NEW SOUTH WALES.

NATIONAL EDUCATION.

(REPORT.)

Presented to both Houses of Parliament, by Command.

ELEVENTH REPORT OF THE COMMISSIONERS OF NATIONAL EDUCATION IN NEW SOUTH WALES.

REPORT for the Year 1858.

To His Excellency SIR WILLIAM THOMAS DENISON, Knight Commander of the Most Honorable Order of the Bath, Governor General in and over all Her Majesty's Colonies of New South Wales, Tasmania, Victoria, South Australia, and Western Australia, and Captain General and Governor-in-Chief of the Territory of New South Wales and its Dependencies, and Vice-Admiral of the same, &c., &c., &c.

MAY IT PLEASE YOUR EXCELLENCY,

We, the Commissioners of National Education in New South Wales, beg to submit to your Excellency this our Eleventh Report.

1.—SCHOOLS.

By a Return hereunto appended, it will be seen that, during the year we had 104 Schools in operation, attended in the aggregate by 7,916 children. Of these Schools 38 were opened in 1858, namely:—

- | | |
|-----------------------|----------------------|
| 1. Araluen. | 20. Goulburn. |
| 2. Berkely. | 21. Jamberoo. |
| 3. Burwood. | 22. Ironbark. |
| 4. Bishopsbridge. | 23. Kirkconnell. |
| 5. Bangalore. | 24. Manly. |
| 6. Blaney. | 25. Mosquito Island. |
| 7. Bishopsgate. | 26. Macquarie Swamp. |
| 8. Corder. | 27. Newcastle. |
| 9. Castlereagh. | 28. Pitt Town. |
| 10. Campbell's River. | 29. Pymont. |
| 11. Cowra. | 30. Raymond Terrace. |
| 12. Cobbity. | 31. South Head. |
| 13. Dubbo. | 32. Tambaroora. |
| 14. Dennis Island. | 33. Tillimby. |
| 15. East Maitland. | 34. Taralga. |
| 16. Ellalong. | 35. Tarlo. |
| 17. Fishery Creek. | 36. Waratah. |
| 18. Fairy Meadow. | 37. Wattle Flat. |
| 19. Gunning. | 38. Waterloo Estate. |

And four, namely—

1. Bowning,
2. Gundagai,
3. Lochinvar, and
4. Bathurst,

For some time suspended, were re-opened.

Appendix B.

The number of Schools for which aid was sought during 1858 was 75. Of this number 7 were rejected, for the reasons assigned below.

No.	Name of place where School applied for.	Reasons for rejection.
1	Brisbane { Brisbane, South Brisbane, North Fortitude Valley Village of Ashby	In order to form one vested School capable of accommodating the whole of the children.
2		
3		
4		
5	Ebbersham... ..	Premises insufficient.
6	Howlong }	Existing means of Education not proved to be deficient.
7	Morpeth }	

Fifteen vested Schools were erected during the year, or were in progress of erection at its close, namely,—

1. Dubbo.
2. Falbrook.
3. Fishery Creek.
4. Fairy Meadow.
5. Gundagai.
6. Jamberoo.
7. Louisa Creek.
8. Manly.
9. Major's Creek.
10. Westbrook (Mount Hunter).
11. Marshall Mount.
12. Singleton.
13. Wattle Flat.
14. Violet Hill (American Creek).
15. Walcha.

At the close of the year forty-three applications were held in suspense, for the reasons mentioned hereunder.

Name of Place where School applied for.	Remarks.
1. Appin	Awaiting formal application.
2. Apsley	Ditto ditto.
3. Adelong	Ditto Tenders for erection of premises.
4. Bendemeer	Ditto formal application.
5. Bow Bow	Ditto appointment of a Teacher.
6. Brisbane	Ditto Tenders for erection of premises.
7. Clifton	Ditto formal application.
8. Congewai	Ditto appointment of a Teacher.
9. Church Hill (Scots' Church)..	Other localities unprovided with any education, considered to have a preferable claim.
10. Charles Town	Awaiting formal application.
11. Cessnock	Ditto organizing Master's Report.
12. Crosslands	Ditto formal application.
13. Deniliquin	Ditto ditto.
14. Dingo Creek	Ditto Inspector's Report.
15. Enfield	Ditto formal application.
16. Fish River Creek	Ditto ditto.
17. Goulburn (No. 2)	Ditto appointment of a Teacher.
18. Howell's Creek	Ditto Plan and Specification of premises.
19. Lochinvar	Ditto appointment of a Teacher.
20. Lydney	Other localities unprovided with any education, considered to have a preferable claim.
21. Limekilns	Not sufficient number of children to justify the outlay.
22. Long Swamp	Awaiting Plan and Specification of premises.
23. Merrendee	Ditto formal application.
24. Molong, West	Ditto ditto.
25. Murray's Flats	Ditto erection of eligible premises.
26. Mummell	Ditto formal application.
27. Morangaroo	Ditto appointment of a Teacher.
28. Mundooran	Ditto formal application.
29. Montefiores	Ditto ditto.
30. Mount Pleasant	Ditto Plans and Specification of premises.
31. Macquarie Swamp	Ditto selection of School site.
32. Macquarie River	Ditto formal application and Inspector's Report.
33. Nundle	Ditto formal application.
34. Omega Retreat	Ditto Tenders for erection of premises.
35. Randwick	Ditto appropriation of School site.
36. Redfern	Other localities unprovided with any education, considered to have a preferable claim.
37. Richardson's Point	Awaiting Tenders for erection of school premises.
38. Shell Harbour	Ditto Inspector's Report.
39. Seone	Ditto formal application.
40. Saltram	Ditto Plan and Specification of school premises.
41. Sedgefield	Ditto organizing Master's Report.
42. Toowoomba	Ditto formal application.
43. Uralla	Ditto ditto.

2.—GRANTS IN AID OF BUILDINGS.

The aggregate amount paid for the erection of School buildings, and for repairs, rent, and furniture, for 1858, was £4,398 13s. 7d., and at the close of the year we had pledged sums for similar purposes, amounting to £7,077 6s. 4d., being double the local contributions promised to be raised in accordance with our published regulations. The amount mentioned above as paid for School buildings, &c., does not include the sums locally contributed, but refers only to the expenditure of the public money.

Appendix C.

3.—SALARIES.

The salaries and allowances paid to teachers, officers, and servants of the Corporation during 1858, amounted in all to £13,963 18s. 2d., of which sum £11,525 17s. 11d. was paid to teachers; and £2,438 0s. 3d. to other officers, namely,—Secretary, Inspector, Organizing Masters (2), Accountant, Clerk, Architect, and Messengers (2). The gross amount of fees paid by the children during 1858, was £6,204 10s. 2d., shewing an increase of £812 16s. 4d. over the fees paid in 1857. The same practice is still observed in the distribution of the fees as in preceding years, namely,—In Sydney, three-fourths, and in the country the whole of the fees go to increase the emoluments of the teachers. With regard to allowance for travelling expenses paid to teachers, when proceeding to take charge of Schools, we have found it necessary to establish a regulation, of which a copy is appended hereto.

Appendix D.

4.—INSPECTION OF SCHOOLS.

The following Reports from our Inspector and Superintendent furnish a general summary of the state of the National Schools throughout the Colony, and also of the Model Schools in Sydney, for the year 1858.

The comprehensive nature of these Reports dispenses with the necessity for any lengthy observations of our own upon many topics to which, in the present state of the Education question, we should have otherwise felt bound to advert. The numerous important suggestions they contain are worthy of earnest consideration by all who aspire to influence the future course of public Education in this Colony; and we trust that, whatever may be the changes resolved upon, the knowledge, zeal, and administrative ability of Mr. Wilkins, from which the Colony has already reaped so much benefit, may be rendered increasingly available to the advantage alike of the community and himself.

GENERAL Report upon the Condition of National Schools in 1858.

The great increase in the number of National Schools, and the augmentation in the Board's business, consequent upon the adoption of the Regulations of 14th December, 1857, having rendered necessary a corresponding extension of the means of inspection, a second Organizing Master was appointed early in the year 1858. The inspectoral staff, therefore, consisted of the Inspector and Superintendent, and two Organizing Masters, one of whom was stationed in the Northern, and the other in the Western District. The area over which their labors were distributed comprised the whole Colony south of the 30th parallel, and extended as far to the westward as Dubbo and Cowra. In addition to the examination of existing Schools, much of the time of the Inspector and his assistants was employed upon matters relating to the establishment of Schools, it being found necessary, before complying with any request for aid, to despatch an officer to inquire and report minutely upon the merits of the application, in the case both of vested and non-vested Schools. Many localities were also visited, on the invitation of the inhabitants, for the purpose of affording information as to the principles of the National System, the regulations of the Board, and the proper mode of applying for assistance. The duties of inspection may thus be summed up:—

Arrangements for inspection.

	Visits.
Inspection of Schools	155
Inspection of proposed Schools	51
Visits for the purpose of giving information	66
TOTAL	272

Total distance travelled, 10,140 miles.

Eighty

Amount and
character of
inspection.

Eighty Schools were examined during the year. Of these 31 were once visited; 28 twice; 18 three times; 2 four times; and 1 six times. Twenty-four Schools were not visited. These Schools are thus distributed:—

				Inspected.	Not Inspected.
Metropolitan District	14	11
Southern do.	10	3
Northern do.	42	5
Western do.	14	5

The twenty-four Schools not inspected were, in some cases, too far from the Inspector's station; and in others, they were not in operation at the time of his visit to the neighbourhood. Many had been inspected late in the previous year, so that the omission in their case was not of very material consequence. The actual process of inspection was of this character:—The School was viewed in three aspects—material, moral, and intellectual. Next followed an inquiry into the competency and efficiency of the teachers, and the character of the local supervision. In considering the material aspect of the School, the Inspector's attention was successively drawn to the situation, form, and construction of the School-house; the playground and its appurtenances; the amount and suitability of the stock of furniture, apparatus, and books; the classification and occupation of the pupils; and the condition of the School Registers. Under each of the above heads the Inspector was instructed to inquire into numerous details, so that nothing might pass unnoticed which would assist him in forming his judgment upon the condition of the School. Similar minuteness was observed in investigating the moral state of the School. The punctuality and regularity of the pupils, their cleanliness of person and neatness of attire, their orderly behaviour, their language, manners, and demeanour, their attention to their lessons, obedience to command, and the means by which they were governed, were closely scrutinized, and the thousand trifling circumstances, which are to an Inspector what symptoms are to a physician, were observed and noted with equal care. In its intellectual aspect, the character of the School was ascertained by a stringent examination of every class in every subject of instruction, especial reference being had to the Table of minimum attainments. While measuring the actual amount of attainments possessed by the pupils, the Inspector was also required to observe their general intelligence, in order that he might be in a position to decide whether the higher ends of Education had been subserved by the inculcation of knowledge, or whether the teaching had consisted of a mere cramming with information. The efficiency of the teacher was tested by an examination into his methods of teaching, the selection and arrangement of the matter of his lessons, together with his skill in presenting it in a logical, simple, and attractive form to the children. His dress and appearance, language and manner, towards the pupils, his mode of government and moral influence were closely studied, and before arriving at a conclusion the whole of the previously mentioned particulars were reviewed, in order that any circumstance bearing upon the question might be duly weighed and allowed for in the final decision. The efficacy of the local supervision, or the reverse, was easily discoverable. Still the Inspector was directed to inquire as to the frequency of the visits of Local Patrons, the reality of the check they are supposed to exercise over the teacher, the countenance and support they accorded him in the discharge of his duty, and the effect of their influence generally upon the prosperity of the School. It is apparent that, after an investigation thus lengthened and minute, an Inspector must have been furnished with the most ample grounds upon which to form an opinion as to the merits of the School, and with data upon which to base his Report to the Board. It is equally obvious that the labor such a course imposed was by no means light, and that large demands were made upon the patience, tact, and skill of those who were charged with the conduct of such an inquiry.

Condition of
Schools in-
spected.

Annex No. 1.

Annexed hereto is a detailed statement of the condition of each School that was inspected, under the three heads of organization, discipline, and instruction. Before proceeding to offer any remarks upon these subjects, I deem it necessary, in order to avoid misconstruction, to state most emphatically, that in forming a judgment upon the condition of a School, the Inspector referred to the highest possible standard of excellence in every respect. The inquiries into the material state of the School, its moral tone, the subjects and methods of instruction, the number and proficiency of the pupils, and the competency of the teacher, were as previously described minute and circumstantial; and the statement referred to exhibits the result of a thorough and systematic investigation into the character and efficiency of the School. In some cases, in which public opinion, and even that of the Local Patrons,

had

had been of a highly satisfactory character, and in which a non-professional visitor would have discovered only occasion for admiration and praise, the verdict of an Inspector, accustomed to look beneath the surface and sift matters thoroughly, has been of an indifferent or positively unfavorable nature. A severer test could scarcely be applied than that to which National Schools were subjected.

Under the head of Organization are included the following points ;—the schoolroom ^{Organization of Schools.} and its appurtenances; furniture, books and apparatus ; the arrangements for classifying and occupying the pupils. The great majority of School sites are well chosen and convenient, though a few cases have occurred in which from the shifting population they are not now central. One effect of the Board's operations has been the gradual introduction of a class of School buildings at once neat, handsome, and suitable to the purpose. Many of the new Schools erected since my last Report are of a superior kind—such are the Schools at Carcoar, Singleton, and Kirkconnell. The moral effect of such buildings is of a most beneficial kind, for it not only causes Education itself to be more respected, but influences the people to erect for themselves more commodious and better looking houses. It is found also that a well built school-house, properly fitted up and supplied with apparatus, attracts the children to the School, and even influences their conduct and demeanour. It will be seen that the supply of furniture is generally good. Since the erection of the new Class Rooms at the Model Schools a sensible improvement has taken place, not only in the amount, but also in the kind of furniture employed—an improvement as regards suitability and convenience, and also as regards tastefulness of appearance. In respect to apparatus, a similar change has occurred, few Schools being now reported as deficient. It is true that in the Mother Country the amount of apparatus considered important, if not absolutely necessary, is much larger than in this Colony. Still it cannot be said that our Schools are not provided with the indispensable articles,—books are also plentifully supplied. The Board's rule to aid new Schools with a first stock of books has proved exceedingly beneficial, first by enabling the teacher to classify his pupils correctly, and secondly by abolishing the old and worse than useless spelling books. One deficiency is greatly felt in all Country Schools—the want of diagrams. Considering the great number and variety now published at home, it is somewhat surprising that they are so difficult of access here. Of their vast utility, in country districts especially, there cannot be the slightest doubt. Much benefit would also result from the establishment of School Libraries, consisting of books of travels, voyages, biographies, histories, and others of an interesting and instructive character. The quality of the books usually found in the hands of children in country districts, is generally low, and, in consequence, their reading does not tend to stimulate inquiry, or in any way to improve the mind. On the contrary, many children's books, if not absolutely vicious in tendency, are at least of questionable morality, and incorrect as to actual facts. Much of the bad reading found in Country Schools, doubtless, arises from the fact that the pupils seldom read except when at School. A School Library would help to correct this fault, while, at the same time, it would provide a healthy, intellectual stimulus, and an innocent recreation for the children in their homes. In modern systems of popular Education all the methods of teaching are based upon the supposition that a certain definite principle is observed in the classification of the pupils—that all in the same class are very nearly upon an equality in point of attainments and mental development. If this principle be, from any cause, neglected or lost sight of, the peculiar methods of imparting instruction no longer apply, and, even under the most skilful teacher, fail to produce satisfactory results. It is on this point that I have to record the greatest number of failures. It is true that serious obstacles exist to a proper classification of the scholars in Country Schools ; but, in very many cases, the teachers have made no attempt to remove these difficulties, nor have they, indeed, appreciated their full force. Even when the importance of this principle of classification has been properly understood and acted upon, when every expedient has been tried to overcome the obstacles which have opposed themselves to it, and when these have proved themselves to be insurmountable, teachers have failed to perceive that a corresponding change was necessitated in the methods of tuition. This barrenness of resource—this want of dexterity in substituting one expedient for another that has failed—is characteristic of ordinary teachers, and arises, in a great measure, from the fact that few are thoroughly trained for the office, while a still greater number are not accustomed to think otherwise than superficially on School matters. Closely connected with the classification are the arrangements for the occupation of the pupil's

pupil's time. By a judicious distribution of time among the different classes, and a proper alternation of lessons, the work of the School may be carried on with the regularity of a machine, every pupil and every subject may receive a just share of attention, and the progress of the School will be steady and uniform. The task of constructing a suitable Time Table is not an easy one even to a good teacher, while to the unskilful or indifferent the numerous and intricate calculations it involves are a complete puzzle. It is not surprising, therefore, that Time Tables, in very many Schools, are still defective, though a decided improvement has taken place since 1857. These details may appear trivial, but when their influence upon the success of the School is understood, they will assume an importance previously unrecognised.

Discipline of
Schools.

The moral aspect of the Schools is on the whole very encouraging. The discipline is stated to be good in a large number of Schools, fair in a still greater proportion, and indifferent or bad in about 18 per cent. It is in this department of his duties that the teacher may be most truly said to make the School, which will be the reflex of his character. All the moral qualities of the master will be manifested in the conduct and demeanour of the scholars. His punctuality and regular attention to his business, his observance of personal proprieties, the decorousness of his conduct and demeanour, the mildness, cheerfulness and courtesy of his manners, his orderly habits, his feeling of deep responsibility, pervading and influencing all his actions,—all these tend to educe similar traits of character in the minds of his charge, and to train their wills in the right direction. But on the other hand, should the teacher's moral constitution exhibit traces of either feebleness or obliquity, these defects will certainly be reproduced in the School. Persons who are accustomed to the examination of Schools will detect the *moral tone* (as it has been called) of the School in a very short time; and the greater the number of Schools visited, the more readily and correctly does an Inspector observe and estimate its quality. This subtle and indescribable feeling pervades every School, and is to it what personality is to an individual; it defies analysis and definition, and yet is distinctly perceptible by an experienced visitor. As has been well remarked by one of the English Inspectors: *—"Spend an hour or two in one School, and you feel all the while as a man "feels who is confronted for some time by a bad countenance. Go into another, and all is "right and healthy again; and even before you inquire what branches of Education are "there taught, you are convinced that it cannot but be well for children to spend their days "in so bright and wholesome an atmosphere." In regard to their future career, the discipline undergone at School will doubtless exercise considerable influence upon the pupils. If while at School they have been trained to yield a willing obedience to *law*, to form habits of order and regularity, and to act with consideration for the views and feelings of others, they will, in all probability, display the same characteristics as citizens and members of society. The importance of the disciplinal arrangements of a School cannot therefore be over-estimated.

Hindrances
to good
discipline.

While expressing my opinion as to the responsibility of the master in this respect, I ought not to omit stating the circumstances which chiefly operate to the disadvantage of his discipline. Unfortunately it is but too easy to enumerate the causes which oppose themselves to the master's efforts. They may be summed up in two points—defective home influence, and low estimate of the value of Education. Perhaps the latter would be more exactly described as utter ignorance of the objects and aims of Education. Two examples occur to me (types of many similar cases), in which the home influence was diametrically opposed to the School training. In one of these, previously to the opening of the School, a child was carefully instructed how to conduct himself so as to give the greatest possible trouble and set the master's authority at defiance. In another instance, a parent exhibited most inexplicable wrong-headedness. Taking his son to a teacher, he remarked, with perfect unconsciousness that he was saying anything blameworthy, or even out of the ordinary course,—“You must not punish my boy at all; *he is sulky-tempered like myself.*” The success of the teacher's influence in such a case appears extremely problematical. Cases have also come to my knowledge, in which parents have remonstrated with the teachers for giving instruction in grammar and geography, and even in arithmetic, beyond the ability to calculate the price of a few bushels of corn.

I.

I entertain very vivid recollections of the pleasure I received in visiting some of the Country Schools. The smiling happy faces and pleasing manners, the modest confidence, and evident interest felt in the lessons, together with the eager desire to answer my queries, have given me assurance that the educational process was going on satisfactorily. The other Inspectors could doubtless bear similar testimony. It is simply an act of justice to mention the Country Schools in which the excellence of the discipline has attracted my own attention. In the first rank I should place the schools at Cowra and Dennis Island, and next to them those at Carcoar, Campbell's River, and Mudgee.

Schools remarkable for good discipline.

Among the minutiae of the subject of discipline, the first point that claims attention is punctuality of attendance. On the whole there is little to complain of under this head, though difficulties are occasionally experienced in causing the children to arrive at School in good time. In the towns the indolence of parents, and in the country their necessities, produce most of the unpunctuality complained of, though, as a rule, it is a matter greatly within the teacher's control. The extent to which many children in towns, and especially in the metropolis, are indulged or neglected by their parents, cannot produce other than objectionable results as regards the discipline of the School, and the character of the pupils themselves, who grow up without any salutary restraint whatever. This weakness on the part of parents has become a marked characteristic among certain classes of the community; but, as regards the regularity of attendance, I do not see any improvement upon the undesirable condition of the Schools mentioned in former Reports; in fact, the irregularity seems to become greater every year, and a state of things appears likely to spring up similar to what exists in America, where, in some States at least, Country Schools are closed in the summer for lack of pupils.

Punctuality and regularity.

With but few exceptions, the children attending National Schools were found to be very neat and clean, and indeed cleanliness has long been one of their distinguishing features. In many Schools, however, a striking contrast was observed between the boys and the girls, the latter being remarkable for the extreme cleanliness of their persons and attire, while the former, if not positively dirty, shewed evident signs of neglect in these particulars. The difference perhaps arises from the circumstance that the boys are more frequently employed in field labor, and are more removed from the influence of their mothers. It has occurred to me that the virtue of cleanliness in this Colony is altogether *sui generis*, instead of being allied with other kindred qualities; I have frequently observed it, in the most unexpected situations—in the homes of persons addicted to intemperance, and of others whose honesty was open to question. On the contrary, among persons of regular life and strong religious principle, such an amount of inattention to personal cleanliness and propriety is sometimes noticeable, as to surprise and even shock a stranger; while, as is evident, the home influence, according to its character, materially aids or impedes the teacher's work, yet it is quite within his power to secure both neatness and cleanliness in the pupils if he give to the subject the attention it deserves. It has always appeared to me one of the first objects of a primary School to inculcate good habits, and indeed there can be little doubt that this branch of elementary Education is of even greater importance than the imparting of any amount of instruction. Cleanliness, whether viewed in relation to its bearing upon health or morals, would, therefore, occupy a high rank in the estimation of a teacher who makes his duties a matter of really personal concern. It has generally been found that when the master's example has been of the right kind, the pupils have followed it willingly; but when, as was remarked in a few cases, the teacher entered the School unshaven, possibly unwashed, and with disordered attire, it could not be expected that the children would exhibit very elevated notions of personal cleanliness and propriety in dress; further, it may be safely predicated of a School, that if the scholars are dirty they will also be disorderly, the absence of self-respect in one point seeming to vitiate their whole moral constitution.

Cleanliness.

Speaking generally, good order is preserved in National Schools; there is one defect, however, characteristic of country children, which is in itself a matter of grave concern, while it interposes a serious obstacle between an Inspector and the efficient discharge of his duty; I allude to the extreme bashfulness prevailing in Country Schools. Frequently, after exhausting every possible device I could think of, to induce and encourage children to reply to my queries, I have been compelled to abandon the examination in sheer despair of success, even in cases in which I had the strongest reason to believe the children acquainted with the

the

the subject of the examination, I have been unable to obtain an answer to a simple question. That this reserve does not wholly arise from the timidity resulting from infrequent intercourse with strangers I had the most ample proofs, as I invariably found this bashfulness associated with impudent manners and hoydenish conduct on the part of the girls; and with a coarse rudeness, verging upon downright insolence, on the part of the boys. Whatever may be the cause, it is evidently an unhealthy condition of the moral feelings, requiring prompt and vigorous remedies. I consider the blame to rest chiefly with the master, who, if he has been three months in charge of the School, and has adopted appropriate methods in his teaching, will have had sufficient opportunities for dispelling the fears of his pupils, and for breaking down their reserve and *amour propre*.

Government.

The government of our Schools is in most instances mild and firm. Perhaps the amount of corporal punishment inflicted is the least possible. This gratifying fact, taken in connexion with the good order of the Schools, may be regarded as a proof of the ability of the teachers to control the children by means of moral influence; it likewise affords a reasonable presumption that, on leaving School, these children will grow up to be orderly and peaceable members of the community. Respecting the moral tone of the Schools, upon which some comments have already been made, I may add here, that, making allowance for the deficiencies above noted, it is generally fair, and that there is promise of further improvement.

Instruction.
Subjects.

The subjects of instruction in National Schools, have been defined by the Board in the Table of Minimum Attainments. In this Table, which also serves as a standard of classification, a statement is given of the various subjects to be taught to each class, and of the amount of progress expected in the pupils after a certain period of tuition. Many advantages have attended the introduction of this Table. In the first place, it has tended to secure a very desirable uniformity throughout National Schools, as regards the subjects of instruction; it opposes an effectual barrier to errors of classification; it requires a more systematic study and arrangement of the various lessons; and it furnishes an Inspector with the means of instituting comparisons between different Schools, in respect of the relative proficiency of the pupils. Objections have been raised to the Table of Minimum Attainments, on the score of its laying down too high a standard of progress for the lower classes. There is undoubtedly some force in the objection, the standard is very high—still it may be reached; and that teacher whose pupils approximate most nearly to the requirements of the Table, is entitled to rank high in his profession. What are termed the ordinary subjects—reading, writing, arithmetic, grammar, geography, and the scripture lessons—are of necessity taught in every School. With the exception of the Sydney Schools, extra branches are seldom taught. Instruction in vocal music is given in Dunmore School; Geometry is taught in the Clarence Town School; and Latin has been introduced into the last-mentioned School, and that at Wollongong; though the amount of time devoted to it is necessarily small. No desire is entertained to encourage the substitution of classical studies for any of the ordinary subjects appropriate to National Schools, nor would a smattering of the higher branches of learning ever be regarded as an excuse for neglect or deficiency in the lower. It is however much to be regretted that instruction in Drawing and Vocal Music is so seldom imparted, as these subjects are calculated to be eminently useful in many respects. The measures adopted by the Board, for encouraging teachers to include them in their routine of instruction will, it is hoped, prove successful in causing them to be introduced into a larger number of Schools.

Methods.

Closely connected with the foregoing topic is that of *method*. In this particular a very general improvement has taken place in all the Schools that have been in operation for a considerable time, though the change has not been of a radical nature. The methods in use are, as a rule, empirical; they are derived from actual experience in teaching, rather than from any study of the nature of the subject to be taught, and the constitution of the human mind. Both these conditions are required before thoroughly correct methods can be acquired, and before teaching can be characterized as the rational adaptation of means to an end. Some conception of this truth seems to be now very generally possessed by the better class of teachers, and one effect of their increased knowledge has been the diminution of mechanical teaching, and the substitution of more intellectual methods. While therefore the imparting of knowledge is not neglected, the higher end of training and strengthening the mental faculties has received considerable attention. On the other hand, it is necessary
to

to state that many inferior teachers have not obtained such an education, and do not themselves possess sufficient literary ability to enable them to form, or even to comprehend, elevated views of the art of teaching, and that consequently much of their instruction is unintelligent and mechanical. It would be unfair to these teachers to omit the explanation that their industry is in no way impeached, and that they would gladly learn, had they available opportunities. This state of things must continue until every teacher has secured the power to attend a Normal School, where his education, both as a master and as a pupil, shall be fully carried out.

The following Table exhibits the actual proficiency of the pupils examined, in the various subjects of instruction. The number of pupils examined (not including those present at the second or third inspection of a School) was 2,386 boys, and 1,907 girls; in all, 4,293. As regards their proficiency in the several branches of education, the Table annexed may be taken as a tolerably correct return; it being borne in mind that their average age was considerably less than nine years.

					Proficiency of the pupils.
<i>Reading.</i>					Number of Children learning.
Monosyllables	1,757
Easy Narratives	1,486
Ordinary Prose	1,050
TOTAL					4,293
<i>Writing.</i>					
On Slates only	1,571
In Copy Books	2,722
TOTAL					4,293
<i>Arithmetic.</i>					
Simple Rules	1,399
Compound Rules	2,248
Higher Rules	646
TOTAL					4,293
Grammar	2,576
Geography	2,576
Needlework	1,456
Drawing	125
Music	774
Extra Branches	27

I feel that it is necessary here to advert to a subject of much importance in connection with this matter. Statistics such as those given above, when rightly understood, are useful in giving information as to actual facts, but are fallacious tests of a master's efficiency and ability. To ascertain these aright, it is necessary to be acquainted with many other circumstances—the previous knowledge of the pupils, their mental capacities, the regularity of their attendance, the length of time they have been under instruction, the home influence to which they are subjected, the means at the master's disposal for educational purposes, and the *moral tone of the district*. The figures given above, therefore, while they represent the actual amount of proficiency in the pupils, do not afford any sufficient clue to the character of the teachers.

The brief remarks which follow on the various branches are intended to delineate the character of the instruction; they will be found useful, I trust, by the friends of Education who are disposed to assist in rendering the instruction efficient.

READING.—This subject is universally taught; I wish it were in my power to add that it is taught well. Two defects have repeatedly been remarked;—first, that sufficient pains are seldom taken to see that the meaning of the passage read is thoroughly understood by the pupils; and, secondly, that the enunciation of the children is rapid, incorrect, and indistinct. In reference to the former defect, it may be stated that very few country teachers read with taste and expression, that is to say, as educated gentlemen would read. The number of those who read with correct emphasis does not form a large proportion of the whole, while comparatively few are entirely free from peculiarities of pronunciation, such as false accent and vicious intonation. Connecting these facts with the existence of very vague and indefinite notions of the proper object of reading, it will not be difficult to perceive why the children in a majority of Schools read without understanding, and with imperfect enunciation; while, therefore, the mechanical part of reading is on the whole fairly executed, the higher ends have yet to be attained. This subject naturally attracted much attention from the Inspectors, who suggested in every case means of improvement.

WRITING.—Writing is much better taught, being chiefly mechanical in its nature, the methods in common use could be conveniently and effectually applied. The copy-books were in general clean and free from blots, even when the writing was not of the highest quality; the copy lines set by the teachers for the imitation of the pupils were not unfrequently inappropriate, and in some cases were absolutely ludicrous; while, in a few Schools, the occurrence of numerous mistakes in spelling shewed that rigid and systematic inspection of the copy-books formed no part of the teacher's procedure. Considering the value attached by parents to the ability to write, and the ease with which progress may be tested, it is surprising that teachers should neglect this subject, and thus expose themselves to unfavorable remark.

SPELLING.—Dictation is the usual mode of teaching spelling, and wherever properly carried out has proved uniformly successful. There is perhaps as little room for complaint on this head as upon any subject of instruction. A strong prejudice exists in the more unenlightened districts in favor of the old spelling books, and it has been found difficult to convince many parents that spelling can be taught otherwise, than by giving the children columns of words to learn by rote. Some of these exploded notions which yet linger in retired localities, have been occasionally arrayed against the teachers, and have caused them much trouble and inconvenience to eradicate.

ARITHMETIC.—This is one of those subjects requiring considerable practical skill and theoretical knowledge, in which many teachers are deficient, and in which their instruction is in consequence imperfect. Besides the inherent difficulty of the subject, another impediment to progress is found in the irregularity of the pupils in country districts, and the want of tension in their minds. These difficulties are aggravated by the fact that arithmetic is chiefly taught by rule, instead of principles; the memory is cultivated rather than the understanding. Mental Arithmetic is seldom taught, the Carcoar School being the only one in which any notable proficiency was attained. Now that the teachers are aware of their defects, there is every reason to expect speedy improvement.

GRAMMAR.—This is one of the tests of a good teacher; the difficulties of the subject are in themselves so great, and those arising from the circumstances of the pupils so serious, that success might well be regarded as a work of great merit; yet, on the whole, there is no doubt that this subject is one of the best taught of all that are included in the routine of a National School. Generally speaking, books are not used in teaching grammar, and this circumstance, by necessitating previous study on the part of the teacher, assists in bringing about the superior character of the instruction.

GEOGRAPHY.—On a subject so extensive as geography, it might reasonably be expected that many deficiencies would be noted, especially when the difficulty of procuring maps is taken into account. Another obstacle to progress in this subject is the ignorance of parents who, in some cases, have specifically objected to the teaching of geography as useless.

SCRIPTURE.—The main facts of Scripture History are well understood in the Schools that have been any considerable time in operation, and the subject is now receiving greater attention than ever.

On former occasions, I have felt it necessary to complain of the neglect of Local Patrons, in omitting to visit the School, and to use their influence in support of the teacher. During the last year, it was found that considerable changes for the better were effected, and that Local Patrons were not only better acquainted with their duties, but that they had manifested an increasing interest in the prosperity of the School. There is now scarcely any considerable National School, in which Local Patrons do not possess a proper organization for discharging the duty of local supervision. Much of this gratifying improvement must be attributed to the definition, in the Board's explanatory "statement," of the powers and duties of Local Patrons. Formerly, I entertained grave doubts as to the utility of this part of the system, and was quite prepared to advocate its discontinuance. Longer experience however has corrected this view; and I am now free to confess that, however modified, the principle of local supervision must continue to form an important feature in any system of public Education for this Colony. It is true that many uneducated, and some wholly illiterate persons, hold office as Local Patrons of National Schools; and it is unfortunately also true that occasionally they exhibit the prejudices and impracticability of character which usually accompany ignorance. Still, as it generally happens in such cases, that no men of education and standing can be found in the district, such persons must be tolerated; and it is bare justice to add, that I have frequently found in men of that class a personal interest in Education, and a disposition to make personal sacrifice in its favor, which would shame individuals of far higher pretensions. The instances of disagreement between the Local Patrons and the teacher have been remarkably infrequent; and I must here record my deliberate conviction, that the whole of my experience up to the present time goes to shew, that in every case the blame has primarily rested with the teacher who, from want of caution and discretion, has given offence.

The position of a National School Teacher, though certainly not free from serious trials and difficulties, may be respectable and useful to the community. Assuming him to be a man thoroughly in earnest, devoted to his work, and fond of his profession, he will find much encouragement and pleasure in teaching; he will be looked up to and respected; and will have more leisure for self cultivation than falls to the lot of most men in the Colony. He performs his duties unfettered and unrestricted; no one interferes with him, or even visits his School, but those who are desirous to recognise his merit, and yield him the honor he deserves. His emoluments are not great, averaging from all sources about £136 per annum; £87 10s. being derived from the Board, and the remainder from School fees. A house rent free is also provided, though in some cases these residences are mere huts. While the total emolument does not appear to be by any means an adequate remuneration for the value and importance of the services rendered by the teachers, it has long been evident to me that they have strong ground of complaints on the score of their miserable dwellings, though at the same time, as intimated in a former Report, I do not see that the Board can beneficially interfere so long as their existing Regulations are in force. The Schools built within the last few years are free from the objections above stated, the teachers' apartments being of a very respectable and comfortable description. Though his income is limited,* it is sufficient with economy to maintain him in respectability, and as he has few temptations to spend, there is little probability of his acquiring extravagant habits. The picture has its dark side. Frequently, the scanty pittance obtained from the people is paid grudgingly, even when earned by heavy labor; advantage is taken of the teacher's necessity, to compel him to pay an exorbitant price for every article of consumption, and he has to abide the risk of offending the prejudices or irritating the self-esteem of his neighbours. Sometimes the teacher and his family have to endure an amount of physical discomfort that none but residents in the bush can understand or estimate; at others, his feelings are wounded by some evidence of low meanness or paltry spite on the part of a neighbour; and, occasionally, his peace of mind may be disturbed through an unintentional offence given to a parent or Local Patron. Quarrels, I find, seldom arise out of matters connected with the School, and it is on this point where teachers are circumstanced like other people, and where tact and judgment are especially needed, that they most frequently fail.

The

* Though *absolutely* greater, it may be as relatively less than the average emolument of teachers in England.

Abilities of
teachers.

The efficiency of a teacher would be estimated,—first, from the amount of his attainments, and, secondly, from his skill in teaching. The former is ascertained by an examination tolerably severe in itself and rigidly conducted upon all the ordinary subjects of instruction, leaving it to the teacher's choice to have his abilities tested in what are called the alternative subjects,—Classics, Mathematics, &c. The results of the examination as regards attainments, considered in connection with the Inspector's Report upon the teacher's practical skill, decides his classification and salary. The following gives the number of teachers holding Certificates of the different classes.

	Males.	Females.	Total.
First Class	5	...	5
Second Class	39	2	41
Third Class	47	14	61

To these may be added eighteen teachers not yet examined for Certificates.

Results of in-
spection.

The general results of the inspection have, on the whole, been as favorable as could be expected. Much valuable information has been elicited relative to the actual condition of the Schools, and the educational wants of various districts in the Colony. In every case, the Inspector left written suggestions for the guidance of the master, and his visits, therefore, may be considered as likely to produce improvement in the character of the Schools, independently of the stimulus to exertion they create in the minds of both master and scholars.

Special Schools.

With the exception of the progressive improvement in the internal arrangements, there is little to record in the history of the Model Schools during the past year; their position as regards the attendance of pupils may be learned from the Table subjoined.

1. The Model
Schools.

	Number on the Rolls.	Average Daily Attendance.	Amount of School Fees Paid.		
			£	s.	d.
Fort-street School	807	714	1,295	9	3
William-street School	790	505	720	0	3
Cleveland-street School	314	196	397	0	11
Paddington School	218	153	225	6	0
	2,129	1,568	2,637	16	5

While a decrease (which may be fully accounted for) has taken place in the number of pupils, the regularity of their attendance has exhibited a gradual improvement. When the large number of infants included in the number of pupils is considered, this fact is not without significance.

The organization of the Model Schools continues to be as perfect as it can be made under present circumstances. The teachers, however, are aware of some defects which they could easily remedy, but for an impediment which has always proved a serious hindrance to progress—the existence of rival systems of public Education. The discipline of the Schools suffers in the same way; and it is found by actual experience, that the desire to inculcate regular and cleanly habits, and to promote orderly conduct among the pupils, operates to the disadvantage of the School in one sense, inasmuch as it gives some parents a pretext for withdrawing their children. No alteration of importance has taken place in reference to the instruction of the children.

Training of
Candidates.

The number of candidates for situations, trained in 1858, was 32, of whom 8 were females. In accordance with the Board's rule to that effect, each candidate underwent a preliminary examination before entering the Model Schools. In a majority of cases, the attainments of the candidates, estimated from the ability displayed in their examination papers, were very meagre, and their practical skill was even more unsatisfactory. This was particularly the case with female applicants. If the qualifications they exhibited were a fair specimen of the kind of education given in middle class Schools, it would be impossible

to

to escape the inference that female education generally must be deplorably deficient in regard to solidity and usefulness. Most of the applicants, it appeared, had some knowledge of music, drawing, and fancy work, but very few could parse a simple sentence correctly, write an ordinary lesson on geography, or work an easy sum in practice. As the number of applications from female teachers generally exceeds forty in the course of the year, the facts above stated are worthy of consideration. I fully believe that there is a radical defect in female education generally in the Colony, and that the lighter branches—accomplishments as they are styled—are too exclusively cultivated, to the neglect of matters of far higher importance. Another proof of this position is supplied by the fact, that much difficulty has been experienced in teaching plain needlework in our Schools; and I am afraid that if the subject of domestic economy were introduced—as it is very extensively in England—the result would be the loss of many pupils. This subject, though beyond my immediate province, seemed from its vast importance in a social point of view, to require this notice at my hands.

The course of training which candidates undergo has been systematized and perfected as far as possible. The instructions placed in their hands on entering the Model School, and which they are required to observe, shew that the discipline to which they are subjected is somewhat severe, and that if they fail to become good teachers the fault lies in themselves, or in the brevity of the period of their probation. At the end of the month's training, the candidates were examined in all the subjects taught in National Schools, together with such other branches as they were acquainted with, the latter part of the examination being voluntary. As it appears to me that the difficulty of the examinations which National Teachers are compelled to pass has never been correctly estimated, I beg to append copies of some of the questions actually proposed to candidates. These questions are regarded as being of medium difficulty, and a different set was prepared for each candidate. The number of candidates appointed was 24,—the following Table shews the rank each attained on examination :—

Arrangements for training and examination.

Annex 2.

Annex 3.

	I. Class.	II. Class.	III. Class.
	A. B.	A. B.	A. B.
Males	1 5	4 9
Females	1 4
Total	1 5	5 13

It must be borne in mind, that, in every case a lower grade was awarded to the candidate than his attainments would seem to warrant, until some opportunity occurred of testing his practical skill in teaching. If the report on this head were satisfactory, he, in general, received his proper status; but if not altogether favorable, that fact was viewed as detracting from his efficiency, and his classification remained unaltered.

The necessity for instituting District Model Schools, to which I have adverted in previous Reports, has increased in urgency, and I think the time has arrived when they may be established with great benefit to the National System, and to Education in general. One, at least, would be required in each Inspectoral District, though it may be prudent first to try the experiment with one only.

2. District Model Schools.

It is satisfactory to find that Infant Departments have been created in some of the Country Schools. A system which does not make special provision for such Schools is necessarily imperfect, inasmuch as without them a most important period in a child's life is left without suitable means of education. The want of the peculiar methods appropriate to infant Schools, cannot be compensated for by any subsequent instruction, and the basis being improperly laid the whole superstructure is unsound and imperfect.

3. Infant Schools.

The hindrances to Education both as respects that department administered by the National Board, and also the subject generally, are numerous. Perhaps the most prominent of these is the difficulty in obtaining funds for the erection of decent School buildings. A proper school-house and master's residence cannot be erected anywhere for much less than £400, and to contribute one-third of this sum is often beyond the means of the inhabitants of country districts. The burden rests ultimately upon a few, for some are too apathetic, others too sordid, to contribute, while, in many cases, ill-will towards the promoters of a School will prompt

Hindrances to Education.

prompt

prompt men to oppose even so useful an undertaking. This difficulty will continue to be felt until some arrangement is made by which *all* will be compelled to aid in the establishment and maintenance of public Schools. Another obstacle is the irregular attendance of the children, especially in country districts. I have reason to believe, as previously mentioned, that this evil is growing stronger instead of being diminished. Two causes aid in producing irregularity of attendance. The first is the apathy of the parents, many of whom appear to care very little whether their children receive any instruction or not, while some have actually stated as their opinion, that children are better without Education. Perhaps the most serious obstacle of all is the low, material estimate of the value of Education formed by some people. Their test is the query, "Will it help to make money?" and if a direct relationship cannot be established between the Education and pecuniary gain, the former is abandoned as unnecessary. Probably, the most valuable part of Education is that which bears no direct relationship to subsequent professional pursuits, but which trains and strengthens the whole mind, perfecting it as an instrument, and enabling the possessor to use it efficiently. This view of Education—as a means of enabling children to earn a living—has been strongly supported in the Mother Country by several eminent educationists, and is widely adopted in the Colony, where, however, the circumstances which give a plausible coloring to the arguments in its favor, do not exist. The result has been, that many parents consider their children properly educated when they are able to read, write, and answer simple questions in arithmetic. Frequently the teacher is called to account because he does not confine his instructions to these points, and he is informed, in no very civil terms, that he is not to teach "grammar, and "geography, and that nonsense." The success of his School depends much upon the *moral tone* of the district. Instances have come under my own observation, in which the whole community, it might be said, were addicted to intemperate habits. The result was, that the Education of the children was entirely neglected, and the teachers, after striving to maintain the School in an efficient state, have been compelled to succumb to the force of opposing influences.

Want of correct information in some districts.

In the course of their travels through the country districts, many facts were elicited by the Inspectors bearing upon the question of Education. Perhaps not the least surprising is the fact—and it goes to explain much of the apparent apathy of the people in educational matters—that in some secluded districts the very existence of the National System was unknown, nor were the inhabitants aware that the Government had provided funds for the support of Education in any way. In other cases the character of the system was completely misunderstood, it having been represented to some as exclusively Protestant, and to others as wholly Roman Catholic in principle. In a few instances the people had been persuaded that the National System was purely secular, and therefore irreligious. It is but fair to add that when the principles upon which the system is based were properly explained, when the School books were exhibited, and the amount of religious instruction pointed out, advantage was eagerly taken of its assistance. Lastly, experience leads to the belief, that so long as local effort on behalf of Education is confined to the voluntary exertions of a few, instead of being the legal duty of all, so long will it be deficient in amount and extent, and imperfect in its character. To secure in any locality an Education at all commensurate with the requirements of the times, it must become a matter of personal concern with every individual of the community.

Deficiency of the means of instruction.

It may be useful here to make a few remarks relative to the distribution of Schools throughout the Colony, and the facilities for obtaining Education in various districts. If, on a map of New South Wales, an irregular line be traced from Brisbane, through Drayton, Warwick, Armidale, Tamworth, Merriwa, Mudgee, Dubbo, Orange, Gundagai, and Queanbeyan to Eden, we shall have enclosed all the public Schools of the Colony with the exception of Albury. It is not pretended that even the area favored with public Schools is adequately supplied with the means of instruction; and of the remainder it may be affirmed, in general terms, that it is absolutely destitute.

Ignorance of the children.

The ignorance and immorality prevailing in many of the outlying districts cannot easily be conceived. Some examples of the former have fallen under my own observation. Frequently, on riding up to a hut to inquire my way, I have witnessed the precipitate flight of the children, who have endeavoured to conceal themselves, as if scared by the presence of a wild beast; and when encouraged to trust themselves for a few minutes with a stranger,

I have found them unable to answer the most commonplace questions, even upon matters lying within the sphere of their observation. One Inspector having occasion in the course of duty, to visit a certain locality, was requested by the inhabitants to meet some of their number to consult upon measures for the establishment of a School. On arriving at the appointed spot—a public house—he found all but two so thoroughly intoxicated as to be quite unfit for the transaction of business. When the great prevalence of intemperate habits among adults is borne in mind, it is not difficult to infer that the children will, for the most part, possess the low, physical constitution and defective moral perception that usually characterize the offspring of drunkards, and that, deprived of all the elevating influences of judicious home training and efficient School instruction, they will, in all probability, manifest in their future lives, the pernicious effects of that neglect and bad example of which they are the helpless victims. It is, unfortunately, too common a circumstance to be strongly remarked, that, in such localities as those before mentioned, the children hear nothing of God but in the form of oaths and blasphemies; moral and religious obligations are in consequence utterly unknown.

In the case of the gentry residing with their families in remote localities, it is usual to find competent instructors. The poorer class—shepherds, stockmen, and artizans—are entirely deprived, by the want of means, of any opportunity of securing education for their children. Between these two classes is a third even more unfortunate. These persons are unable to choose competent tutors, even if they had no disinclination to introduce into their families men superior to themselves in every social qualification. Their only resource, therefore, is to employ men of a class which is a pest to society and a disgrace to the country. The persons who compose this class possess but a smattering of Education, and are of idle, dissipated character. One I remember to have seen, who was engaged to instruct the children *and mend their shoes* for the sum of twenty pounds yearly and board. A few are educated men who, by drunkenness or some other vice, have forfeited their respectability, and who carry their degrading propensities with them in spite of their misfortunes. But ignorance is a venial fault in comparison with the vices to which many of them are habituated. Of intemperate and profligate habits, they engage themselves as tutors for a short period, in order to acquire the means of indulging in vicious pleasures, spending the money they have earned in drinking and gambling. Their example exerts a most injurious influence upon their young charge; and when, as sometimes happens, they are entrusted with the instruction of girls, they have been known to employ the influence which their position gives them to corrupt the morals and destroy the virtue of their female pupils. Instances of this practice of a most distressing nature have come to my knowledge; and although it may not be prudent to go into details, it will not be difficult to calculate the evil—physical, moral, and social—which must result. Not the least of the many benefits arising from the introduction of non-vested Schools is the fact, that in many scattered localities persons of disreputable character have been dismissed, and men of respectability and good morals substituted.

Character of private teachers of the lower class.

The question still remains, what can be done to extend the means of Education to remote and thinly-peopled districts? It is obvious that Schools of the ordinary description must fail to meet the wants of widely-scattered populations, and equally clear that the children must be gathered into a central spot, where it may be requisite to board and lodge them. In short, a Boarding School of a peculiar kind will be necessary. I append hereto a brief outline of a scheme which appears to me to meet the circumstances as nearly as possible.

Means of supplying Education to remote districts.

Annex 4.

There is another class of the community to which the Board's operations, widely extended as they are, have not yet reached. No efforts, as far as I am aware, have yet been made to include within the influence of Education those unfortunates who, under the name of "City Arabs," infest our streets and prowl about our public places. The tenor of the Board's rules prevents them from initiating any movement in the direction of this very important branch of National Education. The number of these unfortunates must be very considerable; and whether viewed in reference to their own future happiness, or in connection with the danger they threaten to society, their condition must be regarded with commiseration and concern. Still I do not see how, under the present educational arrangements of the Colony, any steps can be taken in behalf of the class alluded to.

Juvenile criminals in large towns.

Benefits result-
ing from the
establishment of
non-vested
Schools.

I may be permitted to state, in conclusion, a few of the more obvious results of the establishment of non-vested Schools, the success of which has exceeded my most sanguine expectations. In the first place, then, the Regulations of 14th December, 1857, relating to such Schools, have facilitated the establishment of Schools in localities where previously none or very bad ones existed, and where the residents were too few or too poor to raise one-third of the cost of erecting and furnishing a building of the kind required by the Board. Education itself, having been spread by the introduction of these Schools, has also been greatly improved in quality, while at the same time juster views of the principles of the National System have been acquired. It is an instructive fact, that out of the whole number of non-vested Schools, only five have availed themselves of the permission to introduce special religious instruction. It would seem as if, when they came to study the practical working of the National System, people were satisfied with the amount of religious instruction imparted, and, therefore, unwilling to introduce into the School any element of disunion. Another highly beneficial result has been the dismissal of many incompetent and immoral teachers, and the substitution of men of character and ability.

The arrangements for 1859 provide for a more frequent and systematic inspection of Schools than in 1858. Every School will be visited once, at least, and a very large number two and three times. The plans for training, examining, and classifying teachers will also be more perfect than heretofore, and the whole system will exhibit a better organization and a fuller development than it hitherto possessed.

W. WILKINS,
Inspector and Superintendent.

FINANCE.

Appendix C.

The usual Statement of receipts and disbursements is appended. The balance, £2,583 15s. 4d. which appears in our favor, will be required to meet pledges in aid of buildings made during 1858.

NON-VESTED NATIONAL SCHOOLS.

Appendix E.

On the 3rd June, 1858, a letter was addressed by us to the Honorable the Chief Secretary, with respect to our proposal for the establishment of non-vested National Schools in New South Wales, and submitting an application for five thousand pounds as an additional grant, to enable us to meet the cost of these Schools without detracting from other resources. In that letter it was stated that since the promulgation of the new rules, thirty-seven applications for non-vested Schools had been received; and it was estimated that at least eighty such applications might be expected within the current year.

On the 4th September, 1858, a reply was received from the Honorable the Colonial Secretary, to the effect, that the Government was not then prepared to submit to Parliament any proposal for the augmentation of the vote for National Education. We thereupon systematically discouraged further applications for non-vested Schools, until very near the close of the year, when the sum of £913 15s. 3d. was opportunely placed at our disposal, as the proportion of the revenue of the Church and School Estates falling to the share of National Schools. This enabled us to resume the consideration of applications for non-vested Schools, and to adopt several that must otherwise have been rejected for want of funds.

We have reason to believe, that had it not been for the active discouragement offered for a time to the applications, they would have exceeded the estimate made in our letter of June 3rd.

The

The actual number, however, of non-vested Schools applied for, up to the end of the year, was 66, of which 37 were adopted, namely :—

- | | |
|---|--|
| <ol style="list-style-type: none"> 1. Araluen. 2. Bishopsbridge. 3. Burwood. 4. Bangalore. 5. Black Creek. 6. Bathurst. 7. Bishopsgate. 8. Cowra. 9. Castlereagh. 10. Corder. 11. Campbell's River Lagoon. 12. Cobbity. 13. Cessnock. 14. Dennis Island. 15. Ellalong. 16. East Maitland. 17. Goulburn (1). 18. Goulburn (2). | <ol style="list-style-type: none"> 19. Gunning. 20. Ironbark. 21. Newcastle. 22. Lochinvar. 23. Morangaroo. 24. Mosquito Island. 25. Mount Macquarie. 26. Pitt Town. 27. Pyrmont. 28. Redfern, Waterloo Estate. 29. Raymond Terrace. 30. South Head. 31. Taralga. 32. Tillimby. 33. Tarlo. 34. Tambaroora. 35. Tumut. 36. Towrang. |
|---|--|

37. Waratah.

Six were rejected, for reasons before assigned, namely :—

- | | |
|---|--|
| <ol style="list-style-type: none"> 1. Brisbane. 2. Brisbane, North. 3. Fortitude Valley, Brisbane. | <ol style="list-style-type: none"> 4. Village of Ashby, Brisbane. 5. Ebbersham, and 6. Morpeth. |
|---|--|

and twenty-three left over for further consideration, namely :—

- | | |
|---|--|
| <ol style="list-style-type: none"> 1. Appin. 2. Aberglasslyn. 3. Apsley. 4. Bendemeer. 5. Bow Bow. 6. Clifton. 7. Crosslands. 8. Charles Town. 9. Cotta Walla. 10. Dingo Creek. 11. Sedgefield. 19. Shell Harbour. 20. Seone. 21. Toowoomba. 22. Uralla. |
|---|--|

23. Woola Woola Brush.

The misrepresentations with which we were assailed, when we first brought non-vested Schools within the plan of our operations, obliged us to take up a large portion of our last year's Report in demonstrating that, so far from acting beyond our authority, we had thereby merely carried out more fully the system of Education which we were appointed to establish and conduct. A resolution of the Legislative Assembly having since affirmed our opinion, we are happily relieved from the necessity of returning to the subject.

We cannot, however, refrain from renewing the expression of our sorrow at one result of this controversy, namely, its depriving us of the valuable aid of our late Chairman,—nor does this establishment of our legal right to afford to these Schools a share of the funds placed at our disposal, dispense with a consideration of the policy of the continuance of the system. It was proposed by us as an experiment, and though we considered it a promising, and therefore a justifiable one, for the reasons formerly stated, we never intended to judge of it otherwise than by its fruits. By this test, therefore, we proceed to try it, and so far as we have hitherto proceeded we now feel ourselves entitled to declare it successful—successful, in manifesting by the numerous applications elicited from all quarters its adaptation to the wants and wishes of the community,—successful, in introducing Education in many places where none would have otherwise existed,—successful, in improving the quality of Education in localities where it would otherwise have been far more limited and imperfect,—

successful, in rendering the advantages of the National System compatible with the retention of those benefits (whether they be real or supposed) which the supporters of Denominational Schools claim as exclusively their own. We think, in fine, that the experiment has clearly shewn, in accordance with our expectation, the practicability of uniting, under one central authority, all Schools which fulfil conditions justifying their participation in grants from the public revenue. We have, individually, no ambition to remain the sole depositaries of this central authority. We here renew the statement with which we concluded our last Report, that the business of our Board is rapidly acquiring the dimension of a public Department, and the same deep sense of its importance which prompts us to render with cheerfulness such services as we can spare from our other avocations, compels us to confess and lament their inadequacy.

If, however, it be contended that the comprehension of non-vested Schools within the National System authorizes any relaxation in the rigidly neutral character of the central administrative authority, we unhesitatingly deny the justice of any such opinion. On the contrary, this impartiality may become a quality more essential than before, inasmuch as in non-vested Schools encroachment on the religious liberty of dissentient scholars and parents may be more likely to take place, than in Schools vested in the Board. It is with the National Department of each School (a Department which ought to exist separate and complete in itself, as a *sine qua non*, in order to entitle it to public aid) that the Board will have to deal. With the Denominational Department, however important (and in a separate point of view it may be of even superior importance in the private estimation of individual members of the Board itself), the Board, as such, has no concern, except to restrain it within the bounds of justice. Whatever the Schools may be called, the Board ought, we submit, to be in the fullest sense *National*, not *Denominational*, and the same considerations demand a retention of the distinction made by the rules of the present Board, between general support and partial aid. The vested School being wholly National is mainly supported by public funds. The non-vested School, which may be partially sectarian, is only aided by public funds, in consideration of that part of its Education which is general and open alike to all.

In concluding this Report, we would again express a hope that the long promised settlement of the Education question will be accomplished during the next Session of Parliament; not only because a termination of the controversy between the two existing systems is most earnestly to be desired for the sake of Education itself, but also because it is unfair to the teachers in our service to allow them to remain longer in doubt as to the permanency of their positions. While we cannot specifically charge one of them with neglect of duty, nor even with laxity arising from this cause, we are assured by those who are acquainted with the views and feelings of National Teachers, that their energies are, in a measure, paralysed by the uncertain tenure of their office, and the doubt as to their employment without a compromise of principle, under the projected alterations in the educational arrangements of the Colony. It seems to us reasonable that men, whose energy and zeal in behalf of the system under which they serve may hereafter be construed into an offence, should feel some hesitation while those arrangements are under discussion. The futility of making exertions in behalf of a cause which may shortly cease to exist, also influences those who are not disposed to labor in vain. A similar consideration indeed has induced the Board itself to refrain from proceeding with some measures, which, were the National System permanently established, we should deem absolutely necessary for its extension, and for improving the character of the instruction, and perfecting the modes of tuition in our Schools.

We submit this our Report for the year ending 31st December, 1858; and in testimony thereof we have caused our Corporate Seal to be hereunto affixed, this first day of August, one thousand eight hundred and fifty-nine.

APPENDIX D.

DEPARTMENT OF THE BOARD OF NATIONAL EDUCATION.

Teacher's Receipt for Travelling Expenses.

*National Education Office,
Sydney, 2nd August, 1858.*

The Board of National Education having had occasion to observe, that the public service often fails to derive due advantage from expenditure incurred in aid of the travelling charges of Teachers, by reason of their early resignation, or necessary removal for misconduct,—it is found necessary to establish the following Rule, viz :—

“ Every payment towards a Teacher's travelling expenses is to be conditional on the continuance of his services for two years at least,—and is otherwise to constitute a debt, to be repaid by him, proportionate to the deficiency in term of service,—so that if he leave the Board's service within six months, the whole will remain due,—if between six and twelve months, three-fourths,—if between twelve and eighteen months, one-half,—and if between eighteen and twenty-four months, one-fourth. It is further to be understood, that if the Teacher violate, at any time, the rule requiring six months notice before leaving, the whole will remain due, without reduction for time of prior service.”

Sydney _____ 18

*I acknowledge to have received from the Board of National Education _____
as an advance towards Travelling Expenses on my Appointment to take charge of the School at _____,
subject to the preceding Regulation.*

L

APPENDIX E.

THE NATIONAL EDUCATION BOARD to THE COLONIAL SECRETARY.

*National Education Office,
Sydney, 3 June, 1858.*

SIR,

In the letter of the Chairman of this Board, dated 18th December last, transmitting additional Rules for the extension of the aid of the Board to non-vested schools, the Government was apprised that the application of the new Rules would open out a new field of operation, and consequent expenditure, whilst the existing means of the Board were barely adequate to the building and maintenance of vested schools.

2. This intimation was not given with any expectation of its eliciting, at that time, from the Government any pledge of additional assistance. We must, on the contrary, admit that we acted under the conviction that it was our duty, in the exercise of the powers entrusted to us by the Legislature, even with the inadequate resources at our command, and at the expense of restricting our building grants, at least to initiate an experiment which should manifest, if successful (as we ourselves believed it would be), the adaptation of our new plan to the wishes and exigencies of the community, before we importuned the Government and the Legislature for the means of fully carrying out our views. These motives have already been acknowledged as actuating us in this matter in our Annual Report; and we have now to congratulate ourselves and the public on the proof already received, in the numerous applications which have reached us for non-vested schools, of its adaptation to the social condition of this Colony.

3. It is now our duty to report to the Government, that since the promulgation of the new Rules thirty-seven applications for non-vested schools have been received,—of which eighteen have been considered as deserving of aid; two have been rejected, as not meeting the required conditions; two have been deferred for the present, and fifteen are under investigation. Applications are at present continued from week to week; and it will, we think, be an estimate within the limits of probability, that we ought to endeavor to provide for compliance with a total of at least eighty such applications within the current year.

4. If additional funds be withheld, this Board will be constrained to determine for themselves the question, how far it is desirable, in the exercise of their important public trust, to continue the experiment of non-vested schools, at the expense of restricting contributions which would otherwise be available for the building of vested schools. We are, of course, anxious to avoid this dilemma, both from its tendency to render the experiment imperfect, through the injudicious economy it will impose, and from the disappointment it may occasion to some persons anxious to build vested schools.

It will be in that case impossible for the Board to do more than accept a few of the most pressing applications for non-vested schools, rejecting, on the other hand, a few of the least urgent building applications; while to the extent of those rejected in each class, for want of means, a public want (which it is, of all others, the highest interest of the community to satisfy,) will remain unprovided for.

5.

5. We submit that all applications made to us for schools are to be taken as applications for aid in qualifying the rising generation of the Colony to fulfil the duties which the popular institutions, now about to be established on the widest foundation, will impose; and that money voted for such a purpose is to be regarded, not so much as ordinary expenditure, but rather as an investment of the most profitable kind, not only in a moral, but even in a material point of view.

6. The New York Board of Education, in their Report for 1856, refer, with a pardonable pride, to evidence taken before the English House of Commons, in proof that the superior education afforded in America to the particular class of persons who constitute the masters and crews of vessels trading across the Atlantic, had led to a very great advance in the relative proportion of American tonnage; and they point to the fertile invention applied to implements of practical use characteristic of Americans, as augmenting, in many ways, the fruits of agricultural and manufacturing industry, and refunding, even in hard dollars, the cost of public education. Regarding the question in a still higher point of view, the New York Board cite Jefferson, as saying—"If a nation expects to be ignorant and free, in a state of civilisation, it expects what never was, and never will be." They also cite Daniel Webster, as authority for the assertion that popular institutions cannot possibly be preserved "if early education be not freely furnished by public law, in such forms that all shall gladly avail themselves of it." If there be any hesitation in providing, by annual vote, for at least as liberal a plan of popular education as that of America, may we not venture to hope that the Legislature of this Colony may be induced to follow the example of America, by appropriating a share of public lands, in every county and town, to the support of common schools?

7. The Board have prepared a careful estimate of their liabilities from 1st May to 31st December, of the present year, of which the following is a summary:—

Pledged for building and repairs of vested schools	£7,647 14 2
Salaries, travelling expenses, and other charges	9,000 0 0
Total for vested schools	16,647 14 2
Salaries and books for 80 non-vested schools	3,000 0 0
Total estimated expenditure from 1st May to 31st December, 1858	19,647 14 2
Accruing to the Board from the sum at present on the Estimates	15,000 0 0
Leaving a deficiency of	4,647 14 2

without making any provision for the contingency of new applications for building vested schools during the remainder of the current year. In regard to these, however, it is not likely that the proportion of actual outlay required during the year will be considerable; and whatever it may be, it will probably be met by that proportion of the funds already pledged for building, which, by means of accidents and delays, may fail to be required during the same interval.

8. In the case of non-vested schools, the fact that the buildings are provided by the applicants will, of course, render the relative efficiency of the public expenditure, in regard to numbers educated, far greater than in those hitherto founded and supported by the Board.

9. It is true that, by this extension, the total cost of the National System of public education will be augmented; but the education itself will be augmented in a much greater ratio; and by the extension of the present Normal Schools and system of Inspectorship, so as to meet the increasing demands of the Colony, the blessings of a good education may be secured throughout the length and breadth of the land, under systematic supervision and control, with the organization which, while it facilitates central improvement, helps to diffuse the improvements of the centre to the remotest circumference.

10. We have now the honor to submit, with a confidence we did not venture to express in our letter of the 18th December last, our application for an additional grant, to enable us to meet the applications for non-vested schools without detracting from other resources. The sum required for this purpose will appear, from the statement made in a preceding paragraph of this letter, to be about five thousand pounds.

11. In conclusion, we respectfully request that this letter may be laid before the Legislature, as supplementary to our last Annual Report.

We have, &c.,

G. K. HOLDEN.
J. SMITH.
G. WIGRAM ALLEN.
R. THERRY.

ANNEX No. 1.

DETAILED Statement of the condition of National Schools inspected during 1858.

NOTE.—The remarks under the head 1 refer to the organization of the School; under 2 to the discipline; under 3 to the instruction.

SOUTHERN DISTRICT.

NAME OF SCHOOL.	DATE.	NUMBER OF PUPILS PRESENT AT EXAMINATION.			REMARKS.
		Boys.	Girls.	TOTAL.	
1. Albury.....	1858. 26 April..	23	41	64	<ol style="list-style-type: none"> 1. The schoolroom is in every way too small, and the organization is therefore necessarily imperfect. 2. Owing to the crowded state of the schoolroom proper discipline cannot be enforced. 3. Considering the difficulties with which the teacher has to contend, the progress of the pupils may be regarded as fair.
2. Bangalore (Non-vested.)	18 May ..	6	6	12	<ol style="list-style-type: none"> 1. The School is exceedingly defective in its organization; furniture and apparatus being particularly required. 2. The pupils are clean, orderly, and well conducted. 3. Their attainments are very low, none being able to read easy narratives fluently. The School has been in operation, under the Board, but a very short time.
3. Bowning.....	13 Dec...	11	4	15	<ol style="list-style-type: none"> 1. Building in very bad repair; insufficient supply of books, furniture, and apparatus. 2. The discipline is feeble and ineffective. 3. Very little progress has been made by the pupils in any subject. The School has since been closed.
4. Braidwood.....	13 May ..	30	25	55	<ol style="list-style-type: none"> 1. The boys and girls are taught in separate rooms, which are sufficiently but unsuitably furnished. In other respects the organization is very fair. 2. On the whole, the discipline of the School is in a very creditable condition. 3. The younger children are very backward in reading and writing, and the elder boys in Geography. The girls answered very well, especially in Grammar. New teachers have since been appointed.
5. Goulburn..... (Non-vested.)	13 Dec ..	19	15	34	<ol style="list-style-type: none"> 1. Deficient in School apparatus and furniture. 2. The discipline is tolerably good. 3. Fair progress has been made in all subjects except Geography.
6. Gundagai.....	6 Dec ..	18	21	39	<ol style="list-style-type: none"> 1. There is not sufficient furniture and apparatus; otherwise this School is fairly organized. 2. The discipline is very fair. 3. Considering the short period the School has been in operation, the attainments of the pupils are highly satisfactory.
7. Gunning..... (Non-vested.)	5 May..	21	16	37	<ol style="list-style-type: none"> 1. Fairly organized for the locality. 2. The children are in excellent order; the government is mild, but firm. 3. Considering all the circumstances, the children have made fair progress.
8. Major's Creek ..	14 May..	25	42	67	<ol style="list-style-type: none"> 1. The School has hitherto been conducted in temporary premises, which are too small, and in every way unsuitable. 2. The pupils are not punctual, but are clean and orderly. 3. The proficiency of the pupils is very fair, except in Geography. No maps have yet been furnished.

DETAILED Statement, &c.—*continued.*

NAME OF SCHOOL.	DATE.	NO. OF PUPILS PRESENT AT EXAMINATION.			REMARKS.
		Boys.	Girls.	TOTAL.	
9. Taralga (Non-vested.)	1853. 22 Dec...	17	13	30	1. Fairly organized on the whole, but rather deficient in apparatus. 2. The School is in excellent order, and the aspect and demeanour of the pupils particularly pleasing. 3. This School has been in operation but a short time; the children are making fair progress.
10. Tarlo (Non-vested.)	24 Dec...	11	21	32	1. Very fairly organized; a few articles of apparatus are required. 2. The discipline of the School is very good; the children's demeanour modest and well regulated. 3. This School has been in operation only a few weeks.
NORTHERN DISTRICT.					
1. Bendolba.....	24 March	6	8	14	1. This School is fairly organized. 2. The pupils are punctual and clean. 3. Proficiency of the pupils tolerable.
2. Bishopsbridge .. (Non-vested.)	13 Oct...	14	13	27	1. The whole of the organization is defective. 2. The punctuality, cleanliness, and order very fair. 3. Proficiency of the pupils tolerable for the time the School has been in operation.
3. Black Creek (Non-vested.)	29 Sept..	24	17	41	1. The organization is very defective. 2. The teacher is untrained, and the discipline ineffective. 3. Very little progress has been made by the pupils in any subject.
4. Bolwarra.....	30 March	14	10	24	1. This School is well organized, though the building is much injured by the white ants. 2. The children are punctual, clean, and orderly. 3. The attainments of the pupils are tolerable.
5. Brookfield	22 Sept..	16	9	25	1. This School is very fairly organized. 2. The children are clean and orderly, but unpunctual. 3. The attainments of the pupils are small, and they make very slow progress.
6. Campsie	4 March	6	10	16	1. The building is in bad repair, and badly furnished. 2. The discipline is very feeble and ineffective. 3. Instruction very deficient; the School has since been closed.
7. Clarence Town ..	19 May..	46	39	85	1. This School is very fairly organized in every particular. 2. On the whole the discipline is good, though lax in some particulars. 3. The attainments of the pupils are very fair, though hardly so great as would be expected from the amount of teaching power at work.
8. Cundletown	4 Nov.	23	20	43	1. The School furniture is not very suitable; but the organization is, on the whole, very good. 2. The cleanliness and order fair. 3. Proficiency of the pupils good, for their age and opportunities.
9. Dungog	23 Sept..	25	23	48	1. The School Building is unsuitable, but the organization is good in other respects. 2. Cleanliness and order fair. 3. On the whole, the progress is but tolerable, though the teacher appears to be well qualified.

DETAILED Statement, &c.—*continued.*

NAME OF SCHOOL.	DATE.	NUMBER OF PUPILS PRESENT AT EXAMINATION.			REMARKS.
		Boys.	Girls.	TOTAL.	
10. Dunmore.....	1858. 23 July..	29	31	60	1. The organization of this School is very good. 2. The children are tolerably clean and orderly. 3. The attainments of the pupils are very fair, considering their ages.
11. Dagsworth.....	15 April..	10	14	24	1. The Schoolroom is in bad repair, and the organization very defective. 2. The discipline is not quite satisfactory, the pupils being irregular in attendance. 3. The attainments of the pupils are small. This School has since been closed.
12. Ellalong..... (Non-vested.)	9 Sept..	12	19	31	1. This School is carried on in temporary premises. 2. Order and cleanliness are moderately good. 3. The pupils have made fair progress since the School was established.
13. Falbrook.....	20 Dec..	15	10	25	1. A good building, but the organization in other respects imperfect. 2. Discipline fair. 3. The pupils have made tolerable progress since the present teacher's appointment.
14. Fishery Creek ..	30 Aug ..	16	23	39	1. This School is carried on in temporary premises; it is insufficiently furnished. 2. The pupils are clean, orderly, and punctual. 3. The scholars who attended regularly have made good progress since the School was established.
15. Four Mile Creek..	14 Sept..	12	13	25	1. The building is rather small, otherwise the School is fairly organized. 2. The punctuality, cleanliness, and order fair. 3. The proficiency of the pupils is tolerable, considering their age and time at School.
16. Gosforth.....	11 Feb...	52	33	85	1. Fairly organized in every respect. 2. The discipline is very good. 3. The progress of the pupils very fair. The teacher has given much satisfaction in the district; he has since been promoted.
17. Glen William....	18 May..	15	16	31	1. Very fairly organized in every respect. 2. Cleanliness and order tolerable. 3. Attainments of the pupils upon the whole creditable.
18. Hinton.....	11 Feb..	52	33	85	1. The organization of this School is very good. 2. The discipline is tolerably good. 3. The younger children are rather backward, but the senior classes make fair progress.
19. Iona.....	17 Feb..	22	33	55	1. Fairly organised in every respect. 2. The discipline is lax in every particular. 3. Attainments unsatisfactory on the whole.
20. Lochinvar..... (Non-vested.)	16 Sept..	29	21	50	1. School held in temporary premises. 2. Cleanliness and order tolerable. 3. The progress of the pupils is only moderate; the School has been only a short time in operation since its re-organization.
21. Maitland..... (Non-vested.)	3 May ..	44	44	1. A good building, but insufficiently furnished. 2. Discipline ineffective. 3. The progress of the pupils is small. This School has since been closed.

DETAILED Statement, &c.—*continued.*

NAME OF SCHOOL.	DATE.	NUMBER OF PUPILS PRESENT AT EXAMINATION.			REMARKS.
		Boys.	Girls.	TOTAL.	
22. Merriwa	1858. 16 Dec. ...	23	20	43	1. The supply of apparatus is deficient; organization fair in other respects. 2. The discipline is moderately good. 3. The pupils are tolerably well advanced in most subjects.
23. Murrumbidgee	9 Dec. ...	23	17	40	1. The building is not very suitable, and the organization is generally defective. 2. The discipline very fair. 3. The attainments of the pupils are upon the whole tolerably good.
24. Mulconda	24 Sept. ...	9	7	16	1. This School is not in a central position; it is not well organized. 2. The pupils are clean and orderly. 3. The children have made fair progress since the last inspection.
25. Mosquito Island	23 Oct. ...	8	14	22	1. A small slab building; in other respects suitably organized. 2. ... 3. The School has recently been opened; the children are very ignorant.
26. Nelson's Plains ..	29 July. ...	16	14	30	1. The organization of the School is tolerably good. 2. The children are clean, and in fair order. 3. Their attainments are fair, with the exception of one class.
27. Newcastle	11 Mar. ...	42	30	72	1. This School is fairly organized. 2. The discipline is not sufficiently strict. 3. This School has been but a short time in operation, and the attainments of the pupils are small in every respect.
28. Parading Ground	10 June .	12	9	21	1. Organization of the School very fair. 2. Discipline rather lax. 3. Attainments tolerable. The present teacher has only been recently appointed.
29. Purfleet	2 Nov. ...	9	6	15	1. The schoolhouse is suitable, and there is a fair supply of books, furniture, and apparatus. 2. The discipline of the School is much neglected. 3. The attainments of the pupils are very meagre; they know nothing of Grammar, Geography, or Arithmetic. The teacher has since been dismissed.
30. Port Macquarie ..	15 Nov. ...	34	20	54	1. The organization of this School is good, excepting that maps are wanted. The monitorial arrangement is employed. 2. The children are punctual, clean, and orderly. 3. Their attainments may be regarded on the whole as fair, though rather deficient in Geography and Grammar.
31. Raymond Terrace (Non-vested.)	11 June .	29	16	45	1. This School is very fairly organized. 2. The pupils are punctual, clean, and orderly. 3. The progress of the scholars is good.
32. Redbank	8 Nov. ...	24	23	47	1. A slab building, but its organization in other respects is good. 2. The discipline is only tolerable; the pupils are not punctual. 3. Their attainments very low in every subject except Scripture History.
33. Seaham	22 July. ...	15	14	29	1. The organization of this School is very imperfect. 2. The pupils are irregular in attendance, and the discipline not sufficiently strict in other respects. 3. On the whole their attainments are not satisfactory.

NAME OF SCHOOL	DATE	NUMBER OF PUPILS PRESENT AT EXAMINATION			REMARKS.
		Boys.	Girls.	TOTAL.	
13. Peel	1858. 13 Sept.	34	23	57	<ol style="list-style-type: none"> 1. This School possesses an excellent organization. 2. The discipline is not quite satisfactory in some respects, though fair on the whole. 3. The pupils have made some progress, but not so much as might have been expected.
14. Wattle Flat	6 Oct.	17	11	28	<ol style="list-style-type: none"> 1. The organization of this School is very defective. The school buildings are not quite suitable. 2. The pupils are not well disciplined, being irregular in their attendance. 3. Very little progress has been made in any subject.

METROPOLITAN DISTRICT.

1. Berrima	31 Mar. ...	14	10	24	<ol style="list-style-type: none"> 1. Great deficiency in school books and apparatus. 2. The children are kept in good order; the discipline is very strict. 3. Tolerable progress has been made, considering the circumstances of the School.
2. Burwood	5 Aug. ...	18	11	29	<ol style="list-style-type: none"> 1. Organization fair. 2. Order and cleanliness good; regularity of attendance bad. 3. School but a short time in operation; attainments of the pupils very meagre.
3. Camden	22 Mar. ...	22	17	39	<ol style="list-style-type: none"> 1. Sufficiently furnished in all respects. 2. The pupils are tolerably regular, clean, and orderly. 3. The attainments of the pupils are low; the teacher is about to leave.
4. Castlereagh	6 Aug. ...	10	9	19	<ol style="list-style-type: none"> 1. Apparatus somewhat deficient, but otherwise fairly organized. 2. The pupils are not in good order, though the teacher is very severe in his discipline; he is not judicious. 3. Very little progress has been made by the scholars; the School has been in operation but a short time.
5. Eling Forest	31 Mar. ...	14	15	29	<ol style="list-style-type: none"> 1. Fairly organized for the district. 2. With the exception of some cases of deficient cleanliness, the discipline is good. 3. The excessive bashfulness of the elder pupils rendered it impossible to ascertain the amount of their proficiency which appears to be moderate.
6. Manly	5 Nov. ...	10	7	17	<ol style="list-style-type: none"> 1. School carried on in temporary premises. 2. Order and cleanliness very good. 3. The teacher is competent and energetic; the School has been but a short time in operation.
7. Pennant Hills ...	18 Feb. ...	16	13	29	<ol style="list-style-type: none"> 1. The schoolhouse is in bad repair; in other respects the School is well organized. 2. The pupils are in a fair state of discipline, except that some boys are less clean and tidy than should be. 3. The children are very backward. The teacher who is a man of ability, has been very recently appointed.
8. Picton	29 Mar. ...	27	21	48	<ol style="list-style-type: none"> 1. Very well organized for a country School. 2. The pupils are in a fair state of discipline. 3. On the whole, the pupils are making fair progress.

DETAILED Statement, &c.—concluded.

NAME OF SCHOOL.	DATE.	NUMBER OF PUPILS PRESENT AT EXAMINATION.			REMARKS.
		Boys.	Girls.	TOTAL.	
9. Paddington	1858. 30 Nov. .	83	54	137	1. Organization good. 2. Discipline fair. 3. Very fair progress has been made by the pupils, on the whole.
10. Parramatta	11 Feb. . .	36	18	54	1. Very imperfectly organized in every respect. 2. The discipline tolerably good, except as regards punctuality and regularity of attendance. 3. The attainments of the pupils are very meagre; scarcely any progress has been made in any subject.
11. Smithfield	19 Feb. . .	17	18	35	1. The School is sufficiently provided with the necessary apparatus, but in other respects is not well organized. 2. The discipline is fair, except that some boys are rather dirty, and irregular in their attendance. 3. The attainments of the pupils are very low.
<i>Sydney.</i> 12. Cleveland-street ..	1 & 2 Dec.	110	82	192	1. Well organized. 2. In fair state of discipline. 3. On the whole, the pupils have made satisfactory progress.
13. Fort-street (Boys)	{ 15 & 16 } { Dec. }	251	251	1. The organization is the best possible in the Colony. 2. The discipline is excellent. 3. The pupils have made most satisfactory progress.
14. Do. (Girls)	14 Dec.	117	117	1. The organization is excellent. 2. The discipline is also very good. 3. The proficiency of the pupils is highly satisfactory on the whole.
15. Do. (Infants)	13 Dec. . .	118	99	217	1. This School is organized in the best mode that the circumstances admit of. The rooms are too small for the number of children. 2. It is in a satisfactory state as regards discipline. 3. Very fair progress has been made on the whole.
16. William-st. (Boys)	8 & 9 Dec.	196	196	1. Extremely well organized in every particular. 2. The discipline is very good. 3. The pupils have made very satisfactory progress in all the subjects usually taught in Schools.
17. Do. (Girls)	7 Dec.	105	105	1. Very well organized in every respect. 2. The School is in a fair state as regards discipline. 3. The pupils have made tolerable progress.
18. Do. (Infants)	6 Dec. . .	87	75	162	1. Very well organized in every respect. 2. The School is in fair condition as regards discipline. 3. Fair progress has been made on the whole.

ANNEX No. 2.

INSTRUCTIONS TO CANDIDATES IN TRAINING AT THE MODEL
NATIONAL SCHOOL.

It is assumed that no person will seek the office of Teacher merely for the sake of the emolument. On the contrary, it is hoped that every Candidate has been prompted in his desire to undertake the charge of a School by higher motives;—by a love of the work, by a sense of its importance to society, by a feeling of his own suitability for the office, and not without deep reflection upon the grave responsibility it involves. To persons influenced by such

such motives, no amount of trouble or inconvenience that enables them to augment their qualifications, will appear too great; and they will earnestly endeavour, by all the means in their power, to add to their stores of knowledge, and to acquaint themselves with improved modes of managing Schools. Candidates who are thus disposed will find the Teacher's office delightful and rich in those mental gratifications which good men prize; while to the mere hireling it will only prove irksome and disagreeable.

The Commissioners, in their published Regulations, thus define the qualifications of the Teacher:—

“A Teacher should be a person of Christian sentiment, of calm temper and discretion, imbued with a spirit of peace, of obedience to the law and loyalty to the Sovereign; and should not only possess the art of communicating knowledge, but be capable of moulding the minds of youth, and of giving a useful direction to the power which education confers.”

And it is added, these are the qualities “which the Commissioners are anxious to find, to encourage, and to reward.”

The following Instructions are intended to assist Candidates in preparing themselves for an efficient discharge of their duties. It should be borne in mind, however, that the matters here noted for their consideration form only an outline of the course of training. Having carefully studied the Board's Regulations, their next duty should be to observe the mode in which the system is practically carried out in the Model School. For the purpose of attaining this object effectually, it is recommended that Candidates should enter in a Note Book points which seem to require explanation, and request the advice of the Acting Head Master thereupon, at a reasonable time.

1.—Candidates are to arrive at School not later than a quarter to nine in the morning. They are to proceed immediately to the Library and enter, in a book provided for the purpose, the exact time of their arrival. As punctuality is one of the principal qualifications of a Teacher, much stress will be laid upon the attention paid by Candidates in this particular; every moment of time lost will be counted and taken into consideration in forming an estimate of their probable usefulness.

2.—Absence from School will only be excused on the ground of illness, and when such absence exceeds one day a medical certificate must be furnished. In all cases, the Acting Head Master must be satisfied that the assigned cause is sufficient to justify the Candidate's non-attendance. Irregular attendance on frivolous or insufficient grounds will be regarded as a positive disqualification.

3.—Candidates are next, according to the directions of the Acting Head Master, to proceed to the playground and assist in the supervision of the pupils, or to repair to the schoolroom and observe the preparations made for commencing the School business.

4.—When the children “fall in,” Candidates are to take note of the system of drill, with the view to the adoption, in their own Schools, of so much of it as may be necessary to maintain order and train the children to habits of obedience. In this, as in many other matters, it is more important that Candidates should thoroughly comprehend and imbibe the *spirit*, than simply acquire the mere mechanical *form*.

5.—The arrangements for preserving neatness and cleanliness of person and dress, order and decorum in marching into School, and tidiness in disposing of hats and caps, are also to be closely remarked, and imitated by Candidates in their own Schools.

6.—The discipline in the schoolroom is the next feature to be attended to; and when the lessons have commenced, Candidates are to notice minutely the following matters:—the style and arrangement of the desks and forms; the nature of the apparatus, blackboards, maps, mapstands, diagrams, pictures, slates, pencils, pens, inkwells, pencil-cases, and all other articles used in the School; the books; the classification of the pupils; their occupations as defined in the Time Tables and Table of Minimum Attainments; the means of securing order and obedience; the mode of governing the School; and the subjects and methods of instruction. In reference to the last point, it should be remembered that a good teacher will not only *adopt* methods he may see in efficient operation, but will also *adapt* them to the circumstances in which he may be placed.

7.—During the morning recess, instituted to obviate the necessity of permitting pupils to leave the schoolroom, Candidates are to remain in the playground. They are to avoid conversing with Teachers on duty, or distracting their attention in any way. As a general rule also, Candidates should avoid loud speaking and noise of every description, in order that the quiet, subdued tone which ought to pervade the Schools, may not be disturbed, and that its moral effect upon the children may not be weakened or interrupted.

8.—The calling of the Rolls is the next point for observation.

9.—The precautions for the orderly dismissal of the School and the decorous conduct of the children in going to their homes, are next to be regarded.

10.—Should the Acting Head Master place a Candidate in charge of the playground during the mid-day recess, he will be guided, in discharging that duty by the directions drawn up for his use. He will first, however, study the Order on the subject in the Order Book.

11.—But should it be considered expedient that Candidates should join the Teachers' Class at mid-day, or the Normal class in the evening, it is expected that they will exhibit a becoming modesty of demeanour, and a willingness to avail themselves of the opportunity of improvement thereby afforded. They will carefully observe the subjects of study selected as most desirable for Teachers to be acquainted with, and the methods adopted in imparting instruction.

12.—The preparations for resuming the School duties in the afternoon are next to be noted.

13.—When placed in charge of a class, Candidates are to consider themselves responsible for the order and good conduct of the children, for the due preservation of the materials in use, and for the proper employment of the time. They are never to leave the class until relieved by another Teacher. The tact and skill exhibited by a Candidate in his management of a class, his ability as a disciplinarian, and the appropriateness of his methods of teaching, are all considered in judging of his qualifications.

14.—Candidates are especially recommended to study the "General Lesson," the principles of which the Commissioners require to be strictly inculcated in all Schools under their superintendence. This lesson should be read and explained to the whole School three times a week at least.

15.—Whatever information may be required by Candidates should be obtained from the Acting Head Master only, and it is therefore obviously improper to question the younger Teachers on matters respecting which they can have no definite knowledge.

16.—Instruction will be given by the Acting Head Master to Candidates, upon the mode of keeping the School Registers, of compiling the Quarterly and Annual Returns, and of forwarding, in proper form, Abstracts of Salary. The importance attached by the Board to correctness in these particulars, may be inferred from the fact, that *finer, loss of classification*, and *dismissal*, are punishments inflicted for neglect or want of truthfulness.

17.—At the close of the month's probation, Candidates are examined by the Inspector, or, in his absence, by the Acting Head Master. The following are the Regulations adopted by the Board for such examinations:—

I.—Candidates are required to hand to the Inspector a list of the subjects upon which they are prepared for examination, in order that he may frame suitable questions.

II.—The examinations will be conducted in the Inspector's Office, and in no other place.

III.—Candidates will not be allowed to leave the room without the Inspector's permission. Half-an-hour will be allowed at mid-day for refreshment.

IV.—The examination questions will be written by the Inspector, who will give them, one at a time, to the Candidates. Every answer must be completed before another question is given.

V.—The Inspector will take care that no Candidate leaves the Office, while the answer to any question remains unfinished.

VI.—Candidates are not permitted to refer to books or manuscripts. Any breach of this rule will be immediately reported to the Board.

VII.—Candidates' Papers are to be handed to the Inspector as soon as finished, and are under no circumstances to be taken out of the Office, except when laid before the Board.

18.—The Candidate's conduct, while in training, is then reported upon by the Acting Head Master, and the Inspector reports to the Board respecting his qualifications in general.

19.—Candidates' Wives are to attend at the Model School on a day fixed for the purpose, in order that the Acting Head Mistress may inquire into their ability to teach needle-work.

20.—Before leaving in the afternoon, Candidates are to enter in the Time Book the exact time of their departure, having first reported to the Acting Head Master that every duty confided to them has been discharged. During the day they are not allowed to leave the school grounds without permission from the Acting Head Master.

DIRECTIONS to the Teacher in charge of the Playground.

The time spent by the children in the Playground is devoted to refreshment and recreation. Advantage should be taken of the opportunity to study the characters of children, and so discover how to rule them by moral influence. At play, children appear as they really are; and stripped of the artificial manner induced by the restraint of the school-room, their characters and dispositions are exhibited in their true light. Intelligent Teachers will not fail to conclude, therefore, that the Playground, or uncovered Schoolroom, is a field on which the exercise of all their faculties is required. Nothing should escape the observation of the Teacher. His eye should view every action of a child with the desire and purpose of divining its motives. Without any appearance of intermeddling, the Teacher should see all, know all, control all, and animate all that is done by the children; his influence, unfelt and unsuspected by them, should preside over every action. At the same time, remembering that they are in his charge, and that he is responsible for their safe keeping, he should never relax his vigilant watchfulness, but care for each as he would for his own. The following directions will assist him in learning the details of this duty.

I.—The Teacher on duty in the Playground will take care that the children do not transgress their respective boundaries, and that they do not leave the school ground, except with his consent.

II.—He will see that their health is not endangered by exposure to sun, wet, or cold.

III.—He will take care that each child receives its lunch, and that no paper is strewn about the Playground.

IV.—Dangerous or indecorous games are strictly forbidden, as also throwing stones and climbing upon the walls.

V.

- V.—The Teacher will pay special attention to the Gymnastic Apparatus with a view to guard against accidents, and only one child is to be allowed upon the apparatus at one time.
- VI.—He will take care that no injury is done to the plants, trees, or other property of the Board.
- VII.—Children are not to play at boisterous games by which they might hurt each other, or tear each other's clothing.
- VIII.—Improper conduct and language are to be repressed,—such as quarrelling, calling names in jest, the use of slang terms, &c.
- IX.—The Teacher will prevent children from playing in the closet.
- X.—Should any accident occur, the circumstances are to be reported immediately to the Acting Head Master, though the Teacher should bear in mind that it is his business to guard against them.
- XI.—The children are not to play after the ringing of the first bell, but to prepare themselves for School.
- XII.—The Teacher will take care that the water is not wasted, and that it is used economically by the children.

By order of the Board of National Education,

W. C. WILLS,
Secretary.

National Education Office,
Sydney, 19th July, 1858.

ANNEX No. 3.

EXAMINATION PAPERS OF CANDIDATES IN TRAINING AT THE
MODEL NATIONAL SCHOOLS.

Three hours allowed for each paper. Only one question in each Section is to be answered.

GRAMMAR.

" In the deep stillness of the night
When weary labour is at rest
How lovely is the scene how bright
The wood the lawn the mountain breast
When thou fair moon of harvest hast
Thy radiant glory all unfurled
And sweetly smilest in the west
Far down upon the silent world."

A, punctuate this passage; B, scan the first three lines, and describe the character of the metre; C, arrange the passage in simple prose order; D, paraphrase it; E, analyse it in detail; F, parse the words underlined; G, point out the words derived from the Latin, and give their roots.

SECTION II.

- 1.—Criticize the following expressions; account for any alterations you would suggest.
 - A, The mail is arrived.
 - B, I was offered a situation.
 - C, A large quantity of people was present.
- 2.—State the principal rules of arrangement of words in a sentence.
- 3.—Explain what is meant by *gender* in English, and shew how the gender of nouns may be distinguished.

SECTION III.

- 1.—What is meant by *case*?
- 2.—How is the comparison of adjectives formed?
- 3.—Give a full account of the verb.

SECTION IV.

- 1.—What is a sentence? and of how many parts does it consist?
- 2.—How many kinds of sentences are there? Give examples of each.
- 3.—Write, with examples, six of the principal rules of syntax.

ARITHMETIC.

SECTION I.

- 1.—Multiply £12 17s. 11½d. by 987.
- 2.—Divide £7,528 13s. 3¼d. by 897.
- 3.—How many pecks of corn at 44s. per bushel can be bought for 3s. 5¼d.?

SECTION II.

- 1.—Find the cost of 17 tons 14 cwt. 3 qrs. 19 lbs., at 16s. 4d. per cwt.
- 2.—Find the interest upon £754 12s. 9d. for 4 years, at 3½ per cent.
- 3.—7,897, at £2 19s. 1¾d. each.

SECTION III.

- 1.—Reduce to its simplest form the fraction $\frac{2}{3}$ of $1\frac{1}{3}$ of $1\frac{1}{9}$.
- 2.—Add $\frac{1}{2} + \frac{3}{4} + \frac{5}{8} (\frac{2}{3} - \frac{2}{5})$.
- 3.—Reduce $\frac{19}{21}$ to a decimal; prove your rule.

SECTION IV.

- 1.—Divide $\cdot 525$ by $\cdot 00075$; prove by vulgar fractions.
- 2.— $\sqrt{729834\cdot 575}$.
- 3.— $\sqrt[3]{8329437\frac{2}{3}}$.

GEOGRAPHY.

SECTION I.

- 1.—Describe the rivers (of Europe) flowing into the Mediterranean.
- 2.—Give a brief account of the principal lake regions in the world.
- 3.—Compare Spain with Arabia.

SECTION II.

- 1.—Describe fully the most important mountain systems in Europe.
- 2.—Write a lesson upon the physical features of Hindostan.
- 3.—What are the trade winds and how are they accounted for?

SECTION III.

- 1.—What circumstances affect the amount of rain falling in any country?
- 2.—Give a full description of England, France, or Russia.
- 3.—Account for the tides.

SECTION IV.

- 1.—Give an account of the various kinds of vegetable food used in different countries.
- 2.—Shew how soil and climate influence the condition of a people.
- 3.—Draw an outline map of New South Wales.

ART OF TEACHING.

SECTION I.

- 1.—Give a precise account of the principal educational systems.
- 2.—What are the essential requisites in a good schoolroom?
- 3.—What furniture, apparatus, and books, are necessary for a School numbering one hundred children?
- 4.—How would you classify the children in the above School, and how would you provide for their proper occupation?
- 5.—Write a Time Table.

SECTION II.

- 1.—What is the best means of securing punctuality and regularity of attendance?
- 2.—How would you ensure order and cleanliness?
- 3.—What system of rewards and punishments do you employ?
- 4.—What do you understand by "moral influence," and how is it to be attained?

SECTION III.

- 1.—What faculties are most active in young children below seven years of age; what subjects would you teach them?
- 2.—Mention the mental faculties you think it possible to train in a School?
- 3.—What, in your opinion, is the use of teaching Arithmetic, Grammar, and Geography?
- 4.—State the advantages likely to arise from giving lessons on objects?

SECTION IV.

- 1.—Upon what principle should all methods be founded?
- 2.—Distinguish between analytic and synthetic methods?
- 3.—Can you give any account of the methods of Pestalozzi and Jacotot?
- 4.—Give rules for framing questions, 1,—when examining children; 2,—when communicating knowledge?

SECTION V.

- 1.—How would you teach Geography to a class of beginners?
- 2.—What are the chief points to be borne in mind in teaching Arithmetic?
- 3.—Write notes of an object lesson on "paper"?
- 4.—State your views on the qualifications necessary in a teacher, and on the dignity of his office.

NATIONAL SCHOOL BOOKS.

SECTION I.

- 1.—What is the *design* of the First Book of Lessons?
- 2.—Explain your mode of using this book in class teaching?
- 3.—Give an abstract of the contents of this book.

SECTION II.

- 1.—Classify the lessons in the Second Book according to subjects.
- 2.—What additional information ought the Teacher to supply to a class reading the lesson on the Sloth?
- 3.—Write an abstract of the contents of Sequel No. 1.

SECTION III.

- 1.—Narrate the history of Columbus from the Sequel No. 2.
- 2.—Give a summary of the lessons on Natural History in the same book.
- 3.—What moral lessons may be learned from the biographies and tales in this book?

SECTION IV.

- 1.—State as fully as you can what Scriptural information is contained in the Third Book?
- 2.—Of what character are the Natural History lessons?
- 3.—Give an abstract of the contents of this book.

ANNEX No. 4.

OUTLINE OF PLAN FOR THE ESTABLISHMENT OF BOARDING SCHOOLS
IN REMOTE DISTRICTS.

The object to be accomplished by the establishment of a Boarding School in any locality, would be to afford to settlers in the interior, farm servants, stockmen, and shepherds, facilities for the education of their children. The arrangements for this purpose admit of, and in fact require, the combination of industrial training with the usual amount of School instruction. The circumstances of the case also render it imperative to attend to the pupils' moral and religious instruction. Such an institution would accordingly serve the threefold purpose of a School, a workshop, and a home.

The first point to be determined is the situation in which the proposed School shall be placed. The most suitable position would be in the vicinity of one of the frontier towns, so as to be within reach of medical assistance, and the ministrations of the clergy. At the same time, it would be extremely undesirable to establish the School *in* the town, where the pupils would be in continual danger from the corrupting influences of bad example. As a farm would be a necessary adjunct to the School, a grant or lease of a section of land would be obtained from the Government, together with such an extent of run for cattle as might be required. The land should be of good quality, partly pasture ground, the latter divided into paddocks, being used for horses, working bullocks, and milch cows.

The supply of water would of course, form an important consideration in selecting a site, also the abundance of timber for building, fencing, and fuel.

The next point would be the erection of suitable buildings. The *size* of the buildings and the number of apartments would be governed by the number of children expected to attend the School. Assuming that number to be fifty, the following would be absolutely necessary:—Kitchen, laundry, store-room, dining-room, dormitory, and lavatory. Besides these apartments would have to be provided for the teachers and their families, and for the servants. If girls were admitted as well as boys—an arrangement that is not without its advantages—the number of apartments would, in most instances, be doubled. In point of quality, the buildings should differ little from those in which the pupils are accustomed to reside. The difference, if any, should be such as could be effected by the exertions of any one desirous of securing his own comfort and convenience. It is, perhaps, unnecessary to remark, that every arrangement should be consistent with the most rigorous propriety,—this being a matter which, unfortunately, is seldom considered as of much importance by the class whom these Schools are intended to benefit. The furniture and fittings would partake of the same general character—plain, substantial, and similar to that usually attainable in the district.

The staff of teachers would be—a Master, an Assistant, if required by the number of pupils, and an Industrial Master. The Master should be a married man. His duties would be the general supervision of the entire establishment, and the conduct of the School department in which he would receive the help of the Assistant Teacher if the number of pupils were large. The industrial Master would be responsible for the out-door occupation of the pupils, and for the management of the farming operations. A cook and a laundress, who might be man and wife, would also be required, and for some time at least, a farm laborer to assist in ploughing and the other operations requiring strength as well as skill. The salaries and wages of these parties, would, in the first instance, be paid by the Government, or by the Board having the control of educational affairs.

The

The terms and conditions on which pupils should be admitted, next require settlement. Considering the circumstances of the persons likely to avail themselves of such institutions, it seems desirable to admit pupils at the lowest possible rate, and it should be optional to pay in money or in kind. In fact, it would be wise to allow payment to be made in the form of *rations*, which persons situated as those are whose children would attend the School, could better afford than even the same value in hard cash. A certain amount of clothing should be required with each pupil, or a fixed payment might be substituted to reimburse the cost of supplying it by the Government. It should also be made an indispensable condition of admittance to the School, that every pupil should give a portion of his time to the work of the establishment, not merely with a view to further its interests, but also in order that he may be trained in the practice of some industrial occupation. The parents, generally, would not object to this arrangement, but would rather be gratified, provided the design were clearly explained. A money fee of, say, ten shillings per quarter, should also be exacted, and the funds so obtained would go in part payment of servants, &c.

In providing for the occupation of the pupils, regard should be had to the principle before enunciated of combining *learning* with work. It should accordingly be so arranged that each pupil should spend $3\frac{1}{2}$ hours daily in the School, and $3\frac{1}{2}$ hours in farming, gardening, or household work. Much of the latter—such as making beds, sweeping rooms, &c., would be done by all, on first rising in the morning; but there are other matters—such as the supply of water and fuel, which will require constant attention during the day. The School instruction should be of a thoroughly practical kind, so that while the mental faculties were properly cultivated, the pupils would acquire information of the kind most suited to their circumstances. A School library would be essentially necessary for the amusement of the pupils, if for no higher purpose. The labor would, at first, be exclusively agricultural, but in time the common handicrafts might be introduced, and would, doubtless, prove most acceptable to persons of the humbler class in the interior. The School farm might, eventually, become a Model Farm for the district, and thus accomplish a very useful purpose.

In its character as a *home*, certain duties would attach to a boarding School which do not appertain to an ordinary day School. The moral and religious training of the pupils will require careful attention. If there were pupils of different religious persuasions—Protestant and Roman Catholic—this would be a matter of some difficulty, which, however, might be partly overcome by having a teacher of each of the above denominations. Of the possibility of overcoming it, the School for Destitute Children is an illustration. These teachers might separately instruct the pupils of their own denominations, and see that religious ordinances were observed as fully as possible. These efforts would be supplemented by the pastoral visits of the clergy. I do not propose this as a full and sufficient course of religious teaching, but it cannot be denied that even this measure of instruction is incomparably better than what the pupils would otherwise obtain—that is to say, none at all.

The cost of erecting the necessary building for the accommodation of 50 pupils, providing furniture, School apparatus, and books, and for stocking the farm, I estimated at about £2,000.

The annual expense would be,—

Salaries	325
Wages	100
Maintenance	300
Total	£725

The receipts would be,—

Fees	100
Returns from farm	100
Total	£200

I have no doubt that ultimately, say in five years, the institution, under effective management, would be self-supporting, except as regards payment of salaries to teachers.

W. WILKINS.

1859.

Legislative Assembly.

NEW SOUTH WALES.

DENOMINATIONAL SCHOOL BOARD.

(REPORT FOR 1858.)

Ordered by the Legislative Assembly to be Printed, 14 October, 1859.

REPORT OF THE DENOMINATIONAL SCHOOL BOARD, FOR THE YEAR 1858.

OWING to the late period in the Session of the Parliament of 1858, when the Appropriation Act for that year was passed, the Board were unable, prior to the 31st of December last, to take full advantage of the increased funds placed at their disposal, for the support of Denominational Schools.

The Board are, however, glad to report that the increase in the Vote here referred to, viz.,—from £17,350 to £20,000, has enabled them to place upon their lists a large number of schools, many of which were already in existence, and which, although in reality Denominational Schools, had before been entirely dependent upon local support owing to the inability of the Board to extend to them any aid out of the limited funds at their disposal.

The following is a list of schools above referred to, viz. :—

Church of England, Sydney Diocese—Randwick, Holsworthy, Waverly, Castle-reagh, Denham Court, Waterloo Estate.

Church of England, Newcastle Diocese—Casino, West Maitland (St. Paul's), Stroud, Tenterfield, South Brisbane.

Roman Catholic—Nimitabelle, Waterloo Estate, Tumut, Fortitude Valley, Howlong, Maryborough, Ryde, Dapto.

Although some of these new schools are included among those referred to in the tabular statement appended to this Report, the larger proportion are additional. The Board having been unable, for the reason above given, to complete arrangements for their reception prior to the close of last year. The total number of schools *at present* in connection with the Board is as follows :—

	Schools.	Children.
Church of England	119	8,948
Presbyterian	19	1,339
Wesleyan	11	826
Roman Catholic	83	5,893
	<u>232</u>	<u>17,006</u>

Besides thus placing a number of new schools permanently upon their list, the Board have extended temporary assistance to the following Church of England Schools in the Sydney Diocese, out of the share of the vote belonging to that Denomination :—Denilinguin, Five Dock, Gerringong, Cabramatta, Gunning, Hardwick, Tarago, Louisa Creek, Marulan.

The Board have also appointed the head master of the St. James' Church of England Model School as organizing master of the Church of England Schools in the Sydney Diocese generally; and a second master has been added to this establishment, who will have charge of the school during the temporary absence of the head master.

The Board cannot but express their gratification at having been thus placed in a position to comply, in some measure, with the many urgent applications which they have from time to time received for support in favor of schools hitherto unconnected with them, copies of which application have appeared in previous Report.

In the case of the Presbyterians the Board have, at the recommendation of the Moderator of the Presbyterian Synod, expended their proportion of the increase to the vote in raising minimum salaries.

COST OF CHILDREN'S EDUCATION.

The number of Denominational Schools in operation on the 31st of December, 1858, was, as shewn in the Tabular Statement appended to this Report, 211, attended by 16,082 children, giving an average of 76 children to each school.

The total grant from Government towards the education of these children, including the sum set apart for the expenses of management by the Board and every other charge, was £20,000, or at the rate of £1 4s. 10d. for each child.

The amount of fees from parents and guardians received from the Teachers was £11,210 11s., or at the rate of 13s. 11d. for each child, giving the total cost of each child's education during 1858, as £1 18s. 9d.

To arrive at an approximate average of the total receipts of each Denominational Teacher during the year, we have,—

Total vote for 1858	£20,000
Deduct Board expenses	600
						<u>£19,400</u>
Deduct 10 $\frac{1}{2}$ cent. for Books	£1,940
Balance 31st December, 1858	1,200
						<u>3,140</u>
						16,260
Add receipts from Parents	11,210
						<u>£27,470</u>

which make the total average receipt of each master £130.

The maximum salary given by the Board during 1858, was £140, and the minimum salary was for a primary school £50, and for an infant school £40.

PARTICULARS OF SCHOOL BUILDINGS.

From a Statistical Return forwarded to the Government by the Board on the 22nd July, and printed by order of the Council on the 13th August, 1858, the following information is collected relative to the tenure and state of Denominational School Buildings:—

DENOMINATION OF SCHOOL	TENURE OF BUILDING.					Good repair.	Bad repair.	Having Out-buildings.	Not having Out-buildings.	Having Residence.	Not having Residence.
	Freehold.	Built on Government Grant.	Rented at Local Expense.	On sufferance.	Held in Church.						
Church of England— Diocese of Sydney.....	41	8	7	2	..	38	20	52	15	39	26
Church of England— Diocese of Newcastle ..	22	5	2	24	7	22	7	24	5
Presbyterian	10	2	2	1	..	12	4	10	6	8	7
Wesleyan	8	7	1	7	1	3	4
Roman Catholic.....	43	7	11	..	4	58	4	60	7	54	15
TOTAL.....	124	22	22	3	4	139	36	151	36	128	57

The

The buildings here referred to as freehold are in most instances the property of the communities in which the schools are situated. Those built on Government grants of land have been erected by local contributions, and are held by Trustees, of whom the head of the Denomination to which the school may belong is one. The expense of erecting and repairing School Buildings rests upon the projectors of the schools, with such slight assistance as the Board are able to extend out of the proportion of the Church and School Estates revenue annually placed at their disposal.

The amount of the revenue received by the Board for the year 1858 was £913 15s. 3d.

The proportion of children attending Denominational Schools, who are certified as unable to pay any fee, is about one in every fifteen.

The following may be taken as an approximate statement of the attainments of the children attending the schools :—

The number of children	learning to read is about	7	in every	15
„	„	reading with ease	$6\frac{1}{2}$	„ 15
„	„	writing with ease	8	„ 15
„	„	1st rules of arithmetic	$5\frac{1}{2}$	„ 15
„	„	compound arithmetic . .	3	„ 15
Tolerably advanced in	{	grammar	$5\frac{1}{2}$	„ 15
		geography	6	„ 15
		history	$3\frac{1}{2}$	„ 15

INSPECTION.

The Board cannot close this Report without referring to the urgent necessity which exists of making some provision for the efficient inspection of the schools under their charge.

The importance of this object would have led the Board to have provided means for its accomplishment, out of the slightly increased funds placed at their disposal for the year 1858, had not this increase been voted so late in the Session that it had been, to a certain extent, anticipated towards assisting in the establishment of new schools.

Should the Board, however, continue their operations, they intend making a specific application to the Government for assistance towards establishing a proper system of school inspection.

The Board append a report of the schools which have been visited by the Inspector of Church of England Schools, since the reports of inspections which were appended to the Report of the Board for the year 1857.

C. E. ROBINSON, Secretary,
11 October, 1859.

GEO. ALLEN, Chairman.

THE DIOCESAN INSPECTOR to THE CHAIRMAN OF THE DENOMINATIONAL SCHOOL BOARD.

17 November, 1858.

SIR,

I am directed by the Lord Bishop of Sydney to lay before the Chairman of the Denominational School a Third Report of Schools inspected by me in the Diocese of Sydney, to 30th October, 1858.

I have, &c.,

TO THE HONORABLE
 THE CHAIRMAN OF THE
 DENOMINATIONAL SCHOOL BOARD.

W. J. CUTHBERT.

Wollongong

TO THE HONORABLE THE CHAIRMAN OF THE DENOMINATIONAL SCHOOL BOARD.

Sydney, New South Wales,
16 June, 1859.

SIR,

I have the honor to lay before you a detailed Report of the Schools examined by the Diocesan Inspector of Schools for the Diocese of Sydney, for the six months ending 31st March, 1859.

The number of schools inspected has been fourteen, of which two are held in rooms forming part of the Teacher's residence, and one in a stable or out-house.

Nearly all the schools visited were unprovided with the necessary out-offices, frequently but one, and at most two, are provided for the use of the Master's family, and the boys and girls; as a consequence, the majority of these places presented a filthy appearance; the one marked exception to this rule was in the case of those attached to the new school at Marsfield.

The schoolrooms were generally in a tolerable state of repair, but with the exception of (St. James') Sydney, Camden, Marsfield, and Enfield, were quite destitute of appropriate furniture and apparatus; most of that which is at present in use being antiquated, unsuitable, and in need of repair.

With regard to the conditions of the schools, I have much pleasure in reporting favourably of St. James', Camden, Narellan, Campbelltown, and Pennant Hills; and also, that in the schools at Cobbidee, Marsfield, Appin, and Ashfield, the work of instruction is being carried on with some degree of success; while at Menangle, Enfield, (St. John's) Parramatta, and Liverpool, the schools were found to be in a disorderly and inefficient condition. At Picton the school was closed in consequence of the severe illness of the Master, Mr. Webb.

From an examination of the Schedule given below, it will be found (omitting the school at Picton) that out of the thirteen schools inspected by me the religious instruction was fair in nine; in six (6) the children read fluently and intelligently; in eight (8) the copy-books were clean and carefully written; in eleven (11) spelling and dictation were fair; in three (3) the arithmetic was well known, properly taught, and the children worked the examples given with accuracy and dispatch; two (2) schools exhibited a fair knowledge of English grammar, and four (4) of geography; in five the discipline was satisfactory; and in three the class of girls for plain needlework was conducted with considerable success.

The contents of the following Schedule are abstracted from the detailed reports, and shew at once the state of each school with regard to the principal subjects of instruction expected to be taught by the Master:—

NAME OF THE SCHOOL.	Religious Instruction.	Reading.	Writing.	Spelling and Dictation.	Arithmetic and Tables.	English Grammar.	Geography.	Discipline.
Liverpool	F	F	G	F	M	B	..	B
Campbelltown	F	M	G	F	M	M	F	M

1859.

Legislative Assembly.
NEW SOUTH WALES.

NATIONAL EDUCATION BOARD.

(OFFER TO RESTORE MR PLUNKETT TO A SEAT AT.)

Ordered by the Legislative Assembly to be Printed, 1 December, 1859.

THE COLONIAL SECRETARY to J. H. PLUNKETT, ESQ.

*Colonial Secretary's Office,
 Sydney, 16 November, 1859.*

DEAR SIR,

The present Government desire, at the first convenient opportunity, to convey their sense of your universally acknowledged zeal and important services in the cause of education, by restoring you to a seat at the National Board.

If you can accept this offer, which I now have much pleasure in making, you will gratify not only my colleagues and myself, and I am sure the public generally, but you will be enabled materially to advance those interests which have been so long and so peculiarly your care. I shall be obliged by an answer at your earliest convenience.

I am, &c.,

J. H. PLUNKETT, ESQ., M.P.

W. FORSTER.

J. H. PLUNKETT, ESQ., to THE COLONIAL SECRETARY.

22 November, 1859,

Macquarie-street North.

DEAR SIR,

In acknowledging your letter of the 16th instant, offering to restore me to a seat at the Board of National Education (though I regard it merely as an indication of your desire to do an act of justice), I beg to thank you for the handsome and flattering terms in which that offer is conveyed.

I have delayed thus long in giving my reply, in order the more fully to consider certain difficulties that presented themselves to my mind against the acceptance of that offer, and to overcome them if possible. I regret to say, however, that notwithstanding my wish to join the National Board again, I do not feel that I can do so with consistency or with satisfaction to myself under present circumstances.

It is unnecessary to allude to those difficulties, more particularly as they are beyond the control of your Government, and I am unwilling to intrude them on your attention on that account.

I am, &c.,

J. H. PLUNKETT.

THE HONORABLE

W. FORSTER, ESQ.,

Colonial Secretary.

J. H. PLUNKETT, ESQ., to THE COLONIAL SECRETARY.

23 November, 1859,

169, Macquarie-street North.

MY DEAR SIR,

In connection with your letter of the 16th inst., and mine in reply, on the subject of my restoration to the National Board of Education, I beg leave again to assure you that it is with very great regret I felt myself compelled to decline the offer made. However, as I do not, on that account, take the less interest in the cause of education generally, and in the proper working of the National Board more particularly, I may be permitted to supplement my former letter by reminding you that as the Roman Catholics have been for a long time, and are now, unrepresented by any member of their own body at the National Board, this circumstance is naturally calculated to create distrust.

I am aware that one gentleman (who is a Roman Catholic) was offered a seat at the Board by the late Government, and that it was declined by him solely (as I believe) on account of the mode adopted to remove me, and being doubtful as to the position in which I stood with respect to the Board; and I have heard that others entertained the same feelings, as well as delicacy, in regard to myself personally.

Now as you have, by the offer made to me in the letter alluded to, placed me in a situation to clear away all difficulties that such considerations might interpose to prevent anyone from joining the National Board (though I have always maintained, and still maintain, that my removal was illegal and invalid), I am ready, and do hereby resign any right or supposed right I may have to a seat at the National Board, either as its Chairman or otherwise, and place the same in your hands to use as you think proper.

I trust you will find no difficulty in appointing some Catholics in every way qualified, and also desirous, and possessing the confidence of their co-religionists as well as the public, to discharge the duties of the Board in conjunction with my late able and much respected colleagues who at present constitute it. It is my earnest wish that such a step should be taken to preserve the equilibrium in its original integrity, and thus strengthen the Board; and any assistance or influence I can give or exert in such a direction shall be cheerfully given.

I remain, &c.,

J. H. PLUNKETT.

THE HONORABLE

W. FORSTER, ESQ.

THE COLONIAL SECRETARY to J. H. PLUNKETT, ESQ.

Colonial Secretary's Office,

Sydney, 25 November, 1859.

DEAR SIR,

I really very much regret, and I think the public generally will regret, your determination, as conveyed in your letters of the 22nd and 23rd instant, to decline my offer of a seat at the National Board of Education. But the grounds you assign of difficulties beyond the control of the present Government preclude my pressing the matter further. I am, however, happy to feel assured that I may still reckon on your sympathy and assistance in the cause of education, and I gladly accept your suggestion that the circumstances under which the offer in question has been made and declined have been such as will probably now remove whatever obstacles may have hitherto stood in the way of obtaining the services of other Roman Catholic gentlemen at the National Board.

I am, &c.,

J. H. PLUNKETT, ESQ.

W. FORSTER.

1859.

Legislative Assembly.

NEW SOUTH WALES.

BOARDS OF EDUCATION.

(RETURN OF THE PROPERTIES NOW HELD BY.)

Ordered by the Legislative Assembly to be Printed, 29 November, 1859.

RETURN to an Order made by the Honorable the Legislative Assembly of New South Wales, dated 29 September, 1859, That There be laid upon the Table of this House,—

“ A tabulated nominal Return of the properties now held by
“ the National and Denominational Boards of Education,
“ respectively, that is to say—the quantity of land in each
“ locality, and whether granted by Government or private
“ person; the nature of the buildings erected thereon, whether
“ Schools or Teachers’ Residences, or both; if any other improve-
“ ments, the total cost of such erections and improvements in
“ each spot; distinguishing in each case the amount contributed
“ from the Public Funds from that raised by private subscrip-
“ tions; and further shewing, in the case of private subscriptions,
“ whether such contributions were made in cash or in what
“ other equivalent; the amount pledged for School Buildings
“ yet unpaid; and the entire estimated amount of the properties
“ at the present time vested in the Board of National Education
“ or vested in Trustees or otherwise, on account of Denomina-
“ tional Education.”

(Mr. Nott.)

SCHEDULE.

NO.	PAGE.
1. Secretary to the National School Board to the Under Secretary, forwarding Return of National School Properties. 11 November, 1859	2
2. Secretary to the Denominational School Board to the Colonial Secretary, stating that no Property is held by that Board. 14 November, 1859	6

BOARDS OF EDUCATION.

No. 1.

W. C. WILLS, Esq., to THE PRINCIPAL UNDER SECRETARY.

National Education Office,

Sydney, 11 November, 1859.

SIR,

I have the honor, by direction of the Board of National Education, and in accordance with the request contained in your letter of the 30th September last, to furnish herewith,—

“ A tabulated nominal Return of the properties now held by the National Board
 “ of Education, shewing the quantity of land in each locality, and whether
 “ granted by Government, or private person; the nature of the buildings
 “ erected thereon, whether Schools or Teachers’ Residences, or both; if any
 “ other improvements, the total cost of such erections and improvements in
 “ each spot, distinguishing in each case the amount contributed from the
 “ Public Funds from that raised by private subscriptions, whether such contri-
 “ butions were made in cash, or in what other equivalent; the amount pledged
 “ for School Buildings yet unpaid; and the entire estimated amount of the
 “ properties at the present time vested in the said Board.”

I have, &c.,

W. C. WILLS,
 Secretary.

W. ELYARD, Esq.,

Under Secretary,

Colonial Secretary’s Office.

TABULATED

TABULATED Nominal Return of the Properties now held by the Board of National Education, shewing the Quantity of Land in each locality, and whether granted by Government or private persons; the nature of the buildings erected thereon, whether Schools or Teachers' Residences, or both; if any other improvements, the total cost of such erections and improvements in each spot, distinguishing in each case the amount contributed from the public funds from that raised by private subscription, whether such contributions were made in cash, or in what equivalent; the amount pledged for School buildings yet unpaid; and the entire estimated amount of the properties at the present time vested in the said Board.

With the exceptions specified the following general rule of the Board has been observed in respect to payments for National School Premises, viz.—One-third of the whole contract price must be paid from local contributions before the Board are to be called upon for assistance from the public funds.

(a) The cost of this school has been wholly defrayed from the public funds, being regarded as a Model School.
 (c) An iron structure, then in possession of the Board, was given in this case at a time when the cost of building was exorbitant. The depreciation in the value of the property has arisen from the ravages of the white ant in the woodwork.
 (d) The original schoolhouse having been destroyed by a bush fire, an iron schoolroom was given by the Board, without exacting, for the second time, the usual quota of the cost from the people.
 (e) The cost of this school has been wholly defrayed from the public funds, being regarded as a Model School.

(b) Valuable land.
 (f) Land and premises a private gift

NATIONAL AND DENOMINATIONAL EDUCATION.

No. 1.

DENOMINATIONAL SCHOOL BOARD to THE COLONIAL SECRETARY.

Denominational School Board Office,

Sydney, 18 November, 1859.

SIR,

We have the honor, as members of the Denominational School Board in New South Wales, to address you in reference to the schools under our charge.

The very limited amount hitherto voted annually by the Parliament for the support of Denominational Schools has placed it quite out of the power of the Board to give that encouragement to the numerous supporters of denominational education which the Board feel that they are entitled to expect. The numerous and urgent applications for larger grants of money, both in aid of the establishment of new schools and also for the provision of salaries to teachers of schools already in existence, which have been from time to time received from all denominations, and recommended by the Board to the favorable consideration of the Government, will, we trust, be sufficiently indicative of the importance which the Board attach to this subject. Among many other applications of a similar nature the Board would here especially refer to their communication of the 11th of May, 1857, a copy of which I herewith enclose, in which an application is made for the sum of £35,000 for Denominational School purposes for the year 1858, and would observe that the arguments therein advanced in favor of this measure are materially strengthened by the increasing demands made upon the Board for assistance in the formation of additional schools.

The Board would, in addition to the foregoing remarks, refer to the subject of school inspection. The experience of each succeeding year confirms the Board in the belief that it is impossible for the schools under their charge to thrive unless some provision be made for their efficient periodical inspection; and it is mainly with the view of at once establishing a system by which this object can be carried out that we again submit an application to the Government for a sum of money, to be placed upon the Estimates for the year 1860, more adequate to the increasing requirements of Denominational Schools.

We have, &c.,

GEORGE ALLEN,

Chairman.

JOHN DUNSMURE.

PETER FAUCETT.

ALEXR. GORDON.

THE HONORABLE

THE COLONIAL SECRETARY.

[Enclosure in No. 1.]

*Denominational School Board Office,
Sydney, 11 May, 1857.*

Sir,

I am directed by the Denominational School Board to acknowledge the receipt of your letter, dated 14th April, requesting the Board to send in their proposed estimate of expenditure for Denominational Schools for the year 1858.

In considering this estimate the Board have had before them communications from the Lord Bishop of Sydney, His Grace Archbishop Polding, the Lord Bishop of Newcastle, and the Rev. S. Rabone, of the Wesleyan body, applying for the sums considered by them to be necessary for carrying on the schools already established, or which ought to be established, in connection with the Church of England, the Roman Catholic Church, and the Wesleyans respectively.

The Board feel, upon a review of its proceedings for several years past, that the funds hitherto placed at its disposal have been totally inadequate for the service to be provided for. The numerous complaints which have been made as to the inefficiency of the schools under the Board, and the inadequacy of the stipends granted to the teachers generally; and the pressing applications made by the heads of the respective religious bodies

bodies for extended means in aid of their schools, convince the Board that a larger amount than that hitherto granted for Denominational School purposes is urgently called for.

I have therefore the honor, by direction of the Board, to request that a sum of not less than £35,000 (thirty-five thousand pounds) may be placed upon the Estimates for Denominational Schools for the year 1858, to be appropriated rateably among the denominations at present receiving support under the Board, according to the population as fixed by the last Census.

In agreeing to apply for this amount, many very material changes are contemplated in the present mode of carrying on the schools in connection with the Board. The stipends of the masters should be raised, in order that persons of higher qualifications than those hitherto obtained may be induced to accept the office. School apparatus and books of a higher class than those hitherto supplied to the schools should be provided.

Measures should be taken to have the schoolmasters trained in a model school before appointment. Provision should also be made for the employment of pupil teachers. Funds should be contributed towards repairing school-houses now erected, and for erecting new school-houses, on condition that one-half of the amount required should be raised by private subscription; such aid to be given under regulations to be fixed by the Board. A system of school inspection should also be established.

The foregoing are among the most important points to which the attention of the Board has been directed in applying for this sum, points which, however necessary for the well-being of Denominational Schools, the Board feels itself quite unable to attempt to carry out under the disadvantage consequent upon the inadequacy of the funds hitherto at its disposal.

I have, &c.,

C. E. ROBINSON,
Secretary.

The Honorable
The Colonial Secretary.

No. 2.

UNDER SECRETARY to DENOMINATIONAL SCHOOL BOARD.

*Colonial Secretary's Office,
Sydney, 26 November, 1859.*

GENTLEMEN,

In acknowledging the receipt of your letter of the 18th instant, requesting that an additional sum of money may be placed on the Estimates for 1860 for Denominational School purposes, I am directed by the Colonial Secretary to inform you that the Government do not propose any increase, for the next year, on the vote for 1859.

I have, &c.,

THE DENOMINATIONAL SCHOOL BOARD.

W. ELYARD.

No. 3.

SECRETARY TO THE NATIONAL SCHOOL BOARD to THE UNDER SECRETARY.

*National Education Office,
Sydney, 13 December, 1859*

SIR,

I have the honor, by direction of the Board of National Education, to acquaint you that at their meeting, holden yesterday, the attention of the Board having been drawn to the circumstance that in the Estimates laid before Parliament during the past week no increase beyond the twenty thousand pounds voted for the purposes of National Education £20,000. for the year 1859 is proposed for the year 1860, they have deemed it expedient to place on record a resolution expressive of their opinion thereon.

At the same time I do myself the honor, by direction of the Board, to forward to 12 Dec., 1859. you, for the purpose of being laid before the Government, a copy of the resolution.

I have, &c.,

W. ELYARD, ESQ.,
UNDER SECRETARY.

W. C. WILLS,
Secretary.

[Enclosure

[Enclosure in No. 3.]

*EXTRACT from the Minutes of the Board of National Education, dated
12 December, 1859.*

Resolved,—

“That this Board desires again to place on record its opinion, that £20,000 is an insufficient sum to meet those demands on its attention which are urgent and imperative, and that without the increase which their repeated applications to the Government have represented as necessary, numerous districts of the Colony in which schools under the Board are on the point of being established will continue wholly unprovided with the means of education. In expectation of increased resources, the Board has for some time past entertained provisionally, in excess of its actual means, applications which have been kept in suspense to await the vote for the year 1860. As to many of these, it will be difficult, if not impossible, to say which are most urgent; and it will be the weekly duty of the Board, if their means be not enlarged, to decide between conflicting claimants, where all are equal, because alike unquestionable; and of which none could be expected to admit the justice of refusal. The Board would be very indisposed to undertake so invidious and thankless an office, on personal grounds; and when it is further considered that their labor is thus rendered inefficacious in the same proportion as it is rendered disagreeable, they feel that their retention of office must speedily become a matter for serious consideration, if the means of continued usefulness be withheld from them.”

True extract.—W. C. WILLS,
Secretary.

No. 4.

UNDER SECRETARY to THE SECRETARY TO THE NATIONAL SCHOOL BOARD.

*Colonial Secretary's Office,
Sydney, 24 December, 1859.*

SIR,

I am directed to acknowledge the receipt of your letter of the 13th instant, forwarding the copy of a resolution passed by the Board of National Education, on the 12th instant, to the effect that, in their opinion, £20,000 is an insufficient sum to meet the demands on its attention; and that without the increase, for which applications have been made to the Government, numerous districts of the Colony, in which schools are on the point of being established, will be without the means of education.

2. In reply, I am desired to state, that any further appropriation of the public money, for the purpose in question, must be made through the Supplementary Estimate; but that the Government will consider the propriety of placing on such Estimate a sum to meet the wishes of the Board.

THE SECRETARY TO THE
NATIONAL SCHOOL BOARD.

I have, &c.,
W. ELYARD.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

NATIONAL AND DENOMINATIONAL EDUCATION.
(FUNDS FOR.)

Ordered by the Legislative Assembly to be Printed, 18 April, 1860.

W. DENISON,
Governor General.

Message No. 31.

In accordance with the request contained in the Address from the Legislative Assembly, dated 10th April, 1860, the Governor General has directed that an additional sum of £5,000, in aid of National Education, and £5,000 in aid of Denominational Education, be placed on the Supplementary Estimate for 1860.

Government House,

1859.

Legislative Assembly.

NEW SOUTH WALES.

APPOINTMENT AND REMOVAL OF TEACHERS.

(PETITION CONCERNING THE.)

Ordered by the Legislative Assembly to be Printed, 21 September, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Teachers,—

HUMBLY SHEWETH:—

That your Petitioners believe that the efficiency and respectability of their profession are seriously impaired by the common practice of delegating the appointment and dismissal of Teachers to the Local Boards; and your Petitioners therefore think that, in the event of any changes being made in the existing educational arrangements of the Colony, Teachers should be appointed by the Central Board only, and hold office during good behaviour.

That your Petitioners entertain the opinion that the giving of instruction in dogmatic theology is no part of the duty of a Schoolmaster; and your Petitioners, therefore, consider that no Teacher ought to be compelled to instruct his pupils in matters of doctrine.

That the business of school-keeping requires a special training, before the duties can be adequately performed, and no person not practically acquainted with these duties is competent to judge of the efficiency of a Schoolmaster. Your Petitioners, therefore, are of opinion that no person should be appointed to the office of Inspector of Schools who has not acquired the necessary qualifications by actual experience in a Primary or Normal School.

Your Petitioners, therefore, respectfully request that you will be pleased to give the subject such consideration as may seem best to the wisdom of your Honorable House.

And your Petitioners, as in duty bound, will ever pray, &c.

[*Here follow 57 signatures.*]

Sydney: Thomas Richards, Government Printer.—1859.

CATECHISTS TO NATIONAL SCHOOLS.

(DOCUMENTS RESPECTING.)

Ordered by the Legislative Assembly to be Printed, 3 April, 1860.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 16 February, 1860, praying that His Excellency the Governor General would be pleased to cause to be laid upon the Table of this House,—

“ A Copy of all Correspondence of the Board of National Education relative to the appointment of Catechists to the National Schools, with a Return shewing the amount of remuneration paid to them, with the dates of payment, the nature of the duties to be performed, the number of schools to be visited, and the number actually visited; together with any Report of the Chief Inspector of National Schools, referring to the mode in which any of the Catechists discharged their duties, and any Minutes of the National Board relative to the discontinuance by any of them to discharge his duties of Catechist.”

(*Mr. Windeyer.*)

SCHEDULE.

NO.	PAGE.
1. Secretary to the Board of National Education to the Under Secretary, furnishing copies of Correspondence, &c., relating to Catechists of the National Schools. 8 March, 1860.. ..	2

CATECHISTS TO NATIONAL SCHOOLS.

SECRETARY TO THE BOARD OF NATIONAL EDUCATION to THE UNDER SECRETARY.

*National Education Office,
Sydney, 8 March, 1860.*

SIR,

I have the honor, by direction of the Board of National Education, and in accordance with the request contained in your letter, dated 18th February last, to forward to you the following information called for by the Legislative Assembly, viz. :—

A copy of all correspondence of the Board of National Education, relative to the appointment of Catechists to the National Schools, with a Return shewing the amount of remuneration paid to them, with the dates of payment; the nature of the duties to be performed, the number of schools to be visited, and the number actually visited; together with any Report of the Chief Inspector of National Schools referring to the mode in which any of the Catechists discharged their duties; and any Minutes of the National Board relative to the discontinuance by any of them to discharge his duties of Catechist.

I have, &c.,
W. C. WILLS,
Secretary.

[Enclosure 1.]

SYNOPSIS of Returns relative to the appointment and discontinuance of Catechists by the Board of National Education.

Copies of all correspondence relative to the appointment of Catechists. See Enclosures 2 to 19, inclusive.

Amount of remuneration, with dates of payment. Presbyterian Catechist, at the rate of £100 per annum; Roman Catholic ditto, £150 ditto; monthly payments; amount paid, £637 12s. 11d.

Nature of duties to be performed. See correspondence.

No. of schools to be visited. All in the Hunter River District.

No. actually visited. Thirty.

Report of Chief Inspector. Nil.

Minutes as to the discontinuance of any Catechist. See Enclosures 20 and 21.

[Enclosure 2.]

*West Maitland,
13 September, 1852.*

Sir,

As there are several schools in this district under the patronage and control of the National School Board, of which you are Chairman, I beg leave to address you on a subject intimately connected with their stability and success.

You must be aware that, owing to the great extent of country over which these schools are scattered, it would be impossible for me to impart religious instruction to the Catholic children attending them, and that consequently some arrangement which will provide for the doctrinal teaching of their little ones is rendered indispensable.

I respectfully propose a plan which, without interfering with the regulations of the Board, will carry out my views, and relieve my mind from deep anxiety.

Let the Board appoint a Catholic gentleman (who shall be found duly qualified for the office) religious instructor to all the National Schools within this portion of the Colony, whose duty it shall be to visit periodically such schools, and to instruct the Catholic children attending them in the principles and doctrines of their religion. This gentleman should be placed under the immediate direction of the Catholic clergyman possessing local authority within such circuit, and be bound to send him regular returns of all his journeys, with their respective dates; this local supervision would not only secure a more faithful performance of duty on the part of the religious instructor, but it would also materially strengthen his influence over the Catholic parents and children.

Should

CATECHISTS TO NATIONAL SCHOOLS.

Should these suggestions meet with your approval and that of the other gentlemen forming the Board, and lead to the adoption of a system which will guide the minds of my young flock along the path to knowledge by the light reflected from divine revelation, I shall indeed feel much gratified.

The Hon. Attorney General,
Chairman, National School Board.

I have, &c.,
J. T. LYNCH,
Dean.

[Enclosure 3.]

National Education Office,
Sydney, 4 October, 1852.

Sir,

I have the honor, by direction of the Board of National Education, to acknowledge the receipt of your letter of the 13th ultimo, with respect to the doctrinal teaching in the schools under the superintendence of the Board.

2. In reply, I am desired by the Board to thank you for your suggestions, and to acquaint you that the subject is under the consideration of the Board, with a view to embodying a rule hereon in their revised regulations about to be republished.

The Rev. Dean Lynch,
West Maitland.

I have, &c.,
W. C. WILLS,
Secretary.

[Enclosure 4.]

National Education Office,
Sydney, 15 October, 1852.

Sir,

With reference to your letter of the 13th ultimo, addressed to the Chairman of the Board of National Education, on the subject of catechetical instruction to the Roman Catholic children of the National Schools in the Hunter River District, I now do myself the honor to subjoin a list of places in that district where schools are established under the Board's superintendence.

2. At the same time, I am instructed by the Board to request you will be good enough to inform them if there be any person in your neighborhood whom you could recommend to be intrusted with this important duty, and what amount of remuneration should be devoted thereto.

The Rev. J. T. Lynch, Dean,
West Maitland.

I have, &c.,
W. C. WILLS,
Secretary.

[Enclosure 5.]

West Maitland,
3 November, 1852.

Sir,

In reply to your letter of the 15th ultimo, on the subject of catechetical instruction to the Roman Catholic children attending the National Schools in the Hunter River District, I beg leave to express my acknowledgments for the prompt and favorable consideration given by the Board to my recommendation.

You will have the kindness to inform the Board, that there is a young gentleman (at present absent from Maitland) with whose qualifications and conduct I am pleased, and whom I can safely approve of as religious instructor to the Roman Catholic children of this district. I have written to him; and it was the daily expectation of receiving his reply that delayed thus long my answer to your inquiries.

As the religious instructor would have to devote his whole attention to the duties of his office, and at the same time maintain a respectable position in society, I venture to suggest to the Board that his salary ought to be £150 per annum.

W. C. Wills, Esq.,
Secretary, &c.

I have, &c.,
J. T. LYNCH,
Dean.

[Enclosure

[Enclosure 6.]

EXTRACT of the Minutes of the Proceedings of the Board of National Education, dated 22 November, 1852.

"The Secretary was instructed to inquire of the Rev. R. Blain, on the part of the "Presbyterians in the Hunter River District, if he could recommend any person who could "be intrusted with the duty of catechetical instructor to the children attendant upon the "National Schools, and what amount of remuneration he considered should be given for such "a duty."

[Enclosure 7.]

*National Education Office,
Sydney, 26 November, 1852.*

Sir,

I have the honor, by direction of the Board of National Education, to communicate with you on the following subject.

For the more effectual doctrinal teaching of the children attending the National Schools, the Board propose to appropriate a sum of money for the purpose of enabling the clergy of the various denominations, possessing local authority within certain districts, to employ catechetical instructors, who shall be under the direction and control of the said clergy.

If any clergyman should prefer undertaking the religious instruction of the children personally, such sum of money will still be available for the duty.

2. The Board regard the refusal of the clergy of some denominations to co-operate with the Government, in carrying into effect the system of National Education, in a most serious light; and since every facility has been afforded and every invitation given for the clergy of all denominations to impart doctrinal knowledge to the children of their respective flocks attending their schools, and since these facilities and invitations have been unheeded and studiously avoided, the Board deem it expedient that they should endeavor to remedy the defect by some such agency as proposed above.

3. The Board feel this to be a subject of the highest importance, and one requiring much careful thought and consideration.

4. It will be necessary to offer inducements, for effectually carrying into effect this proposition, proportionately to all denominations of Christians, and as the representative of the Presbyterians in the Hunter River District, I am desired by the Board to request you will do them the favor of affording your opinion on the matter, and further to state if there be any person in your neighborhood whom you could recommend to be intrusted with this important duty, and what amount of remuneration you consider should be devoted thereto.

5. I may mention there are about twenty schools at present established in the district, Merriwa being the most remote.

I have, &c.

W. C. WILLS,
Secretary.

The Rev. R. Blain,
Hinton.

[Enclosure 8.]

Hinton, 7 December, 1852.

Sir,

I have to acknowledge the receipt of yours of the 26th ultimo, and in reply to do myself the honor to state that I have thought much on the important subject of that document, and that I fear the clergymen who now stand aloof from the school will still look with prejudice upon any scheme of instruction, whether secular, religious, or mixed, which does not emanate from themselves; and that the *heads* of some churches having already taken up a certain position in respect to the National Schools, it is very unlikely that they will recede from that position *suddenly*, or allow the other clergy of their respective denominations to assume a more friendly relation towards them than they do themselves.

If a clergyman is sufficiently near to discharge the proposed duty, and he does not *now* do it, I do not think that any pittance the Board could offer would induce him to change his conduct.

I believe the *local patrons* of the schools would hail the proposal you make with delight, as it would blot out the common reproach of religious indifference with which the system is branded, and enable them to retort upon the opposers, that in reality the members of the National Board do more for religious teaching of the children than the clergy themselves. This would be a great point gained; and besides, many of the local patrons sympathise deeply in the want so much lamented over by the Board, and a small reward of merit and industry might assist such in procuring some advanced Sabbath school teacher, or perhaps some pious aged neighbor, to attend to the doctrinal teaching—more than say *one pound* a quarter, merely to enable the instructor to appear more decent, I think would not be expected. In choosing a doctrinal teacher, the fact of he, or she, having taught in a Sabbath school under the inspection of the neighboring clergyman might be a strong recommendation

mentation, and a certificate of qualification from such clergyman should have due weight, but not sufficient (if the clergyman were opposed to the schools) to veto the choice of the local patrons; thus an invitation would still be held out to the clergyman to take his place, but at the same time he might clearly see that if he did not, *his work* would be done without him.

The Board would receive many useful hints from the perusal of certain brief statements inserted in the report of the Irish National Schools for, I think, 1848, by clergymen of different persuasions, shewing how they are enabled to avail themselves of the National Schools in teaching religion; and amongst those I beg leave to direct attention to that of the Rev. Daniel Bagot, of Newry, in which he affirms that the most efficient Scripture school in his extensive cure is the Newry National School. His plan is to train in his own Scripture class a few of the senior pupils attending the National School; to arrange it so with the teacher that those thus taught by himself should read the Scripture and catechism with the children of his cure attending the National School. I took the hint from Mr. Bagot's statement, and I am applying it with considerable success and entire satisfaction to the parents, at Clarence Town, and intend carrying it out if possible, in other schools at a distance from my residence. Mr. Bagot is so well known and so much respected in the Church of England, that it might be well to publish his testimony in favor of the National System far and wide.*

I would suggest that though the teacher of a National School is not expected to teach the catechism, yet the pupils, when receiving such instruction from another, should be under the control and correction of the regular master, which would insure respect and attention for one less accustomed to rule.

Perhaps something might be done by causing the master to register the progress in the catechism at the end of each month according to the report of doctrinal teacher; † this would insure a steady progress and *ultimate success*; and let it be known to the local patrons that it is expected every child who can read will *soon* be able to repeat the devotional manual of its church.

I beg leave to recommend to the most serious consideration of the Board the propriety of opening and closing the school with the Lord's Prayer.

W. C. Wills, Esq.,
Secretary, &c.

I have, &c.,
ROBERT BLAIN.

[Enclosure 9.]

EXTRACT of the Minutes of the Proceedings of the Board of National Education, dated 5 January, 1853.

"The Board resolved to set apart the following sums for the catechetical instruction of the children attendant upon the National Schools in the Hunter River District, such sums to be apportioned as follows:—Not exceeding at the rate of £100 per annum for the Presbyterians and Wesleyans; not exceeding at the rate of £150 per annum for the Roman Catholics; and not exceeding at the rate of £200 per annum for the children of the Church of England. The secretary was instructed to write to the Rev. Mr. Blain, to request him to nominate some competent person or persons qualified to undertake the catechetical instruction of the Presbyterian and Wesleyan children, and to the Rev. Dean Lynch on the part of the Roman Catholics, and at the same time Sir Charles Nicholson undertook to address a clergyman of the Church of England with a view to the catechetical instruction of the children of that denomination."

[Enclosure 10.]

*National Education Office,
Sydney, 11 January, 1853.*

Sir,

I have the honor, by direction of the Board of National Education, to acquaint you that, with reference to the correspondence which has taken place on the subject of catechetical instruction for the children attending the National Schools in the Hunter River District, they have determined to place at your disposal a sum of money not exceeding one hundred pounds sterling, for the special doctrinal teaching of the Presbyterians and Wesleyans in your district. £100 for the year 1853.

2. I am therefore to request you will be good enough to nominate some person or persons whom you can confidently recommend for this important duty, in order that the intentions of the Board may be carried into effect without delay.

3. I am further to state that the Board will be glad to receive any suggestions which you may consider calculated to further the end for which the Board has in view, and which would assist the Catechists in prosecuting their labors.

The Rev. R. Blain,
Hinton.

I have, &c.,
W. C. WILLS,
Secretary.

[Enclosure

* The Report of the Irish National Schools alluded to was given to me by Dr. M'Kean.

† Or let a printed form be filled up monthly and left with a local patron, shewing the progress.

[Enclosure 11.]

National Education Office,
Sydney, 11 January, 1853.

Sir,

With reference to the correspondence which has taken place on the subject of catechetical instructor for the children attendant upon the National Schools in the Hunter River District, I now do myself the honor, by direction of the Board of National Education, to acquaint you that they have determined to place at your disposal a sum of money not exceeding one hundred and fifty pounds for the special doctrinal teaching of the Roman Catholic children in your district, for the year 1853.

2. I am therefore to request you will be pleased to nominate some person or persons whom you can confidently recommend for this important duty, in order that the intentions of the Board may be carried into effect without delay.

3. I am further desired to state that the Board will be happy to receive any suggestions which you may deem proper to afford, and which you may consider calculated to to further the end which the Board has in view, or which would assist the Catechists in prosecuting their labors.

The Rev. Dean Lynch,
West Maitland.I have, &c.,

Secretary.

[Enclosure 12.]

West Maitland,
22 January, 1853.

Sir,

In reply to your letter of the 12th instant, I beg leave to recommend Mr. Owen Charles Beardmore as a person well qualified for the office of religious instructor. He did not arrive from the Barwin River, where he lately resided, till to-day, and hence this tardy acknowledgment of your kind favor. He will be ready whenever the Board may ratify his appointment to commence his duties.

I shall place before the Board of National Education, within a fortnight from this date, a system which I conceive will enable the Catechist to carry out the great object in view.

W. C. Wills, Esq.,
Secretary, &c.I have, &c.,
J. T. LYNCH.

[Enclosure 13.]

West Maitland, 2 February, 1853.

Sir,

I beg leave to lay before the Board of National Education my views as to the system which the religious instructor should employ in the discharge of his duties.

After having paid a visit to each school, and ascertained the number of Roman Catholic children attending, he will furnish me with a list of the children, stating their respective ages and sexes. I can then form some idea as to the schools where his assistance is most required, and where, consequently, his visits must be more frequent; but I think that he cannot be expected to visit Port Macquarie oftener than twice a year, nor Merriwa and Murrurundi except quarterly. I recommend that a sum of money be set apart for the purpose of bestowing rewards on those children whom the Catechist may appoint as monitors in his absence, and whom I may find deserving of notice.

You will kindly favor the religious instructor with any information he may from time to time require, and I would suggest that the Board call for quarterly returns of the schools visited by him, with a hope that the Board may approve of my plan.

W. C. Wills, Esq.,
Secretary, &c.I am, &c.,
J. T. LYNCH.

[Enclosure 14.]

National Education Office,
Sydney, 11 February, 1853.

Sir,

I have the honor, by direction of the Board of National Education, to acknowledge the receipt of your letter of the 1st instant, with reference to your views for carrying into effect the catechetical instruction of the Roman Catholic children attendant upon the National Schools in the Hunter River District, and also your letter of the 22nd ultimo, recommending Mr. Owen Charles Beardmore for the office of religious instructor.

2. In reply, I am instructed to acquaint you that no arrangements have as yet been effected for the religious instruction at these schools of the children belonging to the Church of England, and as the Board are desirous that the various denominations of Christians should be participating equally in the advantages proposed, they feel, on this account, reluctant to make any appointment of a religious instructor for the present.

CATECHISTS TO NATIONAL SCHOOLS:

7

3. I am further instructed to acquaint you that Sir Charles Nicholson is absent on a visit to Melbourne, and that the Honorable the Chairman of the Board leaves Sydney immediately, on circuit, to Goulburn; but that the decision of the full Board shall be communicated to you, on this important subject, so soon as practicable:

The Rev. Dean Lynch,
West Maitland.

I have, &c.,
W. C. WILLS,
Secretary.

[Enclosure 15.]

West Maitland, 14 February, 1853.

Sir,

I have duly received your letter of the 11th instant.

The Board of National Education will allow me respectfully to remind them that, till yesterday, their instructions (as conveyed through you) tended to despatch. In your communication of the 11th ultimo you state that a certain sum was placed at my disposal for the doctrinal teaching of the Roman Catholic children in my district, and that the Board requested me to nominate some person whom I could confidently recommend for the important office of catechist, that their intentions might be carried into effect *without delay*.

I hastened Mr. Beardmore's departure from his former residence, and immediately upon his arrival in Maitland introduced him to the notice of the Board.

The Board will appreciate my views in making these remarks. Mr. Beardmore has now been three weeks awaiting his appointment, and I feel myself rather awkwardly situated.

W. C. Wills, Esq.,
Secretary to the National School Board.

I have, &c.,
J. T. LYNCH,
Dean.

[Enclosure 16.]

National Education Office,
Sydney, 4 March, 1853.

Sir,

I do myself the honor, by direction of the Board of National Education, to acknowledge the receipt of your communication of the 14th ultimo, submitting the awkward situation in which you are placed with respect to your nomination of Mr. Beardmore as catechetical instructor to the Roman Catholic children attendant upon the National Schools in the Hunter River District.

2. In reply, I now hasten to acquaint you, that after mature deliberation on the subject, the Board have determined to approve of your selection of Mr. Beardmore for such purpose, and to allow a salary for the service, at the rate of £150 per annum, such salary to take effect from the time you consider him entitled thereto.

3. The Board desire me further to state that they consider it expedient that Catechist should devote the whole of his time to duties of his office; that he should keep a journal, and record therein his daily proceedings and visits to the schools, and without acting immediately in the capacity of an inspector, to note the number of children present at the respective schools at the time of his visit, the appearance of the children, the order of the school, and any other remarks he may, in his discretion, deem necessary to make. This journal should be submitted to you, through whom only the necessary correspondence with the Board is to be conducted.

4. I have very hastily referred to the substance of the conversation of the Board on this important subject, my object now being to remove the ambiguity which my last letter created with respect to Mr. Beardmore's appointment; I shall, therefore, have the honor of writing you further hereon at some future time.

5. I enclose a few abstracts of salary—one of which, being filled in and certified by yourself, will insure payment on or about the first day of each month.

The Rev. Dean Lynch,
West Maitland.

I have, &c.,
W. C. WILLS,
Secretary.

[Enclosure 17.]

National Education Office,
Sydney, 4 March, 1853.

Sir,

I have the honor, by direction of the Board of National Education, to acknowledge the receipt of your letter of the 17th January last, stating your readiness to do your utmost personally, and also by the aid of such as you may be able to enlist in the service, to carry into effect the catechetical instruction of Presbyterian and Wesleyan children attendant upon the National Schools in the Hunter River District.

2. In reply, I now hasten to acquaint you, that after mature deliberation on the subject the Board have determined to accept your offer, as mentioned above, and to allow a salary for the service, at the rate of £100, such salary to take effect from the time you consider it proper that it should, under the circumstances of the correspondence which has taken place on the subject.

3. The Board desire me further to state that, as a general rule, the Catechist should devote the whole of his time to the duties of his office; that he should keep a journal, and record

£100.

record therein his daily proceedings and visits to the schools, and without acting immediately in the capacity of an inspector, to note the number of children present at the respective schools at the same time of his visit, the appearance of the children, the order of the school, and any other remark he may, in his discretion, deem expedient to make. This journal should be submitted to you, through whom alone the necessary correspondence with the Board is to be conducted.

The Rev. R. Blain,
Hinton.

I have, &c.,
W. C. WILLS,
Secretary.

[Enclosure 18.]

National Education Office,
Sydney, 6 September, 1853.

Sir,

We have the honor to lay before you a statement of our endeavors to carry into effect the system of National Education in the Colony, so far as relates to the special religious instruction of the children, and we beg to request that you will be pleased to submit the same for the consideration of His Excellency the Governor General and Executive Council.

2. Immediately after the appointment of the members of the Board of National Education, in January, 1848, by His Excellency the Governor General, the Board met and framed regulations for the establishment and maintenance of National Schools in the Colony. These regulations were published in the *Government Gazette* of date 10th May, 1848.

As it had been the declared opinion of the Legislature that the National System of Education for the Colony then about to be established should assimilate, as closely as possible, with that commonly known as Lord Stanley's System in Ireland, the regulations established by the Board in Sydney were nearly an exact transcript of those of the Commissioners of National Education in Ireland.

3. In section 2, chapter 2, of the regulations of the New South Wales Board, it is provided,—

“ That one day in each week, or part of a day (independently of Sunday), is
“ to be set apart for the religious instruction of the children, on which day such
“ pastors or other persons as are approved by the parents or guardians of the
“ children shall have access to them for that purpose, whether those pastors have
“ signed the original application or not.”

4. In adopting the above rule, the Commissioners anticipated that the general religious instruction afforded to the children under the National System of Education would be supplemented by special religious teaching on the part of the clergy and other persons approved of by the parents, and the Board provided every possible facility for carrying out the intention of the rule.

5. The Commissioners, however, regret to state that the clergy, with few exceptions, have refrained from attending the schools for the purpose of affording special doctrinal teaching to the children of their respective communions. The Commissioners cannot indeed conceal from themselves the fact that although it might be practicable in towns for the clergy to visit schools, yet in the country, on account of the wide distances, it would be impracticable for them to do so without itinerating, at an expenditure of time and money beyond their means.

6. Whilst these considerations were weighing on the minds of the Board, a letter was received from the Rev. Dean Lynch, of West Maitland, suggesting the appointment, by the Board, of a Catholic gentleman as religious instructor to all the National Schools in the Hunter River District. As this suggestion seemed to meet the ideas entertained by the Commissioners, they put themselves in communication with some of the clergy of different denominations in the same district, in order to ascertain their views of the practicability of making a similar arrangement for the special religious teaching of the children of their respective communions.

On the part of the Presbyterians, the proposal was hailed with the greatest satisfaction.

7. We, therefore, took the matter into consideration and resolved, by way of experiment, as we had funds independent of the Legislature, to place at the disposal of the clergy of the following denominations in the Hunter River District (where we then had twenty-six schools in operation, and others in course of formation), the undermentioned amounts for this purpose, viz. :—

£200.

A sum not exceeding at the rate of two hundred pounds per annum for aiding in the religious instruction of the children of the Church of England.

£150.

One hundred and fifty pounds per annum for the Roman Catholics; and

£100.;

One hundred pounds per annum for the Presbyterians.

£450.

8. These sums have been accepted and devoted to the Roman Catholics and the Presbyterians; but, as yet, no clergyman of the Church of England has performed this duty himself, nor has he delegated it to a layman.

9. The experiment, however, so far as the Board is concerned, has been successful, inasmuch as, in addition to the religious instruction given, the Catechists have afforded constant supervision and inspection of the National Schools in the district, the results of which have been reported to the Board through the respective clergymen every month.

10. As, however, it appears to us that the expenditure of any sums of money by a Board of National Education for special religious instruction might, to some extent, be regarded as a departure from that neutral religious ground upon which the system is based, we beg to suggest that His Excellency the Governor General, with the Executive, may be pleased to take the subject into their consideration.

11.

11. In the absence of any specific declaration of the intentions of the Legislature, we would beg to submit to the Executive the expediency of definitely and permanently sanctioning the appropriation from the Church and School Estates Fund an adequate sum in aid of special religious instruction, to be imparted by clergymen and teachers approved by the respective parents, to children attending the National Schools, and placed for that purpose by the Government, under the direction of the heads of denominations receiving aid from the Government.

I have, &c.,
(For the Board of National Education,)
W. C. WILLS,
Secretary.

The Honorable
The Colonial Secretary.

[Enclosure 19.]
Colonial Secretary's Office,
Sydney, 17 November, 1853.

Sir,

I have the honor to inform you that the Governor General has laid before the Executive Council your letter conveying a statement of the endeavors of the Board to carry into effect the system of National Education in this Colony, so far as relates to the special religious instruction of the children. ^{6 Sept.}

2. It is explained that, according to the regulations adopted by the Board on their first appointment, one day in each week, or a part of a day (independently of Sunday) is set apart for religious instruction, on which day such pastors or other persons, as are approved by the parents or guardians of the children, shall have access to them for that purpose. In adopting this rule, the Commissioners anticipated that the general religious instruction afforded to the children under the National System of Education would be supplemented by special religious instruction on the part of the clergy and other persons approved of by the parents. But, from whatever cause arising, the clergy with few exceptions have refrained from attending the schools for the purpose of affording doctrinal teaching to the children of their respective communions.

3. Under these circumstances, the Board of Commissioners resolved, by way of experiment, as they had funds at their disposal independently of the Legislature, to place a small sum at the disposal of the clergy of the principal religious denominations in the Hunter River District (where the Board have twenty-six schools in operation and others in course of formation), with a view to insure the imparting of special religious teaching in the manner contemplated by the regulations. The sums so allotted were in the following proportions, namely:—

Church of England, not exceeding	£200
Roman Catholics	150
Presbyterians	100

These sums have been accepted and devoted by the Roman Catholics and Presbyterians; but, as yet, no clergyman of the Church of England has either performed this duty himself or delegated it to a layman.

4. As the Council were not aware of any objection, His Excellency has been pleased to approve of the permanent appropriation from the proportion of the Revenues arising from the Church and School Lands which has been placed at the disposal of the Board of National Education of such sums as the Board may deem advisable in aid of special religious instruction to be imparted by clergymen and teachers approved by the respective parents of the children attending the National Schools.

I have, &c.,
E. DEAS THOMSON.

To the Chairman of the
National School Board.

[Enclosure 20.]

EXTRACT of the Minutes of the Proceedings of the Board of National Education, dated 13 November, 1854.

“ The Board consented not to interfere with the nomination of the Rev. Dean Lynch, provided that it be distinctly understood that their approval is not to imply that the office is to be continued longer than the end of the present year, and that Mr. Oxendale is not to consider he has any vested interest in the office, that might either fetter the Board in abolishing it, or give him any claim for compensation.”

[Enclosure 21.]

EXTRACT of the Minutes of the Proceedings of the Board of National Education, dated 9 June, 1856.

“ The experimental arrangement made by the Board with a view to afford catechetical instruction to the children attending the National Schools in the Hunter River District was ordered to be brought to a close after the 30th September next, in consequence of one denomination of Christians only having taken advantage of the funds set apart for this purpose.”

1859-60.

Legislative Assembly.
NEW SOUTH WALES.

SCHOOL BOARDS.

(PETITION OF THE REV. DR. FULLERTON.)

Ordered by the Legislative Assembly to be Printed, 20 April, 1860.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned,—

HUMBLY SHEWETH:—

That Petitioner perceives, with regret and surprise, that no arrangement has yet been made to abolish the Denominational Board of Education, the existence of which wastes six hundred pounds per annum of the public money, prevents the establishment of Primary Schools, and counteracts the efforts of those who desire to render our present schools efficient and useful.

That the Board was established—"that money voted for Denominational Schools "should be expended under the direction of a Board of Inspection, to be appointed by the "Governor;" and, by the first of their published regulations, the Board have repudiated "the entire local superintendence of the schools" placed under their care, while they arrogate to themselves the exclusive right to appoint and remove teachers.

That it is impossible for Local Boards, without degrading themselves, to superintend the schools efficiently, as the tenth regulation of the Central Board says,—“should a teacher "misconduct himself, the Local School Board will at once transmit a full report of the case "to the Central Board, together with any evidence on the subject that may have been "taken"; since there is nothing in the regulations to explain or define what is meant by the term "misconduct," and since what might be regarded as "misconduct" by a Local Board might be pronounced good conduct by the Central Board.

That the Rules and Regulations of the Central Board are absurd, arrogant, and childish, and shew clearly that the Members of the Board are altogether unfit to discharge the important duties which have been intrusted to them; they are, I believe, as individuals, rich, influential, and estimable gentlemen, but their conduct as a Board of Education has been highly injurious to the best interests of our Primary Schools. It was through the incompetence and gross negligence of the Central Board that nearly one-half of the Presbyterian Schools, which were in existence when the Board was appointed, were closed, while the number of schools in connection with other religious bodies was not increased.

That the habitual neglect and mismanagement of the Central Board have been disgraceful. The Board reserves "one tenth of the annual vote for Denominational Schools "for the purchase of books;" and the Commissioners of Education, appointed by Government to inspect all the schools, stated in their Report, which was submitted to Parliament, "that the Presbyterian Schools had, at the time of their inspection, been kept three years "without books." This was a great annoyance to your Petitioner, who lost, as agent of the Synod of Australia, much time in running after the Board. Their office was seldom to be

found open; and when Mr. Robinson could be seen, no information could be obtained from him—his answers were always evasive and indefinite; his general excuse for withholding the Presbyterian Book Fund was, that money had been advanced by the Denominational Board to the Rev. Dr. M'Garvie, before the death of that gentleman. As Petitioner felt very anxious to have the Presbyterian Schools supplied with books, and wished his brethren to know that it was not through his neglect that the books had not been furnished, Petitioner solicited the advice and co-operation of the Rev. John Dougall and the Rev. John M'Gibbon. On three successive days these gentlemen accompanied Petitioner to the Office of the Board, and on each day found it closed, having ascertained that Mr. Robinson resided in the country, and that he usually came to Sydney at 10 o'clock, A.M., and left at noon, or shortly after it. Petitioner wrote to Mr. Robinson, and requested an interview; but he merely repeated his former assertion. As a last effort, Petitioner applied privately to Mr. George Miller, who was then a Member of the Central Board; and Mr. Miller stated immediately, that the Minutes of the Board shewed that the money which had been received by Dr. M'Garvie was not given to purchase books, but to pay for books purchased before his death. The Presbyterian Book Fund, which had under frivolous pretences been so long withheld, was then paid by the Central Board; but no interest was given for the use of the money during the time of its detention. This is a fair specimen of the conduct of the Board. The unexpended surplus of the year 1858 is not yet paid to the Presbyterian Schools. It cannot be paid without the sanction of the Board, and that appears to be entirely dependent on the whim and caprice of the Secretary.

That your Petitioner wrote some years ago to the Central Board, directing their attention to the negligence of their Secretary, and to the necessity of the Office of the Board being open during the ordinary office hours. To that communication Petitioner received no answer; and the Board have since increased their expenditure by paying an Officekeeper, for whose services there is not the slightest necessity.

That salaries are payable at the Office of the Board "on any day of the week, Monday and public holidays excepted, only between the hours of ten o'clock, A.M., and one o'clock, P.M.;" and this must compel many of the teachers to leave their schools in school-hours.

That while the Members of the Denominational Board have shamefully neglected the duties of their office, those of the National Board have strenuously exerted themselves to increase the number and efficiency of our Primary Schools; and the Denominational Schools would, in the opinion of Petitioner, be much improved, were they placed under the superintendence of the National Board.

Your Petitioner prays that your Honorable House will be pleased to take the premises into your serious consideration, and adopt such measures as may cause the Denominational Schools to be placed as non-vested schools under the inspection of the National Board.

And your Petitioner, as in duty bound, will ever pray.

JAMES FULLERTON, LL.D.,
Minister.

1859.

NEW SOUTH WALES.

SYDNEY GRAMMAR SCHOOL.

(REPORT FOR 1858.)

Presented to both Houses of Parliament, by Command.

SIR CHARLES NICHOLSON, BART., to THE COLONIAL SECRETARY.

Sydney Grammar School,

6 April, 1859.

SIR,

By direction of the Trustees of the Sydney Grammar School, I have the honor to transmit to you a Report of their Proceedings, and of the condition of the School during the year 1858, to be laid before His Excellency the Governor General and the Honorable the Executive Council, in accordance with the provisions of the Act of Incorporation.

2. Since the date of their last Report, the Trustees have not found it necessary to make any further regulations for the government and discipline of the School.

3. As an Educational Institution, the success of the School has continued to be eminently satisfactory—the confidence of the public has been evinced by the number of the pupils, which has averaged *two hundred*. The progress of the studies has been tested by regular and frequent examinations. In that which took place before the Christmas holidays, the Professors of Classical Literature and of Mathematics in the University took part, and expressed a highly favorable opinion of the condition of the Upper School, to which their attention was on that occasion confined. It is intended in future to hold public examinations at the close of every half-year.

