Legislative Assembly.

NEW SOUTH WALES.

ALLEGED AGGRESSION UPON CHINESE AT
LAMBING FLAT.

(PETITION FROM SIMON SANLING.)

Ordered by the Legislative Assembly to be Printed, 5 September, 1861.

To the Honorable the Legislative Assembly of the Colony of New South Wales, in
Parliament assembled.

The Petition of Simon Sanling, native of China, late of Lambing Flat, in the
Colony of New South Wales, interpreter,—

HUMBLY SHEWETH :—

That your Petitioner resided for five months at Lambing Flat, or in its
neighbourhood, where he acted as interpreter between his countrymen and Europeans, and
has hitherto borne a good character.

That your Petitioner is a Catholic, married to a European wife of the same faith, and
has a family of three young children, natives of the Colony.

That, on the 30th June, your Petitioner was in occupation of a tent at a place called
Back Creek, six or seven miles from Lambing Flat.

That, on the day aforesaid, a multitude of about thirteen or fourteen hundred persons,
strangers to your Petitioner, assembled near your Petitioner's tent, in a riotous and dis-
orderly manner, with firearms and other weapons, some being on horseback, but the most on
foot, and with evident purposes of violence and hostility towards your Petitioner and other
natives of China.

That, without provocation on your Petitioner's part, some of the aforesaid persons so
assembled, drove your Petitioner, his wife, and family, with violence from their tent, and
destroyed the same and other property of your Petitioner with fire.

That, in making an attempt to escape, your Petitioner was pursued by two of the
persons aforesaid on horseback, and by several of the persons aforesaid on foot, by whom, or
some of whom, your Petitioner was beaten with sticks, knocked down, and wounded in his
person.

That one of the persons aforesaid while pursuing and otherwise assaulting your
Petitioner as aforesaid, cried out "Cut off his tail"; but that your Petitioner having no such
appendage, some of the persons aforesaid tore open your Petitioner's pocket, and robbed your
Petitioner therefrom of seven pounds in bank notes, two nuggets, worth together about two
pounds, and a pocket knife.

That your Petitioner thereupon escaped, and having remained hidden in the bush in
terror of his life for about two hours, returned to his tent, and found it burnt to the ground,
the greater part of his property destroyed by fire, and his wife and children destitute of
shelter and clothing, except such as they had in wearing at the time.

That no endeavours, to the knowledge of your Petitioner, were made at the time by
the Police, or by any of the authorities on the spot or in the neighbourhood, to prevent the
outrages aforesaid, or to apprehend any of the parties concerned therein.

That your Petitioner has lost, by the outrages aforesaid, property to the value of about
one hundred pounds.

That your Petitioner subsequently applied for redress to certain Commissioners of
Crown Lands and Policemen in the neighbourhood, who, though expressing their sorrow for
what had occurred, have failed to afford your Petitioner any redress or satisfaction.

That your Petitioner is ignorant of the names, but has no doubt he could identify
the persons of many of the parties concerned in the outrages aforesaid, but that your
Petitioner has no means of pursuing or bringing the same to justice.

That your Petitioner relying upon the justice of your Honorable House prays that
your Honorable House will afford him, upon the premises, such relief as the circumstances
of the case may be found to warrant.

And your Petitioner shall ever pray.

SIMON SANLING.

30 July, 1861.

1861.

Legislative Assembly.

NEW SOUTH WALES.

ALLEGED AGGRESSION ON CHINESE AT
LAMBING FLAT.

(PETITION OF TOM ME, WHAT YOUNG, AND QUE YOU.)

Ordered by the Legislative Assembly to be Printed, 12 September, 1861.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Tom Me, What Young, and Que You, lately of Lambing Flat, in the Colony of New South Wales, but now of Sydney, in the said Colony,—

RESPECTFULLY SHEWETH:—

That your Petitioners are natives of Canton, in China, and that they, before and up to Sunday the thirtieth day of June last, together with a large number of their countrymen, were peacefully engaged (within the limits assigned to them) in the occupations of gold mining and storekeeping, at and near Lambing Flat aforesaid.

That, on the last-mentioned day, certain of the gold diggers, and other evil disposed persons, resident at and near Lambing Flat aforesaid, assembled together on foot and on horseback, to the number, at various times during the said day, of from eight hundred to three thousand, as your Petitioners believe, and being armed with bludgeons, fire-arms, and other weapons, and carrying banners or flags inscribed with the words "*Roll up,*" "*No Chinese,*" attacked your Petitioners and the rest of the Chinese, at and near Lambing Flat aforesaid, and after having beaten and otherwise cruelly ill-treated your Petitioners, and subjecting your Petitioner, Tom Me, to the indignity of cutting off his hair, drove your Petitioners, and the rest of the Chinese, from the said diggings.

That your Petitioner, Tom Me, was, at the time of the said attack, possessed of property to the value of eight hundred and seventy-four pounds thirteen shillings and three-pence; your Petitioner, What Young, of property to the value of two hundred and forty-four pounds and nine-pence; and your Petitioner, Que You, of gold and other property to the value of seven hundred and forty-one pounds eleven shillings and three-pence.

That your Petitioners, to save their lives, were compelled to abandon their said property, and that your Petitioner, Tom Me, was knocked down, and one hundred and twenty-five ounces fifteen pennyweights of gold forcibly taken from his person.

That the tools, tents, stores, apparel, and property of every description, belonging to your Petitioners, were either appropriated by their assailants, or wantonly and maliciously destroyed by fire.

That your Petitioners were at all times, prior to the said attack, quietly and orderly in their conduct, and had, in all respects, complied with the Government Regulations.

That your Petitioners are now wholly destitute of the means of subsistence, and have been indebted to certain charitable persons for food and other necessaries, and for the means of reaching Sydney for the purpose of laying their grievances before your Honorable House.

Your Petitioners, therefore, humbly pray that due inquiry may be made into the above facts and circumstances, and that such steps may be taken in the premises as justice requires, and to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray, &c.

TOM ME.
WHAT YOUNG.
QUE YOU.

NEW SOUTH WALES.

ALLEGED AGGRESSION ON CHINESE AT
LAMBING FLAT.

(PETITION OF TU LIM POW.)

Ordered by the Legislative Assembly to be Printed, 20 September, 1861.

To the Honorable the Speaker and the other Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble and respectful Petition of Tu Lim Pow, now of Sydney, in the Colony of New South Wales, Chinese Merchant,—

SH EWETH :—

That your Petitioner has been in this Colony fourteen years, and being a native of China and carrying on the business of a Chinese Merchant, proceeded on the discovery of gold at Lambing Flat, to take up his residence there, with the intention of establishing a store, and took with him a large quantity of opium of great value.

That, within a few days after the arrival of your Petitioner at Lambing Flat aforesaid, the European miners surrounded his store at midnight, armed, ordered your Petitioner to leave the said Lambing Flat, and upon his requesting permission to move his goods, your Petitioner was threatened by the said miners and driven off the diggings.

That the said European miners immediately set fire to, and consumed the store of your Petitioner and the contents thereof, amounting in value to about six hundred pounds.

That your Petitioner, since his arrival in this Colony, has conducted himself with propriety, and has not committed, nor has he been accused of committing any offence against the laws.

Your Petitioner, therefore, humbly prays that your Honorable House may take the premises into your favourable consideration, and, upon such consideration, may grant to your Petitioner such relief as the circumstances of the case may require, and in the wisdom of your Honorable House may seem meet.

And your Petitioner, as in duty bound, will ever pray.

TU LIM POW.

HENRY NEWBON,
Solicitor for the Petitioner,
91, Elizabeth-street, Sydney.

1861.

Legislative Assembly.

NEW SOUTH WALES.

ALLEGED AGGRESSION ON CHINESE AT
LAMBING FLAT.

(PETITION OF AH SUE.)

Ordered by the Legislative Assembly to be Printed, 20 September, 1861.

To the Honorable the Speaker and the other Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Ah Sue, late of Burrangong, in the Colony of New South Wales,—

SHEWETH:—

That your Petitioner is a British subject, having been born at Canton, in China.

That, since the arrival of your Petitioner in this Colony, he has earned his livelihood by following the occupation of a gold-digger and storekeeper, and has always acted in strict obedience to the laws of the Colony.

That, on the discovery of gold at Burrangong, your Petitioner proceeded thither and opened a store for the sale of Chinese and European goods and commodities, under a storekeeper's license, No. 64.

That on Sunday, the thirtieth day of June last past, a great number of riotous and tumultuous diggers and others assembled together, and set fire to and destroyed, among others, the said store of your Petitioner, with the contents thereof.

That your Petitioner was then assaulted and beaten, his hair cut off, and a portion of the flesh torn from his skull, and was otherwise illtreated.

That your Petitioner was robbed of a great quantity of money in bank notes and current coin, and also a large quantity of gold dust.

That your Petitioner was driven from the diggings, and, in consequence of the threats then made by the rioters, your Petitioner is afraid to return to Burrangong.

That your Petitioner never, by word or deed, gave any provocation for acting as is hereinbefore mentioned, but, on the contrary, always conducted himself in obedience to law established.

That your Petitioner having had all his goods in his possession at Burrangong aforesaid, and the same having been destroyed and taken away from him as above mentioned, your Petitioner is in a state of very great destitution.

Your Petitioner, therefore, humbly prays that your Honorable House will be pleased to take the premises into your serious and favourable consideration, and grant to your Petitioner such relief as in the wisdom of your Honorable House may seem meet.

And your Petitioner, as in duty bound, will ever pray.

AH SUE.

1861.

Legislative Assembly.

NEW SOUTH WALES.

ALLEGED AGGRESSION ON CHINESE AT BACK CREEK
AND LAMBING FLAT.

(CHINESE GOLD DIGGERS, &c.)

Ordered by the Legislative Assembly to be Printed, 26 November, 1861.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Chinese Gold Diggers, Miners, Storekeepers, and other Chinese Residents, at and in the neighbourhood of Back Creek and Lambing Flat, in the Colony of New South Wales,—

RESPECTFULLY STATES :—

That your Petitioners, before and up to Sunday, the thirtieth day of June last, were peacefully engaged (within the limits assigned to them) in the occupations of gold mining, storekeeping, and other lawful employments, at and in the neighbourhood of Back Creek and Lambing Flat aforesaid.

That on the last-mentioned day, certain of the gold diggers and other evil disposed persons resident at and near Lambing Flat aforesaid riotously assembled in large numbers, on foot and on horseback, and being armed with firearms and other weapons, attacked your Petitioners, and, after having beaten and otherwise cruelly illtreated your Petitioners, drove them from the said diggings.

That your Petitioners were, at the time aforesaid, possessed of personal property and effects of great value, but to save their lives your Petitioners were compelled to give up and abandon their said property and effects, which were immediately appropriated by their assailants, or wantonly or maliciously destroyed by fire.

That your Petitioners were at all times prior to the said attack quiet and orderly in their conduct, and had in all respects complied with the Government regulations.

That your Petitioners, by the means aforesaid, have been reduced to a state of complete destitution, and have no means of pursuing or bringing to justice the persons engaged in the outrages aforesaid.

Your Petitioners, therefore, humbly pray that due inquiry may be made into the matters aforesaid, and that your Honorable House will take such steps to redress the grievances above complained of as to you shall seem meet.

And your Petitioners, as in duty bound, will ever pray, &c.

Dated this seventeenth day of September, A.D. 1861.

1861.

Legislative Assembly.

NEW SOUTH WALES.

EXCLUSION OF CHINESE FROM THE GOLD FIELDS.
(ROCKY RIVER.)

Ordered by the Legislative Assembly to be Printed, 12 September, 1861.

To the Honorable the Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the undersigned Miners and other Residents of the Rocky
River Gold Fields, in public meeting assembled.

RESPECTFULLY SHEWETH :—

That your Petitioners view with alarm the frequent additions to the already
large number of Chinese in this Colony.

That the Chinese, on arriving in this Colony, immediately repair to the various Gold
Fields, and are thus placed in proximity to your Petitioners, who, in common with the
residents on other Gold Fields, have thereby more opportunities of knowing what the Chinese
are, when collected in bodies, than any other section of the community can possibly have.

That your Petitioners consider the Chinese a very undesirable class of emigrants, and,
from their general habits, it is impossible that, as colonists, they will ever tend to the
advancement of Australia.

That, as recent events have shewn, it is impossible for the Europeans and Chinese to
live in amity; and if some restrictions to their future immigration are not put in force, a
recurrence of those scenes which your Petitioners deplore may possibly take place on any or
all of the Gold Fields of New South Wales.

Your Petitioners, therefore, pray that, as the only effectual means of preventing a large
increase of Chinese into New South Wales, your Honorable House would take into serious
consideration the necessity, after a proximate date to be fixed by your Honorable House, of
prohibiting the Chinese from working on the Gold Fields of the Colony.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

Signed, on behalf of the Meeting, by,—

ALEXANDER M'LEOD, Chairman.

JAS. D. LEECE, Secretary.

JOHN LANGTON.

HENRY SANDS.

1861.

Legislative Assembly.

NEW SOUTH WALES.

MR. SUB-COMMISSIONER COOPER.
(KIANDRA GOLD FIELDS.)

Ordered by the Legislative Assembly to be Printed, 31 December, 1861.

To the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Shareholders of the "Homeward Bound Company," New Chum Hill, Kiandra—Saml. Hawkins, James Martin, H. Wingrave, Lewis Lavigne,—

HUMBLY SHEWETH :—

That your Petitioners' property in a water-race, constructed under the written sanction of Mr. Commissioner Cloete, at a cost of nearly £2,000, has been rendered utterly valueless by the orders and decisions of Mr. Sub-Commissioner Cooper, and that your Petitioners humbly pray that your Honorable House will cause an immediate inquiry to be instituted into Mr. Cooper's conduct, on the following charges of partiality and injustice, which your Petitioners prefer against him :—

First—That your Petitioners, on the 1st of August last, requested Mr. Cooper to compel certain parties, who were using water to their prejudice, to prove their right to the water they were appropriating, and, in the event of their proving their right, to compel them to place a proper gauge in their race, in accordance with the Gold Fields Regulations; that Mr. Cooper refused to accede to either of their requests, and that, in consequence, these parties obtained possession of the water which Mr. Cloete had guaranteed to your Petitioners, and upon the faith of the integrity of which guarantee their labour and capital had been expended.

Second—That, on the 2nd of August last, your Petitioners were fined £8, for non-compliance with an order they never received; and that, on the 10th of August, one of their partners was confined in the lock-up for refusing to pay this fine, Mr. Cooper having been informed on the previous evening, by one of your Petitioners, that one of the assessors who adjudged the fine, was an admitted partner of the complainant, and had therefore awarded damages to himself; and also, that Mr. Commissioner Scott had reversed the decision of the 2nd of August, by telegram; and that, notwithstanding both these circumstances, Mr. Cooper still exacted the fine.

Third—That, on the 6th of August, Mr. Cooper sent your Petitioners an order to turn the water out of their race for the benefit of another race, which it could not enter without running up-hill; that your Petitioners obeyed, and then endeavoured to explain to Mr. Cooper the real state of the case; that he refused to listen, and persisted in the water being kept out of your Petitioners' race, which was, in consequence, choked up with snow for more than four miles, and, in many places, covered to a depth of four feet; that the frost destroyed the embankments which, in other races, the running water preserved from injury; that the state of the frozen soil prevented any repairs being executed, and that this order, absurd in itself, caused your Petitioners heavy and protracted losses and expenses.

Fourth—That your Petitioners were fined £20 by Mr. Cooper, and two assessors whom they protested against prior to the commencement of the trial; that your Petitioners were not permitted to send down to the river for disinterested men to act as assessors, unconnected with either side; that the notice they received of the coming trial was too short to enable them to procure their witnesses; that Mr. Cooper would not hear of a postponement, although one of the assessors wished it; that your Petitioners were condemned unheard, and were ordered to pay the amount before nine o'clock on the following morning, or suffer three months imprisonment in Goulburn Gaol.

Fifth—That, on this trial, your Petitioner, Samuel Hawkins, appealed to Mr. Cooper for protection, he having been twice assaulted; that, whilst the case was in progress, he was again assaulted, he being in attendance in obedience to a summons; that this trial, as well as the previous ones, took place in a public-house; that, on the conclusion of the proceedings, he again demanded protection, which was nominally granted; but that, notwithstanding this, he was, for the fourth time, attacked and maltreated, the police never making their appearance until he had made his escape; that members of the Police Force are prepared to prove that they received private instructions from Mr. Cooper "to slip out of the way till Hawkins got a hiding, as the boys were going to set upon him."

Sixth—That, on the 22nd of November, your Petitioners were again fined £19, in consequence of Mr. Cooper's continued refusal to compel the complaining parties to measure their water, in accordance with the express wording of the Gold Fields Regulations, and in direct violation of Mr. Commissioner Scott's telegram defining the respective rights.

Seventh—That, in all these trials, Mr. Cooper has remained with the assessors whilst considering their verdict, thus uniting in his own person the functions of both judge and jury, dictating to them the penalty to be enforced, and, by so doing, preventing the free expression of their opinions on the merits of the case submitted to them for adjudication, to the prejudice of the interests of your Petitioners; and that your Petitioners have reason to believe that the whole of these proceedings are the result of vindictive feelings on the part of Mr. Cooper; and your Petitioners therefore humbly pray that your Honorable House will cause these matters to be speedily investigated, and relieve your Petitioners from the loss and injustice to which they have been subjected.

And your Petitioners, as in duty bound, will ever pray.

Kiandra, 7 December, 1861.

[Here follow 4 Signatures.]

1861-2.

Legislative Assembly.

NEW SOUTH WALES.

ROBERT STEWART.

(RIOTS AT BURRANGONG.)

Ordered by the Legislative Assembly to be Printed, 7 January, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Robert Stewart, of Young, in the District of Burrangong, and Colony of New South Wales, tailor,—

SH EWETH :—

That your Petitioner, on the night of the fourteenth day of July last, while standing in an open space close to his tent, on the east side of the main street, in the town of Young, and Colony of New South Wales, received a gun-shot wound in the right leg, about two inches below the knee, which proceeded from the Police Camp, a distance of three or four hundred yards, and was fired, as your Petitioner verily believes, by some of the Police Force, during the Riot which took place on the night of the said fourteenth day of July.

That your Petitioner, immediately before receiving the said wound, distinctly saw the flash of about a dozen shots fired in a volley, and heard the reports of the said shots; and can positively assert that the shot which struck your Petitioner was fired in and from that volley, which came in the direction in which he then stood, and proceeded from the Police Force aforesaid.

That your Petitioner has, in consequence of the said wound, so received as aforesaid, been idle for the last fourteen weeks, and, being a tailor by trade, has suffered considerable loss. That your Petitioner, up to a short time since, received medical treatment and aid at the Commissioner's Camp, but in consequence of some misunderstanding, has lately been deprived of the said treatment. And that your Petitioner is now suffering from the effects of the said wound, and cannot work at his trade efficiently; and is compelled to use crutches when moving about; and cannot, as he has been informed, and believes, ever again obtain the use of his leg as formerly.

Your Petitioner therefore humbly prays that your Honorable House may take the premises into your favourable consideration, and grant to your Petitioner such relief as the circumstances of the case may require, and to the wisdom of your Honorable House may seem meet.

And your Petitioner, as in duty bound, will ever pray, &c., &c., &c.

ROBERT STEWART.

Witness to above Signature :—

JNO. D. THANE,
Independent Minister, Young.

1861-2.

Legislative Assembly.

NEW SOUTH WALES.

ROBERT STEWART—RIOTS AT BURRANGONG.

(SURGEONS, BANKERS, &c., LAMBING FLAT.)

Ordered by the Legislative Assembly to be Printed, 7 January, 1862.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Surgeons, Bankers, and Merchants, of Young, in the Colony of New South Wales,—

HUMBLY SHEWETH :—

That on the night of the fourteenth July, one thousand eight hundred and sixty-one, during an attack upon the Police Camp at Young, Robert Stewart, a tailor by trade, and in humble circumstances, was standing at the door of his own tent, situated at the rear of the Lambing Flat Hotel, at Young; and that during the said attack a spent ball, which came from the direction of the Camp, struck the said Robert Stewart in the leg, thereby wounding him so seriously as to occasion him severe pecuniary loss.

That your Petitioners regret the occurrence that has taken place, whereby an innocent man met with so severe a wound, and they are desirous of humbly submitting his case to your kind consideration.

Your Petitioners, therefore, humbly pray that your Honorable House may take the premises into your favourable consideration, and upon such consideration, grant to the said Robert Stewart such relief as the circumstances of his case may require, and to the wisdom of your Honorable House may seem meet.

And your Petitioners, as in duty bound, will ever pray, &c., &c., &c.

12. J. R. Hardy, Esquire, to the Colonial Secretary, respecting Mr. A. E. Bush. 25 June, 1851	5

MR. A. E. BUSH.

No. 1.

MR. BUSH to COLONIAL SECRETARY.

Bathurst, 10 July, 1851.

DEAR SIR,

I have commenced working with quicksilver, and thinking it might be interesting to you, I send you enclosed a small sample of two trials. I cannot tell the cause, but there evidently is some chemical action going on, either with the gold or emery, during the process of amalgamation, which hinders the gold from coming from the retort pure, and in consequence will be a great detriment to the use of quicksilver—the only efficient mode, in my opinion, of gathering the gold of the Turon, and in fact at all of the mines, except the Ophir, where the gold is larger, and not liable to be wasted by the ordinary machine.

I am thoroughly convinced of the existence of gold here in large quantities—in fact to vie with California. The time has not come yet, owing to the imperfectness of the machinery, but it will, when fortunes will be made in a day.

I have found quicksilver and silver in small quantities, but have no samples of either. I apprehend they do not exist in any quantity.

I would not trouble you with this note did I not think it of consequence, and that it would be interesting to you.

I am, &c.,

ALFRED E. BUSH.

No. 2.

MR. BUSH to MR. E. DEAS THOMSON.

Bundarra River, 8 March, 1857.

DEAR SIR,

I beg to inform you that I have taken the oaths of naturalization before the Bench of Magistrates at Uralla, as directed by a letter I received from the Colonial Secretary's Office, and am consequently in a position to accept any employment you may in your kindness find, for which I am suitable. I mentioned in my last, Oban Diggings as a place to which I should like to be appointed. There is no doubt a rapidly increasing population, and a Gold Field permanent and rich; and as my health usually suffers in other parts of the Colony I have a preference for the district of New England. But as my object is to get employment I shall be happy to do my best wherever I can be most useful.

I am, &c.,

A. E. BUSH.

No. 3.

MR. E. DEAS THOMSON to MR. SECRETARY HAY.

24 March, 1857.

MY DEAR HAY,

I enclose an application from Bush for employment in the Gold Department. His services might, I think, be made useful as a Sub-Commissioner. This is the gentleman, an American by birth, but now a naturalized British subject, respecting whom I spoke to you some time ago, as having given this Government some valuable information respecting the Gold Regulations of California, at the time the gold discovery took place in this Colony.

Yours very truly,

E. DEAS THOMSON.

Bring up on any vacancy occurring in any of the appointments on the Gold Fields.

J. H.

24 March, 1857.

No. 4.

No. 4.

MR. BUSH to MR. E. DEAS THOMSON.

Bundarra River, 4 July, 1857.

DEAR SIR,

May I beg to remind you of the kind intention expressed in your last, with reference to my obtaining a Government appointment. I am still anxious to obtain one, should you hear of one likely to suit my capacity and experience. I believe there has been a sum of money placed upon the Estimates for the purpose of prospecting for gold; should there be persons required for that purpose I have no hesitation in saying that I have the experience and perseverance necessary to make me a suitable person for such an appointment. Trusting that you will excuse the liberty I take in again mentioning the subject,

I remain, &c.,
A. E. BUSH.

Forwarded, with reference to Mr. Bush's previous applications for employment, to the Secretary for Lands and Works, for favourable consideration, when a fitting opportunity offers.

E. D. T.

17 July, 1857.

To be noted amongst applications for employment on the Gold Fields.

J. H.

18 July.

No. 5.

MR. BUSH to COLONIAL SECRETARY.

Braidwood, 30 April, 1861.

DEAR SIR,

I had the honor to write to you on the 21st of March last, with reference to my claim upon the Government for services performed in the year 1851, to which letter I have not received any reply. May I hope that you will cause to be placed upon the Estimates such a sum as you shall consider adequate to the services performed, as well as for the delay of such remuneration? I think that one thousand pounds is as small a sum as could be consistently offered to me, considering the delay.

I am, &c.,
ALFRED E. BUSH.

No. 6.

THE UNDER SECRETARY to MR. BUSH.

*Colonial Secretary's Office,
Sydney, 11 May, 1861.*

SIR,

In acknowledging the receipt of your letter of the 30th ultimo, requesting an answer to a communication which you state to have been made on the 21st March last, respecting your claim upon Government for services alleged to have been performed in the year 1851, I am directed by the Colonial Secretary to inform you, that the letter to which you refer does not appear to have been received at this office.

I have, &c.,
W. ELYARD.

No. 7.

MR. BUSH to COLONIAL SECRETARY.

Braidwood, 10 June, 1861.

DEAR SIR,

In reply to your letter of 11th May, I beg to enclose a copy of the communication referred to of 21st March, in which I state particulars of services. Permit me to call your attention to the length of time which has passed since the services were performed; and also to state that, could I now receive a part of what I consider due me, for the present it would save me from insolvency, as times have been very bad, and my losses have been great.

The willingness with which I served the Government, when no other person could be found with the necessary experience to give the information required, should, I think, weigh something in my favour; and the time I have waited I feel should have claims for consideration now, when a few hundreds would be of so much importance to me.

Let me hope that you will take some action in the matter at once.

I am, &c.,
ALFRED E. BUSH.

[Enclosure]

[Enclosure in No. 7.]

Braidwood, 21 March, 1861.

Dear Sir,

I have waited a long time in hope that something would be done in reference to my claim upon the Government for services performed in the year 1861. It is doubtless within your knowledge that I assisted Mr. E. Deas Thomson to draw up the first Gold Field Regulations, and afterwards, at his desire, I went up the country with the first Gold Commissioner, and assisted him in putting those Regulations into force, by which I expended nearly two hundred pounds of my own money, and worked for nearly nine months, finding my own horses. My services, as you are doubtless aware, were spoken of by the Commissioner with whom I served, as important.

I have been promised recompense for these services by almost every Administration since that time. As the matter has been brought under your notice before, together with a letter from Mr. E. Deas Thomson, it is doubtless unnecessary for me to go further into particulars; and indeed, being a foreigner, I should have been much better pleased if the Government had given the subject consideration without making it necessary for me to call their attention to it. But I have waited *ten years*, and nothing has been done; and I feel that I have been neglected, and that taking my money and my time without recompense is a positive injustice. May I hope that you will see justice done me speedily, or should you advise me to petition Parliament for recompense?

Trusting to hear from you as to the steps you think most desirable for me to take,—

I remain, &c.,

ALFRED E. BUSH.

No. 8.

THE UNDER SECRETARY to MR. BUSH.

Colonial Secretary's Office,
Sydney, 5 July, 1861.

SIR,

In acknowledging the receipt of your letter of the 10th ultimo, wherein you forwarded the copy of an application for remuneration for your services in assisting to draw up and put in force the Gold Field Regulations in 1851, I am directed by the Colonial Secretary to inform you that no record exists in this office of any services having been performed by you.

I have, &c.,

W. ELYARD.

No. 9.

MEMORANDUM OF COLONIAL SECRETARY.

Gold Regulations of California.—Information obtained from Mr. Bush, of Connecticut.

17 May, 1851.
N.B.—Mr. Bush
left California in
November last.

I WAS employed for two years in working at the Gold Mines in California; the gold is found generally in gulches or ravines, extending 20 miles long and 2 wide; every such gold tract is divided into mining districts, about 4 miles in length, and is presided over by an Alcalde or Judge, and twelve jurymen who are respectively chosen by ballot by the miners of the district; the number of persons occupying a district varies from 800 to 1,200; until there are 30 miners the district is not constituted a mining district; these appointments are made under the authority of a law of the local Legislature; the Alcaldes are empowered to adjudicate in all civil and criminal cases; in cases of claims involving mining rights, their decision is final and without appeal; but in criminal cases their jurisdiction only extends to preliminary magisterial investigations, with power of committal for trial to the County Courts; the mode of acquiring claims to the right of mining is by priority of selection of particular portions of land; the selections are limited in quantity, according to situation; in the bed of the river 60 feet are allowed to the claimant, that is, extending over the whole breadth of the river; on the bank, known as the "dry diggings," 20 feet square is the quantity allowed; no person is permitted to make more than one selection, but any person may acquire a partnership interest by purchase from others to any number of selections; the charge for citizens of the United States is five dollars per month for the mining privilege, and for foreigners 20 dollars; every individual employed in working is chargeable with the fee of five dollars per month, the fee is paid one month in advance; collectors are appointed by the State Government to receive the fees monthly; they are paid in gold dust. (N.B.—The revenue, on the admission of California into the Federal Union, became payable in aid of that of the Federal Government.) There is a standard price for dust of every kind; what is obtained by quicksilver, or the process of amalgamation, is valued at 12 dollars per oz.; that obtained by washing with water is valued at 16 dollars per oz.; there is no difficulty in collecting the tax; the claimant to the mining right has also a pre-emptive right to the purchase of the fee simple of the land, at a valuation put upon it by the Government.

No. 10.

MINUTE of Questions and Answers, apparently given by Mr. Bush.

1. Are selections allowed to be made in any part of a mining district? When the district is constituted the selections can only be made in regular succession.
2. How far do the diggers extend from the river? They vary from 20 feet to 4 miles. It is got at a depth of from 2 feet to 12 feet.
3. Do they cover the whole of the alluvial flats of the valley? Generally speaking.

4.

- 4. Is the ground divided into lots for selection, and numbered on a chart? —
- 5. How are the surveys conducted? —
- 6. If the licensed miner fail to pay regularly the monthly fee, does he lose his pre-emptive right to the purchase of the fee simple of the land; and does it thus become vacant and open to selection by others? Yes.
- 7. In what position are lands considered that have been worked and are abandoned? They revert to their original state.
- 8. Is there any office where a survey of the district can be seen? Yes, the Alcalde's office.
- 9. What is the rule respecting improvements? They go with the claim.
- 10. Are selections transferable; and if so, upon the observance of what formalities?—
- 11. Are lands laid out as the sites for towns, and allotments sold in them? No; townships are never laid by the Government.
- 12. Are cultivation lots sold, and under what regulation? Yes; under the ordinary regulations.

No. 11.

Further Answers or Information referring to the Questions in the previous Paper.

2. They vary from 20 feet to 4 miles, in some instances. The gold is got at a depth of from 2 to 12 feet, and almost invariably on the surface of the 'rock. Clay is the only soil that will retain it. It is occasionally found there, and in always the largest quantities in that case.

When found in clay it is within 2 inches of the surface; it is no use to go deeper. In beds of rivers the clay is covered with from 6 inches to 2 feet of soil. Clay containing gold is also found on the alluvial flats, but in these situations it is covered with from 4 to 12 feet of soil.

In all the lumps of gold, of California, quicksilver ore is found embedded in it. The 9 oz. piece of gold shewn to me as having been found at Bathurst, contained quicksilver ore precisely similar to that found at California.

3. They do, in more or less quantities.

Yes; by bill of sale, which is registered, as in cases of other property.

The average wages that can be earned, by working at the Gold Mines in California, are 8 dollars per day.

No. 12.

J. R. HARDY, Esq., to COLONIAL SECRETARY.

Bathurst, 25 June, 1851.

MY DEAR SIR,

I have just seen Mr. A. E. Bush, to my very great delight. He goes with me to Summer Hill Creek now, and I have promised to put him on to Icely's, across the country—only 35 miles; so he will lose no time, and be of very great service to me. I believe he seems very intelligent, and very willing to impart what he knows.

Yours, &c.,

J. R. HARDY.

1861.

NEW SOUTH WALES.

SYDNEY BRANCH ROYAL MINT.

(DESPATCH RESPECTING.)

Presented to both Houses of Parliament, by Command.

SECRETARY OF STATE to GOVERNOR SIR J. YOUNG, BART., K.C.B.

NEW SOUTH WALES.
(No. 39.)Downing-street,
20 June, 1861.

SIR,

I have the honor to transmit to you, for your information, a copy of a letter from the Master of the Mint, dated the 4th ultimo, relative to the operations of the Sydney Branch of the Royal Mint during the half-year ended the 31st December last.

I also enclose copies of the Report of the Master of the Mint on the weight and fineness of Gold Coins struck at the Sydney Mint, and of the summary of the Monthly Returns of Gold Coin issued therefrom during the year 1860.

I have, &c.,
NEWCASTLE

[Enclosures.]

Sir,

Royal Mint,
4 May, 1861.

I have the honor to acquaint you, for the information of the Lords Commissioners of Her Majesty's Treasury, that the following Returns have been duly received from the Deputy Master of the Sydney Branch of the Royal Mint, in conformity with the Order in Council of the 19th August, 1853:—

Six Monthly Returns, shewing the transactions in Bullion of the Sydney Branch of the Royal Mint, for July to December, 1860, inclusive.

The Coin issued to the public during these six months is as follows:—

	SOVEREIGNS.	HALF-SOVEREIGNS.	TOTAL.
	OZS.	OZS.	OZS.
In July	52,384.16		
August	36,474.10		
September	35,229.46		
October	27,730.51		
November	23,368.14		
December	33,004.82		

Amount charged for Coinage—Nil.

Two Returns of Waste in Coinage of Gold at the Sydney Branch of the Royal Mint for the Quarters ending 30th September and 31st December, 1860.

Two Duplicate Returns made by the Board of Verification to the Colonial Secretary, reporting the state of the Bullion in the Mint on the 1st October, 1860, and 2nd January, 1861.

I have also to request you to submit to their Lordships my Report enclosed (being the Sixteenth) of the weight and fineness of Coins produced at the Sydney Branch of the Royal Mint, during the six months, July to December inclusive, and transmitted by the Deputy Master for examination, in accordance with the provisions of Her Majesty's Order in Council above referred to.

A Copy of the aforesaid Report will be forwarded to the Deputy Master at Sydney for his information.

Geo. A. Hamilton, Esq.

I have, &c.,
THOS. GRAHAM.

SIXTEENTH REPORT, addressed to the Lords Commissioners of Her Majesty's Treasury, by the Master of the Mint, on the Weight and Fineness of Gold Coins struck at the Sydney Branch of the Royal Mint, and transmitted by the Deputy Master for examination, in accordance with the provisions of Her Majesty's Order in Council of 19th August, 1853.

Pieces taken, without preference, by the Colonial Secretary, at the deliveries of the Sydney Mint:—
During the Quarter ending 30th September, 1860.

No. of Pieces.	Denomination.	Total Weight.	Average Weight of a Piece.	Assay Report.		Mean Report.
				Dr. Miller.	Dr. Hoffmann.	
106	Sovereigns	oz. 27.226	oz. 0.25684	916.866	916.944	916.905

SYDNEY BRANCH ROYAL MINT.

During the Quarter ending 31st December, 1860.

No. of Pieces.	Denomination.	Total Weight.	Average Weight of a Piece.	Assay Report.		Mean Report.
				Dr. Miller.	Dr. Hoffmann.	
79	Sovereigns	oz. 20-285	oz. 0-25677	916-956	916-765	916-861

The standard weight of the Sovereign being 0-25682 oz., and the standard fineness 916-67 in 1,000 parts.

THO. GRAHAM.

Royal Mint, 4 May, 1861.

(Copy.)

Sir,

Royal Mint, .

4 May, 1861.

In conformity with the instructions from the Lords Commissioners of Her Majesty's Treasury, communicated to me in Sir Charles Trevelyan's letter of the 9th November, 1855, I have now to submit an account of the weight and fineness, as ascertained here, of Coins struck at the Sydney Branch of the Royal Mint, and sent Home by the Governor of New South Wales during the year 1860. These Coins were conveyed from Australia in closed packets bearing the Seal of the Treasurer, and were received by me with letters from the Assistant Secretary of the Treasury of the 3rd May, 1860, and later dates.

My last report on the Governor's prices was dated 9th May, 1860.

Coins of the Sydney Mint taken from the Colonial circulation from January to December, 1860, by order of the Governor of New South Wales.

TAKEN FROM CIRCULATION IN	NO. OF PIECES.		WEIGHT.		PROPORTION OF GOLD IN 1,000 PARTS.	DATE OF TREASURY LETTER TRANSMITTING THE PACKETS.

The Treasury, New South Wales,
Sydney, 1st November, 1861.

E. C. WEEKES,
Treasurer.

1861.

Legislative Assembly.

NEW SOUTH WALES.

POST OFFICE.

(SIXTH ANNUAL REPORT, BEING FOR 1860.)

Ordered by the Legislative Assembly to be Printed, 15 October, 1861.

THE POSTMASTER GENERAL to THE UNDER SECRETARY FOR FINANCE AND TRADE,
TREASURY, transmitting the Sixth Annual Report on the Post Office Department, being
that for 1860.

General Post Office,
Sydney, 13 August, 1861.

SIR,

In accordance with former instructions, I have the honor to transmit, for the information of the Honorable the Colonial Treasurer, and to be laid before the Legislative Assembly, the Sixth Annual Report on the Post Office Department, being that for the year 1860.

No. 1.—EXTENSION OF POST OFFICE SERVICE.

ON the 31st December, 1859, the whole extent of the Postal Lines in New South Wales was 8,737 miles. At the same date in 1860 their extent was 8,231 miles.

The separation of Queensland has decreased the postal lines of this Colony by 1,558 miles; but new lines have been established during the year, which have caused an ^{A, in Appendix.} increase of 1,069 miles; whilst two lines, amounting together to 16 miles, have been discontinued; and one mile saved by a change of route; giving a difference in the extent of the postal lines, of the two years, of 506 miles decrease in 1860.

Returns of the postal lines transferred to Queensland, of those recently established, ^{Appendix B & C.} and of those discontinued, will be found in the Appendix.

Increased postal communication on existing lines, to the extent of 1,111 miles, has been afforded during the past year, the particulars of which are also given in an annexed ^{Appendix D.} Return.

A second daily mail between Parramatta and Windsor (19 miles) was discontinued in 1860.

The number of miles travelled in 1859 was 1,418,064, whilst during 1860 the mileage had increased to 1,461,518, being an excess of 43,454 miles. When it is considered that the whole population of the Colony, on 31st December, 1860, was estimated by the Registrar General at 360,363 souls, the extent of postal accommodation afforded to the public will be more fully appreciated.

At the end of 1859 there were 252 Post Offices in New South Wales, 15 having been transferred during that year to Queensland. There were at the end of 1860, 289 Post Offices, being an increase of 37 offices. 39 new Post Offices were established during the year, 3 re-established, and 5 discontinued.

REPORT FROM THE POSTMASTER GENERAL—1860.

The last item of gratuities on late sorting is paid to four clerks for overtime, and the arrangement made provides that letters arriving from the Hunter can be delivered at the General Post Office as late as 7 p.m.; and that letters addressed to the Hunter can be posted as late as 7.30 p.m.

The cost of the Colonial Mails conveyed by land, compared with that of 1859, is shewn in the following tabular Statement :—

YEAR.	Extent of Postal Lines by Rail.	Average Cost per Mile.			Extent of Postal Lines by Coach.	Average Cost per Mile.			Extent of Postal Lines by Horse.	Average Cost per Mile.			Total Extent of Postal Lines.	Total Cost of Conveyance.			Average Cost per Mile.		
	MILES.	£	s.	d.	MILES.	£	s.	d.	MILES.	£	s.	d.	MILES.	£	s.	d.	£	s.	d.
1859	54	11	10	0	1,765	12	12	0	6,918	3	5	2	8,737	45,408	8	0	5	3	11
1860	60½	11	10	0	1,757½	12	16	0	6,413	3	7	6	8,231	44,792	12	10	5	8	1
Increase..	6½	0	4	0	0	2	4	0	4	2
Decrease	7½	505	506	615	15	2

It may be necessary to state that the above return deals with the whole liabilities under accepted tenders, and takes no account of either fines levied or special contracts.

Under the head of average cost by rail I have only inserted the actual sum payable by mile to, the Railway Department, which is the same as in 1859; but the expense attendant on railway guards, portage from stations, &c., and which disbursements are peculiarly incidental to railways, must fairly be considered in any comparison that may be drawn as to the cost of mails by the different modes of conveyance; and when so considered, it will be found that the railway, though the most punctual and the most speedy mode of mail transit, is also the most expensive.

From the 30th April to the 28th May, 1860, the Southern Railway was not, (to its full extent), in working order, being damaged by floods. During this period the mail service between Parramatta and Campbelltown, in the first instance, and subsequently between Liverpool and Campbelltown, was performed by coach, under a temporary and necessarily expensive contract. For this service an extra expenditure of £145 was incurred, which it has been decided must be paid by the Post Office Department.

It will be seen that the conveyance of mails by coach was dearer in 1860 than in 1859, by 4s. per mile, and by horse 2s. 4d. per mile; thus increasing the general average of the cost of conveying the mails during 1860 by 4s. 2d. per mile. The extension of the railway lines 6½ miles is caused by the Northern Railway being opened as far as Lochinvar.

No. 3.—REVENUE.

The Revenue of the Post Office Department for the years 1859 and 1860 was as follows :—

YEAR.	SALE OF STAMPS.			FEES FOR PRIVATE BOXES.			POSTAGE ON UNPAID LETTERS.			TOTAL		
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
1859	42,144	19	4	275	12	6	1,258	2	10	43,678	14	8
1860	44,302	19	10	266	14	0	1,042	16	5	45,612	10	8
Increase	2,158	0	6	1,933	15	7
Decrease	8	18	6	215	6	5

The

The increase in the whole revenue of the year has been at the rate of nearly $4\frac{1}{2}$ per cent. over that of 1859. The increase of revenue of 1859 over 1858 was at the rate of 9 per cent. ; but it must be recollected, that during eleven months of 1859, the postal receipts of Queensland were included in the postal revenue of New South Wales. Whilst the sale of stamps during 1860 has increased upwards of 5 per cent., there has been a falling off in the revenue from private boxes and unpaid postage. The decrease in the latter item must be attributed to the fact that loose letters do not arrive by the sailing ships to the extent they did when the mail steamers were less punctual, and that the unpaid postage on Queensland letters is also lost.

I may mention that, by the practice of the Government service, some items are placed to the credit of the General Revenue, the receipts from which are derived from the Post Office Department, such as proceeds of sale of waste paper, old stores, disabled horses, &c.

No. 4.—EXPENDITURE.

The following Statement shows the Total Expenditure of the Department for the past Year, as compared with 1859, under the three heads of Salaries, Contingencies, and Conveyance of Mails :—

YEAR.	SALARIES.			CONTINGENCIES.			CONVEYANCE OF MAILS.			TOTAL.		
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
1859	22,177	15	4	1,578	13	10	47,614	7	9	71,370	16	11
1860	23,244	3	10	1,061	17	0	47,084	17	8	71,390	18	6
Increase	1,066	8	6	20	1	7
Decrease	516	16	10	539	10	1

It will be seen that the expenditure of the Post Office Department during 1860 was nearly the same as in 1859, in spite of the great increase of business.

Under the head of salaries, there is an increase of £1,066 8s. 6d., which is attributable to the fact that nearly £700 more have been paid to country Postmasters during 1860 than during 1859 ; whilst two letter carriers, (one town and one country), two messengers, and an additional mail boy, have been added to the establishment.

It will be noted that the disbursements on account of Post Office salaries do not absorb one-half the postal revenue.

Under the head of contingencies, there is a decrease of expenditure amounting to £516 16s. 10d., or about $\frac{3}{2}$ per cent. This is to be accounted for by an item of £500 towards clerical assistance not having been voted for 1860.

The details of the expenditure of the mail service are elsewhere given ; but the significant fact, that the expenses caused thereby, (independent of the Peninsular and Oriental Company's contract) exceed the whole revenue of the department by the sum of £1,772 7s. 5d., is quite sufficient to explain why the department is not a self-paying one. It is impossible that it can ever become so, until the population of New South Wales is more concentrated, and the relative proportion between the number to be benefited and the extent of postal accommodation afforded has undergone a considerable change.

The subsidy to the British Government towards the performance of the monthly mail service from and to the United Kingdom, which is at present set down at £20,000 per annum, is not paid for through the Post Office Department, and is not therefore included in the above Return of Expenditure.

The incidental expenses of stores, postage, fuel, and light, are also chargeable on votes other than departmental.

No. 5.—NUMBER OF LETTERS, NEWSPAPERS, AND PARCELS.

The three following tabular Statements shew the Despatch business transacted in the New South Wales Post Offices during the years 1859 and 1860.

These statements are necessarily estimated, but are verified in the following way :—

The Superintendent of the Letter Branch of the General Post Office, and the Country Postmasters, transmit returns of the letters, newspapers, and parcels (including the book packets) posted during seven consecutive days, viz.,—from 16th to the 22nd of each month, and from these returns the general average for the whole year is taken.

LETTERS.

YEAR.	POSTED FOR TOWN DELIVERY.	POSTED FOR COUNTRY DELIVERY.	POSTED FOR FOREIGN DESPATCH.	TOTAL POSTED DURING THE YEAR.
1859	348,844	2,843,310*	377,568	3,569,722
1860	349,670	3,012,345*	441,415	3,803,430
Increase	826	169,035	63,847	233,708

* Includes Town Letters posted out of Sydney.

The above Return shews an increase of posted letters under every head; the total per centage of increase on letters posted in 1860 over 1859 being 6 per cent. The increase of 1859 over 1858 was 15 per cent.

The number of letters posted for Town delivery in Sydney, shews but a slight increase; but the return of letters posted for Country delivery (including the Town letters of Country Post Offices) shews an advance of 5 per cent., and in letters posted for Foreign despatch 16 per cent.

NEWSPAPERS.

YEAR.	POSTED FOR COUNTRY DELIVERY.	POSTED FOR FOREIGN DESPATCH.	TOTAL POSTED DURING THE YEAR.
1859	2,376,754	406,684	2,783,438
1860	2,758,305	495,331	3,253,636
Increase	381,551	88,647	470,198

The increase of newspapers transmitted for Country delivery is at the rate of 16 per cent.; whilst in 1859 it was 18 per cent. over the previous year.

The augmentation in the newspapers posted for Foreign despatch is still greater, being at the rate of 21 per cent., against an increase in 1859 over the preceding year of only two per cent. With the exception of a few newspapers posted seven days after publication, the whole of the newspapers posted for Country delivery, and about 252,300 posted for Foreign despatch, were transmitted gratuitously; although entailing considerable expense on the department.

PARCELS.

YEAR.	POSTED FOR COUNTRY DELIVERY.		POSTED FOR FOREIGN DESPATCH.	TOTAL POSTED DURING THE YEAR.
	Closed at the ends.	Open at the ends.		
1859	28,735	33,293	4,084	66,112
1860	24,455	47,085	6,794	78,334
Increase	13,792	2,710	12,222
Decrease	4,280

I had occasion to express my surprise, in the Post Office Report of 1859, that the number of packets passing through the Post Office closed against inspection, which packets are now confined to bank pass books and a few other articles, had rather increased, having anticipated a considerable decrease in that year. The decrease in 1860 is very marked, being at the rate of 15 per cent., whilst the class of parcels open at both ends for Country delivery has increased 41 per cent.

All parcels at book post rates posted for Foreign despatch are open at both ends, and they have increased during the year at the rate of 66 per cent., whilst the general percentage of increase on all descriptions of parcels posted during the year amounts to 18 per cent.

This result may be taken as a satisfactory indication that the privilege of transmitting Colonial book packets at reduced rates is much more extensively made use of.

The three following tabular Statements have reference to the work of the Ship Room of the General Post Office.

The totals despatched are posted in the Colony, and therefore appear in a previous return; those received pass from the Ship Room to the Inland and Delivery Branches of the General Post Office, and from thence are transmitted or delivered to the parties addressed.

The Ports of Newcastle and Eden receive to a limited extent direct Foreign or Colonial mails, but no returns have hitherto been required from the Postmasters of those places.

Increase	2,125	374	211	2,710	834	221	83	1,138
Decrease

From the letter return it will be seen that the despatch to Australasian Colonies has increased 45 per cent., and the receipt 42 per cent.

In 1859 there was a decrease in despatch and an increase of 2 per cent. in the receipt.

The letters sent to or through the United Kingdom have decreased $1\frac{1}{2}$ per cent., and those received increased 6 per cent.

In 1859 the reverse was the case, there being an increase of 6 per cent. on this class of letters despatched, and a similar per centage of decrease on those received.

The

The letters despatched to Foreign Countries and British Possessions have increased in the ratio of 23 per cent., whilst those received shew an increase of 10 per cent.

In 1859 the increase was 29 on despatch, and 37 per cent. on receipt.

The general increase on ship letters despatched is 17 per cent., on those received 20 per cent.

The newspapers despatched to the Australasian Colonies have increased by no less than 73 per cent., and those received 40 per cent. It must be recollected that newspapers to and from Queensland, for the first time, appear in the Inter-colonial Return.

The despatch and receipt of newspapers from and to the United Kingdom are both less than in 1859, the former having decreased 5 per cent., the latter 6 per cent.; whilst on the other hand, there is an increase in the former of 11 per cent., and in the latter 20 per cent., with regard to newspapers to and from Foreign Countries and British Possessions.

The total return of newspapers despatched exhibits the large increase of 21 per cent., and of those received an augmentation of 5 per cent.

The return of parcels, including book packets, shew a steady increase in every item; and, on the despatch to Australasian Colonies, the large increase of 66 per cent.

21,580 letters were returned to the writers as unclaimed; (being 1,742 more than in 1859), of which number 17,136 were addressed to places within the Colony, 3,074 to the Australasian Colonies, 1,287 to the United Kingdom, and 83 to other places.

In the three last items there is a decrease as compared with 1859.

In the first item of Country letters there is an increase of 2,053 letters, which can be accounted for by the increased number of Colonial letters posted.

Of the letters returned to the writers, 256 were unregistered, but were found to contain money or articles of value, and 397 were registered.

8,214 letters addressed to the Colony (being 32 fewer than in last year) were returned unopened, as follows, viz. :—

To Australasian Colonies	3,093
To the United Kingdom.....	4,875
To other places	246

To the neighbouring Colonies there was an increase in the number returned of 247 letters, whilst there was a decrease of 230 letters returned to the United Kingdom, and of 49 letters returned to other parts beyond seas.

9,088 letters were returned as unstamped, insufficiently stamped, and irregularly posted.

As this number is nearly treble that of the number returned for the same causes during 1859, it is necessary to explain that, for a considerable period after the separation of Queensland, parties addressing letters thereto persisted in affixing postage stamps thereon at Colonial instead of Inter-colonial rates.

86,847 registered letters passed through the General Post Office during 1860, being 2,413 less than in the former year, and 8,352 less than in 1858.

I find that there were fewer registered inland letters by 6,160, whilst the registered ship letters increased during the past year by 3,747 letters.

The registered letters passing to and from the United Kingdom were 16,507, being 1,559 more than in the year 1859; to and from the Australasian Colonies 8,209, being 2,323 more than in the former year; whilst there were 358 registered letters to and from parts beyond the sea, being 135 less than in 1859.

1,242 ounces of Gold were received at the General Post Office during 1860, against 1,414 the previous year.

No. 6.—STEAM COMMUNICATION WITH ENGLAND.

The following Return gives the specified and the actual days of Arrival and Despatch of the Mail Contract Steamers during 1860 :—

NAME OF VESSEL.	Specified Date of Arrival.	Actual Date of Arrival.	NAME OF VESSEL.	Specified Date of Departure.	Actual Date of Departure.
Salsette.....	8 January	11 January	Columbian	14 January	14 January
Northam	8 February	9 February	Salsette	13 February	14 February
Emeu	9 March	14 March	Northam	14 March	14 March
Benares	9 April	16 April	Emeu *	14 April	22 April
Malta	9 May	9 May	Benares	14 May	14 May
Ottawa	8 June	16 June	Malta	14 June	14 June
Salsette.....	8 July	8 July	Ottawa	22 July	22 July
Jeddo	14 August	16 August	Salsette	22 August	22 August
Behar	13 Sept.	13 Sept.	Jeddo	22 Sept.	22 Sept.
Salsetto.....	14 October	14 October	Behar	22 October	22 October

Behar	14 Dec.	17 Dec.	Jeddo	22 Dec.	22 Dec.

* The Emeu was detained in consequence of an accident, and injury sustained thereby, on the specified day of despatch.

The above return is extremely favorable as compared with that for 1859. On six occasions the outward mail has been late; but, except in June, a return mail from Sydney, either supplementary or otherwise, was accomplished.

The English mail arrived on the specified day on five occasions during the year, and was two days before its time in the month of November.

Except in April, when the unfortunate collision between the steamers "Emeu" and "Williams" took place, the despatch days of the homeward mails were strictly adhered to.

Five supplementary mails were despatched by Colonial steamers during the year. Two of these were paid for by grants to the Australasian Steam Navigation Company, amounting in the aggregate to £150.

For the other three supplementary mails, the authorized gratuity of a half-penny per letter only was paid.

As a set-off to the expenditure of the supplementary mails, about £80 were received as fees on late letters.

In the month of March, the mails both from the United Kingdom, and the Colony, ceased to touch at the Mauritius; but proceeded from and to Aden and King George's Sound *via* Ceylon.

The mail which left London in June, and which arrived in this Colony in August, was the first that was carried as far as Point de Galle by vessels not subsidized by the Colony; and the August mail from Sydney was the first that was conveyed no further than Ceylon by the subsidized mail steamer.

This new arrangement entailing on the steamers to and from Sydney shorter voyages and less liability to accidents, promises to give to New South Wales a punctuality in mail arrival and despatch that it has never hitherto enjoyed.

MISCELLANEOUS.

In my last Report, I stated the then position of the Post Office Money Order System in Victoria and South Australia; and alluded to the further advantage proposed to be attached to the Money Order Offices in the United Kingdom, by their being made the medium for the deposit and withdrawal of moneys in connection with the Savings Bank.

I further mentioned, that in the beginning of the year 1860, I transmitted an estimate of the probable expenditure that would be incurred by the partial introduction of the Money Order System in New South Wales, from the 1st July to the 31st December last.

In

In order to give the fullest information on the subject, I have placed in the Appendix Appendix G. a copy of my letter.

No steps have since been taken to bring the system into operation; and in one respect the difficulty I foresaw, from the paucity of accommodation in the General Post Office, has considerably augmented.

During the last year, the Telegraph Office has been joined to the Sydney Post Office; and the latter establishment has been still further curtailed, having lost the lobby where I proposed the Money Order Office should be, as well as two store-rooms, the letter carriers' lobby, and part of the room used for the sale of stamps.

Under present circumstances, therefore, I am disposed to recommend, in case the Money Order System should now be introduced, that its operations should commence in some detached building, and be under the control of a superior officer of the Letter Branch, under whom the two clerks should be placed.

As the accounts connected with Money Orders are quite distinct from the usual postal routine, I apprehend that some such plan would not interfere with the efficiency of the financial details, although it would to some extent increase the cost of the establishment.

The only other alteration I would propose making in the plan transmitted by me, would be, that the Money Order Offices might be further extended to Scone, Murrurundi, Tamworth, and Armidale, on the Northern Road; and to Gundagai, Tarcutta, and Albury, on the Southern Road; to all which towns daily postal communication has been extended since the original recommendation was made.

My proposal therefore would now embrace 25 Money Order Offices, including the central one in Sydney.

My attention having been called to the fact, that in the Colony of Victoria provision had been made that at some of the Post Offices therein, postage stamps which were not soiled or defaced could be exchanged for money, I recommended, on the 12th July, 1860, that a similar privilege should be conceded to the public of this Colony, and that it should be made general in its application to all the Post Offices in New South Wales. This proposal has been finally approved of by the Executive Council, and the system is in fact in full operation at the present time.

I believe that the accommodation thus afforded will be highly valued, and that many remittances will be made in postage stamps throughout all parts of the Colony.

The details of the working of the measure will, however, more properly belong to next year's Report.

I have, during 1860, been enabled to make arrangements with the agents for New Zealand, in Sydney, for the monthly mails to and from that Colony being shipped direct, on their arrival in Sydney, from the Pevinsular and Oriental Company's vessels to the branch steamers, and *vice versa*.

Previously, at great inconvenience, and at periods when every officer in the department had his hands full, these mails were brought to the General Post Office, and hence re-shipped to their final destination.

During the year, I proposed that the old Fountain in Macquarie-place, which is now useless and unsightly, should be converted into a receiver for newspapers and book parcels; and the Colonial Architect thought it could be readily so appropriated.

As the suggestion, however, was not sanctioned, I placed on the Estimates of 1861, the necessary sum for four newspaper pillar receivers, and am glad to say that the Legislative Assembly at once voted the amount required for their construction.

When erected, I trust there will be no further complaints as to the present pillar boxes being only available for letters.

The restriction, as already explained, has arisen from the fact that letters are apt to get entangled in the folds of newspapers, when the two are posted together; that the hours of closing the newspaper mails are not the same as those for closing the letter mails; and further, that it was apprehended that the parties who now empty the pillar boxes might not be able to convey, at all times, the bulk of newspapers that might be posted therein.

Separate provision will be made for emptying the newspaper receivers, at hours suitable to the closing of the newspaper mails.

During the past year the discovery of gold at Kiandra called for sudden and extensive additions to the postal lines and Post Offices, to an extent unexampled since the rush to Sofala, in 1851.

It was at one time anticipated, that in the spring of the year, 40,000 persons might be congregated in the neighbourhood of the Kiandra Gold Fields; and it was necessary, during the winter, that steps should be taken to prepare for such an emergency.

A Post Office was opened at Kiandra on the 16th April, and formally established on the 19th May; and on the 13th July, a clerk from the General Post Office was placed in charge, to whom an assistant was given on the 22nd October.

On the 20th July a Post Office was established at Russell's, in the vicinity of the Gold Fields.

Before the end of the year, the postal communication between Sydney and Kiandra was four times a week, viz.,—thrice by way of Cooma, and once by way of Tumut; and an allotment of land having been selected in a central site, a commodious Post Office, with a Telegraph Office attached, was erected thereon, and duly occupied.

As matters afterwards turned out, a great deal of unnecessary expenditure was incurred; but this was inevitable from the uncertainty connected with Gold Fields, and the fluctuating nature of the population thronging thereto.

A great change has taken place during the year in the mode of filling up vacancies in the minor appointments of the department.

The appointment and dismissal of Country Postmasters, letter-carriers, sorters, and mail-guards formerly vested in the Postmaster General; but these are now made entirely by the Government.

The alteration necessarily causes some delay in filling up vacancies, and increases the correspondence of the Office.

During the whole of 1860, the morning delivery at the General Post Office has been impeded and delayed, owing to the Western mails being invariably late, from the circumstance that the railway train which conveyed them did not arrive at the terminus till 8.35 a.m., and sometimes later.

I am happy to say that the Railway Department has consented to an arrangement under which, from the beginning of the present year, these mails are brought down by an early train, and the punctual delivery of letters in Sydney, at 9 a.m., thus insured.

Appendix H.

The Postal Inspector's Annual Report will be found in the Appendix.

I have, &c.,

W. H. CHRISTIE,
Postmaster General.

APPENDIX.

APPENDIX.

A.

RETURN of Postal Lines established during 1860.

ROADS.	POSTAL LINES.	FREQUENCY OF COMMUNICATION.	MODE OF CONVEYANCE.	MILES.
Western Roads...	Drungalee and Canonbah	Once a week	On horseback (re-established)...	24
	Rockley and Swatchfield	Once a week	On horseback	25
Southern Roads .	Cooma and Buckley's Crossing Place	Once a week	On horseback	30
	Binalong and Murrumburrah	Twice a week	On horseback	20
	Queanbeyan and Lanyon.....	Twice a week	{ One or more horse vehicles, or on horseback	16
	Moorna and Mount Murchison	Once a fortnight	On horseback	300
	Cooma, Russell's, and Kiandra	Once a week	{ One or more horse vehicles, or on horseback	50
	Yass and Gundaroo	Twice a week	On horseback	30
	Tumut and Kiandra	Once a week	On horseback	65
	Adelong and Ten Mile Creek	Once a week	On horseback	42
Northern Roads .	With branch to Welaregang	Once a week	On horseback	30
	Cundletown and Jones Island	Twice a week	On horseback and by boat.....	10
	Coolah and Denison Town	Once a week	On horseback	20
	Walgett and Fort Bourke	Once a fortnight	On horseback	250
	Newcastle Post Office and Pillar Box and Branch Offices	Twice a day	On horseback	4
	Kempsey and Frederickton	Once a week	On horseback	10
	Lawrence, Tabulam, and Tooloom	Once a week	On horseback	95
	Gosford and Sydney	Once a week	On horseback	48
TOTAL				1,069

B.

RETURN of Postal Lines transferred to Queensland during 1860.

POSTAL LINE.	FREQUENCY OF COMMUNICATION.	MILES.
Queensland Frontier and Drayton	Twice a week	115
Do. and Callandoon (from Tamworth)	Once a week	18
Do. and Callandoon (from Walgett)	Once a week	7
Warwick and Ipswich	Once a week	65
Queensland Frontier to Brisbane (from Casino).. .. .	Once a week	65
Drayton and Ipswich	Twice a week	60
Ipswich and Brisbane	Three times a week	28
Drayton and Callandoon	Once a week	150
Drayton and Dalby	Once a week	60
Dalby and Condamine	Once a week	76
Condamine and Surat	Once a week	84
Condamine and Taroona	Once a week	80
Ipswich and Burnett Inn	Once a week	140
Gayndah and Maryborough	Once a week	70
Dalby and Gayndah	Once a week	115
Gladstone and Maryborough	Once a fortnight	180
Gayndah and Taroona	Once a week	125
Gladstone and Rockhampton	Once a fortnight	70
Goode's Inn and Gayndah	Once a week	50
TOTAL		1,558

C.

RETURN of Postal Lines discontinued during 1860.

ROADS.	POSTAL LINES.	FREQUENCY OF COMMUNICATION.	MILES.
Northern Roads ..	Gosford and Mangrove Creek	Once a week	12
	Tinonee and Cundletown	Twice a week	4
Western Road ..	Parramatta and Windsor	Second daily mail	19
TOTAL			35

D.

RETURN of increased Postal Accommodation afforded during 1860 to existing Postal Lines.

ROADS.	POSTAL LINES.	ADDITIONAL FREQUENCY OF COMMUNICATION.	MODE OF CONVEYANCE.	MILES.
Western Roads...	Windsor and St. Alban's.....	Once a week	On horseback	25
	Sackville Reach and Lower Portland	Twice a week	On horseback	6
	Hartley and Mudgee.....	Twice a week	By two-horse vehicle	84
Southern Roads...	Curcor and Cowra	Once a week	On horseback	27
	Bathurst and Rockley	Once a week	On horseback	50
	Dapto and Shellharbour	Once a week	On horseback	15
	Dapto and Shoalhaven	Thrice a week	On horseback	42
	Shoalhaven and Green Hills	Thrice a week	On horseback	4
	Shoalhaven and Ulladulla	Thrice a week	On horseback	43
	Ulladulla and Bateman's Bay	Once a week	On horseback	40

G.

General Post Office,
Sydney, 29 February, 1860.

Sir,

Referring to the general wish expressed by the public, that a Money Order System in connection with the Post Office Department shall be established, I have the honor to state, for the information of the Honorable the Colonial Treasurer, that I have had some communication on the subject with the Postmaster General of the Colonies of Victoria and South Australia, and have received printed copies of the forms necessary to carry out such a system.

2. I am satisfied it will not be possible, unless an expenditure be sanctioned much more than commensurate with the object to be attained, to establish a general Money Order System, as in Great Britain, in connection with every Post Office in the Colony, seeing that the usual salary of a Country Postmaster is only £12 per annum, and that I have the greatest difficulty in procuring eligible parties to conduct properly the ordinary postal business.

3. In the Colony of Victoria, the Post Offices where Money Orders can be obtained are all placed under the charge of Government Officers, who have a fixed salary, and no other business to attend to; and there cannot be a doubt that such a system adopted here would impart greater efficiency, and ensure accuracy of accounts.

4. Believing, however, that it would defeat the establishment of a Money Order System were I at the present time to advocate a sweeping change of this nature, I shall content myself with remarking, in order to prevent future misconception, that it is absolutely necessary for the efficiency of the postal service of New South Wales, and for the complete carrying out of the Money Order System, that Post Office buildings should be erected in all the larger towns, and placed, not under storekeepers or residents of such towns, but under Government Officers altogether amenable to this department; and I may add, as a further inducement to the Government to make this change, that it will probably be found that Telegraph Stations may be economically united with such Country Post Offices.

5. I beg to propose that the Money Order System should be introduced from the 1st July next; and that, in addition to the Central Office in Sydney, Money Orders should be procurable at the following Post Offices, viz. :—

Western Road—Parramatta, Windsor, Penrith, Hartley, Mudgee, and Bathurst.

Southern Road—Liverpool, Campbelltown, Camden, Wollongong, Berrima, Goulburn, and Yass.

Northern Road—Newcastle, East Maitland, West Maitland, and Singleton.

Making a total, inclusive of Sydney, of 18 Money Order Offices. To the whole of the Country Post Offices named there is a daily mail, which condition, in a matter of a Money Order account, is, I apprehend, a necessary desideratum.

6. I should, in the first instance, recommend that the maximum order be £5, as in Great Britain, and that the commission chargeable should be—3d. for sums not exceeding £2, and 6d. on sums ranking from £2 to £5. Until abuse of such privilege occurred, I would not be disposed to restrict the number of orders to be procured by any one person in the course of the day.

7. I enclose an Estimate of the expenses connected with the establishment for the last six months of the year, amounting to £2,782, and beg to explain the various items therein.

8. The sum of £2,000 is estimated as the amount that would have to be advanced, in the first instance, to the General Post Office, and to the various Country Postmasters, which amount would of course be gradually returnable.

9. The only available space in the General Post Office for an apartment to be devoted to the purpose would be in the Lobby; and I think the sum of £50 would be sufficient to enclose a small room there, which might answer the purpose; and I have included, under the head of Buildings and Fixtures, an amount of £5 for each Post Office, to enable the Postmasters to procure cash-boxes, and make any other necessary arrangements for the security of the sums of money in their hands.

10. Under the head of Salaries I have estimated for a permanent addition to the General Post Office of two clerks, one of whom would be employed in the issue and payment of orders in Sydney, at £250 per annum; and another, attached to the Account Branch, at £200 per annum. I would propose an average addition to the salaries of the Country Postmasters, where Money Orders are negotiated, of £35 per annum, each; the respective amounts to be paid to each to depend on the amount of business transacted at the various offices.

REPORT FROM THE POSTMASTER GENERAL—1860.

17

11. I propose that an intelligent clerk from this department should be detached for three months, to initiate and organize the system. His travelling expenses I estimate at £100, and the remuneration to a substitute during his absence, at £25.

12. The only other item of expense that I have to allude to is for stationery, forms, &c., which I have not included in my estimate, as they would be procured from the Colonial Storekeeper and the Government Printer.

13. It would be necessary that the Postmasters employed in the Money Order department, as well as the clerk so employed in the General Post Office, should execute, in conjunction with their sureties, bonds for the due performance of their duties, in a larger amount than at present; and, with the approval of the Honorable the Colonial Treasurer, I would suggest that such bonds should be for the amount of £200 for themselves, and £100 for each bondsman.

I have, &c.,

W. H. CHRISTIE,
Postmaster General.The Under Secretary
To the Treasury.

Postmaster General.

* These items would not, of course, appear in any future Estimate, unless the system were extended considerably.

H.

General Post Office,
Sydney, 3 July, 1861.

Sir,

In compliance with your instructions that I should furnish you, as an Appendix to your Annual Report for 1860, with a short statement of my proceedings during that year, I have the honor to report as follows:—

2. On the 4th January, 1860, I left for the purpose of visiting a portion of Southern Coast Line. I proceeded by steamer to Kiama, and from thence on horseback, to Gerringong, Shoalhaven, and Green Hills; returned to Kiama, and then proceeded to Jamberoo, Dapto, Kembla, and Wollongong. From Wollongong I travelled by coach to Woonoona, Appin, and Campbelltown, and from the latter by railway to Sydney, where I arrived on the 17th of the same month. This tour occupied fourteen days, during which period I travelled upwards of 240 miles, visited 11 Post Offices, and inspected the performance of 6 Mail Contracts.

3. On the 28th January I left Sydney for Newcastle, on a tour through the Northern and Western Districts; proceeded by railway from Newcastle to Maitland, and from thence by coach to Lochinvar and Singleton, whence I branched off to Jerry's Plains; from thence to Merton and Muswellbrook; from the latter I travelled, *via* Merton, to Merriwa and Cassilis; from Cassilis I crossed over to Mudgee; thence by Avisford, Louisa Creek, Tambaroora, Sofala, and Peel, to Bathurst. After visiting O'Connell, I started from Bathurst for Guyong, Orange, Ironbark, Black Rock, Wellington, and Dubbo, and returned by the same route to Orange; I then proceeded to Molong, returned again to Orange, and then went back to Bathurst. I left Bathurst again for Blayney and Carcoar, and on my return proceeded along the Main Western Road, visiting Kelso, Kirkconnell, Frying Pan, Meadow Flat, Rydal, Bowenfells, and Hartley. I then diverged to again visit Mudgee, and see the office at Keene's Swamp; I returned to Hartley, and visiting the offices at Little Hartley, Emu, and Penrith, returned to Sydney on the 28th April. I was absent on this tour 92 days, travelled upwards of 1,204 miles, inspected 37 Post Offices, and the way in which 15 Mail Contracts were carried out.

4. My next tour was through the Hawkesbury District. I left Sydney for Gosford, by steamer, on the 12th June, and after visiting Kincumba, went over to Mangrove Creek, thence to St. Alban's, and then to Wiseman's Ferry, Pitt Town, and Windsor. I then visited Wilberforce, Sackville Reach, and Lower Portland; and returning to Windsor, proceeded to Richmond, North Richmond, and Wheeny Creek. On return to Richmond, I went *via* Blacktown to Parramatta. From Parramatta I proceeded to the Prospect, Eastern Creek, and St. Mary's Post Offices; after inspecting which I returned to Sydney, and arrived there on the 23rd of the same month. I was away on this tour of inspection 12 days, inspected 16 Offices, the performance of 7 Mail Contracts, and travelled about 250 miles.

5. My next and last tour during 1860 was commenced on the 17th September, when I again visited the Southern Coast Line, though not the same portion of it. I proceeded by steamer to Bateman's Bay, and on horseback to Mullenderree and Moruya; and after returning to Bateman's Bay, went to Nelligen, and by the Clyde Road to Braidwood. From Braidwood I went to Major's Creek, returned to Braidwood, and retracing my steps *via* Nelligen and Bateman's Bay, reached Sydney on the 3rd October. I was absent on this tour 17 days, travelled more than 540 miles, inspected 6 Post Offices, and ascertained the manner in which 4 Mail Contracts were being performed.

6. This last tour ended my travels for the year 1860. I was engaged during the remainder of it in preparing the Time Tables for the present year.

It will thus be seen that during the past year I was absent from Sydney 135 days, have travelled upwards of 2,234 miles, visited 70 Post Offices, and inspected the performance of 31 Mail Contracts.

8. It will doubtless be expected that I should state what are the general results of my inspection during the past year, both as regards Postmasters and Mail Contractors.

9. I find a marked improvement as regards the manner in which the Post Offices were conducted, and a very general readiness on the part of the Postmasters to receive and attend to my instructions; but I still have to record the somewhat prevalent existence of a few irregularities, amongst which may be cited the omission to take the declaration by the persons who assist in the offices, the bad condition of the date stamps, the neglect to take, day by day, impressions thereof in the book furnished for that purpose; and last, not least, the retention beyond the time specified by the regulations, of unclaimed letters. The omission to take the declaration arises, in a great measure, from the difficulty of obtaining access to a Magistrate, and to a certain extent this evil is beyond any remedy that I can afford; but I am doing my best to remove the other irregularities that I have noted.

10. The Mail Contracts have been better carried out during the past year in many respects. The contractors keep better time, they have better horses and gear, and the introduction of American coaches on the main roads has been a decided success. I have, however, to observe the same omission on the part of the mail-men to take the declaration that I have stated is the case with Postmasters' assistants. It is only just to the contractors and their men to say, I have generally found them disposed to attend to my wishes.

11. I cannot conclude this short Report without observing that many of the irregularities which occurred during the past year were more or less the result of changes which were made in the Time Tables, and that if regularity is to be obtained, a rule will have to be made that no Time Table shall be changed during the year except for very strong reasons.

The Postmaster General.

I have, &c.,

T. W. LEVINGE.

Sydney: Thomas Richards, Government Printer.—1861.

[Price, 5d.]

1861.

Legislative Assembly.

NEW SOUTH WALES.

MRS. MARY JONES.

(MAIL CONTRACT OF J. H. JONES.)

Ordered by the Legislative Assembly to be Printed, 19 November, 1861.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 27 September, 1861, That there be laid upon the Table of this House,—

“ Copies of all Correspondence having reference to the Contract
“ of J. H. Jones for carrying the Mails between Sydney and
“ Melbourne, during the year 1851.”

(*Mr. Stewart.*)

MRS. MARY JONES.

No. 1.

POSTMASTER GENERAL to COLONIAL SECRETARY.

*General Post Office,
Sydney, 4 April, 1851.*

SIR,

I do myself the honor to represent that Mr. J. H. Jones, the contractor for the conveyance of mails, has incurred fines amounting to £27 10s., for not arriving at Goulburn at the time specified in his contract.

2 I should observe, that to meet the desire of the inhabitants of Goulburn, the hour of arrival at that place was altered for the present year from 8 to 6 P.M., but at the commencement of the contract the hours specified were not observed, and Mr. Jones has accordingly subjected himself to the fines mentioned.

3. As however the mails have latterly been conveyed with great regularity, and as I am aware Mr. Jones has had much to contend with, owing to the drought prevailing on the Port Phillip road, I beg leave to submit for the consideration of His Excellency the Governor, that the fines alluded to may be remitted.

I have, &c.,
J. RAYMOND.

No. 2.

MR. JONES to POSTMASTER GENERAL.

Bargo, 10 July, 1851.

SIR,

Some time since I received an intimation from the Colonial Secretary, that the memorial which I presented last month to His Excellency the Governor had been referred to you for your report and decision; not having heard any more on the subject, I beg again to trouble you, and state that the assistance which I then sought is becoming daily more necessary. The difficulties with which I have to contend are rather augmented than decreased; and I much fear I shall soon be compelled to resign the contract I have taken.

I am now on the point of leaving home, to acquaint myself with the actual position of affairs up the country; and on my return, will do myself the honor of waiting on you personally in Sydney. In the mean time, I shall feel obliged by your favoring me with a reply to this; stating in what form and to what extent the Government is inclined to render me the aid which is so absolutely necessary.

I am, &c.,
J. H. JONES.

No. 3.

COLONIAL SECRETARY to POSTMASTER GENERAL.

*Colonial Secretary's Office,
Sydney, 12 July, 1851.*

SIR,

I have the honor to acknowledge the receipt of your letter of the 1st instant, No. 65, reporting on the application made by Mr. J. H. Jones, who holds the contracts for the conveyance of the mails between Sydney and Melbourne, on the grounds of the present circumstances of the Colony, for some further assistance from the Government to enable him to carry out his contracts.

2. Under your report, it appears to the Governor General that it would be just, so far to relieve Mr. Jones, as far as to make him a fair allowance for his present losses on his contracts from Yass to Albury in this Colony, and from Albury to Melbourne in Victoria, in consideration of the unforeseen scarcity and consequent high price of forage.

3. Mr. Jones has accordingly been called on to take the necessary steps to prove, through you, the amount of the losses sustained on the first six months of this contract.

I have, &c.,
(For the Colonial Secretary,)
W. ELYARD, JUNR.

No. 4.

No. 4.

COLONIAL SECRETARY to MR. JONES.

*Colonial Secretary's Office,
Sydney, 12 July, 1851.*

SIR,

Referring to my letter of the 23rd ultimo, I have to inform you that the Governor General has had under consideration, with the report thereon of the Postmaster General, your application, made to His Excellency on the grounds of the present circumstances of the Colony and the other causes therein stated, for some further assistance from the Government, to enable you to carry out your contracts for the conveyance of the mails between Sydney and Melbourne.

2. Under the Postmaster General's report, it appears to His Excellency that it will be just, so far to relieve you, as to make you a fair allowance for your proved losses on your contracts from Yass to Albury in this Colony, and from Albury to Melbourne in Victoria, in consideration of the unforeseen scarcity and consequent high price of forage.

3. You will now therefore take the necessary steps to prove, through the Postmaster General, the amount of your losses on the contract above-mentioned for the first six months.

I am, &c.,

(For the Colonial Secretary,)

W. ELYARD, JUNR.

No. 5.

COLONIAL SECRETARY to POSTMASTER GENERAL.

*Colonial Secretary's Office,
Sydney, 13 July, 1851.*

SIR,

I have the honor to acknowledge the receipt of your letter of the 1st instant, No. 65, reporting on the application made by Mr. J. H. Jones, who holds the contracts for the conveyance of the mails between Sydney and Melbourne, on the grounds of the present circumstances of the Colony, for some further assistance from the Government to enable him to carry out his contracts.

2. Under your report, it appears to the Governor General that it would be just, so far to relieve Mr. Jones, as to make him a fair allowance for his present losses on his contracts from Yass to Albury in this Colony, and from Albury to Melbourne in Victoria, in consideration of the unforeseen scarcity and consequent high price of forage.

3. Mr. Jones has accordingly been called on to take the necessary steps to prove, through you, the amount of the losses sustained on the first six months of his contract.

I have, &c.,

W. ELYARD, JUNR.

No. 6.

POSTMASTER GENERAL to MR. JONES.

*General Post Office,
15 July, 1851.*

SIR,

In acknowledging the receipt of your letter of the 10th instant, referring to your memorial for some relief in the fulfilment of your contract for conveyance of the mails between Sydney and Melbourne, I beg to acquaint you that your memorial was reported on by me on the 1st instant, and that I have now received a letter from the Colonial Secretary, informing me that the decision of the Governor General thereon had been communicated to you.

I am, &c.,

F. L. S. MEREWETHER.

No. 7.

COLONIAL SECRETARY, NEW SOUTH WALES, to COLONIAL SECRETARY, VICTORIA.

*New South Wales.**Colonial Secretary's Office,
Sydney, 16 July, 1851.*

SIR,

I have the honor to acquaint you, that the Governor General has had under consideration an application made by Mr. J. H. Jones, who holds the several contracts for the conveyance of the mails between Sydney and Melbourne, on the grounds of the present circumstances of the Colony, for some further assistance from the Government to enable him to carry out his contract.

1 July, 1851.

2. I transmit herewith, for the information of His Excellency the Lieutenant Governor, the copy of a report on this application of the Postmaster General; and I am desired to state, that it appears to the Governor General that it would only be just, so far to relieve Mr. Jones, as to make him a fair allowance for his proved losses on his contract from Yass to Albury in this Colony, and from Albury to Melbourne in Victoria, in consideration of the unforeseen scarcity and consequent high price of forage.

3. Mr. Jones has accordingly been called upon to prove his losses on the first six months of his contract above referred to, and on this being done I shall have the honor of addressing a further communication to you.

I have, &c.,

E. DEAS THOMSON.

No. 8.

POSTMASTER GENERAL to MR. JONES.

*General Post Office,
Sydney, 26 August, 1851.*

SIR,

I have to acknowledge the receipt of your letter of the 19th instant, stating the loss you have sustained in the conveyance of the mails, in consequence of the difference in the price of forage since you sent in your tender.

This statement has reference only to the contract between Albury and Melbourne; I presume, therefore, that you do not mean to shew that you have yourself sustained loss for the conveyance between Yass and Melbourne.

As respects the prices at which, in this statement, you represent you would have obtained hay and corn at the time when your contract was taken, and those which in your former statement you inserted you had paid, I will recommend that a reference should be made to the Government of Victoria, from whose funds the compensation, if allowed, will be defrayed.

I must however add, that without further proof I should not be prepared myself to admit the correctness of your estimate.

I have, &c.,

F. L. S. MEREWETHER.

No. 9.

POSTMASTER GENERAL to POSTMASTER, GUNDAGAI.

*General Post Office,
8 September, 1851.*

SIR,

Mr. J. H. Jones having applied for some relief from the Government, for losses which he states he has sustained by the contract for the conveyance of the mails between Yass and Albury, owing to the unforeseen scarcity and consequent high price of forage, I have to request that you will inform me whether, at the end of 1850, when the contract was taken, Mr. Jones could have obtained at the then current prices, or could reasonably have expected to have obtained forage at the rates stated by him, viz., £2 per ton for hay, and three shillings a bushel for corn.

I have, &c.,

F. L. S. MEREWETHER.

N.B.—Similar letters were addressed to the Postmasters at Yass, Tarcutta, and Albury.

No. 10.

COLONIAL SECRETARY to AUDITOR GENERAL.

*Colonial Secretary's Office,
Sydney, 7 January, 1853.*

SIR,

With reference to my letter of the 15th of September, 1851, addressed to your predecessor, on the subject of Mr. Jones' claim for losses sustained by him upon his contract for the conveyance of mails, I am directed by His Excellency the Governor General to request that you will be good enough to report thereon.

I have, &c.,

W. ELYARD, JUNR.

No. 11.

No. 11.

MR. JONES to AUDITOR GENERAL.

Bargo, 9 February, 1853.

SIR,

I most respectfully beg the favor of your attention to "documents and receipts" laying in your office, and forwarded there in 1851, by order of the Governor General, to be examined, and if necessary, laid before the Executive, in support of a petition to His Excellency from me, "praying for compensation" for losses incurred while carrying out my contract from Port to Port in 1851.

With advice from the Honorable the Colonial Secretary, I wrote to the present Postmaster General, on the 15th last December, forwarding several letters relative to the above; in answer I am informed that the same had been sent to your department, with instructions for me to apply to you forthwith.

I now have the honor to solicit the favor of your advice, so as to enable me, in petitioning the Council during the early part of its ensuing sittings, if necessary, for such compensation as it may deem fit.

Your early attention will oblige,—

Sir, &c.,

J. H. JONES.

POSTMASTER GENERAL to MR. JONES.

*General Post Office,
15 July, 1851.*

SIR,

In acknowledging the receipt of your letter of the 10th instant, referring to your memorial for some relief in the fulfilment of your contract for conveyance of the mails between Sydney and Melbourne,—

I beg to acquaint you that your memorial was reported on by me on the 1st instant, and that I have now received a letter from the Colonial Secretary, informing me that the decision of the Governor General thereon had been communicated to you.

I am, &c.,

F. L. S. MEREWETHER,
Postmaster General.

No. 2.

MR. JONES to POSTMASTER GENERAL.

Bargo, 28 July, 1851.

SIR,

In conformity with the directions in a letter from the Colonial Secretary, bearing date July 12th, I take the liberty of forwarding the enclosed Schedules marked A and B, containing a statement of the receipts and expenditure during the last six months, in connection with the contract which I now hold for the delivery of mails between Yass and Albury, and Albury and Melbourne. In reference to these Schedules, I would beg to make the following remarks:—

1. I have deemed it right to insert, in each account, the original outlay which I have incurred. It is of course true, that for this outlay I have in some respect an equivalent, in the shape of coaches and horses, &c., still at work; but I would also observe that these depreciate in value every month, and that the amount I have placed for wear and tear is for the most part expended in actual repairs of vehicles and shoeing of horses. Allowing, however, that the property is in as good a condition as when first bought, there will still appear in Schedule A a loss of £2,098, and in Schedule B, of £2,394.
2. During the severe season of drought in the first quarter of the year I also lost many valuable horses for want of water, &c., and they had to be replaced at most extravagant prices. Now, I hear, I am incurring similar losses, not from the want of water, but its abundance—some horses having been drowned in the late floods.
3. The slight income derived from passengers' fares has, during the last month or two, been altogether lost; the state of the country rendering it necessary to convey the mail on horseback, and in some places by canoes.
4. The accompanying Schedules are derived from the returns which I have received from my agents, &c., on the road to which they have reference. Had I been able to make a personal inspection, they might perhaps have been more accurate, and would have exhibited more heavy losses. Many items of expenditure I am aware I have stated below the actual amount; all is therefore within the truth, and every post brings the news of fresh difficulties and more heavy expenditure. The state of the country is indeed matter of general notoriety, by the continued statements of the public press.

I shall feel obliged by your laying the accompanying Schedules, with these remarks, before His Excellency the Governor General, at your earliest convenience.

I have, &c.,

J. H. JONES.

No. 3.

POSTMASTER GENERAL to COLONIAL SECRETARY.

General Post Office,
Sydney, 2 August, 1851.

SIR,

I do myself the honor to forward a letter which has been addressed to me by Mr. J. H. Jones, in pursuance of your letter to him dated 12th ultimo, forwarding statements of the losses he alleges he has sustained by his contract for the conveyance of mails between Yass and Albury and Albury and Melbourne; and in accordance with Mr. Jones' request, I submit them for the purpose of being laid before His Excellency the Governor General.

2. It appears to me, however, that the only items of expenditure in these statements which are entitled to consideration, are those under the head "Forage," amounting to the under-mentioned sums:—

Yass to Albury	£2,140
Albury to Melbourne	£2,425

3. The Auditor General would, I presume, consider it necessary that these statements should be supported by sufficient vouchers. If so, Mr. Jones might be called upon to forward such accounts as may be required, and to shew what, according to the then prices, the same forage would have cost when he sent in his tenders. The difference between that estimated cost, and the amount actually expended would, I conceive, be the sum which, under His Excellency's decision, Mr. Jones should receive on this account.

I have, &c.,

F. L. S. MEREWETHER,
Postmaster General.

No. 4.

POSTMASTER GENERAL to MR. JONES.

General Post Office,
2 August, 1851.

SIR,

I beg to acknowledge the receipt of your letter of the 28th ultimo, enclosing statements of the losses which you allege you have sustained by your contract for conveyance of the mails between Yass and Albury and Albury and Melbourne, and to inform you that, as requested by you, I have submitted the same for the consideration of His Excellency the Governor General.

I am, &c.,

No. 5.

COLONIAL SECRETARY to POSTMASTER GENERAL.

Colonial Secretary's Office,
Sydney, 12 August, 1851.

SIR,

I have received and submitted to the Governor General your letter, No. 70, of the 2nd August, together with the statements of Mr. J. H. Jones, mail contractor, therein enclosed, shewing the amount of his losses on his contracts for the conveyance of the Mails between Yass and Albury, in this Colony, and between Albury and Melbourne, in Victoria.

2. His Excellency quite concurs with you in opinion, that the only items in Mr. Jones' accounts for which he is entitled to the consideration of the Government are those under the head of forage. Mr. Jones should therefore be required to furnish the necessary accounts and vouchers, to shew the loss he has sustained in this article, as suggested by you.

I have, &c.,

(For the Colonial Secretary,)

W. ELYARD, JUNR.

Inform Mr. Jones of this decision, and propose that he should submit a statement shewing the estimated amount which he would have had to pay for the articles specified in his former statement, under the head forage, if the scarcity and consequent increase in price, on account of which his claim to some compensation has been admitted, had not occurred.

Inform him further, that I shall communicate with the Auditor General, as to the vouchers which will be required in support of his statement of actual expenditure under the head of forage.

F. L. S. M.

No. 6.

POSTMASTER GENERAL to MR. JONES.

General Post Office,
15 August, 1851.

SIR,

Referring to my letter of the 2nd instant, apprising you that I had submitted, for the consideration of the Governor General, your statements of the losses you have sustained by your mail contracts between Yass and Melbourne,—I beg now to inform you, that His Excellency considers that the only items in your accounts for which you are entitled to the consideration of the Government are those under the head of forage.

I have, therefore, to propose that you should submit a statement shewing the estimated amount which you would have had to pay for the articles specified in your former statement under the head of forage, if the scarcity and consequent increase of price, on account of which your claim to compensation has been admitted, had not occurred.

I shall communicate with the Auditor General, as to the vouchers which will be required in support of your statement of the actual expenditure under the head of forage.

I am, &c.,

FRANCIS L. S. MEREWETHER.

No. 7.

MR. JONES to POSTMASTER GENERAL.

Sydney, 19 August, 1851.

SIR,

I beg to acknowledge your letter, dated the 15th instant, informing me that His Excellency the Governor General considers that the only items in my accounts for which I am entitled to the consideration of the Government are those under the head of forage, and you propose that I should submit a statement, shewing the estimated amount which I should have had to pay for the articles specified in my former statement, under the head of forage, if the scarcity and consequent increase of price, on account of which my claim to compensation has been admitted, had not occurred.

In answer to which, the following is the statement required :—

FORAGE.		£	s.	d.
80 tons of hay, at £2 per ton		160	0	0
500 bushels of maize, at 3s. per bushel		75	0	0
Carriage of forage—(maize and hay) to Melbourne, per steamer "Shamrock"				Nil.
Carriage of forage—(maize and hay) into the interior ...				Nil.

I beg respectfully to observe, that the two items charged in my former statement, for carriage, would not have occurred, if there had been hay and corn to be bought, either at Melbourne or in the interior, where I was obliged to send it to.

In conclusion, I respectfully acknowledge the attention which my case has met with from His Excellency the Governor General, as well as yourself. I yet hope that His Excellency will not strike out the claim under the head of "wages"; for I can shew that, since the period of the Gold discovery, I have had to pay an increase of 50 per cent., and at the present moment, can scarcely keep my men at any wages; and through the exorbitant rate at which I am at present obliged to pay my men, and, in fact, the unforeseen alteration in price of nearly every article I require, that unless I get some immediate relief from the Government it will be utterly impossible for me to fulfil the terms of my contract.

Trusting you will give this your early consideration,

I am, &c.,

J. H. JONES.

This letter has reference only to the contract for the conveyance of the mails between Albury and Melbourne. I presume, therefore, that Mr. Jones does not mean to shew that he has himself sustained loss on the contract for the conveyance between Yass and Albury.

As respects the prices which by this statement he represents that he expected to pay, and those which in his former statement he asserted that he had paid, I will recommend that a reference should be made to the Government of Victoria, out of whose funds the compensation, if allowed, will be paid. Without proof, I should not be prepared myself to admit the correctness of Mr. Jones' estimate.

25 August.

No. 8.

POSTMASTER GENERAL to MR. JONES.

*General Post Office,
Sydney, 25 August, 1851.*

SIR,

I have to acknowledge the receipt of your letter of the 19th instant, stating the loss you have sustained in the conveyance of the mails, in consequence of the differences in the price of forage since you sent in your tender.

This statement has reference only to the contract between Albury and Melbourne; I presume, therefore, that you do not mean to shew that you have yourself sustained loss on the contract for the conveyance between Yass and Melbourne.

As respects the prices at which, in this statement, you represent that you would have obtained hay and corn at the time when your contract was taken, and those which in your former statement you inserted that you had paid, I will recommend that a reference should be made to the Government of Victoria, on whose funds the compensation, if allowed, will be defrayed.

I must however add, that without further proof I should not be prepared myself to admit the correctness of your estimate.

I am, &c.,

F. L. S. MEREWETHER,

Postmaster General.

No. 9.

MR. JONES to POSTMASTER GENERAL.

Sydney, 26 August, 1851.

SIR,

I beg to acknowledge your letter, dated yesterday, acknowledging and in answer to my letter of the 19th instant, and in which you mention, "that the statement therein contained has reference only to the contract between Albury and Melbourne, and that you therefore presume I do not mean to shew that I have myself sustained loss on the contract for the conveyance between Yass and Albury."

I am much obliged to you for pointing out this omission, which was caused by my clerk in copying, as I had also in my draft letter to you marked and written out the prices which I should also have had to pay for forage, &c., between Yass and Albury, if the scarcity and consequent dearness had not occurred. The statement should have been (and was in my draft) written thus:—

	£	s.	d.
From Albury to Melbourne:—			
80 tons of hay, at £2 per ton	160	0	0
500 bushels of maize, at 3s.	75	0	0
Carriage of corn, &c., per "Shamrock"			Nil.
Carriage of corn, &c., into the interior			Nil.
From Yass to Albury:—			
70 tons of hay, at £2 per ton	140	0	0
600 bushels of maize, at 3s. per bushel	90	0	0
Carriage into the interior			Nil.

With regard to your recommendation, that the Government of Victoria should be referred to, to ascertain whether the statement of what I might have bought forage at, and what I have had to pay for it, is correct or not, I can have no objection thereto; but I must nevertheless respectfully urge, that the allowance which the Governor is kindly disposed to make, and by him considered just, as contained in the Colonial Secretary's letter of the 12th of July, 1851, will lose much of its usefulness and value to me by delay.

And, in conclusion, I have to add, that I shall be ready to verify by my own oath, and, if necessary, by the oath of my Superintendent at Port Phillip, the correctness of the accounts I have sent in; I might get statements made to the same effect by gentlemen squatters; but by obliging me in the sale to me of hay, they have, I am informed, infringed one of the squatting regulations.

I am, &c.,

J. H. JONES.

Mr. Jones' statement is, that for the forage used by him between Yass and Albury during the first six months of the present year he paid £2,140, and that according to the prices current when he took the contract, he expected to pay for the same quantity of forage the sum of £230.

I would recommend that Mr. Jones should be required to satisfy the Auditor General, by the production of sufficient vouchers, that the quantity of forage mentioned in his statement was consumed, and that the sum stated was paid for it.

I will write to the Postmasters at Yass, Gundagai, Tarcutta, and Albury, to ascertain whether at the end of the year 1850, when the contract was taken, Mr. Jones could have obtained at the then current prices, or could reasonably have expected to obtain forage at the rates stated in this letter, viz. :— £2 per ton for hay and 3s. per bushel for corn.

Recommend that the Lieutenant Governor of Victoria should be requested to take a similar course in respect to Mr. Jones' statements of his actual and anticipated expenditure for forage between Albury and Melbourne.

MRS. MARY JONES.

I am, &c.,
ROBT. DAVISON,
Postmaster.

To be put up with other papers.—16.

No. 11.

POSTMASTER, YASS, to POSTMASTER GENERAL.

Post Office, Yass,
12 September, 1851.

SIR,

With reference to your letter of the 8th instant, I have to inform you that the price of forage was extremely low in this district for the greater part of last year, and up to the end of September, I consider that Mr Jones could reasonably have expected to be able to purchase hay here at £2 per ton, and corn at 3s. per bushel, had there been a continuance of such favorable seasons as we had previously had.

The severe drought with which we were afterwards visited must have added very considerably to Mr. Jones' expense. Hay was sold here at £4 to £5 per ton, and corn at 4s. to 5s. per bushel. But in this immediate locality the difference was not so great as at other places beyond this, from the difficulty of getting it conveyed to the towns of Gundagai and Albury. To Gundagai the cost of conveyance was equivalent to fully seventy-five per cent., and at one time it was impossible to get forage conveyed to Albury at any price that could reasonably be afforded.

There cannot be a doubt but that Mr. Jones, for a time, had very great and unforeseen difficulties to contend with—as the drought of this year far exceeded anything we have experienced since 1839. It was principally, however, beyond Gundagai that his heaviest expense must have been incurred. So far as relates to that portion of the road between Yass and Gundagai, I have reason to think that the contract has more than paid expenses.

I am, &c.,
THOS. LAIDLAW.

Acknowledge receipt and thank Mr. Laidlaw for the information which he has afforded.
To be put up with the other papers respecting Mr. Jones' claim to compensation.—16.

No. 12.

POSTMASTER, TARCUTTA, to POSTMASTER GENERAL.

Tarcutta, 13 September, 1851.

SIR,

In reply to your letter of 8th instant, requesting to be informed whether, at the end of 1850, when the mail contract was taken, Mr. Jones could have obtained, at the then current price, or could reasonably have expected to obtain forage at the rate of £2 per ton for hay, and 3s. per bushel for corn,—I do myself the honor to inform you, that at the period mentioned Mr. Jones might have obtained forage at the then current rate; but I consider it would have been unreasonable to expect it at the prices above named, for during the most *plenteous seasons* which I have witnessed here during the last fourteen years, I have not known or heard of forage being obtained at such low rates.

I have, &c.,
THOMAS H. MATE,
Postmaster.

No. 13.

POSTMASTER, ALBURY, to POSTMASTER GENERAL.

Post Office, Albury,
14 September, 1851.

SIR,

I have to acknowledge the receipt of your letter dated 8th September instant, requesting me to inform you whether, at the end of 1850, Mr. J. W. Jones, the mail contractor, could reasonably have expected to obtain forage at the rates stated by him, viz. :—£2 per ton for hay, and 3s. per bushel for corn.

In

In reply, I do myself the honor to state, that since January, 1847 (the time I arrived in this district), I have never known either hay or corn offered for such prices, consequently Mr. Jones could not have obtained them here; whether he could or could not have obtained them elsewhere, is a matter on which I imagine you do not require my opinion.

I have, &c.,
JOHN ROPER.

No. 14.

COLONIAL SECRETARY, NEW SOUTH WALES, to COLONIAL SECRETARY, VICTORIA.

New South Wales.

Colonial Secretary's Office,

Sydney, 15 September, 1851.

SIR,

Adverting to my letter of the 16th July last, respecting the relief which it is proposed to afford to Mr. J. H. Jones, in consideration of the losses sustained by him in carrying on his contracts for the conveyance of the mails between Yass and Albury in this Colony, and between Albury and Melbourne in Victoria,—I am now directed by the Governor General to acquaint you for the information of His Excellency the Lieutenant Governor, that Mr. Jones having submitted a statement of his losses—under the report of the Postmaster General, it has been considered that the only items for which he can properly claim compensation from the Government are those under the head of forage.

2. With respect to the claim of Mr. Jones on this Government on account of his contract between Yass and Albury, he will be required to satisfy the Auditor General, by the production of sufficient vouchers, that the quantity of forage mentioned by him was consumed, and that the sum stated was paid for it; and the Postmaster General has called upon the Postmasters at Yass and Albury to report whether, at the end of the year 1850, when the contract was taken, Mr. Jones could have obtained at the then current prices, or could reasonably have expected to obtain forage at the rates stated by him, viz., £2 per ton for hay, and 3s. per bushel for corn.

3. I am therefore directed by the Governor General to request that you will suggest to the Lieutenant Governor the expediency of following a similar course, in order to ascertain the anticipated and actual expenditure for forage on account of the contract between Albury and Melbourne. The statement of Mr. Jones as to the alleged losses on this portion of his contract is, that he expected to have to pay only £235, and that he paid £2,425—the quantities of forage being as therein given at the anticipated rates.

From Albury to Melbourne:—

80 tons of hay, at £2 per ton.....£160
500 bushels of maize, at 3s. 75

I have, &c.,

W. ELYARD, JUNR.

No. 15.

COLONIAL SECRETARY to POSTMASTER GENERAL.

Colonial Secretary's Office,

Sydney, 15 September, 1851.

SIR,

I have the honor to acknowledge the receipt of your letter No. 73, of the 28th ultimo, respecting the compensation to be allowed to Mr. Jones for his losses on his contracts for the conveyance of the mails between Yass and Albury in this Colony, and between Albury and Melbourne in Victoria.

2. In this case His Excellency the Governor General approves of the course suggested by you being followed; and the necessary communications have been made to the Government of Victoria, and to the Auditor General. You will accordingly call on Mr. Jones to take the necessary steps for satisfying that officer, by the production of sufficient vouchers, that the quantity of forage mentioned in his statement was consumed, and the sum stated was paid for it.

I have, &c.,

W. ELYARD, JUNR.

COLONIAL SECRETARY to POSTMASTER GENERAL.

Colonial Secretary's Office,

Sydney, 4 October, 1851.

SIR

With reference to a letter from the Honorable the Colonial Secretary of Victoria, dated 26th August last, on the subject of Mr. J. H. Jones' claim to compensation for losses as a mail contractor, transmitted to you on the 17th ultimo,—I am now directed by His Excellency the Governor General to refer to you the enclosed communication from Mr. Jones on the same subject, and to request that you will have the goodness to favor me with your immediate report thereon.

I have, &c.,

W. ELYARD, JUNR.

[Enclosure

[Enclosure in No. 16.]

White Horse Inn, George-street,
Sydney, 30 September, 1851.

Sir,

It is with extreme regret that I feel myself compelled to refer to you again on the subject of my former communication respecting the ruinous losses to which I am subjected in carrying out the mail contract between Yass and Albury, and Albury and Melbourne.

2. I am paying now from £20 to £25 per ton for carriage of hay only from Goulburn to Albury and the Owens River; all my other expenses, including wages, are increased fully one hundred per cent. I can prove the truth of this statement by my own affidavit, as well as by other evidence.

3. The consequence of the position in which I am thus placed will be my utter ruin, and I shall be compelled, in spite of all the efforts and the daily sacrifice which I am making of my property, to discontinue running the mail, unless the intentions so kindly expressed by the Government to afford me compensation for the unforeseen and ruinous losses which I have sustained be carried into effect without delay.

4. I humbly entreat that you will forgive the importunity of this my renewed application, which I am only induced to make for the sake of avoiding the utter ruin of myself and family, and the great public inconvenience which must ensue from the stoppage of the mail.

5. I am now in Sydney, and respectfully request that you will permit me to wait upon you at such time as you may appoint, in order that I may be enabled to give you further information on my case.

I have, &c.,

J. H. JONES.

Colonial Secretary, Victoria, 26 August, respecting J. H. Jones' claim to compensation for losses as mail contractor.

Sent to Postmaster General, 17 September.

2 October.—Send this also, requesting his immediate report.

No. 17.

COLONIAL SECRETARY, NEW SOUTH WALES, to COLONIAL SECRETARY, VICTORIA.

New South Wales.

Colonial Secretary's Office,

Sydney, 23 October, 1851.

SIR,

In reference to the correspondence in the case of the claim made by Mr. J. H. Jones, mail contractor, for relief, in consideration of the losses sustained by him under his contracts, both in this Colony and Victoria, and to your letter, No. 331, of the 26th August last, I am desired by the Governor General to transmit herewith, for the consideration of His Excellency the Lieutenant Governor, the annexed copy of a letter from the Postmaster General in this Colony, reporting on your letter above referred to, and accompanied by a further communication on the subject from Mr. Jones.

I have, &c.,

E. DEAS THOMSON.

[Enclosure 1 in No. 17.]

General Post Office,
Sydney, 6 October, 1851.

Sir,

I do myself the honor to return herewith the letter from the Colonial Secretary of Victoria, respecting Mr. J. H. Jones' alleged losses on his mail contract from Albury to Melbourne, which was referred to me, under your blank cover of the 17th ultimo.

2. I also enclose a further explanatory letter from Mr. Jones, written by him after a conversation with me on the subject in this office.

3. After hearing his explanation it certainly does appear to me that Mr. Jones' losses are attributable to the bush fires to a greater extent than is supposed by the authorities in the Colony of Victoria; but, at the same time, I cannot assign to that cause an amount of loss which, if allowed, would give Mr. Jones 400 per cent. more than the sum claimable for the half year under his contract.

I have, &c.,

F. L. S. MEREWETHER.

The Hon. the Colonial Secretary, &c.

[Sub-Enclosure in No. 17.]

Sydney, 7 October, 1851.

Sir,

Having had an interview this day with the Postmaster General, on the subject of the losses I have sustained in the conveyance of the mails from Melbourne to Sydney during the first half of the year, I was informed that the estimate which I had forwarded to that officer had not been laid before you; and as I am desirous you should be possessed of the said information, I take the liberty of laying before you a copy of that estimate, by which it will be seen that my losses from Melbourne to Albury compute to £2,190, and the losses from Albury to Yass compute to £1,910.

I addressed a letter to the Postmaster General, explaining how these losses arose, and for your information I shall briefly enumerate them here, viz.:—The fires which, in the beginning of the present year, laid waste and destroyed nearly the whole of the Victoria country, and portions of this Colony adjoining Victoria, compelled me to give enormous sums for forage—in many instances as high as £30 per ton having been refused; being obliged therefore to go to Melbourne, Yass, and in some cases even to Goulburn, to purchase hay, and have it conveyed at great expense to the various stations. The immense rise in the item for carriage is accounted by the difficulty of obtaining food on the roads to feed the bullocks, and also the risk of having to return in most cases without loading; having to purchase the maize in Sydney and transmit it to Melbourne, and then the great expense of carriage to the various stations for the same reasons as above.

This

This estimate is entirely confined to causes produced by the bush fires already alluded to; although I may add, that the immense destruction of property which took place caused a consequent increase in the prices of food and all the necessaries of life; and consequently I was compelled to raise the wages of my servants, which in itself is no small item.

I would also add that, if necessary, I can make affidavit to the truth of this statement, and my overseer can make affidavit as to the truth of that portion relating to the line he had under his control.

The Auditor General,
Sydney.

I have, &c.,
J. H. JONES.

No. 18.

MR. JONES to AUDITOR GENERAL.

Bargo, 20 October, 1851.

SIR,

Enclosed, I beg to hand you the only documents I can find amongst the receipts now in my own possession at Bargo, that can tend to prove a part of the losses which I have sustained by the mail contract during this year, as referred to in my former statement to the Government.

There are other receipts and documents in the possession of my superintendent at Melbourne (which I have written to him to forward to me), but through the difficulties he had to contend with, and the consequent trouble and hurry of business that he has had, he has not been able as yet to render me any of his accounts.

See Auditor
General's letter
of 17 Feb., 1853.

Through the flooded state of the country and his immediate attendance being at present required in so many places, I am afraid it may be some time before he may be able to render me the accounts I refer to; and as it is absolutely necessary that I should have some immediate assistance, I trust that His Excellency the Governor General will take my case into immediate consideration, and take the documents which I now forward as a proof that I have not in any way exaggerated my former statement; and, in the course of some time, when the floods in any way subside up the country so that my superintendent can spare time to arrange his affairs in the Melbourne country, and forward to me the other documents that he holds which I require to fully substantiate my former claim, I will lose no time in forwarding them to you.

You will see by the enclosed papers, endorsed "Agreement for hay, 1850," the price that I paid for hay last year, and from which I made my calculations for the present contract, hoping that you will give my case your earliest convenient consideration.

I remain, &c.,
J. H. JONES.

Bargo, 24 December, 1851.

SIR,

The enclosed receipts I have the honor of forwarding, for your further information, respecting the losses sustained by me in the conveyance of the Melbourne mails this year. You will perceive, by a letter accompanying the receipts from my superintendent on the Melbourne side, that many more were lost. I trust the enclosed, coupled with my letter to you of 7th October last, shewing the actual losses incurred, will be sufficient to justify you in recommending a compensation in your report to Government. I have the honor also to inform you that the Postmaster General is ordered to report to Government respecting my memorial to His Excellency for a remuneration, so that His Excellency's decision may be obtained to what amount of remuneration His Excellency may deem my case deserving.

Letters from

I am, &c.,

J. H. JONES,
Mail Contractor.

No. 22.

MR. JONES to POSTMASTER GENERAL.

Bargo, 15 December, 1852.

SIR,

I beg the favour to solicit your advice upon the enclosed communications—the cause having emanated from transactions connected with your office during the administration of the late James Raymond and F. L. S. Merewether, Esquires—"remuneration for losses," and applied for to His Excellency the Governor General.

It may appear strange to you, on perusing the enclosed, that the same has been allowed to remain for so long a time in abeyance; the reason was, the change that has taken place both in your department and the Auditor General's.

Receipts and proofs of the actual losses incurred now lay in the office of the Auditor General, arranged and ready to be laid before His Excellency.

By your communicating the proper channel through which it will be necessary for me to apply, so as to bring the matter immediately before His Excellency the Governor General, will greatly oblige—

Sir, &c.,

J. H. JONES,
Mail Contractor.

No. 23.

POSTMASTER GENERAL to AUDITOR GENERAL.

*General Post Office,
18 December, 1852.*

SIR,

I have the honor to enclose an application from Mr. Jones, contractor of mails on the Southern Road, for compensation for losses sustained by him during the year 1850, in his contract for the conveyance of mails between Yass and Melbourne, together with all the documents bearing on the subject.

2. I need not say that the claim is one of which I know nothing—for which there are no funds applicable from the Post Office revenue during the present year, and a portion of which, should the claim be admissable, will become chargeable on another Colony.

3. I therefore forward the papers to be reported on, should you deem such report expedient, for the decision of His Excellency the Governor General.

I have, &c.,

W. H. CHRISTIE,
Postmaster General.

Sydney: Thomas Richards, Government Printer.—1861.

1861-2.

Legislative Assembly.

NEW SOUTH WALES.

STEAM POSTAL SERVICE.

(DESPATCH TRANSMITTING CONTRACT FOR CONVEYANCE OF MAILS BETWEEN POINT DE GALLE AND AUSTRALIA.)

Ordered by the Legislative Assembly to be Printed, 20 January, 1862.

SECRETARY OF STATE FOR THE COLONIES to GOVERNOR SIR JOHN YOUNG.

Downing-street,
17 May, 1861.

SIR,

I transmit to you, for general information in the Colony under your Government, four copies of the new Contract which has been entered into by the Postmaster General with the Peninsular and Oriental Steam Navigation Company, for the conveyance of the Mails between Point de Galle and Australia.

I have, &c.,
NEWCASTLE.

[Enclosure in the foregoing.]

ARTICLES OF AGREEMENT made the 16th day of April, in the year of our Lord 1861, between the Peninsular and Oriental Steam Navigation Company, of the one part, and the Right Honorable Edward John Lord Stanley, of Alderley, Her Majesty's Postmaster General for the time being, of the other part.

Whereas the said Company, in the month of October, 1858, sent to the Commissioners for executing the office of Lord High Admiral of the United Kingdom of Great Britain and Ireland, a Tender in writing, dated the 5th day of that month, for the supply of steam-vessels for performing the Mail Service between Great Britain and Australia: And whereas the terms or conditions of such Tender were subsequently in some respects altered, and in others modified with the mutual consent of the said Company and the said Commissioners: And whereas such Tender (with such alterations and modifications as hereinbefore referred to) was approved by Mr. Arthur Anderson, on the part of the said Company, on the 9th day of the same month of October, and was, as approved by the said Company, accepted by the said Commissioners on the 13th day of the same month, and the draft of a Contract was subsequently prepared by the Solicitor of the Admiralty on the footing of such tender when so altered or modified as aforesaid, and although no Contract in writing has at present been executed in respect of such services, yet the same, as thereby agreed to be performed, have been performed by the said Company, from the 12th day of February, 1859, up to the 30th of June last past: And whereas the said Company having discovered that the services so agreed

Reciting Tender for the supply of steam vessels for the Mail service between Great Britain and Australia.

Reciting the acceptance of the Tender, and the performance of the services by the Company.

Reciting that the services agreed to be performed were attended with great loss; but the Company were willing to continue the same under the modified arrangements, and for a reduced subsidy.

The Company agree to convey the Mails between Point de Galle and Australia.

Vessels to be furnished with appropriate machinery, tackle, &c.;

And manned with certificated officers, &c.;

Also a medical officer;

Also a sufficient number of engineers and crew, to be subject to approval of Postmaster General.

Designs, &c., of vessels, to be submitted to the Postmaster General, if required.

Departure of vessels.

Vessel shall delay departure for 24 hours if deemed expedient by the Postmaster General or his officers.

Company to convey Mails from Point de Galle

to be performed, and so performed by them as aforesaid, were not only not remunerative, but attended with great loss, did address, on the 30th day of April, 1860, a letter to the Lords Commissioners of Her Majesty's Treasury, stating, in reply to inquiries contained in a letter from the said Lords Commissioners, dated the 27th of the same month of April, that the Company would be compelled to abandon the further execution of the said service, but that as an alternative to the total relinquishment of the service, and in order to avoid the inconvenience of a suspension of Mail communication with Australia, they were willing to continue it under the modified arrangements, and for the reduced subsidy hereinafter stated, which alternative proposal the Lords Commissioners of Her Majesty's Treasury were pleased to accept, and to authorize the said Postmaster General, to whom all securities entered into with the Commissioners of the Admiralty in relation to the packet service had been transferred under or by virtue of an Act of Parliament made and passed in the last Session of Parliament, to take the necessary steps in conjunction with the said Company, for preparing a Contract on the footing of such alternative proposal.

Now these presents witness that the said Company, in consideration of the payments hereinafter agreed to be made to them, do hereby for themselves, their successors and assigns, covenant, promise, and agree to and with the said Postmaster General, his successors and assigns, that they the said Company shall and will at their own costs and charges at all times until this agreement shall be determined to the satisfaction of the Postmaster General for the time being, convey Her Majesty's Mails (which term Mails shall for the purposes of this agreement be considered to mean and include all letters, newspapers, books, and printed papers, and also all bags, boxes, and packets of letters, newspapers, books, and printed papers, sent by the post) which shall, during the continuance of this Contract, by the Postmaster General, or any of his officers or agents, be required to be conveyed between Point de Galle in Ceylon, *via* Melbourne and Sydney in Australia, according to the table in that behalf hereunto annexed, by means of a sufficient number of full power steam vessels (not less than three) supplied with first-rate appropriate steam engines.

That all the vessels to be employed in the services hereby agreed to be performed, shall be supplied and furnished with all necessary and proper machinery, engines, apparel, furniture, stores, tackle, boats, fuel, oil, tallow, provisions, anchors, cables, fire pumps and other proper means for extinguishing fire, lightning conductors on Sir Snow Harris's or other approved principle, charts, chronometers, proper nautical instruments, medicines, medicaments, and whatsoever else may be requisite and necessary for equipping the said vessels, and rendering them constantly efficient for the service hereby agreed to be performed, and also manned and provided with competent officers with appropriate certificates granted pursuant to the Act 17th and 18th Vict. cap. 104, or to any other Act or Acts of Parliament in force for the time being relative to the granting certificates to officers in the merchant service, and also a medical officer to be approved by the said Postmaster General, and who shall give medical attendance, medicines, and medicaments gratis to all persons conveyed under or by virtue of this agreement, or whose passage money may be paid for either in whole or in part by the public, and with a sufficient number of efficient engineers, and a sufficient crew of able seamen and other men, to be in all respects subject to the approval of the said Postmaster General, or of such other person or persons as he shall at any time or times, or from time to time, authorize to inspect and examine the same, and the said Company shall (if required) submit the designs, plans, and sections of each vessel to be employed in the performance of this agreement to the said Postmaster General: Provided, however, that all vessels belonging to the said Company, and which at the date of this agreement shall be employed in the performance of any Post Office services, shall be considered as having been approved by the said Postmaster General.

That one of such vessels so approved, equipped, and manned as aforesaid, shall during the continuance of this agreement, on such days and at such hours as are respectively mentioned in the said table hereunto annexed (until and unless any other days or hours shall under the proviso herein in that behalf contained be substituted instead thereof), and immediately after Her Majesty's Mails are embarked, put to sea from, touch, and arrive at the several ports or places respectively mentioned in such table, and all the said vessels to be employed in the services hereby agreed to be performed shall, during the continuance of this agreement, convey the said Mails as mentioned in such table, and all the stipulations, matters, and things therein mentioned and contained shall form part of this agreement, and be observed, kept, and performed by the said Company accordingly. And the said Company shall convey in the vessels to be employed under this agreement to and from, and cause to be delivered and received at such of the ports or places mentioned in the said table from or at which the said vessels are to start, touch, and arrive in performance of this agreement, all such of Her Majesty's Mails as shall or may be tendered to, delivered, or received by the said Company, or any of their agents, officers, or servants, by or from the said Postmaster General, or any of his officers or agents.

That should it be deemed by the said Postmaster General, his officers or agents, requisite for the public service that any vessel to be employed under this agreement should at any time or times delay the departure from Point de Galle or Sydney beyond the period appointed for its departure, the said Postmaster General, his officers or agents, shall have power to order such delay, not however exceeding twenty-four hours, by letter addressed by him, or other his officers or agents to the master of any such vessel, or person acting as such, and which shall be deemed a sufficient authority for such detention, anything herein contained to the contrary notwithstanding.

That the said Company shall convey the said Mails from Point de Galle *via* Melbourne to Sydney in twenty-two days, and from Sydney *via* Melbourne to Point de Galle in twenty-four days: And it is hereby agreed that if the said Company shall fail to deliver the said Mails

Mails at Sydney *viâ* Melbourne from Point de Galle in twenty-two days, or at Point de Galle *viâ* Melbourne from Sydney in twenty-four days, then or in either of such cases, and so often as the same shall happen, the said Company shall forfeit and pay to Her Majesty, Her heirs and successors, the sum of two hundred pounds per day for every twenty-four hours consumed on the respective voyages beyond the periods as hereinbefore respectively agreed and specified. Provided always, that the full amount of such sums on any one voyage shall never exceed the sum of five thousand six hundred and eleven pounds six shillings and eight-pence, and provided further, that the payment of any such sum shall not be enforced against the said Company, if it be shewn by them, to the satisfaction of the said Postmaster General, that the delay has arisen from causes over which they, the said Company, had not and could not have had any control: Provided, however, and it is hereby further agreed and declared, that in the voyage from Sydney *viâ* Melbourne to Point de Galle, and from Point de Galle *viâ* Melbourne to Sydney, the space of twenty-four hours shall be allowed over and above the time hereinbefore above stipulated and appointed for making such respective voyages for detention at Melbourne for the purpose of the delivery and reception of Mails.

viâ Melbourne, to Sydney, in 22 days, and from Sydney *viâ* Melbourne, to Point de Galle, in 24 days. Penalty for delay.

And the said Postmaster General doth hereby covenant and agree to pay to the said Company a premium of fifty pounds for each and every twenty-four hours within which the said Mails shall be delivered less the number of days hereby covenanted for delivery of the same respectively at Sydney and Point de Galle.

The Postmaster General to pay the Company a premium of £50 for delivering the Mails in a less number of days.

And it is hereby agreed that if at any time or times during the continuance of this agreement the said Postmaster General shall desire to modify the services hereby contracted to be performed (as for example, to alter the particular days, times, or hours of departure from and arrival at any of the ports or places to or from which Her Majesty's Mails are to be conveyed under or by virtue of this agreement, or to increase or decrease the frequency of such conveyance), he shall be at liberty so to do on giving reasonable notice in writing of such his desire to the said Company at their offices in London, and on paying to them for such modified or altered services such further or other consideration, and in the event of the services hereby agreed to be performed being decreased on his paying to them such reduced consideration as may be mutually agreed upon between the said Company and the Postmaster General for the time being, and failing such mutual agreement, by arbitration in the manner hereinafter in that behalf provided: And it is hereby further agreed and declared, that the particular days, times, and hours of departure from and arrival at any of such ports or places or other (if any) services which may be appointed by any such modification or alteration in force for the time being as aforesaid, shall be deemed to be the days, times, and hours of departure and arrival of Her Majesty's Mails under this agreement, and shall be observed and kept by the Company accordingly.

The Postmaster General may modify the services on giving notice to the Company.

And the said Company do hereby agree with the said Postmaster General that if they, the said Company, should fail to provide an efficient vessel at Point de Galle and Sydney in accordance with the terms of this agreement, ready to put to sea on the appointed day and at the appointed hour mentioned and specified in the said table hereunto annexed, then and in such case, and so often as the same shall happen, the said Company shall forfeit and pay unto Her Majesty, Her heirs and successors, the sum of Five hundred pounds, and also the further sum of one hundred pounds for every successive twenty-four hours which shall elapse until such vessel shall actually proceed to sea on her voyage in the performance of this agreement: Provided further that the payment of any such sums shall not be enforced against the said Company, if it be shewn by them to the satisfaction of the said Postmaster General that the delay has arisen from causes over which they, the said Company, had not and could not have had any control.

Penalties for not providing efficient vessels.

That the said Company shall at all times, during the continuance of this agreement, have in constant readiness, for the due execution of the service hereby agreed to be performed, not less than three full-power steam vessels, and shall, in every case of any or either of such vessels becoming disabled, with all possible speed, at their own costs and charges, replace the same by good and efficient vessels of similar steam power and efficiency obtained by hire or otherwise.

Company always to have three vessels ready for the service, and in case of being disabled to replace same.

That the said Company shall receive and allow to remain on board each of the said vessels so to be and while employed in the performance of this agreement, and also while remaining at each or either of the ports or places for Return Mails, and with or without Mails in charge, an officer in Her Majesty's navy to be appointed by the said Postmaster General to take charge of the said Mails, and also an assistant or servant of the said officer (if required), and that every such officer shall be recognized and considered by the said Company, their officers, agents, and seamen, as the agent of the said Postmaster General in charge of Her Majesty's Mails, and as having full authority in all cases to require a due and strict performance of this agreement on the part of the said Company, their officers, servants, and agents, and to determine every question, whenever arising, relative to proceeding to sea, or putting into harbour, or to the necessity of stopping to assist any vessel in distress, or to save human life, and that the decision of such officer as aforesaid shall in each and every such case be final and binding on the said Company, unless the said Postmaster General on appeal by the said Company shall think proper to decide otherwise: Provided, however, and it is hereby agreed, that the words "to determine every question" shall not confer upon such officer the power of compulsion in such cases.

An officer in the navy to remain on board the vessels and to take charge of Mails.

That if the said Postmaster General at any time or times think fit, he shall be at liberty in any case or cases to substitute for the said naval officer and his assistant or servant a civil officer in the service of the Postmaster General, to have charge of the said Mails, and in such case or cases any such last-mentioned officer, and also an assistant of the said officer (if required), shall be received and be allowed to remain on board each of the said vessels as hereinbefore provided with respect to any such naval officer and his assistant or servant, but

The Postmaster General may substitute a civil officer in the place of a naval officer.

when

when any civil officer in the service of the Post Office shall be in charge of the said Mails, his duties shall be confined to the Post Office business.

That a suitable first-class cabin, with appropriate bed, bedding, and furniture, shall, at the cost of the said Company, be provided and appropriated by them for and to the exclusive use and for the sole accommodation of every such naval officer or civil officer, and also a proper and convenient place of deposit on board, with secure lock and key, for Her Majesty's Mails, and that each and every of the said officers shall be victualled by the said Company as a chief-cabin passenger, without any charge being made either for his passage or victualling; and that should any of such officers require an assistant or servant, such assistant or servant shall also be provided with a proper and suitable berth, and be duly victualled by and at the cost of the said Company as a second-cabin passenger, without any charge being made for the same.

A first-class cabin, with bed and bedding to be provided for such naval or civil officer; also a proper place for the deposit of the Mails.

The officer to be victualled by the Company as a chief cabin passenger.

The Company to provide suitable accommodation for sorting and making up the Mails.

That the said Company shall and will provide, on board each of the vessels to be employed under this agreement, all necessary and suitable accommodation, to the satisfaction of the Postmaster General, for the purpose of sorting and making up the Mails thereby conveyed, and also shall and will receive, victual, and convey and allow to remain on board each of the said vessels, such civil officer, if any there should be, of the Post Office, and his assistant, without any extra charge whatsoever, which said civil officer shall be treated as a first-class passenger, and be provided for, accommodated, and victualled in the same manner as if he were the naval officer in charge of the Mails, and the said assistant or servant shall be provided for, accommodated, and victualled in the same manner as the assistant or servant of the said naval officer as hereinbefore provided.

To convey the officer in charge of the Mails on shore.

That at each port or place where the said Mails are to be delivered and received, the officer having charge of Her Majesty's Mails shall, whenever, and as often as by him shall be deemed practicable or necessary, be conveyed on shore, and also from the shore to the vessel employed for the time being in the performance of this agreement, together with or (if such officer shall consider it requisite for the purposes of this agreement so to do) without Her Majesty's Mails, in a suitable and seaworthy boat of not less than four oars, to be furnished with effectual covering for the Mails, and properly provided, manned, and equipped by the said Company; and that the directions of such officer shall in all cases be obeyed as to the mode, time, and place of receiving and delivering such Mails.

The Postmaster General may entrust the master of the vessels with the custody of the Mails.

That if the said Postmaster General shall, during the continuance of this agreement, think fit to entrust the charge and custody of the Mails to the master of the vessels to be employed for the time being in the performance of this agreement, and in all cases when the officer or other person appointed to have charge of Her Majesty's Mails shall be absent, the master of such vessel shall without any charge (other than that herein provided to be paid to the said Company) take due care of, and the said Company shall be responsible for the receipt, safe custody, and delivery of the said Mails, and each of such masters shall make the usual oath or declaration, or declarations, required, or which may hereafter be required by the Postmaster General in such and similar cases, and furnish such journals, returns, and information to, and perform such services as the said Postmaster General or any of his agents may require; and every such master or officer, duly authorized by him, having the charge of such Mails, shall himself immediately on the arrival at any of the said ports or places of any vessel so conveying the same, deliver all Her Majesty's Mails for such port or place into the hands of the Postmaster of the port or place where such Mails are to be delivered, or into the hands of such other person as the said Postmaster General shall direct and authorize to receive the same, receiving in like manner all the return or other Mails to be forwarded in due course.

The master to deliver the Mails to the Postmaster of the port or place where they are to be delivered.

That the said Company shall not, nor shall any of the masters of any of the vessels employed or to be employed under this agreement, receive, or permit to be received, on board any of the vessels employed under this agreement any letters for conveyance other than those duly in charge of the said naval officer or other person authorized to have charge of the said Mails, or which are or may be privileged by law; and the said naval officer or other person shall report to the said Postmaster General any default in this respect; and in case of any such default, the said Company shall be liable to be proceeded against for a breach of this agreement.

The Company not to receive on board any letters for conveyance other than those in charge of the naval officer, &c.

Power for the naval officer to survey the vessels, machinery, and crew, and to give notice of defects to the master, &c.

And the said Company do hereby further agree with the said Postmaster General, that every naval officer authorized to have the charge of the said Mails shall, either alone or with such other persons as he may consider necessary, have full power and authority, as often as he may deem it requisite, to examine and survey in such manner, and with the assistance of such persons as he may think proper, any of the vessels employed, or to be employed, in the performance of this agreement, and the hulls, machinery, equipments, and crew thereof, on his giving reasonable notice in writing to the master for the time being of the vessel about to be examined, or to the person acting as such, of such his intention; and if any defect or deficiency be ascertained, and notice thereof in writing be given to such master or other persons, such master or other persons shall and will immediately, or as soon as possible thereupon, remedy, replace, or effectually repair or make good every such defect or deficiency; and that the said Postmaster General shall also have full power, whenever and as often as he may deem it requisite, to survey by any of his officers or agents all or any of the vessels employed and to be employed in the performance of this agreement, and the hulls thereof, and the engines, machinery, furniture, tackle, apparel, stores, equipments, and the officers, engineers, and crew of every such vessel; and that for the purposes aforesaid the said vessels shall (if necessary) be opened in their hulls whenever the said officers may require; and if any such vessels, or any part thereof, or any engines, machinery, furniture, tackle, apparel, boats, stores, or equipments, shall on any such survey be declared by any of such officers or agents unseaworthy or not adapted to the service hereby agreed to be performed,

Power for the Postmaster General or his officers to survey the vessels, &c.

performed, every vessel which shall be disapproved of, or in which such deficiency or defect shall appear, shall be deemed inefficient for any service hereby agreed to be performed, and shall not be employed again in the conveyance of Her Majesty's Mails until such defect or deficiency shall have been repaired or supplied to the satisfaction of the said Postmaster General.

That the said Company, and all commanding and other officers of the vessels to be employed in the performance of this agreement, and all agents, seamen, and servants of the said Company, shall at all times during the continuance of this agreement, punctually attend to the orders and directions of the said Postmaster General, or of any of his officers or agents, as to the landing, delivering, and receiving Her Majesty's Mails.

The Company, &c., to attend to the orders of the Postmaster General, or his officers, as to delivering and receiving the Mails.

That the said Company shall and will, when and as often as in writing they or the masters of their respective vessels shall be required so to do by the said Postmaster General, or by such naval or other officers or agents acting under his authority (such writing to specify the rank or description of the person or persons to be conveyed, and the accommodation to be provided for him or them), receive, provide for, victual, and convey to and from and between the places to which any of the vessels are to proceed in the performance of this agreement, on board each and every or any of the vessels to be employed in the performance of this agreement (in addition to the naval or other officer authorized to have charge of the said Mails), any number of naval, military, or civil officers in the service of Her Majesty, (not exceeding four in any one ship), with or without their wives and children, as chief-cabin passengers, and any number of non-commissioned or warrant officers, or civilians in Her Majesty's service (not exceeding two) in any one ship, with or without their wives and children, as fore-cabin passengers, together with the servants of both chief and fore-cabin passengers, and any number of seamen, marines, soldiers, or artificers in Her Majesty's service (not exceeding ten) in any one ship, with or without their wives and children, as deck passengers, to be effectually protected from rain, sun, and bad weather (a fortnight's notice being given if practicable to the said Company, or to their agent at the port of embarkation of all such passengers as may be required to be received, provided for, victualled, and conveyed as aforesaid), and that the said Company shall and will convey any soldiers (not exceeding ten) as deck passengers (other than those hereinbefore specially provided for), and that the said Company shall and will provide them with adequate protection from rain, sun, and bad weather, and that such soldiers as last aforesaid shall not be exposed on deck without such competent shelter, and that all such passengers as aforesaid shall be permitted to ship the quantity of baggage allowed by the said Company to ordinary passengers of similar rank free of all charge for the conveyance thereof.

The Postmaster General may require the Company to convey on board the vessels a limited number of naval, military, or civil officers, with their wives, &c.; also warrant officers, seamen, marines, soldiers, &c.

That commissioned officers, their wives and children, shall be considered and paid for as chief-cabin passengers, non-commissioned and warrant officers, their wives and children, as and paid for as fore-cabin passengers, and seamen, marines, private soldiers, artificers, and their wives and children, as and paid for as deck passengers, and the said servants (in respect of accommodation) as and paid for as the servants of chief-cabin passengers.

Commissioned officers to be paid for as chief-cabin passengers, &c.

That the victualling of commissioned officers, their wives and children, conveyed as chief-cabin passengers, shall be similar to that usually allowed by the said Company to chief-cabin passengers, their wives and children, the victualling of non-commissioned officers, their wives and children, conveyed as fore-cabin passengers, shall be similar to that usually allowed to the boatswain and carpenter of the said Company's steam ships, and the victualling of seamen, marines, soldiers, and artificers, their wives and children, conveyed as deck passengers, shall be similar to that usually allowed to the seamen of the said Company's steam ships, and the victualling of the servants of officers (whether chief or fore-cabin passengers), shall be similar to that usually allowed to the servants of other chief or fore-cabin passengers.

