. The next class above this would consist of those who generally get their living more or less by labor, sometimes employed, sometimes not, according to circumstances. There is a good deal of intemperance amongst this class, and there habitations generally are very inferior to what they ought to be. It is not at all an uncommon thing for a family of that class—husband and wife and three or four, or even more children—to occupy a single room for all purposes. I have not been in that quarter very recently, but some time ago nearly every house in the lane called Brougham-place, between Castlereagh and Pitt Streets, was underlet in separate rooms.

642. How many rooms are there? Four in each house—twenty-six houses. It was at the time I speak of, not very long ago, a common thing for a laboring man of some sort or other to take from the original landlord the whole house, live in one room himself with his family—perhaps carrying on a trade as shoemaker or green grocer—and underlet the other three rooms to separate families. In one instance I remember I had occasion professionally to visit an old woman in one of these rooms up-stairs, and I found that the room was occupied by herself, an adult son working at his trade as a shoemaker, and his daughter, a child of about eleven or twelve years of age. The room was filthy in the extreme, everything being carried on there,—cooking, sleeping, and everything else. This, I may mention, is one instance of very many of a similar kind which have come under my notice. The courts in which many of these people live are very badly constructed; they are too frequently entirely unpaved, and no proper attention is given to the drainage or cleansing of them. The water-closets, or rather privies, for water-closets they are not, are very frequently dilapidated, and quite indecent from that cause, because no one can go to them without being seen, and so badly constructed that a slight shower of rain causes them either to overflow or soak into the surrounding soil, creating a great deal of disease amongst this class of people. The kind of houses generally occupied by these people are very badly constructed, in a sanitary point of view. Perhaps they consist of two, sometimes of three rooms, the upper room being entered by an open staircase from the lower one, which of course cannot be conducive to health; and where there are three rooms, generally the worst of all is selected for a bedroom.

643. Could you give any instances of the localities you allude to? Brougham-place, to begin with. The houses there are better adapted than many others I have seen for health, provided they were not underlet, and, consequently, over-crowded. Then there is Queen's-place. The houses in Queen's-place, belonging to Mr. Hunt, are some of the worst, not altogether the worst, but some of the worst in the City. I mean those in the lane running east and west behind George-street, behind Pollard's stores, abutting upon Pitt-street North. One side consists almost entirely of wooden tenements, with no up-stair apartment at all—all on the ground floor. These are in an extremely bad and dilapidated condition, and generally over-crowded.

644. What is about the size of them? There are two rooms, each room about twelve feet by ten on the average. I have known in one of these places a man and his wife, five or six children, and very often a lodger or two, probably a servant girl out of place, to be living. The whole place is deficient in drainage, and at the time I speak of, when I first knew this place, there was only one privy to the whole nineteen or twenty houses.

645. Some of them containing eight or ten persons? Yes. The houses on the southern side of this court are of a somewhat better description, being built of brick, and two stories, but consisting only of two rooms, the upper room being very small, not above ten feet square, with no ventilation whatever.

646. Can you state, from your professional experience, what is the continuous state of health in these localities? The people are continually subjects for the dispensary, and, when

I. Aaron, Esq.,
M.R.C.S.L.
29 Nov., 1859.

epidemics occur, of course, they generally suffer most. Upon one occasion last year, when scarlatina was prevalent as an epidemic in Sydney, the people about Queen's-place suffered very severely. There were several funerals from there in the course of the week—week after week.

647. Have you any acquaintance with the south-western portion of the city, at the back of Kent-street? I do not know so much of that from my connection with the Dispensary, because that is not my district—my district includes Bourke and Macquarie Wards—but, in the performance of my duties as Officer of Health to the Corporation, I visited the whole of that portion of the city, every street and alley, and, I believe, the condition of that part of the city is as bad as bad can be.

648. I believe you have paid a good deal of attention, apart from your professional duties, to the question of sanitary improvement in large towns? I have; I have been working at it for upwards of ten years past. I first began in a lecture which I delivered at the School of Arts in 1848.

649. I presume you will be of opinion that the state of things you have described must have a very prejudicial effect on the morals of the population? Of that there can be no doubt. The want of proper accommodation has a direct effect on the moral sense of the occupants, because they are obliged to do everything in public you may say; and the state of bodily feeling which is induced by the absence of sanitary conditions no doubt induces many of these people to resort to intemperance. They sleep in ill-ventilated and over-crowded apartments—get up in the morning, especially in the summer time, unrefreshed, and want something to rouse them. It is not, therefore, to be wondered at that they should go to the public-house for a morning dram. I was about to observe, with regard to the second class of persons I was speaking of—those who get their living by some more or less regular occupation, and who would, if they had the opportunity, live in a better condition. To such a class as that the conduct of some wealthy man who would build a class of buildings which they might occupy at reasonable rates, would be one of the greatest benefits that could possibly be conferred upon them, both sanitarily and morally. The rents they at present pay for these wretched hovels are exceedingly high, ranging from five shillings a-week for the most miserable accommodation possible, such as no respectable man would put his dog into, up to fifteen shillings and one pound. I have not made any calculation, but I think it very possible that, for at all events the medium rents which I have spoken of, the mean of the extremes, wholesome and comfortable habitations might be provided for these people. As it is they often say to me, when I remonstrate with them about living in such dog-holes, "What can we do, we cannot afford to pay any more rent, rents are so high."

650. You are aware that the attention of many men of capital in the Mother Country has been turned in that direction of late years? It has, and with the most beneficial result.

651. As an investment of capital? It has paid very well as an investment of capital; but the good effects have been still more striking with regard to the people who have occupied the buildings.

652. Have you not heard that, as a mere investment of capital, houses of this description, judiciously built, have paid better than houses erected for the middle classes? I have no doubt of it. I firmly believe that, for not quite the smallest amount I have mentioned, but for very little more than the smallest amount, five shillings a-week, buildings might be erected here of a comfortable and wholesome class, which these people would very readily occupy; and the result would be, not only to pay interest on the capital, but of still more importance to the moral and bodily welfare of the people inhabiting them. There is another point, of very great importance in connection with this part of the subject, the effect upon the children. These people generally live either in narrow streets, or lanes, or in courts, and during even fine weather the children have nowhere to go to play but in the street itself, or in some dirty, unwholesome back yard. The result, as a matter of course, is a deterioration of their character, from the manner in which they are associated together, and the inefficient means they have of amusing themselves properly;—and the language you may hear amongst even some of the smallest is fearful. The third class of the laboring population consists of those who, by industry and frugality, have been able to save sufficient either to rent a decent house or to build one for themselves. This, I am happy to say, is a tolerably numerous class in Sydney; but even here there is something wanting in the mode in which houses are constructed, even when building for themselves. They want the knowledge to construct them with the best regard to bodily health and for decency. I still repeat that even amongst them, it is too common for father, mother, and a whole herd of children to be sleeping together in one room.

653. They are not sufficiently alive to the necessity of greater sanitary provision? They are not.

654. With respect to this class of persons—among whom you probably have a good deal of intercourse—what is your opinion of their general character for probity, straightforwardness, and intelligence, as a working body? The very circumstance of their having been sufficiently careful to save money would be almost an answer to your question. I should say decidedly, that the character of this part of our population is equal, in every respect, to that of any other similar population. There is only one unfortunate circumstance which has a tendency to deteriorate them, and that is extravagance in living, when they have got on a little in the world. This class—the superior class of working men and the small shopkeepers about the city—are generally exceedingly correct in their manners; and what is, perhaps, as good a sign of their conduct as anything, when I have to attend them they generally pay their bills pretty punctually.

655. Could you form any opinion as to the destruction of infant life, during the first two or three

three years of infancy, from the causes you have been describing—filthiness around the homes of the poorer classes and want of sanitary regulation? No doubt it is to be attributed in great measure to the want of sanitary regulations about the dwellings. The proportion of deaths is quite as large as in the Mother Country.

I. Aaron, Esq.,
M.R.C.S.L.

29 Nov., 1859.

656. I think it has been stated that the proportion is greater than in London? It is even greater occasionally. The system of registration has not been carried out sufficiently long here to enable us to make a fair estimate. It is sometimes greater, but sometimes, also, it falls below the average. We know that in the winter season here, which is our healthiest season, the mortality is comparatively small. Our summer season is the most unhealthy. I noticed lately in the *Herald* some comparisons made between Sydney and several towns in Scotland, comparing the winter season, the least healthy part of the year there, and the most healthy here, so as to shew a more favorable state of sanitary condition in Sydney than in reality exists. Now that is not a fair comparison, inasmuch as they have taken the healthy season of the one, and the most unhealthy of the other. But generally the mortality of Sydney is equal to that of some of the most unhealthy places in England—greater than in London. The average mortality of all London is 23 or 24 per thousand per annum; that of Sydney, taken year by year, is 25 or 26, even 27 sometimes. And with regard to the mortality amongst infants, it amounts more or less, taking one time with another, to half the whole mortality.

657. In cases where you have been called in yourself, professionally, have you formed the opinion that many—say the greater portion of the deaths of infants of tender years—result from causes obviously preventable under another state of things? Not altogether preventable by public means. There is one very important point—

658. Preventable by the introduction of better habits among the people? Exactly. I was going to say that one cause of the mortality of young children can only be corrected by the diffusion of better information among the people themselves. They are in the constant habit of over-feeding their children—fearfully over-feeding them—and to that I attribute a great deal of the mortality, either directly or indirectly—directly, by the bad effects on the system, by the food itself being indigestible; and indirectly, by rendering the system less able to resist other influences, by lowering its tone; and that is also aided by the want of sanitary regulations, the deficiency of fresh air in the sleeping apartments, and so on.

659. With regard to the other branch of our inquiry, the alleged existence of juvenile vagrancy in our streets, have you formed any opinion upon that? I have formed a very strong opinion. I believe it exists to a very great extent in Sydney. One can scarcely traverse any of the streets, especially in the evenings, and on Sundays and holidays, without meeting troops of shoeless and stockingless urchins, very often, evidently, bent on mischief, for want of something better to do no doubt; and many of them, perhaps nine or ten years of age, you will find at night with cigars in their mouths—some with pipes.

660. You do not suppose these are friendless children, but children in a state of culpable neglect? I believe most of them are in a state of culpable neglect.

661. Who nevertheless have homes, but neglectful parents? Yes; I have known many persons who have been Dispensary patients who have had their children taken to the Police Court for petty delinquencies.

662. Have you at all observed the state of prostitution in the public streets, and whether it includes girls of tender years? That I know it does to a very great extent.

663. It is stated that one-third of the prostitution is confined to girls of tender years—in fact to children? I have not been able to come to any positive conclusion as to that; but, out as I am at all hours, I have a very fair opportunity of being able to state positively that a great number of very young girls are living in that state.

664. Of what ages, should you suppose? I have seen some I should not take to be more than ten years of age, and numbers of not more than thirteen or fourteen.

665. You have seen children you should not take to be more than ten years of age? I have, decidedly.

666. In a state of open prostitution? There could be no doubt about it from their appearance and manner.

667. Could you give an opinion as to whether prostitution has increased during the last few years in Sydney? I believe it has.

668. Disproportionately to the increase of the population? I believe it has. Of course it is mere matter of opinion; I cannot give you any data, but having been residing in Sydney about fourteen years, I of course have had my eyes open, and may be supposed capable of forming some opinion; and my opinion is that it has positively increased.

669. Are you aware whether it is the fact that there are owners of property in Sydney who make it a rule to let their houses only for these purposes? I have known such cases, and I could name one.

670. Have you any objection to do so? No; I allude to Mr. William Nash, who had a whole row of houses let for that purpose in Castlereagh-street when I was living there, till I routed out the occupants.

671. You took steps to put a stop to that, as a citizen? I did. I had a personal reason for doing it, for my daughters could not pass without being insulted by them, and I took immediate steps through the police to get them removed.

672. From your great acquaintance with the city population, are you able to state to the Committee whether there are a large number of persons out of employment, from the city being over-crowded, or from some other cause which renders it difficult to obtain employment? I believe at certain times there is a difficulty in obtaining employment, but that difficulty is not confined to the laboring class only. There is always a very large number of what we may call comparatively educated persons who are unable to obtain employment in Sydney.

With

I. Aaron, Esq.,
M.R.C.S.L.

29 Nov., 1859.

With regard to the laboring classes, I must confess I have some little doubt as to the accuracy of the statements made on that point. Some little time ago there was great agitation on the subject, and having to pass through Hyde Park in going from or returning home, I occasionally saw the assemblies of the unemployed, as they were called, and they certainly did not impress me with a very great idea that they were unemployed, most of them, without some cause resting with themselves. I saw one young fellow, a mere boy in appearance, haranguing an assemblage of about twenty men who were lounging about smoking their pipes and looking on very indifferently, while he was holding forth in very magniloquent language about the magnificent meeting, and the results that were to be expected, telling them they must not submit to this, that, and the other. I stood looking at and listening to him for some time, very much amused I must confess. There is no doubt there will occasionally be times when employment of a laboring kind will be difficult to obtain; but I believe a great deal of the want of employment that has existed in Sydney for some time past depends upon the fact that the people will not leave the city and go into the country where employment might be had. I know as a positive fact, that men who were sent away, by the Committee appointed some time ago for the purpose, into the country to various parts, lounged about for a time and came back at the first opportunity. In fact they had a pleasure trip at the public expense.

673. I should infer from what you said just now, that you are of opinion that there is a good deal of concealed distress among persons who have been well educated? That I have ample reason to know there is.

674. Among persons reared well, and perhaps to no particular pursuit? Clerks and young men of comparatively good education, who came out here with various views, hoping to get situations of various kinds.

675. *By Mr. Windeyer*: Do you know whether there are many persons living in common lodging-houses in town? A great number.

676. Do you not think that an Act for the regulation of these places would have a beneficial effect? Yes. I was in intimate intercourse with Mr. Wise some time ago with the express purpose of getting an Act introduced, which passed the Council, but was rejected by the Assembly.

677. Have you ever seen the practical working of any such Act in the Old Country? No; there was no such Act in operation when I left.

678. I believe such Acts have been generally found to answer very well? Yes. An Act of that kind has been for sometime in operation in Hobart Town.

679. Has it been found to answer there? Very well. The only objection I had to make to the regulations made by the Magistrates, founded upon the Hobart Town Act, was, that they did not allow sufficient cubic space in proportion to the number of inmates. That of course is a matter of detail.

680. I believe the persons who have had the benefit of this Act have themselves approved of it—they have not looked upon it as a hardship, or as a species of police surveillance? I believe after such an Act has been in operation for some time the very people themselves are pleased with it, though perhaps at first they may be apt to feel a little resentment, as being an infringement of the liberty of the subject; but when they find the benefits of it they are satisfied.

681. Do you not think, with respect to the western portion of the town, that if greater facilities were given for bathing and for cleanliness, it would have a beneficial effect on the habits of the inhabitants? No doubt about it. That was one of the points I was about to refer to when I had done with other matters. Next to the erection of suitable houses, the erection of public baths and wash-houses is of very great importance to the welfare and comfort of the working classes, more particularly the wash-houses for washing the family linen. I think that of very great importance. In many places it is now done indoors with great discomfort and inconvenience to the whole family. In those tenements in Brougham-place I have often seen it performed, by the people living up-stairs, upon the landing, and the clothes hung out there to dry, or perhaps out of the window.

682. How are these courts and alleys generally supplied with water? Within the limits of the water supply they have stand pipes, one stand pipe generally serving for the whole court.

683. Do you think the supply of water is generally sufficient or insufficient? Until this late dry weather it was generally sufficient because it was always on; but since the dry weather set in, and the falling of the water in the tunnel, the supply has been insufficient because very intermittent. Even where I live we have only had it on three hours out of the twenty-four.

684. Do you think there is any necessity, or that it would be beneficial, to make it compulsory on persons owning these places to lay on water and give greater facilities for the purpose? When, as I said before, the supply was constant, of course there was always enough.

685. Is water generally laid on to these places? Within the limits of the city supply it is. The fact is the numerous wells I knew to exist formerly in Sydney are either filled up or made use of for some other purpose—dust holes or something of that kind.

686. These people do not generally supply themselves from pumps? No, the public pumps have been done away with.

687. There are a good many young children growing up in Sydney—in what state are they as regards vaccination? That is a question I can scarcely answer. Mr. Rutter, the public vaccinator, would be the proper person to apply to. So far as my own experience goes, it is not carried out to the extent it ought to be—not by a great deal. There is one other point I wish to notice with regard to matters coming under my notice as Dispensary Surgeon, namely,—the number of women whose husbands are said to have gone to the diggings, and left them without

without means of support. I have not kept any record of them because it never occurred to me to do so, but I simply state that they are very numerous. There are many too whose husbands are seamen, and who are left, during their husbands' absence, dependent upon God knows what.

I. Aaron, Esq.,
M.R.C.S.L.
29 Nov., 1859.

688. *By the Chairman*: Most of these women have children? I think most of them have. The subject of the supply of water has occupied a great deal of my attention, particularly with reference to its passing through leaden service pipes, and the consequent very great increase of lead poisoning. This is a matter which perhaps does not come immediately or directly under the consideration of this Committee, and yet I think it right to mention it. There is no doubt there is a great increase of that form of disease.

689. Would you recommend the discontinuance of lead piping altogether? Either its entire discontinuance or that some plan should be adopted by which the influence of the water upon the lead could be counteracted. I happen to know that Mr. Charles Watt, the best analytical chemist we have in New South Wales, has turned his attention to the subject, and has been in communication with the Government, having proposed a plan which he thinks will have the effect of converting the leaden pipes which are now electro-positive and soluble into electro-negative and insoluble, and he only wants the Government to give him the opportunity of making experiments on a sufficiently large scale; if that does not succeed I know no other alternative than the Legislature taking action in the matter, and compelling the substitution of iron for leaden pipes. There is a great deal of this kind of disease amongst the poor as well as amongst the rich.

690. *By Dr. Lang*: Do you think the existence of lead as decomposed by the water in use in the city has had a visible influence upon the health of a considerable portion of the community? I have already stated that the cases of lead poisoning, distinct and decided poisoning, are actually increasing to a great extent.

691. Have you observed that the morals of the humbler classes in this community have been very much and injuriously affected by the derangement that has taken place in our social system since the discovery of gold? Of that I have no doubt. In the first place, there has been the desertion of wives and families by the husbands, which has led in many instances to intemperance and prostitution on the part of the wives, with the consequent results to the family; these are matters which to a very considerable extent are within my own knowledge.

692. Do you not think that that circumstance may explain the facts that have been brought before this Committee by other witnesses, shewing the extreme profligacy of the lower classes in many instances—I mean the destitution in which many of the humbler classes have been left, and the complete derangement of our social system? No doubt to a very considerable extent that has been the case. In many instances men who left regular employment have failed at the diggings, and have come back paupers, and probably have been unable to recover their former position; their wives during their absence have perhaps become intemperate and immoral, and, of course, the results of all these things must be evident. So far as I am concerned, I am of opinion that the gold discovery has been a curse to that portion of the population.

693. *By Mr. Walsh*: From your professional intercourse with the artisans of Sydney, are you able to state whether you consider there is distress existing amongst the deserving portion of them at this moment? I cannot say there is.

694. Do you find that there is more distress amongst the artisans of Sydney who are not the most respectable members of their class than amongst the respectable ones—I mean the intemperate artisans, do you find more distress amongst them? Decidedly. Many of the cases that come under my notice as Dispensary Surgeon are the results of intemperance—such patients sometimes remain on the books of the Dispensary for months and even years.

695. Then, you do not think there is distress amongst the deserving and industrious class of artisans? I am bound to say I do not.

696. *By the Chairman*: Cases of distress amongst persons of that class may exist—you do not say cases do not exist? No, but that is a general expression of opinion.

697. *By Mr. Windeyer*: Do you not think the public baths are too far away from most portions of the city? They suit of course a certain portion of the city, but they are too far away for others. They are very well where they are for those who live near them, but no doubt others ought to be erected at other parts.

698. In Darling Harbor, for instance? Anywhere. There is no necessity for their being near the Harbor at all; in the Mother Country they are erected in all parts of cities. They only require a little machinery. I think it very desirable that there should be fresh-water baths as well as salt.

699. *By the Chairman*: With reference to the system of lodging-houses, it has been stated before this Committee by Mr. Clayton, an officer of the Municipal Council, that when on one occasion he was engaged in taking the Census, he came upon a house in King-street, of not more than five or six rooms, in which there were seventy persons residing; seventy names being given for the purposes of the Census—have you met with anything of that kind? No, I cannot say I have met with anything so extreme as that, except amongst the Chinese. I can conceive the possibility of such an occurrence, especially some time ago (the time probably to which Mr. Clayton refers), when the gold-digging mania broke out, and we had an influx of people from various parts. The lodging-houses were then crowded to excess with men, and I have seen some very curious examples of the kind. There was one lodging-house in Castlereagh-street, I remember, in which the front door opened into the front room (twelve or fourteen feet square) which was used as the common sitting-room. Going out of that, there was a room occupied by the family who kept the house, which all the men who were stopping in the house had to pass through to go upstairs or into the yard; and there was only a curtain separating the portion in which the family slept from the portion used as a passage. There were four or five men in each room.

I. Aaron, Esq.
M.R.C.S.L.

29 Nov., 1855

APPENDIX.

The Chairman of the Committee having intimated to me that I was at liberty to make any additions to my evidence I might think desirable, I beg to state, with reference to Brougham-place, that since the connection of the drainage with the sewer, enforced by the Municipal Council, the sanitary condition of this place has been much improved; but still there is one important point defective. It appears that although that Council has the power to order the conversion of privies into water-closets, it cannot compel the laying-on of the water to them. This has been voluntarily done by Mr. Colyer, of Elizabeth-street, to those tenements belonging to himself, but other landlords owning other portions of this property have not done so, and the result is (as I am informed) that from the occupants neglecting to throw water down them, they frequently become choked up.

The fact is, as when Officer of Health I repeatedly pointed out, the power possessed by the Municipal Council, of enforcing efficient sanitary regulations, is very deficient; but I am bound to say also, that even in matters over which it has ample control, I found great disinclination to act. In one very important point I could not, although urged upon their notice again and again, induce them to take steps for the effectual and systematic removal of the rubbish heaps continually accumulating in the back yards and in the courts and alleys, which, consisting as they more or less do, of animal and vegetable refuse of all kinds, are fruitful sources of foul emanations and causes of disease.

With regard to the effects produced by the "Common Lodging-houses Act," and the proceedings of the "Metropolitan Association for Improving the Dwellings of the Industrious Classes," in the Mother Country, much more important information is to be found in a little pamphlet published by Dr. Southwood Smith, a gentleman well known for his earnest and philanthropic efforts in the cause of sanitary reform.

A copy of this pamphlet, together with a copy of the first quarterly report presented by me, as Officer of Health to the Municipal Council, and the only one printed by them in a separate form (except a special report on the contamination of Sydney water by its passage through leaden pipes), I take the liberty of handing in to the Committee.

One remark more I wish to make on the subject of prostitution. I believe that this trade is promoted to no inconsiderable degree by the habit of servant girls and other young persons frequenting public-house balls and dancing saloons, which have, of late, become so numerous, and from the crowds of "rowdies" and young people of both sexes congregated every Sunday evening, on what is called "Lovers' Walk," in Hyde Park. So offensive are the conduct and language on these occasions, that on returning from Chapel with any of the female portion of my family, I am compelled to go round by Elizabeth-street; and even, when alone, it is most unpleasant to pass along the walk.

My dispensing practice has also brought to my knowledge the fact that many of the females brought out under Government Regulations, have led impure lives previously; and I have repeatedly been told by patients of this class—of both sexes—who were afflicted bodily in various ways, as with rheumatism, chronic bronchitis, and even with consumption, that they were led to believe that they would be cured here.

WEDNESDAY, 7 DECEMBER, 1859.

Present:—

DR. LANG,	MR. PEMELL,
MR. LYONS,	MR. PLUNKETT,
MR. PARKES,	MR. WINDEYER.

HENRY PARKES, ESQ., IN THE CHAIR.

Mr. John Macdonald, called in and examined:—

Mr. John
Macdonald.

7 Dec., 1859.

700. *By the Chairman:* You have resided for some considerable number of years in the City of Sydney? Yes.

701. How many? Twenty-one and two weeks.

702. This Committee of the Legislative Assembly has been appointed to inquire into the social condition of the working classes of Sydney, with reference to the alleged want of employment experienced at times; also, with reference to the house accommodation for the poorer classes, in its sanitary and moral effects upon their lives; and also, into the existence of juvenile vagrancy in the streets;—and the Committee have been led to suppose, that, from your intercourse with the inhabitants of the city, you would be able to give some valuable information. First, with regard to the want of employment, is it within your knowledge, from your long experience, that there is frequently a dearth of employment among persons of sober and good character? I know there is.

703. Could you give particular instances, or state generally—? I could state generally that there have been many persons of that class very long without employment, who would be very willing to work if there were work for them. I know people to be very ill off for want of employment, in all trades.

704. It has been stated publicly, during the last twelve months, that there has been a want of employment experienced; public meetings have been held of the unemployed, as they have called themselves? Yes.

705.

705. Have examples of this distress come within your knowledge? I do not know any particular instances, but I believe there has been a good deal of cause for these complaints; but I question very much whether many might not be employed if they were willing—a good many of them.

Mr. John
Macdonald.

7 Dec., 1859.

706. You think they might if they were willing? I think they might. For instance, I know that some men were sent to the Railway to work there, and when they saw the work they would not face it. So I consider they might be worse off, if when work was offered to them they would not accept it.

707. These would be laboring men chiefly, I presume; but with regard to artizans and mechanics, do you know whether persons of that class are often thrown out of employment in Sydney? Yes, very often.

708. Is it your opinion that they are in a state of suffering from want of employment occasionally? I know some of them are. I could not state very particular instances of real suffering, but I have known several people very hard up.

709. What is your own business? I am a tailor.

710. In your own line of business, is there ever any want of employment? Yes; there are plenty of complaints there.

711. Have you known instances of good tradesmen, who were men also of moral and respectable character, unable to obtain employment in your own business? They are not in want of employment so often as others, but there are instances at times, when trade is very slack.

712. Can you state what class of tradesmen is most frequently out of employment, whose employment is most precarious? I could not say anything particular about that.

713. With regard to the house accommodation of the working population of Sydney, I presume during the twenty-one years you have resided here you have been a good deal about those localities where the poorer classes reside? Yes.

714. Do you consider that the house accommodation is good, such as to promote or to preserve health? It is not good, and I believe it is not easy to keep them good; and will not be until there is a better class inhabiting the places where they reside.

715. Will you explain what you mean? I mean that when unsteady characters huddle together in a locality where there is not much room for them, they make the place unhealthy, because they do not attend to their own comfort so much as they might do.

716. But suppose the people to be of cleanly and commendable habits, are the houses so constructed as to afford sufficient room for ventilation, cleanliness, and the preservation of health? No. I believe there are very few of that class of houses; houses of that class will be beyond the poor man's reach.

717. We are speaking of those within his reach, those which are actually inhabited? Then they are not what they should be; they are not calculated to promote health and comfort.

718. It has been stated before this Committee, for example, that there are cases where twenty or four-and-twenty houses have only one privy for the accommodation of the inmates; do you know any instances—anything like that? I could not say particularly, but I have seen one or two cases of the sort. On the Rocks, towards the end of Cumberland-street, I visited some people, and observed only one or two of those places for a great number of families, and in a very bad state of cleanliness.

719. Have you been oppressed by offensive smells in visiting places of this kind? I have, so bad, that I could not live in one of these houses if I were to be offered one for nothing.

720. You, I presume, are the father of a family? Yes.

721. As a parent, has your attention been directed at all to the general condition of the children among the working part of the population? A great many of them are very improperly attended to; there is a great deal of idleness, and they are left to roam at their own will about the streets. I have known many instances of that.

722. You refer to children of both sexes? Yes.

723. *By Mr. Lyons:* You say that you know instances of men in your own trade being out of employment? Yes.

724. Is it usual for them to be out of employment at particular periods of the year, when trade is dull? There are two seasons of the year when we are not so busy as at other times—that has always been the case—before the summer trade, and before the winter trade.

725. Are these men to whom you refer married? Some are married, and some single.

726. Do you not think if they went up the country they would get plenty of employment; have they any objection to going into the country? Some of them might go, but I have no doubt the greater part of them would sooner be about town than where they would be better off.

727. Do you think they have an objection to go up the country? I cannot say.

728. *By the Chairman:* Did you ever reside in the interior yourself? No; always in Sydney.

729. *By Mr. Lyons:* How do these men get their living when they are out of employment at their own trade? They have no employment; they are obliged to apply to the poor-house and to beggary.

730. When they are in employment what wages do they get? When they are working they get good wages, very good indeed.

731. What would those wages be? In my trade I know they are not satisfied unless they earn ten shillings a day at least.

732. *By Mr. Windeyer:* Journeymen earn about £3 a week at tailoring? Yes; they are not satisfied unless they go that length.

733. *By the Chairman:* Will you state at this stage of the evidence the mode and rate of payment at your business? I believe most of the men are paid by piece-work; I do not know that any of them are paid by daily wages.

- Mr. John Macdonald.**
 7 Dec., 1859.
734. So much for making a coat, so much for making a waistcoat, and so on? Yes. There are some curious coats that are made now, and the price varies from 16s. to £1 10s.
735. How much can a good workman earn at the present rates? He can earn, when he is at work, £3 a week at least.
736. How much could he have earned three years ago? I do not think there is any difference; work might be more brisk, but there was not much difference in the pay.
737. *By Mr. Lyons:* Are the tradesmen that you come in contact with working six days a week, or do they make holidays of Monday or Saturday? Some of them like very much to make a holiday of Monday, and good part of Tuesday—some of them, not all.
738. Are these men the men who are generally out of employment when the slack time comes? I could not say that; there are some of those who would be at work every day, who are out of employment very much in slack times.
739. Do you think a man is able to save anything of his wages if he gets ten shillings a day? If it were regular during the year he might save something.
730. *By the Chairman:* If he had a large family? If he had a large family he could not save any of it.
741. *By Mr. Windeyer:* Do you think there is more than a sufficient supply in your own line of business at present in the city? I do not know; I dare say there are.
742. I mean supposing trade were tolerably good, are there more than could get work even then? It would require to be very good if they could all get employment.
743. Then you think there is rather a redundancy of hands? Yes.
744. *By the Chairman:* I think you work on your own account? Yes.
745. Has your particular business brought you acquainted with this fact, that there are a number of persons of a better condition of life who have been respectably educated and reared—clerks and men reared to professions—who are in a state of great distress in Sydney—poor gentlemen as they may be called? Yes, I know there are some of them.
746. You have no knowledge on that subject? Not so much; I have known some of them in poor circumstances.

Mr. George Brown called in and examined:—

- Mr. G. Brown.**
 7 Dec., 1859.
747. *By the Chairman:* You have resided in Sydney for some years? Yes, eighteen.
748. You are a builder, I believe? Yes.
749. And have been carrying on business on your own account for some years past? Yes, about nine years.
750. Can you state to the Committee whether, within your knowledge, there are a number of persons belonging to the working classes of this city occasionally thrown out of employment and suffering considerably for want of employment, who nevertheless are of sober habits and disposed to work if they could obtain it? Yes. I believe there are a number in that condition just now, and has been for the last twelve months.
751. Of what class of laborers are these, are they unskilled laborers or tradesmen? I believe there are a number of both unskilled laborers and tradespeople out of employment.
752. As an employer, are applications for employment frequently made to you? Yes, very frequently.
753. When these applications are made, are complaints made by the applicants that they cannot obtain employment and are suffering from the want of it? Yes.
754. That is frequently the case? It has latterly been frequently the case. I have had a good deal of employment up in Goulburn, and I have had numerous applications from people in Sydney to go up there,—people who are very anxious to get away from Sydney if they see anything to do in the country, where they have a fair chance of being remunerated.
755. It has been given in evidence before this Committee that there is a very strong indisposition to leave Sydney on the part of persons who are unemployed,—that they would rather linger about Sydney unemployed in a state barely removed from destitution; do you think that is the general disposition? Not general, when they are assured of anything like steady employment and fair remuneration for their labor.
756. Do we gather this from what you state—that the reluctance is owing to a feeling of uncertainty as to the obtainment of employment, but that where there is a certainty there is no reluctance to leave Sydney? That is my opinion,—where there is a certainty of employment, and a certainty of obtaining a fair remuneration for their labor, there is no reluctance, generally speaking.
757. There have been meetings held of the unemployed, as they have been designated, during the last year: if you have not visited those meetings I presume you have seen the accounts of them in the newspapers? Yes.
758. Do you think these gatherings were of persons in a state wanting employment? I am not quite sure about that, because, from my own personal knowledge in similar circumstances, many of the greatest sufferers feel ashamed to thus publicly clamour and beg for employment, who nevertheless are both anxious and willing to work could they obtain it; and I think in all these gatherings there are numbers congregate together who are not over anxious about employment; no doubt there are numbers too who would gladly take it.
759. You will admit this position I presume, that in a new colony where so much has to be done, and where the owners of property are all suffering from the want of means of improving their property, there ought to be work enough for everybody at remunerative rates? Yes.
760. Admitting that, to what causes do you attribute this occasional or frequent want of employment—this unnatural want of employment as it may be called? I think if the lands were

were thrown open in some other way than at present, it would be the means of employing them, and would be an inducement to the working classes to invest in lands the savings which they would otherwise spend. Mr. G. Brown.

7 Dec., 1859.

761. When you say that it would be an inducement to the working classes to invest their savings, do you mean that there are those who have saved sufficient out of their earnings to invest, so as to give employment to others? I mean those who, in better times, have been able to acquire a little; these would be able to invest their savings in land, and would give employment to others.

762. Or make room for others? Yes.

763. When you talk of throwing open the lands, will you explain more definitely what you mean; how would you throw them open so as to answer the object you have in view? I think the upset price is too high, and that there ought to be deferred payments.

764. Another part of the inquiry of this Committee is to ascertain the condition of the house accommodation of the poorer classes of the community of Sydney, whether it is sufficient for the preservation of health, for household convenience, and so on: can you state from your own knowledge what is the general condition of the houses? I think they are not what they ought to be in a hot climate like this; they are too limited in their accommodation, and too closely built in many places.

765. Have you noticed in your intercourse with this portion of the inhabitants whether their houses, however small they may be, have the necessary means of health—proper out-houses, means of drainage and ventilation, without which no place can be healthy? Not generally. I think many of those which have been built lately are better than the older houses; but the latter are very deficient in these respects.

766. We understand from you that there is a better class of tenements being built now? Yes.

767. In this class of dwellings is due care taken for providing such places as privies, so as to preserve decency, out-houses for the purpose of washing, and also proper drainage? Yes, generally, I think there is now; not perhaps quite sufficient, but better a great deal than what has hitherto been.

768. Can you state what is the rule with reference to occupancy,—whether more than one family reside in a house, whether there is a system of sub-letting adopted with a view to the reduction of rent by the first tenant? Yes, there is at the present time, from the want of employment.

769. What I want to arrive at is this—whether, generally, families are crowded into one room; whether, supposing a tenement to consist of two rooms, which would just enable a family to preserve decency, one is sub-let, and thus a whole family are crowded into one room? It is so lately, owing to the want of employment.

770. You have seen instances of that? Yes.

771. Has it come within your knowledge whether or not there are a large number of children of both sexes on the streets of Sydney in an uncared-for state? Yes, I think a great number.

772. In a state of actual vagrancy, from neglect? Yes.

773. You reside, I believe, at the Glebe? Yes.

Yes, About your own locality, are there many children growing up in this neglected state?

774. a good many totally uncared for, apparently.

775. Will you state to the Committee how you arrive at this conclusion? I see them very often about the streets; in fact you may always see them, more especially in the evenings, gathered together in numbers at the different corners of the streets, without any one taking care or charge of them in any way, many of whom are continually committing depredations of some sort or other.

776. Will you be so good as to append to your evidence a statement of the rate of wages paid by you now for laborers, masons, bricklayers, and carpenters, and also of what the wages were two or three years ago? I will. (*Vide Appendix.*)

777. *By Mr. Lyons:* What is the difference between the wages in Goulburn and the wages in Sydney? There is very little difference; the difference of carpenter's wages is not more than a shilling a day, I think.

778. What works are going on in Goulburn now? A large Grammar School is being built, and a building for a branch of the Commercial Banking Company of Sydney. There are no Government buildings but a good many private houses being built.

779. What will become of these men who go up to carry on these works when they are completed—will they return to Sydney or seek employment up the country? I do not anticipate many will return to Sydney.

780. Have they gone up the country with their families? Yes.

781. Then I suppose there is some prospect of their getting employment there? Yes; I think there is a better prospect of constant employment there than here. There is more demand for house accommodation there than here.

782. You have spoken of the working classes investing their money in land; do you think they have the opportunity now of saving any money? Not at present, excepting some very fortunate individuals.

783. Is that from want of employment? Yes.

784. What is the difference between wages now and three years ago? From five shillings to six shillings a day; I cannot be positive of that. I speak now from recollection.

785. What are you paying now? I have no masons employed here at present, nor bricklayers, nothing but carpenters and laborers, and I am paying laborers from seven to eight shillings a day, and carpenters from eight to ten shillings.

786. You think that is just sufficient to support them? Yes.

- Mr. G. Brown. 787. And any addition to that would enable them to put money on one side? Yes.
788. Are you aware whether a number of men who have invested money in buildings have been compelled to sell them? Yes.
789. Have they sold them at a very great sacrifice? Yes.
790. Are there many properties now in the market? Yes.
791. And are sold for less than they cost? Yes; many who have got employment up the country have sold them because they wanted the money, and could not look after their properties when away.
792. You have spoken of children in your neighbourhood congregating at night who appear to be uncared for—how are their parents employed? I do not know how they are employed. I know there are some laboring men who have children, and care very little for them, apparently.
793. There is a good deal of bathing going on in the Glebe, is there not? I think not.
794. Not on Mr. Allen's property? There may be there, but not in my part.
795. Are you aware that children of both sexes congregate there and bathe together? It may be so down on Mr. Allen's property, but I am seldom down that far.
796. Are there no schools near to which these children could be sent and educated? Yes.
797. Do you know anything about the regulations of these schools—what prices are charged? The prices are moderate—from sixpence to a shilling a week.
798. How do you account for people neglecting their children in this way—do you attribute it to want of means, or to their drunken, dissolute habits? To both causes—the want of means and careless habits.
799. *By Mr. Pemell*: Have you any doubt that if there had been a liberal Land Bill—a Bill so that any person could have bought a piece of land during the last five years—there would have been the amount of destitution there is at present? I believe not.
800. You believe that many of these men would have purchased land during the last few years, and that they would thus have had the means of employing others? Yes, and of making room for others.
801. You think the absence of such a system is in part the cause of the want of employment at the present time? Yes, I believe that is the principal, though not the only cause.
802. *By Dr. Lang*: Do you think there are more frequent times of want of employment in this country than there are at home? No, I do not think there are.
803. There are fluctuations in employment both at home and abroad occurring from time to time? Yes; but I look upon the home country as having always a superabundance of labor. I think it should be different here.
804. You ascribe the evil here to the bad arrangement of our political system—to its not affording scope for the investment of capital so as to give employment to labor? Yes.
805. Not only, I presume, in the way of preventing persons of the humbler classes from purchasing small portions of land for themselves, but in preventing those of the higher classes investing their capital in larger purchases? Yes.
806. Do you think if there were a better system established by the Government it would lead to a better state of things on the part of the unemployed generally? I feel confident it would.
807. Do you think that the humbler classes generally in this country are more indifferent about the state of their offspring than persons of the same classes at home? Yes.
808. Much more indifferent? Much more so, especially than the West of Scotland, to which I belong.
809. Do you ascribe that indifference to the greater prevalence of intemperance here, or to any other cause? I think it is partly to be ascribed to intemperance, but I think intemperance springs from a cause for which there might, to some extent, be a remedy.
810. *By the Chairman*: Will you state the cause? I think if the people were better educated than they are it would be a means of checking intemperance. Many of these people have nothing to engage their attention; they cannot read for themselves, and have no means of passing their time but by drinking. I think in any education scheme that may be adopted there should be some compulsory enactment.
811. *By Dr. Lang*: I gather from what you have stated that you consider the moral condition of the humbler classes in this country much inferior to that of the corresponding classes at home? Yes.
812. Does not that in part arise from the penal character of the country in earlier times? No doubt a great deal of it does.
813. Does it not also arise from the indifferent character that a great many of the persons sent out at the public expense have borne? I believe it does likewise.
814. Do you observe an improvement in these respects, or a retrogression on the part of society generally within the last few years? I think there is some small improvement.
815. The progress is rather in the right than in the wrong direction? Yes.
816. Are you aware that there are scenes of profligacy and licentiousness frequently occurring among very young persons in the worst parts of this city? I believe there are.
817. And I suppose you ascribe this state of things to the bad training of these children? Yes.
818. And to the bad condition of their parents' houses? Yes.

APPENDIX.

Mr. G. Brown.

7 Dec., 1859.

RATE OF WAGES PAID BY ME IN THE LATTER PART OF 1856, AND IN THE BEGINNING OF 1857.	RATE OF WAGES PAID BY ME AT THE PRESENT TIME, DECEMBER, 1859.
Stonemasons, from 15s. to 16s. per day.	Stonemasons, from 9s. to 11s. per day.
Bricklayers, from 15s. to 16s. "	Bricklayers, from 10s. to 12s. "
Plasterers, from 14s. to 15s. "	Plasterers, (have not employed any lately in Sydney) but I believe from 9s. to 11s. "
Carpenters, from 13s. to 14s. "	Carpenters, from 8s. to 10s. "
Laborers, from 10s. to 11s. "	Laborers, from 7s. to 9s. "
Other trades, similar wages when employed by me.	But regular employment is in few instances obtainable at these rates,
GEORGE BROWN.	GEORGE BROWN.

Mr. John Garrod White called in and examined:—

819. *By the Chairman:* You are an engineer, I believe? I am.

820. And have resided in the Colony some time? I have been residing in the Colonies nearly eight years, but the former part of the time principally on the Melbourne side; for the last three years I have been residing in Sydney.

821. Are you a native of England? Yes.

822. I think you had been in some other countries before you came here? Not beyond England, Scotland, and Ireland.

823. This Committee of the Legislative Assembly has been appointed to inquire into the social condition of the working classes of this city,—first, with reference to the alleged want of employment at different times; secondly, with respect to the house accommodation for that portion of the inhabitants, more particularly in its moral and sanitary effects upon the lives of the people; and, thirdly, with respect to the existence of juvenile vagrancy. It was thought you might be able to afford us some valuable information on these various heads, and, if you please, we will begin with the first,—the alleged want of employment? I am acquainted with various persons in very many different professions, and have been a very close observer ever since I entered the Colonies—seven or eight years ago—but especially during the last three years that I have been in Sydney. My experience is, that the supply of labor in every trade with which I have been acquainted has been immensely above the demand.

824. You include smiths? Yes.

825. Carpenters? Yes.

826. Masons? Yes.

827. Bricklayers? Yes.

828. Engineers? Yes.

829. Shoemakers? Decidedly yes.

830. Tailors? Yes, tailors and shoemakers especially.

831. Founders? Yes.

832. Shipwrights? I am not acquainted with shipwrights to any extent.

833. As far as your experience goes? In every branch of trade with which I have made myself acquainted; and to obtain information respecting this subject I have not gone to the employed, because it might naturally be supposed that they would give the most unfavorable statements, but I have gone to the employers and have taken their evidence. I inquired of Mr. Venables, a builder, who is now employed putting up two buildings at the corner of Bathurst and George streets, as to his experience, and he stated that, being employed in that leading thoroughfare, masons, carpenters, bricklayers, plasterers, plumbers, glaziers, paper-hangers, painters, and others connected with the building trade, he could get in scores; but as to masons—to use his own words—"he could shingle the roof with them." I asked him at the time if he had any objection to my making use of his statement, and he said, "I have no objection to give a written statement to that effect, and to put my signature to it if I am requested." Mr. Rhodes, another builder, stated, that he regretted having put an advertisement into the paper, in consequence of having to disappoint so many who applied for the situation. The advertisement was for a carter, and before nine o'clock in the morning he had twenty-one applications.

834. How long was this ago? About a fortnight; and as to the statement which has been made of the determination of the men not to work below a certain rate of wages, Mr. Rhodes informs me that he has many mechanics coming to him who would be willing to work at laborer's wages.

835. What is the other name of this gentleman to whom you refer? Mr. Benjamin Rhodes, of Liverpool-street.

836. You have paid some attention to political subjects? I have.

837. I want to direct your attention to this position: that in a young country where everything is to be recovered from a state of nature, and where even those persons of capital who possess landed property can improve it by means of labor, to an extent to which there is hardly any limit; where everything, turn which way you will, pleads as it were with eyes and tongue for the hands of man to improve the wealth of nature—in a young country, where such is the case, how do you account for there being this dearth of employment? I can account for it very plainly.

Mr. J. G. White.

7 Dec., 1859.

Mr. J. G.
White.

838. Will you give the causes as they present themselves to your mind,—first of all you admit the proposition? The desirableness of a sufficient amount of labor, not of a superabundance.
- 7 Dec., 1859. 839. You admit the natural demand for labor in a young country? Decidedly; *provided always it is not forbidden to make use of these advantages.*
840. Just the abstract question you admit? Yes.
841. That being the case then, I want you to give your elucidation of the causes of this unnatural want of employment, where there is such a demand for labor in all directions? *Rather where there should be.*
842. Where there is naturally—I am not saying positively that there is a demand—but where naturally there should be? I attribute it to these causes,—first, and principally, to the unwarrantable and unjustifiable interference of the Government with the supply and demand, instead of leaving these things to adjust themselves as they would naturally do, but for that interference; by creating an artificial supply instead of a real demand, and allowing the supply to flow in as it would naturally have done. Six years ago masons were more in demand than the workmen at any other trade, and the natural consequence was, that in the course of time the supply became superabundant, as it is at present. I know the tampering of the Government with the labor market is one of the great causes. Another cause is the decadence of the gold fields, which has caused a considerable number of diggers to come back from them into the labor market; and, still worse, the conduct of the Government, which, after having brought this labor here, prohibits the employment of that labor, which withholds the country from settlement after it has brought the means of settling it.
843. I should gather from what you have stated that your view generally is this—that if the laws regulating the wild lands of the Colony were such as to afford every facility for the employment of labor and capital upon them, and that the natural attractions of the country were presented in their true light to the world, and at the same time that the public money was not expended for purposes of immigration, that these natural attractions of the country would originate a healthy kind of immigration, and things would adjust themselves, and remove this artificially produced distress which you allege exists. You have no doubt—you are positive—so far as your knowledge goes, that this distress does exist? I am willing at any time to take oath such is the case.
844. A good deal of evidence has been given before the Committee to this effect—that there is plenty of employment in the country, but that those persons who are out of employment in Sydney are so because they prefer hanging about the town, in the streets, scarcely a remove from starvation, to going into the country? Of course the same persons who gave such evidence did not give any reason why persons should prefer starvation in the city to living and having plenty in the country. I have been myself to almost the limits of the settled districts, in the western part of this Colony, but I have not been so much about this Colony generally as about the neighbouring one, though I have been far enough, from gold-field to gold-field, and my experience has been that there is a great glut of labor *throughout the country*. In the country, two hundred miles to the westward, I have found men anxious to get to Sydney in the hope of obtaining work, and in Sydney I have found men equally anxious to go into the country, influenced by the same hope. But I would direct your attention to this fact—for this is a constantly repeated falsehood as to the want of men in the country—just at the present time, at the reaping time, and also at the sheep-shearing, there is a spasmodic want, which lasts for a few weeks; but if a man has got as much wheat as will take one man ten days to reap, he will prefer to employ ten men for one day if the weather is favorable; and if there are not ten men to be had at his elbow, who have been waiting for employment, he complains of a scarcity of laborers. This is a mere spasmodic want: it is periodical; all the rest of the year there is no demand for these men, and they may starve under a gum tree. The fact I wish to draw your attention to is this—some time ago the Government put themselves in communication with the authorities of some sixteen different districts of the Colony, and requested to know what labor the districts could absorb provided it were *sent to them*,—and what was the answer? *Only two out of the sixteen stated that they could receive any at all.* So much for the false statement of the want of laborers in the country. Numbers go there in search of employment, and I have been there myself upon the same errand, and have been compelled to come back to Sydney unsuccessful. Such a state of things could not possibly exist as that the city should be glutted with labor, while there was a demand for it in the country, unless men prefer to starve instead of being fed. It is a perfect falsehood, and I challenge the authorities, whoever they may be, to the proof. The rate of wages is an infallible barometer, and if we refer to that we shall find that that *does* indicate such a glut of laborers. Here I am at the present time receiving ten shillings a day, and the highest wages when I have been working at my trade—although when I have not been able to find employment at that I have turned to something else—has been eleven shillings a day, and at the present time people are sending home papers with the false statement that we are getting fifteen shillings a day.
845. You refer to engineers? Yes.
846. In what particular way are you employed—in driving an engine? No; I am not at present working at any trade, but am employed by an importer in York-street in putting together and cleaning imported machinery, and agricultural implements. I think that the supply of labor is at least as great here as in England, where the rate of wages is the same, as I measure the remuneration, not by the money, but by what the money is worth.
847. What is the rate of wages for your trade in England? When I left it was 30s. a week; I obtained 30s. a week in London, where my board cost me 10s. a week.
848. You obtained, whenever you were employed, one half of what you have obtained here?
Yes;

Mr. J. G.
White.
Dec., 1859.

Yes; my board cost me 10s. a week, so that the labor of one week would support me three weeks. It is precisely the same here, where I receive £3 a week, and pay £1 a week for my board—so that, as I measure it, just the same remuneration is given here as in London. I receive just the same remuneration here as I did there, being a single man; but the married man is far worse off upon colonial wages than he would be at home upon 30s. per week, seeing that the rent and other expenses are double, treble, and in some cases quadruple what they are at home.

849. You said just now you had been unable to find work at your own trade? Yes; I have been three months out of work, on two or three occasions.

850. And you have then made it a rule to take any other employment that has offered? I have frequently not sought it, but I have taken it while I have been waiting in Sydney, in the hope of obtaining employment at my own trade.

851. I believe you are a steady man? I can bring three written characters which I have in my possession from Sydney employers, characters that are all I desire, shewing that it is not through my meddling with politics, or from want of ability in my trade, or from bad moral character, but through the supply being greater than the demand that I have been unemployed.

852. If you are not a teetotaler, you are not addicted to drinking? I have never been the worse for liquor since I was born. No man in Sydney ever saw me the worse for drinking.

853. I ask you these questions because it has been stated to the Committee that intemperance is the cause of the greater portion of the distress among the working classes? It is all a calumny and slander against the working people.

854. Are there many of the persons now suffering from want of employment—men who, of your own knowledge, are not only disposed to take employment, but who are of sober habits, and of reputable character? Decidedly; I would not associate with any other.

855. You have had a good deal of experience, I presume, in England among the industrious classes—will you be good enough to state to the Committee what is the general character of the working classes of Sydney, as to their morals, probity of character, and general intelligence? As far as I am acquainted among the mechanics and skilled artizans, the general state of intelligence is fully equal to that of the mechanics of any part of the mother country. Among the laborers I have found many illiterate men, and ignorant men, but you find them also among the laborers in England.

856. I suppose you could not find the same in the Legislative Assembly? Indeed, you may find plenty of ignorance there, especially on matters with which they ought to be better acquainted, or they would have let the glutting of the labor market alone.

857. You are a free-trader, I believe? I am. I do not object to the importation of my own trade if I have only fair play, I do not ask for protection.

858. You think one of our great political errors—certainly our greatest economic error—is importing labor to this Colony when the market is supplied? Yes. Instead of importing labor, it would be far better, if the Government have any funds to spare, for them to apply those funds to giving employment to the men who are here, to do the work that is wanted to be done. I say that any man who is ignorant of the glut of labor is ignorant of a matter he ought to be well acquainted with.

859. Has this matter ever presented itself to your mind in this particular light—that the money is contributed by all classes, while it is expended to compete with one particular class of the contributors? No doubt the laboring classes, both skilled and unskilled, are made to purchase competition against themselves; and another thing, the Government have helped people to carry out their own imprudent views in this respect; thus persons who are here, and who are totally unable to get back to join their families at home, prompted by their feelings more than by their judgment, send for their families to come out. This is done, not because the place is better for them, but because those who are here are desirous of having their friends around them. I knew an instance of a young man who sent home advising his brother to come out, and on the day of his brother's arrival he was discharged. This party said to me, "I sent home for my brother, and now he has come here he is dissatisfied, and wishes he had remained at home." I said to him, "If you look well to your own motives you will find that what you believe was generosity on your part was really selfishness; you thought you were seeking the good of your brother when really you were influenced by a wish to have your friends about you." If, as we are told by the *Sydney Morning Herald*, sending home for friends is an evidence that the people are doing better here than they could do at home, I want to know why people who are doing so well need ask for parish relief to pay the passages of their friends? In what way have they been doing so very well if they cannot pay the passages without assistance?

860. Do you not think that in the greater number of instances, let the parties be doing ever so well, if assistance be available they will avail themselves of it? Undoubtedly, they will pick up money if it be thrown down to them; people will not pay if they are ever so well off if they can be provided with a passage for nothing.

861. Then it can hardly be an evidence that the people are not doing well merely because they accept assistance? I think people can hardly be in a flourishing condition, or, if so, that they must be dishonest to seek to bring out their relatives when, by the very act, they state that they are doing well themselves, and are consequently able to bring them out without assistance.

862. You said just now something about the opening of the lands, or that it was the want of sound regulations in this respect, that were the cause of the distress? One of the chief causes.

863. Supposing we had a law regulating the management and sale of public lands which would

Mr. J. G.
White.

7 Dec., 1859.

would afford the greatest facility for settlement, by pointing out the character of the country most available for particular pursuits, and bringing it into the market with the least possible delay, and at a price based upon this principle of getting the people into the country as a primary object, instead of merely making a revenue out of the soil; and, at the same time, carrying with it this principle of providing means of education, and for the construction of roads out of the revenue so raised; at the same time, establishing in the mother country, agencies that should make known the condition of the country, give accurate and full information to people seeking to immigrate—do you think, if all these facilities were afforded, so that simultaneously roads might be constructed, and means of education arise with the settlement of population on the lands, and this state of things were made known in the mother country to intelligent and provident persons wishing to immigrate, it would induce an immigration of a better and higher character than we have had? Decidedly it would; immediately men found there was something worth coming for they would come.

864. Is this state of things which I have thus imperfectly tried to shadow out what you mean when you say immigration would work naturally if people were left to themselves? It would not be working naturally if you sent home agents to represent that the Colony was an earthly paradise.

865. I am supposing that they would represent the truth? The truth will be sure to find its way. When a new gold field is discovered, the discoverers endeavour to the utmost to keep the knowledge of it to themselves, but one tells one friend in confidence, and another tells another, till the gold field is over-run. I have seen at the gold fields, in one week, a rush of four or five thousand, and I have known from thirty to forty thousand collected together in four weeks, at Fiery Creek, in Victoria, though the persons who first discovered it endeavoured to conceal it. And so, I say, if there were anything worth coming for here, we could no more prevent the knowledge of it spreading than I could eclipse the sun with my blanket. It is not that there is not plenty of good land in the Colony; if I were told that I could have a hundred acres, I could find plenty on the banks of the Macleay, the Richmond, and the Clarence, where might be grown more than would feed the population of the whole Colony.

866. They say you would not know what to do with it if you had it? And I say I should. I would go to the Macleay, the Richmond, or the Clarence, and find plenty of splendid soil on the banks of those rivers, whence the produce could be brought by the natural road direct into the harbor of Sydney. This would be far better than saddling the country with debt by forming roads over the Blue Mountains, leading to nowhere. Let me have the power of taking up a portion of the land and I will find land suitable for cultivation, and then I will send for my relatives, because I know that by coming they will better their condition. Now, when they send to me and ask me whether they shall come, I reply, "By no means, if you are doing badly where you are you will do worse here, in addition to being severed from "all your old friends and associations, and the comforts of home." For, I contend that it is not enough that a man shall do as well here as at home; to be compensated he should do better: what does he come for—for what does he pay the price of his passage, break up all his old associations, go to live in a den which no decent working man at home would put his head into—if he is simply to receive the same wages and to be placed in the same position as that which he was in at home? What is to indemnify him *even* for the loss he is at in coming out? I say, therefore, it is not enough to shew that a man is as well off by coming out here as he would be at home; he ought to be better: until this is the case, I say we are not justified in sending to England such grand reports. Some few years ago I saw in Essex some placards posted about, headed "Emigration to New South Wales.—Land £1 an acre." And when I came here I found a reserve price upon the land of £1 an acre, and a system in operation to prevent the people purchasing the land. Now, when such falsehoods as these are distributed through the country, and are ultimately discovered, people will not believe statements of a favorable kind when they are sent home, even when they are true. The object of preventing the purchase of land is, as it was said in South Australia, to keep labor cheap. Now, I would ask, can you point me out a country in the world where the supply of labor is greater than the demand where there is abundance? Does not cheap labor mean unrequited labor? I define cheapness to be buying a thing for less than its value; if you give more than its worth for an article you buy it dear, and you are a loser; if you give less than the value for an article you buy it cheap, and somebody else is the loser; but if you give the intrinsic worth you buy it neither cheap nor dear. If labor is cheap it means abundant poverty; if labor is dear it means a loss to the employers; but this is a state of things which cannot possibly continue but for a very brief period, and can only be caused by some sudden convulsion—such as the discovery of the gold fields, when such a state of things did exist, which was the lesser evil; and it is far better that a master should want a servant than that a servant should want a breakfast, and that I take to be the state of things here,—for every man who wants a servant fifty men want a breakfast.

867. Coming to the other branch of our inquiry—can you state any opinion from your own experience as to the efficiency of the house accommodation in the dwellings generally occupied by the working classes of Sydney; whether in their construction there are the necessary means of ventilation, of cleanliness, and drainage, for the preservation of health? It is a matter I have not paid much attention to, but, as far as I have, the state of things is almost invariably what it should not be. In the house where I live the back yard is the length of twelve bricks, or nine feet square, where every convenience or inconvenience is placed in juxtaposition. Where people are obliged to live five or six in a room of course they are morally as well as physically injured.

868. Do I understand that you pay 20s. a week for board and lodging? Yes, and I have done so for three years past.

869. Can you state, as far as your knowledge extends, whether it is the general rule in occupied houses of this kind, where the tenant has a small family, that the houses are sub-let, or lodgers are taken in, with a view of reducing the rent? Amongst the working classes almost all the married people do take in lodgers, with a view of reducing the rent.

870. Thus trenching upon the comfort and decency of their own families? Yes.

871. Do you know of your own knowledge whether families consisting of a man, his wife, and one or two children, live and sleep in one room? I do; in order to reduce their expenses by making room for lodgers.

872. I mean more particularly where they live, eat, sleep, and perform all the offices of domestic life in one room? Yes; but I have not dwelt in such houses myself.

873. That, of course, you, as an intelligent man, will admit must have a detrimental effect upon the physical stamina as well as upon the moral feeling of these people? Yes. It is the price society has to pay in consequence of the glut in the labor market that the moral condition of the people is degraded, and the public health is endangered.

874. Has your attention been turned to the state of the children in these places? No; only that they are most astonishingly abundant; they carry out Malthus' opinion—that they double every twenty-five years; here I think they double every ten.

875. In your experience about town, do you see children in a state of neglect in the streets? You need not walk far to see that, in almost any street in Sydney.

876. Do you think there is much of what may be called with truth juvenile vagrancy in the streets; that is, children of tender years either without parents or with parents of no value to them, growing up in a perfectly wild neglected state? I have met with such instances, but it is a matter I have not paid much attention to. I have even seen female children of not more than fourteen years of age turned on the street through the neglect of their parents.

877. We have had it stated in evidence that prostitution, which appears to have been on the increase for some time past, includes children of tender years—as young as eight or ten? I cannot say I have seen anything of that.

878. Probably you do not know much on that subject? I have noticed that a great deal, and so far as my experience goes of England—and I have visited ninety-eight cities, market towns, and boroughs in England, Ireland and Scotland—there is considerably more prostitution here than in the mother country.

879. A considerable portion of these unfortunate creatures are quite young? Yes, fifteen or fourteen years of age; I have seen them as young as that, I could not say whether they have been younger.

880. *By Mr. Lyons:* You say you have been in Melbourne? Yes.

881. Had you any better opportunity of being employed there than here? At the time I was working there employment was not more easy to be got, but wages were higher. In 1852-3-4 and 1855 I was in Melbourne and on the various gold fields.

882. By comparison, what do you think of the state of things there and here; is it worse here than in Melbourne, or do you think the same surplus labor is to be found in Melbourne as here? Decidedly there is the same surplus there; I am speaking of three years ago, but the higher wages we are told they get there, does not really exist. The value of money is what that money will produce, and, looked at from that point of view, the wages are not high. When I was at work in 1853 at the foundry of Mr. Langlands, a journeyman who had just arrived, and was employed there at the anvil, was engaged at £6 a week, and he said to me, when he was paid at the end of the week, "I felt ashamed to take my wages." He looked at a sovereign as twenty shillings. I said, "You will get rid of that shame when you have to meet Melbourne prices as well as Melbourne wages." A week afterwards I said to him, "What do you think of the Colony now?" He then told me that he had to pay £4 a week for a house in Flinder's Lane. I said—"You see now that the worth of money is what it will get; you are now receiving £6 a week, and you are paying two-thirds of the produce of your labor for rent. In London you would get 30s. a week, and you could get a house of the same quality as that for which you pay £4, for 5s., so that if you are paid high the money is not worth so much." That is the proper measure of a man's wages—how far the money he receives will minister to his wants. As the *Melbourne Herald* said, "High wages are neutralised by high prices."

883. You have expressed a decided opinion that the Government are doing an injury to the country by carrying out immigration? Certainly.

884. Do you object to the system of immigration which allows of persons sending home for their friends? I object to their being assisted out of the public revenue. I have no objection certainly to their sending for them, if they do not call upon the country to pay for them. I have no objection to the Government doing it, provided the supply of labor is not greater than the demand, but while there is a superabundance of labor I do object. So long as that exists I think the Government would much better employ their money by giving employment to those who are here, than by sending home for more labor to add destitution to destitution.

885. Do you not think that if the Government were to educate the people we should have much less distress? I think if they were to devote their attention to feeding them first it would be better. I always received my breakfast before I went to school, and I do not think I studied any the worse for it. The wants of the stomach are more urgent than those of the mind. I never received much education in my life—not more than two or three years—and I have been able to get through the world tolerably well; if I have not, it has not been through

Mr. J. G.
White.

7 Dec., 1859.

Mr. J. G.
White.

7 Dec., 1859.

through want of education. Many men get on very well who have not had education, and many who have had education have not succeeded. It does not follow because a man has had education that he shall not know poverty.

886. Do you not think education would prevent juvenile vagrancy? What amount of education could these really juvenile vagrants receive?

887. I allude to the parents—would not education lead to the protection of children? If they have education it is beneficial, doubtless; but I have seen people who have been well educated who have neglected their children very much, quite as much as those who have been uneducated.

888. You are decidedly of opinion that the only way to remedy the existing state of things is to open the lands? Not the only means. I think the proper means is to cease to tamper with the labor market, and to allow these things to find their natural level, and to allow the fullest facilities for those who are here to settle in the country, not to have recourse to hot-house means of forcing settlement, but to leave it to its natural course. I am fully satisfied that poverty has no natural cause for existence in the Colony—that it is all artificial. If a proper system were adopted, the best of all immigrants would come here and occupy farms. I have a relation in England, who is a farmer, settled on a farm. He has five sons who have been brought up on the farm and are acquainted with agricultural pursuits. The father cannot extemporise farms, and therefore these young men must either sink into the class of agricultural laborers or be destitute. There is a large class of this kind of men who are looking abroad to make a home. Now these are just the men we want here; and if they could come here, and, under a system of free selection, select a farm as they could go on the gold-fields and select a claim, they would come out here; they would produce more than they would consume, and we should soon find consumers who would relieve them of their surplus produce.

889. *By Mr. Windeyer*: Do you think these people would come here in preference to going to the United States, if the same facilities were held out? A great many would come out who value comfort more than money, knowing—and that is a matter which is now pretty well ventilated in England—that the climate here is splendid, and that a man can work all the year round, which he cannot do in Canada. Many have objections to the state of society in America, and would come here in preference. It is objected that the difference in the cost of the passage causes many to go to America; but where a man has a small capital in his pocket, the difference of the price of the fare to America and to Australia would not be weighed for a moment against the advantages they would get. I consider that if anything be charged for the land at all, the only natural price is the expense incurred by the Government in surveying it and making out the deeds, and that that is what I should pay for my share. We all know that the Crown lands, as they are called, are the people's property, not merely the property of the people who are here, but of the people of Britain generally, provided they will come here. It is for the Government to determine what each man's share is. Some people must get the best land, and who so worthy as the first men who go upon it?

890. *By the Chairman*: There have been several meetings during the last year of the unemployed, as they have been designated; can you state to the Committee what has been the character of these meetings in this respect,—whether they have really consisted of persons who have been actually wanting employment, or of loungers about the city; I use that term because it has been given in evidence that they have consisted of mere idlers about the city, who would not take employment in the country? I have not been at any of these meetings for the last twelve months, or more, perhaps eighteen months, and I do not therefore know anything about those meetings; but at the meetings I did attend, though undoubtedly there would be a sprinkling of such characters, as there always are at assemblages in great cities, the bulk of the people who attended wanted employment, and would have been willing to have taken it in places of which they knew nothing. This was proved when they came before the Government Committee—

891. How long is that ago? I do not know exactly; it was at the time when Government voted £5,000 to send these men up the country. Men were willing to go to Port Curtis—this was before the discovery of the gold there, and when they knew nothing of the place; they went to Braidwood, to Bathurst, to Moreton Bay, to Wide Bay, to any place which Government would send them. These were genuine cases of misery; for what man would take his wife and family to an unknown place, not knowing whether the climate were hot or cold, upon such a shaky foundation as the promise of a week's rations, and, for all he knew, liable, when he had consumed them, to be turned in the bush, unless he were in the utmost want? No doubt the Government did not intend that they should be so turned adrift, but the men themselves did not know that.

892. *By Mr. Windeyer*: You do not think there is any truth in these allegations, that the greater part of these persons who state that they are in want of employment would not go into the country if they could obtain employment? I am perfectly certain it is false; I could get twenty men to-morrow who would be glad to go.

I have hitherto spoken principally of the mechanics and artificers: I wish now to direct attention to the lamentable condition of the unfortunate laborer, whose condition is far more pitiable. Some months ago I was employed as an engine-driver, at a mill between Botany and Newtown, where a few laborers were periodically required for a short time. The work was of a very disagreeable kind and highly injurious nature, producing inflammation of the eyes and lungs,—work which no man would select from choice, nor return to a second time if employment was easy to get; yet I have known men return to it again and again, notwithstanding the nature of the work and the difficulty of finding the place to a stranger, being a mile from any public thoroughfare. Whenever an advertisement was inserted in the papers for laborers, considerably more than were required

required would quickly make their appearance. On one of those occasions, when some half-dozen were required, and *twenty-eight* had already made application, I said to my employer, "Well, what do you think of this state of things in a new country? what is your opinion of the state of the labor-market? do you not think that those inflated and untruthful reports of the state of the labor-market sent home from this country are entirely without foundation?" My employer turned on his heel, smiled, and walked to his house, and I to my furnace, to see the men sit down to a meal of dry bread and weak tea with less sugar.

Mr. J. G.
White.

7 Dec., 1859.

WEDNESDAY, 14 DECEMBER, 1859.

Present:—

DR. LANG,
MR. LYONS,
MR. PARKES,

MR. PEMELL,
MR. PLUNKETT,
MR. WINDEYER.

HENRY PARKES, Esq., IN THE CHAIR.

Mr. William Bell Allen called in and examined:—

893. *By the Chairman*: You are a soap and candle manufacturer? Yes.
894. How long have you been engaged in business in Sydney? Eighteen years past.
895. You have been an employer of a considerable number of men, I believe, at different times? Yes; I have always been an employer since 1841.
896. What number of men have you employed when you have had the greatest number in employ? About thirty.
897. Your business necessarily takes you a great deal about town, and brings you into communication with different classes of people? It does.
898. Besides this necessary intercourse in the prosecution of your business, you have directed your attention a good deal to the condition of the people generally? Yes.
899. This Committee has been appointed to inquire into the condition of the working classes of this city, more especially with reference to these three heads of inquiry,—first, the alleged want of employment at different times; secondly, the house accommodation in its sanitary and moral effect upon the habits of its inhabitants; and, thirdly, the alleged existence of juvenile vagrancy in public streets.—Will you have the kindness to state to the Committee whether any instances of want of employment have come under your notice at different times? A man, George McAnally, who has been in the Colony as long as I have, told me this morning that for the last five months he has been out of employment, with the exception of six weeks that he got employment, on the absence of a man from sickness from his situation. That, with three days additional, is all he has had for the last five months; and this day, he told me, he did not know what to do or where to go, that there is no prospect for him.
900. Is he a tradesman? Yes; he has been a baker; after that he was a commission agent for the sale of produce from the country; and latterly, I think, he was working—that is during the six weeks I have referred to—in a store at Sussex-street. He is willing to do anything that would offer, and is an intelligent man.
901. Where did he carry on business when he was a commission agent? In Sussex-street.
902. Is he a man with a family? He is.
903. Can you speak to his general character? So far as I know him, he is an industrious, steady-going man.
904. Sober? Yes.
905. It is given in evidence before this Committee that there is always plenty of employment in the country for persons who are not able to obtain work in town, but that there is great reluctance on their part to leave—that in fact they would rather live in a state of precarious employment, only a remove from destitution, in Sydney, than go into the country to be regularly employed? That is the feeling, I know, but it is not true. Men in the country are precious glad to get to Sydney, because there is nothing for them to do in the country. I may state that there were some of my men who went into the country at the time of the discovery of gold at Rockampton, and within the last twelve months they have returned, and they say they could not get a living at gold-digging, and could get nothing to do in the country. Their report to me was that the men in the country who are unsuccessful at gold-digging always endeavour to make their way to Sydney, expecting to get something to do here, which they could not in the country.
906. Of course you will admit that in a country like this, where everything has yet to be done by labor, there ought to be employment for the population? I will admit that very freely.
907. How do you account for the scarcity of employment? I will very soon account for that. In residing in a country you expect to get your food from that country, and the production of that food will give employment to the people. Instead of that, we send to Boston, to California, and to all parts of the world to fetch our food here, which is grown and produced by foreign labor. How then can your own people have employment in growing it?
908. *By Mr. Plunkett*: Then the stories of these men you think support the principles of protection? Say what you like, you may put it on what footing you please, but that is the truth and fact.

Mr. W. B.
Allen.

14 Dec., 1859.

Mr. W. B.
Allen.

14 Dec., 1859.

909. *By the Chairman:* Do you think the case of the person you fell in with this morning represents many others? It may be taken as a type of his own class—that is, of intelligent men, who are more fitted to manage business than to drive a bullock. With regard to employment in the country, I would state that a very few years ago—within the last four years—wheat was sold by the cargo at from 25s. to 30s. a bushel—foreign wheat; the next year, the year in which Kennedy's mill was burned down, wheat was sold at 3s. 6d. a bushel. I lived next door to the mill, and often conversed with the farmers, and I have been told by them that wheat has been sold by them for 3s. 6d. a bushel, which cost them 2s. 6d. for carriage from Goulburn. Under such circumstances, it is not likely that farmers will grow wheat. Potatoes, again, during that high year were sold at £30 a ton, and the next year I carted them from the wharfs to my farm at Waverley as manure; they were glad to give them away. Cargoes upon cargoes from New Zealand and California were thrown away. The natural tendency of this state of things was that the Shoalhaven large potato growers were entirely ruined, and their servants—the laboring people upon their farms—were discharged; so that a year or two afterwards, as far as my information went, there was not a settler on the Shoalhaven side that had a single paid laborer at work.

910. These two years which you place in contrast, did they follow upon each other without any intervening year? Yes.

911. The high year, as you call it, was the first? Yes.

912. Do you not think, without reference to protective duties, that the cheapness or inability to sell at any price which you say occurred in the second year, was the natural consequence of the very high prices of the preceding year attracting produce from all parts of the world, and that a glut was thus caused which no legislative contrivance could have moderated? I do not believe that.

913. Is it not the case in all commercial matters that high prices are a temptation to over-supply a market, and thus to cause a rebound? I understood that I was speaking with regard to the finding of employment for people in the country, and not with reference to the mercantile view of the matter; of course the effect of a high year would be what you say: people would be on the look-out to consign goods of this class to us—grain, flour, and so on—but I do not think our own merchants would be much taken in that way. But the tendency of the high prices that year was to draw every one into the business of farming who could cultivate an acre of land, and then when he came to market with his produce he found that the importer had glutted the market, and thus he, the home-grower, was ruined.

914. High prices attracted supplies from all parts, and induced persons at home to cultivate the land who had never thought of cultivating before, and those who did cultivate before were induced to cultivate more? Yes.

915. And this produced a glut which could not be moderated to any appreciable extent by protective duties? I differ from you. A protective duty would have equalised the years, and would have kept the prices here as low as the produce could have been raised for; the competition would have been at home; between the growers, the farmers would have got on, and the supply would have been equal to the demand. Occasionally, no doubt, the supply may be short of the demand, but on the general average it will be equal to it. Now here is California—at that place they have a protective duty upon productions of that class.

916. You have been in California, and it was there, I understand, you imbibed your notions of protection? Yes. I have known at that place onions at a dollar a pound, and potatoes from Hobart Town ten cents a pound, and now California, with a protective duty of twenty per cent. in favor of its agricultural produce, has a full supply for the mouths of all its people, and sends its surplus produce to feed the people of New South Wales.

917. Can you give us any distinct facts of trades that have fallen away and died in the Colony on account of foreign competition, or of trades which, in your opinion, would be encouraged and sustained against foreign competition by some moderate duty? Yes. When I came here, eighteen years ago, there was scarcely a foreign tobacco pipe used; they were all made about Brickfield Hill; no such thing is now made in the Colony. Nearly all the nails at that time used in the Colony were made here; everywhere you went you saw the nailers at work in the evening. Now there is only one nailer in the whole town, at Brickfield Hill, and he makes only a peculiar sort of nail which is not in general demand, and is not imported. Another branch of manufactures once carried on here was rope making; the greater portion of the cordage that supplied our own whalers was manufactured here eighteen years ago. Every one who was here at that time will remember that on the Race Course, at Black Wattle Swamp, the back of Dixon's Mills, and other places where there was a long walk, the wheel was constantly going, and New Zealand flax was being manufactured largely into cordage. I am not aware that there is now a rope maker in the whole place. Then, again, there is tweed making. When we first had representative institutions Mr. Wentworth appeared on the hustings in a suit of Colonial tweed at the first election. When he and Mr. Robert Cooper contested the election, Mr. Wentworth—as fashionable man at the time—was dressed in Colonial tweed. Mr. Benjamin Boyd and Mr. Robinson always appeared in the Assembly in Colonial tweed, and the greater number of the people you met in the streets were dressed in the production of our stations and our looms. Now I do not think there is one inch of Colonial manufacture upon any gentleman in the Colonial Legislature. Before the gold diggings were discovered Mr. Barker's manufactory was in full work, and Mr. Walker, his partner, who had the management of it, (latterly of How, Walker, and Co.,) made as fine shawls for ladies garments as were required by the country at that time. Mr. Byrnes' factory was at work making tweeds, better than any I have seen from any part of the world. Fisher and Donaldson were at work at Newcastle, making excellent goods. The Botany people, Mr. Lord's, were at work; Rayner's people were at work; at Dickson's mills also. All these factories I suppose would employ a thousand families.

918. You are aware also, that there was a large factory at Muswellbrook, in the interior? I am speaking of the people about Sydney, who had to look to Sydney for their market. Mr. Barker's factory, now belonging to Mr. Campbell, is the only one at work in the whole Colony, with the exception of one little place near Hartley, and one at Penrith. We do not encourage our own looms, but the people of Melbourne are clothing their Rifle Corps with the produce of Mr. Campbell's factory. Mr. Campbell has contracted with the Victorian Government contractor for the dress of the corps; it is a drab, faced with green, a beautiful green. With respect to tobacco—I have not the statistics about tobacco very clear, but they will be found among the papers published by order of the Houses. I know, however, that a great deal of tobacco was grown in the Colony.

919. Have you ever seen it in its marketable shape in Sydney? Yes, hundredweights of it.

920. Do you use tobacco? Yes; but Colonial tobacco is not so good on the average as Virginia.

921. Will you state what was the difference of value in the market? I do not know the difference of value; I know that in smoking it burned the mouth, but it was got up to look as well, and when it was kept some time sold freely; some of the best that was manufactured by Mr. Boydell at Maitland was often sold for imported tobacco, and was as good in every respect; that was when it was manufactured properly, and had been kept some time. When that branch of industry was in full fling, and the attention of the people of the Hunter was turned to it, and they had the knowledge and experience necessary to bring it to perfection, foreign tobacco was almost beaten out of the market. At that time the duty on tobacco was 2s. a pound; the duty was then reduced to one shilling a pound, and the stoppage of the growth of tobacco was as instantaneous as would be the stoppage of the team or the plough if the cattle that moved them had been struck down by death. Instead of having 731 acres under the tobacco plant, as in 1851, there were only eight acres in 1854; thus the plantations of tobacco were swept entirely away. Now the duty is equalised a little, is fixed at 2s. a pound, things are a little better; but this duty acts in the same way as a protective duty, and the people are gradually increasing the growth of tobacco here. In order, however, to give proper employment to the tobacco grower, the duty should be, on the leaf, 2s. a pound, and on manufactured tobacco, 3s. That would bring into employment all the spinners and twistors of tobacco.

922. Shoemakers? A long time ago there were very few imported boots and shoes here, but that home trade has now greatly fallen off. I do not think I could give better evidence of this than to ask any gentlemen of the Committee to look into the shoe shops of George and Pitt streets, and to observe how very little colonial work there is in those places; or to go to Dean's auction room, or to look at the manifests of the ships that arrive, and observe the quantity of imported leather goods; but you have in the Blue Book the statistical information of the quantity of leather goods imported.

923. When you require men for your own business do you advertise? I dare not, because I would be over-run with them.

924. Have you any difficulty in getting them? I could get a hundred men for one that I want.

925. At the present time if you want a laboring man could you get your pick out of a hundred? Yes, if I advertised.

926. What wages are you giving? 35s a week, with constant employment.

927. With regard to the house accommodation of the laboring classes in Sydney, have you had any means of judging of it? I have not had much. I do not think it is in a bad state; I think the accommodation is good enough.

928. You think the room is sufficient, and the means of ventilation and drainage are sufficient to preserve health? I could not answer that; I do not know; I have not been in many of their houses.

929. Where is your manufactory at the present time? One part is in Sussex-street, the other at Waverley.

930. In Sussex-street are there not a number of low tenements so situated, so crowded together, so ill-constructed, and so deficient of out-houses, such as privies, wash-houses, and all those means of cleanliness, that they must necessarily be unhealthy? I think there is a great deal in what you say, but I have not visited them so as to be able to state anything positive about the matter.

931. With regard to the alleged vagrancy in the public streets, do you think that exists to any extent? I believe the young people of the laboring classes in this Colony are worse off than in any European country, so far as I can judge from reading. They are totally neglected, and entirely thrown upon their own resources, and are left to pick pockets, steal, hold horses, or do any other things they can get for themselves. There are no means of giving them employment, even their fathers have not employment. It used to be the case when Barker's and the other tweed factories were in full work, that there were a vast number of youths, from fifteen years of age down to nine, employed in the mills, and also a large number of girls; but there is no such employment for them now. I mean to say that these mills are doing so little, the number employed by them has no sensible influence upon the bulk.

932. Have you ever thought of the future condition of people here with regard to employment for the rising generation—have you ever turned your attention in that direction? Yes.

933. Do you see any sufficient avenues for employment? If our present policy is to be continued—I mean with respect to free trade—I do not see what these youths can be brought up to do, or what they will eventually turn to; for farther than as stockmen and bullock-drivers there is no employment for them, with the exception of the very few who may be employed by farmers, and another few who may become bricklayers and stonemasons; but that is a very small portion.

Mr. W. B.
Allen.

14 Dec., 1859.

Mr. W. B.
Allen.
14 Dec., 1859.

934. Can you form any opinion, as far as your personal observation among them has gone, as to the disposition to marry among young men growing up in the country? I do not know anything scarcely of a country life, but I know the young men whom I come in contact with in my business are married before their circumstances will properly warrant them in marrying; however, when they are in constant employment, they can support their wives very well.

935. I understand from your answer that you think the natives of the country marry young? The people of England, according to Professor Bowen, I think, marry—the men about 25 years and 5 months old, and the women somewhat younger; the people of America marry rather older—25 years and 9 months; but I think the youths of this Colony are married, on the average, at 23 or 24 years of age, which is much earlier than either the people of England or of America.

936. When we were speaking about children being in a state of destitution in the streets, in a state entirely uncared for, did your remarks extend to females as well as to males? Yes.

937. Have you had any means of noticing whether prostitution has been on the increase lately, as far as you can judge? I see a great number of girls knocking about the streets, that is all I can say in the matter. Oh! yes, I can say that an instance came under my own notice, not very long ago, of a young woman who had gone astray, and when she was spoken to upon the subject her answer was, What could she do; she had no means of living, and she had no other resource left.

938. *By Dr. Lang*: You think the period at which young people get married in this country is considerably earlier than it is in England? Yes, according to the statistics of Professor Bowen. I think the men in England, on the average, get married at 25, and the women at an earlier age.

939. What is the average in America? I think somewhere about 25 or 26, although he gives some instances of people marrying much younger—younger even than 20.

940. *By Mr. Pemell*: Do you not think anything but protection would alter the existing state of things,—suppose the land laws were altered so as to allow of people settling on the land? If you give the people as much land as they can plot out, unless they can sell the articles produced they cannot live on it. If you employ the people of Boston to grow breadstuffs for you, the people of this Colony cannot compete with them, as they can bring wheat from Boston for thirteen pence a bushel freight.

941. *By Mr. Windeyer*: What is your opinion of the present system of immigration? I think it is monstrously absurd that we should pay for immigration. I think all you have to do to populate this country is to foster its industrial pursuits by a good protective policy;—the people will then have plenty of employment, and then, instead of having to seek for immigration, the whole world would seek you.