4. Two additional class-masters have been appointed during the year, in consequence of the increase of numbers; these offices have been conferred upon *Stuart Hawthorne, B.A.*, and *John Kinlock, B.A.*, of the University of Sydney.

5. The financial condition of the Institution having lately formed the subject of a special Report to His Excellency and the Executive Council, the Trustees have no further information to communicate. They avail themselves, however, of this opportunity to express their obligation to the liberality of His Excellency in Council in causing the sum of £4,000 to be placed upon the Supplementary Estimates of the past year, and of the House of Assembly in voting the grant.

6. By this vote the Trustees are placed in a position to satisfy their existing engagements; but they will be still unable to supply the additional and improved accommodation, the necessity of which to the full development of the School system they had the honor to explain in their last annual Report.

I have, &c.,

CHARLES NICHOLSON,

Chairman.

THE HONORABLE
THE COLONIAL SECRETARY.

SYDNEY GRAMMAR SCHOOL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 13th September, 1859, "to inquire into the working of the Sydney Grammar School," and to whom were referred, on the 28th February last,—

(1.) "The Petition of certain Inhabitants of Sydney, relative to the establishment of a Grammar School, referred on the 6th October, 1854, to the Committee then sitting on Education"; and—

(2.) "The Progress Report of the 21st of November, 1854, of the Select Committee on Education, in reference especially to the establishment of a Grammar School in the City of Sydney; together with the Evidence accompanying the same," have agreed to the following Report:—

In the course of the inquiry committed to them by your Honorable House, your Committee have examined four of the Trustees and the Head Master of the Grammar School, together with other witnesses.

Your Committee, in the recommendations which they make to your Honorable House, founded upon the Evidence taken before them, have carefully borne in mind the objects which the Legislature appears to have contemplated in founding the Grammar School, in accordance with the prayer of a Petition signed by a number of the Inhabitants of Sydney, and presented to the Legislative Council in 1854.

The recommendations of your Committee, therefore, have in view the more successful attainment of the object originally proposed.

Your Committee find that the school opened on the 3rd August, 1857, with 110 pupils, and that the average attendance since that time has been 200. The fee charged is £18, and includes every branch of education taught in the school.

A suggestion having been made that the fee charged was too high, and tended to limit the operation of the school, your Committee have considered whether a reduction might have been advantageously made in that charge. Your Committee, however, after mature deliberation, are of opinion that the fee charged is as low as is consistent with the efficient management of the school, and can not be reduced without increasing the present endowment.

The

The object of the Legislature in founding the school, your Committee apprehend, was to furnish those capable of receiving it, the highest kind of education which the school system could afford, an education not only superior to any that could be obtained in the primary schools of the State, but one which should at once fit its pupils for the intelligent discharge of the duties of a commercial or professional life, or fit them for a more advanced course of academical instruction in the halls of the University. Whilst, therefore, it is the duty of the State to afford every facility for obtaining the advantages of the school to all capable of appreciating its teaching, it would not be advisable to lower the fees at the risk of impairing the standard of education. To do so would manifestly defeat the object of the Legislature. Not only would the Institution be destroyed as a National High School, but its usefulness as one which should raise the standard of education throughout the schools of the country would be impaired. The fees, moreover, your Committee are of opinion are quite as low as those charged in the best private establishments. To undersell and consequently to destroy private schools of character and repute would be a course neither right for the Government to pursue, nor wise in policy for the general interests of education. As your Committee find, moreover, that the funds of the school at the present rate of fees are only sufficient to cover its working expenses, they are of opinion that any reduction would be unadvisable on grounds simply economical.

Though it appears that the number of pupils attending the school is, in proportion to the size of the City, equal to the numbers attending schools of a similar character in the larger cities of the Mother Country, yet your Committee are of opinion that the usefulness of the school would be much increased if it could be made more accessible to the superior children of those possessing but limited means.

Your Committee, therefore, recommend an addition to the endowment for the purpose of founding fifty exhibitions which shall be obtained by competition examination, and entitle the holder to a free education in the school. The Evidence shews that £1,000 per annum would be required for this purpose. This addition to the endowment your Committee believe would meet the present requirements of the school, and would be sufficient to afford all boys really likely to benefit by the highest education the means of acquiring it.

The general management of these exhibitions your Committee beg to suggest, should be the same as that now observed with respect to the exhibitions already existing in the school.* In recommending this as a means of affording a free education in the Grammar School to those who might otherwise be unable to obtain a superior education, your Committee would point out that it is simply affording to the clever boy the same advantages which the University holds out to its diligent students.

* *Vide* Evidence, Qs. 416 to 440.

In a country where the highest offices of the State are open to all, where the franchise gives the mass of the people so large a discretion in the choice of the representative, your Committee feel that it becomes the more imperative to give every facility to the clever and ambitious youth for obtaining that high intellectual training, which is the best safeguard
of

of constitutional liberty in a country where, by the wisdom of the Legislature, democratic institutions have been largely introduced. Your Committee, therefore, advocate this measure as one tending more closely to unite the educational system of the country by the opportunity which it will offer to the children of the poorest citizen, if they be worthy, of rising from the primary schools to the lecture halls of the University. If the endowment be considered large, your Committee would urge that the highest education needs endowment. They would cite the opinions of Professors Pillans and Blackie, men intimately acquainted with the Grammar School systems of England and Scotland, confirmed by the testimony of Sir W. Hamilton, eminent for the reforms which he originated in the academic system of the Mother Country, as the highest authorities for the necessity of ample endowments if high education is desired.

In the course of their inquiry your Committee have found that the limits of accommodation for pupils have been reached, and that no more pupils can be conveniently taken with due regard to the health, order, and discipline of the school. Your Committee, therefore, deem it advisable that additional room should be provided to meet the growing wants of the school, and the accession of numbers which may be expected in consequence of the inducements held out by the proposed exhibitions. This matter your Committee find has already been brought under the notice of the Government by the Trustees in their Report of the 24th February, 1858. Your Committee, therefore, recommend that sufficient assistance should be afforded for the erection of the eastern wing as proposed in that Report. Your Committee, moreover, could strongly urge the necessity of procuring another master, as soon as possible, for the modern department, to fill the place lately vacated by the gentleman managing that division of the school. As the means which the Trustees will have at their disposal for this purpose, must in a great measure depend upon the possibility of obtaining the proposed increase to the endowment your Committee would urge this as a strong reason for its grant.

In conclusion, your Committee are of opinion that the general management of the school by the trustees, and the masters who are conducting it, is efficient, and every way worthy of public confidence.

WILLM. C. WINDEYER,

*Legislative Assembly Chamber,
Sydney, 20 April, 1860.*

Chairman.

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 30 SEPTEMBER, 1859.

MEMBERS PRESENT :—

Mr. Windeyer,		Mr. Hay,
Mr. Parkes,		Mr. Murray,
Mr. Jones,		Mr. Cape,
Mr. Plunkett,		Rev. Dr. Lang.

W. C. Windeyer, Esquire, called to the Chair.

The Committee proceeded to deliberate upon the course to be pursued in carrying out the inquiry referred to them, and decided upon taking Evidence on the subject, the first witness to be called being the Rev. J. Woolley, D.C.L., with instructions to produce any minutes or other documents which may be in his possession relating to the matter under consideration.

[Committee adjourned till Friday, 7th proximo, at *Eleven* o'clock.]

FRIDAY, 7 OCTOBER, 1859.

MEMBERS PRESENT :—

W. C. Windeyer, Esquire, in the Chair.

Mr. Plunkett,		Mr. Cape,
Rev. Dr. Lang,		Mr. Parkes,
	Mr. Jones.	

The Rev. J. Woolley, D.C.L., *Principal of the Sydney University*, called in and examined.

[Committee adjourned till Thursday, 13th instant, at *Eleven* o'clock.]

THURSDAY, 13 OCTOBER, 1859.

MEMBERS PRESENT :—

W. C. Windeyer, Esquire, in the Chair.

Mr. Cape,		Mr. Hay,
Rev. Dr. Lang,		Mr. Plunkett,
Mr. Arnold,		Mr. Jones.

M. B. Pell, Esquire, B.A., *Professor of Mathematics, Sydney University*, called in and examined.

W. J. Stephens, Esquire, M.A., *Head Master of the Sydney Grammar School*, called in and examined.

[Committee adjourned till Thursday, 20th instant, at *Ten* o'clock.]

THURSDAY, 20 OCTOBER, 1859.

MEMBERS PRESENT :—

W. C. Windeyer, Esquire, in the Chair.

Mr. Cape,		Mr. Hay,
Mr. Parkes,		Mr. Plunkett,
	Mr. Jones.	

Sir C. Nicholson, *Bart., Provost of the Sydney University*, called in and examined.

[Committee adjourned till 26th instant, at *Eleven* o'clock.]

WEDNESDAY, 26 OCTOBER, 1859.

MEMBERS PRESENT :—

W. C. Windeyer, Esquire, in the Chair.

Mr. Plunkett,		Mr. Parkes,
Mr. Cape,		Rev. Dr. Lang.

W. G. Fitzhardinge, Esquire, called in and examined.

Committee deliberated, and

[Adjourned till 27th instant.]

THURSDAY, 27 OCTOBER, 1859.

In consequence of the House having adjourned, from the 26th instant to 29th proximo, no meeting of the Committee was held this day.

FRIDAY,

FRIDAY, 2 DECEMBER, 1859.

MEMBERS PRESENT:—

W. C. Windeyer, Esquire, in the Chair.

Mr. Parkes, | Rev. Dr. Lang.

A. C. Maxwell, Esquire, *Registrar of the Metropolitan District Court*, called in and examined.

The witness produced certain letters which passed between him and the Trustees of the Sydney Grammar School, and the same having been read at length by the Clerk, were ordered to be appended to the Evidence. (*Vide Appendices B and C.*)

[Committee adjourned to Wednesday, 7th instant, at *Twelve* o'clock.]

WEDNESDAY, 7 DECEMBER, 1859.

MEMBERS PRESENT:—

W. C. Windeyer, Esquire, in the Chair.

Mr. Cape, | Rev. Dr. Lang.

T. Gratton, Esquire, *Colonial Secretary's Office*, called in and examined.

T. Broughton, Esquire, *M.P.*, examined.

[Committee adjourned till Wednesday, 14th instant, at *Twelve* o'clock.]

WEDNESDAY, 14 DECEMBER, 1859.

MEMBERS PRESENT:—

W. C. Windeyer, Esquire, in the Chair.

Mr. Parkes, | Rev. Dr. Lang,

Mr. Plunkett, | Mr. Cape,

The Rev. F. Armitage, *M.A.*, called in and examined.

[Committee adjourned till Wednesday, 21st instant, at *Twelve* o'clock.]

WEDNESDAY, 21 DECEMBER, 1859.

MEMBERS PRESENT:—

W. C. Windeyer, Esquire, in the Chair.

Mr. Plunkett, | Mr. Parkes,

Rev. Dr. Lang.

A. T. Holroyd, Esquire, called in and examined.

The Clerk was instructed to write to the Secretary to the Sydney Grammar School, for a Return of the number of meetings of the Trustees held since the foundation of the School; also for a nominal Return of the attendances at each meeting; together with an Abstract of the moneys received and expended on account of the School from its foundation to the present time.

[Committee adjourned.]

FRIDAY, 27 JANUARY, 1860.

MEMBERS PRESENT:—

W. C. Windeyer, Esquire, in the Chair.

Rev. Dr. Lang, | Mr. Cape.

The Rev. J. Woolley, *D.C.L.*, *Principal of the Sydney University*, called in and further examined.

W. J. Stephens, Esquire, *M.A.*, *Head-Master of the Sydney Grammar School*, called in and further examined.

Committee deliberated, and *Resolved*, That it is unnecessary at present to take further evidence upon the subject under consideration.

[Committee adjourned.]

FRIDAY, 17 FEBRUARY, 1860.

MEMBERS PRESENT:—

Mr. Jones, | Mr. Cape,

Rev. Dr. Lang.

Mr. Jones, in the absence of the Chairman (Mr. Windeyer), called to the Chair.

The Clerk was instructed to secure the circulation of copies of the Evidence among the several Members of the Committee.

[Committee adjourned till Tuesday, 21st instant, at *Ten* o'clock.]

TUESDAY, 21 FEBRUARY, 1860.

The meeting of the Committee appointed for this day postponed, by direction of the Chairman, till Thursday, 23rd instant, at *Twelve* o'clock.

THURSDAY,

THURSDAY, 23 FEBRUARY, 1860.

MEMBERS PRESENT :—

W. C. Windeyer, Esquire, in the Chair.

Mr. Cape,		Rev. Dr. Lang,
Mr. Hay,		Mr. Jones,
Mr. Arnold,		Mr. Parkes.

Committee proceeded to consider the printed evidence, and objections having been taken to a note appended to Mr. Fitzhardinge's evidence without their sanction or knowledge, *It was Resolved*,—

That the note referred to (page 31) be omitted.

A letter from Mr. Catlett, Secretary to the Trustees of the Sydney Grammar School, dated 27th ultimo, enclosing certain Returns and Abstracts applied for pursuant to instruction of the 13th December last, was laid before the Committee.

Motion made and *Question*, That the present letter, together with its several enclosures, be appended to the Report when brought up to the House,—*agreed to*. (*Vide Separate Appendix A.*)

Committee deliberated upon their future course of proceedings, and instructed the Chairman to draw up the heads of a Report for consideration at the next meeting.

[Adjourned till Wednesday, 29th instant, at *Eleven o'clock*.]

WEDNESDAY, 29 FEBRUARY, 1860.

MEMBERS PRESENT :—

W. C. Windeyer, Esquire, in the Chair.

Mr. Arnold,		Mr. Jones,
Mr. Parkes.		Rev. Dr. Lang,
		Mr. Cape.

W. G. A. Fitzhardinge, Esquire, called in and further examined.

Committee proceeding to deliberate on matter arising in the course of examination, witness withdrew.

Witness recalled, examination resumed and concluded.

Witness retired.

Committee deliberated upon the heads of a Report as produced and read by the Chairman.

[Adjourned till Friday, 2nd proximo, at *Twelve o'clock*.]

FRIDAY, 2 MARCH, 1860.

Proceedings interrupted by the adjournment of the House from the 1st to the 6th instant.

THURSDAY, 5 APRIL, 1860.

MEMBERS PRESENT :—

W. C. Windeyer, Esquire, in the Chair.

Mr. Parkes,		Mr. Cape,
Mr. Plunkett,		Rev. Dr. Lang.

The Chairman produced a letter from Mr. W. H. Catlett, on behalf of the Trustees of the Sydney Grammar School, dated the 15th ultimo, requesting that the Head Master might be furnished with a copy of the Evidence taken before the Committee, in order that certain statements, supposed to have been made, might be at once refuted.

Committee deliberated, and *Resolved*,—

(1.) That it is unnecessary, as well as inexpedient, to re-open this inquiry.

(2.) That Mr. Catlett be informed accordingly.

Grammar or High School—Petition.

Motion made (*Mr Parkes*) and *Question*, That the Petition relative to the establishment of a Grammar or High School, from certain Inhabitants of the City of Sydney and others, presented to the late Legislative Council, 3 October, 1854, and referred to this Committee, be appended to the Report when brought up to the House—*agreed to*. (*Vide Separate Appendix B.*)

With a view to form the basis of a Draft Report, the Chairman brought under consideration, the following series of Resolutions.

Questions put *seriatim* :—

(1.) That the Committee is of opinion that the fee charged is as low as is consistent with the efficient management of the school, and cannot be reduced without increasing the present endowment.

Committee divided.

Ayes, 2.

Mr. Parkes,

Mr. Cape,

—*agreed to*.

Noes, 1.

Mr. Plunkett.

(2.)

- (2.) That the Committee recommend an addition to the endowment of £1,000 per annum for the purpose of founding fifty (50) scholarships, which shall be obtained by competitive examination, and entitle the holders to a free education in the school.

Committee divided.

Ayes, 3.
Mr. Parkes,
Mr. Cape,
Mr. Plunkett.

Noes, 1.
Rev. Dr. Lang.

—agreed to.

- (3.) That these scholarships be managed on the system indicated in the answers to questions 416, 417, 426, 439, 440—*agreed to.*
- (4.) That the Committee find that the limits of accommodation for pupils have been reached, and that it is advisable that additional room should be provided to meet the growing wants of the school, and the accession of numbers which may be expected in consequence of the inducements held out by the proposed scholarships—*agreed to.*
- (5.) That the Committee recommend that the sum of £5,000 be put upon the Estimates for the erection of the eastern wing, as proposed by the Trustees in their report of the 24th February, 1858—*agreed to.*
- (6.) That the Committee are of opinion that the management of the school by the Trustees and masters is efficient—*agreed to.*

[Adjourned.]

FRIDAY, 20 APRIL, 1860.

MEMBERS PRESENT :—

W. C. Windeyer, Esquire, in the Chair.

Mr. Hay,
Rev. Dr. Lang,

Mr. Parkes,
Mr. Plunkett.

The Chairman laid before the Committee a Draft Report.

Draft Report read.

Committee considered and *verbally* amended the same.

Motion made (*Mr. Hay*) and *Question*—That the Draft Report, as amended, be the Report of this Committee—*proposed.*

Committee deliberated ;—

And the Rev. Dr. Lang stating that though he had no wish to differ from the general conclusions of the Committee, his own ideas, nevertheless, were so opposed to the policy pursued in the establishment of the Sydney Grammar School, that he would feel it necessary to hand in for record a brief statement, in order to obviate the possibility of his own views being confounded with those approved of in the Report,—

Statement produced and read.

Ordered to be entered ;—As follows, viz. :—

“ The undersigned regrets that he cannot concur with the other Members of the Committee in the conclusions at which they have arrived on the subject of the Sydney Grammar School. Having been a Member of the Legislature when that Institution was originally projected in the year 1854, he is strongly of opinion that it has not realized either the objects of its founders or the reasonable expectations of the public. It has entailed upon the country a large expenditure for buildings—nearly thirty thousand pounds—and a costly educational establishment of fifteen hundred a year, with results, either present or prospective, singularly inadequate.* It has entirely failed to afford a superior education to the youth of the middle classes at a reasonable cost ; and it can in no respect serve as a model school for superior education for the other towns of the Colony, as it would be quite unwarrantable, even if it were practicable, to incur a similar expenditure for the same purpose in any of these towns.

“ The undersigned conceives that the fatal mistake, into which the Trustees of the Sydney Grammar School have been perhaps unconsciously betrayed from the first, has arisen from their having taken as their model, not such an Institution as the High School of Edinburgh, (to which the attention of the Select Committee on the Sydney Grammar School of 1854 was particularly directed as a suitable model school for this Colony,) but the few celebrated old established endowed schools of England, which, from their princely endowments and their aristocratic character, could in no respect form a proper model for a young country like New South Wales.

“ Viewing the Sydney Grammar School, therefore, as an Institution of an exceptional character, to which there can be nothing similar in the other towns of the Colony, the undersigned would not object to a moderate additional grant of public money for the erection of such

* NOTE :—Taking the interest of £30,000 (in round numbers) at 5 per cent., or £1,500 per annum, the cost of the Institution to the public is £3,000 per annum altogether, or £15 a year for each pupil, assuming the present number to be two hundred, which is considerably above the actual number. But as the parents or guardians have to supplement this endowment at the rate of £18 per head for each pupil, the total cost of the education of each pupil is £33 a year.

J. D. L.

“such additional buildings as are indispensably necessary to carry out its present plan; but he would strongly object to the proposed additional endowment of £1,000 (one thousand pounds) a year for the creation of additional scholarships, as such a system as is thus proposed tends to weaken and destroy the invaluable principle of self-reliance in the community, while a reduction of the fees to their proper rates would in all likelihood render such an expedient unnecessary.

“JOHN DUNMORE LANG, D.D.

“*Sydney, 20 April, 1860.*”

Question (That the Draft Report, as amended, be the Report of this Committee) *put*.
Committee divided.

Ayes, 3.
Mr. Hay,
Mr. Parkes,
Mr. Plunkett.

Noes, 1.
Rev. Dr. Lang.

Report agreed to.

Chairman requested to report to the House.

Legislative Assembly.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

SYDNEY GRAMMAR SCHOOL.

FRIDAY, 7 OCTOBER, 1859.

Present:—

MR. WINDEYER,	DR. LANG,
MR. PLUNKETT,	MR. JONES,
MR. PARKES,	MR. CAPE,
MR. HAY.	

WILLIAM CHARLES WINDEYER, ESQUIRE, IN THE CHAIR.

Dr. Woolley called in and examined:—

1. *By the Chairman*: You are Principal of the Sydney University, Dr. Woolley, and also one of the trustees of the Sydney Grammar School? Yes. Dr. Woolley.
2. I believe you gave evidence before the Select Committee appointed to consider the propriety of erecting this institution? Yes. 7 Oct., 1859.
3. You have also acted, I believe, as Secretary to the Trustees? Yes, for about three years—until the year 1857.
4. When was the Grammar School first opened? On the 3rd of August, 1857.
5. Do you know how many boys it opened with? I believe 110. I shall be able presently to lay before the Committee the Reports which give the numbers. At Christmas there were 180, and the school has since averaged about 200. I think it has now 210.
6. What is the greatest number that have been there? I think 214; I am not quite sure; a little under 220.
7. How many masters are there in the school? At the present time there are eight masters. Of those eight masters five are regular class masters. The mathematical master, the English master, and the head master, are not entirely available for classes. It gives an average, taking the eight masters, of 25 pupils to each master.
8. Is that considered about the average which each master is competent to look after? It is a very common average in England. We should be able to take a few more boys with the same number of masters. Thirty boys to each master are manageable.
9. Not more, to manage them efficiently? No; in the English system there is a great deal of writing; and the English schoolmaster has nearly as much of his time occupied out of the school in looking over exercises, as during school in hearing his class.
10. Would you just give us the names of the masters of the Sydney Grammar School, if you please, Dr. Woolley? The trustees thought it advisable in the first instance —
11. Oh, I will first ask you the names of the trustees? There are twelve trustees, of whom six are official, and six were originally appointed by the Government. Vacancies are now supplied by the vote of the trustees themselves. The official trustees are the Colonial Secretary, the Attorney General, the Speaker of the House of Assembly, the Provost of the University, and the Senior Classical and Mathematical Professors of the University.

Dr. Woolley. University. The trustees appointed originally are Mr. Cox, Mr. Holroyd, Mr. Martin, Mr. Nichols, Mr. Barker, and Mr. George Macleay.

7 Oct., 1859. 12. Have any of those gentlemen resigned and others been appointed? There have been two vacancies, one by the death of Mr. Nichols, which was supplied by the election of Mr. George Wigram Allen, of the Glebe; and the second by Mr. George Macleay's departure for England. That vacancy is not yet supplied.

13. Those are the only changes that have taken place? Those are the only changes which have taken place. Four masters were sent out from England, as will appear from the first report. This the trustees thought advisable. They were selected by the Professor of Greek at Oxford, and the Professor of Greek of University College, London, Principal Hornby of Durham, the Astronomer Royal, with Sir Charles Nicholson. One is head master, another mathematical master, and two are ordinary class masters. The masters holding those offices are, Mr. Stephens, who is a Fellow, and was senior tutor of Queen's College, Oxford; Mr. Pratt who was a high wrangler of Cambridge, and a scholar of St. John's.

14. *By Mr. Cape*: Corpus Christi, is it not? Yes, of Corpus Christi College, Cambridge; Mr. Whitfeld, who is a Fellow and Lecturer of Trinity Hall, Cambridge, thirty-fifth wrangler, and second class in classics, and Mr. Julius Charles Stuttzer, who was Assistant Professor of English Literature in King's College, London; he has since left the school, so that only three of them now remain.

15. *By the Chairman*: Did he leave of his own accord? No; some eccentricities in his character made it advisable that—

16. Advisable that he should leave? Yes. In addition, in consequence of the increase of pupils, we have since been obliged to appoint four other masters,—Mr. Blackmore and Mr. Heaven, both graduates of Oxford; and Mr. Hawthorne and Mr. Kinloch, both graduates of this University.

17. Of the Sydney University? Yes. In addition, there is Mr. Mills, who was master of the girls department of the Fort-street School. He was appointed originally as English master, and Secretary to the Trustees. He is now only English master, and does certain secretarial work, which all English masters have to do, keeps the books, &c. We have also a drawing master and a French master. At present we are in want of a German master. Mr. Stuttzer used to teach German. We also want a teacher of gymnastics—a want which we have experienced difficulty in supplying; we have hopes, however, of doing so during the present half-year.

18. Of these masters how many are upon the foundation? Three only at present—Mr. Stephens, Mr. Pratt, and Mr. Whitfeld; the rest are occasional masters.

19. What sum of money was originally granted for the purpose of founding this institution? £1,500 a year, and £20,000 for buildings. The £1,500 a year was at first entirely absorbed in the payment of the retaining fees of the four masters.

20. £20,000 was also granted for—? Building purposes.

21. How was that first sum of £20,000 expended? We are ordered by the Act to expend it in building premises for the school, and a house for the head master. We had great difficulty in finding a suitable site; I think we were almost a year in negotiation with the Government for a site which was to have been given to us by the nation, but it appeared that no site could be procured suitable to our purposes.

22. Were you offered any sites? Several sites were proposed by the Governor General, but it appeared on inquiry that the Government could not let us have them. The only site offered us finally was one in the immediate neighborhood of Christ Church—in a low swampy place near to the Pound. We thought that was not a convenient place, and we entered into negotiations with the Senate of the University, who were about to quit the premises in Hyde Park; and on the advice of a professional surveyor we offered them £13,000 for that property, which they accepted. In lieu of the intended site Parliament granted us £5,000, in addition to the £20,000 before granted.

23. In lieu of the site? In lieu of the site. Though we lost the £13,000, we had the £5,000 additional to expend upon buildings.

24. Was that sum you had remaining expended? Yes, more than that has been expended.

25. That is what we want to know—how it was? This £13,000 was expended in three ways: first, in building lodging rooms for the three foundation masters, at the south end of the building. That was a purpose not contemplated by the Act; but it appeared to us—and our views were sanctioned by the Government—that we should be able to get good masters at a smaller salary, if accommodation were provided, considering the high rents which prevailed, and that besides it would be a great convenience for discipline on the playground. So that there is a wing at the south end of the building with four or five rooms for each of the foundation masters, and business rooms for the trustees and other officials. Certain alterations had to be made in the building itself, in order to make it fit for the occupation of the present number of scholars; and in the north wing we have a convenient house for the head master.

26. Then how much altogether has been expended in buying the land—how much altogether in money have the trustees received from the Government? If I had my papers here I could tell you exactly, but I think I am safe in saying £29,000. We had £25,000 altogether, including what we paid the Senate—that was the sum originally granted to us. We entered into contract however without sufficient care—which involved us in a debt of between £2,000 and £3,000, and the Government, with the sanction of the Parliament, voted us £4,000 to pay that debt and for certain other matters; so that I think £29,000 is the sum actually spent including the purchase of the site.

27. Including the purchase of the site? Yes.

28. And you have an annual grant of—? 1,500 a year.

29. How is the 1,500 expended? Originally it was spent entirely upon the permanent salaries of the four foundation masters. The head master receives £500, the mathematical master £400, and the other two masters received £300 apiece. Since Mr. Stuttzer left we have a surplus of £300, but that is quite absorbed in the additional salaries we are obliged to give now. Dr. Woolley.
7 Oct., 1859.

30. What salaries do the other masters receive? Two of them—Mr. Blackmore and Mr. Heaven—get £375 each; the other three—Mr. Hawthorne, Mr. Kinloch, and Mr. Mills get £300; and we have a janitor who has £100. I submit a table for the use of the Committee of the salaries and expenses as we now have them. The total amount of the salaries at present is £2,050 a year.

31. How are the masters paid—from this fund of £1,500? The three foundation masters are entitled to fees:—the head master to £3 for the first 100 boys and £2 for all others; this, reckoning 200 boys, makes his income £500 from fees. The mathematical master gets £2 for the first 100 and £1 for every other. Mr. Whitfield gets £2 for the first 100 and £1 for all others until his income reaches £600, there it stops.

32. Are the other masters unlimited in the amount of fees to any number of boys? The head master and the mathematical master go on for ever. The French and drawing masters are paid by fees only—£1 for every pupil. The German master would receive the same. We originally proposed that the gymnastic master should receive 5s., but I do not know whether we shall be able to manage that.

33. Then all except the first three masters are paid by the fees they receive from the school? Yes.

34. Is that the usual mode of paying masters in English schools—by fees? In almost all English foundation schools there is this double method of payment of certain masters at all events. In some cases all the masters receive permanent salaries from the foundation, and so much for every boy in the school. The ratio received by the head master, in proportion, is much larger—generally speaking very much larger. But the great incomes of junior masters at Home come from their taking pupil boarders. At Rugby and Eton I suppose no master puts by at the end of the year less than £1,000, which he derives from his profits as a tutor and the keeper of a boarding-house. The master at Rugby I think gets £400 from the foundation, and makes some £2,000 or 2,500 a-year as a boarding-house keeper.

35. I believe you yourself were master of several Grammar Schools in England? Yes.

36. And you have had considerable experience in teaching for many years? Yes. There are some schools at which they have exactly our present arrangement,—that is, where one or two masters are paid from the foundation and by fees, and where the others are paid by salaries. That is the case with the Birmingham School, where the head master receives so much from the foundation and so much from fees,—and the mathematical master also; but the junior masters receive only an annual income from the trustees.

37. Taking into consideration the proportionate rates here and in England—how do the salaries stand proportionately? The salaries here are considerably less than a man of the same standing might expect to get at Home. If Mr. Stephens had been master of Marlborough School at this time he would have been in the receipt of a fixed income of a little more than £1,200 a-year, with a house and very considerable appointments, besides, of course, being in the way of promotion. No man in Mr. Stephens' position would receive less than £1,200 a-year, with a first-rate house and appointments. In the Grammar Schools where the head master takes boarders the profits are much greater. I suppose the head master at Rugby or Harrow would never put by, at the end of the year, less than £3,000 or £4,000, after his expenses are paid; and the head masters of Eton and Winchester are Princes in point of income. My own income, when I left England, was £2,000 a-year, and it was increasing rapidly.

38. You are speaking of the Grammar School at Norwich? Yes.

39. Are there any facilities here for masters taking boarders, or is it entirely a day-school? The head master is restrained from taking boarders. The trustees thought there would be an objection to any resident pupils in a school open to all religious persuasions. The other masters may take boarders if they like. The trustees wish to encourage them to do so, but none of them, I think, at present, have thought fit to do so.

40. Is there accommodation? No; and we thought it right that no boarder should be taken within the walls of the school, in order that no possible umbrage should be given to the members of any Churches. Within the precincts no boy can possibly be received.

41. Then the school, in point of fact, is conducted on the national system? Purely; if any master takes boarders he must do it as at Rugby, Harrow, and Eton, by opening a house for himself on his own responsibility.

42. And then sending the boys to the school? Yes.

43. What is the rate of fees charged for the boys? We originally intended to charge £16 a-year, but we found we could not pay our way with £16, and it was proposed to raise it to £20; however we resolved to adopt a medium of £18. With the present number of the scholars—after our necessary expenses are paid (including nine scholarships which we have founded with Mr. Stuttzer's money)—there is a balance of something like £350 or £370 remaining; but out of that balance we have to pay for printing and advertisements, and letters—which are constantly sent to parents and friends—and for books, instruments, and things of that kind, so that in fact our available margin is scarcely anything; we could not safely do with less than £350 a year for incidental expenses.

44. Then I understand you that with the present grant and the present number of boys you could not lower the fees? I think it would be absolutely impossible. At present there is another objection to lowering the fees,—it would not be equitable to the masters of private schools to lower the fees much below the sum which they charge.

Dr. Woolley. 45. Does this sum of £18 include everything taught in the school? Yes; we have no extras.

7 Oct., 1859. 46. Can you just mention the things that are taught? They will be found in the report of the year 1855. First, languages (five)—English, French, German, Latin, and Greek; history—ancient and modern; geography—historical and physical; arithmetic and mathematics—(there is no limit in mathematics, the boys are taken as far as they can go); natural science—(taught by the classmasters); writing and drawing, gymnastics not at present being taught.

47. That range I presume is equal to what is taught in the best private schools in the country? I should think it is equal to any one, probably it includes more than most of them teach; it includes as much as is taught in any school in England—as much as can be taught with any safety to the boys.

48. The character and style of the education there is sufficient, such as would fit the pupils for going to commercial pursuits or to the University? I believe that a boy who has passed through this school—even as far as the fifth form—would be in a very advantageous position for going into ordinary life; if he had gone through the sixth, no doubt he could enter the University with considerable advantage—as great advantage as any school could give him.

49. Is there a division of the school into upper and lower? There is a threefold division. The course was intended to include six years. Each boy was to go through two forms in one year; the lower school to occupy the first two years, the middle school the second two years, and the upper school the third two years. When a boy gets to the third form he has his option of learning Greek, or devoting the time which he would otherwise spend in learning Greek to a more careful study of modern languages and physical sciences. Boys not going to the University or embracing a profession might be expected to adopt that course. I do not think we recommend it.

50. Do you find that most of the boys go on to the higher classes of the school, or do they leave the school, satisfying themselves with the modern department? We can hardly judge from a school which has been only two years open as to what the state of things will be. At present there seems every disposition on the part of the boys, not only to go to the highest forms, but also to remain there as long as they can. I can state from my own experience of the sixth form boys, that some leave to go to the University—which is a great temptation to a young fellow—and have earnestly entreated their parents to be allowed to continue at school one or two years more.

51. At what age do you receive boys into the school; is there any preparatory examination? There is a preparatory examination in English—the first four rules of arithmetic—and writing English from dictation. We do not fix any limit of age, but we recommend that no boy should be sent to the school (for moral reasons principally) under 10 years of age. I think, personally, that 12 years would be better than 10, for a day-school; I do not think a day-school is the best place for very young boys.

52. Do you keep them for any length of time they choose to stop at the school? Yes, as long as they like. A boy enters any part of the school for which he seems fit on examination. If he began at the bottom he could hardly get through in six years, but he might stop seven or eight if he liked.

53. And you say as far as the school has been working up to the present time—as far as you can judge—the boys remain at the school and go up to the highest classes? I do not know how far the boys of the lower forms will wish to go up, but there is a great deal of enthusiasm in the upper school; and I can state, from having looked over a great many of the papers at repeated examinations, that there is a great improvement in accuracy and style. I know that the boys are very fond of the school and anxious to stop as long as they may be allowed to remain. I should say that the sixth form are in a very hopeful way indeed; but you ought to give at least five years to a school to tell what the tone will be.

54. Are the boys prepared sufficiently well to enable them to matriculate and enter the University? They could matriculate any of the sixth form boys now, and I judge from their papers that they will help us at the University very considerably.

55. Have you yet received any boys at the University from the Grammar School? Several; they have done very well, but they came too soon. We have got now two schoolboys, both doing fairly; one of them got a scholarship, but he would have been all the better for staying at school another year or two.

56. Do you think that the school, considering the advantages which it confers, has that number of scholars which might be expected to attend a school of that character in a large city like this? I thought myself, when we first opened the school, that we should have arrived by this time at about 300. I think more than 300 would be a proportion too large, in fact, for this community. If we had tempting boarding-houses we should probably receive more boys from the country. Two hundred does not disappoint me at all. It is not a less proportion, for instance, than you would have in most of the great Grammar Schools at Home. In Birmingham the population is more than twice as large as this, and I think there are little more than 500 scholars, of whom 200 are in the upper school. In the school which answers to the Grammar School they have an immense foundation—about £15,000. At Harrow they have about 350 or 360. At Eton the number varies from 500 to 700.

57. Don't you think the school would be available to a larger number if the fees could be made lower? I do not think the object of a Grammar School of this kind would be to attract as many boys as possible into it. The object of a Grammar School I understand to be, to furnish to persons capable of receiving it the highest possible kind of education—something superior—to fit them for a higher class of work than the National or middle schools could do; of course preventing it from becoming an aristocratical school; that is,

is, a school confined to the very rich. It is the business of the State, if possible, to make arrangements that clever boys, really worthy, and capable of appreciating this higher kind of teaching, should be sent on at the smallest possible expense; if possible, at no expense at all, as by the grand foundations at Home; but I do not think it advisable that boys should be tempted who are not likely to make any particular use of the opportunity and to rise in the world.

Dr. Woolley.
7 Oct., 1859.

58. Have you not known instances where persons occupying, for instance, positions in public offices, and of limited incomes, have found the fees so large as to press very heavily upon them when they had several boys to send to the school? Yes; I have known cases where the fees have proved inconveniently large. It has been a matter of regret to us. We debated for months upon it before we could make up our minds to adopt our present fees. Upon a large portion of the community—professional men, not very successful in business, and those gentlemen who are engaged in public offices—the sum falls very heavily; and if any means could be devised by which such boys could be franked to the school—as they would be by the large endowments at Home—it would be a very good thing. But I do not think it possible, as we are now situated, to offer such an education as the Grammar School ought to offer, at a less price.

59. And to keep up the standard of education the fees are as low as possible to work the school? I think so. We all had the very strongest desire to bring the fees as low as we could. There is of course a great disadvantage in the Sydney Grammar School, as compared with Grammar Schools at Home. In some of the Grammar Schools at Home—Birmingham, for instance, and others—where the foundation is enormously large, you are enabled to give, in some cases, a free education, or an almost free education to any boy in the town. In some a certain number is educated free. In my school fifty boys received their education partly free. In Birmingham, I think, very little is paid by any boy; but there they have an enormous income.

60. I believe in all the old foundation schools there is always a certain number of boys always educated at the public expense? It is not public. Every foundation school at Home has been created by an individual.

61. I mean free? Yes; in most cases Grammar Schools have private foundations, and in almost every case, I believe, a certain number are educated almost free—in some cases quite free. The common rule is, that the boys who are resident in the town itself, or within a certain distance, should receive, what was in the old days considered a Grammar School education free. Of course there are certain extras now required. Everything which has been added by modern education is an extra in that case. I cannot say exactly what it is at Rugby, but I believe that there you receive Greek, Mathematics, and Latin by the present arrangement free—and also English; other things are extras. I dare say it would be under £10 a-year to a boy living at Rugby. I think at Harrow it is absolutely free.

62. How many more boys could you receive into the school with the present accommodation? Not well—any. We cannot quite carry out our system in the best possible way with the present accommodation, and I think that every new boy would really be an inconvenience to us; certainly we could not get in much more than thirty at the outside.

63. With the present accommodation? With the present accommodation.

64. Then even with the present fees, the school is nearly as full as it can be? It is quite as full as it ought to be, with the present accommodation.

65. And I suppose you think if the fees were lower —? There would be more boys perhaps.

66. If the fees were £10 a-year, don't you think the number of boys would be increased? I do not know. I doubt it myself, but perhaps I may not be capable of judging exactly; and I do not see how we could possibly give the same education for £10 a-year—we could not at present.

67. That is merely carrying on the expenses of the school from the fees? From the fees. I do not think that the head master at present gets more than £1,000 a-year, and his house—which is a little less than the manager of a bank gets, and less than Mr. Stephens was getting at Home; and of course proportionately still less from the difference of expense in the two countries. Mr. Pratt is getting from £600 to £700; Mr. Whitfield about £600, and the rest, none of them so much as £400.

68. Then you do not think that the fees being lowered, the profits of the school would increase in such a ratio as to maintain the character of education, and educate a larger number of boys at the same time? I think there would be no prospect of it at all. If we had fifty additional boys we should want another master; and we could not offer him less than £300 a-year. It would not be fair to ask a man decently educated to take less than that.

69. Don't you think, Dr. Woolley, that a scheme might be introduced similar to what you were mentioning in the old foundation schools, by which boys in any class of life, but of superior ability, might be promoted from the primary schools of the country to the Grammar Schools, which would increase the number of the school and make it more popular? I think a scheme something of this kind might very easily be devised (I have long wished to see something like it); first, a system of thorough government inspection, by some acknowledged authority, of all the schools of the country. This would, I am afraid, involve great expense; you might reward the best boys, first by giving them education free for another year, and then if any boy seemed (but not otherwise) to the examiner and to the masters to possess talent which would justify his being brought up for a still higher class of work than he might naturally look forward to, it would be a very proper thing to frank him to a higher school—from a primary school, for instance, to a Grammar School—if you found such schools in the country. You might apportion the country into districts and the Grammar Schools might

Dr. Woolley. might receive boys of this degree of attainment from a certain district; and then from the Grammar School scholarships at the University should be obtainable—to be given always at the matriculation examination. This would frank any boy who really possessed genius or talent enough to make it necessary that he should go to the University; and, beside that, I think it advisable to have scholarships in the school itself, to encourage the boys there. The trustees have already originated something of that kind; we have founded with the money of Mr. Stutzter nine scholarships. This clears a boy's expenses, and the surplus may pay for his books or be given to him as a prize. There are nine of these scholarships—three I think in each part of the school. If a rich boy gets one of these scholarships he may give up the money (which is bestowed privately and without being known to anybody else) to some deserving boy who is known to require it; the honor of course still remains with the successful candidate. The objection to giving scholarships on the ground of poverty has been proved in Universities. We had three sorts of scholarships.

7 Oct., 1859.

70. In your old University? Yes. There were scholarships as a reward for merit, exhibitions given as a favor, and a third entirely for poverty. It was found, however, after a certain time, impossible to get men to hold the exhibitions, and they have been obliged to give the system up and throw them open to pure literary competition.

71. They were not competitive then? No, they were given away—and in the same way at Eton and Winchester, and I think also at Charterhouse. But instead of these things being given as formerly they went by favor—the system became corrupt. They are now given by competition.

72. The demyships? The lowest are called demyships, by way of distinction.

73. Are there two classes in the Grammar School? Those nine scholarships belong to three parts of the school;—the demyships to the lower school, the middle scholarships to the middle boys, and the first class scholarships to the boys of the upper school.

74. Are these only obtainable after a boy has been in the school and obtained only when he comes to the school? They are open to anybody who chooses to compete for them, only he must go to the Grammar School if he obtains them.

75. They are open to anyone? The only limit is age; a boy must not be more than a certain age.

76. What is the age? Not more than sixteen, I think, to get the highest (I am not quite sure); fourteen for the second, and ten the third.

77. Then, in fact, nine boys can go to the school free? More than free—ten as things are now. Sir Daniel Cooper gave a scholarship of £18 a-year last year (I do not know whether he intends to continue it) to the head boy of the school; but beside that, there has been founded an exhibition of £22 a-year, to support a boy at the University. Having obtained that exhibition while he is in the Grammar School, after he has matriculated he is presented to it by the Senate of the University. It was a foundation left by Mr. Salting, as a thank-offering for the help his sons obtained at the University.

78. They got a large number of prizes? Yes.

79. In what way do you think the school might be made more available—what plan would you propose to make it more available to a larger number of the community—to superior children of the working classes, for instance, and to others? I suppose it would not be wished that the education should be less satisfactory than it is now?

80. No; maintaining the standard of education? I do not think that to those who can fairly afford it the present fees are more than enough. I believe it will be found on the whole cheaper for the country, more available for all purposes, and sufficient to include all boys really requiring the best education, if you found a certain number of scholarships; some attached to the primary schools and some within the school itself. I do not think, unless a boy comes very near a scholarship, that the nation is warranted in supposing that he really requires the higher scale of education. I do not think anything would be better than if you could found fifty scholarships. According to the arrangement which now exists, a boy might hold the rank of scholar without taking the money. Some arrangement might be made for paying the money so given up to a deserving boy who could not otherwise afford it. It might be presented to him in such a way as not to hurt his feelings at all, and if some of those scholarships were presented to boys coming from the lower schools—the primary schools—who shewed genius, but who could not afford to pay for the higher education, you would do as much as you can.

81. You think that would be preferable to lowering the fees generally? If you lower the fees, one of two results must happen;—you must either deteriorate the character of the instruction, or you would be obliged to do a thing which is very objectionable indeed—allow extras. And again, if you have the school broken up, some learning this and others learning that, it makes the trouble of managing the school twice as great as it would otherwise be. The advantage of having no extras is, that all the boys are at work every hour of the day, and there is no difficulty about the management.

82. I suppose you take that view of the matter, supposing that the school would have to be carried on by fees alone; but if the money given to the scholarships were devoted to the general purposes of the school, to enable the fees to be lowered —? So as to increase, to a certain extent, the fees of the masters?

83. Yes? Of course that would involve limiting the number of boys admissible to the school, would it not?

84. In what way do you mean? Suppose you gave £1,000 a-year more—we might be able with that to receive 300 boys; but, after the number had reached 300, it would become mischievous again, because we should still have to get a new master for every 30 boys. Of course the pressure, in point of numbers, is more than upon lower schools. Mr. Mills might have 34 or 38 boys, but some of the masters above him might have only 20. But their exercises

exercises take three times as long to look over as the pupils of the junior master. A master in a good Grammar School will have four exercises a week, and, as the school gets into full swing, they will be long and require his best attention—English essays, which a man cannot honestly read through under a good quarter of an hour each. My experience is that, from six o'clock in the morning till ten o'clock at night, the English schoolmaster can have little time to spare except for his meals and a little recreation.

Dr. Woolley.

7 Oct., 1859.

85. What is the general moral tone of the school? I do not know. I should expect it would begin probably with a great deal of difficulty. All schools at the beginning, and particularly day-schools, will be subject to a great deal of immorality at first. My impression is that the tone of the school is satisfactory—quite as satisfactory as you can expect. The master of a day-school has not of course the same power over the tone of his school. The way in which the tone of a school is formed is by the head master working upon the sixth form, and the sixth form working upon the juniors. You must give the head master time to form the tone of the sixth form. From what I have seen of that form I think it is very hopeful indeed, and such as would warrant us in expecting that a healthy tone would be imparted to the other boys; but you cannot expect in two years any very complete result.

86. Do you know of your own knowledge what class of boys, generally, are at the Grammar School? I do not know exactly. I think there is a great mixture, but that is no objection at all. In the English Grammar Schools —

87. I was not thinking of that—I merely wished to know what the members of the school were? I should think specimens of every class, as we have at the University—young men of every class.

88. *By Mr. Jones:* Can you inform the Committee what the number of the boys is at the principal schools in England (Grammar Schools)—schools analogous to the Grammar School at Sydney? In some cases the number is fixed. I should say that in London one school—the City of London School—has as many as 600 boys. Charterhouse has, I think, about 200, and a variety of other first-rate schools have about the same number. King's School has about 400. The Merchant Tailors, Charterhouse, and Westminster, would average, I think, about 200.

89. What may be the numbers at Eton, and Rugby, and Harrow—and schools of that class? At Eton, I think, the number ranges between 700 and 550. It is sometimes as high as 700. At Rugby at present I think there are nearly 400 boys; at Harrow something about the same number. Winchester never rises to much more than 200. Then there is another class of schools—more like ours. The Great Clergy School—the Marlborough School has, I think, 600 boys. In day-schools, I think Birmingham (which is the best I know) has on the whole about 600 boys, and of these 200 are in what is called the Grammar School—answering to this—200 more in the middle school, and the rest are in schools not in the same building. Their only connection is that they belong to the same foundation. In ordinary Grammar Schools, in Manchester and similar towns, you have from 200 to 300 as an average.

90. And what are the average rate of fees at schools in England which correspond in character to the Grammar School in Sydney? That depends upon the foundation. Where the the foundation is large the fees are small—sometimes nothing at all. When there is little or no foundation I think I may say safely that the fees are not less than ours. In some cases they are certainly more.

91. Do you think the expense of keeping children at the Grammar School in Sydney might be diminished by making the fees in the respective schools bear some proportion to the presumed value of the education given in each; that is, a lower scale of fees for the lower school, a slight rise for the middle school, and then something like the present scale of fees for the upper school? The principle is a good one; the difficulty lies entirely in the payment. As much trouble is required by the lower school as by the upper school.

92. But that means of reduction would not involve the inconvenience you before alluded to—some boys taking one particular kind of education and others not; it would avoid the inconvenience arising from extras? Of course it is a thing quite fair in principle and advisable if you could do it. The question is entirely one of money.

93. If any reduction be made in the fees that would be the better mode? I think that would be better than a reduction throughout, which would interfere with private schools and not qualify the boys themselves.

94. It would also be better than charging extra for particular branches of education, you think? Yes; that would involve us in great difficulty in carrying out the work of the school.

95. You say that nine scholarships have been established? I think it is nine.

96. In the Grammar School? Yes, I think so.

97. Which are open to the boys attending the school and to any other boys? Yes.

98. What object do you think is really served by the establishment of those scholarships? Two, I think—principally of course the inciting of competition amongst the boys; that is the thing we have in view.

99. That is the main object? In a very secondary way—some help to those parents inconvenienced by the expense. That was contemplated by the arrangement I have mentioned, but of course can only operate to a very little extent.

100. Do you not think that the advantages of a Grammar School would be much more effectively thrown open to the children of persons of moderate means if, instead of establishing scholarships within the school itself, scholarships were attached to the primary schools of the Colony (to be awarded after examination) which would defray the fees required for a course of tuition in the Grammar School? I suggested that, I think, just now. We have done the same sort of thing in the University.

- Dr. Woolley. 101. In connection with the Grammar School? Yes. I should like to see, if it can be done, two sorts of scholarships—one to frank boys from the primary schools who shall appear to the examiners fit for a higher kind of education, but which should not be held as scholarships in the school. Then, again, I should like to see scholarships, to keep up literary competition in the school itself; a very much smaller number would do for that—very likely nine or twelve would be required.
- 7 Oct., 1859. 102. The less the number the greater would be the honor of taking the scholarships? Yes. I should like to see the greater number of the scholarships as exhibitions from the lower schools.
103. Do you think the quality of the education given in the Grammar School here is quite equal to the character of the education given in corresponding institutions in the Mother Country? I think our standard is, as nearly as possible, the same as the Home standard in similar schools. When we have got it into full operation our school will bear comparison with the schools at Home very well. In some departments of education I think we are quite equal to schools of the same character at Home.
104. *By Mr. Plunkett*: What are the inducements held out to the masters who came from England, in point of salary? We promised them, first—tenure during good behaviour, and then we pledged ourselves both to the endowment and to the fees, as I have mentioned—the head master £500 a-year, the mathematical master £400, and the others £300. The rate of capitation fees we are equally pledged to by letter.
105. Is there any income understood to be guaranteed? Of course only to the amount of the endowment—the head master £500, the mathematical master £400, and the other £300.
106. And, in addition to that, any amount of fees? No.
107. As to each boy? Yes. We guaranteed the rate of capitation fee as I have stated—to the Head Master, £3 per head for the first 100 pupils, and £2 for every other pupil; to the Mathematical Master, £2 per head for the first 100, and £1 for every pupil above that number. Our Assistant Foundation Masters were to receive £2 per head for the first 100 boys, and £1 for all others till their respective salaries reached £600. There we stop; but if there are no boys at all we do not guarantee them any fees.
108. *By Mr. Cape*: You made this guarantee as to the rate, in England? Yes.
109. *By Mr. Plunkett*: Then you think you are bound to give the present masters the fees they now have? I think so; and I think besides that this is by no means more than a compensation. I think you would find that a less payment to those masters would effectually destroy the school.
110. Were they all guaranteed residences? Yes. The three foundation masters were guaranteed four or five rooms apiece, which they have. The head master of course has a good house.
111. Is there any difference between the fees at the Grammar School and the fees at King's School, Parramatta? I do not happen to know what the fees are at King's School, Parramatta. I do not think they are less than ours, when we made this arrangement. But the masters of King's School, Parramatta, are chiefly paid by boarders, a payment which of course is much more profitable.
112. Have you heard any complaints of the large amount of fees? Yes, I have heard and sympathised with them. There are two or three persons in whom I am much interested, who are obliged to withdraw all, or some of their sons, from the impossibility of paying the fee.
113. Under the present regulations, is there any deduction made at all when three or four come from one family? No. That is a very common rule in boarding-schools. I am not aware of its ever being the case in day-schools. I never heard of it. Of course in boarding-schools there is a meaning in it. To us it could make no difference. There the expense of a second boy is not so great. To us the expense of each boy is absolutely the same.
114. *By Dr. Lang*: Do you approve of large endowments for educational institutions generally? I was looking, a day or two ago, over the Report of the Indian Commission, and the papers published by some of the Scotch Professors upon the present state of the Scotch Schools and Universities. I think they there shew strong reason for the conclusion that, without endowments, it is absolutely impossible to keep up a high tone of education—that a first-class education never can pay its own expenses. In England this was proved. The occasion of this Report was the fact that, when the competitive examination began, the English competitors—Oxford and Cambridge men—carried off the larger share of the prizes. That led to the inquiry, and the result of the inquiry was the conclusion that, in England, superiority in education consists entirely in the effect of the enormous endowments we have. I forget the sums that were stated. In some cases as much as £40,000 and £50,000 a-year are possessed by English schools. In that way a boy is enabled, without any expense whatever, to stay a long time at school. Macauley's opinion (who drew up the Report) is, that a boy thus gets an enormous advantage, and is able, in a very short time, to distance other boys who do not possess the same advantage.
115. Is it not a fact that in many instances these endowments have been very improperly abused? Certainly; they have been made in many cases grossly corrupt. In many cases also they have been administered fairly; but at present, I suppose you are aware, that partly in consequence of Lord Brougham's exertions, there has been a general stir in these matters, and great reforms have taken place in most schools. Eton is purely competitive; so in Winchester, and I think also Charterhouse.
116. *By Mr. Cape*: There has been a complete reform there? Yes.
117. *By Dr. Lang*: Does not the principle of having large endowments interfere with the other principle of the pursuit of knowledge under difficulties? I do not think it does. If you had no endowments at all how would a boy get his education?
118. We find, for instance, in the two chief cities of Scotland—Edinburgh and Glasgow—in Edinburgh

Edinburgh there is quite a number of educational establishments endowed from the olden time—from benefactions—so that any citizen can get his son educated almost gratuitously. Heriot's Hospital, (as it is called,) Davidson's, and various others—Calvin's Hospital,—there is a whole series of these educational institutions in Edinburgh, and a very large proportion of the youth of the city is educated in this way. In Glasgow there are no such institutions at all, and we find that the youth educated in Glasgow, at the cost of their parents or themselves, are, generally speaking, fitted for the business of life earlier, and get on in the world better than those from Edinburgh, as a general rule? Of course I can only fall back upon the opinion expressed—and I believe, without a single contradictory voice—by such men as Blackie, which have been embodied in the public report accepted by the Government and indorsed by Mr. Macaulay. They find, by examination, that the result of the great endowment in England has been to furnish boys with the means of education who otherwise could never have obtained it; these boys, who have been able to give their whole time to their studies, when they come to be about 22 years of age, are certainly in a position of great advantage over other boys who have not had the same opportunities. If you look at the English bar—which perhaps is one of the best tests of what a man can do by hard work—that a large majority of the high places in the law are filled by men educated at Cambridge and Oxford, and who have enjoyed the benefits to be derived from those great endowments. A man has to exert himself when he gets these endowments. He cannot win the higher prizes without work. Then from Eton he must be a clever boy to get into the College; and then, to be passed to Cambridge he must go through a very severe examination and great competition.

119. You mentioned that the trustees of the Grammar School had paid to the University £13,000 for the building? And the property—between two and three acres, I think.

120. Did that property constitute a part of the grant made by the Government to the University? No, it was bought by the University.

121. From the £25,000? I do not know; it was bought since I came here.

122. *By Mr. Plunkett:* Out of the building fund? I suppose there was an Act of Parliament enabling Dr. Bland and the other surviving members of the College to alienate the property.

123. *By Dr. Lang;* Do you know whether the proceeds of that sale on the part of Dr. Bland and the other original trustees were divided rateably among them? I do not know anything about it. It is not a department with which I have anything to do. I merely speak now from hearsay.

124. *By Mr. Cape:* That is an important question. I can say as one of the proprietors that it has been divided rateably, and it has become a question how it is to be disposed of. Originally this property was given for the purpose of education—for a University and Colleges? I am not aware of the facts.

125. *By the Chairman:* Do you know as a trustee whether any large portion of this money has been given by any of those persons or shareholders to the Grammar School on the ground that they got this land for public purposes? I am not aware that we have received anything whatever from any of the gentlemen. I am not conscience of any benefaction we have received from members of the Sydney College.

126. Do you know whether the University has? I do not know.

127. *By Mr. Jones:* The Levy Scholarship—which was a benefaction to the Sydney College—was included in the sale and that has been appropriated to the University to a scholarship? I know that the Levy Scholarship has been a little increased and that it is given every year by the University.

128. *By Mr. Cape:* I find by the Bill that a certain mode of disposing of the endowment is prescribed: first, in the payment of masters; second, in defraying the expense of prizes; third, in the establishment of scholarships; fourth, in providing a library; fifth, in incidental expenses,—have you disposed of this grant only in proportion, or let it go as far as it will on the first two or three items? We have given the £1,500 to the payment of masters.

129. To the payment of masters? Yes; the other things we have supplied from the fees.

130. Then you have not been able to carry out the prescribed course of expenditure? No; we were obliged at first, until Mr. Stuttzer left us, to give every penny to the masters.

131. £20,000 were voted for the erection of suitable buildings, which you have purchased? We have purchased and to a considerable extent improved both the schoolroom and the classrooms.

132. The Governor General was appointed visitor—are you aware how often he has visited? We have at present had no public day. The Governor has, I believe, visited the school occasionally—he takes an interest in it.

133. He has not established a time? No; in fact his visits are not expected (if it means the same thing as an English visitor) unless his interference is requested. In old schools and Colleges visitors are expected to act as umpires in cases of dispute.

134. Has His Excellency made any suggestion or minute which is on record? Yes. He has founded some prize; he gives an annual prize for the greatest proficient in mechanics.

135. One of the greatest differences, I expect, between the masters of this Colony and the masters of the Home schools, is, that in this Colony you have been dependent more upon younger masters—less experienced men—and that education in that department would be inferior to what you would have in the Home schools? I think you will find in schools like these—in Marlborough and King's College—exactly the same thing. You will get one or two masters of the highest rank—men like Mr. Stephens and Mr. Pratt—and the other masters will be young men who simply take the place to learn their trade, and who will leave for a better place as soon as they are fit for it.

136. Therefore, for some long time there is very little regular teaching, they are obliged to set the boys to learn lessons, and teach them as well as they can? I think that tells both ways.

Dr. Woolley. ways. A young man who is clever, and remembers—who had paid attention to the working of the school in which he has been brought up—will soon fall into the routine of the work. 7 Oct., 1859. Men who take up these positions have frequently had some occupation as private tutors before they came.

137. I put this question to meet a public objection—that lessons are set and the boys not taught how to learn them? How do you mean that they are not taught how to learn them?

138. For instance, you set them to a new author—to translate a difficult part of Cæsar, it may be—and they had not had sufficient explanation of the mode in which to deal with the translation? That is a fault which might be easily remedied by mentioning it to the head master.

139. And more particularly in mathematics? The two mathematical masters—Mr. Pratt and Mr. Kinloch—are both known as excellent teachers.

140. I am not at all reflecting—I am simply endeavouring to meet an objection? Mr. Pratt, as a teacher of the higher school boys, is certainly very good indeed. Mr. Kinloch I have had an opportunity—and Mr. Pell has also had an opportunity—of testing, for a considerable time, both as a private tutor, and as a teacher in Mr. Macarthur's school. I believe I am speaking within limit when I say that nothing could exceed the progress of Mr. Macarthur's boys so long as Mr. Kinloch taught them. The enthusiasm with which he inspired them was very great. Of course every young man will have much to learn, and will not be worth so much as an older man.

141. I see from the last report that you have been obliged to abandon the modern school? Mr. Stutzler was master of the modern school, and the difficulties into which we were thrown by his leaving made it, I suppose, necessary to suspend—I hope not to abandon—the operation of that school until we could turn round; the whole school was in confusion when he left us. There is no sort of intention to abandon it.

142. When you advertised for masters did you find the candidates numerous? At Home?

143. No, in this Colony? We did not find a very large number of competitors.

144. A number of the applicants I suppose were not suited? A great many of them was evidently not suited. I think we do very well at present, we have very hard working men.

145. You have been obliged to reduce some of the salaries, have you not? We have reduced one salary. The circumstances under which that was done I think ought to be explained: Mr. Mills was originally engaged as Secretary to the Trustees, and he has been relieved from that duty.

146. You have taken a step recently I believe in the institution in reference to scholarships and demyships from all the schools—inviting competition from all parts of the Colony? Yes.

147. And the result is rather satisfactory, I believe? I do not know.

148. I believe some successful candidates come from the National School? Yes.

149. *By the Chairman*: Is it a fact that you have some boys from the National School? Yes; Mr. Cape happens to be aware of it, for he was present at the election which I was not.

150. *By Mr. Cape*: You have made an effort I believe, to import your own school books? Yes, I think that answers; we import so many books, and are enabled by the saving to give the boys the books they want at English prices, making ourselves a little profit. There are several advantages attending this arrangement: For some things the Sydney booksellers charge 50 per cent., and in the University we find that we are constantly hampered and stopped, by the impossibility of persuading the booksellers to get out our books on speculation. At the present moment I am obliged to lend books of my own, and still we are insufficiently supplied. I think it is a great advantage to import our own books.

151. Have you heard any complaints as to the teaching of drawing in the school, and limiting it to mere figure drawing? The present drawing master is going to leave us.

152. I am speaking as to the introduction of landscape and geometrical drawing? When we first appointed the drawing master we insisted on the carrying out of the English system, more particularly with respect to geometrical and architectural drawings. The master has I believe imported—we ought to have imported if we had had the money—a complete set of diagrams.

153. Models? Models—he imported them and we have bought them; to what extent he has used them I do not know.

154. Landscape, model drawing, and geometrical drawing? Yes.

155. There is a change in contemplation I think? Yes; there is an election next week and I know it will be insisted upon most strongly that the new system adopted in England should be honestly carried out.

156. Then as soon as you are able to obtain a teacher for the modern school you will resume your arrangement? That will be one of the first objects.

157. Have you heard any objection on the part of private schools to the competition? At first some sore feeling did exist, but to the best of my belief that feeling has entirely worn off. Those masters with whom I am personally acquainted feel that they are not interfered with by the Grammar School.

158. But the lowering of the fees would of course interfere with them? I am afraid that would be serious.

159. Do you see any possibility of following up a wider range of instruction instead of lowering the fees? How do you mean?

160. There are certain modern departments of education—the introduction of the elements of chemistry, and so forth? That is intended we assume—and I think none of us will have the least objection—that the elements of the natural sciences should be taught. Our original plan was, that an elementary course of teaching in natural science should be compulsory upon all the members of the school. The Committee did not recommend natural science in the earlier stages of school education, but they thought it extremely important that no pupil should

should pass through the school without the opportunity of acquiring a sound elementary acquaintance with this valuable department of science. They recommended that lectures on natural science should be given to all pupils of the fifth and sixth forms, and that attendance upon those lectures should be compulsory. Dr. Woolley.
7 Oct., 1859.

161. You have not been able to introduce that practice? Not so much as I had hoped. The head master does teach certain natural sciences—zoology in the first year and geology I think, in the second. I dare say, when we have the Curator at the Museum, we shall be able to do better. We could not pay anybody, and probably we could not get a regular teacher at present; but, with the assistance of the Curator of the Museum, I believe we shall be able to supply the deficiency both in the University and in the Grammar School.

162. If the fees were not reduced you could occasionally, as the means presented themselves, and as scholars are available and extend in numbers, meet the usual expenditure incurred in the Home institutions? We are only deficient in that particular and we are anxious to supply it. I know that this much is contemplated by the trustees. The trustees of the Museum are willing and the Curator can and will give time, probably one or two days in the week, for lectures on these subjects. My own plan at Home was, to make all the school attend these lectures. My trustees did not happen to think of these matters as I did, and I had to engage, at my own expense, a gentleman of some standing. Only the sixth form was required to write the lectures out.

163. *By the Chairman*: Have you had any cases brought before you which will justify you in the assertion that the school was so immoral that persons objected to send their children there?—anything to justify it? Certainly not. You would of course expect in every school certain occasional cases of immorality, particularly in the lower school; no school is free from them. You will never be able quite to prevent occasional immorality. In a day-school you will be always more subject to that sort of thing than if you had the boys always under your care. In the beginning of a school it is absurd to expect that you would not have many boys whom, if you had known them, you would not have received at all. I have heard of very few cases in the Grammar School. We have only had one brought before us as trustees, and from all I can learn not more cases have taken place here than take place every year in Home schools—not more than occurred in my own school when I first started it.

164. What are the hours of the school? From a quarter past nine to half-past twelve, and from two to four; five hours a day.

165. And the preparation of lessons is done out of hours? Yes. The masters would be perfectly willing to take a school before breakfast for repetitions and looking over exercises—which is the case at Home; a proposition was made, but so many parents objected, that it was obliged to be given up.

166. That is the school before breakfast? Yes.

167. Then of course those hours you have mentioned do not imply the amount of working hours of the masters? Oh, no; you must at least give three hours to the master for exercises and so forth.

168. *By Mr. Cape*: I believe it is also the practice of the head master to teach occasionally in the lower classes? I think most masters now review every class in the school in the course of a fortnight, in some cases oftener; I myself taught the junior school twice every week.

169. *By the Chairman*: In a large school like that, I believe the object is to form such a strong and well conducted upper class as to exercise a moral influence over the whole school? Everything depends upon the character of the sixth form, and of course the character of the sixth form depends upon the character of the master. That is the reason you cannot get too good a man; it is as difficult sometimes to get a good one as to get a Prime Minister.

170. To take 200 boys more you would require additional accommodation? You could not without painful inconvenience to the masters teach many more boys.

171. Supposing inducements were given to make the school larger, so as to hold one or two hundred boys more, have you considered the additional expense? Some time ago we laid before the Executive Council a plan which would make the work of the school better even for the present number, and which would enable us to increase considerably the number of boys.

172. How much? By at least one hundred, I think.

173. Is that embodied in any report? It is embodied in a report. I think it will appear in one of our four reports. Other things are wanted, but perhaps they are matters of luxury; our playground wants improving, and we require a room for the boys to read in; many boys take their meals at the school, and at present it is very inconvenient for the poor fellows.

174. Many come long distances to attend the school? Yes. If they had a comfortable room, and some sort of arcades for wet weather, when they could not use the playground, it would tend not only to their physical comfort, but also to improve the tone of the school.

175. *By Mr. Cape*: It would tend to order and harmony? Yes.

176. *By the Chairman*: Do I understand you that the best way of making this school more available to the public, would, in your opinion, be by founding fifty scholarships? Yes, about fifty; a majority of them should be competed for by boys before coming to the school, and a smaller number should be given in the school itself, for the purpose of keeping up the literary tone in the school.

177. *By Mr. Hay*: Every year? Every year; but the majority would be, of course, permanent, so long as a boy behaved well; he must, of course, give a certificate from the master to the Government, or to whoever pays, that he has behaved well.

178. I suppose it would be required of him that in his examination he should come up to a certain mark from year to year? Yes, the master would not give the report unless he thought he had been tolerably diligent, and that his acquirements justified the continuance of his salary.

Dr. Woolley. 179. You would not continue a boy in the school at the expense of the public who did not appear to be making good use of the indulgence? There should be, of course, a very careful certificate required; in most cases in the Universities and Schools at Home there is such an annual or half-yearly certificate required from the masters.

7 Oct., 1850.

180. That is particularly necessary, I should say, because I dare say it is a very common thing for boys who have accomplished something of that sort at an earlier period of life to relax in their endeavours? It is so necessary that we have limited the scholarships at the University to one year. Some clever boys, after winning a scholarship, do not care for work afterwards.

181. *By the Chairman:* Don't you think some such plan as this could be adopted: that these presentations should be partly endowed—that a boy should receive, perhaps two-thirds, and his parents find the rest? There will be cases, as we find them in England constantly, where a deserving boy cannot pay one penny. You might do it in this way: a very very poor boy should not be forced into one of those high schools, unless there was every reason to think that he would repay the nation afterwards for his maintenance. Such a boy would be sure to get a scholarship within the school itself, so that probably your half endowment would be sufficient eventually, but he should be franked at first.

182. *By Mr. Cape:* Do we understand that the trustees intend to re-open the modern school? Yes, if indeed it is shut.

183. Has any effort been made to get a substitute for Mr. Stutzter? Poverty prevented us; we had not a large number in the modern school, I think.

184. You have now thrown them all into the general body? No.

185. *By Mr. Hay:* You are not strong enough to keep up that modern school? We have hardly recovered the confusion into which the school was thrown by the sudden departure of Mr. Stutzter.

186. *By the Chairman:* Do you know what was the estimated cost of building which would enable you to take this larger number of boys? I am not quite certain; it would appear in the papers. I am not sure whether it was not as much as £12,000.

187. *By Mr. Hay:* Were there plans and estimates? Yes, I think they are before the Executive Council now; at all events if they are not Mr. Blckett would furnish the Committee with them. They will be found referred to in some of our reports.

188. *By the Chairman:* Have you any other suggestion to make with respect to improvement in the working of the school? We feel that it is very desirable, if possible, to have arrangements made for gymnastics, and for the additional comfort of the boys, carried out; and also for the better division of the classes in teaching. When the modern school is restored that will become the more necessary; we want a better drawing school, and more classrooms.

189. The modern school you do not think has had a fair trial? I do not think Mr. Stutzter gave it a fair trial; he was a man intellectually capable of carrying it to the highest pitch, but unfit for the office certainly.

190. *By Mr. Cape:* You have it satisfactorily carried out in the King's College School, where they have introduced engineering? They have the advantage of manufacturing, like the Irish Colleges; they find that a man requires to go for three years to engineering before he receives his certificate.

191. *By the Chairman:* Do you know what is the average rate of charge in the best private schools in the Colony? I could not state at once, but I believe when we fixed ours it was a little under the rate for the best schools.

192. The Grammar School? Yes. I think it was decidedly under—not very much, but a little.

193. *By Dr. Lang:* I know one in which the fees are twenty guineas? Yes; and it is really not too much when you consider what a private schoolmaster has to do.

194. *By Mr. Cape:* Were you speaking of private schools? Yes.

195. They generally range from £20 to £24; in some of the lower class from £10 to £12, but they have very large classes and teach them little?—

196. *By Mr. Hay:* Is there any necessity, do you think, for employing an architect expressly in connection with the Grammar School. Don't you think it would be quite practicable to obtain from the Colonial Architect all the plans and superintendence you require? Certainly, where only an architect is quite capable. In one sense we should, perhaps, do with an intelligent head master. We have a head master who has a notion of these things. We might be able to save the expense easily and to carry out more distinctly what we ourselves wish.

197. It would be more satisfactory to the public to have a more direct control over the person responsible? I do not think we understood that we had a right to ask the assistance of the Colonial Architect.

198. No, but I apprehend there would be no great difficulty in making an arrangement to obtain his services? I think it would be a good arrangement.

199. *By the Chairman:* Do you not think that a day of public exhibition, on the granting of prizes, would be advantageous? That is fully intended, but from one cause or another it has not yet been carried out. The masters wish to have a fair chance of preparing the boys better for such an exhibition. I have no doubt, however, we shall have one this year. We have the advantage of having examiners appointed so that there will be an independent report as to the state of the school.

200. There are other examiners appointed besides the master? Yes.

THURSDAY, 13 OCTOBER, 1859.

Present:—

| MR. PLUNKETT, | | MR. JONES, |
| MR. LANG, | | MR. ARNOLD, |
| MR. CAPE. | | |

WILLIAM CHARLES WINDEYER, ESQUIRE, IN THE CHAIR.

M. B. Pell, Esquire, B.A., called in and examined:—

201. *By the Chairman*: You are Professor of Mathematics in the Sydney University? Yes. M. B. Pell,
Esq., B.A.
202. And one of the Trustees of the Sydney Grammar School? Yes.
203. You have been so since the Grammar School was opened? Yes.
204. And you have watched over the Grammar School since its foundation? Yes. 13 Oct., 1859.
205. Do you think that the school, considering the size of the town and the advantages which it offers, has as many scholars as might be expected? Not so many as I think we might expect in a town of the same size in England—I think as many as one could expect here.
206. What do you think is the cause of the numbers not being proportionate? I do not think the public here have the same regard for education, generally speaking, as in England. When I say a town of the same size, I am speaking rather of the population of the whole Colony, the Grammar School being almost the only one of the kind which we have.
207. But do not you think the rate of fees charged in the school operates in keeping boys away from the school? There is no doubt whatever fees were charged would always, to a certain extent, prevent boys from attending the school; if the fee were only five pounds a-year there would perhaps be less than if it were one pound.
208. Do you not think that it would bring the school within the range of a great many persons, who would avail themselves of it, if the fees were lower? If the fees were lower there would be a larger number of pupils.
209. Do you think, from what you have seen of the working of the school, and knowing as you do the resources of the school, and the funds at its disposal, that the fees could be made lower? No.
210. What reform would you propose in order to bring the school within the reach of a greater number of people, and at the same time maintaining the standard of education as high as it is at present? The education given there costs a certain sum, which is at present provided for partly by endowment and partly by the fees, and that kind of education cannot be provided for anything less; if the fees are to be reduced, it can only be done by increasing the endowment; if any steps are to be taken to relieve certain classes of boys from paying the fees, or to receive their education at a less rate, it would be necessary to have an additional endowment.
211. Have you ever thought whether it would be advisable to connect, as it were, the Grammar School with the primary schools of the Colony—I mean by exhibitions, or anything of that kind, as in the old foundations of England—do you think that it would be advisable to introduce that system here? To a certain extent it has been introduced. There are a certain number of scholars who are appointed by the trustees, after examination, for two years; these scholarships may be held altogether six years, and the amount of the scholarship is sufficient to pay the school fee.
212. I believe that has only been adopted to a very limited extent? The number is fifteen; they are not in any way connected with the primary schools more than with others; they are open to all persons whatever, who choose to apply, within certain limits as to age merely. I think if anything is to be done to diminish the cost of education in the school, the better plan would be to extend it in this direction; not to reduce the fees generally, but to admit a certain number of boys without fees at all.
213. *By Mr. Hay*: By means of scholarships—to extend the system of scholarships? By means of an extended number of scholarships. There are a great many boys who attend whose parents could well afford to pay the amount, and I do not think those who cannot afford to pay should be entitled to receive their education at the Government expense, unless they have a certain amount of ability, which may be tested by examination.
214. *By the Chairman*: Do not you think that would have the effect of bringing the school within the reach of the more talented children of the working classes who send their children to the primary schools? It would.
215. And you think that would be a better way of popularising the school itself, by merely increasing the endowment? It would certainly make the school more useful.
216. *By Mr. Hay*: That would, in an indirect way, be an increase of the endowment? Of course it would.
217. *By the Chairman*: Do you know whether the Grammar School, since its establishment, has had any effect on the number of boys in the private schools of the colony? I have heard it said that certain schools have been given up in consequence of the establishment of the Grammar School; I have not heard that it has operated to any very great extent.
218. I believe you have acted as examiner—have you not? I have.
219. I suppose in mathematics? Yes.
220. How do you find the standard of education in the school? It is not so high as in first-class schools in England, but it would stand very well with English schools in this respect.
221. *By Mr. Cape*: Does your remark apply to the education in the Grammar School generally or to the standard in mathematics only? To mathematics only.

M. B. Pell,
Esq., B.A.

13 Oct., 1859.

222. *By the Chairman*: How do you think it is considering the age of the school, and the circumstances under which it was constituted? I think it is quite as good—better, if anything, than I could have expected.
223. Then the progress is good taking everything into consideration? Very good.
224. *By the Chairman*: The course of study in the school I presume you think suitable? I do not think it requires any alteration; it was formed after very careful consideration.
225. I believe that the property held by the Grammar School was bought from the University, was it not? Yes.
226. And do you know the circumstances under which the purchase took place—who it was that sold the property to the University? The property passed to the University by an Act of Council, it was not sold at all.
227. Do you know anything about the previous history of that piece of land on which the Grammar School now stands—to whom it was granted originally? I know nothing more than what is notorious about it; that it was granted for a particular purpose, for the establishment of a College, to certain trustees.
228. Are you aware what number of boys was to be in the school when it was in its flourishing period? I know nothing about it.
229. *By Mr. Hay*: Have the arrangements with regard to the modern side of the school been satisfactory? I have never examined in that department, but I understand that it is quite satisfactory.
230. *By Mr. Cape*: Do you mean that they have been able to keep up the same arrangements that were in operation when Professor Stutzter was there? I do not know that it is quite the same.
231. The teaching of German and modern languages? The teaching of German is stopped.
232. *By the Chairman*: Was it the intention of the trustees to supply, as soon as possible, Mr. Stutzter's place? It is not in contemplation at the present moment. In fact we have no surplus income to devote to it; there is a very small margin indeed.
233. *By Dr. Lang*: In giving it as your opinion that in the event of the fees being reduced it would be requisite to have an increased endowment, I presume you fixed a certain standard of emolument for the masters? I said if the education is to be of the character which it is at present it could not be furnished at less cost.
234. What was the amount that the trustees fixed as the proper rate of emolument for the masters, may I ask? They are different for different masters; there is no uniform rate. The head master receives £500 a-year, and a house, and a certain proportion of fees. The proportion of the fees is £3 for each boy in the first hundred, and £2 for every boy after that. It amounts to about £500 a-year; so that his actual emoluments are about £1,000 a-year.
235. Do you think it was proper to fix so high a standard in comparison with the general rate of clerical salaries in the Colony? Well, I do not see that the rates of clerical salaries, if you refer to the salaries of the clergy, bear upon the subject at all; and I do not see how they are connected with it. Our object was to get a man of superior attainments as head master. The prosperity of the school depends more upon the head master than upon anything else; and we knew perfectly well that we should not get a man of the kind we wanted unless we offered a high salary, or, at least, a good salary. I am quite sure we should not get a man of Mr. Stephens' standing for anything else.
236. Than the prospect of £1,000 a-year? No.
237. *By Mr. Cape*: That is an income which is, I believe, below the income of solicitors and barristers? Very much, of course.
238. *By the Chairman*: Below the income of a manager of a bank? It is below it.
239. *By Dr. Lang*: Is it below the ordinary rate received by men who have obtained an equally good education for the ministerial office? Where are the men who have received an equally good education?
240. I mean men who have passed through University course? Mr. Stephens had not merely passed as a man of any inferior attainments may do, but as a first-class man at Oxford, and the tutor of a college.
241. *By the Chairman*: I believe he was considered one of the best Latin scholars of his day? I believe that he stood high. There is as much difference between Mr. Stephens and a man who has merely passed for his degree, as is possible to conceive. Any person who has passed for his degree may be ordained, so far as his University course is concerned.
242. *By Mr. Cape*: The endowment is fixed by the Bill at £1,500 a-year; the distribution of that is recommended to be—first, for the officers; second, for the defraying or contributing to the expense of prizes; third, for scholarships in the University; fourth, for the formation of a library; fifth, for the current expenditure—has the endowment been arranged under those heads so as to appropriate a portion for each, or have you used it for the first and second? The endowment fund?
243. Have you distributed the fund as required by the Act? The whole fund and fees go into one account, and the whole goes to the general expenses.
244. Then they are not arranged in the order prescribed by the Act? The requirements of the clause have been substantially carried out.
245. *By Mr. Plunkett*: How many more students have you room for than there are at present? Very few indeed.
246. And do you think there are as many as you could expect in so large a town as this? Not so many as I should have expected; but we have never refused any yet; the school has never been actually full, although there has been very little room to spare; we have never been under the necessity of refusing any.
247. When it is known that you have as many as the premises will accommodate, do you think that has any effect in preventing others from coming? I should imagine very little.

- I do not think they have been so pressed for room as to produce any effect in that way yet.
248. Have the trustees anything in contemplation in case during the Summer a large increase of students are offered, to enlarge the premises? We have plans for enlarging the school, which will of course require an additional outlay.
249. If the school were enlarged, would it then afford any facility for reducing the expenses? For reducing the expenses?
250. Yes? If there were a much larger number of boys the expenses would be comparatively smaller, no doubt.
251. Have the trustees at all turned their attention to that? We have not; we have not considered it necessary, as we do not see any immediate prospect of a very large increase of numbers.
252. The present income of the head master is £1,000 a-year? About £1,000 a-year.
253. Independent of a house? Yes.
254. Are there any perquisites attached to the house? No.
255. You have been asked, in reference to barristers and attorneys, and professional men, as to their incomes—do you not know that the District Court Judges do not get more than £1,000 a-year without a house? I have heard that such is the case.
256. *By the Chairman*: And I suppose you think that a first-rate master in a school like this ought to be perfectly competent to become a District Court Judge? I should imagine so.
257. *By Mr. Cape*: The head master's residence is entirely his own—there is no public room connected with it? No.
258. Then the public room, or office, for the meeting of the trustees, would be in the other part of the building? Yes.
259. In the other wing? Yes.
260. And that is occupied by two masters? Yes.
261. The juniors have no allowance? No, it is only those who came out from England specially.
262. *By Mr. Plunkett*: What is the entire expense of each student? At the Grammar School?
263. Yes? Eighteen pounds a-year besides books; no extras, none whatever except books, and those are furnished by the trustees at the publishers' prices.
264. *By the Chairman*: Then do I understand you that, with the school standing as it is, you could not take such an additional number of boys—that there would not be room; in fact, to take such an additional number, that if the fees were lowered you could carry on the work of the school? No, if the fees were much lowered, there would be a larger number of applicants than we could receive.
265. And you could not receive enough to make the income of the school sufficiently large to carry on its operations as it stands at present? No.
266. Well, do you know enough of similar institutions in England to say what proportion there is between the salaries of the masters here, and those of the masters of first-class Grammar Schools in England? I am not particularly well acquainted with the subject, but in all the great public schools the emoluments of the masters would be far greater—not in actual salaries, but in the actual emoluments which they would receive from all sources.
267. *By the Chairman*: Then I understand you that the best way to maintain the usefulness of the school, and to make it more popular, would be, as it were, to connect it with the primary schools of the Colony by means of exhibitions to the Grammar School? I would not connect it with the primary schools, I would merely found exhibitions or scholarships, open to all.
268. Do you not think that it would be well to have some attached to the National Schools, or the primary schools, and some perhaps free? I do not see why a boy who has been educated at the public expense in a National School should have any exclusive advantages over others.
269. Do you not think you would make the school more available to the superior children of the working classes, so as to get the clever boys in the school? I think that object would be secured by merely throwing the scholarships quite open.
270. *By Mr. Arnold*: I understand Mr. Pell objects to confining it to scholars of particular schools? Yes.
271. So that they should all be open to the exhibitions? Yes.
272. Open upon entry? Yes.
273. *By Mr. Hay*: Your only limitation being as to age? Yes.
274. *By the Chairman*: Of course dependent on good behaviour and attainments? Yes; those present require the certificate of the head master quarterly.
275. *By Mr. Jones*: And what would be the immediate object of these exhibitions, Mr. Pell? The immediate object?
276. Yes? To encourage a better class of education in the Colony among many who are unable to afford the expense.
277. If you made these exhibitions free to all, might not, under that arrangement, the children of the wealthier classes come in and compete with the children of the classes educated at the ordinary schools of the Colony? No doubt, but I do not think it advisable that the children of the lower classes should receive the kind of education given at the Grammar School, unless they have such ability as to enable them to compete with the children of the upper classes.
278. And would not the throwing open of these exhibitions to the children of all classes under a certain age—would it not to some extent tend to frustrate the very object which seems to be sought in establishing exhibitions so as to enable superior boys of the working classes

M. B. Pell,
Esq., B.A.
13 Oct., 1859.

M. B. Pell, classes to avail themselves of the advantages of the Grammar School, without taxing too severely the means of their parents; because, it may be presumed, supposing the boys to have equal ability, that the children of the wealthy at a given age will have received a superior education to that received by the children of the working classes at the common schools? I do not think that is a difficulty easily overcome.

Esq., B.A.
13 Oct., 1859.

279. Could it not be overcome by using two kinds of exhibitions or scholarships when confined to the elementary schools of the Colony, of the better class, and a limited number thrown open to all children within a certain age? I do not think that would effect the object you desire, because the National Schools are open to all, and, as a matter of fact, in many cases the sons of persons of high respectability attend those schools, and if there was this additional inducement there would be more of them still.

280. *By the Chairman:* But still they would run a more even chance—the children of the working classes—if the exhibitions were confined to those schools, than if they were open generally, would they not; because it would be then only the best children who would get the scholarships—they would have the same training with children of the richer class in the school? The effect would be produced to some extent, no doubt.

281. *By Mr. Hay:* It would be more effectual, would it not, if you were to require a certificate that the parents were not able to educate their children in the Grammar School? Those kinds of conditions work exceedingly bad; if there were a class of that kind it would give rise to great unpleasantness.

282. *By the Chairman:* Have you not already introduced into the Grammar School this system—a boy may receive a scholarship in those exhibitions you have in the school now, but if he be rich he may, at his option, take the honorary distinction merely, and the scholarship is transferred (unknown to anyone) to the parent of another boy not so well off? It is not generally known to whom this emolument is to be transferred; it is only known to the trustees and the master.

283. Might not the same system be adopted in these other scholarships? That same system might be extended to all scholarships.

284. And that would prevent the objection of invidious distinction? It would lessen the objection.

285. *By Mr. Hay:* I gather from what you say that your opinion is, that the advantages of a Grammar School education ought not to be held out at the public expense to the children of the poorer classes, unless they were really superior in their abilities, not only to others of the same class, but also to others of the same age generally? Precisely so.

286. You do not think there is any advantage to them or society from taking up the children of the poorer classes unless they can challenge superiority over other children of all classes at the same age? Yes.

287. *By the Chairman:* That is why I think you say that an increase of the exhibitions would be more satisfactory than a reduction of the fees in general? Yes; that and other reasons as well.

288. Supposing this system was attempted, how many do you think would be adequate for the present requirements? I can hardly fix upon any particular number; we are not likely to have too many, I think.

289. *By Mr. Hay:* You do not think they are likely to grow in excess? No.

290. *By the Chairman:* If you make them too cheap and too easily attainable? I think we have fifteen now; and, if we had fifty, I believe it would be amply sufficient at present.

291. Do not you think the same system might be pursued by making, perhaps, a few from the Grammar School to the University, so as to connect the educational system of the country, and to give boys a chance of rising from the lowest school to the highest? That exists, I think, at present. There are scholarships of the University open to all scholars whatever—open to boys coming from the Grammar School as well as from any other school. I do not see that it is desirable to give boys educated in the Grammar School any superiority over others in that respect.

292. *By the Chairman:* You would let them take their chance with other boys? Yes; and a very good chance it ought to be for them.

293. *By Mr. Cape:* What is the main item that led to the heavy drag upon the building fund? There were £12,000 paid first of all for the old building and the ground—that left only £13,000. Then there are two wings, both quite new, they were constructed with the remaining portion.

294. The nature in which the stone was finished added much, I believe, to that outlay? I am really not aware as to the details.

295. The trustees in their last report make a statement of their requirements to the amount of £1,200;—would you be good enough to select from that list what you consider more immediately necessary than any other—those items which seem indispensable? Some part of this has been already provided for. The most important part would be the building of the proposed eastern wing—£5,000 that would be, for additional accommodation for the boys of the school—for classrooms.

296. You look upon that as the most necessary of all those items? Yes, by far; and especially if there were to be any steps taken which would be likely to lead to an increase of numbers.

297. Ventilating the dome—do you consider additional ventilation necessary? Very desirable, I think.

298. What outbuildings are these for which £400 are set down? I imagine these were houses in connection with the master's residence. That is the old report, is it not? I think that is provided for.

299. This is 24th February, 1858, the third report of the trustees. Your report says that without

- without these additions the effectiveness of the institution, even in its present state, would be seriously compromised, and the sphere of its operations contracted to a limit which was certainly not contemplated by the Legislature at its foundation? Yes.
300. Your playground—there is an item there for improving the playground? That is also a very important matter. M. B. Pell,
Esq., B.A.
13 Oct., 1859.
301. It is rather dangerous as belonging to a public as at present? It is almost dangerous.
302. *By Mr. Arnold:* With regard to the question you spoke of just now—the desirability of establishing exhibitions to enable boys of inferior schools, whose parents were unable to manage the expenses of a Grammar School education—could you suggest, or have you considered whether it would be possible to enable boys of the inferior schools, but of great capacity, and whose acquirements, or whose means of acquirements at these inferior schools would not enable them to compete successfully—is there any way by which this natural capacity might be ascertained? The lowest class of scholarships, or demyships, are given upon examinations in subjects which are taught in the primary schools.
303. Might not a system of this kind be adopted—might not the Inspectors of the National Schools of the country, whatever they were (not in a technical sense)—schools supported at the public expense—might not they recommend that boys whose natural capacity had been made evident at these schools should be admitted to the Grammar School free of expense, in order that their natural capacity might be judged of or ascertained? I suppose you mean the National Schools of Sydney?
304. I am speaking of the advantage, as far as the country is concerned; I am rather alluding to the difficulty in the country of making natural capacity available in consequence of the want of masters to give to each boy sufficient acquirements to compete successfully against boys educated in Sydney—the boys of the country not having this advantage, but being of greater natural capacity, would be unsuccessful against Sydney boys of inferior capacity? It would not be easy to get over that difficulty; I do not know much about the primary schools of the interior, but one boy, educated at the National School at Carcoar, was a successful competitor for a demyship.
305. *By the Chairman:* In the Grammar School? Yes.
306. *By Mr. Arnold:* There might be the accidental circumstance of a good master being sent there? I do not know.
307. *By the Chairman:* But if Grammar Schools were established at the principal towns of the country—at Maitland, Bathurst, Goulburn,—and if similar foundations were given to those now suggested, the boys from the neighbourhood might compete for the demyships in those schools?
308. *By Mr. Arnold:* But that would only be extending it to the larger towns; after all, the boys in the country districts would still be always unable to compete with the town boys? I do not see any objection to the plan of admitting some on the certificates of inspectors.
309. *By Mr. Cape:* There are not here the same facilities as at the middle class examinations at Home, where the examiners travel about? No.
310. *By Mr. Arnold:* I presume it would be very easy for the masters of superior schools here, in a short time, to judge whether there was any extraordinary capacity in any boy so recommended? Very soon.
311. And only in case of an extraordinary capacity the expense should be incurred? Yes.
312. I mean to say that there would be no particular danger of any favoritism being shewn in those recommendations, and no very great expense either; I suppose in the course of the first half-year it would be ascertained? Yes.
313. And you would see no objection to such a course? No.
314. *By Mr. Cape:* I believe the sizarships connected with the British Universities rather encourage the idea of raising children from the lower classes, but in these many have not the same facility? That is only at the Universities, not at schools.
315. Then you might raise a youth from the National Schools and give him a scholarship, and then he would be left to his own energies, or to what his friends might do for him? He might, with proper diligence, hold his scholarship and get his education free of expense, so long as he was likely to remain at school.
316. You could not educate him for any profession—for the church—as at Home? No, we should have nothing to do with him after he left school.
317. *By Mr. Hay:* But he might get a University scholarship, and so complete his education? Yes. With reference to the question which Dr. Lang asked me, as to our object in sending to England for a master, I would observe that if our object had been simply to obtain a graduate of Oxford or Cambridge, we should not have thought it necessary at all to have offered so high a salary,—much less would have been sufficient.
318. *By Mr. Arnold:* But at Home there is a great difference in the prospects of one graduate and another? Very great.
319. Is it not the case that the prospects of a man distinguished at the University are quite equal to the prospects of a person who comes out here with a £1,000 a-year? Yes.
320. Who has distinguished himself so greatly as to be entrusted with a large public school at Home? Yes, the mastership of one of the great public schools in England —
321. The mastership of such a school is worth far more than anything we are likely to offer here? Yes.
322. *By Mr. Cape:* Mr. Stephens' tutorial experience tells in his favor? Yes.
323. *By Mr. Arnold:* Is it not a fact that any man amongst the first-class wranglers at Cambridge would make £1,000 a-year? I will not say that; some years ago it was quite easy, but it has become so common now for young men who have taken high degrees to remain as private tutors that the emoluments are not so great.
324. *By the Chairman:* There is greater competition? Yes, there is greater competition; not

M. B. Pell,
Esq., B.A.
13 Oct., 1859.

not that the fees are reduced, but that the numbers are less in comparison. Those who have taken high degrees at Cambridge have many prospects of advancement which do not exist in this country. Such a graduate might, perhaps, at first, accept an inferior situation in England, certain of finding numerous opportunities of improving his position, but in accepting employment in this country, he has no reasonable prospect of any advancement, and would, therefore, naturally require a good emolument and a certainty of its continuance, as inducements to quit good prospects at Home.

325. But persons holding the same position in one of the large schools in England—generally clergymen—have large opportunities of preferment? Yes.

326. *By Mr. Arnold:* Are you aware what are the principal emoluments of heads of schools at Home?—

327. Is not one of the principal emoluments derived from boarders? Yes, in a great measure.

328. *By Mr. Cape:* There is extensive accommodation for establishments of that kind? Yes; Mr. Stephens is prohibited by the terms of his agreement from taking boarders.

William John Stephens, Esq., M.A., called in and examined:—

W. J. Stephens
Esq., M.A.
13 Oct., 1859.

329. *By the Chairman:* You are the Head Master of the Sydney Grammar School? Yes.

330. And you are a graduate of the University of Oxford? Yes.

331. I believe you are also a fellow of Queen's College? Yes.

332. And a tutor there, I believe? Yes.

333. You were appointed by a number of gentlemen who were directed, I believe, to select masters for the Sydney Grammar School, were you not? Yes.

334. From a number of other candidates? That, of course, I am not aware of.

335. When did you arrive in this Colony? In March, 1857.

336. How soon after you arrived here was the school opened? It was opened in August.

337. How many boys did the school open with? I think ninety-eight, but I believe it increased to one hundred before the end of the quarter.

338. *By Mr. Cape:* One hundred and ten the report says? That would be at the end of the first half-year; this report was issued at the beginning of the second half-year.

339. *By the Chairman:* What other masters had you to assist you when the school first opened? The mathematical master and the two foundation masters; all these were appointed in England.

340. Three besides yourself were appointed in England? Yes; we had also a writing master, and the French and drawing masters.

341. What is the number of the school now? Last quarter it was 198.

342. What is the highest number that has been in the school since it was opened? 210, I think.

343. When about did the slight falling off take place? We only had the larger number during one quarter; I think that shortly after this report had been issued, a number of boys were taken from private schools without consideration, and entered at this public school, their parents repented of it, and took them away again; this, however, is merely a matter of speculation.

344. Do you mean that they were found not to be up to the mark? The roughness of a public school distressed them.

345. The people here, I believe, are not used to the large public school? I think many are not.

346. Do you know whether there was any temporary depression in the Colony then, which might also have contributed to the falling off? I have heard nothing but grumbling as to commercial depression since I have been here.

347. Have the boys that first came to the school remained to the present time? Almost all our higher pupils; some have gone to business, and some to the University; the great mass of the principal or upper school consists of boys who entered two years ago.

348. Are they boys who have risen from the lower forms, or have they chiefly entered in the principal school? A large proportion of them entered in the four higher forms—I suppose about one-third or one-fourth, but I am not quite sure.

349. Are the boys you have in the school chiefly confined to the city, or do they come from the neighborhood? They come from the city and neighborhood, within a radius of six or seven miles.

350. And can you state of what class of boys the school is chiefly composed—from what ranks of life? I think they are the sons of merchants and professional men generally.

351. Merchants and professional men? I am not sure—I do not make it my business to inquire into the position of the parents of my pupils; but there is, I should think, a very large proportion of the sons of merchants and professional men in the school; speaking roughly, almost one-third, or more, must be the sons of such; perhaps a moiety of the remainder are the sons of publicans and small shopkeepers; the others are quite independent, or the sons of men in the lower conditions of life.

352. Do you think you have at present, as far as you know, any of the children of the working classes in the school? Yes, I think so.

353. Mechanics, I mean? I am not sure.

354. *By Mr. Cape:* Some that you have had from the National Schools, for instance? I know that we have had a few, but I do not like to answer the question, because I am afraid that I should lead to a wrong impression as to the proportion; I know we have some.

355. You cannot state how many? No.
356. Do you know whether you have any that came from the National Schools of the Colony? Yes, a great many. W.J. Stephens
Esq., M.A.
357. How many should you think—can you form an estimate? I should think we must have forty or fifty. 13 Oct., 1859.
358. You have one rather distinguished in mathematics at the head of the school, have you not? We have several distinguished in various branches, particularly, perhaps in mathematics, one, as you say, at the head of the school.
359. *By the Chairman*: From the National School? Yes.
360. The best pupil you say in mathematics is one from the National School—has he worked his way up since to this place of distinction, or did he take the lead at once? I should think he was at most five or six places lower when he came.
361. Do you know from what school he came? From Fort-street.
362. To what class of life do the rest of the boys from the National School belong? Many of them are evidently the sons of poor men, but more than this I do not know.
363. Now, how do you find the boys in their moral tone, as compared with schools in England? On the whole I should think they stand well compared with schools carried on upon the same principles, as in Birmingham and Liverpool—day-schools open to every one.
364. They bear a favorable comparison? Yes, I should think so.
365. And have you, from what you have seen of the school, observed anything which would bear out imputations of immorality in the school, greater than might be expected where a large number of boys of different ages are collected together? I have not. I have heard, of course, of particular instances.
366. You have met with instances? Yes; I have also heard vague reports, which I have reason to think very much exaggerated.
367. You have heard reports out of doors, you mean? Yes; there is evil, no doubt, but not to the extent which I was prepared to find here.
368. Then what there is chiefly, do you find it among the superior boys—the better boys of the school? No.
369. I mean, do the boys in the principal class—the sixth form—exercise a healthy tone and moral influence in the school? Unfortunately in a day-school, and indeed in all schools, where a fagging system, or some modification of it, is not adopted, the lower boys do not mix with the higher boys, and the highest forms hold themselves aloof, and consequently have not the influence which they might otherwise exercise.
370. *By Mr. Arnold*: Where the fagging system is not adopted? Yes; in a day-school you could hardly adopt it.
371. Yet all the public schools in England are day-schools? But the great mass of boys are boarders; they are either boarders in the schools or in the master's houses, which are, in fact, parts of the same establishment.
372. *By the Chairman*: You think it impossible to have as good control in a day-school as in a boarding-school? Quite so; much depends in the former case upon the parents; where houses are irregularly managed a boy may conduct himself as he pleases, when not at school, unless I should happen to hear of it through the police.
373. That you would consider a marked distinction between our Grammar School and the English schools, where there are so many resident masters? Yes; ours is very different from the great schools at Eton and other places, and more like those in Birmingham or Liverpool.
374. The masters there have resident pupils? In Birmingham a large majority of pupils are day scholars, and at Liverpool it is certainly the case.
375. *By Mr. Hay*: It is certainly the case at Liverpool? Yes, and at Birmingham too.
376. *By the Chairman*: You are not allowed to take boarders? No.
377. Are the other masters? Yes.
378. Do they take any boarders that you know of? No.
379. Then you have no boys resident that you know of from the country? No; but I ought to qualify what I said. One of the assistant masters has taken boarders—one or two.
380. But not to any extent? No.
381. As far as you have had an opportunity of observing, during the short time that the school has been in existence, do you find that the boys make such progress as might be expected of them? Yes; they make very good progress indeed.
382. And you say that the best boys have remained in the school and gone on? Yes.
383. Considering the short time the school has been working, could you make any comparison with similar schools in England? I should say that the average is much higher here than at Birmingham; but then the great school at Birmingham ramifies throughout the town, and fills the place of the primary schools.
384. *By Mr. Arnold*: That is King Edward's School? Yes.
385. *By the Chairman*: It has branch schools all through the town? Yes.
386. Do you think the school has as many boys as it might be expected to have in a town of this size—in a neighborhood of the same extent? I think, considering the length of time it has been established, it has a very fair number.
387. A fair number? Yes; and as large a number as the building could accommodate. I do not know that this has yet actually limited the number; but it would soon have this effect.
388. How many boys do you think you could take more than you have now, with the present accommodation, to work the school efficiently? I think it is possible that we could conveniently accommodate 215 or 220.
389. *By Mr. Jones*: And you now have how many? 198.
390. Then you could take about 20 more? Yes.

- W. J. Stephens Esq., M.A.
13 Oct., 1859.
391. *By Mr. Cape:* Does this allusion to the necessity for more ventilation relate to space? Rather to arrangement than to space. The rooms are awkwardly contrived. The large room cannot hold more than three classes in teaching at once; but the same number of cubic feet would, under different arrangement, hold five.
392. *By the Chairman:* How many rooms have you then available for classes? Four rooms.
393. And how many classes have you in the school? There are six forms—12 classes altogether.
394. And you say that in the large room you have to teach three forms at once? Yes, in the large room.
395. *By Mr. Cape:* In the hall, and beneath the hall, you have two classrooms? Yes; each of these will accommodate thirty, the large room below sixty, and the room above ninety, at present.
396. Have you started the modern school yet? Yes; there has been such a division from the opening of the school.
397. You have no special room for the modern school? No; but some of their work is taken in a separate room.
398. *By the Chairman:* The school is divided into the upper and the lower? That is only for convenience. The first and second forms are called the lower school, and the other forms are called the upper school; the lower school have not advanced to Greek; the upper school have advanced to the study of Greek, except that part which is called the modern division, which, though advanced with the upper school in Latin, has no Greek.
399. *By the Chairman:* I suppose the modern school is intended for those who do not wish to pursue their studies for the University, or for the duties of professional men, but for mercantile pursuits? That is its original or contemplated end, but here, as everywhere else, it is apt to be taken advantage of by laziness.
400. You find generally that the boys go on to the highest forms in the school? Yes.
401. *By Mr. Cape:* It is a new feature in the schools of the present day that there is a modern school belonging to every large establishment? Yes; at Harrow and Rugby, and in various other schools. I do not know that there is any such division at Eton yet.
402. In Birmingham, Liverpool, and other commercial cities? In Birmingham there is a commercial school; I think the school is two-fold—partly classical and partly commercial; I am not aware whether they learn Latin in the commercial division at all.
403. *By the Chairman:* I believe the modern school is not at present in working order? It is working, but its members are few; there are at present only six boys in it, the others have all gone into the Greek forms.
404. They have all gone higher in the school? To the Greek forms.
405. How many masters are there in the school at the present time? There are eight masters regularly at work, and two occasional masters—the drawing and French masters.
406. Do you not think if the fees were lower that more boys would attend the school? I suppose we should gain in the lower classes, and possibly lose in the higher forms. The lower forms would be increased in number no doubt, but the higher forms might be diminished.
407. But do you not think if the fees could be lowered a great many more persons would be able to avail themselves of the advantages of the school? I do not know how the same kind of education could be sold for a reduced price.
408. I mean, to maintain the standard of education, do you not think that a greater number of persons would avail themselves of the school if it were more within their reach? If the reduction in fees were considerable I suppose such would be the case.
409. *By Mr. Arnold:* And then, do you think there would be any advantage in affording a classical education to the class of boys who would be induced to join the school? In most cases the reverse.
410. *By the Chairman:* Do you not find that the fees of the school, to persons of limited income—men in Government offices, and others, who have two or three sons perhaps to send to school at the same time—mount beyond their means; have not there been instances of persons who made that complaint? Yes; but they complain that bread is dear too. I do not see how you can remedy that misfortune.
411. *By Mr. Cape:* How do you find the rates in comparison with the City of London and the Birmingham schools? The Birmingham school is quite free. That is an exceptional case. I should think the rates here are in fact as low as they can possibly be. If it were not that Government pays now £7 10s. in effect on each boy, by the endowment of £1,500, it would be impossible to carry on our present system at the present rates.
412. *By the Chairman:* You could not maintain the standard of education and work the school efficiently if the fees were lowered? Not unless there was a large additional endowment.
413. Do you not think it would be an advisable thing, by some means, to bring the school within the reach of the superior children of the working classes, probably by increased endowments or by a larger number of exhibitions? I should like to see as large a foundation as might be, of free scholars, who should gain their places by competition.
414. What system would you propose for that? I think that an enlargement of the system we have at present would serve very well.
415. There are some free scholarships in the school now? Fifteen.
416. Would you explain to the Committee what system is pursued with regard to those scholarships? They are divided into three classes:—demyships, junior scholarships, and senior scholarships. The candidates for the demyships must not have passed the age of twelve years; the candidates for the junior scholarships must not have exceeded fourteen years; and the candidates for the senior scholarships must not have passed sixteen years; and the examination for demyships is conducted in general subjects of a primary English education,

education, while for the junior scholarships Latin is required, and for the senior scholarships Greek also.

W.J. Stephens
Esq., M.A.

417. *By Mr. Arnold*: Are those scholarships and demyships open to all? They are open to every one. 13 Oct., 1859.

418. *By the Chairman*: I understood you to say that fifteen places may be obtained now? Yes; they have been already obtained.

419. *By Mr. Arnold*: Of what value are they? The pay the fees of the school—£18 a-year, and there is also a prize in books given with each.

420. They are open, in point of fact then, to those who can maintain themselves in town? Yes.

421. They do not enable a boy from the country to compete—however great his ability may be—if he has not the means of maintaining himself in town? No.

422. *By Mr. Hay*: They make it in fact a free school to those boys who obtain the scholarships? Yes.

423. With a prize added in books;—is that prize added to all equally, or in proportion as they acquit themselves in examination? They are not awarded equally; the prizes of the senior scholars are of greater value than those of the junior, and those of the junior than those given to the demies.

424. *By Mr. Cape*: Had you any candidates from other schools in other parts of the city? Not a great many.

425. You had some? Yes, we had seven.

426. *By the Chairman*: Then these fifteen scholarships are open not only to the boys of the school, but also to other boys from outside? Yes, to every one; we do not make any limitation except the limitation of age.

427. Are all those fifteen given? Yes.

428. Can you state what the number of competitors was? Thirty-seven.

429. Do you know whether the majority who obtained them were boys in the school or boys from elsewhere? Three candidates from other schools were successful—two from Mr. Cape's school, and one from Carcoar National School. Some, also, of our own pupils who obtained scholarships had previously been educated in the National School.

430. But the majority—were they obtained by boys in the school or by boys from outside? Twelve scholarships out of fifteen were gained by pupils already in the Grammar School.

431. And you think it would be advisable to extend this system in order to open the school more? I think so. Each of the scholarships is tenable for two years, so that a boy entering as a demy ought to be able to gain a junior scholarship at the end of two years, and at the end of the second two years to gain a senior scholarship. This would give him six years in the school, and if he is of good abilities he ought unquestionably, at the end of that time, to obtain a scholarship in the University.

432. Supposing these were increased, how many do you think it would be advisable to institute in a school? I should like to see a round number—say fifty—and reckon the additional endowment necessary at £1,000 a-year.

433. £1,000 a-year would enable you to found fifty? Yes.

434. *By Mr. Hay*: To increase the number to fifty, or to found fifty? To found fifty.

435. *By the Chairman*: And you would make them open to everybody,—but how would you propose to manage it? I would make them quite open to everybody.

436. You would not confine some to the National Schools, and some to the people in general—some to the schools, and some to be obtained after they got there? I think not; I should like to see all boys equally matched.

437. Then you would make them perfectly open? Yes; the honor of getting them is destroyed if they are made eleemosynary at all; and if they are confined to particular schools, the result is, as we have seen in England, most unfortunate.

438. But in later days, in the public schools in England, do not the boys who win these very exhibitions on the foundation of public schools bear a favorable comparison with other boys? No doubt; but it is only the other day that the old foundations were made open, and since they have been thrown open to free competition, the foundation boys bear a favorable comparison.

439. In these demyships and scholarships you have now in the Grammar School, has not there been some system adopted by which if a rich boy gets them he or his parent may be allowed to give up the pecuniary benefit to a deserving boy whose parents have not the same means? The present system allows any successful competitor for one of these scholarships to retain the style of honorary scholar, but to hand over the fee to the trustees who then give it to some one else.

440. It does not create any invidious distinction;—the boys do not know this? The boys know who has given such emoluments up, but they do not know who has received them.

441. Has that been adopted? Yes, to some extent.

442. And you think then decidedly that the best plan would be to make the school more open by means of an increased foundation, than by lowering the fees generally? Very much the better plan. I think if the fees were lowered the endowment would have to be increased very largely, and the outcry—which I know does exist—would be enormously increased, because the school will still be for the higher classes and not for the lower. The labor of the son of the laboring man is too valuable to allow him to be kept at school long enough to reap the real advantage to be derived from a classical education.

443. That is why you think it only advisable to open it to superior ones? Yes.

444. *By Mr. Arnold*: I suppose a classical education does not afford very much advantage to mechanics or to persons in the lower walks of trade? If carried out fully it would.

445. A classical butcher, for instance, would he derive any particular advantage by being a classic?

W.J. Stephens
Esq., M.A.
13 Oct., 1859.

classic? Yes, he would have more resources within himself, would have a more extended view of life, and be a freer and more liberal man, and therefore a better citizen.

446. *By the Chairman*: With an increase of the school by fifty, would you require additional accommodation? Yes.

447. Has any plan been proposed to give that additional accommodation? Yes, more than one; the extension is only mentioned in the report of the trustees as the proposed eastern wing, which would contain a schoolroom and two classrooms.

448. How many additional boys would that accommodate? Four additional double classes, containing 120 pupils, might be taught in the new schoolroom. Each classroom I should wish to be large, so that sixty boys might be taken at once. If I may judge by the expense of the rest of the building I should fear that £5,000 would not suffice.

449. Do you know what has been spent on the rest of the building? Yes.

450. How much? £17,000.

451. On pulling down the old building and putting it into its present state? Yes; and on the out-buildings belonging to the school, the porter's lodge, the fence, &c.

452. *By Mr. Arnold*: You have spoken of King Edward's School, at Birmingham, as the one to which you can most nearly compare this establishment—can you tell the Committee what the extent of the endowment of that school is? It is very large indeed. It consists of land in Birmingham.

453. It is an entirely royal foundation? Yes; but it has a corporation managing its own property.

454. What is the number of boys attending that school? I am not sure, but I think very considerably over a thousand.

455. Are there any other public schools in Birmingham—endowed schools? I do not know particularly the condition of Birmingham.

456. I think Dr. Lee was once head master of that school? He was.

457. Then the proportion of children at Birmingham who attend that school is not greater than the proportion of children who attend this? I am not sure.

458. Not much, at all events;—the population of Birmingham is more than four times as large as Sydney? I suppose so.

459. Is it five times as great? The population of Birmingham is about 220,000.

460. *By Mr. Cape*: Would you collect as many boys in a school in this colony—would you not draw a distinction between the climates? These are not collected in one school even in England; yet we have schools containing over a thousand boys in England—Christ's Hospital, for instance.

461. *By Mr. Jones*: Have you any personal knowledge of the public schools of Birmingham or Liverpool? No. I have seen, and been through them, but that is all.

462. Have you sufficient knowledge of them to be able to judge of the general moral tone of those schools? Not from personal knowledge.

463. *By Mr. Arnold*: Do you mean that it is not very high as compared with other schools? I do not think the moral tone of any school is very high.

464. But as compared, for instance, with Eton? I think it is much lower.

465. What is the difference between the foundation at Eton and King Edward's School at Birmingham—is there any difference? The estate is not so directly devoted to school purposes at Eton as at Birmingham.

466. I mean to say the foundation is the same? Originally I think both are nearly the same.

467. The school at Birmingham you say is entirely free? Entirely.

468. There are no fees at all? None, I think.

469. Are you aware what the fees at Eton are? Very trifling.

470. Four pounds a-year, are they not? I believe so, nevertheless the expense of education is very heavy.

471. Yes, for boarders, but not for the oppidans—I think they call them in England? Still, even for the oppidans, the accessories of education are very expensive.

472. Do you know at all what is the proportion of town boys attending the other royally endowed schools—at such as Eton,—is it not the case that nearly all the boys attend? I do not think so. Eton is a small place, and the school is the principal establishment in it.

473. Is not Winchester another royal school? No, Winchester was founded by William of Wykham.

474. You have spoken of the unpopularity of the Sydney Grammar School in some respects, from the roughness complained of—is that complaint made by the boys, or the parents, or by both? I think by both. There were many little boys sent who had been petted, and who were not prepared for the bullying which we cannot altogether extirpate in any large school, or other society.

475. Do you know what sort of control is exercised by the older over the younger boys at the English public schools? Yes.

476. Is not that system very much disappearing now? I think the severities are disappearing, but the system of fagging is established more thoroughly than ever.

477. Yes, but the roughness which formerly existed has been much moderated? Yes. Fags, for instance, are generally liberated from the menial duties which they used to perform.

478. I think one of the things insisted upon in English public schools is that the younger boys or fags should not, under any circumstances, meet the boys of the upper school as their equals? Yes, that is one result of the system.

479. In fact, if they see them coming on one side of the street they are obliged to go on the other? Something of the sort, I believe.

480. And in every respect they are treated as inferiors, and subject to their control? Yes.

481.

481. *By the Chairman* : At the same time the upper school boys, or captains, are bound to protect them against others? Yes, but the protection is very limited. They protect them from all others— W.J. Stephens
Esq., M.A.
482. *By Mr. Arnold* : And beat them ten times as much as all others would beat them? Sometimes, but seldom. 13 Oct., 1859.
483. But so far as the severity of the system goes, it is entirely unpopular in England, and falling into disuse? Yes.
484. Do you think it desirable that the control, as separated from the severity of the system, should be continued? I think so, if it could be done; it is rather a moral influence than a physical one that I should like to maintain.
485. *By Mr. Cape* : Have you succeeded in the Grammar School, as far as you could, where there are non-residents, in inducing the elder boys to control the younger in that respect? I have endeavoured to do so.
486. Is it not the case at present that the Grammar School is availed of much by country boys? Yes, there are a considerable number of country boys; but as they are scattered through the town, living with their friends, I do not distinguish them readily.
487. Would you anticipate any increase to the usefulness of the school if a boarding establishment were created in connection with it? Yes; but the school is a secular school, and these establishments would have to be sectarian, like the Colleges in connection with the University.
488. On account of, as you conceive, the absolute necessity of religious teaching to the children? Yes; not exactly religious teaching, but religious exercises.
489. *By Mr. Arnold* : But they are not insured now? By no means; but the responsibility rests with the parents.
490. Would not that objection be sufficiently got rid of, if the boys were permitted on Sundays to select what places of worship they should attend? I think that one day in a week is a very poor substitute for the regular religious exercises of an English school.
491. Do you think the religious exercises of an English school are very improving? I do. I allude to the regular chapel services, rather than to any doctrinal teaching in class. Of this there is very little indeed, in any of our higher schools.
492. Substantially, although this Grammar School is endowed from the public funds, towards which the country districts contribute equally with the towns, is not the benefit of the school practically confined almost entirely to this town? Yes, I imagine that it was meant for the town; it is called the *Sydney* Grammar School.
493. *By Mr. Cape* : Still you have some from the interior? Yes; but the cheapness of the education makes but little difference to them, for the expense of travelling and living in Sydney must be very heavy.
494. Have you considered whether any system might be adopted by which boys from the interior, of great natural capacity, might be permitted to avail themselves of the advantages of a superior school of this kind at the Government expense—whether the character of the school would not be likely to be improved by gathering together all the superior available capacity of the country? If it were done by competitive examination there would be no difficulty about it; but there would be great difficulty in obtaining such competition in the remote districts.
495. I am rather putting the question as an inquiry whether you do not think some other system might be adopted instead of a competitive system? Then I would rather it was detached from the Grammar School, and that there were exhibitions given to certain districts to which the Inspectors of Schools, or other authorities appointed for the purpose, might appoint; and they might be given to the Sydney Grammar School, or to other places of education. I would rather that the school itself had nothing to do with any merely eleemosynary exhibitions, or with any other to which the appointment was made on local grounds, or on any other than that of superiority on competitive examination.
496. You speak of eleemosynary assistance,—is not eleemosynary assistance afforded to every scholar in the school? Yes; but so long as it is afforded to all alike no invidious comparison can be drawn.
497. Might not a system be adopted by which you could steer clear of the difficulty you suggest. For instance, the Government propose to afford instruction of some kind to all the children of the Colony;—if they have inspectors, might not those inspectors recommend boys of superior natural capacity as free scholars in the Grammar School, until it was tested in the Grammar School whether their capacity was of such a description as to make the expense worth incurring? If they were not fit for the Grammar School work at first I think it would be better that they should have exhibitions to the National School.
498. To the National School at Sydney? Yes, to the Fort-street School.
499. That might be a preparatory step to the Grammar School; but what I mean to say is, do you not think—the expense being incurred by the country generally—that advantage of some kind ought to be extended throughout the country? I suppose it is impossible to divide the advantages of an endowment of public money equally over the country. I should imagine that the nearest approach to a fair division would be made by establishing Grammar Schools at Maitland, Goulburn, Bathurst, and other centres of population.
500. Do you not see that that would only extend the advantages to other towns, and still exclude the country? It is perfectly true. I am afraid the physical difficulties are so great in the way of gathering boys together from the country districts that we shall never have anything like a large number of country boys in the Grammar Schools.
501. *By Mr. Cape* : Would you be good enough to look down that list of requirements of the trustees and select those most requisite? [*Witness refers to Third Report of Sydney Grammar School, 24 February, 1858.*] I think the first thing we require—reckoning

W.J. Stephens
Esq., M.A.
13 Oct., 1859.

- reckoning our numbers as likely to remain as they are—is increased appliances for recreation. I think we ought to have fives-courts, a covered playground, and cloisters. A cricket ground, I think, we ought to have also. But the first preliminary step should be the enlarging of the playground. If I may be allowed to produce a plan, which I have brought with me, I can better explain myself. (*Plan produced.*) That piece of land near to the school is not in our possession, and is likely to become an injury to the school.
502. *By Mr. Arnold:* Is it public property? No, I believe that it belongs to Mrs. Burdekin.
503. *By Mr. Cape:* You mean that it will be overlooked by the boys, that all the improprieties which take place there will be manifest, and that you will also suffer from the drainage? Yes; a greater evil can hardly be conceived.
504. *By Mr. Arnold:* Your ground is higher; could you not build a wall? There is so much rise in the playground as to make this very difficult, if not impracticable.
505. And would you suggest that this land should be bought? Yes, or that it should be got on lease for a long term of years. I cannot conceive greater mischief to the school than houses of bad repute being established there.
506. *By the Chairman:* It is not a street where anything like fine large houses could be built? No, there is no room. It is an awkward little point of land.
507. *By Mr. Cape:* Have you thought of any means by which it might be made a paying speculation? Boarding houses might be established upon it.
508. *By the Chairman:* It is very low, is it not? It is certainly very low. The height above the bay is considerable, but the fall in the immediate neighborhood is very small.
509. And you think that is a matter of importance which ought to be attended to? I think it is most important, looking to the future.
510. *By Mr. Arnold:* And the other houses, how are they situated with respect to the school? We have the front of the other houses looking towards us, and that is not so objectionable as that the back premises of fourth-rate houses should command, or be commanded by, the playground.
511. *By the Chairman:* The extension of the eastern wing was to run out at the back—Mr. Blackett has plans? Yes, he has various plans, but I do not think he has my last suggestions.
512. Your last suggestion for making these improvements has not been embodied in any report? Not exactly, but very nearly.
513. *By Mr. Cape:* You speak of the gymnasium and of other points? I should like to convert those old classrooms into a playground below, and have other classrooms built on the same level.
514. Would there be sufficient air for a place of recreation underneath? I would cut away the walls and leave pillars only. The ventilation of those rooms is not satisfactory.
515. Where would the fives-court be? The fives-court could be formed with little additional expense where we had a high boundary wall.
516. *By Mr. Arnold:* Can you not avail yourself of the Hyde Park playground? They play at cricket there, but it is a common subject of complaint.
517. *By Mr. Cape:* Will you be good enough to speak of the way in which you would complete the exterior of the place, within the compass of the trustees? I would have the long schoolroom thrown out—not of the double cube shape, but very long in proportion to its width, flanked by classrooms; you might have two stories of classrooms.
518. *By the Chairman:* In the shape of a T, something? Yes; and under these I should like to see also a covered playground. I do not think we can in this climate have too much playground covered for the boys.
519. *By Mr. Cape:* You mean in consequence of the sun? Yes, and also of the heavy rains.
520. *By the Chairman:* That is the first thing you would suggest? Yes; I think the health of the school would really be improved by it.
521. And at the same time it would offer additional attractions? Yes.
522. What increased accommodation would those additions give you? For about 310, which would complete the system. If the number was to be increased further, I should go on to nearly double that, and then a larger building would have to be erected.
523. But that wing would allow the school to increase to 310? Yes, to more than that, if we retained the old classrooms.
524. Has there been made a calculation of the probable expense of such an alteration? Of all, except the two classrooms, but the expense of those would not be very great, I think.
525. What is the expenditure estimated at? £5,000.
526. *By Mr. Cape:* I believe you urged upon the trustees the desirability of planting the ground, so as to have shade during the summer? I should be glad to have a complete plantation concealing us from Stanley-street; and if we had this additional ground I should like to plant trees all round it; of course the ground so planted would be very little use as recreation ground for forty or fifty years, but when the trees became timber trees and the fences might be removed, they would be very useful indeed.
527. *By the Chairman:* In the National School the trees seem to live very well with the boys? The system is different, the playground is not a quarter the size, and there is a master always in charge of it.
528. *By Mr. Cape:* You would recommend the planting of willows, which might be removed when the other trees grew up? Yes; blue gums, willows, figs, and other trees, which grow very fast.
529. What you urge at once is some kind of means of healthful recreation? Yes, and principally a covered playground.
530. Are your sanitary arrangements as good as you could wish for? The hall is ventilated by a thorough draft, but I desire to have a dome or cupola on the top of the building, which should

should carry off the air by means of ventilators in the roof, so as to obtain a free circulation of air without this thorough draft.

W.J. Stephens
Esq., M.A.

531. You want an improved ventilation? Yes. The room would be properly ventilated by such an arrangement.

13 Oct., 1869.

532. And your classrooms below—when the wind is from the westward the rooms on the eastern side would become close and unhealthful? It is very uncomfortable now, and it is only by leaving the doors and windows open that we are enabled to keep them tolerable.

533. Do you find the youths of the school as able to close study as boys at Home? Yes.

534. The climate admits of it? Yes.

535. From the upper school lads? I think so. Perhaps we do not get the same intense application here that we do in some of the old schools at Home, where ambition is much more lively.

536. *By Mr. Arnold*: And the emulation greater, too? Yes; and a man's prospects in life depend so much upon success or distinction at school.

537. *By the Chairman*: Of course having a larger number of boys would have an important effect in increasing emulation and competition? Yes.

538. *By Mr. Cape*: What improved facilities for teaching are you desirous of obtaining? Our classrooms are very inconvenient. We have no proper room for teaching drawing, which is very important, and we have no room in which outlines of physical science could be taught with advantage. They could be taught now, but in very small classes, and that would be loss of time.

539. Do you find that boys leave school at an earlier age in this Colony than at Home? I think that is the complaint of schoolmasters everywhere, here and at Home.

540. Do you think it remarkably so in this country? Not as far as my experience goes.

541. *By the Chairman*: You can hardly tell that yet, from the short time the school has been opened? No.

542. Are the hours at present satisfactory to the public—in the Summer is not half-past nine too late in the day? It was on account of some complaint on the part of the public that the hours were changed, but I have heard as much complaint since.

543. You have heard as much complaint since? Yes. I never heard any complaint of the lateness of the hours.

544. *By Mr. Cape*: They lose an evening hour by being kept so late as 4 o'clock? If it were four hours instead of five, including two hours break at noon, more work would be done, and the boys would be less distressed.

545. Do you think the boys could keep on for four hours? Yes, having an interval every hour. They turn out for five minutes every hour.

546. *By Mr. Arnold*: By whom is the course of study at the Grammar School prescribed or arranged? By me.

547. Entirely at your own discretion? When I arrived I submitted a plan to the trustees, and they approved of it.

548. What is the course of study—is it copied from any particular schools at Home? It is very nearly that of Rugby.

549. Rugby at the present day? Yes; but probably more closely Marlborough or Cheltenham.

550. It embraces modern languages, and accomplishments, and drawing—does it necessarily embrace these? Yes.

551. Is it necessary that each scholar should select one or more of the modern languages as a part of his study? That was the case, but German has not been taught lately, and French is therefore the only modern language taught.

552. At Rugby, I think they may choose either German or French? Yes.

553. *By Mr. Cape*: You teach them occasionally the elements of physiology? Yes.

554. *By Mr. Arnold*: And chemistry? No.

555. *By Mr. Cape*: Blackstone is one of your class books, and Pattison's Zoology? Yes; but the latter is rather too popular for a satisfactory class book.

556. *By Mr. Arnold*: So far as you are aware, what degree of scholarship here has been attained—has any scholar been produced here that would be equal to a fifth class boy at Rugby? Yes, excepting in one point where we are very deficient here, and that is composition. I think otherwise we have many that would stand well.

557. *By Mr. Cape*: The native youths have not that patience in working out composition? It is a long process, it takes eight or ten years to learn composition; and I am not sure whether it is in all cases worth the time it occupies.

558. *By Mr. Arnold*: I think I understood you to say that you thought no system could be advantageously substituted for the system of competition for these scholarships? No; exhibitions might be given on other grounds by the Government, or through the people, to the Grammar School, but I think the School itself should have nothing to do with any assistance, for which there would not be "a fair field and no favor" in public competition.

559. Have you ever considered the great difference between the circumstances of a colony like this, and the circumstances of a country like England—I mean as to the advantages afforded to the same classes of persons in different situations in the Colony—in England you have free schools everywhere, every town and village affords some sort of school; but here persons in the country have frequently no schools at all; or if they do exist they are of a most inferior description, so that boys of far greater capacity, and who could be made superior scholars, would have no chance whatever with inferior boys who have had the advantages of town schools—have you ever considered that circumstance? I have considered it, but I do not see how it could be remedied.

- W.J. Stephens
Esq., M.A.
13 Oct., 1859.
560. In connection also with the circumstance of the Government here adopting the general education of the country, which is not the case at Home? The character of most Grammar Schools at Home is not by any means high.
561. Yes, but I suppose they are superior to anything we have in the country here? Possibly.
562. You are not probably acquainted with the state of education in the interior? I have seen something of it.
563. You have no acquaintance with the general competence of our schoolmasters in the interior—perhaps you are not aware of the fact that generally our schoolmasters are persons incompetent to gain a livelihood in any other way? That is a principle on which I believe masters to be appointed in some other places.
564. *By Mr. Cape:* Have you any wishes to express on the subject of the Grammar School, or any recommendations to make? I should like to have plunge baths, with a current of fresh water through them, and large enough to enable swimming to be practised.
565. *By the Chairman:* Anything you have not touched upon to increase the efficiency of the school? There are a great number of improvements which I should like to see introduced, but they depend upon an enlarged endowment; we want a drill master, a German master, and a fencing master. I think the building ought to be finished also, on the ground of its being a public building, and set aside for what one must consider a noble purpose, and not scandalise the institution by its dilapidated look.
566. *By Mr. Arnold:* Have you no system of gymnastics now? No.
567. No professor of any kind? No.
568. *By Mr. Cape:* The boys would resort to gymnastic exercises during their play-hours, or in the evening, which would have a moral influence in diverting them from the town? Yes; but I should look rather to the fives-court, fencing, &c., than to the systematic exercises, for this result.
569. Do you think it important to have a gymnastic master—is it not the case in England in all the superior schools? Yes; there is generally a drill master.
570. Who teaches fencing and broadsword? Yes; but we do not so generally use the machinery which is commonly connected with your notion of gymnastic exercises.
571. *By Mr. Arnold:* They are generally attended by professors, as they style themselves, such as Professor Angelo and others, who teach them fencing and broadsword? Yes.
572. *By the Chairman:* Do you not think that might be supplied by a public gymnasium, if one were established in Sydney? Yes, to some extent.
573. And you desire to see the children instructed in these gymnastic exercises? Yes; especially in those which are not called regular gymnastic exercises, such as fencing, single-stick, and even boxing.
574. That when they do fight they may fight like civilized beings? Yes.
575. *By Mr. Cape:* And this is part of that moral control? If we had a capable drill master, one who would always be at hand to take a foil with a boy, we should have a control which could not be obtained in any other way. One of the class masters exercises a chilling influence on the games; it is hardly possible to avoid this; there are some men of peculiarly genial minds who are able to unite both characters.
576. That is the case in England—Lillywhite is a first-class man in England—I saw it at Cheltenham? Yes; in almost every public school at Home there is a professional bowler to teach cricket. He is engaged by the boys themselves—Lillywhite is one so employed.
577. *By Mr. Arnold:* Were you educated at a public school? At Marlborough.
578. Had you any opportunity of observing the effect of gymnastic teaching, especially with regard to pugilism—had it any tendency to create that propensity? No.
579. On the contrary? I do not think it makes much difference.
580. Is it not the case that those who are the greatest proficient are the least given to the practical exercise of the art? Perhaps.
581. Is it not always the muffs who are quarrelsome? Generally; it is too serious a thing for them if they fight well—to fight more than once a-year.
582. *By the Chairman:* At the same time the training induces a manly healthy tone? The possession of any power generally gives a superior moral tone; there are exceptional cases where the possession of that power, like others, tells only for evil, but such are not common.
583. *By Mr. Cape:* I believe your plan is to teach in the junior forms as well as your own? I review each class in detail, once in each week—that is, I examine them in the work of the past week; this occupies almost half my time, nor would it be practicable, so frequently, were the school much larger.
584. The gentlemen who joined you in this Colony are graduates of the Sydney University? Two of them are.
585. That is the old practice; the junior teachers generally come from the University and are not expected to have had much practice in teaching? We do not look for teachers professionally trained in our high class schools.
586. But in the large endowed schools? The masters are generally graduates. “Training” is chiefly useful in enabling masters to teach very large numbers of pupils at once, and a principal means is the division of the employments of the school in the most convenient way, by the time table. The number taught by any one master in our best schools is small, and the same necessity for special training does not exist.

THURSDAY, 20 OCTOBER, 1859.

Present:—

MR. PARKES,		MR. HAY,
MR. PLUNKETT,		DR. LANG,
MR. CAPE.		

WILLIAM CHARLES WINDEYER, ESQUIRE, IN THE CHAIR.

Sir Charles Nicholson, Bart., called in and examined:—

587. *By the Chairman*: I believe you are Provost of the Sydney University? I am.

588. And one of the executive members of the Board of Trustees for the Sydney Grammar School? Yes.

Sir Charles
Nicholson,
Bart.

589. You have been so since the Grammar School was founded? Yes.

590. Are you of opinion that the objects you had in view when the institution was founded—taking into consideration the number of boys of an age fit to be sent to the school—have been carried out, and that there are as many boys in the school as could be expected? I think there are; in short the school is full. Unless there be some enlargement of the present building it would not accommodate more.

20 Oct., 1859.

591. Do you not know that complaints have been made that the school fees are too high—that persons of limited incomes anxious to avail themselves of the advantages of the institution, being unable to pay the expensive fees, cannot send their children to the school? Yes, I am aware that complaints of that kind have been urged.

592. And also that the high rate of charges for school fees gives to the institution a character of exclusiveness that makes it unpopular? I am not prepared to say that. Even if it were so there are many reasons why you cannot reduce the fees. At the same time I should be glad to see a number of free exhibitions established; and I think in that way the usefulness and popularity of the institution would be increased, whilst the intentions of the original promoters would be thoroughly realised. I think the aim and intention of the founders of the Grammar School were not so much to cheapen education as to establish a high standard of instruction, such as by means of endowment is provided for in the Grammar Schools of England. Adverting to a change in the rate of fees, I may mention that I have suggested that the wishes of those persons who were anxious to avail themselves of such a change may be met by some such system of endowments as that which prevails in England. Impressed with these views I urged that there should be created a number of free exhibitions, so as to increase the present number of fifteen scholarships to fifty. These exhibitions should be open to boys of three several classes:—1st. To those coming from primary schools, and able to pass through a tolerably strict examination in reading, writing, arithmetic, and English grammar. 2ndly. To boys more advanced and acquainted with the rudiments of the Latin grammar; and, 3rdly. To boys of a still higher grade, and who might be qualified, on admission to take their places in the fifth form. I should be glad if the funds at the disposal of the institution would enable us to establish fifty of these scholarships. I think there are many reasons against lowering the fees; indeed I do not consider the charge at present made—looking at the high character of the instruction communicated—is higher than the rates charged at private schools. The boys, besides obtaining a good classical education, are taught French, German, mathematics, and drawing without any extra charge, the fee being £18 or £18 18s. If the charges were materially lowered the private schoolmaster would have good grounds of complaint, and would urge that an institution founded to a great extent by means of public funds was underselling him, so that he would not be able to realise that fair remuneration for his labor which he had a right to expect. But if the system of free exhibitions, to which I have alluded, were carried out that objection would not apply. The aim should be to enable any boy, however humble his station, if he had moderate capacity and was emulous of literary distinction, to elevate himself; and by exhibitions of this kind he might pass through all the grades in the school, and then seek admission to the University.

593. Then, I understand that unless these additions were made no larger number of boys could be received? Not without risking the health of the scholars.

594. *By Mr Parkes*: Would you object to the transfer of exhibitions from boys whose parents could afford to pay to the poorer scholars? I should rather reject such a practice. I do not think this should be regarded as an eleemosynary institution or as intended for the charitable bestowal of pecuniary aid only. I would rather wish to see the acquisition of a scholarship regarded here as it is in England—as an honorable distinction, to be competed for by persons of all classes, to be an object of ambition alike to the son of the humblest day laborer, and the wealthiest citizen.595. *By the Chairman*: An arrangement might be made with these demysships and scholarships whereby the parent might be at liberty to transfer them? I regard the adoption of such a rule as practicable, although for the reasons above alleged I doubt its expediency. No doubt a great number of these exhibitions would, in point of fact, fall in reversion to young men who really required them.596. *By Mr Parkes*: I gather from your evidence that the end you had in view, and the difficulty you wish to meet would be accomplished by the creation of these exhibitions, and that this would enable persons to obtain a high class education by whom it could not be obtained except by lowering the scale of fees—and this being the case, without giving an eleemosynary character to the institution, is it not desirable that, after having been refused by the parents of some scholars, the exhibitions should fall to those boys whose parents are less

Sir Charles
Nicholson,
Bart.

20 Oct., 1859.

less able to pay the fees? In every instance where the parent has declined to receive the endowment it may be given to the second best boy on the list of competitors.

597. *By Mr. Plunkett*: Is not that introducing a distinction? I say I deprecate it; still if the parent chooses to say "I do not accept of the endowment" he can do so. In England a gentleman's son if he chooses may and constantly does compete with the son of the poorest tradesman.

598. *By the Chairman*: In instituting these exhibitions you would make them entirely open to the Colony at large, and connected with the primary schools? I should like to see them connected with the primary schools; for instance, two or more for the National Schools, as well as to such other schools as may be considered entitled to the privilege. I would throw them open to the whole world, and let there be public examinations, also open to the whole world. The gentlemen who conduct the examinations do so publicly, and according to the number of good marks a boy gets his merits are weighed.

599. *By Mr. Plunkett*: It shews that there is no favoritism? It shews that there is no favoritism; and I should like to see the sons of the wealthy competing with the sons of the laboring man.

600. *By the Chairman*: It would give the poor a chance of getting a high education for nothing, while the rich had to pay for it? By giving the nomination for a limited number to a few of the primary schools, you would, to that extent circumscribe the benefit to the child of poor parents. Recently a youth came from a training school in the country, he was first on the list at the examination; he gained a scholarship which he now holds; had it not been for this acquisition, he must have gone back to the bush to follow bullocks and horses. If this young man be diligent there is no reason why he should not be equally fortunate in gaining one of the scholarships at the University and so fully completing his education. A sum of money was recently placed at my disposal and that of the senior Professor of Classics for the benefit of the University; we have agreed to found with it an exhibition, to be exclusively confined to boys from the Sydney Grammar School.

601. *By Mr. Plunkett*: What is the amount of the endowment? About £40 a-year.

602. *By the Chairman*: In founding these exhibitions, do you not think it advisable to connect the primary schools with the Grammar Schools, and the Grammar Schools with the University? I do; yet I do not wish it to be said that we are playing into the hands of any particular class. I should like a considerable portion of these benefactions to be open to the whole world; I think it would help us in our national schools and middle schools, if we had a limited right to presentations to the scholarships in the Grammar School.

603. Do you think it advisable to make these scholarship presentations to the University, and that there should be a system in the University by which the boys could avail themselves of the exhibitions without matriculating? The Grammar School has already one, and we may look forward to their number being augmented.

604. *By Mr. Parkes*: Are you aware whether any of the boys have passed to the University? There has hardly been time; but I hope shortly to see a sufficient number of them qualified. We must not ignore the fact that there are other schools of great merit in the Colony; and I should like to see every school partake of the advantage.

605. *By the Chairman*: In instituting Grammar Schools in other parts of the Colony, you would like to see this project adopted in regard to them? Yes.

606. And you think fifty would be sufficient? Yes. We have already fifteen, and there will always be a considerable portion of the boys whose parents can pay liberally for their education; and it is not right to educate the gentleman's sons at half the proper cost, at the expense of the public. I believe there is no school in England where you can get such high class instruction at a cheaper rate, that is, when comparing the position of things here with those in England.

607. *By Mr. Parkes*: Apart from the mere economy, what is your opinion as to the success of the school, and as to its educational effectiveness? I form the highest opinion of the instruction communicated in the school.

608. Is it vigorous and sound? Yes. I was induced to form the highest expectations of Mr. Stephens from what I heard at home. He was nearly at the head of his College, and I heard in all quarters the highest accounts of his abilities as well as of his efficiency for such a position as that which he now fills; indeed all the masters who came out here from England had the highest testimonials of qualification.

609. *By the Chairman*: I believe this piece of land where the Grammar School stands was purchased by the University from the original shareholders? Yes.

610. Before the University left it the school was in abeyance? There was no school at all, and as soon as the University got it they rented it. Thus finding it valuable the shareholders would not part with it except for the full value of their shares. I believe one of them (Mr. Wentworth) gave up his shares, but we had to pay for all the rest. They insisted on the full amount, and I think we paid some £8,000 or £10,000 for it.

611. Then the value of this land which was given for the purposes of education did not go towards the objects the Government had in granting the land, but to the shareholders? Yes. The building was in a most dilapidated state.

612. Charges have been made as to the dislike of parents to send their children to the school on the ground of the immorality existing amongst the scholars—have you seen anything to justify such a scandal? No, I did hear of a case where some of the boys were dealt with for having been guilty of an act of playful irregularity towards one of their schoolfellows. Any one who knows what schools are at home, must be aware that occasionally things of that kind will happen among a body of youths. More than this one instance I am not aware of.

613. I believe we have been told that an additional thousand pounds would found these fifty scholarships? Less than that. There are already fifteen; and practically more than fifteen, some of the parents having declined to receive the benefaction.

614.

614. But then, to receive that number there is not sufficient accommodation? The school must be enlarged if you make any considerable addition to the pupils. There are two hundred I believe now, and the largest room is only 80 feet long. Sir Charles Nicholson, Bart. 20 Oct., 1859.
615. There is a piece of vacant land at the rear? Yes, and there is a plan for extending the building in a sort of cruciform shape. That would of course enable us to receive double the number of boys. There is a very good area for recreation ground.
616. *By Mr. Plunkett*: From what funds is it proposed to build this extension? That depends upon the pleasure of your colleagues in the Legislature.
617. It is proposed that it should be done at the expense of the public? The school has no funds at its command.
618. Are there not temporary means by which accommodation might be given? No. Besides I think the erection of a temporary building is not economical in the end; it is better to put up something substantial.
619. Are all the rooms occupied as lecturerooms, or where business is conducted? All are occupied as classrooms; indeed I believe even now there is a positive deficiency of room.
620. Do you know whether any clergymen of the different denominations have visited the school, or whether, in case they did visit it, any provision is made to enable them to give religious instruction? I am not aware of any clergyman having made an application.
621. It is not contemplated (as in the system of the National Schools) to provide for religious education? No.
622. *By the Chairman*: The schools are purely of a secular character? Purely secular.
623. *By Mr. Cape*: In England I believe all candidates for public appointments have to undergo an educational examination; and also that the commercial interest have recognised the principle? Certainly; with regard to all public appointments it is made an indispensable condition, that the candidate should submit to an examination, which is open to all the world.
624. No doubt this has a beneficial influence on the progress of education? There can be no doubt that it gives a great and wholesome stimulus.
625. It induces parents to keep their children longer at school? Yes.
626. What do you think of the grant of land for the Grammar School, as compared with the grants for similar schools in England? Seeing that it is in the heart of a large town, it is a fair proportion.

WEDNESDAY, 26 OCTOBER, 1859.

Present:—

MR. CAPE,		MR. PARKES,
MR. PLUNKETT,		DR. LANG.

WILLIAM CHARLES WINDEYER, ESQUIRE, IN THE CHAIR.

Mr. William George Augustus Fitzhardinge called in and examined:—

627. *By the Chairman*: You are a solicitor of the Supreme Court? I am. Mr. W. G. A. Fitzhardinge. 26 Oct., 1859.
628. You have one or more boys at the Sydney Grammar School? I have four.
629. I believe you have some evidence you wish to give before the Committee, will you be kind enough to favor us with it? I have no particular evidence to give, I merely wished to suggest the examination of other persons. However, I am quite willing to afford any information in my power.
630. You have boys at the school, you say? I have, and have had for two years.
631. Since the school began? No, not since the school began, but not later than twelve months after.
632. They are there now? Yes.
633. As far as you have seen the working of the school you are satisfied? No.
634. In what way are you dissatisfied? I am dissatisfied with the extreme length of the vacations. There are thirteen weeks of vacation out of the year besides Saturdays. And I am also extremely dissatisfied with the use of (what are popularly called) "cribs" being allowed by the masters. I mean by that translations.
635. Is there anything else? These are the two points upon which I am dissatisfied, and I think the school may be made much better than it is.
636. In what way do you suggest that it may be improved? My opinion on that point is not worth much.
637. You think that cribs are used for a great part of the lessons which are prepared out of school? I do not think, I know that they are.
638. Supposing they are seen using the cribs, it is impossible for any master to prevent it? It might be prevented if the masters infused a proper spirit among the scholars; the boys might be made to detest cribs. But the cribs are now used under the master's eyes.
639. You do not know this of your own knowledge? No, I could not; but I have expostulated with Mr. Stephens about it, and he did not deny it. The position of a boy in his class is determined by certain marks which he obtains according to the correctness or incorrectness of the exercises which he submits to the master; those who use cribs having no faults in their exercises obtain more marks than those whose parents will not allow the use of cribs. Then, at the end of the quarter the names are paraded by advertisement in the

Mr. W. G. A. Fitzhardinge. the public papers, shewing the position of each boy in his class—those who use cribs standing highest. This takes the heart out of boys who endeavour to work out their translations without cribs. As to the holidays there are three in the year—six weeks at Christmas; six weeks at Midwinter; and a week or ten days between Easter and Michaelmas,—which, in plain English, I call a monstrous robbery, and many more think it a grievance.

26 Oct., 1859.

640. Are you not aware that it is the usual period given in the large schools in England? We are not in England.

641. But are you not aware of that as a fact? I cannot recollect. I will not say I had not six weeks holidays when a boy, but I am almost certain I had not six weeks at Christmas and six weeks at Midsummer; at any rate that that is not the rule at all schools I am certain. Besides, we are differently situated here. At Home boys can pursue their education when they go to their friends in the country, so that a scholar does not waste these six weeks holidays; but, in this country, when the parents of nearly all boys are in trades or professions and unable either to attend to their sons when at home or to send them into the country for instruction, they remain to torment their mothers at home, and lose during the vacation nearly all that they acquired during their previous quarter's schooling.

642. Then it is the length of the holidays and the use of cribs that you consider the chief objections? Those I consider absolute grievances; as to the mode of conducting the school my opinion cannot stand against that of Mr. Stephens; however, I may say that I do not approve of the plan, and I believe it is wrong.

643. *By Mr. Plunkett*: You still leave your boys there? Yes.

644. If you disapprove of the mode of conducting the school, how is it that you allow your boys to remain there? Because it is still the best school in the town.

645. Do you give it the preference? Decidedly, but I think it might to be made better.

646. *By Mr. Cape*: Do you allude to the classes, or to the course of study? To the course of study. It is not usual to put a boy from his first Greek book into Euripides; it was not so in my time, and that time produced as good scholars as the present.

647. Do they not take the Anabasis first? I think they take first a book of short extracts from Greek authors. My two elder sons, who had not been at Greek more than two months, were put into Euripides. Grammar is ignored altogether; and as to prosody, they do not know what it is. The other day my elder son, who had been two years in the fifth form, read to me a passage, and in every second word he made a false quantity. I asked him if he was ever taught prosody; he replied no, except once or twice when he first went there.

648. You are from Westminster School? Yes.

649. There is great rigour in prosodial examination there? A false quantity makes me shudder. No doubt the word is good whatever quantity is given to it.

650. *By the Chairman*: You only judge of the system of teaching from your examination of your own boys? Yes, and from the information I have received from the parents of other boys whom I have persuaded to send their children to the school;—they also complain.

651. *By Mr. Cape*: Have you a son on the elementary forms? Yes.

652. Is he not properly informed upon grammar? I cannot say—I am afraid to examine them.

653. A boy of the junior forms in Grammar Schools has to be well-grounded in grammar? Quite so.

654. Do you disapprove of the grammar used at the school—Kennedy's? I cannot get over my first love "The Eton Grammar," and, strange to say, some of the masters at the school have expressed the same opinion, and think it the most intelligible on the whole.

655. Are you not aware that several first-rate teachers consider it as perfectly exploded? I know it is abused, and has many errors in it no doubt; but no book can be perfect.

656. Speaking of cribs, do you object to the Hamiltonian system of advancing the scholar? Yes; that is, I object to the English being placed before the boy.

657. Is not that a compromise between working out the translation and the use of cribs? No, what the boys use are sheer translations.

658. The translations you allude to are Bohn's translations? Many of them; the worst cribs are keys to the exercise books—"Bland's Verses" and "Ellis' Exercises."

659. You say it is well known to the masters that the boys use cribs? Mr. Stephens, in a letter in answer to one from me on the subject does not deny it, whilst I am told the boys use them under the nose of Mr. Whitfield and the other masters.

660. Do you mean to say that is the case with regard to the key to the Verses and Ellis' book? I do not examine my boys to learn what is going on at school; but being always with the children, I can hear their conversation without encouraging gossip. I have heard that oftentimes a boy will have the crib in his lap, and the book immediately before the master; that occasionally the crib is taken from a boy, and as a punishment for using it he is not mentioned in the examination.

661. *By the Chairman*: Then by the rules of the school they discountenance the use of cribs? Of course, if a pupil was to acknowledge that he had used a crib he would be stood upon the form.

662. If a boy was found to have used a crib he would be without rank? The examinations I allude to are not the examinations for prizes.

663. There it is impossible for boys to use cribs? Not easily.

664. Then the best boys will be those who have not used cribs? Of course they will be the best scholars.

665. At these examinations the honors of the school are obtained? Precisely so. But at the other examinations they get into the habit of using them, and at every examination one or two are caught, though when found using them they are turned out.

666. How are they obtained here then? My boys can get them.
667. With respect to the other translations, have you as much objection to them? Precisely. You must give the boy a dictionary and grammar, and make him work out the translation.
668. It must be mere guess work to translate with a crib without a grammar? Of course he cannot do it without a grammar. Mr. W. G. A.
Fitzhardinge.
26 Oct., 1859.
669. Supposing he had a good knowledge of grammar, under a careful master, would he make more progress? Yes.
670. The objections to translations by authors, and the objections to keys to certain exercises, is materially different? Of course the use of the key is a much grosser piracy.
671. Sydney Smith, the reviewer, was in favour of the Hamiltonian system? Yes; and Mr. Southey, who himself educated his son, recommended the use of the works of different translators, comparing every passage; but the Revd. Mr. Southey complains that he did not become a scholar on account of that practice. I should have no objection to a boy reading Cowper's Homer, but Pope's is not a translation. The use of keys is the worst practice. A boy takes his Ellis or Bland to school, keeps it open and copies from it to make his lesson perfect, while a boy who works out his translation cannot do so. The master says you must have a key.
672. You allude to Mr. Whitfield's form? Yes. Before the commencement of the present quarter, and to the gentleman (I think Mr. Heaven) who had charge of his form in his absence; Mr. Blackmore too has often said "You must have a key to get this right;" so perfect boys send in their exercises letter for letter the same as the key. Of course these would be without fault, whilst the exercises of the boys who did not use the key would have faults.
673. *By Mr. Plunkett*: Can the master, however strict, prevent it if the boys have money wherewith to buy the books? The parents might; but if the masters would infuse into the boys a spirit of dislike to the practice, and expose those who used cribs to ridicule before their school-fellows, that would be the greatest check. It is done at Home.
674. *By the Chairman*: You do not undertake to say the masters do not do the same here? No, I will not; but I do not believe they do.
675. Boys are apt to make these charges when they have not obtained the best places? It may be so.
676. *By Mr. Cape*: Have you complained to Mr. Stephens of the use of cribs by other boys as an absolute injustice to your sons? Yes. I have complained in writing, and it was not denied.
677. *By the Chairman*: He did not deny that the boys who use cribs get the best marks? He did not say that in so many words.
678. Did Mr. Stephens, in his letter or communication, countenance the practice of giving the best marks to the boys who used these cribs? He cannot avoid it.
679. Are you not aware that it was done in Dr. Arnold's school? I am not.
680. *By Mr. Cape*: You allude generally to cribs? Mr. Stephens never answered my letter to him; but my boy reported to me that Mr. Stephens called him up and said, "Tell your father, it is not always those who pass the best examination who are the best scholars." But if the masters choose to adopt a register of the position of boys after examination, the boys do not like to have their names paraded in the public prints as low down in their class, after working hard, and because their competitors used keys.
681. Your boys complain that they do not get their deserts? Yes, and I believe they have grounds. I know how the boys work.
682. *By Mr. Plunkett*: How do you think that can be rectified—the masters could not control the boys when at home? Where the masters have strong grounds for believing that keys are used they can adopt stringent measures, such as depriving a boy of marks, and making representations to his parents. The thing would soon be done away with if Mr. Stephens infused a different spirit into the boys. Mr. Stephens has already very much improved the tone of the boys since the school was opened; the tone is far superior to what it used to be at the Bishop's Grammar School, and other contemporary schools.
683. *By the Chairman*: You think there is a very superior tone? Yes, a very superior tone. I think the boys are very good judges of the abilities of their masters, and among the great number of boys in that school to whom I have spoken, I have never heard one say that he was not glad when Mr. Stephens examined the class, which he does once a week. The little ones even are proud to have Mr. Stephens to examine them. (*See Note at end of Evidence.*)
684. *By Mr. Plunkett*: As to the frequency of vacations, would you put an end to vacations altogether, or what course would you pursue? I would give three weeks at Christmas, and three at Midwinter, which I think would be enough. I have been told that the masters require vacation themselves for private relaxation; but they cannot require such prolonged relaxation, because they are not, or ought not to be, like the private schoolmaster, disturbed in their ordinary duties in order to see that the number of pupils in the school is kept up, the masters in this institution have not to think how their rent will be paid or their tradesmen's bills met; they have handsome incomes.
685. Do you not think that persons in sedentary occupations are better fitted for the discharge of their duties after having the benefit of an occasional run into the country? I do not admit that these gentlemen have sedentary occupations. The Lord Chancellor in England, the Chief Justice, and the other Judges of the Supreme Court, the Chief Secretary, the Attorney General, and other officers having onerous and continuous duties to perform, have not anything like thirteen weeks' holiday in the year.
686. *By Mr. Cape*: The wear and tear of the mind in a schoolroom is different from that of the business of a Judge in his chamber? The wear and tear of a school establishment, where the master is the proprietor, is quite equal to the wear and tear of the mind of a Judge; but I do not admit that these gentlemen have any wear and tear of mind.

- Mr. W. G. A. Fitzhardinge. 687. *By Mr. Plunkett*: Are you not aware that Dr. Arnold placed the greatest possible value upon having the opportunity of going for a couple of months to the Continent, and thus by breaking up altogether, for a time, from his ordinary work, set himself up for the rest of the year? Yes, sir;—Dr. Arnold was an author as well as a schoolmaster.
- 26 Oct., 1859. 688. As far as his experience went it was in favor of a long vacation? Yes; have either one long vacation or two very short ones. But I do not think any man's mind would be relieved by going into the bush, though it might be in visiting the ancient cities of Europe. There too the pupils might find other sources of instruction during the vacation.
689. *By Mr. Cape*: Such as in the elements of natural history and science at the Polytechnic at Home? Precisely. And if we had here such institutions as the Royal Society, where lectures could be heard, the case would be somewhat different.
690. If there were other institutions by which the education of the pupils could be continued during the vacation, then your objection to a long vacation would be less? Yes.
691. Do you not think that, at the Grammar School, they could follow up the pupils education by such instruction in the elements of natural history and chemistry? Not by merely attending lectures.
692. Do you think the course of study at the Grammar School will admit of such an addition? I am not an advocate for overloading a boy's mind.
693. The vacation then does produce an advantage? If you do not take too much of it.
694. *By Mr. Plunkett*: What means have they of employing themselves during vacation? Some seven out of every twelve will hang about the streets or wharfs; others will go to Bondi, and such places, exposing themselves to danger; some go into the country. If the parents could have entire control over them there would not be so much objection; but the parent is, in most cases, engaged in his shop, warehouse or office. The mother can have little control where there are several boys from twelve to fifteen years of age.
695. *By the Chairman*: Would they not roam about the streets and wharfs, and go to Bondi and such places, in a three weeks' vacation the same as in one of six weeks? No; they would not get into the idle habits which a six weeks' vacation allows them to contract.
696. *By Mr. Parkes*: At all events it would be a three weeks instead of six? Precisely.
697. *By Dr. Lang*: Not having heard the former part of your evidence, I understand that you object to the frequent and long holidays in the Grammar School? Yes; thirteen weeks out of the year.
698. In how many intervals are these disposed? Six weeks at the beginning of the year; six weeks in the middle of winter; and from a week to ten days is divided between Easter and Michaelmas.
699. Are you aware that general complaints have been made upon this subject? I have never heard any one speak upon the subject who did not complain. I wrote a letter to the trustees about it. Having spoken to several parents who had boys in the school, and who also objected on the same grounds. But being snubbed I dropped the matter there, intending to petition this House for inquiry, but the Chairman was before me.
700. *By the Chairman*: When you say you were snubbed, what do you mean by that? I cannot remember the words used. They took over two months to answer me. I suppose the trustees could not be got together.
701. *By Mr. Parkes*: You have no objection to put the letter before the Committee? I have not, if I have not torn it up.
702. *By Dr. Lang*: Do you think that such boys as those who attend the Grammar School would be disposed to embrace other branches of study during the term of the holidays? If it was in a popular and agreeable style, such as can be picked up in London, and in many of the great cities of England and the Continent.
703. Boys let loose from school are likely to take every advantage of giving up all attention to the business of education? Decidedly so. I think if the education of a child could be carried on during vacation in a pleasing way much good would be derived.
704. *By Mr. Plunkett*: It is the length of the vacations you object to? The length of the vacations.
705. *By the Chairman*: What was the purport of the answer the trustees sent you, when you complained, and say you were snubbed? The gist of the letter was, that the masters required relaxation as much as the pupils. I will try to find the letter, and will send it to you at once, and I will give you the names of many gentlemen, nearly seventy, who agree with me in thinking the holidays too long, and I think from the position and experience of those gentlemen you will admit that their ideas are entitled to some consideration.
706. *By Mr. Parkes*: Will you state some of the names? There is Mr. Blake, the barrister, Mr. Broughton, a Member of this House; Mr. Yeomans, of Elizabeth-street south; Mr. J. G. Collyer, Elizabeth-street; Mr. Grattan, Clerk in the Colonial Secretary's Office; Mr. Greville, formerly in the Colonial Secretary's Office.
- Mr. Parkes (to the Chairman)*: I think, sir, we need not take any more names down. All have boys in the school, and when I spoke to them upon the matter agreed to sign a statement or petition of remonstrance to the trustees. It strikes me that Mr. Holroyd, who is one of the trustees, could give a great deal of information to the Committee; then there is Mr. Maxwell, the Sydney District Court Registrar, who was the first to complain of the vacations.
707. Did Mr. Maxwell take his boys away? He did; he is a gentleman who takes great interest in the education of his children, as most Scotchmen do.
708. Are you satisfied with the rate of charges or fees in the Grammar School, considering that it is supported by Government funds? I have considered the subject, and I think the fees are much too high.
709. It has been stated here that the object being not so much to cheapen education as to place

place a first class education within the reach of those who could procure it, it would be a much better way to have free exhibitions for boys whose parents could not afford to pay the terms, rather than to lower the terms, and thus come into competition with private institutions? I think the fees should be lowered, or at all events there might be a scale. It seems absurd that boys—young men in fact—under the tutorship of Mr. Stephens, should pay no more than children learning the rudiments. I think if the fee were retained as it is for boys up to a certain age, and lowered for pupils below that age, this difficulty might be met.

Mr. W. G. A. Fitzhardinge.

26 Oct., 1859.

710. You are satisfied with the teaching efficiency of the establishment as compared with other establishments previously existing in this country? Exactly so; but it must be very much improved to be like any educational institutions with which I was acquainted in England.

711. You think it would be only just to have a gradation of fees according to the value of the instruction a boy receives? I do think so. A plan has occurred to me which I mention with great diffidence; I do not think you will ever, or at any rate very rarely, get a good scholar out of a day school. Unless the pupil is in a great measure under the master's control at all hours the teaching will not have very great effect; to meet that, I would suggest that there be either scholarships or exhibitions to the amount of fifty, or which in England is called a foundation. Fifty scholars should be admitted into residence, boarded, lodged, and educated, free of all charge. The scholarships or exhibitions should be given to those who are successful at examinations, the examinations to take place every year. If there are forty or fifty scholarships the ten senior boys who go out should be succeeded by ten juniors coming in, so that forty or fifty scholars would remain on the foundation. There should be an examination every year for those who go out and for those who come in. Then every master should be compelled to have under his charge a certain number of these scholars, or they might reside at a boarding-house, where they could go as boarders, a master presiding over every boarding-house; of course there could be day-scholars as well.

712. *By the Chairman*: Bearing in mind the objection to making this school destroy the private schools, do you not think it would be sufficient to meet the general wants of the place at present, if there were fifty free exhibitions open to those who are able to obtain them by examination? Yes. But you must remember that shortly there will be similar schools in large towns, and of course all the boys who come from the country will no doubt remain there.

713. Supposing it were possible to lower the fees and maintain the efficiency of the school, would it then be the best plan to found these scholarships? Decidedly so.

714. *By Dr. Lang*: Do you think it desirable that boys should be removed so much from parental control as your recommendation contemplates? I have had seven sons to educate, and I have come to the conclusion that they do not know so much as I did at their age; and I think it is because I was at a boarding-school, and they have been at a day-school. They do not pick up the *genius loci*.

715. *By the Chairman*: I believe this is a school established on secular principles, and do you think that in such an institution more can be done than to give the masters power to take boys to live with them if they choose? I suppose not.

716. *By Mr. Plunkett*: Do you think that, where it cannot be done at the residence of the parents, it is necessary to cultivate the domestic and social affections as a part of the education? I have thought so, and have kept my family about me, but I do not think they become bright scholars in that way. By leaving them with the masters you do not destroy the domestic affections, because they can stop at home on Saturdays and Sundays, and would probably enjoy the vacation much better.

717. *By the Chairman*: Then, on the whole, you think this exhibitions plan would be the best? Certainly, if you make them numerous enough.

718. Fifty would be sufficient? Yes.

719. *By Dr. Lang*: To what amount do you think the fees should be reduced in order to make the institution available to a greater extent than it is at present? If the establishment is to be endowed I should think two guineas a quarter quite enough to charge.

720. *By Mr. Cape*: Right through—or would you draw a distinction between the upper and lower classes? Right through, as a principle. It might be convenient, and very likely parents would not object to pay a higher fee as a boy advances.

721. *By the Chairman*: The fee is not higher than the class of education warrants? I am not acquainted with any free endowed school.