As to the victualling of commissioned officers, non-commissioned officers, seamen, &c.

That the passage money shall be paid in full of all charge for mess, including a pint of port or good foreign white wine, and one bottle of malt liquor per day for each officer conveyed as a chief cabin passenger, and half a gill of spirits per day, or an equivalent (if not issued) for each warrant officer, non-commissioned officer, seaman, marine, soldier, artificer, and servant conveyed as a fore-cabin or a deck passenger, at and after the fares or rates charged by the said Company for ordinary passengers of a similar description, the said Company carrying children under three years of age free, and charging for male servants not more than one-half, and for female servants not more than two-thirds of the rates charged for their employers.

The passage money to be paid in full of all charge for mess, including allowances of wine, &c.

That the payment for the passage ordered at the expense of the public of any person shall only be made on the production of the order for the passage, and of a certificate from the person in the following form, namely:—

Certificate for passage money.

“ I hereby certify, that on the _____ I embarked at _____ as a _____ passenger on board the Mail steam packet _____ for a passage to _____, and landed at _____ on the _____.”
To which certificate the following addition is to be made in any case of a male cabin passenger, namely:—

“ I further certify, that the first dinner meal taken on board was on the _____, and the last dinner meal on the _____.”
“ Dated this _____ day of _____.”

And the correctness of the dates shall be corroborated by the master of the packet, adding underneath the passenger's signature—

“ The dates inserted in this certificate are correct.”
“(Signature.)
“ Master of the Packet.”

The passage money for officers and families to be the ordinary rates; children under three years to be free.

That the passage money for the families and wives of officers shall be paid to the said Company by the officers themselves, at the rates charged to ordinary passengers of a similar description, their children under three years of age being conveyed free of charge.

That

The passengers to be exclusive of any men sent Home under the Act 17 and 18 Vic., c. 104.

Small packages to be received on board and delivered at the places where the Mails are delivered, as often as the Postmaster General, or the officer in command at the port, may require, free from all charge.

Naval stores not exceeding 10 tons to be conveyed at the same rate as private goods.

The sums payable by the Company to be considered as stipulated damages.

Payments to the Company for services.

Disputes to be referred to arbitration.

The postage of all Mails to belong to Her Majesty.

Commencement and duration of agreement.

That the passengers hereinbefore mentioned or referred to are to be exclusive of any men to be sent Home under the provisions of the Act 17 and 18 Vic. c. 104, the rate of passage for whom is to be and to be paid for in accordance with the provisions of that Act.

That the said Company shall and will receive on board each and every of the vessels to be employed in the performance of this agreement any number of small packages not exceeding twenty cubic feet in measurement, containing astronomical instruments, charts, wearing apparel, medicines, or other articles (which small packages shall not contain liquids or chemicals, oil, grease, or other articles of a dangerous or damaging character), and convey and deliver the same to, from, and between the said ports or places to or from which the said Mails are to be conveyed in the performance of this agreement, when and as often as directed by the said Postmaster General, or by the British naval officer in command of the station, or at any port where the vessel may touch, free from all costs and charges, and also shall and will receive on board each and every of the said vessels, and convey and deliver to, from, and between all or any of the said ports or places any naval or other stores (which stores shall not consist of liquids, chemicals, oil, grease, or any other article of a dangerous or damaging character), not exceeding ten tons in weight at any one time in any one vessel, at the rate of freight charged by the said Company for private goods, on receiving from the said Postmaster General, his officers or agents, two days' previous notice of his intention to have such stores so conveyed, and that the said Company shall in all cases be strictly responsible for the due custody and safe delivery of the said packages, articles, and stores.

And it is hereby further agreed that all and every the sums of money hereby stipulated to be paid by the said Company unto Her Majesty, Her heirs and successors, shall be considered as stipulated or ascertained damages, whether any damages or loss have or hath, or have not or hath not been sustained, and shall and may be deducted and retained by the said Postmaster General out of any moneys payable or which may thereafter be payable to the said Company, or the payment may be enforced as a debt due to Her Majesty, with full costs of suit, at the discretion of the said Postmaster General.

And in consideration of the due and faithful performance by the said Company of all the services hereby agreed to be by them performed, the said Postmaster General doth hereby covenant and agree that there shall be paid to the said Company (out of such aids or supplies as may be from time to time provided and appropriated by Parliament for the purpose), so long as they perform the whole of the said services in the manner and with such vessels as herein respectively provided, a sum after the rate of one hundred and thirty-four thousand six hundred and seventy-two pounds per annum, in equal quarterly payments, on the first day of January, the first day of April, the first day of July, and the first day of October, and with a proportionate part thereof, should this agreement be determined on any other day than one of those hereinbefore mentioned, which said rateable sum it is hereby agreed and declared shall be paid to and received by the said Company, as full compensation for all costs and expenses which they may incur or be put unto, by reason or on account of all and singular the services hereby contracted to be performed, subject, however, to the abatement of any sums of money in respect of forfeitures which the said Company may have incurred, or to the addition of any sums in respect of premiums (as the case may be), as herein provided, and which payments shall be made on the production by the said Company, from time to time, to the Secretary for the time being of the General Post Office, of certificates from the proper officers that the terms and conditions of this agreement have been strictly and punctually performed, or so soon thereafter as the accounts sent in for the then last quarter can be checked and examined.

And it is hereby further agreed and declared between and by the said parties to these presents, that if at any time during the continuance of this agreement, or after the determination thereof, any dispute or controversy shall arise between the said parties to these presents, or their successors respectively, concerning any breach or alleged breach, by or on the part of the said Company, of this present agreement, or the sufficiency of any such breach to justify the Postmaster General in putting an end to the same, or concerning the amount of consideration to be paid to or allowed by the said Company, as the case may be, for such modified or altered services as hereinbefore in that behalf mentioned, or concerning any of the covenants, matters, or things herein contained, or in anywise relating thereto, and notwithstanding the power herein contained, to determine this agreement, and any execution or attempted execution of such power, such dispute or controversy shall be referred to two arbitrators, one to be chosen from time to time by the said Postmaster General, and the other by the said Company; and if such arbitrators should at any time or times not agree in the matter or question referred to them, then such question in difference shall be referred by them to an umpire, to be chosen by such arbitrators before they proceed with the reference to them, and the joint and concurrent award of the said arbitrators, or the separate award of the said umpire, when the said arbitrators cannot agree, shall be binding and conclusive upon both parties, and this agreement of submission may be made a rule of either of Her Majesty's Courts of Record.

And it is hereby further agreed that the whole postage of all Mails conveyed in the vessels employed under this agreement, whether carried from or out of Her Majesty's dominions or otherwise, shall belong to Her Majesty, and shall be at the disposal of Her Majesty's Postmaster General.

And it is hereby further agreed and declared that this agreement shall commence from the day of the date hereof, and shall continue in force until one of the said parties hereto shall give to the other of them six calendar months' notice of his or their desire to determine the same; and on the expiration of such notice this agreement shall determine accordingly, without prejudice nevertheless to any right of action or other proceeding which shall then have accrued to either party for any breach thereof.

And

STEAM POSTAL SERVICE.

And it is hereby distinctly agreed that the said Company shall undertake for themselves all arrangements relative to quarantine, as connected with the due and regular performance of the conditions of this agreement.

The Company to undertake the arrangements as to quarantine.

And it is hereby further agreed and declared that without the consent of the said Postmaster General, signified in writing under the hand of the secretary, or one of the assistant secretaries of the Post Office, neither this Contract, nor any part thereof, shall be given, granted, assigned, underlet, or disposed of, and that in case of the same, or any part thereof, being given, granted, assigned, underlet, or otherwise disposed of without such consent signified as aforesaid, or in case of any breach of this agreement, or any covenant matter or thing herein contained on the part of the said Company, their officers, agents, or servants, and whether there be or be not any penalty or sum of money hereby made payable by the said Company for any such breach, it shall be lawful for the said Postmaster General, if he shall think fit (and notwithstanding there may or may not have been any former breach of this Contract) by writing under his hand or under the hand of the secretary or one of the assistant secretaries of the Post Office, to determine this agreement without any previous notice to the said Company or their agents, nor shall the said Company be entitled to any compensation in respect of such determination.

The Company not to underlet or dispose of the Contract without the consent of the Postmaster General.

The Postmaster General may determine this agreement in case of any breach by the Company, without any previous notice.

And it is hereby also agreed that all notices or directions which the said Postmaster General, his officers, agents, or others, are hereby authorized and empowered to give to the said Company, their officers, servants, or agents, other than any notice of termination of this Contract, may, at the option of the said Postmaster General, his officers, agents, or others, be either delivered to the master of any of the said vessels, or other officer or agent of the said Company in the charge or management of any vessel employed in the performance of this agreement, or may be left for the said Company at their office or house of business in London, Point de Galle, Melbourne, or Sydney, or at their or any of their last known places of business or abode, and any notices or directions so given or left shall be binding on the said Company: Provided always that any notice of termination of this Contract shall be served on the said Company, their officers, servants, or agents, at their office in London.

As to the service of notices.

And it is hereby further agreed that if on the determination of this agreement any vessel or vessels should have started, or should start with the Mails in conformity with this agreement, such voyage or voyages shall be continued and performed, and the Mails be delivered and received during the same as if this agreement had remained in force with regard to any such vessels and services; and with respect to such vessels and services as last aforesaid, this agreement shall be considered as having terminated as and when such vessels and services shall have reached their port or place of destination, and been performed.

If, when the agreement terminates, any vessel shall have started with the Mails the voyage to be continued as if the agreement had remained in force.

And for the due and faithful performance of all and singular the covenants, conditions, provisoes, clauses, articles, and agreements hereinbefore contained, and which, on the part and behalf of the said Company, their officers, agents, or servants, are or ought to be observed, performed, fulfilled, and kept, the said Company do hereby bind themselves and their successors unto Her Majesty the Queen in the sum of twenty-five thousand pounds sterling, to be paid to Her, Her heirs or successors, by way of stipulated or ascertained damages, hereby agreed upon between the said Postmaster General and the said Company, in case of the failure on the part of the said Company in the due execution of this Contract or any part thereof.

Penalty for the due performance of the agreement

Provided always, and it is hereby expressly agreed and declared between and by the said parties to this agreement, that on this agreement being determined in the manner hereinbefore provided, the said hereinbefore mentioned tender and agreement thereunder made, and all and singular the conditions, agreements, powers, provisoes, clauses, and articles declared, contained, or referred to in the said tender, or in any table, letter, memorandum, or paper writing, forming or constituting the agreement hereinbefore referred to, or containing, explaining, or defining the terms and conditions thereof, for the performance of the services hereby agreed to be performed, shall be revived and become again in full force and effect, as if this agreement had not been made and entered into, anything hereinbefore contained to the contrary notwithstanding.

The former tender to be revived and in full force on the determination of this agreement.

Provided always, and it is hereby further expressly agreed and declared between and by the said parties hereto that the agreement shall not be binding until it has laid upon the table of the House of Commons for one month without disapproval, unless this said agreement is previously approved by a resolution of the said House of Commons.

This agreement not to be binding until it has been laid on the table of the House of Commons for one month.

In witness whereof the said Peninsular and Oriental Steam Navigation Company have hereunto set their corporate seal, and the said Postmaster General hath hereunto set his hand and seal the day and year first above written.

STANLEY OF ALDERLEY. (l. s.)

The Seal of the Peninsular and Oriental Steam Navigation Company.

Signed, sealed, and delivered by the within named Edward John Lord Stanley of Alderley, Her Majesty's Postmaster General, in the presence of—

E. B. OSBORN.

Sealed with the Seal of the Peninsular and Oriental Steam Navigation Company, pursuant to an Order of a Board of Directors of the said Company, dated 12th April, 1861, and such Seal was affixed hereto in presence of three of the Directors, and of me, the Secretary of the said Company, and in conformity with the terms of the deed of settlement.

P. D. HADOW,
JOHN GEORGE,
WM. H. HALL,
Directors.

C. W. HOWELL, Secretary.

Witness also,

E. B. OSBORN,
Solicitor's Office, General Post Office.

1861.

NEW SOUTH WALES.

RAILWAY EXTENSION.

(REPORT FROM ENGINEER-IN-CHIEF FOR RAILWAYS.)

Presented to both Houses of Parliament, by Command.

ENGINEER-IN-CHIEF to SECRETARY FOR PUBLIC WORKS.

*Railway Department, Engineer's Office,
Sydney, 31 July, 1861.*

SIR,

In compliance with your instructions I have prepared, and have now the honor to submit, the following Report on the cost of constructing cheap Locomotive Lines of Railway between Picton and Goulburn in the south, and Penrith and Bathurst in the west; the cost of haulage on the Western Line over the gradients proposed for the Railway, if horse power be used, as compared with the cost of haulage on the same gradients by steam power; and the cost of haulage by horse power over a tramway laid on the surface of the existing main road between Penrith and Bathurst.

The letters from His Excellency Sir John Young, and Captain Ward, R.E., forwarded to me in Minute Paper, dated 4th June last, on the subject of Railways, have received my most careful consideration.

In making a comparison of the cost of lines to be worked by locomotive engines and by horse power, I propose to limit the gradients to 1 in 30 in place of 1 in 20 as suggested by Captain Ward.* My reasons for making this alteration are that I had already prepared an estimate for a locomotive line between Picton and Goulburn with gradients not steeper than 1 in 30, as the general formation of the country through which the proposed line is to be carried does not require the adoption of a steeper gradient.

Assuming, therefore, that the steepest gradient on both lines is 1 in 30, it follows that the cost of construction for earthwork will be the same on either line, unless a different gauge be used for the line to be worked by horses, or unless the formation width be reduced. The gauge of the existing locomotive lines is 4' 8½", and I would not recommend a narrower gauge to be used for the horse railways.

If then the gauges remain the same, the only reduction which could be made in the cost of earthwork would be by reducing the width allowed for drainage. The proposed Railways to be worked by locomotive engines are to have a formation width of 18 feet, thus leaving for the slope of the ballast and for drainage, 6 feet 6 inches on either side of the rails. The width of the ballast being 13 feet, 2 feet 6 inches each only is allowed for side drains.

As efficient drainage is of the utmost importance for the economical maintenance of any road, I do not consider that a less width than 18 feet for cuttings can be adopted. The gradients, therefore, and the formation width being the same in both cases, there can be no difference in the first cost of construction so far as applies to the earthwork.

The only other items connected with the construction of the works are culverts, and bridges, and as these must be sufficiently strong to resist the floods, the same expense must be incurred whether required for horse railways or locomotive lines.

The line proposed for the Southern Railway commences at the end of the extension from Campbelltown to Picton, now in course of construction, crosses Stone Quarry Creek, and intersects the Southern Road, a short distance south of Lower Picton; thence through the Redbank Range by a short tunnel to the westward of the Government Village of Redbank, ascends to the tableland between Redbank and Myrtle Creek on the east, and the lagoons and Cedar Creek on the west. The range dividing the Bargo River tributaries from those of the Nattai River and chain of lagoons is then followed to a point 14 miles from Picton, where the line passes through this range to the westward by a short tunnel, and, after crossing several of the tributaries of the Bargo River, and passing near to the Prince Albert Inn, crosses the Southern Road, where it is intersected by the Nattai Creek; thence to the eastward of the Fitzroy Iron Mines, crossing the Mittagong Range at Gibraltar Gap by a tunnel 550 yards in length, is continued through the Wingecarribee Estate, crossing the Wingecarribee River about 2 miles west of Bong Bong. From this point the line passes to the eastward of Gillinambullam Range, crossing the old Southern Road, where it is intersected by White's Creek; thence passing to the eastward of Sutton Forest and the western foot of Mount Broughton, rises gradually to the summit of Paddy's River Range, near Pine Lodge, the residence of A. Badgery, Esq. The range dividing the tributaries of the Shoalhaven River from the sources of Paddy's River is then followed to the old Southern Road, about a mile and a half south of Paddy's River; thence passing Bomballa Swamp it follows generally the course of Barber's Creek to near Glen Rock, crossing the Southern Road about two miles north of Marulan, and passing Lockyer's Leigh, crosses Narrumbulla Creek and the Wollondilly River; thence skirting the spurs of the Cookbundoon Ranges (above flood level) it reaches a point about a mile distant from and to the westward of Towrang, where the Wollondilly is again crossed, the valley of which river is then followed generally to Goulburn.

On the proposed locomotive line there are three tunnels, of an aggregate length of 925 yards; one through Redbank Range, one in Bargo Brush, and one through the Mittagong Range.

The following is an estimate of the cost of constructing the line of Railway, just described, from Picton to Goulburn, to be worked by locomotive engines, with a maximum gradient of 1 in 30. Length, 81 miles.

	£	s.	d.
Earthwork	179,791	0	0
Masonry in bridges and culverts	68,907	0	0
Timber framing	27,479	0	0
Tunnels	59,000	0	0
Permanent way	243,000	0	0
Stations	10,000	0	0
Wrought-iron girders for bridge over the Wollondilly River	9,600	0	0
Side drains	14,256	0	0
Fencing	24,300	0	0
	636,333	0	0
Add for level crossings, station arrangements, and contingencies.	52,167	0	0
	£688,500	0	0

Or at the rate of £8,500 per mile.

The earthwork, bridges, culverts, &c., being the same, whether the line be worked by horses or by locomotive engines, the only difference in cost of construction will be in the permanent way, the details of which, for both systems, are as under:—

LOCOMOTIVE RAILWAY.

Estimate of cost of constructing one mile of Permanent Way—Single Line:—

	tons	c.	q.	lbs.	£	s.	d.

Say £3,000 per mile.									

HORSE TRACTION RAILWAY.

Estimate of cost of constructing one mile of Permanent Way—Single Line:—

	tons	c.	q.	lbs.	£	s.	d.
Rails, 40 lbs. $\frac{3}{4}$ yard	62	17	0	16	754	5	8
Joint-plates and dog-headed spikes	2	14	3	21	38	9	1
587 transverse sleepers					58	14	0
10,560 feet lineal longitudinal sleepers, 12 x 6...					528	0	0
116 cubic yards stone pitching					23	4	0
1,760 ,, broken stone ballast					528	0	0
1,760 yards laying of permanent way					220	0	0
500 cubic yards bluestone metalling, for horse track					375	0	0
					£2,525	12	9

Say £2,500 per Mile.

Whether locomotive power or horse traction be adopted, the estimates I have given are for permanent ways of the description I would recommend, as no cheaper roads, in my opinion, could be advantageously laid down and satisfactorily worked.

The cost of the permanent way being £500 per mile in favor of horse traction, the estimate for a line from Picton to Goulburn, to be worked by horses, would be as follows:—

Earthwork	£179,791
Masonry in bridges, culverts, &c.	68,907
Timber framing	27,499
Tunnels...	59,000
Permanent way, 81 miles, at £2,500	202,500
Stations...	10,000
Wrought-iron girders over the Wollondilly River	9,300
Side drains	14,256
Fencing ..	24,300
	595,853
Add contingencies and level crossings	52,167
	£648,020

Say £8,000 per mile.

The total difference, therefore, in cost of construction of the two lines is £40,500 in favor of the horse traction system.

The section from which the estimates have been made for the proposed Railway has been taken through a line of country selected with the greatest care, and will not, I believe, admit of any great improvement.

The

The amount, therefore, of £300,000 or £3,703 per mile, as suggested in the papers referred to me, is totally inadequate, in my opinion, to construct any description of Railway which can be serviceable to the Colony.

The estimate of £3,000 a mile, which has been named as sufficient to construct a Tramway on the gradients of the existing roads, can have been intended only to include the laying down of a permanent way, with a metalled track for the horses, and an allowance of £500 per mile for construction of earthworks, bridges, &c. This, however, must be a mere guess, as no information has ever been obtained from which a reliable estimate could be made.

I regret that the section of the main road from Picton to Goulburn is not finished, so that I might have been able to institute a comparison of the gradients on the road, and those proposed for the Railway; but I am in a position to do so with reference to the Western Road from Penrith to Bathurst.

I may here state that it is not my intention to adopt for the Western Railway a steeper gradient than 1 in 30, the same as the maximum for the Southern Line.

The Western Line of Railway is proposed to be carried on from the termination of the existing contract with Sir S. M. Peto and Co., at Penrith, across the River Nepean, north of the site of the present ferry, to the Township of Emu; thence ascending by a spur or inferior range, the line intersects the Western Road 330 feet above the level of Emu Plains, and crosses Knapsack Gully at a considerable elevation (410 feet above Emu Plains) reaching the summit of Lapstone Hill, near the Old Pilgrim Inn, on the Western Road. The main range, which divides the tributaries of the Nepean and the Cox from those of the Grose River, is then followed to near Shepherd's Toll-bar (Mount Victoria); at which point the line diverges to the north along Darling's Causeway; which divides the waters of the River Lett from the sources of the Grose River to Bell's line of road, or the range dividing the River Lett and River Grose tributaries from those of the River Colo. This range is then followed to Dargan's Creek, at which point the line diverges in a westerly direction, and crossing the range between Dargan's Creek and Brown's River, reaches Lithgow's Valley by descending one of the tributaries of Brown's River. This valley is then followed to a point on the Mudgee Road, near Coerwul, where Brown's River intersects it; thence crossing the range between Brown's River and the Middle River, the line continues through a level country to the Middle River Range, which is crossed with a short tunnel (143 yards); thence passing Wallerawang or Piper's Flat, to the north, it crosses Cox's River, and follows the Horse Gully to the lowest point in the main dividing range, between the eastern and western waters, a short distance north of the Township of Rydall. From this point the line crosses the Western Road, and follows generally the course of Solitary Creek to within half a mile of its confluence with the Fish River; thence running round the foot of Tarana Mountain, and crossing an undulating country, it reaches Dirty Swamp, Tyndale's Hollow, and Bathurst Plains, terminating near to the Denison Bridge, at Bathurst.

The following is the estimated cost of the line just described:—

							(Total length, 111 miles.)		
							£	s.	d.
Earthwork	412,141	0	0
Masonry in culverts	43,153	0	0
Timber framing...	41,786	0	0
Wrought iron in viaducts and masonry to piers	100,000	0	0
Tunnelling (143 yards)	5,720	0	0
Permanent way	333,000	0	0
Fencing (at £300 a mile)	33,300	0	0
Side drains	19,536	0	0
Stations	10,000	0	0
							<hr/>		
Contingencies, including station arrangements, road and creek diversions, and level crossings							111,364	0	0
							<hr/>		
							£	1,110,000	0 0

Or at the rate of £10,000 per mile.

If

If Tramways be laid on the present surface of the Western Road, between Penrith and Bathurst, the total elevation over which the traffic will have to be carried is 9,491 feet, which, as compared with the ascent on the proposed Railway of 7,344 feet, shews a difference in favor of the line selected for the Railway of 2,147 feet; consequently all traffic now passing over this Road has to be lifted 2,147 feet higher than necessary.

I append tables of gradients on the Western Road, and on the proposed Southern and Western Railways; from which it will be seen that on the Western Road there are inclines of 1 in 7, 1 in 8, and 1 in 9; and gradients from 1 in 10 to 1 in 15 frequently occur throughout the whole length of the road. The total ascent from Emu Plains to the top of Lapstone Hill is 680 feet, in a distance of 17,910 feet, or a general gradient of 1 in 26; but on portions of this incline there are gradients of 1 in 8, 1 in 10, 1 in 11, 1 in 13, 1 in 14, 1 in 15, and 1 in 16.

At 42 miles from Penrith the following gradients occur on the Main Western Road. The total descent in a length of 9,706 feet, is 820 feet, composed of gradients of 1 in 6 for 80 feet, 1 in 7 for 460 feet, 1 in 8 for 1,260 feet, 1 in 9 for 960 feet, 1 in 11 for 1,020 feet, and 1 in 12 for 2,350 feet; and there are others of 1 in 13, 1 in 15, and 1 in 16.

At 48 miles from Penrith, in a distance of 9,305 feet, there is a total ascent of 657 feet, composed of gradients of 1 in 8 for 520 feet, 1 in 9 for 200 feet, 1 in 10 for 655 feet, 1 in 11 for 2,130 feet, followed by gradients of 1 in 12, 1 in 14, and 1 in 15. At 62 miles from Penrith, in a length of 15,092 feet, there is a total rise of 949 feet, portions of which are 1 in 8, 1 in 9, 1 in 10, 1 in 11, and 1 in 12. The tables of gradients on the Western Road shew, in addition to the length, the rise and the fall of each ascent and descent, the number of horses required to convey, at the rate of 3 miles an hour, a load of 80 tons over each ascent, and also the tractive force in pounds, required on each ascent, to overcome gravitation and friction. This load of 80 tons has been taken for the road, in order to make a comparison between the cost of locomotive and horse traction, as the engines I propose to use on the Railway will be of sufficient power to take 80 tons, at the rate of 12 miles an hour, over the maximum gradient.

In calculating the tractive force required to overcome the different inclines on the Western Road, no allowance has been made for increased friction on curves, which are frequent; and in some instances only 40 feet radius. On reference to the tables of gradients it will be seen, that, with a load of 80 tons, supposing the friction to be reduced to the minimum of 8 lbs. per ton, 184 horses will be required to overcome the steepest gradient of 1 in 8; and although this number of horses will not be necessary throughout the whole distance, on each stage, still, as gradients of 1 in 8 are of frequent occurrence, the required force must be provided when such gradients are met with.

The effective tractive power of a horse may be taken on the level as under:—

	At 2 Miles an hour, 176 lbs.	
	" 2½ " "	150 "
	" 3 " "	125 "
	" 3½ " "	104 "
	" 4 " "	83 "
	" 4½ " "	62½ "
	" 5 " "	41½ "

Although this is the tractive force which a horse is supposed to exert on the level, this force rapidly diminishes with increase of inclination. A horse will doubtless exert for a short time a power equal to 420 lbs., but his useful effective power, day by day, has been ascertained to be not greater than that stated above.

On the main road (down line) between Penrith and Bathurst, the total length of ascents is 261,103 feet; the total length on the level, 10,088 feet; and the length of descents, 207,920 feet.

Over the same road, on the up line (Bathurst to Penrith), the total length of ascents is 207,920 feet; the total length on the level is 10,088 feet; and the length of descents, 261,103 feet, or about 50 miles. It, therefore, appears that, although on the down line there are 39 miles of descending gradients, and on the up line 50 miles of descending gradients, yet no advantage can be taken of these if the line be worked by horse power; as,

in

in consequence of the intervening ascending gradients, which occur in rapid succession, the number of horses required to overcome the maximum ascent must travel with the load throughout the whole journey, and the same cost of working must be incurred as if no such favorable conditions existed. Nor can any great advantage be taken of the momentum which might be acquired on the descending gradients to relieve the tractive force required on the ascending ones, as any great increase of speed would be attended with so much danger as practically to exclude its adoption. Brakes will be required throughout the entire journey, sufficiently powerful to overcome gravitation (minus friction), on the steepest decline, and although the motive animal power travelling with the load would be more than sufficient for this purpose, it cannot be made available, and mechanical means have to be resorted to.

LOCOMOTIVE POWER.

On reference to the tables of gradients for the Western Railway, it will be found that, on the down line from Penrith to Bathurst, the total length of ascending gradients is 270,195 feet, or about 51 miles; the total length on the level 60,490 feet, or about 12 miles; and the total length of descending gradients 245,375 feet, or about 46 miles. On the up line, from Bathurst to Penrith, the total length of ascending gradients is 245,375 feet; the total length on the level 60,490 feet; and the total length of descending gradients 270,195 feet, or about 51 miles. It is, therefore, apparent that on the down line the tractive power of the engine would be required to overcome gravitation and friction only for 51 miles, and to overcome friction only for 12 miles, the remaining 46 miles being worked almost entirely by gravitation.

On the up line, Bathurst to Penrith, the tractive power of the engine would be required to overcome the resistance due to gravity and friction only on 46 miles, and to friction only for 12 miles, the remaining 51 miles being worked almost entirely by gravitation. It will therefore be seen, that out of a total distance of 220 miles (up and down traffic) the full power of the engine will be required only on 122 miles, and that for the remaining 97 miles little or no motive power will be necessary.

The line has been laid out on a system of undulating gradients, by which a considerable saving will be effected on the descending gradients, as the momentum acquired on the descents will decrease the power otherwise necessary to overcome the ascents.

HORSE TRACTION.

It has been assumed that 24 miles a day is the most effective journey for a horse, under the conditions previously mentioned; and on this assumption I have divided the Western Road, commencing at Penrith, into stages of 12 miles each, the horses to work two trips.

Stage No.	Maximum Gradients.	No. of Horses required.
1.	$\frac{1}{8}, \frac{1}{10}, \frac{1}{11}, \frac{1}{13}, \frac{1}{14}, \frac{1}{15}$	184
2.	$\frac{1}{8}, \frac{1}{9}, \frac{1}{10}, \frac{1}{12}, \frac{1}{13}, \frac{1}{14}$	184
3.	$\frac{1}{9}, \frac{1}{10}, \frac{1}{12}, \frac{1}{13}, \frac{1}{15}, \frac{1}{18}$	166
4.	$\frac{1}{6}, \frac{1}{7}, \frac{1}{8}, \frac{1}{9}, \frac{1}{10}, \frac{1}{11}, \frac{1}{12}, \frac{1}{13}, \frac{1}{14}, \frac{1}{15}$	184
5.	$\frac{1}{7}, \frac{1}{8}, \frac{1}{9}, \frac{1}{10}, \frac{1}{11}, \frac{1}{12}, \frac{1}{13}, \frac{1}{14}, \frac{1}{15}$	184
6.	$\frac{1}{7}, \frac{1}{8}, \frac{1}{9}, \frac{1}{10}, \frac{1}{11}, \frac{1}{12}, \frac{1}{13}, \frac{1}{14}, \frac{1}{15}$	184
7.	$\frac{1}{8}, \frac{1}{10}, \frac{1}{11}, \frac{1}{12}, \frac{1}{14}, \frac{1}{15}$	184
8.	6 miles only $\frac{1}{18}, \frac{1}{22}, \frac{1}{30}$, performing 4 journeys	43
Total number of horses required ...		1,313

The following is an estimate of the cost of hauling 160 tons (80 tons each way), by horse traction, between Penrith and Bathurst, assuming that a Railway be laid upon the existing road, length say 90 miles:—

Forage for 1,313 horses, at £40 per annum	£52,520	0	0
Horse-keepers (164), at £104	17,056	0	0
Drivers (220), at £130	28,600	0	0
Brakesmen (220), at £130	28,600	0	0
Horse-shoeing and farriery, at £7 each	9,191	0	0
Repairing permanent way, at £130 per mile	11,700	0	0
Maintenance of horse track, £450 per mile	40,500	0	0
Repairs to harness, 1,313 horses, at £2 each	2,626	0	0
				£190,793	0	0

Assuming

Assuming that 80 tons be delivered in Bathurst, and 80 tons in Penrith each day, the total quantity conveyed per annum would be 50,080 tons, at a total cost of £190,793, being at the rate of £3 16s. 2d. per ton from Penrith to Bathurst, or at the rate of 10d. per ton per mile. For the purpose of shewing the decrease in cost of haulage by adopting better gradients, I give below an estimate of the cost of hauling 80 tons, as in the former case, over the gradients proposed for the Railway, the maximum being 1 in 30. The total length of line is 111 miles, and is divided, as in the former estimate, into stages of 12 miles each. On 9 stages the number of horses required on each stage is 54, and on the 10th stage, 3 miles in length, 7 horses only are required. The total number of horses therefore is 493.

Forage for horses, at £40 per annum	£19,720	0	0
Horsekeepers (62), at £104	„	6,448	0	0
Drivers (82), at £130	„	10,650	0	0
Brakesmen (82), at £130	„	10,660	0	0
Horse-shoeing and farriery, £7 each	3,451	0	0
Repairing permanent way at £130 per mile	14,430	0	0
Maintenance of horse track, £150 per mile	16,650	0	0
Repairs to harness for horses, at £2 each	986	0	0
				<u>£83,005</u>	<u>0</u>	<u>0</u>

The stages being the same as on the existing road, and the mileage greater, the time occupied on the journey from Penrith to Bathurst, at 3 miles an hour, would be 3 days, 37 miles each day. The total tonnage per annum being 50,080 tons, and the cost £83,005, the cost per ton would be £1 13s. 2d., or at the rate of 3½d. per ton per mile.

LOCOMOTIVE ENGINE POWER—COST OF WORKING.

The proposed line to Bathurst is 111 miles in length, with a maximum gradient of 1 in 30; the speed for goods trains is taken at 12 miles an hour, including stoppages, and the load carried is to be 80 tons each way per day.

Cost of haulage for single journey, including fuel	£	s.	d.	£	s.	d.
(coal), oil, tallow, waste, enginemen, firemen, and						
repairs to engines, and water and pumping	...	11	3	7		
					2	
Cost of double journey, or 222 miles	22	7	2	
Permanent way, two men to a mile	88	16	0	
Working days per annum	313	×	111	3
Four guards, two to each train, at 12s. each per day,						
per annum			751	4
					<u>£35,543</u>	<u>15</u>
						<u>2</u>

Two engines making one trip per day, or 111 miles each, would convey 160 tons per day, or 50,080 tons per annum; and the total cost of working being £35,543 15s. 2d., the cost per ton would be 14s. 2d., or at the rate of 1½d. per ton per mile.

By referring to the estimate for conveying 50,080 tons per annum a distance of 90 miles, by horse traction, at the rate of 3 miles an hour, on a railway laid down on the existing road, it will be found that the cost per ton is £3 16s. 2d., or 10d. per ton per mile.

That to convey 50,080 tons per annum a distance of 111 miles, by horse traction, at the rate of 3 miles an hour, over the gradients proposed for the Railway, the cost per ton would be £1 13s. 2d., or 3½d. per ton per mile.

And that to convey 50,080 tons per annum a distance of 111 miles, by locomotive engines, at a speed of 12 miles an hour, on the gradients proposed for the Railway between Penrith and Bathurst, the cost per ton would be 14s. 2d., or at the rate of 1½d. per ton per mile.

This

This amount of $1\frac{1}{2}$ d. per ton per mile is the actual cost for working; but the rate per ton per mile to be charged for haulage should be sufficient to defray the cost of working, and provide for the interest, on the amount expended in the construction of the Railway, and in the purchase of rolling-stock.

Assuming the traffic between Penrith and Bathurst to be 50,000 tons each way per annum, the total cost for haulage over tramways, laid on the existing road, would be £380,833 6 8

The same amount of traffic, if taken by horse traction over the gradients proposed for the Railway, would cost for haulage 165,833 6 8

And if hauled by steam power over the gradients proposed for the Railway, the cost would be 70,833 6 8

Shewing that, by the adoption of the gradients proposed for the Railway, a saving would be effected annually of £215,000 on the haulage of 100,000 tons between Penrith and Bathurst, horse traction being used in both cases.

If steam power be used on the proposed Railway the saving per annum, as compared with the cost for haulage over the gradients on the existing road, would be £310,000, and, as compared with horse traction over the same gradients, the saving would be £95,000.

The estimate for the cost of construction of the line is	...	£1,110,000	0	0
Cost for rolling stock for the traffic stated above	20,000	0	0
Total	£1,130,000	0	0

In the absence of any reliable statistics as to the traffic on the Western Road, I will assume that the tonnage is 80 tons each way per day, or 50,080 tons per annum, for up and down traffic; and if the charge for the transport of goods by steam power be taken at sixpence per ton per mile, the total receipts would be £138,972 0 0

Working charges, including locomotive power, maintenance of permanent way, and wages of station clerks, and porters... 46,324 0 0

Nett receipts... .. £92,648 0 0

Interest, at the rate of 5 per cent., on the total expenditure of £1,130,000 (*exclusive of land*) 56,500 0 0

Leaving... .. £36,148 0 0

to provide for renewals of way and works.

In the above estimate of receipts, passenger traffic has been entirely omitted, nor has any amount been included for the conveyance of the mails, or of horses, carriages, sheep, or cattle. After excluding these sources of revenue it will be seen from the above statement that a goods traffic, even considerably less than that assumed, would justify the expenditure proposed for the construction of this line.

I may add, that the sections of the lines to Bathurst and Goulburn, from which these estimates have been made, were those originally taken; they were abandoned, however, for more direct lines, with better gradients and works of a more costly and permanent character; but, as it has been stated that the resources of the Colony would not justify so large an expenditure, I have reverted to the sections originally taken by me, and prepared estimates for the construction of lines of a less costly description, involving steeper gradients and increased length. Irrespective of the cost of working the maximum gradients, such as $\frac{1}{8}$, $\frac{1}{6}$, &c., which are of frequent occurrence on the main roads of the Colony, I doubt if such inclines could be worked with safety, if the friction be reduced by the substitution of iron rails.

A considerable diversity of opinion no doubt exists as to the power which a horse will exert on inclines, such as are met with on the Western Road; but, assuming that his power

has

has been much underrated, still, as estimates have been made for haulage over the gradients on the existing road, and also over the gradients proposed for the Railway—and as in the former case 1,313 horses are required, and in the latter only 479, to perform the same work—it follows, that whatever may be the average power of a horse, his useful effective force is nearly three times greater on the gradients proposed for the Railway, than on those on the existing road; or it may be seen, on reference to the Tables, that less than one-third the number of horses are required to perform the same amount of work when the gradients are 1 in 30, than would be necessary if the gradients were 1 in 8.

In estimating the cost of haulage by horse traction, no allowance has been made for the number of horses which must be kept to replace those unable to work from sickness or accident; and from information furnished by Messrs. Crane & Roberts, the present mail contractors on the Southern and Western Roads, it appears that an increase of 25 per cent. would have to be provided to meet such contingencies; and that on the Southern Road the entire stock of horses has to be renewed every two years. If it be the case, that one-half the number of horses must be replaced every year, a considerable additional sum should have been charged upon the Estimates for the cost of horse traction.

Having carefully considered the advantages and disadvantages of the two systems, and the great reduction which can be made in the cost of working, by the adoption of better gradients than those on the existing roads, I have no hesitation in recommending that the lines described by me to the south, and to the west, as well as the proposed extension to the north, be constructed, and that they be worked throughout by steam power.

The result to the Colony would be greater expedition in means of transport, greater economy, greater comfort and regularity, and above all, greater safety, than by any other system of locomotion.

I have, &c.,

JOHN WHITTON.

APPENDIX.

A.

EXTRACT from Letter, dated 20 May, 1861, addressed to His Excellency Sir John Young, by Captain Ward, Royal Engineers.

“ Mark out a line from Campbelltown to Goulburn (a distance of 80 miles), that shall not cost in constructing more than £300,000, the same to be adapted for carrying a locomotive engine of 13 tons weight, including water. Gradients not to be steeper than 1 in 20, nor the curves sharper than 200 yards radius, except in positions where it may appear more economical to surmount slopes by horse-traction, or stationary engines, or by zig zags.”

B.

NEW SOUTH WALES.

GREAT WESTERN ROAD. TABLES OF GRADIENTS. PENRITH TO BATHURST.

NOTES.—In the column headed "No. of Horses" is shewn the number of horses required to haul 80 tons over the maximum gradient at the rate of 3 miles per hour. The figures in the column headed "Tractive Force in Pounds" shew the tractive force in pounds required to overcome gravitation and friction on each gradient for 80 tons. Friction taken at 10 pounds per ton in all cases. These Tables are compiled from Sections of the Western Road taken by the Royal Engineers, under the direction of Captain Hawkins, R.E. The dimensions are given in feet.

GREAT WESTERN RAILWAY GRADIENTS. PENRITH TO BATHURST.

NOTE.—In the column headed "No of Horses" is shown the No. of Horses required to haul 30 tons over the maximum gradient at the rate of 3 miles per hour. The figures in the column headed "Tractive Force in Pounds" show the tractive force in pounds required to overcome gravitation and friction on each gradient for 30 tons. Friction taken at 10 pounds per ton in all cases. The dimensions are given in feet.

APPENDIX.

GREAT SOUTHERN RAILWAY. PICTON TO GOULBURN. GRADIENTS.

NOTES.—In the column headed "No. of Horses," is shown the number of horses required to haul 80 tons over the maximum gradient at the rate of 3 miles per hour. The figures in the column headed "Tractive Force in Pounds" show the tractive force in pounds required to overcome gravitation and friction for the maximum gradient for 80 tons. Friction taken at 10 pounds per ton in all cases. The dimensions are given in feet.

**RAILWAY OBSTRUCTION TO GAOL AND COURT HOUSE RESERVE
IN THE TOWN OF MAITLAND.**

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly appointed on the 25th October last, "to inquire into and report upon the allegations contained in the Petition of the Inhabitants of Maitland and its vicinity, presented to this House on the 12th March last, having reference to the Railway Obstruction to the Gaol and Court House Reserve, with power to send for Persons and Papers," have agreed to the following Report,—

Your Committee, in the course of their Inquiry, have examined as witnesses the Gentlemen named in the margin* (whose evidence will be found appended hereto), and, after careful consideration, are of opinion that the allegations of the Petitioners have been substantially proven.

*The Rev. Joseph Oram ;
George Boyle White, Esq. ;
Samuel Clift, Esq. ;
Mr. J. Brettie ;
John Whitton, Esq., C.F.

It appears, from the evidence, that the proprietors of land in Maitland, became purchasers under a certain recognized official plan shewing access to the Gaol and Court House Reserve by William-street and Bank-street.

That the blocking up of those streets by the Railway embankment, has caused a serious injury to the owners and occupiers of land, by depriving them of access to the Gaol and Court House, and by throwing back the water so as to cause the partial submersion of houses in those streets, thereby greatly depreciating the value of property.

Your Committee are of opinion, that the blocking up of those streets is a breach of faith towards those who became purchasers of land according to the official plan, and who were induced to give high prices for such land in Bank-street, because of the ready access to the Gaol and Court House Reserve.

Your Committee find that a sum of Two thousand five hundred pounds was voted by this House, as shewn by the Estimates for 1860 (the funds having been provided by Parliament in the Act 23 Vict., No. 10, and assented to 19 June, 1860) "to construct a bridge in Bank-street, East Maitland," which sum will be sufficient.

In conclusion your Committee recommend that the embankment crossing Bank-street be removed, and a bridge constructed.

JAMES DICKSON,

Chairman.

Legislative Assembly Chamber,
Sydney, 6 December, 1861.

118

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 12 NOVEMBER, 1861.

MEMBERS PRESENT:—

Mr. Dickson, | Mr. Piddington,
Mr. Cummings.

James Dickson, Esquire, called to the Chair.

Resolution of the House (Votes No. 31, entry 12) appointing the inquiry before the Committee.

Committee deliberated as to their course of procedure.

Resolved,—

That Messrs. Samuel Clift, Joseph Brettle, William Cains, John Elliott, and G. B. White, be summoned to give evidence at the next meeting.

[Adjourned to Friday next, at half-past *Eleven* o'clock.]

FRIDAY, 15 NOVEMBER, 1861.

MEMBERS PRESENT:—

J. Dickson, Esquire, in the Chair.

Mr. Piddington, | Mr. Cummings,
Mr. Rusden, | Mr. Faucett,
Mr. Arnold.

Petition of the Inhabitants of Maitland and its vicinity, relative to Railway Obstruction to Gaol and Court House Reserve,—presented to the House 12 March, 1861,—before the Committee.

Rev. Joseph Oram called in and examined.

Witness withdrew.

George Boyle White, Esq., called in and examined.

Witness withdrew.

Samuel Clift, Esq., called in and examined.

Witness withdrew.

Mr. Joseph Brettle called in and examined.

Witness withdrew.

Messrs. W. Cains and J. Elliott, witnesses summoned this day, in attendance, but their several examinations dispensed with.

J. Whitton, Esq., *C.E.*, to be summoned as a Witness for Friday next.

[Adjourned to Friday next, at *Eleven* o'clock.]

FRIDAY, 22 NOVEMBER, 1861.

By direction of the Chairman, the Meeting of the Committee, convened for this day,
[Postponed to Friday next, at *Eleven* o'clock.]

FRIDAY, 29 NOVEMBER, 1861.

MEMBERS PRESENT:—

J. Dickson, Esquire, in the Chair.

Mr. Arnold, | Mr. Rusden,
Mr. Piddington, | Mr. Cummings,
Mr. Eckford.

J. Whitton, Esq., *Engineer-in-Chief, Railway Department*, examined.

Witness withdrew.

Committee deliberated.

Chairman requested to frame Report.

[Adjourned to Friday next, at *Eleven* o'clock.]

FRIDAY,

FRIDAY, 6 DECEMBER, 1861.

MEMBERS PRESENT :—

J. Dickson, Esquire, in the Chair.
Mr. Piddington, | Mr. Faucett,
Mr. Rusden.

Committee deliberated.
Chairman submitted Draft Report.
Same read, and certain Amendments made therein.

Resolved,—

That the Report, as amended, be the Report of the Committee.
Chairman requested to report to the House.

LIST OF WITNESSES.

Legislative Assembly.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

GAOL AND COURT HOUSE RESERVE, MAITLAND. (RAILWAY OBSTRUCTIONS.)

FRIDAY, 15 NOVEMBER, 1861.

Present:—

MR. ARNOLD,
MR. CUMMINGS,
MR. DICKSON,

MR. FAUCETT,
MR. PIDDINGTON,
MR. RUSDEN.

J. DICKSON, ESQ., IN THE CHAIR.

Reverend Joseph Oram called in and examined:—

1. *By the Chairman*: You live at East Maitland? Yes.
2. Have you been long there? About seven months.
3. In what part of East Maitland do you reside? In Bank-street, at the lower part, near the railway, where Mr. Robinson lived.
4. Have you suffered any inconvenience from water since you have been there? Yes, nearly all the time we have been there. About a fortnight after we arrived we had a flood of water some four feet deep on the premises, and ever since we have been suffering inconvenience. It spoiled the kitchen, so far as the use of it goes, and the room I had as a study we have been obliged to convert into a kitchen, so that I have been without a study ever since; and, unfortunately, I had my books in this room, which had been used as a school-room, and I was going to have as a study, and these were seriously injured.
5. And you have sustained loss? Yes, the loss to me is serious; my entire library was spoiled. It had taken me years to collect my books one after the other as I was able.
6. When did this take place? About the 3rd May, on Sabbath evening, it was.
7. And you have been inconvenienced by the water since then? Yes, every time we have had much rain, or heavy rain, it has come on the premises; it has not come into the house since—it has covered the yard.
8. Do you know the cause? It appears to me that the cause is that there is not a sufficient outlet for the water, since the construction of the railway; that they did not leave sufficient room for the water to escape as it comes down from the hills; it collects there, it cannot get away, and is thrown back upon this property.
9. Is it in consequence of the railway embankment that crosses Bank-street that the water is thrown back upon your premises? Entirely so, I should say.
10. It is not within your knowledge whether the house you now occupy was subject to the same inundation before the embankment was there? Not within my own knowledge, but from report. I understand there was no water-thrown back there before the construction of the railway.
11. Has the house you live in been damaged in consequence of this? Certainly the property has been injured. If it were for sale, and I wished to live there, I would not think of purchasing it, on account of its liability to inundation.

Revd. Joseph Oram.
15 Nov., 1861.

- Revd. Joseph Oram.
15 Nov., 1861.
12. *By Mr. Piddington*: How high is the embankment where it intersects Bank-street? I can scarcely answer that question.
13. Can you form no idea of its height? I should suppose it must be some thirty or forty feet high.
14. Of course an embankment of that height must tend to collect water? Yes, to throw it back. It cannot get away.
15. What would you recommend to remedy this evil? I should recommend a bridge being erected, or an opening being made, as it appears to me that this embankment interferes with the line of street—I believe there was a street there.
16. If a bridge were constructed it would carry off the accumulation of water by which your property is now injured? Yes.
17. Are you aware that a sum of money was voted a short time ago for the purpose of constructing a bridge at that point? No, I am not aware of that.
18. *By Mr. Cummings*: Are the landed proprietors in your immediate neighbourhood subject to the same inconvenience? Yes, all the property in front of Bank-street is subject to the same inconvenience more or less.
19. It is occasionally injured from the accumulation of water? Yes.
20. Seriously injured? In some cases; for instance, in my case, the property where I live is seriously injured.
21. As long as this obstruction remains in its present state is it likely the same occurrences will take place? Yes, especially in the winter, if we have three or four days rain; after a few hours heavy rain we are pretty sure to be flooded, as we were in May last.
22. You think if a bridge were erected at this point it would save the property in your immediate neighbourhood from receiving farther injury from that cause? Yes, the water would get away.
23. Has the stoppage of the water by this embankment been the great cause of the accumulation of water which has so much injured the property in that immediate neighbourhood? I believe that is the sole cause.

George Boyle White, Esq., called in and examined:—

- G. B. White, Esq.
15 Nov., 1861.
24. *By the Chairman*: Did you sign a Petition to the Legislative Assembly respecting the embankment across a certain street in East Maitland? I did.
25. Do you know the street crossed by that embankment? I do. I laid out those streets myself, many many years ago.
26. Do you consider that the embankment running across that street is an injury and inconvenience, and that it tends to depreciate the property there? Decidedly. I may state that I was called upon by Mr. T. W. Robinson, in 1859, in the month of May or June, to give my opinion upon the subject; he had written to the Railway Department twice or thrice, and they had answered his letter. I have a copy of the letter here which I wrote to Mr. Robinson on that occasion. It was arranged that Mr. Whitton was to have met me there on the spot; he did not come himself, but sent Mr. Bewick, of his department. I met Mr. Bewick on the 5th July, 1859, on the ground over the culvert; the culvert at that time was in a state of collapse, and I saw that the gentleman who had been sent to meet me knew nothing about it. When I spoke to him on the subject he said the watercourse there could be made available in about six or eight hours, but that if the parties there still persisted in saying that the railway was an obstruction they would not do it. I said, "If that is the case I will have nothing more to say to you," and left him. Mr. Robinson was present when that occurred. This is a copy of the letter I have referred to. (*The witness handed in the same. Vide Appendix.*)
27. Are you aware that the embankment has caused any injury to property there? Decidedly the embankment has caused this injury—that the water lies there, and it never did lie there before. I knew the house which Mr. Robinson occupied when it was built by Mr. Keddie, twenty years ago; and in 1853-4, and '5, I had an office directly opposite to it, and I never saw it in the state it has been in since the embankment was put up, about the end of 1857.
28. It is in consequence of the embankment that the adjoining lands have been flooded? Yes; there is not sufficient scope to allow the water to pass off.
29. What would you recommend? An open bridge, such as that thrown across the road to Green Hills; in fact, I think open bridges are better adapted for railways than brick culverts. There is a watershed there of from 250 to 300 acres; the range that runs immediately south-east is a steep range, and the waterfall is very great, and when the water comes down with a rush the five-foot culvert is apt to be stopped up with rubbish—the culvert is, in fact, only five feet by three. The water lies up against the embankment, and houses some few yards from it are completely flooded. I examined a house the other day for Mr. Robinson, and found that water had been in to the depth of four feet.
30. *By Mr. Piddington*: Is the culvert you speak of five feet wide? No, two feet eight inches; it is an egg-shaped culvert.
31. The width of the culvert is not three feet in the clear? Not three feet; and at the time I examined it the water was standing at the culvert within eighteen inches of the top of it, and on the other side it was dry; some rubbish was standing in the centre of the culvert, and the water would not run through it.
32. *By the Chairman*: Are there any engineering difficulties to prevent a bridge being thrown across? Not any.
33. Could a bridge be put there without obstructing the railway traffic? Certainly, just as easily as it could be put across the Morpeth road.

34. Is there any other method of remedying the evil complained of? I do not think there is any other than that of constructing an open bridge. These lands were laid out and the allotments were sold with a frontage to the street running directly into Newcastle-street and to Morpeth high road, and this embankment has deteriorated the frontage of the property of every individual in the street. G. B.
White, Esq.
15 Nov., 1861.
35. Did you lay out the town in this way (*referring to the plan*)? Yes.
36. Bank-street runs through to the Reserve of the Gaol and Court House? Yes; the Gaol and Court House Reserve, seven acres and a half, and it connected the high Newcastle road with the high road to Morpeth.
37. *By Mr. Rusden*: You stated that that culvert was in a state of collapse; by that I understand that it was completely choked? Yes; I pointed that out to Mr. Bewick, and he admitted that a couple of navvies in six hours could repair that, but he said he would not do it so long as the parties complained that the railway was an obstruction.
38. Can you state the height of the embankment? I did not measure it, but I think it is from eighteen to twenty feet high. When I had that answer made to me I thought it was perfectly useless going any farther into the matter.
39. When you inspected it the water had been stopped, and was within eighteen inches of the top of the culvert? Yes, and the whole of the other side of the culvert was perfectly dry.
40. How high would the top of the culvert be? About five feet; but there was the mark of wreck considerably above the top of the culvert; this was after the water had subsided some fortnight or three weeks.
41. You instanced one particular house, Mr. Keddie's, in which Mr. Robinson lived—I suppose this obstruction of the water has caused a great deal of damage to the surrounding allotments. I see in the petition the blocks 35 and 15 are particularly referred to? Particularly; because those properties are nearest to the culvert.
42. The premises on blocks 35 and 15 have all suffered considerably? Yes, it is very flat there, and after striking against the culvert the water comes back again.
43. As you are a practical man, what do you estimate would be the cost of an open bridge on piles, as a remedy for this evil? I think it could be done for about £1,200. I prefer a substantial bridge on piers.
44. Just such a bridge as crosses the Morpeth road a few yards farther on? Yes.
45. *By Mr. Piddington*: That is not a brick bridge? No; there are brick piers and the sleepers rest on bricks.
46. You would only require a bridge similar to that at Stoney Creek? Yes.
47. *By Mr. Rusden*: But not so extensive? Not so extensive, nor so long.
48. The parties complained of an obstruction in William-street? They are all obstructed in the same way. Day-street it was intended should be a frontage street to the Gaol and Court House Reserve; the railway now cuts through this Reserve which was seven and a-half acres for public purposes, for a Gaol and Court House.
49. It seems by the plan that William-street was intended to be the main thoroughfare to that Court House block? Yes.
50. The inhabitants now suffer great inconvenience from having to go round a considerable distance in order to go to the Court House? Yes; they have now to cross the railroad, and to go through two small gates to get to the Court House; and to get to it by a carriage or other vehicle, they have to go round under the railway bridge, by the Morpeth road, and to turn up to the right.
51. You are of course well acquainted with the locality—have you thought of any plan, or do you think a plan could be devised by which that street could be thrown open and the railway continued? Yes; I should not have taken the railway that way, but that having been done it now involves half a dozen crossings, which it would not if it had been taken above the Victoria Bridge instead of beneath. I was called upon by Mr. Bryson, the engineer, to look over the whole of the land—that was in 1856; I did go on it, but when Captain Martindale took charge of the railway after that the whole plan was changed; but I think the first plan would have been the least expensive to the country, and the shortest distance.
52. In what way do you suggest a remedy for that evil, so that William-street might be opened to the Court House? A similar method to that of crossing Bank-street,—you would have to lay an open bridge across.
53. Would you suggest that it should be made under the railway? Yes; as there is no watercourse there that might be done by arching.
54. The ascent rises there to the Court House? Yes; I would make a gradual incline all the way to the Court House.
55. That is the plan you suggest? If I were called upon to make a plan I would consider it more attentively; that is my impression now in conversing upon the subject.
56. *By Mr. Piddington*: I presume you think that a bridge with one archway would be sufficient in Bank-street? Yes.
57. A timber-piled bridge, with a bay or span of twenty feet, would be sufficient for all purposes? I would rather have it thirty feet; that would be quite sufficient.
58. £1,200 you think would be sufficient for the construction of such a bridge, as well as for removing the earth? I think so.
59. *By Mr. Rusden*: You did not, I think, state that it was necessary to have an arched bridge there? No; in speaking of an arched bridge I referred to William-street.
60. An open bridge on piles? Yes, just such a one as you see at Stoney Creek.
61. One of the least expensive? Yes.
62. An arched bridge would cost more money than one of these piled bridges? Yes.

G. B.
White, Esq.
15 Nov., 1861.

63. *By Mr. Cummings*: Is it your opinion that unless some such arrangements as you now suggest are carried out, the property in that neighbourhood will still be subject to inundation? Yes; within the last three months it has been twice under water. We have had two floods, and on each occasion the water has lain there until the evaporation has carried it away.

64. And that must continue to be the case until the embankment is removed, and the bridge is constructed, to allow the water to escape? Yes; I have known the country there for thirty years, and I never knew such circumstances to occur until the embankment was formed. Since then the property has been completely destroyed, and parties have been driven from the property—for instance, the oven of Mr. Brettle, the baker, was destroyed by the water soaking into the foundation.

65. And this is traceable to the smallness of the culvert there erected? Yes, the culvert is only five feet by two feet eight.

66. It gets stopped by the debris brought down by the heavy rains? Yes, after a heavy thunderstorm rubbish is washed down into the culvert, which is thus choked up, and forms part of the embankment.

67. *By the Chairman*: Are you aware whether the allotments were sold according to that plan, shewing the street running to the reserve? Yes; I prepared the plan for the occasion when these lots were sold.

68. Would it, in your opinion, be an advantage to have the street continued to the Court House and Gaol Reserve? Great.

69. And be an inducement to persons to give a higher price for the land? It was an inducement at the time.

70. Are you aware if any money has been voted for removing the embankment and constructing a bridge? I have heard of it, but I am not aware of it, except from seeing that £1,000 had been voted.

71. You are not aware that a sum of £2,500 has been voted for that especial work? No, I am not.

72. *By Mr. Piddington*: You are aware that no money has been expended, whatever may have been voted? I am quite aware.

73. *By Mr. Rusden*: Did you sign the petition presented to the House? Yes.

74. That petition is the same as that which has since been printed, and is now lying upon the table? Yes.

75. That petition states, "That your memorialists have made sundry efforts to relieve themselves from this inconvenience, as regards the filling up of the street at Bank-street. They succeeded in getting a sum voted by your Honorable House for the removal of the embankment across that street, and for erecting the railway on piers; but notwithstanding the vote was passed, the money has not been provided nor the work done?" It has not been provided nor has the work been done; I am aware of that; I saw it on Tuesday last.

76. *By Mr. Cummings*: At the time this land was sold by Government was there one open access to this reserve? Yes.

77. That was considered a matter of great convenience to the public? Yes, and many persons bought the land on account of its proximity to the Court House Reserve.

78. Do you believe that it induced the parties who bought land in the immediate vicinity to give higher prices? I am certain that some capitalists gave high prices for the land, looking to the future.

79. Is it your opinion that this obstruction is and will be injurious to the value of the land? It has very considerably deteriorated the property in value. I believe that some of the buildings already erected would not bring half the prices they would have brought if the proper plan—I may say the legitimate plan—had been carried out.

80. Can you form an idea of what it would cost to open a thoroughfare to the Court House Reserve? The bridge I am now speaking of would open a thoroughfare to the Court House Reserve, and I say that would cost from £1,000 to £1,200.

81. You are not alluding to that from William-street? That would cost £1,500, perhaps less, but if I had expected to be called upon to give an opinion upon that I would have looked at the matter more closely.

82. Is there any Government land in the vicinity of the Court House Reserve? Yes; the Court House and the railway passing through it occupy the seven and a half acres, and I should think there are four or five acres still belonging to the Government, which were reserved for Crown purposes.

83. *By Mr. Rusden*: That would be the reserve at the back of the Court House? (*The witness pointed out the position on the map.*)

84. *By Mr. Cummings*: This land will not be required for Court House accommodation? Not the whole, certainly not.

85. *By Mr. Rusden*: I gather that the sale of some of that land might pay for the bridge? I am satisfied it would. There would be great demand for it, as there is no inn in the neighbourhood, and you have to go the eighth of a mile before you can get shelter even.

86. The sale of this land would almost more than pay for the bridge? Yes, there would be considerable demand for it, for perhaps there is not a better stand for a large inn anywhere in Maitland.

APPENDIX.

West Maitland,
10 April, 1859.

G. B.
White, Esq.
15 Nov., 1861.

My dear Sir,

I duly received your note, enclosing a copy of letters Nos. 59/49 and 59/192, dated Railway Branch Department of Internal Communication, Sydney, 6th April, relative to "a culvert on the Government Northern Railway, near your property at Maitland, alleged to be insufficient to carry off the accumulation of drainage water in that locality," and setting forth, "I am directed by the Commissioner to inform you, that after full inquiry into the matter, he is inclined to the opinion that the inconvenience arises rather from the incompleteness of the drainage outside the fences of the railway, than for want of any greater provision for carrying off the water in the construction of the railway." You, therefore, ask me to give you the result of my experience for many years, as to the drainage of your property now, and before the railway embankment was thrown up in its vicinity. I willingly do so, believing that opinions must give way to facts, however theoretically great the authority that originates them. The country has been paying dearly for such opinions for years past. Railways, sewerages, fortifications, circular wharfs, have been, in their turn, the playthings of opinion; these are public property, and may serve, at the public expense, to teach men their profession, but private property ought not to be turned to the same account.

The railway embankment near your property has materially injured it; the water lays a couple of feet deeper than it used to lay there before its construction. The culvert for the watercourse does not run in the natural direction; and when any considerable fall of rain takes place it is not sufficient to carry the water off—the principle of engineering is to aid nature, not to obstruct it. In looking at this work I should have considered the reverse; indeed I believe the whole line of railway, as now existing, has been selected for its difficulties and expense—not for utility and economy; the more the expenditure the more the patronage.

It is possible that the first heavy flood will confirm my frequently expressed opinion of our railway works; humble though it may be, it is that of a practical man.

T. W. M. Robinson, Esq.,
Banks-street, East Maitland.

Yours, &c.,
G. BOYLE WHITE.

Samuel Clift, Esq., called in and examined:—

87. *By the Chairman:* You live in Maitland? Yes.
88. And have done for a number of years? Since 1827.
89. Have you purchased any allotments in the town of Maitland? A great many.
90. In what street? I have a great many in Bank-street. I have a great deal of property in Bank-street.
91. How many years ago is it since you purchased those allotments? Somewhere about twenty.
92. At the time you purchased these allotments, did you purchase according to a plan? According to a plan of Bank-street and Day-street that used to be at the Court House.
93. According to that plan did Bank-street run through to the Gaol and Court House Reserve? It ran through to the road which goes to Morpeth.
94. An embankment has been thrown across that street since? Yes.
95. Has that increased or diminished the value of your property? It has taken a third off the value of my property.
96. When you purchased the allotments did you consider the value of them increased by having free access to the reserve? I should say so; if I had known the water would have stayed there I would never have bought the allotments.
97. Has the embankment been a cause of serious injury to the allotments and properties there? My opinion is that it has been a great injury.
98. Will you state to the Committee what injury it has done? It has done a great deal of injury to different parts of my relation's property, and to my own. It has done a great deal of injury to Mr. Robinson's property. I cannot say to what amount.
99. Are you aware that it has prevented the water from running off, as it was accustomed to do before the embankment was thrown across? Before the embankment was there, no water used to stop there.
100. Since then has it done so? Yes. I have known it to rain for a month before the embankment was thrown across, and it has never stopped there; and it rained for only four hours a little while ago, and the place was under water. I used to have £3 a-week for my houses there, now I can only get £2. At times the tenants cannot get backwards and forwards for the water.
101. Are you aware whether any memorial was sent to the Government before the embankment was constructed? I believe there was, by Mr. Robinson and Mr. Mayo.
102. In opposition to the construction of this embankment? Yes; I believe I signed it, but I am not certain.
103. Are you aware whether any money has been voted for the removal of this embankment, and for erecting a bridge there? I believe £2,500 was put on the Estimates to open the embankment, some two years ago.
104. *By Mr. Rusden:* Did the water flood any of your allotments? No.
105. You are aware that it flooded a great many others in blocks 35 and 15? It floods a great deal that belongs to Mr. William Eckford.
106. The allotments marked as Mayo's were very much flooded? I believe there were two allotments very much flooded. Brettle lives on this allotment; he can give you better information than I can.
107. The Government have a great deal of vacant ground round the Court House? There is a great deal of vacant ground, but I do not know whether it is kept as a reserve.
108. If the Government were to offer any of this land for sale, do you think it would be bought up? I think very readily; I think I should buy some.
109. From its being in the neighbourhood of the Court House? Yes.

S. Clift, Esq.
15 Nov., 1861.

- S. Clift, Esq. 110. There is no accommodation in the neighbourhood? No; and there is no way of getting it without going half a mile round, in consequence of this embankment.
- 15 Nov., 1861. 111. Do you think if some of this land were sold it would pay for the necessary alteration required in making the culvert larger? I do not think it would be of any use to have a culvert there; there ought to be a main road there, the same as the Morpeth road.
112. It appears, from the feeling of the inhabitants, that if the Government were to sell some of the land I have just referred to, from this seven acre reserve, the cost of this alteration would be met by the proceeds? I think all that land would be very readily sold.
113. *By Mr. Piddington*: If any of the land in the neighbourhood of the Gaol were now sold by the Government, would you not give a much higher price for it if there were a bridge over Bank-street, than at the present time? I do not think anyone would buy it with the street stopped up.
114. *By Mr. Cummings*: The embankment in Bank-street is the cause of the injury of which you complain? It is. There was never any water at all there to do any harm until this embankment was made.
115. At the time you bought this land in Bank-street access was open to the Government reserve—was that an inducement to you to give a higher price for that land? Yes; I considered that we had a regular street to the Morpeth road.
116. And now you have been deprived of access in consequence of this embankment? Yes.
117. And you consider that a great injury to people in general in that part of the town? In the whole of the town, except to the people just along the Morpeth road; it cannot do them much harm.
118. As to the culvert which has been spoken of, do you consider the cost of that a complete waste of money? I think it was.
119. In consequence of that waste of money a great injury has been done to the landed proprietors in that immediate vicinity? It has.
120. If a pile bridge were constructed there, it would answer all the ends intended by allowing the water to escape? Yes; I never knew a drop of water to stop there before the embankment was formed; and I have been there close on to thirty years.
121. *By Mr. Faucett*: The embankment blocks up the entire street? Yes. I gave £300 for three-quarters of an acre there, because I considered that I had access to the Morpeth road.
122. Bank-street—was that ever continued along from the railway towards Mr. Muir's house? It continued to Morpeth road when I bought the allotments.
123. It was intended to come on to the Morpeth road in a straight line? Yes, to Mr. Muir's bill.
124. At present there is no appearance of a prolongation beyond the railway towards the Morpeth road? Before the embankment was there, people used always to drive that way.
125. Then the result is that Bank-street now stops at the railway? Yes.
126. I have frequently seen a large quantity of water near the railway, between the railway and Morpeth road—has that ever been increased by the stopping up of the railway? It never used to stop there before the embankment was made.
127. You are aware that there is a large quantity to be found there now? Yes, I am.
128. *By the Chairman*: You stated that you gave £300 for three quarter acres of land? Yes.
129. Was that in consequence of its being in a street, having access to the Court House? Yes, Bank-street, having access to the Morpeth road.
130. *By Mr. Cummings*: Now that there is this obstruction, what do you suppose is the value of this block of land for which you gave £300? In consequence of the obstruction of the access to Morpeth road, I do not believe, if it were offered for sale, without the improvements, it would bring £60.
131. *By the Chairman*: At what did you estimate the value of your property in Bank-street before this embankment was thrown across? I should think about £14,000.
132. What is your present estimate of its value? I cannot say; it has reduced greatly since this embankment was thrown across.
133. *By Mr. Faucett*: There is no doubt, whether your property has been depreciated in value or not, that this is a great obstruction and inconvenience to the inhabitants generally? Yes, the people have now to go half a mile round to get to the Court House, because the streets are stopped up.

Mr. Joseph Brettle called in and examined:—

- Mr. Joseph Brettle. 134. *By the Chairman*: You reside in Maitland? Yes.
135. How many years have you lived there? Over twelve.
136. In what part of Maitland do you reside? In Bank-street.
- 15 Nov., 1861. 137. You know the railway embankment? Yes.
138. Have you suffered any inconvenience since it has been constructed? Yes.
139. Will you state to the Committee the nature of the inconvenience you have suffered? I am not now living in the same place. I lived near the embankment for some years; but I now live about five hundred yards from the railway embankment, under Mr. Clift's.
140. *By Mr. Piddington*: On the other side of Law-street, towards Newcastle-street? Yes. In May last I had two feet and a half of water in my bakehouse.
141. *By the Chairman*: Was that caused entirely by the embankment? Yes.
142. Did you suffer any loss? Yes; I had some hay spoiled in the shed at the bottom of my yard, that was up out of the reach of all water, as I thought.

143. Did the house you lived in sustain any injury? On Sunday night I had to work in two feet and a half of water; in fact, the water was in my bed-room. When I got out of bed, between twelve and one o'clock, there was nearly five inches of water in my bed-room.
144. Did you occupy that house before the embankment was thrown up? No.
145. *By Mr. Faucett*: Did the same state of things occur frequently? No; I never saw it so bad before; it had been up several times before, but never so bad as in May last.
146. Your house had been flooded before, several times since the embankment had been thrown up, but never so bad as that? No.
147. You say you live four or five hundred yards away from the embankment? Yes.
148. *By Mr. Piddington*: Are all the houses in that neighbourhood subject to the same inconvenience as your own? Yes.
149. *By Mr. Faucett*: There is a pool of water I have seen frequently, more particularly in wet weather, on your side of the railway, near Mr. Mayo's cottage? Yes; there is always a pool of water there, and under the railway arch.
150. The water lies there at present? Yes; the pigs and geese could always find water there in the summer-time.
151. Used that pool of water to be there before this railway was made? No.
152. There used to be no water there? There was when there was rain, but it would go off in a day or so.
153. Did it supply a perpetual source of amusement for the ducks and geese before that? No.
154. But it does now? Yes.
155. There is a pool of water nearly opposite the place I speak of—or there was at the time I was last at Maitland, at the last Assizes—on the allotments in Bank-street, going away from the pool I have just spoken of, and crossing Day-street? That is the water-hole, at the right side of Day-street; that is a water-hole that was made many years ago.
156. Before this embankment was thrown across the street? Yes; it is now nearly filled up with mud; it was made by a man named Keddie.
157. Do you recollect whether Bank-street was continued as a street across where the railroad now is, towards the Morpeth road? I have always heard so.
158. Do you recollect it yourself? No.*
159. Bank-street is well defined along to the railway, but you do not recollect its being defined beyond the present line of railway towards the Morpeth road? No.
160. Do you recollect that street before the railway was formed? Yes.
161. You recollect Bank-street being distinctly marked at one end, but not at the other? Yes.
162. You are aware that at present there is no appearance at all of a continuation of Bank-street, where I speak of? Yes.
163. *By Mr. Piddington*: Do you not remember a cart track towards Mr. Muir's? Yes, but not a regular line of street.
164. *By Mr. Faucett*: There is a bed of water sometimes near the railway, between the railway and the Morpeth road—do you recollect that? After rain for a day or so, but formerly it ran away.
165. I have seen it there for days? Yes; it is down by Mr. Brown's, of Newcastle, paddock.
166. You recollect that? Yes.
167. Used that bed of water to be there to any extent before the construction of the railway? When it gets through the culvert there is no water more than there used to be.
168. Since the construction of the embankment does it lodge there in greater quantity than it used to do before? No.
169. Then it seems to pass away from that side, which is higher ground, through the culvert, towards your side? Yes.
170. The ground I speak of is a particularly low piece of ground? Yes, between the Morpeth road and the railway.
171. Near the railway? Yes.
172. Either from absorption, or by passing through the culvert, it does pass away in a few days? Yes.
173. There can be no doubt that the embankment is a great inconvenience? No.†
174. *By Mr. Cummings*: Before this embankment was thrown across, were you subject to the same injury from water as now? No.
175. Has property, from the embankment or from the obstruction of the culvert, been very much injured in that immediate neighbourhood? Yes.
176. Is that injury likely to continue after wet weather, or in wet weather, while the same obstruction remains? Yes; five or six hour's rain will almost drown us on our side of the town.
177. I suppose you are aware that water lodging on an improved property—on the inside or the outside of the walls of a building—is very likely to be injurious to the erection? Yes.
178. Very much so? Yes; I know in fact that an oven which I have rented from Mr. Clift, which has not been put up above three years, has split all the way up, from the water having risen there.
179. That must be a great injury to property of that kind? Yes.
180. And this injury is solely traceable to the obstruction of the culvert, and the embankment? Yes.
181. Can you form any idea of the depreciation or value of property from this cause—whether it has depreciated one-half, one-third, or one-fourth in value? I should say it has fallen one-half. There are some of the houses that people will not live in; you cannot get near them in wet weather.

Mr. Joseph
Brettie.
15 Nov., 1861.

*Revised:—"No" should have been "Yes." †Revised:—This "No" should have been "Yes."

- Mr. Joseph
Brettle.
15 Nov., 1861.
182. If these houses are subject to continual inundations, and are constantly in a damp state, people will abandon them if they can find premises anywhere else? Yes.
183. In consequence of the flooded state of the immediate neighbourhood the property has almost become useless? Yes.
184. *By Mr. Faucett:* Over what extent of ground does that spread? It goes from William-street to Bank-street. I am sure in May last there was a sheet of water on which a boat might have floated.
185. *By Mr. Cummings:* In William-street property suffers from the same cause? Yes.
186. The culvert which you say is one of the chief causes of this injury—was the erection of that, in your opinion, a complete waste of public money? Yes.
187. And that is the general opinion? Yes.
188. And that is one of the causes of the destruction of property in that immediate neighbourhood? Yes; the foundation of that culvert was laid eighteen inches too low in the ground.
189. Is it your opinion that an open bridge to allow the water to make its escape would be a means of saving property in that neighbourhood? Yes; or a large culvert.
190. *By Mr. Faucett:* Did I understand you to say that a boat would float in William-street? No; in Bank-street.
191. Do you mean to say that William-street was flooded in consequence of this embankment? Yes; the water is all kept back, from Bank-street to William-street.
192. Then, in fact, there is a double flood—a flood from the upper end of William-street, and also from the embankment—both coming from different directions and lodging on the lower part of William-street, near Day-street? Yes.
193. *By Mr. Rusden:* Did you sign this petition? Yes.

FRIDAY, 29 NOVEMBER, 1861.

Present:—

MR. ARNOLD,		MR. ECKFORD,
MR. CUMMINGS,		MR. PIDDINGTON,
	MR. RUSDEN.	

J. DICKSON, ESQ., IN THE CHAIR.

John Whitton, Esq., C.E., called in and examined:—

- J. Whitton,
Esq., C.E.
29 Nov., 1861.
194. *By the Chairman:* Have you read the evidence taken before this Committee? I have.
195. Is there anything in that evidence which you object to? A great many mis-statements have been made with reference to the culvert under the railway at Bank-street, which I wish to reply to generally. Perhaps I had better point out to the Committee the position of the creek at East Maitland at the time the railway was first projected, and also to the street called Bank-street, which was laid down upon the plans of East Maitland. (*The witness produced a plan.*) This is the original survey of the line for the extension into West Maitland. At the time this survey was made, the whole of Bank-street where the railway crosses was a pond or creek, and I did not think it necessary to advise the Commissioners to erect a bridge across it. Bank-street is shewn in the original plans of East Maitland, but it has never been used as a street, and never could be whilst in that condition.
196. *By Mr. Piddington:* What was the width of the pond where it crossed Bank-street? I think it would be about fifty feet wide.
197. Do you assert that there was a pond fifty feet wide at the intersection of Bank-street—was that permanent water? Yes.
198. *By the Chairman:* It was only in wet weather? I never saw it otherwise, and I think from the formation of the ground it never could be otherwise; there was no outlet for the water, and the only opportunity the water had to get off was by evaporation, as at present, because the land on the east side is considerably higher than that on the west (*referring to the plan.*) I never was at Maitland before the railway was completed that I did not see horses coming down there to be watered.
199. What was the year when the survey was first made? 1857.
200. Were you acquainted with the locality before that time? I was before the survey was made, but not before 1857.
201. When was this survey completed? In May, 1857.
202. *By Mr. Arnold:* When did you first see it? In February or March, 1857.
203. It was then in that state? There was water there then, and I looked upon it as a pond for the accommodation of the town—as a complete watering place; so much so that I determined not to lower the ground outside the railway fence, lest those who used the pond should claim compensation for the loss of water.
204. *By the Chairman:* You are aware that there was a street laid out in the original plan? I was aware that there was a street laid out before this survey was made.
205. Are you aware whether any objection was taken by the inhabitants of Maitland to this embankment? I believe no objection was taken at the time, but before the work was completed I think objection was taken.
206. Before the embankment was completed? I am not quite clear upon that; I think it very possible.
207. You are aware that statements have been made by several witnesses, that since the embankment has been made there, the houses in that locality have been flooded in a way they never had been before? I am aware of that statement, and I entirely disagree with it.

208. Do you believe that it is not the case? I do not say it is not the case that they have been flooded; but I say such floods have not been caused by the railway embankment. I think I can shew the Committee that it is impossible it could be so. This is the section (the witness referred to the same) taken from Day-street, through the culvert under the railway, and on to Melbourne-street. It appears from this, that outside the fence of the railway, or nearer Melbourne-street, the surface of the ground is two feet nine inches higher than the bottom of the culvert under the railway, and therefore the water must always have been standing two feet nine inches in the culvert before any portion could pass over into Melbourne-street; and as this was the original section of the ground it is quite clear that before the water did rise as high as this it would be impossible that it could flood over into the culvert in Melbourne-street.

J. Whitton,
Esq., C.E.

29 Nov., 1861

209. *By Mr. Rusden*: Then the culverts in the two places are on a level? Yes, practically so; within a few inches of the same level.

210. *By Mr. Cummings*: Which of the two culverts is most complained of? There is no complaint whatever made of the culvert under Melbourne-street; but the complaint is with reference to the culvert under the railway, which is far larger than the one under Melbourne-street.

211. You would not consider it much of a flood, considering the heavy fall of water that often takes place here, to cause a rise of two feet nine of water—Is the culvert large enough to carry off the quantity of water which might be collected on the watershed there? It is evident that a culvert five feet high and five feet wide will be large enough to take away the water which can be carried off by a culvert three feet wide.

212. *By Mr. Piddington*: What is the size of the culvert? It is a five feet culvert—five feet high; and not as Mr. White says, two feet eight inches wide, but five feet wide. That under the Morpeth road is only three feet wide, and it is therefore evident that the latter cannot carry off all the water which might pass through the culvert under the railway.

213. Can the water that comes from the railway culvert escape in any other way than through the road culvert? No.

214. *By the Chairman*: Are you aware of the extent of the area of the watershed there, and the quantity of water that collects there? No, I am not.

215. Is it not possible that this culvert might at times be obstructed by drift and rubbish. It is stated by Mr. White, in answer to question 66, "After a heavy thunderstorm the rubbish is washed down into the culvert, which is thus choked up, and forms part of the embankment." Is that an impossibility? It is not an impossibility.

216. Is it probable? It is possible.

217. You have no reason to doubt the statement made by this witness? I cannot contradict it.

218. Are you aware that water has stood some two or three feet above the top of the culvert? I can easily understand that it may have done so; but I do not look upon that as caused by an obstruction in the railway culvert, but by the insufficiency of the culvert under the Morpeth road; for the Committee must see, by reference to the plan, that, in addition to the water coming from the railway culvert, the culvert passing under the Morpeth road must take the water coming from the Gaol, and from the whole of the land on the east side of the railway.

219. The culvert in Melbourne-street is of the same capacity now as it was before the embankment was thrown across Bank-street? Yes.

220. It has been stated that the obstruction since the embankment has been thrown across Bank-street has been much greater, and that houses in that street have been flooded as they never were before? That may be accounted for in many ways. During the last few years the floods have been much higher, and the quantity of water that has collected has been much greater than for many years previously.

221. But we have had floods there nearly as great as any we have had since this embankment was thrown across? What I understand generally from the witnesses is this, that the water has been standing a considerable time in the buildings alongside Bank-street, and Mr. Robinson has stated particularly that that has been the case. He states that damage has been done to his property in consequence of the culvert under the railway in Bank-street not being of sufficient size to take away the water. Now, the surface of the ground outside of the fences of the railway being two feet nine higher than the bottom of the culvert, the water must be dammed back upon him until it rises to that level and passes over that two feet nine inches. I have pointed out to him that if he would drain the land between the railway fence and Melbourne-street, it would take the water away. He has declined to do so; and on one occasion I had this done, and the water was all drained off.

222. *By Mr. Piddington*: I beg to direct your attention to the evidence of Mr. Clift. He was asked whether the water had accumulated at that point after or before the erection of the embankment, and he says "I have known it to rain for a month before the embankment was thrown across, and it never stopped there; and it rained for only four hours a little while ago, and the place was under water." Now, that is the evidence of a very old inhabitant of that neighbourhood? Of course if these matters are stated I cannot contradict them, but at the same time I must say that it is utterly impossible that a three feet culvert, such as the one under Melbourne-street, can take off as much water as the five feet culvert under the railway.

223. You are not aware of the extent of the watershed intended to be drained by the culvert? The whole of the water on the west side of Bank-street, and not only that but all the water from the Gaol side of the railway passes through the culvert under the Morpeth road.

224. Then the culvert under Melbourne-street was sufficient to take the water on both the east and west side of the railway? It appears to me to have been insufficient. I know this

J. Whitton,
Esq., C.E.

29 Nov., 1851.

this, that it is impossible that a culvert of three feet can carry off the quantity of water which may be brought down by a five feet culvert.

225. *By the Chairman*: I think you stated that the culvert might be obstructed by drift brought down from the watershed? Possibly it might.

226. That would throw the water back? Undoubtedly.

227. *By Mr. Piddington*: Would not a bridge be a better safeguard against the accumulation of water at Bank-street than a culvert? Unless the culvert be large enough. I am satisfied that if the culvert in Melbourne-street has been sufficient to take the water off heretofore it is quite sufficient now, and that no damage has ever occurred from the insufficiency of the railway culvert.

228. *By the Chairman*: May it not have been from the obstruction of the culvert? If it has been obstructed; but I think the pressure of water there would be quite sufficient to prevent such an obstruction.

229. *By Mr. Piddington*: If a bridge were there instead of a culvert, would a bridge be choked? That is not very likely.

230. Would not a bridge be a greater safeguard against such contingencies than a culvert? No doubt.

231. *By the Chairman*: A bridge would prevent the choking up of the passage of the water? Undoubtedly.

232. What do you imagine the expense of a bridge would be? About £2,000.

233. You are aware that a sum has been voted for the removal of the embankment, and for the erection of a bridge? Yes.

234. Would that sum be sufficient for the purpose? It would.

235. Would there be any difficulty in throwing a bridge across? No, but we should be obliged to make a temporary bridge or embankment, to enable us to carry on the traffic while the permanent bridge was in course of erection.

236. *By Mr. Piddington*: Are you aware why the sum voted has not been appropriated to the purpose? I am not aware; I have given my opinion that a bridge is unnecessary, and did so when the railway was first formed.

237. *By the Chairman*: Are you aware that according to the plans Bank-street leads to the Gaol and Court House Reserves? Yes, I am.

238. Are you not also aware that allotments have been bought according to that plan? I am not aware of that, and my impression is that the whole of the land on the Gaol side of the railway is the property of the Government.

239. According to the plan Bank-street leads on to Morpeth Road? Yes.

240. *By Mr. Piddington*: On the east side of the railway the land does not belong to the Government? I think it does as far as Day-street; it is a Government reserve.

241. *By the Chairman*: The Government reserve is along Day-street to Bank-street? Yes.

242. Have you anything to say to the statement of Mr. Clift, that the closing of the street has injured the value of his property—would you suppose that to be the case? I should not suppose it to be the case; of course Mr. Clift must know the value of his property much better than I can.

243. *By Mr. Piddington*: There appears to be no Government land on the north-west side of the railway near William-street and Bank-street? No.

244. Your allusion to the Government land I suppose applies to the Reserve for a Gaol and Court House on the south-eastern side? Yes.

245. You were not acquainted with the locality previous to February, 1857? I was not.

246. Are you aware that in 1857 there were considerable floods in the Hunter River Districts? I am.

247. And in consequence of those floods the water accumulated in the Town of East Maitland? Yes.

248. That, I presume, is no criterion of the general accumulation of water at Bank-street? I have seen it on many occasions besides those in 1857; I have never seen it without water. I looked upon it as a pond for the use of the town when I went there in the first instance, and on all occasions when I have been there I have seen horses taken down there to be watered.

249. Was not the place where you said horses were taken to water immediately at the back of Mr. Mayo's property, and was not the water there confined to a small spot? I do not know which is Mr. Mayo's property.

250. According to the plan his property has a frontage to Day-street, and the back extends to Day-street? It was at the back of that property.

251. Are you aware that at that spot the soil has been taken out for the purpose of making bricks? I am not aware.

252. If that were the fact would not that be likely to be a place where water would accumulate? No doubt; being lower than any other portion, water would run to it. When I first saw it I was under the impression that it was a pond in the general course of the creek, and I certainly, at that time, thought a culvert was far more fitted for taking the water away than a bridge, for the purposes of a street; and I never supposed for a moment that Bank-street could be considered as of much importance in leading to the Court House or Gaol, for there are, in my opinion, a sufficient number of bridges and crossings without it.

253. Have you any doubt that a bridge would be a more effectual means of preventing the accumulation of water than an embankment and culvert? I do not believe, except as to the possibility of the culvert being stopped up by rubbish brought down by the water, that the condition of the houses alongside Bank-street would be any better by substituting a bridge for the culvert.

254. I do not ask you whether, if you make certain exceptions, things would not be better; but whether you are not of opinion that a bridge would be a more effectual safeguard than a culvert in Bank-street, against this accumulation of water? No doubt of it.

255. *By Mr. Rusden* : It appears from evidence, and from the plan, that it was the intention of Government to keep Bank-street as an open street? I do not know what was the intention of the Government as to a street.
256. Do you not think if parties purchased allotments in this street, with a view to its being an open street, that they are entitled to some compensation for its being stopped up? I am not aware that any allotments have been purchased with that impression.
257. In Mr. White's evidence, in answer to 226, he says, "the culvert at that time was in a state of collapse"? From the evidence I have seen I think the witness hardly know the meaning of the word "collapse."
258. At 37 you will find the following question by me—"You stated that that culvert was in a state of collapse; by that I understand that it was completely choked? Yes; I pointed that out to Mr. Bewick, and he admitted that a couple of navvies in six hours could repair that, but he said he would not do it so long as the parties complained that the railway was an obstruction." And then at 39, "When you inspected it the water had been stopped, and was within eighteen inches of the top of the culvert? Yes, and the whole of the other side of the culvert was perfectly dry."—That is, the space between the two culverts was dry; the culvert on the Morpeth Road had conveyed away the water, and the culvert on the embankment was choked? I think Mr. White was entirely mistaken in that; because a culvert is choked up it is not therefore necessarily in a state of collapse; but in this case, as I have already stated, the land on the outside of the railway fence was not sufficiently low to allow the water to pass through it.
259. Of course we cannot dispute the correctness of your plan, but it appears from the evidence taken before the Committee, that the water is all taken away by the culvert in the Melbourne road, but that it is stopped by the railway culvert? There are few things so deceptive as levels, to general observation, but I have had these levels taken, and I have no doubt of their accuracy, and on one occasion I had a drain cut to shew Mr. Robinson that by that means the water might be carried away, but he has allowed that drain to silt up again.
260. What is the distance between the two culverts? About six or seven chains.
261. You say that that culvert upon the Melbourne street or Morpeth Road is not sufficient to take away the water? Certainly not, if the culvert under the railway is insufficient.
262. If the water is obstructed by that culvert not being large enough, still, as there are six or seven chains between the two culverts, a very large body of water would be formed between the two culverts without extending beyond the railway culvert? No, water will always find its own level.
263. Water will always find its own level certainly, but there is a large space of land here to be over-spread? No doubt, but if the culvert at Morpeth Road were blocked up, it would block up the water on the western side as well as on the eastern of the railway.
264. There will be a shallow pond, no doubt? But as the ground is tolerably level between the invert of the culvert on the Morpeth Road and up to Mr. Robinson's property, the water that would be dammed back at Morpeth Road would be dammed back on his property.
265. Looking at the evidence—the evidence seems to say that has not been the fact—seeing that there are six or seven chains between the two culverts, is not it apparent that if, while there was one embankment there might have been some injury, with two there must be a greater injury? The only difference in the injury must be the area of the embankment deducted from the whole pool of water, which, I should think, would not raise the level of the water one-eighth of an inch.
266. *By the Chairman* : You have the levels, and have no doubt of their being correct? Not the shadow of a doubt.
267. *By Mr. Rusden* : If the land of the Court House Reserve were sold do you not think it would fetch a great deal of money? I really do not know.
268. You are aware that at present the Court House is standing in an isolated part of Maitland, and is without any accommodation for jurors or witnesses? There is no accommodation there, but Maitland is only a short distance off—half a mile probably.
269. What would be the expense of making communication with the Court House down William-street, either by, under, or over crossings—? I do not think either under or over crossings could be made to be of any use.
270. *By the Chairman* : Could a level crossing be made there? Yes, by removing the station buildings and platform.
271. By removing the station a level crossing could be made? Undoubtedly, and with Bank-street, you would have four crossings in about a quarter of a mile. There is a bridge under High-street, a bridge under George-street, a level crossing at King-street, and a bridge over Melbourne-street. The level crossing at King-street and the bridge over Melbourne-street, answer every purpose for the accommodation of the Court House. The whole distance is very short, between the two points about three-eighths of a mile.
272. *By Mr. Piddington* : If a bridge were built at Bank-street would not that be equally convenient? If we build a bridge we must make provision for the drainage that now runs down Bank-street; and unless a culvert be built we must have a creek running down the centre of the opening of the bridge, and I do not think that would be found a very convenient crossing to the Court House and Gaol.
273. *By Mr. Rusden* : You say you do not think a crossing could be advantageously made in William-street, on account of the railway? I do not think so; I think it would be very expensive, and extremely inconvenient.
274. Will you state where the junction of the Morpeth line is contemplated to be made by the Government? At Pitnacree Road.
275. Then the Government intend to take the lower line? The lower line; of course I do not know the intention of the Government with regard to the construction of that line; That is the line I originally laid down.

J. Whitton,
Esq., C.E.

29 Nov., 1861.

- J. Whitton,
Esq., C.E.
29 Nov., 1861.
276. *By Mr. Cummings* : Would it not be desirable to make a culvert on the Morpeth Road, large enough to enable the water in flood times to escape? I think so.
277. Do you think if that were done this property would be protected from the injury now caused by this destructive element? I think so.
278. Without it you think it will not? I am quite sure that the formation of a bridge would have no effect upon the damage of the property in Bank-street, without the enlargement of the culvert under the Morpeth Road.
279. Would you advise the enlargement of the culvert under the Morpeth Road? If the Committee decide upon building a bridge over Bank-street I would then recommend that it be enlarged.
280. If the culvert were to be replaced by an open bridge, are you of opinion that the evil complained of by some of the witnesses, as to the culvert being stopped up by sand and debris, would be remedied? An open bridge would not be likely to be filled up, but I had not heard of the culvert having been stopped before I heard it here.
281. In case of a culvert being stopped up by debris and sand, the water must find its level somewhere? No doubt. Bridges are better than culverts, unless the culverts are of sufficient size to carry off the water.
282. From your experience you are aware that a great quantity of water falls in this Colony in a short space of time? Very short.
283. To guard against these visitations it is your opinion that it is quite necessary to erect a bridge here in place of a five feet culvert? I do not say so; I say a bridge is less likely to obstruct the water than a five feet culvert, but that it would be of no use to build a bridge there, unless there were an enlargement of the opening of the culvert in the Morpeth Road.
284. Have you seen in the evidence that it is stated that this culvert has been filled up, and the water stopped by debris and other matter brought down to it? I think it is stated so in the evidence.
285. In the case of water remaining there for a length of time it must be very injurious to the adjacent property? No doubt; property must be seriously injured by having water surrounding or over it.
286. About what amount would it cost to make a drain large enough to meet the necessary requirements here? I would build a bridge if I removed the Morpeth Road culvert.
287. An open bridge? Yes.
288. The expense would be very small? I should think about £150 or £160.
289. It is your opinion that an open bridge would be better for that purpose than a culvert? I certainly think so.

SYSTEM OF RAILWAY LOCOMOTION PROPOSED BY MR. E. BELL.

PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly appointed on 12th November last, "to inquire into and report upon the Inventions and System of Railway Locomotion brought forward by Mr. E. Bell, Civil Engineer," with power also, "to inquire into and report upon the applicability of a recent Invention of Mr. W. G. Caporn, for stopping or checking Locomotive and other Engines on inclines, by means of iron frills or ratchet wheels on their axles;" and instructed on the 3rd instant, "to inquire into and report on the character and merits of the Bridge invented by Mr. Woore,—with power to send for persons and papers,"—have agreed to the following Progress Report :—

Your Committee have not been able to make much progress with the investigation "into the Inventions and System of Railway Locomotion brought forward by Mr. E. Bell, Civil Engineer," as the subject being of a scientific nature, it was necessary to have the evidence of each witness printed and circulated among the Members of the Committee before taking further evidence. This has caused considerable delay. But your Committee think the subject of so much importance that they would respectfully recommend that the question be again referred to a Select Committee next Session.

2. With regard to the Invention of Mr. Caporn, your Committee have examined the witnesses named in the margin, whose evidence clearly shews that it is not advisable for the Government to adopt it on our Railways, as it is not an improvement on the system of breaks now in use.

Mr. W. G. Caporn.
J. Whitton, Esq., C.E.
E. Bell, Esq., M.I.C.E.

3. Your Committee have not had time to enter on the subject of Mr. Woore's Bridge, the instructions to do so having been issued so late as the 3rd instant.

J. BOWIE WILSON.
Chairman.

Legislative Assembly Chamber,
Sydney, 17 January, 1862.

PROCEEDINGS OF THE COMMITTEE.

FRIDAY, 15 NOVEMBER, 1861.

MEMBERS PRESENT:—

Mr. Forster,	Mr. Dalgleish,
Mr. Wilson,	Mr. Suttor,
Mr. Sutherland,	Mr. Rotton.

J. B. Wilson, Esq. (on motion of Mr. Rotton), called to the Chair.
 Votes, No. 40, (12th instant, Entry 5,) appointing the inquiry, before the Committee.
 Committee deliberated as to their course of procedure, and

It was Resolved,—

- (1.) That Mr. W. G. Caporn, and Mr. E. Bell, *City Engineer*, be examined before the Committee at their next meeting.
- (2.) That a letter be addressed to Mr. Whitton, Engineer-in-Chief, Railway Department, inviting him to attend during the examination of witnesses, if he think fit.

[Adjourned to Thursday next, at Ten o'clock.]

THURSDAY, 21 NOVEMBER, 1861.

MEMBERS PRESENT:—

J. B. Wilson, Esq., in the Chair.

Mr. Forster,	Mr. Rotton,
Mr. Dalgleish,	Mr. Lucas,
Mr. Hay,	Mr. Arnold.

(Mr. Whitton present in the room during the examination of witnesses.)

Mr. W. G. Caporn called in and examined.

Witness handed in a Report upon his invention for the economical working of Railways, Tramways, &c. (*Vide List of Appendix.*)

Rough plan of projector's idea laid before Committee.

During the examination of witness, the Chairman having occasion to leave the Chair,—

Mr. Forster was called thereto.

Examination continued.

Mr. Wilson, re-entering the room, resumed the Chair.

Examination proceeded with; when,

The Chairman again having occasion to withdraw,—

Chair taken *pro tem.* by Mr. Lucas.

Examination of witness continued.

Chair resumed by Mr. Wilson.

Witness here illustrated his invention by models.

Examination concluded.

John Whitton, Esq., C.E., *Engineer-in-Chief, Railway Department*, examined.

Edward Bell, Esq., C.E., *City Engineer*, examined.

[Adjourned to Wednesday next, at Ten o'clock.]

WEDNESDAY, 27 NOVEMBER, 1861.

MEMBERS PRESENT:—

J. B. Wilson, Esq., in the Chair.

Mr. Lucas,	Mr. Rotton,
Mr. Dalgleish,	Mr. Sutherland.

(Mr. Whitton present in the room during the examination of witness.)

In the temporary absence of the Chairman, Mr. Lucas called to the Chair;

But, before proceeding to the business of the Committee, the Chairman entered the room and resumed the Chair.

Edward Bell, Esq., M.I.C.E., *City Engineer*, further examined.

Chairman laid before Committee letter from Mr. W. G. Caporn.

Committee considered the same.

Resolved: That the letter be printed and entered on the Minutes of Proceedings.

" *Sydney, 26 November, 1861.*

" The Chairman of the Select Committee on Mr. E. Bell's Invention.

" Sir,

" I beg respectfully to call the attention of the Committee to a remarkable verification of my report and evidence before the Committee, in this day's *Sydney Morning Herald*, (Tuesday,) by a Mr. C. A. Fitzgibbon, Engineer, of Nelson, New Zealand, entitled " ' Cheap Railways,' and whose report is absolutely at variance with the opinion of Mr. Whitton, the Engineer-in-Chief.

" I

" I beg leave also to state, that I have looked at the Pitt-street Tramway, and that
" it would afford the necessary place for a trial of my invention, such trial not to cost the
" sum of one hundred (£100) pnds.

" I am, &c.,
" WM. GOODE CAPORN."

Ordered, That copies of Evidence be circulated amongst the Members of the
Committee as soon as printed, and that Mr. Whitton be also furnished with a copy.

[Adjourned.]

TUESDAY, 17 DECEMBER, 1861.

MEMBERS PRESENT:—

J. B. Wilson, Esq., in the Chair.

Mr. Lucas, | Mr. Dalgleish,
Mr. Sutherland.

Committee met, pursuant to summons.

Copies of printed Evidence previously distributed amongst the Members of the
Committee, and a copy transmitted to Mr. Whitton.

J. Whitton, Esq., *Engineer-in-Chief, Railway Department*, examined.

Evidence to be circulated as before.

[Adjourned.]

FRIDAY, 10 JANUARY, 1862.

MEMBER PRESENT:—

Mr. Wilson.

In the absence of a Quorum, the meeting called for this day lapsed.

TUESDAY, 14 JANUARY, 1862.

MEMBERS PRESENT:—

J. B. Wilson, Esq., in the Chair.

Mr. Lucas, | Mr. Forster,
Mr. Dalgleish.

Committee having met, pursuant to summons, deliberated,—

And adjourned to *half-past Eleven, A.M.*, this day.

There not being a Quorum present within half an hour after the time appointed,
the meeting lapsed.

WEDNESDAY, 15 JANUARY, 1862.

MEMBERS PRESENT:—

J. B. Wilson, Esq., in the Chair.

Mr. Forster, | Mr. Dalgleish,
Mr. Arnold, | Mr. Sutherland.

(Mr. E. Bell, *City Engineer*, present in the room.)

Committee met, pursuant to summons.

John Whitton, Esq., *Engineer-in-Chief, Railway Department*, further examined.

In the course of examination, parties requested (on motion of Mr. Dalgleish) to
withdraw.

Committee deliberated.

Parties called in.

Examination resumed, and concluded.

[Adjourned.]

FRIDAY, 17 JANUARY, 1862.

MEMBERS PRESENT:—

J. B. Wilson, Esq., in the Chair.

Mr. Forster, | Mr. Dalgleish.

Committee met pursuant to summons.

Chairman laid before the Committee, Draft Progress Report.

Proposed Progress Report read, verbally amended, and agreed to.

Motion made (*Mr. Forster*) and Question—That this be the Progress Report of the
Committee—*agreed to*.

Chairman to report to the House.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

SYSTEM OF RAILWAY LOCOMOTION PROPOSED BY MR. E. BELL.

THURSDAY, 21 NOVEMBER, 1861.

Present:—

- MR. ARNOLD, MR. DALGLEISH, MR. FORSTER, MR. HAY, MR. LUCAS, MR. ROTTON, MR. WILSON.

J. B. WILSON, Esq., IN THE CHAIR.

Mr. William Goode Caporn called in and examined:—

1. By the Chairman: This Committee has been instructed to inquire into and report upon the applicability of a recent invention of yours, "for stopping or checking locomotives and other engines, on inclines, by means of iron frills or ratchet wheels on their axles"—perhaps you will be kind enough to state to the Committee what your invention is? I have drawn up a report which, with the permission of the Committee, I will read. I have also had a model made, on a scale of an inch to a foot, which I hope to produce before the Committee. (The witness read the report. Vide Appendix.) 2. Perhaps you will have the goodness to describe to the Committee what your invention is? The invention consists of a ratchet in the centre of an axle or between the wheels; a ratchet is a very different thing from a cog; it is very simple, and also easily applied; it is cast of good metal, and either keyed on or the part left square. The frill is put on the square, so that it cannot possibly shift. In going up an incline, when the traction moderates, you have no occasion for a break on the periphery of the wheel, because the backward motion of the carriage is sufficient of itself to arrest it. In going up an incline the traction is hauling up the carriages, which have a tendency to go back, but the pall falls into the ratchet on the axle and prevents the wheels from going back, the pall being fixed to the bottom of the carriage, it falls down into the teeth of the ratchet, and it is lifted by means of a wire or lever; but if you want to come down an incline, the pall falls down and skids the two wheels, for the axletrees revolving with the wheels, if you skid one wheel you skid the other. If you have horse traction in going down an incline at any speed, the carriages would run over the horses without the break were applied; but I say here, (referring to report) "My invention is not meant to stop a train going at a great speed, except in case of extreme danger." I do not mean this (my invention) to stop a train suddenly, but to assist in going up an incline. If you were able to save a great cutting, and to go up and down an incline slowly, say five, six, or seven miles an hour, you, when you had gained the top, might drop the pall here (referring to plan), and then you would be able to slide gently down the rail; once at the bottom of the hill, the pall could easily be lifted,

Mr. W. G. Caporn. 21 Nov., 1861.

Mr. W. G.
Caporn.
21 Nov., 1861.

but you would perhaps have to stop the train to do that; still the great advantage of having managed to ascend over a very steep incline would render the momentary stoppage of very little consideration. In going up an incline with the present break, the whole of the dead weight hangs on the last carriage; the carriages have a tendency to run back from the engine or horses, and hang on to the break van, and if you were to take the break off the whole of the carriages would slip back; but this (my invention) keeps them firmly chocked up, so that if there were a number of carriages there might be a little slack between the coupling-chains, the engineer might turn on the steam, and be able to pick up his load by degrees; the driving wheels would not have the whole weight hanging upon them at once, but the load might be gradually picked up. I say here (*referring to report*), "The savings on the permanent way," &c. That is a point it is useless to make any remark upon. Then I say, upon the level part of the country you do not want the heavy rails and chairs you have now—I say there will be less wear and tear, in consequence of using light engines. I consider that the traffic on any of the proposed lines would be very small indeed, and that light carriages, half the weight of the present ones, would be sufficient to carry any goods or passengers that may be required for some years to come. The reason that we have been obliged to have such heavy engines has been the enormous weight of the carriages. I have heard several remarks made about having to keep the permanent way macadamized if you have horse traction, but I consider that if the sleepers were laid close, say nine inches apart, you would enable the horses to have a good footing. The preparation I refer to in my report, is a preparation of coal dust and tar, which anneals and makes an excellent foundation, and with a little burned earth over the top, I do not consider blue metal would be required between the rails at all. I say—"My system does not interfere with the present rolling stock." This ratchet could be fitted to any carriage on the present railway without any difficulty. Then I say "acting right and left towards a centre" both these ratchet wheels (*referring to models*) act towards a centre.

3. *By Mr. Dalgleish*: With the frills reversed? Yes; it does not matter which one you put, so long as one is right and the other left, so as to have the teeth altered—the same ratchet makes up or down the same side of the incline. I say (*referring to report*) "The principle of the motion is also correct, as if a train going at twenty miles an hour, the axles being nearer the centre, the revolution is so considerably less." Supposing a carriage to be going twenty miles an hour, the nearer the axle the less the revolution, and consequently I believe you would have more power to stop by applying the break to the axle, than by applying it to the periphery of the wheel. And as to not helping the traction, I certainly consider this does not help the traction, but it enables the traction to have a greater command over the train, for in going down a steep incline you would require to have a certain number of the wheels locked; you could then have a certain number of the wheels locked by this, and you could regulate the speed, if necessary, by means of the old break, or by means of a band on the axletree, which could easily be done. I have not done that, but there would be no difficulty in putting a band to the axletree. The other day I was at the station, and I saw two engines and eighteen or nineteen carriages leave the station; I should say the weight of that rolling stock, engines and carriages, must have been 160 tons at least to draw, from what I had ocular demonstration of, I should say a weight of 25 to 30 tons, including passengers and horses, as freight. I have not had much experience in the weight of trains, and I cannot say what they weigh to a ton or two, but I should imagine that the engine would weigh from 35 to 45 tons, and the carriages would weigh 4 tons each. By my system you would have light carriages. My remarks do not refer to the lines now constructed; they are entirely confined to the lines projected. I consider that between this and Parramatta my break would not be of much use, because there are not many inclines, and the speed is high. My remarks more particularly apply to mountainous country between here and Bathurst or any other part of the Colony. With horse traction I consider that mails and passengers could be carried at from ten to twelve miles an hour, light freight from five to seven, and goods from three to five, take the average, because up inclines they would go much slower, but they would be able to push along on the level country. I cannot say positively at what rate you would be able to go, but I should say, on the average, the journeys might be made at those rates. I say, "A very essential part of my scheme is to have great care taken in laying down the permanent way." I would have the character of the permanent way of the very best description, both as regards sleepers, rails, and all the other necessary things. "Light engines would also be quite sufficient for all traffic likely to be on any projected lines for years to come." There would also be great savings in cuttings and embankments. It would be necessary to make some cuttings, but in an undulating country, where the gradients were not more severe than one in fifteen, I should think you might, in a measure, go over the natural surface of the earth. "On the whole, by adopting my ideas, the Colony will be able to construct railways at a cost within its means, regular communication will be completed, but at a low rate of speed—of itself not of much importance when compared with the double advantage attained." As to my own experience in these matters I certainly do not consider that the building line and timber trade is railway engineering; but, at the same time, I had a great deal of experience when I worked at the bench. We had a very large establishment in England, and I was brought up by my employer in that way, with the idea that I should take the business, which I should have done but for circumstances which I thought did not justify me in doing so. I had a great deal of experience at the bench which has enabled me to bring this into operation. When I came to Sydney I was impressed with the belief that something might be done to assist traction up steep inclines. After a long time the idea struck me, but it was very different from what it is now, but by degrees I brought it to its present state. I consider that I am quite capable of discussing the subject with anyone, and that I thoroughly understand it.

4. *By the Chairman*: Have you obtained a patent for this invention? Not in the Colony; I have never applied for one. Messrs. Newton, of 66, Chancery Lane, are my agents in London, and they state that the idea is invaluable for street tramways—for tramways and railways on which a low speed is employed—but in England it is not of much importance on railways, because there a high speed is required; it is a different country to this; the country is level, and capital is of no importance; it is not important what amount of money they spend on a railway, but in a country like this, where you may travel, as I have done, within the circuit of these projected lines, for a hundred miles and not meet a single individual—I did not on that occasion go along the high road, but I travelled from station to station in New England; from Armidale to Hanging Rock, I went a hundred miles in that district, and did not meet a soul the whole way. In England speed is the main thing; if a man has to go from London to Liverpool, he wants to go as speedily as possible; every minute is an object, but in this country I consider that if a man has to come down to Sydney from Bathurst he is better pleased if he can come down in a day and a half comfortably, than if he has to come down as he does now, he does not know when.
5. What you mean to say is, that the gradients in England are so easily overcome that there is not the same necessity for your invention there as here? Yes.
6. *By Mr. Dalgleish*: You were asked if you had taken out a patent for this in England? I have taken out provisional registration; that was the last advice I had from Messrs. Newton.
7. That is what has to be done before a patent is granted, before it is inquired into? Yes, I believe so; I am not aware what the patent law is in England; I have passed a good many patents here.
8. You state that your invention is "something entirely new and original?" Yes.
9. Have you seen your invention, or something very much like it, used on board vessels? Yes.
10. Have you seen it used in crane winches? Yes.
11. Have you seen it used on what are termed patent hoists—windlasses? Yes.
12. In all these different machines for raising weights or stopping weights in motion? Yes.
13. This is exactly the same as the ratchet used upon these machines? Yes.
14. Only you apply it to weight ——? In a different way.
15. To weight in traction? Yes.
16. That is to say, to holding weights suspended? It is hardly suspended.
17. It is in a state of suspension, more or less inclined to run down or fall? It is gravity, not suspension.
18. It retards the motion? Yes.
19. You wish to retard a weight in motion going down an incline? Yes.
20. Is not that an adoption of an old principle? I say so—I say my "application."
21. You say "I also put forth my invention as something entirely new and original"—if you look at your description you will find those words? Yes; but in my plan originally published I say "Caporn's application." I consider the idea entirely new and original for the purpose to which I apply it. I call it my application; it is nevertheless my invention.
22. As it reads here, it is your "invention?" Yes; it is by the use of my "application and invention."
23. You stated that in going up an incline, the engine or the horse may pick up his load by degrees? Yes.
24. What are we to understand by that—I think you stated in explanation that the horse, by having slack coupling chains, could tighten up one wagon, or the engine could tighten up one wagon, and then the second wagon——? Yes, the divisions; it would be in this way—supposing you had four carriages, and one had a break, the horse would get that division first, there would be a slight motion on that before the horse had moved the others. Perhaps I may put it plainer—have you ever taken hold of the shafts of a cart?
25. Yes, I have? Well, you have had great difficulty in starting that cart, but if you were going up hill, and you had a chock behind which fell the moment you moved it there would then be a retrograde movement.
26. If it were heavier than myself I could not move it? If you once got it in motion.
27. But I could not if it were heavier than myself? You would have some difficulty in starting it, but when it was once started there would not be the same strain upon you as you would have had at the moment of starting.
28. That is to say, it would require more power to overcome the inertia of the load, when in a state of rest, than you would need to expend to keep it in motion? Yes.
29. In what way do you expect to gain advantage by the application of this to a train? In an engine—that is, steam power—it is not of so much consequence as in horse traction.
30. You say that you are not only going to make great improvements with regard to horse traction, but in the construction of railways, so as to allow carriages to go at twenty miles an hour on descending gradients? On the average; I do not mean to say that you could ascend and descend inclines at twenty miles an hour.
31. Let us suppose an incline of one in thirty; your train is half way up this incline, the engine is incapable, from loss of pressure or other cause, of progressing any farther up this incline, what then would be the result of the application of this ratchet, supposing it were powerful enough to arrest the downward progress, and to keep the train on the position it has arrived at—what advantage do you expect you would get? You would hold all you had made. A guard going up a steep incline can have no idea of the moment at which the coupling chain might break, but suppose he were going up this incline of one in thirty he would put down this break, and the consequence would be, if the coupling chains broke at any moment

Mr. W. G. Caporn.

21 Nov., 1861.

- Mr. W. G. Caporn.
21 Nov., 1861.
- moment on that incline, the train would be arrested from running back, because it would go on of its own accord, for a certain way, by the power of the traction, till it absolutely stopped.
32. Then it would be necessary for the officer in charge of the train to put down these breaks at every incline? Not absolutely necessary; not if he did not think fit.
33. If he did think fit? If he did think fit; but you must bear it in mind that in going up to Goulburn, for instance, he could leave one break down the whole of the distance, it need never be taken up.
34. What would be the effect of that? The effect of that would be that at any moment it would prevent the retrograde movement of the train.
35. Would it not cause a noise as if fifty or sixty watchmen's rattles were sprung together? That could easily be obviated by a leather.
36. How long would that last, with the continual clatter caused by the engine going at twenty miles an hour? I very much question whether there would be any clatter heard.
37. *By Mr. Rotton*: But the leather would wear? I do not think it would wear very much. The guard need not do that—keep the palls down—without he thought proper.
38. *By Mr. Dalgleish*: But if he did think proper, the guard must enter every carriage to let down the break? Not enter.
39. He must proceed to every carriage in order to let down the palls? He must let them down.
40. He must proceed from one carriage to the other; he has no mechanical or other communication from one carriage to the other for the purpose of letting down the palls? He could let them down in one or two carriages near to where he was without any difficulty.
41. Of course you will admit that the weight of the train would be held by these palls—what would be the weight of the carriages, with the passengers, so suspended upon these palls, and what force would be necessary to draw the pall up, in order to enable the carriage to move, as if the pall were allowed to remain down, the train must remain there for ever—what means would you take of raising the pall? You do not want them taken off.
42. Excuse me—the weight of the carriage, at any rate, must rest upon the pall; now, supposing a train to stop when half-way up this incline, the weight of the carriages and passengers is upon the pall, which has arrested the motion of the carriage downwards; before you could relieve the pall of this weight it would be necessary to rise up the hill, or to get the weight from the pall—what means have you of doing this, in order to allow the carriage to go down hill, seeing that it could not be got up hill; what step would you take to relieve the pall from the weight, in order that it might get down? If you had horse traction you would have no occasion for it.
43. You speak in your report of engines going at twenty miles an hour, of the heavy gradients that may be surmounted, and the astonishing cheapness with which railways are to be made in consequence of your invention? I say you want a certain number of palls down in order to descend with safety.
44. How are you to get them up? You do not want to get them up till you get to the bottom of the incline.
45. I am supposing that the train is half way up this incline, and that the engine is not powerful enough to surmount the ascent; I am admitting that the ratchet pall is sufficient to sustain the full weight of the train, and to keep it at this portion of the incline—what means have you of relieving the pall, in order to allow the train to go down the hill if necessary, as it would be, seeing that you could not go forward? I consider that you do not want to take it off—you want to put the break on going down the incline, to prevent weight overrunning draught.
46. We are coming up? Then you do not want to take it off at all.
47. I am supposing that the engine cannot take up the train; it is necessary then, seeing that it cannot be got to the top, that it should be got to the bottom? But you do not want to take off the pall in order to get the engine and train to the bottom.
48. I am supposing a state of circumstances of this kind—that an accident has occurred to the engine when it has got half way up the incline, and that it is unable to proceed further; then, although your invention might be powerful to prevent the engine from running backward, the engine is relieved, and remains at rest where it is; but the engine being incapacitated from proceeding to the top of the incline, and the whole of the weight resting upon the pall, what means have you of releasing the pall? You do not want to take up the pall, because it merely skids the wheels down hill.
49. You understand that there is a possibility of an engine being disabled? If you could not go up, you could go down; if you were to take off these palls the train would run away.
50. How are you to take them off? You do not want to take them off; if these were taken off the train would run down.
51. What provision have you made against this? If you take the pall off the train will run away of its own accord.
52. How would you get it off? This (*referring to model*) merely skids the two wheels down. At the present stage I have not thought of taking off the palls, because I have not thought it would be necessary to take them off*.
53. *By Mr. Rotton*: The same thing struck me that has occurred to Mr. Dalgleish. You consider that when a train is on an incline it is not necessary to remove the pall, because if you wanted to go down it would be necessary to keep the wheels locked going down hill to enable it to go down safely; but how are you to relieve the pall when you get to the bottom unless you can turn the wheels back? When the train comes to the level you have no farther pressure on the pall.
54. *By Mr. Dalgleish*: You say you are unable to answer the question I have just put to you? Yes, at present.

* NOTE (*on revision*): But if it were, they could be taken off by leverage.

55. You state that "the saving on the permanent way would be on levels, plate rails"—what do you mean by "plate rails?" Flat rails. Mr. W. G. Caporn.
56. How would you save on them? I consider that plate rails would be cheaper than bar iron and chairs. 21 Nov., 1861.
57. Will you explain the apparent discrepancy in your report. You state that there would be a saving on the permanent way, and then you lay stress upon the fact that you would have the permanent way of the best construction and material; indeed you say it is necessary for the success of your scheme that it should be so? No, I do not say it is necessary; I say flat rails would be as good for the permanent way as any others, on levels.
58. Will you give your reason for thinking so? I consider that an iron rail is merely hollowed; it is a bar of iron merely hollowed in the centre for the chairs to hold it. I cannot see that there is any difference—a flat bar of iron would wear as long as a rail.
59. Are you aware that many rails are flat where they enter the chair; that they have no hollow where they enter the chair, but merely a T head? Yes; that is a bar.
60. A flat bar? The T is flat on the top.
61. But it is a T rail, consequently not a flat bar? Exactly so; I put that in italics, so that I think you will pretty well see that I do not attach much importance to this.
62. You say you will endeavour to follow as much as possible the natural surface of the earth, and you also say a great deal about speed with an enormous decrease of cost—in what way do you calculate you will be able to accomplish this enormous decrease of cost? In cuttings.
63. What gradients do you propose to use? I consider that you might go up gradients as high as one in fifteen, if occasion required.
64. If it were necessary? If necessary.
65. You have thoroughly explained that if you stop in the middle of an incline of one in fifteen, there you would have to remain—you have no way of getting down? You would not allow me to explain.
66. We shall be happy to hear you. Suppose that in the middle of an incline of one in fifteen, your engine is disabled, you cannot get up,—how are you going to get down? The least movement—a very little pressure—would be required to send the train of its own free will and accord down the incline.
67. You have provided securely, by means of the ratchet, that the train shall not go down; but I understand you that you have provided no means of release from the pall? In going up an incline I provide that you shall lose no ground, but in going down I provide that the train shall not overrun the draught power by the use of the same ratchet it makes up or down the same side of the incline. If you had not this ratchet down your weight would overrun your draught power, and then, according to my idea, you do not wish to take it off; but supposing you did wish to take it off, I am not at the present moment prepared to answer your question as to how it could be done. That it could be taken off* I do not doubt, but I thought if there would be any necessity to take it off, and therefore I am not prepared to answer your question.
68. You are aware of the way in which I asked my question—It is frequently the case that an engine is disabled; now if an engine were disabled at the critical moment when it was half way up this incline of one in fifteen, the train would then stop; there would be no momentum; the pall would simply sustain the weight of the load upon the incline of one in fifteen; the whole weight being thus upon the pall it is absolutely necessary that the train shall go down the hill, because the engine being disabled, it follows, as a consequence, the train cannot be taken up the hill; and supposing that a train is coming upon the same rail in an opposite direction, it is absolutely necessary for the safety and lives of the passengers that the train shall go down hill;—to meet such a case you know of no provision in order that the palls may be released? I do not think there would be any occasion to take the palls off, because if you took them off the train would run away, and you would have no command with your draught power.
69. *By the Chairman:* Would it be very difficult to bring the train down this incline, even though the palls were locked? No; you would be compelled to have a certain number of the wheels locked if you had horse traction, otherwise the weight would override the horses.
70. *By Mr. Dalgleish:* You state that "the principle of the motion is also correct, as if a train "going at twenty miles an hour, the axles being nearer the centre, the revolution is so "considerably less;" and then you illustrate that by saying, "the wheels being about "forty-two inches over, and require eleven feet to make a revolution, not so the axles and "frills which if a foot, only require three feet to make a single turn, consequently are more "easily arrested"—I should like you to explain that, for really it seems to me to be quite the reverse? I will illustrate it in this way—supposing you were turning the handle of a fly-wheel, the fly-wheel may be six, eight, or ten feet over; now in going round the periphery of the fly-wheel is travelling at an enormous rate, not so your arm, you would then much more easily arrest the fly-wheel by applying a certain force to the axle than to the periphery of the wheel; but I do not mean to stop a train going at great speed.
71. I simply ask you to explain what you mean by stating that the pall will have a greater effect in stopping a train if applied near the centre or on the axle, than it would if applied on the periphery of the wheel? I consider that the nearer the axle the less the revolution.
72. I will grant that, as it is the theory that the exact centre of a rolling body is stationary—that, although a fly wheel may revolve a hundred thousand times a minute, the exact centre does not move at all? Yes.
73. Upon the same principle you think—? I consider that as this wheel is going round (*the witness here illustrated his meaning by reference to a model*) it goes over less space here (*at the axle*) than here (*at the periphery*).
- 74.

*NOTE (on revision):—By leverage.

- Mr. W. G. Caporn.
21 Nov., 1861.
74. Here is an illustration I would like you to explain,—“ as if a man was to cross a precipice, with a causeway only one foot wide, he would be afraid of falling if attempting to cross; but suppose he had two guys the whole length to hold in his hands, he would be enabled to overcome that which he otherwise would not have attempted; so it is with my invention”—in what way is your invention like that? I consider that it is perhaps rather strongly put there. In going up an incline you would have no chance of reaching the top if these palls were not down; if you had not these palls you would not attempt to go up so steep a gradient as one in fifteen.
75. *By Mr. Rotton*: But you can stop a wheel with the ordinary break, cannot you? Yes; but the difficulty is supposing the coupling-chain to break—the guard might not know when a coupling-chain would break.
76. *By Mr. Dalgleish*: Have you paid attention to question what amount of extra strain would be thrown upon the axle by this pall and ratchet, and how much stronger it would be necessary to make the axles in order to adapt them to these frills? That is a question which could be answered only by practical experience.
77. Have you not considered that? No one can tell from a model. It is a question I cannot answer.
78. “ My system also in light carriages will give support by having the centres of carriages and axles extra strong”—is it any advantage to have the centres of wheels extra strong? Not the centres of wheels; the centres of axletrees, where the strain would be.
79. That is to say, the carriages would have to be extra strong in order to take the whole strain of the weight? No.
80. Explain it then in your own way? “ My system also in light carriages will give support by having the centres of carriages and axles extra strong”—I consider that in a light carriage you would have strong supports to support the outside of the frame work, which would also have to be strong; the centre of the axletree would be square, and thicker than the other part.
81. What would be the necessity to have the axle square in the middle? Because the frill would be more easily put on. You could put it on in any shape; round, with a key; but if it is put on square it does not require any keying on or soldering on.
82. Soldering on? That is only a remark—I never had anything to do with iron-work.
83. I thought you had had some practical knowledge, because you state “ by going over any proposed line, I can make an estimate of the cost.” When a gentleman goes over a line for the purpose of surveying it, it is to be supposed that he has some practical knowledge? I consider that I am capable. If an engineer were going over a line to estimate the cost he would not carry a tape in his hand, at least he might do so, but he would have to ascertain the price of brick work and timber, and he would have books to refer to, and other things. I merely make the remark because it would be impossible to make an estimate of the cost of any railway in this Colony without going over the line.
84. What do you consider the weight of a light engine to be? From fifteen to twenty tons.
85. What do you include with the engine—do you include the tender? If you had a light engine you would naturally want a light tender.
86. What would the weight of the tender be? I am not prepared to say.
87. Because you speak so authoritatively I thought you had studied it? I must put something definite down.
88. Will you give this something definite? In light engines?
89. Yes? I consider from fifteen to twenty or twenty-five tons would be a light engine. On all railways there are different kinds of engines—auxiliary engines, and engines for heavy draught.
90. You stated that the other day you saw an engine and train weighing at least 160 tons, with passengers and horses amounting to 30 tons only—will you explain what you mean? I had to be at the railway station last week, and I saw two engines. I did not weigh them, but I take it for granted that they weighed from 35 to 45 tons.
91. Why do you take that for granted? From what I hear. I have always understood that railway engines in this country weigh from 35 to 45 tons.
92. You have no actual knowledge of the matter? I read a great deal; and from various things I have read about the weight of engines, I believe that is about the weight of the engines generally used in this Colony.
93. Do you think so from having read anything authoritative upon the subject? From my ordinary reading and information.
94. I wish you to explain how you come to the conclusion that the weight of this train, which you say carried 30 tons of passengers and horses, was 160 tons. I do not ask you the precise weight; you need not be particular to 10 tons? I consider that each engine and tender weighed 40 tons, that is 80 tons; and then there were about 20 carriages, which I should say weighed about 4 tons each. I happened to go by the station when the train was going away, and that was the observation I made.
95. This was not the result of any actual knowledge, or of any practical means of forming a conclusion? From what I saw I was justified in thinking I was correct.
96. Could you judge from any calculation, or what way had you of forming a judgment; or was it merely an idea of your own without any actual means of judging? It was from an idea of what I was led to believe of railway matters and other things. You must understand that I state here my ideas, and I endeavour to put them in as plain a form as possible; but you ought to make a little allowance for me; you are a practical engineer, and I am not.
97. *By Mr. Forster*: Have you considered what would be the possible cost, at a rough estimate, of testing this plan of yours? I consider that the actual cost of fitting this (referring to model) to the frill, a carriage, would not exceed £10.

98. Will you have the goodness to answer the question—what would be the entire cost of testing your invention? I should say perhaps £100; that is allowing for horses, or fuel, engineers, &c.; and, of course, I suppose that the railway authorities would let us put it on the railway or tramway.
99. Could it be tested on the existing railway? Yes, on the railway under the Parramatta-street Bridge—that is rather a steep incline—or on the Pitt-street tramway.
100. Have you applied to the Government to have it tested? No, I merely forwarded the plans.
101. Then the Government have given no opinion upon the application of your system? No; I saw Mr. Whitton; I gave him a plan and a little slip of paper published with the plans.
102. You have laid it before him? Yes; I asked him if there was any chance of its being of any use to the Government, and he said he did not think there was, because he thought the present break would answer every purpose.
103. With regard to applying this system of yours, do I understand you to say that in going up inclines it might be made self-acting? Yes.
104. In that respect, is not the analogy complete between it and the plan adopted with regard to windlasses? Yes.
105. It could not be made self-acting as a check going down an incline? After you had surmounted an incline you would have to apply the other break.
106. Then your plan could be easily applied going down an incline? Yes; supposing you had horse traction or engines, and you were going up an incline at seven or eight miles an hour, when you came to the top, and before the carriages began to go down, the man in charge could pass his hand along the side of the carriages and unlock a little rod, the break would then fall down and prevent the carriages running too fast.
107. The break would fall down and would be self-acting then? Yes; it would skid the wheels going down.
108. Do you mean to say that you would have the break down going down the incline? Yes, on the other side, to prevent the train running down. There would be one to prevent its running back —
109. That might be down at any time? —
110. When you got over an incline you would put down the other break? Yes; that would dead-lock the wheels, and prevent the load overrunning draught power.
111. That would stop the train at any time? It would not stop it, but it would allow it to go down gradually; this pall-skidding prevents two wheels turning round.
112. You would put that in operation in all cases? In steep inclines; it would depend upon the steepness of the incline.
113. Then in certain steep inclines you would have this break in operation from the moment you passed the summit? Yes; and if you had a heavy load you would require more breaks down than if you had a light one.
114. Having put the break down there would be no taking it off till you got to the bottom? No, but it would want very little traction to draw it to the bottom.
115. You would put the break down before you passed the summit, but you would not propose to put it down at any time when going down the incline? If it, the train, were going down gradually.
116. Suppose you had not put the break down before you had passed the summit, and as you were going down the incline something occurred to render it necessary to put the break down? If it were going down at a high rate.
117. It would be dangerous? It would not be advisable.
118. In that case your system is not applicable to engines going down an incline at a swift pace? It is not meant for that at all.
119. Then, I presume, your system is open to this objection, that the other breaks must be kept in use for possible cases of emergency? Yes, on the present lines.
120. Your break will not supersede the other mode altogether? Not altogether; it is merely an auxiliary. It is of great use in going up an incline, and there is more difficulty in going up than in coming down.
121. *By Mr. Rotton:* When the break you propose is applied it will have the effect of stopping the wheels altogether? Of stopping two wheels altogether.
122. You cannot apply your break as the ordinary break is applied, that is, merely to check the speed? Excepting you are going at a gentle rate; if you are going at a gentle rate you can.
123. But when your break was put down it would have the effect of stopping the train altogether unless you had an engine drawing it on? If you are going down an incline you have to put the break down to prevent the train going down of its own accord.
124. Sometimes the break is applied only to check the speed of the train? Yes.
125. Your's would stop it altogether, unless the power of the engine were applied? Yes.
126. You could not apply it for the purpose of saving your power? Not with my break alone, but with a band upon the axle.
127. Then, according to your idea, it would be necessary to have another break? It would, if at a high rate of speed.
128. Then if the present break is found sufficient for all purposes, and I have not heard that it is not, why encumber the trains and add to the expense in the construction of carriages by putting your break to them? In the case of horse traction.
129. We are speaking of trains and engines? It was not so applicable to engines as to horse power; in the case of horse power this, I think, would be every thing that would be required.
130. Even with horse power, in going down a slight incline would it not be advisable to have some means of checking the speed without altogether stopping the carriage? The person in charge, going down with horses, ought to have sufficient discretion to know when he ought to apply the break.

Mr. W. G.
Caporn.
21 Nov., 1861.

Mr. W. G.
Caporn.

21 Nov., 1861.

131. The horse might require a little assistance to ease the vehicle down hill, but by applying your check it would necessitate the using of all his power to draw it down hill? Not his whole power.

132. Except so much as the incline would give to the train itself? Yes; supposing you had four or five carriages going down hill, drawn by horse power, you would put down just sufficient—perhaps one of these breaks—to prevent the carriage running down of its own accord.

133. If your break were put down would not the wheels be entirely stopped? Yes.

134. Would not that create a great deal of friction? You must have wear and tear somewhere; you are never able to get down an incline without it; if you use the old break there would be the same wear and tear, for you must have a certain amount of friction on the wheels and rails, and you cannot skid one wheel only; you must skid two wheels on railways.

135. As the wheels are altogether stopped by your break there must be a considerable amount of friction, and that on one spot—would not that have the effect of wearing away the wheel? There would be several teeth on the ratchets; sometimes the wheel would be stopped at one point, and sometimes at another, and probably in the course of a year it would be worn pretty equal all round.

136. Supposing this plan of yours were applied to a train; that you were going down an incline of one in thirty, say of a mile in length—and I understand that there are inclines of greater length than that—supposing it were necessary to go down that gradient at a great speed, say of twenty, twenty-five, or thirty miles an hour, in order to make up for lost time, and that the wheels were tightly locked, do not you think that would create a great deal of friction, and be apt to cut the wheel? Yes, in time; but the friction must be somewhere; you cannot have a break without friction; but I state that this is more an auxiliary break in going down hill.

137. Then you do not consider that we could dispense with the other break if we applied yours? I think you almost could.

138. You say yours is only an auxiliary? It is according to the rate of speed you are travelling at. I do not mean to say between this and Parramatta, or Blacktown, or those places where you want speed; I am talking more of where you want to go safely over a difficult country.

139. In going over this very difficult country it will be necessary sometimes to go at a considerable speed, in order to make up time. For instance, supposing a train is timed on an average to twenty miles an hour, on some parts of the road it cannot go more than ten, on other parts it must go more than twenty to make up for lost time; now, if it were necessary to go at this considerable speed down hill, do you consider this break of yours would be sufficient for the purpose? Yes.