942. *By Dr. Lang*: Are there no other employments than those at present prevalent in the country that would give employment to a large proportion of the Colonial youth? By a bounty system. I would recommend the adoption of the system which the English Government extended to the Irish Flax Society in 1847, and give a bounty to the district of Illawarra for the growth of flax. In that part there are a number of men from the North of Ireland—Ulstermen—who know more of the growth of flax than the people of any other part of the world. If the system extended by the British Government to the Irish Flax Society since 1847 were applied to this part of the Colony, you would grow a greater exportable produce than the whole wool of the Colony altogether, and give vast employment for the people for a long time to come.

943. Are there not branches of labor that would afford remunerative employment both for youths and adults in any number, in which we could not fear competition with any European country? It must be in raising produce of an exportable character; you can do nothing for home consumption merely without bounty or protection.

944. Do you not think the culture of cotton—to which this climate and soil are favorable—would afford employment of a profitable character? With respect to cotton growing, I have read the opinion of a southern planter, in a tract published in 1844, and he states that the South Carolina cotton-planter can grow cotton at three half-pence a pound; one man will grow three thousand one hundred and fifty pounds weight a year. Now, it is matter of calculation whether we could compete with them in the growth of cotton with free European labor. It may be done no doubt, but it must be done by bounty; protection would be of no avail in such a case. You cannot establish the cultivation of a new exportable production by a protective policy, but you can take Mr. Holt's plan, and give a bounty of so much per bale on the cotton exported.

945. Is there not another branch of labor in the growth of the mulberry tree, and the raising of raw silk,—would not that afford employment to a large laboring population of children and adults? It would in densely populated countries, like those of Europe, but it will afford no permanent employment for any number of people in this country, until we have far exceeded the population that we are likely to see here in our lifetime.

946. What reason is there for supposing that a family consisting of sons and daughters capable of engaging in agricultural labor, having means, and in possession of land—what is there to prevent such a family doing as well in the branch of labor here as in Lombardy, where the climate is similar? Perhaps they might —

947. Do you think there is a necessity for a larger number of people to be here than there are at present, if those who are in possession of the means in their own households are disposed to engage in this branch of labor? In speaking on this subject, we must remember that there is a vast difference between an old country, where all the machinery is ready to the hand for carrying on the work, and a country like this, where we have nothing but gum trees to begin with.

948. *By Mr. Windeyer*: You think that—granting the theory of free trade is true—there may be occupations which the people of the Colony might take to, but which would not be remunerative, because under the present system there is no market for the products that might be raised? Yes.

Mr. W. B.
Allen.

14 Dec., 1859.

949. If we could produce these articles, we should be beaten out of the market by foreign competition? Yes, for home consumption, if you keep free ports. For instance, if you want to grow silk, the value of the labor employed must be of the average value of labor in other countries where silk is produced; and if the average value of labor in Lombardy is one-fifth what it is here, we cannot grow silk until a duty is imposed upon imported silk equal to the difference in the labor of the two countries. That would bring up the value of silk to par with labor. A new country never can have a low rate of wages.

950. I presume you do not think that mere cheapness is the only thing to be looked to in the commercial policy of a country? Certainly not; for it does not matter a straw to me whether I receive five pounds or five pence for a day's labor, if five pence will purchase for me of other men's labor as much as five pounds. In counting the value of money, what it will procure must be looked to. My labor, in small pieces, through the instrumentality of money, is exchanged for the produce of the labor of other men; but when you bring foreign competition you destroy the home standard of value, and I have to work against a different measure of cheapness. A man can do as much here, with the same machinery and under similar circumstances, as he can in another country. No matter what the wages are, he can produce the goods nationally as cheap as the manufacturer in the other country; but the value of money (the standard by which the labor is measured) may be different in the two countries; so different, that the same amount of money may purchase twice the number of yards in one country that it will do in the other; yet, nationally speaking, the goods are of the same value to both countries, because they cost the same number of days' labor in each.

951. I suppose you think that in legislation we ought to have in view the finding of employment for, and the development of the mental capacities of the natives of the country? Yes, certainly I do.

952. Even at the risk of paying a little more for what we use? We cannot pay too much for the development of the mental capacity of the people.

953. *By the Chairman*: You have given us several illustrations of the manner in which our manufactures have died out since the present tariff was established? Since the discovery of gold.

954. That was almost contemporaneous with the establishment of the new tariff? Yes. I would wish to state my views with respect to the tariff.

955. You think the decline of these manufactures has been consequent upon the withdrawal of the protection which existed previously? There was no protection that I am aware of, but the poverty of the country protected itself,—for no one would trust it till the discovery of gold.

956. There was an *ad valorem* duty; tobacco, for instance, was protected? Yes.

957. At all events, you think a system of protective duties would revive these manufactures? Yes.

958. To take one instance,—what duty do you think it would be necessary to put upon tweed, to set all the tweed factories at active work—I presume the duty would be precisely the amount of difference between the cost of their produce and the cost of that of foreigners? According to my views the Americans have established a very wise plan with regard to their muslin trade; their tariff runs in this way,—a piece of muslin or of cotton goods—no matter what the value—is dutied at a certain amount; it is inappreciable upon fine goods, but it raises the price of coarse goods so high that they cannot be sold, and then the home manufacture comes in and supplies the demand. Suppose we had a shilling a yard upon three-quarter wide woollens,—that shilling a yard would put every tweed factory in the country at work in three months. The duty would not be felt upon fine black cloth.

959. *By Mr. Windeyer*: With reference to tobacco; at the time the duty was repealed were there not thousands of acres in the Hunter River District thrown out of cultivation, which have since lain idle? Yes, there were 731 acres then under cultivation of tobacco; that was brought down to eight. I think, under the present system, the quantity of acres has increased; but the manufacturing is now destroyed, and the leaf is only used to mix with foreign tobacco.

960. *By Dr. Lang*: Do you consider that slave labor is cheaper than free labor? I do not think slave labor is so cheap as free labor in a cold climate, but in a place where the temperature is very high, and where a white man is not intended to live, I think it is cheaper.

961. Supposing there were climates where the health of the white man would be as safe as that of the negro—do you think slave labor could be as cheap as free labor there? I can only speak from what I have read. Webster and Clay both go for free labor; and they say, if they could get the produce of the Southern to grow in the Northern States, free labor would beat the slave labor out; but in the States where white people cannot live of course they must employ blacks.

962. *By the Chairman*: You said just now that you desired to give your views upon the construction of our tariff, upon such principles as would prove beneficial to the industrious classes—will you have the goodness to append to your evidence such information as you desire to give the Committee? I will. (*Vide Appendix.*)

Mr. W. B.
Allen.

APPENDIX.

14 Dec., 1859.

IN availing myself of the permission granted by the Committee, to give my views on the construction of a tariff favorable to the industrious classes, I would state that the tariff most favorable to them will also be best adapted to the welfare of the mercantile classes, and at the same time produce the largest amount of public revenue.

In the preamble, the Tariff Bill should state that its objects are to give encouragement to Colonial industry and enterprise, and for the purposes of public revenue. This statement would give confidence to capitalists in entering on new enterprises, and assure them that when they get their mills and factories at work, they would not be exposed unguarded to the overwhelming competition of the whole world, as at present. It would also attract manufacturers and machinery from Europe and the Atlantic States of America. Duties should all be laid, as far as possible, on the English plan,—that is, specific duties where practicable, *ad val.* where specific duties would not suit, and package measurement where most convenient and safe. Duties for protection should not be less than 30 per cent. on the value, but should be charged specifically. Duties not for protection should not exceed 5 per cent. Raw material of manufactures should be admitted free, also all articles of necessity which the Colony cannot produce. *Ad val.* duties, even when accompanied with home valuation, as in the United States, are often made to countenance gross frauds, both on the revenue and on the honest importers; they also encourage the importation of the lowest class of goods; whereas specific duties, being the same on bad as on good merchandize, encourage the importation of the best goods.

Duties on wearing apparel, millinery, wood work, iron work, leather goods, &c., &c., should be equal, in addition to those charged on the material, to at least one-half of the value of the Colonial labor necessary to make them up.

On grain and flour the sliding scale should be adopted. When wheat is 10s. per bushel, admit it free; when below that, lay a duty to bring it to that value. On flour, a duty additional to the above principles should always be levied equal to one-half the cost of grinding

An *ad valorem* duty of 5 or 10 per cent., indiscriminately levied on all articles of import, would plunge the Colony into inextricable insolvency, and press extremely unfairly on the industrious classes; whereas a discriminating tariff, on the principles set forth above, would bring the productive energies of the Colony into the most healthy activity, and produce a state of mercantile prosperity hitherto unknown in the history of New South Wales.

WM. B. ALLEN.

Mr. Thomas Spence called in and examined:—

Mr. T. Spence. 963. *By the Chairman:* You have been, I believe, an Alderman of the City? I have filled that office for two years.

14 Dec., 1859. 964. You carry on the business of a builder? Yes.

965. You have been engaged in this business in Sydney for some years? Yes, for seventeen years.

966. During that time you have, of course, at different periods employed a large number of men? Yes.

967. This Committee of the Legislative Assembly has been appointed to inquire into the general condition of the working classes of Sydney, more especially with reference to the alleged want of employment at different periods; the house accommodation of these classes in its sanitary and moral effects upon their lives; and also as to whether or not there is any alarming extent of juvenile vagrancy in the streets—will you be kind enough to afford the Committee any information you may possess on the first head? I am not aware of the generality of mechanics being so much in want of employ as laboring men.

968. Are you speaking of the present time? Yes. Carpenters, I think, are generally well employed. I am confining myself more particularly to the branches of business in my line.

969. What wages are carpenters getting? From 11s. to 12s. a day.

970. Bricklayers? 13s.

971. Masons? 11s. and 12s.

972. Are all these three branches of labor pretty well employed? Masons are not so well employed,—there are a number of them out of employment.

973. Are the carpenters, masons, and bricklayers of Sydney, as a body, well conducted, sober, and reputable men? Yes, I think so, the majority; there are, of course, a few who are otherwise.

974. As a body they are deserving men? Certainly, I must say that.

975. So far as you have come in contact with this class, you consider them a respectable body? I do.

976. With regard to laborers at the present time—what is the rate of wages? I am paying laborers engaged in out-of-door work 7s. a day, but bricklayers' or plasterers' laborers get a shilling or a couple of shillings more; if they have a long way to carry the bricks or mortar it is very heavy work; it is almost a trade of itself.

977. If you want bricklayers or common laborers have you any difficulty in getting them? No.

978. Have you more applicants than you want? Yes, particularly of laboring men.

979. Suppose you want five men, how many can you get? As many hundreds.

980.

980. Do you mean that for every one you want you have a hundred men to pick from? *Mr. T. Spence.*
Not if I want a great number. I will give my reason for this statement. I have belonged to the Corporation for the last two years, and I have seen a great number of men collected round the Town Hall from day to day in search of employment. They have often stopped me as I have gone along the streets, seeking for employment, knowing that I was an employer of labor and also was a member of the Corporation. You may get any quantity you like. *14 Dec., 1859.*
981. With regard to unskilled laborers, are they as respectable in their general character and as sober in their habits as people of the same class in other parts of the world? Just such like as you meet anywhere else. The men I have employed are steady; in fact, I would not keep them in my employ if they were not so.
982. You have no hesitation in saying that there is a superabundance of labor? There is a superabundance.
983. Has this existed any length of time? There is one circumstance which I think has caused a great many of these to be out of employ of late. During the last eighteen months the Corporation has been carrying on a great many public works, road and street making, building the new markets, and laying down pipes from the Botany reservoir. There must have been from 600 to 700 men employed in these various ways, now there are not above a hundred. The cause of this demand was that the labor necessary was for matters which could not be imported; stones were to be quarried, bricks to be made, and other things to be done which required home labor.
984. Have you carried on your business wholly in Sydney during the time you have been in the Colony? Yes.
985. You have never been much in the interior? Not much; I have built some churches in the country.
986. It has been stated before this Committee that there is always plenty of employment in the country, but that men in Sydney are unwilling to leave the town; that in fact they prefer remaining in town upon precarious employment—merely a remove from destitution, in consequence of frequent interruption to their employment—to going into the country. Have you observed this? Yes, that is my firm opinion. There is not a ship that comes in but a large proportion of the people refuse to go into the country; they prefer to remain in Sydney on half wages.
987. To what do you attribute that—is it that men having families are apprehensive that if they go into the country their families will not be properly cared for? There is another cause;—a large number of the people who come out are sent for by their friends, and when they arrive they do not like to go away and leave their relations.
988. You must have an extensive knowledge of Sydney, having resided here so long, and been actively engaged in business—do you consider Sydney over-crowded for the size of the colony? Yes, with working men.
989. But as a town, the capital of a country of this size, do you consider it too large—unnaturally large? I do believe it is rather crowded—that there are more people in it than there is any right to be for the business going on.
990. To what do you attribute this state of things chiefly—do you not think something might be done by a change of the law regulating the sale and management of the public lands, to remedy it? Something might be done by opening the public lands, and letting it out in small lots, so as to produce a revenue which might be expended in forming roads, railroads, and wharfs, and building bridges.
991. Do the Committee understand you to say that any change in the land policy would be of little use without better means of communication? I do not see that it would without better means of communication, otherwise how are the people to get their produce to market?
992. With regard to the second head of inquiry—the house accommodation of the laboring classes; do you think it is of a satisfactory character; that there are sufficient means of drainage, ventilation, and accommodation in the way of out-houses, to preserve health? I think there is not sufficient accommodation, that in some parts of the town the houses are too crowded—built too close together. There is no proper ventilation or drainage in many localities.
993. We have it in evidence that there are many tenements of a very poor description, the rooms being of very limited extent, and very low and ill-constructed—that these tenements are grouped together in great numbers without even the common necessary out-houses, such as privies and wash-houses? That is very common in some parts of the town.
994. What is the rent generally paid for places of this kind? I do not know what is paid in these alleys, courts, and back places.
995. Is it not the fact that a better class of dwellings are being erected in some parts of the town, which will be let at a sufficiently low rate to be taken by working people? As long as wages continue as they are it will pay people to build, but if they should be raised it will not. If you build now you want a good rent to pay you.
996. As a practical builder, do you not think if men with capital invested that capital in erecting dwellings for the working classes, having in view all the means for the preservation of health, as proper ventilation, drainage, and conveniences inside and out, that such an undertaking would turn out a good investment, if the houses were built in blocks? I do not think it would, if they were let at so low a rent as to meet the wants of the working man.
997. Are you not aware that such undertakings have been found to answer in the mother country? Yes, in the mother country; but wages are steady there.
998. I believe groups of houses have been erected in the neighborhood of London, where every possible convenience has been provided, as much as in the mansions of the wealthy, and yet

Mr. T. Spence. yet those places have been let at as low a weekly rental as 2s., and been found upon the whole a good investment? In Manchester I built a block of small houses, for a gentleman with whom I was acquainted, at £52 each, and he let them at 2s. 6d. a week. As a general rule, it was considered that a man had no right to pay more for his weekly rent than he could earn in a day. At that time laboring men were getting 2s. 6d. a day. If a carpenter were earning 5s. a day he would pay about 5s. for his week's rent.

14 Dec., 1859.

999. About one-sixth of the people's earnings was paid for rent? Yes. I know a number of houses were built on that rule for different classes of tradesmen. Their rent was about 4s. 6d. a week.

1000. Do you know whether this gentleman was satisfied with his investment? Yes, because he knew what the houses would cost, and what would be the average rental for ten years; but it is different here,—wages rise and fall here, so that you do not know in which way to speculate.

1001. Do not these fluctuations affect business speculations equally; would they not affect the better class of houses? Yes.

1002. So that there would be no greater danger in speculating in cheaper than in more expensive houses? Yes; because houses of that description are sooner knocked to pieces by the occupants. I have houses which have been let to tenants for two or three years, and they are kept in repair by them; if I had laid out my money in small properties they would not have been worth half the money. These small properties go to destruction sooner than the more respectable, and every time a tenant leaves, the house has to be whitewashed, cleaned, and put into repair; besides, these houses more frequently change their occupants. Still the speculation might answer in some parts of the town, in nice, high-up, healthy places.

1003. Have you ever had your attention turned to the great mortality among children in Sydney, chiefly from the unhealthiness of the dwellings? No, I have not taken particular notice of that.

1004. Have you never heard that statement made? I have heard of some children dying or being ill in consequence of the want of sufficient ventilation and drainage of their dwellings.

1005. Suppose it is the fact that the average of infantile mortality is greater here than in London,—which is considered to be a place very unfavorable to health,—do you not think there must be something very wrong for that to be the case? It ought not to be so, but I do not see which way it could be prevented.

1006. With regard to the state of children in the streets, have you turned your attention to the condition of the children of the working class? I have noticed that there are many children about the streets who do not appear to go to school, but I have not turned my attention much to children.

1007. *By Dr. Lang*: Do you not think it is unfortunate, for the country generally, that the immigrants from the old country should all be landed in so large a town as Sydney? I think if there were another landing place it would be better to divide them; we should not then have such an overplus of immigrants in Sydney.

1008. Do not people contract a sort of liking for the place at which they are landed in a new country? I think that is the case in any country almost.

1009. Having a number of acquaintance in Sydney, these people are unwilling to leave? They will not leave it, if they can help it, when they are once settled.

1010. *By Mr. Lyons*: Have not building operations very much decreased of late? Yes; but still there are a good number of buildings going on. The decrease has caused the slackness of work.

1011. *By Mr. Windeyer*: You have said that the disinclination to go into the country is chiefly among new arrivals? The old hands will not go, but the new arrivals ought to go. Most of the immigrants brought out are agricultural laborers, and they ought to go up the country as they arrive. If some of them were landed in other places, they might form an attachment for those places, and not wish to come to Sydney at all.

1012. *By Mr. Pemell*: Would you, if any of your friends were to arrive here, would you persuade them to go into the country? Yes; if any of my relations, who were farmers, were to arrive, I would advise them to go to the country at once.

1013. *By Mr. Windeyer*: What is your opinion of the policy of the general system of immigration? I like the system of immigration very much.

1014. Do you not think if we had a good policy with regard to our public lands, we would have a self-supporting system of immigration? Yes.

1015. *By Mr. Lyons*: Do you think there is much inducement to people to go into the country to settle on farms, when their is so little chance of their being able to bring their produce to market? That is why I suggested that roads and wharfs should be made.

1016. *By Mr. Windeyer*: Do you not think if a population were to settle on the interior lands of the colony, roads and means of communication would follow? They would follow, no doubt, but I think they should be commenced before people should be induced to go such a distance.

1017. *By Mr. Lyons*: Have you not heard it stated that the present settlers could cultivate a much larger quantity of land than they now do, if there were any prospects of their being able to send it to market? Yes; I have friends in the country, who have produce of all sorts, which they could send down if they had a cheap mode of conveyance; but it would now cost more for carriage than the produce would bring.

1018. *By the Chairman*: What number of men do you employ, or have you employed when you have had the largest number engaged? I have had as many as a hundred employed at one time, but I do not do much business now; I have almost given it up. I have carried on almost as large a business as any builder in Sydney during the time I have been engaged in it.

1019. Your evidence is founded upon your observations during the time you have been in Mr. T. Spence's business? Yes.
1020. Will you have the kindness to append to your evidence a tabular statement shewing ^{Mr. T. Spence's} 14 Dec., 1859. the rates of wages you have paid to the different persons in your employment—masons, bricklayers, carpenters, laborers, and others engaged in the building trade, say for the last five years? (*Vide Appendix.*)

APPENDIX.

Rate of Wages from 1853.

1853.		Bricksetters	16s.
Carpenters	11s.	Plasterers	16s.
Masons	14s. to 28s.	Laborers	10s.
Bricksetters	12s.	1857.	
Plasterers	12s.	Carpenters	14s.
Laborers	7s.	Masons	14s.
1854.		Bricksetters	16s.
Carpenters	20s.	Plasterers	15s.
Masons	25s.	Laborers	9s.
Bricksetters	27s.	1858.	
Plasterers	30s.	Carpenters	14s.
Laborers	13s.	Masons	13s.
1855.		Plasterers	14s.
Carpenters	15s.	Bricksetters	14s.
Masons	16s.	Laborers	8s.
Bricksetters	20s.	1859.	
Plasterers	18s.	Carpenters	11s. to 12s.
Laborers	10s.	Masons	11s. to 12s.
1856.		Bricksetters	13s.
Carpenters	14s.	Plasterers	12s.
Masons	15s.	Laborers	7s.

FRIDAY, 16 DECEMBER, 1859.

Present :—

MR. HAY,
MR. HOSKINS,
DR. LANG,

MR. LODER,
MR. PARKES,
MR. WINDEYER.

HENRY PARKES, ESQ., IN THE CHAIR.

Mr. John Elly Begg called in and examined :—

1021. *By the Chairman:* You are resident in the City of Sydney? Yes.
1022. And are engaged in the tanning business? Yes.
1023. Are you carrying on business on your own account? Yes, I carry on business in my brother-in-law, Mr. E. Vickery's name, in Phillip-street.
1024. How long have you resided in Sydney? Six years.
1025. Is that the period of your residence in the Colony? Yes.
1026. Did you come into the Colony from England? From Scotland.
1027. Had you previously visited any other countries? None but Melbourne; I was there a short time.
1028. This Committee is appointed to inquire into the condition of the working classes of this city, with reference more especially to three heads—the alleged want of employment; house accommodation and its sanitary and moral influence upon the well-being of the inhabitants; and the alleged existence of juvenile vagrancy in the public streets. It has been represented to the Committee that you could give evidence that would be valuable to us on the first head especially—the alleged want of employment. Is it within your knowledge that there is at the present time any considerable number of persons of sober and industrious character, willing to accept employment, who nevertheless cannot obtain it? Yes.
1029. Will you explain in detail what you mean, either giving individual instances of it, or stating generally? There are two or three instances at the present time of persons recently from home who have been brought up to my own trade; they could not get employment in their own branch of trade, and went up the country to seek for work. Their sufferings have been great, because people who are trained to that trade are not at all adapted to any other, especially the branch of currying, which is not so easily learned as one would imagine. To learn this trade it is necessary that an apprenticeship of seven years should be served, during which time the apprentice earns nothing for his support. If, after learning this trade, a man has to go to laboring work, it comes very hard upon him, because he has been accustomed to indoor labor. In former years our trade was much better in this Colony, but for the last five or six years it has been very bad. Twenty years ago it was carried on to a larger extent than it is now—double what it is now.

Mr. J. E.
Begg.

16 Dec., 1859.

1030.

- Mr. J. E. Begg.
16 Dec., 1859.
1030. You know that from report, and not from your own experience? Yes, and I have proof of it in the statement on record of the number formerly employed.
1031. Could you state to the Committee the number of persons employed in this branch of trade twenty years, and what it is now? I can state that the number is not nearly as large in the city as it was; I cannot speak as to the Colony at large, although I should think there has been a falling off in every part.
1032. You state that, at the present time, there are a number of carriers who cannot obtain employment at their trade; can they, nevertheless, get other employment? The only employment they can get is to go to the diggings, for the laboring classes themselves—I know by the number of them who come round—cannot get employment. Persons who have been brought up to my trade are not adapted for labor, and if they could get it, it would not suit them long.
1033. Are there any persons who may more strictly be called laborers employed by you? Yes; those employed at work in the tan-yards are laborers, though they require some experience to fit them for their work.
1034. When you want unskilled laborers have you any difficulty to get them? No, I could get dozens.
1035. How do you proceed—do you advertise? I never need advertise, I get plenty of applicants without advertising.
1036. Could you state more definitely, if you were to advertise how many applications you would be likely to get? I do not often change my men; but, about two years ago, I advertised for a drayman, and I had forty applications in one hour.
1037. Did all these persons appear ———? They appeared just like laboring men, as far as I could judge from their appearance.
1038. Speaking from your recollection, were many of them men whom you would not have hesitated to take? Yes, to all appearance they were respectable men.
1039. Going away from your own line of business, do you think that at the present time there are in Sydney a considerable number of unskilled laborers suffering from want of regular employment? I do; I am confident that if I wanted laborers I could replace the men at present in my employ at ten shillings a week less.
1040. What do you pay for unskilled laborers? £2 10s. and £2 15s. a week, but I would not give so much to new men. My men have been a considerable time in my employment.
1041. What do you pay to carriers, good workmen? They work by piece.
1042. What can they earn by piece work? At the present rate of wages about £3 a week.
1043. Then they earn very little more than unskilled laborers? No; but six years ago they earned £12 a week in Melbourne, and £7 in Sydney.
1044. What is the price of this description of labor ruling in Scotland? From 30s. to £2 a week.
1045. Then they do not earn here quite double what they did in Scotland? No; but living is very cheap at home, and rents are very low.
1046. Are the men in your business who have immigrated to the Colony satisfied with the change? They are far from being satisfied with it. I have known men who have been brought out here under engagement for three years at £3 10s. a week, their expenses being paid, who when their time has expired would have been glad to go back to their own country. That has been the case, particularly in one instance. At home, if a man falls out of employment at one shop he can go to another, but there are only two or three places in Sydney where a man has the chance of getting employment; in the country it is worse.
1047. Do you not think, in a new country like this, where the territory for the most part is in a wild state, and consequently, where labor is wanted to an almost inconceivable degree, to turn to account its resources, that employment ought to be abundant? Yes, it ought to be; but there is this to be taken into consideration, that if an employer were to lay out his money in this branch of trade, he would lose it all.
1048. My question does not refer to your trade, but to the country generally? In a new country there should certainly be no want of employment.
1049. If there is really a want of employment here, must not that want be unnatural, and arise either from the fault of the person so suffering, or from the fault of the system of society? It is the fault of the system more than of the persons, I think.
1050. To what then do you attribute this state of things? I attribute it to this—that the country is overdone with goods. The market is in such a glutted state that only a few monied men can do any good, and the others are completely crippled.
1051. I understand that remark to apply to manufactures? To manufactures generally.
1052. To what do you attribute the alleged want of employment among laboring men? When men are thrown out of employment at their own trade they must go among the ranks of ordinary laborers, and thus cause an over supply of that class.
1053. If we admit the proposition, that in a new country there ought to be an abundance of employment for every one in it, there could not be an over supply of labor. All around there are fields for employment; and if there is an over supply of labour there must be some natural cause for it; no person having property but could make his land more valuable by laying out money upon it? But it would not pay. Population is the wealth of a new country, and if 100,000 people go to a rising country they should increase its wealth; but if the same number were to go into London they would not have that effect, because they would not add to its resources, as there is an abundant supply of labor for its requirements; and so it is with New South Wales, on account of the land system, and you may get persons acquainted with any description of trade or labor if you advertise for them.
1054. You said something about the land system just now———? I say it is on account of so many people being kept in the city. There are more people in Sydney than there is employment

employment for; and if they could go into the country and settle upon the land, they would relieve those who were left behind, and as more came they would go into the country.

1055. Have you had any experience outside Sydney, have you ever been into the country at all? No.

1056. Do you think there has always been, since you have resided in Sydney, a number of persons out of employment here? Yes.

1057. Are you of opinion that it is a condition incident to all large towns, that there will be a considerable number of persons out of employment, either from their own improvidence or unfitness? It may be so in large towns, but I believe there is a larger proportion of people in that condition here than in the towns of England.

1058. However, you have said that a considerable number of industrious persons here are desirous of employment and cannot get it? Yes, I have had a good number of applications.

1059. Have you turned your attention to the house accommodation of the working classes of this city? I think it is bad; that there is not enough accommodation for the working classes.

1060. Have you ever noticed the houses at the south end of Sussex-street? Yes; I particularly refer to that part.

1061. Brougham-place, Clyde-place, and Queen's-place? Yes.

1062. Your attention has been attracted to those particular places? Yes; they are far from fit to be the residences of human beings—some of them.

1063. Do you not think a large number of persons living in such a state as these must necessarily live in is calculated to engender fever and produce the seeds of other disease? No doubt, especially in such a hot country as this. The houses too are generally badly drained.

1064. You could not, I suppose, give any opinion as to whether it would be a profitable investment for men of capital to build houses of a better condition for the working classes? I should think small houses built for the working classes in the city would pay better than any others, for there is a great want of them.

1065. Before you came out here, had your attention been turned to the great efforts made at home to improve the dwellings of the working classes? Yes.

1066. Did it come to your knowledge that it had been proved as a fact, that it was a profitable investment as a mere investment? I am not aware. I remember of it being tried by the Duke of Buccleugh, but I do not know whether it was profitable or not.

1067. With regard to children in the streets, have you noticed an unusual number of children in the streets in a state of apparent vagrancy? I never saw so many, not half so many in any town at home.

1068. You state that as your deliberate opinion? Yes, and I am at a loss to know what they are to do.

1069. In what state have you observed them—in disorderly crowds, begging—? I have seen them in disorderly crowds, but never begging. I have often seen them disorderly and very impudent.

1070. Does your remark apply to both sexes? To both sexes.

1071. It has been stated before this Committee that prostitution has been on the increase of late years in Sydney, and that among these unfortunate creatures are a large number of girls of tender years? I have observed that. I have seen some that I should take to be from twelve to thirteen years of age.

1072. Have you inferred from their behaviour in going along the streets that they were of that class? Yes; I never saw such behaviour in any large town in England or Scotland.

1073. You say you are at a loss to see what avenues can open for the employment of the rising generation? Yes.

1074. What course would you recommend to be pursued, with the view of opening more avenues for their employment as they grow up? It would be difficult to come to that point. If manufactories were to take on apprentices, it would not pay them. For instance, take shoemaking: if a shoemaker were to make a boot, he must, in order to live, get 6s. a pair, while they could be made in England for 2s.

1075. I should imagine, from the general tenor of your evidence, that you would be an advocate for a system of protective duties? I cannot see any relief in any other way.

1076. When you stated that in your own business more men were employed in Sydney twenty years ago, do you attribute that declension to the free trade that exists here? I attribute it to the state of the labor market. Before the gold fields were discovered labor here was low, and England could not send out goods to compete with ours of home manufacture; but now a man's wages must be high to enable him to live, and a manufacturer who has to pay the lowest wages, even £2 a week, cannot compete with the English manufacturer.

1077. Are you aware of the principle on which immigration now rests? Yes; it is sending home money to bring out people to starve. It is a very bad system, and I think if Government were to take this money and lay it out on public works, it would be much better. Still, I think we cannot have too much population if the thing is properly managed. A system of free grants would be much better than locking up the land at £1 an acre; it would be far better to the State if the land were given for nothing, and a small tax were laid on it. As it is, things are getting worse every year.

1078. What is the commercial state of Sydney at the present time? I think it is very bad, as bad as it was in 1842.

1079. Is there a general complaint among vendors of the depression which has existed, without any break, for a considerable period? Yes.

1080. I mean among retail shopkeepers? Yes; and there is a system in operation here which is very injurious. Goods come out to this country, and the merchants, in the first instance, supply

Mr. J. E.
Begg.

16 Dec., 1859.

Mr. J. E.
Begg.

16 Dec., 1859.

supply their customers; when they are supplied, the remainder of the goods are sent to auction, sold at low prices; the buyers at these sales can undersell the first purchasers, who are thereby ruined.

1081. Can you give any opinion as to whether this state of things extends to those who are engaged in business in the country towns? Yes; they have all the same cry of dullness and glut, almost without exception.

1082. *By Mr. Windeyer*: Has this falling off in your business gone on since you have been here yourself? Yes, it has been continually going on. I do not find my own business falling off, but speaking generally, of business, it is very dull. There are only two or three of our business in Sydney, and we have it all to ourselves.

1083. You attribute the depression in business to the great glut of goods in the market? Yes.

1084. How many men do you employ? Thirteen in the tanning trade.

1085. You said that persons employed in that business became unfit for other occupations? Yes.

1086. How is that? Because they have been brought up to an indoor trade.

1087. It does not require much physical strength? It is not that, but they are in the habit of working under cover, and they cannot stand laboring work. I knew a man in Melbourne who had come from the town I came from, and who had been trained to the currying business; he had been working at laboring work, and was almost knocked up, although a strong man.

1088. What duty do you think it would be necessary to impose to bring those establishments now falling into disuse into active operation? I should have to make a calculation before I could decide upon that.

1089. You have not thought of that? It would require the duty to be pretty heavy, almost equal to twenty-five per cent., to put us on a footing with the English tanner.

1090. Is there anything in your trade deleterious? Quite the reverse; I have known carriers work in one shop in England for 60 years.

1091. Is it an unhealthy trade to be carried on in the neighborhood of a large town? There are tanneries in all the large towns of England and Scotland.

1092. With regard to protection,—were you a free-trader before you came here, and is it the peculiar circumstances of this country which have led you to adopt your present views? I was a free-trader at home, if you can call it free-trade. I am not so fond of the name of protection. I should like the free-trade of England if it were suited to this Colony.

1093. Do you find any disposition among young persons to be apprenticed to your trade? Not now; at one time parents would pay £50 to apprentice their boys to carriers, and Hall and Alderson have had as high as £100; but before the gold-field sprung up wages were as high as they now are, and six and seven years ago men could earn £12 in Melbourne and £7 in Sydney.

1094. You find no disposition among lads now to learn the business? Yes, disposition, but I would not take them. People are glad to get their boys into any trade, but it would be of no use for them to learn our trade, because as soon as they were out of their time they could get no employment. I know six who were apprenticed to Hall and Alderson, who have all abandoned the business.

1095. There is no inducement to learn a trade here? No.

1096. I understand you to say that the two great things to be reformed here are the land law and the immigration policy? Yes, and I think the tariff should be altered. I may state with respect to another branch of manufacture, that I know Mr. Thomson, a manufacturer of tobacco, who carried on an establishment in Edinburgh, and he has stated to me that he found himself better off in Edinburgh than here in consequence of the duty on manufactured tobacco being the same as that on the leaf.

1097. Supposing an inducement were given in that way, is this country adapted to the production of as good articles as those imported? Far better; as a proof of that, if you get a pair of Colonial boots you will find that though they cost more they last longer. The goods sent out are made up in a slop-work way, the leather is split by a splitting machine, and the boots and shoes are made of this split leather and lined with sheepskin, while such practises are not resorted to here. If there were a proper tax put upon imported articles, I believe better goods would come out from England, and the people who trade here, the merchants in England, would in the long run be gainers. Some of the principal houses have become insolvent through over-speculation in boots and shoes.

1098. *By Mr. Hoskins*: I understand you to say that there is a superabundance of labor here? Yes.

1099. And that you advertised for a carman, and in an hour had forty applicants? Yes; that was two years ago.

1100. Were the persons who applied for that situation working men—men who you suppose would work? Yes, they were generally working men, but there were some who I thought had not been brought up to work, yet who would be glad to try at it.

1101. The majority of them were working men who lived by their labor? Yes.

1102. From your own knowledge, do you believe that the persons who are idle are persons willing and able to work—those who have generally got their living by manual labor? Some of those who came were, but some were perfect strangers to me.

1103. You say that people will not bind their children to trades—are you aware that in building trades, especially among the masons, a large number of youths are employed? That is only one trade in particular, and the reason of that is that you cannot import a stone house.

1104. Is it a fact which has come under your own knowledge that a large number of the people employed on buildings are youths? I see many youths, but still there must be a great many men, for youths cannot build houses by themselves.

1105.

1105. You are opposed to the present system of Government immigration—what do you think of land grants to persons who have paid their passages? I think that would be the right system.

Mr. J. E.
Begg.

16 Dec., 1859.

1106. You think the country would progress under a system of land grants to persons who had paid their passages? Yes, and that we should have a far better class of immigrants.

1107. *By Mr. Loder*: How do you think the alteration of the land system will affect the laboring man? It will be for his good.

1108. In what way? Because it would open a field for those who wished to go on the land, which is now almost impossible, under the system of paying £1 an acre for it, to get. Even where people are willing to pay £1 or £2 an acre it is difficult for them to get land.

1109. You say you have not been into the country? Not a greater distance than fifty miles.

1110. Do you know any one engaged in farming? Yes, I do.

1111. Do they make it pay? Some branches pay; some do not. It is the same with the corn trade as with others, and I think the importation of breadstuffs has an injurious effect, because you can import flour from South America cheaper than you can bring it from a hundred miles in the country, on account of the expense of carriage.

1112. Do you not think that that is in a great measure owing to the unfruitfulness of the soil? By no means; it is as fruitful as any I have seen.

1113. As the land in America? As any I have seen in Scotland. I have been brought up among agricultural pursuits; my cousin was one of the largest farmers in East Lothian, and I can tell the quality of the land as soon as I see the crop come through the ground.

1114. Do you know the average produce of wheat throughout the country per acre. I am not aware at this moment.

1115. Are you aware that, considering the low rate per acre of wheat we are able to get from our land, it would not pay to grow it unless a high duty were placed upon imported breadstuffs? I do not mean a prohibitive duty.

1116. That is what I want to get at, for if we depend upon our own cereals here and give the encouragement you seem to think necessary, the duty we should have to put upon foreign breadstuffs would be prohibitory? No; I think the result would be that the people of the Colony would get their supplies cheaper. For instance: Suppose flour to be this year £20 a ton, a quantity will be imported next year, which will cause a glut; the price will then fall so as not to pay the grower, and the following year but a small quantity will be grown, so that the price will again be excessive.

1117. I think you alluded to a land tax? Yes.

1118. And also said you considered that system would be a better one than the present, even if the land were given for nothing? Yes.

1119. Would you give the land and tax it at the same time? If the revenue required it, but the tax should be very small.

1120. *By the Chairman*: In what part of Scotland did you reside? In Mid, or rather East Lothian, of which Edinburgh is the capital.

1121. Are you acquainted with any other large town population besides Edinburgh? Glasgow.

1122. Did you reside there any time? I did not reside there, but I have passed through it at various times.

1123. You are, I suppose, pretty well acquainted with the character of the population of Edinburgh? Yes.

1124. I believe that is rather a peculiar population? Yes; you could not judge other town-populations by that. Education is the chief thing there.

1125. It is quite different from any other part of the United Kingdom? Yes.

1126. You are not acquainted with the character of the people of Glasgow? No,—merely by reading; not as an eye-witness.

1127. What is your opinion of the general character of the working classes of Sydney, take them as a body? Take them as a body I think they are far superior to the working classes generally of other countries.

1128. Have you been brought into intercourse individually with many of the working men of Sydney? Yes.

1129. In the general elements of intelligence, sobriety, provident habits, and sense of duty, you think the working classes of Sydney are equal to the working classes of most towns of Great Britain? As regards sobriety and intelligence, I think they are as good here as you will get anywhere; indeed, rather superior.

1130. Is it within your knowledge that among the masons there are many men of very considerable intelligence and acquirements? Yes, that is almost the only trade from which you could form a judgment, because the others are so insignificant.

Mr. Edward James called in and examined:—

1131. *By the Chairman*: You have resided for a considerable number of years in Sydney? Mr. E. James.
Between twenty-one and twenty-two.

1132. Is that the period of your residence in the Colony? Yes.

16 Dec., 1859.

1133. Have you been in Sydney all the time? With the exception of some two months, when I was in the country.

1134. I believe that was at gold-digging? Yes, at the gold fields.

1135. You are a tailor, I believe? Yes.

1136. For a considerable number of years you were, I believe, overseer to Messrs. D. Jones

Mr. E. James, and Co.? My first situation, which I held one or two years, was with Mr. Henry Hayes, as foreman.

16 Dec., 1859. 1137. Did he carry on a large business? At that time he had somewhere about five-and-twenty men employed weekly.

1138. Where did you go when you left Mr. Hayes? I carried on business for myself up to the time of my going to Messrs. David Jones and Co. I was in business for myself about four years.

1139. You then went as overseer to D. Jones and Co.? Yes.

1140. Did they carry on a large business as manufacturing clothiers at that time? When I first went there they had a very small business—not sufficient for one man besides myself; but during the period I was there I have paid as much as £70 a week for wages.

1141. Since that time have you been in business on your own account? Yes.

1142. These various operations extend over a period of twenty-one or twenty-two years? Twenty-one years last October.

1143. This Committee has been appointed to inquire into the condition of the working classes of Sydney, with respect to the alleged want of employment at the present time and at other periods, and also as to the house accommodation of the working classes, its influence in a sanitary and moral point of view upon the persons inhabiting those houses, and also the alleged existence of juvenile vagrancy. Can you give the Committee any information upon the first point—as to whether there is any want of employment experienced at the present time? I think so at the present time, and I believe there has been every year since I have been in the Colony at my own trade, with the exception of some three or four years, commencing about twelve months after the discovery of gold. During the latter period I could have employed more men than I could find. I look upon the generality of my own trade as more industrious here than they are in the mother country.

1144. At the present time is there any considerable number of tailors who cannot get employment? I believe, at the present time, and I think I may say for the last three years, there has not been four days work a week for our trade, taking the general body, averaging the whole trade of the city; at the present time I believe there is not half employment.

1145. Where did you reside in the mother country before you came here? At Stroudwater, Gloucestershire.

1146. As far as your experience has extended, you believe the persons engaged in your business here are of as industrious and sober habits as those of the same class in England? Yes; and my reason for believing so is that a very large proportion of the parties who come to this Colony as mechanics are married men. I think I am in a position to judge, for I have been among working men all my life, and those whom I now principally mix with are working men; and I believe that some of the best mechanics, as well as men of the best moral character, come out here.

1147. Has your experience extended to other trades and to working people generally? I have been obliged, being in business, to know the general want of employment among the mechanics of Sydney.

1148. At the present time do you think there is a want of employment generally felt among other trades than your own, and also among unskilled laborers? No doubt of it.

1149. Do you know of your own knowledge positively that there are persons of sober character willing to work who nevertheless cannot obtain employment? I do know parties of that character.

1150. Can you speak of any other particular trade—shoemakers, masons, bricklayers? Masons and bricklayers are as badly off, I have been given to understand, as any class of tradesmen.

1151. With regard to the house accommodation of the working classes of Sydney generally, have you had an opportunity of forming an opinion of what it is? Yes; I have at times been obliged to go round to visit my workmen. Sometimes when they have been sick I have gone to see after them. My men take home their work, and therefore I am sometimes necessitated to go and see after them. I have had occasion to go to houses in different parts of Sydney and its suburbs.

1152. Do you think in these houses the necessary means are provided to preserve proper decency and cleanliness—are they supplied with the means of drainage and the necessary out-door conveniences? I think not anything equal to what they are at home. In many parts they are very bad indeed. Many of the houses of mechanics have nothing but surface drains, and the cesspools are of the worst possible description.

1153. Can you name any particular localities to which you allude? I have had occasion to go down the back lanes in Goulburn-street, and I have seen places there in an abominable state of filth. I do not know that I could name the particular locality, but some of the lanes branching off from there. All the back lanes are more or less in a filthy state.

1154. Have you been in Brougham-place? Yes.

1155. Have you been in any of the houses in Brougham-place? I have been in three.

1156. Can you state of your own knowledge whether the system is pretty general among working people of letting off rooms in a dwelling already too small for the requirements of their families, with a view of reducing the rent? I know of my own knowledge that directly after the gold fields were discovered rents sprung up amazingly. One house in Bourke-street, which before that time let for 8s. a week, in the course of two years was raised to 45s. a week. Of course persons occupying these houses were unable to pay the increased rent, and were necessitated to let off the greater portion of them.

1157. Is it within your knowledge that there are many instances where the man, his wife, and children, live and perform all the offices of the household in one room? I have seen several instances of it.

1158.

1158. In places where the drainage is bad, or where there is no drainage, and the ordinary means of decency as to out-offices are few? These places where families live in one room are generally large houses in Sydney, where the rooms are large. In some houses half a dozen families live. Mr. E. James.
16 Dec., 1859.
1159. Are there many houses of this kind? I believe there are a great number.
1160. It has been given in evidence by Mr. Clayton, one of the officers of the Municipal Council, who was engaged in taking the Census, that when it was last taken he found in a house of six rooms in King-street, occupied as a common lodging-house, no fewer than seventy inmates? I have heard of such instances, but I am not aware of any of my own knowledge. I have however seen families occupying one room where, to secure the comforts and decencies of life, they should have had three.
1161. With regard to the state of children of the poorer classes, have you noticed many children in a state of apparent vagrancy? I have been obliged to notice it; it is patent to your eyes as you walk the streets. You see children of from five to eight years of age in the streets begging. Only this morning I had two who called at my place of business.
1162. As a tradesman long resident in Sydney, are you much troubled by persons begging at your door? By a very considerable number.
1163. Do these appear to be habitual beggars, or do you observe many strange faces? I have reason to think that lately they have not been habitual beggars, but parties in distress from want of work. I have thought from their appearance that they have been respectable people who from want of work alone were begging.
1164. You think there is a large number of children in a state of neglect? No doubt of it.
1165. Do you know it from your actual observation? Yes.
1166. Does your remark apply to both sexes? Yes.
1167. It has been stated by witnesses before the Committee that prostitution is on the increase in Sydney, have you had opportunities of forming an opinion upon that subject? No farther than from what I have seen in passing the public streets.
1168. Should you think that was the case? I have noticed that there are more girls who appear to be of bad character about the streets than there were in former years.
1169. Have you ever noticed, when you have been in the streets, whether the prostitutes include a number of children of tender years? I have thought some were very young indeed; some appeared to be mere children—as young as ten or fifteen years of age.
1170. To what do you attribute the want of employment in Sydney—for I take it for granted you are of opinion there ought not to be want of employment where so much labor is required on all hands? I think no person in this colony who is willing to work should want it.
1171. To what do you attribute the want? I have thought it has been owing to persons not going into the interior, to the want of employment in the interior, or the want of ability to make a living there. I think if there were a different land system—if a man were allowed to go into the interior, select his twenty, forty, or hundred acres of land, and to cultivate it himself—we should have had five times the number of people in the country, and there would have been no want of employment for those left in Sydney. For if the interior of the country were populated and the land were cultivated, as a matter of course there would be more employment for the people in the city.
1172. Have you noticed, in your intercourse with working people, an indisposition to go into the country as laborers—that they would rather hang about Sydney in a state of precarious employment almost bordering upon destitution, than go into the country with a certainty of employment? I believe if they were certain of employment they would be willing to go; but there have been many instances of parties going into the interior and working there, and at the end of twelve months finding themselves in the same position as they were when they left Sydney; they have returned and circulated such tales as to have prevented others from going into the interior.
1173. *By Mr. Hay:* Of want of employment in the interior? Of the manner in which they have been treated by their employers; as far back as ten or fifteen years there were some very extraordinary tales circulated. That has been the principal objection.
1174. Is it so now? I have heard similar tales even latterly, but not so frequently as I did fifteen years ago.
1175. *By Mr. Windeyer:* Do I understand you that because these people see no opportunity of rising—of getting above the position of manual laborers, they dislike going into the country? Yes, that is the principal reason, that they see no chance of bettering their condition—of anything beyond getting a bare living. Besides, the treatment of masters has been such that they have thought their personal liberty at stake.
1176. Have you heard any complaint as to the working of the Masters' and Servants' Act? I have heard frequent complaints, but not so much during the last three or four years.
1177. Has there not been an alteration made in that Act? I am not certain.
1178. What is your opinion of the present system of immigration? I think if we had a different land system, and parties were allowed to have land to the amount of their passage money, it would be much better than the present mode of sending for labor.
1179. Would you advise that the present system should be discontinued? Yes; I think a superior class of people would come out here if they were allowed the cost of their passage money in land.
1180. You think by this means we should have a self-sustaining system of immigration? Yes, and a very superior class of immigrants.
1181. *By Mr. Hay:* Are you aware that the principal portion of the immigration at present

Mr. E. James. present is of persons who have been assisted by their relatives to come to this Colony?
Yes, I have heard so.

16 Dec., 1859. 1182. Do you think that an undesirable system to pursue? That is a matter left between the two parties. I think there is not so much objection to that system as to the other, but I think the Government here provides the greater portion of the passage money.

1183. As a large employer of labor in Sydney, do you know whether there is or is not a considerable portion of the working population in Sydney who are not very well fitted to earn a livelihood—who are in fact inferior workmen? I have stated that my impression is that, taking a number of mechanics in Sydney, they are more than equal as regards intelligence and sobriety to the same number of men in any city or town in England. I have never in my own trade found men in England superior to those I have now in my employ, and I should suppose the same state of things exists in other trades.

1184. But do you not find that, among the people who apply to you for work, there are many whom you as a prudent man would not wish to engage? Yes, and it will be found to be so in every town and city in England; but I do not know that I find it more so here than I did at home.

1185. What wages are you giving? Our men are paid by the hour. Up to the time of the gold discovery wages were sixpence an hour, after that they were eight-pence, then ten-pence, then fifteen-pence. At various times they were changed, but they never went higher than fifteen-pence.

1186. What do you pay now? Ten-pence.

1187. Wages that were sixpence before the gold times are now ten-pence? Yes.

1188. Do you think these persons are better off now with ten-pence per hour than they were with sixpence before the gold times? I should think the alteration of rent alone would make more than the difference.

1189. Rents are still so much higher than they were before the gold times that you do not think they are better off with ten-pence an hour than they were with sixpence? I do not think they are so well off. I mentioned a house that previously to the gold fields was rented for eight shillings a week that afterwards went up to forty-five shillings, and is now down to twenty-two shillings; and I believe that is about the proportion.

1190. Are these good workmen at your trade who cannot find employment now? My own employment is not more than half-time.

1191. And the pay you are giving is ten-pence, as compared with sixpence before the gold times? Yes.

1192. Do you not think the only way in which rents can be brought down is by a necessary lowering of wages? I think builders are better paid for their labor than the lighter businesses.

1193. It appears to me, from what you state, that if rents were as low as they were before the gold times that the condition of the working classes would be better than they then were, because wages you say are higher. I do not think there is such regular employment for them as there was previous to the gold times.

1194. Have you ever been in the interior? Not more than two months.

1195. In your business is there any reason why the relation between the employer and the employed should be more unfavorable to the workmen in towns throughout the Colony than it is in Sydney? I am not aware that it is so, but from the probability of not getting regular employment married men dislike to go into the country, as it is attended with great expense to take up a family and to bring them back.

1196. *By Mr. Windeyer*: When you spoke just now of the relationship between master and servant not being good, did you speak generally with reference to labor, and not with reference to your own particular business? Not with reference to my own particular business, but to laborers and mechanics generally.

1197. *By Mr. Hoskins*: I think you said that persons who had been in the interior had complained of their treatment; what was the nature of their complaint—was it of the provisions or of the house accommodation afforded? Both; of the position they have been placed in by men of their own class, by whom they have been brought before the magistrates; they have been afraid for their personal liberty.

1198. Do I understand you that the working classes are not satisfied with the administration of justice in the country? They are not.

1199. *By Mr. Hay*: Were these tradesmen whom you allude to? I have known both tradesmen and laboring men complain.

1200. *By Dr. Lang*: Do you consider that the chief difficulty with the working classes, is preventing them from going into the interior? I do not; but that is one objection. It is a very difficult thing for a man with a family to go into the interior, it is very expensive; and it is very difficult for him to get back if he is not satisfied with his position. If they travel by drays, as a considerable portion of them do, it is very tiresome.

1201. Is it not the fact that an evil report brought by any particular individual, whether well founded or not, has a damaging effect upon others of the same class? No doubt, if it were a mere evil report, it would have a damaging effect; but there have been some instances mentioned of which I believe the generality of people have not doubted the truth. There have been cases frequently stated in the Press during the time I have resided in Sydney, which I have never seen contradicted.

1202. *By Mr. Loder*: What have they been? Of the manner in which the working classes have been treated by magistrates in the interior, from which it has appeared that the men have not had justice.

1203. *By Mr. Hoskins*: I think you stated they complained of the food they were supplied with, and of the house accommodation? Yes.

1204. *By Mr. Windeyer*: I think you stated that wages were higher in the building line than in any other department? I believe they are. The men employed in these trades have generally been paid higher; when tailors were getting 15d. an hour, I have known bricklayers or masons to be receiving 30s. a day. Mr. E. James.
16 Dec., 1852.

1205. To what do you attribute that difference in wages? To supply and demand; our business being light, it is possible to do without us altogether.

1206. Cannot a foreign competition be brought against you which cannot be brought against other trades? That is one of the principal reasons. Slops can be imported, but stone or brick houses cannot.

1207. Do you know whether there is an indisposition on the part of parents to apprentice their children to your trade? There are few apprenticed now. There is a much greater reluctance to apprentice lads to the trade than there was fifteen years ago; then every one wanted to put their children to it, as it was considered a respectable and profitable business.

1208. To what do you attribute that? To the importation of slop goods.

1209. *By Dr. Lang*: Were not such goods imported then? Not to the extent they are now. I remember when it was not possible to get a ready made suit of clothes fit for a respectable man to wear.

1210. Is it not the fact that at home wages in your business are lower than those paid to carpenters and stonemasons? I do not think so. To first-class tradesmen the wages in large towns, such as London, have averaged 36s. a week for many years past. I believe they are better paid than masons or carpenters.

1211. Besides, they are not exposed to loss of time from bad weather? No, but the work depends upon the seasons at home, and in fashionable places men will be out of work for three or four months at a stretch.

1212. *By Mr. Hoskins*: Do you not think if a system of land warrants, to be given to persons who pay their own passage, were established, it would induce people to come out to the country? Yes, I think there should be more encouragement given to immigration, and that parties paying their own passages should be entitled to land double the value of the passage money.

1213. At all events you think the persons introduced under the present system of immigration are not a desirable class of colonists? I should not like to pass my opinion upon any class of colonists.

1214. You think they might be improved? Yes.

1215. *By Mr. Windeyer*: You think more persons of capital would come here? Yes; men in every line of business, and a large number of agriculturists,—men competent to make the best use of the land if an inducement were held out. I would let a man have, if he could cultivate it, from 100 up to 300 acres.

1216. *By Mr. Hoskins*: You say you would offer inducements to small capitalists to come to the Colony? I would offer inducements to the whole world; that is the way to populate the place.

1217. *By Dr. Lang*: You think that any immigrant coming here should have an equivalent in land to the amount his passage has cost him? Yes, that would be a wise system; but I think he should have something more.

1218. *By Mr. Hay*: Would you give those born here some land? I would give it to all who chose to occupy. At my time of life it is not likely I should turn agriculturist, but I should derive an advantage from the country being better populated. Besides, if I did not obtain any for myself I might for my family, and I have a large family. My eldest son I have brought up to my own business, but he is very dissatisfied with it.

1219. *By the Chairman*: Have you any other sons? Yes.

1220. Shall you bring them up to your business? I cannot see my way clear as to what they shall follow. My eldest son, who is a very good tradesman, and of good moral character, is so dissatisfied with his business that twelve months ago he wanted me to get a Government situation for him. I told him I had a great objection to his seeking for such employment, that I would rather he followed his business, and that I would do nothing in the matter beyond giving him a character.

1221. Have you noticed a wide-spread disposition among the native youth to get Government situations? Yes; I think it arises from the general want of employment, and the fact that there is no prospect of getting a living in any other way, and not from any particular liking for that service.

1222. Some years ago when you were in business in Sydney did you manufacture more Colonial tweed than you do now, for home consumption? Considerably more. The first tweeds manufactured by Sir John Jamison were of a very superior description, far superior to any that have been made since, and that was the reason persons in a respectable way of business were able to make use of it. We paid about 4s. 6d. a yard for it. I made trowsers for Mr. (afterwards Sir William) a'Beckett, who was Chief Justice at Victoria, for Mr. Broadhurst, and several other gentlemen whom I used to work for. Mechanics and respectable tradesmen used to wear Colonial tweed for trowsers, and they were much liked. At the time of the discovery of gold in California, I made 2,000 suits to send there. Of late the tweeds have been much rougher, and we have not been able to use them; they are now only used for slop goods. I have not made half-a-dozen garments the last seven years.

1223. Will you have the goodness to append to your evidence a statement giving the present scale of wages paid in your trade, and also the rate paid two or three years ago? (*Vide Appendix.*)

Mr. E. James.

APPENDIX.

16 Dec., 1859.

The present scale of wages is at the rate of 10d. per hour in all *first-class establishments*, and have not materially varied for the last three years; but in other establishments where inferior labor is employed, the rates do not exceed 6d. per hour. These are facts gathered from personal knowledge and careful inquiry.

TUESDAY, 20 DECEMBER, 1859.

Present:—

MR. PENELL,
MR. LYONS,
MR. WINDEYER,

DR. LANG,
MR. PLUNKETT,
MR. HOSKINS,

HENRY PARKES, Esq., IN THE CHAIR.

James Hugh Palmer, Esq., called in and examined:—

H. Palmer Esq. 1224. *By the Chairman*: You are aware of the object of inquiry by this Committee, viz., the condition of the working classes? I am.

20 Dec., 1859. 1225. You have paid some little attention to the general subject before the Committee? Yes; it is a subject in which I have taken considerable interest for years past; but my attention has been especially directed to it by my attendance upon this Committee. And during the late recess or adjournment of Parliament, I have made it my business to go round the city and suburbs in company with Inspector Harrison and others, to make myself acquainted with facts connected with the subject of inquiry.

1226. Are you aware that Inspector Harrison has given evidence before this Committee? I am.

1227. Have you read a document handed in as an Appendix to that gentleman's evidence? I have.

1228. Perhaps in the course of your evidence, you will state to the Committee whether you have noticed any circumstances corroborating the statements in that Appendix to his evidence? I shall, in my evidence, shew how far my knowledge of the circumstances agrees with that statement, and to what extent I differ from the conclusions that gentleman has arrived at.

1229. You were about to state that you went round the city in company with Inspector Harrison? I went in company with that gentleman to obtain information with reference to that branch of the inquiry which relates to juvenile prostitution; my special object being to observe the state of the class known as "unfortunate females," and the proportion of extremely young girls among them. I have visited several localities inhabited by these people, such as Durand's Alley, and the various lanes and alleys leading from Kent-street to Sussex-street, between Bathurst-street and Sussex-street.

1230. You have noticed the house accommodation which is provided for the working classes of Sydney in some parts of the town? I have, and I may say, that in Sydney the house accommodation for this class is very defective, and its influence, both upon the moral and physical condition of the people, must be highly injurious. Between the comforts of the home of a mechanic in England, and that of one in this city, the contrast is marked. In London, a comfortable cottage of three or four rooms, well ventilated, with abundant light, water laid on, good sewerage, neat garden, or well paved yard, and convenient out-houses, may be obtained at rentals varying from £12 to £15 a year; whilst in the neighborhood of Sydney, a cottage with fewer conveniences defective drainage, and inadequate water supply, would readily let at 20s. a week. In Sydney the houses occupied by this class are in many instances very small weatherboard buildings of two rooms, not more than 10 feet by 11 feet each, and with ceiling not more than 6 or 7 feet high, with no means of ventilation excepting the door and window, as few have chimnies save in one room. In some cases the want of proper means for ventilation is in part afforded by the delapidations into which the houses have fallen, the air finding ingress and egress through the broken windows or the cracks in the walls. The privies to these houses, where they are to be found, are often in so ruined a condition as to afford the most scanty protection from the observation of the passer-by. Around these places too are frequently gathered green pools of mud and putrid matter, sending up their exhalations to poison what might be the pure air of the city, and to inflict upon the wealthy the natural penalty of their indifference to or neglect of the sanitary welfare of their poorer brethren. This may be considered an exaggerated statement; but I am in a position to prove by reference to certain localities these descriptions are quite consistent with the state of things existing. I do not, however, mean to say that the large majority of the working classes are to be found in such wretched hovels as these; there are others far superior to those I have described. Still the very best of them come far short of what they should be, and of what is necessary for the health and comfort of their inhabitants, and for the well-being of the community generally.

1231. Have you resided in London? I have.

1232. Any length of time? For upwards of twenty years.

1233. Is the contrast instituted in what you have stated based upon your own experience of things as they exist in London? Based upon my own personal observation of things as they existed there eighteen or twenty years ago.

1234.

1234. Can you refer specially to any particular localities or houses of this class in the city? **J. H. Palmer, Esq.** I can refer to a large number of instances. I have visited various localities, especially on the Western side of the city, along the banks of Darling Harbor, and the various lanes and courts leading from Kent-street to Sussex-street; and I have also visited various yards and places branching out of Pitt-street at the Southern end. I may say my special observation has been directed to these localities. 20 Dec., 1859.

1235. Have you visited these places recently? I have visited them recently, and especially with a view to give evidence before this Committee.

1236. You would of course infer, even if you had not seen it with your own eyes, that this wretched state of house accommodation would have a very prejudicial effect upon the moral life of the inhabitants of the city? I believe it has a very serious influence upon both the physical and moral condition of the people.

1237. Have you taken particular notice of the state of the inhabitants in these places as to their physical health and moral condition? I have. I may state that, as regards the general health of the people residing in the localities alluded to, it must be apparent to a very slight observer that the children to be found in the courts, lanes, and alleys of the city, are in a much less healthy condition than those in the suburbs. I have no doubt the large rate of infantile mortality and disease which prevails in Sydney may be attributed to the want of ventilation in the houses, and of pure air in the streets. In some localities the stench arising from cesspools and putrid matter collected in the water-courses of the street is so offensive as almost to overpower those who come from the purer air of the suburbs. This poisonous atmosphere must inevitably be peculiarly injurious to young children, induce diseases which we know to be prevalent here at certain seasons of the year, and where not attended with immediately fatal results deposit the seeds of much future physical debility and suffering. "Impure air," says Mr. Carmichael, "is one of the most powerful causes of scrofula;" and Dr. Andrew Combe states, that in the Dublin Lying-in Hospital "every sixth child died within nine days after birth of convulsive disease, but that after means of thorough ventilation had been adopted, the mortality of infants in five succeeding years was reduced to nearly one in twenty." Consumption may also, I believe, be traced to the same cause; and as the children of consumptive and scrofulous parents are known to be generally precocious, I attribute in some measure to this the existence among the youth of this city, at so early an age, of the desire for sexual intercourse.

1238. Do families appear to be crowded in these small places, in an excessive manner? Very much crowded. In some places I visited there were cottages consisting of but two rooms, and those only about 10 feet by 11 or 12 feet, with a yard about 10 feet by 6 feet, which were occupied by families of eight or nine individuals. There is a block of six or seven small cottages at the bottom of Goulburn-street, each cottage built upon land about 12 feet by 24 feet. The front room is about 12 feet in width, and the same in depth, the ceiling being little more than six feet high, with a back room barely 6 feet by 11 feet, and opening into a yard about five feet in width, the privy of course being close to the back window, as the yard is only about 8 feet by 5 feet.

1239. Can you explain to the Committee the situation of any of these streets, courts, or alleys, so as to give the Committee an idea of the density of population? I have made a rough sketch of a large yard leading out of Sussex-street (between Bathurst and Liverpool streets, on the eastern side). This is a block of land about 100 feet by 100 feet, and it contains twenty houses. The houses are built in two blocks of eight, and one of four, with back to back in a yard. To these twenty houses there are but four water-closets; and the wants of the people inhabiting the twenty houses are supplied from one water butt.

1240. Are they built of wood? Sixteen of them are built of rubble stone, the other four are weatherboard, and the latter are in a somewhat dilapidated condition.

1241. Were they of one story, or more? The stone houses of two stories; the rooms being about 10 feet by 10 feet, and perhaps about seven feet high.

1242. Did there appear to be more than one family living in any one of them? No; they appeared to be occupied by respectable people of the laboring class, who did their best to keep the place clean. There was an attempt at underground drainage, but the stench from the drain I was informed by some of the people, was frequently insupportable. The yard was swept clean, and in front of each cottage there was a small stack of wood, and a place erected for a fire. I must state that the whole of the buildings on two sides were enclosed by a high stone wall, and on the side at the rear and on that fronting the street, by the privies, which in times of heavy rain I was told overflowed into the yard.

1243. *By Mr. Hoskins:* Was that in the vicinity of the slaughter-houses? No, to the southward of the slaughter-houses.

1244. *By the Chairman:* Are there many such places? I consider these superior examples. There were a few mechanics living in the houses, but the inhabitants were mostly unskilled laborers—persons working in stores, draymen, or masons' laborers.

1245. *By Mr. Lyons:* What was the rent? They let for about 8s. a week, each house, so that a total rental of £408 is produced, giving an interest at 8 per cent. upon £5,000.

1246. *By the Chairman:* When was it you visited these places? I visited them on Sunday last.

1247. Did you state to the people your object in visiting them? Yes. I asked them whether, if some capitalist were disposed to erect comfortable residences in blocks, giving to each family proper room, and having conveniences for washing according to the system of the model lodging-houses in England—they would be willing to pay a trifle more rent for such superior accommodation; and in most instances the answer was in the affirmative.

1248. Have you noticed the state of the children of the poorer classes in the city? I have been repeatedly struck by the appearance and habits of the children out of doors; and in

J. H. Palmer, Esq. no part of the world I have visited have I ever heard language so obscene and profane as I from the children in this city.

1249. And you have heard this so frequently as to give you an impression that it is habitual?
20 Dec., 1859. Yes; and I think the habitual use of such language may be considered as a sure indication of low moral feeling.

1250. How long have you resided in the colony? About eighteen years.

1251. You are the head of a large family, I believe? I am.

1252. It has been stated before the Committee that female prostitution has been on the increase of late years, and that it includes a number of girls of tender years; indeed, the Appendix to Inspector Harrison's evidence (to which I have called attention) refers more particularly to that branch of the subject—do you know anything of it? As I have stated in the commencement of my evidence, I have given particular attention to it, and have lately visited houses occupied by girls of this class.

1253. Have you visited them at night or by day? At night.

1254. At what time did your visits commence? They commenced about 10 o'clock and terminated about 2 o'clock next morning. These visits were in company with Inspector Harrison, another inspector, and a private policeman.

1255. Perhaps you would state what you have observed? As a mere casual observer, occasionally walking the streets of Sydney at night, I have perceived that prostitution has lately increased, and no doubt a portion of that increase is caused by some very young girls who have turned upon the streets; still I am inclined to doubt whether the proportion of these is so great as Inspector Harrison has supposed; certainly the greater number of avowed prostitutes are not of this class. The consequences of the early association of the sexes are not, I believe, so apparent upon the surface of society. Hundreds of young girls are, I fear, annually debauched, though comparatively few are found parading the streets. With a view to obtaining reliable information upon these points I have, as I have already stated, visited a number of houses in the localities I have mentioned, and from my personal observation, together with what I have learned from those best acquainted with this unfortunate class, I believe half the number are natives of the colony. Of the remainder the greater proportion are girls coming out as free immigrants from Ireland, England, and Scotland, with a few natives of other countries. Many of them are deficient in ordinary education, and I am informed that the greater portion are unable to read or write. I thought it might be possible that among them would be found some persons who had filled situations as governesses—supposing that they might be placed in circumstances of peculiar temptation, but from all the information I can gather there are none. I may be permitted to mention a few cases that came under my notice. At a house in Durand's Alley, the door was opened by a girl about eighteen years of age, and by the direction of the police she led us into an adjoining room, the floor of which was in a most filthy condition. In one corner was a bundle of old rags from which she had evidently just risen, and on which an old man of sixty or seventy years of age was still lying. There was not an article of furniture in the room. In another room were lying, upon some articles of wearing apparel, three or four young children of both sexes, and on a mattress on the floor, upon the opposite side of the room, was a young girl of fourteen or fifteen, with a lad about sixteen or seventeen. In another house we visited, there were four persons lying upon the floor of a room completely destitute of furniture, with the exception of a dirty mattress, upon which there were two men and two girls, both of them young, though I could scarcely guess their ages. In a lane leading from Kent-street to Sussex-street, I found seven persons in a wretched apartment, about seven feet by ten feet, and divided from the main building by a thin partition, the door of which was fastened by a bolt outside. Three of these persons were sailors, and four girls; one of these sailors lay on a mattress, with two young girls, one on each side, one of these could not be more than fourteen. I could not see the other's face, as she drew some article of clothing over it; the only instance, in the course of my visits, where I observed the slightest indication of shame on the part of any of these girls. In another lane in the same street, I met a girl, now about sixteen, far advanced in pregnancy, with her second child, and who must have commenced her career of profligacy as early as thirteen years of age. The language she used was truly horrible, and was strikingly illustrative of the brutalising influence of such a course of life. She had, according to her own statement, recently left a man with whom she had been cohabiting in the country, was longing, to use her own expression, to be "upon the batter," and lamented, in the most revolting terms, that her condition at present prevented her plying her disgusting trade. Her chief delight, she said, was to "bilk" the men out of their money. Her sister, a year or so older, is the mother of two children, and is at present living with a man whom she supports with the wages of her prostitution. Both these girls are natives of the colony, and their mother had followed the same mode of life.

1256. *By Mr. Plunkett:* Did this girl know Inspector Harrison was a policeman? Yes.

1257. How was it then she was so familiar and candid? I do not know; she seemed to be upon good terms with him; she had no reserve, but spoke with the greatest freedom.

1258. She might have been hoaxing the policeman? No; there was an apparent ingenuousness about the woman which led me to receive her statement with some degree of confidence; for I saw her on a second occasion, and found her in high glee,—she was in the company of several other girls, who were uproariously laughing at the success with which they had "bilked" or cheated the men whom they had drawn to their dens.

1259. *By Mr. Hoskins:* Do the policeman frequently visit these places? Yes; they are compelled to do so on duty.

1260. *By the Chairman:* Do you think any measures could be adopted to remedy these evils? I think one of the most effectual preventives to this state of things would be the provision

provision of proper residences for the working classes. The inability in consequence of J. H. Palmer, Esq. the small space at command to secure the separation of the sexes, the sleeping of parents and children of both sexes in the same room, and the consequent observation by young children of all the intercourse of domestic life, are all calculated to originate impure ideas and desires. The utter want of seclusion and constant association of girls and young women with the other sex can scarcely fail to destroy that natural modesty which is one of the chief ornaments of the female character. The outworks of female virtue once broken down, its utter destruction is comparatively easy, and this is facilitated by the natural excitement caused by a hot climate, and the almost if not actual contact with the opposite sex at night. If indoors there are these pernicious influences at work, the evil is increased by the indiscriminate mingling of boys and girls in the streets, and for this the parents can scarcely be blamed. We cannot be surprised if a mother, engaged in her ordinary domestic occupations, and cooped up in a close room with half a dozen noisy children, is glad to be for a period relieved of their presence; or, if the children are delighted to escape from their prison, to breathe the comparatively fresh air of the street and to play with their young neighbors. The innocent are thus thrown into the society of those who are already tainted by vice, and are compelled to listen to profane language and disgusting allusions, the meaning of which they too soon learn. The father comes home weary from the daily labor which is to produce the daily food of his family, has no inclination, even if he have the power, to instruct his children, and the means of education are beyond the reach of his earnings. Thus the children grow up untaught in all that is necessary to make them good citizens, and become learned in vice. But the children are not the only sufferers from this lamentable state of things. The parents, perhaps, at one time accustomed to a comfortable and sufficiently commodious home, become discontented and unhappy. The father, finding all in disorder and confusion at home, met perhaps on his return from his work by complaints from his wife, seeks consolation in the society of his companions at the public-house, which is always close at hand at the corner of the street. The wife, neglected by her husband, unable with all her efforts to maintain cleanliness and order, becomes dirty in her habits, slatternly in her appearance, generally indifferent to domestic comfort, and probably at last has recourse to that which seals the ruin of her family—the rum bottle. I believe the most fruitful source of intemperance in this colony is the want of cheerful, comfortable homes for the working class, and that until these are provided Teetotal and Temperance Societies will labor almost in vain.

20 Dec., 1859.

1261. Referring to the paper handed in by Inspector Harrison, does your experience—derived from actual observation in these particular visits—corroborate its truth with the one exception, to which you have alluded, with regard to the proportionate amount of juvenile prostitution? I do not throw doubt upon the particular instances referred to by him, but I doubt whether so large a proportion, as he supposes, commenced their career at so early an age as he supposes.

1262. You think the scenes he describes are exaggerated? No; on the contrary, I have had some conversations with medical men in Sydney, who go far to confirm his statements; for while they have denied the probability of girls commencing a career of prostitution at so early an age as nine or ten, they have assured me that they have had cases of girls at so early an age as twelve laboring under secondary symptoms.

1263. Are you able to say of your own knowledge that there is any want of employment among the working classes of this city? I believe there is a want of employment, but I think among mechanics rather than mere laborers; work might be found for the one and not for the other.

1264. Taking the word in its widest meaning, as comprehending laborers, mechanics, men in counting-houses, stores, &c., all dependant upon their exertions for obtaining a livelihood; do you think there is a want of employment among this class? I do.

1265. All your experience leads you to the impression that there is considerable suffering among this class? I believe there is considerable suffering, and that this is, perhaps, more severely felt by what may be termed the educated classes, than by any others. I refer to those not brought up to manual labor, but who may have been educated for professions or as clerks.

1266. *By Mr. Windeyer*: Do you think females find any difficulty in obtaining employment? I think not; there is a great want of female servants experienced everywhere. I think the deplorable state of this class is not attributable to a want of employment.

1267. *By Mr. Plunkett*: Do you think any large portion of that unfortunate class could be induced to abandon their habits if they were enabled to go into the interior of the country? I think some of them might, but I am afraid, that in a large number of instances, they are entirely lost to moral sense, and utterly impervious to a feeling of shame; having been brought up in scenes of vice, they have become hardened to it, and have no desire to become virtuous.

1268. Is there generally much distress among the working classes, in such cases as where the father of a family, through ill-health, is unable to work? I have no doubt there is a great deal of distress in consequence of intemperance; but a resort to this vice is often caused by the want of a comfortable home.

1269. *By Dr. Lang*: Do you not think it is a great misfortune in this country, and a source of much of the distress and immorality that prevails here, that so large a proportion of the whole population of the country, as one-fourth, should be concentrated in this city and suburbs? I think this is the chief cause of many of the evils which exist here.

1270. Does not that circumstance produce a difficulty almost insurmountable in dealing with the humbler classes of the population? It does present a difficulty, doubtless; but so long as a large number of them remain here, and are likely to remain here, I think some good might be done by the erection of suitable residences for them, which they would occupy in preference to the miserable dwellings they now inhabit.

Mr. William Cox called in and examined:—

- Mr. W. Cox. 1271. *By the Chairman*: You have resided in this Colony for some time, Mr. Cox? I am a native of it.
- 20 Dec., 1859. 1272. You are a tradesman, I believe? I am.
1273. You have served an apprenticeship? Yes.
1274. Have you resided in Sydney any length of time? For the last fourteen years.
1275. Are you a native of Sydney? No; of Parramatta.
1276. And you have known Sydney during your lifetime? Yes.
1277. This Committee is appointed to inquire into the condition of the working classes, with reference to an alleged want of employment and house accommodation, and its sanitary and moral effects upon their well being; and also as to the existence of vagrancy in and about the streets, including a certain proportion of children. Can you afford information to the Committee as to whether a want of employment is at present experienced, or has been experienced during the last two or three years? During the last three years there has been a great want of employment in a vast number of trades, so much so that I could mention some that have come under my own notice in the trade to which I belong. I know that for the last three years in that trade, taking it all through, the men have not had three days' work in the week.
1278. Have not averaged three days' employment in the week? Not averaged more than three days' work in the week.
1279. Are you in business for yourself? Yes; I have been so for some time.
1280. And is this want of employment alluded to borne out by the applications to you for work? For the last three months I have had ten or twelve, and sometimes more persons in the day, seeking for employment.
1281. What wages can a good hand earn per week if fully employed? No two shops in the trade give the same wages, but the wages average from 5s. 6d. to 8s. 6d. a day,—that is, when fully employed; 8s. 6d. is the highest rate paid.
1282. It ranges from 5s. 6d. to 8s. 6d. per day? Yes.
1283. Does this difference in the rate of wages arise from the arbitrary arrangements at the various shops, or is it varied according to the quality of the work, or the competency of the workman? No; each employer has his own rate.
1284. Then A. B. may earn at one shop 8s. 6d. a day, and after his discharge on going to another may not earn more than 5s. 6d.? That is the state of the case. You may do the same quality of work in just the same style and earn different wages at different shops.
1285. Has there been any variation in wages during the last two years? Four years ago the wages were a shilling an hour; they have since been 10d. and 8d.; some shops acknowledge the 8d. still, others give 6d. at the present time. It has ranged from a shilling to sixpence. The wages of tailors have never been more than a shilling an hour.
1286. Can you say whether this want of employment extends to othr tradesmen? I can.
1287. Of your own knowledge? Yes. For the last three years I have been mixed up with the various trades of building, and if I had wanted any large number of men I could have obtained them. I could get six if I wanted one.
1288. In what branch of trades—masons, bricklayers, and carpenters? Each of them.
1289. For the last two years you could get six men in these trades if you wanted one? Yes; and more particularly carpenters and joiners.
1290. *By Mr. Plunkett*: At what wages? Within the last two years wages have ranged from 12s. to 9s. a day, to which they have now come down. Another fact to be noticed in the building trade, which I know of my own knowledge, is that the men will not work under set wages; for instance, joiners, masons, plasterers, and bricklayers, who will not take less than 9s. a day on wages, will contract to take 6s., in consequence of the want of employment.
1291. *By the Chairman*: They will take a contract which they know beforehand will not yield more than 6s. a day? Yes; I know that myself.
1292. That is, there is an *esprit de corps* which keeps up the wages to 9s.; but that they will submit to lower terms when the loss only falls upon themselves individually? They will take a contract for 6s., while on day work they will not work under 9s.
1293. With regard to unskilled laborers—mere laborers—do you think there is any want of employment experienced by them? I think there is a great want indeed. It has come under my own knowledge that two men of that class have had but three weeks' work since last Christmas—sober, industrious men, who have had to live on money they had previously saved on the gold fields. I know a large number of instances of this kind.
1294. It has been stated before the Committee that there is plenty of employment in the interior, but that masons and others suffering for want of it in Sydney, prefer living in the city in a state of destitution rather than go into the country to receive regular employment? I do not think that statement is borne out by facts, for I know two cases within the last three months where I have furnished friends of mine with the means of going into the country to find employment. They went in the Goulburn direction, but returned and stated that it was not possible to get employment.
1295. Farm laborers? Yes.
1296. You must have an extensive knowledge of the working classes of Sydney, having resided here so long, and mixed up with men in various ways, not only in business transactions, but by taking a part in their public movements? Yes, I have a good knowledge of them.
1297. What do you think of the character of those of the working classes who are permanently settled here? do you think the generality of them are a sober, intelligent, and industrious class of men? I think the working people of Sydney are on the whole an industrious, saving people, and would do well if they had an opportunity. 1298.

1298. Is it not a fact that where men do fall in with regular employment they have shewn provident habits, and saved from their earnings sufficient to build houses for themselves, and thus acquire little freeholds? Yes, a large number have done so, and if they had not been extremely industrious previously, they could not have lived for the last two years, nine-tenths of them having been subsisting on their former earnings. Mr. W. Cox.
20 Dec., 1859,
1299. Do you think it is a fact that could be illustrated in many instances, that many men are now living upon their former savings? I could, if I had thought it necessary, have brought the names of a large number here, and particularly of those in the tailoring business. I know that a large number of tailors acquired little freeholds of their own, prior to the discovery of the gold fields.
1300. Do you know of any instance where persons of the working class have acquired freeholds of their own, when better employed, and who are now compelled to dispose of them for the support of their families? I know about four or five at the present time, who will have to give them up.
1301. What, on the Riley Estate? Yes.
1302. They have eaten them away? Eaten them away.
1303. By mortgaging them first, and then getting into difficulty? Yes.
1304. You are of opinion that a great deal of the distress in Sydney is owing to a want of employment? A vast deal. For every three men in Sydney in full employment, there are two unemployed in nearly every trade.
1305. Two-thirds unemployed? At the present time there are two-thirds unemployed.
1306. Have you turned your attention to the house accommodation of the working classes, as to whether it is sufficient for the preservation of health? The house accommodation of the working classes is very indifferent, the houses in which they reside not having been built with a view to any conveniences of any kind.
1307. You are a married man, I believe? Yes.
1308. As a family man, you must be aware that certain means of drainage, ventilation, and out-door conveniences, are necessary for health and decency? Yes.
1309. Are there any houses without these conveniences? A large number.
1310. Where physical health must be impaired, and outward decency violated? That is the case with nearly all the houses of the working classes; they have been run up for the sake of a large per centage, and not with a view to accommodation.
1311. Could you give an opinion as to whether the children are, to a large extent, in a state of neglect, and left to run in the streets? I think a large number of children are neglected; but I think the great cause of the children being uneducated, is to be attributed to want of employment on the part of the parents.
1312. Have you noticed whether female prostitution is on the increase in Sydney? I think it is very much on the increase.
1313. Do you form your opinion from what you see in the streets? I believe there is a large number of houses of that kind in the city, more than ever.
1314. Do you know the particular localities where these houses are situated? Yes; particularly in Woolloomooloo. There are more houses of ill-fame in Woolloomooloo now, than there were some years ago in Sydney altogether, and the inmates of these houses are girls of very tender years, viz., from twelve to fourteen years of age; and there is now a great number of them.
1315. Can you state whether the prostitution of this city embraces a great number of girls of very tender years, namely, from ten to fourteen years? I think the majority are very young girls, probably from twelve to fifteen years of age.
1316. Have you heard of, or seen, children of very tender years, under ten, in a state of prostitution? I have frequently seen such girls hanging about the streets, and from asking questions from the police, I have gathered that they were of these tender years.
1317. *By Mr. Hoskins:* Are there any females working for tailors? A large number.
1318. Are there many females applying for employment? Within the last two months I have had sixty-four applications by females.
1319. You think there are a large number of females who cannot get employment? I am satisfied of that from the number applying for work.
1320. You say there are a large number of persons out of employment; are these persons who have been in the habit of getting their living by their labor; because it has been said that some of them will not work? It is possible that there are a few about Sydney who would rather be idle, but I think the large majority of those unemployed would do work if they could get it.
1321. *By Mr. Wandeyer:* What is your opinion with regard to the present system of immigration? I think the principle bad. I think the principle of importing labor into the Colony whilst laborers here are in their present state is entirely wrong; but the system is wrong if there were plenty of labor.
1322. *By the Chairman:* Are you an advocate for unrestricted commerce? I think the fact that we have a free trade tariff is one of the chief causes of the distress existing amongst us.
1323. Do slop goods tumble against you to any great extent? I am satisfied that if New South Wales had a tariff like that of England we should not have a want of employment in any branches of trade. I think it is the importation of goods which are admitted free that is the cause of the want of employment.
1324. Is it within your knowledge—as a native of the Colony—that a number of trades which were carried on here to a considerable extent, such as making nails, cordage, tanning, currying, cloth making, and the manufacture of tobacco, and one or two other trades, have now nearly died out? Some ten or twelve years ago there were several manufactories of tobacco, in which a large number were engaged, and from 700 to 800 were employed in making Colonial tweeds, which has entirely died out.