722. You would not think of underpaying the masters? Certainly not; they must be well paid.

723. *By Mr. Plunkett*: Do you think it desirable to undersell private schools? Acting for the public I do not think you can look to the right hand or to the left.

724. What is the utmost number that could be educated at the Grammar School in Sydney? Nearly five hundred I should imagine.

725. Would that be sufficient for the education of the children of Sydney, independently of private schools? Perhaps not. If the private school could offer something better than the Grammar School the private school would get plenty of custom.

726. *By Mr. Cape*: Do you think it would be sufficient to accommodate all in Sydney who are desirous of availing themselves of its advantages, without being enlarged? Certainly not;

Mr. W. G. A. Fitzhardinge. not; the buildings must be enlarged. There are two hundred scholars now and they are very much crowded. I have been told by one of the trustees that even, with the present fees, they have not money enough—that they must have more assistance from the Government or the thing will fall to the ground.

26 Oct., 1859.

727. *By the Chairman*: You have no other general suggestions to make? No, except that those gentlemen whom I have named should be examined.

[*Note referred to omitted by order of the Committee.*]

FRIDAY, 2 DECEMBER, 1859.

Present:—

DR. LANG,

| MR. PARKES.

WILLIAM CHARLES WINDEYER, ESQ., IN THE CHAIR.

Mr. A. C. Maxwell called in and examined:—

Mr. A. C. Maxwell.

2 Dec., 1859.

728. *By the Chairman*: Your Christian name? Alexander Charles.

729. You are Registrar of the Metropolitan District Court? I am.

730. You have a son at the Sydney Grammar School? I had three sons there about a year ago, but I have none there now.

731. When did you send your sons there first? At the opening of the school. I forget exactly how long since; but it was about two years ago.

732. How long did they continue there? About one year.

733. Under what circumstances did they leave the school? I had a misunderstanding with the head master and with the trustees; and I was induced to withdraw the two elder boys in consequence of what I considered harsh and unjustifiable conduct towards my younger son.

734. Did you lay the matter before the trustees? I did.

735. Did any correspondence take place between you and the trustees on the subject? I addressed them on two occasions and had replies from them, with a copy of the resolution passed by the trustees.

736. Have you the correspondence with you? I have.

737. Is that the original, or merely copies? Merely a copy. The arithmetical exercise is what gave rise to the misunderstanding. That is the basis of the whole matter. (*Vide Appendix A.*)

738. Then, I understand, the first misunderstanding between you and the Grammar School authorities arose out of a certain exercise which your son wrote, and which came under your notice? Yes; an exercise which my son wrote, and which came under my notice.

739. Then, I understand, that this exercise having come under your notice, you wrote these words, which are written across it:—"Darlinghurst, 3rd November, 1858.—A proof of Grammar School figures.—A. C. Maxwell." That is signed by your name? Yes. The original of the exercise is at the Grammar School.

740. This exercise, or one of a similar character, having come to your notice, you wrote the words across, and your son presented it to the master? Yes, by my direction; after being asked

asked for it, in his proper place in school, and at the proper time, he handed it to the captain, or head boy of the class, and he handed it to the master.

741. Did you, before writing that, write to the master upon the boy's progress? I did not.

742. After this exercise was presented to the master did you receive any communication from the Grammar School? I did. The first short letter. (*Vide Appendix B.*)

743. After that exercise had been shewn to the master you received from Mr. Stephens the letter dated the 4th of November, 1858? Yes. I may be permitted to state that the exercise was presented to the master on the 3rd of November, and that between ten and eleven o'clock at night on the 4th, I received the communication referred to, stating that my son would not be permitted to return to the Grammar School until I had made a full apology for the remark complained of.

744. Upon the receipt of that letter, what did you do? I explained the matter to a number of my own friends, in whose opinion I placed confidence.

745. What did you do with reference to the Grammar School authorities? By the advice of one of the trustees, I addressed that body instead of Mr. Stephens. Mr. Holroyd suggested this course, as I objected to communicate with Mr. Stephens.

746. Then this letter, dated the 8th of November, was the one you received from the secretary? Yes; the letter which embodies the resolution adopted by the trustees.

747. Then, after receiving that letter from the trustees, you wrote the other letter? I wrote the second letter to the trustees. (*Vide Appendix C.*)

748. Was this the whole of the correspondence that passed? Yes.

749. Is that the original? No; it is a copy made by myself. The original of the exercise is at the Grammar School; this copy was made by my son, and the writing across the document is mine.

750. Did your remarks apply to the arithmetical exercise? Yes; only to the figures.

751. Then I understand you never corresponded with Mr. Stephens or with any of the other masters upon your son's progress before you sent this document with the indorsement? I did not. I hold in my hand the quarterly reports, in the latest of which my son's progress in classics is spoken of as fair, in mathematics slow and even, in geography and history fair, French fair, drawing fair, and, generally, conduct very satisfactory. (*Vide Appendix D.*)

752. Then, all the boys in the class of which your son is a member would be cognizant of your treatment of this exercise? From what my son stated to me on being questioned, I should say not.

753. That depends, of course, upon the conduct of the school? I understand from my boy that the exercise was only seen by the boy appointed to collect them from the class.

754. There is nothing to prevent that boy from shewing it to any other? Nothing that I am aware of.

755. *By Mr. Parkes:* You are aware from what your son has told you that it was not shewn to any one except the youth who came round the class to collect the exercises? Yes, I was informed by my son that it was shewn to no one else.

756. *By the Chairman:* There is nothing to prevent any other boys from seeing it? No, there is no doubt, for anything I know, the boy who took the exercise *might* have shewn it to all the others.

757. Do you not think the fact of a boy's father having made such a remark is a matter a boy would mention out of school? I think not. My son is a retiring boy; and even for his own sake, I think, would not have mentioned it; but if he had, I do not believe it would have been supposed to convey an insult to Mr. Stephens.

758. *By Mr. Parkes:* You are satisfied he did not? I am satisfied he did not.

759. *By the Chairman:* You have formed some opinion as to the mode in which the school is managed, from the character of the remark in the exercise? I do not think that remark had anything to do with the management of the school. It was not my intention to apply the observation to the schoolmasters, but to the boy; it was as much as to say, this is a strange specimen of a Grammar School boy's figures. I approved, so far, of the management of the school, that I told my son, on giving him the paper, I believed his master would give him a good trouncing; the answer was so ridiculous, that £1,100 invested in 3 per cents., at 88, should produce £968 per annum.

760. Do you not think an indorsement of this character would, if known among the boys in a school, have the effect of impairing the discipline, by degrading the master in the eyes of the boys? I do not. The observation was much too trifling to have led to *such* a result. I cannot see *how* the master could be affected by it, and my object was merely to draw the master's attention to the boy's backwardness.

761. Do you not think the best way to do that would have been to communicate with the master? I do; probably I was wrong in not adopting that course.

762. *By Mr. Parkes:* You have admitted that, in writing to the authorities of the school? Yes, certainly, and if Mr. Stephens had asked for an explanation in the first instance, he should have had a satisfactory one.

763. That you intended to convey by the last letter? Having received a note—which I consider Mr. Stephens should never have written—I stated to the trustees I had resolved not to make any apology. I conceive, that before the boy was suspended, the master ought to have called on me for an explanation. The boy himself was innocent of *any offence*, and his general conduct was reported to me as being *very satisfactory*. Under any circumstances I was entitled to have the opportunity of withdrawing the offensive remark before the boy was expelled.

764. *By the Chairman:* Do you not think the result of producing this indorsed exercise in the school would have a prejudicial effect on the boys? Such remarks ought not to be written, I admit, on a school exercise; but, I think, the boys would not agree with the
master

Mr. A. C.
Maxwell.

2 Dec., 1859.

Mr. A. C.
Maxwell.
2 Dec., 1859.

master in his construction of the remark in question ; many things pass without notice, which are more likely to be prejudicial to the boys. I have already stated I exceedingly regretted making the remark, and had my son not been expelled I would gladly have made a full apology.

765. Do you not think any master, receiving such a document as that, would consider it an abrupt and off-hand way of treating him ? If the master thought it was addressed to him ; but the generality of masters would have given me an opportunity of explaining before coming to that conclusion, and certainly before visiting a pupil with a punishment so disproportionate in every way.

766. I presume, that when writing this remark, you intended it to be seen by some authority ? I did, and I thought the master would give some punishment for making such a gross blunder.

767. *By Dr. Lang :* Do you not regard it rather as a reproof to your son than as a censure upon the master ? I do ; I had no other intention than that Mr. Whitfield, when the exercise was presented, would reprove my son for making such a ridiculous answer. It was not likely that a person, having three sons at the school, would deliberately insult the masters.

768. Do you not think a parent, in such a case, has a right to make remarks upon an instance of gross carelessness or incompetency ? Certainly I do.

769. *By the Chairman :* Are not these words, " a proof of Grammar School figures," a sort of slur upon the teaching in the school ? The words, considered by themselves, really bear no definite meaning ; I have stated in my first letter to the trustees that I had no intention to cast any such slur.

770. Are there any other matters connected with the school that you would wish to mention to the Committee ? Nothing more than that I wish to mention the effect of this harsh proceeding on my sons. The course of their education has been entirely altered, and in other respects it has had a serious effect upon them. I look upon the matter as a great grievance, as I wished my sons to be perfected in the course of study they were pursuing under Mr. Stephens. My son bore a good character, yet he has been punished for an offence for which I am only accountable, and a stigma has been cast on him, which to this day he is taunted with by his schoolfellows.

771. *By Mr. Parkes :* Where is he now ? At Mr. Horniman's.

772. *By the Chairman :* You are satisfied with the progress the boy was making ? I was ; and I may add I was exceedingly sorry to withdraw my son, who was under the especial charge of Mr. Stephens, as I had every reason to be satisfied with the manner in which he was progressing. I have only further to say, that the remark on the exercise was written hastily, and under a feeling of disagreeable surprise that my son should make £1,100, invested in 3 per cents., at 88, produce £968 per annum. I was much struck with the answer, and hastily wrote the observation complained of. Mr. Stephens, on the other hand, had two full days to weigh the matter, his first letter having only reached my hands after two days' consideration, in effect expelling my son without giving me an opportunity to explain.

APPENDIX A.

What is yearly Income on £1,100 invested in 3 per cents., at 88 ?

100	:	88	::	£	1100	Ans.
					20	
					22000	
					88	
					176000	
					176000	
					100) 1936000 (1936	
					100	
					936	20) 1936
					900	
					360	968 per ann.
					300	
					600	
					600	
					600	

Note.—Across the exercise is written :—" *Darlinghurst, 3rd November, 1858.*—A " proof of Grammar School figures.—A. C. MAXWELL."

APPENDIX B.

Sydney Grammar School,
November 4, 1858.

Mr. A. C.
Maxwell.
2 Dec., 1859.

Sir,

It is my painful duty to give you notice that your son, Henry Maxwell, will not be allowed to attend the Sydney Grammar School until a full apology has been received for the remarks noted on his last exercise.

I am, &c.,
W. J. STEPHENS.

A. C. Maxwell, Esq.

Sydney, 5 November, 1858.

Gentlemen,

I have the honor to bring under your notice the enclosed copy of an extraordinary letter, received from the Head Master of the Sydney Grammar School, in effect expelling my son in a summary manner from that institution until a full apology had been given by me for a remark noted on a certain school exercise.

I request the Head Master may be called on to produce the original exercise, with my remark thereon, for your information; and I will be glad to know whether you can properly construe any act of mine, however incautious, sufficient cause to justify the Head Master in summarily expelling my son without any scholastic breach of duty on his part, reference to the Trustees, or during the current quarter.

Although I object to tender any apology for my conduct, yet I regret that any incautious remark of mine should be construed by the Head Master—especially without my being first called on for explanation—in any other light than was intended by me, viz., to bring before my son's tutor's notice the careless manner in which the exercise in question had been prepared.

I have, &c.,
A. C. MAXWELL.

To the Trustees
of the Sydney Grammar School.

Sydney Grammar School,
November 8, 1858.

Sir,

In reply to your letter of the 5th instant, addressed to the Trustees of the Sydney Grammar School, complaining of the conduct of the Head Master in reference to your son, I am requested by the Trustees to state that after a full consideration of your complaint, and after having heard the Head Master's statement, the following resolution was agreed to:—"That in the opinion of the Trustees the indorsement by Mr. A. C. Maxwell upon Henry Maxwell's exercise conveyed an insult to the Head Master, and that Henry Maxwell appears to some extent to have participated in the same; the insult being aggravated by the fact that the exercise had not been previously submitted to the tutor for correction. Resolved, therefore, that the suspension of Henry Maxwell be continued until Mr. A. C. Maxwell apologises for the remarks complained of."

I have, &c.,
W. H. CATLETT,
Secretary.

A. C. Maxwell, Esq.

APPENDIX C.

Sydney, November, 1858.

Sir,

With reference to your letter of the 8th instant I think it right to state, for the information of the Trustees, that, had Mr. Stephens written to me for an explanation, I should at once have disclaimed all intention of offering any slight or disrespect either to him or any of the masters; and this, I contend, was the course which he ought to have adopted before proceeding to such an extremity.

Whatever may have been my error, I cannot understand why any penalty or humiliation which it might seem to challenge should not have been inflicted exclusively on myself; and still less why my son should have a stigma placed on him that may, perhaps, affect him through life, for any fault which can be attributed to *him* in the matter, acting, as he did, under my influence.

In fact, my friends have advised me that the punishment has been so disproportionate, even if the harshest construction be put on the offence, that I may now consider myself and my family as the only parties entitled to complain.

I have resolved, however, to make this last appeal to the Trustees; and I now offer, in case Mr. Stephens will withdraw his letter, to make any apology which, on maturer consideration, he may think fit to require.

I have, &c.,
A. C. MAXWELL.

The Secretary,
Sydney Grammar School.

Sydney,

Sydney, 6 November, 1858.

Mr. A. C.
Maxwell.

Sir,

I beg to acknowledge the receipt of your letter of the 26th ultimo, which was laid before the Trustees of the Sydney Grammar School at their monthly meeting, on the 3rd instant; and in reply I am requested by the Trustees to refer you to their Resolution of the 5th November, with a copy of which you have already been furnished.

I have, &c.,

W. J. CATLETT,
Secretary.

A. C. Maxwell, Esq.

APPENDIX D.

SYDNEY GRAMMAR SCHOOL.

No. —.

Report for Quarter ending June 18, 1858.

Form 4. Name—Henry Maxwell.

Classics, good progress, shewing a will to work; mathematics, very fair; geography and history, good; French, moderate; drawing, moderate; general conduct, very satisfactory.

Report for Quarter ending October 8, 1858.

No. —.

Form 5. Name—Henry F. Maxwell. (3^{tius})

Classics, fair progress, shewing a desire to improve; mathematics, slow and even progress; geography and history, fair; French, fair; drawing, fair; general conduct, very satisfactory.

No. 67.

Report for Quarter ending April 9, 1858.

Form 4. Name—Henry Maxwell.

Classics, fair, but varying at times; mathematics, satisfactory; geography and history, good; French, moderate; drawing, moderate; general conduct, generally good.

No. 67.

Report for Quarter ending December 16, 1857.

Name—Henry Maxwell.

Classics, quick, but inaccurate—painstaking and attentive; mathematics, very good; French, not mentioned; German, very fair; very good in geography; always attentive and quiet; drawing, not mentioned; writing, pretty well; general conduct, very satisfactory; doing well.

EDWIN WHITFIELD, Master.
W. J. STEPHENS, Head Master.

WEDNESDAY, 7 DECEMBER, 1859.

Present:—

MR. WINDEYER,

MR. CAPE.

DR. LANG,

WILLIAM CHARLES WINDEYER, ESQ., IN THE CHAIR.

Thomas Gratton, Esq., called in and examined:—

T. Gratton,
Esq.773. *By the Chairman:* I believe you are in one of the Government offices, Mr. Gratton? Yes, I am in the Colonial Secretary's Office.

774. This Committee is appointed to inquire into the working of the Sydney Grammar School,—I believe you have a son, or sons, at that school? I had; but they have been removed.

775. We were informed that you would probably be able to give us some evidence in reference to the school? I do not know that I can state anything particular with reference to the school. I was not satisfied with the arrangements for the holidays, nor with the reports I received from the school. As the boys did not seem to improve, and they appeared themselves to be dissatisfied, I considered that it would be better to remove them.

776. When did you first send your sons to the Sydney Grammar School? At the time it was first opened.

777. How long did they remain there? Two years, I think. I removed them at the last midwinter holidays—the June holidays.

778. *By Mr. Cape:* On what form were they in the school? One of the lower forms; I think the second form, second remove.

779.

779. *By the Chairman*: And you removed them because you did not think they were making much progress? Yes, and for the reasons before stated. T. Gratton, Esq.
780. *By Mr. Cape*: Did you find fault with the general management of the school, or with some particular incompetency in the teaching of the classes your sons were in? The boys seemed dissatisfied with the master under whom they were. They fancied that he acted unfairly towards them—that he had favorites in the class, and that whether they were attentive or not the result was the same, because he was partial in the distribution of the marks. 7 Dec., 1859.
781. *By the Chairman*: Is not that a common suspicion in all schools? I think it is not unlikely, although it is not perhaps always without foundation.
782. And you removed them solely on those grounds? Principally; and what I considered the loss of time, arising from the length of the holidays.
783. Which was the primary cause of your moving them? Principally the length of the holidays. There seemed to me a sad loss of time.
784. What age were the boys? When they were sent to the school one was eleven and the other thirteen.
785. If the boys had been making what you considered fair progress—do you think that would have influenced you in the matter? No, I think not. I should, perhaps, in that case have been willing to have passed over the length of the holidays—seven or eight weeks—during which they were kept from school.
786. Seven or eight weeks? When I say seven or eight weeks, I mean, that the holidays used to extend to about seven weeks, and I believe that another week elapsed after they went back before they commenced their studies.
787. Is not that the case, whatever may be the length of the holidays, in all large schools? It may be. I am not aware what the holidays are in other schools; but still, I think, where the hours of study are only five in the day, and the attendance only five days in the week, six or seven weeks are too long for holidays.
788. I believe, in point of fact, that the holidays extend over a period of six weeks, do they not? They may call them six weeks, but I think, generally speaking, they are more than six weeks—between six and seven.
789. *By Mr. Cape*: Do you know what exercises and lessons they had to prepare for the following day after they left school? Chiefly Latin exercises.
790. *By the Chairman*: Do you know that the whole school work is prepared out of school? Not the whole. Every evening when they came home, and I asked them what they had to do, they said Latin exercises, or Latin to learn. They had no other exercises.
791. Are you not aware that the system is that the whole lessons should be prepared out of school, and that no lessons are prepared in the school? As far as I can recollect now, they had nothing to prepare or learn at night but a certain quantity of Latin.
792. How long have your boys been to school altogether? They have been at various schools since they were five or six years of age.
793. How many schools have they been at during that time? They have been at, I think, about three or four.
794. Did you observe at all what the moral effect of the Sydney Grammar School seemed to be upon the boys? No.
795. Did you form any opinion as to the effect of the school upon them? In what respect?
796. Upon their tone and feelings? I do not know that I did particularly. It appeared to me really that it was left entirely to the boys themselves to learn or not as they pleased. If they chose to learn, well and good; if not, there was not much trouble taken with them.
797. Do you think they were not thrashed enough? They were not thrashed at all.
798. Did you find fault on that ground? I should be sorry to advocate such a system, but I am certainly of opinion that means ought to be adopted in a school to induce or compel boys to attend to their lessons and studies properly.
799. *By Dr. Lang*: Have you calculated what the whole period of the holidays in the course of the year would be—the united holidays? No; but I should say fully three months.
800. A quarter of the whole year? Just so.
801. And do you think that boys, during these long holidays, lose a great deal of what they have gained during their previous attendance? I think so; and I believe, also, that boys are likely to acquire indolent habits from being so long absent from school.
802. And they lose a portion of time when they return in recovering the ground they have lost? I think there is no doubt that they do.
803. You have no remarks to make to the Committee on the moral state of the pupils in the institution generally, as far as you were enabled to see it from your own boys? No.
804. I presume your sons were under one of the under-masters in the school, chiefly? Yes.
805. Entirely, I suppose? Entirely so,—that is, from the time of the appointment of masters in the Colony.
806. They were not under the head-master, Mr. Stephens?—They were not in his class? No.
807. *By the Chairman*: Do you know what form they were on? I think the second form, second remove.
808. In the lower school? Yes.
809. *By Mr. Cape*: As to the terms,—what were your feelings on that matter? You refer to the fees?
810. Yes? Personally, I did not object to them, although they were higher than I expected they would have been.
811. As a public school, you had no objection to the fees? No.
812. Did you ever see your sons preparing geography or history at home; did you see them engaged in what are termed English studies? On some few occasions; but generally not.

- T. Gratton, Esq. 813. You remarked that? Yes. It was almost entirely Latin, with, perhaps, once a week, poetry.
- 7 Dec., 1859. 814. Did you make complaints, at any time, with respect to the length of the holidays, the tuition, or want of control over the boys? No; although, when I first placed my boys there, I objected to the length of the holidays.
815. But, during the time the youths were at school, did you find it necessary to complain that they were making no progress? No; I considered it useless; and it is foreign to my disposition to prefer complaints when they can be avoided.
816. You do not know how far complaints of a parent have met with attention? I do not.

T. Broughton, Esq., M.P., called in and examined:—

- T. Broughton, Esq., M.P. 817. *By the Chairman*: You are a member of the Legislative Assembly? Yes.
- 7 Dec., 1859. 818. Have you had any boys at the Sydney Grammar School? On the opening of the Grammar School I had one boy there. I may also state that I made it my business to solicit a great number of persons to send their sons also to the Grammar School; in fact, I think I was the cause of sending more boys to the Grammar School than any other single individual. I thought I could fairly speak to them in reference to sending their sons to the Grammar School from the high standing of the masters who were engaged, fancying that the boys would receive a better education there than at any other school that I knew; and on the opening of the school I sent my eldest boy there.
819. *By Mr. Cape*: Will you state his age? He was then fifteen years of age, and had been seven years with Mr. Cape. On entering the school he was in the sixth class, under the immediate instruction of Mr. Stephens. He had been at Mr. Cape's school previous to that.
820. *By the Chairman*: What opinion did you form of the school from the means of judging of it which you had at your command? My son was eighteen months at the Grammar School, and under the tuition of Mr. Stephens I think he did remarkably well. He was kept hard at work, and had as much as he could possibly get through of an evening. In fact his evening work was quite sufficient to occupy him until a late hour of the night.
821. And you were satisfied with the progress he made, generally? I was satisfied with the progress he made at the Grammar School; and, although I do not up to this time personally know Mr. Stephens, I always heard my son speak of him in the highest terms, and of his treatment not only of my son, but also of the boys in the class generally.
822. Do you think the moral effect of the school is good? I do not think the moral effect of the school was good upon my son.
823. In what way? I think in that school he associated with boys he never had been in the habit of associating with before.
824. Probably he was never at such a large school before? He never was at such a large school before. I heard him complain of many of the boys being addicted to smoking and swearing.
825. Perhaps you think those things are almost unavoidable in a large school? I believe in all public schools of the kind it is unavoidable; but I can only say it was what he never had been accustomed to at Mr. Cape's school.
826. But Mr. Cape's was a much smaller school than this, and a private school? When my son was at the Grammar School there were a hundred boys, and I believe he has been at Mr. Cape's school when there have been sixty. But of course Mr. Cape was more select in his pupils than they would be at a Grammar School.
827. Of course it would be impossible for a Grammar School to refuse boys who conducted themselves openly and with propriety? Being a public institution, and supported in part from the public funds, as long as boys behave themselves well in school, they have no power to refuse them.
828. Then you do not attribute any of these things, as far as you can see, to any neglect on the part of the head master? I cannot see that the masters are at all answerable for anything of that kind.
829. Is your son still at the Grammar School? No; my son has been, during the past six months, with Mr. Savigny. I removed him from the Grammar School in consequence of the very great loss of time consequent upon the long vacations.
830. For that reason solely? No; not for that reason solely. He was constantly complaining that he was not dealt fairly with, that some of the boys were using "cribs," and that if he continued honestly to work with his studies, he had no chance so long as they were allowed to make use of "cribs" in the school. He said that was the practice, but that he thought it discreditable to do anything of the kind, and would not have recourse to any such practice.
831. *By Dr. Lang*: What do you mean by that phrase? Translations.
832. *By the Chairman*: Was it principally on account of the use of "cribs" that you removed your son? It was more from the loss of time incidental to those long holidays.
833. If there had not been this additional reason, and the progress of the boy was good, do you think you would have removed him solely on account of the length of the holidays? I approved of the school, but I thought that by getting him away out of Sydney he would not have so much to abstract his attention from his studies as he would have at the Sydney Grammar School.
834. Then it was not on account of the holidays alone that you removed him? That was one great consideration, and I may say I think it will induce me to remove one at least, if not two boys, that I have sent since then to the Grammar School. I have been constrained to send

send two boys there, in consequence of Mr. Cape, with whom they had been many years, T. Broughton, relinquishing his profession as a tutor. I may also state, that it is not myself alone that complains; many persons whom I have been soliciting to send their children there have complained to me about these long holidays; and I know that a practice now obtains during the vacation in the Sydney Grammar School, of sending boys to the National School to keep them out of the streets, until the school opens again. Esq., M.P.

7 Dec., 1859.

835. Does not that look very much as though the parents did not like to have their children at home, and the responsibility of looking after them? I think it is done to keep them from the auction bazaars, the police courts, and street auctions generally. These are the complaints which have been made to me by different individuals who have boys at the Sydney Grammar School.

836. Do you not think parents ought to be able to keep their children from resorting to what they consider improper places without the necessity of sending them to school? Persons who have business cannot be looking after their children all the day long; and children, if they have not something to do—if their minds are not occupied, will get into mischief of one kind or other.

837. I suppose they could get to the police offices and auction bazaars as well in three weeks as in six? Well, they certainly could get to those places; but, if they had not so much time on their hands, they would, perhaps, find other amusements. They would not have so much time for it in three weeks as they would in six.

838. *By Dr. Lang*: What proportion, did you ever ascertain, the time occupied in holidays bore to the whole period? Just half. I conceived that there were six months of the year absolutely lost.

839. *By the Chairman*: How do you make that out? There were six weeks at Christmas time. In fact, there were four holidays in the year—two of six weeks each, making twelve weeks, and two of two weeks or ten days; at all events, say two of a week each, which would be fourteen weeks.

840. When were the two holidays of a week each given? I think it has been altered within the last three or four months.

841. What has? The week at Michaelmas and the week at Easter.

842. Have those been done away with? The Michaelmas holiday has been shortened by a day or two.

843. Was there always a week given at Michaelmas? I think so.

844. Are you sure of it? I would not speak positively. I did not take it down, but I made a calculation with my son; and, after going through it, I think there were six months lost in the year, with the weeks I have enumerated and the absolute loss of Saturday, which was a new system introduced with the Sydney Grammar School. I was not aware of any scholastic establishment in the Colony giving Saturday as a holiday altogether, until it was first introduced by the Sydney Grammar School. It was the practice, I remember, at Mr. Cape's school—with which I was more intimately acquainted than with any other school—only to give a half holiday on Saturday, with the exception of the last Saturday in every month, when it was a whole holiday.

845. *By Mr. Cape*: With respect to the long vacations, Mr. Broughton, if the trustees could arrange to have classes for the entertaining studies of botany, drawing, or the elements of natural philosophy, and so forth, would your objection still hold? My objection would still hold as to the waste of time.

846. Would you consider it a waste of time for them to attend to those studies? Do you mean during the vacation?

847. Yes? Not if it afforded them employment during the vacation.

848. For instance, if a fortnight out of each vacation were devoted to those elementary and entertaining studies which are so wisely pursued in England during vacations? I think that would be more desirable than the long holidays now given at the Grammar School.

849. You say that the work the youths had to prepare employed them from the time they came home almost to their going to bed? My eldest son, who was on the sixth form, had to work very hard on an evening. He had no spare time.

850. Did you find that the case on Friday evenings and throughout the Saturday also—that he had work to prepare—or was Saturday an entire holiday? No; he had his work to do, if he would do it.

851. Do you feel that there is a necessity in the metropolis for a large public Grammar School? Certainly.

852. You have no doubt of that? Not the slightest doubt.

853. What is your opinion in reference to the terms of the school? I do not object to the terms for the higher classes, but for the training school, or the lower school, I think the terms are high.

854. With respect to "cribs," as they are called, do you think that a "crib" would be injurious to a studious youth, really anxious to improve himself? I think it would tend to make him indolent if he found he could crib an answer, instead of working it out. I think it would tend to make him careless about his studies.

855. You have expressed your satisfaction as to the upper forms—what is your opinion of the lower? I expressed myself satisfied with Mr. Stephens personally, not only with reference to my own son, but also to every one with whom I have been brought into connection who have boys in Mr. Stephens' class.

856. As to your sons on the lower form—what is your opinion of the tuition there? They have not been there long enough for me to form an opinion.

857. *By Dr. Lang*: Do you think the fees paid in the Grammar School operate as a prevention to persons of the industrial classes sending their sons to the school? I have heard many tradesmen find fault with the fees as being too high.

- T. Broughton, Esq., M.P.
7 Dec., 1859.
858. *By the Chairman*: Do you not think that there are a great many persons who would prefer to give more to their cook than for the education of their son? The persons to whom I refer perhaps do not employ cooks.
859. *By Dr. Lang*: Do you not think such fees as £18 a year would operate as an exclusion to the children of the artizan? A man having children, and depending upon the sweat of his brow for the support of his family, could not afford to pay such high fees as are charged there.
860. *By Mr. Cape*: In going into the calculation of holidays, you think they amount to nearly six months? Yes; that is taking into consideration the loss of the Saturdays. There is one other thing that I complain of myself, and I have heard other people complain of it too, that is, the mid-day hour and a-half; it used to be two hours, but now it is altered to an hour and a-half. I think it would be an advantage to the pupils if it were still further shortened, for they really do not know what to do with themselves in the heat of the summer, and particularly those who have any distance to walk to school.
861. What do you think of the alteration of the morning hour from nine to half-past nine? I believe the alteration to half-past nine has been to accommodate children whose parents live out of town, and who come in by train. I do not so much object to that, seeing that it is an accommodation to those parties; but I do object to their having so much time to walk about the streets in the middle of the day, particularly in the heat of the sun, in summer time. My youngest son came home, not many days ago, suffering from a sun stroke, in consequence of having been exposed in the middle of the day; he was laid up for days in consequence. There is no means of shelter, and the distance from his home is too great for him to walk home and get back to school in time. I also think some better arrangement might be made at the Grammar School with the drawing master. One drawing master has resigned his engagement there, finding he could do no good with the boys.
862. That is an objection he took, not an objection to his teaching? There was no objection to his teaching, but it was an objection to the irregularity and want of discipline with the boys during the time they were under his charge for instruction in drawing.
863. *By the Chairman*: That is his account of it? I have not seen him personally.
864. Then you do not know it from him, but by hearsay from some one else? Just so; I have not been in conversation with him; it is from the boys themselves that I have heard it.

I desire to state that it is very objectionable, and that many complaints are made, to the present system of permitting the masters at the Sydney Grammar School to have, as private pupils, the students at that school.

That sufficient attention is not paid to mathematics.

WEDNESDAY, 14 DECEMBER, 1859.

Present:—

MR. WINDEYER,
MR. PARKES,

MR. PLUNKETT,
DR. LANG,

MR. CAPE.

WILLIAM CHARLES WINDEYER, ESQ., IN THE CHAIR.

The Rev. Frederick Armitage, M.A., called in and examined:—

- The Rev. F. Armitage, M.A.
14 Dec., 1859.
865. *By the Chairman*: You are master of King's School, Parramatta? Yes.
866. And a Master of Arts of the University of Oxford? Yes.
867. *By Mr. Cape*: Had you any engagement of the kind in England? Yes, I was resident master of the Bath Grammar School.
868. Were you the head master? No; Mr. Pears was the head master, but from illness was prevented from visiting the school during the two last years of his life. He had a paralytic stroke, and could not conduct the school; I conducted it for him.
869. *By the Chairman*: The Committee heard that you wished to be examined in order that you might give some evidence with reference to the Sydney Grammar School? There were one or two things that I wanted to mention. I think, in reference to those matters—I perhaps represent the feelings of the other schoolmasters—and I believe that what we feel generally is that there are no means of competition between our schools and the Grammar School. All opportunities of competition have been avoided as much as possible. I do not know whether it is intentional or not, but it has been established now two years, and as yet there has been no opportunity afforded of competition on the part of any other schools. Undoubtedly the Professors of the University make it their business;—or, whether they make it their business or not, they do “cry up” the Sydney Grammar School to the exclusion of all the other schools of the Colony. They have publicly stated so in the papers, and we think it unfair that they should do so without giving us any opportunity of trying our boys against theirs. The chief object for which a great school like the Sydney Grammar School is established, is to raise the education of the Colony generally, and not a section of the children in Sydney—and that can only be done by competition.

870.

870. When you say that no means of competition are afforded, what do you mean? I mean that I think such means ought to have been afforded by the trustees or persons in authority over the Grammar School. When I found this was not done I wrote to Mr. Stephens. In fact, I have now written for two years running, suggesting that prizes should be given—and offering to pay my share of the expense—to be competed for by the boys of the King's School and the Sydney Grammar School. Each year it has been declined, not as a permanent declination, but for the year—it must be in abeyance each year.

The Rev.
F. Armitage,
M.A.
14 Dec., 1859.

871. What means would you suggest? I would suggest that a fund, to be called a "General Scholarship Fund," should be established with the surplus (after expenses paid) of fees paid by parents of boys at the Sydney or any future Grammar School. That this amount, supplemented by an equal sum from Government, should be divided into scholarships of amount each, teachable at any school for one year. That such scholarships should be annually awarded to the best answerers from any school at examinations (by papers) held in various parts of the Colony as most convenient, and that the winners of such scholarships should be allowed to carry them to any school, public or private, which they might select. I think that is one—that prizes should be given to be tried for by all the schools in the Colony—composition prizes I mean.

872. And how would you suggest that the trustees of the Grammar School should do that? They have public money at their disposal, or else they would not establish scholarships. That money is not money obtained from fees. It is over and above the necessary expenses of the school, and they have no more right to establish scholarships with it than the clerks in the Post Office have a right to take surplus money from the Post Office for the same purpose.

873. What would you suggest they should do? I say that is one way. I would have prizes established with the surplus funds for the schools of the Colony generally. I think those scholarships, if scholarships are established, should be tried for by all the schools of the Colony, and not attached to the Grammar School alone. Just in the same way as all the schools are now examined at home—the same as the examination given at Oxford and Cambridge for all the schools in England. Places are established for examinations to be held, and boys from any school whatever may compete. If scholarships are established, why should not a boy, or his parents, choose which school he should go to to try for those scholarships? There would then be competition through all the schools of the Colony. And if there were six or eight examiners appointed, why should not those examiners hold one sitting at Bathurst, another at Goulburn, another at Parramatta, and another at Maitland, to examine such boys as liked to come before them? Then there would be fair competition. It is certainly a gross injustice, we think, that our money should be taken for the establishment of a Grammar School, and then that that school should be used to induce other boys to come from other schools is rather too bad.

874. What number of boys have you in your school? Between eighty and ninety.

875. Altogether? Yes, boarders and day scholars.

876. The school has fallen off then? No; it is nearly three times as big as when I commenced it; but it is smaller than it was two years ago.

877. Then it is somewhat smaller since the Grammar School was established? No, the Grammar School has not effected us at all. Two boys only have gone from us to the Grammar School, and we have received three or four from the Grammar School since it has been established.

878. But it is not so large as it was before the Grammar School was established? No; it was after the Grammar School was established that it was at its height.

879. But it is not so large now? It is not so large now.

880. Has not your school fallen off so much lately that you have got rid of one of your masters? It has not fallen off so much lately. I have got rid of one of my masters, and, I am sorry to say, I am losing another. That has nothing to do with the school. The school has not changed for the last year at all.

881. You say this feeling is shared in by other schoolmasters? Yes.

882. Have you heard anybody express that feeling? Yes, several.

883. Who? I do not like to mention. It was in private conversation. I do not think I have a right to say. The reason of my coming down was a schoolmaster mentioning it to me. He said, "if they did not speak now it was no use speaking afterwards"; but he did not like to come down himself. He was afraid of putting himself publicly forward.

884. You say that the Professors of the Sydney University have identified themselves with this school altogether? Yes.

885. How have they shewn that? If you have read the papers, you might have seen Mr. Pell's letter to that effect.

886. When was that? A short time ago.

887. How long ago? I really do not know. It was in reply to one of my letters.

888. I believe it is about eighteen months ago? It is more than that.

889. Did not the Professors of the University examine your school for you just before that time? Yes.

890. Do you not know that they have since been in the habit of examining private schools, at the request of the master? They examined Mr. Macarthur's school.

891. Do you know whether they examined Mr. Savigny's school? I believe not.

892. You would not undertake to say they did not? I do not think they have ever done so. They did not do so last year.

893. You would not undertake to say that they are not doing so now? Yes, positively, because the school has not been broken up.

894. Do you know whether they have been examining in Mr. Moore's school, Lyndhurst? No.

- The Rev. F. Armitage, M.A.
14 Dec., 1859.
895. You know that they are doing it at Mr. Macarthur's school? Yes.
896. And they examined your school, until the correspondence took place in the papers? Yes. I was sorry they left off.
897. Are you not aware that two of the professors of the University are trustees of the Grammar School, if not all the professors? Yes.
898. Is it usual for public schools of a similar character in England, to (as you say) bring their scholars into competition with other schools, and to give scholarships to other schools? No; because in England the Universities give degrees or certificates. Oxford gives a degree; Cambridge, a certificate—that answers the same purpose.
899. But would you propose—the State having given certain funds to support the Grammar School, and a part of those funds being applied to the foundation of scholarships—that the scholarships should be given to other schools than the one over which the State had supervision? Undoubtedly. I think the State would conduct the examination. The scholarship would only be held as the result of that examination for the year, and have nothing to do with the supervision of the school.
900. Then the State would not be supporting its own school? Undoubtedly it would. Have they not built it for them?
901. But your proposition is that the boys should go to any private schools they like? That does not interfere with the support of the Grammar School. Why should not the Government appoint some Board—?
902. To do this without reference to the Grammar School—why in the province of the Grammar School particularly? Undoubtedly the Government might afford another Board. There is surplus money over and above what is necessary for the support of the Grammar School.
903. How do you know—how do they get those scholarships? They are not necessary. They are merely used to draw boys to the school.
904. Do you not think that the fee charged in the Grammar School is, for a public school, a high one? Undoubtedly; and if the fees were very low there need not be surplus funds. But so long as there are surplus funds they ought not to be devoted to one school alone.
905. Do you not think that in a school of that kind, which has for its object the bringing of the means of a superior education as much as possible within the reach of the superior children of the working classes, the State ought to give facilities even for the education of those children without cost? I think so, quite.
906. Well then, should not the State carry out that principle, by seeing that they are educated in a school over which it has supervision? Is there any limitation as to the means of the parents of the holders of scholarships?
907. I am speaking theoretically—supposing that certain scholarships were given to meet that purpose? They would not do it. They could not meet the purpose unless they were limited to the children of poor parents who could not afford to pay the fees.
908. You do not know anything about the system pursued in the Grammar School with reference to those scholarships? Simply what I have seen advertised in the papers. The only limitation there was age.
909. The scholarships are open to any boy that chooses to come from any school? Undoubtedly.
910. Then you cannot tell us the name of any schoolmaster whom we could examine on this point? No. There are three or four that I have spoken to, but I should not like to mention their names, without having first asked their permission.
911. Would you object to sending a boy to that school on the ground of its being an unsectarian school? No; it is not a more unsectarian school than my own, practically.
912. Your school is under the supervision of the Church, is it not? Well, I am a clergyman, and it is under my supervision.
913. You have Church of England prayers there? Yes; but no one need attend them unless he likes to do so.
914. But you do have them? Oh, yes.
915. And the boys are brought up in the doctrines of the Church of England? No; I have all kinds of boys there. I have had Roman Catholics (I had Mr. Plunkett's nephew); I have Wesleyans. The Divinity prize, the Church History prize, was taken last time by a Wesleyan. It was at the first; it was not given at the last examination.
916. But is it not the Bishop of Sydney —? He gives the prizes, but he does not interfere at all.
917. Does he not generally act the part of visitor? He is the visitor, but he has never visited the school except when I have asked him to come down and distribute the prizes, when the Governor General was not able to do so.
918. Is there anything else beside the want of competition that you complain of? No, I think that is the only thing of which I have reason to complain.
919. Then you suggest that these scholarships, after a boy has won them at the Sydney Grammar School —? Why should he win them at the Grammar School? Why should not they extend to other schools?
920. Then you would not make this a necessary part of the Grammar School? No; the surplus funds are at the disposal of the Government just the same as if they were funds over at the Post Office. It is a gross injustice, we consider, that we have to pay for inducements to boys to leave our own schools and go to another school.
921. *By Mr. Parkes*: I gather from your evidence that you do not look upon the Grammar School as simply a teaching institution, but also as a means of raising the standard of education in the country? Undoubtedly. That is what I hope to find it.
922. And it is taking this view that you think it would be strictly in the province of the trustees to award prizes for general competition? Yes.

923. With a view to elevate the standard of education throughout the Colony? Undoubtedly.
924. In other words I should infer that you would think the Grammar School not favoring its great object if it contented itself with its simple teaching capabilities, and did not direct the support it receives from the State towards the general cause of education? Yes, exactly.
925. You think it ought to exert a salutary influence on private schools? Yes, all over the Colony; and not only over private schools, it might exercise an influence over private tuition—tutors in gentlemen's families.
926. Have you any means of forming an opinion as to the character of the Grammar School? No, excepting on the same ground as Professor Pell and Dr. Woolley form their opinions. I know Mr. Stephens, and think very highly of him; beyond that I wish to say nothing.
927. You think it is efficiently conducted? I should say so, from what I have seen of Mr. Stephens.
928. You have not, then, been present at the examinations, and have no means of judging, excepting your personal knowledge of Mr. Stephens? Mr. Stephens was kind enough to conduct the examination at King's School last Christmas. I saw a good deal of his way of examining then, and it was very good—very.
929. You think highly of Mr. Stephens? I think very highly of Mr. Stephens.
930. *By Dr. Lang:* Is it of the authorities of the Grammar School or of the University that you complain in there not being competition? I think they are almost identical. There are two professors, and they are the only acting trustees of the Grammar School, or nearly the only acting trustees, so that it comes to the same thing. There has been lately a scholarship at St. Paul's College. I was anxious that some of my boys should try their powers there, so I sent them down to compete with the Grammar School boys. I sent four of them down, although not one of them would have taken the scholarship if they had obtained it. I mentioned this to Mr. Hose, first of all, that I merely wanted them to compete.
931. Do you think it would be competent for the authorities of the Grammar School, under a vote of the Legislature for the support of that institution, to give any part of the funds available for the purpose of establishing scholarships in connection with other institutions? That I hardly know. I do not complain of the authorities not having done so, but of its not being done; whether it is the fault of the authorities or of the Act I do not know.
932. Do not you think that duty, if it is to be discharged at all, would fall upon the trustees or managers of a higher institution than either the Grammar School or private schools, which you desire to bring into competition? I should be sorry to see it fall under a high institution.
933. I mean the University? I should be very sorry. I do not think any examiners appointed by the University would gain the same confidence throughout the Colony as the examiners appointed last year for the Sydney Grammar School.
934. You merely wish that the pupils of private schools educating youth in the higher branches of education should be placed upon the same footing as those educated in the Grammar School? The private, and the other public schools of the Colony.
935. That would refer, I should conceive, to their admission into a higher institution than either afford without the same facilities? Yes; but supposing they do not wish to go. The scholarships, I believe, are for different years; if I remember right, from 10 to 12, from 12 to 14, and from 14 to 16. Of course those boys would continue at school when they got the scholarships. I believe they are intended for boys remaining at school, and not proceeding to the University.
936. Do you not think that the object you have in view would be better promoted by a special application to the Government to afford similar facilities to youth educated in private schools—to those that they have afforded in those scholarships—to the youth of the Grammar School? I should like to see competition with the Grammar School; that is the thing.
937. Would not that imply competition? Not unless the scholarships remained in the Grammar School as at present. If other scholarships were given to other schools there would be no competition between them.
938. But, supposing there were general scholarships for the University? Yes; that would be equally good. All I want to see is, that the establishment of a public school should give a standard to the education of the Colony; at present, it does not do this, because there is no competition between it and the other schools of the Colony.
939. *By the Chairman:* I understood you to say that the board of examiners, of which the professors of the University formed a part, would not have the confidence of the Colony? Not if they selected them.
940. How do you mean? I mean that they are identified—that they are looked upon more or less identified with the Grammar School.
941. Who looks upon them as thus identified? Meet any man in the street and ask him, he will tell you the same.
942. Will Mr. Savigny tell you the same? I think he would.
943. You think he would be a safe person whose opinion might be taken in reference to the matter? Undoubtedly.
944. *By Mr. Cape:* For instance, in the middle-class examinations at home there is no such restriction? No; they may go to any school, or come from any school.
945. *By the Chairman:* Then, I suppose, in fact, you would be in favor of general assistance to all schools under the Privy Council system? I do not think they want aid; they do not get it at home, and I do not see that they want it here.
946. You mean the lower schools? Yes.
947. Is not this a branch of the same system? No; at home it is done by the two Universities.

The Rev.
F. Armitage,
M.A.

The Rev.
F. Armitage,
M.A.

14 Dec., 1859.

Universities. They examine. Oxford gives a degree and Cambridge a certificate of proficiency; it is merely a means of inducing competition between the schools.

948. Have you heard objections raised by respectable private teachers against the existence of these endowed schools? Hardly against the existence of endowed schools, but chiefly against these scholarships. A scholarship held at school is simply intended to draw boys. That is universally allowed. It is very unfair to establish public scholarships at the Grammar School to draw boys from other schools to that school. That is the objection; and especially when it might be made so useful by having competition with the Grammar School, and thus giving a standard to the education of the Colony.

949. *By Mr. Cape:* Then the private teachers, you think, would not object to Grammar Schools in such places as Goulburn and Bathurst? I think not at all. If I was a private teacher I should be very well satisfied that something of the kind should be established. I think it should only be the building.

950. The existence of good schools like these have a tendency to promote emulation? Yes.

951. It is sometimes a standard? Yes, I think so. But, perhaps, I am not a fair judge in the matter, because I have never had anything to do with private schools myself.

952. You are aware that they took a good position at home, recently, in the Civil Service examinations? Yes.

953. And in the middle-class examinations some of the leading private schools of England—? Have done very well.

954. *By the Chairman:* I wish to understand your objection to the professors being examiners; is it because they as trustees are identified with this school? That is partly the objection; but I do not think it is satisfactory always to have the same examiners. I think the examiners ought to be changed every year, and I think they ought to represent more opinions than the professors of the Sydney University do. They represent one, and a very exaggerated, state of opinion, whether in classical or mathematical subjects. Professor Pell is known to represent one kind of mathematical opinion, and Dr. Woolley, undoubtedly, represents one feeling with regard to classical subjects; it is not a general feeling at all.

955. Then you do not mean to imply—as your answers seemed to do at first—that you have any want of confidence in those gentlemen? Not in the least, as gentlemen; but they only represent one set of opinions.

956. Then you merely go on the general principle that it is advisable to change the examiners? Exactly; I do not wish for a dictatorship in literature any more than in anything else.

957. *By Mr. Cape:* It is a particular style? Yes; and, if that is continued, the whole education of the country must be formed on that model.

958. The examination is put in a particular style. There is a paper on mathematics and a paper on classics? Yes.

959. *By the Chairman:* Would not that be the unavoidable result of professors remaining for a certain number of years? So long as examinations are conducted as at present. I do not see why the professors (they are not more members of the University than I am) should set the papers any more than the graduates of Oxford and Cambridge generally.

960. Is our field for the selection of examiners sufficient to admit of carrying out your wishes? Quite so.

961. You think it is? Quite. I was saying that the examiners (I think there were six or eight for the Grammar School scholarships last time) could not gain the confidence of the schools in the Colony. I do not think there would be any objection if Mr. Stephens were joined with Dr. Woolley; they are very different in their way of examining.

962. *By Mr. Plunkett:* As to the scholarships—do I understand you to object to them *in toto*, or to the principle on which they are established? I object to them *in toto* as confined to the Grammar School.

963. *By Mr. Cape:* As drawing youths from other schools to the Grammar School? That is the simple object of the scholarships, unless they are confined to the children of persons of limited means. If there is a limitation of that kind, that is a new element.

964. Do you prefer that they should be abolished altogether, or that the system should be moulded some other way? I should prefer to see them thrown open to the Colony generally, if it could be done. I think an examination of that kind for boys of different ages is very valuable indeed.

965. *By Mr. Plunkett:* Do you think it could be done—that they can be instituted without any restriction? I think so. It is done at home, and it is found there that the apparent difficulties were much greater than the difficulties in practice. Supposing, for instance, six examiners were appointed. They might each like a different place, and give the same papers to any boys that came up, at the same time.

966. What cases do you allude to at home? To the middle-class examinations which are held in all the chief towns of England.

967. *By the Chairman:* Under the auspices of the different Universities? Yes.

968. *By Mr. Cape:* About the difference of climate—what period of the year would you select for the examination of a large public institution; supposing you had entire control, what period of the year would you select for setting boys to prepare for examination? June, undoubtedly.

969. You would not change the period? I have examined both at June and at Christmas and I find that the difference is great. Very few can keep up the steam at Christmas that they do in June. There is much more life in the June examination.

970. And it is attended with more hazard, particularly to health? Undoubtedly.

971. *By Dr. Lang:* What period have you for vacation at the King's School? Six weeks in June and six weeks at Christmas.

972. Twelve weeks altogether? Yes. None at Easter beyond the necessary days; and Good Friday.
973. *By the Chairman*: Then you do not think the holidays given at the Grammar School are too long, considering the climate and everything? I should be unwilling to say anything at all about it. My reason for doing it in the King's School is, that the boys come from such a distance that they could not otherwise get home. For myself, I should be sorry to have less.
974. You think the masters require it? I mean that I want it for myself.
975. *By Dr. Lang*: Do you think it desirable that there should be such long vacations? As I said before, as a master, I should be sorry to have less. I find that I want it to get away into a colder climate for a short time.
976. But do you not find it a great interruption to the progress of the studies of youth? Not nearly so much so as by allowing Easter and Michaelmas holidays. I found that three days at Michaelmas (I gave three days one time, in consequence of Mrs. Armitage's return) proved to be a great interruption.
977. What period of the year do you consider the fittest for vacation? I should like to have it rather later than at present, so as to get the chief of the hot weather over during the vacation.
978. You consider the winter half of the year best for studying? Undoubtedly.
979. *By Mr. Cape*: Then so far as your recommendation goes, you would prefer having examinations in the cool part of the year? Undoubtedly.
980. *By the Chairman*: Was not there some difficulty between you and the professors of the University upon this matter about the examinations, some misunderstanding? No, not misunderstanding; I had one view, and they had another.
981. Did not some rather warm correspondence take place between you, at all events? Yes, I believe so; I hope not warm on my part.
982. *By Mr. Cape*: On the system of examination? Yes; the system of examination has been altered now in the University. The professors are not now the sole examiners.
983. That was a part of your observation? Yes.
984. *By the Chairman*: It was solely then with regard to the undesirableness of having the same examiners constantly? Yes, that was one of the points.
985. What were the other points? Really, I hardly remember now; but certainly I should have liked the examiners to have been perpetually changed, that the professors should not be always on the examining board. They are there still, but they have others to assist them. They are not the sole examiners, yet the examiners are not changed. I should have liked to have seen a change of examiners.
986. *By Mr. Cape*: How many years have you been head master of King's School, Parramatta? Now more than four years.
987. *By Mr. Plunkett*: What are the usual vacations in England? Quite as large as here, I believe; sometimes six and sometimes seven weeks.
988. Twice a year? Twice a year. In the private schools they are shorter; but in public schools it is invariably the case.
989. At Rugby are there two vacations? Yes.
990. Do you not find that it takes a long time after the pupils return before they settle down and pull up? No, I do not find that at all. The greatest nuisance I found when I first came out here was, that the boys did not return in time.
991. *By the Chairman*: Do you not think it is worse for the discipline of the school if they stay over their time, and come straggling back? Of course. In a public institution of that kind it should be prevented. They should not be allowed to come in at all, if they did not return in time. I have agreed with Mr. Hawkins, who is leaving me to go to the Goulburn School, that, if I can do it, I will get the other schools to join me to send back boys who return after their time, unless they produce a doctor's certificate.
992. *By Mr. Plunkett*: Do you not think a fortnight or three weeks' holiday would be sufficient for health? For a boy it probably might; but I should be very sorry to have only three weeks for myself. An examination at the end of the year, conducted by the master, is hard work.
993. *By the Chairman*: Supposing an occurrence of this kind took place in your school:—Supposing a boy wrote an exercise, and his parents seeing that exercise and observing mistakes in it, wrote on it "a specimen of King's School figures," or "a specimen of Grammar School figures," or anything of that kind, and sent it to you; should you think that a proper way of dealing with the matter? Undoubtedly not.
994. Don't you think such a thing becoming known amongst the boys would greatly impair the discipline of the school? Very much so.
995. Have you observed at any time a tendency amongst parents to treat the master of a school not with that deference —? No; I cannot say that I have at all. On the contrary, I must say I have been very much obliged to the parents two or three times when (of course in a large school you cannot be responsible always for all your masters) difficult exercises have been returned inefficiently corrected. They have brought them to me privately.
996. *By Dr. Lang*: Supposing such an occurrence as that took place in your school, what steps should you take?—would you eject the boy? I think it would depend upon who was the parent. If he ought to have known better, I think I should have been very much inclined to do so.
997. *By the Chairman*: If he refused to apologise? I do not think I should ask him to do so. The man that would write that is not the man to get an apology from. I might go and state my own view of the matter to him clearly.

The Rev.
F. Armitage,
M.A.

14 Dec., 1859.

- The Rev. F. Armitage, M.A.
14 Dec., 1859.
998. And you would not think a document of that kind—"A specimen of King's School figures"—might be construed into an intimation to the master that he was to give the son a flogging,—you would not call it a complimentary allusion to the school? That would depend upon what the parent said.
999. But supposing he said nothing, but merely wrote on an exercise—"A specimen of King's School figures,"—and sent it to you? I should communicate with the parent, and if he merely meant that the boy was to get a flogging I should tell him that I was the best judge of that, and that he had better communicate with me in a different way next time.
1000. Supposing the parent, finding his son bring home a notoriously incorrect exercise—? That is a different matter.
1001. An exercise grossly incorrect; which had not, in fact, been corrected? I understood that the exercise to which you alluded was one written at home, and that the father had seen it before it had been given up. If it had been through the master's hands, and the master had given it back without its being corrected, then I think there would be good reason for complaint.
1002. But not if he had not seen it? No, that is a very different matter.
1003. *By Dr. Lang*: When a parent found this specimen of his son's progress brought before him incidentally, do you think their could be anything materially wrong in his writing across the exercise—"A specimen of Grammar School figures"? I think it would be very disagreeable. I should be very sorry to do anything of the kind myself. I do not think it was a gentlemanly act. I certainly should request that nothing of the kind should be done again. I think its tendency would be to bring the masters to be looked down upon by the boys.
1004. *By Mr. Cape*: Is it unusual to find a clever boy able to work through his equations well, committing very absurd errors in the application of the common rules of arithmetic? It is very frequently the case.
1005. *By Dr. Lang*: Might not a parent do such a thing as that without intending any disrespect? I believe some persons might. As I say, I should take into consideration who the person was that wrote it. If he was a person who ought to know better I should act in a different way.
1006. Do you think such an occurrence would justify immediate expulsion of the boy from the school? I should be sorry to do it myself.
1007. But do you think, if you asked the father to apologise, and he demurred, it would be anything outrageous to ask him to withdraw his boy? I should ask for an apology.
1008. Do you think that would be a harsh course—to ask him to withdraw the boy? I should think there are other circumstances connected with the matter of which at present I know nothing.
1009. But supposing a transaction of the kind, and that the master wrote to the father and did not receive a satisfactory reply, and then asked him to withdraw the boy? I think it would be harsh unless there were additional circumstances. I should be very sorry to do it.
1010. You, yourself, think you would not stand upon so much ceremony? Do you mean that I should not send the boy away?
1011. I understand you to say, that if he was a person that ought to know better, you would not ask him for an apology? I should say, unless he promised not to do so again; or rather I should say, if he did do so again I could not keep the boy in the school.

WEDNESDAY, 21 DECEMBER, 1859.

Present:—

MR. PLUNKETT, | DR. LANG,
MR. PARKES.

WILLIAM CHARLES WINDEYER, ESQ., IN THE CHAIR.

Arthur Todd Holroyd, Esq., Barrister-at-Law, called in and examined:—

- A.T. Holroyd, Esq.
21 Dec., 1859.
1012. *By the Chairman*: You are one of the trustees originally appointed to the Grammar School? Yes; shortly after Sir William Denison came to the Colony I became one of the trustees.
1013. Have you continued to act in that capacity ever since? Yes; from that time to the present.
1014. And you have had opportunity of watching over the management of the school? I have been there as often as I could—in fact I have been very regular in my attendance, as it is a subject in which I have taken an interest.
1015. *By Mr. Plunkett*: There are six official and six non-official trustees, and occasionally the non-official trustees who had previously been official act under the same appointment? Yes; for instance, Sir Daniel Cooper is now a non-official trustee; and the Speaker of the Legislative Assembly is an official trustee. In the case of Sir Daniel Cooper, when we heard of his intention of resigning, the vacancy was not filled up, but he was continued as a non-official trustee.
1016. *By Mr. Parkes*: Who are the trustees? The non-official trustees are Mr. Thomas Barker (who up to the time of his recent accident was a regular attendant, and he has also attended since whenever he is in town), Mr. Edward Cox, Mr. George Wigram Allen,

I think Mr. James Martin, Sir Daniel Cooper, and myself. The official trustees are the Colonial Secretary, the Attorney General, the Speaker of the Legislative Assembly, the Provost of the University, the Professor of Greek, and the Professor of Mathematics.

1017. *By Dr. Lang*: They are trustees in virtue of their office? Yes; in that case it not unfrequently happens, as I think it did in Mr. Martin's case, that an official trustee is a non-official one at the same time; we have then eleven trustees. If we have a gentleman taking an interest in the establishment, and that he is not likely to hold office long, it has been thought better not to cause a vacancy and fill up his berth, but that he should still remain a trustee.

1018. *By Mr. Plunkett*: You hold then that one appointment merges into the other? Yes; he is an official and a non-official trustee. We claim him as a non-official, and the official trustees claim him as one of them; and if on acceptance of office the official trustee was no longer a non-official trustee, his appointment would be at an end, and there would be a vacancy.

1019. *By the Chairman*: If he resigned he would be put out altogether? Precisely. When Sir Charles Nicholson was elected Speaker, he was one of the trustees. Professor Smith also was a trustee for a short time, in consequence of a vacancy having occurred by a non-official trustee having taken office; but he retired as soon as the official trustee was out of office, and I think returned to his duty.

1020. He retired of his own will? It was understood that he was to be a trustee only for that time. We could not have three official trustees from the professors of the University; we have already Dr. Woolley and Professor Pell.

1021. You are aware of the objects of the establishment of the Grammar School, namely, to afford a superior education to as many of the youth of the Colony as possible—do you think the school is attended by as large a number of children as can be expected? I think the school has succeeded, I admit, beyond my own expectations, and, I believe, beyond the expectations of other trustees originally appointed. I think we opened with about 120 boys, and rapidly got up to 200. It has now been averaging from 190 to 200 for some time; but there are many causes to fix it between these two points. In the first year or two of its existence a great number of boys came from other schools. There is one school in particular, where they previously had 119 boys, but where they now have only 69—parents having sent them to the Grammar School instead of there.

1022. *By Mr. Parkes*: Do you know of this decrease of your own knowledge? I know it from the boys themselves, and from one of the masters.

1023. *By the Chairman*: Do you not think more boys might be induced to join the school if the fees were lower? Yes; but that cannot be done, unless the staff is made less or the endowment increased.

1024. The object of the trustees is, I understand, to make the fees as low as possible, whilst having in view the efficiency of the school? Just so. When we first met to consider this matter, I suggested £12 a-year, and a gentleman who has devoted considerable attention to scholastic arrangements suggested £20. After much discussion the fees were fixed at £18. I was then, and still am, opposed to it; but, considering the staff which has to be kept up, unless the State assists the establishment with more than £1,500 a-year, I do not see how a reduction in the fees can be made without impairing the efficiency of the institution.

1025. Then £18 was the minimum upon which you decided this class of education could be afforded? At that time. Since then there have been established 15 scholarships, respectively at £19, £20, and £21 a-year—called senior, junior, and demys. I am happy to say that of the boys who obtained two demys recently founded, one was from the National School at Carcoar, and the other from the National School in Fort-street; and that the one from the Fort-street school was the son of a mechanic. They were submitted to examination by gentlemen properly appointed—viz., by Mr. Cape, Mr. Paterson, Dr. Woolley, Professor Pell, and the Head Master of the Grammar School, so that nothing like partiality was shewn to the boys selected. They were all examined according to age—the five senior scholarships being for boys under sixteen; the five junior scholarships for those under fourteen; and the five demys for boys under twelve; so that boys in each division should have a chance.

1026. Is the accommodation of the school sufficient or insufficient for the number of boys attending it? It is not sufficient, especially with a prospect of increase in numbers. The desks are badly arranged, but it has been with a view to an economy of space. I think the head master should always be in front of the boys; but, considering the number of boys for whom places have to be found, we have been obliged to place some of them at the side, in what appears to me an awkward position.

1027. Then, for a larger number of boys you would not have room to accommodate them? There are desks for 120 in the large room; down stairs there are other rooms for particular purposes, such as elementary physics and mathematics, and these rooms are now appropriated to boys who should be in the schoolroom. If it be the wish of the Government that the school should only consist of 200 boys, and not be expansive, we can, no doubt, make accommodation for them, but the room at present is quite insufficient for that number. I think if we make better accommodation for the boys we shall have a larger number of pupils; for I find that with the exception of the parents of a few boys the school has given universal satisfaction.

1028. With few exceptions? With few exceptions. I have conversed with many parents having boys there, and in nearly every case they were well satisfied. In the first place, the masters are young, well-meaning, and well-bred men, and have brought to this Colony some improved systems of communicating instruction; they are gentlemenly men, and the scholars see that and appreciate it, looking at them as patterns of what a gentleman should be.

A.T. Holroyd, Esq.
21 Dec., 1859.

1029. Have you heard parents express their approbation of them? Yes, very frequently. Of course I have heard dissatisfaction, but not with Mr. Stephens or with the other masters, but with the system. The trustees, however, have always left the system of education in the hands of Mr. Stephens.

1030. We have heard a case mentioned here, that of Mr. Maxwell's, whose son was expelled from the school—are you aware of the circumstance? I am, and will shortly mention to the Committee the state of the case. On coming into town one morning, I met Mr. Maxwell at the door of my chambers, and at my request he walked up stairs. He said he had a complaint to make against the head master of the Grammar School. I thought there was to have been a meeting of the trustees in the course of that week, and told him so. He stated the case in reference to his son, and asked me what he should do in the matter. I then wished to know from him whether I was to advise him as a friend, or give an opinion as a trustee of the Grammar School. He said he applied to me as a friend to advise. I heard what he had to say. The complaint was about an exercise which I certainly at that time did not understand to be an uncorrected exercise, but which I thought had been done in school and corrected. He told me that he wrote across it, I believe the words, "November 3rd, 1858. A proof of Grammar School figures. A. Maxwell." He said, "I gave it to my boy, who gave it to Mr. Whitfeld, and Mr. Whitfeld gave it to Mr. Stephens, who expelled my son." He then shewed me the note from Mr. Stephens, when I said it was not an expulsion but merely a suspension. I also asked him if he intended that the boy should shew the note on the exercise to Mr. Whitfeld; and he said he did, and that it was done without notice not to shew it to other boys. I said, "Then you expected it would go into the hands of Mr. Stephens;" and he said, "That depended upon Mr. Whitfeld." I suggested that it would have been better to have enclosed the exercise in a note to Mr. Stephens, if he did not wish the boy to leave the school, or get it into disrepute. What I said to Mr. Maxwell was this: that it appears to me that Mr. Stephens is entitled to the courtesy of having a note sent to him with this exercise enclosed; and that if he had a complaint to make that was the proper course to have pursued. I said, "If you look at what you have written on the exercise which was given to Mr. Stephens, you must admit that there is a want of courtesy in it towards him." He said, "Well, there is." I said, "Then why not drop him a note, and say that, upon reflection, you think you have acted in a manner which you ought not to have done in sending this note upon the exercise to Mr. Whitfeld." Mr. Maxwell then said, "I have taken the advice of two friends, who consider that he has acted in an arbitrary way towards my son." I said, "If you will send a note to him of the kind I suggest, he will admit your son to-morrow morning." I said, "Suppose he were to receive twenty or thirty of such notes on exercises every morning, the discipline of the school could not be maintained." I said, "That is just your case; there will be a meeting of the Grammar School trustees this week, and, if you wish them to act, I beg you will send a note to the Board." I found that the meeting was to be held that day, and I sent a note to Mr. Maxwell, apprising him of it, in order that he might not lose the earliest opportunity of communicating with the trustees. He wrote a letter to the trustees, in which he reported that his boy had been expelled; but we never treated it as such, and we came to the unanimous opinion that, until Mr. Maxwell offered an explanation to Mr. Stephens, the boy should not be again received.

1031. You did not side with Mr. Maxwell against the trustees? On the contrary, I advised him as a friend to act as the trustees in their resolution afterwards suggested; and, on every occasion, I have stated my opinion that Mr. Maxwell was wrong, he having admitted to me that there was a want of courtesy on his part towards Mr. Stephens; but he seemed determined not to withdraw or explain in any way. I am sorry for it, but I feel that Mr. Stephens was right in the course he took. With the exception of one or two complaints, we have been quite free from them during the time I have been at the Board.

1032. *By Mr. Plunkett:* Do you think such a case is worth making so much work about? I think it was; and, if Mr. Stephens had not taken notice of it in the way he did, perhaps other parents would have taken the same obnoxious mode of censuring him.

1033. Did anything of the kind ever occur before? Never before or since. Mr. Maxwell, who, I am informed, felt indignant at the mode of treatment he received, still allowed his other boys to remain there to the end of the quarter, I believe, and then removed them. The decision of the trustees could have no effect upon the school. It was suggested in the resolution that Mr. Maxwell should explain to Mr. Stephens, and I was in great hopes that he would have adopted the suggestion.

1034. *By Mr. Plunkett:* Did the trustees think the son was in fault at all? They thought he was in fault in the first instance in making out this exercise in the way he did, and then handing it in to his father; but they considered his father was to blame in making the boy the channel for conveying this document, insulting as it was, and open to be seen by other boys to be made known to all the people of New South Wales.

1035. Yet the boy is to suffer? Somebody must be the sufferer; no corporeal punishment is inflicted in the school; the punishments inflicted are comparatively light, and many of the boys think so too, but the boys have great respect for Mr. Stephens. I have been told that so much is he respected by the boys that, on looking around the school, he can at any time, and in a second, enforce his wishes and will.

1036. *By Mr. Plunkett:* Do you not think that it would have had the same effect if Mr. Stephens had first intimated that, if such a thing occurred again, he would take the course he had now taken? Probably that would have been the best course at the moment, but I cannot see how the trustees can interfere with the plan he adopted.

1037. *By Mr. Parkes:* When you proposed to reduce the fees of the Grammar School did you advise the reduction being taken into consideration without reference to private educational

educational establishments? I would have them reduced generally; but there should be one uniform charge. At present the charges are lower, taken altogether, than those of any other educational establishment. There are very few educational establishments in the city, where children do not pay £4 and sometimes £5 a quarter. At the Grammar School, it is £4 10s.; but at private schools extras are charged for which are included in the first charge at the Grammar School. We have French and German taught, we have a drawing master, and we are about getting a drill sergeant; all these charges as extras in other schools are included in the £4 10s.; therefore, the education obtained at the Grammar School is at a lower rate than in the other seminaries. No doubt a reduction would interfere with other schools, just as the introduction of railways interfered with stage coaches.

A. T. Holroyd,
Esq.
21 Dec., 1859.

1038. *By the Chairman*: As educational provision has to be made for the whole of the Colony, and as at present that afforded by the Government is not sufficient to establish Grammar Schools throughout the country, would it be expedient to reduce the fees of one Grammar School so as to make it come into competition with the best class of private schools? St. James's School, conducted by Mr. Rowe, a good master and clever man, was, I understand, closed on account of the Grammar School; but I think it would generally stimulate private tutors to afford a better system of education, and it will shut up those schools not zealously conducted.

1039. When the school was about to be established, it was a strong argument in favor of its establishment, that it would act as a kind of educational standard to bring the other schools up to a certain mark; has it been as extensively beneficial in that respect, as it has been as a teaching institution? The public say, seeing that you have such a large endowment, we do not consider that we should be compelled to pay £18 a-year. But that argument is all moonshine; because education and talent, for imparting instruction, are just as marketable as solid goods or hollow-ware.

1040. *By Mr. Plunkett*: Do you know the proportion of charges between the King's School and the Grammar School? I do not know what the day scholars pay there, but I believe it is about £4 4s. a quarter, and that is less than the charge at the Grammar School. I believe the King's School has its premises free.

1041. *By Mr. Parkes*: You admit then that the institution has been successful? Yes.

1042. You think all the masters are efficient? Yes, very efficient. We had one extremely efficient master, but we were obliged to part with him, but not until his conduct had been under investigation on two separate occasions. He was, undoubtedly, a very efficient teacher.

1043. What is the average attendance of trustees, of course official and non-official? I have never seen a Colonial Secretary there but once, and that was when Mr. Cowper came with Mr. Martin, when Attorney General; I was the only other trustee there on that occasion, and there was no quorum. The average attendance, I should say, is from six to seven out of twelve.

1044. *By Mr. Plunkett*: Would there be any objection to giving a nominal list of the attendances, like that furnished with reference to the attendances at the Senate of the University? None, I believe; I should be too happy to see it done.

1045. *By Mr. Parkes*: How often do the trustees meet? The first Tuesday or Wednesday in every month, unless there is some special reason for meeting. We pay the masters monthly.

1046. Do you inspect the schools at your meetings, or receive special reports, or make special inquiry? We make special reports; and we have the head master present, unless in matters connected with himself, and if he has anything to report we look into it. But our meetings are usually held when the business of the school is going on, and unless our attention is called to some necessary inspection, we do not inspect the building. I have inspected it three or four times, and especially when the discussion upon the vote for its extension was going on.

1047. *By the Chairman*: What do you think of the employment of a private architect on the building? I would rather have a private architect than the Colonial Architect. There has been a great waste of money, for which I hold myself to a great extent answerable for not properly understanding the specifications. I think a great portion of the master's part of the building was extravagantly finished. In Mr. Stephens's bedrooms the linings of the windows are panelled only two or two-and-a-half inches in width; and it appears to me that as they are splayed windows they might just as well have been done plain, especially as they are bedroom windows. I did not look carefully at the specification; but in any future alteration or addition I should be very cautious in seeing to the mode of expenditure.

1048. *By Mr. Parkes*: Are there similar kinds of expensive work in other parts of the building? The master's three or four rooms might have been better arranged with more care; they are not well adapted to the intended use.

1049. Is the masonry of a costly character? No. The sitting-rooms of those gentlemen have a blaze of light into them which is not adapted to the climate.

1050. *By Mr. Plunkett*: Who was the architect? Mr. Blacket.

1051. *By the Chairman*: Have you thought that in case the fees were very much reduced there might be such a large number of boys coming to the school that you would not only require more extensive accommodation but a larger staff of masters; and that the amount of expense would be so large that it would be the better plan to found a number of free scholarships, so that children of the poorer classes might have the benefit of the school? I think there is such a desire on the part of the trustees to encourage the children of parents in reduced circumstances to come there that they have no difficulty in coming to the school. I might mention an instance of one of the trustees paying for the children of parents who are incapable of paying the fees. In establishing these scholarships we have made them to cover the fees of the school, and I think any scholarship of £20 a-year is quite sufficient.

1052.

A.T. Holroyd, Esq. 1052. Suppose you get fifty more founded, would it not make the school more popular, and establish it in the minds of the people? I have thought so; but the boys of very few mechanics come up for these scholarships. The boy whom I have mentioned as having come from the National School, at Carcoar, is the grandson of Mr. North, the Water Police Magistrate. Mechanics can rarely pay £18 a-year for the education of their children, and if they do not get a scholarship they have to take them away, as they cannot afford to keep them at the school.

21 Dec., 1859.

1053. *By Mr Plunkett*: You are in favor of a reduction of the fee to £12? I am.

1054. What is the difficulty in the way? The want of money to pay the masters, as one master could not attend to more than thirty or forty boys.

1055. Suppose the fees are reduced by one-half the amount you propose—to £15? Then I do not think we could carry on the school without an additional endowment of £1,000 a-year.

1056. What would it go to make up? The employment of additional masters. We have now as few as we can do with. Mr. Stutzer having resigned, we find we have got the number down to the very minimum. Some junior boys have been placed under Mr. Mills, who is properly the writing-master. At one time this gentleman acted as secretary to the trustees, and, as it was not considered just that one of the masters should have this additional work without remuneration, a small increase was made in his salary. But this arrangement was not considered satisfactory, and a resolution was passed that the work should not be done by any of the masters. We appointed Mr. Catlett as secretary, at £50 a-year, and took that sum off the salary of the writing-master. No master has time to attend to it.

There is another subject on which I wish to give my opinion to the Committee, as it has engrossed the attention of the trustees at one or two meetings. I mean the question of reducing the present vacations. I think the summer vacation should be six weeks; but the winter vacation might be reduced to four weeks. I may add, the masters of the school, and a majority of the trustees, are opposed to any alteration.

FRIDAY, 27 JANUARY, 1860.

Present:—

MR. CAPE,

DR. LANG,

MR. WINDEYER.

WILLIAM CHARLES WINDEYER, ESQ., IN THE CHAIR.

John Woolley, D.C.L., called in and further examined:—

J. Woolley, D.C.L. 1057. *By the Chairman*: There are one or two matters on which the Committee wish to hear further evidence from you with reference to certain statements made by some witnesses here. You remember the case of Mr. Maxwell's son? Yes.

27 Jan., 1860.

1058. Will you be kind enough to give us the account of the matter as it came before the trustees? We received a letter from Mr. Maxwell, complaining of the head master having expelled his son from the school; and on inquiry we found the facts to be these:—One of Mr. Maxwell's boys had a mathematical exercise to do; the father saw it, and finding it contained some serious mistakes, he wrote across it, "This is a specimen of Grammar School figures," or something of that kind, with his initials, and gave it to the boy to take up. The exercise had not then been seen by the master. The boy shewed it to Mr. Whitfeld, who was the master of the class, and he shewed it, as he ought to do, to Mr. Stephens. Mr. Stephens wrote Mr. Maxwell a note, the effect of which was that he regretted the circumstance, but unless or until an apology was made for the indorsement, the boy could not be received at the school. The father refused to apologise, and appealed to us. We confirmed Mr. Stephens' view of the case; and, finally, Mr. Maxwell wrote us a letter in which he stated that he did not think there was any apology to make, but that if Mr. Stephens first withdrew his letter, he would withdraw his offensive remark. We declined that; and the result has been that the boy has not come back to the school. That is all we know of the case.

1059. Were the trustees unanimous in the view they took of the matter? Quite unanimous. This was an exercise which had not been looked over by the master, and might be reasonably expected to contain mistakes. The master is a most diligent and most accurate man. And even if the master had been proved in fault, we did not think the father ought to have taken that way of expressing his dissatisfaction, but that he ought to have written privately to the head master, or to the master of the class. However, without having any real complaint at all against the master, who had never failed in his duty, he expresses his opinion in this public way; and we know the boy shewed this indorsement of his father's to other boys of the class, before he sent up his exercise. Besides the want of courtesy, it would be perfectly impossible to maintain discipline under such circumstances.

1060. You found that this exercise, with the indorsement, had been shewn to other boys? Yes, there was no doubt of that; and of course there was but one inference, that the father was censuring, in that strange way, the diligence of the master.

1061. Then it is not the fact that the boy was sent away without any opportunity being afforded for explanation or apology? No; Mr. Stephens was very courteous in his communication

munication to the father, the effect of which was, that unless some apology was made, the boy could not continue at the school; and the father, in a very uncourteous way, refused apology. He wrote to us first, and all we could get from him was, that if Mr. Stephens would recall the boy, and withdraw his letter, he would withdraw the offensive remark. I think if we had not taken the step we did, discipline would have been impossible. If it had been my school, I certainly should not have done as Mr. Stephens did; I should have sent the boy away positively at once. In a boarding-school, of course these things can be corrected; but in a day-school, unless the parents are very courteous to the masters, it is absolutely impossible to keep up discipline.

J. Woolley.
D.C.L.

27 Jan., 1860.

1062. *By Mr. Cape*: Was there not, previous to this occurrence, some complaint as to lack of strict discipline in the school? We have received no such complaints. Of course it was to be expected that in a school collected together as this was in the first instance, there would be some little difficulty in maintaining discipline at the outset.

1063. Was it not therefore felt that there was a necessity for some check? On the part of the masters, do you mean?

1064. On the part of the masters—was it not felt that there was a necessity for having strict discipline maintained—that there had been an indulgent system? I do not know that there was any particular indulgence. They do not allow of flogging in the school; but I think they maintain their rules with a considerable degree of strictness. Of course it was to be expected that there would be some difficult cases to deal with in getting the school together at the first—that the masters would not be able to get all these boys in hand at once.

1065. There have not been many complaints of severe treatment? There have been only two cases of complaint before us, one of which could not be called a complaint of severe treatment. I allude to this case of Mr. Maxwell's son, and another case more recently, in which Mr. Fitzhardinge complained of the English master for not having sent the monthly report so soon as might have been expected, and which we thought quite frivolous.

1066. There have not been any complaints from parents on account of boys having been sent away? No.

1067. I want to get at the fact how far it had been the practice to send boys away for breaches of discipline and faults of that kind? In this case the boy was not sent away at once. In fact, Mr. Stephens consulted me before he did anything at all in the matter, and I thought he was stretching courtesy quite as far as he could do. This is the only case of expulsion; but there was another case, in which boys were conditionally expelled, but in which both parents recognised the justice of the proceedings.

1068. *By the Chairman*: Has any suggestion been made to the trustees about the length of the holidays? We have heard complaints from some of the parents. We received a letter on the subject from one gentleman, and he told us we should receive, within a certain time, a memorial from parents generally; but we never did receive that memorial, and we decided, by a large majority, that the holidays were not too long. They are twelve weeks in the year; and the arrangement now is that there shall be six weeks at the end of each half. If the boys really work as they ought to be made to work, and as I believe they are made to work there, I do not think six weeks' holidays at a time is too long.

1069. Have you heard any complaints that in consequence of the length of the holidays at the Grammar School parents have sent their children to other schools? I do not know that we have received any such complaints. Even if parents did so, I should not, as a member of the Board, consider that a sufficient reason for changing our proceedings. If a letter came before the Board, I should only think it my duty to consider its statements on their own merits. If all the parents took away their children, in consequence of any regulation we thought right, I do not think we ought to change our course. The longest holidays in the world are given by the best English schools. There is certainly no school in England, of the rank of a Grammar School, which gives less than twelve weeks; and the great majority give fifteen weeks. In any school which is thoroughly at work I do not think the boys can do with less, especially as in every good school it has become the practice to give holiday exercises.

1070. Is it the custom in the Sydney Grammar School to give the boys holiday tasks? Yes; I understand so.

1071. *By Mr. Cape*: Does not the objection to long holidays arise, in great measure, from the advanced boys being much less in number than in the English schools of the same rank? I do not think that is the case.

1072. I allude to the numbers in the fifth and sixth forms and their removes; I think you will find that the numbers in those forms are not so great, in proportion to the whole number of pupils in the Sydney Grammar School, as in the Grammar Schools in England? I think you will very seldom find a head master with more than twenty boys under his own immediate care. I do not think the numbers in the sixth form at the high class schools in England—Eton, Harrow, or Rugby—are larger in proportion than they are here; and I believe you will bear me out in saying that as a rule, taking the school all round, from thirty to forty is the largest number of boys ever put into one man's hands. Besides, in the English schools all the boys have tutors.

1073. I observe that your argument applies more immediately to the high class of Grammar Schools in England, but I am speaking more with reference to Grammar Schools in those towns where the practical tone of society is more to be compared with that which obtains in this young country? If you look to the Grammar Schools in Birmingham and Manchester—two towns quite as busy as this—I do not think you will find any difference.

1074. Take the City of London Grammar School, for instance? I should say the proportion would be exactly the same. I do not think there would be any real gain in the amount of information

J. Woolley, D.C.L.

27 Jan., 1860.

information acquired, by shortening the holidays. I am sure there should be one set of holidays at least, the summer ones, six weeks long.

1075. Supposing the Committee should fall into the trustees' idea that the holidays are not too long, how far do you think it would be possible to connect some practical education with them, by some additional salary to the junior masters? What do you mean by connecting practical education with them?

1076. Extending the teaching in arithmetic, for instance, or in practical geometry—you never attempt any surveying now? If you want to have surveying taught, it might be done without interfering with the holidays.

1077. Or the elements of chemistry? These things would not require another day's work in addition to the time already occupied in study. They are supposed in the upper school to be always reading some one physical science. I do not suppose they have been reading chemistry yet, because they have not got the machinery. I am quite sure that a boy who goes through our school, with due attention to his studies, could get up the practical part of surveying in a very short time.

1078. Do you think that youths from the Sydney Grammar School, even with the skilful teaching in the higher departments that there is, would be able to pass the Civil Service examination of the first class, or the Indian Service examination, now advertised in our Gazettes? The Indian Service is almost always competed for by men from the Universities. But I am quite sure our boys are going the way to make perfectly certain, if they do their duty, of getting their fair proportion of those prizes which are competed for by boys from schools of a similar class in England. There is no practical education comprised in the Indian Service examination that our boys do not get. We require the head boys in the school always to be learning some physical science in addition to their other work. In the Indian Service examination they do not allow boys to take up more than three subjects; and a boy who goes in for classics and mathematics, and does well, must win, because those marks beat all the rest.

1079. *By Dr. Lang*: Taking it for granted that twelve weeks' holidays in the year is not too large a proportion for the more advanced students in the Grammar School, do you think that there is not considerable danger, both to the intellect and to the morals of the younger pupils, in having so protracted a period? I was ten years master of a Grammar School in England, where there were never less than twelve weeks' holidays in the year, and where there were boys as young as eight years of age—there being nearly sixty boys under nine years old—and I do not think their intellect or morals were injured.

1080. Have you not heard complaints on the part of the parents, that they do not know how to dispose of the boys during the long holidays? I think that is the fault of the parents themselves. I believe all these complaints proceed from nothing but the idleness and unwillingness of the parents to do their share in the education of their children; they want, in fact, to treat the school as a kind of nursery for bringing them up. I have not the least doubt that in many cases it is a bad thing for the children to be at home.

1081. Does not that arise from the difficulty of disposing of children in this country? I think if they have a happy home there ought to be no difficulty on that score. In the houses of those parents whom I personally know I do not find any complaint. I believe the fact really is that some parents wish to throw all the burden of bringing up their children on the masters of the school.

1082. The complaint is generally something of this kind, that parents cannot allow their children to go out unless by throwing them upon the streets—that there are not such facilities of obtaining amusement for them as in England? They must be quite as great as in Birmingham, Manchester, and such towns, where there are boys of all classes in the Grammar Schools, and where the holidays are quite as long as they are here. The objection, if pressed, would go to destroy holidays altogether.

William John Stephens, Esq., M.A., Head Master of the Sydney Grammar School,
called in and further examined:—

W.J. Stephens
Esq., M.A.

27 Jan., 1860.

1083. *By the Chairman*: Since examining you we have had some evidence given before the Committee respecting the removal of a boy from the school, and we have thought it right to summon you again in order that the Committee might have both sides of the story—I allude to the case of Mr. Maxwell's son—will you be good enough to give the Committee your account of the matter as it came before you? I feel some difficulty in answering such a question as that, because it is a matter so immediately concerning the direct administration of the school that it does not even fall within the province of the trustees to examine into it, unless there were question of a direct official censure passed upon me.

1084. Mr. Maxwell wished to be examined, and gave his account of the matter, and, as it involved a charge against you, the Committee thought it was only right we should have the whole state of the case on both sides. The trustees, through Dr. Woolley, have given their account of the matter? If the trustees have done this I do not wish to maintain the principle any further, but it seems to me that the question is one which it is hardly for the public to determine. However, I am ready to answer any questions upon it, since the trustees have done so.

1085. Will you be kind enough to state the circumstances under which you wrote to Mr. Maxwell? An exercise in arithmetic had been given to the pupils to prepare at home, and one of Mr. Maxwell's sons had attempted this, and failed. Mr. Maxwell thereupon wrote across this exercise a remark disparaging the teaching of the Grammar School, and tending,

as I thought, to destroy the respect which ought to be maintained towards the masters by the boys. This was shewn up in the ordinary way to the master of the class, and he sent it to me. I wrote to Mr. Maxwell to request an apology, and to say that his son could not be allowed to return to the school until such apology was made. That was the end of the matter, so far as I was directly concerned. I had no further communication with Mr Maxwell.

W.J. Stephens
Esq., M.A.
27 Jan., 1860.

1086. Then it is not the fact, that you sent away the boy and prevented his coming to the school, without affording Mr. Maxwell a chance of apology? No; I only demanded the apology, and said that the boy could not return to the school till such apology was made. His brothers remained till the end of the half-year.

1087. Did Mr. Maxwell offer to retract? No.

1088. The matter went before the trustees? Yes.

1089. And they confirmed the course you took? Yes.

1090. Have the parents of any of the boys at the Grammar School complained to you personally about the length of the holidays? A few have rather grumbled than complained.

1091. In point of fact, the holidays are not longer than are usual in schools of a similar class? No; shorter than in the public schools in England. But there is no real analogy between the English public schools and the Grammar School here.

1092. In what way? In the public schools in England, such as Eton, Harrow, and Rugby, the pupils are concentrated in those towns, for the purpose of being educated there; and there are scarcely any "day-boys," in the strict sense of the word.

1093. In that respect, you mean, there is no similarity? And in many other respects. The pupils in the English public schools may, I suppose, be called the *elite* of English schoolboys.

1094. *By Dr. Lang*: They are not casual pupils belonging to the town population? There is no town population of importance about the schools to which I refer.

1095. The pupils are gathered together from a great extent of country? Yes; and they are brought to live in those towns where the schools are situated, simply for the purpose of being educated there.

1096. *By Mr. Cape*: From your experience in the Colony, is it your desire to raise the Sydney Grammar School to the standard of schools such as you have mentioned, or to make it more resemble the Birmingham and City of London Grammar Schools? I think we should be content to follow the example of the public schools in the large towns in England.

1097. *By the Chairman*: In what way? I am afraid we cannot, for many generations, obtain the same *esprit de corps*, and the same general nobleness of character, that distinguishes an Eton boy for instance.

1098. You do not mean that we should aim at a less high standard of scholarship? No; as far as scholarship goes, the schools at Birmingham and other large towns, are quite as high as at Eton or Harrow; and, in fact, the teaching is, in many instances, better in the new schools.

1099. *By Mr. Cape*: We want a certain amount of practical education, with a certain amount of high class education? I understand that the teaching in the Grammar School, which is intended to be the highest scholastic teaching in this Colony, ought to be directed to general or liberal education, as distinguished from special training, commercial or professional.

1100. *By Dr. Lang*: I think the distinction you mean to convey to the Committee is this, that the high schools in England, such as Winchester, are more of an aristocratic character, and that we must be content with a school of a plebeian character? Not plebeian.

1101. Not in regard to the class of education, but in general character? Where there is no aristocracy, there can be no plebeians. I would rather the school should represent the people of Sydney, without the distinction of plebeian and aristocrat. I think the tone of the Sydney Grammar School quite as high as that of similar schools in the great towns of England.

1102. *By the Chairman*: So far as you have observed, do you think the effect of the long holidays upon the minds of the boys is injurious? Not in the least, I should think.

1103. Have you any letters that Mr. Maxwell wrote to you? He never wrote to me at all, that I remember.

1104. And you only wrote to him once? Only once.

SEPARATE APPENDIX.

455, Pitt-street South,
27 January, 1860.

Sir,

In accordance with the request contained in your letter of the 11th instant, I have the honor herewith to enclose Returns shewing the dates upon which meetings of the Trustees of the Sydney Grammar School have been held since the foundation of the School, together with an account of all moneys received and expended by the Trustees on account of the School, from the date of its foundation to the present time.

Chas. Tompson, Jun., Esq.,
Clerk of Legislative Assembly.

I have, &c.,
W. H. CATLETT,
Secretary.

WEDNESDAY, 29 FEBRUARY, 1860.

Present:—

MR. ARNOLD,
MR. CAPE,DR. LANG,
MR. PARKES.

WILLIAM CHARLES WINDEYER, ESQ., IN THE CHAIR.

Mr. W. G. A. Fitzhardinge again called in and further examined:—

Mr. W. G. A. 1105. *By the Chairman:* Since examining you the other day the Committee have gone through your evidence, and have observed that you have appended a note referring to matters upon which you made no observation when you were before the Committee; and as the rule is not to allow notes of that kind to be appended, the Committee thought well to recall you to know whether you have any further evidence to give upon the matters referred to in this note or otherwise? I believe a drill master has since been appointed at the school.

29 Feb., 1860.

1106. Since you gave your evidence? Yes. I am told that the porter drills the boys.

1107.

1107. Besides this matter referring to the drill master, have you any other evidence you wish to give the Committee with respect to the school? Yes. With reference to the drill master, I think it is objectionable that a servant should be put in command over the boys. The boys know his position, and do not treat him with proper respect. Mr. W. G. A.
Fitzhardinge.
29 Feb., 1860.
1108. Do you state that as a fact, or do you conclude that that would be the case? I am not at the school to see it, but I hear my children talk of what passes there; I hear them say that when the sergeant gives an order the answer is, "Yes, porter," "No, porter."
1109. *By Mr. Arnold*: Is not that evidence rather of bad manners on the part of the children than of the impropriety of the appointment? It is brought about by putting an improper person over them.
1110. Is not a sergeant a proper person for a drill master? He is not a sergeant, but a porter. He has been a soldier, was a publican, and is now a porter, and in some sort a servant of the boys—he has to supply them with water, and at all events is the servant of the masters. At one time he is a servant, and five minutes after he becomes the master of the boys. I have nothing to say to the man being put into that position, but his discipline is rendered ineffective by his position.
1111. *By the Chairman*: Have you anything else to state? The vacation has occurred since I was examined, and I have received reports of the progress of my boys, and I am more dissatisfied with the school than I was when I was previously examined. Very great carelessness has been exhibited both on the part of the trustees, and on the part of the master. There is a rule at the school which is very prominently published, that "At the end of each quarter a report upon the conduct and progress of each pupil shall be made to his parent or guardian." No report was made to me, nor, I believe, to any other parent, for some time after the end of the quarter. I wrote to the trustees, drawing their attention to the breach of the rule. They wrote that they had referred my complaint to the head master, and that is all I have heard about it. I have copies of the letters I wrote to the trustees.
1112. You have since received that report? I received the report the day the Board met, and a very careless report it was; and I referred it back to the trustees to shew how carelessly it had been prepared.
1113. *By Mr. Jones*: Carelessly,—in what respect? Perhaps I had better shew you. (*The witness produced the report.*) One of my sons was advertised as having distinguished himself in mathematics. The report sent in upon that son's conduct said nothing about mathematics; that item was left out altogether.
1114. *By Mr. Cape*: Had he distinguished himself at the examination? At the examination. At the bottom of the advertised list it is stated, "Those pupils against whose name stars are placed have gained prizes; those pupils whose names are printed in capital letters have distinguished themselves at the examination." I sent back that report to the trustees, and it was returned to me, I do not know by whom, in a blank envelope, in the dirty state you see it; and no notice was taken, excepting that the word "satisfactory" was placed against "mathematics." And yet these gentlemen, the masters, are paid liberal salaries to attend to their duties.
1115. The newspaper report refers to the examination, the quarterly report to the progress of the pupils during the quarter? I suppose so.
1116. *By the Chairman*: Did you ever receive any of these reports before? Yes, here they are. (*Producing several reports.*)
1117. Are the stars and capitals here? No. In the newspaper these lists are published, but in a different form. The stars are there put against the names of all the gentlemen who have taken prizes; and those gentlemen who have distinguished themselves at the examination have their names printed in capitals.
1118. *By Mr. Jones*: I understand your complaint as to carelessness to be that, although your son appears on the newspaper report to have distinguished himself in mathematics, no such remark is made in the report sent to you as would harmonise with the newspaper report? No word was placed against "mathematics;" the word "satisfactory" has since been added.
1119. Then there was an omission on the part of the mathematical master? There was an omission.
1120. Then the charge of carelessness resolves itself into this, that the mathematical master failed in the report sent in respecting your son to state anything as to his progress? Yes, if you like to take it in that way. I maintain that that is carelessness. That is the particular complaint. Besides, these reports were not sent to me at the end of the quarter; the school broke up on the 16th December, and they were not sent to me until the 3rd January—not until after I had complained to the trustees. I received the report eighteen or nineteen days after the end of the quarter.
1121. Including during that time Christmas week and new year? A period of the year which rendered these reports more valuable, because most parents are in the habit of making presents to their children at that time, and they might, for want of the information that ought to be contained in these reports, make presents to those who did not deserve it, while the deserving might go unrewarded.
1122. It does not say immediately upon the close of the term? No.
1123. *By Mr. Cape*: Has this neglect of which you complain been a common practice? Every parent I have spoken to upon the subject has been in the same position.
1124. This particular quarter? This particular quarter. I inquired of several, because I thought it might have arisen from the porter or messenger having neglected or forgotten to deliver mine.
1125. *By the Chairman*: Do you mean every parent was in the same position with reference to

Mr. W. G. A. to the report upon mathematics, or that they, like yourself, did not receive any report?
Fitzhardinge. All to whom I spoke were in the same position as myself—they had not received any report.

1126. I suppose the newspaper report was published at the time? That is a list of how they stand in their class—not whether they have been good, bad, or indifferent. One who was a prizeman was shewn by the report to have been most unsatisfactory in his conduct.

1127. When you said both master and trustees were guilty of carelessness you founded the charge of carelessness against the trustees upon the fact that no report was made to you of your son's progress in mathematics? Although I wrote to them upon the 31st December, and they acknowledged my letter and stated that the report had been forwarded to the head master, I have not since received any communication from them. Eighteen months ago I wrote to the trustees, and I had to wait some months before I got an answer. The trustees rarely meet in sufficient numbers to form a quorum; so one of the trustees has told me.

1128. Have you anything else to complain of? I have complained to the head master that the eldest of my sons now at school has been on the fifth form ever since he has been there—now upwards of two years. It will be almost impossible for him to go to the University if his progress is so slow as that, as he will be too old.

1129. What age is he? He is now seventeen. Probably he will remain in the fifth form this year; he will then require to be two years in the sixth form, and will be twenty before he can matriculate.

1130. Is not twenty-one the usual age for a young man in the Mother Country to matriculate? That is at Home. If more attention were paid to that form, the boys would do better. I have brought the reports of that boy's conduct, in order that the Committee may see that he does not bear a bad character. I omitted another instance of carelessness: Last year one of my sons was advertised as a prizeman; months elapsed, but no prize was given: I wrote to Mr. Stephens, then the prize was given. At the examination last December, another son was marked as a prizeman; no prize however has as yet been awarded.

1131. *By Mr. Arnold*: Do you know what books he is in in the classics? Euripides and Cicero.

1132. Are you acquainted with public schools at Home? Yes.

1133. Are you aware that a very considerable portion of students in public schools never reach the sixth form at all?—

1134. *By the Chairman*: Do they not often go from Eton from the fifth form? Of Eton I know nothing. I refer to Westminster, The Charter House, Harrow, and Winchester. In all public schools with which I am acquainted, the progress of the scholar rested with the scholar himself how long he should remain in any form. There was a certain amount of work to be done, and if that were performed he was removed to a higher form. I have seen a boy in three months run through four forms, a studious, clever boy.

1135. *By Mr. Jones*: Are you aware whether it has been commonly the case for boys to remain in the fifth form for two years,—whether, during that time, several boys have not passed from that to the sixth form? I should say decidedly that during two years the boys who have been removed to the sixth form have been remarkably few. I should be quite within bounds in saying ten have not been removed from the fifth to the sixth form.

1136. How many boys are there in the fifth form, in the second remove? Here is the list.

1137. In the second remove? You will see not above two or three have been removed. I do not mean to say they should be removed whether they are fit or not, but I think if more attention was paid to the fifth form boys they would sooner be able to go into the sixth. A tutor, an Oxford man, told me that the fifth form had much too easy and the sixth form much too hard work to do. The difference is so great that it is hardly possible for a fifth form boy to go into the sixth without preparation.

1138. *By the Chairman*: At all events, your son is not an exceptional case? No; my son is treated as fairly as other boys. I am not one of those parents who thinks a son must be a genius, I believe my boy is rather thick-headed, but he has brought home a good report every quarter during the two years he has been at school.

1139. *By Mr. Arnold*: Do you mean that any other preparation is required for the sixth form besides the preparation the lads undergo in the fifth? There is not, but there ought to be; the fifth form ought to be better attended to.

1140. In fact you mean that there ought not to be any other preparation necessary? There ought not to be, but as the thing stands the preparation is not sufficient. Mr. Stephens must feel that or he would move more into the sixth. The work in the sixth is very great;—I am told that two of the boys, Allen and Dixson—Allen is a son of the Honorable George Allen, a member of the other House—work together, and that they are up at their studies until two or three o'clock in the morning. Mr. Gilbert Wright also told me that the amount of work his son has to do was very great. I know that what my boys, who are in the fifth form, do, is a mere bagatelle.

1141. *By Mr. Arnold*: Do you desire to give any other information to the Committee, or to make any other reference to the management of the school? I have very great objection to these lists being published, because I believe they annoy the boys, they do not shew the boys' capabilities; they do not even give his true position.

1142. *By Mr. Jones*: Do you know how his position in the lists is determined? By marks.

1143. By marks how obtained? There are a certain number of marks appropriated for every lesson; the highest number I believe is six. The master, when he gets an exercise, or has finished an examination, says to the boy, "I will give you so many marks." If he thinks the exercise very good, he gives him six; if mediocre, three; and if bad, none. These marks are entered in a kind of ledger, and at the end of the term they are totted up.

1144. Are there not in addition to these, marks for general assiduity and success during the quarter—marks obtained in the course of examination? I believe not; the marks obtained

- obtained at examination merely tell with reference to prizes, they are not added to the marks for the quarter; marks for the quarter are quite distinct, they are for determining the position in the class. A prizeman, for instance, may be three or four down in his class.
1145. The position in the class is put in the paper, and those who have distinguished themselves have their names printed in capitals, or have stars before their names? These marks are determined in this way, they have work to do at home—Latin verses to make, or to turn English into Latin. If a boy does that of his own ability, without any assistance, perhaps he will have but a poor performance to shew; but if he obtain the help of an elder brother, or of a crib, he may do it letter perfect and get six marks. Cribbs are the rule at the school, and the non-use of them the exception.
1146. Do the masters tolerate the use of cribbs? They know that they exist. I have drawn Mr. Stephens's attention to the matter over and over again. The use of cribbs is notorious; the only time the master watches against them is at the examination.
1147. *By the Chairman:* Are not the honors of the school obtained at this examination? The prizes, and honorable mention; but the position in the list is determined by the quarter's marks. The consequence is, that I find Fitzhardinge primus near the bottom, because he is not allowed to use a crib. I may state, to shew the absurdity of these marks, that the youngest of my boys at school is very irregular in his attendance on account of the delicate state of his health; he did not return to school until some time after the commencement of the past term; nevertheless, on Monday, 31st October, he, although absent one day and a half during the then past week, was made captain of his form. The fact is, I make my elder sons see that their younger brothers get up their work. The elder brother, on whom the duty devolved of looking after this young "captain," to save himself trouble, did the youngster's exercises, which, of course, obtained no end of marks for the youngster, and he was thereby thrust over the heads of others who, in all probability, were better scholars. These last remarks were contained in the note appended to my previous examination. It is fair that I should now add that the captain kept his post to the end of the quarter, and obtained a prize,—certainly with the same assistance. With reference to the receipts, I certainly think that the receipt stating a fact should express that fact, and not something else; and these receipts, I maintain, do not express the fact they pretend to express.
1148. Will you explain what you mean; we have not these receipts before us? (*The witness produced several receipts.*) These receipts are never dated. I have nearly all I have had from the first to the last. They state that the fee is paid for the quarter ending on a particular day.
1149. *By Mr. Jones:* That day being the day on which the school quarter actually did end? I always understood that a quarter meant a fourth part.
1150. The school quarter ends ———? We will take the exact words, "being for the school fee for the quarter ending on Friday, the 6th day of April."
1151. *By Mr. Cape:* Suppose it said "term," it would come to the same thing? Why not put a date.
1152. *By Mr. Jones:* Your objection would be met if, instead of using the word "quarter," "term" were used? That would put persons on inquiry,—they would ask what the term was.
1153. Do not all parties sending to the school know what the quarter is? No, a vast number of illiterate people believe that a quarter means three months. This is a mode of calculation peculiar to the school.
1154. The word term would meet the objection, the year might be divided into three terms? Yes, a term may mean a day.
1155. *By Mr. Arnold:* Do your sons still continue at the school? My sons still continue. My desire is that the school should be improved, not that it should be either put down or left unassisted.
1156. *By the Chairman:* Is there any other information you would wish to give the Committee? I wish to draw attention to the fact of the trustees being as it were self-elected. It is a popular institution, and in my opinion there should be a popular election of at least some of the trustees.
1157. On what basis? Every parent who has had a child at school six months should have a vote. The honor is, in a measure, thrust upon these gentlemen at present, and they are very careless in attending. I believe the whole business is conducted by three who usually attend. I get my information from one of the trustees.
1158. *By Mr. Parkes:* What do you think of appointing official trustees—persons who from the nature of their employment cannot attend the meetings regularly? I cannot see the necessity for it; indeed, I think it very objectionable.
1159. The Colonial Secretary, for instance? I think it objectionable to have the Speaker, the Chief Justice, or the Attorney General. I think it is a slavish imitation of the old country, where they appoint official trustees of the British Museum and some other places.
1160. You object to the mode of filling extraordinary vacancies by the election by other trustees? Yes.
1161. As having a tendency to still farther narrow the mode of appointment? Yes, and it is fearfully obsolete. It was the plan of the old vestries when I was a boy, which was scouted out of every parish before I left England.
1162. *By the Chairman:* Would you have them solely elected? Perhaps the Government might, if there were twelve trustees, appoint three. I do not know of any absolute necessity even for that.
1163. Do you know whether the official or the non-official trustees are most regular in their attendance? I believe if a nominal return were obtained it would be found that

Mr. W. G. A.
Fitzhardinge.
29 Feb., 1860.

Mr. W. G. A. Messrs. Holroyd, G. W. Allen, and T. Barker, do the greater part of the work, and are Fitzhardinge. most frequent in their attendance.

1164. *By Dr. Lang*: Have you any suggestions to offer to the Committee for the general improvement of the institution—what measures of reform do you think are required? I think the head master should superintend the fifth form more than he does at present. His attention to the sixth form and the general superintendence of the school can hardly fully occupy his time, or at all events it would be only fair that he should give more of his immediate attention to the fifth form. I admit, however, that it is a delicate thing to interfere with a gentleman of Mr. Stephens's attainments. There is one other remark I would make in reply to the last question. About a year ago some scholarships were instituted, and I hold in my hand the rules and conditions with reference to them. At the end of the rules is a note in these words:—"All future examinations will take place at the end of the "summer vacation." It appears that these scholarships are not to be granted at the end of every year, but only at the end of every second year. The scholarships in existence are to lapse before fresh ones are created. I think fresh scholarships should be given every year, because the boy who may be able to compete for a scholarship this year and next, if he has to wait till the end of the following year, may be thrown out altogether.

1165. *By the Chairman*: How do you mean the boy would be thrown out? He must be of a certain age.

1166. That is, he must not be over a certain age? Yes, he is not over in 1858 or in 1859, but he is in 1860; he might have tried in 1858 or 1859, but because there is no examination till 1860, he is thrown out. There are five senior and five junior scholarships, and five demi-ships.

1167. I think you expressed yourself in favor of that system of establishing scholarships as the best means of increasing the usefulness of the school? Decidedly.

1168. You think that would meet with general approbation amongst those who wished to avail themselves of the advantages of the school? I think so.

1169. It would be better you think than lowering the fees generally? Yes, if there were a sufficient number of scholarships I think the fees might be maintained, if not at their present rate, at a very little diminution. Scholarships should be open to those who cannot afford to pay so much, but I cannot complain that £4 10s. is a large sum to pay per quarter or term, although it falls heavy upon me who have four, and at one time had five at school. Of course if you could get funds elsewhere it would be desirable to have the fees as small as possible.

1170. Of course you would not wish to do anything in the way of reducing the fees that would impair the efficiency of the school? Certainly not; I would wish to see all the masters very well paid indeed, but they must work for their pay.

1171. So that the question of money must be borne in mind at the same time that you make any alteration? Yes.

SEPARATE APPENDIX.

B.

To the Honorable the Legislative Council of New South Wales.
The Petition of the undersigned Inhabitants of Sydney, and Others,—

SHREWETH:—

That your Petitioners cordially participate in that just estimate of the policy of establishing means of liberal education, without restriction to sect or party, which has already influenced your Honorable House in the endowment of a University, destined, as your Petitioners earnestly hope and believe, to train up many Australian youths whose future services in the material and moral advancement of their native land will be such as to render the cost of the institution a matter unworthy of any comparative regard.

Your Petitioners nevertheless are impressed with the conviction, that provision is no less required for raising the character of the earlier instruction bestowed on the youth of the Colony, both as respects those who do not, and those who do, intend to follow up their studies at the University; the progress and usefulness of which are at present manifestly retarded for want of efficient preparatory education.

Your Petitioners respectfully submit that, by the erection of a Grammar or High School, and by the engagement of first-rate masters, with a partial endowment, supplemented by liberal fees to be contributed by parents, the youth of Sydney might be at once raised to an equality, in point of education, with those of English cities; a nursery provided for our University; a model afforded to other schools; and a new stimulus given to our progress in all that constitutes intellectual, moral, and national greatness.

Your Petitioners therefore pray that your Honorable House will adopt such measures as may appear best adapted to accomplish the object now indicated.

And your Petitioners will ever pray.

[Here follow 365 Signatures.]

1859.

Legislative Assembly.

NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.

(REPORT FOR 1858.)

*Ordered by the Legislative Assembly to be Printed, 13 September, 1859.*REPORT OF THE PROCEEDINGS OF THE SENATE OF THE UNIVERSITY,
FOR THE YEAR 1858.

1. In accordance with the provisions of the 22nd clause of the Act of Incorporation, 14 Vic., No. 31, the Senate of the University have the honor to submit, for the information of the Governor and Executive Council, the following Report of their proceedings during the year 1858.

2. The year 1858 is memorable for the importance of the privileges acquired by the University, in the grant of a Royal Charter. As stated in the Report for the year 1857, a Petition was addressed by the Senate to Her Majesty, and transmitted through His Excellency the Governor General, (whose cordial support it received,) praying that Her Majesty would be graciously pleased to grant the authority required to entitle the Degrees of this University to recognition throughout the British Dominions. The claims to the concession thus sought for from the Crown were urged on the ground of the extended and complete course of instruction which the University is enabled to supply, the standard of qualifications demanded from Candidates for Honors and Degrees, and the distinguished attainments and recognised ability of the Professors. The existence of By-laws having the force of statutory enactments (until repealed with the assent of the Governor General)—and the visitatorial power vested in His Excellency would, it was also shewn, afford a satisfactory guarantee—that the course of Academic discipline, and the tests at present enforced, would not be permitted to assume a less elevated character than that which they now possess. To the Petition of the Senate, the Queen has been most graciously pleased to assent, and Letters Patent have been issued under the Great Seal, declaring that the Degrees already granted, or hereafter to be granted, by the University of Sydney, shall be recognised as Academic Distinctions and Rewards of Merit, and be entitled to rank, precedence, and consideration, in the United Kingdom, and in the British Colonies and Possessions throughout the World, as fully as if they had been granted by any University in the United Kingdom. In this place the Senate feel it due to the Provost, Sir Charles Nicholson, to express their deep sense of his exertions, and the active zeal which he displayed in initiating, and subsequently carrying to a successful issue, their endeavours to obtain the desired Charter.

3. To the exertions of the Provost, by whom application was made to the Chancellor of the University of London, the Senate are indebted for a further valuable privilege conceded to them by that Institution, viz., the recognition of attendance on the lectures of the Professors of the University of Sydney, as entitling Candidates for Degrees to present themselves for examination in London. Further,—in the new Charter lately granted to the University of London, the University of Sydney is specially named as one of the Institutions in connexion with it.

4. Their sense of the high distinctions thus conferred upon this University has been shewn by the adoption of Addresses by both Houses of the Colonial Parliament to Her Majesty, expressive of their thanks, and by the concession to the University of the

privilege of returning a Representative to the House of Assembly, so soon as those duly qualified to vote shall have reached the number of 100.

5. The term of his tenure of office, as Provost, having expired early in the year, Sir Charles Nicholson, who had expressed a wish to resign,—as the period of his return to the Colony was prolonged,—was unanimously re-elected.

6. A vacancy in the Senate has been filled up by the election of the Hon. James Martin.

7. The College of St. John having been formally incorporated by proclamation of His Excellency the Governor and the Executive Council, in accordance with the provisions of the Act 18 Viet., No. 38, application was made by the Council of the College for an assignment of the land to be sub-granted to them out of the University grounds, as specified in the Deed of Grant issued to the University by the Crown. The prescribed area of 18 acres, situate on the south side of the University grounds, was allotted by the Senate to the Council of the College in accordance with their request.

8. It being provided by the By-laws relating to the Faculty of Law, that until the necessary Professorships shall have been established, a Board of Examiners should be appointed to test the qualifications of Candidates who might apply for Degrees in Law, under the 13th clause of the Act of Incorporation; the Senate, as a preliminary measure, resolved on the appointment of a Reader in general Jurisprudence. John Fletcher Hargrave, Esq., has been elected to fill this post. Lectures will be delivered by this gentleman, during two terms in the year, and are open to all persons on payment of a moderate* fee.

9. The question of the expediency of enlarging the Board of Examiners for Honors and Degrees in the University having been raised, the Senate, acting on the recommendations of the Professorial Board, to whom the subject had been referred for their report, appointed the following gentlemen to co-operate with the Professors in the Faculty of Arts, in the annual Examinations, viz., in Classical Literature, Henry Cary, Esq., M.A. In Mathematics and Natural Philosophy, the Rev. W. Scott, M.A.; and in Chemistry and Experimental Physics, Richard Greenup, Esq., M.D.

10. It being provided by the By-laws of 1856, that the degree of M.A. should be conferred only after examination, whereas by those in force previously to that time no examination was prescribed,—a By-law has been framed by the Senate, and laid before the Governor and Executive Council, whose assent it received,—dispensing with the examination in the case of such Candidates for that degree as had obtained the degree of B.A. previously to the date when the By-law came into operation. (Appended is a copy.)

11. A By-law was also passed by the Senate, and assented to by the Governor and Executive Council, declaring the title of Professor to be distinctive of Public Teachers in the University, and forbidding it to be assumed by any person in or belonging to the University, or any College within it, without their express authority. (A copy of this By-law is also appended.)

12. The number of Students admitted to matriculation during the year, after having passed the preliminary examination, is 7.

13. Five Students having attended the University course for the period of three years, and having otherwise complied with the regulations of the University, were declared to be entitled to the degree of Bachelor of Arts.

14. A statement of the Receipts and Expenditure of the University during the year is appended.

The foregoing Report was adopted at a Meeting of the Senate, held on the 13th July, 1859, and ordered to be transmitted to the Honorable the Colonial Secretary for presentation to the Governor and Executive Council and the Parliament, in pursuance of the 22nd Section of the Act of Incorporation, 14 Vic., No. 31.

H. KENNEDY,
REGISTRAR.

* The Fee for Members of the University is £1 1s.; for others, £2 2s.

APPENDIX I.**BY-LAW**

For dispensing with the Examination for the M.A. Degree, in certain cases.

The By-law of 1857, prescribing an Examination for the Degree of Master of Arts, shall not apply to such Candidates for that Degree as had obtained the Degree of B.A., previously to the date when the said By-law came into operation.

APPENDIX II.**BY-LAW****LIMITING THE TITLE OF PROFESSOR.**

The Title of Professor shall be distinctive of Public Teachers in the University, and no person in or belonging to the University or any College within it, shall assume that Title without the express authority of the Senate of the University.

APPENDIX III.**REPORT OF THE AUDITORS, FOR THE YEAR ENDING 31 DECEMBER, 1858.**

The undersigned Fellows of the Senate appointed to audit, and report upon the state of the accounts of the University of Sydney, report to the Senate as follows:—

1. We have examined the Books, and have seen warrants duly signed, and receipts given for every item of expenditure on account of the University.

2. The forty-four (44) Government Debentures on hand on the 1st January, 1858, have been sold during the year at £95 10s. to £96.

3. The full amount of the Endowment Fund (£5,000) for 1858 has been received.

4. We find the following to be the state of the monetary affairs of the University of Sydney at this date:—

RECEIPTS.

Balance in Commercial Bank, on 1st January, 1858	£706 17 8
Received from Treasury—Endowment Fund	5,000 0 0
„ by Sale of 44 Government Debentures, with accrued Interest to date	4,251 8 0
„ Interest on above 44 Debentures to 1st January, 1858, half-year	110 0 0
„ Interest on Thomson, Barker, Cooper, Levy, and Wentworth, Scholarships	194 5 7
„ Interest on Bank Account, half-year	3 2 6
„ Rent for Pasturage	87 10 0
„ Fees from Students, after paying Professors their share	169 3 8
„ Fines	2 2 0
	<u>£10,524 9 5</u>

EXPENDITURE.

Paid Commercial Bank Building Fund, over draft at date 1st January, 1858, per last balance.....	£2,462 9 9
Salaries, charges for Printing, Stationery, and sundry expenses.....	4,918 1 11
For Furniture	311 8 6
Paid to Building Committee, including Architect's Commission	1,787 15 8
Remitted to London for Books.....	60 0 0
Paid University Scholarships	150 0 0
„ Special ditto	71 5 0
„ Petty Cash	25 0 0
„ Commercial Bank, half-year's Interest on overdrawn account to 30th June	41 6 5
	<u>9,827 7 3</u>
Balance on hand, thus	<u>£697 2 2</u>
Commercial Bank General Account.....	£488 8 7
„ Building Fund	208 13 7
	<u>£697 2 2</u>

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 8. TUESDAY, 13 SEPTEMBER, 1859.

7. Sydney University :—Mr. Murray moved, pursuant to notice,—
(1.) That a Select Committee be appointed to inquire into the present state of the University of Sydney.
(2.) That such Committee consist of Mr. Plunkett, Mr. Macleay, Mr. Piddington, Mr. Windeyer, Mr. Parkes, Mr. Broughton, Mr. Flood, Mr. Wilson, Mr. Black, Mr. Cape, and the Mover.
Debate ensued.
And the Revd. Dr. Lang requiring that the proposed Committee be appointed by Ballot,—
Question,—That a Select Committee be appointed to inquire into the present state of the University of Sydney,—put and passed ;—
Whereupon the House proceeded to the Ballot, and the Speaker declared the following Members to be, with the Mover, the Committee duly appointed, viz. :—Revd. Dr. Lang, Mr. Cape,* Mr. Jones,† Mr. Black,‡ Mr. Windeyer, Mr. Arnold,§ Mr. Dalley,¶ Mr. Wilson, and Mr. Plunkett.

* Seat declared vacant, 14 April, 1860.

† Seat declared vacant, 10 April, 1860.

‡ Seat declared vacant, 26 October, 1859.

§ Seat declared vacant, 8 March, 1860.

¶ Seat declared vacant, 28 February, 1860.

VOTES NO. 29. WEDNESDAY, 19 OCTOBER, 1859.

8. Attendance of Member of Legislative Council :—Mr. Murray moved, That the following Message be carried to the Legislative Council :—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee to inquire into the present state of the University of Sydney, and that Committee being desirous to examine the Honorable George Allen, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

Legislative Assembly Chamber,
Sydney, 19 October, 1859.

Speaker.

* * * * *

11. Attendance of Member of Legislative Council :—The Speaker reported that during the Debate of the Question last before the House the following Message was received from the Legislative Council :—

MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated this day, requesting leave for the Honorable George Allen, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly on the present state of the University of Sydney, the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee, if he think fit.

Legislative Council Chamber,
Sydney, 19 October, 1859.

W. W. BURTON,
President.

VOTES NO. 42. WEDNESDAY, 14 DECEMBER, 1859.

7. Attendance of Members of Legislative Council :—
(1.) Mr. Murray moved, without previous notice, That the following Message be carried to the Legislative Council :—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee to inquire into the present state of the University of Sydney, and that Committee being desirous to examine the Honorable Francis Lewis Shaw Merewether, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

Legislative Assembly Chamber,
Sydney, 14 December, 1859.

Speaker.

Question put and passed.

(2.)

(2.) Mr. Murray moved, without previous notice, That the following Message be carried to the Legislative Council :—

MR. PRESIDENT,

The Legislative Assembly having appointed a Select Committee to inquire into the present state of the University of Sydney, and that Committee being desirous to examine the Honorable John Macfarlane, Esquire, in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.

*Legislative Assembly Chamber,
Sydney, 14 December, 1859.*

Speaker.

Question put and passed.

VOTES NO. 43. THURSDAY, 15 DECEMBER, 1859.

9. Messages :—The Speaker reported that, during the Debate of the Question last before the House, the following Messages were received from the Legislative Council :—

(1.) * * * * *

(2.) Attendance of Members of Legislative Council :—

MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated the 14th instant, requesting leave for the Honorable Francis Lewis Shaw Merewether, and the Honorable John Macfarlane, Members of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly appointed to inquire into the present state of the University of Sydney, the Council acquaints the Assembly that leave has been granted to its said Members to attend and be examined by the said Committee, if they think fit.

*Legislative Council Chamber,
Sydney, 15 December, 1859.*

1860.

 SYDNEY UNIVERSITY.

 REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 13th September, 1859, "to inquire into the present state of the *Sydney University*," have agreed to the following Report:—

Your Committee have examined several witnesses, whose evidence affords very full information respecting the present state of the University of Sydney.

That the University has not yet realised the expectations of the public seems clear; and it is also evident that great mistakes have been made with respect to it. A large amount of unnecessary expenditure has been incurred, in an attempt to raise here, all at once, buildings not at present required, on a scale of magnitude which, in other parts of the world, has almost invariably been the growth of ages.

But your Committee are not disposed to dwell now on matters which cannot be remedied; they deem it necessary, however, to point out the tendencies of the present expenditure.

The University has already cost about £70,000, and if completed on the plan selected by the Senate—the most expensive of those submitted to it for approval—it will cost, according to the estimate of the architect, at least £150,000. The annual endowments have already reached a total of nearly £50,000. The Affiliated Colleges—assuming that each is to be aided to an equal extent with St. Paul's—will swell the amount by £60,000, or it may be £80,000 more. Thus the country is exposed at present in these respects to an outlay which, on the plans proposed, cannot fall short of—and may very considerably exceed—a quarter of a million sterling—independently of an additional endowment ^{£300,000.} of £2,000 a year—and this, too, for a purpose which, according to the evidence, by no means requires such an expenditure.

It may be freely admitted that the advantages of a high standard of education in a State cannot be estimated at a mere money value. Their importance is so great that they should be obtained at any cost; but your Committee submit that those advantages might have been acquired without any such outlay as that which is contemplated, and has been partly incurred.

In illustration of these views they refer to the evidence of Mr. William Sharpe Macleay, as follows:—

"1284. In your opinion was there any occasion at all for such a building? It depends upon the taste of people, some people are very fond of architecture; but so far as the real purpose of an University is concerned it appears to me to have been throwing money away.
"1285.

1285. The necessary instruction might be communicated in a much humbler building? Certainly; it would astonish some people if they were to see some of the German or French Universities. It is evident that the building has nothing to do with the education given within it. No doubt Oxford and Cambridge, being rich foundations, have splendid buildings, but the students there could be just as well taught without them.

1286. *By Mr. Jones*: It is not in any degree owing to their fine buildings that they have gained their celebrity? No; but to the men they have sent out into the world.

1287. *By the Chairman*: Many of the Universities on the Continent have simple and plain buildings? Yes, and some of the Universities of the United States have still plainer.

1288. And these Universities send out eminent men? Yes; first-rate men some of them.

1289. *By Dr. Lang*: Is it not the case that some of the German Universities have no buildings at all? I believe that in every case there is a public room for the Senate or managing body, where they give degrees, &c.; but the Professors often have to lecture in their own houses.

1290. *By the Chairman*: It has been urged here that such a building as the University is almost necessary to refine the taste of youth? It may be to improve the taste in architecture, but what influence it can have in the teaching of moral philosophy, Greek, Latin, or natural philosophy, I cannot see. So far as making the mortar and the selection of the proper kind of stone go, the science of experimental physics may have some bearing upon your fine edifice, but I cannot see what the building has to do with the other studies pursued within it, unless it be that applied branch of mathematics which is called mechanics.

1291. You are clearly of opinion no such building as that is necessary? Certainly not; I think that the money it has cost would have been better employed in a hundred other ways, for the promotion of the objects contemplated in the establishment of an University.

1292. With the Affiliated Colleges and the University itself completed as proposed, and the endowments, the country will probably be put to an expense of £250,000 or £300,000? I think that expenditure might easily be stopped. The University here has been built all of a sudden; but scarcely any other University that I have heard of has sprung up in the same way—certainly not Oxford or Cambridge; they required ages for the erection of their fine buildings.

1293. *By Mr. Windeyer*: If it were intended to have such a fine building, do you not think it might have been begun and completed by degrees? Yes, of course; look at our cathedrals in England, and consider what time they have taken for erection—in some cases centuries have elapsed before they were completed. No doubt, if anybody could demonstrate that the building can have a direct effect upon University education it would be desirable to finish it at once; but in my opinion it is a mere matter of luxury, and has nothing to do with that education which an University is expected to impart.

* * * * *
1295. So far I gather from your evidence, that in your opinion the University has failed at present to carry out the objects its founders had in view? The founders? Do you mean Mr. Wentworth, Mr. Lowe, and my friend here, Mr. Plunkett? Well, I do not know; they are best able to explain what their objects were; I know it has failed to effect that which on its first proposal I hoped it would; it has not come up to my *beau ideal* of an University. What was the founders' intention I do not know; I only conjecture it to have been more liberal than it has proved in the result.

1296. What was your own view? I thought it would be more adapted to those reforms which are taking place in the English Universities; I thought there would be less of the theological and more of the lay element. You could not have a better course of study for the young men of the Colony than that which is adopted by Professors Woolley and Pell, and you have in those gentlemen first-rate men to carry it through; but there is this great misfortune attending the Institution—that you have not enough of students, and cannot expect to have enough for many years to come. I think the founding of the University was premature, and that it would have been better, with the money that was at your disposal, to have sent your young men to Europe for their education, where they would have been brought into collision with a number of powerful intellects.

* * * * *
1298. In your opinion then, it would be better to discontinue the great expense incurred in this University? I do not know about that, we must live in hope; but I think it would be better not to go on increasing our expenses. I think it totally uncalled for, with so few pupils.

Your Committee cannot recognise the correctness of the principle on which the Senate originally acted in projecting such a structure. If architectural display is calculated to cultivate and improve the youthful taste, the greatest care should be taken to exhibit it in its purest form. But amid diversities of taste, style, beautiful in the estimation of some, may be regarded as barbaric by others. And it may perhaps be well asked how the griffins, unicorns, or other monstrous shapes which have been selected as decorations suitable for the University, can serve to develop a high type of architectural taste. They, recommend however,
that

that those parts which have been commenced should be completed, especially as they are all in an advanced state.

Your Committee are of opinion that a grievous mistake has been made in the establishment of Affiliated Colleges, which are not only not at all necessary as adjuncts to the University, but actually involve in their association with it a violation of the great principle on which it was founded as a strictly secular institution. And there was great inconsistency in thus giving a sectarian character to that institution, in which our whole educational system culminates, at the very time when the determination of the Legislature—declared over and over again—was to secularise, to nationalise, that system as broadly as possible. The founders of the University were the very men who were the most earnest and most active in originating schools on the National System throughout the Colony. The grand principle they then endeavored to establish was, that boys of all religious denominations should be instructed in common, in all that relates to secular knowledge. Their object was to bring youths of all persuasions into intimate contact with each other, and thus secure their cordial co-operation as citizens in after life, and ensure for society through that cordial co-operation advantages, which, in the words of His Grace Archbishop Polding, before a Committee of the Legislative Council, in 1844, “cannot be estimated too highly.” But wherein will be the benefit of all this, if, in the closing and most important years of their education, they are to be thrown back into sectarian schools? On the important questions involved in these considerations your Committee again quote Mr. Macleay:—

“1250. You have had an objection to the University, on the ground of its having been imbued, in some way or other, with sectarian tendencies? Yes; that in my mind was not the original intention of the founders; which, if I am right in my understanding of it, was afterwards set aside by a sort of compact made by two Bishops of the Church of England with Sir Charles Nicholson and Mr. Wentworth. From that time I determined to decline having anything to do with the Sydney University.

“1251. You were not favorable to the establishment of these Affiliated Colleges; No; I think it was a retrograde step. At a time when the two great Universities of England are every day becoming more liberal, and sinking those bitter sectarian animosities which have so long prevailed, we are, by the establishment of these Colleges, doing what we can to revive them. I think that bitter sectarianism will be the result of this system; and that it would have been far better if the University had been established upon the original principle—a principle adopted in the national schools, namely, of educating our young men of different religious creeds together.

“1252. Do you think that, on the score of providing household accommodation for young men, it was necessary to establish those Colleges, for that appears to have been one of the objects for which they were established? I think there might have been boarding-houses of any sect, but still the lecture-room might have been the same for all.

“1253. Are you aware of the fact that some of the members of the Affiliated Colleges are on the Senate of the University; Yes; I am aware—there are only two I believe.

“1254. Has it ever occurred to you, that in consequence of fellows of Affiliated Colleges thus being on the Senate of the University, it might have the effect of impairing the strictly secular character which the Sydney University itself was intended to have? I may say that I have heard—although if you ask me to prove it I cannot—I have heard that there was such an interference; perhaps it would not be fair that I should mention my authority.

* * * * *

“1261. Are you aware of this, that certain modifications of the principles on which the University was founded, were made? Yes, I paid great attention to such modifications at the time.

“1262. Do you think that they involved any great concession in regard to the principle involved? I think they did.

“1263. Then the Senate, in that instance, have departed from the original intention? Yes; I am, and ever was, against that compact. In fact, I may say, that I believe both Sir Charles Nicholson and Mr. Wentworth went into it very reluctantly, but that they conceived themselves—erroneously, as I thought at the time—forced to yield.

“ 1264. The Senate in that instance abandoned the principle on which the University was founded? I think so, but it is a mere matter of opinion. I was very sorry for it at the time, because at the first formation of the University, I looked forward to an establishment of a very different character altogether. I thought there would be very little of the theological element in it, and I much regretted to see this retrograde step taken at a moment when the Universities of Oxford and Cambridge were endeavoring to get rid of theological domination, and to introduce more of the lay element.

“ 1265.

* * * * *
 “ I think it is a great mistake to form such Colleges, for, from my own knowledge of private schools in the neighborhood of London, I can speak to the extraordinary hostility which exists between boys in contiguous Protestant and Roman Catholic schools. A feeling is too often manifested, such as ought not to exist in a country like England. It is notorious that between Presbyterian and Church of England schools there are similar manifestations. Young people are much more inclined to be intolerant than persons who have seen more of the World. The intensity of bigotry is usually in proportion to the ignorance of the bigot.

“ 1266. That is as they are taught? Yes, as they teach one another. I am entirely against sectarian Colleges.”

The experience of mankind in all countries shews that it would be wise in Governments to ignore sectarian differences among their people. A recognition of them, especially by religious educational endowments, is but too likely to lead ultimately to the dominancy of that sect which happens to be supported by the greatest number—The struggle for that dominancy in England, Ireland, and Scotland, has at different periods defiled nominal Christianity with crimes as dark as any that have stained Paganism. So far as your Committee can judge, there has been no desire on the part of the religious denominations generally, to establish Affiliated Colleges here in connection with the University. But the movement in favor of St. Paul's, which, it is clear is not supported by the Church of England, evidently excited the other denominations to similar action, more, perhaps, from a simple desire to acquire the same status, than from any confidence in its importance on other grounds. However, if the denominations the Affiliated Colleges represent wished to establish them, it was open for them to do so; but to aid them by State support is unsound in policy, and leads not only to a useless, but to an injurious, expenditure of public money.

St. Paul's College has, in building, cost the country £14,395, and receives an annual endowment of £500. Three other Colleges are proposed. These, on the same scale of assistance which has been afforded to St. Paul's, will cost the country £40,000, it may be £60,000, and £1,500 a year additional in endowments, as already stated.

And here the question naturally arises, where is all this to end? If the Church of England, the Church of Rome, the Church of Scotland, and the Wesleyans are to have Affiliated Colleges in connection with the University, why should not all other Denominations have them likewise? But, under the arrangements which have been made, all other sects have been and are precluded from such advantages as these four enjoy. All the land (72 acres in extent) at Grose Farm has been already appropriated. There is none now left for them. It is, therefore, clearly impracticable to carry out this system of Affiliated Colleges on the plan on which the Government is bound to carry them out, if it aids them at all.

Although these mistakes have been made with respect to the University, your Committee do not concur in an opinion which has been expressed to them, that its establishment was premature. It has served to raise

raise a higher standard of education, the influence of which is felt throughout all the schools of the Colony. It may not even be too much to say that the literary taste of the country has already been materially improved by it; and one most pleasing circumstance in connection with it is the affectionate veneration and confidence with which the students regard its Professors.

The number of students, no doubt, increases but slowly; but your Committee attribute this to the fact that in such a busy community parents find it more conducive to their own interests and the advancement of their sons in life, to employ them in the counting-house, or in pastoral pursuits. And it may be remarked that the education of youth generally, throughout this Colony, is materially affected by the same cause.

The University is managed by a Senate, the members of which were originally appointed by the Governor General. As vacancies have arisen, they have been filled by election—the electors being the members themselves. It does not appear that literary or scientific qualifications were much regarded in the appointments at first made, nor do they seem to have met with greater consideration in the elections which have since taken place. In fact, our most prominent literary and scientific men are not on the Senate; and it might be inferred from appearances, that mere social position has been too much regarded in the elections. In fact, the University, as now constituted, is exposed to all the injurious workings of a close Corporation.

As the first measure of reform your Committee recommend that the Professors representing the Faculty of Arts, the only one at present organised, should be forthwith declared members of the Senate. They also recommend that the President of the Legislative Council, the Speaker, and the Colonial Secretary should, *ex officio*, be members of that body. Both Houses of Legislature and the Executive Government would thus be represented in the Senate, and an important advantage might, thereby, be obtained for the University.

They also deem it advisable that the graduates of the University, who now number thirty-four, should vote with the Senate in all future elections for the filling up of vacancies.

With these changes in the constitution of its governing body, your Committee think anything faulty in the management of the University must be speedily corrected; and that its capacity for adapting its teaching to the spirit of the age must be improved.

And as a matter of most important, in fact of vital, bearing on its future usefulness they strongly urge on your Honorable House that the strictly secular character of the Institution should be restored, and that all connection between it and the Affiliated Colleges should cease.

Late and comparatively difficult though it may be now to effect so great a change as this, they nevertheless press it on your attention as one pregnant with importance to the future of the University and the country. And the difficulty is not so great as it may appear to be at first sight. St. Paul's is the only College yet built—even that one is not quite finished—

finished—and it does not appear to have even the support of that Church for the benefit of which it was established. When your Committee visited it, there was in it but one resident student. It may be presumed, therefore, that the subscribers might be induced to part with their interest in it; and as a residence must be provided by the Government for the Professors of the University your Committee submit that it would serve that purpose sufficiently well.

The Warden who would thus be deprived of that appointment which he came here from England to fill might be otherwise commensurately provided for.

As to the other Colleges which are proposed, it is to be remarked that no progress has been made with any but St. John's. Still it might be argued that the Government is by law bound to advance them sums equal to those they raise by subscription, and that the repeal of the Affiliated Colleges Act, on which the subscribers have relied, would constitute a breach of faith with them. This might be admitted with respect to all who had contracted any engagements in consequence, but could not apply to those who had not.

But your Committee think it would be far wiser on the part of the Government to pay over to the denominations interested any sums to which they are at present by law entitled—such sums to be applied as they may think fit—than suffer the affiliated Colleges to be proceeded with. The one course would simply involve an expenditure of public money—the other would involve the same, probably a much larger ultimate expenditure, coupled with false principles of most injurious tendency, in connection with the highest grades of education in the country.

T. A. MURRAY,
Chairman.

*Legislative Assembly Chamber,
Sydney, 8 June, 1860.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 15 SEPTEMBER, 1859.

MEMBERS PRESENT:—

Mr. Murray, | Mr. Jones,
Mr. Plunkett, | Mr. Cape.

The Honorable T. A. Murray, Esq., was called to the Chair.

Committee deliberated as to their course of proceeding, and decided upon taking Evidence.

Whereupon Motion made (Mr. Jones) and Question—That Mr. Kennedy, the Registrar to the Sydney University, be summoned as a witness, for Friday, the 16th instant, at 10 o'clock, A.M., with instructions to produce all calendars, registers, &c., having reference to the subject under consideration—agreed to.

[Committee adjourned till the 16th instant, at Ten o'clock.]

FRIDAY, 16 SEPTEMBER, 1859.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.
Mr. Cape, | Mr. Wilson,
Mr. Plunkett, | Mr. Black.

Committee deliberated as to their course of proceedings in the absence of the Registrar, from whom a letter was received apologising for his non-attendance on the Committee.

Mr. Kennedy, having at length attended, was not examined owing to his other engagements, but was instructed to produce at the next meeting all documents referring to the inquiry on which the Committee are engaged.

A letter was received and read from Dr. Woolley, requesting the Committee not to summon the Professors of the University sooner than the end of this month, which request the Committee agreed to.

[Committee then adjourned till Tuesday the 20th instant, at Ten o'clock.]

TUESDAY, 20 SEPTEMBER, 1859.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.
Mr. Plunkett, | Mr. Jones,
Rev. Dr. Lang, | Mr. Wilson,
Mr. Black, | Mr. Cape.

H. Kennedy, Esq., Registrar, examined.

Sir C. Nicholson, Bart., D.C.L., LL.D., Provost, examined.

A letter from Dr. Woolley having been read, it was determined to summon that gentleman to give Evidence on to-morrow, the 21st instant, at 11 o'clock.

Committee deliberated, and decided on visiting the University on Saturday, the 24th instant.

[Committee then adjourned till the 21st instant, at Eleven o'clock.]

WEDNESDAY, 21 SEPTEMBER, 1859.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.
Mr. Cape, | Mr. Wilson,
Mr. Arnold, | Mr. Plunkett,
Mr. Black.

Professor J. Woolley, D.C.L., called in, but from the state of his health was unable to give any Evidence,—consequently his examination was postponed till Friday, 23rd instant, at 11 o'clock.

Committee then deliberated on the subject under consideration, and

[Adjourned till Thursday, the 22nd instant, at Ten o'clock.]

THURSDAY,

THURSDAY, 22 SEPTEMBER, 1859.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.

Mr. Plunkett,		Mr. Jones,
Rev. Dr. Lang,		Mr. Cape,
Mr. Black,		Mr. Arnold.

W. J. Stephens, Esq., *M.A.*, called in and examined.

J. Douglas, Esq., *M.P.*, examined.

Committee deliberated, and

[Adjourned till Friday, the 23rd instant.]

FRIDAY, 23 SEPTEMBER, 1859.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.

Mr. Plunkett,		Mr. Cape,
Mr. Wilson,		Mr. Jones,
Mr. Black,		Rev. Dr. Lang.

Professor J. Woolley, *D.C.L.*, called in and examined.

[Committee then adjourned till Tuesday the 27th instant.]

TUESDAY, 27 SEPTEMBER, 1859.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.

Mr. Plunkett,		Mr. Black,
Mr. Cape,		Rev. Dr. Lang,
Mr. Arnold,		Mr. Wilson,

The Chairman informed the Committee that, in compliance with arrangements made on the 20th instant, several members of the Committee visited the University and St. Paul's College buildings and grounds on Saturday the 24th instant, during the inspection of which they were attended by Dr. Woolley, Professor Pell, Mr. Kennedy, and Mr. Blackett.

E. T. Blackett, Esq., *Architect*, called in and examined.

Professor M. B. Pell, *B.A.*, called in and examined.

Committee then deliberated, and

[Adjourned till Wednesday, the 28th instant, at *Eleven o'clock.*]

WEDNESDAY, 28 SEPTEMBER, 1860.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.

Mr. Windeyer,		Mr. Plunkett,
Mr. Black,		Rev. Dr. Lang,
Mr. Arnold,		Mr. Wilson,
		Mr. Cape.

C. Moore, Esq., called in and examined.

W. C. Windeyer, Esq., *M.A.*, *M.P.*, a *Member of the Committee*, examined in his place.

[Committee then adjourned till Friday the 30th instant, at *Ten o'clock.*]

FRIDAY, 30 SEPTMEBER, 1859.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.

Mr. Black,		Mr. Jones,
Mr. Cape,		Mr. Windeyer,
Rev. Dr. Lang,		Mr. Plunkett.

The Rev. H. J. Hose, *M.A.*, called in and examined.

The Rev. W. B. Clarke, *M.A.*, called in and examined.

[Committee then adjourned till Wednesday the 5th October, 1859.]

WEDNESDAY,

WEDNESDAY, 5 OCTOBER, 1859.

MEMBERS PRESENT :—

The Honorable T. A. Murray, Esq., in the Chair.	
Mr. Plunkett,	Rev. Dr. Lang,
Mr. Jones,	Mr. Cape,
Mr. Windeyer,	Mr. Wilson.

S. D. Gordon, Esq., called in and examined.
Committee deliberated, and

[Adjourned till Thursday the 6th instant, at *Eleven o'clock*.]

THURSDAY, 6 OCTOBER, 1859.

MEMBERS PRESENT :—

The Honorable T. A. Murray, Esq., in the Chair.	
Mr. Black,	Mr. Jones,
Mr. Cape,	Mr. Windeyer,
Rev. Dr. Lang,	Mr. Plunkett.

W. S. Macleay, Esq., called in and examined.

[Committee then adjourned till Wednesday the 12th instant, at *Ten o'clock*.]

WEDNESDAY, 12 OCTOBER, 1859.

MEMBERS PRESENT :—

The Honorable T. A. Murray, Esq., in the Chair.	
Mr. Wilson,	Mr. Jones,
Mr. Arnold,	Rev. Dr. Lang,
Mr. Cape.	

Professor J. Smith, *M.D.*, called in and examined.
The Chairman's attendance being required upon another Committee, he vacated the Chair, which was taken by Mr. Cape.

The Rev. F. Armitage, *M.A.*, called in and examined.

[Committee adjourned.]

TUESDAY, 18 OCTOBER, 1859.

MEMBERS PRESENT :—

The Honorable T. A. Murray, Esq., in the Chair.	
Mr. Black,	Mr. Wilson,
Rev. Dr. Lang,	Mr. Cape,
Mr. Plunkett,	Mr. Arnold,
Mr. Windeyer.	

Professor J. Smith, *M.D.*, called in and *further* examined.

Rev. W. H. Savigny, *B.A.*, called in and examined.

[Committee adjourned till the 25th October.]

TUESDAY, 25 OCTOBER, 1859.

MEMBERS PRESENT :—

The Honorable T. A. Murray, Esq., in the Chair.	
Mr. Plunkett,	Mr. Wilson,
Mr. Jones,	Mr. Cape,
Rev. Dr. Lang.	

G. W. Allen, Esq., in the room of the Honorable George Allen, Esq., *M.L.C.*, called in and examined.

H. Kennedy, Esq., called in and *further* examined.

Committee then deliberated, and decided that it was not necessary that any further Evidence be taken on the subject referred to them for consideration.

The Clerk was instructed to distribute, as quickly as possible, to the Members of the Committee, all the Evidence taken, with a view to enable them at the next meeting to enter upon consideration of the heads of a Report, which the Chairman will then lay before the Committee.

The

The Chairman produced a letter from W. S. Macleay, Esq. (a witness examined before the Committee), requesting permission to expunge certain portions of his Evidence which he considers of a personal character, to which request the Committee gave an unanimous approval.

Letter directed to be addressed to the Senate of the University, requiring a full and clear statement of the actual expenditure for all purposes connected with the Institution since its establishment, together with a memo. of the system of audit to which the accounts have been subjected from time to time.

[Committee then adjourned.]

TUESDAY, 20 DECEMBER, 1859.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.		
Mr. Plunkett,		Mr. Wilson,
Rev. Dr. Lang,		Mr. Cape,
Mr. Jones.		

The Honorable J. Macfarlane, *M.L.C.*, attending by permission of the Legislative Council, examined.

The Chairman read a letter from The Honorable F. L. S. Merewether, *M.L.C.*, declining attendance on the Committee this day, owing to continued indisposition.

The Chairman laid before the Committee a statement of Receipts and Expenditure on account of the University of Sydney, from its foundation to 30th September, 1859, accompanied by a memo. of the system of audit, furnished by Mr. Kennedy. (*Vide Separate Appendix A. and B.*)

[Committee then adjourned till the 23rd instant.]

FRIDAY, 23 DECEMBER, 1859.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.		
Mr. Plunkett,		Mr. Wilson,
Mr. Jones,		Mr. Windeyer,
Rev. Dr. Lang.		

The Committee deliberated on their further course of proceeding; and the Clerk was instructed to convey, by letter to the Registrar, an intimation that the Committee are desirous of bringing their labors to a close early in the month of January, 1860, and, that should any member of the Senate be anxious to give evidence, that the Committee will be prepared to receive *such* on the first day of the assembly of the House after the Christmas holidays,—six copies of the Evidence taken to be forwarded at the same time for distribution amongst the members of the Senate.

[Committee adjourned till the first day of the meeting of the House after the 23rd instant.]

TUESDAY, 31 JANUARY, 1860.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.		
Mr. Jones,		Rev. Dr. Lang,
Mr. Dalley,		Mr. Windeyer,
Mr. Cape,		Mr. Plunkett,
Mr. Wilson.		

H. Kennedy, Esq., called in and examined.

Professor M. B. Pell, *B. A.*, called in and examined.

Professor J. Woolley, *D. C. L.*, called in and examined.

The Chairman brought under the notice of the Committee a Letter from the Registrar of the University to the Clerk of the Legislative Assembly, dated 6th January, in answer to a communication from that officer of the 4th instant, acquainting him that the Senate propose that the Provost and Vice-Provost should be examined before the Committee, with a view to supplement the Evidence already taken; whereupon it was *Resolved*:—

“That the Provost and Vice-Provost of the University be accordingly summoned
“as witnesses.”

[Committee adjourned till To-morrow, at *Eleven* o'clock.]

WEDNESDAY, 1 FEBRUARY, 1860.

The House having met at 11 o'clock, A.M., (for the purpose of proceeding to Government House and presenting their Speaker to His Excellency the Governor General,) there was no meeting of the Committee this day.

THURSDAY,

17

THURSDAY, 2 FEBRUARY, 1860.

MEMBERS PRESENT:--

The Honorable T. A. Murray, Esq., in the Chair.		
Mr. Plunkett,		Rev. Dr. Lang,
Mr. Wilson,		Mr. Cape.

The Chairman read a letter from Sir Charles Nicholson, Bart., excusing his attendance as a witness this day, but expressing his readiness to respond to a further summons.

[Committee then adjourned till To-morrow at *Eleven* o'clock.]

FRIDAY, 3 FEBRUARY, 1860.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.		
Mr. Plunkett,		Mr. Wilson,
Mr. Cape,		Rev. Dr. Lang,
Mr. Jones.		

The Honorable F. L. S. Merewether, Esq., *B.A., M.L.C.*, *Vice-Provost* of the Sydney University, attending by permission of the Legislative Council, examined.

Sir Charles Nicholson, Bart., *D.C.L., LL.D.*, *Provost*, further examined.

[Committee adjourned till Tuesday next, at *Twelve* o'clock.]

TUESDAY, 7 FEBRUARY, 1860.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.		
Mr. Wilson,		Mr. Cape,
Mr. Plunkett,		Rev. Dr. Lang.

Professor W. P. Wilson, *M.A.*, of the Melbourne University, called in and examined.

Committee deliberated, and it was *Resolved*:—

- “ 1. That sufficient Evidence has now been taken on the subject of their inquiry.
- “ 2. That a meeting of the Committee be called for Tuesday next, to consider a “ Report.”

[Committee then adjourned till Tuesday next, at *Eleven* o'clock.]

TUESDAY, 14 FEBRUARY, 1860.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.		
Mr. Wilson,		Mr. Windeyer,
Mr. Arnold,		Mr. Cape,
Mr. Jones,		Mr. Plunkett,
Rev. Dr. Lang.		

The Chairman informed the Committee that he had received a letter from Dr. Woolley, expressing a desire to see the Evidence of the Provost and Vice-Provost of the University, in order that he might have an opportunity of giving a statement or explanation upon that Evidence if he should think fit,—

And Committee deliberating, decided upon sending copies of the Evidence when printed, to Dr. Woolley for that purpose.

The Rev. Dr. Lang presented to the Committee a memorandum of fees for the full course of general literature qualifying for degree of A.B. in the Queen's Colleges, Ireland, and in certain American Colleges.

Committee deliberated, and having decided upon summoning some of the Lecturers and Examiners of the University, as witnesses,—

[Adjourned till Thursday next, at *Eleven* o'clock.]

THURSDAY, 16 FEBRUARY, 1860.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.		
Mr. Jones,		Mr. Windeyer,
Mr. Plunkett,		Rev. Dr. Lang,
Mr. Cape.		

The Honorable J. F. Hargrave, Esq., *M.L.C.*, *Reader in General Jurisprudence*, at the University, being in attendance by permission of the Legislative Council, examined.

Monsieur Pierre Dutruc, *Reader in French*, at the University, called in and examined.

[Committee adjourned till Tuesday next, at *Eleven* o'clock.]

TUESDAY, 21 FEBRUARY, 1860.

There not being a Quorum present, no meeting of the Committee was held this day.

FRIDAY, 18 MAY, 1860.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.
 Mr. Black, | Rev. Dr. Lang,
 Mr. Wilson.

Committee met pursuant to summons.

The Chairman laid before Committee a Draft Report.

Draft Report read.

Committee deliberated;—especially upon the expediency of recommending the severance of the present Affiliated Colleges from the University, and the repeal of the Colleges Endowment Act of 1854.

With a view to the full consideration of such question by a larger meeting of the Committee, *It was Resolved*:—

“That motion be made in the House for adding to this Committee Mr. Arnold, Mr. Deniehy, Mr. Forster, and Mr. Parkes.”

And Mr. Wilson requested, on behalf of the Chairman, to move in the House accordingly.

[Adjourned till Wednesday, 23rd instant, at *Eleven* o'clock.]

WEDNESDAY, 23 MAY, 1860.

MEMBERS PRESENT:—

None.

In the absence of a Quorum, the meeting of the Committee convened for this day *lapsed*.

TUESDAY, 5 JUNE, 1860.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.
 Mr. Deniehy, | Mr. Parkes,
 Rev. Dr. Lang, | Mr. Wilson,
 Mr. Windeyer.

Committee met pursuant to summons.

Certain additional Members having been appointed by the House on motion following the Resolution of Committee, agreed to 18th ultimo,—

Chairman's Draft of Report further considered.

[Adjourned till Thursday, 7th instant, at *Twelve* o'clock.]

THURSDAY, 7 JUNE, 1860.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.
 Rev. Dr. Lang, | Mr. Wilson,
 Mr. Windeyer.

Committee met to further consider Draft Report.

Same read 2^o, and considered.

Committee again deliberating, as proposed on the 18th ultimo, relative to certain recommendations,—

Agreed thereto.

And other paragraphs having been suggested in furtherance of such views,—

Committee resolved to finally consider a Revised Draft on the following day.

[Adjourned till Friday, 8th instant, at *Twelve* o'clock.]

FRIDAY, 8 JUNE, 1860.

MEMBERS PRESENT:—

The Honorable T. A. Murray, Esq., in the Chair.
 Mr. Forster, | Mr. Parkes,
 Rev. Dr. Lang, | Mr. Wilson.

Committee having met for the final consideration of proposed Report,—

Paragraphs of *Amended* Draft severally read and considered.

Certain *verbal* and other amendments made,—

When, Committee having agreed to the respective paragraphs, as read, or amended, in succession,

Motion made (*Mr. Parkes*) and *Question*—That this be the Report of the Committee—*agreed to*.

And Mr. Wilson, on behalf of the Chairman, requested so to Report, with the accompanying Minutes of Evidence.

SYDNEY UNIVERSITY.

TUESDAY, 20 SEPTEMBER, 1859.

Present :—

MR. PLUNKETT,
DR. WILSON,
MR. JONES,REV. DR. LANG,
MR. CAPE,
MR. BLACK.

TERENCE AUBREY MURRAY, Esq., IN THE CHAIR.

Hugh Kennedy, Esquire, Registrar, called in and examined :—

1. *By the Chairman* : You are Registrar of the University of Sydney ? I am.
2. Will you be good enough to state the duties of the office ? I hold the offices of Registrar and Librarian, as well as of Assistant to Dr. Woolley in Classics,—three separate appointments.
3. As Registrar, what is your particular duty ? To take charge of the records, conduct the correspondence, compile the University Calendar, and attend the meetings of the Senate and different Committees.
4. With what purpose do you attend such meetings—to put on record the proceedings ? Yes.
5. Is there an office analogous to yours in the Universities of the United Kingdom ? There is, I believe, in every University.
6. How long have you held office ? Since 1853.
7. I presume the actual duties which devolve upon you as Registrar form but a very small portion of those which you really discharge ? Not a small portion.
8. How many students were there in the University when you were first appointed ? Twenty-four.
9. Were you the first person who held the office you now hold ? No ; the third.
10. Who preceded you ? Dr. Greenup was the first ; he was succeeded by Mr. Hutton, and Mr. Hutton by myself.
11. The University was only established in 1850 ? Yes.
12. Was it brought into active operation immediately upon the Act of Incorporation being passed ? No, it was not ; steps had first to be taken for the selection of Professors.
13. Did the gentlemen who preceded you hold their appointments merely as honorary appointments, or were they precisely in the same position as that in which you now stand ? They were paid.
14. How many students are there now ? Forty altogether, at present, including non-matriculated ; twenty-six matriculated and fourteen non-matriculated.
15. Has the ratio of increase in the number been very marked during the period you have been connected with the University ? I can give you the numbers ; perhaps that will be more satisfactory. In 1852, there were 24 ; in 1853, 11 ; in 1854, 4 ; in 1855, 7 ; in 1856, 11 ; in 1857, 19 ; in 1858, 7 ; in 1859, 7. But I would remark that in 1859 there were fourteen non-matriculated students who were attending lectures.
16. Over and above the seven ? Yes.
17. How many students have there been in the University from its first establishment down to the present time, including those that are in it now ? Ninety matriculated students.

H. Kennedy,
Esq.

20 Sept., 1859.

H. Kennedy, Esq. The attendance of non-matriculated students, I observe, has been very fluctuating; they may attend one term and perhaps not the next.

20 Sept., 1859. 18. Do you think there is a general disposition on the part of the people of the Colony to send their sons there? Yes; I think so. The great dread seems to be that they are not sufficiently prepared to go there; many I know, have been hindered by that reason.

19. Are you aware of the fact that a great many colonists send their sons Home in preference? I am not.

20. What is the expense attending the sending of young men to the University? The expense attendant upon the necessary lectures of the curriculum is £21 each year for the first two years, and £12 the third year.

21. How many paid officers are there attached to the University, in all? Three Senior Professors, a Reader in General Jurisprudence, a Reader in French, a Registrar, three paid Examiners for the Faculty of Arts, and an Accountant,—ten altogether.

22. Do you know the amounts they are paid? I have an account of it here:—

	£	£
		Allowance for House Rent.
Professor Woolley	925	200
Professor Pell	825	150
Professor Smith	675	120
Registrar	400	...
Reader in French	100	...
Reader in Law	100	...
Accountant	50	...
Beadle	100	...
Gardener	109	...
Messenger	52	...

The paid Examiners receive an honorarium of £20 each. The Beadle has apartments, and the gardener has a house.

23. There are no other pecuniary allowances? No. Besides his allowance for a family residence, Dr. Woolley has two apartments in the University building.

24. *By Mr. Plunkett*: Will you state under what regulation? In the first instance £300 was allowed him for house rent, and at the end of last year £100 was taken off and two apartments were allotted to him in the building.

25. *By Dr. Wilson*: Have Professors Pell and Smith any apartments in the building as well as Dr. Woolley? They have not.

26. *By the Chairman*: There is an annual endowment of £5,000; how is that money appropriated? In salaries and allowances, £3,803; scholarships and prizes, £420; contingencies, £400, which includes printing, examination papers, calendar, catalogue of books, and every other item.

27. There is still a balance? Yes, which is appropriated for the grounds, repairs, &c.

28. Is the expenditure of this year greater or less than the expenditure of previous years? Greater, for the reason that it is increased by the salary of the Law Reader, in the first place.

29. How is this balance appropriated—this year amounting to some £300; in former years it was greater? Yes; there was a large debt on the property for the purchase of the Sydney College—the old building—which had to be paid off by instalments.

30. *By Dr. Lang*: Is it not provided that any sum saved from the Endowment Fund shall be added to the Building Fund? Not exactly, that is, it is applied to general purposes.

31. It does not return to the Treasury? It does not. The sum of £4,000 has been spent in the purchase of books for the library.

32. Was that sum derived from the savings of the Endowment Fund? Yes.

33. *By Dr. Wilson*: Since 1850? Since 1850.

34. *By the Chairman*: How many volumes are there in the Library? Between nine and ten thousand volumes.

35. *By Mr. Cape*: Have you brought a catalogue with you? The catalogue is printed, and is in the library here.

36. *By the Chairman*: What do you suppose to have been the average annual attendance of students during all those years since the University was opened? About thirty-two.

37. Then, if the average is thirty-two, and there are only twenty-six now, as you have told us, it would appear that the attendance is falling off? It has declined this year.

38. Do you know to what that decline is to be attributed? I cannot say that I do, beyond what I stated just now—the fact of young men not being sufficiently prepared.

39. Have there not been instances of students having entered the University who have left it prematurely? There have.

40. Many instances? Many instances.

41. What is that attributable to? In most cases I think it is owing to the services of the young men being required by their parents in their business.

42. What proportion do you suppose those who have so left the University bear in number to those who remain—one-third or one-fourth? Not so much as that.

43. *By Mr. Cape*: have not several accompanied their parents to England and joined British Universities? Some have gone from the circumstance of their families having gone to reside in England; and three have graduated here previously.

44. *By the Chairman*: Are there many instances of students being sent from the neighbouring colonies to the University? There are a few—some from New Zealand, some from Tasmania, and many from Moreton Bay. Some have left Universities at Home to attend here.

45. What is that attributable to? I think in each case they have been promising young men, and their idea probably was, that there was a larger field of honors and rewards here.
46. Did it at all happen from any desire to try change of climate? I have no reason to think so in the cases I am speaking of.
47. *By Mr. Plunkett*: How many cases of that kind have there been? Three or four.
48. *By the Chairman*: Do you think they came out here specially for the purpose of entering the University of Sydney? I happen to know it was in one case, because the uncle of the young gentleman in question came to me for a Calendar to send Home to his nephew, with a view to his coming out.
49. *By Dr. Wilson*: That may have been because the uncle was anxious to get his nephew out, and held out the fact of there being a University here as an inducement? Or, perhaps, being a young man of talent, he thought there were better chances of gaining honors in the way of scholarships and prizes.
50. *By the Chairman*: Can you state what the total cost of the University Building has been up to the present time? £68,500, in round numbers, up to the present month.
51. It is still unfinished? It is still unfinished.
52. Can you form any estimate of the amount required in order to complete it? Do you mean according to the original plan?
53. According to the plan on which it is now being erected? The estimate for the whole, if carried out, was £140,000.
54. *By Mr. Cape*: That includes residences for the Professors? No; but it does include a house for the Registrar.
55. *By Mr. Jones*: Then do I understand that the plan approved by the Senate did not include residences for the Professors? It did not.
56. *By Dr. Lang*: Does that sum of £68,500 include the sums that have been advanced annually for the expenditure of the University, or is it only the cost of the building? The cost of the building only.
57. *By Mr. Cape*: The cost has been materially affected by the alteration in wages in consequence of the Gold Fields? Yes; when the building was first commenced wages were very high.
58. Are you in the habit of receiving the British University Calendars regularly? There is no regular communication between ourselves and the British Universities. The Calendars are sent to the Library.
59. You are yourself a graduate of a British University? I am a graduate of Oxford.
60. And are, therefore, aware of the improvements which have been introduced into the system of education pursued at the Universities at Home, particularly with respect to the application of the physical sciences? I am.
61. Some of the Professors of the Sydney University are expected to deliver lectures in the evening, are they not? The Reader in Law attends in the evening.
62. Is that the practice in British Universities? Not that I am aware of.
63. Are you aware how many attend that lecture? Thirty-five. The hour was named specially for the convenience of young men engaged in business in Sydney during the day. Next term I have no doubt there will be a larger attendance, on account of the longer evenings.
64. *By Dr. Lang*: What is the complete curriculum that the Senate have contemplated for the Institution? It is printed amongst the by-laws, at page 62 of the Calendar for 1859. Besides the Faculty of Arts, there is a Faculty of Law in which lectures are delivered; and a Faculty of Medicine is in course of erection.
65. Is the present establishment of Professors supposed to be sufficient for the Faculty of Arts, or is it contemplated that there should be any other Professorships? Many others are contemplated in that Faculty.
66. There is no Professor and no education afforded in the Faculty of Medicine as yet? No instruction is afforded in Medicine as yet, but preparations have been made to enable that Faculty to be opened.
67. *By Mr. Cape*: You have a Board, I believe? Yes; there is a Board of Medical Examiners already in existence, under the twentieth by-law, which will be found at page 73 of the Calendar.

H. Kennedy,
Esq.
20 Sept., 1859.

Sir Charles Nicholson, Bart., D.C.L., LL.D., Provost of the Sydney University, examined:—

68. *By the Chairman*: When were you first installed in the office of Provost? I succeeded Mr. Hamilton, the first Provost, in 1854.
69. You took an active part in the establishment of the University? I did.
70. When you became Provost I presume you were elected by the Senate? Yes.
71. Will you be so good as to state the principles upon which the University of Sydney was first established? I think those principles are embodied in the Act of Incorporation, and in the Parliamentary Papers connected with the initiation of the Institution, the object being, of course, to encourage the cultivation of the higher branches of learning, such as are contemplated in a complete system of academic education, without reference to any religious tests or sectarian differences, the Institution being open to all classes and denominations of Her Majesty's subjects.
72. It was originally established as an exclusively secular Institution? No doubt such was the intention of the founders, so far as I can understand, and yet the language of the first Act is to some extent equivocal, inasmuch as in the Preamble it is stated that it is expedient to establish the University "for the better advancement of religion and morality;" and in the clauses of the Act provision is made for the licensing of boarding-houses and making regulations

Sir Charles
Nicholson,
Bart., D.C.L.,
LL.D.
20 Sept., 1859.

Sir Charles
Nicholson,
Bart., D.C.L.,
LL.D.