140. Although it would stop the wheels entirely, and create a great deal of friction? The other break stops the wheels entirely.

141. With the present break there is a means of providing against that; the break is greased so that the wheel is not suddenly or entirely stopped? A break is a break.

142. It does not stop the wheel entirely, except when necessary—the wheel is generally allowed to revolve to a certain extent; that must prevent a great deal of friction? If the way is so steep that it is necessary to apply the break, there will not be more friction caused by my break than by the present one.

143. Your break stops the wheels altogether; the other allows them to revolve slowly; now, the wheels must be subjected to more friction if they slide on the rail than if they revolve upon it. There is another thing which has struck me with reference to the application of your break, and that is, whether it would not be in some degree dangerous—your break is to be in some cases applied to the front wheels, and supposing it were necessary to turn a sharp curve—? The front wheels are never stopped by my break.

144. In either case, in going round a sharp curve, as the wheels would be entirely fixed, would not that have a tendency to throw the vehicle off the line? They are all fixed, whatever movement you make; if one side of the wheel turns the other does also; in railway carriages the axles and wheels are always solid.

145. I know that perfectly well, but is there no means of permitting the wheel under the carriage to accommodate itself to a curve of the road? No, it is like a ship, all one mass; if you could strike a ship with a sufficiently heavy hammer the vibration would be felt all over.

146. Would not this necessitate a total alteration in the construction of axles used for carriages? Not at all.

147. How do you propose to apply this ratchet? These wheels are cast first (*referring to models*), then the axles; a hole is then made in the wheels, and the axle is keyed on.

148. You would propose to fix the ratchet in the same way? Yes.

149. Then it could be applied to the present axle? Yes.

150. *By Mr. Lucas*: Your scheme would be more applicable to a horse tramway, where the speed would be about five miles an hour, than to railways? I should say with horse traction it would be available at any speed a horse would go.

151. The great advantage of your scheme would be to prevent the backward movement in going up hill? Yes.

152. For instance, if it were found necessary, when a hill had been ascended half way, to rest the horses, your system would prevent any backward motion? Yes.

153. And the horses would then not have to overcome the retrograde motion? Just so.

154. That is the chief advantage? It is; that is the chief thing.

155. I understood you to say, at the commencement of your evidence, that it would be much easier, and would take less force to break these wheels at the axles, at a diameter of a foot,

than

than at the rims at a diameter of three feet—is not that opposed to the general principle of mechanics; would it not be much easier to stop a wheel, when revolving, at the rim, where the diameter was four feet, than at the axle, where the diameter was only eighteen inches? I think if a frill were put on the periphery of a wheel, and another were put on the centre, the latter would sustain a greater weight.

Mr. W. G.
Caporn.

21 Nov., 1861.

156. Would it require the same power to be applied in order to stop it—Supposing a carriage were going at the rate of ten miles an hour, and you could chock it with a piece of wood three inches by three on the outside of the wheel, do you think a piece of wood of the same size and strength, if applied to the axle, would stop it? I do not think it would; but cogs and ratchets are quite different things. I believe, however, that it would be easier to stop a wheel on the axle than on the periphery.

157. Is not that opposed to all the principles of mechanics—is it not always admitted that a smaller force will stop a revolving body, when applied at a distance from the centre of gravity, than when near it—is not the leverage greater? I do not think there is any leverage at all.

158. Supposing a train were going at the rate of twenty miles an hour, and you applied your break suddenly, do you not think it would smash the frill and wheel? It is not intended to stop a train going twenty miles an hour; it is meant on an average of twenty miles an hour.

159. You were speaking of trying your invention on that piece of the line which passes under Parramatta-street? Of course you would require only to put your break upon the last carriage of the train? Yes. (*The witness exhibited a model, shewing the application of his ratchet and pall to a carriage*)

160. *By Mr. Arnold*: Did you ever practically test your invention, by applying it to any rate of speed at all? I have had no opportunity of applying it on a railway—I have applied it to a dray.

161. Going at what pace? Going about town—up the inclines about town, and it has answered exceedingly well.

APPENDIX.

REPORT TO BE LAID BEFORE THE SELECT COMMITTEE.

I offer a few remarks, and will commence by stating that my invention is an auxiliary. I will endeavour to shew the reason why the cost of construction on railways should be enormously decreased by the use of my application.

The savings will be in the permanent way. The lessening of cuttings, increasing the inclines, and doing away with heavy engines of 40 or 50 tons, and substituting others of much less weight; all reasons, in my opinion, sufficiently strong to induce the attempt.

I also put forth my invention as something entirely new and original, exceedingly simple, effective, and inexpensive. I believe in traction power, and engines can be constructed with power and without the present heavy weights, which of themselves do enormous damage to the permanent way, but which heavy engines have been positively necessary so as to afford the required strength in haulage on ascending inclines, and in having command of the pressure on descending. My invention is not meant to stop a train going at a great speed, except in case of extreme danger, when an immediate stoppage is absolutely necessary, but up to twenty miles an hour I see no difficulty; but in ascending, it is equally advantageous at fifty as at five miles per hour, as follows:—Supposing a train of twenty carriages, with four breaks, was required to stop on going up an incline, the moment the traction moderated, the train or carriages would moderate also, and on the engine stopping, the carriages would be effectively broken of their own accord, instead of the present system of having to apply the break to the periphery of the wheel, which on proceeding remains a dead weight, hanging on the engine; but not so with mine, for the moment the engine stops each break supports the carriages in front, and on proceeding offers no impediment, but enables the driving wheels to make perhaps an entire revolution ere the whole train is entirely in motion. My invention may also be considered an auxiliary on descents, as by applying certain breaks the traction has perfect command of the carriages or trucks. The saving on the permanent way would be (on levels, plate rails) less wear and tear, in consequence of light engines, the bridges, &c., would not be required to be so solid and expensive, cuttings would be made in some cases merely for balancing the line (that is embankments), and I would endeavour to follow as much as possible the natural surface of the earth, and which I am of opinion can be done, and still allow a speed of say twenty miles per hour, but with an enormous decrease of cost, and yet with positive safety up and down inclines, in some cases as high as 1 in 15; heavy rails will be required on inclines to stand the wear and tear; you will be able to complete communication at a very low cost, a very great desideratum to this Colony. The permanent way if horse traction be adopted, will require the sleepers very close, say every nine inches, and then no difficulty will arise in keeping it in order. I have a common preparation in my stable down now eighteen months, and which wears admirably, cheap and available, and which I shall be happy to shew.

My system does not interfere with the present rolling stock, an advantage of no mean importance, as if goods are conveyed down the country, they can be conveyed to the metropolis direct. My system is also founded on correct principles, acting right and left towards the centre, the same break making up or down the same side of the incline. The principle of the motion is also correct, as if a train going at twenty miles an hour, the axles being nearer the centre, the revolution is so considerably less—the wheels being about 42 inches over, and require 11 feet to make a revolution, not so the axles and frills, which if a foot only, require 3 feet to make a single turn, consequently are more easily arrested. A remark has been made that my invention does not help the traction; it does not directly, but indirectly, as if a man was to cross a precipice with a causeway only one foot wide, he would be afraid of falling if attempting to cross; but suppose he had two guys the whole length to hold in his hands, he would be enabled to overcome that which he otherwise would not have attempted; so it is with my invention. Also, it would be next to impossible to heave a ship's anchor, if it were not for the palls of the windlass. I also propose that the flanges be increased, as with light carriages they would be less liable to shift. At present a train weighs from 60 to 100 tons, (a wide margin) to carry say passengers of the weight of 5 to 10 tons. I propose to decrease the weight of the rolling stock at

Mr. W. G. Caporn. least one-half, of itself a great reduction, and thereby lessening the friction on the permanent way. My system also in light carriages will give support by having the centres of carriages and axles extra strong. As to the cost of construction it is useless to make any remark, depending as it does on the line of country followed, which in New South Wales is so variable; but by going over any proposed line, I could make an estimate as to the cost. With horse traction the following rates can be easily maintained:—Mails and passengers, 10 to 12; light freight, 5 to 7; goods, 3 to 5 miles per hour, certain. By having the permanent way properly laid down I see no reason why engines and horses may not be advantageously used, as convenience requires, but with steam power alone, a greater speed could of course be maintained.

21 Nov., 1861.

A very essential part of my scheme is to have great care taken in laying down the permanent way, and which must be of a very substantial character; the saving in cuttings, embankments, bridges, viaducts, and tunnels will well allow it to be done on a firm basis. Light engines would also be quite sufficient for all traffic likely to be on any projected lines for years to come. On the whole, by adopting my ideas, the Colony will be able to construct railways at a cost within its means, regular communication will be completed, but at a low rate of speed, of itself of not much importance when compared with the double advantage attained. I am not altogether devoid of practical experience, having been six years in the building line and timber trade in England, three years of which I worked at the bench to obtain practical knowledge, after which I had charge of all materials used in construction. In conclusion I am confident that my break will bear me out in all I state, and in the event of its coming into use I shall consider that I am entitled to a recompense commensurate to the advantages attained, and in conformance with my first communication with the Government on this subject, in May, 1861.

WILLIAM GOODE CAPORN.

New South Wales, 21st November, 1861.

The invention is at work on a common dray in town, and answers every expectation.

John Whitton, Esq., C.E., called in and examined:—

- J. Whitton, Esq., C.E. 162. *By the Chairman*: You have heard the evidence given by Mr. Caporn as to his invention for stopping or checking locomotive and other engines on inclines, by means of iron frills or ratchet wheels on their axles? Yes.
- 21 Nov., 1861. 163. Will you be kind enough to state to the Committee your opinion of this invention? I think it totally inapplicable for railway purposes, and attended with the greatest danger. I do not believe it would be possible to make axles, even assuming all other parts to be strong enough, to resist the pressure of the pall as it falls upon the ratchet; the effect would be either to break the pall, to break the axles, or to strip the wheels from the iron plates, even assuming the bodies of the carriages were strong enough to support the application of the palls.
164. That is, supposing the palls were applied while the trains were in motion? Decidedly; it would be of no use for any purpose except when the trains were in motion.
165. Would the same objection hold good to tramways by horse traction? Yes; I think the ordinary breaks far superior in every respect; the only advantage of this is to skid the wheels, and you can skid the wheels by the ordinary break, which is applied where it can be most effectually employed; that is, to the periphery of the wheel.
166. *By Mr. Rotton*: Is it not an advantage of the present break, that it can be applied to the four wheels instead of, as by the plan now proposed, to two wheels? Yes, and if you had six, or eight, or ten wheels, you could apply the ordinary break to them at the same time, besides you can now apply the power gradually; but, assuming that you were travelling at any speed, say sixteen or eighteen miles an hour, and this pall were suddenly applied, something must break, either the pall or the axle, or the wheels must be stripped off.
167. Will you state what your idea is with reference to the extra friction which would be caused by the application of this plan, in consequence of the wheels being totally stopped? It would be precisely the same as in the ordinary break; you apply the break gradually, but the friction is when you skid the wheel.
168. But there would not be so much friction unless you required to stop the wheel entirely? No; in the case of the ordinary break you can apply it gradually, and check the speed by degrees; but with this you must stop the wheel entirely.
169. *By Mr. Dalgleish*: There is no means of removing the break during the progress of the train down an incline—you cannot remove it or relieve the train from the break? No.
170. *By Mr. Rotton*: If you were going up an incline and it became necessary to stop the train in the middle, would it not be as practicable to stop it with the ordinary break as with this? Yes, assuming that you had the same break power; that you had the break applied to as many wheels with the ordinary break as with this. The only difference would be this, that with the ordinary break you could let the train down by its own gravity; with this you could not.
171. For all purposes you consider the ordinary break preferable? Yes. I think the break of Mr. Caporn would be extremely dangerous, and I should be sorry to see it applied to railways in this country.
172. *By Mr. Dalgleish*: The great danger would be from the percussion which would be caused by the sudden dropping of the pall? Yes; the leverage of the wheel against the ratches would be so great that if the pall were sufficiently strong the axle would be twisted by the pressure.

Edward

Edward Bell, Esq., M.I.C.E., called in and examined:—

173. *By the Chairman*: You are an engineer? Yes.
174. Have you heard the evidence of Mr. Caporn, explaining his scheme? Yes, I was here during a considerable portion of his examination.
175. Did you hear sufficient to enable you to understand what he proposes? Yes.
176. Will you have the goodness to state to the Committee what is your opinion of his scheme, as to its utility and applicability? I think it might be made an effectual break for horse traction carriages, but its sudden action is detrimental to its use on railways, inasmuch as I think it is unsafe. If a break is thrown into gear suddenly, something must go. It is very true the wheels will skid on a steep incline and give some relief; but if the train were going at a very high speed, at twenty or twenty-five miles an hour, that would not give relief in time to save either the wheels or the ratchets from breaking.
177. You do not think it is so well adapted for the purpose to which it is proposed to apply it as the present system? I think it might be applied to horse traction with advantage. The ratchet should not be in the middle of the axle. If it were nearer the bearing it would save the axle from breaking or twisting, but I think that each carriage should have two of its wheels checked by means of this break, instead of all the wheels; this would be sufficient to prevent the rear carriage from pressing upon the former, as without that the carriages might skid down an incline too fast for the horse to get out of the way. If there were a break on every carriage, one man in charge of a train might put in action as many palls and ratchets as he found necessary, and no more, to allow a train to pass down an incline at an easy rate. I think on a horse tramway this might be very advantageously introduced.
178. *By Mr. Kotton*: Even on a horse railway, if you found it necessary to use the break at all, would it not be disadvantageous to stop the wheels altogether, as you would have to do by this means? I think not, except on steep gradients.
179. Supposing a gradient, not very steep, on which it was necessary to give some slight assistance to a horse, but not to stop the carriage altogether, would not that be disadvantageous? You might prevent all the carriages from being locked—you might allow the palls to fall in two or three carriages and not in the rest, but if you were going down a very steep incline then you might let them all down.
180. Supposing it were a passenger carriage, and that there were only one carriage? You must let the pall fall, and on a very easy gradient that would break it too much.
181. In a long line of railway there would be very easy as well as steep gradients? Yes.
182. In these easy gradients it would not be necessary to stop the wheels entirely? No.
183. There is no way of using this break except by stopping them entirely? The palls might be made self-acting, so as to stop the wheels of some of the carriages from revolving without stopping others.
184. *By Mr. Lucas*: I understand you to say that to use this break it would be necessary to apply it to every carriage; is it not the fact that the trains now have only one break? Yes, the tender generally has one, and the break van behind has one also.
185. Is it found that one break is sufficient for a train of ten or twelve heavy carriages—why then would you require this break to be applied to every carriage? I would not use this ratchet break on a railway; I said it would be injurious; but in horse traction, to save the necessity of having a man on every carriage, you might have these breaks on every carriage but the leading one, where the ordinary railway break might be used.
186. Suppose the gradient were one in twelve, would it be necessary to have it in every carriage? Yes.
187. *By the Chairman*: I understood you to say that it would be necessary to put a person to each carriage? Yes, if you have the present railway break upon horse traction carriages you would require a person in every carriage to apply it on steep inclines; but if they were self-acting palls they would put themselves in action, and they might be used on moderate inclines.
188. You have stated that you do not think this break would be of any use for carriages going at the rate of twenty or twenty-five miles an hour—do you not think it would be of service in the case of traction engines going at the rate of twelve miles an hour? If you give sufficient strength; it might be made so strong that it would not break, but then it would be so cumbrous as to be of little value.
189. *By Mr. Arnold*: Is there any difficulty in the present break in completely locking the wheel? No; I think it is perfect in that respect.
190. Does this do anything more? Nothing more I think; with the ordinary break you apply the pressure gradually, and the rotatory motion of the wheel is not immediately stopped, but by the break now proposed the wheel is suddenly stopped.
191. The one does it safely, the other dangerously? Yes.
192. *By Mr. Dalgleish*: One does it with comparatively less damage to the wheel than the other? Yes.
193. Seeing that the pall fixes the wheel it would wear it more in one part? Yes.
194. Whereas if the wheel revolved a little, the tire would not be so much destroyed? Certainly not.
195. The portion exposed to abrasion would be continually changed? Yes.
196. *By the Chairman*: Do you not think going up steep inclines of one in fifteen this break would be of service in the event of the coupling chains breaking? There is no danger of the coupling chains breaking; there are generally two or three to each carriage—that is one coupling link and two guard chains.

E. Bell, Esq.,

WEDNESDAY, 27 NOVEMBER, 1861.

Present:—

MR. DALGLEISH,
MR. LUCAS,MR. ROTTON,
MR. SUTHERLAND.

JOHN BOWIE WILSON, Esq., IN THE CHAIR.

Present in the Room:— John Whitton, Esq., Engineer-in-Chief for Railways.

Edward Bell, Esq., C.E., called in and examined:—

E. Bell,
Esq., C.E.
27 Nov., 1861.

197. *By the Chairman:* This Committee has been appointed, I dare say you are aware, to inquire into and report upon your inventions and system of railway locomotion. Perhaps the most convenient way of proceeding would be for you to state to the Committee, in your own way, what those inventions and what that system are? Yes, I will explain my inventions, commencing with the first patent, then the second, and then the third invention for which I have applied for a patent. The first invention was described in a Petition to the Governor General, dated 8 June, 1860. It was an invention or improvement in railways and locomotive engines to be used thereon; and in order to inform the Committee of the nature of the invention it will be necessary to read the petition. (*The witness read the same. Vide Appendix A.*) That explains the nature of the first invention—a wooden rail with an iron bar or rim upon it for the guiding wheels to run upon. As soon as that patent was granted (I have not got the date here) I applied for another, that is, for a patent for a wooden wheel to run upon that wooden rail, and to act as a driving or propelling wheel for the engine. It is explained in this manner. (*The witness read the specification for patent. Vide Appendix B.*) That is the nature of the patent for the wooden wheel which was to run upon the wooden way. These are the two patents that are referred to in my letter of the 6th February, 1861, to the Secretary for Public Works. These papers have been printed before, but I will state the substance of them. In the letter I have just referred to I called the attention of the Government to my two inventions for improvements in railways and tramways, for which letters of registration for the Colony had been recently granted to me for the term of fourteen years, and that I was desirous of placing these inventions at the service of the Government on very advantageous terms, feeling confident that the adoption of my improvements would save from £5,000 to £8,000 a-mile upon the then estimated cost of railways in the Colony. I had not at that time seen those estimates, but I was under the impression that the cost of railways in the Colony was estimated at £9,000 a-mile, or somewhere about the cost of the line between Liverpool and Campbelltown. The circular letter of the 14th February, published among these papers, I did not consider to bear any reference whatever to the correspondence with the Minister for Works; but as it bears an ulterior date to the letter I have just read it may possibly be considered as connected with it. However, that circular, so far as I am aware, was not taken any notice of by the Minister for Works; he neither appeared on the 19th or 20th of that month at the School of Arts, nor, as far as I am aware, did anyone from the railway department attend to see what was there exhibited for his inspection. On the 2nd March I received a letter stating that any proposals made by me on the subject of my invention for improvements in railways and tramways would receive the attention of the Government; and on the 8th March following I made a proposal to the Government as the basis of a negotiation, not going into engineering detail at all, but simply confining my proposition to a basis for a negotiation, by means of which the terms of the arrangement should be settled. That proposition, I stated at the end, I was quite willing to discuss, and I might meet, or otherwise, any modification that might be suggested on the part of the Government. I stated in that letter that there were two points on which the Government might fairly require proof to satisfy themselves of the advantage of my plan of railway; the first was the practicability of ascending and descending severe gradients by means of locomotive engines with safety, and the second was the effect produced on wooden ways and wheels by working upon my plan. To solve this problem I thought it was necessary, and in fact indispensable, that a line of some eight or ten miles in length, through a fair average country, should be constructed, reasonably contiguous to a supply of suitable timber, and between two places between which a line was likely to pass, the traffic between which would give a good working trial of the railway and engines, and at the same time defray the expense of running the trains. I thought that a term of not less than a year was necessary to prove it, in order to shew what effect the wooden wheels would produce on the wooden surfaces, and that if the line were connected with an existing railway the carriages running upon that might run upon the trial line, and might subject it to a more severe test than it would otherwise sustain if subjected only to its own traffic, and not to through traffic. I stated that I considered that gradients of one in twelve might easily be overcome and worked to advantage under my system, and I proposed to introduce such gradients upon it; and that if I succeeded in working these gradients it would shew that cuttings and tunnels might be dispensed with in railway works throughout the Colony, or very nearly so. I also said that even if gradients of one in seven should be found necessary to avoid these expensive works, I had no hesitation in saying they might be overcome and worked successfully by my system. I estimated that such a fair average line might be constructed, and two engines made in the Colony and put to work upon it in the course of twelve months from the commencement, at a cost not exceeding £25,000. I mentioned eight or ten miles, but I added that it would be practicable

practicable to construct ten times that length in the same period at a similar rate, it being understood that on the trial line I was to exclude the crossing of large rivers, deep ravines or gullies, and precipitous country from that estimate. These are works that could not possibly be estimated for unless the site and necessary data in connection with such works were given one to estimate upon. I may say there was no occasion to put bridges in the trial line, inasmuch as everybody knows what bridges are, and what they will carry, and therefore it was not necessary to make experiments with them. I stated that the trial line would mainly depend upon my own personal exertions, skill, and management, and consequently that it would be necessary it should be under my direction and control in every way, except with regard to money receivers, with whom I wished to have nothing to do. There was nothing to be paid for the use of the invention during the trial year, unless the system proved successful. If it were successful, I suggested that I should be paid one shilling per train mile run for the last six months of the trial year, and for all future train miles run on my system upon any line, one shilling per train mile run; it being understood that if the patent were used on any part of a line, the mileage was to be paid upon the whole length that the trains ran, as if the patent were employed the whole distance, (existing lines excepted, unless the patent be used upon them.) These propositions were submitted as the basis of a negotiation, and if any negotiation had proceeded I was prepared, as I stated in the first letter, to give very advantageous terms to the Government. If they were considered high, as a matter of course I should have altered them; but in making a proposition you never begin on the lowest scale; you always expect to arrive at that before you come to the end. I should mention that before I received the letter of the 2nd March I had heard indirectly, on very good authority, that an unfavourable report had been given by the Engineer-in-Chief, and that there was no chance of his looking upon it favourably; but as the Secretary for Public Works informed me, after getting that report, that any proposition I might make should receive the attention of the Government, I at once (within six days) tendered him my propositions. On the 12th June I received from the Under Secretary for Works a letter acknowledging certain proposals of mine submitted to the Government for testing my inventions and improvements in railways, and informing me that, under a report received from the Engineer-in-Chief for Railways, the Secretary for Public Works did not feel justified in recommending to the Government any expenditure for testing the merits of my inventions. Now I conceive that that letter was not perfect; it should have forwarded a copy of the report it alludes to. If no reference had been made to the report of the Engineer-in-Chief I should not have considered myself, in courtesy or otherwise, entitled to a copy; but, as the letter referred to that report, and it was on that report that my basis of negotiation was not submitted to the Government at all, I applied for a copy of the report, considering, as I before stated, that a communication of that kind was not perfect unless accompanied by the report. The reply I received was that it was not customary to furnish reports of this kind to persons applying for them, as a compliance with such request would lead to much inconvenience. The Minister's regret, expressed in his note on my letter of the 26th June, was omitted; beyond that the letter conveys his sentiments. Now it is very true it might be inconvenient to furnish persons who might apply for them with copies, but I do not think that should be applied to one person who had been led to believe that his proposition should meet with a fair amount of attention on the part of the Government. I do not think I should have been classified with those persons who would make themselves troublesome in that way. I think courtesy alone should have moved the Minister to have given me a copy of that report. However, that report was moved for in the House by the Chairman of this Committee, and obtained by me for the first time, when it was printed by order of the House, some days after the 17th October. I may also remark that on the 26th February, 1861, or about that date, the Chairman presented a petition from me to the Legislative Assembly, of which this is a copy as printed. In this petition I call the attention of the House to my improvements in railways and in locomotion on the same, stating that if put in operation they would be the means of saving large sums of public money, and greatly facilitating the progress of railway communication throughout the Colony; that I was prepared to shew that railways may be constructed and worked by steam power in this Colony cheaper than tramways by horse power; that they would be in every respect as permanent and useful as the railways now in operation in the Colony; that the same carriages and rolling stock as are now in use might be used on my lines, excepting the engines, which are much heavier than those which under my system would be required to perform an equal amount of work; that the material of which the lines projected by me would be composed, would be chiefly the hardwood of the Colony, and that the quantity of iron used in them would not exceed one-seventh part of the weight of that now used on the lines in operation. I had never weighed any of the rails in use, but I was under the impression that they were 90 lbs. to the yard. I went on to say that I observed in the fourth report of the Commissioner for Railways, that the lines projected, and for which plans and estimates had been prepared in the Railway Department, were estimated to cost, from Penrith to Bathurst, £26,000 per mile; Picton to Goulburn, nearly £19,000 per mile; and from Singleton to Muswellbrook, nearly £17,000 per mile. That petition was written and sent to the House as soon as I learnt what the probable cost of the intended lines would be. I stated also in that petition that on my system, a line from Penrith to Bathurst would not exceed £2,000 per mile, exclusive of bridges. I had previously shewn that if the gradients I proposed to adopt could be worked, cuttings, earth works, tunnels, and so on, could be dispensed with; and consequently I had occasion only to mention "exclusive of bridges." The petition further states that the facility of ascending and descending gradients of one in seven or eight, with engines drawing about three times their own weight, would enable me to dispense with the very heavy earthworks and other expensive operations which, under the present system, are unavoidable; and that

by the rapidity with which lines on my principle could be constructed, a further considerable saving would accrue to the Colony at large. I therefore prayed the House to take the matter into consideration. Now the document that first came to my hands after this correspondence was the report of the Engineer-in-Chief upon my two inventions, which I have just described. My proposition was referred to the Engineer-in-Chief, by the Minister for Works, on the 14th March, 1861, and he reported on the 10th May, 1861. His first remark was, that I proposed that the Government should furnish me with £25,000, to construct eight or ten miles of railway and build two engines, "it being understood that the crossing of large rivers, deep ravines, or gullies, and precipitous country, is excluded from this estimate." Now I did not exactly wish that, and I do not think I proposed it. I merely proposed that the Government should expend £25,000. I did not want the money; I simply wanted to control its expenditure. I did not include large rivers, because I did not want the Government to try any experiments with bridges. I certainly excluded deep ravines and gullies, because I did not think they came within the description of fair average country. However, the next clause of the report says, "it requires no consideration to see that the above estimate is a mere guess." I do not know why. It would have been a mere guess if I had included bridges, or if I had undertaken to apply the same estimate to any line the Government might choose, or to cross any rivers; but I think I brought it as nearly as possible to a reliable estimate for a fair average line, without any guess. At any rate I have surveyed a line since, and I am quite prepared to shew how that line can be laid for the same money—ten miles of it. The report adds, "Mr. Bell having no objection to pledge himself to construct ten miles for the same amount as eight miles." It was scarcely any use to say that. The ground not having been chosen, it was not possible for me to be more precise. Possibly, if the Government had chosen to select a piece of ground a mile long, with a wide river in it, I should have been wrong and my estimate a mere guess. Then Mr. Whitton says, "It is quite probable that "one bridge on the eight or ten miles proposed to be constructed would cost from £20,000 to £40,000, or even £60,000, yet no provision is made for such contingencies." That is a curious term to give bridges—contingencies. But would it be a fair average line of country that contained a bridge that would cost £20,000, £40,000 or £60,000. I can scarcely conceive a man making such an observation at all. I do not intend my observations to impugn the Engineer-in-Chief's professional knowledge in the slightest degree, but I think he forgot that he had to report on that document as an engineer, and instead of that he reported as some one of the unprofessional gentlemen in the office might have done. Mr. Whitton says, "Mr. Bell states that under his system gradients of 1 in 12 may be easily overcome and worked to advantage. I know that such gradients never have been easily overcome and worked to advantage." Now I directly state that they have; I know they have, and I have done it myself. I have taken locomotives weighing seven tons up gradients of one in twelve, drawing seven tons on a common road, and I know it has been done by others, and I could prove it; I could not put my hand upon it this morning, but I have seen a book containing an account of Hancock's engine, which ran up Pentonville Hill. I saw it myself draw another carriage after it up an incline of one in twelve, and do it successfully and easily at six miles an hour. Mr. Whitton in his report goes on, "A locomotive engine "with iron driving wheels, and working on iron rails, can be made to work gradients of one in twelve; but the work done would be so costly that it would be less expensive to increase "the cost of construction and improve the gradient. Any gradient worse than one in forty is "a bad gradient, and should never be used if practicable to avoid it; almost any expense in "works is preferable to such gradients." Now I agree in that opinion exactly, and in addressing the Colonial Secretary on the 25th September, with regard to my other application for a patent, I almost use the same words with regard to the traction system. I stated that on the traction system it is ruinous to work at any gradient more severe than one in forty, with iron wheels upon iron rails. That was written some days before this report of Mr. Whitton was published, so that my opinion quite coincides with Mr. Whitton's on that point, that it would be preferable to carry out any works, whatever their cost, rather than work steeper gradients than one in forty on the traction system, with iron wheels and iron rails. The next part refers to the remuneration I was expecting or supposed to expect for the use of my invention. I have read my offer again, and I can see nothing ambiguous in it. I think it states very clearly what I meant; and I cannot conceive how, if eight miles of line were laid between Campbelltown and Camden, with three trains a day running as they are now, through trains to Campbelltown, the remuneration to be paid to me without any deduction, would come to more than £800 or £900 a year. It is stated in the same report, that "Mr. Bell proposes to increase the tractive power of an engine by using wooden rails and wheels"—this is true; but it goes on to state what is not true, viz.—that I propose to increase the tractive power of an engine by having engines of less weight than those now in use on the existing lines. I am not aware of having made any such proposition, and have given no foundation whatever for such a report. This statement is not only unfounded and absurd, but the incorrectness is aggravated by the words immediately following—"This is really the sole merit Mr. Bell claims for his patent." I proposed, at the Exhibition at the School of Arts, to augment the tractive power of engines by increased adhesion; and to perform the same work with engines of less weight than those now in use, by means of such increased adhesion; and to ascend steeper gradients than the present engines can, by engines of less power and weight; and, by the use of steeper gradients, abolish, or nearly so, earthworks, tunnels, cuttings, embankments, wooden viaducts, and other expensive works. I proposed also to use the timber of the country, and save a large amount of iron which has to be imported, and to make the engines and rolling stock in this Colony. Now that is really what I have proposed, and all I have proposed, and I am quite sure that Mr. Whitton will see that I have made no such proposition as he states. It would indeed be a ridiculous proposition

position to make, if I stated that by having engines of less weight I increase my tractive power. I increase my tractive power entirely by the increased adhesion that there is between wood and wood. It is also stated in the report of the Engineer-in-Chief, that "the tractive power of an engine depends not entirely upon increased adhesion, but upon power combined with adhesion;" by the word *power* (in italics) I conclude that *steam power* is meant; but be that as it may, I maintain that whatever the steam power of an engine may be, its tractive power depends entirely upon adhesion and the manner in which the steam power is applied to give tractive power to a locomotive engine; for instance, suppose the engines imported into this Colony so late as the month of May or June last, had, instead of being mounted upon two 5ft. 6in. or 6ft. propelling and four guiding or trailing wheels, been mounted upon six coupled driving wheels 2ft. 9in. or 3ft. in diameter, they would have had (6) six times the tractive power that they now have for ascending inclines, with the same engines and steam pressure, while they would run at half the speed, and consequently there would be a clear gain—taking the tractive power and speed together—of three times the power of the same engine, had they been properly mounted; that is, mounted on smaller wheels. Mounting it on smaller wheels gives the engine more power over the train, and the train less power over the engine to draw it back. The engine being mounted on six propelling wheels, or all its wheels being propelling wheels, all the weight of the engine is thrown on those wheels instead of on two wheels only, as in the engines I have alluded to, in which there are only two propelling wheels, and consequently they only take their proportion of the weight of the engine to keep them in contact, whatever that proportion may be—8, 9, or 10 tons. But if all the wheels were propelling wheels, and the weight were thrown on all, there would be 40 tons to keep the engine in contact, instead of 8 or 10; consequently the wheels would never slip, or would not slip so soon by three times, while driving by six wheels, as they would if driving only by two. Then decreasing the diameter of the wheel from 5ft. 6in. to 2ft. 9in., or from 6ft. to 3ft.—I do not know what the diameter is exactly, but reducing them to one-half the diameter—that would give them double the power of drawing a train that the engine has now, and the train would have less power over the engine, in the same way that a small wheel working into a cog wheel, or a small pulley driving a large pulley with a strap over it, would have greater power over the large pulley than, reversing it, the large pulley would have over the small. The report goes on to say, "Assuming that more adhesion is attained by using wood against wood than by the use of iron against iron, this assumed advantage is thrown away by decreasing the weight holding the two bodies in contact." Mr. Whitton assumes, just for the sake of argument, that the one has greater adhesion than the other. I found by experiment, that the adhesion of my wooden wheels upon wooden rails was three times that of iron wheels upon iron rails. Assuming, therefore, that by using wood upon wood, the adhesion is thrice that of iron upon iron rails, it follows that a locomotive engine of 15 tons weight would draw, by its adhesion to the wooden rails, as heavy a load as an engine of 45 tons weight, with iron wheels upon iron rails; all the wheels of the engines in both cases being propelling wheels, or both engines having the same number of propelling and guiding wheels respectively. Now, if an engine of the smaller weight will perform the same amount of work as that of greater weight, there must be a judicious economy in using the engine of smaller weight, and consequently a great advantage attained, and which is not thrown away as stated. There would also be 30 tons less weight to carry with every engine, and consequently to propel on inclines. *This is highly important*; besides which there would be a proportionate saving of engine power, fuel, wear and tear of rails, and a large amount of capital, which is now thrown away where high speeds are not required. Another great advantage would result from the greater adhesion of wood upon wood than of iron upon iron, viz, if one-third the weight upon the former is sufficient to give the same amount of contact or adhesion as three times the weight upon the latter, the wood will perform the same amount of work as the iron, and be subject only to one-third of the crushing weights. The only other remark I need make on the report of the Engineer-in-Chief is, that "it is probably not necessary to say more on this subject than that, in my opinion, Mr. Bell's model is mechanically defective; and if ever his scheme be tried it will turn out a failure." I do not know why it was not necessary to say more—why a report of this sort should be called for, and then the matter be dismissed in this summary way. As to the model being defective, I do not know what the model had to do with it; it was the system I was advocating. The Minister did not come to see the model at the School of Arts, probably because he had seen some parts of it before at the Town Hall. However, I was endeavouring to bring forward a system, and my model was condemned. I made it myself, and as I have not much time to spare from my other duties, perhaps it was not so complete as it might have been. Mr. Whitton pronounces that if the scheme be tried it will turn out a failure; but I think a scheme of so much importance might have received more attention, a little more argument, and a little more engineering opinion, and that some reasons should have been given why it would turn out a failure. It was not for want of time that this was not done, for I applied to the Minister for Works on the 6th February, and it took till the 5th of July—five months—to tell me that the Engineer-in-Chief had made a report, and that it was not customary to give such information to persons applying for it, as compliance would lead to great inconvenience. If I had got an answer to this correspondence at an earlier date I should have been three or four months earlier with my third application for a patent, but pending the issue of this I took no step about the other. But as soon as I got that letter—I think within four days after that letter came—my application for another patent, developing fully the scheme I proposed to carry out, was put into the hands of the Colonial Secretary. It was dated 3rd July, and it was put into the hands of the Commissioners for Patents, (one of whom was Mr. Whitton, and the other, Captain Ward,) on the 9th July, to decide whether it was new or whether it was old. Now, without making

E. Bell,
Esq., C.E.
27 Nov., 1861.

making any remarks or intending anything of a personal character towards Mr. Whitton or Captain Ward, or anyone else, it will be necessary to make a little explanation, to shew why I have applied for three or four patents, and why it should not appear as has been said, that I have been taking up one patent and dropping it, and then taking up another. As far back as 1858 I had these inventions, all of them, under consideration, and I mentioned them to many persons connected with the Corporation—the then Mayor, Mr. John Williams, I recollect most distinctly—assigning as my reason for not taking out a patent the great injustice to which I might be submitted, in the event of an application of the sort; and I further stated that I did not dare develop my whole scheme, because I saw very clearly that I had a tribunal to go to which could be anything but an impartial one. The Act, assented to on the 6th December, 1852, “to authorize the Governor General, with the advice of the Executive Council, to grant Letters of Registration for all Inventions and Improvements in the Arts “or Manufactures,” sets forth in the first clause, that the Governor may grant Letters of Registration for a period of not less than seven nor more than fourteen years, for such inventions and improvements; and the next clause says, that the person claiming to be the author or designer of any invention or improvement shall pay a deposit of £20 to the Colonial Treasurer, and, after payment of such deposit, shall present a petition to the Governor, specifying the particulars of such invention or improvement; and that then, “it shall be lawful for the said Governor for the time-being to refer the said petition to one “or more competent person or persons, to be appointed by the said Governor, to examine “and consider the matters stated in such petition, and to report thereon for the information “of His Excellency; and if the report of the person or persons to whom the said petition “shall have been referred by the Governor shall be favourable to its prayer, it shall be lawful “for His Excellency, with the advice of his Executive Council, to grant the Letters of “Registration hereinbefore mentioned.” Now you will see by this that the Governor has not the power to give me a patent; he is entirely dependent upon the report of two “competent persons” whom he is supposed to appoint, and if they do not recommend him to give me a patent I cannot have it; it is not lawful for the Governor to do it without that recommendation. Now it was not possible for me to be certain to whom my petitions would be referred, but I had a shrewd suspicion that the competent persons who would be appointed would be persons belonging to the Railway Department. (*Mr. Rotton, taking exception to the course the witness was pursuing, on the ground that the Committee had nothing to do with the law of patents, but to inquire into the merits of Mr. Bell's system of railway locomotion, the Chairman ruled the witness to be in order.*) My remarks are not intended to be in any way personal, or in the slightest degree to cast any reflection on anyone. This Act has restrained me from bringing my inventions before the public, because it appeared to me that the persons to whom they would be referred for report would most probably belong to the Railway Department; and that appeared to me like sending Bellambi coals to Newcastle to get Newcastle coal-owners to give a report about the nature of Bellambi coals; and I think so still. However, as I stated before, about the 5th of July I received that letter from the Under Secretary for Works, and within a few days afterwards I deposited another specification in the hands of the Governor, explaining how I meant to work my engines and trains, both on wooden ways and iron ways. I have here a copy of my petition and specification, and of the correspondence which followed thereon, which I can hand in. (*The witness handed in the same. Vide Appendix C.*) I will read the specification. (*Read.*) Now the letter of the 9th July informed me that that petition for a patent had been referred to Captain Ward and Mr. Whitton. On the 18th of July I received a note from Captain Ward, which will be found among this correspondence, requesting an interview at the Mint. (*Note read.*) I went at the time appointed, and he told me they did not exactly understand my specification, and wished me to furnish drawings. I remonstrated, on the ground of the expense it would put me to, to illustrate all the different ways that these wheels might be driven and these engines applied to carriages. Captain Ward assured me that it was the practice in the law of patents in England, and he should insist upon it here, that drawings should be furnished with the specification. I assured him that it was not the case, and on reference to his notes he found it was not compulsory to send drawings at all, but merely that if you do send drawings they shall be drawn to a scale of one inch to the foot, so that throughout all patents the scale may be uniform. He then told me, “I have had a meeting with Mr. Whitton, and we are not going to grant the patent unless we have drawings.” The result was as stated in the letter of 27th August to Messrs. Rodd and Dawson. (*Letter read; also the Report of Captain Ward and Mr. Whitton, with the enclosure thereto.*) Now all the cars alluded to in this extract from the *Engineer* have their engines combined or built in with the car; they form part and parcel of the same machine, and cannot be detached from one another; and they are all driven with gear wheels and multiplying power. That was published, I may observe, in England, on the 4th January; it must have come here by the January mail at the earliest, and could not have arrived here before the 13th or 14th of March. After receiving the letter above referred to, I wrote a note to Captain Ward, and asked the favour of an interview with him, and in conversation he said that they were not aware of this publication when they asked me for drawings, but that afterwards they casually took up the paper and happened to see it, and if I would state distinctly what was new in my invention and different from what was in this paper, the matter would be entertained again, if I asked for it to be referred back to them; and as the Report of the Commissioners or the Board stated that they could not recommend letters of registration to be granted unless I shewed the difference between my invention and that referred to in the *Engineer*, I addressed to the Colonial Secretary the letter dated 25th September, 1861. (*Letter read.*) So that you see, after the third application for a patent, being called upon for drawings, and seeing no chance of getting a patent without these drawings, which I very much objected to give, I introduced another invention on the drawing,

drawing which I furnished, and which I had intended to come forward with at another period, after the matter contained in my application for a third patent was disposed of. I was not aware of the existence of such an article in the *Engineer*, though I did know that such a paper existed. I had not seen this particular number of 4th January, or any number of it. I may state that since sending that letter to the Colonial Secretary, which bears date 25th September, but which was delivered to him only on the 4th October, I have received no reply at all; there has been no further communication. There is one observation that I wish to make with reference to that part of my letter, of the 8th March, to the Minister for Works, where I estimate that a fair average line of railway may be constructed, and two engines, made in this Colony, put to work upon it, within twelve months from the commencement, at a cost not exceeding £25,000. When I proposed to get these two engines made in the Colony, it was my intention to have them made as shewn in the plan on the table, and to use them either to carry or to draw the load, just as I pleased, so that I might introduce there the system of carrying; and if the Minister for Works had gone into the negotiation with me on the matter, I was prepared to enter on just the same kind of explanation with regard not only to the inventions I had patented but to those I have not patented, just as fully as I have done with this Committee, or as I intend to do with this Committee. My surprise was, that when Mr. Whitton referred to my proposing to construct eight or ten miles of railway and build two engines, he did not ask what I wanted with two engines on a single line of so short a length—running two, three, or four trains a day. It is very certain that unless I made sidings for these engines to pass one another I could not have worked two engines in the ordinary way, by drawing the trains; if I did I must have made a double line, for some part of the distance at least, for these two engines to pass each other upon; without it, it was quite impossible to work on the traction system more than one engine; and in asking for two engines my object was to try this very system, for his satisfaction, in addition to the other. Now that letter is dated 8th March, and therefore it must have been written before this article in the *Engineer* (which I have never seen, but which I have heard of) reached the Colony. That drawing (*referring to a drawing on the table*) I am prepared to prove was made in last Christmas week—the drawing of the two carriages; one mounted upon two independent steam trucks, the other upon a steam truck at one end and an ordinary truck at the other. This letter, dated on the 8th, was written on the 7th March, and that journal could not have been here before the 12th or 13th March. I never heard of it till I received that communication from the Commissioners of Patents. It is clear I never could have been guided by the report contained in that journal, the *Engineer*, unless I had seen it prior to the 8th March, which was impossible. In all other countries you are allowed to register your patent and pay for it, and if it is proved, on trial before a jury, that it is not new, you lose your patent, but if it is new you retain it, or so much as is new. Here it is different. Now I hold if that invention had been in use in other countries, and I did not know that it was in use, and it was not known in this country to be in use in other countries at the time I applied for a patent for the invention, that I am entitled to a patent, and that such patent should stand good anywhere. If it is new here—if it has never been published, and is not known here—I should be entitled to it in any country where the patent law exists. It is true engines have been built which were intended to carry passengers, but they were of a different kind, and quite unsuited to the ordinary traffic. For instance, a little engine was built at Adams' Works, near Stratford, to carry a few passengers—some six or eight—on the engine, on the same carriage; it formed part and parcel of the engine. It was a similar carriage to those which were made for running on common roads, and it was mounted on the Eastern Counties Railway, and carried seven or eight passengers. That did not answer, and has long since been abolished.

E. Bell,
Esq., C.E.

27 Nov., 1861.

198. *By Mr. Dalgleish*: Do you mean, Mr. Bell, Adams' carriage? Yes. In 1850, when I was in England, I was on the line repeatedly, and inquired after that carriage, and was told it no longer existed.

199. Excuse me,—it did not exist in 1850? I say it did not exist in 1850.

200. It has been constructed since 1850? Then it is not the one I mean. The one I mean was constructed by Mr. Samuel, who was then Resident Engineer of the Eastern Counties line, at Mr. Adams' works—nearer 1840 than 1850. It was a little thing weighing 25 cwt., and was used as an express engine when the Directors or any person wished to visit the line, but not to run for passenger traffic.

201. *By Mr. Lucas*: I suppose when you proposed to construct eight or ten miles of your railway for £25,000 you meant to take such a country as that between Sydney and Parramatta, or between Parramatta and Windsor? Yes. As I thought it might appear to some persons that my estimate was merely a guess, I prepared, at my own expense, a section of a line, from St. Mary's, South Creek, to Windsor, ten miles in length; and I inspected all the different routes—the Blacktown route, and the Windsor route, and from about Crawford's station along by Eastern Creek to Windsor. I also took the range along the further side of South Creek to Windsor. I preferred that, and took a section of it, as being the least expensive, the least likely to be inundated, and requiring no large bridges to carry it across South Creek and Eastern Creek, and other creeks in which the floods rise to a very great height, especially near the bridges on the main roads; and I found I could easily make the line I have stated, for the estimate I have given, even with 40 lbs. iron rails.

202. You could construct ten miles of that way for £25,000? Yes.

203. *By Mr. Dalgleish*: Have you got the sections? Not here.

204. Have you any objection to produce them? No, I will do so.

205. *By Mr. Lucas*: In going down such inclines as you propose, one in fifteen, or even one in twelve, do you not think there would be great danger—do you propose to use the present break to get down these inclines? There would be no danger whatever, and I should use the present break.

206.

- E. Bell,
Esq., C.E.
27 Nov., 1861.
206. On how many wheels could you apply it—the whole of the wheels? Just as you do now, to all the wheels; and in using wheels of two sizes I would apply the break to the large wheels, so that in going down hill the breaks would have very great control over the small wheels. In fact, in going down steep inclines I would always use the small wheels just as I would the same wheels in going up, inasmuch as the load has much less influence over the small wheels, and the train would consequently descend more safely. Indeed there would be no slip; I have tried experiments on gradients of one in ten, iron wheels on iron rails, to see how much it requires to move a carriage with its wheels locked and make them slip on that gradient, and I have found that it requires a draught equal to the weight of one-fourth of the whole load to move it.
207. It requires a strain of one-fourth of the whole load to move it down? Yes, 28 lbs. to 100 lbs.
208. That is, if the wheels are locked, as you propose to lock them? Yes, iron wheels and iron rails.
209. What power does it require to take it up? I do not recollect.
210. I presume you have tried? I have; and the memorandum is amongst the papers which I have here.
211. We are now referring to your last invention? Yes; iron wheels and iron rails.
212. To such a carriage as is shewn here (*referring to drawing*)? Yes (*reading from memos.*), 14 lbs. weight started a load of 100 lbs. weight on an incline of one in ten; that is upwards, with the wheels running; and it took 28 lbs. weight to start a load of 100 lbs. down the hill with the wheels locked, and 20 to 24 lbs. of traction kept the load in motion down the hill with the wheels locked. I suppose the rail was not filed quite true, and the load had a tendency to set itself after slipping a little way. But 12 lbs. took it off a gradient of one in twenty, and drew it up an incline of one in ten, at the rate of eight feet a second.
213. *By Mr. Dalgleish*: In ascending the incline did you make use of any leverage on the axles—any drum? None whatever. I took a Salter's balance and yoked it to the frame of a car by a piece of red tape; set a person to draw it, and carefully watched the scale, and after repeated experiments I saw that it indicated as I have stated.
214. Is not the best way of testing these matters by dead weights over a pulley? I tested the Salter's balance and found it correct, and I do not see what more accurate test you can have. If you test a plough you do it by Salter's balance. It was the least expensive method too, and easiest to me to perform it in that way; and it was quite satisfactory. I do not see a doubt about it, if the Salter's balance weighs correctly. I thought it a very good test in going up hill, because it shewed me that it required a certain weight to make it slip, and what that weight was. Now, if I had had a certain weight over a pulley, I must have let it descend to the bottom of the incline, and I could not have discovered by the weight the minimum weight or force which was necessary to continue the slip or descent of the engine along the incline, without the wheels revolving after it had first started, so well as by the Salter's balance. I do not know what more I have to state now; I have stated my views on all the objections that have been raised to my plans, and until further objections have been raised I think it would be only wasting the time of the Committee to raise objections myself.
215. You have certainly given answers to objections which have been made to your inventions, but I think I may be allowed to state that you have said very little with regard to the power and the manner in which you wish to apply it; or to shew that your engines have within themselves the power of taking these loads up the inclines you mention? It has not been disputed that I am aware of.
216. It has only been asserted as yet by yourself. Generally speaking, in mechanics, figures express power, and perhaps it would be quite as well to have your calculations before us? I will give you the facts and the calculations too if you want them, but you may make your own calculations if I give you the facts.
217. A Committee of the Assembly are not supposed to be all engineers or to be able to make these calculations; and engineers are rather expected to talk down to the Committee than the Committee to work up to them? I do not know what the drift of this is, but any facts you want to know, or any engineering opinion you wish to have, I will give you to the best of my ability; but do not lead me into making fifty or sixty diagrams or a mass of calculations, which many gentlemen who are not engineers may not understand. I now give you the result, and tell you exactly what power I consider necessary to apply to get a certain weight up a certain incline.
218. What I mean is this—that you have certain calculations and have given certain results. Now I do not think it would take a great amount of time to shew the Committee your calculations on which your results are based? I do not think I have given any results such as you speak of.
219. You have mentioned that your wooden wheels on wooden rails would draw up three times the amount that iron wheels on iron rails would do, and you attribute that to increased adhesion—? Yes, I have given you a simple reason for that—the result of experiment.
220. If you will allow me, the question is how that adhesion is obtained? I give it from practical test; from trying my wheels on an incline I tell you the actual result was that they had three times more adhesion. No calculation can prove that; it is entirely a matter of experiment. If you give me a formula to prove that, I will be happy to work it out, but nothing but the fact would bring me to the conclusion to believe it. I do not see how you
are

are to calculate it. The next thing is whether you have power to work these wheels up the incline? You will admit that any load an engine can *draw up* an incline an engine will *carry up* an incline, for it is only so much weight raised up so many feet high in so many minutes.

E. Bell,
Esq., C.E.

27 Nov., 1861.

221. Simple adhesion is obtained by weight, is it not? And by weight only, regardless of surface.

222. How then do you gain three times the adhesion with wooden rails that you do with iron, seeing that adhesion is the result of weight? It is not entirely the result of weight—

223. I understood you to say so just now? My answer had reference to the friction of surfaces, having regard distinctly to each separate surface by itself—not two different surfaces, a hard and a soft one, but two iron surfaces or two wooden surfaces, or two of leather if you like. The friction, and consequent adhesion, is guided in every one of these cases by the weight on the surface, let that surface be what it will; the amount of adhesion is different in each different case; but it is as the weight and not as the surface. You drew a deduction before, I understood you, that let the surface be composed of what it would I maintained that the friction was the same.

224. No, I never said a word about friction? Adhesion then; it becomes friction when adhesion ceases and slip begins.

225. Abrasion when there is slip? Well, it does come to something of the sort at last.

226. You intend to put the whole weight of your load on the engine? Yes, on steep gradients; in some cases I do not. I claim in my patent to put a load on the engine and tow another load behind, it on level places and easy gradients.

227. You intend to increase the weight carried on your engine or engines to far beyond what is now usually placed on locomotives themselves? No.

228. You intend to make it as much? Yes.

229. In that case what will be the effect of an engine of fifty tons weight, or its equivalent, distributed upon twelve wheels—what would be the effect of that weight in motion, and the adhesion between the end wood of the wheel and the longitudinal wood of the rail—would it not be to laminate the wood? No, if the weight was not too excessive.

230. What would take place when what is usually known as slip ensued—when adhesion or friction becomes abrasion—what would take place then with a wooden rail? As a matter of course, with any surface, if you put too much weight on that surface it must begin to disturb it. If you load a pair of wooden wheels excessively on a piece of ironbark lying longitudinally, the first alteration you would notice would be a compression of the grain of the wood, in some places more, in some places less—where there is a knot, less, where there is no knot, more. In carrying loads on the wooden way I do not necessarily ask you to let me put fifty tons on the wooden way; I do not recommend it, because I state that a very great advantage arises by reducing the engine to one-third its present weight—taking off fifteen or twenty tons—and so relieving a surface not capable of bearing so great a weight as the iron rail.

231. I understood you to repudiate the idea which Mr. Whitton puts forward in his report, where he states that you intend to use lighter engines, and that by so doing you throw away the advantage obtained by the greater adhesion of wood and wood—I understood you to say that Mr. Whitton was unwarranted in saying that you intended to use lighter engines? No; I repudiated the statement of Mr. Whitton that I proposed to increase the tractive power of the engine by having *engines of less weight* than those now in use on existing lines. That I repudiate most distinctly, but that is very different from the way you put it.

232. Are you acquainted with the practice at Home, or in other countries where railways are laid down and in use, with regard to permanent way or rails—is it the practice to adopt the softest material—is the softest iron used for the rails, or the hardest? Many kinds of iron are used.

233. Has it not been matter of deep consideration with practical men to obtain, if possible, even a steel surface for the rails? Yes.

234. Which would have the effect of making it still harder? Yes, it would wear longer and bear a great deal more of the effects of slip on the rails.

235. But wood would of course be softer? I do not anticipate there would be so much slip upon it as must be imposed on iron rails. It will not be necessary to make the weight placed on wood so heavy as that usually placed upon iron rails, because it requires only one-third the weight upon wood and wood to keep it in contact and give the same adhesion as upon iron and iron.

236. The wood would suffer if it were so? Yes, even Colonial ironbark, if the weight upon it were excessive.

237. The end of an ironbark timber is still harder than the longitudinal fibre of the same timber? I dare say it is in a great many instances.

238. In damp or wet weather, in timber of all descriptions a little slippiness ensues from the moisture of the atmosphere? All that depends upon the weight; if there is weight to make the water exude there is no slippiness with the two surfaces in contact.

239. The effect of a heavy weight running on the surface at such a time would be to produce lamination of the timber? I do not think it would.

240. Not in time? Well, in time it would; nothing will wear for ever. Iron bars laminate with frequent wear and heavy loads.

241. The first train that rolled over the surface would in some degree injure the fibre of the timber? You must bear this in mind, that your iron wheel, which runs on an iron rail, and which is necessarily hard, does not cover one-eighth of an inch really in contact. Now, I propose to put a wheel on the wooden surface that will have five inches of bearing.

242. You gain nothing by that? I gain a greater amount of surface, and there is less weight on any one part of the horizontal timber. If my wheel took as narrow a bearing on
the

E. Bell,
Esq., C.E.
27 Nov., 1861.

the timber as the iron wheel takes upon the iron rail, as a matter of course there would be considerable indentation and cutting, and destruction of the surface; but if my wheel has a bearing of five inches wide—nearly forty times as much as the surface presented by the iron wheel to the iron rail—there is not likely to be much indentation or destruction of the surface of my rail, because I have got more surface to carry the same weight.

243. However, the surface of the timber would be injured by the passage of this weight over it, though it might have ten inches of surface? Not if the breadth of the wheel were in proportion to the load it was intended to carry. By placing the load on ten or twelve wheels—I do not say with an engine of fifty tons weight, because I have urged, as one of the advantages of my plan, that with wood the weight of the engines may be reduced one-half—you have only two tons on each wheel. Now I mean to say that an ironbark rail, with a wheel of five inches wide, will bear two tons easily, without the slightest appearance of destruction to the surface.

244. You admit that it is destroyed? I do not.

245. Not in process of time? Not in a reasonable time. As I said before, nothing will wear for ever.

246. If it is not destroyed by degrees by the passage of one truck or one train in proportion, it never can be destroyed at all—it must be destroyed in proportion by every train that runs over it? Yes, but the damage sustained by any one train will not be perceptible.

247. After twelve months wear would there be, according to your theory, any perceptible difference? Very little; the sand would be rolled into the surface, and it would be almost better than when it started.

248. If the sand were rolled into the surface would it not have the effect of cutting the grain of the timber? No.

249. Every particle of sand having a keen cutting edge of itself? No, I think not.

250. It must displace the grain of the timber? No, the particles are so small, and you must recollect there are pores in the timber which would take in the sand without any destruction at all.

251. In very wet weather, when there would be a swelling of the wood, and when the pores had been filled with sand, more especially in that part where the fibres were in some degree cut, would it not make the surface of the rail in that particular place spongy? No, I do not propose to put such weights on any one wheel as would cause the action you mention to take place.

252. You acknowledge that you will place such weights upon it as to force the sand into the grain of the timber—these must be forced in in some way, and from the natural action of the wet weather on the timber, to swell it, more especially where it has been subject to the friction of any body rolling over it, it must get pulpy and spongy? I do not think so, and I will give you a very simple illustration of the fact. Five years ago, when I first began to inquire into this matter and to think seriously of employing hardwood for railways, I put down a crossing of eight logs of timber at the Market Wharf, over which all the traffic of drays, carts, and carriages passing to and from the steamboats at the Steam Companies' wharves and other wharves has been going, and there was a drain continually running over the surface. I laid this timber down to try what a wooden surface of ironbark would stand. After three years, when I made the approaches to Pymont Bridge, I had to raise the road and make a sewer across it, and I then took this timber up, after it had been lying three years subject to all this traffic; after being taken up it was left for three months to lie on the wharf, and it was then sold by auction for the price of new timber, and on the wharf at the time of the sale I defied any man to shew me which side had been uppermost. The persons who bought this timber will shew it; it has been put in some new warehouses near the bridge without being planed. There was another instance in Elizabeth-street, where I had the timber down for two years and a half, and after being subject to the traffic for that time it fetched 2s. a foot at auction, the same price as we paid for it; in that case there was the same result; it was impossible for anybody to discover which side had been uppermost after it was subject to the weather for three months. These are the best practical tests I have had, and I assure you the timber was not in the slightest degree injured.

253. *By the Chairman*: You consider the ironbark of this Colony peculiarly adapted for railway purposes as suggested by you? I do.

254. *By Mr. Dalgleish*: I presume when you invited the attention of the public and of the Members of the House and the Government to your plans, that you submitted to their inspection what you considered to be the best mode of constructing the engines and all their component parts? No, I did not submit the engines at all; I merely submitted the rail and wheel.

255. As parts of the driving gear of the engine? No, only the driving wheel and the rail. As far as they went I explained them fully; but I admit I was virtually carrying on a deception, or rather concealment, with regard to the engine, the principle of which I was not prepared to develop at that time, and consequently said nothing about it.

256. I am not alluding to your having had a peculiar plan of taking off or on the frame of the engine, and carrying the frame of your carriage; I allude simply to the fact that this was what you conceived to be the best plan of wheel, and the best plan of rail? The best plan of wooden wheel and the best plan of wooden way.

257. Was not that the only thing the attention of parties inspecting your plans was called to? That was all I professed to shew—a wooden wheel and a wooden rail, and the means of making crossings on these wooden ways.

258. Are you aware that when the Great Western Railway was first proposed by Mr. Brunel to be on the broad gauge, it was proposed to take the bodies of the trucks from the narrow gauge axle and place them on axles for the broad gauge? I do not think it was; it might have been at the "battle of the gauges," but not before.

259. Even before "the battle of the gauges" you are aware it was proposed to change the bodies of the trucks from one set of axles to another? No, I say it was not before that; and I have good reason for knowing, for I was employed at the time by the promoters of that railway, at the time that railway was first brought out, and I know that no such idea was in contemplation at that time. E. Bell.
Esq., C.E.
27 Nov., 1861.
260. I am speaking with regard to Mr. Brunel? Mr. Brunel made no such suggestion, and had no such intention, at the time he first originated the Great Western Railway.
261. Was it not suggested by him as a means of obviating what was stated to be a great objection in changing the traffic of the narrow gauge to the broad gauge? No such question was raised when he established the broad gauge line.
262. You intend, I think you said, to use wheels of five inches in width? I said I would proportion the width of the wheel according to the weight I have to carry; I merely assumed that they would be five-inch wheels.
263. If these wheels have five-inch bearings will you have parallel wheels? No, not quite; chamfered on the edges, and nearly cylindrical.

(ADDENDUM.)

The objections raised against my system of ironbark rails, and propelling wheels with ironbark peripheries, are, that the ironbark of this country will not stand the wear and tear, but will be subject to abrasion and rapid destruction. I am most decidedly of opinion, that by decreasing the weight of the engines to one-third that of the present engines, and (on account of the softer nature of ironbark in comparison with that of iron) giving increased width or bearing surface to the wooden wheels, that the ironbark rails would be as enduring as the iron rails; that the wooden segments, of which the wheels are composed, will last longer than the iron tires of the iron wheels, and that the wooden segments may be replaced at one-fifth the cost of the iron tires; and if the diameter of the driving or propelling wheels be reduced to one-half the diameter of the propelling wheels now in use, and all the propelling wheels be coupled, such an engine, so reduced in weight, fitted with such wheels, and running upon such wooden ways, would transport three times the load that the engines on existing lines will convey.

The testing of the ironbark rails and wheels would be an experiment, and necessarily one of some magnitude; but, compared with the advantages that would accrue in the event of its success, in the reduction of earthworks, &c., and consequently in the cost of railways throughout the Colony, it would be money well spent, the more so, as in the event of failure it would still remain a cheap horse traction way.

The following is an estimate of cost of constructing one mile of railway on Mr. Bell's patented system of wooden ways, with iron bars attached to them:—

	£
10,560 feet lineal of longitudinal timbers of ironbark—12 inches by 12 inches —purchased, felled, squared, and transported, @ 2s. per lineal foot	1,056
400 transverse sleepers, cut or notched to receive longitudinal timbers, @ 4s. each	60
800 wooden keys	10
1,760 yards permanent way, fitted and laid	250
Cutting water channels on both sides of line—3,520 lineal yards, @ 1s. 6d. average	264
3,520 feet lineal of iron bars for permanent way—2½ inches by ½ inch—19½ tons	237
5,280 holes bored, countersunk, and spikes to suit	66
	£1,943

The system which I last brought before the notice of the Government requires no experiment to prove its usefulness; I allude to the system of carrying the goods, freight, &c., in cars mounted upon the engines with iron wheels upon iron rails, and more than one pair of wheels of different diameters to propel the loads by, and placing the rails in such manner that the smallest wheels may be in operation on the steepest gradients, and the largest wheels on the easiest gradients. There is nothing new in the engines themselves, nor in the rails, nor in the wheels, but the manner in which they are used and applied is novel.

Working under this system the lines with gradients of 1 in 10, 1 in 20, 1 in 30, 1 in 40, and upwards, will only require three-fourths of a ton of engine and rolling stock to transport one ton of goods; while working on the traction system, with gradients of 1 in 40, it requires, at the rate of 3¼ tons of engine and rolling stock to draw and transport one ton of goods, on the traction system on existing railways, or a 45 ton engine and tender and 20 tons of trucks, to transport 20 tons of goods.

I propose to use cars or bodies of cars similar to those used in America, because they convey a larger number of passengers, and a larger quantity of goods, in proportion to the dead weight, than can be conveyed in the carriages used on the English narrow gauge (which are identical with the New South Wales) railways.

An American car, to contain sixty passengers, is 40 feet long, and weighs about 7 tons (that is, inclusive of wheels and radial trucks.) As a general rule, on English narrow gauge railways, the same number of second class passengers would scarcely be accommodated under a weight of 10 tons. (*Vide Cap. Galton's Report, page 17.*)

The same report says, "That freight cars, 28 feet long, with a capacity for a load of 9 tons, weighs 6 tons"—(this includes radial trucks and wheels.) "On narrow gauge English railways, as a general rule, the weight of the goods wagon is not much less than the weight of the load."

As I do not require the radial trucks and their wheels, a car body to carry sixty passengers, and 40 feet long, would not exceed 4½ tons weight; and a body 26 feet long, to carry 20 tons of goods, would not exceed 4½ tons in weight, if constructed with suitable tension rods to support the weight of the load.

Thus a car weighing • 4½ tons.
Two steam trucks, weighing each 5½ tons, or in the aggregate 11 "

Will make a total of 15½ tons.

And this will transport a net weight of 20 tons of goods, or three-fourths of a ton dead weight to the ton of freight. Two such steam trucks, each containing two 6-inch cylinders, 16 inches stroke, would carry a net load of 20 tons of goods, up gradients of 1 in 20, at the rate of 7 miles per hour, upon iron rails and iron wheels, and of 1 in 10, at the rate of three miles per hour; and of 1 in 40, at the rate of fourteen miles per hour; and upon easier gradients the speed would be faster in proportion.

The

F. Bell,
Esq., C.E.

27 Nov., 1861.

The following is an estimate of the cost of constructing one mile of railway, to work on my system, with pairs of iron wheels, of different diameters, on the same axle, with 50 lbs. iron rails:—

<i>Single Line.</i>		£
Rails, 50 lbs. per yard, 78 tons 10 cwt., and 3 tons 5 cwt. of fish plates, @ £12		
per ton		987
Fish bolts and nuts, joint plates, and dog-headed spikes, 2 tons 18 cwt.		54
2,200 transverse sleepers		220
1,760 yards of permanent way, laid and embedded in earthwork from side drains		920
Fencing		290
		£2,471

Estimate of the cost of a line working with iron wheels upon iron rails—the rails to be laid on longitudinal timbers of ironbark, and to weigh 30 lbs. to the yard:—

		£
10,560 feet lineal of longitudinal timbers of ironbark, 12 inches by 12 inches,		
purchased, felled, squared, and transported, @ 2s. 4 ^p foot		1,056
400 transverse sleepers, cut and knothed to receive longitudinal timbers, @ 4s.		60
800 wooden keys		10
1,760 yards permanent way, fitted and laid		250
Cutting water channels on both sides of line, 3,250 yards lineal		264
3,250 feet lineal rails, 30 lbs. to the yard, 47 tons, @ £12		564
5,280 holes bored, countersunk, and spikes to suit		132
Fencing		290
		£2,626

30 lbs. per yard is a very heavy rail to use upon longitudinal timbers of ironbark; 20 lbs., or even lighter rails, would be sufficient in some instances; but, as it may be expedient in some cases to use the bridge rail, I have, for the purposes of this estimate, taken the maximum weight that could be required.

The system of railways adopted in New South Wales is substantially the same in every particular as that of England. The engines are made to run upon iron rails, and by the adhesiveness of the wheels to the rails the steam power is so applied to the propelling wheels as to give them rotatory motion; the adhesiveness of the propelling wheels to the rails gives the engines linear motion as the wheels rotate. The carriages and rolling stock which carry passengers and merchandize are coupled to the engines by chains, and are led by the tractive force of the engines along the rails; the loads or freights are thus transported from one place to another.

The engines and tenders on the New South Wales lines vary in weight from 35 to 45 tons (some of the *heaviest* were imported so late as the month of June last); they are six-wheel engines, with tenders; the engines have six wheels, the tenders four wheels, so the weight of 45 tons is distributed over 10 wheels. As the engines are not *coupled engines* two only out of the 10 wheels which carry the 45 tons are propelling wheels; these two wheels bear nine tons of the whole weight; the remaining 36 tons, which rest on the other eight wheels, are thrown away and entirely useless for traction, as they in no way give adhesiveness to the propelling wheels upon the rails. If the engines on these lines were *coupled engines* the case would be different.

In addition to a 45-ton passenger engine, each passenger train leaving Sydney consists, on an average, of six passenger carriages, one baggage van, one carriage truck, and two horse-boxes—or in all, 10 carriages; these average in weight about 3 tons 15 cwt. each; the sum of the weights, therefore, of engine, tender, and train of carriages, is at least 80 tons, exclusive of the passengers and freight.

As each passenger carriage, when full, is capable of carrying, on the average, 24 passengers, who weigh about 32 cwt.; each horse-box three horses, or 20 cwt.; each carriage truck carrying, say one carriage or two gigs, 15 cwt.; and the luggage van one guard and probably 10 cwt. of luggage,—it will be seen that the maximum weight such a train can be estimated to carry is 13 tons; therefore, supposing the passenger trains to be *full every time they run*, there are at least 80 tons of engine and rolling stock devoted to the transport of 13 tons freight; but on the Great Southern Railway more frequently five or six tons. There are 50 railway wheels employed in the operation, and 25 axles, and the cost of such a train to the Colony is not less than £11,000. The same trains cost in England about £6,000, and, as they always fill well in England, they yield a moderate return; but in this Colony they *fill only in holidays*, on other occasions they are seldom, if ever, half full, and consequently must run to serious loss.

I propose to make in this Colony, and employ under my system, on its railways, engines and cars which will not in the aggregate weigh 20 tons, to carry the same number of passengers, horses, and carriages, as the present trains weighing 80 tons. The cost of my engines and cars shall not exceed £4,000, to perform the same work on steeper gradients. The number of wheels will not exceed 20 to each train, and six axles.

A passenger engine and car to run from Sydney to Bathurst, made on my system, to carry 40 passengers, would weigh in the aggregate only 15 tons, and carry 40 or 50 passengers, at a rate of 15 or 20 miles an hour the whole distance from Sydney to Penrith. On extraordinary occasions, over easy gradients, they would run 50 miles if required in the hour.

For goods trains we have in this Colony the same weight of engines, 45 tons, and to every three tons of goods carried we have a truck weighing on the average three tons; so, for the transport of every 30 tons of merchandize, we have 75 tons of engines and trucks, making a total weight of 105 tons, the cost of transporting which has to be defrayed by the freights charged upon 30 tons. We have at the same time 50 wheels employed, and 25 axles. The cost of such a train to the Colony is not less than £7,500.

I propose to make in this Colony, and employ under my system, on its railways, engines and trains which will not in the aggregate weigh more than 16 tons, and carry 30 tons of goods in its cars upon the engines, making a total weight of 46 tons, the cost of which engines and cars will not exceed £3,000 in the first instance. After the first are made, and contractors are conversant with them, so that they can compete for them by tender, the cost will not exceed £2,700. Such engines and trains, with their load of goods, would travel from Sydney to Bathurst at the rate of 12 miles per hour. Along the easy gradients, say from Sydney to Picton, they would, in addition to carrying 30 tons of goods, draw behind them eight or ten of the goods trucks now in use, carrying three tons in each, making in all 60 tons of goods. They would, of course, leave these trucks where required at the different stations on the line, and on departing from Penrith, for instance, the engines and car would proceed to Bathurst up the steep gradients required on that line, carrying with them their load of 30 tons of goods.

The engines imported into this Colony (especially the last and heaviest) have two propelling wheels six feet in diameter. They are built exactly like those used in England for express trains—to run where the lines are constructed with the *easiest possible* gradients and for the *highest speeds* (50 to 60 miles an hour.) Their enormous weight is to keep them on the lines under high speeds, and thus ensure safety. The gradients on the lines of railways in this Colony, instead of being the *easiest possible*, are, what are considered by the railway engineers, and ought to be in order to save expense, the steepest practicable, hence the absurdity of importing and using such engines.

The

The system of railway locomotion which I have brought before the Government of this Colony, and which I seek to introduce is, carrying the goods instead of drawing them on railways, and may be termed the packhorse of New South Wales system, in contradistinction to the draft horse or English traction system. I have devised my system within the last few years, with a view to meet the peculiar features and wants of this Colony, and to dispense as far as practicable with the most troublesome and expensive works of the present system, viz., the tunnels and cuttings, or what are known as earthworks, works which have necessitated the importation of contractors and suitable plant to perform them, and which are the stumbling block to the cheap and rapid extension of internal communication in the Colony.

E. Bell,
Esq., C.E.

27 Nov., 1861.

My system consists, as I before stated, in *carrying* the cars or bodies in which goods and passengers are transported along railways, upon *independent locomotive steam engines or trucks*, instead of *leading* them along railways by *traction engines*. Also, on the lines where steep gradients are necessary, to put two pairs of propelling and carrying wheels, of different diameters upon each of the axles which carry the engines and cars, one pair of such wheels (I prefer the smaller) to be placed outside the bearings, and the other pair inside the bearings which rest upon the axle journals. Also, in constructing the railways for such wheels and axles to run upon, the rails, where level places or easy gradients exist, shall be laid to the *general gauge* adopted for the line, and so that the larger wheels may run upon them; and where steep gradients are required, rails (extra or otherwise) shall be laid to *another gauge*, and so that the smaller wheels may run upon them. The diameter of the smaller wheels will be regulated by the steepness of the gradients they are required to ascend or descend. The rails laid to a general gauge, on which the larger wheels run, need not, in all cases, be continuous on severe gradients; they may cease within a few feet of the commencement of the rails laid to receive the smaller wheels, the ends of the former overlapping the latter sufficiently to enable one pair of wheels to take a proper bearing on the rails laid for them, before the other pair of wheels leaves the rails laid for it. So, when there is a steep gradient, the rails for the smaller wheels, will be placed as it were at a higher elevation than the other rails, in order to receive those wheels as they approach the steep inclines, and so that they will entirely relieve the larger wheels of their loads, and thus, the loads, engines, and cars, will be carried and propelled up the steep inclines by the smaller wheels, while the larger wheels will revolve freely, without touching any rails, and the loads, cars, &c., will be propelled and carried on level places and easy gradients by the larger wheels, whilst the smaller will be free from any rails. This will serve the purpose of a multiplying power, without the inconvenience and risk of cog wheels. It will also obviate the necessity of stopping at the foot and top of every incline to put one motion out of gear, and another in gear; and the weight of the load will be transferred from one rail and wheel to another without any impediment, in fact as easily as it is done by trucks in England working upon mixed gauges.

The cars are to be mounted on the steam trucks in such manner that the latter may work round curves without restraint from the cars, and so that the engines may be attached to or detached from the cars at pleasure. This distinction from cars which have *their engines combined and fixed* in the car is very important, as under my system the engine trucks may be detached from a loaded car in a few minutes, and whilst it is loading and discharging, the same engines may transport many other loaded cars from place to place; thus one pair of engines will suffice for many freight cars, but if the engines are built in and combined with the freight cars, two engines would be required for every freight car, and remain idle while the car is loading and discharging; this would render the rolling stock nearly as expensive and ruinous as now.

My system requires wheels and axles for the engines only, and not for the cars; and if I transport along railways 30 tons of goods with the engines upon 12 wheels instead of 50, as at present, it will yield a large annual saving to the Colony. It is customary at present, as I have before stated, to carry 45 tons of engine and tender upon 10 wheels, and 30 tons of goods upon 40 wheels. I propose to carry 30 tons of goods and 16 tons of engine and tender, in all 46 tons, upon 12 wheels; the weight therefore upon each wheel will not exceed that under the old system, and consequently it will have no more tendency to destroy the rails.

If my invention be tested I will show:—

First—That the cost of constructing railways in this Colony may be reduced by the amounts usually expended in cuttings and embankments, or nearly so; in support of this I submit the reports which have been laid before the House of Assembly by the late Commissioner for Railways and the Engineer-in-Chief. In November, 1860, the Commissioner stated in his report that, from information he had received from the Engineer-in-Chief the line to Bathurst would cost about £25,000 per mile, and that to Goulburn £19,000 per mile. On the 9th July, 1861, my specification for a patent was referred to the Engineer-in-Chief and another gentleman to report upon. In September last, a report and estimate, dated 31st July (21 days after my specification was put in his hands), was laid before the House of Assembly, from the Engineer-in-Chief, in which he reduced his length of tunnels on the Bathurst line from five and a half miles to 143 yards—the projected earthworks in proportion; his severest gradients, from one in forty to one in thirty, and consequently the cost of the Western line from £25,000 to £10,000 per mile; and, as he says, it is not his intention to adopt a steeper gradient than one in thirty, I have no hesitation, from the gradients published, in stating that my system will work easily and expeditiously gradients of one in fifteen, and reduce the cost of the line, at a very moderate computation, £3,000 per mile under his last estimate. This will save £330,000, and I believe that the distance might be decreased by such gradients to the length of the road, and thus save £473,000 on that line alone, besides an immense saving in the cost of the rolling stock.

The estimate of the Engineer-in-Chief does not provide for the bridge over the Nepean, and is not included in the estimate of £10,000 per mile, nor have I allowed for it, having no data to rely upon. The Goulburn line was reduced in like manner with the Bathurst, in the same period, from £19,000 to £8,500 per mile.

Secondly—It will shew that two engines of about five and a half tons weight, *carrying* a car of five tons and a load of goods weighing thirty tons up hills on the pack horse system, will perform an immense amount of work in comparison with what is now done in this country by a forty-five ton traction engine, and at one-third the cost. Mr. Whitton, I find, says so in his report on my patents. Under the traction system on iron rails it is folly to attempt steeper gradients than one in forty, as the wear and tear and expense of working is known to be ruinous. A forty-five ton traction engine on the Southern line will not, under ordinary circumstances, draw on such gradients thirty tons of goods with the trucks which carry them; but two five and a half ton engines, with all the wheels driven by steam power, will carry themselves and thirty tons of goods up gradients of one in fifteen; and along easy gradients between Sydney and Penrith, draw behind them on the traction system thirty tons of goods more easily than the traction engines now transport them.

Thirdly—It will shew that the prime cost of the rolling stock on the lines of this Colony may be reduced two-thirds or 66 per cent., perform more work, and that the whole may be made in the Colony; and,

Fourthly—It will shew what is of great importance to this Colony, that eighty miles of railway may be constructed in this Colony per annum more readily than ten miles are constructed now.

The particular information which would enable me to set forth accurately the comparative value of one system over the other on the projected lines of railway and tramway in this Colony being carefully retained within the archives of the Railway Office, I found it necessary, in order to state distinctly what could be done in some definite locality, to make at my own cost a section of a line from the Great Western Railway, near St. Mary's, South Creek, to Windsor, a distance of ten miles. The steepest gradient on my line would be one in twenty, for a distance of two hundred yards; the remainder

E. Bell,
Esq., C.E.
27 Nov., 1861.

are easy gradients, and for four or five miles the line is nearly level. I undertake to say, without the slightest hesitation, that a railway with rails 60 lbs. to the yard, may be constructed from the point I have named to Windsor, at a cost, including bridges, culverts, and every expense exclusive of purchase of land, not exceeding £3,400 per mile. A line may, if required, be taken from it to Richmond (about four miles) at any time at the same rate, but, in the first instance, the line to Windsor may be made under the cost I state. The country could lose nothing by the experiment being made upon this line; it is the best and cheapest line that can be made to that town, whether railway or tramway, and supposing my system were not approved, the line might be used as a tramway, and the severe gradient, with a slight additional outlay, would be rendered easy for horse traction.

On this line I would carry all that I have stated in this paper under my system. It would shew that gradients of one in twenty may be profitably worked, and an additional outlay of £200 would shew that gradients of one in twelve may be worked with great ease and profit, and without the slightest difficulty or risk.

APPENDIX.

A.

To His Excellency SIR WILLIAM THOMAS DENISON, Knight, Governor General in and over all Her Majesty's Colonies of New South Wales, Van Diemen's Land, South Australia, and Western Australia, and Captain General and Governor-in-Chief of the Territory of New South Wales and its Dependencies, and Vice-Admiral of the same, &c.

The humble Petition of Edward Bell, of Bourke-street, Surry Hills, near Sydney, in the Colony of New South Wales, Civil Engineer,—

SHewETH :—

That your Petitioner has invented or discovered, and is the author and designer of a certain new and useful invention or improvement in railways and in locomotive engines to be used thereon.

That the nature and particulars of, and the means by which your Petitioner proposes to perfect or carry into effect his said invention or improvement, are fully described and ascertained in and by the following statement or specification thereof, that is to say :—

Statement or Specification.

In Railways, as at present constructed, the same rails are invariably used for all the wheels, as well those of the locomotive engines as those of the carriages, trucks, or other rolling stock, drawn or propelled thereon, and all such engines, carriages, trucks, and other rolling stock, are necessarily constructed so that all the wheels thereof on the respective sides pursue the same track and run on the same rails.

The nature of my said invention or improvement is as follows, namely,—the combination of wooden and metal rails for railway locomotive engines, to run upon or along, and the use of such combined rails for that purpose, and the drawing or propelling of carriages, trucks, and other rolling stock, along the metal rails, by engines running upon or along such combined wooden and metal rails.

The means by which I propose to perfect and carry into effect my said invention or improvement are as follows, namely :—For each line of railway I propose to lay down two or more wooden planes, surfaces, or ways (which may be called, and which I herein throughout designate as "wooden rails,") parallel to each other, in addition to two or more metal rails; or if so desired there need only be one such wooden plane, surface, or way; such metal rails to be laid parallel with, and either at the side of the wooden rails, or upon such wooden rails, in which latter case the wooden rails will form longitudinal supports for the metal rails; the wooden rails, or the portion thereof not occupied by the metal rails, as the case may be, to be laid in proper position for the propelling wheel or wheels of the locomotive engines to run thereon; and the metal rails to be laid in proper position for the guiding and trailing wheels of such engines to run thereon, along, or against; the propelling wheel or wheels of the locomotive engines to be adjusted to a different width from that of the guiding or trailing wheels thereof, so that the propelling wheel or wheels thereof will run on a different track from that of the guiding or trailing wheels thereof; the propelling wheel or wheels of the engines to be adjusted so as to run on the wooden rails, the guiding and trailing wheels of the engines and the wheels of the carriages, trucks, and other rolling stock to be adjusted to the same width, and so that such wheels shall run on the metal rails, and the metal rails to be so constructed or laid that they may be used as guides for the guiding and trailing wheels of the engines, and for the wheels of the carriages, trucks, and other rolling stock, so that under the system of my said invention or improvement, the leading and trailing wheels of the locomotive engines, and the wheels of the carriages, trucks, and other rolling stock drawn or propelled by such engines will run upon, or along, or against metal as at present, but the propelling wheel or wheels of the engines will run upon wood.

That your Petitioner has deposited the sum of twenty pounds sterling with the Colonial Treasurer, in compliance with the provisions of the Act 16th Victoria, No. 24, in that behalf made and provided.

Your Petitioner therefore humbly prays that letters of registration of the Colony or Territory of New South Wales, may, in pursuance of the provisions of the said Act, be granted to him, his executors, administrators, and assigns, securing to him and them the exclusive enjoyment and advantage of the said invention or improvement in the said Colony or Territory for the period of fourteen years, upon the terms and conditions provided in and by the said Act relating thereto.

And your Petitioner will ever pray, &c., &c.

Sydney, 8 June, 1860.

B.

The following is a description of my patent wooden wheel, it being the second patent for which I applied :—

In constructing the wheels to be used on railways or tramways with wooden peripheries, and so that such wheels may present a wooden surface to the rails, plates, or ways on which they are to run, I use ironbark or other suitable timber, thoroughly seasoned, baked, and shrunk into the smallest possible compass, but not so as to deteriorate its strength or destroy its nature; the wood is to be in segments, so set and placed as always to present its end or cross grain to the periphery of the wheel; the segments thus put together are to be securely bound in position by metal discs, plates, or rings, and the wooden rim of the wheel made to project slightly beyond the peripheries of the metal discs, plates, or rings, as the case may be, which bind and hold the wooden segments together. Metal flanches or rims may be attached to the sides of these wheels, to act as guides for giving them direction along the rails or ways, in which case the guiding rim may be made of larger diameter than the circumference of the wooden segments. I prefer to make the wooden peripheries of my wheels cylindrical, or nearly so, with the angles rounded or chamfered.

C.

O.

To His Excellency the Right Honorable SIR JOHN YOUNG, Baronet, Governor-in-Chief of the Colony of New South Wales and its Dependencies, and Vice-Admiral of the same.

The humble Petition of Edward Bell, of Bourke-street, Surry Hills, near Sydney, in the Colony of New South Wales,—

SHWETH :—

That your Petitioner has invented or discovered, and is the author and designer of a certain new and useful invention or improvement in the machinery and apparatus for transporting and carrying passengers, goods, merchandise, minerals, &c., &c., upon or along railways, and in the use of the same.

That the nature and particulars of, and the means by which your Petitioner proposes to carry into effect his said invention or improvement, are fully described and ascertained in and by the following statement or specification thereof, that is to say :—

Statement or Specification.

The wheels at present attached to and used for railway carriages, trucks, cars, and rolling stock, are invariably used only for such carriages, trucks, cars, &c., to run upon to support their weight and that of their loads, motion being given to such carriages, &c., and their wheels, by the tractive force of engines, locomotive and otherwise. These engines are invariably separate machines from the carriages, trucks, cars, &c., which they draw, and the engines are only connected to the carriages, cars, &c., by coupling chains or links, which cause them to follow the engines when in motion along the rails, and thus transport their loads or freight from one place on a line of railway to another.

In some countries (America in particular) the practice of supporting the carriage bodies or cars on two independent trucks is common, and in the United States almost invariable; this enables very long-bodied cars to be used. The wheels of the trucks which support these cars have always been caused to rotate and run on railways by the leading or tractive power of the engines to which they have been, and are, from time to time, coupled by coupling chains or links, or other suitable apparatus for leading them by; and in all countries where railways exist, their freight, merchandise, passengers, &c., &c., or traffic, are invariably impelled and transported along them in carriages, trucks, cars, &c., mounted upon trailing wheels, either with or without independent trucks, solely by the tractive power or force of the engines employed to move them.

The nature of my invention or improvement is as follows, viz. :—The carrying of the freight, merchandise, passengers, &c., and the cars, bodies, or frames in which they are transported along railways upon locomotive steam engines or trucks, instead of leading them, as heretofore, along railways upon trailing wheels, by the tractive force or power of locomotive engines; and the application of steam or other expansive power to the wheels which support railway cars and their freights of passengers and goods, and the use of such wheels as propelling wheels for the transport of the cars and their freights along or upon railways, and causing the wheels (some or all of them) which carry the cars, freights, merchandise, passengers, &c., on railways, to rotate by the application of steam or other engines to them or their axles.

The means by which I propose to carry into effect my invention or improvements are as follows, namely :—To construct carriage truck or other bodies of wood or iron, or both combined, or girders, or tubes, of any convenient form for holding, containing, or conveying passengers, freight, merchandise, minerals, &c., &c., (all which bodies, girders, tubes, &c., may be called, and which I herein throughout designate as "cars,") and of any convenient length and dimensions, and support them at or near each end, upon a steam locomotive truck or engine, whose frames or parts shall be so made as to recline and bear the cars, and so that the steam locomotive trucks at each end of the cars can move freely around curves on the lines of railway, without restraint, in like manner to the trucks which support the cars used commonly on railways in the United States and elsewhere, and thus carry each car, with its entire load, upon the steam trucks; or if the gradients on a railway be light, and it be found convenient, one end only of a car may be supported on a steam locomotive truck, and the other end upon an ordinary truck, with trailing wheels, or upon trailing wheels without a truck, in which case one end of the car and its load will be carried by and rest its weight on the engine-truck, and the other end of the car, with its load or passengers, will rest on the ordinary truck, and be led or moved by the steam truck at the other end. The cars may be made (and I prefer them) on the American plan, or otherwise, as may be deemed most suitable for the transport of passengers, freight, merchandise, &c. (all or any of them), and attached to the steam engine truck by a centre pin or pivot, or other convenient and suitable apparatus, in each lock or bed which bears upon the steam or other truck. This centre pin or other suitable apparatus may be so constructed as to disconnect the steam truck from the cars, or connect them, as required, and to perform the same office with the ordinary trucks mounted upon trailing wheels, when it may be found desirable to place one or more such trucks under a car, in lieu of one or both steam trucks. The cars may be supported or carried by a steam truck at one or both of their ends, or with a steam truck at one end, and the ordinary trailing wheels (with or without an independent truck) at the other; and when the gradients on a line are easy, or when it may be found convenient to do so, ordinary carriages, trucks, and other rolling stock of railways may be yoked or coupled to the said steam trucks or cars, or both, and led along railways in the same manner as when coupled to the ordinary locomotive engines used upon railways.

The steam truck may be constructed in such manner that the engines act directly upon the driving wheels of the same, or so that they act upon the wheels through a second motion, such as gear wheels, or by other means; and they may be so made as to act with either one or both at pleasure, and the cars may be constructed on the iron girder or tubular bridge principle, or both combined.

Having thus described the nature of my invention or improvement, and the manner of effecting or carrying out the same, I would have it understood that I do not confine myself to any particular form of engine or car, or mode of connecting them, nor to the precise detail herein given, so long as the character of my invention or improvement be retained.

But what I claim as my invention or improvement, and seek letters of registration for, is the application of engines worked by steam or other expansive power to the wheels which support and carry cars, passengers, freight, merchandise, minerals, materials, &c., on railways, and the use of the same and the use of such wheels, some or all of them, as propelling wheels for transporting cars, passengers, freight, merchandise, materials, &c., along or upon railways, as hereinbefore described.

That your Petitioner has deposited the sum of twenty pounds sterling with the Colonial Treasurer, in compliance with the provisions of the Act 16 Victoria, No. 24, in that behalf made and provided.

Your Petitioner therefore humbly prays that letters of registration of the Colony or Territory of New South Wales may, in pursuance of the provisions of the said Act, be granted to him, his executors, administrators, and assigns, securing to him and them the exclusive enjoyment and advantage of the said invention or improvement in the said Colony or Territory for the period of fourteen years, upon the terms and conditions provided in and by the said Act relating thereto.

And your Petitioner will ever pray.

Colonial Secretary's Office,
Sydney, 9 July, 1861.

Gentlemen,

Your letter under date the 3rd instant, on the subject mentioned below, has been duly received and referred for the report of Captain Ward, R.E., and Mr. Whitton, Engineer-in-Chief for Railways.

2. As soon as the necessary information has been obtained, a further communication will be made to you.

I have, &c.,
W. ELYARD,
Under Secretary.

Subject:—Mr. Edward Bell's application for letters of registration for an improvement in railways.
Messrs. Rodd and Dawson,
132, Pitt-street.

18 July.

My dear Sir,

I shall be glad if you can give me an interview at the Mint to-morrow, at noon, on the subject of your application for a patent.

E. Bell, Esq.

Yours, &c.,
E. W. WARD.

3 August, 1861.

My dear Sir,

I called with the enclosed drawing this day, thinking you had returned. If I can be of any further use, shall be glad to attend your summons when required.

Captn. Ward, R.E.

Yours, &c.,
E. BELL.

Colonial Secretary's Office,
Sydney, 27 August, 1861.

Gentlemen,

17 August, 1861. With reference to my letter of the 9th ultimo, respecting Mr. Edward Bell's application for letters of registration, for an invention or improvement in the machinery and apparatus for transporting passengers, goods, &c., upon or along railways, I am directed by the Colonial Secretary to enclose, for your information, a copy of the Report that has been furnished by the Board, to whom the petition of Mr. Bell was referred, by which it will be perceived that, for the reason therein given, they cannot recommend the granting to him of letters of registration, as prayed for.

Messrs. Rodd & Dawson,
132, Pitt-street,
Sydney.

I have, &c.,
W. ELYARD.

Royal Mint, Sydney,
17 August, 1861.

Sir,

Having examined Mr. Edward Bell's application for letters of registration for an invention or improvement in the machinery and apparatus for transporting passengers, goods, &c., upon or along railways, we have the honor to report that the design which Mr. Bell claims as of his invention, appears substantially the same as that of which an account is given in the *Engineer*, a London journal, of the 4th January last, at page 7, as having been carried out by Messrs. Grice and Long, Philadelphia, and Messrs. Russell and Co., of Massillon, Ohio.

It does not appear that this design has been patented in the United States, or if it has been, that Mr. E. Bell has been appointed sole assignee for the original patentee in this country. We consider therefore that letters of registration ought not to be issued, unless Mr. Bell can shew the distinction between the design he has described and that to which we have referred.

The documents transmitted to us are forwarded herewith, as also a sheet of diagrams supplied to us by Mr. Bell at our request.

Three.

The Honorable
The Colonial Secretary.

We have, &c.,
E. W. WARD,
JOHN WHITTON.

Extract from the "Engineer."

CITY RAILWAY MATTERS IN THE UNITED STATES.

Messrs. Grice and Long, of Philadelphia, some time since completed a steam passenger car for city railroads, and which is still running successfully to Frankford. It appeared, however, that, with one or two exceptions, the city railroads were prohibited by their charters from using steam, and to get over this obstacle it will be sought this winter to obtain an Act from the State Legislature repealing the anti-locomotive clause of the charters in question. When this is done, cars upon Messrs. Grice and Long's plan will probably come into extensive use. In the meantime Messrs. Neape and Levy, of the Penn Works, are building two pairs of engines for Messrs. Grice and Long; one pair for a car to carry 40 passengers, and to run on the Jackson Ville and Lake City railroad of Florida; the other pair for a 25 passenger car for the Cincinnati horse railroad. The engines are of the simplest construction, consisting of one of a pair of nearly vertical cylinders 6 in. by 10 in., and the other for the Cincinnati car, of a similar pair 5 in. by 10 in. stroke. The short shaft, to the ends of which the cranks are fixed at right angles to each other, is supported in bearings in the frame, and is parallel with, and at the same level as the action of the single pair of 42 in. wheels at the front end of the car. The short engine shaft of the Florida car has a spur gear 12 inches in diameter and 3 inch face, which works into a 20 inch gear on the front axle. In the Cincinnati car the gear will be 12 inch and 26 inch. The crank shaft is free to rise or fall, through the range of the springs, over the main axle journals, and without affecting the working of the gearing. The hind end of the car is supported by a radial truck. The boiler is a small upright affair in the engine-room at the front of the car. The Florida car, which will run upon a road six and a half miles long, will weigh about 16,000 lbs. in running order, and exclusive of passengers. It is expected to attain a speed of twenty miles an hour. The seats are arranged as in ordinary steam-drawn railroad cars. The Cincinnati car is fitted up inside like the horse cars, and its weight in running order will be about 8,000 lbs., exclusive of passengers. Its wheels will be so fitted that it may be made to run on either the 4 ft. 10 in. or 5 ft. 2 in. gauges, both of which are laid in Cincinnati. The Pittsburgh, Fort Warrup, and Chicago Railway Company have had an iron car, with steam engine combined, built at Messrs. Russell and Co., at Massillon, Ohio. The car is 77 feet long

long over all, seats 98 passengers, and weighs with fuel and water, 35,020 lbs. The Catarangua and Togelville Railroad are about to have a steam passenger car constructed at the Jersey City Locomotive Works, and similar cars have been constructed for the Eastern Railroad of Massachusetts, Huntingdon, and Broad Tap and others, &c., &c.

My dear Sir,
 May I ask the favour of an interview with you, on the subject of the patent for which I have applied?

Captain Ward, R.E.

Town Hall, 9 September, 1861.

Yours, &c.,
 E. BELL.

Monday.

My dear Sir,
 I shall be at the Mint to-day (9th), between half-past 12 and 3, and I shall have much pleasure in seeing you, on the subject of the patent you have applied for.

E. Bell, Esq.

Yours, &c.,
 E. W. WARD.

Sydney, 25 September, 1861.

Sir,

I had the honor to receive from Messrs. Rodd and Dawson your communication of the 21st August last, respecting my application for letters of registration for my invention or improvement in the machinery for transporting goods, merchandise, passengers, &c., upon or along railways; also a copy of the Report of the Board to whom my Petition was referred; with a copy of an extract from the *Engineer*, a London journal, of the 4th January last.

2. I regret that public business has prevented my replying to your favour at an earlier date.

3. The Report of the Board states that the design which I claim as of my invention appears substantially the same as that of which an account is given in the above journal, and that letters of registration ought not to be issued, unless I can shew the distinction between the designs I had described and that referred to.

Engineer, 4th
 January.

4. I will therefore endeavour to explain to you, as briefly as I am able, the very broad distinctions which do exist.

5. By reference to the extract before mentioned, it will be seen that the whole of the cars therein described are constructed with engines combined for transporting passengers upon railways, and not for what must be deemed the most important object to attain in this Colony, the transport of goods, merchandise, minerals, and materials. If then we suppose, for the sake of argument, the word passengers be erased from my specification and from the claims at the end of it, I respectfully submit that the remainder is entirely new; and if it be not omitted, then I submit that the carrying of goods, &c., as well as passengers, in the manner I described in my specification, is a useful improvement and invention.

6. Secondly—I beg to submit, that the carrying of cars or bodies which contain goods, merchandise, minerals, or materials, on independent steam locomotive engines or trucks, as described in my specification, and so that they can be attached or detached at pleasure, is another invention or improvement. This distinction is very important, inasmuch as the engines may be detached from one car whilst it is discharging and loading, and in the interim the same engines may transport many other loaded cars from place to place. Thus one pair of engines will suffice for many cars, but if the engines are built in the cars and combined with them, as stated in the account transcribed by the Board, then two engines would be required for every freight car.

7. The plan of engines and cars combined may answer very well in cars constructed for passengers only—their load is alive and may discharge itself in a few minutes; but for freight cars, carrying large quantities of goods, which occupy much time in loading and discharging, the case is entirely different. Engines combined with these cars might be detained with the car discharging and loading for several days, and thus the expense of the engines and rolling stock, to perform the carrying trade on any one line, would be enormous.

8. A third distinction and invention or improvement is, constructing the engines so that the bed plate or lock frame of the car merely bears upon a saddle or plate fixed in the framing of the engine, and being held, while travelling, in their relative positions, by a centre pin or pivot, which passes through both the frame of the car and the plate on the engine frame; so that the engines can each be mounted upon two, three, or even a greater number of axles and pairs of wheels, and travel with their loads round curves with perfect freedom, and without any restraint from the car which they carry.

9. A fourth distinction and invention or improvement is, the drawing of railway rolling stock and their freights of passengers, goods, merchandise, minerals, and materials, along railways, by the tractive force of locomotive engines, loaded as before described, with a freight car containing goods, merchandise, &c. This is an important improvement, inasmuch as two engines, each weighing say 6 tons, and loaded with, say 30 tons of goods, will lead as heavy a railway train along the railway where the gradients are easy, from Sydney to Picton or Penrith, for instance, as the 35 ton engines now on those lines. On reaching Picton or Penrith the engines would be relieved of the trailing cars or trucks, and proceed onwards, carrying their loads up the very steep gradients which must be encountered if cheap railways are to be made over the mountainous country beyond these places, and drawing behind them, when required, light passenger carriages, horse-boxes, &c. When I say cheap railways I mean good substantial iron ways, equally permanent with the most expensive which now exist, but without the ruinous expense of cutting through hills and filling up valleys, and which work it has been found necessary to import contractors to perform.

10. A fifth distinction and invention or improvement is, carrying one end of the cars loaded with goods, merchandise, minerals, or materials, upon an independent steam locomotive engine or truck, which may be attached or detached at pleasure by the arrangement before described, and carrying the other end of the cars upon an ordinary truck with trailing wheels. These cars may be loaded with goods at the end which rests upon the engine, and the other end devoted to passengers; or they might be loaded with all goods or all passengers.

11. A sixth invention or improvement is, constructing cars (to be transported as before-mentioned) for the reception of freight at each end and passengers in the centre, or for goods entirely, or for goods at one end and passengers at the other, or for passengers entirely, and supporting and transporting them, or any of them, along railways, upon independent locomotive engines, as described in my specification.

12. The seventh distinction and invention or improvement is as follows:—I propose, where steep gradients have to be overcome, to put two pairs of propelling and carrying wheels of different diameters upon each of the axles which carry the engines and cars with their loads of passengers, goods, freights, merchandise, minerals, and materials, all or any of them; one pair of such wheels (I prefer the smaller) to be placed outside the bearings, and the other pair inside the bearings which rest upon the axle journals; also, that in constructing the railways for such wheels and axles to run upon, the rails, where level places and easy gradients exist, shall be laid to the general gauge adopted on the line, and so that the larger wheels above described may run upon them; and the rails, where steep gradients exist,

exist, shall be laid to another gauge, and so that the smaller wheels above described may run upon them. The diameter of the smaller wheels will be regulated by the steepness of the gradients they are required to ascend or descend. The rails on which the smaller wheels run may be extra or additional rails to those laid to the general gauge; or the rails laid to the general gauge may cease within a few feet of the commencement of the rails laid to receive the smaller wheels, the ends of the former overlapping the latter sufficiently to enable the one pair of wheels to take a proper bearing on the rails laid for them, before the other pair of wheels leaves the rails laid for them. So, where there is a steep gradient, the rails for the smaller wheels will be placed as it were at a higher elevation than the other rails, in order to receive those wheels as they approach the steep inclines, and so that they will entirely relieve the larger wheels, which run upon the easy gradients, of their loads, and thus the loads, engines, and cars, will be carried up the steep inclines by the smaller wheels, while the larger wheels will revolve freely without touching any rails, and the loads, engines, and cars, will be carried on level places and easy gradients by the larger wheels, while the smaller wheels will revolve with the axles free from any rails; this will serve the purposes of a multiplying power, without the inconvenience and risk of cog wheels. It will also obviate the necessity of stopping at the foot and top of every incline to put one motion out of gear and another in gear, and the weight of the load will be transferred from one line to the other without any impediment. In claiming the right to this invention I do so whether the cars rest upon independent steam trucks, or whether the cars are made with the engines combined, whether they carry passengers only, or passengers, goods, merchandise, minerals, or materials, all or any of them.

13. For the application of steam power to the wheels of cars constructed with engines combined, and with one pair of wheels, or with more than one pair of wheels of the same diameter upon each axle for running upon ordinary railways, with or without mixed gauges, and for carrying passengers only with their luggage, I claim nothing original and ask for no protection.

14. But what I ask letters of registration for is, what I have described herein and in my specification as my invention and improvement, all which is further shewn on the drawing furnished by desire of the Board, viz., for the application of steam or other expansive power to the wheels of engines which support and carry cars with freight, goods, merchandise, minerals, and materials, all or any of them, either with or without passengers; also for the application of two or more pairs of wheels of different diameters to the same axles, and for the use of the same for the transport of passengers, goods, &c., as hereinbefore described; also for the application of wheels with two or more concentric rings or peripheries of different diameters to locomotive engines, cars, &c., and the use of the same, as herein described, for transporting passengers goods, freights, &c., all or any of them, upon or along railways.

15. Also for the application and use of independent locomotive steam engines or trucks to support and carry cars with their loads of freights, goods, passengers, &c., and attaching the engines to or detaching them from the cars at pleasure, as before described; also for drawing railway carriages and other railway rolling stock along or upon railways, by the tractive force of such locomotive steam engines or trucks so loaded with goods, freight, passengers, &c.

16. Also for laying additional rails on steep gradients, in addition to the ordinary rails, in such manner that the smaller propelling wheels of the locomotive engines and cars may run upon and transport their loads along them, as herein described; also for laying the rails of railways on steep gradients to a different gauge from that of the general gauge of the lines, and so that such rails may receive the smaller propelling wheels of the engines and cars, and relieve the larger wheels of the weight of their loads, as herein described.

17. Having been so much occupied with public business of importance since I commenced this statement, as to prevent my completing it before to-day (4th October), I take the liberty of sending it without altering the date. I hope, however, that although I have written, as opportunities permit, my statement is sufficiently explicit to shew that what I ask a protection for is not substantially the same as that said to be working in America, but that it bears a very wide and palpable distinction, amounting to a valuable improvement and invention in railways and locomotion; an invention which, if carried into practice, will reduce the cost of railways by the amounts which are usually expended in cuttings, tunnels, and embankments, and the execution of which has to be done in this Colony by imported contractors and plant. It will shew also what has never been attempted elsewhere, that two 7-ton engines, with small wheels, carrying a load of 30 tons of goods up-hill, on the pack-horse instead of the draft-horse system, will perform an immense amount of work in comparison with what is now done by a 40-ton traction engine, and at one-third the cost. Under the traction system on iron rails it is folly to attempt any gradient steeper than 1 in 40, as the wear and tear, and expense of working, is known to be ruinous. A 40-ton traction engine will not, under all ordinary circumstances, draw on such gradients 30 tons of goods; while two 7-ton engines, carrying 30 tons of goods, on my system (*i. e.*, the pack-horse), will draw, on iron rails, more than the 40-ton traction engine up gradients of 1 in 40, and will carry themselves and load of 30 tons of goods up gradients of 1 in 15, or 1 in 10, if required. The small wheels will enable my pack-horse engines to perform their work up steep hills at a slow rate, without increasing the power of the engines, while the larger wheels, on easy gradients, will enable the engines to run at any speed which may be desired.

The Honorable
The Colonial Secretary.

I have, &c.,
E. BELL, C. E.

D.
NOTES.

On the 28th September, 1861, (Saturday) I travelled by the Blacktown Line to the terminus.

Fairburn's 6-wheel engine and 4-wheel tender led the train by traction.

The train came to a dead stand-still on the gradient of 1 in 90, approaching and almost within sight of the terminus at Blacktown. The engine whistle screamed aloud, and after an interval of some time, the ballast engine on the Penrith extension, belonging to the contractors (Peto & Co.), came to the rescue, and assisted the engine and train to the Blacktown station; or it might have stood there yet, unless it was taken on in parts. The train consisted of—

2 empty goods trucks.	
1 loaded do.,	3 tons.
1 half loaded do.,	1½ "
5 passenger carriages, containing in all 17 passengers.	
1 luggage van, containing the guard only.	
2 carriage trucks, containing 1 phaeton and 2 gigs	1 ton.
3 horse-boxes, containing 6 horses	2 tons.
	3 tons.
Weight of engine	40 tons.
Weight of carriages	75 "
	115 tons.
The weight of the freight was	7½ tons.
The weight of the passengers (17)	1½ "
	8½ tons.

Here

Here is an instance of the inability to work even the present lines with gradients of 1 in 90, with almost empty trains.

Another instance came under my observation on the day the Volunteers went to Penrith, where the heaviest engine then on the line was unable to draw two timber trucks loaded with two sticks of iron-bark timber, and six empty passenger carriages, up the incline approaching the Parramatta station from Blacktown. The engine was obliged to disconnect the empty carriages about $1\frac{1}{2}$ mile from the Station, bring in the timber trucks by themselves, and return for the empty passenger carriages, which she brought in afterwards.

If such gradients as these cause such obstruction under the present system, it is necessary some different system should be introduced, to overcome the steeper gradients that are now recommended in the last Report of the Engineer-in-Chief.

On Saturday the 23rd November, at 2 p.m., I saw a passenger train leave Sydney. It had two engines in front, which were drawing 12 carriages behind them, including the guard's van; none were full of passengers, some were half full, while others were not one quarter full. The number of passengers did not exceed 150. So here were two engines and tenders of 70 tons weight employed in drawing 40 tons of carriages, and certainly not exceeding 13 tons of passengers, up a gradient which cannot exceed 1 in 60. Here 130 tons were employed to transport 13 tons or 10 tons of train to 1 ton of passengers.

TUESDAY, 17 DECEMBER, 1861.

Present:—

MR. DALGLEISH, | MR. LUCAS,
MR. SUTHERLAND.

J. B. WILSON, Esq., IN THE CHAIR.

Edward Bell, Esq., present in the room.

John Whitton, Esq., C.E., Engineer-in-Chief for Railways, called in and examined:—

264. *By the Chairman:* I suppose you are aware that this Committee has been appointed with the view of inquiring into and reporting upon the inventions and system of Railway Locomotion proposed by Mr. Bell? I am. J. Whitton,
Esq., C.E.

265. Have you had an opportunity of perusing Mr. Bell's evidence and his statement? I have. 17 Dec., 1861.

266. Would you be kind enough to give the Committee your opinion of this invention of Mr. Bell's, and his proposal? Probably the best course, if the Committee will allow me, will be to follow Mr. Bell through the papers he has put before the Committee, and also his evidence, and to make my remarks as I go along. Mr. Bell read at some length, as will be seen at page 12 of these papers, an explanation to the Committee of what he termed an invention for wooden rails as applicable to railways. I dare say Mr. Bell is perfectly aware that that is not an invention of his at all; Mr. Bell has no claim whatever to it as an invention, for so early as November, 1845, the very same thing was patented by Prosser. There is no mention in this statement of Prosser's of his wooden wheels, but from the appearance of the engines he uses, I have little doubt that he would have wooden wheels as well as wooden rails. This was patented so far back as 1845. In addition to which I find, in the records of the railway proceedings in this Colony, that Mr. Shields and Captain Mann also proposed wooden rails. At all events I have in the office a drawing of a locomotive engine made by Captain Mann, shewing an engine to run upon wooden rails.

267. With wooden wheels? The wheels are not stated; but no doubt Captain Mann could explain whether he intended to have wooden wheels or not.

268. Neither of these gentlemen, however—Mr. Prosser or Captain Mann—have ever enunciated their intention of using wooden wheels? I am not clear about Prosser; I have not been able to find a detailed account of Prosser's idea, more than is contained in an extract from the *Illustrated London News* of November, 1845, wherein Prosser states his intention of using wooden rails.

269. Even from that, I would infer that Mr. Bell is the first person who has proposed using wooden wheels? That may be assumed, but I am doubtful about that point. So far as the wooden wheels go, I have not the least objection to give Mr. Bell the benefit of everything that may accrue from the use of them. On the same page, a little lower down, I see that Mr. Bell says, that in applying to the Government, with reference to his improvements in railways, he did so, "feeling confident that the adoption of his improvements would save from £6,000 to £8,000 a mile, upon the then estimated cost of railways in the Colony." Now it was rather extraordinary that Mr. Bell should make that statement, because, in the very next line, he admits that he had never seen these estimates, so that Mr. Bell proposed to reduce the cost of railways in the Colony, £6,000 or £8,000 a mile, when he had actually never seen any estimates to show him what that cost would be. Mr. Bell says a little further on, that he assumes it would be "£9,000 a mile, or somewhere about the cost of the line between Liverpool and Campbelltown." Therefore, if he makes a reduction of £8,000 a mile, the cost of the railways in the Colony, to be constructed by Mr. Bell, would be £1,000 a mile. On the same page also, I find that Mr. Bell appears rather injured that no one connected with the Railway Department, or the Minister for Works, went down to inspect the model which he exhibited at the School of Arts. Now it was hardly necessary that

J. Whitton, Esq., C.E.
 17 Dec., 1861.

that I should do so, because, as Mr. Bell was perfectly aware at the time he said this, that I had seen the model in his office, and therefore it was quite unnecessary for me to go down there to see it again. At the top of page 13, Mr. Bell says that he "mentioned eight or ten miles," but he added "that it would be practicable to construct ten times that length in the same period at a similar rate;" that is simply eighty miles a year. I do not wish to make any further remark upon that, than that Mr. Bell must be very sanguine as to the rate at which he can carry on railways in the Colony. I may mention here that it is extremely difficult to follow these statements of Mr. Bell's, for they occur in almost every page—almost the same statements; for instance, his statement with respect to his being paid 1s. per train mile run occurs here, (p. 13), and it also occurs on the other side. I will take the statement on the other side, when I come to it, to reply to that. Lower down, on the same page, (13), speaking about iron rails, Mr. Bell says he proposes to use, in his rails, only one-seventh of the quantity of iron contained in those now used on the lines in operation. Mr. Bell afterwards states that he has never weighed any of the rails, but he is under the impression that they are 90 lbs. to the yard. Now, they are nothing of the sort; the rails now in use are 75 lbs. to the yard; and if Mr. Bell uses rails weighing only one-seventh of the weight of these, his rails will be $10\frac{1}{2}$ lbs. to the yard. There are several other matters on the same page, but as they are referred to afterwards I will take another opportunity of replying to them. At page 14, Mr. Bell, quoting from the remarks I made on his application to the Government for £25,000, to be expended in constructing eight or ten miles of railway and building two engines, says—"However, the next clause of the report says, 'it requires no consideration to see that the above estimate is a mere guess.' I do not know why." I think he clearly explains why a little further on, because he says—"I think I brought it as nearly as possible to a reliable estimate for a fair average line, without any guess. At any rate, I have surveyed a line since." Now, it is quite clear that his former estimate could have been nothing but a guess, because he acknowledges he had no survey of any line, and that, since forwarding that estimate to the Government, he surveyed a line.

270. Is it not possible for a man to make an estimate, on an average line of country, without surveying, especially if he knows that he will have no earth-works and no cuttings? That is impossible.

271. Could he not make an estimate for a railway on a level country? There is not such a thing here.

272. Supposing it were possible, could not a man make an estimate without actual survey? No; I say that no man is justified in making an estimate for any line of railway without a survey, for there is no line of any length on which some earth-works, culverts, or bridges, will not be required. It is certainly impossible to give any reliable estimate unless surveys are made.

273. Taking the supposition that there are no earthworks? Then I would simply say it is not an estimate for a line of railway, but merely for the cost of the permanent way. The other matters must remain over as contingencies. I never heard of such a country—a fair average country—without assuming that there must be works of some kind; there must be culverts, and there must be bridges.

274. I think Mr. Bell particularly excluded bridges? Therefore I say his estimate did not apply to a fair average line of country; it was a guess; because he stated that it was to be eight or ten miles over fair average country, excluding everything, in fact, except the permanent way. I say that is no estimate for a railway at all.

275. *By Mr. Dalgleish:* Will you explain what the permanent way is? Rails, chairs, fish-plates, bolts, nuts, spikes, sleepers, and ballast.

276. Is the ballast always accounted a part of the permanent way? Yes.

277. You are aware there is what is called the "Permanent Way Company," of London, who send out prospectuses all over the world;—of course they cannot include ballast? They simply supply rails.

278. Rails, chairs, and cast iron sleepers? That depends on the description of permanent way they use. If you order a double headed rail which requires chairs, of course they include chairs in the specification. But theirs is simply the patent right which they have in rails. They do not profess to supply rails and chairs, except in accordance with certain patents on which they receive a royalty; and they will order at certain manufacturers rails of any particular pattern on which they get a royalty. But in the construction of a railway the ballast is always included as a portion of the permanent way.

279. *By the Chairman:* I think Mr. Bell states that he could construct a fair average line of railway, eight or ten miles in extent, at the rate he named, but he did not bind himself down to construct ten miles at a particular sum? No; but I think it leaves it quite optional for the Government, assuming that there were no works, to say we might as well have ten miles as eight for the £25,000.

280. You do not think it at all possible for any gentleman to go and survey a line of country at his own expense, before he knows whether the Government are willing to entertain his proposal? No; but at the same time Mr. Bell might have stated what he proposed to do, but by writing a proposition of that kind he left the Government to infer that the line would not cost more unless they took it into a country where these things would be required; but, if these things were required they would be extras; therefore Mr. Bell could not complete it for £25,000, and by not stating precisely what he proposed to do, Mr. Bell was in fact misleading the Government, for the eight or ten miles might have cost £50,000 instead of £25,000.

281. He gave his estimate, provided bridges were excluded? They must have been executed whether Mr. Bell included them or not; and therefore the actual cost to the public might be found to be £8,000 or £10,000 a mile instead of £2,000.

282. I do not think the public would be deceived when Mr. Bell in his statement particularly excludes bridges? I do not know what the public might think; I certainly should not be deceived with it; but I do not think an estimate excluding certain things, when these things may form a large portion of the whole cost, is really any estimate at all. If I were to state that I could construct a line from Pieton to Goulburn, for instance, for £3,000 a-mile, excluding everything except permanent way, it would be no estimate at all; it would be misleading the Government; it would be simply stating the cost of the permanent way, which is the simplest thing possible, when you get the cost of materials and the cost of laying them down.

J. Whitton,
Esq., C.E.

17 Dec., 1861.

283. As far as I understand Mr. Bell's proposition, he proposes to do away in a great measure with the necessity for earth-works—do you not think it perfectly fair, as an illustration of that proposition, to state what he could construct a railway for, excluding earth-works or bridges? And excluding everything excepting permanent way.

284. What is there after excluding bridges and earth-works—are there any other great obstacles? Earth-works, culverts, bridges, fencing. The earth-works no doubt are heavy in many instances, and even with the gradients proposed by Mr. Bell—assuming those gradients can be worked, which I say they cannot—still earth-works could not be altogether dispensed with.

285. Could they not be in a great measure dispensed with? Of course the steeper you have your gradients the less earth-works you will require; but there are no practicable gradients on which you can dispense with earth-works entirely; therefore, I say, the £2,000 a mile, which Mr. Bell proposed to expend, was simply an amount for the permanent way, excluding all works which, in any district, might make a line expensive. Indeed there is no country where a line could be made without requiring drainage of some kind or other, and, in Mr. Bell's estimate of £2,000 a mile, there is no provision even for drainage.

286. How do you gather that? From Mr. Bell's own statement here. There are a few personal remarks which Mr. Bell has made in his evidence respecting myself; but I do not think it necessary to trouble the Committee with any observation upon them. Mr. Bell goes on, page 14, alluding to my report:—"Mr. Whitton says, 'Mr. Bell states that, under his system, gradients of 1 in 12 may be easily overcome and worked to advantage. I know that such gradients never have been easily overcome and worked to advantage.' Now I directly state that they have; I know they have, and I have done it myself; I have taken locomotives weighing seven tons up gradients of 1 in 12, drawing seven tons on a common road." But Mr. Bell might just as well have referred to rope traction, or to bullock drays taking goods up inclines of 1 in 4, as refer to an engine made for common roads, when the matter under discussion was a locomotive engine to be used on a railway, with either wooden rails or iron rails—things so totally dissimilar that it is not a very fortunate comparison. There is another matter with reference to the train mileage. He says, he thinks his letter states very clearly what he meant, and he cannot conceive how, if eight miles of line were laid between Campbelltown and Camden, with three trains a day running as they are now, the remuneration to be paid to him without any deduction would come to more than £800 or £900 a year. Now, I will just refer to Mr. Bell's letter, which is dated 8th March, 1861, and addressed to the Secretary for Public Works. Speaking of his proposal, he says, "If it be successful I am to be paid one shilling per train mile run, for the last (6) six months of the trial year, for the use of the invention; and for all future train miles run on my system upon any line, one shilling per train mile run; it being understood that if the patent be used upon any part of a line, the mileage is to be paid upon the whole length that the trains run, as if the patent were employed the whole distance (existing lines excepted, unless the patent be used upon them)." Now, in my opinion the meaning of that is as clear as possible, that if Mr. Bell's system is applied to any line in connection with the existing lines, under that letter Mr. Bell would claim to be paid one shilling per train mile for the whole distance, and not exclusively on the line on which his patent is applied, because though he exempts existing lines, he still says "unless the patent be used upon them," or any line in connection with them, in which case he is to be paid mileage for the whole distance the trains would run. Now, at the time he wrote this letter the mileage on the line to Campbelltown was something like 150,000 miles a year, and adding the distance from Campbelltown to Camden, there is no doubt the amount to be paid to Mr. Bell would have been about £9,000 a year. I cannot read it in any other way. A few lines lower down Mr. Bell says, "It is stated in the same report that 'Mr. Bell proposes to increase the tractive power of an engine by using wooden rails and wheels'—this is true; but it goes on to state what is not true, viz., that I propose to increase the tractive power of an engine by having engines of less weight." Now that is professedly a quotation from my report, but it is not so. In the memorandum which I made in reference to Mr. Bell's application, No. 6 in the printed papers laid before the Assembly, I say "I may here state that Mr. Bell proposes to increase the tractive power of an engine by using wooden rails and wooden driving wheels, and"—I go on further—"by having engines of less weight than those now in use." Mr. Bell's proposition was to sue engines of less weight, and he also proposed to increase the tractive power by using wooden rails and wooden wheels, because three or four lines further down Mr. Bell says,—"I proposed, at the Exhibition at the School of Arts, to augment the tractive power of engines by increased adhesion, and to perform the same work with engines of less weight than those now in use, by means of such increased adhesion." I do not mean to say that by using wooden rails and wooden wheels you get the same adhesion with a light engine that you do with a heavy engine, but I simply say that Mr. Bell's proposition was to use wooden rails and wooden wheels, and engines of less weight, to produce greater adhesion than the present engines. Mr. Bell states here that he proposes to increase his tractive power by using

J. Whitton,
Esq., C.E.
17 Dec., 1861.

using wooden rails and wooden wheels, and so obtaining increased adhesion; and in another part of his evidence he says the tractive power would be increased three times. Now I differ entirely in opinion with Mr. Bell on that subject. My impression is, that after a line with wooden rails and wooden wheels had been used three months it would not have half the adhesion that we have at present with iron wheels and iron rails, leaving aside the whole question as to whether the wheels or the rails would stand. I am thoroughly satisfied in my own mind—I have not a shadow of doubt about it—that with these ironbark longitudinal sleepers for rails and with ironbark wheels, as Mr. Bell proposes, in three months we should not have half the adhesion that we would with iron rails and iron wheels. A little lower down Mr. Bell says,—“I maintain that whatever the steam power of an engine may be, its tractive power depends entirely upon adhesion, and the manner in which the steam power is applied to give tractive power to a locomotive engine.” From that I should assume that Mr. Bell is under the impression that, if he gains a sufficient amount of adhesion, even with a very limited amount of steam power, if the steam power be applied in the way he suggests, it is of very little importance whether he has large cylinders or small cylinders, or large steam pressure or small steam pressure. Now it is very evident that if you get more adhesive power than steam power your adhesion is of no use, but just the reverse, it is an obstruction, and Mr. Bell should know that all engines of every description have their adhesive power and steam power proportioned to the work they have to do. It is not a matter of guess at all—ordering engines. Mr. Bell, however, thinks he could alter the engines now at the station and give them far increased power, by simply reducing the wheels; but whatever reduction you make in the wheels, you give no more power to the engine if the adhesion you get is beyond the steam power in the cylinders. The entire power of an engine does not depend upon adhesion; it depends on the steam power combined with adhesion. If you get a load of eight or nine tons on the driving wheels, and a deficient amount of steam power to turn these wheels round, the weight will be of no use to you—it is an obstruction. This is one matter Mr. Bell should have explained; he stated what his engines were going to do, but he gave no calculations and no information to justify him in making the statement he did. He seems to have taken it for granted that the steam power would be sufficient to move his engines, which I say it would not, if he obtains the adhesion he expects.

287. With regard to the steam power and adhesion, you state that if the adhesion was carried too far it would be a loss of power instead of a gain—too much adhesion? Yes, because you would get so much more friction and weight on the bearings of the wheels.

288. Am I to understand that the steam power must be regulated according to the amount of adhesion you have—that the greater the adhesion the greater the steam power must be? Decidedly.

289. But that must hold good only up to a certain point? It holds good throughout the whole range of it. If you have a certain weight to take, and if the adhesion be sufficient, the engine will move the weight, provided you have got sufficient power; but if you have not sufficient steam power the adhesion is of no use.

290. But a certain amount of adhesion is absolutely necessary to the amount of steam power and the weight you have to move? Undoubtedly.

291. Then the question I asked was, that what you have stated would hold good only to a certain point? It holds good throughout. The steam power must be proportioned to the weight on the driving wheels, which is the adhesion.

292. Supposing the rails were iced, as happens at Home sometimes, you would not then have as much adhesion as when they were not iced? No, there would be the same weight; but the slippery state of the rail would cause the wheels to revolve without sufficient adhesion for a time, but the ice is very quickly knocked off by the pressure on the wheels.

293. Supposing it is on, and you have the same amount of steam power, yet because you have not the requisite amount of adhesion you cannot move the train? Certainly not.

294. Then your argument can only hold good to a certain point? I think the proposition you make respecting the ice, is almost equal to lifting the engines entirely off the rails and letting the wheels revolve at liberty; but I am speaking of the ordinary locomotive on iron rails, where there is the ordinary amount of adhesion.

295. I understood you to say that a certain amount of adhesion was not absolutely necessary? No; I said that if the number of pounds of adhesion which you have got is in more than due proportion to the amount of pressure in your cylinders, it is of no use, but on the contrary, an obstruction.

296. That is all I wanted to get at, that it is beyond a particular point—that it comes to be a loss instead of a gain? Yes. Mr. Bell says, “For instance, suppose the engines imported into this Colony so late as the month of May or June last had, instead of being mounted upon two 5 ft. 6 in. or 6 ft. propelling, and four guiding or trailing wheels, been mounted upon six coupled driving wheels 2 ft. 9 in. or 3 ft. in diameter, they would have had (6) six times the tractive power.” Now I say they would have nothing of the kind. Mr. Bell speaks on the assumption that these engines have 8 or 9 tons on the driving wheels, the total weight being 40 tons, whereas it is only 19 tons; but even if he had the whole weight distributed on his six driving wheels, I cannot see that by reducing the size of the wheels he could increase the power six times, because the cylinder power would not admit of it. The tractive steam power is equal to 5,400 lbs., and if the wheels were reduced to three feet in diameter, the tractive steam power would be 10,000 lbs.; but that would be only double, and the increased adhesion beyond that would be of no use. The adhesive power is 6,720 lbs., and being in excess of the steam power, is consequently useless. I must here say that I am more than astonished, considering the number of times Mr. Bell has been before this House on different matters, that he should always make a practice of mis-stating everything connected with the Railway Department. I am very sorry to make this statement, but it is so constant that I cannot look upon it in any other light than as intentional.

Mr.

- Mr. Bell says here:—"But if all the wheels were propelling wheels, and the weight were thrown on all, there would be 40 tons to keep the engine in contact." Now we have not got an engine in the yard that ever did weigh 40 tons. J. Whitton,
Esq., C.E.
297. *By Mr. Lucas:* What is the weight of the heaviest engine you have? 27 or 28 tons? But the engines ordered by me, or by the Government, on my recommendation, Mr. Bell states are the heaviest that have ever been in the Colony. Now I think it is wrong of Mr. Bell to make these statements without he can shew that he has some foundation for them, as he could have ascertained easily, if he had given himself the least trouble to have done so, what the weight of these engines were. 17 Dec., 1861.
298. What are the weights? 19 tons 7 cwt., without water and fuel, except the tank engines, which weigh 22 tons. I have the makers' weights to them all.
299. *By the Chairman:* Perhaps there may be some difference as to what he considers the engine and what you do—perhaps he includes the weight of the tank and tender? You cannot make use of the adhesion of the tank unless the tank is on the top of the boiler. Mr. Bell speaks of forty-ton engines, evidently to give the impression that we are obliged to use engines of enormous weight in order to get sufficient adhesion.
300. *By Mr. Dalgleish:* The tank engines, which weigh 22 tons, are, to a certain extent, engine and tender combined? They are engine and tender combined; they have no tender to them.
301. What is the usual weight of the tender when separate? From about 5 or 6 to 10 or 11 tons; it depends upon whether it is a four or a six wheeled tender; that is, without water. Mr. Bell also says the engines he suggests would run at half the speed we at present adopt for the ordinary traffic, which would be eight miles and a half an hour. Now I do not think the speed we are at present running at is so great that there need be any reduction, but if you run an engine with greater adhesive power, you increase the friction and the wear and tear of the engine, and in a very short time knock it to pieces.
302. And you increase the wear of the rails? Yes. Now these engines were ordered to take fourteen carriages, and the cylinders and wheels are so arranged as to take twelve or fourteen carriages off any of the inclines we have on this line. With a steam pressure of 5,472 lbs. they will remove fifteen or sixteen carriages off the steepest incline, at Petersham; but to shew what is the result of not having sufficient steam power, I was on an engine a short time ago, and the steam gauge shewed only a pressure of 62 lbs. to the inch, and when they tried to start from Petersham the engine would not move; it had sufficient adhesion, but not sufficient steam power; but after waiting a few minutes till the gauge shewed a pressure of 85 lbs. in the boilers, it went away without any difficulty. Therefore, it is quite clear that these engines are properly proportioned as to steam power and adhesion; but to increase the adhesion would only be to make them comparatively useless for running passenger trains. You can only have a steam pressure of 5,400 lbs., and therefore the additional weight thrown on the driving wheels would be of no advantage at all, but would simply render the engine useless. Mr. Bell, further on, on page 15, quotes a remark of mine, that "it is probably not necessary to say more on this subject than that, in my opinion, Mr. Bell's model is mechanically defective; and if ever his scheme be tried it will turn out a failure"; upon which, Mr. Bell says, he does not know why it was not necessary to say more. It was not my intention to say any more; but as Mr. Bell appears to ask me to say more, I may state that I simply declined to say more on that occasion, out of a feeling of kindness to Mr. Bell, or I certainly should have told him that the model he exhibited at the School of Arts was the most wretched mechanical abortion I ever saw. I did not wish to say that in an official Report. I heard it far more aptly described as a weighing machine. Mr. Bell says, on the same page, that his model ought to have received more attention. Now, it was not necessary to give it more attention, for the moment I saw it I was thoroughly satisfied of its inutility.
303. *By the Chairman:* Of the principle? Of the principle. I was so satisfied of it that I could not recommend the Minister of Works to expend 1s. in trying it. On the next page Mr. Bell makes some remarks with reference to Captain Ward and myself, which I do not think it necessary to go into; but he said he dare not develop his whole scheme, because he had "anything but an impartial tribunal to go to." That is merely matter of opinion, and it is not necessary I should say anything about it. Mr. Bell says—"the competent persons who would be appointed would be persons belonging to the Railway Department." I was the only one belonging to the Railway Department, and Captain Ward and I are not Commissioners for Patents; I do not think more than five or six have been referred to me since I have been in the Colony, and then only in conjunction with some one else. Captain Ward is not connected with the Railway Department in any way. On page 17 Mr. Bell says—"My surprise was, that when Mr. Whitton referred to my proposing to construct eight or ten miles of railway and build two engines, he did not ask what I wanted with two engines on a single line of so short a length." I think Mr. Bell must be extremely innocent of the way railways are worked, to suppose any person would ever commence to work with one engine. Engines do break down sometimes, and assuming one did break down, what is to become of the traffic unless you have one to supply its place. I did not see anything to excite surprise in Mr. Bell applying for two engines. The next matter that Mr. Bell alludes to is that his letter is dated the 8th March, and therefore must have been written before the article in the *Engineer* reached the Colony. Mr. Bell applied for a patent for what he was pleased to call another invention, with iron rails and iron wheels, and which I found to be precisely, in my opinion, the same in principle as one then in use in America; and although that letter of Mr. Bell's may have been written on the 8th March, I do not know that other information from America might not have been sent to Mr. Bell. At all events that journal was in the Colony long before Mr. Bell made

J. Whitton,
Esq., C.E.

17 Dec., 1861.

application for a patent. It arrived here in March, and Mr. Bell's application was not made until June; and I do not find that Mr. Bell denies that he was aware of the existence of this in America; but he simply states that his invention, as he is pleased to call it, is an adaptation to the goods traffic of the engine used in America for passenger traffic. He does not profess to seek a patent for the original idea, but he wants to patent the adaptation for the purpose of applying it to the goods traffic and for disconnecting the engine. It is rather unfortunate that nearly all Mr. Bell states in his evidence is repeated again in the statement sent in to the Committee; but if the Committee will allow me, I shall be glad to go through both statements. Mr. Bell says, on page 17, that to shew his estimate was not a mere guess, he "prepared at his own expense a section of a line from St. Mary's, South Creek, to Windsor, ten miles in length; and that he inspected all the different routes—the Blacktown route, and the Windsor route, and from about Crawford's station along by Eastern Creek to Windsor." It is quite clear, therefore, that Mr. Bell has examined the whole of that district, and he has come to the conclusion that to take the line from South Creek to Windsor would be far the best, not only for the public generally, but for the Windsor people in particular. Mr. Bell must have a slightly-limited notion of the locality, when he proposes to take the whole traffic of the Windsor line about seven miles round, from Blacktown to South Creek, and thence to Windsor, in preference to a branch from Blacktown direct to Windsor—in fact to take the whole traffic passing to and from Windsor seven miles further than is necessary; and of course the rates would have to be paid in proportion by the Windsor people.