Mr. W. Cox. 1325. *By Mr. Lyons*: Are there no manufactories of that kind carried on now—has not Mr. Barker an establishment? Mr. Barker at one time employed 300 hands; and I think that
 20 Dec., 1859. now ten or a dozen will do all the work there.

1326. Is that owing to the inferiority of the produce, or to the importation from England of cloths and made-up goods? I think the article made here is not inferior to any other; I think it is possible to make as good an article here as any imported, but not with the present tariff.

1327. The tweeds made here are not equal to the English tweeds? My opinion is that the Colonial tweeds as made here are by far the best to wear; they may not be so light or look so well as the English tweeds.

1328. *By the Chairman*: In your trade do you make up much Colonial tweed? None at all.

1329. It was much worn eight or nine years ago? Eight or ten years ago there was scarcely anything else worn, you would seldom see a black cloth suit; but, when I was an apprentice, three suits out of four would be Colonial tweeds.

1330. *By Mr. Windeyer*: It was better then? I see as good now.

1331. *By the Chairman*: Do you remember the Members of the Legislature when half were dressed in Colonial tweeds? Yes. I recollect seeing Mr. Wentworth dressed entirely in Colonial tweed.

1332. *By Mr. Windeyer*: Do you find any difficulty in apprenticing? There is no difficulty in getting them, but no one will take apprentices—there is nothing for them to do.

1333. Is there greater difficulty in finding occupation for the young people of the country than there was ten or twelve years ago? Ten or twelve years ago there were about forty different trades you could bring boys up to, and many different occupations young women used to make a good and respectable living at—but now, in consequence of the large importations of manufactured goods from all parts of the world, there is nothing whatever for them to do.

1334. *By Mr. Lyons*: Were these women who applied to you for work married or single? Most of them married.

1335. The majority of them? That is what we do not question them upon.

1336. *By Mr. Windeyer*: Do you know that a greater number of young persons of active habits are applying for Government situations than formerly? Some years ago the majority of people did not care about Government situations, but now it seems to be the only thing looked to. They cannot get a living at anything else, and if a vacancy occurs in a Government office there are a large number of candidates.

1337. If there were greater facilities for settling upon the public lands these people would take to that kind of life instead of this? I think a bad administration of the public lands has brought about this distress; that, with the tariff, I consider the chief cause of the present condition of working people, or it may be caused by one acting upon the other.

1338. *By Mr. Hoskins*: You ascribe a great deal of distress to the present land regulations? Yes; I think if we had had a good administration of the public lands, such as the American system, for the last ten years, the people would have been in a much better condition now.

1339. Do you think the wants of the population can be satisfied, if the land regulations are not soon altered? I think not; and more than that there are children growing up in the colony, and people really cannot put their sons to any useful employment, there being no business to which they can be put.

Mr. Stephen Gleadall called in and examined:—

Mr. Stephen Gleadall. 1340. *By the Chairman*: You are a mason, I believe? Yes.

1341. You have resided in Sydney some little time? Yes, since 1854.

1342. Did you come direct from England to this Colony? No; I came from South Australia to this place.
 20 Dec., 1859.

1343. You came direct from England to the Australian Colonies? Yes.

1344. From what part of England did you come? From Doncaster, in Yorkshire; but I sailed from Southampton.

1345. Have you been in any other country besides your native country? I have been in France, but was not there any great length of time.

1346. This Committee is appointed to inquire into the condition of the working classes in this metropolis—is it within your knowledge that there is a want of employment experienced by any portion of them? I am sorry to say that it is within my knowledge that there has been a very serious want of employment for the last two years; since 1854 there has been a perceptible decline.

1347. There has not been a steady demand for labor since your arrival in the Colony? No, the steady demand for labor was past when I came, or nearly so.

1348. Do you confine your observation to any particular trade, or do you refer to all? To the building trades in general.

1349. The building trades, and the laborers in connection with those trades? Yes.

1350. Your experience is chiefly confined to them? Yes.

1351. At the present time are there more masons in Sydney than are required? Yes; a great many more. Last night a mason with whom I was acquainted in England, and who is a good mason and mechanic, overtook me, and asked me if I wanted hands. He had been on one of the public works, he and four more; and when the work stopped they could not find other employment. That was two months ago, and not one of these five has had any

- any work since. These men told me that they had been all round the city and suburbs, and as far as Liverpool and Newcastle, and had not been able to obtain a job. This man thinks there is not much more than 100 masons now employed in the city and suburbs. Mr. Stephen
Gleadall.
1352. Can you form any opinion as to the number of masons in Sydney? It would only be a rough estimate. I know that at the end of the year 1855 there were about 425 masons here. A deputation was sent out from and by the Mason's Society of Sydney to ascertain the number of masons, men and boys, in the city and vicinity, and I think it was found that there were 425, which number was made up to 500 by men and boys. 20 Dec., 1859.
1353. Do you think many of these persons have left Sydney since then? Yes; I know that within my own circle of acquaintances there are twelve or fifteen whose names I could mention.
1354. Left Sydney, and gone where? Gone to the diggings, but chiefly to Melbourne.
1355. You think there are a considerable number unemployed in consequence of the scarcity of building operations going on? Yes, and I take this as a guarantee: whenever I want a man I need not advertise, but pass it about by word of mouth,—I should have a dozen men in a few hours.
1356. You carry on contracts on your own account? Yes.
1357. Where is your work now? At Ashfield.
1358. Does your remark as to the want of employment apply generally, and include such branches as bricklayers and carpenters? Not so much to the carpenters at present; I think they are in a better condition now than other branches of the building trades are.
1359. What was the rate of wages upon your arrival in the Colony? I can scarcely say what was the rate.
1360. What did you get yourself? 28s. a-day.
1361. That was a good rate of wages? Yes, very good indeed.
1362. *By Mr. Lyons*: The profits were equally large? I was not a contractor then.
1363. *By the Chairman*: What did it fall to then? In the latter part of 1854, or early in 1855, it fell to 22s. a day.
1364. What is it now? I can scarcely say.
1365. What are you paying? 10s. 6d. I am cognizant also of many of the best mechanics in Sydney being out of work for three or four months, and at times as long as five months, with perhaps two or three days' work in a month. A few months ago I had a mason working for me in Pitt-street, and he told me that he had not worked more than four months in the last sixteen months. He was a very hard-working, steady, industrious man.
1366. You cannot give any information as to the sufficiency of house accommodation for the working classes in Sydney—as to whether it affords the necessary means for the preservation of health and common decency in families? Is there sufficient means of ventilation and out-door conveniences? There is anything but good drainage to such houses; because in the generality of places where working men live the drainage has not been carried—the municipal body have not been in working for a sufficient length of time; but I am not aware of any extraordinary want of convenience of that description.
1367. *By Mr. Hoskins*: You say there are about 425 masons in Sydney? At the end of 1855.
1368. There are now a large number idle? Yes.
1369. Are there a great number of youths and boys employed in the building trade? Yes.
1370. In point of fact, there are very few men employed? I am sorry to say that such is the real state of things.
1371. *By the Chairman*: Do you mean to affirm that there are very few men employed? The mason to whom I have alluded, and who has been all over the city and suburbs seeking employment, said there could not be much more than 100. Others have told me somewhat similar. My opinion is that 150 is the outside.
1372. There are few men employed compared with the number of boys? Not upon good work; upon work of a commoner quality the boys are engaged.
1373. There are more boys in proportion to the able hands? Yes.
1374. They are generally taken as apprentices to trades in proportion to the full number of able hands? I am not aware of that.
1375. *By Mr. Hoskins*: Are there more apprentices employed upon buildings here than at home? It is the misfortune that they are not apprentices.
1376. You are paying 10s. 6d. a-day to masons, you say—is there any large number working for less—that is not the average? No; the principal work is done by the piece. As a general rule, when trade is bad work is done by the piece, and men do not stand as to what they can earn; that depends upon the state of trade.
1377. If they work by piece can they average 10s. 6d. a-day? No; I knew half-a-dozen masons working at a place in Sydney, about six months ago, and they were not making above an average of 5s. a day.
1378. *By Mr. Lyons*: How do they make a living when out of employment—are they spending their savings? I cannot tell that; nor can I see how it is possible for them to live properly when in such employment.
1379. *By the Chairman*: Are you aware of any instances where men who in former times, when fully employed, had amassed sufficient money to buy freehold homes, and who have since been compelled to encumber them, by borrowing money upon them, in order to support their families when out of employment? I know several instances of that character.
1380. You have resided here for some years—what is your opinion of the general character of the population of Sydney—I mean the settled portion; not that floating part which there must be in all cities, but the more permanent portion—as to their intelligence, sobriety,

- Mr. Stephen
Gleadall.
20 Dec., 1859.
- sobriety, and general propriety of conduct, as compared with what you have seen at home? I am not aware that I have seen anything better anywhere else. The body of men amongst whom I move more particularly are a superior class to what I have met with elsewhere.
1381. Is it not a fact, that in your own trade there are men of considerable intelligence and educational acquirements? Yes.
1382. *By Mr. Hoskins*: From your actual observation, do you know that there is such distress as to extend to a want of food? Certainly.
1383. *By the Chairman*: Positive suffering? Yes.
1384. You do not know anything about prostitution being very general? It is a subject upon which I am unable to give any information.

FRIDAY, 23 DECEMBER, 1859.

Present:—

MR. HOSKINS,		MR. LYONS,
DR. LANG,		MR. PLUNKETT,
MR. WINDEYER.		

HENRY PARKES, ESQ., IN THE CHAIR.

John M'Lerie, Esq., again called in and further examined:—

- J. M'Lerie,
Esq.
23 Dec., 1859.
1385. *By the Chairman*: When you were examined before this Committee on a previous occasion you undertook to prepare certain returns to be appended to your evidence? I did.
1386. I think one of those was a return that would shew, as far as it could be ascertained, the character of the house accommodation of the working classes? That was one of the returns called for.
1387. Have you prepared such a return? I have. I have here several other returns which I beg to lay before the Committee. The return marked A is a return of houses occupied by working mechanics and laborers within the city. B and C are returns of families within the city occupying one room only. D is a return of houses deficient of proper accommodation in a sanitary point of view. E is a return of juvenile prostitutes and vagrants under sixteen years of age. G is a return of mechanics and laborers partially or wholly out of employment on the 26th October last.
1388. Will you be kind enough to state to the Committee what means were adopted in collecting the information as the foundation of this return? The city is divided into four police divisions, each under the control of an officer of the police called Inspector in charge, and the divisional returns, from which the general return I have alluded to was made, were collected under the superintendence of these Inspectors in charge.
1389. The police force were employed in collecting them? Exclusively. (*The witness handed in the returns. Vide Appendix.*)
1390. You also undertook, I think, to supply a return shewing the number of persons taken into custody by the police during the year 1858? Yes; I have here a number of returns with reference to that point. The first of the series is a return of prisoners taken into custody by the Sydney police force during each month in 1858, distinguishing the sexes and the offences with which they were charged. No. 2 is a return shewing the results of magisterial inquiries into those several offences for the same period. No. 3 is a table shewing the age and sex of the prisoners taken into custody for the same period. No. 4, a table shewing the degree of instruction of prisoners taken into custody during the same period. No. 5 is a return shewing the trades and occupations of persons taken into custody for the same period. No. 6 is a return of property, with its value, reported as stolen during the year 1858, with the amount recovered.
1391. That return, I presume, is prepared from the records of your office? It is prepared from the daily reports of occurrences brought to my office of the amount of property stolen, but I cannot look upon it as correct, for frequently there are reports of property having been stolen when no thefts have been committed, and very often property is over-valued. No. 7 is a comparative statement of the persons taken into custody, and how disposed of in each year, from 1851 to 1858 inclusive. I may mention that this last is the only account of police statistics I found in the office when I took charge of the police. No. 8 is a return of the number of informations filed by the police within the city of Sydney for the year 1858. (*The witness handed in the same. Vide Appendix.*)
1392. *By Mr. Plunkett*: What kinds of informations? They are stated under several headings, as Breaches of Police Act, Licensed Victualler's Act, &c. According to Return A, which I have handed in, it appears that there are within the City of Sydney 480 freehold dwellings occupied by working mechanics and laborers, and the average number of rooms in each of these dwellings is 3.075. The number of dwellings rented by mechanics and laborers is 3,288, the average number of rooms in each being 3.025. The number of permanent lodging-houses, that is accommodating permanent lodgers, is 236; the average number of rooms is 4.050; and the number of lodging-houses accommodating migratory lodgers is 49; the average number of rooms in each of these houses is 6.025, and the average number of lodgers in each of these houses during the year is ten per night. Return C shews that there are within the City of Sydney 151 families, occupying one room each only: that the number

number of children belonging to these families amount to 213, whose average age is six years. Return D shews that there are 1,466 houses within the City, where the accommodation in a sanitary point of view is defective.

J. M'Lerie,
Esq.

23 Dec., 1869.

1393. *By Mr. Plunkett*: What kind of deficiency is there? The particulars are given in the divisional returns, and are bad drainage, deficiency of water-closets, and so forth. This return shews that there are only 356 water-closets to the number of houses I have given, which is, therefore, but one of these places to four houses. Return E shews that there are 112 juveniles, under sixteen years of age, in a state of prostitution or vagrancy within the City. Of this number 90 are males, living in a state of vagrancy, whose average age is twelve; and 22 females, in a state of prostitution, whose average age is fourteen: of this number (112), 63 are returned as being members of the Roman Catholic faith, 36 of the Protestant, and 13 not known; and that 84 of these children have received no education at all, and 28 have been imperfectly educated; that 101 are natives of the Colony, 4 natives of England, 5 of Ireland, and 2 place of birth not known. G shews the number of mechanics and laborers who were partially or wholly out of employment on the 26th October last. The several trades are enumerated in the return alphabetically.

1394. When you say out of employment, do you mention any particular time for which they have been unemployed? The return will shew,—That it appears from the return that 1,039 persons were out of employment at that date, of whom 250 were stated to be only partially employed, 13 had been one week out of employment, 44 had been two weeks, 34 three weeks, 331 from four weeks to three months out of employment, and 367 were stated to have been from three to six months out of employment.

1395. *By the Chairman*: In the preparation of these returns, and the necessary intercourse with your officers on the subject, have any new facts come to your knowledge which are not included in that statistical information? No, excepting with respect to some of the persons who are stated to be out of employment. My inspectors, in each division, stated that among those who were out of employment, were some of lazy, idle habits. No distinction was, however, made in the return.

1396. *By Mr. Plunkett*: With reference to the return of the number out of employment, have you traced at all the principal causes, whether it has arisen from idle habits, illness, or actual want of employment, by reason of want of demand for labor? As I have stated, a small proportion has been reported to me, as owing to the idle habits of the people themselves.

1397. Only a small proportion? Yes; and others from scarcity of employment; but I think the demand is greater now than it was in October, when the return was compiled. With respect to return D, I think it would be well to leave with the Committee the divisional returns upon which it was made, as they contain the information in detail as to the sanitary state of the houses. (*The witness handed in the same. Vide Appendix.*)

1398. Are you, from your investigation, able to say what resources the working people feel they have to rely on, when they become ill or meet with any accident? In many instances, they are assisted by their grown-up children, or industrious wives, who wash and assist in supporting the family by such means.

1399. Does the Benevolent Asylum, or any other public institution, come to the relief of the class which may be called indigent housekeepers? Yes.

1400. In what way? They frequently apply to me, or some other magistrate, though they seldom do so, until they are reduced to the last stage of wretchedness, and they are then recommended for out-door relief at the Benevolent Asylum—generally out-door relief, because they do not like to go into the institution. Mr. Johnson, the Secretary, after inquiring into the circumstances of the family, affords relief under the instructions of the Committee. They have a weekly supply of bread and meat, and in cases of illness, rice, arrowroot, and other medical comforts. With reference to the return of persons out of employment, I find that the larger proportion of the number appear to belong to trades connected with building. I find, of the 1,039, there are 23 bricklayers, 3 builders, 9 cabinet makers, 130 carpenters, 9 joiners, 430 laborers, 53 painters, 36 plasterers, 75 stonemasons, 3 plumbers, 2 stonecutters, 8 slaters, 6 shingleers. There appears to be out of employment also, 19 butchers, 18 blacksmiths, 15 bakers, 10 coopers, 5 coach builders, 6 draymen, 6 engineers, 2 engravers, 10 gardeners, 2 millwrights, 2 nailors, 1 pastrycook, 4 printers, 5 quarrymen, 6 sawyers, 16 seamen, 12 shipwrights, 3 ship stewards, 31 shoemakers, 6 saddlers, 1 soapboiler, 37 tailors, 2 tinsmiths, 3 upholsterers, 8 wheelwrights, 1 waiter, 1 watchmaker.

1401. Can you give the maximum and minimum time these have been out of employment? In taking down the details of these returns, the precise time each person had been out of employment was put down, but in making out the returns an average was struck.

1402. *By Mr. Hoskins*: I believe some two years ago there was great distress in the city, and a commission was appointed of which you were a member? Yes.

1403. And you placed yourselves in communication with persons in different districts of the Colony to learn whether there was any demand for labor in those districts? We did.

1404. With how many districts did you communicate? Along all the main lines of road, and to those places where there was steam communication.

1405. I believe with the exception of two districts there were no places where labor could be absorbed? I know we got very little encouragement to send up unemployed labor.

APPENDIX.

A DIVISION.

LOCALITIES in which the House Accommodation is deficient in a Sanitary point of view.

TREET, LANE, OR PLACE.	No. of Houses	Average No. of Houses to each Water Closet.	State of the Drainage.	REMARKS.
Sussex-street North	14	7	Very bad.....	Near Phoenix Wharf.
Bates'-lane, off Sussex-street	4	2	Bad.	
Stewart's-lane, off Sussex-street ..	5	5	Good.	
Oatly's Court, off Sussex-street....	5	5	Bad	From the Water-closet.

C DIVISION.

RETURN of Localities in which the House Accommodation is deficient in a Sanitary point of view.

STREET, LANE, OR PLACE.	No. of Houses.	Average No. of Houses to each Water-closet.	State of the Drainage.	REMARKS.
Queen's-place	18	6	Surface, bad..	Gutters very filthy.
Abercrombie-lane, off George-street	12	2	do. ..	{ Accumulation of all kinds of filth in gutters; stench abominable; proximity of Tank Stream a principal cause of bad sanitary condition of this neighborhood.
Malcom's-lane, off George-street ..	7	3	do. ..	{ Convenient to Tank Stream; stagnant filth in gutters; smell very offensive.
Robin Hood-lane, off George-street.	7	7	do. ..	{ Convenient to Tank Stream; same remarks apply as in last case.
Reynold's-buildings, off George-st..	10	2	do. ..	{ One water tap to ten houses; drainage very defective.
George-street North.....	3	1	{ Water-closets of these houses, and drainage from higher neighborhood at rear, flow into cellars; stench abominable; infested with vermin; totally unfit for human occupation.
Harrington-street.....	30	1½	Surface, bad..	No gutters constructed.
Cambridge-street	4	4	do. ..	{ Gutters constantly filthy from receiving drainage from Harrington and Cumberland streets, which are situate higher.
Cambridge-street	20	2	do. ..	
Cambridge-street	17	2	do. ..	
Harrington-street.....	3	No closets	do. ..	{ Occupied by vagrants; neither water-closets, back yards, nor water laid on; roofs partially uncovered; accumulation of filth under floors, which are broken through; stench intolerable.
Hunt's-buildings, Gloucester-street.	11	5½	do. ..	{ Large accumulation of filth in gutter; houses flooded in heavy rains; ground under floors becomes saturated with filthy water; exhalations after floods very injurious to health of occupants.
Gloucester-street	5	No closets	do. ..	{ Neither water-closets, back yards, nor water laid on; very defective drainage.
Gloucester-street	2	2	do. ..	{ Occupied by Chinese; overcrowded; interior of house filthy; animal and vegetable refuse and filth in back yard; smell very offensive.
Long's-lane, off Cumberland-street..	7	1	do. ..	{ One water tap to seven houses; back yards filthy; water-closets near back doors; stench intolerable.
Cumberland-street	}	{ No gutters constructed through the greater portion of these streets; natural channels, by which water is carried away, greatly obstructed; large accumulations of filth in many places; smell very bad in summer season.
Gloucester-street				
Harrington-street.....				
Cambridge-street.....				
Princes-street	1	No closet.	Surface, bad .	No water laid on.
Off Princes-street.....	3	3	None.....	Do.
Clarence-lane.....	1	1	Surface, bad..	{ Five families occupy this house, all of whom use one water-closet; gutters very filthy.
Off Kent-street	1	1	do. ..	Do.
Off Kent-street.....	12	6	do.	{ Seven families occupy these houses which have only one water-closet; a stream of filthy water runs across vacant ground near this street, from which a very offensive smell proceeds.

DECREASE	12

JNO. M'LERIE,
Inspector General of Police.

The Honorable Edward Wise, M.L.C., (by permission of the Legislative Council) examined:—

1406. *By the Chairman:* You are the Attorney General of the Colony? Yes.

1407. And have resided in the Colony some years? Yes, since June, 1855.

1408. This Committee has been appointed to inquire into the general condition of the working population of Sydney, with reference, among other things, to house accommodation and its sanitary and moral effects upon the well-being of the inhabitants—the Committee have been given to understand that you have paid considerable attention, for some time past, to this subject? I have paid some attention.

1409. You have paid attention to the subject of sanitary reform in towns? Both here and in England.

1410. In Sydney, have you taken up the subject practically to any extent? To some extent I have addressed my mind to it, and have endeavored, as far as possible, to disseminate sound information upon the subject.

1411. Have you made any inquiries which have placed in your possession facts bearing upon the actual condition of the house accommodation of the working classes? I have. On my first arrival, I was particularly struck with what seemed to me the deficient house accommodation in the town, and, after a short visit to the country, in the interior also. It appeared to me that the houses were not in the slightest degree adapted to the country, or so as to be conducive to the domestic comforts or the morals of the dwellers therein. During the first four months I was here, living alone, I made it my business to inquire, on every occasion that I could, of the working men whom I met, and although I cannot give the details of the answers, my first impressions were very strongly confirmed, not only that deficiencies existed, but that they were felt especially by the new comers. I may mention that I conversed, over and over again, with masons and persons engaged in building, and they invariably admitted the deficiency of the accommodation. I especially remember the case of a cab-driver, who told me that he and twelve others slept in one loft, in which there was no window, no ventilation of any kind. I endeavored to institute some inquiries through the Philosophical Society, and a Committee was appointed to examine into the state of Sydney.

1412. When was that? Just before the Officer of Health was appointed, in the latter part of 1856, or the beginning of 1857. That Committee, however, in consequence of the appointment of the Officer of Health, and having no funds at their command at that time, did not result in anything beyond a few meetings. A Mr. Smith, who has since been appointed as clergyman to the Church in Parramatta-street, had just arrived. I did not know him personally, but became acquainted with him, and employed him to procure some information from actual examination. He did so, and furnished me with these papers which I have now in my hand, which I have no doubt were correct. With the permission of the Committee I will hand them in. (*The witness handed in the same. Vide Appendix.*)

1413. At what time were these inquiries made? About two years. I was lately told that some of these places were being deserted.

1414. You believe such cases as those represented in these papers exist in other parts of the City still? I should so, decidedly. Previous to the Lodging House Act being brought in in the Council, I spent some four hours one evening with an Inspector of Police in going round to many lodging-houses in the town, and though I am aware, of course, that all the lowest class must be badly accommodated, still the amount paid did not seem at all to afford the accommodation it ought to have done. To give you an instance—in one loft there were seven sleeping who paid sixpence each a-night for their bed, or three shillings a-week. For this room, therefore, a weekly sum of a guinea a-week was received. In several of these rooms there would be no utensil except a bucket placed in the middle of the room for common use. In some houses there was great attention paid to ventilation and cleanliness; but, generally, the impression upon my mind was, that it was most desirable that what we call common lodging-houses should be put under some control and regulation.

1415. The Lodging House Bill was introduced and passed in the Legislative Council, and thrown out in the Assembly? Yes; for some reason which I never could understand it was thrown out in the Assembly without consideration, and I must say that its rejection in this way by the Assembly, they being representatives of the people, most particularly astonished me.

1416. Do you know whether that Bill was prepared in consultation with the Health Officer at the time, Mr. Aaron? It certainly had his approval to the best of my recollection. That Bill was prepared in the main upon the model of the English Act, and I should add that its supporters were encouraged to proceed, because they found that at Melbourne, where similar evils had to be contended with, a similar Act had been passed. It will be found in the Victorian Acts in the year 1854.

1417. When was the Bill introduced in the Legislative Council? I was about to introduce it, but as Mr. Lutwyche, who was the Solicitor General at the time, approved of it, its supporters availed themselves of the assistance of the Government, and he introduced it, and carried it through the Legislative Council.

1418. *By Mr. Windeyer:* Are you aware that a similar Act has also been found to work well in Tasmania? Yes. The benefit of the Lodging Houses Act in the large towns of England has been universally admitted; and although there are not, perhaps, so many here of what in the English sense of the word may be called a "vagrant" population, still there are in this country a great number who are apt to seek a bed, as we may say, on chance, and who in that sense are vagrant or wandering about. If the Committee desire it I will make a short summary of the Lodging Houses Act in England, and append it. (*Vide Appendix.*)

1419. I believe it has been found that the persons who have been affected by the working of this Act, although they may have disliked it at first, have approved of it afterwards? Yes; and

The Hon.
Edward Wise,
M.L.C.
23 Dec., 1859.

The Hon.
Edward Wise,
M.L.C.

23 Dec., 1859.

and in Lord Shaftesbury's speech in 1858, as President of the Lecture "Public Health," at the National Association for the Promotion of Social Science, he stated, "There has been in "one measure more productive of good results than is the registration of Common Lodging "Houses."

1420. There is no substantial objection to it as interfering with the liberty of the subject? Not at all.

1421. *By the Chairman:* When you say that the Lodging House Bill was thrown out of the Assembly, you are aware that there was a division upon it, and that there was a section in favor of going on with the Bill? Yes.

1422. You are aware that the House divided upon it? Yes, I believe it did. Although I think there is an improvement apparent in the lower class of houses during the last two or three years, yet, speaking generally, there is a total want of the means of ordinary ventilation in sleeping rooms, not only in houses of this description in town, but it is equally remarkable in hotels, and in inns on the roadside in the country to a very great extent.

1423. Is there any other information you desire to give the Committee? There are many alleys and lanes in Sydney, in which it seems to me it is quite impossible that any decency could exist.

1424. What towns are you acquainted with in the mother country? My knowledge is chiefly confined to London.

1425. Do you think, leaving out of view the consideration of climate, the house accommodation is worse here than in London? Certainly, compared with the ability to pay for it, and the charges made.

1426. Generally, I should infer from your evidence, you think there is a feeling of indifference to the necessary sanitary provision of houses here as compared with that of London? Decidedly; but at the same time that indifference is lessening.

1427. With reference to one of the other branches of our inquiry, as to the existence of juvenile vagrancy in the streets of Sydney—are you able to give any information on that subject? No, I have not seen that; but I have seen that the deficiency of house accommodation necessitates children being turned into the streets, and therefore becomes a fruitful source of crime and demoralization.

1428. I presume you will not be able to tell us anything about the alleged want of employment? I think not; but my impression is that employment is difficult to obtain just now.

1429. You think there is suffering from want of employment? I should think there is; but I should attribute that to the over pressure of the working population in Sydney, and their disinclination to remove from Sydney.

1430. Do you think, from your observation, that there is want of employment? That there is difficulty in obtaining it, I have known two or three instances, but my observation is limited. To return to the subject of house accommodation, and to illustrate what I mean with reference to the want of ventilation; although it may seem a small matter, it is of great importance practically, hardly any windows are made to open from the top, and the consequence is, that very often the windows are not opened at all; for, if opened at the bottom, as they are generally without sash-lines, they require something to be placed under them to keep them up. That gives a little extra trouble, to begin with, and also, not unfrequently, accidents may occur; and I have noticed, over and over again, even in the country, that windows are evidently not opened from week's end to week's end. There is no fault, it seems to me, to be found in this matter; it is not a subject of blame so much as of ignorance, and we know that it is only within the last fifteen or twenty years that these matters have been properly dealt with in England. It seems to me that the type of house was formed here when this subject was not understood, and that type has been followed without the least consideration.

1431. Are not the houses in the country, occupied by the poorer classes, pretty well ventilated by the cracks in the walls, or the openings between the slabs? Fortunately they are so.

1432. *By Mr. Windeyer:* Do you know, as a matter of fact, that the erection of model lodging-houses for the working classes in England has been found to answer as a speculation? I believe a moderate interest has been realised; but the feeling with a great number of employers in England, and unquestionably a very proper feeling, is that it is more economical for them in the end, to provide good house accommodation for their workmen, as it tends to preserve their health and strength, and also to preserve their character. That the interests of the employer and the employed are identical is a truth becoming daily more recognized.

1433. I understood you to say that you considered the existence of these lanes and alleys had a bad moral effect upon the people—could you suggest any thing in the way of legislation to correct this evil? Yes. I would have no thirty feet lanes. I would have a legislative enactment absolutely forbidding any lane to be made in any town unless of a certain width, and the minimum width should be forty feet; without such an enactment the eagerness of people to make the most of their properties will almost inevitably reproduce the evils of narrow streets in every new place that is built; all *cul-de-sacs* should also be prohibited.

1434. Has such legislation as that been carried into effect in the Mother Country. It has. Endeavors are being made to throw open the streets in all directions, to destroy all *cul-de-sacs*, which are most injurious, and to provide, what I have most earnestly urged here, places for public recreation and exercise. With reference to that last point I may mention, that although I know there are some reserves made under the land regulations, in the Land Bill which I had the honor to assist in framing in 1857 a clause was prepared that no town in future should be laid out without a certain defined proportion being reserved for the recreation, health, and enjoyment of the inhabitants. I have no hesitation in my own mind in attributing the great tendency to intemperance here, amongst other causes, to the people being constantly shut up in close rooms, and being compelled to breathe impure air.

1435.

1435. *By the Chairman*: You think, to a great extent, intemperance is the consequence of discomfort, rather than discomfort the consequence of intemperance? Decidedly; and from all the inquiries I have been able to make here, I believe that another cause is, the imperfect knowledge of domestic economy among the working classes, and the almost impossibility of anything like household comfort. These two causes, I believe, drive many men from their homes. With reference to the connection between drunkenness and bad air, and social discomfort, I can quote the authority of persons who have especially devoted their attention to this subject, persons of very different character and of very different mental tendencies, who agree on this point—such as Dr. Southwood Smith and Dr. Toynbee. The latter was surgeon at a large infirmary in London; and he first drew my attention to a very simple remedy for the imperfect ventilation of rooms, and the application of which diminished the extent of illness in his parish very considerably. I may also mention the names of Mr. Vanderkiste, now in this country, who was for six years a city missionary in the worst parts of London; of the well-known Mr. Chambers, of Edinburgh; and I may close the list with the name of Lord Shaftesbury, who, in the speech delivered by him in October, 1858, already referred to, uses this language:—"You will find the matters which must be brought under sanitary arrangement will be divided into two great aspects—the physical and moral. In detail they may be considered apart; but they cannot be considered apart, as not to be frequently, constantly, nay, perpetually brought into contact. They act and re-act upon one another, in a way quite indivisible. A low moral state will bring on intemperance, and with intemperance all that dreadful catalogue of disease and crime which ever follows in the wake of intoxication. But those habits of drinking are engendered by foul air, and the disgusting and depressing influence of the localities in which the people live; by a defective supply of water; by its deleterious quality." And again:—"We should first, as far as possible, regulate the building of houses, the width and construction of streets. I have seen the greatest possible effect produced by destroying a court which was a *cul-de-sac*, by knocking down the end house and making it a common thoroughfare. You must also erect houses for the people to live in, or adapt old houses." I can also state that several instances of the grossest crime have come under my notice officially, connected with and almost incident to the close association of the sexes, consequent upon the wretched accommodation afforded to the poorer classes. Dr. Southwood Smith says, in his pamphlet on the "Results of Sanitary Improvement"—"There must be compulsory enforcement of certain sanitary conditions wherever there are human habitations. There must be provision for the supply of better ordered dwellings for the industrious classes; dwellings accessible to air and light, and no longer producing that malarious depression which resorts for relief to the fatal stimulus of ardent spirits; dwellings compatible with cleanliness, comfort, and those decent observances which are necessary to self-respect, and which must become habits before there can be respect for the happiness, property, or life of others. The physical improvement of these masses, it is now admitted, must precede their intellectual and moral elevation. When the house ceases to be a sty, and possesses the conditions which render it capable of being made a home, then, but not till then, may it receive with some hope of benefit, the schoolmaster and the minister of religion."

The Hon.
Edward Wise,
M.L.C.

23 Dec., 1859.

1436. *By Mr. Lyons*: Do you know what is the present salary of the Health Officer? I believe it is only £100 a-year.

1437. Do you think that is sufficient to enable him satisfactorily to perform his duties? Unquestionably not.

1438. You have said, I think, it appears to you that the people are anxious to remove out of the dwellings you describe—do you think that arises from a knowledge of the evils you have stated, or from their having a greater choice of dwellings in consequence of the reduction of rents? I think they are becoming more and more sensible of these evils. I have given lectures on this and cognate subjects, and I have found them very well listened to, and frequently spoken of afterwards. I have also circulated a considerable number of books bearing on these topics; these have been read particularly recently. Some of these are entitled "Household Truths for Working Men," and they are now on sale at Cook's, in George-street. I merely mention this to shew that more attention is paid to these matters than was the case some years ago. The newspapers also devote more attention to the subject, and the feeling is spreading among all classes. Deficiency of knowledge on these subjects is not confined to any class, and this is not astonishing when we reflect that it is only a few years since they began to be considered much in England.

1439. *By Dr. Lang*: Would you say, from your own observation, that the humbler classes in this country are more indifferent to the character of their house accommodation than the corresponding classes at home? Than the corresponding classes at home now are, not more so than the corresponding classes at home were a few years ago.

1440. Do you not think that state of things is to be ascribed pretty much to the finer character of our climate, rendering the precautions against cold and other atmospheric influences that are necessary at home scarcely so necessary here? Partly no doubt, and partly from adopting habits and customs which are totally inapplicable to the existing state of things; and that is what I meant when I said that the type of house adopted in this Colony in the first instance had been too implicitly followed. If you refer to Collins's New South Wales, you will see a picture of the first barracks at Parramatta, which is an exact representation of many houses now all over the country; for instance, the row of wooden houses just beyond the turnpike in Rushcutter's Bay, with windows close up to the roof.

1441. Do you not think that when people of the humbler classes find that it is not necessary to take such precautions against the climate as are indispensable at home, it leads them to an indifference generally about their house accommodation, and induces a feeling of barbarism? No, I do not think that causes it at all, or very slightly.

The Hon.
Edward Wise,
M.L.C.
23 Dec., 1859.

1442. Do you not think that the unnatural distribution of our population, about one-fourth of the entire population of the country being concentrated in the city and its suburbs, tends greatly to increase the difficulties which present themselves for the improvement of the humbler classes? Undoubtedly; but one of the causes greatly contributing to that is the miserable house accommodation that exists in the country; a kind of terror exists against going into the interior. This is especially so with servants.

1443. Have you found there is such a feeling of unwillingness to go into the interior? Yes, and I believe it is partly attributable to the notion that to go into the country is to relapse into a state of barbarism.

1444. *By the Chairman*: Upon the general sanitary question, do you not think one of the most striking popular delusions is that people feel satisfied if they get healthy situations, while they neglect altogether the necessary precautions for preserving health in doors, and thus render their house perhaps a den of fever in the midst of a most healthful position? Yes; and in order to remedy this I would have a knowledge of common things, to use the current expression, taught at all the schools, especially among the class likely to be servants. Miss Burdett Coutts has greatly promoted the spread of this species of knowledge by offering prizes to be competed for by pupils who shew they possess the best knowledge of common things, or who have made the greatest progress in hemming, sewing, cooking, and the various arts relating to the comforts of every day life. Upon this subject she has published a book, and a considerable number of copies have been circulated in this Colony. There is also another little book of a similar kind by Miss Brewster, called "Household Economy," which gives a great variety of information upon common things—the air we breathe—the food we eat—modes of cookery—means of preventing diseases, &c.

1445. With regard to the juvenile life of this city, have you ever thought of the very large amount that is sacrificed by preventable causes? I believe there is a very large amount, especially of the infant population annually sacrificed by these causes; and some of the chief causes I believe to be the want of fresh air, the closeness of the rooms, and the great ignorance of young mothers with reference to their mode of treatment of the children. I think Dr. Roberts can give you valuable information upon that point. With reference to house accommodation, I would particularly draw the attention of the Committee to what seems to me to be a great fault in the houses of the upper classes of Sydney. In the old and many of the new houses here, there is no proper accommodation for servants, who are therefore compelled to sleep in rooms out of the house. This practice prevails also very much in the country. It seems to me that this has a direct tendency to evil, as the servant is thus removed from the control and supervision of the master.

1446. *By Dr. Lang*: You are aware that that state of things arose from the peculiar circumstances of the Colony in its commencement? No doubt; but I think the upper classes are not sufficiently alive to the evils consequent upon it, and to the duty that devolves upon them as much as lies in their power to regard their servants as members of their families.

1447. *By Mr. Hoskins*: I presume you consider that there is a deficiency of houses suitable for the residence of mechanics and laborers? Yes; for that reason I would to the utmost facilitate the means of getting to the suburbs by railway.

1448. You say there is a disinclination among the working classes to go into the interior—have you never heard the reasons assigned? One reason, I believe, is the difficulty of getting there, and another the discomforts to which they are subjected when they get there. I would wish to impress upon the Committee my belief that, unless we do attend to these subjects more than we have done, it will tend to make the contrast between this country and Home greater than it would otherwise be; and this will operate injuriously to this country, for when the people at Home find that their social comforts are attended to by all classes, as is beginning to be the case now, and that they are neglected here, it will materially affect the immigration.

1449. That is, it will lessen the attraction of this Colony as a field for emigration? Yes.

1450. You are aware that there are now in England model lodging-houses for single men? Yes.

1451. Where every comfort is provided? Yes.

1452. I believe they have paid very well? Yes, I think reasonably so.

1453. Do you not think something of the same kind in Sydney would also pay? No doubt it would. I had several interviews some three years ago with a wealthy man in Sydney, who was arranging the details of such a plan, but his enterprise was stopped by illness.

1454. A large number of young men come from the interior, and having no comfortable place where they can stay, it induces habits of intemperance? Yes; I believe the hotel accommodation is equally bad.

1455. *By the Chairman*: Do you not think that the want of proper sanitary conveniences, such as means of drainage, ventilation, and due care in the construction of buildings, is almost as much felt in the mansions of the rich as in the cottages of the poor—that there is as much neglect? There is a great deal of neglect; but I have observed a decided improvement during the last four or five years.

1456. Are you aware that some of the new model houses, built since the reform movement in house accommodation has taken place in England, have in greater perfection all these conveniences than some of the most expensive palaces have in this country? Yes.

1457. Through the ignorance or indifference of the people here? Yes; or through not considering sufficiently whether the new houses are adapted to the climate.

1458. You, of course, consider this question of sanitary improvement with regard to the house accommodation afforded for the poor affects equally the rich, inasmuch as, if fevers are engendered by the filth and squalor of the poor, they will extend to the rich? It affects all classes, but more especially the working classes, because they are tied to their work, but the evil will extend to the higher classes as well.

1459. What I want to elicit from you is, whether this is not a question in which all have a substantial interest? Unquestionably all have; but the higher class can avoid the evil without legislation by expenditure and removal, whereas the working classes have not much leisure, and from the necessities of their position are subject to the evils I have referred to in a far greater degree; and it appears to me to be the duty of the State to take care that they are protected, for the benefit of all. The rich must ultimately pay for distress and poverty. Directly or indirectly the support of distress and poverty will fall upon the rich.

The Hon.
Edward Wise,
M.L.C.
23 Dec., 1859.

1460. *By Mr. Lyons*: What do you think would be a sufficiently remunerative salary for the Health Officer? £400 a-year; but my belief is that the municipal authorities should not have the appointment of the Health Officer, but that the appointment should be vested in the State Government, because I think by the latter arrangement there would be fewer difficulties thrown in the way of his carrying out his arrangements, and that he would be less fettered by personal influences. I wish to add that I regret that my constant occupations since this Committee was formed have caused the evidence I have now given to be more desultory and less definite than it would have been had I had leisure to prepare myself.

APPENDIX.

A.

ULTIMO ROAD.

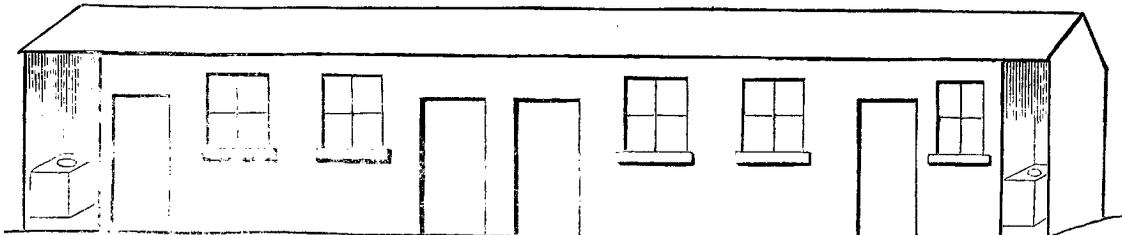

Many of the houses up this road are quite unfit for the lower animals in creation to be placed in; and how human beings inhabit these *human slaughter-houses* is an enigma which I cannot solve. I went into one—it was almost down. In looking at it I could not imagine how I was to get in; but at last I found a hole called the door; the extreme height was 5 feet. Rooms, 9 feet by 5 feet. The door that leads into their sleeping apartment is 5 feet high. Scarcely an article of furniture is in the place. The occupants (about four in number) seem idiotic; to say the best, they are inferior to the Aborigines. The place was a mass of filth. The refuse from an old water-closet, which had a bit of rag for a door, almost down into the bargain, having no seat, was on the top of the ground. They begged of me to inquire if they were compelled to pay taxes for such a place.

Just after you emerge from George-street are two houses on the left hand side of Ultimo Road; and in my numerous visits to bad localities, I never saw such disreputable places as these. Each house contains two rooms. The front room is 10 feet by 10 feet, 7 feet high; back room, 10 feet by 7 feet; windows very small. The houses were formerly let at 10s. or 12s. per week; then each house had an extra room. The landlord, to suit his own convenience, has taken away one room from each house, and now lets them at 8s. per week. In these rooms he keeps pigs, and the stench is dreadful. The filth from the pigs comes underneath the doors, so that the houses are in fact pig-styes. When the poor people come down in a morning, the first thing they have to do is to clean away the filth from the pigs which has come under the door. The house is full of vermin; and the walls being partly down, it presents the appearance of having been besieged. In front of these houses are stagnant cesspools, containing filth of every description. I could hardly get into the house for the filth—stepping-stones are absolutely required, to prevent you from being ankle-deep in it. What with these pigs, no water-closets,* and the accumulated matter at the front door, I am at a loss to conceive how it is that cholera has not seized the unhappy inhabitants of these miserable hovels. As it is, they look squalid, dirty, miserable victims to the rapacity and covetousness of an unthoughtful landlord. There has been much sickness here.

B.

SHERBAN-PLACE.

In George-street, near the Haymarket, is Sherban-place. I was looking down some courts, and a respectable tradesman spoke to me; I told him my business, and he asked me to step down this court. As I entered, the stench was so overpowering that I hesitated as to whether I would go back or go on. I went with him, and found 5 small houses bounded on each side by a water-closet.

W. C., full.

Water-closets and Houses under same roof.

W. C.

One had been emptied on the night before owing to a remonstrance made by the owner of a shop in the street, who has left his place of business owing to the dreadful stench from this court. Nothing can exceed the wretched appearance of the children in this court. The houses are dreadfully dirty, and in a bad state of repair. Rooms, 8 feet by 10 feet, 7 feet high; sleeping rooms, 6 feet by 10 feet. Eight shillings per week is paid. I was not able to glean the number of occupants owing to the persons being from home. The end house next the water-closet contains five.

C.

* Neither house has any water-closet.

The Hon.
Edward Wise,
M.L.C.

23 Dec., 1859.

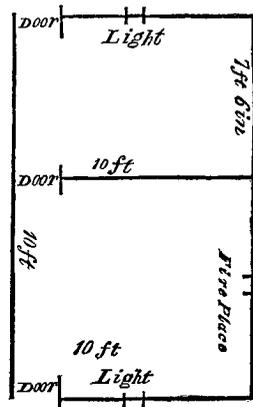

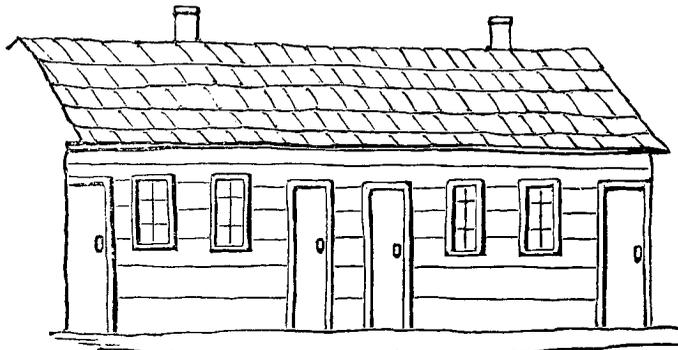

C.

BETWEEN RAILWAY BRIDGE AND CHRIST CHURCH.

This is a narrow entry, at the top of which are 3 weatherboard houses. The condition of this place is odious, and one which sooner or later will entail fearful consequences upon the health of the people in the surrounding district. No. 1—2 roomed cottage; front room, 9 feet square, 7 feet high; back room, 7 feet by 9 feet; light 26 inches by 22 inches in each room; tolerably clean. Man, wife, 3 children, 15, 13, and 12 years of age. Rent 10s. per week. No drainage except what runs on the surface close to the door. There are three water-closets close to this house—one opposite the front door which is quite full, the feculent matter is upon the surface and oftentimes it is so dreadful that the refuse of these places, filled to overflowing, comes in at the front door, especially when there is a storm of rain, the house is then deluged with the contents of the water-closets. The woman has been ill, and she attributes it alone to the horrible stench. House No. 2—5 persons, dirty, same complaints, privy opposite front door, rent 10s., same size as No. 1. House No. 3—man, wife, one child, clean, privy opposite the door almost down, 7 feet from front door to privy; an open stagnant pool is within 4 feet of this woman's house, which was abominable; the stench is almost suffocating, and enough to breed a virulent disease. Rent 10s., same as No. 1.

D.

PARADISE ROW, CHIPPENDALE.—25 HOUSES.

No.	No. of Family.	Condition.	REMARKS.
1	Man, wife, 2 children (4)	Dirty.	This row of houses, twenty-five in number, are all weatherboard, with a roof of shingles, in an exceedingly dilapidated condition, totally unfit to be the residence of human beings; many of these dens are so filled with vermin that the people can hardly live at all in them. The wet comes in through the roof, and runs off the street into them, the floors being lower than the street. Each dwelling contains two rooms—the one 10 feet square, the other 7 feet 6 inches by 10 feet. All the light is from two windows, about 25 inches square. The back room in which they sleep is so small, that when the bed is up scarcely room is found to turn round, and yet I found, huddled together, five of both sexes, indiscriminately. There is no drainage, and only one well to all the houses. At the back of the house, fronting the back doors, are the privies, five in number, three full, and four out of the five unfit for any human being to enter; three have no doors, and another has no roof, so that, if the feelings of delicacy were at all consulted, four would never be used, and the 100 inhabitants would all go to one privy. The men seemed ashamed to look at me while they told me the barbarous state in which they were compelled to live. The houses were 8s. each, reduced to 6s.
2	Man, wife, 2 children (4)	Dirty.	
3	Widow, 3 children (4.) (Illness)	Clean.	
4	Man, wife, 4 children (6)	Dirty.	
5	Man and wife, 2 children (4)	Tolerable.	
6	Man and wife (2)	Dirty.	
7	Man and wife, 3 children (5). (Illness)	Dirty.	
8	In family (3)	Dirty.	
9	Widow, mother, 5 children (7)	Clean.	
10	In family (3)	Clean.	
11	In family (2)	Tolerable.	
12	Man, wife, 4 children (6)	Dirty.	
13	In family (3)	Clean.	
14	Man, wife, 3 children (5)	Dirty.

23	Vacant	
24	In family (4)	Dirty.	
25	In family (5)	Clean.	

TUESDAY, 24 JANUARY, 1860.

Present:—

MR. HOSKINS,
DR. LANG,
MR. LYONS,MR. PARKES,
MR. PEMELL,
MR. PLUNKETT.

HENRY PARKES, ESQ., IN THE CHAIR.

The Reverend Patrick Newman, called in and examined:—

1461. *By the Chairman*: This Committee has been appointed to inquire into the social condition of the working classes of Sydney, with reference to the want of employment experienced at times, also the house accommodation and its sanitary effects, and also as to whether there is any large amount of juvenile vagrancy in the streets; it was thought, from the situation you fill, that you would be probably brought into contact with parts of the town, which would enable you to give some valuable information to the Committee—will you be kind enough to state whether it has come at all within your knowledge that there is any degree of suffering among the working classes in that part of the town with which you are more particularly acquainted? I have not many observations to address to the Committee on the subject under discussion. By way of preface I may state, that I certainly have a fair opportunity of corroborating by *facts* and *ocular proofs* a great many of the assertions I shall have to make. For, as Catholic Clergyman of the district, which includes a very considerable portion of Sydney, having been appointed to it now for some years, and having constantly to go through not merely the main streets, but also the by-ways and by-lanes, I am in a position to see thoroughly into the state of the working classes.

The Rev.
P. Newman.
24 Jan., 1860.

1462. *By Dr. Lang*: May I ask the part of Sydney you refer to? St. Patrick's, which corresponds with the parishes of St. Phillip and Holy Trinity.

1463. *By the Chairman*: The district popularly known as "The Rocks"? It includes a much larger portion than *The Rocks*; it includes all that part of the city lying to the north of King-street West to George-street, and Hunter-street to Macquarie-street. I have to state that there have come under my notice during the time of my residence in that district, a great many very distressing cases; and that this distress is increasing. A very great amount of distress is to be witnessed in the back streets, back lanes, and by-ways.

1464. Would you be kind enough to state more particularly any instance of distress, in what it consisted, and also to what you attribute it? I know instances more than one, within the last six months, of the following kind: I find if I go into one of these huts or houses in these back streets, a father who has very small wages, who is often out of employment, and who has the whole family depending upon his wages for their support, a very large family of from six to ten, and the children of various ages, the eldest perhaps not more than twelve or thirteen, and of course generally unable to assist the father in any way. His wages have therefore to support this family, and they are not constant, and very often as I observed rather low. He has to pay his rent—and I may observe, with regard to rent, that the poor have to pay monstrously out of proportion, when we look at the tenements they hold. The week before last I attended a poor person in an apartment, which was the only one occupied by a father, mother, and child about ten or twelve years of age. It was a little room not more than about six feet by six, and about nine feet high, situated in a most unhealthy part of Sydney—Malcolm's Buildings, lying off George-street.

1465. Near the Tank Stream? Yes. I asked the owner whether he had any other apartment. He said, "No." I asked what he was paying for this room? And he answered, "four shillings a week."

1466. Are there many houses destitute of furniture and the common utensils for domestic comfort? A great number of these smaller houses have scarcely a decent article of furniture of any kind.

1467. Do you attribute this extreme state of poverty to the faults of the head of the family? No; in nine cases out of ten I attribute it to the peculiar circumstances connected with the City of Sydney at large. What I mean is, that the working population of Sydney is vastly in excess of the employment at present; indeed, I believe, in the best times, when the demand for labor is most extensive, I believe the working class in Sydney is in excess of that demand.

1468. You believe then that Sydney is too great a city for the population of the country? I believe the working class in Sydney is far too numerous for the works usually going on in Sydney.

1469. That there are too many laborers for the ordinary employment likely to arise in a city of this kind? Yes, in a city like Sydney.

1470. Has it come to your knowledge that persons thus situated have rejected offers, or have not availed themselves of opportunities, of going into the interior where they could be employed? I have said that, in nine cases out of ten, the cause of this distress may be referred to what I have stated; but, probably, I would say, in one case out of ten this misery arises from the person's own fault. A man may work for three, four, or five days and then spend his money in the dram shop. I could not say more than that proportion. When once these people (I allude to that portion of the laboring class addicted to intemperance) have got into the difficulty they have not the energy to get out of it, and although occasional offers may be made to them to go into the country, they have a disposition to remain in Sydney, and reject offers which would appear to be encouraging to go to remote parts of the country. In fact they prefer to remain in Sydney, and to struggle on through misery, to going up the country, to what I would consider encouraging offers.

1471.

- The Rev. P. Newman.
24 Jan., 1860.
1471. Do we understand that you visit many of the houses of the working classes, where the want of proper house accommodation is such as to render it impossible for the family to be in a state of moral and physical health? In the first place it is part and parcel of my duty as a Catholic Clergyman to visit every poor family in my district. It is in fact a matter of absolute duty. These people (the poor) are especially committed to my care as the Catholic Clergyman of the district; consequently I can see into the actual extent and nature of the poverty existing in different parts of the district. Now in regard to this actual distress and misery, do you ask me to explain it?
1472. No; what I want to elicit is, whether from the manner in which the working classes are housed—looking to the means at command for the preservation of cleanliness and ventilation in their houses, and also of family decency—it is impossible for them to be in a state of physical and moral health? In many cases it is exceedingly difficult, and in many cases impossible, so far as the *morale* is concerned. With regard to their physical condition, I say it is impossible for them to be in a healthy state. There is one thing which really astonishes me, and that is, how it is we have not had epidemics in Sydney before this. I cannot understand how this is, unless indeed it arise from the salubrity of our climate and the peculiar formation of the Sydney Harbour, which causes the sea breeze to reach even these most objectionable localities. This may serve as a check to the evil which the habitations themselves would cause. These are of such a character, as far as my experience goes, as would lead me unhesitatingly to pronounce them dangerous to the health of the strongest, directly opposed to the physical health of the inmates, and in many instances opposed to the well-being of their moral condition.
1473. With regard to the manner in which the children of the working classes are cared for; does it come within your knowledge that there is a good deal of practical vagrancy among the juvenile population in the streets—that there are many children who are either without friends, or with friends who imperfectly discharge their duty? That is a question I cannot so conveniently answer, taking it generally. So far as the Catholic portion of the community are concerned—I cannot speak of others, they are beyond my sphere, but so far as the Catholic portion are concerned—I can state that there is not a great amount of vagrancy. I state, secondly, that some children are kept from school by the necessitous circumstances of their parents. This is the case in some instances, but not in very many, because it is one of the rules of the Denominational Board, that if parents are really unable to pay the school fees, they may get a certificate from a member of the Board to that effect, and such certificate entitles the children to admission to the school. But the worst effect of the mode of living of the parents upon the children, is that it is very hard under such circumstances to give them proper habits of cleanliness, or other habits which will afterwards become them as citizens, and above all as Christians. Where a number of persons are huddled together in small apartments, without any separation of the sexes, nothing is more difficult than to preserve a due sense of morals, and a due sense of decorum. It is exceedingly difficult under such circumstances for people to preserve that natural, delicate, noble feeling of the human heart, which the teaching of Christian parents and religious instructors should help to promote and foster.
1474. Your duties must necessarily take you a great deal about the streets and by-places of the city, do you ever notice promiscuously assembled in the street—I am now speaking irrespectively of that section of the community committed to your pastoral charge—groups of children apparently of vagrant habits? I do occasionally. I do not know to what section of the community they belong.
1475. Do you notice in the streets, to a large extent, children of disorderly habits? I could not say to a very large extent, but I notice them frequently.
1476. Do you ever go near the public wharfs? Yes.
1477. Have you noticed children congregated together at the waterside? Yes, that is their principal rendezvous; and also at the place where I reside, near the Flag Staff, there are a considerable number of boys whom I would consider vagrants, for during school-hours I may say I frequently see them.
1478. Speaking generally, you think the house accommodation is bad? I think the house accommodation is wretched in the extreme.
1479. *By Mr. Hoskins*: You say you are acquainted with large families who are depending for the necessaries of life upon the exertions of their fathers? Yes.
1480. Who when in employment receives such low wages that he is unable to make provision for the time when he is out of employ, and that owing to the precariousness of employment his family are often in great distress? The wages in themselves may not perhaps be considered as very low, but looking to the state of the country I think them so. From want of permanency of employment the wages, even were they in other respects satisfactory, are not sufficient to enable a laboring man to keep his family in comfort.
1481. I presume you are acquainted with the moral character of a number of these persons to whom you allude—do you consider that the distress of these families is to be ascribed to the intemperance of parents? I say one case out of ten may be attributed to the fault of parents who may be drunkards, and whatever money they may earn is spent in the dram shop.
1482. From what has come under your observation, do you think the working classes in this town are more intemperate than the same classes in other countries? I could not positively state that.
1483. You think the rents in this town are too high in proportion to the wages people receive? Speaking of the poorer classes, I believe the rents of the tenements they occupy are vastly too high.
1484. You think the working population of Sydney are in excess of the demand? Yes.

1485. Have you known persons to be offered work in the interior who have refused to go? I have known an instance or two.

The Rev.
P. Newman.

1486. From your acquaintance with the feeling of the working classes, do you think if the majority of those who are out of employment in Sydney were offered permanent employment in the interior they would embrace it? Knowing the disposition of the Catholic portion of the laboring classes (I am not acquainted with the disposition of others)—I may safely state of them that if there were anything like an encouraging offer made to them the majority of them would be glad to embrace it. There are instances where they would not, because there is as an obstacle in the way, a hankering after and habits formed for a town life.

24 Jan., 1860.

1487. You say the latter class are the fewer in number? Yes, by far.

1488. Have you known persons who have been in the interior of this country who have returned to town dissatisfied with the treatment they have received—have they complained to you of the treatment they have received in the interior? I cannot say exactly that many cases of that kind have come under my notice, but a great number of persons have applied to me from time to time for a small portion of relief to assist them in going up the country; they have gone up the country, and have expressed themselves very satisfied with the treatment they have received. The great complaint has been the absence of religious instruction and assistance.

1489. *By Dr. Lang*: I think you stated that the disproportion of the population in Sydney and in the country was a great cause of the distress that prevails among the working classes? Yes, the over-crowded state of the labor market in Sydney.

1490. Are you aware of the proportion the population of Sydney and its suburbs bears to the whole population of the Colony? I should say about a-third at a rough calculation.

1491. Are you aware of any instance in any other country, either in ancient or modern times, where the population of a country bore so small a proportion to that of its capital? I do not remember an instance just now.

1492. Do you think such a state of things is of itself a fruitful cause of privation and suffering among the working classes? Decidedly.

1493. *By Mr. Plunkett*: What is the average rate of wages? Perhaps it is rather difficult to state the average; sometimes I have known a number of men to be at work at 4s. a-day; I have known others to get 5s.; and others I have known to get 7s. and 8s. a-day. I speak not of mechanics, but of simple laborers.

1494. What description of laborers are those who get only 4s. a-day? Persons who attend masons, who break stones, do the business of porters at stores, usually persons who have to do the general rough work.

1495. Do you think many of those who are in the distress you mention are so in consequence of the lowness of their wages? That is one of the causes of the distress; but it is not the cause, as it appears to me, that lies at the foundation. The principle cause, it appears to me, is the great excess in the amount of laborers as compared with the employment.

1496. You mean that the people do not get constant work? They do not get constant work; in fact, looking to the ordinary amount of employment to be distributed among them, they cannot all get constant work.

1497. Have you ever made any calculation as to the total rents of such houses as those you have spoken of, one room of which produces 4s. a-week? I have not made any calculation upon that particular point; I can merely give instances such as that I have already given. This room was a *quasi* cellar, half above and half below ground, and the house might have consisted of six or seven rooms. Now if this apartment was let for 4s. a-week, it was reasonable to suppose that the rooms up-stairs would let at a higher rate.

1498. How many Catholic schools have you in your district? In our district there are four Catholic schools, two in Kent-street, male and female; and two at St. Patrick's, an infant and a female school.

1499. There are then three female and one male school? Yes.

1500. How many attend the male school? The average number who daily attend the male school, as will be seen by the books, is ninety.

1501. Does it not follow from that, that unless they go to other schools, there must be a great number of children in that district who receive no education? A large number go to the other schools. The average attendance of males at St. Patrick's is much less than that of females; the average attendance of females is probably 240, the boy's average attendance is 90. I account for the disproportion in this way, that a large number go to other schools and a considerable number to the seminary.

1502. To which seminary? St. Mary's.

1503. From your part of the town? Yes, and also to the school at Macquarie-street; they also go, though not in great numbers, to the National School, and to three or four private schools; and as we know the character of these boys, and find them go on very well, I do not feel inclined to or even justified in removing them from private schools. But if there were encouragement given by the Government, so far as education is concerned, we could with the greatest ease have 200 male children in daily attendance. As there is such very poor encouragement at present, I watch the morals of the children so far as it is in my power, and I allow them to go to other schools, because I find they receive a good deal of secular instruction at them.

1504. How many private schools are there? There are a large number of private schools not kept by Catholics, but there are three or four kept by Catholics.

1505. What is the average attendance at these schools? I cannot state.

1506. You are aware that a great many attend the National School? A good number of girls, not many boys. I got a list a few months ago and I do not think more than twenty-five boys attend.

The Rev. P. Newman. 1507. I think you will find that one-third of the children who are there are Catholics? You find on reference to the books that there are a large number of girls, but very few boys. The number of boys going to the National School from the district I have charge of was, two or three months ago, as I already stated, twenty-five or thirty.

24 Jan., 1860.

1508. What I want to see is this: what becomes of the boys—you say there is not much vagrancy in the street, that there are 230 or 240 girls attending St. Patrick's School, and only 90 boys, that the great number of Catholics in the National School are also girls—how then do you account for the boys? The thing is exceedingly easy to account for. In that district girls are far more numerous than boys, I should say two-thirds are girls,—perhaps not two-thirds, but the number is much greater of girls than of boys.

1509. The female sex preponderate? To a very considerable extent. About twenty-five of the boys from my district go to the National School; a good number of the Catholic boys who go to the National School come from the central part of the town, between King and Druitt Streets, but that part does not come under my jurisdiction.

1510. Perhaps you have not an opportunity of seeing the number of little idle urchins who are about the wharfs, quays, and streets of the city at all hours of the day? Of course I have not an opportunity of seeing the majority of them, but I think I have a *fair opportunity*, for there is scarcely a day that I have not to pass the wharfs. Sometimes I pass at nine, sometimes at eleven, another time at noon, at another at two o'clock. I do see a number of children idling about, but whether I have a fair opportunity of judging of the number of vagrants I cannot say.

1511. Can you give a statement of the number of Catholic children in your district under the age of fifteen, specifying whether they go to school or not? I will, if time permit, prepare such a statement and append it to my evidence. (*Vide Appendix.*)

1512. *By the Chairman:* Has any remedy for any portion of this evil suggested itself to your mind? I would consider it a very excellent remedy if the Government would establish depôts at Maitland, Bathurst, and Goulburn, and as immigrants arrived from home or other countries, I would have them at once drafted off to those places, where they would get employment, and the state of distress in Sydney would be by that means, instead of becoming still greater, diminished. A few days ago I asked a gentleman thoroughly acquainted with the Yass district whether there was employment for laborers in that part of the country if they were sent there, and he stated distinctly that it would be a first rate place to which to draft off immigrants upon their arrival. He said they would get plenty of employment; that at present employers had great difficulty in getting men to do their work, and had to pay very high wages, with this further disadvantage, that many of the men were drunkards, who would stay a few days, and if mildly remonstrated with for their improper conduct, would say they would leave, they would not be tyrannised over. I would suggest this as a very fair remedy to remove these evils.

1513. Have you any other suggestions to offer to the Committee? That is the principal suggestion I have to make.

1514. *By Mr. Plunkett:* Do you not think it desirable that a couple of thousand from your own district should emigrate into the interior? I have no doubt that emigration of some of the inhabitants from Sydney would follow; for in the first place on the part of newly-arrived immigrants it is timidity which prevents their going into the country, and secondly if these persons went into the country, settled, and got on well, their friends and others in Sydney would hear of their success, and the force of their example would lead others to follow.

1515. You think it would be better for themselves and better for the town? It would be better for the community of Sydney at large.

1516. *By Mr. Hoskins:* Have you been in the country? I have been in Bathurst, and towards Carcoar.

1517. Do you think, considering that the pursuits in the country are chiefly pastoral, a large quantity of labor can be absorbed? I think many of these people would get farms, and follow agricultural pursuits.

1518. You are aware that very few people are employed on stations in the interior of this country? The number of persons employed is, I believe, not very numerous; but I believe if people were sent into the country, in a fine fertile district (like Yass, for instance), they would turn their attention to agriculture.

1519. People cannot get the land? Government have the remedy for that in their own hands.

APPENDIX.

By way of further reply to the inquiries of the honorable member for Sydney West (Mr. Plunkett), I have to add:—

1. That the number of male children attending the Roman Catholic School in Kent-street North is over 120.
 2. That the number of young male children attending the Infant and Female Schools is over 60.
 3. That the number of male children of the district attending private schools, including the 25 or 30 boys attending the National School, Fort-street, is over 80.
 4. That the total number of Catholic children, of the St. Patrick's District, attending school, is at least 500.
-

The Very Rev. W. M. Cowper, Dean of Sydney, called in and examined :—

1520. *By the Chairman* : This Committee has been appointed to inquire into the social condition of the laboring population of Sydney, with reference to the allegations that have been made, at different times, of a severe want of employment ; also to the house accommodation of that portion of the inhabitants, and its sanitary and moral influence upon the well-being of the occupants ; and also as to the alleged extent of vagrancy in the public streets. It has been thought by the Committee that you might be able to give some valuable information upon these subjects. You will perhaps be good enough to state whether any instances of distress from want of employment have come under your notice, either among persons belonging to the class of manual laborers, or among that class who live more by the labor of their minds ? I have many applications continually made to me by persons out of employment, both of the laboring classes and of those whose occupation is of a mental character.

Very Rev.
W.M.Cowper.

24 Jan., 1860.

1521. Have those applications been made to you recently ? They have, in some instances.

1522. Have you come into contact with any cases of positive distress recently, which you have witnessed with your own eyes ? Almost every week I have cases of persons applying to me for relief, and I am obliged to avail myself very much of the Benevolent Society's charity to obtain relief for them, besides other means which are at my disposal.

1523. Has this distress extended—of course distress is a relative thing—to a want of food ? In some cases it has, but these have been generally cases of wives, with their families, deserted by their husbands, rather than of men out of employment.

1524. It has been given in evidence before this Committee that there are a good many cases where fathers of families have gone to the diggings, leaving their families unprovided for ? Many such cases have fallen under my notice within the last twelve months, and they are very painful cases, as evincing an utter forgetfulness of moral and relative obligation on the part of those who have thus forsaken their wives and families.

1525. Do you think there is much distress experienced from positive want of employment among persons of sober character, willing and able to work ? I do not. Employment is occasionally scarce with such persons ; but I find upon inquiry that those who are sober, steady, and industrious, are generally able to get enough employment to maintain themselves respectably.

1526. How long have you been resident in Sydney ? About three years and a half.

1527. I believe you have had two clerical appointments during that time—at present you are Dean of Sydney ? I have. I was for some time at the Glebe. I am now Incumbent of St. Phillip's, and also Dean of Sydney.

1528. That, I believe, is a new appointment ? It is.

1529. As far as you have become acquainted with the character of the working classes of Sydney, the more settled and permanent of the working classes—those of more provident habits and permanently settled in Sydney—what is your opinion of their general character as a body ? I have a favorable opinion of that class of persons.

1530. I should infer from what you have already said, that you consider the distress is more confined to the floating portion of the working classes—of persons who, from desertion or family bereavement, have been deprived of their means of subsistence ? Yes. As far my knowledge extends, I should say that it has arisen very much from the unsettlement of a large portion of the population by the opening of the gold diggings. Those persons who took to that kind of employment have not settled down again. This has broken up families in many instances. Within the last six or eight months I think I have heard of as many as six or eight wives whose husbands have deserted them, and they do not know whether they are alive or dead, and they are thrown upon the world to gain their livelihood as they can.

1531. Has it ever occurred to you that the City of Sydney is too overgrown for the body politic ? I have often thought, with surprise, how so large a population can obtain the means of subsistence.

1532. Must not that, of itself, necessitate more or less of distress, if there are more persons congregated together in Sydney depending upon their labor than can possibly find employment from the natural operations of our commerce and of our investments of capital in building and in manufactures ? No doubt. And it would be a great relief to the laboring population if large numbers of them were drafted off to such places in the country as would afford them employment. I have frequently recommended those who have spoken of their straitened circumstances here, to go into districts where I was personally aware they would find employment.

1533. Have you met with persons who have been reluctant to leave Sydney when they have been suffering distress and want—persons who would rather hang upon the skirts of the greater civilization in the town, even with the conditions of occasional suffering and want than enter upon the unknown experiences of a country life ? I have met with such cases ; and with cases where reasonable wages have been offered and refused.

1534. Refused by persons who were wanting employment ? Who represented themselves to me, and whom I believed to be wanting almost the necessaries of life.

1535. Do you think, in such cases as these, the offers were refused from a fear of this kind, that the wives and families would be subjected to unknown trials or evils in the country, or from less worthy motives ? In some instances from less worthy motives. I may mention one case in particular, where the person had lived in the country, knew the kind of life led there, and had a reasonable offer of wages and rations ; his family consisted of a wife and three children, and the offer was refused, simply because he preferred the uncertainty of a Sydney life to certainty in the country. I am afraid cases of that kind sometimes occur.

1536. Your parish, I think, includes a good many of the residences of the working classes ? A very large number.

Very Rev.
W.M. Cowper.
24 Jan., 1860.

1537. What is your opinion of the house accommodation of those classes—I mean, in this respect, as to whether the houses are built with due regard to proper ventilation, as well as to proper conveniences of a sanitary character, so as to preserve physical health, and to provide for the morals and decency of families? A very large proportion of the houses of the working classes in my parish have been in existence for a number of years, and I think they are built with very little regard to ventilation or other sanitary provisions.

1538. Are the rooms, to your knowledge, over-crowded—perhaps two families living where there is only room for one? Yes; in some instances a whole family occupying only one apartment—eating, drinking, and sleeping in one apartment—or perhaps two that are scarcely separated by any decent mode of separation.

1539. Has it come to your knowledge that where small tenements of this description are grouped together in courts, alleys, or by-streets, there are not proper conveniences outside, such as proper privies and outside drainage? That I think is a very great evil in some parts of Sydney. In that part with which I am more particularly acquainted there is one court which I have visited recently, occupied by twelve or fourteen families, where there is but one of these conveniences.

1540. Will you be kind enough to name it? In Lower George-street, near Queen's-street; there are fourteen houses with but one water-closet for the whole. There is also another locality which till recently was without any water-closet, just below what is called Gallows' Hill; the sanitary condition of that part of Sydney is very unsatisfactory.

1541. How far does your parish extend? The parish is bounded on one side by King-street, coming up from Darling Harbour to George-street, down George-street to Hunter-street, down Hunter-street to New Pitt-street, from that to the Queen's Wharf, from the Queen's Wharf up Globe-street to Harrington-street, from Harrington-street into Princes-street, and down to Agar and Stabler's Wharf.

1542. You go over much the same ground as the gentleman who left the Committee room as you entered, Mr. Newman, the minister of St. Patrick's? I am not aware.

1543. *By Mr. Lyons*: What is your parish? St. Philip's.

1544. *By the Chairman*: In Clarence-street and Kent-street, as well as that locality called "The Rocks," part of which is within your parish, and the by-lanes that lead from George-street to the Tank Stream, I imagine nearly all the houses are of the description you speak of or very little better? I believe that to be very much the case.

1545. More or less so? Yes; there is very little provision for drainage in those parts. The smells are sometimes almost intolerable in parts of The Rocks, and near the Tank Stream.

1546. Do you think there is much distress arising from the drunkenness of heads of families? I think that is one principal cause of distress, where it does exist among the settled population.

1547. You are aware that drunkenness is very widely diffused? I know it to be the case; and that it is prolific of crime, wretchedness, and want.

1548. Have you found in your own experience that there is a large number of children in the streets in a state of vagrancy—children either destitute of any natural guardians, or having parents who very imperfectly discharge their duties? There is a considerable number, but I cannot speak with any confidence as to the extent. I know that about The Rocks there are some lads who lead a vagrant life, sleeping under bridges or sheds,—perhaps in the Domain, or about the wharfs; and these have either been deserted by their parents, or their parents are leading profligate lives, which has led to the adoption of these habits by the children.

1549. It has been given in evidence before the Committee that female prostitution in this City is largely on the increase, and that it to a great extent includes girls of very tender age; have your duties made you acquainted with this fact? Some very sad cases have come within my knowledge of very young girls, as young as twelve years of age, having commenced a life of prostitution.

1550. Have you been able to trace the adoption of this course of life to any particular cause—in any case to parental neglect? In some instances to parental neglect, and in some to the profligate conduct of one or other of the parents themselves. I think it is patent to every one who traverses the streets of Sydney at night that female prostitution prevails to a very large extent. It is a very lamentable phase of society. The persons upon the streets appear in many instances to be very young.

1551. *By Mr. Lyons*: Do you not think this state of things has increased very much of late years? I am afraid it has.

1552. *By Mr. Hoskins*: You say you have known persons leave their families and go to the Gold Fields, can you say whether they have left their families from want of employment in Sydney? The statements made to me are that they left hoping to benefit their circumstances at the Gold Fields and have never returned nor communicated with those whom they have left behind. I should not think they went from absolute want of employment, but from a hope of increasing their means more rapidly.

1553. You have said that you have known persons want the necessaries of life? Almost in want of them.

1554. Have you been acquainted with the habits of the parents in such cases, whether their neglect, intemperance, or idleness, have brought this distress upon their children? I am not speaking with reference to young persons, but to wives who have been deserted. In most cases of the vagrancy of children, there has been either some impropriety, neglect, immorality, or delinquency on the part of the parents.

1555. From your observations do you think the working classes in this town are more intemperate, or more profligate, than the same classes in the mother country? I have not had an opportunity of observing sufficiently the working classes in the mother country to enable

enable me to compare them with our own, but I am aware that there is a large amount of drunkenness and immorality in large towns in Great Britain. Very Rev.
W.M. Cowper.

1556. *By Dr. Lang*: You think we have a disproportionate amount of population in the City of Sydney compared with the Colony at large? I am quite of that opinion. 24 Jan., 1860.

1557. That of itself I presume you consider a cause of the distress that prevails? It must tend to occasional distress, I think.

1558. Do you find a reluctance on the part of the humbler classes to go to the interior—you have mentioned a particular instance—do you find that to be a general state of things? I have found it so in several cases.

1559. Are you aware that these people have excused themselves from going into the interior by alleging that others of a similar class with themselves have gone and have returned from being dissatisfied with the treatment they have received, or from the circumstances in which they have been placed? That may have been the case in some instances, but I think the reason the greater portion of the town population dislike a country life is that they have been brought up in towns at home, or have been accustomed to a town life here; they therefore prefer the uncertainty of obtaining employment in Sydney to migrating into the country where they might do better.

1560. Is it consistent with your observations and experience that a very considerable portion of our town population consists of persons who formed part of a town population in the mother country? I have reason to think that is the case.

1561. And consequently that there has been an indisposition from the first to go into the interior? Quite so.

1562. *By Mr. Plunkett*: You say the Benevolent Asylum has been the means of relieving a great many cases which have fallen within your knowledge? Yes.

1563. What description of cases do you refer to? Cases of persons of the very poorest class, where they would otherwise have been in want of the necessaries of life.

1564. Poor families? Poor families. In some instances where the father has been away at sea, or in the country, and has not been heard of for months, or years.

1565. Do you mean cases of out-door relief? Of out-door relief.

1566. Do you approve of the system of out-door relief as practised by the Benevolent Asylum? Yes; I think it necessary in the present circumstances of many. The assistance given I believe enables a number of families to keep themselves as it were from sinking, when there is a disposition to do so.

1567. Would you think it desirable that relief in that direction should be extended? I do not know to what extent it is given at the present time, not being acquainted with the working of the Committee of the Benevolent Asylum. I believe every case I have recommended has received a certain amount of assistance.

1568. You are aware that the claims of a family must necessarily very much confine the efforts of a mother? Yes; and I think it necessary that relief should be extended to all such proper cases. Where a person is industrious and sober, a little relief may enable the parent to support a family, which if it be withheld, she may utterly sink under her burden.

1569. Do you think intemperance has much to do with the distress which prevails in your parish? I have no doubt it has. I may add, that I think the music and dancing saloons and dancing parties which are allowed in public-houses are means of leading many of the young astray, and that they have tended of late years to increase the demoralization and prostitution which exist in Sydney. It has been stated to me, by credible persons, that the very worst characters of both sexes congregate there.

1570. Have you ever calculated the number of public-houses in your parish? I have never counted them, but I know there are three or four times as many as can for legitimate purposes be required.

1571. You could dispense with some dozens? Yes; I think the present wholesale system of licensing a great moral evil, and I would strongly urge the adoption of measures for restraining it.

1572. Have dancing saloons and other places of that kind increased very much of late years in Sydney? I believe they have.

1573. To what cause is that owing? I do not know.

1574. In whose hands are they? The publicans, I suppose. There was one in Sussex-street which has been discontinued since a new landlord took the public-house adjoining; he informed me that he shut it up, because he wished to keep a respectable establishment.

1575. The police have some check upon them, have they not? I presume they have; but I fear that if a license is required for such places, it is granted with great laxity.

1576. You have no doubt that they have a pernicious effect upon the people? I have no doubt at all—I feel persuaded of it.

1577. *By Mr. Hoskins*: Have you resided for any length of time in the mother country? I was there eight years.

1578. Are you not aware that places of amusement similar to these dancing saloons are licensed there? Yes.

1579. Do you think from what you observed in England that places of amusement are so numerous here as there? It is twenty-five years since I was in England, and my attention was not turned particularly to such subjects at that time.

1580. You have not resided on the Continent? I have not.

1581. You say you have known persons to return from the interior of the country who have been dissatisfied with the treatment they have received? Occasionally.

1582. Was it the description of food they were dissatisfied with, or the manner in which they were used, or the difficulty of getting their wages? The difficulty of getting their wages, rather than anything else.

Very Rev. 1583. In point of fact, they considered there was great difficulty in getting the wages they
W.M. Cowper. had worked for? That is the allegation often made. I believe wages are, to a great extent,
24 Jan., 1860. taken out in stores; and when orders are given there is sometimes a difficulty in getting
them cashed.

1584. Have you heard people complain that there were no inducements to persons to cultivate thrifty and frugal habits, in consequence of the difficulty of getting possession of land? Not with reference to the class of persons I was alluding to just now. I know it is a complaint sometimes made, but probably without due reflection.

1585. That there are no incentives offered to them to take care of their means, and to get land and houses for themselves? Yes; but that, perhaps, is an exaggeration on their part.

1586. Do you think if such inducements were held out—if the people could purchase land at a reasonable price, and obtain possession of it without delay—that would induce people of temperate habits to go into the country? Upon the population of Sydney I do not think it would have much effect. We have a large proportion of people who are accustomed to town life, and who would not go into the country for inducements of that kind.

1587. You do not know whether these persons who are unfit for the wants of the Colony have been brought out under the Government system of immigration, at the public expense? No.

1588. *By Dr. Lang*: You do not think any facilities for the occupation of land would be sufficient to induce any large portion of the humbler population of this city to go into the interior? I do not.

1589. *By the Chairman*: With reference to female immorality in this place, can you state to the Committee, from your own knowledge, how any of the institutions established for the purpose of effecting reformation have succeeded—I believe there is one called the Female Refuge? That has operated beneficially to a limited extent. I believe the number of inmates is not usually more than twenty-five. Some efforts of a more *thorough* and energetic character are required to stay the moral pestilence.

1590. Has it effected a thorough reformation in any cases? In several it has.

1591. What has become of these persons? They have, I believe, gone into service in the country, and have pursued a good and consistent life for a considerable time.

1592. *By Mr. Lyons*: Have some of them got married? I think so. Perhaps if more energetic measures were taken, more would be induced to enter that Asylum.

1593. *By the Chairman*: I should gather from the whole of your evidence, that you do not think much distress exists in Sydney from want of employment, except what may be explained by causes arising out of the conduct of the persons themselves? I think that where distress does actually exist, it may be traced in most cases to improvidence, misconduct, or a neglect of moral and relative obligations by the individuals themselves, or those with whom they are connected.

1594. That house accommodation is generally very bad? Yes.

1595. And that you do not think there is a greater proportion of uncared-for children in this than in most other large cities? I think not. My impression is, that the supposed number of such is an exaggeration. It would form a deeply interesting and instructive inquiry, to ascertain, *statistically*, how much of the industrial power of the country is lost, how much crime is produced, how much disease generated by intemperance; and what the cost entailed upon the country by these means in the support of gaols, police, Courts of Justice, and Benevolent Institutions, rendered necessary by the depraved habits of the people.

FRIDAY, 27 JANUARY, 1860.

Present:—

MR. HOSKINS,
DR. LANG,
MR. LYONS,

MR. PARKES,
MR. PLUNKETT,
MR. WINDEYER.

HENRY PARKES, ESQ., IN THE CHAIR.

Mr. John Coulson Glue called in and examined:—

Mr. J.C. Glue. 1596. *By the Chairman*: You are keeper of a registry office in Sydney? Yes.

1597. What length of time have you kept that establishment? I think about four years.

27 Jan., 1860. 1598. How long have you been in Sydney? Five years and a half.

1599. Were you in business prior to opening this establishment? No.

1600. This Committee has been appointed by the Legislative Assembly to inquire into the condition of the working classes of this city—can you state to the Committee whether, in your knowledge, there is any extensive want of employment in Sydney? I can only speak as far as my own knowledge with regard to my own business goes; and I think from that I can form a pretty good idea of the state of the working classes.

1601. Do you think there is any difficulty in obtaining employment on the part of any section of the working classes? Not generally.