20 Sept., 1859.

regulations to secure the due attendance of the under graduates at their respective places of worship, churches, or chapels. At the same time there is a distinct provision that no religious test is to be exacted from any student as a condition of his acquiring any honor or degree in the Institution.

73. That is the 20th clause of the Incorporation Act? Yes. You see the proviso says, "Provided always that this enactment shall not be deemed to prevent the making of regulations for securing the due attendance of the Students, for Divine Worship, at such church or chapel as shall be approved by their parents or guardians respectively." I may say that that clause was altogether inoperative; we found that, with a number of young men scattered about the town in lodging-houses, it was impossible to carry it out. And I may say also that it was the difficulty of finding or providing suitable lodgings for the young men attending the University, that I believe suggested the idea of instituting Affiliated Colleges, in which they might be subjected to domestic supervision and control, according to the wishes of their parents and friends.

74. But you found at the first that this twentieth clause was wholly inoperative? It was.

75. Nevertheless strong opposition was manifested to the University as a secular establishment by some of the most influential heads of different churches? Yes, and to a great extent without reason, I think.

76. Was it not that opposition which led to a compromise by way of these Affiliated Colleges? I think not. In consequence of the strength of the feeling to which you have adverted the Senate were induced to accede to a regulation which you will find in one of the first drafts of the by-laws, but which has since been repealed, by which all students coming up for degrees, or as candidates for honors, were required to bring a certificate of competent religious attainment from their pastor or other religious guide. That, however, was thought to be repugnant to the spirit of the Institution, and I find that whilst I was in England it has been repealed, I think the establishment of the Affiliated Colleges was rather the result of an appreciation of all the difficulties connected with sending young men to Sydney without any proper places where they might be domiciled. The truth is the University was almost useless to people in the country. No person would trust a lad of fifteen or sixteen in a common boarding-house; and I think that was regarded as sufficient reason for the establishment of these institutions, in which young men could be looked after and subjected to domestic supervision, and in which they could have religious instruction according to their peculiar religious views, or those of their parents or guardians, with the additional advantage of tutorial instruction.

77. But in the communications which took place between yourself and a high dignitary of the Church of England here, was the opposition manifested by him to the University attributable, in your opinion, to the difficulties he saw in regard to the household accommodation of students, or was it on account of the strong objection he had to the establishment as it then stood, on religious grounds? I presume you advert to the Bishop of Newcastle. Really at this moment I am scarcely prepared to say what his Lordship's objections were. He appeared to me to be opposed to the University altogether; and his suggestion was, that the endowment should be divided rateably amongst the different denominations, and that each should be allowed to appropriate its quota, as it thought fit. I believe he ultimately receded from that view, and expressed his willingness to concur in that compromise to which I have adverted, by which a certificate was required of competent religious instruction.

78. These Colleges, then, were established and connected with the University by way of compromise? Or to meet a difficulty which I think would not have been met in any other way.

79. But the difficulty did not arise on account of the objection you have reverted to, on the score of accommodation? I think it did to a great extent. I think that difficulty was insuperable in any other way; for I do not see how the University could be recruited by any considerable number of students, unless there were some means of providing suitable quarters for them. I know that when I first assumed the office of Vice-Provost, by virtue of the powers entrusted to that office, advertisements were inserted in the newspapers, inviting respectable householders to state upon what terms they would receive pupils, and I do not think we had a single application from any one individual.

80. *By Mr. Cape:* In fact, you proposed to establish private halls, the same as at Oxford? Not exactly—private halls have not succeeded in the English Universities; I think there was only one at Oxford when I was in England, and only two pupils in that. The Colleges proposed to be established here would stand in the same relation to the University that the several Colleges of Oxford and Cambridge stand in to the present institutions.

81. *By the Chairman:* The Bishop of Newcastle manifested the strongest opposition to the University as it then stood? He did; but, as I have already stated, I think the Bishop of Newcastle expressed his willingness to concur in the resolution that was afterwards agreed to, and to which I have just adverted.

82. Where is that resolution to be found? It is the thirteenth clause of the by-laws. "1. Every student belonging to a College in the University shall be required to produce a certificate of competent religious attainment from the Principal of such College, before he shall be entitled to any honor or degree in the University." Now, I have always held, and still hold that there is no hardship in that. No man is compelled to go to these Colleges, but I think if a young man does go to one of them, it is no hardship to require him to conform to the discipline that is established in that College.

83. *By Dr. Wilson:* As there are only four Affiliated Colleges but more than four different sects, do you not think a man may be driven to go to a College which is founded upon religious principles that he may not approve? He would not be obliged to go to any College for the sake of getting this certificate. The by-law I have quoted goes on, "2.—Every student
" not

"not belonging to a College, before he shall be entitled to any honor or degree, shall be required to produce a like certificate from a religious teacher of the denomination to which he belongs, or from some other responsible person whom the Senate of the University may in each case accredit for that purpose." Now I confess that that is a resolution which appeared to me to be of very little value, because it is one which cannot be put in force.

Sir Charles
Nicholson,
Bart., D.C.L.,
LL.D.

20 Sept., 1859.

84. But if the advantage of domestic supervision or household accommodation should induce any student to go to any one of these Colleges, with which, however, on religious grounds, he could not conscientiously agree, would he be precluded from the honors of the University? No, these resolutions are all repealed.

85. They were by-laws of the University, passed by the Senate? Yes; they were a concession to a very influential party who took strong views on this subject.

86. Nevertheless they involved a departure from the principles on which the Legislature founded the University? I think not; I think they were justified by the preamble of the original Act, "Whereas it is expedient for the better advancement of religion and morality, &c.,"—and by the twentieth clause which provides that "this enactment shall not be deemed to prevent the making of regulations for securing the due attendance of the students, for divine worship, at such church or chapel as shall be approved by their parents or guardians respectively." That to my mind was quite sufficient authority to justify the Senate in agreeing to this by-law.

87. *By Mr. Jones:* Does not one of the clauses of the Act of Incorporation provide that there shall be no test? Yes; the question is, was it a test?

88. Allow me to put this case—supposing after the Senate had passed these by-laws a young man had come to the University who avowed that he did not belong to any religion, that in fact he was a Deist, or say an Atheist, and could therefore not produce any testimonials of sufficient religious attainment—would that young man have been prevented from taking his degree? I presume he would, under the operation of this by-law, if he declared that he was absolutely an Atheist or a Deist.

89. If a man did not profess any particular religion he would be debarred by these by-laws from the honors of the University? Yes, and also by the twentieth clause, by which the Senate are empowered to make regulations for securing attendance on Church or Chapel.

90. *By Mr. Plunkett:* Even in the case put by Mr. Jones, do you think that under the second rule upon that subject the difficulty might be met,—the words are to this effect: "or from some other responsible person whom the Senate of the University may in each case accredit for the purpose"? I think it might, probably; but it is so extreme a case that I am hardly prepared to entertain it.

91. *By the Chairman:* You do not think that the principle, in this respect, on which the University was founded has in any way been departed from? No; I think nothing can be more comprehensive than the design upon which the University is now carried on. I am not aware by what possible means it could be liberalised more than it is.

92. As an educational establishment do you think the University has fulfilled the expectations of those who founded it? I regret that there is not a greater number of students; but I think the fault is to a great extent with parents and guardians, and the want of appreciation on the part of the public of the advantages of high education.

93. Would not that involve this conclusion, that the attempt was premature? No, I think not.

94. If the people are not in a condition to appreciate the advantages of the high order of education which it is calculated to give, it naturally follows, I think, that the providing of such means of education was premature? I think the Institution itself will create that very spirit by which it will ultimately be sustained.

95. Is there any evidence of it as yet? Yes; I think all those young men who have taken degrees, and who are capable of appreciating the advantages afforded to them by the high education they have received, will act as so many missionaries in propagating a similar spirit throughout the country.

96. Have any of these young men distinguished themselves for any great amount of ability? Yes, many of them are young men of great promise; I know two or three who have taken a high position in the Universities at Home. One young man, Mr. Oliver, has, I believe, taken a double first class degree at Oxford; and one or two more, who have gone to other Universities, have evinced a very creditable degree of talent and proficiency. Of course everything must have a beginning. We know how many efforts have been made to place education on a higher footing, and what a struggle it is to induce communities to enter into and take advantage of those means which are afforded for the purpose.

97. But this experiment—for as yet, at all events, it is merely an experiment—has involved an enormous expenditure—? I do not think the expenditure enormous at all. In the first place I hold that this is the richest community in the world; and I think money cannot be bestowed on any better purpose or aim—

98. *By Mr. Cape:* Do you think three Professors are sufficient to give a regular University education, particularly to comprehend the improved nature of the education introduced within the last ten years, as noticed in the Oxford Calendar? There are more than three Professors; we have virtually five or six. But I quite admit that our staff is inconveniently small, and I would be glad to see it enlarged. Our first staff of Professors and Lecturers consisted of the Professor of Classics, Dr. Woolley, who also gave a separate course of lectures on Logic; the Professor of Mathematics, Mr. Pell; Dr. Smith, who lectured alternately on Natural and Experimental Philosophy, and on Chemistry. Then we had lectures on German and French—

99. Was that a gentleman introduced from a British University, or was he a teacher in the Colony? He was a teacher in the Colony. The three Professors introduced from England were Dr. Woolley, Mr. Pell, and Dr. Smith.

Sir Charles
Nicholson,
Bart., D.C.L.,
LL.D.

20 Sept., 1859.

100. Those were the only three introduced direct from British Universities? Yes; besides Mr. Kennedy, the Registrar and Assistant Professor of Classics.

101. *By Dr. Wilson*: Do you not think that the people of the Colony would appreciate more highly the education afforded in the University, provided that greater exertions were made to ensure elementary education? I am quite convinced of the necessity of that. No doubt there is the greatest demand for educational efforts in every possible channel. I may state that a Law Readership has been appointed in the University, and that a considerable number of students are attending the lectures delivered by the Reader; and that at this moment the Senate are endeavouring to organize a scheme for the establishment of a Medical School. They are in communication with the managers of the Infirmary here, and hope to be able to establish Professorships in Medicine, and to organize, in short, a Medical School, within probably the next twelve months. It has also been proposed—and I hope the period is not far distant—when a Professorship of Civil Engineering (with workshop similar to that at King's College, London,) may be established. There is every desire on the part of the Senate to render the Institution one of good *practical* benefit to the community, whilst there is an equal determination to maintain the high standard of learning required by its statutes for the attainment of honors and degrees. In the establishment of a Medical School a new field of employment and usefulness is opened up to the youth of the Colony. Of course a great deal has to be done. A University is not established in a day, nor in a year. The machinery can only be established gradually and according to its requirements.

102. *By Dr. Lang*: Do you think so extensive a suite of buildings was requisite for so small a number of students? We were in hopes that the number of students would increase, and we still hope that the building now erected will not be in excess of our real wants. I may state that Mr. Kennedy made an error just now in giving his evidence as to the expense of the building. He stated £68,500 as the amount. Now £68,500 may have been expended, but the amounts granted by the Legislature only reach £60,000. There were two separate grants, one of £50,000 and the other of £10,000. The remainder of the money expended upon the building has been made up by the savings of the Institution, and by a surplus amounting to some £8,000 which was available from the resale of the old Sydney College. And I think that, looking at what has been created by the expenditure of the funds placed at the disposal of the University, no one can allege that the money has been injudiciously spent. A suite of buildings, which from their style and execution would form an ornament to any of the Capitals of Europe, and which will probably afford, with some slight additional outlay, all the accommodation requisite for the next century for the business of the Institution, has been called into existence. I cannot understand how any native of the Colony, or any one influenced by a truly patriotic interest in its welfare, can regard with feelings other than those of pride and satisfaction, an Institution which has so much to recommend it in its material aspects as well as in its moral ends.

103. *By the Chairman*: The question is, whether it was not premature to determine upon expending so large an amount of money upon buildings at so early a stage in the progress of the University? That point was resolved by the wisdom of the Legislature of that day, not by the Senate.

104. What was the sum proposed in the first instance? £50,000, and £10,000 have been voted since.

105. How was it that sum of £10,000 became necessary? I was in England at the time, and therefore I am hardly prepared to enter into the details; but I presume that it generally happens that the actual cost of any large building exceeds the estimate in at least as great proportion as in this instance.

106. *By Dr. Wilson*: But I understood Mr. Kennedy to say that the whole cost was estimated at £140,000? That includes a large pile of building which the Senate have no idea of carrying out—the eastern wing. The building to be completed under the present contracts will, minus the Professors' houses, suffice for a considerable time to come. I think some few thousand pounds more will probably be required for the satisfactory completion of the buildings now in process of erection, and for the fittings of the interior.

107. *By the Chairman*: It appears that the Legislature voted £50,000 for the purpose of erecting the building, and subsequently an additional £10,000, by which amount the expenditure had exceeded the estimate? No, it did not exceed it. The Senate found themselves unable to finish the buildings, according to the designs they were anxious to carry out, without a further grant. And permit me to state that when that sum of £50,000 was voted wages were only half what they turned out to be a year or two afterwards, when the building was actually in course of erection, and therefore that sum would have gone twice as far at the time of the vote as it eventually did.

108. Then it appears that notwithstanding that this vote of £60,000 involves a sum of £10,000 in excess of the original sum voted by the Legislature, the buildings are still unfinished, and it will take £80,000 more to complete them according to the plan the Senate have devised? No, this is the plan of the building which was submitted to the Senate, but all that the Senate have undertaken to construct or to provide for is the front portion, which is now nearly completed; in fact it will be so in two or three months. There are some details of the interior still requiring completion; and all that is really required for the present will be completed, perhaps not for £60,000, but for a few thousands in excess of that sum. The other portions of the building, according to this plan, which would involve a very large outlay, are not contemplated at all at present.

109. It would appear from Mr. Kennedy's evidence that, supposing this building to be completed, nevertheless additional accommodation will be required for the Professors? The Professors' houses I do not at all include.

110. Are we not entitled to presume that when the Legislature was originally applied to for a vote for the University, it was contemplated that the sum then applied for would be sufficient

sufficient to cover those expenses as well as others? I am not aware that it was. In this plan there was no provision made for Professors' residences.

111. Supposing that this front, now so near completion, is completed, still the necessary accommodation is not provided for the Professors? The Professors object to living in the University. Their wish is to have houses erected on the domain of the University, separate and altogether detached from the University building itself.

112. *By Mr. Black*: Has any estimate been formed of the probable expense of houses for the Professors? Of course the expense would depend on the style of the houses. We have had several estimates submitted to us, some of which have appeared to be too extravagant, and they have, consequently, been rejected. The matter is still pending. My idea was, that it would have been better to have modified the design by doing away with one wing, and erecting the three dwellings for the Professors to complete the quadrangle of the building; but there seemed to be very great architectural difficulties in the way—there could be no back yards, and no accommodation for servants; and the Professors seemed to be altogether opposed to it. Whether any plan of that kind can be matured, I do not know. I may state that the Senate are anxious that houses should be provided for the Professors, because we are obliged, out of the endowment, to make them allowances for house rent. Dr. Woolley is now living in the University, but it is merely during the absence of his wife and family, and he has £100 a year deducted from his allowance on that account. If we had houses for the Professors it would give the University the control of some £500 a year, or more, and enable them to establish a Medical School on a very satisfactory basis. It would enable them to subsidise two or three chairs of medicine, anatomy, and surgery, and to establish on the same grounds a botanic garden really deserving that name, an object which is very much to be desired; for the public gardens here, though very creditable to the Colony, and to the gentlemen under whose charge they are placed, are not botanic gardens properly so called, but rather pleasure grounds. I can assure the Committee that, having taken no inconsiderable share in the initiation and subsequent management of the Institution, I have had practical and painful experience of the difficulties and disappointments attendant upon such a task. As to the cost of the building, to which objection appears to be taken, I may observe that most of the expense incurred in the strictly ornamental details has been borne by private contribution. Between four and five thousand pounds have been expended in this way upon embellishments of various kinds. Thus the whole of the windows of the Great Hall, and of the two principal staircases, were the results of private munificence, and cost upwards of £4,000. The carvings in the Great Hall now being carried on are, in the like manner, at the expense of a private individual, W. Fanning, Esq.; whilst the elaborately carved wood work of the principal staircase is, in a similar manner, provided for by private contributions.

113. *By the Chairman*: With reference to the expense, we have it given in evidence, by Mr. Kennedy, that the expense of completing the building, upon the plan which was at all events in contemplation, will amount to £140,000 —? I believe Mr. Kennedy has no authority whatever for making that statement —

114. And in addition to whatever sum may be required for completing these buildings, originally estimated as involving an expense of only £50,000, there are now two Affiliated Colleges, and will probably soon be two more, which have drawn, or will be entitled to draw, from the public Treasury £10,000 each, and which also involve an annual expense of £500 each as endowment; so that the total expense connected with the University—of which it nevertheless appears that the people of the Colony are not disposed to avail themselves to any great extent—will amount to possibly from two hundred thousand pounds to a quarter of a million, when these adjuncts are added? I beg to state that Mr. Kennedy made that statement, as to the estimated cost of the building, without authority; he was not in office at the time, and was not competent to give such information. That plan I have already stated has been renounced as far as regards the carrying out of the eastern wing; and I have no hesitation in saying that a few thousands more will render the University all that is required for present purposes, independently of the Professors' houses.

115. The average attendance, in number of students, since its foundation appears to be about thirty-two, while at present the actual attendance is only twenty-six—that does not appear to realise the expectations formed of it? No, it does not; but I think the reflection is upon the Colony rather than upon the Institution.

116. But the inevitable conclusion is that the establishment was premature? I think if you had waited longer you would have had greater difficulty in establishing it. I think the Colony would have sunk into a still greater degree of apathetic indifference and want of appreciation as to the advantages of such an Institution.

117. The Senate have the management of the whole of the buildings, and of the affairs of the Institution generally? Yes.

118. How are the members of the Senate appointed? The members of the Senate were originally appointed under the Act of Council, by the Governor, and, since then, they have themselves elected members to fill vacancies as they have arisen; and this they will continue to do until the number of graduates amounts to one hundred, when all vacancies are to be filled by election by the graduates.

119. Does it appear that the Senate, in the elections which they have hitherto made, have been at all influenced by considerations of the persons whom they have elected being in any way men of letters, or men at all noted for learning, or great zeal in promoting the higher branches of education? I think that is rather an invidious question to put to me. Each member of the Senate has a right to form his own opinion as to the fitness of the person whose election he approves. But I am quite ready to say, that the Senate, as a whole, fairly represent the Colony. The fact is, the choice is to a very great extent limited to persons residing in Sydney, by the circumstance that already we have often been in great difficulties

difficulties for want of a quorum to transact business, many of the members now on the list of the Senate being resident at considerable distances from town, and being consequently unable to be very regular in their attendance.

120. What is the number of graduates now? There must be a considerable number. We admitted eighteen last month to the degrees of Bachelor of Arts and Master of Arts; and we have reason to believe and hope that there will be a considerable accession to the list next Lent Term. Referring to the cost of the University in proportion to its results, I would point to the analagous case of the Irish Colleges, which have had large parliamentary grants and receive large annual subsidies, and in many of which the number of pupils does not, I believe, exceed, if it equals, that of those now in the Sydney University.

121. How do you come to that conclusion? I visited them, and have seen the returns.

122. Perhaps you would be good enough to put them in? I will, if able to procure them, which I hope to do. (*Vide Appendix A.*)

123. Looking at the list of Members of the Senate, do you not think that in the City of Sydney many gentlemen fully qualified to serve on the Senate might be had, by the election of whom this great inconvenience to which you have referred, for want of a quorum, might be obviated? That assumes the resignations of present incumbents of office. Those who are nominated on the Senate are nominated *ad vitam*.

124. Has the fact ever been discussed by the Senate, that it is very difficult to get a quorum, and that business has been staid by it? I cannot say business has been staid by it, because there has been great activity and energy among the members generally.

125. Is there any record of the meetings of the Senate? Most assuredly.

126. Minutes? Yes.

127. Who has got them? They are in the custody of the Registrar.

128. *By Mr. Cape:* Have you ever heard any reasonable accounting for the falling off in the attendance of non-matriculated students upon the lectures—the removal of the University to a distance may been the cause? It may, to some extent. I do not despair of seeing this class of students re-established. Time must be afforded to all these institutions; you cannot achieve everything at once.

129. *By the Chairman:* In the selection of members for the Senate, is the fitness of the individual the sole matter considered by the Senate? I should say so, undoubtedly.

130. That there is no weight at all attached to the social position of the party? I think social position is one of the elements which ought to be taken into consideration, but not the only one.

131. Do you think any weight is attached to the probability of his being a benefactor to the Institution? I should say not.

132. None at all? I should say not. It certainly would not influence me to vote for a man not otherwise qualified; but if there were two candidates equally eligible, and one was favorably disposed to the Institution, testifying his zeal in behalf of its objects by a munificent endowment, (as has been evidenced in more cases than one, with respect to the University of Sydney,) I would, undoubtedly, give him my vote in preference to the other.

133. How do you mean favorably disposed? By acts so unequivocal as those I have just mentioned.

134. Do you not think considerations of that kind might lead to great abuses? I am not conscious that they have, or could by possibility lead to any abuse.

135. Returning to the present position of the Institution, we find *primâ facie* that there has been a very great expenditure, involving large additional grants, without, to all appearance, anything like the good that was anticipated resulting from it? I am not prepared to admit that statement in such broad terms as you put it; I think great good has resulted, though it might have been wished that a greater amount of benefit had been derived; but I am still disposed to believe that immense advantage has accrued. We have established in the Colony a standard of education and of educational requirement such as it never had before; and the influence of the University is not merely confined to those who are students within its walls, but extends I think through the whole Colony, and tends to raise the character of the whole community. In fact, the establishment of this Institution has raised the character of this Colony throughout the world in a degree that I cannot conceive would have resulted by any other agency. The spirit that originated, and the liberal provision that has been made for the support of the University, have been regarded as the noblest and most honorable incidents in the history of this community. The introduction, too, of men like the Professors, has been of great advantage to the community. The Colony has thus obtained an equivalent to a great extent for the money laid out, and if all the results hoped for have not yet been obtained, there is no reason to despair of their being ultimately arrived at and realised in a very high degree.

136. What evidence have you that the establishment of the University has caused such a high tone of education to prevail generally in the Colony? I did not say it had caused a high tone of education to prevail,—I said it had created a disposition to appreciate the advantages of high education, such as, I believe, had not existed before.

137. What evidence have you of that? My own personal experience, comparing the state of feeling on the subject ten years ago with that existing at the present time.

138. Would not the best proof of that fact be the degree in which the public avail themselves of the opportunities afforded? I draw my inferences in a different way.

139. *By Mr. Cape:* Have you been able to ascertain its influence upon the schools of the Colony? I believe it has had the effect of improving the character of all our schools throughout the Colony. I believe the standard established by the examinations for matriculation has stimulated the youth of the Colony generally, and made them look to higher aims than have been previously taken. Hitherto in this Colony, before the establishment of the

University,

University, as many gentlemen here know very well, there were no rewards for learning, and no incitements to advance educational acquirements whatever.

140. Do you not think the omission on the part of the Government to institute examinations for the Civil Service has had an influence on the progress of education? I think it may have had.

141. *By the Chairman:* Are you aware that the Professors of the University have at any time been in any way dissatisfied with the mode in which the University was conducted? There have been occasions when some differences have existed, but I believe never such as to impair the usual cordial relations between them and the Senate.

142. Do you think they had any cause for being so dissatisfied? No, I do not; I distinctly say I do not. I think they have had every consideration so far as my experience goes. I can only say for myself, as one of the chief executive officers of the Institution, that I have always been most anxious to consult their feelings and wishes in every way, of course with due regard to the progress of the Institution.

143. *By Mr. Cape:* Has the Government, in any period of the University's existence, opened any communication with the Senate, with a view to the establishment of an academic body for the examination of candidates for the Civil Service? I am not aware that they have.

144. *By Mr. Black:* It appears that the attendance on the University has been very short of your own expectations of what it would be—to what cause or causes do you attribute that disappointment? I am afraid it is attributable to apathy on the part of the public and of parents—a want of appreciation of the advantages held out. I know gentlemen now in the country, wealthy settlers with incomes of five or ten thousand a year, who send their sons out driving bullocks, and after horses and wild cattle, instead of sending them to the University. I think that such a state of things may justly be regarded as the opprobrium of the Colony.

145. Do you think it is at all attributable to the expense? I am glad you have started that point. I think the rate of fees the lowest in any Institution of the kind in the world; a young man may go through the whole of the undergraduate course I think for £18 a-year; the amount may be qualified to some small extent by a later regulation. Now I think all the advantages of the University cannot be considered as exorbitantly purchased for £18 a-year. Then there are several endowments: Public favor has been evidenced towards the Institution by the establishment of several private scholarships of £40 or £50 a-year, so that any boy of energy and zeal, and determined to distinguish himself, can educate himself without expense to his family, by getting one of these scholarships. I would also state, with regard to the expenditure of the Institution, that we have accumulated a very valuable library; on which some £5,000 or £6,000 have been expended.

146. *By Mr. Cape:* Does that include the chemical apparatus? No, independently of the apparatus.

147. *By Dr. Wilson:* I think you grant a sum every year to keep up that apparatus? Yes.

148. *By the Chairman:* You stated that the fact of the University having been established has caused an exalted opinion to be entertained in various parts of the world of the general character of this country—upon what was that opinion founded? Upon my own personal experience in different parts of Europe.

149. From what have the parties who entertain that opinion drawn their conclusion? The knowledge of the fact that an Institution of this kind had been founded, and largely and liberally endowed; it is regarded as a testimony of the high tendencies of public opinion in this Colony.

150. Were the parties who expressed this favorable opinion aware that, although there has been this enormous expenditure, and although such a magnificent building has been erected, the colonists have not at all availed themselves of its advantages? I cannot say not at all, because they have done so to a considerable extent; we have admitted between sixty and seventy young men to the degrees of Bachelor of Arts and Master of Arts.

151. *By Mr. Cape:* Would the Senate be disposed to make another attempt to establish private halls, or to encourage them? We would be glad to do anything calculated to advance the Institution, if we saw an opportunity of doing it.

152. *By Mr. Black:* Do you consider it very desirable, for the beneficial working of the University, that residences should be provided for the Professors in connection with the Institution? No; I do not think it is a matter of any great importance in that light. I made it more an argument *ad crumenam*. If we were able to lodge the Professors there would be a larger fund available for the purposes of the Institution. We shall have some difficulty in establishing Medical Professorships with the present endowment.

153. *By the Chairman:* You think £5,000 per annum is not sufficient? It would be if we had Professors' houses.

154. *By Mr. Cape:* Has not the Supreme Court recognised the University degrees by rendering admission to the Bar easier to gentlemen who hold them than to others who do not? Yes, since we have got a Royal Charter granting us the privileges of the more ancient Institutions in the Mother Country.

155. Have the Churches of the Colony recognised the degrees of the University in any way as giving proof of competent education? I am not aware.

156. How many denominations have availed themselves of the provisions of the Affiliated Colleges Act? I believe, in fact, only two; but I understand the Presbyterians and Wesleyans have raised funds with the object of taking advantage of the Act, and I rather think some application is now pending for the passing of their Acts of Incorporation.

Sir Charles
Nicholson,

APPENDIX A.

Sir Charles
Nicholson,
Bart., D.C.L.,
LL.D.

20 Sept., 1859.

On the subject of the Irish Colleges, the last returns which I have been able to find extend up to 1855-56. So far as I understand the constitution of those bodies, it would appear that they have each an endowment of £7,000 per annum, in addition to grants for building purposes, and irrespective of a sum placed at the disposal of the Council of the "Queen's University." At the date above-mentioned, it would seem that the annual charges, and number of students of the three Colleges of Cork, Belfast, and Galway, were as follows:—

CORK.

Salaries.....	£ 5,487
Scholarships and Prizes	1,427
Students—Faculty of Arts	67
" " Medicine	63
Others, viz., Law and Agriculture...	35

BELFAST.

Salaries.....	£ 4,650
Scholarships and Prizes—not mentioned.	
Students—Matriculated	119
" Non-Matriculated	74
	— 193

GALWAY.

Salaries.....	} Amount not mentioned.
Scholarships and Prizes.....	
Students—Matriculated	78
" Non-Matriculated	7
	— 85

C. NICHOLSON.

THURSDAY, 22 SEPTEMBER, 1859.

Present:—

MR. BLACK,
MR. CAPE,
MR. JONES,

REV. DR. LANG,
MR. MURRAY,
MR. PLUNKETT.

TERENCE AUBREY MURRAY, Esq., IN THE CHAIR.

William John Stephens, Esquire, M.A., called in and examined:—

- W.J. Stephens, Esq., M.A. 157. *By the Chairman*: You are the Head Master of the Sydney Grammar School? Yes.
158. You are a member of a British University? I am a member of University Convocation of Oxford, Master of Arts, and Fellow of the Queen's College in Oxford University.
- 22 Sept., 1859. 159. Will you be good enough to give the Committee some information as to the branches of knowledge in which the students of the Universities at Home are instructed or examined? There have been great changes lately, and changes are still going on, so that I am not in a position to say exactly what is the present state, but the direction of the new changes has been to introduce more of scientific education in addition to the *literæ humaniores*.
160. I suppose, when you speak of scientific education, you allude to the application of science to the practical purposes of life? I do not allude to the application of science to the practical purposes of life, but to the physical sciences. Mathematics, pure and applied, were a separate branch of study before, but of late years the physical sciences—natural history, comparative physiology, geology, chemistry, and so forth—have been taught.
161. There has been a great change, then, upon the old system? A very considerable change in the form of the studies, which have been made to depend more upon professorial teaching than before.
162. Wherein consists the advantage of that change? It is very much questioned even now whether it is altogether an advantage.
163. If the teachers were competent persons——? Tutors were not always competent persons.
164. It may possibly happen that Professors may not be competent persons, so that that change itself may be no great advantage? You have more chance of obtaining competent Professors, they being elected from the whole body of the University, while tutors were appointed from close Colleges, confined to particular parishes, or to particular counties.
165. The power of communicating knowledge seems to be a gift—a man of moderate attainments may communicate knowledge with greater facility than one of far greater attainments? Sometimes.
166. Is Civil Engineering at all a branch of education? Not at all, in either Oxford or Cambridge.
167. Are there not some Colleges in England where it is taught? I am not aware.
168. In the London University? I am not aware—no degrees are given to it.

169. There is some peculiar establishment up the Thames where it is taught? At Putney. I imagine that that establishment is closed; it did not succeed.
170. Do you know at all the course of instruction in the University of Sydney? Roughly I know something of it; I have not made it my business to inquire.
171. You have not made yourself sufficiently well acquainted with the course of instruction in the Sydney University to give an opinion upon it? No.
172. Perhaps you will be good enough to look at the by-laws of the University, which shew what the courses of examination are;—(*the witness referred to the by-laws*) Are they the same as those at Oxford and Cambridge? We have, I am to sorry to say, no University matriculation examination at Oxford, each College has its own entrance examination, so that the standard is very various; in some Colleges it is very high, in some extremely low.
173. What is the examination for degrees? There are four examinations to be passed the "little go" or responsions, which is the proper name; moderations—which is a new examination lately introduced—and the final examination—popularly the "great go," and this is double—consisting of one examination in *Lit. Hum.* which *must* be passed, and one in Law and Modern History, Mathematics, or the Physical Sciences, according to the candidate's option.
174. What studies are embraced in these examinations? The responsions—Euclid or logic, a small amount of Latin and Greek. I am not quite sure of the details—something like three or four orations of Cicero and —
175. For the degrees? No, that is the first examination or responsions.
176. Then to what extent are the physical sciences taught? They are not, I am sorry to say, necessary to a degree at all, but there are separate class schools for them. In the final examination those who choose can take honors in the physical sciences. The number in the schools is not great yet, but it is increasing rapidly.
177. You speak then of the state of things existing before these improvements were carried out? To a certain extent the examinations remain the same; it is rather that additions have been made.
178. There is no change? There is a change. Scientific studies are fostered but not enforced, and the improvement is not immediately apparent.
179. *By Mr. Cape:* I believe this circular (*referring to a circular published in the Oxford University Calendar for 1859, p. 141.*) applies to this question? [*The witness referred to the Calendar.*] I see "Moderations" are called here "first public examination." I mention that as there might otherwise be some confusion—responsions being theoretically private, though really as public as the other. The result of the examination is not published, and therefore it is not called public.
180. *By the Chairman:* Can you observe by that Calendar what improvements have been made of late days? One—which was before my time—was rendering logic unnecessary, so that Euclid might be taken up instead of it in the first examination. The principal improvement that I have seen in actual operation is the introduction of the middle examination which is here called the first public examination or moderations.
181. What are the subjects of that examination? Each candidate must be examined in "the four Gospels, with special reference to an accurate knowledge of the text. One Greek and one Latin author, at least, of which one must be a poet, the other an orator; but not the same authors as were offered for the responsions, unless in the case of candidates who offer to be examined in four authors at least, *e. g.*,—in Greek, Homer, Iliad, or Odyssey, six books. The dramatists—any three plays of Æschylus, Sophocles, Euripides, or Aristophanes—Pindar, Olympic, and Pythian Odes—Demosthenes—De Corona; or Olynthiaes with Phillippes, or Olynthiaes with the Meidias, or any other orations of equal length in the aggregate—(Æschines in Ctesiphontem." The principal change there is the introduction of Homer and Demosthenes into the Oxford course. They were very little read before this change.
182. Then it appears so far, that the great object in this University was to teach the Latin and Greek languages rather than substantial knowledge? The Universities of Oxford and Cambridge were ecclesiastical establishments, and are casting off that character very slowly indeed. I think it is owing, in part, to their character as ecclesiastical corporations that the study of languages has been the chief object.
183. Do you think it desirable, in these days, that the course of instruction in any great educational establishment should be limited in this way? By no means.
184. Then what suggestions would you, as well acquainted with this subject, make in reference to a new country like this, where we have nothing in the way of old Institutions to obstruct us? I could hardly venture to make any suggestions without consideration.
185. Perhaps you will give the matter your consideration and favor the Committee with any suggestions that may occur to you? If the course of studies, as originally determined on the foundation of the Sydney University, were fully carried out, I think that a very sufficient scientific basis, for the further cultivation of any profession, would be obtained. Any effectual study of the Arts or Professions, as distinguished from that of the scientific truths on which they depend, must always be founded upon actual practice. This can never be attainable in University teaching. There is also a grave probability that University examinations would fail to distinguish between the pedantic and unpractical, and the scientific and practical students, while instruction might therefore, with great advantage, be given in the theory and natural laws underlying any art; the art itself, could hardly be taught, except in the Infirmary, Foundry, or other place in which it is found in real exercise, and here it would be studied with advantage, proportionate to the extent and depth of the previous (or accompanying) training in Science.
186. In the great Educational Institutions of England there have been vested interests, the continuance of which have been held to be incompatible with the progress of society in other respects?

W.J. Stephens
Esq., M.A.

22 Sept., 1859.

W.J. Stephens respects? Do you mean interests in the conduct of the University, or in the property of the Esq., M.A. University?

187. In both. The original founders prescribed certain conditions, which their representatives, in these days, have been unwilling to depart from? I think they were more unwilling to depart from the practice. The Statutes of the Colleges are much more liberal, in the prescribed course of study, than the practice has been.

22 Sept., 1859.

188. Does it not occur to you that there are many branches of knowledge of far higher importance to men, than any involved in the branches of learning just adverted to, as being considered so important in the English Universities? I should not like to say that any department of human knowledge was higher than another; but the founders of these Colleges made provision for teaching all that was known in their days. The Physics of their days, however bad, were taught.

189. But language is merely the vehicle of knowledge; the knowledge of languages does not constitute knowledge in itself? The knowledge of other languages increases the knowledge of English; it teaches men to distinguish synonymous, or nearly synonymous words, and is valuable in literary pursuits. These are material or practical advantages.

190. You are aware that the old system of teaching was considered so objectionable that Commissioners were appointed by the British Government to inquire into it, with the view of effecting some improvements? I think when the Commissioners were appointed, there was little idea of the subjects of education being faulty; there was rather an impression that the system of Education was not well carried out, and principal objects of the commission were the abolition of religious tests; and incidentally the alteration of the constitution of the Universities so as to get rid of the Government by the heads of houses, and put the Executive part of Government into the hands of a board composed of six heads of houses, six Professors, and six Masters, chosen by convocation.

191. Will you be good enough to look over the Calendar of the Sydney University, and to give an opinion as to whether the system there generally defined, is the same as that which has been objected to in the Universities at Home, or whether it is in any way dissimilar,—and how dissimilar? I believe it is dissimilar in there being no religious or doctrinal qualifications.

192. But only in that respect? I find in paragraph 8 of the by-laws that the subjects of instruction are very much the same, quite the same as in the improved system in Oxford; but I am not aware that in the University of Sydney the students are taught Modern History or Natural History; I imagine that the study of mental, moral, and political philosophy is not enforced, *i. e.*, that the pupils are not obliged to attend lectures on these subjects.

193. Then there are branches of learning contemplated under that section of the by-laws which do not appear as yet from your knowledge to be taught in the University? I am not aware of any one having been appointed to teach them.

194. Will you be so good as to look at this return (*The Statistical Return of the Colony for 1858*), which gives a statement of the progress of the Institution to the close of the last year. (*The Witness referred to the same.*) You do not see then that these branches are included in the duties of the Professors named in that list? How far the Professor of Chemistry and Experimental Physics may teach other physical sciences I do not know, but I have very little knowledge of Sydney University in any way.

195. Has it ever come under your observation in England that an University education has in any way whatever the effect of checking originality? I think an ecclesiastical education has; I do not think the present Oxford system has at all that effect; the reaction against the ecclesiastical checks has been very great.

196. In Oxford? Yes.

197. Is it so in Cambridge? I believe so, but I have known very little of Cambridge of late years.

198. What are the great subjects in which the graduates of Oxford are examined? Philosophy is perhaps the principal subject of examination for honors.

199. What branch of philosophy? I mean mental philosophy, moral and political philosophy. Nominally the subject is taken from Greek Text books, *e.g.*, Aristotle, but it embraces the history of in fact all philosophy.

200. That is all mental philosophy—metaphysics? Yes.

201. Not natural philosophy? That is not enforced.

202. Do you not think it desirable it should be? Yes; I think there is a very strong feeling that it should be; but there is great opposition to contend with, the majority of the convocation have been brought up under the old system and are averse to change, and as every change has to be brought about through the representative, or I might rather call the democratic body of convocation, all Masters of Arts being members, it is very difficult to introduce any novelty.

203. Do you think it desirable these new branches should be taught in this country? I should think very much so.

204. You are not aware of civil engineering forming part of the examination in any way? No.

205. Do you know anything of the London University? I do not know it particularly.

206. You are not much acquainted with the University here? Very little.

207. Have you been there? I have been in the building.

208. Do you think the site a desirable one for the purpose for which it is established? It is, I think, at a very inconvenient distance from Sydney.

209. Has your attention been directed at all to the establishment of Affiliated Colleges? I have thought of that subject.

210. Do you think that an improvement? I do not think it an improvement upon the original secular character of the University. W.J. Stephens
Esq., M.A.

211. Do you know what led to the establishment of these Colleges? It was long before I came to this Colony, and I have only heard in conversation. 22 Sept., 1859.

212. *By Mr. Jones:* What strikes you as the material difference or distinction between the University of Oxford and the University of Sydney—wherein do they differ most materially? I should say in the prominence which the study of the metaphysical sciences takes in Oxford. You refer only to the studies?

213. Not only to the studies, but to the mode of management—to the relative positions of tutors in the Colleges, and Professors in the Universities? I do not think the cases are so far parallel that one could argue much from the practice at Home. The Colleges there are all distinct corporations, and would exist if the University were abolished; while the University would equally exist if the Colleges were abolished. They are all ecclesiastical corporations. I am not sure that I am right in saying that they are all ecclesiastical corporations; they were so originally; how far they are so now I am not prepared to say, now that there are no ecclesiastical duties to be performed by them.

214. Is the connection between the Affiliated Colleges of the Sydney University, and the Colleges connected with the University of Oxford, of a similar character? The Affiliated Colleges here, I should think, must always be in polemical opposition; whereas in England there is no such opposition, no such jealousy between one College and another.

215. Is the relation of Colleges here, as a whole, to the Sydney University, the same as the relation of Colleges, as a whole, to the University of Oxford? I believe no member of Council of a College here is necessarily a member of the Senate of the University, and the reverse is the case in Oxford and Cambridge—there are no members of the Senate of the University at either of the latter places who are not members of one or other of the Colleges.

216. I think you are under a mistake. As a matter of fact, I may mention that some of the members of the Senate of the only College established here are also members of the Senate of the University. Will you be kind enough to explain in what the changes to which you have alluded, as having been made in the tutorial and professorial systems, have affected the change of teaching in the University of Oxford? The tutors remain still as tutors in their Colleges; they continue their catechetical lectures as before; but the Professors continue to lecture *ex cathedra* without cross-examination of pupils. I think one principal advantage is, that more general views, and a better stand-point, are obtained from the professorial teaching; while greater accuracy is obtained from the tutorial.

217. Do I understand that the students at Oxford are bound to attend more lectures of the Professors than they were formerly? They were not bound to attend any lectures at all when I was an undergraduate; the enforcement of attendance on professorial lectures is a recent alteration.

218. They are now bound to attend? Yes; a certain number of lectures.

219. That, I presume, is one important distinction between the University of Sydney and that of Oxford—here the students are bound to attend professorial lectures, while there, till recently, they were not bound to do so? I was under the impression that they were not bound to attend all the lectures, but only certain lectures, *e. g.*, on mathematics and Greek.

220. They are bound to attend certain lectures? Yes.

221. Do you see any objection to there being a kind of supplemental power given to the Senate of the University to examine persons who are not graduates of the University for degrees—persons, perhaps, who cannot afford to go to the University, who acquire their education in the remote districts of the Colony, but who attain sufficient proficiency in the several studies pursued in the University? I should like very much to see some system by which they might receive a degree—a mark of University distinction; but I would rather keep separate the degrees of the students, and of those who were not students of the University.

222. *By Mr. Plunkett:* You have spoken of ecclesiastical checks in Oxford—what sort of checks do you allude to? As, when a person had to sign the thirty-nine articles, to take the oaths of supremacy, and all the old English checks. Those have all been abolished—there is now no restrictive oath, as to doctrine or the like, required until the master's degree. The bachelor's is taken without any subscription or declaration whatever; but I am sorry to say that the master's is not.

223. When did that change take place? Since the Commissioners were appointed.

224. That is within the last few years? I think 1854 was the year in which the Report of the Commissioners was published, and in which the Act was passed withdrawing the government of the University from the hands of the Hebdomadal Board. If I may explain the construction of the Hebdomadal Board, it was this: it was composed almost entirely of the heads of houses who were not engaged in tuition. They might, in some cases, be so engaged, but they were not compelled to take any part in tuition; they were practically bursars of Colleges; they managed the property of the Colleges. There are exceptions to that as a rule, but it might be said to be a general rule. In the new system the members of the hebdomadal council, as it is called—now eighteen in number—are, six heads of houses, six Professors, and six Master's of Arts, all chosen, and chosen by convocation which generally consists of men engaged in tuition in Oxford—a power of choice which the University never had before. To that change I refer all the improvements gradually being introduced into the system.

225. Is there any other ecclesiastical element that you have adverted to, that you think still obstructs education, or affects it, in England? I think the fact that all the Colleges still belong to the Church of England, or are identified with the Church of England, popularly, if not in reality, has some effect.

226. Under the amended system is there any probability of a further change gradually taking

W.J. Stephens taking place? I have heard so; but the Principal of a house has still the power of rejecting any candidate he chooses from matriculation, so that it is possible for the head of a house to keep the house as close as before the Act was passed.

Esq., M.A.
22 Sept., 1859.

227. Is the head of a house a person in Orders? In most cases, not in all.

228. You have said you are not aware that students here are obliged to attend University lectures—are you not aware that the candidates are required to attend lectures on the subjects mentioned in No. 34 of the by-laws? That clause leaves out the subjects I particularly mentioned,—Logic, Mental, Moral, and Physical Philosophy.

229. You see with those exceptions they are bound to attend the lectures named in No. 34? Yes.

230. I collect from your examination that many of the arts and sciences which have only lately been added to the studies in Oxford are all included in the programme here? Quite so.

231. Do you approve of that? Very much.

232. Do you happen to know whether there are many students of the Sydney Grammar School at the present moment who have the intention of preparing themselves for the University? I know that there is a considerable number, but it is quite out of my power to say how many. I think most of those in the two higher forms—a large majority of them—are going to the University.

233. When will they be fit? At various times; we shall have, I suppose, three, or four, or five, going out this next year, and I should think a pretty continuous stream will follow.

234. Have you made any calculation at all as to the number the Grammar School is likely to furnish annually to the University? Supposing the number of pupils to be at the present rate about two hundred, I should think that six each year would be as many as could be expected—six or seven—reckoning the boys who are likely to go up to the University as one quarter of the number, and I am afraid that is over the true proportion, and reckoning the course of instruction in the Grammar School to extend over six years, I should be very well satisfied if six were to go every year.

235. To what do you attribute the smallness of the number? I think there are very few schools in England who send out of two hundred pupils more than six every year to an University. No doubt from some schools a very large number is sent; from Rugby, for instance, a very large proportion of the upper forms do go to the University, but it is not the case in most of our public schools, I think.

236. *By Dr. Lang*: Do you conceive that the English Universities which you have described as institutions ecclesiastical in their origin and past history, afford a proper model for the establishment of a University in a Colony like this, consisting as it does of a heterogeneous population from all parts of the United Kingdom, with many additions from the Continent of Europe? I think if the English system were made thoroughly secular I should be satisfied to see it introduced.

237. Are you at all acquainted with the system pursued in the Scotch Universities, or in those of the United States, or of the Continent of Europe? I am acquainted with the system of the German Universities, but not particularly or intimately with any other.

238. Do you not suppose that the circumstances and wants of a country like this are very different from those of the old country with institutions coming down to them from remote antiquity that have been very little changed in their character? It may be so, but I could not answer generally.

239. You would not suggest any change in the subjects for examination, in the case of candidates for degrees in Arts? I think if the subjects mentioned in paragraph 8 of the by-laws were all part of the regular course it would be a very great advantage to the University.

240. *By Mr. Black*: Are you aware to what expense the Legislature intend to go in the establishment of Affiliated Colleges? I understand that they would pay a sum equal to the amount raised by subscription, and give an endowment of £500 a-year in each case.

241. Do you think it likely that the usefulness of the University will be extended in a degree proportionate to the great expense connected with the establishment of Affiliated Colleges? I do not know what the monetary value of such education is.

242. To shorten the question, I would ask—do you think the University is likely to be made more useful by the establishment of Affiliated Colleges? There might be a difficulty in students from the country finding homes in Sydney that would be quite satisfactory, otherwise I do not see any great advantage.

243. The only advantage, then, arising from the establishment of Affiliated Colleges, that you look to, is the domestic supervision of students? Yes; of course it is also a great advantage to members of these Colleges to have the tutorial instruction in the College, as well as the professorial in the University.

244. *By Dr. Lang*: Is there no combination of the professorial and tutorial modes of instruction in the English Universities? Yes.

245. Does the same person officiate as a lecturer on any given subject, and as a tutor by holding class examinations? In exceptional cases; but it is not considered desirable, inasmuch as the tutorial and catechetical lectures are confined to the particular College of which the lecturer is tutor. In one or two cases Professors themselves have given, with great success, catechetical lectures open to all the University.

246. That is not a regular part of the system, but is merely accidental? It is accidental; the labor would be beyond the strength of any single man.

247. *By Mr. Black*: If efficient domestic supervision over the students could have been given without the establishment of these Affiliated Colleges, do you think the University would have stood upon a better footing without the Colleges—looking particularly to the professedly sectarian character of the Affiliated Colleges? My personal feeling in the matter

is

is that of dislike to the system of sectarian Colleges, but I am not sure that it is more than a feeling, rather than a conclusion, grounded on thought and consideration, which might shew them to be necessary evils.

W.J. Stephens
Esq., M.A.

22 Sept., 1859.

248. *By Mr. Cape:* You have spoken of the number likely to leave the Grammar School for the University, and have stated that, as compared with the number who leave similar Institutions in the mother country for the Universities there, the average is a fair one? Yes.

249. Are we to understand that none of these go into the Army, the Navy, or the Indian service? Yes, and into business latterly.

250. The requirements from candidates for the Indian service are higher than would lead to matriculation? Much more so; we have lost some of our best students by their going in for the Indian civil service.

251. The number qualified would therefore embrace also those who pass into the Indian service, the engineering service, and others? Yes; and not only so; the great majority of boys coming from the sixth, the fifth, and probably the fourth forms, would easily matriculate.

252. With respect to the number of pupils from the Grammar School who enter the University being so few, would it not be fair to consider that others would be capable of entering into other services? Yes; but the examinations being competitive, it would hardly be in my power to say that any individual was or was not qualified.

253. I believe the curriculum in the circular, published in the Oxford University Calendar, has been introduced in consequence of the requirements of the British Parliament for the examination of candidates for offices in the civil service, and also for the Indian service,—are we to understand that this forms part of the education for a degree? It is not compulsory. It is not required in examination for a common degree.

254. It appears to me that it is for a common degree that it is required. This is the practical education which we so much want in this Colony, and which has been so far recognized at Oxford? For the public examination the subjects are to be found in page 146. The first school which must be passed is that of *literæ humaniores*, which is nearly the same as that of the old *literæ humaniores*. After that school has been passed, the candidate for a degree can either take honors or pass in any one of these schools—mathematics, natural science, law, or modern history.

255. Have you heard of any restrictions upon the whole range of history being lectured upon here? I have not heard of any, but, from the nature of the case, one would conclude that there were restrictions. I may say that in Oxford the limit is the date of the breaking out of the French Revolution,—I think 1789.

256. Is there any teaching of modern history in the University? I do not know.

257. You have not heard of any? I have not heard of any.

258. *By Mr. Plunkett:* Has it fallen within your observation that there is much emulation excited among those in your charge at the Grammar School, with a view to the obtainment of a scholarship in the University? I think the scope of a boy's ambition is more confined, and that the prospect of being high in the class is as much as he can see at once. I think very few boys look forward to the University at all, until they are in the highest form, and then they may talk of going to the University.

259. Are you aware that there are a great many scholarships in the Sydney University, which hold out great inducements to parents as well as to the students themselves? Yes.

260. *By Mr. Jones:* When you say that you expect the Grammar School will annually furnish about six pupils for matriculation at the University—you do not thereby mean to imply that there will be only those fit to matriculate, but that only six will go to the University? Yes.

261. I presume that all in the sixth and some in fifth form would be fit to matriculate? I do not quite know what the standard of the University is for matriculation, but I think any boys in the sixth or fifth, and most in the fourth forms, ought to be able to matriculate.

262. So that although a small number would go from the Grammar School annually, a much larger number would be able to go, if the parents were in a position to send them there? Yes.

263. *By Mr. Cape:* Would the inducement to go from the Grammar School to the University be greater if the Government were to admit a certificate of fitness for matriculation as a qualification for employment? I suppose it would increase the number of those who would go to the matriculation examination, but I do not think it would increase the number of students of the University.

264. *By Mr. Jones:* Do you think it desirable that Professors of the University should have seats or any influence in the governing body of the University? I should think so.

265. Do you attribute the improvements which have taken place in the studies in the English Universities to the addition of Professors to the Hebdomadal Board? I think principally to that.

266. Then, if the Professors of Sydney University have not now seats in the Senate, and have no practical influence in the decisions of the Senate, do you think it would be an improvement in the government if they were to have seats, or to exercise a substantial influence in the decisions of the Senate? I should think so; in fact it is a question which does not seem to me to admit of a doubt; of course there were strong grounds for the exclusion of the Professors from the governing body, but these do not occur to me, and I have not heard them stated.

267. You do not know of any strong grounds, but you presume there are from the exclusion? I presume there are, for it seems to me natural that the heads of the educational department should have a voice in the government of a University.

268. You yourself do not see any objection to the Professors having seats in the Senate? No.

269. While you can see many advantages on the other side? I think so, judging from the circumstances which I have mentioned in reference to Oxford.

- W.J. Stephens Esq., M.A.
22 Sept., 1853.
270. *By Mr. Plunkett*: Reverting to the proportion of six or seven out of two hundred, likely to go from the Grammar School to the Sydney University, can you state at all what course of life the others are likely to pursue—what pursuits are they likely to follow? A very large number of our boys will enter into squatting pursuits, others will go into business.
271. Do you not think a larger proportion than you have named will go into the different professions? I hope those will go into the University.
272. *By Mr. Cape*: What are the ages of the boys in the upper school—in the highest class? Eighteen is about the maximum; we have in the school some very young boys, indeed boys of eight or nine years old.
273. *By Dr. Lang*: Supposing there were three or four Affiliated Colleges established in connection with the University, under the Act for the purpose, do you suppose it would be desirable that the head of each of these Colleges should be *ex officio* a member of the University? I think all or none should be. There does seem to be an advantage in the Colleges being brought into immediate subordinate connection with the governing body of the University.
274. Do you not think such an arrangement would tend to make the connection between the two Institutions closer and more intimate? Clearly, but as I understand the heads of the various Colleges will be Ecclesiastical—
275. Not necessarily so, there is no such provision? It would be undesirable that ecclesiastics of one or two denominations should have *ex officio* seats in the Board, while other denominations which had equally the advantage of Affiliated Colleges should be represented by laymen who are not often such partizans of sectarian views.
276. You consider it a matter of importance, that the tie which binds the University and the Colleges, supposing them to be in existence, should be as strong as possible? Clearly.
277. *By Mr. Cape*: The more numerous the Colleges, of course, the greater the influence upon the University Senate? If I thought the Colleges were likely to be very numerous, I think I should have answered the last question differently. I should wish the tie between the University and the Affiliated Colleges to enable the Senate to influence the Councils, not the Councils to influence the Senate.
278. *By Mr. Plunkett*: Are you aware of the principle upon which Colleges are affiliated to the London University? I have already said that I am not particularly acquainted with that University, but I suppose it is very much the same as the system here.
279. Is it the fact that any College, no matter to what denomination or body of religionists it may belong, can be affiliated to the London University? I believe so; but I think, although I speak under correction, that the governing body of the Affiliated College has no necessary connection with the governing body of the University.
280. *By the Chairman*: Do you think that the great advantage of these Colleges is that they provide residence for the students? There is also the advantage of tuition, which I should not like to slight in any way; but I suppose the principal ground of their foundation was the lodging, domestic comfort, and supervision of the pupils.
281. *By Mr. Plunkett*: Are you aware of the discipline of Trinity College, Dublin? To some extent; that has been very much altered too.
282. You are aware that the students reside there, and are bound by the discipline of the College, and, in some establishments, take degrees, as at the University? Yes, that members not resident may take their degrees by passing examinations.
283. There is accommodation within the walls of the College for upwards of six hundred students? Yes.
284. Are you aware also, that the Junior Fellows, twenty in number, act as private tutors, and give private tutorial lectures, besides professorial lectures? Yes.
285. Do you approve of that? Of the last part.
286. Do you think that is a better system than the one you describe, as adopted in Oxford? I do not think it is, but not owing, I think, altogether, to the fact that the same persons are both lecturers and professors, but for other reasons. I do not think the system is good.
287. What are the other causes? The exclusion of the Junior Fellows—of the gentlemen who conduct the educational part of the College—from its government.
288. That is vested in the Senior Fellows? Yes.
289. *By the Chairman*: (*Handing to the witness the Parliamentary Report on the Dublin University.*) You see at the bottom of page 43, that there is an Engineering School, which has been established since 1841? Yes.
290. Do you think it advisable anything of that kind should be established here? I suppose there is no other place in which the knowledge of civil engineering could be obtained here, except by entering the office of a civil engineer as a private pupil.
291. I suppose not; that involves many branches of instruction which would be useful in a new country, as, for example, surveying. Will you look also at this, which is the Parliamentary Report as to the state of the Queen's College in Ireland, in 1857. (*Handing the Report to the Witness.*) You see there are many branches of instruction contemplated there which do not appear to be contemplated in our University course, not only engineering, but there is also agriculture? There are a great number.
292. A great many that it would be desirable to introduce here? Yes, I should think so.
293. Will you specify a few of them? I think there might be Professorships of Civil Engineering and of Agriculture.
294. If you turn over the next page you will see how much is comprehended under the term Agriculture? It seems to be rather heterogeneous—"Agriculture, including lectures on "medical jurisprudence, diseases of farm animals, &c."
295. A knowledge of the diseases of farm animals would be important for persons engaged in squatting pursuits to be instructed in? It would.
296. In the course of instruction at the University at present, so far as you can judge from the

the Calendar, is practical ability in regard to our position in this Colony, so much regarded as it might be? I think if the scheme of instructions laid down were carried out it would be very sufficient. Most of such questions as would come under the head of Agriculture might be taught, as they are at Oxford, by a Professor of Botany. The Professor of Botany at Oxford is also Professor of Practical Agriculture; he gives lectures on the various qualities of soils, grasses, and so on, but I do not think they are very much attended. An important part of Civil Engineering would be mineralogy and geology; while under experimental physics might be taught the knowledge of all the instruments which the civil engineer requires.

W.J. Stephens
Esq., M.A.
22 Sept., 1859.

297. Do you know if philology forms a branch of instruction at Home? Comparative philology. We have a Professor who lectures on comparative philology, but it is not essential to a degree.

298. Do you think it desirable to have that branch of science attended to here? I should think it might be very well combined with the study of the more synthetical languages,—Greek and Latin.

299. I see in some of the Universities at Home there is a Professor of the Celtic languages? I think that is only in the Irish Universities. In Oxford there is one College which has a Welsh Lectureship, but that is a singular case.

300. Has it ever occurred to you that it might be desirable, in a philological point of view, to have the structure of the Aboriginal language? I think the study of every language throws light upon the theory of language, but I should have great hesitation in introducing the study of the Aboriginal languages into the University.

301. Incidentally it would be an interesting subject of inquiry? It would be an interesting subject of inquiry, but very few, I suppose, would have the means of acquiring any knowledge of the language previously.

302. If philology, as a science, were at all taught in the University, of course the language of our Aborigines would come under the notice of the Professors? I should think so; no language could be rejected.

John Douglas, Esq., M. P., examined:—

303. *By the Chairman*: You are a Member of the Legislative Assembly? I am.

304. How long have you been in this Colony? I came here in 1857.

305. You are, I believe, a Member of an English University? I graduated at Durham, in 1849.

J. Douglas,
Esq., M.P.
22 Sept., 1859.

306. Will you be good enough to mention to the Committee what is the general course of examination there? The course of examination is very much what it is at Oxford, or it was so at the time of the foundation of the University. When Van Mildent, the Bishop of Durham, exerted himself to form a University in the North of England, it was attempted to combine the advantages of both Oxford and Cambridge, and also to introduce into the University a wider field of inquiry than was supposed to have existed at Oxford and Cambridge.

307. *By Mr. Plunkett*: What time do you speak of? I think the University of Durham was founded in 1835.

308. *By the Chairman*: Is it precisely similar to the course of examination at Oxford? It is very similar; in entering for honors you have the choice of being examined in a course of mathematics, or in the classics and philosophy. In connection, also, with that Institution there was established a school of theology, in which it was proposed, after the student had graduated, he should take a degree, which was termed a licentiate's—that was after the student had taken the degree of B. A. in the University.

309. Is there a religious test there? There was when I left. The University did not require any religious test upon matriculation, which was the case at Oxford at the time.

310. There was no religious test at matriculation—there was at taking degrees? Yes.

311. What was the test? The subscription to the Thirty-nine Articles.

312. Was civil engineering at all a branch of instruction there? It was at one time, it was intended when the University was founded that considerable attention should be bestowed upon that, but from the nature of the government of the University very little attention was paid to such subjects, and gradually the number of students who attended for the purpose diminished, and when I was there had entirely ceased. I think there were two studying civil engineering when I was there.

313. Have you paid any attention to the state of the Sydney University? No farther than this, that I am merely acquainted with the general facts which I suppose are known to most people.

314. How many students were there at the Durham University? At the time I was there about 120. There was a magnificent foundation of £10,000 a-year—endowments, Professorships, and Fellowships.

315. *By Mr. Jones*: In addition to the £10,000? No, the original endowment, in addition to the buildings which were granted to the University, amounted to about £10,000 a-year.

316. *By the Chairman*: Was it a Government or a private endowment? It originally belonged to the See of Durham. From the immense revenues that were coming into the See of Durham, and the Canons of Durham, it was thought desirable to appropriate a portion to the purposes of education, and the ecclesiastical establishment of the Cathedral of Durham was formed into an educational establishment to a great extent—the Professors being actually Canons of the Cathedral.

317. *By Mr. Plunkett*: Was it by Act of Parliament, or by Charter? I think by Charter.

318. *By the Chairman*: That accounts for the establishment of the test; as it was taken from the Bishop, it was thought right the test should be applied? I believe the test is still applied there.

J. Douglas,
Esq., M.P.
22 Sept., 1859.

319. *By Mr. Plunkett*: What was it open for those who could not subscribe to the test to do—might they belong to the University? They might pass their degree, but they could not have it conferred without subscription to the Thirty-nine Articles.

320. Could a person who had gone through that course take a degree in the London University, and so be relieved from disability? I think not; there are certain privileges conferred upon members of the University of Durham, and members of King's College, which were in connection with the London University, but I do not think such a thing was contemplated by Durham University itself.

321. *By Mr. Cape*: Had Durham University any Affiliated Colleges? There was originally one. The system adopted there was very much the same as that of any College in Cambridge or Oxford; the system was carried on upon almost the same footing, and it was found, as the expense was very nearly the same as that of attending the educational course at Oxford or Cambridge, that those who wished to enter upon an University career preferred to go to Oxford or Cambridge. That being the case, it was thought desirable to establish affiliated halls where students could receive the advantage of an University education without the expense that was generally incurred. Bishop Halfield's Hall was established when I was there, and subsequently another Hall—Bishop Cousins'—has been established; but it has not increased the number of members of the University, though it has enabled a class of men who were not in a position probably to meet the expense of an University education at Cambridge or Oxford—men from the North of England, who wished to obtain a title for orders—to be educated at these Halls. I believe the University College class is now very much reduced in number.

322. *By Mr. Plunkett*: Could you give any idea of the annual expense of each student? The expense at the University—at Oxford or Cambridge—which was considered necessary, perhaps not absolutely necessary, but by means of which students could enjoy the benefit of society with their fellow students, from which very much benefit might be derived—I suppose would be about £200 a year; of course many would spend £400 or £500 a year, but I should think £200 would be about the minimum; but at Halfield's and Cousins' Hall—which latter was a much more economical Hall—where the students messed at all times in common, it was supposed the expenses were not above £100, if they amounted to that.

323. *By Mr. Cape*: You have been at Rugby also I believe? Yes.

324. Do you remember the number of students that annually went from Rugby to the Universities? I went there in 1842, about the time of Dr. Arnold's death, and left in 1846. There were then about 350 boys there, and Dr. Arnold had made a rule not to admit more; but Dr. Tate, the present Bishop of London, increased the number, and when I left there were from 450 to 500 boys in the school; out of that number from the sixth form, which generally numbered about thirty boys, there were drafted about half every year to the different Universities. At that time the examinations for civil offices, in the gift of the Government, were not open, and the consequence was, that almost all the boys in the sixth form did go up, either to Oxford or to Cambridge, and were considered capable of carrying off University honors. Of course a number went from the fifth and upper middle fifth forms, but I should think not more than from thirty to forty every year went up to the Universities of Cambridge and Oxford, and that was at a time when competitive examinations did not exist.

325. *By the Chairman*: What are the branches of instruction at Rugby? Chiefly classical; at the time I was there, almost solely. Since then they have been very considerably modified to meet the requirements of the times.

326. Do you know what the modifications have been? Dr. Arnold introduced modifications which were considered innovations in the English schools; he introduced modern languages, —French and German, and Mathematics. That system was developed by Dr. Tate, and to a still greater degree by the present Master, Dr. Temple. I believe it is now generally thought desirable to know what course in life a boy will follow, and as far as possible to direct his education in that channel. I believe boys now receive instruction in the physical sciences.

327. *By Mr. Cape*: Lately there have been prizes in botany and music? There have been; we used to have concerts at the end of every half-year at Rugby.

328. *By the Chairman*: Was music taught there? Not recognized, but every assistance was given to those who wished to learn it. The organist of the Chapel was instructed to afford every facility to those who wished to cultivate music.

329. *By Dr. Lang*: Are you acquainted with the system of the Scotch Universities? I am, to a certain extent; I have lived with a member of a Scotch University, and am acquainted with a good many who have matriculated at Scotch Universities.

330. Do you think that the English Universities generally are proper models for the establishment of an University in a country so constituted as this? I should imagine that the standard of education at the existing English Universities of Oxford and Cambridge is a very high one indeed, and that the system of education at present pursued in Scotland is hardly up to that standard; at the same time, I think that system meets the requirements of a class which are hardly met by the English Universities. I know, for instance, that in the country districts of Scotland it is quite a possibility, and frequently occurs, that men of the most humble origin are enabled to work their way through the curriculum of a Scotch University, and to attain a position that a man, in the same sphere, could not do in England in the English Universities.

331. Do you not think such a system is very desirable for a Colony? I do; I have known instances of men, the sons of even husbandmen—country laborers—who have shewn promising indications of talent at the parish schools, who have actually worked their way by manual labor,—have gone into Edinburgh and Glasgow in the winter session—lived a very precarious

rious life, procuring the means of subsistence by giving tuition at a spare hour or to,—and have afterwards attained positions of eminence.

J. Douglas,
Esq., M.P.

332. Do you think such a thing is practicable in an English University? Such a thing might be practicable, but hardly likely to be the case, because I think the English Universities at present minister to the educational wants of the higher and more refined classes. There may be other means at the disposal of those in the lower rank of life in England. I believe at one time the English Universities did minister to the national educational wants to a much greater degree than they have done till very lately. I think they are beginning to do so now, and especially through the medium of the examination tests. I think they call it the middle class examination. I think in that way they will come in contact with the great mass of the population.

22 Sept., 1859.

333. What has been hitherto the distinctive feature of the education given in the two great English Universities—what is the branch by which each University has been characterised? The course of study at Cambridge has been mathematical rather than classical, and at Oxford rather classical and philosophical than mathematical.

334. You state that the standard in these departments, in classics and mathematics, is not so high in the Scottish as in the English Universities? I should gather from all I can learn that of the men turned out from the different Universities at the present day, comparing the English with the Scotch—those from the former have a higher character literary, scientific, and specially philosophic than the Scotch. I am speaking of the period within the last twenty years, and that is rather gradually increasing. I should say that, although the Scotch Universities in the previous generation were decidedly a-head of the English, they have hardly kept pace with the times. They have been lately endeavouring to institute reforms, and there has been a very decided wish that the tutorial system of Oxford and Cambridge should be introduced, with modifications suited to circumstances, in the Scotch Universities where there was a deficiency in the ground work, although the professorial element was fully carried out—that professorial element which was wanting in Oxford and Cambridge.

335. Do you not suppose that the reason why the standard in classics and mathematics was considerably lower in Scotland was that the range of education in the Scotch Universities was more extended? That is very possible.

336. Do you think the Scotch Universities have failed in turning out a class of men generally fitted for the business of life? No, I do not think so. For the general purposes of life I think they turn out a class of men most suitable; but, for the higher professions, I do not think they turn out men equal to those from the English Universities.

337. The Scotch Universities then, as contrasted with the English, are more of a plebeian character, while the others are of an aristocratic? I think they meet the average requirements of the nation more than the English Universities do.

338. Do you not think such a system is more desirable in the Colonies generally? I should be inclined to think so myself; but, at the same time, I think, in the present stage of our existence here, there will only be a limited number who will seek for an University education at all; that must almost necessarily be the case when there are not a considerable number who are able to devote their leisure time, or have the means of devoting their leisure time to literary pursuits.

339. What means do you think would be calculated to induce a larger proportion than at present of the youth of the country to avail themselves of an University education? I have hardly thought of that, but I should think, if the University could connect itself with the whole educational system of the country—I do not mean to say that it is desirable to centralize the whole system—but if it could place itself in connection with the other educational establishments of the country, they would act and react on one another—would impart vitality to each other.

340. Do you not think the diminution of the cost of education at the University would be an important means of facilitating the attainment of such an education to a very considerable portion of the youth of the country? I think the expense of education in this country is a very great impediment in all its stages. Even among the poorest classes, in the scattered districts of the country, I find parents who strain a point to send their children to an elementary school, put to an expense which, in England, would supply them with a very fair mercantile education.

341. Do you not suppose that the requisition of a certain amount of attainment for office, in any capacity under the Government, would serve as an inducement to the youth of the country to avail themselves of a higher order of education? Yes. I think, also, that it would act as a stimulus to those schoolmasters who succeeded in bringing up their pupils to such a standard, which is the system adopted in the educational system of England, to a great extent.

342. *By Mr Plunkett:* What is the distinctive feature of the Scotch Universities, as distinguished from the English Universities, which gives greater facilities to persons in the humbler ranks of life to avail themselves of the advantage of the education afforded by them? The Universities in Scotland simply require from them attendance upon certain lectures. They come to large towns, and are enabled to get cheap lodgings. The Universities do not exercise control over the students, except during the time they are obliged to attend the lectures—some three or four hours a day. They can live at very small expense, and during their spare hours they can act as tutors to boys, attend schools, or give private lessons, and in that way are enabled to eke out their means. And I should also wish to add, that the parish schools in the rural districts of Scotland have, even more materially than the Universities, contributed to the culture of that class which, without such elementary training, would, with very exceptional instances, have found itself precluded from the practical possibility of participating in the benefits of an University system.

- J. Douglas, Esq., M.P.
22 Sept., 1859.
343. Is there any great difference between the fees paid in the Scotch and those paid in the English Universities? I know that at the English Colleges the fees are not the chief expense. The charges of the Universities, whether in England or Scotland, are not excessive. The chief outlay in the English Colleges is for rooms, very often for fees to private tutors, and many et ceteras connected with the style of living and the society mixed with; but the actual University fees are not very oppressive.
344. *By Mr. Jones:* They are rather the living expenses connected with the University? Yes.
345. *By Mr. Cape:* I believe the Scotch Universities are celebrated for the more extended medical skill of their Professors? Yes.

FRIDAY, 23 SEPTEMBER, 1859.

Present:—

MR. PLUNKETT,
DR. WILSON,
MR. CAPE,

MR. JONES,
MR. BLACK,
REVD. DR. LANG.

TERENCE AUBREY MURRAY, ESQ., IN THE CHAIR.

John Woolley, Esq., D.C.L., Principal Professor in the University of Sydney, called in and examined:—

- John Woolley, Esq., D.C.L.
23 Sept., 1859.
346. *By the Chairman:* How long have you been in the colony? We came out at the foundation of the University in 1852; we opened the classes in October, 1852.
347. Where did you meet? In the Hyde Park building, formerly the Sydney College.
348. How many students were there at that time? Twenty-three the first year.
349. How long did you remain in that building? I think we remained till the end of the academical year 1857.
350. Did that building afford the requisite accommodation for the number of students? There was sufficient accommodation for the actual number of pupils that we had attending the classes, but the building was not well adapted for the purpose of a University, and could not have been continued as such without considerable extension.
351. The change of locality was made in 1857? Yes.
352. With whom did that change of locality originate? I do not know.
353. Did the Professors make any representation at all as to the buildings being inconvenient? No, no representation was made by us; but it was an understood thing when we first came, that the buildings then occupied by the University were not to be permanently occupied in that form, and there was never any question raised upon the necessary question of erecting new buildings.
354. You were not at all instrumental in making the change of locality? No; personally I was very much afraid of the effect of the change of locality.
355. What was your objection? My objection chiefly was to the great distance from Sydney. I thought that at first the distance and the direction from Sydney would operate disadvantageously on the numbers, and it has done so; one or two other causes also have been prejudicial to the success of the University.
356. What other causes? I am disposed to think there are about four different causes which have somewhat checked the increase of the number of students of late. One, no doubt, is the locality, which people have not yet got used to. It is true the University of Sydney is not now so far from the best parts of Sydney as University College, London, is from the best parts of London. When I was at the University of London I was at much greater inconvenience than students here are put to; I used to go off in the dark very often and spend nearly the whole day on the premises, but people here are not used to that. We have a great deal of rainy weather here, and delicate students are not able to come on that account, although they might have been able to reach Hyde Park. This distance has also broken up the voluntary associations for mutual improvement which were doing a great deal of good before. Another reason, I think, for the numbers not having increased, is that students from the bush, in most cases, have not been able to get any previous regular training. Some of the most willing fellows we have come to us so thoroughly untrained, mentally, that they are completely unable to handle their minds, and they sometimes become quite ill. One of our best students is at present suffering from severe illness in consequence of the exertions he found it necessary to make.
357. That, at all events, would be as much the case in any other site? Yes, certainly. The third reason has been the state of the buildings. We have suffered from want of sufficient accommodation for the young men; but that can only be remedied by time and money. The young men come about nine o'clock in the morning, and they are obliged to stay over one o'clock—in fact, it would be convenient to us if they staid a little longer. During the greater part of that time they are, of course, in lecture, but every student will have, each day perhaps, an hour during which he is not in lecture. Two sorts of accommodation they require absolutely—one is a large room fitted up with presses in which they may be able to keep their caps and gowns and a change of dress, boots, and so on, so that in wet weather, which is very common, they may not be in danger, either as to health or comfort in coming up to us. The want of such accommodation we have felt a great deal. Besides this, they ought to have a reading room comfortably furnished, with materials for writing—a small library of reference, and also, if it could be managed, the

the best periodicals, in many of which articles are constantly appearing to which we want to direct the young men's attention. In the University of London, accommodation of this kind was provided, and was found extremely useful. I am quite sure the absence of such a room has been mischievous to us in several ways. It obviously increases the temptation to smoking and other idle habits. On account of the want of such a common room as I have indicated, we have been obliged to excuse absence from lecture, and we cannot strictly carry out the discipline as to academic dress, as there are no means of taking care of the dress; and, if a single mischievous fellow comes amongst us, a student may find that, by some stupid trick, his gown has been hidden, or rendered unfit to appear in. It should also be considered, in reference to this subject, that one great object of the University is to train gentlemen. This cannot be done without giving the students the habit of self-respect, and this habit would be greatly encouraged by decent accommodation. When I have urged the provision of good furniture, I have been answered that the young men would destroy it. I am convinced that it is not so—they will destroy shabby furniture; if they are trusted with anything really good they will respect it as much as their elders. I have often tried the experiment.

John Woolley,
Esq., D.C.L.
23 Sept., 1859.

358. Has any representation in this respect been made to the Senate? Yes, they have partly executed our wish, but it has not been carried out fully; you will see the difficulty which has prevented it when you visit the building.

359. These inconveniences were not at all anticipated when the buildings were commenced? I suppose not. There is one other objection, which is a serious one, and which, I think, should be remedied, but the want of money has prevented it. Some of the students are obliged to come on horseback, and there is no accommodation for horses whatever; consequently we cannot prevent their keeping these horses at the neighbouring hotels, which is very objectionable, on many accounts.

360. Then, from all these considerations, you think the site was ill chosen, or that it was not a convenient site? For the present certainly—I hope not so much so hereafter. At first all these inconveniences are sure to be felt. The distance has operated, hitherto, inconveniently; in time, I hope, the young men will get used to it.

361. Have the Professors been consulted at all as to the plans of the building? We were at first members of the building committee, but we have not been so since the present plan was proposed.

362. How many students are now in the University? We have now the smallest number we have had, something between forty and fifty, taking the law students and the art students together. The art students amount to twenty-five.

363. Have the law students matriculated? Not all.

364. How many have actually entered? Twenty-five.

365. You had twenty-four at first? Twenty-three the first year. We have had more than forty in one year. The numbers have diminished from accidental causes. We have lost by death one of our best students, and by sickness some of the others, who are still on the books but are not able to attend lectures. The average last year was thirty-five, if I remember rightly.

366. Then it appears that the public does not avail itself of the opportunity which is offered of obtaining education for young men in the higher branches of knowledge, to the extent which was expected at first? They avail themselves of it more than I expected when I came out. If you compare the numbers even now with the numbers in the Queen's Colleges, in Ireland, and the numbers for the first ten or twelve years in the Durham University, and the numbers, in my days, in the University of London, I think the proportion is not by any means disadvantageous to us. I believe in Galway College at the present moment, taking matriculated and non-matriculated students together, there are not more than about eighty, and that College has been established many years more than we have been, and with a staff of twenty Professors.

367. Has there not been great opposition to those Colleges in Ireland? It has been chiefly religious. In Durham University it was many years before they got as high as fifty students, although they had the interest of the Chapter of Durham to support them, and a large class for civil engineering. I think they have now about one hundred and twenty students.

368. You are acquainted, of course, with the improvements in the system of education, either contemplated or actually carried into effect, in the great Universities of the United Kingdom? Yes.

369. Has the University of Sydney been established at all in conformity with those alterations? It has. I have noted down on paper the examinations of the three great Universities of Oxford, Cambridge, and London. I know the examinations of some of the other Universities, but I have not been able to get at them in a printed form. I think the system the Senate has founded here is almost entirely on the same basis as theirs, and only wants time to be carried out.

370. That is, the heads of examination are sufficiently comprehensive to involve all the subjects included in the improved system introduced in England? Yes. I beg to hand in the examinations I have just referred to, which include the examinations for the B. A. degree in the Universities of Oxford, Cambridge, and London. (*The witness handed in the same. Vide Appendix.*) The present system in the University of Sydney is this:—

We have a matriculation examination in classics and mathematics.

The B. A. course is one of three years.

There are examinations at the close of each academical year, in classical literature, history, mathematics and natural philosophy, chemistry and physics, with classes of honor for distinguished students, and prizes to members of the first class. The B. A. subjects include logic, classics, ancient history, English history, mathematics, chemistry and physics. Students who desire it may attain honors in classics and mathematics.

The

John Woolley,
Esq., D.C.L.
23 Sept., 1859.

The examination for M. A. is held two years after the B. A. A student may pass in any *one or more* of the following schools:—classical philology, mental and moral philosophy, mathematics and natural philosophy, physical science.

It will be seen from our Calendar that we contemplate a twofold addition to our present subjects of tuition,—(a) metaphysical science; (b) natural history (including botany, zoology, geology, and mineralogy). Efforts have been made to supply the two latter, but unsuccessfully. There is great hope that a chair of zoology and natural history generally will soon be added. The Trustees of the Museum are about to engage a scientific Curator; it will probably be easy to secure his assistance in giving a course or courses of lectures suited both to undergraduates and graduates. It will then be easy to establish an honor higher in natural science, similar to those of London, Oxford, and Cambridge. It is to be observed (1)—that already Sydney provides physical science in two examinations more than London does, viz., in the first examination for B. A. (our first annual), and in that for M. A., which cannot be gained by physical science in London; (2)—that in London the rewards for classical and mathematical knowledge are proportionably to physics much *greater* than with us; the rewards for physical attainment with us are almost equal to the others in London; the *scholarships* are *entirely confined* to literature, mental science, and mathematics.

371. In the improvements contemplated has engineering been at all thought of? Civil Engineering could never form part of the regular course of a University. I am talking of the Faculty of Arts only; in no University in the world would Civil Engineering be made part of the regular training for Degrees in Arts. At Durham University, the only University where it has yet been tried, they have a school of Civil Engineering; and a College for Civil Engineering was founded at Putney some years ago; but the practical difficulty was found to be this, that though all the scientific and theoretical knowledge could be imparted, no practical application of it could be had. It is found that no amount of theoretical knowledge ever can make a man practically up to his work as a Civil Engineer. At Putney, the class, though supported by the Government at great expense, was obliged to be given up, because they were not near enough to any manufactory. In our own University, *the theoretical* knowledge necessary for a Civil Engineer, was given in the Mathematical and Physical lecture rooms.

“*Extract from Calendar of Queen’s College, Belfast.*”

“Course of Civil Engineering. Year 1:—Mathematics, Physics, and Chemistry, Drawing, Surveying, Mapping. Year 2:—Higher Mathematics, Practical Mechanics, Mineralogy, and Geology, Drawing, Civil Engineering including the principles of Architecture.”

372. Have they not similar classes in the Queen’s Colleges in Ireland? They have a school of Civil Engineering there, but I suppose in those towns they have facilities for practical engineering. In the Queen’s University the course of Civil Engineering is divided into two parts, at the conclusion of the *first* the student obtains a certificate of qualification to act as “Assistant to an Engineer,” he does not obtain the diploma of C.E. until he has been three years engaged in acquiring a practical knowledge of Engineering.

373. There should be also a School of Agriculture? They teach in Oxford Agricultural Chemistry; and here, Dr. Smith includes it in his course. If, as I hope, a Professorship of Natural History is soon established, we shall have almost all the requirements.

374. Are you a member of Oxford or Cambridge? Of Oxford, but I have had connections in both Universities; and before I came out here I had long conversations, and have since had frequent communication, by letter, with members of the Commissions for both Universities.

375. Could you briefly state the circumstances under which the various Colleges at Oxford were founded? That would be rather a long affair. They were all private foundations and had nothing to do with the University.

376. Which is the most modern? The most modern is Worcester College.

377. When was that established? Just after the Reformation, in the seventeenth century, I think.

378. Do you think it is desirable, in a new country like this, to form our Institutions according to the model which is furnished by these old literary foundations in England? I do not think you can say the University of Sydney is formed after an ancient model. The present scheme of education at Oxford and Cambridge is not only modern, but almost in advance of the times. It is the result of careful examination by several Boards, composed of the most distinguished men in all sciences.

379. Since the late changes have been made? Yes.

380. They have involved innovations? Rather additions. The expression used by the Cambridge Syndicate—a Commission of the Senate founded for the improvement of the studies—was almost in these words:—“We are of opinion that the old system of studies pursued in this University, consisting principally of classical and mathematical attainments, is by far the best as a general training for the mind, and must not in any way be interfered with; but we think it quite possible to add other sciences, which are practically valuable in life, and which can be, with very little trouble, fostered in this place.” And they proceeded, in consequence, to add the moral sciences and natural sciences to the previous subjects of examination. In the moral science tripos, at Cambridge, the examination this year consists of six subjects, four of which are classical—Plato’s Republic, Aristotle’s Rhetoric, Aristotle’s Ethics, and Grotius’ “De Jure belli et pacis.” And it is the opinion of the Scotch Professors—and most of the Scotch Professors now are among the principal reforming educationalists at Home—that the best way of teaching the moral sciences is not by having simple lectures, but by taking one of the hard thinkers of the old times, and making the young men go through a severe course of study in him. They have come to that
in

in Cambridge. Dr. Whewell tried the system of a mere course of lectures, but did not find it answer.

John Woolley,
Esq., D.C.L.

381. Did these improvements in Oxford and Cambridge originate with the Universities themselves? Yes.

23 Sept., 1859.

382. They were not forced by any pressure from without? Not in the least forced. Even when I was a resident member of Oxford a strong party already existed for carrying out substantially the present changes.

383. How are the *Fellows* in Oxford elected? The government of the University of Oxford consists of three bodies, the chief of which, in whose hands the ultimate government of the University rests, is composed of all those who have taken the degree of Master of Arts; and no law can be passed which is not ultimately sanctioned by them—a certain number of doctors and masters form a smaller house, called the congregation, which has only certain special executive functions. Lastly, there is the Supreme Council, answering to our Senate, composed of three different classes of persons—certain official members, the Vice-Chancellor and Proctors, and eighteen others, composed in equal parts of the three different interests of the University—six Professors, six heads of private houses, and six graduates. These eighteen, with the Vice-Chancellor and Proctors, make the chief government of the University.

384. I presume these are all men who have distinguished themselves? Of course the chance is, that they are all residents, and the very best men in the place. A man is hardly likely to get high office at Oxford without having done something for it.

385. Is there anything analogous in the positions these men occupy in Oxford or Cambridge, relatively to that of the Senate of the University here? Yes. The Caput of Cambridge, and Council of Oxford, have the general management of the University; but they cannot make any new law without submitting it to the general body of Masters of Arts, and after that I think it has to go before Parliament.

386. Does that apply to any alteration of the studies? No; only to statutes affecting the general constitution.

387. The Professors do exercise a certain influence in the University? Yes; there are six Professors in the Supreme Council.

388. Do the Professors in the Sydney University exercise any influence in its affairs—I mean, have they a voice? They do not at present. The Act of Parliament which founds the University is evidently framed by a person who did not know the practical workings of an educational establishment. First, the government is framed on the model of the University of London, which has no teaching whatever in it; then, throughout, the Act proposed to carry on public teaching, and, besides that, there is a College supposed, so that there are three quite inconsistent arrangements assumed in this Act of Incorporation. But the meaning of the Act is quite clear that the University should be a teaching University, and under a certain body distinguished for their general interest in educational matters. I do not think that when the University comes to be an important Institution, the present constitution of the Senate will be found to work. The Professors have had no personal reason to complain of the Senate, but I think there are these difficulties. In an Institution like this you must have on the supreme body persons acquainted with the practical working as well as men of general theoretical views. There are practical things which no gentleman not on the spot constantly could be expected to think of, and these things will be sure to be neglected in a body composed simply of theoretical men. Of course, on the other hand, it is advisable that the practical men should be prevented from becoming red-tapists. Again, in this University we are trying an experiment which is a very difficult one, but which I hope will succeed—that is, to unite the general secular teaching of a University with independent denominational Colleges, which are independent in their own sphere. It is a very difficult scheme, which has never been tried before anywhere; and I think that now, and always, it will be liable to considerable and obvious dangers. One of these dangers will be this,—it is difficult for ecclesiastical men to feel quite satisfied with a system which throws persons of all religious views together. That is a feeling always likely to exist more or less; and, therefore, there will be a tendency on the part of the Colleges to interfere with the teaching and working of the University as a central body.

389. To swamp the University in fact? Yes. We must expect that the most distinguished men of each denomination will be practically Fellows both of these Colleges and of the Senate. Six members of the Senate are already Fellows of Colleges; and I think it is almost certain that the Clerical Fellows provided for by the Act will be the heads of Denominational Colleges. I think, for that reason, it would be advisable to have certain persons in the Senate whose interest it would be to maintain the general system—to represent in fact the students not connected with the denominational element. Then, again, the Masters of Arts will eventually elect their own Senate, and, supposing the Professors have no representatives, they will be in the position of servants to their own pupils. I think that would operate very strongly against men of any character or standing seeking to become Professors in this University. Many of these causes have not occurred, at present, but I think, looking to the future, that they will be found to be strongly operating.

390. You think that, as at present constituted, the Senate is not altogether so well qualified as might be wished to deal with the University as it stands, and that very great danger is to be apprehended for the future? I do not say that, exactly. What I said was that looking to the future I do consider the present constitution of the Senate to be an *interim* constitution, and that it will not be found to work well permanently. I believe some leading members of the Senate are of the same opinion.

391. How are the members of the Senate elected now? The Act of Parliament provides for their election by themselves.

392. Does it appear to you that men who have distinguished themselves as advocates for education,

John Woolley, education, or as deeply imbued with a taste for letters, have in all cases been elected? I do not know that I have any right to give an opinion. The Professors have no grievance against the Senate; we have always found them disposed to listen to any proposals we have had to make.

Esq., D.C.L.
23 Sept., 1859.

393. Have you had any experience of the general feeling that prevails in the Colony on the subject of the University? I know very little of the Colony beyond Sydney.

394. Whether it is a popular Institution or not? I should have thought, from the few visits I have made in this country to Maitland and other places, that the people, so far as I have come into intercourse with them, certainly did look forward with considerable hope to the results that might be expected from it; but then I have not been out of town since 1857.

395. In the election of persons to the Senate—of course these are questions which it is quite optional to you to answer or not, I only put them from a sense of duty—have you heard it remarked that social position influences the Senate very much? I do not know that I have; but, if I might make an observation, I should think that, in the present state of the University, and whilst the Senate is constituted as it is now, social position—that is, eminence in public life—should be a qualification. In laying the foundation of a great public Institution we want men who have distinguished themselves for general views and public usefulness.

396. Do you know many men who may be at all regarded as men of letters in Sydney? I think we are very fortunate in that respect.

397. I do not mean in the Senate—I mean in Sydney? Without mentioning names it has always struck me that, for the smallness of our numbers, we are fortunate in the number of scientific men we have in the Colony.

398. Looking at the list of the Senate, do you think any great preference is given to men of that description? If I am to express an opinion, I do not think mere scientific excellence is the only, perhaps, not even the chief requisite to be looked to in the Government of a body like this. Of course there should be a number of persons in the Board thoroughly competent to treat of the questions of science that come before them; but there are other qualifications, such as practical sense and character, which are quite as valuable. It would naturally, in a University like this, fall on the working bodies to deal with questions of a purely scientific character, and there is a Board constituted for that purpose, to lay before the Senate their opinions on all questions connected with the studies; there is such an order, and it is generally carried out. The Senate has generally paid great attention to the recommendations of the Board. I do not think it is my business to judge the qualifications of the Senators.

399. According to the Act of Incorporation it appears that Members of the Senate are to elect Members of the Senate until the Masters of Arts amount to one hundred in number—how long will it be, do you think, before that event takes place? A long time, undoubtedly. We have only ten Masters of Arts at present.

400. Ten in nine years—it would take a hundred years at the same rate? If our numbers did not increase faster than at present, of course it would be a very long business.

401. Do you think it is advisable to abide by that section of the law? No, certainly not.

402. You think it would be well to alter it? Yes; and particularly for the sake of drawing more closely the corporate feeling amongst the young men who have been trained up there. They should begin to be proud of their connection with the University, and to feel an interest in their privileges as members of it. I wish it to be understood, however, that I do not suggest this because I think better men would be elected, but rather as a means of creating an *esprit de corps* among the members of the University, which would be productive of the most beneficial effects. I should think they may safely elect representatives to the Senate so soon as there are twenty Masters of Arts.

403. You recommend an amendment of the Act with that view? I should be glad to see it.

404. At present, amongst the members of the Senate, there are several Fellows of Affiliated Colleges, do you think that an alteration of the law to this effect would be advisable, to prevent any member of the governing body of an Affiliated College being a member of the Senate of the University? It is a very difficult question. In Oxford and Cambridge, as you know, the private Colleges have their own rules, and no notice is taken by the University itself of a man's position in his own College at all; and if the Colleges here are to be like the Colleges at Home, to be houses fairly within the University, in the abstract I should not like that any disqualification should be suffered by the governing body of a College. The danger here is the antagonism that may possibly arise between the Colleges and the central body. That is the peculiar reason for which, without some check, I should be afraid of having too many members of Affiliated Colleges on the governing Senate. Nevertheless, I think I should be a little afraid of any such disqualification, because, under its operation we might lose some of our best men. My own personal opinion is that we should have a counterpoise to the denominational influence.

405. There is this difference in principle between Oxford and Cambridge and our University, that they are both sectarian establishments? Not now.

406. Is there no religious test? No.

407. May Roman Catholics take degrees? Yes. The only practical difficulty, which will, doubtless, soon be removed, is in the ecclesiastical character of the Colleges, with one of which a student must at present be connected. It has always been contemplated to allow free students, and the measure is only postponed for fear of causing alarm by rapid and sweeping changes. At first it was demanded that not only all degrees should be open to persons of all or no religion, which is actually the case, but that the Colleges also should be thrown quite open. Then there came the practical difficulty that the Colleges are places of residence, and you cannot have places where young men reside constantly without religion.

At

At present, if any young man becomes a scholar of a College no declaration is asked as to his religious opinion, but he is expected to conform to the customs of the College, and one of these is attending chapel; a man who becomes a member of a foundation is expected often to attend chapel, but he is not asked to what sect he belongs. Even in my time many Presbyterians were among us. Lately an attempt was made by the head of one of the Colleges to require a test from certain members of the foundation; but this attempt was peremptorily checked by the Visitor, a Bishop. The only thing that would now prevent a Roman Catholic from becoming a member of a College at Oxford would be his own conscientious objection to hear our prayers read. Reforms of this nature have been pushed so far in England, that people began to get frightened, and even Sir William Hamilton, who was one of the greatest reformers, in deference to this feeling, thought it advisable to proceed a little more slowly.

John Woolley,
Esq., D.C.L.

23 Sept., 1859.

408. Ours is a strictly secular establishment? And Oxford, as a University, is perfectly secular. It has been made penal to require from any man on taking his degree a declaration of religious opinion; a man now takes his degree at Oxford without being obliged or *allowed* to give any expression whatever of religious opinion, except, of course, the degrees in the Faculty of Theology.

409. To revert to the Sydney University—it is a strictly secular establishment—that was the great fundamental principle upon which it was founded, and many objections have been and still are entertained to these Colleges being established in connection with it; and I observe from what you have said yourself that you are apprehensive of the growing influence of these Colleges? I think it would require checking. I ought to confess honestly that I have been interested in favor of the Colleges from the beginning, although I have not had much to do with the practical carrying out of the Act. The general sketch on which the plan was originally based was suggested to me in England by persons connected with the University Commission. In the case of the Queen's Colleges, the objection felt by the clergy is met by appointing Deans of the different religious persuasions, and they give religious instruction to such members of the Colleges as desire to avail themselves of it. It was thought in our own case that, looking to the distance at which many persons reside in the bush, and the extreme danger of young men residing in ordinary lodging-houses, it would be well to incorporate these Colleges so as to offer the protection of a good home to young men, and at the same time to afford them the option of religious education and discipline, which the University ought not to attempt; and I confess I entertain a strong wish that the plan may be found to answer.

410. But you think there is this great danger, that these Affiliated Colleges may gain such influence as to completely sectarianise—if we may use the expression—the University itself? I think that may happen in two ways. The Act of Incorporation is in one respect defective. It is provided that students of the Colleges shall be members of the University so long as they remain students, but there is no provision that members of the Colleges shall be students of the University, so that it is quite consistent with the state of the law that there should be a large body of members who have no connection with the University whatever. I believe that is the fact in the only College actually existing now; the majority of its members are not actually members of the University at all. I should like to see the Act amended so as to provide, that after the first body of Fellows of any College is named, which must be an exceptional case, all subsequently chosen should be members of the University, and that no person should be a member of a College who is not a member of the University.

411. The evil to be dreaded is this, that the members of all these Affiliated Colleges may coalesce to bring about an object in which they have all a common interest, and the question is, how to guard against it? I believe it is a danger. It is a thing which makes me tremble sometimes for the success of our plan.

412. You think the establishment of these Affiliated Colleges may virtually endanger the fundamental principle on which the University is established? It is quite possible, and, I fear, probable; I do not wish to anticipate evil, but I do fear that such a tendency is too likely to arise.

413. Sectarian influence might be brought to bear, not only by means of the Fellows of these Colleges being on the Senate of the University, as they are now, but also by means of the students themselves? Yes; it is possible there might grow up, instead of a spirit of union, a spirit of violent antagonism, and that the only point on which the Colleges should agree should be their opposition to the secular principle, which would be their common enemy.

414. *By Dr. Lang*: Do you not suppose that it would be desirable to make such an alteration in the present system as that the principal or head of each different College should be *ex officio* a member of the Senate of the University? It will come to that of course, as a matter of fact.

415. And to limit the connection of each of the Colleges to that single case? You must have an entirely different constitution of the Colleges themselves in that case. If the Fellows of these Colleges were, like the Fellows of the Oxford Colleges, practical working men, and not an honorary body chiefly, it might do very well; but if you were to do it now, you would prevent men of distinction from taking office as Fellows of Colleges. I have, however, so much real apprehension as to the difficulty with respect to sectarian quarrels, that I have often wished so much as this, that whenever a gentleman who is a Fellow of a private College is elected on the Senate, he should be obliged to resign his connection with his own Board. I should not like to see a man who has been elected a Fellow of a College cut off from the higher honors which would follow a connection with the governing body of the University itself.

416. Do you not think that if the head of each of the Colleges were not a member of the Senate, it would be placing him, and the Institution over which he presided, in an inferior position?

John Woolley, position? He would be in the same position that the Professors are in now; equally with that, a mere officer, having no place in the governing body. If a change were made by which the officers of the secular part of the Institution were represented I should think it quite advisable that the Colleges should be represented as in Oxford and Cambridge, where there is an equal representation of all classes and interests.

Esq., D.C.L.
23 Sept., 1859.

417. *By the Chairman:* But the Colleges in Oxford and Cambridge are not similar in character to those here, and you are not represented in the governing body? I think that we ought to be.

418. That is not the case now? No; if you had a representative body, I think it would be more likely to prevent sectarian quarrels, to have officers on the supreme Board who could confer with all the others freely, rather than to have people living apart and nursing their feelings of hostility to each other.

419. *By Mr. Jones:* Do I understand you to express an opinion that it would be an improvement on the present constitution, if the heads of the several Colleges and the Professors of the University had seats in the Senate? I think it would be well for the future working of the University.

420. And a sufficient number of general members, not officially connected with either, to keep them in check? Yes. At Cambridge there are eight persons who are official, and at Oxford twelve, and an equal number of Doctors, or Masters of Arts, elected by the Masters of Arts, having no necessary official position, though, practically, several of these are also officers; and it is specially provided in the Act, that Professors, or heads of houses, may also sit as graduates. It is impossible to check the freedom of election by the general body of Masters of Arts, and, if it proves that the University produces a sectarian constituency, we cannot help that.

421. *By Dr. Lang:* I think the great defect in the present constitution of the Senate is, that the Professors have no voice? That is no fault of the Senate; it is the Act of Incorporation that is to blame.

422. *By the Chairman:* Did the removal of the University to the locality where it is now situated lead at all, in your opinion, to the establishment of these Colleges? I do not think it was so. The first design of these Colleges was, I think, proposed by myself. I do not say in their present form; but the first plan was proposed by me to Sir Charles Nicholson and Mr. Deas Thomson. We had no idea at that time of going to the State for any grants in aid of the Colleges, nor of changing the locality of the University. We thought it would be very easy to find places in the neighbourhood of Hyde Park; and it was intended at that time that they should be supported by voluntary contributions. After that I lost sight of it, and I do not know how the present system arose.

423. If your idea had been carried out in that form, they would have stood in a different position, for, of course, if private individuals chose to establish Colleges, the State could not prevent them; but the character of the thing is completely altered as the matter stands at present? Still I do believe that, if it can be kept free from the danger of sectarian influence, it will be found to be a very valuable improvement, if you can really get these Colleges to live together in perfect harmony, and to work with the central system. Up to the time of these Colleges being founded, there was a thoroughly bitter and unmitigated hostility on the part of the clergy against us. The clergy of the Church of England were—at least the great majority—against us; and the power they had they used to check the growth of the University. The great advantage, however, of the Colleges, is the advantage of tutorial instruction, and academic discipline, which can hardly be estimated too highly for pupils coming from the country.

424. With regard to the buildings, do you think it was necessary at all, or even desirable, that such a magnificent structure should have been commenced—the Professors, I think you say, were not consulted? We belonged to the Building Committee at first, but we ceased to be members of it before the present plan was made. My own notion would be this—that it would be advisable to have a splendid plan for a building like this, but so arranged that only so much of it as is wanted should be carried out, and that it should be left for future generations to make such additions as they might find to be required. I do not think that, magnificent as it is, that Hall will be found to be a waste of money. In the first place, it is not too large for the public meetings of the University. In carrying on the education of the students a great deal depends on the sympathy and encouragement of the citizens generally, and these meetings do more to stimulate the young men to exertion than anything you can well imagine. I believe they would not work as well as they do if it were not for the hope of receiving their prizes in public. There are other purposes for which the Hall might be used; but the beauty of it, in itself, will have a great and elevating effect on the young men. It is a very suggestive Hall. No boy of any spirit can walk up and down that place without getting his ambition fired. I find it hard to look at it even now without getting excited.

425. But the Hall forms but a comparatively small portion of the building? Yes. The necessary buildings—are a room for the meetings of the Senate, the library, the Registrar's office, four lecture rooms, and a reading room, and common room for the students.

426. Looking at the enormous expense already incurred, which very probably will be doubled before the buildings are completed, do you think it at all desirable in a young country like this, and where there is apparently no very great earnestness on the part of parents to avail themselves of the higher branches of education for their children, to have entered on such a stupendous structure? I would not have entered on it with any idea of carrying it out in our time. I should have liked to see a plan capable of being added to from time to time, each part being handsome in itself.

427. We have now a building suitable to all the wants of the Colony in this respect for a couple

couple of hundred years, and far in advance of our present wants? I would not undertake to say that I think the present is the possible plan to suit the circumstances of our case; there is more of it done than we want at present, no doubt; but after all, it has cost as much as it will cost in our days. It has cost something less than £70,000.

John Woolley,
Esq., D.C.L.
23 Sept., 1859.

428. Even that part which is now being proceeded with is not finished yet? It will be finished for within £4,000 more. All that it requires, and that merely for beauty, is the tower. One thing I feel personally, and that is, that our houses have not been included in the grants made for the building. We expected, and indeed it was part of the understanding when we came here that we should live on the premises; and there are many strong reasons in favor of our doing so.

429. *By Dr. Lang*: Do you not think that should be one of the first objects to be looked to? Of course I am speaking of my own interest, but I must say I felt very strongly, when in the Hyde Park building, that my living there was productive of some good to the students, and I had the greatest possible dislike to living anywhere else.

430. Do you not think that the residence of the Professors within the precincts of the University is calculated to exercise a public and beneficial influence on the youth? I think it is extremely important, in that point of view. I am quite certain that good resulted from it when I was at Hyde Park; and since I have been occupying rooms at the University I believe that I have been able to prevent some irregularities; besides that, it makes a great difference to ourselves as to our effectiveness. Those Professors whose whole time is engaged in the University, ought, I think, to live on the premises.

431. *By Mr. Jones*: Do you not think the residence of the Professors is absolutely essential to the proper discipline of the University? I think so; it makes a very great difference to the tone of the University's training. While I resided at Hyde Park I was able to see something of the young men privately, and I am quite sure Mr. Cape will agree with me, that the private associations of the young men with the Professors and the ladies of the family, is a great collateral help in their education. When I was at Oxford, as a boy of sixteen, I was often asked by the heads of the governing body to meet, not only themselves, but the ladies of their families and visitors, and I am very sensible of the good effect it had.

432. Has there been any provision at all made for the residence of the Professors? We have always received intimation from the Senate that they intended us to reside. It was insisted on very strongly in the letters sent Home, and we receive compensation at present for non-residence.

433. But no actual accommodation is made for the residence of the Professors? I think it was at first intended that our houses should form part of the main building, but some difficulties arose, and in consequence it was determined, I believe, that they should not be built as part of the general design. That occurred about 1857. When I found that we were going out to Grose Farm, and that the houses were not to be built, I petitioned the Senate, through Sir Charles Nicholson, to let me have a particular part of the building that would not be wanted for educational purposes, and I understood that assent was given, and I was under that impression until just before we moved, and then I found difficulties had been started, I think, by the architect.

434. Then, so far as the buildings have been erected, no provision has been made for the residence of any of the Professors? No.

435. Do you know if any provision is contemplated? There was a plan drawn for building three cottage residences at a little distance from the building itself, but not forming part of the general design; and I have also heard that Mr. Blackett had made a design for adding the houses to the main building; but I have no distinct knowledge of either of those plans. I think it is embodied in letters from the Senate to the Government about 1857, and I have had assurances from members of the Senate privately, that it was intended we should have these separate cottage residences apart from the main building.

436. Would they answer all the purposes for which the residence of the Professors at the University is desirable? They would answer them in a great degree, assuming they were within the precincts. I think it would have been better, and I expressed my opinion strongly on that point, that the Professors' houses should have formed part of the building itself, as bringing us more into contact with the young men, and especially if their voluntary associations are to flourish again, as they are beginning to do, we should have more indirect control over any irregularities.

437. What endowment has the University received in land, do you know? We have that magnificent piece of land, which is something within 150 acres—the Chairman says 126 acres—and of that four times eighteen acres are set apart for the Colleges, each College having eighteen acres. One advantage of that large endowment in land is, that, as soon as that can be laid out, it will answer all the purposes of a public park, which is much wanted in that part of the town. Every Sunday we have now, even in the worst weather, about a thousand people who come to the place to see and admire the buildings; and if it were brought into cultivation it would become a place of public recreation to the neighbourhood, which is becoming thickly populated.

438. Will the endowments for four Colleges absorb all the land available for that purpose? Yes.

439. Then, supposing other Colleges should be established——? They could have no place on the ground; there is no place where they could be put, and we could not make a place.

440. Will that circumstance interfere with the establishment of other Colleges? I should think it fatal, because all the land about there is very dear.

441. Are you at all aware what is the extent of land about the Colleges at Home? Scarcely one of them has anything like that amount of land; most of them have moderately large gardens, but many have no gardens at all; the College stands on the street, and just occupies enough ground for its own outhouses and buildings.

John Woolley, Esq., D.C.L. 442. What do you suppose to be the average quantity of land possessed by the Colleges at Home? I should not think—leaving out the two magnificent foundations of Christ Church and Magdalen—that any College occupied more than four or five acres.

23 Sept., 1859. 443. Is there any necessity for having so much as has been given here? Personally, I should think that eighteen acres will be found disagreeably large. Ten acres I should think would be sufficient.

444. You do not think that any practical inconvenience would arise if these endowments in land were diminished so as to admit of other denominations receiving some portion? I have always thought that it has been a fatal gift—they should not have taken so much. I know the Independents, for instance, memorialised the present Government on the subject, having at one time some idea of setting up a house; but they found there was no land that they could have. In fact it will be impossible for any other Church to set up a College.

445. You cannot see any claim which those four denominations have to be endowed with land over other bodies? No. I do not think they would be really inconvenienced by having a portion taken off. I suppose the accident was, that they were the bodies supported by the State.

446. *By Dr. Wilson*: Do you not think even six acres would be sufficient? I could have wished that they had only six acres each.

447. Is there not some idea of forming a Botanical Garden in connection with the University? I have heard of some idea of establishing a Medical School, and in connection with that Medical School the Senate have wished to have a Botanical Lecturer, who should be Curator of a Botanical Garden which it is intended to form at the bottom of the hill, close to the water, where the ground is extremely good.

448. That would be of great importance to the University? Of very great importance.

449. With reference to these cottage residences, do you think they would give satisfaction to the Professors? Yes; I think both my brother Professors would be quite content. They could be made more comfortable houses than the others. Houses attached to the building would be open to two objections—they would be much smaller, and there would be no privacy for a family.

450. *By Mr. Jones*: Have you reason to believe that the residences now contemplated would be such as would be suitable for gentlemen in the position of Professors of the University? I do not know that there are any actually contemplated. The last design made by Mr. Blackett I was allowed to see; but Mr. Blackett himself is of opinion that it is impossible to make the houses in connection with the building at all comfortable; he thinks there are certain great disadvantages which could be easily pointed out on the ground, and which would make them almost a drawback instead of a comfort to any body holding the office.

451. *By Mr. Plunkett*: Was it not the wish of the Professors to have residences apart? I believe both of my colleagues would prefer residences apart, but my own personal feeling has always been in favor of being in the building itself.

452. Do you happen to know that it was in consequence of some wish expressed on the part of some of the Professors that Mr. Blackett drew out plans for separate residences? Do you mean quite lately—within the last few weeks?

453. The first time separate residences were proposed detached from the other building? I always understood that the opinions of my two colleagues had some weight, but that that was not the only or principal reason; I have no official knowledge how it came about. We went out with the Building Committee to see the ground, and there was that expression of opinion that you mention, but there was a great deal of other conversation at the time, and other reasons were given on the part of members of the Building Committee for not attaching us to the building, and I understood that the result was not chiefly in deference to the Professors wishes, but decided by the consideration of inconveniences.

454. *By Mr. Cape*: I observe in the Calendar for the first and second years that you were very successful in attaching to the University a number of non-matriculated students, but that the number has fallen off since—do you attribute that to the removal from Sydney? When we first came, numbers of persons applied to us who were engaged in professions in the course of the day but wished to get some advantage from our teaching; and the Senate proposed, that if these men would pass the usual examinations and come to evening lectures they might obtain some of the privileges of the University. For two Terms we had evening lectures, but the numbers attending them fell off even then. I think it is practically impossible that a man engaged in business should go through the labor necessary for a serious course of study. It may do after he has taken a degree and is working up for the M. A. degree, but not for a student beginning his University studies.

455. The gentlemen I refer to attended in the morning? We had them occasionally, just as they wanted to get up information for examinations, and then they retired. I should not wish to see evening classes for students. Evening is the most precious time for a real student; but my experience is, that the young men attending evening lectures are apt to make them mere amusements.

456. Is it the intention to make the examinations here precisely similar to those in the British Universities, or to adapt them to the wants of the Colony? My impression is that the plan in operation at Home will be found to be highly useful to the Colonies. Might I ask in what respect you meant to adapt them?

457. Is the character of the classical reading so suitable to a young country where more practical pursuits are to be followed,—in consequence of the difference of climate the mind is less able to work? I have found it just the contrary; young men are quicker here than at Home. We attempt to found the University here on the principle which is generally received at Home, the ruling object, in the examinations for the B.A. degree, being first to train

train the mind,—not necessarily to give any very large amount of information which would be immediately available, but to discipline the mind for future work, and to give a man the power of independent observation and accurate thought; and we believe, and indeed it has been formally stated by both the Boards which sat at Oxford and Cambridge, that for a future course of study or active exertion no previous training is so good as the training in mathematics and grammar as given through the classic languages. That was stated in the last Report of the Syndicate of Cambridge.

John Woolley,
Esq., D.C.L.
23 Sept., 1859.

458. I allude to the disposition which prevails here to place children out earlier in the active business of life? I was going to say that on that ground I should not be disposed myself, and I do not think my brother Professors would, to diminish the amount of classical and mathematical training at present given. I believe, and I am not singular in the opinion, for it is shared by Sir William Hamilton and Professor Sedgwick, that a young man, who is thoroughly well grounded to use his mind by mathematical training, will in a short time outstrip in any natural science persons who have begun to apply themselves to it much earlier, but without previous training. It is always found in Oxford that a public-school man, though his education may not, in point of subjects, be so practical as can be had in other places, is yet, from having been so well trained to use his mind, absolutely certain to beat any other man you bring against him.

459. The leaders of education at Home form their opinion on this subject in countries possessing very different associations, and placed in very different circumstances to ours? I doubt whether that circumstance affects their judgment. Take a man like Sedgwick; his associations are not by any means peculiar to Cambridge. The University Commissioners, though distinguished Academicians, have included men of practical habits—not residents in the University.

460. I allude to the climate? I do not think the climate is any hindrance; I find I can read much harder here than I could do at Home. It must be remembered that the examinations here are on things actually done during the course of the Term. A much easier looking examination would be a much more severe test. No question is asked in these examinations that has not been often written about by the young men in the course of the Term.

461. You do not recognize any difference from the effect of climate? My impression is that the young men are brighter. They may be a little lazier, but I do not attribute it to the climate. It would be very absurd in me to say that we overwork ourselves, but there are several of the students who do really work hard. As far as I can judge those students who have applied most closely have never felt the least inconvenience from the climate. Again, we have had cases of students from Home who, whilst here, worked hard without inconvenience, but on going to Oxford were knocked up.

462. Have efforts been made to establish private halls here? I do not know any.

463. There were some efforts of the kind at first, were there not? The Affiliated Colleges have superseded that. It was not found that it practically answered. Great efforts were made at first, but the style of domestic supervision was not so good as it might have been, and they were not cheaper to the young men.

464. Do you contemplate introducing Middle Class examinations? I think it would be most advisable. Ever since I came here I have been looking forward to it. I think it would be found to answer extremely well.

465. *By Dr. Lang:* Admitting that the classics and mathematics are the best means of intellectual training, which I most cordially do—do you think it necessary, in the circumstances and wants of such a country as this, to establish so high a standard in both of those departments as has hitherto obtained in the English Universities? Our standard is not so high as in English Universities. These examination papers are very deceptive. A young man wishing to get on in classics or in mathematics in Oxford and Cambridge must be well acquainted with moral and mental philosophy, both modern and ancient, and so well up in languages that it would be almost impossible to puzzle him with any book you put before him.

466. Is it not the fact that men who have devoted their attention, as many graduates of the Universities at Home have done, almost exclusively to classics or mathematics have been found very unfit men for the general business of life? I have the disadvantage of speaking about my own trade, but certainly that has not been my experience at all, but just the contrary. I think a man who has gone through the classical and logical training at Oxford is not only capable of turning himself to anything, but much more willing to take up any work that offers.

467. You are aware that the standard both in classics and mathematics in the Scotch Universities has not been anything so high as in the English, but do you not suppose, from your general acquaintanceship with the educational system of the Mother Country, that we manage notwithstanding to fit out a large number of men who are very capable of pushing their way in the world in the general business of life? Scotchmen are clever men, and no doubt the Scotch Universities have brought out some very good men; but you have got the habit nevertheless of taking Oxford and Cambridge men as Professors. The most distinguished Scottish Professors have long acknowledged the deficiency, and agitated for a change to assimilate their system to ours; I may specify Sir W. Hamilton, and Professor Blackie—their representations have been effectual. In a late Report, complaint has been made on the part of the Scotch Universities that they have not been able to carry their reading so high, from an obvious reason—the want of endowment; a commission has been issued, and large grants—I believe as much as £10,000 a year to one University—are proposed to found Fellowships and Scholarships, in order to hold out the same inducements as in Oxford and Cambridge. We have large numbers of Scotchmen in Oxford, who are amongst the cleverest men

John Woolley, men there. In my College nearly half of us were Scotchmen. At one time in Oxford, the Esq., D.C.L. University boat's crew—the eight oar—the champion of England, had not a single Englishman in it.

23 Sept., 1859.

468. Do not some of the peculiarities apparent in the working of the English Universities arise partly from their more aristocratic character? They are not aristocratic. It is a very curious mistake to call those Universities aristocratic bodies; on the contrary, the most distinguished men in them are men who have worked their way from the ranks of the people. Several Professors in each University have so risen, and many distinguished for learning are men who had not a single farthing in the world, and who have been enabled to prosecute their learning entirely by the magnificent endowments which the Universities possess. They are only in this sense aristocratic—that the sons of noblemen are usually sent to them to complete their education, but while there they are not more than equal with the men who come out of the street. It is an obtrusive fact, that probably a majority of men in the governing bodies are not only poor, but have risen from the ranks in the strictest sense of the words.

469. Is it not the fact, that the number of such cases is much smaller in comparison with the whole number of students in the English Universities than in Scotland? I can hardly tell that. I know that the number is very great indeed. Of course it is the fashion in England for rich people to send their sons to the Universities, but they are on terms of mere equality with other men. It is a matter thoroughly well understood in the Universities, that a very large number consists of as poor men as you will see anywhere. Many of these students have not enough money to be apprenticed to the commonest trade, and owe their education altogether to the endowments. It is the case sometimes with the younger sons of the aristocracy themselves. I have known several cases where men have not been able to get sufficient to keep them, and have been obliged to take pupils, but they have not lost caste by it.

470. It is not the fact then that the large proportion of those who have risen from the ranks have done so by their own exertions? They have been materially assisted by the endowments which are scattered so thickly over England.

471. Do you think the cost of education in the University of Sydney is any obstacle in the way of an increase in the number of students? I do not know whether it is, but I am sure the Professors have no wish that the fees should be kept up for their advantage.

472. You spoke of the probability of a Curator being appointed for the Museum who might give lectures on Natural History—do you think the University in its present site would be a proper place for such lectures, rather than the Museum itself? There is a similar arrangement in Cambridge between the Professors of Astronomy and the University authorities. The Professor of Astronomy gives certain lectures to the under-graduates there. I do not know why the Curator should not be able to give his lectures at the University, say twenty in the course of the year. I would prefer his giving them at the University, because it would break up the discipline if the under-graduates came down here. I hope to find that we shall soon have a Museum of our own. The natural wealth of this country is enormous, and the trustees of the Museum are in correspondence with other countries, and are getting very large contributions from all parts of the world. I believe the Senate would have no great difficulty in making a good Museum at the University.

473. *By Mr. Black:* Do you know of any instance in the United Kingdom, or in the British Colonies, in which a University has in connection with it a number of Affiliated Colleges, each of them professing a distinctive sectarian character, similar to those established here? There is no case exactly like it. The nearest approach to it is in the constitution of the Queen's Colleges in Ireland, where there are recognised teachers of religion, who also act as moral censors of the young men belonging to their own churches, residing in licensed lodging-houses.

474. This is quite a novel experiment? Yes, as far as residence goes.

475. Of the eighteen acres of land granted to each College, how much would be absolutely necessary in order to provide a sufficient site for the necessary buildings, and outhouses, with a court, but not including garden? I do not know that I could answer that question at the present moment; but if you will allow me to say so, I think it would be a pity if there were not some recreation ground attached to each College for the use of the College itself. It is a great convenience.

476. By the word "court" I would include such a recreation ground? I do not think ten acres would be found to be too much.

477. *By Mr. Plunkett:* With respect to the old Sydney College, are you aware that it did not belong to the University when you came out first, that, in fact, they rented it from the trustees? It was bought soon after, I think.

478. Do you not know that it was at the urgent solicitation of the trustees of the Grammar School that it was sold, and, ultimately, you were obliged to leave it? Yes; but that was after the arrangement was made that we should go to Grose Farm.

479. It was entirely with your consent that the change was made? It was with my consent, as a trustee of the Grammar School, that we bought that site; but it was long after the Senate had decided that the University should be removed to Grose Farm.

480. If the Senate had not built at Grose Farm, would not they have been obliged to repair the old buildings of the Sydney College, and to have erected other buildings in connection with them? They would. It would have been quite impossible to have maintained that place very long. My own house was in such a state of ill repair that the mantel pieces were constantly coming out, and, long before I left, we had to strip off the plaster from the ceilings for fear of its falling. I think the place was in a hopeless state of disrepair, and

the

the trustees of the Grammar School were not long in discovering that they had made a bad bargain, so far as the buildings went. John Woolley,
Esq., D.C.L.

481. You are a trustee of the Grammar School? Yes.

482. Did you not fail in getting any other convenient place for the establishment of the Grammar School? Yes, we were nearly a year. We could not afford to buy a site, and we had to depend on the Government. There were plenty of sites we liked, but the Government would not give them to us. 23 Sept., 1859.

483. Was it not considered a mutual accommodation between these kindred establishments? Yes; I think, under the circumstances, the trustees of the Grammar School were very much obliged to the Senate for letting them have that site. It is as good a site as they could have.

484. You are aware that omnibusses go to the toll-bar at the foot of the hill on which the University stands, every five minutes? Yes; I think I said that, though the distance had been a source of discouragement hitherto, I did not think it would always continue so. The difficulty was chiefly felt in consequence of the want of accommodation at the University, which is very inconvenient in bad weather. But the feeling is wearing off.

485. In fine weather do you think there is much inconvenience in the students going out there, looking to the facilities they have of getting there by means of these omnibusses? I cannot say I should have liked the site. There is sufficient inconvenience to make it a certain drawback, but it will diminish more and more. I think it would have been more convenient to have had it in another part of the town.

APPENDIX A.

Examinations for B.A. in Oxford.

	ORDINARY AND NECESSARY.	OPTIONAL HONORS.
1. Responsions.	Classics, Mathematics.	
2. First Public Examination.	Classics, Logic, or Geometry, Algebra. }	Classics Mathematics—pure } Classes of Honor.
3. Second Public Examination.	Classics. And one of the three schools of— Mathematics, Law, and Modern His- tory. Natural Science.	Classics, including Logic, and Mental and Moral Philosophy. Mathematics—pure and mixed (i. e. Natural Philosophy.) } Law and Modern History. } Chemistry. } Physiology. } Mechanical Philosophy. } Classes of Honor.

APPENDIX B.

Examinations for B.A. in Cambridge.

	ORDINARY AND NECESSARY.	OPTIONAL HONORS.
1. Previous Examination.	Greek and Latin, Geometry (Euclid) or Arithmetic. (Additional subjects in Euclid, Algebra, Candidates for Honors in 2nd Me- chanics' examination.)	1. Mathematics*—Candidates for which are excused the ordinary examination. 2. Classics—Candidates must pass ordinary examination.
2. B.A.	Greek and Latin. Euclid, I, IV, and VI (1-6.) Algebra, Mechanics, &c. } And to produce a Certificate of having passed the Professor's Examination in one of the following subjects:— Law. Physic. Moral Philosophy. Chemistry. Modern History. Anatomy. Law of England. Botany. Political Economy. Geology. Mineralogy.	3. Moral Sciences. } 4. Natural Sciences. } Which may be passed a year after the others.

* Including Natural Philosophy.

John Woolley,
Esq., D.C.L.
23 Sept., 1859.

APPENDIX C.

Examinations for B.A. Degree in the University of London.

	ORDINARY AND NECESSARY.	HONORS—(OPTIONAL.)	REWARDS, TO THE BEST MAN.
1 Matriculation	Classics	Classics	{ Exhibition, £30 a-year, for two years.
	English Language and History. Mathematics.	{ Mathematics.	Ditto, ditto.
	Chemistry.	{ Chemistry, Botany, Zoology.	Prize in each of £10.
2. First B.A....	Latin Language and History. Mathematics.	Latin.....	{ Exhibition, £40 a-year,—two years.
	English Language and History.	Mathematics.	Ditto, ditto.
	French or German.....	English.	{ Exhibition, £30 a-year,—two years.
		French or German	Prize of £10.
3. Second B.A.	Latin and Greek } Greek History } Mathematics and Natural Philosophy.	Classics and Greek History	{ University Scholarship, £50,—three years.
	Logic and Moral Philosophy	Mathematics.	Ditto, ditto.
		Logic and Moral Philosophy	Ditto, ditto.
	Animal Physiology.	{ Physiology, Animal Do. Vegetable, & Botany.. } Chemistry.	In each, prize of £10.
For M.A. Degree	The subjects are either....	{ Classics, Mathematics and Natural Philosophy, Logic, Mental, Moral, Social Philosophy.	

APPENDIX D.

Final Examinations for B.A. in London, Oxford, and Cambridge.

	NECESSARY—(ORDINARY.)	OPTIONAL—(HONORS.)	REWARDS.
LONDON	Latin and Greek } Grecian History } Mathematics and Natural Philosophy.....	Classics	{ Classes of Honor; and to the best man in each subject a University Scholarship, value, annual, £50, tenable for 3 years.
	Logic and Moral Philosophy	Mathematics	{ Class of Honor: To best man in each, prize of £10.
	Animal Physiology	Logic and Moral Philosophy (Animal Physiology ...) Vegetable Physiology and Botany Chemistry	
OXFORD	Classics, especially in reference to Historians and Philosophers.....	Classics, including Logic and Mental and Moral Philosophy.....	Classes of Honor.
	Logic		
	And one of the three Schools of— Mathematics and Natural Philosophy..... Law and Modern History	Mathematics, i.e., Natural Philosophy..... Law and Modern History	
	Natural Science	Natural Science. { Chemistry, Physiology, Mechanical, Physiology, &c.	
CAMBRIDGE ..	Greek and Latin.	1. Mathematics and Natural Philosophy	Classes of Honor, excusing from the ordinary examination,—two prizes.
	Geometry, Algebra, Mechanics, &c., and certificate of Professors' examination on one of the following subjects:— Law, Moral Philosophy, Modern History, Laws of England, Political Economy, Mineralogy.	2. Classics	{ Classes of Honor, — two medals.
		3. Moral Sciences, } 4. Natural Sciences, }	Classes } May be passed a of year after the former.

TUESDAY,

TUESDAY, 27 SEPTEMBER, 1859.

Present :—

MR. BLACK,		MR. MURRAY,
MR. CAPE,		MR. PLUNKETT,
THE REVD. DR. LANG,		DR. WILSON.

TERENCE AUBREY MURRAY, Esq., IN THE CHAIR.

Edmund Thomas Blackett, Esq., called in and examined :—

- 486. *By the Chairman* : You are the architect of Sydney University? Yes.
- 487. You planned the building? Yes.
- 488. How long is it since you undertook to do so? June, 1854. It came about in this way :—I was, at the time, the Colonial Architect, and was asked if I would undertake it; I said we could not undertake it in the office, because we were overburdened with work; but, if the Senate would give me the work, I would resign my Government office to take it.
- 489. Who were the members of the Senate you communicated with? I communicated with the Provost, and others.
- 490. Who was the Provost at the time? Sir Charles Nicholson. I was at a meeting—I cannot call to mind who attended it; but there were Bishop Davis, Dr. Douglass, the Revd. Mr. Boyce, and six or seven others.
- 491. How did your communication with them commence? I can hardly say; I can hardly call to mind the exact beginning of it.
- 492. What direction did you receive when you engaged to furnish the plan? The papers are all, I suppose, on the Minutes. I received instructions to prepare the plans for a building to contain a certain amount of accommodation.
- 493. The accommodation required was specified? Yes.
- 494. Do you recollect what it was? I have left the instructions I received at home. I drew a number of sketches, one of which was approved.
- 495. What were the data furnished to you upon which you were required to prepare a plan? I had a copy of the minute furnished by the Senate. It is in the Senate's book.
- 496. Did any correspondence take place between you and any of the members of the Senate, or the Senate collectively, upon the subject? Only between Mr. Kennedy, as Registrar, and myself.
- 497. You cannot recollect what accommodation you were to provide for? I cannot remember the words of my instruction, but I did what I was instructed to do, and the result of my doing is one of the plans.
- 498. You furnished several plans? Yes.
- 499. The plan upon which the building has been erected—did that provide a larger or lesser amount of accommodation than the other plans? The plan has not provided for a larger number of apartments; but for higher and more spacious, and arranged on a different plan.
- 500. Was the least or the most expensive plan chosen? By far the most expensive. I cannot find the ground plan of the original design, but I have the elevation. (*The witness produced the same.*)
- 501. The other provided the same amount of accommodation as this? Yes; nearly the same number of apartments, but differing in size.
- 502. Did the plan you speak of meet with any approval on the part of the Senate? It was laid before the Senate, and was generally approved; but it was thought not to be sufficiently extensive and commanding, and I was desired to draw it afresh—to make a longer front, and a larger building.
- 503. It was not sufficiently commanding in appearance? Yes.
- 504. Have you any recollection at all of the estimated cost of the building on the original plan? I did not make a detailed estimate of that, for as soon as I had furnished it, and it had been laid before the Senate, I received instructions to go on with the more extended plan.
- 505. That (*the original plan*) was approved of? That was approved of generally. I understood that that kind of building would do, but that it was not sufficiently extensive.
- 506. Can you give any idea at all of the difference of the estimated cost of the two buildings? The original building, I estimated roughly, might be done for £70,000. Of the larger one I made a detailed estimate.
- 507. What is the detailed estimate? (*The witness produced the same, from which it appeared that the total estimated cost was £148,720 14s. 6d.*)
- 508. Your estimate of the first building was that it would be completed for £70,000, which appeared to be available for the purpose? Yes, I bore that in mind, and was working out on that supposition.
- 509. That was partly approved by the Senate? Yes, as the right kind of thing, but not sufficiently extensive. The rooms in the present building are not many more than in the first, but they are altogether larger, the walls are thicker, and in all respects more expensive.
- 510. Then this building, involving an expenditure of nearly £150,000, was approved of by the Senate in preference to the plan which, to the best of your judgement, would not have involved an expenditure of much more than half the amount? Yes.
- 511. Does this plan relate (*referring to a plan produced*) to the University buildings as they stand at the present moment, or to any extension? To the extensions, to the whole plan. That is the whole plan which was finally approved, and upon that I made the estimate. One wing has never been carried out; part of another wing, and the cloisters, have never been carried out.
- 512. What, up to the present time, has the building already put up cost? I can only say what

E.T. Blackett,
Esq.
27 Sept., 1859.

- E.T. Blackett, Esq.
27 Sept., 1859.
- what I have expended upon it; besides that some money has been sent to England for the purchase of slates. I have spent £66,348.
513. Has that sum been actually spent? Yes.
514. It appears from our examination the other day that a large portion of the building is yet unfinished? Yes, the other wing has never been begun.
515. I refer to parts that have been commenced? The part of it upon which the masons are at work has the whole of the work to be done, excepting that portion of the masons' work already done.
516. Notwithstanding £65,000 has been spent, exclusive of the cost for slates? Yes.
517. Will you shew the ground plan of the building as it really is? (*The witness produced a ground plan.*) Will you specify the parts unfinished? From the north side of the tower to the north side of the laboratory is all unfinished, extending in length 160 feet.
518. That is the main front? Yes.
519. What remains to be done in that portion? The whole of the carpenters, slaters, plumbers, glaziers, and some part of the stonework.
520. Is there much of the stonework? Not a great deal; part of the tower remains unfinished.
521. Have you formed any estimate at all of what the completion of that part of the building would cost? (*See Appendix A.*)
522. The portion of the building on the north side which is partly completed, or which wants little to complete it, will you say what is required to be done there? A variety of small matters—one or two doors have no architraves, the ceiling of the ante-room. (*See Appendix B.*) The staircase is not finished, but contracts are taken for that.
523. What is the contract? £200.
524. That is not paid? No, part of it.
525. The plaster is not completed? No, a small portion of the plaster is not finished; that is a comparatively small matter.
526. In the directions you received from the Senate of the University at first, what was the style of architecture recommended to you, or was it left open to yourself? It was talked of, and I proposed a similar style to that I have adopted.
527. What style do you call that? The style of Henry VII. I do not know any particular name for it; it is the style of the larger portion of the buildings at Cambridge and Oxford.
528. It is not then any pure style of architecture? It is not a style to which I can give a particular name; in architects' text books it is called "Perpendicular English."
529. In the instructions of the Senate were you directed to adopt the elaborate decoration of the building? No particular instructions were given in writing, except as to the number of apartments, but I produced a great variety of sketches.
530. And this was the most expensive of all? By far.
531. In the plan which you first produced was there the same amount of architectural decoration proposed as in this? No; the first plan was for brick, with stone windows and doors.
532. What increase in the expense of the building has been made by all the ornamental parts—the stone carving? Without picking out the items I could not say—I never made a detailed estimate of them at first.
533. Was there any enlarged plan exhibiting the features emblazoned about the building? No; the only estimate I made was that contained in these papers and plans. There were several little alterations made in the building—for instance, there is a bay-window that was not in the plan.
534. The decorations in the Great Hall, I understand, are met by private contributions? A great many.
535. Not all? Not those that were part of the building; the strings were worked as the building went on.
536. The ornamental supporters of the stone arches? They were paid for by private subscription.
537. What may be the estimated cost of carving these? £105.
538. How many were there? Twelve—they were estimated at £8 each, exclusive of cost of scaffolding.
539. Do you suppose the stone carving on the outside of the building is equally expensive with those parts of the carved work in the Great Hall? Not equally expensive with those parts of the carved work in the Great Hall, but equally expensive with the other.
540. What are the figures that hold flags? They are lions and unicorns.
541. Are they contracted for separately, or included in the general stonework? Separately.
542. Can you state what the cost of each has been? A great many of those figures were done by day labor.
543. What might have been the expense of each? I could give an estimate of the contracts taken since. (*See Appendix C.*)
544. Was the taste of the Senate consulted in the selection of these figures? No; they were carried out according to the ordinary style of these things in similar buildings at Home.
545. Have you heard it alleged, as one of the great objects in view in the expenditure of this large sum of money in the erection of this building, that it was to cultivate the taste of the colonial youth? Yes.
546. How do you think the peculiar style of ornament in this building tends to promote that object? It has been found to do so elsewhere.
547. I refer to these figures of griffins and other monsters? If you take, abstractedly, the profile of any one of these figures you cannot, of course, say how that particular figure will advance

advance the taste of the age, but still it has been found that this style if not ornamented with such figures becomes flat and insipid.

548. Were you the architect of St. Paul's College? Yes; that is a plain, simple, building.

E.T. Blackett,
Esq.
27 Sept., 1869.

549. Still it is a very beautiful building? I am glad to hear you say so; but all its beauty depends upon its peculiar shape.

550. What did it cost? Some £25,000 or £26,000.

551. *By Mr. Cape:* What was the usual mode of your receiving instructions with reference to the building—was it by written communication, or verbally from the Registrar? All written communications were received from the Registrar, but I attended the Senate when these matters were discussed, and gathered from what was said what was the intention; but I received no written instructions on those occasions.

552. Would it have been possible to have completed the ornamental parts of the building at a later period? It would, some of it; in fact, some of it is left still, but it was found that from the erection of scaffolding and placing of ladders it would take twice as long to do if it were left. For instance, in the case of the high figures the workmen could not have got up to them.

553. In the report contained in the University Calendar for 1856, page 158, there is this passage—"The contract entered into, £16,550"—are we to understand that that was the cost of erecting that portion of the building? I did not draw up this report; I do not know how its framers have got at that fact at all. The first contract was for carrying up this hall to the string course, and then there was a second contract, and several afterwards.

554. The amount differs so widely from the cost as stated by yourself, that there seems to have been a great error? I presume the amount must have been taken from my own figures, but that is only for carrying up half the height of the building. The whole wall is forty-four feet high, the first contract is for only twenty-one feet.

555. *By Dr. Lang:* What was the extent of accommodation in the way of classrooms that the Senate required you to provide for in the original plan of the University? I incorporated in this plan all the Senate spoke of.

556. What amount of accommodation did the Senate estimate as necessary in the first instance? That I do not know, the whole plan was approved of and carried on thinking that the present front would be sufficient for all immediate purposes.

557. Was any estimate made by the Senate of the number of students for whose accommodation the different classrooms were required? I got no information upon that subject. The first plan I drew had the lecturerooms much smaller than these; they were objected to as not large enough, and I, of course, enlarged them.

558. Are they all of the same size? No; there are four smaller and four larger ones.

559. What number of students were they calculated to accommodate? I cannot just now call to mind; they were all drawn with desks in the first plans. I had a meeting with some of the Professors to ascertain how many students could be seated, and spaced them out accordingly.

560. Was there no provision made by the Senate in their estimate for dwellings for the Professors? No, only for the Registrar. It was expressly agreed that the only persons who should live on the premises were the Registrar and the porter.

561. *By Mr. Plunkett:* Do you know that there was a building committee appointed as a sub-committee of the Senate to regulate the details? Yes.

562. Who were the members of that committee? They have changed a good deal. The first I recollect was composed of the Provost, the Vice-Provost, Mr. Merewether, Bishop Davis (but the latter attended only once or twice before he died), and the Rev. Mr. Boyce, and Dr. Douglass.

563. Can you state what number of students the classrooms are calculated to contain as they now stand? Some of the Professors, I know, wanted more room than others; for instance, Professor Pell said his students had to write all the time, and that they took more space than some others.

564. What is the difference in size between the classrooms in the first plans, and the plan ultimately adopted? In proportion, the one was rather more than half as large again as the other.

565. Can you give any idea how many students could be accommodated in each classroom according to the first plan? I think some rooms were estimated to hold a hundred, or something over a hundred. In my original plans I have drawn the seats, supposing the students to be reasonably close to each other. I understood them to want larger space.

566. Do you refer to a conference with the building committee or with the Professors? I had conferences both with the building committee, and with the Professors.

567. Then it was after deliberation that the larger space was determined upon? Yes.

568. Have you any plan for the Professors' houses? Within the last month I have been drawing a variety of sketches for them; some as isolated buildings, and others as attached to the quadrangle itself.

569. Did you get any directions from, or have you communicated with, the Senate with reference to the Professors' buildings? I have not had any official communication; the matter was talked about, and I prepared plans.

570. Have you any of these plans with you? I have all the papers which have been laid before the Senate. (*The witness produced the same.*)

571. With reference to the figures on the buildings, is there greater facility in working the figures here, by reason of the stone being softer, than in the Mother Country? It is much the same kind of material. Some stone is finer, and some coarser than this, but there is very little difference.

H.T. Blackett, Esq. 572. Is not the stone softer and more easily worked when newly got out of the quarry?

Not the stone we have there. We had the best stone we could get.

573. You are the architect of St. Philip's Church? Yes.

27 Sept., 1859. 574. There are some figures on the tower of that Church? Yes, there always are upon that style; you could not form it without.

575. *By Mr. Cape*: Were your professional services paid for by a salary or by commission? By commission.

576. At the usual rate? At the usual rate.

577. *By the Chairman*: What is that? Five per cent. on the expenditure? Yes.

578. What is the general character of the stone used in the building? It is all sandstone, the best of the Pymont stone; of course it is not all out of one quarry. Some is better than other.

579. Does it appear to be at all friable, or does it bear exposure to the weather? There are one or two stones which shew the effects of the weather, but they are inside the Great Hall fortunately, and now that the windows are in they are no further exposed.

580. *By Mr. Plunkett*: Do you think stone is more permanent than brick? I do not know that; really good brick appears to me to be as lasting as stone.

581. *By Mr. Cape*: Brick made in this Colony? Yes, really good brick properly burned.

582. Is there much difference between the expense of brick and of stone? There is some, but not so much as at first sight would appear, because all the ornamental work must be of stone.

583. How far have you to bring the stone? From Pymont, from a mile to a mile and a half distant; it does not all come from one part of Pymont.

584. *By Mr. Black*: When the sum you have estimated shall have been expended, there will be four classrooms and the laboratory? Yes.

585. *By the Chairman*: Is there much difference in the expense of making these figures in this Colony, and that at which they might have been made at Home? From all the experience I have had of things imported from England I believe we could do them cheaper here, although the wages paid are higher here, we have no expense of freight or damage; but in England the work would have been done in an entirely different material.

586. You think they have been made cheaper here than they would have been at Home? Yes; I believe the building could not have been put up in England cheaper than it has here. If measured according to the London Price Book, it would amount to more than has been paid.

587. *By Mr. Cape*: How do you reconcile that with the higher rate of wages here? By the greater cost of stone in London.

588. *By Mr. Plunkett*: Was there anything paid for the stone at the quarry? The Senate had nothing to do with that; the party who took the contract had also to provide the stone.

589. Was the stone taken from a Government quarry? No; it is all private property in Pymont.

590. *By the Chairman*: Then the contractor had to pay to get the stone? Yes.

591. Could bricks have been made on the spot? All the clay there could have been made into bricks on the spot.

592. Do you consider that the use of stone has made a material difference in the expense of building? Yes, it has made a difference, of course.

593. And, in your opinion, good brick is as durable? I believe so. I have used bricks, and bonded them with stone at the English and Scottish Chartered Bank, and find it answer well.

594. *By Dr. Lang*: What is the proportion of difference? I cannot say without working it out. The saving is chiefly in the internal wall, not in the decorative part.

595. *By Mr. Black*: I suppose we have not had much opportunity of testing the durability of brick as compared with that of Pymont stone? Yes; some of the buildings in Sydney have been erected thirty years. St. James' Church, for instance, is built of brick, and there are only two or three bricks decayed; of course, it is a matter we shall know more of a hundred years hence than now.

596. *By Mr. Plunkett*: The stone of which Government House has been built has not proved very durable? That was all dug out from the site upon which Government House stands, and the stone there has been subjected to the action of salt water.

597. The character of the stone used in the building of the University is different from that? Yes.

598. There is no likelihood of its chipping? I hope not. If you examine the quarries at Pymont, you will find among all the stone that there are parts which are rotten, but they are at once apparent, and are easily avoided.

599. *By Mr. Cape*: Have you examined the old Government buildings—the old Law Offices—what is the state of them? They are built of all sorts of stone, chiefly from Darling Harbour stone, at the time that part was being excavated for the purpose of forming streets; that splits into laminæ, which is not the case with the best of the Pymont stone.

600. Did you examine the stone of which old St. Philip's Church was built; I suppose that was also obtained from Darling Harbour? It seemed to have been obtained from all parts; part of it was very durable. In spite of all precautions failures are made sometimes. The carvings in the Houses of Parliament, it is said, are dropping to pieces, in consequence of the nature of the stone.

601. *By the Chairman*: Is not that of built of granite? No; of magnesian limestone. I hear that they talk of having it painted over with a preparation of tar.

602. *By Mr. Plunkett*: Is it not considered prudent to paint over all the stones of this Colony to prevent the action of the weather affecting them? I think so. I would paint every building. The oil sinks into the outside surface of the stone, and makes it very hard.

603. Is it very expensive? It drinks up a great deal of oil.
 604. Is it necessary to have any coloring matter with the oil? It is necessary to have white lead with the oil, otherwise the oil would stain the stone.

E.T. Blckett,
 Esq.
 27 Sept., 1859.

APPENDIX A.

Work in tower, and adjoining compartment, not yet contracted for	... £4,750
Balance of contracts already taken 2,720

APPENDIX B.

Work to be done in other parts of the building, not contracted for	... 858
Balance of contracts already taken 600

APPENDIX C.

40 figures completed, at £3	} 216
32 do. to complete, at do.	
3 large animals, at £10	} 40
1 do. to complete, at do.	

These estimates do not include the cost of floor of the Hall, which is at present undecided; nor do they include the cost of drains, roads, or planting, or making up the grounds.

1 October, 1859.

Maurice Birkbeck Pell, Esq., M.A., called in and examined:—

605. *By the Chairman*: You are one of the Professors of the Sydney University? I am. M. B. Pell,
 606. You came out here in 1851, I believe? In 1852. Esq., M.A.
 607. Have you since then been attached to the University? I have.
 608. In what branch of knowledge do you instruct the students? I am Professor of Mathematics and Natural Philosophy. 27 Sept., 1859.
 609. How many students were there in the University when you first came out? None when I first came; during the first year I think there were twenty-four.
 610. How many are there now? I think about twenty or twenty-four in actual attendance upon lectures.
 611. How many have graduated since you have been there? I really cannot remember; I should think about twenty or thirty. It could easily be ascertained from the records.
 612. The attendance then does not appear to have increased? No.
 613. To what do you attribute that? There are several causes. I should attribute it in some degree to the distance of the present building from the centre of the city; for the first few years after I arrived the number of pupils did increase and it has since diminished.
 614. Do you mean since the present building was opened? Yes; since the present University building has been opened the number has diminished.
 615. You think then that the situation is not convenient? Yes.
 616. Have you ever heard any complaints upon the subject? I do not call to mind any definite complaint.
 617. Did any of the students who were attending the University when you met in the building in Hyde Park discontinue to attend when you removed to your present building? I do not remember any instance of a pupil having quitted on account of the removal.
 618. Why then do you suppose that the change in the site has affected the attendance? Rather upon *a priori* grounds than from actual experience of particular cases.
 619. What other causes have tended to produce that effect? Another cause, I think, is the general tone of feeling in the Colony. I think there is not that sympathy with the studies pursued at the University that would encourage students to enter; I believe this to be the principal cause.
 620. To what do you think that is to be attributed? Merely to the general tone of feeling in the Colony.
 621. Do you think there really is more indifference to knowledge, generally as such, here than elsewhere? Yes.
 622. Does not this circumstance materially influence the parents of the youth of the Colony, namely,—that all the various walks of life are open at so early a period—the business of life which would lead on to fortune—and therefore, they prefer that their sons should embark in the active pursuits of life? Yes; but I have observed also that the same feeling exists among those with whom it is a matter of comparative indifference whether their sons should succeed, in a pecuniary point of view.
 623. Do you think there are many instances in which people are so very wealthy here as to make it a matter of indifference whether their sons succeed in the ordinary business of life? I do not mean that; but there appears to me to be the same indifference to the advantages of a liberal education among those whose circumstances are so good that it is not necessary for them to push their sons early into the pursuits of business.
 624. Do you not think that the necessary preparation which the youth of the colony ought to

M. B. Pell,
Esq., M.A.
27 Sept., 1859.

to have received, in order to fit them for the University, has not taken place here? There has, no doubt, been a deficiency in that respect.

625. The ordinary course of instruction which the youth of the country ought to have received, to fit them for this higher branches of education, has not been received? Yes.

626. For instance, if Grammar Schools had been more generally established, and the University had followed instead of preceded them, the success of the experiment would have been greater in all probability? I do not think that; I think the course that has been pursued the best. I think good Grammar Schools likely to follow, and indeed they have followed the establishment of the University. I do not think Grammar Schools would have fully succeeded, unless there had been an University as a standard.

627. Do you conclude then that the University has been at all a failure from the fact that you have adverted to, or that its establishment has been premature? I think the University has done great good in improving the character of the schools generally; I believe the character of the schools is far superior to what it was some years ago, and that that is in a great measure owing to the establishment of the University.

628. Do you not think that improvements might have been brought about in these schools by other causes—by the establishment of National Schools, also by the establishment of the better class of Denominational Schools, and especially of the Sydney Grammar School? I do not think the National and Denominational Schools have affected the matter; but I do not think the Sydney Grammar School would have been established if the University had not preceded it. It was the University that shewed the want of Grammar Schools.

629. To all appearances the Sydney University, you say, has been to some extent a failure up to the present time? So far as regards the number of students.

630. Have you any expectation of its immediate improvement in that respect? I do not see any reason for supposing any immediate improvement in that respect, so long as the causes which at present prevent students from entering exist.

631. Do you suppose these causes are confined to the parents of the children alone, or what are the other causes? I believe the clergy exercise an influence which has been prejudicial to the Institution.

632. Notwithstanding the establishment of Affiliated Colleges? Notwithstanding the establishment of Affiliated Colleges.

633. Upon what grounds could the clergy still continue to oppose the University? Their notion is, I suppose, that secular and religious instruction should not be in any degree separated.

634. Is it not one of the improvements now suggested in England, that such a separation should be made? It is a question which has been mooted in England many years.

635. There is now in several Universities in England no longer any religious test? I am aware of that.

636. Is there any other cause which has led to this result? I am not aware of any other important cause.

637. Can you offer any suggestions to improve the state of the University? That is a very general question; I think many improvements might be made in the University, but I cannot at this moment make any suggestion that would probably lead to an immediate increase of number.

638. Do you think there is anything in the management of the University which prevents parents sending their children there? Nothing of any importance.

639. The main point is that people are unwilling to send their sons there? I would not say "unwilling," but I think indifference, combined with the influence of the clergy, have been the principal causes; of course there have been some minor ones, but not, I imagine, such as to produce any material effect.

640. The building has been constructed on a very large scale? Yes.

641. Has that building been entered upon since you came to the Colony? Yes.

642. Did the Professors give any recommendation at all with regard to it? They gave many recommendations with regard to it.

643. With regard to the size, do you mean, or to the plan or accommodation required? The plans were seen by the Professors, and they offered opinions upon them.

644. Can you remember at all what were the suggestions offered by the Professors—whether they were in writing, or verbal? A great many verbal opinions and suggestions were expressed; and there was, I distinctly remember, one written opinion expressed by the Professors—there may have been more.

645. Do you remember the purport of it? It was to the effect that, in the opinion of the Professors, it would be more expedient that the useful parts of the building—those immediately required—should be completed first.

646. Was that opinion acted on? No.

647. What did you consider to be the most useful parts of the building? The lecture-rooms, and necessary accommodations for public purposes.

648. They are not completed? No.

649. What was the part of the building first completed? The Hall and the adjoining parts of the building were first completed.

650. Do you think a Hall of that extent was necessary? Not necessary, certainly.

651. Do you know how many students there are now in St. Paul's College? I believe four.

652. These are included in the number of between twenty and four-and-twenty you have mentioned? Yes.

653. Is not the attendance at St. Paul's College very small? Yes. I must remark that there are two classes of students; there are some who actually reside in the College, and some who merely avail themselves of the instructions of the Warden. I believe the greatest number who have resided there at one time is eight.

654. To what do you attribute that small attendance—the influence of the clergy, at all events, can scarcely be brought to bear adversely upon that? I think it is, in some degree.
655. Do you mean the clergy of the Church of England? I do not think the College is in high favor at head quarters in the Church of England.
656. To what do you attribute that disfavor? The connection of the College with the University is not approved of, I suppose.
657. You think that is the cause of the smallness of the number of young men attending St. Paul's College? I would not say the principal cause, but one which, in my opinion, has operated.
658. With regard to the charges—do you think them too high? No.
659. Do you know what they are? Something like £100 a-year, I believe. I am not acquainted with the details.
660. What is the charge in the University? The total expense is £2 for matriculation—that is, at entrance, and £18 for fees.
661. Do you think, then, that with the £100 a-year the expenses at St. Paul's College are too high? I should imagine not.
662. £100 a-year is a large sum for a man to pay who has three or four sons to educate;—admitting that the expense at St. Paul's College is high, does that objection apply in some degree to the University? No.
663. Did you find the attendance when you were in the College buildings better than it is now at the present University? If I remember aright, we had more students during the whole time during which we were in the old building than we have at the present moment in the new one.
664. Was the attendance more regular? Rather more regular; there is no very marked difference in that respect.
665. Do you know anything of Moore's College, at Liverpool? Only from hearsay.
666. It is a Church of England College? Yes.
667. Not connected with your University? No.
668. Have you reason to believe that it is more favored by the Church of England authorities than St. Paul's College? I have no knowledge on the subject; I have merely heard it said that it is the case.
669. *By Mr. Plunkett*: Have any students come from it to the University? No. I believe the students at that College are merely candidates for ordination. When they leave the College they are ordained.
670. *By Mr. Cape*: I see there is an Assistant Professor of Classics—have you an Assistant Professor of Mathematics? No.
671. Do you find that you are able to carry out the University plan of mixed mathematics without assistance? Yes.
672. Sufficiently for the Colony? Yes, for the present.
673. The examination papers relate chiefly to pure mathematics? Chiefly.
674. Have you every facility for prosecuting the study of mixed mathematics? Every thing I wish.
675. *By the Chairman*: Do you think that the objection which appears to exist on the part of parents, in the way of sending youths to the University, proceeds from the fact that the great branches of knowledge in which the students are instructed have no very immediate bearing upon the business of life they are likely to pursue in a new Colony? I think it arises from the fact that the parents do not appreciate the fact that these studies have a great bearing upon all the pursuits of life.
676. In what way? You put the question in rather too general a form to be answered immediately; but I think the course of study as it is at present in the University is the best for the preparation of young men for the duties of life.
677. You mean the moral duties of life? Yes, and other duties.
678. For instance, mercantile pursuits or squatting? A very limited amount of actual knowledge only is necessary for those pursuits; but I think the training young men go through in the course of instruction prescribed in the University, would much improve their capacity for any kind of business, and their usefulness as members of society.
679. The breeding of sheep and cattle is a thing very simple to the meanest capacity? I think to no class of men is a good education of greater advantage than to the squatter.
680. I suppose you are aware of the improvements made of late days in the Universities of England? I am not very perfectly acquainted with the changes made.
681. Branches of knowledge are taught there which are not taught here, connected with special or professional education, for instance—engineering? From all I know, these branches form a very small part of an University course.
682. Possibly that may result from the fact that most of the students of the Universities at Home are preparing for the learned professions? A large proportion of them.
683. Is that the case, so far as you can judge, here? A very considerable proportion, the number itself is small, but a very considerable proportion are studying for the learned professions.
684. I think you say between twenty and thirty have graduated,—of these, how many do you know have embraced the learned professions? I do not know. I know several have studied or are studying law.
685. *By Mr. Cape*: Some have gone to English Universities—Mr. Oliver, I believe, and Mr. William Salting? Yes.
686. *By the Chairman*: Do you know any cases in which young men going from this Colony have distinguished themselves at the Universities at Home? I am told Mr. Oliver and Mr. Salting both distinguished themselves.

M. B. Pell,
Esq., M.A.
27 Sept., 1859.

- M. B. Pell, Esq., M.A. 687. Gained some honors? Yes.
688. At Oxford or Cambridge? At Oxford.
689. Have any young men come to the University from the neighboring Colonies? Very few, there have been only one or two cases, one from Melbourne, and another, if I remember rightly, from Hobartton.
690. *By Mr. Plunkett*: Was it before the Melbourne University was established this gentleman came from Melbourne? It was, it was when we were in the old building.
691. *By Dr. Lang*: Your department I think includes experimental physics and natural philosophy? Not experimental physics, it includes natural philosophy—the application of mathematics to physical science.
692. Your department would not afford a series of popular lectures for the youth of the Colony generally who might not be students? Lectures could be formed upon the subjects upon which I lecture of a popular kind, on mechanics, hydrostatics, and astronomy. All those subjects of course are capable of being treated popularly.
693. I mention the subject from the circumstance that at the University of St. Andrew's, Glasgow, where I studied, the Professors gave popular lectures on Tuesday and Thursday evenings; these were attended, besides the regular students of the class, by a number of young men from the City, who were considered as private students, who paid a different rate of fee from the others—do you think if the University had been more accessible such a system could have been instituted with advantage to the youth of this City? I think it is very doubtful whether it would have been successful. A short time after the first opening of the University I gave evening lectures for the advantage of those who were not able to attend during the day, but they were not successful. But you must understand that they were not popular lectures; they were of the same character as those we usually give.
694. *By Mr. Plunkett*: Do you think if those lectures had been more popular they would have been more successful? They might have been more successful in attracting a number of students, but not, if you mean by successful, useful.
695. *By Dr. Wilson*: Might they have not attracted individuals to pursue studies, which otherwise they would not? I think in the present day if a person has a peculiar taste for a certain study he will find abundant opportunities of attending popular lectures.
696. *By Mr. Cape*: I believe the general practice at Home is that University Professors only deliver popular lectures at popular Institutions, such as Mechanics' Schools of Arts and Working Men's Colleges? Yes.
697. *By Dr. Lang*: You were mentioning that the distance of the University from the centre of the City had operated unfavorably? I said I believed so, but that I was not aware of any specific case.
698. Would not that have been the case to a great extent in regard to the class of students I have alluded to—young men in business? It would operate in those cases still more no doubt.
699. *By the Chairman*: Do you think it was desirable to have a building on such a very large scale? I do not think it was, but the possession of it is no doubt an advantage. It was certainly not necessary.
700. The Professors were not anxious that it should be erected on so large a scale? I can answer for myself—I was strongly opposed to its being on so large a scale.
701. The Professors sought for the requisite accommodation to enable them to go on with their lectures and instructions? The memorial which was drawn up by the Professors upon the subject related to what part should be first completed; it was after the general plan of the building had been adopted.
702. Can you furnish a copy of that memorial? I cannot. I believe that it is on the minutes.
703. Turning your attention to the general subject of education in the Colony—which I suppose has attracted your attention—do you think anything like the same amount of indifference is evinced to the instruction of the youth of the Colony as appears to exist in regard to the University education? As respects common school education I think not; at the same time, parents remove their sons from school, generally speaking, at an earlier age than people of the same class at Home would do.
704. What is the cause of that? A want of appreciation, I suppose, of the advantages of education.
705. May it not proceed from the opportunities offered of advancing boys in business at an early age? I suppose they think that of more importance than the obtainment of a more complete education.
706. *By Dr. Lang*: Do you think it arises in any degree from the greater precocity of the youth of the Colony as compared with that of those of the Mother Country? It may possibly do so.
707. *By the Chairman*: Have you any reason to apprehend there is anything at all in the management of the University itself that leads to this result? I think the causes I have already named are the great causes—I do not think there is anything in the management of the University that could correct it in any important degree.
708. It has been alleged here in evidence that a building of such a style as the University is calculated to elevate the taste of the youth of the Colony—do you think that is the case? Yes.
709. And, in consequence, you think it desirable such a building should be erected? I think it highly desirable. I do not know whether you quite understand me—I did not certainly, at the commencement, approve of entertaining a plan so extensive, but I certainly think a building of that kind is of enormous advantage; the only question is—whether the Colony can afford it, or whether it is the intention of the Government and the Legislature that it should be carried out on so large a scale.

710. Have you any knowledge of any cases in which parents have sent their sons to the Universities at Home rather than to the University at Sydney? There have been cases—
Mr. Wentworth sent his son to Cambridge. M. B. PeH,
Esq., M.A.
27 Sept., 1859.
711. *By Mr. Arnold*: That was after he had been at the University here? He was for a very short time at the University.
712. *By Mr. Plunkett*: Are you aware that that was owing to domestic arrangements, as he was going Home himself? Yes.
713. *By Mr. Arnold*: I presume, as you think the accessory circumstances of a magnificent building so very desirable, and to some extent necessary in creating a refined taste, that we could never hope to possess the same advantages that we could gain by sending Home our sons to the English Universities? Certainly not; there are greater advantages for young men in the English Universities than we can hope to have here for many years.
714. Why do you think we can never hope to hold out the same advantages to youths in the University here that they would obtain at Home? I would not say never; but there are great disadvantages in sending young men so far from home.
715. I suppose you consider the inferior competition one of the disadvantages here? Yes, but it will always be considered a very great disadvantage to send young men so very far from home, and will involve much greater expense.
716. Do you think the advantages to be derived from the University, taking into consideration the experience we have now had of the number who avail themselves of it, at all commensurate with the expense incurred? The value to the community of even a few highly educated persons, can, I think, scarcely be over-estimated.
717. *By Mr. Cape*: You consider the University as doing all it can towards the extension of knowledge in practical mathematics;—supposing we had a class for Engineers? I do not think there is any necessity for that; I think it would be a complete failure. If we had a class of Engineers, and we should turn out two a-year, it would be a greater supply than the Colony could require.
718. We find these Institutions dotted over England and affording a supply for the construction of railways and other public works, and we are not keeping pace with these requirements in practical education? The advantage of these Institutions have to be proved. I do not believe in them. Every preliminary knowledge for a civil engineer can be acquired at school and University; the practical part, I believe, can only be acquired by practice in a surveyor's or civil engineer's office.
719. For draining the alluvial lands and such works as have engaged the attention of the French engineers, have we students who could take part in calculations connected with such engineering operations? Yes.
720. And embrace all those questions that arise with reference to weights and measures, and which are referred by the English Government to Cambridge? I would not say all.
721. *By Dr. Lang*: Is it not the fact that the College of Engineers, even at London, has failed—been given up? I do not know; I should think it naturally would.
722. *By Dr. Wilson*: You stated in a previous part of your examination that one of the causes of the small number of students was the distance of the University from Sydney? Yes.
723. One would infer from that that the greater part of the students are young men living in Sydney? Yes.
724. I suppose there are not many young men from the interior? Not a great many.
725. The proportion is comparatively small? Yes.
726. Does any proportion of the fees go to the Professors? Yes.
727. What proportion? Three-fourths.
728. *By Mr. Plunkett*: As to the size of the classrooms, do you think it desirable, in this hot climate, that the classrooms should be airy and spacious, looking to the health of the students? Highly desirable, I think.
729. You belong to Cambridge? Yes.
730. What is the size of the classrooms there, generally speaking? The classrooms are not large; but the circumstances of the two places are so different that we can hardly compare them.
731. Do you think the classrooms here are too large? We have not any classrooms at all.
732. The rooms you use? The rooms we use are much larger than we require at present.
733. What number will it contain commodiously? I can hardly judge; I should think it would contain a hundred.
734. *By Mr. Cape*: You are using the lecturerooms as classrooms? Not the lecturerooms; the room I am now using is intended for the Museum of Classical Antiquities; I believe it is considerably larger than those intended for classrooms.
735. Is the University without classrooms at this time? None of the rooms intended for classrooms are completed.
736. *By Mr. Plunkett*: By looking at the plan, you will know the size the intended classrooms will be when finished (*The witness referred to the plan*)? They are inconveniently large, but I think they are larger than will be required for a great many years.
737. How many would they contain commodiously? I can hardly form an opinion.
738. Have you made no calculation? We did make some calculation, but it is a good many years since. I see, upon reference to the plan, that the room I now use is not larger, but about the same size as the larger rooms intended for lecturerooms.
739. When you gave the evening lectures you have spoken of, and you had a pretty full attendance, were the rooms you occupied in the old building of the Sydney Grammar School sufficiently large? Quite; we never had a very large attendance.
740. Was the room there larger than the intended classrooms in the University? Not nearly so large.