304. *By Mr. Lucas*: How far is it from Blacktown to Windsor by your proposed line? Eleven or twelve miles.

305. How far is it from St. Mary's to where Mr. Bell proposes to leave the present Western line? A little more than eight miles.

306. How far then is it to Windsor from St. Mary's? About ten miles.

307. *By Mr. Dalgleish*: So that he saves on one line, and adds on the other? He saves two miles one way, and adds eight the other.

308. *By Mr. Lucas*: Have you any idea of the difference in cost of these two lines—that from South Creek to Windsor, proposed by Mr. Bell, and the one proposed by you from Blacktown to Windsor? I have not seen Mr. Bell's line, but I have seen Mr. Bell's estimate, which assumes that there will be no earth-works, no culverts, and no bridges—in fact, that there will be nothing but the permanent way.

309. What do you estimate your line at? It was originally estimated at £7,000 a mile.

310. *By the Chairman*: I thought the estimate was for £60,000 for the whole distance? That is not my estimate; that is for a horse tramway.

311. *By Mr. Lucas*: Was that estimate prepared by you? No.

312. *By the Chairman*: Are you aware that it was stated in the House, by the Minister for Works, that the line was to be made so substantial that locomotives could be used upon it, if found more conducive to the public interest? I was not aware of that statement, but I heard from some of the Members afterwards, that it was an understanding that the line should be constructed sufficiently substantial to carry locomotives, if horse traction was not found desirable.

313. Whom did the Government consult, with respect to this tramway? They did not consult me on the tramways.

314. *By Mr. Dalgleish*: Does your estimate cover the rolling stock required for the line? No, simply the works.

315. Was it intended at that time, to carry it as nearly as possible by the face of the country, adopting the natural gradients? No, the worst gradient was 1 in 100.

316. If the gradients be taken as nearly as possible on the level of the country, will it not make the formation of a line, capable of being adapted to railway traffic, much cheaper than on the dead level system? Yes, no doubt; but there is a limit beyond which I would not recommend gradients to be worked.

317. One in 100 is scarcely considered a gradient at all? It is very good indeed; the cost could be considerably reduced by increasing such gradients.

318. Or even 1 in 50? Yes, that is very good.

319. Are the gradients of that description on the Windsor line? If it is proposed as a locomotive line, I would suggest that they should be 1 in 40.

320. That would considerably reduce the cost of your first estimate? Yes.

321. So that the sum now voted for a tramway might be found sufficient for a locomotive railway? No, I think not. It might be made for about £6,000 a mile in as cheap a way as possible.

322. *By the Chairman*: Is not the line proposed from Windsor to Blacktown subject to inundation in very severe floods in South Creek? Not if it is kept above flood level. There have been very heavy floods in South Creek of late years.

323. It is some years since you surveyed the line? Yes, in 1858 I think.

324. Have not the severe floods since then risen higher than was supposed likely by you at that time? They have.

325. And therefore you will require to alter your line? No doubt there will be a little extra work, so far as that portion is concerned.

326. In consequence of the recent severe floods, have you not been obliged to keep the levels of the railways generally higher than you previously expected, where they were subject to inundation? There has been only one instance where the level of the rails has been altered, that is at Menangle. We have certainly had to give more water-way in other instances.

327. *By Mr. Dalgleish*: In consequence of experience obtained by the whole Colony? Yes. I may allude here to statements which have been made to the effect that, previous to certain lines being constructed, persons said to have been acquainted with the localities recommended

me to allow more room for flood water, particularly on the Liverpool and Campbelltown line. Now no person ever suggested such a thing to me, and I never heard of such a thing till the line was washed away. The line is the same within three or four inches as was laid down when I came to the Colony, and which had been proclaimed, and was ready to commence work upon. It has been frequently stated that I altered the levels and made them lower; but that is not the case, with the exception of Davis' Flats, and there the line is lower; if it had been raised to the height shown in the original section, the result would have been much worse, simply because it would have dammed back a greater quantity of water.

328. And on account of the damming back of so much water, the force would have been so great that the bank would not have been able to resist it? I believe it would not.

329. Whereas with a lower level it became flooded over, and the pressure was more equalized?

Yes. The next part of Mr. Bell's evidence that I will notice is question 217, on page 18. It is a simple matter, but I may name it. Mr. Dalgleish asked this question—"A Committee of the Assembly are not supposed to be all engineers, or to be able to make these calculations, and engineers are rather expected to talk down to the Committee than the Committee to work up to them?" To which Mr. Bell replied—"I do not know what the drift of this is, but any facts you want to know, or any engineering opinion you wish to have, I will give you to the best of my ability; but do not lead me into making fifty or sixty diagrams, or a mass of calculations." Now I wish to observe that the questions asked by Mr. Dalgleish were of a very simple nature, and required no large diagrams or extensive calculations. At question 241, Mr. Bell says he proposes to have his wooden surfaces five inches in bearing. Now with wooden wheels and wooden rails, and five inches of bearing, I say Mr. Bell could not run an engine round a curve; I say his engine would not travel round a curve, unless there were some provision, which I do not see made, to have guide wheels to lift the engine round curves. The tendency of the engine is to go in a direct line, and if you have wooden surfaces five inches wide you must have some power to twist the engine in passing round a curve, or it will continue to go in a straight line.

330. *By Mr. Dalgleish:* Will you be kind enough to explain what takes place now, even with the small bearing and the conical form which is given to the wheels of locomotives at present, when locomotives are going round a curve? The leading wheel is constantly in contact with the outer rail, and in a short time the flanges are destroyed from the pressure of the leading wheel on the outside surfaces; and if the wheels had larger bearings they would not be able to get round the curves at all. The outside wheel is running on a larger radius than the inside, and yet the tendency is to leave the rail at the curve, and it is only the pressure brought on the leading wheel that keeps them in their places. The leading wheels are considerably worn by that pressure in a very short time.

331. The reason why the wheels are made conical is to equalize, as much as can be done by mechanical means, the space run over, by presenting the larger portion of the wheel to the outside, and the small portion to the inside? Yes; to equalize the outside and the inside radius of the curves, the outside wheels working on the larger curve.

332. Does not the outside rail of the curve suffer considerably more from the abrasion on the surface of the outside wheel? The outside rail suffers considerably more than the inside. In the addendum to his evidence, page 21, Mr. Bell says, "I am most decidedly of opinion that by decreasing the weight of the engines to one-third that of the present engines, (and on account of the softer nature of iron-bark in comparison with that of iron), giving increased width or bearing surface to the wooden wheels, that the iron-bark rails would be as enduring as the iron rails." That is a similar statement to the one I mentioned last, and I can only repeat that, in my opinion, the engines would never pass round a curve at all—that they could not be worked if they were made; and the iron-bark rails, in my opinion, would never last one-tenth the time, from the abrasion that would be upon them. Mr. Bell gives, lower down, the weight he proposes to have the cars and two steam trucks, making altogether $15\frac{1}{2}$ tons; and with these he proposes to transport a net weight of 20 tons of goods up gradients of 1 in 20, on iron rails and with iron wheels, at the rate of seven miles an hour. The engines and trucks weighing $15\frac{1}{2}$ tons, and the goods 20 tons, there is a total weight of nearly 36 tons. Now the tractive force required to move 36 tons up a gradient of 1 in 20 is 4,392 lbs., and the steam power of Mr. Bell's engines is 3,080 lbs., taking a steam pressure of 80 lbs. to the square inch; therefore I say Mr. Bell's engines would not move that load up an incline of 1 in 20; but Mr. Bell says they could take it up 1 in 10, which requires a steam pressure of 8,424 lbs., whereas his engines have only 3,080 lbs.

333. *By Mr. Lucas:* On that calculation, the engine would hardly take itself up? Yes, the engine would take its own weight up.

334. *By the Chairman:* You have used the term "tractive power of the engine," but I think Mr. Bell does not propose that these engines shall be worked on the tractive principle; he speaks of them as carrying, more than drawing? That is what I say. Mr. Bell gets an immense amount of adhesion, but he has not got steam power in proportion. Mr. Bell is acting on the assumption that if he gets sufficient adhesion, steam power is of no importance; he gets only 3,000 lbs. of steam power and 36 tons of adhesion, that is to say, a weight of 36 tons. There is no comparison at all between the two. Mr. Bell's cylinders would require to be very much larger, to work the traffic he speaks of. I suppose the plan of Mr. Bell's engine is here, and I should be very glad to see it, and explain it to the Committee, (*Plan laid on the table.*) I call that a traction engine to all intents and purposes. If you have an engine, and call it a pack-horse engine, you must load everything on the engine; and then it is not a traction engine. If there is any weight behind it or before it, then it is a traction engine. There is not such a thing as a pack-horse engine; or, at least, I never heard of such. With reference to the freight car, there is an engine at each end; the weight, I believe, to be carried is something like 30 tons, and to carry 30 tons would necessitate a load of 15 tons in the centre of that truck. Now I should very

much

J. Whitton,
Esq., C.E.

17 Dec., 1861.

- J. Whitton,
Esq., C.E.
17 Dec., 1861.
- much like to know how that is going to be built to carry 15 tons; it would have to be a very heavy machine to do anything of the sort. And then again a stronger objection to it is, that the whole weight of 15 tons in the car is carried on one pair of driving wheels; and I am satisfied it would not run. Mr. Bell, I believe, proposes that when these engines are not in use to draw the cars, they can be used for other purposes for running down the line; but if Mr. Bell removes the freight car from this engine the engine will not run at all; the centre of gravity of that engine is decidedly in front of the leading wheels.
335. I am not aware that Mr. Bell stated in his evidence that the engines could be used for any other purpose? If removed from one freight car to another, as he certainly proposes, they must travel for some distance from one to another. I do not believe it could do anything of the sort. I am satisfied the engines alone would not run ten miles an hour on any part of the line.
336. I do not think Mr. Bell proposes that they shall, but only to move them from one part of the station to another? I will endeavour to explain to the Committee the utter absurdity of attempting to work goods traffic with a thing like this. I will assume that there are one hundred tons of goods leaving the principal station, and perhaps not more than two tons are for any one station on the line; you have bricks, coal, sugar, merchandise of all kinds, a ton to be left at one station, two at another, and so on, and you have to wait at each station while the loading for that station is being discharged. Now it is very possible that the goods for one of the first stations may be at the very bottom of the car; then how is it to be unloaded? The fact is, no line in the world could be worked with a car of that kind.
337. It would be great carelessness on the part of the persons connected with the railway, if they were to allow those goods to be put on the bottom of the car? It might happen without any carelessness; you must load up as your freight comes in; and it is very possible that the last freight to arrive might be for the last station on the line; and, even assuming it were not so, still the train would have to stop at every station, to get out the loading for that station, and to pick up what other loading there might be.
338. That difficulty might be overcome by having the freight car in compartments? Then, assuming that there was loading to fetch from one of the stations to the main terminus, you would have to send one of these cars and engines to bring two or three tons of goods.
339. *By Mr. Dalgleish:* Will you explain how you arrange these matters now? The system now is, that we have got trucks for every station on the line, which are left along the line as they may be wanted. We get notice from the different stations that they require one, two, three, or four trucks, to load bricks or goods of any kind; we send up the trucks, and they are loaded there, and when the goods train is passing it leaves the goods for that station, and takes the trucks that are ready loaded to come on. It would be perfectly impossible to work an extensive goods traffic with engines and cars on this principle.
340. Do you not think the same disadvantage would ensue with large cars of this description, that exists at present in getting goods out of the hold of a vessel? Just the same.
341. And the same delay? It would be precisely the same thing in principle. There would be no end to the trouble and confusion, and injury to the goods.
342. If you had four or five tons of goods for each station, you would have to stop at each station till these were discharged; whereas, by the present mode, you load the five tons in a separate carriage, disconnect the carriage on arriving at the station, and at once proceed? Yes.
343. Leaving the carriage to be unloaded at leisure? Yes, certainly.
344. *By Mr. Sutherland:* Does not Mr. Bell propose to do the same as you are now doing? Mr. Bell has made so many propositions, and they are so contradictory, that it is utterly impossible to know what he does mean. The great result with him appears to be, that he is to use the pack-horse engine, as he calls it, in opposition to the traction engine; but then he says he can use them for any purpose he likes; in fact, the pack-horse engine is not Mr. Bell's sole proposition; it is only a portion of it.
345. *By the Chairman:* I think you have stated that this pack-horse system—to call it so, for the sake of reference—is in use in America? No, I did not.
346. Are you aware that it is in use in America? I am not.
347. Have you never seen any statement to that effect? No; I have seen an engine combined with a carriage for passenger traffic, but I understand that by what Mr. Bell calls his invention, he wishes to adopt that for goods traffic.
348. With regard to patents for inventions—is there no such thing as granting a patent for the application of a particular principle? No, I think not; unless you state distinctly—what never has been stated yet by Mr. Bell—in what that particular application consists, so that there may be no mistake.
349. As far as I understand it, Mr. Bell's application is quite different from the application of the same principle in America? No, it is the same in principle; but Mr. Bell attempts to apply it to a purpose for which it is most unsuitable.
350. With regard to inventions, is it generally taken into consideration whether an invention is useful before a patent is granted? I never would recommend the granting of any patent, if I knew that the same thing had been used before.
351. I am asking whether it is proper to refuse a patent because you think it cannot be usefully applied? I never give any opinion on that at all.
352. As Mr. Bell's application of the principle is so different to that in use in America, will you state why you recommended that he should not get a patent for it? Because I did not see anything at all in it that differed in principle from that used in America.
353. Is not the application of the principle original? I do not think it is; I think it is so nearly connected with the one used in America that there ought not to be a patent issued for it. The only difference is, that Mr. Bell turns the passenger car into a freight car.
354. Of course if the application of the principle is the same, and it can be shewn that this invention

invention and application is working in America, that will refute a great deal of the evidence you have been giving? No; not if all the circumstances are taken into consideration. In America it is just possible that one of these engines may be used on a short branch line between two termini; but as to working a general goods traffic with them, I say it is impossible.

J. Whitton,
Esq., C.E.
17 Dec., 1861.

355. The facts of the case appear to be these:—Mr. Bell applied for a patent for an alleged invention of his, and he is refused the patent because it is not his invention, but is in use in America—well, if it is in use in America surely we can bring it into use here? A patent once taken out must be the patent of the original inventor, or if it is in general use the public have a perfect right to it, so long as no new principle is involved; and this is precisely, in every respect, with regard to the passenger cars, the same as in use in America. I saw no reason why I should recommend the Government to grant a patent for a supposed invention which I found to be already in use in America.

356. Then, if it can be shown to this Committee that this invention is in use in America, of course that will refute a great deal of the evidence you have given now, for you have stated that you believe it to be impracticable to work it? As far as I am aware, it is used in America only for passenger traffic; but even if it be proved to be in use in America, it should be taken into consideration whether it is used on a branch line or a main trunk line; it is possible it may be used on a branch line to take goods from one station to another, where there are no intermediate stations.

357. In a letter, dated 17th August, 1861, and signed by Captain Ward and yourself, you go on to state that “the design which Mr. Bell claims as of his invention appears substantially the same as that of which an account is given in the *Engineer*, a London journal, of the 4th January last, at page 7, as having been carried out by Messrs. Grice and Long, Philadelphia, and Messrs. Russell and Co. of Massillon, Ohio”? Yes; but that invention simply applies to passenger cars, and not to freight cars. It appears to me that Mr. Bell might just as well say, that because we have been in the habit of carrying passengers in the ordinary carriages of the railway, it would be a sufficient ground for a patent if dogs and cattle were substituted. I can see nothing more in it. It is a simple adaptation of what has been used in America for passengers, and Mr. Bell proposes to use it for freight.

358. There is some little difference in the application of the engine to the freight car and to the passenger car—different from what it has been stated is used in America? Yes, Mr. Bell proposes to remove the engines from the carriages; but the Committee will see that if these engines are taken away you must make all sorts of contrivances for blocking up these cars until they are unloaded; they must see that it would be a perfect impossibility to work them for intermediate traffic.

359. Unless there is a freight car for every station, there would be no necessity to block them up at every station? Wherever it is necessary to take the engine off it must be blocked up; if they are not blocked up, the engines must stand while the trucks are unloaded. The trucks we use now sometimes stand for days before they are unloaded; but in this case the engines must be taken away entirely from the cars, or they must wait the whole time till the trucks are unloaded. I see on page 22, in the Addendum, an estimate given by Mr. Bell, for constructing a railway without ballast; now that is not an invention of Mr. Bell's, for it was proposed by Mr. Woore.

360. I do not think Mr. Bell stated that in his evidence as an invention of his? No, this is taken from the Addendum; it is the most eccentric proposition I ever heard in my life—to construct a railway without ballast. I find that even on Mr. Bell's system he proposes to use 50 lbs. rails, and he makes the cost £2,181, without the fencing; and he also gives an estimate of a line for iron wheels and with iron rails weighing 30 lbs., laid on longitudinal timbers, amounting, after deducting the fencing, to £2,336. Now when the thing was done, and after expending £2,336, it would be impossible to maintain it—impossible to run over it. I am quite sure it is not necessary for me to point out that longitudinal timbers, laid in mud, and carrying engines and freights 25 or 30 tons in weight, would never remain in a satisfactory condition, or that you would not be able to run over them for a month. After heavy rains the lines would be unsafe, if not altogether impassable.

361. What may be the average expense of ballasting a line? Of course that depends entirely on the quantity.

362. To ballast them well? About £1,400 a mile.

363. Taking it at £2,000—allowing Mr. Bell to ballast his line at a cost of £2,000, that would bring the cost of construction up to £4,626, including fencing? That is simply the permanent way, which I can construct in a satisfactory manner for £3,000 a mile.

364. What then is the cause of the great expense upon that extension from Penrith to the Nepean, which is stated by the Minister of Works at £10,000 a mile, in a very nearly level country? No, it is anything but level; but in that extension there is 1,900 feet of timber framing, and between £7,000 and £8,000 for stations, sidings, engine shed, goods shed, turn tables, carriage docks, &c.

365. The Minister of Works stated in the House, that for the railway alone it would be £10,000 a mile? If the Minister stated so, it must have been a mistake,—because he explained the whole of the items to the House.

366. Is it necessary to put all those buildings and other things that you mention, at such a place as Penrith? We are compelled to have them; the only thing we can do is to put them up as cheaply as possible.

367. I suppose a great many of them will be only for temporary purposes? I propose to put up wooden buildings, covered with galvanized iron. I simply wished to call the attention of the Committee to the fact, that these estimates of Mr. Bell's are for railways without ballast; and by making a thoroughly good line, including the permanent way (which is all that is provided for here) and ballast, it could be done for £3,000 a mile, with a lighter rail than

J. Whitton, Esq., C.E.
 17 Dec., 1861.

than we use at present. But that would be a thoroughly good permanent way; whereas no railway without ballast could be used for any length of time, except in very fine weather. The expense of maintenance would, in the end, be much in excess of what it would cost for ballast. I see that Mr. Bell proposes to use 30 lbs. rails on longitudinal timbers, and I believe it is stated somewhere, that they are to be bridge rails. Now there never was a bridge rail made of 30 lbs. to the yard. It is possible Mr. Bell may intend the contractor's rail. In the same page (22) the same statement comes again, with reference to the engines recently ordered out from England:—"Some of the heaviest were imported so late as the month of June last." I have previously replied to that, by stating that they are nothing of the sort—that they are the lightest we have had, with the exception of the "Governor General," a very small engine which came out some time ago. I see so many things that I have alluded to previously, repeated here, that I do not think it necessary to trouble the Committee with them. There is one other matter I wish to name. On page 23, Mr. Bell says, "In November, 1860, the Commissioner stated in his report that, from information he had received from the Engineer-in-Chief, the line to Bathurst would cost about £25,000 a mile, and that to Goulburn, £19,000. On the 9th July, 1861, my specification for a patent was referred to the Engineer-in-Chief and another gentleman, to report upon. In September last, a report and estimate, dated 31st July, (21 days after my specification was put in his hands,) was laid before the House of Assembly, from the Engineer-in-Chief, in which he reduced his length of tunnels on the Bathurst line, from five and a half miles to 143 yards—the projected earth-works in proportion." Mr. Bell undoubtedly wished to give an impression to the Assembly, at the time this paper was read in the House, that I had never thought of making these cheap lines until he suggested the adoption of steep gradients, and working them on his plans; and I may say that nothing can shew more clearly Mr. Bell's utter want of knowledge of the way of making estimates, than his assuming that I could make these estimates for the lines to Goulburn and Bathurst in 21 d.ys. The fact is, these estimates were in hand nine months; and in February last, long before Mr. Bell proposed his scheme, they were completed for the line to Goulburn, and those for the Bathurst line in June. They had been in hand from the previous year. I scarcely need assure the Committee that it was no suggestion of Mr. Bell's that induced me to make the estimates for these cheap lines.

368. As you are at this particular paragraph, will you explain how it was that you stated, in your report on Mr. Bell's plan, that any gradient severer than 1 in 40 could not be worked, and yet you have proposed gradients of 1 in 20, in some instances, on the Bathurst line? I never stated that they could not be worked, but that any gradient worse than 1 in 40 was a bad gradient, and that almost any expense in works was preferable to making such gradients; but there is no doubt 1 in 40 can be worked. Neither did I recommend, in my report, that gradients of 1 in 20 should be worked on the Bathurst line. I stated that it was not my intention to adopt worse gradients than 1 in 30. The large item for contingencies in the Bathurst estimate is principally to improve these gradients from 1 in 20 to 1 in 30, which I have no doubt can be done. Mr. Bell also says, "The estimate of the Engineer-in-Chief does not provide for the bridge over the Nepean, and is not included in the estimate of £10,000 per mile, nor have I allowed for it, having no data to rely upon." I may simply state that this bridge is included in the estimate of £10,000 a mile; and I do not know that Mr. Bell has more data to rely upon for his estimates for lines throughout the Colony than he has for the bridge over the Nepean. If Mr. Bell has made estimates he should shew, by statements of the quantities and prices of the works, that he is able to perform the work; but to say that his estimate is made in a rough way, and that it is £2,000 or £3,000 a mile, is giving no reliable estimate at all. No reliable estimate can be made until all the quantities are taken out, and I am not aware that Mr. Bell is in possession of information that would justify him in saying he can make lines for £3,000 or £4,000 a mile.

369. Then you think no man is justified in making any estimate in a matter of this kind, without making extensive surveys at his own expense? I simply say that no man is justified in saying that he can do a thing unless he can prove that he has sufficient evidence to warrant his assertion. Before a statement is made as to what can be done, sufficient information should be obtained to justify it.

370. Mr. Bell has given an estimate in his Addendum, at page 22, shewing how he proposes to make his railways for the amounts he names? That includes simply a very inferior permanent way.

371. Is not such an estimate as this, for what you call a very inferior permanent way, as much as you have a right to ask from a gentleman occupying the position that Mr. Bell does in relation to this matter? It is not for me to ask; it is simply for the Committee to consider whether such a proposition as this can be relied upon; and if I am called here to give evidence upon it, I think it my duty to state my impression, and whether the lines can be made for Mr. Bell's estimate or not. It is then for the Committee to decide what recommendation they shall make to the House. I say that Mr. Bell cannot construct these lines for what he states, or anything approaching to it. The earth-works cannot be done away with, and large bridges as well as small ones must be built; and for none of these has he provided. His estimate, therefore, must be a mere guess; and if noticed at all, its effect must be to mislead; it is not one on which any reliance can be placed as to the cost of railways throughout the Colony, even on Mr. Bell's own scheme. On page 23, in the "first" paragraph enumerating the advantages of his invention, Mr. Bell goes into the savings to be effected by reducing the gradients on the Western line, consequently the distance to the length of the road. That of course is on the assumption that Mr. Bell works the gradients now on the existing roads, some of which are one in eight and one in six. It is hardly necessary that I should further remark upon that. A little lower down, in the paragraph headed "secondly," Mr. Bell professes to quote from my reports, but he does not quote from them. "Under the traction system

system on iron rails it is folly to attempt steeper gradients than 1 in 40." I do not say so; I simply say that a gradient of 1 in 40 is a bad gradient. I think I have referred before to the estimate of the cost of a line to Windsor, which Mr. Bell proposed to take from St. Mary's, South Creek. I do not know whether this estimate here is intended to apply to that line, but I find it stated that the estimate of the cost of this line from St. Mary's to Windsor is £3,400 a mile, in opposition to a cost of £2,000 a mile for a line over a fair average country; so that I assume that the line to Windsor is not a fair average country, as the estimate is increased from £2,000 to £3,400 a-mile.

J. Whitten,
Esq., C.E.

17 Dec., 1861.

372. Does not that include bridges and other necessary works? Yes, it appears it is to include bridges. But surely on such an easy line as that to Windsor it is not necessary to make gradients of 1 in 20; if it is, it cannot be the level country I have heard it described, and which Mr. Bell says it is. But he says this gradient of 1 in 20 is for not more than two hundred yards; if that be so, there is not an engine employed at present that could not work it; therefore there is no necessity for making engines of a peculiar construction to work a gradient of 1 in 20 for two hundred yards in length. I think it was understood the last time the Committee met, that a section of the line was to be produced; if that were here we could judge better of the character of the line. Mr. Bell also says, at page 24, "It would shew that gradients of 1 in 20 could be profitably worked, and an additional outlay of £200 would shew that gradients of 1 in 12 may be worked with great ease and profit, and without the slightest risk or difficulty." I do not know whether the £200 includes the additional rail for working steep gradients, or not. Mr. Bell also says, "The country could lose nothing by the experiment being made upon this line; it is the best and cheapest line that can be made to that town, whether railway or tramway, and supposing my system were not approved, the line might be used as a tramway, and the severe gradient, with a slight additional outlay, would be rendered easy for horse traction." Now I certainly do not think you could ever work a line of that kind without ballast, by horse traction. An expenditure of something like £1,200 or £1,400 a-mile would have to be incurred to put it in a state to be used even by horse traction. The other matters are simply, I think, repetitions of the previous evidence; but on page 28 there is a note of Mr. Bell's about a train on the Blacktown line, which, Mr. Bell says, came to a stand on an incline of 1 in 90, and might have stood there yet had not a ballast engine, belonging to the contractors, come to the rescue, as he is pleased to call it, or unless the train had been taken on in parts. Now I am quite sure the Committee must see the intention of that statement was to give an impression that this engine was incapable of working a gradient of 1 in 90; a thing that is utterly absurd, when we are working gradients of 1 in 66 every day. Mr. Bell might have known that the engine was short of steam, and that engines will come to a dead stand on a level when short of steam. No doubt that was the cause of its coming to a stand on this occasion.

373. *By Mr. Dalgleish:* Had you heard of a pack-horse engine previously to seeing these drawings, or an engine answering the same purpose as this passenger car and engines? Yes, such an engine was used in England on the Eastern Counties Railway many years ago; and they have been used on several short branches in England; that is, a passenger carriage combined with the engine.

374. The work I hold in my hand is Dempsey's Practical Railway Engineer, and it gives a description of engines calculated for the purpose of carrying passengers, together with the coke and water for the engine—is that a "pack-horse" engine, accepting that definition of what we have been discussing—this passenger car and engine? Yes, it answered precisely the same purpose; the engine is combined with the carriage, and there is no carriage to be detached. It was used in branch lines.

375. Are you alluding to the engine made for the manager of the line? The engine made for Mr. Samuels, at the time he had charge of the Eastern Counties line. The carriage was on the same frame as the engine, and was used chiefly for inspecting the line. There are other engines of that class—the "Fairfield" and the "Enfield," and several others made for short branch lines, but not in use on any main line in England, and they never have been so used.

376. Would the "Enfield," as far as you know, answer the description of what Mr. Bell describes as a "pack-horse" engine, towing other carriages—that is the expression I think Mr. Bell uses? Yes.

377. Does the "Enfield" carry out the same principle? It carries out the same principle—taking one carriage fixed in the same frame.

378. Perhaps you will allow me to quote from this work, which you must acknowledge to be a work of the first class:—"The 'Enfield' steam carriage worked the 10 a.m. passenger train from London to Ely, on 14th June, a distance of seventy-two miles, taking behind her three of the ordinary carriages and two horse-boxes, and arrived at Ely eight minutes before time, and the total consumption of fuel, including the getting up steam, was found to be 8½ lbs. per mile." Does that answer the description Mr. Bell has given of the "pack-horse" engine, drawing other carriages behind it? It is precisely the same.

379. The first engine you have mentioned, namely, the "Express," the little engine made for Mr. Samuels, is stated to have ascended the Lickey incline—what is the gradient of the Lickey incline? 1 in 37½.

380. You have stated that less than 1 in 40 is a bad gradient—are you aware that a gradient of 1 in 27 is daily worked on the Manchester and Oldham line? Yes, that is worked by the ordinary passenger engines working the general traffic of the railway. At the same time I do not call that a good gradient. If it be necessary to make worse gradients than 1 in 40 they must be made, but there is more difficulty in working them.

- J. Whitton, Esq., C.E.
17 Dec., 1861.
331. What is the length of that gradient? I think from a mile to a mile and a half.
332. The bad gradients you speak of on the proposed line have generally a falling gradient or a level immediately after the worst part of the gradient is passed? Yes.
333. That is an advantage? Yes.
334. It enables the engineer to work up the steam, so as to contend with the next difficulty? Yes; besides the impetus the train gets in descending.
335. Could you give the Committee any idea of the effect produced by a train descending an incline of 1 in 10, which I think Mr. Bell proposes to work in some instances? The effect would be, that you would not have the slightest control over your train; the train must run with increasing velocity so long as the incline continued.
336. Even if the wheels were skidded, the velocity would increase according to the length of the incline? Yes, no doubt.
337. If the incline were of very considerable length, could you give us an idea of what velocity the train would attain? I think after attaining seventy or eighty miles an hour the train would run off the line.
338. *By the Chairman*: Am I to understand that a train would not stand on an incline of 1 in 7, wood upon wood? Not if the train is in motion when it comes to the incline; and we are speaking of iron upon iron.
339. As I understood him, Mr. Bell expressed an opinion that it would be safe, with wood upon wood, to have inclines of 1 in 7? We were speaking of a train having to descend an incline of 1 in 10 on iron rails with iron wheels. With wooden rails I do not think it would be at all safe to attempt to descend 1 in 10. Irrespective of the difficulty of getting up 1 in 10, it is far more dangerous coming down it. I may also say that no incline of 1 in 10 can be worked to advantage with ordinary locomotive traction. If you work an incline like that you must do it with stationary power. An engine can be made, no doubt, to do it; but whether you succeed in doing it or not, it is of no use practically. On a line of 1 in 10, with many severe curves, you would get down much better than on a straight line, simply because of the resistance of the friction in coming down.
390. *By Mr. Dalgleish*: It is stated in this report, which I take from Dempsey's Practical Railway Engineer, that passenger trains are conveyed by the "light" or "small" engines; and that the trains frequently consist of one large first and second class carriage for fifty-eight passengers, one third class carriage for forty passengers, one horse-box for three horses, and one carriage truck; and that the average rate of speed is thirty miles an hour. Is this, in your opinion, certainly the same principle as Mr. Bell claims, namely, partly "pack-horse" and partly towing? Yes, precisely.
391. The only difference being that he adopts a continuous carriage where Mr. Samuel's adopts the ordinary passenger carriages, and the ordinary goods trucks for the additional weight he has to carry? Yes, and with this difference also, that I understood Mr. Bell's original statement to be that everything was to be carried.
392. *By the Chairman*: Are engines on this principle at work in England? On short lines.
393. On the same principle as Mr. Bell's? Yes.
394. Then there would be no difficulty in working them here? If we had a branch line to work them on there would be no difficulty.
395. Is not the Windsor line a branch line? It is not made yet.
396. It is to be made? With engines and carriages of that description, the only thing I can see in the whole affair is this, that Mr. Bell proposes to gain his adhesion by getting the weight of the car upon the top of the engine; and by that means the engine would not be so useful for other purposes. It would never answer to employ a car like this upon a main line, and to unload from it all the goods that may require to be left at each station, instead of dropping them in separate trucks as we do upon an ordinary railway.
397. How do they do in England with the engines you have been speaking of? Engines of this kind are never used for goods that I am aware of. If used at all it is as passenger carriages, and they may draw a horse-box or so behind them, but they do that the same as an ordinary engine would.
398. Mr. Bell proposes, I think, on the easy gradients on the line between Sydney and Blacktown, to use goods trucks, such as are now in use, on the purely tractive principle—to draw them behind the engine? I do not see any advantage in that. On all lines the engines are proportioned to the weights they have to take. If the line is to be opened from Blacktown to Windsor as a locomotive line, as a matter of course engines will have to be ordered of sufficient power to work the traffic on that branch.
499. For instance, if the line from Windsor to Blacktown were on Mr. Bell's principle, he states it would be easy to bring along the wagons that were required to be sent on to Sydney by drawing them behind his engine? I see no new system in that, nor any invention, nor even any new application of a principle.
400. He does not claim, as far as I understand, anything new in respect to drawing the trucks behind the engine; but he proposes to construct a carriage, combining the car with the engine, and at the same time, along the easy gradients, to draw other carriages, if necessary, behind the engine. If that is done in England why could it not be done here? I do not say it cannot be done, but I do say it is not Mr. Bell's system.
401. *By Mr. Dalgleish*: As this is information that may be useful not only for the Committee but for the House, I will read a passage relating to the "Enfield" steam carriage, so that it may appear in the evidence:—"The 'Enfield' is in steam 15 hours per day; the fire being lighted about six in the morning, and drawn at ten o'clock at night. But of these 15 hours it appears, by the return, that she is engaged running only 5 hours, the remaining 10 being employed standing in the siding. It was found by experiment, that the quantity of coke consumed standing was 32 lbs. per hour; and after deducting this and the

"quantity consumed getting up steam, it will appear that the actual consumption of coke running is under 6 lbs. per mile. It must also be particularly borne in mind that this consumption of coke includes the total goods and coal traffic on the branch, amounting to 1,410 tons; viz, 169 tons of goods and 1,241 tons of coal." That is this light engine which performs the passenger traffic as well, and here is the fact detailed of her performance on gradients, as you will find, of 1 in 60; and at the same time you will find the lightest of these engines ascended the Lickey incline, which is 1 in 37½? I never said they were not used on branch lines; I said they were used in England, but not as what you call "pack-horse" engines.

J. Whitton,
Esq., C.E.

17 Dec., 1861.

402. *By the Chairman:* In a previous part of your evidence you stated that with wood on wood, in three months there would not be half the adhesion that there is with iron and iron? Yes; that is my impression.

403. Can you give your reason? It would make the surfaces perfectly polished.

404. Is it not customary to throw sand on the rails to prevent that? If you were to throw sand on the wooden rails it would destroy the rails by producing abrasion; in addition to which, I may say that wooden wheels would not last six months.

405. You are aware that ironbark, of which it is proposed to make these wheels and rails, is supposed to be peculiarly adapted for railway purposes? It is peculiarly adapted for bridge building; but I do not think it is peculiarly adapted for longitudinal timbers to be used in place of iron rails.

406. Do they not in some parts of America use wooden rails for tramways? I do not know that they do; it is just possible they do; I have seen ordinary timber put down for tramways myself, but only for temporary purposes.

407. You admit that ironbark, of all other woods, has peculiar qualities for such a purpose? Yes, it has; but it also has peculiar qualities for warping and twisting in all varieties of shapes.

408. Not when it is seasoned? I never saw any seasoned ironbark yet, except from old buildings. If there are any large works to be performed, it is not easy to get the ironbark required, setting aside its being seasoned.

409. If you take the sap off it will not warp and twist in the manner you speak of? Yes; I believe ironbark felled for two years, if you cut a slab off it will warp immediately.

410. Without the sap? Without the sap.

411. *By Mr. Sutherland:* Is it not possible to cut ironbark so that it will remain as straight as when standing in the bush? I think it would be exceedingly difficult.

412. Is it not more in the way they cut the tree that makes it warp, than the nature of the tree itself? I do not know that it is. It depends a great deal on the season of the year when it is felled. But I am speaking only of the ironbark I have seen in the country; I have had a good deal of experience of it, and I have never seen a piece, excepting very large scantlings, that would remain straight.

413. *By Mr. Dalgleish:* When you speak of its not being seasoned, you allude to the fact that it is not kept in stock by the timber dealers? Yes.

414. So that it is impossible to get it unless it is ordered and cut for the occasion? Yes.

415. How long does it require to season ironbark? I do not know; many years.

416. It is a very dense wood, and therefore takes long in seasoning? Yes.

417. *By the Chairman:* Is there any great difficulty in cutting down ironbark in time to let it season? I do not see any difficulty in doing it, but I do not see by whom it is to be done. If the Government intended constructing the works themselves they might cut it; but they would have long to wait before it was seasoned. In some parts of the country there is no ironbark to be had.

418. In those parts are there not other woods as well adapted for railway purposes? I do not think there are any so well adapted, but other woods might be used. Ironbark has another defect in addition to want of seasoning, that before it becomes seasoned it is split considerably.

419. *By Mr. Sutherland:* You stated that a train running down a gradient of 1 in 10 would go at the rate of 80 or 100 miles an hour, and then go off the rail? No; I said, if the train arrived at a velocity of 80 miles an hour, it would not stop on the line; but I did not say it would arrive at that velocity.

420. Mr. Bell proposes to go up and down by small wheels; would these small wheels gain the same velocity as large four or five feet wheels? There would only be the friction less; that would be something less; but any train coming down an incline of 1 in 10 must gain in velocity, and I do not believe any breaks can be invented to prevent a train, after having arrived at a certain rate of motion on the top of an incline, from gaining great velocity in going down.

421. Supposing it was going three miles an hour when it came on the incline, do you think no breaks could be invented that could keep it at that? I do not think so.

422. *By Mr. Dalgleish:* Can a break do anything more than lock the wheels? No; I am satisfied that to work an incline of 1 in 10 would be extremely dangerous; and I am sure any person understanding the subject would never attempt to go down 1 in 10.

423. *By Mr. Sutherland:* I do not think Mr. Bell proposes to do so—I think he only said it was possible to do it? It would be possible to get up an incline of 1 in 10, but the work done would be so little that the line would be practically useless, setting aside the danger of coming down it.

424. You state that the present engines would work 1 in 20? Yes, for a distance of 200 yards, which Mr. Bell says he has got on that line; because I assume that the velocity attained before they came to the 200 yards would take them over it, even without steam, or very little steam.

J. Whitton, Esq., C.E.
17 Dec., 1861.

425. How is it they so often stop on the present line? Simply from being short of steam, or from the engines being weighted with a load they were never intended to carry. If an engine be ordered to do a certain amount of work, and they load the engine with double the weight, of course it is to be expected that it will not be able to take it. In numerous cases, particularly on the Blacktown line, it has arisen from the bad quality of the water; the engine frequently can make no steam at all; and a stoppage takes place in consequence, not of a deficiency in the power of the engine, but simply because there is no steam in it.

426. And the want of steam is not the result of the neglect of the party in charge, but of the peculiar quality of the water made use of? Yes, that has been so on the Blacktown line, from the bad quality of the water they get about a mile and a half or two miles on this side the Blacktown Station. Cases do arise where the fault is attributable to the driver, in allowing his steam to get too low in the boiler.

WEDNESDAY, 15 JANUARY, 1862.

Present:—

Mr. ARNOLD, | Mr. FORSTER,
Mr. DALGLEISH, | Mr. SUTHERLAND.

JOHN BOWIE WILSON, ESQ., IN THE CHAIR.

Edward Bell, Esq., C.E., present in the room.

John Whitton, Esq., Engineer-in-Chief for Railways, further examined:—

J. Whitton, Esq., C.E.
15 Jan., 1862.

427. *By the Chairman:* If you will be kind enough to look to the commencement of your former evidence (question 266), you will see you were asked to give the Committee your opinion of Mr. Bell's invention, and his proposal. Now, as far as I can understand, you have gone into that portion of it which applies to the wooden rails, but I do not think you have explicitly given your opinion of the invention as a whole? One portion of it is no invention at all, with regard to the wooden rails. The other may be an invention, but I think it is useless—that is, with reference to the wooden wheels. Wooden rails, no doubt, were used by Prosser; and they have been proposed by Mr. Shields, in this Colony, and also by Captain Mann.

428. You have no means of ascertaining whether they proposed to have wooden wheels or not? No.

429. Consequently, so far as the wooden wheels go, Mr. Bell's plan appears to be new—so far as we have any information? Yes, so far as I know, for locomotive purposes they are.

430. As far as I understand this invention, there seem to be two ideas—that of having the propelling wheels of wood, running on wooden rails, but the carriage and truck wheels of iron, running on iron rails? Yes, that I believe is the proposition.

431. That is new also, is it not? That, I believe, is new.

432. Do you not think that portion of the invention would facilitate the working of it? I do not. I do not believe the wooden wheels would be found to be of the slightest use after a few months' running on wooden rails.

433. From the circumstance of only the propelling wheels being of wood, running upon wood, there is not the same probability of great wear and tear on the wooden rails, as if the whole train were running on the wooden rails? I think neither the wooden rails nor the wooden wheels would last any length of time, and I do not believe there would be the same amount of adhesion, which is what Mr. Bell seeks to obtain by their use, after they had been in use three months, as there is, on the present plan, between iron and iron.

434. Not even with the assistance of sand thrown on the rails? I do not think so.

435. You have not exactly answered my question. I could easily understand that there would be some force in your argument, provided all the wheels ran on the wooden rails, but as the propelling wheels are the only wheels to run wood upon wood, there will not be the same wear and tear as if all the wheels of the train were working upon wood? I think there will, for the weight on the propelling wheels must be much greater than that of any other wheels in the train; and it is the extreme weight which causes destruction to rails and tires.

436. Do you think there would be a very great amount of destruction on the wooden rail, from the wooden wheels running in the centre of a block of wood? I think so. I think not only the rail would be destroyed, but the wheel would be destroyed. At all events, I am thoroughly satisfied that there never could be the same utility in a wooden wheel that there is in an iron wheel, and I believe that the expense of working upon that system would be very much in excess of working with iron wheels on iron rails. With regard to this matter, perhaps I may be allowed to make a statement with reference to the wooden rails and wooden wheels. Mr. Bell invented, as he states, the wooden rail and wooden wheel, and claimed and obtained a patent for the wooden wheel. A model was made of it, and Mr. Bell lectured on it for some time at the School of Arts. He had also so much confidence in it that he asked the Government for £25,000 to try this invention. Not obtaining the £25,000 for the purpose, Mr. Bell, as I understand, abandoned it himself entirely, and now claims another patent.

437. I do not think Mr. Bell ever explicitly stated to the Government what plan he intended to adopt for the experiment you speak of, and I understood him to say in his evidence

evidence that it was not the wooden wheel and wooden rail? I think in one of Mr. Bell's letters he states it is to use wooden rails and wooden wheels. At all events, whether that be so or not, it seems to me that the wooden rail and wooden wheel invention has been entirely abandoned.

J. Whitton,
Esq., C.E.

15 Jan., 1862.

438. As far as I understand Mr. Bell's own proposal, he intended to use these wooden wheels and wooden rails on very severe gradients; but on the line he proposed to the Government to make, there were to be no very severe gradients, and I do not think he explicitly stated which of his inventions or improvements he intended to adopt, and he states himself in his evidence that it was another plan he intended to adopt on that line, namely, what he calls the "pack-horse" system? At the time that application was made, the wooden wheel and wooden rail system was the only one before the Government or the public, and Mr. Bell's proposition was to work very severe gradients with safety, with locomotive engines, so that it would have been useless for him to have experimented on a line on which there were no severe gradients. If this was not the system he intended to adopt, Mr. Bell's letters led the Government to believe that it was, and he could scarcely have expected that a large sum of money would be placed at his disposal, to be expended on the trial of a scheme which had not been disclosed. I find in Mr. Bell's letter of the 8th March, which was referred to me for report, he said that the Government had a right to expect some explanation from him, as to what he proposed to do; first, as to "the practicability of ascending and descending severe gradients by means of locomotive engines with safety"; and, "second, the effect produced upon the *wooden ways and wheels* by working upon my plan." I think it is clear from that, that at that time, Mr. Bell intended to use wooden wheels and wooden rails; but now it seems that since the £25,000 were refused, Mr. Bell has entirely abandoned his original scheme, or at all events, he has substituted an entirely distinct and different one.

439. If you look at Mr. Bell's evidence—I cannot exactly put my hand on the place at present—you will see that Mr. Bell, to a certain extent, intended to combine the two schemes; and he states that, not having received a patent for one of them, he did not state what that was, and he enters into some reasons for not having done so? As I stated in my former evidence, the difficulty with me was, to know what Mr. Bell intended, for he had made so many propositions that it was impossible to give evidence upon them, not having before me any definite proposal. I think there is no question, from this letter of the 8th March, that at the time he applied to the Government he proposed to use wooden rails and wooden wheels.

440. I think we are bound to take Mr. Bell's contradiction of that, for he states in his evidence that that was not his intention? Mr. Bell's letter to the Government, which was all they had before them at that time, says nothing about iron rails or iron wheels, but simply wooden rails and wooden wheels. In referring to this plan of Mr. Bell's, I simply wish to point out to the Committee, that Mr. Bell himself could have had very little confidence in the system he then proposed, when he so soon abandoned it after the Government declined to give him £25,000 to try it.

441. You did not ask Mr. Bell to enter fully and explicitly into his plans before the Government declined to accede to his proposition? No, I asked for nothing; but what I saw in the letter spoke only of wooden wheels and wooden rails.

442. Be kind enough to turn to question 286 of your evidence. You allude there to Mr. Bell's having stated that locomotives on an ordinary road have overcome gradients of 1 in 12, but admitting such to be the case, you think it would be impracticable on railways to overcome that gradient? I do not say it would be impracticable, but that even if he succeeded in surmounting a gradient of 1 in 12 it would be practically useless; and I also say, in the answer you allude to, that Mr. Bell might just as well have alluded to rope traction or to bullock drays working inclines of 1 in 4. I have no doubt there are many instances on the roads of the Colony where bullock drays work inclines of 1 in 6. I refer to that in consequence of Mr. Bell having stated that an engine he was acquainted with worked an incline of 1 in 12 on a common road.

443. I have always understood that it is easier to work steep gradients on an iron rail than on a common road? It is just the reverse.

444. Why is it then that they have laid tramways at the steep ascents from wharves in Sydney? That is with horse traction; they would not be able to work them with locomotives at all. There is less friction, as a matter of course, on an iron rail, but you have got horse power. It is not as though you had to work with the adhesion between iron and iron, with a locomotive engine. No doubt the friction is decreased considerably with iron rails instead of a common road.

445. And supposing you got sufficient adhesion, of course it would be easier to ascend a steep gradient on an iron rail than on a common road? If you have sufficient adhesion and sufficient power to get up.

446. Provided you had sufficient adhesion, the same power would take you up a steeper gradient on an iron rail than on a common road? There is less friction, of course; the same power would take you up a steeper gradient.

447. *By Mr. Dalgleish*: Do you consider that your answer to that question in any way favours the idea that these gradients would be practicable? Certainly not.

448. With regard to a horse working on a common macadamized road, where the wheels run on a plate or rail, is that in any way analogous to a locomotive working on common roads? Not in the slightest.

449. Is the power to be calculated by the same rule? Certainly not.

450. *By the Chairman (at the request of Mr. Bell)*: In stating that the friction would be decreased upon an iron way, what friction did you allude to? I allude simply to the friction of the wheel against the macadamized road.

J. Whitton,
Esq., C.E.

15 Jan., 1862.

451. The driving wheel? Not the driving wheel, certainly. I am assuming that you are taking a load up an incline by horse power, and I say there is less friction on an iron rail, with horse power, than there would be on a macadamized road. There is less resistance on the iron rail than on the common road.

452. The engine Mr. Bell alludes to had four wheels, and the carriage that was drawn had four wheels, that made four pairs of wheels, of which one pair only on the leading engine were driven by steam power, the other three pairs of wheels being led or driven exactly as if a horse drew them—would not the resistance to these three pairs of wheels, not coupled to the engines, be much greater in going up that hill on the common road than it would have been if it had gone up on an iron way? There cannot be two opinions about it. No doubt there is far less resistance on an iron rail than on an ordinary macadamized road.

453. Would you not infer from that, that the engine would have more work to do than if these wheels had been drawing up an iron rail? No doubt.

454. In that case the test of power to ascend inclines of 1 in 12 would be much more severe than if any or all of the wheels had been going up an iron rail? I think it would be better, before going into this question, that the engine should be described.

455. Any engine with four wheels put on a common road, as it might be if the flange were cut off? It is discussing a thing that can never be adopted in practice.

456. *By the Chairman:* The next subject I wish to ask some explanation of is with regard to this new proposition of Mr. Bell's, the second proposition—the "pack-horse" system. You will find it alluded to in questions 345, onwards. I think in different parts of your evidence, if I read it correctly, you stated that this system is not in vogue in America; and then afterwards you admit that it is in use on branch lines in America; and also, as Mr. Bell says, that the "Enfield" engine goes on main trunk lines in England? So far as I am aware, it is only used in America on branch lines for passenger traffic. With regard to the "Enfield," I am not aware that it is used on a main trunk line, or if it be, it is simply a carriage combined with an engine for the purpose of taking a small number of passengers.

457. Mr. Dalgleish, in asking you a question (378), said that this engine worked a passenger train, on a particular day, from London to Ely, a distance of 72 miles? That may have been an experiment, but I do not believe the passenger trains were generally run with that description of engine.

458. You cannot state whether the experiment was a failure or not? I do not think it possible it could have been a failure. I think an engine combined with a carriage can work just as well as an engine not combined; but for main trunk lines such combined engines would be extremely inconvenient, because as soon as you had got beyond the number of passengers one of them could take, you would have to supply another engine and another carriage. The great convenience of working engines and carriages separately is, that you can supply carriages or take them off as required.

459. Commencing at question 425, at the end of the examination, there are some questions asked which I should like to have some explanation of, with regard to the various qualities of water from different localities, and its capability of producing steam? I think it is perfectly intelligible to anyone accustomed to working railways. We know that water may contain certain ingredients, alum, or lime, or salt, and when these are present it is almost impossible to get sufficient steam. The engines "prime," that is, instead of pure steam going into the cylinders, water is also admitted, and if the engine-drivers are not very careful, the cylinder covers will be knocked off. It is quite well known that water obtained at certain places is perfectly useless. For instance, there is no water fit for engines between Menangle and the lagoons beyond Picton.

460. Will not the water boil? It will, but it makes impure steam, or that water is carried with the steam into the cylinders.

461. What is the reason of it? The reason simply is that it is impure water, or water mixed with salt or alum—what is generally called here brackish water.

462. They use sea water? So they do, but it is a different description of engine, made purposely for it.

463. *By Mr. Dalgleish:* Have you much knowledge of marine engines? No.

464. You are not aware that they are frequently in the habit of priming? I am not aware of it; but I should be surprised if they did not.

465. *By the Chairman:* I can easily imagine that the boilers would be coated with the saline matters contained in the water, and that in that way the heat would be prevented from fully getting to the water, but I was certainly under the idea that if the water boiled it would generate steam? It does; but it generates impure steam. On the Blacktown line I have seen an engine perfectly white, as if it had been whitewashed, with the priming or water that has come out of the cylinders. If an engine were in good working order, and were to take in bad water, it would work very unsatisfactory, and probably be compelled to stop.

466. These are principally earthy matters? Yes; but this water has not been analyzed, that I am aware of, but the water is easily tested.

467. Practically tested you mean? Yes. It is always water that is offensive to drink. The best construction of locomotive would prime if foul water be used.

468. *By Mr. Dalgleish:* What bearing were the wooden wheels that have been spoken of to have upon the wooden rails? I think Mr. Bell said he proposed to give them a bearing of five inches, but that it could easily be extended to eight or nine inches.

469. If the driving wheels of a locomotive had five inches continuous bearing on the rail, what would be the effect on requiring the engine to go round curves—would it keep the line? I do not believe it would, unless some very strong arrangement were made to twist the engine

- engine round the curves, in the shape of guard wheels. The present leading tires would not keep them on the rail.
470. What would be the effect on the wheels themselves, in forcing them to slip from these five inches of bearing to adapt themselves to the curve? The effect would be to twist the wheels or the axles.
471. Would the axles require to be of extra strength? I think they would; but I am quite satisfied they would not run on a curve if made with a bearing of five inches; of course I mean curves of small radius.
472. The present system, by the wheels giving a minimum surface of bearing to the rail, and also by being conical, is better adapted to take the curves? Yes, no doubt it is; they run on a point as nearly as possible; a very small bearing surface.
473. There is compensation allowed for the curves by that means? Yes.
474. Could the same effect be obtained from wooden wheels with five inches of continuous bearing? No, it could not.
475. Would the two wheels with the axle be equivalent and similar in every respect to a continuous roller of that diameter? Yes, of that diameter and the same width of surface.
476. And the same difficulty would exist in regard to one going round a curve as in regard to the other? Yes.
477. In your opinion would that be a fatal objection to the use of wooden wheels? That alone would be a fatal objection, if there were no other, unless some arrangement were made by which these wheels could be continually lifted and twisted round the curves.
478. Would not the greater adhesion that Mr. Bell assumes he will obtain from working wood upon wood be an additional objection to the proposition to take these wheels round curves? No doubt it would be an additional objection. It would be more difficult to get round if there is more friction.
479. It would be more difficult to twist it round the curve? Yes, on the assumption that there is more adhesion.
480. What effect would this torsion, I think I may call it, have on the wooden rails? I think it would destroy the fibre of the wooden rail.
481. Does it to some extent destroy the fibre of iron rails? Yes.
482. The effect on wood would be proportionally greater? Yes; I have no doubt it would destroy the fibre of the wood by the weight there must be on the driving wheels, and by suddenly twisting them round curves.
483. With regard to question 285, Mr. Bell refers to an engine for working on a common road—is that usually known as a locomotive engine? Of course all engines that move are in one sense locomotive engines, but the term locomotive is generally applied only to those that run on railways.
484. Is it usual to work these engines on the roads with crank axles in the ordinary way, or by tooth gear? I do not know what the general custom is; they have been worked both ways, I believe.
485. This engine is stated to be a locomotive weighing seven tons, drawing seven tons up 1 in 12 on a common road—do you think an engine of that description could be worked with a crank on a common road? Mr. Bell states that it did; and, in the absence of any evidence to the contrary, I should be sorry to say it did not.
486. The greater portion of the weight would come on the crank axle? It would.
487. And the concussion of the engine itself would be much greater than that of a locomotive on rails? No doubt, working on a common road.
488. So that it would require to be of immense strength—much stronger in proportion than the crank of an ordinary locomotive? I think it would. There would be more likelihood of its being damaged running on the common road, from the inequalities of the surface, than on an ordinary railway.
489. Had the public any reason to imagine that Mr. Bell was in possession of any other plan than the one he prepared and lectured on at the School of Arts? I am not aware that they had; I had not.
490. The Government were not aware of any other? Not that I know of. I had no knowledge of nor did I see any documents connected with any other proposition.
491. *By the Chairman (at the request of Mr. Bell):* With reference to the bad quality of the water affecting the steam, will not all fresh waters make steam? The waters I referred to are not fresh waters; they are brackish. Everyone connected with railways knows that engines will prime, and what is the cause of it? The thing is so palpable that I think I have given a sufficient answer already.
492. Will not two different waters of the same specific gravity, if put into a boiler, make steam alike, the one as well as the other? If the water is of the same quality no doubt they will. It is a matter of fact, that on the Blacktown line we have had engines detained over and over again in consequence of the bad quality of the water.
493. If two waters are of the same specific gravity, will they not boil and make steam as quickly as each other? They may contain something extremely prejudicial, although of the same specific gravity.
494. If the specific gravity is alike, will they not boil at the same temperature? I have no doubt they will.
495. And assuming that they would boil at the same temperature, they would steam as rapidly? No doubt.
496. Is the quality of the water at Blacktown so bad as to make an important difference in the steaming power of the boilers? It is so bad that rather than use it we now run an engine from the junction at Parramatta to Liverpool to fetch water. It is not a matter of opinion at all; it is a matter of fact that can be ascertained from any of the drivers.

J. Whitton,
Esq., C.E.

15 Jan., 1862.

497. Is your knowledge of it derived from your own observation? I have seen the engines prime, and I have had frequent reports about the bad quality of the water.

498. Have you had reports that the water will not steam? No, but I have had reports that they cannot run the trains with the water.

499. Are there not 95 lbs. rails in use on the railway? No; I have never seen 95 lbs. rails in the Colony. There is not a rail that I am aware of that is more than 75 lbs.

500. Are you aware what the weight of the Barlow rail was? 75 lbs.

501. Did you not introduce a heavier rail than the Barlow rail when you introduced the double-headed rail? No.

502. What depth of ballast is it usual to put on the rails here? Sometimes two feet, sometimes twenty-one inches, sometimes eighteen inches, and sometimes only twelve inches.

503. Twelve inches is the lowest? I never put as little as twelve inches; eighteen inches is the least I ever put.

504. The use of the ballast is to bed the sleepers and keep them in their places? It is for another very important purpose, the purpose of drainage.

505. And for foundation? Unquestionably. The system we are adopting now is, to pitch the whole formation from side to side with large stones to an average depth of seven inches; over that we put five inches of stone, broken to a 3-inch gauge; on the top of that we lay the sleepers; and on the top of these, eight or nine inches more of broken stone.

506. Is it indispensable you should have broken stone to use for ballast? Broken stone makes the best kind of ballast, and costs far less for maintenance, with the exception of good gravel, which we cannot get here.

507. On a line where you would have a good gravel surface all along, you might use that for ballast, without going to any other expense? I have not seen any part where there is a good gravel surface.

508. Have you been over the direct line between St. Mary's, South Creek, and Windsor? No.

509. Supposing a section of country could be found where the gradients were not steeper than 1 in 20, and that it is possible to work gradients of 1 in 20, a railway might be made there without any cuttings or embankments at all? I do not think any portion of the country you can find will shew gradients no worse than 1 in 20 without embankments or cuttings. If Mr. Bell has such a section, I should very much like to see it. If you can form a line on the surface of the country, of course there is no occasion then for cuttings or embankments.

[Mr. Bell produced a section of his proposed line between St. Mary's, South Creek, and Windsor.]

510. With reference to the latter part of your answer to question 303, I think you have stated that the line from Blacktown to Windsor is eleven or twelve miles? About twelve miles, probably a little more.

511. And it is eight miles from St. Mary's to Blacktown? It is more than eight miles.

512. Then if it is eight miles from St. Mary's to Blacktown, and Mr. Bell's line is ten miles long, he would require eighteen miles of railway to travel from Blacktown to Windsor, but he would only require to make ten, the other being already made? Yes.

513. Then assuming that Mr. Bell's ten miles can be made at £2,000 a mile, the cost would be £20,000? Mr. Bell may assume such a thing, I would not.

514. Suppose it possible? I cannot suppose such a thing.

515. What is the estimate of the line from Blacktown to Windsor? The original estimate I have already stated distinctly.

516. £7,000 a mile? Yes.

517. But you stated that it would require alteration to get over higher floods? Yes, and I also stated that by working steeper gradients the cost might be reduced.

518. Are you aware to what height the flood rose last? It rose to the toll-house at the bridge.

519. To the eaves of the toll-house? Not quite to the eaves of the toll-house. I passed over a few days after and saw the mark on the wall.

520. Then the lowest estimate of the line from Blacktown to Windsor is £84,000? I have not said so; I have said the expense might be reduced by making the gradients steeper.

521. Your last survey is the only one on which you have formed an estimate? Yes.

522. That is £84,000? Yes, £7,000 a mile.

523. Then if Mr. Bell can construct his line from St. Mary's, South Creek, to Windsor, for £20,000, there will be a saving of £64,000? I do not think Mr. Bell can do anything of the kind. He might, with the same reason, assume that he could construct the line from Blacktown to Windsor for £2,000 a mile, as well as the one from St. Mary's, South Creek.

524. At question 332 you state that "the tractive force required to move thirty-six tons up a gradient of 1 in 20 is 4,392 lbs."—Is that arbitrary? That is the force required to move thirty-six tons up an incline of 1 in 20.

525. At what speed? That is the force required merely to move it; the speed would be in addition.

526. You say, "taking the steam pressure at 80 lbs. to the square inch"—what is the meaning of that? If you calculate the power of an engine you must assume a steam pressure of something.

527. Am I to understand that it requires a pressure of 4,392 lbs. on the pistons to draw 36 tons up 1 in 20? That is the force on the whole.

528. From the steam? From the steam. It is a calculation with a certain sized wheel, and a 16-inch crank I think it was.

529. Is 4,392 lbs. the pressure of steam upon the piston required to draw 36 tons up a gradient of 1 in 20? I said the tractive force required to draw 36 tons up that gradient

is

is 4,392 lbs. This answer has nothing whatever to do with the steam. It does not matter how the tractive force is supplied. The 80 lbs. of steam pressure is in allusion to what I calculated Mr. Bell's engines at. I take the steam pressure on Mr. Bell's cylinders at 80 lbs. to the square inch, and upon that I calculate the power of his engines at 3,080 lbs.

J. Whitton,
Esq., C.E.

15 Jan., 1862.

530. Are you not aware that Mr. Bell does not require the tractive force at all—that he is going to carry the load? It does not matter whether he carries it or not—that amount of force must still be supplied. 4,392 lbs. is the force required to take 36 tons up an incline of 1 in 20.

531. To start it? Yes.

532. And you say that to take it up 1 in 10 would require a steam power of 8,424 lbs.? Yes.

533. Whereas Mr. Bell's engines have only 3,080 lbs.? Yes.

534. What is the diameter of your cylinders? We have nothing less than 14 inches; the smallest are 14 inches, and the largest 16 inches.

535. Is the maximum pressure 80 lbs. to the square inch? No, the maximum is 150 lbs., and the average is 130 lbs. to 140 lbs. It depends upon the condition of the engine.

[Mr. Dalgleish objected to the course of examination. Witness and Mr. Bell requested to withdraw. Committee deliberated. Witness recalled.]

536. If Mr. Bell's engines, with a pressure of 80 lbs. to the square inch, give a tractive force of 3,080 lbs., with a pressure of 150 lbs. they would give something like 6,000 lbs. to work with? No, it is impossible to get anything like 150 lbs. into the cylinders, because, though the steam is admitted at a certain pressure, it is something less by the time it gets to the cylinders, and, as the engines work expansively, the pressure is not more than 80 lbs.—in fact, that is a high average.

537. If he has 3,080 lbs. with one pressure, he would have nearly 6,000 lbs. with the other? No doubt; but I may state that with ordinary locomotive boilers you would not get that pressure, to be safe to work with, for any length of time.

538. I think you are aware that Mr. Bell proposes to decrease the speed—that he does not propose to run at a high speed? I think the speed was to be 12 miles an hour.

539. Your engines run now at much quicker speeds? Yes.

540. And you will admit that the quicker the engines run the less pressure of steam there is in the cylinders? Yes.

541. They even run so fast at times that there is a pressure against you? We do not run at that speed here.

542. However, the slower the pistons travel, the more effect the pressure of steam has upon them? Yes, all other things being equal.

543. If you employ 16-inch cylinders on your engines to turn a 5-foot wheel, or a series of 5-foot wheels, and you could take a certain lead up a gradient of 1 in 20, with the steam power so applied, or you could not take it up, and assuming that you had sufficient grip on the rail, and not sufficient steam power, if you employ a wheel of half the diameter with the same sized cylinders, would you not double the power to propel the train, provided you had sufficient grip? Yes, you would increase the power undoubtedly with the same engine.

544. That is, a wheel half the size, with the same steam power applied to it, would, with sufficient adhesion, ascend double the gradient that a 5-foot wheel would? It would have double the power, no doubt; but I do not see that that has any reference to the engine that Mr. Bell proposes to use, because his engine was taken with as small a wheel as he could reasonably propose to work. In fact, I think I took the size from his drawing.

545. You are aware that Mr. Bell proposes to use wheels of two or three sizes? Yes.

546. The smaller wheels on the severer gradients, and the larger wheels on the level places and easy gradients? That, I believe, is the proposition.

547. Do you think that practicable or useful? It is practicable, no doubt; but I do not think there is any use in constructing railways with very bad gradients, for the purpose of inventing a machine to overcome gradients that are practically useless. It is creating two difficulties; first, making gradients that never can be worked economically or advantageously, and next, endeavouring to work them by an extraordinary kind of machine.

548. Supposing the machine was first proved to be useful, in ascending or descending these gradients, then it would be wise to make the railway, would it not? You may assume all these things no doubt; but I do not see myself that a small wheel would be of any more use in coming down inclines than a large wheel; and it is in coming down that the greater danger consists.

549. Do you not think that the load has less power over a small wheel in descending an incline than it has over a large wheel, assuming there is grip? It has greater power over a large wheel than over a small wheel.

550. And it is possible to attain a speed with a large wheel that is not possible with a small wheel? Yes.

551. Consequently, the small wheel on severe gradients is good in principle? No doubt, to a certain extent; but these gradients may be carried so far as to make both useless.

552. It is matter of opinion where danger begins and safety ends? It is a matter of experience probably.

553. Matter of opinion derived from experience? I think experience, so far as America is concerned, goes to show that these steep gradients are not advantageous, and that they are only used until they can make more perfect ones, simply to get the line open.

554. You are aware that Mr. Bell proposes to put the large wheels on the same axles as the small ones? Yes.

- J. Whitton, Esq., C.E.
15 Jan., 1862.
555. And to apply the breaks on the large wheels as a means of controlling the small wheels? That would have no effect whatever, because you can only skid the wheel, the same on the large wheel as on the small one.
556. The break would have greater influence with the same pressure, when exercised on a large wheel to curb a small one? But at the same time it might be applied to the small wheels without having a break to skid the large wheels.
557. Do not you think it safer to apply the break to the large wheel, while it is there, and so decrease the liability to extraordinary strain on the break; the less the strain on the break the less danger of its breaking? No doubt it would be safer.
558. In your answer to question 340 you seem to think Mr. Bell's "pack-horse" system would be liable to the same disadvantage as getting goods out of the hold of a vessel. You are aware that from the hold of a vessel the goods have to be drawn up and lifted over the ship's side on to the wharf? Yes.
559. In this case, the floor of the truck would be about level with the stage of the station, consequently the goods would be much more easily moved out of the carriages than out of the hold of a vessel? The allusion to the hold of a vessel was simply with reference to the goods being placed one over another, and in order to get goods for intermediate stations it would often be necessary to shift others and reload them.
560. You are aware that Mr. Bell proposes with his loaded pack-horse engines, to draw trucks with goods behind them until the hilly country begins, and these trucks might be left at the intermediate stations, for instance, between here and the Nepean, and it is not likely there will be many intermediate stations between Penrith and Bathurst? I do not know; there may be a good many at some future time.
561. Do you not think each of these might claim a car to itself—might not a load be dispatched to each of these stations? I do not think so. To run an engine with one truck to each intermediate station would be extremely inconvenient.
562. Mr. Bell proposes to load an engine to go to Bathurst, and to draw some trucks behind it as far as the gradients are easy—do you think that would be practicable? Yes, but I see nothing new in that as a system.
563. At any rate, Bathurst would require a loaded car to itself, carrying 20 or 30 tons? I should be very sorry to recommend a railway to Bathurst, unless I thought there was far more traffic than one or two "pack-horse" engines would take.
564. These engines may be made to be attached and detached from the cars at convenience? No doubt.
565. Then the two engines which had just brought up one loaded truck to Bathurst might be put under another truck which had been loaded with care and attention to getting the goods out? I think if the engines are to be moved about a line in that way, there would have to be some alteration in them, for I do not believe they would run by themselves.
566. If the engines are correctly proportioned and will run by themselves, they may be taken out? Yes, and then you would have to leave the car suspended in some way.
567. Mr. Bell proposes to lift the cars by hydraulic pressure? Any weight can be lifted by hydraulic pressure.
568. It is cheap and effective? It is cheap and effective, but whether it would be applicable to this purpose is doubtful.
- [A plan of the engines proposed by Mr. Bell was here placed on the table, and after some conversation with reference thereto, the examination was resumed.]
569. You have no doubt that engines might be made which would run safely detached from these bodies, and so that they might be attached and detached at pleasure? No doubt.
570. Do you not think an experiment might very cheaply be tried, as to what gradient could be safely descended or ascended by iron wheels in contact with iron rails? Even after the experiments, it must be well known that if any accident happened on an incline of 1 in 10, or 1 in 20—if the breaks gave way, for instance—nothing could save the train; there would be nothing but destruction for the passengers. With such fearful risk I do not think it would be advisable, for the sake of saving a few pounds, to make such gradients, which after all cannot be worked to advantage, when for an advance on the first cost small compared with the result, we can have much better gradients. 1 in 30 is comparatively safe, but 1 in 10 or 1 in 20 is extremely dangerous.
571. Would it not be cheaply tested by allowing one of your tenders, with breaks attached, to descend an incline of 1 in 10, if Mr. Bell himself (if nobody else would risk it) were willing to work it? It might be cheaply tested; but a tender would not be the only weight in a train. If a goods train of 80 or 100 tons were on such an incline, and the breaks were to give way, nothing could save the train.
572. Might it not be possible to attach a very small apparatus to the train, which, in the event of the breaks giving way—though that is a very rare occurrence—might be thrown down so as to stop the engine? I think it would have a very strong tendency to throw the engine off the line, and whether it would stop the train without damage would be extremely doubtful. There is really no occasion for making these difficulties, by proposing gradients of 1 in 10; the saving would be very small and not commensurate with the disadvantages.
573. Would not the saving be enormous—would it not save the entire expense of earth-works and cuttings? No, I do not think so. There must be some earth-works where the line is exposed to floods, for instance.
574. Would it not be better to raise it above floods, to use timber-work, or open-work of some kind? Yes, but this would be more expensive than earth-works.
575. And consequently it would tend in a great measure to dispense with earth-works? No doubt, but the cost would be greater.

576. Supposing we should go to extremes and use very small wheels, do you not think we could ascend any gradient where iron and iron would work together? It is possible to ascend 1 in 3; but I can only say again that the work done on these steep gradients would be so small that it would be practically useless, and so extremely dangerous that I cannot conceive any person proposing to come down an incline of 1 in 10 for two miles, which would have to be done on some of the roads.
577. Without resorting to extreme gradients of 1 in 10, could we not, without much cutting, obtain a practicable and easy gradient of 1 in 12? Not a practicable gradient certainly.
578. What is the gradient on the Pitt-street Tramway at Goulburn-street? 1 in 20.
579. There is perfect command over that? With the 'bus there is.
580. The 'bus with its passengers weighs about five tons? Yes, I think so.
581. And that is perfectly safe, with a very light break? It appears to be an effective one.
582. Still the apparatus which works it is very slight? Yes.
583. If that break were to give way, what would be the result? Nothing very great. The horses would to a great extent hold the 'bus back, and if not, they could be easily pulled up at the Haymarket—a perfectly straight line of no length.
584. *By Mr. Dalgleish*: Would the wagon attain its highest velocity in that short distance, or would the velocity increase in proportion to the length of the road? It would increase of course.
585. *By the Chairman (at the request of Mr. Bell)*: There would be no danger in two or three hundred yards? No.
586. You assume, that because Mr. Bell has applied for a new patent that he has cast aside the old one altogether? I assume so from the papers.
587. Before he brought the new proposal forward, had not you yourself passed a very strong condemnation of the first plan? I did not recommend it.
588. You in fact condemned it? Yes.
589. Do you think that with a new invention in his head, it would have been wise or judicious in Mr. Bell to have persisted with the other to try to get it introduced, against the Railway Department, after such a report? I cannot give an opinion as to that.
590. Do you not think the wooden wheel would have been a very great experiment? It would have been an experiment no doubt.
591. The system Mr. Bell now proposes to introduce contains no new principle at all—the iron wheels and iron rails? No.
592. It is a mechanical improvement? That is what Mr. Bell says it is.
593. There is no great experiment to try, excepting the use of very small wheels in ascending and descending steep gradients? I believe that is all.
594. In your answer to question 296, you complain that Mr. Bell "should always make a practice of mis-stating everything connected with the Railway Department"? Yes, I stated that, and I think on very good grounds; and if I had known I was going to have the question asked, I should have brought forward his evidence on the railway accident. I think you will find on reference to that, that I contradict almost everything Mr. Bell says, with reference to the carriages and engines. And in the statement Mr. Bell wrote for the House, he stated in one paragraph that our engines weighed from 35 to 45 tons, and that *some of the heaviest*, which words he placed in italics, were imported so late as the month of June last. Now that I state is untrue; and if Mr. Bell had taken any trouble in the matter, he might have ascertained the facts. I would have given him the weights if he had asked for them. And I will engage to say that in every letter he has written connected with the Railway Department, I can find mis-statements.
595. These are the only two occasions? These are the only two occasions he has been before the House on such matters. At all events, he has done it every time that he had the opportunity.
596. In your evidence, at question 298, you state that the engines weigh 19 tons 7 cwt., without water and fuel. Now what will be the weight of water and fuel? Water and fuel will not make up 45 tons.
597. Then there is the tender to come? That has nothing to do with the engine.
598. Is not the tank part of the engine? Not unless it is a tank engine.
599. Then if Mr. Bell added the weight of the tank he was not far from right? He was perhaps 15 tons wrong, with regard to some of the engines. Possibly there would be two tons of fuel and three or four tons of water.
600. The fuel would be in the tender? I thought you were speaking of tank engines. I do not take any notice of the tender in speaking of the weight of the engine.
601. If Mr. Bell stated that engines and tenders together weighed 45 tons, he would have been correct? He did not state so. He said the engines we were now using weighed 45 tons.
602. If you read the second paragraph, you will see that Mr. Bell says distinctly that the engines and tenders vary in weight from 35 to 45 tons:—"They are six-wheeled engines with tenders; the engines have six wheels, the tenders four wheels, so the weight of 45 tons is distributed over 10 wheels." There can be no mistake about that? A little further on you will find something besides that; he speaks of a "45-ton passenger engine."
603. But having given a description of engines and tenders, together weighing 45 tons, it is to be assumed, of course, that he subsequently alludes to the engines of the same description in the paragraph you speak of? Well, it seems to me to be calculated to convey a false impression; but if Mr. Bell says that was not his intention, of course I will not contradict him. With the exception of the paragraph you have quoted, Mr. Bell speaks all through of engines weighing 45 tons. Perhaps you will read a little further on:—"As the engines are not coupled engines two only out of the 10 wheels which carry the 45 tons are propelling wheels; these two wheels bear nine tons of the whole weight; the remaining 36 tons, which

J. Whitton,
Esq., C.E.
15 Jan., 1862.

- J. Whitton, Esq., C.E.
15 Jan., 1862.
- "rest on the other eight wheels, are thrown away and entirely useless for traction, as they in no way give adhesiveness to the propelling wheels upon the rails. If the engines on these lines were coupled engines the case would be different." And then again, in the next sentence, he goes on,—“In addition to a 45-ton passenger engine, &c.”
604. *By Mr. Sutherland*: What is the weight of the heaviest engine on the line? 28 tons.
605. Without the tender? Yes; the tenders are changed about.
606. What is the weight of the tender to the heaviest engine? I should think about 11 tons, or it might be 13 tons with the water in it, fully that. What I complain of in Mr. Bell's statement is not so much his saying that the engines weigh 45 tons, as that *the heaviest were imported so late as June last*. That certainly is not the case.
607. What would be the weight of the fuel? Possibly two or three tons.
608. And the water? The water in the boiler, perhaps three or four tons. I do not deny that engine and tender together may weigh 45 tons.
609. *By the Chairman (at the request of Mr. Bell)*: Do you not think 45 tons is a little short of the heaviest? Possibly it may be; the allusion to the engines is I think calculated to convey a false impression; but what I complain of most is, the statement that the heaviest were imported so late as June last.
610. What was the weight of the largest engine landed on Russell's Wharf lately, as now in working order, engine and tender? About 28 or 29 tons; the engine itself when landed at Russell's Wharf was only 11 tons; I think 11 tons was the greatest weight they had to lift.
611. Was that the smallest one? No, the largest one.
612. I am asking what is the weight of the engine, tender and tank and fuel complete, as Mr. Bell alludes to here, when he says 35 to 45 tons? I dare say the engine altogether might be 29 or 30 tons, including fuel and water.
613. When prepared for work, it does not exceed 30 tons? I will not say positively; but I know the engine is a little over 19 tons, and the tender is about 6 tons, as imported from the maker. When Mr. Bell says—incorrectly, as I have shewn—that “some of the *heaviest* engines were imported so late as the month of June last,” I do not see why the word *heaviest* should have been put in italics, except to convey the impression to the House that I had ordered these in June last, in consequence of the other engines not being sufficiently heavy to work the traffic.
614. Have you not ordered other engines, since these, of a lighter description? No, they are heavier.
615. With smaller wheels? Yes.
616. And all the wheels coupled? No.
617. Four out of six? Yes. In answering that question I may simply say the engines were ordered for a particular description of traffic. If required for a heavy coal traffic, of course they are made with wheels and cylinders proportioned to the work they have to do. I should not order small wheels for a passenger engine.
618. You order large wheels where you want speed, and small wheels where you want to transport heavy loads? Yes.
619. And you couple your wheels together when you want to gain power? Yes.
620. *By Mr. Dalgleish*: You only get adhesion? That is tractive power if you have got sufficient steam pressure.
621. *By the Chairman (at the request of Mr. Bell)*: The more wheels you can drive by, in carrying a load, so long as you have got sufficient steam power, the greater advantage you gain? No doubt of it. It would be just the same if you had an engine on four wheels, and coupled the four wheels.
622. If you have a six-wheel engine and coupled four wheels, the weight applied to the guiding wheels is lost to traction? It is lost to traction; but it is assumed that you do not require it. But it is a disadvantage to couple wheels unless required, as a six-wheeled coupled engine is more expensive to keep in repair.
623. *By Mr. Dalgleish*: Is not that the advantage of the bogie engine, that it is easier kept in repair? Yes.
624. That is an engine that has the whole weight concentrated on one pair of driving wheels? Yes.*
625. *By the Chairman (at the request of Mr. Bell)*: Has any limit been given to the weight? No, the proportions are given. In the first engines the weights were limited, but they are not limited in the last; the last engines will probably weigh 24 tons, including the bogie frames.
626. Are these bogied-framed engines? Two of them.
627. Then they are more than six wheels? No doubt they are, but not eight wheels coupled.
628. Four wheels coupled, and the bogie merely guides? Yes.
629. You say there would be a difficulty with Mr. Bell's wooden wheels in running round curves? Yes.
630. Why would it be greater than if they were iron wheels running on iron rails? Simply that if it be, as Mr. Bell says, that there would be more adhesion, it would be more difficult to turn.
631. If there is no more adhesion, it would be just as easy to go round curves with Mr. Bell's wheels? No, because of the width of the bearing he proposes, five inches.
632. You did not see Prosser's experiments? No.
633. But you were under the impression that he used a wooden wheel? I did not say whether he did or not.

634.

* Revised:—No, part of the weight is on the bogie wheels, and the remainder on the driving and trailing wheels.

634. An iron wheel was used. Are you aware of the damage done to Prosser's rails? I am aware that he tried these experiments, and that they were generally considered to be perfectly useless. J. Whitton, Esq., C.E.
635. Are you aware what wood Prosser used? No. 15 Jan., 1862.
636. Did you ever hear that he used beech? No.
637. Should you be surprised if you heard that Prosser's wooden rail was destroyed entirely by the angular guide wheel? No.
638. Does it not stand to reason that such wheels with peripheries of different diameters, and running at different speeds, must necessarily destroy a wooden rail? I should think so. I believe all wooden rails would soon be destroyed.
639. Supposing an iron plate were put on to prevent the action on the wooden rail? I think if the guiding wheel did not touch the wood it would have some difficulty in causing abrasion.
640. You state in your evidence that Mr. Bell's patent is exactly identical with that brought forward by Mr. Prosser, Mr. Shields, and Captain Mann? I did not say it was exactly identical.
641. Is not Mr. Bell's patent for a combination of wooden and metal rails? Yes, I believe it is.
642. Is not Prosser's patent simply for wooden rails? Yes. Mr. Bell's proposal is simply an adaptation of rails which have been in use—the wooden rail by Prosser, and the iron rail on every locomotive railway.
643. *By Mr. Dalgleish:* Have you not seen lines of tramway where wood and iron have been combined for rails? Yes.
644. How many years ago? Fourteen or fifteen years ago.
645. *By the Chairman (at the request of Mr. Bell):* In these cases did not the trucks always run on the iron? Yes.
646. Was any part of the wood used except as a bearer for the rails? No.
647. Do you not consider it is an invention to use these two substances for different purposes, as Mr. Bell proposes? It is an adaptation.
648. Do you know of any person ever running driving wheels on wood and guide wheels on iron at the same time? No.
649. Do you not think there is more resistance in running on wood than on iron? Yes.
650. And consequently, assuming that the adhesion from wood and wood is greater than that from iron and iron, you will admit that mechanically the principle of this must be good, inasmuch as you get the least resistance to the load drawn on the rail and the greatest adhesion for the driving wheels? Assuming that wooden rails and wooden wheels are of any use, no doubt.
651. If you had not thought it was a useful invention, would you have recommended it for protection? Yes, I would. If I had acted on my own judgment, I do not believe there has been one application that I have been connected with since I came to the Colony that I should have granted a patent for. I never go into the question whether these things are useful or not. It forms no part of the Act under which the Commissioners are authorized to report.
652. From what you have stated, I think you will admit that Mr. Bell's patent is not the same as Prosser's? The wooden rail is Prosser's.
653. Without the iron? Without the iron.
654. Mr. Bell's combination of the wooden and iron rails, and system of working upon them, is new? - Yes, I dare say it is.
655. Mr. Brunel's railway, with an iron rail on a wooden log, is in point of fact the same railway as Mr. Bell's? Yes, worked differently.
656. The rails proposed by Captain Mann were only wood? Only wood.
657. There was nothing to shew that he proposed to use the combination? He did use an iron guide rail.
658. Is there anything left in the Railway Office to shew that he proposed to use them as Mr. Bell proposes to use them? No.

1861.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES No. 19. THURSDAY, 3 OCTOBER, 1861.

- 7. Maitland and Morpeth Railway Company's Bill:—Mr. Wilson, on behalf of Mr. Windeyer, moved, pursuant to notice standing in the name of Mr. Windeyer,—
 - (1.) That the Bill to incorporate the Maitland and Morpeth Railway Company be referred to a Select Committee, for their consideration and report.
 - (2.) That such Committee consist of Mr. Wilson, Mr. Morris, Mr. Hoskins, Mr. Hannell, Mr. Arnold, Mr. Lucas, Mr. Buchanan, and the Mover.
 - (3.) That the Minutes of Evidence, taken before the same Committee last Session, be referred to this Committee.
 And Mr. Dalgleish requiring that the said Committee be appointed by ballot,—

Question,—

 - (1.) That the Bill to incorporate the Maitland and Morpeth Railway Company be referred to a Select Committee, for their consideration and report.
 - (2.) That the Minutes of Evidence, taken before the same Committee last Session, be referred to this Committee,—
 put and passed.

Whereupon the House proceeded to the Ballot, and the Speaker declared the following Members to be the Committee duly appointed:—Mr. Windeyer, Mr. Hoskins, Mr. Lucas, Mr. Hannell, Mr. Arnold, Mr. Piddington, Mr. Buchanan, and Mr. Dalgleish.

VOTES No. 21. WEDNESDAY, 9 OCTOBER, 1861.

- 14. Maitland and Morpeth Railway Company's Bill:—Mr. Windeyer moved, pursuant to notice,—
 - (1.) That the Members of the Select Committee on the Maitland and Morpeth Railway Company's Bill, appointed by ballot on Thursday, the 3rd instant, be discharged from attendance, and that a fresh Committee be appointed.
 - (2.) That such fresh Committee consist of Mr. Wilson, Mr. Morris, Mr. Lucas, Mr. Hannell, Mr. Hoskins, Mr. Hay, Mr. Arnold, Mr. Buchanan, Mr. Bell, and the Mover.
 Debate ensued.

* * * * *

- Question then,—
- (1.) That the Members of the Select Committee on the Maitland and Morpeth Railway Company's Bill, appointed by ballot on Thursday, the 3rd instant, be discharged from attendance, and that a fresh Committee be appointed,—
- put and passed.
- And Mr. Redman requiring that the said fresh Committee be appointed by Ballot,—
- The House proceeded to the Ballot, and the Speaker declared the following Members to be the fresh Committee duly appointed:—Mr. Windeyer, Mr. Arnold, Mr. Morris, Mr. Bell, Mr. Buchanan, Mr. Wilson, Mr. Hay, Mr. T. Garrett, Mr. Piddington, and Mr. Dalgleish.

VOTES No. 26. THURSDAY, 17 OCTOBER, 1861.

- 2. Maitland and Morpeth Railway Company's Bill:—Mr. Piddington presented a Petition from certain Inhabitants of Morpeth, Hinton, Maitland, and the Hunter River District, adverse to the passing of the said Bill, unless with certain qualifications as therein set forth.

Petition received, and referred to the Select Committee on the Bill.

VOTES No. 32. TUESDAY, 29 OCTOBER, 1861.

- 8. Maitland and Morpeth Railway Company's Bill:—Mr. Windeyer, as Chairman, brought up the Report from, and laid upon the Table the Proceedings of, and Minutes of Evidence taken before, the Select Committee, for whose consideration and report this Bill was referred on the 3rd instant.

Ordered to be printed.

* * * * *

1861.

MAITLAND AND MORPETH RAILWAY COMPANY'S BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, upon the 3rd instant, "*the Bill to incorporate the Maitland and Morpeth Railway Company;*" and to whom were referred, on the same day, "*the Minutes of Evidence taken before the same Committee, last Session,*" and, on the 17th instant, "*a Petition from certain Inhabitants of Morpeth, Hinton, Maitland, and the Hunter River District,*"—beg leave to report to your Honorable House,—

That they have examined the witnesses named in the margin (whose evidence will be found appended hereto), have considered the evidence taken before a former Committee of your Honorable House and referred to your Committee, together with a Petition from certain Inhabitants of Morpeth and Hinton, and that the Preamble of the Bill having been proved to the satisfaction of your Committee, they proceeded with the several Clauses and the Schedule.

Mr. P. MacAuliffe.
Mr. J. Campbell.
Mr. A. Brown.
Mr. A. J. Whalley.
C.E.
Mr. J. Whitton, C.E.
Mr. J. Rae.

And your Committee now beg to lay the Bill before your Honorable House without Amendment.

WILLM. C. WINDEYER,

Chairman.

*Legislative Assembly Chamber,
Sydney, 24 October, 1861.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 10 OCTOBER, 1861.

The Committee convened this day by direction of the Mover (Mr. Windeyer) discharged from attendance by the House, last evening.

FRIDAY, 11 OCTOBER, 1861.

MEMBERS PRESENT:—

Mr. Buchanan,		Mr. Morris,
Mr. Dalgleish,		Mr. Piddington,
Mr. T. Garrett,		Mr. Wilson,
	Mr. Windeyer.	

W. C. Windeyer, Esq., called to the Chair.

Votes No. 21, 9th instant, entry 14, appointing fresh Committee, upon the Table.
Printed copies of the Maitland and Morpeth Railway Company's Bill, before the Committee.

Promoters of the Bill:—Benjamin Lee, junr., of West Maitland, merchant, and Samuel Smith Dickson, of Morpeth, merchant, respectively Chairman and Vice-Chairman of the Provisional Committee of the Company.

Solicitor for the Bill:—Mr. Thomas Iceton, as Sydney Agent of Mr. W. H. Mullen, of West Maitland.

Committee deliberated.

Parties called in.

Present:—Mr. Iceton, Solicitor.

The Chairman informed the Solicitor for the Bill, that the Committee were about to adjourn till Tuesday, at half-past Ten o'clock.

[Adjourned till Tuesday, 15th instant, at half-past Ten o'clock.]

TUESDAY, 15 OCTOBER, 1861.

MEMBERS PRESENT:—

W. C. Windeyer, Esq., in the Chair.

Mr. Buchanan,		Mr. Morris,
Mr. Dalgleish,		Mr. Piddington,
Mr. T. Garrett,		Mr. Wilson,

Present:—Mr. Iceton, Solicitor.

Solicitor for the Bill briefly stated the course he intended to pursue, in calling witnesses.

Mr. Patrick MacAuliffe, *Secretary to Company*, examined.

Original Deed referred to in the Preamble of the Bill, produced by witness, and printed copy handed in.

Other documents (2) handed in (*Vide List of Appendix.*)

The Chairman having occasion to leave the Chair, A. Morris, Esq., called thereto, *pro temp.*

Examination of witness continued.

Chair resumed by Mr. Windeyer.

Examination of witness concluded.

Committee deliberated.

Motion made (*Mr. T. Garrett*) and Question proposed,—That this Committee do now adjourn until to-morrow, at half-past Ten o'clock.

Amendment proposed (*Mr. Dalgleish*), to omit "to-morrow," and insert "Thursday next."

Question put,—That the word proposed to be omitted stand part of the Question.
Committee divided.

Ayes, 2.		Noes, 2.
The Chairman,		Mr. Dalgleish,
(Mr. Windeyer),		Mr. Piddington.
Mr. T. Garrett,		

The Chairman gave his casting vote with the Ayes.

Amendment negatived.

Original Question put.

Committee divided.

Ayes, 2.		Noes, 2.
The Chairman,		Mr. Dalgleish,
(Mr. Windeyer),		Mr. Piddington.
Mr. T. Garrett,		

The Chairman gave his casting vote with the Ayes.

Original Question agreed to.

[Adjourned till To-morrow, 16th instant, at half-past Ten o'clock.]

WEDNESDAY,

WEDNESDAY, 16 OCTOBER, 1861.

MEMBERS PRESENT :—

W. C. Windeyer, Esq., in the Chair.

Mr. Bell,		Mr. Dalgleish,
Mr. Buchanan,		Mr. T. Garrett,
		Mr. Piddington.

Present :—Mr. Iceton, Solicitor.

Mr. James Campbell examined.

The Chairman requesting to vacate the Chair temporarily,—

Room cleared.

Committee deliberated.

Motion made (*Mr. Buchanan*) and Question proposed,—That Mr. T. Garrett do take the Chair, *pro temp.*

Amendment proposed (*Mr. Dalgleish*) to omit the name "Mr. T. Garrett," and insert the name "Mr. Piddington."

Question put,—That the name first proposed stand part of the Question.

Committee divided,—Mr. Bell not voting.

Ayes, 3.		Noes, 2.
The Chairman,		Mr. Dalgleish,
(Mr. Windeyer),		Mr. Piddington.
Mr. Buchanan,		
Mr. T. Garrett,		

Amendment negatived.

Original Question put.

Committee divided,—Mr. Bell not voting.

Ayes, 3.		Noes, 2.
The Chairman,		Mr. Dalgleish,
(Mr. Windeyer),		Mr. Piddington.
Mr. Buchanan,		
Mr. T. Garrett,		

Original Question agreed to.

Whereupon the Chair taken by T. Garrett, Esq.

Solicitor and witness called in, and examination of latter continued.

Chair resumed by Mr. Windeyer.

Examination of witness continued.

Committee deliberated.

Motion made (*Mr. T. Garrett*) and Question proposed,—That this Committee do now adjourn until to-morrow, at half-past *Ten* o'clock.

Amendment proposed (*Mr. Dalgleish*), to omit "to-morrow," and insert "Friday next."

Question put,—That the word proposed to be omitted stand part of the Question.

Committee divided.

Ayes, 4.		Noes, 2.
The Chairman,		Mr. Dalgleish,
(Mr. Windeyer),		Mr. Piddington.
Mr. Bell,		
Mr. Buchanan,		
Mr. T. Garrett.		

Amendment negatived.

Original Question put.

Committee divided.

Ayes, 4.		Noes, 2.
The Chairman,		Mr. Dalgleish,
(Mr. Windeyer),		Mr. Piddington.
Mr. Bell,		
Mr. Buchanan,		
Mr. T. Garrett.		

Original Question agreed to.

[Adjourned till To-morrow, 17th instant, at half-past *Ten* o'clock.]

THURSDAY, 17 OCTOBER, 1861.

MEMBERS PRESENT :—

W. C. Windeyer, Esq., in the Chair.

Mr. Bell,		Mr. T. Garrett,
Mr. Buchanan,		Mr. Piddington,
Mr. Dalgleish,		Mr. Wilson.

Present :—Mr. Iceton, Solicitor.

Mr. James Campbell further examined.

Mr. Alexander Brown examined.

Exception taken to the relevancy of certain questions to witness, put by Mr. Dalgleish, a Member of the Committee.

Room cleared.

Committee

Committee deliberated,—and further objection stated (*Mr. Wilson*) to the general style of the examination conducted by the Honorable Member.

At the instance of *Mr. T. Garrett*, the following interrogatory put:—Are questions relative to wharfrage accommodation at Morpeth relevant to this inquiry?

Committee divided.

Ayes, 6.	No, 1.
The Chairman,	Mr. T. Garrett.
(<i>Mr. Windeyer</i>),	
Mr. Bell,	
Mr. Buchanan,	
Mr. Dalgleish,	
Mr. Piddington,	
Mr. Wilson.	

Resolved in the affirmative.

Deliberation continued.

Motion made (*Mr. Wilson*) and Question put,—That the course of examination adopted by *Mr. Dalgleish* is irregular and unparliamentary.

Committee divided,—*Mr. Dalgleish* declining to vote.

Ayes, 5.	No, 1.
The Chairman,	Mr. Piddington.
(<i>Mr. Windeyer</i>),	
Mr. Bell,	
Mr. Buchanan,	
Mr. T. Garrett,	
Mr. Wilson.	

Question agreed to.

Committee further deliberated.

On motion of *Mr. Wilson*, Solicitor and witness called in, and the latter further examined.

And Questions touching the plan of the proposed Railway being addressed to the witness,—

Solicitor for the Bill submitted that he did not produce this witness to offer evidence in regard to the plan; but that the surveyor who prepared it was in attendance for that purpose.

Question waived.

Examination concluded.

[Adjourned till To-morrow, 18th instant, at half-past *Ten* o'clock.]

FRIDAY, 18 OCTOBER, 1861.

MEMBERS PRESENT:—

Mr. Dalgleish,		Mr. Piddington.
----------------	--	-----------------

In the absence of a Quorum of the Committee, at *Eleven* o'clock, the meeting lapsed.

TUESDAY, 22 OCTOBER, 1861.

MEMBERS PRESENT:—

W. C. Windeyer, Esq., in the Chair.		
Mr. Buchanan,		Mr. Morris,
Mr. T. Garrett,		Mr. Piddington,
Mr. Wilson.		

Petition from certain Inhabitants of Morpeth, Hinton, Maitland, and the Hunter River District, referred by the House,—read and considered.

Solicitor for the Bill called in.

Mr. Arthur John Whalley, C.E., Engineer to Company, examined.

Witness laid before Committee a plan and section of the intended line of Railway, with schedule of references attached.

Room cleared.

Committee deliberated.

Motion made (*Mr. Piddington*), and Question proposed,—That *Mr. Whitton*, *Mr. Rae*, and *Mr. E. O. Moriarty*, Officers of the Department for Public Works, be now examined before the Committee.

Deliberation continued.

On motion of *Mr. T. Garrett*, Previous Question put,—That this Question be now put.

Committee divided,—the Chairman not exercising his vote.

Aye, 1.	Noes, 4.
Mr. Piddington.	Mr. Buchanan,
	Mr. T. Garrett,
	Mr. Morris,
	Mr. Wilson.

Previous Question negatived, and Original Motion superseded.
Preamble read and considered.

Motion

Motion made (*Mr. Piddington*), That the Preamble be amended, in line 1, by omitting the word "public."

Question put,—That the word proposed to be omitted stand part of the Preamble.
Committee divided,—the Chairman not exercising his vote.

Ayes, 4.	No, 1.
Mr. Buchanan,	Mr. Piddington.
Mr. T. Garrett,	
Mr. Morris,	
Mr. Wilson.	

Amendment negatived.

Motion made (*Mr. Piddington*), That the Preamble be amended, in line 1, after "advantage," by inserting "to the shareholders of the proposed line."

Question put,—That the words proposed to be inserted be so inserted.
Committee divided,—the Chairman not exercising his vote.

Aye, 1.	Noes, 4.
Mr. Piddington.	Mr. Buchanan,
	Mr. T. Garrett,
	Mr. Morris,
	Mr. Wilson.

Motion made (*Mr. T. Garrett*), and *Question put*,—That this Preamble stand part of the Bill.

Committee divided,—the Chairman not exercising his vote.

Ayes, 4.	No, 1.
Mr. Buchanan,	Mr. Piddington.
Mr. T. Garrett,	
Mr. Morris,	
Mr. Wilson.	

Preamble agreed to.

Solicitor for the Bill called in and informed.

Committee proceeded with the Bill.

Clauses 1 and 2 severally read and agreed to.

Clause 3 read.

Question put,—That the Clause, as read, stand part of the Bill.

Committee divided,—the Chairman not exercising his vote.

Ayes, 4.	No, 1.
Mr. Buchanan,	Mr. Piddington.
Mr. T. Garrett,	
Mr. Morris,	
Mr. Wilson.	

Clause 3 agreed to.

Clauses 4 to 13 severally read and agreed to.

Clause 14 read.

Question put,—That the Clause, as read, stand part of the Bill.

Committee divided.

Ayes, 5.	No, 1.
The Chairman,	Mr. Piddington.
(Mr. Windeyer),	
Mr. Buchanan,	
Mr. T. Garrett,	
Mr. Morris,	
Mr. Wilson.	

Clause 14 agreed to.

Clauses 15 to 40 severally read and agreed to.

Clause 41 read.

Room cleared.

Committee deliberated.

Motion made (*Mr. Piddington*), and *Question put*,—That the Committee take the evidence of Mr. Whitton, Engineer-in-Chief, and Mr. Rae, Commissioner for Railways, in reference to this Clause.

Committee divided,—the Chairman declining to vote.

Ayes, 3.	Noes, 2.
Mr. T. Garrett,	Mr. Buchanan,
Mr. Morris,	Mr. Wilson.
Mr. Piddington.	

Question agreed to.

Solicitor for the Bill called in and informed.

Clause 41 postponed.

Clauses 42 to 51 severally read and agreed to.

Schedule A read and agreed to.

Committee deliberated.

Motion made (*Mr. Piddington*), and Question proposed,—That the Clerk be instructed to summon the attendance of Mr. Whitton and Mr. Rae, for the purpose of being examined at the next sitting.

Amendment proposed (*Mr. Wilson*),—To omit all the words after “instructed,” and insert “to follow the ordinary practice in regard to witnesses on Private Bills.”

Question put,—That the words proposed to be omitted stand part of the Question.
Committee divided,—The Chairman not exercising his vote.

Aye, 1.	Noes, 3.
Mr. Piddington.	Mr. T. Garrett, Mr. Morris, Mr. Wilson.

Words omitted.

Question put,—That the words proposed to be inserted be so inserted.
Committee divided,—The Chairman not exercising his vote.

Ayes, 3.	No, 1.
Mr. T. Garrett, Mr. Morris, Mr. Wilson.	Mr. Piddington.

Words inserted.

Main Question, as amended, put.

Committee divided,—The Chairman not exercising his vote.

Ayes, 3.	No, 1.
Mr. T. Garrett, Mr. Morris, Mr. Wilson.	Mr. Piddington.

[Adjourned till Thursday, 24th instant, at half-past Ten o'clock.]

THURSDAY, 24 OCTOBER, 1861.

MEMBERS PRESENT :—

W. C. Windeyer, Esq., in the Chair.

Mr. Arnold, Mr. Bell, Mr. Buchanan, Mr. Dalglish,	Mr. T. Garrett, Mr. Morris, Mr. Piddington, Mr. Wilson.
--	--

Present :—Mr. Iceton, Solicitor.

Mr. John Whitton, *C.E.*, *Engineer-in-Chief, Railway Department*, examined in reference to Clause 41, postponed at the last meeting.

The witness being prepared to offer certain remarks upon the Bill generally, and Question arising as to the limits within which further evidence was still admissible,—
Room cleared.

Committee deliberated.

Motion made (*Mr. Piddington*), and Question proposed,—That Mr. Whitton be permitted to offer the suggestions which he wishes to make in reference to this Bill.

Amendment proposed (*Mr. Buchanan*), to omit all the words after “That,” and insert “the suggestions of Mr. Whitton in regard to the Bill be confined to matters of engineering experience.”

Question put,—That the words proposed to be omitted stand part of the Question.
Committee deliberated,—Mr. Arnold not voting.

Ayes, 2.	Noes, 4.
Mr. Morris, Mr. Piddington.	The Chairman, (Mr. Windeyer), Mr. Bell, Mr. Buchanan, Mr. T. Garrett.

Words omitted.

Question put,—That the words proposed to be inserted be so inserted.
Committee divided,—Mr. Arnold not voting.

Ayes, 4.	Noes, 2.
The Chairman, (Mr. Windeyer), Mr. Bell, Mr. Buchanan, Mr. T. Garrett.	Mr. Morris, Mr. Piddington.

Main

Main Question, as amended, put.

Committee divided,—Mr. Arnold not voting.

Ayes, 4.		Noes, 2.
The Chairman, (Mr. Windeyer),		Mr. Morris,
Mr. Bell,		Mr. Piddington.
Mr. Buchanan,		
Mr. T. Garrett.		

Question agreed to.

Solicitor for the Bill and witness called in.

Witness informed of the Resolution, and further examined.

Objection being taken to a Question to witness, put by Mr. Dalgleish, a Member of the Committee,—

Room cleared.

Committee deliberated.

Motion made (*Mr. T. Garrett*), and Question put,—That the Question put to Mr. Whitton by Mr. Dalgleish, as to whether it is the custom of Select Committees on Railway Bills in examination of witnesses to restrict them to evidence on one clause, is highly irregular.

Committee divided,—neither the Chairman nor Mr. Arnold voting.

Ayes, 5.		Noes, 2.
Mr. Bell,		Mr. Dalgleish,
Mr. Buchanan,		Mr. Piddington.
Mr. T. Garrett,		
Mr. Morris,		
Mr. Wilson.		

Question agreed to.

Solicitor for the Bill and witness called in.

Examination of witness concluded.

Mr. John Rae, Under Secretary for Public Works, and Commissioner for Railways, examined, in reference to Clause 41, postponed at the last meeting.

Postponed Clause 41 then read.

Question put,—That the Clause, as read, stand part of the Bill.

Committee divided.

Ayes, 4.		Noes, 4.
The Chairman, (Mr. Windeyer),		Mr. Dalgleish,
Mr. Arnold,		Mr. T. Garrett,
Mr. Bell,		Mr. Morris,
Mr. Buchanan.		Mr. Piddington.

The Chairman gave his casting vote with the Ayes.

Clause 41 agreed to.

Committee deliberated.

Motion made (*Mr. Piddington*), and Question put,—That the Petition from certain Inhabitants of Morpeth, Hinton, Maitland, and the Hunter River District, be attached to the Report and Evidence when brought up, in view to being printed therewith.

Committee divided.

Ayes, 2.		Noes, 7.
Mr. Dalgleish,		The Chairman, (Mr. Windeyer),
Mr. Piddington.		Mr. Arnold,
		Mr. Bell,
		Mr. Buchanan,
		Mr. T. Garrett,
		Mr. Morris,
		Mr. Wilson.

Question negatived.

Draft Report submitted by the Chairman—read.

Motion made (*Mr. Wilson*), and Question put,—That the Draft Report, as read, be the Report of this Committee.

Committee divided.

Ayes, 7.		Noes, 2.
The Chairman, (Mr. Windeyer),		Mr. Dalgleish,
Mr. Arnold,		Mr. Piddington.
Mr. Bell,		
Mr. Buchanan,		
Mr. T. Garrett,		
Mr. Morris,		
Mr. Wilson.		

Report agreed to.

To report accordingly.

LIST OF WITNESSES.

	PAGE.
Brown, Mr. Alexander	50
Campbell, Mr. James	81
MacAuliffe, Mr. Patrick	18
Bac, Mr. M. John	63
Whalley, Mr. Arthur John, C.E.	58
Whitton, Mr. John, C. E.	61

LIST OF APPENDIX.

(To Evidence given by Mr. P. MacAuliffe, 15 October, 1861.)

Legislative Assembly.

NEW SOUTH WALES:

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

MAITLAND AND MORPETH RAILWAY COMPANY'S BILL.

TUESDAY, 15 OCTOBER, 1861.

Present:—

MR. BUCHANAN,
MR. DALGLEISH,
MR. T. GARRETT,

MR. WINDEYER.

MR. MORRIS,
MR. PIDDINGTON,
MR. WILSON,

WILLIAM CHARLES WINDEYER, Esq., IN THE CHAIR.

Thomas Iceton, Esq., appeared as Solicitor for the Bill.

Mr. Patrick Macauliffe called in and examined:—

1. *By Mr. Iceton:* You are Secretary to a Company called the Maitland and Morpeth Railway Company? Yes.
2. Do you produce the deed of settlement of that Company? I do. (*Deed produced, and printed copies laid on the Table.*)
3. The deed you now produce is the original deed? It is.
4. Turn to the signatures if you please. You appear to be the attesting witness to a great many of the signatures? Yes.
5. Did you see those parties execute the deed? I did.
6. That is the deed under which the Company is established? Yes.
7. How many shares have been taken by the members of the Company? 2,604 are signed for in the deed of settlement, but more are taken and will no doubt be signed for.
8. 2,604 shares are held by persons who have executed the deed? Yes.
9. Have any shares been taken by persons who have not executed the deed? Yes.
10. About how many? About 600 I think.
11. What deposit has been paid on their shares by persons who have executed the deed? £2,604 in the whole, being £1 per share, but more has been paid up by parties who have not yet signed.
12. Parties who have not yet signed have also paid the deposit? Yes; they are parties living at a distance, who cannot conveniently come down at present to execute the deed.
13. *By the Chairman:* What is the proposed capital of the Company? £25,000.
14. *By Mr. Iceton:* In what shares? 5,000 shares of £5 each.
15. You have received in cash about £2,400, in round numbers? More than that; £2,604 from parties who have subscribed the deed, besides money paid by others who have not yet signed it. The total amount paid is about £3,000.
16. As to the rest of the capital have you received any promissory notes or anything of that sort? Yes.
17. What have you received, and to what amount? To the amount of £13,700, in promissory notes and cash.
18. Including the first call? Including the first call of £1 cash per share.

Mr. Patrick
Macauliffe.

15 Oct., 1861.

19.

- Mr. Patrick
Macauliffe.
- 15 Oct., 1861.
19. The Company are the promoters of this Bill? They are the promoters of this Bill.
20. *By Mr. Piddington*: You say 2,604 shareholders have executed the deed of settlement? The number of shareholders executing the deed of settlement is about 72 or 75; the amount of shares on which the deposit has been paid, represented by those who have signed, is 2,604; the total amount paid up, about £3,000.
21. Is that sum paid in cash? In cash.
22. Deposited to the credit of the Company in any bank? In the Commercial Bank at Morpeth.
23. What proportion does the paid-up capital of the Company bear to the whole capital of the Company? Paid-up capital, including promissory notes?
24. Not including promissory notes—cash, of course; I do not recognize promissory notes as capital; I never heard of such a thing as part of paid-up capital before? I may be allowed to remark then, that part of the Hunter River New Steam Navigation Company's capital has been paid up in precisely the same manner. But to answer your question,—the amount actually paid in cash is one-eighth of the whole.
25. *By the Chairman*: Including promissory notes, what portion of the proposed capital is paid up? £13,721.
26. More than half? Yes.
27. *By Mr. Piddington*: Do you consider capital, represented by promissory notes, to be paid-up capital? You ask me the question as a matter of opinion, and I would say, in this case, decidedly yes.
28. *By the Chairman*: Are the persons who have given these promissory notes persons of known standing and means? I would say they are of first-rate standing, and reference to the deed of settlement will shew whom they are.
29. Have you a list of the persons who have paid up or given promissory notes? I have. I can put it in. (*The witness handed in the same, vide Appendix A.*)
30. *By Mr. Piddington*: What are the objects of this Company? To construct and work a line of railway between Morpeth and the Great Northern Railway at East Maitland.
31. Are you a shareholder? No.
32. Will the Company require to possess land on the line that they are not now possessed of? For the construction of the railway—yes.
33. Is the Company in possession of any land they require? They are so far in possession that deeds of conveyance in their favour have been made out and executed.
34. For the whole line? Not for the whole, but for a very large portion.
35. Then there is a considerable portion of the land the Company will require which they do not now possess? Yes.
36. Are you aware of what portion of the land they will require, the Company are now in possession of, and of which deeds are made in their favour? Of the particular cases?
37. Of the extent, say? Well, I think, without fear of exaggeration, I might say three-fourths or four-fifths; I know it is a very large proportion of the whole.
38. But unless the Company become possessed of the remaining portion, of course the line cannot be constructed? No; unless they have power to take the remaining portion, of course it will not be constructed.
39. And with respect to one-fourth, you are clear the Company are not possessed of it? A fourth or a fifth; I wish to keep within limits when I say three-fourths or four-fifths are actually conveyed by deed already.
40. Do you expect the Morpeth District to be benefited by the construction of this line? Yes.
41. What do you understand by the Morpeth District? As I understand it, I would not limit the benefit to the immediate district about Morpeth; I would take that which is commonly known as the whole Hunter District.
42. Do you mean from Newcastle on the sea-shore, to Seone or Muswellbrook in the interior? I think I might almost define it so, as matter of opinion.
43. Then you think the two or three miles of railway which the Company propose to construct from Morpeth to Maitland will benefit the whole Hunter River District, from the sea-shore to Seone and Muswellbrook? I do, inasmuch as I believe it will form the connecting link between the water and the rail.
44. Do you know the Paterson township? Yes.
45. Do you know Tocal, on the Paterson River? I have never been in Tocal, but I have been in the neighbourhood.
46. Supposing I were a farmer on the Paterson, do you think it would be more to my advantage to send my produce to Morpeth to be sent by this railway to the interior, or to West Maitland on the Government line of railway? I am not aware that I know precisely the particular locality you mean; but I can say generally that I believe it would largely benefit the district of Paterson to send produce to Morpeth in order to have it transferred by rail to West Maitland and the interior.
47. I thought you said you knew the town of Paterson? Yes; I have been along the Paterson more or less, but not much beyond it; I have been as far as Mr. Mitchell's, at Dunmore, and beyond in that way.
48. That is much nearer to Morpeth than I allude to? I dare say it is.
49. Then do you mean to say you do not know the position of the town of Paterson? I know the position, but I have never been in it.
50. I want to know whether, from your knowledge of the locality, you think it would not be more advantageous to a settler at Paterson to send his produce, if he deemed it necessary, to Maitland, than it would be to send it to Morpeth? Well; I believe it would be more to his advantage to send it to Morpeth, and perhaps you will allow me to explain the reason.
- There

There is water communication between the two, which would, I presume, scarcely be available by the winding and circuitous way he would have to go to get to West Maitland; I mean that he can get direct to Morpeth, and then, without going further, can transfer his goods to West Maitland or where he pleases.

Mr. Patrick
Macauliffe.

15 Oct., 1861.

51. Is there not a more difficult water barrier at Morpeth than at West Maitland? I think not.

52. Cannot a settler cross at the Falls—do you know the Falls? I have been there, but never took particular notice of them. The Hunter, it should be explained, is a very long river, and very circuitous throughout.

53. My question does not refer to the passage or transit of goods to Morpeth or West Maitland by water, but merely to the comparative convenience to a settler located at Paterson transmitting his produce to the Great Northern line of railway at West Maitland, or transmitting it to Morpeth, to be sent by the proposed line of railway from that place, taking the existing road in both instances? I believe, as a matter of opinion, that it would be much more convenient to send by way of Morpeth.

54. And have to cross the river there? He would necessarily have to cross the river.

55. Would he not have to cross the river at Morpeth? Yes.

56. And to pay toll there? Yes; unless he brought it by boat.

57. I am not speaking of that. I wish to know whether he would not have to pay ferry dues? He would have to pay ferry dues if he came by land.

58. Are there any ferry dues to cross at the Falls? I suppose not; I have been at the Falls, but I cannot recollect whether there is a punt there or not.

59. And yet you have given your positive opinion that this line, if constructed, will benefit the whole of that country from the seaboard upwards? Yes, and I beg leave to repeat it; but if you ask me with reference to exceptional cases, I have no doubt different opinions might be formed by different persons.

60. You are not aware whether there is a punt at the Falls or not? No; I know there are punts at Pitnacree, Duumore, Morpeth, and Hinton.

61. The punt at Duumore is not on the Hunter? It is on the Paterson.

62. I am not speaking of the Paterson. If there were not a punt at the Falls, and no ferry dues to be paid, do you still persist in your opinion, that it would be more beneficial for a settler to pay puntage at Morpeth, in order to ship his produce on the Morpeth railway, rather than to pay no puntage, and send it by the Government railway? Yes, I think it would; the roads are so wretchedly bad, and the communication so difficult, that the facilities offered by the railway would be infinitely superior to anything offered there at present.

63. Does what you say, with respect to the difficulties of communication, only apply to the difficulty between Tocal and West Maitland, and not to any similar difficulty between Tocal and Morpeth? Water communication is contemplated between Morpeth and the district of Paterson.

64. You are again diverging from my question, perhaps from not understanding it; I am not at all referring to water communication but to land communication; I wish to know whether, in your opinion, it would be equally advantageous to a settler at Tocal to send his goods to West Maitland, and not to pay puntage, as to send them to Morpeth and pay puntage? The difference of puntage might possibly influence a settler in wishing to send the other way; but it is mere matter of opinion; the puntage is a very small figure.

65. Do you know the amount of puntage for a dray and six bullocks? No; I never crossed with a dray and six bullocks, but I have with a gig and horse.

66. What is the puntage for a gig and horse? Sixpence, I think.

67. Are you clear that it would be a shorter line for the settler to send his goods to Morpeth than to send them to West Maitland? I really do think, generally speaking, it would.

68. Do you know positively, of your own knowledge, that it would be shorter? If I understand your question correctly, as applying to the whole district, I should say yes.

69. To a limited extent, taking the town of Paterson as a pivot, I ask whether it is a shorter distance from the town of Paterson to West Maitland, across the Falls, than from the town of Paterson to Morpeth, across the river, by the punt? I am not prepared to say; it may be.

70. If you go beyond the town of Paterson, across the river between the Williams and the Paterson, would not that be an additional difficulty in transmitting goods by land to Morpeth? Yes, if you confine it to land, certainly.

71. If you go to the eastward of the Williams River, would not the difficulty be again increased? Yes, if the carriage of the goods be confined to the land; but these are exceptional cases.

72. Then, I presume, the great mass of the produce grown on the Paterson and Williams is sent by water? Yes.

73. Now I wish to know what proportion of the produce grown on the Paterson and the Williams is sent to Sydney by water, and what proportion to Morpeth by water? A very large proportion. One of the Company's steamers is employed as a drogher, besides other small boats; in fact it is principally collected by water.

74. Do you think that one-third of the produce grown on the Paterson and the Williams is sent to Morpeth by water? I have no hesitation in saying that more than three-fourths are taken to Morpeth for shipment.

75. Then I understand you to be of opinion that one-fourth only of the produce, wheat and maize, grown on the Paterson and Williams, is sent direct to Sydney from those localities? Perhaps less than a fourth.

76. Either by sailing craft or any other? Yes. Of course it is merely a comparative figure at best.

77. Are you not aware that there are a considerable number of small craft engaged in the direct

Mr. Patrick
Macauliffe.

15 Oct., 1861.

direct trade between the Paterson and Williams and Sydney? There are a few, not a very considerable number.

78. Whatever the number may be you are decidedly of opinion that by means of direct water communication only one-fourth reaches Sydney? Yes, the principal portion of it comes by way of Morpeth.

79. Three-fourths you think? Yes; in fact I should think more than that.

80. Is there much produce grown in the immediate neighbourhood of Morpeth, on the south bank of the Hunter, that is, the Morpeth bank? A very considerable quantity about Miller's Forest.

81. I am not speaking of Miller's Forest; I say the immediate neighbourhood of Morpeth, on the south bank? I know it principally comes by water, but not so much on that side, if you except Miller's Forest.

82. I merely ask if there is much produce grown in the immediate neighbourhood of Morpeth, on the south bank of the River Hunter? No, not in the immediate neighbourhood of Morpeth.

83. Is there anything like an equal amount of produce grown on the south side of the Hunter as there is on the north side? No, I think not, if you confine it particularly to the locality of Morpeth.

84. You are of opinion that much of the produce grown on the north bank of the River Hunter will be shipped at Morpeth? Yes, a very large proportion of it.

85. How far from the north bank of the river would settlers be likely to take advantage of this proposed railway—how far would the influence of the proposed railway extend amongst the settlers? For many miles, I would say, in every direction around it.

86. Is the neighbourhood of Morpeth particularly famed for its fertility? Opposite Morpeth it is, about Phoenix Park.

87. On the Morpeth side of the river? No.

88. Is there not a great deal of inferior and sterile land? Yes; unproductive land—swamps, and so on.

89. Are you of opinion that this land in the immediate neighbourhood of Morpeth, on the south bank of the river, is likely to send much produce to the interior? No, inasmuch as there could not be any considerable quantity of produce grown there, I would think not; but that is again an exceptional case altogether as applying to Morpeth.

90. Are you of opinion that the land in the immediate neighbourhood of the town of Morpeth supplies Maitland with potatoes and so on? Yes, there is a portion of it that does; but I would answer that the difficulty of communication is so great that it almost precludes the supply that would otherwise reach Maitland from the neighbourhood of Morpeth, but some still does reach it.

91. What difficulty of communication do you refer to? The road for one thing.

92. Do you call a road a difficulty? I find it rather a considerable difficulty when I want to get to Maitland.

93. The road is bad? Not particularly bad, but it involves very considerable delay, and if I want to send a package or anything bulky it involves considerable expense.

94. The Morpeth road is not worse than any other road? No.

95. Are not such difficulties shared in throughout the country? They are, I am sorry to say.

96. Has not a considerable sum of money been expended on the road between Morpeth and Maitland? Yes.

97. Is it not a good road? Yes, a very fair road as compared with others.

98. What is the distance to East Maitland? About three miles.

99. Are you not of opinion that there is an infinitely larger proportion of good land surrounding West Maitland than there is around Morpeth, on the south bank of the river? I have already said there is not very much land which is productive in the immediate neighbourhood of Morpeth, for half a mile or so.

100. Are you aware what is the population of the large town of Morpeth by the last Census? I do not know without reference to the Census. The population of the whole electorate is about 3,000.

101. I am speaking of the village itself? It is within 1,000, I think.

102. That is a more modest estimate than was given last Session, when it was stated at 2,000? That alludes to the electorate, I fancy.

103. The town of Morpeth, including men, women, children, and babies, only numbers 1,175, by the last Census? I am glad to hear I was within the number.

104. Do you know the population of West Maitland? No, I do not officially know it.

105. It is about six times the population of Morpeth? Very likely, but that includes the whole electorate.

106. No, West Maitland only? Very possible.

107. What is the amount of business transacted in this town of Morpeth with up-country settlers? Would you take that as represented by the quantity of produce shipped there?

108. No, that has nothing to do with my question; I merely wish to know the amount of business transacted by storekeepers, in the town of Morpeth, with up-country settlers? I would say, without reference to West Maitland, with which it does not rank in importance, that it is very considerable.

109. Your opinion is merely conjecture? From knowledge of the place.

110. You have no statistics of the actual trade carried on by storekeepers at Morpeth with the up-country settlers? I have not, in regard to that point; but I am in a position to shew the general commerce of the port.

111. In order to arrive at a notion of the comparative business of the two places, I will ask what

what proportion you think the business transacted by Morpeth with up-country settlers bears to that transacted by West Maitland with the same class of customers? No doubt, a very small proportion.

Mr. Patrick
Macauliffe.

15 Oct., 1861.

112. One twentieth? At present, I dare say not.

113. Is not Morpeth a mere stopping place for steamers, with but little local trade of any description? I really think not; I really think it is a place of very considerable trade; and it appears it supports a population of 1,175 persons, according to your statement.

114. I am speaking of the local trade in Morpeth? As matter of fair opinion I really think it is very considerable.

115. What are your notions of a very considerable trade? I judge by comparison with similar towns at Home with which I am acquainted, and even with Newcastle itself, which I know quite as well as I do Morpeth; I do say, comparing the one with the other, that the trade of the particular kind to which you refer is very nearly as great at Morpeth as at Newcastle.

116. I again ask whether Morpeth is not a mere stopping place for steamers, with but little local trade? It is a port; and perhaps I had better answer your question by saying that I do not consider it a mere stopping place, except in the same way as Newcastle or any other port of the kind may be considered so.

117. It is in that sense that I ask the question? It is a port.

118. Are you of opinion that the Morpeth line of railway will be a feeder to the Great Northern line? I am.

119. How do you prove that? I would refer, for one very important point, to the minerals which most people know to exist in the neighbourhood of Maitland and beyond Maitland a little way, the development of which will considerably increase the traffic of the Great Northern line. They are on the Great Northern line, but at present not available, owing to the expense of taking them to Newcastle.

120. My question was, how do you prove that the Morpeth line will be a feeder to the Great Northern line; and you allude to the minerals in the neighbourhood of Maitland—do those minerals exist upon the line already established by the Government between Maitland and the Northern Districts? Yes.

121. Then in what way will this contemplated railway particularly benefit the country, or in what way will it be a feeder to the Government line? By bringing these minerals within easier transit of a port of shipment, and thereby making them available as a commercial article, which they are not at present, having reference to the price.

122. What particular locality do you now allude to as being likely to be benefited by that line? Anvil Creek I would name as one place.

123. Any other place? Four-mile Creek and Black Creek. Minerals exist at all those places.

124. How far is Anvil Creek from West Maitland? Ten or twelve miles.

125. And Black Creek a little beyond that again? Yes.

126. Fifteen miles? Yes.

127. How far is Four-mile Creek from Maitland? About four miles, I think.

128. Is there not a Government line of railway from the neighbourhood of Four-mile Creek, (four miles to the south of Maitland), to Black Creek and Anvil Creek, from ten to fifteen miles to the north? Yes.

129. *By the Chairman:* Are not large quantities of coal at present carted from Four-mile Creek to Morpeth for shipment? Yes, at an enormous expense.

130. *By Mr. Dalrymple:* At what expense per ton? 5s. to 6s. 6d.

131. *By Mr. Piddington:* In what respect will this proposed line benefit the coal mines that are discovered, or that will be discovered at Black Creek and Anvil Creek? It will afford them a port for shipment within cheap and easy access, which Newcastle is not, and by that means (to answer your question a little more fully) it brings forward minerals that certainly never would be developed did not the Great Northern line become connected with the port of Morpeth.

132. But the assumed cheapness of this proposed railway will depend upon the freight charged by the Company who purpose to construct it? Of course it would.

133. How do you know they would charge a low price? I think it is their interest to do so. As commercial men they would stultify themselves if they did not charge a moderate price.

134. Are you not aware that many commercial partnerships do not always see their interest in cheapness? Not in these days. I think the ordinary rules which govern such matters are now so well understood, that there need be no fear on that score.

[*Mr. Morris here took the chair during the temporary absence of Mr. Windeyer.*]

135. Then you expect that the coals which are to be found at various places along the Government line of railway will be brought down the Government line to Maitland, and then transferred to the Morpeth line? Provided the Morpeth line be formed, I am quite certain they will.

136. Then the Morpeth Railway Company will be enabled to charge what they please per ton for coals brought down by the Government line to Maitland? They will be enabled to make such a charge as they may think reasonable, and the proprietors of the coal mines may be able to pay. I presume they will be governed by the same rules and principles as other people are in such matters.

137. Then, if your theory is correct, the Government line will be a feeder to the Maitland line? No, I do not think so; for the minerals which we have been speaking of will not be brought down the Government line at all unless the Morpeth line be constructed.

- Mr. Patrick Macauliffe.
15 Oct., 1861.
138. But under the circumstances you have just described, you stated that the minerals will be brought down and shipped at Morpeth? Yes.
139. Then I say, as the minerals must come down ten or fifteen miles on the Government railway, in order to be shipped for two miles or thereabouts on the private line, surely the Government line is the feeder to the private line? Well, I think not; I view it from the other side of the question.
140. *By Mr. Wilson*: I presume your argument is, that if they run fifteen miles on the Government railway, and only three on the private railway, the Government will derive five times the benefit that the private Company will, and consequently that the private railway will be a feeder to the Government line? Yes, precisely.
141. *By Mr. Piddington*: You have admitted that there is a Government railway for fifteen miles to Black Creek, while the Morpeth line will only run two and a half or three miles? Yes.
142. Seeing that these coals come fifteen miles on the Government railway, and only three miles on the private line, will not the Government line rather be the feeder to the private line? In that view of the question, which I respectfully take leave to dissent from, it may be considered so, but perhaps if you look at it in an enlarged view—
143. I am not speaking of enlarged views, I only want you to answer my question; any other gentleman may have enlarged views; mine are narrow views. You admit that it would actually be a feeder to the private line? Not under the circumstances; I would say that which I do not believe if I replied that it would be.
144. In a case where goods come on a Government line fifteen miles to be shipped on a private line for three miles, you think the Government line will not feed the private line? I am now speaking of a special case.
145. You are speaking of my question. If you choose to frame your own questions and answer them in your own way I cannot prevent you, but I should prefer at present that you should answer mine? I would presume that your inquiry has fair reference to the Maitland and Morpeth Railway, and considering that these minerals are not yet developed, and will not be till this line is formed, I do not see how the one is a feeder to the other at all.
146. You are assuming that the Maitland and Morpeth line will be constructed? Yes.
147. And you know that, from Maitland to Black Creek, a Government line is now in course of construction? Yes.
148. Well, I want to know whether a wagon of coal carried along the Government line from Black Creek to West Maitland, which it must be in order to reach your line—whether that fact does not establish the Government line as a feeder of the private line? No; I cannot look at it in that light.
149. Do you not calculate on the receipts from traffic of this description as a means of paying the shareholders a dividend? Certainly, as one means.
150. And yet, under such circumstances, you do not consider the Great Northern line a feeder to your line? By no means.
151. On what grounds do you assert that the Maitland and Morpeth line will be a feeder to the Great Northern line? I believe it would bring these minerals into the market, and give them a commercial value, which they have not at present. It will bring them near a port of shipment; and I do believe that, in that view—which I fancy is a reasonable commercial one—that the Maitland and Morpeth Railway will be a valuable accessory to the Great Northern line, and should rather be considered a feeder than otherwise.
152. Is the Government line of railway already completed to Black Creek and Anvil Creek? No.
153. Then you cannot tell what might be done when the Government line is opened? I can partly, and it does not rest on my testimony, inasmuch as I think there will be evidence before this Committee to shew that already one or two pits are being opened on Anvil Creek, in anticipation of power being obtained to form this line.
154. You do not know whether those pits will be worked, inasmuch as you do not know what will be the cost of carriage upon the Government line or on the Morpeth line? They will not be worked if this Act be not obtained.
155. You cannot tell whether they will be worked if it is obtained? I am certain they will.
156. It is a matter of opinion, is it not? It is more than matter of opinion; I know that Mr. Farthing is now working a pit; he was a large proprietor at Four-mile Creek, and he sold his collieries there, and is going up the line in anticipation of the Company obtaining power to form this line. I have some authority for saying so, having been informed to that effect by Mr. Farthing himself.
157. What distance is Anvil Creek from Morpeth, taking the Government line of railway and the line proposed for the Maitland and Morpeth Railway as the guide to the answer? Fifteen miles, I think.
158. Do you think coal raised fifteen miles from the port of shipment will come into competition with coal raised at Newcastle, within a few yards of the port of shipment? I do; there also they have to construct lines of rails.
159. At Newcastle? Yes.
160. What distance are the Coal and Copper Company's and A. A. Company's pits from the port of Newcastle? Some two, and some three miles.
161. *By Mr. Dalgleish*: And the Wallsend Company? Ten miles fully.
162. *By Mr. Piddington*: Then you think coal carried along a line for fifteen miles will form the basis of a trade and come into competition with coal carried two or three miles? I do believe it will; having some knowledge also of the cannel coal which exists at Anvil Creek. No doubt you recollect that cannel coal obtained at Wigan, and in Scotland, is a very superior article; and I may be allowed to say, from some knowledge of the English trade in cannel coal, that the cannel coal at Anvil Creek will largely advance the trade of the Colony.