1602. We will take the building trades, for instance? Persons of that class do not apply to me, only just occasionally.

1603. Have you no knowledge with respect to the condition of that class, acquired incidentally out

out of your ordinary business? The applicants to me for mechanics are generally from the *Mr. J. O. Glue.* country. The mechanics generally know the masters in town, and apply to them directly.

1604. With respect to the laboring classes generally, do you think there is any difficulty in finding employment within the precincts of Sydney? Yes; because the applicants for employment are more numerous than the situations, for three or four reasons.

1605. Will you state those reasons? One reason I think is, that generally new arrivals seek situations in or about Sydney, and, finding they cannot obtain them, they are obliged to take engagements in the country, and they enter into these for six or twelve months, as the case may be.

1606. Can they always get situations in the country? Yes.

1607. When you insert advertisements for servants have you many applicants? Sometimes.

1608. Generally speaking, have you difficulty in supplying places at any time? It may occur occasionally, not generally.

1609. At the present time? I have no particular difficulty, except with female servants.

1610. You do find difficulty in obtaining female servants? Yes.

1611. Then the demand is in excess of the supply I should infer from what you say? Yes, for female servants.

1612. Have you many applicants for employment at your office? Yes.

1613. Are the applications from persons seeking employment in excess of those from persons wanting servants? Taking them as a body they are, because a great many applicants apply for situations they are not adapted for, especially in the case of those who have newly come out.

1614. Do not they pay a fee to you on application? No; only when they get a situation. The charge is made when the agreement is drawn up, except where a party wishes his name registered; I then charge half-a-crown for inserting the name in my book.

1615. You do not, I suppose, have many applications from parties who willingly pay this half-a-crown unless they want employment? I suppose every person who comes to my place wants something.

1616. *By Mr. Lyons:* Are you of opinion that people are generally anxious to remain about Sydney rather than to go up the country? Yes. I was going to remark a reason why the applicants are so numerous. New arrivals when they come to Sydney go up the country, and many of them are not satisfied with the way they are treated; they do not understand rations being served out to them, and not being accustomed to cooking they cannot economise their food, and consequently have not sufficient. Others object because they have to cook it at all. For these and other reasons, when their time is up, they make their way to Sydney, where they can have board and lodging. That is the chief reason why servants do not stop up the country.

1617. Is there greater difficulty in procuring female servants than there generally has been? Yes. I think if employers up the country were to enable servants to be more comfortable in their situations they would stop and would not want to leave.

1618. *By the Chairman:* I should infer that your remarks now apply to single persons chiefly? Yes.

1619. Do families pass through your office to any extent? Yes, families and married couples. Families are more anxious to go into the country than single persons, because they cannot subsist on what a single man earns.

1620. Can you form an opinion, from your experience in business, whether a considerable number of persons are suffering from want of employment in Sydney—without reference to the causes? I should say there are a great many.

1621. Of laboring people? I would not say particularly of the laboring class, because there are a great many about Sydney who are not accustomed to labor who are suffering.

1622. Have you any experience arising out of your business of the condition of that class of persons who live more by the labor of the brain than by the labor of the hands—such as the class of clerks, professional people—people who have been genteely reared—do you know whether there is much distress among that class of persons? I should think there is; it arises partly from their being incompetent to fill the situations which may be vacant, and from their style of living and habits they are reduced very soon.

1623. *By Mr. Lyons:* Have you many applications from parties who have resided in the country and returned to Sydney? I have.

1624. Do you succeed in finding employment for them? Generally speaking I do, for the working classes, such as farm servants, bushmen, shepherds, and so on.

1625. The rate of wages has fallen lately, has it not? I believe wages are quite as high now as they were four years ago, when I commenced business.

1626. They have fallen considerably since the high rate consequent upon the gold discovery? I was not here when the rate of wages rose on that account.

1627. Do you find the people are unwilling to accept employment at a reduced rate of wages? A great many applicants, when I tell them the rate of wages going, seek for more, and as long as they have money in their pockets or can get board and lodging they will refuse the wages offered; they will not leave Sydney until they are necessitated, except where they are industrious and anxious to save money.

1628. Your business is chiefly confined to supplying the country with servants? Yes.

1629. Do you find you have more applicants at your office now than formerly? About the same. There are a great many applications for town situations; in fact we cannot find situations for many of them.

1630. *By Mr. Windeyer:* Do you know whether the people who come to you have been some time in the country, or whether they are new hands? We get a mixed class.

1631. Do you know which are the more numerous? I do not think the one class is more numerous than the other.

1632.

- Mr. J. C. Glue. 1632. Do I understand that the greater part of those who come to you seek situations as domestic servants? No.
- 27 Jan., 1860. 1633. Are they chiefly skilled mechanics, domestic servants, or laboring men? I have a portion of mechanics as well as others.
1634. *By the Chairman*: Very few? Yes; the classes of persons applying to me and to the offices at Sydney are female servants, domestic servants, farm laborers, bushmen, gardeners, shepherds, married couples, and general servants. Then there is a class of persons who have been respectably brought up, who apply for situations as storekeepers or clerks; there are a great number of them.
1635. Do you find that when these people have been sent up the country they come back to you, or do they remain? I do not have many come back—not the respectable class; I believe they generally forage about the country and do what they can.
1636. *By Mr. Hoskins*: You say applications for employment are much in excess of applications for servants? That is, for town situations, and situations which we do not get in our office; but, if a man applies, who is a farm laborer, I can readily get him employment.
1637. Is it not the fact that you always have a large number of males and females in your office waiting for employment? I have very few female servants apply at my office at present, as they are scarce in consequence of the few arrivals.
1638. Is it not the fact that there are a large number of men wait about your office? They do sometimes.
1639. Always waiting for employment? Not always; I have a large number of orders on my books for men, which orders I cannot always execute.
1640. What description of men? Farm servants: from England, or domestic servants without children.
1641. Is it not the fact that employers of labor in the interior object to hire servants with families? If the employer has no employment for the families, and they want only to employ the men, they do not care about the wives and children.
1642. It has been represented by a portion of the community here, that persons with families are the most eligible to come out to this Colony—does it not come within your knowledge that employers of labor in the interior object to take families? Except they want the men for shepherds, or depends on the ages and capabilities of the children.
1643. They do not object to take families with shepherds? They do not where the children are useful.
1644. You say you have had complaints from persons who have returned from the country of the quantity or quality of the food they have received, and also of its insufficiency? Yes.
1645. Have you not heard persons who have returned from the interior complain of the insufficiency of the food, and of the high price charged for extra rations? That applies to married people where the man only is employed.
1646. Have you not also heard single men complain? Yes. I have occasionally heard them complain, but they will generally rather go without than buy of their employer.
1647. Have you not heard them complain that in consequence of the large number of unemployed persons who are travelling through the country, and who stop at their huts, they are compelled to purchase extra rations, which has materially diminished their wages? Do you mean on purpose to supply these loafers?
1648. These travellers without employment? It has not come under my notice.
1649. You have never been in the interior of this country, I suppose? No.
1650. You say a large number of persons apply to you for employment who are unaccustomed to labor—what are these persons, natives of this or of the mother country? I believe new arrivals chiefly.
1651. Who have been brought out under the Government Immigration system? I believe they have either paid their own passages or had them paid for them.
1652. By their friends under the Assisted Immigration system? In some instances.
1653. Are you aware of the number who arrive here in the year on their own resources? I have heard, but do not remember.
1654. I suppose you are aware that the larger number of those who arrived are brought out under the Assisted Immigration system, the expense of which is borne chiefly by the Government? Yes.
1655. You say that wages are not lower than they were four years ago? Yes.
1656. What wages are you paying farm laborers—£30 to £40? Yes; if a first class laborer, able to plough, sow, reap, mow, thresh, milk, and so on, he will get £40.
1657. He must be an extraordinary man—I suppose you find few men possessed of all these qualifications? They are not very numerous.
1658. Is it not the fact that you employ more men under £30 than over? The average is £35.
1659. Where a man is possessed of all these qualifications? Sometimes the scale is limited to £30, and I can engage men at that.
1660. *By the Chairman*: You say the average is £35? Yes. Employers when they send instructions to me invariably limit the rate; some employers give £5 or £10 more than others.
1661. *By Mr. Windeyer*: Where no conditions are made as to the country or qualifications, applicants are willing enough to go, and you have a number of that class? Persons sending to me for servants generally say, "I want so and so;" but if they have confidence in me, and leave it to my own discretion to send them what they require, I generally engage people at £35 a year.
1662. Do you find that many persons are prevented taking situations by the conditions imposed—do not refusals arise from this cause rather than from any objection on the part of those

those who seek employment? I think not; I think they arise more with themselves. For instance, I tell a man of a situation at Mudgee; he says, "I do not want to go to Mudgee;" I tell him of one at New England; "I do not want to go to New England."

Mr. J. C. Glue.
27 Jan., 1860.

1663. *By Mr. Hoskins*: I understand the drift of Mr. Windeyer's question to be this—are not the majority of refusals to engagements in the country attributable to the circumstance that although the applicants at your office may be stalwart, able men, they are not possessed of all the qualifications you enumerate? I would not like to send a man up the country as a farm servant if I did not think him a suitable person. No doubt many persons apply who say they can do anything, and that they will do anything, but we generally examine them, and by questioning them find out whether they are likely to suit the parties desiring to engage servants.

1664. You say you have no more applicants for servants now than you had four or five years since? I think the supply and demand are about the same.

1665. You think there is no more employment for the laboring man now than there was then? There naturally must be.

1666. Respectable people, I think you say, when they get engagements in the interior do not return? I think they shift about until they get employment suitable to them.

1667. *By Dr. Lang*: Do you find families return from the interior, and who on their return complain of the rations they have received? Families when they go up the country, if hired as a family, generally have sufficient rations; for instance, if a family hired for a sheep station, perhaps they have three flocks to take care of, and they get three rations, or perhaps a little less. I do not think I have noticed families coming back in that way.

1668. Do you find a great objection on the part of agricultural laborers who come out here to go to sheep stations? Yes, I do; and to go up the country at all; more particularly on the part of the Irish farm servants.

1669. Do you find them strongly indisposed to "go shepherding," as they call it? They do not like to go shepherding.

1670. What do you find to be the larger proportion of immigrants who are unskilled laborers, are they from the rural districts or from the towns at home? I believe they are all from towns; I do not think there are any applicants from the country districts.

1671. You consider that the large proportion of the immigrant population consists of people who come from towns at home rather than from the country districts? Do you mean immigrants assisted?

1672. Immigrants generally, both assisted and others? They are both from town and country districts. I find most of them who come from towns have their passages paid, either by their friends or by themselves.

1673. Is it not the case generally, that those who have had their passages paid by their friends have situations found for them by their friends? Yes, their friends generally arrange to have situations for them upon their arrival.

1674. You do not find any considerable number of this class of immigrants applying for situations as unskilled laborers? As unskilled laborers, I do not; they apply for situations, we cannot supply them with genteel situations. There are some who are, as they say, "hard up," and they are willing to take anything they can get. If these apply we can hire them.

1675. *By Mr. Plunkett*: How do you get your authority from persons in the country—is yours a general or particular agency? Parties who want servants write to me. We never send servants into the country without we have authority.

1676. How do you know the places where they are wanted—are there no general agencies for particular districts to keep up the stream of emigration wherever it is wanted? I believe not.

1677. You only receive isolated applications from individuals as they require servants? Yes.

1678. With respect to families, how far does your authority extend as to rations, and the number in a family? For instance, if a man and his two sons go on a sheep station, we generally give a ration to each of these; and if he has a wife who cooks for them, she also receives a ration as a hutkeeper.

1679. What are the largest families you send up the country? Sometimes six or seven persons in a family.

1680. How are they supplied with rations? 10 lbs. flour, 10 lbs. meat, 2 lbs. sugar, $\frac{1}{4}$ lb. tea; in some cases 12 lbs. meat is given to each person.

1681. What will be the wages of each? A party hiring a family, and giving that quantity of rations, would seek to hire them at a lower rate of wages. For instance—if a man has three or four sons, we allow the man about £30 a year, and the boys, according to their ages, from £5 up to £20 a year each.

1682. How are the travelling expenses paid? Generally by the employer.

1683. You say you find the Irish disinclined to go into the country—what is the cause of that? I think partly that they have more friends in Sydney, and they are frightened that they will be entirely out of society, and be unable to go to mass or anything of that kind. I believe that is the great reason. I have heard them state that they do not see a clergyman for months together.

1684. *By Mr. Lyons*: What is the expense of sending a family of five or six up the country? That depends upon how they travel.

1685. How do they generally travel? By team or by steam-boat.

1686. Is it not expensive when they go by steam-boat? When they go to the northward they have to go by steam, and then have to be conveyed by drays.

1687. *By Mr. Plunkett*: Do you think there is a difficulty for persons who labor with their hands

Mr. J. C. Glue. hands to get situations at any time? I am satisfied that persons of industrious habits who are willing to work, and to take the regular rate of wages, can get employment at any time.

27 Jan., 1860. 1688. What is the rate of wages you speak of? From £30 to £40 a year, with rations.

1689. *By Mr. Hoskins*: You say you have known families of six or seven go into the interior of the country, and that they have been supplied with rations; you say that they have to look after two flocks —? Sometimes three.

1690. Do you happen to know, of your own knowledge, that the whole of those families have been supplied with rations by the employer? I do not think it is generally the case—only those persons who are employed; if the wife, for instance, cooks for the men, she gets a ration as hutkeeper.

1691. You say they are supplied with 10 lbs. meat, 10 lbs. flour; do you know parts of the country where they do not get 10 lbs. flour? I assert that they do get 10 lbs. flour, because I, myself, make the agreement, and I suppose what I put in the agreement the employer will be bound by.

1692. Do you not know that a number of employers give their men only 8 lbs. flour? That will be in the northern district, where conveyance is difficult. I believe in Wide Bay and Darling Downs they give 8 lbs. of flour, but there they give a greater proportion of meat, some 12 lbs., some 14 lbs., and in some cases employers are not at all particular as to the quantity, so long as the men do not waste.

1693. I suppose you know the quantity of tea and sugar they are provided with? $\frac{1}{4}$ lb. tea.

1694. Are you aware of the quality? I am. I am a grocer by trade and have had the getting up of many squatters' orders. They generally get Pampanga sugar.

1695. Most inferior in quality? That is not most inferior; it is the general quality.

1696. Could you sell it over the counter in Sydney? Yes; for some purposes.

1697. You know the quality of the tea supplied? Yes.

1698. Is it tea? Yes; and very good tea—some of it. Some employers are more stingy than others, and get worse tea.

1699. It is generally green tea? Yes.

1700. Of a description that cannot be sold over the counter? It is sold sometimes.

1701. What is the price of this description of tea, sold for the use of servants in the interior? There is considerable difference in the prices of tea. About five years ago hysonskin sold from £3 to £3 10s. and £4 a chest.

1702. You say a large number of persons who come out under the Assisted Immigration Act are unused to farm labor? Yes; there are a great many; but I generally find that their own friends generally endeavour to provide situations for them.

1703. *By Mr. Plunkett*: You state that in the case of families those only get rations who are employed; how do you provide for the wants of those who are not employed? We do not make provision for them. It is generally supposed that if provision is not made for them the parents have to pay for extra rations.

1704. Do you not think it would be a necessary protection for those people to state the prices they would have to pay? It might be, but it is not generally done. I have done it in some individual cases.

1705. You are aware that children in the bush often eat as much as grown people; if, therefore, the parents have to purchase provisions for them at a high rate, may not their wages be materially trenched upon? No doubt, but employers do not take that into consideration.

1706. When they leave it to you to make a contract for them, do you not think you ought to look to the interest of these people to guard them against any imposition? I believe employers would not object, but they would then have to reduce the wages.

1707. But the people would then understand their contract—they would know what they were about? It might be more advantageous to the servants, and no doubt it would be.

1708. It would be advantageous to both parties, because there would then be no reason for complaint? Sometimes the price of provisions in the country is very high on account of the cost of conveyance.

1709. The person who gives you authority to employ people would name his own terms, and these would be fully understood before the contract was entered into? They generally state the number of persons they require.

1710. *By the Chairman*: Will you append to your evidence a tabular statement of the rates of wages being paid at the present time? I will. (*Vide Appendix.*)

APPENDIX.

Mr. J. C. Glue.

27 Jan., 1860.

Current Rate of Wages, 1st February, 1860.

	Per Annum.	Average.
Single farm servants with rations or board and lodging	£30 to 40	£35 0 0
Married couples ditto	40 „ 60	50 0 0
Garden laborers ditto	35 „ 45	40 0 0
Gardeners ditto	45 „ 52	50 0 0
Dairymen ditto	35 „ 40	38 0 0
Bush laborers ditto	30 „ 35	32 0 0
Bushmen ditto	40 „ 65	52 0 0
Grooms and coachmen ditto	40 „ 60	50 0 0
Boys ditto	13 „ 26	20 0 0
Surveyors' men ditto	35 „ 45	40 0 0
Draymen or Team drivers ditto	40 „ 52	45 0 0
Shepherds, single men ditto	25 „ 30	30 0 0
Families, according to description ditto	50 „ 100
Stockmen ditto	40 „ 52	45 0 0
Bullock drivers ditto	40 „ 52	50 0 0
Blacksmiths ditto	50 „ 80	60 0 0
House carpenters ditto	50 „ 80	60 0 0
Rough carpenters ditto	40 „ 52	45 0 0
Men cooks ditto	40 „ 78	50 0 0
Female servants ditto	13 „ 24	18 0 0
Nursemaids ditto		
Housemaids ditto	20 „ 26	24 0 0
General servants ditto	20 „ 30	26 0 0
Laundresses ditto	26 „ 30	28 0 0
Cooks ditto	26 „ 40	30 0 0
Governesses ditto	30 „ 52	45 0 0

The above applies to Servants hired for the Country.

J. C. GLUE,
Labor Agent, 162, Pitt-street.

Mr. Spencer Ashlin called in and examined :—

1711 *By the Chairman*: You have been for some years keeper of a registry office in Mr. S. Ashlin, Sydney? I have.

1712. Can you give this Committee any information as to whether there is any serious want of employment at the present time among the laboring classes of Sydney? There are certainly a great many applications for employment; but when the applications are answered, it generally turns out that the applicants do not wish to leave Sydney, and that they decline offers to go into the country.

1713. Among what classes are these? The laboring classes who have been brought up in towns, who are inefficient and unsuited for country labor.

1714. Mechanics, I presume, do not apply at your office? They do. I have had a number of applications from carpenters, blacksmiths, and wheelwrights.

1715. Do you find any want among those who are engaged in the building trades? More particularly among carpenters there is some slackness. I had an order for some four or five carpenters for Braidwood; and, in answer to an advertisement, I had some fifty applicants. They, however, generally refused to go, because the rate of wages I had to offer was 8s. a-day, and the rate in Sydney was 10s. I wanted four, and could get only two.

1716. Does this remark apply to other branches of the building trade? The same remark applies to masons and bricklayers. I had occasion to advertise, a short time since, for some men in these trades.

1717. Had you many applications in that case? Not so many as in the former case.

1718. With regard to female servants, is there a scarcity? A great scarcity at the present moment. I suppose I have thirty or forty orders on my books unexecuted.

1719. You cannot obtain them? I cannot. They object to go into the country to take service. Generally they are required as general servants, or as cook and laundress; and they want a special occupation.

1720. Do you think (speaking of this particular class of servants) there are a great number of persons very inadequately fitted for discharging these duties? Many, from having been brought up as needlewomen, or in situations where light work only has been required of them, are unable to perform the arduous duties of general servant, or cook and laundress, in this climate.

Mr. S. Ashlin. 1721. Is it within your experience, that when persons have accepted situations in the country, and the term of their service has expired, they return to Sydney in preference to remaining in the country? They do not remain in the country if they do not get married; but they generally get married.

27 Jan., 1860.

1722. I allude to servants generally? Male servants generally return; and that fact is strongly confirmed by this very instance:—I suppose I have cases of three or four times hiring parties over and over again, at the same wages, to go to the same district. That arises from this fact;—that they have been engaged as shepherds, perhaps, to Messrs. Tooth, or some large stock or sheep holder; and upon receipt of their wages have come to Sydney. In a week or two, having spent all their money, they are obliged to go back. These men invariably become so tired with a country life, that after a twelvemonth's residence in it they are glad to come to Sydney.

1723. You say that is invariably the case? It is very often the case. That remark applies to shepherds; in other cases men save their wages and probably get farms of their own.

1724. Without reference to the causes of this state of things, do you think at the present time there is a great deal of suffering in Sydney from want of employment? I think there is a certain degree of suffering among people with families, who are deprived of many of the comforts they have been accustomed to. We have great difficulty in getting young children up the country; people will not hire those who have families, because they are expensive and useless.

1725. Is that disposition general? Very general; it is quite the exception to have an order where the employer will allow you to send children.

1726. *By Mr. Lyons:* When you advertise for carpenters and bricklayers, to send them up the country, what extent of work can you ensure them? Six months. I wait carpenters at the present moment to whom I can give six months work at eight shillings a-day.

1727. When you do succeed in getting them to go into the country do their families accompany them? They do; the employers in such cases do not object to families because they do not supply rations. They receive eight shillings a day without rations.

1728. Have you any, or many, applications from parties seeking employment who have been brought out here by the assistance of friends—or are the applicants at your office those who have come out under the Government regulations? More frequently those who have come out under the Government regulations; but latterly I have had many who have come out under the Assisted Immigration system.

1729. Have there been more applications in your office for the last six months than there were for the six months previous? There has not been nearly so many since the falling off of immigration.

1730. *By Mr. Hoskins:* You say that a number of the persons who apply to you for situations come from towns, and are unfitted for country life? Yes.

1731. You say a large number are brought out at the Government expense? Yes.

1732. So I consider that you infer that the persons who are sent out here at the expense of the Government are unsuited for the country? I mean quite the reverse; if I stated so I expressed myself wrongly; what I mean to state is this—that the parties sent by Government from England—from Somersetshire, Cambridgeshire, and other agricultural counties—are better fitted for the requirements of the Colony than those who are generally sent for by their friends. These have in most instances been brought up in towns, and are entirely unfitted for the demands of the Colony. Week after week we have applications for good farm servants, and we can at once obtain employment for persons of that class; but owing to the depression of the times it is difficult to find employment for the class brought out by friends. As a case in point, a man and his wife came into my office recently; they were both well dressed; he kept good accounts, and wanted either a clerkship or an engagement as an overseer; I said, “the very fact of your having had an education is a disadvantage to you—if you could neither read nor write, and had three or four grown sons I could give you £100 a year; but as you are I could not get you £50.”

1733. You are aware that under the Assisted Immigration system, Government contribute two-thirds of the cost of the passage? Yes.

1734. And in your opinion the persons who come out under the Assisted Immigration system are quite unsuited to the wants of the Colony? Yes, a great many of them are.

1735. The majority? Yes.

1736. I infer from your remarks that there is a preference for English farm servants? No doubt.

1737. Are a large number of the persons who are brought out under the Assisted Immigration system English? I think the lists would shew that the larger number are Irish.

1738. You say you have known female servants object to go into the interior because they have not been accustomed to domestic service? Yes, and the difficulty of getting back is one objection.

1739. Do you think the females brought out here at the Government expense are generally suitable for domestic service—have they been accustomed to domestic service? They vary; some have, some have not.

1740. I am speaking of the majority? I should hardly think they are generally suitable.

1741. Is it not a fact, patent to your knowledge, that there is still a partiality among employers to English or Scotch? I could bring a thousand letters to prove that.

1742. Have you not seen English females who have been accustomed to domestic service in the mother country, who have complained that their employers have not treated them in the considerate way to which they have been accustomed at home? That is the universal complaint, that they are not treated here as they are at home. Many say to me “Cannot you get me a passage back again.”

1743. Consequently there is not sufficient inducement offered for really efficient female servants to come out here? No. Mr. S. Ashlin.
1744. You say you have known shepherds return from their engagements in the country to spend their earnings in Sydney—from your experience do you think shepherds are persons of intemperate habits? I think they very often are. 27 Jan., 1860.
1745. The cases you have referred to may have been exceptional? I think they are frequent.
1746. Do you think the persons who fill the situation of shepherds in the interior are generally men of inferior moral habits? I think they are generally men who cannot get anything else to do—it is a *dernier resort* for a man to be a shepherd.
1747. From what you have seen, as one largely engaged in the employment of this class of men, do you think shepherds in their habits are inferior to the working population generally? I think they are.
1748. *By the Chairman*: Will you append a carefully compiled tabular statement of the rates of wages now current for all kinds of trades and occupations, and the terms upon which the parties are engaged? I will. (*Vide Appendix.*)

APPENDIX.

The rate of Wages, with board and lodging, are as under:—

Married couples	£45	to	£60	per annum.
Single ploughmen	35	to	36	”
Farm laborers	30	to	32	”
Grooms and gardeners	40	to	60	”
Bushmen and rough carpenters	40	to	45	”
Single shepherds	25	to	30	”
Shepherds and families	55	to	70	”
Blacksmiths and wheelwrights	60	to	80	”
Men cooks and waiters	40	to	80	”
Female servants	20	to	30	”

SPENCER ASHLIN,
139, Pitt-street, Sydney.

3 Feb., 1860.

Mr. William Buckley Haigh, called in and examined:—

1749. *By the Chairman*: You have been for some years the keeper of a registry office for masters and servants in Sydney? Very nearly seven years. Mr. W. B. Haigh.
1750. Did you reside in the Colony previous to your commencement in this business? About five years. 27 Jan., 1860.
1751. Then your experience extends to twelve years? It does.
1752. This Committee has been appointed to inquire into the condition of the working classes of Sydney, with reference to the alleged want of employment; also with reference to the house accommodation of these classes, and its sanitary and moral bearing upon the well-being of the occupants; and also with reference to juvenile vagrancy in the public streets—you have been summoned principally to give evidence upon the first point; but as you have resided in the Colony many years you may probably be able to give some valuable information upon the others? I have resided twelve years in the Colony—two years before I went into the country, three years at Windsor, and seven years in my present occupation in Sydney.
1753. Is it within your knowledge that there is a want of employment experienced in Sydney at the present time—without reference to the causes? There is a certain class—a very miscellaneous class—in want of employment, but it is because they have no very special business that they are so; then, again, they have a very great disposition to be at liberty very frequently—they only wish to get occasional employment.
1754. With regard to trades—the building trades more particularly—I presume some of these persons pass through your office? They do.
1755. Evidence has been received by this Committee that would lead to the belief that there is really a serious want of employment among that class of persons? There is in town; and in the country there is not so large a demand as there has been. I only occasionally send them up the country.
1756. Do you find any difficulty when you want carpenters, blacksmiths, or masons, in obtaining them? There is no difficulty in obtaining those who are willing to go up into the country, having small families.
1757. The last witness stated that he had occasion to advertise for five carpenters, and that he had fifty applicants? We have not had occasion to advertise for carpenters lately, only when they were wanted immediately; we have generally had a supply very regularly applying to us.
1758. When you admit that there is some want of employment in Sydney, but that it is generally among the floating portion of the population, who are not very regular in their habits as I should infer, do you not know that the laboring people who happen to be burdened with large and helpless families are very objectionable in the country? They are generally;

Mr. W. B.
Haigh.

27 Jan., 1860.

generally; it is very difficult for such persons to get into situations if their families are small—not useful.

1759. Supposing you received twenty commissions from persons in the country to engage farm servants, how many of these on the average would be willing to take families of three or four helpless children? Not above two or three, on the average.

1760. That is, you generally have strict instructions not to engage persons encumbered with helpless children? My experience does not exactly go to that point; it is in this way, generally, if my instructions do not specify that the employer has no objection to take a few small children, we could not send them but only those who would be employed. We should not venture to send a family.

1761. Do you find a very general feeling of repugnance to go into the country among persons who have been for some time residing in Sydney? Those who have been residing in Sydney, generally speaking, have a dislike to the country; but we have found, latterly, a greater disposition among persons who have been long residing in Sydney to go up the country, in consequence of the greater pressure of the times.

1762. When single men engage to go up the country do you find that, at the expiration of their engagements, they flow back into the town, generally speaking? I do not think, generally, more than one in ten come back. If they are a good description of servants they generally remain with their employers, or obtain employment in the neighborhood where they have been living.

1763. With respect to families, I suppose still fewer return? By far; they rarely come back.

1764. As you have been in business seven years you, in all probability, have been able to trace the result in the case of many persons who have been engaged in your office. Do you know cases of persons sent by you into the country who have become settlers, and are now doing well, on their own lands? I have heard of many, but cannot call to mind their names. You refer to male servants, I suppose?

1765. I refer to all classes? Single females who have gone up have got married, and settled in the districts where they have gone; several have married storekeepers, and parties well to do; and the men, especially in the southern districts, have taken small farms, or portions of land, on improving leases, and settled down. A great number have done well.

1766. Having so many passing through your office, of course you cannot remember particular instances, but I want to elicit your general impression as to whether men who have gone into the country have settled down, and got on well? Many have

1767. Have cases occurred where persons have accosted you in the streets of Sydney, and said, "I engaged in your office so many years ago"? Yes; and who have been very grateful that they had done so.

1768. Have they described, when you have thus met them, what they were doing? Yes.

1769. Do you recollect whether any of them have settled down and become farmers? I remember several, but I cannot call to mind the particular locality or names. One came to me not long ago to engage three farming men, who had himself been hired by me as a farming man. That was in the Western District—Hartley way. He had a little money when he came out, though he kept it secret at the time.

1770. Do you find much difficulty in supplying persons with female servants at the present time? We do.

1771. I have noticed, in passing along the streets very recently, crowds of young women round some of the registry offices—how can that be accounted for when there is a difficulty in finding female servants? There is a class of female as well as of men servants of a very general description, who have no good knowledge of any particular work—who are of a very unsettled disposition. These are very frequently out of situations, as may well be supposed, and they flock to these offices. We have very few of them in our office, for we do not encourage them to congregate.

1772. Are they very critical in accepting situations—very particular as to the duties they are to discharge, and as to the character of employers? Yes; they are becoming far too much so. It grows out of this state of things,—that the supply is not good. We have a very deficient supply of good female servants.

1773. From what country are they chiefly? They are chiefly from Ireland.

1774. Could you state, with reference to those young females who go into the country, whether, as a general rule, the well-conducted of them get quickly married? They do, very quickly. We seldom see them again; it is a very rare thing to see one of them come back to Sydney.

1775. That is to say, the second engagement is generally a matrimonial one? Yes; if they are worth having.

1776. *By Mr. Lyons:* You do not generally have applications for carpenters for the town, but for the country? Yes, for the country.

1777. Have you latterly had more applications for that description of labor than formerly? I cannot say that we have had more.

1778. Have you had more applications from mechanics lately than you had some years ago? Yes.

1779. You say there is a deficiency of good female servants, how does that arise? It arises from the circumstance that fewer have been sent out.

1780. Do you not think a good English servant could at all times get employment? I never found it otherwise, and, at present more especially, there is a very great demand.

1781. You have no doubt that there is an objection to employing Irish female servants? We hear it frequently.

1782. They are unsuited to the wants and requirements of the Colony? Many do not understand their duties, and are so fond of dress, of change, and of Sydney life, that
employers

employers do not like to engage them. An English girl who brought a seven years' character with her the other day was taken at once. English girls more frequently bring long characters with them; it is a growing feeling among them that it is discreditable to them to leave their places with a short character, hence they are more enduring of whatever difficulties they may meet with in domestic life, and, in time, get over those difficulties, and become acquainted with the wishes and feelings of their employers.

Mr. W. B.
Haigh.

27 Jan., 1860.

1783. *By Mr. Hoskins*: You say you have known persons go into the interior and improve their position in life by taking improving leases? Yes.

1784. Do you know the terms on which they took those leases? I do not. I could not speak on that point.

1785. Are you not aware that persons who take improving leases take up land and expend their labor upon it for a course of years and then give up the property? Yes. A good many from the southern parts, from Wollongong and Illawarra, have come to me and complained that they have been unsuccessful in their undertakings, but I attribute much of this to the failure of the crops, and to the unfavorable seasons they have had.

1786. In point of fact you cannot take that as a criterion, if they have no better prospects before them than taking improving leases? Unless they have a little money, and have skill, I see no difficulty.

1787. I suppose you must be aware that it must depend upon the prices for agricultural produce whether such speculations turn out favorably? Yes.

1788. And that the land reverts to the landlord? Yes.

1789. You say that a class of female servants arrive in this Colony not at all suitable for domestic service? Yes, there are servants constantly coming out who do not appear to have any knowledge of domestic service.

1790. You have a superabundance of unemployed females, but not of the right description? I would not say that we have a superabundance, but there is a large number of them who would be employed if they were of the right character.

1791. You say there is a preference among employers for English or Scotch, and the large majority are Irish? Yes, the preference arises (not so much from prejudice, but) simply from the fact that the English and Scotch generally prove to have been more accustomed to domestic service.

1792. Has it come to your knowledge that persons of this suitable class complain of the treatment they receive from employers—do they not complain that they are not treated with the kindness and courtesy to which they have been accustomed at home? No doubt cases of that kind do occur.

1793. Will you append to your evidence a carefully prepared tabular statement of wages current at the present time as compared with those current four years ago? I will. (*Vide Appendix.*)

APPENDIX.

Notwithstanding the superabundant unemployed labor in Sydney that is talked about, my experience convinces me, that this is not owing so much to the over-working of our present emigration scheme, at least not so far as the agricultural and domestic classes are concerned, as to the defective carrying out of its objects, viz.: to select and send out from our Mother Country able and efficient hands, unencumbered with young children. We want more single farm servants well accustomed to handle the plough, and more single females brought up to habits of domestic life than are sent to us; instead of them we have an over supply of an inefficient description, not adapted to the wants of the Colony, and therefore often out of places.

Yet it is not, I look upon it, a remarkable circumstance, if we find at certain seasons two or three hundred persons out of employ in Sydney, with a population of about 70,000, where employers resort from all parts of the Colony to supply themselves with fresh labor; and from my knowledge and lengthened experience of the labor requirements of this Colony, I can unhesitatingly affirm, that no industrious and persevering person of the efficient class such as I have described, need be out of employment one week in a year.

I trust it will not be regarded as presumption on my part, if I venture to recommend what I consider to be the best method of supplying this Colony with a suitable description of immigrants. Let an Agent be appointed, possessed of intelligence and colonial experience, and an unblemished reputation, with full powers to select and send out from the country parts of Great Britain, young vigorous men and women of a suitable class, to be assisted by the Colonial Government, to the extent of say one thousand of both sexes yearly, which I think is not too many for him to send every year, if they are not sent in too large a number at one time; thus will the social, moral, and industrial interests of the community be greatly promoted; and then let the pre-paid emigration scheme go on to supply the miscellaneous classes as at present in operation.

W. B. HAIGH.

Mr. W. B. Haigh.

The following is taken from the *Sydney Morning Herald* of 2nd February, 1856:—

LABOR MARKET.

27 Jan., 1860.

THERE has not been one arrival of immigrant ships to report for the past week. The supply and demand continues pretty nearly equal for all descriptions of labor. The demand, however, for efficient married and single farm servants, has been so pressing the last fortnight, especially for able-bodied single men, as to induce employers to give as high as forty pounds per annum and rations; but at the present wages remain unaltered for married couples, although those with either no children or only useful ones begin to be much inquired after.

TOWN WAGES.

	£	s.	d.	£	s.	d.
Bookbinders, according to competency, per week, from	2	10	0	4	0	0

HAIGH & BROWN,

Commission and Labor Agents,
 120 King-street East.

Sydney, 4 February, 1860.

TUESDAY, 31 JANUARY, 1860.

Present :—

MR. HOSKINS,
DR. LANG,
MR. PARKES,MR. PEMELL,
MR. PLUNKETT,
MR. WINDEYER.

HENRY PARKES, ESQ., IN THE CHAIR.

Mrs. Marian Pawsey called in and examined :—

1794. *By the Chairman* : You have been a resident in Sydney for some years? Twenty-eight years.

1795. For some considerable time you have kept a registry office for female servants? I have, from the year 1846.

1796. This Committee of the Legislative Assembly has been appointed to inquire into the condition of the working classes of Sydney in several respects, one of which is the alleged want of employment, the difficulty of obtaining employment sometimes felt by different sections of the working classes; and inasmuch as this relates to female servants, it was thought you might give the Committee some little information upon this point,—will you be kind enough to state whether you think there is any difficulty in females obtaining employment? There is no difficulty whatever in respectable females obtaining employment.

1797. Is there any other registry office besides yours in Sydney for females? There is.

1798. Are there many? There is Mrs. Capps', and also Mrs. Dunn's, but the latter has been so short a time in business that she cannot have much experience.

1799. Can you state whether you have as much business as any other office? I believe that I engage more females than any other office.

1800. How many servants may pass through your office in the course of a month? Upwards of 200, not including men-servants or married people.

1801. Do you find any difficulty in filling situations when you have particular commissions? I do.

1802. In what particular capacity do you find the most difficulty? It is difficult to get servants of any description to engage for the country.

1803. As general servants? As general servants; in fact, female servants of any kind for the country districts are very hard to be got.

1804. What is the description generally given when you have commissions to send servants into the interior? According to the wants of the family. Orders from the country are of the same description as for families in Sydney, excepting from farmers, then they are required to understand milking and dairy work.

1805. In filling these particular situations, what description of persons do you generally send—are there many natives of the Colony? No.

1806. Natives of England, Scotland, and Ireland? I generally find the Irish more disposed to go in the country than either the Scotch or English.

1807. Do you find when you send female servants into the country, that they frequently return, after the termination of their engagements, to Sydney? Yes, unless they get married.

1808. The evidence we have had would lead us to suppose that they generally get married when they go into the country? I know many that have married, others have returned from places three or four hundred miles distant from Sydney; also from Moreton Bay, Port Curtis, and Wide Bay, although they could have obtained situations in the district at a considerable advance in wages.

1809. There is a general dislike to go into the country? Very great; I find it almost impossible to fill up country orders for female servants.

1810. Do you know, as a general rule, whether respectable, well conducted girls, who go into the country, get married rapidly? They do.

1811. That they seldom have occasion to enter into a second engagement, except one for life? I do.

1812. Do you know whether many who have passed through your office and gone into the country, have settled down and become respectable heads of families, and done well? I do, very many.

1813. It is not likely you would remember particular cases, but have you not been accosted by persons who have settled in this way, and informed by them that they had engaged to go in the country in your office? Very many have settled down respectably, and done exceedingly well.

1814. Would you be good enough to state the wages current at the present time? From £20 to £30 for female servants; some even get higher wages than that.

1815. With respect to female servants in the town, does the same remark apply as to the sufficiency of employment? There is plenty of employment in town.

1816. As far as young women are concerned? Yes.

1817. I presume you cannot give any evidence as to any other portion of the working classes besides females? I engage men also.

1818. Do you think there is plenty of employment for male general servants? There is, if they will hire for the country—some prefer remaining in town. I think it is their own blame if they are unemployed.

1819. Is it not within your knowledge that there are many poor persons who, being encumbered with large families, are ineligible for the country? It is.

1820. When you have a commission to engage a man and his wife, is it not generally accompanied by conditions not to engage them with small children? Not to engage them with children

Mrs. M.
Pawsey.

31 Jan., 1860.

Mrs. M.
Pawsey.

31 Jan., 1860.

children at all, unless they are able to work; and sometimes they reject them even when the children are almost young men and women, and able to work.

1821. Would not this shew a great difficulty with poor people, who have large helpless children, to get employment? There is a great difficulty with this class; in fact, there are many in Sydney with families who are almost starving.

1822. You think persons unencumbered in this respect may obtain work if they choose? Yes, if they would take reasonable wages; but sometimes their demands are so exorbitant that no employer can comply with them. I know many persons to remain out of situations who would be in employment but for their exorbitant demands.

1823. With regard to female servants, can you state whether the class of young persons supplied by the immigration system, as a general rule, are acceptable as servants? They are not.

1824. You think many are not suited for domestic service? Certainly not more than six out of every twelve are suitable for the Colony.

1825. One-half of the young females introduced by the present immigrant system are unfit for domestic service in the Colony? Yes.

1826. That is the result of your experience? Yes.

1827. In relation to this branch of our inquiry it has been given in evidence that female prostitution in this city is greatly on the increase—have you any means of forming an opinion upon that subject? I have; and, I am sorry to say, it is too true.

1828. You think it is the case? It is.

1829. Have you known any instances in connection with your own business where young women have taken to that mode of life in preference to remaining in families? I have.

1830. Will you be kind enough to give a carefully compiled tabular statement of the wages current in Sydney at the present time, and also of the wages current two years ago? I will. (*Vide Appendix.*)

1831. *By Mr Windeyer*: You say, I think, that you very often cannot supply applications from the country? Yes.

1832. You say, also, that very often conditions are imposed as to the kind of persons you are to send? Yes.

1833. Do you think the cause of the greater number of these applications not being complied with arises; not from the objections of the parties seeking employment, but from the conditions imposed by the persons needing servants? Do you mean married or single people?

1834. On the whole? Single women, unless compelled by necessity, will seldom go into the country. They invariably prefer remaining in Sydney—it is difficult to get them to take situations one or two miles from town.

1835. As to single men, do you send them into the country? Yes.

1836. How are they disposed to go? They make no complaint. They are generally disposed to go, especially those who have come out as farming men.

1837. Are there not numbers who come to you, who appear, from their previous habits, not suitable for country service? Yes; who are not of the class of persons for country service.

1838. *By Mr. Hoskins*: Can you say, of your own knowledge, whether the females brought to this Colony have been in domestic service at Home? I do not believe that more than one-third of those by the late ships have ever been at service in their native land. They complain of their relations having brought them from comfortable homes to work they have never been accustomed to, and quite unfit to perform.

1839. Have you known females who have been accustomed to domestic service at Home, and who can prove it by testimonials, who, having been engaged in this Colony, have afterwards complained of the treatment they have received from their employers? Many.

1840. I presume they say they are not treated in the same considerate manner by their employers here that they were at home? They say so.

1841. Are you acquainted with the heads of many of those families which you say are in such great distress—have you known them to be people of temperate habits? I have known men temperate and well-conducted when single, and seen them afterwards married, and father of a family, who, by being out of work and idling about Sydney, has taken to drink and dissipation—the wife, in some instances, has followed her husband's example, and brought ruin and desolation on themselves and children.

1842. You think then this distress arises from the intemperance of parents? In some cases; they cannot get work in town, and gentlemen will not take them into the country.

1843. Are they generally intemperate? I cannot say they are.

1844. *By the Chairman*: You merely mean to give particular instances where persons have turned to drinking after marriage—you do not mean, as a general rule, that persons turn to drinking after marriage? No, I do not mean it as a general rule. I merely state that as the consequence of men with families being idle; they cannot get work in town, and gentlemen will not go to the trouble and expense of taking them to the interior.

1845. *By Mr. Hoskins*: Do you not think that is a proof that there is a superabundance of labor in the interior? Not at all. I have known gentlemen remain one or two months without servants, rather than take even one child.

1846. *By Mr. Plunkett*: You state that girls get married sooner by going into the country than by remaining in Sydney? I do.

1847. How then do you account for their unwillingness to go into the country, where there is a better market for them? That I cannot say.

1848. What objections do the girls make? The bush life is too dull for them, there is not enough company.

1849. You say one-half of the girls who come out here are unfit for domestic service? Yes, at the time of their arrival. I do not say they are so after they have been in the colony some time.

1850. What do you include in domestic service—merely household work in Sydney, or business in the country? I think the business in the country much the same as in town, with the exception of milking and dairy work; no country employer turns his female servants out to work in the fields.

Mrs. M.
Pawsey.

31 Jan., 1860.

1851. Do you not know that many of these girls who come from Ireland in particular are brought up in the country, and accustomed to country service, but are perfectly unsuited, by reason of not having learned, for domestic service such as is required in Sydney? They are not suitable for service in Sydney, and will not be persuaded to go in the country; running about town is the cause of their changing places so often.

1852. If persons brought up in that way could be induced to go into the country, would it not be more beneficial to themselves? It would be a great benefit to them; they would get experience during a twelve or eighteen months service in the country that would fit them for service in Sydney, did they wish to return.

1853. Do you find that many of those who have never been in service until they came into this country have turned out good servants afterwards—that they soon learn? Yes, they do.

1854. In hiring, do you make a distinction between those who have to learn their business and those who are trained servants? Yes.

1855. What is the difference? Difference in wages.

1856. What is the difference of wages? An active well-trained servant can easily get £30 a-year; the other not more than £20.

1857. Will they get £30 in Sydney? They do at this time; the lowest rate for a thorough servant is £26.

1858. In what capacity—as housemaids? General domestic servants.

1859. *By the Chairman*: General servants in small families? Yes. General servants in small families.

1860. I suppose they get the highest wages? Yes; one who can take the cooking and laundry work—housemaids are not paid so high, because they have only a portion of the work to do.

1861. *By Mr. Plunkett*: You stated in answer to a question that they complained of the treatment they received in the country—what is the nature of their complaints? That more work is expected of them than they are able to perform, and have at times harsh and unreasonable employers who prefer scolding to calmly and kindly telling them their faults, and shewing them how they want the work done. When good servants go in the country they generally give satisfaction.

1862. *By the Chairman*: Have you many complaints from girls who have returned from the country of rudeness, of that kind of treatment to which no decent woman can submit? I have never heard an instance of it.

1863. *By Mr. Plunkett*: Do you find these girls remain long in the service they go to? Some of them remain years in one service; some of them not a week. Generally speaking, those newly arrived do not remain long.

1864. *By the Chairman*: In speaking of the country, is it within your knowledge that many girls consider three or four miles out of town as the country? They do; they consider Waverley, Balmain, the North Shore, as the country.

1865. They draw a distinction between those places and the heart of Sydney? They do.

1866. As you have been in the Colony twenty-eight years, you are probably able to form an opinion of the general character of the working population of this City,—what is your opinion of that portion of the population which is settled, and resides permanently in Sydney, as to the general industrial habits, intelligence, sobriety, and other qualities which distinguish one population from another? I think them quite equal to the working classes of any city in England or Scotland.

1867. You have had some experience in cities at Home? I have; I was brought up in the City of Edinburgh.

1868. Is it within your knowledge that many of the working classes who have been permanently employed have been sufficiently frugal to save sufficient from their earnings to provide little freehold homes for themselves? Many. I came out with Dr. Lang's mechanics in 1831, and I could point out many of them not only in comfortable circumstances but wealthy.

1869. They have nearly all done well, have they not, whom Dr. Lang brought out here? Yes.

1870. *By Mr. Plunkett*: What vessel did you come out by? The "Stirling Castle," which arrived in Sydney, in October, 1831.

1871. *By the Chairman*: There is one other branch of inquiry before this Committee, as to the existence of vagrant children in the streets—do you observe in passing through the streets a number of children in an uncared-for state? A great number, even now that the Institution for Destitute Children has been established for some years, by which a great number are taken care of.

1872. In your intercourse with poor families, have you formed the opinion that a large number of children are in a state of moral neglect? A great number that might be sent to school are neglected by their parents.

1873. Are you aware that many children are in a state of absolute vagrancy, sleeping under sheds, on the wharfs, and about the markets, in the City of Sydney? I believe that many boys and girls of tender years are in a state of vagrancy, living by theft. I have two or three times gone to look after the children of servants that had been compelled from circumstances to board or hire them out, and have found them sleeping in omnibusses at the Glebe, in the carts at the Haymarket, these places—empty and unfinished houses and worksheds—are their principal places of resort.

1874. The evidence given by some of the police authorities among others goes to shew very strongly

Mrs. M.
Pawsey.
31 Jan., 1860.

strongly that there are a number of girls of very tender years in a state of prostitution in Sydney, should you think that is the case? It is the case.

1875. There is another point of our inquiry upon which I should like to have your opinion, as to the general house accommodation of the working classes—do you think the houses, taking into consideration the climatic influences, have sufficient room and conveniences for sanitary purposes, and are sufficiently ventilated to preserve physical health? I have visited some of the lowest localities in Sydney, and have generally found the houses very close, confined, and filthy. I have been to see the sick in some of these dens as they might truly be called.

1876. In many of the courts are you aware whether there are the necessary conveniences outside, without which it is impossible for a family to be maintained in a state of health? I could not speak to that; I have merely gone into the houses.

1877. *By Mr. Plunkett*: What parts do you refer to? Sussex-street, Campbell-street, and the back places where servants are likely to take lodgings. About Goulburn-street and the Haymarket the houses are very close, built on small spaces of ground, and the rooms are small and ill ventilated.

1878. *By the Chairman*: In your visits to these particular localities have you noticed whether more than one family were crowded into houses having insufficient room for even one? Yes.

1879. Is it frequently the case that a man, his wife, and one or two children, live all in one room—eat, sleep, and everything? Yes, frequently.

1880. If a house contain more than one apartment are two families sometimes crowded into it for the sake of dividing the rent? Yes.

1881. *By Mr. Plunkett*: You have stated that there are families at the present moment in distress, who will not be received in the country, and cannot get work here, can you suggest any means by which long families could be relieved in town, or by providing for them in the country? The wages of a laborer in town is too low to enable him to provide for a family. He will find it very difficult to pay house rent and fuel, besides providing the necessary food and clothing for a wife and three or four children. They get in arrears with rent, the consequence is they are sold off and left destitute.

1882. Have you thought of any means by which such cases could be met? I would advise their being removed into the interior, to some district where laborers were required; the house rent would be nominal, they could collect fuel without paying for it, and children old enough to work could be employed.

1883. Would you have them removed at the expense of Government? They cannot remove at their own expense most assuredly, for they have not the means.

1884. Do you know any district in the Colony that has collected any subscriptions or organised any plan to induce persons to go to these particular districts? No, I have never heard of any.

1885. Have you ever suggested any such plan? No, I have not.

1886. Do you not think it very desirable in those districts where labor is wanted that some such plan should be devised? It would be advantageous to the land and stock holders to have families settled in the distant districts of the Colony.

1887. It would be an advantage to the landholders themselves, and a relief to those who are suffering poverty in Sydney from no fault of their own? Yes.

1888. *By the Chairman*: Possibly you have some children yourself? I have.

1889. Have you ever thought of the difficulty of finding employment for the rising youth of the Colony—has it ever occurred to you as a parent? Not with reference to my own; I have been able to have them educated to fit them for employment.

1890. There are a number of boys growing up in the country, what are they to do? Some of them go out as stockmen.

1891. They cannot all go as stockmen? There are apprentices in town.

1892. There are not many manufactures in town? No.

1893. They cannot be apprenticed except to tailors? There are other trades besides that of tailors; there is shoemakers, carpenters, bricklayers, and many other trades. I have one son apprenticed to the business of tanner and currier.

1894. *By Mr. Windeyer*: How long is it since he was apprenticed? Three years and a-half.

1895. *By Mr. Hoskins*: I presume you have never been in the interior of this country? Not far; I resided on the Lower Hunter River ten years.

1896. Will you state the reason why employers of labor in the interior object to take families? They complain of the expense of taking a large family a long journey.

1897. Do they object to find provisions for large families? Yes.

1898. You are aware, I suppose, that persons engaged in pastoral pursuits are the largest employers of labor, almost the only employers in the interior? Yes.

1899. If these persons were sent into the country there would still be the same objection on the part of employers to take them? No, because they would be on the spot; whereas if they go up the country with teams, or travel in any other way, it entails expense on the employer.

1900. You say they object to find the children in rations? Yes; and to taking children up to their stations.

1901. *By the Chairman*: Is it within your knowledge that where a family are in the service of a gentleman in the interior they generally have to pay for any extra rations they may require a considerable advance upon Sydney prices? They have, but these gentlemen have to pay a great price to take their stores up to the station.

1902. Still the servant has to pay a considerably advanced price? Yes.

1903. As a parent I suppose you know that a growing boy eats as much as an adult? More.

1904.

1904. In that case if a man and his wife were engaged with a person in the country, and had to buy rations for three or four children, would it not take the whole of his wages and leave him penniless at the end of his engagement? It would be the case where children were taken up who could not find employment.

Mrs. M.
Pawsey.

31 Jan., 1860.

1905. But even little fellows who cannot work can eat? Yes, but not so much as that—a little fellow five years of age cannot eat as much as a man.

1906. *By Mr. Hoskins*: Has it ever come under your observation that the heads of families have returned from the interior who have had so much to spend for extra rations to feed their children that they have had nothing to receive at the end of the year? I have.

APPENDIX.

RATE of Wages current for Men Servants, during the years 1853 and 1854, with Rations or Board and Lodging.

Gardeners	£80	to	£100	} If engaged to proceed to the country all expenses paid by the employer.
Coachmen	60	"	80	
Grooms	50	"	70	
Ploughmen	45	"	60	
General farm laborers	40	"	60	
Stockmen	60	"	70	
Bullock drivers	60	"	100	
Teamsters	70	"	100	
Shepherds	40	"	45	
To shepherd and watch	52	"	55	
Hutkeepers	30	"	..	
Butlers	40	"	60	
Cooks	60	"	100	

RATE of Wages current for Female Servants, during the years 1853 and 1854, with Board and Lodging.

Cooks	£35	to	£60	} If engaged for the country the employer to pay all expenses.
Laundresses	30	"	55	
Housemaids	26	"	30	
Parlormaids	26	"	30	
Ladiesmaids	30	"	40	
Needlewomen	40	"	45	
Upper nurses	30	"	40	
Under nurses	24	"	28	
General servants	30	"	40	

Married couples, either as in-door servants, or as gardener, coachman, or groom; wife either as cook, laundress, housemaid, or general servant	£80	to	£110	} All expenses of transit to the station paid by the employer.
Married couple:—shepherd and hutkeeper ..	55	"	70	

RATE of Wages current for Men Servants, from the years 1858 to 1860, with Rations or Board and Lodging.

Gardeners	£40	to	£60	} If engaged for country districts all expenses paid by the employer.
Coachmen	40	"	60	
Grooms	40	"	45	
Ploughmen	35	"	38	
Farm laborers	30	"	35	
Stockmen	35	"	40	
Bullock drivers	40	"	50	
Teamsters	40	"	50	
Shepherds	28	"	30	
To shepherd and watch	35	"	40	
Hutkeepers	24	"	28	
Butlers	40	"	45	
Cooks	50	"	100	

RATE of Wages current for Female Servants, from the years 1858 to 1860, with Board and Lodging.

Cooks	£30	to	£40
Laundresses	30	"	35
Housemaids	20	"	26
Parlormaids	24	"	26
Ladiesmaids	26	"	30
Needlewomen	26	"	30
Upper nurses	28	"	32
Under nurses	16	"	24
General servants	20	"	30

Married couples, according to employment, from £40 to £65.

M. PAWSEY,
168, Pitt-street.

Alderman

Alderman John Sutherland called in and examined:—

- Alderman J. Sutherland. 1907. *By the Chairman*: You are a master builder? Yes.
- 31 Jan., 1860. 1908. How long have you been in business in Sydney? I have been in business on my own account about seventeen or eighteen years.
1909. How long have you been in the Colony? Twenty-two years.
1910. You are at present an Alderman of the City of Sydney? I am.
1911. And a magistrate of the territory also? Yes.
1912. This Committee has been appointed to inquire into the state of the working classes of Sydney, with reference to their alleged want of employment, with reference to the house accommodation, and its effect upon the physical and moral well-being of the occupants of such houses, and with reference to the existence of juvenile vagrancy about the streets; could you inform the Committee whether, at the present time and especially among the building trades, with whom you may be presumed to be better acquainted, there is any real want of employment? There is.
1913. How many persons do you, yourself, employ upon the average? I have employed very few the last three years.
1914. How many have you employed at any one time? On an average from fifty to eighty.
1915. But you have not employed many lately? I have had perhaps forty for some months. I was engaged in erecting a large building in Hunter-street.
1916. At the present time you say there is a great scarcity of employment generally felt? Yes.
1917. We understand from that, that persons who are good tradesmen, able men, of sober habits, anxious to obtain work, cannot obtain it? It is so in all branches of the building trade.
1918. Coming to particular branches of the building trade, masons for instance, could you form any opinion which might be relied upon as to the proportion now unable to obtain regular employment? I should say, at the least, one-third cannot find it about Sydney at present, and have not been able for many months.
1919. Does the same remark apply to other branches of the building trade, such as carpenters, bricksetters, and plasterers? I think it applies to all, but not so much to carpenters at the present time as to others; there are not, I think, more than one-fourth of them out of employment at present.
1920. Are you aware whether many members of these trades during the time when they were receiving high wages saved money and invested it in freehold property? A great many of them.
1921. Have you met with any cases where, recently, from want of employment they have been compelled to sacrifice those properties? Such cases have often come under my knowledge.
1922. Do you know whether persons of reputable character, belonging to those trades, have left the Colony from want of employment recently? Many.
1923. Where have they gone? To New Zealand, to Port Phillip, and some have gone lately to New Caledonia.
1924. With regard to laborers engaged in the building trades, are they suffering from want of employment? Very much.
1925. More so than the tradesmen? Not more, but I think equally as much.
1926. Do you think these persons might obtain employment in the country if they were prepared to go? No, I believe they cannot. I have known many of them within the last six months who have gone into the country, and have tried for employment in many places; some of them have got work for a month or so in harvest, and have come back to Sydney almost starving. I have known many cases where men have left their families here almost in a state of starvation, and have gone into the country when they have been unable to find employment here; some of them have begged their way up the country, and have obtained work for a month or two, and then have returned for want of employment.
1927. With reference to house accommodation—from the long time you have resided in Sydney, and the intercourse you must necessarily have had with mechanics and laborers, and from the circumstance of your being a builder, probably you will give us valuable information upon that head. What do you think of the houses where working people generally reside within the city—are they all that could be desired, as conducive to health and moral decency? Neither. I think they are very injurious to the health and moral character of the inmates. I should say the deaths of at least half the children are caused by the badly ventilated houses.
1928. By their living in a foul atmosphere? Yes. I have been through many of these houses. The nature of my business has in many instances led me to these places, and my own curiosity, since I have occupied my present position as an Alderman, has led me into a great many houses in lanes and back places about Sydney, where these people generally reside. A large portion of the houses are neither ventilated in the ceiling nor under the floors; and the windows are made in the old fashion, not to go up and down, but merely to be lifted up to a certain distance, and many do not open at all.
1929. So that there is no draught through the room? No draught whatever.
1930. Are the houses generally low—unnecessarily low? Very low; the older portion of the houses is very low; but they are building the houses higher of late years.
1931. Are you acquainted with the back courts in Sydney, as for instance, Queen's-place? Yes, I have been through them.
1932. Have you ever noticed whether they had sufficient accommodation in the shape of privies

privies and places for washing? There is very little I think in Queen's-place, in the shape of privies. There are some, but they are almost open to view; and there is only one privy to so many houses. In fact, that is the case in many other places besides Queen's-place.

Alderman
J. Sutherland.
31 Jan., 1860.

1933. Have you visited many of the courts and back lanes on the western side of the city, towards Darling Harbor? Yes. There are a great many between Sussex and Kent streets. I have visited many of those courts.

1934. Have you observed offensive effluvia arising from those places when you have passed by them? Very much so. I made it a point to examine all those places, or I should not have known so much of them.

1935. When did you make it a point to examine them? Better than two years ago, shortly after I was elected an alderman.

1936. Could you give us rough sketches of some of these places, shewing the ground plans and elevations; and also accompany these sketches with the rents paid? I will furnish the Committee with the information required. (*Vide Appendix.*) There is a large number of properties I wish to refer to between Sussex-street and the water. From time to time parties have been allowed to fill in the frontage to the harbor; and the consequence is, that in many cases the land immediately fronting the water is higher than that behind; and thus a hollow is left, where stagnant water accumulates. The smell on a close morning is almost overpowering in this locality.

1937. *By Mr. Hoskins:* You refer to the range of buildings close to the slaughter-houses? Yes; but they are not the worst. At the bottom of Liverpool-street there is a range of buildings which has been almost destroyed, by the proprietor being allowed to fill out a great way in the water without the means of drainage from the land behind.

1938. *By the Chairman:* Are you aware that in England great attention has been paid to improving the house accommodation of the working classes, not only on the estates of many noblemen, but of manufacturers in London and other places? I have heard of them.

1939. Do you think, as a practical man, that if any gentleman of capital in Sydney were to invest in building a palace, as it were, constructed with a view of letting off compartments of it as habitations for working men, with all sanitary conveniences, it would pay him,—that is, whether the superior accommodation he would be able to offer would be so attractive to the most provident of the working classes as to secure him permanent tenants to occupy the whole of the building, and thereby, even though let at a low rent, in the aggregate to pay him for his outlay? I believe it would pay him bank interest if properly conducted; but it might be made to pay by passing a sanitary law, compelling persons to provide for their houses proper means of ventilation, and to prohibit above a certain number of persons from living in houses of a certain size.

1940. Suppose any rich man were to buy a piece of land on the North Shore, and build a marine village sufficiently large for it to be profitable to him to give regular communication by means of a steamer to his property from Sydney, and that this marine village consisted of small houses fitted up with proper sanitary conveniences, and having attached small plots of garden ground for each, the whole being placed under proper sanitary rules, do you think he would get the place tenanted? I think he would.

1941. Suppose the steamer took them at proper hours to and from Sydney ———? It would be to the interest of the proprietor to have a steamer to take the people to and from their meals; it would then, I believe, pay, if a large number were congregated together.

1942. Suppose he built fifty such houses? Yes.

1943. Would not a man who did this be in the highest sense a benefactor to the country? Yes.

1944. And also secure to himself a fair return for the outlay of his capital? He would save to the Colony not only money but the lives of the inhabitants to a very large amount.

1945. As you have stated in evidence that you believe half the children die in Sydney from want of a pure atmosphere I thought of asking your opinion of the wisdom of a Government that sends its funds out of the country to import adults when it spends none to save the lives of its children—is that wise? It is not, in my opinion.

1946. Do you think there is any great extent of vagrant children in the streets? I think a great number.

1947. *By Mr. Pemell:* You must have noticed a great number of boys running about the streets? Yes.

1948. Have you ever thought what would become of those boys when they grow up to be men? I can see no employment for the youth of the country—no employment in Sydney but upon the omnibuses, and that would only bring them up to vagrancy in a large number of cases.

1949. *By the Chairman:* It would not be a desirable thing for all our boys to become 'bus boys? No.

1950. *By Mr. Hoskins:* I gather from the tenor of your remarks that you think it is not desirable to send money to the Mother Country to import immigrants,—do you think there is a sufficient supply of labor in the market now to last for years to come, taking into consideration the rising generation? That is a hard question for me to answer. It will depend upon how the Government carries out the works of the Colony; for if the Government works were to be carried out we should want a large increase of population.

1951. *By the Chairman:* Would it not also depend upon the way the resources of the Colony were worked out by a wise policy? Yes.

1952. Do you not think the country might support three millions, as well or better than it now does three hundred thousand? I believe it would, better.

1953. *By Mr. Hoskins:* Has it come to your knowledge that young men have complained of the wretched accommodation provided for them at boarding-houses? Yes, for the lower classes of working men the accommodation is very bad.

1954.

- Alderman
J. Sutherland.
- 31 Jan., 1860.
1954. I presume you have heard of the model lodging-houses provided for young men in the Mother Country? Yes, I have heard of them.
1955. Do you think an establishment of that kind, in which the inmates would be provided with rooms for themselves, where there would be abundance of water, and proper sanitary conveniences and regulations, would pay the projector? I think it would pay eventually—I doubt whether it would pay at the present time, for the number arriving are so few.
1956. Do you not think, from your knowledge of the habits of the working classes, that those who arrive would gladly avail themselves of such an establishment? A great number would if there were proper boarding-houses.
1957. Do you not think it would promote the temperance and morality of the working classes? I do. I have gone through a number of boarding-houses, and have found in the sleeping-rooms, a number of stretchers in two rows, the stretchers in a line, being close to each other, with about two feet for a passage between the heads and feet of the two rows; the boxes of each occupant were placed under the stretchers, and the only way of getting into the stretchers was by crawling in at the end. The walls were covered with tobacco spittle, there was no ventilation, and the smell was dreadful.
1958. *By Mr. Windeyer*: You are aware, I suppose, of the system of inspection introduced into England and other places under the Common Lodging-houses Act? Yes.
1959. Have you ever met with any persons who have been in the lodging-houses under that Act? No, I have never met with any.
1960. You have heard, I suppose, that that Act was generally approved of? I have heard it spoken of very highly.
1961. *By Mr. Plunkett*: Did you ever see the law introduced here on the subject which passed one or other of the Houses? I never took particular notice; I heard of such a law passing.
1962. Are you aware of the provisions of the Public Health Act in England? No, I am not.
1963. In the places you have spoken of, where sufficient water-closets are not provided, would you think it a great hardship on the landlord if the municipal authorities had power to make proper water-closets, and charge the landlord with the expense? I think the Legislature should compel them to do it, and if they did not do it themselves, it should be done for them, and they should be made to pay the expense.
1964. In such a case, you do not think the landlord would have any reason to complain? I think he would have no just reason.
1965. What localities do you refer to when you describe the miserable dens you have spoken of? There are many of them; a number of alleys between Sussex and Kent streets, Queen's-place, Durand's Alley, places between York-street and Clarence-street, in Kent-street, one in Castlereagh-street near Liverpool-street—in fact, they are all over the town. These places have no sewerage; in many cases there are no water-closets, and where there are any they are sometimes built against the chimney, and the heat of the fire draws the effluvia from the closets.
1966. Do your observations generally apply to all these places? There are some places worse than others.
1967. *By Mr. Windeyer*: Having been in business some years, of course you have opportunities of observing whether many young persons are apprenticed—can you state whether more or less are apprenticed now than some years ago? There are less now; in fact, there is very little use for apprentices now.
1968. There is a disinclination to apprentice? Yes.
1969. On the part of young persons, as they see no prospect of remuneration by learning a trade? No; I could get any number of apprentices if I could take them; in fact, parents are constantly begging me to take them for very little remuneration, in order that they may be kept off the streets and learn some business.
1970. But work is so slack that you have not an opportunity of doing so? Yes; besides, most articles now come manufactured into the Colony, and there is therefore very little employment at any trade.
1971. We have not a chance of competing with the productions of other countries? No.
1972. Do you not think if an opportunity were given to settle on the public lands of the Colony a number of these people would avail themselves of it? I do. I believe we have lost a large number of very desirable people by their not being able to settle on the lands within the last few years.
1973. The best and most energetic when they find they cannot succeed go off elsewhere? Yes, they are the most provident and energetic who go—men who have saved a little money.
1974. Then you think it is a false cry which is got up, that the people would not avail themselves of the land if they had the opportunity? I am positive a great many would avail themselves of it if they had the opportunity.
1975. *By Mr. Hoskins*: From what has come under your observation in this Colony and in the Mother Country, do you think the accommodation provided for the working classes here is inferior to that provided for the same classes in the Mother Country? I do.
1976. Do you consider that the working classes here compare favorably with those of the Mother Country, as to their general intelligence, temperance, and provident habits? I do.
1977. *By the Chairman*: Will you have the goodness to append a tabular statement of the wages current in the various branches of your business, and also of the wages current four years ago? I will. (*Vide Appendix.*)

APPENDIX.

STATEMENT of the Wages of Workmen employed in the various branches of the Building Trade.

Alderman
J. Sutherland.

31 Jan., 1860.

For 1856.		For 1860.	
Carpenters, per day	15s.	Carpenters, per day	9s. to 10s.
Masons, ditto	15s.	Masons, ditto	9s. to 10s.
Bricksetters, ditto	15s.	Bricksetters, ditto	13s. to 14s.
Plasterers, ditto	16s.	Plasterers, ditto	12s.
Laborers, ditto	10s.	Laborers, ditto	7s.

Masons, eight hours; all others, ten.

Mr. John Russell called in and examined:—

1978. *By the Chairman*: You have been for many years engaged in the business of an iron-founder in Sydney I believe? Yes, as engineer and ironfounder. Mr. J. Russell.
1979. How many years? Our firm has been in business since 1839. 31 Jan., 1860.
1980. Have you resided in Sydney most of that time? I was in business in Sydney till 1843, I then left Sydney for a time, and returned in 1852.
1981. How long have you been in business this last time? Since 1852.
1982. This Committee has been appointed to inquire into the social condition of the working classes in Sydney, with reference to the alleged want of employment experienced at present; also, with reference to the house accommodation of these classes, and its effect upon their moral and physical well-being, and also with reference to the alleged existence of juvenile vagrancy in the public streets—I believe you are a large employer of labor at the present time? Yes, I think the largest number I have employed has been 200.
1983. You have nearly that number in your employ now, have you not? Yes, about that number.
1984. What trades are comprised in that number? Engineers, blacksmiths, pattern makers, boiler makers, iron founders, copper-smiths, laborers, carters, clerks, and salesmen.
1985. Among the various classes of mechanics and laborers included in your own establishment is there any difficulty in obtaining employment as far as you are aware at the present time? We have had a number of applications lately by men for employment.
1986. In excess of your wants? In excess of our wants.
1987. I believe there are not many persons in so large a way of business in the Colony? Not in our line of business, excepting the Australian Steam Navigation Company.
1988. That would make it difficult then for persons to obtain employment if they left you? The reason we have not been able to give employment to many of these men is that some of the ironfounders are out on strike, and in consequence of the ironfounders not being at work we have been unable to employ pattern makers, engineers, and smiths.
1989. Have you had any difficulty in finding men when you have required them? We have had considerable difficulty with one class, that of ironfounders.
1990. Have you ever been compelled to import persons from home? Yes, we have fifteen or twenty of them on board the "Fitzjames," at the present time.
1991. Probably your business has increased lately? It has during the last four years.
1992. Can you state to the Committee whether to any considerable extent, you, as a manufacturer, can compete with persons engaged in the same kind of manufacture at home? We could compete with the manufacturer at home in a good many articles of manufacture, provided we could depend upon the wages being at an uniform rate, because the freights and charges are so heavy upon a large portion of the manufactures, that that sum saved upon them would be equal to a profit to us here.
1993. I should infer that you could afford to give a higher rate of wages here provided it did not go to an extravagant extent, and that the saving of freight would still enable you to compete with foreign manufacturers? To a certain extent, particularly in machinery.
1994. What wages are you now giving to persons engaged in your business? Ironfounders had last year—the lowest 10s., and the highest 14s., a-day.
1995. What wages would they get at home? The best hands would get—in Scotland about 22s. or 23s. a-week, and in England, where they are paid higher, 30s.
1996. With regard to the laborers, who represent the great bulk of the population, can you state any impression as to whether there is much suffering experienced for want of employment among sober, industrious men of the laboring classes? It has not come to my knowledge that there has been much suffering among the class of laborers we employ, but these are men who have been used to our business; among bricklayer's laborers, general laborers, pick and shovel men—a number of them, I believe, are out of employment.
1997. Can you give us any information as to the character of the houses in which the working classes of Sydney generally live? I have not made it my business; indeed, I have not time to look round, but I have heard the men complain of the difficulty they have in getting comfortable dwellings, and also of the high rents they are required to pay.
1998. Of course you are aware that if a man, after working hard all day, has to sleep in a house where the atmosphere is very bad, it has a depressing effect upon his physical energies, and instead of being refreshed by his sleep he rises exhausted before he commences his day's labor? Yes; and I am aware that the houses let to the working classes are in a very bad state, many of them not fit for brute animals to live in.
- 1999.

Mr. J. Russell. 1999. Some years ago your establishment was in Queen-street? Yes.

31 Jan., 1860. 2000. Are you not aware that at the back of your place there are a number of these wretched habitations? Yes; these are the places I chiefly refer to; a number of these places are not fit for human beings to live in.

2001. I imagine from the life you live you will not be able to give us any opinion as to the question of juvenile vagrancy? I have seen a number of boys congregated about the wharfs; in fact, we have a difficulty in keeping them out of our works, when they see an opportunity of getting in.

2002. Do you employ many boys? Yes.

2003. How many? I think about fifty or sixty.

2004. Regularly apprenticed? They are not bound. We find it best to adopt the principle acted upon in the large establishments in England, and have taken the children of respectable parents as apprentices to the different branches for a certain time, and if they behave properly, and are attentive to their business, we give them their indentures filled up for a certain number of years. When they were bound to us we found them very often careless, as they were entitled under their indentures to a certain advance of wages. We now fix the wages at a certain rate to begin with, and, if a boy is attentive and learns his business quickly, we can, at our own discretion, advance him without being obliged to do so; if, on the other hand, he misbehaves, or does not attend to his work, his wages are reduced. This arrangement makes the boys more attentive to their foreman, and they turn out better workmen.

2005. By this arrangement, are the boys put to particular branches, and placed under competent instructors? Yes; they are placed under competent foremen. We have been obliged to dismiss a few of our boys, but very few.

2006. For all practical purposes, they are the same as apprentices? Yes.

2007. Have you many applications from parents to take their boys? Yes.

2008. More than you require? Yes; as the boys advance they take the place of men, and we then take other boys.

2009. When you say you have a great many applications, what do you mean? I dare say, since the 1st January, we have had twenty applications.

2010. Have you taken any since then? Yes, a few.

2011. How many have you taken since? In both establishments, I dare say, four.

2012. So that, in reality, you have had five times the number of applications you have taken boys? Yes. One reason why we do not take on more boys in Sydney is, that they all seem to set their minds on one branch. If they would become ironfounders we could take on several; but none of the lads will learn that branch.

2013. What is the branch they desire to learn? They all want to be engineers.

2014. Do you not think that arises from a more favorable apprehension of the trade from the mere term than from anything else, and that, if the nature of the trade were properly placed before them, it would not be so? I have explained to parents that the ironfounders was the best trade; but that seems to have no effect, all the lads prefer to be engineers.

2015. Will you be kind enough to give us, as fully as you can, the rate of wages at the present time of the various branches employed by you, and also the rates prevailing, say four years ago? I will. (*Vide Appendix.*)

APPENDIX.

STATEMENT of average Wages paid to Workmen and Laborers from 1st January, 1854, to 1st January, 1860.

YEAR.	TRADE.	RATE PER DAY.			TRADE.	AVERAGE RATE PER DAY.	TRADE.	AVERAGE RATE PER DAY.
		Highest.	Lowest.	AVERAGE.

P. N. RUSSELL, & CO.,
Sydney Foundry, and
Sussex-street Engine Works.

7th February, 1860.

Mr.

Mr. Benjamin James called in and examined:—

2016. *By the Chairman*: You have resided in the Colony a considerable time I believe? *Mr. B. James.*
Yes, about eighteen years.
2017. Have you been engaged in business the whole of the time? With the exception of a ^{31 Jan., 1860.} few months from my first arrival.
2018. I believe you are rather an extensive employer in your trade? At present I am not doing much.
2019. You are in the habit of employing a good many persons; can you state the number you have employed at any particular time? During the last twelve months I have had from forty to eighty.
2020. I think you heard me state to the previous witness the object of our inquiry? Yes.
2021. Can you state to the Committee whether, in your opinion, there are many men belonging to the building trades—competent tradesmen, men of sober habits—who are anxious to get employment, and who cannot? I think there are.
2022. Can you give us any instances of applications to yourself, or anything of that kind? It is only when I have much work in hand that men apply to me; they know when I am slack, and then I have fewer applications.
2023. Suppose you were to advertise for half-a-dozen masons to-morrow, would you have any difficulty in getting them? No difficulty whatever.
2024. Speaking roughly, do you think you would have more applications than you would require? More than I should require, no doubt of it.
2025. A witness, who was examined to-day, gave it as his deliberate opinion that one-third of the masons in Sydney, at the present time, were unable to get employment? I could not give an opinion upon that. I should think there was a larger proportion of carpenters out of employ than of masons.
2026. And of laborers connected with the building trades? Yes, a considerable number of them; some of them when they have applied to me for work have told me that they have been months out of employment.
2027. Is it your opinion that among those classes, who depend on their manual labor for the support of their families, there is much suffering from want of employment? I have not much opportunity of observing, but as they tell me they have been months out of employment, the inference must be that there must be suffering.
2028. It has been given in evidence, before this Committee, that persons may at any time obtain employment if they will go into the country, and are ready to take such employment as may be offered? I have no opportunity of knowing the demand for men in the country.
2029. Are you aware that there is a reluctance among many persons to go into the country? Yes, I believe there is great reluctance.
2030. Can you state what, in your opinion, is the cause of this reluctance—is it the apprehension of bad treatment? As soon as people arrive in this country they have a dislike, from some cause or other, to go into the interior. Probably many have friends in the town, and they stick together; unless they have friends in the country they dislike to go there.
2031. As a citizen of this city, are you ever applied to by persons who are in distress; by common vagrants, for instance; by persons begging in the street or at your own door? Yes, they occasionally call; but the larger number of the applications I receive is from persons who come to me in consequence of accidents or deaths, by which a widow may be left with a family unprovided for. These things occur two or three times a week, on the average; sometimes more.
2032. With regard to the house accommodation provided for the poorer class of people, what is your opinion? I think the houses built during the last few years about Woolloomooloo and the Riley Estate are far superior to the houses in the older part of the town.
2033. Referring to the older portion of the city? Such as Sussex-street, the neighborhood of the slaughter-houses, Parramatta-street —
2034. The Rocks? The houses in that locality must, I think, be more healthy, because they are more exposed to the sea breeze; but many of the houses along Sussex-street, round by Blackwattle Swamp, are not fit for a human being to live in.
2035. Better buildings have been put up within the last year or two? I think within the last few years there has been great improvement in building. On the Riley Estate the houses are of a much superior class.
2036. Have you ever noticed whether a large number of children in the streets of Sydney are in a state of moral neglect? Yes, I see them continually on the streets.
2037. Do you know whether these children are in such a state that they sleep out in open places—in omnibuses, in the neighborhood of the markets, and about the wharfs? I am not aware further than from what I gather from the newspaper and police reports. I do not know it of my own knowledge.
2038. *By Mr. Hoskins*: You say there is a reluctance among the working classes to go into the interior—have you known some of the working classes go into the interior who have returned and complained of the treatment they have received from the employers of labor? Yes, I have.
2039. What has been the nature of their complaint? Sometimes I have heard them complain—those of them who have been employed as shepherds—that they have lost a few sheep, and that their wages have been docked at the end of the year. But when I speak of the reluctance of people to go into the interior, I particularly refer to what I have seen on board immigrant ships. I have advised some of these people to go into the country. They have refused; and I have seen them some months after hanging about Sydney without work.
2040. Have you ever heard them complain of the food they have been provided with, and of the

- Mr. B. James. the manner in which they have been housed? I have had very few instances come under my notice of people who have been in the country and who have come back.
- 31 Jan., 1860. 2041. Have you heard any of them complain of the administration of justice, and say that it was impossible for the working classes to get justice in the interior? I may have heard so, but I know of no special case.
2042. *By the Chairman*: I should infer from your evidence that you consider Sydney is over-populated for the general population of the country; that there are too many persons crowded into Sydney? I think there is not employment for the people in Sydney—there is no encouragement to go on building to give employment to the people; even now rentals do not pay, and people will not be induced to build so long as the banks lock up the money and give interest for it.
2043. But building could only go on in proportion to the demand for buildings? Yes; but when there is employment each family will have a house to itself—when there is not employment two or three families will live in one house.
2044. Is that the case at present? Yes.
2045. Will you favor the Committee with a statement of wages at the present time, and a corresponding statement shewing the rate of wages two years ago? Yes. (*Vide Appendix.*)
2046. *By Mr. Hoskins*: Is it not your opinion that the population of Sydney is disproportionate to the population of the country generally? Yes.
2047. Largely in excess of what it should be? Yes; I think so.

APPENDIX.

PRESENT RATE OF WAGES.		Rate of wages two years past averaged about 2s. per day higher than at present.
Carpenters (per day)	10s. to 11s.	
Masons (8 hours)	10s.	
Bricklayers	14s.	
Bricklayers' laborers	9s.	
Masons' laborers	8s.	
Ordinary laborers	7s.	
Painters	10s.	

February 7th, 1860.

BENJAMIN JAMES.

FRIDAY, 3 FEBRUARY, 1860.

Present:—

MR. HOSKINS,
DR. LANG,

MR. PEMELL.

MR. LODER,
MR. LYONS,

HENRY. PARKES, ESQ., IN THE CHAIR.

Mr. William Robertson called in and examined:—

- Mr. William Robertson. 2048. *By the Chairman*: You are a mechanic, I believe? Yes.
- 3 Feb., 1860. 2049. What is your trade? I am a carpenter by trade, but I give my mind very much to machinery, and have connected myself with that for the last fifteen years.
2050. How long have you resided in Sydney? Between three and four years. I have been in the Colony between five and six years, but I was at Moreton Bay two years.
2051. Did you come out from Scotland? From London.
2052. Were you resident in London chiefly before you came to the Colony? Yes, for eighteen years.
2053. Following your trade? Yes.
2054. This Committee has been appointed to inquire into the condition of the working classes, with reference to the alleged want of employment at the present time, and the general state of the labor market here at all times; as to house accommodation, and its effects in a sanitary point of view upon the physical health and moral well-being of the persons occupying such houses; and as to the state of the children, whether there is a considerable number of children in the public streets in a state of vagrancy. It has been represented to the Committee that you could give evidence more particularly in relation to the first head of inquiry. Is there, in your opinion, at the present time, a want of employment felt by persons, either tradesmen or laborers, who are of sober habits, respectable character, and who are anxious to obtain employment? I think there is a very great want of employment in Sydney at the present time—that there are many sober, industrious, and frugal parties who can scarcely get a living. I know some who are excellent workmen who have seldom hitherto, until the last twelve months, been out of employment, but who have been more out than in for the last few months.
2055. Could you illustrate your general statement by any examples,—could you describe any particular person, and say how long he has been out of employment, and the cause of it? I may take the case of a mason whom I have known all the time I have been in Sydney; he is well

well known in Sydney, is a most steady man, and an excellent workman, as far as I ever heard; and he has been out a great deal lately. He gives a very bad account of the labor market

Mr. William
Robertson.

2056. Have you mixed much with the mechanics of Sydney since you have resided here? 3 Feb., 1860.
There is a considerable number employed where I work, but I am a man of temperate habits, and I do not frequent public-houses much, therefore I am not in the habit of mixing very much with them.

2057. Where are you employed? At Messrs. W. Fairfax and Sons, Woolloomooloo.

2058. You are there in the capacity of a machinist? Yes.

2059. When I asked you whether you mixed much with the mechanics of Sydney it was with the view of asking this further question—whether it is within your knowledge that many mechanics of provident habits and industrial capabilities, when times were good, saved sufficient to build themselves houses for instance, and whether latterly, through want of employment, they had not been compelled to sacrifice these little properties? I have not mixed so much with the working classes, and therefore am not aware of instances.