M. B. Pell,
Esq., M.A.
27 Sept., 1859.

741. *By Dr. Lang*: Would there have been sufficient accommodation in the old building for the extent of the University, as to students and Professors, at present? There would have been lecturerooms to accommodate the number of students we had, but other apartments were required which we had not there.
742. *By Mr. Plunkett*: What were these? There was no common room for the young men—no place where they could leave their books or wash their hands; there was no library, and the books were necessarily exposed in the hall.
743. *By Dr. Lang*: Would it not have been practicable to have erected a temporary building that would have served all these purposes for a considerable number of years, till the number of students in the University had increased to a hundred or a hundred and fifty? It would have been practicable, no doubt.
744. And it would have served all the purposes of the Professors, in the communication of instruction to the youth of the Institution? We could have lectured quite as well in rooms of that kind, no doubt, as we can in the rooms we use at present.
745. *By Mr. Black*: It has been stated in evidence this morning, that when that part of the building which is begun is completed, an expense of upwards of £70,000 will have been incurred—do you think, under all the circumstances connected with the University, there is fair ground of evidence that the country will reap an adequate advantage from the amount expended? I think the advantages derived from the University generally cannot be estimated in money.
746. *By Mr. Plunkett*: Looking to the fact that the establishment of the Grammar School was depending upon the removal, do you think upon the whole it was wise to remove to the present building, and to relinquish the old Sydney College? I think it was highly desirable that the change should have been made when it was—that had nothing whatever to do with the original question as to the site for the University buildings.
747. Did the removal take place with the approbation of the Professors? Quite,—that was at a time, however, you will remember, when the ultimate removal was inevitable; it was then merely a question of time.
748. Is there not great facility in going from any part of the City to the University—is there not ample carriage accommodation? Yes.
749. The omnibus stand is within a very short distance of the University? Yes.
750. *By Dr. Wilson*: Now that St. Paul's College has been built at a cost of some £25,000 or £30,000, do you not think something of that style of building would have been amply sufficient for the wants of the Colony for many years to come? I think it would.
751. *By Mr. Arnold*: In reference to a former answer of yours, can you tell me any advantage the University possesses over a private school for the production of great statesmen? I do not know the operation for the production of a great statesman.
752. Can you tell me any species of instruction which could make a great statesman of inapt materials? It would be difficult to do so.
753. I fancy it depends more upon the aptitude of the materials than upon the nature of the education? Yes.
754. Is not the great advantage of an University at Home this, that the most brilliant men from all the schools in the world are there brought together, and what educational advantages they have previously received are there perfected by the most eminent Professors in the world? No doubt.
755. And also the emulation produced by the meeting of students from different schools? Yes.
756. These are advantages you have not here? There is at the Sydney University the meeting of students from a great number of different schools.
757. But you have only twenty or thirty students? Yes.
758. So that there is nothing like the emulation excited there which would be felt at an English University? The competent would depend not merely upon the number.
759. *By Dr. Lang*: Do you not think it a greater advantage to the Colony to reap the benefits that are available from an imperfect Institution, rather than to wait for the time when we can have Institutions similar to those of Europe? Yes, if we waited for that time that time would never come.
760. *By Mr. Arnold*: Suppose you had a son of your own, of whom you had hopes, would you prefer sending him to the Sydney, or to an English University? I do not think, if I had a son of a suitable age for an University education, I would ever send him to Europe.
761. I mean to say, from a consideration merely of educational advantages? There is no question that the advantages to be obtained from a great English University are far superior to anything that can be expected here.
762. I suppose your great objection to an English University would be the want of restraint? Yes; the alienation from home, and the distance.
763. *By Dr. Lang*: Also to the climate? Yes.
764. *By Mr. Plunkett*: Do you know anything of the working of any of the American Universities? Very little.
765. I believe you are an American by birth? Yes.
766. *By Mr. Cape*: You were a Wrangler at Cambridge? I was.
767. *By the Chairman*: Do you know how many Fellows of St. Paul's College are on the Senate of the University? The Revd. Mr. Allwood, Sir Daniel Cooper, and Mr. James Macarthur.
768. Are any of the members of the Senate of St. John's College also members of the Senate of the University? Mr. Plunkett and Mr. Peter Faucett.
769. One fundamental principle on which the Sydney University was established was, that it should be strictly secular in its character? That it should afford instruction to all religious denominations equally.

M. B. Pell,
Esq., M.A.

27 Sept., 1859.

770. There was to be no religious test? No religious distinction.
771. These Colleges are all sectarian? Yes.
772. Do you not think the fact of the Fellows of these Affiliated Colleges being admissible to the Senate of the University, may not, very probably, at some period, endanger that fundamental principle? It might, I think, be desirable that Fellows of Colleges should not be on the Senate of the University.
773. Is it on these grounds you think it desirable to exclude them? I would, on the general ground that the interests of the University, and of a particular, might, in certain cases, be antagonistic.
774. *By Dr. Lang*: Do you not think it desirable that the heads of each College should be members of the Senate? It might be, in case the Professors of the University were also on the Senate; but, unless the Professors of the University were on the Senate, I think it would be fatal to put the Wardens of the Colleges on the Senate.
775. Do you not think that the circumstance of the Head Warden or Principal, or whatever might be his particular title, being a member of the Senate, would constitute a sufficient representative for the College in the Senatorial body? Quite sufficient.
776. Do you think it desirable that the Professors of the University should be Members of the Senate? I think so.
777. *By Mr. Plunkett*: If you think it desirable there should be that connection between the Affiliated Colleges and the Senate, where the Heads are *ex officio* members of the Senate, do you not think it less objectionable to have lay fellows of those Colleges than clergymen on the Senate, looking to this fact, that the Affiliated Colleges may be likely to look with jealousy to the University as a secular Institution? I do not think you quite understood my answer to the question. I do not say that it would be highly desirable—rather the contrary—that these persons should be on the Senate, but I said the College would be sufficiently represented by having them on the Senate.
778. You have been asked about the names of the members of the Senate,—do you know that these gentlemen were members of the Senate before they were members of St. Paul's College? That was the case I know with respect to Mr. Macarthur, but whether it was with respect to Mr. Allwood and Sir Daniel Cooper I do not remember,—I am rather under the impression that Mr. Allwood was a Fellow of St. Paul's before he was a member of the Senate.
779. On the whole, you think it would be desirable not to have a member of the Senate eligible to be a member of one of the Affiliated Colleges? Any member of the Senate who accepted the Fellowship of a College should resign his seat; it should be a disqualification.
780. *By the Chairman*: Could you suggest any improvement at all in the mode whereby gentlemen are elected members of the Senate of the University? I should not be prepared to make any suggestion, unless the system were entirely altered.
781. What alteration would you suggest—it is provided by law, that when the graduates of the University amount to a hundred they shall elect; but, according to the progress the University is making, it may be fifty years before they will be in a position to do so—do you think it desirable the present system shall continue in the meantime? No, I do not. I think it desirable that a smaller number of graduates shall have the power of electing some of the members of the Senate of the University; there should also be official members.
782. You said all the Professors should be members? It might not be desirable that all the Professors who may hereafter be appointed should be members, but some of them should, and certainly those engaged in teaching subjects forming a necessary part of the course. I think it might, perhaps, be desirable that some of the members of the Government should be official members of the Senate.
783. That would involve a re-construction of the whole thing—would you recommend that the members of the Executive Government for the time being should be members of the Senate? I have not well considered that particular point; perhaps the Colonial Secretary and the Attorney General might be members.
784. With regard to the election, you would alter the Act so as to give the right of election to a smaller number of graduates? To a smaller number of graduates—Masters of Arts.
785. What number would you suggest—thirty? I would allow thirty to elect a certain small number, and I would increase the number as the number of Masters of Arts came up to a hundred.
786. How would you propose one or more of the Professors to be elected? I would have them official members; but no change could be made without an alteration of the Act.
787. The governing body of the University here is very differently constituted from the governing bodies of similar Institutions at Home. The governing bodies of Universities in the United Kingdom are men who have gone through the various grades of University life—men who have been Professors, or who possess high attainments or education, and that is not so here? We have in our governing body men of very high attainments.
788. It is not the rule here at all? It is not the rule that they should have gone through the course.
789. That is the condition in the Mother Country? It is the condition in the Mother Country that they shall be graduates. In many cases, however, the Professors who form a part or the whole of the governing body are selected from other Universities. Many of the Professors in Scotland are graduates of Oxford or Cambridge.
790. There is no such condition here? No.
791. There is no condition here as to the educational attainments of the individual? No.
792. Do you think it desirable that that should continue to be the case? I think it is a thing which might safely be left to the discretion of the electors themselves. I think there is not much danger of ignorant persons being elected.

- M. B. Pell,
Esq., M.A.
27 Sept., 1859.
793. *By Dr. Lang*: Do you think the election by the graduates would be unexceptionable even although they were so numerous as originally contemplated? I think the system as it now stands not altogether unobjectionable.
794. Do you not think there ought to be a different mode of appointment for different portions of the Senate? Yes, I think some should be elected, and some should be official members.
795. *By Mr. Cape*: Would you have the Judges Members of the Senate—you have spoken of high executive officers? The Judges generally have already as much as they can do.
796. *By the Chairman*: The District Courts will relieve them? In all cases they would be very proper persons.
797. *By Mr. Arnold*: Do you think the circumstance of a man being a Judge is a good guarantee that he is a man of high education? He is not likely to be a very ignorant person.
798. *By Dr. Lang*: All the patronage of the University is in the hands of the Senate? There are no appointments but those of the Professors, the Registrars, and servants.
799. *By Mr. Cape*: You have one Assistant Professor in Classics? Yes.
800. That is the only one you have? Yes, the reason of that appointment was that Dr. Woolley undertook, in addition to his own duties, the duties of Professor of Logic.
801. *By Dr. Lang*: Supposing Professors of the University were constituted members of the Senate *ex officio*, and that the graduates, whether the contemplated number or a smaller number, should elect certain other proportion, and that the remainder, perhaps one-third, should be elected by the Legislature—do you think that that would form the proper body? I do not think there would be any serious objection to that scheme, but should prefer that the members should be official members.
802. Have you seen Sir William Hamilton's recommendation as to the mode of disposing of the patronage of Universities, and of the Colleges generally? No.
803. *By Mr. Arnold*: Your opinion of the advantage of an University is, that it has a tendency to elevate and refine the mind—is it not in England the tendency of an University education to elevate the mind *above* the practical business of life, rather than to elevate it *for* the practical business of life? I think not.
804. Is not the ordinary business of life rather looked down upon with contempt by the English Universities? No.
805. *By Mr. Cape*: The aristocratic influence in the English Universities has a tendency that way? That has nothing to do with the education, the course of study I think would have rather a contrary effect. In answer to one of the questions, I stated that I considered the University in some degree was a failure, as far as regarded the number; but if we compare the number of students with the population, we shall find it as great a proportion as in some other countries, considerably greater than in the case of the new Irish Universities.
806. Have you any statistical figures? I have not made any exact calculation.
807. If you take the number of students in the Irish Colleges, the "Godless Colleges," as they are called, Oxford, Cambridge, and the other Universities, and compare the number of the students with the population that would be the result? I think the result would be, that the number would not be so small in proportion to the population as might be at first supposed.
808. *By Mr. Arnold*: If that is the case, that the proportion attending here is greater than it is at Home, and the great advantage to be derived from the Colleges is the great number attending, and the emulation thereby excited, does not that shew that we are unfit for an University at all? I would not say that the only advantage is in having a large number; if we never have a small number, we can never have a large one—we cannot expect at once to have all the advantages obtainable at Home in an old country.
809. *By Mr. Plunkett*: With reference to the Queen's Colleges in Ireland, are you not aware that for religious reasons there are objections to attending these Colleges? Yes.
810. Do you happen to know that the average attendance at Trinity College at Dublin is 1,500 or 1,600, and that the average number on the books is from 1,500 to 1,800? I was referring more particularly to the number at the Queen's Colleges.
811. *By Mr. Arnold*: Do you know the number at Cambridge? About 2,000, I think, including resident graduates.
812. The number at Cambridge is considerably larger than that at Oxford? Yes; you will see that the number of students at the Universities in England bear a very small proportion to the population.
813. *By Mr. Plunkett*: Do you think the operation of the Grammar School lately established, likely to increase the number of students at the University? I think it will.
814. How long do you think the Grammar School will be in operation before it will have any great effect upon the University? It will, I think, begin to have its full effect in the course of four or five years.
815. In what way are the Professors at the English Universities paid? Mostly from endowments; in some cases they are paid by fees, in some they are not.

WEDNESDAY, 28 SEPTEMBER, 1859.

Present:—

MR. MURRAY,		MR. WINDEYER,
MR. PLUNKETT,		DR. WILSON,
REVD. DR. LANG,		MR. ARNOLD,
MR. BLACK,		MR. CAPE.

TERENCE AUBREY MURRAY, ESQ., IN THE CHAIR.

Charles Moore, Esquire, called in and examined:—

816. *By the Chairman*: You are Director of the Botanic Gardens here? Yes.
817. You have been making for some a botanical classification of the plants there? I have endeavored to get the plants into something like botanical classification; that in fact has been my greatest effort, but in consequence of there having been no arrangement of the plants, whatever, before, and the trees and shrubs long established, this object has not been accomplished so satisfactorily as could be desired.
818. How far have you advanced with that classification? I have already made an arrangement of plants according to the Linnæan or Sexual system; and I have also arranged the endogenous plants into families according to their natural affinities, as many plants of this class have been illustrated in this way as could readily be obtained, but I have not generally included those kinds which have very little interest, except for the scientific botanist. All the families containing ornamental plants have been illustrated as far as practicable. I have hitherto had no ground on which to carry out the classification of exogenous plants, but when that portion of the lower garden which has lately been reclaimed becomes available I hope to be able to do so; but nothing can be done in this way until the soil becomes sufficiently sweetened for planting. When that arrangement of plants is completed, the Botanical Garden in Sydney will afford advantages and facilities for studying botany equal to those afforded by any similar establishment in England. My object has not been to make it a mere Botanic Garden, but to carry out the scientific detail with as much of ornament as possible. As I have before stated, that is the reason why I have left out some orders of plants of no possible interest except to the mere botanist.
819. Do you contemplate at all introducing those plants? If I had had the ground I might have done it.
820. But you trust to be able to do so with the new ground you have spoken of? To a certain extent.
821. Then you think that in the course of a little time the Government Gardens here will afford to the scientific botanist as extensive a classification of plants as could be had in this part of the world? Not so extensive, but as valuable in a botanical sense, to the student, as almost any arrangement of the kind in England. In fact I learn that the Botanic Gardens at Home are confining themselves, in great measure, to ornamental plants.
822. Still that is not desirable for merely scientific purposes? Certainly not.
823. The least ornamental plant is the subject of as much interest to the man of science as the most highly ornamental? No doubt of it.
824. Has the arrangement you have been making been attended with any great expense? None at all; it has been carried out with the ordinary labor of the Garden.
825. You think all the ends that are desirable will be gained by it? I have no doubt of it.
826. And therefore there would be no occasion for the Government to undertake the expense of establishing a separate and distinct Botanic Garden? No; in my opinion it would be a perfect waste of money.
827. You have delivered lectures on botany from time to time? Yes; since 1851 or 1852.
828. Have they been well attended? In some years very well attended.
829. You are clearly of opinion that the arrangements you have in progress, and which you hope soon to complete, are such as to render it quite unnecessary for the Government to do anything more for the purposes of science? I can have no doubt of it, because, from my practical acquaintance with the subject and with Botanic Gardens at Home, I can state, with confidence, that when the arrangement of exogenous plants is complete, it will afford any advantages the student could desire.
830. And the work is going on without any extraordinary expense? There has not been any additional expense in the way of laying out the ground, up to the present time, beyond the money expended in merely reclaiming the ground. There is a sum on the Estimates this year for the purpose of preparing the new ground, but that is merely for trenching and draining it, not for laying it out, because I hope to do that by means of a slight addition to the ordinary labor of the establishment, and it can only be done by degrees. I am obliged to collect the plants from various quarters, to illustrate the different families.
831. Do you find the situation of the Gardens a good one? The situation is good enough but the soil is very bad, especially in the lower garden, where there is very little of it; but the ground which has been lately taken in ought to be as good as any in Australia.
832. Do you find that plants which are found in a great diversity of latitudes, grow here pretty well in conjunction? Yes; for instance, on entering the Garden, there are growing, in the greatest luxuriance, within a few yards of each other inhabitants of the Cape, of South America, of the Mauritius, of India, and of this Country.
833. Do you find here that plants, which in other parts of the world are not found growing within the same isothermal lines, nevertheless do well in the Gardens here? Yes; and, strange to say, some plants which do very well in the South of Europe in almost the same climate,

C. Moore,
Esq.
28 Sept., 1859.

C. Moore,
Esq.
28 Sept., 1859.

climate, will not succeed here; for instance, the Portugal laurel, which is one of the finest evergreens in the South of Europe, will scarcely grow about Sydney.

834. *By Dr. Lang*: Do you not think that a botanical establishment, existing as a mere adjunct to a general educational institution, would be likely to be managed in a much inferior way to one established expressly for the purpose? It would depend in great measure upon the management. If a Botanic Garden be established in connection with any establishment there must necessarily be some person to manage it, who not only understands botanical arrangement, but who ought also to know the plants themselves very well. I do not think an establishment of that kind could be managed in this Country under from £800 to £1,000 a year in the most moderate way, because there must not only be a manager but there must be men, and there are other expenses connected with a garden which must necessarily be incurred.

835. *By Mr. Black*: From £800 to £1,000 independently of the value of the ground? Independently of the value of the ground. It must necessarily be managed by a person accustomed to a Botanic Garden, because if it is to be a mere Botanic Garden one plant in a false position would destroy the whole arrangement.

836. *By Dr. Lang*: Would not the existence of another establishment of the kind contemplated by one of the witnesses tend to weaken the other—there would be two rival establishments for a similar object? It could not affect the present Botanic Gardens, to which it must necessarily be always inferior, from the fact of their being unable to support a large Botanic Garden. It might be considered a rival establishment; but I cannot help thinking it a perfectly unnecessary one, because after all a Botanic Garden, as an adjunct to an University, is only for the benefit of medical students.

837. What was the class of persons who attended your lectures? A highly respectable class, but not so many of the younger members of families as I anticipated would attend; they were generally middle-aged persons. A great number of ladies came. My hope when I first commenced was, that schools would have availed themselves of the lectures as a means of instruction, instead of which they have not attended at all, with the exception of a ladies' school at Paddington. I may state that I made an offer to lecture at the Grammar School if they thought it desirable to form a botanical class there. I made the offer to Mr. Stephens.

838. *By the Chairman*: Was the offer declined? It was not absolutely declined, but he could not see how an hour could be spared to devote for the purpose.

839. *By Dr. Lang*: Do you anticipate from your past experience in the matter that there is any probability of forming a regular class of students of botany until that branch becomes a part of the examinations for the education of students of medicine and other branches of science in which it is a consideration? I do not, and I can very shortly state my reason for thinking so. During the time I was lecturing I made it known that I would be very happy to instruct any persons how to arrange their plants who might call on me between the time of delivering the lectures, or I would arrange and name the specimen they might collect and dry for themselves. They came and listened to the lectures, and they seemed to pay attention to the subject, but there was no appearance, so far as I could observe, of their studying afterwards.

840. *By Mr. Windeyer*: They took it up rather in a dilettanti spirit than as students? Quite so. Now at Home both ladies and gentlemen form themselves into classes, collect plants, and dry them; and they seem to make it not only a study, but a study of pleasure. I cannot say the same of those residing here; at all events, I have not observed it; and it is rarely you see any one collecting plants about Sydney, notwithstanding the number of beautiful plants there are, excepting merely as a bouquet, not for scientific purposes.

841. *By Mr. Plunkett*: Where did you deliver your lectures? In a part of the old barrack, a long building to the right as you go into the Garden. While on the subject I may state that there is in connection with the Botanic Garden here a very excellent library of reference, in a room in which any one can sit and read, where there are also specimens of plants arranged and named, a very good microscope, and, in fact, everything for study that the student could desire.

842. It is made up for visitors? Yes, and there is a man to attend on them. Both with regard to specimens and books every advantage is offered.

843. What means are there of informing the public of the existence of these conveniences? The fact is mentioned in the almanacs, and referred to in my annual reports.

844. But when strangers go into the Gardens now they may pass up and down fifty times, and not know that there is anything of the kind there—is there any board or placard posted up in the Gardens? No, there is not. Perhaps that would be desirable.

845. How was it known when you were to lecture? I advertised in the newspapers. I purpose beginning my lectures for this season very soon. It is necessary to lecture at certain seasons only, because, unless there are specimens in flower it is difficult to convey the meaning distinctly—at all events, to the class of persons who attend my lectures; mere diagrams will not do it.

846. Do you put any placard about the Gardens on these occasions? Yes, I put one on the gate at the entrance to the Gardens.

847. *By Dr. Lang*: Supposing there were a class for botany, connected with the University, for students in the medical department—have you the means of affording a complete course of lectures with illustrations for that branch of science? Yes.

848. I presume you would consider the Botanic Garden itself the best place for the delivery of those lectures? It would be most convenient. At Home the Botanic Garden in Regent's Park is made subservient to the purposes of the London University, and in the same way the Botanic Garden here might be made subservient to the University here. Specimens could be sent to the University from the Botanic Garden perfectly fresh, if it were thought advisable

to

to deliver the lectures there; or, if otherwise, the lectures could be delivered where the specimens are growing.

849. *By Mr. Black*: Do I understand you to give it as your decided opinion that you see no object likely to be gained from the establishment of a Botanic Garden in connection with the University, at an expense of £800 or £1,000, which cannot be equally well attained from the present Botanic Garden under your control, without any expense whatever? That is my firm conviction; I have no doubt about it.

850. *By Mr. Plunkett*: You speak of a Botanic Garden purely as such, but I presume you do not include in your observation any pleasure ground with exotic plants interspersed—should you have any objection to that? So far from it that I would turn the whole of the park into pleasure grounds. A most valuable arboretum might be laid out there, at once to the advantage of the botanist and of the Colony. At present there are no means of illustrating the trees of the Colony. It might be made both highly ornamental and useful to the public at large.

851. *By Mr. Black*: Would it involve anything like the expense of a Botanic Garden? Only the expense of planting the trees.

852. *By Mr. Plunkett*: And taking care of the ground? The trees should be fenced in. I do not think of any piece of ground in the Colony more suitable for an arboretum than Grose Farm, the soil being good and the situation favorable. I may add, that I met on the ground, by appointment, members of the Senate, on two or three occasions, and I then recommended that the whole of the land attached to the University, as well as all that portion reserved for the Affiliated Colleges, should be made into a park, instead of cutting it up, as was intended to be done.

853. *By Mr. Windeyer*: Do I understand you that you gave evidence and advice before the Senate similar to that you have given here to-day, with respect to the Botanic Garden? No, I was not asked the question; I was only asked about the laying out of the grounds. I knew from Mr. Merewether, privately, what they intended to do, but the question was never put to me by the Senate. I went with the object of assisting to make choice of the ground.

854. *By the Chairman*: What sort of a garden did they want your advice upon? They wanted a garden simply to illustrate the natural families of plants, and also to illustrate the sexual system; but even in a small way there must necessarily be a great expense in keeping up a garden of that kind.

855. That, in fact, was to be the beginning of a Botanic Garden? Yes; it is a nursery just now.

856. *By Dr. Wilson*: If they had carried out what they proposed they intended it as the nucleus for a Botanic Garden? Yes, just so. They have a piece of ground enclosed, in which they have established a sort of nursery.

857. *By Mr. Windeyer*: Partly with a view of planting out trees and shrubbery afterwards? Yes.

William Charles Windeyer, Esquire, M.A., a Member of the Committee, examined in his place:—

858. *By the Chairman*: You are a Graduate of the Sydney University, and a Member of the Legislative Assembly? Yes.

859. When did you enter the University? When it was first opened.

860. And you have witnessed its working from that time to the present? Yes.

861. When did you graduate? In 1855, I think; I was amongst the first graduates.

862. What was the number of students when you first entered? I think about thirty.

863. Do you know at all what the number is now? I believe it is about the same; thirty-three are on the books I believe.

864. Have you any knowledge at all as to whether the University is working out to any great extent the purposes for which it was established? That is a question which it is rather difficult to answer; but I think the influence which the University would have would be twofold: first, its direct influence as a teaching Institution; and, secondly, its influence on education in general. I think it has given a great impetus to education generally in the Colony, by raising the standard of education, as far as I have observed, in the schools; and I also think, that even as a teaching Institution, considering the young state of the country, and the early period at which many young men are withdrawn from educational training, that even in that respect—although it has not, perhaps, been so successful as it might have been under different circumstances—yet I think it has been fairly successful. A great number of young men have taken to professional pursuits that have come from the University.

865. Did you attend at first at the old College buildings in Hyde Park? Yes.

866. Do you think the change to the present site was a judicious one? No; I was always opposed to it.

867. What were your objections? My objection was to the fact of its being so much out of town, which I thought would for a time operate against it; I thought the more central it was the better.

868. You thought the distance would prevent young men from going there? I thought it would for a time be some slight drawback.

869. Do you think that has at all been the case? I cannot say that it has; I do not know of any young men having absolutely staid away on that account.

870. It has been mentioned here in evidence that there are now only twenty-four students? That is, in daily attendance I presume; of course there will be always some away now and then. When I said thirty-three, I went by the number I saw in the last University Report.

871.

C. Moore,
Esq.

28 Sept., 1859.

W. C.
Windeyer,
Esq., M.A.

28 Sept., 1859.

W. C.
Windeyer,
Esq., M.A.
28 Sept., 1859.

871. Are there any other causes do you think detracting from the usefulness of the University? With regard to its being out of town—of course, being a graduate, I have taken an interest in watching it, and have been much amongst the young men—and I may say that I think greater facilities might be given for the accommodation of the students. For instance, many students ride there, but there is no place to put up a horse. To such matters I do not think the Senate have given sufficient attention; they treat the students too much as boys, and let them rough it too much. Their complaints on such matters have not met with the reception I think they ought to do.

872. Do you think there was any occasion for such a costly structure as the building now being erected? I think a University ought to be a building worthy of the country; but I do not know whether the money that has been expended on it has been expended in the most judicious way; I think it has not.

873. Do you know what the cost has been up to the present time? I am not aware.

874. What should you have recommended in the place of the expenditure that has taken place—that merely those parts which were required for lecturerooms should be finished? Partly so. One can hardly tell from the present unfinished state of the building, but it seems to me that a good deal of it is wasted; it is not so much taken up for educational purposes as it might be. The Hall is the only room in the University worth anything as far as architectural appearance goes. I am not at all opposed to having a handsome building, for I have seen the good effect of it. From my observation as a boy at school, and afterwards as a graduate, I conclude that good buildings have a beneficial moral effect. I think if boys and young men are only given things they do not value they knock them about, and a low tone altogether prevails among them; but the existence of a good building, worth taking care of, produces a desire to do so in their minds and a love for the place.

875. Are you at all aware whether there is any disinclination on the part of parents to send their sons to the University? No, I cannot say so.

876. How do you account then for the very small attendance? Because I think there is a disinclination, generally, in parents, to allow their children to give up so much of their time, when they begin to be useful, to educational pursuits.

877. You think that is the main cause? I think it is.

878. You remember, of course, when the University was first established here? Yes.

879. Great expectations were then entertained of its utility? Yes.

880. Do you think those expectations have been realised up to the present time? Perhaps we expected too much of it; but I think the general tone of education is higher throughout the country, and that in consequence of the existence of the University there is a greater general desire for superior education. The educational standard has been raised.

881. That effect on the state of education in the Colony was produced when the University was here in the buildings at Hyde Park? No doubt the first impetus was then given, and I think it has been kept up since.

882. Do you suppose that it has been caused in any greater degree by the change? Do you mean that the feeling has grown with the existence of the University?

883. Yes? I cannot say it has.

884. Do you think it advisable to have Affiliated Colleges established in connection with the University? I do not think so.

885. What objection have you to them? I object altogether on general grounds to the recognition by the University of any religious sects at all. I think it ought to be entirely a national Institution.

886. Quite secular? Quite secular.

887. Do you think there is any evil to be apprehended from this in time, namely, that through the influence these Affiliated Colleges may bring to bear on the University itself, its character as a secular establishment may be impaired, and in itself it may become sectarian? I think the religious character of the Colleges, as I understand the term religious—in the sense in which the Colleges in the Mother Country are regarded as religious—ought to be kept in view, else there is a danger that they may encroach on the secular teaching of the University; for if the religious character of the Colleges is once lost sight of, then people will begin to think they are paying twice over for the same thing. And if care is not also taken that the management of the University proper is prevented from falling into the hands of the Colleges, the same result may take place here as has taken place in the Mother Country, that the Colleges may usurp the functions of the University, and the University as a teaching body die out.

888. You are aware that many of the Fellows of the Affiliated Colleges are also in the Senate of the University? I am, and I think it objectionable.

889. You would impose some restriction in that respect? I would.

890. What would you propose? I think if the head of each College was a member of the Senate that no other members of the Senate should be allowed to hold office in the Colleges. I also think that an objectionable clause in the Act of Incorporation which provides that four members of the Senate may be clergymen. I think, as I said before, that the University ought not to recognise sects in any way. If it is necessary at all it would be quite sufficient that the head of each College should represent the religious body with which his College is connected, whether he be a clergyman or a layman.

891. Which is the clause to which you refer? The fourth clause.

892. *By Dr. Wilson*: I suppose this clause was put in with the object of there not being more than four clergymen on the Senate? Yes, and perhaps it was a "sop to Cerberus." There was a great feeling of antipathy to the University, when first it was founded, on the part of many clergymen, on account of its purely national character.

893. *By Mr. Black*: There is nothing here to prevent the whole Senate consisting of laymen?

men? No, nothing to prevent it. There is one thing I think it right to mention, and that is, the Colleges of the four denominations supported by the State have monopolised the whole lands of the University. I suppose the Committee have gone into that.

894. *By Dr. Wilson*: They have eighteen acres each? Yes. I believe no College in Oxford or Cambridge has more than seven or eight acres, as an average. The consequence of this monopoly is that no other religious body can get land for a College at all.

895. *By the Chairman*: Do you think the establishment of these Affiliated Colleges involved a departure from the secular character of the University—from the principles on which it was founded? No, I cannot say I think it did, because no student is obliged to go to a College in order to be admitted to the University. But the danger is, that if the heads of Colleges get the power in their hands they will allow no one to go to the University except he goes to a College.

896. You think that is to be guarded against by imposing some restrictions? Yes.

897. What do you think of that clause of the Act of Incorporation which provides for the election of members of the Senate of the University by the graduates when the number amounts to one hundred? I think myself that the number ought to be made smaller and come into operation sooner. With regard to the impetus given to education being kept up, I may observe—and I think teachers will bear me out in the observation—that there are, as it were, crops of scholars; one year there will be a great many good scholars, and then a falling off—perhaps quite a lull—and then another good year; and that may explain the present paucity of students at the University. At the time the University was established there had been a general looking forward to it, and young men had been saved up, as it were, and very likely those who were most energetic and most interested on their own behalf. There was thus, perhaps, a little unnatural impulse given to it at that time.

898. What number of graduates would you propose as an amendment on the hundred to whom the right of election is deputed? By the Act they are not even to be graduates, but Masters of Arts; and as a great many do not take their Masters' degrees, it will be one cannot say how long before that clause could come into operation. Many young men go into the country, and cannot take their degrees; and several have gone to England without doing so—some of our best men.

899. Would you think the number twenty too low? I think it would be quite enough—twenty Masters—because, although the electoral body would be only twenty, it would represent a vast number more; it would represent all the Bachelors and the undergraduates too.

900. It would not be desirable to give the power to the graduates, because it might have the effect of preventing them from taking the higher degree? Perhaps so. According to the University usage a Bachelor is still looked upon as in a state of pupilage, not as a full member until he has a Master; and perhaps it would be hardly advisable to give to young men, especially in an University like this where they take their first degree very young, the power of electing the governing body.

901. Do you think the Professors, or any of them, ought to be on the Senate? I think all the Professors ought to be on the Senate. By Professors, I mean the Professors proper, not all the teachers of the University.

902. Do you think the extension of this power of election to the Masters of Arts would serve to give a deeper interest in the Institution to the students generally? I think it would serve to unite us together more. That is one of the objections to going out of town, that it prevents the young men of the University frequently meeting together. We used to have an Union Debating Club, but going out of town broke it up, because it was so far to go. I think the habit of meeting has a good effect in keeping up the education of the young men.

903. Are these the only improvements you would suggest in regard to the Senate? Those are the only improvements I think of just at present.

904. Have you been at all aware of any instances in which the management of the University by the Senate has not been approved of by the Professors? Yes.

905. In your own opinion, would the view taken by the Professors be more likely to be the correct one than that taken by the Senate? I think the view taken by the Professors would be more likely to be the correct one. I have known suggestions made and not acted upon, which, I think, would have had a beneficial effect.

906. How many members of the Senate constitute a quorum? I am not aware.

907. Where does the Senate hold its meetings? I believe sometimes at the University, but not always. There is another matter which I think would be very important, with a view to maintaining the University in its integrity, and that is—that the Professors should reside on the spot.

908. What are the general qualifications looked to now, in so far as you can judge, in the election of members of the Senate—a love of letters, or zeal in the diffusion of knowledge? I am afraid I cannot say. I think so. I do not think some of the late appointments have been judicious; I can say that.

909. Do you conceive at all that mere social position has anything to do with it? I am afraid it has been so.

910. Do you think it desirable that that body should be to some extent popularised? I think so certainly, that is, that it ought not to be a close body to which election should be made merely on account of some imaginary social position.

911. You do not think that love of letters or zeal in the cause of education, or for the diffusion of knowledge have very much effect at present? I do not think they have. People have been elected to the Senate who have never shewn themselves remarkably interested in the cause of education, and who have never acquired a title to sit on the chief managing board of the highest educational Institution of the country.

W. C.
Windeyer,
Esq., M.A.
28 Sept., 1859.

912. As a member of the University, do you think the management of its affairs by the Senate has given general satisfaction to the Professors or Students? I do not think it has.

913. Have you heard complaints on the subject? Yes, frequently.

914. You think the Professors have not been satisfied? I think the Professors have not been treated with that deference which, as men of education and high standing, they are entitled to; nor do I think the young men of the University have met with sufficient encouragement from the Senate, they have been too much snubbed, in fact, and kept down.

915. Then do you think it desirable that the changes you have stated yourself to be in favor of, should be brought into operation without delay? I think so.

916. And as there are now only ten Masters of Arts, and it will probably be many years before the number will be increased to one hundred, you think some change ought to be made in that respect immediately? I think so.

917. Would you give to these ten the right of voting with the present Senate in the election of the members, or would you allow them to exercise their functions absolutely without reference to the Senate;—the Senate, at present, has the power of election, I suppose, by votes? Yes.

918. When the alteration in the mode of election, contemplated by the law, takes place, the Senate would cease to elect, but the Masters of Arts, amounting to one hundred, would then elect to all vacancies. Now there are ten or twelve Masters of Arts—would you at once give these ten, or when they amount to twenty, would you give those twenty, the absolute right of electing to future vacancies, or merely allow them to vote with the present Senate in the elections—or perhaps you think they might be over-awed by the dignity of that body? I was going to say, I think they ought to elect separately, until the graduates increased to a certain number, and that then the graduates might do it altogether.

919. Would you then make the members of the Senate electors *ex officio*? Yes.

920. Do you think a wise economy has been shewn in the erection of the University building? I cannot speak as to that. I am not an advocate for having a poor or shabby building for the University, for I am perfectly confident that good buildings have a great effect, judging from my experience, as a young man brought up in the country, of the low tone prevailing in consequence of the poor accommodation afforded by school buildings here.

921. *By Dr. Wilson*: Would not such a building as St. Paul's College, if it were finished, have answered the purpose of the University for a number of years to come—a plain but still beautiful building? I do not agree with you that it is a beautiful building; I would rather see something else. I do not think the University Hall is thrown away; it is the rest of the building that is wasted.

922. Would such a building as St. Paul's College have answered the purposes of the University for a number of years to come? It would have answered the purposes certainly. Any building would do that which would give sufficient accommodation. I think the buildings ought to be of a handsome character.

923. *By the Chairman*: Did you pay any attention at all to those very grotesque figures which ornament the parapets? I have seen them.

924. Do you think they serve to elevate the taste? Well, if you have a Gothic building, I suppose you must carry out the style of architecture.

925. *By Mr. Black*: Do you not think the students might derive quite as much inspiration from the calm perusal of the works of men of genius as from the contemplation of those figures on the walls of the University? Do you mean from the calm perusal of literary works?

926. Yes? I think the student would study with a great deal more of enthusiasm, and more abstract attention or devotion to his studies, if surrounded by buildings of fine architectural appearance, than he would if reading in a barn.

927. *By the Chairman*: Do you think Homer was inspired by the buildings of Greece? No; but I think that the Greeks were, in a great measure, inspired with their love of their country, from their love of the fine buildings around them. We read it in Thucydides.

928. That was at a later day? I am speaking of the most glorious period of Grecian history, when Pericles himself, pointing to those buildings, reminded them that their existence was one of the causes of their love of their country.

929. *By Dr. Lang*: There were no such buildings in Homer's time? No.

930. *By the Chairman*: Then Homer's divine genius was not at all inspired by the buildings of Greece—the architecture of Greece was then of a poor character? Perhaps so; but the poetry of Homer may have inspired the Greeks to build those buildings.

931. *By Mr. Cape*: In our reading we observe that the associations connected with the great Universities have had their influence on the characters of the men educated in them? Yes. I think the history of the lives of many of the English statesmen who have been at those Universities shews that; almost all of them speak of the effect of the places upon them.

932. *By Mr. Black*: Do you not think the study of such a science as astronomy would have as elevating an effect on the mind as the mere inspection of architectural beauty? I do not think you would teach astronomy to students as a general subject of study. To my mind it would have no interest at all as taught in Universities.

933. Supposing it were taught in such a manner as Sir Isaac Newton, Kepler, or any of those great men would teach it? For my own part I do not think I would go to their lectures. Mine may be rather a peculiar taste, but I would rather go to lectures on Plato, Aristotle, or Thucydides, myself; or I would rather study history.

934. *By Dr. Lang*: Are you not aware that in some cases on the Continent there are no University buildings at all, and that the lectures are delivered by the Professors at their own private residences? I believe their system does not involve residence as in the Mother Country.

935. Is it not the fact, notwithstanding, that the scholars produced under such a system stand at the head of their several departments in Europe—I allude to the German Universities? There is no doubt many of the Continental scholars do occupy, perhaps, the highest places in their line.

936. Do you not think all the educational objects of the University could have been carried out for ten or fifteen years in the old buildings in Hyde Park, with such temporary additions as would have been required for carrying out the different classes? I think so, most decidedly.

937. Do you think the benefit derivable by the Colony, through its educated youth, from having a splendid building to look at, at all compensates in point of value for the enormous sum that has been expended in the erection of the University buildings? If you look only to the effect it has had during the last three years, since the University buildings were put up, perhaps not; but fine buildings like these are property for the nation for ever.

938. Are you aware of any instance in which a building of the extent of the Sydney University has so long preceded the need for it, as the University buildings we have have evidently done, when there are only twenty-four or twenty-five students? I do not think I am.

939. Do you think the prejudice against the University is not due in some respects to the connection of the educational machinery with a building that has involved the Country in so great an expense—has not that circumstance operated in prejudice of the University, the public seeing so immense a structure raised to so little purpose? Perhaps it may.

940. You have mentioned that the distance of the University from the central parts of the city was an objection to it? Yes.

941. Does it not appear that that would form a very strong objection, considering the desirableness of rendering the lectures of the University available for young men not studying professionally? Yes, perhaps it might.

942. Would it not be desirable that courses of popular lectures should be delivered by the Professors in the University, to be made available to young men engaged in mercantile pursuits, or in the public offices in the city? I think it would, most certainly; but they have been tried and not found to succeed. All the classes now are open to any students, and especially with regard to experimental physics the hours have been fixed at the times when they were most likely to come. People took them up, however, much as Mr. Moore has just stated they took up botany, and as soon as the novelty wore off they got careless in their attendance.

943. Does it not require considerable time to create a taste for such pursuits in a community that has been long disused to them? No doubt it does.

944. Do you not think the want of encouragement hitherto in this country, for young men to devote themselves to superior education, has operated in preventing many young men from embracing a high educational course? Most certainly it has.

945. You have alluded to the constitution of the Senate; do you think that the mode of appointment contemplated by the Act of Incorporation, by the votes of the graduates of the University exclusively, is a proper and unexceptionable mode of appointment;—Would the graduates of the University form the best electoral body you could have? I can hardly give an answer to that question without consideration.

946. You are satisfied that the Professors of the University ought to be members of the Senate *ex officio*, and that the heads of the Colleges should also be so, as the sole representatives of those bodies? Yes.

947. Do you not think there might be a third portion of the Senate, to be elected by some other body unconnected with the University at all? I think it would be advisable.

948. Do you not think that a Senate composed of gentlemen, appointed in these various ways, would be likely to secure the objects of the University better than the present system? Most certainly.

949. And better than the one the University Act contemplates, namely,—election by the Masters of Arts exclusively? Perhaps it would.

950. Do you think there ought to have been residences for the Professors within the University precincts from the first? Yes, I think that is where one of the wastes of money is. A great deal of the money which has been already laid out in this rambling building, might have been spent to a great deal more advantage in residences for the Professors. I would just mention here, that when speaking of the effect of architecture, I was speaking theoretically on general grounds, without saying whether it was advisable to carry out the buildings to the extent that has been already done in this instance.

951. Do you not think there is a high moral effect derivable, on the part of the students, from having the Professors of the University, under whom they are to study, residing on the spot? Most certainly. I may state, as a matter of observation on my own part, that when Dr. Woolley was residing in the building at Hyde Park, it had a general effect on the bearing, manners, and habits of thought of the students; and there is a change since, which is observable to anybody who mixes with the young men. The fact of a person being there in a position of authority, and to whom they can go for advice or assistance out of professional hours on any matter of study, has a very beneficial effect upon them, especially if he is a man fit for his position, and sympathises with the young men under his control. And the fact of the Professors being resident on the spot gives them also an additional interest in their work, and attaches them more to the place.

952. Have you turned your attention to the amount of accommodation for educational purposes that the present buildings afford, as compared with their extent—do you think it is at all sufficient for the cost incurred? No; that is where I think there has been waste of money.

W. C.
Windeyer,
Esq., M.A.
28 Sept., 1859.

W. C.
Windeyer,
Esq., M.A.

28 Sept., 1859.

953. Do you not think there has been a great waste of space? Yes. As far as I can understand the design, the space wasted on the Senate alone is altogether too much; they seem to monopolise the best part of the building.

954. *By Mr. Cape*: Before the establishment of the University, were the advanced students of the colony in the habit of associating so much together as since? I think not. They had no common meeting place as they have now in the University.

955. Do you think the establishment of private halls, which are less expensive than the Colleges, would tend to supply the University with more students, by receiving youths from the interior? Yes. There were no Colleges when the University was first established, and we lived in lodgings how we could. I think decidedly it would be an improvement if it could be carried out.

956. You are aware that students have joined the Universities from the Home Universities? I have known of some.

957. Do you remember their remarks as to the relative status of the scholarship here? I do not recollect anything favorable they did; they did not take first class prizes.

958. I am speaking of their opinion as to the standing of the University here, as to whether the reading was of a character above the merely scholastic? I think so. Several of our students gave gone to England and taken high prizes there. One of our men was admitted into one of the first Colleges of Oxford at the head of forty men, I think.

959. Were there any rules or by-laws of the Senate of which the students here complained as a grievance? I do not remember any at the present moment. The complaint was, that we were not recognised as persons whose interests ought to be attended to most, as really with the Professors forming the working part of the University.

960. *By Mr. Black*: Do you mean that there was an unpleasant degree of superciliousness on the part of the Senate? Yes, there was. The accommodation provided for students is very insufficient; in fact, they are treated as a parcel of boys, who can manage for themselves anyhow. Young men, who come from a distance, cannot find a place to hang up a horse; all these are little matters, but they have an effect.

961. *By Dr. Lang*: Do you not think the University would have had a more powerful moral effect if it had been within the City? Yes; I always thought so. I thought a building might have been erected on the site in Hyde Park, which would have had more effect, for less money; the citizens would have looked to it with more regard.

962. Supposing the building had been erected on the site reserved for the Post Office in Wynyard Square, but not to be used for that purpose it appears, do you not think it would have had a much better effect on the community? I think, in such a spot, there would have been hardly the necessary space for it. A place of this kind ought to have some recreation ground.

963. *By Mr. Cape*: Have the students found the library of the University so serviceable as they could wish in the course of their studies? Now you remind me of it, I think the library was rather a grievance; we were not allowed sufficient access to it.

964. *By Dr. Lang*: Was it not made available to the students generally? Not so available as it might have been; I felt it so; I used to dislike to go and get books.

965. *By Mr. Cape*: As far as you had access to it, did you find it a practically useful library in the course of your studies? Yes, I think it is so. I could always get any book.

966. It was not mere black letter? No.

967. But there were restrictions that rendered it of little use? Yes.

968. Is that still the case? I do not know.

969. *By Dr. Wilson*: You stated that a higher tone had been given to education in the Colony, and you attributed it to the University—do you think the University is entitled to all the credit, or is not a great deal owing to the people of the Colony being in better circumstances, and having more time to devote to literary pursuits? No doubt both have operated together. The University fostered it.

970. But the feeling was gaining ground? Yes, I think so.

971. Have you any means of judging how the clerical influence is exercised now, whether in favor of the University, or otherwise? I think a great deal of the old bitter spirit has in a great measure died out; but the clergy do not enter into it heartily, and they never will, I believe, as long as they have State support and are kept as a class apart from the rest of the citizens. I think if it had not been for the Professors the University would have been a great deal more unpopular than it is. That is my decided opinion. They have done all they could in the way of working beyond their ordinary bounden duties.

972. *By Mr. Cape*: Mingling with public bodies and giving public lectures? Yes, and doing all they could to make the University as popular as possible.

973. *By Mr. Arnold*: Are you inclined to anticipate or fear that these sectarian Colleges will become rival institutions than auxiliary institutions to the University? I do not think they will become rival institutions, because the University will always get better men if it is properly supported; but they may set up claims to usurp the functions of the University. The grand idea of the University is its bringing all the students together in common lecture halls and making them forget their religious differences, thus carrying out in the highest kind of education the beneficial effects of the national system. I may say that my own observation is that that feature has had a very beneficial effect upon the young men.

974. Can you say what is the total expense of an University education to an individual coming from the country? The fees when I was there amounted to £18 a-year.

975. What would be the total expense including board and lodging—would £150 a-year be sufficient? It might be managed on that. I could not have staid at the University myself if it had not been for the scholarships I won.

976. *By Mr. Cape*: Buying books would be an expensive item? Yes.

977. *By Dr. Lang*: Do you not think the cost of living might be much reduced to students resident at the University in the Colleges, by having boarding-houses under proper moral superintendence, so that the expense would fall more lightly on students in humble circumstances? It might; but I have always considered the only College at present existing—the Church of England College—quite as expensive as any boarding-house. It should be the object, I apprehend, of the Colleges, to enable the students in them to live at as moderate an expense as possible.

978. *By Mr. Arnold*: Are you aware how much money has been expended in the erection of this University? I am not.

979. Do you think it would be a good plan, in order to encourage students in the humbler schools to excel in learning, if free scholarships or exhibitions were instituted? Yes, I think there ought to be a regular system, beginning from the National Schools to the Grammar Schools, and from the Grammar Schools to the University.

980. *By Dr. Lang*: Are you aware that there is another purpose to which the Affiliated Colleges may be turned of very great importance to the community, by giving professorial education in those departments in which the University does not provide the means—they might be made theological seminaries for instance? Certainly, that might be one of their uses.

981. But it forms no part of the design as exhibited in the Colleges Bill, or in the University Incorporation Act? My idea was that that was left to the Colleges themselves to manage, because some religious denominations refuse to accept money for religious purposes in any way. Nothing was said about it, so that they should not be kept out from the advantages of the Colleges; and the only thing that implies otherwise is in the preamble of the Colleges Act, where systematic religious instruction is alluded to, which, I apprehend, only means that those duties which a well regulated home observes, would be observed in the Colleges.

982. Do you not think it would be much better for the public interest that that clause should be left out? No, for this reason, that I think there would be then nothing to shew the distinctive character of these Colleges. I think their religious character should be carefully kept in view, as distinguishing them from the University as a teaching body—to shew that the Legislature recognises only the University as a teaching body, or else there will be some danger of the Colleges setting themselves up against the University as teaching Institutions.

983. Do you not think the religious character of the Colleges might be maintained without having such a clause in the preamble of the Colleges Act? It might be, certainly.

984. Are you not aware that the existence of such a clause has been a stumbling-block in the way of a good many who object to religion being supported by the State? I have heard so.

985. *By Mr. Arnold*: Then I rather judge, from the whole tendency of your answers, that you think the University, in order to be a very useful Institution, must be very much enlarged in its operations; for instance, I understand you that you think the Professors ought to be resident at the University, and that it is desirable that the scholars also should be resident? No, not the scholars.

986. I do not mean that they should necessarily be resident, but that the means of residence should be provided—for scholars of a certain description, at all events—that is to say, those who have distinguished themselves at the inferior schools, and whom the Government may on that account think fit to adopt as their own proteges, and placed free at the University? Most certainly I would provide for them in every way, and make their keeping these advantages dependent upon certain examinations, to keep them up to the standard.

987. Even for those purposes there would soon be a great extension of accommodation required? I do not think you could do that in the University. As I understand the system, that is the business of the Colleges. If they could be induced to take so many free commoners every year, I should be very glad to see it.

988. *By Mr. Black*: Do you think that the fact of their having a distinctive religious or sectarian character is likely to add to the kind of usefulness which the Affiliated Colleges furnish as respectable boarding-houses? I do not think their distinctive sectarian character is likely to add to their usefulness in any way, except that where there are a number of young men living together there must be some kind of religious supervision. I believe the first idea was that of a general College, in which the young men should come and live anyhow; but as they could then have been brought together for religious services, and it was not advisable that they should live together without those associations or influences, it was given up. It was the idea of that College which shocked so many of the clergy.

989. *By Dr. Lang*: Are you not aware that the present Affiliated Colleges were originally based upon the idea of the boon being confined exclusively to those denominations supported by the State? I never thought so, and I was very much surprised to find, that though in the Act it seems to be contemplated that any denomination should establish a College, yet by the deed of grant of the land to the University it has been confined to these four denominations, and that thus a fraud has been perpetrated on the rest of the community; each College does not want more than six or seven acres of land, and I think the rest ought to be taken away from them, in order to enable other sects to found Colleges, as well as the four supported by the State.

W. C.
Windeyer.
Esq., M.A.
28 Sept., 1859.

FRIDAY, 30 SEPTEMBER, 1859.

Present:—

MR. MURRAY,		MR. WILSON,
MR. JONES,		DR. LANG,
MR. PLUNKETT,		MR. WINDEYER,
MR. BLACK,		MR. CAPE,

TERENCE AUBREY MURRAY, ESQ., IN THE CHAIR.

The Revd. Henry Judge Hose, M. A., examined:—

- The Rev. H. J. Hose, M.A. 990. *By the Chairman*: What office do you hold in St. Paul's College? Warden.
- 30 Sept., 1859. 991. What are the duties devolving upon you? I have the surveillance of the students who reside in, and attend at the College, exercising over them proper academic control; and I give preparatory instruction, so as to fit the members of St. Paul's College for the lectures delivered by the Professors of the University; I act as Chaplain of the College; and I give lessons in divinity, according to the teaching of the Church of England.
992. What is the general course of study in St. Paul's College? The course of study is twofold in St. Paul's College. One portion independent of the University, namely, divinity; the second, dependent on and preparatory to the studies of the University, embracing mathematics and classics.
993. Then mathematics, classics, and divinity? Yes.
994. No branches of physical science? No, only so far as physical science is a branch of mixt mathematics. I should, therefore, include under physical science statics, hydrostatics, optics, &c., but not chemistry.
995. There are no lectures on chemistry? No.
996. What branches of science are taught in St. Paul's College under the head of mathematics? Euclid, Arithmetic, Algebra, Trigonometry, Algebraic Geometry including Conic Sections, Statics, and Dynamics of a Point. These have been taught the present year. I am, however, prepared to extend the course according to the requirements of the University. Thus I have previously given lectures in Hydrostatics and Elementary Astronomy, and shall have shortly to commence a course on Optics. I would mention that I have made arrangements to give extra mathematical instruction to such students as may be anxious to avail themselves of it, with a view to their reading for mathematical honors; and have accordingly advertised the subjects of these voluntary lectures, viz.:—The Principia of Newton and the Theory of Equations. None, however, as yet have expressed their wish to attend this extra instruction.
997. How many students have you at the present time? Four resident, and four non-resident students, undergraduates; and five bachelor students,—men, that is to say, who have taken their degree of B.A. whilst members of St. Paul's College, but who are not receiving any instruction at present.
998. Not attending lectures? Yes, just so.
999. You have then virtually eight? Yes; four resident, and four non-resident.
1000. Do these eight attend regularly at all the lectures? The non-resident do not attend regularly; two quite irregularly. The condition of one non-resident student's continuing on the books of the College was, that on account of the distance of the College from his home, and the hours at which I was obliged to lecture, he should be treated tenderly in this respect, and his attendance be occasionally excused.
1001. How are the lectures given, at stated times? Yes; I will explain how I have managed the last term. Of the members of St. Paul's College, seven belong to one year—the outgoing year—that which takes its degree in 1859; the eighth is in his second year, and will take his degree in 1860, but is attending the lectures of the third year at the University, as he is in advance of the other men of his year. He does the like with me. Virtually, therefore, the men at St. Paul's are all of one year. These at present go to the University lectures at ten; and my object being to prepare them for the lectures at the University, I find it the most convenient time to lecture them before they go to the University; therefore from half-past 8 or 20 minutes to 9 till 10 I lecture them. When I have got men of other years, besides the third reading at St. Paul's (which has occurred, and will occur again), I have to lecture them as I find most convenient to suit the University hours.
1002. How long have you held office in St. Paul's College? My appointment dated from the 1st September, 1856. I had, therefore, held office 3 years on the 1st September last.
1003. Is the number of students increasing? Decreasing; chiefly on account of the men having taken their degrees quitting residence in, or attendance at the College, although their names are retained on the books.
1004. The new ones do not come to fill up their places? New ones have come, but not to the number who have left. These are the statistics of the matter:—In December, 1858, St. Paul's numbered eleven undergraduate students—seven resident, four non-resident. Of these, four of the residents take their B.A. degree, and need not for the present reside in, or attend at the College; one of the non-residents at the end of the year leaves the University, and therefore the College, without taking his degree; also one of the non-residents leaves the College, yet continues at the University. The number then would have been three residents and two non-residents, had not two new non-residents joined at beginning of the year; these, together with a fresh resident, who joined in Trinity Term, make our present number eight, viz.:—four resident, and four non-resident.
1005. That would argue some disinclination on the part of parents to send their sons to St. Paul's College? I don't think it would follow. The number of men coming to St. Paul's College

College must be considered in reference to the number of freshmen going to the University, and then to the number of these that are members of the Church of England. The Rev. H. J. Hose, M.A.

1006. You think from a disinclination to send them to the University, there would be a disinclination to send them to St. Paul's College? If the members of the Church of England did not send their sons to the University there would be none in St. Paul's College, unless students of other denominations entered it. 30 Sept., 1859.

1007. When you find the attendance has been greater in past years than the present, the inference that there is a disinclination on the part of parents to send their sons seems legitimate? There are only two years to compare, 1859 and 1858. 1857 could scarcely be considered the commencement of St. Paul's College, although I gave divinity and tutorial instruction to nine students, both during term and vacation of that year; but if that year be included, 1858 shows an increase of two students on 1857; while 1859 shows a decrease of three students on 1858. I had to select a room in Sydney wherein to deliver my lectures, and I used to go backwards and forwards from my house thither each afternoon to meet the students.

1008. Did you find your lectures better attended at that period than at present, when you delivered them in Sydney? Yes; that is, by the non-residents. All the students then were, of course, non-residents, and I compare them with the non-residents now.

1009. To what do you attribute that—that it was more convenient to attend in Sydney? At that time the Sydney University was held in Sydney, at the Sydney Grammar School, and my lectures were in the afternoon—I am speaking of the first two-thirds of the year. A man after his lectures at the University would go and take his lunch, in the middle of the day (I am talking of the case of a resident of Sydney), and then he could conveniently attend my divinity or tutorial lectures in the afternoon, without having his attention kept too long on the stretch. But a student resident in Sydney now goes to the University at 9; he attends the lectures from 9 till 1; if he requires preparatory lecturing at St. Paul's, that must be super-added to the four hours, and accordingly be imparted to him before 9, or else after 1; so that the hours of instruction should be, if possible, continuous. That is a great stress on a man's attention, and renders the attendance of non-resident students inconvenient to themselves. One gentleman told me he was obliged to discontinue attending the College, from the difficulty of the hours. These difficulties vanish in the case of resident students, who can be lectured at other times of the day. Lastly, the distance of the College from Sydney is fatal to non-residents attending lectures in the evening, as they would have to make a second journey to the University grounds.

1010. What is the amount of support given by the Government to St. Paul's College? In part payment of the salary of the Warden, £500 a-year; in support of the expenses of the College, nothing.

1011. £500 a-year is the only contribution? Yes. The payments the pupils make have to keep the College, and pay for servants, and current expenses.

1012. Will you state what the resident students pay per annum? £95 a-year.

1013. That includes everything? Everything. Luncheon, beer, and firing are extra.

1014. What would that involve? These items need not be anything. The amount depends on the taste of the man. The firing is a shilling a-day, but the men rarely have fires; the charge for luncheon is 6d.; that need not necessarily be had—a man might have biscuits in his room; the same applies to beer at dinner. To fix a price and give a round sum I should say £7 or £8 a-year. Taking the average of the last term, the buttery bills (the weekly bills of the aforesaid extras sent in to the students) would be about £2 10s. a term; three times that is £7 10s. I think, notwithstanding, that £100 a-year would cover everything.

1015. There is no extra charge for lectures? No, not even for the voluntary instruction on the Modern Languages, Model Drawing, &c.

1016. And £100 a-year would pay all the expenses of a student at the College? Yes it ought; and besides he could do it on £95.

1017. What are the fees payable at the University? I am not prepared to give that exactly. I believe for a student to attend the necessary course of lectures only, the annual fees are 18 guineas for each of his first two years, and 12 for his third, thus averaging 16 guineas each year—it may be a little more. The necessary annual expense to a student residing at St. Paul's, and proceeding to a B.A. degree, would, supposing me to be correct, be £112 (or £115) for three years.

1018. Then for non-residents what is the expense? £7 a term—for the three terms or a year it will be £21.

1019. Do you think that the charges of St. Paul's College operate at all against the greater attendance of young men of the Church of England? I think that if they were made less you might get more students, but I cannot see how they could be made less—at any rate at the present. It is easier at any time to lower than to raise charges.

1020. You think the ordinary household expenses could not be reduced? No, they could not. Even not allowing for the difference of value in money here and in England, and how charges ought *a priori* to be higher for the same education here than there—not allowing this, the charges made in Sydney for academic instruction are lower than at home. However, I think by a larger number of students being obtained at the College the expenses might be slightly lessened.

1021. Can you mention the number of students of St. Paul's College who have matriculated to the University since the University was opened? Shall I include the first year, viz., 1857?

1022. By Mr. Murray: Yes, all, I think? The number on our books who have entered is 18.

1023. Is there any certificate required in the University for students of St. Paul's College who

The Rev. H. J.
Hose, M.A.

30 Sept., 1859.

who are candidates for degrees as to their having received religious instruction? None now, by virtue of a change in the University by-law. When I came, and during the first year or more of the existence of the College, there was a by-law to that effect—it has since been rescinded. Previous to that rescission, Mr. Randolph passed his B.A. degree examination, as student of St. Paul's, in the December of 1857. I wrote him, pursuant to the by-law, a certificate as Head of the College—I said, shortly, that I certified him to be possessed of competent religious attainments, or words to that effect.

1024. *By Mr. Windeyer*: That by-law was repealed by virtue of an Act of the Legislature? Yes.

1025. *By Mr. Murray*: Will you be good enough to describe the weekly course at St. Paul's College? The formal weekly course at present adopted is as follows—this will be, probably, changed next term, just as this is different from the one of last term:—Monday—given up to divinity instruction. Tuesday:—One lecture on mathematics or physics, and one on Thucydides. Wednesday:—One lecture on mathematics, and one on some classical subject, (Aristotle, for example.) Thursday:—One lecture on mathematics or physics, and one on Thucydides. Friday:—Given up to Latin. Saturday:—*Dies non*,—not meaning thereby that no work is done on Saturday, but that no fixed work is—it is a day to be filled up by anything omitted in the week. I mean by filling up what is omitted, not omitting a lecture on Thursday and giving it on Saturday, but making up deficiencies in the tutorial instruction of the preceding five days; for, in preparing my students for Dr. Woolley's lectures I have a great deal to do to keep pace with him, especially as I have to prepare the students for other Professors as well. I have said the above was the *formal* course just now being followed. It by no means comprises all the instruction I have given, whether to individual students as I saw it requisite, or to classes of them. Such has been given in Church History, the History of England, Natural Philosophy, &c.

1026. Classics occupy most of your time at St. Paul's College? Yes. Of the hours that is assigned to tutorial instruction they have the largest share. The reason is, that if you look into the list of subjects for a degree, classics occupies the most prominent part of the examination. I have, therefore, to devote most of my time in tutorial instruction preparatory to it.

1027. You have no regular days for mathematics? Yes. Tuesday, Wednesday, and Thursday; these were the days during Trinity Term. My lectures depend on the subjects lectured on in the University, not only as to subject matter, but as to hours of delivery. It might happen that Dr. Woolley would change his subject from Thucydides to something else, then I change also.

1028. *By Mr. Windeyer*: You include history in classics? Yes, Ancient History I frequently teach in classical hours; modern history I teach at hours other than the above.

1029. With reference also to there being more tutorial help in the classics, do you not think that in classics the students require more assistance than they do in mathematics, and that they may work up the latter by themselves? Yes, I think so; not only because the subject in itself requires it, but because it requires a larger number of books to be studied and consulted by the student, and these books are not all procurable here; and the teacher has to make digests and the like of them for the use of his pupils. Whereas a mathematical subject—as trigonometry—can be well learnt out of one or two books at most.

1030. *By Dr. Lang*: Is the business of the College confined exclusively to enabling students entering to keep up with the lectures at the University? That is one object only—the tutorial object of the College. But the objects of the College are three:—1. To enforce a Collegiate discipline and life among the students—I allude especially to the resident ones—such consisting in daily prayer in chapel, common meals in hall, punctuality in keeping hours, &c. 2. To assist its students in preparing for the lectures and examinations at the University—this tutorial instruction corresponding much to the private tuition at the Home Universities. 3. To furnish instruction in divinity—this instruction bearing the same proportion to all the other received as the divinity instruction does to all the other received in the Church of England Colleges at Home. Nay, more; in my time at Trinity, excessively little divinity was taught except to the second and third years. Examination was held in assigned divinity subjects; but attendance at the lectures was not compulsory.

1031. The business of the College in preparing the students for attending the classes of the University is therefore destined to take up the position of the tutorial system of the English Universities? Yes; but it has to be borne in mind that all the necessary instruction for undergraduates to attend before passing the previous and degree examinations is given by the tutors and resident fellows of the several Colleges. (I speak of Cambridge from 1846 to 1850.) Unless he wished it, an undergraduate need never attend a professorial lecture; so that, as far as the education of undergraduate students is concerned, my position may be explained thus:—I, plus the Professors of the University, am equal to the fellows of the Colleges at Home.

1032. Are the students in the College generally pursuing their studies with a view to the University? No; their studies are general, just as is the case in the Church of England Colleges at Cambridge. I mean by general not to exclude divinity; but consider instruction therein to be an integral part of a general education.

1033. It is not contemplated to engraft on part of the system instructions for candidates for the University separate from the instructions required to bring students to the University level? It is not only contemplated, but facilities are offered for it; if a candidate for Holy Orders required instruction in divinity particularly, I am prepared to give it him. If, whilst an undergraduate, he has made up his mind to read for Holy Orders, he can attend additional divinity instruction, over and above the ordinary one given, the particulars of which are terminally advertised; and for proficiency in which additional divinity instruction annual prizes have been offered by Messrs. M. E. Murnin and Richd. Johnson. Again, should

should such an one wish to reside in or attend at the College after taking his B.A., I should at once be prepared to offer him formal instruction in theological subjects, such as would enable him (at the end of one or two years) to pass the Voluntary Theological Examination for Bachelors at Cambridge.

The Rev. H. J. Hose, M.A.
30 Sept., 1859.

1034. Do you think that the principle of supply and demand is sufficient to produce the number of students in the Colleges it is desirable they should have? I think in time it would—meaning by time, two or three years. I will here state that things are quite different to what I was led to expect when I accepted my present office. I expected that the College was ready for immediate operation, that there would be more students, and that I should be assisted by a Vice-Warden, which is now out of the question; in fact I was bidden by letter from the electors to select one and carry him out with me; this I deferred till my arrival; so much did I look for that, that I would not have accepted my office without it, had I known it. The number of students in St. Paul's College will, I believe, much increase when families residing in the country begin more and more to send their sons to the University; but so long as it depends principally on sons of parents resident in Sydney I think the students will be few, though increasing, of course, as the total number of students at the University does.

1035. You think the benefits of the College are likely to be realised to a larger extent by those residing in the country than in Sydney? I think so.

1036. Have any efforts been made in your communion to ensure an additional number of students in addition to those who come by virtue of the laws of supply and demand? No efforts have been made.

1037. Do you think that such efforts are necessary? Necessary?—the whole question of supply and demand in my opinion is, I think, rather too early; I want to wait a year or two, to see the facts; if there was then no increase, or no increase proportionate to the number of Church of England students in the University, I think it would be necessary. I think it would be desirable in the highest degree to extend the University education as well here; so that young men proceeding to business in merchants' or banking offices, or going up the country, should possess such an education. The age at which men attend the University here approximates to that in England in times past, when men joined the University much younger than they do at present. There is also another method by which I think the advantages of the University might be extended:—There is a class of men older than those I just mentioned, who are anxious to take degrees in the University; these are *partly* gentlemen who would have attended the University had it been in operation whilst they were between 17 and 20, and whose avocations would now only admit of their attending evening lectures; and *partly* gentlemen whose bar to graduating is the same—their duties as schoolmasters, clerks, &c., forbidding a morning attendance at the University. Now these gentlemen being older than the undergraduate students, a less amount of lecturing might fit them for the University Examinations; and if the Professors (assisted, if need were, by competent lecturers) were twice or three times a week to give lectures in the evening (and perhaps at reduced rates) to fit these gentlemen for the ordinary examinations (the curriculum and the undergraduate course being just the same—three years in length), benefits would be conferred upon many by the University, without her *ceasing in any way to be a teacher, or becoming an Examining Board only.*

1038. From your experience and observation in the Colony, do you think a sufficient number of young men come forward as candidates for the ministry in the various communions? I think it is below the average in this Colony, just as I think it is beyond the average in England.

1039. Do you suppose that additional efforts would be required to increase the number of candidates in your own communion, by enabling a humbler class of students to avail themselves of the facilities the College affords? I think if more men attended the College the average number of candidates for the ministry would be increased; but I cannot help thinking that that is but a collateral object (though a most important one) of the College. The primary object was to give, in conjunction with the University, a good Church of England education; some will study medicine, some go to the bar, some adopt a mercantile line of life, and some prepare for Holy Orders. I do not think the proportion of those taking orders likely to be as large in this University and College, compared of course with the total number of students, as at Oxford or Cambridge.

1040. What is the proportion of students who have entered the College with the intention of joining the ministry? I never had one who came with that intention.

1041. *B. Mr. Cape:* You are a Master of Arts of Cambridge? Yes, I am M. A. of Trinity College, Cambridge.

1042. Are you a fellow? No; I was scholar of my College, and resigned the scholarship on my marriage.

1043. Do you consider the room you gave your lectures in in Sydney (under St. James' Church, I believe), was suitable for the purpose? It was the Vestry. It was certainly one I should not have chosen.

1044. Do you think its being so connected with the Church had a prejudicial effect? I think not. Towards the end of the year a room or two was fitted up at the College for me to lecture in; this was inconvenient.

1045. Your vacations at the St. Paul's College are the same as at the University? Yes.

1046. Have you any scholarships or exhibitions? A Divinity prize given annually by Dr. Mitchell to that Bachelor student of the College who shall, within twelve months after taking his B. A. degree, pass the best examination in the doctrines and history of the Church of England; its value is the interest on an investment of £200. It is equivalent to an annual Divinity scholarship tenable for one year. It will be first awarded next Autumn.

- The Rev. H. J. Hose, M.A.
30 Sept., 1859.
1047. Have you any residents in the Colony receiving certain benefits as subscribers? Yes, there are a class of annual subscribers called members; they pay £2 per annum, and if clergymen, £1 per annum; for that they have certain social privileges.
1048. *By Mr. Murray*: Have you had to perform any duties not properly those of a Warden? I have had to do more things than come within the duty of a Warden, as understood at home, but perhaps not very much more than the Warden and Vice-Warden of such a post as mine should expect to do. I have realised the truth of the statement of Dr. Jelf, that I should have to make myself generally useful. I am organ of the Council occupying the position of Provost. As the organ of the Council of the College, I occupy with regard to that corporation the same position as Provost, Vice-Provost, and Registrar do to the Senate of the University; as enforcer of discipline and tutorial instructor I occupy the positions of College Tutor, Dean, and Lecturer; and as our Institution was hardly raised above the ground when I landed, I have had much to do in superintending its arrangements, procuring its fittings and furnitures, drawing up reports, &c; all which things though a pleasant labor, are yet laborious, and necessitate much locomotion. So that my employments have been various
1049. You named Dr. Jelf, he and two others nominated you—could you mention them? Sir James Stephen, Dr. Jelf, and Canon Selwyn.
1050. *By Mr. Cape*: You were a master at Westminster? Yes, I left residence as scholar at Cambridge in 1850, to be a master at Westminster School; I only left there to fill my appointment here. At the time of my accepting the appointment, I was also on the staff of the City of London and Bedford Square Ladies Colleges; and was lecturer and member of Council of the Working Men's College in London. I was at Westminster six years.
1051. Since your employment in the Colony, have you employed yourself in other capacities? I have, since I have been here, never refused to give any aid in the cause of learning. I have several times examined in classics, divinity, and mathematics, both at the King's School, Parramatta, and the Collegiate School, Cook's River. I never refused to lecture to any one.
1052. You have lectured at public Institutions? Yes, at the Schools of Arts, &c.
1053. *By Mr. Windeyer*: When was the College opened for the reception of students? In February 1858.
1054. How many students had you? It opened with eight students resident, besides three non-resident; one of the eight residents went out of residence, owing to the death of his father, Mr. Cowper, and the number was reduced to seven residents; four took their degree and ceased to reside, that made the number three, while Mr. Innes returning to the University, and residing at the College, made the number of residents up to four.
1055. Then unless new men come next year, they will be diminished to one, three taking their degree? Yes.
1056. Do you know how many students there are in the University? I do not.
1057. Do I understand you never had any students preparing for the Church of England? No, their course has been studying for the University lectures and examinations; and the divinity lectures I give them.
1058. In Oxford and Cambridge there is no special education for the Church? A general education to the time of taking the B. A. professorial lectures on divinity are given, open to anyone. These are not compulsory beyond this:—a candidate (after taking his B. A.) for examination in the theological tripos, must shew he has attended one course of lectures in one term from one of the Divinity Professors; he need attend no other lectures. The University, by her divinity degrees, pronounces certain members to be possessed of such and such theological attainments, and she is willing to give instruction that will lead to the possession of such attainments. A candidate for Holy Orders would doubtless attend these lectures and examination; but still the University system is general, not special, such as is open to all, and not enforced on any.
1059. The English system considers a clergyman should be educated as any other English gentleman? Yes. Some Ecclesiastical Colleges have been established at Home by one or two Bishops, but attendance at them has never been made a *sine qua non* to my knowledge for ordination. I must mention that I have used College here in a different scale from elsewhere; there I meant by College a College in indissoluble union with an University, like Trinity College at Home, and the Affiliated Colleges here. This is the ordinary sense, but besides such Colleges, there are many Institutions using the name quite unconnected with the Universities, as Theological, Missionary, Military Colleges, &c. The Ecclesiastical Colleges I just alluded to are of this latter class. *I know much misconception has prevailed, owing to the loose use of the name of College, which I would see avoided.*
1060. Are you aware that Sir William Hamilton recommends a general system of education? I am not, but I should think he would.
1061. *By Mr. Murray*: Do you know of any establishment here where gentlemen are specially educated for the Church of England? Yes, the establishment named Moore College.
1062. Do you not know that the Bishop of the Episcopal Protestant Church insists on young men intended for the ministry going to this College, even though they have been to St. Paul's—that he insists on their going there, irrespective of St. Paul's? I presume he says I wish them to go to a certain place, and I do not care where they wish to go.
1063. Do you not think the effects of that Institution, together with the acts of the Bishop, injurious to St. Paul's College? I do not think St. Paul's College is a loser at all. If I saw Moore College flourishing, with many pupils, I should think it injured St. Paul's College; but there are only one or two pupils there.
1064. Do you not know that young men have been deterred from going to St. Paul's who intended to go into the Church, by the fact of the Bishop saying they must go to this other College?

College? I know of one instance where a gentleman who at that time proposed to be a clergyman said he should like to have a degree at the University,—if he gave up a certain part of his life, three years; but having to give up another two if he attended Moore's College, he could not do it, and so his intention for the present was laid aside. I am not aware he referred particularly to St. Paul's College, or mentioned it in any way. There is one thing I think prejudicial to the Colleges, and I am not reflecting on anyone; but the period of the lectures extending over four hours, I think (physically speaking) a man feels tired after this amount of instruction; and therefore the addition thereto of tutorial instruction, whether before or after, would be irksome. I judge from myself. I was lectured, on the average, two hours, and read for about nine hours a day including in those nine hours the hours of lectures or private tuition. That was as much as I could do at home; I do not think the men possess more physical strength here.

1065. *By Mr. Plunkett*: What change do you recommend? The amount of lectures in one day is, I think, too long. If a man has been before with me an hour and a half, and then attends the lecture for four hours, or if he has already attended lectures for four hours, and then has to attend mine for one and a half or two hours, he has too little time to read by himself privately. And this private reading after all is the fuel of his subsequent attainments. I would offer, as a suggestion, that the lectures be limited to three per diem for each year, allowing a fourth hour for Collegiate instruction, if taken; and that they commence at 10 instead of 9. It is a long way for a student to come from the further end of Sydney to the University, when the public conveyances cannot be with certainty relied upon, on account of the early hour; and in the Summer it must be most fatiguing for a pedestrian.

1066. *By Mr. Cape*: Will this country admit of the hard reading that men do at Home? I think not.

1067. *By Mr. Windeyer*: You say the annual members have certain social privileges, what are we to understand by that? That they should be enabled to breakfast or dine in the hall, and have a bed in the College, without the ceremony of being introduced by the Warden or one of the Fellows.

1068. These persons are not necessarily members of the University? No, they are not. Instead indeed of members of the College, they are rather annual subscribers. The object of having such members appeared to me to be to provide an annual endowment for the College. This will serve as a kind of margin, wherewith to cover our current expenses. For some time the numbers at the College will fluctuate, and it is difficult to pay our way; last year, with 8 residents, the fees would pay the servants; but if we had not sufficient then we should go to the annual endowment.

1069. However expedient it may be to increase the funds of the College, is it expedient the College should be used for the purposes of a club? It would never be used as a club, we are never likely to have sufficient of these subscribing members who would so far avail themselves of the privileges to justify the comparison. At the Home Colleges a visitor might occasionally partake of exactly the same privileges upon being introduced as a visitor by the Master or one of the Fellows. We should do the same at St. Paul's. And the existence or non-existence of such members would produce no difference in point of fact. Only instead of a gentleman having to be introduced each time he is admitted to any social privilege by the Warden or one of the Fellows, such introduction is done once for all when he is elected one of our subscribing members; and he can afterwards, when he pleases, avail himself of either the privileges aforesaid. According to our present constitution they can have no voice in the management of the College.

1070. *By Mr. Plunkett*: How many members are there? About twelve.

1071. *By Mr. Cape*: The object was to secure an association with Graduates of the English Colleges, more particularly clergymen, was it not? Yes. In this matter I have been speaking for others, and may have missed their main design. I spoke of my own impressions. It was supposed that clergymen, being members of the Universities, would like to have a place to go to in case they lived in the country, and had to visit Sydney for a day or two. They might not wish to be at a club. Both they and others, members of the Universities, it was thought, would like sometimes to have a reminder here of their old College life at Home. Added to which we should have them not only taking additional interest in the College, but enabled by their occasional visits to test its working, and offer suggestions, &c. They might not wish to be at a club. That was one of the objects of the promoters of the system.

1072. *By Dr. Lang*: Suppose the different Colleges contemplated were in active operation, is it desirable that the heads of each should be a member *ex officio* of the Senate? I should say yes.

1073. Would that be sufficient representation of that College in the University? That is a question difficult to answer. In matters of this sort it is always difficult to legislate. If there is a man of education fit to be made a member of the Senate (supposing him to be honest, *i. e.*, impartial, not one who would use his post to advance the interest of his own College alone) he should be admitted.

1074. Do you not think that it would be better to restrict the representation of that College in the Senate of the University to the head of the College? As I said before, I am averse to these restrictions. I think, if a man is a clever and a fit man we should not ask is he a member of this or that College.

1075. *By Mr. Windeyer*: You would take a good man wherever you found him? Yes.

1076. *By Dr. Lang*: You think it desirable that these heads of the Colleges should be *ex officio* members of the Senate? Yes. Especially as the tutorial teaching is subordinate to that of the University, and by being a member of the Senate, the head of a College would naturally the better understand the University system.

1077. *By Mr. Plunkett*: Do you not think that that plan might, not at the present, but at some

The Rev. H. J.
Hose, M.A.

30 Sept., 1859.

- The Rev. H. J. some future time, interfere with the University as a teaching establishment—would it not
Hose, M.A. be calculated to promote jealousies between the Affiliated Colleges and the University to have
the heads of the Colleges members of the Senate? I do not think so in any way.
- 30 Sept., 1859. 1078. Are you aware that there is a feeling amongst men of the University as to teaching?
Yes; that they would wish the teaching to be done by the University, and not by the
Colleges.
1079. *By Mr. Jones*: You state that the annual expense of a resident student at the College
is £95? Yes.
1080. What is that for? His board and residence, and tuition, during the University terms.
1081. Does it include his board and residence for the remainder of the year? No. He is
supposed to be away between the terms.
1082. How long do the terms extend? Thirty-five weeks. I take this year, 1859. The
Lent term contains two portions of nine weeks and three weeks respectively, separated by a
recess of two weeks, making in all fourteen weeks. The Spring term contains eleven; the
Michaelmas term ten. Before Lent and after Michaelmas term is Long vacation of nine
weeks; Lent and Trinity term are divided by the May vacation of three: Trinity and
Michaelmas term by the September vacation of five weeks. Thus there are thirty-five weeks
of term; seventeen weeks of vacation, nine whereof belong to the Long vacation.
1083. If a young man came from the country he would have to pay for the time between
the terms? Yes. But he would probably go home for the Long vacation. In the September
vacation, in the last year, four men resided in the College. They were charged £7 10s.
for the four or five weeks. The charge for residing in vacation is put down in the
list of charges at £2 a week; this might be lessened, and most probably will be. I think
30s. would be sufficient. Now, as I said before—a student from the country would be most
likely to go home once a year for the Long vacation, and stop in residence during the May
and September vacations, which together are eight weeks (no charge is made for the two
weeks of recess of the fourteen of Lent term). This annual expense for residence would be
therefore eight times 30s. and £95, or £107.
1084. *By Mr. Jones*: Can you inform the Committee what are the average expenses of a
resident in a College annually at Home? It varies very much; I should say about £200.
That includes everything; that is about the average, certainly not above it. I have seen an
account of the expenses in the Cambridge Calendar, but it is more imaginary than true.
The expense estimated falls very far short of the truth.
1085. Does a student paying this £200 at Home receive many advantages that a student in
St. Paul's College does not receive? I think not. It is modelled much on the plan of the
Colleges at Home, allowing for such alterations as a difference of relationship to the University
renders necessary. Our College plus the University is equal to the College at Home.
1086. Then the necessary expense of a collegiate education here is less than at Home? Yes;
much less. Without considering the relative value of money, a student takes his course of
teaching, I think, much cheaper.
1087. What number of resident students is necessary to defray the annual expense of St.
Paul's College? I think, with economy, five or six. That is a question for the future; we
hardly yet know all our current expenses, such as repairs and the like. We are keeping
these things down at present; there are only three servants at present, but a boy in addition
will be required as soon as term re-commences. I have not sufficient data to fix the amount
which will be required, but I think six resident students would meet it.
1088. Is it your opinion that the Affiliated Colleges are absolutely necessary? Absolutely
necessary is a strong word; but starting with this axiom, that I, as a member of the Church
of England, think no education for a youth belonging to that Church complete without some
religious instruction according to her teaching, I think they are necessary.
1089. What does the religious instruction consist in in the Home Universities? At my own
College, and for the examinations of my University, we had to prepare portions of the Greek
Testament; portions of the Christian evidences; the Ecclesiastical History of the first three
centuries; and the history of the English reformation. The lectures on these subjects were
not insisted upon being attended, yet we had all to pass examinations in them.
1090. These were required at the College? All the teaching at Cambridge was given at the
Colleges. The Professors of Divinity lectured on higher subjects, which were not required
of an ordinary student—as parts of English Church history; the Hebrew text of the psalms;
the use of the Early Fathers, &c.
1091. They were required by the College, not the University? What is required by the
College is required by the University.
1092. *By Mr. Windeyer*: You spoke of tutors doing much which Professors do here—are
you aware of the late University reforms relative to the teaching in the University? I
know very little of it, or not enough to speak definitely about it; but it is my impression
that there was a feeling that teaching had gone too much to the Colleges, and that Professorial
lectures were not attended so much as they should be.
1093. The Professors' chairs, in some instances, were mere sinecures, were they not? Yes.
1094. *By Mr. Murray*: How many students can be accommodated at St. Paul's College?
Twenty-five.
1095. Only twenty-five? I have my rooms in the College, which take away from the forty
rooms built expressly for the students. All these rooms are the same size.
1096. But what accommodation is made for the students? Twenty-five; at present fourteen
rooms are parts of my house. It may seem a large number, but I have the use of no out-
houses, &c. of any kind, and one is a storeroom, another a laundry, &c.
1097. Independent of the accommodation for your family and the servants, how many stu-
dents is there room for? Twenty-five.

1098. And the charges amount to £125 per annum? Assuming the average annual expense of the University to be £19, and that of the College to be £95, that would make the two together to be £114. If we add £6 for extras, this might be called £120. The Rev. H. J. Hose, M.A.
30 Sept., 1859.
1099. Would £20 additional be enough to cover clothing? That depends upon the man.
1100. It would require good management on the part of a young man at St. Paul's College to pay everything with £150 per annum? Yes; I think so. In this I include the two short vacations.
1101. The charges could not be reduced? I think not.
1102. And under six students you could not pay expenses? Yes.
1103. Then, the charges are such, on the score of expense, as to preclude a great number from sending their sons to this Institution; few parents are in a position to give each of their sons £150 a-year? I do not know. I think that many do not care for an University education.
1104. But, independently, the charges are such as to preclude numbers from having the benefit of the Institution? The same would be the case if the charges were £40 or £50.
1105. But persons who could pay £40 could not send their sons to the University; a man may be able to pay £40 but not £150? No; quite so.
1106. Do you believe that if the expense were less more would join? I think if it were reduced a greater number would attend.
1107. If you had an attendance of twenty-five students, what reduction do you think could be made? Well; that is a matter involving some consideration of the question of domestic economy. The building affords accommodation for forty students.
1108. How is it only twenty-five can be accommodated? I have a suite of rooms till the Warden's proper house is built; it is not yet begun. As the students increase I shall be removed.
1109. Then the great cause of the charges being so high is that the attendance is so small, and as the number of students increase the charge can be reduced? Yes; but I do not think the charges high. I think the £95 might be reduced if we had more; but I am not pronouncing as to the judiciousness of it.
1110. When the State provides a great educational establishment, the object is to throw it open to the masses of the people? Yes.
1111. That is incompatible with the expense? And with the nature of the Institution too. We are constantly aiming to reduce the charges. At the time this Calendar was published the annual charge was £105; and it was lowered £10.
1112. The very fact of your answer to Mr. Windeyer's question shews the difficulty the establishment has in meeting its expense, that your four resident students do not pay the expenses? Yes. There is not a great deficit; and I am speaking of what would probably be the case did that number continue to be fixed.
1113. And you have endeavoured to supplement your means by these occasional parties? They are not exactly that.
1114. *By Mr. Black:* In St. Paul's College, as at present conducted, are you prepared to give a young man such an education, with the University education, as to fit him for Holy Orders? Yes, to prepare him for the Bishop's examination; that is, for such an examination as I had to undergo at the hand of the Bishop of London.
1115. Under ordinary circumstances, with ordinary ability, and ordinary application, how long must a student prosecute his studies to enable him to undergo successfully the examination of the Bishop? I should think a year after his degree; even previous to that, during his undergraduate course, a student ultimately intending to take Holy Orders might find time to attend the additional divinity instruction; this, together with the ordinary divinity instruction, was expressly intended to assist preparation for Holy Orders. Men here take their degrees younger than they do at Home, and perhaps a Bishop would not like to ordain a man at twenty-one;—they take their degree at twenty.
1116. At present, all instruction in divinity is confined to Monday lectures? Yes, at present to Monday. I have given them on Friday, and on other days as well; but last term I found that arrangement of the lectures I have mentioned most convenient. The above is the formal divinity teaching; pastoral teaching I have given, when I have had students in residence, on Sundays; then I give an address in the morning chapel service.
1117. What is the nature of the lectures on Monday—on divinity? Considering the students are virtually of the third year, they were on the Greek text of the Epistle to the Ephesians, and the Church history connected therewith, and on certain of the Thirty-nine Articles of the Church of England; besides these, they have to study certain textbooks by themselves, on which they will be examined, and of which I give occasional elucidations. If I had men of three years, some would be in St. Paul's Epistles, some in the Acts, some in the Gospels; they would attend lectures on different parts of the articles, and have different textbooks to get up. My lectures this year have been exclusively on St. Paul's Epistles, and certain of the articles, together with the elucidations I mentioned.
1118. Is there anything in these lectures to prevent their being equally suitable to a Presbyterian, a Wesleyan, or other dissenter? I am of opinion not; whether the Wesleyan or the Presbyterian would think so I cannot say. I have always fearlessly taught the religion of the Church of England, not at the same seeking out points of difference. A great portion of religious instruction (*e. g.*, that in the Evidences, the Canon of Scripture, early Church history) might be shared in by members of different communions. Both in 1857 and 1858 I have had students whose parents were not members of the Church of England.
1119. There is nothing sectarian? No, I teach the religion of the Church of England.
1120. *By Mr. Wilson:* That would be sectarian to the Roman Catholic? Yes it must be so.
1121. *By Mr. Windeyer:* I believe in most Church of England schools immediately under the supervision of the church, a boy might go all his life and never hear anything of controversy?

The Rev. H. J. Hose, M.A. versy? I do not think it would be wise to bring points of controversy before children. In saying this I would wish to see the danger, on the other side, avoided, of being neither hot nor cold, and of giving no distinctive teaching; I have no desire to see an emasculated system of theology taught.

30 Sept., 1859.

1122. Are you aware that by the reforms recently carried out in England, a man may go to the University and not be a member of the College at all? I am not aware of it; I know there are many changes.

The Revd. William B. Clarke, M.A., called in and examined:—

The Rev. W. B. Clarke, M.A. 1123. *By the Chairman:* You are a Fellow of St. Paul's College I believe? Yes.

1124. And an old resident of the Colony? For more than twenty years.

1125. You have been in the habit of devoting much attention to literary and scientific pursuits? Yes.

30 Sept., 1859.

1126. Have you had occasion to observe if any improvement has taken place in the literary tone of society here since the establishment of the Sydney University? That is a difficult question to answer; there are very few data by which a judgment can be formed. But it is, probably, premature to expect any general influence from the University at present, or for some years to come.

1127. Have you attended the meetings of the Council of St. Paul's College regularly? No; not regularly.

1128. Have you visited the buildings of the University at all? Yes.

1129. Have you any reason to know whether the expectations formed here, when the University was first established, have been realised to any great extent? My own opinion is in this matter very much guided by that of others. I should think not so much as might have been expected.

1130. Could you offer any suggestion of an improvement to the Committee that would conduce to the more rapid attainment of the object the Government had in view? So far as I can judge, from what I have heard, persons seem to think the teaching at the University not altogether in keeping with the requirements of the times we live in.

1131. *By Mr. Windeyer:* Is that your opinion? It is the opinion of others, in which I partly concur.

1132. *By Mr. Murray:* In what respect does the University teaching not keep pace with the times? In the present day there is a demand for a more extended course of education; one more suitable to the practical objects in which men are engaged in this country.

1133. Improvements of that kind have been made in the Universities in the old country? Yes.

1134. Then at present our University system has been founded rather in the experience of past times in England than in regard to the improvements of later days? Certainly. But I speak of the working of the system.

1135. What improvement would you suggest? I would suggest more attention to subjects important in a new country, natural history and physical sciences.

1136. Have you had any communication with the authorities of the University on the subject? No.

1137. Were any proposals ever made to you to deliver lectures? A proposal has been made to me on three occasions to accept a chair in the University. The proposal was not made formally, but by individual members of the Senate, and I declined to accede to it, under the circumstances in which I was placed.

1138. Not in a form involving any practical result? It was not; I could not entertain it in that form, but there was an objection, arising from the impossibility of my accepting the office without any suitable provision having been made for the remuneration of its duties. (*Vide P. S.*)

1139. On what subjects were you invited to lecture? The subjects mentioned were geology and mineralogy.

1140. Are you aware if any instruction is conveyed on those subjects? I am not aware that there is any such instruction in the University.

1141. Are these subjects entertained in St. Paul's College? I cannot conceive it possible, as there is but one lecturer.

1142. That branch of science is important and interesting in a country like this? Yes; it must be so in a country depending so much on its mineral wealth.

1143. The mineral wealth of this country is very great? Certainly.

1144. Independent of its gold, do you think it is as rich or richer than any other part of the World? It is impossible to say, unless we knew sufficiently the whole of it.

1145. Have you reason to believe any new metals could be discovered? I cannot say.

1146. It is a fact, at all events, that it produces minerals of one kind and another throughout the Colony, and that clearly shews that it is desirable this branch of science should be cultivated? It is cultivated at Oxford and Cambridge, and other Home Universities, and forms a part of the teaching in Universities on the Continent. It is also provided for by the by-laws of the Sydney University.

1147. Have you ever been invited to become a member of the Senate of the University? Sir Charles Fitz Roy offered me a seat in the Senate, and I declined it on the grounds that when Sir Charles Fitz Roy offered it to me, he at the same time put into my hands a correspondence between himself and the late Bishop. When I knew the terms upon which the Bishop had retired, I thought it proper to consider if I should be wise to involve myself in a quarrel with

- with the Head of my Church, and, therefore, I declined after having consulted His Excellency. Sir Charles then sent for Mr. Donaldson, and appointed him instead of me.
1148. That was before the Senate was formed? Yes.
1149. Since that period—since the matter in dispute with the Bishop has been settled, and the Senate has had the power of electing members—have you had any offer? No.
1150. Do you know if any one has been elected since the Senate had the power of election? I do not know who have been elected by the Senate. But I think now, I should not be willing to accept office as a Professor in the University, unless I was at the same time a member of the Senate.
1151. *By Dr. Lang*: Do you consider it desirable that the Professors should be members of the Senate? Decidedly.
1152. And the heads of the Colleges? Yes.
1153. *By Mr. Windeyer*: At Cambridge the Senate are all Professors? At Cambridge it is not perhaps necessary for a Professor to be a member of the Senate, but he can scarcely help being so, owing to the constitution of the University. All who have taken a perfect degree, as Masters of Arts or Doctors, having their names on the College Boards, are members of the Senate. There is also a Council called the Caput, consisting of five members.
1154. That corresponds with the Senate here? It has not so much power as the Senate here. The Senate at Cambridge consists of two houses, the younger members of which constitute the Regent, or Upper or White-hood House, the others make the Lower, Non-Regent or Black-hood House; and what they do in any new measure requires first the approval of the Caput, *i.e.*, the Caput possesses a veto. This is, in fact, the work of a little Parliament with an Executive Council.
1155. *By Dr. Lang*: Do you think that if the heads of the Affiliated Colleges were constituted members of the Senate, *ex officio*, that that would be a sufficient representation of the Colleges in Senate? That is a difficult matter to deal with. I came hither with all my old predilections and recollections of Cambridge, where the Senate is composed altogether of full graduates of the University, and it is a very different thing from the Senate here, many members of which might have no academical distinction, and who might be exceedingly well informed, or extremely ignorant in University matters. It was this which made me say, I consider the Professors should be members of the Senate, because a Professor might find himself interfered with in his teaching by persons who could not appreciate his objects; and he would have very little power against the Senate, all of whom hereafter may be persons without academical distinction, being elective.
1156. Do you think the Master of Arts would form a sufficient electoral body in this Colony? Not at present, they are too few by the Statute.
1157. Even supposing there were one hundred—if they were constituted an electoral body—do you think they would form a sufficient electoral body for the Senate of the University? It is a very difficult question; if you desire your Senate to be men of first-class University education the electors should be the same.
1158. If the heads of the Affiliated Colleges were made members, *ex officio*, would it not conduce to the formation of an electoral body, more in accordance with the constitution, if a certain proportion of the members of the Senate were elected by the Masters of Arts, and another proportion by the Legislature? It is merely shifting the difficulty. In Cambridge they know nothing of it; you might have one hundred here not qualified for such election, and you would be no better off, and Legislatures are variable.
1159. *By Mr. Windeyer*: Do you not know that under the recent reforms the Colleges do not hold the prominent position they used to do? I do not; I think they hold quite as prominent a position, if not one more so.
1160. Do you not know that all classes of religionists can now go and take a degree? Well, suppose it is admitted, the oath was all that formerly prevented; a man must be bound by conscience.
1161. Is it not a change? To some extent.
1162. Has there not been a great change in the old Universities in throwing them open to all denominations in the Kingdom? That I do not know sufficient about; I know that honors and degrees are more accessible than they were in some respects; but, I believe, honors were attainable at Cambridge, when degrees were not. I am not aware whether offices are so.
1163. The Universities were not formerly free to any man? A man at Cambridge could obtain all the advantages of the University education; but he had an oath to take, and if his conscience would not allow of his taking it he was prevented from obtaining his degree.
1164. You are aware now that any one can go to the University without going to College? I am not aware of that as a fact; I am aware there are arrangements by which men living away from the Colleges can get an associate's degree.
1165. *By Dr. Lang*: Is it not a fact that in England the system of Colleges is very much annihilated? I think that the life of Universities in England at present springs from the Colleges. At first they were both schools and Colleges.
1166. *By Mr. Windeyer*: Are you not aware that in old times the Professors were the only teachers? That might have been; but there were always Colleges, or schools, or private houses in which the Professors taught. The evils of the latter system led to a more strictly collegiate system, as we now understand the term.
1167. Is it not a fact that the teaching in the Universities of late became a dead letter; that it all went to the Colleges? Not all; in my own time, at least, the University teaching at Cambridge was not a dead letter. Certain Professors delivered lectures which were more or less required to be attended by certain students. The others lectured on subjects which all might attend, such as chemistry, natural philosophy, history, geology, mineralogy,

The Rev. W.B. Clarke, M.A.

30 Sept., 1859.

The Rev. W. B. Clarke, M.A. mineralogy, botany, &c. Professorships long ago, were, in some instances, considered distinctions of honor, and were sinecures. The Professorship of Greek, at Cambridge, up to 1792, was such. It is not so now.

30 Sept., 1859.

1168. You are not aware that Sir William Hamilton attributed the dying out of learning to the Professors not teaching, and the Colleges doing it? I am acquainted with Sir William Hamilton's writings, but I am not compelled to adopt all his views. Some of them are excellent, and he is right in saying that University Professors have not all always done their duty. All the teaching connected with the acquirement of literature and classical learning, or acquirements in mathematics, might certainly be the work of the Colleges, but the Professors, as a body, have never omitted to give lectures, in recent times.

1169. Was the attendance compulsory? Not on all to attend all. Those who studied civil law, for instance, attended the Professor of civil law. In physic, the students were obliged to attend the Professors of physic, botany, anatomy, chemistry, and medicine, as well as hospital practice. Candidates for Holy Orders, of course, are required to attend the Professor of Divinity.

1170. Are you aware that persons ascribe the decline of learning to the Colleges taking so prominent a part? I have heard it, but I do not agree with all I hear. I have no practical experience of a University without Colleges, and I do not know that learning has declined.

1171. Are you not aware that the Colleges exclude a great portion of persons? It is impossible where the interests of a particular Church are involved, but that where the influence of that Church is dominant, persons not of that Church, should be under disadvantages. In all Ecclesiastical systems it is the same.

1172. Your studies have been chiefly scientific? No; I have turned my attention to literary pursuits, as well, also, as to my professional studies.

1173. Lately? I have lately amused myself with scientific pursuits.

1174. I suppose you have a predilection for these pursuits, and would be likely to make these studies occupy a more prominent position than most persons? I think in a country where a great portion of its wealth is mineral, it is strange that no proper provision should be made for teaching sciences connected with its development. There are many practical studies which would be taught with advantage here.

1175. Would you make professional matters the subject of education? I would not make everybody an engineer, nor everyone a geologist, nor everyone an astronomer; but if any person wished to obtain information in the University, on engineering, geology, or astronomy, he should have the means of obtaining it.

1176. Is it desirable that the education given at the University should be general and not relate to particular branches of life? There must be certain general subjects taught; but the others should not be excluded in a perfect system, nor are they in the system propounded for Sydney.

1177. The University having certain means at its disposition, should it not give an education such as is necessary to the general life not to particular pursuits? It would be wrong to exclude the general course of study for the sake of particular pursuits.

1178. *By Dr. Lang*: Do you think it necessary that we should maintain so high a standard of classics and mathematics here as prevails at the English Universities? The standard is so high in England owing to the number of students and the objects of successful competition; it is impossible to expect such a thing here at present, but it is, of course, advisable that the standard should be as high as is compatible with the objects of the instruction afforded.

1179. Do you not think that too much attention is devoted to classics and mathematics, to the exclusion of other matters? I think that to neglect classics and mathematics would be to strike at the root of a liberal education. The classics are the basis of literature; the mathematics the basis of science.

1180. I presume by classics you understand history and other kindred subjects? I do not consider a man a classic who simply construes Greek.

1181. *By Mr. Murray*: Do you not think that, under the old system of the Universities in England, that the education of the men was rather confined to instructions calculated to fit his faculties for the acquisition of knowledge—in tutoring his faculties, not in communicating knowledge itself? No doubt, to a certain extent, that object was intended; and this is one of the grounds of difference between rival systems of mental training.

1182. Therefore the communication of knowledge has been more disregarded than it should have been, in the different branches of physical science. I apprehend knowledge is in them, knowledge of languages is not knowledge—language is the mere vehicle of knowledge; a man is not necessarily learned because he is well acquainted with Greek and Hebrew? That may be quite true; but being proficient in Greek and Hebrew, a man must have read the works upon which he will find many of his opinions in after life. Sir W. Hamilton who was just quoted, says:—"The study of language, if conducted upon rational principles, is one of the best exercises of applied logic."

1183. Do you not think that physical science should be more attended to? I think that public education should be in accordance with the requirements of the age.

1184. Should you recommend agriculture to be taught? Well, I should like to see it extended.

1185. It is taught? Yes, I think it is taught in the Dublin University. There are many things in the system of that University which contrast, favorably, with those of the English Universities.

1186. You know the University building? Yes.

1187. Do you think it was necessary to erect so costly an edifice? Necessary? Perhaps not; but I think it is a blessing that young men have such a building to look at, it has a tendency to elevate the mind. I should be glad to see all Sydney filled with such buildings. I do not think the money thrown away.

1188.

1188. Even though it cost £60,000? Even though it cost £60,000.

1189. Do you think those griffins and figures have any great connexion with the purposes of the University? That is another matter; better to keep the griffins outside; but they are not more out of place on the outside of the University, than they are in the inside of York Minster. I think if you destroy the ornamental or the beautiful in architecture in any country, it will decline to barbarism.

The Rev. W. B. Clarke, M.A.
30 Sept., 1859.

1190. But the most stupendous buildings in the World have been erected where the people were most ignorant as a body? Perhaps so; but it shews there must have been a master mind there, or they never would have been erected.

P.S.—I am aware that the opinions expressed in the preceding desultory conversation may have little weight with those who have been engaged in deep thought on many of the topics involved in the questions put to me, and that such a conversation can only be taken for what it is worth. Moreover, I have not the presumption to suppose, that after the establishment of the University, and after the considerate attention given by its founders to the system of proposed instruction therein to be followed, it is advisable to prematurely alter a plan that has been only partially tried.

My only desire would be to give the system as full and fair a trial as possible; that requires not only additional Professors, but, what are indispensable, additional students and the rewards of learning. The University may have been costly, compared with its present number of *alumni*, but, it must be remembered, that it has been built for "all time to come."

As regards one personal matter in the preceding evidence affecting myself, I wish to explain clearly, why, having desired to see taught one particular subject, which is already mentioned in the list given in the by-laws of the University, under the Faculty of Arts, I felt it my duty to decline the opportunity of teaching it, when that opportunity might have been considered as in my power.

Had the emolument to be derived from the Professorship been sufficient, even without any advantage to myself, to enable me to enter upon its duties, I might have entered upon it, from a desire to be useful, when I was solicited so to do.

But when I found that it would demand a considerable portion of my time, and that I should require the assistance of a colleague in my present parochial duties, in order to absent myself from them in the service of the University, and that the funds necessary to obtain this assistance must be, at least, equivalent to *three times* the annual *honorarium* of the Professorship; that, besides, the expense of moving to and fro would equal another stipend of the Professorship, and that, therefore, my outgoing would be, at least, *four times* so much as my income, without producing anything in the way of payment for the services required, I could do no otherwise than decline to accept an office which was so embarrassed by difficulties.

In the English Universities the Professors have generally sufficient independent incomes arising from other preferment, to enable them to accept the chairs they occupy without any pecuniary sacrifice; and, therefore, they can even perform gratuitous services, or remain contented with the fees from their pupils. But what preferment is there in this Colony, which is commensurate with the required duties of a theological teacher, to say nothing of his becoming a geological teacher into the bargain? What pretension could any man with the official income of £200 per annum have to undertake fresh duties, leaving half his former ones unperformed, (as they would necessarily be) which fresh duties would cost him double his whole former annual income?

Such a question as this ought to open the eyes of practical legislators to the necessity of *sufficient endowments*, I do not mean for sinecures, but to enable the Colony to take advantage of the qualifications of those whom it might employ in the best interests of its inhabitants, instead of adopting the frequently more expensive and sometimes less profitable plan of importing new agents, who have, for a long time before they can teach what is peculiarly connected with the country, to become diligent learners.

Looking then at the question in all its bearings, and having been for many years discharging in private, by a considerable and unsought correspondence with persons in all the Colonies, in some degree, the duties of geologist and mineralogist,—by performing in fact without fee or reward, services which, if paid for, would to another realize a considerable income; having, moreover, not excluded even the Government from participation in such services when they have been required; having for a considerable period of my life acted in this way willingly and conscientiously, I did not think I was compelled to burthen myself with fresh engagements, which would inevitably plunge me into irremediable difficulties if I did not faithfully discharge them, and which, if I did so perform them, would, from mental exertion, very shortly prevent me continuing to serve either the Colony or the Church in any capacity whatever.

I have also to add, that the amount of work which was proposed in the number of lectures supposed necessary, would have made it anything but a "labor of love"; and one, which at the same time, could not meet with reciprocal attention from the pupils in the lecture room, who can never obtain due advantage from Collegiate or University instruction, when they are compelled to attend more lectures than they can read up to, or which they can follow up by subsequent study.

St. Leonard's,
6 October, 1859.

W. B. C.

WEDNESDAY, 5 OCTOBER, 1859.

Present :—

MR. MURRAY,
MR. JONES,
REV. DR. LANG,MR. PLUNKETT,
MR. CAPE,
DR. WILSON,

MR. WINDEYER.

TERENCE AUBREY MURRAY, Esq., IN THE CHAIR.

Samuel Deane Gordon, Esquire, called in and examined :—

S. D. Gordon,
Esq.

5 Oct., 1859.

1191. *By the Chairman*: You have taken an active part, I believe, in reference to the establishment of the proposed Presbyterian College in connection with the Church of Scotland? I moved for a Committee of the Legislative Assembly during the last Session, to consider a Petition that had been presented on the part of the Reverend Dr. Lang, with respect to the proposed Presbyterian College; but I took no part in the proceedings which took place out of doors with reference to the establishment of that College. I was put upon a Committee which was appointed by a meeting to take steps for establishing a Presbyterian College, but not entirely agreeing with the proceedings, I declined taking any part.

1192. You differed in principle from the promoters of the proposed College? Yes.

1193. Was that from any general objection to Affiliated Colleges? The objection which I felt was this, that the proposed College was to be erected in connection with the established Church of Scotland, to which I do not adhere; I belong to what is called the Free Church, and my objection was that this College was proposed to be in connection only with one portion of the Presbyterian population of the Colony, whereas I thought that it ought to be on a sufficiently liberal basis to admit all Presbyterians.

1194. Has not that plan been ultimately agreed upon? I am not aware that it has.

1195. You see no objection to the establishment of a Presbyterian College, if it could be made to include all classes of Presbyterians? Certainly not, I think it very desirable.

1196. Have you paid any attention to the working of the Sydney University? No, I have not, to the educational working of it.

1197. It has been given in evidence here, that the number of students in the University has rather decreased since its first establishment—do you think that is attributable to the desire parents in general have to embark their sons in the ordinary business of life at an early age, or to any indifference to education of a higher character? I am really unable to offer an opinion on the subject. I have given the educational part of the subject of the University very little consideration.

1198. *By Dr. Lang*: Has your attention been particularly drawn to an Act, entitled “An Act to provide for the establishment and endowment of Colleges within the University of Sydney”? Yes, my attention has been drawn to that Act.

1199. Does it appear to you that that Act confers any exclusive rights or privileges on any particular denomination, or does it refer generally and equally to all? I think the Act refers generally to all denominations alike.

1200. Is there any particular religious denomination mentioned in the Act? I think if my memory serves me right that there is no particular denomination mentioned in the Act, but that there is mention made of four denominations in the Deed of Grant of land to the University for the purpose of establishing Affiliated Colleges.

1201. Are you aware that that Deed of Grant was issued almost immediately after the passing of the Affiliated Colleges Act? I am.

1202. That Deed of Grant confers special privileges on four particular religious denominations? Yes.

1203. Are you aware on what principle or for what reason these four denominations were selected for this special boon? I presume it was because those four denominations were receiving State support.

1204. Did the Affiliated Colleges Act contemplate any special favor on that account to these four denominations? I should think not, because they are not mentioned in the Act.

1205. Can you state when the Affiliated Colleges Act was assented to by the Governor? It is dated “Government House, Sydney, 2nd December, 1854.”

1206. When was that Deed of Grant in favor of the four favored Colleges passed? The Deed of Grant is dated 23rd January, 1855.

1207. Do you consider that Deed contrary to the spirit and letter of the Act as far as the Presbyterian denomination is concerned? I do with regard to these four denominations. My opinion of the Act is that it provides that Colleges may be erected by any denomination, but the Deed only provides for these four denominations, which is not, I think, in accordance with the spirit of the Act.

1208. Are you aware whether the whole of the land available for Affiliated Colleges, belonging to the University, has been appropriated to these four denominations? I believe it has all been appropriated.

1209. So that there is no room for any other Colleges, if there should be an application from any other quarter? No; the evidence given before the Select Committee of which I was Chairman went to shew that the whole of the land was appropriated to these four denominations, and that there was no more land in that vicinity to be appropriated for the establishment of any Colleges for any other denomination.

1210. How is the appropriation for the Presbyterian College expressed? I hold in my hand a copy of the Deed of Grant, in which I find these words—“And as to one other portion of the said land hereby granted to the said University upon the like trust for a College in connection

"connection with the Church of Scotland, when the same shall have been in like manner established and incorporated as a College within the said University, and the founders thereof, or subscribers to the same, shall have complied with the said conditions of public endowment."

S. D. Gordon,
Esq.
5 Oct., 1859.

1211. Are you aware whether there are or are not many families and individuals of the Presbyterian communion in this Colony who do not belong to the Church of Scotland? I should think two-thirds of the Presbyterian community in this Colony do not adhere to the Church of Scotland. Besides those who belong to the Church of Scotland, there are the Free Church Presbyterians, the United Presbyterians, and the Synod of New South Wales Presbyterians, and others.

1212. You consider, then, that that portion of the Presbyterians who do not belong to the Church of Scotland have been virtually excluded from the benefits of the Affiliated Colleges Act? Certainly, under this Deed of Grant they are excluded; but it was stated by certain witnesses examined before the Committee on the proposed Presbyterian College, to which I have referred, that it was intended that any Presbyterians choosing to avail themselves of the privileges held out by the Act, should have the same advantages as the Church of Scotland.

1213. But, in fact, they can now only have such advantages by special favor? The Deed of Grant is exclusively to the Church of Scotland, and I presume that the representatives of the Church of Scotland could, at any time, assume their right of control over the land, as being granted for this particular body.

1214. Are you aware that the present state of the case has occasioned great dissatisfaction among a numerous portion of the Presbyterian community? I am aware that it has, and that there are considerable diversities of opinion with respect to it.

1215. Are you aware that a considerable number of influential Presbyterians have refused to contribute towards the proposed College, in consequence of this state of things? I am aware that a very large majority of the Presbyterian body have declined to contribute anything, though they would willingly have done so, provided all Presbyterians could have been admitted on an equal footing.

1216. On such a basis as the Act implies and prescribes? Exactly so.

1217. What would you suggest in order to re-establish the equality contemplated by the Act among the different sections of the Presbyterian community? I should think that this section of the Deed of Grant, which gives that portion of the land intended for the Presbyterians generally to the Church of Scotland, only should be revoked or altered, so as to admit all Presbyterians upon the same footing. If a College is established, as is here described, in connection with the established Church of Scotland, I am quite satisfied it will not receive the support of the general body of Presbyterians.

1218. You believe there will never be united or harmonious action for the establishment of a Presbyterian College till these grievances are redressed? I will not say never, but at present in all likelihood there will not be. The Committee on the proposed Presbyterian College, to which I have before alluded, made the following recommendation in their Report:—"In conclusion, your Committee further recommend that the Legislature should refuse to pass any Act for the incorporation of a Presbyterian College as contemplated under the Affiliated Colleges Partial Endowment Act, until steps have been taken *de novo* by the parties concerned, and in particular until the above recommendation has been complied with or fully considered by the Legislature." That recommendation is with respect to this Deed of Grant, that it should be altered in such a way as would admit all Presbyterians upon the same footing. It was the opinion of the Committee that it could not have been contemplated by the Legislature which passed the Affiliated Colleges Act that more than one Presbyterian College should be erected in connection with the University; at least that the Government would certainly not provide a salary for a Principal and give aid to the establishment of three or four Presbyterian Colleges; and, therefore, for the purpose of uniting all Presbyterians in one College, they recommended that this part of the Deed of Grant should be altered so as to do away with the implied connection of the College with the Church of Scotland.

1219. Do you consider that it would be very undesirable for more than one Presbyterian College to be established? I think it would be very undesirable. I should think one Presbyterian College would be sufficient for many centuries to come.

1220. Are you aware that there is a strong objection on the part of those Presbyterians who are opposed to the present system of supporting all religious denominations alike from the Public Treasury, to the phrase "systematic religious instruction," in the preamble of the Colleges Act? I am aware that many Presbyterians object to the retention of that phrase, because they do not think it is the duty of the State to support all religious denominations indiscriminately alike.

1221. Do you suppose there is any benefit derivable by any of the Colleges from the retention of that phrase in the preamble of the Act? Perhaps I am not very well qualified to give an opinion upon that; but my own opinion is, that there is no advantage in its retention.

1222. Does that phrase insure any result that could not be equally obtained without it? I think not. I think religious instruction could be equally as well imparted without the phrase as with it.

1223. Is not the particular Act for the establishment of any particular College sufficient to regulate the mode in which such College should be conducted, independently of any such phrase in the preamble of the general Colleges Act? I should suppose sufficient provision could be made in any Act incorporating any College for all purposes of management, even if this phrase were withdrawn from the preamble of the general Colleges Act.

1224. Do you consider it desirable to retain a phrase that obviously creates an obstacle and a grievance in certain quarters without its being necessary in other quarters? I can only answer

S. D. Gordon, answer for myself—that I object to the phrase, and think it unnecessary. Other persons Esq. may think differently, and consider it essential to be retained.

5 Oct., 1859. 1225. *By Mr. Plunkett*: Do you think there is any virtue in these words, "systematic religious instruction," seeing that they are only in the preamble of the Act as a mere recital, and not at all in any of the enacting clauses? That is exactly my objection—that they are unnecessary because they can have no real effect.

1226. Being only unnecessary and not attended with any legal effect, do you think they offer such an objection as ought to interfere with the establishment of Colleges under the Act? I think they ought not to interfere with the establishment of Colleges, as the words are immaterial in themselves, but if, by their retention, they give offence to any parties, I think they would be better out.

1227. Although in other respects harmless? Yes.

1228. Your opinion is that one Presbyterian College would be sufficient? It would certainly be sufficient to provide for all the wants of the Presbyterian population for centuries to come.

1229. I believe it is the case that all Presbyterians hold the same standards—the Westminster Confession of Faith? Yes, in general.

1230. That being so, there is no insuperable obstacle to their combining for the establishment of a College? There should be no obstacle; that is exactly what I have been wishing to advance to the Committee; but while the grant of the land is limited to a College in connection with the Church of Scotland, that will be an obstacle to other Presbyterians joining in its erection, or giving it their countenance and support.

1231. If that objection were removed, you think there could be then no difficulty in all Presbyterians uniting for the purpose of erecting a College? There should be no difficulty; but very likely differences of opinion would arise.

1232. *By Mr. Cape*: Have you heard any definition suggested that would accomplish the object of uniting the Presbyterian community in the establishment of a College? I do not think I have heard of any; but it would be very easy to substitute one that could not be objectionable.

1233. *By Mr. Plunkett*: Do you not think that if there were inserted in the Presbyterian College Bill a definition that the term "Church of Scotland" should be held to include all Presbyterians holding the standards of the Westminster Confession of Faith, that would answer all purposes? I do not exactly understand the question.

1234. I mean that a legal definition should be given in the Presbyterian College Act to the words "Church of Scotland," sufficiently comprehensive to embrace all branches of the Presbyterian Church, so as to do away with the objection; as I believe there can be little doubt that the intention of the framers of the Colleges Act was to allow all Presbyterians to avail themselves of it, and not to confine it to any one section; although the use of the phrase "Church of Scotland" would, in your opinion, make it appear otherwise? I have no doubt it was the intention of the framers of the Act to admit all Presbyterians upon an equal footing; but while this phrase is continued in the deed of grant, it will effectually be a deed of grant for a College in connection with the Church of Scotland alone; for although other Presbyterians might subscribe their money for the purpose of building the College, yet, if a dispute arose at any time, the representatives of the Church of Scotland in this Colony could assert their exclusive right to the land on the terms of the deed of grant.

1235. What I propose is virtually to amend the deed of grant, by enacting that the words "Church of Scotland" should be held to include all Presbyterians? I think it should be phrased something in this way, that this College should be built for the use of all Presbyterians holding certain standards, for instance, the Confession of Faith and the Catechisms of this Church, larger and shorter, &c. That might obviate the difficulty; but while you retain the words "Church of Scotland," the College will be always taken as being in connection with the established Church of Scotland, and therefore objectionable.

1236. *By Mr. Jones*: If it were recited in an Act, that it should not be confined to that particular Church, but should include, in the most comprehensive way, all Presbyterians holding the same standards of faith, do you not think that would do away with the objection entirely? I do not think it would, if the words "Church of Scotland" is retained exclusively.

1237. What do you propose to carry out what you believe to have been the intentions of the Legislature? I think this phrase should be entirely taken out of the deed; it is not in the Act, and the Act and the deed do not correspond. The Act is open to all denominations alike who choose to avail themselves of it, but the deed of grant to the University grants the lands only to the four denominations receiving State support, excluding all the other denominations, and that is my great objection to it.

1238. But you have also a special objection, that instead of setting aside one portion of the land granted to these four denominations, for the use of the Presbyterians of the Colony generally, the deed limits it to that particular section of the Presbyterian body which is in connection with the Church of Scotland? That is my objection as far as the Presbyterians are concerned.

1239. Do you think, if this deed of grant were amended so as to convey the land to the use of the Presbyterians of the Colony, under some comprehensive designation that would admit the whole of them, that would remove one main stumbling-block in the way of the erection of a College by the joint action of the various bodies of Presbyterians? I think it would go a long way towards it.

1240. *By Mr. Plunkett*: You observe that the deed of grant to the University authorises the University to give sub-grants? Yes.

1241. You are aware that the sub-grant to the Presbyterians has not yet been given, all the necessary conditions not having been yet complied with, as required by the Affiliated Colleges Act? I am aware of that; and it is before the sub-grant is given that this alteration should take place. 1242.

1242. Would not the best way to rectify the error be to enact that, instead of giving a sub-
grant in the confined terms you now think they would be bound to do, it should be given in
such a comprehensive way as would meet the views of all Presbyterians? I think so. I believe
there is no doubt the deed was drawn previously to the final passing of the Act—that it was
in fact drawn to correspond with the Bill as at first introduced into the Legislative Council, and
the alterations that were made in it during its passage through the House not having been
observed by the person who drew the deed, it was issued just as it had been previously
prepared. Perhaps the Committee would permit me to read one of the recommendations of
the Report of the Committee on the Presbyterian College Bill, of which I was Chairman:—
“ In the course of their investigation the Committee have discovered, with some surprise, that
“ while all denominations were placed on precisely the same footing by the Affiliated Colleges
“ Partial Endowment Act, passed on the 2nd December, 1854, a deed of grant issued to the
“ Senate of the University on the 23rd January, 1855, intended to convey certain lands to
“ that body for carrying out the objects of the University and Affiliated Colleges Partial
“ Endowment Acts, purports to restrict the benefits of these Acts, as regards the land proposed
“ to be made available, to merely four denominations, and among them to the Church of
“ Scotland, thereby excluding a large majority of the Presbyterians of the Colony from all
“ right and title to the said land. Your Committee cannot concur with Mr. Merewether,
“ that this restriction, which appears to them clearly illegal, was intentional on the part of
“ the Government; they are rather of opinion, with the petitioner and Mr. Stenhouse, that
“ it was a mere oversight of the draftsman who drew up the deed of grant. On the grounds,
“ however, not only of its illegality, but because it seems to interfere with the establishment
“ of a Presbyterian College, on a broad and liberal basis, in conformity with the Act, your
“ Committee would recommend either that the deed of grant be revoked, or an Act of the
“ Legislature passed to correct the mistake.” As this Committee is inquiring into the
working of the University, perhaps I may be permitted to say that it appears to me very
objectionable that the Senate of the University should have given away the whole of the
lands available for College purposes to the four State-paid denominations—eighteen acres to
each—a quantity quite unnecessary for the purpose of building a College upon, and whereby
the Independents, the Baptists, the Primitive Methodists, and all other denominations what-
soever, although contributing their quota to the general revenue of the Colony, and possessing
as good a right to a portion of the land as any other denomination, have been excluded from
participation in the advantages of the Affiliated Colleges Act. I think if the deed is to be
altered at all, it ought to be altered in this respect, so as to include all denominations alike
who choose to avail themselves of the provisions of the Affiliated Colleges Act. If I am
rightly informed, no College in England has more than about seven acres of ground attached
to it.

S. D. Gordon,
Esq.

5 Oct., 1859.

1243. *By Mr. Windeyer:* I suppose you think the sooner the alteration is made the better,
before any improvements are made upon the land by any of the Colleges? Yes, I think it
should be done before any vested interests may interfere.

THURSDAY, 6 OCTOBER, 1859.

Present:—

MR. BLACK,
MR. CAPE,
MR. JONES,

DR. LANG,
MR. MURRAY,
MR. PLUNKETT,

MR. WINDEYER.

TERENCE AUBREY MURRAY, ESQ., IN THE CHAIR.

William Sharp Macleay, Esq., called in and examined:—

1244. *By the Chairman:* You have devoted a good deal of attention to scientific and literary
pursuits? I have, that is to say, to particular branches of natural science. W.S. Macleay,
Esq.

1245. Have you visited Sydney University at all? When the meetings were held in my
neighborhood, I attended several of the Encœnia or commemorations, but I did not attend
the last one. I have seen the new building once or twice. 6 Oct., 1859.

1246. Are you one of the Senate? No, I am not.

1247. Has it ever been proposed that you should be one of the Senate? It was proposed; my
name was on the original list, but I declined being a member of the Senate, for reasons, to
which, as they have now passed away, it is unnecessary to recur.

1248. That was when the University was first established? Yes.

1249. Have any overtures been made to you, in regard to your being on the Senate, since
then? No, never; I fancy that I was sounded on the subject, that was all.

1250. You have had an objection to the University, on the ground of its having been imbued,
in some way or other, with sectarian tendencies? Yes; that in my mind was not the original
intention of the founders; which, if I am right in my understanding of it, was afterwards
set aside by a sort of compact made by two Bishops of the Church of England with Sir Charles
Nicholson and Mr. Wentworth. From that time I determined to decline having anything
to do with the Sydney University.

1251. You were not favorable to the establishment of these Affiliated Colleges? No; I think
it was a retrograde step. At a time when the two great Universities of England are every
day becoming more liberal, and sinking those bitter sectarian animosities which have so
long

W.S. Macleay, long prevailed, we are, by the establishment of these Colleges, doing what we can to revive them. I think that bitter sectarianism will be the result of this system; and that it would have been far better if the University had been established upon the original principle—a principle adopted in the national schools, namely, of educating our young men of different religious creeds together.

Esq.

6 Oct., 1859.

1252. Do you think that, on the score of providing household accommodation for young men, it was necessary to establish those Colleges, for that appears to have been one of the objects for which they were established? I think there might have been boarding-houses of any sects, but still the lectureroom might have been the same for all.

1253. Are you aware of the fact that some of the members of the Affiliated Colleges are on the Senate of the University? Yes; I am aware—there are only two I believe.

1254. Has it ever occurred to you, that in consequence of fellows of Affiliated Colleges thus being on the Senate of the University, it might have the effect of impairing the strictly secular character which the Sydney University itself was intended to have? I may say that I have heard—although if you ask me to prove it I cannot—I have heard that there was such an interference; perhaps it would not be fair that I should mention my authority.

1255. It is obvious, I think, if the governing body of the University is composed, to a great extent, of gentlemen who properly belong to these Affiliated Colleges, they may infuse their sectarian views into the general management of the University? It is possible; but of course it will depend a great deal upon their personal influence, and upon the influence of their character; and the influence which they very naturally would have derived from their high education, may possibly not be exerted in this direction.

1256. But high education, after all, does not prevent men being imbued with sectarian principles? I think it does, in a certain degree—a man of high, scientific education, is usually liberal. I agree with you, that a man may be well versed in science and literature, and yet may have strong sectarian prejudices. I have known cases: the late Baron Cauchy, a very learned man, and one of the greatest mathematicians in France, whom I knew very well, I conceive to have been a bigoted man; but I should say that, in general, science does make a man liberal. I have known a great many scientific men, both in England and on the Continent, and I have almost always found that science tended very much to liberalise their views, both in politics and in religion. The good observer soon learns to distrust his preconceived ideas, and tries to subject everything, without bias, to investigation.

1257. Do you think it desirable that the Legislature should guard against such a contingency as the ascendancy of the officials connected with the Affiliated Colleges, in the councils of the University? I do not know that you can interfere with it. As I understand the charter given to the Affiliated Colleges, and the compact made with the University, you have scarcely any means of getting out of the difficulty, even if it were absolutely necessary to make the attempt.

1258. The charter granted to the Affiliated Colleges has nothing to do with Fellows being on the Senate? The Affiliated Colleges can scarcely admit any one who does not belong to the particular sect of some one Affiliated College, and they will doubtless complain if their members should be excluded specially from the Senate.

1259. If the management of the University falls into the hands of Fellows of the Affiliated Colleges, all of which are sectarian establishments, then the University itself may become a sectarian establishment to some extent? I should hope that would never happen. I should hope the Senate would never elect, *ceteris paribus*, a majority of their Fellows from the Affiliated Colleges. I can hardly think they would, from what I know of the Senate now; the majority of them are too liberal for that.

1260. But it will be a shifting body? I think it would be better if the members of the Senate had nothing to do with the Affiliated Colleges; that is my own private opinion.

1261. Are you aware of this, that certain modifications of the principles on which the University was founded, were made? Yes, I paid great attention to such modifications at the time.

1262. Do you think that they involved any great concession in regard to the principle involved? I think they did.

1263. Then the Senate, in that instance, have departed from the original intention? Yes; I am, and ever was, against that compact. In fact, I may say, that I believe both Sir Charles Nicholson and Mr. Wentworth went into it very reluctantly, but that they conceived themselves—erroneously, as I thought at the time—forced to yield.

1264. The Senate in that instance abandoned the principle on which the University was founded? I think so, but it is a mere matter of opinion. I was very sorry for it at the time, because at the first formation of the University I looked forward to an establishment of a very different character altogether. I thought there would be very little of the theological element in it, and I much regretted to see this retrograde step taken at a moment when the Universities of Oxford and Cambridge were endeavouring to get rid of theological domination, and to introduce more of the lay element.

1265. You think then that our University is established more in accordance with what the English Universities were some time ago than with what they now are? I think so. I need not tell you that my own University is Cambridge, and I may state, that at that University there was no difficulty in a person of any religion obtaining admission, only at the end of the prescribed three years of study he could not take his degree without having signed the thirty-nine articles. At Oxford, I believe, it was different, for the thirty-nine articles had to be signed before matriculation. I remember that at Christ College, Cambridge, in my time, Lord Petre, a well known Catholic nobleman, was educated; and a friend of mine, an Unitarian, went through all the examinations for honors, but he could not take his degree, because it was necessary before students were called up to the Senate House to take their degrees, that is, before

before they placed their hands between the hands of the Vice-Chancellor, that they should have signed the thirty-nine articles. So that though members of other communions than the Church of England could not at Cambridge take degrees, they could enjoy all the chief advantages of an University education:—and to shew how far that principle of liberality has been carried, I may say that, although they may not have taken degrees, such persons can become members of the United University Club of London, which is understood in general to be a Club of Graduates. Under the old plan men of any religion could have all the chief advantages of an University education, but I believe now that the system is even more liberal, and that even sectarian Colleges may be formed at Cambridge; I do not, however, approve of them, nor have I heard that any have been there established. I think it is a great mistake to form such Colleges, for, from my own knowledge of private schools in the neighborhood of London, I can speak to the extraordinary hostility which exists between boys in contiguous Protestant and Roman Catholic schools. A feeling is too often manifested, such as ought not to exist in a country like England. It is notorious that between Presbyterian and Church of England schools there are similar manifestations. Young people are much more inclined to be intolerant than persons who have seen more of the World. The intensity of bigotry is usually in proportion to the ignorance of the bigot.

W.S. Macleay,
Esq.
6 Oct., 1859.

1266. That is as they are taught? Yes, as they teach one another. I am entirely against sectarian Colleges.

1267. Can you offer the Committee any suggestions as to how any evil to be apprehended in the present circumstances may be avoided—this being a matter of such vast importance ought the State to be bound by any arrangement between the University and the Colleges—nothing in the way of repudiation is involved? I think it is rather too late to change your system without first trying the effect of it.

1268. If, for instance, we find that a great educational institution has been founded upon false principles in one age, are all future ages to be bound by it? Now that you have been imprudent enough to allow these sectarian Colleges to be established I think you ought to allow the system to proceed; to see whether it works well or ill.

1269. *By Mr. Black*: Do you not think the experience of the working of the English Universities may be considered conclusive on this point, before it is demonstrated in our own University? I think the English Universities have been led to adopt their present course from the experience of their Masters of Arts who have gone every year in crowds to the Continent, and observed the state of the Universities there; more particularly the German ones. I believe the experience thus gained to have very much led to the changes that have taken place in England. I do not agree, however, in the propriety of all the changes which have been adopted in England. I think the taking of degrees in the natural sciences, and in other branches of science quite a false step. The people who hitherto have taken their degrees in the natural sciences at Cambridge and Oxford have never done any thing to distinguish themselves in those sciences, and I look upon it as only an easy way for an indolent person to obtain his degree. I think the old system of examinations in Greek, Latin, and Mathematics, far better for all students; for after all what is the use of the University? Not so much to teach learning as to teach us the habit of learning. After leaving the University a highly educated man is learning all his life—from the time of leaving the University to his death-bed.

1270. *By the Chairman*: But do you not think that knowledge as knowledge ought to be taught at the University? No doubt any acquirement of knowledge is a great thing, and you could not well be taught Greek or Latin without obtaining some knowledge; perhaps the knowledge thus obtained may not be of any great use in the business of the world, for very few men use their Greek, Latin, or Mathematics after leaving the University. What then is the true use of it? It is that the mind becomes inured to the process of learning, and accustomed to reflect.

1271. The altered course of education is to improve the faculties, so as to render them better able to acquire knowledge, but language does not constitute knowledge, it is the mere vehicle by which knowledge is conveyed; the teaching of the great parts of physical science does, however, involve the communication of knowledge? Yes, but even as regards the natural sciences you will make very little progress with them unless you know something of the learned languages, particularly Greek and Latin.

1272. No doubt the knowledge of Greek and Latin is very useful? Independently of their value as regards the natural sciences, they are particularly useful in acquiring the modern languages of Europe, and surely nothing can be more advantageous to a man as he goes through the world than the knowledge of French, German, Spanish, and Italian. These languages, or at least, some of these, are absolutely necessary. Now a student could not have a better foundation for learning them than a knowledge of Greek and Latin, nor could he have a better foundation for the applied sciences than mathematics; and I think it quite a mistake—because young men are apt to become idle and to apply themselves to desultory reading—to allow them to take their degree in natural sciences. In proof of which, I repeat, that not one man, who has of late gone out, that is—in other words—taken his degree in the natural sciences, appears to have done anything to extend the field of science.

1273. What do you mean, in particular, by the natural sciences? I mean zoology, chemistry, botany, physiology, geology, &c. A man at both Oxford and Cambridge, can, at the present time, go out in the natural sciences as well as in Greek, Latin, mathematics, moral philosophy, and logic. The latter are the old studies by which a man got his degree in my time. The great mass of the students are still examined in these, and the classes are made out in them; but there are a few men who now say: “We will content ourselves with the least possible quantity of Latin and Greek, and we will apply ourselves to chemistry, physiology,

W.S. Macleay, Esq., "physiology, or some other branch of natural science." They are accordingly examined in these branches and take their degrees in them; then another number will go out in law and modern history, and will avoid, also, a strict examination in Latin, Greek, and mathematics.

6 Oct., 1859.

Well, I conceive all that to be a mistake, and I think that the old system is the best.

1274. Still you would have these sciences taught in the University? Yes; I would have them taught by lectures, and in general they always were so taught at both Cambridge and Oxford. There were Professors of most of these sciences. There was no Professor of Natural History at Cambridge, in my time, but there were Professors of mineralogy and geology, and of botany. There was no Professor of Zoology.

1275. Do you think the nature of the knowledge involved in the acquisition of a degree, prepared men to distinguish themselves in the world? Not, perhaps, the particular knowledge acquired, but I think that, in the acquirement of it, the mind was trained to observe and to reason. I think, for example, the old studies of mathematics and logic, with the critical study of a good stiff passage from a chorus in one of the old Greek plays, to be a better preparation for even the mind of a naturalist, than any chemical experiments or examination of plants.

1276. Suppose you combine the two? But then you run the danger of diverting too much a young man's mind from the subject to which his mind ought to be particularly directed; for instance, I observed when I was at the University, very few of the "reading" undergraduates would attend what were called amusing lectures, such as Professor Smythe's "Lectures on Modern History," but when once they became Bachelor's of Arts they would fly to them, and did so with great advantage. Indeed it was never considered advantageous for the undergraduates to attend such lectures, because it was found that their minds were too much distracted from the proper studies of the University.

1277. You are yourself an University man? Yes; on leaving Westminster school I became a member of Trinity College, Cambridge.

1278. The general system in your University has very much altered from what it was in your time? Yes; I have reason so to understand.

1279. It is in your opinion improving? I do not know that. I do not conceive this introduction of new studies to take a degree in to be an improvement, and I have heard many University people object to the change. In addition to the old subjects of Greek, Latin, moral philosophy, logic, and mathematics at Cambridge, it was always expected, although you did not get many marks by it, that you should give some answers with regard to Paley's Christian Evidences, and works of that kind; and in the second year there was at Trinity College always a course of lectures upon one of the Gospels—critical lectures—but that had nothing to do with the great University examinations. We were in my time on such subjects examined in the College only.

1280. Have you compared the system established in our University with the modern improvements that have taken place in England? I have no objection to the Sydney system, if you mean the system of lectures, but the great defect of our University is one which you cannot remedy—one which, indeed, money cannot completely remedy—I mean a want of the proper amount of competition.

1281. Do you think the establishment of the University at all premature? I think it to have been very premature, and it was the very reason, when Mr. Lowe first proposed the matter to me, which I gave him for my reluctance to be connected with the University. However, he said that there was a new plan formed, a new experiment to be made, and I accordingly consented that my name should be put on the original list of the Senate; but the truth is I always thought the establishment premature. I may mention, in support of this opinion, that I know a case where a young man took honors here—he took the degree of B.A.—and then went to the University of Oxford, where he applied to be admitted a member of Baliol College, but could not pass his matriculation examination. But do I argue from that that there was any fault in the conduct of the Sydney University? Far from it. But I do say if you have only three or four men studying together, the head among that number will be a mere "triton of the minnows," while if he contends with some five hundred, as in the Cambridge University, he will most probably have some gigantic intellects to encounter. It is competition that makes the best University. You may erect the noblest building in the world, and produce no particular result to the general cause of literature; the grand object of an University ought to be to have plenty of competition, something to excite young men to effort and industry.

1282. Is not the communication of young men one with another highly beneficial? No doubt. I may also say that to have a large number of prizes in an University is a misfortune, for where prizes are so numerous what merit is there in obtaining one? The great thing is to have something to contend for that will distinguish the winner. In the present very thin state of the Sydney University I consider the founding of a new prize to be a disadvantage, inasmuch as it tends to weaken competition. Your intending benefactors had better let their money go to the foundation of new Professorships.

1283. There has been a very large sum of money spent upon the building of the University? Yes, I think a great deal too much. I think it was a great mistake, for, as I said before, I do not think the £50,000, or whatever sum has been spent upon it, will remedy the great disadvantage the University labors under. If this money had been employed to bring out distinguished men as Professors of the various sciences it might possibly have induced young men to come to the University. If there were a celebrated medical or law lecturer, for instance, I believe it would be a great advantage—for a celebrated lecturer will always draw students to an University; and, I believe, such a man would here be specially advantageous as increasing the number of competitors by drawing young men from the neighboring colonies. That would prove to you a great benefit, for every one knows that it is not a fine building which

makes

makes the character of an University, but the Professor who teaches, and the young men who are taught. W.S. Macleay,
Esq.

1284. In your opinion was there any occasion at all for such a building? It depends upon the taste of people, some people are very fond of architecture; but so far as the real purpose of an University is concerned it appears to me to have been throwing money away. 6 Oct., 1859.

1285. The necessary instruction might be communicated in a much humbler building? Certainly; it would astonish some people if they were to see some of the German or French Universities. It is evident that the building has nothing to do with the education given within it. No doubt Oxford and Cambridge being rich foundations have splendid buildings, but the students there could be just as well taught without them.

1286. *By Mr. Jones*: It is not in any degree owing to their fine buildings that they have gained their celebrity? No; but to the men they have sent out into the world.

1287. *By the Chairman*: Many of the Universities on the Continent have simple and plain buildings? Yes, and some of the Universities of the United States have still plainer.

1288. And these Universities send out eminent men? Yes; first-rate men some of them.

1289. *By Dr. Lang*: Is it not the case that some of the German Universities have no buildings at all? I believe that in every case there is a public room for the Senate or managing body where they give degrees, &c.; but the Professors often have to lecture in rooms in their own houses.

1290. *By the Chairman*: It has been urged here that such a building as the University is almost necessary to refine the taste of youth? It may be to improve the taste in architecture, but what influence it can have in the teaching of moral philosophy, Greek, Latin, or natural philosophy, I cannot see. So far as making the mortar and the selection of the proper kind of stone go, the science of experimental physics may have some bearing upon your fine edifice, but I cannot see what the building has to do with the other studies pursued within it, unless it be that applied branch of mathematics which is called mechanics.

1291. You are clearly of opinion no such building as that is necessary? Certainly not; I think that the money it has cost would have been better employed in a hundred other ways, for the promotion of the objects contemplated in the establishment of an University.

1292. With the Affiliated Colleges and the University itself completed as proposed, and the endowments, the country will probably be put to an expense of £250,000 or £300,000? I think that expenditure might easily be stopped. The University here has been built all of a sudden; but scarcely any other University that I have heard of has sprung up in the same way—certainly not Oxford or Cambridge; they required ages for the erection of their fine buildings.

1293. *By Mr. Windeyer*: If it were intended to have such a fine building, do you not think it might have been begun and completed by degrees? Yes, of course; look at our cathedrals in England, and consider what time they have taken for erection—in some cases centuries have elapsed before they were completed. No doubt, if anybody could demonstrate that the building can have a direct effect upon University education it would be desirable to finish it at once; but in my opinion it is a mere matter of luxury, and has nothing to do with that education which an University is expected to impart.

1294. *By the Chairman*: Do you know the number of students in the University at present? No; I think Dr. Woolley did mention the number to me, but I forget it; the number however is very small, and Dr. Woolley is just as well aware as I am of the great misfortune of not having enough competition.

1295. So far I gather from your evidence, that in your opinion the University has failed at present to carry out the objects its founders had in view? The founders! Do you mean Mr. Wentworth, Mr. Lowe, and my friend here, Mr. Plunkett? Well, I do not know; they are best able to explain what their objects were; I know it has failed to effect that which on its first proposal I hoped it would; it has not come up to my *beau ideal* of an University. What was the founders' intention I do not know; I only conjecture it to have been more liberal than it has proved in the result.

1296. What was your own view? I thought it would be more adapted to those reforms which are taking place in the English Universities; I thought there would be less of the theological and more of the lay element. You could not have a better course of study for the young men of the Colony than that which is adopted by Professors Woolley and Pell, and you have in those gentlemen first-rate men to carry it through; but there is this great misfortune attending the Institution—that you have not enough of students, and cannot expect to have enough for many years to come. I think the founding of the University was premature, and that it would have been better, with the money that was at your disposal, to have sent your young men to Europe for their education, where they would have been brought into collision with a number of powerful intellects.

1297. Do you think there is any disposition on the part of parents in the Colony to send their children to Europe in preference to our University? I see that people are even now sending their children to England for education, and if there had been, with some of the money that has been expended in the building of the University, good scholarships founded, for the purpose of maintaining young men of ability but of moderate means at an European University, the money would have been better employed than it has been. It might have been easily done, and would have been of great advantage to young men of talent, and very beneficial to the Colony. I have always expressed such an opinion, and see no reason to alter it.

1298. In your opinion then, it would be better to discontinue the great expense incurred in this University? I do not know about that, we must live in hope; but I think it would be better not to go on increasing our expenses. I think it totally uncalled for, with so few pupils.

1299. *By Mr. Jones*: You refer to the erection of additional buildings? Yes.

1300. Would you extend that observation to the engagement of additional Professors, so as

W.S. Macleay, Esq. to make the establishment more valuable to the few students who may be there? You have already the Professors you chiefly want, but you perhaps might have a Professor of Medicine in addition.

6 Oct., 1859.

1301. *By Mr. Cape*: This is a circular containing a list of the latest Professors at Oxford? (*The Oxford University Calendar was handed to the witness.*) I know little of the University of Oxford, but this part of the Calendar appears to have reference to the studies preparatory to taking a degree there in the natural sciences. I think it would have been better, as I have before stated, if the mind had been prepared by the old studies, Greek, Latin, and mathematics, and that a student having a taste for the natural sciences should only have prosecuted these after taking his degree in the old studies.

1302. *By Dr. Lang*: You think the principle of the pursuit of knowledge under difficulties is realized, in the English Universities, notwithstanding their rich foundations, by the large competition there is? Yes, the large competition, and the facilities a young man with talent but of moderate means has of getting on there. At Cambridge for instance, he enters as a sizar, and if sharp and industrious, he gets into a college scholarship at the first examination, and then it is all plane sailing. Nearly all the public schools of England have foundations for sending young men of moderate means to the University, which foundations they call exhibitions, scholarships, bursaries, and so on.

1303. And you think that state of things cannot be realised in an University like that of Sydney? I think it could have been easily done at the time we were founding the University. How many young men of talent would this £50,000, expended in bricks and mortar, have sent to the Universities in England?

1304. *By Mr. Cape*: After the plan of Travelling Fellows? No, I mean as scholars or exhibitors from Colonial schools; Travelling Fellows are quite a different thing. These young men whom I allude to would have had to pass an examination here; for it would have been scarcely worth while to send them from this country to England, where they might be rejected, to be examined. It would have been easy for an English University to appoint some of its Masters of Arts here to examine any such young men as candidates for matriculation, and if they judged them worthy the students might have proceeded to England, and entered one of the Universities. They might have pursued the various studies, and at the proper time have taken their degrees. A Travelling Fellow, which you have alluded to, is a person who has already taken his degree. At both Oxford and Cambridge there is a fund from which a person of this description receives a sum of money to enable him to travel in some part of Europe, not for the purpose of prosecuting his classical studies, but for the purpose of observing the manners and customs of the inhabitants, and the natural products and features of the country through which he travels. He is obliged to write two or three Latin letters to the University respecting the countries he visits. These are duly registered in the University, and if they are thought worthy of publication they are printed. At the end of two or three years the appointment becomes vacant, and another young man is appointed. It is merely a way of giving a young man an opportunity of observing, and the University the means of judging of his power of observation. At Cambridge they are called "Travelling Bachelors," and are not necessarily the Fellows of a College.

1305. *By Mr. Plunkett*: What emolument is attached to that office or position? I see from the Oxford Calendar, now in my hands, that the amount paid by that University to a Travelling Fellow is £300 a year. If I recollect rightly, the remuneration of a Cambridge Travelling Bachelor is even less.

1306. *By Mr. Cape*: Are you aware that at Baliol College the applications for admission are so numerous that the matriculation examination is noted for its severity? Yes, and Sir William Hamilton has assigned that as the reason why Baliol absorbs almost all the chief honors of Oxford. In the case I have referred to, the young man went the very same day that he was rejected at Baliol to Queen's College, was immediately received there, and is now doing exceedingly well, as I learn, promising to take high University honors.

1307. *By Mr. Windeyer*: Have you not known another instance where a young man went Home from the Sydney University, and entered one of the Colleges honorably? Yes, the brother of the young man to whom I have referred did so. But this comes back to what I have said before. Among three or four young men classed, the first may be of distinguished acquirements, while the second may be far behind. A long interval may occur between them. With respect to literature, where the numbers of a class are so small, the gap between the first and second youths may be enormous; but if there are six hundred men associated in an University for examination, there will be a regular gradation of intellect and ability.

1308. Do you not consider that the requirements of the age render the study of natural sciences more requisite than formerly? Yes, I think so; but I also think that you could not have a better way of preparing the mind for the reception of knowledge of the natural sciences than by beginning with the study of Greek, Latin, and mathematics.

1309. Then I understand that your idea of the teaching the University should give, is that of educating all the faculties of the mind? Yes, most certainly.

1310. With a view to any future grafting he may make upon that stock? Yes, I repeat the proper teaching of an University is the teaching a youth how to learn. The man who has just taken his degree is then only beginning his true education.

1311. Then, I understand you to say, that, notwithstanding your predilection for the study of the natural sciences, as a means of education, properly speaking you prefer what some people now call the old fashioned style of teaching? Yes, and the proof of the justice of my choice is, that perhaps only one in a hundred students goes out in the natural sciences. Young men of energy who wish to improve the faculties of their mind, will still prosecute these (so called) old fashioned studies, and will still prefer being examined in them as you see by this Calendar in my hand.

1312. Then, as a matter of observation, you, as a scientific man, have observed that the men who attain the highest distinction in natural sciences, are those who have this general foundation first? Yes, what I mean is, that looking to the men who have gone out in the natural sciences instead of going out in the old studies, they have as yet done nothing to advance our knowledge of the natural sciences. W.S. Macleay,
Esq.
6 Oct., 1859.

1313. Have you not observed that generally the best men take to the more difficult subjects Greek, Latin, and mathematics? Yes, because they can see that they form a better discipline for the mind.

1314. Then you think it would not be advisable to make these scientific subjects studies compulsory upon all in the University? Certainly not. I should be very sorry if all these young men were compelled to study natural science; I think it would distract their attention too much. In the pursuit of science the mind cannot be too much concentrated on a point, and it is this habit of concentration which distinguishes the good scholar from the desultory reader; a man may be well informed as it is called, and yet be a poor scholar, but it is necessary that a minute accurate observer, and a close reasoner, should possess the power of concentration which I have mentioned.

1315. Then you think it is a mistake in these reforms in the old Universities to make these scientific subjects supplant in any way the old teaching—do you not think it has been giving way to a popular cry? It is a giving way, but after all it does not appear to affect the study of the classics much—perhaps not more than one or two persons go out in the natural sciences in the course of a year. From this book, where I open it at a chance, (*the Oxford University Calendar*) I see from the record of the examinations of 1853, that in the 1st 2nd 3rd and 4th of the natural science classes there are no students, and in the fifth class but two, while these two are so low that they are not deemed worthy to be named. I believe that a Cambridge Calendar, if we had one here, would shew a similar result.

1316. *By Mr. Cape*: Do you think it is so at Cambridge? Yes, and always will be so I trust, in our Universities, so long as men know which is the best discipline for the mind; for if you look at the classes for 1853, in this Oxford Calendar, headed, "*In literis humanioribus*," you will see the first, second, and third classes crowded.

1317. *By Mr. Windeyer*: Do you think it fair to call the present system of the University an old and exploded system, and that it would be better to do away with it in order to put in its place more scientific teaching? I have said over and over again that I do not.

1318. *By Mr. Cape*: Do you think, from the Calendar now before you, that Oxford has lowered its standard of classical science? No. As there has been a vulgar outcry against classical literature, the Oxford authorities have said, "The evil, if any, is easily remedied, so we will admit a natural science class in addition to the old ones."

1319. *By Mr. Windeyer*: You think the University having a certain amount of means at its disposal has done right to do what it has done, instead of encouraging in a larger degree the study of physical science? Yes; I think the old English plan will always be the best to follow. The natural sciences may be made a matter of amusement, for instance a young man instead of reading novels might as well attend a mineralogical lecture. The late Dr. Clarke, the traveller, could make such a lecture very amusing.

1320. I understood you to say that you are not in favor of these sectarian Colleges in connection with the University? Yes, I said so.

1321. Has not the comparative superiority, as a general rule, of the Continental Universities, and the somewhat of decline—I do not speak so much of the present time as of a little time ago—of learning in the English Universities, been attributed by many persons, by Sir William Hamilton for instance, to the Colleges usurping the place of the University, and the dying away of the general professorial teaching? I do not agree with Sir William Hamilton in that view, I think tutorial instruction is the best. I do not think people can learn deeply from dilettante lectures. The only lectures I could myself learn from, or have known others to learn much from, have been on the tutorial plan; that is, where the pupil asks questions of the tutor, and the tutor asks questions of the pupil on the subject under discussion. But no doubt this plan requires that the pupil should have previously read up his subject. And indeed this is the great merit of the tutorial plan.

1322. I understood then that you object in fact to the popular style of teaching in the University in the professorial chairs? What I object to is that this Cambridge system of tutorial teaching should be set aside. It is easy for a man without any previous attention to the subject to enter a lectureroom, and hear another read a dissertation; but he will not profit so much by it as if he had some previous acquaintance with the matters lectured upon. It is all very well to have Professors of this kind, and very interesting it was when I was at Cambridge to hear Professor Smythe's eloquent lectures on Modern History, since to prove his points he referred to many books, and saved us a great deal of trouble and time by supplying us with those references; but that is not the way for a man to study Latin, Greek, or mathematics. In order to do that with the greatest advantage you should sit round a table, while the Professor asks each student in turn such questions as may be necessary, and while you, the students, can ask the Professor such questions as may seem to you requisite for the elucidation of the subject.

1323. What I mean is this—do you not think it would be better if all the men were brought together in the Halls of the University, and that system were pursued, instead of different sets of men being taught in their own Colleges. On the principle of competition do you not think it would be better? That was, as I understood, the original plan of the Sydney University, and when I thought that plan was adopted, I so far approved of the Institution.

1324. You think then that the bringing together the whole of the students in an University, whether in a College or not, ought to be maintained as much as possible? I think so, for purposes

W.S. Macleay, Esq. purposes of competition; and I have another reason for my opinion—to prevent sectarianism as much as possible.

6 Oct., 1859.

1325. *By Mr. Black*: It is in the exclusion of sectarianism that the principal part of the improvement in the English Universities consists? Yes, I think so.

1326. *By Mr. Windeyer*: More than in that of substituting tutorial for professorial teaching? The tutorial system of examination has at Cambridge always existed for the last 150 years. It is not a modern improvement.

1327. *By Dr. Lang*: Do you not think a better plan than either is to combine the two? That is what is done at Cambridge. There are, for instance, professorial lectures on mathematics, which are of a different kind from those given under the tutorial system; the former are for able mathematicians. But I am sure it is by the latter kind of lectures that young men learn best, although they may derive advantage from attending the professorial. The tutorial system is almost unknown on the Continent; but though you may make one or two good scholars by the professorial system alone, whether from the natural indolence of most men or whatever cause, the tutorial system will always bring on the greatest part of a given number of young men. Young men with great talent may get on without it; but the chief object of an University ought to be to bring on the greatest number of its students.

1328. *By Mr. Windeyer*: Do you not think if the Professors of the University taught tutorially it would be the best system that could be pursued? Yes; but I do not see that that necessarily prevents the other kind of teaching also. If you are going to found other professorships—of zoology, botany, and other sciences, for instance—you would not examine the students in these sciences, but in the old subjects, and allow them to attend the lectures on scientific subjects as they pleased.

1329. Do you not think it would have a beneficial effect if the Professors were to reside on the spot, at the University? Certainly; I have always been of that opinion.

1330. Do you not think that the money which has been spent on this large building would have been better employed in erecting residences for the Professors? Yes, no doubt.

1331. It would have a moral effect? Yes, it would be better than a fine hall.

1332. *By Dr. Lang*: Do you not think the £50,000 spent upon the University building would have told much better for the advancement of the country if it had been spent in raising the character of the higher schools? I have before answered that question in what I said of scholars to be chosen from the public schools for the English Universities.

1333. *By Mr. Windeyer*: Do you not think that the undue dominance of the Colleges in the University ought to be guarded against by not allowing more than a certain number of the Senate to be members of Colleges—to prevent the Colleges usurping the place of the University? I think it would be desirable to prevent this; more particularly as I have heard complaints that there is a good deal of sectarian influence used in the Senate.

1334. Do you think it desirable that that rule, which seems to be countenanced by the Act of Incorporation, should be maintained, that one-fourth of the Senate shall be clergymen? I have said already that I objected to so much of the theological element in it; I think it a great mistake to admit so many clergymen; not that clergymen should be altogether excluded, but that they should not be admitted as clergymen representing particular theological dogmas.

1335. If clergymen were the best men you would take them? Yes, but not as clergymen, not as professors of any particular doctrines of theology. It is better to keep our Institutions for theological teaching quite distinct from the University, like the Bishop of Sydney's College at Liverpool.

1336. *By Dr. Lang*: Do you think, if the representation of the Colleges in the Senate of the University were confined to the head of each College, that would be likely to lead to a dangerous influence on the part of the College in the University? I think it would scarcely do that if the Senate did their duty; with the present Senate there would be very little chance of that. The head of a sectarian College may perhaps do mischief within his own community, but I am not so much afraid of his presence in the Senate of the University having an injurious effect on the general student, as I am that it will lead to the precious time of the Senate being wasted in theological squabbling and mutual jealousies.

1337. *By Mr. Cape*: Has any plan occurred to you that would feed the University—would you have any scholars sent there from the National and Grammar Schools? You would not feed it advantageously by giving exhibitions to young men who could not distinguish themselves. These exhibitions should be given to bring forward young men of talent; but if they are given to poor young men without talent, these will only be made burdens to themselves and to the community. Many a man has had cause to regret that he was not early accustomed to manual labor.

1338. I presume that they pass examinations and distinguish themselves? That is the case in most instances in England, where a youth of moderate means really benefits by his University education.

1339. Would you recommend such a system here? Yes; but I think you may give too many of these exhibitions—the danger is that you will have too many prizes; if not, there is no objection. But the great object should be to ensure competition, for what is the use of having prizes if every person is to get one?

1340. I am alluding to schools in the remote interior? In England most of the provincial schools have in former days had some benefactor who has founded an exhibition, has left a sum of money or a piece of land to be devoted to the education of any young man, very often of his own name, who may distinguish himself in the school. He must pass a sufficient examination at school to prove him able to go through the University matriculation examination. But the University has nothing to do with that; the trustees of the school will examine him

him

him for their own purpose; they will give him that which is truly and legitimately a prize; he will be the first youth of his school, and get an exhibition to the University. It is of very little use, indeed it is a misfortune, to a poor young man to be sent to the University without talent as well as without means.

W.S. Macleay,
Esq.

6 Oct., 1859.

1341. *By Mr. Cape*: Were you a member of the Senate of Cambridge University? I was for many years; indeed I only took my name off the boards of my College when I was leaving England for this Colony in 1838.

1342. *By the Chairman*: You think the great object of an University education is to train the mind for the reception of knowledge? Yes, I think so.

1343. And that the best mode of training the mind is by imparting Greek, Latin, and mathematics? I think so; I think these ought to be the principal studies.

1344. Why do you prefer the Greek and Latin to all other languages? Because they are the foundation of most of the modern European languages—Latin more especially.

1345. Sanscrit is regarded as the basis of all—? Sanscrit is studied at the Universities at home. I understand nothing of Sanscrit myself, but I have understood from Sanscrit scholars that, although a beautiful language, it is not so valuable, nor can it be expected to be, as Greek or Latin. The Latin and Greek languages will always be celebrated as offering some of the most distinguished writers, and formers of style that ever have appeared in the world.

1346. I presume you found that opinion upon the fact that Greek and Latin literature has been transmitted us; but we know very little comparatively of Sanscrit literature, or of Celtic literature? Of the Celtic or Gaelic language we know something, namely, that there are very few authors in it, and I suspect there are very few likewise in Sanscrit. However, I should not object to young men taking degrees in Sanscrit, Celtic, or Gaelic, if these languages discipline the mind; but I think the Sydney University had better stick to Latin and Greek, on account, as I said before, of the authors in the latter languages, who are so distinguished for their taste and cultivation of style.

1347. You think these branches of education of more importance than the exact sciences? The exact sciences—do you mean mathematics, for that is the exact science *par excellence*?

1348. The various branches of physical science to which mathematics apply? The applied branches of mathematics. You cannot make any progress in these sciences without learning abstract mathematics.

1349. What I want to get at is this—is not the very course of inductive reasoning, which is the source of some of the most important conclusions that have been arrived at, in itself an excellent training for the mind? I have emphatically said so with regard to mathematics. In Oxford, logic is in a great degree substituted for mathematics, as a discipline for the mind.

1350. That involves an amount of mental training? Certainly, but I do not think logic applies to a young man's ordinary road through life as mathematics do.

1351. Do you not think if we can combine that mental training which adapts a man's mind for the reception of knowledge with the acquisition of knowledge itself while the training is going on, we shall accomplish a very great object? No doubt, if you can; and I have no doubt that you can, for the two things go together.

1352. If we can communicate knowledge and at the same time train the mind—? I do not see how you can train the mind without communicating some knowledge. What I have said is, that the great use of the University consists, not so much in the amount of knowledge that it communicates, as in its system of training the mind for the acquisition of knowledge—that the amount of knowledge gained by a young man at any University is small as compared with what, if his mind be properly trained, he will acquire throughout life.

1353. I suppose you are aware of this—that a very great difference of opinion prevails among literary men, as to the time devoted by young men to the study of Greek and Latin? Yes, because it is sometimes supposed that the only use of such studies is the knowledge of Greek and Latin; but, in the first place, these studies train the mind to reflect deeply; in the second place, they enable the student to learn grammatically and philologically the modern languages of the nations around him; and thirdly, they are of great advantage in the formation of his taste and style. One easily knows whether a man's mind has been properly trained by the study of Greek and Latin from the style of his writings, or of his speeches.

1354. I knew the case of a young man well acquainted with the Greek and Latin writers, who could describe exactly the retreat of the Ten Thousand—could quote Thucydides, and tell you things of remote antiquity, but who knew nothing whatever of the history of Napoleon Buonaparte? I think that is very possible, but such exceptions prove the rule.

Mr. Robert Lowe once told me of a gentleman whom he fell in with at Dinant, in Normandy, who was one of the most stupid men he had ever met, but who had been Senior Wrangler at Cambridge. A man may have a mind of peculiar constitution—he may excel, for instance, in certain branches of learning, and yet be very deficient in judgment and common sense. A man's ambition may be altogether directed to the acquirement of a fellowship, or some narrow object like that; but, fortunately, that happens comparatively seldom with the great number of University men. People do not generally go to the University for a fellowship, but to prepare themselves to struggle through the world for something of far higher value than celibacy with £200 or £300 a-year.

WEDNESDAY, 12 OCTOBER, 1859.

Present:—MR. MURRAY,
DR. LANG,
MR. ARNOLD,MR. CAPE,
MR. WILSON,
MR. JONES.

TERENCE AUBREY MURRAY, ESQ., IN THE CHAIR.

J. Smith, Esq., M. D., called in, and examined:—

- J. Smith, Esq., M. D.
12 Oct., 1859.
1355. *By the Chairman:* You are one of the Professors of the Sydney University? Yes.
1356. What branches of instruction do you lecture on? Chemistry and experimental philosophy; experimental philosophy being understood to be the more experimental sorts of natural philosophy.
1357. The experimental parts of natural philosophy—what are they? The term experimental philosophy is not very generally used yet; it embraces the consideration of heat, electricity, and magnetism. That, I believe, would be properly all that should be included in experimental philosophy; but, as we have no Professor of Natural Philosophy proper, I am in the habit of teaching a little more, so that between Mr. Pell and myself we give a tolerably complete course of natural philosophy.
1358. How often do you lecture on those subjects? One complete course of chemistry by itself, and a separate course of experimental philosophy; daily lectures, of an hour each.
1359. Is there any examination in those branches of knowledge? There are frequent oral examinations in the class, and written examinations at times appointed by the University.
1360. Who are the examiners? In the oral examinations in the class I am the only examiner; but in the written examination prescribed by the University I am assisted by Dr. Greenup, one of the Board of Examiners.
1361. You are yourself examiner? Yes, in the oral examinations.
1362. Is that the custom generally in the Universities of the old world? Yes; it is quite customary that what are called class examinations should be conducted entirely by the teacher or Professor. It is only in the competitive examinations, or the "pass" examinations, where other examiners would be introduced. I am in the habit of adopting two kinds of examinations in class; one, the ordinary examination, and another, a recapitulatory examination, which is competitive; but it is an arrangement of my own entirely—it is not at the instance of the University.
1363. How many students attend your classes now? At present I have only nine. I take only the students of the first and second years; I do not get students of the third year; and it so happens at present that the classes of the first and second year are very small.
1364. And you have at present —? Nine, I think.
1365. What has been the maximum number you have had in attendance? Several years ago I had thirty-two in my class. I forget which year it was, but it might be ascertained by referring to the Calendar.
1366. Were they all in the University? They were not all matriculated students. There were two or three others.
1367. *By Mr. Jones:* And those students were in the first and second years—the students when there were thirty-two were in their first and second years? In the first year of the University there was only one class of students; we had a large class then, and I rather think it reached to thirty-two the very first year.
1368. *By the Chairman:* And you have only nine now? Only nine.
1369. *By Mr. Jones:* But at that time you would have all the students in the University, in point of fact? Yes.
1370. While now you have only students of the first and second years? Only those.
1371. *By Mr. Arnold:* What was the reason for the change? It was a change at my own suggestion. The original plan was, that I should give three lectures a week to each of the three classes—first, second, and third years—so that there would be three courses of lectures going on at once. I found this arrangement impracticable. I have no assistant. I have to do everything myself, merely getting a little assistance in cleaning things. Having to prepare experiments and arrange the apparatus I found it impossible to carry on the three courses, and suggested that only two should be given—one course on chemistry by itself, and another course on experimental philosophy, and that the students of the first and second years should be taken together. It is an arrangement by which they get a greater number of lectures than under the old arrangement. Under the old plan they would get a certain number of lectures by attending three years: they now get a larger number by attending only two years, but now they come daily instead of three times a week.
1372. *By Mr. Arnold:* Then I imagine that the arrangement pre-supposes that before they enter upon the third year their studies in these branches are complete? That is presumed. If it were possible to extend the teaching in my department it would be well to instruct the students in practical chemistry during the third year; but under our present arrangements I do not see how it can be done.
1373. *By Mr. Jones:* What is the impediment? One impediment is that I have not time to do it; another is, that the students are not left time to attend such a class. It would be too much for me to do. I do not know of any case in England where one person conducts the whole business of such a class as I do.
1374. *By Mr. Wilson:* In England there is a time set apart for experimental classes? Yes, but the Professors have efficient assistants to do all the drudgery.
1375. *By Dr. Lang:* Do you consider the under-graduate course of the University equivalent in

in the range of subjects it embraces to the course given in the gown classes in the Scotch Universities? No; it is not equal to the curriculum in Scotland. There are two very essential defects.