163. Who do you expect to be the principal consumers of cannel coal? According to one of the scientific tracts published by Weale, it is shewn that the Lismahago and Wigan cannel coal produces 50, 60, and 70 per cent. more gas than common coal, and as a parlour coal it is infinitely superior to anything raised in the Colonies at present.
164. It splinters very much? Yes, it does throw out a good deal.
165. *By Mr. Wilson:* Does it fly? Yes.
166. *By Mr. Piddington:* Does it not fly upon the hearth-rug and carpet? Yes, sometimes.
167. Is that a particular qualification for domestic use? It is preferred, with all its disadvantages. It is not my opinion only but the opinion of housekeepers, who give it the preference. In Lancashire it is very extensively used, as perhaps you are aware, and for gas it has always the preference. It is very extensively exported from Scotland.
168. Are you not of opinion that cannel coal scarcely comes into use at all as compared with the great mass of coal used in England? I think it commands a better price.
169. Is it not consumed to a very limited extent indeed? Not considering the sites of production; it is not found everywhere. I am not aware that there are any other mines where it is extensively produced, but at Wigan, and Lismahago in Scotland.
170. Does it not bear a very small proportion to the whole production of coal? To the whole no doubt it does.
171. I will put this case,—Suppose the Government line were finished to Singleton, and I wished to send goods from Sydney to Singleton, or any of the northern towns by rail; in such case, would not those goods be sent from Maitland to Singleton by rail, whether your line be constructed or not? Of course they would, if you tied them down to go by the Government railway.
172. In what way would the construction of your railway facilitate my object, if I wished to send my goods to Singleton, or Muswellbrook, or anywhere else? There would be this advantage, that the natural direction of the traffic is to Morpeth.
173. I do not think you ought to explain your views but to answer my question? Well, I conceive it would be to the interest of parties to send their goods to Morpeth, in preference to Newcastle.
174. I did not ask that question, I merely asked this,—Supposing I wished to send any goods from Sydney, north of Singleton, by the Government rail, would not those goods be transmitted by the Government rail to Singleton, or northwards, whether your line was constructed or not? Certainly, if you ordered them to be so sent.
175. Then how would your line be a great advantage to the Government line? If you limit it to a particular case—
176. To that case only? In this way it would be an advantage, that you would have to send your goods a shorter distance by the Government railway, if you sent them by Morpeth, than if you sent them by Newcastle.
177. I said, supposing I wished to send them from Maitland to Singleton, or northwards, by the Government rail, would I not be as well able to send them by the Government rail, from Maitland, if your railway were not constructed, as if it were? From Maitland, of course.
178. From Sydney,—Supposing I am resident in Sydney, and wished to send 100 tons of goods to Singleton, and north of Singleton, by the Government rail, would not my directions be as effectively carried out, assuming that your rail were not constructed, as if it were? Certainly, if you desired them to be sent by the Government railway they would necessarily have to go to Newcastle.
179. They might go to Morpeth? I thought your question applied entirely to the rail after they touched the land. However, I think it would be decidedly a greater convenience to have them put on the trucks at Morpeth, and so sent on to the Great Northern line.
180. To what extent would this great facility exist—what is the distance between Morpeth and West Maitland? About four miles.
181. I mean the length of your line—it strikes the Great Northern at Pitnacree, does it not? Yes.
182. What is the distance by the proposed line from Morpeth to Pitnacree? From the steamer very nearly three miles.
183. Then all the facility the construction of this line would afford would be in reference to three miles of land carriage? Yes.
184. Nothing more? Yes, but that involves very important considerations.
185. That is all the facility this line would afford, three miles of railway instead of three miles of land carriage? Yes, but that involves an immense convenience.
186. It has been said, I think, that if this line be constructed the settlers in the immediate neighbourhood of Morpeth would be greatly benefited, by having an additional market for their produce in the up-country districts? Yes.
187. Such as Singleton and other places, even to Mudgee? Yes.
188. In what way will they be benefited? In having the seat of production, from which they draw their supplies, extended. For instance—at present, or very recently so, I have heard the price of potatoes at Singleton is enormously high.
189. Do you speak from your own knowledge? From my own knowledge so far as seeing the quotations in the papers, and so on; and I believe that by extending the seat of production from which they derive their supplies, they would naturally have an immense advantage.
190. Are not potatoes grown in the neighbourhood of Maitland as well as at Morpeth? Yes, extensively.
191. There is to be a Government line of railway from Maitland to Singleton? Yes.
192. Do you not think the land in the neighbourhood of Maitland would be quite sufficient to supply Singleton with potatoes, without going to Morpeth? Yes, but if you enlarge the source of supply you lower the price.
193. How far would you enlarge the source of supply by the aid of these two miles of railway?

Mr. Patrick
Macauliffa.
15 Oct., 1861.

- Mr. Patrick Macauliffe.
 15 Oct., 1861.
- way? By bringing in the Paterson, the Hunter, and the Williams. All the settlers on the banks of these rivers have boats, and they prefer to use the stream as a means of carriage for their produce, it being the more economical mode; and they would bring it to Morpeth, for transmission to the places you speak of, if by the aid of this railway the markets at a distance in the interior were opened up to them.
194. In your opinion then the construction of two miles and a half of railway from Morpeth to Maitland will make a considerable difference in the market value of potatoes at Singleton? At certain times, in supplies generally.
195. Are you aware that there is a vast extent of land suitable for the growth of potatoes at West Maitland? Yes.
196. Do you know Louth Park? Yes.
197. Is not that a very fertile tract of land? Yes, but it is often under water.
198. You know the land in the neighbourhood of Pitnacree? Yes.
199. Is not that very fertile? Yes.
200. And so is the land near the Oakhampton road? Yes.
201. Bolwarra, is not that very fertile? Yes.
202. Do you mean to say that the whole of the potato land in the immediate neighbourhood of West Maitland would not be sufficient to supply Singleton, without going to Morpeth? It is just a question of price; as I said before, if you enlarge the source from which you derive your supply, you cheapen the article; but there may be times, and I have known them myself, when potatoes are dear and scarce at West Maitland.
203. And at those times have they not been dear at Morpeth? Yes.
204. What has been the difference in the market price of maize, on the average, for six months of the present year, at Morpeth and West Maitland? I could not answer precisely, but I believe it has been a fraction cheaper at Morpeth.
205. Do you mean the lowest coin known to an Englishman, half a farthing? Perhaps 2d. a bushel.
206. What has been the difference in the average price of wheat? Not much.
207. And only 2d. on maize? I am supposing a figure, to represent a distinction in value.
208. 2d. is a considerable sum in a bushel of maize? I don't know; a good deal depends upon the bulk of the article, and the expense of carriage.
209. I am speaking of Morpeth and West Maitland—you think 2d. a bushel is the difference in the price of maize in favour of Morpeth? It might happen that maize would be cheaper at West Maitland than at Morpeth.
210. I ask whether it is your opinion that maize is cheaper on the average at Morpeth than at Maitland? Yes.
211. 2d. a bushel you think on the average? I suppose a figure. Maitland buyers go down to Morpeth to buy the article, which proves that a difference does exist.
212. Do you know the difference in the price of wheat? Well, wheat is cheaper generally, I think, on the Williams and the Hunter, than it is at Maitland. There are a variety of circumstances which affect the price and make it a trifle cheaper.
213. Do you not conceive that the Maitland and Morpeth line of railway will be a competing line with the existing Government line? I answer generally that I think not, on the whole.
214. Is there not a railway within a very short distance of Morpeth already constructed to West Maitland? Yes, within some three miles.
215. Have you a map of the district? No.
216. Have you any idea of the average distance between the existing Government line from Morpeth to East Maitland and the proposed line from Morpeth to Pitnacree—I mean between any point you like on your proposed line and any point on the existing Government line? I could not answer that question; I can hear the whistle of the train every morning well and plainly, but that is scarcely a rule for judging distance; I have never crossed between the two lines. But you appear to assume that the lines run parallel, whereas they meet at right angles, or very nearly so.
217. What is the extreme distance? I am not prepared to say.
218. Seeing that there is a Government railway already constructed from the immediate neighbourhood of Morpeth to Pitnacree, will not your line of railway be a competing line with the Government line? I do not think it would; I have given the matter a good deal of consideration, and I believe it will not be found so in practice.
219. *By Mr. Buchanan:* You were asked about the promissory notes—are you aware that among the shareholders there are a good many that have a considerable number of shares? Yes.
220. And those who have given these promissory notes being men of substance, you would consider their promissory notes as equivalent to money? Yes.
221. You would as lieve take a tender of their promissory notes as currency of the realm? Well, I certainly think that, as regards the great majority of them, they are quite good for a much larger amount of money.
222. Many of the shareholders are reputed to possess enormous capital? They do represent very large capital.
223. You have been asked by Mr. Piddington if you think the Morpeth district will be benefited by the construction of this line? I decidedly think it will.
224. You are aware that at the present moment there is a very extensive coal trade going on by drays from Four-mile Creek to Morpeth?—(*Mr. Dalgleish:* At 5s. 6d. a ton?) Yes, about that.
225. Are you of opinion that, if this line were constructed, that coal trade would be increased enormously? Yes.
226. Without the advantage of this line you say there is a very large trade in this coal, and that

that it would be enormously increased on the construction of this line of railway? No ^{Mr. Patrick Macauliffe.}
doubt of it.

227. Are you not of opinion that the great trade derivable from this coal would be a sufficient inducement to construct this line, if there were no other traffic, merely this coal? ^{15 Oct., 1861}
It depends upon the spirit of enterprise in which it is entered upon, of course; but I do believe the quality of the coal, which is very superior, would be almost an inducement.

228. That traffic will form a very lucrative source of profit to the Company? Very lucrative.

229. You are aware that there are five steamers trading to the port of Morpeth? Yes.

230. You mentioned that you had some statistics as to the trade of the port—the imports and exports—will you be kind enough to hand them in to the Committee? I can put them in now, with permission. (*The witness handed in the same. Vide Appendix B.*)

231. Could you tell the Committee what is the passenger traffic from Sydney to Newcastle and Morpeth, by the Steam Companies, in any one month of the year? I could not.

232. At present a good many passengers leave the steamers at Newcastle? A great many.

233. Are you aware that they are put to considerable inconvenience by having to wait for the train frequently? Yes, they may be; I have seen them waiting.

234. What is your general impression—if the railway were constructed from Morpeth to Maitland, do you think they would go up the river by the steamers, and then go on from there up the country by the rail? Generally speaking I think the intercourse would be largely increased.

235. You have been asked about the Tocal road, if you were a shipper of produce, whether you would send it to Maitland or Morpeth from Tocal. Now you are aware that there is a very expeditious water transit from Tocal to Morpeth? Yes, very.

236. If you were shipping produce from Tocal to Sydney, would you send it to Maitland to go by rail to Newcastle, or to Morpeth to go by steam to Sydney? To Morpeth.

237. If you were shipping goods from Tocal to Sydney, sooner than take them over bad roads and across the Falls to West Maitland, you would take them to Morpeth to be shipped to Sydney? Yes, of course.

238. *By Mr. Morris:* As a matter of fact which way do the farmers send their goods, to Maitland by water, and through Morpeth, or direct by land, by the road? The fact is that very little goes that way at all now.

[*Mr. Windeyer here resumed the Chair.*]

239. *By Mr. Buchanan:* In the event of the railway being constructed from Morpeth to Maitland, and you were sending produce from Tocal up the country, would you send it by water to Morpeth to go thence by rail, or over bad roads to Maitland? I would send it by Morpeth decidedly, and I think every farmer in the district would do the same.

240. The river is covered with droghing craft, is it not? Yes.

241. You are also aware that the Falls are sometimes impassable, owing to floods? Yes, I have heard so.

242. *By Mr. Morris:* Did I understand you to say there is very little direct trade between the Paterson and Williams and Maitland? I do not think there is much.

243. *By Mr. Buchanan:* You said Miller's Forest is not in the vicinity of Morpeth—is it a mile from Morpeth? It is reached immediately from Morpeth by a back road.

244. Does Miller's Forest reach within a mile of Morpeth, or two miles? It reaches very close to it, but I do not know that I could define the boundary very exactly, whether it joins the Morpeth district or not.

245. Are you aware that prices current at Singleton have often shewn a very considerable difference—3s. or 4s. a bushel on maize—as compared with Morpeth? Yes, I have heard so from time to time.

246. In that event, from want of this railway, in fact, the Morpeth people are prevented from taking advantage of this market? Yes, from want of cheap conveyance.

247. In the event of this railway being constructed there will be a largely increased trade between these places? Yes, an immense increase of intercourse between the whole district of the three rivers and the Upper Hunter.

248. Are you of opinion that in the event of this railway being constructed, settlers wishing to send produce up the country, would prefer sending it by Morpeth rather than by Newcastle, in consequence of the large amount of wharfage accommodation, warehouses, and so on, afforded by the two Steam Companies? Yes; and Morpeth is at all times more convenient of access to persons on the Upper Hunter, the Williams, and the Paterson.

249. Are you aware that there are no warehouses at all on the quay at Newcastle, and no conveniences at all? None of the kind you refer to.

250. Do you conceive that in the event of this railway being constructed a very large passenger traffic would take place on the line—passengers coming from up the country and from Maitland to Sydney? Yes, I think the intercourse between the different places would be wonderfully increased.

251. Do you know the rates of toll on the road between East Maitland and Morpeth? No, I do not, but I think it is stated in some matter lately presented to the House, that the returns from tolls are about £720 a year.

252. In the event of this railway being constructed the Great Northern Railway will of course be benefited by carrying all the goods brought to it by the Morpeth Railway? Yes, I think so. It would be easy to shew how the prosperity of the one line would benefit the other, in the same way as the prosperity of one shop helps another. There would no doubt be an increase of intercourse.

253. *By Mr. Piddington:* Do you say that one shop helps another in the same trade? I have heard so.

Mr. Patrick
Macauliffe.
15 Oct., 1861.

254. *By Mr. Buchanan*: All the goods brought by steam to Morpeth would go on the proposed line of railway, to be carried up the country by the Government line? Yes.
255. Under such circumstances would not the Morpeth railway be a feeder to the other? It is my conviction that it will.
256. *By the Chairman*: Do you not think that, if this railway be constructed, connecting the Great Northern Railway with Morpeth, people residing up the country would place their goods on the Great Northern line to be carried to Morpeth for shipment, whereas if it were not constructed they would send their drays the whole distance to Morpeth rather than be troubled by taking them off the line at East Maitland and carting them to Morpeth? It will afford an immense facility in that way, and more particularly when taken in connection with the river system which we have, which enables persons on the Rivers Paterson, Williams, and Hunter, to bring their produce in boats to the Morpeth terminus of the railway, where they can immediately send them forward by rail up the country, without involving the inconvenience which attends carriage by drays or carts overland.
257. Can you tell me what quantity of coals are from time to time sent in from Four-mile Creek alone to Morpeth? The quantity of coal sent in from Four-mile Creek has enormously increased since the strike at Newcastle, and I think I would not be exaggerating by saying that something like 1,200 tons a-week have been sent in—certainly 1,000 tons, to keep within limits.
258. And the charge for cartage to Morpeth is from 5s. to 5s. 6d. a ton? Yes; in summer weather about 5s.
259. And the price of coal when unaffected by the strike, is 12s. a ton? Yes.
260. Then the carriage alone is 45 per cent. of the value? Yes, fully that.
261. *By Mr. Buchanan*: As things at present stand, without a railway, you are aware that the Morpeth people and the district around find Maitland available as a market for hay? Yes.
262. Have you not frequently seen drays going daily from Morpeth to Maitland laden with hay? Yes.
263. That market is not, however, taken advantage of to the full extent, for want of facilities of carriage? Decidedly not.
264. And of course when the railway opens the facility it will afford will largely increase that trade? Yes.
265. *By the Chairman*: You have stated that the trade of Morpeth is not one-twentieth of the trade of Maitland—the local trade? Yes.
266. Do you not think that this railway, if constructed, would give Morpeth a greater chance of competing with West Maitland, considering that Morpeth is the more natural place for an emporium, being the joining point between the land communication and the water communication? Yes, I think it would.
267. Do you not think that Morpeth, a spot which joins the water communication with the land communication, is a more natural place to become an emporium, a place having trade of its own, than an internal town simply on the line of road? No doubt of it.
268. Do you not think it a more natural place for mercantile houses to establish branch houses? I do.
269. *By Mr. Piddington*: Has not Morpeth always been at the head of the navigation? Yes.
270. If it has always had this natural advantage how do you account for your opinion that it will have some superior natural advantages now over what it has had for the last 25 years? Because it will be brought into more easy communication with the interior.
271. By substituting the rail for the common road? Yes.
272. That is the only additional advantage it will have over the natural advantages it has possessed for the last 25 years past? Yes.
273. Do you think it will ever overtake Maitland in prosperity and extent simply because you may have a railway constructed between Morpeth and Pitnacree? I never made the comparison mentally, but I need not beg the question by saying that you know as well as I do that Morpeth is the natural location of the trade, as the head of the navigation of the Hunter. Maitland is purely the creation of accident.
274. Is it not a rather remarkable accident which has made the population of West Maitland 7,000, while that of Morpeth is only 1,100? I think reasons could be given which would quite satisfactorily explain the difference between the two.
275. *By the Chairman*: If the Morpeth people wish to construct a work which they think will give them an opportunity of competing with Maitland, do you see any reason why Parliament should interfere to prevent them? I think not. The policy of the Government at Home has invariably been to encourage facilities for communication.
276. *By Mr. Piddington*: Do you see any reason why the Government, after having, at an enormous expense, constructed a railway from Newcastle to Maitland, should now lend its assistance to establish a competing line? I do not hold this to be a competing line.
277. *By the Chairman*: You look upon the two as mutually assisting each other; that line obtaining the greatest advantage which has the greatest length? Yes.
278. *By Mr. Piddington*: What is the distance from Four-mile Creek to the proposed Morpeth line by land? Which end?
279. Any end you like—What is the distance from the coal mines at Four-mile Creek to the Morpeth line of railway, as proposed to be constructed? I presume about two miles and a-half.
280. What saving will there be then in the land carriage the miners must pay from Four-mile Creek, even if the Morpeth line be constructed? They would save the remainder of the distance to Morpeth.
281. What is that distance? About two miles and a-half.

282. I understood you to say the distance between Four-mile Creek and Morpeth is about four miles? I think it is more; it is nearer to five; you may call it five, for the pits vary, one here and one there; say from four to five miles. Mr. Patrick Macauliffe.
283. How much will be saved in land carriage to the miners of Four-mile Creek, even if the Morpeth line be constructed; how much of that distance—four or five miles—will be saved? It will not lessen the distance; it will only increase the facilities of carriage. 15 Oct., 1861.
284. You think it will not lessen the distance at all? It could not; how could it?
285. *By the Chairman*: How much would it lessen the distance they would have to cart the coals by way of the ordinary road? To that question I can make an intelligible reply. If this Bill be obtained, they are about making a tramway to communicate with the Great Northern line, and then the whole distance to the shipping place at Morpeth can be done by rail; they will come by their own tramway till they join the Northern line, by that line into the proposed Morpeth line, and then by the latter to Morpeth.
286. *By Mr. Piddington*: What distance would be saved from Four-mile Creek to the nearest point on the proposed Morpeth railway? They would not be in a position at all to avail of it, unless they made their tramway; for this reason, that they would have to transfer the coal from their carts to the waggons on the line.
287. Then, as I understand you, the mere construction of the Morpeth line will not necessarily do away with land carriage of coal from Four-mile Creek? I think it will, because, owing to the proposed construction of this line, they are about to construct a tramway, which they would not do if our line were not to be made.
288. I ask whether, supposing the Morpeth line is constructed, there will be a saving if nothing else is done? Yes.
289. To what extent? About half.
290. Then there will be still about two miles of land carriage to be paid for? Yes, supposing they do not take it by tram.
291. *By the Chairman*: You are aware that the proprietors of mines at Four-mile Creek are prepared to make a tramway in the event of the Morpeth line being constructed? I am, from circumstances within my own knowledge.
292. And to do that they would have to use the Great Northern line? Yes, for nearly a mile. I would here wish, with the permission of the Committee, to set myself right with regard to an awkward idea of competition between Morpeth and West Maitland, suggested by my reply to a question put to me. I would misrepresent the matter did I confine my reply to what I then said. I believe that, so far from this line taking away from the prosperity of West Maitland, it would greatly advance the interests of both towns.
293. Are not many of the shareholders in this Company mercantile men, and residents in West Maitland? A great many.
294. *By Mr. Piddington*: In what way will it advance the interests of West Maitland? By giving increased facilities for trade, for one thing.
295. *By Mr. Dalgleish*: Do you remember being examined before a similar Committee to this in the last Session of Parliament? I was.
296. Are you acquainted with railway matters as they are conducted in England? Yes, I have seen them for twenty years in operation there.
297. Is every Company that applies to Parliament, in England, for permission to make a line, is it granted in all instances? Not every Company.
298. I think you stated in your examination last Session, turning to the 444th question, that having resided in England for some years you are aware that trade is always allowed to follow its own course? That is the general rule which, I believe, is correct enough.
299. That they are allowed to carry on their business in any way they think best? Yes, that is the principle.
300. Is that the principle when they are not allowed to make lines—when they apply for an Act and it is not granted? The Board of Trade, which has generally the determination of these matters, determines on the lines that will be best calculated to promote the public interests.
301. Then you have heard that the Government in England have interfered in this way, to prevent people making a line where they thought proper? The truth is, that when private individuals project competing lines, they have to submit their plans to the Board of Trade, which determines which line is the best, and though the Parliamentary Committee takes evidence on the subject, and decides ultimately whether the Bill shall be granted, the Government, represented by the Board of Trade, has naturally a good deal to do with it, and exercises a sort of control.
302. In fact the Bill has to be applied for the same as here? Yes.
303. And in many cases it is not granted? Yes.
304. Then your answer, as it appears here, is incorrect? No; I think it perfectly correct.
305. *By the Chairman*: Have you ever heard of an instance where the English Government interfered to prevent private persons from making any line of railway, except when other parties, who might have interests opposed to its construction, objected to it, and proved their objection to be well founded. Have you ever known the Government to interpose to prevent it, of their own motion? No, I never did.
306. *By Mr. Piddington*: Do you know of any case where the English Government have constructed any line of railway whatever? No.
307. *By Mr. Dalgleish*: Do you depend upon the Government allowing your line to join theirs? Yes; we assume it will.
308. Is it usual in England to allow junctions to take place between lines in this way? Yes, I think it is.
309. Not in all instances? Not in all instances. For many years it often formed a subject of

Mr. Patrick
Macauliffe.

15 Oct., 1861.

of dispute between them before they laid down any principle at all, but of late Companies have learnt to be a little more liberal amongst themselves, after costly experience of the opposite course of conduct.

310. Do you know the Caledonian line of railway? No.

311. Nor the North British? No.

312. Are you sufficiently acquainted with the working of English Railway Companies to know whether an equivalent has not to be given for any supposed advantage arising from a junction of one line with another? I do not profess to be acquainted with the terms on which junctions are made; I presume that depends on circumstances; but I am aware that sometimes one line leases another, and so on.

313. *By Mr. Buchanan*: Are you aware that the Government granted an Act for the Caledonian Railway, notwithstanding that it runs parallel with the Edinburgh and Glasgow line? I have some recollection of having observed on a map that it does run parallel.

314. *By Mr. Dalgleish*: You say in your answer to the 444th question of your former evidence, "I know of my own knowledge that at Home—having resided in England for some years—that where lines exist in the country, the Companies are pledged to permit other lines to communicate with them, although the directors should be unwilling that a junction should be made"? So I believe they are.

315. Do you know that of your own knowledge? If you ask me to cite any particular case I cannot say I am in a position to do so.

316. Are you aware of any case of your own knowledge? I have heard of such cases. It is eight or nine years ago since I left Home.

317. It is a kind of floating idea? It must float on something you know.

318. A supposition? It is more than that.

319. In speaking of the town of Morpeth, do you know the locality? Yes.

320. And the river? Yes.

321. What is the width of the river at Morpeth? On an average perhaps 100 yards; it varies.

322. Have you no knowledge, only an idea? Such an idea as you might get from seeing it every day.

323. No direct knowledge? No.

324. Do you expect a large accession to the shipping at Morpeth if this line be made? Yes.

325. And the data——? Are founded on the capabilities of the country when its mineral and other produce is better developed.

326. What do you mean when you say "other produce"? It is a fine alluvial soil capable of growing almost anything.

327. In the neighbourhood of the three rivers? Yes, which comprises a very large area.

328. I think you stated that there are droghers on the river? Yes.

329. These droghers bring cargo from the Williams to where? Morpeth.

330. Does the steamer not call at Raymond Terrace? Yes.

331. Is not Raymond Terrace immediately at the junction of the Williams? So it is.

332. And the steamers call there for cargo? Yes, and very inconvenient it is; they would rather take it to Morpeth by far, and ship it there.

333. *By the Chairman*: They do as a matter of fact? Yes, no doubt of it.

334. Is the freight less from Raymond Terrace than from Morpeth? I think I may answer that question distinctly, that it is the same.

335. It is found more convenient, in point of fact, to bring goods down the River Williams and up the Hunter to the chief emporium at Morpeth, than to unload the cargo boats at Raymond Terrace and stop the steamers in their passage down the Hunter to pick them up there? Yes, as a general rule.

336. *By Mr. Dalgleish*: What is your idea of a large accession of shipping? Upon my word I fancy that instead of having only a couple of sailing vessels at the wharf there, we should have a score.

337. What accession of wharfage accommodation would then be required? They would require an accession of wharfage accommodation no doubt, but there is all the necessary water frontage for the purpose. I fancy that the whole Queen's Wharf would be required for the shipment of coal——

338. What is its length? It is a very fine wharf, and I think I should not be outside the mark if I were to say it is 150 yards long; beyond that again there is good deep water, and a wharf in reality exists there, except that it would require to be faced and so on.

339. Are you aware that there is a great difference between the line as proposed by Mr. Whalley, and the line proposed by the Government Engineer? No, I think they are about the same—identical almost.

340. The same levels? Yes, I think so. Perhaps I may be allowed to answer the question by saying there really is no practical difference. I should explain that the Government plan as proposed, which plan was rejected by the House, only intended to carry the line to the Queen's Wharf, while the Company propose to carry it three-quarters of a mile beyond that. As far as the Queen's Wharf I believe there is no essential difference in the two proposals.

341. Excepting that the line is now going to be carried by a higher level at the back of the Australian Steam Navigation Company's and Hunter River Company's stores? Any extension into the town was never proposed by the Government at all.

342. You have given your evidence to the effect that canal coal is better adapted to parlour use than any other? I should give it the preference.

343. Do you know for what specific purpose it is used as a staple? Generally, I think, it is used for gas making very extensively.

344.

344. Have you any knowledge of the consumption of coals for gas making here in proportion to the consumption of the same coal for gas in Great Britain? No; I should think the comparison could hardly be made, the consumption there is so enormous.
345. Have you any knowledge of the relative values of these coals? At Home one can form a better idea than here, because they have not yet been brought into supply in this Colony. At Home cannel coal commands, I think, 1s. 6d. or 2s. a ton more than the other coal.
346. You were speaking of the difficulties of bad roads, and rates of freight from Four-mile Creek, which you stated to be 5s. a ton at present? Yes.
347. What is the freight from the nearest point of the Great Northern line to Newcastle? Supposing they found waggons, it would be 3s. a ton.
348. So that, at the present moment, there is 2s. 6d. a ton in favour of the railway to Newcastle? No, they are not in communication with the railway at all.
349. But you say it will be necessary to form a tramway to meet your line—might they not as well form a tramway to the Great Northern line? I would answer your question in this way—that they would really have no advantage over the present by the plan you propose, because with 3s. a ton to Newcastle, and with the cost of constructing waggons and constructing a tramway, there would be no great gain; but if on the Morpeth line they save any important portion of the 3s. per ton, then you make it worth while.
350. If they save it? They will.
351. In order to form a junction with the Morpeth line I think I understood they must first form a junction with the Great Northern, which must carry their traffic how far? About a mile.
352. Then they would have to pay a mile's toll on the Great Northern? Yes.
353. And afterwards pay toll to your line from the Maitland junction to Morpeth? Carriage, rather, I will take the liberty of saying.
354. Or toll? Well—
355. Then there would be the cost of laying down a tramway from the pit to the Great Northern line, and of providing carriages, &c., for the carriage of the coal which would apply equally to the case of Morpeth as to Newcastle? But they would save 2s. 6d. a ton by going to Morpeth; we would take it for 6d. a ton, whereas on the Great Northern to Newcastle it would cost 3s.
356. How far would you take it for 6d.? Nearly three miles.
357. That is from Maitland? Yes.
358. What would it cost them previously to bring it there? Just the same as if they ran it to Newcastle; there would be no difference there, but they would save the difference between 6d. a ton and 3s.
359. Have you got a scale of freights which it is proposed to charge on this Morpeth line? No; but I think you will find what I say will be confirmed. It is about 2d. a ton per mile, they finding their own waggons.
360. Is the country on the opposite side of the Hunter lower than it is on the Morpeth side? Yes.
361. Is it subject to inundation? Yes.
362. Would the necessary wharfage to provide for a large accession of shipping, by being piled, &c., be any obstruction to the flood waters of the Hunter? No; we would make it on the Morpeth side.
363. This would partially dam the river? No.
364. Would it not narrow its course? Not a bit; we do not run out at all; we take the present line of river frontage.
365. *By the Chairman:* There is deep water close alongside? Yes.
366. *By Mr. Dalgleish:* Are the wharves not submerged at present during floods, or nearly so? I dare say they are—the lower flooring.
367. During the time of heavy floods is not the communication between Sydney and Morpeth practically cut off? As far as the loading of goods it is.
368. *By the Chairman:* Therefore there is all the greater necessity for being able to communicate with the Northern railway, in order to get to Newcastle? Yes.
369. *By Mr. Dalgleish:* In this case, which is the most natural point of communication with the interior,—the point near the mouth of the river where the communication is never stopped, or the point where the communication is stopped during floods? That point, I should imagine, which is nearest to the interior, that is Morpeth.
370. I should say the point nearest the sea-coast—where does the traffic come from which you anticipate? It arises at Morpeth, and near it.
371. You do not calculate on any traffic from Sydney? We do, to a certain extent, of course.
372. Not to a great extent? A portion of the elements of our traffic are derived from the Sydney trade.
373. Is not the principal element the Sydney trade? It is a matter of opinion. I think that, either way, we shall have a large trade.
374. When wool, for instance, is *in transitu* from the interior, what benefit will it be to the squatters or wool growers in the interior to have their wool delayed in its passage to market, by floods in the Hunter? Certainly it would be more if that were the case.
375. Would it not frequently shut out such produce from homeward-bound ships and perhaps be the cause of the loss of a season? For a week in four or five years it might happen—or two or three days rather.
376. Every year for the last three years it has been the case. It has been stopped this year? It has.
377. Last year? Yes, partially, for a day or so.

Mr. Patrick Macauliffe.

15 Oct., 1861.

- Mr. Patrick Macauliffe. 378. The year before? I think not between last year and 1857. There has been nothing of any consequence till this year.
- 15 Oct., 1861. 379. Not the flood of 1859*? It really amounted to nothing. I was living in Morpeth at the time, and therefore I can speak to it.
380. When one of the three rivers is flooded it is usual for them all to be so, more or less? Generally it is so.
381. As a matter of fact does the produce from the Williams come to Morpeth or go direct to Sydney—the greater portion? Well, I said a good deal went to Morpeth, and I say so still; some of it goes to Raymond Terrace.
382. Is there not a boat regularly in the trade to the head of the navigation of the Williams? Yes, that is the extreme end.
383. Does not the steamer tranship from every settler that has grain to send? I do not think they do.
384. Have you any knowledge of the working of that steamer in receiving and delivering cargo? No; it appears to pay them.
385. There is a large expense incurred in taking on board freight and another expense in discharging that freight, but when the freight is on board the steamer the mere transit is not such an expense as that which is incurred by stopping, &c. Is it so, or is it greater? It all adds to the amount. I do not suppose they make a close calculation of that kind; it is not common in business.
386. Would it not be a more natural means of communication, if, when the accumulated grain from the farmers was on board the drogher, she should take it to Newcastle, than take it to Morpeth? It depends upon the proportion of cargo taken.
387. I assume a full cargo? Even Raymond Terrace is very considerably nearer to Morpeth than to Newcastle; it is not half the distance down the river.
388. I am not asking the distance? That will affect the question if you will excuse me. I word my reply to the best of my ability.
389. Is not Newcastle the most natural place for the receipt and delivery of cargo for and from the Williams? It is not. Trade follows its natural channels, and it goes up to Morpeth as naturally as rain pours down from above us.
390. *By the Chairman*: In point of fact it always has done so? Yes, it is not a question of argument or mere opinion, but it is one of fact.
391. *By Mr. Dalgleish*: In your evidence last year, I find the following—question 513,—“At the port of Newcastle there is a bar which makes access dangerous? Yes.”—What allusion has that to the railway to Morpeth? Of course I merely answered the question; I had nothing to do with the policy of it.
392. The next question is to the effect that vessels can only get in in one state of the wind, and you reply that for a considerable period of the year it is difficult to get in. Is there any other way of getting to Morpeth than by water? Clearly not.
393. Whatever disadvantage may attend Newcastle in these respects applies to Morpeth also? Certainly.
394. In answer to question 516, you say there is a full mile of water frontage at Morpeth, where wharves could be constructed—in order to make that mile of water frontage available for the railway, would it not be necessary to extend the line, in order that vessels might derive the natural advantage from the railway? Clearly. It is intended to carry the line through the town parallel with the water, but not so close to it as to destroy the water frontage.
395. You are not a shareholder in this Company? I am not.
396. The whole of this supposition with regard to coals from Black Creek, Anvil Creek, &c., is mere supposition? No, I respectfully dissent from that; it is not supposition; on the contrary, some pits are now in course of construction, calculating on the facilities which will be afforded by this line.
397. Do you suppose they may not have been sunk with an idea of junction with the Great Northern line, for the purpose of conveying the coals to Newcastle? No; they are intended for Morpeth; I know that specially from Mr. Farthing himself.
398. Do you know the average profits paid by English railways? Well, I did see very recently what they were; they have improved very much; I think the average now is somewhere about five per cent.
399. Do you know any reason for the improvement? Yes.
400. Is it not on account of the Railways Relief Bill, which releases them from the necessity of keeping up unprofitable branch lines? I rather think it is from the general increase of trade,—so it is stated.
401. What do you consider proof of a line being a feeder? The reciprocity which a good many years knowledge of the business leads me to believe exists between two railway lines does in fact increase the prosperity of both lines. It has amounted to an axiom of late years, within my own knowledge.
402. I understood you had some distinct ideas on what constituted a feeder to a line of railway and what did not? As applied to this line I think the proof is very obvious; and first I would mention here that portion of the traffic affecting the mineral development which will be an entirely new source of profit to the Great Northern line. There is, besides, the large traffic which will be sent along the Great Northern line from Morpeth and the extensive agricultural districts of the Paterson and Williams.
403. Where do you expect to get this traffic from Morpeth, seeing that you have said there is little

little or no local trade? That involves the very question of increased facilities for intercourse. If you give us those facilities we will provide the trade.

404. Are you aware of the contents of this Bill? Yes.

405. Is there any right claimed to run trucks on the Government line of railway? There is a right sought to communicate with it, and to arrange with the Government for the traffic—the concluding portion of section 14, I think.

406. You claim by this Bill the right to enter on the Great Northern line at any point which your Directors think fit, without any reference to the Government Engineer? We contemplate an arrangement with the Government in conformity with the clause in their own Act, by which the Government authorizes the principle—the Railway Act, section 99, I think.

407. *By the Chairman:* You only claim, as I understand, such right to join the Government line as is given by law under the 99th section of the Railway Act of 1858? Yes, I believe that is all.

408. *By Mr. Dalgleish:* With regard to the Flats I think the boats do still stick upon the Flats? One of them did yesterday, but it was the first time for a long period, and almost anticipating your question I asked the reason of the captain of the "City of Newcastle," and he told me he was much surprised at it, for he drew two feet more water than the "Paterson" and yet he never struck. The truth is, I believe, it was not in consequence of the want of water on the Flats, but in consequence of some accident or mistake that occurred.

409. Are you aware that the steamers have stuck on several occasions? No, I am not; I think you have been misinformed.

410. *By the Chairman:* Notwithstanding the Flats the trade has gone to Morpeth? Yes, even before they were deepened at all.

411. *By Mr. Dalgleish:* Can you give any reason for the trade going to Morpeth previously in preference to its going to Newcastle? One very important reason exists, that vessels found a freight to and from Morpeth which they did not at Newcastle, except coals, which the steamers do not take as freight.

412. The teams have been in the habit of coming direct to Morpeth as the nearest point to which the steamers penetrate? Yes, clearly.

413. Do you think the same reason will operate on shippers when the Great Northern line is so far extended into the interior as to do away with the bullock drays, or with cartage from the far interior by bullock drays? It will be economy to come to Morpeth as the nearest point.

414. By drays;—I say when the railway is extended farther into the interior? That is a matter of opinion. Some people would tell you the trade would all go down to Newcastle if you do not give us this line.

415. I want to know what you think? Some of it might go down there.

416. You think that if these two miles——? About three, I beg your pardon.

417. These three miles of railway are not made from Maitland to Morpeth, the bullock drays will still continue to bring the produce of the interior to the port of Morpeth? No, I do not think so.

418. You think then that the produce will come down the Great Northern as far as Maitland? Yes, I believe a portion of it would, but I would not infer that all would.

419. *By Mr. Piddington:* Would the largest portion come to Morpeth? Say a moiety of it; we would have a hard tussel for it.

420. In such a helpless condition as you seem to think the refusal of this line would leave you in, what proportion of the up-country produce would come to Morpeth? In that case I think we should divide it.

421. Are you expressing what you wish or what is your opinion? Both ways perhaps; the wish may be father to the thought.

422. *By Mr. Dalgleish:* You stated, in answer to Mr. Buchanan, that you have known maize 4s. a bushel dearer at Singleton than it was at Morpeth? I have heard of such a thing, and I think it is only a few months ago that something of the sort occurred; I would not bind myself to 4s.

423. You did not give that as matter of opinion at all? There was a very large difference.

424. How do you account for it? I would rather not say it was precisely 4s.; I know there was a very important difference, and that difference frequently occurs in the prices of different articles of produce between Singleton and Morpeth. It is the want of facilities of communication that is the cause.

425. What prices do you know of your own knowledge—I understood that you knew of 4s.? I said I had heard of it.

426. What do you know of your own knowledge as being the difference? I recollect—and it is a mere matter of memory with me now—that I mentioned before the other Committee that there was sometimes a very important difference between the prices of produce at Singleton and those at Maitland and Morpeth; and that difference I attribute naturally to the want of proper facilities for communication.

427. What is the natural difference between the price of grain at Singleton and the price of grain at Morpeth—is it not the difference of carriage? ———

428. *By the Chairman:* They cannot grow maize at Singleton in all seasons? I do not think they can.

429. *By Mr. Dalgleish:* Would it not be the difference of carriage? Yes, as a general rule, and that shews, I respectfully would assert, the necessity for increased communication. That is our case.

430. Will the difference arise from anything except apathy or ignorance of the scarcity which may be prevailing—the difference of 4s. between the places named? The difficulty
of

Mr. Patrick
Macauliffe.

15 Oct., 1861.

- Mr. Patrick Macauliffe.
15 Oct., 1861.
- of transit, which imposes an obstacle to communication, is the great cause, and it induces the others which you mention; the people cannot overcome it.
431. The Government line running from Maitland, would not that sufficiently overcome the difficulty you have mentioned, Maitland being a large producing district? No; I will venture to repeat what I said before, that if you extend the area of available production, you by that means cheapen the price, and you do that by bringing us into communication with Singleton.
432. *By the Chairman*: You see no reason why the neighbourhood of Maitland should have the exclusive monopoly of selling corn at Singleton? I do not.
433. *By Mr. Piddington*: What is your idea of the difference between the price of a bushel of corn sent by the aid of your line, if constructed, and the price of a bushel of corn sent, without the aid of your line, by the Government line? I think I could almost answer that question in figures; it would make a difference of 3d. or 4d. a bushel, assuming that the Great Northern line is finished.
434. *By Mr. T. Garrett*: Would you not charge 2d. or 3d. a bushel to carry it from Morpeth to Maitland? I daresay we should, but I cannot say exactly. Our intention is to make the traffic as cheap as possible.
435. *By Mr. Piddington*: The charge you would make would swallow up the advantage from extending the area of production? I respectfully think not. I do not think we should charge 4d. a bushel; it would probably range between 1d. and 2d.—I am not prepared to say.
436. *By Mr. Dalgleish*: Are you aware what time the steamers occupy in the voyage between Sydney and Newcastle? About six hours; it is sometimes done in less.
437. What time is the voyage between Newcastle and Morpeth done in? Within three hours; you leave Morpeth at seven o'clock in the morning and arrive in Newcastle at about a quarter before ten.
438. And from Newcastle to Sydney—? It takes about six hours.
439. The steamers generally arrive here at about half-past five? ———
440. *By the Chairman*: They have to wait for the Government train arriving at Newcastle, and considerable delay may take place? Yes.
441. *By Mr. Dalgleish*: Does it not take three hours and a-half from Morpeth? No, clearly not; I left the other morning at seven and arrived at a quarter before ten; I know it, for I went up the town and had to wait for the train a considerable time.
442. What time does the train take? About an hour.
443. You do not know the difference between the freight from Newcastle by boat, and the freight from Newcastle by rail, to Morpeth? No.
444. *By the Chairman*: What is the difference between the freight of a ton of goods between Sydney and Morpeth by steamer and between Sydney and Newcastle? I think about the same.
445. Do they not charge the same? Yes.
446. Then for the same money they take them thirty miles further than if the goods were unshipped at Newcastle? Yes. They cannot find any return freight at Newcastle, and therefore they have no interest in stopping there. They have to go up to Morpeth to get a cargo.
447. *By Mr. Dalgleish*: That is not the question I asked; I ask, what is the price per ton from Newcastle to Morpeth—provided you send a ton of salt, for instance, or a ton of cheese, by the steamer, from Newcastle to Morpeth, what do they charge? I do not know.
448. They would not take freight for nothing from Newcastle to Morpeth? No, indeed they do not.
449. What is the freight of goods from Morpeth to Sydney—is it the same as from Newcastle to Sydney? Yes.
450. What is the freight of hay from Morpeth to Newcastle per ton? I thought I had a memorandum of the freights here with me, but I find I have not got it.
451. You admit there is traffic that way? Yes, there is; but it is slight. I have been in the habit of seeing goods landed from the Morpeth steamers at Newcastle, and I never saw a bale of hay landed from them in my life.
452. *By Mr. Piddington*: That is owing to the people of Newcastle having supplies in their own neighbourhood? Yes.*
453. *By Mr. Dalgleish*: In answer to a question of Mr. Buchanan's about Miller's Forest—did I understand you to state that Miller's Forest reaches to Morpeth? No, I do not think I did; the question of boundary I am not able to define.
454. Miller's Forest is immediately opposite Raymond Terrace? It extends a considerable way up and down the river.
455. The centre of it is almost opposite Raymond Terrace? I daresay it is.
456. Is not Raymond Terrace the natural shipping place for Miller's Forest, as well as the lower portions of the Williams? I do not think it is.
457. Can you describe the disadvantages for loading that exist at Raymond Terrace, as contrasted with the advantages that exist for loading at Morpeth? The wharf itself I have heard complained of very much; at certain times of wind and tide, the steamer damages herself by being carried against it. I know they do not like to take in cargo there.
458. *By the Chairman*: Do they not often refuse to stop at Raymond Terrace, even when there is cargo there? I have known them do it very often.
459. *By Mr. Dalgleish*: Is not the stopping at the different wharves on the river far more destructive

- destructive to the steamers than the sea passage to Sydney? With regard to that question I am hardly prepared to answer it. I have seen them going into Newcastle with a strong wind, knock their bows to pieces by coming right against the wharf.
460. Have you never seen the same thing occur at other places on the river? I have seen it* at Raymond Terrace, where they sometimes have great difficulty in getting alongside.
461. *By the Chairman:* They cannot get into the wharf in some winds? No.
462. *By Mr. Dalgleish:* In fact it is to the interest of the Steam Companies to do away with the river voyage? If it were their interest they would follow it.
463. Has it ever been mooted to confine the trade to Newcastle? I never heard such a proposition, and I do not think it is at all likely, for this reason, that they would then have to go back to Sydney with clean holds, there being no freight at Newcastle, except coals, which the steamers do not take as freight.
464. Do you assume that nothing would come to Newcastle? I do not think it would.
465. How much cheaper would the steamers carry their freight to Sydney, providing it was shipped at Newcastle instead of Morpeth? I do not think they could carry it any cheaper, having regard to the fact that they could not get any cargo at all.
466. Do you, a business man, assume that the three hours wear and tear of machinery and knocking about of the vessels up and down, making six hours on each voyage, can be accomplished without any recompense to the Companies? They have an equivalent for that six hours voyage in the freight which they get; they would get no freight to Sydney at all if they confined themselves to Newcastle.
467. Would not the freight follow them to Newcastle? I do not think it would.
468. With the Northern line of railway constructed to Singleton, is not Newcastle the natural port of shipment? I do not think it is, as long as water communication exists to Morpeth.
469. I think you said it was a job making the line from Newcastle to Maitland? I never used the word "job," not that I can recollect, but I daresay it was something of that character.
470. Have you never known railways competing with water communication in England? Not in England.
471. In Scotland? I have heard of it in Scotland.
472. Never in England? Yes, I did, I think, between London and the North; on that side of the coast there is a competition.
473. Do you know as a matter of fact that coals are brought in by the North-eastern line of railway to London in competition with screw and sailing colliers? I believe they are, I believe one competes with the other, and they have brought the price down very considerably. You are aware that the screw steamers have superseded the old coasting colliers.
474. Do you know anything of the Dublin line of steamers? Yes.
475. Are you aware that the whole traffic to Dublin has changed its course from the usual places of shipment, London and Liverpool, to a sea port on the coast near Holyhead? No; I have only heard of the railway as competing with the water carriage for certain classes of the traffic. The London and Holyhead line has not been completed many years, about ten I think.
476. You are aware they compete with the water carriage? Not for goods, for mails and passengers.
477. As a matter of fact, are you aware as to whether the whole of the passenger and traffic arrangements in Great Britain have not been seriously altered from water communication to internal communication by railway by competition? Water communication I would take to include canals. I believe the trade on canals, although injured at first, has very much increased, and I believe now, from what I have recently heard, and some accounts I have seen, that they are paying again.
478. Do you know the town and port of Fleetwood? Yes.
479. Was it in communication with Ireland? Yes, and the Isle of Man.
480. What is the consequence, are you aware, has it not almost got a monopoly of the Irish trade? I believe it was the other way;—Sir Hesbeth Fleetwood nearly ruined himself, but like everything else, it was coming round wonderfully.
481. Speaking of it as it is —? Now I believe it is doing very well.
482. It is in direct competition with water carriage —? It is a port, you know —.
483. By the usual overland communication? There are a number of steamers trading to all parts—Dublin, Isle of Man, Whitehaven, and even Glasgow.

Mr. Patrick
Macauliffe.

15 Oct., 1861.

NOTE (Revised):—Something like it occur.

Mr. Patrick
Macauliffe.

WEDNESDAY, 16 OCTOBER, 1861.

Present:—

MR. BELL, | MR. DALGLEISH,
MR. BUCHANAN, | MR. T. GARRETT,
MR. PIDDINGTON.

W. C. WINDEYER, ESQ., IN THE CHAIR.

James Campbell, Esq., called in and examined:—

484. *By the Chairman:* You have been for some years engaged in business as a merchant in Sydney? Yes; for three years in Sydney.
485. And before that you were in business at Morpeth? I was.
486. For how long a time? About eleven years.
487. And you are well acquainted with Morpeth and the districts which surround it? Yes. I went to reside in Morpeth in 1845; that is, sixteen years ago. I must have been in business there more than eleven years.
488. You have, in the way of your business, had opportunities for becoming well acquainted with the district surrounding Morpeth? Yes, for several miles round I know every inch of the ground.
489. From being in business there at that time you know what amount of commercial business was transacted there at that time? Yes, very nearly.
490. You are aware that several persons have joined themselves together, in order to make a line of railway between Morpeth and West Maitland? I am.
491. Are you one of the shareholders in the proposed Company? I am.
492. To what extent? I am the holder of one hundred shares.
493. These persons set out in the preamble of their Bill that "it would be of great public advantage that a line of railway should be constructed and maintained between the Town of Morpeth, in the Colony of New South Wales, and the Town of Maitland, in the same Colony, for the more regular and expeditious conveyance of the important and increasing commerce of the said places, and for facilitating communication between the north-western interior of the said Colony and the Port of Morpeth"—is it your opinion that this allegation is correct, and that such a line would be an advantage? I am perfectly satisfied that it would be.

J. Campbell,
Esq.

16 Oct., 1861.

J. Campbell, Esq. 494. Upon what do you ground your opinion? I ground it first upon the present amount of traffic between the two places, and next upon the advantage that must be derived from combining the river traffic with that from the northern and north-western interior. There would, likewise, be a tolerably large passenger traffic between the two places, particularly if this line were formed. West Maitland has now got to be a very populous town.

16 Oct., 1861.

495. I presume you are aware of the circumstances under which this Company originated? I am.

496. It was formed, I believe, when the Parliament refused to give its assent to the proposal of the Government to construct the line from the public funds? Yes; I understood it to arise in this way:—The Government put a sum of money on the Estimates for the construction of line to connect Morpeth with the Great Northern line at West Maitland; and by a vote of the Assembly, it was declared to be not consistent with the railway policy of the country to make what was deemed to be a branch line out of the public funds; but that such lines should be left to private Companies to form.

497. And on the strength of that opinion of the Assembly, this Company was formed? Yes.

498. I believe the promoters have, since their last application to this House, gone to some considerable expense in making surveys? I am not certain as to the amount that has been expended, but I believe it has been over £1,000. The Engineer* of the Company will be able to give you the best information on this point. I believe he† has been engaged in carrying out the working surveys.

499. Then the Company has been formed, relying upon the circumstance of the Parliament having refused to allow the Government to perform the work out of the public funds; and of their having sanctioned its construction by private enterprise? Yes; the former vote of the House was to that effect.

500. Do you think that if this railway were constructed the business of the town of Morpeth with the interior would be increased? I do.

501. In what way? It would open up greater facilities than at present exist for a trade between Morpeth and the north and north-western interior; and would tend in a great measure to concentrate the trade of those portions of the interior between the three towns of East and West Maitland and Morpeth, for it would give equal facilities for trade to East and West Maitland to Morpeth.

502. Then the proposed line would be of equal advantage to these three towns? It would.

503. For what purpose would this proposed line be used? For the great up-country traffic, to a great extent; and also to some considerable extent for the coal traffic.

504. Is there any coal brought into Morpeth now, which, if this line were constructed, would be brought in by it? When I was at Morpeth three‡ months ago, a very great deal of coal was being brought into Morpeth. The roads were regularly black with coal teams then. That was during the miners' strike at Newcastle.

505. Before that had there been any considerable traffic in coal to Morpeth? Yes; the demand for the steam consumption alone was very great. There are some six or seven steamers in the trade, and their consumption of coal is very large—about thirty tons a trip, I believe.

506. When you say that the traffic with the interior would be increased, do you mean that it would be in the through traffic of goods forwarded from Sydney to the interior, or that it would be in the articles produced in Morpeth and its neighbourhood? I consider that, as the Great Northern line extends into the interior, the agricultural settlers on the line will avail themselves of it, and that this traffic will increase as the population of the Colony increases. The establishment of this proposed line will, of course, tend to keep the trade with the interior in its present channel.

507. There is a considerable quantity of rich agricultural land round about Morpeth? Yes. The agricultural land consists almost entirely of fine alluvial flats, with the exception of some portions of swampy land as you get nearer Newcastle.

508. Would there be a trade in produce between Morpeth and the up-country districts, if they were joined to Morpeth by this proposed line? Yes, I think so. It would be more particularly the case in dry seasons.

509. Do you know, as a matter of fact, that there is any difference in the price of certain articles of produce as you get higher up into the interior, as compared with that charged in Morpeth? Yes; I was informed by a dealer, only a month ago, that potatoes were bringing £1 per cwt. at Muswellbrook, when they were selling at 8s. per cwt. in Morpeth.

510. In what other articles is there a difference in price? In hay and maize.

511. Except in very moist seasons I believe it is almost impossible to grow these articles of consumption any distance beyond Maitland? It has been hitherto considered, until the last few years, which have been uncommonly favourable, that you would not get a crop of wheat more than once out of every three years at Singleton. In saying this I am speaking of what was the opinion ten years ago; but for that time—for the last ten years—we have had moist seasons.

512. I presume you are acquainted with many of the persons who are shareholders in this Company? I am, with most of them.

513. Are they mainly persons resident about Maitland and Morpeth? A great number of them are. There are a few Sydney shareholders, but, with only one or two exceptions, these have property in the district. Mr. Flood, who is the largest shareholder in the Company, is a Sydney man, but he has a large property at the Four-mile Creek.

514.

* Revised:—Secretary.

† Revised:—The Engineer.

‡ Revised:—One.

514. And coal has been found there, I believe? It has.
515. We may expect that a considerable quantity of coal will come from there if this line be constructed? Yes, all the coal raised there would come down thence by rail, to be shipped at Morpeth; and besides that, there are other mines that would be opened higher up the line, between West Maitland and Black Creek.
516. Then, from your knowledge of the persons who are shareholders in this Company, you are satisfied that if the calls were made, the whole of the capital would be at once paid up? I have not the slightest doubt about it.
517. When this Bill formerly came before Parliament no capital had been paid up? No, not then.
518. Since then £1 per share has been paid? Yes, in cash; the remainder has been also paid in promissory notes; and the first Directors of the Company have also been elected.
519. *By Mr. J. Garrett*: It is usual in the Colony to pay up a portion of the capital by promissory notes? Yes, I believe so. I know that was the course adopted in the case of the Hunter River New Steam Company. I think they paid all their capital in the first instance by promissory notes.
520. Do you think this proposed line is likely to become a competing line with the Government line between Maitland and Newcastle? I do not think it can be said that this will be a competing line, for the Government line will always have to compete with the river.
521. *By Mr. Piddington*: I believe you gave evidence before the Select Committee to whom this Bill was last Session referred? I did.
522. Do you recollect being asked a question in regard to the population of Morpeth? I do.
523. It is stated in that evidence, that you say you thought it to be about 2,000? Yes, I said so.*
524. Are you aware that the Census returns show the population to be scarcely half that number? No; I have not seen the Census; but if you look to the preceding answer you will see that I said that the population of the town itself was not so very large, but that it had a very rich and populous district around it.
525. You were distinctly asked this question—"Can you give a guess as to the present population of the town?" Yes; and to that I replied, about 2,000.
526. I now ask you if you are aware that the population is not one-half of what you then stated it to be? I am not aware of it; I have not seen the Census.
527. As a matter of fact, the Census returns shew the population to be only 1,175, so that you must have been in error in your estimate? It appears so.
528. Let me ask you if all the evidence you have given is equally as consistent with fact as this appears to be? I should almost presume that there are honorable gentlemen on this Committee who know me better than to imagine for an instant that I would state what I knew not to be the fact.
529. I do not in any way impeach your veracity, but I speak only in regard to the accuracy of your data. Are you as accurate in all else that you have stated as you have been with respect to the population of Morpeth? I should hope not.
530. You admit that you made an error in your estimate? Yes, such an error as any person would be likely to fall into upon such a matter.
531. Supposing the proposed line to be formed, what would be the total length of carriage from the Four-mile Creek to the Government line along that line, to the proposed line, and along the proposed line to Morpeth, by the route that must be followed if this proposed line be constructed? It would be about five miles from the coal mine to Morpeth.
532. Along the proposed railway line? Yes.
533. And what is the distance by the common road? About the same.
534. Then there would be no saving of distance by the construction of the proposed line? No actual saving of distance.
535. In what manner will the traffic between Morpeth and the interior be increased by the formation of this proposed line? It will be increased in this manner,—that as the country becomes populated the traffic will be increased, and this line will preserve to Morpeth its present trade, and I presume, add to it as the population and consequently the demand increase.
536. Then you look to this line to increase the traffic as the population increases? We do not look to it so much to increase the traffic as to keep with Morpeth the traffic it at present has.
537. If I were to ship goods at Sydney, for Singleton or Muswellbrook, under the present state of circumstances, there being no Morpeth railway, and I desire that they shall go by rail, would they not do so without going to Morpeth? Of course they would.
538. In what way then would this proposed line increase the Morpeth traffic in goods, seeing that they would always go as ordered? It would be increased just in proportion to the saving in the expense of the two lines, which would be to the extent of 6d. per ton per mile for the twelve or thirteen miles extra that the goods would have to go by rail if landed at Newcastle and sent on thence.
539. What does that observation refer to? To the ordering goods to be sent on from Newcastle by rail.
540. But how could the traffic be increased by the construction of a mere three miles of railway

J. Campbell,
Esq.
16 Oct., 1861.

* NOTE (on revision):—The boundary of the Town of Morpeth has been circumscribed within twelve months, for police purposes. A few years since, when it was one of the Northumberland Boroughs, it included the greater part of Mr. Close's estate, and the population then was, I believe, nearly seventeen hundred (1,700), and I believe the amount now would be two thousand, provided the old boundaries were adhered to.

J. Campbell, Esq. railway? By the coal traffic, to commence with; and as to the ordinary traffic in goods passing through Morpeth, I do not so much calculate upon increasing that as to keep the trade already there.

- 16 Oct., 1861. 541. You allude to the traffic passing through Morpeth, to goods landed there from Sydney on their way to the interior; that is not a trade, properly so called? Yes; I consider all that passes up the river to be included in the trade of Morpeth.
542. You have said, I believe, in your evidence, that if permission be not given to form this proposed line, Morpeth will, as the northern line extends, be gradually deprived of its trade? I have.
543. To what quarter will that trade be transferred? It will ultimately be transferred to Newcastle.
544. Then if this line be not allowed to be established the present traffic now passing through Morpeth will in the end be transferred to Newcastle? Yes; a portion of it.
545. A large portion? No, not such a very large portion; all the up-country goods.
546. They will be landed at Newcastle? Yes, when the rails extend to any very great distance into the interior.
547. How far will it be necessary to carry the rails before this effect that you contemplate, is produced? So soon as the line gets above Maswellbrook, it will be worth while to send down direct to Newcastle.
548. Do you know the sum that has been expended by the public, in the construction of the line of railway between Newcastle and Maitland? I believe it was nearly £400,000.
549. Do you know the rate of interest on the sum expended by the public paid by the traffic on that line? The money was raised by loan, I believe, at 5 per cent.
550. You misunderstand me—I ask you what interest the traffic on the line pays on the expenditure? Very small. If I recollect rightly, it is something not quite $2\frac{1}{2}$ per cent.
551. Now, seeing that the profits of the line are so small, and that the probabilities are that if this proposed line were constructed it would deprive the Government line of a large portion of the very small trade it now has, would it, in your opinion, be wise in the Legislature to sanction the construction of a competing line? What the mercantile community would do—
552. I am not speaking of them, but of the Government. Do you think it would be wise in a Government, who have expended so large a sum upon the construction of a work that is paying so small a dividend, to sanction the establishment of a private Company, whose object is to form a line to deprive the Government line of its traffic? If the traffic can be conveyed cheaper by the proposed line than by that of the Government, then I say it would be unfair and unjust to the mercantile public, to compel them to use the costly line, when they might have one so much cheaper.
553. Are you aware of the rate of profit paid by Railway Companies in England? I am not; but I believe that there are very few instances where it exceeds six per cent.
554. Taking the average of the railway dividends paid in England, do you know that the rate is not more than four per cent.? I do not, but I know that six per cent. is the highest rate paid.
555. Are you aware of the rate of dividend paid by Railway Companies in France? I am not.
556. You do not know then that they are much larger than those paid in England? I do not. I know nothing about them.
557. Are you aware that the difference in the amount of profit derived from Companies in these two countries, is attributed to the absence in France of that unhealthy competition that exists in England? I am not. I am not read up on the subject of French Railways.
558. Are you aware that the Government have placed on the Estimates for 1862, the sum of £20,000 for the construction of a railway to connect the Great Northern Line with Morpeth? I have read of their intention to do so, in an article in this morning's *Herald*.
559. Is it not singular that the Government should offer to spend so large a sum of money on the work, at a time when a private Company is prepared to construct it? It certainly does look so.
560. From their having done this, would you not be led to infer that the Government regarded this proposed line in the light of a competing line with their line to Newcastle? They may rather have found out their mistake in making the terminus of their line at Newcastle instead of Morpeth, and may now be trying to remedy it.
561. But when the Government steps in and offers to expend £20,000 upon a work which a public Company has offered to construct without a shilling's expense to the State, do you not think that it is rather a singular thing for the Government to do? That is a point upon which the Government ought to give their own opinion.
562. I ask you what your opinion is? It is hardly fair to ask me that.
563. Have you any map or plan of the survey of the proposed line? I have not. The engineer has one and had it here with him yesterday.
564. Are you acquainted with the proposed line? Yes, I have walked over it.
565. Taking a line running south, what is the greatest distance between any point of the proposed line of railway and the nearest point of the existing line of railway formed by the Government? About two miles.
566. Is that the maximum distance between any spot on the proposed line and the spot parallel to it on the Government line? The proposed line does not run parallel with the Government line; but rather runs from it in a triangular form.
567. What is the maximum width of interval between your proposed line and the Government line? The greatest width between the two is at the town of Morpeth, and from the Queen's Wharf to the Government line will be about two miles.

568. Then taking half the distance of the proposed line, say a mile and a half from the Queen's Wharf, and running a line south from it to the Government line of railway, what would be the distance across? About a mile. J. Campbell,
Esq.
569. In fact, then, this line runs very nearly parallel with the Government line? No; it forms, as it were, two sides of a triangle. 16 Oct., 1861.
570. What is the maximum length of a line drawn from Morpeth to a corresponding point on the Government line? About two miles.
571. Then there is only a distance of two miles between the Morpeth line at any part and the Government line? Not more, or at all events very little more.
572. And can you deny that a line running so very near is not very nearly a parallel line? I say that it cannot be a parallel line as it runs off from the Northern line nearly at right angles.
573. Are you aware that by the existing Railway Act any line running parallel to a Government line is not permitted to be connected with the Government line? I am not.
574. If the Morpeth line is not sanctioned by the Legislature are you of opinion that goods will pass along the line to Newcastle, that would not pass along it if the Morpeth line be formed? Yes, when the Northern line is extended into the interior, but not at present. Then a portion of the traffic will come by way of Newcastle, but not before. The Newcastle line has no goods traffic now, or at all events none worth mentioning, except it may be a few baskets of fish.
575. But looking to the extension upwards towards the interior, it would have a traffic that it has not now? Yes, when it is extended up as far as Muswellbrook, but not before.
576. *By Mr. T. Garrett:* That would make it all the worse for this Company? I do not know that. I think it would be all the better for this Company the further the Northern line was extended.
577. *By Mr. Piddington:* To what extent would the construction of this proposed line benefit Morpeth and its neighbourhood—what area would be benefited by it? All the Lower Hunter districts would receive an advantage from it, and all the country of the Williams and the Paterson; an area, I suppose, of about twenty miles square.
578. There is a station on the Government line at West Maitland? There is.
579. How is a settler at the Paterson to be benefited if he can send his goods to West Maitland? It is acknowledged that the cheapest carriage is by water; and if the settler sends to West Maitland he has to go by way of the Falls, and so use his teams over a bad road; and besides, there is no agricultural country between West Maitland and the Paterson; it is all grass land.
580. But about the township, and around Tocal? Yes, from Tocal upwards there is all good land.
581. Would not the produce thence find its way to the station at West Maitland rather than to Morpeth? No; it would find its way to Morpeth, now that they have small vessels drogueing on the river.
582. What proportion of the produce of these twenty miles square finds its way to Sydney, and what is sent up the country? There is not a very large proportion sent up the country in moist seasons; it is only in dry years that produce is sent up the country.
583. On the average of the eleven years you were residing at Morpeth were you satisfied that the country suffered from dry seasons? Yes, we had a very dry season in 1845-6.
584. But taking the average of years? The last ten years have been all moist seasons.
585. Then the produce during that time of the twenty miles square would not find its way up the country? Yes, a portion of it, such as wheat, flour, and potatoes, would.
586. What proportion of the whole produce is sent up the country, and what to Sydney? It would be a very difficult thing to calculate the exact proportion, because it is not to be got at easily. The proportion of wheat and flour might be ascertained.
587. But taking all the produce of the district, in round numbers what proportion goes up the country? Taken in that way the proportion would be no fair criterion of the amount of the up-country trade; because a great portion of the produce of the Hunter is lucerne hay, and that all goes to Sydney.
588. Well, then, restrict your answer to the wheat and other grain sent up the country—what is the proportion? About half the wheat, and one-tenth of the maize.
589. So that nine-tenths of the maize produced in these districts is not sent up the country at all? No.
590. But is sent to Sydney? Yes.
591. From your experience as a merchant there, are you of opinion that the local trade of Morpeth is very large? It is not so very large. I presume you mean the trade of the town itself.
592. I do—what is its amount? I should think that altogether it must amount to nearly £100,000 a year.
593. What data do you rely upon in stating these figures? Upon this fact—that I myself did a business of £40,000 a year when I was there. Calculating the proportion of business that others did there, that fully £100,000 is done there.
594. As you have a correct knowledge of the town of West Maitland, what in your opinion is the amount of trade per annum that is done there, limiting it to that town alone? It is almost impossible for me to give anything like an approximate estimate of it, because Cohen & Co. and Dickson & Co. do very large trades with the interior.
595. But at a rough guess? I should say it was about ten times the amount done in Morpeth.
596. Don't you think that it is very much more? No, I do not think so. I make a rough estimate, but I think it is as near as one can go.
597. In what way would the Maitland trade be increased by the construction of this proposed line

- J. Campbell, Esq.
16 Oct., 1861.
- line? By giving facilities for the traffic of goods, and by delivering them at a cheaper rate than by the Newcastle line.
598. But you say that no goods go by that line? No, not at present.
599. Then the only advantage Maitland would derive from the line would be, that goods would be delivered there a trifle cheaper? Yes; that and the advantage of having the trade concentrated between the three towns of East and West Maitland and Morpeth. That alone would give a stimulus to the prosperity of Maitland that is wanting now.
600. What do you mean by concentrating the trade? I mean that the facilities of traffic given by this proposed line would make the three towns almost as one.
601. But you spoke of concentrating the trade—in what place would it be concentrated? The railway between the three places would be a concentrating of the three, or very nearly so.
602. I wish to know at which of the three towns the trade would be most likely to be concentrated? I think it would tend to benefit all the three towns.
603. That is not an answer to my question. You say that the trade will be concentrated, and I wish to know where? My idea is, that the construction of this line would give the people of West Maitland living higher up the river, and above the head of navigation, and who may have business to transact at the natural port of the district, facilities of going to Morpeth by the cheap, speedy, and frequent passages of the train.
604. Then your view of concentration is, that the people of West Maitland should remove from thence to Morpeth? No; I do not mean it in that light. What I say is, that the proposed line would give the people of West Maitland increased facilities for attending to any business they may have at the port of Morpeth, by the increased means of traffic between the two places that it would provide.
605. The proposed line would merely enable the people to pass backward and forwards more readily and more cheaply? Yes.
606. But that is hardly to be called a concentration of business? To some extent it is so.
607. *By the Chairman*: It would make them seem as one town? Exactly.
608. *By Mr. Piddington*: But how do you conceive it possible that three towns, so perfectly distinct in every way as are the towns of East and West Maitland and Morpeth, can be brought together in this way? In one sense they can.
609. Only as a railway is superior to a common road—only in that sense? Exactly.
610. And in no other sense? Yes; because they would have means also of getting goods cheaper and more expeditiously.
611. Is there much produce raised in the immediate neighbourhood of Morpeth, on the south bank of the river? Yes, there is a good deal, if you get as far as Miller's Forest.
612. Miller's Forest is hardly to be called the immediate neighbourhood of Morpeth? Does your question refer to the land above or below Morpeth?
613. I allude to the land both above and below Morpeth, on the south bank of the river? Yes, there is a large quantity of produce grown on the west of the line between Morpeth and Maitland; but I suppose there are not above 4,000 or 5,000 acres of agricultural land below the town. The land there is mostly swampy. Then between the line and the river there is also a good deal grown.*
614. But is not that equally as accessible to the Government line as to the proposed line? No. There is no communication with the station, except by the line of road, and that is not often in a good state of repair.
615. To what portion do you allude? To that called Narrow Gut, Howe's Farm, and Eckford's.
616. Is not that as accessible to the Maitland station as to Morpeth? No, it is not, on account of the bad road.
617. But is very nearly as accessible? No; not till you get up to the town of East Maitland, when you get on to the good road.
618. There cannot be much difference, as the whole length of railway does not extend above a mile and a half in either direction? No.
619. Then what advantage would this portion of the district possess with your proposed line, above what it now has in the Government line? In their being able to have their goods trained up to Morpeth, with which all their trade is done.
620. Do none of the people to the east or west of Howe's land send their produce to Maitland? Not those about Howe's, but Eckford's do.
621. Then there is not a fair average proportion of the produce sent to Maitland; all appears to go to Morpeth? Yes, nearly all.
622. Is there not a great deal of very inferior land near Morpeth? Yes; a great deal to the south of the railway line.
623. Does not that inferior land come right down to the river bank at Morpeth? No.
624. Could you grow maize on the high land where Mr. Portus' mill stands? It is not intended to grow maize there.
625. What I mean to say is, is there not a break in the good agricultural land occurring at Morpeth, from a range which comes right down upon the river? Yes, it is mostly all high land, and it was not intended to cultivate it. Yet there is a good black soil on the hills that might very well be cultivated.
626. Is it not a fact, that for the whole distance down along the banks of the Hunter for twenty miles, you will find no inferior land until you get to Morpeth? Except what is in the

* NOTE (on revision):—I may here mention that I was prohibited saying anything about what was grown north of the Hunter, which is twenty times greater than the particular space I was confined to, and the answer does not do justice to the district.

the township of Morpeth itself, I do not know of any really inferior land until you get to the back of Morpeth, between there and the railway.

627. And at the back of the town is there not a great deal of very inferior land, covered almost permanently with water? There is.

628. Then the good land around Morpeth bears only a very small proportion to that which is in the neighbourhood of Maitland? In speaking of the land about Morpeth I do not restrict myself to the south bank of the river.

629. But I wish you to restrict yourself to that bank. What I wish to ask you is, whether, taking the Morpeth side of the Hunter, there is not a great deal of good land about Maitland as compared with that around Morpeth? To give a proper answer I must take a larger area than you desire.

630. I only wish to ask you with regard to the south bank—some other gentleman who supports the Bill will ask you as to the rest. Taking the line of railway as a limit? Taking the back of Morpeth, there is very little good land between that and the railway.

631. Do you know the line to West Maitland? I do.

632. Taking the Government line of railway, is there a similar amount of inferior land from West Maitland, westward of that line? Yes; I consider that there is hardly any good land to be found after once you pass to the north of Stoney Creek.

633. You are now alluding to the north of Maitland, but I wish to know with regard to the west of the Government line bounding it by the Long Bridge? There is perhaps as large a proportion of good land there, but it is all liable to be flooded—it nearly all consists of swamps.

634. Is there the same proportion of swampy land as is to be found near Morpeth? Yes, I think there is. Some of them are very extensive; Hangerford's Swamp, for instance.

635. Are they as extensive as Close's Swamp and Wentworth's Swamp? The latter is rather to be taken as part of Hexham than of Morpeth.

636. Does Morpeth supply the town of Maitland with potatoes? No; they get their supply from their own district.

637. From the good land in their own neighbourhood? Yes.

638. You admit, then, that there is some good land there? Yes, no doubt of it.

639. Is there any jealousy existing between the two towns of Maitland and Morpeth? No, not particularly.

640. Is not Morpeth a mere stopping place for steamers, with really very little actual local trade? All the trade of the northern and north-western interior passes through Morpeth.

641. Yes, but it passes through it like water through a pipe? No; there is a very large trade with the interior done by the merchants and storekeepers of West Maitland in particular, and all that passes through Morpeth; it is all done through Morpeth.

642. But it is a trade that merely passes through Morpeth, and does not spring up in it? Being conducted through Morpeth, I regard it as part of the traffic of the town.

643. You cannot regard Morpeth as the source of the trade, since it is nothing more than the conduit through which it passes? It is the head of the navigation of the Hunter, and the port through which all the traffic of the interior districts is received. Both the Steam Companies have their warehouses and wharves there in order to give facilities for this trade.

644. What I wish to ask you is, not as to what facilities for trade are given, but whether Morpeth is not merely the conduit for the traffic of the northern and north-western interior to pass through—whether, in fact, it is not a trade that does not originate in Morpeth? A great proportion of it does not originate there.

645. A very large proportion of the trade originates in Sydney and other places? I am not aware of any other places having a trade with the northern interior.

646. At all events the trade does not originate in Morpeth? Not a great portion of it.

[P. Garrett, Esq., in the Chair.]

647. The proposed Company who now seek for this Bill will require to possess lands, in order to construct their line? They will.

648. Do they possess any lands at present? They do. They have a great portion of what they will require, but not the whole.

649. How have they acquired what they now have? It has been a free grant from the persons over whose property the line passes.

650. Do you expect that you will be able to get all the land you will require for the line in the same way? No, not all. We knew from the first that we should have to buy some portions of the land.

651. That land which the Company now possesses, is it that which they expected they would have to buy—or is it that which from the first they calculated upon having made over to them free? It is not that which they have always reckoned that they would have to purchase.

652. Have you any idea of the sum that will be demanded for that part which they will have to buy? I have no idea whatever.

653. You know that in such cases very large sums have often to be paid for land? I am aware that people are sometimes very unreasonable in their demands, especially when they have a public company to deal with.

654. Have you any idea of the proportion that the sum which will have to be paid for land will be, as compared with the subscribed capital of the Company? I have no idea; but the real value of the land we shall require will not come to much.

655. The owners may have a different notion to you as to the value of their land? Yes; I have said that they are often very unreasonable in the value they fix.

- J. Campbell, Esq.
16 Oct., 1861.
656. What is the subscribed capital of the Company? £25,000.
657. Into how many shares is it divided—into 5,000 shares of £5 each? Yes.
658. How many of these shares have been subscribed for? I cannot tell you exactly, but you will get that information from the Secretary.
659. Did you ever know of a Railway Company in England coming to the Parliament for an Act of Incorporation, with scarcely more than half the number of their prescribed shares subscribed for? I am not acquainted with the mode of working public companies in England.
660. Do you know what proportion of the shares now subscribed for has been paid in cash? I do not know of my own knowledge. All I know is that I have paid mine.
661. But is it not an extraordinary circumstance for a Company, whose prescribed number of shares, according to their prospectus, is 5,000, to come to the Legislature for an Act of Incorporation with only 3,000 shares out of the 5,000 subscribed for? I do not consider it either extraordinary or unprecedented, as we have seen the same thing in other instances.
662. Where? When the Newcastle Railway Company was formed, only 2s. 6d. a share was paid when the application for the Bill was made.
663. You have said, however, on your former examination, that you looked at that Company as a job throughout? I did say so, and say so now.
664. Do you wish to cite that as a precedent for the present Company? No, I do not.
665. Then you have been unlucky in your selection of an authority? But there was also the new Hunter River Steam Company. When that was started only 2s. 6d. a share* was paid up when application was made to the Legislature for an Act of Incorporation.
666. I will put it in this way, then—do you consider it to be a correct principle for the Legislature to grant any Company an Act of Incorporation, when little more than one-half of the prescribed number of shares has been subscribed for? With the amount of capital already subscribed I think there is an excellent guarantee to the public that the railway will be made if the Act of Incorporation is obtained. There cannot be a better guarantee than the names of those who have subscribed for the shares; they are all substantial men; there are no men of straw amongst them.
667. But allowing them to be all substantial men, they have only subscribed for a number of shares equal to very little more than one-half of the total number required? I know many that will subscribe for shares when the Bill is passed. The people of this Colony, and particularly those men who deal in shares, always prefer to come into a Company when all the preliminaries have been settled.
668. Then the stock jobbing community generally, in your opinion, prefer to have everything done to their hand prior to joining a Company? They do.
669. Why? Generally speaking, they do not wish to have their money lying idle, waiting unproductive whilst a Bill is being passed through Parliament. When the Bill is once passed they know that their money will be placed at use and profit.
670. Then you think, in fact, that there are some persons looking forward to this Bill being passed into law, in order to make speculative purchases of the stock of the Company? No, I do not say that; but I say that they are lying by, because they dislike to have their money lying unproductive.
671. Have you not alluded to certain persons, and amongst others to stock jobbers, who were lying by until this Act was passed, to purchase this Company's stock? What I said was, that this class of persons always do so.
672. What makes you think so? I do not think so, for I know, as a general rule, that the class of persons who buy shares, prefer to have all preliminaries settled before they invest.
673. I ask you then, as a matter of fact, where there are any persons who ordinarily deal in shares, waiting for the passing of this Bill to purchase stock of this Company? I am not aware of any of that class, but I know of several persons who are not dealers in shares, who are waiting for the passing of this Act in order to purchase.
674. You are not aware of any dealers in shares waiting to take advantage of the passing of the Bill? No; but those who do deal in shares always object to purchase in a Company until the Act of Incorporation is passed.
675. Do you think that the farmers in the neighbourhood of Morpeth would be likely to transport their produce to the Western Gold Fields if this proposed line were carried out? I do not think they would; there could hardly be any inducement for them to attempt such a trade, as there is some very rich land about the neighbourhood of the Western Gold Fields, and they grow now as much produce there as will supply their own demands.
676. You stated in your evidence a short time back, that upon one occasion potatoes were 20s. per cwt. at Muswellbrook, when they were only 5s. per cwt. at Morpeth? I stated that I had been so informed.
677. Would the construction of this line tend, in your opinion, to equalize the price between the two places? I think so.
678. What was the price of potatoes at West Maitland, when they were 20s. at Muswellbrook? They were from 5s. to 8s. at Morpeth.
679. But at West Maitland what was the price? I cannot say.
680. You say they were 20s. a cwt. at one place, whilst they were only 5s. per cwt. at the other, and I want to know if there was any difference of price at Maitland? There is not any very great difference in price between Maitland and Morpeth.
681. Was there 1s. per cwt. difference? Something of that sort—just about the cost of carriage.
682. Not more than 1s. per cwt. however? No, not more.

683.

NOTE (On revision):—Instead of 2s. 6d. a share, say 25s.; remainder by bills, at 3, 9, & 18 months.

683. Then what possible advantage could there be derived from the construction of a line between Morpeth and Maitland, seeing that produce can now be had at the same rate, with the cost of carriage added? There would be this advantage, that it would place the people of Morpeth on an equality with the Maitland people.

J. Campbell,
Esq.
16 Oct., 1861.

684. And that I presume is all you wish? But besides that, it would tend greatly to facilitate the traffic of the country. I do not wish, and I am sure the Company do not wish to go upon this narrow ground, of advantage to Morpeth only.

685. You wish, however, to see the people of Morpeth placed on the same footing of advantage as the Maitland people? I do.

686. And is that your view of the public advantage that is to be conferred by this Bill? No, it is not.

687. But the extent of advantage that the line will confer being that it will place Morpeth upon the same advantageous footing as is now held by Maitland, it appears to me that, according to your evidence, the advantage will be to the people of Morpeth alone? My view is this—the whole trade of the interior passing through Morpeth and Maitland, not only will these two towns benefit by the line, but the whole interior also.

688. You have said, however, that the great advantage of the line would be that it would place Morpeth in the same advantageous position? Yes; and I should have added that it would give to Maitland all the advantage that Morpeth now has from being the port of the district.

689. And is that your view of public advantage? No; my view of public advantage is the advantage that would accrue to the Colony at large, by reason of the settler in the interior being able to receive his supplies through the head of navigation, at a less rate than he could get them through Newcastle.

690. When you speak of the Colony at large do you allude to the people of Sydney? No. I allude more particularly to the producing public of the interior.

691. And not to the people of Sydney? No.

692. Are not the people of Sydney nearer to Newcastle than to Morpeth? They are.

693. And is it not nearer for them to send their goods to Newcastle than to Morpeth? It is; but in telling you so, I must, of course, explain that water carriage is always cheaper than land carriage.

694. But there is water carriage from Sydney to Newcastle as well as to Morpeth? There is.

695. The only carriage for goods between Sydney and Newcastle is by water? Yes; and in that respect Newcastle is of course the nearest.

696. What additional number of acres of land around Morpeth will be brought into cultivation if this proposed Bill be passed, that will not be cultivated if the Morpeth line is not sanctioned? I do not see that the passing or otherwise of this Bill will at all interfere with the cultivation of the land around Morpeth. There will not be much more land than there now is under cultivation, until we have some good Drainage Act brought into operation.

697. I have not asked you about a Drainage Act; I refer solely to the operation of this Bill, and ask you what number of acres would be brought under cultivation that will not be if this line is not sanctioned? If I answer you, it is only just to myself that I should be allowed to give an explanation of my answer.

698. All I want is a simple answer to a simple question—Will the refusal to pass this Bill prevent any land in the neighbourhood of Morpeth from being brought into cultivation? I am not aware of any.

699. *By Mr. Buchanan*: But if a good Drainage Act were passed, a very large portion of land would soon come into cultivation? It would.

700. *By Mr. T. Garrett*: If there was an increased demand for produce, would not that hold out an inducement to the people to drain? No doubt it would.

701. *By Mr. Piddington*: Do you suppose that the Government would permit the trucks of this Company to run upon their line? I presume they would, if an arrangement were made for permitting them to do so.

702. You think they would allow it, even though the 99th clause of the Railway Act particularly prohibits it? I have not read the Railway Act, and cannot give an opinion on the point.

703. *By Mr. Buchanan*: The proposed Morpeth line does not, however, run parallel to the Great Northern line? No; it forms an angle with it. It is more like the two sides of a triangle.

704. *By Mr. Piddington*: But the maximum distance between the two is not more than two miles,—that is the evidence you have already given? I have.

705. *By Mr. Dalgleish*: You are a shareholder in this proposed Company? I am.

706. Are you a shareholder in either of the two Steam Companies? I am not.

707. Have you any knowledge of how this proposed Railway Company was first called into existence—I mean as to who the parties were who first mooted the matter? There is a list of the Committee in the evidence given last year. It originated, however, with a few inhabitants of Morpeth and West Maitland.

708. It originated with residents in the district? With them principally. The list shews the greater part to be residents of Morpeth and West Maitland, and the neighbourhood. There is one resident of Parramatta, one or two of Sydney, and one or two others, but they are all gentlemen interested in the district.

709. On the last occasion that this Bill was before a Select Committee of the Assembly, there was not the slightest doubt but that each of the shareholders in this list was in such a state of affluence as to be able to meet any call that might be made on him—is that the case now? If you refer to my evidence I may say that I was not asked in respect to the solvency of the shareholders. It was Mr. Cohen who gave evidence on that point, and he said he

knew

- J. Campbell, Esq. knew the parties about whom he was questioned; but the whole list was not gone over when I was questioned.
- 16 Oct., 1861. 710. If you refer to questions from 293 to 299 of Mr. Cohen's evidence, you will see that with regard to the names there mentioned, he says that he had not the slightest doubt; but that all these persons were able to meet all the engagements of the Company. There was not then the slightest doubt about their affluence? Not the slightest.
711. Are all those parties in the same position now? Yes, I believe so.
712. Look over the list there given, and see if there are any of them about whom you have any doubt? Yes; I believe them all perfectly capable of meeting their engagements.
713. All? I do not know one of them that is not.
714. You are acquainted with the Hunter River at Morpeth? I am.
715. And with the district around it? Yes.
716. Do you know the width of the river at Morpeth? Not exactly; but I should suppose it to be about 100 yards wide. I know it must be nearly as wide as that, if not quite; because the "City of Newcastle" swings there quite easily, and she is a long boat; though the new boat the Company has just launched is 25 feet longer than her.
717. And will she be able to swing at Morpeth? Yes.
718. So that there is just about room, and nothing to spare, for the steamers to swing? No, they swing easily now.
719. How much room have they to spare? It is impossible for me to say exactly; but there are two ways of swinging a vessel, by hand and by steam. You can swing them by hand in far less space than by steam.
720. How do they swing the boats at Morpeth? They usually do it by steam.
721. It takes twice the vessel's length to swing her? Yes.*
722. You know the length of the "City of Newcastle"? Yes; she is 100† feet in length.
723. And requiring twice her length, is there much room to spare? Oh, yes; a considerable space.
724. Are there fifty feet? Yes, and a hundred.
725. So that the steamer would require 200 feet, and there are 100 feet to spare? Yes.
726. And that makes the river 100 yards wide? Yes.
727. So that, knowing the length of the steamer, and the space required to swing her, you are able to guess at the width of the river? Yes.
728. In what way do you consider that the rivers Williams and Paterson would benefit by this proposed line from Morpeth and Maitland? I consider that the facilities that would be thereby given to them for doing business would be greatly increased, since it would open to these people the Maitland market as well as the Sydney one; and this would be a very great advantage to them, as they now have only the Sydney market for their produce.
729. Is the Maitland market closed to them at present? Not closed, but difficult of access; as after reaching Morpeth they have five miles to go with their produce over a very bad road; and this railway will very materially shorten the time that will have to be occupied, whilst the distance is less.
730. These rivers, I believe, are very winding? The navigable portion of the Williams is not so, neither is the navigable part of the Paterson; that is, they are not particularly winding. The Hunter, however, is a very winding river.
731. In what way do the products of these rivers reach Morpeth and Maitland at the present time? The produce of the Williams is principally cedar, and that is generally rafted to Morpeth. It is cedar, tobacco, and produce of that class, which principally goes up to Maitland.
732. Do the tobacco and hay produced on the Williams go thence by way of Morpeth to Maitland, or does it find its way to Sydney? The tobacco is principally sold in Maitland.
733. For sheep-washing purposes? No; there are several tobacco manufactories there.
734. And with regard to the other produce of these rivers, how does it reach market? By steam.
735. The whole of it? Yes, the whole.
736. Direct from the Williams? Yes.
737. Then a railway between Morpeth and Maitland would hardly be a benefit to the Williams? Yes, because it would give them facilities for an upward traffic that they do not now possess; by enabling them to get their goods readily, and without loss of time, to the upward market as well as to Sydney.
738. That is an advantage that it would take considerable time to develop, since a market would have to be made there for their produce? Once give them facilities for traffic and a market would soon spring up.
739. I suppose the same remark applies to the Paterson that you have already made in regard to the Williams—that no immediate and tangible benefit would be derived from the construction of this proposed line? They would have this advantage, that by the railway coming right down to the head of navigation, and meeting the water carriage, they would get facilities which they do not now possess for sending their goods into the interior, if a demand for them existed there. They would have the choice between the up-country and the Sydney market.
740. In what way would the proposed line benefit those farmers who lived nearer to Maitland than to Morpeth? It would benefit them by enabling them to ship their produce to Sydney, when they required to do so, cheaper than they now do.

741.

* Revised:—It takes more space to swing by steam than by hand.

† Revised:—Say about 220 feet in length.

741. In what way would they be able to send it cheaper? By rail.
742. Do you propose then to have any intermediate stations on your line? No; it is not proposed to have them at present.
743. Is it proposed, then, to lay down tramways to the farms? No.
744. Then how will the farmers who are equidistant between the two stations, living at the same distance from either terminus, be likely to be benefited by your proposed line? If they are equidistant from the two, they certainly will not derive any benefit from it.
745. Suppose a farmer to reside somewhat nearer to Maitland, would he derive any benefit from it? Then of course he would go to Maitland.
746. In that way he would gain nothing from your line? Yes, he would obtain facilities for sending his produce to Sydney.
747. As I understand it, your argument in favour of this line is all based upon the increased facilities that will be given for sending produce to the north and north-western interior in time of scarcity? It is, to a great extent.
748. Then, to the farmer who resides within a mile and a half of Maitland, your proposed line will offer no advantage, in so far as the increased facilities for reaching the northern markets are concerned? No; because if he is equally near to Maitland as to Morpeth, he will of course go to Maitland and save the railway toll.
749. Would it be of any advantage to a farmer to send his produce to Sydney by this proposed line, supposing him to live equidistant, or nearly so, from both termini? No, it would not; because on a mere three miles line, a man who has to send in produce a mile and a half either way may as well take it to where it has to go, and so save the railway altogether, as take it the same distance on the other side, and then have the railway toll to pay.
750. Where the whole distance that the produce would have to go is only three miles, do you think it would be worth a farmer's while to cart his produce even a quarter of a mile, in order to reach a railway, seeing that the cost of carting for the three miles would be but a trifle over that for the quarter of a mile? That would in a great measure depend upon how the man was off for horses.
751. Imagine him to have as many horses, carts, and men, as are necessary to enable him to pursue his usual avocations, and suppose him to have a load of grain or other produce to send to market,—do you think that he would load up his dray, take his load half a mile to a station, unload it, and change it from his dray on to the railway truck, then have to wait the time of starting of the train, or perhaps the convenience of some petty official; or would he take it direct the whole two miles and a half to the port of shipment or departure, whether it be Morpeth or Maitland? If the charges were not such as seriously to interfere with his profit on the articles, I think he would take advantage of the rail.
752. Putting the charge at 2d. per bushel,—that would not be excessive? No.*
753. Would he prefer the rail to using his own teams? I think he would.
754. Is not the principal expense of carriage for short distances the loading and unloading of the goods, and will not these and the cost of storage always operate against the success of short lines of rails? No, I think not; for the strongest argument in their favour is the very great expense of carriage by drays.
755. How many miles an hour will a dray travel upon ordinary roads? On an average, I should say from two and a half to three miles an hour.
756. At what expense per hour for the man and his team? I know of carriers between Maitland and Morpeth who are making their two loads a day each way.
757. That is not what I wish to get at,—I want to know the expense per hour of a man and a team of horses on the road? If you want to hire a horse and dray, the price in Morpeth for a horse, dray, and driver,† is 17s. 6d. a day.
758. That estimate, however, would hardly apply to the farmer who has to cart his own produce? I am looking at the ordinary price of carriage.
759. And that is not the question I am asking you;—what I wish to know is the value per hour to the farmer for his men and team? I can only answer that 17s. 6d. per diem is supposed to be the commercial value of a man and a team of two horses.
760. You admit, however, that the proposed line is of no advantage to parties centrally situated between Morpeth and Maitland? That I quite admit.
761. And the same answer would refer to persons living centrally between the two lines of railway, or in any position where their farm was at as great a distance from the station as from Morpeth? Yes, of course. Parties living at the same distance from either end of the line would find it the same to send their produce to Morpeth at once, as to the station; besides which there would be the saving of railway toll.
762. How is the produce along the river at present collected? By small steam vessels, and by a few sailing vessels, acting as droghers.
763. And they are employed for the special purpose of getting the produce from the settlers farms to the Steam Companies wharves? Yes.
764. Where is it destined for? For Sydney, of course.
765. In what way? By the Steam Companies vessels.
766. It pays these Companies, then, to send these vessels for produce even though the river route is so very circuitous? They do not travel far up the Hunter, between Morpeth and West Maitland. The river is not navigable higher up than Dunmore. It is principally on the Paterson and Williams, and up and down the Hunter that they are employed; and they make a charge of 6d. per bale for hay, which is the chief produce sent.

767.

* Note (on revision):—My answer was, Yes.

† Revised:—Two horses in a dray, with a man to drive.

- J. Campbell, Esq.
 16 Oct., 1861.
767. Does all the produce of the Paterson and Williams come down for shipment to Morpeth? No; there is a proportion of the Williams traffic that is carried to Raymond Terrace.
768. Does any of the river traffic of the Paterson go to Raymond Terrace? No; it all comes to Morpeth.
769. There is some very rich land at Miller's Forest,—where does its produce go? Part of it to Morpeth.
770. Does the larger portion of the produce of the Williams come to Morpeth or to Raymond Terrace? That I am not prepared to say.
771. The district, however, is very productive; the land being very rich and prolific? It is.
772. At what part of the river is the chief cultivation carried on,—is it high up or low down the river? The greater part of the produce is grown above the navigable portions of the river.
773. Above Clarence Town? Yes.
774. Steamers, I believe, come up to Clarence Town to receive it? They do.
775. And take it direct to Sydney? Yes.
776. So that the proposed line of rails from Morpeth would have very little influence upon the price of produce in that locality? It would have an influence on the wheat, tobacco, and maize produced there, by making the up-country market available.
777. As a general rule, is the price of wheat higher in Maitland than in Morpeth? There is this to be said, that there is a far larger number of millers in Maitland than there are in Morpeth; and there is consequently more demand in Maitland.
778. The price of wheat, however, is pretty equal in both places? Yes, tolerably so; there is not very much difference in price.
779. Is the country in the vicinity of Maitland a wheat producing district? Not in the immediate vicinity. There is a good deal of wheat, however, produced on the bank of the river about Lochinvar.
780. That is to the north of Maitland? It is.
781. And would, of course, find its way to the nearest station on the Northern line? Exactly.
782. And would come to Maitland without any reference to Morpeth? Yes.
783. That being the natural outlet of that part of the country? Yes, it would all come to Maitland. At the present time all the produce of that part of the country is sold in Maitland.
784. Is that district sufficiently productive to supply all the wants of the districts of the interior which you have mentioned as being occasionally subject to drought? No, not at present.
785. Are there not a sufficient quantity of good land for the purpose? Every inch of good land in the locality is now under cultivation.
786. Then there is no more land in that particular locality that is worth cultivating—there is no good land left? There may be places here and there in patches; but the great bulk of the good land is now under cultivation.
787. However, what is grown there will find its way to the north—to those districts which you say have to pay so expensive a price for agricultural produce? No; under any circumstances, I think it would find its way to Maitland in the first instance. The wheat I am sure would, as it would go to Maitland to be manufactured into flour, even though the flour had to be sent back again along the line.
788. Then this traffic would not, under any circumstances, offer any encouragement to the proposed line between Maitland and Morpeth? No, certainly not. The traffic is above Maitland altogether, and has nothing at all to do with Morpeth.
789. Then, though you use it as a strong argument in favour of your line, that the produce of the district will find its way up the country, yet you shew that those now residing on the up-line actually send their wheat down the line, is not this rather against your position? No, and for this reason;—There are a number of millers in Maitland, some five or six, and consequently the wheat growers have considerable competition in the market. On the other hand, as you get higher up to the north, there is no market, and certainly no competition. Now the producer will always send his produce to the market where he will find the greatest competition for what he has to sell; and that is the reason that wheat is sent to Maitland to await in the hands of the miller the order for its despatch to the interior when the demand arises.
790. But surely the saving in sending it up direct, rather than to Maitland and back, must be considerable? Not very great; the distance from Lochinvar to Maitland is only seven miles.
791. Then am I to understand you that the real cause of the potatoes you have spoken about being so high in Muswellbrook is, that there is no competition there? No; it is rather because there is no other carriage there than a long and tedious land carriage, and the trade is consequently in a few hands.
792. You are of opinion, then, that the only difference between two places in the price of an article should be the cost of the carriage between them? Yes, that is my opinion.
793. Do you consider it a valid argument in favour of railways, to quote the difference in price of these potatoes, seeing that the difference is very much in excess of the cost of carriage? It shews this, that there is only a very restricted consumption of this article at the particular place, and that this consumption would be very largely increased if the article could be supplied at a cheaper rate than at present.
794. What is the principal trade of Morpeth? In what way?
795. I mean, what does the trade of Morpeth itself principally consist of? A general trade. They are all general stores, the same as all country stores.

796. Do they deal in the products of the district? No. I am alluding now to the parties ^{J. Campbell, Esq.} in business—to their wholesale and retail trade in supplies.

797. That is, supplies for the town and its immediate neighbourhood? Yes; and for up-country too. We do some business with the interior as well. 16 Oct., 1861.

798. Do you consider that Morpeth is eligibly situated as the site for a town? I do.

799. How do you account, then, for the want of progress and improvement in that town as compared with others; and how is it that it has remained in that very stand-still state; and supposing it to have all the advantages that it is said to possess, how does it happen that it has not increased in the same proportion as other towns? It is accounted for very easily. In the early days of the Colony, when the township was first formed, on account of its eligibility of situation, at the head of the navigation, the whole of the land was in the possession of one person, who would only let the land on lease.

800. Was it a private township? Yes; and the proprietor, Mr. Close, would not sell any of the land, but would only let it out on building leases. In consequence of this, many persons who would have settled there, objected to do so in that way, as they naturally desired to build only on freehold land of their own.

801. Does that cause at present influence the state of decay, or rather I should say, the want of improvement in the town? I do not think that there is any want of improvement in the town at present. I have just been up there, and I have seen several buildings in course of erection; and there is not a house unlet there now.

802. Does Mr. Close pursue the same system now as he did formerly, in regard to his land? No, he sells it now, and has done so for the last seven years.

803. Then during the past seven years, has the town progressed? Yes; there has been a very great improvement in building, both as regards the number and the appearance of the houses.

804. To the same extent as in the town of Maitland? No; it is not so large a place as Maitland, and of course there have not been so many buildings erected; but I consider that, regarding the population of the two places, there has been an increase in Morpeth to a proportionate extent with Maitland.

805. In what way do you consider that the railway going north from Newcastle through Maitland, is calculated to injure Morpeth? It will not injure Morpeth at present, but when it is extended sufficiently far into the interior to induce parties to send their produce direct to Newcastle for shipment, the produce will all go there, and so Morpeth be injured, by being deprived of the traffic it now receives.

806. You think that when the line of rails reaches further into the interior, the traffic will follow its natural course? No; I should say rather that it will be diverted into an artificial course.

807. Will you explain how it is that you make out the course of traffic that will then be pursued to be artificial, and how you shew that at present followed to be natural? It is not likely that persons having their produce loaded up at Muswellbrook would have them unloaded at Maitland, to be again loaded and carted to Morpeth for shipment, when they could get them taken down direct to Newcastle without shifting.

808. And that is your distinction between a natural and artificial course? I consider the course the traffic now takes to be the natural one; whilst the construction of the Northern line is making an artificial course.

809. *By the Chairman:* In fact, you regard the natural course as that along which the traffic has for so many years proceeded of its own choice? Yes.

810. And you look upon that as artificial which, by holding out inducements for the traffic to pass, seeks to divert it from the former channel? Precisely.

811. *By Mr. Dalgleish:* Presuming that it is so, and that heretofore Morpeth has been the natural outlet of the district, do you consider that there exists now the same cause for calling it so as has existed hitherto? I do; for now, even with the advantage of the railway, goods sent down the country for shipment to Sydney arrive at the port of shipment 13 miles short of that to which the railway would take them, and so save a corresponding amount in carriage to the public.

812. In what way can this possibly cause a saving? In this way;—Supposing the railway toll to be 6d. per ton per mile, and that 13 miles are saved by sending goods to Morpeth instead of to Newcastle, the saving would be 6s. 6d. per ton, the charge for freight being the same whether the goods are shipped at Morpeth or at Newcastle.

813. How do you follow out the argument? I have concluded it. I consider I have shewn all that was necessary, in proving a saving of so much per ton on the railway charges, the freight being the same at either port.

814. Is that a usual thing, to charge the same freights from Morpeth as from Newcastle? It is; it has been the rule for some time past.

815. But surely that is against all the rules of trade? Against ordinary rules it may be; but as regards the steamers, I consider that under the present arrangements it costs the steam Companies actually more to land goods at Newcastle than it does to land them at Morpeth?

816. Will you explain how this happens? Why, the whole trade of the interior could be very well done by two boats only; they would be amply sufficient for all the ordinary requirements of the trade. Now there are some six or seven, and as these are all kept running it is necessary to pay their expenses, so they have to be filled up with the produce grown on the river and in the neighbourhood of Morpeth, and to obtain this the boats must of necessity come up to Morpeth.

817. And this produce has to be droghed to the point of shipment? Yes; to induce a traffic, by giving the settlers every facility for it.

- J. Campbell, Esq.
16 Oct., 1861.
818. Would not the same facilities for traffic be given by the droghing vessels taking the produce they collected to Newcastle, to Raymond Terrace, or to some other point on the river? No; I do not think so.
819. Why? Because the Companies have now at Morpeth so many facilities for the traffic, in the way of stores for the produce, and many other things. They have expended very large sums in making their wharves and stores as complete as possible.
820. But do you consider that is a point that ought to be taken into account in a great national inquiry? I think that it ought to be taken into account in the present instance, and that a comparison ought to be made between the conveniences offered at Morpeth and those at Newcastle. I do not suppose that if there were 300 tons of hay landed at Newcastle to-morrow, there is so much as a shed large enough to store them in. The Steam Company have lately built a very fine store, large enough to hold this quantity of hay.
821. Do you consider the fact of the Steam Company having recently built a very fine store as an argument why the traffic should continue in the present direction? No, not exactly; but so long as the two Companies have the facilities they possess, whilst Newcastle has them not, and so long as the steamers go up the river to fill up, so long will Morpeth be the more natural place for goods to come to.
822. So long as the vessels go up the river,—and yet send vessels droghing down the river to the different farms collecting produce, which you then take up the river, in order that you may take it down again? The object of these droghers is this:—The roads over all these alluvial lands near the edge of the river are very bad, and often impassable; the droghing vessels are therefore sent round to take the produce from the settlers doors, thus saving them from the heavy task of having to cart it over such roads to town.
823. Do you know any valid reason why the droghers should not be able to carry goods as cheaply to any other point on the river as to Morpeth? Yes; Morpeth is the nearest port of shipment, and therefore goods can be taken there cheaper than elsewhere. It is by a long way the nearest for the produce of the Paterson.
824. How high up the Paterson do the droghing vessels go? Somewhere about Hickey's place. I know they bring produce down from Hickey's.
825. Then for the great bulk of the Paterson produce, Morpeth is the entrepôt? It is.
826. What distance is Hickey's place from Morpeth, by the river? About five miles.
827. You have stated that at Newcastle there are no sheds in which 300 bales of hay can be stored;—now I wish to ask you whether hay taken to Morpeth is stored under cover, or whether it is left on the wharf, being merely covered with a tarpaulin? At Morpeth it is placed under cover—the whole of it.
828. Yet it is always brought up as deck cargo by the steamers? No; it is nearly always brought up under hatches.
829. Are you sure of that? Yes, I think so. I do not remember seeing any as deck cargo since the time of the old "Rose" and "Thistle."
830. You are not a member of either of the Steam Companies? I am not.
831. You cannot say then whether it pays the boats to carry hay? No, I cannot; but I should hardly think they would take the trouble they do to get it as loading if it did not pay.
832. In what way has Morpeth suffered hitherto from the line of railway going north from Newcastle; and in what way have the two Maitlands suffered by the same line? I do not think that up to the present time the two Maitlands have suffered by the construction of the line; but ultimately, there is no doubt but that the whole trade that now goes down the river will be diverted to Newcastle, that is, if this line be not made.
833. I find in your evidence given last Session, that a question was asked you, No. 162,—“But be the extent greater or less, has not the effect been that the railway to Newcastle constructed with the public money has caused an artificial drawback to what should have been the steadily increasing prosperity of Morpeth?” To that question the reply given was—“There can be no doubt about that. And not only has Morpeth suffered, but the two Maitlands also; all these places have felt the ill effects of the line.” How do you reconcile that with your present statement? I may observe with regard to the evidence there given, that I had no opportunity afforded me of reading it over at the time, in order to correct it; but I think that my meaning in the answer given was,—more than the two Maitlands would be likely to suffer as the line extended, than that they actually suffered now. In fact, the general tenor of my evidence throughout would put that meaning upon the answer. If you refer to question No. 160, you will see that I say there, that “up to the present time the railway has not done so much injury to Morpeth, as it would have done had it extended further into the interior.”
834. That answer will certainly bear the construction you put on it; but in saying that it has not done “so much injury,” you infer that to some extent it has been injured? No doubt it has.
835. In what way, then, has Morpeth suffered injury by the construction of this line? In the first place there used to be a very large passenger traffic by the steamers to Morpeth, but since the line has been opened to Maitland that has been all done away with; for now, instead of persons coming into Morpeth and stopping and spending their money there, they land at Newcastle, get into the train, and go right on to Maitland.
836. Is that an injury to the public in general? To the Morpeth public it is.
837. But I mean to the general public—to the public who travel and pay? No, it is not an injury to the great body of the public.
838. Is it not an advantage rather than an injury to the general public? No doubt it is.
839. The loss to Morpeth has been the public gain? It has.
840. And should the Great Northern line of the Government be extended into the interior, the goods traffic will most likely follow the passenger traffic? I think so.

841. And this proposed Morpeth line is an attempt to divert the goods traffic from the course that it would otherwise pursue, which is to Newcastle? No; it is merely intended to keep the traffic in its present course; not to divert it, but to prevent its being diverted from its present channel.

J. Campbell,
Esq.
16 Oct., 1861.

842. In fact, to prevent the good arising to the community from the extension of this line that should accrue to it? No; I think we are consulting the good of the community by the construction of this line, since we cause a saving of expense on the cost of traffic.

843. What is the charge to the community now for goods carried on the Great Northern line? I believe it is 6d. per ton per mile.

844. On the whole distance from Newcastle to Maitland? Yes.

845. And the steamers charging no freight between Morpeth and Newcastle, you anticipate that there will be a saving to the public by using your line? I do.

846. *By the Chairman:* However that may be, the public are the best judges of what is for their own interest; and if they find the road by Morpeth the best and cheapest, they will use it? They will.

847. Whereas if they discover that the road to Newcastle is the best, they will go by that? Yes, whichever they find to be the most available they will take.

848. *By Mr. Dalgleish:* Do you consider the gentlemen named in the present Bill, who have asked for this proposed line of railway, as the public? I consider them to be a very fair representation of the Hunter River public; there are men of all trades and professions amongst them.

849. *By the Chairman:* Do you think that the House, who last Session decided that they should have this Bill, regarded these gentlemen as a fair representation of the public? I do.

850. *By Mr. Dalgleish:* Did the Assembly last Session give an opinion in favour of this Bill? Yes, by carrying the second reading by a large majority. That was giving an opinion in its favour, according to my view.

851. You consider, then, that giving the Morpeth people a right to construct this proposed railway is only giving them a fair chance to compete with the Great Northern line? I think it is giving them the chance to avail themselves of the great natural advantages of their position, to the fullest extent.

852. That is, to compete with the Northern line? I cannot call it competing when we are merely keeping the trade we have already got.

853. You are however afraid, that as the line goes into the interior, the goods traffic will find its way to its natural outlet at Newcastle? I call Newcastle the artificial outlet, as it is an outlet formed artificially by the line of railway.

854. I see in your evidence that, in speaking of the Great Northern Railway, you spoke of its establishment as a job? Yes, it was so in the first instance.

855. What is your opinion of the line as it now exists; is it a paying line? I do not think it can be a paying line.

856. What do you think are its prospects in the future? Not very bright.

857. Have you any knowledge of the improvement that has taken place on this line, as shewn by recent traffic returns? No; I have no knowledge on the subject.

858. So that you do not know whether the scheme is an ill-advised one or not? No; but I think, if I remember rightly, that some time ago I saw some returns from Captain Martindale, in which only a very small return was shewn upon the outlay.

859. Will this junction of the steamers with the Great Northern line, by means of this proposed railway, be calculated to increase the traffic on the Government line? It will increase it on the line above Maitland, but certainly not on the line below it.

860. On the contrary, the opposite will be the case as far as the Newcastle end of the line is concerned? Yes, I will admit that it will be so.

861. Do you think that it will pay to carry hay and vegetables on the line to Singleton? Yes, I think so.

862. Do not these articles grow in the country around Singleton? Not much.

863. Is there any very great demand for them there? Yes, very fair.

864. Is that part of the country not adapted for growing hay? Not generally.

865. Nor for growing grasses suitable for haymaking? No, not generally; though there may be some portions of land on the banks of the river where hay might be grown.

866. Then were the demand for these articles to increase there, would there be any corresponding increase in the production—such an increase as would meet the demand? No, I think not; and in dry seasons there certainly would not be.

867. That would affect only the portion of land lying on the banks of the river? No; that is the portion that would be least affected, for in dry seasons it is the low damp land that grows the best crops.

868. In what way do you propose to carry on the traffic on the proposed Morpeth and Maitland line? I am not aware whether any determination has been arrived at, as I am not a Director.

869. I mean the proposition in regard to the working the line. Do you intend to have your own rolling stock; and if so, will you import it or have it made in the Colony? I believe the Company intend to have their own engines, trucks and carriages, and to get them as cheap as they can, which I presume will be by ordering them from England.

870. Do they propose to run their trucks on the Government line? Yes, they propose to run their own engines, carriages, and trucks, on the Great Northern line.

871. By arrangement with the Government? Of course.

872. What kind of arrangement is proposed? I presume that by paying the Government a toll for the use of the line, the Company will be able to use it, and to carry their traffic on it as far as it runs.

- J. Campbell, Esq.
16 Oct., 1861.
873. So that your chief traffic will be on the Government line? Yes.
874. And by your traffic you would rob the line of whatever traffic there might be on it? I do not call it robbery, so long as we pay the Government a fair price for using the line.
875. The proposed Company calculate, I presume, upon making a profit on their shares? I should imagine so.
876. Now, do you suppose that their profit will be obtained from the two and a half miles which they propose to construct, or from the great length of the Great Northern line itself, which they propose to use? I presume that the greater portion of their profit will be derived from the two and a half miles of their own line.
877. But you anticipate some profit from the use of the Great Northern line? No; I do not anticipate deriving any profit from the use of the Government line; the only advantage we expect from it is that it will give the Company facilities of communication with the interior.
878. In what way do you consider that the running of your trains on the Government line will be likely to affect the Government trains? We need not affect them at all; we shall be altogether independent of the Government trains.
879. If you anticipate no profit from using the Government line, why do you desire to bargain for its use? Solely, as I have said, to have facilities of communication with the interior, by which, of course, we bring traffic to our own line.
880. Then you anticipate making a profit from it? No, I do not admit that; not a direct profit, but only incidental, from the traffic brought to our own line.
881. Of course you do not anticipate running on the line at a loss? No, certainly not. But, after all, it may be possible that we may make such an arrangement with the Government as will enable us, instead of using the Government line, to hand over the goods to the Government in our trucks at the junction of the two lines. However, I am not in a position to state what arrangement is projected, still less what will be made.
882. Then you have no knowledge whatever on the subject of the intended arrangement? Not the slightest.
883. Have you never had any knowledge of what the intentions of the Government were in this respect? I have not.
884. Then how was it that you anticipated the arrangement that was to be made, as shewn in the following question and answer last Session. In question 190 you are asked:—"Let me ask you if it will pay to shift goods from the steamer on to your trucks at Morpeth, and then to take them on to Maitland, and to shift them from your trucks on to those of the Government line?" And your answer to this is, "No, certainly not; and that is the very object we have in making an arrangement with the Government for our trucks to travel on their line, so that the goods may be taken from the vessel at Morpeth, and then not shifted again until they reach their destination;" so that it seems from the very first that you contemplated sending your trucks on the Government line? Yes, it is natural to presume so, because it would do away with one of the great advantages of this proposed line, if the goods had to be shifted from our trucks on to those of the Government.
885. If that were the case, and the goods were sent on in your trucks, you would of course require that the Government should pay you for the use of them? Yes. No doubt some mutual arrangement would be made between the Government and the Company, in regard to that point.
886. You have stated in your evidence something with regard to the produce of the Hunter; that you anticipated it would all come to Morpeth, basing your anticipation on the fact of the freight of goods being the same from Morpeth to Sydney as from Newcastle to Sydney,—can you explain how this can be? Not being a shareholder in either of the Companies, I cannot explain it; I can only say that it is so.
887. Does it not seem rather extraordinary that three hours and a half of river passage should be performed gratuitously? I can only explain it in this way,—that there is only sufficient up-country trade to keep two steamers at work; and that so long as there are two steam Companies competing with each other, and having to maintain so many steamers, which they have to fill up from the produce gathered on the river, so long will this state of things exist.
888. That does not account for the same charge being made at Morpeth as at Newcastle? The steamers have to go to Morpeth to get the produce, and it is an expense to them to delay at Newcastle, because whilst they are receiving or discharging cargo there, they are burning coal all the time. That I imagine to be the reason why they charge as much for goods landed there as for goods taken on to Morpeth.
889. Is it not the same thing at Morpeth? No.
890. Why is that? Because that is their stopping place, and their fires are put out the moment they arrive.
891. So that if Newcastle were made the place for the droghers to bring their goods, as well as the stopping place for the steamers, the same argument would apply to it as now applies to Morpeth? That is not a very likely matter. The Steam Companies, after all the expense they have gone to at Morpeth, are hardly likely to make such an arrangement as that.
892. But supposing it to be made, would not the same argument apply as you have just used in favour of Morpeth? No; because these droghing vessels only make short trips now, and they would have to make long ones by your plan; and besides that, you would have all the trouble of transshipping from them to the steamers.
893. Under any circumstances that must be done, even now. There must be a transshipment under the present arrangement? Yes, no doubt; but there are more conveniences for it at Morpeth than at Newcastle.
894. Those conveniences might be made at Newcastle? No doubt.

- 895. Then your argument in this respect is nullified? No, I think not, because the trips are shorter now than they would be if the droghers went to Newcastle; for instead of three miles, which is now about the length of their trips, they would have to go ten or fifteen* miles.
- 896. Would you be in favour of a Company that would undertake to ship the produce of the Hunter direct from Morpeth to Sydney, filling up with produce at Morpeth, and then sailing direct to Sydney, without calling at any intermediate stations except for passengers? Yes; it does not pay them to stop at Newcastle.
- 897. How many of the present steamers would this employ? All but two.
- 898. What advantage would then accrue to those merchants who chose to ship goods direct to the northern interior from Newcastle by the line of rail,—what benefit would be derived by the shipper? In what way.
- 899. Under the circumstance of having a line of steamers direct to Newcastle, two steamers you say would be sufficient to bring away all the wool, tallow, and hides produced in the northern district? Yes, quite sufficient.
- 900. The remaining traffic is made up of the produce of the river? Yes.
- 901. Under those circumstances, the steamer running no further than Newcastle, the 13 miles of railway would be performed cheaper than the 29 miles of water carriage? No, certainly not.
- 902. On what ground do you found that answer? On the ground that a ton of salt or iron is now carried from Sydney to Morpeth for 6s.; and I ask you what the price would be if it were carried those 110 miles by railway at the price the Government now charge.
- 903. But there would be water carriage to Newcastle, and the railway would only have to compete with the river transit? Yes; but the goods are carried all the way to Morpeth for 6s. a ton, and the 13 miles of railway would cost more than that.
- 904. What does a ton of dry goods cost by the steamer? I think about 12s.
- 905. Do you know that in England railways can and do compete, and compete successfully with water carriage? I have not heard of many instances of such a competition being successful.
- 906. Have you heard of any? † I have not; not where there has been any passenger traffic.
- 907. Do you know anything of the coal traffic of England? No, nothing.
- 908. You do not know, then, that in the carriage of coal the railways compete successfully with water carriage? I believe that some of the railways carry coals at 1d. per ton per mile, but those are lines upon which there is no‡ passenger traffic. That price, however, would not pay in this Colony.
- 909. How do you arrive at that conclusion? Why, it seems to me that if the Government lines will not pay where they get 6d. per ton per mile, they will certainly not pay if they charge only 1d. per ton per mile.
- 910. What is the charge by the steamer for a ton of salt sent from Newcastle to Morpeth? There is no trade of that kind done between the two places.
- 911. Is there anything sent from Newcastle to Morpeth? No.
- 912. No goods of any kind? No.
- 913. Is there anything sent from Morpeth to Newcastle? Yes, sometimes.
- 914. What does it consist of? Maize and hay, chiefly.
- 915. What is the charge per ton by the steamer? I cannot say; I have never sent anything there, and have consequently never had freight to pay.
- 916. Do they carry it for nothing? No; I should think not.
- 917. Do they charge the same price as for goods sent to Sydney? No, I believe not.

J. Campbell,
Esq.
16 Oct., 1861.

THURSDAY, 17 OCTOBER, 1861.

Present :—

Mr. DALGLEISH, | | Mr. T. GARRETT,
Mr. PIDDINGTON,
Mr. WILSON. |
|--|--|---|

WILLIAM CHARLES WINDEYER ESQ., IN THE CHAIR.

Thomas Iceton, Esq., appeared as Solicitor for the Bill.

James Campbell, Esq., called in and further examined :—

- 918. *By Mr. Dalgleish* : In your former examination, question 235, with regard to the probable trade between England and Newcastle direct, your answer stated that, as to the squatters, even if there were no other considerations to lead them to send their produce to Sydney, they would always prefer to do so, rather than risk the danger of shipping it at Newcastle? Yes.
- 919. As a matter of fact, has it not all to be shipped from Newcastle? By steam.

J. Campbell,
Esq.
17 Oct., 1861.

920.

* NOTE (on revision) :—Instead of fifteen miles, say from fifteen to thirty miles.
 † Revised :—I have not, except where there was a large passenger traffic.
 ‡ Revised :—A large passenger traffic.

- J. Campbell, Esq.
17 Oct., 1861.
920. Is there any great danger in shipping it under proper regulation by sailing vessels? Decidedly so.
921. In what does it consist? It is a very narrow port of entry, remarkably narrow for sailing vessels; unless there is a leading wind, you run the risk of getting on the Oyster Bank.
922. Are you not aware that at many ports in England, for instance, at Newcastle-upon-Tyne, there are similar disadvantages; but there it is overcome, even the immense trade of that port, by tug steamers? It could be overcome, no doubt, to a certain extent, but it could never be made a harbour to compete with Sydney.
923. I do not allude to competition with Sydney, but simply with regard to shipments by the squatters. Have goods, to your knowledge, ever been shipped direct? One vessel did ship a cargo there, after being four or five months* filling up.
924. How long ago? Something like three or four years. Messrs. Bingle and Co. were the agents.
925. How do you infer that Newcastle will never have a large trade except in coal? I infer it from the trade being already settled and established in Sydney, and the squatters to a large extent in the hands of the Sydney merchants.
926. What advantage has Morpeth over Newcastle in respect to shipments? Do you mean direct shipments to England?
927. Shipments to anywhere? None whatever.
928. Consequently the argument is of no avail with respect to the railway? In regard to the railway, if I must really repeat the argument over again, the difference is the saving between the land and water carriage to the general public. I really cannot state too positively what I ground my opinion upon.
929. You state that there is a very large traffic at present between Maitland and Morpeth? I do.
930. Do you know the extent of the passenger traffic? No, I do not; I do not think there is passenger traffic at present to any very large extent.
931. In question 240 you state there is a very large passenger traffic now between Maitland and Morpeth? It is not what might be termed a very large passenger traffic; there are not facilities for a very large traffic, as compared with the passenger traffic between Sydney and Parramatta for instance, or anything of that class. It is, however, a large passenger traffic, considering the circumstances of the case.
932. Do you anticipate an increase of that traffic on the construction of this railway? I do.
933. Taking passengers between Morpeth and Maitland to and from the steamers? Yes.
934. And competing with the Government line? I really cannot put it as competing. I myself would prefer, if I were going from Sydney to Maitland, particularly in winter weather, going on by the steamer to Morpeth, provided I could travel cheaply and comfortably as I could by this railway, from Morpeth to Maitland, rather than get out of bed at Newcastle when the steamer arrives there; and I believe many passengers would likewise prefer it.
935. Is not time the great desideratum with business men? There are a great number of people that travel that are not business men; business men are a comparatively small portion of the travelling public.
936. The quickest route is the one generally adopted? By business men, no doubt.
937. *By the Chairman*: Do you not think that, if there were a railway from Morpeth to Maitland, in nine cases out of ten passengers would be able to go as quickly by the steamer as by the train from Newcastle? Yes, unless the Government would always place a train at their disposal, to leave on the arrival of the steamer.
938. In winter you have to dawdle about three or four hours at Newcastle waiting for the train? I have been there two hours and a half myself.
939. *By Mr. Piddington*: Are you of opinion that the bulk of the passengers travel for pleasure? I do not know that they do; but a great many passengers travel by the rail who are not business men in the ordinary sense of the word.
940. Are you of opinion that the great bulk of the passengers who travel by rail are persons who travel for pleasure? Parties may travel for pleasure, and others may travel up and down the country having some object in view; probably most of them may have some reason for travelling besides pleasure, but that does not make them business men.
941. Have you no means of forming an opinion that would enable you to answer my question? I have no means.
942. *By Mr. Dalgleish*: You have stated that you have been two hours and a half in Newcastle waiting for the train? Yes.
943. Was it optional on your part? I had no option in the matter.
944. What period of time does the boat usually take to go from Newcastle to Morpeth? Three hours.
945. Consequently, had you gone up in the boat, you would have been in Morpeth in about the same time that you had to wait at Newcastle? I might have been.
946. Do the trains not run at fixed intervals? They run at fixed times, but I had to wait for that time.
947. You were aware of what time you would have to wait? Yes, perfectly aware of it.
948. Consequently it was a matter of choice? It was not entirely a matter of choice, because I wanted to see a party at Newcastle.
949. There were advantages, then, to be derived from staying at Newcastle? There was that advantage

* NOTE (on revision):—I believe it was six to eight months.

- advantage to me, but it would not apply to the general public. It does not alter the fact, that from the time the boat arrived until the train left was two hours and a half.
950. In fact, it merely shows mismanagement of the railway? It is managed by the Government, and we are to assume that they do things for the best.
951. It merely shows mismanagement? I am not here to give an opinion on that.
952. *By Mr. Wilson:* I suppose the Government start these trains at the stated hours they think most convenient to the public? Yes. The boats sometimes arrive in Newcastle as early as five o'clock in the morning.
953. *By Mr. Dalgleish:* Do the steamers stick in the passage to Morpeth? I have not heard of one having done so for the last twelve months, that is, since the Flats were cleared.
954. Have you been in a position to know? I have been told by captains of steamers that they never stick; Captain Hardy and Captain Mulhall I may mention.
955. One of the vessels stuck last week? I never heard it. I know I can state positively that I have been informed by captains that they never stick now. If one of the vessels did stick, as you say, I fancy it was not owing to the Flats, but to some accident or mismanagement.
956. What class of colliers do you anticipate would resort to Morpeth for coals? The usual class of colliers; they are generally vessels of not more than 300 tons; even the largest colliers in the Newcastle trade.
957. Do you anticipate a large increase of that trade? Yes, provided the coal is, as I believe it to be, of a different description and superior quality to that at Newcastle; there is one species of it, I think, which is called cannel coal.
958. Would it be necessary to increase the wharfage accommodation? That would depend on what amount of coal may be shipped; of course if there is a large shipping trade it will require more wharfage accommodation than at present, that is to say, as far as wharves are concerned.
959. Your evidence shows that you anticipate a large increase of the coal trade? I do.
960. Consequently, in conformity with your anticipations, what wharfage will be required? That is a very difficult matter to say; my anticipations may not be realised.
961. You have formed some? Well, I do not form any anticipation that there will be very extensive wharfage accommodation required; certainly not more than there is sufficient space for.
962. They will require more accommodation than at present? They will require more wharves to be made.
963. The form of the river on the Morpeth side of the bank is a double bank, is it not? How a double bank?
964. A rise from the river with a small flat, and a rise above that again? No, it rises in some places precipitously from the river.
965. Not at the town of Morpeth? Yes.
966. Where the wharves are at present situated, is there not a double bank? No.
967. It rises precipitously? In some places; in others there is a gradual slope; and in others it is nearly flat, at what is called the Queen's Wharf, for instance.
968. The water is deep almost to the edge of the bank? Yes.
969. Not quite to the edge of the bank, is it—it slopes gradually? I believe Mr. Whalley has made a survey of the river; he can give you the soundings right from the New Company's Wharf, past the Queen's Wharf. I have seen such a survey within the last two months, and I presume Mr. Whalley will have it with him.
970. Is the bank on the opposite side higher or lower than the Morpeth side? Lower.
971. Is there any obstruction to the flood waters from the wharfage? I think not. I do not think any additional wharfage made—provided they were not allowed to intrude further than is absolutely necessary—would offer any further obstructions to the river than those wharves which already exist.
972. You have been intimately conversant with the traffic on the river for the last four years? I have been conversant with it for the last fourteen or fifteen years.
973. Four years will be sufficient for me—during the last four years how often in each year have you known the traffic to be interrupted by the floods? I have not been so conversant with the traffic on the river during the last four years as I have been previously, because during the last four years, or nearly four years, I have been living in Sydney?
974. Are you aware that the traffic has been stopped by the floods? I am, once or twice.
975. For how long a period of time? About two days at a time.
976. Have you never known it stopped a week? I have not.
977. *By Mr. Wilson:* When the traffic on the river was stopped by floods, did those floods interfere at all with the railway from Newcastle to Maitland? On one occasion I think the railway was washed away somewhere about Hexham.
978. *By the Chairman:* Was not the traffic stopped from Newcastle to Maitland for a fortnight, on account of the line being washed away? I cannot tell you the exact time, but I know it was stopped on one occasion.
979. *By Mr. Dalgleish:* Do you know whether it was stopped for three days? I do not know the time; I know it was stopped.
980. *By the Chairman:* In the fourteen years that you were there, before the four years to which Mr. Dalgleish confines you, was the traffic on the river often stopped? I went there in 1845, and until the floods of 1857 I have never known it stopped but once.
981. *By Mr. Piddington:* If the capital of £25,000 is sufficient for the purpose of forming this line, why is it that the Bill proposes to enable the Company to increase it to £50,000? I think it is usual with most Companies to have power to increase.
982. When a survey has been made, and an estimate supposed to be accurate formed, for the purpose

- J. Campbell, Esq.
17 Oct., 1860.
- purpose of constructing a line of railway only two miles and a half in extent? It has been frequently found, when the Government have gone to the trouble of making accurate estimates, that they could not get the work carried out for the sum estimated.
983. Then you are of opinion that the proposed power indicates a conviction on the part of the promoters of this Bill that the capital of £25,000 will be insufficient? No; I look upon it as a safety clause, which I think will be found in most private Companies' Bills of anything of the same character.
984. Do you think £25,000 will be sufficient? I think the line could be made from East Maitland to a certain portion of Morpeth for considerably under £18,000—to the Queen's Wharf.
985. And yet the promoters of the Bill wish to take power to obtain £50,000? I mentioned before, that in my opinion it is only a safety clause, usual in almost every private Bill. It would not be very well, supposing this Bill to be passed, if the Company should find their means insufficient, that they should be obliged to stop the works while they applied for another Bill.
986. *By Mr. Dalgleish*: You are acquainted with the proposed Bill? I do not know that I have read it through; but I have been present at a discussion of some of its clauses.
987. *By the Chairman*: Do you know what outlay the Company have incurred already? I asked the question of Mr. Macauliffe this morning, and he says they have paid away I think about £700, and their engagements amount to about £800 more.
988. *By Mr. Dalgleish*: Are you aware how much the preliminary surveys given over by the Government to the Engineer of the Company cost the country? I am not aware what that survey cost, but I do not believe the Government gave it over.
989. Mr. Whalley acknowledges that he received it from the Government? He had such a survey lent him during his last examination here I believe.

Alexander Brown, Esq., called in and examined:—

- Alex. Brown, Esq.
17 Oct., 1860.
990. *By Mr. Iceton*: I believe you are engaged in coal mining operations on the Hunter River? Yes.
991. In the neighbourhood of Newcastle? In the neighbourhood of Hexham.
992. Your operations are rather extensive? They are rather.
993. It is proposed to construct a line of railway from Morpeth to some point of the Great Northern Railway near East Maitland? Yes.
994. In your opinion, would the construction of that line tend, or would it not tend to the development of the coal mines of that district? In case of the facilities being increased, of course it would tend to the development of the coal fields there.
995. If such a line were made, would it be of any use to coal owners in your neighbourhood? It would be of great use to me.
996. In what way? We should then supply the steamers and sailing vessels that visit Morpeth.
997. It would open another market to you? Yes, it would open another market which we are not now in possession of, because we cannot get there.
998. You are speaking of other coal proprietors besides yourself? Others in the same position.
999. *By the Chairman*: To get to the proposed railway, you would have to convey your coals a considerable distance along the Great Northern line? Yes, about six miles along the Great Northern line, and then turn down to Morpeth.
1000. *By Mr. Dalgleish*: You at present run your coals on a portion of the Great Northern line? Yes, to Newcastle.
1001. Has the rate of toll been increased on that line lately? No, it has never been increased since I commenced to run any coals on the Northern line.
1002. At what date was that? It is only since they put up the cranes that I have done anything worth speaking about on that line; for the last two years it has always been 2d. a ton per mile; we finding our own trucks of course.
1003. Are you aware that the general rate of toll or freight on the Great Northern line has been increased since that period? On other goods it has been increased, I believe; on everything excepting first-class goods, such as bricks, stone, and coal.
1004. Is your junction with the Great Northern nearer Morpeth or Newcastle? Just about the same; nine miles from Morpeth, and nine and a half from Newcastle.
1005. What advantage do you expect to reap from making Morpeth the point of departure? A great number of vessels visit Morpeth; Maitland, for which it is the shipping port, being a commercial town where a great deal of business is transacted, looking for freight, grain, and so on. The steamers also go up as a matter of necessity, the principal part of their cargo being secured on the river; and we will be able, when this line is made, to supply both sailing vessels and steamers with coal, which we cannot do now.
1006. Would exemption from the tonnage dues at Newcastle form any part of your calculation? They are all subject to the same charges.
1007. Those that go to Morpeth as well as Newcastle? Yes; it is at Newcastle the tonnage dues are paid.
1008. Do the steamers pay tonnage dues? Yes, they pay double; it is paid periodically by the sailing vessels, and the steamers pay twice for once that the sailing vessels do.
1009. Are you aware of any advantage that is possessed by the town of Morpeth, as a shipping port, over the town of Newcastle? Its position being near to West Maitland, and being

- being in the centre of an agricultural district also, the whole of the up-country trade naturally goes there; it goes there now and always has done. Alex. Brown, Esq.
1010. What do you mean by naturally goes there? They send to Morpeth, that being the route to Sydney; if they send to Newcastle there are no buyers there to determine the value. 17 Oct., 1861.
1011. Are there any buyers at Morpeth? There are at West Maitland, and at Morpeth too—Mr. Taylor, and several others.
1012. The principal buyers are at Maitland? Yes; West Maitland is the principal site of business for almost everything.
1013. There is already communication between Sydney, Newcastle, and West Maitland? Yes; there is the Great Northern.
1014. Would this line you now speak of be beneficial to the Great Northern line in any way? Well, I cannot see any very great advantage to it. The passenger traffic will always go on the Great Northern line, but I should imagine the heavy freight will go by way of Morpeth.
1015. Do you know any predisposing cause why Morpeth has hitherto been the favourite depôt for goods intended for the interior? Well, it is cheaper to send them by way of Morpeth; that is one thing.
1016. Is there no other cause? I cannot of course go into the causes, any more than I can say what is the cause of the trade going to Liverpool, London, Glasgow, and all those places; being at the head of the navigation, it seems a natural result.
1017. Is the prosperity of Liverpool the result of being at the head of the navigation? It is a long way up.
1018. Is not Greenock increasing? It may be increasing in proportion as Glasgow increases, but it is insignificant.
1019. Is there a railway in competition? Yes; and notwithstanding Glasgow goes ahead.
1020. Is there any comparison between Greenock and Morpeth? There is no comparison now.
1021. Has Morpeth visibly increased of late years, however humbly, in any way for to cause an allusion to the city of Glasgow or the city of Liverpool? I can hardly look at Morpeth singly, I must look at West Maitland also; it has increased more than any town I know of in the country.
1022. Have not East and West Maitland increased in far greater ratio than Morpeth? They have, because there is the seat of business.
1023. Can you mention any English town which has had the same ratio of extension as the town of East and West Maitland, in proportion to its shipping port? East Maitland is no place; I do not know any difference in East Maitland since I have known it; Morpeth is the shipping place, but West Maitland has increased more than any town I know of in the country.
1024. Although it is not the shipping port? Yes, but still all the business is carried on by way of Morpeth.
1025. *By the Chairman:* You look upon both as one? They are inseparably linked together.
1026. *By Mr. Dalgleish:* It is a place where the traffic passes through? It passes through Morpeth, but Maitland is the place where business is transacted.
1027. You see no benefit arising to the Great Northern line? It will increase the passenger traffic, no doubt, and though the heavy traffic will continue to go by way of the river, no doubt the Northern line will receive a corresponding advantage; for instance, with ourselves it will increase the trade; and they are sinking coal pits now at Black Creek, from which they cannot send the coal to Newcastle because it will not pay, but they can to Morpeth, if this line is established, because it will pay.
1028. *By the Chairman:* They will have to send the coals from Black Creek twelve or fifteen miles by the Great Northern line, in order to get to Morpeth? It is fifteen miles from Morpeth, and it will cost 3s. 9d. a ton to deliver the coals at Morpeth.
1029. *By Mr. Dalgleish:* Is 3s. 9d. a ton a necessity? I have been always under the impression that the rate for coals was too high.
1030. You draw your own coal? From our own mine, but they will not let our engines go on the Great Northern.
1031. Can you give the Committee the cost for traction on your own line? I could not now.
1032. It would be very valuable information if you could send it to the Committee? I have never gone into it; I could ascertain it though.
1033. *By Mr. Wilson:* How far does your line of railway run before you join the Great Northern line? Six miles.
1034. Do you think you could work a railway only six miles in length as economically as a company could work a railway of say ten times greater length? No, it is the long length that pays, of course.
1035. Therefore the probability is that your expenses will be greater per mile than on the Great Northern? Yes; the long line in any case, whether by sailing ship, steamer, or railway, always pays. The Great Northern at Home charges a half-penny per ton per mile.
1036. Are you a shareholder in this Company? Yes, to a small extent.
1037. *By Mr. Piddington:* To what extent? One hundred shares.
1038. *By Mr. Dalgleish:* Are you a Director? Yes.
1039. Have you gone through the Bill? I have never read it.
1040. You do not know the provisions of it? I really do not, I must admit.
1041. Are you aware that in England, where all the lines are already owned by Companies, and the Government have no interest in railways, there is always a provision for running cheap trains? Yes, the parliamentary trains, as they are called.