2060. Your impression is, that there is a want of employment generally felt; and you know some individual instances where the want has not arisen from improvident or profligate habits? A friend of mine at Pymont advertised some time ago for a joiner, and he told me that on the morning when the advertisement appeared a man came to him a few minutes after six, and he took him on; that he remained at home till dinner time; that during that time about fifty called for that one situation; that he went out after dinner, and that his wife told him several had called after he had gone out in the afternoon.

2061. What is your opinion of the house accommodation of Sydney, so far as it affects the laboring classes? I think the sewerage is very bad in Sydney.

2062. In what part of the town do you yourself reside? In Dowling-street, Woolloomooloo Bay.

2063. I believe the houses there are all new? They are not so bad there as I believe they are in other parts.

2064. Are you acquainted with the older parts of the city? No.

2065. Have you paid any attention at all to the state of the children of the laboring classes of the city? I think they are not getting the education they ought to receive. There are too many running about the streets, in my opinion.

2066. Do they congregate in little mobs about the water's edge on the Sabbath and on other days? Yes.

2067. Do they appear to be in a state of neglect? I see them about, but though I live near the water's edge, I do not observe them much on Sunday, as I am little out on that day, except to church.

2068. Do you not think it is rather surprising, or that it ought to surprise us, that in a new country, where the natural resources are undeveloped, and can only be developed for the use of man by the labor of man; where, in fact, all kinds of property may be improved by means of labor, that there should be a want of employment? It does surprise me; but I think it need not so much surprise us after all, because the legislation we have hitherto had has been enough to retard the progress of any country.

2069. Will you be good enough to describe what, in your opinion, constitutes the bad legislation which has been so injurious to the Colony? I consider that agriculture and manufactures would include almost everything. If a country has neither manufactures nor agriculture it cannot be expected to prosper. This, in my opinion, has neither. I think many things might alter the present state of things, but I would content myself by referring to two. The lands ought, in my opinion, to be opened up on easy terms—£1 an acre at the outside, but I think it ought to be less. I think there ought to be free selection and deferred payments; because I believe that there are many who would go on the lands who, if they are obliged to pay down their little capital, can only allow the land to grow gum trees as it is doing now. Some would call this class legislation, but I would not wish it to be in any degree class legislation, as I would allow a rich man to select his 320 acres the same as the poor man, provided he went on it and cultivated it. Again, with regard to manufactures; while we have everything coming in duty free—goods already manufactured—how can we expect the laboring class to be fully employed. I call myself a protectionist, some call it protection, some call it free trade, but what I mean is, that I would like to see the tariff of this country assimilated very much to the existing tariff of England—Sir Robert Peel's tariff—to put a duty upon all goods manufactured or partly manufactured.

2070. You are aware that the present tariff does not satisfy the people of England? It may not in some things.

2071. Then you think that protective duties in some respects would have an almost prohibitory effect? They would tend towards that.

2072. Do you think protective duties upon imported articles, and greater facilities for the settlement of people on the land, would do much to alter the present depression felt in the Colony? I do.

2073. Do you know, of your own knowledge, many parties who would actually settle upon the land—parties of small means, if the facilities for doing so were greater? I intend to take up a farm myself. It has been reported by I think an interested class, that the land would not grow anything; but I cannot believe in their sincerity, when I see them getting such large tracts of it themselves; I think they want to let it to us as tenants by and by; and there is, I believe, a numerous tenantry already about Shoalhaven, who are paying rent. Now, I think, if a man can live on a farm and pay rent for it; if he were in a position to purchase that farm, he must get a living.

2074. It is an established fact, I believe, that there is some land in this Colony as fertile as any

- Mr. William
Robertson.
3 Feb., 1860.
- any to be found in any part of the world? How ever good land may be, it is not my intention ever to attend a sale of land at auction.
2075. You are against the auction system, you think that injurious? I am thoroughly against the auction system.
2076. What do you think of the present system of immigration? I think it is unsound.
2077. In what respect? I think while the labor market is glutted immigration ought to be stopped; I would not be understood as opposed to immigration, but I think it is wrong to bring people here when those who are here are so badly employed. I think more of the money obtained from the sale of lands, and so forth, ought to be laid out in opening up the resources of the country.
2078. How do you mean—in constructing roads? Yes, and railroads, and in making the country attractive. I think then people would find their way to the Colony. If we wanted them, we could then send for them.
2079. I presume you repudiate the idea that the country is over-populated? Yes, I do.
2080. I suppose you are of opinion that, under proper management, the country would support three millions as well as, or better, than it supports its present three hundred thousand? Better. In my opinion people could not come fast enough under good legislation.
2081. You think they would come by force of the attraction itself of the country? Yes.
2082. If I understand you rightly, you are against the remission of money from the Public Treasury for the purpose of immigration? Not if the people are wanted. In the present state of the labor market I am against it.
2083. Is it within your knowledge that many persons who have difficulty in finding employment in Sydney are nevertheless reluctant to go into the country if employment is offered to them? There are a good many I think who would not go into the country if they could live anyhow in town; but, as far as my knowledge goes, it appears to me that the people who object to go are those who have never seen anything of the country, and who dread going into the bush as they call it.
2084. It has been represented to this Committee by several witnesses that many men would prefer lingering in Sydney, even in a state scarcely removed from destitution, to accepting employment in the interior? I am aware many would be very reluctant to leave Sydney.
2085. Have you ever written Home for any friends to come to this Colony? Under a more favorable state of things I would like to bring out some of my friends; but, in reply to the application of two relatives of mine to pay their passages out, which I would have done under a more favorable state of things, I wrote them Home that if they were getting a living at all, they had better stop where they were. These two families contained in all about twelve souls, and they were prevented coming here by the state of the labor market.
2086. *By Mr. Hoskins:* You say you have been given to understand that a large number of persons, mechanics and laborers, are unemployed in Sydney, but that you cannot speak with certainty because you are not in the habit of attending public-houses where they resort? No.
2087. Are the working classes of Sydney generally intemperate do you think? They have been represented as intemperate, but that is not my opinion. I think, in fact I know, that while I was in London I saw more intemperance than ever I have seen in Sydney.
2088. Do you think the working classes of Sydney will compare, in point of general intelligence, sobriety, and morality, with the working classes of large towns in the Mother Country? I do.
2089. Do you think many persons who are unemployed in Sydney would go into the interior if an advancement were offered to people to settle on the land? Most of my acquaintance who have it in their power seem that way inclined.
2090. But they object to go because they cannot purchase land at a reasonable rate—I presume you consider that when people emigrate to a new country they have higher aspirations than to be mere tenant farmers? Well, I do not know; I consider it to be a very honorable occupation to be a farmer; I think a man ought to live by that as by any other calling.
2091. Do you not think people emigrate to a new country expecting to have an opportunity of acquiring honorable independent homes for themselves? I do not think they would ever undertake such a long tedious voyage if they did not.
2092. Have you known persons who have been in the interior of this country who have returned disgusted with the treatment they have received? I have heard many of them complain of their rations, and of the want of the comforts of civilized life; but I cannot say that a great proportion of them object to go back again.
2093. Have you heard any other complaints—have you heard them complain that they are mulcted of their wages? Yes, and also that upon the things they have wanted to purchase they have been charged an exorbitant amount on purpose, that their employers might have the less money to pay them as wages.
2094. *By Mr. Parkes:* I presume your actual experience, with reference to the complaints of the country is very limited, you having resided in Sydney only some years, and not having had much intercourse with the working classes? No, but I resided for two years at Ipswich, Moreton Bay, where I had an opportunity of seeing a great many people from the interior.
2095. *By Mr. Hoskins:* Your knowledge is limited to information acquired from others who had been in the interior? Yes. I may mention an instance which came with some amount of authority while I was at Ipswich. Passing along the street one day I unfortunately saw one man hit another. I was subpoenaed to the Police Court as a witness, and while I was in the Court the case was tried of a shepherd who had sued his employer for his wages. His employer had charged him with so many sheep, a dozen I think, that he had lost, at £1 a head. After the case was over, the Police Magistrate said that the sheep, when they were sold, were reckoned at 10s. a head only, the run being sold with the sheep at the rate of £1 a head, and that, therefore, as the employer had charged the man £1 a head, he ought to hand

hand over that proportion of his run to him. The evidence shewed that tobacco had been charged to the man at 9s. a pound, and that a cotton handkerchief, which it was said could have been purchased, I am not sure whether here or in England, for 6d., had been charged 3s. 6d. I think that is conclusive as to the fact that imposition is practised.

Mr. William
Robertson.
3 Feb., 1860.

2096. How long was this ago? Four years since.

2097. Is that the only case with which you are acquainted, or have you not heard of numerous other cases in which persons have been employed in the interior complain of their treatment, as to their house accommodation, their rations, and of being mulcted by Benches of Magistrates when no offence has been committed? I have heard many complaints with regard to house accommodation and rations, but chiefly as to the rations; but I consider this case which I heard in the Police Court to be of more importance, as having come under my personal observation.

2098. Is it not the fact that you have heard many cases of that kind since you have been in the country? Yes, I have heard many.

2099. *By the Chairman*: Will you explain what the nature of the complaints was, and what you mean when you say you have heard many complaints—have you heard twenty, or fifty, or a hundred? I should think I have heard twenty.

2100. Were they of such a character as to command your attention at the time? They were; I did not misdoubt them, but I cannot vouch for the truth of them; I am only giving them as what I heard. They were chiefly about the rations and what they were charged for them, and if they wanted many things how their pay was reduced by the time they had to take it. I am speaking of what I heard at Ipswich; since I have been in Sydney I have not heard these complaints.

2101. *By Mr. Hoskins*: Were you personally acquainted with your informants? Some of them were my shipmates coming out.

2102. Therefore you could attach credibility to their statements? I believe so.

2103. Is it the fact that you have heard the working classes in the interior complain of the administration of justice in particular cases between masters and servants? Yes.

2104. *By Mr. Loder*: Have you not heard the same complaint of the administration of justice in Sydney? I believe there will always be complaints; the magistrates can never please both parties.

2105. You said, in one of your first answers, that you were not in the habit of meeting many of the laboring classes, because you did not resort to the public-houses which they were in the habit of frequenting? I did not wish to convey that they were in the habit of frequenting them further than that most of the societies are held at public-houses, because there almost exclusively they can get rooms to suit such meetings.

2106. Then I misunderstood you—you did not mean to say that they went there for the purpose of drinking, but of holding meetings of different societies? Yes.

2107. *By the Chairman*: You simply meant this,—that they were in the habit of visiting public-houses because there were no other places where they could meet? Yes; and I do not go to other public resorts, such as the theatre.

2108. *By Mr. Loder*: Has it come within your knowledge that a good many mechanics have houses of their own? A considerable number, no doubt, have houses of their own, but there are a large proportion without.

2109. You say you think that, if the land were easier of access, a great many of these people would remove from the town into the interior? I think so.

2110. *By the Chairman*: You are the head of a family, I presume? Yes.

2111. Are you satisfied as a working man, a mechanic, satisfied with the means of public instruction at present provided by the Government of this country? I would very much like to see a comprehensive system of education; but, if the tariff were revised, I think we should have sufficient funds without the present tea and sugar duties being retained and applied to that purpose. I cannot understand pinching the belly to feed the mind; I think both should have nutriment.

2112. Without reference to any particular scheme, I want to know whether you, representing to some extent the mechanics of Sydney, think larger funds ought to be provided for the purpose of education? I think so.

2113. You think the present means do not meet the demand? I think not, but if there were such legislation as would tend to develop the resources of the Colony, and to place the laboring classes, which I reckon, and which are generally reckoned the source of all wealth, in a prosperous condition, all other classes will be in a prosperous condition.

2114. Am I to understand that if they were prosperous they would be satisfied to educate their own children? That is what I was coming to.

2115. *By Mr. Hoskins*: Have the complaints you have heard of the administration of justice in the interior of the country been in excess of the complaints you have heard of the administration of justice in Sydney? I think they have been in excess in the country.

APPENDIX.

In stating the case of the shepherd who sued his employer for his wages in the Police Court, Ipswich, I omitted to state that the shepherd accounted for every one of the sheep his employer charged him with losing, and the police magistrate struck off part of the account against the shepherd for goods supplied, as being an over-charge. This case I heard stated upon oath.

WILLIAM ROBERTSON.

Alfred

Alfred Roberts, Esq., M.R.C.S., called in and examined :—

A. Roberts, Esq., M.R.C.S. 2116. *By the Chairman* : You are a member of the medical profession? I am a member of the Royal College of Surgeons, a member of the Society of Apothecaries, and Surgeon to the Sydney Infirmary.

3 Feb.. 1860. 2117. You have resided in Sydney some years, and are in active practice? Yes, between six and seven years.

2118. Were you in practice in any town in the Mother Country before you arrived here? I was, at Rye, in Sussex, and in London.

2119. This Committee has been appointed to inquire into the condition of the working classes of Sydney, as to the manner in which they are employed and housed, and the effect of their house accommodation upon them in a sanitary point of view, upon their physical health and moral welfare; and also as to the alleged extent of juvenile vagrancy in the public streets. It was thought, from your active habits, and from the extent to which you are engaged in your profession, that you would be specially qualified to give us valuable information upon the two latter of these points—the house accommodation and the state of the children? I may state that perhaps it would be as well you should know that in England I took some little interest in the condition of the working classes, especially relative to the economic management of their homes. I offer my evidence, therefore, with more diffidence, because my views may be more circumscribed, in consequence of my having felt some interest in those classes at home.

2120. Have you in making your professional rounds noticed particularly the state of the houses in Sydney? I have; in all parts of Sydney and its suburbs, scarcely one part more than another.

2121. Does your profession lead you much among the poorer classes? Not much.

2122. Have you been in any of the back lanes of the city? I have often visited them, not in the pursuit of my professional avocation, but for the purpose of seeing what I could of the poorer classes and their dwellings. My practice does not lie much among the poorer classes.

2123. Will you state your opinion of the effects of the house accommodation upon the working classes in the worst, the older, parts of the city—about The Rocks, for instance, all along the western side of the town, Sussex-street, Kent-street, Lower George-street, and the neighborhood of the Haymarket? There appears to me, first, a rudimentary want of system in the erection of all the habitations for the lower orders, that is, a total absence of any means of ventilation, or proportionate size of rooms to the number of inmates, and I believe the sacrifice of life in consequence is very great; I would, however, specially press upon your notice the absence of any law to compel a landlord to build his rooms—in this warm climate—above a certain size, or with certain necessary common-sense means for securing ventilation and drainage.

2124. The houses being thus bad in construction, and deficient of the necessary means of ventilation and drainage, is it within your knowledge that families are crowded in an undue manner into these unwholesome dwellings? They are so; but not more than they are in other dense neighborhoods in large towns. Bad house accommodation leads to the sacrifice of human life in many ways; and it also leads to dirty, untidy, improvident, and immoral habits, and to a carelessness about home. I should say it would be utterly impossible for a housewife to keep a bad house tidy. Where she is placed in such a house, she soon ceases to strive to preserve order and cleanliness in her house; the husband does not care about coming home to his wife; she becomes careless, and neglects her children; their diet is also neglected, and they are allowed to expose themselves to the sun. This all reacts, not only upon the health of the man and woman, but also upon that of the children, and ultimately upon the habits of the people. A large number of the deaths of children arise indirectly from the same cause.

2125. Could you state what proportion of deaths in infancy proceed, in your opinion, from an unwholesome atmosphere; in other words, from preventable causes? It is impossible for me to give an opinion upon that point.

2126. Should you think the larger proportion? From preventable causes—yes.

2127. Does it not appear to you, in a political point of view, suicidal, in a new country, not to take every possible precaution to save the lives of people, when we are seeking by all means to import them? I am not a politician; but as a matter of common sense, I should give the answer—*clearly so*.

2128. When I say “a political point of view,” I merely mean in the nature of government, in the larger sense of the word? Still further—I think those who are growing up, when they shall have arrived at adult age, will be incapable of doing the amount of work they would have been able to do if their habitations had been better. What I mean is—that children are growing up sickly and weakly in consequence of the bad accommodation they receive, and of the immorality and carelessness of parents, which is an absolute and inseparable result of such accommodation.

2129. Have you ever noticed this, as a matter of physiological study,—that there is a vast difference in the physical appearance and proportions of the older natives of the Colony—say of men who have arrived at the age of forty or fifty—and of the younger natives? I have observed sufficient to have arrived at this fact—that this climate is capable, with good management, of rearing a healthy, robust, active class of men; and that the class now rising up in Sydney is not such.

2130. You will be of opinion that the general character of mothers, in all classes, is of the utmost importance in any country, and especially in a new country where the national character has to be formed? Yes, and this is a point in which I have taken special interest since I have been in Sydney.

2131. Is it possible for any woman living cramped up in a small dwelling in an unwholesome atmosphere, and without the common conveniences for preserving decency, to maintain that sense of propriety without which she cannot properly discharge her duties? No, I think it is not, but we need not rest upon my opinion: there is evidence with reference to the model dwelling-houses in London, which proves the fact you mention. Perhaps you will allow me to do here what I have done in the society of my friends before—trace the life of an immigrant girl, and I think it will bear out your views. I came out from choice in an emigrant ship, simply because I took an interest in the well-being of the working classes. During the passage Mrs. Roberts took the history of every one of the 140 girls on board, and from those histories we gathered that the average wages of them before they left Ireland was from £3 to £4 a-year, and many of them had received only 7s. a quarter. These girls had been accustomed to live on these wages at home, and although a more painful sight could scarcely be imagined than was presented by them when they came on board the ship, by dint of cheerful perseverance and attention to them on the voyage they became a smart, nice set of girls by the time of their arrival here. When such girls arrive here they are immediately offered wages varying from £20 to £40 a-year; they go into their places, and when they receive their wages they have no inducement to spend their money but on dress; having their dresses they naturally wish to shew them; they go out, there are immense temptations in the streets—and as a large number of mistresses ask for no character in taking a servant they care little about keeping their places; they become careless of their conduct; and thus, instead of their situation in a family becoming a place for the education of the future mothers of the Colony, and to fit them for the management of children, their servitude is comparatively useless, if not worse. They marry, therefore, uneducated as to the proper mode of managing a family; they then go into these houses we have just been describing, in which the necessary comforts and decencies of life are absent, and rapidly sink into careless, negligent, and untidy women. The effect upon the children is also seriously injurious. The rough Irish girl, accustomed to live on her wages of 7s. a quarter comes out here and has more to spend than she knows what to do with, the money is spent in finery, she is taught that character is of no object, she learns but little during the period of her servitude, and when she is married she has not the slightest idea how to manage children, or to bring them up in a climate new to her. Probably she would be able to do so well enough in Ireland, although many are squalid enough there; but in this climate the treatment to which children are submitted is ruin to them; infants of eighteen months old are exposed to the sun and allowed to eat anything that comes in the way, and the natural consequence is a great increase in the mortality.

2132. Could you suggest any remedial means for such a state of things as this, any sanitary law, any law to regulate the building of houses, or any inducement to men of capital to invest their money in the erection of a superior kind of buildings for the working classes? I am of opinion that no houses for the lower orders—in fact, no houses—ought to be built within a certain size, or with rooms less than a fixed size, and without a regular system of ventilation; that is a fundamental principle.

2133. Have you paid any attention to the state of the poorer children in the public streets,—whether there are more children than there ought to be in a state of neglect? There are, clearly.

2134. What are the diseases most incident to the poorer classes of this city? Diseases of the digestive organs specially, and such complaints as are induced by mismanagement of the climate, and the want of knowledge and experience of the mother. I would still go back to the same point, that there are a very large number of young mothers possessed of no system and of no management; the necessary consequence is, that a large proportion of our lower-class children suffer.

2135. Are you able to give the Committee any opinion founded upon your own experience as to the existence of intemperance in the working classes? Yes; the cases admitted to the Infirmary afford a large range of experience, and it is clear that the evil is very extensive.

2136. More so than in towns of similar extent and character in the Mother Country? I do not know that it is more so, if you take into consideration the amount people have to spend, combined with the want of previous education or training to manage that proportion of their wages. It is not that people are worse—it is not that they are immoral here—but they suddenly come into possession of large wages, having previously had but small, and they are without previous education, which, combined with the sudden transition from the comparative mental inactivity which is general among the lower classes of the rural population in Great Britain, incapacitates them from settling down quietly to their employment under circumstances so novel and exciting as those by which they are surrounded in Sydney.

2137. Is it not an orderly city? It is the most orderly city I have been in. I have never been in any city where more respect is paid to females, nor have I observed so much order in any other town either in England or on the continent.

2138. On general holidays, as well as on the Sabbath, the people are very orderly, are they not? I think that is the most strikingly pleasing feature here.

2139. *By Mr. Lyons:* You are aware that the City Council appointed a Health Officer at a salary of £100 a year? Yes.

2140. Do you think that officer can perform his duty satisfactorily at that salary? I fear not—I may say, positively not. He ought to be an officer in a very high position; he should possess a salary which would enable him to throw the whole force of his mind into the performance of the duties of his office. I believe it would be an economical arrangement for the country to give a suitable man such a salary as should enable him to do that.

2141. Do you not think it would be the means of removing many of those evils that are now complained of in the health officer's quarterly reports? Yes; but you could not expect a gentleman

A. Roberts,
Esq., M.R.C.S.

3 Feb., 1860.

A. Roberts, gentleman such as I have alluded to, to become a mere inspector of nuisances. He should
Esq., M.R.C.S. embrace the subject in its largest sense, and should have a staff under him to deal with the
detail.

3 Feb., 1860.

2142. At what salary do you think a gentleman could be found to perform the duties satisfactorily? £1,000 a-year. I am now speaking of a gentleman possessed of an education up to the present time, and capable of keeping himself always up to the existing progress of science, which you are aware is advancing every day. He should be well informed with respect to all the details of the registrar office, by which the laws of health and disease are being more and more elucidated month after month; he should also be medical adviser to the Government.

2143. Do you think that in the long run it would be a saving to the country? I do; a very large saving, even allowing a very considerable amount for a properly organised staff; not an extravagant, but a sufficient staff.

2144. You are aware that there are many buildings in the city that are now totally unfit for habitation? Yes.

2145. Do you not think it would be a good thing if legislation were to step in and either remove them or shut them up? I think it is absolutely necessary, unless you allow life to be continually sacrificed. Life is now being lost in consequence of the state of these places, and immorality is promoted by them; a very considerable loss is sustained by the community at large, and I therefore think it is the stringent duty of Government to interfere.

2146. *By the Chairman*: Have you ever turned your attention to the effect likely to be produced by the discharge of sewerage matter into the harbor? I have often thought of it as a professional matter. It is unpleasant I am aware; it is unhealthy I am aware; but in the present state of the deodorization question I am not prepared to say that it would be desirable at once to deal with it. I think it would be well to allow the experiments now going on at home to develop the best processes until they arrive at the point as to which is the most economical, and most practical method. The tide changes twice every day, and there are so many currents of air passing through Sydney as to lessen the danger from this cause; therefore, although it will be necessary to deal with it by and by, I am not prepared to say it is desirable to experimentalize.

2147. Do you think any effect can arise from the ventilation of the sewers by means of the obelisk in Hyde Park? I think not generally.

2148. Some complaints have been made of the Mint chimney, as emitting poisonous gases of a subtle and dangerous character? That is the case; but they are of so great specific gravity, that the only persons likely to be affected by them are the inmates of the Infirmary. The staff of the Infirmary have recommended either that some other means should be adopted to purify the gold, or that the chimney be removed or elevated.

2149. It is not desirable that there should be a poisonous fountain immediately by the Infirmary? We think not, and we have recommended that it should be removed.

2150. Do you think in a city of the character of this, where there is so large a floating population—so many persons newly arriving every month—sufficient medical and surgical assistance are provided by the Infirmary and Hospital? I think so; because there are many clubs, and there are also district surgeons to the Infirmary; and I think, perhaps, it is a dangerous thing to interfere with the independence of the lower orders in that respect. If you give them assistance you make them feel as paupers, and destroy their independence. It is found in the Mother Country that it is much better for them to form societies to which they can pay a trifle, so that they may feel they pay their own medical adviser, than to give them too much assistance.

2151. That would only apply to a settled population; my question had reference more particularly to strangers—to persons newly arrived here—can they always be sure of assistance? I think so.

2152. *By Mr. Hoskins*: Do you think the dwellings provided for the laboring classes in Sydney are equal to those provided for the same classes in London? I do; but I think they are only tolerated in London, where they are productive of an immense amount of disease and mortality; but I think that the same kind of buildings which are tolerated in London would be much more injurious in a climate like this.

2153. Has there not been a great improvement in the description of houses provided for the accommodation of the working classes of late years? There has; but I think there has been scarcely time for it to have become general in large towns. I may mention that of late years the mortality in model lodging-houses has been—I am afraid to say what, but something absurdly small.

2154. I presume you have resided in London? I have, and for two years taken sole charge of one-fifth of the poor of the city.

2155. Have you ever inspected the model lodging-houses provided for the working classes in London? No; I have seen plans of them.

2156. Are you aware whether they have been profitable speculations to the persons who have invested money in them? Some have been; some few, I believe, have not. As profitable speculations they have been improving year by year.

2157. However, you think they are a great improvement upon the ordinary dwellings of the working classes? Yes, there is a striking improvement in the rate of mortality.

2158. Have you, during your residence in Sydney, visited any of the boarding-houses provided for single men? Yes.

2159. What is your opinion of the accommodation provided for single men? In the few I have been in, there were extremely good rooms, crowded, no doubt, with a large number of beds, but the comfort was very great. I must, however, state that the houses to which I refer

refer were for a superior class of mechanics; I am not called much to visit the lowest class of houses. A. Roberts,
Esq., M.R.C.S.

2160. You complain of the style of building adopted in Sydney? Yes.

2161. And you would remedy that by legislation? Yes. I consider it to be a matter of simple duty on the part of the Legislature; people are now dying in consequence of the existing state of these buildings, and I am quite convinced if houses were built on simple principles by which ventilation could be secured, a certain number of cubic feet of air given to each inmate of an apartment, a proper supply of water laid on, and there were trap-drains provided with valves, as used in the model lodging-houses in England, the rate of mortality in Sydney would be considerably lessened among this class. 3 Feb., 1860.

2162. Are there not laws of that character in force in England—are there not either municipal or legislative regulations? Not to the extent I should like to see.

2163. *By Mr. Loder*: I gather from your evidence that you have an unfavorable opinion of the children of the lower classes now growing up in Sydney? Yes.

2164. Will they not bear comparison with the children of the same class in London, or the manufacturing towns of England? I have a low opinion of them also.

2165. Have you a lower opinion of the children of the City of Sydney than of those of the City of London, or of any other city in England? I believe the character of the minds of the children here is more shrewd and more quick, the mental power is also earlier developed, and therefore more susceptible of good or evil influences, and the consequence of that is that the circumstances of their external life have more effect upon them. I have not compared them with children of the Mother Country, but with what they might be under judicious legislation.

2166. You think that maternal management is not worse conducted here than in the Mother Country? Yes; I think there is more ignorant mismanagement here; for instance, we pay a professional visit, and give directions to a mother about her child; we tell her to take care of its diet, and to give it no more than so and so; next day, we call and find the unfortunate little brat, perhaps two years of age, with a huge piece of cucumber in its hand—the mother is grieved beyond expression if you tell her she is likely to kill her child by such want of prudence, but she is incapable of taking in the idea of the necessity of being strict and careful. I do not know whether it is within the power of the Committee to recommend that it should be necessary in all cases for heads of families to have to obtain personal characters of female servants before hiring them, and to afford them the same upon their leaving their service; but I think it most important, and that the character of the homes, and of the future well-being of the community, depends in a large measure upon the training of those who shall be the future mothers.

2167. Is it your confirmed opinion that heads of families are careless about the characters of their servants? I speak, I believe, cautiously when I say so. I have taken very much interest in the question, and, as far as I could, have assisted in the formation of an institution, one of the main objects of which would be to remedy the evil. I refer to the *Governesses' and Servants' Home*, an institution which has already done good.

2168. *By Mr. Hoskins*: I understood from you that there is great mortality among children here, far greater than in the Mother Country? Yes.

2169. Do you attribute that to the diet they consume? To the general mismanagement of life and diet.

2170. Do you not think the children of this country consume too much animal food at an early age? I think, generally, they have a misdirected diet.

2171. Do you think a simpler diet, such as that of children at home, would be better for them, and more conducive to their health? Yes. The children at home have their food more regularly, and have no means of getting the variety of diet they have here. It is not that their diet is better for infancy, but that the diet here is misgiven.

2172. Do you not think it mischievous to give young children much animal food? Yes.

2173. Do you not think they consume too much animal food here? I do not think you can say what they do consume; they consume this, that, and the other.

2174. *By the Chairman*: At what age may a child take animal food? As soon as he has the power of mastication, but it should be given him with judgment.

2175. Given in moderation you do not consider it injurious? No.

2176. *By Mr. Lyons*: You said you would like to see a law passed requiring employers to have a character with a female servant before engaging her? Yes.

2177. Something similar to the law that did exist with regard to male servants at the time there was a great deal of absconding? Yes; but the character should be personal whenever this is possible. A more unkind and injudicious course can scarcely be taken than to give written characters to servants; the character thus obtained is given, therefore, with a totally different object to that alluded to by you. It is intended to induce the servant to remain steadily in her place, and do her best at some self-sacrifice to perform her duty, and to teach her the value of character. I have a high opinion of the girls who have come out here, generally; they are tractable, cheerful, and desire to do that which is right, but I believe many have never been shewn how to do it. At home they lived in a totally different state of society, and when they come here—(I am now speaking of mistresses of the middle and lower orders, mistresses who have been servants themselves)—their employers are not considerate, and strive to get all they can out of their servants. They, knowing that they can easily get other situations, will not take a rebuke, but leave on the slightest occasion. They seldom get that thoughtful, kind advice, that servants frequently get at home from their employers, and the consequence is that they never become methodical or clean in their habits. At home a farm-house servant—a girl of seventeen—has done her work by the middle of the day, when she sits down to her needle clean and tidy.

A. Roberts, Esq., M.R.C.S. That girl, in consequence of the habits of system she has acquired, becomes a good mother, and brings up her children well. It is not only that she does not give them too much animal food; but she keeps them clean, puts them to bed at regular hours, &c.; and the consequence is that she rears a healthy family. I may, perhaps, be permitted to state to the Committee what was mentioned to me by Mrs. Roberts the other day:—A girl was sent up from the Governesses' and Servants' Home to Wide Bay, as a servant. On her arrival there, she was met by a young man who informed her that the person to whom she was engaged lived at a distance in the country. She had to travel with this young man one hundred miles through the bush, and upon her arrival was transferred to another person who kept a public-house. Here she was so ill-treated that she married the first person who proposed to her, and was mulcted £10 for travelling expenses, which sum her husband had to pay.

3 Feb., 1860.

2178. Generally speaking, in engagements of that kind, there is some agreement about travelling expenses? There is, I am informed; but in this case every agreement was broken through. The agreement was made, we will say, with Jones. On her arrival, he confesses that she was not engaged for him, that he does not want her; and hands her over to Smith, who keeps a low public-house, where the girl is unhappy and miserable. She cannot bear to stop in the situation; and for the sake of getting out of it, accepts the first man who offers; and he, in order to get her, pays the £10 Jones demands. Such cases as these must, in nine instances out of ten, cause a girl to go astray.

Mr. George Kemp called in and examined:—

Mr. G. Kemp.

3 Feb., 1860.

2179. *By the Chairman*: You are bailiff in the Domain, I believe? Yes.
 2180. How long have you held that situation? Six years.
 2181. Do your duties extend all over the Domain? To the Inner and Outer Domain, and to the Botanical Gardens.
 2182. What have you to do? To look to the protection of the plantations, the trees and flowers, to the impounding of cattle; and to see that no improper characters loiter about the Domain?
 2083. Can you state to the Committee whether the Domain is frequented by disorderly characters? Yes, they are very numerous, especially at night.
 2184. I believe the gates are thrown open at night? Part are closed, and part are open.
 2185. Anyone can go into the Domain at night? Yes, from Macquarie-street gate to Palmer-street gate.
 2186. How long has that been the case? About twelve months.
 2187. You state improper characters congregate in the Domain—will you state more definitely what you mean? I mean for the purpose of prostitution and debauchery—as far as I see that is the intention.
 2188. Can you state, of your own knowledge, that immoral acts of that kind are perpetrated in the Domain to any extent? I see indications of it, but being alone in the Domain it is difficult to get at the positive fact. My duties are very onerous during the day, but occasionally at night I go out at ten or twelve o'clock, to look after cattle, and I scarcely ever go but I see women and men lying about, and of course I speak to them.
 2189. Do any children come into the Domain at improper hours, or in a disorderly state? A great number of young children come into the Domain.
 2190. Children of tender years—of ten or twelve years of age? Yes.
 2191. Do they appear to be in a neglected state and disposed for immoral conduct? A great number have come in, especially since the new baths have been opened. I have known upwards of seventy prostitutes, young and old, to pass in one hour.
 2192. Did you count them? I had a person with me, more acquainted with these characters than I am, though I know a great many, and he counted them.
 2193. Did these persons merely pass to go to the baths? Their conduct is such that there is no mistaking them—their conduct is very improper, and it causes me a great deal of trouble to suppress it.
 2194. Do you mean their conduct and language in going to and from the bath? Both their language and the indecency of their behaviour—they pull each other about in an improper way, and their demeanour is indecent.
 2195. What I want to elicit is whether this conduct you are speaking of merely occurs during their passage to and from the baths, or that they indulge in this immoral conduct in the Domain,—whether they go for the purpose? Both; knowing these improper characters I stop them, and their excuse is that they are going to the baths.
 2196. Is it a frequent circumstance that young girls come into the Domain for an improper purpose? A great many young children do.
 2197. Who seem abandoned to immoral purposes? Yes.
 2198. Do young boys come too? A great number of young men; and they are lying about the Domain at all times. These things I have reported, from time to time, to the Director.
 2199. For what purpose were the gates left open—for the recreation of the inhabitants of the city? Merely as a trial, I think, to accommodate the people who were passing from this part of the town to Woolloomooloo; and it is a great accommodation to the public.
 2200. Can you state whether the congregating of persons of this kind has become so notorious as to deter people of more decent character from going into the Domain at night? I have not the slightest doubt it does deter people of more respectable character from going there. With respect to the band—people have complained of the large number of prostitutes attending in the Gardens when the band is playing.

2201.

2201. Have you been only six years in the Colony? Very little more. I was with Mr. M. ^{Mr. G. Kemp.} H. Marsh, at New England, for a short time.
2202. I suppose you have no very extensive acquaintance with the working classes of ³ Sydney, and cannot say whether there is a want of employment among them? No further than from having been often asked by them if I could tell where they could get employment, at the time hands were being taken on at Hyde Park. As it is my duty to see that there are no loiterers about the Domain, I have often asked people the reason they were lying about; and they have told me it was want of employment.
2203. Is it your opinion that there is any extensive want of employment felt by the laboring class at the present time? I have not had so many applications made to me, nor have I seen so many people lying about lately, as there were before and after the rush to Rockhampton.
2204. You have no means of judging, except from the experience gained in your own situation? No.
2205. *By Mr. Lyons:* Are the gates left open all night? All night.
2206. The new baths to which you refer are public baths? Yes.
2207. Is there not one public bath at which a charge is made, and one at which there is no charge? At the females' baths, both at Mr. Robinson's and at the public bath, a charge is made.
2208. What is the price? Four-pence.
2209. At what time in the day do these people go to bathe? It depends upon when it is high water.
2210. When they go to bathe, do they stop about in the afternoon or at night? They stop as long as they can.
2211. *By the Chairman:* But you say they come at night, for immoral purposes? Yes.
2212. Were there not one or two letters in the papers some time ago, complaining of the Domain gates being shut so early? I think so.
2213. *By Mr. Hoskins:* Are prostitutes precluded from walking in the Domain? If they misconduct themselves.
2214. If they do not misconduct themselves? I have no remedy then.
2215. You have said that you have seen seventy prostitutes pass into the Domain in one hour—what induced you to believe they were prostitutes? Their conduct, their speaking to men, and their general demeanour. I have a good opportunity of knowing these people, as I see them often—over and over again.
2216. *By Mr. Loder:* Are you prepared to say that these people whom you see in the Domain at night are there for an improper purpose? From the late hour of the night at which I see them lying about under the trees, I do not think they are likely to be there for a proper purpose.
2217. Are there seats in the Domain for the whole of the people who may be there? There are seats all about, and every seat is generally occupied by a couple. I have seen young men taking improper liberties with girls. I have seen men and women in the Domain lying about on the grass at twelve at night, or at one or two in the morning.
2218. *By Mr. Hoskins:* Is there not a thoroughfare through the Domain? Yes.
2219. Is it not possible that people may traverse the Domain at night on their way home? I do not judge those who are travelling, but those who are lying about on the grass and under the rocks.
2220. *By Mr. Pemell:* When you were in the habit of closing the gates at night, did you, after they were closed, find people lying about the Domain? Yes.
2221. How did they get in if the gates were locked? They used to get over the gates, and they used to come between the Gardens, round by Circular Quay. When I go round that way now I generally find five or six couples lying about.
2222. *By Mr. Hoskins:* What part of England do you come from? Hampshire.
2223. Do you think the conduct of females here is more profligate, or that there are more prostitutes here in proportion to the population than in London? No; I should say not. I never saw any community more orderly than the people are here.
2225. *By Mr. Pemell:* I suppose the police do not interfere much with people in the Domain? No, I have the whole duty to attend to now; they have been withdrawn about three years.

TUESDAY, 7 FEBRUARY, 1860.

Present:—

MR. HOSKINS,		DR. LANG,
MR. LODER,		MR. PLUNKETT.

HENRY PARKES, ESQ., IN THE CHAIR.

The Hon. Robert Fitzgerald, M.L.C., (by permission of the Legislative Council) examined:—

2226. *By the Chairman:* This Committee has been appointed to inquire into the condition of the working classes of Sydney, with reference to the alleged want of employment, which we have all heard of at different times; in the second place, with reference to the house accommodation of the working classes and the effects produced thereby upon the physical and moral well-being of the occupants; and in the third place, with reference to the existence of juvenile vagrancy in the public streets. It was thought that you, as a large employer, might be able to give us some valuable information, more especially upon the first head

The Hon.
R. Fitzgerald,
M.L.C.
7 Feb., 1860.

The Hon.
R. Fitzgerald,
M.L.C.

7 Feb., 1860.

head of our inquiry. I believe you have been acquainted with Sydney for many years? I have been more or less acquainted with the working people of Sydney all my life, but I have been more acquainted with the people in the interior than with those in Sydney.

2227. You have resided in Sydney some considerable time I believe? Yes, four years and better, but although I have been residing in Sydney I am not half my time in it.

2228. Have any applications been made to you for employment during your residence in Sydney? Yes, every day nearly, more or less. I can hardly ride from my house to George-street without applications being made to me.

2229. What impression have you formed respecting the character and capability of the persons who apply to you for employment? There is hardly a man who comes to me for employment that I do not have some conversation with. Some are unwilling to go up the country, and others are unwilling to take the wages.

2230. Do you engage many of them? I have engaged five-and-twenty at a time.

2231. Could you engage men at the present time, suppose applications were made to you to-day? Yes, I would engage a ploughman to-day—I have been looking for one.

2232. You would not engage a number of persons who have not been accustomed to agricultural or country work? No, they would be useless to me unless they would take to a pastoral life—become shepherds.

2233. Suppose they were willing to go shepherding, how many would you take? I could not give you an answer until I saw how I was circumstanced with my men, what men were leaving, for my shepherds have to give me a month's notice.

2234. How many persons have you in your employment altogether? I could not say without going through my lists.

2235. You can tell whether the number is nearer two hundred than twenty? Near two hundred one way and another.

2236. Do you engage at any time tradesmen such as carpenters? Yes; I have at this moment four at work.

2237. Do you find any difficulty in getting persons of that description? I cannot say I find much difficulty. I find good men are scarce; and when I get good men I try to keep them, by not letting them go for want of wages. I will tell the rates of wages I am giving. I am putting up some buildings at an establishment of mine at Dabee, in Ryalstone district. To one I give £2 4s. a-week and diet; to another I pay £75 a-year, and to another £70, and their diet; and they have a man to provide their food for them.

2238. For their individual labor? Yes.

2239. Have you had these men long? I have had one for ten years, off and on, who now gets £2 4s. per week. One of the others I have had for twelve, and the other for nine months.

2240. You would not, I suppose, be able to give employment to more at the same wages? No, I would not like to employ more; but upon this reason,—that if I employed another set of men, these would be dissatisfied, as they are looking forward to more work; and they would not do the work about which they are engaged so well, if they thought others were to be taken on in their place.

2241. Suppose you required more men? That is a supposition which is not likely; for in the bush generally we make buildings for the time being by splitting a little timber and stripping bark; but the building upon which these men are engaged is not of that primitive character, but one that will stand for perhaps a hundred years.

2242. Are you of opinion that there are a number of persons in Sydney who are suffering from want of employment, judging from what you see in your intercourse with the town? I do not think there is what I consider—from the way you put your question—"suffering." I do not think there is suffering. But I must answer that question by putting another; though it is not my province here to put questions. If I were to say to any merchant—I will only take so much money for my wool; I will not sell my wool, I will not sell my horses, I will not sell my fat cattle, unless I have so much money, I should have no right to complain of poverty because no one would buy them; and just in this way I think people are hoarding up their labor; they will not sell it at the price offered.

2243. Setting aside the causes —? I will illustrate what I say. I offered a man—at least Mr. Glue, who is my agent, offered a man—a ploughman, £32 a-year, only to-day; and he would not engage under £35. I wanted him, and I believe he is engaged; but no man can afford to pay £35 a-year to a ploughman, when I can go and buy the hay already trussed up at £2 10s. a ton, in Maitland, and I can buy it down below at £3.

2244. Setting aside the causes—it may arise from their indisposition to go into the country, from their imprudence, possibly from worse causes. Let the cause be what it may, is it not the fact that at present many are out of work? Certainly there are.

2245. They must be suffering? They may be suffering; but if they are it is their own fault; that is my opinion.

2246. I understand, then, that you believe there are a number of persons out of work in Sydney? I do not see many without work—there may be a good many. But I will tell you what I think,—that there is more in the expression of suffering than there is in the reality. Now there is scarcely a week that some of my teams do not come down from the country. Well, while they are unloading a man will come up to me—"Good morning." "Good morning." "I want a job up the country." "Well, what do you want?" "I want so and so." "Very well, I will give it you; but stay and help this man to load, and I will give you half-a-crown." After they have got the money away they go, and I see no more of them. Just such a circumstance as this took place a week ago. There were three men helping to load; they were engaged an hour or so, and I gave them eighteen-pence each, or something like that; and I engaged them to go up the country, to cut scrub and clear

clear the land for cultivation, at £30 a-year. At the same time I said—"I do not suppose " you will go." "Oh yes," they said, "we will be at such a place to-morrow." However, I never saw them from that day to this.

The Hon.
R. Fitzgerald,
M.L.C.

2247. Supposing there are a number of persons in Sydney wanting employment—do you think they may get it by going into the country? I think they might. Of course I see idle men going about the country—loungers who will go from sheep station to sheep station, pull up and get a night's lodging, till they get something at their own price.

7 Feb., 1860.

2248. It would appear from evidence given before this Committee, that country employers have a great objection to hire men with families of small children? I think there is a good deal of truth in that; but that is wearing out fast. We used to get Chinese to look after our sheep, but now we find men with families more suitable; and where a man has a wife who makes his hut comfortable, he does not like to leave. The woman does not like to move about. It has been my policy to have families; and at this minute I have eleven thousand sheep in the district of Ryalstone; and they are all kept by families, except two flocks.

2249. I think you have mentioned the name of Mr. Glue as acting as agent for you? Yes.

2250. He has given evidence before this Committee, and, if I remember rightly, he states that he has very few commissions from the country in which there are not conditions precluding persons with families of small children from employment? I should think you could not have better evidence than his; but that only goes to this extent, that there is an objection to engage men with children to go up the country from Sydney. There are many objections to this. A team starts with a man, his wife, and children, well, perhaps the woman is confined on the road, the man has to pull up with a team of five or six horses, and this, with the expense of the driver, will amount to 30s. a-day. The man cannot go away—his employer dare not let him go away and leave the woman on the road—under four or five days, and this is, of course, attended with great expense and loss. If you want to engage for loading, the first thing a carrier asks is, "any women—how many young ones?" Those are the first two questions, as they very much object to take women. But it does not follow, because Mr. Glue has that restriction put upon him in Sydney, that there is the same indisposition up the country to engage families. I confine my observations to sheep establishments.

2251. The objection is rather to the expense and possible delay and inconvenience of carrying women and children into the interior than to taking them into employment when they are there? Yes; it is to the expense and inconvenience. A man is, perhaps, driving his own team, and in the morning he wants to make a good start, but, if he has a lot of women and children with him, he cannot; it is, perhaps, a nine or ten o'clock job to get them ready, and then there is a good deal of snarling, bundling women's beds up, and so on. People do not like it, and they will not take them as back carriage if they can get anything else to do.

2252. Will you tell us the rates of wages you are giving generally on your property to shepherds, ploughmen, and farm laborers? A man, his wife, and boy get £60 a-year, and four rations, at one place; the man takes a flock, the boy takes a flock, and the woman cooks the victuals. It is at a place called the Junction, Port Macquarie, in the district of Ryalstone. I have others at fifty.

2253. With the same family? Yes; but this is a distinct case—the man with his family give no one any trouble.

2254. What is the average? I should say about £55.

2255. With a family of one or two children? Yes. I do not know about the average—there are some people not worth having at all; it is a nuisance to have them. The people I am speaking of are better worth £60 a-year than some of them are worth their rations.

2256. Generally, I suppose, when you get persons of that kind, you get rid of them as soon as possible? Yes, but you cannot always get rid of them. Your sheep may die of starvation, but without you have some specific charge to bring against a man it is of no use going to court. You may say to the man, "My sheep look bad." He will say, "They are all right, " there are the number of skins for you." Unless you have a specific charge to bring against a man, you cannot get rid of him before the court.

2257. You give about £55 a year for a man, his wife, and a child who can work? Yes, where the boy shepherds; where only the man shepherds and the wife cooks they get £40 a year.

2258. Nothing more? Yes, and two rations.

2259. What does this ration consist of on your stations? 10lbs. flour and as much beef as they can use. The quantity of beef is regulated by the number of dogs they keep; if a man is seen with more than two dogs, he does not get more than five or six pounds in excess of his ration. Some men would use a hundredweight of beef in a week. Some families use a quarter of beef a week, because the men rear collie dogs. They make a business of it; one of these dogs is worth a pound.

2260. *By Mr. Plunkett*: What rations are allowed the dogs? They are not allowed any, but the men get it; if they are good shepherds they are never refused a bit of beef.

2261. *By Dr. Lang*: I suppose these men make a trade of breeding dogs? Yes; particularly people from Scotland, they bring these collie dogs out with them, and take great care of their breeding. I have known as much as £16 to be given for one, and I know a man who has one now that he would not take £25 for; he will do anything but talk.

2262. *By Mr. Hoskins*: I suppose employers of labor consider these dogs indispensable? Yes, they cannot be done without; these dogs are worth rearing.

2263. *By the Chairman*: Is it not the system on many stations for extra rations to be sold where there are families; that is to say, the husband and his wife have perhaps a double ration,

The Hon.
R. Fitzgerald,
M.L.C.
7 Feb., 1860.

ration, and if they require more for their family, have they not to buy it from the store? That is always the case.

2264. It has been represented as a great grievance that in cases of this kind the prices charged are so far advanced upon Sydney prices, that the quantity they must necessarily buy to supply the wants of a family frequently consumes all the wages of the head of the family? I do not know any instances of that, but I know that in many cases the people do buy extra rations. The only extra rations I know them to buy are flour, tea, and sugar.

2265. Have you any objection to state to the Committee whether, in your own service, any of your servants have drawn so largely from your stores that at the end of the year they have had no wages to take from you? I most unhesitatingly say—never in my life. Whenever they have no wages to take it is when they have been closely watched, and have been found away from their sheep, and the sheep have been lost by neglect. Unless evidence can be given by any one, “I found the sheep so many times without a shepherd,” you cannot withhold the pay. The only way is to make a bargain with the man that if there are any sheep short he is to lose, otherwise it is of no use going to court. In fact, people with well regulated establishments do not go to court. The right way to do with people who do not do their work without growling and grumbling is to pay them their wages and let them go. Then when you meet a man it is “Good morning;” “Good morning; were you not in my “service?” “Yes.” “Did we have any row?” “No, you paid me my wages and we are “good friends.”

2266. Have any of your servants settled on the land, become farmers and stockholders? Several of them.

2267. Are they now doing well? Some of them are doing very well; some of them are going back again to shepherding.

2268. Do you think that is the result of your experience in the country——? I will go on and answer your question. This was the case, an old man and woman went on a farm depending upon their son and daughter to do the work, and they finding they could not make money left them, and the father and mother told me they wanted to go shepherding again. Young men when they go on the land in this way find they cannot make money and they take to cracking the whip, riding their horse, and turn stockkeepers or carters.

2269. Are we to infer from that, that it is exceedingly difficult for persons to succeed well by cultivating land? They cannot if they pay wages.

2270. In no part of the country? In no part of the country I know; and if I were offered £10,000 and were put on the best land in the country to cultivate it and to pay wages I would not take it. I would sooner take it and sit down at my case in Sydney, and I understand that business as well as any one in Sydney, or out of it; there is no part that I cannot do with my own hands or shew the boys how to do. I know no man in New South Wales—and I say it without the slightest hesitation—for it is based on figures—can make it pay if he has to pay wages. If, however, it is a small establishment and the man has a family who can work he may do well.

2271. You have heard the cry raised about people settling on the lands? Yes I have, and laughed at it—and have said nobody would talk such nonsense but theorists—no man who knew anything about it. I have answered the question myself in this way:—“I should be “a fool, an idiot, myself, with all the fine land I hold, not to cultivate it if it would pay me.” I am cultivating now because there is a mill near me.

2272. Do you think any alteration in the law affecting the management of the public lands would induce a larger number to settle upon them as cultivators? That is a question that would require a good deal of consideration to answer. If something like a duty were put upon wheat whether it would be a good thing for the entire country it is not for me to say. The thing answers itself; if I could make farming and agricultural pursuits pay me, or if other persons could, why do not we do it. We do not want telling what our own interest is. We do not want to have public meetings held to tell us how to get money.

2273. Do you not know that some people have cultivated land and made it pay? I do not know a man in New South Wales, with the exception of a farmer or two on the Hawkesbury after a long life, and been in the best district for agriculture, who has made a fortune by farming—but a great many have done better than they at other pursuits.

2274. They have done pretty well? Pretty well, but others have done better who have taken to the wilds for it.

2275. Are there not a good many persons in the Windsor district who have done pretty well, and who have reared their families respectably, who have followed agricultural pursuits? Not with farming. I can answer that question and explain it. The people in that district rent the land, and I myself draw considerable rents. I send to a man for my rent he says, “I have not sold my wheat but I have sent a load to a pastoral district, and when the team “returns I expect my money, and then I will pay——”

2276. There is a man at Pitt Town——? A man at Pitt Town—a thirty acre man—will get more money by his carriage than he will by his farm.

2277. Thomas Chaseling, is not he a cultivator? Yes, and he has teams on the road. I could buy all the corn in the district, if I had money enough, at from 2s. 3d. to 3s. a bushel.

2278. Do you cultivate much wheat land yourself? Yes.

2279. What average crops do you raise? I have known a thunder storm destroy it all.

2280. In good seasons? About twenty bushels is fair.

2281. Not more? I think not more, after the losses and shakings out. It might be sometimes twenty-five, and I have had as much as forty-five and fifty.

2282. Where are you cultivating now? At Cudgegong River; but though I am cultivating and am going to cultivate extensively, that is no criterion that it would pay another man who devoted himself to farming exclusively, because I am obliged to keep up in my establishment

a number of teams, and there is not a day in the year but I have about a hundred horses at work for me, and I have more than half the number in teams. When a man comes up with a team, and there is no load ready to go down the country for a week perhaps, I can set the man to plough; and as the man and horses must be kept, whether they work or not, I save their labor by turning to agriculture. I have one set of men now ploughing at St. Mary's, and another at Windsor, upon that system.

The Hon.
R. Fitzgerald,
M.L.C.
7 Feb., 1860.

2283. What crops are you raising? I am growing a little corn and potatoes.

2284. And hay? Yes, largely of hay, more than I have used.

2285. Have you tried sorghum? Yes.

2286. To any extent? Not much, but I have a very good crop now. My man tells me the horses will not eat it, and that he will have to buy some Lucerne hay; but I believe if they are deprived of their accustomed food, they will soon eat it and like it.

2287. What do you think of the working of the immigration system for the last few years—do you think it has tended to introduce persons who are not fitted for the ordinary pursuits of the Colony? If I were to speak about that I should say too much almost. The fact is, that many of these people do not know the right end of a tool, some of them hardly know which end to take of an axe. Plenty of the Irish immigrants do not know anything in the world but to use a long spade; they do not know how to use a short spade, but then they want very little teaching.

2288. *By Mr. Prunkett*: Does it not depend upon the part of Ireland they come from—in some counties they dig only with long spades? I sent eighteen men up the country last September, and out of the eighteen only two or three knew how to use a short spade.

2289. How long did it take to teach them? It took a man away from his work half a day.

2290. *By Mr. Hoskins*: Do you not think a man can do as good a day's work with a long-handled shovel as with a short one? But we do not use them, we have not the tools; our object is to get the work done regardless of the tools. I have known people engaged in Sydney as farm servants who did not know how to hold the plough at all, and some have engaged as shearers, and brought out a pile of characters, that my apprentice boys would beat. I have known people come out here as laborers from England and other parts who have never done a day's labor in their lives. I suppose that is an evil we cannot help, but if I were hiring a laborer I could tell at a glance whether a man, if he were twenty years old, had ever worked in his life or not.

2291. You have never been in England, I believe? No.

2292. Have you paid any attention at all to the house accommodation of the working classes in the City of Sydney? Yes. I think the houses are very miserable.

2293. In the older parts of the city? Some of the places are shocking. If you go down some of the places you are obliged to put your handkerchief to your nose, the smell is so very bad. There is a place close to us called Brougham-place, that is a filthy place, but there are many worse, especially those down by the slaughter-houses.

2294. You must be of opinion that a corrupt atmosphere of this kind is hurtful to the constitution of those who live in it? I should say so. I know it would not agree with me long.

2295. I believe you are proprietor of a good deal of property in Sydney? I am of some, but I took care not to lay out any of my money on any of these dens.

2296. With regard to the children, have you ever noticed that we have a good many children in a neglected state in Sydney? Yes, you can hardly go about Sydney without observing it. I do not know how many boys I have in my service, but I know I have ten, twelve, or fourteen whom I have picked up in the streets of Sydney.

2297. Vagrants? They have come to hold my horse for me in the first instance, and I have questioned them where they have been and so forth. I have one this very day.

2298. One that you have picked up to-day? Not to-day, but a few days ago. I found out that he was walking about the streets with his mother and did not know where to get a living. There were a number of boys formerly sleeping about the Market wharf; one of these boys I took about four years ago; he is now nineteen years of age, and is getting £40 a year; another is getting £50.

2299. Have all the boys you have taken in this way turned out well? Not all.

2300. Most of them? Several of them; but those who have been long knocking about Sydney have not turned out well. If I can get hold of a boy a fortnight or three weeks after he has left his parents he generally turns out well.

2301. Can you recollect what were the bad propensities of those who did not turn out well? Smoking; they go with the blacks continually to get a bit of tobacco—they do not wash their faces or their shirts—they have no habits of cleanliness.

2302. Have you ever, as the head of a family, reflected upon the probable difficulty there will be in finding employment for the youth of the Colony a few years hence? I have never thought there will be much difficulty about that—not for many years to come, unless it is the same kind of difficulty that I believe exists now, that they will not take the wages offered to them.

2303. Are there any trades to which they can be apprenticed? There are plenty of boys learning trades.

2304. Not to any extent? I do not know; I have never been to inquire about that, but I cannot go to any establishment in Sydney without seeing apprentices. I went to Mr. Moriarty's this morning, and I saw two. I take what I may call apprentices; I teach one to crack a whip and drive fat cattle, another to drive a team, another to shepherd. At the present moment I have got three boys from one family, and they send down their parents £30 a-year.

2305. They are good boys? They will all do that; I have never known an instance where it has been hinted to them, when they have had wages coming to them, that they would not give the whole to their parents.

2306.

The Hon.
R. Fitzgerald,
M.L.C.

7 Feb., 1860.

2306. You could, I suppose, always dispose of two or three boys? I could to a certain extent, for I have a number of large concerns in different parts of the country.

2307. *By Mr. Hoskins*: Do you think there will be sufficient employment of labor in the interior, looking to the natural increase, to absorb the rising generation, if no better occupation be found than driving cattle and tending sheep? I think in time the boys will be stockholders and proprietors themselves, as they are now becoming.

2308. Is not the opportunity of getting runs in the country limited? In certain parts.

2309. In New South Wales proper? In certain parts it is very limited.

2310. Can you tell me any part where runs are to be had? Yes, I can.

2311. Where? I do not think I am bound to tell you. I am going to look after them myself, and perhaps if I were to tell you you would go and get them. I know whole tracts of country, and can ride to them in sixteen days.

2312. You will acknowledge that they are limited in extent? Yes, and particularly so to people who will not strike out and work, but people who will work will find runs.

2313. From the large increase of population very few will be able to get runs? They can turn to agriculture.

2314. You say agriculture will not pay? Not now, but it will not always remain at that—Government could make it pay, and I think I could make it pay if I had the ruling of it. If there were a restrictive duty—it is only that it wants to make it pay—all that is needed is a price. People who are now cultivating in the bush and selling their produce to the squatters, make it pay.

2315. What do you call a paying price? That is regulated by the amount of wages you have to pay.

2316. At the present time? No man can live under about 9s. a bushel for wheat; he may eke out an existence; and no man can live under 5s. for corn.

2317. You have never lived in any other country? No.

2318. You are not aware that in California they put wheat on board ship at 5s. a bushel, and pay men £6 a month? That may be answered this way—they may get three times the crop we get here.

2319. Are you aware that the average crop there is not over fifteen bushels an acre? No, I am not aware.

2320. I presume you always reap your wheat with sickles? Yes.

2321. You have never adopted any of the modern improvements? Yes, some have been reaping with machinery; a friend of mine at Mudgee has commenced this year, and I have also begun to collect hay with a horse rake, and I know some others, who are in treaty for machines to reap.

2322. Do you not think something less than 5s. a bushel would pay if this machinery were brought to bear? The reason these things are not used is that the machinery is liable to get out of order, and cannot be put right again in the country. Another reason is that employers do not like to use them, particularly if they have many stacks, because there is a down upon them. I know a friend of mine, at Mudgee, when he introduced it was advised to lock it up at night.

2323. You think the people of this country are opposed to all improvements? No, I do not think the people are.

2324. I infer that from what you have said? That is a very improper inference, it is not a fair inference—I speak of the men who reap, I do not speak of the *people* of New South Wales.

2325. The working population? I call them the people who reap the wheat, they are not the hardest working people in the fields; the hardest working man is he who rides about to see that the people do their work, for his work is never done.

2326. These people who reap live by their manual labour, you acknowledge that? Yes.

2327. And they are opposed to all improvements? I do not say they are opposed to all improvements, this is what I say that they are opposed to everything that has a tendency to reduce their wages.

2328. Do you not consider that if there were an increased demand for machinery there would be a larger breadth of land under cultivation? No doubt whatever.

2329. Then by cheapening the cost of production would it not pay? Yes, if you can only get the people to do it. If I had to take up a machine to-morrow, I should feel my way by whispering who would be the man to work it; for there would be a down upon the man who worked it for a time. That will not last, particularly when they found that I should require a greater amount of work to be done; but you cannot by words make them understand that. They think anything you do to reduce the amount of labor is an infringement upon their rights.

2330. How do you account for that, do you think it arises from the ignorance of the masses? It arises from a belief that their wages are going to be reduced. Mr. Ainsworth will tell you that he did not buy machinery on account of that difficulty.

2331. I suppose you will acknowledge that the property is protected in the interior? How?

2332. By the police? That is another question; I do not think that is pertinent to the matter.

2333. You say you are afraid the machinery may be destroyed? Where will you go to get the police?

2334. Is there no protection at Mudgee? Yes, but I am speaking of thirty-five miles from Mudgee, and there are three constables there, while in an establishment like mine there are ten men for every finger on a constable's hand, and to suppose they could oppose these people by force is quite ridiculous.

2335. Have you not found among the working people here a respect for law and order? I have

have no fault to find with them that way, take them generally. I manage my establishment without going to court with my men.

2336. You say you have three carpenters working for you, one at £2 a week, another at £75 a year, and a third at £70, with rations, and a man to cook for them—are they what we term rough carpenters? No; one is a first-rate tradesman—the man to whom I give £2 4s. a week, the other is a ship carpenter, and the man to whom I give the lowest wages is a rough carpenter.

2337. In what part of the country are these men employed? On my farm at Dabee.

2338. You have a number of persons employed hut-building, have you not—what we call rough carpenters in the bush? Not one; any man can do that.

2339. Still you require rough carpenters to put up your woolsheds? My woolshed is a stone building—better work than this house, chisel and hammer dressed. We have done away with wooden woolsheds.

2340. You have said that you wanted to engage a ploughman, and that Mr. Glue was in treaty with one—you wanted to engage him for £32, but he asked £35; do you think £35 too much? Rather, at present prices for produce.

2341. Where was he to be employed? Within 35 miles of Sydney, at Windsor.

2342. You expect to get 8s. or 9s. a bushel for wheat? I do not expect to get anything; I shall use it.

2343. How much do you suppose this man will have at the end of the year to supply himself with necessary clothing? That depends upon his taste—what clothes he will wear. If he chooses to spend all his money for the quarter he can do it on a single suit.

2344. You think it too much? It is too much, according to the present prices.

2345. What do you think is a fair remuneration for labor? The week before last I got two men at £30 a year; they were engaged to split timber for boiling down—to split billet wood. I do not know where they were got from, but they appeared to be men who were hard up, who had come from up the country, and who seemed to know their work.

2346. You consider that a sufficient remuneration for men engaged in splitting timber, toiling under an Australian sun? Not for splitting; that man requires to learn, but for such splitting as this. A man could as easily be taught to split timber for this purpose as one of these men we have spoken of could be taught to work with a short spade.

2347. Do you think there is any harder labor done in the country than splitting? That depends a good deal upon what the timber is. Some timber is easily split, and when a man splits timber for this purpose he does not care whether it is dry timber or not, and there is plenty of timber on the ground; it is not hard work. A man can make hard work of it, but when there are two or three working together, and no one to watch them, they do not overwork themselves.

2348. You think it is necessary that the working classes should be constantly watched—that they should be under a rigid supervision? I am perfectly certain that, where there are a number of men at work, it will pay to keep a man to overlook them.

2349. You must have a bad opinion of the working classes who come to the Colony? Not of all of them.

2350. Still you find that you can employ the persons who are sent out, and you get along with them? We are obliged to employ them.

2351. Are there no others to be employed? I frequently prefer to employ new chums.

2352. You said they were not adapted to the Colony? I said nothing of the kind. I spoke of them in certain cases, not as a body. I said that a great many people who come out pretend to understand various businesses appertaining to farming pursuits, and know nothing of them; but there are many useful people, and I have put a man fresh from the ship at once to the plough, who has shewn that he understood his business; and I do not see why he should not, if he had been following it before. In England they seem to think anything will do here—that we know nothing about farming, and this is the case not only with working people, but with others.

2353. According to your opinion, as you have stated it, the people engaged in agricultural pursuits in this country are much behind those engaged in similar pursuits in other countries? They are behind them, not from want of knowledge but from want of means. For instance, you frequently see a field, as I call it, scraped over—indeed you hardly see a field ploughed twice over; it is just turned up and sown.

2354. Did you ever see a field sown twice in the neighborhood of Mudgee? Sown twice?

2355. Yes, or ploughed twice? I do not know that I have; I do not often go to Mudgee. I know I have sown paddocks myself, which have been ploughed only once, and have had good crops.

2356. You say you believe there are a good many people out of employment in Sydney, and you think they might get employment in the interior? I think many might get employment in Sydney, if they would only take the wages offered them.

2357. What do you think sufficient remuneration in Sydney for unskilled labor? The way I have employed people has been to give them their breakfast and dinner, and about 4s. a day. I have offered some of them 4s. a day and they have laughed at me. But that has been for only a day or two's job in Sydney, weeding.

2358. You think, in fact, that there is only precarious employment to be had in Sydney? I think employment is generally precarious in Sydney. I know a good many who take contracts from Government and employ these men; but that work is precarious.

2359. You think these men might obtain employment in the interior? I think all those who are willing to get work will; but there are many who will only take work at their own figure, and they go from station to station to see if they can get their own price.

2360. Do you not think a laborer has an undoubted right to sell his labor to the best bidder?

The Hon.
R. Fitzgerald,
M.L.C.
7 Feb., 1860.

Quite so; and if they had sagacity they would never be without work, but would sell it for what it would fetch, and not hang it out. I do not think a man has a right to say, "Here I am, hale and hearty; I have the labor of my two arms for sale, but I will not sell it, and I am starving," any more than I have to say, "I have plenty of produce, but I will not sell it, and I have no money."

2361. Do you think you would be censured for holding back your produce if you thought you would get a larger profit by so doing? If I did I should have very little cause to complain that I was without a shilling. Any man might say, "Mr. Fitzgerald has no need to be without money when he can obtain it by selling his produce."

2362. *By the Chairman*: Your analogy, which seems to be a favorite one with you, is not quite a correct one, because it seems to me that the laborer who holds back his labor loses it—suppose, for instance, he holds back a fortnight, he loses a fortnight's labor, which he can never recover—but your produce is left to you? If the analogy is incorrect it is from want of sagacity on the part of the working people. If a man has labor to dispose of he ought at once to take advantage of it, and not walk about losing it, or just doing enough in loading a dray to get a glass.

2363. *By Mr. Hoskins*: You say you are as much in the country as in town? More, a good deal.

2364. Have you not seen on the main road from the seaboard, from Sydney—I believe you have stations on Liverpool Plains? Yes, but I go up round Mudgee way.

2365. Have you not seen on the main road, families—men, women, and children—travelling up the country carrying loads on their backs? I have never seen children carrying anything of a load; I believe any team would put a woman and her young ones on it; but I have seen a man and woman travelling carrying their swags.

2366. You say that men go about from station to station—is it not the fact that employers have refused to supply these people with food? I have never had an opportunity of judging of that; but I know there are lots of people travelling through the bush, and all they want in coming to a station is to buy a piece of beef. I dare say that is the case if they are travelling where people have no means of getting rations up, and want to buy a bit of tea and sugar; but they cannot go far without coming to a store. If I went from here to the Maranoa District, and had a crown in my pocket, I could buy anything.

2367. Have you not known persons in the interior of this country, proprietors of stations, who have refused food to travellers, and who, when these have wanted food, have directed them to their servants' huts? I never heard or saw an instance of that kind. I never saw a man coming up to a station who would go the master's place, I always saw him face to the huts.

2368. Have you not known servants who have had a large portion of their wages mulcted in consequence of their having had to buy extra rations to supply persons who have called at the station wanting food? I have heard of such cases, but I have no personal knowledge of them. I dare say it may have been the case, particularly since the discovery of the gold diggings.

2369. You say you prefer having families? Yes, I do, on sheep stations.

2370. I suppose you are aware that there is a general disinclination to employ families? There used to be, but I believe that is wearing out. They used to have Chinamen, but they wore out of that.

2371. *By the Chairman*: Have you any Chinamen now? Yes. I have some that I would not part with for anything; they are some of the best servants I have had.

2372. *By Mr. Hoskins*: Have you not heard people object to families because more rations would be consumed by them? I can hardly say that I have heard it, but I believe people have parted with families from that cause, but that has been where the rations have been limited, and the people have been what you call small settlers, who could nearly manage the whole of their sheep themselves, and had no teams to bring loads.

2373. I believe you have stations at Liverpool Plains? Yes, at least I have one.

2374. You say you give your servants 10 lbs. flour? Yes.

2375. Do you not happen to know that the larger number of settlers give only 8 lbs. on Liverpool Plains? I believe, with regard to Liverpool Plains, that may be an exception. My establishment is a stock station.

2376. Have you not heard that the much larger number of the employers there give 8 lbs. than 10 lbs.? I never asked; wherever I go they seem to have plenty of food, and no man can eat more than 8 lbs. of flour if he has plenty of beef. I have heard that a good many give 8 lbs. flour, but they give as much beef as they can eat.

2377. You say you have a man, his wife, and a boy, to whom you give four rations? Yes. The name is Cassidy.

2378. Is it usual to give more rations than the number of servants employed? No; but this man gives no trouble, he is about twenty miles from the head station, and he is not seen above once in six months. He is a very good man, and wants nobody to look after him; he never loses a sheep, and gives no trouble. If he wants a pair of boots he sends over his boy upon the pony, and we have no further trouble with him.

2379. You say you have some families at £50, but the average is £55? Yes.

2380. Must a family be arbitrarily limited to three persons—you will not supply more than three persons except in this unusual case? If I find a man suitable I will give him more. I give a man and his wife, on the Liverpool Plains, £60 a year; he fattens me a thousand sheep a year, and brings me my sheep laden with wool every year.

2381. If a family exceeds three, you engage the labor of three, but never give more than three rations? No; if you engage three persons you generally give two rations—for a man, woman, and child two rations is about the usual thing.

2382.

2382. Then the number of the family must be arbitrarily limited? No, it is not arbitrarily limited, because the man makes the bargain. I can only recollect one instance where I heard a man say that he had spent all his money, and that was at an establishment close to mine, on the Goulburn. He said he never had a shilling to draw, that all his money went to the store.

The Hon.
B. Fitzgerald,
M.L.C.

7 Feb., 1860.

2383. Still you have an objection to a large family yourself? No, I have not an objection.

2384. *By the Chairman:* Would you part with a good servant on account of his large family? No, on my oath I would not; and not only so, but I would not part with a man for £5 a year more if he were worth it.

2385. If a man had served you well, would you part with him even if his family increased to any extent? No, and I never heard of such a thing; I would not do it upon any consideration. Besides, as a man's family increased, some of the children would be growing up and would get employed on a large concern.

2386. What you meant I suppose was this, that if two persons of equal value wanted employment, one having a family of small children, and one with none, you would prefer the one with none as a matter of economy? It depends upon the usefulness of the man; if he makes himself useful not a word is said.

2387. *By Mr. Hoskins:* You say some people are worth nothing, and that you cannot get rid of them, has it not come to your knowledge that agreements have been arbitrarily cancelled by Benches of Magistrates in the interior? I never go to court with my people—I will tell you why, I would sooner cut it short, pay them, and have done with them. I think the last alteration in the Masters' and Servants' Act has settled that altogether.

2388. *By Mr. Loder:* Do you not know that Benches of Magistrates cannot cancel agreements without both parties are agreeable? I am aware that they often construe the law in a very ridiculous way.

2389. But are you not aware that they cannot cancel an agreement without the consent of both parties? I believe that is the law.

2390. *By Mr. Hoskins:* I am not asking what they legally can do, but what they actually do? They do do, in remote places, some funny things—very funny things.

2391. Some very unjust and tyrannical things? I dare say they do—some very funny things.

2392. I know you frequently go to your station at Liverpool Plains? Yes.

2393. Has it not come to your knowledge that people have been shepherding two flocks there at £40 a year? No, I never heard of it.

2394. You say you know people who cannot live upon the land, and who have gone shepherding? I have known one or two instances. I do not say they cannot live upon the land; but that when a man's children have left him, and he has not their labor to depend upon, he is glad to go back to shepherding.

2395. You say people cannot live upon farming—the people to whom you referred live upon the Hawkesbury, and are tenant farmers? They live very well, but they do not make money; and there is no mistake about that being fine land.

2396. Do you not suppose, if opportunities were offered to people to purchase the land, and they were to cultivate their own land, they would then make money? I can hardly tell where a person can buy land, fit for cultivation, to make money; for it is almost free selection everywhere now. If the owner of a station has a bit of land fit for cultivation he will let it to some one to grow produce.

2397. Is not that a violation of the squatting laws? They do not mind that, I suppose.

2398. Are you not aware that there is land on the banks of the Namoi where wheat could be grown? Yes, there is land there as fine as any on the Hawkesbury.

2399. Do you not think, if people could get some of that land it would pay them to cultivate? They must have some money. I lost my horse there; and travelling along the banks, I saw some land there as fine as any on the Hawkesbury; but there are trees there seven feet through. If the land could be cleared, there is no mistake about its being fit for cultivation.

2400. It is not very thickly timbered? No. That land will be sold yet; and whenever it is I will have a slice of it. It would be just the thing for me, as it would meet my establishments both ways.

2401. Do you not think farming would pay there? I am certain it would, if people could get wages down to anything near the mark.

2402. So that there are parts of the country where it will pay to farm if land is to be got at a reasonable rate? That part of the country would grow as much as ours.

2403. *By the Chairman:* Is land worth 5s. an acre there? Yes, it is well worth that; but if it were put up at 5s. an acre it would find its level, as it used to do. I believe it would pay to farm there, from the fact that carriage is so high there. I would illustrate this point. When I went to some of these meetings about the land, and heard the people talking, I said I would give any man a pound a bushel if he would give me five hundred bushels of wheat up the country. I said I would enter into a bargain with any six men to give the highest market price in Sydney, for all they could grow, and would give them security that I would do it.

2404. *By Mr. Hoskins:* Do you consider that the interest of the people has been considered in the surveying of the land in this country, or in the way the land has been put up for sale? This is the way I would answer that question:—If a man is put into the bush to measure the whole of a locality, he first measures the whole of the good land, and when he has done that, in order to keep himself employed, he will measure all the scrub and rubbish. I saw a man, whom Mr. Bowman and myself recommended to the Surveyor General, engaged measuring land of no value, and I said to him, "What are you doing?" He said,

"I

The Hon. R. Fitzgerald, M.L.C. "I have measured all the good land, and there is not a word about my going away—am I to "starve?" He measured land that was useless, and the profit got out of the good land went to pay for measuring the bad.

7 Feb., 1860. 2405. Is it not a fact that has come under your observation, that persons who have purchased land under pre-emptive right have obtained land of a better description than the land which has been sold under public auction? I never bought any myself, but they have a right, I believe, to buy on the squatting stations to the extent of three hundred acres.

2406. Have you not known persons to purchase more than three thousand? I have heard of somebody buying some, but I do not know it. It is evident that any one who can take the land where the water is will have better land than much that is laid out as small farms.

2407. Is it not your belief, generally, that the land put up to auction is inferior in description to that purchased under pre-emptive right? No; I could not go to that extent, because many people who have exercised their pre-emptive right have bought a sandy ridge, because of their buildings.

2408. Did you ever traverse the banks of the Peel River? Yes, but a good while ago.

2409. You say that, although farming does not pay, you are about to have a large breadth of land under cultivation in the neighborhood of Mudjee? Yes.

2410. You have to pay wages? Yes; but I have explained the facilities I have for carrying on agricultural operations.

2411. Do you intend to use the produce of this land on your own stations, or to sell it? To use it—it would not do for me to sell it.

2412. You do not cultivate for profit? It is a profit for me, because I should have to keep up my establishment whether I cultivated or not.

Mr. Malcolm Macintyre Campbell called in and examined:—

Mr. M. M. Campbell. 2413. *By the Chairman*: You are a tweed manufacturer, I believe? Yes.
2414. You have the mills at the bottom of Bathurst-street, formerly belonging to Mr. Thomas Barker? Yes.

7 Feb., 1860. 2415. How long have you been connected with this manufacturing business in this Colony? About four years.

2416. How long have you been in the Colony? Six years.

2417. Were you connected with the tweed manufacture in the Mother Country? Not at all.

2418. During the time you have been at the mills in Sussex-street, what number of men have been employed by you? I have made an average for the last year—men, boys, and females, about 56.

2419. Do you know whether more were employed by you during the three previous years? The first year, I think, rather more; but not exceeding 60 at any time.

2420. Can you tell us how many manufactories, of a similar character to yours, are now in full operation in the Colony? Only three; and one of them I must state is scarcely in full operation; it is just commencing, at Parramatta.

2421. Where are they situated? At Penrith, Parramatta, and Sydney—by-the-by there is another at Hartley.

2422. What are the names of the proprietors? Messrs. J. and R. Rayner, Penrith; Messrs. Donaldson, Parramatta; and Mr. Houston, at Hartley.

2423. Are you quite sure there is no other? There is another manufacturer; but I do not know whether he is at work now.

2424. Beyond Bathurst? I think not; somewhere by Emu Plains—Mr. French; he had at one time about two weavers.

2425. Can you state the number of persons employed at Rayner's? There cannot be more than six or seven.

2426. At Houston's? Four or five.

2427. How many are the Messrs. Donaldson likely to employ at Parramatta? I should think they will employ between 50 and 60—about the same as myself.

2428. Can you state from your own knowledge, or upon trustworthy information from other sources, how many tweed manufactories were in full operation a few, say twelve, years ago? Six, I believe.

2429. Have you any difficulty in getting persons to work in your place? Not at all. I have applications—not alone from all parts of this Colony, but from Victoria—from the diggings.

2430. Are there more weavers than there is employment for? A great many more.

2431. You suppose then that Messrs. Donaldson will have no difficulty in filling their factory? They may have a little, for there are more hand-loom than power-loom weavers; and I understand they are going to commence with power-looms.

2432. What wages do you give your men? I have a statement here, which, with the permission of the Committee, I will read. I have 31 men—weavers, dyers, spinners, and finishers—from 25 to 60 years of age, averaging 40. Of these 24 are married, having families, including themselves and wives, of an aggregate of 90, living in 67 apartments; of the 24, 3 are freehold, and 21 pay an average weekly rent of 8s. each; of the 31, 7 are unmarried, and live in lodgings, paying an average of 18s. per week. The wages earned by the 31 averages £62 13s. 6d. weekly, or £2 1s. for each man. 16 boys, piecers, feeders, &c., from 11 to 17 years of age, averaging 13 years, earning an average of £7 4s. 6d. per week, or 9s. each. 9 females, pirlers, piecers, reelers, and winders from 14 to 60 years of age, average 30 years, earning £5 15s., or 12s. 6d. per week. The average time they all work is 56 hours

per

per week, or $9\frac{1}{2}$ hours per day. But they do not work full time; some of them work piece-work, and do not get enough to do.

2433. Do these people lodge upon your premises? No; I merely state that as a matter of information. I take a lively interest in the men employed by myself, and I had that put down in this memorandum merely for my own guidance.

Mr. M. M.
Campbell.

7 Feb., 1860.

2434. Can you give us any idea of the consumption of tweed you manufacture now as compared with what it was a few years ago? I should say it is about one-sixth of the consumption—scarcely that I should think.

2435. Where does the manufacture go chiefly; is it used in our own Colony, or is it exported? A large quantity is consumed in this Colony; some in New Zealand; and since October last, there has been a small quantity consumed in Victoria. I exported about £2,000 worth to Victoria, principally for the Volunteers there.

2436. What color was that? Some grey and some blue. Grey with green facings is the uniform for the rifle corps; blue for the naval brigade, and blue for the artillery.

2437. Has much improvement taken place in the manufacture of tweeds during the last few years? I do not think there has. I think the appearance of the article is much better, but the quality of the greatest portion a little worse. I do not think, upon the whole, it will wear so well.

1438. Can you give the Committee any information as to whether there is a want of employment seriously felt by the working classes of Sydney generally? From my own personal knowledge I can scarcely give information, but from what I hear from others I can.

2439. From information that you consider good? I can only derive it from men employed by myself, who have it from their own friends; for none apply to me but those who are acquainted with my business.

2440. What is your impression as a master manufacturer? My impression is, that the working classes are in a good condition—certainly a good number idle, but I think it is because they are not so well inclined to work as others, and that they stand out in some cases, though not in all, for a greater amount of wages than they should. Another thing is, that a great many may not be steady people, and not willing to work.

2441. Does it come within your experience that there is a reluctance on the part of people who cannot get work in Sydney to go into the country? It has in one or two, but not in many instances.

2442. Do you think the rising youth of this Colony are likely to find proper avenues for employment under our present social economy? That is a difficult question. I do not think, generally, they will find really useful and profitable employment.

2443. Are you the father of a family yourself? I am married, but have no family.

2444. Is it not a difficult thing for a parent with four or five boys, if he is anxious to start them well in the world, to know what to do with them? It is difficult.

2445. Are you not aware that the professions are over-crowded in Sydney? To all appearance professional men have full employment.

2446. There are not many manufacturers? No; they cannot flourish under the present system, or at any rate till wages become lower. We might have things better if we had first-class machinery here, and if the interest of money were lower, even at the present rate of wages.

2447. Has the condition of the house accommodation of the working classes of Sydney attracted your notice? It has, to a certain extent. I do not think they have been kept so well as they might have been, or as they ought to have been; but, generally, that arises from the intemperance of the people themselves.

2448. Apart from the conduct of the inmates, have the houses the means of ventilation or of drainage necessary for the preservation of health in the neighborhood of your manufactory? Not in that locality.

2449. Have you been able to form any opinion whether the state of the atmosphere in the older parts of the city, where working people dwell, has a bad effect upon the health and lives of children, causing great mortality? That has not come under my notice. I find in the lower parts of the city that the children appear as healthy as others.

2450. You have not paid much attention to that subject? Not much in proportion to that which should be paid to the subject, or, perhaps, is paid to it by those whose immediate duty it is to do so.

2451. Are there many children about the streets in the part you frequent in a state of apparent neglect? A large number.

2452. Have you many applications made to you by parents to take their children as apprentices? No; they never think of apprenticing their children to a manufacturing business, for they look upon it as not likely to flourish.

2453. Have you many applications to you to employ boys? Perhaps, in the course of twelve months I may have ten or twelve applications, but there is no difficulty in getting plenty of boys if you look after them.

2454. Do you employ laboring men who are not skilled hands? No; I have employed some who have not been in a factory before, but in a short time they have become acquainted with the business of the particular department.

2455. Have you many applications from persons who have not been previously accustomed to the business, and who are desirous of learning it? Not any. I have had applications from laboring men, but not within the last two months. In the latter end of October and the month of November there were a great many applications by laborers, to see if I could give them any employment whatever, but since that time I have not had any.