J. Smith.
Esq., M.D.

12 Oct., 1859.

1376. *By Mr. Jones*: In our system? Yes. I count that we have two important blanks which need to be filled up: we have no Professor of Natural History; we have no one to represent any branch of natural history, and we have no Professor of Mental Philosophy—those are two leading defects. We ought certainly to have a Professor of Natural History.

He need not go over the whole range of natural history, but teach those branches most important for a country like this. He might pay special attention to mineralogy and geology.

1377. *By Dr. Lang*: Natural history forms part of the curriculum of the University of Aberdeen? Yes, it does.

1378. You are aware that it does not occupy that position in some other of the Scotch Universities—Glasgow, for instance? Yes, but in Edinburgh it does.

1379. Does it form part of the curriculum there? I would not speak positively, but I think it has always been a leading class at Edinburgh.

1380. *By Mr. Wilson*: Are you aware whether it forms part of the curriculum in the Edinburgh University? I am not sure if it forms part of the curriculum of arts.

1381. Of the medical? It is a portion of the medical curriculum.

1382. *By Dr. Lang*: It is a much more fashionable study in Edinburgh than in Glasgow? Yes. I was going to remark that the Professor of Natural History should select what would be most important, and I name two branches—mineralogy and geology. I think then it is also highly important that all young men of liberal education should get some knowledge of physiology and the laws of health. The absence of such instruction is a very remarkable defect in nearly all the systems of education we now have. We rarely teach people anything about the laws of health—one of the most important things people can know. Then the Professor of Natural History might teach comparative anatomy—an interesting branch of study—and along with that zoology.

1383. *By Dr. Lang*: Would not physiology properly form a part of the medical department—hygienics? If we had a medical department it would; but it ought to be a part of general education. Then we ought to have a Professor of, what is called in Scotland, Moral Philosophy, which is understood to embrace the whole of mental science, besides ethics proper. I think these are the two leading defects—the want of natural history, and the want of mental philosophy. I should also like to see, by and by, a Professor of English Literature.

1384. *By Mr. Jones*: Does not the present Professor of Classics supply the professorship of mental philosophy? Yes, to some extent; but in the Universities at Home they have always two Professors to do the classical work—one for Latin and one for Greek; and, generally speaking, one for logic, besides the Professors of Moral Philosophy. Dr. Woolley cannot overtake all these things. He has to teach Latin and Greek, to give a separate course of logic, and what instruction he can in ethics and mental philosophy.

1385. Then Dr. Woolley has duties to perform here which are usually assigned to four distinct Professors at Home? Yes, to four distinct Professors. I feel the two defects I have mentioned more strongly than perhaps people coming from English Universities would, because in Scotland those two departments have great weight. The moral philosophy class is always considered one of the most important. I know, by experience, that it is one of the most profitable classes to students—one of the most improving; I have seen students dull and laggard in other branches, until they came to the moral philosophy class, when they have brightened up and made rapid progress.

1386. You regard that class as specially valuable as a means of discipline or training? Yes, education proper.

1387. *By the Chairman*: For the development of the faculties? Yes. The natural history class, again, I would look upon as more valuable for its information.

1388. *By Mr. Jones*: Than as a means of training? Yes.

1389. *By the Chairman*: But how does moral philosophy develop the faculties? That is rather an extensive question, and I should not like to give an off-hand answer to it; but I have a very strong conviction from experience that it does so.

1390. *By Dr. Lang*: Does it not lead the student to investigate his own intellectual and moral nature? No doubt it does. It leads him to study his own consciousness to an extent he did not think of before. He begins to see into a new world, as it were.

1391. And is not that a very important part of mental training? I consider it to be highly important.

1392. *By the Chairman*: But what new world does it open up to him? He has first to study languages and mathematics, and perhaps chemistry and natural history. No one of these branches requires him or leads him to look into the operations of his own mind—to examine his own consciousness. All these branches lead him outwards. It is not until he comes to study what is called in Scotland moral philosophy, mental philosophy generally, or psychology.

1393. Then do you express psychology under the head of moral philosophy? I have been using the term moral philosophy in the Scotch technical sense; psychology would, perhaps, be a better term.

1394. Psychology I should have thought to be the proper term? Yes.

1395. Psychology undoubtedly opens up a new world of thought to every person who pays any attention to it? That is included in the term moral philosophy; the name psychology has never come to be much used in Scotland.

1396. *By Mr. Jones*: By moral philosophy I suppose you refer to all that pertains to a man's moral and mental nature? Yes.

1397. *By the Chairman*: Man's moral nature as distinct from his other natures? Yes.

1398.

- J. Smith,
Esq., M.D.
- 12 Oct., 1859.
1398. Is that usually understood;—it embraces psychology also? Yes; it is so understood in Scotland.
1399. Anywhere else? Perhaps not.
1400. That is what I thought. Do you think the pursuit of psychological science leads to any very exact conclusions or deductions? Even if it did not, I think the inquiry is valuable notwithstanding.
1401. The science of psychology, in the meantime, is only in its infancy. You then would suggest some alterations in the course of instruction in the University, in these respects? Yes; I think that our curriculum is imperfect in those two respects chiefly. Indeed if we had those two blanks filled up, I think then our curriculum of arts would compare pretty well with the curriculum of arts elsewhere.
1402. You have been connected with the University since its first establishment? Yes.
1403. It was established on a strictly non-sectarian basis originally? Yes, entirely so.
1404. Do you think that that principle has been at all departed from since? There was an appearance of departing from it in certain by-laws, but, perhaps, it was only in appearance; and, as those by-laws are now repealed, I do not think that at present there is any departure from the original constitution.
1405. Do you think the establishment of Affiliated Colleges has had any effect or any tendency at all in that way? Practically, I fear they will have that tendency.
1406. They will have that tendency? Yes.
1407. *By Mr. Jones*: That they *will* rather than they *have*? Yes; I have never liked the Affiliated College system; I would much rather have preferred to see a University on the plan of the Scotch Universities. The Scotch Universities have no Colleges within them, in the sense that the English Universities have. There are Colleges in St. Andrew's and Aberdeen, but they are merely different buildings where the studies go on.
1408. *By Mr. Jones*: What is the difference between those Colleges and our Affiliated Colleges? Those Colleges in Scotland are not Colleges of residence. The students merely go there to hear lectures.
1409. Then they are in fact simply auxiliaries to the University? The University has no other place for teaching.
1410. Then, as I understand, the Universities in Scotland teach through the agency of these Colleges: here the University proposes to be a teaching body as well as an examining body? Yes.
1411. *By Dr. Lang*: The real fact is—that “College” and “University” are in Scotland convertible terms, and the best way is perhaps to look at the Edinburgh College and University, where there is only one building, and there is no complication of terms? I would much prefer to see an Institution of that kind, not hampered by any Affiliated Colleges; but had it been deemed advisable from the circumstances of the Colony to have Affiliated Colleges, I would much rather have seen them left to private enterprise, and that the State should not have interfered at all. They might then have taken the position of the Colleges affiliated to the London University. Those Colleges, I believe, receive no State Aid whatever. From the beginning I have had a great feeling of objection to our system of Affiliated Colleges, and I do not see yet that it is likely to work very well.
1412. *By the Chairman*: I gather then from what you say that you disapprove of any interference with strictly secular education in the great schools of education in the Colony? What I mean to say is this:—Whether, in your opinion, it is advisable that any sectarian education should be given in any of those great educational institutions, or that sectarian education should not be mixed up with them? I think sectarian education should not be given in the great educational institutions supported by the Government.
1413. Do you know the circumstances which led to the establishment of those Affiliated Colleges? Although I was in Sydney at the time, and was interested in the matter, I have never had a very clear idea of what led to their introduction. The general impression is—and I do not know anything contrary to it—that those Colleges were introduced to supplement the University in what was considered a deficiency. The University did not provide religious teaching. There was no religious superintendence, and those Colleges were to supplement that deficiency, and also to fulfil another very important function—to act as comfortable lodging-houses for the young men; but then, that is an end that might have been attained at a less cost and with less cumbrous machinery.
1414. Do you think the State has anything to do with that? Perhaps not.
1415. You said just now that you thought perhaps through the instrumentality of those Affiliated Colleges the University itself, as a school for secular learning, might ultimately be damaged? I would not like to put it just in that form,—that the University would be damaged as a school for secular learning,—but I think that the existence of these Institutions withdraws public sympathy and support in a great degree from the University itself.
1416. The existence of these Colleges? Yes.
1417. Sectarian Colleges? Yes.
1418. Then do you think they are opposed at all to the spirit of the people or to the spirit of the times? Well, it is hard to say; they may be in accordance with the wishes of the people. I could scarcely judge.
1419. Then how would they withdraw from the usefulness of the University? It is very well known that if you evoke the religious enthusiasm and sympathies of the people they will exert themselves more in any cause than where these feelings are dormant. The University cannot appeal to the religious sympathies of the people at all, but those Colleges do. It may be a good thing that they should draw off to themselves public support. I merely say so much the worse for the University.
1420. *By Dr. Lang*: Do you not think that these Colleges will serve an important purpose when

when the number of students from the distant parts of the interior becomes considerable—(students attending the University)—as lodging-houses, where the students can be under general and moral superintendence, and have tutorial assistance while studying at the University? Yes; and I think that is their strongest claim to support. I think, by and by, they would come to be very useful as lodging-houses, but then I think the machinery is much too expensive for that simple object; and I dislike very much the idea of the State taking upon itself to parcel out the students into the four denominations; they come to us for lectures, but the State, in its dealings with them, encourages the idea that it is barely safe for them to sit together and listen to lectures; as soon as they leave us they are to be separated and marched off to their respective denominational Colleges.

J. Smith,
Esq., M.D.

12 Oct., 1859.

1421. *By the Chairman*: I gather from you, then, that you think it highly desirable that students of every denomination should be thrown as much together as possible? Decidedly.

1422. And that thereby those strong sectarian prejudices which have heretofore worked such mischief in society may be, if not wholly abolished, considerably diminished? I think those prejudices might be very much smoothed down if the education were in common—if the students were brought as much together as possible.

1423. *By Dr. Lang*: Do you not think that the association of the students of the different Colleges in the University will be sufficient to create an *esprit de corps* in favor of the University, notwithstanding their being lodged in separate Colleges? I should hope that will be the case, but I fear the *esprit de corps* will be in the separate Colleges, and that the students will come to us in a spirit of rivalry. I hope it will be otherwise.

1424. Looking at the Presbyterian College separately from the others, and solely at present, do you not think that that institution might serve a very valuable purpose in supplying those branches of education which cannot be afforded in the University? Yes; I think that any one of the Colleges might be made useful in that way, but its usefulness would be very much circumscribed on account of its denominational nature. People would judge that all the instruction given in those Colleges would have a denominational tendency. They might be wrong, but I think they would be apt to judge in that way.

1425. Do you think that the site of the University has been well selected for the purpose of general education in such a community as this? No; I think it has been ill-selected. I was strongly of that opinion when the first selection was made, and I have never changed my opinion. The original site—the old college building—we first occupied was greatly better. It was with great regret that I saw them fix the site at Grose Farm.

1426. Do you think that if the position of the University had been more central for the general population of the city, such classes as your own—chemistry and experimental philosophy—would have been resorted to by a much larger number of young men in the city generally—by persons for instance in private offices—though not undergoing the regular University course? I would not venture to say that the attendance would have been much larger, but it would have been a little larger. I know that I lost one student when we moved, from the simple obstacle of distance, and I have reason to believe that others would have been attending since then had the same obstacle not interfered. There are lads who would be allowed to leave their duties for one hour, and a few minutes more perhaps to go and come, when they would not be allowed to leave for two hours, which would in most cases now be necessary.

1427. Are you aware that in the University of Glasgow (I do not know how it is in Aberdeen) the experimental philosophy class is attended by a considerable number of students who are not enrolled in the books of the University? Yes, I believe it is generally the case in Scotland.

1428. Private students? Yes, it is the case in Scotland. I taught chemistry in Aberdeen for several years, and I had many students who were not regular students of the University.

1429. Who were not pursuing a professional course? Who were not pursuing a professional course.

1430. And do you not think that is very desirable for such a community as this? Yes; I think it should be encouraged.

1431. Do you think it desirable that there should be a professorship or professorships of law in connection with the University? I was not formerly inclined to think there was any necessity for it, but the experiment of a law lecture having been tried, the results shew that young men studying are so disposed to take advantage of it that the class is really large. It might perhaps be a good thing to change the readership into a professorship. The law class is just now the largest class at the University.

1432. Do you not think it would be desirable that the Legislature should interfere, and require attendance at such lectures on the part of professional men—solicitors and barristers generally? Well, I should not like to offer an opinion on that; it would be assuming a greater knowledge than I possess of the circumstances of the profession.

1433. *By the Chairman*: Is there a professorship of natural theology in any of the Universities of Europe? It is very likely that there are such professors in Germany. I do not remember any in Great Britain.

1434. Could you offer any suggestions at all in regard to the principles involved in the management of the University? The mode of governing Universities has been very much debated of late years, and it is a difficult question. I am not disposed to find fault with the mode of government of our University. No doubt in theory various alterations may be suggested, but I think that the mode of government by a Senate, which will by and by be chosen by the graduates, is, on the whole, likely to work as well as any other.

1435. The graduates are to elect the Senate when in number they reach 100? Yes.

1436. How long will it be, according to the present ratio of increase, before they will arrive at that number? At the present ratio it cannot be within a dozen years.

J. Smith,
Esq., M.D.
12 Oct., 1859.

1437. Do you think it is likely to be so soon—how many Masters of Arts are there now? Well, I never try to keep those things in memory. There has been only one batch of Masters of Arts turned out yet, and the list is contained in the latest calendar.

1438. Only one lot of Masters of Arts? Only one. There ought to have been a graduation last year, but in consequence of the want of a hall it was put off until the present year.

1439. Then it seems likely that some time will elapse before 100 is made up? Yes; a few years, certainly.

1440. Do you think it advisable at all that the Professors should be on the Senate? I can scarcely make up my mind on the question. Personally I think I would rather not be on the Senate. I think it simplifies matters considerably that the professors should only teach, and give advice when necessary on the subject of the studies. On the whole, I think it would simplify the matter; and, personally, I would not wish to be a member of the Senate.

1441. *By Dr Lang:* Do you not think that it places the Professors in a subordinate position to be entirely under — ? No doubt it does, but the question must arise—is it not proper that they should be subordinate to the Senate, to the governing body; I can scarcely make up my mind about it; I know that a good deal can be said on both sides.

1442. Would they not be subordinate to the Senate, although they were members of the Senate themselves, just as ministers are; they are subject to the body of which they are members? Well, as a matter of fact, the thing is done in other places; indeed, if you appeal to experience, Professors are generally members of the governing body. I do not know, in fact, a case where they are not; certainly, custom is in favor of putting Professors on the Senate.

1443. Supposing the Affiliated College system to be carried out in the mode contemplated by the Act, do you think it would be proper that the head of each of those Colleges should be a member of the Senate *ex officio*? On that again I would have the same difficulty. I cannot, just at present, see that any harm would accrue. There might be some utility in having a mode of official communication with the various Colleges; but then, if the heads of the Colleges were to be members of the Senate, I rather think I would incline to advocate that Professors also should be members, because I think the Professors should not be subordinate to the heads of the Colleges. And, in regard to official communication, there would be considerable utility and convenience in the Professors being present in the Senate, for we have sometimes found that business has been delayed from the Senate waiting until they have the opinion of the Professors; perhaps, upon the whole, the Professors had better have a seat; personally, I think I would rather not.

1444. *By the Chairman:* Have you known any evil to result from the practice elsewhere? Well, the practice is complained of; but it is complained of, so far as I know, only in places where the Professors are the sole governing body. There are Colleges at Home where the Professors are the sole governing body. But that would be quite a different thing from the Professors being merely associated with a larger body that could control them numerically.

1445. It is only in such cases that you have heard of inconvenience resulting from it? Only in such cases.

1446. *By Dr Lang:* Has it not been the case that Universities have been open to the charge preferred within the last few years against all close corporations in the Mother Country? Yes.

1447. They have been just regarded as close corporations? Yes, and justly, I think.

1448. That would not apply if the professors had merely a seat in the University as members of a body constituted variously? The objection would not apply. I may just state in passing, that the objection has been made strongly in Aberdeen, where the governing body in the course of years came to consist of Professors alone; complaints were made, and an Act was lately passed which changed the constitution.

1449. You are aware, I suppose, that it was quite the same in Glasgow—a close corporation? Yes, I believe so.

1450. *By the Chairman:* Have the Professors of the University here ever been known to make representations to the Senate in opposition to any particular views or objects which the Senate might have in contemplation? I think that on one or two occasions we have. I think the passing of those by-laws respecting religious certificates was one of those occasions.

1451. What was the result then of the remonstrance? It did not lead to any—

1452. It was not successful? No.

1453. How was it made—in writing or verbally? In writing, I believe.

1454. Was that the only occasion? No. I cannot at present recal them to mind, but my impression is that we have, at least on one other occasion, sent in written statements of our views in reference to certain particulars.

1455. The Professors, then, remonstrated against those by-laws which the Senate established, and was ultimately induced to revoke? Yes.

1456. Then it would appear that the views of the Professors were correct, inasmuch as those by-laws were ultimately abolished? It would appear so.

1457. From this circumstance, then, does it not appear that the Professors should have some voice in the management of the University—that they should be in a position to discuss and vote upon any matter connected with the University which might be submitted to the Senate? There would be, certainly, utility in it; on the other hand, if the Professors found themselves in a minority in the Senate, I think it would be more disagreeable than at present. At present we might make a representation or remonstrance, and there our duty and responsibility end. I think that if we were members of the Senate ourselves, and in a minority, it would be more unpleasant.

1458. But, looking to the experience the Professors have of the working of the University, does it appear to you that they are as competent, or less competent, to deal with questions connected

connected with its management as members of the Senate? I think they are quite as competent; perhaps in regard to educational details they are more competent. But that is not the leading point of view in which I see it; it is just whether or no it would be better that the teaching body should be entirely subordinate to the governing body, or be a part of it. It is not exactly a question of competence I think that is to be determined, because in questions affecting educational details the Senate generally asks our opinion. I do not think they have ever settled anything affecting educational details without asking and following our advice. But, on the whole, perhaps the argument in favour of the Professors having a seat in the Senate preponderates.

J. Smith,
Esq., M.D.
12 Oct., 1859.

1459. It appears that some of the Fellows of the Affiliated Colleges are now on the Senate of the University? Yes, I believe so.

1460. Has it ever appeared to you that those Affiliated Colleges might gain an ascendancy in the Councils of the Senate, so as to give it a sectarian character, which according to its foundation ought not properly to belong to it? Well, it might be possible; I do not think, however, that under the mode of election that will come into operation when there are one hundred graduates, the Fellows of these Colleges would be likely to acquire undue influence; I think they would not be elected in large numbers.

1461. But it will be some time before there are one hundred? Yes.

1462. I think we had it in evidence that there are ten or eleven Masters of Arts? Perhaps so.

1463. Then the University has been in action now for some seven or eight years, and it is apparently declining—the number of students now is not so great as the number was when the University was first established, and according to the rates of the increase in the number of graduates it would appear that fifty, sixty, or seventy years may elapse before the number mounts to one hundred? This must be taken into account, that no Masters of Arts could be turned out under five years from the commencement of the University, because the undergraduate course extends over three years, and then they have to wait two years more; but every year afterwards there ought to be a certain number of Masters of Arts turned out.

1464. How were those by-laws which the Senate was ultimately obliged to repeal, and which were at variance with the great principle on which the University was established—how was it that they came to be enacted? It was I believe through a desire on the part of the Senate to conciliate opponents. I do not think that of their own accord they would have passed such by-laws.

1455. Does it not appear then that the Senate in passing those by-laws were more or less under the influence of sectarianism? Perhaps that would be too strong a phrase to apply to it; they were desirous of satisfying the denominations, and they were really desirous of making the University as useful as possible. I really think that they passed those by-laws with the desire of removing certain grounds of opposition, and under the belief that the by-laws themselves would do no harm. I think they never anticipated that they would do any good further than the conciliation of opponents.

1466. But, do you think the Senate of the University has a right to conciliate any opposition when any principle is at stake? They believed that they were not infringing on a matter of principle—that must be stated in their favor.

1467. Were the Professors in favor of those by-laws? Certainly not.

1468. You remonstrated against them? Yes.

1469. Can you remember at all what the nature of your remonstrance was—by the way, you stated it was in writing? It is in writing.

1470. Perhaps you can furnish us with a copy, and append it to your evidence? I think that would be possible.

1471. Has it ever occurred to you that the constitution of the Senate might be advantageously altered, so that there should be no occasion to wait for the length of time which will probably elapse before the number of Masters of Arts amounts to 100? Well, as I said before, personally I see no great objection to the present constitution. I know that many different constitutions are tried, and they all work more or less well.

1472. How are the members of the Senate elected at present? The Senate itself fills up the vacancies which occur.

1473. By election? Yes.

1474. From your experience of the working of the thing, what are the qualifications which apparently the Senate requires in the election of new members; are men of letters—men remarkable for their scientific tastes or attainments—sought for? I think it would chiefly be leading members of society that would be selected.

1475. Then it is the social position of the individuals, in your opinion, that recommends them? I think so, in a great measure; but not to the neglect of talents or acquirements.

1476. You are acquainted, of course, from your long sojourn in the Colony, with many men of great literary and scientific attainments here in society, at least with those who are prominent in our society in these respects? Yes, with some.

1477. Have you known any of those gentlemen elected to the Senate of the University? I am unwilling to give a very distinct opinion upon this subject. I am unwilling to appear to oppose my judgment to the discretion of the members of the Senate. I have not seen any particular reason to find fault with the appointments that have been made; I would not say that they have been made in consequence of literary or scientific attainments, because they have been made, perhaps, more on account of social position and general ability; but these are fair grounds of selection, and I see no great reason to find fault with the appointments.

1478. Have you ever observed that those men who are known to be fully up to the knowledge of the times in which we live have been selected as proper persons for the Senate—men who
are

- J. Smith,
Esq., M.D.
12 Oct., 1859.
- are acquainted with the reforms which have been made in the great educational establishments of the Mother Country? I can scarcely answer that question.
1479. Is the University, as now established, in accordance with those modern improvements, or in accordance with the state in which the Universities of the Mother Country were some years back? One cannot say that it is up to the present condition of Universities in Britain; but I would not lay the blame of that to any great extent on the governing body.
1480. Well, if it is not established on that basis of reform which prevails in the Universities at home, don't you think it is desirable that should be the case? That, you see, opens up extensive questions. The reforms at home have been chiefly in the mode of government; they have been to but a small extent in the mode of teaching.
1481. And in the course of study I think? And in the course of study.
1482. In the variety of subjects taught, and in the exclusion of all sorts of religious tests? As to the extent of our curriculum I know there are certain defects; but then the governing body acknowledge those defects, but are without the means—
1483. What means do they want? Money.
1484. But are not you aware that they have been expending hundreds of thousands of pounds, and that hundreds more are in course of expenditure, while there are yet only very few students in the University? Still that is the defence made, and it must be remembered that a great deal of money has been required for buildings. When a comparison is made between our University and the British Universities, and when an acknowledgment is made that our University is not equal to those Universities, I would not have it inferred from what I say that I throw the blame on the governing body.
1485. Have you heard that it is contemplated by the Senate to adopt those reforms—to adopt the present English system? I am not aware that they have any intention of copying further from the English system; and really it would be hard to say what the English system is. They are working themselves free from clogs which we have never had hanging to us. Our University stands on a fair basis.
1486. Now, with regard to your Scotch Universities, is the Sydney University similar, in the course of instruction given in it, to any of the Scotch Universities, and, if so, could you point out to which? It is not nearly so complete as any Scotch University.
1487. Then, in a new country like this, where we have a *carte blanche*, where everything is open to us, does it not seem desirable that we should work upon the very best system—that we should copy the very best model? Certainly the best models should be copied, but it is not possible to reach to the full extent of these models, just at the outset.
1488. I presume that you, yourself, and your fellow Professors are all up to the reforms established of late, in England? I am not sure whether they are all existing in Scotland, but I think they have existed longer in Scotland than in England. I am more familiar with the Scotch system. I dare say that among the Professors we possess a knowledge of the various systems.
1489. Then, I presume, the Professors are informed. The Professors in England have always a voice in the management of the affairs of the University? I am so little acquainted with English Universities—
1490. Is it so in Scotland? Yes.
1491. Here it is to be presumed that the Professors are also up to all the modern improvements? It is to be presumed so.
1492. *By Dr. Lang*: You are aware that there is a peculiarity in the mode of government in University of Edinburgh? Yes.
1493. The Professors are appointed or have hitherto been appointed by the City Council? By the City Council. That leads me again to what I said before; I am not disposed to trouble myself much about our mode of government. It is different from others, but then, perhaps, no two educational institutions in Great Britain have the same mode of government, and you will find that under diverse modes of government the educational part may work easily and well. I do not lay very much stress on the constitution of the governing body.
1494. *By Mr. Cape*: Have you all the apparatus and all the books you desire, and the assistance you require in your department? Certainly not.
1495. Is there a very great deficiency? No; not very great. I have made the money go as far as possible. Certain small sums have been allotted for keeping up apparatus. We are not greatly deficient.
1496. Have you any assistance in your department? No assistance.
1497. *By Dr. Lang*: Referring to a former question of mine,—are you aware that students of law in Scotland are obliged to produce certificates of attendance at the law classes in the Universities previous to their passing either for solicitors of the Supreme Court or barristers? I am not personally aware of the fact, for I have not given any attention to law studies. I quite believe it to be the case, although I am not personally aware of it.
1498. Supposing there were such a change in the constitution of the Senate as to admit the heads of the different Colleges as members of that body, do you think that would constitute a sufficient representation of those Colleges in the Senate? I am unwilling to give a decided opinion as to that matter, because it would lead to this:—if you hold it to be a sufficient representation you limit the choice of the graduates when they come to exercise their power of voting to fill up vacancies; I would be loath to limit their choice in any way; I would leave it to their discretion.
1499. Perhaps you have misunderstood me; I merely meant to say—supposing the heads of the different Colleges were appointed members of the Senate *ex officio*, don't you think that that ought to be the limit of the representation of each College in the Senate of the University? I did understand the question, and I would say that I would rather decline giving an opinion upon it, because if you were to come to the conclusion that that was sufficient representation,

representation, it would have the effect of limiting the choice of the graduates, and I would be adverse to that.

1500. Do you think it would improve the constitution of the Senate if the Legislature were, from time to time, to appoint a certain number of the members? Well, if by any means the Legislature could shew a greater interest in the government of the University, and be more cognizant of its proceedings, I think it would act beneficially. Whether that would be best accomplished by nominating some of the members occasionally, I am not quite sure, but I think the Legislature has not taken sufficient interest in the proceedings of the University.

J. Smith,
Esq., M.D.

12 Oct., 1859.

1501. Referring to the Affiliated Colleges Act, are you aware whether there has been any objection on the part of any portion of the Presbyterian community to the preamble of that Act, or the mode in which it is expressed—the purpose of the College being to afford systematic religious instruction? Yes, I am aware that objection has been taken to the terms of the preamble.

1502. Has not that objection operated in preventing various parties from associating themselves in the accomplishment of the object? I am not personally aware that it has gone to the length of preventing any from aiding an institution of the kind.

1503. Do you not think it would be desirable to have that clause expunged from the preamble of the Act? The Affiliated Colleges were instituted in a great measure to supplement what is counted a deficiency—religious instruction in the University. If that clause were to be left out, it would appear as if they had no intention of supplying the deficiency.

1504. Could the omission in the general Act not be supplemented in the particular Act for each College? No doubt it might; but the Affiliated Colleges were instituted, as I understood, partly, and in a great measure, to supply the religious defect, and why should not that intention be clearly expressed in the general Act.

1505. *By the Chairman*: Would you be good enough to look at this clause (the 9th) of the Partial Endowment Act? This clause contains the substance of the by-laws to which I alluded.

1506. Has that clause been repealed, do you know? Yes, that clause has been repealed.

1507. By-laws were framed upon that clause? The clause was framed from by-laws, and these by-laws, I imagine, must have been repealed, although really I am not sure.

1508. How do you know that that was repealed?—

1509. Perhaps you would be good enough to read that clause? An Act was passed amending this Act to the extent of abolishing this ninth clause.

1510. But in examinations now for degrees in the University, is any religious test in any way required, directly or indirectly? No; there is no religious test at present.

1511. None at all? None at all.

1512. Not even for the students who come from the Affiliated Colleges? No; indeed the by-law was never acted upon at all.

1513. That clause evidently involves a departure from the principles on which the University was founded? That was the belief of the Professors, but it was not the belief of the Senate when they enacted the by-law.

1514. That clause not only renders it necessary that students connected with the Affiliated Colleges should give a certificate, but that also those who even attended the University without belonging to any of those Colleges? Yes, it required them also to conform to it.

1515. You are clearly of opinion, I understand from the preceding part of your evidence, that in educational establishments of any kind supported by the State no religious disqualification should be allowed? Distinctly.

1516. That those establishments should have for their object secular teaching in all its branches? Yes.

1517. And you think that the great benefit to be derived therefrom is that students of different denominations would all be thrown together, and that their religious prejudices would either be worn away altogether, or to some extent be alleviated or removed? I would not say *the* great benefit. It is no doubt a great benefit, but still I think only an incidental one. The State merely supplies education that may be accessible to all without any reference to religious opinion.

1518. What does the State provide education for—what is the great object of the State in providing education for its people, either in the higher or the lower grades of learning? I think merely to rear good citizens.

1519. That is all the State has to do? I think so.

1520. The State has nothing to do with their belonging to one denomination or another? It is better that the State should know nothing of that.

1521. You think that fact had better be ignored by the State? I think so; and I would add, if the State did not make such an ostentatious profession of interest in the various denominations, the denominations themselves would be more easily dealt with. There are the Universities of Scotland, nominally under the Established Church certainly, but practically very free now. Students of all denominations go to them, and there is no profession made of attending to the interests of those denominations, and being careful of their consciences, and all the rest of it; but students of different creeds come and take advantage of those institutions, and never make any words about it.

1522. That is the case in Scotland? Yes.

1523. *By Mr. Arnold*: Then, I suppose you think that religious education has nothing to do with the making of a good citizen? I should be sorry to draw that inference. It is quite possible that there are elements in the manufacture of a good citizen which the State cannot supply.

1524. I understood the questions to be these—"What do you think is the duty of the
"State

- J. Smith, Esq., M.D.
12 Oct., 1859.
- "State with regard to the education of the children of the State?" You said—"to make good citizens?" The next question was—"Do you think the Government ought to interfere with the religious education of the children?" and I think you said "No."? Yes.
1525. I supposed the inference would be from those two questions—that religious education would have nothing to do with the making of a good citizen? I do not think that a fair inference. The State may understand that there are other appliances for making good citizens, but it may not be able to use those appliances.
1526. *Mr. Arnold*: I put the question more with a view to enable you to explain.
1527. *By the Chairman*: A man may be a very good citizen without having any religion at all. In many instances in antiquity men were fine citizens —? Yes, but religion is rather a wide word.
1528. No doubt it is a wide term. I dare say most of those men were good citizens in their own way, but a man may be a very good citizen without being a very good Church of England man, a very good Church of Scotland man, a very good Roman Catholic, or a very good member of any other denomination? Yes, certainly.
1529. *By Mr. Arnold*: And, *vice versa*, a man may have the character of being a very religious man, and yet turn out a very bad citizen? No doubt.
1530. *By Mr. Cape*: Have you not been called in occasionally by the Government? Yes; I am frequently referred to by the Government in reference to patents, Customs' questions, and general matters.
1531. Ofttimes involving considerable labor? Yes, sometimes considerable labor.
1532. *By Mr. Arnold*: In analytical chemistry, I suppose? Yes, together with general inquiries and investigations.
1533. *By the Chairman*: In cases of poison? Yes; but a great variety of questions are submitted to me. People go and propose something to the Government, and if it is anything connected even remotely with my department I am often referred to for an opinion. Then other matters require analysis, involving tedious operations, and they interfere often a good deal with the work of my class.
1534. *By Mr. Cape*: These labors are not always remunerative, I believe? For a time they were not, but then I was given to understand by the authorities that matters involving professional labor, such as analyses, would be paid for.
1535. But to this time you have been for the most part without remuneration? The present arrangement has been in existence some time. At first the labor used to be gratuitous, and I was compelled to remonstrate a little, but I believe it was merely from there being no application on my part that the work was not paid for originally. It may not be out of place to state that I ask only very moderate fees for Government work, and that this is a very insignificant source of income. Of late I have had to decline the Coroner's business entirely. The duties of the class would not allow me to go into cases of poisoning satisfactorily. I had on several occasions to dismiss the class during such investigations, as they required constant attention, and had other things been going on the legal evidence might have been vitiated. There is a competent analytical chemist now in Sydney who can take these cases, and I have recommended the Coroner to employ him.
1536. *By the Chairman*: Do you think there is any occasion for such a building as that in course of erection? I am inclined to think it is rather premature. The old Sydney College would have sufficed for a dozen years at least—until they saw their way more clearly.
1537. Was that the general opinion of the Professors? I think the others were perhaps more inclined to have a new building.
1538. The site you say was not approved of? I did not approve of it.
1539. Are your Scotch Universities built on a scale of grandeur similar to that which has been commenced here? The Edinburgh University is a fine pile of buildings, but not equal to ours in point of outward appearance; it was very expensive. A handsome and very commodious new College was built in Aberdeen a few years ago, but by no means so imposing in appearance as the Sydney University.
1540. How were the funds provided for the College at Aberdeen? Partly by the Government, and partly by subscription.
1541. Do you know the amount advanced by the Government? £20,000, I believe.
1542. In Edinburgh how were the funds raised? I do not know.
1543. *By Dr. Lang*: There were repeated grants in Edinburgh? I think the first was £30,000? Altogether, I think it has been a very expensive building, but it is very extensive, and, probably, not more expensive than there is occasion for.
1544. *By the Chairman*: How many students attended it? I imagine there are about 800 under-graduates.
1545. *By Mr. Wilson*: There were 1,800 medical students in Edinburgh; they might not be matriculated students, but the great bulk of them were attending the University? It is the curriculum of arts I was thinking of. If you add the medical students they are very numerous.
1546. *By the Chairman*: How many members of the Senate constitute a quorum in your Senate? I believe five.
1547. Is there generally a full attendance? Not generally.
1548. Do the same persons attend on all occasions? I think a few attend pretty regularly. It is not a thing I am exactly cognizant of. I am at the other end of the building, and do not see who attend the meetings.
1549. *By Mr. Wilson*: Are you aware whether it is proposed to convert the University domain into a botanic garden, with a view of teaching the students botany? I do not think there is any intention of actually carrying it into effect.
1550. Do you not think the present botanic garden will be sufficient for some years to come?
At

At least for a number of years to come. It would be going to an unnecessary expense in the meantime to make a botanic garden in the University domain.

1551. Are you aware that the whole of the University land set apart for Colleges is already granted to four denominations? Not the whole, but a large portion certainly.

1552. I thought the whole had been set apart for the Colleges. There is a part of the University land still remaining, but I understand that all that set apart for Colleges has been granted to the four denominations? No, it is held in trust for the four denominations. If they apply within five years from the date of that deed of grant (I believe that is the tenor of it) they will get those portions handed over.

1553. I suppose you are aware that it is proposed to give to each eighteen acres? It says "not less than eighteen acres."

1554. Do you not think that a great deal too much under the circumstances? It is a large quantity of land; I do not quite see how they are to use it to any good purpose.

1555. Do you not think that six acres for purely College purposes would be amply sufficient, leaving the other twelve as part of the general domain round the University? Well, if you consider that the head of each College should have a good portion of land for his own use, and then some for ornamental purposes, perhaps six acres would be rather too little, although eighteen acres may be too much.

1556. *By Dr. Lang*: Do you think there ought to have been residences for the Professors within the University precincts from the first? Personally I have no very strong feeling on that score; I think on the whole it would have been better if there had been residences; it would, in fact, have saved a little of the annual income of the University.

1557. Do you not think it would have exercised a moral influence favorable to the University and the students to have had the Professors residing on the spot? I scarcely think that would make much difference, seeing that the students only come to hear lectures. They never can get accommodation for living in the University building; and as they only come to hear lectures, I do not know how it could have much effect of that kind. As soon as the lectures are over they disperse.

1558. *By Mr. Wilson*: Have you heard any complaint of want of accommodation for horses? No, I do not think I have heard any complaints, but I dare say in consequence of the want of such accommodation students have sometimes been put to inconvenience.

1559. Do you think such accommodation is requisite, considering the situation of the University—should not a shed of some kind be put up? Yes, I think so; it would be a great convenience for the students to have some such accommodation for their horses.

1560. You do not think it would increase the attendance on the lectures? I scarcely think a matter of that kind would much affect the attendance.

J. Smith,
Esq., M.D.

12 Oct., 1859.

The Rev. Frederick Armitage, M.A., called in and examined:—

1561. *By the Chairman*: You are Head Master of King's School, Parramatta? Yes.

1562. Are you a member of an English University? Yes, of Oxford.

1563. How long is it since you left Oxford? I graduated in 1849, and have only resided one term since that time.

1564. You are a Master of Arts? Yes.

1565. Would you be good enough to state to the Committee the general course of instruction at Oxford? It has been altered very much since my time; I came out under the old system.

1566. You had no experience of the new system? No personal experience, though of course I was affected by it as resident master of the Bath Grammar School, having to prepare pupils for the University.

1567. Do you know what the changes have been? The change chiefly affecting the schools, which prepared boys for the University, has been the necessity of a certain amount of mathematical knowledge for passing the second public examination. In my time it was frequently the case that men when they took their degrees could not work the simplest sum in common arithmetic. Many schools consequently neglected mathematical studies. I have known schools where half an hour in the week was all that was allowed for mathematical instruction to the upper classes.

1568. That was commonly the case then? Quite commonly.

1569. And what changes have taken place since? No one can pass without exhibiting a certain amount of mathematical knowledge. This change has had most effect on the schools preparing boys for the University, and as such has come most under my notice; but the great change in the University course itself was the opening honor schools in modern history, and the physical sciences. A third public examination was also appointed midway between responsions and the final examination, in which honors are assigned in classics and mathematics; but I do not know whether the change has worked well. From late accounts I find that attempts have been made to revert, more or less, to the old system, as if the change was not satisfactory.

1570. Have you visited the Sydney University at all? -Not at all.

1571. You have not seen the building? Only on the occasion of the musical festival.

1572. Do you know at all what the curriculum is there? I know nothing more than I could learn from what is freely given to every one.

1573. Have you visited St. Paul's College? Yes; I am an annual subscriber.

1574. Do you know what branches of education are chiefly attended to now at Oxford—is civil engineering taught? Scarcely at all, I believe; but I am loath to say anything on the matter, because I know nothing more than what I have learnt from the public papers, and such reports as I receive from Home.

The Rev.
F. Armitage,
M.A.

12 Oct., 1859.

- The Rev. F. Armitage, M.A.
12 Oct., 1869.
1575. It was not, I suppose, in your time? No. Modern languages are taught now.
1576. What modern languages? French, German, and Italian, I think, are all taught by the Professors of the Taylor Institution—French and German certainly.
1577. And what branches of science? Mathematical science?
1578. Yes? Mathematical honors in my time were not considered very important; they were always thought inferior to honors in *literis humanioribus*. There were the ordinary branches, the same as at Cambridge. It was said that an Oxford first-class man was equal to one of the first seven wranglers, but whether it was so or not I cannot say.
1579. *By Mr. Arnold*: In mathematics? In mathematics. The mathematical class list was always very small.
1580. *By the Chairman*: Are the relations between the King's School and the University satisfactory? We have no relations at all.
1581. It is an independent establishment, and not recognised as one of the Colleges? The King's School?
1582. Yes? Oh, no.
1583. What is its present position—will you be good enough to answer this question as far as you please? I have no objection to answer any questions, as it is a public institution.
1584. Is there an emolument attached to it from the Government? No.
1585. There used to be? Yes, I believe there used to be.
1586. It is merely a building handed over to your care? Yes.
1587. You have expended capital upon it, I believe? Yes, about £3,000. The necessary accommodation was very deficient indeed, so much so that no school could have been kept there with proper attention paid to ordinary decency, without considerable improvements.
1588. What number of students have you now? At present between seventy and eighty.
1589. Are you in the habit of supplying the University with some of them? I have sent one only.
1590. *By Dr. Lang*: Are those all boarders? No. At present we have fifty-one boarders; the rest are day-boys. We have two boarding-houses. The mathematical master and myself each keep a boarding-house.
1591. What may be the cost of education at the King's School? Four guineas a quarter.
1592. For the mere education? For the education.
1593. And the board? The board is twelve guineas.
1594. *By the Chairman*: Do you teach them any of the practical mathematics there? Yes. Mr. Hawkins is a Cambridge man, and he takes the superintendence of the whole of the mathematics.
1595. You give such a course of mathematical instruction as would enable the students to turn to engineering, I suppose? Yes.
1596. You feel that it is necessary in this Colony to make education practical? Quite so. The great difficulty we have had is in obtaining occasional masters to teach such subjects as drawing, and practical land surveying; Mr. Hawkins however teaches it theoretically.
1597. Would you favor the Committee with some of your views as to the position of the University respecting the larger schools of the Colony—your own, for instance? I would not say that it is antagonistic, but it is exclusive; it sets itself apart from the schools of the Colony. It does not profess either to test or to supplement the work of the schools, but would wish that they should conform to its requirements. This is very well in the case of a University venerable for its age, and for the number and learning of its members; but here, where the University is younger than most of the schools, and the Professors do not command respect as having been selected by the University from its own body, but were before their appointment, and are still in the eyes of their own Universities simply on an equality with most of the schoolmasters in the Colony; the latter do not like to be dictated to as to the subjects they shall teach, which is practically done so long as the appointment of the subjects for University examination, and practically the conduct of the examinations are in the hands of the Professors. I think the schools feel this, and, as matters stand at present, they will send as few to the University as possible. They would not oppose any boys going to the University, but they do not recommend it at all. At Home we had always a vote and a voice in the government of the Universities, and we feel it very hard that we should be placed out here under men who would be but on a par with us at Home.
1598. As graduates? Yes.
1599. This will not apply to gentlemen who are not graduates? No.
1600. You feel this as a University man? Yes, and I think I may say the same of the other schoolmasters. If the University were thrown open to graduates generally, they would feel much more confidence in it; but they look upon it now as under the management of three graduates, and as not satisfactory in that respect. The schoolmasters practically object to the present system of professorial lectures. It is a well known thing at Oxford and Cambridge, that if a man is reading hard, one hour's lecture per day is considered as much as will be useful to him; and to have of necessity to attend four lectures is throwing away time, especially where, as here, students of one year are all grouped together, though of course there will be the greatest difference in their respective attainments. I know that schoolmasters complain that their best boys instead of improving, from this reason go back.
1601. *By Dr. Lang*: What was the course of instruction for an undergraduate at the time you studied at Oxford? It was not necessary to attend any Professor's lectures. The lectures were simply such as the College thought necessary, and the general system was that the harder a man read the fewer lectures he had to attend. Ordinarily, a really hard reading man—one that was recognised as a hard reading man in the College—was not called upon to attend more than three lectures a week during the last year.

1602. You are aware that there is a feeling of antagonism on the part of some of the schools of the Colony towards the University? I would not say antagonism.

1603. Alienation? We certainly are kept apart from the University; the Professors tell us we are not their peers; we are not even allowed to use the books belonging to the library, so that lately when I wanted a philological work, I had to wait nine months and send to Germany for it, while it was lying dusty on the shelves of the University library all the time.

1604. There is not a friendly feeling at all events? Not at all.

1605. And do you think that operates prejudicially? Undoubtedly, to a very considerable extent.

1606. What change would you recommend in order to effect a better state of things? I think it would be very simple to allow graduates of other Universities for the present to have a degree in the Sydney University, so as to have a voice in the management and the arrangement of subjects.

1607. To have an *ad eundem* degree? An *ad eundem* degree does not confer a vote at the Home Universities.

1608. But with the condition of a vote? Yes.

1609. From any British University? From any British University.

1610. *By the Chairman*: Do you see any objection to tutors in actual practice (who may be graduates) having an interest in the University? Certainly not; it is not found that they exercise an evil influence at Home, and I do not see why they should do so here. If individual schoolmasters were to be appointed University Examiners, arbitrarily, there might arise a cause of complaint; but as graduates, I cannot conceive any reason for their acting differently from any other class of graduates.

1611. *By Mr. Arnold*: Is there any class excluded here who are included at Home in the election of the Senate or in any way in the management of the University? The University is in a different position here. The University here consists of three Professors. It is not the University of the Colony; it does not represent the education of the Colony. Doubtless it is a difficult matter to start a University, but unless it is at first at the head of the education of the Colony, I do not think it ever will be.

1612. But I am looking to the intention to give the University here the same position in regard to the schools as the English Universities hold to the schools of England. Is there any exclusion from the management of the University that can be complained of here? When there are enough graduates of the Sydney University to spread over the Colony and take the schools, the present management may be very good, but at the present time the graduates of Home Universities—in whose hands the education of the Colony is now placed—are excluded; they have not the power of becoming members without going through the regular course.

1613. Precisely, nor would they at Home; for instance, a graduate of this University being admitted to the same standard —? He would not be admitted; he could not take an *ad eundem* degree at Oxford or Cambridge.

1614. But at all events at other Universities who can—they are not admitted to any participation in the management of the University? No.

1615. So that you have no more to complain of here than persons in a similar position at Home, excepting that you do not recognise the position of the University? The very essence of our complaint is, that the whole influence of the Universities at Home is here claimed by the Professors; they are dictators, to whom all graduates, their equals, must submit.

1616. *By the Chairman*: Have you heard any remarks upon the expenses of a University education here? I cannot say that I have heard the amount of the fees ever mentioned.

1617. Do you approve of Affiliated Colleges? As the University is at present I do not see what good they can do. I think if ever the University should increase in numbers, the establishment of separate Colleges will be likely to produce emulation and rivalry in the University itself, and at some subsequent time will doubtless produce good.

1618. *By Mr. Arnold*: Do I gather correctly from your remarks, that you think the time of the establishment of the University is premature? As at present constituted—yes; but not as it might be.

1619. You think alterations might be made which might make it —? Pre-eminently useful to the Colony.

1620. What would be the alterations? If the University were thrown open so as to represent the education of the Colony. The influence of the University might well be exerted in the way in which Oxford and Cambridge now exert themselves—by middle-class examinations—by their giving certificates merely, or a lower degree, as at Oxford. In that way the University influence would be felt all over the Colony, and no doubt would result in drawing many new students into residence.

1621. Merely to test the qualifications of students and grant certificates? Yes.

1622. Without attendance at all? Yes, as at Oxford and Cambridge at the present time. Then the influence of the University would be felt all over the Colony.

1623. *By Dr. Lang*: What I understand you to suggest as an improvement is, that all graduates of British Universities should be received to the same degree in this University, and be recognised as having power to vote? Yes. I would not make that arrangement for all time, but for a time at all events.

1624. *By Mr. Arnold*: Until the number of graduates here are sufficient? Until they are sufficiently numerous.

1625. You think that would be preferable to the present mode of election? Yes; for if the University as at present constituted were to attempt such examinations as I have mentioned, they would find few, if any, candidates present themselves; and for this reason, that the conduct of such examinations implies a power prescribing the course of study to be pursued

The Rev.

12 Oct., 1859.

in schools, and the schoolmasters of the Colony would not submit to be dictated to on this point by the present Professors under the name of the University.

1626. *By Dr. Lang*: And that is the extent to which you would propose a change? I think such a change would enable the University to originate in itself such progressive changes as might from time to time be found necessary.

1627. You would not have any other class of teachers than graduates of Universities? I think at present you could not well associate others; but if the University so constituted undertook the examination of schools, the masters of those schools from which pupils received a certificate or an A.A. degree, as at Oxford, might be again admitted, I think, on a similar footing, to graduate. In short, wherever you could find a thoroughly educated man, and could test his education, I think it would be very well to associate him—

1628. *By the Chairman*: Is it likely that the certificate to which you allude would be of service in enabling the Government to judge of competent applicants? Undoubtedly; and it would improve the schools very much. I have been here now four years, and I find it very hard matter to keep up the standard in the school as at first. I never know whether the standard is lowering or rising, because I cannot compare myself with other schools, or with anything at all, either below me or above me.

1629. Excepting the examination for a degree, there is no test existing in this Colony? No; there is no test at all existing in the Colony—

1630. Which of course has its influence upon education—it is a check upon the progress of education? On the efficiency of education, not on the amount.

1631. The value also? Certainly.

1632. Is this the case at Home at this time? At present both Oxford and Cambridge examine candidates from schools; they appoint certain places of examination, and, at the same time, the same papers are given in every place. Oxford gives successful candidates an A.A. degree, and Cambridge gives a certificate calling them by the name of non-gremials.

1633. Have you any other views to state respecting the University, or the relation between the schools and teachers of the University? I am unwilling to repeat what I only know from hearsay of the causes of the dissatisfaction felt by the masters of many schools with the Professors of the University. Their connection, however, with the Grammar School as Trustees is generally considered improper, when they are also perpetual examiners in the University.

1734. Do you find the youths of the Colony disposed to pass on to the University? Not at present at all. I find in my school boys continue in the classical department until they have attained sufficient proficiency for the University, and then they go to the modern department previous to entering on practical life.

1635. They pass, as it were, from your Classical School back to the modern department, instead of going on to the University? Yes.

1636. Does this arise from their own taste, or from the direction of their parents? I think both influence them. I should mention that the King's School is rather different from other schools in one respect. We have exhibitions to Oxford and Cambridge of £100 a-year, and the best boys take those exhibitions home. There is, therefore, always an inducement to continue in the classical department. Boys probably continue in it from that view until they find it is not likely they will obtain an exhibition.

1637. Who established those exhibitions? The late Robert Campbell.

1638. *By Dr. Lang*: How many are there of them? The matter is in a curious position at present; Mr. John Campbell wrote to me about it last night. There have, up to the present time, been three exhibitions of £100 each, lasting for four years.

1639. *By Dr. Lang*: To an English University? To any University of the United Kingdom.

1640. They are not able with those exhibitions to avail themselves of the Sydney University? No.

1641. *By the Chairman*: They are restricted? Yes.

1642. Who is the exhibitor at this time? There have been two exhibitors since I have had the King's School; Günther is now a member of Green's College, Oxford. The last exhibitor was Pilcher.

1643. *By Mr. Arnold*: Has he gone Home? Yes; he is going to try to get an exhibition at Oxford; if not, he will go to Cambridge.

1644. Do you not think it would be a great stimulus to scholars in such schools as King's School, and in other schools—the Grammar School for instance—if there were scholarships to the University open to competition on the immediate entrance of the boy at the University, as at Oxford? Undoubtedly.

1645. As a test of the scholarship of the different schools? Yes.

1646. That, I presume, you think would be more valuable than the process open to them at a more advanced period? Very much so, and I think it would draw more boys to the University.

1647. *By Mr. Arnold*: Do you remember what the restrictions in the Baliol scholarship are? Candidates must be under eighteen.

1648. Is there no other restriction? No.

1649. That is always competed for by boys at school? Almost entirely so, in consequence of the restriction as to age.

1650. And that in fact is looked upon as the great test of scholarship? Yes; it is considered a great honor to the school to which the newly elected scholar belonged.

1651. *By Dr. Lang*: Perhaps you will add to your evidence any suggestion for the improvement of the educational system of the Colony that may occur to you? The University of Sydney, by requiring attendance at the Professors lectures, excludes many men who are now engaged

engaged in the practical work of life, but who would have gladly joined it at an earlier period, if it had been then established. For these cases, at all events, if not perpetually, it would be well for the University, under certain restrictions, to allow non-resident students to pass the annual examinations, and so proceed to a degree. This is the case at Dublin, and the system has recently been adopted at Melbourne. In consequence of a similar change not having been proposed in the Sydney University, I know of several young men who are making arrangements for entering at Melbourne, and I don't think the Sydney University ought to allow a single would-be student to escape her.

TUESDAY, 18 OCTOBER, 1859.

Present:—

MR. ARNOLD,
MR. BLACK,
MR. CAPE,
REV. DR. LANG,

MR. MURRAY,
MR. PLUNKETT,
MR. WINDEYER,
DR. WILSON.

TERENCE AUBREY MURRAY, ESQ., IN THE CHAIR.

John Smith, Esq., M.D., Professor of Chemistry in the Sydney University, called in and further examined:—

1652. *By the Chairman:* There were some omissions in your last evidence which you will now perhaps be able to supply? One point on which I was not able to give the information desired was in reference to the communications between the Professors and the Senate, on subjects on which the Professors disagreed with the Senate. I have consulted Dr. Woolley on the matter; and he, being Chairman of the Professorial Board, has looked up the records of that Board, and supplied me with certain memoranda. Perhaps I may read the letter which he writes to myself, enclosing these memoranda. (*The witness read the letter referred to, for which, with enclosures, see Appendix.*)

John Smith,
Esq., M.D.
18 Oct., 1859.

1653. I see by Dr. Woolley's letter that the second communication, dated Nov. 4, 1857, "refers to the religious test inserted in the Colleges Bill of 1854, and which was abrogated "last year"—what opinion did the Professors express on that point? It is an opinion strongly against the proposed test, or against what the Professors believed to be a test. In that respect there was a difference of opinion; the Senate holding that it was no test, the Professors holding that it was.

1654. Was the letter of the Professors directed against the clause in the Affiliated Colleges Act, or against the by-law? From the date of it, it was evidently written after the Act was passed, which, again, was considerably after the making of the by-law.

1655. The by-law was passed first, and the Act subsequently? Yes. Indeed I see that the particular reason which caused this letter to be written was that up to that time (November, 1857,) the by-law had not been acted upon, and the Professors learnt that it was then the intention of the Senate to act on it in future. The second paragraph of the letter begins with a statement to that effect.

1656. *By Mr. Cape:* The by-law, as well as the clause in the Act, virtually a dead letter now, are they not—my object in asking the question is, to consider whether it is worth while to labor the point much at this time? It is worth while, for this reason:—I remember, Mr. Chairman, that when I was examined before, you asked me how I knew the by-law was repealed, and I was rather surprised at the question, as it was well known that an Act had been passed amending the Affiliated Colleges Act to the extent of repealing the ninth clause. It did not occur to me at the time that repealing the ninth clause of this particular Act does not affect the University by-law. The University by-law stands in precisely the same position that it did before, and my impression is, from all I can gather from these documents, that the by-law is, at the present time, just as legal and binding as ever it was.

1657. *By the Chairman:* There is nothing in the Act that repeals the by-law? I believe not, but I am speaking beyond my own personal knowledge, because I have not seen a copy of the Act.

1658. Are you aware whether the Senate of the University have repealed it? I judge they have not, because I see it is still in the Calendar for 1859, just the same as before.

1659. There is no record of its having been repealed? Not that I am aware of. If the opinion be correct, that this by-law is legal, then the question arises,—are the degrees that the University has already conferred legal, because they have been conferred without this certificate being demanded or produced.

1660. *By Mr. Plunkett:* Did the Professors make any representation against the passing of the by-law? No representation appears to have been made in writing; it had been only conversational.

1661. When the Bill was passing through the House in 1854, did they then make any representation? So far as I can gather, there is no record of any such representation, but I have a distinct recollection (speaking only for myself) that I did a good deal to prevent this clause being introduced into the Act. It was introduced after the Bill was read a second time. I happened to see a copy of the Bill, as reprinted, after it had been read a second time, and in the reprint I found this clause inserted,—and I felt that it was an excessively objectionable thing to be giving permanence in this way, to what I thought was a religious test.

John Smith,
Esq., M.D.
18 Oct., 1859.

test. I thought it objectionable too in another point of view. Here is an Act to establish Affiliated Colleges, and in that Act they depart from the subject specified in the preamble, and begin to legislate for the University. Supposing it was right to enact that particular clause it was not right to do so in that connection, for you will see in this 9th clause you at once open a new subject:—"And whereas it has been resolved by the Senate of the University of Sydney that honors and degrees shall not be given to any student who shall not produce testimonials of competent religious attainments, and it is expedient to give legal permanency to such resolution." Well, supposing it were expedient, was it right to take advantage of an Act which had reference to another thing altogether? On seeing that copy with this clause printed in it, though only a few hours had to elapse before the Bill had to pass, I took the opportunity of seeing several Members of the Legislature, and asked them to try and resist it, even at the last moment. One or two were perfectly incredulous when I told them the Bill would be presented to them with this clause in it. They said the thing could not be done—that the usages of the House did not allow it. Well, they went to the House and found that it was done, and one or two—I remember that Mr. Holroyd was one—did stand up and oppose it; but it was a thin House, and nobody seemed to care about it, and so the Bill was passed, either without a division, or by a considerable majority. But when a Bill was afterwards introduced to expunge this clause, scarcely one could be found to raise a voice in favor of its retention.

1662. However, in fact, the Professors made no remonstrance or representation against it in any way till 1857, three years after this clause passed? It would appear that there is no record of their having done so in writing.

1663. *By Mr. Black*: No instance has occurred in which the production of these testimonials as to religious attainment has been insisted upon? No instance.

1664. From whom was it supposed these testimonials were to emanate, for this clause does not specify? From the heads of Colleges, in the case of students attending Colleges; and in the case of students not attending Colleges they were to produce certificates from a religious teacher of the denomination to which they might belong, "or from some other responsible person whom the Senate of the University may in each case accredit for the purpose."

1665. The whole of this is a dead letter as to the production of testimonials of competent religious attainment? It has not been acted upon, but my impression is that it is still legal, and might be insisted on if the Senate were so disposed.

1666. Do you not think it would be advisable to place the law on this point on a clear and indisputable footing? I think it would be expedient for the Senate to repeal their by-law.

1667. So as to do away with the possibility of the Senate insisting at any time on the production of testimonials of competent religious attainment? Yes.

1668. *By Mr. Plunkett*: I place in your hands the Act "to amend an Act intituled 'An Act to provide for the establishment and endowment of Colleges within the University of Sydney'" (assented to 25th August, 1858,) from which you will see that the ninth clause of the Affiliated Colleges Act has been repealed? (*The Witness read the Act.*) Well, I repeat that my own impression is that the repealing of this ninth clause leaves the by-law precisely where it was before. The by-law had legal force before that Act was passed, what hinders it to have legal force after that Act is repealed?

1669. *By the Chairman*: You are not aware of the by-law having been repealed? I am not. It is still in the Calendar.

1670. *By Mr. Plunkett*: The Calendar only comes up to the end of 1858, though published in 1859? The Act for repealing the ninth clause was passed on the 25th August, 1858, and yet the by-law appears here. It may possibly have been repealed in the present year. With reference to the third subject mentioned in Dr. Woolley's letter to me, the accommodation for the students, respecting which he states that, in September, 1857, himself and Mr. Pell "obtained an audience with the Senate for the purpose of pointing out certain inconveniences resulting from the want of accommodation for the young men attending lectures." I would not be inclined to lay much stress on this, because I think that when the present portion of the building is completed there will be plenty of accommodation for the students. Perhaps they had not enough before, but I scarcely think more could be allotted to them out of the part of the building already finished. With respect to the proposed medical school, the protest Dr. Woolley alludes to has not yet had time to get before the Senate, and therefore I doubt whether it would be proper to put it in here.

1671. *By the Chairman*: When is it to be presented? At the earliest meeting of the Senate.

1672. When will that take place? They meet on the first Wednesday of each month, unless when special business calls them together oftener; I may, however, state my own opinion of the matter, which perhaps would be better than referring to this paper at present. There is a by-law stating that—"The Professors of the three several faculties shall form a Board, of which the Provost and Vice-Provost shall be *ex officio* members, and the Dean of the Faculty of Arts Chairman, for the consideration of all general questions relating to the studies of the University, or which may be referred to them by the Senate." Now the institution of a medical school is surely a question relating to the studies of the University. I have learnt, indirectly to be sure, that considerable progress has been made by the Senate in the arrangements for a medical school, and the Professorial Board has not been referred to. In this Calendar you will find that I am named Dean of the Faculty of Medicine, but I have not been consulted. It is but right to say, that during the late vacation, September, I was away from Sydney, and during my absence the meeting was held at which the Report was adopted, so that even had I been summoned I could not have been present. Then, I wish to express a decided opinion against the expediency of introducing extended professional education before we complete the curriculum of arts, or at all

- all events before we render it more complete than it is at present. The authorities of the University themselves acknowledge that there are certain defects in the curriculum of arts, and I think it is their duty to fill up the chief blanks in that curriculum before they begin to expend money on professional education. This institution of a medical school cannot be done for nothing; no doubt the Senate will try to do it as economically as possible, but it will take money away which ought I think to be employed in the faculty of arts. It is their first duty to provide a good general education, and having done that, then to try to provide professional education; but clearly in my view the one stands before the other. And, again, granting that the curriculum of arts is filled up, and there is money to spare, then comes the question of the expediency of establishing a medical school at the present time; I know something of the Colony now, having been teaching and travelling in it for seven years, and I think there is little probability of getting more than three or four medical students per annum. Well then, is it worth while to spend money, though it be only a few hundred pounds, for so small a number of students? And, even though more students were to present themselves, I have a strong impression that they ought not to be encouraged to stay in the Colony to study medicine. Anyone who knows the medical schools of Great Britain or the Continent may easily understand that it would be doing young men an injustice to tempt them to go through the study of medicine here instead of in Europe; they would be placed at a disadvantage in comparison with those who had studied in those schools. If it be said that it is a matter of expense, that there are lads in the Colony who would be glad to study medicine, but who cannot afford to go Home, then I say that when you come to look into it the difference of expense will be a trifling matter; in fact, the fees for classes at Home are so low, and the rates of living so cheap, that even with the expense of the passage added, the advantage might still be somewhat on the side of British education on the score of economy. There is, however, an argument (which I admit has much force) in favor of supplying professional education in the Colonies, derived from the impolicy of sending young lads to England who have no near relations to take charge of them. I would lay stress upon this objection, that it is not expedient to profess to give a complete medical education, and thereupon to grant degrees, and thus encourage lads to study medicine here, when they could not hope to hold the same position in the profession as medical men well educated at Home. In England it is only in the larger towns that medical schools can be well supported. You should have too, if possible, men of great standing and experience to be teachers—men who would be looked up to, not only by their own circle, but by the civilised world.
1673. I suppose when you are speaking of medical schools you include surgical schools? Yes; the phrase medical school is generally used to include surgical schools.
1674. Do the remarks you have just made apply to the distinct branch of surgery? Yes, to both branches.
1675. As much to one as the other? Yes.
1676. Do you not think anatomy might be studied to as much advantage here as at Home? I think not; the heat of the climate stands in the way of that.
1677. *By Dr. Wilson*: And the difficulty of getting subjects? That might be an objection too. It would be difficult to carry out the studies.
1678. *By the Chairman*: Do you think medical science, apart from surgical science, is in a state of perfection in England, or in any part of the world? It is not perfect, certainly.
1679. I mean the treatment of disease, quite apart from surgery properly considered? I would say the study of disease, and the study of the art of curing disease, has been very much advanced of late years. I would rather not give an opinion as to whether it has attained great perfection in the results.
1680. Looking at medical science apart from surgical science, which has no doubt reached great perfection, do you think it has made any progress during the last two or three hundred years at all to be compared to that made by other branches of science? The progress in medicine has probably not equalled that in surgery; but I think great progress has really been made.
1681. Some very great authorities appear to be of quite a contrary opinion, and look upon medical treatment, even in the best schools, as still to a great extent empirical? I am not prepared just at once to controvert that opinion.
1682. You give no opinion on the point? I would rather not.
1683. Do you not suppose that the study of medicine in the Colony might fit a person for the treatment of disease in the Colony in a greater degree than the study of medicine in a distant country? I think not necessarily.
1684. Is not the treatment of disease in the Colony on European principles often very unsuccessful here? I think it may be so. The type, as it is called, of disease may be somewhat different; but I do not think that that bears much against the opinions I have expressed as to the superior advantages of the study of medicine in Europe.
1685. Do you think an experienced European practitioner, coming to a distant part of the world like this, is likely to be successful here in the treatment of disease, if he merely follows his European experience? A well-educated and experienced European physician will not continue his European practice if he finds it is not successful.
1686. He must have colonial experience? He will soon acquire that experience, and soon be a better practitioner than a person who has merely studied the treatment of colonial diseases in the Colony. The chief end of medical study does not consist in learning that a particular medicine should be given for a particular disease. One requires to understand the theory of diseases, and the changes they produce on the body—the pathological changes; and there are certain habits of observation and powers of discrimination, and correct reasoning, that require to be cultivated, to render a man a good practitioner; and these, I think, may be better cultivated in Europe than here.

John Smith,
Esq., M.D.

18 Oct., 1859.

- John Smith, Esq., M.D.
18 Oct., 1859.
1687. Must not the diseases prevalent in the Colony be treated in a manner peculiar to the Colony? I scarcely think so. There may be some little differences in the details.
1688. Are you clearly of opinion that it is not desirable to establish a medical school? At present I am clearly of that opinion. I think the University ought first to supply a good general education. That being done, if they still have the means in their hands, I would then consider the propriety of giving professional education; and if they had arrived at that point I would then consider whether it was expedient to establish a medical school in the Colony. At present I do not consider it expedient.
1689. Why do you not consider it expedient? For the reasons I have tried to state.
1690. I suppose the teaching of medicine must have a beginning in this part of the world? I think you may still take a few years to consider of it.
1691. Are you aware what the feeling is on the subject among professional men in Sydney? I believe several of the leading professional men are highly in favor of the establishment of a medical school.
1692. *By Dr. Lang*: Do you think so small a population as we have in this Colony would afford sufficient variety either of clinical or surgical cases to give a student of medicine the requisite experience? No. I think he would scarcely have fair play. The expression I used before, I think, was that it would be an injustice to a clever lad to induce him to study medicine in the Colony.
1693. Is it not the general result of experience at Home that it is only in very large accumulations of population that you can have that variety either of disease or of accident, which is requisite for the instruction of youth? That is the opinion, and it is now acted upon to a great extent. Young men who go through their medical studies in one of the recognised medical schools in England or Scotland, are now very much in the habit of going to the Continent for some time, after completing the regular curriculum, to attend the large hospitals of Paris or Vienna. They prefer the studies of Britain; but the British hospitals are rarely so large as those of Paris or Vienna, and the advantage of getting a great mass of cases together is considered so great that there are few young medical men now who do not go to the Continent for a time, after their curriculum is completed at Home.
1694. Do you not think the study of anatomy might be pursued successfully in the winter months in this county, as far as the objection you have stated as arising from the climate is concerned? If it were necessary it might be studied. I think a young man might begin his medical studies in this Colony. We might give him one year of his studies here and thus save time at Home. We might give chemistry, some anatomy, and some hospital practice, and then let the student go Home and complete the rest.
1695. Is not the study of pharmacy, by serving an apprenticeship in chemists' or druggists' shops, part of the medical education required in Scotland? They must learn practical pharmacy somewhere, but they are not bound to do so in druggists' shops; they may do it in the dispensaries attached to hospitals.
1696. *By Dr. Wilson*: Do you not think there would be great difficulty in finding competent medical teachers in a Colony like this? Perhaps I ought not to express an opinion on that score. I think you would get men who would put themselves to a great deal of trouble to do the thing well; and I think you might get a staff of very good lecturers here, but they could not command the advantages which lecturers at Home have. They have not the museums of preparations to shew, nor such an amount of living cases to exhibit. There is a spirit of enthusiasm too in the medical schools, which I think is one of the most valuable elements in them, and what enthusiasm could you get up among three or four students? and I do not think you could expect more for several years. Some of our students from the University have gone to England to study medicine, and I am glad to say have taken a high place there among their fellow students. I am sure if it were in your power to ask their opinion what they would think of being obliged to study medicine in the Colony, they would give a strong opinion in favor of England.
1697. *By Dr. Lang*: With reference to previous questions, is not the influence of climate in modifying disease one of the branches of medical study? It is. Indeed it is well known that the types of diseases alter very much, not merely from climate, but in the same place at different times. The practice in Great Britain is different now from what it was thirty years ago, and still more different from what it was sixty years ago. The type of disease changes in the same place, and still more in different parts of the world. The study of medicine is not by any means confined to learning that for certain diseases you should give certain medicines.
1698. *By Mr. Plunkett*: Does not your objection go to establishing a medical school at any time within the next fifty years, because we cannot hope within that time to have the same advantages in every respect as the Mother Country possesses? I do not think it would be expedient to institute a medical school for several years to come.
1699. Are you wholly against making a beginning at all in the establishment of a medical school? I think we could supply one year of medical studies, which would be a beginning; but, as I have understood—though my information is perhaps indirect—that is not the kind of beginning which the Senate contemplate. It is a complete curriculum, which is a very different thing.
1700. *By Mr. Windeyer*: Do you know what is the state of medical science in America? I have not sufficiently minute information on it to speak.
1701. They have medical schools there? Yes.
1702. Do you know when they were first instituted? No; I really never looked into their history. It is not unlikely, however, that they were founded pretty early.
1703. *By Mr. Plunkett*: Until recently—since railroads have been constructed—was there not almost as much difficulty for students from England to get to Vienna, as there is now for

for students from this Colony to get to England? Yes; a few years ago the difficulty of getting from England to Vienna would have been even greater than in getting from Sydney to London at the present time, although the time occupied would have been shorter.

John Smith,
Esq., M.D.

18 Oct., 1859.

1704. Then it would be as open to students to supplement the education they might obtain here by going to London, Paris, or Vienna, or any other European Medical Institutions, as to students from Great Britain to supplement their studies by going to the Continent? No doubt it would. But then these young men at Home have got a splendid medical education to begin with, and still they go to supplement it by seeing the large hospitals on the Continent. I am not prepared to admit that you can give them a preliminary education here like what they could get at Home. And if you put it before them that they must ultimately go Home to supplement their education, why not let them go a little earlier?

1705. What number of cases are open to the students of Edinburgh who walk the hospitals there? I cannot state.

1706. Do you think the Sydney Infirmary and Benevolent Asylum do not nearly come up to the same number? No, I think not.

1707. Do you think there are any diseases here that are not known at Home—I mean any peculiar to the climate? I give so little attention to medical matters here that I can scarcely say. There might be a few diseases known here that are scarcely met with at Home; but I do not think there can be much difference.

1708. If I understand you rightly, your principal objection to the institution of a medical school here is that it would interfere with the faculty of arts? That is an objection that I feel, quite irrespective of the expediency of the thing on other grounds.

1709. In what way would it interfere so materially with the faculty of arts? As I mentioned when I was examined here on the last occasion, there are two blanks in the curriculum of arts that I think ought to be speedily filled up. We ought to have a Professor of Natural History, and also a Professor of Mental Science generally—you may call it Psychology; and until these are appointed I think nothing should be done to extend merely professional education. I think the general curriculum is of more importance to the Colony than any professional curriculum. I would be willing to rest my objection on that ground alone.

1710. What do you think the expense of establishing a medical school here is likely to be? I think, even on the most economical scale, which the Senate are desirous of adhering to, it would amount to a considerable sum. They count, I believe, upon having only four Professors, and giving each of them £100 a-year as a kind of retaining fee. That comes to £400 a-year. But I doubt if medical men will continue long to lecture for £100 a-year, although they may be willing to begin for that. Then there would be the expense of rooms for anatomy, for the effort to get rooms for anatomy in the hospital failed, and it would be necessary to build rooms; then it would be necessary to have a man to take charge of them. So that even on a very economical scale you may count upon an expenditure of £600 a-year, besides the expense of building. Now that would give you at least one additional Professor in the faculty of arts.

1711. *By Dr. Wilson*: Do you think a competent lecturer and demonstrator of anatomy could possibly be got to devote his time to it for even £500 a-year? That is a point which I was neglecting. For anatomy you must have a demonstrator, to devote his time to it. So that in one way or another the institution of a medical school will take up the salaries of two additional Professors—the two we want for the Faculty of Arts.

1712. *By Mr. Plunkett*: Even to give professional education, as you appear to be in favor of, for one year? No, I wish to draw a distinction. We could at present, with the aid of the Infirmary, but without the expenditure of sixpence more, give one year of medical studies.

1713. Without an anatomy room? Yes; but it would be certainly worth little without that, and some arrangement might yet be made with the Directors of the Hospital that would permit of anatomical studies going on there.

1714. *By Mr. Windeyer*: For that one year of medical study has not some arrangement been made already, by which it is to count in England? I have a kind of vague impression that it may be counted; but I doubt if the necessary steps have been taken to get it recognised. I think if the Senate were to communicate with some of the Medical Boards at Home, they could get one year of medical studies here recognised by them.

1715. *By the Chairman*: Does physiology at present form any part of the instruction given in the University of Sydney? No. I think it is a very important branch, which might be taken up by the Professor of Natural History.

1716. *By Dr. Ling*: What branches of natural history would you recommend to be studied principally in the first instance? A person should be got competent to teach all or any branch of it; but as it would be necessary for him to select, I think most people would agree in recommending the teaching of geology and mineralogy pretty fully, and then physiology, along with comparative anatomy and portions of zoology.

1717. Do you not think such a department of study would be of very great value to the youth of the Colony generally in such a country as this? Yes; and I have a strong opinion that its absence is a serious defect in our scheme of general education.

1718. *By the Chairman*: Are the Senate of the University responsible to any parties at all for the management of the Institution? Not in any direct way; they are endowed with very full powers by the Act of Incorporation. They are required to submit their by-laws to the Governor and Executive Council for approval; but within the University they are absolute, and their responsibility is of a very indirect kind.

1719. They can do just as they please then? They can scarcely do as they please, perhaps, that is to say, they must not do anything contrary to the by-laws, but still they have great scope.

1720. With regard to the building, the sole management of that is in their hands? Yes; that is an example of the extent of their powers.

1721.

John Smith, 1721. There is no power of interfering with them in any quarter? No power, so far as I know.
Esq., M.D.

1722. Do they in any way direct the course of instruction given? Yes, they do. They framed the by-laws at first, marking out the course of instruction, but these by-laws were afterwards revised and altered after consulting with the Professors. They are the only authoritative body, but in regard to the course of study they have been in the habit of taking the opinion of the Professors.

18 Oct., 1859.

1723. Have you any further suggestion to make to the Committee? With regard to the responsibility of the Senate, I do not see exactly how that can be much increased by any arrangement or any change in the constitution of that body. There is no doubt a want of responsibility in all such bodies. It has occurred to me that all the Educational Boards—to speak only of Educational Boards just now—the National and Denominational, and Grammar School Boards, as well as the Senate, should have a mouthpiece in the Legislature, who might be questioned at any time, for I think the power of questioning is a great matter. If people are constantly liable to be called upon for explanations about things it makes them careful. My impression is, that when the Legislature first voted £50,000 for the University buildings, had there been any official organ of the University in the House, some Member would have been sure to ask what was being done with that money, and this would have brought under consideration these plans which you have on the table. While undue interference should be avoided, I think it very desirable that opinions should be freely expressed on great undertakings like this. In this case the Legislature voted £50,000 for buildings, and the Senate adopted a plan which was estimated to cost about £148,000. Surely the Legislature ought to have been aware of that fact. Therefore, while I do not see that there can be any direct responsibility, I think there should be some means of affording information accessible at all times. It was no doubt in the power of any Member of the House to ask the head of the Government what was being done; but people are less apt to ask questions when there is no recognized person to answer them. I think the Legislature, when they voted such a large sum of money, ought to have taken a little more interest in seeing how it was to be expended; and they never came to know about it until the thing was so far gone that it could not be materially altered. It has often been suggested that there should be a Minister of Instruction, and there are many ways in which such an officer would be useful. He might be *ex officio* a member of all the Educational Boards, and then he would be able to give information in Parliament concerning them.

1724. *By Dr. Lang*: Do you think this defect might be remedied by having a representative of the University in the House of Assembly? I am not sure that that would answer the purpose; no, I think it would not, because the University electorate would have a free choice, and they might not elect any member of the Senate, in which case the representative would not have access to the necessary official information. I think each of these bodies ought to be represented by a Member in the House, who would be officially, not accidentally there.

1725. *By Mr. Cape*: You think we want a person to represent all the educational institutions in the country? They labor under a common defect, that none of them have an official mode of communication with Parliament, and hence I think arises a want of interest on the part of Parliament.

1726. A Minister of Public Instruction is a continental appointment? Yes; such an office has not been instituted in Britain. I merely suggest that, as one way in which something may be done, because I do not see at all clearly how the defects are to be entirely remedied, it is more easy to see a deficiency than to say how it should be supplied.

1727. *By the Chairman*: What would you suggest—how would you have these great educational bodies represented in Parliament? I would rather decline to give a distinct opinion. The way I have mentioned, though apparently simple enough, might not be the best.

1728. Would you make the Minister of Instruction a Responsible Minister of the Crown? I suspect he would require to be so.

1729. And that he should take his place in Parliament like the other Ministers? I suppose that would need to be the way of it, though it complicates the matter as far as education is concerned, because other political questions not at all connected with education would affect such a Minister's position. I know that any plan which could be devised would be found to contain difficulties.

1730. Do you think there might not be a Minister of Education who should not be a Responsible Minister? I am not prepared to give an opinion as to how it might be managed, not having yet sufficiently considered this particular matter. As I have said, it is more easy to see the deficiency than to point out the remedy. But it is surely possible to give a mouthpiece to the various Boards, and to give the Legislature an opportunity of getting information directly as to how matters are going on in all those cases where the Legislature has committed large sums of money to these Boards. I think the Legislature ought never to vote large sums of money without taking an interest in the way they are expended.

1731. Have you heard of any proposal that the University should be represented ultimately? Yes; I have no doubt arrangements will be made by which the University will be represented as soon as it comes to have sufficient numbers—the University generally, that is to say. But that does not meet the difficulty with regard to the Senate. The representative of the University might not be a member of the Senate, unless indeed he were made an *ex officio* member, which perhaps might be advisable.

1732. *By Mr. Arnold*: In what way does the Government, as such, exercise any influence or control over the Senate now? They could refuse to pass their by-laws, but after a by-law has been approved, though it may turn out to be objectionable—and we have found that a by-law has been so—it does not appear that the Government have any right to interfere.

1733.

1733. Is that the only interference the Government can exercise? I think that according to the Act of Incorporation that is the only interference. John Smith,
Esq., M.D.
1734. With so slight a power of interference can the Government be held responsible? I think not; and I quite acknowledge the difficulty of getting real responsibility in any way. 18 Oct., 1859.
1735. It appears to me that if you would make the Government responsible you must give them complete control, because responsibility can hardly exist where there is no control—which would you prefer, that the power of control over the University should be in the hands of the Government or in the hands of an independent Senate? It is hard to choose between them; there are advantages in both ways. On the whole, perhaps, an independent Senate, such as we have, would be the most satisfactory.
1736. Do you not think that plan would necessarily remove all idea of responsibility from the Government? Where they are quite independent of course there can be no responsibility. At present the Senate is independent, and practically irresponsible. I have said that I do not see how to secure real responsibility; but I would fall back on the opinion that an official organ in Parliament would be valuable, though there might be no compulsory control.
1737. As the only function of this official mouthpiece would be to detail to any curious Member what was going on in the Senate, would he not be likely to be looked upon as a sort of spy in the Senate, who would make communications that would not be at all times pleasant? If such communications were liable to be made, the Senate would endeavor to avoid doing things that might be unpleasant. That is just the point. Publicity is a great matter.
1738. Then, I presume, we may infer that a good many things are done now, under the veil of privacy, that would not be done if they were to be made public? I would be very sorry to draw such an inference; but I am willing to take a particular case, the remarkable case of the Legislature voting £50,000 for the building, and the Senate thereupon adopting a plan estimated to cost £148,000. My impression is, that they would not have done that if the matter had obtained due publicity through Parliament. If after consultation with their architect the Senate found that £50,000 would not build anything worthy of the Colony, I think it was their duty, of their own accord, to go to the Legislature, and get their sanction to the extra expenditure.
1739. I will take that particular case, and ask in what way you suppose that any information this official person could give would enable Parliament to exercise any control over the expenditure of the money; they might know that something wrong was going on, but it does not seem to me that they could exercise any control unless there were distinct responsibility? I would be inclined to answer that question by asking another,—whether Parliament does not often do good by expressing opinions even when it does not directly interfere? It was competent for any member to ask for papers and plans; and had the thing come before the Legislature they would have been much inclined, I think, to say that it was not following out their intention. Had they expressed a clear opinion on that score, do you think the Senate would have gone on with this plan? They might have done it, certainly; but the question is, would they have done it?
1740. You think Parliament would have set their face against granting further money to carry out a scheme which they would have thought extravagant? I have little doubt they would; but now that the plan is far advanced Parliament is almost compelled to grant more money, in order that what has been spent may not be thrown away.
1741. *By Mr. Black*: Do you not think Parliament in granting further sums ought to make it conditional on their being made acquainted with the plans, and on their expressing their approval of those plans? It is too late now. All you have got to do is to finish a building the walls of which are partly up. You must roof it in to protect it from the weather, and then furnish the interior to make it of any use. To some extent, certainly, the plan may be altered.
1742. *By Mr. Arnold*: Is it the fact that a large proportion of the money has been expended in the ornamentation of the building? No, not a great deal. Much of that has been done by private subscription.
1743. *By Mr. Black*: Are you aware whether the Senate ever made any direct official communication to the Government of the fact that they proposed putting up a building which instead of costing £50,000, the sum voted, would cost £148,000? I never heard of such a communication being made, and I scarcely think it could have been made.
1744. *By Mr. Windeyer*: Was not some protest made by the Professors against the expenditure on the building? I have handed in a communication which was made to the Senate by the Professors on the subject, expressing an opinion against proceeding solely with the official parts of the building, and recommending that the principal classrooms should be included in the first contract. I may state that originally the Professors were on the Building Committee—that is stated in Dr. Woolley's memorandum—and the architect was directed to communicate with the Professors in arranging the plan of the University. The architect then, with the concurrence of the Professors, drew up a plan of comparatively moderate expense, and on a more modest scale than that finally adopted. That was the plan the Professors approved of. We were in no way responsible for the amount of money to be expended, but we thought, here was a plan that would suit all the purposes of the University. That plan was laid before the Senate, and as far as my information goes, they would scarcely look at it; they wished something on a more extensive scale, and the architect was accordingly instructed to make a new and larger plan.
1745. *By the Chairman*: Do you know who the Members of the Senate were at that time, or the year? No, I cannot give you the names or the year. It was probably in 1853. The plan was for a compact quadrangle, which would have been less expensive, and probably much more convenient than the plan afterwards adopted.

John Smith, Esq., M.D.
 18 Oct., 1859.

1746. *By Mr. Black*: The Senate appears to have gone on from the beginning extending their plans without calling on the Government for their approval, or without the Government having any control? They have never extended the plans, except on the occasion I have just mentioned, when Mr. Blackett was instructed to make a larger plan. Since they adopted that plan it has not been changed in its general features, though they may have altered some of the details; for instance, a very beautiful lantern, which was to have been placed in the hall, has been left out in consequence of the expense.

1747. Did the Government in any way express their approval of that plan, do you know? I am not aware that they did.

APPENDIX A.

University of Sydney,
 17 October, 1859.

My dear Dr. Smith,

In answer to your inquiry, I enclose the only existing records of representations made by the Professors to the Senate.

1. In reference to building.

No. 1, dated *March 2, 1855*, in reference to the building. The Professors were originally members of the Building Committee; a new Committee was formed, in which their names were not included; that Committee accepted the present plan. The memorial, as will be seen, refers to that plan, of which the Professors had incidentally heard.

2. In reference to "religious test."

The answer was, that the Senate "could not re-open the subject."
 No. 2, dated *November 4, 1857*, refers to the religious test inserted in the Colleges' Bill of *November, 1854*, and which was abrogated last year.

The answer of the Senate maintains the principle of the "test," and disallows the claim of the Professors to be informed beforehand of changes contemplated in the constitution of the University.

It may be observed that the Senatorial By-Law enforcing the test has not been repealed, but is still in force. (Act of Incorporation, § 8.)

Accommodation of students.

These are the only written documents previous to the occupation of the new building.
 3. In *September, 1857*, Dr. Woolley and Mr. Pell obtained an audience of the Senate, for the purpose of pointing out certain inconveniences resulting from the want of accommodation for the young men attending lectures. A favorable answer was returned; but the accommodation asked for has only been furnished in part, and great inconvenience has resulted to the studies and to discipline.

4. Text-books.

4. Much difficulty has been and is experienced in procuring *text-books*. The Professors have repeatedly urged the expediency of importing a supply from England, as is done by the Grammar School; they believe that the difficulty is insurmountable by any other method.

5. Medical School.

5. In the course of the present inquiry, the Professors have learnt that the Senate have taken steps for the immediate erection of a Medical School. The 20th by-law provides that all general questions relating to the studies of the University "shall be referred to the "Professorial Board." The arrangements in question have been made without communication either with the Board or with the Professor of Chemistry, who is Dean of the Faculty of Medicine. The Professors have addressed to the Senate a *protest* on the subject.

I have no record of any other communications.

Believe me, &c.,
 JOHN WOOLLEY.

APPENDIX B.

Extract from Minutes of Professorial Board in reference to the Building.

March 2, 1855. "At a Meeting of the Professorial Board, held on Friday, March 2nd, 1855, present—the Professors—

"Resolved:—

"1.—The Professorial Board desires respectfully to suggest to the Senate, that it is of great consequence to the *practical working* of the University that the *principal class-rooms* be included in the *first contract*.

"That part of the front which connects the hall with the tower contains only *official rooms*, not one specially intended for the use of the classes. They will, in themselves, be inconvenient for that purpose; it is to be feared that their double character will involve many and daily difficulties, and particularly, a considerable outlay will be incurred in their *temporary preparation for the reception of students*.

"The Board therefore recommend that the whole of the north-east side of the quadrangle be included in the first estimate and proceeded with at once.

"2.—The Board have further to request that the decision of the Senate with regard to the residences of the Professors be communicated to them; if circumstances will not allow this part of the plan to be carried out for some years, they beg to suggest that some modification in the plan itself may be found desirable."

A true copy,

JOHN WOOLLEY,
 Chairman.

APPENDIX

APPENDIX C.

John Smith,
Esq., M.D.

COPY of a letter addressed by the Professors to the Senate, 4 November, 1857.

University, 4 November, 1857.

18 Oct., 1859

Gentlemen,

We are compelled by a sense of duty to address you upon a subject which, although not belonging immediately to our functions, is intimately connected with the peace and well-being of this University.

We are informed that it is the intention of the Senate to exact from all future candidates for honors and degrees testimonials of religious attainment, in accordance with the 44th by-law, and with the last clause in the Affiliated Colleges Act. To this provision we have, from its first proposal, offered strenuous and consistent opposition. We have not for the past two years renewed our protest, because there seemed reason to hope that the enactment would be suffered to grow obsolete. The intimation which we have received to the contrary has excited in our minds the gravest regret, and we beg permission briefly to state the grounds upon which our repugnance to this measure is founded.

1. We are convinced, in the first place, that it is a direct violation of that clause in the Act of Incorporation which provides that "no religious test shall be administered" under any circumstances in this University. If to require assent to public and recognised formularies is a religious test, no milder name can be applied to enforced compliance with the opinions, and submission to the judgment of any *individual*. And it is a test far more offensive and more liable to abuse.

2. We have reason to believe that this clause, inserted, as it is, into an Act relating to an entirely different subject, and contradicting a previous Act not formally repealed, is, to say the least, of questionable validity, and cannot be enforced without endangering the peace of the University.

3. But granting its legality, this enactment presents a singular and mournful contrast to that enlightened liberality which has abolished, or is rapidly abolishing, all interference with personal religious belief in the Universities of the Empire. In Scotland the good work is complete. Professors and students are equally emancipated from any ecclesiastical censorship. In Cambridge and Oxford, notwithstanding their peculiar difficulties, the case is nearly the same; the highest honors and degrees are open to candidates of whose religious opinion or absence of opinion the University seeks to know nothing. Some Professorial Chairs are already held upon the same conditions, and it is confidently expected that this comprehensive policy will shortly become universal, with the exception, of course, of the theological faculty.

4. But further, there are two peculiarities of the test proposed amongst us which unfavorably distinguish it from those of all other Universities:—

1. Its frequent repetition. It applies to all honors, including the Professorial Chairs, and even the Senatorial dignity. Upon the undergraduate it imposes an intolerable burden. He may be called upon to produce *three* certificates in the course of *one* academic year, in order, namely—to qualify himself (1) for the class examinations; (2) for prizes; (3) for scholarships. The ancient and exploded system of the Home Universities presents nothing similar. In Cambridge a student might complete his undergraduate course, and gain the highest distinctions and honors, except the actual degree, without once being questioned upon his religious faith. Amongst very numerous examples one is furnished by a member of our own Senate.

2. In the most exclusively denominational Universities no test has been hitherto required from a candidate beyond his own statement of his own creed. He was believed upon his word, and was never required to support it by the testimony of a second person. By virtue of this regulation students not belonging to the Established Church have for many years obtained degrees and fellowships in Oxford. From the same cause there are persons at this moment holding distinguished posts in that University who could not obtain certificates from orthodox members of their own communion. The inevitable effect of the proposed certificate will be to place the student at the absolute mercy of an irresponsible judge, who, upon any motive of caprice or intellectual idiosyncrasy, may deprive the most diligent and deserving of his hard-won reward.

It is no answer to this objection that the Senate has the power in individual cases of rendering the clause inoperative, by accrediting a person—if such a person can be found—whom they know to be favorable to the opinions of the candidate. For (1) we hold that the power of refusing civil honors upon religious grounds cannot, consistently with the Act of Incorporation, and ought not to reside in any Board; and (2) the actual exercise of such a power on the part of the Senate would plainly violate the spirit of this enactment, and would inevitably lead to jealousy and confusion.

As a further explanation of the part which we have felt ourselves bound to take in this question, we beg to state that the earnestness with which the Senate, in their able letter to the London Electors, printed and widely circulated by those gentlemen, insisted upon the maintenance of the purely secular character of the University, was felt both by them and by ourselves as a principal inducement to the acceptance of the office which we now hold. We may be permitted to recal the attention of the Senate to a passage in that letter in which, whilst inviting the assistance of the Professors in modifying the then existing constitution, they add the caution—"Provided the principle upon which the University "is founded, of offering education to all classes without reference to religious distinction, be "not infringed."

We have referred to the invitation originally given to us by the Senate to offer our opinion and advice. We believe that the spirit of that invitation is equally liberal and wise. To the free intercourse which so long subsisted we cannot but attribute very much of the success which has been attained. We are not conscious that we have forfeited that privilege.

We

John Smith,
Esq., M.D.
18 Oct., 1859.

We are bold to say that we need not shrink from the most searching public inquiry into our conduct as officers of this Institution. We therefore feel ourselves justified in requesting that in relation to the subject of this letter, to any question affecting the general constitution of the University, and more particularly its relation to the denominational Colleges, the Senate would not pronounce any final decision without affording to us the opportunity of expressing our opinion.*

We have, &c.,

APPENDIX D.

Minute, 2nd Nov., 1859.

The Provost lays before the Senate a Protest, dated the 17th ultimo, from the Professors of the University, in their capacity as members of the Professorial Board, against the erection of a Medical School, a copy of which had, by his desire, been previously sent to each of the Fellows. The following are the grounds of their Protest, viz. :—

I. Because the proposed measure will retard the completion of the curriculum of the Faculty of Arts, as contemplated by the by-law.

II. Because they entertain serious doubts whether the erection of a Medical School at the present time is expedient.

III. Because the 20th By-law provides a Professorial Board for "the consideration of the general questions relating to the studies of the University"; but no communication upon this important subject has been made on the part of the Senate, either to the Board or any of the Professors.

It was then moved by Sir D. Cooper, seconded by the Rev. D. Purves :—

"That this Protest be remitted to the Professors, on the ground of its not having emanated from a duly convened meeting of the Professorial Board."

This motion having been put to the meeting, was negatived.

It was moved by Mr. Deas Thomson, seconded by Alfred Denison, Esq., and carried,—

That the following minute be adopted, viz. :—

"1. The Senate regrets that the Professors should have considered themselves justified in adopting so extreme a step as that of entering a protest against proceedings which the Senate, in the unquestionable exercise of its prerogative, had thought fit to take with reference to the initiation of the necessary measures for the erection of a Medical School in connection with the University, as expressly contemplated by the 12th section of the Incorporation Act.

"2. That whilst the Senate is always most anxious to uphold the authority of the Professors, and to secure to them that respect and consideration to which they are entitled on personal grounds, as well as on account of the high and responsible duties they perform, it, nevertheless, cannot permit its *own* authority, or appropriate functions as the governing body of the University, to be controlled by those in whose hands certain administrative duties only are placed.

"3. That whilst the Senate will always be glad to receive, and cordially to entertain, representations at any time made to it by the Professorial Board, or by the Professors individually, on matters connected with the established studies or the discipline of the University, it cannot admit that the foundation of *new* Professorships, or the effort to realize the intentions of the founders of the University, in providing adequate machinery for instruction in the Faculties of Law and Medicine, are matters to be *previously* sanctioned by the Professorial Board, or to be *over-ruled* by the objections of the Professors in the Faculty of Arts. If the powers thus claimed on behalf of the Professorial Board could be substantiated, the authority of the Senate would be circumscribed in a degree utterly inconsistent with its own proper position, or the duties imposed upon it by the Legislature.

"4. As however it was never intended, so under no circumstances will any attempt be made, finally to organize a Medical School without the advice and co-operation of the Professorial Board as to the periods to be fixed upon for the delivery of lectures, and for all details, the arrangement of which would be necessary, to prevent the curriculum in one faculty from interfering with that in another.

"5. The Senate, for the foregoing reasons, is unable to depart from its resolution to establish a Medical School. It must not be unmindful of the munificent endowment in land and money which the Government and the Legislature have provided for the establishment and maintenance of the University; it feels bound, therefore, by every means in its power, to render it as extensively beneficial to the community as may be found practicable. This object will be materially promoted by creating, in the manner contemplated, a new and honorable field of employment to the youth of the Colony; and whilst effect will thus be given to the intentions of the Legislature, and the provisions expressly embodied in the Act of Incorporation, the University of Sydney will be assimilated, in all its most essential objects and aims, to the great Academic Institutions of Europe, upon the model of which it is founded.

" The

* This request was refused.

" The Senate has not deemed it necessary to decline the consideration of the Protest, on the ground of its not having emanated from a duly convened meeting of the Professorial Board; but in courtesy to the Professors, it has not hesitated to explain to them the grounds of its decision.

" The Senate directs the Registrar to transmit a copy of this Minute to the Members of the Professorial Board who signed the Protest."

John Smith,
Esq., M.D.
18 Oct., 1859.

Protest ordered by the Provost to be circulated, previously to its consideration at the Monthly Meeting.

To the Provost, Vice Provost, and Fellows of the University of Sydney.

Protest of the undersigned Members of the Professorial Board against the erection of a Medical School:—

The undersigned, being Members of the Professorial Board, have heard, upon what they believe to be trustworthy authority, that the Senate has in contemplation, and has taken actual steps for the immediate erection of a Medical School in connexion with the University.

Against the course which has been adopted in this matter the undersigned protest:—

1. Because the proposed measure will retard the completion of the curriculum of the Faculty of Arts, as contemplated by the by-law.
2. Because they entertain serious doubts whether the erection of a Medical School at the present time be expedient.
3. Because the 20th by-law provides a Professorial Board "for the consideration of the general questions relating to the studies of the University," but no communication upon this important subject has been made on the part of the Senate, either to the Board or any of the Professors.

University,
17 October, 1859.

J. WOOLLEY.
M. B. PELL.
J. SMITH.

The Reverend William Henry Savigny, B.A., called in and examined:—

1748. *By the Chairman:* How long have you been in this Colony? Six years.
1749. You belong to an English University? To Oxford.
1750. How long is it since you left Oxford? I took my degree in 1847.
1751. Were any of the improvements in the curriculum of education which have taken place of late years then adopted? No; they have all been adopted since.
1752. Are you acquainted at all with these improvements? Very slightly indeed; not sufficiently so to give an opinion.
1753. I suppose you have paid attention since you came to the Colony to the progress of education in it, in connection with the various educational institutions that have been established by the State? I have more immediately observed that kind of education which most nearly affects my own position, namely, a liberal education.
1754. Are you at all acquainted with the Sydney University? I have been brought into contact with the Sydney University owing to the fact that many boys from my school have matriculated there.
1755. Do you find any strong desire among the boys at your school to enter the University? I think I would leave out the epithet "strong." There is a desire, and a growing desire.
1756. Do you think there is any difference in the circumstances of a new country like this, and an old one like England, which renders it necessary at all to form our course of instruction on a different basis? Certainly. I think the curriculum should be somewhat modified, especially in reference to natural science, but that it should preserve all the essential features of that in the old country.
1757. You would adapt it more to the practical affairs of life? I think if a person's mind is well disciplined by the work of a good school, and afterwards by passing through the University, his mental faculties will be more capable of discharging the ordinary duties of life, even the practical ones, than those of a person brought up merely with a view to practice.
1758. You think then that a knowledge of the classics fits a man for the ordinary business of life? I think that the study of the classics gives a man that mental discipline which fits him for the ordinary business of life; but not that it should be pursued to the exclusion of other things.
1759. Do you think natural philosophy ought to be taught? Certainly at a University; but taught scientifically, not in a popular way.
1760. Do you think it affords that mental training which increases the powers of the mind? I think it affords very valuable mental training, and that is why I say it should be taught scientifically, and not popularly.
1761. Do you think the mental training and culture afforded by the study of natural philosophy, in its various branches, is as good as any derived from the study of the classics? I think they differ; that a person who has been simply disciplined in the classics is only partially educated, and similarly that a person whose attention has been principally confined to mathematics is only partially educated. I think even that a person who is both a good classic and a good mathematician has still a great deal to learn; certain faculties have never been called into play. Many members of the old Universities have felt that to their dying hour, owing to the simple fact of their not having studied natural philosophy in a proper scientific way.

The Rev. W.
H. Savigny,
B.A.

18 Oct., 1859.

The Rev. W. H. Savigny, B.A. 1762. That remark would apply to man in any state of mental culture—he would still be but partially educated under any circumstances? Quite so; but persons who go to a University go for the express purpose of being educated, and having their mental faculties brought out.

18 Oct., 1859. 1763. According to the improvements of the day? According to the improvements of the day.

1764. Can you offer any suggestion as to the management of, or the course of instruction in, the University of Sydney, which you think would be applicable to the circumstances of this Colony? There is one suggestion that occurs to me, though I do not know whether it exactly meets your question. It is not an original one, but borrowed from the practice of the old Universities. Practically I find in my business that it is a very difficult thing to know what to do with Colonial boys, when their education is considered complete, owing to the want of their being able to be professionally educated. Unless a youth has some private means, his only destination will probably be a Bank or merchant's office, with just the chance of getting on or not, as the case may be. As far as professions are concerned, I think this Colony has barely any to look to practically; and therefore I think it would be a very wise thing for the University of Sydney in process of time to establish what was established in the old Universities many years ago, when England was not the scientific country it is now, namely, travelling fellowships, in order that those youths in the University who were anxious to prosecute some particular and distinct science or profession, should, if they satisfied the examiners at the University after a competitive examination, be allowed to gain those fellowships which should be sufficiently large to enable them to prosecute some one branch of study in the older country, whether medicine, law, or divinity, as the case might be. It is not an original idea. It was the practice of both Oxford and Cambridge in the old times, when it was thought necessary that people should go out of England to the great Universities of the Continent, in order to study particular branches of science.

1765. How are these fellowships endowed in England? Generally as most other fellowships are there—by private munificence.

1766. How would you propose to have it done here—by the Government? I think the object is sufficiently national for the Government to do it.

1767. *By Mr. Cape*: The Radcliffe Fellowships at Oxford are an instance? Yes. There is a similar institution at Cambridge, where I think they go by the name of the Travelling Bachelors.

1768. *By the Chairman*: You think there is but an indifferent field of employment for young men in these Colonies? I think so. Of course I mean with reference to education. There is an excellent field for young men who have some private means, or who have decided on going into business, but not for those whose inclination prompts them into some profession.

1769. Are you at all aware of the number of students in the University now? Do you mean those actually *in statu pupillari*?

1770. Yes? I believe there are some thirty-three or thirty-five.

1771. It has been stated here that one cause of the paucity of attendance at the University is the fact that young men embark so very early in these Colonies in the ordinary business of life—do you think that has any effect? I think there is no doubt that is one very great cause. The advantages the University holds out are not sufficiently immediate or tangible to counteract that tendency.

1772. Would you conclude, then, from this state of facts that the attempt to found this University has been premature? Certainly not. I think the University has indirectly had a very beneficial effect on all the educational institutions of the Colony.

1773. In that way alone you think it has done great good? In that way alone it has been a very good thing. I feel it personally.

1774. You are aware of that from your own experience? I am aware of it from my own experience.

1775. Do you know anything at all of the general management of the University? I have some slight knowledge of it from mixing with my own pupils, who are there now. You mean the instruction communicated?

1776. Do you think the students you are acquainted with are favorably impressed with regard to it generally—have you heard them express any complaints as to the University in any way whatever? The fault they have to find with their position is, that there is not sufficient competition, owing to the paucity of numbers.

1777. They think, I presume, from that, that the examination is too easy? Not so. There is not sufficient inducement.

1778. Are you at all acquainted with the Affiliated Colleges in connection with the University? I have some slight acquaintance with St. Paul's College.

1779. Do you know how many students there are there? Actually, I think four.

1780. That is a small number? Very small.

1781. Is there any indisposition on the part of members of the Church of England to send their sons there? No; I do not think any student has been prevented from going there on grounds of that kind.

1782. That College was built partly by private subscription and partly by Government aid? I think it was.

1783. Do you know what the amount raised by private subscription was? I think they raised something like £10,000.

1784. How long has it been established? Do mean by that how long is it since they commenced operations?

1785. Yes? I suppose about a year and a half, or two years.

1786. And yet, although the members of the Church of England subscribed £10,000 for the foundation

- foundation of that College, they have only availed themselves of the advantages it affords to the extent at present of four or five students? Yes.
1787. That is rather a strange result? It is.
1788. Do you know anything of Moore's College at Liverpool? I merely know it by name.
1789. Have you ever heard that St. Paul's College was discountenanced at all by the clergy of the Church of England in favor of that establishment? It has been said that the Bishop of the English Church has indirectly set his face against St. Paul's College.
1790. Did you hear at all the grounds on which any opposition to it was manifested? No; but one can very easily form one's own notion of what the grounds would be.
1791. Have you any objection to state what your idea of them is? My opinion is simply this, that the Bishop of Sydney, like many other ecclesiastical gentlemen, is very fond of his own opinions, and his own opinions are taught at Moore's College.
1792. He favors Moore's College? So I believe.
1793. How many students are there there? Either one or none; I am not quite sure which.
1794. Then it does not appear that his Lordship's predilections have led to any great practical result? None whatever.
1795. You would not argue unfavorably, I presume, of these Colleges in connection with the University, in consequence of the small attendance at the present time? I think not. I can see, with regard to my own school, that if parents remain in the same state of mind in which they are now, and if other schools are similarly circumstanced, the numbers must increase, and that within the next five or six years.
1796. You form this opinion from the experience you have had in your own school? Yes, from what I know of the ultimate destination of boys with me at this moment.
1797. So far as your experience with regard to your own school goes, you conclude that there is an earnest desire felt by parents for the education of their sons? Yes, very much so indeed.
1798. At all events up to a certain period? Up to a certain period at least.
1799. Then many of them branch off into other pursuits in life? Quite so.
1800. Do you know at all the curriculum established in the Sydney University? Yes, I have had students of the Sydney University residing in my own house; and have partially directed their studies.
1801. Do you approve of it? As far as the peculiar circumstances of the Sydney University will allow, I do.
1802. *By Mr. Windeyer*: When you say peculiar circumstances, what do you allude to? I mean this, that in teaching history, for instance, a Professor of the University must be considerably hampered; he must avoid all kinds of questions which to different bodies of religionists are exceedingly interesting, and which must be interesting and valuable to the mere politician too.
1803. You are aware that there is a clause in the Affiliated Colleges Acts that have been passed, empowering the councils of those Colleges to prevent students resident in the Colleges from attending lectures on Modern History and Moral and Mental Philosophy—do you think that is advisable? It is a thing I would set my face against altogether.
1804. *By the Chairman*: Did I understand you to express an opinion to this effect, that all history is prevented in order to meet the predilections or prejudices of different parties or sects? I merely lamented a fact in the circumstances of the Sydney University, a fact which seems to me to prevent the introduction of what is most valuable and interesting to us all.
1805. Modern History is not taught in the Sydney University? The attention of the students is directed to it.
1806. Putting the question generally to you, do you think that in any part of the world the mode adopted in any educational establishment, so far as you are acquainted with them generally, is calculated to develop or to educate man's faculties in as high a degree as that in which they might be developed—Have we as yet struck upon the right mode of educating man? It is a very difficult thing to prove a negative.
1807. I do not want the proof of it, but merely an expression of opinion. Have we yet, in any of these various forms of education, struck upon the right system? Taking in or leaving out the religious element?
1808. Well, I should explain with regard to that, that my own notion is, that in all public instruction we should be particular to secularise it; when the State interferes I think it ought not to interfere in regard to religion, but I should be very sorry to say anything to the effect that religion should not be taught. That is the most important thing in this strangely mysterious existence in which we are placed? I think it is a very difficult thing to answer a question like that absolutely, but I think it would be wise to look at the tendency which the old Universities of the Mother Country and others are now exhibiting. There seems to be a movement there—the introduction of quite new subjects amongst very old ones; and I think in an inquiry of this kind it would be well to take the opinions of the rising men of bodies like these, which represent much of the intellect of England, as very valuable, much more valuable than any that private individuals could express. The history of the last ten years of Oxford would furnish, I think, an approximate answer to your question.
1809. Then you are of opinion that, within the last ten years, they have been making radical changes in the Universities of England, especially in Oxford? I have not used the word "radical." They seem to me to have added another element—another branch—which has made the curriculum much more complete than it was before.
1810. They have abolished nothing then that did formerly exist? Not to my knowledge.
1811. Have they not got rid of all the religious tests? I was not thinking of that. I thought we had agreed to leave out the religious element.

The Rev. W.
H. Savigny,
B.A.

18 Oct., 1859.

The Rev. W. H. Savigny, B.A.
 18 Oct., 1859.

1812. Do you think the course of instruction in our University of Sydney is similar to that which now prevails in Oxford, or is more in accordance with that which did exist ten years ago? I think the course of instruction at the present time in the Sydney University must be very much like that now pursued in the University of Oxford, with this difference, that natural science at the Sydney University is made a *sine qua non*, while, even to this day, in Oxford it is, to a certain extent, optional.

1813. To turn to another branch,—what is your opinion of the establishment of Affiliated Colleges in connection with the University of Sydney? I think that practically there will be always one difficulty—the tutorial system and the professorial system seem to me to clash.

1814. Is that the great difficulty you see in regard to them? That is a great difficulty.

1815. *By Mr. Windeyer*: In what way? I think if a young man has to attend even two lectures before one o'clock in the day, that if he has prepared those lectures properly, it is a very great hardship for him to attend two more. I am merely referring to the experience of most University men. You must know yourself that three lectures a day are quite as much as a young man can attend to properly.

1816. *By Dr. Lang*: Supposing these lectures were delivered in the University, might not the tutorial system be made available in the Colleges in bringing up the students to the level that the University required? My objection is this, that too much time is occupied before Professors or tutors, to the loss of time which might be much better employed by the student himself in his own room. Lectures suppose a certain amount of preparation, and if there are too many lectures they are either slurred over or not attended to at all.

1817. *By Mr. Windeyer*: Do you not think that if the Professors teach tutorially—catechetically, that is to say—that is an argument somewhat against the need of Affiliated Colleges at all? Of course you mean simply with regard to instruction?

1818. Yes? Quite so. My own impression is that the Affiliated Colleges should be ancillary to the University in every way—that the head of an Affiliated College should stand in the relationship almost of a private tutor to the men of his College, especially in giving them that help they would need in the professorial room.

1819. I believe you are aware that the Professors in point of fact do teach tutorially? From what I hear from my own boys, the instruction given by the Professors is just that given by Oxford and Cambridge tutors in their own rooms.

1820. With this advantage, that it brings all the students together in the same lecture halls? Yes.

1821. *By Dr. Lang*: Do you not think the Colleges could be made to serve a very important purpose, merely as residences for students coming from all parts of the country? A most important purpose.

1822. Do you not think that ought to be their principal object? I think it ought to be their principal object.

1823. That the education to be furnished in the Colleges is a matter of secondary importance? Yes. Help should be given by the authorities of the College with especial reference to the instruction in the University—that kind of help which will stand a man in good stead when he comes to be examined for his degree.

1824. Do you not think it would be practicable for the Colleges to lessen the expense of education materially to students from the country, as compared to what it would cost them if they had to go to lodging-houses in such a city as this? I have no doubt that when the Affiliated Colleges have their full numbers that will be perfectly feasible, but not immediately.

1825. Do you think there is anything necessary to supply a larger number of students to the different Colleges, supposing them in existence and in operation, than there is at present—any peculiar machinery for bringing up students to the Colleges? I think that the institution of scholarships, and even fellowships, in the particular Colleges, would have a very beneficial effect in every way. Take the instance of St. Paul's College. I think that if there were half-a-dozen scholarships in connection with that College, and if those scholarships could be tried for previous to a man's matriculating, not only would they fill up all six scholarships, but they would be a means of drawing other young men to the place by the mere fact that there were certain things to be tried for. Because in this country it is not simply the wealthy people who aspire after a good education, but I know really and truly that a great deal of self-denial is practised in many quarters with that object, and scholarships of £40 or £50 a year would just act as the turning cause at least. A youth has finished school; it is a difficult thing to find him a profession; the parents are anxious that he should complete his education; but here are the temptations of a bank or a merchant's office. Now if you held out the opposite temptation of a scholarship of £40 or £50 a year, that boy would probably go to the University and try for the scholarship. At present a boy must matriculate before he can try for a scholarship; but I propose that these scholarships which I am recommending should be open to all the schools of the Colony, making it necessary to matriculate afterwards within a reasonable time.

1826. *By Dr. Lang*: In the United States of America a system has been in operation for the last thirty or forty years, through the medium of what are called educational societies, which receive recommendations of young men in the humbler walks of life, who exhibit promise and unblemished character, and assist them in obtaining the advantages of the Universities—do you think such a system would be beneficial if it could be brought into general operation in the different religious denominations in such a country as this? I think a system of that kind would be decidedly beneficial. It would be a good thing to stir up the liberality of our leading men to help such a system forward. With reference to the working of individual Colleges, the more we are independent the better. Oxford and Cambridge were founded and kept on by private munificence, and

I think there is no lack of munificence in this country, if the question were fairly put before the people. We are appealing to the Government for everything, whereas if we appealed to the members of our own communions we should get, in process of time, what we want.

The Rev. W. H. Savigny. B.A.

1827. Were not the Colleges in the English Universities much more of the character contemplated for the Colleges in the Sydney University, more Colleges of residence than for education in the first instance? No doubt that was the case, especially with regard to Oxford. 1828. And the Colleges have subsequently invaded the proper province of the University? I think that is the truth.

18 Oct., 1859.

1829. *By Mr. Cape*: Have you heard any objections to the fees charged by the University? None have ever come before me.

1830. Do you think the progress of education would be considerably aided in this Colony by the establishment of some test of qualification for admission to the civil service? I think everything of that kind that can be introduced will act beneficially in every way. Even if the thing were not immediately wanted *per se*, yet the introduction of that kind of thing is what we want educationally. We want something to counteract the materialism, so to speak, of the Colony in which we are living.

1831. Do you look upon that as one of the greatest improvements in the means of advancing education? I think it is a very great improvement.

1832. *By Dr. Lang*: Do you find that there is a spirit of alienation from the University on the part of educated men from the Mother Country? Not decidedly so. You see that kind of thing in particular instances, but I have not met with any decided exhibition of that spirit.

1833. *By Mr. Windeyer*: You do not think there is anything that would justify accusations of partiality in the University as an examining body? Certainly not.

1834. Or anything that would justify a person in saying there was a general want of confidence in it on the part of the schoolmasters of the Colony? Certainly not.

1835. Then I understand you to say that you approve of the University education here as far as the University can carry it out? As far as the University can carry it out.

1836. And you think the University of Sydney has copied the improvements adopted at Oxford? I think so.

1837. *By Dr. Lang*: Do you think it would be desirable to connect the University more intimately with the higher schools of the Colony than it is at present? I think the more the schools of the Colony are brought into contact with the University and University ways, the better it will be for all.

1838. Do you think there is any positive obstacle in the present administration of the University's affairs, in the way of the connection of the higher schools with the University? I have not observed it for my own part.

1839. Do you find that the fact of University-bred men from Home not being recognised as having any status in the Sydney University has operated against the institution? I cannot say I find such to be the case; but I have felt very strongly that such might be the case—that there is something too close about it. It would add to the influence of the University throughout the length and breadth of the land if the graduates of the old Universities were admitted to *ad eundem* degrees, for instance.

1840. You think that would tend to settle popular feeling in favor of the University? I think it would then become, what a University ought to be, something more of a national affair.

1841. *By Mr. Windeyer*: Do you think it would be right to put persons taking *ad eundem* degrees on an equality with those who really were brought up in the University? I do not know exactly how the matter stands in reference to men who take *ad eundem* degrees in the Mother Country. That is a thing to be considered. I do not suppose men from the old Universities would claim the full rights of actual graduates. There might be some line drawn.

1842. You do not think it would be desirable to put them in such a position that they would really swamp the University, as far as graduates of the University are concerned? I think not. The inundation at first might be too great. The peculiar circumstances of the case ought to be had regard to.

1843. *By Mr. Cape*: Have you not felt the scarcity of school books in this country a great obstruction to your progress? So much so that I have had to import them myself.

1844. *By Dr. Lang*: Has your attention been directed to the constitution of the Senate of the University? Not so.

1845. Do you think that supposing the Masters of Arts reached the number contemplated in the Act, one hundred, they would constitute an unexceptionable electoral body for the University? I think so. I do not see the objection.

1846. Do you think they would constitute the best electoral body that could be had? Considering that the person to be elected would be only one, I think so. I think that in a country like this all shades of opinion would be found among these hundred electors.

1847. Do you not think it would be desirable, supposing there were the numbers contemplated, and that mode of election were in operation, to make the heads of the different Colleges *ex officio* members of the Senate,—to connect those different institutions with the University? I think so.

1848. Is it your opinion that the Professors of the University should be *ex officio* members of the Senate also? I think so. I believe, at present, they are not even members of the University.

1849. Does not that appear to you a very great anomaly? A very great anomaly indeed.

1850. That the Professors should have no voice in the government of their body? They do not even belong to the body, as far as I understand.

- The Rev. W. H. Savigny, B.A.
18 Oct., 1859.
1851. Do you think it would be desirable, in order to give a more popular tone to the University, that there should be some proportion of the members of the Senate elected by the Legislature? I think that as the circumstances of this University are quite peculiar, it might be desirable to introduce members in some such way as that.
1852. To have the Senate constituted variously and on a broad basis? On a broad basis.
1853. *By the Chairman*: Do you calculate at all in giving an answer to that question on the possible effects of political prejudices of the Members of the Legislature. All members of Legislative bodies, even the best disposed, are liable to political prejudices of one kind or other? I suppose none of these prejudices would allow people to have quite their own way, especially if the number of the Senate were increased. The prejudices of one man might lead him in one direction, and those of another man in another direction, but the resultant between the two would be neither the one nor the other, but something between them.
1854. *By Dr. Lang*: Is the patronage of the English Universities and Colleges in the hands of the Masters of Arts? Almost universally so in Oxford, except in the case of my own College—Worcester. The Provost of Worcester is appointed by the Government for the time-being, but the heads of all the other Colleges are elected from amongst the Fellows themselves.
1855. *By Mr. Cape*: Have you observed among the youth of the Colony a remarkable predilection for life in the bush? Very much so. Some of my best youths have taken that direction.
1856. So much so as to be a source of regret to you? Yes, very much so, in several instances.
1857. Do you not think increasing the rewards to be attained by proficiency in study would have the effect of creating a diversion? That is quite my opinion. We want something to be placed before the students that would be immediate and tangible.
1858. *By Dr. Lang*: Do you not think that the fact that the squatocracy of the Colony considers itself a superior class has a tendency to lead many young men into the ranks of that body? No; I think, as far as my own observation has led me to form an opinion, there is a kind of romance in it —
1859. *By Mr. Black*: A freedom from restraint? Yes.
1860. *By Mr. Cape*: Have not also the unavoidable defects in domestic training something to do with it? Very often our difficulties are just the difficulties that ought to be surmounted in the nursery.
1861. *By Dr. Lang*: What do you consider as the best substratum for general education for the purposes of life—I mean what branches of education should be considered *sine qua non*? I suppose you speak in the most general way?
1862. For the training of the mind? I think that some one of the classical languages, and some one modern language, the elements of mathematics, more especially geometry, and some one essentially modern science, scientifically considered, would form a very good substratum.
1863. You think at all events that classics and mathematics are indispensable? Yes.
1864. *By Mr. Black*: Which of the classical languages would you look upon as the most useful? The Latin, decidedly, because, besides the mental discipline, it lies at the base of many European languages, to say nothing of our own language, the terms of science, and so on.
1865. *By Dr. Lang*: Do you think the mental training supplied by the study of languages could be supplied by the study of natural science or natural philosophy? I think not.
1866. *By Mr. Windeyer*: I suppose you think the effect of University teaching is to educate the whole of the faculties together, so as afterwards to enable the mind to receive any professional training? Quite so; that is just my view.
1867. *By Mr. Black*: Is it your opinion that it is necessary, or advisable, looking to the general purposes of life, to combine with secular instruction any religious or theological teaching? As a Christian, I must say decidedly that no education is complete without it.
1868. Do you not think parents and guardians, or the pastors of the different denominations, are the best fitted for imparting all the religious knowledge required for enabling a youth to understand and discharge all the duties of life aright? Perhaps I had in contemplation my own especial school. Mine is a boarding school, and I stand in fact in the place of parents and guardians. That is what made me give that decided answer. Now that I understand your question, I may say that I think pastors or parents and guardians are the proper persons to communicate that instruction. I communicate religious instruction, because I conceive that every schoolmaster who receives boarders into his house stands *in loco parentis*.
1869. Your decided opinion is that the pastor, the parent, or the person standing *in loco parentis*, is the proper person to give religious instruction? Quite so. I think that is the natural source to look to for such instruction.
1870. *By Dr. Lang*: You think that in an educational institution supported by the State secular education alone should be kept in view by the State? I think so.
1871. That the religious element should be supplied *ab externo*? That is quite my opinion.
1872. By the parents or by the pastors of the different churches? Quite so.
1873. *By Mr. Arnold*: Is not a sense of religion an innate and inherent part of our nature? Doubtless. The mere constitution of our own moral nature points that out to be the truth.
1874. A general sense of religion? Just the mere glimmerings.
1875. *By Mr. Black*: Looking at the great diversity of opinion among professing Christian communions in this Colony, do you not think it altogether impracticable for the State to teach religion? I think it is perfectly impracticable for the State to teach religion in any way. It ought not to attempt the work.
1876. Under the actual circumstances of the case, you think they must fail in the task? Yes.
1877. *By Mr. Arnold*: Presuming upon the existence of this innate sense of religion in every

- every person, do you not think a purely secular education afforded by the State is sufficient to enable a person so educated to determine for himself the particular creed which he thinks it most desirable to adopt? Of course I think a person whose mind has been disciplined, whether more or less, by instruction, is in a much better position to judge wisely and satisfactorily for himself than a man who has never received any instruction at all. I mean to say this, that imparting mere secular instruction to the nation at large would be a means of indirectly communicating religious instruction. It would make the population more capable of understanding that which it is the special business of religious teachers to put before them. 1878. It would enable them to inquire for themselves? Yes.
1879. *By the Chairman*: It follows from that opinion that our sectarian schools, in consequence of the manner in which they imbue the minds of youth with peculiar dogmas, unfit them for fair investigation afterwards; if, for instance, in a Church of England School, or a Roman Catholic School, or any other sectarian school, certain dogmas are taught, the young minds receiving those dogmas which are instilled into them from day to day and from year to year, become less fitted for investigation into the truth of those dogmas afterwards, than they would be if they were left free from any such instruction? Yes; where the instruction is decidedly dogmatical, no doubt the young mind receives the bias so communicated.
1880. *By Mr. Arnold*: In fact, the difference is this, that in the one case the conclusion to which the child arrives is supported by prejudice, in the other by reason? Yes. I specially dwell on the word dogmatical. I conceive among Protestants generally there are certain broad truths of Christianity which can be taught without communicating any decided bias.
1881. *By the Chairman*: Dogmatic teaching enters into all sectarian schools—can you shew an instance in any of our denominational schools where the teaching is free from dogmatism? I have not made these denominational schools my study at all; I merely give an opinion; but taking the denominational schools as I have heard them to be by report, I should say that what you observe is perfectly true—that a bias is communicated, which bias has afterwards to be got over, if any proper and fair investigation of religious truth is to be gone into.
1882. The basis of Protestantism is in fact free inquiry? Free inquiry.
1883. The original protest was against the authority of the Church? Quite so.
1884. *By Dr. Lang*: Are you acquainted with the series of books, or any portion of them, put forth by the National Board in Ireland? Some few of them I have seen and used.
1885. Is it not your opinion that these books embody the great facts and doctrines of Christianity, apart from any sectarian or denominational character? That is quite my opinion, with reference to the only religious books issued by that Board which I have seen. I came to the conclusion that, as far as I, a member of the Church of England, could judge, there was nothing that offended my particular predilections.
1886. There was nothing you would wish to be expunged? Nothing whatever; they were books I could put with a clear conscience before my own boys.
1887. You would not characterize such a system as a godless system of education? Certainly not.
1888. If based on the great fundamental truths of natural and revealed religion? Certainly not.
1889. *By Mr. Black*: Do you not think a very baneful influence is likely to be exercised on the moral powers of children brought together for the purpose of receiving secular instruction under circumstances that compel them to recognize among themselves sectarian distinctions—that communicating secular instruction under those circumstances is likely to exercise a baneful influence upon the moral character of the children? I think that under ordinary circumstances that would be counteracted by the teaching of home, or friends, or clergy.
1890. But you think it would require a counteracting influence, in order to make the secular instruction beneficial? Decidedly.
1891. *By Mr. Windeyer*: When you said there was some danger of the tutorial and professorial teaching clashing, you did not mean that the professorial teaching ought to be given up in favor of the tutorial system? No; I do not see how it could be.
1892. You think the central teaching of the University ought to be preserved? I think the central teaching of the University ought to be kept up, or else it would lose its distinctive character.
1893. *By Mr. Arnold*: Do you see any danger in a Government establishment in leaving religious instruction an open question? I should like to see the Government of the country wash its hands of the entire question.
1894. You think it would be a great advantage if it were not introduced at all? Yes, under the peculiar circumstances of the Colony.
1895. *By Mr. Windeyer*: Do you think the Government ought to give money in any such way that it might be indirectly applied to sectarian teaching? I think not.
1896. You think that if money is given for education at all by the State, it ought to be on the principle of ignoring religion, and bringing the children of all religious denominations together? Yes.
1897. *By Dr. Lang*: Do you not think the desire that prevails on the part of parents of the different religious communions, that the schools should be made subsidiary to their respective churches and give specific religious instruction, originates very greatly in the consciousness on the part of parents of not having discharged their own duties in that respect to their children? I suppose that is the feeling in their minds in the majority of instances.
1898. Do you think the curriculum of the Sydney University is complete in its present extent

The Rev. W.
H. Savigny,
B.A.

18 Oct., 1859.

The Rev. W. H. Savigny, B.A. extent—is there any deficiency that it would be desirable to fill up? I think, perhaps, they might take into the curriculum a subject which I see the London University has taken up, an essentially modern one—physiology.

18 Oct., 1859. 1899. As a branch of natural history? Yes.

1900. You think it desirable there should be a professorship of natural history in the University as a part of the curriculum of arts? I should think, in the present state of the University, the present Professor of Natural Philosophy could undertake the duty perfectly well. I say merely looking at the numbers, and so on. As long as they remain so few there would be something ridiculous in having a multitude of Professors.

1901. *By Mr. Windeyer*: Do you not think, considering the means at the disposal of the University, the course of studies adopted was the right one, instead of adopting more physical science subjects? I think so. The scheme appears to me to be a perfectly fair one, evidently regarding the end of University education as not so much imparting actual knowledge of things as teaching young men how to acquire it afterwards. It seems to me the system, as constituted at present, calls into play all those faculties which will be hereafter called into play, whatever profession a young man embraces.

1902. *By Dr. Lang*: Do you think there should be a department of mental philosophy in the faculty of arts? Not as the University is constituted at present. I think the requisite instruction might be given in that particular, not directly, but in connection with various classical books, for instance.

1903. *By Mr. Windeyer*: You do not think it is a charge rightly made against the University that too much classics are taught there to the exclusion of physical science? It is my opinion that classics, mathematics, and physical sciences, occupy their proper places.

1904. *By Dr. Lang*: Is there not a special department for mental philosophy in the English University Colleges? There is a Professor of Mental Philosophy in Oxford. Somebody observed just now that the Professors there are more names than realities, and they were so in my time. The instruction in mental or moral philosophy was really communicated by the tutors of the different Colleges, or by private tutors.

1905. That arises from the Colleges having invaded the proper province of the University? Yes, that appears to be the true state of the case.

1906. *By Mr. Windeyer*: Have not many persons who have studied the University system of England ascribed the comparative falling off in the English Universities to that fact of the Colleges having usurped the place of the University and destroyed the central teaching? I have heard that opinion broached. I dare say it may be the case.

1907. It is in consequence of these views having been promulgated that the University teaching, properly speaking, is being restored? Gradually restored in Oxford, at any rate.

1908. *By Mr. Arnold*: Is it supposed to be the fact that the standard of scholarship has declined within the last few years? No, not of late; not within the last few years.

1909. *By the Chairman*: Have you any other suggestions to offer? No suggestions beyond those which I have brought forward directly or indirectly.

1910. That was a very important one you made some half-hour ago, that any scholarships in the University should be thrown open to boys from all schools in the Colony? Yes; matriculation not being made a *sine qua non*. Now, a youth must matriculate and undergo considerable preparation, with much loss of time.

1911. In your mind then the great object should be to ascertain the qualifications of the individual, not at all how he obtained them? Not at all how he obtained them. As Mr. Cape suggested just now, we want something to counterbalance those adverse influences which take young men away from educational pursuits.

1912. *By Mr. Windeyer*: Of course you would make them matriculate as soon as possible after gaining scholarships? Yes.

1913. *By Mr. Arnold*: The scholarships would have to be held by members of the University? Yes.

1914. In what way would you propose to limit, or would you place any limit at all on the competitors for these scholarships? I think that limitations have always been bad. The tendency in all Universities is now to get rid of all limitations.

1915. Would you have any limitations as to age? Nobody could object to that. That is generally done. There are very few Colleges where a man over nineteen can get a scholarship, or over thirty a fellowship.

1916. *By Mr. Windeyer*: You would not allow any person coming from England, who might find himself in want of employment after his arrival here, to make use of these scholarships merely as a means of gaining a livelihood? No; I would look to the object of them—the encouragement of education in the Colony.

1917. *By Mr. Arnold*: You think a restriction as to age, confining it to persons under nineteen, with the condition that they could hold them only as scholarships in the University, would be sufficient? As a general rule.

1918. The sort of conditions under which the Baliol Scholarship at Oxford is competed for? Yes. I think, if so, it would never be very likely that a person would come out to this Colony to try for a scholarship, whatever he might do for a fellowship.

1919. *By Dr. Lang*: Do you not think the travelling fellowships you have suggested would imply a more advanced state of things than we have reached as yet? Something of the kind seems to me to be a necessity, from the acknowledged inability of the University to supply that specific professional education which young men want.

1920. *By Mr. Cape*: You would rather this benefit came from the wealthy public than from the Government? That is my own individual feeling,—that the more we have to do with private liberality and the less with the Government, the better.

1921. It is not a genuine British practice to depend altogether on the Government? Certainly not in educational matters.

TUESDAY, 25 OCTOBER, 1859.

Present:—

MR. MURRAY,
MR. WILSON,
REV. DR. LANG,

MR. JONES,
MR. PLUNKETT,
MR. CAPE.

TERENCE AUBREY MURRAY, Esq., IN THE CHAIR.

George Wigram Allen, Esquire, called in and examined:—

1922. *By the Chairman*: What we wish to obtain is some information as to the appropriation of the proceeds of the College Buildings when they were disposed of in 1853? In that year, I think, the Legislature passed an Act, authorising the surviving trustee of the land on which had been erected certain buildings known as "Sydney College" to convey the land and building to the University, in consideration of the University paying to the said trustee the sum of £150 for some estimated expenses, and also paying to each proprietor the full amount of his shares. The conveyance was made to the University, and every proprietor who has applied to the University has received the full amount of his shares. A sum of about £6,000 has been paid.

G. W. Allen,
Esq.
25 Oct., 1859.

1923. What sum was received for the building? The University afterwards sold it to the Grammar School for £12,000.

1924. And how would the matter stand then; was it the property of the shareholders—the old Sydney College? The property was originally granted to Dr. Bland, and, I think, two other trustees, in trust for educational purposes.

1925. *By Mr. Jones*: The land was? Yes. A deed of settlement was prepared, and a number of persons contributed towards the institution by taking shares of the value of £50 each, and with the proceeds of the shares the building was put up. Neither the grant nor the deed of settlement contained any power to sell the property, and it therefore became necessary to apply to the Legislature to authorise the sale to the University.

1926. *By the Chairman*: Then the land was granted, but the shareholders were at the whole expense of the building? I believe so.

1927. Were those shares transferable in the market, like other shares? Yes; they were frequently sold. At one time they were disposed of at about their original value, but afterwards, when the Sydney College was temporarily closed as an educational establishment, the shares were sold very low, some of them as low, I believe, as £5. Some gentlemen purchased a number of them for a very small sum; they afterwards received £50 for each share.

1928. Then the Government, in fact, contributed nothing whatever but the land? I think not, but I cannot speak positively. I was but a boy when the College was built.

1929. Do you know what form those shares were in? There was scrip issued for them.

1930. The same as other scrip? Similar to the scrip of other companies. The only advantage the proprietors had was the right of presentation to the College. The students presented by the proprietors paid a less fee than others who were not so presented.

1931. *By Mr. Jones*: Then no return, excepting in the way you speak of, was sought by those who took shares? None, I believe.

1932. *By the Chairman*: And the proceeds, I suppose, merely paid off all the shares of all the proprietors? All the proprietors who have applied have been paid in full. Several have not yet applied.

1933. Where is the balance of the funds? The University is liable under the Act, and under the conveyance for the payment to each proprietor as he calls for the money.

1934. Then the University has not, in fact, paid the money? Not the full amount.

1935. What amount has been paid? £6,000, as nearly as possible.

1936. And to what extent is the University still liable? I cannot speak positively. I investigated the claims for shares as far as I could at the time, and I think I reported to the University that upwards of £7,500 would be required to pay the whole.

1937. *By Mr. Jones*: Would be due on shares? Yes, for the whole, if the whole were applied for. I did not know till late last night that I should be required to give evidence, otherwise I would have come prepared with the correct figures.

1938. Practically the University either gave or made itself liable for a sum of from £7,500 to £8,000 for the land and building? Yes, somewhat under £8,000, I know.

1939. And what would you estimate the value of the building and land respectively to be? I could scarcely form an opinion upon that, because the building at the time they took it was useful for scarcely anything else than a large school. It would have cost a large sum of money to have turned it to any other account. The land was very valuable; but I understand that the trustees of the Grammar School, or the University, (I am not sure which) had the property valued at the time of the sale, and that the whole was then valued at £12,000.

1940. The land and building? Yes, so I understood. It was more valuable then than when the University purchased it I should think.

1941. *By Dr. Lang*: I thought it strange that land should have been given for the purpose of education, and converted, by an Act of the late Council, into private property, which I think is precisely the *prima facie* view the case indicates—has not that been done? As I have already explained to the Committee, all that the proprietors received was what they had previously paid in the shape of shares to the institution; they received nothing as the price of the land. Many of the proprietors have, to my knowledge, used the money they so received for other educational purposes. For instance, I believe Mr. Wentworth gave his £200 towards a scholarship in the University—or for something connected with the University

G. W. Allen, Esq. University—and others have given their money towards the Colleges. I could name several persons who I know have given the value of their shares towards the establishment of one or other of the Affiliated Colleges.

25 Oct., 1859. 1942. At all events, the real property of the institution—the land on which the building stands—was not disposed of? It was conveyed under the authority of an Act of the Legislature to the University, in consideration of the payment, by the University, of the amount of the shares which each proprietor held in the institution; that is, the University became liable to pay to each proprietor the full amount of the shares he held, and nothing more than that.

1943. What amount has been paid to the original shareholders? About £6,000. There will be a difficulty, I think, with several proprietors in establishing their claim. I do not anticipate that the whole sum will be asked for.

H. Kennedy, Esq.

Hugh Kennedy, Esq., called in, and further examined:—

25 Oct., 1859. 1944. *By the Chairman*: There were some documents which we wished to have when you were last here,—have you been able to procure them since? I am not aware of any documents having been asked for.

1945. Some returns and accounts, I think, in connection with the question which we requested you would hand in by way of an appendix to your evidence? I am not aware that anything of the kind was required.

1946. Do you know what sums have been paid to the shareholders of the Sydney Grammar School? Of the Sydney College—the old College?

1947. Yes? £5,852 10s.

1948. And how much still remains to be paid in case applications are made? It is supposed that there are no more liabilities—that the Senate are not liable to be called upon for a further sum.

1949. That there are no more? That there are no more.

1950. Has that been ascertained, do you know, or is it a mere matter of supposition? It was ascertained from Mr. Allen, the University solicitor. Many of the shareholders forewent their claims altogether.

1951. How many? A certain number.

1952. Gave up their claims? Gave up their claims.

1953. And the sum of £5,800 has been actually paid? That sum has been paid in cash.

1954. Out of what fund was that payment made? The sum of £4,000 was paid out of the Endowment Fund previous to leaving the old premises. The balance of £1,852 was paid out of the receipts of the Trustees of the Grammar School, who purchased the building.

1955. And how was the money received from the Trustees of the Grammar School appropriated? The balance of it was appropriated to the building, and the sum of £5,500 was transferred to the general account, to repay the money paid for the purchase of the Sydney College property. £150 was appropriated to supplement the Levy Bequest, to raise it to £700.

1956. How much has been used for supplementing the building fund? In addition to the Government grants?

1957. Yes? The sum of £6,500; but on this was charged the repayment of £565 3s. 11d., (being Mr. Levy's Bequest) together with interest, £81 18s., for the term for which it was borrowed by the Senate.

1958. That has been applied with the authority of the Senate, I presume? By the authority of the Senate.

1959. That is in addition to the sums of money voted by Parliament? In addition to those sums.

1960. Do you remember what the appropriation by Parliament amounted to? £50,000.

1961. £50,000? £50,000.

1962. Was there any supplementary vote at all? There was at the end of the year a vote of £10,000.

1963. That is £60,000? £60,000.

1964. And this £10,000 makes £70,000? Yes, £70,000.

1965. All spent in the building? That sum has not all been spent in the building. There is a balance in hand of upwards of £4,000. A considerable portion of it, however, may be said to be appropriated. The Senate are liable for it.

1966. For work done? For contracts taken and not completed.

1967. How many gentlemen have declined to take any payment for their shares in the Sydney College? I am not aware.

1968. Do you know what the amount altogether would have been had all claimed what they were entitled to? No, I do not.

1969. *By Mr. Cape*: Do you know how it arises that although there was a certain sum for building, and the architect received his instructions, he, upon his own accountability, went beyond that amount? It hardly occurred in that way, I think. The architect sent in an estimate; he gave an estimate of the cost of a certain part of the building, and after some time that estimate was found to be considerably exceeded.

1970. The question is how, without funds, the Senate went on with such a responsibility; how do you account for that? I am not aware that they entered into works which they were

were unable to meet; six or seven contracts had been taken for different parts of the building for a specific sum each, and in no case have the Senate exceeded the amount.

1971. After Mr. Hutton, who was treasurer of the Institution? I succeeded him.

1972. How many years have you had the accounts? Until 1855.

1973. And they passed to whom? To Mr. Grabam.

1974. And during whose Treasurership would the change have been as to the original plan of the building—a more expensive plan? I am not aware that there was a change; there has never been a change from one plan to another.

1975. There were two plans before the Senate—a less expensive one and this one of larger expense? There was a plan laid before the Senate in the first instance, which never was adopted; it was not supposed to be commodious enough.

1976. How did the practice arise of discontinuing the annual accounts in the Calendar? During the first two or three years there were regular accounts; then for some years there was a discontinuance, and in the year 1858 we have the accounts again? I am not aware how that happened. There was no Calendar published one year at all. There was a break in the Calendar.

1977. *By Dr. Lang*: The surplus funds arising from the payment of the Trustees of the Grammar School for the property, after paying the shareholders their claims, went into the general fund of the University? No, it did not; a portion of it, as I said just now, went to supplement the Levy Scholarship, a portion to pay the shareholders of the Sydney College, and the balance went to the building fund.

H. Kennedy,
Esq.,
25 Oct., 1859.

TUESDAY, DECEMBER 20, 1859.

Present:—

REV. DR. LANG,
MR. PLUNKETT,
MR. WILSON,

MR. MURRAY,
MR. JONES,
MR. CAPE.

TERENCE AUBREY MURRAY, Esq., IN THE CHAIR.

John Macfarlane, Esq., M.L.C., called in and examined:—

1978. *By the Chairman*: You are a member of the Sydney University, I believe? I am one of the Examiners in Medicine. J. Macfarlane,
Esq., M.L.C.

1979. We wish to have some information from you as to the advisableness of establishing a school of medicine in the University of Sydney—would you be good enough to give the Committee your opinion? I am of opinion that it is not only desirable, but imperative. I see no difficulty in the matter; clergymen and lawyers have been educated here, and why should not doctors? For example—in the curriculum the chair of chemistry is already established; a chair of anatomy ought to be established; materia medica and botany might be combined. Progressively, chairs might be added as young gentlemen become qualified by study. In the first instance, we ought to begin so as to inform the public mind that it can be done. When the public mind is aware, people will bend their attention to it, so that their sons may be in course of preparation. 20 Dec., 1859.

1980. It has been urged that the climate is unfavorable to the study of anatomy? Well, I do not think so. There are great facilities for studying anatomy here.

1981. There is no greater difficulty here than that which exists in other countries? I think there is less difficulty.

1982. *By Mr. Wilson*: You allude to the procuring of subjects? Yes, on that account. I remember that when I began the study of medicine in 1828, I had to pay twenty pounds for a body which had been underground some weeks. You may fancy what kind of knowledge of anatomy can be acquired from dissecting a decomposed body. But this was inevitable then. The body had been procured by some men, and I had to pay £20 for it. After the passing of Warburton's Anatomy Act, I think it was, the bodies of persons unclaimed in public institutions were handed over with proper form to gentlemen who had acquired a license for teaching anatomy, so that there was afterwards a better supply; but it was always insufficient, compelling young gentlemen to go to other countries to study.

1983. *By Mr. Plunkett*: What country do you speak of—England or Scotland? I speak of England, Ireland, and Scotland.

1984. *By the Chairman*: Do you think the expense of establishing a medical school here would be very great? I do not think so. I think that, in the first instance, gentlemen might be obtained who would for a time fill the offices, until the University could afford to make an allowance to them. All our medical men here have been educated at home, and all are able, at least many are, whom I have in my observation.

1985. What opinion upon the subject is entertained by the profession in Sydney? I think the profession is favorable to it.

1986. *By Mr. Wilson*: What classes would you propose to teach first? Chemistry and anatomy go hand in hand, both being a sort of foundation of medical study.

1987. You require a demonstrator of anatomy? Yes.

1988. That would be a well paid office—he would have to get a regular salary? I do not think it. For a few years, at first, I believe gentlemen might be found who would take it up for the honor of the thing.

- J. Macfarlane, Esq., M.L.C.
20 Dec., 1859.
1889. Do you think they would devote all their time to it for the honor of the affair? It is not necessary. A good anatomist with a few hours a day would do all that was required perhaps by a little rehearsing of his early studies.
1890. I am not alluding to his capability of doing it, but of his being enabled to give up his time to it? I do not think it would require that undivided attention. Most of the professors at home in high medical practice have always assistance which they can call in.
1891. Would it not be difficult to get such assistance here? No, I think not; I think some of the younger doctors would assist for a few years for the honor of the matter.
1892. But you would not have the same facility of obtaining medical men here as young men at home? Oh, yes; eminence in anatomy is merely a little dexterity in dissecting, possessing that, with a good education, any man may become a proficient in anatomy if he has facilities for pursuing it. I know, as a father, if I were disposed to educate any of my boys for the profession, I would rather train them here, and then send them home to travel.
1893. That is only because they would have the benefit of your own supervision, I presume? No doubt, a sort of parental control might be exercised over the boy—
1894. It is not because he would be able to get as good an education in this Colony as in England? I think travelling would increase his information.
1895. But, irrespective of travel, would he not benefit by being brought into contact with men of eminence, among whom he would sit, in England, and with the competition that exists—do you think a young man would get as good an education under any circumstances in a Colony like this, where there are only one or two competitors? I do not see why he should not, with an originally well-ordered mind; he could increase his information by travel, and extend his study at home. I do not see why we should not be able to give as good an education here in medicine as in law, or arts, or theology.
1896. There are so many more branches connected with medicine than with law, so many sciences in which it is necessary for a man to perfect himself? True. I would rather, as I have said, educate one of my boys here, giving him the best education he could get, and then, when he is able to take care of himself, I would send him home to travel.
1897. *By the Chairman*: But at all events, whatever the difficulties, or whatever objection might apply at present to the establishment of a medical school, we must all look forward, I presume, to its ultimate establishment? Yes, and I think the sooner the better.
1898. We cannot always be sending our youth to Europe to acquire a knowledge of anatomy and medical science? When I look to the risk to physical health, and to moral health too, it is a risk I would not willingly undertake. I would not trust my boys so far away from my own supervision, unless I had some relative to act *in loco parentis*, and even then I should not feel the same satisfaction as though they were under my own roof.
1899. But it is advisable that we should, at all events, make a beginning, since the thing must be done? I think it is high time. I am told that in San Francisco, a place of only ten years' existence, they have actually promulgated a scheme which will work well, and where they have established six chairs at once. I can refer to a periodical I received from home the other day—*The Medical Times*—in which it is fully stated. If that is done there, why should not this Colony, which has been established seventy years, also have a school of medicine in our University?
2000. You are of opinion that there are no practical difficulties in the way? I do not think there are any practical difficulties.
2001. Do you not think that then parents would find better opportunities for the employment of their sons than at present? Yes, in that way to.
2002. That would be an important point? It would be a very great advantage. Parents now-a-days look around them and say, "What am I to do with my boys? I cannot make them doctors, which I might prefer." If you hold out to them the prospect that their sons can study medicine, that would be an inducement to them.
2003. In fact, there is another profession thrown open to the youth of the Colony? Yes, and they would have an opportunity of studying disease under its Australian forms, which they could not do at home.
2004. That is an important point? Yes, a most important point.
2005. That they should see the Australian type of disease? Yes.
2006. Are you aware that considerable opposition has been manifested by some of the gentlemen in office in the University? I have heard that certain of the Professors have objected slightly. Their desire is to complete the faculty of arts and law. It is a very natural desire; but why should not their faculties all be made complete.
2007. The University itself would be incomplete without a medical school? I think so, clearly.
2008. There is another point in reference to which I wish to put a few questions to you; you stated just now that you attended the University occasionally as examiner? I am appointed examiner, but no candidates have yet come for examination in medicine.
2009. Do you know anything at all of the recent examinations at the University? In arts?
2010. Yes? I have heard them spoken of highly, as being strict and as they ought to be.
2011. Do you know at all whether they have been more particular in the late examinations than in the previous ones? It has been stated that they have always been very particular.
2012. There were at the last examination sixteen, I think, candidates for degrees? I believe so.
2013. And only eight passed? Yes.
2014. Does that prove the strictness of the examination? It proves that there is a proper amount of strictness and rigour which ought to be exercised.
2015. *By Mr. Plunkett*: If the establishment of a medical school were postponed for the next ten years, do you not think the same difficulties would have to be encountered? Yes;
I

I think it would create a greater difficulty, because the public mind must be prepared by its being advertised that in such a session certain chairs would be established for the instruction of young gentlemen in medicine. The sooner that is promulgated the better.

J. Macfarlane,
Esq., M.L.C.

20 Dec., 1859.

2016. You say that the medical profession, generally speaking, is favorable to it? I believe so. I have had frequent conversations with my colleagues in the Infirmary, for example, and those whom I see most frequently, and I am delighted to find that they are as zealous as possible.

2017. Now, looking to the consequences of sending boys home, if a medical chair were established in the Sydney University, what would be your advice to your own friends who had boys that desired to enter the medical profession—would you think it advisable to introduce them to the University here, in the first instance, or to send them home? For many reasons I should recommend that they should be trained as far as possible here. Then, after having finished and obtained a degree of qualification, I would say let them travel. Almost all parents can afford to allow their sons to travel for a few years, and at the age of twenty-four or twenty-five much good may be obtained; but removing boys from the parental eye at so early an age as fifteen is a most serious matter. I would not allow any boys to go to a distance under the charge of an uncle or an aunt, who might be too indulgent or too severe. I would much prefer to have them under the paternal eye.

2018. Are you aware that there was a strong feeling against allowing young men to be called to the bar here until a very few years ago? I fancy there was a little feeling of the kind, but I believe that has subsided now, and the bar has turned out some clever young men.

2019. Many arguments such as these were raised against it,—that they would acquire more information by travelling, and coming in contact with lawyers at home, and seeing justice administered there, than they could possibly acquire here? Yes, I have heard those statements, but I do not attach much importance to them.

2020. Do you not know that the young barristers who have been called to the bar here are equal to those who have been called at home? I believe so. I am very glad to hear it from such an authority as yourself. I do think, though, that it is desirable a young gentleman of twenty-five should travel for a year or two to see the old country; but I would not send a boy away from this climate, to live in England, at the age of fifteen—before his constitution is fairly formed.

2021. Is it the case, that medical men at home are not content to take degrees in one institution, and that they take degrees in different institutions? Yes. I know one gentleman who has four separate qualifications; for each of which he would have to undergo a sort of extended curriculum. That is very proper, I think.

2022. Have you made any calculation as to the expense that would be necessary for the first two or three years? No; I am unable to form any opinion on that subject. I might be able, in a day or two, to collect some data. The only expense I think we should incur, in the establishment of an anatomical chair, would be the erection of an anatomical theatre, built in the ordinary way.

2023. *By Mr. Cape*: Would not a medical school be of assistance to the public, in enabling dispensers and young chemists to be better qualified? Yes.

2024. It would also be a great protection to the public? A very great protection.

2025. Men of that kind are not able to avail themselves of the English education? The state of pharmacy is very low here—it is carried on in the most loose possible way. It has been stated to me, that a person is in business as a druggist, who a short time ago was accustomed to a different kind of vocation altogether, and who has had no training whatever; that when he sees one substance, he cannot distinguish it from another. A properly educated pharmaceutical druggist ought to undergo a proper training; and only after examination ought he to be permitted to dispense.

2026. They ought to possess certain certificates, to enable them to dispense medicines? Yes.

2027. *By Mr. Plunkett*: Is not there some pharmaceutical association here? No. It was talked of some time ago.

2028. *By Mr. Cape*: The existing law here, I believe, is more lax than the law in England? It is extraordinarily lax. Anyone may here open a shop and dispense deadly drugs, without knowing anything about them.

2029. It is acknowledged that the law is lax? There is in fact no law upon the subject.

2030. *By the Chairman*: I recollect that, in a former Committee, Dr. Dickson examined many of the chemists themselves, and it appeared from their information that they were anxious to establish a Pharmaceutical Association—in fact, some progress was made? Yes; I remember something of that circumstance.

2031. They all acknowledged that a great quantity of worthless drugs—damaged drugs—was purchased in the market here, and sold to the public without any sort of check? I believe that exists at present.

2032. *By Mr. Cape*: Would not veterinary surgery and medicine be included? I think so, very properly, for we have diseases of cattle and horse stock.

2033. A medical school would also open up the study of botany as connected with *materia medica*? Yes.

2034. In the London University and Queen's College I believe the medical school has risen to some eminence? Yes.

2035. *By Dr. Lang*: It has been stated by a former witness that great disadvantages would arise to the students in the event of the establishment of a medical school, in connection with the University, from the very limited field of study they would have in this Colony, as compared with the vast extent of such fields in London and Paris, and other great cities of Europe—do you think that advantage would be compensated by the parental supervision and control the students would have in this country? I think so; I think it would be more than balanced.

- J. Macfarlane, 2036. And you think that, if medical students should go to Europe at all, it should be after they have undergone a regular medical education in the Colony? I think only then—not until. I repeat, I would not permit a boy of my own to go at fifteen, unless he went to a near relative—and even then, perhaps, that relative might be too strict, or too indulgent; and, besides, at the early age of fifteen boys in the larger towns are exposed to temptations which, sometimes, older boys do not resist.
2037. *By Mr. Cape*: When in Edinburgh, in 1855, I heard of the failure of several medical students, from Port Phillip, from the want of parental care, and the unsuitableness of the climate? I have heard of such cases. I have referred to physical evils, and also to moral evils, resulting from sending an unformed boy a distance from parental control.
2038. *By Dr. Lang*: It has been stated that it was the intention of the Senate of the University to form a Botanic Garden in connection with the University—do you think that would be at all necessary, when we have such an institution as the Botanic Garden in the Domain? I think the Domain would be available for many years to come, and a most admirable garden it is; by-and-by it will increase in plants, and so on. At present I think the garden in the Domain is highly suitable for instruction in botany.
2039. Do you think the present situation of the University is a suitable one for the advancement of general education, professional and otherwise, in a capital such as this—its present situation as apart from the city, and at a considerable distance from it—as compared with what would have been the advantages to the community if it had been more centrally situated with regard to the city, like the Universities of Edinburgh and Glasgow? I am not quite clear on that point; I think the University should be a little away from the hub-bub of the town. My own *alma mater* at Glasgow was situated in the very heart of the town, but I do not know that that is an advantage.
2040. Is it not a great advantage to have certain of the more popular classes open to general students not matriculating in the University? Yes; that is a sort of partially irregular education which I think ought always to be open. I think young gentlemen should be permitted to attend lectures on anatomy who did not intend to follow it up; it is quite desirable. Young clergymen in Scotland attend these lectures, not intending to follow up the study of medicine.
2041. *By Mr. Cape*: And so in law? Yes.
2042. *By Dr. Lang*: Would not the distance of the University from the city preclude such young men generally in this city from attending courses of lectures either in the evenings or early in the mornings? Perhaps in that way there is a slight disadvantage, but young fellows should not grumble about that. I had a strong notion to attend the lectures of Mr. Hargrave in law, but these being delivered in the evening, it was inconvenient, and I did not go. But young gentlemen who are following out their studies may make their way to the University on horseback, or even on foot; a long walk will do them good.
2043. Have you turned your attention to the subject of the fees that are demanded for students of the University—do you think them too high? I do not at this present moment remember, but I do not think they are out of proportion to the fees at Home—classics, two guineas; chemistry, three guineas; I think chemistry was more than that in my time, with Professor Thomson; I think it was five guineas, and an extra sum for experiments.
2044. But are not these far shorter terms than at home? I do not think they are out of proportion; I do not think they would place any obstacle in the way of a young gentleman studying medicine. I am happy to notice that even with the unthinking part of this population there is a desire to educate their children to the fullest extent; I have often been delighted to notice that.
2045. It has been stated that the fees average about £21—do you not think that is too high a rate? Well, yes; I think it is rather high.
2046. *By Mr. Cape*: That is not for classics alone; it is two guineas a term for classics (six guineas), six guineas for mathematics, and nine guineas for chemistry and experimental physics? I do not think that is out of proportion.
2047. For instance, logic might be only one term of the year (they vary their terms), and chemistry might occupy other terms—it is according to what they are studying? Of course. I am supposing the fact of young gentlemen not being able to pay these funds; there ought to be some assistance granted either through an exhibition, or by making provision for bursaries. This might easily be done if people would continue their munificence to assist young gentlemen.
2048. *By Dr. Lang*: But are there not young men who would rather pursue knowledge under difficulties, and work their own way than be indebted to public charity? I am glad to hear that there are.
2049. In such circumstances do you not think the present rates are rather high? There is the necessity of supporting the professors in a suitable way, which renders such fees probably necessary.
2050. Are you aware what the fees are now in the Queen's College, Ireland? I am not aware.
2051. *By Mr. Cape*: Looking at the list of subjects taught in the London University, do you not find it comprehend a large amount of practical education? Yes.
2052. Do you think the fees excessive? From the high rate of living, and the necessity of paying professors, and men qualified to teach the various branches, I do not think the fees charged at the Sydney University are so much out of proportion. Of course, at home these matters are well arranged, and, probably, a professor of high qualification can be obtained at a much lower rate than you have to pay for a suitably qualified gentleman to come out here.
2053. *By Mr. Plunkett*: Are you aware that the Imperial Government were prepared to make great sacrifices in order to establish those Queen's schools in Ireland? I believe great privileges have been granted to them.
- 2054.

2054. *By Mr. Cape*: On looking at the list of subjects pursued at the Universities of *J. Macfarlane*, London, Scotland, and Ireland you find, I believe, a large amount of practical education connected with them? Oh, yes. *Esq., M.L.C.*

2055. That is essentially necessary now-a-days? Yes, it is very necessary. Sub-divisions in education, which, perhaps, a hundred years ago were not thought of, now obtain. 20 Dec., 1859.

2056. And in this country too? Yes; for example, anatomy and physiology—you begin with anatomy and then come to physiology as the philosophy of anatomy. Having become familiar with anatomy you study physiology as the thinking part of it, so to speak—morbidity anatomy, pathology, and dissection as a portion of the study of anatomy. Comparative anatomy is the study of anatomy through all the branches of the animal kingdom—the nature and treatment of diseases, or the practice of physic. I find that the chair of the practice of medicine was established in 1714. That seems to have been, at the time, the only chair; but, very likely, in that chair were taught seven or eight branches. Four years afterwards, in 1718, anatomy was established.

2057. You have, in that list, veterinary surgery? Yes, and very properly so. Botany is also essential—that would be one of the earliest studies.

2058. As well as natural history? That would come in as part of his preliminary education.

2059. According to the London University you will find that those practical subjects would be taught in the medical school, and that many would attend? It is a very important part of their general education.

2060. *By Mr. Wilson*: But, referring to the subject of veterinary surgery, would you not find a distinct professor necessary for that—you could not get a medical man sufficiently qualified to practice it—he must be a veterinarian? Certainly. I remember a gentleman who delivered lectures in my native town.

2061. *By Mr. Cape*: He might be a sub-professor? Such a person would be a great acquisition to the University, with its completed arrangements.

2062. And to the Colony at large, in reference to diseases of cattle? Yes.

2063. *By Mr. Plunkett*: Do you happen to know whether there is any school of medicine or anatomy in India? I have heard so, incidentally. I am not quite certain.

2064. *By the Chairman*: Are you aware whether the Professors of the University have protested against the establishment of a medical school? I have been told that they have; and their great reason has been, that the Faculty of Arts has not been made complete.

2065. *By Dr. Lang*: Do you think there has not been a great mistake committed by the Senate of the University, in not arranging for the erection of residences for the Professors, in the buildings that have been already erected at great cost? I would not like to say that I think it a mistake; but I think it would have been better if residences for the Professors had been constructed.

2066. Does it not appear to you that the residence of a staff of professors within the precincts of the University would tend to diffuse a higher moral atmosphere in the locality than can otherwise obtain? I do think so. That is a plan which prevails in Scotland pretty generally.

2067. *By Mr. Wilson*: Providing a medical school were established in Sydney, do you think the University, as it at present stands, affords sufficient accommodation for that purpose? I see no difficulty. The short distance it is from the town would be rather beneficial.

2068. I am alluding to the accommodation of the University building as it stands, and not as it will be when it is completed—would it not be necessary to extend the present accommodation? I fancy there are rooms available in the present structure, without the necessity for erecting more.

2069. Do you not think, that if one professor is called upon to teach on different subjects, he is very apt to confuse the subjects, and the minds of his pupils, in so doing? I do not think a professor of well-regulated mind would fall into such a mistake as that—he ought not to. It may be within the remembrance of Dr. Lang, that Professor Jeffrey was professor of anatomy, surgery, and botany. Afterwards, as the school extended, separate chairs were erected. The chair for surgery was established, I think, in 1815, and that of botany in 1818. In the beginning of this century Professor Jeffrey taught those three branches. I by no means go in for a low standard of education, but for the highest, so as to make your Australian qualification worth possessing.

2070. Can you form any idea of the number of students likely to attend the medical classes in this Colony? I am unable to say. From the simple fact of gentlemen not being aware that their sons could be trained in medicine here very few have given their attention to it. Some, you are aware, have sent their sons home. Mr. Cox, for example, and Mr. Bowman, have sent their sons home. They have come out qualified, and happen to be clever young men.

2071. But do you not think the facilities young men possess—not only of obtaining a living, but acquiring fortunes in other walks of life—tend to divert their attention from all learned professions? That will not always remain. The profits in these pursuits will not be so great by-and-by. We may reasonably look forward to the time when men will desire more than sordid money a complete education.

2072. In all probability do you not think that will be some years first? Perhaps so; but every day this community loses—every day it abstains from the establishment of a medical school—the loss will be years, simply in that way.

TUESDAY, 31 JANUARY, 1860.

Present:—

MR. CAPE,
MR. DALLEY,
MR. JONES,
REV. DR. LANG,

MR. MURRAY,
MR. PLUNKETT,
MR. WILSON,
MR. WINDEYER.

TERENCE AUBREY MURRAY, ESQ., IN THE CHAIR.