Alex. Brown,
Esq.

17 Oct., 1861.

1042. Is there any such provision in this Bill? I really do not know.
1043. Are you aware that there is a duty charged on all passenger traffic above 1d. a mile in Great Britain—a duty to the Government of five per cent.? I was not aware of that.
1044. Are you aware that in 1852 that duty amounted to £280,000? No.
1045. Are you aware if there is a clause in your Bill empowering the Government to examine and report upon the state of the line if necessary? No, I am not aware; but it would be very necessary I believe, or at least, I should say there would be no objection to its being introduced.
1046. Are you aware whether there is any clause enabling the Government to compel improvements when recommended? No; not having read the Bill, as I have already said, it is not likely I should know.
1047. Is it usual for Directors to have no knowledge of the Bill they require? It may not be usual.
1048. Do you look upon this line as a feeder to the Government line? I think it will be, in course of time.
1049. Do you think it so at the present moment? Well, it is not made yet, but instantly the line is finished to Morpeth there will be a considerable traffic.
1050. *By Mr. Piddington*: Where from? Black Creek, Anvil Creek, and Four Mile Creek.
1051. *By Mr. Dalgleish*: Is it your opinion that this is the best line that can be adopted? I have no doubt it is. I have not examined the sections.
1052. Will not this line virtually give you a monopoly of the whole traffic that passes from Morpeth to the Great Northern line? No, I do not see that, because we shall have to carry all kinds of goods.
1053. Is there any clause in the Bill you ask for limiting the price per ton you are to charge? I am not aware; but it is usual to have certain charges stipulated in a Bill of this kind.
1054. Would it be for the public benefit to allow a Bill of that description to pass the Legislature? Without a scale of charges, do you mean?—perhaps it would be as well to have a maximum scale established in the Bill.
1055. Under any circumstances, can a railway bear any comparison with a turnpike road? Well, I do not know how you are going to compare them.
1056. They are both vehicles for traffic? Yes, you can compare the amount of work to be performed on a road and on a railway; in my experience I have found them very different.
1057. The question is answered somewhat widely. Is there any point of comparison, with regard to the general public good, between a railway upon which a monopoly is actually in possession of one Company and no other, and a turnpike road which is open to all? The railway is open to all I presume.
1058. *By Mr. Piddington*: By paying for it? By paying for it. And it is a well known fact that it pays the poorest man to ride on a railway; it is cheaper for him to do so than to walk on the common road.
1059. *By Mr. Dalgleish*: It may or may not, according as the charges are made? If you charge him a pound per mile, of course he would walk; but if you charge him 1d. or 2d. a mile he would ride.
1060. Provided this grant is given to your Company, and an opposition Company should seek to lay down a parallel line to Maitland and Morpeth, would your Company, in your opinion, seek to prevent the rival Company from laying down that line? I think they would be quite justified; that is to say, if they had a maximum scale of charges.
1061. *By the Chairman*: Is not permission often refused in England to construct railways under similar circumstances? There is generally a clause to the effect that no railway shall be made parallel to the first one.
1062. *By Mr. Dalgleish*: Is not that incontestible proof of monopoly? You can call turnpike roads monopolies if you like.
1063. Would it not be to the interest of the country generally, if this line must be completed, to make it a Government line? We have introduced a clause empowering the Government to buy it.
1064. At what rate? The Company would have to be paid their outlay, at least, the same as a common contractor.
1065. Are you aware that a sum is on the Estimates for this year for the construction of this line by the Government? So I see; but it is objected to, both by the Government and private individuals.
1066. Provided that Parliament decide on making this line at the public expense—? Then I apprehend the Morpeth people will at once say, let the Government do it.
1067. Do you consider that in that case the Directors would have any claim against the Government for any moneys? Yes, I should say so, because their preliminary expenses are of a certain value.
1068. You think the preliminary expenses are of a certain value, and should always be paid for? Yes, I should think so.
1069. Are you aware that all the preliminary surveys of the Government on this line were handed over to your Company? I am not aware of it.
1070. If they are so handed over, they should be paid for? Not if they have not been adopted; I do not see why we should pay for a thing of no use to us.
1071. All that has been adopted should be paid for? All that has saved the Company from expense. It is simply a question of debtor and creditor account, I presume. How much is it worth?
1072. It remains to be seen what it has cost? It has cost the Government plenty, I dare say.
1073. So you consider it would be unjust, and not for the public good, to allow a competing line with the Maitland and Morpeth Railway? If the Company could carry on the traffic with

with reasonable charges, it would be unjust to run a line parallel with theirs, and set both Alex. Brown, Companies by the ears, to ruin one another. Esq.

1074. Under the same circumstances, would it be just of the country, which is the owner of Colonial lines, to allow this competing line to Morpeth to be established by the Company? 17 Oct., 1861.

I think it would be quite right, particularly when they refuse to do it themselves.

1075. *By Mr. Wilson*: Do you look on this Maitland and Morpeth line as a competing line with the Great Northern? No, I do not; not to any extent. The very first week the Morpeth Railway is open they will find the income to the Great Northern very much increased, with the same working expenses as now.

1076. *By Mr. Dalgleish*: You anticipate running your trucks and engines to the utmost extent of the Great Northern line? Only to the junction. The Great Northern people will not allow our engines on their line.

1077. *By Mr. Piddington*: How do you know? They have refused myself.

1078. How do you know they will not allow this Company? I simply say they have refused me.

1079. *By the Chairman*: I suppose you look upon this line as a feeding line, and that there will be a proportionate benefit to both lines, according to their length? Yes, the greater benefit will be derived by the Great Northern line, simply from the extra distance all goods will have to go on it.

1080. *By Mr. Dalgleish*: I see that some of your shareholders, who have given evidence, fully anticipate that they shall have the right of running their goods to the extremity of the Government line? The Government no doubt will take the charges if they do. When they are joined, a certain quota will be allowed to the Morpeth line, and a proportion to the Great Northern line.

1081. What will that quota, in your opinion, be—will it be a profit to the Morpeth Company? That remains to be seen; railways generally have not been very profitable.

1082. Would you run your engines and trucks northwards, unless at a profit? Of course not.

1083. If it is a profit to the Morpeth Company, will it not be a loss to the country generally? I do not see that.

1084. Seeing that the Government have to allow a quota, I presume, for the use of the trucks? They charge 1d. a mile; too much, I think.

1085. Would the Morpeth Company expect to receive 1d. a mile for the use of their trucks? It would be only fair they should be paid the same as the Government charge.

1086. So that if the Government rob the Morpeth Company, the Morpeth Company is to rob the country? If the Government shew the example of robbery, I do not think we should do wrong to follow it.

1087. Will the line pay as a line between Maitland and Morpeth only? That is problematical, like all other speculations.

1088. Would you take shares or become a Director under these circumstances, between Maitland and Morpeth only? I would, decidedly.

1089. Without any junction? It would be valueless without any junction, of course.

1090. Or with a junction, at the option of the Government, over which the Directors had no control? Then the line would be valueless.

1091. So that the line will be valueless unless the Directors have a voice in the traffic on the Great Northern line? I presume they would have a voice no further than the extent of their own land went.

1092. *By the Chairman*: It would be a matter of arrangement, the same as it is now with branch lines to collieries? Yes, just so.

1093. *By Mr. Dalgleish*: Is there no difference between this line and the branch lines to collieries? I do not see any difference.

1094. Are not branch lines to collieries direct feeding lines? So they are.

1095. Can you recognize this is a direct feeding line? Yes; the very fact of this line being made will fetch traffic on the Great Northern line which is not on it now, and which it would be of no use to fetch on it without this line. The Black Creek pits are actually sinking the same as our own; but it would be no use sending the coal to East Maitland with the view of carting it to Morpeth, the expense would be too great; but if this line were done, they would commence operations at once. Give the outlet, and so fetch on the feed.

1096. In that respect we will admit it is a feeding line; but this is not from the Morpeth line; it is a feeding line from the junction which you make on to the Great Northern line, and then the Morpeth and Maitland line merely take it from that line? It is from the fact of their taking it onwards that the traffic comes on to the Great Northern.

1097. Then do you admit that that which takes feeds? Yes; because the very fact of its taking causes it to feed.

1098. That is only inference? It is no inference; it is fact. The traffic which I allude to as coming on the Great Northern line it would be of no use to bring on now, because it could not be shipped.

1099. Not at Newcastle? At Newcastle it might, but not to pay the parties.

1000. What is the distance from Black Creek to Newcastle? Somewhere about 35 miles.

1101. What would be the expense? About 9s. a ton.

1102. *By Mr. Piddington*: And what to Morpeth? 3s. 9d.

1103. *By Mr. Dalgleish*: Do you recognize the charge of 9s. to Newcastle as a fair charge? It is too much.

1104. *By Mr. Buchanan*: It is the charge, whether fair or not? It is the charge.

1105. *By Mr. Dalgleish*: With your knowledge of locomotive traffic, could it not be done for considerably less? Yes, I think it could; at 1½d. a ton per mile at most.

1106. *By the Chairman*: If the charge were reduced, there would still be an advantage in sending the coals to Morpeth? Yes, because there would be a corresponding advantage on that

Alex. Brown, that portion of the line. The Great Northern line at Home takes coals from Durham, 400 miles, to London, at a $\frac{1}{2}$ d. a ton per mile.

1107. *By Mr. Dalgleish*: In that way they compete with the water traffic? Yes, to Euston-square.

17 Oct., 1861.

1108. Would not the same argument hold good on the Northern line to Newcastle, if under proper management? I think if the charge was very low, the coals would come into competition.

1109. The water carriage from Newcastle-upon-Tyne to London is not very circuitous? No.

1110. But the river from Morpeth is how much longer than the railway? It is 30 miles by the river from Morpeth to Newcastle.

1111. And how much by the railway from Maitland? Eighteen miles.

1112. *By the Chairman*: It does not follow because it is cheaper to take coals from Durham to London by rail than by water, that therefore it is cheaper to take them all the way to Newcastle by rail instead of shipping them by water at Morpeth? If you can ship them at Morpeth, of course it is better to do so. The Great Northern line at Home takes the coals to Euston-square, in the heart of London, and the expense of carting the coals shipped by vessels to that part of London is in their favour.

1113. *By Mr. Dalgleish*: And yet the Thames at the Pool may be considered to be equally in the heart of London? For that particular part of London there is no doubt the railway does the traffic cheaper.

1114. So far as the shipping is concerned, the Pool is nearer to the heart of London than Euston-square? I am not acquainted with that particular place.

1115. *By Mr. Piddington*: Do you not consider London Bridge nearer the centre of London than Euston-square? Of course if the ships go up to that place, the surrounding parts of London will be supplied cheaper, and it is the same with Euston-square.

1116. *By Mr. Dalgleish*: You are aware that the colliers in London usually discharge in or near the Regent's Canal? They discharge all over the river, I believe.

1117. It is one of the largest depôts? At the canal you allude to I am aware there are a great many colliers.

1118. You are aware that that canal is nearer the heart of London than Euston-square? Yes, and no doubt the parties around there have the advantage.

1119. Each is best for its own locality? Yes; but still it is the low charge on the Great Northern at Home that enables them to take coals to compete with the water carriage.

1120. Are you acquainted with the town of Morpeth? Yes.

1121. From your practical acquaintance with the product of mines in general, and your knowledge of what is to be expected from these mines in particular that you have alluded to, what traffic, under favourable circumstances, do you consider would be conducted from Morpeth? From Morpeth to Maitland?

1122. From Morpeth to anywhere—from the mines? Well, I should think that directly this railway is established, and there are facilities for shipping—

1123. How many hundred tons a week, or how many thousand? Perhaps 200 tons a day.

1124. Which would require shipping to what amount? Of course to the amount produced.

1125. What number of vessels do you anticipate would be required? That depends upon the size of the ships; you may get a ship that will hold 2,000 tons.

1126. Can you get a ship of 2,000 tons to Morpeth? No, vessels of 100 to 150 tons go up to Morpeth.

1127. So that it would require, under ordinary circumstances, two vessels a day to lay under the shoots? Yes.

1128. This would require what amount of shipping? Twenty or thirty vessels.

1129. And the amount of obstruction to the river? Oh, my goodness! They would not obstruct the river, except when they stuck upon the Flats.

1130. You admit they might stick on the Flats? They would be very useful as beacons if they did.

1131. You are aware that the river is very narrow at Morpeth? Yes.

1132. You know the "City of Newcastle"? Yes.

1133. Has she much more than room to swing? She can swing.

1134. With much room to spare? No.

1135. There is a vessel in the course of completion for the Company, which is 25 feet longer? Yes.

1136. She will just have room to swing? Yes.

1137. Should a vessel be lying at the wharf, she would not have room to swing? Yes, she would.

1138. With another vessel lying alongside that? One of them could move ahead. There need be no difficulty on that score; it could be managed at any rate as in the docks at Home.

1139. There is this difference, that though a dock has a narrow entrance it widens out into a basin? Yes.

1140. Therefore, what is done in the docks is not applicable to a river like the Hunter? It is just as applicable as to a dock, I think.

1141. Would extra wharfage be required? There is plenty of wharfage for a greatly increased trade to what there is now, and when the trade increases I dare say they will find wharfage accommodation.

1142. If extra wharfage is required, will the piles form no obstruction to the flood waters of the river? No; because the banks are almost perpendicular at Morpeth.

Objection being here taken by a Member of the Committee to the relevancy of the questions, witness was requested to retire; being again called in, the examination was continued.

1143. Have you seen a plan of the proposed railway for the water frontage? Yes; I think there is a plan. Alex. Brown,
Esq.

1144. Does the plan, as shewn, interfere with the water frontage in any way?—

Mr. Icton submitted that this witness was not before the Committee to prove anything about this plan, the Surveyor who made the plan being in attendance. 17 Oct., 1861.

1145. You are practically acquainted with the shipping of coals by rail? Yes.

1146. From your knowledge of the plan, does it afford the necessary facilities for shipping the coal which you anticipate will form part of the traffic? Yes, I think it will afford all the facilities required at the present time, unless the trade increases very much.

1147. *By Mr. Piddington:* What is the distance of the Miami mine from Morpeth? Fifteen or sixteen miles, including our own line.

1148. Is that calculated partly on your own line and partly on the common road? Partly on our own line, partly on the Great Northern, and partly on the Morpeth line as proposed; altogether about fifteen miles.

1149. How do you expect to reach the proposed line from Miami? We shall come down our own line, go up the Great Northern, and down the Morpeth line.

1150. Go up the Great Northern to what point? The junction of the Morpeth line.

1151. The proposed junction at Pitmaer? Yes.

1152. How far is that from your mine? Twelve miles.

1153. How far is your mine from Newcastle? About the same distance.

1154. Twelve miles from the pit to Newcastle? Fifteen miles.

1155. And not so much from the pit to Morpeth? The distance from Morpeth is about half a mile less.

1156. Then it is fourteen miles and a half to Morpeth? Fifteen miles to Morpeth, and fifteen and a half to Newcastle.

1157. Then the difference in advantage as respects the distance from your mine to Newcastle, and from your mine to Morpeth, is half a mile? Yes.

1158. And is it on that advantage you found your opinion that this line will be of such great use to you? So it will, because there is a constant stream of trade; a great number of coasting vessels must go to Morpeth for many reasons, and if they could load coals there they would do so, because now they have to come down to Newcastle in ballast.

1159. Do you not think the trading vessels that now go to Morpeth will, when the Great Northern line is carried to Muswellbrook, stop at Newcastle? They will always go to Morpeth, because the trade they go after is principally on the rivers among the settlers, and their return cargo is very often coals.

1160. You think this railway will be an advantage to your interest, simply because there are a number of small coasters who will always proceed to Morpeth? Yes; and every year that description of coasting trade is increasing.

1161. Do you not think the goods traffic on the Great Northern line will very much increase when the line is extended to Singleton and Muswellbrook? Well, it would; but it would always go to Morpeth; it would go to Morpeth if they took it by drays; they do so now.

1162. My question is not what they do now—my question is as to what will take place when the line is extended to Muswellbrook? It will always be better to send to Morpeth to save shifting at Newcastle.

1163. Don't they have to shift it at Morpeth? They save the charges on the Great Northern line. It is considerably cheaper to cart from West Maitland to Morpeth, than to send to Newcastle by the Great Northern line.

1164. Assuming that the Legislature does not allow this line, do you not think the goods traffic will very much increase when the Great Northern line is carried further? It will increase as far as West Maitland is concerned.

1165. Is it not the fact that the Great Northern line of railway is not worked beyond Maitland, except for a few miles? Goods from Lochinvar are taken to Maitland, and then carted to Morpeth.

1166. Will that practice prevail when the Great Northern is extended to Muswellbrook? I believe it will prevail then, to a certain extent.

1167. You think the extension will have no effect whatever on the transit of goods to Newcastle? I do not think it will, so far as the up-country trade is concerned.

1168. You have alluded to the circumstance that the proposed Act of Incorporation contains a clause to enable the Government to purchase this railway? I believe it does.

1169. Are you aware as to the number of years' purchase the Company expect the Government to pay upon the annual profits, if they purchase the railway? No, I am not aware of it; but the usual thing is 15 per cent., based upon that.

1170. The usual calculation is a calculation founded on a rate of profit equal to 15 per cent.? Yes.

1171. And yet the Company requires twenty-five years' purchase of such a right, and power to ask more if the average rate of profit is below 15 per cent.—Is not that an enormous demand? 15 per cent., taking into account the tear and wear, is not too much.

1172. Do you not think 25 years' purchase of 15 per cent. is an enormous demand for this Company to make? I would rather not answer the question at the present moment, not having thought the matter over.

1173. You have known the Maitland and Morpeth districts for a long time? Yes.

1174. Are you aware whether the town of Morpeth has increased much in population, or the number of houses, during the time you have known it? Not a very great deal; West Maitland is the seat of business.

- Alex. Brown, Esq. 1175. Has the population of East Maitland increased much during the last five years? Very little indeed.
- 17 Oct., 1861. 1176. *By Mr. Dalgleish*: Do you know if the traffic on the Great Northern Railway was not seriously interfered with by the raising of the rate of freight? I believe it was to a certain extent.
1177. Prior to that being raised, goods were being sent to Newcastle for shipment? Well, very little goods ever came to Newcastle for shipment.
1178. Some goods? Well, some. Upon my word there has been so little traffic either before or since that it is hardly worth while naming.
1179. Since then it has decreased? I dare say it has got less, but it is not possible to tell, because there is so little on the whole.
1180. *By Mr. Buchanan*: Do you know the Paterson River? Yes.
1181. Supposing a resident on the Paterson had one or two hundred tons of goods to send up the country, and this railway was constructed, whether would he send them to Morpeth by droghers to go up that way, or by drays over the Falls to Maitland? He would send it down the river, and put it on the railway.
1182. It would be cheaper and more expeditious? Yes, and save the goods too.
1183. At the present moment, without a railway, a great quantity of coals come to Morpeth? Yes, during the strike 300 tons a-day.
1184. In the event of this railway being constructed, that rate would be enormously increased? The case is rather exceptional just now, in consequence of the strike; but no doubt it would gradually increase, the same as the coal trade has always done since I have known.
1185. These mines at Black Creek? Oh, they will increase very much.
1186. They would, of course, increase largely from the increased means of transit? Yes, and if the river was deepened they would enormously increase.
1187. Would you suppose that the coal trade alone would be a very great inducement to construct a line to Morpeth? It would.
1188. You believe it would pay? I believe it would pay almost, if the line were constructed economically, for a coal line alone.
1189. Are you aware that ever since the construction of the Great Northern, it has not taken any of the traffic that comes by drays over bad roads to Morpeth? I do not think it has taken any of the traffic. If there were no drays, I have often gone so far as to say, they would carry the stuff to Morpeth on men's backs.
1190. Are you aware how many thousand bales of wool came to Morpeth last year? I am not posted up in that.
1191. At all events, there would be far greater inducement to send it to Morpeth, in the event of having increased facilities by railway? Of course the greater the facilities the greater the inducement.
1192. There is considerable passenger traffic also? Yes.
1193. Are you of opinion, that passengers from Sydney, going up country, would prefer the river passage, taking the rail at Morpeth, than to take the rail at Newcastle? I believe the passengers would always land at Newcastle.
1194. The Morpeth railway would do a great deal of good to the Great Northern? By giving an outlet, it would bring traffic on it, no doubt.
1195. All these goods that go from Morpeth by dray to Maitland, and thence up the country, would go by rail from Morpeth, and of course would benefit the Northern line by going on it? Yes, of course.
1196. Then it would be a feeder? Yes, if you put the goods on the line at Morpeth, they would go direct up to Singleton and other places.
1197. And, of course, if the Morpeth Railway Company used the Great Northern line, they would pay the Government for it? I presume that the Morpeth Company would charge toll as far as their line went, and the Government would charge on their own line, the same as they do at Home.
1198. In any view of this matter that you can possibly take, can you conceive that the construction of this Morpeth line will be any detriment to the present line? I think that any line of railway joining it, (not only the Morpeth railway), must benefit it by bringing traffic on it.
1199. Then according to your experience and knowledge of the trade of Morpeth, as at present existing, notwithstanding there being no railway, a great traffic of goods comes to Morpeth, and you are of opinion that giving them increased facilities for this traffic, will have a tendency to increase it? I believe it would.
1200. And you think this undertaking would be for the public good? It would result in public good.
1201. *By Mr. Dalgleish*: Is it usual to give any consideration for power to form a junction with other lines in Great Britain? No, I believe not; I believe they are often too glad to get lines to join them, particularly on main trunk lines; the more lines the better for them.
1202. Are you not aware that in many instances interdicts have been taken out against junctions being formed? There may have been extraordinary things done; and even when an interdict has been taken out they have probably found they were mistaken, and that the junction would be a great advantage to them.
1203. Do you know the Great Northern line at Home? No.*
1204. The North British? I know a little about that.

1205.

* *Revised*:—Yes.

1205. Are you aware that the North British line formed a junction with the Caledonian railway? I am not aware. Alex. Brown,
Esq.
1206. *By Mr. Piddington:* Do you believe, if a line of railway is constructed parallel to another, it must of necessity, if it happens to join it, benefit it? If both run in the same direction and the lines join; I do not see how you mean. 17 Oct., 1861.
1207. I wish to ask whether every line which happens to join another must necessarily benefit it? I think it does if it feeds it.
1208. I do not wish you to give an answer with reference to hypothesis, but simply an answer to the question, whether a line of railway constructed parallel to another, if it joins it, must of necessity benefit it? I think it does.
1209. Is it always the case? There may be exceptions.
1210. Would you conceive it to be an exception where a line runs so nearly parallel as to be a competing line? Where it runs parallel—
1211. Would you conceive it to be a benefit? Not when it runs parallel and both are candidates for the same traffic.
1212. What is the maximum distance between the proposed Morpeth line and the Government line to the south—I will give you any point you choose to take from Morpeth to the proposed junction at Pitnacree, and I would ask you to run a line south, so that you may strike the Government line, and I wish to know what is the maximum distance of such a cross line? Upon my word the question is so very extended that without the matter being put down so that I can trace the positions, I do not understand it.
1213. *By Mr. Buchanan:* They do not run parallel? They do not.
1214. *By Mr. Piddington:* You propose to run from Morpeth and join at Pitnacree? Yes.
1215. From any point on the proposed line to any point on the existing Government line, what is the maximum distance? It must be about three miles, I presume.
1216. Straight across? I could not tell the exact distance, because no measurement has been made.
1217. Have you any idea? Two and a half or three miles.
1218. That is the maximum distance? It must be more, because the line comes round with a curve—about four miles.
1219. What is the minimum distance in a line, from a spot upon the Morpeth line to the nearest spot in a southerly direction on the Government line? I could not tell you the distance.
1220. *By Mr. Buchanan:* You are in the coal trade? Yes.
1221. Are you aware of the quality of the coal at Four Mile Creek? Yes.
1222. Is it superior or inferior to other coal? It is very superior steam coal.
1223. Of course it would be shipped from Morpeth? Yes, of course.
1224. And on account of its superiority it would induce a great increase of the trade? It would have this effect, that large quantities of coal now imported from England for the mail ships would probably be stopped, and they would be supplied from Four Mile Creek, which would be a great addition to the trade. The consumption by the mail steamers is about 50 tons a day; they burn about 1,000 tons a month.
1225. What is the quality of the coals at other places which this line would open up—Anvil Creek for instance? This line will bring into the market a variety of coals. At Anvil Creek the coal is bituminous, and fit for use in houses, by blacksmiths, and in steam engines also. Then there is cannel coal, large quantities of which are imported into Melbourne from England; and in place of fetching it from England they would get it by way of Morpeth if this line were made.
1226. It would be shipped at the port of Morpeth? Yes; it is not likely, while the river is in existence, that it will be sent to Newcastle.
1227. This coal would come down the Great Northern line? Yes, about eight miles.
1228. And of course do it a vast deal of good? From a calculation I have made, I think the yield to the Great Northern will be about £6,000 a year from this source. The fact of the line to Morpeth being made, will open up traffic to the Great Northern line to that amount.
1229. From the coal trade alone the increase of traffic will be £6,000 a year? Yes.
1230. *By the Chairman:* There is no cannel coal at present in the market? No, it is not available. It is very valuable for making gas.
1231. *By Mr. Dalgleish:* Do you admit the implied superiority of the Four Mile Creek coal? It has always had the name.
1232. *By Mr. Wilson:* Is the cannel coal supposed to be of good quality as cannel coal? Yes, it has been tried and found very good.
1233. *By the Chairman:* Can this line, if constructed, be called in any way a parallel line to the Great Northern? I do not see how it is possible to make out that it is.
1234. *By Mr. Dalgleish:* About what angle would it form with the Great Northern? The Morpeth line runs direct from it.
1235. So that according to that it forms almost a straight line? The Great Northern goes away northwards.
1236. *By Mr. Ieston:* Does the question of whether it is a parallel line or not depend upon the angle at which it leaves or joins the Great Northern line—has that anything, in fact, to do with its being a parallel line—does not a parallel line mean a line running alongside another without meeting it? Yes, a parallel line is a line alongside another.
1237. And therefore the angle of incidence has nothing to do with the question? Nothing.

TUESDAY, 22 OCTOBER, 1861.

Present:—

MR. BUCHANAN,
MR. T. GARRETT,
MR. MORRIS,MR. PIDDINGTON,
MR. WILSON.

WILLIAM CHARLES WINDEYER, ESQ., IN THE CHAIR.

Thomas Iceton, Esq., appeared as Solicitor for the Bill.

Arthur John Whalley, Esq., C.E., called in and examined:—

- A. J. Whalley, Esq., C.E.
22 Oct., 1861.
1238. *By the Chairman:* You were examined on a previous occasion, with respect to the Maitland and Morpeth Railway? I was.
1239. Since you gave your evidence on that occasion, have you made any further survey of the proposed line? I have made the working survey and laid out the line.
1240. Since you gave your evidence? Since I gave my evidence.
1241. Was that following up the previous rough survey which you had made? I had not made any survey myself when I gave evidence here before.
1242. What had you done then? I had merely gone over the various lines that were proposed, and by comparison of the various plans, had formed an opinion as to which was the best, and I recommended the carrying out of the line laid down by Mr. Whitton.
1243. Is that the line of which you have since made the working survey? That is the line, with some slight alterations.
1244. Is your opinion the same as when you gave your evidence before, as to the expense of constructing this line? Yes.
1245. That it will cost £16,000 or £17,000? I have an estimate here by which I calculate that the line to the Queen's Wharf will cost £16,632.
1246. *By Mr. Morris:* The mere making of the railway, without rolling stock? Yes, without rolling stock.
1247. *By the Chairman:* Have you calculated the expense of making any proposed extension? Through the town—yes; I make the whole cost of carrying the line through the town, including an allowance of 15 per cent. on the permanent way and earthwork, for sidings and so on, £23,557.
1248. You have seen the Bill, I presume? I have.
1249. The provisions in the Bill, with regard to security to the public in working the railway, are the same as in the Bill that was before Parliament before? I believe they are. With regard to bridges, there are no roads crossed by bridges, although there are provisions in the Bill regulating the height of such bridges.
1250. *By Mr. Piddington:* You say you have completed a working survey of this line? Yes.
1251. Have you any objection to hand in to the Committee a copy of that survey? I have done the out-door work of the survey, and I am drawing sections now, or having them drawn. I have a survey here, such as it is customary to deposit on these occasions.
1252. Have you no section of the line, no working section such as is given to the contractor? No; I do not know that it is customary to deposit such sections.
1253. Have you that? I have taken my sections, and the drawings are now being made.
1254. You have not got a copy of your section? The sections on this plan were laid down from the very levels I took.
1255. Have you any objection to hand that in? No; I prepared this to hand in. (*The witness handed in the plan referred to.*)
1256. You intend to divert the existing line of road at some particular point? Yes.
1257. At how many points do you intend to divert the existing road? Only at two points; one occurring at one mile twenty chains, and another at two miles distance from Maitland.
1258. Is the diversion considerable? No; much less than was proposed by Mr. Whitton.
1259. Is this broad line that I see here the line of road from Morpeth to Maitland? Yes.
1260. Does your proposed line of railway run pretty nearly parallel with the existing common road? It runs in the direction shown here.
1261. Is that line nearly parallel with the road? Parallel as far as the sinuosities of the road will allow it to be so.
1262. What distance do you suppose it is, say from the intersection of your proposed line at Northumberland-street, to the existing line of Government Railway to the south—what would be the distance of a line carried southerly to the Great Northern Railway? At least three miles.
1263. From the point of intersection at Northumberland-street? Yes.
1264. Take another point, the contemplated diversion of the common road nearest to East Maitland—what is the distance from that particular point running southerly to the Great Northern line? About two miles and a half.
1265. Taking a mean of the whole line from Morpeth to East Maitland, what is the mean distance of a line running southerly until it intersects the Great Northern Railway? I do not exactly see how to arrive at that.
1266. Perhaps you have never made any examinations in order to do so? I have made examinations of all the country to the south of the proposed line of railway.
1267. I mean with reference to the matter referred to in my question? No.

1268.

1268. Can you give no opinion as to the mean distance of a line running from the proposed Maitland and Morpeth line and intersecting the Northern line? I should think the mean distance might be about two miles. A. J. Whalley,
Esq., C.E.

1269. That is the nearest estimate you can give at the present time? That appears to me to be about what it is. 22 Oct., 1861.

1270. Do you not think any line of railway which runs parallel to an existing line, the mean distance of which does not exceed two miles, may be fairly called a parallel line? I do not think that this is a parallel line.

1271. What is the nearest approximation to a line which you, in your judgment, would consider a parallel line, where an existing line is constructed? Well, really I do not exactly see how to answer your question. This line, together with a supposed line drawn from any part of its length, would form a triangle with the Great Northern Railway.

1272. You stated just now, or I understood you to state, that the mean distance of a line drawn from this railway to the Government line would be two miles? I suppose it may be.

1273. Do you see any reason to change your opinion on that point? No, I do not.

1274. Then I ask this question—what constitutes a parallel line, in your opinion, to an existing line of railway? A line running parallel to another is one which being produced never so far will not meet it. This line does meet the Great Northern line.

1275. I am quite aware there is an intended junction, but I meant with regard to the distance from an existing line of railway? Really I do not—Of course it must be borne in mind that this line is only two miles and a half in length up to the Queen's Wharf.

1276. I did not ask with regard to its length? No, but that has something to do with its relative position with regard to a supposed line drawn to the Northern Railway.

1277. My question was simply this—What constitutes a parallel line of railway to one already existing? I think I stated just now, a line which, being produced never so far, does not meet it; this one does meet it.

1278. You have said—I hope I have not misunderstood you—that taking the whole of this railway, the distance of a line running from the projected line to the Government line south, is a mean distance of only two miles? Certainly I said it might be about that.

1279. *By Mr. Wilson:* What is the length of the railway from Morpeth altogether? Not quite three miles and a half.

1280. Then the greatest distance it can possibly be is a little over three miles? Yes.

1281. *By the Chairman:* Do you not think that, when considering the question whether railway lines are parallel, it is not a mere question of distance from one line to another, but a question as to the way in which the traffic goes and the use of the railway? Yes.

1282. *By Mr. Piddington:* I do not mean to tie you down to a strict answer to my question, such as that with regard to two parallel lines not meeting each other, but whether the proposed Maitland and Morpeth line is not practically a line parallel to the existing Government line? No, I do not think so.

1283. Although you admit it is only two miles from the Government line? Yes.

1284. Where do you propose that the junction should take place with the Government line? At the Pitnacree crossing.

1285. What distance is your proposed junction at Pitnacree from the existing station at East Maitland, on the Government line? I suppose about a quarter of a mile.

1286. From whence do you expect the goods traffic on this line? I presume there will be a large trade in coal.

1287. Where from? From Stoney Creek, Anvil Creek,—

1288. This line does not run to either of those places? No, it does not.

1289. Then you expect the traffic at Stoney Creek to come down the Great Northern line for a very considerable distance? Certainly.

1290. *By the Chairman:* I think you have not been very long in the Colony? About nine months only.

1291. *By Mr. Piddington:* Do you know Anvil Creek. I have passed it.

1292. How many bridges or viaducts will you require to construct on this line? Four bridges and eight flood openings.

1293. Have you an estimate of the separate cost of these four bridges? I have not a separate estimate of the cost of each of them, but I have estimated the whole cost of all the bridges and all the flood openings at £1,646.

1294. What description of bridges do you intend to build? Timber.

1295. Are they intended to be built on piles—timber pile bridges? On piles where the soil will admit of driving them. Of course where the soil will not admit of driving piles we shall put in brick piers.

1296. In how many cases will the soil not admit of pile driving? That I cannot say; it is not my business as yet to ascertain that. Of course when a bridge comes to be built, it will be time then to sink trial pits to ascertain what the subsoil is.

1297. How can you give an estimate of the cost of a bridge if you do not know whether you will have to construct it on timber piles driven into the natural soil, or whether you will have to use bricks for piers? I have estimated them all as being all built of timber.

1298. But you say that in some cases they may possibly have to be built of bricks? It may possibly be so; I only put that in as an alternative. I have no reason for believing it will be necessary in any case.

1299. *By Mr. Morris:* Which is the most expensive? I believe there will be very little difference in the cost of the two.

1300. *By the Chairman:* What is the height of the highest? About twelve feet.

1301. *By Mr. Piddington:* Have you any reason to believe brick piers will not be required? As far as I know the nature of the ground, I have no reason to believe they will be required.

1302.

- A. J. Whalley, Esq., C.E.
 22 Oct., 1861.
1302. Then I presume you will require timber bridges in most cases? They will all be timber, as far as I know at present.
1303. Resting upon piles? Resting upon piles.
1304. How are these piles to be secured? They are to be framed together. I have not brought any design with me, although I have made out some of my drawings; I did not think it would be necessary.
1305. You expect a considerable passenger traffic as well as goods traffic on this line? Certainly.
1306. And do you think you are entitled, as an engineer, to form an estimate for this line, without reference to particular estimates for bridges? I cannot frame my estimate for the line without reference to particular estimates for the bridges.
1307. You appear to have framed your estimate without particular reference to the nature of the bridges? No, I say I have made my drawings of the bridges, but I have not brought them here, because I did not know they would be required or asked for even.
1308. Do you not think it is desirable that a Committee of the Assembly should investigate closely the nature and construction of bridges on which a great number of passengers may travel? It might be considered expedient.
1309. Do you not think the construction of a bridge is a very important question, with reference to the safety of travellers? Undoubtedly it is.
1310. I want to know in what manner you propose to build these bridges; whether they are to be braced or secured? Certainly they are; you cannot build a bridge without it.
1311. In what way is it proposed to brace them? To brace them diagonally and strut them with battering piles.
1312. How many piles do you intend to drive in a line with each other? Three perpendicularly, and two battering piles, one on each side, the whole secured by waling pieces a short distance from the ground, and braced with diagonal braces, and the whole held together with wrought-iron bolts.
1313. *By Mr. Morris:* What will be the diameter of the piles? I have reckoned the scantling of the piles at 13 inches by 13 inches.
1314. Square? Square.
1315. *By the Chairman:* Many of the bridges on the Government line are much higher than twelve feet? One over Black Creek is nearly forty feet high.
1316. *By Mr. Piddington:* Do you intend to use the same means of securing your bridges that the Government have used at Black Creek? Really I do not know exactly what those means are; I have merely passed it at a distance, and I have been told what its height is.
1317. I mean with regard to strengthening the bridges, and so forth? I propose to brace and strut them in the way I have usually seen these things constructed; and I have had the construction of a good deal of timber work of that kind in India.
1318. What is the span of the proposed bridges—is there more than one archway or span? Several.
1319. What is the distance between each row of piles? One hundred feet* from bank to bank, on the top of the bank; allowing for the slope, the opening at the foot of the bank will not be so much. It will be a hundred feet at the level of formation.
1320. Are there any works that may be called viaducts on this line, where there is more than one span, I mean in a longitudinal direction? Yes; there is more than one span in them.
1321. I am not speaking of the width of the bridge from bank to bank, but the distance between two rows of piles? I reckon that at 20 feet.
1322. *By the Chairman:* I understood you to say, that though you had not calculated the cost of brick piers, there would be very little difference between them and wooden piers in bridges 12 feet high? The superstructure, that which carries the rails, would still be of timber; the only difference would be, that instead of using timber piers, the piers would be of brick; and I think when you take into consideration the difference in the cost of carting and so on, the brick piers would be found to come almost as cheap as the timber.
1323. *By Mr. Piddington:* Are you acquainted with railways in England, and railway legislation? I cannot say that railway legislation is my business.
1324. I am merely asking whether you are acquainted with the matter? I cannot say I am.
1325. Have you been employed on any railways in England? No; I have not been employed on railways in England, but I was employed on railways all the time I was in India.
1326. You are not acquainted with any limitations which the English Legislature insist upon with regard to railways? I am aware there are certain points which the Legislature requires should be attended to.
1327. In England? In England; and it has been my endeavour to meet all those requirements of the English Legislature as far as possible in this case, because I was not exactly aware what the requirements in this Colony were.
1328. You now allude to engineering matters exclusively? To engineering matters exclusively, with such provision for the convenience of the public generally as can be made in carrying out the work.
1329. I suppose you do not know of any rule in English railway Bills to fix the maximum scale of charges for the conveyance of goods and passengers? I am not aware of it; very likely there may be such.
1330. *By the Chairman:* Will the diversions it is proposed to make in any way interfere with the traffic of the road? No; these diversions will be made before the line is commenced.
- 1331.

*NOTE (on revision):—In this bridge. (I pointed to the largest bridge on the line at the time I spoke.)

1331. And after they are made, they will not interfere with the traffic on the road? No.* A. J. Whalley, Esq., C.E.
1332. *By Mr. Iceton*: Are they of very great extent, or very small? Small.
1333. *By Mr. Piddington*: I perceive that a question was put to you last Session, as follows:—"We have had before the House at different times various opinions as to the best mode of staying piles in a viaduct or culvert—what is your opinion on the point; or rather how do you propose to stay your piles, by longitudinal or by cross braces? The kind of thing I propose is merely to place on the piles the timber necessary for carrying the rails, and these timbers would of themselves be braces." Do you adhere to that opinion now? That is not altogether a correct report of what I said, and at the time the thing was before the House I spoke to Mr. Morris about it. I never had my evidence sent to me to correct before it was published.
1334. Then this answer is not to be taken as your answer at the present time? No, nor was it my answer then.

22 Oct., 1861.

THURSDAY, 24 OCTOBER, 1861.

Present:—

- | | | |
|----------------|--|-----------------|
| Mr. ARNOLD, | | Mr. T. GARRETT, |
| Mr. BELL, | | Mr. MORRIS, |
| Mr. BUCHANAN, | | Mr. PIDDINGTON, |
| Mr. DALGLEISH, | | Mr. WILSON. |

WILLIAM CHARLES WINDEYER, Esq., IN THE CHAIR.

Thomas Iceton, Esq., appeared as Solicitor for the Bill.

John Whitton Esq., called in and examined:—

1335. *By the Chairman*: You are Engineer-in-Chief for Railways in this Colony? I am. J. Whitton, Esq.
1336. You are acquainted with the subject matter of the 41st clause of the Maitland and Morpeth Railway Bill? Yes, I have a copy of it here.
1337. Does that clause contain anything on which you, as an engineer, and in your position, can give the Committee any particular information? Not as an engineer; but it certainly is a clause I do not clearly understand. The provisions contained in the clause are not quite intelligible to me, but it may possibly be because I do not understand the intention of the person who drew the Bill. In the first part of the clause provision is made to allow the Government to purchase the line after twenty-one years, on payment of a sum equal to twenty-five years' purchase of the annual profits estimated on the average of the seven next preceding years "Provided always that if the average rate of profit for the said seven years shall be less than the rate of fifteen pounds per one hundred pounds it shall be lawful for the Company if they shall be of opinion that the said rate of twenty-five years purchase of the said average profits is not an adequate rate of purchase of such railways and other works and appurtenances reference being had to the future prospects thereof to require that it shall be left to arbitration in case of difference to determine what (if any) additional amount of purchase money shall be paid to the Company." Then the last part of the clause provides "That such option of purchase shall not be exercised except with the consent of the Company while any such reduced scale of tolls fares and charges as aforesaid shall be in force." Under this clause it appears to me that unless the Company can charge whatever rates they please, they will be able to refuse to allow the Government to purchase on any terms.
1338. Then it is the last proviso that gives the ambiguity to the clause in your opinion? Yes, I think so.
1339. And you think the clause would be improved if the last proviso were done away with? I think the clause would be improved if it were so altered as to give the Government the right to purchase at any time, on payment to the shareholders of a certain premium on the money they had expended. I think it would make the clause clearer.
1340. *By Mr. Morris*: Have you ever seen a similar clause to this in any other Bill? No, but I have been told there is a similar clause in the Hunter River Railway Company's Bill.
1341. And the Pymont Bridge Company's Bill? No, I think the clause in the Pymont Bridge Company's Bill is to the effect that the Government may purchase the bridge within seven years, on payment of a premium of ten per cent. on the sum expended in the construction of the bridge.
1342. *By Mr. Piddington*: You have noticed the stipulation, contained in the 41st clause of

24 Oct., 1861.

* NOTE (on revision):—The work on the line will not interfere with the traffic of the road.

J. Whitton, Esq. of this Bill, that the Government shall not be permitted to purchase the railway unless they give the Company twenty-five years' purchase, calculated on the average profits of the seven preceding years? I have.

1343. What is your opinion of that limitation of the power of the Government to purchase? I think the clause had better be altered altogether, giving the Government power to purchase at any time, by paying a certain premium to the shareholders on their expenditure. But although, in the first part of the clause, power is given to the Government to purchase, the last proviso prevents the Government from doing so, "except with the consent of the Company while any such reduced scale of tolls fares and charges as aforesaid shall be in force." It therefore appears, that if the Government or the Legislature should interfere, under clause 39, with any rates the Company may propose to charge for carriage along that line of railway, the Government will have no power to purchase at all if the Company are not willing to sell.

1344. With reference to the stipulation for twenty-five years' purchase, do you think that is a fair stipulation for the Company to insist upon—do you think twenty-five years' purchase is, or is not, a moderate sum for the Government to be asked to pay? I do not think it is a moderate sum; but at the same time I think the clause would be far better if it were put as I say.

1345. Do you know the average price of real property, with regard to the number of years' purchase? In this country, from eight to ten years; in England, it may be twenty to twenty-five years.

1346. In this Colony, I mean? Perhaps ten or twelve years' purchase.

1347. In that case, if the average price given for real property is ten years' purchase, do you not think this an enormous sum to ask the Government to give—twenty-five years' purchase for an interest of this description? I think it is.

1348. Have you noticed the first proviso, which provides that if the average rate of profit shall be less than fifteen per cent., it shall be lawful for the Company to insist that a higher rate than even twenty-five years' purchase shall be given by the Government? It is left to arbitration; it is not compulsory that a higher rate shall be given.

1349. Do you notice that, although the question in dispute is to be referred to arbitration, the point is not whether a lower sum shall be given, but what additional sum shall be paid to the Company? Decidedly. I imagine the arbitrators would have no power to award less.

1350. *By the Chairman:* The arbitrators might decide that nothing additional should be given? The Bill certainly implies that the arbitrators shall only have power to consider what additional amount shall be paid.

1351. *By Mr. Piddington:* Provided the Company does pay fifteen per cent. the question will not arise? I think not.

1352. And if they do not pay fifteen per cent., the only point left to the arbitrators will be the additional amount to be paid? Yes.

1353. In reference to the last proviso of this clause, the Company appears also to demand that, if a certain scale of charges be not assented to, or in existence, the Government are not to have any power of purchase whatever? Yes.

1354. So that the last proviso entirely nullifies, under certain circumstances, the supposed privilege conferred by the previous part of the clause? Certainly.

1355. Are you aware that the English Parliament will not permit any clause to authorize any power of sale, lease, or amalgamation in any Bill for the construction of a railway? I am not quite clear on that, there are so many railway Bills.

1356. Are you aware that Committees of the House of Commons on railway Bills fix a maximum rate of charge for the conveyance of goods and passengers? In all cases.

1357. Do you find any scale of that description contained in this Bill? No; that is one of the suggestions I intended making.

1358. It is not contained in the draft of the Bill? No. As I am before the Committee, I wish to make a few suggestions as to this Bill. (*Witness requested to withdraw. Being re-introduced; examination continued.*)

1359. *By the Chairman:* The Committee have come to the conclusion that you may make what suggestions you think proper to the Committee; not with regard to the general policy of the Bill, or the Bill generally, but with regard to any engineering questions which may be raised by it? The first suggestion I have to make is with regard to clause 14 of the new Bill, which gives power to the Company to make a junction with the Northern Railway at any point at or near to East Maitland, which may appear most suitable and proper to the Board of Directors of the said Company. I think that permission is far too indefinite, and that the place of junction should be fixed as nearly as possible to some point shown on a plan. Otherwise I see nothing in this Bill to prevent the Company carrying their line on to West Maitland and forming the junction there. I think the Bill should state that the junction should be made near the Pitnacree road; the exact point to be determined between the Directors and the Commissioner for Railways, in accordance with the 99th section of the Government Railways Act of 1858. The next clause is clause 18. The Company take power under this clause to make any branch railways and all works connected therewith to any places not authorized by this Bill. In fact there is no limit that I can see. The Bill being a private Bill, the proving the preamble has been limited to the plan before the Committee; but the indefinite powers of extension here given will enable the Company to go through the lands of parties who might have objected to the Bill if they had known the intention of the Company.

1360. *By Mr. Iceton:* Under which clause do you conceive the Company will have the power you mention—Are these the words, in the 17th line,—“any extension or branch thereof?” Yes, they are to take power to do what “may be necessary and proper for the laying

"laying out, making, constructing, and the convenient operation of the said railway and any extension or branch thereof." J. Whitton, Esq.

1361. Those are the words you think objectionable? Yes, I think under the clause as it stands, the Company will have the power to extend their railway in any direction without applying to Parliament for a new Bill. I think the powers given to the Company should be limited to the plan before the Committee; and for any extensions that may be requisite afterwards, the Company should deposit fresh plans and apply for a new Bill. The Bill should state distinctly that the line shall be of a certain length, and shall commence at a certain point and end at a certain point, to be specifically defined in the Bill. I never saw a railway Bill, or an application for one, in which the two points were not distinctly stated, as well as the entire length of the line. If it be the intention of the promoters to make the line from East Maitland to the Queen's Wharf at Morpeth, I do not see that there can be the slightest objection to inserting a clause to that effect. The next clause is the 19th. I simply wish to introduce into the proviso the following words—"or to take or use any portion of the land belonging to the Commissioner for Railways without his consent." In clause 39 power is given to the Company to take tolls or rates, but I see no schedule of rates in the Bill. I think the rates should not be allowed to exceed those fixed from time to time by the Governor and Executive Council for the Great Northern Railway, for the like distance. The only other suggestion I have to make is that a clause should be inserted in this Bill, to the effect that nothing herein contained shall alter, repeal, or otherwise affect the Government Railways Act of 1858.

1362. *By Mr. Dalgleish*: May I ask if there is any provision in this Bill for enforcing whatever alterations may be recommended by the Government Engineer—There is a clause which authorizes the Government Engineer to inspect, but there is no power to enable him to enforce his recommendation—is not that necessary? Certainly I think it is, but as I was not examined before the Committee on engineering questions, I do not consider myself responsible for anything connected with such matters in this Bill.

1363. From your knowledge of parliamentary inquiries with regard to railway Bills, is it usual to restrict the examination of a witness to one particular clause?

The question being objected to, the Committee decided that it could not be put.

1364. *By the Chairman*: Is there any other matter in this Bill connected with engineering questions, to which you wish to make reference—It is the opinion of the Committee that you should confine yourself to matters of engineering skill? No, I see nothing in the Bill of that kind. By a sketch I saw just now, the line appears to be laid out as far as the Queen's Wharf as I laid it out; I have not noticed any deviation, and I do not know of any engineering question to which I wish to direct attention.

1365. *By Mr. Dalgleish*: Did you receive instructions to confine your answers to one clause of the Bill?

Question overruled, and witness directed to withdraw.

John Rae, Esq., called in and examined:—

1366. *By the Chairman*: What is the office you hold? Under Secretary for Works and Commissioner for Railways. John Rae, Esq.

1367. *By Mr. Piddington*: Have you looked over this proposed Bill for the construction of a private railway from Maitland to Morpeth? I have glanced over it. 24 Oct., 1861.

1368. Will you have the goodness to refer to clause 41? I have it before me.

1369. Do you observe that the proposed Company stipulate, that if the Government choose to exercise the right of purchase, they are to be compelled to pay to the Company twenty-five years' purchase of the annual divisible profits, estimated on the average of the next preceding seven years? Yes.

1370. Do you think that is a reasonable sum to be stipulated for by this private Company? I think it a high price, compared to what is considered the value of house property in this Colony—more than double what I should consider the value of house property.

1371. The value of house property is ten or twelve years' purchase in favourable situations? I should say ten years' purchase would be a fair average, rather high than otherwise.

1372. You observe that the first proviso provides that if the average rate of profit for the said seven years shall be less than fifteen per cent., the Company may then proceed to arbitration, with a view of obtaining more than twenty-five years' purchase? Yes.

1373. So that the Company are evidently not satisfied with twenty-five years' purchase, unless they realise fifteen per cent.? It seems so.

1374. And then the last proviso provides that such option of purchase shall not be exercised except with the consent of the Company, while any such reduced scale of charges as is mentioned in a previous clause is in force? Yes, that I think does away with the intention of the former part of the clause.

1375. You are of opinion that the last proviso reduces the whole previous part of the clause almost to a nullity? Almost. I think the clause is exceedingly confused in drawing—

1376. With reference to the stipulations? With reference to the stipulations—I think the one seems to eat up the others. I think a simple clause, that the Government should have the power at any time to purchase these railway works at a fair valuation, would be more advisable.

1377. *By Mr. T. Garrett*: Agreed upon by arbitration? Yes.

1378. *By Mr. Piddington*: Would the valuation arrived at as you proposed be based on the total expenditure, or a valuation based on the profits? I believe it would include both. The

- John Rac, Esq.
24 Oct., 1861.
- The arbitrators would be left to judge what the actual value of the property was at the time, and to say what premium should be paid.
1379. In advance upon the first cost? Yes. In practice, in settling the amounts to be paid by the Government for land taken for railways, we find that the arbitrators take into account not only the actual value of the property at the time, but also the forced sale and the prospective advantages which would increase the value of the property. It would simplify the matter much to allow the Government to purchase at a fair valuation at any time, because if they find it necessary or advisable to take over this railway, it may happen next year as well as in twenty-one years.
1380. With reference to the twenty-five years' purchase—are you of opinion that it would not be consistent with the public interest that that should be assented to by the Legislature? I should think not, but of course it is a matter for the Legislature itself to decide.
1381. Are you aware that the English Parliament will not permit any clause to authorize any power of sale, lease, or amalgamation, in any Bill for the construction of a railway? I am not aware.
1382. *By Mr. Morris:* You remember, no doubt, the Hunter River Railway Company's Act? Yes.
1383. Was there a similar clause to this in it? There was.
1384. Was it not the same *verbatim et literatim*? I cannot say; I have not compared the two.*
1385. *By Mr. Arnold:* You say you think this Company ought to be obliged to sell to the Government at a valuation, supposing the railway proves a success, while if it proves a failure the Government will not be compelled to purchase? It will cut both ways, of course;† but if you refer the matter to arbitrators they will take all circumstances into account.
1386. But in any case, the compulsory sale falls only on the Company? Quite so. That is a reason why they should be paid a higher valuation than is usual in the case of ordinary purchases.
1387. Did you ever know any case of a railway being sold to the Government before? Yes.
1388. Was that sold at as high a rate as twenty-five years' purchase of the net receipts? The Hunter River Railway was sold for the amount of the expenditure,‡ with an addition of a premium of seven per cent.
1389. Was the price then paid more than twenty-five years' purchase of the annual net receipts? I am not prepared to say how much, but it must have been much more than that, because the annual net receipts were very small.
1390. You are familiar with the mode in which the Government compensate persons whose land they take—is it the case that they often give more than twenty-five years' purchase? Yes.
1391. Very frequently? Yes.
1392. Very much more than that? Yes.§
1393. Do you know of any reason why the same scale of compensation should not be given to this Company as to other persons whose property is taken by the Government? I am not aware of any reason; but I think, as I said before, that it is a high rate to pay, and the only reason that it is fixed so high is that it is compulsory. It is not higher than other cases that have happened, but it is higher than the general rate.
1394. Not higher than where the Government take property compulsorily from individuals? No.
1395. *By the Chairman:* Will you be good enough to compare this clause with that which has been alluded to in the Hunter River Railway Company's Act, and say whether it is the same? Yes; the clauses are identical.
1396. *By Mr. Piddington:* You have spoken of the sale of a railway to the Government—what railway did you allude to? Both the Hunter River Railway and the Sydney Railway—the Parramatta line.
1397. Is it the fact or not, that the Government never paid to either of these Companies more than seven per cent. on the sum supposed to have been expended in the construction of the works? That is what they did pay to the one line.
1398. They paid nothing more? They paid the whole expenditure.||
1399. But not more than seven per cent. premium? No; but the actual price, as Mr. Arnold has said, was very much more than twenty-five years' purchase. With reference to the scale of tolls, there is one thing I wish to mention. A difficulty has been started about the rates not being fixed. It was stated that there is no scale of tolls named in the Bill. I think they are fixed to a certain extent, because you will observe that clause 39 states that the scale of charges shall be such as the Directors of the Company shall from time to time establish, and the proviso provides that if these shall be found excessive, the Legislature may reduce and revise them in such manner as may seem most proper and advisable. That comes practically to the same thing. The Government will always have power to regulate the tolls.

1400.

* NOTE (on revision):—They are at all events the same in substance.

† Revised:—I would leave the option to purchase with the Government.

‡ Revised:—And the Sydney Railway Company for the paid up capital.

§ NOTE (on revision):—Not for the land itself, but for damage by severance and otherwise.

|| Revised:—In one case, and in the other added a premium of seven per cent.

- 1400. Not unless they come to the Legislature? No, I meant the Legislature.
- 1401. *By Mr. Dalgleish:* You have mentioned the sale of the Newcastle line, and the Sydney and Parramatta line—are those cases similar to this? I think they are similar cases. John Rae,
Esq.
- 1402. Was there not a guarantee for five per cent. to be paid by the Government, on all capital expended? There was a guarantee on one of them, and I think on both. 24 Oct., 1861.
- 1403. *By Mr. Arnold:* On all the capital expended? I think so.
- 1404. Or on the first hundred thousand pounds? It was up to a certain extent. I forget the exact amount.
- 1405. *By Mr. Dalgleish:* Is there any such clause in this Bill? No.
- 1406. *By the Chairman:* Do you not think that there being no such provision as a guarantee of five per cent in this case, the Government ought to be more liberal in their terms? I think so. The Company runs greater risk than the other two did.
- 1407. *By Mr. Dalgleish:* Could you not, if necessary, give further evidence on this Bill? I could, probably, if I were asked.
- 1408. You are confined by your summons to answer questions on the 41st clause? I may say I have no further observations I wish to make, but if questions are asked I will answer them, of course.
- 1409. Have you not been warned that you were not to answer any questions except on the 41st clause? I understood, incidentally, that I was to be examined on the 41st clause.

Legislative Assembly.
NEW SOUTH WALES.

MAITLAND AND MORPETH RAILWAY COMPANY'S BILL.
(MAITLAND, MORPETH, HINTON, &c.)

Ordered by the Legislative Assembly to be Printed, 14 November, 1861.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Inhabitants of Maitland, Morpeth, Hinton,
Raymond Terrace, and their vicinities in the Hunter River District, in the
said Colony,—

HUMBLY SHEWETH:—

That, in the last Session of Parliament, a sum of money was placed on the Estimates for the construction of a Railway from the port of Morpeth to the Great Northern Railway, at or near to East Maitland, which sum your Honorable House refused to grant.

That, on the refusal of your Honorable House to grant funds for the construction of said line, as aforesaid, a Company was formed, entitled, "The Maitland and Morpeth Railway Company," for the purpose of making and working the same; to empower the said Company to do which a Bill is now before your Honorable House.

That the construction of the said line would much facilitate and enlarge trade and intercourse between the Districts of the Rivers Hunter, Paterson, and Williams, and the interior of this Colony, as well as between the inhabitants of the places immediately contiguous to the said line; would cheapen the cost of transit, and extensively develop the rich mineral and other resources of this important district, thereby greatly benefiting it and the Colony at large.

That your Petitioners having full confidence in the said Company, and in the beneficial operation of the said Railway, therefore humbly pray your Honorable House to pass the said Bill.

And your Petitioners will ever pray.

[Here follow 1,274 Signatures.]

1861.

Legislative Assembly.

NEW SOUTH WALES.

MAITLAND AND MORPETH RAILWAY COMPANY'S BILL.
(MORPETH, NEWCASTLE, &c.)

Ordered by the Legislative Assembly to be Printed, 14 November, 1861.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Inhabitants of Morpeth, Newcastle, and the Hunter River District,—

RESPECTFULLY SHEWETH:—

That your Petitioners view with considerable interest and misgivings the Bill now before the Assembly, for the Incorporation of the proposed Maitland and Morpeth Railway Company, and they therefore would most respectfully and earnestly urge upon your Honorable House the necessity of discussing this important measure, in all its bearings, previously to its receiving the sanction of Parliament.

That your Petitioners would remind your Honorable House, that the great highway of the District, the Hunter River, is entirely in the hands of two Incorporated Companies of capitalists, who, instead of conducting their business transactions in accordance with the rules of legitimate competition, are acting in direct and open collusion; and that, in consequence of this monopoly, the cost of transporting agricultural produce along this line of traffic, to the Sydney market, amounts ordinarily to one-third, often to one-half, and sometimes to three-fourths of its mercantile value.

That, as the exorbitant freights and prohibitory fares imposed by the Hunter River Steam Navigation Companies have completely prostrated the trade of the District, and virtually cut off all personal intercourse between our residents and the urban population, your Petitioners feel assured that your Honorable House will arrive at the logical conclusion that, to diminish the traffic of the Great Northern Line of Railway, in order to increase the goods traffic of the River, would inevitably augment the cost of transport, and thus further militate against the industrial classes.

That the Directors of the proposed line of Railway being the same as, or identical with, those of the Steam Navigation Companies, your Petitioners venture to hope that your Honorable House will pause before transferring from the public revenue to the pockets of private capitalists, the annual receipts of the Morpeth Toll-bar, which now amount to the sum of seven hundred and thirty-two pounds (£732) sterling.

That, in the event of your Honorable House sanctioning the incorporation of the said Company, and thereby declaring that no evil can possibly accrue from placing a larger portion of the highways of the Colony under the control of private capitalists, your Petitioners, in conclusion, most earnestly pray that your Honorable House will deem it expedient and necessary, either to impose by the statute of incorporation a major limit of ten per cent. to the Company's dividends, or enact that the entire surplus of this limit shall revert to the public Treasury.

And your Petitioners, as in duty bound, will ever pray.

Morpeth, 24 October, 1861.

NEW SOUTH WALES.

MAITLAND AND MORPETH RAILWAY COMPANY'S BILL.
(PETITION OF FRANCES SOPHIA MAGRANE.)

Ordered by the Legislative Assembly to be Printed, 26 November, 1861.

To the Honorable the Speaker and the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Frances Sophia Magrane, of Balmain, in the Colony of New South Wales,—

HUMBLY SHEWETH :—

That your Petitioner is possessed of a piece or parcel of land, situate at East Maitland, in the said Colony, containing two acres.

That there is now before your Honorable House a Bill to establish and incorporate a Company, to be called, "The Maitland and Morpeth Railway Company, and to enable the said Company to construct and work a line of Railway between the Port of Morpeth, in the Colony of New South Wales, and the Great Northern Railway, at or near to the Town of Maitland, in the said Colony."

That, by the twenty-second section of the said Bill, it is provided that the said Company shall give notice of the lands taken, ascertained, set out, and required for the said Railway, to all the parties interested in such lands, or to the parties enabled by said Bill to sell, convey, or release the same, when the said Company shall have been made and completed the map or plan and book of reference therein required to be made.

That the aforesaid property of your Petitioner constitutes a portion of the land ascertained, set out, and required for the said Railway, but that your Petitioner has not received any notice whatsoever from the said Company to that effect, nor has any person on her behalf, as your Petitioner believes, received any such notice.

That your Petitioner has also inspected the said plan of the said Railway, but does not find thereon any reference whatever to her in relation to the said land.

Your Petitioner, therefore, feels herself aggrieved, and humbly prays that your Honorable House will be pleased to withhold your consent to the said Bill until the requirements therein contained, and hereinbefore set forth, shall have been complied with.

And your Petitioner, as in duty bound, will ever pray.

F. S. MAGRANE.

7 November, 1861.

1861.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY TO GOULBURN.

(DISTRICT OF GOULBURN, AND COUNTY OF ARGYLE.)

Ordered by the Legislative Assembly to be Printed, 11 October, 1861.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Inhabitants of the District of Goulburn, and County of Argyle,—

SHEWETH :—

That your Petitioners, having learnt that it is the purpose of the Government to place certain sums upon the Estimates for Railway extension, humbly and earnestly pray to be allowed to place before your Honorable House the claims of the Southern line, which, your Petitioners trust, will not fail to indicate the necessity for prompt and decisive measures, whereby Goulburn may be at once connected by Railway with Sydney.

The favored climate of the South is eminently adapted for the growth of cereals. With such facilities of transit as all civilized countries do or seek to possess, an impetus would be given to agricultural pursuits, a demand for the acquisition of land would be created, and the South would be in a position to supply the metropolis with breadstuffs, while the Colony would retain in circulation amongst its people the very large sums annually paid for the importation of such necessaries.

There are, between Picton and Goulburn, the richest of Iron Mines, a field of Coal contiguous to the Hanging Rock, and inexhaustible quantities of Limestone, all of which lie profitless.

The route through Goulburn leads to the most numerous and richest Gold Fields in the Territory of New South Wales, and it also is the great highway between the Cities of Sydney and Melbourne.

It is well known to the Government that the absence of speedy and certain communication has led to disaffection amongst important sections of the community, who feel that a disregard has hitherto been shewn to the well-nigh despairing cry for attention to their wants in this particular.

Sydney, with its magnificent harbor, will little avail to provoke commerce without internal lines of Railway, if the more energetic neighbouring Colonies continue in the advance-step already made.

Goods at the present time are now being delivered from South Australia, six hundred miles, into our Colony, for seven pounds per ton.

Your Petitioners conceive they but express the unprejudiced opinion of reasonable persons, in declaring that it will tend to raise from depression, and stimulate the interests of the whole Colony, if all available means are devoted to the extension of the Southern Line exclusively, it will be fraught with immeasurably greater advantage to the Colony in its entirety than by the extension of the Northern and Western Lines prolonged to their limits.

Goulburn had the first telegraphic communication because it was on the line to Melbourne; so do similar reasons, though in an increased degree, manifestly point to the vital necessity of the first construction and completion of the Railway towards Albury.

Your Petitioners pray that Railway communication between Sydney and the Southern Districts may be extended and completed as far as Goulburn, at least, with all possible dispatch.

And your Petitioners, as in duty bound, will ever pray.

NEW SOUTH WALES.

RAILWAY EXTENSION TO SOUTHERN DISTRICTS.
(YASS.)

Ordered by the Legislative Assembly to be Printed, 18 October, 1861.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Inhabitants of the District of Yass,—

HUMBLY SHEWETH:—

Your Petitioners having learned that it is the purpose of the Government to place certain sums upon the Estimates for Railway Extension, humbly and earnestly pray to be allowed to place before your Honorable House the claims of the Southern Line, which Petitioners trust will not fail to indicate the necessity for prompt and decisive measures, whereby Goulburn, Yass, and the other towns along that line, may be speedily connected by Railway with Sydney.

The favoured climate of the south is eminently adapted for the growth of cereals. With such facilities of transit as all civilized countries do or seek to possess, an impetus would be given to agricultural pursuits, a demand for the acquisition of land would be created, and the South would be in a position to supply the Metropolis with bread-stuffs, while the Colony would retain, in circulation among its people, the very large sums annually paid for the importation of such necessaries.

There are in the Yass District several rich mines of copper, lead, iron, &c., all of which lie profitless until transit to Sydney is obtainable at a reasonable cost.

The Southern Line leads to the most numerous and richest Gold Fields in the territory of New South Wales, and it also is the great highway between the Cities of Sydney and Melbourne.

It is well known to the Government, that the absence of speedy and certain communication has led to disaffection amongst important sections of the community, who feel that a disregard has hitherto been shewn to the well-nigh despairing cry for attention to their wants in this particular.

Sydney, with its magnificent harbour, will little avail to provoke commerce without internal lines of Railway, if the more energetic neighbouring Colonies continue in the advance step already made. Goods at the present time are now being delivered from South Australia, six hundred miles into our Colony, for £7 per ton.

Petitioners conceive they but express the unprejudiced opinions of reasonable persons, in declaring that it will tend to raise from depression and stimulate the interests of the whole Colony, if all available means are devoted to the extension of the Southern Line exclusively; it will be fraught with immeasurably greater advantage to the Colony in its entirety, than by the extension of the Northern and Western Lines prolonged to their limits.

As the first telegraphic communication was established along this line, in order to connect Sydney with Melbourne, so do similar reasons, though in an increased degree, manifestly point to the vital necessity of the first construction and completion of the Railway towards Albury.

Your Petitioners pray that Railway communication between Sydney and the Southern Districts may be extended and completed with all possible dispatch.

And your Petitioners will ever pray, &c., &c., &c.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY EXTENSION TO SOUTHERN DISTRICTS.

(OVENS GOLD FIELD, VICTORIA, AND HUME DISTRICT, N. S. W.)

Ordered by the Legislative Assembly to be Printed, 7 January, 1862.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Residents on the Ovens Gold Field, Victoria, and Hume District, New South Wales,—

RESPECTFULLY SHEWETH :—

That your Petitioners, observing with satisfaction the steps now being taken to proceed with the formation of the Great Southern Railway to Goulburn, take the present opportunity of addressing your Honorable House, with a view of representing the advantages of extending the said line still further to Albury.

That the extension of the line to Albury, as aforesaid, will place within the reach of Sydney the rich Gold Fields of the Ovens and Murray Districts, lying within a mean distance of about twenty miles from the Border. That the population of the Ovens Gold Field, according to the last Census, was 30,833 souls. That a capital of £118,720 is invested in mining machinery upon those Gold Fields, and that upwards of fifty steam engines are constantly employed in quartz-crushing and pumping. That the District contains one hundred and four quartz reefs, together with extensive and permanent surface diggings, numerous remunerative deep leads, &c., &c. That since the discovery of the Gold Field, the following quantities of gold have been transmitted by Escort :—

	ozs.	dwt.	grs.
November, 1852	27,966	3	
" 1853	198,436	0	
" 1854	138,588	0	
" 1855	192,027	3	
" 1856	342,828	0	
" 1857	346,809	0	
" 1858	245,291	10	
" 1859	284,017	0	
" 1860	286,616	15	
October, 1861	228,902	0	
Total.....	2,291,482	1	

which quantity of gold, valued at £4 per ounce, represents a sum of £9,165,928 sterling.

Your Petitioners entertain but little hope of ever being placed in Railway communication with Melbourne, and moreover they are unable to secure from the Victorian Government even those ordinary road improvements which have been so lavishly made to those more fortunate Gold Fields now being connected by Railway with Melbourne. That the absence of proper means of communication raises the price of necessaries in this portion of the Colonies to a ruinous extent, and operates as a most grievous tax upon the consumer. That, under these circumstances, your Petitioners are compelled to apply to the Sydney Legislature for relief, feeling convinced that the trade of these districts would render the through line a payable speculation.

Your Petitioners would also direct the attention of your Honorable House to the fact that, whereas the line to Goulburn cannot be expected to command the Pastoral Districts of Murrumbidgee, an extension to Albury would restore to Sydney the whole of the trade of those Districts, thus obviating all necessity for erecting Border Custom Houses on the northern bank of the Murray.

2 RAILWAY EXTENSION TO SOUTHERN DISTRICTS.—PETITION.

Should your Honorable House determine upon carrying out the extension above recommended, it would be the object of your Petitioners to endeavour to organize a private Company for constructing a short Railway from Albury, *via* Chiltern, to Beechworth, so that goods arriving from Sydney, consigned to merchants on the Ovens, would not have to be broken in bulk, or conveyed from the Border by drays.

Your Petitioners therefore pray that the arguments adduced in this Petition may be duly considered by your Honorable House, when the Ministerial Railway scheme comes under discussion, so as to ensure the completion of the line to Albury.

And your Petitioners will ever pray, &c., &c.

1861.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY TO WESTERN DISTRICTS.

(BATHURST.)

Ordered by the Legislative Assembly to be Printed, 26 November, 1861.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Stockholders, Merchants, Storekeepers, Tradesmen, Agriculturists, Miners, and others, Inhabitants of the District of Bathurst,—

SHIWEETH :—

That notwithstanding the large expenditure upon the main road between Bathurst and Sydney during the past two or three years, experience has shewn that, as a means of commercial communication in rainy seasons, it is utterly inadequate to the business requirements of the Western Districts.

That during the past winter the prevalence of excessive moisture has caused serious impediments of every species of traffic, amounting at times to almost total cessation, and that heavy pecuniary losses have thereby been sustained by business people of all classes, which have resulted in correspondingly serious loss and inconvenience to the community generally.

That independently of the accidents of weather, the increase of population of the district, its numerous resources, pastoral, agricultural, and mineral, some of which are unproductive, owing to the difficulties and dearness of transit and the total absence of water communication, necessitate the adoption of some superior mode of intercourse between Bathurst and the Metropolis, to the one now in existence.

That, at a Public Meeting held at Bathurst on the 17th day of June last, it was, after full discussion, resolved, that in the opinion of that meeting, the cheapest and best mode of communication between Bathurst and the Metropolis, would be steam locomotive Railway transit, and that nothing short of that would meet the requirements of Bathurst and the other Western Districts.

That your Petitioners rejoice to see by the Report of the Engineer-in-Chief, dated 31st July, 1861, not only that there are no insurmountable engineering difficulties against the laying down of a Locomotive Railway between Penrith and Bathurst, but also that the costs of such a Railway would not exceed £10,000 per mile.

That your Petitioners are of opinion that it would be highly detrimental to the interests of the community at large, if any preference is given to one district over another in the matter of Railway communication.

Your Petitioners therefore humbly pray that your Honorable House will take the matter of this Petition into your early consideration, and adopt such measures as will ensure speedy steam locomotive communication between Bathurst and Sydney.

And your Petitioners will ever pray.

[Here follow 1,274 Signatures.]

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY TO WESTERN DISTRICTS.

(CERTAIN INHABITANTS, BATHURST, IN PUBLIC MEETING ASSEMBLED.)

Ordered by the Legislative Assembly to be Printed, 26 November, 1861.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Professional Men, Stockholders, Merchants, Storekeepers, Tradesmen, Agriculturists, Miners, and Inhabitants generally, of the Town and District of Bathurst, in Public Meeting assembled,—

SHEWETH :—

That your Petitioners view with astonishment and alarm the provision made in the financial statement for public works during the ensuing year, in which a sum of money is proposed for the construction of a Railway to Goulburn, a Horse Tramway to Mudgee, and improved communication to other localities, whilst the Town and District of Bathurst are altogether ignored.

That your Petitioners emphatically protest against the gross injustice sought to be perpetrated upon the Western Districts by such a repudiation of their rights, and, as a matter of simple fairness and common justice, ask that they shall be placed upon the same footing with the other great districts of the Colony, as regards improved communication.

That the Western Districts possess unbounded mineral and other resources of ascertained richness, which would vastly contribute to the wealth of these regions, and therefore, of the Colony at large; but which, from want of some cheap and expeditious mode of transit, are unavailable.

Your Petitioners therefore humbly pray that your Honorable Assembly will be graciously pleased to take these circumstances into consideration; and, in the prosecution of the railway policy of the Government, will grant to the Western Districts mile for mile of Railway with the other great districts of the Colony.

And your Petitioners will ever pray, &c.

(Signed for and on behalf of the Meeting.)

WILLIAM LEE,
Chairman.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY TO WESTERN DISTRICTS.
(HARTLEY.)

Ordered by the Legislative Assembly to be Printed, 26 November, 1861.

To the Honorable the Legislative Assembly, in Parliament assembled.

The humble Petition of the Inhabitants of the District of Hartley,—

SHEWETH :—

That your Petitioners hear, with unfeigned surprise and regret, that a sum of money is to be placed upon the Estimates for the present year, for the formation of Railways and Tramways in the Southern and Northern Districts, excluding the Western Districts.

That your Petitioners, without wishing to assume any dictation, would most respectfully urge that they think, with regard to the formation of Railways or any other improved mode of transit, the expenditure ought to be equally distributed.

That such a proposal as that made by the Government would so materially affect the prospects of the Western Districts (more particularly that of Hartley), that your Petitioners pray for just consideration of the matter.

And your Petitioners will ever pray, &c.

JOHN DELANEY, J.P.,
Chairman.

1861.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY TO WESTERN DISTRICTS.
(CARCOAR.)

Ordered by the Legislative Assembly to be Printed, 26 November, 1861.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

Petition of the Inhabitants of the District of Carcoar,—

HUMBLY SHEWETH:—

That your Petitioners perceive, with regret and indignation, that provision has been made for a Railway to Goulburn and Horse Tramways to Mudgee and Tenterfield, whilst Bathurst and the surrounding districts are entirely neglected.

That your Petitioners remonstrate against the provision alluded to for improved transit, as a repudiation of their just and reasonable claims, and ask, as a matter of simple justice, that the Western shall be placed on the same footing with the other great districts of the Colony.

Your Petitioners desire to draw the attention of your Honorable House to the fact that the Western Districts possess immense agricultural and mineral resources, which are either very partially developed or totally unavailable, in consequence of the dearness and difficulties of the existing means of transit; that their population is equal in number, and their contributions to the Revenue equally large with those of the other great districts of the Colony.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to take the above recited facts into consideration, and grant a co-equal extension of the Western Railway with that already proposed for the District of Goulburn.

And your Petitioners will ever pray, &c., &c., &c.

THOMAS ICELY,
Chairman.

Carcoar, 30 October, 1861.

Legislative Assembly.

NEW SOUTH WALES.

IMPROVED COMMUNICATION WITH THE INTERIOR.
(GUYONG, CORNISH SETTLEMENT, &c.)

Ordered by the Legislative Assembly to be Printed, 20 January, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Inhabitants of Guyong, Cornish Settlement, and surrounding country, in public meeting assembled,—

HUMBLY SHEWETH :—

That your Petitioners have learnt with deep disappointment that the Financial Scheme of the Government for Improved Transit provides for a Railway to the South and Horse Tramways to other Districts, but makes no similar provision for Bathurst.

That the population and resources of the Western Districts are equally large with those of any of the other great Districts of the Colony, and, with the aid of Railway communication, are capable of indefinite extension and development; and that your Petitioners feel assured that until some superior mode of transit be provided, their progress will be seriously impeded.

Your Petitioners therefore devoutly pray that your Honorable House may be pleased to consider the premises herein set forth, and adopt the necessary means for extending the Western Line of Railway to Bathurst.

And your Petitioners, as in duty bound, will ever pray.

Signed in behalf of the Meeting,—

WM. TOM,
Chairman.

1861-2.

Legislative Assembly.

NEW SOUTH WALES.

IMPROVED COMMUNICATION WITH THE INTERIOR.

(BLANEY AND KING'S PLAINS.)

Ordered by the Legislative Assembly to be Printed, 20 January, 1862.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Stockholders, Agriculturists, Storekeepers, and Inhabitants generally, of the Township of Blaney, and of King's Plains, in public meeting assembled,—

HUMBLY SHEWETH:—

That your Petitioners regret to perceive that, in the provision made for Improved Transit in the Financial Statement of the Government, a large sum of money is proposed for expenditure upon a Railway to the South, and Horse Tramways to other localities, whilst Bathurst and the surrounding Districts are left without any provision whatever.

That the Western Districts are equal in point of wealth and population to any of the great Districts of New South Wales, and possess mineral resources of immense value, whose development is retarded for want of cheap and expeditious transit; that serious loss and inconvenience are yearly experienced by these communities, from the cause now stated; and that your Petitioners complain that, in the proposed distribution of Revenue for Rail and Tramway purposes, by far the most populous and important portions of the Western Districts are ignored.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to take the foregoing circumstances into consideration, and to adopt such steps as may be necessary for securing to Bathurst and the surrounding Districts, co-equal Railway extension with the other great Districts of the Colony.

And your Petitioners, as in duty bound, will ever pray.

Signed on behalf of the Meeting,
WM. STEWART, Chairman.

1861.

Legislative Assembly.

NEW SOUTH WALES.

PROPOSED HORSE RAILWAY FROM SINGLETON
TO MUDGEE.

(NEWCASTLE.)

Ordered by the Legislative Assembly to be Printed, 9 December, 1861.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Council assembled.

The humble Petition of the Inhabitants of the City and District of Newcastle, in the Colony aforesaid,—

HUMBLY SHEWETH:—

That your Petitioners have observed, with much satisfaction, that a sum of money has been placed upon the Estimates for the year 1862, by the Government, for the construction of a line of Horse Railway from Singleton to Mudgee.

That your Petitioners are desirous of pointing out to your Honorable House some of the advantages that will be afforded by the proposed line of Railway:—

First.—That the line from Singleton to Mudgee will not exceed 110 miles in length, and will pass through a very level country, peculiarly suited for settlement and cultivation; that in the immediate vicinity there exist extensive forests of ironbark; and that the engineering difficulties will be few, thus materially reducing the price of construction.

Second.—That the construction of the line will afford safe, commodious, and expeditious transit to a large extent of country, embracing the towns and districts of Mudgee, Rylstone, Wellington, Dubbo, Orange, Molong, the Western Gold Fields, a large portion of the Liverpool Plains district, the Bligh district, the Lower Namoi River, &c.

Third.—That the extent of the productions of these countries is well known; and that to the north and westward of Mudgee the country is nearly a dead level, offering the greatest facilities for future Railway extension.

Fourth.—That the traffic that now comes from the westward and north-west portion of the Colony, by various routes, will be almost entirely drawn to the proposed line of Railway, and all produce destined for shipment will be easily conveyed by that line and the Great Northern Line of Railway to the sea-coast; and the same will be the case with respect to all goods, &c., to be transmitted from the coast to the interior.

And your Petitioners therefore pray that your Honorable House will take the preceding into your consideration, and will afford your Petitioners such advantages as will accrue from the construction of the proposed line of Horse Railway from Singleton to Mudgee.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

[Here follow 180 Signatures.]

1861.

Legislative Assembly.

NEW SOUTH WALES.

PROPOSED HORSE RAILWAY FROM SINGLETON TO MUDGEES.

(MUDGEES.)

Ordered by the Legislative Assembly to be Printed, 9 December, 1861.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Council assembled.

The humble Petition of the Inhabitants of the Town and District of Mudgee, in the Colony aforesaid,—

HUMBLY SHEWETH:—

That with much satisfaction your Petitioners have observed that a sum of money has been placed upon the Estimates for the year 1862, by the Government, for the construction of a Line of Horse Railway from Singleton to Mudgee.

That your Petitioners, from the late discussion that has taken place in your Honorable House upon the subject of Railway Extension, are apprehensive that this proposal of extending the Northern Line of Railway to Mudgee does not meet with the approbation that they are anxious and desirous it should, and that, either from misapprehension of locality, or want of information with respect to the advantages that will be opened out from the construction of the proposed line, your Honorable House may be induced to withhold its sanction; and the hopes of their obtaining that desideratum, which they have so long looked forward to obtaining, be thus disappointed.

Your Petitioners would therefore most humbly and respectfully beg to lay before your Honorable House the following brief statement of the advantages that will accrue, not only to your Petitioners, but to the inhabitants of a vast extent of country surrounding their District, by the opening of the line of Railway now proposed to be established, as also, a few remarks as to the facilities and recommendations it possesses over any other line hitherto proposed to be constructed in this Colony.

First, then, your Petitioners would beg to point out that the proposed line will be, at the outside (from Singleton to Mudgee), in extent only about one hundred and ten miles; that running, as it no doubt will, up the line of the Goulburn River, it will pass through a nearly level country, of rich alluvial soil, eminently adapted for location and cultivation; that beds of coal of a superior quality pervade most of the route to be passed through; that in the immediate neighbourhood there exists extensive forests of ironbark; and that engineering difficulties, in the shape of cuttings, culverts, and bridges, will be comparatively few, and of slight importance, rendering the price of construction of no excessive amount per mile.

That the construction of the proposed line will confer the advantages of safe, commodious, and expeditious transit, upon a very large extent of country, which may briefly be enumerated, viz.:—The Districts and Towns of Mudgee, Rylestone, Wellington, Dubbo, Orange, Molong, the whole of the Western Gold Fields, the South-western portion of the Liverpool Plains District, the large and extensively occupied District of Bligh, the Lower Namoi River, and Melville Plains.

That

2 PROPOSED HORSE RAILWAY, SINGLETON TO MUDGEES.—PETITION.

That the extent of productions in minerals and cereals, in these districts, are too well known to be repeated; that besides these, a large number of sheep establishments are in the immediate neighbourhood of this line, most of them of considerable magnitude; and the establishment of that line will attract to it a very considerable amount of traffic that now unavoidably goes by other routes. That to the westward and northward of Mudgee the country is nearly a dead level, offering facilities for future Railway extension to any distance. That this line will afford great facilities also to the inhabitants of the Districts of Coolah, Cassilis, and Merriwa; and should a Station be formed at Denman, on the Hunter River, distant only twelve miles from Muswellbrook, the traffic that now passes through the township from the Northern portion of the Liverpool Plains, Tamworth, Goono Goono, New England, Scone, and Murrundi, will undoubtedly take advantage of the circumstance, and thus avoid the necessity of traversing the succession of ranges that separate Muswellbrook from Singleton.

We may also state that the road from Muswellbrook to Denman is over a dead level, along the bank of the Hunter River.

That the proposed line will thus, if sanctioned by your Honorable House, open and confer earlier advantages upon a larger population, and to a greater amount of traffic, than any other line of Railway that may be adopted.

That your Petitioners have no doubt whatever as to the paying capabilities of this line, from the above circumstances and facts, which they now most respectfully beg to lay before your Honorable House; and your Petitioners most earnestly entreat that your Honorable House will take these facts and circumstances into your most attentive consideration, and permit them to have that weight in influencing your decision, that their verity and importance demand; and that your Honorable House will then be induced to afford your Petitioners the advantages of that safe, expeditious, and commodious mode of transit, that it has been proposed to confer upon them.

And your Petitioners, as in duty bound, will ever pray.

ANDREW M'CAULEY,
Mayor, Mudgee.

3

 BENCH OF MAGISTRATES, SHOALHAVEN, to AUDITOR GENERAL.

Shoalhaven,
16 April, 1861.

SIR,

With reference to your letter of the 26th ultimo, calling for a more particular account of the expenditure of moneys placed at our disposal for the Roads of the District, we have the honor to say that the accounts, previous to the flood of February, 1860, were lost in that flood, and that, subsequently, on a representation by us of the necessity of putting the local roads in a passable state, we received an answer from the Under Secretary for Lands, bearing date 12th March, 1860, numbered 60-74 and 38, authorizing the expenditure by us, according to our discretion, of any money then in our hands for the repair of different roads in the Shoalhaven District.

If it can be pointed out that we have misapplied funds before the flood in any particular instance, or since the flood have transgressed the limits of the discretion allowed to us by the letter quoted above, we shall be glad to furnish any further information that may lay in our power.

We have, &c.,

KEN. MACKENZIE, J.P.
J. L. BIDDULPH, J.P.
ALFRED ELYARD, J.P.
A. MEATRE, J.P.

1861.

Legislative Assembly.

NEW SOUTH WALES.

ROAD BETWEEN BARK HUTS AND BANKSTOWN.

(BANKSTOWN.)

Ordered by the Legislative Assembly to be Printed, 8 October, 1861.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Landholders, Householders, and others in the vicinity of Bankstown, in the Colony of New South Wales,—

RESPECTFULLY SHEWETH:—

That the condition of the Great Southern Road, between the Bark Huts and Bankstown—a distance of from ten to fourteen miles from the Metropolis of the Colony—is at the present time, and has been for some months past, in so great a want of repair as to render it almost impassable for all purposes of traffic.

That the land on both sides of the said road is the freehold property of sundry private individuals, by whom it has been purchased in some instances at high prices, in the warrantable belief that the road would be maintained by the Government in such a condition as would enable them to convey their produce to the Sydney Market, and thus secure a livelihood for themselves and families.

That in consequence of the impassable state of the said road, aggravated by the absence of all means of communicating with the various stations on the line of railway, many of your Petitioners have been reduced to great distress, and all have been subjected more or less to severe losses, arising from the positive impossibility of sending their goods to market.

That houses for the accommodation of the public have been erected, and are maintained at great expenses, in view of the large traffic from the Gold Fields and other sources in the Southern District of the Colony, that would pass along the said line of road, if maintained in a proper state of repair, but which is now either wholly stopped, or diverted into other channels of communication with Sydney, at considerable loss to all parties concerned.

That frequent representations have been made to the Honorable the Secretary for Public Works, setting forth the circumstances above detailed, but that at present nothing of any importance has been done to relieve the position of your Petitioners.

Your Petitioners therefore humbly pray, that your Honorable House will be pleased to take the premises into favourable consideration, and afford them such relief as to your Honorable House may seem fit.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 200 Signatures.]

“ of Notices calling for Tenders in the respective Police Dis-
“ tricts.”

(*Mr. Dangar.*)

TOLL HOUSES AND GATES ON THE GREAT NORTHERN ROAD.

No. 1.

S. G. SHAIRP, Esq., to P. D. BROWN, Esq.

*Department of Public Works,
Road Branch,
Sydney, 8 August, 1861.*

SIR,

I am directed by the Commissioner to request you to forward, within a week from the receipt of this communication, plans, specifications, and an accurate description of sites for the three new Toll Bars to be erected at Camberwell, Scone, and Blandford. The total amount allowed for the three Toll Houses is £300, and the same must be erected and fit for occupation on or before the 25th day of September of the present year. The houses can be built of either wood or stone, with two rooms and a skillion, and can be done either by tender, task, or day work, as you may deem most advantageous and economical; and are to be shingled. Should the money suffice for the erection of proper gates they may be put up; if not, a common fence and slip rail or chains must be sufficient for the present.

I have, &c.,
S. G. SHAIRP,
Chief Clerk.

No. 2.

P. D. BROWN, Esq., to COMMISSIONER FOR ROADS, SYDNEY.

Scone, 6 August, 1861.

SIR,

I beg to enclose offer by Mr. Matthew Miller to erect a Toll Bar at Dudley Hollow, Scone, for £100. The best site seems to be in line of the south fence of the Pound, the lower lands being subject to flood, and southern length liable to avoidance of toll, as unenclosed.

I have also examined the Blandford District, and to save avoidance by the Murulla deviation, recommend that the bar be placed within fences 110 yards north of Rose's Inn, near Murrurundi, now occupied by Mr. James Winter, under the sign of the "Australian Arms."

I shall have a corresponding offer for this within a few days, the builder being absent; the cost and date of finishing being as above.

I also enclose offer by Mr. J. Garbutt for Camberwell Toll Bar.

I have, &c.,
PETER D. BROWN.

The Bars must be completed by 25th September, under penalties of £20.—W. R. C.

Approved—W. R. C. 11/8/61.

[Enclosure 1 in No. 2.]

I HEREBY propose to execute the whole of the works required for a cottage and toll bar on the south side of Scone, to the satisfaction of the Superintendent for Roads.

The cottage to be of slabs, 7 feet in height from floor, with shingled roof; the slabs to be 12 inches in ground, the corner posts 3 feet in ground, with brick chimney and brick floor; the slabs to be pointed and whitewashed.

The cottage to be 24 × 12 feet, divided into two rooms; to provide and fix two ledge doors to cottage, one to each room; also two windows, six lights, each 10 × 12; one to each room. To provide and fix a gate, 10 feet wide, with three bars; also, make good the fence, four rails, at each side of gate; and complete the whole of the above by the 25th of September, 1861, for the sum of one hundred pounds sterling, under a penalty of £20.

MATTHEW MILLER.

Scone, 6 August, 1861.

Approved—W. R. C. 11/8/61.

[Enclosure

TOLL HOUSES AND GATES ON THE GREAT NORTHERN ROAD. 3

[Enclosure 2 in No. 2.]

Camberwell Toll Bar.

Singleton, 31 July, 1861.

Sir,

I hereby offer to build a slab house, 24 X 12 X 8 feet clear, two rooms; posts and slabs ironbark; posts 3 feet, slabs 1 foot, in ground. Flooring joists (on 2 sleepers), tie beams, and rafters, ironbark, 18 inches from centre to centre. Floors and battens, spotted gum; shingles, ironbark.

Slabs trimmed, close jointed. Window, 12 square, 10 X 12, and doors (3) of pine; brick chimney. Posts and chain across the road—for the sum of one hundred pounds, and to complete the same by 25th September next, under a penalty of £20.

I am, &c.,

JOHN GARBUTT.

P. D. Brown, Esq.,

Surveyor of Roads, &c., Singleton.

Approved—W. R. C. 11/8/61.

No. 3.

MR. MILLER to SUPERINTENDENT OF FIRST DISTRICT, NORTHERN ROAD.

Scone, 24 August, 1861.

SIR,

I hereby propose to erect a Toll House and Gate at Blandford, on the same terms as the one at Scone—that is, if you cannot get any other person to do it.

I have, &c.,

MATTHEW MILLER.

Singleton, 27 August, 1861.

Accepted—PETER D. BROWN.

1861.

Legislative Assembly.

NEW SOUTH WALES.

TOLL-GATE, COWPER-STREET, WAVERLEY.
(PETITION FOR REMOVAL OF.)

Ordered by the Legislative Assembly to be Printed, 26 November, 1861.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Landholders and Ratepayers, residing within the Municipality of Waverley,—

RESPECTFULLY SHEWETH :—

That the Coogee and Randwick Road Trust are allowed to retain the Toll-gate in Cowper-street, together with the management of that street, the whole of which runs through the Municipality of Waverley.

That all the landed property in this street is assessed by the Waverley Council, and the rates enforced by that body.

That in consequence of the Toll-gate being allowed to remain, traffic is diverted from hence, and landed property seriously lessened in value.

That the inhabitants of this locality pay two tolls for riding or driving a distance not more than two miles.

Your Petitioners therefore most earnestly pray that your Honorable House will be pleased to cause the removal of the Toll-gate, and the management of the street handed over to the Municipal Council of Waverley.

And your Petitioners, as in duty bound; will ever pray, &c. :

[Here follow 94 Signatures.]

1861.

Legislative Assembly.

NEW SOUTH WALES.

SUBORDINATE ROADS OF NEW SOUTH WALES.
(CLASSIFICATION AND PROPOSED DISTRIBUTION FOR 1862.)

Ordered by the Legislative Assembly to be Printed, 18th December, 1861.

			£ 2,226

* One half the Road being in a Municipality, half-scale only is allowed.

NOTES.—The Classification of Roads is not made alone with reference to their relative importance, but has been influenced by the state of repair required, and the amount of money recently expended upon them.
Where the Road Tolls pass to the Consolidated Revenue, Parliament will be asked to vote the respective accounts for the repair of such Roads.

ROAD FROM BATHURST TO ROCKLEY.

No. 1.

ACTING SURVEYOR GENERAL to DISTRICT SURVEYOR DAVIDSON.

*Surveyor General's Office,
Sydney, 29 September, 1859.*

SIR,

* A copy of this not considered necessary, it having reference to the Western Roads generally.

With reference to my letter* to you of this date, No. 2535, I have the honor to request your special and early report as to which, in your opinion, is the best line of Road between Rockley and Tuena, in order that it may be determined on which shall be expended the money provided for repairs for the current year; also, whether it is desirable that in selecting a line of road between the above-mentioned place, it would be necessary to make any expenditure southerly from Rockley or any other line.

2. It has been represented to the Secretary for Lands and Public Works that the road which now enters Rockley from Bathurst, near the north-eastern corner of the village, should enter it instead, near the north-west corner, and on this point it is desirable that you should report.

3. Whether these reports may be made from your general knowledge, or whether an inspection will be necessary, it will be for you to decide, but in the latter case I should feel obliged by your informing me to that effect, and as to the probable time of your inspection, without delay.

4. It will be necessary, eventually, to make further surveys to determine the lines of roads on which annual expenditure shall be made, and if in this case you should be of opinion that a line between the Abercrombie River, near Tuena and Rockley, and even onwards to Bathurst, should be at once surveyed with the above object, you will be so good as to instruct Mr. Licensed Surveyor Arthur to make the necessary surveys, and to afford, on his plan, all the information necessary to fill up, as a book of reference, one of the enclosed forms.

I have, &c.,
A. G. McLEAN.

No. 2.

DISTRICT SURVEYOR DAVIDSON to ACTING SURVEYOR GENERAL.

Kirkconnell, 7 October, 1859.

SIR,

* See note on No. 1.

In immediate attention to your letters of the 29th September, received 6th October, No. 59-2535,* 2536, transmitting a copy of Schedules of Expenditure for the current year, of the Roads throughout the Colony, and requesting I will give that portion which refers to the Western District my consideration, and forward a report.

2. In your letter No. 2536 you refer particularly as to the best line of road between Rockley and Tuena, that it may be determined on which line shall be expended the money provided for repairs for the current year, &c.

3. I do myself the honor to inform you, that in order to reply to the third paragraph of your letter No. 2536, a personal inspection will be necessary about Rockley; and in order to be able to carry out this, I request you will be pleased, if there is no lithograph map of the village, to order a rough tracing shewing the north-east part and the north-west, and I request it may be transmitted to me with as little delay as possible, in order that I may at once furnish you with the report required. It may be that I shall have to proceed to Tuena; but under any circumstances I do myself the honor to state, that your instructions relative to the road will be carried out with as little delay as possible, and the necessary reports forwarded.

I have, &c.,
W. R. DAVIDSON.

No. 3.

ACTING SURVEYOR GENERAL to DISTRICT SURVEYOR DAVIDSON.

*Surveyor General's Office,
Sydney, 14 October, 1859.*

SIR,

* Appendix A.

In compliance with the request contained in the third paragraph of your letter of the 7th, received on the 11th instant, No. 59-47, I have the honor to forward to you herewith, a tracing* of the Village of Rockley, to enable you to report on the best line of Road between Rockley and Tuena.

I have, &c.,
A. G. McLEAN.

No. 4.

DISTRICT SURVEYOR DAVIDSON to ACTING SURVEYOR GENERAL.

*Camp, Head of O'Brien's Creek,
27 October, 1859.*

SIR,

In attention to your letter of the 29th September, received 6th October, requesting my special and early report, on which, in my opinion, is the best line of Road between Rockley and Tuena, in order that it may be determined on which shall be expended the money provided for repairs for the current year, also whether it is desirable in selecting a line of Road between the above-mentioned places, it would be necessary to make any expenditure

expenditure southerly from Rockley or any other line ;—2. You also inform me that it has been represented to the Secretary for Lands and Public Works, that the Road which now enters Rockley, near the north-eastern corner of the village, should enter it instead near the north-west corner, and on this point you state it is desirable I should report ;—3. Whether these reports may be made from my general knowledge, or whether an inspection will be necessary, you inform me it is for me to decide, but in the latter case you request to be informed to that effect, and as to the probable time of my inspection without delay ;—4. You also state it will be necessary eventually to make further surveys, to determine the lines of road on which an annual expenditure shall be made, and if in this case I should be of opinion that a line between the Abercrombie River, near Tuena and Rockley, and even onwards to Bathurst, should be at once surveyed with the above object, I will instruct Mr. Licensed Surveyor Arthur to make the necessary survey, and to afford on his plan all the information necessary to fill up, as a book of reference, one of the forms transmitted to me ;—I do myself the honor to state, immediately on the receipt of your letter enclosing the tracing of the Village of Rockley, I proceeded to carry out your instructions, knowing from the intricate and mountainous country through which part of this line of road must pass, nothing but a strict inspection could enable me to furnish the report required.

2. I examined the Road from Bathurst to Rockley, and I am of opinion that this part of the road requires to be surveyed and proclaimed more than any other, more particularly that portion before you ascend the range, known as the Mountain Run, on the Church Land, where small settlers have altered and made encroachments on the line of road, and in places have very much narrowed it. I have instructed Mr. Licensed Surveyor Arthur to proceed at once with the survey of the road from the south boundary line of Dr. Wardell's grant as far as Rockley and Triangle Flat. I consider the road ought to enter the Village of Rockley at the north-western corner, where there is a tract now used, of easy descent, to Mulgunnia-street, which would require but little outlay to make it a good line of road. It joins the old line about a mile from the village, on the Bathurst side, the line continuing from Mulgunnia-street, on by Jumper's Flat Creek to Triangle Flat, a good road all the way, and from there is a level line to the head of O'Brien's Creek. There are two roads or tracks diverge at this point, the one shewn blue on the tracing* accompanying this letter, the other, yellow. The one shewn in yellow is a considerable detour, but a very level line, opening up a fine country, where there is good agricultural land, forests of stringy-bark timber, and water, and where but little if any outlay would be required as far as J. G. Brown's 917 acres. The other line of road, the general direction of which is more direct, and also opens up some fine agricultural country, proceeds from the head of O'Brien's Creek by what is known as the Springs—a well-watered and well-defined creek ; from there to a creek known as the Bald Ridge Creek there is a very abrupt descent to the above-named creek, but this could be avoided by taking the line to the west of the descent by the creek. On this some expenditure would be necessary to make it a practicable line. Some other cuttings on this road would be required, but of no great extent. These lines join at J. G. Brown's 917 acres, and across Thompson's Creek, at the same point, and then onwards in the direction of Bumba. The descent to the Abercrombie River at this place is very abrupt, but can be avoided by taking a valley about two miles short of Bumba ; the locality, as near as may be, is shewn on the tracing, leading by a very practicable descent to what is known as the Chain of Ponds ; crossing these a level spur from the main range leads to the Abercrombie River, to the camping ground, a portion of land on the river, purchased by Mr. J. Smith, about two miles above Bumba. The point of this spur is abrupt for about a quarter of a mile, but still the easiest descent to the river I could discover. From the river there is a gradual ascent through valleys to the top of the range dividing its waters from Tuena Creek, but the descent to the creek is very abrupt—it would require side-cutting and to diverge from the direct slope to ease it. This line would descend to the creek two miles above the Government Township, nearly opposite the present quarters of the Commissioner.

* Appendix B.

3. The other line of road, shewn in pink, which I take leave to bring under your notice, by Carrawa and Mulgunnia, is somewhat round, but by the residents of Tuena more travelled than the other lines alluded to. The only difficulty on this line is the descent to the river, but a fair road might be made with some side-cutting down the gully, marked A on the tracing. After crossing the river there is a good road into Tuena, and it has this advantage over the others, of leading direct to the village. The great difficulty after all is the descent and ascent from the river. Before finally instructing Mr. Arthur I do myself the honor to bring these matters under your notice, in order that you may have the means before you of deciding which line to adopt. I am inclined to recommend that by Long Swamp and Mulgunnia, as it leads directly to the village, and is in my opinion the best line after crossing the river. Mr. Licensed Surveyor Arthur being encamped in the neighbourhood of Rockley, I sent for him to accompany me to Tuena, in order that I might better explain my views about the different lines of road ; and as he at once commences the survey to Rockley, I have the honor to request the favour of your instructions as early as possible as to which of the lines, after leaving Triangle Flat, you consider should be adopted and surveyed, and I will transmit the form for the book of reference to Mr. Licensed Surveyor Arthur, and instruct him accordingly.

I am not aware of any other line southerly from Rockley, on which expenditure should be made, except it might be as far as the Mines, by which line the mail to Tuena is at present carried on horseback.

I may as well add, there has been an important gold discovery on the Government land on Campbell's River ; adjoining Mr. Pye's, to this place, I met several parties proceeding from Tuena.

I have, &c.,
W. R. DAVIDSON,
District Surveyor.

ROAD FROM BATHURST TO ROCKLEY.

No. 5.

ACTING SURVEYOR GENERAL to DISTRICT SURVEYOR DAVIDSON.

*Surveyor General's Office,**Sydney, 4 November, 1859.*

SIR,

In reference to your letter of the 27th ultimo, No. 59/48, respecting lines of roads *viâ* Rockley to Tuena, I have the honor to inform you that Mr. Licensed Surveyor Arthur had better adopt, in his survey from Bathurst to Rockley, the line entering Rockley at the north-west corner, as described in your letter, and forward the survey and book of reference of that line separately from that of the line south of Rockley.

You will be so good as to inform Mr. Arthur that the survey may be plotted on a scale of forty chains to one inch, with diagrams on a larger scale of any portions where existing occupations or minute turns in the road may render a larger scale necessary to distinctness, such as the entrance to Bathurst or Rockley, and that the traverse lines should be shewn, and the length and bearings introduced either in the lines or in a table; that existing tracts should be shewn in brown lines, and the line proposed to be fenced under the Act 4 Gul. IV., No. 11, in a *red* line; the breadth of the road being one chain, as a general rule, but varying in parts where that breadth would interfere with existing improvements, or where a less breadth would suffice; in no portion, however, being less than 50 links. The title to the plan should be "Plan of the Road from Bathurst to Rockley, proposed to be opened as a Parish Road under the Act of Council, 4 Wm. IV., No. 11."

I may here inform you that your recommendation of the Mulgunnia line between Rockley and Tuena, its facility of approach to Tuena, and the circumstance that it is now preferred by the public, more than compensate for the slight additional distance over the other lines, and that therefore it should be the line to be surveyed by Mr. Arthur, leaving it of course open to objections under the Act, after the appearance of the notice of intention to open it.

In conclusion, I beg to say that it would be desirable that Mr. Arthur should survey the line of road from Rockley to the Mines, and extending onwards to the new Gold Fields mentioned by you, should the Field prove productive.

The directions for the Bathurst line plan will apply also to the others.

I enclose four forms of books of reference.

I have, &c.,

A. G. McLEAN.

No. 6.

LICENSED SURVEYOR ARTHUR to ACTING SURVEYOR GENERAL.

Bathurst, 8 December, 1859.

SIR,

In accordance with the instructions contained in Mr. District Surveyor Davidson's letter,* dated 9th November, 1859, requesting me to survey the Road from Bathurst to Rockley, the line of road to enter the north-west corner of the latter village,—

I have now the honor to forward the plan and report of the above-named road.

Proceeding from the S.E. corner of sec. No. 114, in the Town of Bathurst, the road is fenced in on both sides nearly all the way to where it crosses Queen Charlotte's Vale Creek. I don't think it would be desirable to alter this line from its present position. There are several places along this part of the road that require making; part of the way along J. Palmer's east boundary, through E. White's 100 acres, P. Fitzpatrick's 100 acres, R. Smith's 80 acres, W. Lawson's 100 acres to the N. boundary of W. Lane's 320 acres, also through G. Raine's 80 acres, and W. Short's 80 acres.

The crossing-place over the creek is by means of a ford; the traffic is rarely stopped at any time for more than a few hours.

From Queen Charlotte's Vale Creek to the foot of the Mount the road proposed would not require more than a very trifling sum of money to make it ready for traffic at once. There are a few small creeks to cross, which might be done by log bridges. The present road is longer than the one proposed, and it runs up a small creek, crossing and re-crossing it in many places; it passes between the fences of numerous small farms. The road, if altered as proposed, will pass along the side of a low ridge. The Mount (as it is called) requires a good sum of money to make it fit for travelling over; this place, both ascending and descending, presents far greater obstacles than all the rest of the road. It has a very steep ascent, and the road is also very much out of repair; in wet weather many travellers prefer going round by the Lagoon Road, many miles of the way, in preference to crossing the Mount. The descent on the Rockley side is a very long drag, but not so sharp or so difficult of access as the Bathurst side. The road thence, as far as where the proposed new road leaves the present track at a, there is no great difficulty—a crossing-place over two small creeks is all that is required. From thence the road is practicable as far as a place marked e on the plan.* Some side-cutting would be necessary down this hollow to make it practicable; also, a crossing-place over the Back Creek would be required. On to Foster's Valley there is no difficulty. I think this proposed new road, to the right of the present one, would be easier for traffic, and more direct.

From Foster's Valley to a place marked F on the plan there is no difficulty; from this point the proposed new road leaves the present one—the former enters the north-west corner of Rockley, the latter the north-east corner; the road to the right is a new road lately opened, but is not much used at present. I think the proposed road is the easiest way of access that can be obtained to pass through Rockley. A slight cutting would be required leading down to Pepper's Creek; a good ford can easily be made across the creek, as it has a rocky bottom.

I have, &c.,

CHAS. ARTHUR,

Licensed Surveyor.

[Enclosure

*A copy of this cannot be supplied without reference to Mr. Davidson, which it is considered would cause unnecessary delay.

*Department of Lands,
Sydney, 23 March, 1860.*

ROAD.

HIS Excellency the Governor General, with the advice of the Executive Council, having deemed it expedient to open and make a Parish Road (to be maintained at the expense of the Parishes through which it passes), from Bathurst to Rockley, running through the lands granted to or now occupied by Messrs. G. Busby, G. Palmer, and William Lane, and J. Walker: Notice is hereby given, that in conformity with the provisions of the Act of the Governor and Council, 4th William 4, No. 11, a plan and book of reference, shewing the intended line of road above-mentioned, are now deposited at the Office of the Surveyor General, in Sydney, and at the Police Office, Bathurst; and all persons interested therein are requested to transmit, in writing, to the Clerk of the Executive Council, within one month from this date, any well-grounded objections which may exist to the formation of the road in question.

By His Excellency's Command,
JOHN ROBERTSON.

No. 11.

UNDER SECRETARY FOR LANDS to CLERK OF EXECUTIVE COUNCIL.

*Department of Lands,
Sydney, 31 March, 1860.*

SIR,

In drawing your attention to the notice in the *Government Gazette* of the 23rd instant, respecting the intended formation of a Parish Road from Bathurst to Rockley, I am directed to request that you will have the goodness, at the end of one month from the date thereof, to inform me whether any objections have been received by you, in respect of the said road, in pursuance of the notice alluded to.

I have, &c.,
MICHL. FITZPATRICK.

ROAD FROM BATHURST TO ROCKLEY.

No. 12.

CLERK OF EXECUTIVE COUNCIL to SECRETARY FOR LANDS.

Executive Council Office,
7 May, 1860.

SIR,

10 April, 1860.

In compliance with the request contained in Mr. Under Secretary Fitzpatrick's letter of the 31st March last, No. 74, I do myself the honor to forward an objection which has been lodged with me, to the formation of a Parish Road from Bathurst to Rockley.

I have, &c.,

EDWARD C. MEREWETHER,

Clerk of the Council.

[Enclosure in No. 12.]

Rockley, 10 April, 1860.

Sir,

In accordance with a notice published in a late number of the *Government Gazette*, and having reference to the opening and making of a Parish Road from Bathurst to Rockley, and stating further, that "any well-grounded objection which may exist to the formation of the road in question, " be transmitted to you within one month from the 22nd of March ultimo,"—

We, the undersigned, representing the landed, commercial, and agricultural interests in and around the eastern portion of the Township of Rockley, beg hereby to make certain objections to the above contemplated road—objections which seem to us well-founded.

We beg, firstly, to submit to the authorities the fact, that there is no building of any kind, nor are there any improvements made on the site of the Township, where the contemplated road will run through; that, on the contrary, the great majority of the undersigned have purchased property in the eastern part of the Township of Rockley, and have severally expended considerable amounts of money upon the said property.

We would further draw attention to the fact of the road at present in use being in a direct line from Bathurst to the occupied or eastern portion of this Township, and that it has been used as such road for the last five and twenty years.

Again—the road as surveyed and now in contemplation, is between two (2) and three (3) miles longer than the existing road, and would not be within a mile and a half of that portion of the Township of Rockley which is inhabited, and where numerous improvements have been made.

In conclusion, we beg to add that the existing road is fully equal to any road which may be established, as contemplated.

For the reasons stated, we deem it necessary, as a matter of right and of justice to ourselves, being the parties most interested, to protest against the opening of the road as contemplated and surveyed.

We have, &c.,

J. C. STRANGER;

ARTHUR BUDDEN;

And sixteen (16) other persons.

The Clerk of the Executive Council,
Sydney.

No. 13.

REPORT of Acting Surveyor General.

THIS objection is simply to the proposed point of entrance to the Village of Rockley by the road in question, and no doubt results from the apprehension that that entrance at the west side of the village will injuriously affect the value of property at the eastern end.

The alteration in the entrance was pointed out to the Secretary for Lands, by some persons acquainted with the locality, and it has been recommended both by the District Surveyor and by Mr. Arthur, who surveyed the road.

Under these circumstances the road, as surveyed and notified, should, it appears to me, be confirmed.

A. G. McLEAN.

*Colonial Secretary's Office,
Sydney, 27 September, 1860.*

SIR,

In reply to your letter of the 17th ultimo, I am directed to state, for the information of the Secretary for Lands, that no applications have been received in this Office for compensation in respect to the Road from Bathurst to Rockley.

I have, &c.,
W. ELYARD.

No. 18.

(60-4524)

SURVEYOR GENERAL'S REPORT.

THIS road passes through enclosed lands for about 70 chains, and its opening would involve the cost of fencing to the extent of from 500 to 600 yards, costing probably £150 or upwards.

The road is of too important a character to render practicable the application of the principle of throwing the cost of fencing on the persons desirous of having the road opened; and I could therefore suggest that, in this case, the portions of road passing through enclosures should be fenced by the Trustees of the money for the repair, even should an additional sum for that purpose thereby become necessary.

Until the fencing shall have been arranged for, I have of course delayed to formally open the road.

A. G. M.

No. 19.

R. DRIVER, ESQ., M.L.A., to SECRETARY FOR LANDS.

*Pitt-street,
Sydney, 21 February, 1861.*

SIR,

I have the honor to forward herewith, a Petition from the inhabitants of ^{2 February,} Rockley, and beg to request that you will give the matter your immediate attention. ^{1861.}

I have, &c.,
RD. DRIVER, JUNR.

[Enclosure in No. 19.]

To His Excellency COLONEL KEMPT, Administrator of the Government of the Colony of New South Wales and its Dependencies, and to the Honorable the Executive Council of the said Colony.

The humble Petition of the undersigned Landholders, Residents, &c., in the Township of Rockley, and its immediate vicinity,—

RESPECTFULLY SHEWETH:—

That the Township of Rockley extends for more than a mile in width, and that all the buildings erected in the said Township are situated at its eastern extremity.

That among these buildings there is a Chapel, a National School, three stores, two public-houses, &c.

That the present Government Road from Bathurst to Rockley enters the latter place at its western extremity—a distance of more than a mile from that part of the Township where all the aforesaid buildings are situated, whilst that part of the Township where the Government road enters Rockley is totally uninhabited.

That there is thus virtually no Government road at all leading to the inhabited portion of Rockley.

That the road leading there, which has been hitherto used, runs through private property, and is liable at any moment to be closed up, and that the aforesaid Government road branches off at a distance of about $1\frac{1}{4}$ miles from Rockley.

Your Petitioners would therefore humbly and respectfully pray, that your Excellency and the Honorable the Executive Council would be pleased to cause the said portion of private road to be declared a branch Government road to Rockley.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

12 February, 1861.

[Here follow twenty-six (26) Signatures.]

No. 20.

UNDER SECRETARY FOR LANDS to MR. DRIVER.

Department of Lands,
Sydney, 22 February, 1861.

SIR,

I am directed to acknowledge the receipt of your letter of the 21st instant, on the subject noted hereunder, and to inform you that it will receive due attention.

I have, &c.,

S. B. WARBURTON,
(For the Under Secretary.)

Subject:—Forwarding Petition respecting the road from Bathurst to Rockley.

No. 21.

REPORT of Acting Surveyor General.

* See No. 14. THE question of at what point of Rockley the road from Bathurst should enter it, was decided by the Executive Council (*See Minute of 12th July, 1860), after every consideration, and on the recommendation of those most competent to judge. The streets of Rockley afford a means of communication from the proclaimed road to the other portion of the village.

A. G. M.

B.C.—26 March, 1861.

No. 22.

UNDER SECRETARY FOR LANDS to MR. DRIVER.

Department of Lands,
Sydney, 31 May, 1861.

SIR,

With reference to the Petition presented by you from certain of the Inhabitants of Rockley, praying that a portion of private road may be proclaimed as the Road from Bathurst to that place, the present road being too far distant from the inhabited part of the Township, I am directed to inform you that the question at what point of Rockley the Road from Bathurst should enter it was decided by the Council, after every consideration, and on the recommendation of those most competent to judge.

2. I am to add, that as the streets of Rockley afford a means of communication from the proclaimed road to the other portions of the village, there appears to be no necessity for the proclamation of the road referred to.

I have, &c.,

MICHEL. FITZPATRICK.

No. 23.

MR. ARTHUR BUDDEN to SECRETARY FOR LANDS.

Rockley, 26 September, 1861.

SIR,

I have the honor to call your attention to a Petition forwarded by the Inhabitants of Rockley some months ago, relative to the formation of a branch Road, which, striking off from the Government road about $1\frac{1}{4}$ mile from Rockley, would enter it at its eastern extremity—the only inhabited portion of the Township.

No

No official reply has been received to this Memorial ; but it was stated at a Public Meeting held here on the 30th ultimo, that a letter had been received from Mr. Driver, the Member for this district, stating that he (Mr. Driver) had been informed by you that the request contained in our Memorial should be complied with.

No steps having, however, as yet been taken to carry out this, to the inhabitants of Rockley, highly desirable arrangement, I have been requested to draw your attention to the matter, and to beg that you will cause the said branch line to be declared a Government Road, without further delay.

I have, &c.,
ARTHUR BUDDEN,
 Chairman of Public Meeting.

No. 24.

UNDER SECRETARY FOR LANDS to MR. ARTHUR BUDDEN.

Department of Lands,
Sydney, 30 October, 1861.

SIR,

Referring to your letter of the 26th ultimo, respecting a proposed branch Road to strike off from the proclaimed road about one mile and a quarter from Rockley, and to enter that Township at its eastern extremity, I am directed to forward, for the information of yourself and the other persons interested, a copy of a letter which has been addressed to R. Driver, Esq., M.L.A. (in answer to the Petition presented by him on the subject), stating that as the streets of Rockley afford a means of communication from the proclaimed road to the other portions of the village, there appeared to be no necessity for the proclamation of the road in question.

31st May, 1861.
 See No. 22.

I have, &c.,
MICHL. FITZPATRICK.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES, No. 48. TUESDAY, 26 DECEMBER, 1861.

25. Resignation of Mr. Quodling, late Inspector of Roads in the Northern Districts:—

Mr. Forster moved, pursuant to notice,—

(1.) That a Select Committee be appointed to inquire into and report upon the circumstances connected with the resignation of Mr. Quodling, late Inspector of Roads in the Northern Districts, with power to extend such inquiry and report, according as to such Committee shall appear expedient, over the general management of Public Works in the said Districts, and likewise to send for persons and papers.

(2.) That such Committee consist of:—Mr. Arnold, Mr. Markham, Mr. Dalgleish, Mr. Dangar, Mr. Piddington, Mr. Lucas, Mr. Rotton, Mr. Hoskins, Mr. Rusden, and the Mover.

Debate ensued.

Question put,—(1.) That a Select Committee be appointed to inquire into and report upon the circumstances connected with the resignation of Mr. Quodling, late Inspector of Roads in the Northern Districts, with power to extend such inquiry and report, according as to such Committee shall appear expedient, over the general management of Public Works in the said Districts, and likewise to send for persons and papers.

The House divided.

Ayes, 18.

Noes, 14.

* * * * *

And Mr. Sadleir requiring the said Committee be appointed by Ballot,—

The House proceeded to the Ballot accordingly, and the Speaker declared the following Members to be the Committee duly appointed:—Mr. Forster, Mr. Arnold, Mr. Markham, Mr. Dalgleish, Mr. Lucas, Mr. Dick, Mr. Driver, Mr. T. Garrett, Mr. Hoskins, and Mr. Dangar.

VOTES, No. 78. WEDNESDAY, 15 JANUARY, 1862.

1. * * * * *

Resignation of Mr. Quodling, late Inspector of Roads in the Northern Districts:—Mr.

Forster, as Chairman, brought up a Progress Report from, and laid upon the Table the Proceedings of, and Minutes of Evidence taken before, the Select Committee to whom this subject was referred on the 26th November last, together with Appendix.

Mr. Forster then moved, That the said Report and accompanying Proceedings, Evidence, and Appendix, be printed.

And a Debate arising,—

And an Honorable Member opposing the motion,—

The Speaker ruled as follows:—The Debate, as well as the motion itself, as opposed, is irregular; for, although a motion for printing the Proceedings of a Select Committee is usually received as a matter of form,—still, the practice is, that such Proceedings must be complete,—which is not the case in the present instance. It is quite open to the House to order the printing of such Proceedings, if it think fit; but, in this case, the motion for the printing is opposed, and the rule is that none but unopposed motions can be made without notice. It is open to the Mover to give notice for a future day. Besides, a Sessional Order of the Assembly gives precedence to Government Business on Wednesdays.

Mr. Morris then moved, That this House does not agree to the ruling of the Honorable the Speaker on the matter of printing a Report and Evidence of a Select Committee.

Debate ensued.

Mr. Morris' motion by leave withdrawn.

* * * * *

5. Resignation of Mr. Quodling, late Inspector of Roads in the Northern Districts:—The Speaker, adverting to his ruling on the Point of Order in this matter (recorded in Entry No. 1 above), stated that, having had time to look further into the subject, he had now arrived at the conclusion, that the general Rule, as observed in the House of Commons, under which he had given his decision, was over-ridden, so far as Mr. Forster's motion was concerned, by the 29th Standing Order of the Assembly, which declares as follows:—"it shall always be in order, on the presentation of any "document, except a Petition, for the Member presenting it to move, without "previous notice, that it be printed." He therefore took the earliest opportunity afforded him of correcting his decision, in order that the Honorable Member, whose motion had been declared irregular, might have the opportunity of repeating it, at once, if desirous of doing so.
But no motion being made in consequence of this explanation, the matter dropped.
-

VOTES, No. 80. FRIDAY, 17 JANUARY, 1862.

10. Resignation of Mr. Quodling, late Inspector of Roads in the Northern Districts:—Mr. Piddington, on behalf of Mr. Rotton, moved, pursuant to notice, standing in the name of Mr. Rotton, That the Report of, and Evidence taken before, the Select Committee upon the Resignation of Mr. Quodling, be printed.
Debate ensued.
Question put and passed.
Ordered to be printed.
-

1861-2.

RESIGNATION OF MR. QUODLING, LATE INSPECTOR OF ROADS
IN THE NORTHERN DISTRICTS.

PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 26th November last, “ *to inquire into and report upon the circumstances connected with the resignation of Mr. Quodling, late Inspector of Roads in the Northern Districts, with power to extend such inquiry and report, according as to such Committee shall appear expedient, over the general management of Public Works in the said Districts, and likewise to send for persons and papers,*” have agreed to the following Progress Report:—

Your Committee having examined the witnesses whose names are appended, as well as a number of documents connected with the case, are of opinion that the necessity for inquiry has been conclusively established. The statements contained in Mr. Quodling's letters of October 24th and November 3rd have been so far substantiated, that very great irregularities in the system of management of public works in the Northern Districts, under the Commissioner for Roads, have been disclosed. Mr. Quodling himself does not appear to have generally acted with candour or with due regard to official decorum, or to have adopted in all cases the most regular mode of communication with his superior officer; but it has been shown that he more than once reported in writing, and that he frequently made personal remonstrances, to the Commissioner for Roads, upon the unsatisfactory manner in which the works under his (Mr. Quodling's) charge, at the Doughboy Diversion, were being carried out by the contractor, Mr. Martindale. It has been further shown that these reports and remonstrances of Mr. Quodling were in general disregarded, and that, in fact, the Commissioner was in the constant habit of receiving personal communications from the contractor in question, and of adopting his *ex parte* representations and explanations as conclusive evidence in his own favour, without further inquiry or reference to the officers in charge of the works. It appears, moreover, that on Mr. Quodling's

Quodling's subsequent refusal to furnish the usual vouchers or certificates for the works he had previously condemned, payments of money were in several instances made to the contractor, by authority of the Commissioner, without such vouchers or certificates; and that in one case a voucher for a considerable sum (£600), which Mr. Quodling had refused, was furnished by another Superintendent (Mr. Bayley), who states, that he had positive instructions from the Commissioner to vouch for works which were not under his charge, and with the character of which he was but slightly acquainted. It likewise appears, and the Commissioner himself admits, that he has frequently taken upon himself to alter the terms of contracts, and to supplement them by extraordinary provisions, sometimes in direct opposition to the judgment of the subordinate officer immediately in charge. For instance, at the Doughboy Diversion, the contractor was in this way authorized to spread metal without previous consolidation of the road, by which omission, according to Mr. Bayley, a saving of £300 a mile must have accrued to the contractor. Again, to adopt an expression of Mr. Shairp, Chief Clerk to the Commissioner, in his letter of October 30, "pitching was substituted for a portion of the broken metal," by sole authority of the Commissioner. Under this head your Committee beg leave particularly to direct the attention of your Honorable House to the evidence of Mr. Shairp, who testifies, not only to many of the facts above referred to, but, from his own experience as a former Superintendent of Roads, expresses a strong opinion upon the unusual and irregular character of these proceedings.

Similar irregularities appear to have existed, as well with reference to other contracts in the same district, as to the enforcement and supervision of contracts generally. In one instance, after a piece of road, known as the New Gap, had been condemned both by the Superintendent (Mr. Bayley), and by the then Engineer for Roads (Mr. Bennett,) the same piece of road was approved of by the Commissioner. The correctness of the opinions pronounced by Mr. Bayley and Mr. Bennett has been, in this particular instance, proved by the evidence of persons who have since had occasion to use the road, and have found it nearly impassable after a few days wet weather.

It is but just to Mr. Collett to acknowledge that the system in question did not altogether originate with himself, and that he has shewn no disposition to conceal the circumstances above alluded to. On the contrary, Mr. Collett, though admitting the irregularity, yet considers his interference, in every case, to have been justified by the emergency, and quite within the sphere of his legitimate powers under the Main Roads Act. Mr. Collett, however, has made no attempt to explain the nature of any such emergency, and does not appear to have, in any case, made special record of the circumstances, or to have communicated to the Minister for Works the extraordinary course which he (Mr. Collett) thought proper to adopt. The Committee need scarcely point out to what gross abuses such a system must be liable, as enabling the Commissioner,

sioner, at any moment, to divest himself of responsibility, by superseding, at his own discretion, the checks imposed upon him by the action of subordinate officers, and by removing every means of subsequently calling him to account.

In some instances, it is true, that documentary and other evidence has been produced by Mr. Collett, purporting to shew the subsequent concurrence of some of his subordinate officers, whether or not directly in charge, with the irregular course adopted by the Commissioner; but in most of these instances, the subordinate officers concerned appear to have acted under the impression that they were bound to concur with what their superior officers had previously done, and that their concurrence was merely formal; and it is obvious that no such retrospective adjustment of the records of a particular case can cure the original irregularity, or render the proceedings to which it refers satisfactory to the public.

Your Committee find that these are not the only irregular proceedings in which Mr. Collett has been implicated. It appears, by the evidence of Mr. Under Secretary Rae, and by Mr. Collett's own admission, as well as by the records of the Department, that Mr. Collett, when employed as Superintendent of Roads in 1859, was severely censured by the then Commissioner for Roads, Captain Martindale, for insubordination, and for having exceeded his authority in the expenditure of public money upon certain works under his charge; and that Captain Martindale's censure, after further correspondence and inquiry, was finally endorsed by a formal reprimand from Mr. Secretary Eagar, accompanied by an intimation, that, in the event of a repetition of the practice, Mr. Collett would render himself liable to dismissal.

The difficulties of the inquiry undertaken by your Committee have been greatly increased by the ambiguous position assumed by the Commissioner for Roads. Your Committee have been unable to obtain from Mr. Collett any precise definition of his own duties. Mr. Collett expressly disclaims subordination or responsibility to the Head of the Department of Public Works, and refers to the Main Roads Act to vindicate for himself an independence claimed by no other public officer, and entirely inconsistent with the principle of constitutional responsibility. How fully the peculiar views of Mr. Collett upon this point have been carried out in practice, the preceding observations serve, in a great measure, to exemplify. But neither have the mutual relations subsisting between the Commissioner and his subordinates, nor the functions of the latter, been satisfactorily explained by any of the witnesses. In general, the Superintendents of Roads seem to have been left very much to their own discretion; at other times, as has been shewn above, the Commissioner has adopted the contrary extreme, of practically superseding these officers. Mr. Quodling asserts that on several occasions he applied for information, which he failed to obtain. His successor, Mr. Coghlan, states that his only instructions on receiving his appointment consisted of a simple
reference

reference to his predecessor, whose competency and integrity have been called in question by Mr. Collett, and who, under the circumstances, could scarcely be expected to furnish satisfactory information. In regard also to the most important portion of the works under Mr. Coghlan's charge, namely, the Doughboy Diversion Works, and which were the principal subject of Mr. Quodling's complaints, Mr. Coghlan affirms that he expressly declined taking charge without more definite instructions, which, up to the date of his evidence, he had not received. Whether these works could, at the period of Mr. Quodling's resignation, be regarded as sufficiently completed to require no further supervision, your Committee have not ascertained.

Mr. Collett having expressed a strong opinion of the incapacity and dishonesty of Mr. Quodling, has not satisfactorily explained to your Committee how Mr. Quodling could have been so long retained in a position of trust, immediately under Mr. Collett, without complaint or reprimand. Mr. Collett, indeed, does not appear to have been fully sensible of Mr. Quodling's deficiencies, until the conduct of the former was called in question by the latter. It is but fair to Mr. Quodling to point out that his official qualifications are favourably attested by several witnesses, and that the more serious charges against him cannot be regarded as proved.