2456. *By Mr. Hoskins*: Do you think the machinery employed here in tweed manufacturing is defective? Yes.

2457. Were you engaged in that trade at home? No.

2458.

- Mr. M. M. Campbell. 2458. Do you think if as much capital were invested in machinery here as at home we could successfully compete with the home manufacturer? I think so, so far as the consumption of cloth in this Colony (and, perhaps, the adjacent ones) is concerned, but we could not compete with them in the British market.
- 7 Feb., 1860. 2459. Do you think the tweeds manufactured here are superior to those manufactured at home? Much superior, so far as qualities of endurance are concerned, but not in appearance.

Mr. Benjamin Rhodes called in and examined:—

- Mr. B. Rhodes. 2460. *By the Chairman:* You are a master builder, I believe? Yes.
- 7 Feb., 1860. 2461. And have been living in Sydney some years? Yes. I have been four years in Sydney.
2462. This Committee has been appointed to inquire into the condition of the working classes in this City, with reference to the alleged want of employment; the character of the house accommodation and its effect, in a sanitary point of view, upon the inmates; and the existence of juvenile vagrancy in the public streets; can you state to the Committee whether it is within your own knowledge that there are at the present time persons who, though of sober habits, and anxious to obtain employment, are unable to get such employment? Yes. I have had occasion twice during this last month to advertise in the Sydney papers for laborers.
2463. Unskilled laborers? Yes; the first I wanted was a man to act as a carter, and to make himself generally useful. This was just after Christmas, and I had something over thirty applicants by seven o'clock in the morning—all single men. Since that I have had to advertise for two laborers for digging up ground for gardens, and I had a larger number of applicants. I did not count them, but when I returned to my house at half-past seven, the yard was full. I think there must have been considerably over forty. All the time I have been in Sydney there has been the same large supply of labor in all the branches appertaining to the building trade.
2464. In these cases what wages did you give the carter and the other men, when you engaged them? I gave the carter 12s. a week and his board. The laborers said I could give them what I pleased, and I gave them 7s. a day.
2465. Do you suppose that you could have engaged them at lower wages? Yes. I have men now working for me who would take anything I offered them.
2466. It has been stated before this Committee by a witness to-day, among others, that one great cause of the want of employment is, that men will not take reasonable wages? I have not found it so.
2467. That is not borne out by your experience? No. I have had masons, carpenters, blaoksmiths, shoemakers, all kinds of trades offer to do anything I wanted them to do at any wages I pleased.
2468. Are the various branches of the building trade in a distressed state for want of employment? Yes; and the employers are as badly off as the men.
2469. I am now speaking of the trades connected with building—masons for instance? Yes, a great many of them are unemployed.
2470. Can you form any opinion of the proportion unemployed in Sydney? I think about two-thirds of them are unemployed in Sydney.
2471. Do you mean that if there are 600 in Sydney there are 400 out of employment? Yes; there are 450 in Sydney, and about 300 are out of employment; and there is the same proportion among carpenters.
2472. It is right I should tell you that this proportion is higher than is stated by other witnesses? I believe what I have said to be correct.
2473. With regard to other trades, which may not be supposed to come so much under your observation, such as shoemakers, tailors, smiths, and so on, do you think they are well employed? No, they are not; the tailors are almost wholly employed in altering imported clothes.
2474. You think there are at the present time a large number of persons in Sydney who are not properly employed? Yes.
2475. Do you not think it a very unnatural state of things for an able-bodied man, willing to work, to be unemployed in a new country, where labor is so much wanted? Yes; I find there is much more unemployed labor here than in Canada or the United States, where I spent sixteen years of my life—four years in Canada, and twelve in the States. I found the working classes here are in a much worse state than in the places I have referred to, and they are in a worse condition now than they were four years ago.
2476. What remedy would you propose for the existing state of things? I have not been much in the interior, I have not been further than Parramatta, so that I cannot judge of the country, but I think, if the land were open, those who went upon it would be able to support themselves. It was so in America and in Canada, where the climate is not so favorable to the working man. In Canada, for four months in the year but little can be done, while here a man may work all the year round.
2477. With regard to settling on the land, it has been urged that a man could get no more than a living; is it not within your knowledge that by far the greater portion of working men, from the cradle to the grave, never can get more than a living under any circumstances, and in many cases a very precarious and uncertain living—that they never have a week's means beforehand till they drop into the grave? Yes.
2478. Suppose families got upon the land and were able simply to support their children, to rear children in a healthy atmosphere, to feed and clothe them, however humbly, would they not

- not be better off than they are in reality by living on the wages they receive in town, while ^{Mr. B. Rhodes.} they would make room for others who would be the better for their absence? Yes.
2479. Would they not live longer, enjoy a more healthy existence, and bring up their ^{7 Feb., 1860.} children in circumstances of greater comfort? Yes, and they would grow up honest, and not in the state in which children now too frequently grow up in Sydney. When I go to the wharfs now, I see children swarming about, boys and girls from the ages of five or six to fourteen or fifteen.
2480. You have noticed a great number of children about in an apparently neglected state? Yes; and it seems to me that they are increasing rapidly. I do not know what is to be done with them, unless something turns up.
2481. Have you had any means of forming an opinion of the house accommodation of the bulk of the working classes in Sydney? Yes. I have had a great deal to do with the repair of the old buildings in Sydney; they are in a very bad state; but even the new constructions are generally badly ventilated.
2482. Do you mean that they have no current of air through them—that they are mere boxes with a door on one side? Yes; and that there is no ventilation under the ground floor.
2483. That produces damp? Yes; and bad smells. After rain the water remains beneath them, and causes a very bad smell.
2484. Is it not the case that when houses are built upon a rock, as many of the houses in Sydney are, that, if there is no drain beneath, the walls are more affected by damp than they would be if not built upon the rock? Yes; and they are generally built against hilly ground. It is the case, particularly in Woolloomooloo Bay, where many of the houses are in a very bad state. I am now repairing a newly built house—the walls of which are all decomposing.
2485. When houses are built flat upon the rock, do you not think the rain collecting beneath them causes the damp to rise up over the walls more than if built upon a different foundation? Yes; sand is the best foundation to build upon.
2486. As far as you have had experience with regard to the new houses occupied by working people, are they more or less damp? Yes.
2487. As to the ventilation, can you tell us whether there is passage for the air through them, or whether they are built with merely a door and window on one side, and no outlet on the other? There is no direct draught through from front to rear. Many are built without back doors.
2488. Can you state what is about the height of the rooms? Generally, eight to nine feet.
2489. You are speaking of the new houses? Yes.
2490. In the older parts of the town have you observed that there are large groups of tenements of a very imperfect character, and without hardly any of the conveniences necessary for preserving decency and health? Yes; a great many houses, in various parts of the town, are very much in that state.
2491. What parts of the town do you allude to? The back streets of Sydney, and about Woolloomooloo.
2492. The houses about Woolloomooloo are nearly new? Yes. There are a great many houses in the older parts of Sydney—about Clarence-street, Sussex-street, and the western side of the city—where there are great nuisances; the filth from the houses above triekling down into those below.
2493. Are you the father of a family? Yes.
2494. Has it ever occurred to you that there will be considerable difficulty in finding employment for the rising youth of the Colony? Yes; if my sons had not trades I would not know what to put them to. I have put them to my own trade, and, goodness knows, there is not much that is encouraging in that.
2495. Do you think the state of things you have alluded to—the bad atmosphere in these ill-arranged houses—causes considerable mortality among children of tender years? I cannot say much about that.
2496. Have you noticed whether your neighbors or work-people have many deaths among their children? Yes, there are a great many deaths take place among children here; but a great deal of bad milk is sold here, and that is very injurious to children.
2497. Supposing it to be the case that one-half the infant life of the Colony is destroyed by preventable causes—causes which, under better sanitary regulations, and due regard on the part of the parents themselves to the health of their children, might be prevented—do you not think that discloses something very suicidal in the management of a country where people are so badly wanted that money is sent out of it to bring in population? If I must be candid in giving an answer, I think it is a good thing for them to die off; for I am sure there would be nothing for them to do if they were to live.
2498. Coming back to my question—do you not think that in a country like this there ought to be room for our children, if things were managed properly? Of course I do; there is plenty of room for men, women, and children.
2499. My question depended upon the correct management of the country —? I do not see any remedy, without you can get the lands thrown open for the people. Some of the men I have discharged have gone up the country, and have returned because they could do no good.
2500. *By Mr. Loder:* How far did they go up? Some went to Liverpool, and some went to Goulburn. Some went to Mudgee, where they stopped till the work was all finished, and then they returned.
2501. *By Mr. Hoskins:* You say you have employed a carter at 12s. a week, and laborers at 7s. a day—when was that? Four weeks ago.

- Mr. B. Rhodes. 2502. Is it a common occurrence to find skilled mechanics working at laborers' work in Sydney? Yes, of almost all trades.
- 7 Feb., 1860. 2503. You say you have lived in Canada and in the United States? Yes.
2504. In what parts of the States? In New York, Connecticut, New Jersey.
2505. What wages do carters get at New York? They are mostly hired by the day there; they will not hire by the week in New York. They used to get 6s. a day and find themselves.
2506. In other places I suppose they were hired by the week and found board? Yes, in Canada.
2507. What were the average wages you paid there finding board? About 24s. a week with board, for a first-rate carter.
2508. That was what are called York shillings in the States—equal to 6d.? Yes.
2509. Then you paid about the same wages as here for unskilled labor? Wages for unskilled labor are higher here than at New York. There we could hire unskilled labor at seven York shillings a day.
2510. But what would be the expenses of a laborer there, for diet, clothing, and so on—are not these things much cheaper there than here? Yes.
2511. What can a person buy a pair of working shoes for there? Fifty cents, or four York shillings.
2512. Are not things generally twenty-five per cent. cheaper? Yes.
2513. Then I infer that you consider the position of the working classes is better there than here? Yes, much better. One penny will go as far there as two-pence half-penny here, in living. You would have to pay no more for house-rent for a month there than you would have to pay for a week here, and you would have a better house there.
2514. You have not been in the Western States? No. I have been in Western Canada.
2515. A large number of people there are, I suppose, desirous of engaging in agricultural pursuits? Nearly all get into that.
2516. Does the prospect of it not paying them, or of their not making fortunes, deter them? It does not. Most of the men I employed had their little farms. They would get two men to work for them at the wages I paid them for their skilled labor.
2517. In what town did you live? Brockville, St. Lawrence.
2518. People are not ambitious, and do not expect to make fortunes, but they generally live in great comfort? They have plenty; they never need to come short of anything to eat in the States, or in Canada; and that is not all, if a stranger comes among them, they all flock round him to a helping hand.
2519. *By the Chairman*: Were you much in the country districts of Canada? Yes; for sixty miles back.
2520. Have you ever been at a country place on Sunday and seen the people go to church? Yes.
2521. Can you state whether many travelled to church in little vehicles of their own? Yes; they came in sledges in the winter.
2522. Most of the farmers came in their gigs, did they not? Yes; in gigs, sledges, dog-carts, or four-wheeled wagons.
2523. Will you append to your evidence a statement of the wages you are paying at present to the different trades employed by you, and to the laborers; and, also, a similar statement shewing the wages you paid when you were first in Sydney? Yes. (*Vide Appendix.*)

APPENDIX.

B. RHODES.

TUESDAY,

TUESDAY, 14 FEBRUARY, 1860.

Present :—

MR. HOSKINS,
DR. LANG,
MR. LODER,

MR. PEMELL,
MR. PLUNKETT,
MR. WINDEYER.

HENRY PARKES, ESQ., IN THE CHAIR.

The Honorable James Robert Wilshire, Esq., M.L.C., (by permission of the Legislative Council) examined :—

2524. *By the Chairman*: This Committee has been appointed to inquire into the social condition of the working classes of Sydney, with reference to the alleged want of employment experienced by many sections of those classes, particularly at the present time; also with reference to their house accommodation, and its effects upon the physical health and moral well-being of the occupants; and also with reference to the existence of juvenile vagrancy in the public streets. It was thought from your being a very old and extensive employer, you might be able to give some information upon the first head; also, from being a native of the city, I believe, and always a resident in it, you might be able to give us valuable information on the other two heads of our inquiry. Will you state whether, in your opinion, there is any want of employment felt at the present time? I think there is a very great want of employment, more particularly among young men employed as assistants and clerks in various mercantile establishments.

The Hon.
J. R. Wilshire,
Esq., M.L.C.
14 Feb., 1860.

2525. Can you give any instances that have come under your own knowledge? I can refer to the case of a young man who is now temporarily employed by me, who has stated that before he obtained that situation he was for eighteen months unemployed.

2526. He is a very competent clerk, is he not? He is a very competent man.

2527. While he has been temporarily employed by you have you found him to be attentive and steady? Yes, very much so.

2528. Will you state what he has told you as to his inability to get employment? He has told me that he applied for every situation that was vacant, and which he was competent to fill, and that he found when he had failed to get it, that some seventy or eighty persons had applied before him, or at the same time with himself.

2529. *By Mr. Plunkett*: When you say that he made so many applications, do you mean that he made application for government or for private employment? He made applications for both government and private employment.

2530. *By the Chairman*: Can you state whether it is within your knowledge that laboring men have difficulty in some cases in getting employment at the present time? Yes, it does come within my knowledge that they have some difficulty in getting it; but I think the greatest difficulty arises from the desire to get high wages, or higher wages than, I believe, they can obtain.

2531. That is, they will not take reduced rates of wages, and will rather remain out of employment? Yes.

2532. Do you not think that arises from a feeling of this kind,—that though it might be an individual benefit to them, it would be an injury to their class which they are not justified in inflicting? I think it arises chiefly from the price of provisions and house-rent not coming down in the same proportion—that they cannot afford to take less wages—that they could not keep themselves if they did.

2533. But, even without reference to these considerations—when a general complaint is made against working people for not taking a reduced rate of wages, do you not think it frequently arises from a very conscientious conviction on their part—perhaps a mistaken one; I am not saying whether it is or not—that by taking less wages they would injure the class to which they belong? I think that perhaps operates with some, perhaps the greater number.

2534. Their political economy may be bad, but it does not affect their conscientiousness in the matter? No.

2535. What is the rate of wages you are paying? We pay about £2 a week for common laborers, and £2 10s. to men who have been long in our employ.

2536. Who know the run of their work? Who know the run of their work.

2537. Have you ever paid any attention to the subject as to whether a man with a family, say of three children, can save money out of that rate of wages? No; I think a man with three or four children can barely live on £2 a week, and he then is obliged to live in a mere hovel at a very low rent. I believe this state of things arises entirely from the interest of money being kept up by the Banks.

2538. If that be so, that he can barely live without being able to put by anything for accident, sickness, or temporary want of employment,—does it not follow that a working man could not accept less wages? Yes; I think it does follow that he cannot accept less wages, but I believe the whole of it hangs upon the interest of money. The money invested in building costs so much a year, and the builder cannot afford to erect them, or the landlord to let them so as to pay interest, and that naturally operates upon the working classes.

2539. Operates upon them by requiring from them higher rent, do you mean to say? Yes.

2540. And do I also understand you to say that it operates upon them in limiting the employment of capital? Yes, in the erection of houses.

2541. And further limits the employment of persons who would be employed in such kind of work? Yes.

2542. Do you know whether this want of employment which appears to be experienced by clerks

- The Hon. J. R. Wilshire, Esq., M.L.C.
14 Feb., 1860.
- clerks and laboring men is felt also by mechanics? I believe it is to a very great extent felt by mechanics.
2543. By the building trades for instance? By the building trades very much indeed.
2544. You have no positive information upon that subject, I suppose? I know several mechanics who are not in constant, regular, employment.
2545. You are a proprietor of dwelling-houses in Sydney, I believe? Yes.
2546. Are your houses such as are let to working people? Not many of them, but my family have great property in small houses.
2547. As a landlord, do you ever hear any complaints from tenants of their necessitous circumstances—I suppose that is experienced by the landlord as soon as by anyone? Yes, by the non-payment of the rent, and by the reduction of the rent.
2548. With regard to the general condition of the small tenements in Sydney occupied by working people, more especially in the lower parts of the town—do you consider that they are such as they ought to be? I consider them very bad; indeed, the greater part of the houses occupied by the laboring classes are not fit to be called houses.
2549. I believe you were Mayor of Sydney? Yes, a long time ago.
2550. And Alderman? Yes.
2551. At all events, you have had very good opportunities of making yourself acquainted with this subject? Yes, I have.
2552. Are the houses in the localities to which you have alluded badly constructed? I think they are.
2553. Are the rooms low, and have they no means of ventilation? No means of ventilation at all.
2554. Is the drainage bad? The drainage is bad.
2555. Are they in many instances without the ordinary conveniences for decency of life? In many instances they are without any convenience at all.
2556. Can you state whether the buildings that have been erected of late years are of a better class, in point of construction, means of ventilation and of drainage? They are of a better class generally, but too expensive for the occupation of the laboring class.
2557. What localities are you alluding to? I am alluding more particularly to the Woolloomooloo estate.
2558. I believe you have, ever since you were Mayor, and perhaps before, paid some attention to the cause of public education? Yes.
2559. In connection with that, has your attention ever been attracted to the state of children in the street in an uncared for, neglected condition—in many instances, a state of absolute vagrancy? Yes, in all parts of Sydney they congregate in very large numbers, particularly in the evening.
2560. Do you think there is a very large number of children here in a very neglected state—who, in fact derive no benefit from having parents even where they have any? Of late years it has not been so much so, in proportion to the population. The different national and other schools are pretty well filled. The laboring classes who have any pride at all send their children to these; it is only in the evening, after school-hours, that I think the children are neglected.
2561. What is your business? Tanning and currying. I am a manufacturer of leather.
2562. How many persons do you employ? At present we do not employ nearly so many as we did a few years ago. I should imagine that there are about twenty employed altogether at our establishment.

Mr. Samuel Worthington Mansfield called in and examined:—

- Mr. S. W. Mansfield.
14 Feb., 1860.
2563. *By the Chairman*: You are Master of the Sydney Benevolent Asylum? Yes.
2564. How many years have you been in that situation? Upwards of five years.
2565. How long have you been a resident in Sydney? Since January, 1825.
2566. Have you been in Sydney during the whole of that time? With the exception of a very short time that I lived in Parramatta.
2567. What situation did you occupy previous to being appointed master of the Benevolent Asylum? For three years preceding my present appointment, I filled the office of Secretary and Librarian to the "Sydney Mechanics' School of Arts;" and for a period of nearly fourteen years was clerk in the office of Mr. G. Allen, and Allen and Son.
2568. This Committee has been appointed to inquire into the condition of the working classes of Sydney, and is anxious to obtain from you any information you may be possessed of, derived from your present situation or otherwise, as to the alleged existence of juvenile vagrancy on the public streets. Do you know, of your own knowledge, that there is a considerable number of children in a very neglected and uncared-for state? I do; it frequently comes under my notice in the performance of my duties.
2569. Are many children of this description sent to the Asylum? There are a good number.
2570. Without parents? Without parents.
2571. Of what ages? Of all ages; from a few months, to ten, eleven, or twelve years.
2572. Have you ever paid attention to this subject, apart from the discharge of your duties in the Asylum—have you ever noticed in your walks about Sydney, or otherwise? Part of my duty brings me among the people in their homes.
2573. Will you explain what your duties there are? There are many families who receive out-door relief, and these families I have to visit.
2574. In what parts do these families generally reside? In all the lower parts of Sydney.
- 2575.

2575. Do they reside more in one part than in another? I scarcely know that they do; they are particularly in the lower parts of Kent and Sussex streets.

2576. On the western side of Sydney? Yes; and at Paddington, Chippendale, Redfern, Newtown, and Camperdown.

2577. In visiting these parts, what state of things do you find, with respect to the children particularly? Generally speaking, very great destitution and extreme filth are the prevailing characteristics; there is a want—an entire want—of cleanliness in their persons as well as in their habitations; and this is more particularly the case in Sydney than in the outskirts. In the lower parts of Sydney, where I find so many children congregated together, there is the greatest extreme of filth and neglect.

2578. Does this give rise to much profligacy, as far as your observation extends? I cannot trace profligacy to that source in any particular way.

2579. It has been stated before this Committee, that female prostitution has been much on the increase of late years; and that it has included a large number of girls of tender years, from eight or nine to twelve or thirteen? Few circumstances of that kind have come under my notice.

2580. If that is the case it is not within your knowledge? It is not within my knowledge that a large number of girls of tender years are so included.

2581. With regard to the habitations of the poorer classes, you must have had a very good opportunity of observing them—are they, as regards their construction, their means of ventilation and drainage, at all calculated to preserve health? No; hundreds in Sydney are totally unfit for human habitations.

2582. Will you be kind enough to describe some instances of that kind? There is one occupied by a family that I visited last week, and probably shall do again to-day, if they are not washed out of it entirely. It is situated in a filthy yard, leading by a small gateway from Druitt-street, near Kent-street, and is occupied by a man, his wife, and daughter, about 18 years of age, who is imbecile. I found them last week in the most deplorable state. The so-called house, or hovel, consists of two rooms, and the water during the late rains ran through on one side and out on the other; but few shingles are on the roof, only one here and there, just patched up where they sit. It had been a wet night previous to the morning of my call, and they told me they had been moving about all night long to obtain temporary shelter; over the top was a piece of old canvas, fastened by means of four strings, and under this they were all huddled—not a spark of fire was in the place.

2583. What was this man? A shoemaker.

2584. Cannot he get employment? He is unable to work from having a very bad leg.

2585. Do you know what they pay for such a place as that? 3s. a week. When I called, on one occasion, the landlord was there, seeking his rent, and threatening to turn them out if they did not pay arrears of rent due. I did purpose to have a little conversation with the landlord, but when he saw me he walked off.

2586. With regard to the houses in courts and yards, there are a good many in that neighborhood, are there not? Yes; some of them are kept in a very good state. There is Ann's-place, leading off Kent-street, and Alfred-place, also leading from Kent-street, where there are a great number of two-roomed houses on each side, but the court is paved all the way down, and there is a central gutter; but there are many others most deplorable.

2587. In the better of these places, such as you have just described, are the rooms of sufficient height, and is there any means of ventilation, or of obtaining a current of air right through the room? No; they only obtain air from the front door and window; there are fire-places in the low rooms, but no opening at the back.

2588. In these places are the out-door means of convenience sufficient, such as water-closets? I never paid any particular attention to that. In one or two places I have noticed them.

2589. Do you think the houses in the older part of the town are very bad? Yes, most deplorable.

2590. Have you been acquainted with any city in the Mother Country? With none but Liverpool, where I was brought up.

2591. You must have left England young? Yes; in my seventeenth year.

2592. Have you any knowledge of the newer buildings that have been erected in Woolloomooloo? I have not much knowledge of Woolloomooloo; but, in Redfern and some of the outskirts, the houses erected of late are much better.

2593. Can you form any opinion as to whether there is a want of employment extensively felt at the present time? I find it very much so in my visits to the people.

2594. You think large numbers of persons are unable to obtain employment? A large number of families get relief on account of the fathers being out of employment, or out of Sydney seeking employment.

2595. Does your remark apply to mechanics as well as to laborers? Chiefly to laborers.

2596. Do you know of any instances where men who to your knowledge are industrious, sober, and anxious to obtain employment, yet cannot get it? Yes, I do, as laborers.

2597. To what do you ascribe this state of things in Sydney; there ought not to be any widely-felt distress from want of employment in a young country? I can scarcely frame an answer to that question. In many cases I have heard it attributed to the cessation from works of the Corporation, and this has thrown a number of hands out of employment.

2598. Do you think Sydney is over-peopled? I do with that class.

2599. *By Mr. Hoskins:* Have aged people any difficulty in procuring admission into the Benevolent Asylum? No.

2600. Your accommodation is not limited? We never turn anybody away from want of room—never in any instance.

2601. Have you any young persons in the Asylum? Yes, many.

2602. Males or females? Females.

2603.

Mr. S. W.
Mansfield.

14 Feb., 1866.

- Mr. S. W. Mansfield.
14 Feb., 1860.
2603. Prostitutes? Well, you must call them so in the strict sense of the term, though in many cases they are not what may be called common prostitutes on the town; but there are many young women with illegitimate children, who have been confined in the house. Last year there were sixty-one births of illegitimate children in the institution, and there are upwards of twenty young women now there with their infants.
2604. You seem to have an intimate acquaintance with the working classes; do you happen to know whether many of these persons who are now out of employment are men of temperate, industrious habits? In many cases I know they are.
2605. *By the Chairman*: Will you have the kindness to state the number of children you have received into the Asylum during the last year? I think about 130; but many of these children have been discharged with their mothers and re-admitted; and they all appear in the report as admitted. The number of children who have passed through the institution during the year 1859 is 252, as shewn in Appendix.
2606. Can you state how many have died during that time? 39.
2607. Of the vagrant children received into the asylum, do many of them appear in a state of disease? Yes; many of them.
2608. What are the diseases they are afflicted with when they come into the asylum? Generally diseases arising from filth and neglect, skin diseases; some young girls have been received with syphilis.
2609. *By Mr. Hoskins*: At what age? Nine or ten years old.
2610. *By the Chairman*: Have there been many cases of that kind? Not many.
2611. Are young females of more advanced years often suffering in the same way? It is not very common among them, excepting those who are really prostitutes—among them there are many cases.
2612. *By Mr. Loder*: Are you aware that young girls so afflicted, may have received the disease from the mother? It is possible.
2613. *By Mr. Hoskins*: I presume the cases you refer to are where the disease is in an aggravated form? Yes.
2614. Has it come to your knowledge that there is a large amount of infanticide here? Yes; very great.
2615. Is not that crime increasing? I fear so.
2616. Do you happen to know whether it is in excess, in proportion to the population, as compared with the Mother Country? I think so.
2617. *By the Chairman*: How many persons are there now in the Benevolent Asylum? There are at the present time 312, including children.
2618. *By Mr. Pemell*: They are females, I believe? Not all.
2619. *By the Chairman*: How many is the building calculated to accommodate properly? About 200.
2620. *By Mr. Hoskins*: Can you, from what has come under your observation, assign a reason for the excess of cases of infanticide in this Colony as compared with the Mother Country? It is difficult to state any reason. In many of the cases which have come under my notice, the crime has arisen from a desire on the part of the young woman to conceal her condition to the last moment, which they have in many instances, so that their mistresses have not known it; and when at last the crisis has come they have attempted to conceal it in that way.
2621. Do you not think that there is a want of paternal care exercised over girls in this town? Yes; particularly so. The children of the working classes in Sydney, of the very lower classes I mean, are very much neglected. I have found, when speaking to parents and trying to reason with them on the subject, that they have been very indifferent about the education of their children. When I have said, "Why do you not send them to school?" Some have replied that they could not afford to pay. When I have told them, that no matter to what denomination they belonged they could send them to school without payment; they have said, "Oh yes, as paupers!" and although they did not mind sending to the Benevolent Asylum to receive rations as paupers, they did not like to send their children to school in that character.
2622. From what has come under your observation have you reason to believe that there is a large amount of distress and absolute want of food among the laboring classes? I believe there is a great deal of distress and absolute want of food. In the case I have referred to, that of the shoemaker, I believe when I saw him and his family that morning they, as he represented to me, were without food and without anything to assist them to purchase—he had nothing left. I asked him where were his tools—"They were all at the Three Balls." Everything was gone.
2623. Previously to the gold discovery did you observe the same distress among the working classes as at the present time? No; very many of the families, now receiving assistance, have been deserted by the husbands and fathers, who have gone to the diggings, and many have never been heard of since.
2624. Do you not think the number of unskilled laborers in Sydney very much in excess of the demand? I do think so.
2625. From your knowledge a large number are always depending for employment upon the public works? Very many.
2626. *By Mr. Loder*: Do you think the case you have referred to of this family being in so deplorable a condition is an isolated case? No, but I mention it because it is one that has so recently come before me.
2627. *By the Chairman*: I believe you are a parent? Yes.
2628. As a citizen and the head of a family, have you ever considered this subject, whether a large amount of human life is lost in the time of infancy from preventable causes—that is

- to say, whether children have perished from misdirected treatment, or from neglect, or bad atmosphere, all of which causes might be prevented? Yes, I have thought much of it, and I believe much life is sacrificed by want of habits of cleanliness, and proper attention among the lower orders. Mr. S. W. Mansfield.
14 Feb., 1860.
2629. Are not the deaths of the city population very numerous? Very numerous.
2630. Have you made any calculation, or have you heard any calculation made as to the proportion of infant deaths in relation to the population, as compared with the proportion of infant deaths in London, or other large cities? I have not.
2631. Have you ever heard it stated that the proportion was greater here than in London? No, I have not.
2632. But you know, as a fact, that infant deaths are very numerous, and you believe that they are so from causes that might be prevented? Yes.
2633. Will you have the goodness to append to your evidence a statement, shewing the number of persons received into the Benevolent Assylum during the last year, stating the sex and age; distinguishing the children who were received in a friendless state, and those who were in a state of disease. (*Vide Appendix.*)
2634. To what treatment are the infant inmates of the Asylum subjected—who is placed over them? Those who have mothers are left with their mothers.
2635. When I say infants I mean children of very tender years, up to six years? They are under a proper nurse with assistants, and are kept in a ward called the nursery.
2636. Describe the food they have? In the morning milk, bread, tea, arrowroot, for the younger ones and those who require it, and rice.
2637. Is the quantity limited? There is no limit. At dinner they have soup, meat those who are hale, for whom it is fit; the younger ones have boiled rice, arrowroot, sago, and oatmeal gruel.
2638. In the evening they have a similar meal to that in the morning, I suppose? Yes.
2639. At what time are they put to bed? Just at dusk.
2640. What time do they get up? The ward is open at five in the morning, and they are bathed the first thing in the morning.
2641. How do they sleep? All in the same room.
2642. Two in a bed? Their beds are on the floor, we have no beds raised for them.
2643. How many in a bed? I can scarcely say.
2644. I suppose according to the state of the Asylum? Yes; sometimes the floor is completely covered from one end to the other.
2645. Have the nurses you have now been any length of time in office? The head nurse has not been long in her situation, she is the mother of a large family herself.
2646. As a parent yourself, do you think the nurses generally have been of kindly dispositions—women who understood the necessities of little children? Yes, quite so; and they are continually under the eye of the matron, Mrs. Mansfield; she sees them every hour of the day.
2647. You think the children are fairly treated? I think they have every attention they possibly can have.
2648. You admit that the place is very much over-crowded? It is very; it was never intended for the reception of children.
2649. Do you succeed in keeping the sleeping apartment pretty well free from vermin? Pretty well, but not entirely.
2650. I suppose you have difficulty in doing so? Yes; there are some bugs in the place.
2651. I suppose some of the children come off the street in a filthy state? Yes, in nine cases out of ten. When they come in every particle of hair is cut off.
2652. What treatment are they subjected to on their admission? They immediately go into the bath.
2653. Do you destroy their clothes? In many cases the clothes are taken off and immediately destroyed, in other cases they are washed. Always there are clean clothes put on them, and they are put into the bath before they are allowed to mix with the other children. The same practice is adopted with regard to adults, they are bathed immediately on their admission; and, in many instances, we have to turn them out, because they will not submit to this very necessary precaution. They say they have never been washed since their mother washed them, and they will not come there to be washed.
2654. Are many of the children who are admitted from six to ten years of age of a rebellious spirit, saucy? I cannot say I have found much of that.
2655. *By Mr. Hoskins:* Do you think the Benevolent Asylum is situated in a healthy locality? I cannot say that I have ever experienced anything objectionable on my own part, but it has often been suggested to me that it must be unhealthy from its position being so near the burial ground.
2656. And from being so low? I do not consider it low.
2657. Have you many deaths from diarrhœa and dysentery? Those are diseases very prevalent among old people, especially with those whose previous habits of life have been vicious. They are frequently taken off with diarrhœa.
2658. Do not the children suffer from that? No, not as a general disease.
2659. Are there many children from the Benevolent Asylum forwarded to the Destitute Children's Asylum, at Randwick? We forwarded forty-seven out of fifty about a fortnight ago. These were the first who had been sent for a long time.
2660. I suppose you think that a more healthy locality for children? Yes, and they have every appliance for the reception of children, which we have not.
2661. *By the Chairman:* Have you seen the children belonging to the Destitute Children's Asylum lately? Yes.

- Mr. S. W. Mansfield. 2662. Do your children look as healthy as they? Not as a whole; but out of the forty-seven forwarded to them there were many whom I could put alongside the children of the Destitute Children's Asylum, and compare with them; and they were quite equal in appearance.
- 14 Feb., 1860. *By Mr. Plunkett*: Do you find persons come from a great distance to the Benevolent Asylum here, and pass by other similar institutions in the country? Yes, we frequently have them from Yass, Bathurst, Singleton, Tamworth, and various parts of the country.
2664. *By Mr. Hoskins*: How long do you generally keep the children in your Asylum before they are removed to the Destitute Children's Asylum? There are no definite periods at all; it is when they can take them. We do not send them from our institution there as a matter of course.
2665. They have only limited accommodation at Randwick? Yes.
2666. *By Dr. Lang*: Does your experience lead you to conclude that it would be desirable to have a separate institution for children? Yes, I am decidedly of that opinion.
2667. Rather than have them mixed up with the ordinary inmates of the institution? Yes. I think it is a very great evil to have very young children, more particularly those of ten or twelve years of age, mixed, as they necessarily must be, with the old women.
2668. From what you know of the other institution, do you think the object would be most effectually accomplished by the extension of the Destitute Children's Asylum? Yes. I have visited that institution and seen the treatment of the children there, and I think it most admirably adapted for the purpose.
2669. *By the Chairman*: Are you aware that the Asylum at Randwick would take off all your children if their buildings were completed? Yes.
2670. Have they stated that to you officially? Yes.
2671. *By Mr. Hoskins*: Can you state whether the mortality has been greater at your institution than it has been at Randwick? It has been.
2672. *By Dr. Lang*: Do you think, in addition to the Destitute Children's Asylum, at Randwick, there is any necessity for a Foundling Hospital? No, I do not see any requirement for a Foundling Hospital proper.
2673. *By Mr. Windeyer*: Have you observed that lately the number of foundling children have been greater than formerly? No.
2674. Do you not know that many cases appear in the papers of concealment of birth, and of children being found? Found dead.
2675. Not many come to you? No.
2676. Are they ever reclaimed by their mothers after they come to you? Never.
2677. *By Mr. Hoskins*: Is it the fact that a large number of children are roaming about the streets of Sydney without parents? It does not come under my knowledge that they are without parents; but I cannot fail to observe that there are a vast number of children prowling about the streets of Sydney from morning till night. There can be no doubt that there is a vast amount of juvenile vagrancy.
2678. *By the Chairman*: Are you aware, in connection with this subject, that the Legislature some years ago voted a sum of money for founding a Nautical School in Sydney? Yes, I learned it from statements in the paper.
2679. Do you think from the habits of many of the boys who lounge about the wharfs that if such an establishment were founded a good many children would gladly avail themselves of it? I do; I think two or three hundred boys might be found who would gladly go into such a school to-morrow.
2680. Do you not think it would be a great good to a country like this, where we are getting considerable local shipping, and have great difficulty in manning our ships, if we could rear seamen of our own? I think it would be of great advantage, and, as I have just stated, I believe hundreds of boys could be found who would gladly enter such a school. Many cases come under my notice where boys go about gathering bones, which they sell to the sugar companies, and many families are supported entirely by that. One respectable family, I know, who pay their rent by that means. The father is now in a dying state, and there are three children; the eldest and a younger boy go about with a little cart, which they draw themselves, and gather bones, which they sell to the sugar companies. With the proceeds they pay the rent, and buy some necessaries which they do not receive from the Asylum.
2681. During the last few years a class of refuse-gatherers has sprung up—persons who gather bones, bottles, and old rags—have you noticed that? The gathering of bottles is an old trade, but I have not observed the gathering of bones till of late years.
2682. *By Mr. Windeyer*: Do you find a disposition to impose upon your institution, or do persons only apply to you as a last resource? There are persons who would impose if they could.
2683. Do you think those who do apply generally do so from sheer necessity? Yes; as far as it is in my power I ascertain that fact by visiting the locality to which the applicant represents himself to belong; but there are some persons who elude my investigation, until by chance I find them out. There is a great difficulty in getting the history of a family from the neighbors, they are always very wary, they know who I am, and what I come for; and as soon as I enter one of these courts, the word is passed along from house to house, "The poor-house man is coming." There is a long lane called Linden's-lane, where there are a good many recipients of out-door relief, and before I get into the second house in that lane it is known throughout the houses that I am there, and the inmates are at once busily engaged with their washtubs, or in some other way.
2684. *By Mr. Plunkett*: Does not the House Committee exercise great care to guard against imposition? The Acting Weekly Committee do as far as they can. I think impositions are very rare.
2685. *By Mr. Hoskins*: I suppose you had no opportunity of examining into the condition of the working classes in Liverpool? No; I was too young.

APPENDIX.

Mr. S. W.
Mansfield.

NUMBER of Persons received into the Benevolent Asylum during the year 1859.					NUMBER who have Died during the same period. 14 Feb., 1860.				
	Men.	Women.	Children.	Total.		Men.	Women.	Children.	Total.
During the Quarter ending March...	107	96	68	271	Quarter ending March 8 ..	5	7		20
Ditto June....	94	86	57	337	Ditto June.. 8 ..	11	6		25
Ditto Sept....	81	95	52	228	Ditto Sept.. 5 ..	10	4		19
Ditto Decr....	92	104	75	271	Ditto Decr.. 6 ..	14	22		42
Total	374	381	252	1007	Total.....	27	40	39	106

In addition to the above, there were in the house on 31st December, 1858,—80 men, 164 females, 154 children; total, 348.

I cannot possibly, in the time allowed, give all the information as to ages, &c. I can, however, state, that out of the number of children received, 56 were in a perfectly friendless condition, principally brought by the police.

I shall be most happy to render any further information in my power.

S. W. MANSFIELD.

FRIDAY, 17 FEBRUARY, 1860.

Present:—

MR. HOSKINS,
DR. LANG,
MR. LODER,

MR. LYONS,
MR. PEMELL,
MR. WINDEYER.

HENRY PARKES, Esq., IN THE CHAIR.

John Robertson, Esq., M.P., examined:—

2686. *By the Chairman*: I believe you are aware of the object of the inquiry of this Committee? Yes, I am aware from having been present in the Assembly when the Committee was appointed. J. Robertson,
Esq., M.P.

2687. You were for some considerable time Secretary for Lands and Public Works? For nearly two years. 17 Feb., 1860.

2688. During that time were you, from your official position, brought into communication with any of the working classes of Sydney, with respect to their alleged want of employment? Yes; several times large bodies of men applied to me, sometimes by deputation, and sometimes as many as seven or eight hundred men have come to my office.

2689. The Committee will feel indebted to you if you will state what was your experience of this want of employment, confining your observations in the first instance to the laboring class? We had many applications. During the time I was in office there were several large meetings held in Hyde Park, and the people came desiring employment of the Government. The Government took this course:—they retained in their own hand, from the general railway contracts, portions of the railway works—I think five or seven miles south, and the same distance north. This was left for the employment of any of these people who chose to go. We provided that these people might be paid, if necessary, daily, and we found them in tents, tools, and passages to the works. We paid them by job, and in no instance by day-work, at a rate computed to be about 20 per cent. less than the contractor's price; the 20 per cent. being retained to meet all these minor matters I have mentioned—that is to say, for tents, tools, removal, and the extra trouble they gave the Government for superintendence and frequent payment. I think we sent up about 500 of these men to the south, and a good many went to the north. Of the 500 about 250 remained at the work; the others appeared dissatisfied with the work, or unable to make it pay them. They were not, I think, people much used to hard labor. I suppose that must have been the reason, for the prices were as I have stated; and, therefore, they ought to have paid them if they had been well-fitted for the labor. About 250 remained; and, I think, subsequently, when Mr. Rhodes, on behalf of Messrs. Peto, Brassey, and Betts, was prepared to undertake the whole sixty miles, or nearly so, of railroad, the Government, under the impression that the arrangement for employing the people directly would no longer be necessary (as there would be so much employment for the people), transferred them to Messrs. Peto, Brassey, and Betts, who engaged to take them.

2690. From what you saw and heard in this intercourse with the working people and their deputies, were you of opinion at the time that distress was prevalent in Sydney among persons of that description? I was strongly of opinion that distress was very prevalent indeed, and it appeared to me to be mainly where there were men with families, who could not get away into the country districts with their families; and it was to these people that even our railway works were not so suitable, for it was a very difficult matter for a man to take his family up to the railway works. For that reason I endeavored to bring out other works more in the neighborhood of the city, such as the road to Long Bay, along the coast from Randwick, and other works where we could, having regard to the public interests, employ people near Sydney. It has been alleged that these working people were very unreasonable

J. Robertson,
Esq., M.P.
17 Feb., 1860.

unreasonable in their demands. They waited upon me many times, and I must say that they were most reasonable in their demands; that they admitted, at once, that the Government could not be well called upon to pay day labor, and they only desired the proper amount of payment, according to the absolute amount of work they did; they did not seem to desire that there should be any injustice done to the community generally, or that unnecessary works should be entered upon on their account; they were willing to accept work, and to be paid for it, upon the terms I have stated—so much per yard or job, as the case might be.

2691. You have said that a crowd of persons of several hundreds came up to your office on one occasion? Yes; more than once.

2692. Did those persons conduct themselves in an orderly manner, or was there any unseemly disturbance, any thing to complain of? I thought it was an improper course—their visiting a Minister in such large numbers; they came once or twice as many, I fancy, as a thousand people, and sent up a deputation to me. On each occasion I pointed out to them that I thought it was not a proper course, and that they might have sent a deputation unattended by such a number of people; but so far as any impropriety was concerned—other than the impropriety of such a number waiting upon a Minister of the Crown under such circumstances—there was none.

2693. I spoke with reference to their demeanor? Their demeanor was most well-behaved; any impropriety there might have been was, perhaps, that their manner was too complimentary to the Minister for Lands and Works—they were cheering him, and all that kind of thing.

2694. Did your Government, during the time you were a member of the late Government, receive many applications from persons who were dependent chiefly upon their intellectual labor—persons of better education, who had been reared in habits of greater refinement than the working classes? Our offices were crowded with such people. I imagined that if a Minister could have had spared the time, his whole time would have been taken up with refusals, or in answering these people's applications. I used to devote an hour to this every day, and I could not spare any more time to this kind of business. Of course some got appointments; but as the policy of our Government was to reduce the number of employes, so that when a vacancy occurred, if possible, we supplied it from some other office, in the way of a reduction. We had not so much to give away as some more extravagant Governments would have.

2695. Have you noticed, in your experience as a Minister, an undue disposition among the native-born youth to get Government employment? I should say the native-born youth certainly have not exhibited such an undue desire for Government employment. If any difference existed, half the native-born youth were less pressing of berths than the imported portion of the community.

2696. A witness examined before this Committee, a native of this Colony, and of this city, who is well known, Mr. J. R. Clayton, gave it as his opinion that there was not a native of the Colony but who hoped to be in Government employment at some time or other. My opinion is that the natives made fewer applications than any other class of people in the Colony, according to the proportion of adults. I think it is not the case, but that the applicants for employment in the public service were mainly people from the old countries.

2697. *By Mr. Hoskins:* You think the English were exempt? I think they did not tease me so much as the Scotch and Irish.

2698. *By the Chairman:* I believe you have had some personal knowledge of Sydney for the last five or six years? I have had a personal knowledge of Sydney for nearly forty years.

2699. Have you ever turned your attention to the character of the dwellings occupied by the working classes in the older parts of the city? I have not had much opportunity to give any attention to that matter, because I resided in Sydney only during the early part of my life, and of old Sydney very little is left. During more than twenty years of my life, until I came into Parliament, four years ago, I merely passed three or four months in the year in Sydney; but since I have represented a constituency, I have resided almost entirely in Sydney.

2700. With respect to the distress which you think exists in Sydney to a considerable extent, what remedy has occurred to you for alleviating it—I believe you have paid considerable attention to the question of reforming the land laws of the country—do you think any improvement in the land system of the country would effect relief from the pressure upon the population of Sydney? I have always held that opinion, long before I came into Parliament. I gave expression to that opinion before a Committee, of which the Honorable Chairman was also a Chairman, and my opinion has not changed on that matter. My opinion is that the policy of the Government, for many years, has been, and the spirit of our laws at the present time still is, to check agricultural production; that while every facility, and not only every facility, but every encouragement, was given to the pastoral interest, the agricultural interest was not only not assisted but was cramped in numerous ways. There is the Lien on Wool Act, an Act that was passed when the agricultural interest was in a state of perfect depression—the pastoral interest was also frightfully depressed—and that Act did more to save the pastoral interest than anything else; but it was a privilege which was extended only to the pastoral interest and not to the agricultural. Thus, I have seen a farmer, having a fine crop of wheat ready to reap, obliged to sell his wheat to some storekeeper in the neighborhood at perhaps half its value. I have seen instances of that, because the farmer required an advance. It was not at all an unreasonable advantage for the storekeeper to take, because he not only had the risk of fire, and of the crop not coming to maturity, but it might be that he had the risk of the farmer becoming insolvent in the meantime, a risk which the person advancing on pastoral property has not; he has only the risk of the property being lost by flood or other cause, but he has not any risk connected with the insolvency of the borrower. Thus,
the

the agriculturist, if he wants to borrow money to get his crops off the land and into market, has to pay substantially cent. per cent. for accommodation for three months, while the pastoral person can borrow money at 8 per cent. per annum. Thus, while pastoral people have been fostered by extraordinary provisions in our laws, the agricultural people have had no such favorable consideration.

J. Robertson,
Esq., M.P.

17 Feb., 1860.

2701. *By Dr. Lang*: Do you not think the bad policy of Government with regard to affording facility for the occupation of land has tended to concentrate an unnatural proportion of the inhabitants of the Colony in the city? Yes, unquestionably, and in the other towns of the Colony; and in this way it works, as I have seen it many times. Having lived long in the country districts, I know many instances of men, who have saved up £60 or more, perhaps desiring to sit down upon a piece of land and to form settlements for themselves, who have gone to the auction sales in the town where the land has been sold—having waited perhaps, a year or so before they could get the land put up—and then finding themselves out-bid by some wealthy proprietor, they have given up as hopeless all prospects of getting a farm, have gone to a public-house and spent every farthing they have saved. I have heard men say to their companions, when they have been thus disappointed, “I will knock my money down like a man; I shall never get land in this country.”

2702. *By the Chairman*: What did they mean by “knocking their money down”? Spending it in public-houses. I have attended land sales frequently, and have heard men say, when they have been out-bid by a wealthy proprietor, “it is of no use trying to get land in this country, I will knock down my money like a man.” Now, if these people had had proper facilities, without competition, to have taken up the pieces of land they desired, there would have been an inducement to remain upon them to form homes and centres around which to accumulate their little earnings, and they would probably now have had comfortable homes and cultivated lands, and would not have “wasted” their money.

2703. *By Dr. Lang*: Do you not conceive that the bad policy of Government in withholding the land from the industrious classes has tended exceedingly to promote the tendency to intemperance throughout the country? Unquestionably, I attribute intemperance largely to the land system, more than to any other cause, or to all the other causes put together.

2704. *By Mr. Windeyer*: Do you not think, with reference to the people to whom you have alluded, those who have large families and who cannot find employment in Sydney, that that class would be chiefly benefited by settling upon the land? I am afraid not; persons such as I have been speaking of with large families have not the means of living upon the land, even if it were given them for nothing, because of their large families. The fault has been that these people have been kept off the land for so long a time; had they gone on the land twenty years ago their means would have increased with their families, and they might now be in independent circumstances. I do not think you can transplant families on the land any more than you can transplant full-grown trees.

2705. *By the Chairman*: You think, under other and wiser regulations, a large proportion of the population would avail themselves of the opportunity to get upon the land—would thus make room for others, and relieve the overburdened population of the city? Unquestionably. It seems to me it would work in this way:—I look upon the choice of a piece of land as a matter different from the choice of anything else. If a man wants any other thing than land or a wife he is not very particular as to the precise article he has; but a man who chooses a wife takes her for some whim, some fancy, it is difficult to say what. So I think it is with land. A man takes a fancy to a special piece of land,—perhaps it is in the neighborhood of his sweetheart’s family, perhaps he has had pleasant Sunday walks over it with his sweetheart; if he can get that particular piece of land he will settle down upon it; but, if a wealthy man outbids him he gets out of all patience, does not care for any other piece, and squanders away the money he had saved. I think there is a good deal in that; and that a man becomes attached to land more than to any other thing excepting his wife.

2706. *By Mr. Hoskins*: I think I understood you to say there were a thousand persons applied to you for employment? I do not know how many there were, but they extended from one side of the street to the other in a mass.

2707. Not more than five hundred availed themselves of your offer of employment? No, not more, I think.

2708. How long did they remain at work? Some hardly went to work at all, but about two hundred and fifty remained.

2709. Then, I suppose that you consider that a large number applied who had not been accustomed to manual labor? I think they had been, but that they were not very fond of work. The work was conducted with greater economy than any other.

2710. A large number of those who applied were persons with families? I assume so from their not being able to get away from Sydney. I apprehend, that if they had not been tied by their families they would have gone into the interior.

2711. I understood you to say that there were great disadvantages to families locating themselves in the neighborhood of a railway? Yes; naturally a man with a large family has difficulty in settling on a railway line. The family have to live in a tent, which they are not used to; and the father, therefore, prefers if possible to obtain work in Sydney.

2712. I infer that you think there are large numbers of the working classes with families who cannot get employment? I think there can be no doubt that they cannot get employment in Sydney at such wages as will enable them to support their families.

2713. At remunerative wages? I would not say remunerative wages—

2714. They cannot get a fair remuneration for their labor? I would not say that—I would put it in this way, that they, having families, are not by their own work able to earn sufficient to keep those families in respectability. I think work is paid for at a very high price notwithstanding, but I think the cause of the existing state of things is that these

J. Robertson,
Esq., M.P.

17 Feb., 1860.

people have, by the policy of our Government during many years, been kept here bringing up these large families when they ought to have been enabled to spread themselves over the country upon the land. A laboring man with seven or eight children cannot find employment for those children in the city; but, if they had grown up in the country there would have been employment for them. The employer of the laboring man there would not only have paid the man's wages, but also the wages of his wife if she had been useful; one boy might have been employed to look after a horse or some employment of that kind, another to go messages, another in other ways, while the girls might have been employed in the family of the employer, or if on a farm in dairy or other work. Thus the man would have been enabled to support his family; but in this country, where there are no manufactures, employment cannot be found in town. I think the actual work done is paid for at a very high rate.

2715. Are you in favor of letting public works in small contracts to working men? We did try that plan, but we did not find it work well. It would give the Government that class of duty that seems to me proper to devolve upon the contractor—the large contractor gives out his work in sub-contracts; he is thus between the Government and the small contractors, and I think that is the natural course of events. We know very well that, let the Government do what it will, there will be sub-contractors. In the case of the laboring people, the unemployed that I have spoken of, who were sent on to the railway works by the Government, there very soon became master men among them; and before they had been at work a fortnight or three weeks, there were complaints by those who had not been so successful against the more successful; and there were two parties formed in direct antagonism. Some of the more intelligent, or better informed, or better laboring people, got to be a sort of aristocracy, and there was a perfect battle between the two parties; one complaining against the other for taking too much of the work.

2716. Have you not had applications from persons of good education, who have been willing to turn their attention to anything? I remember one person of that description who expressed a desire for such employment, and to whom I offered work, but he declined it; only one however.

2717. Has any objection been offered by applicants to go up the country? Yes; there were generally difficulties thrown in the way—the deputations said people with large families did not like to go away. They looked for some work about Woolloomooloo Bay, Darling Harbor, or somewhere near the city. They were alarmed at the idea of going up the country, lest they should not have justice done them. There is a general impression among working people that they do not have fair play in the interior, though I believe they have more fair play in the interior than they have in Sydney. Certainly in the Police Courts, so far as I have been able to discover, they have a more careful examination into their cases than I have ever seen in Sydney. I have seen a great many hurriedly disposed cases in Sydney.

2718. Have you not heard of great objections to decisions in the country, under the Masters' and Servants' Act? Yes, and for that reason I brought in the Amendment Act now in force.

2719. Do you not think they were well founded? Yes, and for that reason I obtained the amendment of the law.

2720. Do you not think there are now persons in the Commission of the Peace in the country who ought never to have been appointed? Perhaps. Before I go to that matter, I may say that I believe now, since the present Masters' and Servants' Act Amendment Act passed, there are no complaints against the Masters' and Servants' Act, except, perhaps, by some individuals of the class of employers.

2721. You have been given to understand that one objection to going up the country on the part of working people is that they have no confidence in the administration of justice? Yes, quite so.

2722. Do you not think it an anomalous thing in a young country to send out money to bring in breadstuffs? Yes, I think so. I think we should not have been in that position if the Government had afforded the same facilities to agriculturists as they have done to the pastoral interest; but if the direction of the honorable member's question is, as to whether I am of opinion that there ought to be any protective duties, I should say certainly not. I would leave the people of this Colony to apply their time and capital in the best way they can, with a fair field and no favor.

2723. Do you consider that the Orders in Council, with respect to the sale of land, adapted to the settlement of the country? Certainly not; I think they were constructed with the greatest ability and forethought to prevent the settlement of the country by the smaller propertied people.

2724. Has it come under your knowledge, that the policy of the Legislature has had the effect of driving a large number of thrifty and industrious people, who had saved a little money, and who would have settled on the land, out of the country? I have it heard it said, but I do not know it.

2725. I understand you to say that you are in favor of *bonâ fide* agriculturists being allowed to select portions of land? Yes; *bonâ fide*.

2726. Are you aware that a portion of the population have been allowed the privilege of selecting portions of land without having them put up to public competition? Yes; these persons are the squatters, who buy under their pre-emptive right; many of them object to the picking out the eyes of the country by others, but see no objection to picking them out themselves.

2727. From what has come under your knowledge, have they selected some of the best portions of the country? Of course, they would have been very foolish if they had not done so, when they had the land open for selection.

2728. *By Mr. Lyons*: How do you account for the advantage you have spoken of being extended

extended to the pastoral and not to the agricultural interest? From the greater power of the pastoral interest in the legislation of the country. J. Robertson, Esq., M.P.

2729. Has this state of things never been brought before the Legislature before? Yes, often; but the pastoral interest has been all-powerful.

17 Feb., 1860.

2730. *By the Chairman*: Formerly, before we had Responsible Government, is it not the fact that these things were mostly done in England; and is it not another fact, that while the pastoral interest was most powerfully represented there, not a single whisper was heard in favor of the agricultural? It is true that, nominally, they were conducted in England, but I believe that the great desire of the English Government was to do right for all the people of the country, but they were so bamboozled by very clever people, who had the ear of Government, and who managed to send home very able gentlemen on their behalf, that the result was, that the pastoral people had all possible consideration, and the agricultural none.

2731. You will see that you have not replied to my question, which is this: Is it not the fact, that the pastoral interest was very powerfully and ably represented at Home, while no other interest was represented there? I would not say that no other interest was represented in England; but no other interest had a fiftieth part of the power there.

2732. Did you ever of any voice being raised on behalf of the small agriculturist? Yes; I think they generally had the appearance of a desire to aid the small agriculturist, but that was only, as it seemed to me, to throw dust in the eyes of the authorities of England. I think, while their expressions were in favor of giving the people the power of settling on the land, their whole policy was directed to prevent such settlement.

2733. *By Mr. Lyons*: Do you not think an Act such as you have spoken of, that would extend the same benefits to the agriculturist as is now enjoyed by the person engaged in pastoral pursuits, would pass the Assembly, constituted as it now is? I do not think it would, or I would have brought a Bill in. I do not think it would have the ghost of a chance.

2734. Are you of opinion that agricultural pursuits in this country are never carried on to pay except by parties who go on the land and work themselves? I think that is quite a mistake; I know instances of men in the Hunter district who have made thousands and tens of thousands by agriculture. I know agricultural lands that are let now at as high as £5 an acre, and these lands are held by the gentleman to whom they were originally granted; and he, having made a fortune by them, lets them at £5 a year an acre. That proves that agriculture cannot be so frightfully unproductive.

2735. That is a particularly favored district; do you know any circumstance of the kind in the western district? I believe the people of the western district obtained their wealth in the first instance by agriculture, that their pastoral occupation was at first very small; their principal means of living was agriculture, and the little stock they had was not the main, but merely a contingent means of support. The stock increased from time to time, and at length it was sent by their sons into the interior; here it continued to increase in numbers and in value until the owners became enormously wealthy, independently of their agriculture, and they then gave up the cultivation of the land, so far as they were personally concerned. I believe that is the history of nine-tenths of the early wealthy inhabitants of the Colony. Of late years gentlemen have come from England, and have gone direct to the pastoral business; and these men have made large fortunes. These fortunes have usually been made by men who have come with large sums of money and embarked in the line of business most fostered by Government, or by their superintendents, who have succeeded them. Seeing that that business had facilities offered to it they preferred going into that to entering upon agriculture. I will shew you how it appears to me the state of the laws would work in their favor. The Lien on Wool Act and the Mortgage on Cattle Act enable the grazier, who perhaps has £1,000, to buy £6,000 or £7,000 worth of property. The Mortgage on Cattle Act will enable such a person to pay down £1,000, and to give a mortgage on his cattle or sheep for the £5,000. Thus, instead of entering into business with an investment of £1,000, he has £6,000 invested. The Lien on Wool Act enables him to carry on his establishment until the wool comes down, when he reaps a large profit. No such facilities are afforded the agriculturist; he cannot extend his operations beyond his means, because he cannot obtain advances at all unless he pays cent. per cent., as the lenders are afraid he might become insolvent, and they would then lose all they had lent. The person engaged in pastoral business has also this advantage, the greatest facility is afforded him for getting on the land, for taking up the land without any delay—he may take as many acres as he likes upon what may be called a permanent holding, but what is called squatting—and I have myself known people hold their squatting land for forty years—that while for pastoral purposes he may take up any number of acres, a man who requires land for agricultural purposes must wait till it is put up for sale at auction, and then he may be brought into competition with some wealthier man who may purchase it.

2736. Do you know any person who has come into the Colony with large capital, commenced agricultural pursuits in the western district, and made them pay? I know a gentleman at the Hunter who is engaged in what is called "high farming," who is doing very well. I am not so well acquainted with the present people of the western district.

2737. Have you heard of the western district, particularly Bathurst, producing heavy crops of wheat, which have never been sold or made use of, and which have rotted in the barns at Bathurst? Most likely it has been the case, the country is so very productive in some seasons that more grain has been grown than has been required for the consumption of the people, and thus the grain, unless it could be sent away from the district, has been lost. The road between this and Bathurst over the mountains is such, that it will never, I think, pay the people of Bathurst to bring wheat to market here, over it, with a profit, until we have a railway.

2738.

J. Robertson, 2738. If there were easy transit to Bathurst, do you think the people of that district could cultivate five times the present quantity of land? Yes; but I am clearly of opinion that such easy transit as would enable the people of Bathurst to grow wheat at a profit for the Sydney market will never be obtained over the present mountain road.

Esq., M.P.
17 Feb., 1860.

2739. *By Dr. Lang*: Do you not think the natural market for a grain-growing district beyond the mountains would be the population employed in other occupations in their own district? Quite so; that is what the farmers grow for, they do not grow in contemplation of supplying other markets; but sometimes the crops are so large that they have more than the people can consume, then comes down the price, and the farmers are dissatisfied. If there were some safety-valve for this surplus supply, no doubt it would be better for the farmer—such as a railway to Sydney would supply.

2740. Do you not think that part of the country, with such high mineral capabilities as it has, will eventually have a numerous population employed in other ways than in agriculture? I think it is beyond question that such will be the case; but I believe, whatever the production of copper or minerals of that kind may be beyond the mountains, the people of Bathurst will never work them profitably until they have some better means of bringing the produce down to the coast; that the cost of carriage is a bar to any extensive operations in that direction.

2741. Are you not of opinion that the interference of the Government, to which you have already alluded, in regard to withholding facilities for the occupation of the land for agricultural purposes, and the interference of the Government with the natural distribution of population over the territory, that would otherwise have taken place, has been productive of great social evils that it will be very difficult to remedy? I am clearly of opinion that that is the case. I believe that the difficulty of obtaining land has caused intemperance on the one hand; and on the other has aided much in what is called the "social evil." I mean, that it has aided very much in the spread of that evil. I think if the land had been open, as it might very easily have been, to the people, young men would have settled down on the land and married, and there would thus have been some provision for the female inhabitants of the Colony, who would have had some employment on their husbands' farms. Now it seems to me, that the manner in which our laws have been framed has had a tendency merely to employ the male population, leaving the females in our cities and towns; the male population going away for a year at a time, and returning to spend their money. This, I believe, not only has a tendency to encourage intemperance, but also to spread what is called "the social evil" among females.

2742. *By Mr. Pemell*: Do I understand you to say, that a grazier can have two mortgages over one sheep at the same time, one over the body, and the other over the wool? Yes, certainly, and they are very different things; the grazier, who buys the sheep—and it is quite a common thing even with our greatest graziers—pays twenty-five per cent. down, and gives a mortgage, running for a great many years upon the property; at the same time entering into a bond that the stock shall not be reduced below a certain number. The Lien on Wool Act enables him to mortgage, for one year, the crop of wool. It is like an agriculturist having an estate of his own, mortgaging his land for a number of years—that is, a permanent borrowing—and then upon his crop, which will go off in a few months, obtaining an advance. That is the principle of the Lien on Wool Act; an Act which was taken from a West Indian law, for the encouragement of sugar planting; therefore, from the origin of the law, it would have been more analagous to have applied it to agriculture here. Maize certainly comes much nearer to the sugar-cane than wool does.

2743. Then it is your opinion that wheat growing will pay in certain spots in this Colony? I have no doubt of it.

2744. If the laboring classes could get land do you think we could grow sufficient wheat to maintain ourselves? I doubt whether we would grow as much wheat as we could consume in the Colony, and I am not quite sure that it is desirable that we should do so. I think it is improbable that a sufficient number of persons could be engaged in raising the £700,000 worth of breadstuffs now imported into the Colony annually without withdrawing from their labors those who are now engaged in occupations resulting in more wealth to the country. As it seems to me the object of all our enterprise is to get the most money for the least labor—the most money which, of course, represents the most means of comfort. It is undesirable to force into any direction a greater amount of labor than it is desirable for the interest of the people should be so employed. I think a large proportion of this £700,000 would be provided by our Colony if our land laws were as I should like to see them made; but I do not think, even if that were done, we should raise all the breadstuffs we should consume for years to come.

2745. *By Dr. Lang*: Do you think an agricultural population can be extemporised under any land law in any country? I think not. All I want is to see this branch of business in common with all others have fair play, leaving the people to take up whatever business they please. I have no desire that agriculture should have any special privileges or advantages, but I want to see that no restrictions are put upon it that are not put upon other branches of business, that the privilege extended to pastoral people may be extended to agricultural people. I do not wish in any way to cramp the pastoral people, indeed I think it most desirable that they should have every facility afforded them, but I desire that the agricultural people shall have the same facilities.

2746. *By Mr. Hoskins*: Do you consider it a healthy state of things that a new country adapted to the growth of cereals should export money to import those cereals for its own consumption? I think it may be, for this reason: the people who land in a new country are the best judges of what is best for them to do; they employ themselves in accumulating wealth, and they will best know whether it is most to their interest to gather gold, to obtain sheep

sheep or cattle, and to breed them, or to grow wheat. It is for them to determine that; and I think a country may have so much to do, and so few hands to do it, that it may be quite a healthy state of things for that country to import breadstuffs, or any other requirement. If breadstuffs are grown in other countries, where the people have not such a choice of advantageous employment, there can be no ill follow the people of this country buying their breadstuffs from them if they can do so cheaper than they could produce the same for themselves. I think the honorable member may have seen on the gold fields that the diggers do not begin on the washing stuff, but if they see nuggets they pick them up first. So it is with people coming to a new country: they go where they can get the most nuggets, either by farming, by gold digging, by sheep tending, or whatever else offers; and if there is any attempt on the part of the Government, on the one hand, unduly to force them into any of these employments, or, on the other, to restrict their entering upon them, I think it wrong. I think every facility should be given to afford a fair field for each employment.

J. Robertson,
Esq., M.P.

17 Feb., 1860.

2747. *By Dr. Lang*: But you have admitted that this force has been employed by Government, in restricting the people from distributing themselves over the territory, and employing themselves as they otherwise would in the concerns of agriculture? Yes, quite so; but the question asked by the honorable member, Mr. Pemell, was, whether I thought the £700,000 worth of grain now imported would be grown if the land were thrown open; I said I did not think it would, and, at any rate, for some time to come, for the reasons given, I did not think it desirable people should be forced into raising it, or favored for doing so; and then, when Mr. Hoskins asked me if it was possible a new country could be in a healthy state to export money to import grain, I said I thought it was possible, and I endeavored to shew my reasons for thinking so.

2748. You mean that the natural productiveness of the country is so great that it prospers in spite of the Government to keep it down? Yes.

2749. *By Mr. Hoskins*: Do you think a healthy state of things, when a number of people are idle and in a state of distress, that we should be sending money out of the country to import cereals—do you not think it would be better that those people should be employed in raising them here? That is not the question the honorable member put to me before. I think most certainly that it is not a healthy state of things—that it is most objectionable; and no man has endeavored more in a humble way to obviate that state of things than I have myself.

2750. Are you not aware that another new country, which has not been more than twelve years in existence, is exporting cereals to us; and are you not also aware that wages are fifty per cent. higher there than here? I am not aware of these things. I am aware that California exports sometimes some produce to this Colony—not very much, I think—but I am not aware what the price of labor in that country is, nor am I fully aware what the facilities there are for cultivation.

2751. *By Dr. Lang*: When a large population has been concentrated in whatever way in any city or town, is it practicable to transform any considerable part of that population into an agricultural population by any enactments? I should think so. I think if we had a change in the land laws, so as to facilitate the people in getting possession of the land, young people would draw off into the country; people without very large families would get away, and those who would go away would make room for those who would be left behind. While the young men, and those not having large families might go at once and take up occupation on the land, those with large families would not be able to do so; but they would have the advantage of a greater chance of employment, and this other advantage, that as their children would grow up, the young men would get into the country and settle upon the land, and the young women would marry others who had gone before, and thus the city would in time be relieved; but I do not believe any attempt to remove them rapidly would be attended with anything but disaster.

2752. Do you think the transformation of the working population of a city, into an agricultural population, would be either rapid or extensive? I think it would be both rapid and extensive. I may mention what I think bears directly upon this matter. In the days of the old convict system the best farmers we had were the mechanics who had been transported out here. When a man of this description went upon a farm he brought so much more intelligence to bear upon everything he did, that in a short time he was a very much better farmer for this country than the imported farmer from Europe. I know many prosperous and respectable farmers and graziers that were mechanics. I think, therefore, that a very large portion of the town population would turn to agriculture, especially as in this country farming is not conducted on what is called "high farming" principles; but when I spoke just now I referred to the people usually described as the unemployed, those with large families, who would not be able to go into the country.

2753. *By Mr. Hoskins*: Do you think if there were liberal land laws to facilitate the settlement upon the land of the class of persons to whom you have alluded, it would be necessary to send money out of the country to bring people here? I think the principle of sending money to the Mother Country, or any where else for people, is utterly wrong. We have no more right to import labor with the public funds than we have any other commodity. I think the taxing of the general community for the purpose of introducing laborers cannot be justified, because you tax the laboring people to introduce competitors in their own labor—in fact, for a purpose not likely to be directly beneficial to them, however beneficial it may be to employers. If the introduction of any people can be indulged in, it should be only for the purpose of colonization, and the high price of labor should not be taken into consideration. We do not import capitalists or lawyers, and we have no right, I think, to import laborers as laborers.

2754. You consider that if we had liberal land laws, and people could at once settle upon the

J. Robertson, the lands on easy terms, a suitable class of persons would be attracted to the Colony?
 Esq., M.P. Yes; just as the discovery of the gold fields attracted large numbers independently of public assistance. I think if we had a wise and liberal land law, a law by which people could settle down on the land without any delay, competition, or annoyance, persons in the Colony would advise their friends to come out, and thus we should have a large population, independently of any importation by the Government. I believe at the present time, persons who come out here for the purpose of obtaining land are so dissatisfied with the difficulties and cost in the way of obtaining land, that instead of encouraging their friends to come out, they discourage them. If we had a fair and liberal land law, the encouragement of these persons would be so much in favor of the Colony, that we should have a much larger immigration than by any grant of money from the public purse. Besides, I think that our present course is most impolitic; because, as Victoria has always been more attractive than New South Wales, it is a fact that, in many cases, the people whom we bring hither, as soon as they arrive, shift their luggage on board a Melbourne steamer and go away; we having paid for their importation. It seems to me to be wrong in principle, and wrong as a matter of expediency, excepting it might be in the case of some special district, for the purpose of colonization; but it never has been done for that purpose. A country might dispose of its land for the purpose of introducing people, but not for the purpose of lowering the wages of shepherds, of farm servants, or of stonemasons, &c.

17 Feb., 1860. 2755. You believe then, that the object of the persons who have voted this money for immigration, has been to lower the wages of the laboring classes? I believe, indeed it has always been avowed, that was the object of those who devised this scheme; many persons have since supported it from other considerations, some with the greatest sincerity from a feeling of patriotism and a desire to see the country populated; but these are exceptions, the rule has been to make the importations for the purpose of controlling the price of labor.

George Octavius Allan, Esq., called in and examined:—

G. O. Allan, Esq. 2756. *By the Chairman*: You are Managing Trustee of the Sydney Savings' Bank? Yes.
 2757. How long have you held that office? Five years.
 17 Feb., 1860. 2758. This Committee has been appointed to inquire into the social condition of the working classes of Sydney, and is desirous of ascertaining from you such particulars as you can give with reference to the savings of the mechanics and laborers,—I presume your books shew the social position of the various depositors? When we receive new depositors, we always take down their occupations, but we have never kept any statistical return of their various occupations.
 2759. Can you make up from your books a tabular statement shewing the amount of deposits at the end of each half-year, during the past two years, and also a statement shewing the occupations of the various depositors, the number of each class, and the total amount of each, with the minimum and maximum sums deposited, extending over the same period? Yes; but it would take a considerable amount of clerical labor and of time to prepare such a tabular statement.
 2760. Has your intercourse with the working classes, by the nature of your duties, led you to suppose that there is much distress among that section of the population at the present time? Occasionally, when drawing out their money, they say the times are bad, and that they are obliged to draw out a pound or two to support their families.
 2761. Is that complaint more frequently made now than it was twelve months ago? Not more frequently.
 2762. You do not notice any change? No; I can shew this from the return before me. The amount of deposits received by the bank from the 16th January to the 16th of February, our last receiving day, was £31,191; while from the 16th January to the same period last year, the amount received was £31,229, which is very close.

Mr. Thomas Smith called in and examined:—

Mr. T. Smith. 2763. *By the Chairman*: You are a stonemason I believe? Yes.
 2764. How long have you resided in Sydney? About six or seven and twenty years.
 17 Feb., 1860. 2765. From what part of the Mother Country do you come? From Scotland.
 2766. From what part of Scotland? From Edinburgh. I have been living in Pymont over eight years.
 2767. This Committee has been appointed to inquire into the social condition of the working classes of Sydney, with respect to the alleged want of employment experienced by some of the trades and by unskilled laborers; also, with respect to the character of the house accommodation—whether it has the necessary conveniences for the preservation of health and decency; and also, as to whether there is any considerable extent of vagrancy in the public streets. It has been represented to us that you could give us information upon some of these heads, can you say whether there is any want of employment felt at the present time? I think there is, for I know many of the working classes who are very badly off for want of some employment.
 2768. I suppose you have always been employed? I have been more fortunate than most of my class, but I have been out of employment for several weeks.
 2769. Are you out of employment now? Yes.
 2770. Notwithstanding that you are very well known? Yes; it is on account of my being well known that I have generally been employed.

2771.

2771. Do you undertake work on your own account or do jobbing? Jobbing is the principal thing. *Mr. T. Smith.*
2772. In your trade is there any considerable want of employment in the city? There is ^{17 Feb., 1860.} nothing going on in Sydney for masons at the present time.
2773. Could you form any idea of the number of masons in Sydney? I could not form any idea, for many have gone to the diggings to the Melbourne side, and to the railways.
2774. Could you form any opinion of the proportion of masons out of employ; is it one-half do you think? I know if I had work for two or three masons I could get fifty at an hour's notice.
2775. Does this want of employment extend to the other building trades, as carpenters and bricksetters? To all in the building line.
2776. You are of opinion that none of the building trades are fully employed at the present time? Far from it.
2777. Unskilled laborers? Such as masons' laborers and quarrymen are plentiful; they are the worst off of all, for when they get work they receive very little pay for it, and it takes all they earn to keep things going regularly.
2778. I suppose, having resided here so long, you have an extensive acquaintance with working people? Yes; I am acquainted very well with them.
2779. Has it come within your personal knowledge that there is any great distress—any actual destitution experienced from want of employment, by any families? I know that last week a mason died and it was very hard to get the money to bury him. We got up a subscription among those who were in work to pay the funeral expenses.
2780. Have you known any instances where families have been obliged to part with their furniture or clothing to pawnbrokers, or to sell them? Yes; I know there are people living near myself, to whom my mistress and others who could afford have had to give a loaf of bread now and then to keep them from starving.
2781. Are you speaking of persons of sober habits and steady character? Yes; they are quite sober to my knowledge; if they were not they would not be supported by the neighbors.
2782. Have you ever been into the interior? I have never been much into it. I just went up to the diggings, stopped there about four months, and came back again.
2783. Have you ever heard people express repugnance to go into the country, or known them to refuse employment in the country? If they could only get out of Sydney they would be very glad, but many of them have large families and nothing to move them with.
2784. With regard to the house accommodation in the city—what is your opinion of it in the older parts of the city? There are some very unhealthy places about Sydney, where the poorer classes live. I am not much acquainted with them; but I have sometimes had to do jobs in the neighborhood, and the smells have been fearful; I could scarcely work a day in them.
2785. Are you acquainted with other large towns in the Mother Country besides Edinburgh? Yes, with Glasgow, but that is a long time since.
2786. Do you think the state of the houses you have referred to must have a seriously prejudicial effect upon the health of the inhabitants and their moral well-being? Yes, I should think so.
2787. With regard to the children—have you noticed any large number of children in a state of neglect? I see a great many in the street very poorly clad and very dirty.
2788. Are you of opinion that there are children either without parents, or with parents who pay no regard to them—in a state of actual vagrancy? Yes, I have seen them in that state.
2789. It has been stated, for instance, that the children who congregate about Pymont Bridge are in a very wretched state? Yes, there are a great number generally about Market Wharf.
2790. Have you ever been witness of scenes of revolting immorality on the part of these children? I have never stopped to see. I have seen a great number crowded about the place who seemed to pick up a living about the wharf.
2791. Do you think if facilities were afforded to persons with small means they would settle upon the lands? I think a great many would—I am sure of it.
2792. That would make room for those who had no means, and who would remain behind in Sydney? Yes. If they had a little means and could get a bit of ground, there are a good many would soon leave Sydney.
2793. Is this the prevailing feeling of the persons with whom you come into contact? It is always their talk and feeling.
2794. *By Mr. Loder:* You have stated that if you wanted any assistance—any masons or laborers—and it was known, you would soon have a number of applications? Yes.
2795. Do you know whether persons who apply in such cases are actually out of work, and required employment, or whether they do so for the purpose of getting increased pay from the employers in whose service they are at the time? I am sure they are out of work, for there is scarcely one in Sydney that I do not know.
2796. *By Mr. Hoskins:* Is it not the fact that there are a larger number of apprentices engaged in building here, and on various jobs, than are employed in towns in the Mother Country? Yes.
2797. Do you not consider the reason there are so many youths employed here is the competition of contractors to reduce prices? Yes, because they get these lads to work for a mere nothing. They will not employ men, when they can get two or three boys to work for one man's wages.
2798. Will you be kind enough to state the average wages of stonemasons? From 9s. to 12s. a day; very few get 12s.

- Mr. T. Smith. 2799. What is the average pay of unskilled laborers who work in buildings? From 6s. to 7s.
- 17 Feb., 1860. 2800. From your observation of the character of the working classes of Sydney generally, do you think they will bear a favorable comparison for intelligence, sobriety, and regular habits, with the same class in the mother country? Yes.
2801. *By Dr. Lang*: You consider the mechanics of the different classes engaged in building operations quite equal in point of ability and moral character to the same classes at home? Yes.

THURSDAY, 23 FEBRUARY, 1860.

Present:—

MR. HAY,
MR. HOSKINS,

DR. LANG,
MR. PEMELL.

HENRY PARKES, ESQ., IN THE CHAIR.

James Pye, Esq., called in and examined:—

- James Pye, Esq.
23 Feb., 1860.
2802. *By the Chairman*: You have been a resident of the County of Cumberland some years? Yes, all my life.
2803. And have been engaged chiefly in farming pursuits, I believe? Yes.
2804. Are you acquainted with Sydney in any great degree? No, I am not.
2805. This Committee has been appointed to inquire into the social condition of the working classes of Sydney, with reference to the alleged want of employment, more especially of late; with reference to the house accommodation; and also to the existence of juvenile vagrancy in the public streets? I could not give you any information upon those points.
2806. Can you give us information as to whether there is employment in the country for laboring men? I believe there is plenty of employment.
2807. You are an employee of labor? Yes.
2808. What wages are you paying? Five shillings, six shillings, and seven shillings a day.
2809. Are you acquainted with many parts of the country beyond the County of Cumberland? Yes.
2810. And with any pursuits besides those of agriculture? Yes, grazing.
2811. Do you think there is a general want of labor in the country districts? I think there is.
2812. Is there a difficulty in getting hands? Yes.
2813. Do you experience any difficulty when you require laborers in obtaining them? I do not, but I live near Parramatta.
2814. Have you had any difficulty for the last two or three years? No.
2815. When you say there is a want of labor in the country districts, to what parts of the country do you allude, and in what pursuits? In the County of Cumberland, on the Hawkesbury, in the agricultural districts. The high price of labor is a great drawback to the agriculturist; and the second drawback is, that some years ago when we employed men we had a day's work for a day's pay, now we do not get more than two-thirds of a day's work, and that makes wages high.
2816. Many of the laborers are of inferior character, and do not work so well as those you formerly employed? Yes.
2817. How do you account for that? I think it is owing to the gold fields, and the great noise that is made about unlocking the lands and giving it to the poor man; that, I think, makes the men dissatisfied.
2818. It unsettles their character? Yes; they do not seem to settle down in the way they used to do, more particularly those who come out with their wives; it is difficult to get them to stop at any distance from town.
2819. Are the persons in your employment men of family? Some are, and some are single.
2820. Is it within your knowledge that there is an objection to employ men with families on country estates? I do not believe there is; I think employers would prefer them, they are better and more contented when they have their families with them.
2821. It is your opinion that there is not an objection among employers to take men with families into their service, provided they are of suitable character? It is.
2822. Do you not think the demand that you say exists upon the Hawkesbury is very limited? I do not think it is limited if employers could get men at reasonable wages, but there is no farmer who can pay 5s. a day for laborers; it does not pay them to cultivate the soil.
2823. What wages do you suppose a farm laborer could afford to take at the present rates ruling for the means of subsistence? That would depend upon whether engagement was with or without rations.
2824. I presume if you gave 5s. a day, it would be without rations? Yes.
2825. What wages could a farm laborer afford to take without rations? A single man could afford to take 4s. a day, and do very well.
2826. Could a man with a family? The wife I suppose could do something.
2827. She could not do much if she had three or four small children? No.
2828. Should not the rate of remuneration to a married man be sufficient to enable him to provide for his family—is not that the natural condition? The natural condition is, that if

if I am going to employ, I should look at the labor he is going to do for me, it is not the natural condition that I should look to what is to keep his family. If I gave four shillings a day to a single man, and five shillings to a married man, the single man would not remain with me.

James Pye,
Esq.

23 Feb., 1860.

2829. Do you not think the rate of payment for labor should be sufficient to enable a man to support his family? It should be provided the employer could afford it.

2830. Do you not think the circumstances of the country should be such that he could afford it—else how are people who labor to live? It is impossible they can.

2831. Must there not be something wrong, if the rates of remuneration are such as not to afford the means of subsistence to a laborer who has a family? Yes, certainly; and I think that is owing to the laboring class themselves. For instance, if I employ a man at 5s. a day, and find after a time that he is not earning 5s. a day, I discharge him; and the laboring classes have got so idle that very few of them are worth employing, not one in twenty.

2832. Have you any personal experience of the pastoral districts? Not a great deal.

2833. You think there is a good deal of employment for men in the County of Cumberland, if men would take such wages as the employer can afford to give? I am satisfied of it.

2834. *By Mr. Hay*: What is the kind of labor you have been accustomed principally to employ? Different kinds—in farming, and in tending orchards.

2835. Labor employed in improving? In improving.

2836. You require for that purpose a good deal of rough unskilled labor as well as skilled farm labor? Yes; but it is nearly all unskilled labor. I have some employed in clearing.

2837. There is a considerable amount of skill necessary to make an efficient farm laborer? Yes, a great deal more than is necessary for another laborer.

2838. Are the laborers you employ chiefly natives of the Colony or immigrants? I never employed a native of the Colony—they will not work—they are very idle.

2839. *By the Chairman*: You are a native yourself, I believe? I am.

2840. *By Mr. Hay*: Have you employed immigrants exclusively? Yes, immigrants and old hands.

2841. Men who have served their time? Yes; latterly I have employed immigrants.

2842. You rather prefer to employ men with wives? Yes; I have little cottages for them to live in, and they are rent free. I have now three men with me who have been with me some years. I have given them 30s. a week, and they have done very well, as they have got little freeholds of their own, and one is about to plant an orchard. That is a proof that men could live with less.

2843. How long have they been with you? Four, five, or six years, perhaps.

2844. The principal difference that you see, comparing the present time with the period before the discovery of the gold fields, is not the greater difficulty of obtaining laborers, but the deterioration in the character of the laborer? Yes, in the character of the laborer;—you pay higher wages and get less work.

2845. The wages of 5s. a day is more costly to you than 5s. would have been before the discovery of gold? Yes; some ten years ago we used to pay 3s. a day, and we got more work than than we do now for 5s. a day.