Hugh Kennedy, Esquire, called in and further examined:—

- H. Kennedy, Esq. 2073. *By the Chairman*: I was informed some short time ago, as Chairman of this Committee, that the Senate of the University, or some members of the Senate, had made some animadversions upon the evidence which you had given here, and had found fault with you for being so explicit in the statements you had made,—have you heard anything at all from the Senate, or any member of the Senate, to that effect? No; the statement is hardly correct; I have not had any communication on the subject with the Senate as a body, and no remarks have been made as to my evidence. With reference to a return I sent you during the recess, I mentioned it to the Vice-Provost after it was forwarded—I did not think it necessary to do so before—and he remarked that I ought to have submitted it to him or the Provost before sending it. That was the only remark.
- 31 Jan., 1860. 2074. Did the Vice-Provost assign any reason for making that remark? No reason at all.
2075. That is all that has passed? A remark was made by the Provost that I had made an error with regard to the amount the building was to cost—I think I stated it was to cost £140,000—and the only reply I could give was that the plan was before the Committee, and that was the estimated cost of the building according to that plan.
2076. *By Mr. Cape*: Do you understand differently now as to the cost? No, I am of the same opinion still.
2077. *By the Chairman*: This is the question in Sir Charles Nicholson's evidence, in answer to which he makes that statement: he is asked by the Chairman: "With reference to the expense, we have it given in evidence by Mr. Kennedy that the expense of completing the building upon the plan which was at all events in contemplation, will amount to £140,000—?" The answer is, "I believe Mr. Kennedy had no authority whatever for making that statement." You think you had authority for making that statement? My authority is the minute of proceedings of that date in which the amount is stated. I think I can explain the difference between Sir Charles Nicholson and myself. He would imply that it was not intended to carry out the whole building according to that plan. But that would be the cost of it if carried out in its integrity.
2078. *By Mr. Jones*: As estimated by the architect? Yes, I think you will find it is marked on the plan. I am aware that at the time the plan was adopted the Senate knew it could only be carried out at once, but it was intended that the work should extend over a long course of years.

Morris Birkbeck Pell, Esq., M.A., Professor in the University of Sydney, called in and further examined:—

- M. B. Pell, Esq., M.A. 2079. *By the Chairman*: You gave evidence before this Committee some time ago? I did.
- 31 Jan., 1860. 2080. Have you had any communication at all from the Senate of the University in reference to that evidence? No.
2081. Nor from any individual member of the Senate? Nothing more than private conversation.
2082. Nothing of an official character? No.
2083. Have you seen a copy of your evidence? I had a copy to correct.
2084. Is there anything you would like to add? Nothing at present.

Professor John Woolley, D.C.L., called in and further examined:—

- J. Woolley, D.C.L. 2085. *By the Chairman*: You gave evidence before this Committee some time ago? Yes.
- 31 Jan., 1860. 2086. Have you had any communication at all from the Senate of the University on the subject of that evidence since then? No.
2087. Or from any individual member of the Senate, of an official character? No, not officially.
2088. You have had no communication whatever from the Senate on that subject? Not with reference to the Committee.
2089. You have read your evidence, I presume? I had the manuscript to revise.
2090. Is there anything you would wish to add? Supposing any general question were put by the Committee, on the constitution and practical working of the University, it might be in my power to say something to express the impression made upon me as an officer of the institution; but I have not come prepared on the present occasion.

FRIDAY,

FRIDAY, 3 FEBRUARY, 1860.

Present:—

MR. CAPE,
MR. JONES,
REV. DR. LANG,

MR. MURRAY,
MR. WILSON,
MR. PLUNKETT.

THE HON. TERENCE AUBREY MURRAY, ESQ., IN THE CHAIR.

The Honorable Francis Lewis Shaw Merewether, Esq., B.A., M.L.C., examined:—

2091. *By the Chairman:* You are Vice-Provost of the University of Sydney? I am.
2092. How long have you held that office? Since 1854, having been annually re-elected.
2093. You have had a great deal to do with the management of the University since it was established? Yes, I have taken an active part from the commencement.
2094. Especially during the absence of Sir Charles Nicholson? Yes, in his absence I was the chief executive officer.
2095. You have been on the Senate from its first establishment? Yes.
2096. Do you remember what the estimated expenditure on the building was when it was first proposed? The architect's estimate for the portion of the buildings which it was intended to erect was, I think, £72,000.
2097. What was the estimate for the whole? The estimate for the whole plan as submitted by the architect, was £140,000; but the Senate never intended to carry out the whole at once—indeed, it is not to be considered that the plan is adopted as regards that portion of the building which has not yet been commenced. Whenever an extension may be required, the original design will doubtless undergo revision and be considerably modified.
2098. Was there one plan, or more than one, proposed originally? There were two plans.
2099. What was the estimate for the first plan? I think it was about £70,000.
2100. The Senate preferred the plan which was estimated to cost ultimately £140,000? Yes.
2101. Was the Senate of opinion that the building, which was estimated to cost £70,000, would be insufficient for the purposes of the University? I think the impression was that the rooms were smaller than it was desirable to provide, with reference to probable future requirements, and also to the climate, and that the hall was not capacious enough; but the principal objection was to the elevation, which was not of a character befitting the commencement of a building intended to last for ages, and to receive the additions which the increasing requirements of succeeding generations will demand.
2102. Was it considered very desirable to have a superior sort of building? Yes; the idea was that a design should be adopted, which might be carried out by degrees by succeeding generations.
2103. Was that the unanimous opinion of the Senate? Yes, that principle was unanimously assented to.
2104. What good results did they expect to derive from that superior sort of building? It was considered that if a paltry building were commenced the money would probably be ultimately thrown away; that instead of merely adding to our work posterity would have to undo it, and begin afresh.
2105. Are you not aware that in some parts of the world, where there are distinguished Universities, there are no buildings at all? I am.
2106. Was that fact taken into consideration by the Senate? I do not think it was. I think the Senate was rather disposed to follow the example of those Universities the fine buildings of which are objects of universal interest.
2107. Do you think the fineness of a building conduces much to the learning which distinguishes the persons connected with it? I think it has a very important influence upon the minds of the students. That fine buildings have a powerful effect upon the mind and feelings is an unquestionable fact, and in proof of the attraction which they possess it is only necessary to refer to the fact that they are the first objects sought by strangers who visit the great cities of Europe.
2108. Do you think there is any necessary connection between great architectural display and great success in teaching moral philosophy, greek, latin, and natural philosophy? I do not say that it has any effect upon the teaching, but it has a beneficial effect upon the minds of those who are taught, and thus contributes to the successful result of the teaching. It elevates the students' feelings, and prepares their minds for the due appreciation and reception of the knowledge to which the walls are dedicated, and tends to create that attachment to the place of their studies which is so strongly felt by those educated in the great seminaries of learning in England, and the beneficial influence of which last long beyond the years of pupilage.
2109. The estimated expense of that part of the building which you have in hand was £72,000? Yes.
2110. Is that part of the building completed? It comprises the entire front of the building, and the unfinished portion will be roofed in probably in the course of the present month.
2111. How much money has been expended upon it up to the present time? About £71,000.
2112. How much more will be required to complete it? The Senate have now at their disposal about £2,000 more, which will roof in the building, but will leave unfinished the interior of the rooms in that part of the building last undertaken. It was not expected that these rooms would be required for some time to come, but it will now be necessary to complete some of them in order to provide room for the large and valuable collection of Egyptian, Etruscan, and Roman antiquities which was made by Sir Charles Nicholson during his

The Hon.
F. L. S. Merewether, Esq.,
B.A., M.L.C.

3 Feb., 1860.

The Hon. his recent tour, and which he has munificently offered to the University, upon condition of suitable provision being made for its reception, safe custody, and exhibition under proper regulations.

F. L. S. Mewether, Esq.,
B.A., M.L.C.
3 Feb., 1860.

2113. Is there any estimate of the additional expense which will be required? I think the architect's estimate was about £2,600. The estimate I am speaking of is one given to the Senate of the amount it would cost to complete the interior of the portion of the building now unfinished.

2114. I think the architect's estimate was something like £10,000? I have not gone into the estimate submitted to the Committee by the architect; but, as his evidence was given in September last, it must include the amount expended (about £2,000) between that date and the present time. It also includes the further work now in progress, which the Senate have funds in hands to meet, about £2,000 as before stated. I consider that for the £10,000, we ought to be able perfectly to complete the present building, with the approaches, and the laying out of the terrace in front. But I was speaking not with reference to the whole work, but to the estimates which the architect has furnished to the Senate of the cost of completing the internal fittings, &c., of the rooms in that portion of the building which is not roofed in. On looking to the estimate in the appendix to Mr. Blacket's estimates, I see that the work in the tower and adjoining compartments, not yet contracted for, is estimated at £4,750. I conclude that this sum is taken from the original estimate made when the plan was submitted, and if so, there will be a considerable saving upon it, as the work has been recently estimated by the architect at about £3,000.

2115. Then the expenditure on that portion of the building which you have in hand, will exceed the estimate by about £10,000? What is the estimate referred to?

2116. You mentioned just now that the estimated cost of the part you have in hand was £72,000? The Senate having £4,000 as just stated, out of the £10,000, the excess is only £6,000, and that would make provision for items not included in the estimate of £72,000.

2117. The remaining portion of the building, according to the plan, will not be proceeded with at present? No.

2118. Did you intend, when you commenced the building, to leave that portion out? It was always intended to leave a certain portion out.

2119. To be proceeded with in after times? Yes.

2120. Have the expectations formed by yourself and the Senate, with regard to the usefulness of the institution at first, been realised? On that point I am scarcely prepared to give an answer on the part of the Senate; but my own expectations have been fully realised. I think quite as much has been done as could have been expected under the circumstances of the Colony.

2121. Have your expectations with regard to the number of students been met? Yes.

2122. How many have been educated there? There are now 10 Masters of Arts, and 23 Bachelors of Arts, and the number of under-graduates attending lectures last year was 24, besides 14 attendants on the law lectures.

2123. *By Mr. Cape*: Non-matriculated students? Yes.

2124. *By the Chairman*: That is altogether 57? Yes, not including either non-matriculated students or students who matriculated but did not complete the full course of study; of these latter there have been about 37.

2125. Has the course of examination been very strict at the University? Yes, I believe it has been so.

2126. From the first? Yes.

2127. I have heard it commonly remarked that it is much more strict now than it was originally? No material change has taken place as far as I am aware.

2128. Then you think that the University, as a great educational institution, has realised all that was to be expected from it? It has realised all that I expected from it up to the present time. I was not so sanguine as many people were as to the number of students it would attract during the first years of its existence. I did not anticipate that the numbers could be large, looking to the state of education in the Colony, and to the great inducements there are for young men to go at once into active life. I think the proportion of students to the population of the Colony will not be found very much below the proportion of those who go to Universities in England to the population, notwithstanding the vast inducements which exist there.

2129. What has been the average number of students that have matriculated every year? About thirteen, including those mentioned above, who did not complete the full course of studies. I may mention that this year the number of under-graduates entered is likely to be large—not less than twenty.

2130. You have gone through the evidence which has been laid before this Committee? I have.

2131. And at the request of the Senate you appear here to give some explanations upon it? Yes, in pursuance of the invitation of the Committee; and, in doing so, I should wish to give expression to the sense the Senate entertain of the courtesy of the Committee in forwarding the evidence for their perusal.

2132. Perhaps, having gone through the evidence, and being deputed by the Senate to give explanations upon it, you would be good enough to make any statement you think it advisable to offer on any of the points stated in it? It does not appear to me that there is much in the evidence calling for notice. The two main questions seem to have been the building and the studies. As regards the building there may be differences of opinion as there are differences of taste. The Senate are perfectly satisfied that they have done right in the course which they have taken. As respects the studies the evidence seems fully to confirm the wisdom of the course adopted in the by-laws of the Senate. Those regulations cannot be fully

fully acted up to at the present time, for want of funds wherewith to provide additional professors; but when the course of instruction is made complete, according to the terms of the by-law, I think, as far as I understand the evidence which has been given, that it will satisfy what the witnesses concur in considering to be the most desirable course of University education.

The Hon.
F. L. S. Merewether, Esq.,
B.A., M.L.C.

3 Feb., 1860.

2133. Then I understand you to say you have no particular observations to offer in reference to the evidence which has been adduced? There are a few points on which I wish to make observation, as I am here, and requested to do so.
2134. We were under the impression that the Senate had requested you, as well as the Provost, to appear before the Committee, in order to give some explanations on points adverted to in the evidence? Yes, I am here prepared to answer any questions which may be put.
2135. *By Mr. Cape:* Have you any observation to make with respect to the registrar's evidence? There does not appear to me to be anything in the registrar's evidence which calls for special comment,—the erroneous impression which his answer respecting the extent of the immediate liability incurred on account of the building having been corrected by the Provost. I observe that the decision as to questions of considerable importance may depend upon the views the Committee take as to the rate at which Masters of Arts are likely to be created; I therefore wish to correct an erroneous impression under which the Committee appear to have fallen, that, as only ten Masters of Arts have been created in the first seven years of the University's existence, ten in seven years may be assumed to be the rate of increase to be expected from a number of students equal to that which we have had up to the present time; of course, at that rate, the time that would be occupied in arriving at 100 would be very great. But, the fact is that, for the purpose of calculation as to the future, they are not to be regarded as the product of seven years, but of two years; for no Masters of Arts could be created during the first five years of the existence of the University—the course required for the attainment of that degree being five years. The first five years being, accordingly, struck out, the rate hitherto has been five a year.
2136. *By the Chairman:* That is one of the points, then, to which you wish to direct the attention of the Committee? Yes. There is also an impression that there has been a continuous diminution in the number of students in the University, but that is quite inconsistent with the figures given by the registrar. The numbers have fluctuated, but not continuously decreased. One of the largest years was 1857.
2137. How many were there in 1857? Nineteen.
2138. In 1858 how many were there? Seven.
2139. In 1859? Seven.
2140. In 1852? Twenty-four. That was the first year, when a large number might naturally be expected. In the following year there were eleven, and in the year following that only four, and after that is an increase again.
2141. Do you think it desirable that the law should remain unaltered in regard to the election of members of the Senate? I do not think it would be desirable to defer the right of the graduates to elect the Fellows of the Senate until they attain the number of one hundred, as provided by the Act of Incorporation; but I consider some of the numbers proposed in the evidence too small, for instance, twenty. The present constitution of the University I conceive to be one which will not be permanent. The provisions of the Act of Incorporation are taken chiefly from the Charter of the University of London, and are not suitable to the ultimate requirements of our University. They appear to work satisfactorily enough for present purposes; but, ultimately, I think, not only the power of electing the Senate, but the power of making laws also should be vested in the graduates.
2142. Under the present arrangement, upon what principle does the Senate elect its own members? The object is to select those members of the community who may be expected to exercise the most influence, and be most useful in their position, as members of the Senate.
2143. Most influence in what way? Most influence upon the public mind, so as to give confidence as to the proceedings of the body.
2144. As men of learning? Partly as men of learning, and partly as men of sound judgment, who have acquired a high standing in the community.
2145. Then if a very wealthy merchant had acquired a certain standing in the community by reason of his wealth, would he be elected on that account? I should not consider mere wealth a qualification at all.
2146. Is the Senate remarkable for containing within itself men of letters or men of science? I think the Senate may be considered to contain a large proportion of such men. Many of the members are men of learning, and all of them are men qualified to be useful in the position in which they are placed. We do not regard high learning as an essential requisite in the election of a member. Such learning is essential in the professors; but on the Senate we want shrewd men of business—men of matured judgment and prudence, as well as men of learning.
2147. Is the shrewdness of a man, as a man of business, one of the qualifications that is deemed necessary in the election of members of the Senate? I consider that qualifications for the transaction of business are amongst those which should be looked for.
2148. Is the social position of the individual chosen regarded as a matter of material importance? I consider social position to form an important element in the qualifications to be looked for.
2149. Is it regarded as of more importance than the character the individual may bear, and the reputation he may have as a man of letters? I do not consider that on the Senate, as now constituted, we should look to men of letters only. A body composed exclusively of mere men of letters might, perhaps, not be competent to manage the business of the

- The Hon. F. L. S. Meredith, Esq., B.A., M.L.C.
- 3-Feb., 1860.
- University as prudently as one selected with reference to business as well as literary qualifications.
2150. On the occasion of electing members of the Senate, have you a general meeting of the Senate? Yes.
2151. How is the election proceeded with? By vote, in the usual way—nomination seconded.
2152. Is the Senate now a responsible body—is it responsible to any party in the State? Yes, it is responsible to the Visitor.
2153. Who is the Visitor? The Visitor is the Governor of the Colony, who can at any time proceed, as has been done in England of late, to appoint a Commission to inquire into the affairs of the University, and the way in which the intentions of the founders of the institution, as pointed out in the Statute, have been carried out, and to correct all abuses.
2154. Under what authority has the Governor that power? It is inherent in the office of Visitor, which is conferred by Statute on the Governor.
2155. According to a clause in the Act incorporating the University? Yes.
2156. Does that clause give him any particular powers such as you mention? It gives him no particular powers; but in the office of Visitor certain powers are inherent by the common law, which have been recognized by decisions of the Superior Courts in England.
2157. Then it is a mere matter of common law? I believe the Visitors of such corporations derive their powers from the common law.
2158. Then the only responsibility under which the Senate of the University is is of this character, that you think the Governor General, as Visitor, by the common law has the right of directing a Commission to inquire? Yes, and to correct and punish.
2159. And this body, that is only responsible in this way, has the power of renovating itself, and this power is exclusively confined to itself? Yes, for a certain period.
2160. Thus a Senate whose responsibility is of this character has the exclusive power of electing its own members? Yes.
2161. Do you think it is desirable that should continue? I do not think it desirable it should continue permanently; but as this mode of election has been established, I see nothing so faulty in it as to render a change advisable until the ultimately contemplated mode of election by the graduates is brought into operation. The number of graduates on whom the power of election will be conferred might be reduced to perhaps half what is now required.
2162. If the number should remain as contemplated by the Act incorporating the University, one hundred years may pass before there are one hundred graduates? No, that is an erroneous impression which I have already endeavored to remove from the minds of the Committee. Taking the present rate, it would be a period of twenty years from the commencement of the creation of Masters of Arts, or eighteen years from the present time.
2163. Assuming that it would be twenty years—is it desirable that the form of election which obtains at present should be continued for that period? No, I think not. I should be disposed to reduce the number to one-half.
2164. This Senate so constituted, and so possessing the right of electing its own members, and under responsibility merely in the way pointed out, has also the control of an immense expenditure? It has had the control of the parliamentary building grants, amounting to £60,000, and has the control of the annual State endowment of £5,000, with the fees and private endowment funds.
2165. To whom is it responsible at all for that expenditure? To Parliament.
2166. Are any returns of the expenditure made to the Auditor General's office, or to any other office of the Government? Accounts are rendered periodically under the Statute to the Colonial Secretary's office.
2167. Are the accounts audited at all by the Government? I am not aware that they are.
2168. They are furnished to the Government then merely by way of information? They are placed in the hands of the Government to do what they please with them.
2169. They are sent in to the Colonial Secretary's office just in the way that Bank returns are sent in? Not at all. The thirteenth clause of the Act of Incorporation contains the following provision:—"That a full account of the whole income and expenditure of the said University shall, once in every year, be transmitted to the Colonial Secretary, for the purpose of being submitted to the Legislative Council or Assembly of the said Colony, as the case may be, and subjected to such examination and audit as the said Legislative Council or Assembly may direct."
2170. Then the accounts are not subjected to any other audit unless under the direction of the Legislative Assembly? The Act does not expressly prescribe a Government audit, and I am not aware that there has been any.
2171. *By Mr. Jones*: Except in regard to the building fund? For the building fund provision is made, that accounts in detail of the expenditure shall be laid before the Assembly, and shall be subject to examination and audit in the same manner as all other accounts of expenditure chargeable on the general revenue of the colony.
2172. *By the Chairman*: Here is an abstract, which has been furnished to this Committee, of the expenditure of the University (*handing the same*)—? I have not seen this before.
2173. Have these items, or any of them, come under your observation as Vice-Provost? The items appear to be the totals of expenditure under different heads of account since the commencement of the University, as shewn in the books. Payments are all made by cheques signed by two members of the Senate, and countersigned by the registrar who issues them, in pursuance of warrants passed and signed by two members of the Senate at duly convened meetings.
2174. Could you suggest any improvement at all in the present system in regard to the expenditure of funds at the disposal of the Senate? As to the mode of accounting for them?
- 2175.

2175. Yes? I do not think anything can be more satisfactory than the mode laid down. Here is full power given to the Assembly to direct an examination and audit. There is an audit made by two members of the Senate within the University, and there is provision in the Act for further examination and audit, under authority of the House of Assembly; and I presume the Auditor General might be instructed to examine the accounts on behalf of the Legislature.
- The Hon. F. L. S. Mervether, Esq., B.A., M.L.C.
3 Feb., 1860.
2176. That is by vote of the House? Yes.
2177. But, as a general rule, is it not desirable that wherever public money is spent there should be strict inquiry into its appropriation? Yes.
2178. And this, at all events, is a circuitous mode which is provided at present—the Governor General has to be put in motion, Parliament has to be put in motion, and it is only thus the Auditor General can be put in motion? The matter can be very simply remedied by an instruction to the Auditor General to examine the accounts.
2179. You are of opinion, at all events, that some change should be made in the mode of electing members of the Senate? I think so, prospectively.
2180. You do not think it advisable then that any change should be made immediately? I would reduce the number of graduates to fifty, and leave the present plan in operation until there are fifty.
2181. Do you think it would be desirable to have the professors on the Senate? I think it would be desirable. Looking at the matter prospectively, I should prefer that the Supreme Council or Board of Management of the University should be constituted very much as the Boards are now constituted at Cambridge and Oxford—a certain number of *ex officio* members, a certain number of graduates, a certain number of the heads of houses, and a certain number of the professors.
2182. You think it would be an improvement to have the professors members of the Senate? Yes, a certain number of the professors.
2183. Do you think it advisable that a change of that character should be carried out immediately? I see no objection to making a certain number of the professors *ex officio* members of the Senate. At present the number of professors is three, and this would not be too large a number to put on the Board of Management.
2184. You are of opinion that the University has fully realised all reasonable expectations up to the present time? That is my own opinion.
2185. It has realised all your own expectations? Yes.
2186. It has been stated that some objections are entertained in the public mind in certain quarters to some of the professors in the University—have you any reason to believe that is the case? It is very hard to say what the public mind is.
2187. Do you think the present professors of the University are gentlemen well qualified to command the confidence of the public in all respects? Yes, undoubtedly; they are eminently learned men—men of very high distinction and qualifications.
2188. I have not put this question in consequence of any doubts I have myself upon the subject—from what I know of them I have the fullest confidence in these gentlemen, and the highest opinion of their qualifications—but I deemed it my duty to put the question, and the answer you have given is the result of your knowledge of these gentlemen since the University was formed? It is.
2189. *By Mr. Jones*: Without reference to the question whether they enjoy the public confidence or not, you can say that they are well qualified for the positions they hold, and efficiently discharge their duties? Yes, I say so distinctly. Their qualifications are beyond question. The first object of the Senate was to have gentlemen selected for these offices whose qualifications should be undoubted, because it was of great importance that they should be men who could not but be looked up to as authorities, and whose opinions must be received with deference. In that respect the professors have fully answered the wishes of the Senate; and to their assiduity in the performance of their duties I can bear the fullest testimony. Whilst the Provost was absent, it was my duty to be at the University for various purposes nearly every day, and therefore I can speak from my own personal observation.
2190. Can you say whether the members of the Senate generally share in your opinions and feelings with regard to the professors? Yes, I can. I infer from the evidence that there is an impression that there is some want of cordiality between the Senate and the professors, but I can say certainly for myself, and judging by my experience, for the Senate, that there is nothing of the sort. The opinions of the professors are received with the utmost deference, and have been almost invariably acted upon.
2191. *By Mr. Plunkett*: Will you state how and by whom the professors were selected in England? The professors were selected by Sir John Herschell, Professor Airey, Professor Malden, and Mr. Henry Denison, from sixty-three candidates, of whom it was reported to the Senate by Sir John Herschell, that "many in each department produced testimonials "indicating qualifications of a very high order as to their proficiency in their several "branches of knowledge, their college distinctions, and their general character and competency from ascertained experience in the duties of instruction."
2192. Has anything occurred to give rise to the idea, or have you any reason to believe, that the Senate have not been perfectly satisfied, by experience of the professors since they have arrived, that the selection made by those eminent men was judicious? I believe the Senate are perfectly satisfied. Of course, on individual questions there may be differences of opinion, as there must be everywhere, and there have been differences of opinion in some few cases between the professors and the Senate, but nothing whatever to interrupt the cordiality of the connection between them.
2193. *By the Chairman*: Then, do you think it would be an advantage to the institution to have

The Hon.
F. L. S. Mcre-
wether, Esq.,
B.A., M.L.C.

3 Feb., 1860.

have these gentlemen on the Senate at present? I do; I think it would be desirable to have the three professors on the Senate, not as elected, but as *ex officio* members; or we might have one of the three or two of the three selected by themselves.

2194. *By Mr Plunkett:* Will you refer to page 50 of the printed evidence, question 914, where Mr. Windeyer is asked, "You think the professors have not been satisfied?" and his answer is, "I think the professors have not been treated with that deference which, as men of education and high standing, they are entitled to." Now, do you think that is a correct opinion, or has anything occurred between the Senate and the professors to justify it? It is entirely contrary to my own experience. The professors, as far as my observation has gone, have been treated with the utmost deference, and I am not aware that they themselves have any other feeling but that they have received the fullest consideration from the Senate throughout.

2195. And you take it on yourself to say that it has been the unanimous feeling of the Senate, from the first arrival of the professors till the present time, to treat them with the utmost respect and deference? Yes, certainly. In connection with that subject, I will refer to one or two passages in a letter from Dr. Woolley to Dr. Smith, appended to the evidence of the latter gentleman (page 98), which contain inaccuracies which I think it desirable to set right, because they may leave the impression that, in the few instances brought forward, the professors have not been treated with proper consideration. From the style of the letter I assume that it was not intended to be made public; and that may account, perhaps, for the inaccuracies which appear in it. First, it is stated in the letter that "the professors were originally members of the Building Committee; that a new committee was formed, in which their names were not included; and that that committee accepted the present plan." Now, from that statement, it might be inferred that the committee on which the professors were stated to have been had made a report, that that report had not been adopted, and that a new committee had been appointed, from which the professors were unceremoniously excluded, who upset their views. The facts of the case are these. The professors were not in strictness members of the first committee at all. A committee was appointed, consisting of the Provost, Bishop Davis, Mr. Wentworth, and myself, with the power of "associating the professors for the purpose of consultation." Accordingly the professors were consulted, and a report was drawn up stating the requirements which would have to be met in the new building, the number and size of rooms, and other particulars. The report went before the Senate, and the business of that committee was completed. The report was considered, and instructions were given to the architect to prepare a ground plan and elevation. The elevation, as I have stated before, was objected to, and the architect was instructed to prepare a new plan with a different elevation, but following generally the same arrangements as to the rooms in the building. All this was done in the Senate and by the Senate; no further committee was appointed at that time. The first elevation could not have been before the first committee at all, because the plan was framed upon the report of that committee, under the instructions of the Senate itself. The second building committee was appointed for a totally different purpose; it was appointed after the plan had been settled, for the purpose of communicating with the architect and carrying out all the details. It will thus be seen that the statement here is not correct, and that the professors were not put off the committee, and their views unceremoniously disregarded, as is stated or may be inferred. The next matter referred to in this letter is a communication respecting the religious certificate. The letter of the professors to the Senate is given here, but not the answer of the Senate; and I think it may be desirable that that should be put in to the Committee, in order that they may see the terms in which the professors were addressed. (*The witness handed in the same. Vide Appendix A.*) It will be seen from this letter, that the statements in the evidence, made by some of the professors, that they made strong remonstrances against this religious certificate at the time when it received the Senate's assent, are incorrect. The only representation made by them on this subject, was the letter of November, 1857, received shortly before the introduction of the Bill repealing the certificate. There is another statement made in paragraph No. 4:—"Much difficulty has been and is experienced in procuring *text books*. The professors have repeatedly urged the expediency of importing a supply from England, as is done by the Grammar School; they believe that the difficulty is insurmountable by any other method." That may be an expedient course, or it may not; but as a matter of fact, the professors have made no such applications to the Senate upon the subject. I mention this, not with the mere view of pointing out inaccuracies, but of removing the impression which they might convey in support of the opinion expressed by some witnesses, in the course of the evidence, that the recommendations of the professors have not received the consideration due to them.

2196. As to the residences of the professors, there is some complaint made; could you state how that matter stands—they came out with the guarantee that residences should be provided? To a certain extent they did come out with that guarantee. At that time it was intended to have a college, in connection with the University, of which they would have had the superintendence; and, of course, it would have been then almost necessary that they should reside on the spot. But it is scarcely correct to say, as is stated in Professor Woolley's evidence, that they would be provided with residences connected with the building, was "strongly insisted upon in the letters sent to England;" because all I can find on this subject is this, that after stating what the salaries would be, there is an undertaking to give an additional allowance to each of the professors of £100 a year until proper residences can be provided for them. It was thus intimated that there was an intention to provide residences for them, but there was not such an express stipulation to that effect as is stated in some of the evidence. The house allowance

ance at an increased rate was made to the professors, and they also received an addition to their salaries of £325 a year each, in consideration of the great increase that had taken place in the cost of living; these augmented allowances and salaries have been maintained up to the present time.

The Hon. F. L. S. Meredith, Esq., B.A., M.L.C.

2197. *By the Chairman:* Have any of the professors objected to live in the building? Professor Pell and Professor Smith, I think, have a strong objection to living in the building; Professor Woolley may be favorable to it; but they all wish to have a considerable space of land attached to their houses, and that, of course, implies that the residences should be detached.

3 Feb., 1860.

2198. *By Dr. Lang:* Is it your opinion that, considering the population and resources of the Colony generally, and the number of students that were to be anticipated for such an institution as the Sydney University, it was warrantable to incur so large an expenditure, in the first instance, in the erection of buildings? I do; I consider that the Senate, to whom the matter was entrusted, would have done exceedingly wrong if they had acted otherwise; that they would have been guilty of false economy and a want of proper foresight.

2199. Do you not consider that it would have been of importance for the moral welfare of the students at the University, that there should have been residences provided for the professors from the very first? I do not think it would have made much difference as to moral influence upon the students up to the present time, because they are not resident; they merely come to the building to attend the lectures; but I nevertheless am of opinion that it will be desirable that residences on the University grounds should be provided for the professors, with reference more to their duties as proctors than as professors. They have powers given them as proctors, under one of the by-laws of the Senate; and it will be advantageous that one or more of them should be upon the premises to prevent irregularities which might otherwise occur as the number of students increases.

2200. What is the duty of the Professorial Board as distinct from the Senate—is it the cognizance of all matters connected with the internal management of the institution and the discipline of the students? There are two Boards for these objects—the Professorial Board, which may be called the Board of Studies, and the Proctorial Board, that of discipline; both these Boards consist of the same members—the Provost, the Vice-Provost, and the three Professors.

2201. You have stated, that you think it desirable that the professors of the University, either all together or a portion of them representing the rest, should be members of the Senate? I have not stated that all the professors, whatever may be their number hereafter, should be members of the Senate, but that a certain number of them should.

2202. Do you think the future constitution of the Senate, as contemplated by the Act, is a right one—that the governing body should consist of the first hundred, or the first fifty graduates of the University—do you think that is likely to constitute a proper governing body in future for the management of the University? Under the existing Act the Masters of Arts will have no power to govern whatever; they will not be the governing body; they will merely elect a body to govern; their powers are limited to the election of the Senate, in whom the whole government of the University will rest.

2203. Do you not think it desirable to have the Senate constituted of various materials, so to speak, of persons representing different portions of the body politic? I have a very strong opinion that it would be undesirable to have upon the Senate, or governing body, any persons not connected with the University; but as I have stated before, I think the most desirable constitution of the actual governing body would be much such a constitution as has been adopted at Cambridge and Oxford, consisting of professors, heads of houses, and persons elected from their own body by the graduates, and that ultimately the graduates collectively should form a constituent part of the legislative body.

2204. Supposing there were either fifty or a hundred Masters of Arts created by the University, is it not reasonable to be supposed they would be scattered in all directions over this vast territory, and would not be available as an electoral body for the constitution of the Senate? No doubt the elections would in most cases devolve upon those who were resident at the University or in the immediate neighborhood; but on some occasions, when there was keen competition, Masters of Arts might come from distant parts of the country to vote.

2205. Do you not think it desirable there should be some representation of the Legislature of the Colony in the Senate—say part of its body? Not as members of the Legislature. I think the University should be an entirely independent body; and that to its own members exclusively should be entrusted the selection of its governing body.

2206. Do you not think it would be desirable, in order to maintain an intimate connection between the University and the Colleges to be connected with it, that the heads of those Colleges respectively should be members of the Senate? I have expressed that opinion before. There would be no objection, perhaps, to having as many as four heads of Colleges in the governing body; but if the number of Colleges increases beyond that, there should, I think, be a selection made from them. The number of professors should not be less than that of heads of houses in the governing body.

2207. You are not opposed to the principle, that the head of any one of the Colleges in existence, or to be brought into existence in connection with the University, should be *ex officio* a member of the Senate? No; I think it desirable that heads of Colleges within the University should be upon the Board.

2208. Was it a matter of consideration with the Senate, in the first instance, when fixing upon the present site of the buildings, whether it would not have been desirable to have a situation for the University buildings that would have rendered them more accessible for lectures to unmatriculated students residing throughout the city? The fact was, that the Senate took the only land that was to be had. But the University is at present easily accessible

The Hon.
F. L. S. Mexe-
wether, Esq.,
B.A., M.L.C.

3 Feb., 1860.

accessible from the more thickly populated parts of the city, and will probably be ultimately in a central situation.

2209. Supposing there were a series of popular lectures delivered, on any subjects that would interest the community generally, in the evening, for example—do you think the present site of the University would be easily accessible to young men in business, or in offices in the city? I am rather doubtful whether it is desirable to have lectures of that class in the University at all. If given by the professors, I think they should be delivered at the School of Arts, or other places of that character. The University is scarcely a place for popular lectures; it is rather a place for severe study.

2210. *By Mr. Cape:* In the early calendars, you were in the habit of publishing the papers of questions at the matriculation examinations; but it has been discontinued—is it not an advantage in this young country, to have the matriculation papers of the University before the public—is it not a stimulus to the schools? I do not remember at this moment the reason for the omission; but I think some reason was assigned by the professors for the alteration.

2211. What may be your opinion? My opinion is generally that here all the examination papers should be laid before the public. But I do not think that any other than honor examination papers are published in the calendars in England.

2212. What is your opinion as to their influence upon the schools? They are a guide to the schoolmaster, shewing as they do the character of the examination; and as one of the great benefits looked for from the University is the influence it is expected to exercise on the course of studies in the schools, I think they might be published with advantage.

2213. Would you think it derogatory to the character of the Sydney University to have the paper of questions include references to English grammar, as well as to history and geography? A knowledge of the English language must be shewn to a certain extent by the translations and answers to the examination papers.

2214. There are some questions on these subjects asked at Melbourne, and also in the Civil Service examination papers? Modern history forms a portion of our examinations for degrees and scholarships. I am not aware whether any questions upon modern history have been inserted in the examination papers for matriculation; but I see no objection to it.

2215. I believe it is known that seventeen students have already entered this year? Yes, I understand there are likely to be upwards of twenty.

2216. Are you beginning to think of another professor—you have only three, while there are four at Melbourne? We have been thinking of it for a long time; but we have no funds to pay for an additional professor. The annual endowment of the Melbourne University is nearly twice as large as ours.

2217. Was it a matter of choice with the Senate to build, or were they merely carrying out the instructions of the Legislature—did they commence their arrangements for building before the endowment? We did not commence building until this special fund was granted to the Senate, and we were obliged to hurry it on more than was desirable in order that we might be able to give up the old Sydney College Buildings to the Grammar School.

2218. At the time you commenced building I believe there was a rage for public buildings, many large buildings being in course of erection at the time, which rather affected the market for labor? The rate of wages was very high at the time.

2219. *By Mr. Plunkett:* As to the responsibility of the Senate—you have pointed out that the Senate is responsible to the Governor as Visitor? Yes.

2220. You know that the powers of a Visitor are very large? Very large indeed. I believe they are totally undefined, and there was a case in the Court of Queen's Bench arising out of the removal of a head of a college, in which the Three Puisne Judges held that the decision of the Visitor could be subjected to revision by the common law courts; but Chief Justice Holt took the contrary view, and his opinion was confirmed on appeal to the House of Lords.

2221. At all events, they are undefined by law? My impression is that they rest on the common law, and are very large and undefined.

2222. Have you any doubt that the same powers which exist in Visitors in England are by the Act invested in the Visitor here? I conceive there can be no doubt on the subject. There are no limitations in the local Act appointing the Visitor, and therefore we must go back to the law of England to ascertain what his powers are.

2223. As to the accounts—you have pointed out that they are to be laid before the Governor and Executive Council, and before the House of Assembly—? I do not think they are laid before the Governor and Executive Council; but they are transmitted for the purpose of their being laid before the Legislative Assembly.

2224. You see that by the fifteenth section of the Act all the by-laws are to be submitted to the Governor and Executive Council for approval? Yes.

2225. And that, by the twenty-first section, the by-laws, regulations, &c., after being approved by the Governor and Executive Council, are to be laid before the Legislative Assembly of the Colony? Yes.

2226. What greater check is it possible to have over an institution of this kind than these? Are you aware what the checks are in respect to the London University, which I understood you to say was the model on which the Sydney University was founded? I think they are of precisely the same character. The by-laws have to be submitted to the Secretary of State and laid before Parliament, and I think the Crown is Visitor. It appears to me that there can be no greater security. No law can be passed which is not approved by the Governor and Executive Council, and which may not form the subject of discussion afterwards in Parliament, which of course might lead to its repeal; and the Governor has power of his own motion, or set in motion by the Legislature, to take the necessary steps to see that the rules are carried out.

2227.

2227. Respecting the library, some of the witnesses have complained that the undergraduates have not had sufficient access to the books, and I perceive that one witness, unconnected with the University, the Rev. F. Armitage, also makes a complaint in this way—"We are not even allowed to use the books belonging to the library, so that lately when I wanted a philological work, I had to wait nine months and send to Germany for it, while it was lying dusty on the shelves of the University library all the time?" As respects the first statement, I think it is made by a member of the University, and certainly he must have been mistaken as to any cause of complaint existing in his time, because the library was then open almost to the world at large. It was in the hall of the Sydney College, a place where proper restraint could not be imposed. Everybody admitted into the building could have access to it, and some few books were I believe lost in consequence. Rules have been laid down under which the undergraduates have the use of the books of the library upon conditions similar to those in force at the University of Cambridge, upon the model of which the rules have been principally framed. I can supply a copy of them. (*The witness handed in the same. Vide Appendix B.*) With respect to such persons as Mr. Armitage, they may with very little trouble get the use of the books. The arrangements of the library are hardly completed, because we were obliged to go into the new building before it was sufficiently finished for occupation, in order to make way for the Sydney Grammar School; but there is a rule laid down by the Senate that persons unconnected with the University may be admitted to its privileges, amongst which is the use of the library; and if Mr. Armitage had made inquiry he would have found no difficulty in his being admitted to those privileges.

The Hon.
F. L. S. Mervether, Esq.,
B.A., M.L.C.
3 Feb., 1860.

2228. Will you state what steps should be taken to obtain those privileges? He should make an application to the registrar. I noticed a statement made by Mr. Macleay with reference to the classification in examinations. This statement has reference to the advantage—no doubt a great advantage—of the superior competition which there is in English Universities. It said, with reference to our University, that among three or four young men classed, the first may be of distinguished acquirements, while the second may be far behind. Now, that is not the case; they are classed according to marks, and if they do not reach a certain number of marks they fall into a lower class; so that, in that respect, there is not the slightest difference between the relative positions of classmen in the Sydney University and those in the English Universities. The competition is not, of course, so large; but, in this respect, the case is rather overstated by Mr. Macleay, when he says, that in the English Universities there are five or six hundred men associated for examination, and forming a regular gradation of intellect and ability. Now, that is not an accurate statement of the case. In Oxford or Cambridge probably four hundred out of the five hundred will not be what are called "reading men;" so that the competition for distinction is in fact limited to about one hundred.

2229. *By Mr. Cape:* One fact appears in the evidence, namely, that the income from fees is becoming considerable, the gross amount having already reached £4,779; so that with the increase of students there will, probably, be such an increase of revenue as will enable you to provide additional professors? The professors have a proportion of the fees; and, of course, if the fees increased very much in amount, we might take off the whole or a proportion of the £320 a year, which we have added to their salaries. The professors receive three-fourths of the fees, the remaining fourth going to the funds of the University.

2230. *By Mr. Plunkett:* You have said that it is expected that twenty students will matriculate next year? Yes.

2231. Where do they come from? Some from the Sydney Grammar School, six or seven from Lyndhurst, and some from Mr. Savigny's school.

2232. Do you contemplate that many Affiliated Colleges will be established under the University? That is Colleges within the University—such as those now established—in close connection with the University, under the Colleges Act?

2233. I mean Affiliated Colleges such as those that are extensively established in connection with the London University all through England—have you contemplated the establishment of any such Colleges as those? I have not heard of any movement in that direction at present. I think it would be more desirable, for the present, that young men from the country should come to the Colleges in the Sydney University.

2234. Is it not open to you to have Affiliated Colleges in different parts of the country in connection with the University here, in the same way as in distant places in England they are in connection with the London University? Yes; it is quite competent to the Senate to affiliate such Colleges, if established. The London University admit to examination those who have passed through a course of study at Colleges approved by them; and there is an express provision in our Statute of Incorporation authorizing the adoption of a similar course.

2235. If the heads of such Colleges were to be *ex officio* members of the Senate, the number might become inconveniently large? I did not contemplate their addition to the governing body at all; I would only extend that privilege to the heads of those Colleges which may be termed Colleges within the University.

2236. Sectarian Colleges? Colleges founded under the Act of 1854. And I mentioned, in giving the answer referred to, that it would not be desirable to have more than a certain number of heads of Colleges on the Senate, and therefore that, in the event of an increase of Colleges, a specified number only should be admitted, either by election amongst themselves, or by periodical successions according to a fixed cycle.

2237. Considering that these sectarian Colleges were established for the purpose of supplying religious instruction to the public, what advantage would be gained by having the heads of such Colleges *ex officio* members of the Senate? I do not admit that these Colleges are established exclusively for imparting religious instruction. They have other important objects;

The Hon.
F. L. S. Merewether, Esq.,
B.A., M.L.C.

3 Feb., 1860.

objects; they are boarding-houses for students, where they are submitted to proper discipline, and they also supply the tutorial instruction, and thus form a tutorial system subordinate to a professorial, which Sir William Hamilton calls the *beau ideal* of a University.

2238. *By the Chairman*: Is it necessary for students coming from these Affiliated Colleges to produce any certificate? No, it is not.

2239. Have you any further explanations to offer respecting the evidence? No.

2240. *By Mr. Cape*: You have extended the number of examiners, have you not. They were merely the professors originally, but now you have extended them to graduates of British Universities? Yes; we have now one graduate of a British University for each branch of study, associated with the three professors.

APPENDIX A.

(*Copy of Letter to Professors from Senate.*)

27 November, 1857.

Gentlemen,

I am instructed by the Senate to inform you that they have maturely considered your letter of the 4th instant, on the subject of the law which requires candidates for Honors and Degrees in the University to produce certificates of competent religious attainment.

Before entering upon the questions raised in your letter, the Senate felt it necessary to notice your introductory statement that, to the enactment referred to, you had "from the first proposal offered strenuous and consistent opposition, and that you have not for the past two years renewed your protest, because there seemed reason to hope that the law would be suffered to grow obsolete." Such opinions as those to which you refer may have been expressed by you individually to individual members of the Senate, but, as the present is the first formal communication which they have received from you on the subject, the Senate cannot admit that in now addressing them you are justified in referring to former *strenuous* and *consistent opposition*, or in speaking of the *renewal* of a *protest* when no protest has been made before. In the year 1853, as you doubtless remember, a conference was held for the purpose of settling the terms of connection between the University and a College proposed to be established by members of the Church of England. At this conference the promoters of the College were represented by the following, viz. :—

The Bishop of New Zealand,
The Bishop of Newcastle,
His Honor Sir Alfred Stephen,
The Rev. W. H. Walsh,
The Rev. J. Milner,
The Rev. Alfred Stephen,
Charles Low, Esquire,
Robert Johnson, Esquire.

The University was represented by a Committee appointed by the Senate and consisting of the following members, viz. :—

Sir Charles Nicholson, Vice Provost,
The Right Rev. Bishop Davis,
The Rev. W. B. Boyce,
The Hon. F. L. S. Merewether, Esq.,
The Hon. J. H. Plunkett, Esq.,
W. C. Wentworth, Esq.

At this conference the representatives of the intended College proposed two rules, the one exempting collegiate students from the necessity of attending University lectures, and the other requiring that non-collegiate and collegiate students alike should produce before their admission to honors or degrees certificates of competent religious attainments, according to their respective creeds. The former of these rules was abandoned by its proposers, who assented to one of a contrary purport, providing that no collegiate student should be entitled to an honor or degree in the University unless he should produce a certificate of his having duly attended the lectures of the University on those subjects, an examination and proficiency in which are required for such honor or degree, with the exception of those on ethics, metaphysics, or modern history. The latter, referring to the religious certificate, was assented to by the Committee, and subsequently by the Senate, and both rules, as forming the basis of the compact between the University and the College, were embodied in the Colleges Endowment Bill of 1854, and were adopted by the Legislature and passed into law.

You now assert your conviction that the rule requiring the religious certificate is a direct violation of that clause in the Act of Incorporation which provides that no religious test shall be administered; and, assuming the correctness of that conviction, you express your belief that the clause in the Colleges Act which relates to the certificate is at least of questionable validity, as contradicting a previous Statute not formally repealed. On this the Senate have to remark, that the question on which you have pronounced so decided an opinion was fully considered when the by-law requiring the certificate was passed, and again when its provisions were introduced into the Colleges Bill, and on both occasions the conclusions formed by very competent judges were at variance with that which you have adopted. That the prescribed certificate was not a religious test within the meaning

of

of the Incorporation Act, and that the Senate were legally empowered to require it, was the opinion of Mr. Wentworth, who, as the author of that Act, must have best known the intended meaning of its provisions, and, as an acute and experienced lawyer, could well judge of the actual meaning of the words employed. By him the terms of the rule were expressly assented to, and by him the by-law embodying them was seconded in the Senate. Similar opinions were held by Mr. Plunkett, the then Attorney General of the Colony, who had been concerned in the framing of the Incorporation Act, and, as a member of the Senate, took part in the conference; and by Mr. Manning, the Solicitor General, who settled the clause in the Colleges Act of 1854.

The Hon.
F. L. S. Merewether, Esq.,
B.A., M.L.C.

3 Feb., 1860.

You speak of the certificate as involving an "enforced compliance with the opinions, and submission to the judgment, of another," and state that its "inevitable effect will be to place the student at the absolute mercy of an irresponsible judge, who upon any motive of caprice or intellectual idiosyncrasy may deprive the most diligent and deserving of his hard-won reward;" and further, citing the terms of the letter addressed by the Senate to the gentlemen appointed to select the first professors, you pronounce the acquirement of the certificate to be "inconsistent with the principles upon which the University is founded, of offering education to all classes without reference to religious distinctions." Of these views the Senate cannot admit the correctness. Neither enforced compliance with the opinion of another nor submission to the judgment of another is required, except in the sense in which the examined submits himself to the judgment of the examiner as regards his proficiency in the subject of examination. The law does not empower the Senate to require a certificate of conformity with the religious opinions of a particular examiner, but leaves it to the student to obtain a certificate, not of his opinions but of his attainments, from a teacher of the denomination to which he belongs; and he has at least this security against his becoming the victim of caprice or intellectual idiosyncrasy, that he can select or propose for the approval of the Senate a judge of his own choice. Nor does the law in any respect violate the comprehensive principles on which the University is founded. It favors no particular creed; it shuts out no class of religionists; but requires all to prove, by the testimony of their own pastors or teachers, that, whilst pursuing their studies in the lay faculties of the University, they have not neglected the due acquisition of religious knowledge according to the faith in which they have been brought up.

The Senate do not concur in the view taken by you as to the necessity for repeated productions of a religious certificate by the same student; and your assertion, that the law "applies to the professorial chair, and even to the senatorial dignity," is obviously wrong, as its operation is expressly limited to "students."

Nor can it be admitted that your reference to the practice at Cambridge is fairly put, as regards its bearing on the question under consideration. It is true that at the time referred to, when a religious test was still enforced, a "student might complete his undergraduate course and attain the highest honors, except the actual degree, without once being questioned upon his *religious faith*;" or, in other words, called upon to declare himself "a member of the Church of England;" but he was required, during his whole undergraduate course, to attend his college chapel, and he had to pass a University examination in the history of the Old Testament, one of the Gospels in Greek, and Paley's *Evidences of Christianity*.

In order to shew that the certificate required by the University possesses a further objectionable peculiarity, you state that "in the most exclusively denominational Universities no test has been hitherto required from a candidate beyond his own statement of his own creed; that he was believed on his own word, and was never required to support it by the testimony of a second person; and that thus students not belonging to the Established Church have for many years obtained fellowships and degrees in Oxford." These remarks appear to be founded on a misapprehension of the case under consideration. Under our law the student's own statement as to his creed is not questioned, nor required to be supported by the testimony of a second person. What he is required to do, is to produce a certificate that, according to his creed, be it what it may, he possesses competent religious attainments. On this question of competency a candidate's own word was not taken at Oxford, but he was subjected to examination in theological subjects, and could not obtain a degree without a certificate from his college that he had duly kept his terms, which involved attendance at chapel, and his possession of the requisite knowledge in such theological subjects as had been included in the college examinations. Nor is it correctly stated that students not belonging to the Established Church obtained degrees, &c., because their own unsupported statement was taken, or, as the words used might be understood to mean, because no statement but their own being required they could misrepresent their belief without any external hinderance. They obtain their degrees, because they were required, not as at Cambridge, to declare themselves members of the Church of England, but to subscribe to the 39 Articles and the three Articles of the 36th Canon, which, though not members of the Church, they could conscientiously do.

Your allegation that the requirement of the certificate in question has thrown our University out of its position in the van of liberal educational progress, and placed it behind Oxford and Cambridge, is one that a reference to the terms of the law itself is sufficient to refute. But the Senate think it right to remark that, as a matter of fact, the Universities of Oxford and Cambridge have not reached the degree of indifference as to the religious feelings and habits of the students which you represent in your letter. Every student there must be a member of a College or Public Hall, or of a Private Hall established under the recent Acts of Parliament. If he is a member of college he must attend chapel, and the Acts of Parliament expressly declare that no Private Hall shall be licensed until regulations shall have been established on certain specified subjects, of which one is "the attendance of the

The Hon. F. L. S. Mervether, Esq., B.A., M.L.C. "the students on divine worship." At Cambridge no Private Halls appear to have been established, but at Oxford the system has been brought into operation, and among the regulations established are the following:—

"The Master to take care that the scholars attend daily prayer either in some neighbouring Church, or College Chapel, or in his own Hall, &c."

"The Master to attend diligently to the moral and religious behaviour of his scholars, and to aid the University authorities in doing the same."

3 Feb., 1860.

Thus it appears that, although at Oxford and Cambridge religious tests, properly so called, have been abolished as qualifications for honors and degrees, the maintenance of religious habits and feelings amongst the students is an object of earnest attention.

Having made the above remarks on the passages in your letter which appear to demand notice, the Senate now proceed to state the conclusions at which they have arrived as to the course of action which it is their duty to take in respect to the certificate.

As the students who had matriculated before the passing of the by-law have now taken their B.A. degrees, and all the remaining students have placed themselves under an obligation to observe it by the declaration taken on their admission, and as the College with which the agreement was made has been this year brought into active operation, and will of course expect the fulfilment of the condition agreed upon, the Senate is bound to act upon the law. The question raised as to the validity of the enactment is one which can be only conclusively settled by competent legal authority; and nothing short of a Judicial decision in accordance with the view taken by you could release the Senate from its obligation to obey the law, as it now stands. With reference to the concluding paragraph of your letter on the subject of the connection between yourselves and the Senate, I am directed to remind you, that on the Board of Discipline and the Board of Studies you are associated with the Provost and Vice-Provost, and have, therefore, not only a voice, but a preponderating influence in the direction of all the important matters which those Boards are appointed to regulate. On questions affecting the general constitution of the University, "and more particularly its relation to the Denominational Colleges," the Senate will probably deem it conducive to the interests of the Institution that you should be consulted, but they cannot compromise their freedom of action or their authority, by giving a pledge that, without reference to you, no decision shall be finally pronounced.

I have, &c.,

H. KENNEDY,
Registrar.

APPENDIX B.

RULES AND ORDERS OF THE UNIVERSITY LIBRARY.

For Books allowed to be taken out of the Library.

No person shall be allowed to take books out of the Library but Fellows of the Senate, Professors, and other Public Teachers in the University, Officers of the University, or other persons who shall have obtained this privilege under a special resolution of the Senate, and Graduates holding any Degree above that of B.A., and having their names on the Books of the University and being resident in Sydney or its suburbs.

No one shall take or borrow any Book out of the Library without first delivering a note for the same to the Librarian or his Deputy, expressing his name and residence in his own handwriting, the title of the Book, the year and day of the month on which such Book is taken or borrowed, on pain of forfeiting £5, or double the value of such Book, at the discretion of the Library Committee.

The Librarian shall preserve all such notes, till the books so taken out are returned to the Library; and when all the Books specified in each note are returned, the notes shall be delivered up to the persons by whom the Books are brought back: when only some Books specified in each note are returned, the titles of the Books so returned shall be erased from the note at the time.

No person shall be allowed to have in his possession at one time more than Ten volumes belonging to the Library, but the Library Committee may dispense with this order in any particular case, if they shall be of opinion that sufficient reasons have been assigned for such dispensation; such dispensation, however, shall continue in force no longer than to the end of the current quarter, but upon fresh application may be renewed by the same authority.

Every one who shall borrow or take any Book out of the Library shall return it thither again on the demand of the Librarian, at any time after the expiration of seven days, and without such demand on or before the next of the four following Quarter Days, viz.:—March 31st, June 30th, September 30th, December 31st, under penalty of Two shillings for every folio or quarto, and One Shilling for every Book of less size; all penalties to be repeated every fortnight till the Books be returned, or others of the same editions and equal value be placed in their room, such fortnight being first reckoned from the day on which the Library is re-opened after the Quarter Day. If any of the Quarter Days shall fall on a Sunday, or on any other day on which the Library is closed by Rule , the day appointed for returning the Books shall be the following day.

No Books shall be taken out of the Library on the days appointed for the return of Books.

Every Professor shall have the privilege of obtaining Books for each Student attending his lectures, and being a Member of the University. Each order for the volume so obtained shall bear the titles of the Books, and be dated and subscribed as follows—

For M. N.,

C. D., Professor.

The

The Books so obtained shall not be taken out of the Library till the day after that on which the Library is re-opened for the Quarter; and they shall be returned at any time after the expiration of seven days, if demanded by the Librarian, and, if not so demanded, not later than the day before the next Quarter Day. The Professor shall be responsible for the Books so obtained, and for the penalties prescribed by Rule ; and no Student shall have in his possession at one time more than five volumes.

The Hon.
F. L. S. Mcre-
wether, Esq.,
B.A., M.L.C.

3 Feb., 1860.

A List of the Books omitted to be returned at the end of any Quarter, together with the names of the borrowers, shall be suspended in some conspicuous place in the Library.

No person from whom any fine is due to the Library shall be allowed to take out Books until such fine has been paid.

If any Book be injured or defaced by writing while in the possession of any person taking it out of the Library, he shall be required to replace it by another Book of the same edition and of equal value. Persons taking Books out of the Library are required to report, without delay, to the Librarian any injury which they may observe in them.

For Books not to be taken out of the Library without a note countersigned by the Provost or Vice-Provost.

Certain printed Books, of which a list shall be prepared under the authority of the Library Committee and be kept by the Librarian, shall not be taken out except by a note countersigned by the Provost or Vice-Provost, nor until the day after that on which the note is presented; and no such note shall be given to any Undergraduate Member of the University, nor shall any person have more than five volumes of such Books out of the Library at one time. A Register shall be kept of all such Books taken out of the Library, and of the date on which they are returned, and after the books are returned the Plates in them shall forthwith be collated, and the collation be registered; and, until such collation shall have been made, the Books shall not be accessible to persons using the Library, nor shall the countersigned note be given up to the persons by whom the Books are returned, but in lieu of it an acknowledgment signed by the Librarian or his Deputy; and the name of the person by whom the acknowledgment is signed shall also be registered.

The Penalties for not returning such Books at the Quarter Days shall be double of the Penalties prescribed in Rule 5.

For MSS. and Books not allowed to be taken out of the Library.

The Library Committee may cause MSS. Books containing collections of Prints or Drawings, and other Documents and Books of a nature or value to render such precaution expedient, to be locked up in cases or compartments by themselves. These shall not be taken out of the Library on any pretence whatever; and access to them shall not be allowed, unless the Librarian or some one deputed by him be present. The Librarian himself shall have charge of the keys.

The Library Committee may direct that certain printed Books, of which a list shall be kept by the Librarian, shall not be removed from the Library. Such Books shall be always kept there.

Persons desirous of referring to any particular MSS. or scarce printed Book, shall apply to the Librarian, who, if he see cause, may allow such MSS. or Books to be consulted, but not in the compartment in which the MSS. or scarce printed Books are kept.

Parts of Periodicals, works in progress, Pamphlets, &c., until such time as is proper for binding them shall be kept under such a system of management that they may be produced if required, after a few minutes' notice, on application being made to the Librarian by means of an ordinary Library note, so that persons in whose literary researches such works are necessary may consult them in the Library with the consent of the Librarian.

For admission to the Library.

Except on the day when the Library is re-opened for any Quarter those Undergraduates who have obtained Professor's orders for Books shall be admitted to the Library for the purpose of selecting their Books, or otherwise consulting the Library, during the hour from one to two.

Admission of Persons not Members of the University for the purpose of study and research.

The Provost or Vice-Provost may grant an order of admission to the Library for the purpose of study and research to any person who shall produce to him a recommendation from any Fellow of the Senate or Professor, or any Member of the University who shall have been admitted to the Degree of M.A. or any higher Degree, stating "that the person recommended is well known to him, and that he is a fit and proper person to obtain such order." The name of the Member of the Senate or the Professor upon whose recommendation any such order of admission shall be granted, shall be placed after the name of the person receiving the permission in a List to be suspended at the entrance to the Library.

Such persons shall be permitted to use the Library whilst open, except (on any day on which the Library is first opened for the Quarter, or on any day on which the Library is closed for the Quarter.) This admission order shall not entitle the holder to have access to lock-up cases, which admission order shall have effect only until the expiration of the quarter in which it shall have been granted.

For opening and closing the Library.

For the purpose of allowing the Librarian sufficient time to inspect the Books, the Library shall be closed for the first fortnight in the month of January, and also for the two days (excepting Sunday) next after each of the three other Quarter Days.

The Library shall be closed on Sundays and Public Holidays.

The Library shall be open on Saturdays from ten till one, and other days from ten till three.

Sir

Sir Charles Nicholson, Bart., D.C.L., LL.D., Provost of the Sydney University, further examined:—

Sir Charles
Nicholson,
Bart., D.C.L.,
LL.D.

3 Feb., 1860.

2241. *By the Chairman*: We have understood that, with the concurrence of the Senate of the University, you desire to offer some remarks upon the evidence which has been given before this Committee—will you have the kindness to proceed with any statement you think fit? In most of the observations I had intended to make, I have been to a great extent anticipated by the remarks of the Vice-Provost, in all of which I entirely concur. There are, however, a few matters which I have thought likely to require explanation, and concerning which I think it right to say a few words. The first point is with reference to the site of the University, to which considerable exception has been taken by several members of the Committee. Now on this point I would repeat the language already employed by the Vice-Provost, and say that in point of fact the site adopted was the only one we could procure. We had very prolonged negotiations with the Executive Government of the day, with the view of procuring a suitable site either in the Barrack Square, in the Domain, or elsewhere in a central situation; but we found it was absolutely impossible to obtain anything like an appropriate site on land belonging to the Crown. My own impression was that the building should have been erected in the Domain, in order to have had the advantage of the surrounding pleasure grounds, and of the proximity to the city. That was resisted by the Executive, and we were obliged ultimately to accept of the present site at Grose Farm. Admitting that it is now somewhat remote from the more populous parts of the town, I think, looking to the future, the site is most admirably chosen; and regarding the Affiliated Colleges as part of the scheme, it would have been impossible that we could have contented ourselves with any limited space of ground. The position is a most healthy one; there is plenty of room for exercise; and it is dissociated from those parts of the town in which the students would have been exposed to great temptations had the building been in Sydney. Any one who knows the habits of students attending the Universities of Great Britain must know how desirable it is to keep them out of those foci of temptation to which all young men are exposed. Then I find that Dr. Woolley complains, in his evidence—and I think somewhat unreasonably—of the want of accommodation for the young men. With respect to that I would observe that the buildings are still in an incomplete state, but we have made contracts for their completion, and when those contracts are fulfilled, every accommodation that can be required will be provided for the professors and the undergraduates. It is a question of time; everything cannot be achieved at once; and in the meantime I do not think these young men have any real grounds of complaint. I believe most of the members of the Committee have been up to the University, and may have seen that the rooms employed as lecture rooms are capacious and handsome, quite equal to those in most of the Universities in Britain. Then there is a retiring room for them, comfortably furnished with desks and seats, and a room in which they put their caps and gowns. I quite admit that it is desirable to give extension to these conveniences, but we must wait the completion of the building. Really I think it is somewhat unreasonable to make this a ground of complaint against the Senate. Then again, on the departure of his family to England, Dr. Woolley was very anxious to secure apartments in the building, where he has now desirable accommodation; and it was in deference to his wishes that he was allowed to occupy those apartments. Yet I would observe that if the undergraduates were suffering so much inconvenience for want of an extra room as a reading room or retiring room, in that case their claims ought to have been considered before the occupancy of these rooms was given up to Professor Woolley. There is another complaint, that stables are not provided for the horses of the young men, to which I would again answer that the building is not completed yet, and of course some amount of inconvenience must be encountered by every one connected with the institution. I find that one of the members of the Committee in giving evidence has stated that there is a great deal of space wasted on the Senate, and that in the design of the building a great deal too much room has been bestowed on the Senate, and on the purely official part of the building, with a view to their convenience. I can only say that I am wholly ignorant of any such intention on the part of the Senate. We meet in a small room, about half the size of this, and I am not aware that any plan is contemplated for appropriating any large portion of the building to the use of the Senate. I regret that such a remark should have been made, inasmuch as it appears to me to indicate an *animus* unfavorable to those who have the management of the institution. With regard to the alleged difficulty of getting out to the building, I may observe that omnibusses go from all parts of the town to the Glebe every five minutes during the day. Then with reference to the cost of the building, I must repeat that the absolute amount granted by the Legislature has been only £60,000, and that the sums which have been expended in excess of that amount has been the result of savings from the Endowment Fund, and from the sale of the Sydney College. The actual amount of money voted by the Legislature has been £60,000; the first amount voted being £50,000, to which a supplementary vote of £10,000 was subsequently added. It is hardly a question worth entering into, but I find that great exception is taken to the ornamental details of the building. I have on a previous occasion stated that a great portion of these were the result of private contribution; but I may add with regard to some of these details—the ornamental carving—that they were inseparable adjuncts to a building of that character. If you determine to erect a public edifice according to the style of any given epoch or country, you must carry out that style in all its appropriate details. If you erect a Grecian building you must have the columns, the frieze entablature, and all the other adjuncts of the particular style of architecture selected, although they may be regarded, in point of utility, as altogether supererogatory. In every building you must have the details more or less carried out with due attention to what is due to the style, unless you determine to erect something like a quaker meeting-house or a factory, in which you discard

all

all ornamentation whatever. But I do not apprehend such a design would have met the approval of the Colony at large.

2242. You will find stated in the evidence of Mr. Blacket, that he received no particular instructions as to the plan of the building, except as to the number of apartments, and that he produced a great variety of sketches; and then the question is put whether the one selected was not the most expensive of all—and the answer is, by far the most expensive? I am prepared to make this statement, that Mr. Blacket submitted various designs which were disapproved of for various reasons; but they were designs which I am quite sure, if adopted, would not have met the approval of the public generally. I believe the aim of the Senate was this, not to carry out the whole details of the plan which Mr. Blacket presented to us, but to erect such a portion of it as would probably provide sufficient accommodation for all purposes for a hundred years to come, and which should be part of a great design that might be carried out in after times. I do not admit that the plan we adopted (and which has to a great extent been realized) was extravagant in its conception, or that there has been an unjustifiable and profuse bestowal of ornament upon the erection. I was rather struck to see how much more elaborate is the design of the University of Toronto; and I see they have given large endowments in land there for the sustentation of that institution, in the same way as they do in America.

2243. *By Mr. Wilson*: Do you think it was prudent to give such large grants as have been given to individual Colleges in connection with the University? I do not. I think the area was too large, but the land having been granted, I do not see how it is possible to resume it, those who have initiated the different Colleges have given their subscriptions on the idea that they were to have these large grants in perpetuity. And after all, it is desirable to keep a large open space in that part of the town.

2244. *By the Chairman*: In the evidence of Mr. Macleay, the following passages occur:—“It would astonish some people if they saw some of the German or French Universities. It is evident that the building has nothing to do with the education given within it.” And again, “Is it not the case that some of the German Universities have no buildings at all? I believe, that in every case, there is a public room for the Senate or managing body, where they give degrees, &c.; but the professors often have to lecture in rooms in their own houses.”—? That may be. I have been in Germany, but I am not aware of any Universities in which there are not public rooms for lectures. At all events, at Heidelberg and Bonn, both celebrated Universities, they have public lecture rooms; I quite admit of a very plain and unostentatious character.

2245. *By Dr. Lang*: In Berlin, the professors generally lectured in their own houses? Yes; but the public buildings in Berlin, connected with the University, are very fine.

2246. *By the Chairman*: You are of opinion that fine architecture educates the taste? Yes, I have a very strong opinion upon that point.

2247. How did you determine that the style adopted for the Sydney University was the style best calculated to elevate the popular taste, in preference to the Grecian or any other of the numerous styles of architecture? We could not well have adopted any style which would have been suitable. A Grecian building is wholly unadapted for purposes such as those aimed at. The greatest difficulty is found in adapting a purely Grecian building to the ordinary wants of public institutions. But the Elizabethan style, or rather the later Tudor style, is eminently qualified for such purposes, besides being thoroughly English in its character and associations. The great academical institutions of the Mother Country all belong to that period; and those attempts which have been made to introduce Grecian architecture have, I believe, been most miserable failures.

2248. There is another point in Mr. Macleay's evidence to which I wish to call your attention. The question is asked—“With the Affiliated Colleges, and the University itself completed as proposed, and the endowments, the country will probably be put to an expense of £250,000 or £300,000?” and the answer is, “I think that expenditure might easily be stopped. The University here has been built all of a sudden; but scarcely any other University that I have heard of has sprung up in the same way,—certainly not Oxford or Cambridge; they required ages for the erection of their fine buildings?” Well, I would observe, that University College, London, and King's College, are magnificent buildings, in which very large sums have been expended—some hundreds of thousands of pounds at least; and that, if we are to build handsome churches and handsome private dwellings, our buildings for public purposes ought also to receive a fair share of such an expenditure. I do not admit that there has been any extravagant expenditure on the University building.

2249. *By Mr. Cape*: It is now nine years since the University building was commenced? Yes.

2250. *By the Chairman*: We must not forget that we have railways to construct, and our common roads to keep in order? And we have to improve the minds, the tastes, and the habits of the rising generation, and to give them those impressions which are only to be acquired by the contemplation of objects of this kind. Assuming that we might have put up some building which would have cost some £10,000 less—a plain square building that would have been just of the character of the Commissariat Store or the Custom House—I ask whether such a design would have met with the approval of the Colony generally.

2251. Do you not think these conceptions of the beautiful are more in the mind itself, and are not to be produced by external objects? No; I think they are to be excited by external objects; and I challenge my friend, the Chairman, that, if he will only go to the old country, he will find his aspirations and his feelings powerfully affected by the contemplation of the magnificent piles of buildings, and other works of art, which are to be met with at our ancient seats of learning. Perhaps I may be permitted to make one or two observations with regard to the constitution of the Senate, concerning which I may remark that

it must be regarded as provisional, inasmuch as we have yet to create the materials out of which the University is to be subsequently governed. I agree with what the Vice-Provost has said with respect to having the professors, or some of them, upon the Senate, and I also agree in the propriety of having upon that body the heads of Affiliated Colleges, or a certain number of them—not a sufficient number to swamp the secular influences which ought to prevail there—but sufficient to give a fair representation to the interests of the Colleges; but if we introduce the heads of the different Colleges into the Senate, I think those members of the Senate who are now connected with the Denominational Colleges ought either to resign their seats in the Senate or in the Councils of the Colleges with which they may be connected. I see it has been proposed, also, to reduce the numbers of the constituency from one hundred Masters of Arts to a smaller number, and probably that might with propriety be agreed to; but I think the Committee regard the creation of that number, one hundred, as being more remote than it really will be. It is more than probable that there will be an instalment of eight or ten men coming up for their degrees every year; and if we reduce the number to fifty, I think in three years we might have a constituency in existence which might elect the members of the Senate. Feeling how invidious it is to make these nominations by the present system of co-optation, I should be very glad to see the Senate relieved of that power. A remark has been made by one of the witnesses, to which I think it right to advert. The question was asked, “Have you turned your attention to the amount of accommodation for educational purposes that the present buildings afford, as compared with their extent—do you think it is at all sufficient for the cost incurred?” The answer is, “No; that is where I think there has been waste of money.” Now, as the whole building is erected for the purposes of the institution, I cannot understand the application of this answer. The next question is, “Do you not think there has been a great waste of space? Yes; as far as I can understand the design, the space wasted on the Senate alone is altogether too much; they seem to monopolise the best part of the building.” In reply to that I can only repeat what I have said before, that we occupy a small room about half the size of this, and I am not aware that it is in contemplation to occupy any larger space.

2252. *By Mr. Cape:* I should like to hear your opinion with reference to the complaints about the library? The regulations of the library are now before the Committee, and I think with due regard to the safe custody of the books it is impossible to make them more liberal. If any gentleman wishes to obtain the privilege of access to the library, he has only to apply to a member of the Senate.

2253. *By the Chairman:* Have the Senate actually decided upon establishing a school of medicine? We are very anxious to do so, and very active steps have been taken to carry out such an object. Great facilities are offered by the Infirmary here, which has all the characteristics of a large public hospital, and contains two hundred patients. It is believed that a competent staff of medical men can be engaged to initiate two or three of the most important chairs. I am sorry to say, however, that all our professors are opposed to the idea, and have protested against it, and I think under very mistaken notions. The matter is now in the hands of the Senate, who are endeavoring to mature the plan. We are also considering the means of enlarging the faculty of law. It has been suggested that the reader in law should be made a professor.

2254. *By Mr. Wilson:* Would you not require a professor of anatomy on full salary? No. The idea was, that if we established a medical school, fully qualified gentlemen would be found quite prepared to accept the appointments on condition that whatever fees might be received should be appropriated by them, and that in the first instance the professors should depend upon the fees of their pupils.

2255. Could you get an efficient lecturer and demonstrator of anatomy to devote all his time on those terms? We should not expect him to devote all his time, because a young man must teach himself anatomy by his own efforts in great measure. We have a most excellent hospital here, and men quite as competent to teach as could be found in any provincial town in England. They have now in Newcastle and Birmingham very complete establishments, where they have the whole apparatus of a medical school; and I know no reason why we should not have the same here. We have a very able professor of chemistry who might teach the chemical part of the course. I do not mean to say we could give the whole curriculum of a medical course, but young men would be able, after passing their undergraduate course, to study some of the branches of medical science, and instead of spending three or four years in England it would be sufficient for them to go home for one year to complete their studies, taking with them certificates that they had passed through a certain course of study.

2256. *By Mr. Cape:* Are you aware that some of our Colonial youths have gone home at a very large expense, with certificates which they have obtained from persons here, who are not qualified to give them? Yes. Of course I think it would be desirable to supplement the chairs of medicine and surgery by a retaining fee of £100 or £150 to each of the gentlemen occupying them; and if the professors had houses we should have funds to achieve that object. At present we are obliged to furnish them with lodging-money. I beg to repeat what the Vice-Provost has stated, that it was with some surprise we learned that these gentlemen were making complaints about not having houses, for I always understood Professor Pell and Dr. Smith to be averse to living in the building.

2257. *By Mr. Wilson:* The objection taken by the professors to the establishment of a medical school is, that the faculty of arts ought to be completed first? We are quite alive to the necessity of that. We do not wish to ignore that want in the establishment of a medical school. Our object is to make the institution as useful as we can. What is all this preliminary training for, unless it is to subserve some purpose in professional life? It is with that anxiety that the Senate have endeavored to establish a medical school, so that it may not be said that we are regardless of practical ends.

2258. *By Mr. Cape*: You propose to connect botany with it? Yes. I have before stated that we might have a Botanical Garden in connection with the University, without any material expense—simply a scientific garden; not a mere pleasure garden.
2259. *By Mr. Wilson*: Mr. Moore stated in his evidence, that he was arranging the plants in the Botanical Garden in Sydney, with a view to making it available in a scientific point of view? Notwithstanding all Mr. Moore's care and attention—and I acknowledge them to be very great and meritorious—I do not think that the Botanical Garden will ever be made available for anything much more than a pleasure ground.

Sir Charles
Nicholson,

LL.D.

3 Feb., 1860.

TUESDAY, 7 FEBRUARY, 1860.

Present:—

MR. PLUNKETT,
MR. CAPE,

MR. WILSON,
REV. DR. LANG.

THE HON. TERENCE AUBREY MURRAY IN THE CHAIR.

William Parkinson Wilson, Esq., M. A., called in and examined:—

2260. *By the Chairman*: You are one of the professors of the Melbourne University? I am, sir.
2261. How long have you been in this part of the world? About five years.
2262. Is the building of the Melbourne University completed? No; the building is intended to be in the form of a quadrangle, and the rear and two sides are finished, the front remaining unfinished.
2263. What has been the expenditure involved up to the present time? I am not able to say exactly, but I believe it is about £60,000 or £70,000.
2264. Are there many students there? Last year we had twenty-two regular students of the arts class, and thirty-eight students attending the law lectures.
2265. All matriculated? No, not all matriculated.
2266. Sixty altogether? Yes, sixty. The law students are not matriculated.
2267. How many graduates are there in the University? I am not sure how many there are of our own, but they are very few. The Melbourne University has adopted the system of admitting graduates of other Universities *ad eundem gradum*, and the greater part of the graduates are of this class.
2268. How long has the University been opened to students? It was opened in the autumn of 1855—I think in April.
2269. Have you any knowledge of the number of students who matriculated at that time? Either fourteen or sixteen, I am not quite sure.
2270. Do you find the University well attended, and that the students increase from year to year? Slowly.
2271. Do you think the people generally avail themselves of the opportunity of obtaining for their sons an education of that high class which these institutions usually afford, or to such an extent as might reasonably be expected? I can scarcely say so. The University has up to the present been laboring under the disadvantage that, previous to its existence, there were no proper schools for training youth. Good schools, however, are now being established, and we are getting more students.
2272. Do you think, then, that the University has worked considerable benefit in that way by stimulating the establishment of better schools generally? Yes. The education in the schools has been raised to a higher standard by it.
2273. What is the ordinary course of instruction given—how many professors are there? Four: one for classical and comparative philology; one for mathematics; one for natural science; and one for history and political economy. The first of these departments includes Greek and Latin, and English treated as a classical language, Shakspeare and Milton being read and criticised as would be the case with a Greek play. My own department is that of mathematics and natural philosophy; there is a professor of natural science, which includes chemistry, zoology, botany, mineralogy, geology, &c., and another for history and political economy.
2274. Is nothing taught in the shape of civil engineering? No. I have been anxious myself to get a school of that kind established, but was met by a difficulty entirely financial.
2275. Have you a medical school? No. The Council, however, have been making efforts to establish one.
2276. How is the University governed at present? By a Council of twenty members, appointed by the Governor.
2277. Nominated by the Governor? Yes, and holding office for life. The Act of Incorporation, however, provides that, when there are one hundred graduates of superior degrees (doctors or masters), then all the graduates of these degrees shall form a Senate, and that Senate shall afterwards elect the members of the Council, and have a veto upon their proceedings.
2278. Are the professors members of the Council? No; and it has been a source of inconvenience that they are not so. Many questions, which might be decided in five minutes were the professors present in the Council, have been left for a long time undetermined, on account of the necessity for referring them for consideration.

W. P. Wilson,
Esq., M.A.

7 Feb., 1860.

- W. P. Wilson, 2279. Have any suggestions been thrown out upon that point? No official suggestions, but, in many cases, private suggestions have been made.
- Esq., M.A. 2280. Has the Governor himself the right of appointing members of the Council, or is it done through his Ministers? The right of appointment, I think, rests with the Governor himself; but I believe he generally refers it to the Chief Secretary.
- Feb., 1860. 2281. What mode of appointing members of the Council would you recommend? I think election by the body of graduates is as good as any.
2282. But then you must have some mode of government until you have a sufficient number of graduates? Then it is difficult to say which is the best mode. I do not think the election by the Council itself is a good one.
2283. Have you made any practical observations as to the inconvenience arising from the appointment being dependent upon the Ministers of the day, by which means political influence might be brought to bear upon the choice of the members for this body? It is difficult to speak upon a question of that kind. I think several appointments have been made which ought not to have been made.
2284. It appears to me that, if the appointments depend upon the Minister for the time being, even his ordinary influence would be more than he ought to have? In many cases the Minister has left the appointment to particular religious denominations.
2285. Have you any Affiliated Colleges? Not at present. We have a grant of sixty acres of land for that purpose, but there has been no provision for endowment of any kind.
2286. Is your University at all sectarian? No.
2287. Quite secular? Quite secular.
2288. Have you moved in the matter for the establishment of Affiliated Colleges? No such motion has at present been made. The Government granted forty acres of land for the University itself, and sixty acres more for Affiliated Colleges.
2289. Is it in contemplation to establish them? Yes, as soon as the various religious denominations set about the work.
2290. What is the benefit expected to be derived from such an arrangement as that? That students coming from a distance to Melbourne will have places to reside in under proper superintendence, and where also they can receive assistance in preparing for their University work, and instruction in those branches of study by the teaching of which you are likely to tread on sectarian prejudices. There is another object in view with reference to the Affiliated Colleges, which are to be not merely places for residence and preparation of students actually attending the University, but places where a theological course may be pursued.
2291. Is there any religious test in the University? None whatever.
2292. *By Mr. Cape*: Besides the ordinary professors, you have lecturers in law? Yes, two.
2293. And you divide your University into four schools, I believe, namely—mathematics and physics, natural science, social science, and language and logic? Those are merely for the honors; there is no division into schools in the earlier stages of instruction.
2294. I observe you combine the study of the English language with the classics? Yes.
2295. You read an English play after the manner of a Greek play with a view to analysis? Yes.
2296. By experience, have you found that necessary—or on examination of students found them remarkably deficient in the knowledge of their own language? Not only have I found this deficiency in students, but in the literature of the Colony. Take the leading articles in newspapers for instance; the most gross faults in English will be found in them.
2297. You find practical education more necessary than the higher class of education in the University? I do not know the distinction between a practical and a high class education.
2298. I mean that education given with a view to the undertaking of mere practical pursuits in distinction from professional life, such as law and divinity? Of the studies in the University, the study of the law has been most numerous attended. With the exception of the law lectures, education in the University has been limited to what is called pure education as distinguished from professional education.
2299. What would be the entire expenditure of the University for the year? About £9,000.
2300. What is the expense to each student? £12 a year.
2301. Have you heard any objections to that amount? There has been grumbling about it as too high.
2302. *By Dr. Lang*: You state it as your opinion that the professors in the University of Melbourne should be members of the Council or governing body? Yes.
2303. Do you think that that observation should apply to all professors, or merely a delegation from them? I think it would be better if all were members of the Council. But some of them would be better than none.
2304. Suppose the number of professors should be considerably increased, so that the University of Melbourne should in that respect be on a par with the Universities in the Mother Country, would you then require that all the professors, or merely a delegation from them, should be members of the governing body? I think the professors engaged in practically working the University would be the best executive. The proper object of a Council not consisting of professors would be rather as a Board of Control.
2305. You would have an educational board consisting solely of professors? There is a board of that kind, "The Professorial Board," consisting of the professors, with the Chancellor and Vice-Chancellor.
2306. To administer discipline? Yes.
2307. And regulate the matters connected with the business of education? Yes; in trifling, not in important matters.

2308. Suppose there were a series of Affiliated Colleges in connection with the University, would you deem it expedient that the heads of the Colleges should also be members of the University Council? I think that, taking a view of the Council as a board of control, it would be desirable; but I doubt the expediency of giving them too much power in the executive body. W. P. Wilson,
Esq., M.A.
7 Feb., 1860.
2309. Suppose there were four or five Affiliated Colleges established, would you consider it as involving any danger to the freedom of the University if the heads of these Colleges were members of the Council? No; I do not see the danger, unless we consider the possibility of some of these Colleges growing to such dimensions as to produce a rivalry between them and the University.
2310. Would not one of the heads of these Colleges be a check upon all the others with regard to the existence of sectarian influences? There is this difficulty in the way—that the heads of these Colleges would most probably be clergymen, and the Act of Incorporation provides that no more than four clergymen shall sit as members of the Council.
2311. Do you consider that the plan sketched out in the Act of Incorporation, for the government of the institution by means of the one hundred graduates electing a Council, is likely to form a proper governing body for the University? The system is not that the hundred should vote, but that after the number amounts to one hundred a Senate should be formed from all the graduates. Some, who resided at a distance, could not of course take part.
2312. I suppose you obtained that idea from the British Universities? Yes; the plan has now, I believe, been adopted at the London University.
2313. Suppose there were a hundred graduates in Melbourne or Sydney University, would it not, from the probability that most of these graduates would be scattered over a vast extent of country in the exercise of their professions or avocations, be difficult to assemble them so as to form a body of electors to choose the governing body? In the first instance, a considerable number usually reside in the metropolis; and, secondly, the functions which the Act assigns to the Senate are not those which require frequent exercise, being only such as filling up vacancies, and passing any statutes or regulations sent to them from the Council, but not to interfere with the details of the working of the institution.
2314. They would merely act as an electoral body? Yes, chiefly as an electoral body.
2315. Would it not improve the constitution of the University if a different element to that were to be introduced into its composition, such as members of the Government or of the Legislature of the country? I think the Government and Legislature might always be expected to consist of the educated classes of the community, and consequently to be represented by the ordinary action of the system.
2316. Such appointments would be generally the result of the electoral action? Yes, of the electoral action.
2317. *By Mr. Plunkett*: Have you made any calculation as to what time will elapse before the one hundred graduates are obtained? We have often tried to calculate the time, but have not arrived at any conclusion.
2318. Do you think you will have them before twenty years? Yes; I think so. I think we have had twenty-five or twenty-six in the five years the University has been in existence.
2319. Seeing that they drop off occasionally and go away to a distance, do you not think it will be a very long time before you obtain sufficient for the electoral body; and do you not therefore think it would be better to have but half that number? I should be glad if the required number were reduced to one-half what is now required by the Act, and we have had in contemplation a petition to the Legislature to reduce the number.
2320. What is your own College? St. John's, Cambridge; but for five years I was professor of mathematics at Queen's College, Belfast, and continued there until I came out here.
2321. How long has the Queen's College at Belfast been in existence? It was opened in October, 1849.
2322. Are there many students there? Yes.
2323. How many—it has been said here that those Colleges were not successful? I cannot give the numbers precisely. When the College opened I had ninety students in my own class; there were besides, many medical students. By the last report, I observe that there are more than sixty students in the arts department; and there were departments of medicine, law, engineering, and agriculture, in the College, which must have included many more students.
2324. Do you know whether the Council at Melbourne have had it in contemplation to establish, in the institution, a school for engineering? I myself brought forward a scheme before the Professorial Board, by whom it was brought before the Council, with a view to the establishment of such a department; but it was postponed for want of funds.
2325. You say there is a professorship of history and political economy? Yes.
2326. Are there not sectarian objections to that? I have not heard of any.
2327. How are the lectures delivered, like those by the other professors? Precisely the same.
2328. Within the University building? Yes; it is one of the regular chairs of the University.
2329. *By Mr. Plunkett*: Do the students of all denominations attend? You will find, on reference to our system of instruction, that the whole course to be taken is divided into three years, each student being required to take five subjects in each year; and as he has not to elect more than five out of a larger number, he might avoid any subject he disapproved of.
2330. Do you know whether any students, for any reasons, have not attended the historical lectures? Many students have not attended, but I have no knowledge of their particular reasons for it.

- W. P. Wilson, Esq., M.A.
7 Feb., 1860.
2331. No particular objections have been made? No; the students generally follow up those departments in which they think they can make the greatest proficiency. The University of Melbourne grants degrees without attendance upon lectures to students who pass the matriculation examination, and three other examinations at intervals of a year. At present, however, only two students have come forward in that way.
2332. *By Dr. Lang*: And how do these students receive their education in the meantime? I do not know where they receive their education; one of them failed to pass in the first year. Both were schoolmasters.
2333. *By Mr. Plunkett*: Do you find the students regular in their attendance, or that they are so precise at the time of matriculating, or when taking degrees, as students in the Mother Country? There is a little falling off; we always lose some of them.
2334. *By Mr. Cape*: Have you many non-matriculated students attending the lectures? Besides the law students, there is only one. The law students are non-matriculated, as that department is not considered a branch of the regular course.
2335. *By Mr. Plunkett*: Is there any regulation made by the authorities or Council in the Melbourne University for students in the country who wish to attend lectures, so as to supply the places of the Affiliated Colleges in contemplation? None.
2336. That is left to the parents? The Council did advertise for applications from persons willing to have their houses licensed as boarding-houses for students; but no applications were received.
2337. So that they have to lodge and live as best they can? They are required to have the authority of their parents for choosing the places where they live.
2338. Are there many students from the country attending the lectures? Not many.
2339. Do you think the number would be greater if there was a facility for the proper care of the students when in attendance upon lectures? I think it would.
2340. When is it intended to establish the Affiliated Colleges? I have no means of forming an opinion upon that point; it rests with the voluntary action of the religious bodies.
2341. *By Dr. Lang*: The Government are not pledged to any amount of support to these Colleges? They have not held out hopes of support at all. The grant of land was made in fixed terms, and was granted to the Council in trust, for purposes in subordination to the University.
2342. *By Mr. Plunkett*: The Council is unfettered as to the mode of carrying out that trust? Yes.
2343. There is no particular quantity of land to be given to the respective establishments? There are no lands at all assigned to the different establishments.
2344. *By Dr. Lang*: Do you find that the proportion of candidates for high University education bears any relation in your community to the proportion at home?—I mean the proportion of the candidates as compared with the population of Victoria—whether that is at all comparable with the proportion in Great Britain? I do not think there can be a great difference. The statistics of the numbers at the various Universities of England recently I have not seen; but, on taking a rough estimate, I think there can hardly be a great difference.
2345. Suppose you had proper machinery in action for intermediate education, would not that be likely to increase the number of applications for University education? We have schools suited for that purpose now, but they have only recently been established. The Church of England Grammar School has been opened for two years, and is working very well indeed.
2346. Do you think it would be desirable for the Government to hold out encouragements for the prosecution of superior education, such as have been introduced at home in regard to the civil service and India service? I think it would be desirable that no one should be admitted into the civil service unless he could pass an examination shewing a certain amount of educational qualifications; but I think there would be danger in holding out posts in the civil service as objects of competition. I do not think our youth should be led to look to employment under the Government of the Colony as an object of ambition.
2347. *By Mr. Cape*: But only as part of the rewards of education? Only as part of the rewards. They ought rather to be taught to seek to get on in professions than in official employments. I think the greatest advantages would result from the establishment in the University of professional schools, such as medical, law, and engineering schools.
2348. Do you think your present number of professors is sufficient for the faculty of arts? I think it is at present.
2349. Do you think a sufficient curriculum can be formed through these professorships for education in the arts department? I think so, with our present numbers.
2350. You have a school of natural science,—are there many students entering upon that course? Several have attended the various courses in that department.
2351. *By Mr. Plunkett*: Do the professors reside in the University? Yes.
2352. They have quarters? Yes.
2353. *By Dr. Lang*: Within the University building? Within its precincts. There are residences for the four professors, a council-room, which is also used as a library, and a registrar's office, four lecture-rooms, suite of rooms for museum, &c.
2354. *By Mr. Plunkett*: What are the salaries of the professors? £1,000 a year, with quarters.
2355. Do they get fees? No.
2356. What fees are charged, and to what purposes are they applied? A difference of opinion exists as to the latter point, as the Act of Incorporation provides that they shall be paid to the professors. The fees now go to the general funds of the University; they are four pounds a term or twelve pounds a year, which throws all lectures open to the students.
2357. *By Dr. Lang*: That is the whole amount paid? That is all for lectures. There is a fee of £2 for matriculation, and another of £5 for the degree of B.A.

2358. *By Mr. Plunkett*: Are the salaries of all the professors alike? All alike.
2359. *By Dr. Lang*: Do you not consider the residence of the professors in the University building has a beneficial moral effect upon the students generally? I do not think it has anything to do with the matter; the students are in the University only during the time of attending upon lectures, there being no residences for them in the University.
2360. It has not a College of residence? No College of residence at all.
2361. The professors exercise no control over the students after their attendance at the lectures? The students are required to observe good order whilst within the precincts of the University; the professors would check disorder if it came under their notice.
2362. How far is the University from what is called the central part of Melbourne? The front gate is exactly a mile from the Post Office.
2363. Is the present Post Office considered central? Yes.
2364. *By Mr. Cape*: You do not think it beneath the dignity of the University to make English, geography, and history part of the matriculation course? Oh, no. The English, as it enters into the matriculation examination, consists principally of questions on the grammar of the language; not questions on literature and criticism.
2365. Do you find the students disposed to attend the lectures on social science? Some of them attend; but of course they generally attend those classes in which they think of getting prizes.
2366. Which branches are the most popular among the students, or attended by the greater number? The classical professor's lectures.
2367. That is a *sine qua non* for degrees? Yes.
2368. Have you any philosophical apparatus? Yes; a good collection is in course of formation.
2369. You consider classics and mathematics with natural philosophy as the best basis for the superstructure of general education? I think so; not from any particular quality in the subjects themselves, but because they have so long been subjects of education, that they can be made matter of more precise instruction than other branches of knowledge; and you can test the knowledge of them more readily than that of other branches of learning, in which there is more vagueness and looseness—not in the subjects themselves, but in the manner in which they have been generally treated. This arises from the fact that they have only recently become matters of general education.
2370. Is not the mode of teaching the classics and mathematics less in the abstract form than it used to be? Yes.
2371. You found the school and college books more practical, and tending to create an interest in the subject? I cannot say that of books in my own department. I have the greatest trouble to get any fit for use.
2372. *By the Chairman*: What is the style of your building? The late perpendicular.
2373. Is it simple or ornamental? Very plain indeed. In some parts of the building there is a good deal of ornamental carving.
2374. Who had the designing of the building? The Council advertised for tenders, and from a number of other designs they selected this one.
2375. Did the Council specify what sort of building they wanted? No.
2376. They left the style altogether to the architect? Yes. The designs sent in were, I believe, of the most various description.
2377. Are you aware that the Council deemed it advisable to have great attention paid to the style of the building with the view to impart a degree of taste to the minds of the youth attending the University? I think they did; they selected what I think the best of the designs, as far as I can judge from what I have heard.
2378. Have you seen the University here? Yes.
2379. Is your building upon the same scale or design? Our building is not nearly so handsome.
2380. Is your hall equal to ours? That portion of our University is not built; we mean to have a hall and library, with additional lecture-rooms for medical and other schools.
2381. There is a free library in Melbourne, I think? Yes.
2382. Is that attached to the University? No.
2383. Is the library of the University open to the public? Yes; but the attendance is small.
2384. Is it intended to be a large library? Yes.
2385. Is it intended to be open to the public like the free library? Yes. Of course there is little attendance, because the character of the books is almost entirely technical. The public library in Melbourne is generally quite crowded.
2386. *By Mr. Cape*: Are we to understand you to say that there are thirty-eight non-matriculated students attending the law lectures? Yes.
2387. *By Mr. Plunkett*: What is the entire estimate for the University when completed? Well, I am not aware that there has been any such estimate. The design has been much altered from the original one; the portion now built is not in accordance with the first design, and the remainder certainly will not be so.
2388. You say the cost up to the present time has been £60,000 or £70,000? When I say so, I am speaking rather at random.
2389. That amount does not include the cost of the front, which is to be the handsomest part of the building—do you think it will require as much more before the building is completed? I think it will take twice as much more. We have not the advantage you possess as regards the supply of stone. We have only the basalt or blue-stone, which is scarcely fit for buildings that require facing.
2390. Is the building all of stone? All of stone. The body of the building of blue-stone, faced

W. P. Wilson,
Esq., M.A.

7 Feb., 1860.

- W. P. Wilson, Esq., M.A. faced with free-stone from Kangaroo Point, Tasmania. We have now, however, found some good building stone in Victoria.
- 7 Feb., 1860. 2391. *By the Chairman*: Have you any students from the neighboring Colonies? We have none now; two years ago we had one from Tasmania.
2392. None from this, the old Colony? No, I think not.
2393. None from New Zealand? No.
2394. *By Mr. Cape*: You have admitted some of our professional men as members of the University? Yes, *ad eundem gradum*.
2395. The degree to be obtained without attendance? If satisfactory evidence can be shewn that he has that degree. We also admit students who have prosecuted part of a course to the same standing in our University. We have students from Dublin, Edinburgh, and Oxford.
2396. To any resident who had not distinguished himself in the sciences would you give the honorary degree? We can give the honorary degree to none except to graduates of another University. The tenth clause of the Act of Incorporation states, that the Council shall have power to confer, after examination, certain degrees, and that it shall be lawful to admit, without examination, graduates of other Universities.

THURSDAY, 16 FEBRUARY, 1860.

Present:—

MR. CAPE,
MR. JONES,

MR. WINDEYER.

DR. LANG,
MR. PLUNKETT,

THE HON. TERENCE AUBREY MURRAY, ESQ., IN THE CHAIR.

The Honorable John Fletcher Hargrave, Esq., (a Member of the Legislative Council, attending by leave,) called in and examined:—

- The Hon. J. F. Hargrave, Esq., M.L.C. 2397. *By the Chairman*: You deliver lectures on law in the Sydney University? I would rather say upon jurisprudence.
- 16 Feb., 1860. 2398. Have you a regular class there? No; the class put down their names at the beginning of the session. I was originally appointed only for the year 1859, rather as an experiment; and the class for this year is as yet unformed; but I believe it will be formed on the 2nd of March, if at all. I undertook to the University to deliver twenty lectures in the course of the year 1859; but the formation of the class was entirely the act of the pupils themselves; if they did not choose to form a class there would be no lectures.
2399. Were the lectures well attended? At first they were—about thirty attended.
2400. When did you deliver the last lecture? On the 23rd of December. At the close of the lectures only some five or six attended.
2401. To what do you attribute the falling off? A great many causes. First, the distance of the University from Sydney; and the second, and, I believe, the chief cause was, I had fixed my lectures in the two latter terms of the University course, when the students were very busy attending the usual curriculum of the University, with a view to their degrees; and there being no inducement of that nature to attend my lectures, as the time for the examinations drew near they ceased to do so, because they could not give sufficient attention to my lectures without endangering their position in the classical and mathematical course. For that reason I have this year fixed the lectures in the first and second terms, instead of in the second and third; so that my course will be finished before they are in sight, as it were, of the Christmas examinations.
2402. But you think the main cause of the falling off in the attendance is the distance of the University from the populous parts of Sydney? I think it was. I was constantly told that if I had been delivering lectures in the Supreme Court, or any place as central as that, there would have been a much larger attendance; and I think so myself. I endeavored to make the lectures as much as possible attractive in their character and popularly useful, consistently with a University course,—dealing with principles rather than with practice, and putting the students into a correct course of reading upon the subjects touched upon; and I am happy to say that the latitude the Senate were good enough to allow me in treating the subjects enabled me to make the lectures as popular as lectures on jurisprudence were likely to be, without making them unworthy of the University.
2403. Were the students who attended matriculated in the University? I think ten or twelve of them were. Mr. Kennedy, the registrar, attended entirely to that. At the beginning of the lectures I did not even know the faces of most of those who attended.
2404. Were the arrangements at all dependent on yourself? No; at the beginning of the course I was told it would be better for me to fix an evening hour, so as not to interfere with the lectures of the other professors, and, therefore, I fixed the Monday evenings, which suited me, and I believe the gentlemen who attended; but it made the course necessarily ancillary to the general studies of the University.
2405. Can you offer any suggestion at all as to any improvements that would lead to your lectures being better attended, or any improvements whatsoever in connection with the subject of lectures on jurisprudence? No, I do not see anything that could be altered, as
University

University lectures must be delivered there. The lecture room accommodation is very good, and everything that could be done is done, so far as the University is complete. The road approach to the University is not complete, and there is some inconvenience on that account; but I think that if the University grounds were complete and well lighted, so that carriages could go straight up, that might have an effect upon the attendance.

The Hon. J.
F. Hargrave,
Esq., M.L.C.
16 Feb., 1860.

2406. *By Mr. Windeyer*: I suppose the evening hour suited the non-matriculated students? Yes; the few that came there.

2407. *By Dr. Lang*: Did any of the students complain of the distance? Those who were not students in the University complained of it very much; they said that, coming out there for an hour's lecture, and returning, took up two or three additional hours of time which was valuable to themselves.

2408. *By Mr. Plunkett*: What hour in the evening did you fix? At seven o'clock.

2409. Were not some of the nights on which you lectured very dark, and sometimes, also, very wet? Yes. The Sydney students used to charter an omnibus to bring them out; and when the road was very bad, it was, of course, inconvenient.

2410. *By Mr. Cape*: How many non-matriculated students attended your lectures? I think, at the beginning, there were fifteen or sixteen non-matriculated students, and ten or twelve who were members of St. Paul's College.

2411. *By Dr. Lang*: Were the non-matriculated students gentlemen connected with the legal profession? Some of them were, and others with literary pursuits.

2412. Do you think it desirable for the Legislature to make it compulsory on candidates for the bar, and the legal profession generally, to attend courses of lectures such as these? We had that subject under consideration to some extent in the Legislative Council a week ago, and, I think, in the present state of the profession, in both branches, it is not advisable for either branch of the profession to have more impediments thrown in the way of the admission of candidates, until the whole system of legal education is placed on a more permanent footing.

2413. *By Mr. Windeyer*: Do you think it advisable to allow examinations in law at the University to count instead of examinations by the ordinary board of examiners for the bar? In that case I should be obliged to alter my course, because it would throw on me a much wider course of instruction than any University lecturer would have to adopt in England. The knowledge that is necessary to pass an examination to practise the law is quite different from that which is to be required of a member of the University as part of the University course. If attendance upon my lectures were to be a passport to the bar, or to the position of an attorney, in any way, I should have of course not merely to direct their studies into certain books, and lecture upon leading points to guide them, but I should feel myself bound to enter into details of professional learning and practice.

2414. They would have to be lectures of a more technical kind? Yes; of course professional lectures and lectures in the practice of the profession, are both totally different from University lectures.

2415. *By Mr. Plunkett*: They have lectures of that character at the inns of court at home now? Yes, but those are legal Universities, so to speak, and the work is divided among several barristers. There are separate lectures on real property law, on equity practice, on common law, and in all the various subjects on which examinations are required. The lectures at the inns of court are totally different in character from University lectures.

2416. *By Dr. Lang*: Those subjects would not require to form part of a course of University lectures simply for the education of gentlemen? No, not in the slightest. The lectures at the inns of court would be quite technical and professional. Neither at the King's College, London, nor at the London University, nor at Cambridge, would any lectures of that kind be provided, because such information would be literally useless to nearly all of the students.

2417. *By Mr. Cape*: You spoke of the ordinary studies of the University preventing the attendance on the law lectures—could not that be obviated by some arrangement? I think it will this year, by fixing my lectures in the first and second terms, instead of the second and third, because in the first and second terms they have time to attend at that hour in the evening, without interfering with their other studies, and it is not a burden to them. I used to stop half an hour or so conversing with those who chose to remain after the lecture was over, and there was no inconvenience felt at first; but when it came close to Christmas the students found that they could not spare the time on account of the necessity for hard study in those other subjects upon which they were to be examined.

2418. Were any of them studying for a degree in law? After the close of the course I was told they were. But as to what position my lectures would occupy with regard to a degree I have no knowledge at all. It was merely an experiment, to see what sort of lectures could be delivered. Until the close of the course in December, I was not aware that any of the students attended, with the expectation of these lectures having anything to do with their getting their degrees.

2419. The intention of the University is made manifest by that portion of the calendar under the head of Faculty of Laws? Those gentlemen who attended my lectures last year would, it appears from this, be entitled to the benefit of that attendance in taking an L.L.B. degree. The reason they did not pay so much attention to them was, that the lectures were entitled lectures on general jurisprudence and not on law. When I wished to alter them at the beginning, to make law lectures of them, I was told that that was not within the scope of the University. Although I gave my lectures, and in fact could give them, no other than a practical character, there were many subjects into which I could not enter under the head of jurisprudence, that I might have taken up under the head of law.

2420. Then you are not actually recognised as a professor of law in the University? Certainly not. I was merely appointed as *reader* in general jurisprudence for that one year as a temporary arrangement.

2421.

- The Hon. J. F. Hargrave, Esq., M.L.C.
16 Feb., 1860.
2421. The arrangements for the study of the law are not fixed yet? No. By the letter appointing me I was a distinctly appointed as reader in general jurisprudence for the year 1859. Of course what arrangements the University authorities make with the students I had nothing whatever to do with.
2422. *By Dr. Lang*: I presume you would consider a course of lectures on jurisprudence, such as you have been delivering in the University, as a very important part of University education,—that is, for the education of gentlemen? I endeavored to make them so. But the usual branches of a University education, the classics and mathematics, seem to me more necessary. I know they were most valuable to myself; I did not enter into the study of the law at all until after I had passed through the usual course of study in classics and mathematics, and taken my B.A. degree at Cambridge; and I do not think it would have done me any good if I had attended lectures on law before that time. I do not think a man can, while busy studying Latin, Greek, and mathematics, give sufficient time also to the study of the law as a profession.
2423. *By Mr. Windeyer*: Your idea is that the object of University education is to train a man's mind in such a manner as to enable him to acquire afterwards any professional knowledge he may devote himself to? Yes; and I treated my lectures more as a means of disciplining the mind than as giving information.
2424. *By Mr. Plunkett*: I believe you are one of the editors of Blackstone's Commentaries? Of the 21st edition in 1844, I edited the first volume on constitutional law and social and political rights, and that part of the third volume which relates to equity proceedings.
2425. *By Mr. Windeyer*: I believe you are also the author of a treatise on the Thellusson Will Act? Yes, on the Thellusson Act, which was rendered necessary by Thellusson's will.
2426. *By Mr. Plunkett*: Then these subjects have been long familiar to you? Yes. The greatest difficulty I felt in composing the lectures was in keeping the attention of the students down to the particular branch of the general subject before me, so as to give a general course in twenty lectures upon jurisprudence.
2427. I believe you have delivered some lectures of the same kind before your connection with the University? Yes, I delivered one at the School of Arts in Sydney, and one at Parramatta.
2428. They were published, I believe? One was published—the first one.
2429. What plan did you follow in the twenty lectures? I have published a Prospectus for this year, which I have here; I do not know how I can explain my plan better than by handing in this to you. (*The witness handed in the same. Vide Appendix.*) You will observe that I have divided the subjects into twenty lectures and arranged them in such a manner that the minds of the students will obtain a connected idea of general jurisprudence in the whole course. Having given an introductory lecture, I then take each subject and treat it as fully as I can, dealing generally with principles, and also referring the students to books such as carry out those principles. For instance, the first lecture on constitutional law explains the definition of a constitution, and the object of constitutional forms of government. I then read extracts from De Lolme, and the usual books on those subjects, explaining them so as to point out the chief land marks of constitutional law. And so with the different other subjects, taking all the topics out of Blackstone's Commentaries, because, according to the principles I laid down to the students in my first lecture, there is no book in the English language, or by any other legal writer that I ever read, to equal the plain text of Blackstone's Commentaries as a foundation, being both attractive in style, and very correct for the law as it then stood. What requires altering down to the present time I pointed out in each case. I pointed out shortly that part of Blackstone which referred to each subject; but when I found myself entering into professional details, or topics at all, I always struck out the passages and kept to first principles.
2430. Some of the lectures, I presume, were necessarily of a more popular character than others? One would think so; but, looking back to the notes I have of them, I could not say that one was more popular than another in its character.
2431. I mean that one, from its heading, would be more likely to attract an audience than another? Perhaps so, if they looked at the heading alone; but I treated every subject quite as popularly as I could do under the circumstances.
2432. You do not think the different subjects had anything to do with the falling off in the attendance, or the irregular attendance? Not materially, certainly. Perhaps the first four lectures on constitutional law and legislative and judicial systems might have been, as introductory lectures, a little more attractive; but after that, from "Justice of the Peace" down to "Masters and Servants," they were much of the same character.
2433. In fixing your lectures in the evening had you any reference at all to the state of the moon—whether there was light or not? Not the slightest; I took it I was limited to the Mondays.
2434. It is likely that those who would have been otherwise inclined to attend the lectures would be very much affected by that consideration? Yes.
2435. *By Mr. Cape*: Might not the attendance also be affected by the fact of the lectures being delivered not having been made known to the public? I do not think that materially affected it.
2436. For instance, on Justice of the Peace, do you not think there would be several who would attend a lecture of that kind? There might be.
2437. *By Mr. Plunkett*: How were the lectures made known? Only by being put up in the University Hall, and being advertised once or twice in the papers before the commencement of the course, but not afterwards.
2438. Do you not think it would be desirable, from time to time, to give notice in the newspapers? No, I do not think there should be any difference made with regard to these lectures.

lectures in that respect; I do not see why they should be advertised by the University authorities any more than the other University lectures.

2439. *By Mr. Windeyer*: Do you think there would be any good done by people coming, in a desultory way, to one or two lectures? If persons wished to take up the study of the law, these lectures would not be more than an introduction. A knowledge of law must be acquired, not from lectures, but by really hard study. Such lectures as these might put a student in a right course of reading just at starting on any one subject, or refresh the mind and memory afterwards, but they would form a very small part of the study of the law.

2440. *By Mr. Plunkett*: Is it your intention to publish the lectures? That was my intention this next year. I intended at the end of this year to resign my appointment, and then put my lectures in a shape for publication as quickly as I could, thinking they would in that way be much more useful, as they would be accessible throughout the Colony. That was my intention in first accepting the temporary appointment. I found that there was not much chance of such a number attending these lectures as would produce any sensible effect on education.

2441. *By the Chairman*: Was there any extra charge for your course of lectures to non-matriculated students? The fee was one guinea to members of the University, and two guineas to those who were not.

2442. I suppose you became acquainted with all the gentlemen who attended the class? Yes, with all those who attended for any length of time.

2443. To what station in society did they generally belong? I think the majority of those who were not members of the University were articled clerks to attorneys in Sydney.

2444. Did you observe any desire at all, on the part of any persons supposed to be connected more directly with the great masses of the people, to attend these lectures? No, I did not. At first I observed that there were ten or twelve students who were members of the University, and then I think there were amongst the rest four or five gentlemen, articled clerks, whom I know by sight.

2445. The subject is one of great general interest? Yes, I think so.

2446. It is a matter of great interest to every private citizen? Yes, I think it is of incalculable importance to every citizen to have a clear idea of the foundations on which social and political rights rest.

2447. *By Mr. Cape*: Would it not be an advantage to have an inn in Sydney, connected with the University, at which lectures could be delivered? That subject connects itself with the present difficult question of providing the Colony with regularly trained members of all the professions; but I do not see my way clear to do it. I doubt whether the Colony is in a position to establish an inn of court.

2448. I mean something that would afford facilities of receiving instruction not only at the distant University, but also in Sydney itself—for instance, lectures in a chamber at the Supreme Court, or some other public building? I do not see how the mere delivery of lectures would do much good in that way. If it is to be professional education, then it must be done by the profession itself uniting and supplying other means of education. The first step, with regard to the bar, would be the establishment of a proper library, and the members of the bar meeting together, either once a month or at other intervals, and through this association with each other, meeting gentlemen who wish to be admitted to the bar. That is, in effect, establishing an inn of court.

2449. My inquiry was not so much in reference to the profession of the bar as to the minor law departments, and particularly to the means of supplying such general information as magistrates might be supposed to require? I think what the magistrates chiefly want is, better information on the statute law of the Colony; they have no means of getting complete copies of the statutes they have to administer as Justices of the Peace. From my experience of the Colony, I should say that there are copies of very few of the statutes that have to be carried out, to be found at the different benches; and, therefore, the administration of justice is almost natural justice rather than anything else. If they were supplied with the Colonial statutes they have to administer, I am quite certain there is such acuteness and general knowledge amongst the magistrates throughout the Colony, as would enable them to administer the laws properly. The publication of any lectures would be very little substantial advantage to the Colony generally, compared to disseminating the laws themselves. That is where the foundation should be laid. Take for example my lecture on "Justice of the Peace," founded on Sir John Jervis' Acts: I explained to the students how those Acts came to be adopted in this Colony, and their general outline; but I was obliged to tell them that there were no copies of the Justices' Acts to be had in the Colony.

2450. *By the Chairman*: You do not mean that there is no copy of Sir John Jervis' Acts in the Colony? No published copy; they are out of print. They are to be found in Nichols's edition of the Administration of Justice Acts; but that is out of print. Callaghan's edition of the Acts of Council is also out of print. There are other Acts which ought to be on every magistrate's table, and would be so in England. Every Bench of Magistrates should be supplied by the Government. The foundation of the mistakes made by the magistrates is that they have not got the law before them.

2451. *By Mr. Plunkett*: You are one of the law officers of the Crown? I have been Solicitor General for some time.

2452. In that capacity you have many opportunities of knowing the difficulties magistrates feel for want of books? Yes, we are constantly referred to, not only by magistrates, but by professional gentlemen, Clerks of the Peace, and others.

2453. Mr. Nichols's book has been out of print for some years? Yes.

2454. Do you know what books they usually have at the different Benches throughout the Colony? Generally a few loose copies of Acts of Parliament, odd parts of Callaghan, and

The Hon. J.
F. Hargrave,
Esq., M.L.C.

16 Feb., 1860.

The Hon. J. a few statutes which they now and then write up for and obtain ; but nothing like a complete set of the statutes.

F. Hargrave,
Esq., M.L.C.
16 Feb., 1860.

2455. What remedy would you propose? The remedy I would propose would be a selection from the existing laws, exactly as they stand in Callaghan, and subsequently of such Acts as are administered by justices, those which are out of print being reprinted, and a distribution to every magistrate when completed.

2456. Are you aware that Mr. Callaghan's book which does not come up beyond 1850, has been out of print for several years? Yes; I had the greatest difficulty in getting a copy myself two years ago.

2457. *By Mr. Cape*: You would recommend that the Government should edit such a compilation as you have been speaking of? Yes, I have constantly pressed it on the attention of the Government, and there is a small sum on the Estimates now to provide for extra assistance. Every clerk we have in the office is occupied with carrying on the business of the office, and there is not a single moment to spare for arranging or re-printing these statutes.

2458. *By Mr. Plunkett*: Do you not think that, in these circumstances, some officer belonging to the Government should advise the magistrates? No, I think not. It would throw upon the Crown Law Officers a constant mass of work that it would be impossible to get through. They now ask questions that I am quite certain they would not ask if they had the last Acts of Parliament before them.

2459. But in the present state of circumstances, as you have described them, do you not think it is the duty of the Government to arrange that, until the want is supplied, some officer of the Government should give opinions, not only in fairness to the magistrates themselves, but also in justice to the public? Not exactly so; because this deficiency of information on the part of the magistrates might be cured by themselves to a great extent. There are many of these statutes that they could get from the printers if they choose. There is some want of will on their part.

2460. In the case of those who live at great distances from the benches at which they administer justice, even if they had the books at their own houses they would not have access to them for the occasion? It should be the duty of the clerk of the bench, as it is in England, to have the statutes on the table.

2461. And the duty of the Government to furnish them to the clerk? Yes; I think it is the duty of the Government to furnish every public officer with the laws he has to administer. It does not come so much under my notice as under that of the Attorney General, but I believe a great many of the questions, on which advice is asked for from the Crown Law Officers, would not be sent up to Sydney if there were a better supply of books—perhaps in nine cases out of ten. On the general principle, it does not seem to me to be right that cases pending before a Bench of Magistrates should be subject to the decision of a Crown Law Officer, who has not the parties before him. I think it is rather for the magistrates themselves. I do not think it would be done in England—that an accused person should be held to bail or kept in prison until the decision of an officer, holding any such position as the Attorney General does here, could be obtained on some point of law, or requiring further evidence.

2462. Reverting to your lectures, are there sufficient books of reference for your purpose in the library of the University? I was glad to find a very useful set of books there, though they might be added to in a few instances. There is a book on civil law, which is the best for the use of students that could be obtained, and exactly the book I should wish them all to read; and the other books now in the library are very useful books.

2463. *By Mr. Cape*: Is there a complete copy of the Colonial statutes? I did not look into that; I looked rather into the text books. I do not think there are any Colonial books.

2464. Did the students complain of the want of these Colonial statutes? No, not in the least. Not many had the time or inclination to follow me into the authorities; though a few did, perhaps half a dozen. I can state that at the close of the examination those who did attend throughout, some five or six, had a much wider range of information on the subject than I gave them credit for;—they had evidently read a great deal either before or during my lectures.

2465. I presume you have been unable to adopt the practice of giving lectures upon the decisions of the day? I did not enter into those at all. That sort of instruction would be quite professional. A single hour would not be sufficient to give the students any useful information of that kind.

2466. Nor could you adopt the plan of conversations? No, I had not the time for that.

2467. *By Mr. Plunkett*: You have told us that the character of the lectures given to those intended for the profession of the law is quite different from that of University lectures? Yes, perfectly different.

2468. What difficulties do you see in the way of establishing an inn of court? The main difficulty is the apathy of the Colony. If the profession chose to do it there would be no difficulty whatever. It would be only establishing all the barristers together, paying in one sum the rent of all their chambers, and building a common hall and library. I do not think one sixpence more would have to be paid in rent than is paid by the barristers now for their separate chambers; and it would be much more comfortable, and they would have opportunities of associating all the students who might wish hereafter to be admitted to the bar.

2469. If both branches of the profession could join, do you not think it would be very easy and very advisable to form an inn of court? I do not see how the attorneys and articled clerks—though I have a high respect for them in connection with the practice of the profession—could associate on exactly the same terms with the barristers.

2470. They do so, do they not, in the inns of court in London? Certainly not. The benchers of the inn, barristers, and law students all dine together, and at table discuss and talk over questions that have been or are about to be argued. I do not think the practitioners could meet us in the same way that we do among ourselves—as barristers and law students.

2471. In Dublin, at the Queen's inns there, judges, barristers, and attorneys, all dine in the same room, but in different divisions of the hall; they all have access to the same library, and all meet on the same terms—do you see any objection to its being so here? I should not have the slightest personal objection. I only say that in London it was just the opposite. The bar being associated in all its branches in the four inns of court, and the solicitors and attorneys in the law institution.

2472. *By Mr. Cape:* Was not the law society commenced in a similar way? Yes. I believe it was established as a separate inn for attorneys and solicitors, and had statutory powers by recent Acts of Parliaments; it has done a great deal of good for the profession in London; and has made the attorneys and solicitors of London as completely an inn of court in their way as the barristers are in theirs;—that is, all members of that branch of the legal profession in London became members of the law institution, and it was considered something extraordinary for anyone not to be a member of it.

2473. *By Mr. Plunkett:* Attorneys can be members of the inn of court if they like to add their names? Not that I am aware of. I believe they can, by taking their name off the roll of attorneys for two years before entering at the inn.

2474. And special pleaders also who are neither barristers nor attorneys? Yes.

2475. *By Mr. Cape:* Have any prizes been announced in your class? I do not know at all what the University may have done. I awarded my own prizes among those who attended—all the students that answered. I think the total number of marks I allowed was 400; and one student obtained 360,—and all considerably above half; and, according to the rule I laid down, they were each entitled to a prize.

2476. *By the Chairman:* Have you directed your attention at all to the general state of the University of Sydney? Not more than it came in my way as reader. I was very anxious to do everything I could to promote its interests. There seem to me to be the elements of great good in the University; and I was very much pleased to have any share in it. They only want to go on completing the building, and in time they will do very well. At present it seems, with the associated Colleges, to be quite in its infancy; but it is a very vigorous infancy, considering the state of the Colony.

The Hon. J.
F. Hargrave,
Esq., M.L.C.
16 Feb., 1860.

APPENDIX.

READINGS on General Jurisprudence, to be delivered at the University of Sydney, during Lent and Trinity Terms, 1860.

THE Reader will lecture during the year 1860, to his junior class who have not attended the lectures of 1859, on the most important of the topics of law comprised in the first and second volumes of Mr. Justice Blackstone's Commentaries, as particularly mentioned on the other side.

To those pupils who attended the lectures of 1859, and who may wish to form a senior class, the Reader will deliver a course of lectures during Michaelmas Term, the topics of which lectures will be hereafter published on the formation of the senior class.

In all these lectures the Reader will endeavour:—

1st.—To convey to his audience a clear and popular exposition of the present state of the law on each of the topics selected, pointing out the most important alterations and modifications of our several legal rights, duties, and liabilities since the time of Blackstone, in the various political, social, and domestic relations lectured upon; with an especial reference to our own Colonial community.

2nd.—To point out to his audience certain land marks, to guide the future progress of the student through the Imperial and Colonial statutes, and other legal authorities, on the several topics of lecture; whereby the various fundamental principles and philosophical maxims of general jurisprudence, on which our English and Colonial laws are based, may be made manifest in all their true harmony and just proportions.

These readings will be delivered at the Sydney University, and pupils desirous of attending can communicate with the Registrar at the University.

FIRST Course of Readings on General Jurisprudence, to be delivered at the University of Sydney, during Lent Term, 1860.

“THERE is not, in my opinion, in the whole compass of human affairs so noble a spectacle as that which is displayed in the progress of jurisprudence, where we may contemplate the cautious and unwearied exertions of wise men through a long course of ages, withdrawing every case as it arises from the dangerous power of discretion, and subjecting it to inflexible rules, extending the dominion of justice and reason, and gradually contracting within the narrowest possible limits the domain of brutal force and arbitrary will.”—*Sir James McIntosh's Discourse on the Study of the Laws of Nature and of Nations.*

The Hon. J.
F. Hargrave,
Esq., M.L.C.

16 Feb., 1860.

LECTURE.	DATE AND HOUR.	SUBJECT.
1	{ Monday, } At 7 p.m.	Introductory Lecture.
2	{ March 5, } "	On our Constitutional Law.
3	{ Mar. 12, } "	On our Legislative System.
4	{ Monday, } "	On our Judicial System.
5	{ Mar. 26, } "	On the office of Justice of the Peace.

Mr. Pierre Dutruc called in and examined:—

2477. *By the Chairman*: What office do you fill in connection with the University of *Mr. P. Dutruc*.
Sydney? French Reader.
2478. You have a regular class of students? Yes, but not very numerous attended; there ^{are} 16 Feb., 1860.
are very few generally.
2479. How many? The average may be five or six.
2480. How long have you been employed in this way? Four years now.
2481. Has the attendance fallen off? Last year it has fallen off.
2482. What do you attribute that to? The hour devoted to my lectures—from one o'clock
to two is a very awkward one, being the hour of lunch.
2483. On what days is the class held? On Tuesday and Thursday.
2484. Has any representation ever been made of the inconvenience attached to the particular
hour? Yes. The students do not attend very regularly, even when they have become
members of my class, because they are always anxious to go away on account of the hour.
2485. Is there any examination of the pupils at any particular time of year? Yes; but
last year, as there were only two pupils attending at the time of examination, it was not
worth while; and one of them even was not a member of the University—consequently, there
was really no competition.
2486. What representation was made to the Senate as to the inconvenience attached to the
hour of meeting? I do not think any public representation was made. It seems to me to
be an important thing for the students to be acquainted with the French language.
2487. Could you suggest any alterations in the present arrangements? If the Senate could
give me any hour from nine to one o'clock, I would make it convenient for myself to attend;
but the hour of lunch is a very bad hour, as the students are already tired with their attend
dance on other classes.
2488. *By Mr. Cape*: What was the number of French students in the early part of your
engagement? Eleven.
2489. What was the hour then? In the first instance from nine to ten in the morning, and
afterwards from eight to nine—the hour from nine to ten being required for classics—and,
unfortunately for the study of French, it was put aside as quite secondary.
2490. Is there any other reader in modern languages besides yourself? There was a
reader in German, but he had only one pupil, and when that pupil left the class was
abandoned.
2491. Then the University is doing very little in modern languages? Yes; but it must be
borne in mind that the attendance is very moderate in all the other classes.
2492. *By Mr. Windeyer*: As long as your lectures are not compulsory, is it not very likely
that the attendance will always be fluctuating? Yes, very likely. I believe it is expected
this year that there will be 23 new pupils, and that will probably have some effect on the
attendance on the French classes, as there are generally more who study French in their
first year. In the third year they want to get their degrees, and therefore they do not attend
to French, being anxious to devote all their time to the study of those subjects in which the
examinations are compulsory.
2493. *By Mr. Cape*: Have you ever had any examination papers amongst the published
papers of the University? Not for French. Modern languages are not considered of great
importance; but I think that is a mistake, in this country particularly, and especially French,
because on the whole Continent they speak French.
2494. There are several French houses in the City? Yes, there are. I believe, also, there
are some of the students who intend to study medicine, and it seems to me that a knowledge
of French would be of some importance to them.
2495. *By Mr. Plunkett*: Are your lectures written before-hand, or delivered orally? We
make reference to the grammar in conversation, and we read French works, and translate
French into English and English into French.
2496. *By Mr. Cape*: Is it not the practice at home to include French among the subjects
for examination? Yes; and I am quite surprised it is not the case here.
2497. *By the Chairman*: You attribute the decline in the attendance mainly to the hour at
which the lectures are delivered? Yes, I think that is the principal cause.
2498. *By Mr. Plunkett*: You say that at one time you lectured between 8 and 9 o'clock in
the morning? Yes.
2499. Did many attend at that time? Yes. In the winter time they did not attend so
regularly, but in the summer the lectures were well attended. Where the University is
situated now it would be difficult to get the pupils to come so early as eight o'clock in the
morning; but any hour from nine to one would do.
2500. How many had you in the class at first? Eleven. I had to form two divisions,
because some were more advanced than others.
2501. *By Mr. Windeyer*: Was not that when you had the classes in Hyde Park? Yes.
2502. The falling off in the attendance has been since you went out to the present University;
Yes.
2503. *By Mr. Plunkett*: How many pupils had you last year? Two only.
2504. What are the fees? Two guineas.
2505. *By Mr. Cape*: How many lectures do you deliver in the week? Three times a week.
2506. Are you paid by fees only, or have you a salary? I have a salary as well as the fees,
which are not very considerable, as you may understand from the number of pupils.
2507. *By Dr. Lang*: You find the distance of the University from the central parts of the
city an objection on the part of the students? I do not think it is much objected to by the
professors, but it is by the students.

SEPARATE APPENDIX.

A.

STATEMENT of Receipts and Expenditure on account of the University of Sydney, from its Foundation to 30th September, 1859.

RECEIPTS.	£	s.	d.	EXPENDITURE.	£	s.	d.
Received from the Government as Annual Endowment	43,750	0	0	Charges, including,—			
„ from ditto for Building purposes	60,000	0	0	Salaries	£24,386	7	8
„ by profit on Debentures issued by Government to the University ..	1,572	15	0	Library	3,484	8	0
„ from Trustees of Sydney Grammar School for purchase of Building in Hyde Park	12,000	0	0	Philosophical Apparatus	860	13	5
„ Fees from Students	4,779	11	1	Furniture	518	9	6
„ Rent of Land let for Pasturage	595	0	0	Sundries, viz.—Printing Examination Papers, Calendars, Catalogues, Stationery, Fuel, Gas, Prize Books, &c., &c ..	5,097	0	4
„ from Private Benefactors :—							
William Fanning .. £100 0 0				University General Scholarships		2,450	0 0
Clark Irving	166	0	0	Shareholders of Sydney College		6,147	10 0
F. L. S. Merewether for Prize Medal ..	10	0	0	Levy Scholarship		712	5 0
				Share of Fees to Professors		3,565	6 0
	216	0	0	Building Committee for Building purposes	66,782	18	10
„ Interest accrued on Debentures representing the Capital of Scholarships and Prizes founded by private benefactors, and which are lodged in Commercial Bank, viz. :—				Architect's commission	3,179	12	0
Interest.				Laying out and enclosing grounds, fencing, trenching, road making, planting, building house for gardener.	1,141	17	10
Barker Scholarship, £1,000	£100	0	0				
Thomson „ 1,000	97	18	8	Balance unexpended, thus :—			
Cooper „ 1,000	100	0	0	In Commercial Bank on deposit at interest	4,000	0	0
Salting „ 400	40	0	0	In Commercial Bank, at credit of Building Fund Account	455	1	7
Levy „ 700	70	0	0	Do. General Account ..	592	19	8
Wentworth prize medal 200	53	5	1				
	461	3	9			5,048	1 3
	£	123,374	9 10			£	123,374 9 10

* MEMO.—The amount of £50,000 was issued to the University in Debentures at that time valued at £92 10s. In consequence of their sudden rise in value they were sold at prices varying from £92 10s. to par.

B.

MEMO.—AUDIT OF ACCOUNTS.

The system of Audit of the University Accounts is as follows, viz. :—A statement of receipts and expenditure is laid on the Table for examination at every monthly meeting of the Senate, and Warrants signed by two Fellows and passed by the Senate are issued, authorizing further expenditure. At the end of every six months the books, vouchers, receipts, warrants, &c., are submitted to examination at the hands of two Fellows appointed for the purpose by the Senate.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

PRESBYTERIAN COLLEGE BILL.

(PETITION AGAINST INTRODUCTION OF.)

Ordered by the Legislative Assembly to be Printed, 24 April, 1860.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the Minister and undersigned Elders of the Scots' Church, Pitt-street, Sydney,—

HUMBLY SHEWETH :—

That notice has been given by Dr. John Dunmore Lang that he intends to introduce into your Honorable House a Bill to incorporate a College, to be called "The Presbyterian College, within the University of Sydney," wherein provision shall be made for the residence and domestic supervision of Presbyterian and other students, and for affording them tutorial assistance in their preparation for the University Lectures and Examinations.

That this preamble is in direct contravention of the Act 18 Victoria, No. 37, which provides for the establishment and endowment of Colleges within the University of Sydney, "in which Colleges, systematic religious instruction and domestic supervision, with efficient assistance in preparing for the University Lectures and Examinations, shall be provided for students of the University," and to endow a College within the University of Sydney in which the Principal would be prohibited from teaching systematic theology, would defeat the great object which the Legislature wished to accomplish by the passing of that Act.

That the proposed Bill would vest the entire management of the College in a Principal and eighteen Trustees to be chosen by the subscribers; and there is no provision in the Bill to prevent the subscribers from choosing men illiterate, immoral, and irreligious.

That the Deed of Grant under which the University holds the land granted as sites for Colleges within the University provides, "That each sub-grant shall be made to five Trustees, of whom two and their successors, one of whom being the Provost or Vice-Provost of the University, shall be nominated by the Senate of the University, and the other two and their successors by the Councils or governing bodies of the Colleges, and the fifth and his successors by the other four."

That the proposed Bill annuls this provision, and states that the Principal and first eighteen Trustees shall be elected by the subscribers to the funds of the College, and that vacancies created shall be supplied by "the surviving subscribers, together with such additional subscribers as shall then have contributed to the funds of the College."

That the constitution of the proposed Presbyterian College appears to be similar to that of the Australian College. In 1832 an Act was passed to enable the Trustees of the Scots' Church to mortgage to Government their allotment, to secure the re-payment of £3,500 lent towards the erection of the Australian College; that sum was lent by Government, and £1,715 paid by shareholders; a College Council was nominated, with

Dr. Lang as their principal; four Houses were built in Jamison-street, and the College was provided with Professors and pupils; but in 1842, only ten years after the loan of £3,500 was granted by Government, Dr. Lang dismissed the Professors, let the College Buildings for lodging-houses, and from that time till the present moment he has enjoyed the rents and appropriated them for his own benefit.

That the proposed Bill would transfer land vested in the Senate of the University in trust for a College in connection with the Church of Scotland to men who may reject the doctrines of that Church and alienate entirely the property from the object for which it was intended.

That your Petitioners earnestly and most respectfully protest against the sanction of the Legislature being granted to the establishment of any College bearing the name of Presbyterian in which provision shall not be made for the systematic teaching of religion in accordance with the Westminster Standards, by competent teachers approved of by the proper judicatories of the Presbyterian Church in this Colony.

That your Petitioners pray your Honorable House will be pleased to take the premises into your serious consideration, and refuse to permit Dr. Lang to introduce the proposed Bill.

And your Petitioners, as in duty bound, will ever pray.

JAMES FULLERTON, LL.D., Minister.

SAMUEL ANDERSON, Elder.

WILLIAM McCLELLAND, Elder.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

PRESBYTERIAN COLLEGE BILL.

(PETITION AGAINST INTRODUCTION OF.)

Ordered by the Legislative Assembly to be Printed, 24 April, 1860

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Presbyterians of the City of Sydney,—

HUMBLY SHEWETH :—

That Dr. John Dunmore Lang has given notice of his intention to introduce a Bill into your Honorable House for the purpose of incorporating a College, to be called “the Presbyterian College, within the University of Sydney, wherein provision shall be made for the residence and domestic supervision of Presbyterian and other students, and for affording them efficient tutorial assistance in their preparation for the University Lectures and Examinations.”

Your Petitioners respectfully submit that the Act 18 Vic., No. 37, commonly known as the “College Partial Endowment Act,” provides for the establishment and endowment of Colleges within the University of Sydney, in which Colleges “systematic religious instruction and domestic supervision, with efficient assistance in preparing for the University Lectures and Examinations, shall be provided for students of the University.” By this Act express provision is made for the teaching of systematic theology, that branch of professional learning not being included in the curriculum of the University, whereas the Bill now sought to be introduced into your Honorable House by Dr. Lang makes no provision whatever for such “systematic religious instruction.”

That the fourth clause of the said proposed Bill is as follows :—“It is expected that there will be, in due course, certain Divinity and other Professors and Tutors appointed within the said College, for the training up of candidates for the Ministry in the Presbyterian Church, as well as for the education of students generally, in certain branches not comprised in the University curriculum; so soon as there shall be one or more such Professors or Tutors appointed, by or with the concurrence of the Board of Management, the said Principal, Professors, and Tutors shall together form a faculty, to be called ‘the Faculty of the Presbyterian College,’ for the maintenance of discipline among the students, and for the regulation of all matters connected with the business of education in the College.”

Your Petitioners respectfully submit that “systematic religious instruction”—that which is especially contemplated in the Act 18 Vic., No. 37—is of such paramount importance, that provision for its being imparted to students, in such an institution as “the Presbyterian College,” ought not to be a contingency left to uncertain expectation, the main object of the said Act—18 Vic., No. 37—being, to secure, by the authority of law, that such “systematic religious instruction” shall be imparted to the students of the University attending the respective Colleges receiving the benefits of the said Act.

That the said Act—18 Vic., No. 37—proceeds, on the supposition and actual knowledge, both of its framers and of the Legislative bodies passing and confirming it, that the University is precluded, by its constitution, from all teaching on the subject of religion;

that this deficiency was to be supplied by Colleges within the University;—and hence it is an express provision in the said Act that “systematic religious instruction” shall be imparted in every College erected in terms of the said Act. And, therefore, your Petitioners cannot but view, with deep anxiety, the entire contravention of the chief object of the said Act, by the Bill now sought to be introduced into your Honorable House, and they feel constrained, under an imperative sense of duty, respectfully to protest against its introduction into your Honorable House.

That your Petitioners are confirmed in this view of the Bill now sought to be introduced into your Honorable House by Dr. Lang, by seeing that in the whole of the said Bill, while expectation is held forth of there being, at some future period, Divinity and other Professors and Tutors appointed within the said College, there is no mention whatever made of the manner in which such Professors of Divinity are to be elected, or what shall be their connection, if any, with the Presbyterian Ecclesiastical Judicatories of this land; for your Petitioners would respectfully remind your Honorable House, that it is utterly at variance with the spirit and provisions of Presbyterianism to acknowledge or support Professors in Divinity, especially in any College, without the said Professors being amenable to Presbyterian jurisdiction; and, therefore, your Petitioners would respectfully and earnestly pray your Honorable House not to sanction any such Bill for the Incorporation of a “Presbyterian College” as would establish, in the very constitution of the College, what would thus be so thoroughly repugnant to all that is Presbyterian, while the same Bill is also, in its main provisions, in direct violation of the Colleges Act, 18 Vic., No. 37.

That the Bill now sought to be introduced into your Honorable House proposes to vest the entire management of the College in one Principal and eighteen Trustees, to be chosen by the subscribers, while no qualification of such Trustees is provided for; and thus the management of such College might fall into the hands of persons irreligious and otherwise wholly incompetent to exercise such a trust for the benefit of an Institution of so great importance. Your Petitioners press upon the attention of your Honorable House, that, according to the proposed Bill, the said eighteen Trustees and one Principal (of whose qualification there is no mention) will form a Board, who shall have the exclusive right to appoint or dismiss Professors of Divinity and other Tutors, from the decisions of which Board there will be no appeal; and this, your Petitioners submit, is contrary to every acknowledged principle of right dealing with kindred institutions in every Christian land. Your Petitioners feel thorough assurance that none of the other religious bodies erecting Colleges within the University of Sydney would accept, even as a free gift, any College erected on such erroneous principles.

That in the Deed of Grant to the University of Sydney, of certain land in trust for certain Colleges, a portion of the said land is vested in the Senate of the University, in trust for a “College in connection with the Church of Scotland;” but the Bill which Dr. Lang desires to introduce into your Honorable House proposes to vest the said land in Trustees, who may (for anything which the said Bill contains) be wholly antagonistic to the interests of the Church of Scotland, and hold doctrines contrary to her standards, and be parties to proceedings totally subversive of her discipline, while they would be in no way accountable to her recognised Judicatories. The proposal is altogether unprecedented—that the conduct of an Institution of so much importance as a College, wherein “systematic religious instruction” will be imparted to the future ministers and people of the Presbyterian Church in this land, should be intrusted to an irresponsible and absolute Board, composed of persons, for whose moral character, literary qualifications, soundness in the faith, there is no guarantee. It is true the proposed Bill specifies in the eleventh clause—“All Presbyterians who profess to hold the Westminster Confession of Faith and other Standards”—but in this, which appears to be a security, there is no such guarantee as would satisfy the leading bodies of Presbyterians in the Colony; for it is well known that Presbyterian Unitarians, both in England and Ireland, “profess to hold the Westminster Confession of Faith and other Standards;” and, in the event of any question arising as to what is meant by “professing to hold” the said Confession of Faith and other Standards, such question must be finally decided, as proposed by the bill of Dr. Lang, by the said irresponsible and absolute Board of Management.

Your

PRESBYTERIAN COLLEGE BILL.—PETITION.

Your Petitioners beg respectfully and earnestly to press on the attention of your Honorable House, that, although the Synod of Australia and the Synod of Eastern Australia represent more than four-fifths of the Presbyterians of the Colony, and consequently have the largest interest at stake in the erection of a Presbyterian College, not only has the proposed Bill, which is now sought to be introduced by Dr. Lang into your Honorable House, been drawn up without the sanction and knowledge of these two bodies, but the whole spirit and every provision of the said Bill are directly contrary to the deliverances which these two bodies have published, from time to time, on the subject of the erection of a Presbyterian College.

Your Petitioners, therefore, humbly pray that your Honorable House will take the premises into serious consideration, and refuse permission to Dr. Lang to introduce any such Bill for the incorporation of a Presbyterian College within the University of Sydney as that of which he has given notice.

And your Petitioners, as in duty bound, will ever pray.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 27. FRIDAY, 14 OCTOBER, 1859.

12. St. Andrew's College Bill :—Mr. Hay moved, pursuant to notice,—
(1.) That the St. Andrew's College Bill be referred to a Select Committee.
(2.) That such Committee consist of Mr. Byrnes, Mr. Elliott, Mr. Laidlaw, Revd. Dr. Lang, Mr. Macalister, Mr. Macleay, Mr. Morris, Mr. McArthur, Mr. Plunkett, and the Mover.
And the Revd. Dr. Lang requiring that the proposed Committee be appointed by Ballot,—
Question,—That the St. Andrew's College Bill be referred to a Select Committee,—
put and passed ;—
Whereupon the House proceeded to the Ballot, and the Speaker declared the following Members to be, with the Mover, the Committee duly appointed, viz. :—The Revd. Dr. Lang, Mr. Macalister, Mr. Black, Mr. Macleay, Mr. Wilson, Mr. Richardson, Mr. Dickson, Mr. Robertson, and Mr. Byrnes.

VOTES No. 36. FRIDAY, 2 DECEMBER, 1859.

8. Presbyterian College Bill :—The Revd. Dr. Lang moved, pursuant to notice, That the Report of the Select Committee of the late Legislative Assembly on the Presbyterian College, be referred to the Select Committee on the Presbyterian College, for their consideration.
Debate ensued.
Question put and passed.

VOTES No. 40. FRIDAY, 9 DECEMBER, 1859.

16. St. Andrew's College Bill :—The Revd. Dr. Lang moved, pursuant to *amended* notice,—
(1.) That Mr. Black, having ceased to be a Member of the Select Committee on the Presbyterian College, on his acceptance of Office and vacating his Seat in this House, be re-appointed to that Committee.
(2.) That Mr. Gordon and Mr. Parkes be appointed as Members of the Presbyterian College Committee.
Question put and passed.

VOTES No. 44. FRIDAY, 16 DECEMBER, 1859.

7. Attendance of Member of Legislative Council :—Mr. Hay moved, without previous notice, That the following Message be carried to the Legislative Council :—
MR. PRESIDENT,
The Legislative Assembly having appointed a Select Committee to "inquire into and report upon the '*St. Andrew's College Bill*,'" and that Committee being desirous to examine the Honorable John Alexander, Esq., in reference thereto, begs to request that the Legislative Council will give leave to its said Member to attend accordingly, on such day and days as shall be arranged between him and the said Committee.
Legislative Assembly Chamber,
Sydney, 16 December, 1859. Speaker.
Question put and passed.

VOTES No. 45. TUESDAY, 20 DECEMBER, 1859.

5. Attendance of Member of Legislative Council :—The Speaker reported that during the Debate of the Question last before the House, the following Message was received from the Legislative Council :—
MR. SPEAKER,
In answer to the Message from the Legislative Assembly, dated the 16th instant, requesting leave for the Honorable John Alexander, Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly to inquire into and report upon the "*St. Andrew's College Bill*," the Council acquaints the Assembly that leave has been granted to its said Member to attend and be examined by the said Committee if he think fit.
Legislative Council Chamber,
Sydney, 20 December, 1859. W. W. BURTON,
President.

ST. ANDREW'S COLLEGE BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and Report was referred, on 14th October last, "*St. Andrew's College Bill*;" and to whom were also referred, on the 2nd December last, "*Report of the Select Committee of the late Legislative Assembly on the Presbyterian College*;" on the 2nd instant, a "*Petition from certain Presbyterian Ministers against the passing of any Bill for the establishment of a Presbyterian College that shall be open to the objections stated in the Petition*;" and again on the 3rd instant, a similar "*Petition from certain Presbyterians of the various branches of the Presbyterian Church in the City of Sydney*," Report to your Honorable House:—

That, having examined certain witnesses in favor of the Bill (whose evidence will be found appended hereto), your Committee proceeded to deliberate on the Preamble; and the Question being put from the Chair—"That this Preamble stand part of the Bill,"—it was negatived.

JOHN HAY,
Chairman.

*Legislative Assembly Chamber,
Sydney, 29 February, 1860.*

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 13 DECEMBER, 1859.

MEMBERS PRESENT :—

Mr. Hay,		Revd. Dr. Lang,
Mr. Byrnes,		Mr. Wilson.

John Hay, Esq., called to the Chair.

The Clerk, by direction of the Chairman, read the Petition praying for leave to introduce a Bill to incorporate St. Andrew's College.

Committee proceeded to deliberate, and Dr. Lang having produced a letter addressed to the Committee—

Motion made and Question (*Mr. Wilson*)—That the letter be received and read by the Clerk—*carried*.

The letter of Helen M. Baillie was then read by the Clerk as follows :—

To the Honorable the Select Committee of the Legislative Assembly on the Presbyterian College.
Sydney, 13 December, 1859.

Gentlemen,

I beg to inform you that my late husband, Mr. John Hunter Baillie, Secretary to the Bank of New South Wales, who died on the 25th of March, 1854, left the whole of his property, subject to certain legacies and my own life-rent, for the establishment and endowment of two Professorships in a Presbyterian College in Sydney—the one for the Oriental and Polynesian Languages, and the other for the English Language and Literature.

I have reason to believe that my late husband's property will be amply sufficient for the endowment of these two Professorships, whenever it shall please Divine Providence to remove me from this present world. But as I am earnestly desirous that something should, if possible, be done during my own lifetime to carry out the desires of my late husband, I propose to contribute, of my own proper funds, towards the establishment and endowment of the said College, the sum of five hundred pounds, payable by instalments of one hundred each; and I hereby authorise my relative, the Rev. Dr. Lang, to assent on my behalf to whatever mode of appropriating the said amount, either for buildings or for endowment, that may appear to him and the Committee expedient and necessary.

Hoping and trusting that the Divine blessing will crown your efforts for the establishment of an institution that shall prove in all future time of incalculable benefit to the Presbyterian youth of this Colony,

I am, &c.,
HELEN M. BAILLIE.

Deliberation resumed,—and
Committee adjourned till 16th instant.

FRIDAY, 16 DECEMBER, 1859.

MEMBERS PRESENT :—

John Hay, Esq., in the Chair.

Mr. Wilson,		Mr. Parkes,
		Revd. Dr. Lang.

The Revd. Dr. Lang having produced an extract from the Will of John Hunter Baillie, Esquire, laid the same before the Committee, with a view of having it appended to the letter of Mrs. Baillie received at the last meeting,—it was read by the Clerk.

Motion made and Question (*Mr. Wilson*)—That the Document just read be inserted in the Minutes of this day's Proceedings as an Appendix to the letter from Helen M. Baillie received at the last meeting—*carried*.

APPENDIX.—*I give devise and bequeath* all my real estate and all the rest residue and remainder of my personal estate and effects to my said wife and to my friends Daniel Cooper the younger of Sydney aforesaid merchant and Thomas Buckland of Sydney aforesaid gentleman whom I appoint executrix and executors of this my Will their heirs executors administrators and assigns according to the nature thereof respectively *Upon* the trusts and to and for the ends intents and purposes and with under and subject to the powers declarations and agreements hereinafter expressed and contained that is to say *Upon trust* to permit and suffer my said wife to receive and take the rents issues and profits interests dividends and annual produce thereof to and for her own sole and separate use and benefit for and during the remainder of her natural life *And* from and after the decease of my said wife upon trust to apply the said rents interest and annual produce to the endowment of a Professorship of the English Language and Literature and a Professorship of Oriental and Polynesian Languages in any College which may be established in Sydney in connection with the Presbyterian Church within five years after the decease of my said wife *Provided always* that such Professorship shall not be held by any priest or member of any religious order of the Church of Rome but no other religious test shall be admitted or allowed *Provided further* that if no such College shall be established within the said period of five years then I direct and declare that the trustees or trustee for the time being of this my Will shall stand possessed of my said real estate and residuary personal estate and the funds and securities in or upon which the same may be invested *Upon trust* for the establishment or endowment of a Ragged School or House of Refuge for Destitute Children, &c., &c.

J.

J. Dunsmure, Esq., *Solicitor for the Bill*, called in and examined.

The Chairman having informed the Committee that the Hon. John Alexander, a Member of the Legislative Council, had been requested to attend as a Witness, required the instruction of the Committee as to whether that gentleman should be examined, the usual application for leave not having been sent to the Legislative Council; and the Clerk having produced precedents in favor of the examination being gone into, it was agreed by the Committee that the Chairman should inquire of Mr. Alexander whether he had any objection to give evidence on the subject under consideration, and that gentleman having no objection, the Chairman was instructed to make the formal application for leave this evening.

The Hon. John Alexander, M.L.C., *examined*.

Committee deliberated and adjourned till 22nd instant.

THURSDAY, 22 DECEMBER, 1859.

MEMBERS PRESENT:—

John Hay, Esq., in the Chair.

Mr. Parkes,
Rev. Dr. Lang,

Mr. Wilson,
Mr. Black,

Mr. Gordon.

Present for the Promoters—J. Dunsmure, Esq., *Solicitor*.

The Chairman having called upon the *Solicitor* for the Bill to prove the Preamble by the evidence of Witnesses, and the Revd. Mr. McGibbon being in attendance for that purpose,—Committee deliberated, and decided upon postponing the examination of Witnesses till their next meeting.

Committee adjourned till the first day on which the House may meet after the 23rd instant.

WEDNESDAY, 15 FEBRUARY, 1860.

MEMBERS PRESENT:—

John Hay, Esq., in the Chair.

Mr. Dickson,

Rev. Dr. Lang,

Mr. Gordon.

Present for the Promoters—J. Dunsmure, Esq., *Solicitor*.

The Clerk, by direction of the Chairman, read the Minutes of Proceedings at last meeting.

The Chairman then submitted to the Committee a letter he had received from Thomas Barker, Esq., excusing his attendance as a Witness on this day.

Rev. Dr. Mackay called in and examined.

Rev. Dr. Fullerton called in and examined.

Committee adjourned till Tuesday next, at 11 o'clock.

TUESDAY, 21 FEBRUARY, 1860.

MEMBERS PRESENT:—

John Hay, Esquire, in the Chair.

Mr. Parkes,

Rev. Dr. Lang,

Mr. Gordon.

Present for the Promoters—J. Dunsmure, Esq., *Solicitor*.

The Clerk, at the request of Dr. Mackay, handed in an Appendix affixed by that gentleman to his Evidence, and the Committee having considered the same, agreed that it should be printed in the usual form as an Appendix to Evidence.

The Clerk then, by direction of the Chairman, read the Resolutions of the House dated 2nd and 3rd February, respectively, referring to the Committee:—

1. Petition of certain Ministers of the Synod of New South Wales.
2. Petition of certain Presbyterians of the various branches of the Presbyterian Church in the City of Sydney.

which, having been read, Committee considered the same, and agreed that they should be printed, and entered on the Minutes of Proceedings.

No. 1.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Ministers of the Synod of New South Wales,—

HUMBLY SHEWETH:—

That, in the year 1854, an Act was passed by the late Legislative Council for the establishment of certain Affiliated Colleges in connection with the University of Sydney.

That, as far as the Presbyterians of the Colony were concerned, the Affiliated Colleges Act placed all Presbyterians in New South Wales on precisely the same footing, and regarded them all as equally entitled to the benefits contemplated in the said Act.

That

That your Petitioners have learned, however, that certain Presbyterians, comprising only a small minority of the Presbyterians of New South Wales, have arrogated to themselves the exclusive possession of those rights and privileges which the Act recognizes as belonging equally to all; and have endeavored, by certain unwarrantable proceedings, to exclude from all connexion with the institution and management of the future Presbyterian College certain other Presbyterians, and, in particular, your Petitioners, and the other ministers of the Synod of New South Wales, with their respective congregations; and that with this view they have submitted to your Honorable House a Bill for the Incorporation of a College, to be called "Saint Andrew's College," intended to carry out their own illiberal, sectarian, and exclusive objects; thereby converting into a private institution, for the benefit of a few, what the Legislature intended to be equally available for all.

That your Petitioners are earnestly desirous that a Presbyterian College should be established, in connection with the University of Sydney, on a broad, comprehensive, and liberal basis, in accordance with the intentions of the Legislature, as declared in the Affiliated Colleges Act.

That your Petitioners entertain the following strong objections against the Bill entitled "The Saint Andrew's College Bill" now before your Honorable House, viz. :—

1. They object to the proposed designation, "Saint Andrew's College," as being an unmeaning and sectarian designation, offensive in a high degree to all Presbyterians who reject the principle of State support for religion.
2. They object to the clause in the preamble, "wherein systematic religious instruction, in accordance with the doctrines and discipline set forth in the Westminster Standards, shall be afforded"—first, because it is unnecessary, inasmuch as the clause is already contained in the preamble of the Affiliated Colleges Act; and, secondly, because its retention would imply an approval of the principle of State support for religion—systematic religious instruction being understood by all Presbyterians to signify, not the religious instruction afforded by the father of a family to his children or household, but the instruction afforded by a Professor of Divinity to candidates for the Christian Ministry.
3. They object to the use of the word "Fellows" (in Clause 1), as the designation of a functionary in the proposed College; such a designation being unknown to Presbyterians, either in Scotland or in America, while the future government of the institution, by such Fellows exclusively, would be highly objectionable.
4. They object to any distinction whatever being made in the constitution of the proposed College between ministers of religion and laymen (as in Clause 3); leaving it to the good sense and patriotism of the subscribers generally to choose the fittest persons, whether ministers or laymen.
5. They object to any recognition in the constitution of the proposed College of the existing divisions of the Presbyterian Church (as in Clause 4), such recognition being calculated only to perpetuate such division.
6. They object to the proposal (Clause 5) that the Principal shall always be a minister of religion, as being contrary to the recent Act of the Imperial Parliament for the better government of the Colleges and Universities of Scotland, in virtue of which Sir David Brewster, a distinguished layman, has just been elected Principal of the University of Edinburgh; and as also being offensive to all Presbyterians rejecting the principle of State support for religion.
7. They object to the principle announced in Clause 8, allowing the first office-bearers to be elected by "the subscribers to the funds of the College, in such manner as they shall among themselves appoint"; and they insist that, in order to give the Institution a thoroughly popular character, and to prevent its being over-ridden by a strong money power, every subscriber of one pound shall have one vote, every subscriber of ten pounds shall have two votes, and every subscriber of fifty pounds or upwards shall have three votes, and no more.
8. They object to Clause 9, as being unnecessary, the matriculation of all students of the College in the University being already provided for in the Affiliated Colleges Act; and they further object very strongly to the exemption claimed for such students from attendance on any lectures included in the University curriculum.

Your Petitioners therefore humbly pray that your Honorable House will not consent to the passing of any Bill for the establishment of a Presbyterian College that shall be open to any or all of these objections.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

PATRICK FITZGERALD, Moderator.
JOHN REID, Minister.
WILLIAM CHAUCER, Minister.

Sydney, 26 January, 1860.

No. 2.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Presbyterians of the various branches of the Presbyterian Church in the City of Sydney,—

HUMBLY SHEWETH:—

That, in the year 1854, an Act was passed by the late Legislative Council, for the establishment of certain Affiliated Colleges in connection with the University of Sydney.

That, as far as the Presbyterians of the Colony were concerned, the Affiliated Colleges Act placed all Presbyterians in New South Wales precisely on the same footing, and regarded them all as equally entitled to the benefits and advantages which the Act proposed to confer.

That your Petitioners are earnestly desirous that a Presbyterian College should be established, in connection with the University of Sydney, on the broad, comprehensive, and popular basis contemplated by the Legislature, and are willing to contribute for that object to the best of their ability.

That your Petitioners are strongly of opinion, however, that this object will not be attained by passing into law the "Saint Andrew's College Bill," which is now before your Honorable House, and which they cannot help regarding as being strongly calculated to convert into a private institution, for the benefit and purposes of a few, what the Legislature had intended to be equally available for all.

That your Petitioners entertain the following strong objections to the "Saint Andrew's College Bill," viz. :—

1. They object to the proposed designation, "Saint Andrew's College," as being, in the estimation of Scotchmen and Presbyterians generally, an unmeaning and sectarian designation, besides being offensive to all Presbyterians who reject the principle of State support for religion.
2. They object to the clause in the preamble, "wherein systematic religious instruction, &c., should be afforded"—first, because it is unnecessary, inasmuch as the clause is already contained in the preamble of the Affiliated Colleges Act; and, secondly, because its retention would imply an approval of the principle of State support for religion;—systematic religious instruction being understood by all Presbyterians to signify not the religious instruction afforded by the father of a family to his children or household, but the instruction afforded by a Professor of Divinity to candidates for the Christian Ministry.

3. They object to the proposal to designate certain functionaries in the proposed "Fellows" (as in Clause 1); such designation being unknown to Presbyterians, either in Scotland or in America; while the future government of the institution by such "Fellows" exclusively, would, in their opinion, be highly objectionable.
 4. They object to any distinction whatever being made in the constitution of the proposed College between ministers of religion and laymen (as in Clause 3); leaving it to the good sense and patriotism of the subscribers generally to choose the fittest persons for their office-bearers, whether ministers or laymen.
 5. They object to any recognition, in the constitution of the proposed College, of the existing divisions of the Presbyterian Church (as in Clause 4); such recognition being calculated only to perpetuate these divisions.
 6. They object to the proposal (Clause 5) that the Principal shall always be a minister of religion, as being contrary to the recent Act of the Imperial Parliament for the better government of the Colleges and Universities of Scotland, in virtue of which Sir David Brewster, a distinguished layman, has just been elected Principal of the College and University of Edinburgh; and as, also, being offensive to all Presbyterians rejecting the principle of State support for religion.
 7. They object to the principle announced in Clause 8, allowing the first office-bearers to be elected by "the subscribers to the funds of the College, in such manner as they shall among themselves appoint"; such a proposal being tantamount to the creation of a close monopoly in the hands of the present subscribers; and they insist that in order to give the institution a thoroughly popular character, and to prevent its being over-riden by a strong money power, every subscriber of one pound shall have one vote; every subscriber of ten pounds shall have two votes; and every subscriber of fifty pounds shall have three votes, and no more.
 8. They object to Clause 9 as being unnecessary; the matriculation of all students in the University being already provided for in the Affiliated Colleges Act; and they further object very strongly to the exemption claimed for such students from attendance on any lectures included in the University curriculum.
 9. And they object finally to that part of Clause 15, in which mention is made of "all those Presbyterian Churches which hold and sign the Westminster Standards in their integrity," and insist that it shall be allowable for any Presbyterian to object to that part of the Confession of Faith which authorises the interference of the Civil Magistrate in the concerns of religion, or seems to teach intolerant principles.
- Your Petitioners therefore humbly pray that your Honorable House will not consent to the passing of any Bill for the establishment of a Presbyterian College that shall be open to any or all of these objections.

And your Petitioners, as in duty bound, will ever pray, &c., &c., &c.

Sydney, 21 January, 1860.

[Here follow 248 Signatures.]

Committee deliberated, and the Clerk was instructed to have all the Evidence, together with Minutes of Proceedings, printed and laid before the Committee at their next meeting.

Adjourned till Tuesday next, at 11 o'clock.

TUESDAY, 28 FEBRUARY, 1860.

MEMBERS PRESENT:—

John Hay, Esq., in the Chair.

Mr. Robertson,		Revd. Dr. Lang,
Mr. Dickson,		Mr. Gordon,
Mr. Parkes,		Mr. Wilson.

Present—J. Dunsmure, Esq., *Solicitor*.

Committee proceeded to deliberate on the Preamble of the Bill, and Mr. Dunsmure having withdrawn.

Motion made and Question,—“That this Preamble stand part of the Bill,”—put and negatived.

Chairman requested to report to the House.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

ST. ANDREW'S COLLEGE BILL.

FRIDAY, 16 DECEMBER, 1859.

Present :—

DR. LANG,		MR. HAY,
MR. PARKES,		MR. WILSON.

JOHN HAY, ESQ., IN THE CHAIR.

Mr. John Dunsmure called in and examined:—

1. *By the Chairman:* You are the Solicitor to the Petitioners for St. Andrew's College Bill? I am. Mr. John Dunsmure.
2. Are you likewise one of the Petitioners? No, Sir.
3. From whom did you receive your instructions? From several parties—Mr. Garland, Mr. Alexander, Mr. Barker, and others; four or five different parties at different times. 16 Dec., 1859.
4. From Petitioners? Yes.
5. Are you aware of the fact stated in the preamble with regard to the money? Not of my own knowledge.
6. Was this Bill drawn by you? No, Sir.
7. Then this Bill was handed to you as it stands now? As it stands now.
8. You are not at all responsible for the Bill? No.
9. Have you given any attention to the provisions of the Bill? No; not particularly.
10. Can you inform the Committee who is likely to give us information as to the facts stated in the preamble, or as to the mode in which the Bill was drawn? I think Mr. Alexander, Mr. Barker, or Dr. Macfarlane, would be able to do so.

John Alexander, Esq., M.L.C., called in and examined:—

11. *By the Chairman:* Are you one of the Petitioners in favor of the Bill for the incorporation of St. Andrew's College? I am. J. Alexander, Esq., M.L.C.
12. You are one of the Committee? I acted upon the Committee before being appointed at the public meeting. My name was included amongst others at a public meeting, and I was then legally constituted one of the Committee. 16 Dec., 1859.
13. And have you any knowledge of the amount subscribed for the purpose of establishing this College? I think close upon £8,000 were subscribed some time ago. I have not been making inquiries lately for we have been making no exertions to get subscriptions till the Bill was passed.
14. Has any portion of that money been paid? Yes.

42. Will you have the goodness to state what, in your opinion, is meant by systematic religious instruction, as shortly as you possibly can? Systematic theology I consider to be the exhibiting of the doctrines of revelation in a connected form, shewing the dependence of every doctrine, one upon another, and the defence of them also. It is divided into a great number of subsidiary departments—nor should I say subsidiary, because every department is equally important in itself. The evidences hold a very great share in it. Objections and answers, controversies, history of the Church, study of the original languages in which Scripture was written—all these form branches of systematic theology. It may also signify the setting forth, propounding, and defending of any particular system of religious belief held by particular religious denominations or bodies, such as Popery or Protestantism, Episcopacy or Presbyterianism.

The Rev.
M. Mackay,
E.L.D.
15 Feb., 1860.

43. Do you consider such a College as is proposed to be necessary in this Colony for the teaching of systematic theology as you have stated it? I consider the establishment of such a College as not only expedient, as is stated in the preamble to the Bill, but absolutely necessary—that is if Presbyterianism is to continue to exist in the Colony.

44. Would you, as a minister of the Free Church, consider the teaching of systematic theology, in a Presbyterian College, to the students of your church, to be safe in the hands of a principal or professor not belonging to your own church? Generally speaking I should.

45. You would prefer one of your own church? Certainly I should prefer one of my own Church, and at all events I should require to have some share in the supervision of the work done, that is, to have some share in the visitation of the College. But with such visitation I should consider it perfectly safe, if the Westminster standards were taught fairly and fully.

46. You consider it of importance that Presbyterian students of theology should be brought together within the University of Sydney? Certainly I do; I consider that to be exceedingly important to the acquirements and the personal character and bearing of the students as members of society, and to their usefulness in every respect. In the present state of society I should consider it of very essential importance that they should go through a regular course, both of classical, scientific, and literary, as well as of theological teaching and study.