In connection with the irregularities above-mentioned, it is not perhaps to be wondered at that the public works in the Northern Districts do not appear to have been in all cases carried out so as to give general satisfaction. Defects in the construction of roads have been spoken of by practical and intelligent eye-witnesses, which probably might have been avoided by more careful supervision. Roads are said to have become impassable in a short time after having been opened to the public, and it is affirmed that metal of inferior description, and in some cases totally unfit for the purpose, has been applied on spots where the best quality had been contracted and paid for; and although a general improvement in the Roads of the Northern Districts since Mr. Collett became Commissioner is admitted, the prevailing impression seems to be, that the amount and quality of the work done are not in proportion to the money expended and the official machinery employed.

The system of public accounts, connected with the Department of Public Works, appears to your Committee highly unsatisfactory. It has been shewn by the evidence of both Mr. Collett and Mr. Quodling, that neither have proper checks been maintained, nor sufficient control exercised, over the disbursement of considerable sums of public money, by the Commissioner and his subordinate officers. Mr. Quodling himself admits that his own public accounts have been most irregularly kept for some time past, but the irregularity appears to have entirely escaped the notice of the Department. Your Committee therefore feel it their duty to recommend that some improvement in this respect should be insisted on in future, by the Executive Government.

With

With reference to Mr. Martindale, who has been for some time past the most extensive Contractor for public works in the Northern Districts, your Committee consider it unfortunate that some inquiry had not been made before so much confidence was reposed in him. It appears by a letter addressed to the Chairman by Mr. Steavenson, Superintendent of Roads and Bridges in Victoria, that the same Mr. Martindale was formerly an extensive contractor in that Colony; where, however, his conduct was so unsatisfactory as, at least in Mr. Steavenson's opinion, to have quite disqualified him for further employment in that capacity.

The evidence of Mr. Hannington, and of other witnesses, conveys the unavoidable impression, that whatever may have been Mr. Collett's intentions, the public interest has often suffered by his irregular proceedings; but as regards certain charges of corrupt conduct which have been rather implied than directly made, in the course of this investigation, against Mr. Collett, your Committee feel bound to admit that no evidence has been brought before them which justifies them in forming a conclusive judgment to the prejudice of Mr. Collett's character for integrity; nor would it be altogether just to this gentleman to attach no weight whatever to his own denial of the allegations against him. It is undoubtedly true, as Mr. Collett himself admits, that he allowed himself to be the recipient of a sum of money in the shape of a testimonial, to which at least one contractor, whose works were under Mr. Collett's supervision, was a contributor, and in collecting which the same contractor is stated to have been an active agent. But in this matter, though your Committee are of opinion that Mr. Collett's conduct was unbecoming and injudicious, they cannot, taking into consideration the smallness of the amount, and the publicity of the transaction, take upon themselves to pronounce it corrupt. On the other hand, as the labours of your Committee must necessarily be brought to an immediate close, and, as the system to which your Committee have called attention and the errors of which Mr. Collett's administration has not tended to correct, appears to your Committee to place many and almost insurmountable obstacles in the way of satisfactory inquiry into any misconduct or malversation of which the Commissioner may be guilty, your Committee consider themselves entirely precluded from arriving at a positive conclusion in favour of Mr. Collett; they therefore deem it their most prudent course to abstain for the present from any more decided expression of opinion upon this point, and content themselves with recommending that it should, during the next Session, be made the subject of future investigation, together with all other branches of the present inquiry which your Committee have not been enabled to complete. Your Committee, however, have no hesitation in expressing a strong opinion that, so long as the office of Engineer of Roads is retained, that of Commissioner is wholly unnecessary, and that whatever legal or technical reasons there may be for the continuance of the latter, might be

met by the amalgamation of both offices in one, or by the appointment of qualified Engineers as Superintendents of Roads.

Before closing their remarks, your Committee cannot avoid noticing a letter addressed by Mr. Collett to Mr. Bayley, in answer to an application made by the latter to Mr. Collett, for leave to attend before your Committee for the purpose of giving evidence. Mr. Collett's letter appears to your Committee to evince a disposition not only to suppress evidence by indirect means, but also to encourage in a subordinate officer a spirit of disrespect towards a Committee of your Honorable House, which cannot but be regarded as highly reprehensible.

WILLIAM FORSTER,
Chairman.

*Legislative Assembly Chamber,
Sydney, 15 January, 1862.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 28 NOVEMBER, 1861.

MEMBERS PRESENT :—

Mr. Arnold,	Mr. Lucas,
Mr. Forster,	Mr. Dangar,
Mr. T. Garrett,	Mr. Markham.

William Forster, Esq., called to the Chair.

Committee deliberated upon the course of proceedings, and

Resolved :—That Mr. Quodling be summoned to give Evidence before this Committee to-morrow.

Motion made (*Mr. T. Garrett*) and Question,—That Mr. Collett be informed that the Committee will sit to-morrow at *Eleven o'clock*—*agreed to*.

[Adjourned till To-morrow, at *Eleven o'clock*.]

FRIDAY, 29 NOVEMBER, 1861.

MEMBERS PRESENT :—

W. Forster, Esq., in the Chair.

Mr. Dalgleish,	Mr. Dangar,
Mr. T. Garrett,	Mr. Hoskins,
Mr. Lucas,	Mr. Dick,
Mr. Arnold.	

Mr. Collett present in the room during the examination of witness.

Mr. Robert Quodling called in and examined.

Witness handed in copy of letter of resignation, together with copy of letter accepting the same. (*Vide List of Appendix.*)

In the course of examination, objection was taken to the form in which the Evidence was being conducted.

Strangers requested to withdraw.

Committee deliberated.

Witness recalled, and examination proceeded with.

Certain vouchers and other documents handed in. (*Vide List of Appendix.*)

Witness to be further examined.

[Adjourned to Wednesday next, at *Ten o'clock*.]

WEDNESDAY, 4 DECEMBER, 1861.

MEMBERS PRESENT :—

W. Forster, Esq., in the Chair.

Mr. Hoskins,	Mr. Lucas,
Mr. Markham,	Mr. Dangar,
Mr. T. Garrett,	Mr. Dalgleish,
Mr. Driver,	Mr. Arnold.

The witness (Mr. Quodling) not being yet in attendance,—

The Chairman suggested that Mr. James White (now in Sydney), who had travelled extensively over the Northern Roads, was a person likely to give useful information to the Committee in their inquiry.

Mr. White, with the concurrence of the Committee, sent for.

William R. Collett, Esq., *Commissioner for Roads*, examined.

Mr. James White, being in attendance, called in and examined.

Witness withdrew.

Mr. Quodling being now in attendance, called in and further examined.

Several documents handed in. (*Vide List of Appendix.*)

Copy of letter from Mr. Collett to Mr. Quodling, dated 7 March, 1861, produced, and by direction of the Chairman, read at length by the Clerk. (*Vide List of Appendix.*)

And,—the examination of witness not being yet concluded,—

Motion made (*Mr. Lucas*) and Question proposed,—That the Committee adjourn till eleven o'clock to-morrow.

Amendment

Amendment proposed (*Mr. Dalglish*),—That all the words after “till” be omitted, with the view to the insertion in their stead of the words “ten o'clock on Friday next.”

Amendment by leave withdrawn.

Original Question *put and agreed to.*

[Adjourned accordingly till To-morrow, at *Eleven o'clock.*]

THURSDAY, 5 DECEMBER, 1861.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Dalglish,
Mr. Dangar,
Mr. Dick,

Mr. Markham,
Mr. Hoskins,
Mr. T. Garrett,

Mr. Lucas.

Mr. Collett present in the room, during the examination of witness.

Mr. R. Quodling called in and further examined.

Strangers requested to withdraw.

Committee deliberated on the mode of conducting the evidence, and—

[Adjourned till To-morrow, at *Ten o'clock.*]

FRIDAY, 6 DECEMBER, 1861.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Dick,
Mr. Dangar,
Mr. T. Garrett,

Mr. Dalglish,
Mr. Markham,
Mr. Hoskins.

Mr. Collett present in the room during the examination of witness.

Mr. R. Quodling called in and further examined.

Several documents handed in. (*Vide List of Appendix.*)

In the course of examination, objection being taken to the style of Questions put to witness by Mr. Dick,—

Strangers requested to withdraw.

Committee deliberated.

Motion made (*Mr. Dalglish*) and Question proposed,—That the mode of examination adopted by Mr. Dick is irregular.

Deliberation continued.

Motion by leave withdrawn, and witness recalled.

Examination resumed, and,

Mr. Dick taking exception to replies of witness,—

Strangers again requested to withdraw.

On motion of Mr. Dalglish, evidence read by Shorthand Writer.

Witness recalled and examination proceeded with.

Witness withdrew.

Committee deliberated.

Motion made (*Mr. Lucas*) and Question proposed,—That the Committee adjourn to Monday next, at 10 o'clock.

Amendment proposed (*Mr. Dick*), to omit “Monday” and insert “Tuesday.”

Question put,—That the word proposed to be omitted stand part of the Question—
Agreed to.

Original Question put and agreed to.

[Adjourned accordingly to Monday next, at *Ten o'clock.*]

MONDAY, 9 DECEMBER, 1861.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Dalglish,
Mr. Markham,
Mr. Dangar,

Mr. T. Garrett,
Mr. Dick,
Mr. Lucas,

Mr. Hoskins.

Messrs. Collett and Quodling present in the room during the examination of witnesses.

Mr. Thomas Evans called in and examined.

Witness withdrew.

Andrew Loder, Esq., examined.

Witness withdrew.

[Adjourned till to-morrow, at *Ten o'clock.*]

TUESDAY,

TUESDAY, 10 DECEMBER, 1861.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Hoskins,		Mr. Markham,
Mr. Lucas,		Mr. Dangar,
Mr. Dick,		Mr. Dalgleish,

Mr. T. Garrett.

Messrs. Collett and Quodling present in the room during the examination of witnesses.

A. Loder, Esq., further examined.

Here the Chairman vacated the Chair, which was taken by Mr. Hoskins *pro tem*.

Examination continued.

Mr. Forster re-entering the room, resumed the Chair.

Examination concluded.

Witness withdrew.

[Adjourned till to-morrow, at Ten o'clock.]

WEDNESDAY, 11 DECEMBER, 1861.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Dick,		Mr. Markham,
Mr. Dalgleish,		Mr. Dangar,
Mr. Arnold,		Mr. Hoskins,
Mr. T. Garrett,		Mr. Lucas.

Mr. Collett present in the room during the examination of witness.

Mr. R. Quodling further examined.

Letter from Mr. Martindale to Mr. Collett, dated 18 February, 1861, handed to witness by Mr. Dick. (*Vide List of Appendix.*)

Mr. Dalgleish objecting to the form in which a Question was put to witness by Mr. Dick,—

Strangers requested to withdraw.

Committee deliberated.

And Chairman ruling that the form of Question put by Mr. Dick was *not* irregular,—

Witness recalled and examination resumed.

Mr. Hoskins objected to the form of Question put to witness by Mr. Arnold.

Strangers again withdrew.

Committee deliberated, and,

In the course of deliberation Chairman resigned the Chair;—

Whereupon, Mr. T. Garrett (on motion of *Mr. Forster*) called thereto.

Committee deliberated.

Motion made (*Mr. Dick*) and Question proposed,—“That the Committee adjourn until witness produce certain plans and papers referred to in the evidence.”

Committee further deliberated.

Motion by leave withdrawn.

Witness recalled and requested to produce before the Committee to-morrow, the plans and papers referred to.

Examination resumed.

Strangers again requested to withdraw.

Committee deliberated.

Motion made (*Mr. Lucas*) and Question proposed,—“That witness hand in his Field or Memorandum Book whenever he may think proper.”

Deliberation continued.

Motion by leave withdrawn.

Motion made (*Mr. Hoskins*) and Question proposed,—“That the book be not handed in until the termination of witness' examination.”

Question put.

Ayes, 3.		Noes, 2.
Mr. Dangar,		Mr. Arnold,
Mr. Lucas,		Mr. Dick.
Mr. Hoskins.		

And the following Members declining to vote,—

Mr. Dalgleish,
Mr. Markham,
Mr. Forster,—

Point of Order was raised by Mr. Arnold—namely,—

Whether Members on a Division in Committee are obliged to vote,—

And the Chairman ruling in the affirmative,—

Mr. Dalgleish, Mr. Forster, and Mr. Markham voted with the Noes,—and

Question negatived.

Committee further deliberated, and decided that witness be requested now to produce his Field or Memorandum Book.

Witness recalled and informed of decision of the Committee.

Witness produced the book referred to (with the understanding that it was to be handed in at the close of his examination).

Examination

Examination proceeded with.

Letter from Mr. Quodling to Commissioner for Roads, forwarding extras on Doughboy Diversion contract, handed to witness by Mr. Dick. (*Vide List of Appendix.*)

[Committee adjourned (on motion of *Mr. Hoskins*) till To-morrow, at Ten o'clock.]

THURSDAY, 12 DECEMBER, 1861.

MEMBERS PRESENT:—

Mr. Forster,	Mr. T. Garrett,
Mr. Dagleish,	Mr. Markham,
Mr. Dangar,	Mr. Hoskins,
Mr. Lucas,	Mr. Arnold.

Mr. Collett present in the room during the examination of witnesses.

The Committee having met,—

The newly elected Chairman (Mr. T. Garrett) resigned the Chair.

Mr. Forster (on motion of *Mr. Dagleish*) called thereto.

Mr. Quodling called in and further examined.

Certain documents handed in. (*Vide List of Appendix.*)

Strangers requested to withdraw.

Letter from Crown Solicitor to the Chairman, dated 10th instant, requesting to be informed whether Mr. Collett's attendance before the Committee on Monday next, the 16th instant, is indispensably necessary,—he being a material witness in an arbitration appointed to be held on that day,—*read.*

Committee deliberated.

Ordered,—That Mr. Williams, Crown Solicitor, be informed that Mr. Collett is not yet a witness before this Committee; that his attendance before them on Monday next will not be at all necessary, and that he is at liberty to attend the arbitration without in any way inconveniencing the Committee.

[Adjourned till To-morrow, at Ten o'clock.]

FRIDAY, 13 DECEMBER, 1861.

Proceedings stopped by sitting of the House during the hour appointed for meeting.

TUESDAY, 17 DECEMBER, 1861.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Lucas,	Mr. Hoskins,
Mr. Markham,	Mr. Dagleish,
Mr. Dangar,	Mr. T. Garrett.

Committee met pursuant to summons.

The following Telegram, from witness summoned this day, by direction of the Chairman, read by the Clerk.

"Sydney Station, 16 December, 1861.

"Received the following Message at 11h. 37m.

"From A. C. Bayley, Yass, to W. Forster, Esq., M.P., Sydney.

"Not having received any answer from the Commissioner for Roads for leave of absence to attend Quodling's Committee, am unable to leave the work without

"it. What am I to do? Will forward all correspondence."

Committee deliberated.

Resolved,—That the Chairman report the disobedience of summons to the House.

The Chairman laid before the Committee a letter he had received from the Commissioner of Roads and Bridges, Melbourne, dated 11 December, 1861, with reference to Mr. Martindale.

The same read and ordered (on motion of *Mr. Dagleish*) to be appended to the Report. (*Vide Separate Appendix A.*)

Mr. Quodling called in and further examined.

Committee deliberated, and—

[Adjourned till To-morrow, at Ten o'clock.]

WEDNESDAY, 18 DECEMBER, 1861.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Lucas,	Mr. Dangar,
Mr. Hoskins,	Mr. T. Garrett.

Mr. William Coghlan called in and examined.

At the conclusion of his examination, witness submitted verbal application for payment of expenses in attending the Committee.

To be subsequently considered.

Committee deliberated.

Resolved,—That Mr. W. R. Collett be examined at the earliest opportunity.

[Adjourned till To-morrow, at Ten o'clock.]

THURSDAY,

THURSDAY, 19 DECEMBER, 1861.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Markham,		Mr. Dalgleish,
Mr. Hoskins,		Mr. Dangar.

Mr. Quodling present in the room during the examination of witness.

Mr. Collett not being in town,—

Mr. Frederick Wells, *Surveyor of Roads*, called in and examined.

Examination being concluded,—

Strangers requested to withdraw.

Chairman laid before the Committee certain telegrams and letters that had passed between Commissioner for Roads and Mr. Bayley, with reference to the attendance of the latter as witness before the Committee.

Committee deliberated.

Motion made (*Mr. Dalgleish*) and Question proposed,—That it be an instruction to the Chairman to move, in the House—“That Mr. Bayley’s Evidence before the Committee “is desirable, and that the Secretary for Public Works be instructed to command his “attendance.”

Question put.

Committee divided.

Ayes, 2.

Noes, 2.

Mr. Dalgleish,		Mr. Markham,
Mr. Dangar.		Mr. Hoskins.

The Chairman decided with the “Noes,”—

And Question negatived.

The Chairman then submitted a Schedule of Travelling Expenses, &c., incurred by Mr. Coghlan in attending as witness before the Committee.

To be subsequently considered.

Committee further deliberated.

Ordered,—That Mr. Collett be summoned to give evidence immediately upon his arrival in town.

Alexander Brodie, Esq., J.P., then called in and examined.

At the conclusion of his examination witness made verbal application for payment of expenses incurred by attending before the Committee.

To be subsequently considered.

Witness withdrew, and—

[Committee adjourned till To-morrow, at Ten o'clock.]

FRIDAY, 20 DECEMBER, 1861.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Dalgleish,		Mr. Dangar,
Mr. Markham,		Mr. Hoskins,
		Mr. T. Garrett.

Mr. Quodling present in the room during the examination of witnesses.

Mr. Zacharia Hawkins called in and examined.

Witness withdrew.

Mr. S. G. Shairp, *Chief Clerk, Road Branch, Public Works Department*, called in and examined.

In the course of examination draft of letter from Mr. Shairp, in reply to Mr. Quodling’s letter of resignation, read and compared with that handed in by Mr. Quodling on the 29th November last. (*Vide Appendix B, page 8.*)

By direction of the Committee Mr. Quodling furnished with a copy of the Evidence as far as printed.

[Adjourned to Monday next, at Ten o'clock.]

MONDAY, 23 DECEMBER, 1861.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Lucas,		Mr. Dalgleish,
Mr. Dangar,		Mr. Hoskins.

The witness (Mr. Collett) summoned for this day not being in attendance, Committee deliberated.

Messrs. Collett and Shairp to be summoned for the next meeting.

[Adjourned.]

MONDAY,

MONDAY, 30 DECEMBER, 1861.

MEMBERS PRESENT :—

W. Forster, Esq., in the Chair.

Mr. Dangar,		Mr. Markham,
Mr. Hoskins,		Mr. Dalgleish,
Mr. T. Garrett.		

Committee met pursuant to summons.

Mr. Quodling present in the room during the examination of witness.

W. R. Collett, Esq., *Commissioner for Roads*, further examined.

Written statement handed in by witness, and by direction of the Chairman read by the Clerk. (*Vide List of Appendix.*)

Several other documents handed in. (*Vide List of Appendix.*)

Mr. Collett's examination to be continued at the next meeting.

[Adjourned, till To-morrow, at Ten o'clock.]

TUESDAY, 31 DECEMBER, 1861.

MEMBERS PRESENT :—

W. Forster, Esq., in the Chair.

Mr. Markham,		Mr. Lucas,
Mr. Dangar,		Mr. T. Garrett,
Mr. Dalgleish,		Mr. Hoskins.

Mr. Quodling present in the room during the examination of witness.

W. R. Collett, Esq., further examined.

Telegram from Commissioner for Roads to A. C. Bayley, Yass, 12 December, 1861, handed in and read by the Clerk. (*Vide List of Appendix.*)

Other documents handed in. (*Vide List of Appendix.*)

Examination to be resumed at next meeting.

[Adjourned to Thursday next, at Ten o'clock.]

THURSDAY, 2 JANUARY, 1862.

MEMBERS PRESENT :—

W. Forster, Esq., in the Chair.

Mr. Lucas,		Mr. Dalgleish,
Mr. Hoskins,		Mr. Markham,
Mr. T. Garrett.		

Mr. Quodling present in the room during the examination of witnesses.

W. R. Collett, Esq., further examined.

Copy of a letter from the Department of Internal Communication, dated 13th Dec., 1860, and signed A. Cooper Walker, Chief Clerk; also a copy of letter dated 8th August, 1860, signed by Mr. Bennett, and addressed to A. C. Bayley, Esq., Murrurundi, handed in, and by direction of the Chairman, read by the Clerk.

A. C. Bayley, Esq., *Superintendent of Bridges*, Yass, called in and examined.

Memorandum handed in. (*Vide List of Appendix.*)

[Adjourned till To-morrow, at Ten o'clock.]

FRIDAY, 3 JANUARY, 1862.

MEMBERS PRESENT :—

W. Forster, Esq., in the Chair.

Mr. Hoskins,		Mr. Dangar,
Mr. Dalgleish,		Mr. Lucas,
Mr. T. Garrett.		

Messrs. Collett and Quodling present in the room during the examination of witness.

A. C. Bayley, Esq., called in and further examined.

Room cleared.

Committee deliberated.

The Chairman laid before the Committee a letter from Mr. Coghlan, applying for reimbursement of expenses incurred by him in attending the Committee.

To be subsequently considered.

Letter from David Buchanau, Esq., M.P., addressed to the Chairman, also laid before Committee, and,—

On motion of *Mr. Dalgleish*, "That the same be read by the Clerk,"—

Question put.

Committee divided.

Ayes,

Ayes, 2.
Mr. Dalglish,
Mr. Dangar.

Noes, 3.
Mr. Hoskins,
Mr. T. Garrett,
Mr. Lucas.

Question negatived.

Motion then made (*Mr. Lucas*) and Question proposed,—“That the Committee do now adjourn to Tuesday next.”

Amendment proposed (*Mr. Dalglish*),—That the word “Tuesday” be omitted, with a view to insert in its stead the word “Monday.”

Question put,—That the word proposed to be omitted stand part of the Question.
Committee divided.

Ayes, 4.
Mr. Hoskins,
Mr. Lucas,
Mr. T. Garrett,
Mr. Dangar.

No, 1.
Mr. Dalglish.

Original Question put and agreed to.

[Adjourned accordingly to Tuesday next, at Ten o'clock.]

TUESDAY, 7 JANUARY, 1862.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Dalglish,
Mr. T. Garrett,
Mr. Dangar,

Mr. Hoskins,
Mr. Lucas,
Mr. Arnold.

Mr. Collett further examined.

Paper handed in by witness. (*Vide List of Appendix.*)

[Adjourned till To-morrow, at Ten o'clock.]

WEDNESDAY, 8 JANUARY, 1862.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Hoskins,
Mr. Dalglish,

Mr. Lucas,
Mr. Dangar.

Mr. Collett further examined.

During examination of witness, Mr. Bayley called in (on motion of *Mr. Hoskins*) to testify to the authenticity of a letter alleged to have been written by him without signature, and previously handed in by Mr. Collett.

Mr. Bayley was thereupon examined, and withdrew.

Examination of Mr. Collett resumed.

The following Letters and Report handed in and read at length by the Clerk:—

Letter from Joseph Martindale to Commissioner for Roads, dated November 1st, 1861. (*Vide List of Appendix.*)

Same to same, dated October 1st, 1861. (*Vide List of Appendix.*)

Letter from Mr. Muir, Foreman to Mr. Martindale, Contractor, dated from Doughboy Hollow, 18 November, 1861. (*Vide List of Appendix.*)

Letter from Mr. Hannington, Overseer to Commissioner for Roads, dated December 4, 1861. (*Vide List of Appendix.*)

Copy of Commissioner's Report on the Doughboy Diversion contract. (*Vide List of Appendix.*)

John Rae, Esq., Commissioner for Railways, and Mr. Hannington, to be summoned to attend at the next meeting.

[Adjourned till To-morrow, at Ten o'clock.]

THURSDAY, 9 JANUARY, 1862.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Markham,
Mr. Dalglish,

Mr. Dangar,
Mr. Dick,

Mr. Lucas.

Mr. Collett present in the room during the examination of witnesses.

Mr. Hannington called in and examined.

Examination interrupted by Mr. Rae being in attendance, who was called in and examined.

Witness requested to procure and produce certain correspondence in reference to expenditure by Mr. Collett of public money upon certain works under his charge.

Witness withdrew.

Mr. Hannington's examination resumed.

Copy of letter from Mr. S. G. Shairp to Mr. Hannington, dated October 30, 1861, handed in by Mr. Dalgleish at the request of Mr. Quodling (not present in the room), and read. (*Vide Inst of Appendix.*)

[Adjourned till To-morrow, at Ten o'clock.]

FRIDAY, 10 JANUARY, 1862.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Markham,	Mr. Dangar,
Mr. Dalgleish,	Mr. Hoskins,
Mr. Dick,	Mr. Lucas,
Mr. Arnold.	

Mr. Collett and Mr. Quodling present in the room.

John Rae, Esq., *Commissioner for Railways*, called in and further examined.

Witness explained and handed in several documents, and then withdrew.

Mr. Collett further examined.

Room cleared.

Committee deliberated.

Resolved—That, previous to the resumption of Mr. Collett's examination, the Committee receive a statement from Mr. Quodling (at his request) with reference to his Banking Account.

Mr. Quodling, thereupon, called in and further examined.

Parties requested to withdraw.

Committee deliberated.

Motion made (*Mr. Dalgleish*) and Question proposed,—“That this examination of Mr. Quodling be discontinued.”

Deliberation continued.

Motion by leave withdrawn.

Parties called in, and examination resumed.

During examination, Mr. Collett desiring to hand in a letter, with a view to its being appended to the Evidence,—

Parties requested to withdraw.

Committee deliberated.

Motion made (*Mr. Lucas*) and Question proposed,—“That the letter offered to be handed in by Mr. Collett be received.”

Deliberation continued, and

Motion by leave withdrawn.

Parties called in.

Examination of Mr. Quodling concluded.

Mr. Collett further examined.

In the course of examination, Mr. Dangar (through the Chairman) handed in a letter, dated June, 1861, from Mr. S. G. Shairp to Thomas Dangar, Esq., M.P. (*Vide Separate Appendix C.*)

Witness withdrew.

Committee to consider Draft Progress Report at next meeting.

[Adjourned to Tuesday next, at Eleven o'clock.]

TUESDAY, 14 JANUARY, 1862.

MEMBERS PRESENT:—

W. Forster, Esq., in the Chair.

Mr. Lucas,	Mr. Dalgleish,
Mr. Hoskins,	Mr. T. Garrett,
Mr. Dangar,	Mr. Markham,
Mr. Arnold.	

Committee met, pursuant to resolution of last meeting, to consider Draft Progress Report.

Chairman submitted the same to the Committee (printed copies having been previously circulated).

Draft of Progress Report read 1°.

The same read 2° paragraph by paragraph.

Paragraph 1 read, viz. :—

“Your Committee having examined the witnesses whose names are appended, as well as a number of documents connected with the case, are of opinion that the necessity for inquiry has been conclusively “established.” The statements contained in Mr. Quodling's letters of October 24th and November 3rd have been so far substantiated, that very great irregularities in the system of management of public works in the Northern Districts, under the Commissioner for Roads, have been disclosed. Mr. Quodling “himself

“ himself does not appear to have generally acted with candour or with due regard to official decorum, or to have adopted in all cases the most regular mode of communication with his superior officer; but it has been shewn that he more than once reported in writing, and that he frequently made personal remonstrances, to the Commissioner for Roads, upon the unsatisfactory manner in which the works under his (Mr. Quodling’s) charge, at the Doughboy Diversion, were being carried out by the contractor, Mr. Martindale. It has been further shewn that these reports and remonstrances of Mr. Quodling were in general disregarded, and that, in fact, the Commissioner was in the constant habit of receiving personal communications from the contractor in question, and of adopting his *ex parte* representations and explanations as conclusive evidence in his own favour, without further inquiry or reference to the officers in charge of the works. It appears, moreover, that on Mr. Quodling’s subsequent refusal to furnish the usual vouchers or certificates for the works he had previously condemned, payments of money were in several instances made to the contractor, by authority of the Commissioner, without such vouchers or certificates; and that in one case a voucher for a considerable sum (£600), which Mr. Quodling had refused, was furnished by another Superintendent (Mr. Bayley), who states that he had positive instructions from the Commissioner to vouch for works which were not under his charge, and with the character of which he was but slightly acquainted. It likewise appears, and the Commissioner himself admits, that he has frequently taken upon himself to alter the terms of contracts, and to supplement them by extraordinary provisions, sometimes in direct opposition to the judgment of the subordinate officer immediately in charge. For instance, at the Doughboy Diversion, the contractor was in this way authorized to spread metal without previous consolidation of the road, by which omission, according to Mr. Bayley, a saving of £300 a mile must have accrued to the contractor. Again, to adopt an expression of Mr. Shairp, Chief Clerk to the Commissioner, in his letter of October 30, “pitching was substituted for a portion of the broken metal,” by sole authority of the Commissioner. Under this head your Committee beg leave particularly to direct the attention of your Honorable House to the evidence of Mr. Shairp, who testifies, not only to many of the facts above referred to, but, from his own experience as a former Superintendent of Roads, expresses a strong opinion upon the unusual and irregular character of these proceedings.”

Motion made (*Mr. Dalgleish*) and Question proposed,—That the paragraph, as read, stand part of the proposed Progress Report.

Amendment proposed (*Mr. T. Garrett*),—That there be inserted after “established,” at the end of the first sentence, the words—“The evidence, however, having extended to such a length as to preclude the possibility of its being laid before your Honorable House this Session, your Committee recommend that—the evidence being printed and circulated in the meantime—a Committee be re-appointed next Session to consider the same, and draw up a Report based thereon”—with a view to their superseding the remainder of the paragraph.

Committee deliberated.

And the Chairman proceeding to put the Question in the usual form, viz., “That the words proposed to be omitted stand part of the Question,”—

Objection raised by Mr. T. Garrett, on the ground that his motion was merely to insert the above words after the word “established.”

Committee deliberated.

Question put,—That the form of Question proposed by Mr. Garrett be adopted.

Committee divided.

Ayes, 2.	Noes, 3.
Mr. T. Garrett, Mr. Hoskins.	Mr. Dangar, Mr. Lucas, Mr. Dalgleish.

Whereupon Question put,—That all the words after “established” stand part of the Question.

Committee divided.

Ayes, 3.	Noes, 2.
Mr. Dangar, Mr. Lucas, Mr. Dalgleish.	Mr. T. Garrett, Mr. Hoskins.

Original Question then put,—viz. That the paragraph, as read, stand part of the proposed Progress Report.

Committee divided.

Ayes, 3.	Noes, 2.
Mr. Lucas, Mr. Dangar, Mr. Dalgleish.	Mr. T. Garrett, Mr. Hoskins.

Paragraph 2 read, considered, and verbally amended.

Question put,—That the paragraph, as read, stand part of the proposed Progress Report.

Committee divided.

Ayes,

Ayes, 4.

Mr. Lucas,
Mr. Dalgleish,
Mr. Hoskins,
Mr. Dangar.

No, 1.

Mr. T. Garrett.

Mr. Markham not voting.

Paragraph 3, verbally and otherwise, by *consent*, amended.

The same, as amended, read, viz. :—

“ 3. It is but just to Mr. Collett to acknowledge that the system in question did
“ not altogether originate with himself, and that he has shewn no disposition
“ to conceal the circumstances above alluded to. On the contrary, Mr. Collett,
“ though admitting the irregularity, [which he himself characterizes by the
“ term ‘usurpation,’] yet considers his interference, in every case, to have
“ been justified by the emergency, and quite within the sphere of his legiti-
“ mate powers under the Main Roads Act. Mr. Collett, however, has made
“ no attempt to explain the nature of any such emergency, and does not
“ appear to have, in any case, made special record of the circumstances, or
“ to have communicated to the Minister for Works the extraordinary course
“ which he (Mr. Collett) thought proper to adopt. The Committee need
“ scarcely point out to what gross abuses such a system must be liable, as
“ enabling the Commissioner, at any moment, to divest himself of responsi-
“ bility, by superseding, at his own discretion, the checks imposed upon him
“ by the action of subordinate officers, and by removing every means of subse-
“ quently calling him to account.”

Question proposed,—That the paragraph, as amended, stand part of the proposed Progress Report.

Amendment proposed (*Mr. Garrett*),—That the words “ which he himself characterizes by the term ‘usurpation,’ ” be omitted.

Question put,—That the words proposed to be omitted stand part of the Question. Committee divided.

Ayes, 3.

Mr. Dangar,
Mr. Lucas,
Mr. Dalgleish.

Noes, 3.

Mr. T. Garrett,
Mr. Hoskins,
Mr. Markham.

The Chairman gave his casting vote with the Noes.

So it passed in the negative—words omitted accordingly.

Question then put,—That the paragraph, as now amended, stand part of the proposed Progress Report.

Committee divided.

Ayes, 5.

Mr. Lucas,
Mr. Dangar,
Mr. Hoskins,
Mr. Dalgleish,
Mr. Markham.

No, 1.

Mr. T. Garrett.

Paragraph 4 read.

Question put,—That the paragraph, as read, stand part of the proposed Progress Report.

Committee divided.

Ayes, 4.

Mr. Dangar,
Mr. Lucas,
Mr. Dalgleish,
Mr. Hoskins.

No, 1.

Mr. T. Garrett.

Mr. Markham not voting.

Paragraph 5 read.

Question put,—That the paragraph, as read, stand part of the proposed Progress Report.

Committee divided.

Ayes, 3.

Mr. Dangar,
Mr. Dalgleish,
Mr. Lucas.

Noes, 3.

Mr. T. Garrett,
Mr. Hoskins,
Mr. Markham.

The Chairman gave his casting vote with the Ayes.

So it passed in the affirmative.

Paragraph 6 by consent amended.

The same, as amended, read, viz. :—

“ 6. [The difficulties of the inquiry undertaken by your Committee have been
“ greatly increased by the ambiguous position assumed by the Commissioner for
“ Roads. Your Committee have been unable to obtain from Mr. Collett any
“ precise definition of his own duties.] Mr. Collett expressly disclaims subor-
“ dination or responsibility to the Head of the Department of Public Works,
“ and refers to the Main Roads Act to vindicate for himself an independence
“ claimed

“ claimed by no other public officer, and entirely inconsistent with the principle of constitutional responsibility. How fully the peculiar views of Mr. Collett upon this point have been carried out in practice, the preceding observations serve, in a great measure, to exemplify. But neither have the mutual relations subsisting between the Commissioner and his subordinates, nor the functions of the latter, been satisfactorily explained by any of the witnesses. In general, the Superintendents of Roads seem to have been left very much to their own discretion; at other times, as has been shown above, the Commissioner has adopted the contrary extreme, of practically superseding these officers. Mr. Quodling asserts that on several occasions he applied for information, which he failed to obtain. His successor, Mr. Coghlan, states that his only instructions on receiving his appointment consisted of a simple reference to his predecessor, whose competency and integrity have been called in question by Mr. Collett, and who, under the circumstances, could scarcely be expected to furnish satisfactory information. In regard also to the most important portion of the works under Mr. Coghlan's charge, namely, the Doughboy Diversion Works, and which were the principal subject of Mr. Quodling's complaints, Mr. Coghlan affirms that he expressly declined taking charge without more definite instructions, which, up to the date of his evidence, he had not received. Whether these works could, at the period of Mr. Quodling's resignation, be regarded as sufficiently completed to require no further supervision, your Committee have not ascertained.”

Question proposed,—That the paragraph, as read, stand part of the proposed Progress Report.

Amendment proposed (*Mr. Hoskins*),—That the following words be struck out—
[“ The difficulties of the inquiry undertaken by your Committee have been greatly increased by the ambiguous position assumed by the Commissioner for Roads. Your Committee have been unable to obtain from Mr. Collett any precise definition of his own duties.”]

Question put,—That the words proposed to be omitted stand part of the Question.
Committee divided.

Ayes, 3.

Mr. Lucas,
Mr. Dalgleish,
Mr. Dangar.

Noes, 3.

Mr. T. Garrett,
Mr. Hoskins,
Mr. Markham.

The Chairman gave his casting vote with the Ayes,—

And so it passed in the affirmative.

Original Question then put.

Committee divided.

Ayes, 3.

Mr. Lucas,
Mr. Dalgleish,
Mr. Dangar.

No, 1.

Mr. T. Garrett.

Mr. Hoskins and Mr. Markham not voting.

Paragraphs 7 and 8 read and agreed to.

Paragraph 9 read.

Question put,—That the paragraph, as read, stand part of the proposed Progress Report.

Committee divided.

Ayes, 5.

Mr. Lucas,
Mr. Dalgleish,
Mr. Hoskins,
Mr. Dangar,
Mr. Markham.

No, 1.

Mr. T. Garrett.

Paragraph 10, *by consent*, amended.

Same as amended read.

Question put,—That the paragraph, as read, stand part of the proposed Progress Report.

Committee divided.

Ayes, 5.

Mr. Lucas,
Mr. Dalgleish,
Mr. Dangar,
Mr. Hoskins,
Mr. Markham.

No, 1.

Mr. T. Garrett.

Portion of paragraph 11, *by consent*, amended.

The same, as amended, read, viz. :—

“ 11. The evidence of Mr. Hannington, and of other witnesses, conveys the unavoidable impression, that, whatever may have been Mr. Collett's intentions, the public interest has often suffered by his irregular proceedings; but as regards certain charges of corrupt conduct, which have been rather implied than directly made, in the course of this investigation, against Mr. Collett,

“ Collett, your Committee feel bound to admit that “no” evidence “has” been brought before them which justifies them in forming a conclusive judgment to the prejudice of Mr. Collett’s character for integrity, nor would it be altogether just to this gentleman to attach no weight whatever to his own denial of the allegations against him. It is undoubtedly true, as Mr. Collett himself admits, that he allowed himself to be the recipient of a sum of money in the shape of a testimonial, to which at least one contractor whose works were under Mr. Collett’s supervision was a contributor, and in collecting which the same contractor is stated to have been an active agent. But in this matter, though your Committee are of opinion that Mr. Collett’s conduct was unbecoming and injudicious, they cannot, taking into consideration the smallness of the amount, and the publicity of the transaction, take upon themselves to pronounce it corrupt.”

Question proposed,—That this portion of the paragraph, as read, stand part of the proposed Progress Report.

Amendment proposed (*Mr. Lucas*),—That the word “no,” in the 9th line, be omitted, with a view to the insertion of the word “sufficient,” and that the word “not” be inserted after “has,” in the same line.

Question put,—That the word proposed to be omitted stand part of the Question.
Committee divided.

Ayes, 3.

Mr. T. Garrett,
Mr. Hoskins,
Mr. Markham.

Noes, 3.

Mr. Lucas,
Mr. Dangar,
Mr. Dalgleish.

The Chairman gave his casting vote with the Ayes.

And so it passed in the affirmative.

Remaining portion of paragraph 11 then, *by consent*, amended.

The same, as amended, read, viz. :—“ On the other hand, as the labours of your Committee must necessarily be brought to an immediate close, and, as the system, to which your Committee have called attention, and the errors of which Mr. Collett’s administration has not tended to correct, appears to your Committee to place many and almost insurmountable obstacles in the way of satisfactory inquiry into any misconduct or malversation of which the Commissioner may be guilty, your Committee consider themselves entirely precluded from arriving at a positive conclusion in favour of Mr. Collett; they therefore deem it their most prudent course to abstain for the present from any more decided expression of opinion upon this point, and content themselves with recommending that it should, during the next Session, be made the subject of future investigation, together with all other branches of the present inquiry which your Committee have not been enabled to complete. Your Committee, however, have no hesitation in expressing a strong opinion that, so long as the office of Engineer of Roads is retained, that of Commissioner is wholly unnecessary, and that whatever legal or technical reasons there may be for the continuance of the latter, might be met by the amalgamation of both offices in one, or by the appointment of qualified Engineers as Superintendents of Roads.”

Question put,—That paragraph 11, as amended, stand part of the proposed Progress Report.

Committee divided.

Ayes, 5.

Mr. Lucas,
Mr. Dalgleish,
Mr. Hoskins,
Mr. Dangar,
Mr. Markham.

No, 1.

Mr. T. Garrett.

Paragraph 12 read.

Question put,—That the paragraph as read stand part of the proposed Progress Report.

Committee divided.

Ayes, 3.

Mr. Lucas,
Mr. Dangar,
Mr. Dalgleish,

Noes, 3.

Mr. T. Garrett,
Mr. Hoskins,
Mr. Markham.

The Chairman gave his casting vote with the Ayes.

So it passed in the affirmative.

Motion made (*Mr. Dalgleish*) and Question put,—That this be the Progress Report of the Committee.

Committee divided.

Ayes, 3.

Mr. Lucas,
Mr. Dangar,
Mr. Dalgleish.

Noes, 3.

Mr. T. Garrett,
Mr. Hoskins,
Mr. Markham.

The Chairman gave his casting vote with the Ayes.

And so it passed in the affirmative.

Chairman requested to report.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

RESIGNATION OF MR. QUODLING.

FRIDAY, 29 NOVEMBER, 1861.

Present:—

Mr. ARNOLD,	Mr. FORSTER,
Mr. DALGLEISH,	Mr. T. GARRETT,
Mr. DANGAR,	Mr. HOSKINS,
Mr. DICK,	Mr. LUCAS.

WILLIAM FORSTER, ESQ., IN THE CHAIR.

Mr. Robert Quodling called in and examined:—

1. *By the Chairman*: Will you state what office you held lately in the public service? Mr. Robert Quodling.
2. Did you not resign lately? I did resign, on the 24th of October last.
3. Have you any copy of the letter which signified your resignation to hand to the Committee? 29 Nov., 1861.
4. I have. That is the letter accepting the resignation.
5. I asked for the letter by which you signified your resignation? This is a rough draft. *(The witness handed in the same. Vide Appendix A.)*
6. Is this a correct copy? It is a correct copy.
7. Have you seen a copy of that letter published in the *Herald* lately? Yes.
8. Is that a correct copy? That is a correct copy.
9. Published on the 27th November? Yes.
10. Do you wish to hand in this other letter to the Committee—you say this is the letter in reply? In reply to my letter of resignation.
11. You hand this in also? Yes. *(The witness handed in the same. Vide Appendix B.)*
12. This letter is signed "C. G. Shairp"—what office does Mr. Shairp hold? Chief Clerk of Roads.
13. Is he under Mr. Collett, the Commissioner of Roads? I believe he is Chief Clerk of Roads, under Mr. Collett.
14. Was he in the habit of corresponding with you under that designation? Yes.
15. I believe you say, in your letter of resignation, that you have repeatedly reported about the unsatisfactory manner in which the Doughboy Diversion Works are being carried out by Mr. Martindale—do you adhere to that statement? Yes.
16. Who is Mr. Martindale? He is a contractor under the Government.
17. Contractor for the Doughboy Diversion Works? Yes.
18. Does he hold any other contracts? I believe he has a great many other contracts.
19. He is a well-known contractor? He is a well-known contractor.
20. You also state that your remonstrances have been of no avail? Yes.
21. That you were continually met by the contractor with his having explained to Mr. Collett personally? Yes.
22. You adhere to these statements? I adhere to them.

- Mr. Robert Quodling.
29 Nov., 1861.
22. Am I to infer, then, that you considered that the public interest would have suffered, had you remained in office under the circumstances in which you were placed? Yes.
23. Was it entirely on public grounds that you resigned? Yes.
24. You are not conscious of having any private motives at all? No private motives at all.
25. You think the public interest would have suffered if you had remained in office? I am satisfied that it would.
26. In what shape were these reports put that you say, in your letter of resignation, were repeatedly given in to the Government—were they verbal or written reports? They were included in my monthly reports, and when I took charge of the works on the 12th of August—
27. Be kind enough to answer the question as precisely as you can; you will have full opportunity for explanation. In what shape were these reports made—were they verbal or written reports? Written reports.
28. Have you any copies of the reports you furnished? Yes; I have one here, dated Tamworth, August 16th.
29. Do you hand this in to the Committee? Yes. (*The witness handed in the same. Vide Appendix C.*)
30. This is one of the reports to which you allude in your letter of resignation? Yes.
31. Were there any other written reports furnished by you? They were included in my monthly report.
32. But you said you had repeatedly reported? I repeatedly reported.
33. Have you made any verbal reports also? Yes.
34. To the Commissioner personally? To the Commissioner personally.
35. On many occasions you made verbal reports to the Commissioner, of the same character as your written reports, condemning these works? Yes; on the 11th September I reported unfavourably to Mr. Collett; that was the date of one of his visits to the Doughboy Diversion.
36. *By Mr. Hoskins:* Mr. Collett personally visited you? Mr. Collett personally visited the Doughboy Works.
37. *By the Chairman:* You state here also, that there have been "repeated payments of money before it was due, without vouchers"—do you adhere to that? Yes.
38. Did you report this circumstance in writing to anyone? No; I refused to certify to the vouchers forwarded for my certificate.
39. Do you mean to say that repeated payments of money were made without the necessary vouchers from yourself? Without the necessary certificate from myself.
40. Is it your opinion that there was no proper authority to pay the money without your certificate? I never knew an instance before. It is not usual with other contractors to pay without the superintendent's voucher and certificate.
41. Do you know this to have occurred in a great many cases? I believe it has occurred with this contractor, but I do not know that it has with any other.
- [*Witness and strangers ordered to withdraw. Committee deliberated. Witness re-introduced.*]
42. Of your own knowledge do you know whether this circumstance of which you now complain, that is, of money having been paid without the proper certificate, has occurred in a great many cases, or only in a few? I do not know of any other cases but Mr. Martindale's.
43. With regard to Mr. Martindale, did it happen once, or more than once? It happened several times.
44. By whose authority was the money paid? The Commissioner for Roads; it states here, by these returns I have got—
45. Can you state of your own knowledge that Mr. Martindale received this money without the due certificates? I can produce vouchers, without certificates, shewing Mr. Martindale's receipt, and witnessed by clerks in the office, and the money was lodged to the credit of the contractor in the Commercial Bank at Maitland.
46. Can you hand in any papers to shew this? This is the first voucher, 20th August; I refused to certify to that. (*The witness handed in the same. Vide Appendix D.*)
47. Is this the contractor's signature, "Joseph Martindale"? That is his signature, to the best of my belief.
48. You state that you refused to certify for this sum of money? Yes.
49. Have you any other similar documents? Yes, a £500 voucher paid on the 13th August, seven days previous to that, received by me on October 30th; it left the office on the 28th. (*The witness handed in the same. Vide Appendix E.*)
50. Long after—? Long after the payment.
51. It was forwarded to you for your signature? It was forwarded to me for my signature.
52. Were there any other cases? £200, 21st September, to the credit of J. Martindale, by authority of the Commissioner, without voucher; I submitted it to the office, for explanation, with this letter (*The witness handed in the same. Vide Appendix F.*) objecting or asking the reason it was paid in, and that is the letter I received when I submitted it. (*The witness handed in the same. Vide Appendix G.*)
53. This letter you received from the office, in explanation of your objection? Yes.
54. Were these all sums of money paid on account of the Doughboy Diversion Works? On account of the Doughboy Diversion Works.
55. Did you make any remonstrances or objections, on the ground of the money having been paid without vouchers? I stated on the back of one of the vouchers—. I returned one to the office with my certificate to it, but I made an objection on the back of the return; I was requested to certify, but I made a memorandum saying that the contractor had not done sufficient to entitle him to it.

56. Are you sure that the payment of this money, without your certificate, was irregular? I am certain it was irregular; it never occurs with other contractors.
57. Had not the Commissioner power to pay money, if he was satisfied? I do not know what authority he may have.
58. Did you consider it your duty to give certificates on which alone the money ought to have been paid? The specification distinctly states that the work is to be done to the satisfaction of the Road Superintendent and the Commissioner for Roads.
59. *And* the Commissioner? *And* the Commissioner.
60. You were the Road Superintendent? I was the Road Superintendent.
61. In regard to the whole work, you say you made remonstrances at different times as to the unsatisfactory manner in which it was performed. What is your opinion of the state of these works at the time you resigned—the condition the works were in, as to their being well or ill performed, or near their completion? The quantities to complete the bridges, and my objections, I suppose you want.
62. I want to know the condition the works were in, and whether they were well performed? They were not well performed.
63. I observe that you say you had repeatedly reported about the unsatisfactory manner in which the works were being carried out, and that these remonstrances were not attended to at the time—I want to know whether any alteration or improvement had taken place when you resigned—were the works still in the unsatisfactory condition as to which you had previously reported? They were still in the unsatisfactory condition as to which I had reported.
64. Will you state particulars, shewing, as far as you believe it to exist, the unsatisfactory character of the works—in what particulars did you find fault? I found fault with the pitching.
65. "Pitching" being a technical word, perhaps you will explain it? The macadamizing.
66. In what respect did you find fault? It was not carried out according to specification; the consolidation clause was not attended to.
67. Was this special fault in existence at the time you resigned? Yes.
68. You think the pitching was not satisfactory when you resigned? It is not now, nor was it when I resigned.
69. Do you mean to say the stone laid on the roads was too large? It was not too large, but it was laid on before the formation was consolidated.
70. What would be the effect of such a defect as that? The effect would be that you would never have a good road. When I objected to the pitching being put on, my horse sank up to his belly in the soft embankment; but I was directed to put it on by the Commissioner. The clause in the specification states:—"When the formation, fences, and bridges are completed, the traffic is to be turned on to the road during the fine weather, until formation is thoroughly consolidated; the maintaining convexity with fresh approved material and filling up ruts must be carefully attended to by contractor." That clause is struck out altogether.
71. Confine yourself first to the point I am at now. You state that the pitching was put on before the foundation was properly consolidated? Yes, the metalling.
72. And that the effect would be to make a bad road—would it injure the convexity of the road—would it work into hollows? It would work into hollows and not stand any heavy traffic over it in wet weather.
73. What is the material of which the consolidation was formed under the pitching? Clay, soft embankment.
74. Is that according to specification—was the material correct? It is earthwork.
75. In what respect was the consolidation defective—had it not been sufficiently exposed to the air? The traffic had not been turned on it in fine weather, as stated here in the specification. There is a clause providing for that, in order to get the formation hard to receive the macadamising; that was not attended to.
76. You mentioned just now that a clause was struck out of the specification—what do you mean? I was told by the Commissioner, when I stopped the contractor from putting on the pitching—
77. For the reason stated? For the reason stated.
78. You called the attention of the Commissioner to it? I did, and he directed the contractor to carry on the work.
79. Do you mean that he directed the contractor to put on the pitching in the state the embankments were in? In the state the embankments were in.
80. And you state positively the consolidation was not sufficient? It had had no consolidation at all.
81. What do you allude to, when you say the clause was struck out of the specification? It was struck out—I was told by the Commissioner to take not the slightest notice of the consolidation clause in the specification.
82. That is what you mean by its being struck out—you did not see it struck out of the writing.—You have explained that the Commissioner directed you not to notice it; you did not see the document with the clause struck out? No document, but I was told verbally, in the presence of one or two witnesses.
83. Did you consider it your duty to obey the Commissioner? I did, as a subordinate officer.
84. Did you not consider it your duty to make a report of this order? I was directly under the Commissioner, and of course I did not consider it my duty to make any report.
85. You did obey the order of the Commissioner? I did, and the remark Mr. Collett made when I objected was this (*reading from a memorandum book*):—"I received a reprimand from Mr. Collett about the stoppage of Martindale with his pitching. I was told by Mr. Collett
" to

Mr. Robert Quodling.

29 Nov., 1861.

- Mr. Robert Quodling. "to put on the pitching on the embankments just as they were, and I stated they were not in a fit state to receive the pitching; he said he did not care about the embankments sinking, if one coat of pitching did not do he would give it another, and if that did not do he would supplement it with a third."
- 29 Nov., 1861.
86. *By Mr. Hoskins*: When did you make that memorandum? On the 11th September.
87. *By Mr. Dick*: On the day of the conversation? On the day of the conversation, on the works, in the presence of one or two witnesses.
88. *By Mr. Dalgleish*: Are you in the habit of taking memoranda? I have taken every word.
89. *By the Chairman*: Will you explain the process of pitching—the various processes that the stone is put through—there are several, I am told? The way the Doughboy Diversion is pitched is this: it is pitched for a space of eighteen feet wide, nine inches in the centre and six inches at the side.
90. *By Mr. Dick*: Rubble stone? Rubble stone.
91. *By the Chairman*: What term do you give to that process? That is the pitching.
92. That is the first rough foundation? Yes.
93. What is the next? The metalling.
94. What is the character of that stone—the best stone? No, a description of shale has been used.
95. Is the best stone applied to any contract put on in what is called metalling—is that the last process, the top? Yes, that is the top.
96. What is the meaning of ballasting? There is no ballasting in this contract.
97. In regard to what ought to be done under the contract, where do you derive your information as to the mode in which the contract was to be performed—had you a copy of the contract submitted to you? I had the specification to guide me.
98. Then the objections you have been taking are grounded on the specification itself? On the specification itself.
99. You made some remark; you said shale was put in the place of proper material? Yes.
100. What was the kind of metal under the specification? It was specified to be basalt.
101. What was the metal really used? A description of shale.
102. Basalt was not used at all? It was used.
103. To what extent? Only a small extent.
104. Can you mention it in round numbers? I have the whole of the measurements. There is about 700 yards of shale that has been used, or a bad description of metal that I did not approve of.
105. You call it shale? I call it shale. A better term might be found, but I could not.
106. You state positively it was not basalt? It was not basalt.
107. And do you state positively that the specification intended basalt from beginning to end? Yes.
108. Ought this shale not to have been used at all? It ought not to have been used at all.
109. Was it a sort of ironstone? I am sure it was not ironstone.
110. Was it a stratified rock? It was a stratified rock, of course.
111. Was it of a character—this shale—that is easily broken into flakes when it receives a blow—is that the kind of rock it is? Yes.
112. When struck with a hammer did it fly into flakes instead of into square blocks as basalt does? Shale will not break up into square blocks.
113. What is the difference in point of value between this shale and basalt? One could be broken for a considerable sum cheaper than the other; it is more easily broken.
114. *By Mr. Hoskins*: And very inferior for road-making? Yes.
115. *By Mr. Dalgleish*: Have you a sample? I had a sample; Mr. Arnold has got it.
116. *By the Chairman*: What was the species of basalt that was used—was it good? Very good.
117. Was it put on according to specification? Yes.
118. In proper quantity? No, not in proper quantity.
119. What was the deficiency? I was not allowed to measure it in heaps on the road, as specified.
120. It was not measured according to specification? It was not measured according to specification.
121. You say you were not allowed to measure it—had you positive orders not to measure it? Yes.
122. From whom? From the Commissioner of Roads, and from Mr. Bayley, when he was leaving the works.
123. Who was Mr. Bayley? He had charge of the works before me.
124. And he left orders for you that he had received himself—do you mean that? Yes.
125. Did Mr. Bayley leave you written orders? Yes, he left me a written slip.
126. You have lost it, have you? I can produce it.
127. What was the purport of this written slip? Stating that the metal was to be put on without measurement, half a cubic yard to the lineal yard.
128. Do you mean to say these orders were given in writing? In writing.
129. In the writing of Mr. Bayley, or in the writing of anyone else? Orders were given in my presence to Mr. Bayley, by Mr. Collett.
130. With regard to this written order? That was in Mr. Bayley's writing.
131. Then it was a mere memorandum? A mere memorandum.
132. There was no authority from Mr. Collett, as far as the writing was concerned? No.
133. You say that the orders, in the shape in which you have put them, were that you were not to measure the metal? Yes; in fact I received orders from Mr. Collett not to measure anything—that it was a lump sum and required no measurements.

134. Did you consider it your duty to obey these orders? I did not; I measured for my own information. Mr. Robert Quodling.
135. According to specification? Yes.
136. What was the result of your measurement.—Will you refer to that part of the specification which determines the mode of measurement? “All the stone for the first layer may be broken at whatever time suits the contractor; and when the entire is ready to be spread, will be measured in heaps by the superintendent or other authorized officer; it must then be all spread before the metal for the second layer is broken.” That is not attended to at all. 29 Nov., 1861.
137. *By Mr. Hoskins*: We want to know the terms of the specification, as to the quantity of metal to be laid on the road per yard? The quantity of metal to be laid on the road is this —
138. *By the Chairman*: Is that in the specification? No, it is not included in the specification. This is Mr. Collett's memorandum.
139. *By Mr. Arnold*: Is it on a schedule of prices? Yes.
140. They are not bound to quantity? They are bound to quantity.
141. What is the quantity? 2,600 cubic yards is the quantity.
142. *By the Chairman*: Do you mean to say the contractor was bound to furnish this amount? 2,600 cubic yards.
143. That is not in the specification? This is the contract. The specification is only to guide you in doing the work. The quantities are not included in the specification.
144. You say you were ordered not to measure, but you did notwithstanding; I want to know the result of your measurements—these private measurements—as nearly as you can give it? 1,584 cubic yards is the quantity broken for the contract.
145. Was this all basalt? No, that is the total quantity.
146. The total quantity of all the stone put on the road? The total quantity of all the stone broken and paid for by the contractor.
147. And which you state ought to have been basalt? The whole quantity ought to have been basalt.
148. This is the total quantity, by your measurement; that was laid on the roads? The total quantity by my measurement was 1,584 cubic yards.
149. Was that equal to the quantity that should have been laid on the road, or was it deficient? There was a deficiency of 1,016 cubic yards.
150. Was anyone else cognizant of this measurement but yourself? Mr. Hannington, my overseer, and the contractor's agent.
151. Will he be able to prove these measurements? Yes; it is a measurement made by Mr. Hannington and the contractor's agent, and checked by myself.
152. Did you not consider that you were disobeying orders when you measured after being told not to do so? No.
153. Did you not say you were told not to do so? I keep them for my own guidance.
154. What was your object? To see the real quantity that was broken, because I did not think matters were going on as they ought to be going on.
155. Do you know anything of this document, which is, I believe, called an I form, and comes from the Department of Internal Communication. (*This document was handed to the Chairman by Mr. Collett. Vide Appendix II.*) The total amount certified for under this document is 1,200 yards, and it is signed “Robert Quodling”? Yes.
156. It is a species of voucher, I presume? Yes.
157. You know that document? Yes, I have seen the document before.
158. That is your signature? Yes.
159. Is it a correct document? I believe it is.
160. This was a voucher properly passed? Yes.
161. Does it bear any reference at all to what——? That was a voucher forwarded to me after Mr. Collett's inspection of the work.
162. Is the metal for which this voucher is given included in the measurement you have given? That is included in my measurement.
163. That is a portion of it? That is a portion of it. I think that is the only voucher Mr. Collett can find that I forwarded for metal.
164. It is a correct voucher, so far? It is a correct voucher, so far.
165. Was this for basalt or shale? That was the metal, just as it was, and approved by the Commissioner.
166. Did you understand that you were vouching for yourself, or by his authority? By his authority.
167. *By Mr. Dick*: For shale or basalt? For shale and basalt.
168. *By Mr. Hoskins*: Then you certified for metal of a description that should not have been laid down? Yes.
169. *By the Chairman*: This is not the entire quantity—1,200 yards? The entire quantity broken is 1,584 cubic yards.
170. Under this document you say 1,200 yards were broken but not spread—does not that imply that it was measured before it was spread? It was never measured by me.
171. How comes it then that you signed this? There is a deduction for that which was not spread.
172. Did you measure these 1,200 yards? No, I did not measure it personally; I went through the heaps and saw there was about that quantity done, and I made a return for it.
173. You were not sure of it? I was satisfied there was that amount done.
174. Are you sure this is correct? Quite certain.
175. What is the meaning of deducting 40 per cent.? Till the metal was spread on the road.

- Mr. Robert Quodling. 176. That was to be withheld? It was withheld.
177. Until the metal was spread? Yes.
178. So far there was a measurement? There was a measurement, so far.
- 29 Nov., 1861. 179. You stated just now that you did not measure any? I had not authority to measure when I left the works. I had charge of the works at this time, and directly I began to measure on the work it was taken out of my hands; then I was told by the Commissioner not to make any measurements at all.
180. You have made objections now to certain things—have you any other objections, or at least, are there any other remarks that you have to make on the condition of these works, shewing what you consider to have been the defective condition of these works at the time you resigned? Yes, I have a great number.
181. With regard to the fencing? There are only six panels of fencing put up on the contract.
182. What was the proper quantity? I was told there was half a mile to put up.
183. Is there anything in the specification about fencing? There is no quantity stated in the specification.
184. Then you cannot be positive whether it was according to contract or not? This is the whole contract—three or four documents; it is made on slips of paper.
185. You have no document to shew that the fencing is not according to contract? No; no document to shew about the fencing.
186. *By Mr. Hoskins*: How do you know the quantity of fencing to be erected? That is the quantity Mr. Bailey told me was to be put up—the arrangement made—when I took charge of the works.
187. *By the Chairman*: With regard to the bridges on this road, were they all finished according to contract, or so far as done were they properly done? Were they carried out to drawings, do you mean?
188. So far as they were done when you left, were they properly done? No, they were not properly done.
189. What was the defect? Do you want the quantities?
190. I want to know how they were defective, as compared with the specification to which you have referred—what was there defective in regard to the bridges? They were not carried out to drawings; three piles were substituted instead of four. This is an attested copy of Mr. Collett's memorandum:—"Mr. Bayley to substitute three piles instead of four piles on the several bridges on the Doughboy Diversion, unless some satisfactory reason to the contrary is shewn to the Commissioner.—Field. W. R. C., 11/4/61."
191. In the written specification to which you refer, is there anything about bridges? Yes.
192. I mean the specification which you say constituted your instructions from the department—is there anything there about bridges? Yes.
193. Are the defects you mentioned defects as compared with that? Yes, they are.
194. Will you point them out, and point out the particular part of what you call the specification, which refers to bridges, in which the contractor deviated from his contract—where is the part that refers to bridges, or is there any part at all? The slabbing has not been carried out according to specification.
195. What is the part that refers to bridges in the specification—you have referred to a specification which you say constituted your instructions from the department—in what part of this are bridges mentioned, or are they mentioned at all? Bridges are mentioned.
196. Read out the part where they are mentioned? I want to explain to you that this specification of the original line has been altered, and many bridges mentioned in this specification have been done away, and others substituted which have been different to these.
197. You said your instructions were in the shape of a specification; read out the part that refers to bridges—what instructions did you get about bridges? "The bridges to be as follows:—
- "No. 1. A simple beam bridge of two spans of 20 feet each and one span 15 feet.
 - "No. 2. A simple beam bridge of one 20 feet span.
 - "No. 3. A simple beam bridge of two 21 feet spans.
 - "No. 4. A simple beam bridge of three 21 feet spans.
 - "No. 5. A simple beam bridge of one 25 and four 21 feet spans.
 - "No. 6. A bridge of three 50 feet spans undertrussed, and one 21 feet span, beam with corbels.
 - "No. 7. Three 25 feet spans, beams with corbels.
 - "No. 8. A simple beam bridge in two spans of 20 feet.
 - "No. 9. One queen-truss 50 feet span with three 21 feet spans, girders, and corbels.
 - "No. 10. One undertruss of 50 feet span, with two 21 feet and two 18 feet, beams with corbels."
- Nos. 6, 7, 8, 9, and 10, have been altered from this contract.
198. With regard to these bridges, what defects did you find? The slabbing has not been carried out according to specification, neither has the spiking of the floors.
199. Will you read that part of the specification? The floors of Nos. 1, 2, 3, 4, 5, 7, 8, and 9, instead of 12 feet wide have been altered to 18 feet wide.
200. The contract has been altered? The contract has been altered. I cannot explain it without I shew you the documents.
201. Were the bridges made according to your instructions? They were not, because there was something wrong in the slabbing and spiking. The slabs were not the proper thickness, and the quantity of spikes were not used in the floors.
202. Did you report that? I did report it.
203. In what shape? I reported it to the Commissioner personally; I pointed out this to him.
204. What was his reply? He said it would do well enough.
205. Do you think it did well enough? I do not think it did.

206. Do you think the bridge was fit for public use as it stood; do you think the Commissioner was right in saying it would do well enough? I did not agree with him; I did not think they were strong enough. Mr. Robert Quodling.
207. Read out now that part which relates to the slabbing, the size of the slabs and the number of them; or read what you consider you were to be guided by? "The floors of " 1, 2, 3, 4, 5, 7, and 8, to be twelve feet wide between hand-rails, to consist of stringy " bark, ironbark, box, or red gum slabs, 4 inches thick —" 29 Nov., 1861.
208. Were they four inches thick? They were not four inches thick.
209. Did you measure them yourself? I did.
210. What was the deficiency? Many of them were only three inches in thickness.
211. In regard to the number of spikes, were there a certain number of spikes to be put in every slab? It is specified here that two spikes are to be put in each end of the slabs, and only one has been used.
212. Was that general through the work? It was general through each bridge.
213. Did you point these more special points out to the Commissioner? Yes.
214. And you say he said they would do well enough? He inspected the whole of the works, and expressed himself perfectly satisfied.
215. Was the number of spikes equal to the number in the specification? No, it was not; there was one spike short of the quantity.
216. Do you mean to say there was only half the quantity? At the extreme end of each slab it was specified that two spikes should be put in, and only one was used.
217. Then there was only half the proper number? At each end.
218. *By Mr. Dick:* Were not the whole number used in the bridge? No.
219. *By the Chairman:* Do you know what number of spikes there ought to be in a bridge altogether? Yes, it is specified here, in addition to what I have just read, that the slabs are to be "not less than 7 or more than 10 inches wide, to be long enough to span two of the " openings between girders, the joints to be broken, to be secured to girders by $\frac{1}{2}$ -inch jagged " spikes 7 inches long, one spike at each intersection of girders, and two at each end of each " slab"—and only one has been put in at each end of each slab.
220. *By Mr. Hoskins:* Do you consider that that has weakened the roadway? That has weakened the roadway.
221. *By the Chairman:* Were the bridges finished when you resigned? No.
222. Do you know what the whole number ought to have been in each bridge? I did not count each spike in a bridge.
223. Did you know the entire number there ought to have been? I saw there was only one put in, instead of two, at each end of each slab.
224. *By Mr. Dalgleish:* There was no definite number of spikes mentioned in the specification? No definite number.
225. *By the Chairman:* Was there any special number of spikes mentioned in the specification? I have just read that they are specified to be one spike at each intersection of the girder, and two at each end; I cannot explain further.
226. Was the total quantity mentioned, without any reference to where they were to be? No.
227. What is the meaning of tarring slabs or flooring—putting tar on them? Yes.
228. Was there any defect of that sort, or in that respect—was the flooring properly tarred? The flooring was not properly tarred.
229. Is there any direction in your instructions about tarring? Yes.
230. Will you read out that portion? "The entire of the timber work, except hand-rails, " to get three coats of Stockholm tar, the first to be laid on hot; the handrail to be painted " three times white, and joints and butting surfaces over ground to be twice coated with " Stockholm tar when fixing, and all timber under or in contact with the ground to be " charred." The tarring has not been done to any of the bridges.
231. Do you mean to say there was no tar put on at all? Some tarring was put on the piles, but not on the floors.
232. Did you point that out to the Commissioner? I did not point it out to the Commissioner, because he came on to the works as the were placed, but I took the notes as I came away. The quantities were not complete when I objected to certify to these returns.
233. Was there any defect as to the slabbing of abutments? Yes; the slabbing on the landward side was not carried out according to specification.
234. Read the specification in regard to that particular:—"The landward side of all abutments to be slabbed in the same manner as floor—four round posts and small piles are to " be driven and slabbed to retain foot of embankments at bridges where ground is steep?" That has not been carried out at all.
235. Did you point that out? Of course. When I left the works I took a list shewing the quantities completed according to this specification.
236. And you declined to certify on those grounds? I did.
237. Did you point it out? It has not been carried out.
238. *By Mr. Hoskins:* Did you ever represent to Mr. Collett that you were dissatisfied with the way in which the contract was being carried out? The contract is not carried out.
239. *By the Chairman:* Did you get any instructions to certify at any particular times? I have returned the vouchers (which I have just handed in) objecting, stating that the contractor had not done sufficient to entitle him to the advance; and there is Mr. Collett's memo. on that return.

Mr. Robert
Quodling.

29 Nov., 1861.

APPENDIX.

A.

Tamworth, 24 Oct., 1861.

Sir,

Having repeatedly reported about the unsatisfactory manner in which the Doughboy Diversion Works are being carried out by Mr. Martindale, which is quite contrary to the specifications and drawings furnished, thereby rendering the works in many instances nearly valueless, I find it quite impossible to continue in my present situation with credit to myself.

All my remonstrances are and have been of no avail, as I am continually met by the contractor with his having explained to you personally.

The repeated payments of money before it was due, also without vouchers, has for a considerable time rendered my services useless. As under these circumstances I can have no control, consequently cannot insist on the contractor's carrying out the work satisfactorily, I am therefore reluctantly compelled to resign my office.

I am, &c.,

R. QUODLING.

B.

Department of Public Works, Road Branch,
Sydney, 30 October, 1861.

Sir,

I am directed by the Commissioner to inform you that he has laid your letter of resignation, dated October 24th, before the Minister for Works. In sending in your resignation you have stated as reasons, "the impossibility of continuing in your present situation with credit to yourself," on account of the works being carried on contrary to the (original) specifications. This is simply ridiculous; because pitching, after mature consideration, was substituted for a portion of the broken metal, at the very same price, viz., 6s. 6d. per cubic yard; and, from your inability to measure accurately, the big cuttings were paid for by the Commissioner in a lump sum under your estimate.

With respect to "repeated payments of money before it was due," I am directed to inform you that the Commissioner requested that fortnightly vouchers should be sent in, which you neglected to do; and it was only after a personal inspection of the work, and the fact of your remissness, that moneys were paid on account, for which vouchers have been duly signed by the contractor, and which you have thought fit to withhold.

Although the financial part does not concern you, the Commissioner is at a loss to know from what source you have made this extraordinary statement, as at no time more than 80 per cent. has been paid to the contractor; and at the present time, although the contract is almost completed, there remains a very large balance in hand, which will not be paid until the Commissioner has made his final inspection of the whole of the works on this extensive contract.

I have, &c.,

S. G. SHAIRP,
Chief Clerk.

R. Quodling, Esq.,
Tamworth.

C.

Tamworth, 16 August, 1861.

Sir,

In compliance with your instructions, I took the Doughboy Diversion Works over from Mr. Bayley, on the 12th instant.

A considerable quantity of the work is not carried out to specification. The stumps on the entire length of line are only removed for a width of 30 and 20 feet respectively; specification states road to be cleared and stumped 99 feet wide, with the exception of those covered by high embankments. Mr. Martindale tells me that you told him to leave the stumps in on the sites of high cuttings on the upper side; will you have the kindness to let me know if this is the case?

Nearly all the pitching put on Doughboy embankments was put on before the banks were consolidated, and a considerable quantity of metal not broken to gauge or spread the proper thickness on pitching.

Nearly all the excavation is completed; the water tables and embankments are not dressed. The late rains have caused the roadway of big cutting to slip slightly. I am afraid the road will have to be taken 5 feet more into the solid for a distance of 50 feet.

The bridges are not progressing very rapidly. Adam Bridge is finished, with the exception of flooring.

Brown Bridge, finished, with the exception of hand-rail.

Clement's Bridge, ditto ditto.

Donaldson Bridge, three of the piers finished and a few feet of timber delivered.

Evans Bridge, not set out.

Fon Shin, complete, with the exception of floor and hand-rail.

Glover's bridge, a quantity of sills and piles delivered.

Hannington Bridge, all the piers finished.

Culverts, three 2nd class completed, and one 1st, but this I cannot pass, the timber used being small, and the workmanship very bad.

I have, &c.,

ROBT. QUODLING.

The Commissioner for Roads,
&c., &c., &c.,
Sydney.

No. of Warrant No.

DISTRICT, DIVISION.

ABSTRACT and ACQUITANCES of Amounts paid to Contractors and others employed as herein described, from the

of

Voucher No.

of Abstract

to the 20th August, 1861.

Table with columns: No., Names, Locality, Nature and quantity of work done by each individual or party, to be here stated, CONTRACT OR TASK WORK (No. of Agreement, Rate, Amount), DAY WORK (No. of full working days, Rate, Amount), Total, Witness, Date of payment, and by whom paid. Includes entry for J. Martindale with amount £ 476 18 9.

We hereby certify that the above Account, amounting to Four hundred and seventy-six pounds eighteen shillings and nine-pence, is correct in every particular, that the persons therein named have fully and fairly performed the work contracted for by them, and that the day labourers have been employed for the time stated against their respective names, and at the current rate of wages.

Overseer.

ROBT. QUODLING, Superintendent.

Certified as requested, but I don't think Mr. Martindale has done sufficient work to entitle him to this advance.—R. QUODLING. 4 Sept, 1861. Mr. Quodling will please not to make any remarks in ink on the voucher. This cannot be forwarded to the Auditor General, on account of this unusual proceeding. If Mr. Quodling had not stopped Mr. Martindale from going on with his pitching much more would be due, and this was done contrary to the recent circular.—W. R. C. 7/9/61. Mr. Quodling to note remarks and certify to fresh voucher herewith. 7/9/61. To be returned.

Mr. Quodling will please certify. 28/10/61.

Received, 30 Oct., 1861.

R. QUODLING, Tamworth.

SELECT COMMITTEE ON THE RESIGNATION OF MR. QUODLING.

F.

Tamworth, 21 September, 1861.

Mr. Robert Quodling.

Sir,

29 Nov., 1861.

I do myself the honor to acknowledge receipt of the enclosed, informing me that the sum of £426 16s. 6d. is paid in to my credit, and £200 to the credit of Mr. Martindale, on account of Doughboy contract. * I think there must be some mistake; I do not recollect sending in any voucher for W. Dowel, amounting to £72 18s. 10d., or £200 for Mr. Martindale, on account of Doughboy contract. I sent voucher, amounting to £200, on account of clearing contract, Goonoo Goonoo to Arnisdale. The amount to be placed to the credit of Mr. P. J. Coghlan, the contractor's agent.

The Commissioner for Roads,
&c., &c., &c.,
Sydney.

I have, &c.,
ROBERT QUODLING.

* Mr. Shairp will explain to Mr. Quodling respecting these payments.—W. R. C. 26/9/61.

Mr. Coghlan called at the office, and requested that the £200 due to Mr. Dowel might be paid to his credit (as requested by Mr. Quodling) as early as possible. The Commissioner was absent at the time, and as there was no probability of getting any money for some days, an amount which we had in hand, of £127 1s. 2d., was paid to Coghlan's credit at the Commercial Bank, on the 14th September, of which it appears Mr. Quodling was not advised. The balance, £72 18s. 10d., which should also have been paid to Coghlan, was paid to Mr. Quodling's credit, as advised. The supposed mistake is simply owing to Mr. Chisholm's neglect in not advising payment.

WEDNESDAY,

WEDNESDAY, 4 DECEMBER, 1861.

Present:—

MR. ARNOLD,
MR. DALGLEISH,
MR. DANGAR,
MR. DRIVER,

MR. T. GARRETT,
MR. HOSKINS,
MR. LUCAS,
MR. MARKHAM.

WILLIAM FORSTER, Esq., IN THE CHAIR.

William Rickford Collett, Esq., called in and examined:—

240. *By the Chairman:* What is your position? Commissioner for Roads. I may state that I was appointed to that office on the 15th January, 1861.
241. You are aware of Mr. Quodling having been appointed Inspector of the Doughboy Diversion Works? No, I am not aware that he was appointed Inspector.
242. What position did he occupy? He was appointed Superintendent of the Second District of the Northern Road, I believe, in the Autumn of 1860.
243. What were called the Doughboy Diversion Works were included in the portion of the road of which he had the superintendence? It was included in the 135 miles of his district.
244. It was part of his district? It was part of his district; the commencement of his district, at this end.
245. Will you state the position that Mr. Quodling stood in, with regard to this particular contract of the Doughboy Diversion Works—the position he stood in towards the Government and the contractor? I may state, as it is a material point, that I was appointed in January—the 15th of January, 1861—and that this contract was given to Mr. Martindale, by Capt. Martindale, previous to my appointment. On proceeding to the works, in February, 1861, I found that it was impossible for Mr. Quodling—I need not say here anything about his incompetency—but it was impossible for him to superintend the works.
246. Do you mean by that, that it was impossible for him on account of incompetency? I mean that it was impossible for him, at the commencement of the year, to superintend this 135 miles of road, and to pay proper attention to this work.
247. It was impossible for him or for anyone to superintend the whole of this work? I did not say so.
248. It was impossible for Mr. Quodling to—? To attend to that and to the rest of the district, and therefore Mr. Bayley was appointed conjointly with him to superintend the works. Mr. Bayley was at that time the Inspector of the Page Bridge; and finding that Mr. Quodling was not the person I wished to superintend work of that kind, I gave the difficult works to Mr. Bayley.
249. Do you mean that Mr. Quodling had no special superintendence? Certainly not.
250. Was he under Mr. Bayley in any way? He had his district—I will not take the ground of his incompetency—I have not come to that—but merely that he had the 135 miles of his district to look after, the whole of which had to be cleared, defined, and arranged; that had been let by contract, and it required his superintendence, he having no overseer but one at that time.
251. I wish merely to understand the position he was placed in—do you mean to say that if he saw anything going on wrong at the Doughboy Diversion Works it was not his duty to report—? I cannot imagine anything going on wrong.
252. If he did see anything going on wrong, was it his duty to report? No, it was his duty to send in a report every fortnight, whether things were going on well or ill.
253. Were the Doughboy Diversion Works being carried on under a certain contract? Under a contract.
254. Was this placed in Mr. Quodling's hand, to guide him in any way? He had nothing to do with the masonry or bridges—he had something to do with the earth-work?
255. Then the earth-work was under his superintendence? Both Mr. Bayley and Mr. Quodling signed for the earth-work. Mr. Bayley would not admit —
256. I do not want to know what Mr. Bayley would or would not admit. I wish to know whether you consider that Mr. Quodling had to superintend the earth-work? I consider that Mr. Bayley was Mr. Quodling's superior officer.
257. Was Mr. Quodling informed of that? That he was to look after the earth-work, and Mr. Bayley after the engineering and bridges.
258. Was Mr. Quodling ordered to obey Mr. Bayley? No, he was ordered to send in returns of the earth-work, and Mr. Bayley of the engineering and bridges.
259. Both separate? Both separate. They were both under my orders.
260. Both having separate duties? Having separate duties; I presume they worked together—if I may use the term “together”—that they acted in concert. I have no reason to doubt that, as they both signed the certificates.
261. The earth-work was under Mr. Quodling? The earth-work was under Mr. Quodling.
262. Mr. Quodling, in his evidence, which you have heard, makes allusion to the specification which seems to have been placed in his hands by Government—is that a portion of the instructions he received? No specification or instructions were placed in his hands by the Government.
263. Had he no instructions? None whatever, as superintendent.
264. What were his instructions? That the earthwork was to be done according to the plans and drawings.
265. Were these placed in his hands? Before the contract was signed a copy was placed in the Police Office.

W. R. Collett,
Esq.
4 Dec., 1861.

- W. R. Collett, Esq.
4 Dec., 1861.
266. He had no other instructions than this? None except what written documents will shew.
267. Is it not usual to give written instructions in such cases? Not for every contract.
268. If he thought the earthwork were not done according to these plans, was it his duty to report? Exactly.
269. In fact, his instructions were confined to this:—that he, having the plans and specifications placed in his hands with regard to the earth-work, if the work were not done according to them it was his duty to report? That depends upon another question, whether the contract was on a schedule of prices or for a bulk sum; if for a bulk sum, it was his duty only to see that the work was carried out in accordance with the drawings, as the work proceeded.
270. Supposing Mr. Quodling discovered, or supposed he discovered, that the earth-work was not done according to his instructions and plans, was it his duty to write to the contractor, calling upon him to stop at that moment, or to report to the Government? Not to stop the contractor.
271. Was it his duty simply to report to the Government, and to wait until he received an answer to his report? In his abstract it was his duty to do so; but having done so, I should visit the work, and if upon doing so I found that the work was not done, I should communicate with the contractor, not Mr. Quodling.
272. I want to know if it was his duty to report to the Government, and to stop the contractor from going on? To report to the Government—not to stop the contractor.
273. Was it his duty to point out to the contractor in what respect he was deviating from the contract, in that part of the contract which was under him? I cannot answer that question. There were certain drawings which should guide both the contractor and himself. If the contractor says he has followed the drawings, and the superintendent says he has not, it is a question of engineering.
274. I do not think it is a question of engineering—I ask you whether it was his duty, if he saw deviations from his instructions or from his drawings, to point out those deviations to the contractor, or not? He was to report in the first instance; but I cannot admit the possibility of deviation.
275. I beg you will admit the possibility. If the inspector says that the contractor is not carrying out the works as he thinks he ought, or according to the drawings, is he to write to the contractor of this, or is he to let the contractor go on without interfering? His duty is to tell me.
276. Is it his duty to report to the Government contractor? I think not; he has nothing to do with the contractor.
277. His duty is to report to the Government? Undoubtedly.
278. What course would the Government adopt in case of a report of that kind? They would call upon the contractor to explain—which was done in this case—why certain deviations had been made; and if the contractor's explanation were not satisfactory, he would be required to do the work over again. Since I have been Commissioner, I have not considered it the duty of the superintendent to stop the contractor; if he did so he would do it at his own peril. The superior officer visits the work when it is finished, and reports; I have not put it in the power of the superintendent to report finally.
279. You do not admit his power to interfere? Certainly not, when the contractor has plans to guide him for every chain of the work.
280. I will just put a possible case:—Supposing an inspector who is placed to look over a work sees an error going on, and, following out your theory, does not take notice of it; and supposing that the work is done in such a way that it is not possible afterwards to inspect it, to look back as it were to that error, that the error were covered up by subsequent work,—what would the Government do with a contract of that kind—would they reject it? A case of that kind cannot occur; we had here a cutting and a certain embankment to make, that was all, and Mr. Quodling had to look after it.
281. Mr. Quodling had nothing to do but to look after the earth-work? In the first place.
282. Was metalling the road included in this earth-work? That was a subsequent arrangement; certainly not.
283. He had nothing to do with it? He had nothing to do with it.
284. You say his duty was to superintend certain earth-work—had metalling the road nothing to do with the earth-work? Nothing whatever.
285. Was it not part of his duty to measure the metalling? He had no instructions.
286. Was it not part of his duty? It might have been part of his duty if he had been directed to do so, but he was not directed.
287. Can you say that it was not part of his duty? I do not say that it was not his duty; his duty was to do what he was ordered; I wished to test Mr. Quodling's abilities before I gave him powers; that is the plain thing on which the matter hangs; therefore I did not give him more than I thought him competent to perform, and I simply gave him the earth-work.
288. Then you did not consider that it was Mr. Quodling's duty to measure the metalling in any way? It was his duty to do what he was told by me, which was to finally measure the metal.
289. He had an order to measure the metal? I ordered him to measure everything finally.
290. You said that metalling was not included in the earth-work? Certainly not; but still, if there were a heap of stones to be measured, and he had nothing to do, it would be his duty to do that.
291. Do you know whether he measured the metal or not? I know by his certificate he states that he measured 1,200 cubic yards.

292. Do you think he was competent to measure this metal? Certainly; any boy can do that. W. R. Collett,
Esq.
293. Was it his duty to pronounce an opinion upon the quality? At the time he sent in his specification he said it was an important specification of 1,200 cubic yards. 4 Dec., 1861.
294. Then he had some specification? He had a printed paper, which you have had handed in, called an I form.
295. He was bound by that? When he had signed his name he was bound by that. (*The witness produced a paper, from which he read the following words:—"We hereby certify that the above return is a fair and correct statement of the contract to which it refers, and that the above measurements were made by—Robert Quodling. A. U. Bayley."*) I am bound to take this, of course.
296. You rely there upon the statements of the inspectors, and presume they are men competent to perform their work? Yes, but I do not say this is a portion of the contract.
297. Was it a part of Mr. Quodling's duty, if he found that shale was being substituted for trap, to point it out, or simply to refuse to certify? To report it to me, which he never did on any occasion.
298. *By Mr. Hoskins:* He never made any report to you respecting this? No; the first I heard of it was through the newspaper. I had no confidence in Mr. Quodling; and Mr. Bayley having at that time the superintendence of the Page Bridge, at Murrurundi, I put him to superintend the engineering and bridges, and Mr. Quodling to superintend the earth-work. That was at my first visit, in February. At that time Mr. Bayley had rather more control of the works than the other. Subsequently Mr. Bayley was removed to superintend the bridge at Yass, and then Mr. Quodling in a manner seized upon the whole thing, but up to that time Mr. Quodling had charge only of the earth-work, for which he signed conjointly with Mr. Bayley.
299. *By Mr. Garrett:* You considered Mr. Bayley the superior officer simply because he had the superintendence of a superior class of work? Yes; I knew one man, and I did not know the other.
300. Was there any difference between the salaries of the two gentlemen? No, they had about the same—about £400 a-year, and a guinea a-day travelling expenses; I think, if anything, Mr. Bayley had the greater salary by one or two pounds—it may have been more or less; but Mr. Bayley had been connected with the works for a long time, and Mr. Quodling I knew nothing about, and I had my own view of him from the commencement.
301. Was there no copy of the specification of the work given to Mr. Quodling? None by the office—he never requested any.
302. He produced one the other day? He got that from the Police Office, never from the Government; he never saw the bond or the specification there.
303. *By Mr. Hoskins:* Where is Mr. Bayley? He is at the present moment superintending the Hume Bridge, Yass.
304. Why was he removed from your district? Because the Page Bridge was finished. Mr. Quodling reported that the other works would be done one month from that time, and Mr. Bayley being the best bridge engineer, he was sent to Yass.
305. Was Mr. Quodling equally responsible with Mr. Bayley for the supervision of this contract? Not in my eyes; Mr. Bayley was the one I looked to.
306. You considered it necessary to have two Government officers to superintend a contract involving an outlay of £6,000 or £7,000? I thought it was desirable, when I could get the services of one superintendent for nothing; as Mr. Bayley was superintending the building of the bridge on the Page he could ride over and superintend the other work.
307. Then during a portion of the time, he had charge of the works at the Page as well as at the Doughboy? Yes; when the Page Bridge was finished, and from the report of Mr. Quodling the works under him were nearly completed, Mr. Bayley was removed to Yass.
308. Had Mr. Quodling the supervision of all the excavation of earth-work and the formation of new lines of road between the Page and Armidale? Yes, the whole, and I thought it too much for him.
309. Are there not a large number of men and several contractors employed in that length of road? Yes, the whole of that line has been cleared and defined.
310. Do you think it was possible that Mr. Quodling could devote much time to overlooking the contract at Doughboy? It was quite impossible he could do it.
311. Did you appoint anybody to succeed Mr. Bayley when he was removed? Mr. Bayley was removed in consequence of Mr. Quodling's report that the work would be finished in a month from May. When I was going up there, in October, to certify to the work, the accident happened to my family, which Mr. Quodling took advantage of.
312. Do you consider the works finished now? Yes.
313. Are they finished to your satisfaction? I have not seen them. The position of Mr. Quodling I may state in a few words:—From February to July he was with Mr. Bayley, acting conjointly with him; Mr. Bayley having charge of the masonry and bridges, and Mr. Quodling of the earth-work. In the early part of May Mr. Quodling reported that the earth-work would be finished in about a month. When I went up in June, as well as in September, certain things occurred which caused great dissatisfaction with Mr. Quodling.
314. You considered that Mr. Quodling had the sole charge of the earth-works, and that it was his duty to report to you whether the contractor was performing those works satisfactorily or not? Yes; that is the reason of his report. Every superintendent reports every fortnight every contract along the road.
315. You say he had not the power to suspend the work if he considered that it was not performed satisfactorily? Not if the contractors were bound to do it within a certain time, and we always bind contractors to time; if then a superintendent stopped the work for a month, the contractor would become liable to the penalty.

- W. R. Collett, Esq.
4 Dec., 1861.
316. Was Mr. Quodling supplied with the quantity of metal required to be laid upon the road? No.
317. Then he could not tell whether the contract was performed satisfactorily or not? No; he had no means of knowing.
318. Who had the means? Everything is done according to the specification for a lump sum; I have all the details, and I check these off and see that they are correct.
319. Whose duty is it to measure everything—to see that the work is done according to specification? That is a final affair, not an intermediate.
320. I ask whether the person in charge, deputed by the Government to supervise the manner in which the contractor performs his contract, has not some rule prescribed as to the manner in which the contractor shall carry out his work? As a general rule; this is only an exceptional case, because I had no confidence in the person.
321. Suppose there should have been six inches of metal to be laid down, and Mr. Martindale had only laid down three inches, would you say that Mr. Quodling had no right to interfere in such a case? Not if he had previously measured the metal; the quantity being stated in the specification, he could put down one inch or ten inches if he liked.
322. Then he had nothing to do but to measure when the work was performed; not to see whether the work was performed properly? I cannot understand what you mean by its being performed properly.
323. I will put my question again:—Supposing the quantity of metal to be placed upon the road was six inches, and the contractor had only placed three, would not the superintendent be authorized to interfere? In this contract I took the whole responsibility, because I did not like the man.
324. This contract was made in Captain Martindale's time, before you took charge? It was.
325. Did you make any alteration in the terms of the contract? Yes; and in the bond, before the man signed it. This, Mr. Quodling never saw.
326. What were Mr. Quodling's duties? Mr. Quodling's duties on this particular occasion were those of trial. I had not confidence in him, with reference to engineering work on this 135 miles of road.
327. Do you not think you ought to have placed someone there in whom you had confidence? I never visited the place without Mr. Peter Brown, one of the most competent engineers in Australia, with respect to gradients and cuttings. If I objected to the work, it was with his concurrence. When I went in June I discovered some errors, and subsequently, in September, I saw that there were fresh engineering mistakes.
328. Who is Mr. Brown? He is at present Superintendent on the Northern Road, and is the person who partly laid out the Railroad between Picton and Goulburn.
329. In all the other contracts under your supervision are the overseers furnished with plans and specifications? The second-class superintendents.
330. Was Mr. Quodling a second-class superintendent? Yes.
331. Are not second-class superintendents furnished with specifications and contracts? From the head office they are.
332. His is the only exception? It appears that he had got it from the Police Office, but he never made any inquiry whether there were any alteration in it.
333. *By Mr. Markham:* Was Mr. Bayley responsible for the portion of the road from the Gap northwards as well as Mr. Quodling, or was Mr. Bayley's responsibility confined to the bridge? To the bridges and masonry; that involves the earth-work, otherwise he could not lay out his bridges; he would be obliged to know the earth-work in order to get his levels.
334. You consider him the superior officer as being the superior engineer, I think you stated? I always communicated with Mr. Bayley personally.
335. In preference to Mr. Quodling? I knew nothing of Mr. Quodling.
336. Mr. Quodling would be responsible only for errors committed in connection with the earthwork and the measurement of metal? Up to the time of Mr. Bayley leaving, which I believe was on the 12th of August —
337. *By Mr. Hoskins:* Did you depute Mr. Quodling to supervise the contract? That is a very leading question. It was part of his duty; he was superintendent of the district, and I did not tell him not to do so, for that would be too much of a slur upon the man; I could modify his duties just to let him have as much as he could do, and no more.
338. *By Mr. Dangar:* Were you not, previous to being Commissioner, Superintendent over this Doughboy Extension Road? Yes.
339. *By Mr. Dalgleish:* Who is Mr. Quodling? He is a second-class superintendent of the Northern Road, from Doughboy Hollow to Armidale.
340. When did you first become acquainted with him? I believe officially acquainted with him on the 15th January.
341. What were Mr. Quodling's duties? I cannot answer that question.
342. What did you understand to be Mr. Quodling's duties? To do as he was told.
343. Will you be kind enough to answer the question I have asked? We have no specific rule in the office as to the duties of superintendents—we have nothing to guide us; it is a new appointment. The whole of the road was under my superintendence before Mr. Quodling; but I am not aware of the duties of second-class superintendents.
344. I must still beg to say you are not attempting to answer my question? I beg your pardon; I do not wish to evade your question. The duty of Mr. Quodling was to undertake the superintendence of what he states was 135 miles of road. I do not say it was.
345. I do not ask you what he states, but I ask you what you state? That it is not 135 miles.
346. I ask you what his duties were? His duties were to see to the contract work, to see to the task work, and to see to the maintenance men—that the contracts are performed according

according to the contracts, the task work according to the tasks, and that the maintenance men do their work properly.

347. Are these duties defined for him, or by him? Are there any written or printed instructions? W. R. Collett,
Esq.
4 Dec., 1861.

348. I think the question is very definite? I do not understand it.

349. Are the duties defined for him, or has he the defining of his own duties—he is appointed superintendent; are his duties as superintendent defined? Not to my knowledge.

350. Then it is discretionary? It is not my appointment; it is the Government's.

351. I am not asking as to its being a Government appointment; you acknowledge that you are the Commissioner, and as Mr. Quodling is under you I presume that you should be thoroughly acquainted with his duties, seeing that you have charged him with a breach of his duties? I beg your pardon—I have charged him with nothing. I can only answer in one way that I was in Mr. Quodling's position for seven years, and I had no instructions.

352. *By Mr. Lucas:* You could do as you liked? That does not follow.

353. Under whom were you? Nobody whatever; it was only a subsequent appointment.

354. You really cannot define the duties of a second-class superintendent? I cannot.

James White, Esq., called in and examined:—

355. *By the Chairman:* You are a settler in the Northern District? Yes, I reside near Muswellbrook. James White,
Esq.
4 Dec., 1861.

356. I suppose it is a common thing with you to ride along the Northern Road? Yes, I am frequently on the road from Muswellbrook, past Murrurundi.

357. Have you noticed a portion of the road near the Dividing Range? In the beginning of August last I drove down the new road from the top of the Murrurundi Gap along the new cutting—the road had been opened about six or eight weeks.

358. Was it macadamized? Part of the way—about half way it was a very good macadamized road; the rest was completely boggy.

359. What sort of metal was there on the road? Blue metal. The road was very good for a third of the way.

360. How many miles was a third? About three-quarters of a mile.

361. And the remainder was completely boggy? Yes, my horse's hoofs sunk completely through the mud to the stones at the bottom.

362. You mean the remainder of the completed portion? Yes, the new road.

363. Is this what is called the Doughboy Diversion? No, that is on the other side; this is on the Murrurundi Range—the new cutting. It is a new line of road; I think the whole was not then opened.

364. With regard to this part that was so bad, was it metalled, or supposed to be? It was certainly not metalled; when I was going up there was a sort of metal over it, but this was converted into mud when I returned. Going up it was dry weather, but when I returned there had been some rain.

365. How much rain had fallen? A day and night's rain.

366. After this you travelled over it again? Yes, and found it a complete bog.

367. Did your horse's feet sink into it? Yes, from nine to twelve inches; my horse's hoofs struck on the ballast at the bottom.

368. Do you know under what contractor this road had been completed? Under Mr. Martindale I understood.

369. Perhaps you do not know of your own knowledge? No, except from repute; he was the reputed contractor.

370. Did you make any other remarks with regard to the condition of the road? I saw bullock teams attempting to come up this line, and they had to turn back and go up the old line of road, up the Gap.

371. Were any men working at this road as you went along? There was one man upon it throwing in a few stones where the drays had made ruts as they went along; that was the only man I saw working upon the road.

372. Will you state the length of this portion which you consider so bad? I think it was about half a mile, the worst portion of it.

373. Do you know whether the road was completely open—whether it was out of the contractor's hands at the time? I am not aware; but six weeks before, when I went up, the teams were going over it, so I presume it was open, as there was no bar across.

374. *By Mr. Garrett:* Did you notice the colour of the metal in the sound portion? It was blue.

375. Did you notice the colour in the bad? It was red or reddish.

376. Did it strike you that the bad part had been metalled? When I went up they were putting a sort of soft stone upon it; when I came back it was all one mass of mud.

377. Off the immediate track the full width of the road appeared to be hard? Yes, the full width of the road. This same portion of the road is now undergoing repair, and teams are turned off. It is not open now; there is a bar put across and bushes.

378. What are they doing to the road now? I think they are putting down large stones—ballasting it.

379. I thought you stated that your horse's hoofs went through to the ballast? I think this is a second course of ballasting. It may be intended for the surface, but I am not aware; they are large stones.

380. *By the Chairman:* Do you know under whom these repairs are being made now? I am not aware at all.

- James White, Esq.
4 Dec., 1861.
381. *By Mr. Hoskins*: Do you not know that this was a new line of road—that it was not completed? I was not aware that it was not completed.
382. You say there was a portion of this road over which teams were not allowed to pass? Yes, at one portion they turn off the road for two or three hundred yards.
383. Do not parties, in forming a new road, always prevent teams travelling over them, by placing logs on the side of the road? Yes.
384. Was this road drained when you travelled over it and found it in so bad a condition? Yes.
385. Table-drained? Yes, drains were cut on each side.
386. Was this metalled;—Do you not know that the natural road there, is a red sandstone? The road was properly formed when I went up, for some distance.
387. But not metalled? But not metalled with the same metal all the way down.
388. Not metalled in the same manner as the other portion of that cutting? It was the same height, and appeared to be of the same formation.
389. Were there men employed upon it? No there were not.
390. Were there any other parts of the road where your horse's hoofs sank in the mud? Not any of the new road, but in some parts of the bush road.
391. Is there not a new road from the Willow Tree to Loder's? I did not travel that, I went down the Namoi.
392. *By Mr. Dangar*: Do you think the metal at the Doughboy Diversion was of the kind generally used—was it not shale? I have not seen the Doughboy Diversion at all. I have not been down that line. I am speaking only of the road on this side of the range.
393. *By Mr. Dalgleish*: What length of time elapsed between your going up and coming down the same road, when you found the road good on going up and bad on returning? Between six and eight weeks.
394. At that time it was apparently open for traffic? Yes, for the teams travelled on it.
395. There was no obstruction on the road? No obstruction whatever.
396. You thought it was metalled? It appeared to me to be so, although the metal was not of the same kind all the way up; it was blue metal up at the top, and red metal lower down.
397. Afterwards you saw them apparently reballasting this road? Yes, when I came down in August. I came down about a fortnight ago, and they appeared to be reballasting it—putting large stones upon it—I do not know the term.
398. This particular place—the worst portion of it—is about half a mile long? Yes, about half a mile.
399. About what length altogether was the whole of the bad portion—the indifferent as well as the extremely bad? Altogether I think about a mile—perhaps more. I am not very sure as to distances. A bad road always appears much longer than a good one.
400. When you came down, a fortnight ago, the road was barred? Yes; they were re-making this road.
401. And an obstruction was placed there? Yes.
402. *By Mr. Lucas*: I understood you to say that when you were coming down your horse's feet struck down to the stone; was that the first layer of stone? Yes.
403. And on the top of this was the red stone you have spoken of? Yes.
404. Was that broken as road metal is generally broken? It appeared to be too soft to bear breaking in that. It was worked down into dust; it was more like gravel.
405. Was that stone brought out of a cutting? No, it appeared to have been carted; it was not the same as was brought out of the cutting.
406. How far do you suppose this stuff had been brought? I cannot say; I do not know where it could have been brought from; I think from some of the neighbouring hills.
407. Since then you say they have been repitching the road? I do not know whether it is called pitching; they are putting down large stones, and forming a crown to the road.
408. Where is this situated? Going up the cutting—going up the range—the new cutting.
409. Do I understand this to belong to the Doughboy Diversion? No.
410. How far is it from it? From the commencement of the Doughboy Diversion about three-quarters of a mile; the range merely divides the one from the other.
411. Do you know who was the contractor? I believe, Mr. Martindale.
412. Do you know whether it was the same contractor who had the Doughboy Diversion? The same; so I understood.
413. Do you know that when the blocks of stone are placed on the road, that is called pitching; and that broken stuff is afterwards thrown on the top—you say that this was properly formed when you went up? Yes.
414. Since that they have been repitching it upon the top? I think the mud had been cleared off; I saw mud-heaps on the side of the road.
415. At any rate they were repitching it with blocks of stone? Yes.
416. *By the Chairman*: Do you know what pitching means? I understand it to be the placing of blocks of stone at the bottom—the first formation of the road.
417. When you say re-pitched, are you aware whether the road had been pitched in the first instance? I suppose so, from hearing my horse's hoofs sound on the stone when they went through this mud.
418. *By Mr. Hoskins*: Is it not a stone formation there? There are some stones there; but stones had evidently been placed at the bottom of this.
419. Do you travel frequently over the Northern Road? Frequently.
420. Do you consider that there has been a great improvement in the construction of the Northern Road, of late years? I believe there is a considerable improvement; but, for the money I understand has been expended, I imagine there might have been far greater.
- 421.

421. What money has been expended? Very large sums; I do not know the amount.
422. However, the condition of the road is much superior to what it has ever been before? In dry weather, particularly; but in wet weather it is not much better.
423. Previous to your travelling over this place, had there been continuous wet weather for some time? No; I was travelling from up the Nainoi, and there was one night's rain—the night before I passed over—that was the only rain I saw.
424. Was not last winter unusually wet? It was very wet. There may have been more rain on this side of the range.
425. *By Mr. Dangar*: Do you think that the main road from East to West Maitland has been improved by the quantity of the metal put on? I do not think it is metal; it seems to be dust. It was dust when I came down the other day.
426. They call it sandstone? It may have been sandstone; I saw nothing but dust.
427. *By the Chairman*: Will you state the date of your journey going up? I think it was the latter end of June when I went up; it was August when I returned.
428. Do you consider the road near the Gap a good deal better than it was in former days? On the whole it was much better when I went up. In dry weather it was very good.
429. You think it did not stand the test of wet weather? No; I saw teams attempt to go up that were obliged to turn off.
430. *By Mr. Garrett*: You are alluding to the part that was not metalled? To the part where the mud was, coming back; to the red part.
431. Where it was metalled it was good? Where it was metalled.
432. *By Mr. Hoskins*: Still, with all its defects, you think it was much superior to the road over the mountain previously? Yes.
433. *By Mr. Lucas*: Is there no particular name for this spot where you say your horse's hoofs went down to the stone? Not that I am aware; it is all called the new cutting.
434. Is it on the other or on this side of the Doughboy? On this side the Doughboy.
435. *By Mr. Driver*: I understood you to say just now, that the only reason you had for stating that the road had been pitched was, that you heard the sound of your horse's hoofs upon the stones? My horse's hoofs went down to the stone underneath.
436. I think you stated that your only reason for saying that the road had been pitched was, that you heard your horse's hoofs strike upon the stone? And from the formation of the road going up I concluded that it had been pitched. It was all formed alike—the part where the blue metal was and where the red stone was.
437. That is the only reason you can give for saying that the road had been pitched? I did not see the red stone put on, but I concluded that it had been pitched.
438. That is the only reason? That is one of the reasons. The other is, that when I went up the road was apparently formed and completed, and as I was aware that one portion of the road had been pitched I concluded that the other had been.
439. For the reason you have given? For the reason I have given, that it was completed apparently, and that I heard my horse's hoofs go down to the stone.
440. That is the only reason? Those are the only reasons.
441. Is it not the case in new roads, where any particular portions are fit for traffic, that bullock-drivers will continually use the road before it is completed? I have generally seen logs drawn across to prevent that.
442. Have you never seen those logs removed? When the road has been completed.
443. Before the road has been completed? They are generally so thickly laid that they would take the bullock-drivers some time to remove them out of their way.
444. Did you ever see any logs upon this particular road? Yes, when I came down a fortnight ago, and a part was shut off from traffic—a part that was being reformed.
445. *By Mr. Hoskins*: What do you mean by pitching the road? Placing stones at the bottom of the road—the first forming of it. After the earth is taken away the stones are placed upon the bottom.
446. That is ballasting the road? I do not understand the technical terms.

James White,
Esq.

4 Dec., 1861.

Mr. Robert Quodling again called in, and further examined:—

447. *By the Chairman*: Will you state what you consider your duties to have been as Inspector of Roads, in as concise a shape as you can? I had the general inspection of the whole of the works under my charge.
448. But what were the works under your charge? I had the charge of the road from Doughboy Hollow to Armidale.
449. What is the length of that? 135 miles.
450. You had all that road under your charge? Yes.
451. Had you every species of work connected with that road? Yes. I had two overseers as assistants.
452. Under you? Under me.
453. Was there any part of the work specially placed under you—for instance, the earth-work? Yes.
454. Was that more exclusively under your charge than any other part? Yes.
455. Do you consider that you had charge of the bridges? Yes. I had charge when Mr. Bayley left.
456. You had charge of the metalling? Yes.
457. Do you consider that you had charge of the other portions of the works? Yes.
458. Equally with the earth-work? Yes.
459. Did you get any particular instructions—did you get any instructions in writing, as to your duty? No particular instructions in writing.

Mr. Robert
Quodling.

4 Dec., 1861.

- Mr. Robert Quodling. 460. Did you get any verbally? I do not recollect getting verbal instructions. Mr. Collett, when he visited the works, had something to say.
461. Did you get any verbal instructions as to your duty? No verbal instructions.
- 4 Dec., 1861. 462. How did you ascertain your duties? I knew what my duties were as superintendent.
463. Where did you find the duties of superintendents defined? I do not know that they are defined anywhere.
464. Do you mean to say that no special instructions are given to superintendents on any portion of the works? I am not aware of any.
465. Were you not specially told to look after the earth-work? Yes, to look after the earth-work; and Mr. Bayley was told to take some other portion of the work.
466. Have you any doubt of your competency to superintend the duties you speak of? Not the slightest.
467. Were any doubts of your competency expressed by any officer over you? Never.
468. In what position was Mr. Bayley placed towards you? I had nothing to do with Mr. Bayley. At first we sent in our vouchers and returns together; after that I was told by Mr. Collett —
469. Verbally? That, I think, was by letter—to take the earth-work.
470. Have you that letter? Yes. I think it is not registered in the office.
471. Have you the letter? I think I have not it with me.
472. Was Mr. Bayley not placed over you at any time? Never.
473. Were you never ordered to obey his orders? I was never ordered to obey his orders.
474. When Mr. Bayley was with you signing vouchers, had he not one portion of the work and you another? Not at that time when we signed the vouchers together.
475. How came it that you signed the vouchers together? It was my proposal that we should do so.
476. Not from any orders? Not from any orders.
477. Mr. Bayley assented to your proposal? Yes.
478. What was Mr. Bayley's duty at the time? He had charge of the Murrurundi Bridge; of course I was on the Doughboy works.
479. Had he an equal supervision with you over these works? Yes.
480. Had he an equal supervision of the earth-work? I had only charge of the earth-work for a short time, in fact I had charge of the whole of the work. I received a letter from Mr. Collett, directing me to take the works, and to include them in my monthly reports, and stating that Mr. Bayley had only acted to oblige the Commissioner. (*The witness handed in the same. Vide Appendix A.*)
481. Was this authority in any way altered by any subsequent communication to you? No, it was not altered.
482. Was it in any way modified—did you get any subsequent communication? When I received that letter I took charge of the works, and the first thing I did was to condemn a considerable quantity of work.
483. Did you get any subsequent letter modifying or altering the instructions you got by this letter? I do not recollect any; I may have got some; I got a letter, I recollect. (*The witness produced the same. Vide Appendix B.*)
484. Did you get any letter between these two? I do not recollect getting any.
485. Did you receive a letter on the 7th March, from the department? I might, but I do not recollect; I have not it with me; I have no knowledge of its receipt at all.
486. You have spoken of a contract by which the contractor was bound—have you had any copy of the contract in regard to these works placed in your hands by any authority from the department? Never.
487. Do you state that you had no farther instructions than what are conveyed and intimated by the letter you have handed in to the Committee? When I took charge of the works I had some documents from Mr. Bayley.
488. Have you those documents? I have.
489. Will you hand them to the Committee? Yes. (*The witness handed in the same. Vide Appendix C.*) These are Mr. Bayley's instructions which he had from the Commissioner, and he handed them over to me.
490. Do you consider yourself bound by Mr. Bayley's instructions? Yes, as these are initialled by Mr. Collett. This is sent in as an original of Mr. Bayley's, copied; it is initialled by Mr. Collett.
491. *By Mr. Lucas:* You say that is a copy of an original letter of Mr. Bayley—do you mean to say that the Commissioner sent the letter to Mr. Bayley to copy and give to you? Yes; at least he gave it to him to copy and send as his. (*The witness handed in a memorandum. Vide Appendix D.*)
492. *By the Chairman:* Is that a copy, or an original document? It is an original document, initialled by Mr. Collett "W. R. C." (*The witness produced several papers.*)
493. Is that an original document? These are copies from Mr. Bayley's memos.
494. Are they copies of letters you have received yourself? No; they are attested copies of memos to Mr. Bayley; they bear Mr. Bayley's signature, and also Mr. Hannington's (*The witness handed in the same. Vide Appendix E.*)
495. You say Mr. Bayley handed these to you—what authority had Mr. Bayley to hand these instructions to you? When he was leaving the work I asked him what documents he had in his possession, for my own information.
496. He gave you these as your instructions? As my instructions.
497. You consider that you were bound by these instructions? Yes, as far as I understood them. (*The witness handed in a memorandum. Vide Appendix F.*)
498. This is a document from Mr. Bayley himself? Signed by Mr. Bayley.

499. Did you consider yourself bound by Mr. Bayley's instructions, without any farther instructions from the Commissioner? I consider that I was.
500. Did you act upon those instructions in carrying out your duties? Yes, I have acted upon them so far.
501. Now, in case you found the contractor deviating from the way in which you considered the work was to be done, did you, in that case, think it to be your duty to report to the Government? Yes.
502. And to stop the contractor? Yes.
503. Did cases of that kind occur? Yes.
504. Did you report it to the contractor? I reported it to the contractor. That was the pitching before the works were consolidated, and I stopped him.
505. In what shape did you report? In my monthly report, and in a letter. I think I handed in the letter yesterday; and I received in reply this letter from the Government (*producing a letter.*)
506. Is this the reply in the particular case to which you refer? Yes, particularizing each item.
507. This is the letter you received from the Government in reply to your report against the contractor? As to the way in which the works were being carried out.
508. This is the original letter? Yes. (*The witness handed in the same. Vide Appendix G.*)
509. After receiving that letter you considered that it affected your duties? Of course. I then saw that I had no power or control over the works, if the contractor's personal explanation was taken.
510. What did you do after getting that letter—when you found things going wrong—that the contractor was performing his work wrongly;—did you report again? I reported every month, or nearly so, I sent in my reports.
511. Did you generally, in your monthly reports, condemn the work that was being done? Yes.
512. Did you receive any other reply than this? No other reply.
513. You spoke, the other day, in your evidence, of some specifications and drawings? Yes.
514. Will you state to what specification you referred? I referred to this (*producing a paper.*)
515. That is a printed paper? The general conditions are printed.
516. From what source did you receive this? From Mr. Bayley.
517. Have you any proof of this specification having been given to Mr. Bayley by the department? I have no proof. I took it from Mr. Bayley as the document he received, and I had another copy.
518. Do you hand this in to the Committee as the specification you received from Mr. Bayley? Yes.
519. Which formed part of your instructions for carrying on the work? Yes. (*The witness handed in the same. Vide Appendix H.*)
520. At what time were these furnished to you—when first you took office? When first I took office; I had previously had a copy of that specification.
521. From whom? From Mr. Bennett, the late Engineer for Roads.
522. Have you that copy? Not here; but that is a fair copy.
523. By what authority did Mr. Bennett give it you? It was forwarded to me with the original drawings—the drawings of the works. When the works were advertized for tender there were drawings and specifications forwarded to me at Tamworth.
524. Do you say that the objections you took to the work done, when you reported against it, was for deviations from this specification? Yes.
525. It was on that account you reported against them? On that account.
526. Have these been in your possession ever since, from the time you received them until now that you hand them in? Yes.
527. Are you aware whether the original contract for the Doughboy Diversion Works was for a bulk sum? I was told by that letter, from Mr. Bayley, that I have handed in.
528. Did that state that it was for a bulk sum? For a bulk sum.
529. What was the amount? £6,339, the original contract I think it was—you will see by the letter—making a total of £7,000, I think, altogether.
530. Do you know the special prices of any of these things, for clearing? I think it is £200 the contractor gets for it, but I was not furnished with a schedule.
531. You do not know? I do know, but I have no documents to hand in.
532. In what way do you arrive at that knowledge? Through Mr. Bayley.
533. Did Mr. Bayley state that in writing or personally? Personally; I believe the contract amounts to £200 for clearing.
534. Fencing? That I do not know; that is not included in my duty.
535. Masonry? I do know, but I have no documents to hand in to you.
536. You do not know of your own knowledge? I do not; I have no documents from the Government giving me the prices for these works.
537. Have you anything for the prices of earth-work, which you say was specially under you? 1s. 5d. a cubic yard and 1s. 10d.
538. Have you a document stating those prices? Yes.
539. Will you hand it in? Yes. (*The witness handed in the same. Vide Appendix I.*) This is an original document.
540. Do you know anything of the price of rock-cutting? 3s. I think he has a cubic yard.
541. How do you derive that knowledge? From Mr. Bayley. I have no documents.
542. Brick-work? I know the whole of the prices, but I cannot give them in because I have no documents.

Mr. Robert Quodling.

4 Dec., 1861.

- Mr. Robert Quodling.
4 Dec., 1861.
543. Is it the same with regard to slabbing? The same. I can give the quantities.
544. Do you know anything about the contract being revised or altered before it was signed by the contractor and his sureties? Yes; there was a deviation from the original line— from the line let to the contractor; I have the drawings here.
545. What knowledge have you of the alteration of the contract? I have no knowledge, except that a letter informs me that the original line has been altered.
546. When you undertook it was the line sufficiently marked out—? Yes, it was commenced.
547. Was it this altered line you commenced to supervise? Yes, Mr. Collett's line.
548. Was there any further alteration after you took charge? Not to my knowledge. (*The witness produced a plan, and pointed out the line.*)
549. What was the original quantity of bridge timber for twelve feet bridges? That I have not taken out.
550. What do you mean by "not taken out?" I had nothing to do with twelve feet bridges.
551. Had you anything to do with the present bridges of eighteen feet? I had charge of them.
552. Do you know anything of the original quantity of timber in those bridges? I know nothing of the original quantity. I know the quantity there was to complete them when I had to certify to these returns.
553. How could you tell the quantity required to complete them if you did not know the original quantity? I have got the measurement, but I do not know what the twelve feet measurement is; I have not taken it out, but I have got the quantity for the eighteen feet bridges.
554. You have the quantity for the eighteen feet bridges? Yes.
555. Will you state what that was (*The witness referred to a memorandum book*)? October 12th, the quantity to complete Adam Bridge, 88 cubic feet timber work, 217½ lbs. iron-work, and tarring and painting throughout.
556. Was this an eighteen feet bridge? Yes. Brown Bridge, 34 cubic feet 11 inches timber-work, 104 lbs. iron-work. Clement's Bridge, 61 cubic feet 9 inches timber, 174 lbs. iron-work; tarring and painting to all these bridges not completed. Donaldson Bridge, 97½ cubic feet timber work, 245 lbs. iron-work. Evan's Bridge, 398 cubic feet 3 inches timber, 160 lbs. iron-work, 2,072 feet flooring —
557. Are you telling the quantity there ought to have been? The quantity required to complete the bridges, according to the drawings. Evan's Bridge, 1,288 lbs. iron-work, and tarring and painting. Fon Shin Bridge, tarring and painting to be done, and other portions of the work to be completed. Glover's Bridge, 101 cubic feet 4 inches timber, 219 feet flooring, 708 lbs. iron-work, tarring and painting. Hanington Bridge, 172 cubic feet 4 inches timber-work, 1,764 feet flooring, 858 lbs. iron-work, and tarring and painting.
558. Was the contract supposed to be completed at the time you resigned? No.
559. Was the time expired for its completion? Yes, I believe it was.
560. Can you speak positively? I cannot speak positively.
561. Is there no time named in the specification? I do not think there is; there might be.
562. Did you not read the specification attentively, seeing that it was to guide you in the supervision of the work? Yes.
563. Does it not state the time? I think not.
564. Did you get no instructions specifying the time? I got no instructions.
565. Was it not possible that these bridges could be completed properly after you had resigned, and within the time? They might have been completed within the time. I did not know the time. What I objected to was to certify to these returns, and these are the statements I stand by of the quantities required to complete—I refused to certify to the work to pay amounts on account while there was so much to complete.
566. What do you mean by "quantities required to complete?" The quantities to complete each bridge—in some cases the timber was not on the ground—and these were quantities that required to be done to finish the bridges.
567. You mean to say that the contractor had not provided sufficient timber to entitle him to a certain sum of money? Yes.
568. Was it your duty then to certify to a certain amount of work, as involving the payment of a certain sum of money? Yes.
569. And you thought it your duty to report against such payment? Yes, and I did so.
570. Was there any particular report made to you? I handed in the documents the other day, and there is my memo. on the back of the return.
571. With regard to the alteration from twelve to eighteen feet bridges—by whose authority was that alteration made? I believe by Mr. Collett's; I know nothing about that.
572. You had only to do with eighteen feet bridges? Yes; when I took charge they were all eighteen feet bridges.
573. Do you know anything about the difference of payment that would be entailed by that alteration? I do not think there would be much difference; because on the other line there were two bridges which would have come to about £2,000, and these were done away with by adopting this line.
574. You mean that the new line involves the necessity of a smaller number of bridges? Yes.
575. Is there anything about pitching in this specification you have handed in? There is nothing about pitching.
576. Then out of what portion of the contract money was the pitching to be paid for? I have handed in the document about the pitching.

577. You have not answered my question? I know nothing about that question; I was told I had nothing to do with the financial part of the contract.
578. Who told you that? The Commissioner.
579. Verbally? In reply to my letter of resignation.
580. Before your resignation? No; I was not told so before.
581. Did you think it was your business to look after the financial part of the contract before? I thought so.
582. Do you know the cubic quantity per lineal yard of the pitching? 2,800 lineal yards, I think.
583. You mean that is what it ought to have been? I do not understand your question.
584. What quantity per lineal yard of pitching was to be done by the contractor? I have handed in the memo. with the quantity; that is one of the documents I received from Mr. Bayley.
585. Do you know the length of pitching to be laid on? It is on the document.
586. From what source do you derive the information that 1,584 yards was the total amount of metal to be broken? I do not arrive at that amount.
587. Did you not state the other day that 1,584 yards was the total amount? No; I stated that 2,600 lineal yards was the amount to be broken.
588. What was the amount you measured as broken—how did you arrive at this amount of 2,600? By these documents I have handed in. There is one stating 1,000 cubic yards of metal to be supplied, and another stating—the first one is dated 18/4/61, “Mr. Martindale is to break 1,600 cubic yards of metal;” and by the latter, of June 27th, it is stated, “1,000 cubic yards of blue metal will be required”—That would make 2,600 cubic yards.
589. Was a Mr. Hannington a road overseer under you? Yes.
590. Have you a letter from this Mr. Hannington making comments on the work? Yes.
591. Will you hand that letter to the Committee? Yes. (*The witness handed in the same. Vide Appendix J.*)
592. This is dated the day of your resignation? Yes.
593. Did you receive it before you resigned? Yes.
594. How came it to be dated on the day of your resignation? I went through the works with Mr. Hannington, and told him that I had objected to certify to my returns—that I had refused to sign the documents, and I shewed him the quantities from the documents I had in my possession.
595. Then you went over the works before this letter was written? Yes.
596. And it was in consequence of his going over with you that he wrote this letter? Yes.
597. Did he write this letter in compliance with your instructions? I said I had refused to certify—that he might do as he pleased, and he said of course if I could not sign he could not; he then wrote the letter and I dictated it.
598. Then you do not disguise the fact that this letter was written under your instructions to some extent? No.
599. You had to some extent before made up your mind to resign? Yes.
600. Did you get this as a kind of certificate of your own statement? Yes. I directed Mr. Hannington to furnish me with a return giving me all the measurements of the contract, and this is a letter from him dated October 8th.
601. Is this an original letter? Yes. (*The witness handed in the same. Vide Appendix K.*)
602. Was that letter written according to your instructions? I wrote to him about the measurements.
603. Did you ever express any discontent with your salary? I asked Mr. Collett, at Singleton, about my salary, or to take some of the road off my hands, having thirty odd miles of road more than the other superintendents. I told him the salary I was receiving I could barely live on. He said he would recommend me for an increase at once.
604. Did he say so verbally? Yes, he directed me to make an application.
605. Did you? I did.
606. To whom? To Mr. Collett.
607. In writing? Yes, in July I applied for an increase of salary.
608. What reply did you receive? I had no answer at all from the department.
609. Are you sure your resignation had nothing to do with this? Nothing at all.
610. Did you make up your mind to resign after your salary was refused? I made up my mind, if Mr. Collett insisted upon my certifying to that voucher, I would resign—I would not certify to it. I retained the voucher.
611. When you resigned you wrote another letter, did you not? Yes.
612. Did you write a letter after your resignation to Mr. Arnold? Yes.
613. Have you a copy of that to hand in? Yes.
614. In that you make charges against Mr. Collett of carrying on a loose system? Yes. (*The witness handed in the same. Vide Appendix L.*)
615. Did you get an answer to that? Yes. (*The witness handed in the same. Vide Appendix M.*)
616. Is this an original letter? Yes.
617. Did you see Mr. Arnold? Yes.
618. What was the result of this interview? Mr. Arnold asked me to bring direct charges against Mr. Collett; he said that this was a statement he could not act upon.
619. Why did you not bring direct charges? I had my reasons.
620. You had better state them? I object to state them. (*After a pause*): My objection was this—I was not an officer of the department; the matter was in your hands, and I thought it was not right. I would sooner that the matter were investigated by a Committee.
621. You preferred to have the matter investigated by a Committee of the Assembly rather than by the Government? Yes.

Mr. Robert
Quodling.

4 Dec., 1861.

- Mr. Robert Quodling. 622. Did you state to Mr. Arnold that that was the reason? I told Mr. Arnold I would not bring any charges against him.
- 4 Dec., 1861. 623. *By Mr. Garrett:* You had done so in your letter? Yes, but Mr. Arnold would not act upon that.
624. *By the Chairman:* Do you adopt that letter of Mr. Hannington? No, I take no notice of Mr. Hannington's letter; I stand only by my personal observation; I have nothing to do with Mr. Hannington's letter.
625. Had Mr. Hannington ever certified previously to any voucher you had sent in? No, he had not an opportunity.
626. Had he ever been called upon to do so? No, not till the time I wrote that letter.
627. Was it your duty to get Mr. Hannington's report upon any matter you reported upon to the Government? Yes, I had his monthly report of the works.
628. There is the voucher referred to in this letter for £476 18s. 9d.—did you ask him to sign for that voucher previously? No.
629. When did you receive it from Sydney? I have not the voucher here, but the date is marked upon it. Mr. Hannington was never upon any public works till he came to me; he was more a pupil than anything else.
630. Did you keep this voucher in your possession for any time before you got any report from Mr. Hannington about it? Yes, I kept the voucher; and I intended, upon Mr. Collett's insisting upon my certifying to it, to resign and expose the matter. I kept the voucher for some time, and payments have been made since that was done.
631. How long had this been in your possession? (*The witness referred to a paper.*) On September 4th I made the remark and sent it to Sydney—"Certified as requested, but the contractor has not done sufficient to entitle him to the advance."
632. You reported against it? Yes, directly I received it; that was September 4th.
633. Had Mr. Hannington reported upon that? No; Mr. Hannington was not asked to report.
634. Why? He had never been upon any public works before.
635. How came it then that you got Mr. Hannington's report at one time, and not at another? I thought it better, although his evidence was not worth anything.
636. Did you get Mr. Hannington's report when you were going to resign, and wished to expose the department? Yes.
637. Did you think Mr. Hannington's report necessary to substantiate your own? I did not think it necessary; I told him I was going to resign, that I could not sign the vouchers, but if he liked to sign them they could go in with his signature alone; he said if I could not sign he could not.
638. Did you state in any report that any bridge was finished? Yes.
639. What bridge? Fou Shin.
640. You reported that as finished? Yes, I think so.
641. Did you make any complaint regarding the way in which it was done? I mentioned that the work had been completed; the contractor called it finished.
642. Did you consider that bridge properly done? I did not.
643. How do you reconcile that with your report? By the letter I received, I considered that the personal explanation of the contractor was better than my report.
644. Did you ever receive a letter dated 26th August, from the department—from the chief clerk? I do not remember receiving one; I may have received one. If I saw it perhaps I could tell whether I had received it or not.
645. Did you receive this letter (*handing a letter to witness*)? Yes; this is a circular.
646. Did you receive this circular? Yes, I received that; that is not a letter—that is a circular.
647. Will you hand that in? (*The witness handed in the same. Vide Appendix N.*)
648. This is a repetition, but as it is an important matter, I ask you the question again, to ensure you against mistake—Did you not receive a letter dated March 7th, 1861, signed by Mr. Collett, to yourself? I do not recollect. (*The Chairman handed to the witness a letter produced by Mr. Collett.*)
649. Will you look at that and refresh your memory? Yes; I received that letter, but it was when I was in Singleton. I did not know the letter referred to. I received none from the office; I received it personally from the Commissioner; it was put into my hands.
650. Have you a copy of that? I have that letter, but it is not here.
651. *By Mr. Hoskins:* Are you prepared to say that you are confident you received that letter? Yes, I believe I received it, but I cannot be certain.
652. *By the Chairman:* This is a copy of the letter you suppose you received? I believe I received such a document, but I am not certain; if I received it, I shall have it among my papers at home. (*The Chairman handed the letter above referred to, to the Clerk, who read the same. Vide Appendix O.*)
653. Will you produce the original of this letter at the next meeting of the Committee? I believe I received that letter, and if I have it at home I will hand it in.

APPENDIX.

A.

*Road Branch,
Department of Internal Communication,
Sydney, 8 February, 1861.*

Sir,

I am directed by the Commissioner to acknowledge the receipt of your report for the month of January, 1861, and to inform you that the works on Doughboy Diversion are under your immediate superintendence, as Mr. Bayley only acted to oblige the Commissioner, and should therefore be included in your monthly reports.

R. Quodling, Esq.,
Tamworth.

I have, &c.,
S. G. SHAIRP,
Chief Clerk.

B.

*Department of Public Works,
Road Branch,
Sydney, 5 July, 1861.*

Sir,

I am directed by the Commissioner to inform you, that Mr. Bayley has been appointed to the superintendence of the Bridge over the Yass River, at Hume's Crossing-place.
As Mr. Bayley will leave for Yass on the completion of the Page Bridge, the whole of the works at Doughboy will now be under your charge.

R. Quodling, Esq.,
Tamworth.

I have, &c.,
S. G. SHAIRP,
Chief Clerk.

C.

*Murrurundi,
27 June, 1861.*

Sir,

The original contract of Mr. Martindale for Doughboy Diversion, was signed for £6,379. 1,000 cubic yards of blue metal will be required, cost £235; added to which there will be some extras in the earth and rock excavations, amounting to £296; making a total of £7,000; for which amount the contractor is willing to hand over the entire length of 199 chains to your satisfaction, and as directed, and according to specification.

The Commissioner for Roads,
Sydney.

I have, &c.,
A. C. BAYLEY.

Approved—W. R. C.
28/6/61. Inform Mr. Bayley.

I hold Mr. Collett's original letter, which this is a fair copy.

*Doughboy Hollow,
12 August, 1861.*

A. C. BAYLEY.

R. Quodling,
Supt. N. Road.

D.

Mr. Martindale is to break 1,600 cubic yards of metal, and to pitch 2,800 lineal yards of road 18' X 9" X 6", for 6s. 6d. The metal to be laid on the pitching $\frac{1}{2}$ cubic yard to the lineal yard.

W. R. C.
18/4/61.

Mr. Bayley to send section and estimate of line from present diversion to join Doughboy Rise Bridge with a gradient of 1 in 30 to meet sideling. Ground section of bridge will suffice, as detailed plan can be made out in Sydney.

W. R. C.
18/4/61.

E.

Let the coping and finishing of the masonry be deferred until further orders, which probably will not be issued during the present year.

W. R. C.
26/6/61.

Let no more fencing than is delivered and split be put up until further orders.

W. R. C.
26/6/61.

Mr. Bayley is to substitute 3 piles instead of 4 piles in the several bridges on the Doughboy Diversion, unless some satisfactory reason to the contrary be shewn to the Commissioner.

W. R. C.
11/4/61.

Sawn planking-4" may be substituted for slabbing on No. 3 D bridge.

W. R. C.
11/4/61.

(No. 1 D.)

This bridge is to be shifted easterly, so as to improve the curve, and the elevation lowered, in order to make the gradient uniform to the big cutting.

W. R. C.
11/4/61.

I heroby certify that these are true copies from Mr. Bayley's book.

Witness—A. C. BAYLEY.
10 August, 1861.

OLIVER L. HANNINGTON.

Murrurundi,

F.

Doughboy.—Metal to be put on road $\frac{1}{2}$ cubic yard to the lineal yard, without being measured in heaps, as directed by Mr. Collett.

A. C. BAYLEY.

12 August, 1861.

G.

Department of Public Works,
Road Branch,
Sydney, 23 August, 1861.

Sir,

Referring to your letter of the 16th instant, in which you state that Mr. Martindale is not carrying out his contract for Doughboy Diversion in a satisfactory manner, and particularize the items complained of, I am directed by the Commissioner to inform you that Mr. Martindale has explained, personally, all the points at issue.

R. Quodling, Esq.,
Tamworth.

I have, &c.,
S. G. SHARP,
Chief Clerk.

H.

ROAD BRANCH.—DEPARTMENT OF INTERNAL COMMUNICATION.

Specification of work required for the construction of the Doughboy Diversion of the Great Northern Road, between Doughboy Village and the Willow Tree.

GENERAL CONDITIONS.