2846. You do not think 5s. a day would be too high now if the amount of work given for that 5s. were equal to what it used to be? I do not think it would be.

2847. Could you form a rough calculation what proportion the labor yielded by the laborer formerly at 3s. per diem would bear to that yielded now at 5s.? I have studied that subject, and I think, take the whole of the men, they do about a third less now.

2848. As an employer you calculate the labor not at the cost per diem, but according to the work done? Yes.

2849. If the amount of labor performed in a day were as great now as formerly, you could afford to pay the laborer one-third more? Yes. I consider, comparing the work done now with what was done formerly, that I am paying at the rate of 6s. a day.

2850. Do you think if labor were as effective as formerly, there would be a considerable increase in the amount of employment in the County of Cumberland, by the extension of improvements in the way of planting orchards and vineyards, and in the operations of farming? Yes; a great many more men would be employed if they would work at 3s. 6d. or 4s. a day. They could live in their own cottages, have no rent to pay, and grow their own vegetables. I should like to clear a good deal more of my land if I could employ people at that rate.

2851. And if they worked as hard as they used to do, you could afford to give them 5s. a day? Yes.

2852. You think the fact of their not doing the same amount of work as formerly arises from their unsettled disposition, consequent upon the disturbance of society by the gold diggings? Yes.

2853. *By the Chairman*: And the cry of opening up the lands? Yes.

2854. *By Mr. Hay*: You think in the County of Cumberland there is plenty of land which would be turned to the improvement of the land and to farming operations, if there were a good amount of good labor available? I am confident of it.

2855. There is plenty of good land even in some parts of Cumberland? Yes; plenty that could be turned to profitable account, no doubt.

2856. Is there more or less intemperance among the laboring classes, so far as you have come in contact with them, since the discovery of the gold fields? I fancy there is less in our district.

2857. There is an improvement in that respect? Yes.

2858. *By the Chairman*: Less intemperance and more idleness? Yes.

2859. *By Mr. Hay*: The old hands you have alluded to were many of them good laborers? Yes.

- James Pye, Esq.
23 Feb., 1860.
2860. But as a class, were very much given to intemperance? Yes; most of them were very intemperate, but they have many of them left our part of the country, and that accounts for the people being more temperate.
2861. Do many men come to you from Sydney seeking employment? I can get plenty of men; one of my men left this morning to go to the gold fields.
2862. *By Mr. Hoskins:* You say that wages are very high, and that that is the reason you object to employ men at the present time; have not your profits increased in proportion to the increase of wages? Mine have.
2863. Do you not think labor ought to share in a portion of that profit? Perhaps I am one out of a hundred. You will not find one in a hundred in Cumberland who have turned their attention to the same pursuit—fruit growing.
2864. Do you not think profits generally have increased? Not in farming in the County of Cumberland.
2865. Most people in the interior supply their hands with rations, what would you think fair wages for efficient farm laborers with rations? From 12s. to 15s. a week.
2866. Is it not the fact that men are engaged at lower rates? I am not aware of it.
2867. You say that men with families object to remain in employment, but you have some? Yes.
2868. How long have they remained in your employment? Mine are within sight of Parramatta.
2869. How long have they remained in your employment? One man came to me eighteen years ago, at £20 a year. I have been giving him £100 a year for the last two or three years, but he is a first rate man.
2870. Then the married men in your employment are not disinclined to remain? I am speaking of men further up the country.
2871. You say if you employed men at 5s. a day, and found they did not earn it, you would send them away—do you not think the laborer has an undoubted right to sell his labor to the best bidder? Yes.
2872. *By Dr. Lang:* Do I understand, in the case of these families who have been so long with you, that they have the opportunity of cultivating land on their own account? Yes.
2873. Do you find people of the working classes who have either farms of their own, or who are settled on leasehold farms, are less industrious now than people of the same class were before the discovery of the gold fields? I fancy they are.
2874. The change has affected them as well as others? I think so; they are more careless than they were.
2875. A feeling of recklessness has come over the working class generally? Yes.

Mr. Robert Appleton called in and examined:—

- Mr. Robert Appleton.
23 Feb., 1860.
2876. *By the Chairman:* You have been a pawnbroker for some years? Between seven and eight.
2877. Where has your place of business been situated? In Sussex-street, Bathurst-street, and Newtown.
2878. Is it not more than seven years since you were in Bathurst-street? Between seven and eight.
2879. Did you do what may be considered a large business? I did a large business, but I have been for some few months out of that business, about eight months. I did not take out a license the last time. I am now in the grocery business.
2880. Can you state to the Committee what was the course of your business during the time you were engaged in that way so as to shew whether it had increased of late years, and whether the persons visiting your establishment at different times brought you different descriptions of property? Formerly, the things brought to me were articles of mere luxury that they could well afford to spare; but of late they brought wearing apparel, bed linen, blankets, and things of that kind.
2881. When you started in that business it was the time when there was an unusual degree of prosperity, about 1853—when there were very high prices in consequence of the gold discovery? That was about the time, 1852 or 1853.
2882. What was the class of goods you generally received then? They were rather superfluities—goods the people could spare; but at the time of the gold discovery, when the people were going to the gold fields, I had a brokering establishment, and they were not so fond of pawning as of selling, because they wished to raise all the money they could to go to the diggings.
2883. During the last year, 1859, did many of the persons who visited your place appear to be in distressed circumstances? Very much so. I never saw them so much so; that was the reason in fact that I did not renew my license.
2884. Did many women, mothers of young children, come to you? Yes, and many hard working men—good able-bodied men.
2885. Did they ever appear to be in very deep distress; for instance, did they ever weep? No, they did not exactly like that; although they were in poverty they did not wish to shew it exactly.
2886. Did you receive such articles as the people could ill spare, for instance, bed linen, and clothing, latterly? Latterly I did.
2887. When you say latterly, what do you mean? During the last year, and the year before that, up to the time of my leaving off the business.
2888. What were the terms on which you carried on business—what were the rates of interest?

interest? Sometimes according to what the articles were, sometimes a shilling in the pound per month.

2889. Is there no law restraining the rate of interest? No.

2890. You can charge what you like? Yes.

2891. Do the various pawnbrokers in Sydney make different charges? Different charges, according to their principles.

2892. How many pawnbrokers are there in Sydney? I think about eight now.

2893. Are there any persons carrying on a business of this kind who do not take out licenses? Not that I am aware of.

2894. You are not aware that there are persons who privately take in pledges? I do not think there are; those who have licenses would be likely to act as a check upon that.

2895. What proportion of the pledges you have received during the last two years have been forfeited. I may say on the average one-third.

2896. Two-thirds have been redeemed? Yes.

2897. I should gather from what you have said that in your opinion there must be a great amount of distress? Yes, there is.

2898. Have you any extensive knowledge of the working men of Sydney? I have of the hamlets, that is, of Newtown, Kingston, and Cook's River.

2899. Are you a mechanic yourself? No, merely a storekeeper.

2900. Do you think, speaking as a citizen of Sydney, there is much suffering or destitution among the laboring classes of Sydney, arising from want of employment, among persons of steady habits, disposed to work if they could obtain it? I have been here twenty-eight years, and I never saw so much before.

2901. You think persons of sober habits, and industrious, cannot get employment? I know it. I believe that in the hamlets I could produce two hundred men who would take anything they could get—in Newtown, Kingston, and Cook's River.

2902. Does this want of employment extend to mechanics as well as to unskilled laborers? Yes; I know mechanics who would go and do the meanest job that could be taken, in order to have employment.

2903. Have you yourself during the last few months known any instances of downright suffering from want of employment? I have. I have known several people who have been for days together—who have scarcely had a bit to put into their mouths—men that were able to work and willing to work, but who could not get employment. I know it from their coming to my store to get little things, for I am obliged to give a good deal of credit even now.

2904. You are a grocer now? Yes.

2905. Have you found difficulty in getting in your little accounts? I cannot get my accounts from any of them, and if I bring them to Court I shall be worse off.

2906. *By Mr. Hay:* What are the general rates charged by pawnbrokers? Some charge two-pence in the shilling per month, but generally one penny.

2907. *By the Chairman:* I suppose it depends to some extent upon the kind of article pledged? Yes.

2908. You charge a higher rate of interest upon the small pledges? Yes, for there are so many forfeited, and when they are sold at auction we do not get our own money back again.

2909. You would lend five guineas upon a gold watch upon easier terms than one shilling upon a handkerchief?—

2910. *By Mr. Hay:* Would the interest upon articles of superfluity be larger or smaller than upon articles of common daily use? It would be rather larger upon articles of superfluity than upon those of necessity.

2911. Do you think some pawnbrokers study more the necessities of the persons who bring the articles to pawn than the nature of the pledge? There are some very hard-hearted people among that set; they do not study anything but how much they shall get.

2912. They have no general rule? They have not.

2913. In each case they may exact the highest rate of interest? Yes.

2914. So that in reality it will depend upon the necessity of the person pawning? Yes. I should be disposed to be as easy as I could with a person in need.

2915. *By Mr. Hoskins:* Are the generality of the people in your way of business animated with the same humane feeling? I am afraid not. I have had a great many losses, I know that.

2916. If you sell your pledges can you realise better prices in proportion for articles of luxury than for those of necessity? Yes; the latter will fetch nothing, no matter what you lend for them; for instance, I have lent ten or fifteen shillings for a coat, which has sold for not more than five shillings. This may be seen by looking to my books.

2917. Who are the purchasers of these articles of luxury? Any person who pleases.

2918. Are they generally speculators? Yes.

2919. Who ship them to other countries? No, not generally; in the case of coats they may buy them for speculation.

2920. Not the articles of luxury? No; they merely buy them to sell here again.

2921. Can you state whether the rate of interest charged by pawnbrokers in the Mother Country is fixed by law? It is.

2922. Do these persons, who represent themselves as being in great distress, express unwillingness to go into the interior if they could get employment? Not the slightest—they would go anywhere.

2923. Do you know whether they are persons of temperate and industrious habits? I do. I know many good, hard-working, steady men; some who have been employed in brick-making, some in farming, and some in drawing wood who have sold their horses and carts, who

Mr. Robert
Appleton.

Mr. Robert
Appleton.

23 Feb., 1860.

who have been walking about for weeks and weeks, to my certain knowledge, without employment. I have given many of them credit, and do not expect to see a farthing back again.

2924. I presume they are not persons who would go to a pawnbroker to pawn any of their goods unless from sheer necessity? I am sure of it. Many of them are men of spirit—men of pride, who form all sorts of excuses when they come to the office.

2925. *By Mr. Pemell*: Do you not think the law ought to regulate the rate of interest? I think not. The reason is that, where there is one article pledged here there are a hundred in England, and if the rate of interest were fixed here low very few would take out a license at all.

2926. As the law now stands is the time fixed for redeeming a pledge? Yes, three months; many articles could not be kept longer because of the moths.

2927. What class of persons chiefly visit the pawnbroker—the middle or the lower class? Both.

2928. Which is the greater proportion? The lower class are the majority.

2929. I believe the law in England compels the pawnbroker to keep the articles pledged with him twelve months, here the time is three months? Yes; but here if a coat is put on the shelf, at the end of three months it is like a riddle.

Mr. John Speerin called in and examined:—

Mr. J. Speerin.

23 Feb., 1860.

2930. *By the Chairman*: You are a pawnbroker? Yes.

2931. How long have you been engaged in that business? About nine years.

2932. In what part of the city is your establishment? I have been in Lower George-street nearly six years, and before that I was clerk with Mr. Heydon, in King-street.

2933. Will you state to the Committee whether there has been any change in the character of the articles brought to your place to be pledged during the last two or three years as compared with the class of articles brought a few years ago—that is, whether they more generally comprise articles of necessity, such as bed linen, articles of personal clothing and so on? A few years ago the articles brought were chiefly jewellery and Sunday clothes—good articles; whereas now they are generally the very last things the people have to part with, such as their furniture, beds, bed linen, children's clothing, and all kinds of clothing.

2934. What do you infer from that change in the character of the things brought to you? That many of these people who have come from the diggings when the times got bad, parted with their best articles, and now are driven to part with their children's and their own wearing apparel, and with their necessary furniture. I believe the times have been getting bad for the last three or four years.

2935. You say you have been engaged in the pawnbroking business the last nine years, and the first portion of the time with Mr. Heydon;—Mr. Heydon, I believe, had a large establishment in that way, and a large connection? Yes, a very large connection.

2936. Is it your opinion that the character of the trade at the pawn offices is a pretty sure indication of the state of persons in the lower grade of society? I believe it is the surest.

2937. That is to say, if people are generally well off, those who visit the pawn office will be people of improvident habits, who will bring articles of luxury such as watches, or unnecessary articles of furniture; but if they are badly off it will appear from their bringing articles of daily necessity? Yes, that is my opinion.

2938. If you had no other means of judging, would you infer from the change in the articles brought to the pawn office, that there is more distress now than formerly? Yes; I know it is so from the people; I know people who have pawned with me for the last nine years—formerly they had some very good articles, now they have nothing.

2939. I believe in the neighborhood of your office there are a good many people who live by manual labor? A good number who chiefly work about the wharfs.

2940. Have you any personal knowledge of the condition of many of these people and of their families—whether they are fully employed or not? My opinion is that they are scarcely employed two days in a week generally speaking at that end of the city. Most of the men who live about Argyle-street, street, and Miller's Point, are men who have been to sea, and who, having married in Sydney and got families, now work about the wharfs. During the wool season they are busily employed; but at other times they are hanging about the corners of streets looking out for a day's or for an hour's job, and their wives take in washing to support their husbands and families.

2941. Are the men and families supported by the women washing? A good many of the husbands get the washing on board ships and then go with their wives and take it home.

2942. Have you any personal knowledge of instances of positive destitution, where families have been without the ordinary means of domestic comfort, or without food? I have. I have sometimes been asked to look at some little article of furniture that has been left in a house, and when I have gone I have found that some dealer—and there are several who go about and supply these poor people with groceries and other articles, in exchange for their furniture—has taken away nearly every thing the house contained.

2943. How long have you been in the Colony? Since 1848.

2944. What part of the United Kingdom do you come from? From Ireland.

2945. Were you resident in a city there? Yes; in Limerick.

2946.

2946. Are you acquainted with any other of the cities of the old country? With none ^{Mr. J. Speerin.}
other.
2947. Comparing the state of the laboring population of Sydney at the present time with that ^{23 Feb., 1860.} of the population of Limerick, do you think there are any cases of equal distress here to what existed there? I think there are, and there is less relief here. In the old country there are a good many institutions which do not exist here, where the people may get relief.
2948. Is it not generally the case also that people have more personal friends there? Yes; if a family land here they seldom take any freedom with a next door neighbor; at Home it is not so; the people are known to one another.
2949. Perhaps, as a resident for some time in the city, you may, of your own knowledge, apart from your trade, know whether there is a want of employment felt in the city at the present time? I am sure there is a want of employment felt in the city, about the part where I reside, for I see the people walking about without employment.
2950. With regard to the house accommodation, I imagine you have a pretty good knowledge of that part of the city where you live; take "The Rocks"—as that locality is generally called—what is the character of the houses there as regards their construction, the means of ventilation, and drainage; is it calculated to preserve health and decency? I have never seen such a miserable class of houses as that on The Rocks. I know two or three houses which are not larger than this room, two or three families living in one house, perhaps partitioned off by boards; and for each of these partitions six shillings or eight shillings a week is charged.
2951. Have you noticed the want of ordinary means of convenience out of doors? I have noticed that they have scarcely a closet. Just near where I am living there are nine small houses and only one small closet, with no drainage.
2952. Are there families with children living in each of those houses? There are children.
2953. In such localities as you name do the children appear to suffer in health? I cannot say, but I know my children have suffered. I have buried one from it. There is a horrid stench coming from that place in The Rocks.
2954. Are the houses generally almost destitute of the means of ventilation? In Globe-street there is a sewer, but the houses are not connected therewith; the consequence is, there is always a very unwholesome effluvia from the yards and houses about that locality, and consequently they are not fit for Christians to live in.
2955. Have you ever noticed whether there are a number of children in a very neglected state in your neighborhood? There are indeed. I suppose there are some thousands of children running about the back streets of Sydney—Lower George-street, Harrington-street, and the back streets. When I say two thousand I believe I am within the number.
2956. Are there any children who appear to be either friendless, or having friends who pay no attention to them? I know many children up to twelve or fourteen years of age—children of both sexes—who are getting their living in the best way they can. Some of the boys fish about the wharfs and sell fish upon a string. They sleep in casks and old boilers on the wharfs.
2957. You say you notice children in this state of both sexes? Of both sexes.
2958. Have you ever noticed whether there are very young girls in a state of prostitution? At all ages—as young as thirteen or fourteen.
2959. I believe a good many Chinamen are living close to you? Yes.
2960. Some houses are full of them, are they not? Yes.
2961. How many do you suppose live in a small house of four or five rooms? I have the lease of a house next to mine, and I let that to a Chinaman and his wife. I see as many as twenty Chinamen in that place—probably more, but I wish to be within bounds. That house has six rooms. But there are houses on The Rocks—small wooden ones, with two rooms—in which twenty or twenty-five Chinamen live.
2962. In passing along the street where your shop is, I have seen some of the houses which appear to be jammed full of Chinamen? Some are as full as they can be. They all lie on the floor, and a large number sleep in one room.
2963. Have you ever been into one of these places? Often.
2964. Have you been offended by any bad smells? Very often. I had to turn away the Chinaman who lived in the house adjoining mine. The people used to bring fish from Broken Bay and keep it in casks, and the smell was dreadful.
2965. Do you think there is danger of disease breaking out in these localities? I think if warm weather were to set in there would be great danger.
2966. How many Chinamen do you think there are living within two or three hundred yards of your place? From Dr. Mackellar's to where I am living there must be four or five hundred.
2967. Have you noticed more Chinamen than Englishmen there at all hours of the day? Yes.

THURSDAY, 1 MARCH, 1860.

Present:—

DR. LANG,

MR. WINDEYER.

HENRY PARKES, ESQ., IN THE CHAIR.

John M'Lerie, Esq., J.P., again called in and further examined:—

John M'Lerie, Esq., J.P.
Mar., 1860.

2968. *By the Chairman*: It is understood by the Committee that you have some further information to lay before them than that you have already given? When I was last before the Committee the year 1859 had not terminated, and, therefore, I was not in a position to lay before them returns of the state of crime within the city for that year. I am now able to do so, and beg to hand them in. (*The witness handed in the same. Vide Appendix A.*)

The returns I formerly handed in had reference to the state of crime in 1858.

2969. Your evidence in describing those returns would apply to these? Yes, generally. There is, however, a note to one of these returns which was not attached to those previously handed in.

2970. Will you have the goodness to describe the nature of that note? I may state that this return shews a considerable decrease in crime in 1859, as compared with 1858, which is gratifying. The number of persons taken into custody during the year 1858 was 8,337, during 1859 it was 7,718, shewing a decrease of 619 apprehensions in 1859. These are the apprehensions, but in order to shew clearly the number of persons taken into custody I have appended this note: "Of the above apprehensions during the year 1859 the following were in custody more than once, so that the number of persons actually apprehended stands thus, males 4,259, females 2,966, total 7,225. There were 493 apprehensions of persons who had been more than once in custody."

2971. This return goes to shew that the persons who come under the notice of the police are, to a certain extent, a class? A class. There are 493 apprehensions connected with that class—a class continually under the observation, or in the custody of the police; one female was as many as twenty-three times in custody.

2972. Have you, or your officers, during the last month or two paid any attention to the Chinese inhabitants of this city? Yes, in consequence of my attention having been called by a member of this Committee to the number of Chinese in Sydney, I, about the middle of last month, directed the inspector of the district where they principally resided to examine all the buildings occupied by them as lodging-houses, and to report to me the state they were in, the number of persons in each, the number of rooms occupied by the Chinese, and the sanitary state in which they found these buildings. That return I now beg to hand in. (*The witness handed in the same. Vide Appendix B.*)

2973. Will you state the character of that return and the general results of it? It appears from the return that there were fourteen houses occupied as Chinese lodging-houses in the southern district of the city on the 18th February; these houses contained in all 84 rooms, and these rooms were occupied on that day by 619 Chinese. The whole of these houses, with the exception of one, are rented by Chinese lodging-house keepers; one, situated 142, George-street, rented by a man named Ogilvie, contains the largest number of Chinese; on that day there were in six rooms no fewer than 353 Chinamen; it is a large building, and was formerly occupied by Messrs. Mitchell as a store. With respect to the first six houses on the list, the inspector makes this remark—"They contain water and every other necessary accommodation, and are kept clean. These parties keep stores, and only accommodate with lodgings Chinese dealers who come from the diggings and other places to Sydney to purchase goods during their stay in Sydney." With respect to the next three houses, the landlords of which are Chinese, he reports—"They contain water and all necessary accommodation, clean and comfortable." The next is in Cumberland-street, contains four rooms, 41 Chinamen, water and all necessary accommodation, crowded and dirty." The next is in Goulburn-street, there are only six Chinese there, that is clean. The next is 97, George-street, Chinese landlord, contains 5 rooms; and on that day there were 50 Chinese in occupation. The inspector reports this building is crowded and dirty. 161, George-street, Chinese landlord, contains 9 rooms; on that day 150 Chinese lodging there. He says—"water and all necessary accommodation, crowded and dirty, bad drainage; old store." The last on the list is the building I have referred to, of which the landlord is an European named Ogilvie; it contains six rooms and had 315 occupants. The inspector reports—"water and all necessary accommodation, crowded and dirty, bad drainage, closets overflowing; old store."

2974. Does that return shew or did the inspector report that there were any Europeans among these Chinese? None. These buildings were occupied exclusively by Chinese.

2975. *By Mr. Windeyer*: Were there any females among them? I do not think there were.

2976. *By the Chairman*: There are none shewn on the return? No.

2977. Have you any information derived from your official position, as to the habits of the Chinese, as regards morality? Some time ago I met the captain of a vessel in which I sailed to New Zealand with troops at the end of 1844. He has since that time made about a dozen passages from China to Australia with Chinese, and I questioned him particularly upon that point. He said the public labored under a great misapprehension with reference to it; that in all the intercourse he had had with them on board ship he had never seen nor heard of from his officers or crew of the slightest act of indecency.

2978.

2978. You are not aware whether they frequent houses of ill-fame to any extent? Not to any extent; not to a greater extent than Europeans.
2979. *By Mr. Windeyer*: Have you any difficulty in the police inspection of these people; any difficulty in detecting crime? Yes; but I have a paid interpreter, he is employed to assist me and to interpret when a witness is sworn at a Court of Justice. His name is Johnson, he calls himself a Christian now.
2980. Have you observed at all the system of awarding weekly payments in affiliation cases? I have.
2981. Have you formed any opinion as to the policy of the large amounts at present awarded? I think, in many instances, the magistrates are not guided by any clearly defined rule in making the award. They do not sufficiently take into account the income of the man in fixing the sum.
2182. Are you aware of cases where young women are receiving payments from two or three persons at once for children? Within the last year or two one case came to my knowledge, that is all.
2983. You do not sit at the Police Office? No; but these payments are made through my inspectors, and I wish they were not.
2984. Do you think the tendency of giving such high payments is to increase rather than to suppress vice? I would not go so far as to say that.
2985. *By Dr. Lang*: Does the existence of the criminal class you have referred to in your evidence entail a very large expenditure upon the Government? It necessarily does, from the increased number of police required to look after them.
2986. Have you any suggestions to offer as to what course Government, from self defence for the protection of the community, ought to take with regard to that class? I look upon the criminal class of females as the most dangerous in a moral point of view, and we have no means of punishing them. There ought to be a house of correction exclusively for females, where they should be made to work for their support. At present there is nothing of the kind, and these hardened offenders who are sent to gaol care no more for the punishment, either physically or morally, than they care for going to bed. Some of them commit crime as they say, for the sake of going to have a "month's snooze."
2987. *By Mr. Windeyer*: Can you assign any cause for the apparent decrease in the amount of crime last year? I cannot. One would suppose from the scarcity of employment that crime would have increased, but I am glad to say the contrary has been the case. Although the number of idle people last year was greater than the year before, crime was less.
2988. *By the Chairman*: May it not be accepted as evidence of general social improvement? Yes.
2989. With reference to the main subject of our inquiry, the condition of the working classes, has the migration to the newly discovered gold fields at the Snowy River had any effect? I begin to see the effect already.
2990. Are a great many persons removing? Yes; and if the report of the discovery of gold at Shoalhaven be confirmed, a great many will go there.
2991. Do you pay any attention to the departure of the steamer? Yes; the steamers are generally watched.
2992. A great number are going by every steamer, I believe? Yes; and a great many are going by the road too.
2993. That would tend to increase that class of cases where a good deal of suffering often arises, where families are left without their natural protectors? Yes, for a time it will; that will be felt more by the Benevolent Asylum than by any other institution.

John M'Levie,
Esq., J.P.
1 Mar., 1860.

APPENDIX A.

No. 1.

PERSONS taken into Custody by the Sydney Police, during the year 1859.

APPENDIX TO THE FOREGOING EVIDENCE.

SEPARATE APPENDIX.

A.

Detective Office, Sydney,
21 October, 1859.

Sir,

Instead of leaving that portion of my evidence relating to children of tender years, I have annexed, for the information of the Committee, particulars of the grounds on which I gave those answers, so that they need not be printed.

I have, &c.,

CHS. E. HARRISON,
Inspector of Det. Police.

To the Chairman of the Committee
on the Condition of the Working Classes.

[Enclosure to foregoing.]

For the information of the Select Committee of the Legislative Assembly on the condition of the Working Classes of the Metropolis, I have placed upon paper the result of my inquiries, made amongst prostitutes and others, since my examination, together with descriptions of a few of the scenes I have witnessed during the last fortnight.

Mrs. B., alias C., resides at No. 260, Castlereagh-street, in a house belonging to T. D. The house contains two rooms and a detached kitchen. The room facing Castlereagh-street is 12 feet long by 10 feet wide; the other room is eight feet long by six feet wide. In the largest room was a table, rough sofa, bedstead, and a chair; in the small room there was a mattress on the floor, but no other furniture. On Saturday, the 8th instant, about 12 p.m., I visited this place in consequence of a man named Cooper, whom I had arrested for a robbery, having stated it to be his place of abode. Upon entering the house I found three men and four women. There was also a man lying in a state of insensibility, in the enclosed space in front of the house, who had been robbed and dragged outside; his property was laying upon the table. On the mattress in the small room was a young woman about 24 years old, quite insensible from drink. This young person belongs to a respectable family, and her parents reside in the Illawarra District. She told me that she left her home through having been seduced by a person who was staying in the district, and to whom she bore a child. Feeling disgraced, she came to Sydney, where her seducer deserted her, and refused to support the child, which shortly afterwards died. Since that time (about six years ago) she has been a prostitute.

Another of the women in this house was the wife of a respectable man, who only a short time ago kept a first-class public-house in Sydney. From some cause unknown to me they separated; he allowing her 10s. per week towards her maintenance. She has become a common prostitute.

The third woman is the mistress of the house. She, also, must at one time have been a decent woman, for, when searching after the stolen property which I supposed was hidden in the house, I found receipts for a sitting in one of the churches. This woman stated that the man Cooper had been cohabiting with her for some time, and had lived on the money earned by her prostitution.

The fourth woman was one of those low prostitutes, of whom there are, I am sorry to say, too many in Sydney.

One of the men was recognised, and is known to be a carman in Sydney. Two of the others stated themselves to be diggers from Rockhampton. The man who was lying outside was said to be from the country.

About 1 a.m. of the 14th instant, I went to a lane in Kent-street, known as Jake's-lane. The hovels in this place are occupied by prostitutes; one of them is a Mrs. J., about 40 years old, and the mother of five children, two of whom, both boys, one 9 and the other 6 years old are living with her; the other three are with their father, from whom she is separated. Her habitation consists of one room, in which there are two rough stretchers or bedsteads, a table and a chair. I found four persons in this room; they were prostitutes and their men. The children sleep in the same apartment.

Another hovel in the same lane consists of one room about 12 feet square; this place is occupied by a Mrs. P., a woman about 40 years of age, who cohabits with a lad named R., about 15 years of age. This woman is known to receive nightly a number of boys for immoral purposes. The scenes in this house are so disgusting as to be complained of by the prostitutes who reside in the neighborhood. On Sunday morning, about one o'clock, I visited this den, and found the woman and a blackfellow in bed on the floor, a sailor and a girl both entirely naked on a sort of stretcher or sofa, and the lad R. asleep on a bundle of rags in the corner. About one o'clock, on Monday morning, I re-visited this place, and saw two men and two women in one bed on the floor, one man and one woman on the sofa or stretcher, and one woman sitting up.

There also lived in the same lane a woman named C. C., now in gaol for some crime, who had a woman, whose name I do not know, and her four daughters staying with her; the ages of these girls varied from 6 to 12 years, yet they always staid with her, and must have witnessed the scenes which occurred whenever she brought men to the house; indeed I am credibly informed that the children frequently accompanied her when looking for men.

The cases above-mentioned and scenes described are not rare occurrences, but can be witnessed nightly in any of the parts of the city inhabited by low and abandoned women.

A. M. is sixteen years old, and lives in Darcey's-lane; she formerly resided with her mother, and they kept a brothel between them, but owing to some quarrel they separated. She states that she has been three years on the town; and acknowledges to having prostituted herself previous to that time, when in service. Her mother is now keeping a brothel in the same lane.

N. is 13 years old; she is and has been, during the last 6 years, the constant companion of a man known as "Blind I." This man keeps a brothel in Kent-street, and is a noted gambler. The girl accompanies him to gambling-houses, for the purpose of seeing that he is not cheated when using dice, or when tossing with money. Previous to keeping the brothel in Kent-street, this man kept a brothel in a lane which leads out of Liverpool-street, South Head Road; he had several girls there. I remember the brother of one of them applying to me to assist him in reclaiming his sister, as he was willing to work for and maintain her. He told me that he had frequently taken her home, but she was always induced by "Blind I." to return to his place. I rendered the young man all the assistance in my power; but it was of no avail, as she persisted in her abandoned course.

The girl — N. has two sisters; they are by different men with whom her mother cohabited. One of the girls, 22 years old, cohabits with a man named D.; the other one, 14 years old, resides with

with her mother, who is cohabiting with a man, and lives in Durand's Alley. The husband of this woman is a barber in Market street; he is a notorious gambler, and an associate of thieves; although a cripple, and using a crutch to support himself when walking, he has a young woman cohabiting with him.

H. T. says she is 15 years old, but appears to be about 13. She ran away from her friends at Maitland 12 months ago, and has been on the town ever since.

A. K. gives her age as 15, but looks much younger—says her mother is dead, and father at the diggings; cannot tell exactly how long she has been a prostitute, but supposes it to be about 12 months.

J. R. states her age to be nearly 16; appears to be about 14; states that her mother is dead, and her father lives at Redfern; has been about a year on the town.

M. A. H. says she is 16 years old; appears to be about 14. She states that she ran away from her friends at Maitland 12 months ago, and has been on the town ever since.

S. A. gave her age as 17, but does not appear to be more than 14; says her father is dead, and that she lives with her mother on the Surry Hills; denies being on the town, but is known to the Police as a frequenter of the theatres, and has been frequently seen leaving them at closing time in company with different men.

M. R. stated her age to be 15, but looks younger; has been a barmaid; since leaving her situation has become a prostitute. On the 17th October was committed to take her trial for stealing a silk dress and some jewellery.

A number of other girls who are about the same age have made similar statements.

In all these cases I have heard of none caused by distress; nor during the whole of my experience in Sydney do I remember one instance where a girl has been forced on the town by distressed circumstances.

There are, in the city, a number of brothels kept by persons who have young children living with them, and from the fact of the women bringing men to the house, in which there is sometimes only one room, the children must of necessity witness the scenes which are constantly occurring, particularly in some cases where even the lights are not extinguished.

With respect to younger girls, I can only say, let any of the gentlemen forming the Committee go into Hyde Park, the City, and its Suburbs, before 10 o'clock on Sunday nights, and observe the numbers of young children congregated there, and on pieces of waste ground in low neighborhoods, and, without disturbing these children, get near enough to hear their conversation and observe their actions—let this be done, and I am convinced they will not require further proof of the juvenile profligacy alluded to in my evidence.

I have frequently observed a number of children, varying from infancy to 12 or 14 years of age, in a state of nudity, bathing at the different wharfs leading out of Sussex-street; but more particularly at the Market Wharf previous to the building of the jetties which are now there. These children were of both sexes, and all mixed up together. I believe it is intercourse of this kind which first breaks down the barrier of decency, deadens the sense of modesty, and leads to criminal intercourse between boys and girls whilst they are only mere children.

Girls of tender years can be seen nightly, in almost any quarter of the city, followed by boys of all sizes, who act openly in the streets in an indecent manner towards them. The girls receive this rudeness with laughter and coarse jests. On the appearance of a constable they scatter to meet again at some other place. All these children have parents and homes. It was only on Monday night that I stopped and questioned one of a number of boys, about 13 years old, whom I had seen acting in an indecent manner to a female in George-street, and I learned from him, that he and his companions were the children of respectable parents, residing at Newtown, Redfern, and other suburbs of the city.

Before and during this inquiry I have had frequent opportunities of seeing the house accommodation among the lower classes of the community. It is extremely bad,—families consisting of father, mother, and 2 or 3 children, sometimes living together in one room. The children, through sleeping in the same apartment with their parents, must see things which they ought not to see. This, taken together with the warmth of the climate, and the bad example too frequently shewn them by their parents and women of bad character, who generally reside in the poor man's neighborhood, may, perhaps, account for some portion of the juvenile immorality so prevalent in Sydney.

There are in Sydney several dancing clubs formed by the youths of the city, and in some instances held at public-houses. These are termed "private clubs," and are frequented by young females of all ages. I believe these places tend to corrupt the morals of those who attend them.

There is likewise a rotunda or dancing saloon, which, when open, is not only a rendezvous for prostitutes, but where a number of young girls have received their first lessons in immorality.

I have also made some inquiries into the state of the working classes, and I have formed the following opinion concerning the want of employment:—That it is not the want of employment which is so much complained of as the low rate of wages which is now given, when compared with what was paid a few years ago. Many of the men who are complaining used to keep themselves by working 3 or 4 days in the week, whereas at the present time they are compelled to work all the week for a sum equal to that which they formerly obtained for 3 or 4 days' work.

In support of this statement I will call attention to the fact that the lessees of the theatres always calculate upon the pit and gallery audience to clear the expenses of the houses. This, coupled with the circumstance of there being two, sometimes three theatres, constantly open, besides other places of amusement, which are generally well attended, goes far to prove that there is not so much distress in Sydney as is currently reported.

In consequence of having withdrawn that portion of my evidence relating to children of tender years, I beg to mention a few of the cases which have come to my knowledge previous to and during my service in the police force.

Sometime in the year 1852 there was a circus in Castlereagh-street, where a number of boys, from 10 to 15 years old, were apprentices. Some girls used to come after these boys; and amongst them were three, aged respectively 9, 11, and 12. On one occasion I caught two of the boys named M'G. and E. in a hay-loft adjoining the circus, having connection with two of the girls. Previous to catching them, I had been told by different persons, that these children were frequently seen in the same situation. In 1854 these three girls were common prostitutes in Sydney. They were called K., B. M., and L.

Just before leaving Sydney in 1856, I was in Sussex-street about one o'clock in the morning; I found a little girl about 7 years of age standing at the entrance of one of the lanes. She told me that she was waiting for another girl, her companion, who had gone into a house up the lane with a man: that she had no home, her father being dead and her mother in prison. I went to the hovel she pointed out, and on looking in between the openings of the boards, I saw a man, about 40 years old, on the bed with a child. I burst open the door, rushed in, and struck the man a blow on the head, which severely wounded him, and threw him down a flight of steps to the rock beneath. When I questioned the girl, she told me she was nine years old. I sent the children to the police station for protection, but as the man appeared to be seriously injured I did not take him into custody.

About the same time, I was one night near the Markets, when I heard an old man say to a woman who had a child with her, I will give you half-a-crown. Shortly afterwards I saw the man take the child up the dark part of the Market. I followed him, and saw him place the child upon a stone ledge. I went up and took the child from him, and went after the woman, who had run away. The child said she was 7 years old; that the woman was her mother, and resided in — street, and that she knew her way home; where I sent her. Being engaged on other duty I was unable to adopt any other course.

Some

Some three or four years ago I was watching a young man who was suspected by the police of being connected with a gang of thieves. I followed him to Newtown, where he was joined by a girl. I saw them go down a lane in which there were no houses, and there, on the grass and under shelter of the fence, they had criminal intercourse. In endeavoring to get near enough to take them in the act, I accidentally made a noise, and the man got away. I questioned the girl, and she told me that she was between eleven and twelve years old; that she lived with her mother in Sussex-street, and some other particulars which I have forgotten.

A pawnbroker in the city was robbed of 62 gold rings by a young girl 12 years old; she was living with her mother and two sisters, one 15 and the other 19 years old. They were considered a respectable family, and moved in respectable society. Not finding the property on the girl, I searched the house, and recovered about 40 of the rings; whilst making the search, I learnt that the mother and daughters slept together in one room on the same bed, with only one blanket to cover them. In the room, slops of the most filthy description were contained in old soup-and-bouille tins, which had not been emptied for months, and the stench was so bad, that I was compelled to leave the room several times during the search. I afterwards learnt that the young girl who stole the rings was known to be a prostitute, and a frequenter of a casino then existing in King-street; she was sentenced to six months imprisonment. During the time she was in the gaol, she took the lead of the most abandoned women there, and was looked up to as a sort of chieftainess or leader by many of the prostitutes who were undergoing a sentence at the time.

Mr. S. P., toll receiver at the Pyrmont bridge, told me in the course of conversation, that he is constantly witnessing revolting scenes between boys and girls in the vicinity of the bridge. No later than Monday and Tuesday afternoons, there were a number of boys and girls of all sizes and ages, in a state of nudity, bathing on the south side of the Sussex-street end of the bridge.

The other evening he overheard a conversation between a girl about thirteen years of age, who sells oranges, and her brother, who is eleven years old. The boy called her by name, and told her in revolting language, that two men were coming down who wanted a———. Whereupon she left her basket in his charge, went and met the men, and afterwards went away in their company.

One night last week, three girls, the eldest being only eleven years old, came to the bridge; the eldest began to cry and said she was tired. Mr. P. told her to sit down and rest herself, which she did. After a time the two others left her. Some boys came down there and began pulling the girl about, Mr. P. drove them away, and began questioning the girl about her mode of obtaining a living. She told him that herself and her two sisters supported themselves and their mother by selling water cress, and by getting money from men and boys for going with them. She afterwards said, "give me nine-pence and you can go with me if you like," at the same time pointing to a small house on the opposite side of the bridge, as a place suitable for the purpose, and remarking "no one will see us there."

As another proof of juvenile profligacy, I may mention that I have been informed by a chemist, who has for years done an extensive business in Sydney, that several girls of only eight or nine years of age have been brought to him by their mothers for medical examination, having been more or less injured by connection with boys.

If the Committee think it desirable to examine any young girls, there are several now in gaol, undergoing various terms of imprisonment for robbery, who are well known to the police as prostitutes.

In conclusion, I beg to state, that I have made diligent inquiry for male vagrants among the youths of the city, and I can confidently say, there are not fifty houseless boys in Sydney.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 9: WEDNESDAY, 14 SEPTEMBER, 1859.

5. Retrenchment in the Public Expenditure :—Mr. Cowper moved, pursuant to *amended* notice,—
- (1.) That a Select Committee be appointed, to inquire and report what changes can be made in the respective Departments of the Government, with a view to promoting their efficiency, and at the same time reducing their cost to the public, and that such Committee have power to send for persons and papers.
- (2.) That the Committee consist of ten Members, viz. :—Mr. Arnold, Mr. Flood, Mr. Parkes, Mr. Jones, Mr. McArthur, Mr. Byrnes, Mr. Robertson, and the Mover and Seconder (Mr. Cowper and Mr. Bayley).
- Debate ensued.
- * * * * *

7. Retrenchment in the Public Expenditure :—The Debate on Mr. Cowper's motion,—
- (1.) That a Select Committee be appointed, to inquire and report what changes can be made in the respective Departments of the Government, with a view to promoting their efficiency, and at the same time reducing their cost to the public, and that such Committee have power to send for persons and papers.
- (2.) That the Committee consist of ten Members, viz. :—Mr. Arnold, Mr. Flood, Mr. Parkes, Mr. Jones, Mr. McArthur, Mr. Byrnes, Mr. Robertson, and the Mover and Seconder—interrupted by the foregoing Message,—resumed ;—
- And Mr. Hodgson requiring that the proposed Committee be appointed, by Ballot,—
- Question—That a Select Committee be appointed, to inquire and report what changes can be made in the respective Departments of the Government, with a view to promoting their efficiency, and at the same time reducing their cost to the public, and that such Committee have power to send for persons and papers,—put and passed ;—
- Whereupon the House proceeded to the Ballot, and the Speaker declared the following Members to be, with the Mover, the Committee duly appointed, viz. :—Mr. Flood, Mr. Parkes, Mr. Jones, Mr. Forster, Mr. Arnold, Mr. Robertson, Mr. Byrnes, Mr. Hay, and Mr. McArthur.

VOTES No. 14. THURSDAY, 22 SEPTEMBER, 1859.

4. Attendance of Member of Legislative Council :—Mr. Cowper moved, That the following Message be carried to the Legislative Council :—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee to inquire into and report what changes can be made in the respective Departments of the Government, with a view to promoting their efficiency, and at the same time reducing their cost to the public, with power to send for persons and papers, and that Committee being desirous to examine the Honorable Jacob L. Montefiore, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

Legislative Assembly Chamber,

Sydney, 22 September, 1859.

Speaker.

Question put and passed.

RETRENCHMENT IN THE PUBLIC EXPENDITURE.

PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 14th September, 1859, "to inquire and report what changes can be made in the respective Departments of the Government, with a view to promoting their efficiency, and at the same time reducing their cost to the Public," with "power to send for persons and papers," and to whom on the 8th ultimo was referred "the Evidence taken before the similar Committee during the last Session of Parliament" (1858), have agreed to the following Progress Report:—

In consideration of the matter referred to them, your Committee have taken the evidence of several witnesses, but, in consequence of the frequent interruptions to regular business that have occurred, they have been unable to complete the inquiry. It would be impossible to do so at this late period of the Session; your Committee, therefore, deem it advisable to submit to your Honorable House the Evidence which has been taken by them, and to recommend a resumption of the inquiry during the ensuing Session.

A. McARTHUR,
Chairman.

*Legislative Assembly Chamber,
Sydney, 5 June, 1860.*

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 21 SEPTEMBER, 1859.

MEMBERS PRESENT:—

Mr. Cowper,		Mr. Byrnes,
Mr. Hay,		Mr. Forster,
Mr. Arnold,		Mr. McArthur,
	Mr. Parkes.	

The Honorable Charles Cowper, Esq., called to the Chair.

The Committee deliberated as to their course of proceeding in reference to the matters referred for their consideration, and decided on taking the evidence of gentlemen unconnected with the public service, but experienced in the management of banking and mercantile establishments.

[Committee then adjourned till Friday, the 23rd instant, at 11 o'clock]

FRIDAY, 23 SEPTEMBER, 1859.

MEMBERS PRESENT:—

The Hon. C. Cowper, Esq., in the Chair.

Mr. Byrnes,		Mr. Parkes,
Mr. Hay,		Mr. Forster,
	Mr. McArthur.	

G. K. Ingelow, Esq., called in and examined.

T. Buchanan, Esq., called in and examined.

[Committee then adjourned till Wednesday, the 28th instant, at 11 o'clock]

WEDNESDAY, 28 SEPTEMBER, 1859.

MEMBERS PRESENT:—

The Hon. C. Cowper, Esq., in the Chair.

Mr. Forster,		Mr. Hay,
Mr. McArthur,		Mr. Parkes.

A. McDonald, Esq., called in and examined.

The Honorable J. L. Montefiore, Esq., M.L.C., attending by permission of the Legislative Council, examined.

W. Kirchner, Esq., called and examined.

[Committee then adjourned till Wednesday, the 5th proximo, at 11 o'clock.]

WEDNESDAY, 5 OCTOBER, 1859.

MEMBERS PRESENT:—

The Hon. C. Cowper, Esq., in the Chair.

Mr. McArthur,		Mr. Hay,
Mr. Forster,		Mr. Parkes.

The witness summoned for this day not being in attendance,—

Committee proceeded to deliberate upon their future course of action in carrying out the inquiry.

[Committee then adjourned till the 12th instant, at 11 o'clock.]

WEDNESDAY, 12 OCTOBER, 1859.

MEMBERS PRESENT:—

The Hon. C. Cowper, Esq., in the Chair.

Mr. Parkes,		Mr. Forster
	Mr. McArthur.	

The Honorable G. Eagar, Esq., M.L.C., attending by permission of the Legislative Council, examined.

Committee further deliberated upon the course of subsequent proceedings.

W. A. Duncan, Esq., *Collector of Customs*, called in and examined.

Witness withdrew.

Previous deliberation resumed.

[Committee then adjourned.]

WEDNESDAY,

WEDNESDAY, 16 MAY, 1860.

MEMBERS PRESENT:—

Mr. Gray,		Mr. Robertson,
Mr. McArthur,		Mr. Wisdom.

A. McArthur, Esq., called to the Chair, in room of the Honorable C. Cowper, Esq., former Chairman, whose seat in the House had been vacated since the previous sitting.

Committee deliberating upon their further course of procedure,—

Motion made (*Mr. Robertson*) and *Question*,—That at this late period of the Session, it is inexpedient to take further action upon the subject of Retrenchment in the Public Expenditure, and that the Chairman be instructed to prepare a Draft Progress Report, to accompany the Evidence already taken before the Committee,—for consideration at the next sitting.—*agreed to.*

[Adjourned till Friday, 18th instant, at 11 o'clock.]

FRIDAY, 18 MAY, 1860.

MEMBERS PRESENT:—

Mr. McArthur,		Mr. Wisdom.
---------------	--	-------------

In the absence of a Quorum of the Committee, the meeting convened for this day *lapsed.*

TUESDAY, 22 MAY, 1860.

MEMBERS PRESENT:—

None.

In the absence of a Quorum of the Committee, the meeting convened for this day *lapsed.*

TUESDAY, 5 JUNE, 1860.

MEMBERS PRESENT:—

Mr. Gray,		Mr. Robertson.
A. McArthur, Esq., in the Chair.		

Committee met pursuant to summons

The Chairman produced a letter from J. J. Calvert, Esq., *Clerk Assistant, Legislative Council*, under date the 21st ultimo, bearing upon certain Evidence taken before a similar Committee in the Session of 1858, and now referred to the present Committee.

Letter read.

Committee deliberated.

Motion made (*Mr. Gray*) and *Question*—That this letter be appended to the Progress Report about to be brought up to the House—*agreed to.* (*Vide Separate Appendix A.*)

The Chairman then laid before Committee a Draft Progress Report, pursuant to Resolution of the 16th ultimo.

Draft read.

And Committee having considered same,—

Motion made (*Mr. Robertson*) and *Question*—That the Report, as read, be the Progress Report of this Committee—*agreed to.*

Chairman requested to report progress, together with the Minutes of Evidence.

LIST OF WITNESSES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

RETRENCHMENT IN THE PUBLIC EXPENDITURE.

FRIDAY, 23 SEPTEMBER, 1859.

Present:—

MR. COWPER, MR. MCARTHUR, MR. HAY,		MR. FORSTER, MR. BYRNES, MR. PARKES.
--	--	--

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

G. K. Ingelow, Esq., examined:—

1. *By the Chairman* : You are manager of the Oriental Bank? Yes.
2. And have in your employment a large number of clerks of various qualifications? Yes; from young men of no experience to men of considerable experience.
3. Would you have any objection to state to the Committee generally the rate or scale of remuneration you give these gentlemen in their various branches, and with reference to their qualifications and responsibility? I have no objection, but I must inform the Committee that the Oriental Bank has two classes of *employés*;—those appointed out here, in the local establishment, and those who receive their appointments in England from the Court of Directors. The salaries of the latter are not regulated by local circumstances; those of the former class are so. I generally commence by giving a young man of no experience, except his general education, £100 a-year, gradually raising it to two, three, and four hundred a-year, as he may appear to be worth the additional remuneration, from time to time, and opportunity for promotion offers; but those gentlemen appointed by the Court of Directors receive considerably higher emolument; but they are persons of some experience in business. The lowest salary given by the Court of Directors is three hundred a-year to assistant accountants, and they may rise to the highest positions in the bank, with emoluments ranging from £1,500 to £3,000 per annum.
4. *By Mr. Hay* : With regard to the branch in this Colony does it rise to that? Not to the highest point in this Colony. The climate is much better here than at the Mauritius, China, &c., and that is taken into consideration.
5. *By the Chairman* : Those are Indian salaries, I presume? The highest are partly Indian, and partly obtained through length of service. The responsibility of a manager of the Oriental Bank is very great; he has no local Directors to assist him; the whole responsibility is therefore on the shoulders of one individual, at each point uncontrolled, except by the regulations of the bank and the travelling Inspector from the Court, whose range of duty extends over Shanghai, the Mauritius, and India, to New Zealand and Australia, and who, at distant intervals, arrives at particular spots.
6. With regard to your Colonial appointments, how long would elapse between the appointment at £100 and its arriving at £400? If I found a young man shewing anything like reasonable ability, I should give him an increase of not less than £50 for the second year, and

G.K. Ingelow,
Esq.

23 Sept., 1859.

G.K. Ingelow, and the same for the third; if he shewed very considerable ability he would get on still faster, or he might not get any promotion on the other hand from not shewing any aptitude for business or disposition to make himself useful. I have received applications from Government clerks for employment in the bank, but I do not think I ever knew a clerk leave a bank to go into a public office, therefore, I presume, the chances of promotion in a bank are better than in public offices.

Esq.
23 Sept., 1859.

7. *By Mr. Hay*: Now anyone who after three or four years experience in the public service went back to the bank, would he take the position he left three or four years previous? I have no doubt in any Colonial bank, where there is everything open to young men, they are far better off than in the Government service; the chances of rising are very remote; in the bank there is always the probability of getting a branch in a few years.

8. What is the average salary of your agents? The agents in the country are paid £400, with a house furnished, and in some of the branch banks of the other establishments in the larger towns, such as Goulburn and Bathurst, the managers get, I believe, £500 or £600.

9. *By Mr. McArthur*: What I was going to say, was that the chance of getting promoted depended generally on the prosperity of the banks? There is a considerable chance of promotion in the large local banks of the Colony, such as the Commercial, the Bank of New South Wales, and the Joint Stock Bank. I imagine young men in a banking house have an advantage over those in public offices on account of their superior chances of promotion, and of getting branch banks. Suppose one man to enter a Government office and one a bank at the same time, the one in the bank would, I think, obtain the better position first.

10. *By Mr. Couper*: Are you aware of the remuneration given to the various classes of employes in Government? I looked at some tables in the Report (*the Retrenchment Committee Report*), I have not looked at it very carefully, perhaps you could let me see one—(*looking at the Report*) here is a tabulated statement of the salaries of officers of the Houses of Parliament.

11. Look at the Legislative Assembly? Those salaries certainly appear to me to be on a fair scale, unless the persons employed are required to set up very late at night (*Mr. Couper*: *No doubt they are*)—that would put them in a worse position than a clerk in a bank who leaves at four or five o'clock in the afternoon.

12. Do your clerks generally leave at four or five o'clock? Yes, except when there is a Mail outwards or inwards. I (*refers again to the Report*) observe here Mr. Under Secretary Elyard, £800 a-year, that seems to me to be a small salary. It is not more than equivalent to the salary drawn by most of the accountants in banks, and I should certainly presume that the Under Secretary to the Principal Secretary's Department must hold a more responsible position than an accountant in a bank.

13. With regard to the Under Secretary of the Treasury, with which department you have transacted business, do you consider £800 at all excessive? I should say that is a very small salary if it is to be taken also in conjunction with his length of service.

14. What is the salary you give your accountants generally? The accountants draw £600 to £700 with residence, but then they are persons not only eligible for, but certain of, promotion, unless by their own default, to a higher grade, where their salaries would be considerably increased; that puts them in a better position than an Under Secretary.

15. Have they any retiring allowance? We have in the Oriental Bank a plan which might be with advantage adopted by the Government offices;—each person in the establishment subscribes a certain amount per annum to a general fund, which accumulates, and will provide, in the course of a few years, pensions for widows and orphans, and also persons retiring from office; but the plan, as regards distribution of the income, is not settled yet. We anticipate from this accumulation to have, in 5 or 6 years, a capital of £50,000, with an income of £6,000 or £7,000 per annum. This fund also provides for the fidelity of all those who subscribe to it to the extent to which each individual would have been required to find security.

16. Is that under the management of the bank? It is in the hands of trustees, one the Chairman of the Court of Directors at Home, another the Chief Manager of the bank, the the third, the Chief Accountant—these being supposed to represent the three interests, the Directors, the Manager, and the Junior Officers. It is, I consider, a very excellent plan—one I think the Government, or any one employing a large number of persons, should adopt with the necessary modifications. It gives the employer a very great hold on the employed, as if the latter throws up his position he throws up the benefit he would derive from the fund to which he has been a subscriber.

17. At what rate do you make the deduction? One per cent. on the amount for which the fund is liable.

18. What rate of pension does it secure? The scheme is not sufficiently mature to enable me to say—the matter is in the hands of an actuary, the fund being only in the course of formation. In four or five years, when the capital will probably be not less than £50,000, it will be devoted to giving pensions to those who have served a certain time, and also pensions to any widows of officers who have died in the service, besides forming a guarantee fund for the protection of the bank against defalcations.

19. You stated that when the Court of Directors send a gentleman out from England £300 a-year is the commencing salary. You commence much lower here; how do you account for that—is it on account of the distance they have to go—do they require that inducement to come to the Colony? The gentlemen sent out by the Court are persons of business experience—those who commence here on the low rate are men of no experience. When we require to take into our service here one who has higher qualifications, he enters also at higher pay; but the system originated in the Indian Establishments where all Europeans were a superior class, the clerks being for the most part Hindoos, Mussulmen, or Singalese,

- as the case may be. The scale of pay in India is high—£300 being the lowest sum on which, G.K. Ingelow,
Esq.
a young man can keep up a position of respectability.
20. You spoke of salaries of about £400, then £800—have you many intermediate? There are assistant accountants who commence at £300, and work up to £400. 23 Sept., 1859.
21. On a graduated scale? It depends on promotion in the whole establishment. Those sent out here from England are liable to be sent to India, China, or elsewhere, by the Court of Directors at Home.
22. Have you any officer in receipt of £500 or £600 a year? Yes, the deputy accountants. There are three classes of accountants—the assistants, the deputy accountants, the full accountant; their pay ranges from £300 to £700. The next grade is that of the deputy managers, who draw £1,000.
23. They are eligible in this office? Yes.
24. Have you cast your eye through the other departments of the Government—look at the Lands and Works, if you please, and tell us what you think of the scale of salaries there? I presume some new arrangement has been made here, as all the clerks appear to have entered at the same time—'56 or '57. I find the highest salary after the Under Secretary's, which, I think, is very moderately paid, is chief clerk in Land Branch, £500 a year.
25. *By Mr. Hay:* What is the length of service? Eighth February, 1841, now eighteen years. Well, if there is any responsibility in the duty he performs, it is certainly not a large salary. The other salaries are on a lower scale, from £350 to £150, in the Surveyor General's Office. I presume these gentlemen have some professional skill. (*Mr. Couper: No, they are the same class.*) It is to be taken into account—in a banking establishment there is a great amount of money passing through the hands of the clerks, and they have, therefore, more responsible duties than a clerk simply engaged in writing letters. I think all clerks, where there is a considerable amount of money passing through their hands, should have salaries sufficient to provide them with all the reasonable necessaries of life.
26. But you would do that in all departments of the Government? I should be particularly cautious, where clerks had money to handle, not to have them pinched at all.
27. Would you not pay every clerk in the Government, to place him above that temptation? I would not like to employ anyone and pay less than he was worth; but, where there was charge of money, a clerk should be paid specially for that duty. (*Looking at the Treasury Table.*) The chief clerk of the Pay Branch, I see, has £600; he entered in '27.
28. Is that an extravagant salary? No, I think not; I presume it is a position of responsibility, to say nothing of the great length of service. The accountant at £530 entered, I see, in 1837; the salary certainly is not high. Looking down the whole list, the salaries do not appear high at all. I should say the clerks with £150 and £175 are better paid than the seniors.
29. I suppose all your gentlemen give security? Yes, the lowest £1,000, rising to £5,000 for managers.
30. Are they answerable for losses, who are entrusted with money, do they make up sums lost by negligence or mistake? The cashier is liable to make up deficiencies, so are the clerks under him.
31. You hold them responsible for mistakes? Yes.
32. *By Mr. Parkes:* Do mistakes of that kind often occur? I think not often. The cashier does occasionally pay a sum of money in mistake, but not frequently.
33. Would the other banks be bound to check him if they discovered it? It occurs in paying money over the counter.
34. *By Mr. Byrnes:* Then it would generally be a small amount? Not always. I saw lately a case where a cashier brought a man up for receiving £100 in excess of the cheque, and which he had refused to return.
35. *By Mr. Parkes:* How often do these mistakes occur over the counter? Small deficiencies occur about once a month, or so, I should think; but the cashier in most of the banks is supposed to receive an extra pay to cover losses which must occur. I think in most banks they give the cashier £50 or £100 higher pay than they give in other departments, as he is liable for losses.
36. You do not consider this item in paying your officers generally? No; because it would not appertain to their position,—the cashier only is liable.
37. And he alone? Yes, and he alone.
38. He is not only liable then for mistakes of his own, but for those of his juniors? We hold him accountable, unless he can trace it to some one.
39. This is only for losses considered reasonable from the multiplicity of payments? Yes.
40. *By Mr. Couper:* You find no difficulty in supplying yourself with efficient gentlemen at fair rates of pay? No, I do not; there are always a number of young men moving about from one part to another, and many are willing to leave Government offices to get into a bank. I have known clerks leave the bank of which I am manager to go to other banks; and *vice versa*; but whilst I have received them from Government offices I never knew them leave the bank to go back to Government.
41. What is your opinion of the public service generally—from what you know of it, are you able to say if they are over or excessively paid for the duties they perform, or are you of opinion that the duties are lighter than in other positions?—The office hours are from 9 to 4, with liability to be detained longer if their official duties require it? I presume there is an immense amount of work in Government offices which can be done by mere copying clerks. I do not say that the lower clerks, the 2nd and 3rd class and assistants, are not sufficiently paid; I see nothing niggardly there, but I think that the higher clerks, who, by dint of long service and the display of superior abilities, have risen to be chief clerks and accountants, and under secretaries, the Government pays very poorly. I consider the pay,
for

G.K. Ingelow, for instance, of Mr. Lane and Mr. Elyard, and Mr. Fitzpatrick, very low. I think the upper clerks are all alike in this respect.

23 Sept., 1860. 42. *By Mr. Hay*: In point of fact you don't think there is any difficulty in finding abundance of persons whose business is that of mere copying clerks, and you think they are very well paid? Whether they have any reasonable prospect of advancement I cannot say; if the prospect is poor they must be the better paid to induce them to remain.

43. *By Mr. Byrnes*: You would not, as a matter of course, increase the pay of an officer for long service, if he shewed no ability? If the Government desired to retain the services of a clerk in a low department, they would have to pay him high; if the prospect of promotion under Government was very small, some clerks drawing £200 a-year would leave to take £150 in a bank, knowing they would make up by the more rapid promotion.

44. But would it follow, as a matter of course, in case of a vacancy, that he would be promoted unless he had the ability for the higher office? No.

45. *By Mr. Hay*: Perhaps, Mr. Ingelow, you will say whether you think an allowance should be made in proportion to length of service, merely as such, or should it be taken merely as an element in considering promotion? There has been a practice in Government of increasing payment on account of length of service.

46. *By the Chairman*: There is no graduated scale now? No; the length of service is generally considered a legitimate ground for increase, but it does not follow, as a matter of course, that after so many years he should be entitled to additional pay if not fit for higher office.

47. It is only an element? Yes; only an element.

48. *By Mr. Parkes*: Suppose a case of this kind in the Government service:—A person holds an appointment for a number of years, say 10 or 20; it is then discovered he is not qualified to discharge his duty and is discharged for incompetency;—what do you think about compensation for loss of office in that case? I cannot say he is entitled to it, but it seems odd the Government should take so long to find it out.

49. Would it not appear upon the principle of abstract justice that the country ought to be compensated when he had enjoyed his pay so long—that he should refund? I presume the Government would not be at the loss of all they had paid him.

50. *By Mr. Hay*: You presume the person has been unfit for service the whole time; can you not suppose a person having been quite fit for service for 20 years and quite unfit for the remaining five? I think the question did not suppose him ever to have been competent; if his incompetency arose from physical incapacity, through old age or sickness, he would be entitled to compensation.

51. *By Mr. Parkes*: I think you have been in the Colony about five years? Yes.

52. Your business has brought you in contact with the Government? Yes, with the Treasury Department, for three or four years.

53. In England, before you arrived here, had you much intercourse with Government? Not in England. I have had intercourse with Colonial Governments, and in India.

54. May I ask, from your experience, whether you are enabled to offer any opinion of the efficiency of the general organization of our establishments, in comparison with that British Dependency, or of the Mother Country? I am not in a position to give an opinion.

55. You are aware of Dickens' description of "circumlocution"? Yes.

56. Have you seen anything of that kind here? Yes, there is some unnecessary correspondence. It is an invariable fault attaching to all Governments—Home and Colonial.

57. You have arrived at the opinion some improvement might be made in the departments? I think there might; by more direct communication between the departments much now done by letter could be done verbally. This would probably necessitate bringing the government offices nearer together, as for instance in this place every department of the Government is in a different building, and these are at a considerable distance apart.

58. It would be a saving then if a group of buildings were erected for government offices? Yes, a great saving.

59. Supposing the whole of the government *employés* were discharged, do you think there would be much difficulty in replacing them by efficient men? I imagine there would be a very great difficulty, as you would require a certain amount of experience; if the whole staff of any department were to be suddenly changed, at once the department would fall into disorder, and would suffer for some time however clever the new men might be.

60. But without reference to the necessary experience—put that out of the whole case—do you think there would be any difficulty, so far as general fitness was concerned, even suppose the change took place gradually? I presume that if the Government adopted some measures which would lead to a considerable number of clerks leaving the Government in a reasonable time they would be able to replace them. I think the community could supply the Government with a sufficient number of persons, if there was no other extraordinary demand upon it.

61. I should infer from your answers already given, that you do not consider the salaries high—the general range of salaries? I do not; and particularly the clerks of the higher order, I consider their salaries low.

62. *By Mr. McArthur*: I think I understood you to say the managers got houses? Yes.

63. The agents, do they get them also? Yes.

64. Do the accountants get anything in that way? A simple salary.

65. *By Mr. Couper*: Does it occur to you that the circumlocution to which Mr. Parkes alluded was more conspicuous in this than in other Governments, or not? I think I have seen it displayed to its greatest height in India.

66. *By Mr. Parkes*: How long were you in India? Nearly ten years in Bombay, Calcutta, Ceylon, and Singapore.

67. Your previous answers, so far as they affect the question of comparison with this Government, relate to India? India and the Crown Colony of Ceylon. India being at that time under the Company, its machinery for the transaction of business was of a most cumbersome character.

G.K. Ingelow,
Esq.
23 Sept., 1859.

68. *By Mr. Cowper*: Is it your impression, or is it a general idea in the city, that the establishments of the Colony are on an excessive scale in point of numbers, and that they must be reduced? That certainly appears to be the general impression—whether there are grounds for it I cannot form an opinion—that there is an unnecessary expenditure in government departments.

69. If these gentlemen are employed from 9 till 4, and sometimes longer, that is as much as the Government ought to expect from them all the year round? If they are fully occupied it is by no means an excessive amount of labor to expect from a clerk. It is less than the time given in most merchants offices or warehouses.

70. Do you think that these hours could be fairly extended as a general arrangement? I should say there could be no great cause for complaint if they were extended for another hour in the afternoon; I do not wish to express any individual opinion of that sort,—I am rather in favour of short hours; I do not think you gain much by lengthening the number of hours as you would probably get no more work by keeping an individual on his stool for one, two, or three hours extra.

71. Would you give them any hour for lunch? Yes, in such case.

72. Speaking of general impressions—is it not a general impression that public servants are too highly paid—what is your impression of the payment of the public servants, from the Principal Secretary to the lowest? I have not heard it said that the public servants are too handsomely or too highly paid; I have seen it so stated in debates in the Parliament, but not in any other place; I cannot suppose any man of business would consider the Colonial Treasurer, or any Minister, could be overpaid at £2,000 or £1,500 a year; I should think most men of business consider the sum inadequate for so responsible a position, seeing also that the holder of the office may be thrown out of it any day.

73. What is the salary of the highest official in the banks in this Colony? I presume about £2,000 a year, with furnished residence.

74. *By Mr. Byrnes*: You spoke of your agents—what are the duties of agents, generally speaking, in the country? The country managers have generally the management of a small branch bank; they have to refer to the head establishment in Sydney as to making advances, discounting bills, and lending money generally. They are bank managers on a small scale.

75. They are not simply banks of issue I infer? They carry on all the business of banks in the interior, receiving deposits, discounting settlers paper, &c.

76. Are there any gentlemen in the interior appointed to advise with the manager? I believe in all but the Oriental Bank they have a Board on a small scale to carry on their business, in the same manner as in Sydney; they have a board to advise with them.

77. *By Mr. McArthur*: You said it was your general impression, taking all the circumstances into account, that a young gentleman entering the public service would be at a disadvantage with one entering a bank? Yes, he has far less chance of advancement.

Thomas Buchanan, Esq., examined:—

78. *By the Chairman*: I believe you are acting manager of the Bank of Australasia? I am acting manager at present.

T. Buchanan,
Esq.
23 Sept., 1859.

79. Will you have any objection to state to the Committee the rate of remuneration you give in your bank? The salaries differ very much—we have no fixed salaries for particular duties; the manager has, at present, £1,200 a-year, with residence.

80. Your next? The accountant, £600.

81. Has he a residence? No.

82. *By Mr. Parkes*: Is there any salary between? No.

83. Is he an officer of a long period in the service, generally speaking? It takes him some time to arrive at that grade—I am the present accountant, and have been in the bank between 9 and 10 years.

84. *By the Chairman*: What is the salary next to you? The teller, £450; it is usually £500, without residence.

85. Do they give security? Yes—all, high and low.

86. Ranging from what? From £2,000 downwards.

87. Descending to the next officer, what does he get? £400—sub-accountant.

88. And lower down? The clerks in the office generally average £200, or rather more.

89. Have you any between £200 and £400? Yes, the receiving-teller has £350; one of the ledger-keepers has £325, some of the clerks £250, the lowest, with one exception, is £150, the lowest, £100.

90. What are the hours of business during which you require their attendance? From 9 to 4 in the afternoon—occasionally later, till 6 or 7.

91. Do you often require them later? Every Monday, the exchanges of the banks being completed on that day. We have no fixed hour for leaving—when the work of the day is done, which is rarely before 4 o'clock.

92. Is there in your establishment much opportunity of promotion? Yes, owing to the number of branches established—during the last 3 or 4 years, however, the promotion has not been so rapid.

- T. Buchanan, Esq.
23 Sept., 1859.
93. To what salaries can you promote them in these branches? Accountants, £350 to £400; branch managers, £750, with a residence.
94. This office is generally filled by a gentleman promoted from Sydney? Yes, or from some one of the other branches.
95. Is there much difficulty in filling these offices when vacant? No, we have experienced none. There is a rule, rarely departed from, that promotion takes place in the bank. I know of no instance of a person being appointed to a senior position without first going through the routine of the office.
96. That is an inducement to persons to come, and when they come to stay? Yes.
97. Have you ever considered—have you arrived at any opinion as to the relative position of Government clerks and those in banks? No, I have generally had so much to look after at the bank, that I have not considered the subject sufficiently to give an opinion, yet, I would prefer a bank to the public service. I cannot give my reasons for the conclusion, but I think a banking establishment the best for a young man.
98. *By Mr. Parkes:* Are there many leaving the Bank of Australasia to go into public service? I never heard of anything of the kind.
99. You never did this? I religiously avoided it.
100. Have you known persons to leave the public service to join a bank? Yes.
101. Have you any general impression as to the amount of work required from public servants and those in private establishments, and are the latter in that respect at a disadvantage? That is my impression.
102. They are not so hard-worked as you are? No, that is my opinion; I have no knowledge of the details of the working of any department of the Government.
103. *By Mr. Byrnes:* When the clerks have left the public service and gone into a bank, have you found them as efficient as others? Yes.
104. *By the Chairman:* That is they have not been spoiled in the public service? Yes, just so.
105. Are they sufficiently “fast” for your purposes? Yes, quite; we do not encourage fastness.
106. *By Mr. Byrnes:* Have you any class of gentlemen in the position of agents? Not in this Colony—in Victoria we have.
107. *By Mr. Hay:* How many branch banks have you in New South Wales? Three; Maitland, Newcastle, and Ipswich.
108. The cashier has £450, £500 has been given, and the highest salary is that of the superintendent—£2,500? Yes.
109. *By Mr. McArthur:* I think, Mr Buchanan, you made a remark that the clerks were not so fully employed in the Government as in private establishments, that is merely your impression? Only an impression. I would wish to state with reference to it, that my opinion is arrived at from the regularity of the hours of Government officials; we have busier days than others—on the occasion of the Mails coming in or going out, we are busy till 8 or 9 o'clock.
110. You never heard that of the public servants? I never heard of it.
111. *By the Chairman:* Do you think that generally speaking, that the responsibility on the officers of the Government is as great as that on gentlemen in banking offices? I think not, for these reasons—there are so many grades, so many heads of departments in the Government, on whom would rest the responsibility; in the bank, every clerk has his personal responsibility.
112. The clerks in the bank have greater responsibilities on their shoulders than persons merely employed in copying letters? Yes.
113. Have you persons who are simply employed as copying clerks? It is the duty of the juniors as they come, they are only put to it till they shew their fitness, then they are promoted to a more responsible duty.
114. *By the Chairman:* What do you give them? We give them £150; it depends on their fitness how soon they may get an increased salary—perhaps a month or two, according to ability.
115. *By Mr. Hay:* If the clerks did not get beyond mere copying clerks for want of ability, would they be promoted on account of long service, if they did not shew any aptitude for business? No, there is no rule of the kind, they rise by their efficiency.
116. *By Mr. McArthur:* I think you said you never knew a case but one, but what the next in office was promoted? No, the promotion takes place in the bank, not as a matter of course by seniority, but according to who is the best qualified.
117. Not guided by length of service? Other things being equal, that should weigh.

WEDNESDAY, 28 SEPTEMBER, 1859.

Present:—

MR. COWPER,
MR. HAY,MR. PARKES,
MR. FORSTER,

MR. MCARTHUR.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

A. McDonald, Esq., called in and examined:—

118. *By the Chairman:* You were formerly the chief officer of the Union Bank in the A. McDonald, Esq. Colony, and are now a member of the large mercantile firm of Messrs. Flower, Salting & Company? Yes.

119. The Committee is, as you are perhaps aware, appointed to inquire into the efficiency of the state of the Public Departments, and are desirous to obtain information with reference to the remuneration generally given to gentlemen in various grades of employment in the banking and commercial establishments of the City. Will you have the kindness, therefore, to give the Committee any information which you possess upon the subject? For instance, with regard to the bank with which you were connected? The salaries of managers range from about £600 to £1,000 a year. In the Union Bank the manager has a free residence, besides coals (or firewood) and candles. The salary is £1,000 in Sydney. Some of the other banks pay as high as £1,200 a year.

120. Is there any provision in these banks for a retiring fund? None at all.

121. With respect to the second class of officers—accountants and cashiers—what is paid to them? From £300 to £500. In Sydney the salary of an accountant is £500, but it varies according to particular circumstances.

122. Length of services then would operate so as to increase the stipends paid? Yes, that is the great inducement to remain in the service, the chance of rising from the lowest to the highest post.

123. Perhaps you will state generally what is the scale? About £150 a year for junior clerks who can write a good hand—that is the lowest scale.

124. Then what is the probable period of time before a junior clerk rises to a higher grade? The bank keeps a register of those who enter their service, in which is the date of their entrance, the duty they perform, and the rate of their remuneration, together with the office they hold. Every officer has a separate account, shewing the gradual advancement of each. Whenever a vacancy occurs the Inspector has to consider who is the most suitable officer to fill it, or entitled to it by seniority of service; as it sometimes happens that a person of senior rank is unfit for the appointment, although fit for his own peculiar work. Whenever you raise the salary of an inferior officer, others of the same standing or grade look for an increase too. The managing and adjustment of this list requires, at times, considerable tact and judgment to avoid discontent.

125. Is there much competition with other banks? It sometimes happens that inferior officers (possessed of superior abilities) obtain higher appointments in other establishments.

126. The salaries then are not always sufficient to keep men in the banks? Certainly not (in regard to the officers underpaid). The inspectors' salary ranges from £2,000 to £2,500 a-year, and every expense paid whilst travelling, but no residence is provided.

127. How long is one of those juniors, under ordinary circumstances, in obtaining advancement from £150 to a higher branch? There are a good many chances in the lower scale—in the course of a month sometimes. He may get to be bill-clerk or ledger-keeper, and would then receive £200 or £250 a-year.

128. Is the advancement pretty speedy? Yes, but sometimes an officer is found to be peculiarly fitted for a certain office and retained in it; in such case he gets a proportionate increase of salary. When an increase of 25 per cent. was allowed, in consequence of the state of affairs five or six years ago, it was afterwards made permanent, being added to the fixed salaries.

129. Do they give security? They all give security from £500 to £10,000.

130. What are your general hours of business? From half-past 9 to 4, with an hour for luncheon.

131. Between half-past 9 and 4 an hour? Yes, they get dinner or lunch, but some of the officers are kept to transact business.

132. Are you often detained beyond your business hours? Very seldom, unless employed in cancelling notes or preparing for the yearly balances.

133. Is that peculiar to your bank? All banks are something similarly situated.

134. You have been furnished with a copy of the evidence taken last Session—have you looked over it? I merely took a glance at it.

135. Can you give an idea of the comparative scale between the public and private service? No, I cannot.

136. Have you any opinion as connected with the efficiency of the public service, and the remuneration given compared with commercial matters—are you aware whether the members of the public service are under-paid or over? As far as I can judge I do not think they are over-paid.

137. You speak, of course, with reference to the responsibility of banks as compared with Government departments where money is not involved? I do not speak of responsibility, they have the chance of advancement which does not seem to exist in the Government service. I would certainly take a less salary in a mercantile establishment, or in a bank, than under the Government.

A. McDonald, 138. On the ground of promotion? Yes.

Esq. 139. Can you say whether, from your intercourse with the Government, there are too many
28 Sept., 1859. *employés* in the public service? In fact I have not sufficient knowledge of the working of the Government to say whether it is so or not.

140. Have you come much in contact with the Government departments? Not much.

141. Could you give us information as to the "circumlocution" spoken about? At times our staff varies very considerably, and to perform the work we have to employ fresh officers.

142. Have you any impression that in the Government offices there is too much circumlocution, or that the public service could be reduced in numbers by a more systematic mode of doing business? Only the head of a department could answer that question properly. I have often perceived where half-a-dozen indifferent hands might have been replaced by a couple of competent clerks; but then higher salaries would have been required, so that the cost of the department might not have been lessened.

143. *By Mr. Hay*: What is your experience with regard to the comparative amount of salary in mercantile establishments as compared with banks? Mercantile offices generally pay better than banks. We never hesitate in our own office in giving an ordinary clerk £200 to £250 a-year. I should be very glad now if I could get a good competent man, and would readily give him £600 a-year. I think a person competent to conduct such a business as ours would be well worth £1,000 a-year.

144. Of course you are less hampered than the banks in giving salaries proportioned to usefulness? We are not hampered at all. The salaries in the banks range from £150 to £1,000 per annum; when Inspector, I had full power to appoint or dismiss officers, to fix or increase salaries, only subject of course to confirmation by the London Board—generally allowed as a matter of course.

145. *By Mr. Cowper*: Did the bank send out many officers from London? A few; but I seldom found them superior to our ordinary Colonial hands. The usual salaries agreed to be paid to supposed competent clerks for a term of two or three years was about £250 per annum, with passage to the Colony paid by the bank.

The Hon. J. L. Montefiore, M.L.C., examined:—

The Hon. J. L. Montefiore, M.L.C. 146. *By the Chairman*: You are a merchant of the firm of Montefiore, Graham, & Co., in this City, and a Bank Director? I am.

Esq. 147. The Committee is appointed to inquire into the scale of remuneration given to the
28 Sept., 1859. Government officials, with a view to ascertain how far it is desirable to reduce the Government expenditure, without lowering the standard of efficiency. With that view, anxious to ascertain how far the remuneration given in the mercantile establishments and banks of the City is in a fair comparison with that of the public service, will you have the kindness to state to the Committee what is the scale of remuneration given for gentlemen in various grades of employment in the banking and mercantile establishments—say, for instance, in the Bank of Australasia, with which you are connected? I can give the answer you require, but I would warn the Committee that it would not be fair to be guided by the answer. Any gentleman who goes into a mercantile house looks forward in time to become a principal, and in a banking establishment, a manager; therefore those circumstances influence him in the amount of remuneration asked for in the commencement of his career. In a merchant's office in Sydney it is very common for a young man to enter as an apprentice; the amount of remuneration received during every year of apprenticeship is exceedingly limited, that is to say, that it is almost nominal. Immediately on leaving his apprenticeship, supposing he had shewn ability during that term, he would at once receive a salary varying from £150 to £200 a year, which would generally go on increasing, say to about £300. The head clerks of mercantile establishments, and there could be only one or two, received from £400 to perhaps £450 a year; having arrived at that amount of salary, they look to the probability that steady attention may lead them, and it generally does, so as to becoming a principal in the business when the head thinks fit to retire. In banks, the salary commences at a higher rate, for the reason that all banks require security for each clerk who enters the establishment; and I rather think the lowest salary given is £150. It goes up through different grades to either £1,000 or £1,200—I think the latter sum—a year; the last named sum is given to bank managers, and they generally have a residence also attached.

148. How long is it generally that a gentleman has to wait before he rises from the lowest to the highest grade? It is impossible to give a definite answer, because circumstances vary the time in a bank; it must depend entirely upon the death or retirement of those above. In a mercantile establishment, how soon the heads may think proper to retire from business and leave it to the juniors to conduct. It is difficult to specify any period in a bank, but I should say that the time to rise from the lowest grade to the managership would be from 15 to 18 years.

149. Are your hours in your own firm very long? To take the average throughout the year from 9 till half-past 5; from 9 till 5 in winter, and from 9 to 6 in summer, always allowing the clerks half an hour for refreshment. At the sametime, when the Mail is on the eve of starting, the clerks are often at work from 9 in the morning till 10 at night. But it must be remembered that all my clerks have reasonable holidays when they ask for them.

150. The Government hours are from 9 to 4 all the year round, do you think that sufficient? Quite sufficient.

151. If they work well from 9 to 4, the public have as much labor as they have a right to ask for? Quite so.

152. Have you any difficulty in getting gentlemen to fill situations in the bank, or your own firm? I have never had any difficulty myself, but I should say from what I know of the banks, as well as other establishments, that the difficulty is to obtain really good men.
153. Average men you can get? They are in abundance. You must know that a really able and laborious man is better worthy of £300 than an average one of £150 a-year.
154. Have you had much intercourse with the Government departments? I have not.
155. Can you form any opinion whether the Government departments are efficiently conducted, or otherwise? I am quite unable to form an opinion.
156. Has the business you have had to contract been done with facility? I can only speak from hearsay; the Custom House and Treasury business has been managed through my clerks, and they do not complain.
157. *By Mr. Parkes*: As a Member of the Legislature, have you ever directed your attention to the subject of the reconstruction of the departments when before the Legislature? In what way am I to give an answer—do you mean a division of the work?
158. I mean generally a reconstruction; the matter has been before the Legislature? Generally, as a matter of course, like any other Member I have devoted some little time to the matter.
159. Have you arrived at any definite opinion as to the reorganization of the departments which you think it necessary to state to the Committee? I look on the question as one of such a tenor, and requiring so long a reply, that I could hardly give it you. Do you mean whether I think a division of the Department of Lands and Works necessary, or other departments to be brought under it; if so, I am of opinion that the division of the Department of Lands and Works is highly necessary; that it is exceedingly advisable that the management of Railway and Telegraphic Communication should be under the control of a Responsible Minister; and further, that attention should be immediately paid to procure efficient men for the public service, more than to seek retrenchment in their salaries. From what I have heard and know of the work done in banks and mercantile establishments, I believe that the public service could be conducted with a smaller number of hands, supposing all the hands employed were fully competent and able men.
160. Do you think there is much circumlocution in the business, and more labor expended than is necessary with the present system? My own connection with the Government has been almost *nil*. I can only speak from hearsay, but from that I have not the slightest doubt that there is a great deal too much circumlocution.
161. *By the Chairman*: Does it occur to you to make any suggestion to the Committee generally with reference to the organization of the Government departments; the mode of conducting the business of the Government generally, and the scale of remuneration to the officers?—Can you make any suggestion for providing a superannuation fund, or for giving retiring allowances?—have you such a fund in mercantile offices? I think it most advisable that it should be done, and think it the only way to procure efficient men.

[*The witness then withdrew, it being understood that, if convenient, he should draw up a statement explanatory of his ideas on the last-named questions, for the guidance of the Committee.*]

Notwithstanding the opinion that has been enunciated by the House of Assembly, I have always been of opinion that no clerk should be admitted into government employ without having undergone some previous examination, for I do not see in what other way *efficiency* is to be secured. I do not think it necessary that such examination should be competitive, but merely a test of ability in writing, arithmetic, and English composition. Such a Board of Examiners might consist of three Members of the Legislature, whose duties should be purely of an honorary nature.

I do not believe that it would tend to economy in the public service that the existing rates of salaries should be reduced, but I would recommend that five per cent. of all salaries should be retained for the creation of a superannuation fund, the which five per cent. should be invested for that purpose, and at the expiration of fifteen years' employment each *employé* should be entitled to retire upon a yearly pension not exceeding the amount of salary he was receiving in the seventh year of his employ; and in the event of death at any time after the tenth year of employment the widow or children, if there be one or the other, should be entitled to receive for ten years a pension not exceeding fifty pounds per annum.