47. In fact, you consider it almost impossible that Presbyterianism can be upheld in this Colony without a College for the systematic teaching of theology? I do indeed, if you mean by that that we shall be dependent else for the supply of ministers on other churches or other countries. I consider that supply to be of so very precarious a nature that we can never be sure of obtaining it when necessary, and it is always necessary. I do not confine my present observation merely to the necessity of the case; but there is an adaptation on the part of the natives of a country to be ministers in their own country, as indeed is the case in every other pursuit. And I do not know that in the compass of church history there is any instance of a church having long flourished or been useful in any country without the ministers of that church having been natives of the country. I think that to be a very essential consideration in looking to the institution of such a means of education here.

48. You would then expect that this College, if carried through, would be enlarged with additional chairs or professorships in course of time? I should have strong expectations and hopes of that. The endowment of one or two professorships has been, I understand, offered already contingently; and looking to the history of other Universities and Colleges in England, Scotland, Ireland, and in all Europe, so far as I know, it seems to follow almost in the order of nature that in the course of time endowments will fall in into such institutions.

49. *By the Chairman:* What would you look upon as the principal object of the establishment of this College—would you consider it as something distinct from the University? I consider that in the University there is no religious instruction communicated at all; it is systematically excluded; and therefore we cannot raise ministers here without instituting the means, not only to communicate to them, as if in school-boy style, religious instruction, but to have them sent through a regular course of instruction and training in the doctrines of revelation, in accordance with the standards of the Westminster Assembly, which we, as Presbyterians, hold to be essential.

50. Then, I suppose, you look upon the object of the establishment of a College of this sort to be to supply the deficiency, which purposely exists in the University, by affording religious education? Clearly—ministerial education—professional religious education to the future ministers of the Presbyterian Church in this Colony, and that such a College should be, in point of fact, a means of forming the mind, and character, and acquirements necessary to the proper discharge of ministerial functions in our church.

51. When you speak of the endowment of additional chairs, I suppose you mean chairs in connection with theology? I would not confine it to chairs in connection with theology directly, but to bear relatively on theology. I do not see anything in the constitution of the University to hinder any chair being endowed in our College, or any other College connected with any science or art.

52. Do you not think it would be a somewhat objectionable course for the Government, after having endowed the University for the purpose of secular teaching, to endow another establishment in connection with it, also for secular teaching? I would look upon it as an extension or expansion of the system of the University.

53. Then these chairs would not be open generally to all the students in the University? Assuredly they would;—they would be open to all comers.

54. Would there not be something inconsistent in that—having chairs in a particular College, for the very purposes for which the University itself was endowed? Of course, if we instituted chairs that are already supplied in the University with professors, it would be so; but I meant chairs not hitherto instituted, at the period the endowment might come, in the University.

The Rev.
M. Mackay,
LL.D.

15 Feb., 1860.

55. Do you not think it would be better that they should be instituted in the University itself? I should consider them better if instituted in the College. However, I consider that to be a contingency which must be treated when it arises.

56. Do you look upon it that this College should also afford tutorial assistance to students resident there, but attending the University? I should consider that a benefit; but I do not think the tutorial system the best exclusively; I do not think it sufficient for the training of students, particularly theological students.

57. Am I to gather, on the whole, that you look upon this proposed institution as one which would be chiefly useful as an institution for the teaching of systematic theology, according to the Presbyterian standards? Decidedly.

58. Is there not some difference of opinion among Presbyterians as to particular portions of the Westminster standards which have relation to the civil power? There are considerable differences of opinion.

59. How do you propose to get over that? In the Church of Scotland itself, at the time of the acceptance of the Confession as the secondary standard of faith and practice, there was, with respect to the interference of the civil magistrate, even at that time, a saving or explanatory clause inserted, limiting the power of the civil magistrate, or at least tending in that direction; and since that time it is well known there did arise dissents in the Established Church of Scotland, chiefly from individuals and congregations experiencing the evils arising from what those who did dissent considered the undue influence of the the civil power, patronage particularly, and latterly the interference of the Courts of Law. Certain of the bodies dissenting from the Established Church of Scotland consider there is an interference with the private judgment implied in the power given to the civil magistrate in the third paragraph of the twenty-third chapter of the Confession of Faith.

60. Has there not been a union of the different Presbyterian bodies in the sister Colony of Victoria? There has been.

61. How do they get over this difficulty? They have a note explanatory of the civil magistrate's power, setting forth that it does not affect the private judgment of any individual: each can hold his own views upon that point.

62. Has that satisfied the scruples of most of the different Presbyterian bodies in Victoria? Perfectly.

63. Does that union include the greater portion of the Presbyterian body in Victoria? It does. There are a few dissentients from that union, but their number is not great.

64. Do you think there would be any objection to introducing a similar saving clause in such a Bill as this, if it would answer the purpose of obtaining the union of all parties among Presbyterians? I think we should be very cautious as to what extent it is introduced.

65. Have you considered that particular clause to which we have been alluding, in connection with the union of the Presbyterian bodies in Victoria? I have had occasion to consider it very particularly.

66. Do you think it unobjectionable? I do think the explanation of the clause of the 23rd chapter of the Confession—given in the Basis of Union in the Presbyterian Church of Victoria—setting forth that this does not nullify or go against the right of private judgment, or countenance persecution on the part of the civil magistrate, to be altogether satisfactory.

67. Have you looked over the Bill which is before us? I have.

68. Generally, does it meet with your approval? It does.

69. Is there any particular point in any of the provisions of the Bill that you would wish to direct the attention of the Committee to? There is not that I remember. If there is anything I would press more than another, it is the necessity of upholding the Westminster standards; we must have landmarks to go by, and to throw it entirely open to any who might wish to join us merely as Presbyterians; I should consider vitiatory to the whole.

70. *By Dr. Lang:* I presume that your remarks in regard to systematic religious instruction refer principally, if not exclusively, to the training up of candidates for the ministry in the Presbyterian Church? Yes.

71. Supposing there were such additional professorships for theological departments, as you anticipate, would you think it necessary that the Principal of the Institution should be a regularly ordained minister? In present circumstances I should consider it absolutely necessary.

72. Are you not aware that a different arrangement has been introduced into the academical system of Scotland, at the instance of the body to which you belong, the Free Church, rendering it now accordant with the law of the land that a layman may be a principal in any of the Scotch Universities, and that in consequence of that change in the law, Sir David Brewster has recently been appointed Principal of the University of Edinburgh, which office he could not have held under the old system? I am quite aware of that. But with regard to the appointment of Sir David Brewster, in the first place, to be Principal of the University of St. Andrew's, it is to be recollected that he had nothing whatever to do with the teaching of theology. There is no theology taught in the united College, St. Andrew's, of which Sir David Brewster was appointed principal some years ago. It is taught in only St. Mary's College, St. Andrew's, with which Sir David Brewster had nothing whatever to do. Then with respect to Edinburgh, I am aware there have been recent changes in that University, as well as others, under an Act called now in Scotland, as I understand, Mr. Dunlop's Act. Till now, the Principal of the University of Edinburgh was held to be under obligation to teach a theological class, as *Primarius* Professor of Theology, and, of course, under such circumstances, a layman could not be Principal of that University. How it has been opened up to a layman now I am not prepared to say, for I do not in detail know the provisions of Mr. Dunlop's Act.

73. Supposing that there were a theological faculty established in the proposed College, for the

the training up of candidates for the ministry, distinct from the general education that would be given within the College to students not contemplating the ministry, would you not consider it quite sufficient for the wants of the Presbyterian Church that the professors in the theological faculty should have the exclusive teaching of systematic theology? Decidedly; though I consider the College, as contemplated by the Bill, to be in itself really a theological faculty and no more, under present circumstances.

The Rev.
M. Mackay,
LL.D.

15 Feb., 1860.

74. Do you form that conclusion from the Affiliated Colleges Act? From this Bill. It appears to me that if this Bill be passed into law, and is introduced under present circumstances, the College will be confined chiefly to the teaching of systematic theology, and the preparation of candidates for the ministry. Of course other students could not be prevented from attending on the preparatory instructions given to those students of theology, as attending also the University classes.

75. Referring to the provision that has been made in the united body in Victoria for those who object to the 23rd chapter of the Confession of Faith—would you consider those who adopt the objection of the United Presbyterians, for instance, to the 23rd chapter, as not holding the Westminster standards? It is not as objecting to the 23rd chapter that I would accept them. If they objected to the chapter out and out I could not accept them, speaking for myself; nor do I think they would have been accepted by the other bodies in Victoria; but they are received as explaining their difficulty with respect to a part of that chapter—not objecting to the chapter *in toto*, but explaining their objection to a particular clause of the chapter.

76. Provided it were established as a principle, that persons objecting to the *primâ facie* interpretation of the 23rd chapter should still be deemed as persons holding the Westminster Confession of Faith —? They could not be received as holding the Westminster Confession.

77. What is the interpretation you put upon the phrase found in one of the clauses of this Bill,—“holding the Westminster standards in their integrity?” Just what it professes to be.

78. Do you not consider those who have the objections of the United Presbyterians to the 23rd chapter —? I should rather call it a scruple with regard to a portion of the chapter, than objections to the whole chapter. I think that is a very important distinction. If a person comes forward and tells me *primâ facie* that he objects to it, I am sorry to say I could not myself, as at present advised, receive such a person into a church of which I was a minister.

79. If he simply stated his objection to any part of the Confession of Faith, as seeming to teach intolerant principles, and to give to the civil power undue authority—would not that be sufficient to meet your objection? That is the explanation we allow, precisely.

80. Is there any such office known in the Presbyterian system of Scotland, ecclesiastical or academical, as Fellows? I believe there is to be now. In the changes recently made there are, as I understand, to be “Fellows.” There has not been hitherto any such denomination known in the Scottish Universities.

81. Do you think it is necessary to call into existence in this country a form of office that is totally unknown to the Presbyterian Church or body in Scotland and in America? I would not say it is absolutely necessary to do so, but I do not object to its being done, of itself.

82. *By the Chairman*: Do you know, or can you tell us, what are the terms of that note, or condition, or explanatory clause, as used in Victoria, with respect to the 23rd chapter of the Confession of Faith? Its terms are as follows:—“That inasmuch as there is a difference of opinion in regard to the doctrines contained in these [the Westminster] standards relative to the power and duty of the civil magistrate in matters of religion, the office-bearers of this Church, in subscribing these standards and formularies, are not to be held as countenancing any persecuting or intolerant principles, or as professing any views in reference to the power and duty of the civil magistrate inconsistent with the liberty of personal conscience or the right of private judgment.”

83. When you talk of the *primâ facie* interpretation of the 23rd chapter, I suppose you mean that which suggests itself to your own mind? There are very important general principles laid down in the 23rd chapter of the Confession with regard to the necessity of civil government, and the usefulness, according to the Word of God, of civil government as an institution or ordinance of God. That has branched out further into relative considerations arising from that principle, as stated in the 23rd chapter of the Confession. I could not agree to the blotting out of that chapter from my Confession.

84. There may be different interpretations by different persons? There may be; I do not see how we are to prevent that, in dealing with human beings.

85. Are you willing to accept the note or memorandum adopted by the Presbyterian union in Melbourne? I would accept that, as limited to part of the 23rd chapter of the Confession.

86. *By Dr. Lang*: Are you not aware that the Presbyterian Church in America, which numbers a much greater number of ministers than there are in Scotland, has left out of its Confession of Faith the 23rd chapter altogether, as being, in the opinion of that body, a stone of stumbling and a rock of offence to many? In the first place, I would not speak of the Presbyterian Church in America as outnumbering by a very large amount the number of Presbyterian ministers now in Scotland, Ireland, and England. It may do so; but I do not think, from anything I have heard or read of America, that it does, so very largely. As to their leaving out the 23rd chapter of the Confession, we would have to consider two or three relative circumstances there. I cannot say I am advised whether both bodies, the new Presbyterian school and the old Presbyterian school, in America, have done so; my opinion is that the old school have not done so. But there is a reason for it in America, namely, that the civil power there, all the world knows, is altogether different and distinct in its frame-
work

The Rev. M. Mackay, LL.D.,
15 Feb., 1860.

work from our British Government—founded on different principles, or resting on different assumptions; so that I should not wonder at a conscientious Presbyterian leaving it out there. If, however, I had been myself a member of that body, I think I should have hesitated, at least, before doing so.

APPENDIX.

XXIII. CHAPTER OF WESTMINSTER CONFSSION OF FAITH.

I. God, the Supreme Lord and King of all the world, hath ordained civil magistrates to be under Him over the people, for His own glory, and the public good; and, to this end, hath armed them with the power of the sword, for the defence and encouragement of them that are good, and for the punishment of evil-doers.

II. It is lawful for Christians to accept and execute the office of a magistrate when called thereunto; in the managing whereof, as they ought especially to maintain piety, justice, and peace, according to the wholesome laws of each commonwealth; so, for that end, they may lawfully, now under the New Testament, wage war upon just and necessary occasions.

III. The civil magistrate may not assume to himself the administration of the word and sacraments, or the power of the keys of the Kingdom of Heaven: yet he hath authority, and it is his duty to take order, that unity and peace be preserved in the Church, that the truth of God be kept pure and entire, that all blasphemies and heresies be suppressed, all corruptions and abuses in worship and discipline prevented or reformed, and all the ordinances of God duly settled, administered, and observed. For the better affecting whereof, he hath power to call Synods, to be present at them, and to provide that whatsoever is transacted in them be according to the mind of God.

IV. It is the duty of people to pray for magistrates, to honour their persons, to pay them tribute and other dues, to obey their lawful commands, and to be subject to their authority for conscience' sake. Infidelity, or difference in religion, doth not make void the magistrate's just and legal authority, nor free the people from their due obedience to him; from which ecclesiastical persons are not exempted; much less hath the Pope any power or jurisdiction over them in their dominions, or over any of their people; and least of all to deprive them of their dominions or lives, if he shall judge them to be hereticks, or upon any other pretence whatsoever.

EXTRACT from the Work by the Revd. Dr. Baird, entitled "Religion in the United States of America." First Edition (1844.) Messrs. Blackie & Son, Glasgow. pp. 736, 8vo. Pages, 1st Edition, 538.

The Confession of Faith and the Larger and Shorter Catechisms prepared by the Assembly of Divines at Westminster, were, as is well known, adopted by the Church of Scotland, and the same symbols have, from the beginning, constituted the creed of the Presbyterian Church in this country. The formal adopting Act was passed by the Synod in 1729. In that Act we find the following language, viz.:—"We do agree that all the ministers of this Synod, or that shall hereafter be admitted into this Synod, shall declare their agreement in, and approbation of, the Confession of Faith, with the Larger and Shorter Catechisms of the Assembly of Divines at Westminster, as being, in all necessary articles, good forms of sound words and systems of christian doctrine; and do also adopt the said Confession and Catechisms as the Confession of our Faith." On the same page of the records is found the following minute, viz.:—"All the members of the Synod now present except one, who declared himself not prepared (but who at a subsequent meeting gave in his adhesion), after proposing all the scruples that any of them had to make against any of the articles or expressions in the Confession of Faith, and Larger and Shorter Catechisms of the Assembly of Divines at Westminster, have unanimously agreed in the solution of those scruples, and in declaring the said Confession and Catechisms to be the Confession of their Faith; except only some clauses in the twentieth and twenty-third chapters, concerning which the Synod do unanimously declare that they do not receive those articles in any such sense as to suppose the civil magistrate hath a controlling power over Synods, with respect to the exercise of their ministerial authority, or power to persecute any for their religion, or in any sense contrary to the Protestant succession to the Throne of Great Britain. The Synod observing the unanimity, peace, and unity in all their deliberations and consultations in the affair of the Confession, did unanimously agree in solemn prayer and praise."

It appears that some doubt arose whether the expression "essential and necessary articles" in the above acts was to be understood of articles essential to the system of Doctrine contained in the Confession of Faith, or of articles essential to Christianity. To remove this ambiguity, the Synod, the following year, unanimously adopted the following minute, viz.:—"Whereas some persons have been dissatisfied with the manner of wording our last year's agreement about the Confession, supposing some expressions not sufficiently obligatory upon intrants, overtures that the Synod do now declare that they understand those clauses which respect the admission of intrants, in such a sense as to oblige them to receive and adopt the Confession and Catechisms, at their admission, in the same manner and as fully as the Members of the Synod as were then present; that is, they were to adopt it without exception, save the clauses relating to the powers of civil magistrates in matters of religion.

When the General Assembly was formed in 1787, the Confession of Faith and Catechisms were revised, and those parts which relate to the power of the magistrate *modified*, and ever since it has without alteration, been the standard of doctrine in the Presbyterian Church, and every minister, as already stated, is required at his ordination to declare that he "sincerely receives and adopts the Confession of Faith of this Church as containing the system of doctrines taught in the Holy Scriptures."

NOTE.—Dr. Baird's work, quoted above, is considered the highest authority on the Statistics of Religious Denominations in the United States. It is very frequently cited as an authority by writers on kindred subjects in Britain.

Dr. Baird's "Summary" (page 600, 1st Edition,) is—

Regular Presbyterians, Old and New Schools	Ministers.	2,551
But embracing Cumberland Presbyterians	Ministers.	550
Dutch Reformed Church		234
Associate Synod		87
Associate Reformed		116
Reformed Presbyterians or Cameronians		20
Lutherans		423
German Reformed		180
		1,610
Total number of Presbyterian Ministers in United States..		4,161

SELECT COMMITTEE ON THE ST. ANDREW'S COLLEGE BILL.

7

If we withdraw from this enumeration those not deriving their origin from Scotland or Ireland apparently, viz. —

	Ministers.
Dutch Reformed Church.....	234
Lutherans	423
German Reformed.....	180
	<hr/>
	837

The Rev.
M. Mackay,
LL.D.
15 Feb.. 1860.

Deducted from 4,161, leaves 3,324, as the number of *bonâ fide* Presbyterian Ministers in the United States, say, 3,324 .

Then, taking summary of Presbyterians in Scotland, Ireland, and England, we have as follow, as per published list, 1859:—

	Ministers.
Established Church of Scotland	1,781
Free Church of Scotland	811
United Presbyterian Church	518
Reformed Presbyterian Church.....	35
Original Seceders.....	22
Presbyterian Church in Ireland, list of 1847, since which date there has been considerable increase and extension	474
Presbyterian Church in England (1859).....	108
	<hr/>
	3,749

Leaving majority of Presbyterian Ministers in favor of } Scotland, Ireland, and England of	425
Or, without making any deduction from Dr. Baird's summary, we have Presby- terian Ministers in the United States	4,161 .
And we have in Scotland, Ireland, and England, of Presbyterian Ministers	3,749
	<hr/>
Leaving majority of Presbyterian Ministers in favor of United States of....	412

And if we include British America as connected with Scotland and Ireland, and other Colonial Presbyterian Churches connected with Scotland and Ireland, it would be found that all these conjointly would outnumber the above majority.

The Reverend James Fullerton, LL.D., called in and examined:—

87. *By Mr. Dunsmure*: You are a clergyman belonging to the Synod of Australia? Yes.

88. And have a charge in Sydney? In Pitt-street South.

89. Are you aware that considerable funds have been subscribed for the endowment of a Presbyterian College in Sydney? Yes.

90. Wherein systematic religious instruction, in accordance with the doctrines and discipline set forth in the Westminster standards, shall be afforded? Yes.

91. And where provision is to be made for the residence and domestic supervision of students, and for affording them efficient assistance in their preparation for the University lectures and examinations under proper academic control? Yes.

92. Do you think it expedient that that College should be affiliated to the University? I do.

93. Will you state your opinion as to what is systematic religious instruction, as shortly as you can? Systematic religious instruction may be religious instruction communicated in a systematic manner, commencing with the existence and the perfections of God, the evidences of the Old and New Testaments being a revelation from God, and a full and systematic view of the doctrines taught in that revelation.

94. Do you consider such a College necessary in this Colony? It is very necessary at present, and will daily become more necessary. Its necessity arises from the impossibility which exists at present of obtaining ministers from any body to fill vacancies in the Presbyterian Church here.

95. You think you could not obtain a sufficient supply from other Presbyterian bodies? I do not think that at present we could get any. There is a particular case where application was made to the Church of Scotland three years ago for a minister, and a number of men signed their names as willing to give a legal guarantee on their property for a salary to the to the amount of £300, with a manse, and they have got no minister yet. The Church of Scotland twice wrote that they had advertised, and could get no man that would undertake it, from the scarcity of preachers.

96. Then the obtaining of such a supply is full of difficulty? For us it is. In Victoria they do not feel such difficulties, many clergymen having relations established in Victoria, and being thus induced to come out to that Colony on account of their family connexions. In the particular case I have referred to, I have advised the people who communicated with me before, to apply to the Victorian Synod for a minister; having received an intimation that they had some ministers at present, one of whom might be removed there.

97. Then you deem it really necessary that a Presbyterian College should be established here? I think it is absolutely necessary, if we wish to have a sufficient supply of educated clergymen to fill the vacancies that may arise by death, or otherwise, in the present charges, and to extend the Church. There is another object that we ought not to lose sight of; one member of my own congregation has been an *alumnus* of St. Paul's College; he is not intended for the ministry, but wishing to attend the University, his parents, because we have no College where students can procure tutorial assistance and superintendence, placed him there. There are also one or two other Presbyterians who are going to St. Paul's during the present year, on account of the tutorial assistance and superintendence provided there.

The Rev.
J. Fullerton,
LL.D.
15 Feb., 1860.

The Rev.
J. Fullerton,
LL.D.
5 Feb., 1860.

there. Now, if we wish to exist as a distinct body, it is desirable that our youth, particularly the children of the wealthier classes, should be brought up in the principles of the Presbyterian Church during their collegiate course.

98. Would you, as a minister of the Synod of Australia, consider the teaching of systematic theology, in a Presbyterian College, to the students of your own Church, to be safe in the hands of a principal or professor not of your own body? If he was a minister, and such as ought to be chosen as a principal, and signed the Westminster Confession of Faith; and if I believe him to sign them conscientiously, and to teach their doctrines, I would have perfect confidence in him.

99. *By the Chairman*: I understand you to say that you consider the great use of this College to be twofold:—first, as a theological institution, in which the young men of the Colony belonging to the Presbyterian Church, who are anxious to devote themselves to the ministry, should have the opportunity of being perfectly instructed in all the niceties of theology; and secondly, to afford to them and other young men the advantages of tutorial assistance in connection with the University? Yes.

100. Now, with respect to the Westminster standards; you are aware, of course, that there is some difference as to a certain portion of these—the 23rd chapter of the Confession of Faith—having relation to the power of the civil government? The statement in that chapter is certainly very strongly worded, and is not perhaps worded exactly as we would word it at the present day; but it was intended for a particular state of things; it was intended for an association all of whom had signed the Solemn League and Covenant, and had declared that the standards of the church were in perfect accordance with the Word of God; and therefore to a community, all the members of which have declared those standards to be their Confession of Faith individually, it only gives the power to the civil magistrate to assist the officers of the church in carrying out those doctrines and maintaining those principles that they themselves had originally avowed. As I have always viewed it in that sense, I have had no difficulty in subscribing to it.

101. Are you aware that others have a certain degree of scruple with regard to the interpretation of that chapter? Yes.

102. And that has been felt to be an obstacle in the way of the union of the various Presbyterian bodies? There are a few in Victoria who required a sentence to be added, stating that this passage was not to be understood as inculcating persecuting principles.

103. That has been found sufficient to effect a union in all the various Presbyterian bodies in Victoria? Nearly all the various bodies are united. There are seven ministers, I believe, who still stand out. Four of them, ministers of the Free Church, stand out because there is not a distinct avowal of all the points for which the Free Church contended; while Mr. Ramsay and others, I think, stand out on the fact that some of the united body receive State support. Mr. Ramsay, however, told me he was quite willing to subscribe it with this explanation, that by subscribing it he did not authorise the exercise of any persecution on the part of the Government.

104. Then as far as the 23rd chapter of the Confession of Faith is concerned this explanation is found to do away with the objection to union on the part of all the Presbyterian bodies in Victoria? Yes, so I believe.

105. The great mass of the Presbyterians there have joined the united body? Yes, there are seventy ministers in that body.

106. The Presbyterians in Victoria are much more numerous than in this Colony? Yes.

107. Have you read the explanation? I saw it in manuscript before it was printed.

108. Do you think it unobjectionable? I think it would meet the objection in the minds of most people.

109. *By Mr. Gordon*: With regard to the 23rd chapter of the Confession of Faith; you say it was adopted to suit a particular state of things at a particular time—seeing that that state of things does not now exist, do you think it necessary to insist upon the Confession of Faith being adopted in its entirety, if it would lead perhaps to a division of opinion with regard to the establishment of this Presbyterian College? I am hardly prepared to answer that question directly. I would feel great hesitation in making any alteration in a Confession that is received by the Established Church of Scotland, by the Free Church of Scotland, and by the Irish General Assembly. Those three large bodies, from which we are most likely to receive emigrants, receive the standards as a whole, just as they are. But to meet the difficulties of those who might object, I would be quite willing to adopt the explanation that has been adopted in Victoria—to append that. I think we might retain the standards just as they are, and attach this explanatory clause, stating that those signing these standards and maintaining them do not interpret them to teach any persecuting doctrines, or to authorise the civil magistrate to interfere, so as to persecute men on account of religious opinion.

110. If I understand this Bill aright it professes to be such a Bill as will admit all Presbyterians to the benefits of this College? The Bill is intended to admit all Presbyterians as pupils in the College—to receive its benefits; but it would exclude from office in the College all who refuse to sign the standards, that is, from the position of a member of the Council or of principal.

111. Are you aware that there are a large number, both of ministers and people in this Colony—members of the different Presbyterian Churches—who do object to this chapter in the Confession of Faith? No; I have not heard the statement from any minister, that he objected to it. I never heard any such statement, either from minister or people.

112. Are you not aware that there are Presbyterian Ministers who object to subscribe this chapter? No; I never met with any of them.

113. With regard to the name of this College, do you think it is desirable to adopt the title
of

of "St. Andrew's College" instead of Presbyterian College, as we are only likely to have one Presbyterian College in the Colony? In my opinion the name is a matter of very little importance. I was, myself, more in favor of another name, and divided the Committee upon it; but I think, at the time this name was adopted, there were nearly forty gentlemen present, most of them Scotch, and I was out-voted by an overwhelming majority. I therefore submitted to the decision against me, believing there was, amongst those present, a very fair representation of all the Presbyterians of the Colony.

The Rev.
J. Fullerton,
LL.D.
15 Feb., 1860.

114. Do you not think that if it had been called the Presbyterian College of New South Wales, that would have been a more general term than St. Andrew's College? It will practically be called the Presbyterian College, and that was the name I proposed; but, as I have said, I was defeated; I think only two or three of the whole number present agreed with me.

115. Do you think it is essential that the Principal of the College should always be a duly ordained Presbyterian minister? The College is to be a theological institute to train ministers in the knowledge of the Word of God. If I wanted a man to teach my son law, I would look out for a man who had a thorough education as a lawyer, and was possessed of good capacity for teaching: so, in the same manner, when I want a man to teach theology, I wish to have proper credentials that he has been taught in a good school, and has a proper knowledge of the subject he professes to teach. I think the principal should be a minister, because, for a long time, he will be the only teacher of theology.

116. If there were a number of students in a class of divinity, would it not be necessary to have a professor of theology entirely apart from the Principal of the College? That might be necessary when the number becomes large, but the Government only offers a salary for one, and until the population is so large that there will be upwards of one hundred students I do not think it will be practicable to provide a second teacher.

117. Then the principal would be a professor of different branches I presume? At first, he would be the only teacher of theology. He would teach theology systematically in lectures to those intended for the ministry of the church; and he would instruct those students who attended the College and University, but who did not intend themselves for the ministry, in the shorter Catechism. He would also be obliged to act as tutor to assist the young men in preparing for the lectures and examinations in the University.

118. Are you aware whether there have not been principals of Presbyterian Colleges in Scotland who have not been ordained ministers of the Presbyterian Church? There have been; but in Scotland, where there are Universities, and regular provision made for the teaching of theology independent of the principal, it may not be necessary for the principal to teach theology or anything else; he may be merely the overseer of the other professors.

119. Or rather of the pupils? Of the professors; to see that the professors are attentive to their duty.

120. I thought his chief business would have been the supervision of the pupils that were residing in the College? I am speaking of Scotland. In this instance, the chief business of the principal would be to superintend the students under his own care—residing under his own roof. But in Scotland the principal is the general superintendent of the professors, and it is his business to report any delinquency on the part of the professors; each professor being the superintendent of his own pupils, and it is his business to report any improper conduct on their part.

121. Is it usual to call the body of management the Presbyterian College Fellows? No; it is usual to call them members of the Senate, but the University having appropriated that name we ascertained that it would not be permissible to us. That was the reason why it was proposed that the members of the managing board should be called Fellows. Dr. Smith, whom we consulted on the subject, said he thought it would create opposition on the part of the University if we attempted to adopt their name, and thereby confound our College with the University.

122. *By Mr. Dickson:* I think I understood you to say that your Synod find it almost impossible to obtain ministers from any other church? Yes.

123. Can you assign any cause? One cause is the increased demand from all the Colonies. The Church of Scotland have applications every month from Canada—in fact, from all the British Colonies—and there is rather a falling off in the number of theological students. I see that in the Congregational body also there is a considerable falling off in the number of theological students, as stated by themselves at their annual meeting. In Ireland there was a great falling off, but I got a letter from Dr. Cooke, by the last mail, in which he says the revival has produced a great increase in the number this year; parents, having been induced to set a higher value on religious instruction, have been led to devote more of their children to the work of the ministry, and the number of those who have entered the theological class this year is double what it was formerly.

124. Do you think the advantages offered by the Church are sufficient to induce young men to come forward for the ministry in this Colony? Not unless they were very pious. There is a member of my own congregation, who was in a lawyer's office, receiving £120 a-year; he gave that up, and submitted to great privations to go through the University; he has now £300 a-year as a teacher in the Sydney Grammar School, and it is only the existence of his mother, who is dependent on him, that prevents him from taking a charge; on that account I dissuaded him from it. If other young men were actuated by the same zeal, we should not have so much difficulty in procuring ministers; but the pecuniary advantages are so small, that very few parents will encourage their sons to come forward. Nevertheless, if there were a proper school for training up young men to the ministry, I should hope some of the rich and wealthy of the community might be induced to send their sons to this College, and the very fact of their being trained according to the system that would be pursued there, might induce these young men to devote their time and talent to the ministry, as was the case at the Reformation in Scotland.

- The Rev. J. Fullerton, LL.D.
15 Feb., 1860.
125. Then you are of opinion that if this College is incorporated, there would be students offering for it? There would be some, I think; there are two members of my own congregation at present who would gladly avail themselves of a theological course.
126. Are you of opinion that the latter portion of the 15th clause will not exclude many from availing themselves of the advantages which this College will hold out; that is, that they should hold the Westminster standards "in their integrity"—will not that exclude a large body of Presbyterians from uniting in the establishment of the College? I was in hopes that would be the very bond of union. That word "integrity" was put in by Dr. Mackay, to shew that we were determined to adhere to the Westminster Confession. He and all were determined to adopt these standards in their integrity, to prevent any invasion or any subterfuge. I think, however, that if that be insisted upon, an explanatory clause might very well be added with regard to the 23rd chapter, such as they have adopted in Victoria.
127. Do you think, as it now stands, that this clause is calculated to exclude any important portion of the Presbyterian community in this Colony? As far as my own knowledge goes, I never heard any of the ministers object to the standards.
128. *By the Chairman:* Do you think the words "in their integrity" are at all requisite, when by the seventeenth clause of the Bill the Westminster standards are defined—do you not think them surplusage? Yes; it was not my wish to have the words put in at first.
129. The seventeenth clause is an interpretation clause, defining what are meant by the Westminster standards; so that if they are signed, they must be signed in their integrity? Yes, I suppose so.
130. There might be some hesitation about the meaning of the word integrity? Yes, exactly so. I have met some persons who said they were willing to sign the Westminster standards, but with their own meaning with regard to the divinity of Christ; and I think it was to meet such cases, that Dr. Mackay and others wished to insert the words "in their integrity."
131. Still, to make them effectual, there would require to be an interpretation clause, to define the meaning of the word "integrity"? Yes, exactly so. I think the standards as enumerated are quite enough.
132. Have you looked carefully at the fourth clause of the Bill, defining the character of the Board of Visitors, and providing that it shall have "all such powers as by law appertain to the office of Visitors of a College?" Yes. The object of that clause is to make all sections of the Presbyterian Church in the Colony equally interested in the College. The history of Scotland shews that the greatest supporters of University and Collegiate education have been the members of the church courts. All the church courts in Scotland have maintained the necessity of collegiate education as a preparation for the ministry. And we thought one of the most effectual means of interesting the whole community in the College would be to give all the church courts here an equal interest, by inducing them to appoint one or two persons of their body to visit the College and to report, and that this would be a kind of permanent advertisement to keep the community interested in the College.
133. Do you not anticipate some difficulty in the working of that provision? The visitors would only have the power of interfering to see that the doctrines taught were correct, which they could ascertain by attending the theological examinations of the students.
134. People become tenacious of rights that seem to be conferred upon them by law; do you not think there may come to be some difficulty as to the construction of this clause—as to what Synods shall really have a claim to be admitted? It will depend upon what Synod shall be held by law to be "validly constituted?" My own view would be to admit all Presbyterians who exist as Synods or united bodies.
135. Do you not see that the question must be settled in the end, if there is any dispute, by the courts of law? They would have no other control than to see whether the doctrines taught were in accordance with the standards.
136. If any dispute should arise the courts of law would have to decide whether these Synods were "validly constituted in accordance with the recognised discipline of the Presbyterian Church"? I do not think in practice there would be any difficulty. If any Synod existed as a distinct body, I think all would be willing to acknowledge them.
137. Have you any clear idea as to what the powers are which "by law appertain to the office of visitors of a College"? I heard them read once, and they are very full, I believe, as to all doctrinal points.
138. Of course in other Colleges this difficulty does not arise, because there is no question as to who is the Bishop, for instance, of the English Church, or the Archbishop of the Romish Church, or the President of the Wesleyan Conference—there can scarcely be any doubt who is visitor in those cases, because it is provided that those functionaries respectively shall be the visitors; but do you not think there may be some difficulty with respect to the Board of Visitors of the Presbyterian College, composed, as it is proposed to be, of a number of individuals appointed by different bodies, whose right to nominate rests upon the interpretation that may be put upon the words of this clause? Each Synod would have the power of naming their own visitors, and they would be received as such by virtue of their appointment.
139. *By Mr. Dickson:* With reference to the eighth clause, which sets forth "that the first eighteen Fellows shall be elected by the subscribers to the funds of the College, in such manner as they shall among themselves appoint"—do you not think it would be desirable to define the method in which these elections shall take place,—for instance, by enacting that all subscribers shall have an equal number of votes, whether they subscribe one shilling or more? We followed the Church of England in that, and left it to be settled by the subscribers themselves. The qualifications of electors might be introduced here, but it was
not

not thought expedient to do so. I see they have been introduced in the Wesleyan College Act.

140. Do you think it would not be better to introduce some regulation on that subject into this Bill? I think it is a matter of very little importance. My view of it was chiefly influenced by the opinion of those members of the Free Church who have had much more experience than I have had myself in raising voluntary contributions; and they were unanimously of opinion that it would be desirable to increase the number of votes in proportion to the sum contributed. The power of the contributors would only exist at the first election, or at most during their own lifetime, and the elections would ultimately fall into the hands of the graduates of the University who were members of the College. It was thought desirable to hold out as large an inducement as possible to people to give, as it is necessary to have a large amount of funds. In my own experience I found it was just as easy to get £10 as £1; that those who would not give £10 would give nothing. I tried the working classes myself, but I could not convince them of the necessity of a College at all, and they declined to subscribe anything towards it; and Mr. Laughton, of Bathurst, told me he had done the same amongst the members of his congregation there, and found the feeling prevail universally that the working classes had no interest in the foundation of a College.

141. *By Mr. Gordon:* Were you one of the four ministers who framed this Bill? A Bill was framed by a committee consisting of Dr. Mackay, Mr. Milne, another minister, and myself; but that Bill was lost, and this Bill was hastily copied, in great measure, from the Church of England College Bill.

142. I was about to put the question, where several of these clauses were taken from, because I find in looking through St. Paul's College Act that clauses, almost verbatim, have been introduced here? It was agreed at a large meeting of the committee to copy St. Paul's College Bill; it was done hastily, and for the purpose of saving the Legislature the trouble of reconsidering the matter.

143. As a Presbyterian minister, do you think Presbyterians ought to adopt the Church of England Bill for incorporating a College? The Church of England Bill was drawn up with very great care and attention, and so far as it was common ground I think it was very wise to adopt it.

144. Do you think the latter part of the ninth clause, with regard to excluding lectures on ethics, metaphysics, and modern history ought to be carried out in a Presbyterian College; do you think it at all desirable to exclude these from the number of subjects that students should be taught? I think you take an erroneous view of the passage. It reserves to us the exclusive power of teaching those branches, and it exempts our students from being obliged to attend the lectures of the professors of the University on those subjects, if thought fit by the Council of the College.

145. It does not say so here? I think that is the plain meaning, that our students would not be bound to attend the University lectures on ethics, metaphysics, or modern history, unless we please.

146. Do you think it right to except them—that is my question? I do, because metaphysics are intimately connected with theology, and it was by erroneously teaching metaphysics that they attempted to undermine theology in the Belfast College.

147. Might you not have students in the College who would not be studying theology at all, and who would desire to attend these lectures? The clause would not prevent them. The exception is simply to enable the Council of the College, if they think the professor of metaphysics, or ethics, or modern history, in the University, is not sound, according to their views, to prevent the attendance upon his lectures, of young men, to whom instruction in theology is being communicated in the College, and, at the same time, to allow them to take their degrees without the necessity of such attendance; the Council, of course, in that case, providing such instruction for them in their own College. I think it was a wise thing of the Church of England not to make these classes imperative. Mr. Ferrie, who was professor of metaphysics at Belfast College, was the very man who demolished that College, because he taught metaphysics in such a way as, in effect, to abolish Revelation; he taught materialism, and, accordingly, the Presbyterian Church in Ireland withdrew their pupils.

148. *By the Chairman:* This is not an absolute exclusion? No; only a permission to exempt the students from attendance.

149. If thought fit by the Council? If thought fit by the Council.

150. *By Mr. Gordon:* The Council of the College? Yes. If the Council of St. Andrew's College thought that the professor of those subjects in the University was not perfectly sound, according to their views, they could prevent the necessity of their own students attending his lectures before taking their degrees.

151. *By the Chairman:* In point of fact, I suppose you do not think it likely that this exception would have to be insisted on? I would not expect it; but I know it to be the fact, that it was the teaching of the metaphysical professor in Belfast College that caused the Irish Church to withdraw their students.

152. *By Mr. Gordon:* With reference to the 3rd clause, do you not think that it is an interference with the subscribers to this College to stipulate here that there shall always be six ordained Presbyterian Ministers as Members of the Council—do you not think it would have been as well to have left it open to the subscribers to elect whom they please? I think the proportion of ministers should be fixed. As it is to be a theological institute, I think it absolutely necessary to have a certain portion of men in the Council who have had a theological education. I know that when Belfast College was first built, it was built by private contribution, and the understanding was, that it was to be a College for the whole of the Presbyterian Church, and that it was to be left to the choice of the subscribers to elect whom they pleased; but it soon came about that they chose none but Unitarians to the professorships

J. Fullerton,
LL.D.

15 Feb., 1860.

ships or the Senate; the majority of the subscribers would have what they called liberal men.

153. If you think it desirable that that point should be fixed in the Bill, do you not think it desirable that the mode of electing this Council should be also fixed, so as to prevent the number of votes to be allowed in proportion to the subscriptions from being so great as to enable a few persons contributing large sums, such as £1,000, to elect the whole Council, to the exclusion of the voices of the other subscribers? All the subscribers would have votes, and we generally find that those men who give large subscriptions very seldom take the trouble of interfering at all.

154. Do you not think we should fix the number of votes to be allowed, say one vote for £10, two votes for £100, and so on—or any other proportion—limiting it so that the subscribers may know exactly their power, and not leaving it to be arranged by themselves? Then the point is, whether the subscribers, who pay the money, would not be more likely amongst themselves to make a judicious arrangement for the election of the first members of the Council than the Legislature. I think the subscribers will be more likely to make an arrangement that will be agreeable to themselves.

155. But if the subscribers require legislation upon one point, that is, with regard to there being six ministers and twelve laymen on the Council, surely they should also require legislation as to the way in which these persons are to be elected? Legislation would be permanent with regard to the proportion of ministers and laymen who should be members of the Council; but with regard to the mere election of the first Council, that would be only one act, and I think that would be done to the satisfaction of the subscribers themselves, by their own by-law; though, if it were thought wise, I should not object to its being put in the body of the Bill.

156. Do you not think it more likely to be popular with the public, if they knew exactly their standing with respect to the election of this Council, than if it is merely left to a meeting of the subscribers to be settled by a majority? I believe it would not. I believe a large portion of the subscribers would not take the trouble of attending to vote; in fact many of them have told me they would not.

157. *By the Chairman:* It might save some chance of dispute if this point were settled in the Bill? I would not object to its being settled in the Bill; perhaps it would save time.

158. Have you seen the provisions of the Wesleyan College Bill on this point? Yes.

159. Did they strike you as being reasonable and fair? They are exactly what I suggested myself, but I deferred to my Free Church brethren, who thought we should get a larger sum of money by another plan.

160. In themselves you think they are not objectionable? I think not.

161. And their adoption in this Bill would save a risk of the subscribers falling out among themselves, and perhaps throwing obstacles in the way of the realization of the project after all? Yes.

162. *By Mr Gordon:* Do you think the opinion of the Free Church ministers has been carried out in respect to getting larger sums of money? Really I do not know, for most of the subscriptions were given before the present arrangement was made. Since this Bill was adopted, I have not moved in the thing at all; and I told my friends that I would not move till the Bill of Incorporation was passed.

Legislative Assembly.

NEW SOUTH WALES.

ST. JOHN'S COLLEGE.

(BY-LAW, DATED 21 NOVEMBER, 1859.)

Ordered by the Legislative Assembly to be Printed, 24 January, 1860.

E. G. ELLIS, ESQ., to THE COLONIAL SECRETARY.

32, Elizabeth-street North,
Sydney, 20 December, 1859.

SIR,

I do myself the honor to request you will be good enough to submit to His Excellency the Governor, for the purpose of being laid before Parliament, the enclosed By-Law made by the Council of St. John's College on the 21st ultimo:

I have, &c.,

THE HONORABLE
THE COLONIAL SECRETARY.

EYRE G. ELLIS.
Secretary.

BY-LAW made by the Council of St. John's College on the 21st November, 1859.

If any Fellow shall be absent for three consecutive calendar months from the ordinary meetings of the Council, at the next following ordinary meeting the Council shall declare his seat to be vacant, and shall appoint a special meeting for the election of a successor.

 “ this Colony and the Imperial Government, relative to the
 “ allowance by Her Majesty of the Act to Incorporate St.
 “ John's College.”

(*Mr. Hart.*)

SCHEDULE.

NO.	PAGE.
1. The Governor General to the Right Honorable the Secretary of State for the Colonies, forwarding a Copy of a Letter from the Bishop of Sydney, relative to St. John's College Act. 15 March, 1859.	2
2. The Duke of Newcastle to the Governor General, in reply. 18 October, 1859.	3

Other Correspondence relative to the St. John's College Act, laid before the Legislative Assembly 23 September, 1858.

ST. JOHN'S COLLEGE ACT.

No. 1.

THE GOVERNOR GENERAL to THE SECRETARY OF STATE FOR THE COLONIES.

(No. 26.)

*Government House,**Sydney, 15 March, 1859.*

SIR,

I have the honor, at the request of the Bishop of Sydney, to forward to you a copy of a letter addressed by him to the Colonial Secretary, on the subject of the disallowance by Her Majesty of the Act passed by the Legislature of this Colony, intituled, "*An Act to Incorporate St. John's College as a College within the University.*" I do not think it necessary to express my opinion upon the question raised by the Bishop, as I have done so fully in former Despatches. I would only observe that I do not conceive that the interests of the United Church of Great Britain and Ireland, and the rightful claims of the province over which the Bishop presides, are or can be in any way affected by the allowance of the Act in question.

I have, &c.,

SIR E. B. LYTTON.

W. DENISON.

[*Enclosure in No. 1.*]*Sydney, 28 February, 1859.*

Sir,

I had the honor to receive your letter, dated 1st September, 1858, conveying a copy of the Despatch from the Right Honorable the Secretary of State for the Colonies, addressed to the Governor General, upon the subject of the remonstrance I had the honor to present to Her Majesty's Government, through His Excellency, against the admission of certain titles and designations applied to the Roman Catholic Archbishop in this Colony, into the Act incorporating the Roman Catholic College of Saint John, and praying that Her Majesty might be advised to disallow the said Act, so far as relates to the titles and designations therein contained.

The Right Honorable Secretary was pleased to suggest to the Governor General that the Act in question should be re-submitted to the local Legislature, with a view to its amendment on the points complained of, remarking, "I cannot but agree with the Bishop of Sydney that the Act requires amendment in the particulars to which he has called attention;" I was thus led to suppose that the course indicated by the Secretary of State would be adopted.

In this expectation I continued until I observed the report of a reply given by you in the Assembly to a question upon this subject; you are represented to have said that a Despatch had been forwarded by the Governor General to the Secretary of State, recommending that Her Majesty should be advised not to disallow the said Act.

Assuming this statement by you, as Colonial Secretary, to have been correctly reported, I trust I shall not be considered as exceeding the bounds of official courtesy, in expressing my surprise that I should have been left to obtain such important information from a mere newspaper statement.

Relying upon your kind indulgence so to express myself, I must further beg leave respectfully to repeat my remonstrance against the use and admission of the terms complained of in the before-mentioned Act; and I do so upon the grounds stated in my former correspondence, the validity of which I submit to be altogether unaffected by any arguments that have been advanced, or by any subsequent events.

I believe that if the attention of the Law Officers of the Crown in England was pointedly called to the question which has thus been raised as to the legality of the terms employed in the Saint John's College Act, their opinion would be in accordance with the view which I have had the honor of submitting to you, and which has received the concurrence of Her Majesty's Secretary of State for the Colonies.

Under all these circumstances I deem it my duty, from a due regard to the interests of the United Church of England and Ireland, and to the rightful claims of that province over which I am appointed by Her Majesty to preside, to record my dissent from the advice tendered by the Governor General, in his recent despatch to the Secretary of State for the Colonies, and to request that His Excellency will be pleased to cause a copy of this communication to be transmitted to Her Majesty's Minister.

I have, &c.,

F. SYDNEY.

The Honorable

The Colonial Secretary,

&c., &c., &c.

No. 2.

THE SECRETARY OF STATE FOR THE COLONIES to THE GOVERNOR GENERAL.

(No. 30.)

Downing-street,

18 October, 1859.

SIR,

I have received your Despatch, No. 26, of the 15th March, 1859, enclosing a copy of a letter addressed to the Colonial Secretary by the Bishop of Sydney, on the subject of the Act passed by the Legislature of New South Wales, intituled "*An Act to Incorporate St. John's College as a College within the University of Sydney.*"

I have fully considered the letter of the Bishop of Sydney in connection with the previous correspondence on the subject; and I have not deemed it necessary to advise Her Majesty to disallow the Act. Having submitted that Act to the Queen, I have to acquaint you that it will be left to its operation.

I have, &c.,

NEWCASTLE.

GOVERNOR

SIR W. DENISON, K. C. B.,

WESLEY COLLEGE BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly for whose consideration and Report was referred on the 12th October last the "*Wesley College Bill*," beg leave to Report to your Honorable House,—

That they examined Mr. G. W. Allen, the Solicitor in charge of the Bill (whose evidence will be found appended hereto), and that the Preamble of the Bill having been satisfactorily proved by the evidence of that gentleman, they proceeded to consider the several Clauses, in the consideration of which they found it necessary to make certain amendments.

It will be seen that six new Clauses were introduced into the Bill during its progress through the Committee, to regulate the mode of election of the first eight Lay Fellows of the College.

And your Committee now beg to lay before your Honorable House the Bill as so amended by them.

JAMES BYRNES,

Chairman.

Legislative Assembly Chamber,

Sydney, 13 December, 1859.

PROCEEDINGS

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 18 OCTOBER, 1859.

MEMBERS PRESENT :—

Mr. Byrnes,		Mr. Douglas,
Mr. Elliott,		Mr. Dickson.

James Byrnes, Esq., called to the Chair.

Present for the Petitioners, G. W. Allen, Esq., *Solicitor*.

1. The Clerk, by direction of the Chairman, read the Petition praying for leave to introduce the Bill.

2. The Chairman requested the Solicitor for the Bill to give an explanation of its general objects,—whereupon Mr. Allen proceeded to address the Committee upon the several clauses of the Bill, and retired.

Committee deliberated, and adjourned till Wednesday the 26th October, 1859.

WEDNESDAY, 26 OCTOBER, 1859.

MEMBERS PRESENT :—

James Byrnes, Esq., in the Chair.

Mr. Douglas,		Mr. McArthur,
Mr. Elliott,		Mr. Hay.

G. W. Allen, Esq., *Solicitor*, called in and examined.

Committee deliberated, and being of opinion that the Preamble had been satisfactorily proved by the evidence of the witness,—

Motion made and *Question* (Mr. *Elliott*)—"That the Preamble as read stand the Preamble to the Bill"—*carried*.

Committee then proceeded to consider the Clauses in detail.

Clauses 1 to 9 *read*, and *agreed to*.

Clause 10 *postponed*.

Clauses 11 to 17 *read*, and *agreed to*.

Clause 18 *postponed*.

Committee deliberated, and instructed the Solicitor in charge of the Bill to have new Clauses prepared before next meeting, containing the principles upon which the election of Fellows is proposed to be carried on.

Committee adjourned.

TUESDAY, 6 DECEMBER, 1859.

MEMBERS PRESENT :—

James Byrnes, Esq., in the Chair.

Mr. McArthur,		Mr. Hay.
---------------	--	----------

G. W. Allen, Esq., *Solicitor*, produced certain new Clauses ordered by the Committee at their last meeting.

Committee deliberated as to the propriety of printing the same.

Motion made and *Question* (Mr. *Hay*)—"That the six new Clauses handed in by Mr. Allen be printed, and circulated to the Members of the Committee before the next meeting"—*carried*.

Committee adjourned till Friday, the 9th instant.

FRIDAY, 9 DECEMBER, 1859.

MEMBERS PRESENT :—

James Byrnes, Esq., in the Chair.

Mr. Jones,		Mr. McArthur.
------------	--	---------------

Present—G. W. Allen, Esq., *Solicitor*.

The Committee proceeded to consider the postponed Clause 10.

Motion made and *Question* (Mr. *Jones*)—"That the Clause be amended by the omission of the words at the beginning, viz. :—"Provided that the first eight lay Fellows shall be elected by the subscribers in such manner as they shall among themselves appoint and that"—*Carried*.

Clause as amended *agreed to*.

The

The Clerk having produced the new Clauses, which were ordered to be printed by the Committee at their last meeting, and the Committee having considered the same,—
 New Clauses numbered 10, 11, 12, 13, 14, read, and agreed to.
 The consideration of the new Clause 15 postponed till next meeting.
 Committee then adjourned till Tuesday, 13th instant.

TUESDAY, 13 DECEMBER, 1859.

MEMBERS PRESENT :—

James Byrnes, Esq., in the Chair.

Mr. Jones, | Mr. McArthur.

Present—G. W. Allen, Esq., *Solicitor*.

Committee proceeded to re-consider new Clause 15, postponed at last meeting, and after deliberation Clause as read *agreed to*.

Motion made and *Question* (Mr. Jones),—That new Clause 12 be re-committed—*agreed to*.

Motion made and *Question* (Mr. Jones),—That the Clause be amended in the second line, by the omission of the word “and” after “residences,” and the insertion of the words “and qualifications” after “designations”—*agreed to*.

Clause as amended *agreed to*.

Motion made and *Question* (Mr. Jones),—That Clause 4 be re-committed—*agreed to*.

Motion made and *Question* (Mr. Jones),—That the Clause be amended in the first line by the omission of the words “not being supernumeraries,” and the insertion thereof in the second line after “Cumberland”—*agreed to*.

Clause as amended *agreed to*.

Clause 18 read and *agreed to*.

The Chairman produced and read a Draft Report, which was, after deliberation, on motion of Mr. Jones, *agreed to*.

Motion made and *Question* (Mr. Jones),—That the Chairman Report the Bill to the House with amendments—*agreed to*.

WITNESS.

G. W. Allen, Esquire, *Solicitor* PAGE.

1859.

Legislative Assembly.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

WESLEY COLLEGE BILL.

WEDNESDAY, 26 OCTOBER, 1859.

Present:—MR. BYRNES,
MR. MCARTHUR,

MR. HAY.

MR. DOUGLAS,
MR. ELIOTT,

JAMES BYRNES, ESQUIRE, IN THE CHAIR.

George Wigram Allen, Esq., called in and examined:—

1. *By the Chairman*: You are one of the Joint Secretaries of the Provisional Committee? G. W. Allen,
Esq.
Yes.
2. Will you state what took place at the commencement of your proceedings with respect to the Wesley College Bill? Some time in 1857—I believe about the middle of that year—a 26 Oct., 1859.
Provisional Committee was appointed to take into consideration the necessity of establishing a College within the University of Sydney, in connection with the Wesleyan Methodist Church. A public meeting was held in the York-street Chapel, at which the Governor General presided, and at which certain resolutions in favor of the establishment of the College were passed, and a Committee (of which the Rev. Mr. Gaud and myself were appointed Secretaries) was appointed to take measures to establish the College. At that meeting it was reported that a large sum had been promised, and I believe the subscriptions at that time and since—with promises—have amounted to about £11,000.
3. That was the initiatory step, was it? Yes. The meeting was very numerously attended; the chapel was quite full, and everything passed off very satisfactorily—favorably to the establishment of the College.
4. And were the principal members of the Wesleyan Church present from different parts of the Colony? Yes, many were present from different parts of the Colony.
5. Were any particular resolutions passed at that time? Yes; there were resolutions passed enunciating the desirability of establishing a College in connection with the Wesleyan Methodist Church, so that the students might receive the religious instruction taught by the Church, and be brought up in the doctrines and discipline of the Church.
6. And was the Committee appointed at that meeting? Yes.
7. Were the Treasurers and Secretaries appointed there? Yes, both. The Rev. Mr. Gaud and myself were appointed Secretaries, and the Chairman of the District Meeting of New South Wales and Mr. McArthur were appointed Treasurers.
8. What is the sum subscribed at the present time? Upwards of £11,000 have been promised; but there has not been much actually paid in cash yet, because there has been some doubt whether there would be time to get the College incorporated within the time limited by the Deed of Grant to the University. I believe when that is done the subscriptions will be forthcoming to a very large amount.
9. Promissory notes have been given to a considerable sum? Yes.
10. Can you say to what amount? The Treasurer has informed me that he has received promissory notes to the amount of eight thousand pounds, or thereabouts.

- G. W. Allen, Esq.
26 Oct., 1859.
11. Have the subscriptions varied in amount? Yes; from as low as half-a-crown, I think, up to a thousand pounds.
12. Are there many subscriptions to a small amount? There are many subscribers of small sums; but the amount realized from this source is not large. There have been also collections in the different chapels.
13. Does this movement appear to have met with the general approbation of the Wesleyan body in the Colony? The movement for the establishment of the College has met, I think, with the universal approbation of the Church; but there have been differences of opinion as to the principles on which it should be established. The Bill as now proposed has been passed by a very large number of the Provisional Committee—I think with the approbation of all excepting three or four—and it is believed to possess the approbation of the Church generally. It has met with the sanction of the Conference of the Wesleyan Methodist Society, and has been approved by a great many of the laymen.
14. Can you say about what amount is secured by bills and promissory notes? I think about £8000.
15. By bills and promissory notes, apart from cash? I think there is something under £2000 actually in cash, and that there would be about £6000 in bills at present. There are several subscribers who have not yet given their bills who are prepared to give them so soon as the Bill is passed.
16. You do not apprehend that there will be any difficulty in raising the amount? I do not think there will be any difficulty in getting the amount that has been promised. Some may not give what they have promised, but others who have not yet promised will probably subscribe.
17. Well, what is the great object of this movement—is it to take advantage of the Affiliated Colleges Endowment Act? It is.
18. Have you anything further to state, Mr. Allen? Nothing. The principles of the Bill were explained by me at the previous meeting.
19. *By Mr. Douglas*: I think it was understood at our last meeting, Mr. Allen, that you were to ascertain the feeling of the Wesleyan body as to the appointment of Fellows at the first election? Yes; I was requested to mention it to the Provisional Committee at their next meeting. They met yesterday, and I have from them certain resolutions which they wished to be put into the Act, in reference to the mode of election. They were only passed last night, so that when we come to the 10th clause I shall be obliged to ask the Committee to postpone the consideration of the clause until I have had time to put these resolutions into shape for insertion in the Bill. It was not till six o'clock last night that they came to the decision, and there has not been time to prepare the clauses since. Shall I mention the way in which they wished it?
20. *By the Chairman*: I think it would be as well? The Committee agreed that the election should take place in Sydney, by ballot; that all subscribers of £1 and not more than £25 should have one vote; that subscribers of £25 and not exceeding £50 should have two votes; that subscribers from £50 to £100 should have three votes; subscribers from £100 to £200 to have four votes; and subscribers over £200 to have five votes; that candidates for the office of "Fellow" should be nominated by two subscribers before a day to be appointed by the Provisional Committee, and that lists of those names should be made out and printed; that three scrutineers should be appointed by the Provisional Committee, who should prepare the printed lists of candidates who were nominated, and authenticate them under their own signature, and transmit them to the subscribers, who should strike out the names of all but those they desire to be elected. That is shortly the intention of the Committee. It will of course have to be put into legal shape. In fact, it is carrying out the principle of the ballot.
21. *By Mr. Hay*: Then it is considered desirable that the Bill should include precise provisions for the mode of election of Fellows? Yes; the Provisional Committee thought it advisable.
22. I suppose you would provide clauses to be inserted? Yes; I will do so by the next meeting, if the Committee will, when they come to that clause, adjourn for a few days.
23. Do you know whether the attention of the Committee has been directed particularly to the provision in the 6th clause as to the Visitor? Yes.
24. And to the powers of the Visitor? Yes; there have been numerous meetings in reference to that clause, and one or two others, and long discussions have taken place upon the question, some very much objecting to the appointment of a Visitor at all, particularly with the words in the St. Paul's and the St. John's College Acts, appointing Visitors with "such powers as by law pertain to the office"—and, to meet the objections, the duties of Visitor are defined in this clause. It simply says that the President for the time-being of the Conference, or, in his absence from the Colony of New South Wales, the Chairman for the time-being of the New South Wales District, shall be Visitor of the College, and shall have the right to visit the College at any time, to examine into the manner in which it is conducted, and to see that its laws and regulations are duly observed and executed. The duties of the Visitor are there described.
25. And did it seem to the Committee, or does it seem to you, that this clause is sufficiently precise—"to see that its laws and regulations are duly observed and executed"—is only to give him indefinite power with respect to the execution of those laws and regulations; how is he to see that they are duly executed? He can only visit and inspect; he can do no more.
26. Then this would seem almost surplusage—"to see that its laws and regulations are duly observed and executed"? He can report to the Conference, and the Conference has exclusive power over its Ministers. The Principal of the College must be a Minister in full connection with the Australasian Conference, and if the Principal does not conduct the duties of his office to

to the satisfaction of the Conference they can remove him—not directly from this office, but to any other part of the Colony, if they please. They cannot appoint any Minister to the College without the consent of the Council of the College, but they can remove Ministers from one part of the Colony to another, or to another Colony, and so, in effect, remove him from his office of Principal. So that the President in his capacity of Visitor would have considerable power in that way.

G. W. Allen,
Esq.

26 Oct., 1859.

27. Through the Conference? Yes, but not personally. The power he would have of effective control, or making his control effective, would be by reporting the conduct of the Principal to the Conference—leaving it with the Conference to deal with the Principal.
28. As a Wesleyan Minister in connection with that Conference? Yes.
29. And by exerting its power the Conference would be enabled to correct any erroneous conduct on his part by his removal? Yes.
30. In his removal directly from the office of Principal? Directly from the office of Principal, by dismissal from his office as a Minister, or indirectly by his removal from one place to another. Therefore, in fact they have the power to remove the Principal.
31. *By Mr. Douglas*: Because he ceases to be Principal—? If he ceases to be a Wesleyan Minister in full connection with the Conference. And he must obey the orders of the Conference if he continues in full connection with it. If he disobeys its orders he ceases to be in connection, and his office of Principal becomes vacant.
32. It is also essential that the Principal shall reside in the College? The Bill does not actually say that he shall reside in the College; but I take it that it follows that he cannot perform his duties without residing there.
33. *By Mr. Hay*: The fifth clause says, "The Principal, who shall not be a Fellow, shall always be a Wesleyan Minister in full connection with the said Conference"? Yes.
34. Therefore, if by any act of the Conference he should cease to be in full connection with the said Conference, of course he can no longer be the Principal—that is your reading? Just so.
35. The office would become vacant, and it would be necessary to elect another Principal in his stead? Yes.
36. That is the working of it? Yes. The Fellows appoint; but they must appoint a Minister in full connection with the Conference, and that clause and a subsequent one explain more clearly the powers of the Council and the Conference.
37. The 7th clause, I think? Yes; but the qualification of the Principal is in the 5th. The words are, "shall always be a Wesleyan Minister in full connection with the said Conference," which will have the same effect as stating that his ceasing to be so shall vacate his office.
38. You consider that will have the same effect? Yes.
39. You do not think it is liable to any misconstruction? No, I think not.
40. It will not apply to his election—but you think the working of the fifth clause will be such, that by ceasing to be a Wesleyan Methodist Minister in full connection with the Conference his office will be vacated? It must be so.
41. And a new election must take place? A new appointment by the Fellows.
42. You observe that in the seventh clause, in case the Principal be removed or suspended from his office by the Fellows, there is an appeal to the Visitor, who, it would appear from that clause, is intended to have a right to confirm or to annul that act on the part of the Fellows? Yes, in all cases affecting moral character.
43. And in cases involving his religious or theological doctrines he is bound to remit the same for trial to the properly constituted Wesleyan Methodist Courts? The Fellows remit to the properly constituted Methodist Courts, so that they have no control over the theological or religious doctrines, or teaching of the Principal.
44. They cannot remove or suspend him for anything connected with his religious doctrines? No.
45. Nor has the Visitor any power to do so? No.
46. It must be remitted directly to the Courts? Yes.
47. But with respect to the moral conduct of the Principal—anything involving his moral character—there is the power of removal or suspension? Yes, subject to an appeal to the Visitor; and in reference to scholastic attainments, the Fellows have exclusive authority. In reference to everything but moral character and theological and religious doctrines and teaching, the Fellows have exclusive authority.
48. And you think by the wording of this clause the Fellows would be empowered to remove the Principal—for inability, for instance, to carry out his duties as manager of the College? Yes.
49. And as superintendent of the general affairs of the College, or as superintendent of the tutorial instruction of the students? Yes.
50. You think, if there were sufficient cause, it would give them that power? Yes. I take it they will have to determine what is sufficient cause.
51. You think the Fellows would have to determine what is sufficient cause—do you not think it might possibly lead to litigation—do you not think the Principal might bring the question of suspension before the Supreme Court, and oblige the Fellows to shew that the cause alleged was a sufficient cause? It is possible he might bring the case before the Court, but I imagine the Court would decide that the Fellows were the proper persons to decide what was sufficient cause by the wording of that clause, and in connection with the by-laws to be made under the authority of the 12th clause.
52. Do you think the Court would not, under such circumstances, feel itself bound to see that the Fellows had not removed or suspended the Principal without sufficient cause? I take it that it would be very desirable the Act should be so worded as to prevent any cases coming

- G. W. Allen, Esq.
26 Oct., 1859.
- coming before the Courts of the Colony; and I think the power of the College ought to be complete within itself? Taking the 12th clause in connection with this, I think the Council would have sufficient authority over the Principal. I will read the clause—"The Council of the College shall have power, from time to time, to make and establish all such by-laws and rules for carrying into effect the several provisions and objects of this Act, and particularly for declaring the causes which shall create vacancies in the office of Fellow, and directing who shall preside at meetings of the Council and of the Fellows, and for the management of the College and prescribing the duties of the several officers thereof, and of the Principal, and the ordering of all things in and connected with the College and discipline thereof, as to the said Council shall seem expedient, and such laws and rules, or any of them, from time to time to alter or revoke, or to substitute others in their place."
53. Do you think there is any particular necessity for the insertion of the words "sufficient cause"? No, I do not. The words are in the other Acts, and these have been followed as nearly as possible. It would remove any doubt as to the power of the Fellows if those words were omitted; and as there are so many things taken from them—there being an appeal against any decision as to the moral character of the Principal, and requiring that they should not act at all in reference to his theological or religious doctrines—I cannot see any reason why they should not have full control in all other matters. The intention was that they should.
54. Am I to understand, Mr. Allen, that it is the preponderating opinion of the members of the Wesleyan Methodist Church that there should be this visitorial power in the President of the Conference? It would be very difficult to answer that question—as to the opinion of the Church generally. It was the opinion of the Conference; it was inserted, in fact, by the Conference. The Provisional Committee who prepared this Bill left out the office of Visitor entirely. They thought they had far better do without such an office; but the Conference of the Wesleyan Methodist Society inserted a clause similar to the clause in St. Paul's and St. John's College Acts, and the Provisional Committee (it was a very large Committee) agreed to that clause being inserted, provided that the duties of Visitor were described.
55. But at first they had prepared a Bill leaving out the office of Visitor at all? Yes.
56. *By the Chairman*: I suppose it simply arose from the fact that the office of President of the Conference was an annual office? Not altogether. It was left out intentionally by the Provisional Committee in the first instance, because, as far as they could learn, the powers of Visitor were such as they thought no one man ought to have.
57. *By Mr. Hay*: They considered perhaps that the Fellows would feel such irksome? Yes.
58. That it would place them in a position——? That it would give the Visitor power to control all their acts. And some members seemed to think that there had been decisions in England to the effect that the Visitor had very extraordinary powers over the students in the College.
59. Did that first Draft Bill, as prepared by the Provisional Committee, include any provisions similar to those in the 7th clause, with respect to the theological or religious doctrines or teaching of the Principal? This and several other clauses have been altered several times by the Provisional Committee and the Conference of the Wesleyan Methodist Society, and it would be scarcely possible to tell you how it stood originally. I think at first it was intended to make the Principal (who in the first Draft Bill was called President) liable to removal or suspension, subject to an appeal to the New South Wales District Meeting; leaving the appointment of a Visitor out of the Bill.
60. The New South Wales District Meeting? Yes; that is a meeting of the Ministers resident in New South Wales—an annual meeting.
61. *By the Chairman*: Was not that prior to the Conference being established in New South Wales and the Australian Colonies? The New South Wales District Meeting was so named because the Conference sometimes sits in one Colony and sometimes in another. The New South Wales District Meeting always sits in New South Wales. But after the Conference had proposed the insertion of a clause appointing the President of the Conference Visitor, it was determined that his duties should be defined.
62. *By Mr. Hay*: It did not appear then that sound theological teaching would be sufficiently provided for by the fact of the Fellows being four of them Wesleyan Methodist Ministers in full connection with the Conference, and eight others laymen, communicants with the Wesleyan Methodist Church, and of whom five at least should be members of the Wesleyan Society—it did not appear that that would be sufficient security for sound theological teaching? It did not appear to the Conference sufficient; and the members of the Provisional Committee were divided upon the matter, but they gave way.
63. To the Conference? To the Conference.
64. What is the nature of the Conference—I see it is mentioned here for the first time in the Act, in the third clause? It is to some extent described in the interpretation clause:—"The term 'Conference' shall mean and refer to the Wesleyan Methodist Conference administering the affairs of the Wesleyan Methodist Church in New South Wales." It is composed of delegates from the different Wesleyan Districts within the jurisdiction of the Conference—Ministers appointed by the District Meetings throughout the different Colonies.
65. Throughout the different Colonies? Throughout New South Wales, Victoria, South Australia, Tasmania and New Zealand. The District Meetings in those Colonies appoint their delegates—being Wesleyan Ministers—to attend the Conference in January every year, to be held in one or other of those Colonies, except New Zealand, and they have exclusive control over the religious affairs of the Church. The financial business of the Church is conducted by those Ministers, and by certain laymen who are also appointed to attend.
66. Who are chosen in a similar way? Yes, and I think by the same District Meetings.

67. And this Conference is a body which presides over the affairs of the Church throughout all the Australasian Colonies? Throughout the Australasian Colonies. G. W. Allen, Esq.
68. Is there any particular body which has peculiar charge of the affairs of the Wesleyan Church in so far as New South Wales is concerned? The New South Wales District Meeting direct the affairs of the Wesleyan Church in New South Wales, subject to the Conference. 26 Oct., 1859.
69. Subject to the Conference? Yes.
70. Where do the Conference meet? They meet in the various Colonies, one year in one, and the next year in another; in four Colonies, not in New Zealand.
71. How often do they meet? Once a-year.
72. I suppose there is no institution of this sort in connection with the Wesleyan Church in any of the other Colonies? None exactly of this character, assisted by the State. They have a College, called Horton College, in Tasmania, but it is little more than a good Grammar and Boarding School.
73. What is the connection between the Wesleyan Church in the Colonies and the Wesleyan Church in Great Britain? The Conference in the Colonies is affiliated to the Conference in Great Britain.
74. Is it in subordination to it? It has full control over its own affairs in the Colonies, with the exception of the appointment of the President. The President is appointed by the English Conference; he is nominated by the Colonial Conference and appointed by the Home Conference. I believe that is the only case in which they have not full control over their affairs.
75. Is he appointed by the Home Conference by vote? Yes.
76. *By the Chairman:* The Conference in these Colonies elects that officer, and they nominate to the Conference at Home? Yes; the election here amounts merely to nomination.
77. *By Mr. Hay:* By election—in fact, by vote? Yes; by vote. In every case the person nominated here has been appointed.
78. How is the President of the Conference at Home appointed—by election? By election.
79. And has no peculiar power with respect to the appointment of the President out here? No.
80. That appointment is in the general body of the Conference? Yes.
81. Then, as to Wesleyan Methodist Ministers “in full connection with the said Conference,” are there Wesleyan Methodist Ministers in connection with the Colonial Conference who are not in connection with the Conference in Great Britain? Yes. The Conference referred to here is the Australasian Conference—“that they shall be in full connection with the “Australasian Conference.” There are Ministers in connection with this Conference who do not belong to the British Conference at all—who have been received here as Ministers into full connection.
82. And who have nothing to do with the British Conference? Who have nothing to do with the British Conference.
83. Are Ministers in connection with the British Conference received, as a matter of course, as in connection with the Conference here? I imagine that the Australasian Conference would have a voice as to whether they would receive them or not. They have been received as a matter of course, and probably would be, but still I think they would not be bound to receive them. There are many financial matters connected with the Church which would require consideration at the hands of the Conference in receiving a Minister.
84. With respect to the doctrines—what is the connection between the Conference here and the Conference in Great Britain; I suppose no change would take place in any received doctrine of the Wesleyan Church by the action of the Conference here without reference to the Conference at Home? I think that is provided for in the constitution under which the Australian Conference is appointed—that there is an appeal to the Home Conference in all matters of doctrine and discipline.
85. *By Mr. Douglas:* Are not delegates at times appointed by the Wesleyan body here to attend the Conference in England? In one case, I believe, one of the Ministers was, on one occasion, appointed to represent this Conference; it is not necessary that there should be.
86. Mr. Boyce went, I think? Yes; he attended the British Conference as the representative of the Australasian Conference.
87. *By the Chairman:* That was merely his first visit to England? Yes. There has been no one appointed in such a capacity since. The Conferences in connection with the English Conference sometimes send representatives—the Irish and American Conferences, for instance—to attend, to present their address, and to explain any matters in reference to which the Home Conference would like explanation.
88. *By Mr. Hay:* I was going to follow up my question by asking whether, in the case of a member being deprived of his connection with the Conference here by the Act of the Colonial Conference, there would, on his part, be an appeal to the Conference in Great Britain? I think not. The Conference here have full control over the Ministers connected with it.
89. You think they have full control? Yes.
90. In all matters of discipline? Yes.
91. Both on moral and religious grounds? Yes.
92. Without appeal to the English Conference? Yes.
93. *By the Chairman:* Since the establishment of a Conference in this Colony? Yes, of course. Previously the District Meeting had a certain control, subject to an appeal to the Conference in England, but now the Conference here has exclusive control.
94. *By Mr. Hay:* The Colonial Conference? Yes—over all in connection with it.
95. And conclusively? And conclusive control.

G. W. Allen, Esq. 96. *By Mr. Douglas*: In reference to the fourth clause,—is it the opinion of the Methodist body generally that the Members of the Council (being the four senior Ministers resident in the County of Cumberland) will sufficiently represent the distant Churches in the Council? The reason for appointing persons resident in the County of Cumberland was that clerical members should have an opportunity of attending all meetings of the Council. It was thought that if clerical members were appointed, resident in different parts of the Colony, it would be impossible for them to attend regularly, and that therefore the Ministers would not be properly represented in the Council.

26 Oct., 1859.

97. The constitution of the Methodist Church admitting, I suppose, of constant change—Ministers leaving one parish after a period of service, and going to another? Yes; they all change after three years; they may change annually, but they must change at the end of three years.

98. Then that principle, as applied to the appointment of the Principal—he necessarily being a Methodist Minister in full connection—must also change? In England Ministers holding somewhat similar offices are appointed for six years, in the first instance, and the Conference have power to re-appoint them immediately to the same office. It is only in such positions that they are entitled to retain them in the office. Every Minister having a circuit, he being the pastor of a Church, must be appointed annually to his charge, and he must be removed every third year.

99. *By Mr. Hay*: That would not apply to the Principal of this College? No; there is no absolute rule that he shall be removed, either yearly or at any time.

100. *By Mr. Douglas*: It is merely a matter of discipline? Merely a matter of discipline.

101. Which would not be applied to the Principal? No, it would not necessarily be applied to the Principal. The Conference has the power to remove any of its Ministers when it pleases—that is annually.

102. And, in fact, I imagine the Principal could, by that method, be removed by being ordered to a different sphere? Yes.

103. Irrespective of his being Principal? Yes; he could be removed from Sydney, where he might be stationed as Principal of the College, to any other part of the Colony, or to any other Colony, at the will of the Conference.

104. Then, of course, he could not continue to be Principal while he was resident in another sphere of action? No; it would then be necessary for the Fellows to appoint another Minister to that post.

105. *By Mr. Hay*: Removal in this way then could take place without any formal complaint? Yes; the Conference has absolute control in the removal of its Ministers.

106. *By Mr. Douglas*: Then, in fact, the Principal might be removed even in opposition to the wish of the Fellows? He might; but that could not be prevented without altering the whole system of Wesleyan Methodism. Each Minister when he comes into connection with a Conference submits to the control of the Conference entirely in all such matters. He can retire from the position if he likes; but so long as he remains in full connection with the Conference he must go where the Conference direct. Under the discipline of Wesleyan Methodism the Conference will have far more control over the Principal of Wesley College than any other Church can have over its College.

107. *By Mr. Hay*: Have you considered what would be the precise position of the matter under this Act if the Principal were removed, he still remaining in full connection with the Conference, to a position where he could not possibly act as Principal—would the seat necessarily be vacated under the Act? I think so; but if it were not so the Fellows would have power, under the seventh clause, to remove him absolutely, and to appoint another.

108. Yes; but suppose the Fellows choose at some future time to take a different view of matters from the Conference—it may be a very violent supposition in connection with such a body as the Wesleyans, but still we live in strange times? If the Fellows did not choose to appoint another no one could take the post; but if, after having appointed one, the Conference choose to say, “We will remove him,” or “We will not have him,”—the Fellows are not compelled to appoint another? No; and in such a case there would be no Principal.

109. But might he not still be Principal—that is what I mean? When he was not in a position to do his duty?

110. Yes? This view of the matter did not occur to me; but it is possible that such a case might happen. It might be advisable, perhaps, to insert some words making his residence in the College, or within some reasonable distance from it, or in Sydney, compulsory.

PHILLIP-STREET.

1859.

SCHEDULE.

NO.	PAGE.
1. Mr. Darvall to the Colonial Secretary, forwarding a tabulated Statistical Return relating to the Protestant Orphan School, at Parramatta. 14 February, 1859.. .. .	3
2. Secretary to the National Education Board to the Under Secretary, forwarding similar Return from the National Schools	5
3. Secretary to the National Education Board to the Under Secretary, forwarding additional Returns. 29 April, 1859	111
4. Secretary to the Trustees of the Sydney Grammar School to the Colonial Secretary, transmitting the Returns from the Sydney Grammar School. 3 May, 1859	152
5. Secretary to the Denominational School Board to the Colonial Secretary, stating that the Returns from the Denominational Schools will be sent in as soon as possible after they shall have been received by the Board. 15 February 1859	161
6. Ditto ditto ditto 9 July, 1859	161
7. The Reverend Alfred H. Stephen to the Colonial Secretary, stating that the information required could be furnished only in a few instances from the Asylum for Destitute Children, which is considered also not to come within the scope of the Return asked for ..	161

(No Return from the Roman Catholic Orphan School has been received.)

1859.

RETURN, in part, to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 24 November, 1858,—“ That
 “ there be laid upon the Table of this House, a (tabulated) Return
 “ from all Schools in New South Wales, wholly or partly maintained
 “ by Public Funds, of—

- “ (1) Name of locality where the School is situate.
 “ (2.) The materials of which such School is constructed,—whether chiefly of stone,
 “ of brick, of wood, or of metal; and the present condition of the building, and
 “ whether it needs repairs, enlargement, or other improvement.
 “ (3.) The number of superficial square feet contained in the area of the school-
 “ house or building.
 “ (4.) The number of superficial square yards or of square feet contained in the
 “ ground or land adjoining the School for the use of the pupils.
 “ (5.) The description and present condition of the water-closets provided for the
 “ use of the pupils.
 “ (6.) The number of superficial square feet, and of cubic feet, contained in each
 “ room appropriated for teaching.
 “ (7.) The average number of pupils usually assembled in each of such rooms.
 “ (8.) The provision which is made for the ventilation of such rooms.
 “ (9.) The annual average number on the books, and the average number attending
 “ the School; distinguishing the males from the females where the School is
 “ attended by both sexes.
 “ (10.) The maximum and minimum age of the pupils (of males and of females)
 “ in the School.
 “ (11.) The number of classes into which the School is divided, the average number
 “ in each class, and the maximum and minimum age in each class.
 “ (12.) The number of hours during each day the pupils attend the School, stating
 “ the hour of commencing and the hour of terminating the School duties, with the
 “ times of intervening cessation of study, and how such intervals are employed.
 “ (13.) The number of holidays and half-holidays in each week, and the number of
 “ vacations, the duration of each, and the period of the year when such vacations
 “ occur.
 “ (14.) The total number of days appropriated to School studies during the year.
 “ (15.) The average length of the period during which pupils, from the time of
 “ their first entrance to the time of their finally leaving School, remain there.
 “ (16.) The number of children between the ages of 5 and 15 years in the district
 “ or locality where the School is situate, who do *not* usually attend there.
 “ (17.) The weekly, quarterly, half-yearly, or annual sum charged to each pupil
 “ for instruction; the annual charge for books; and the *total* annual charge for
 “ each pupil
 “ (18.) The annual amount of School fees received from the pupils of the School
 “ during the twelvemonth ending the 30th September, 1858; the appropriation of
 “ such fees; the amount received from other (specifying from what) sources towards
 “ the support of such School; the total amount received from *all* sources towards
 “ the support of such School during the above-mentioned period.
 “ (19.) Dividing the last mentioned total by the average number of the pupils
 “ actually attending the School during the period above-mentioned, give a state-
 “ ment of the average annual total cost of the education of each pupil.
 “ (20.) A detailed enumeration of the several subjects of instruction given to each
 “ class, and the precise portion of time allotted to each of such subjects in each day
 “ throughout the week.
 “ (21.) A list of the titles of all books used in each of the several classes in the
 “ School; the present condition of the books now in use; whether other kinds of
 “ books are needed; and whether the number of those at present in use is adequate
 “ to the wants of the School.
 “ (22.) A descriptive list of all prints, diagrams, maps, instruments, and other
 “ School apparatus used in the School, their present condition, and whether any,
 “ and, if so, what others are needed.
 “ (23.) An account of the system of correction employed in the School to preserve
 “ discipline, and an account of any written or other instructions to the teachers
 “ from any Board of Education, Official Visitors, Inspectors, or Managers of the
 “ School on this subject.

“ (24.)

- “(24.) How often during the year, and by whom, are the pupils of the School examined with reference to their progress, and whether any prizes or other rewards of merit are given periodically in the School, and, if any, of what description, and how often distributed?”
- “(25.) By whom is the School officially visited or inspected? How often during the year, and what length of time is occupied by the Inspector or Visitor in the performance of this duty. If any report on the state of the School exist, furnish a copy of it, adding thereto any remarks on such report, and the present condition of the School, as the teacher (master or mistress) may be prepared to offer.”
- “(26.) Name of Head Teacher.”
- “(27.) Names of Assistant Teachers, Pupil Teachers, or Monitors attached to each School.”
- “(28.) Birthplace of each of the above.”
- “(29.) Age of ditto.”
- “(30.) Date of appointment to present office.”
- “(31.) Whether or not trained as a teacher.”
- “(32.) If trained, at what institution? For how long a period? Possessing what class of certificate of competency?”
- “(33.) If *not* trained as a Teacher: What experience in teaching previous to undertaking present appointment? What occupation or business before adopting that of a Teacher?”
- “(34.) Annual or other periodical amount of salary of Head Teacher, of Assistant Teachers, of Pupil Teachers, and of Monitors.”
- “(35.) Fees, allowances, and emoluments, *exclusive of salary*.”
- “(36.) Total annual income of Teacher or Teachers, derived from School.”
- “(37.) What religious or moral instruction is given? How often? By whom? If visited by any Clergyman or Minister of Religion, state the name and denomination to which he belongs. Give a list of the titles of the books used in the School for such purpose.”

(*Mr. Plunkett.*)

SCHOOLS IN NEW SOUTH WALES.

No. 1.

F. O. DARVALL, ESQ., to THE COLONIAL SECRETARY.

Parramatta, 14 February, 1859.

SIR,

I have the honor, in reply to your letter dated the 11th instant, to forward to you the tabulated Returns asked for.

I have, &c.,

THE HONORABLE
THE COLONIAL SECRETARY.

F. O. DARVALL, P.M.,
Superintendent.

PROTESTANT ORPHAN SCHOOL, PARRAMATTA.

- 1.—Parramatta.
- 2.—Built of brick; in tolerably good condition considering it is an old building, having been erected in 1814, by Governor Macquarie. The timbers in some places are very much injured by the white ant; and, from this and other causes, repairs are constantly necessary.
- 3.—
- 4.—Girls' playground, 61,226 square feet; boys' playground, 68,640 square feet.
- 5.—Pretty good, but capable of improvement.
- 6.—Girls' schoolroom, 11,352 cubic feet; boys' schoolroom, 8,256 cubic feet.
- 7.—Boys' schoolroom, about 60; girls' schoolroom, about 70.
- 8.—Merely doors, windows, and fireplace in the girls' schoolroom. In the boys' schoolroom there is a Venetian ventilator at each end; but it is still very imperfectly ventilated.
- 9.—The average number ranges from 180 to 190, allowing for fluctuations and changes. Males usually averaging from 70 to 80; females usually averaging from 70 to 80.
- 10.—Maximum age of males, 14; minimum age of males, 3. Maximum age of females, 16; minimum age of females, 3.
- 11.—Boys' school—six classes; average number in each class, 14, viz. :—

1st class—Maximum age, 13.	
Do. Minimum age, 9.	
2nd class—Maximum age, 11.	
Do. Minimum age, 8.	
3rd class—Maximum age, 11.	
Do. Minimum age, 8.	
4th class—Maximum age, 11.	
Do. Minimum age, 6.	
5th class—Maximum age, 10.	
Do. Minimum age, 6.	
6th class—Maximum age, 10.	
Do. Minimum age, 6.	
- 12.—Five hours, namely: From 9 to 12 in the forenoon, and from 2 till 4 in the afternoon. The boys go out of school for a quarter of an hour in the forenoon. The intervals are employed in recreation, and in the performance of certain household and domestic duties, gardening, &c
- 13.—A whole holiday on Saturdays, and an occasional half-holiday. A vacation of ten days or a fortnight at Christmas and Midwinter.
- 14.—Total number of days appropriated to school studies during the year, 229.
- 15.—
- 16.—Question not applicable to this school.
- 17.—Ditto.
- 18.—Ditto.
- 19.—Ditto.
- 20.—First class—boys:

Reading...	$\frac{1}{2}$	an hour each day.
Arithmetic	1	" "
Writing...	1	" "
Grammar	$\frac{1}{4}$	" three times a week.
Mental arithmetic...	$\frac{1}{4}$	" twice a week.
History	$\frac{1}{4}$	" "
Geography	$\frac{1}{4}$	" three times a week.
Tables	$\frac{1}{4}$	" each day.
Religious instruction	"	" "
Music	$1\frac{1}{2}$	" per week.
- Second class—boys:
Same as the first.
- Third class—boys:

Reading...	1	hour each day.
Arithmetic	1	" "
Writing...	1	" "
Religious instruction, tables, and music,						same as first and second.

Fourth class—boys :	
Same as the third.	
Fifth class—boys :	
Reading... ..	2 hours each day.
Writing... ..	1½ " "
Scriptures and tables same as the first division.	
Sixth class—boys :	
Same as the fifth.	
First and second classes—girls :	
Reading... ..	½ an hour each day.
Writing... ..	1 " "
Arithmetic... ..	$\frac{3}{4}$ " "
Grammar... ..	" twice a week.
Geography... ..	$\frac{1}{4}$ " "
Religious instruction... ..	½ " each day.
Needlework... ..	1½ " "
Third and fourth classes—girls :	
Reading... ..	$\frac{3}{4}$ of an hour each day.
Writing... ..	1 " "
Arithmetic... ..	$\frac{3}{4}$ " "
Needlework... ..	1½ " "
Religious instruction, catechism, and tables, same as first and second classes.	
Fifth and sixth classes—girls :	
Reading... ..	2 hours each day.
Writing... ..	½ " "
Repeating catechism, hymns, tables, &c.	1 " "
Needlework... ..	1½ " "

21.—First class—boys: We have a good stock of the following books, perfect in condition, and sufficient in number, for the present wants of the school,—Illustrated London instructor; fourth reading books (Irish); fifth ditto (Irish); supplement to fourth (Irish); child's guide; grammar (Lennie and M'Culloch); geography (Australian). Second class: third reading books (Irish); third ditto (S. P. C. R.); History of England (Pinnock's). Third class: second reading book (S. P. C. R.). Fourth class: Same as third. Fifth and sixth classes: Mavor's spelling books; fourth lessons (Irish); and a number of reading lessons on sheets. In addition to the above we have a fair supply of arithmetics, tables, slates, copy-books, catechisms, bibles, and testaments. I consider the present stock of books quite sufficient, and have no wish to suggest any alteration. Girls' school: We have a sufficient number of the following books for the present use of the school,—Fourth reading book, third ditto, second ditto, class ditto, grammar, geography, primer, Mavor's spelling-book, reading lessons on sheets, bibles, prayer-books, catechisms, arithmetics, copy-books, and slates.

22.—Maps, &c.,—boys' school: Eastern and Western Hemisphere, Europe, Asia, Africa, America, England and Wales, Ireland, Scotland, Palestine, Australia; 1 black board stand, 2 black boards; table and master's desks; 5 very convenient desks with sufficient number of forms—no more required at present. Maps, &c.: Map of the World, Europe, Australia, Palestine; 1 black board; 2 tables, and a sufficient number of desks and forms, all in good condition.

23.—The system of correction employed in the school to preserve discipline is varied, according to the nature of the offence. Pilfering, lying, or using bad language, is punished by solitary confinement, or corporally, and is reported to the master or matron. For minor offences—such as being absent without leave, slovenliness, or neglect of any of the duties devolving upon them—they are kept in on holidays, and made to work when the others are at play, &c., &c.

24.—The children are examined twice a year; prizes are given for progress in learning, for cleanliness, and good conduct; the prizes are books, work-boxes, bats, balls, boxes, pocket knives, &c., &c.

25.—By the Diocesan Inspector of Schools, twice a year. The time occupied is generally a full day of school hours to each school.

26.—Mary Macnab (girls); Charles Johnson (boys).

27.—Sarah Barnes, second teacher in girls' school; Thomas Harrison, drill-master in boys' school.

28.—Mary Macnab, Argyleshire, Scotland; Charles Johnson, London, England; Sarah Barnes, Norwich, England; Thomas Harrison, Liverpool, England.

29.—Mary Macnab, 22 years; Charles Johnson, 36 years; Sarah Barnes, 19 years; Thomas Harrison, 32 years.

30.—Mary Macnab, 1st November, 1857; Charles Johnson, 1st October, 1858; Sarah Barnes, 1st July, 1857; Thomas Harrison, 1st September, 1856.

31.—Mary Macnab, trained teacher; Charles Johnson, ditto; Sarah Barnes, ditto; Thomas Harrison, not trained.

32.—Miss Macnab:—At St. James', eight years there; five years a teacher; certificate of competency from the Reyd. Mr. Allwood. Charles Johnson:—At the Glasgow Normal Seminary for twelve months; second division 3rd class; Committee Privy Council, England; with diploma from Normal Seminary. Sarah Barnes:—At the Model School in Norwich, three years there; but no certificate. Thomas Harrison:—Not trained.

33.—Miss Macnab, Charles Johnson, Sarah Barnes.

- 34.—Schoolmaster, £120 ; 1st teacher to girls, £70 ; 2nd ditto, £60 ; drill-master, £60.
 35.—Rations and quarters.
 36.—Salaries and quarters, with rations.
 37.—Daily by the teachers, and occasionally by the Minister of the Parish, the Revd. Mr. Gore, incumbent of All Saints' Church, Parramatta,—bible, prayer-book, church catechism, faith and duty, Watt's scripture history.

Parramatta, 11 February, 1859.

J. A. BETTS,
 Master.

F. O. DARVALL, P.M.

No. 2.

SECRETARY TO NATIONAL EDUCATION BOARD to THE UNDER SECRETARY.

National Education Office,
 Sydney, 23 March, 1859.

SIR,

I have the honor, by direction of the Board of National Education, and in accordance with the request contained in your letter, dated 17th December last, to forward to you Returns of the National Schools, as per Appendix annexed hereto, for the purpose of compiling a general (tabulated) Return of all Schools in New South Wales, wholly or partly maintained by public funds, to be laid before the Legislative Assembly. 22nd March, 1859.

2. There are several other National Schools, from which no returns up to this date have been received. The attention of the teachers, however, has been recalled to the matter, and the remainder of the returns will be furnished so soon as they shall have reached this Office.

I have, &c.,

WM. ELYARD, Esq.,
 Under Secretary.

W. C. WILLS,
 Secretary.

APPENDIX.

LIST of Returns of Schools referred to in the letter of the Board of National Education, No. 495, of date 22nd March, 1859.

- | | |

| 37. Manly. | |

W. C. WILLS, Secretary.

ALBURY.

ALBURY.

- 1.—Albury.
- 2.—Constructed of brick; building in good repair, but not sufficiently commodious.
- 3.—The whole building contains 666 square feet; of which the schoolrooms cover 424, and the teacher's residence 242 square feet.
- 4.—The ground adjoining the school, for the use of the pupils, contains 3,686 square yards.
- 5.—The water-closets consist of one building, divided by a partition, capable of accommodating one each, and in good repair.
- 6.—The principal room contains 297 square feet, and 2,673 cubic feet; the classroom 127 square feet, and 1,143 cubic feet; total, 424 square feet, and 3,816 cubic feet.
- 7.—Generally about 50 children in the large room and 25 in the classroom.
- 8.—Three windows in one room and two in the other.
- 9.—Average number on the books, 54 males, 60 females; total, 114. Average number in attendance, 33.96 males, 39.66 females; total, 73.62.
- 10.—Maximum age of males, 14 years; of females, 13 years.
Minimum " 4 " " 3 "
- 11.—The school is divided into five classes; average number in each, 15.
Maximum age in 1st class, 6 years; minimum, 4 years.
" 2nd " 8 " " 5 "
" sequel 13 " " 6 "
" 3rd class 14 " " 8 "
" 4th " 14 " " 12 "
- 12.—The pupils attend school for seven hours daily, commencing at 9 o'clock A. M., and terminating at 4 P. M.; with an intermission of ten minutes at 10½ o'clock, employed in the playground; and from 12 to 2 o'clock at dinner and in playground.
- 13.—One half-holiday in each week. One holiday in the year. Two vacations—one at Christmas for two weeks, and one at Easter for one week.
- 14.—292 days during the year appropriated to school duties.
- 15.—Twelve months.
- 16.—About 100 children.
- 17.—Annual sum charged to each pupil for instruction £2 9 0
Books and stationery 0 4 1
Total annual charge £2 13 1
- 18.—Amount of school fees £163 6 6
Subscription of pupils, at 1d. each per week, towards providing the school with books and stationery ... 4 9 8
Salary from the Board of National Education 140 0 0
Total amount £307 16 2

The school fees and Board's allowance make up the teacher's salary; the other item is used for the purpose above-mentioned.

19.—The average cost for the education of each pupil, for the period specified, is £4 7s. 11d.

20.—Reading, writing, grammar, arithmetic, geography, English etymology, derivations, history, mental arithmetic, and object lessons. First, second, and sequel classes instructed in reading for an hour and a half each day; and third and fourth classes, for forty-five minutes.

The three first-mentioned classes are instructed in writing for an hour and a half each day, and the two last for three-quarters of an hour. All are instructed in geography and arithmetic for three-quarters of an hour daily, and in grammar; third and fourth classes for three-quarters of an hour, and first, second, and sequel classes for half an hour each day.

Third and fourth classes instructed in English etymology and derivations for half an hour, and in mental arithmetic for a quarter of an hour each day.

On two days in the week, and for two hours and a quarter each of these days, girls are taught needlework, and object lessons to all for half an hour. The fourth class receives instruction in history for three-quarters of an hour each day on four days of the week.

- | | |
|----------------------------|------------------------------------|
| 21.—First book of lessons. | Compendium of geography. |
| Second do. | Elements of geometry. |
| Sequel do. | Mensuration. |
| Third do. | Scripture lessons (Old Testament). |
| Fourth do. | Do. (New Testament). |
| Sequel to do. | Sacred poetry. |
| Fifth do. | Geography generalized. |
| Reading do. (Girls.) | English dictionary. |
| English grammar. | (Spelling-book superseded.) |
| Book-keeping. | |

With the exception of the second lesson books, these are all in good condition; and, with the same exception, the number is sufficient.

22.—Two sheets, each 4 ft. 2 in. × 3 ft. 6 in., illustrating the first principles of natural philosophy.

One sheet, 4 ft. 8 in. × 4 ft., illustrating the motions of the earth, phases of the moon, eclipses, planetary system, effects of refraction and summer and winter rays.

One sheet, 3 ft. 8 in. × 4 ft. 6 in., shewing, in relative proportions, the different species of animals.

One sheet, 3 ft. 8 in. × 2 ft. 9 in., shewing the different sources of food, animal and vegetable.

One map of the World, on a globular projection 6 ft. 7 in. × 4 ft. 3 in.

One map of Europe, 5 ft. 4 in. × 4 ft. 4 in.

One map of Australia, 5 ft. 4 in. × 4 ft. 4 in.

One map of Palestine, 5 ft. 4 in. × 4 ft. 3 in.

One black board in stand, 3 ft. 4 in. × 2 ft. 2 in. All in good condition.

The school would be benefited by an additional black board, a map of Asia, America, England, Ireland, Scotland, Ancient World, and United States; also a globe and ball-frame.

23.—When found necessary, deprivation of privilege is the only kind resorted to; moral influence in a great measure superseding any correction of a harsher nature.

No instructions on the subject from any Board of Education, Inspector, or Manager.

24.—The pupils have hitherto been examined only at Christmas, by the teacher, at which time books have been distributed as prizes.

25.—The school is officially visited by the Patron at least once a month; and was inspected in April, 1858, by the Board's Inspector, on two consecutive days, whose suggestions, which are subjoined, are the only notices of any visitor:—

1. "To keep a debtor and creditor account of the Book Fund.

2. "To be very particular in keeping the Registers.

3. "To correct the habit of reading very fast which some of the children have "acquired."

These suggestions have been strictly observed and faithfully carried out.

26.—William Dwyer.

27.—None, with the exception of the teacher's wife, who assists in the school duties.

28.—Kilkenny (City), Ireland.

29.—Twenty-four (24) years.

30.—11th August, 1856.

31.—Trained as a teacher.

32.—At the Training Institute of the Irish National Education Commissioners for twelve months, possessing a first division of second class certificate; and at the National Model School, Sydney, for one month.

33.—No other occupation.

34.—£120 per annum.

35.—£20 per annum allowance from the Board, on account of the high prices of provisions, &c., in the District; and school fees, which vary.

36.—About £275 per annum.

37.—Scripture history taught by the teacher on three days of the week, for forty-five minutes each day. Religious instruction given by the Rev. Mr. Potter to the children of the Church of England, and by the Rev. Mr. Ballantyne to the Presbyterians.

Mr. Potter for two hours in the week, and Mr. Ballantyne for one hour.

WILLIAM DWYER,
Teacher of the National School, Albury.

BANGALORE.

1.—Bangalore, District of Goulburn.

2.—Slab house, shingled roof; in good condition, but too small.

3.—66 superficial square feet 6 inches.

4.—No ground attached to the schoolhouse.

5.—No water-closet.

6.—The schoolroom contains 5 cubic feet 8 inches, or 15 superficial square feet 8 inches. The kitchen, 1 cubic foot only.

7.—Average daily attendance, 20.

8.—Well ventilated by the interstices through the slabs.

9.—On the Rolls 42, average attendance, viz.,—boys 10, girls 10.

10.—Boys 3 years of age to 8	12	} Total 42.
Do. 8 " " 14	10	
	—	
	22	
Girls 3 years of age to 8...	12	} Total 42.
Do. 8 " " 16...	8	
	—	
	20	

11.—Two classes; first and second.

1st class boys ...	4	From 2 years of age to	4	} Total 42.
2nd do. ...	15	From 6 " "	14	
	—			
	19			
Girls, 1st class	12	From 3 years of age to	16	} Total 42.
Do. 2nd do.	11	From 6 " "	16	
	—			
	23			

12.—School hours 9 to 12; recreation from 12 to 2 o'clock, which time is passed in innocent amusements; school re-commences at 2 o'clock until 4; the total number of hours the pupils are engaged at their studies being five hours daily.

13.—No holidays or half holidays during the week; a fortnight is allowed at Christmas.

14.—About 300 days.

15.—The school has not been established long enough to answer this question, but from the progress they have made with me, I consider three years would complete a child for colonial routine of life.

16.—About 15.

17.—I receive £4 per annum from four families, from those who are not so well to do £2 per annum, leaving it to their option to send so many of their children as they may think fit; no money has yet been paid me for books; taking one family with another, the annual charge for each pupil would be £3 1s.

18.—The amount received for school fees for twelve months ending 30th September, 1858, £20, which with the Government allowance £42 per annum, forms my salary £62 per annum; no fees or contributions have been received from any other source, towards the support of this school.

19.—Annual charge for each pupil, £3 1s.

20.—9 to 10, reading—1st and 2nd class; 10 to 12—dictation and spelling to 2nd class; 10 to 12—1st class writing on slates, and arithmetic; 2 to 3, 1st class—reading, tables, and mental calculations; 2 to 3, 2nd class—writing and arithmetic.

21.—First, second, and third series of reading lessons—these constitute the library; this school has never received a complement of books; geographies, grammars, arithmetic, and scripture lessons much wanted; also one dozen first reading books.

22.—No prints, diagrams, or maps—a map of Australia much wanted.

23.—For disobedience or dereliction of duty, the child so committing himself or herself, is kept in during play hours, and a task given, which must be either committed to memory, or written out on a slate before the offender is allowed to join his companions; no instructions received from any Board of Education, or official visitor, on this subject.

24.—This school was visited twice during the past year by Inspectors.

25.—Mr. McCann visited us in December last; this gentleman devoted a whole day in examining the pupils, and advising with me on scholastic duties generally; I am not in possession of any Report on the state of the school, nor have I any report to make thereon.

26.—Charles Capon.

27.—None.

28.—Charles Capon, Hendon, Middlesex; educated at Mill Hill Grammar School.

29.—Thirty years of age last 4th January, 1859.

30.—1st August, 1858.

31.—Not a trained teacher.

32.—None.

33.—Two years tutor in private families; I was previously cashier to the London and County Bk., Lombard-street, London.

34.—None.

35.—None.

36.—£62 per annum.

37.—No religious instruction given; no Clergyman or Minister of Religion has visited this school; nor are there any books in the school for that purpose.

BATHURST.

1.—The school is situated in Piper-street, Bathurst.

2.—It has a stone foundation, brick walls, and shingled roof. Before it was rented for a National School, it was a private dwelling, of five rooms. The brick partition between the two front rooms has been taken down; the back rooms remain as they were. The house is in good repair; but the front—in which alone the school is held—is inconveniently small.

3.—In the area of the schoolhouse there are 740 superficial square feet.

4.—Size of playground, 1,640 square yards.

5.—There are two separate closets; one new, and built of brick, with two seats; the other of wood, with one seat. Both are regularly cleaned.

6.—The school is held in one room only, which contains 325 superficial square feet, and 3,250 cubic feet. The classroom contains 115 superficial square feet, and 920 cubic feet.

*7.—Average assembled for the last month, 43.

8.—One door and one window are kept constantly open, and there is an opening across the ceiling to the roof, where the partition was removed.

*9.—Average number on the books; boys, 42.25; girls, 19.5: total, 61.75. Average in attendance;—boys, 30; girls, 13; total, 43.

10.—Boys' maximum age, 15 years; minimum, 3. Girls' maximum, 13; minimum, 4.

*11.—There are four classes, as follows:—

Class.	Average.	Maximum Age.	Minimum Age.
1st	22	9	3
2nd	24	13	6
Sequel	9	13	7
3rd	7	15	9

12.

* As the school has not been opened twelve months, here, and in those places where an asterisk is prefixed to the number of the heading, the average is taken for the last four weeks ending February 25th, 1859.

SCHOOLS IN NEW SOUTH WALES.

9

12.—The pupils attend five hours each day; from 9 o'clock till 12, and from 2 till 4. Besides the two hours for dinner and recreation, there is a recess at half-past ten o'clock for fifteen minutes.

13.—There is a holiday every Saturday. The appointed vacations are, a week each at Easter, Midsummer, and Christmas, but a fortnight was given last Christmas.

14.—Total number of days appropriated to school studies from the opening of the school on July 26th, 1858, to February 25th, 1859—109 days.

15.—Thirteen have left the school; average length of time they remained, eleven weeks.

16.—An approximate amount only can be given of the number of children in the town between the ages of 5 and 15 who do not usually attend this school—say 750. At the Census taken in 1856 there were 821 children between the ages of 4 and 14, in the town of Bathurst.

17.—Charges to each pupil:—10 children, at 6d. per week; 26, at 1s.; 5, at 1s. 6d.; 12, at 15s. per quarter; and 8, at 21s. per quarter; 3 being admitted free. The annual charge for books is 2s. each child, with the exception of the 3 free. Total annual charge to each pupil:—10, at £1 4s.; 26, at £2 8s.; 5, at £3 12s.; 12, at £3; 8, at £4 4s.; 3, free.

18.—Amount received from the pupils, from the opening of the school on July 26th to September 30th, 1858, £5 18s. 6d., which was appropriated to the teacher. Amount received from the Board of National Education, £15 Total amount, £20 18s. 6d.

19.—Cost of the education of each pupil (21.7) for the time above-mentioned, 19s. 3¼d. which is at the rate of £4 12s. 6d. per annum.

20.—Hours allotted to the several subjects of instruction in each class:—

FIRST CLASS.

	Monday.	Wednesday & Friday.	Tuesday & Thursday.	Total.
Reading.....	1½ hours	1½ hours	1½ hours	6¾ hours.
Writing	1½ "	1½ "	1½ "	8¾ "
Arithmetic ...	¾ "	¾ "	1 "	3¾ "
Geography.....	¾ "	¾ "	...	2¾ "
Grammar	¾ "	1½ "

Scripture lessons .	1 "	1 "	5 "
General lesson ...	¼ "	.. "	¾ "
			<u>23¾</u>

21.

* Most of the second class join in reading the scripture lessons. The girls spend an hour each day in needlework.

21.—Titles of the books used in the several classes:—First class: First book of lessons, ditto in tablets. Second class: Second book of lessons, sequel No. 1 to ditto, Scripture lessons (O. T.) No. 1, first book of arithmetic, English grammar. Sequel class: Second book of lessons, sequel No. 1 to ditto, Scripture lessons (O. T.) No. 1, arithmetic, grammar, spelling-book superseded. Third class: Third book of lessons, Scripture lessons (O. T.) No. 1, arithmetic, grammar, spelling-book superseded, mensuration. The books are generally in good condition; no others are needed at present; and those in use are adequate to the wants of the school.

22.—The map of the World, map of Europe, England, Ireland, and Scotland; black-board and large compass; all in good condition. A map each of Palestine and the Ancient World would be very useful.

23.—Corporal punishment is but little used; twice only since the commencement of the school has a boy over six years old received corporal punishment. For children under that age a twig is used, the child being called into the classroom to receive punishment. When a boy is observed to have an unruly spirit, he is sent to the classroom for a time. The common punishment for talking, and other breaches of order, is that the offender is *kept in* after school hours. Oral and written suggestions have been received from the Inspector, Mr. Wilkins, and the Organizing Master, Mr. McCann, on the subject of discipline; the former saying that no punishment should be inflicted which would be felt to be degrading; the latter writing, "a fault never to pass unnoticed or without judicious comment," and urging "a more strict course of discipline."

24.—The Inspector and the Organizing Master examined the school in September last, and the latter again in January. No prizes have been given as yet. Occasionally small rewards have been offered by the teacher.

25.—The school is officially visited by the Inspector and Organizing Master. The Inspector spent about two-hours examining; the Organizing Master occupied the next day, I think; and in his January visit about two hours. The teacher would offer the following remarks on the present state of the school:—There are 67 names now on the class rolls, 2 of whom have left. About 20 have been absent daily for the last month, chiefly owing to a most distressing blight in the eyes. 38 new scholars have been admitted this quarter. Generally speaking, he finds new scholars can do very little more than read. Of writing, arithmetic, grammar, and geography, they know very commonly next to nothing at all, if anything; nor do they appear to have been trained to think. These circumstances operate very much against a favorable examination according to the "Table of Minimum Attainments."

26.—Name of Teacher:—B. Banks Carvosso.

27.—J. Carvosso Lean.

28.—Birthplace of B. Banks Carvosso, Hobarton, Tasmania; of Mrs. Lean, the North Atlantic Ocean.

29.—Age of B. Banks Carvosso, 32; of Mrs. Lean, 28.

30.—Date of appointment to present office:—July, 1858.

31.—Not trained.

32.—Classification after examination:—3rd Class A.

33.—Two years and a half a private tutor; and two years and a half partly so engaged. Previous occupation:—Printer.

34.—Amount of salary, £32 from July to December.

35.—Fees, allowances, and emoluments, exclusive of salary:—To September 24th, £5 2s. 6d.; to December 24th, £13 12s: total £18 14s. 6d.

36.—Total income for the twenty-two weeks ending December 24th, £50 14s. 6d.; from which £24 11s. should be deducted,—being £17 11s. for rent, and £7 for removal of partition.

37. No separate religious instruction is given, but an hour each day is devoted to the Scripture lessons by all who can read them. Scripture lessons Nos. 1, 2, 3, and 4, are in the school ready for use; although as yet only No. 1 has been used. No Clergyman has visited the school.

B. BANKS CARVOSSO,
Teacher.

BENDOLBA.

1.—Bendolba.

2.—The material of which such school is constructed is wood. There are two fire-places, one in the schoolroom, the other in the teacher's apartment—built of brick. The premises are in good repair, and need no enlargement.

3.—The number of superficial square feet in the area of the building is 1,224.

4.—The number of superficial square contained in the ground adjoining the school for the use of the pupils is 42,330.

5.—There are no water-closets attached to the premises.

6.—There are two rooms used for teaching; in the largest the number of superficial square feet is 468, and of cubic feet 3,978. The smallest contains 180 square feet, and 1,530 cubic feet.

7.—The average number of pupils usually assembled in each of the above-mentioned rooms is, 12 in the principal room, and 8 in the other.

8.—The provision which is made for the ventilation of these rooms is by means of six windows, three in the back, and three in the front, which turn freely on pivots.

9.—The annual average number on the books is, of boys, 16.75; girls, 19.75; and the average number attending the school is, boys, 15.67; girls, 15.46.

10.—The maximum age of male pupils is 11 years; minimum, 4 years. Female pupils, maximum, 16 years; minimum, 4 years.

11.—There are three classes in the school; average number in the first class, 8; in the second, 4; in the third, 6; maximum age in the first class, 8 years; minimum, 4 years; maximum age in the second class, 9 years; minimum, 5 years; maximum age in the third class, 16 years; minimum, 10 years.

12.—The pupils attend the school for five hours each day; duties in the morning commence at 9, and terminate at 12. At 10.30 A.M. an interval of 15 minutes is allowed for recreation. From 12 to 1 dinner and recreation. School is resumed at 1 P.M., and closed at 3.

13.—There is one holiday in each week—Saturday, the school week ending on Friday afternoon. The only vacations sanctioned by the Board of Education are—a week at Christmas, a week at Easter, and a week in Midwinter.

14.—The total number of days appropriated to school studies during the year is 239.

15.—The average length of the period during which pupils, from the time of their first entrance to the time of their finally leaving school, remain there is 12 months.

16.—The number of children between the ages of 5 and 15 years, in the locality where the school is situate, who do not usually attend there, is from 10 to 12.

17.—The school fee, weekly, to each child is 4d. for instruction, and $\frac{1}{2}$ d. towards a book fund. The total annual charge for each pupil is 18s. 4 $\frac{1}{2}$ d.

18.—The annual amount of the school fees received from the pupils during the twelve months ending 30th September, 1858, was £13 13s. 0 $\frac{1}{2}$ d., which sum was appropriated by the teacher. The amount received from other sources was £34, salary from the Board of Education; £1 14s. 5d. for books, from the pupils—making the total amount received from all sources, during the above-mentioned period, £99 7s. 5 $\frac{1}{2}$ d.

19.—Dividing the last-mentioned total by the average number of the pupils actually attending the school during the period above-mentioned, the average annual cost of the education of each pupil was £7 1s. 11 $\frac{1}{2}$ d.

20.—A detailed enumeration of the several subjects of instruction given to each class, and the precise portion of time allotted to each of such subjects, daily, is as follows:—

FIRST CLASS.		SECOND CLASS.		THIRD CLASS.	
Monday.		Wednesday.		Friday.	
Reading ...	1 $\frac{1}{2}$ hours.	Reading ...	1 hour.	Reading ...	1 hour.
Writing ...	1 "	Writing ...	$\frac{1}{2}$ "	Writing ...	$\frac{1}{2}$ "

		Sewing (girls)	1 "	Sewing (girls)	1 "

N. B.—As the female pupils receive instruction in needlework for one hour daily, their employment is so arranged as to admit of this being done without loss to them of any of the other branches of instruction, and yet the whole routine of duties is included within the prescribed period of 5 hours.

21.—The titles of the books used in each of the several classes are as follows:—First book of reading lessons—first class. Second book ditto, and New Testament Scripture lessons—second class. Third book ditto, ditto—third class. Fourth book and Old Testament Scripture lessons,—copies in hand, but not used at present.

For the general use of the school—1 dictionary, 1 grammar, 1 spelling-book superseded, and 1 arithmetic.

All the books, with the exception of the 1st and 2nd class reading lesson books, are in good condition, and are quite sufficient for the number of children at present on the rolls.

22.—There are neither prints, diagrams, nor instruments in the school. There are 5 maps:—1 Europe, 1 Asia, 1 Africa, 1 America, 1 Australia, and 1 board and stand. Maps and board are in good condition.

23.—The system of correction employed is chiefly confinement during play-time, and as little corporal punishment as possible.

24.—The pupils are examined twice during the year by the Organizing Master. There are no prizes given.

25.—The school is officially visited twice a year by the Organizing Master. His examination occupies a period of two hours each visit.

26.—Name of head teacher—James Sheldon.

27.—Assistant teacher—Rebecca Sheldon, wife of head teacher.

- 28.—Birthplaces—of head teacher, Bristol, England; of wife, Bandon, Ireland.
 29.—Ages—of head teacher, 34; of wife, 28.
 30.—Date of appointment to present office, 18th November, 1858.
 31.—Not trained as a teacher.
 32.—Possess a certificate of competency, Class III, Section B, obtained from the Board of Education, after passing the usual month's training at the Model School, Fort-street, Sydney.
 33.—Taught a non-vested school at Burwood, near Sydney, for a period of 7 months. Was engaged for six years as reader and *precis* writer in a newspaper office, before adopting the occupation of a teacher.
 34.—The salary, £84 per annum, is a joint one, between teacher and wife.
 35.—Exclusive of salary, the school fees of the children, free residence, garden ground, and a yearly allowance from the Board of £1 to cover the cost of postage on school business.
 36.—The total annual income derived from the school, inclusive of items mentioned in preceding paragraph and Board's salary, may be stated at £114.
 37.—Religious instruction and visitation. In the afternoon of each day, from 1 to 2 o'clock, all the children who can read well enough, are occupied with the Scripture lesson, as directed in the Board's published Regulations. The teacher briefly explains what is read.
 There is but one visit of a Minister of Religion on record since the school was opened, namely, of the Rev. A. Wayse, Church of England. But a Local Patron states, that the school has been visited several times by a Mr. Stretton, Presbyterian Minister.
 There are no books in the school appropriated for the purpose of ministerial instruction.

BERKELY.

- 1.—Berkely.
 2.—This school is built entirely of wood, chimneys of brick; is in very good condition. A verandah is much needed round this building, to protect the pupils from sun and rain.
 3.—Number of superficial feet in area of building, 1,007 feet 8½ inches.
 4.—Area of playground, 7,260 yards, or 65,340 feet.
 5.—Water-closets not yet built, but contract is taken for two—one for boys, and one for girls.
 6.—Area of schoolroom, 375 square feet; ditto classroom, 158 square feet 4 inches. Contents of schoolroom, 4,500 cubic feet; ditto of classroom, 1,900 cubic feet.
 7.—Average number of pupils assembled in schoolroom, 45; in classroom, 12.
 8.—Schoolroom and classroom, containing 4 windows, are well ventilated.
 9.—To January 1st, 1859:—

AVERAGE NUMBER ON BOOKS.			AVERAGE ATTENDANCE.		
Boys.	Girls.	Total.	Boys.	Girls.	Total.
32.75	26.50	59.25	23.14	18.78	41.92

10.—Maximum age—males, 14 years; females, 15 years.

Minimum age— " 5 " " 6 "

11.—

Classes.	Boys.	Girls.	Total.	AGE OF PUPILS.				REMARKS.
				Boys.		Girls.		
				Maximum.	Minimum.	Maximum.	Minimum.	
1st Class..	19	6	25	11	5	13	6	These numbers apply to this present quarter, viz., March.—C. H.
2nd " ..	8	5	13	12	8	12	9	
3rd " ..	8	11	19	14	10	15	10	

12.—Pupils attend this school for six hours each day. Studies commence at 9½ A. M.; cease for 10 minutes at 11 A. M.; then continue to 12½ P. M.; to 1½ P. M., dismiss for dinner; resume studies, continue to 3½ P. M., final dismissal.

Pupils do not attend on Saturdays.

13.—Vacations allowed by the Board of National Education, viz.:—One week at Christmas, one week at Easter, and one week at Midwinter. Holidays, every Saturday; no half-holidays.

14.—Total number of days devoted to studies during the year, 245 days.

15.—Regarding the average length of pupils' attendance at school, from period of entrance to final departure, I find, that children living in a dairy district, like this, usually enter at 5 years, and continue attending pretty regularly till from 15 to 17 years; but, in a former school, in an entirely agricultural district, that I conducted, on the banks of the Williams River, I found that pupils entered at 6 years, and (rarely attending more than nine months in the year) finally left at from 13 to 15 years of age.

16.—There are 21 children in this district, between 5 and 15 years of age, who do not attend the school.

17.—Fee for each pupil, 6d. per week, if two only of one family attend; if more, 5d. for those that write on copies; 4d. for those on slates. The charge for books is 6d. per quarter each child. Total annual charge:—

Those at 6d. per week	£1 8 0	} Average cost of each child, £1 3s. 8d.
" 5d. "	1 3 8	
" 4d. "	0 19 4	

18.—Total amount of school fees received from pupils to September 30th, 1858:—

Teacher's fees	... £26 16 8	}	£29 4 7
Book fees 2 7 11		
Salary of teacher	... 96 0 0	96 0 0
Maps presented to the school	4 11 0
Books and one map presented by Board of National Education	}	2 0 0

Total amount received to support of school £131 15 7

19.—Average annual cost of each pupil, £2 3s. 11.46d.

20.—1st class, Reading	... 1 $\frac{1}{4}$ hour each day.
" Writing	... 1 $\frac{1}{4}$ " "
" Arithmetic	... 1 $\frac{1}{4}$ " "
" Spelling	... 1 $\frac{1}{2}$ " "
2nd class, Reading	... 1 $\frac{1}{4}$ " "
" Writing	... 1 $\frac{1}{4}$ " "
" Arithmetic	... 1 $\frac{1}{4}$ " "
" Geography	} 3 days per week.
" Grammar	
" Spelling	... 1 $\frac{1}{2}$ " each day.
3rd class, Reading	... 1 $\frac{1}{4}$ " "
" Writing	... 1 $\frac{1}{4}$ " "
" Arithmetic	... 1 $\frac{1}{4}$ " "
" Geography	} 3 days per week.
" Grammar	
" Dictation	... 1 $\frac{1}{2}$ " per day.

21.—Books in use, in the 1st class, are the 1st and 2nd books of lessons, and reading tablets; in the 2nd class, 2nd books, and 1st arithmetics; in the 3rd class, 3rd books, grammar, and Scripture lessons, O. T. and N. T.

Books are in very good order, and sufficient in quantity.

22.—Maps of America, Asia, Africa, Australia, Palestine, England, Ireland, and Scotland; one black-board, and map-stand; six desks and eight forms; all the above are good, except the desks, which, being made of badly-seasoned cedar, are much warped. Maps of World, and Europe, with a supply of zoological tablets, and diagrams illustrating the sciences of mechanics and geometry, are much needed in this school.

23. Where correction is necessary I employ it by keeping the child from play, by imposition of tasks, and, in extreme cases, I administer corporal punishment, if other means fail. Received, while at Glen William, a letter from Board of National Education, expressing their desire to abolish corporal punishment in their schools, when possible.

24. This school, being but recently formed, has not yet been examined by any one, but has several times been visited by principal Local Patron, William Warren Jenkins, Esq. It is intended to hold annual examinations of the pupils.

25. Not yet visited by National Board Inspector, W. Wilkins, Esq. No report of this school exists.

Respecting present condition of this school the pupils exhibit a fair average progress, but as the great majority are under ten years of age, and never attended any other school previously, few of them yet have attained excellence in the more difficult branches. In their manners (as may be supposed, in a country district) they are exceedingly rude and uncultivated.

26.—Charles Hookins.

27.—Martha Anne Hookins.

28.—Master, born in Exeter; Mistress, born in Sible Hedingham.

29.—Master, 26 years; Mistress, 29 years.

30.—Appointed to this school January 6th, 1858.

31.—Trained as a teacher.

32.—At Brockley Academy, for two years; and at Model National School, Sydney, for six weeks. Hold a Certificate, Class 3, Section A.

33.—Chemist and Druggist.

34.—Salary of teacher, £96 per annum.

35.—Fees from pupils, £26 16s. 8d.

36.—Total annual income, £122 16s. 8d.

37.—Instruction given to children of all denominations from the Scripture lessons published by the National Board, by the teacher, during one hour each day. No Clergyman has yet visited this school. Religious books used by the teacher are Scripture lessons, O. T. No. 1 and 2, and Scripture lessons, N. T., No. 1.

CHARLES HOOKINS,
Teacher.

BERRIMA.

BERRIMA.

- 1.—Market-street, Berrima.
- 2.—Stone ; much in need of repair.
- 3.—750 feet superficial.
- 4.—3 roods, 3,630 yards, or 32,670 feet.
- 5.—One with double seat, in need of repair.
- 6.—One room, 17 feet \times 12 feet = 204 feet superficial \times 9½ feet = 1,938 cubic feet.
- 7.—Varying from 13 to 18 in one, from 12 to 6 in the other.
- 8.—Good and sufficient.
- 9.—Girls, 19 ; boys, 11, to query 1st ;—girls 18 ; boys 9, to query 2nd.
- 10.—Girls, from 13 years to 4 years ; boys, from 13 years to 5 years.
- 11.—3 classes :—1st, number, 9, from 7 to 4 years ; 2nd, number, 9, from 10 to 7 years ; 3rd, number, 12, from 13 to 7 years.
- 12.—School hours, from 9 to 12, a m., from 1 to 3 p m., intervening hour for dinner.
- 13.—1st, one, viz., Saturday ; 2nd, fortnight at Christmas ; and at Easter (once only) in 1858, a week.
- 14.—261 days (holidays at Christmas included).
- 15.—From 2 years to 2 months, say about 12 months.
- 16.—Have no accurate means of knowing, perhaps 20.
- 17.—One shilling per week, £2 12s. per annum, books bought by pupils.
- 18.—School fees, £70 4s. (the average of 3 years would be £8 less per annum) ; from National Board, £84 ; total, £154 4s., appropriated to the providing for teacher and family.
- 19.—Annual cost of each pupil, say £4 7s. 9¼d.
- 20.—Orthography, orthoepy, and definition, 3 classes, 1 hour and 10 minutes per diem ; grammar, 1 class, 20 minutes ; geography, 1 class, 20 minutes = 40 minutes, per diem ; reading, 3 classes, 2 hours ; sewing and arithmetic, 25 minutes = 2 hours 25 minutes ; writing or arithmetic, alternate days, 45 minutes = 45 minutes.
- 21.—3rd book reading lessons, 2nd do., 1st do. Scripture lessons, Old and New Testament, geographies, grammars, arithmetic, dictionaries, and spelling-books, fully adequate to wants of school.
- 22.—Map of Australia, Scripture Atlas, Fenner's do., fair condition.
- 23.—Such as I saw at Model School when attending as a probationer, viz., striking on the fingers or hand, and detention, according to circumstances.
- 24.—No examinations have been made or rewards given, except,—
- 25.—By W. Wilkins, Esq., twice, one day on each occasion, and by Mr. M'Intyre, once, on his passage down by mail.
- 26.—Jacob Halls.
- 27.—Eliza Halls.
- 28.—London.
- 29.—J. Halls, age, 52 years ; E. Halls, 44 years.
- 30.—December 1st, 1855.
- 31.—No.
- 32.—
- 33.—Have been engaged in teaching since 1830 (with a few intervals, amounting together to perhaps 5 years), say 24 years.
- 34.—Salary for self and wife, £84 per annum.
- 35.—Say £70 (above the average.)
- 36.—Say £150 (above the average.)
- 37.—By Revd. J. S. Hassall, on Friday mornings, one hour, when not called away by more urgent duties, and at the Sunday School by Revd. Mr. Hassall, his lady, and teachers, and by myself (I trust) daily. Books used by Revd. Mr. Hassall consist of the Holy Bible, prayer books, and hymn books ; those by myself as named in No. 21.

JACOB HALLS,
Teacher.

Berrima, February 23, 1859.

BISHOPSBRIDGE.

- 1.—Bishopsbridge.
- 2.—Entirely of wood, not in good condition ; it needs repairs and enlargement.
- 3.—250 feet.
- 4.—10,000 square yards.
- 5.—Common privy, good state.
- 6.—250 superficial feet, 2,500 cubic feet.
- 7.—39.
- 8.—The windows and door opened.
- 9.—The school has not been opened twelve months.
- 10.—Females, 13 to 5 ; males, 11 to 4.
- 11.—Twenty in first class, 13 to 4 ; seventeen in second, 10 to 6 ; four in sequel, 14 to 9.
- 12.—Five hours school :—Commence at 9, recess at half-past 10 ; school a quarter to 11, recess at 12 ; school at 2, terminate at 4 ; the intervals are employed at play.
- 13.—A holiday every Saturday. The number of vacations cannot say, only having been here about seven weeks.
- 14.—Cannot answer.
- 15.—Cannot answer.
- 16.—Cannot answer.

17.—6d. per week to 10 years, 9d. per week above; I have made a charge for books, but have received only a trifle.

18.—Cannot answer.

19.—Cannot answer.

20.—Reading in first class books, 3 hours; grammar, half an hour; writing on slates, half an hour; mental arithmetic, half an hour; geography, half an hour. Second class, reading from second class books, 2 hours; grammar, half an hour; writing on slates, half an hour; mental exercises, half an hour; geography, half an hour; arithmetic, one hour. Sequel, reading from sequel books, 2 hours; grammar, half an hour; mental exercises, half an hour; geography, 1 hour; arithmetic, 1 hour; pupils who have copy-books write three times a week, an hour, on Monday, Wednesday, and Friday. The females have an hour's needlework every afternoon.

21.—First class books, second class books, sequel books, grammar, geography, reading books for the use of females, fifth book of lessons, lessons on the truth of christianity. The condition of the books are good, except a number of the first class books and a few of the second class books; more grammar and geography books are wanted,—a dozen of third class books required. The number of books in use are adequate to the wants of the school, except the third class books as before stated.

22.—General lesson; two object lessons, and a copy to write from;—maps are much wanted—the school has not any.

23.—A small cane only is used.

24.—Cannot say.

25.—Mr. M'Intyre.—See copies of—"Mr. M'Intyre, 2nd June, 1858.—Visited the school to day and found 18 pupils present.—Wm. M'Intyre. 9th September, 1858.—"Visited the school to-day, and found 32 pupils present, neat and clean.—Wm. M'Intyre." The present condition of the school is, that the pupils attend regularly, and are neat and clean.

26.—Thomas Holmes.

27.—Ann Holmes, my wife.

28.—London.

29.—Self, 42. Wife, 36.

30.—January, 1859.

31.—Trained.

32.—Fort-street, Sydney. Seven weeks, third class pay, but I have no certificate.

33.—Builder, &c.

34.—£60, and the weekly fees, the annual amount of which I cannot say.

35.—Cannot say.

36.—Cannot say.

37.—General lesson is read every day.

March 7, 1859.

THOMAS HOLMES.

BOLWARRA.

1.—Bolwarra, near West Maitland.

2.—Wood altogether; at present unfit for use owing to the damage done to it by a late storm; the school is now carried on in a building belonging to D. Dickson, Esq., Local Patron.

3.—576 superficial square feet.

4.—1,242 square yards.

5.—A slab building, shingled; recently erected.

6.—There is but one room in the school, which contains 576 square feet, and 6,528 cubic feet.

7.—27.6 in the whole school, which consists of one room only. (See preceding answer.)

8.—None, except that afforded by opening the windows and door.

9.—Annual average number on the books:—boys, 22; girls, 25.5. Average number attending school:—boys, 12.3; girls, 15.3.

10.—Maximum age of pupils attending this school, 16 years; minimum, 3 years.

11.—Three classes; first, second, and sequel to second; average number in first class, 25.5; second, 15.25; sequel, 6.75.

AGES.

	Maximum.	Minimum.
First Class	9	3
Second Class	16	8
Sequel Class	13	10

12.—The children attend school as per following Tables:—

SEASON.	Number of hours pupils attend school.	HOUR WHEN SCHOOL DUTIES		INTERVALS.	
		Commence.	Terminate.	At 10.30 a.m.	At Noon.
Summer	6½ hours....	9 a.m. ..	3.30 p.m.	10 minutes..	h. m. 1.30
Winter	6 hours....	9 a.m. ..	3 p.m. ..	10 minutes..	1.0

The

The first interval is employed by the children in recreation; the second, in eating their dinners and recreation; such recreation as children generally indulge in; on both occasions they are under the supervision of the teacher; recreation having an injurious tendency is not allowed.

13.—Saturday in each week is observed as a holiday; during the year there are three vacations, each of one week's duration; they occur at Christmas, Easter, and Midwinter.

14.—244 days.

15.—1 year 9 months and 12½ days.

16.—34.

17.—The weekly sum charged to each pupil depends upon the class to which it belongs; 1st class, 3d.; 2nd class, 4d.; sequel and above, 6d.; average, 4·33d.; charge for books, 6d. per quarter;—total annual charge (average), £1 0s. 9d.

18.—School fees, £14 11s. 1d., received by teacher; from Government salary, £100; postage, £1;—total received from all sources, £115 11s. 1d.

19.—Average annual cost of the education of each pupil, £4 3s. 9d.

NOTE.—Immediately before the period for which this calculation is made, several floods took place, whereby the attendance during the early part of the year ending September, 1858, was greatly diminished; furthermore, in consequence of these floods and other causes, fully one-half of the inhabitants, then residing in the district, have removed; the unsettled state of families, arising from such removals, caused a great decrease both in the number on the books and in the average attendance during the year. If the calculation had been made for the two previous years the cost would have been little more than one-half of the above.

20.—The following Table will supply the desired information:—

DAYS.	CLASS.	Reading.	Writing.	Grammar.	Geography	Arith- metic.	Object Lesson.	General Lesson.
		h. m.	h. m.	h. m.	h. m.	h. m.	h. m.	h. m.
Monday	{ First	0·45	1·35	1·30	0·45	0·15
	{ Second	1·35	0·45	0·45	0·45	0·45	0·15
	{ Sequel	1·45	0·35	0·45	0·45	0·45	0·15
Tuesday	{ First	0·45	0·45	0·45	0·35	1·45	0·15

	{ Second	1·35	0·45	0·45	0·45	0·45	0·15
	{ Sequel	1·45	0·35	0·45	0·45	0·45	0·15

21.—Titles of books used in

FIRST CLASS.

First book of lessons.
Introduction to geography.
First book of arithmetic.

SECOND CLASS.

Second book of lessons.
Introduction to geography.
Theory and practice of arithmetic.
English grammar.

SEQUEL CLASS.

Sequels No. 1 and 2 to second book of lessons.
Geography generalized.
Compendium of geography.
Theory and practice of arithmetic.
English grammar.

Some of the books are more or less worn; the greater part are, however, in very fair condition; no others are needed; the number in use is quite adequate to the wants of the school; all the books used are either published or sanctioned by the Irish Board of Education.

22.—The following maps, viz.:—The World, Europe, Africa, Australia, and Palestine, are in use in this school; there is also a black-board and stand.

Charts of the animal and vegetable kingdoms, together with a moderate sized Globe, would be very serviceable.

23.—Almost the only correction used is that of keeping the offenders in school for various periods after the usual school-hours. It is the aim of the teacher to keep the children constantly employed and under strict supervision, and thereby prevent offences against good order; he sometimes administers slight corporal punishments to the children of the first class only.

24.—The children are not examined in regard to their progress, except by the Inspector of National Schools, and Organizing Master; no prizes or rewards are given, periodically, or otherwise.

25.—This school is officially inspected by the Inspector of National Schools and the Organizing Master generally three or four times in the year; from 4 to 5 hours are occupied in

in this duty upon each visit; the following are the copies of two memorandums or reports made by the Organizing Master:—

“MEMO.—August, 1858.—Visited this school to-day and found 31 pupils present, neat and clean, and making fair progress.

“WM. M'INTYRE.”

“14th January, 1859.—Visited this school to-day and found 30 pupils present.

“WM. M'INTYRE.”

- 26.—James Browning.
- 27.—There are no assistant teachers, pupil teachers, or monitors, attached to this school.
- 28.—England.
- 29.—33 years.
- 30.—10th March, 1858.
- 31.—Not trained as a teacher.
- 32.—Not trained.
- 33.—Was monitor in a school in England for 4 years; subsequently became clerk in the Norwood Industrial Schools, near London, where I had many opportunities of becoming acquainted with the system of Education pursued under the direction of the Commissioners of Education in England. The occupation followed in the Colony immediately before adopting that of teacher, was that of farming.
- 34.—Annual salary, £96.
- 35.—Fees received from pupils, £14 11s. 1d.; allowance for postage, £1.
- 36.—£115 11s. 1d.
- 37.—The broad and general principles of Christianity and morality are inculcated by the teacher every day from the Scripture and general lessons; one hour and a-quarter is devoted to this duty, daily; no Clergyman or Minister of Religion has visited this school since March, 1858; the following are the names of books used, viz.:—Scripture lessons, Old Testament, No. 1; Scripture lessons, Old Testament, No. 2; Scripture lessons, New Testament, No. 1; Scripture lessons, New Testament, No. 2; and the general lesson.

BOWENFELS.

- 1.—The school is situated in the locality of Bowenfels, Police District of Hartley.
- 2.—The school is constructed entirely of stone, with canvas ceiling, is in tolerable repair, but requires enlargement.
- 3.—The number of superficial square feet contained in the building (including teacher's residence and classroom) is 1,127.
- 4.—There is an enclosed paddock of about 2 acres adjoining the school.
- 5.—There are two water-closets for the use of the pupils. These are constructed of slabs, shingled, and are in pretty good condition.
- 6.—There is only one room appropriated for teaching, containing 340 superficial square feet and 2,975 cubic feet.
- 7.—The average number of pupils assembled in the school during the year 1858 was 40.
- 8.—The only provision made for the ventilation of the schoolroom is the windows being made to open from the bottom.
- 9.—The annual average number on the books is,—of males, 31; of females, 29; total, 60. Average number in attendance,—males, 21; females, 19; total, 40.
- 10.—Maximum of pupils,—males, 11 years; females, 12 years. Minimum of pupils,—males, 4 years; females, 3 years.
- 11.—The school is divided into four classes,—

In each class.	Average number.	Maximum age.	Minimum age.
1st class	18	9 years	3 years
2nd class	16	11 "	6 "
3rd Class	11	12 "	8 "
4th Class	15	12 "	8 "

12.—The pupils attend school during 7 hours each day,—school duties commencing at 9 o'clock a.m., and terminating at 4 p.m. A great many of the pupils live within a moderate distance of the school. These go home for dinner at 12 o'clock and return before 2 o'clock, at which hour the afternoon duties of the school commence. A few of the pupils who study Latin and French are so employed during the hour from 12 to 1 o'clock.

13.—Saturday in each week is a holiday; there is one vacation during the year, viz.:—two weeks at Christmas.

14.—About 250 days are appropriated to school duties during the year.

15.—No means of ascertaining the length of the period during which pupils remain at school, from the time of their first entrance to the time of their finally leaving.

16.—The number of children between the ages of 5 and 15 years, resident in the district, who do not usually attend school, may perhaps be about 30.

17.—The weekly sum charged for each pupil is 6d., 8d., 10d., and 1s., the average for each pupil being nearly 9d. per week. Amount charged for books say 2s. 1d. each—total annual charge for each pupil, £1 18s. 10d.

18.—Amount of school fees received from the pupils during the year ending 30th September, 1858, £79 7s 7d. (which was appropriated to the support of the teacher). Amount received from pupils for books, £4 2s. 10d. Amount received from Government, £108.

19.—Total amount received from all sources towards support of school, £191 10s. 5d., which divided by 43, average number actually attending school during the 12 months ending 30th September, 1858, gives average annual total cost of education of each pupil, viz. :—£4 9s. 1d.

20.—The subjects of instruction given in the school comprise reading, writing, grammar, arithmetic, geography, Latin and French.

First class.

Reading and spelling	2	hours each day.
Writing on slates	1	" "
Addition of simple sums, &c.	1	" "

Second class.

Reading, spelling, explanation of lesson, &c.	2	hours each day.
Explanation of geographical terms, and use of map	$\frac{1}{2}$	" "
Elements of English grammar	$\frac{1}{2}$	" "
Writing from copies and dictation	1	" "
Multiplication tables and sums in simple rules in arithmetic	1	" "

Third class.

Reading, spelling, explanation of lessons, &c.	1	hour each day.
Grammar	$\frac{1}{2}$	" "
Geography	$\frac{1}{2}$	" "
Writing copies	1	" "
Arithmetic	$1\frac{1}{2}$	" "
Writing from dictation, Wednesday and Friday	1	" "
Religious instruction, Monday, Tuesday, Thursday, and Friday	$\frac{1}{2}$	" "

Fourth class.

Reading, spelling, explanation of lesson, Latin and Greek roots	1	hour each day.
Grammar, paraphrasing, and re-construction of sentences	$\frac{1}{2}$	" "
Geography, physical and descriptive	$\frac{1}{2}$	" "
Writing copies	1	" "
Arithmetic	$1\frac{1}{2}$	" "
Writing from dictation, Wednesday and Friday	1	" "
Religious instruction, Monday, Tuesday, Thursday, and Friday	$\frac{1}{2}$	" "

NOTE.—There are at present 5 pupils learning Latin and French; this class is taken up from 12 to 1 o'clock. The girls are taught sewing from 3 to 4 o'clock each day.

21.—Books used in the several classes :—1st Class : First book of lessons. 2nd Class : Second book of lessons. 3rd Class : Third book of lessons ; English grammar ; introduction to geography ; first book of arithmetic ; Scripture lessons (O. T.) No. 1 ; ditto No. 2 ; Scripture lessons (N. T.) No. 1 ; ditto No. 2. 4th Class : Fourth book of lessons ; English grammar ; introduction to geography ; first book of arithmetic ; Scripture lessons (O. T.) No. 1 ; ditto No. 2 ; Scripture lessons (N. T.) No. 1 ; ditto No. 2. The books, with a few exceptions, are in pretty good condition, and the present number is nearly adequate to the wants of the school.

22.—There are two black-boards and three maps in the school,—map of the World, map of Europe constructed for the use of the National Schools of Ireland, in good condition, and J. Jones' map of Australasia, which, for schoolroom purposes, is useless. A good map of Australia is very much wanted, as also a few diagrams.

23.—To preserve discipline in the school corporal punishment is employed, resorted to only, however, when persuasion or other lenient measures are found of no avail.

24.—The present teacher having filled his present office only for a few months is unable to state by whom the pupils are examined in regard to their progress, nor is he aware that any prizes are awarded.

25.—The school is officially visited by W. Wilkins, Esq., Inspector of National Schools, and by Mr. M'Cann, Organizing Master; cannot state how often during the year, and what length of time is occupied in the performance of these duties.

26.—Name of head teacher, Robert M'Dougal.

27.—Assisted by Mrs. M'Dougal.

28.—Birthplace of R. M'Dougal, Dumfriesshire, Scotland. Birthplace of Mrs. M'Dougal, Edinburgh.

29.—Age of teacher, 35 years.

30.—Appointed to present office 27th October, 1858.

31.—Not trained as a teacher.

32.—Classified by Board of National Education, in Class II, Section B.

33.—Received a classical education at Clarencefield Academy, in the south of Dumfriesshire. In 1842 was engaged as assistant master in a public school in the parish of Dunscore. In 1843 was appointed to the mastership of the Evan Water District School, in the north of

Dumfriesshire,

Dumfriesshire,—promoted by the Town Council and Ministers of Edinburgh to the ushership of Moffat Grammar School, 1844. In 1846 appointed to the head-mastership of the boys' school, Royal Caledonian Asylum, London. After teaching in London for about two years, was appointed to the mastership of Eddleston Parochial School, Peeblesshire, remained there for nearly five years, immigrated to this Colony in 1853, since which time to date of appointment to present office, was engaged partly in mercantile pursuits, and partly in conducting a private school in Moreton Bay.

34.—Annual amount of salary for united services of teacher and wife, £108.

35.—Amount of fees, £79 7s. 7d.

36.—Total income of teacher, say £187 per annum.

37.—Religious instruction given to the pupils four times in the week by the teacher. Since the present teacher's entering upon his duties, the school has not been visited by any Clergyman, as such; but the Revd. Mr. Troughton, Episcopalian, and the Revd. Mr. McKenzie, Presbyterian, have each once visited the school in the capacity of Local Patrons.

R. M'DOUGAL, Teacher.

BRAIDWOOD.

1.—Braidwood.

2.—The school is built of stone, with a shingled roof; and it is at present in a good state of repair; but owing to a want of water on the premises, a tank, with spouting round the school, would be a very great improvement.

3.—The schoolhouse outside is 61 feet by 23 feet; its area is, therefore, 1,403 square feet.

4.—The ground being 104.6 yards long, by 53.3 yards broad, contains 5575.18 yards.

5.—There are two water-closets of brick, for the use of the pupils, in very good repair.

6.—In the boys' schoolroom there are 440 square feet, and 7,700 cubic feet; and the girls' schoolroom is exactly the same size.

7.—In boys' room, 44.1; in the girls' room, 32.6.

8.—The windows open easily, and the rooms being without ceilings, ventilation is amply secured.

9.—Annual average number on rolls—53.7 males, and 57.8 females; the average attendance, 39.4 males, and 33 females.

10.—Maximum age of males, 15 years.

Maximum age of females, 11 years.

Minimum age of males, 3 years.

Minimum age of females, 3 years.

11.—Each school is divided into three classes, of which the average of the first class of boys is 14; of the second class of boys, 14; of the third class of boys, 13; of the first class of girls, 16; of the second class of girls, 6; and of the third class of girls, 5:—

Maximum age, first class (boys)	6 years.
Minimum age, first class (boys)	3 "
Maximum age, second class (boys)	15 "
Minimum age, second class (boys)	5 "
Maximum age, third class (boys)	12 "
Minimum age, third class (boys)	7 "
Maximum age, first class (girls)	10 "
Minimum age, first class (girls)	3 "
Maximum age, second class (girls)	12 "
Minimum age, second class (girls)	5 "
Maximum age, third class (girls)	11 "
Minimum age, third class (girls)	8 "

12.—Children attend school five hours each day, commencing at half-past nine, and terminating at four; with one hour and a half for recreation, from half-past twelve till two, and a short recess of from five to ten minutes during the forenoon for necessary purposes.

13.—Saturday is given as a holiday in each week; and the only vacations allowed by the Board of National Education are one week at Christmas, one week at Easter, and one week at Midwinter.

14.—245 days.

15.—About two and a half years.

16.—No means of ascertaining.

17.—The scale of charges, as fixed by the Local Patrons, ranges from three-pence to one shilling; the children attending this school are supposed to find their own books, there is therefore no charge for books; the total annual charge for each pupil is about 19s. 6 $\frac{1}{2}$ d.

18.—Amount of fees, £69 18s. 1d., which were appropriated as follows,—£37 17s. 10d. was received by the master, and £32 0s. 3d. by the assistant female teacher; the other sums received were the salary of £108 for the master, and the salary of £54 for the assistant female teacher, from the Board of National Education; the total amount received from all sources was £231 18s. 1d.

19.—£231 18s. 1d. ÷ 72.4 = £3 4s. 0 $\frac{1}{2}$ d.

20.—For a detailed enumeration of the several subjects of instruction given to each class, and the time allotted to each, I beg to refer to the accompanying "Time Tables" marked A. and B.

A.

21.—In the 1st class, the books used are the first book of lessons, and tablet lessons; in the 2nd class, the second book of lessons, and the sequel to second book of lessons, as well as the grammar, geography, and arithmetic, published by the Board of National Education for Ireland; and in the 3rd class, the third book of lessons, together with the works above enumerated; the books at present in use are in tolerable order, no others are needed at present, and the supply is adequate.

22.—There are no prints, no diagrams, and no instruments in this school; there are maps of the World, Europe, Asia, Africa, North America, and South America; some of these maps are torn and defaced; there are also two black-boards in use; a case of instruments, a globe, together with a map of Australia, one of Palestine, and one to illustrate ancient history; and some sheet illustrations of natural history are much needed.

23.—Slight corporal punishment is adopted for aggravated cases, but the general system of correction is by the deprivation of a certain amount of play-time; no instructions on this subject have ever been received by the present master from any person.

24.—The pupils are examined once every year by the Inspector of Schools, and once a year by the master; rewards of merit are given to the most deserving pupils, in the shape of books, selected by the Local Patrons, after such examinations.

25.—The school is visited once a year by the Inspector of National Schools, who usually occupies three days in his examination and inspection; it is also visited once a week by one or other of the Local Patrons; I am not aware of any report on the school, and consequently have no remarks to offer.

26.—Henry Matthews.

27.—None at present.

28.—Of head teacher,—Ireland.

29.—Thirty-five years.

30.—2nd July, 1858.

31.—Trained.

32.—Trained at the National Model School, Fort-street, Sydney, for one month; and possessing a certificate of competency for Class I, Section B.

33.—The occupation of a farmer.

34.—Salary of head teacher, £132 a year; there is at present no assistant teacher, nor pupil teacher, nor monitor.

35.—The average amount of the school fees, about £40 a year; and there are no allowances or emoluments but that of £1 a year for postage.

36.—Salary, £132; fees, £40; postage allowance, £1;—total, £173.

37.—Besides the general lesson, as published by the Board of National Education, and inculcated twice a week, the Rev. James Allan, the Clergyman of the Church of England, attends regularly once a week to instruct those children of his own persuasion; it is also often visited by the different Gold Fields Chaplains, viz.—Rev. Mr. Rich, of the Church of England; Rev. J. O'Brien, of the Roman Catholic Church; and the Rev. A. Pennycook, of the Presbyterian Church; the teacher is not acquainted with the titles of the books used by those gentlemen, for inculcating their peculiar tenets.

The teacher of the Braidwood National School begs to say, that he does not pledge himself to the accuracy of all the details in the above Return; he not having been master of the school for the greater part of the time for which the Return is called.

HENRY MATTHEWS,
Teacher.

BURWOOD.

1.—Burwood.

2.—Hardwood.

3.—800 feet.

4.—2,000 feet.

5.—Water-closets both new and in good condition.

6.—One large room appropriated for teaching.

7.—32.

8.—Ten windows and two doors.

9.—The school has not been in operation one year.

10.—Boys, from 14 to 4 years; girls, from 13 to 5 years.

11.—4. Average number in the fourth, 8; ages, from 14 to 11. In the third, 11; ages, from 13 to 11. In the second, 3; ages, from 8 to 6. First class, 10; ages, from 9 to 4 years.

12.—Number of school hours, 6; commencing at 9, terminating at 3; one hour's recess for luncheon, from 12 to 1.

13.—Number of holidays in each week, one day; vacations, 2; two weeks at Christmas and one at Easter.

14.—Number of school days in the year, 240.

15.—

16.—

17.—Weekly fee for each child, 6d.; annual charge to each pupil, £1 4s. 6d.

18.—School fees received from the pupils, from the commencement of the school, April 9th, 1858, to 25th of December, 1858, £20 15s. 2d. The fees go towards the support of the teacher. The total amount from all sources is £365 15s. 2d.

19.—The annual costs for each pupil, £2 1s. 1d.

21.—List of books:—Fourth class,—Fourth book of lessons, arithmetic, grammar, geography, (spelling superseded.) Third class,—Third book of lessons, arithmetic, grammar, geography, Scripture with fourth class. Second class,—Second book of lessons, arithmetic. First class,—First reading book. All books are in good condition.

22.—Not any maps or instruments.

23.—System of correction—confinement in the schoolroom during recess.

24.—Not examined at all, except by the Inspector.

25.—The school has been twice visited officially by the Chief Inspector, W. Wilkins, Esq.; cannot say time occupied in examining the pupils, as these visits occurred before my appointment.

26.—Name of teacher, Mary Anne Rutter.

27.—One monitor, Samuel Rutter, son of the teacher; age, 14 years.

28.—Birthplace, London.

29.—Age of teacher, 30 years.

30.—Date of appointment to present office, 18 October, 1858.

31.—Not trained.

32.—Experience in teaching, six years under Board of National Education, Sydney.

33.—

34.—Amount of salary, £60 per annum.

35.—Fees, £25 19s.

36.—Total amount, £85 19s.

37.—School not visited by Ministers.

DANL. ALDERTON,
Local Patron.

MARY ANNE RUTTER,
Teacher.

CLEVELAND STREET.

- 1.—Cleveland Paddocks, Sydney.
- 2.—Iron, on a stone foundation; some repair is needed.
- 3.—Two thousand one hundred (2,100) square feet.
- 4.—Twenty thousand four hundred and seventy-six (20,476) square feet.
- 5.—Well built, sufficiently large, and in good condition.
- 6.—One room contains 1,360 superficial square feet, and 19,720 cubic feet; a second contains 370 square feet, and 3,700 cubic feet; and a third 189 square feet, and 1,890 cubic feet.
- 7.—The average attendance in the first is about 200, in the second 99, and in the third 42.
- 8.—They are well ventilated by means of windows.
- 9.—Annual average on books, 631; average attending school, 341; of whom 184 are males, and 157 females.
- 10.—Maximum and minimum ages of boys, 14 years and 2 $\frac{1}{2}$ years; ditto of girls, 14 years and 3 years.

11.—The school is divided into five classes; the average number in the first or lowest class is 99; in the second, 58; in the third, 90; in the fourth, 64; and in the fifth, 30. The maximum and minimum ages are, in the first class, 8 years and 2½ years; in the second, 10 and 6 years; in the third, 12 and 6 years; in the fourth, 14 and 8 years; and in the fifth, 14 and 8 years.

12.—The number of hours daily during which the school is open is 7, commencing at 9 o'clock A.M., and closing at 4 o'clock P.M. Cessation of duty from 12 o'clock to 2 o'clock. The interval is employed in physical exercises in the playground, under supervision of the teachers.

13.—The number of holidays in each week is one, viz., Saturday; the number of vacations two, 20 days at Christmas, and 10 at Easter.

14.—Number of days appropriated to school studies during the year, 239.

15.—Eighteen months.

16.—The district not sufficiently well defined to answer this question satisfactorily.

17.—The weekly charge is 8d; no charge for books; annual charge, £1 12s.

18.—Amount of school fees for year ending 30th September, 1858, £407 2s 1d. Of these fees 25 per cent. is appropriated by the Board to supply the school with the necessary books and apparatus, and the remainder distributed among the teachers. The amount received from the Board during the same period was £676 10s. Received from all sources during the year ending 30th September, 1858, the sum of one thousand and eighty-three pounds twelve shillings and one penny (£1,083 12s. 1d).

20.—The subjects of instruction, and the time allotted to each, is as follows:—

FIFTH CLASS.

Grammar	0	45	0	45
Object lessons	0	30	0	30	0	30	0	30
Arithmetic.....	0	45	0	30	0	45

Physical exercise in these classes as in the fourth and fifth.

Needlework as in the fifth class for all capable of sewing.

21.—The fifth class read the 3rd book of lessons, published by the Board of National Education; the fourth class read the sequel book, No. 2, of the same series; the third class use the sequel No. 1; and the second and first classes read the 2nd and 1st class books respectively.

22.—The maps in use are—the World, Europe, Asia, Africa, America, and Australia; England, Ireland, Scotland, Pacific Ocean, and Palestine. The diagrams and other apparatus are—2 Johnston's illustrations of natural philosophy, 1 animal kingdom, 1 vegetable kingdom, various diagrams of mechanical powers, animals, plants, &c., &c.; four black-boards and easels, T square, wooden compass, thermometer, &c., &c.

23.—Moral influence principally. The following are the Inspector's written instructions regarding punishment:—"There are many cogent reasons for dispensing with corporal punishment—it tends to diminish and eventually to destroy the child's self-respect, it excites anger and hatred in his mind towards the teacher, its effect is transient, and it is liable to abuse from the difficulty of proportioning the severity of the punishment to the heinousness of the offence. Whenever it can be safely disused, therefore, the cane should be entirely abolished as an instrument of punishment. With very young children, incapable from their tender age to comprehend a moral lesson, and requiring, moreover, to be accustomd to prompt, unreasoning obedience, slight personal chastisement may be necessary, and therefore admissible. In reference to the circumstances under which the cane may be employed, it seems proper to restrict its use to extreme cases, such as wilful disobedience, or some really vicious action. It should never be resorted to for the punishment of trifling offences, such as chattering, laughing, or unimportant breaches of order, many of which are involuntary, i. e., they arise from exuberance of animal spirits, or from a deficiency of self-control on the part of the child. When such is the case, the child requires a larger share of the teacher's vigilance and help, rather than punishment. Nor should children be punished corporally for inattention to lessons, a fault which would be regarded by a candid teacher as evidence of failure on his own part to render the subject interesting. The continual resort to corporal punishment as a means of maintaining authority or procuring attention, is an unmistakeable sign of weakness on the part of the teacher. As regards the extent to which the cane may be used, no exact rule can be given. If the teacher really feels an interest in his pupil's welfare, however, there is no danger of excessive punishment being inflicted. No weapon but a cane or a strap should be employed, and the child should not be beaten on any part of his person except the palm of the hand. In the extreme cases before alluded to, a considerate teacher will probably consult his colleagues before deciding upon the amount of punishment to be administered. Under no circumstances would he feel justified in marking a child. He will further avoid striking the children's heads, pulling their ears or hair, as being simply acts of brutality.

"The mode of chastising will often, when judicious, be more effective than the punishment itself. Without having a punishment hour, a good teacher will never chastise a child while in a passion, or laboring under any excitement of feeling. He should rather manifest the utmost coolness and deliberateness, yet as giving pain to his scholar rather 'in sorrow than in anger.' This self-control, this freedom from mere animal passion, conveys in itself a great moral lesson to the child's mind, and counteracts in some measure the injurious effects of corporal punishment to produce bad feeling. Prudence will probably suggest the inexpediency of punishing a child on the report of a pupil teacher only, without a full investigation on the part of the teacher. Degrading punishment should never be employed."

24.—Frequently, by the Inspector, but at no stated intervals. Prize books are awarded annually to the most deserving of the pupils (once a year only).

25.—The school is officially visited by the Inspector and Superintendent often during the year, but not at stated intervals. No record is kept of the time occupied by each visit.

26	28	29	31 and 32	33	34	34	35	36	30
NAME.	BIRTHPLACE.	AGE.	TRAINED IN	TERM OF TRAINING.	CLASS.	SALARY PER ANNUM.	FEES.	TOTAL.	DATE OF APPOINTMENT.

37.—No Minister of Religion comes to give religious instruction, but the Scriptures are taught daily in the school by the teachers.

CAMDEN.

1.—National Schools, Camden, Parish of St. John, District of Camden, Picton, and Narellan.

2.—Brick building—in good condition.

3.— $50 \times 24 = 1,200$ square feet.

4.— $1,833\frac{1}{2}$ square yards.

5.—Three—teachers, boys, and girls. Brick buildings—in good condition.

6.—Large room, $50 \times 24 = 1,200$ feet. Classroom, $10 \times 12 = 120$ feet.

7.—When all are assembled in the large room, 120 children; 40 are at times taught in the classroom.

8.—By 7 windows, 1 fireplace, and by ventilators above and around the school.

9.—Average yearly attendance—boys, 36.95; girls, 32.2.

10.—Ages of the whole school:—

	Maximum.	Minimum.	
Boys	15	2	
Girls	15	$1\frac{1}{2}$	
11.—3 classes:—			
	Ist.	2nd.	3rd.
Boys	16.83	12.83	15.25
Girls	10.41	12.16	8.41
	Clasr.	Maximum.	Minimum.
	1.....	12	2
	2.....	14	8
	3.....	15	9
		Girls.	
	1.....	12	$1\frac{1}{2}$
	2.....	12	8
	3.....	15	10

12.—Five hours. Ten minutes are allowed for play between the hours of 10 and 11 o'clock. From 12 to 2 o'clock dinner and recreations. Commencing 9 o'clock A.M.; ending at 4 o'clock P.M.

13.—Saturday, weekly; a fortnight at Christmas, and a week at Easter.

14.—Number of school days, 245.

15.—The average time of attendance may be taken at 5 years. This, however, can form no criterion of the state of education in the district, because some children attend very regular, others but for a short time. The regularity and time of attendance depend upon the quality of the school.

16.—The district is large, and the locality is not clearly defined. The Registrar cannot give me the number of the children in the district; consequently, I cannot answer this question.

17.—The sum charged for each child quarterly is 7s.; fees, 6s. 6d.; book fund (annually) 6d.

18.—	Amount of fees.....	£50	0	0
	Book fund	5	6	10
	Master's salary	120	0	0
	Assistant's, 1 month	3	10	0
		£178 16 10		

The incidental expenses of the school are paid from the fees; the remainder makes up the salaries of the master and assistant.

19.—Average annual cost of each child for the year ending September 30, 1858, £2 12s.

20.—	Reading, including religious instruction	$5\frac{1}{4}$	hours
	Writing, dictation, and composition.....	6	"
	Practice and theory of arithmetic.....	6	"
	Geography.....	$2\frac{1}{4}$	"
	Grammar	4	"
	Object lessons	$1\frac{1}{2}$	"

Total for the week

25

21.—National School Books of Ireland; first, second, and third class books; Scripture lessons from Old and New Testaments. The school is increasing in numbers, consequently more books are required. They will be supplied from the book fund.

22.—Maps of Europe, Asia, Africa, America, Australia, New South Wales, Ireland, and Scotland; two black-boards; forms, desks; press; two galleries; ball-frame; Scripture and other prints for young children; spelling cards, &c.; map-stand; washing-stands, towels, &c., all in good condition.

23.—Kindness, firmness, and constant supervision, win the respect of children and preserve the discipline. No directions.

24.—By the teachers weekly. My Local Patrons write their opinions of the school in the "Visitor's Book."

25.—By the Inspector and Superintendent of National Schools—once or twice yearly. His reports are furnished to the National Board of Education. The only report that I have on the state of my school is to be found in my "Visitor's Book." I furnish copies of some of the remarks therein:—

Hon. James Macarthur, Local Patron, June 14, 1858.

"Evident progress. The children attentive, and alert in answering questions in "grammar and arithmetic. Singing also improved."

Mr. and Mrs. Smyth, Darling Point, and Mr. Thorp, Melbourne, June 30, 1858.

"We have much pleasure in recording our approbation of the efficient manner in which the children are grounded in their grammatical and geographical studies, and of the "excellent discipline observed."

J. R. Chisholm, Esq., J.P., Local Patron.

"Most decided improvement in reading and grammar. The music lesson was very "gratifying, and the children most orderly."

Mr., Mrs., and Miss Macarthur, August 3, 1858.

"Present this afternoon; looked at the slates (writing); all very gratifying, "especially the singing at the conclusion."

Lieut. Norman, R.N., Aug. 16, 1858.

"Exceedingly pleased."

Hon. J. Macarthur and J. Hassall, Esq., J.P., Sept. 9, 1858.

"Very much pleased. Heard the second and third classes examined in Scripture—"Genesis."

Rev. H. Tingcombe, C.E.

"The singing class admirably conducted."—*Sept. 8, 1858.*

"The examination of the children in grammar very satisfactory."—*Oct. 12, 1858.*

Rev. J. P. Roach, R.C., Sept. 9, 1858.

"I find the children orderly and well conducted."

Rev. C. W. Rigg, Wesleyan Local Patron.

"Very much pleased."—*Oct. 14, 1858.*

"Very much pleased with the ready manner in which the children answered "arithmetical and geographical questions."—*Feb. 8, 1859.*

Rev. W. McKee, Presb., Nov. 19, 1858.

"Much pleased with the singing, and also with the neat dress and clean appearance "of the children. The discipline excellent."

Sir W., Mr., Mrs., and Miss Macarthur, Jan. 15, 1859.

"Spent two hours in the school with much pleasure. The general and progressive "improvement is very gratifying."

His Honor Judge Therry, Mrs., and Miss Therry, Jan. 15, 1859.

"Much pleased with the appearance of the scholars and the well regulated discipline "that seems to prevail, with the cleanliness of the school, and the respectable deportment of "both boys and girls."

Mr. Pendered, Balmain, March 8, 1859.

"Much gratified and pleased with the singing and respectable appearance of the "children, as contrasted with other schools. Exercises well performed."

Mr. E. Simpson, Camden.

"Very much pleased with the neat, orderly appearance of the children, and to find "that they understand what they are doing."

26 to 33.—