These superannuation funds do not generally exist in mercantile offices, but that may be accounted for by the reasons I have explained at the commencement of my examination, while I am aware that they are insisted upon by many banking establishments.

I trust that the Committee will understand that in my opinion the public service will be more ably, and at the same time more cheaply, conducted by a small number of well-paid and highly efficient officers, than by a large number of clerks at a lower salary and not equally competent.

J. L. M.

W. Kirchner, Esq., examined:—

W. Kirchner, Esq. 162. *By the Chairman:* You are a partner in a large mercantile establishment in the City?
I am.

23 Sept., 1858. 163. The Committee are desirous to ascertain from some gentlemen engaged in the management of large banking and mercantile firms—the general rate of remuneration you give to your officers and servants. Will you have the kindness to state the general rate of remuneration which is given to clerks and other persons whom you employ? The chief clerk gets £500; the cashier, £350; the salesman, £300; and the junior clerks, £50 to £150 a-year. £50 is given to an apprentice or lad; storekeepers get £4 a-week.

164. Have they any other advantages? No.

165. Do you find a difficulty in obtaining suitable persons? Not at present; much higher salaries are paid by some firms. I have known as much as £800 a-year given to a chief clerk, and even £1,000.

166. What are their duties? Managing clerks under the partners.

167. Have you any knowledge of the remuneration given by the Government to their officials? Yes.

168. What is your opinion—is it more than a fair remuneration for their services? I do not think so. I know that some clerks who have left a commercial counting-house have thought themselves worse paid in Government service. Some clerks of my own who left me, and who are now in the Treasury, do not get so much as they used to in our office.

169. Do you know what was the inducement for them to enter the Government service? They were not required any further by me, but they were not attracted by greater salaries.

170. Are your office hours very long? No, from half-past 9 until 5 P.M.; sometimes when the Mail goes clerks stay longer—all night through—but that is very rare indeed. They get an hour for luncheon.

171. Have you had much intercourse with the departments of the Government in transacting business? Yes.

172. Have you found your business conducted without much delay? Four or five years ago we had much more reason to complain than lately. Business is much more speedily transacted now than it used to be; there is also more civility shewn now than there was some years ago. We had then sometimes to wait a long time for money before we could get it.

173. Your business is now transacted better and more speedily? Yes.

174. Have you formed any opinion whether the servants of the public are well employed during business hours? No.

175. Do you know of any gentlemen who could remain in private establishments leaving them to go into the public service? I do not think so; they would have no inducement to leave, having in a mercantile or banking establishment better prospects. An intelligent young man in a bank would have the prospect of becoming a manager.

176. You are a bank director? I used to be; I am not now.

177. Do you know whether amongst private establishments there is any means of providing retiring allowances, or a superannuation fund, to gentlemen employed? There is no such thing. It is done in some instances with old servants, who get some pension from their masters.

178. It is a matter of individual arrangement? Of course.

179. Are you prepared with any suggestion to the Committee from your great experience as a man of business, which you think worthy of their consideration, as to the better employment and remuneration of the servants of the public—is it the impression amongst mercantile men that the Government departments are deficient? No, nothing of the kind; because it is generally considered that they are better managed now than they used to be. There are still some complaints made about delays in the Surveyor General's department, but the Treasury and Colonial Secretary's departments everybody acknowledges are better managed. There may be some complaint about the Crown Lands' Office; it is difficult, at times, to get the information required, but it has always been so, and it is not to be wondered at that correct information about distant runs, and the boundaries of such, cannot always readily be given.

180. You have resided a great deal abroad—have you been much in contact with Continental or European Governments; with reference to those Governments, is the Government of New South Wales upon an extravagant or fair scale of expenditure? The money goes so much further in Germany that the officials in Germany can make two ends meet much better, owing to the cheapness of things; comforts are lower, too, but Government officials have to work harder in Germany.

181. *By Mr. Parkes:* Viewed in comparison with Continental Governments, do you think the operations are conducted as efficiently here? They have more hands in Germany to do the work in Government offices. You have not to wait so long to see the heads of departments in Prussia, or rather Berlin. Where you employ five they employ twenty. It is the fashion for the people to work earlier and later. When I had business to transact with Baron Manteuffel, I called upon him at 7 in the morning, in winter, and by candlelight. Manteuffel only got about £1,200 a-year salary as Prime Minister, which is more in proportion than £3,000 or £4,000 a-year here.

WEDNESDAY, 12 OCTOBER, 1859.

Present :—

MR. COWPER,
MR. FORSTER,MR. MCARTHUR,
MR. PARKES.

THE HON. CHARLES COWPER, ESQ., IN THE CHAIR.

The Honorable Geoffrey Eagar, Esquire, M.L.C., examined :—

182. *By the Chairman* : You have been for many years connected with large mercantile and banking establishments in this city? For twenty-five years.

183. You are perhaps aware that this Committee has been appointed to inquire into the state of the public departments, with the view, if possible, to reduce the expenditure without impairing their efficiency. We are desirous therefore of ascertaining from those who are familiar with large mercantile and banking institutions, whether the salaries given to the servants of the public are excessive, in comparison with those given in similar situations in private establishments—have you sufficient knowledge of the Government departments to express an opinion on the subject? No, I have not.

184. You are perhaps aware that in one of the papers laid upon the Table of both Houses of Parliament during the present Session, information is given in detail upon these points—will you cast your eye over some of the pages of that document, and see whether you feel yourself competent to say whether the salaries given to Government officials are more than fair compensation for what may be assumed to be the labor required from these gentlemen, and the ability necessary to enable them to fill their offices satisfactorily? Looking at the list of salaries in the Office of the Treasurer and Secretary for Finance and Trade, it appears to me that the large salaries, commencing with the Under Secretary, are not disproportioned to the salaries given for a similar amount of ability in banking or mercantile offices; and with respect to the remaining salaries, they are much the same as banking salaries, if anything a little under; but I think there is a pretty close approximation.

185. Is it the case that in the banks and other establishments of a mercantile character, there are frequent opportunities for promotion and advancement? In banking institutions that have a number of branches there are frequent opportunities, and promotions are almost constantly taking place.

186. In that respect, do you think the public service offers greater or less advantages than private employment? I think before answering that question I should state that I have all along assumed that the business of the public departments is conducted on a *prima facie* correct principle, that is to say, that it takes a certain number of persons, at salaries varying in degree, to do the necessary work, when possibly it might be done by fewer persons and better paid, in which latter case I think the Government service would offer as great advantages as any private situation.

187. Have you an impression that the public service is over officered, that is, that the officials are too numerous in proportion to the work? I have this impression with respect to both public and private establishments, that there are too many persons employed of inferior capacity, generally speaking; and the remedy would be to select men better qualified for their special duties, to have them fewer in number and pay them better salaries. That is my impression certainly with respect to the banks, and an opinion I have long entertained with respect to the Government offices.

188. It is an opinion of general application? It is an opinion of general application, and I may remark that the document before me, entitled "The Statistical Register," supplies an excellent illustration. I see salaries here as low as £150, some less, some £75—now there is no amount of talent or ability that could be bought for that annual sum.

189. Not even young gentlemen? No; from my long experience I am of opinion that to employ young persons in such positions is a decided mistake.

190. At what age then would you take persons into the public service? I would reply, that ability is not always to be estimated by age; you may have an old man who has no ability at all, and, on the contrary, a young man possessing considerable talents. Therefore it is not so much a question of age as of special fitness, which ought to be determined beforehand by competent parties.

191. Then you would not give so low a remuneration as £75 a-year to any public servant, however youthful? I would put the matter in a somewhat different position, and say that no person ought to be employed by the Government at less than £200 a-year to begin with, but then he should be a man, and a man of some capacity.

192. Do you not think there are some of the duties that are mere copying, that persons of less ability, and therefore willing to be employed at less remuneration, might fill satisfactorily? I think that might apply in banking or private services, where the mere will of the directors or principals fixes the annual remuneration, which may be a few hundreds more or less, without being felt by the proprietors or by the firm; but in the case of the Government, where the vote for a particular department is limited, and cannot in fact be exceeded, then the employment of young persons at low salaries for a low kind of work is in point of fact detrimental to those abler persons who can do all kinds of work; it takes so much from them to give it to incompetent parties for an inferior description of work.

193. Will you refer to some other department? I have looked at the list of salaries in the Post Office Department, and the same rule appears to apply there, because there are a large number of clerks at apparently low salaries. I do not think the superior salaries are too high, perhaps hardly high enough, for what I presume to be the kind of ability required; but then I see there is a large staff, many of them at very moderate salaries, for instance, in six instances the salary is £175. Now I think the ability that is paid for at that rate per annum must be purely mechanical, and I am not prepared to say how far mere mechanical ability

The Hon.
G. Eagar,
Esq., M.L.C.

12 Oct., 1859.

The Hon.
G. Eagar,
Esq., M.L.C.
12 Oct., 1859.

ability is advantageous to the public service. With respect to the salaries of the Under Secretaries, who are, I presume, gentlemen who really do their work and require to be of first class ability, I certainly do not think £800 a-year is too much.

194. What is your opinion as to the salaries of the heads of departments—for instance, the Postmaster General has £950, the Collector of Customs £900, the Registrar General £700, the Immigration Agent £600 or £650—do you consider that those salaries are excessive for gentlemen acting as the heads of departments? No, not if the work be done competently; that is, supposing Major Christie, for instance, is the best Postmaster General you could get, I do not think he is too highly paid. I am always assuming these are the most efficient men the Government could obtain.

195. The salary for the office is not too much? The salary for the office is not too much, without reference to the occupant.

196. *By Mr. Parkes*: Ought not the question to be considered on this footing, that the discharge of the duties of the office requires a certain standard of fitness, and then that the salary should be fixed according to that standard, leaving out of sight the present incumbent altogether? I am of course always assuming that the Postmaster General has the control of the entire department, which must involve rather onerous duties, and that a large amount of ability is required for the successful conduct of the department. On that view of the case I do not think that £950 a-year is too much for a man who efficiently discharges the duties of the office of Postmaster General.

197. *By the Chairman*: Is £900 a fair salary for the Collector of Customs? That should be a well paid office, for it is certainly a most important one.

198. *By Mr. Parkes*: Do you think £900 is a low salary for that office? I think not. With regard to the salary of the Immigration Agent, I do not think that is too much. I am guided in my remarks by the salaries paid in the Bank of New South Wales, where I have been for the last five years and a half, and where the Manager gets £1,500 a-year, and has a large staff of competent assistants.

199. With regard to the hours of attendance—the Government hours are from nine o'clock to four, without intermission—do you consider that a sufficient amount of attendance to require from Government officials? I think a better arrangement would be to make the hours from nine to five, and give an hour for lunch between one and two o'clock. In the Banks the hours are not excessive, except under particular circumstances; for instance, commencing business at a quarter-past nine in the morning the doors are shut at three, and it must be a very indifferent clerk who cannot get his work done and be away by half-past four o'clock. Then, although there is no positive allowance of a moderate time for mid-day lunch, still the clerks have the implied permission, and are allowed to go out for a little time at one o'clock; but on Monday night, owing to the weekly balance being then made up, they are kept till ten or eleven o'clock. Then, again, on Saturday they are allowed to go at two o'clock, if the work be done. The difference is this, that the amount of work done at a Bank fluctuates each day, and therefore, the time of remaining in the Bank may be half-an-hour, more or less, according to that particular circumstance; but I fancy that in the Government departments the work of routine is pretty much the same every day. Certainly, as an old mercantile clerk myself, I should say the Government are wrong not to give a little time for lunch.

200. Have you not heard complaints that it acts prejudicially? I have heard innumerable complaints of the want of a little time to get out.

201. I mean that the privilege is sometimes abused? Assuming that to be the case, I think the remedy is not, for the fault of a few who deserve to be dismissed for such abuse, to inflict an injury on the many.

202. Are bank clerks frequently kept over hours or obliged to give any excessive amount of attendance after hours? Not as the general rule, except on Monday night, when the weekly balance is made up.

203. Is there any point on which you can favor the Committee with any suggestion with regard to any improvements in the working of the departments, that may have occurred to you as likely to carry out the objects of the inquiry? I think the only improvements would be to employ fewer and abler men and pay them better, and above all to avoid making appointments from mere favoritism, or in virtue of a man's connections—in fact, to abjure nepotism to the fullest extent of the abjuration. I think a very good system might be adopted, as in the banks or private establishments, where a man comes on trial. For example, during the five and a half years I held the position of Branch Accountant in the Bank of New South Wales, I had a succession of assistants, who came to me, in the first instance, for a month's trial.

204. *By Mr. Forster*: Could you suggest any mode of determining the special fitness which you have already stated, you think ought to be ascertained in the case of any person employed in the Government service? It should be ascertained, not solely by means of an examination for the Civil Service, which I see my friend Mr. Cape recommends; but the simple question should be, is the candidate fit for the work you want him to do? You must have an examiner in the person of the head of the department, or his immediate subordinate. An Under Secretary, for instance, should be a man himself capable of doing the whole duties of his department, from top to the bottom, if required; and an examination by such an Under Secretary would soon determine the qualifications of any candidate for employment. If you set a man to write a letter, you can tell at once if he is fit to be a corresponding clerk. I felt no difficulty in determining, in twenty-four hours, whether a man was fit or not for the work proposed to be entrusted to him.

205. In other words, you would distinguish special fitness from what may be termed educational fitness? Exactly. You can only determine special fitness by special examination in the office itself, then you discover aptitude immediately. Of course, a certain amount of educational fitness is necessarily presumed, as essential in the candidate for either public or private employment.

William Augustine Duncan, Esquire, Collector of Customs, called in and examined:—

206. *By the Chairman:* You are perhaps aware that this Committee has been appointed in order to inquire into the possibility of reducing the expenditure of the public departments, without impairing their efficiency? Yes.

W.A. Duncan,
Esq.

12 Oct., 1859.

207. Will you have the kindness to state to the Committee your opinion as to your own particular department as it at present stands. Do you think the number of persons employed in that department more than adequate to the performance of the duty, and also with reference to their salaries, do you consider the amount of remuneration at all excessive? I think the number is by no means too great, and the salaries, upon the whole, nearly as low as it would be prudent to make them. No doubt gentlemen could be found who would undertake the same duties, in many cases, at smaller salaries, but I have gone over the list very carefully, and I do not see that I can suggest any reduction.

208. Your department has recently undergone almost a complete re-organization? Yes. I may mention at once, if I am in order in doing so, that in the case of the Collector's salary, a very considerable reduction has taken place; my predecessor's salary was £1,100, mine is only £900. I must say I think the Collector's salary ought not to be less than £1,000, considering the immense amount of work he has to do, and the high responsibility that rests upon him, having, in addition to the collection of the Revenue, the control of upwards of 100 officers; and not only that, but he has to incur very considerable risk, as he is obliged to give decisions very frequently on very nice legal points, which are constantly arising, and which do not admit of delay. Then, if the salary be compared with those of other heads of departments, who have not anything like the same responsibility,—for example, the Auditor General, who no doubt must be a man of very high character, but whose work is simply that of an accountant, has a salary of £1,000; one of the Under Secretaries is put down for £1,500; then the Postmaster General's duty cannot be said to be more responsible than mine, although the salary is higher, being £950. I do not suggest that those salaries are too much, as things are in this Colony, but by comparison with these and other heads of departments, I think the Collector's salary is unfairly low. It has in fact been reduced while the others have been increased. For example, I remember when I was in this part of the Colony before, the Collector's salary was I think £1,000, (it was subsequently raised to £1,100,) while the Auditor General's was £600. Now upon what principle the Collector's salary should be reduced to £900 and the other raised to £1,000 I cannot see. I do not complain that the salary should have been somewhat reduced, because I think that if a reduction was necessary at all, a change of officers was the proper time to effect it, and if it had been reduced to £1,000, and other salaries reduced in proportion, I should have said that was fair and proper; but I think it was going a little too far to reduce it to £900. Of course I am not complaining of any advantage having been taken of me, because I was aware of the reduction before I accepted the office. My objection arises from a comparison of the Estimates for the various departments. I think in my department generally the salaries are rather lower than persons of the same grade in the public service receive, as a general rule. The Landing Surveyor's salary, though it appears to be increased, has been in reality reduced, because two offices, that of Landing Surveyor and Inspector of Warehouses, have been amalgamated, and the duties are now performed by one officer, at a salary of £600 a year, and I do not think it should be less. The office is now filled by a very excellent officer, a most conscientious and industrious man. In the case of the Chief Clerk, his salary last year was £530, and it has been reduced £450—I think that is quite low enough; the same with the second clerk. It does not appear to me proper or politic to reduce them any lower than that. With regard to the other salaries, the first Landing-waiter has been reduced from £375 to £325; that I think was a very proper reduction, and it was made on the retirement of an old officer and the appointment of a new one. The Warehousekeeper has also been reduced from £375 to £350. The Warehousekeeper, the members of the Committee must be aware, is a very responsible officer; he has the charge of all the goods in bond, that is to say, he keeps the books in which they are recorded, and he has the responsibility of inserting the entries in the books and writing them off when the duty is paid. That is an office of the very highest importance, and I do not think it desirable to reduce it more than it has been already reduced. I may mention that although the expense of the department has been reduced in the whole to the extent of £2,219, the efficiency of it has been, I may with perfect safety say, doubled since I have taken charge of it. I have put the whole thing upon a new footing, and I have now no hesitation in saying that the work is now well done. Occasionally a few mistakes occur from some of the new men not understanding the work, but, taking it on the whole, the work is carefully performed.

209. Do you find the men recently appointed anxious to qualify themselves for their duty? Yes. It will take some considerable time for them to learn all the business, but I have no reason to object to them personally, in any way.

210. *By Mr. Parkes:* Could you state to the Committee in what state you found the department when you took charge of it, and in what state it is at the present time, so as to shew, by contrast, the alterations you have made in it? That would be a matter of considerable detail. In fact everything has been changed; for instance, I found no regulations at all in force when I took charge. The old regulations of the Board of Customs had been recalled, and for some years past there had been no rules at all. Every man did pretty much as he thought proper. I have had regulations drawn up and approved by the Government, for all the different branches—I think some seven or eight series of regulations for all the different kinds of officers; and they are now held responsible for doing their work exactly in accordance with those regulations. Of course, in drawing them up, I availed myself of the regulations issued by the English Board of Customs, and of every other authority I could lay my hands upon, in addition to my own experience.

- W.A. Duncan, Esq.
12 Oct., 1859.
211. Do you yourself visit the officers of the establishment on duty outside the walls of the Custom House? I do, occasionally. That is the more immediate duty of Mr. Still, the Landing Surveyor; but I do visit them sometimes, and when disputes arise, as they very often do, I have to set them right; sometimes I do it on the wharf, but oftener in my own office, because I cannot be spared at all times to go out.
212. Do you consider it your duty to go at any time on the water? Not on the water. I should do so if I found it necessary, but I have not seen occasion to do so as yet.
213. Does the Tide Surveyor —? Yes; there are three Tide Surveyors, two of whom are constantly afloat.
214. I presume one is the head? One is called the First Tide Surveyor, but he has no particular authority over the others.
215. Do any of these officers report to you? They are obliged to send in reports every day, and a general report once a week.
216. Does that report embrace the disposition of the officers during the day, so that you could find any officer you wanted at any time? That is entered in a book, which I can refer to at any time.
217. Have there been any complaints, since you have been at the head of the establishment, of insobriety on the part of any of the officers? I have on several occasions had the disagreeable duty of reporting some of them as being addicted to drinking; and one was dismissed, and one or two others have been obliged to retire.
218. You said something about regulations, which, I presume, embrace also instructions—when officers enter the service have they any instructions given them? They are always furnished with a copy of the regulations, which are in fact instructions for the performance of their duties.
219. Do those instructions forbid them from taking any gifts? They do, very peremptorily. I found that almost every officer in the department was in the habit of receiving fees of one kind or other for private services to merchants, and one of the first things I did was to send round a printed slip, stating that as the taking of any fees was illegal, being expressly forbidden in the Customs Act, any one who did so would be immediately dismissed; that, I think, completely put a stop to it.
220. *By the Chairman*: Have you not made some great change in the mode of employing the extra tide-waiters, so as to do away with a large number of persons who were deficient in character and qualifications? Yes; about seventeen were discharged at once, some of them old men, and others who were unfit, from their irregular habits, for anything of the kind.
221. Do you find the amended system working much more satisfactorily? Much more so.
222. You have no statement with you as to the changes which have taken place in the Customs Department generally, since the Board reported on the “*Louisa*” case? No. I may mention that I very carefully read the able Report of that Board, and some of the alterations I have made have been founded on suggestions emanating from that Board.
223. You think the salaries given in your department now are sufficient to enable you to obtain competent persons to do the work, without being at all excessive? Yes. As I stated before, I believe in the present state of things in the Colony, competent persons could be got for smaller salaries; but I should not recommend the dismissal of old officers to take on new ones, for the mere saving of a few pounds in that way.
224. You find ample employment for all the officials you have? I believe they are all well employed, and some of them have very hard work. I may mention that, among other reductions, I reduced two of the Long Room clerks, whose places have not been filled up; and I think I went—I do not exactly say too far, because I think I can do with the number I have—but quite as far as can possibly be done in that direction. If I had to do it now, I do not think I should reduce more than one; but I have no intention of recommending that there should be one more re-appointed.
225. You consider your department to be, on the whole, in a very efficient state at present? I do. I mentioned before that there are some of the officers who do not well know their duty yet, and we have sometimes a little trouble with their unintentional mistakes; but, with that exception, the department is quite efficient.
226. That inconvenience partly arises from the necessity of making such sweeping changes in consequence of the state of disorganization into which the department had fallen? Yes. I think it was a very proper measure to infuse a little new blood into the establishment. I think it has had a good effect in more ways than one; but, as a rule, I do not think it would be advisable to continue that course of procedure, because the Customs duty is a thing that cannot be learnt except by long practice, and the necessity of teaching new hands takes off the attention and occupies the time of the older officers. I think the department is in such a state now that it would be advisable to fill up vacancies by promotion as far as practicable.
227. *By Mr. McArthur*: Is not that the general rule of the service, where the persons coming immediately after those who retire are sufficiently qualified? I think it is the proper rule. I should strongly recommend that future vacancies should be filled up by promotion.
228. *By Mr. Forster*: With reference to the remarks you have made as to the reductions having been carried as far as was consistent with prudence, do they extend to all classes of employes in the Customs Department; I allude particularly to those officers who have the duty of inspection—superior out-door officers: have you enough or more than enough of that class? As far as the Tide Surveyors are concerned, we have enough, and not too many. The Landing Surveyor has, certainly, a very great deal of work. We have only one, whereas in other ports of like extent they have several; and if the trade of this port were to increase considerably, I think his duty would be more than one man could perform.
229. *By the Chairman*: He is allowed a horse? Yes; and if he were not allowed a horse it would be impossible for him to do half the duty; but he is a very active man, and rides about

about and gets through a great deal of work. Although one will be sufficient for the present, W.A. Duncan, I think circumstances may arise when it will be necessary to have two Landing Surveyors. Esq.

230. *By Mr. Forster:* May it not occur that there is sometimes far less work? Yes; the work fluctuates; sometimes there may be a rush of shipping, and at others there is much less than usual. 12 Oct., 1859.

231. Is there any officer appointed to superintend the bonding warehouses particularly? That is part of the Landing Surveyor's duty; he visits once a day every bonding warehouse.

232. Does that sufficiently meet the requirements of the case? I think it does, because there is a locker at each warehouse. The Surveyor may have occasion to go to a bonding warehouse more than once a day; for instance, if they are repacking or coloring spirits, that has to be done under his inspection; but, as a general rule, his instructions bind him to visit each warehouse once a day.

233. Have you paid any attention to the general question of revenue derived from Customs duties; that is to say, as to the feasibility of increasing the revenue, by the application of other principles, and diminishing the cost of its collection on the whole? I do not think, as far as the Customs go, that if the tariff were to remain in its present state, or anything analogous to it, it would be possible to reduce the cost of collection to any great extent, at all events.*

234. Do you not think the tariff might be changed? It might in some respects, but on the whole I think it is a very good tariff. The chief objection I have to it is, that spirits pay two different duties—ten shillings and seven shillings.

235. That is in fact an application of the *ad valorem* principle? To a certain extent it is. I cannot see why rum should only pay seven shillings, while brandy and gin are charged ten shillings.

236. Are you not of opinion that, in the abstract, *ad valorem* duties are very objectionable? I think they are. If we can possibly get a revenue without them they should be altogether avoided.

237. Has it ever occurred to you to consider whether a revenue might not be collected by imposing a tonnage duty on vessels, without relation to the quantity or quality of the articles they contain, but simply in return for the harbour accommodation we afford them? I fear that would be considered injurious to trade.

238. In what way would it injure trade? It would fall immediately on the owners of vessels, whereas the duty at present falls, as it should do, upon the consumer of the goods.

239. Does it altogether fall upon the consumer? I think it does, because the greater part of the goods imported are put into bond, and the duty is not paid till they are taken out for home consumption.

240. If vessels are employed for carrying our articles out here, is it not clear that we shall have to pay the cost of carrying them out in addition to the market price? Yes.

241. Then would not any duty of the kind I allude to fall upon the price of the goods as part of the cost of carriage? Ultimately, no doubt; but I think that would not be so direct a mode of levying a revenue as we have at present. I think the consumer is the person to be taxed, and to be taxed as directly as it can be done.

242. Does not the present system, which is, in effect, to a considerable extent at least, a tax upon the value of the cargo, act as a restriction upon the importation of valuable cargoes? It may, perhaps, be said to have indirectly an effect of that kind.

243. On the contrary, if we removed that check, would not the effect be to encourage the importation of such cargoes? I think if a high tonnage duty were imposed it would be more likely to drive vessels out of the port altogether; and it would at best be but a round-about way of arriving at taxation. I think the correct principle is to let it fall as directly as possible on the consumer.

244. *By Mr. McArthur:* Would not the effect of such a system as Mr. Forster refers to be exactly the opposite to the intended effect of the present tariff, inasmuch as it would impose a duty on everything that enters the harbour, instead of upon articles of luxury only? It would be so.

SEPARATE

* The opinion I have given throughout, as to the cost of the department, has reference to the present state of the law and the tariff. A change in these might greatly affect the cost of collecting the revenue either way. For example, if all goods were bonded in a Queen's Warehouse, a great reduction might be made in the number of officers, now scattered over a number of private bonds and sufferance wharfs.

SEPARATE APPENDIX.

A.

Legislative Council Offices,
21 May, 1860.

Sir,

**Vide* Answers to Questions Nos. 85 to 88 inclusive (Page 41), and Appendix D, (Page 46).
† *Vide* Appendix D.

In the *Evidence given by Mr. O'Connor before the Select Committee on "Retrenchment in the Public Expenditure" during the Session of 1858, that gentleman has surmised that the salary of the Clerk of Select Committees of the Assembly, New South Wales, is in the same proportion to that of the Clerk, as the salary of the principal Clerk of Committees in the House of Commons is to that of Clerk of the Commons; and that the office is analogous to that of the † Third Clerk of the Assembly, Victoria.

At the time this evidence was printed I was not in possession of information sufficiently reliable to justify a public contradiction of these statements, though I was then pretty well convinced of their inaccuracy. By the publication of the Report of the "Civil Service Commission," Victoria (Page 24), I am now, however, in a position to state, positively, that the General Committee Clerk in the Assembly there is not the Third Clerk as set forth in Appendix D to Mr. O'Connor's evidence, but the First Clerk out of the House in that Department; that he is actually in receipt of a salary of £500 per annum, and is, moreover, assisted in the private Bill work by an officer called the "Private Bill Clerk," at a salary of £400 per annum. It would thus appear that the total amount paid annually for the transaction of the Select Committee work of the Assembly, Victoria, is £900 per annum, whilst that paid for the performance of like duties in this Colony amounts only to £300; a fact, I think, specially deserving of the consideration of the Committee, since inquiry will further shew that the work in connection with Select Committees in this Colony has during the last three years been in excess of that in Victoria.

I believe, too, that it can be proved indisputably that in salary and position the Principal Committee Clerk, in every Legislature but that of New South Wales, is second only to the Clerk Assistant. In the House of Commons, for example, the Clerk's † salary is fixed at an annual rate of £2,000, and that of the Principal Committee Clerk at £1,000, *i.e.*, one-half. In the Victorian Assembly the Clerk receives £1,000 per annum, and the General Committee Clerk £500, *i.e.*, also one-half; whilst in New South Wales the former receives £800, and the latter only £300 per annum.

Had I still held the office of Clerk of Select Committees in the Assembly I should have felt some hesitation in bringing this matter under the notice of the Committee; but as I am now no longer in a position in which a feeling of personal interest can be imputed to me, beyond a most sincere desire to see justice done to the appointment, when the Committee have under their consideration the rate of salary and official *status* of the various Parliamentary Officers, I would request that the Committee would be good enough to cause this letter to be printed in the "Separate Appendix" to any Report hereafter made by them, or its purport succinctly set forth in the Minutes; not only for the purpose of obviating any injustice which might otherwise result from misapprehension arising out of this portion of Mr. O'Connor's evidence, but also to shew that elsewhere it has been deemed necessary to fix the salary of this appointment at such a rate, and to give the officer holding it such a *status* in the department, as would ensure the services of a person of ability and intelligence sufficient for the onerous and important duties appertaining thereto.

I have, &c.,

JOHN J. CALVERT.

The Chairman of the Select Committee on
"Retrenchment in the Public Expenditure."

1859-60.

Legislative Assembly.
NEW SOUTH WALES.

SALARY OF AUDITOR GENERAL.

(LETTERS RESPECTING.)

Ordered by the Legislative Assembly to be Printed, 20 April, 1860.

AUDITOR GENERAL to COLONIAL SECRETARY.

*Audit Office,
5 November, 1859.*

MY DEAR MR. FORSTER,

Wishing, when the Estimates for 1860 were in course of preparation by the late Ministry, to relieve them (if contemplating any system of reduction applying to the salaries of heads of departments generally) from any difficulty or delicacy in regard to the salary expressly attached by Mr. Cowper's first Ministry to my own office when conferred upon me, I addressed to Mr. Cowper the enclosed letter, which will speak for itself.

Considerations similar to those which then prompted that letter urge me now, when you may be preparing your Estimates, to communicate it to you, Mr. Cowper having, after an interview with him on the subject, returned me the letter, and left me entirely at liberty to place you in possession of it.

Believe me, &c.,
W. C. MAYNE.

[Enclosure.]

*Audit Office,
19 August, 1859.*

My dear Mr. Cowper,

Having regard to the separation of the Northern Districts from this Colony, now in not remote prospect, and to the diminution in revenue and in expenditure (involving some decrease in offices and in accounts) which must result, the probability and perhaps (as regards future incumbents certainly) the reasonableness of the public looking for commensurate reduction in some, at least, of the salaries paid to heads of departments, have suggested themselves to me; and it is with reference to this, and to its bearing on the salary attached to my own office, that I now write to you, preferring, for reasons which will be obvious, addressing you on the subject thus, rather than in the ordinary official way.

While prompted by the consideration to which I have referred, I am at the same time pressed by this, that any step tending towards what I have indicated cannot have individual operation only, but must affect several, and that I have no right, while willing to forego emolument myself, to do anything which can compromise or affect the interests of others.

The question, too, as regards the present holders of any offices which might be affected, is further complicated, in my mind, by the operation that a reduction of existing salaries would have on the amount of pensions or gratuities to which the present incumbents are entitled on superannuation, or abolition of office, these being regulated by the amount of emolument attached to the office at the time.

Having thus touched on what has suggested itself to me, I shall now merely further say that, as regards myself, I wish to relieve Ministers from any feeling of difficulty in the matter, by placing myself in their hands; and that, if they consider it right and expedient to do so, and that the step will not involve injury or injustice to others, I am quite willing that, on the creation of the new Colony, my salary as Auditor General shall be restricted to the amount in the Schedule, and that the item of £100 per annum, by which that is now supplemented by vote, shall be withdrawn from the Estimates submitted to Parliament.

Believe me, &c.,
W. C. MAYNE.

The Honorable
Charles Cowper, M.P.

1859-60.

Legislative Assembly.
NEW SOUTH WALES.

COLLISION BETWEEN THE "EMEU" AND "WILLIAMS."
(REPORT OF BOARD OF INQUIRY.)

Ordered by the Legislative Assembly to be Printed, 25 April, 1860.

BOARD OF INQUIRY to UNDER SECRETARY TO THE TREASURY.

*The Office of The Steam Navigation Board,
24 April, 1860.*

SIR,

We have the honor to transmit the Minutes of Evidence taken before the Steam Navigation Board, at an inquiry held into the circumstances attending the collision between the Royal Mail Steamer "Emeu" and the Hunter River New Steam Navigation Company's Steamer "Williams," and to report, for the information of the Honorable the Minister for Finance and Trade, the conclusions at which we have arrived in reference thereto.

At about midnight of the 16th instant the "Emeu" weighed anchor from her moorings in the mouth of Lavender Bay, on the northern side of the harbor, and made one or two stern-boards to the southern shore, for the purpose of casting the vessel's head to seaward. Whilst in the act of making the second stern-board, and when close over to the southern side, in the immediate vicinity of Dawes' Point, the "Williams," coming in from the Hunter, attempted to pass under the "Emeu's" stern, to the southward of her, and came into collision with her, whereby both vessels sustained considerable damage, the "Williams" in the topsides and topgallant bulwarks, and the "Emeu" by a serious rent in her starboard quarter, and the fracture of the main piece of her rudder, some feet above the water. Both vessels sustained sufficient damage to prevent them from going to sea without repairs.

Of the cause of the collision we have arrived at a unanimous opinion, viz.—That the master of the "Williams," Mr. Chatfield, did not intentionally commit a breach of the 32nd section of the Act 16 Victoria, No. 46, nor did he fail to comply with the Port Regulations for placing his vessel at half speed after passing Fort Denison, or in making proper warning signals as therein provided. He did, however, commit a serious error in judgment, and was guilty of want of proper care and attention in the navigation of his vessel, in permitting her to be steered with the intention of passing under the stern of the "Emeu," without due consideration of the position then occupied by that vessel, he believing her to be still at anchor in Lavender Bay; and without careful discrimination in the alteration of the course of the "Williams," thereby bringing her on the south side of the harbor, especially as there would have been ample room for her to have passed on her proper side of the harbor without any fear of collision.

In this neglect we cannot but include the chief and second officers of the "Williams," the first of whom was appointed to the look-out, and who, after reporting, as soon as the "Williams" rounded Kirribilli Point, that the Mail Steamer was lighted up, did not discover

the dangerous proximity of his own vessel to the "Emeu" until his attention was called by the sudden order of Captain Chatfield to starboard the helm, followed by the peremptory command, "Hard astarboard, stop the engines, and go astern full speed." The second officer being at the wheel, was, to use his own language, after passing Bradley's Head, "steering by a star," under the supposition that he was proceeding up the harbor about mid-channel, and he does not seem to have discovered that he was on the south side until a collision was inevitable, and that such steps as were practicable were being taken by Mr. Chatfield to lessen its effects as much as possible.

We do not attribute any blame to the Pilot, or persons in charge of the "Emeu," as we consider the vessel was handled skilfully, and that the stern-board was necessary to cant her head to seaward; and as it is not attempted to be denied that the requisite masthead and side lights were exhibited aboard of her, there does not appear to us to be any valid excuse for not perceiving from the "Williams" that the "Emeu" was under way.

We have, &c.,

H. H. BROWNE,
W. S. DELOITTE,
BENJN. DARLEY,
CHS. SMITH.

*Peninsular and Oriental Steam Navigation Company,
Offices, Sydney, 17 April, 1860.*

Sir,

I do myself the honor of applying to you for direction that an inquiry be instituted by the Pilot Board into the circumstances under which a collision took place last night between the steam-ship "Emeu," belonging to the Company (having Her Majesty's mails on board), and the steamer "Williams," by which severe damage has been done to the "Emeu," and the ship prevented from sailing with the mails. As it will be necessary that the officers' evidence should be taken before the "Emeu's" departure from this port, I should be obliged by the appointment being made as early as possible.

The Honorable
The Minister of Finance and Trade,
&c., &c., &c.

I have, &c.,
HY. MOORE,
Agent.

Steam Navigation Board.—E. C. W., 17 April, /60.

B. C.—Urgent.

I wish to submit to the consideration of the Members of the Steam Navigation Board that there is no evidence of any one being placed for the purpose of looking out.

The evidence goes to shew that the pilot was watching the movements of the ship; Mr. Crook looking out when she was far enough astern; the chief officer looking after the anchor; second officer attending the conn; fourth officer passing the word to the engineer; captain looking after the pilot; Admiralty Agent attending to his friends going away in a boat. Captain Burne and James Macarthur, Esq., being passengers, had nothing to do with the ship's movements. There is no evidence from the third officer. Mr. Baines does not say he reported the "Williams" to any one when he saw her.

The pilot's evidence goes to state that he did not see the "Williams" more than one minute and a half before the collision. If there had been men placed for the purpose they must have seen a steam-ship coming from Bradley's Head to Kirribilli Point, the evidence shewing that the "Emeu" made two or more boards across the harbor from Lavender Bay to Dawes' Point, consequently she had the harbor open and clear as far as Bradley's Head.

I wish also to call the attention of the Board to the fact of such a long vessel attempting to turn under steam alone, when more simple means would have brought her head round much quicker, and thereby shew her distinguishing lights to any vessel coming up the harbor.

From the evidence the Board will see that every precaution was taken on board the "Williams," viz., the mate was stationed on the fore-castle to look out and for no other purpose, a man was stationed at the bell, the engineers were at their stations, the engines were reduced to half speed when passing Pinchgut, and the bell kept ringing until within a minute of the collision.

I am, &c.,
C. W. CHATFIELD.

COLLISION BETWEEN THE "EMEU" AND "WILLIAMS."

3

Watson's Bay, 17 April, 1860.

Sir,

I have the honor to inform you, that while in the act of canting the mail steamer between Dawes' Point and Milsom's Point, laying at the time perfectly still, with orders just given to turn ahead, the steamer "Williams," coming up at full speed, ran right into our starboard quarter, carrying away the rudder and driving a large hole through her quarter. After the collision one of my crew was missing, and up to the present time I have not seen him.

John Crook, Esq.,
Harbor Master.

I have, &c.,
THOS. ROBINSON.

Sydney, 17 April, 1860.

Gentlemen,

I beg to acquaint you a collision took place between the mail steamer "Emeu" and the "Williams," belonging to the Hunter River New Steam Navigation Company, by which considerable damage was done to the upper works of the latter boat.

Should you deem any inquiry into the circumstances of the collision necessary, every attention will be paid by this Company to your directions on the subject.

To the Chairman and Members of the
Steam Navigation Board, Sydney.

Your, &c.,
P. J. COHEN,
Manager.

Cuthbert's Wharf, Sydney, 17 April, 1860.

Sir,

I have the honor to acquaint you, for the information of the Steam Navigation Board, that I attended this day on board the steam vessel "Williams," for the purpose of surveying the damage sustained in consequence of having been in collision with the Royal Mail steam ship "Emeu."

After a careful examination (as far as practicable) I found as follows:—Starboard side.—The middle of the second plate from forward forming the upper strake broken nearly in halves, waterway plates broken, about 35 feet of rail and bulwarks, topgallant rails and bulwarks, seven stanchions, and about 15 feet of coveringboard broken, anchorstock broken off from the anchor, break of windlass-purchase broken from pallbitt. Port side.—The butts of the two foremost plates forming the upper strake started and bilged out, one rivet drove out, about 23 feet of main rail, topgallant bulwark rail, bulwarks, &c., five stanchions broken, the fore end of main deck started up, topgallant forecastle deck trimmed off, main topmast broken off from cap, two of the foremost deck beams broken.

In consequence of the berths in the forecastle I could not discover whether any further damage is done inside.

W. J. Wilshire, Esq.,
Secretary Steam Navigation Board, Sydney.

I have, &c.,
JOHN CUTHBERT.

NEW SOUTH WALES ELECTRIC TELEGRAPH.

Sydney Station.

No. of words, 14. Charges to pay, 4s.

Received the following Message from West Maitland Station, at 10 h., 19 April, 1860:—

From the Manager of the Hunter River New Steam Navigation Company, Morpeth, to the Secretary to the Pilot Board, Sydney:—No vessel leaves Morpeth before this morning. The parties named cannot attend before Friday.

BOARD MEETING, HELD 19 APRIL, 1860.

Present:—

H. H. BROWNE, CHAIRMAN.

W. S. DELOITTE, | B. DARLEY, and
C. SMITH, Esquires.

The Chairman informed the Board that he had called them together for the purpose of inquiring into the circumstances attending the collision which took place on the 16th instant between the Royal Mail steamer "Emeu" and the Hunter River New Steam Navigation Company's steamer "Williams." Mr. Dawson, of the firm of Rodd and Dawson, attended to watch the proceedings on behalf of the latter Company, and Mr. Henry Moore on behalf of the former.

H. H. BROWNE, Chairman.

John

John Savell Keatley, Commander in the Royal Navy, being sworn, states:—I am the Admiralty Agent on board the mail contract steamer "Emeu;" I was on board the steamer on Monday night last; it was past midnight; I was on deck on the starboard side, on the side the collision took place; I saw two steamers coming up the harbor, one of which afterwards proved to be the "Williams," standing straight on for the "Emeu," in the centre between Pinchgut and the shore; the "Emeu" was under weigh, and had been stopped, but she had stern-way; she had been astern twice after the anchor was away; she was backed to cant her head to the northward—to sea; the "Emeu" was about a cable's length from the shore, as near as I could say, she was as close as she could safely be; my attention was called to a person getting into a boat, and I can't say whether the "Williams" altered her course either to the north or to the south; I should say, to the best of my knowledge, that the "Williams" was going from seven to eight knots an hour; the engine of the "Emeu" was not moving, the vessel was laying quiet at the time the collision took place; the "Emeu" had her proper lights when we started, for I saw them; I saw the starboard light just previously; the "Williams" struck the "Emeu" on her starboard quarter; the concussion was severe, she completely slewed the "Emeu's" head round, which enabled the "Williams" to go clear; the "Emeu" was in charge of a pilot; I don't know what became of the second steamer; I don't know how the "Emeu's" helm was at the time the collision took place; I am not quite certain whether the "Emeu" went ahead again after the first turn astern; the steamer's stern, I should say, was into Dawes' Point, and her head canting out of the harbor; I don't think it was prudent for the steamer to come in stern of her, she could have well gone into the cove; I don't know exactly the width across, but the Emeu was considerably a greater distance over from the North Shore than from the south; there was plenty of room to have passed ahead of the "Emeu" with safety, but not astern of her, particularly as she was going astern; the "Emeu" laid over in Lavender Bay when at anchor, and was backing out at the time of the collision; the "Williams," when I saw her first, was on the north side of Fort Denison.

Sworn before me, at Sydney, }
this 19th April, 1860. }

J. S. KEATLEY, Com. R. N.,
Admiralty Agent, M. C. S. "Emeu."

H. H. BROWNE, Chairman.

James Macarthur, Esquire, being sworn, states:—I was a passenger by the "Emeu" steamer; I was on the deck at the time of the collision, on the after part, near the after skylight; the "Emeu's" anchor had been up but a short time; I think she was propelled ahead first, and then the engine was stopped; I can't explain how, but the vessel's position was altered, she had moved from the first position over to the south shore, she was drifting slowly astern; at this time her head was up the harbor; I did not observe how her stern was with reference to the south shore; she was very close into the Sydney side; I saw a large steamer coming up the harbor; she appeared to come directly down upon us; I was under no apprehension, for I thought she would go over to the north shore, then, just before the collision took place, I thought she must have been going into the cove; I never could have supposed that she would run into us, as pains seemed to have been taken to warn her of us, the bell was ringing, and there was much shouting; I did not observe on which side of Fort Denison the steamer came; I saw what I supposed to be a second steamer; she passed close to the north of us, and she was hailed; the steamer that struck us appeared to be going very fast; I heard no bell or notice of the approach of the "Williams."

Sworn before me, at Sydney, }
this 19th April, 1860. }

J. MACARTHUR.

H. H. BROWNE, Chairman.

Daniel George Munro, being sworn, states:—I am commander of the Royal Mail steamer "Emeu," and was so on the morning of the 17th April; I was on deck the whole time; the ship was in charge of the pilot, and I did not interfere with his movements; the vessel was lying in Lavender Bay previous to getting under weigh; after the anchor was up the engines were reversed; I was on the quarter-deck myself; the vessel was then backed astern; her head was as fair across as it was possible to be with her stern to the south; I can't say how the vessel's helm was put at this time; she was too close, I imagine, for any vessel to pass under her stern with safety; I should say, half my ship's length, about 150 feet from Dawes' Point; I saw the "Williams" coming up the harbor; it may have been from Pinchgut; I remarked that she seemed right end into me, and that, from the speed, a collision was inevitable; I saw all three lights; he starboarded his helm, that is, appeared to give the vessel a shear when close to, as if going into the cove; had he not done so, he would have struck our mizen rigging; he struck us under the counter on the starboard quarter; I should think the "Emeu" was stationary at this time, she had been going astern; all the lights were exhibited, and the bell had been rung a minute before; I think there was a little steam blowing off, but not with violence; I was under the impression that the harbor master was on the bridge with the pilot and the fourth officer; I had been on the bridge, and as I saw everything was done as I should have done it myself, I did not interfere at the time of the collision; the "Emeu" was canting slowly to the eastward, I should think her head was right across; the pilot appeared to handle her skilfully and properly; there was plenty of room for a steamer to have passed to the northward of us, and I was surprised he did not adopt that course; if the "Emeu" had been going ahead at the time of the collision there would, I think, still have been room for the "Williams" to pass ahead.

ahead of us; it was rather dark, we could see half-way up the cove, we could see the land distinctly; the "Emeu" sustained considerable damage by the collision; I am not aware of anyone being injured by the collision; the damage was so serious that I could not proceed to sea at all.

Sworn before me, at Sydney, }
this 19th April, 1860. }

D. G. MUNRO.

H. H. BROWNE, Chairman.

William Colin Angove, being duly sworn, states:—I am the chief officer of the "Emeu;" I was on duty on the fore-castle on the morning of the 17th April; the anchor was off the ground before the engines were moved; the vessel was lying out of the fair-way in Lavender Bay, before getting under weigh; I know the vessel was turned astern after the anchor was up; I heard no order given; her head was about north-west when the anchor was lifted; her head came round to starboard and the stern went to port after the anchor was lifted; we were not apparently a ship's length from the south shore when the collision took place; I think the vessel had a little stern-way when she came into collision; when I first saw the "Williams" she was broad on our starboard quarter; I did not see which side she passed Fort Denison; she appeared to be steering right for our quarter; she altered her position very rapidly; she was coming up very fast; I saw the water leave her paddles; she was going very fast up to the time the collision took place; the "Williams'" head seemed to be right for our quarter, from the first I saw of her; there was sufficient room for her to pass ahead; we were right over on the south shore; I think if the "Williams" had missed our stern she would have run on shore, the "Emeu" being to the eastward of Dawes' Point; if the "Emeu" had been going ahead there would still have been room for the "Williams" to have gone by the north shore; the "Emeu's" lights were all up from 11 o'clock; the starboard light was knocked out by the collision and immediately lighted again; the "Williams" was going very fast; I should judge about 8 knots.

W. C. ANGOVE.

Sworn before me, at Sydney, }
this 19th April, 1860. }

H. H. BROWNE, Chairman.

Alfred Symons, being sworn, states:—I am the second officer of the "Emeu;" I was stationed at the conn, close to the wheel, on the 17th April; the steamer was well out of the fair-way in Lavender Bay; the vessel went astern after the anchor was lifted; the helm was put to starboard and the vessel came astern; the vessel's head was well up the harbor when she was turned astern; she came round very nicely to starboard—to sea—after she was turned astern; Dawes' Point was nearly right astern of us when the collision took place, a little more on the port than on the starboard; the engines had been stopped two or three minutes; she was going very slowly, losing way very fast; we were, as near as possible, 180 or 200 yards off Dawes' Point at this time; I did not notice particularly; we could see the land distinctly; I saw the "Williams" from 2 to 3 minutes before she struck us; I was at the aftermost skylight, and she was steering right in a line with me; she was coming fast; her engines were stopped before she came into collision; I am sure they were stopped, but I feel sure they had not time to reverse them; in harbor we don't take notice of the compass, and all my time is occupied watching the telegraph on the bridge; there was much noise after the collision, but I did not hear anything that was said; the concussion was very severe; we felt it on board the ship; the order was given to go ahead before the collision, but the vessel was still going astern, and at this time I think she made two turns ahead; at the time we were struck I think a vessel could not have passed our stern; we were stern on to Dawes' Point; I think we were about half our ship's length from Dawes' Point, certainly not a whole length off; I don't know whether there was room for a vessel to pass ahead of us, as I never leave the conn.

ALFRED SYMONS,
Second Officer.

Sworn before me, at Sydney, }
this 19th April, 1860. }

H. H. BROWNE, Chairman.

George James Curgenvin, being sworn, states:—I am the fourth officer of the "Emeu"; my station was on the bridge on the 17th April; I was near the pilot; as soon as the anchor was off the ground the engines were turned astern; we went astern until we got close to the south shore; the vessel's head was pointing into Lavender Bay when the engines were turned astern; the vessel's head then canted down the harbor; the engines had been stopped about a minute before the collision took place; the order had been given to go ahead, but the vessel had still stern way, although two or three turns ahead had been made; the "Emeu" was about half the ship's length off Dawes' Point at this time; there was no room for a steamer to pass between us and the south shore at the time the "Williams" struck us; our head was then down the harbor more than up; we were trying to slew her; I first saw the "Williams" about off Fort Macquarie, and I told the pilot there was a steamer coming, and he said at once turn ahead; the steamer appeared to be steering right on to us about amidships; as she came up she starboarded her helm, went off to our stern; steam had been blowing off, but it was not at that time; sparks and smoke were coming out
of

of the funnel; the steamer was coming very fast; she did not stop her engines within a ship's length; that was when I saw her last; she was going full 8 or 9 knots; there was plenty room for a vessel to go a-head of us, we were close into Dawes' Point; had the "Emeu" began to gather head-way, the steamer could have gone ahead of her.

GEO. J. CURGENVEN.

Sworn before me, at Sydney, }
this 19th April, 1860. }

H. H. BROWNE, Chairman.

Thomas Robinson, being sworn, states:—I am a licensed pilot for Port Jackson; I was the pilot in charge of the "Emeu" on the night of the 16th or morning of the 17th April; she was anchored close off Milsom's Point, out the fair-way when I boarded her; as soon as the anchor was up, we turned astern; the vessel's head was about north-west then, rather in towards the land, up the harbor; I ordered the helm to be put astarboard; she went astern until I had Goat Island just beginning to be shut in by Dawes' Point; her head had canted then right direct for the North Shore, rather down the harbor if anything; I had given an order for the engines to be turned ahead; they were turned half speed ahead, but the vessel was as near stationary as possible; I ordered the helm then to be put apart; as near as I could possibly tell, I believe the vessel was her own length off Dawes' Point at this time, and a vessel could not have gone astern of us without going on to Dawes' Point; I saw the "Williams" I should say not more than 1½ minute elapsed before she struck us; she was then coming close up on to our quarter; she altered her helm astarboard; it could not be a minute before, because I hailed her to stop; she stopped her engines just as the collision took place, perhaps about 5 or 6 seconds before; the "Williams" was coming about 7 to 8 knots up the harbor; there was plenty of room for the "Williams" to have passed ahead of us; if we had had good way ahead, I don't suppose there would have been room for the "Williams" to pass ahead of us; she had not head-way then; the bell had been rung, and the proper lights were exhibited; there was no signals, but our hailing, to the "Williams"—the collision took place so suddenly; everything was in proper order in the "Emeu," and my orders were strictly and immediately attended to; I did not discover the serious damage until round Bradley's Head; the chief officer reported this, and that there was a hole in the "Emeu's" quarter, and the engines were immediately stopped; the stern of the steamer was near just before the red buoy, to the eastward of the point; I am sure that I just observed Goat Island, being shut in by the point; from the position the "Williams" was steering, I should think she passed to the north of Fort Denison.

THOS. ROBINSON.

Sworn before me, at Sydney, }
this 19th April, 1860. }

H. H. BROWNE, Chairman.

William Summerbell, being sworn, states:—I am the chief officer of the "Williams" steamer; I was on deck when she came up the harbor on the 16th or 17th April; I was on the topgallant forecandle, that is my station from outside North Head to the wharf; we were coming up half speed from Fort Denison, I believe; we passed the north side of the fort; we first saw the "Emeu" when off Kirribilli Point; I don't know how we were steering; we appeared to be right up mid-channel; the mail steamer, when first we saw her, appeared to be broad on our starboard bow near Milsom's Point; the "Williams" course was not altered I think; I can't say whether the speed of the engines was altered; I reported from the topgallant forecandle to the captain, "the mail steamer lighted up"; seeing the lights in the ports, and knowing the mail steamer to be lying there, I reported her as before stated; I never noticed her masthead light at all; had I have done so, I would not have supposed that she was under weigh; I should think it was at least five minutes before we came into collision from the time that I first reported her; I saw the "Emeu" coming across our bows; I kept my look-out, and ordered the man to keep ringing the bell; I heard the captain order the engines to be stopped, the helm to be put hard astarboard, and the engines full speed astern; I heard nothing more until I saw a man leaning over the "Emeu's" quarter singing out; the speed of the "Williams" was checked before we came into collision; I believe the engines had made three revolutions astern; when the collision took place, we were over to the south side; had we gone clear of the "Emeu," there was not room to pass Dawes' Point at the time of the collision; we did not know the "Emeu" was under weigh until we got close to her; I have been mate of the "Williams" four months; we always come up the harbor on the north side; the reasons for our being on the south shore on the night in question was, because we thought the "Emeu" was still lying at anchor where we had left her the day before, lying over on the north shore; there was no other steamer with us; Captain Chatfield has been two trips in the "Williams," he joined on Thursday morning; the second mate was at the wheel; what I mean by the "Emeu" coming across our bows was, that the two vessels were coming in contact, which gave the "Emeu" the appearance of crossing our bows, and it was not until then that I had the least idea that she was under weigh; when I first saw the "Emeu," she appeared to be closer to the North Shore than to Dawes' Point.

W. SUMMERBELL.

COLLISION BETWEEN THE "EMEU" AND "WILLIAMS."

7

John Fyfe, being sworn, states:—I am the chief engineer of the "Williams" steamer; I was in the engine-room on the morning of the 17th April; from within ten minutes or a quarter of an hour before the collision took place, the engines were going at half speed; this was done by orders of the captain; we were at full speed before this; when our vessel is at full speed, she goes at 12 or 13 miles an hour in smooth water; when the speed is reduced to half, she goes between 6 and 7 miles an hour; when we were going half speed, we had a pressure of 10 lbs., and at full speed 18 lbs. The steam was not blown off when we put her at half speed; I saw nothing of the collision; it was between 1 and 2 minutes before the collision took place that the captain gave orders to go "quite slow, stop her, full speed astern." I couldn't exactly say, but no more than two or three revolutions were made astern before the collision took place; this would have checked her; twice as many more would have stopped her; I did not feel the collision much below; there was a great crash.

Sworn before me, at Sydney, }
this 19th April, 1860. }

JOHN FYFE.

H. H. BROWNE, Chairman.

Hayward Fleetwood, being sworn, states:—I am chief engineer of the "Emeu"; I was in attendance on the engines on the morning of the 17th April; after the anchor was lifted I was ordered to put the engines astern, and they were put astern; they went astern for a minute or two; I could not say how far we went astern; we went at about one-third speed; the engines were then stopped; we went ahead before the collision took place; according to my belief, we went ahead twice and astern twice before the collision took place; the engines were going ahead, but the vessel had stern-way, when the collision happened; we had gone astern for about four minutes and then started ahead again before the collision, but the vessel had not gathered head-way.

R. H. FLEETWOOD.

I have examined the damage sustained by the "Emeu"; it is decidedly of such a nature as to prevent her from proceeding to sea; the collision has broken the rudder-post in two places—that is, the frame, which is plated over with $\frac{3}{8}$ plates.

There is a hole in the counter, 2 feet long by about 14 inches wide, being a portion of two plates.

R. H. FLEETWOOD.

Sworn before me, at Sydney, }
this 19th April, 1860. }

H. H. BROWNE, Chairman.

John Crook, being sworn, states:—I am harbor master of Port Jackson; I was in my boat, under the quarter of the mail steamer, when the collision took place; I had been on board in my capacity as harbor master, and had seen the vessel get fairly under weigh; the mail steamer was about her own length and a quarter from the red buoy to the eastward of Dawes' Point; I went in my boat for the purpose of seeing that the "Emeu" was not backed too close in; the "Emeu" was coming astern when the collision took place, but I had told the pilot to stop her five or six minutes before, but she still had stern-way on; I had also given orders to go ahead, and I pulled my boat out of the way of the back water of the fan, when I heard a crash, and saw the bowsprit of a steamer under the "Emeu's" stern. I had not seen the "Williams" before this, and I did not know it was a steamer until I saw her two funnels. There was not room for the steamer to have gone under the "Emeu's" stern and cleared Dawes' Point. I put in a drawing shewing, to the best of my belief, the position of the vessels at the time the collision occurred, as I thought that some inquiry would take place. The steamer had her lights up, and I hailed them to keep the bell ringing. She could not possibly have been mistaken for a vessel at anchor, as the sparks from her funnel were falling about and into our boat, and the steam was blowing off. Even if the "Emeu" had gathered head-way the "Williams" could have passed to the north, because she could have got by before the "Emeu" would be over to the North Shore. When I left the vessel I was not aware of any damage having been sustained by the "Emeu," and she proceeded on her voyage.

JOHN CROOK.

Sworn before me, at Sydney, }
this 19th April, 1860. }

H. H. BROWNE, Chairman.

William Smith, being sworn, states:—I am second mate of the "Williams" steamer; I was steering that vessel on the 17th April; we came up the north side the Sow and Pigs to Bradley's Head, and from there I steer very near for the north end of Goat Island; I was attending to the captain, and steering by a star, and did not recognise the mail steamer at all; the first order I received before the collision was "starboard, hard astarboard," and this was the first I knew of the mail steamer being near; I put the helm hard down; putting my helm this way, I found we had come over on to the south shore considerably; I heard no report of the mail steamer given to the master of the "Williams"; the captain was on the bridge; there were plenty of lights; I saw them before we came up, but I paid no attention to

to anything until ordered by the master; I can't say if we missed the "Emeu" that we would have gone clear of Dawes' Point; the night was sufficiently clear to make out Goat Island from Bradley's Head.

WILLIAM SMITH.

Sworn before me, at Sydney, }
this 19th April, 1860. }

H. H. BROWNE, Chairman.

Charles Stephen Ferguson Chatfield, being sworn, states:—I am the master of the steamer "Williams," and was so on the night of the 16th or morning of the 17th April; we entered the heads about 20 minutes to 12 o'clock that night; I was on the bridge from Morpeth to Sydney; we came up full speed as far as Pinchgut; as soon as Fort Denison was on my port beam I ordered the engines to be put at half speed; at full speed in smooth water she would make 12 or 13 miles an hour—at half speed from 6 to 7 miles; I passed to the north of Fort Denison; after passing the fort I rounded about $\frac{3}{4}$ of my own vessel's length from Kirribilli Point; I then steered for the north end of Goat Island; I could see the island; it was a fine clear starry night; I saw numerous lights broad on my starboard bow, but no vessel then; I was about twice or three times my own length from Kirribilli Point when I made out the vessel with her head to the northward; I did not that moment make it out to be a steamer, but shortly after the mate called my attention to the mail steamer being lit up; I did not see her masthead light or green light, but I saw the accommodation and saloon lights; she was quartering to me; shortly after the report was made to me that it was the mail steamer, I saw that she was moving, and gave the order to starboard the helm a little and go quite slow; finding it to be a steamer coming astern, I put the helm hard astarboard, and ordered the engines to be turned astern; immediately after this she struck us on our starboard bow with her starboard quarter, heeling us over about four feet, doing considerable damage; I can't say how many strokes astern we had made—my attention was taken up with the collision; we were checked, but had a little way—we were not quite stopped; after the collision I found the "Williams" more on the cove side of Dawes' Point, right off the point—that is, to the eastward of the point; it was impossible for me to pass to the northward of the "Emeu"; when I first saw her she was over on the North Shore, apparently in the position where I saw her on the previous Saturday; there was no smoke or sparks from the funnel, nor any steam blown off from the "Emeu" from the time I first saw her until the collision, when I observed a small feather only from her steam funnel; I had all my lights burning, and had them trimmed coming in at the heads; I could see my lights from side to side as I passed, and the masthead light reflected on the stays; as soon as I found the "Emeu" was under weigh I starboarded my helm, not knowing which way she was going; at the time of the collision the "Emeu" was coming astern rapidly; I can't say whether the screw was turning; as the collision took place somebody put a light over the quarter, and I heard said, "Look out, sir; we are going ahead"; I can't say whether this was addressed to me; I am under the impression, from what I know of Sydney Harbor, that from the position in which the "Emeu" was in when off Dawes' Point, that she must have struck the rocks, as I believe she is drawing 20 feet water. I wish to call the Board's attention to the diagram published by the Board, on which I acted; I refer to second situation; I see a vessel, without being able to observe her light, with her starboard quarter to me; I know this from the position of her head, according to this situation I starboard my helm to pass under her stern, and I respectfully submit to the Board that from the position in which the "Emeu" was lying, I was not to know that she was making stern-way; what I state now is from what I observed when I first made out the steamer to be under weigh; it was never my intention when I found that the "Emeu" had stern-way on her, to pass between her stern and Dawes' Point, and from her so rapidly closing it was impossible for me to go ahead of her, if I had ported my helm in that case I should have gone right into her; I put in a diagram showing the position of the damage done to the "Williams" by the collision, which shows that the force of the blow is directly across the ship; we started all the stanchions in the vicinity of the blow, and in the port side as well, forcing the topgallant forecastle over to the port side; the starboard anchor was carried in board bodily, and the broken part of the stock found on deck; this I have produced to show that we had little or no way on the ship, as if we had we should have made the damage from forward to aft; neither the bowsprit or cutwater are touched; I deny that the collision on the part of the "Williams" could have slewed the "Emeu" to the extent stated in the evidence, or that it slewed her at all; I gave my second officer the order to port rounding Kirribilli Point, but I did not give any further orders until I found the "Emeu" under weigh, when I said starboard, and when I found her coming astern rapidly, I gave the order hard astarboard; I have not seen the damage to the "Emeu," and have not therefore contrasted the damage sustained by her with that of the "Williams"; my own bell was kept ringing coming up the harbor, it was ringing a minute before the collision; I did not hear the "Emeu's" bell; there was no other steamer near us at or about the time of the collision; I saw the north end of Goat Island on rounding Kirribilli Point astern of the "Emeu"; I rounded that point about my own length off; my impression is that the "Emeu" was going as fast astern as I was going ahead, that is, when I first made her out going astern a little previous to the collision, and that she was in the position marked D when I ordered my helm to be put hard astarboard; the position of the "Williams" is marked C, and when the "Emeu" was going astern it was at the rate of about 5 miles an hour; that being the case, my reason for not putting my helm aport was because it is contrary to the regulations, and I should have gone into the mail ship amidships; the position

COLLISION BETWEEN THE "EMEÜ" AND "WILLIAMS."

9

position D shows mid-channel; under the circumstances the north side of the harbor was not my proper side; in steering from Kirribilli Point to Goat Island it would be about a mid-channel course; it is the custom to steer that course coming up the harbor if there is nothing in the way; I do not hold a certificate from this (the Pilot) Board; I had no pilot, and navigate my own ship; I was in command *pro tempore*, and I did not know it was necessary to hold a certificate from the Board; I held a commission in the Royal Navy; I was appointed to the "Williams" last Thursday week, to the temporary command, and had no opportunity subsequent to that to obtain a certificate.

C. S. F. CHATFIELD.

H. H. BROWNE, J.P., Chairman.

Angus Campbell, being sworn, states:—I am the master of the "H. M. Warfield"; I hold a certificate from the Pilot Board; I entered the heads about 12 o'clock on the night of the 16th April; I saw the "Williams" steamer first outside the heads; she passed me about off the South Reef; I saw the "Emeu" below Bradley's Head, and I boarded her; I saw nothing of the collision; I went alongside, observing them firing guns and shewing blue lights; I was then told that her rudder was gone, and I then left; she was at anchor.

Sworn before me, at Sydney, }
this 20th April, 1860. }

A. CAMPBELL.

H. H. BROWNE, Chairman.

Edward Evans, being sworn, states:—I am the engineer to the New South Wales Steam Navigation Board; in that capacity I have examined the steamers "Emeu" and "Williams." (*Mr. Evans's reports were then handed to him and read.*) I consider the damage sustained by the "Emeu" quite sufficient to prevent her proceeding to sea; I consider the damage done to the "Emeu" has resulted from the impetus from the "Williams"; having also seen the damage to the "Williams," I still am of opinion that the injury to the "Williams" was from the same cause; the statement by Captain Chatfield, respecting the impetus from the "Emeu" to the "Williams," is not in my opinion, borne out by my examination of the damage; my reasons for arriving at a contrary conclusion are—first, the "Emeu," being a rounded vessel, the anchor-stock of the "Williams" struck under the starboard counter; and second—the bulwarks and water-way plate of the "Williams" broke the outer frame-iron and rudder-post of the "Emeu." These results would not have been produced had the pressure been from the "Emeu"; the fracture, by the anchor-stock, is not shewn in my diagram, because there is not room; the screw is before the rudder and below the water-line; there is no space between stern-post and the rudder above the water-line; I account for the bowsprit going clear, because there was room for it to pass, but not for the bow of the vessel; if the "Emeu" had struck the "Williams" first, the difference would be that the rudder would have kept its position, and not been bent over as at present; the fracture in the "Emeu's" counter, had she struck the "Williams," would have been vertical instead of horizontal.

Sworn before me, at Sydney, }
this 20th April, 1860. }

EDWD. EVANS.

H. H. BROWNE, J.P., Chairman.

No. 1 Report sent in by the Engineer to the Steam Navigation Board.

Injuries sustained by the steam-vessel "Williams," from collision with the steam-vessel "Emeu," on the 17th ult.:—

The injuries are entirely confined to the starboard bow, the point of contact being situate at about twelve feet from the stem, at which place the plating of the first strake below the water-way plate is torn down in two places nearly through the depth of the plate. The water-way plate being likewise torn through and otherwise buckled throughout the length of the plate.

Two of the deck beams are bent and forced from their positions.

The frame-irons, in one instance, considerably bent, and others in its vicinity forced aft.

The timber work of the upper deck extending from the windlass forward is more or less injured, and fastenings started; the water-way plank on starboard side broken through, the top rail and topgallant fore-castle being forced over to port side, with staunchions drawn and broken off from water-way planks, and the whole of the panelling destroyed.

The anchorstock was found broken off at its junction with the shank.

EDWD. EVANS,
Engineer.

Steam Navigation Board Office,
18th April, 1860.

No. 2 Report put in by the Engineer.

Injuries sustained by the steam-vessel "Emeu," from collision with the steam-vessel "Williams":—

The plating under the starboard counter, immediately below the first quarter-gallery window, has been found punctured and torn horizontally towards the stern.

The rudder-post is completely broken through above the pintle-gudgeon, and the plating torn across on both sides, the outer frame-iron being torn from the scarph to the rudder-

10 COLLISION BETWEEN THE "EMEU" AND "WILLIAMS."

rudder-post, and the bolts broken, and completely broken off lower down, the lower portions above the rudder-chain shackle and gudgeon being bent over to port.

The injuries do not extend below the points above referred to.

Steam Navigation Board Office,
18th April, 1860.

EDWD. EVANS,
Engineer.

Steam Navigation Board Office,
Sydney, 18 April, 1860.

W. J. Wilshire, Esq., Secretary :—
Sir,

I have the honor to report, for the information of the Board, of my having examined the injuries sustained by the steam-vessels "Emeu" and "Williams," from collision in Sydney Harbor on the 17th ult., and enclose reports of damages respectively.

I remain, &c.,
EDWD. EVANS,
Engineer.

Daniel Harding, being sworn, states :—I am in command of the steamer "City of Newcastle;" I hold a certificate from the Pilot Board; if I saw a vessel without being able to make out her lights, but satisfied that her starboard broadside was towards me, I would first try to ascertain which way she was going, but failing to ascertain that I would put my helm astarboard, reverse the engines, and go astern.

D. HARDING.

Sworn before me, at Sydney, }
this 20th April, 1860. }
H. H. BROWNE, Chairman.

Edward Evans, re-examined, states :—I was not on a survey on the "Emeu" before she went on her last voyage; I am aware that there was a survey on the rudder of the "Emeu" before she went to sea; then I saw the rudder as a casual observer.

EDWD. EVANS.

Sworn before me, at Sydney, }
this 21st April, 1860. }
H. H. BROWNE, Chairman.

George Charles Burne, being sworn, states :—I command the Royal Mail steamer "Benares;" I was a passenger by the "Emeu," and was on board on the night of the 16th or morning of the 17th April; I was on deck; I was standing on the quarter-deck gangway, by the accommodation ladder, on the starboard side, at which time the "Emeu" was going astern, when I saw the "Williams" coming up the harbor at considerable speed; the "Emeu's" engines were stopped at the time I thought a collision was possible, but she had still sternway; I saw that the "Williams" was endeavoring to pass under the "Emeu's" stern, between that and the point; and I also saw that unless the "Williams" was able to stop a collision was inevitable, and consequently the collision—a very severe one—took place; the "Williams" struck the "Emeu" under her quarter; the "Williams' engines were stopped a short time before the collision took place; at the time of the collision the "Emeu" was still going astern; when I first saw the "Williams" she appeared to me to be steering for the stern of the "Emeu;" I think that when close she suddenly starboarded her helm; the bell of the "Emeu" was rung, as is usual with all of our steamers, just before starting; I can hardly say, but I should think the bell was rung some time before the collision took place; I think she had the side lights; I could see the masthead light; I did not observe whether steam, or smoke, or fire was escaping from the "Emeu," to indicate that she was under weigh; certainly both vessels had motion, but the "Williams" was certainly impelled against the "Emeu;" I should not regard it the other way at all; when I first saw the "Williams" the "Emeu" was going astern; I should think, standing as I was, on the quarter-deck, that the "Emeu" was as far over on the south side as she could be; I have commanded a steamer in the Company's service nearly 4 years; I am not a good judge of the effect of a reduction of pressure as affecting speed, but from my own experience I should say that a vessel going at from 12 to 13 knots an hour, at full speed, would, at half speed, go at the rate of about 8 knots an hour—that is, assuming that half speed is a reduction of about $\frac{2}{3}$ of the full speed.

By Captain Chatfield: Before the engine moved I should think the "Emeu" was about half way between the two shores; I should think she was nearer the south shore before she got under weigh; I am not quite certain whether the vessel went ahead or astern first after the anchor was lifted; once each way, at least, before the collision took place; I don't think I saw the "Williams" until she had passed Pinchgut; I think I saw all three lights aboard the "Williams"; I am positive that at one time I saw all three lights, but not the whole time; the "Emeu" was lying right across the harbor when I saw the "Williams" off Kirribilli Fort; the "Emeu" at this time was going astern; I can't say she was then off Kirribilli Point; I mean the "Emeu" was going astern the whole time after I saw the "Williams"; I should think the "Emeu" was going astern somewhere between three and five knots before the

COLLISION BETWEEN THE "EMEU" AND "WILLIAMS."

11

the collision took place; the bell of the "Emeu" was rung two or three times, and for what purpose I don't know; there was no party or ball on board the "Emeu" that night; if I had been in the position of the "Emeu" I would have canted her under steam alone in that sea room; I have canted larger vessels in less room than that; the screw will act immediately in retarding a vessel making stern-way, but of course it will be some little time before it will give her head-way; when you got clear of the "Emeu," she went down to Bradley's Head; I looked over the side, and not seeing any damage done, I was going to turn in; I am not positive that the "Emeu" went straight down the harbor after the collision; a vessel coming up at about eight knots, although drawing six feet, would slew a long vessel like the "Emeu," drawing twenty feet, having great leverage, and striking her at the extreme point; it is a fact that a vessel drawing two or three feet more water forward than aft will slew more readily if struck at the stern, the fore part of the vessel forming a point to turn on; the "Emeu's" head was canting to seaward from the time I first saw the "Williams," but I could not say to what extent.

Sworn before me, at Sydney, }
this 21st April, 1860. }

GEO. C. BURNE.

H. H. BROWNE, Chairman.

David Cate, being sworn, states:—I am commander of the ship "Black Sea." I was in Captain Crook's boat at the time of the collision with the "Emeu" and "Williams," from the time the "Emeu" was under weigh. My wife was a passenger by the "Emeu," and I was there to see her away. When the "Emeu" started from Lavender Bay she made a stern-board; she went very quick; she came to the south shore as far as it would be considered safe for a vessel of that kind, and her head was canting to the eastward, to sea, the whole time. The first I saw of the "Williams" was her jib-boom passing the stern of the "Emeu"; I think this was the second board the "Emeu" had made; she turned ahead once and then backed again; at the time of the collision she had stern-way I think; I did not hear the "Emeu's" bell ring till after the collision; it was then ordered to be rung; I don't say it was not rung—I did not remark it; Captain Crook ordered it to be rung; I don't know whether the order to turn ahead had been given before the collision took place, but Captain Crook had ordered her to be stopped; I suppose Captain Crook was there to assist the pilot; he was directing the movements of the "Emeu." *Cross examined*: I know there was a pilot on board, but I suppose Mr. Crook was directing the vessel as he knew more about the harbor; I believe the pilot was a new one; I am sure I couldn't say whether there was any indication of the "Emeu" being under weigh; I have been so much among steamers, that I don't know that I should have noticed the steam blowing off; I never commanded a steamer.

DAVID CATE.

Sworn before me, at Sydney, }
this 21st April, 1860. }

H. H. BROWNE, Chairman.

John Fyfe, being sworn, states:—I am the superintendent engineer of the Hunter River New Steam Navigation Company. I have made an examination of the "Williams" and "Emeu," and I hand in a report of the same. This statement is read as being the result of my opinion after examination of both vessels. I saw nothing of the collision.

Sworn before me, at Sydney, this }
21st April, 1860. }

JOHN FYFE, Engineer.

H. H. BROWNE, Chairman.

REPORT handed in by Mr. Fyfe, and alluded to in his Evidence.

I HAVE examined the hulls of the steamers "Emeu" and "Williams," for the purpose of ascertaining the extent of damage done by the late collision, and from the comparative trifling damage done to the "Williams," compared with the ordinary circumstances of collision between vessels under weigh, I am satisfied the "Williams" could not have had any headway on her at the time the vessels struck; if she had been shooting ahead nothing in all ordinary possibility could have prevented part of her top side and bulwarks from being torn away, whereas it now stands out in bold relief; for it is evident from the indent on the top side and covering board, that the "Emeu" ran into the "Williams," and so gently that she lifted the anchor and top rail and laid them down on the deck of the fore-castle; the concussion given by the "Emeu" doing no more harm than the straight indent made, and as a matter of course shoving the "Williams" to the one side. According to the laws of motion, both on sea or land, I affirm that the consequences of the "Williams'" entanglement of the "Emeu's" rudder, had there been any headway on her nothing could have saved the bulwarks as far as the deck-houses and sponson beams from being destroyed, and finishing the havoc by the destruction of the paddle-wheel.

I will also suppose, looking at the damage sustained by the "Emeu," that if the "Williams" first struck her on the rudder, that that circumstance would cause her to stop and do no further damage; it is impossible.

For

For these reasons, I am confident in my opinion that the "Emeu" struck the "Williams" first, and that the collision was not of a more dangerous nature arose from the fact of no headway being on the "Williams" when the collision took place.

JOHN FYFE,

Superintending Engineer.

Sydney, 20 April, 1860.

Alexander Bright Bain:—I am the superintending purser of the Company on this station; I was on board the "Emeu" on the night of the 16th or morning of the 17th April; I was there when the "Emeu" was being got under weigh; I was on the starboard side at the gangway; I was interested in getting away; the "Emeu" was going astern, and I was waiting for her to stop, that I might get into my boat; and I went down the ladder to get into my boat; my friend got in, and I was about to do so when, looking round, I saw a steamer coming up the harbor; the "Emeu" had way on, but very slight; I observed the three lights; she appeared to be steering straight amidships of us; some one told me to jump, but I said "I'll wait till the steamer pass"; about a moment or two afterwards I saw that there was likely to be a collision, as she was apparently steering for our gangway, I went up on deck and told my friend to follow; she did not come on our gangway; she must have starboarded her helm; I observed her go off to port; her engines were stopped, I should think about her own length off the "Emeu"; I saw the wheels stop, she was then within the radius of our lights; I did not see them reversed; certainly the "Emeu" was not going as fast astern as the "Williams" was coming on to us; she could not possibly have been, she had very little motion; I am quite certain that the "Williams" engine was not stopped until I saw the paddles; my boat's head was towards the "Emeu's" stern; I can't say that the "Emeu's" bell was rung, or that there was any demonstration of her being under weigh; I heard one bell rung, but I can't say at what time.

Cross-examined by Capt. Chatfield: When I first saw the "Williams," she was coming up the harbor apparently in a line with us and Pinchgut; she was this side of Pinchgut; I can't tell her relative position to the land; I am positive the "Williams" paddles did not go astern before the collision; I could see by the direction that the "Williams" helm was put starboard; I know this by my own knowledge.

H. H. BROWNE, Chairman.

Captain Munro, being recalled and re-examined, states:—We never give up charge of our ships; had the pilot done any thing wrong I would have superseded him; I consider the pilot was in charge if he received any direction from the harbor master; I have nothing to do with it; the bell of the "Emeu" was rung more than once after the anchor was up; it was rung about a minute or a minute and a half before the collision; the Harbor Regulations are on board the "Emeu"; they may have been given to my chief officer by the pilot; I believe the bell was rung in accordance with those regulations.

D. G. MUNRO.

Prince Little, constable in the Water Police, being sworn, states:—I was on board the ship "Dirigo" on the night of 16th April; I saw the collision between the "Emeu" and another steamer; the steamer that came into collision with the "Emeu" passed from one-eighth to a quarter of a mile off the "Dirigo"; there was a brig outside of that vessel, and the steamer passed outside of her; I did not see the "Emeu" get under weigh; I saw her first when I heard her bell, just as she was getting under weigh; when I next saw her was between the point and the "Dirigo," outside the buoy; she appeared to me to be backing in very slowly to the point, her head being towards Milsom's Point; I noticed the "Williams" from the time she passed Pinchgut; she passed close round Kirribilli and outside of the brig; I heard some person, it appeared to me from the "Williams," say "aport, hard aport"; immediately afterwards, "stop her"; after passing the brig she came over towards Dawes' Point, and I thought by the way she came that she was trying to go between the point and mail boat; if she was drawing 6 or 7 feet she might have gone between, but it would have been very dangerous; she appeared to me from the time I saw her to be steering right towards the "Emeu"; there was plenty of room to go to the northward as the big steamer was sterning in; when I heard the order "port, hard aport," I should say the "Williams" was about four times her own length from the "Emeu," and I thought she then was going to the northward of the mail steamer; the "Williams" reversed her engines, I should think from three to five revolutions before coming against the "Emeu"; the "Williams" appeared to me to be about half speed, that is, about 6 or 7 knots; you could hear her floats very distinct striking the water; I did not observe the mail steamer's position alter; but the "Williams" heeled over to starboard, and I thought she was filling, she was laying over so low; it appeared from the sound that the order to port was from the "Williams"; when I first saw the "Williams" she was about one-third of the way from Pinchgut to Kirribilli; she appeared to be well over to the northward;

northward; I did not notice the "Emeu" under weigh at all until she was very close to me; she got under weigh very quiet and noiselessly; it was starlight; I could see a steamer by her lights as far as Bradley's Head; I saw the "Williams'" lights plainly; when I first saw her they were burning quite bright; I heard the "Williams'" bell this side of Pinchgut, but I don't recollect hearing it until after the collision; I don't know anything about the "Emeu's" position until she was just slowly sterning close in to Dawes' Point; from the position I was in, there is no question but both steamers struck together; one was heading in and the other sterning in; I am positive the "Williams'" engines were turned astern before I heard the crash. At the time of the collision I saw the "Williams'" list towards the "Emeu," because I saw her masthead light cant over to starboard; I could not see the "Williams'" side lights at the time of the collision; after the collision I saw the port and masthead lights of the "Williams'"; the order to turn ahead from the "Emeu" was given just after the collision; the boats appeared to me to be laying together when the order was given to turn ahead; there was music on board the "Emeu"; I did not notice the band playing after she got under weigh, and I don't think there was a bell rung after she got under weigh until after the collision; if the "Emeu" had been ranging ahead it would have been equally dangerous to have gone ahead as astern of her, considering the close proximity of the vessels; but when you first stopped the engines of the "Williams'" there was not room for you to have gone ahead of her.

PRINCE F. LITTLE.

Charles Andrews, being sworn, states:—I am a seaman, one of the crew of the "Williams." It was my duty to ring the bell coming up on the night of the 16th April; I had also to keep a look-out. I saw several vessels coming up the harbor. I saw the mail steamer after coming round Kirribilli. The "Williams" was then about mid-channel, steering up the centre of the harbor as near as possible. The "Emeu" appeared then to be on the north side of us, and we tried to pass her to the south. I saw the "Emeu's" lights, but I did not make her out to be under weigh until the collision took place. We were then on the south side. The order "starboard" and "hard astarboard" was given about one or one and a half minute before the collision. The captain ordered the engines to be turned astern full speed before the collision took place, but I could not say how many turns. The "Williams" way was stopped a good deal when the collision took place; she may have been going half a knot; I did not take particular notice. We passed about forty yards from Kirribilli Point. I saw Goat Island immediately after passing Kirribilli Point. The "Emeu" was then on our starboard bow. We were then steering about mid-channel, heading more for the point where the Artillery Barracks is. I am quite sure of this. I did not know the mail was under way when the mate reported her lighted up. I saw no smoke or steam from the "Emeu," or heard her bell ring before the collision. The "Emeu's" head was to the northward, a trifle down the harbor, when I made her out to be under weigh. I saw the mail steamer's bright lights along her side, but I could not very clearly distinguish the green light, but I did see it. I kept the "Williams'" bell ringing all the way up the harbor.