- Works.** 1. The work for which tenders are to be made, and to which this specification refers, comprises the providing of all materials, tools, labour, scaffolding, implements, workmanship, and every other thing requisite for the full and proper completion of all the earth-work, rock-work, stone-breaking, cartage, clearing, carpenters, smiths, pile-drivers, and painters' work, and all other work required in the construction of a new road, ten bridges, and numerous culverts, between Doughboy and the Willow Tree on the Great Northern Road, in accordance with the plans and this specification, and to the entire satisfaction of the Engineer for Roads.
- Tenders.** 2. The tenders to state the gross amount for which the contractors will be prepared to complete all the clearing and stumping, with a schedule of prices for the valuation of all other work.
- Schedule of prices.** 3. Prices for each description of work named in tender must be filled in.
- Tender to contain time and sureties.** 4. At the foot of every tender there must be a memorandum signed by the person tendering, and two other responsible persons as sureties, agreeing to be answerable for the due performance of contract in the event of the tender being accepted, and undertaking in that event that they will execute a bond, at the Office of the Crown Solicitor in Sydney, or at the Police Offices, Murrurundi or Singleton, within ten days from notification of acceptance, in the penal sum of five hundred pounds, for securing such performance; any tender not complying with these requirements will be rejected.
- Extras.** 5. No extra work to be paid for without the sanction of the Commissioner for Roads, and the production of an order, in writing, for its execution, signed by the officer in charge of the works; and an account must be forwarded to the Commissioner each fortnight, until the completion of the work, stating the quantity and cost of extra work done; in default thereof, the claim for such extra work shall be null and void. The price for any work not included in schedule is to be determined on previous to its execution, and set forth in the order for such work.
- Measurements.** 6. The measurements to be made according to the actual dimensions, notwithstanding any general or local custom to the contrary.
- Time.** 7. The work to be completed, and the road ready to be opened to the public by the 1st June, 1861.
- Nonfulfilment of contract.** 8. Should the Engineer for Roads be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works, or any part thereof, the Commissioner shall have full power to make use of all labour or materials which he may deem necessary, the costs of such labour and materials to be deducted from any money that may be then due, or may hereinafter become due, to the contractor; and should the contractor fail to proceed in the execution of, and to complete the works, in the manner and at the rate of progress required by the Engineer, the Commissioner shall have full power to cancel the contract, so far as relates to the works remaining to be done; and all sums of money that may be due to the contractor, together with all implements in his possession, and all sums of money claimed as penalties for the nonfulfilment of the contract shall be forfeited to the Commissioner, and the amount shall be considered as ascertained damages for breach of contract.
- Power to dismiss men.** 9. The Engineer or other authorized officer to have the power of immediately dismissing any agent or workman employed by the contractor, and of having removed off the works, even if fixed, any timber, materials, plant, or implements he may consider unfit or insufficient for the purposes intended, or at variance with the meaning and intention of this specification, the costs of such removal to be paid by the contractor.
- Contractor to have materials under Road Acts.** 10. Any advantages conferred by the clauses of the Road Acts for obtaining materials for the roads will be enjoyed by the contractor as the Commissioner's agent, but the contractor will be liable to the Commissioner for the amount of all damages to be paid under said Acts; and he is not to allow such materials to be used for other purposes, on pain of invalidating the contract, and having the reasonable costs of such materials or damage deducted from any moneys due or that may become due to him.
- Works to be set out.** 11. The work will be set out for the contractor, but he must satisfy himself of its accuracy.
- Discrepancies.** 12. The forms and dimensions of the different portions of the work are shown generally in the drawings, but where any discrepancy exists between the dimensions as indicated by scale, and those marked in figures, the figures are to be considered as correct, and are to be taken, in all cases, in preference to the measurement by the scale attached; and if there should likewise be any discrepancy between the figures, or dimensions, or the form of construction, or the material, as indicated in the drawings, and the dimensions and material given in the specification, the directions of the specification shall be adopted; and in all cases of defective description, or of any ambiguity, the explanation given by the Engineer shall be binding on the contractor; also anything contained in the drawings, or in the specification, shall be equally binding as if it were contained in both.
- Risks.** 13. The contractor to be liable to all risk from floods or other accident during the construction of the works, which are to be delivered up perfect and in good order.
- Payments.** 14. Payments to be made once a month as the work proceeds, on the certificate of the superintending officer, countersigned by the Engineer for Roads, in the proportion of 80 per cent. of the work actually executed, and the remaining 20 per cent. will be paid after the Engineer shall have certified that the whole of the works have been completed to his satisfaction. All moneys due on account of contracts will be paid to the credit of contractor in the Bank of New South Wales, or such other bank in Sydney as contractor may request.
15. To secure the proper quantity of metal being spread on the road it will be measured in heaps before being spread, as well as on the road when spread, and the contractor is to give notice to the Road Superintendent when a heap of metal is ready.
16. In all payments on account of contracts the money due will be paid into the Bank of New South Wales, or to such other bank in Sydney as the contractor may request.

Specification

Specification for Road Works.

This contract commences at centre of intersection of High-street with Long-fellow-street, in the village of Doughboy Hollow, and extends 199 chains 26 links down Doughboy Creek. Contract commences.

The plan, which is drawn to a scale of two chains to the inch, shows the course of the line; the centre red line represents the line of the stakes, which are driven down at intervals of one chain (with a few exceptions shewn on plan.) The section, which is drawn to the same horizontal scale as the plan, and a vertical scale of 20 feet to the inch, represents the surface of the ground in black, and is taken along the centre line. Plans and sections.

The other sections and drawings represent, generally, the forms and dimensions of the several works, and are as follows:—

- Nos. 1 and 2, plans.
- Nos. 3 and 4, longitudinal sections.
- Nos. 5 and 6, cross sections.
- Nos. 7, 9, and 10, drawings and details of bridges.
- No. 8, general drawings of bridges.
- No. 11, drawing of culvert.

The first step to be taken will be the clearing; the entire contract is to be cleared, $1\frac{1}{2}$ chains wide, and the stumps removed, except on the sites of the higher embankments, where the stumps may remain in the ground. Tenders to state a bulk sum for the clearing. Clearing.

Ditches averaging 4 feet wide at top, $1\frac{1}{2}$ feet deep, and 1 foot wide at bottom, to be cut on the upper side for the entire length, with proper outlets, &c., to the culverts and bridges. Ditches.

Previous to making any of the side cuttings or embankments, or to forming the road surface where there is no cutting, if required, all the loose stones are to be removed and piled where directed, to be ultimately used as metal; where there are embankments in earth exceeding 3 feet in height, benches $3\frac{1}{2}$ feet wide and 2 feet deep are to be cut on the side of the bank as will be directed;—this to be done and inspected by the Road Superintendent before any material is filled into them. Stones to be piled.

The material from the cutting is then to be deposited where pointed out by the Road Superintendent or overseer. The quantities of bank will be found in most cases in excess of cutting; the deficiency is to be supplied from side cutting, to be made where directed; if possible, to be taken from side of bank, so as to widen road; where the cutting is in excess after all banks within six chains either way are made up, it may be applied to widening banks near cutting. Care is to be taken to provide sufficient material for shrinkage of banks, and to keep the hardest and most suitable material on the top. Embankments.

The excavations to be made of the depths shewn on longitudinal section; to be 30 feet wide at that level from commencement of work to chain 50, and thence to end to be 24 feet wide; to be formed with a convexity of 8 inches to 1 foot in the entire width, leaving a corresponding water-table at foot of slopes. Dimensions of excavations.

The slopes of cuttings to be in rock $\frac{1}{2}$ to 1, and in earth 1 to 1, banks to be as shewn on cross-sections; and where no cross sections are shewn, to be $1\frac{1}{2}$ to 1; where slopes of embankments are shewn steeper than 1 to 1, the best rubble from the cutting is to be selected for the outside, and carefully hand-packed as directed. All the batters to be neatly trimmed off with proper battering rules to be provided by the contractor for this purpose. Slopes.

The earth-work must be well punned round the abutments of all bridges, culverts, and retaining walls; where the road is merely formed without any cutting it is to be 30 feet wide, water-tables 9 inches deep, stumps and roots to be thoroughly eradicated, and holes filled with gravel or broken metal. Punning.

The masonry of retaining walls, where required, to be of well-bedded rubble, laid with as little mortar as may be, with the largest face downwards, the upper surface brought to a uniform level at the height of every course of the face work, and thoroughly filled with mortar at such level, the faces to have a batter of 2 inches to the foot; the footings to be carefully laid well below surface, and to be the largest stones to be procured within reasonable distance; each perch of work to have 2 thro' bonds; the wall to be coped with a heavy course not less than 2 feet in width; the back of wall to be built plumb with sells off as in drawing. Masonry.

Fencing.

The fencing to be sound ironbark, box, or red gum, 2 rail fence, with posts not less than 9 feet long $8'' \times 4''$, or round posts 9" in diameter at the small end, each to be charred for $3\frac{1}{2}$ feet in height, well rammed, securely and firmly fixed; the rails to be 9 feet long, $6'' \times 2''$ fitted accurately into the posts; the ends of the rails to lap. Fencing.

When the formation, fences, and bridges, are completed, the traffic is to be turned on to the road during fine weather, until formation is thoroughly consolidated; the maintaining convexity with fresh approved material and filling up ruts must be carefully attended to by contractor. Formation.

All portions of the road directed to be metalled, to be metalled as follows:—The metal to be of the best and hardest available stone, the blue columnar basalt broken to a $2\frac{1}{2}$ inch gauge, free from earth, sand, chips, and other impurities; to be spread to a width of 18 feet, 9 inches deep at the centre and 6 at the sides, in two layers of equal thickness, the first to be consolidated before the second is put on. All the stone for the first layer may be broken at whatever time suits the contractor, and when the entire is ready to be spread, will be measured in heaps by the Superintendent or other authorized officer; it must then be all spread before the metal for the second layer is broken. Metal.

The other portions of road are, if required, to be ballasted with the best approved clean river or ridge gravel, free from all earth, to be put on 18 feet wide 9" thick at the centre and 7" at the sides, both metal and ballast to be maintained until thoroughly consolidated, and if necessary fresh material put on to keep up convexity. Ballast.

Bridges.

The Bridges to be as follows:—

- No. 1.—A simple beam bridge of 2 spans of 20 feet each, and one span 15'0.
- No. 2.—A simple beam bridge of one 20 feet span.
- No. 3.—A simple beam bridge of two 21 feet spans.
- No. 4.—A simple beam bridge of three 21 feet spans.
- No. 5.—A simple beam bridge of one 25, and four 21 feet spans.
- No. 6.—A bridge of three 50 feet spans under-trussed, and one 21 feet span, beam with corbels.
- No. 7.—Three 25 feet spans, beams with corbels.
- No. 8.—A simple beam bridge in two spans of 20 feet.
- No. 9.—One queen-truss 50 feet span, with three 21 feet spans, girders and corbels.
- No. 10.—One under-truss of 50 feet span, with two 21 feet, and two 18 feet beams with corbels.

The timber for all the bridges to be of approved red gum or ironbark, the floors to be of stringy-bark, to be of the full dimensions shewn on drawings, perfectly straight, free from wanes, shakes, gum veins, and cores, with perfectly clean sharp arisses, whether sawn or hewn. Timber.

The iron-work for all the bridges and culverts to be of the best English iron; the nuts to be truly fitted on strong clean cut threads, all bolts to have washers, and the iron-work to be heated and dipped three times in linseed oil before fixing. Iron-work.

The entire of the timber-work, except slabbing and handrails, to get three coats of Stockholm tar, the first to be laid on hot; the hand-rail to be painted three times white, and joints and butting surfaces over ground to be twice coated with Stockholm tar when fixing, and all timber under or in contact with the ground to be charred.

- Piles.** All piles to be round, not less than 12 inches in diameter at the small end, pointed, and if required shod with 20 lb. shoes; the portions over ground to be hewn 10 or 12 inches square; all the portions driven in ground to be charred; where rock does not occur, piles must be driven at least 12 feet, and tested as may be directed by the Engineer; the piles to have a ring $4 \times 2\frac{1}{2}$ on the head when driving; the capsill to be mortised on piles.
- Sills.** When the nature of the ground, rock, bottom, or other cause, will not admit of piles being driven, the contractor to excavate and lay down 12 sills, and tenon the uprights in same, securing them with straps 2 feet long, $2\frac{1}{2} \times \frac{1}{2}$ and $\frac{3}{4}$ bolts, the remainder of framing to be as in drawing, the sill to be at least 4 feet below the surface of the ground and packed in with heavy rubble.
- Beam bridges.** For the bridges 1, 2, 3, 4, 5, 7, and 8, the girders to be 11×14 for all spans over 21 feet, 11×13 for all over 16 feet, and 11×12 for all less than that span; the girders to be five in number; the external girders to be scarfed on capsills and secured to piers by holding-down strap-bolts, with straps $3 \times \frac{1}{2}$ and $1\frac{1}{2}$ inch tangs, and bolted to piers by $\frac{3}{4}$ inch and 1" bolts as in detailed drawing No. 7; the remainder of the girders to be lap-jointed as in drawing, and secured to capsills with $\frac{3}{4}$ bolts, one bolt in each girder.
- Beam with corbels.** Bridge No. 7 to have corbels under the beams 12×12 , secured as shewn in detailed drawing No. 10.
- Floors.** The floors of 1, 2, 3, 4, 5, 7, and 8, to be 12 feet wide between hand-rails, to consist of stringy-bark, ironbark, box, or red gum slabs, 4 inches thick and not less than 7 or more than 10 inches wide, to be long enough to span two of the openings between girders, the joints to be broken, to be secured to girders by $\frac{1}{2}$ inch jagged spikes 7 inches long, one spike at each intersection of girders and two at each end of each slab; the slabs to be lined and laid close, adzed, and firmly seated on girders; a marginal log 9×5 to be spiked to external girder with $\frac{1}{2}$ inch spikes 18 inches long.
- Under-strutted bridges.** Bridges Nos. 6 and 10 to be under-strutted, as in detailed drawing No. 10.
- Under-strutting.** Each of the wide bays to have two stringers 12×12 resting on corbels 12×12 , with a straining piece 9×10 and 2 under-struts 10×10 , all properly fitted and fastened as in drawing.
- Girders on corbels.** The smaller bays to have 3 girders, 13×10 on corbels, secured as in drawing.
- Floors.** The floors to be carried by joists, in the larger spans where there is no intermediate girder, to be $10 \times 3\frac{1}{2}$, calked 1 inch, and in the smaller spans 9×3 , all skew spiked to the girders.
- The floor to be 4 inch diagonal planking, laid close and spiked to the joists with $\frac{1}{2}$ inch wrought iron spikes 7 inches long, bearded 3° , one spike and two spikes alternately in each plank, flooring to be adzed off fair when laid.
- Queen truss.** No. 9 to have one 50 feet queen-truss span as in detailed drawing, the stringer to be 14×10 , the straining beam 12×9 , braces 12×9 , minor braces 10×9 , and joists 6×9 , corbels 12×10 , $1\frac{1}{2}$ inch suspension rods, joists to be 3×10 in large opening, and floor and remainder of superstructure same as for Nos. 6 and 10.
- Hand-rail.** The hand-rail for all the bridges to be as in detailed drawing. Posts, with the exception of in No. 9, is to be secured to stringer with $\frac{1}{2}$ bolt, and to floor with iron collar strap $1\frac{1}{2} \times \frac{1}{2}$, spiked through floor to girder.
- In No. 9 the posts to be bolted to joists, as in drawing; all posts to be 6×4 .
- Top rail to be 6×4 with chamfered arrisse mortised on and spiked to posts, as in drawing; the intermediate rail to be 4×3 halved into and secured to posts by treenails, and with outside struts 6×4 over each pier, heel of strut to be tenoned into capsill and spiked to it, head to be let into and bolted to post with $\frac{1}{2}$ inch bolts.
- Slabbing abutments.** The landward side of all abutments to be slabbed in the same manner as floor, 4 round posts and small piles are to be driven and slabbed to retain foot of embankments at bridges where ground is steep.
- Culverts.** Culverts to be as in drawing, to be erected where pointed out by Road Superintendent, and in accordance with drawing No. 11.
- The timber framing to be all round timber, piles to be driven as for bridges, except in rock, when holes 2 to 3 feet deep are to be cut to receive the end of uprights, which are to be firmly wedged in with timber or stone wedges, the capsills to be tenoned on and spiked with $\frac{3}{4}$ inch jagged spikes 20 inches long to uprights.
- The girders, 6 in number, to be firmly seated and spiked on capsills, the face girder to be hewn with under arrisse square and to extend back on each side, as in drawing, the ends to be supported by piles, the floor to be of slabs as specified for some of the bridges.
- The landward side of abutment and the space between angle and wing piles or uprights to be sheeted with 4 inch slabs in the same manner as floor.
- The hand-rail to be, as in drawing, of the same general character as in bridges, but no hand-rail on upper side, nor no struts to posts, which are to be spiked instead of bolted to girders and capsills.
- The box drains to be formed of 3 inch planks well fastened together with 4 inch nails and cleets 3×4 , and continued in every instance to the foot of the slopes, to be placed where directed by the officer in charge of the works.
- Tenders to contain a price for each culvert and box drain respectively, as the quantities of work in them will not be measured with quantities in bridges.

I.

Road Branch,
Department of Internal Communication,
Sydney, 5 February, 1861.

Sir,

In reference to your letter of the 2nd instant, reporting on works at Doughboy Diversion and Murrurundi Gap, I am directed by the Commissioner to inform you that Mr. Martindale's price for cutting (1s. 10d. per cubic yard) is approved of, but for the deviation only. The gravel over the metal one quarter of a cubic yard per yard lineal, at 4s., is also approved of, with guard logs placed as suggested by you.

I am also to request that in future you will send all letters and reports on official paper, with a quarter margin for letters and half margin for reports.

A. C. Bayley, Esq.,
Murrurundi.

I have, &c.,
S. G. SHAIRP,
Chief Clerk.

J.

Doughboy Hollow,
24 October, 1861.

Sir,

I have the honor to acknowledge your favour of the 20th instant, requesting me to forward you certificate of vouchers for the following items, viz. :-

£476	18	9
300	0	0
200	0	0
<hr/>		
976	18	9

paid

paid to Mr. Martindale on account of Doughboy Diversion contract, making a total paid to Mr. Martindale of £6,000.

With all due respect to your wishes, I must, on the present occasion, decline, for the present, signing these documents, for reasons which I have now the honor to submit to you :—

Clearing Contract.—This has not been carried out to specification. The clearing of the main road is bad, there being many stumps left protruding above ground; and along the embankments the timber is still lying, not having been cleared away; in fact, in many places the banks are formed, or resting upon, the uncleared timber.

Embankments.—On entire length of road not trimmed as specified in specification.

Priming.—The priming of earth-work around abutments of bridges, culverts, and retaining walls, has not been performed.

Consolidation.—To this clause I would call your particular attention.

The pitching is bad; in many places much sunken, in consequence of the road not being well consolidated before commencing work; and I am afraid much difficulty will be found in keeping up the proper convexity.

Fencing.—Only six panels of fencing put up.

Metal.—This is another very important item. We have neither proper quantity nor quality; the principal portion supplied by the contractor being a description of shale, not basalt, as specified. 1,511 c. yds. of metal have yet to be spread, of which 1,016 are not yet broken, to make up the quantity required.

Bridges.—Only one bridge is finished—Fon Chin; for particulars of the other I beg to refer you to the enclosed statement of quantities of work to complete the same.

Flooring.—Neither tarred nor spiked as specified; only one spike being put in each end of slabs.

Slabbing.—The slabbing of abutments and landward side to hold embankments not slabbed; the contractor was wishing to make this an extra charge, although specified in specification.

Doughboy Creek.—In many places the creek is blocked up, through the earth from the cuttings having been tipped into the creek; the same with the big cutting.

I think I have now enumerated the most important objections; and when taking into consideration the amount required to complete the works, which I estimate at £1,800 to £2,000, and with the 20 per cent. to be deducted from the total amount of contract, £1,400—which, added to the £2,000, ought to leave a balance of £3,400, whereas I find only £1,000 in hand to complete contract. Under these circumstances I have felt it my duty to decline signing vouchers; but on your exonerating me from all liability or censure, and still wishing me to sign after this explanation, I shall be ready to do your request, on receiving a communication to that effect.

Robert Quodling, Esq.,
Road Superintendent,
Tamworth.

I have, &c.,
OLIVER L. HANNINGTON,
Road Overseer.

P.S.—The estimate herein made for completion of works is made from the measurements taken October 12th, 1861.—O. L. H.

K.

Doughboy Hollow,
8 October, 1861.

Sir,

According to instructions received from you, I, in conjunction with Mr. Donaldson, have measured the whole of the works of Doughboy Diversion contract, and have now the honor of forwarding the same.

Enclosed you will find an abstract measurement of all work done up to the 30th ultimo, also work done from the 12th of August up to the 30th September, with detail quantities to complete bridges, also alterations from specification.

Should you require a detailed account of the measurements of earth-work, rock, &c., I will, on receiving an intimation to that effect, forward the same.

Robert Quodling, Esq.,
Road Superintendent,
Tamworth.

I have, &c.,
OLIVER L. HANNINGTON.

P.S.—I also enclose August voucher for maintenance men, duly signed.—O. L. H.

L.

Tamworth, 3 November, 1861.

Sir,

I do myself the honor to inform you that I received a letter from the Commissioner for Roads, informing me that you had accepted my resignation. I do not know what remarks Mr. Collett may have made when submitting my resignation to you, but I sincerely hope you will have the matter thoroughly investigated. Everything that I stated in my letter to Mr. Collett I can substantiate.

If the matter is thoroughly investigated, you will, I think, see that I had good cause to state that "I could not continue in my present employment with credit to myself, or in justice to the Government." All that I ask is an inquiry into the matter.

I can produce documents to prove that there is a regular loose and discreditable system carried on since Mr. Collett has been in office.

I will prove to you that monies have been paid before they were due; and further, which I consider of great moment, that there is not sufficient funds in hand to complete the contract—Mr. Martindale having received £6,000, the total amount of contract being £7,000; and I can prove that it will take £2,000, independent of the work which ought to be condemned, to complete the works satisfactorily. I can also disclose many matters that I think will be rather discreditable to any gentleman holding an appointment as Commissioner for Roads.

I was not premature in sending in my resignation; the case is of such a glaring nature that many gentlemen not connected with the department have noticed the flagrant way in which this contract has been carried out.

I will proceed at once to Sydney; and if you would kindly honor me with an interview, I am confident that you will say that I have acted in a fearless, upright manner.

To the Honorable
the Minister for Public Works.

I have, &c.,
ROBERT QUODLING.

M.

Department of Public Works,
Sydney, 12 November, 1861.

Sir,

I am directed by the Secretary for Public Works to acknowledge the receipt of your letter of the 3rd instant, relative to the causes which led to your resignation of the office of Superintendent on the Great Northern Road, and to inform you that, in compliance with your request, Mr. Secretary Arnold will see you on any day previously arranged between you and myself.

Mr. Robert Quodling,
Tamworth.

I have, &c.,
JOHN RAE.

N.

N.

(Circular.)

Department of Public Works,
Road Branch,
Sydney, 26 August, 1861.

Sir,

I am directed by the Commissioner to call your particular attention to the fact that contractors under present arrangements are all bound to time, under certain penalties. Should any delay, therefore, arise from the absence or omission of the Road Superintendent, Overseer, or Ganger, (as the case may be,) in laying out the work, measuring metal, or otherwise impeding the operations of the contractor, the penalties cannot with justice be enforced. As the general conditions require "the works to be completed to the entire satisfaction of the Commissioner and Road Superintendent," the risk of doing wrong lies with the contractors, and any alterations from the specification comes under the same category, but in no instance ought the contractors to be hindered or stooped in the carrying out of their engagements.

As regards the substitution of pitching in lieu of ballasting, every facility should be given to the contractors, provided the expense does not exceed the original amount specified for ballasting or metalling in the contract. In any case of excess the question is to be referred to the Commissioner, for his decision.

R. Quodling, Esq.,
Tamworth.

I have, &c.,
S. G. SHAIRP,
Chief Clerk.

O.

Singleton, 7 March, 1861.

Sir,

When you were directed to superintend the Doughboy Diversion contract, it was with a view to push forward the works as much as possible, and to give every facility to the contractor, by sending in returns, less ten per cent., of all work, at least every fortnight; and if you had any doubt on this point, or on the portion of this contract which I required first completed, it was your duty to make the necessary inquiries. If you had been at your post when I surveyed the Doughboy Diversion you would have known what my wishes were. I have directed Mr. Bayley to superintend the wood-work, and you will take the earth-work of the Doughboy Diversion, independently of each other. You will send a detailed report of all the principal works in your district, and also the balance in hand of any moneys appropriated in 1860, specifying each appropriation. Send this to Sydney by Monday's mail.

R. Quodling, Esq.,
Tamworth.

Yours faithfully,
WILLIAM R. COLLETT.

THURSDAY, 5 DECEMBER, 1861.

Present:—

MR. DALGLEISH,	MR. T. GARRETT,
MR. DANGAR,	MR. LUCAS,
MR. DICK,	MR. MARKHAM.

W. FORSTER, Esq., IN THE CHAIR.

Mr. Robert Quodling, again called in and still further examined:—

- Mr. Robert Quodling. 654. *By the Chairman:* Have you been able to find copies of the two letters referred to at our last meeting? No; I have written up for them to Tamworth; I find I have not them with me.
- 5 Dec., 1861. 655. You think you will be able to produce them? I will be able to produce them.
656. *By Mr. Dalgleish:* I think you stated that you had no definite duties—that your duties were not defined? They were not defined by any instructions.
657. In what light did you consider these letters you have handed in—these written instructions to take charge of certain portions of the work? I thought I would have to act up to them.
658. You considered them as instructions? Yes; I had no regular instructions as to the mode of carrying out my duties.
659. And you acted on these? Yes.
660. In the first instance you considered that you had the general charge over the entire works? Yes.
661. And then you received a communication to take charge of the earth-work only? Yes.
662. And afterwards a communication that you were to take charge of the whole work again? Yes.
663. Without any definite instructions as to what were your precise duties? Without any definite instructions, only the documents I received from Mr. Bayley when I took them over.
664. When you received the appointment of Superintendent of Roads, how did you receive it—in what manner? I never had an appointment from the office when I was promoted.
665. Had you a letter notifying the fact? I had a letter notifying the fact that I had been appointed Superintendent of the second district of the Northern Road.
666. Were you then on the Northern Road? No, the Western.
667. You were removed from the Western to the Northern Road? Yes.
668. Did your instructions tell you what part of the Northern Road you were to proceed to? Yes; I started from Doughboy to Armidale.
669. Have you a letter appointing you superintendent? Not with me; I had a letter.
670. Is that one of the letters you promised to furnish to the Committee? No.
671. Will you append that to your evidence? Yes; I will see if I can get it; I am not certain if I can get them down; my things are locked up at Tamworth, and I have no person I can trust there to go to my papers. I will try to get them down, but there will be some delay.

672. In what position were you prior to being superintendent? I was first-class overseer of the Western Road. Mr. Robert Quodling.
673. You became conversant with the duties and with the mode of conducting the business of road making? Yes. 5 Dec., 1861.
674. Were you in the habit of receiving instructions from a superior officer, when you were an overseer? Yes, from the engineer.
675. Then you received definite instructions as to what you were to do? Yes; it was left to my own judgment to carry out the works.
676. As overseer? Yes; money was placed at my disposal, and I was to expend it in the best way I could.
677. In what respect did the duties of superintendent differ from those of overseer? The duties were very little different. I was directly under the Engineer for Roads, when I was overseer over the Western Road. When I was superintendent I was not so much under his eye. The duties are the same, or nearly so; there is no difference.
678. Are you aware of having committed any errors in carrying out the works entrusted to your charge? I have not been informed that I have committed any errors.
679. You have not been found fault with for incapacity? No.
680. Have you any reason to suppose you were not considered capable of carrying out the works? I never had reason to suppose so.
681. No fault was found with you? No fault at any time.
682. Do you know that portion of the road known as the new cutting on this side of the mountain, this side of the Doughboy Hollow? Liverpool Range.
683. Known as the new cutting—was that a portion of the line under your charge? No.
684. In bringing out the quantities for the different bridges, do I understand that these quantities were the materials, short of what should have been expended in the bridges? Yes; that was the state they were in when I objected to certify to the return.
685. Were they considered to be finished? No.
686. What was your objection? My objection was to certify to the return, because the amount was not due. I took out the quantities to see the amount it would take to complete the contract; and, adding the amounts together that had been expended, I thought there was not sufficient in hand to carry them out according to the specification furnished.
687. Was it understood by you that the full amount of cubic yards of stone contained in the two orders you received from Mr. Collett had to be broken and supplied by the contractor? Yes.
688. You complain that that order was not fulfilled? It was not fulfilled.
689. Although he was paid for the full order? He was paid for the full order; he was paid on account of the contract. The amounts he received were paid on account of the contract generally.
690. Your complaint is, that larger amounts of money have been paid than is warranted by the state of the work? Yes; that was my complaint—one of my complaints.
691. The works not being finished? Sufficiently finished for the advance.
692. The broken stone short of the contract could have been insisted upon being supplied before the money in hand was paid? Yes.
693. You think the money in hand was not a sufficient guarantee? There was not sufficient in hand to complete the work.
694. Were any bonds taken for the completion of the work? I believe there were.
695. Would they not have been sufficient to have compelled the contractor to finish the work in a proper manner, if it had not been performed satisfactorily? I think not, for if they had deviated from the general conditions of the contract —
696. The contract was broken? The contract was broken. It states in the contract, payments to be made at the rate of eighty per cent. as the work is proceeding. I consider that clause broken.
697. Have you seen the bond papers? I never saw them.
698. You do not know the nature of the bond? I know the nature of general bonds for contractors.
699. What is the general bond? I could not describe it, but I have seen the general bonds signed by them.
700. Is it—the work to be completed to the satisfaction of the overseer? I am not certain whether it states that. The bonds are kept in the office; they are not kept by me; in fact I did not witness the signature.
701. The discretion you had to exercise at Doughboy Hollow was of the same nature as that you exercised as overseer of roads? Yes, similar.
702. Had similar cause of complaint arisen when you were overseer of the Western Road, would you have adopted the same course you have done now? Exactly the same.
703. *By Mr. Hoskins:* What was your office—what situation did you fill under Government? I was Superintendent of Roads.
704. The district you had charge of was from Doughboy to Armidale? Yes.
705. Are you an engineer by profession? Not by profession; I have been employed on works for the last eight years.
706. Are you a civil engineer? I am not a civil engineer.
707. What salary did you receive? £400 per annum.
708. Is it not the fact that superintendents of roads are generally civil engineers? I believe not.
709. What induced you to resign—I do not clearly understand even now? My reason for resigning was this:—I found no notice was taken of my repeated reports about the works; I was set aside altogether; and the contractor's personal explanation was considered sufficient.
710. Who did you report to? To Mr. Collett; and he referred personally to him.

- Mr. Robert Quodling.
5 Dec., 1861.
711. Did you not consider it your duty as a public servant, if you saw a contract not properly performed—if in fact the public were robbed, for I can apply no other term to it, if a contract is not performed according to the specification—would you not consider it your duty, before tendering your resignation, to make the Minister of Works acquainted with this violation of the contract? My reason for not placing the matter in the hands of the Minister for Works was, that I thought the matter might be burked. I wanted to have it investigated by a Committee.
712. Did you not consider that, as your superior officer, as the gentleman in charge of your department, it was your duty to make your report to him? I did not consider that it was my duty to make the report to the Minister of Public Works.
713. You considered it to be consistent with your duty as a public servant to see a contract violated, and to take no notice of it? The Commissioner of Roads was quite aware the state the work was in, I presume.
714. Has the Commissioner of Roads never complained of your remissness in attending to your duties? Never till after I resigned.
715. Had he never previously? Never.
716. Did you ever reside in Murrurundi? Never.
717. Did the Commissioner of Roads never complain of your being too frequently at Murrurundi away from your district? Never.
718. Do you mean to say that at no time Mr. Collett has complained to you of your being away from your district? Never at any time.
719. Did you consider that you had a concurrent responsibility in the charge of this work with Mr. Bayley? I had when Mr. Bayley was on this work.
720. An equal responsibility with him? An equal responsibility with him.
721. Did Mr. Collett never intimate to you that you were to act under the instructions Mr. Bayley received from him, and to receive your instructions from Mr. Bayley? Never.
722. Did not Mr. Collett ever inform you that Mr. Bayley would have charge of the bridges and masonry. Yes, he did.
723. Did he not tell you you were not to interfere with that part of the contract? At that time I did not interfere with it.
724. Did you not tell us yesterday that you had charge of the contract? I had the whole of the contract till I received that letter. Mr. Bayley took his work separate from mine only for a very short period. I can give you the date, but I have not it with me now.
725. Do you mean to say that Mr. Collett was so satisfied with the manner in which you had performed your duty that he told you he would recommend you for an increase of salary? He told me at Singleton, that if I applied for an increase of salary he would lay my application before the Minister for Works. In fact, he promised me an increase before.
726. Do you know whether he ever did make an application for an increase? I do not know.
727. You never received any reply? No.
728. Was it not the fact that you received a letter some time in March, telling you that he could not place that confidence in you, in the management of the contract, that he had expected? No, I do not recollect receiving any such letter.
729. Did you receive any letter in March, altering the instructions? I believe that is the letter which has been referred to.
730. Have you it now? No, I have not; I have written for it; if the letter is sent to me I can produce it. At the time the letter was written to me I was on Glen Innes Road, and had charge of that from the Bench of Magistrates at Armidale; that was my reason for not being at my post, as was stated.
731. One thing you have remarked, namely, that you did not send vouchers in every fortnight—Were you in the habit of sending in fortnightly vouchers with reference to other contracts? Yes.
732. This is the only exception? Yes.
733. Why did you not send fortnightly vouchers in, in this instance? Because I felt that the Commissioner of Roads was paying the contractor more money than was due, and I could not send in my returns. I could never tell how the contract stood. Perhaps on the very day when I sent in a return, the contractor might receive £500 on account. He could get money whenever he chose to telegraph for it.
734. Do you know whether Mr. Martindale had ever had contracts in New South Wales previous to this? I believe he has had several on the Liverpool Range.
735. Do you know whether Mr. Martindale has been in the habit of contracting for public works, here, in England, and in Victoria? I believe he has.
736. Do you know whether there has ever been any complaint of Mr. Martindale having performed a contract negligently in any part of the world? I have heard a great deal about Mr. Martindale, but I know nothing about these works.
737. You never heard anything against his reputation as a contractor? No, I never heard anything; I cannot speak of anything.
738. You say you had concurrent responsibility with Mr. Bayley—can you tell me the amount of money certified by Mr. Bayley and by yourself, between March and June of the present year? I have not my book with me. The amount will be on the vouchers, which can be produced.
739. Did yourself and Mr. Bayley jointly sign vouchers? Yes.
740. To what extent have you signed in the aggregate? I cannot tell from memory, but I will have every entry and copy of voucher forwarded.
741. I believe, by the specification, twenty per cent. was to be withheld—was it twenty or ten? Twenty.

742. That twenty per cent. you say was not withheld? I think not.
743. Can you tell whether there was work performed under your own and Mr. Bayley's supervision amounting in the aggregate to £5,300? I could not tell you; I think not.
744. Can you tell how much money the contractor received? £6,000, I believe.
745. Has he still money due? I believe £1,000 is due to him.
746. What was the amount which was considered to be sufficient to perform the contract from the time you left up to its completion, according to the specification? I estimated the works at £1,800, to complete them according to the specification; and this, with the twenty per cent. to be retained, £1,400, would be £3,200, which should have been in hand.
747. *By Mr. Markham*: What was there in hand? £1,000.
748. *By Mr. Hoskins*: Did you ever make written objections to Mr. Collett, as to the manner in which the contract was performed? Yes; I handed the letters in yesterday, and I mentioned in my monthly and fortnightly reports, about the manner the work had been carried on.
749. You never at any time made any written objection to the Minister for Works? Never, at any time.
750. You would have considered, if you had seen the contract being carried out in direct violation of the specification, that it was not your duty to make representations to the responsible minister? It was not my duty, for Mr. Collett being the officer over me, his explanation would be taken before mine.
751. Do you know whether Mr. Collett has the power to alter contracts? I dare say he has.
752. You think he may have the power without consulting any person? He may have.
753. You do not know? I do not.
754. Have you ever seen money paid to a contractor without having a voucher signed by the officer in charge of the works? Never before.
755. Did you not say that the earth-work was not properly consolidated before it was pitched? Yes.
756. How long were you generally in the habit of allowing a newly-formed road to remain before it was pitched—did you allow drays to pass over it? We allowed light traffic to run over it in fine weather. The clause with reference to consolidation was left out in this specification. The consolidation of the embankment would take about a couple of months.
757. In this case drays were allowed—? The pitching was put on before the drays went over it—before it was consolidated.
758. In some cases you say broken metal was put upon clay? On the ordinary earth-work.
759. But according to the specification, this should have been pitched before the metal was put on? That clause about pitching was substituted, and the same price was paid per cubic yard as for broken metal.
760. How could the traffic be brought on to produce what you call consolidation, before the bridges were built? The bridges should have been built at the same time as the earth-work was carried on, so that they might have been finished together.
761. Would it not be impossible for drays to travel over the road till the bridges were finished? It would have been possible; of course the drays could work between the bridges where the bridges were not completed, but there was no opportunity for consolidation after, because the metalling and pitching was all done.
762. If drays were travelling on this road frequently between where these bridges were to be erected, would not the drays cut away the embankments and destroy the water-tables? The drays would consolidate the embankments.
763. Would they not destroy the side drains? No, they would not destroy anything. There is a clause in the specification that the convexity is to be maintained by the contractor for a certain time, till it is properly consolidated.
764. Would not this cut up the crust of the road? That is the object—to get the whole formation hard.
765. Would you not have been empowered to stop the traffic yourself without receiving any instructions from Mr. Collett, if you thought the traffic were injuring the road previous to its being metalled and pitched? There was no traffic on the road previous to its being pitched and metalled.
766. A much smaller quantity of metal has been placed on the road than was comprised in the specification? Than was comprised in the contract—in the memos. handed over to me by Mr. Bayley when I took charge of the works.
767. Is that the customary way of handing over to a person the charge of a road—to give him memoranda? I believe that is Mr. Collett's system of carrying out the works. I believe he does that with other superintendents.
768. Have you been under any other gentleman in charge of roads? Yes.
769. Was he in the habit of giving similar memoranda? No. I was made acquainted with every thing officially; everything came through the office in Sydney—the Road Branch.
770. You had formal instructions, not small memoranda? Yes.
771. Did the contractor use a roller, in order to consolidate the work done? He had a piece of a tree—a log—drawn by one horse. He used to run that over it at intervals through the day, but it was of no use at all.
772. That was not included in the specification; it was an extra trouble and expense to him? It was not used often.
773. *By Mr. Dalgleish*: Can you tell the weight of the tree? No; I could tell you the weight; it was a log about 16 inches in diameter and 7 feet long.
774. *By Mr. Hoskins*: When you saw this shale being placed on the road, did you never point out to Mr. Collett that it was a very inferior article and a direct violation of the contract?

Mr. Robert
Quodling.
5 Dec., 1861.

- Mr. Robert Quodling.
 5 Dec., 1861.
- contract? I did point out that it ought to have been broken metal. I said to Mr. Collett, "Do you approve of this metal?" He said "I do," and I thought that was sufficient.
775. Have you ever seen shale used in place of basalt? I have seen it in this case, but in no other work that I have carried out; I have never allowed it to be used.
776. Are you aware that it is not as durable? I am.
777. When you pointed out these heaps of shale to Mr. Collett, did he assign any reason why shale should be substituted for basalt? No, he assigned no reason.
778. *By Mr. Dalgleish*: Did you certify for the stone before Mr. Collett saw it? No, I paid the contractor an amount on account; it was mentioned on the H form—"On account of the Doughboy contract."
779. Did you certify for any part of that that was broken as shale before Mr. Collett saw it? Not before Mr. Collett saw it.
780. *By Mr. Hoskins*: I understood you to say that you were not allowed to measure the heaps of metal broken? I was not allowed. I received a memo. in August, from Mr. Bayley, stating that the Commissioner had directed him that the metal was to be put on half a cubic yard to a lineal yard without measurement, and that memo. he gave to me at the time.
781. *By Mr. Dalgleish*: Have you handed that in? Yes.
782. *By Mr. Hoskins*: Then you were not furnished with the specification of the actual quantity of metal in the aggregate that was to be laid on the road? I had the documents under which Mr. Bayley was supervising the contract.
783. At that time Mr. Bayley had the sole charge? Who I took it in August he had. They found I was condemning the work and putting them to more trouble, and I was told quietly I was to have nothing more to do with the works.
784. Who told you that? Mr. Bayley, I believe, was informed by letter.
785. Mr. Bayley was informed by letter that you were to have nothing to do with it? That he had sole charge of the works. I think I received a note from Mr. Collett—I am not certain.
786. When you represented to Mr. Bayley that the contract was not faithfully performed, you were informed that you were not to interfere? The contractor objected to having two superintendents on the work, and Mr. Bayley was then directed to take the entire charge, and I went on with my other duties.
787. You left the contract? I used to visit it and go over the works, but I never interfered with Mr. Bayley. At that time I used to go over the works frequently.
788. In the specification it is provided that "All portions of the road directed to be "metalled—to be metalled as follows:—The metal to be of the best and hardest available "stone, the blue columnar basalt, broken to a 2½ inch gauge, free from earth, sand, chips, "and other impurities; to be spread to a width of 18 feet, 9 inches deep at the centre, and "6 at the sides"—was that part of the contract complied with? It was not, because this memo. that I received did away with the clause altogether. Mr. Collett substituted pitching for metalling, and paid the contractor the same price for rough stone as for blue metal. The memo. I received when I took charge from Mr. Bayley was sufficient for me to take no notice of that clause.
789. In no part of the contract is the metal 18 feet wide, 9 inches deep at the centre and 6 at the sides? No, he substituted pitching for metalling.
790. Can you state whether there is any part of the contract where this is complied with? I cannot tell you any.
791. And you do not believe there is any? I do not believe there is any.
792. This substitution of pitching for broken metal would be a considerable gain to the contractor? A considerable gain.
793. Has there been any ballasting, any ordinary rough ballasting, any gravel put on the top of the metal? I know there was no gravel put on the top of the metal.
794. No blinding? Not on any metal when I was there.
795. Is it not frequently the practice, especially in swampy places, in forming a road, to have a layer of ballast thrown down, and on the top of that to put the broken metal? That has not been done.
796. Is not that the plan generally adopted in the formation of a road? No; the general plan is to have the entire length of the earth-work thoroughly consolidated before any macadamizing is done. All drains and outlets should be cut before the metalling is commenced.
797. In constructing roads, are you in the habit of putting metal down without ballasting or rough stones? Yes.
798. Do you consider that a good plan? Yes, when the earth-work is thoroughly consolidated.
799. Do you mean to tell me that a road is equally durable where the metal is laid upon the earth, as it would be if laid upon pitching, rough stone, or ballasting? Not on any boggy portions of a road, but upon any dry consolidated road. I think metalling is before any pitching that can be put on. Pitching is objectionable on embankments which are not consolidated, for when traffic comes on them, the drays sink through it, and it is a great deal worse.
800. Is it not customary on a good road to have pitching and metalling as well—the metalling on the top of the pitching? It is adopted in the streets here.
801. Was that plan adopted in this contract? Pitching has been substituted for metalling.
802. Has metal been put on the top of the pitching in this contract? Yes.
803. Do you not consider that an improvement? It is not so good, because the consolidation clause is taken no notice of.
804. Do you not think pitching is a more solid foundation for a road than ordinary clay or earth? No; ordinary clay or earth, if consolidated, will make a better road than pitching.

805. To come back to the first question—is it not the practice, especially in swampy portions of a road, to have pitching or ballasting, then a coating of earth, and then on the top of that coating the metal? No, I do not think that is customary.
806. Or gravel? Yes, gravel, that has been carried out. I have done that in boggy portions, but then I have put on the gravel without pitching; the portions without pitching on a consolidated road would be as good as the other.
807. Do you think if gravel had been put upon the pitching of this contract, the road would be as firm as if metal had been laid on the earth or clay? I do not understand you.
808. Supposing Mr. Collett had substituted pitching, and gravel on the top of that, instead of having broken metal laid upon the ordinary earth-work—do you think the pitching and gravel would form a more durable road than the other, having metal laid upon the ordinary clay? If the earth were consolidated, the metal laid upon the ordinary clay would be the best.
809. Have you not observed upon the Northern Road, that where metal has been laid upon the clay or ordinary earth, the dry wheels have ground the metal into the road, and the metal has all wasted away? Not on any portion I have carried out on the Northern Road.
810. Your objection to the performance of the contract, so far as the earth-work is concerned, is the substitution of pitching and gravel for metal? And the doing away with the consolidation clause, which puts £300 in the pocket of the contractor; that is, the doing away of the clause which refers to the maintaining the convexity of the formation and turning the traffic on in fine weather, as specified in the specification.
811. Did you certify for shale? I sent in a return on account for shale, but that was after Mr. Collett had seen it. I pointed out the stone to Mr. Collett, and Mr. Bayley pointed it out too; when he said he was satisfied, of course that was sufficient.
812. The fencing part of the contract has not been performed? No.
813. In what way was the deficiency? Mr. Bayley informed me half a mile was to be put up, and there are only six panels up at the present time.
814. Did you receive any instructions from the Engineer or Commissioner of the road as to the quantity? No. I have Mr. Bayley's note in my memorandum book.
815. The only instructions you received with reference to the quantity of fencing was from this note of Mr. Bayley? Yes.
816. There is a clause in the specification about fencing:—"The fencing to be sound iron-bark, box or red gum, two-rail fence, with posts not less than 9 feet long, 8 by 4 inches, or round posts 9 inches in diameter at the small end, each to be charred for $3\frac{1}{2}$ feet in height, well rammed, securely and firmly fixed; the rails to be 9 feet long, 6 by 2, fitted accurately into the posts, the ends of the rails to top"—there was to be half a mile of it? So I am told, but to read that specification you would think there was a great quantity.
817. When the contract was altered was it not intended to substitute a stone wall—was it not understood that the Commissioner would be satisfied with a stone wall instead of timber fencing? That was for a portion of the Doughboy Creek, a retaining wall of masonry; but now fencing will be required, for it is not up to the height of the formation.
818. What is this fencing for? For fencing the side of the road.
819. To compel people to travel on the road? Yes.
820. Then you think travellers would be jeopardized if the fence were not erected? The specification states there is to be a fence along the line of road, but it has not been carried out.
821. What do you suppose will be the gain to the contractor from not carrying this out? I do not know; I suppose he intends to erect this fence, but he has not done it.
822. Have you ever complained to Mr. Collett of this fence not having been erected? No, Mr. Collett knew it; when he visited the works last he directed the contractor to put this half-mile at the worst place along the road.
823. He had not commenced it? He had not commenced it when I left the works.
824. Do you know whether the contract is finished there now? No.
825. Do you know whether the contractor has received his money? I do not know.
826. Another complaint of yours is, that the bridges are not according to contract—there were to have been four piers to each bridge? That was in the bridges marked B. In the specification it states three.
827. Then three have been erected? In some of the original line there were to be four, but the original line has been altered; in the D bridges there were to be three.
828. You are aware that this contract was subject to any alteration being made by the Commissioner? I do not know that the Commissioner is empowered to make alterations in the contract; he was not Commissioner of Roads at the time this contract was let.
829. By having three piers instead of four, you think the superstructures of these bridges are not so secure? In the large bridges they are not so secure.
830. Do you know whether these piles are properly driven into the rock? They are not driven, they are sills.
831. One alteration is, that the bridges have been altered from twelve to eighteen feet wide—do you not think that an improvement? It is a great improvement.
832. Do you not consider that the bridges generally erected under Mr. Bennett's supervision are too narrow? I do not know about Mr. Bennett's directions; the bridges I have carried out that have been only twelve feet wide have been too narrow.
833. Do you not know that the teamsters frequently go to the old crossing-places rather than go over these bridges? I have a decided objection to bridges twelve feet wide.
834. Did you not make a representation to Mr. Collett that you considered the flooring of these bridges would not be secure, inasmuch as there were not so many spikes driven in the planking as were specified? I pointed out the bridges to Mr. Collett when he visited the works, and as he was satisfied I did not consider it necessary to make a report.

Mr. Robert
Quodling.
5 Dec., 1861.

Mr. Robert
Quodling.

5 Dec., 1861.

835. Did you not consider that driving only half the number of spikes would be a serious infringement of the terms of the contract, especially in the flooring of a bridge? I do not know that it was very serious.
836. Do you not think that the floor would not be so durable? The floor would not be so durable.
837. Would it not be likely to be dangerous, because the flooring would soon get loose? Yes.
838. Why do you say that you consider this is one of the charges you have against the Works Department of not carrying out the contract, inasmuch as there were not so many spikes used as were specified, if you do not consider this a serious violation of the contract? It is a material violation, but not so serious as you would make out.
839. Can you give us a rough estimate of the gain to the contractor by only having two spikes instead of three? I could not give it from memory; I could take it out.
840. When you represented to Mr. Collett that the bridges also were not constructed according to the contract, he said he was quite satisfied? Yes, he was quite satisfied.
841. Did the specification of the bridges which guided you state the minimum breadth of the slabs? I believe it did.
842. What is the breadth of the slabs? They are all sketched on the drawings.
843. You superintended the construction of the bridges? The width of the slabs was from eight to ten inches.
844. According to the original specification they were to be twelve inches wide? I forget; they are marked on the drawings.
845. *By Mr. Dick*: Is any reference made to them in the specification? I think they are specified there.
846. *By Mr. Hoskins*: I think you say Mr. Bayley was removed from overlooking this contract in July? No, I think it was in August.
847. From August to October—the time of your resignation—you had sole charge of this work? Yes.
848. Did you ever during this time—or did you ever make repeated representations to the Commissioner of Roads of this persistent violation of the contract by the contractor? I pointed out everything when he visited the works, and I frequently repeated in my monthly reports, about the unsatisfactory way in which the works were carried on.
849. Of course you considered your responsibility increased when Mr. Bayley was not there; he having had partial responsibility before? Yes.
850. Did Mr. Collett actually order you to take charge of the works when Mr. Bayley left? I think I yesterday handed in the letter directing me to take charge of the works, and stating that Mr. Bayley was appointed to the bridge at the Hume Crossing-place, at Yass.
851. There has been a diversion made from the original plan of the road? Yes.
852. Do you think that diversion has been an improvement? I do not think it has.
853. Will you give us the reason why you do not think it has? I do not think the road will be so good. In the first instance, the taking the road through the sideling—the large cutting they have made there—the road will never be safe, but continually out of order, and in the course of a year or so they will have to make a considerable excavation for ten or twelve feet back; the sideling is exposed, and in bad weather will be carried away.
854. Will you tell us the nature of this alteration—has it shortened the distance—has the road been taken on higher ground? I had the drawings here yesterday, but I have not brought them to-day, as I thought they would not be required.
855. This is an alteration made by the Chief Commissioner? I had nothing to do with it.
856. We would like to know the nature of the alteration—whether it will be a greater convenience to the public—whether there will be less gradients, or less likelihood of the traffic being impeded by floods—whether there will be less work for the contractor to do on this diverted road, this amended contract? There will be less work for the contractor, I am satisfied, but I have not the drawings with me. Two large bridges are done away, (the two most expensive bridges on the contract,) and an extra amount has been paid on account of those bridges.
857. The new line is much higher than the old one? Yes.
858. The two bridges are avoided? Yes.
859. Were those permanent running streams the bridges were to cross? No.
860. Only gullies? Yes.
861. In what way further do you consider it more favourable to the contractor to have this line? He got the extra price for this large cutting, this sideling; and the doing away with these two large bridges in the first contract was most important to him. He gets five-pence a yard extra for this earth-work.
862. Then he would receive a larger amount for his contract than that specified in the original contract? Yes; I think the amount paid him is £7,000. Sufficient money has not been deducted for these two large bridges which have been done away, and extra money has been paid for the earth-work.
863. Do you consider that, by this new diversion, in the winter season, when we have heavy rains for weeks together, the traffic will be more likely to be impeded than by the original line proposed? I believe it will; and I reported to the Commissioner that the roadway, the back cutting, would have to be carried some distance back into the solid hill.
864. Do you think the road will not be of such a durable character as the original? I am satisfied it will not be so good.
865. To make a durable road it will be necessary to have a further cutting? To have a further cutting into the lead.
866. Farther into the hill? Yes.
867. Otherwise there may be a slip? Yes; in fact I pointed out slips to Mr. Collett.

868. Is there a difference in the gradients—are there easier gradients on the diversion than on the original line? I could not say they are easier; they are about the same.
869. You had a Mr. Hannington an overseer under you? Yes.
870. Mr. Hannington signed a letter concurring with you generally as to the contract not having been properly performed according to the specification? Yes.
871. What office does Mr. Hannington hold? Overseer under me.
872. What is his salary? £255 a-year.
873. How long has he been in the Government service? I forget now, but he was appointed by Mr. Collett.
874. Has he ever had charge of the supervision of road work before? Never; till he came to me he never knew what work was.
875. Is he an engineer? No.
876. Is he ignorant of the management of works generally? Not so, because he has worked up in a measure.
877. Under you? Under me.
878. He was quite a novice when he was appointed? Yes.
879. And he receives a salary of £250? £255.
880. What were his duties? To ride up and down the road and look after the maintenance men; he was supposed to have charge of the different road gangs in the district.
881. What district? From Goonoo Goonoo to Doughboy Hollow.
882. Did he reside at Murrurundi? No, at the Willow Tree.
883. Did you consider, from his inexperience in these matters, that Mr. Hannington was competent to express an opinion upon the manner in which the contract was performed? He went through this work with me, and compiled the letter from his notes.
884. Did you ask him? I asked him to certify to the return; I said I could not do so; if he liked to do so he could.
885. Was it his duty to certify? It was his duty.
886. I thought it was your duty, as the superintendent? The returns were countersigned by him.
887. Is he still employed by Government? I believe he is in Sydney.
888. Why was he removed? I believe he came down with Mr. Collett to Sydney, and is here at the present time.
889. What is he doing in Sydney? I am sure I do not know.
890. Was he removed from there subsequently to your resignation? Yes.
891. Who has charge of the contracts there now? I think, Mr. Coghlan, my successor.
892. Who is Mr. Coghlan? He was overseer of the Western Road.
893. How long was he overseer of the Western Road? I do not know; a considerable time, I believe.
894. Do you know whether he was ever engaged in overlooking road work in Victoria? I do not know that; but I heard of him in Victoria when I was there.
895. Do you know whether Mr. Coghlan has ever been employed in any works in which Mr. Martindale was the contractor? I believe he was a sub-contractor under Mr. Martindale.
896. Where? In Victoria.
897. Did you receive that from a reliable source? Mr. Martindale told me so himself.
898. Did Mr. Martindale tell you so? He said that Mr. Coghlan, the present superintendent, was a sub-contractor under him.
899. And Mr. Coghlan is now? The superintendent of the Northern Road.
900. Has Mr. Martindale any contracts now? Yes.
901. What contracts has he? The Doughboy contract.
902. Any other? Not to my knowledge.
903. Mr. Coghlan has sole charge of this contract now? I believe he has, to the best of my belief.
904. I think you said you heard Mr. Coghlan say, that he had been a sub-contractor under Mr. Martindale? No; Mr. Martindale told me so.
905. You were the person who superintended the erection of the foundation of the bridge at Bendemeer? The abutments at Bendemeer.
906. Who designed that bridge? I believe, Mr. Bennett, the late Engineer for Roads.
907. Did you see a copy of the specifications? Yes, and the drawings.
908. Can you tell me whether, according to the specifications you received from Mr. Bennett with reference to the formation of that bridge, it was or was not provided that the foundation of those piers should be upon the bed rock? Yes.
909. Can you say whether that was done? On the Tamworth bank of the river the foundation is on the rock; on the Armidale bank of the river on concrete, at least on flat-bedded rubble; but I have the engineer's letter directing me to build upon hard shingle.
910. Do you not happen to know that last winter the flood in that river wore away the formation of this bridge? It never touched the foundation; the foundation has not sunk in the least.
911. Have not several of the stones been displaced? Yes. The mortar was green, when the flood came down, on one of the piers; it was just finished on the Armidale side. On the Tamworth side scarcely any stones are displaced at all.
912. Did you receive any information that the Government intended to continue the construction of this bridge at the original site? I reported about the flood, and I stated to the Commissioner for Roads that it would be advisable to pull down the abutments, and to build them in cement; and I received a reply from the Commissioner for Roads that no alteration would be made.
913. Did not the specification specify that cement was to be used in this contract? No, the cement was supplied by Government.

Mr. Robert Quodling.

5 Dec., 1861.

Mr. Robert
Quodling.

5 Dec., 1861.

914. Do you consider that the foundation of that pier would be secure if laid upon shingly rock or rubble? I considered that they would be secure, and they are now.

915. Do you consider that they will be secure when they have the whole superstructure upon them? Yes.

916. *By Mr. Markham*: Did you send in a certificate for the piers? I did.

917. Did you receive any reprimand in consequence? No. After the flood I received a letter from the office informing me that I should not have forwarded the vouchers for the balance of the contract till it was inspected by the Commissioner from Sydney. That was an unusual thing; I never heard of it before.

918. But you did receive that reprimand? I received a letter, and I wrote to the Government saying that it should not occur again. That was not a contract; it was task-work.

919. Who did you receive that reprimand from? I think it was signed by the chief clerk. It was not a reprimand. In fact, I sent in my report with the final vouchers, and the Commissioner for Roads passed my vouchers, and therefore he could have no objection.

920. Who was the contractor? Dowell.

921. Would he have been responsible for the damages, and have been compelled to repair them, if your certificate had not been given for the whole of the work? He would not if the works had been completed before the flood came.

922. Would he not have been responsible if they had not been inspected by the Commissioner or some one on his behalf? Yes.

923. Was your report upon this sufficient? Yes; the Commissioner for Roads could have objected to paying the money till he had visited the work; but he made no objection, and the money was placed to the credit of the contractor.

924. You say one of the abutments was built upon the solid rock, and the other on shingle—is it the fact that one is built upon a boulder and not upon the solid rock? It is built upon the solid rock, as far as I can judge. The site was pointed out by the Engineer for Roads, and soundings were taken by me. I hold his letter.

925. If it were proved to be upon a boulder instead of upon solid rock would it make any material difference as to the safety of the superstructure? Not a bit; if it be upon a boulder the boulder must extend a great number of feet, for I sounded all round and found rock.

926. If this abutment were raised as you mentioned just now, would it be consistent with the original intention to raise the abutment without increasing the base in any way? It would not; the abutments would have to be altered.

927. The foundation would have to be enlarged? The abutments would want reconstructing. In fact it would require to be built with a V at the end—a cutwater—it is built now breast-on, as it were, to the stream.

928. Is it your opinion that building abutments of that sort, breast on to the stream, is objectionable? I think it is, very.

929. Can you account for that course having been taken in the present instance? I did as I was directed.

930. Can you account in any way for that course having been adopted? I cannot account for the engineer's design; I carried it out strictly according to the drawing and specification.

931. I suppose you perceived the defect? I told the Engineer for Roads I did not approve of his plan, but of course I was his junior and not allowed to speak.

932. You did not feel bound to report to anyone in authority over you? No.

933. Do you consider the site chosen at Bendemeer the best site in the neighbourhood for such a structure? No; I think a better site was to have been procured.

934. Higher up or lower down? One higher up; the other lower down. I think the lower one the best crossing.

935. Which do you think the most suitable for the public? The lower one, because the road way would then go through the town.

936. Are you of opinion that if the bridge were erected upon the present piers, they being only altered, that it would be a safe and permanent structure? I believe it would if the design were altered; if they were built with a cutwater to them. The foundation is good; it has not sunken in the least.

937. That is, without taking down the present abutments? They would have to be taken down to alter the shape of them.

938. In any case? Yes.

939. You would not advise adding to them as at present besides building with a V without taking them down? No.

940. Do you know what were the terms of Mr. Dowell's contract as to the proportion he was to receive, or as to what drawback there was to be? Yes; I think I complied with the specification and conditions.

941. Were those terms in accordance with or similar to the terms of other contracts on other portions of the road, or were they more particularly defined? They were particularly defined.

942. Did he receive a regular specification? Yes; he signed a regular specification.

943. He did not receive a mere memorandum, but signed a regular specification? He signed a regular specification.

944. Did you in this case receive a specification or only a memorandum? A specification directly from the office.

945. In this particular instance? Yes.

946. Was this contract let by public tender or otherwise? It was advertized—I am not certain—I think it was advertized; the present contractor tendered for it, and there was some alteration made in the contract. I am not certain—I would not be positive; I know there

there was an advertisement calling for tenders, and I think the present contractor put in a tender. There were some drawings he did not understand, and I think the Engineer of Roads and himself made an agreement together.

947. Was he bound to time in his contract? He was bound to time.

948. Did he give any bond as usual under such circumstances? I think no bond was signed.

949. No bond was signed to compel him to complete? There was some delay in supplying the cement from Sydney. The cement was supplied by the Government, and the non-arrival of it was the cause of the delay.

950. Was that cement used when it arrived? Yes.

951. I understood you to say that it was green mortar that was washed out by the flood? The cement was used for the footing courses, not in the upper portion of the work.

952. Was that according to the specification? That was according to the specification.

953. About how far do the footing courses extend in these abutments? I can produce the drawings—I would not like to tell you from memory—I want to give you correct information.

954. Do they, to the best of your recollection, extend beyond the usual level of the river? They were considerably below the usual level of the river.

955. Did the use of the cement extend above the usual level of the water? There was not sufficient to carry it above the ordinary water level.

956. Was the contractor absent at any time or on any occasion when the work was inspected—on two occasions was he absent when the work was inspected by the Commissioner? The contractor was not present when the Commissioner for Roads walked past them. The Commissioner looked at the piers but he never expressed any opinion; in fact I do not think he was able to say anything about them.

957. Do you mean to say that the Commissioner for Roads when he visited the works did not examine them? He looked at the abutments, but he never made any comments.

958. Did you communicate to the Commissioner for Roads any suspicion with regard to the contractor stopping away, or as to the unsoundness of the foundation, or anything to that effect? No.

959. Did you make any suggestion to that effect? I do not recollect. He only stopped a couple of minutes on the works; he was travelling in the coach, and there was no time for any stoppage.

960. *By Mr. Dick:* What was the amount of the contract for building this bridge? I cannot tell you from memory—I have all the information of the amount paid.

961. Was it done to your satisfaction, or to the satisfaction of the Commissioner? To my satisfaction, and the satisfaction of the Commissioner and Engineer.

962. Both or either? Both.

963. Is the Doughboy contract in the same way? Yes, the Doughboy contract is to be done to the satisfaction of the Road Superintendent and Commissioner.

964. You say the Road Superintendent and Commissioner—I understand you to mean both? Yes.

965. You say it is not usual for the Commissioner of Roads to pay money until after he has inspected works—How was it then you were reprimanded for giving a certificate before Mr. Collett had examined the Bendemeer bridge? I am sure I cannot account for that. I did not consider it a reprimand.

966. At all events that letter intimated to you that the Commissioner for Roads would have inspected it? Would have inspected what?

967. That bridge? I forwarded my return for the final balance on account of the Bendemeer bridge; I certified that the contractor had finished it, and it was paid by the Commissioner for Roads—lodged in the bank to the contractor's credit.

968. You stated that the piers rest upon the bed rock? One of them did, the other did not. I have the engineer's letter, which I can produce.

969. Was any deduction made from the contract on the account? No deduction was made; it made no difference to the contractor, except that it was worse, if anything, for him. He would not have had the amount of excavation, nor the trouble in making coffer-dams, if he had got the rock nearer the surface to build the abutment upon.

970. Why did he not go to the bed rock if it were better for him? He went below the depth shewn in the drawings, and found no signs of bed rock.

971. You say it would have been better for him if he had built upon the bed rock—I ask you, then, why he did not do so? It would have been better, if he had got the bed rock at the depth shewn in the drawings.

972. How long have you been superintendent of the road from Armidale to Doughboy Creek? I think I arrived at Tamworth in June, 1860.

973. Who was in charge there then? Mr. Newcomen.

974. Did you receive the works over from him? No.

975. From whom, then? The works were handed over to me by the Engineer for Roads.

976. The Engineer for Roads was Mr. Bennett? Yes.

977. What works were in progress at the time they were handed over to you? Tamworth Bridge works, and Moonby Range.

978. Any others? There were some other small contracts on the road—the whole line of road—but the principal works were on the Moonby Pass and at Tamworth Bridge.

979. How far does your district extend—how many miles? About 135 miles, from Doughboy to Armidale.

980. How many overseers had you under you? Two.

981. Where were their districts? One from Goonoo Goonoo to Doughboy, and the other from Bendemeer to Armidale.

982. Were there any other assistants employed under you? No.

Mr. Robert
Quodling.

5 Dec., 1861.

Mr. Robert
Quodling.

5 Dec., 1861.

983. What were the duties of these overseers, as distinguished from yours? They were supposed to look after the roads.
984. Can you tell me what their duties were—not what they were supposed to be; there must have been something defined? To measure up the work and to see that it was carried out according to the agreements and specifications; they sent in their returns to the superintendent. They were directly under the superintendent.
985. What do you call maintenance men? Men employed along the road to fill in the ruts.
986. At so much per diem? Yes.
987. Do I understand that these overseers measure the work and report to you? Yes, they are directly under me.
988. You report to the Commissioner for Roads at the head office? Yes.
989. You say Mr. Hannington is now an overseer? Yes.
990. If your district was 135 miles long, will you be kind enough to tell me how much of that you have to complain of as not having been done in accordance with the contract? I do not understand that question—I am not complaining of the whole line of road.
991. To what part of the 135 miles of road does your complaint extend? To the Doughboy Hollow.
992. Do I understand that you do not complain of any other works? No; I have no complaint against any others.
993. Then with all the other works you were satisfied? Yes, the other works were carried on satisfactorily.
994. What was the length of the work at Doughboy Hollow? 199 chains, the contract with Mr. Martindale.
995. That is about two miles and a half? Yes.
996. Have you no complaints to make about any other part of your district—this length of 135 miles? No.
997. There have been no irregularities at all? I do not know of any irregularities.
998. The men have always been paid? They have never been paid till I sent in the returns for the work.
999. You state in your letter to the Minister for Works that there is a “regular loose and discreditable system carried on” since Mr. Collett has been in office—will you state whether you ever communicated directly with the Commissioner upon any abuse, as your superior officer? I frequently reported about the manner in which the works had been carried on.
1000. In writing? In writing, and personally.
1001. How often in writing? I could not tell; several times, till I was tired.
1002. A dozen times? I do not know about a dozen.
1003. Half a dozen times? I reported frequently in my monthly reports, and in special reports that I sent in.
1004. Have you handed in copies of those letters? I believe some are in the possession of the Committee.
1005. Have you handed them in to the Committee? Yes.
1006. Did you make any verbal complaints? Frequently.
1007. To whom? To Mr. Collett.
1008. What did he say? I pointed out to him the manner in which the works had been carried on, and referred him to the specification, and he expressed himself as satisfied with the manner in which the works were carried on.
1009. Was that all that took place? I frequently reported. I think I stated yesterday, in my letters that I reported about the different works not being carried on properly.
1010. You complained about certain abuses with reference to these two miles and a half of road—you say you reported them in writing, and that you also made verbal complaints to Mr. Collett? Yes.
1011. Where? On the works I pointed out several irregularities.
1012. Can you tell me what you said to him? I pointed out the metal, I pointed out the consolidation, and the general works along the whole contract.
1013. Did Mr. Collett tell you he would alter the contract? No, Mr. Collett expressed no dissatisfaction.
1014. He said he was thoroughly satisfied? I have not the whole dialogue here. I had it here yesterday and I can produce it again. I had the whole dialogue here yesterday, and many other memos which I would like to bring before the Committee.
1015. Did Mr. Collett tell you he would look after the Doughboy contract himself? Never.
1016. Why did you sign that voucher after you found that the contractor was not carrying out the contract? I did it as I was required, but I knew it was of no use, for they could not send it to the Auditor General with my remark upon it. My signature would not be valued, because of the remark on the back of the return, unless they pasted something over it.
1017. That does not alter your certifying as a fact what was not the fact? I did as I was required by them.
1018. By whom were you required? By the office.
1019. If the office asked you to certify to a certain amount of work having been done, which you knew had not been done, would you feel justified in certifying to it? I mentioned in one of my reports that the contractor had nothing due to him.
1020. *By Mr. Hoskins*: Has that report been handed in? I think it has.
1021. How many reports have you handed in? I could not tell you; I have a great number to hand in yet which I have not been asked for.
1022. To what do they refer? To the Doughboy Works.
1023. Will you state to what the documents you have not handed in generally refer? To the contract generally.
1024. To the slovenly manner in which the work has been performed? Yes.

1025.

1025. *By Mr. Dick*: You said that the "regular loose system" only referred to this two miles and a half? Yes.
1026. All the other works, at Tamworth, Kangaroo Flat, Armidale, and elsewhere, were properly carried out? Yes; they were all properly carried out; payments were not made without my certificate in any other works but these.
1027. Do you know the amount that has been laid out on this road—the part under your superintendence I speak of? No, I do not. I know a great deal of money has been laid out.
1028. Do you know the amount laid out on the Doughboy Works? £6,000 has been paid to the contractor, and the total amount I learn from the papers I have handed in, is £7,000, so that there is only £1,000 in hand.
1029. About an equal amount has been laid out on the rest of the road? Most likely there has.
1030. What motive do you think Mr. Collett could have for not making the contractor carry out his contract? I could not tell his motive; it is very hard to tell his motive; the contractor and he were on very friendly terms.
1031. Do I understand you to say that you do not insinuate some motive? I do not make any insinuation; I know that Mr. Collett received purses of money from the contractor, and the other contractors in the district.
1032. You know he received purses of money? Yes.
1033. In what shape? They were given to him as a testimonial.
1034. Was it done publicly? I do not know whether it was done publicly—the money was handed to him.
1035. How did you come to the knowledge of that? It was done in a public-house; I have witnesses who will come here and state that.
1036. Were you there? I was there soon after the money was given to him; I saw Mr. Martindale and several other contractors collecting money for him.
1037. Will you oblige us with the names——? I will not give the names; I will produce witnesses.
1038. *By the Chairman*: I advise you to answer every question,—of course you are not obliged to answer any question to which you object, but I think it would be better to state what you know? I have a reason—I will produce witnesses.
1039. *By Mr. Dick*: Do you decline to give the names of the other contractors? Yes, I do.
1040. Whereabout did this take place? In Murrurundi.
1041. How long ago? I have the date, but I have some witnesses to bring forward, and it is a matter I would like to clear up.
1042. At present I am asking you some questions, and I wish to get what evidence I can from you—when the witnesses come, I will ask them; you say you saw Mr. Martindale collecting money——? With the rest.
1043. When was this? I have the date, but I have not it with me; it is in my book.
1044. How long ago? I have not the date with me.
1045. Was it this year or last year? It was this year.
1046. Do you know what sum was subscribed? No, I do not know the exact amount, but I know within some little; but I would like to bring the witnesses forward that I have got; you can take my evidence upon that point when I have my papers with me and my notes.
1047. What is your object in calling witnesses to shew that Mr. Collett received a sum of money? My object is because I believe Mr. Collett is working with these contractors in some way.
1048. Is not that charging Mr. Collett with receiving money from the contractors? I am not charging him at all. I want to bring out in evidence that Mr. Collett has received money from the contractors.
1049. *By Mr. Lucas*: You merely state it as a fact? Yes.
1050. *By Mr. Dick*: You say your object is simply to shew that he has received money? Yes.
1051. Do you mean that he favoured these contractors because they have given him money? I do not know what you call favouring. I think he has allowed these contractors not to carry out the works as they ought to have done. I think he has favoured them in many instances, by not requiring them to carry out work according to specifications.
1052. Do you not consider it favouring the contractor when you say that he made this diversion, which was £300 in the contractor's pocket? Yes, I do call that favouring him.
1053. I understand that you charge Mr. Collett with having received money from the contractors, and favouring them? Yes. The contractors and other people subscribed; at least the contractors were carrying the list about; there are one or two witnesses who subscribed to the list who are willing to come forward.
1054. You say you cannot tell me how much was subscribed? No, I cannot tell you how much; at least——
1055. How many testimonials were presented? I believe one at Murrurundi and one at Scone. I know nothing about the Scone one.
1056. You have heard so? I have heard so—at Scone.
1057. Were you at Murrurundi at this time? Yes.
1058. How came you there? I was in the district.
1059. Is Murrurundi your district? No.
1060. How were you there? I was there at this time.
1061. For what object were you there? I used to go there for my letters. I generally lived at Murrurundi when I visited that end of the work.
1062. *By Mr. Lucas*: Is that locality under your supervision? The end of my district is four miles from Murrurundi.

Mr. Robert Quodling.

5 Dec., 1861.

- Mr. Robert Quodling. 1063. *By Mr. Dick*: Did you hear anything about the testimonial before you went there? Before I went there?
1064. Yes, before you went to Murrurundi this time? Yes, I saw several of the contractors, and they were carrying lists from one to the other.
1065. I suppose you were going to Murrurundi to see what was doing about the testimonial? No, I did not go particularly for that.
1066. Do you know who presented this testimonial? It was presented—the money was subscribed by several contractors.
1067. Who presented it? I am not certain who presented it, because I did not see the money handed to him, but I can prove that the contractor's names were on the list, and that a purse was handed to him—by witnesses.
1068. The Committee are anxious to ascertain the facts as regards you and Mr. Collett, with a view to do justice to both parties? But I do not wish to say anything.
1069. You have a good recollection as to the amount? I do not feel disposed to tell the amount, for I think you had better examine others who know more about it.
1070. I ask you whether you know the amount? (*No answer.*)
1071. *By the Chairman*: I am satisfied that your best course is to state, to the fullest extent, what you know, and you are not to suppose that you are committed in any way. What you know of your own knowledge state that you know of your own knowledge; and what you know from hearsay state that you know from hearsay —
1072. *By Mr. Dick*: You decline to tell the amount? I do.
1073. *By the Chairman*: Do you mean that you do not know the amount of your own knowledge? I am not satisfied that I know the amount. I do not want to make any statement here that, when I produce the papers, may prove to be wrong.
1074. You do not like to state distinctly or precisely? No.
1075. *By Mr. Dick*: If you do not know of your own knowledge, say you have heard it; if you cannot state the exact amount—it is not of great importance—tell about the amount? No; I decline.
1076. You say it was presented in a public-house? Yes.
1077. In what public-house? That is another question. I do not want to give you any information about this until you examine the proper witnesses.

FRIDAY, 6 DECEMBER, 1861.

Present:—

MR. DALGLEISH,
MR. DICK,
MR. DANGAR,

MR. MARKHAM,
MR. HOSKINS,
MR. T. GARRETT.

WILLIAM FORSTER, Esq., IN THE CHAIR.

Mr. Robert Quodling called in, and further examined:—

- Mr. Robert Quodling. 1078. *By the Chairman*: Do you produce any of those papers which you alluded to yesterday? Yes.
1079. Will you hand in those you intended to hand in, describing each paper as it is handed in? Yes; this is one. (*Paper handed in and read. Vide Appendix A*)
- 6 Dec., 1861. 1080. Was this one of the papers alluded to in your evidence yesterday? Yes, I think it was. This is another letter, dated the 6th March.
1081. Is this the letter to which Mr. Collett made reference? Yes.
1082. *By Mr. Dick*: About the Bendemeer Bridge? I brought no documents about the Bendemeer Bridge. (*Letter read and handed in. Vide Appendix B.*)
1083. What is the date of that letter? The 6th of March.
1084. *By the Chairman*: Have you any other papers? Yes; this one—£300 payment, not handed in on the 14th October; there is no certificate for that money. (*Document handed in and read. Vide Appendix C.*)
1085. Have you any further papers to hand in? No, not at present.
1086. With reference to the first letter you handed in, dated August the 6th, to the Commissioner of Roads—what was the answer you got? I received no reply to that letter.
1087. During the term of your service? During the term of my service. I was told verbally by the Commissioner the amount paid on the 11th of September.
1088. What was the verbal answer? The answer that I got on the 11th of September was that Mr. Martindale had received £5,500 on account of Doughboy.
1089. Did you understand that verbal reply to be an answer to this letter? Yes.
1090. Did the Commissioner intimate that to you? I asked the Commissioner; I told him I had written and received no reply. This is the 11th September.
1091. Have you been in the habit of writing letters without receiving replies? I have—several letters.
1092. Several letters? Several letters.
1093. Was the inquiry you put in this letter an inquiry properly coming from you in the position you were then in? Yes.
1094. Did you think it was necessary for you to know this in order to perform your duties properly? Yes. I did not know the amount paid; I did not know how the contract stood, and was anxious to know before I took charge of the works.
1095. Is it a usual piece of information this? Yes; it is very requisite information for any one taking over works.

1096.

1096. Would you have been liable to animadversion if you had certified for more money than was properly payable on account of the contract? Yes.
1097. Then it was part of your duty to see that no more money was paid than was properly payable under the contract? Yes.
1098. Do you consider that if money was paid without your certificate beyond the amount in question, it would have been irregularly paid in that case? Yes, I do. In giving in the quantities to complete the work at the time I objected to certify, I gave you the quantities of the bridges. There were the other works I wanted to give in, to shew that when I made this objection I had grounds for doing so. You have not received the quantities.
1099. *By Mr. Hoskins*: That is the quantity which should have been performed? That had to be performed.
1100. *By the Chairman*: Have you any other statement to make with reference to these letters? No; the quantities are what I was wanting to give in.
1101. *By Mr. Hoskins*: Perhaps you will be kind enough to let us know what quantity of work had not been performed? Yes; 871 lineal yards of pitching.
1102. *By Mr. Dick*: It is all down before? It is not, sir.
1103. *By the Chairman*: Make any statement you desire to put before the Committee? Eight hundred and seventy-one lineal yards —
1104. *By Mr. Hoskins*: Explain what this is? This is the quantity to complete the work when I left it.
1105. *By the Chairman*: The work to be done when you left? Yes; four hundred and ninety-five cubic yards of metal to be spread, not yet carted on the road. One thousand and sixteen cubic yards yet to be supplied, not broken. Half a mile of fencing, all but six panels. Five hundred and twenty-seven yards of intercepting drain. Clearing the space of sixty feet yet to be cleared on the entire length of line. Batters of cutting and embankments not yet trimmed. Spiking of floors of five bridges. The spikes for the floors of five bridges. I think this is all for the present. I have some more.
1106. *By Mr. Hoskins*: We do not understand the meaning of that? The spikes for the floors—the slabbing of five bridges.
1107. Still required? Still required. They are not included in the iron-work I gave in yesterday with the other work.
1108. *By Mr. Dalgleish*: It is in addition to the iron-work mentioned as being short by you yesterday? Yes.
1109. *By the Chairman*: Can you give in round numbers what the value of the work would be? About eighteen hundred or two thousand pounds.
1110. What amount do you state upon your own knowledge was actually paid to the contractor? The amount paid, sir, I am told, is five thousand five hundred pounds.
1111. You do not know of your own knowledge? The contractor told me he had received five thousand five hundred pounds.
1112. He himself told you? Yes, and Mr. Collett told me he had received that amount. Since then he has received five hundred pounds more, making in all six thousand pounds.
1113. And the contract was for what? Seven thousand pounds.
1114. *By Mr. Hoskins*: What was the value of this work? From eighteen hundred to two thousand pounds.
1115. *By Mr. Dalgleish*: Is the value you are speaking of the value of the material alone, or of the material and work? The material and work.
1116. Both? Yes; about two thousand pounds. That can easily be taken out of the schedule of prices. The work is let to the contractor.
1117. *By Mr. Dick*: You say these things were required—what was the date you left the works? I resigned on the 24th of October.
1118. What was the date you left the works? I resigned on that date.
1119. That is not my question? I was on the works on that date.
1120. I ask you when you left the works? Well, I left the works on the 24th of October; I was on the works then.
1121. Is that the date you refer to when you say "When I left"? —
1122. Was that the date to which you referred to when you say "When I left"? I was at the works since the 24th October.
1123. On what date were you last at the works? I think it was on the 25th of November.
1124. What do you mean by "you think"? The 25th of October, rather.
1125. Have you made a note of it? I have got a note of it. I think that is the date, sir.
1126. *By Mr. Garrett*: October? The 25th of October.
1127. *By Mr. Dick*: Are you not certain? I have got the date here. I think you will find that is the date I sent in in my report.
1128. Pardon me, I have not got to find anything; I want the date from you? That is the date.
1129. The date you left? Yes.
1130. And you have not seen the works since? I have seen the works since, several times.
1131. All these things were required on the day you left—the 25th of October? No, they were not.
1132. They were not all required? No; they were required on October the 12th.
1133. On October the 12th? Then some of them had been supplied between the 12th and the 25th? Yes.
1134. Then when you stated just now that all these things were deficient when you left, you did not state what was exactly correct, did you? I stated the quantities required to complete the work. If you look at the last payment I made, and take the dates of the payments—this is up to the 12th, and —

- Mr. Robert Quodling.
6 Dec., 1861.
1135. I am taking your statement:—You stated that there was a deficiency when you left, and you say you left on the 25th? These quantities are made up to the 12th.
1136. You state that this was the case on the 12th? That is the date.
1137. They were not all deficient when you left? I have been on the works since.
1138. Were these works deficient when you left? They were deficient on October the 12th.
1139. Were they deficient on the 25th? They were not.
1140. *By Mr. Dalgleish*: Had you any official connection with the works on the 25th? I was employed on the 25th.
1141. *By Mr. Dick*: Then between the 12th and the 25th some of these things were rectified? Yes.
1142. Can you state what they were? No, sir. I can state what they were, but I have not got them made up. I know the number of men that have been employed on the works.
1143. You cannot state, then, what was the deficiency on the 25th? I dare say I could if I were to take the quantities out, but I have not taken them out.
1144. If you cannot state the quantities, perhaps you can tell us what the matters were—what was the nature of the work? It is similar to the work I have just given in now—bridge work, and metalling and pitching—the general work of the contract.
1145. What deficiencies had the contractor made up from the 12th to the 25th? I cannot reply to that question.
1146. You cannot tell us at all? No; I have not taken the quantity out from the 12th to the 25th. Works are not so easily taken out.
1147. Can you not state generally any works? No, sir, I am speaking from the 12th of October.
1148. I am speaking of from the 12th to the 25th? I cannot give it to you, sir.
1149. *By the Chairman*: Perhaps I may ask the witness, as a matter of explanation—do you mean that you refuse to give the information, or that you have not made the calculation? I have not calculated it.
1150. *By Mr. Dick*: When did you last measure the works? My last report about the Doughboy works is November the 5th.
1151. You are only wasting time by not answering my question, and I shall only have to ask you over and over again; when did you last measure the works? November the 5th is the date of my last report.
1152. When did you last measure the works? November the 5th is my last report.
1153. I do not want to know the date of your last report; I want to know when you last measured the works? That was the date, November the 5th.
1154. That was subsequently to your resignation? Yes, it was.
1155. *By Mr. T. Garrett*: You do not make a mistake about the amounts? No, I believe not.
1156. I thought you resigned on the 24th of October? Yes, but I sent in returns after.
1157. You sent in returns after? Yes.
1158. *By Mr. Dick*: You said just now that there were sixteen hundred cubic yards of metal wanted; what was the total contract, or was there a contract for any particular quantity? I gave that evidence in before.
1159. What was the total contract for metalling? Two thousand six hundred cubic yards.
1160. Was there a contract taken for that amount? According to those documents I received from Mr. Bayley, that was the amount.
1161. Was there a contract taken for it, and was it task-work or piece-work? That was the contract.
1162. What was the date it had to be supplied on—was there any term fixed? Terms written on strips of paper?
1163. No; was there any time during which that quantity of metal had to be supplied? There was a time in which it was to be carried out, but the contract was broken by the not carrying out of the consolidation clause. There was a time; I believe it was in June last.
1164. Was there any time fixed for the delivery of these 2,600 tons of metal? I do not know that there was any particular time. It states in the specification that the first coating is to be spread before the second coating is broken.
1165. There was no term—no time that you know of? I state the terms now.
1166. I am not speaking of the terms, but of the term—the time when this amount of metal had to be delivered? There was no date fixed. It could not be fixed until the earth-work was prepared to receive it.
1167. Was there any time fixed for the completion of the earth-work? I believe there was; there is a date fixed.
1168. What date? I do not know what it is; I took no notice of it.
1169. *By Mr. Dick*: You said the last time you measured the works was on the 5th of November; that was subsequently to your resignation, was it not? Yes.
1170. Who measured them with you? The works—I sent in a report on November the 5th, compiled from the one received from Mr. Hannington.
1171. Who measured the works with you on the 5th of November? I did not measure the works personally on the 5th of November—that is the date of my report to the Commissioner.
1172. When did you last measure the works; can you not tell me? I have told you, sir, several times.
1173. I am waiting for an answer; I am asking you when you last measured the works: do you decline to answer? I decline to answer, because I have answered you before. I know Mr. Dick is paid to do this, and is trying to confuse me, asking the same question two or three times.

1174. *By the Chairman*: You must answer the questions asked, even if they are asked two or three times. It is presumed that every Member of a Select Committee is desirous only of eliciting the truth? I—
1175. *By Mr. Dick*: I should be sorry to forget myself in the Committee-room, but if language of this kind is to be permitted, it will lead to some disturbance, I think.
1176. *By the Chairman (again addressing witness)*: You have nothing to do but to answer the questions put to you? I want to answer questions, but I do not want to be cross-examined.
1177. But you must be cross-examined? He is trying to confuse me as much as he can.
1178. It is not for you to give an opinion upon the style of examination. If I see anything improper I shall interrupt: your duty is to answer or to decline to answer, and you have no right to make the slightest remark on the style of the examination? —
1179. *By Mr. Dick*: I will not take up the time of the Committee; I will take an opportunity of dealing with him in another way. I ask when you last measured the works; do you decline to answer the question? I measured the works on the eleventh of September, and I went through the works when I was on my way down to Sydney.
1180. And you have not measured the works since the 11th of September? Yes, I have been through the works since.
1181. But you have not measured the works since the 11th of September? I have.
1182. I ask you when you last measured them? I forget the date now that I was on the works.
1183. Did you not make any note of it? Oh! yes, several.
1184. Perhaps you will refer to it and tell us? On the 28th of September I went through the works and measured them, and compared them with the drawings.
1185. Did you measure the works on that day? The 28th.
1186. What works did you measure? The whole of the works. I went through the whole of the works.
1187. Who was with you? I do not recollect now who was with me. The contractor's agent was with me.
1188. You had some person to assist you, I suppose? Yes.
1189. You do not remember who that was? I had the contractor's agent.
1190. What is his name? Donaldson; he is in Sydney now.
1191. He was foreman, was he not, to Mr. Martindale? He was.
1192. I ask you now whether that is the last time you measured the work? I have answered that question before.
1193. You said the 11th of September just now—I now ask you whether the last time was the 28th;—was that the last day you measured the works? Yes, I went through them on that day, and on the 11th of September.
1194. What do you mean when you say you "went through" them—do you mean that you measured them? Yes.
1195. And you have not measured them since that time? I have not measured them since that time.
1196. Then the statements you made with reference to the works are founded on Mr. Hannington's report? No, sir, on my notes.
1197. On your notes? Yes; Mr. Hannington compiled that report from my notes. Mr. Hannington was never on any public works until he was under me.
1198. He compiled it from your notes? Yes.
1199. At your request? No.
1200. Did not you draw the report for him? No, he wrote the report himself.
1201. Did you correct it? No.
1202. Make any notes on it? No.
1203. Quite sure of that? Quite certain.
- [*Mr. Dalgleish here took exception to the style of examination. Witness withdrew. Committee deliberated. Witness re-introduced, and examination continued.*]
1204. *By Mr. Dick*: You put in a letter dated the 6th of March—Mr. Quodling directing you to take charge of the works. How soon after that did you take charge? At that time I had charge of the works with Mr. Bayley.
1205. When did you first take charge in conjunction with Mr. Bayley? March the 4th, I think, is my first measurement; or February the 4th, rather.
1206. How long was that after the contract was commenced? I do not know; I cannot answer that question.
1207. When you take over a contract you say it is necessary that you should know how much has been already paid on account of it; how is that? I think it is necessary that I should know, as I cannot be able to comply with the general conditions unless.
1208. You mean to say that when you are called upon to certify the amount of work done, it is necessary for you to measure the whole work from the commencement, to see how much has been done, and calculate that in accordance with the amount that has been paid for? Yes.
1209. Then you do not act on the certificates of previous superintendents? The previous superintendent could not tell me the amount paid. The payments had been made so irregularly that he could not tell me the amount that was paid.
1210. Is it usual, when you take charge of works which have been handed over, to measure them, in order to see how much has been done? It is usual.
1211. Did you measure this work? Yes; I went through the work, and reported to the Chief Commissioner when I took charge of the works.

Mr. Robert Quodling.

6 Dec., 1861.

- Mr. Robert Quodling.
6 Dec., 1861.
1212. It would save time if you would state this—do I understand you to mean on all occasions when you say you “went through” the works that you measured them? I went through them.
1213. When you say that you went through them do you mean that you measured them? Yes.
1214. And when you say you went through the works, you mean on all occasions, that you measured them? I do not know that I do.
1215. Did you measure this work after you took charge of it? Yes; I think my report is handed in. You can see the report I handed in on that date.
1216. Does that report state the whole amount done by the contractor to that date? No, it is a statement to the Commissioner about the contract—the state it was in when I took charge of it.
1217. What was the date of it? I cannot tell you from memory.
1218. About what date? I will not say about at all. If you get the document you will see it, but I think it was August the 16th or 12th—I am not sure which. It is in August.
1219. But you and Mr. Bayley took charge of the works at the beginning of the year—in February? Yes, we did.
1220. Did you take charge of the earth-works? I took the earth-work. I had charge of the earth-work, and sent in proper measurements.
1221. Did Mr. Bayley have charge of the bridges? Well, I believe he had charge of the bridges. I am not certain whether he had or not. I do not think there was anything done to the bridges at the commencement of the work. Here are my measurements of contracts—my measurements with Mr. Bayley.
1222. What would you call this letter of the 6th of March—a letter of instructions? Yes, I would.
1223. Did you act upon those instructions? Yes.
1224. Did you send in returns every fortnight of all the work done? Yes, for a time.
1225. For how long? I cannot tell you from memory how long.
1226. Why did you discontinue sending them in every fortnight? Because I found that the contractor was receiving money without my vouchers.
1227. When did you first ascertain that? I cannot tell you the date.
1228. Where did you learn it from? I learned it from the office, of course. He informed me he had paid such and such money, and when asked for the certificates —
1229. By letter? By letter. They are handed in to the Committee.
1230. And after that you did not think there was any necessity to send in fortnightly returns? I would have considered it necessary to send in fortnightly returns if there had been anything due to the contractor.
1231. How could you tell whether there was or was not anything due to the contractor, when you could not ascertain the amount received? I was told verbally by Mr. Collett the amount received, and I acted on that.
1232. Can you tell the Committee how much work you certified for—you and Mr. Bayley? Well, I dare say I could. My vouchers are all to be procured. I have got vouchers here, but I am not satisfied about them. There may be some omission here. They are easily obtained from the office.
1233. How much do you make it? I cannot give you any figures, sir; at least I do not wish to give you any.
1234. *By Mr. Dick:* You cannot give the Committee a detailed statement of the amounts for which you sent in vouchers—you and Mr. Bayley, or you individually? I can give it to you, but you had better receive it from the office officially. I have got copies here, but I do not wish to give them in. I decline to give them in.
1235. You decline? Yes.
1236. That is your opinion—that we had better get them from the office? Yes, I do not think I ought to give you any out of my measurement books.
1237. When you give in a voucher for so much work done, is that the amount less the amount that should be deducted—Suppose, for instance, 10 per cent. were deducted, and five hundred and fifty pounds worth of work was done, you would give a certificate for five hundred pounds—is that so? That is generally the case. The deduction is 20 per cent.
1238. On some things? On all things in this contract.
1239. It is 40 per cent. on metal? It is 20 per cent. on the whole contract—20 per cent. on the metal when it is on the road.
1240. I think I understood you to say the other day, that on one matter it was 40 per cent.? That was where metal was broken but not delivered on the road.
1241. Did I understand you to say so? That was metal which was broken but not delivered on the road, and that 40 per cent. was retained until it was carted on to the road.
1242. Then, in some cases, 40 per cent. is deducted? In that case it was deducted.
1243. Therefore, the amount you have certified would shew the amount of work, less those deductions? In that case.
1244. Well, less the deductions in all cases. I simply wish to know whether you certify for the whole amount that is done, or for the whole amount less the amount deducted—what is the usual practice? To deduct the per centage.
1245. You certify, less the per centage? I have answered that several times now.
1246. Can you state what amount of work was done from the time you last measured the work, on the 28th of September, to the time you last saw it, the 5th of November? No, I decline stating.
1247. Do I understand you, that you can do so, but you decline, or that you cannot give the information? I can do, but I decline.

1248. *By Mr. Hoskins* : What is the reason—have you any objection to state the reason? I decline giving you the information. Mr. Robert Quodling.

1249. *By Mr. Dick* : Have you any other means of ascertaining the amount that has been paid to the contractor, except what you have heard from Mr. Collett? I refuse to answer that question. 6 Dec., 1861.

1250. You stated to the Committee, that the amount required to finish the contract, after stating the deficiency, would be eighteen hundred or two thousand pounds—do you mean that that was the amount required on the 28th of September, or on the 5th of November? That was the amount required on the 12th of August, sir, the date of that measurement. What I want to prove is, that the moneys were paid before they were due. I am only taking the dates of the last vouchers, and any further information I decline giving.

1251. *By Mr. Lucas* : Do I understand that the matters on which you decline to give information have occurred since your resignation? Yes.

1252. *By the Chairman* : Are you declining to give information that you really can give—that you are in possession of? I have got information, but I am not in a position, at the present time, to lay it before you.

1253. Are you withholding information that you know of your own knowledge—or is it only hearsay evidence that you cannot properly substantiate—is that the reason you are withholding it? That is one of my reasons; I am not prepared at the present moment, to give it to you.

1254. Does this question refer to matters with which you were officially connected? Which question?

1255. The information Mr. Dick asks from you, and which you do not wish to give? No.

1256. Have you given all the information which you had officially? Yes.

1257. And do you mean to say, then, that this information is what you could not personally substantiate? It is information which I could not personally, at the present time, substantiate.

1258. Is that your reason for declining to give the information? That is my reason.

1259. *By Mr. Dick* : Do you decline to give any evidence to the Committee which you cannot personally substantiate—is that so? I do.

1260. You continued on duty until you resigned—you were engaged superintending until the day of your resignation? Yes, up to the 18th of November.

1261. The 13th of November, was that the date of your resignation? That is the date when I was relieved.

1262. The date you were relieved? Yes.

1263. How do you make it out? I am not paid for that service yet by the Government.

1264. One of your reasons for not giving information is that you are not paid by the Government? That is not one of my reasons.

1265. Is that one of your reasons? I decline answering—it is not one of my reasons.

1266. You have told the Committee all about the contract in the first instance, up to the time of your resignation; how is it you cannot tell us what took place between the 28th of September and the 5th of November, while you were in the Government employ? I have not the papers with me, sir, but you can get my reports from the office for those dates.

1267. Would your papers shew the amount of work done from the date of survey, the 12th of August, until your resignation? Well, if you get the papers you'll see.

1268. Will they shew it—I am asking you the question? I think they will—I am not quite certain. If you get them they will shew.

[*Mr. Dick appealed to the Chairman. Witness withdrew. Committee deliberated. Witness re-introduced.*]

1269. *By Mr. Dick* : You stated that you were relieved on the 13th of November, Mr. Quodling, is that so? Yes.

1270. Is that the day you consider you left the Government service? That is the day I consider I left the Government service.

1271. Did you continue at work up to that time? Up to that time.

1272. In the Government employ? In the Government employ.

1273. Have you claimed payment up to that date? I claim payment, but I have not been paid.

1274. Can you tell the Committee the portions of the works which you say were deficient on the 12th of August? That is a mistake. It is October the 12th, and not August the 12th.

1275. And you meant October the 12th instead of August the 12th, just now? Instead of August the 12th.

1276. Can you tell what works were completed from that date to the 13th of November? I cannot tell it; I refuse to tell it.

1277. *By the Chairman* : As I understand you, you mean that you have not information which you can speak to positively, and there is nothing offensive in declining. But you say you "refuse," an expression which conveys something more than you are aware of—that you are withholding something which you are in a position to give. For your own sake it is desirable you should not leave an impression of that kind in the minds of the Committee. I suppose your meaning is that you cannot speak positively. If that is your meaning, and you will say that, there can be nothing offensive in the reply, and no one will object to it? —

1278. *By Mr. Dick* : Did you measure any works between the 12th of October and the 13th of November? I have just answered that question.

1279. *By Mr. Hoskins* : That is a very simple question, Mr. Quodling? No; I did not measure any works.

- Mr. Robert Quodling. 1280. *By Mr. Dick*: Will you tell the Committee why you did not? I have no reason.
1281. What part of the line were you engaged on between those days? I cannot tell you from memory. I have not any paper with me, and I cannot speak positively about it.
- 6 Dec., 1861. 1282. Did you superintend any portion of the Doughboy Diversion between these days? Well, I believe it was under my charge to the date of my resignation.
1283. Did you go to superintend them on those days? No, I believe I did not.
1284. Were you at the works with Mr. Hannington? I was over the works with him several times.
1285. Were you at the works with Mr. Hannington between the two dates to which I refer—the 12th of October and the 13th of November? I believe I was, but I cannot speak positively.
1286. Where were you when Mr. Hannington made this report from your notes? In Murrurundi, I believe.
1287. In Murrurundi? Yes.
1288. Had you sent in your resignation, then? No, I think not.
1289. Did you make any memorandum at the time you saw it? I do not recollect. I might have made a memorandum.
1290. If Mr. Hannington states that he wrote this letter (dated 24th October) two days after it bears date—is that a fact? He might have done so. I cannot say.
1291. On what day did you receive it from him? I forget now the day I received it from him.
1292. Did you receive it by post, or did he deliver it to you personally? I think he gave it to me personally.
1293. I am now referring to Mr. Hannington's letter to you, dated the 24th of October—did you receive it on the day it bears date? I am not certain that I did.
1294. Do not you recollect whether you received it before or after you sent in your resignation? I think I received it before I sent my resignation in.
1295. Your letter of resignation bears date the 24th of October—did you post it on the same day? I am not certain about that.
1296. Where did you receive the letter from Mr. Hannington? I do not recollect at the present time.
1297. How long after Mr. Hannington had seen your notes? I do not remember.
1298. You have no doubt it was at Murrurundi that you shewed him your notes? I am not certain. He was with me when I took my notes at different times.
1299. How often had you been at Murrurundi between the 12th of October and the 13th of November? I cannot answer that. I do not know.
1300. Were you there more than once? I do not know. I cannot answer you.
1301. Now, can you say whether you saw Mr. Hannington there? I do not recollect. I have not my diary with me at the present time.
1302. Well, I do not wish to press it, but this was rather an important letter you received from Mr. Hannington, was it not? Not of the slightest importance.
1303. Does it not corroborate your statements? No, I do not require it to corroborate any statements I have made.
1304. What was your object in getting it from him. I do not know that I had any particular object in getting it from him.
1305. Did he volunteer it to you, or did you ask him for it? I asked him to sign for the returns. I told him that I would refuse to certify, but that if he liked to certify he could do so. I told him I was going to resign, and that if he liked he could certify.
1306. Is this the usual way to certify, or on a printed form? I do not know that it is the usual way.
1307. How do you certify, by a printed form or by letter? I do not understand the question.
1308. You say you asked him to certify as to the works, and that you declined? To sign the vouchers.
1309. He might certify, but you declined—was that the ordinary way? He said if I did not sign the vouchers he could not do it, or would not do it. I then said you had better write me to that effect, and he wrote that from my notes.
1310. Do you not recollect where the conversation took place? No, not at the present time.
1311. You recollect the conversation distinctly? Yes.
1312. Try and recollect where it took place. Have you your diary in Sydney? I have a diary in Sydney.
1313. The diary you refer to, will that tell you? Yes; it is a private document though.
1314. If you referred to that, would it tell you where you saw Mr. Hannington? I think it would; I think I made a memo. at the time.
1315. You made pretty voluminous memoranda during the last month or two of what took place? I have been pretty careful what I have done.
1316. Did you ever before ask Mr. Hannington to certify for works? No; I did not think it was necessary to ask him before.
1317. Is it usual to ask the overseer to certify? Mr. Hannington being a gentleman who knew nothing about the work, I thought it was not of the slightest use asking him, so I visited the works myself.
1318. Do all the overseers certify to works? All the other overseers used to certify to the returns in his district.
1319. But Mr. Hannington was unable to do so, and you assisted him? Mr. Hannington was unable.
1320. And you assisted him? He is not called upon to do so, because the payments were made without certificates; in the other works all sent in certified vouchers.

1321. This certificate appears to certify for what is not done, and not for work done. Did you ask him to certify to work not done—for deficiencies? I do not understand the question.
1322. You stated that you refused to certify to work that had been done, and therefore you called Mr. Hannington to certify. I have read this letter, and it appears to me to certify to certain deficiencies and not to work done, and I ask you whether you asked him to certify to deficiencies? What I asked him to certify—if you will turn to my letter—was to the very returns I certified to myself.
1323. Has the letter been already put in? Yes.
1324. And is this letter a reply to it? Yes.
1325. Where was it written from? I do not recollect where I wrote it from, but I believe I wrote him a letter.
1326. Would your diary shew it? I think it would.
1327. Was it written from where it is dated. I think so.
1328. When did you see Mr. Hannington last? I do not remember. I saw him when I was coming down the road.
1329. Where? At Murrurundi.
1330. How long after his appointment was it when you discovered that he was unable to perform his duties? I found that out the first few days.
1331. Did you make any representation to that effect? No, I did not consider it necessary. He was willing to learn.
1332. Is it very easy to learn that sort of business? Well, it is pretty easy, I should think; but it was no use my reporting —
1333. *By Mr. Lucas:* What was the answer? It was no use my reporting unfavourably after he had been appointed by Mr. Collett.
1334. *By Mr. Dick:* Why not? Because he is a particular friend of Mr. Collett's.
1335. And because he was a friend of Mr. Collett's you allowed him to remain in his office although he was incompetent—is that so? Yes, that is it. I had nothing to do with the appointment.
1336. *By Mr. Dalgleish:* Had you any power of discharging him? Oh! no power at all. He was appointed by the Minister for Public Works.
1337. *By Mr. Dick:* You had no power to suspend a junior officer? No.
1338. *By the Chairman:* Did your power extend to reporting him if he did anything wrong? Yes, if there was anything wrong—very wrong against him.
1339. *By Mr. Dick:* Then do you think Mr. Hannington, at the time he wrote this letter (it appears to be dated 24th October) had obtained such experience as to be competent to give an opinion in reference to the works? He is not competent now to give any opinion on the works.

Mr. Robert
Quodling.
6 Dec., 1861.

APPENDIX.

A.

Willow Tree, 6 August, 1861.

Sir,
I have the honor to request that you will furnish me with a statement shewing the amounts paid to Mr. Martindale, on account of Doughboy Diversion contract.
I purpose taking the works over from Mr. Superintendent Bayley to-morrow.

The Commissioner for Roads,
&c., &c., &c.,
Sydney.

I have, &c.,
ROBERT QUODLING.

B.

Singleton, 6 March, 1861.

Sir,
When you were directed to superintend the Doughboy Diversion contract, it was with a view to push forward the works as much as possible, and to give every facility to the contractor, by sending in returns, less 10 per cent., of all work, at least every fortnight; and if you had had any doubt on this point, or on the portion of the contract which I required first completed, it was your duty to make the necessary inquiries. If you had been at your post when I surveyed the Doughboy Diversion, you would have known what my wishes were. I have directed Mr. Bayley to superintend the wood-work, and you will superintend the earth-work, of the Doughboy Diversion, independently of each other. You will send a detailed report of all the principal works in your district; and also the balance in hand of any moneys appropriated in 1860, specifying each appropriation. Send this to Sydney by Monday's mail.

— Quodling, Esq.

Yours, &c.,
WILLIAM R. COLLETT.

C.

*Department of Public Works,
Road Branch, 14 October, 1861.*

Sir,
I am directed by the Commissioner to state, that the sum of £317 10s. has been paid to bank, as per margin, on account of the Northern road.

R. Quodling, Esq.,
Tamworth.

I have, &c.,
S. G. SHAIRP,
Chief Clerk.

*Margin:—
No. 61-1338.*

Paid B. N. S. Wales, Tamworth.

	£	s.	d.
Cr. R. Quodling, on account taskwork	17	10	0
Paid Commercial Bank, W. Maitland.			
Cr. J. Martindale, on account Doughboy cont.	300	0	0
	<u>317</u>	<u>10</u>	<u>0</u>

MONDAY

MONDAY, 9 DECEMBER, 1861.

Present:—

MR. DALGLEISH,
MR. DANGAR,
MR. DICK,MR. T. GARRETT,
MR. LUCAS,
MR. MARKHAM.

WILLIAM FORSTER, ESQ., IN THE CHAIR.

Mr. Thomas Evans called in and examined:—

- Mr. Thomas Evans.
Dec., 1861.
1340. *By the Chairman:* What is your occupation? Innkeeper.
1341. Where do you reside? At Doughboy Hollow, district Murrurundi.
1342. Have you heard anything as to the reasons why this Committee is sitting? I have seen it in the papers.
1343. I may just mention that we are inquiring into the circumstances connected with the late resignation of Mr. Quodling, and that we are also empowered to inquire into matters generally connected with the public works on the Northern Road. The attention of the Committee has been called to the circumstance of a testimonial presented to Mr. Collett, in regard to which it was mentioned by Mr. Quodling that you could give some information—do you remember anything of a testimonial given to Mr. Collett? I gave towards a testimonial.
1344. You subscribed to it? Yes.
1345. How long ago was that? About six months ago; I am not quite certain as to the date.
1346. In what shape was the testimonial given—was it a sum of money or anything else? I gave money.
1347. Was it a subscription of a number of persons? I was asked to give, and I gave.
1348. May I ask what you gave? £1.
1349. What was the total amount, do you know? I think when I saw the list there was £28 or £30.
1350. Are you not acquainted with any further circumstances connected with this testimonial? I was not present when it was presented; I was asked to give, and I gave.
1351. By whom were you asked to give? By Mr. Martindale and Mr. Greer.
1352. What position do Messrs. Martindale and Greer occupy? They are contractors.
1353. Both contractors? Both contractors, I believe.
1354. Did they ask you—did they appear very anxious that you should subscribe? They asked me to subscribe to a testimonial to Mr. Collett, and I asked them why; they said, they wished to mark their appreciation of what he was doing for the roads.
1355. Did they not specify particularly what he was doing that excited their approbation? No. I objected at first, but I afterwards gave. I asked them if they knew what they were doing—I forget now exactly what I said, but it was something to the effect that it did not look well for contractors to give a testimonial to a Commissioner; that it was placing him in an awkward position, I thought.
1356. What did they say to that? I said, suppose I was to ask one of the Members of the House, meaning the Assembly, to inquire how it was, it would be very awkward for Mr. Collett, and would be placing him in a position he ought not to be in. They said they did not think of that before.
1357. Did that prevent their receiving money from you? No.
1358. Do you know anything of the circumstances of its being presented? I was not present, but I saw an account of it.
1359. Was there an account of it in the papers? Yes; I was invited to attend, but I did not go.
1360. There was a public presentation of it? Yes, so I believe, but I was not present.
1361. On what grounds were you asked to subscribe to this testimonial? I do not know, unless it was in common with others.
1362. Surely you would have some reason why you would give a testimonial to a public man, besides that of doing as others did? I generally give something to anyone that asks me, as far as I can.
1363. Whether it is deserved or not? I did not like to refuse, because I would not like Mr. Collett to think that I had any feeling towards him.
1364. Would you not consider a testimonial as an attestation of appreciation on the ground of some public merit? I could not see that it was so in this case, and I objected to give upon that ground.
1365. Did you consider that Mr. Collett deserved a testimonial? No; I thought his salary was ample.
1366. And you did not think it looked well for contractors to ask for contributions to this testimonial? No.
1367. Are you aware whether any others subscribed besides yourself and these two contractors? Yes.
1368. Did you see the two names of Mr. Martindale and Mr. Greer on the list? I cannot say that I recollect.
1369. Do you know the names of any others who subscribed? I know that there was between £20 and £30 at the time.
1370. Do you know whether Mr. Martindale held the contract for the Doughboy Diversion Works? Yes, I know he was the contractor for it.
1371. Are you aware of his having been in the habit of collecting subscriptions for a testimonial to Mr. Collett at any other time than this? I am not aware of it.

1372. Do you know anything of public works in the Northern District, generally; have you ridden much about? Yes, I have a good deal.
1373. Do you know anything particularly with reference to the contract of the Doughboy Diversion? I have been on it only once or twice.
1374. Did you come down it very lately? Yes.
1375. How long ago? Ten or twelve days ago.
1376. Do you think the works are finished, or nearly finished, at that new road? In coming down I did not pass the new works.
1377. You could not say whether the works were finished or not? No; it is three or four weeks since I was there.
1378. Are you a tolerable judge of the way in which works of that kind are done? No, only as an ordinary observer; I cannot say that I have had much experience. I was connected with the Maitland Road Trust for some years.
1379. Can you give an opinion as to the way in which this contract has been carried out? I do not know that I can. The road appears to me to be too narrow, that is one of the great faults. I remember in the month of March, 1860, counting 475 drays that passed along that road, and the traffic has considerably increased.
1380. Do you think the contract is being well done? I could not give an opinion.
1381. Are you aware what material is being placed on the road? The pitching material is very good.
1382. Is it good all along? The material is good; the pitching, that is the ground work, the first coating.
1383. The first coating—you do not know of the last? I have not been over to look at the other.
1384. You could not say what was put on the top? It was only partly done—done here and there.
1385. Do you know the difference between trap and shale? Yes.
1386. Do you know whether they are putting any shale upon the road? A mixture of both.
1387. You are not aware whether this was intended to be the top coating? No, I am not aware; I do not know what the arrangements are, or are likely to be.
1388. Do you know anything of the bridge from which it has been said iron-work has been taken away since it was completed? I have seen it.
1389. Do you know the bridge? Yes.
1390. Will you state what you know connected with the circumstances of taking away the iron-work? I heard one of the men stating to Mr. Quodling that the iron-work had been taken away.
1391. One of the men employed upon the works? Yes.
1392. He called attention to the circumstance that iron-work had been taken away? Yes; and I went out and saw that iron-work had been removed.
1393. Was this iron-work necessary to the construction of the bridge? I do not know; I suppose it must have been thought to be necessary, or it would not have been put there; but I do not think it would materially affect the structure.
1394. Was anything done to conceal the taking away of the iron-work? A tar brush had been put over the place, and wooden pins had been put in.
1395. Would you have noticed it unless your attention had been particularly called to it? No, I would not.
1396. You are not aware whether the iron-work was part of the work the contractor was bound to do? I heard the contractor say he was not bound to do it.
1397. What contractor was that? Mr. Martindale.
1398. Then in fact he admitted having taken the iron-work away? He admitted it.
1399. There was no concealment in that case? No.
1400. Was that bridge supposed to be finished at the time? No; the hand-rails were not to it.
1401. It was not open to the public? No.
1402. Do you know anything of the part of the road called the new cutting? I do not know, unless it is what is called Welsh's cutting.
1403. Is that a road lately made? If it is the one I imagine, it is at the far end of the Doughboy Diversion. (*Mr. Markham described the locality.*)
1404. Do you know anything of that road? I pass it occasionally.
1405. How long is it since you last passed it? When I came down here, in the latter end of November.
1406. Was the road open to the public at that time? No, one part of it was not.
1407. Part of it was closed in? Yes.
1408. Was it closed after having been opened to the public? It was closed on account of some repairs.
1409. Had it been opened previously? Yes.
1410. Was it a road that had been completed, then opened, and then closed again? Yes.
1411. Had it been closed a second time? I do not know about a second time; it was out of repair twice; it is closed now; it forms an elbow in the road.
1412. It is closed now? Yes.
1413. How long is it since it was opened to the public as a new road? I think about six or seven months—I am not quite certain.
1414. Do you know who was the contractor? Mr. Martindale.
1415. Did you pass over the road before it was last closed when it was a new road? Yes.
1416. In what condition was it then? It looked very well when it was first done, with the exception of being too narrow.

Mr. Thomas
Evans.
9 Dec., 1861.

- Mr. Thomas Evans. 1417. Did you travel over it so as to try it after wet weather? I was requested by Mr. Bayley, one of the superintendents, to go and look at it.
- 9 Dec., 1861. 1418. Then he considered you a person whose opinion was worth having? He felt indignant that it should be so bad after so much trouble.
1419. What situation did Mr. Bayley hold? Inspector of Bridges.
1420. He, as Inspector of Bridges, asked you to look at this road, because he felt indignant that the road was so bad after so much trouble? Yes.
1421. What was your opinion of it? I thought it was bad; the men had to go into the middle of the road to scrape the bad stuff away on to each side of the road, to let the mail and other vehicles pass.
1422. What was the reason of its being so bad? It should have been pitched.
1423. Did you observe the material on it? It was a sort of loam.
1424. Was there no trap upon it? I think it was composed of gravel and loam.
1425. There was no trap upon it? I do not think there was any trap upon it at this particular place; in some places there was a great deal of trap and the road was very good.
1426. On this particular part there was no trap? No.
1427. Was there any shale? If there was it was ground into powder.
1428. Then you think this road was very bad? It must have been when the traffic was obliged to be cut off.
1429. They are now mending this road again? It was being mended when I came along.
1430. By whom is it being now repaired—by the same contractor? That I could not say.
1431. You do not know? I do not know.
1432. By Mr. Hoskins: Have you ridden over this Doughboy Diversion Road lately? No; I walked over it about a month ago.
1433. Was that subsequently to Mr. Quodling's resignation? Yes.
1434. You know the big cutting? If it is the one called Welsh's cutting.
1435. The largest cutting? Yes.
1436. Do you consider the roadway wide enough for the traffic, or do you think it will require more excavation to make it a durable road? I think it is not half wide enough. Very few persons would conceive the amount of traffic on that road; as I have already said, 475 drays passed along the road in March, 1860, and the traffic is increasing.
1437. Have you been accustomed to road making—do you know anything of it? A very little; I was connected with the Maitland Road Trust several years.
1438. Do you consider that if at the cutting the roadway is narrow, it will in a short time become dangerous for traffic, in consequence of the drainage? Of course it will. Mails can now scarcely pass drays, if one is going up and the other coming down. A great part has come down already.
1439. If the roadway is generally too narrow, it would be more dangerous here in consequence of the cutting of the hill? I told Mr. Bennett so in the first instance, when he was marking it out.
1440. Have you looked lately at any of the bridges on this contract? Yes.
1441. Do you know whether iron bolts and straps were originally put to fasten the timber of these bridges? Yes.
1442. Do you know that they have been removed? I do not know that they were ever there; I saw where the holes were filled in with pieces of wood, and where the pieces were cut out to let the plates in level with the wood.
1443. Do you consider the superstructure unsafe in consequence of these iron bolts having been taken away? The superstructure is very good; I do not think any fault could be found with that.
1444. Do you think the bridges would be as secure having wooden bolts as iron? They would be better with iron of course, but the workmanship and timber is very good; there is only one fault I know of, and that is in the decking.
1445. What fault do you find with that? I do not find fault with it, but I hear the carpenters say that they ought to be planked instead of floored with split stuff; that the split stuff will not last two years.
1446. Do you not know that by the terms of the contract they were to be slabbed? No.
1447. Did you ever hear any of the men working upon this portion of the road say that the bridges would be unsafe, in consequence of the removal of these iron bolts and straps? No, I only heard them speak of the decking. In fact, the construction, both as regards material and workmanship, is very good.
1448. Do you know whether the channel of the Doughboy Creek is stopped up by Mr. Martindale, in excavation? That I cannot say.
1449. Do you know anything of Mr. Clark, who was overseer on the road some time? Yes, years ago.
1450. How long is it since he was Superintendent? He was never on that side. I think he was between the Doughboy Creek and Scone.
1451. Is he now in the Government service? I am not aware; not there.
1452. How long was he in charge of parties there? I could not tell; some months—perhaps six or twelve months; I could not say.
1453. Did you know him before he came there? Yes.
1454. What had he been? I knew him at Mr. Lipscombe's, the druggist.
1455. How long was that previous to his being appointed overseer? Some years; he then went to the gold-diggings, and I lost sight of him.
1456. Do you know whether, previous to being appointed, he had ever had any charge of a road? I do not know.
1457. Have you ever heard? I have never heard. I do not know of my own knowledge.

Mr. Thomas Evans.

9 Dec., 1861.

- 1458. Did you consider the roadway at Doughboy Diversion properly consolidated? I could not give an opinion.
- 1459. Do you know the Armidale Bridge at Murrurundi? Yes.
- 1460. Did you ever inspect that bridge? Only in passing it.
- 1461. Do you know whether any white gum is used in the construction of that? I do not know; I consider it one of the best bridges on the road as to workmanship, but I do not know of what material it is built.
- 1462. What is your opinion of white gum—is it a durable timber? Everybody thinks it will soon decay.
- 1463. Are residents in that neighbourhood in the habit of using white gum for building? No.
- 1464. They consider it an inferior timber? Yes.
- 1465. Do you know Mr. Greer? Yes.
- 1466. What is Mr. Greer? A sub-contractor—he takes contracts under Mr. Martindale.
- 1467. Has he never to your knowledge had a contract under Government direct? Not to my knowledge; I have heard of his having a contract, but I do not know it.
- 1468. You know he has had a contract under Mr. Martindale—a sub-contract? Yes.
- 1469. Do you know Mr. Clements? Yes.
- 1470. Has he ever been in the Government service there? Yes, he has.
- 1471. In what situation? Overseer, at one time.
- 1472. How long ago is it since you first knew him as a road overseer? More than two years ago.
- 1473. Has he continued from that time to the present as road overseer? No, I think he was dismissed.
- 1474. Do you happen to know for a certainty that he was dismissed—in a small community like that in which you live these things are generally known? I know it only by report.
- 1475. You have heard that he was dismissed? Yes, I have.
- 1476. Did you hear what he was dismissed for? I do not recollect now what he was dismissed for, but it was reported that he was dismissed.
- 1477. What followed afterwards—how did he employ himself after he was dismissed—did he live in the neighbourhood? He went to live at Scone, and I lost sight of him.
- 1478. Has he ever been a contractor under Mr. Martindale? I have heard of his being a contractor in company with Mr. Greer.
- 1479. Subsequent to his dismissal? Yes.
- 1480. Where was he contractor? About Scone and —
- 1481. Do you know anything about this contract? I do not indeed.
- 1482. Was Mr. Clements afterwards in the employ of the Government as road overseer, was he reinstated? I have heard that he was employed, but I do not know.
- 1483. Do you know where he is now? In Scone.
- 1484. What is he doing in Scone? That is his place of residence; I do not know anything about him; I am thirty miles away.
- 1485. Has he had charge of any men under Mr. Collett as a Government officer subsequent to his having a contract? I have heard so.
- 1486. Where did you hear that he had charge? I heard he was superintendent from the Island Home to—
- 1487. Do you know how long he superintended that work? A few months.
- 1488. Is he now in the employment of Government? That I could not say; report says not. I have heard that he was suspended by Mr. Brown about a fortnight ago.
- 1489. Why was he suspended? For misconduct, I suppose; I do not know.
- 1490. What misconduct have you heard? I would rather decline to answer the question.
- 1491. You can surely say what you have heard? I would not like to say anything prejudicial to another, unless I knew it.
- 1492. *By the Chairman:* I understand you to say that you do not like to speak of these matters unless you knew them of your own knowledge; if you knew anything of your own knowledge, you would not object to state it to the Committee? As a conscientious man I do not like to quibble, and I would not tell a lie; besides, as I have fine feelings, I would not like to injure another.
- 1493. Would you prefer injuring the public to injuring a private individual? As one of the public, I feel bound to do what I can to see things carried on properly.
- 1494. *By Mr. Hoskins:* I will put the question in another way,—did you recently hear that Mr. Clements had been suspended for drunkenness? Yes.
- 1495. Did you ever hear that Mr. Brown had found him drunk in a public-house with £200 in his pocket, that was intended for the payment of the men? That was the common report in Murrurundi, when I came through.
- 1496. Did you hear that this money was given to Mr. Clements to pay wages? That was the report.
- 1497. You do not know whether Mr. Clements has been reinstated, or whether he has been dismissed? I do not. It took place a day or two before I left, and I have been away ten or twelve days, therefore I do not know what has taken place.
- 1498. Do you recollect a visit Mr. Collett made to your locality, when he expressed his final approval of the contract performed by Mr. Martindale at Liverpool Range? No.
- 1499. Can you give us the date? No.
- 1500. Can you give us an approximation? I do not know when Mr. Collett approved of the work; it is not my business.
- 1501. Keeping a public house you might have heard? I did not.
- 1502. Did you see Mr. Greer, Mr. Clements, and Mr. Martindale, who were contractors

under

- Mr. Thomas
Evans.
9 Dec., 1861.
- under Mr. Collett, going about Murrurundi or any other part, soliciting subscriptions to a testimonial? I have already stated that I saw two of the three—not Mr. Clements.
1503. Did they solicit you? Yes.
1504. Do you know whether they solicited every workman in their employ? I do not know that they solicited any.
1505. Did you expostulate with them? I did, out of justice to Mr. Collett; I said I thought they were doing wrong—that it did not look well.
1506. Were you asked to subscribe, and did you subscribe? Yes.
1507. Do you know a Mr. Williams, a road surveyor, who I believe, lives at Murrurundi? Yes.
1508. Did you know him previous to his appointment to that office? No.
1509. Do you know whether he filled the office of road overseer before? I never saw him or knew him before.
1510. Can you say whether Mr. Collett ever stated at a public meeting that Mr. Williams would make an efficient road overseer when he had acquired experience? I never attended any gatherings; I made it a rule to keep away.
1511. What part of the Liverpool Range did you say was in such a bad state? About half way up the range.
1512. In how long after this road was opened for the use of the public did this road become in so bad a state? We had an unusually wet season, and the traffic cut up the road so that it became impassable.
1513. Was there never any metal laid upon that road? If there was it was rough, not broken metal.
1514. Were there many or any men employed by the contractor after this road was opened to the public, to keep the road in repair? Two men were continually employed.
1515. Two men only? And when the road became impassable, a lot of men were sent on.
1516. Before that there were only two men employed? Yes; there were always two men, sometimes more when it was necessary.
1517. You do not happen to know whether there was any agreement between Mr. Collett and Mr. Martindale, with reference to Mr. Martindale keeping the road in repair for a certain time? No.
1518. At all events you are not aware that there were more than two men employed? When the road became impassable there were more put on.
1519. There is no scarcity of trap or basalt for metalling that road? It is very abundant.
1520. *By Mr. Dick*: Under whose superintendence was this Liverpool Range Road made? Mr. Bayley's at first.
1521. Had Mr. Collett anything to do with it? I suppose Mr. Collett had; I have seen Mr. Collett there several times.
1522. Had Mr. Collett anything to do with it at the time Mr. Bayley pointed it out to you? Mr. Collett was the Commissioner at the time.
1523. When Mr. Bayley said that the road was very badly done, did he mean badly done by the contractor, or that he regretted he had been unable to make a better road than he had? Mr. Bayley had been priding himself upon having such a good road made, but he was indignant to find that after all his trouble it had turned out so badly. He said to me, "You would be surprised if you were to see the state it is in," and wished me to see it; I did see it, and he was regretting that he had not made so good a road as he expected.
1524. Was that from any fault of the contractor? I do not know whose fault it was.
1525. Did he state whose fault it was? Of course he would consider it was the fault of the contractor.
1526. Was the road completed and out of the hands of the contractor? Not at that time.
1527. You say you subscribed to this testimonial; did you approve of Mr. Collett's conduct at that time? I gave it for two reasons:—I generally give what I can to everybody that asks me; and another reason was, that Mr. Collett should not think I had any feeling against him, although I remonstrated with them, and said I thought they were putting Mr. Collett in a position he ought not to be placed in. I referred to its being collected from contractors. After that they discontinued asking any more; they said they had not thought of it before.
1528. Did you, at the time you gave that, consider Mr. Collett an efficient officer? I could not tell; Mr. Collett was not often there. I am not a competent person to judge in these matters; I could not give an opinion.
1529. Doughboy Diversion passes very near to your place, does it not? Yes.
1530. You had frequent opportunities of visiting the work? Yes.
1531. Do you know anything about the terms of the contract? I do not.
1532. Can you state whether any portion of it was completed at the time you left? They were very busy trying to complete it; they thought they would have it open by Christmas.
1533. You say that the chief fault of the road is, that it is too narrow? Too narrow by half.
1534. You are aware that the bridges were extended from twelve to eighteen feet in width? It does not matter so much about the bridges as about the road.
1535. Are you aware that the bridges were widened? No.
1536. Do you know the width of the bridges at present? I should think about twelve or fourteen feet; I could not say.
1537. Supposing Mr. Collett has widened the bridges from twelve to eighteen feet, do you think that an improvement? On some of the bridges a person cannot drive a team across without going behind. It would not be safe to go by the side of a team at Lennie's Creek.

1538. Some of the new bridges at the Doughboy Diversion? No; I am speaking of the one near Singleton; the one that was attempted to be blown up.
1539. With regard to the iron-work—you say that some of the iron-work was removed? Yes.
1540. Do you know whether the full quantity that ought to have been on the bridge was left after this had been removed? There could not have been the full quantity; there must have been some deficiency when they were removed.
1541. Do you know how many spikes were in the bridge? No.
1542. You do not know the full quantity? I had no idea that I should be called upon in this inquiry, and therefore I did not take notice.
1543. With regard to this testimonial, was it ever presented to Mr. Collett? I believe it was.
1544. Will you tell me where? At Murrurundi, I think.
1545. Was it publicly presented? Yes. I was invited to attend.
1546. Was there a dinner on the occasion? I think there was.
1547. Who was in the chair? I only know by report, unless Captain Wheeler —
1548. Do you remember whether Mr. Brodie was in the chair? I do not know.
1549. Do you know that Mr. Alexander Brodie, of Murrurundi, was in the chair? I do not.
1550. Did you ever see any account of it in the paper? If my recollection serves me rightly, it was published.
1551. It was publicly done? Yes.
1552. It was no secret? No secret.
1553. At what house was it given in Murrurundi—was it not at Mr. Wightman's, one of the most respectable hotels at Murrurundi? I am not certain whether it was at Wightman's or at the Sydney.
1554. After you pointed out to these contractors that it did not look well for them to be asking subscriptions, they left off? I think they said they would.
1555. Did they ask anyone afterwards, to your knowledge? No.
1556. Do you know anything about Mr. Quodling's resignation? Only that he has resigned.
1557. Do you know anything about the causes that led to his resignation? I have seen by the papers —
1558. You know nothing more than you have seen by the papers? I have heard from rumour that there has been some misunderstanding.
1559. Have you heard any charges made against Mr. Collett? In what respect?
1560. In any respect? No.
1561. Do you know of any charges? I have heard the men talk of Mr. Quodling condemning the work. I have heard some of them object to his condemning the work.
1562. Has any matter come under your own knowledge, with reference to Mr. Collett's management of the road, you would think it desirable for the Committee to know? I do not think it necessary, farther than I have already said, that in my opinion the road is too narrow.
1563. I think you hardly understand my question—Mr. Quodling has resigned, and has made certain charges against the Road Commissioner; I ask you if you know of any charges against Mr. Collett? It is not my province; I should not know of anything.
1564. You do not know anything? I should only know from report.
1565. Do you know of any malpractices on the part of Mr. Collett? No.
1566. Do you think the works on the Doughboy Diversion are much improved? They are improved; they could not do anything but improve them, they were so very bad before; still, I think, they might have been improved a great deal more.
1567. How often did Mr. Quodling visit the works? Frequently; he was sometimes at Tamworth, sometimes at Armidale; he was always moving about; he was a very active man.
1568. How frequently has he visited Doughboy Diversion, are you aware? I could not say; very frequently.
1569. What kind of man is Mr. Martindale—a respectable tradesman? He is considered so; I do not know him beyond his being a contractor there.
1570. How long have you known him? Only since he has had this contract.
1571. How long is that? Fifteen or eighteen months.
1572. What has been his conduct, so far as it has come under your observation? I have seen nothing else.
1573. Have you heard anything to his prejudice? There were various reports before he came there. The men had some misgivings at first, but they have always been paid, and they are satisfied.
1574. You have said you do not know anything about the terms of the contract—you do not know whether he was bound to keep the road in order for any time? He told me he was bound to keep it in order, that is the Liverpool Range, the Murrurundi side.
1575. Have you seen Mr. Martindale pay his wages yourself? Yes.
1576. He is known as a man who pays punctually? Yes. He is away sometimes, perhaps six weeks, but when he comes back he will pay. For instance, he may pay his men to-day, and then he will go off to Grafton or Mudgee, and when he comes back he will pay; he may be away in this manner for five or six weeks.
1577. Do you make any charges against Mr. Collett? No.
1578. Do you make any charges against the general management of the road? You have heard my observation, that I think the road is too narrow, and that it will require a great deal of money to keep it in repair, for every dray follows in the same track, and then the metal thrown on the top will work under and the mud will be brought to the surface.
- 1579.

Mr. Thomas

Evans.

9 Dec., 1861.

- Mr. Thomas Evans. 1579. You are aware that there is only a certain sum allowed for repairing the road? No, I do not know that.
- 9 Dec., 1861. 1580. *By Mr. Dangar*: How long have you been in Sydney—were you at home last week? It is about ten or twelve days since I left.
1581. You had no opportunity, then, of seeing Mr. Collett when he was up there last? No.
1582. Did Mr. Hannington accompany Mr. Collett to Sydney? No.
1583. You are aware that he is in town? I have not seen him.
1584. Is Mr. Martindale residing in the Murrurundi district now? Yes.
1585. Is he there still? He intended to reside there till the work was finished.
1586. Has he any men at work there from the Gap down to Murrurundi? There are men at work, but I do not know who is employing them.
1587. Are you aware that Mr. Greer took a contract from Mr. Martindale in the picce we are speaking of? On the diversion?
1588. You said just now that Mr. Clements was dismissed when he first held a Government situation? Yes.
1589. You are aware that he was dismissed for some irregularity in his accounts? I think that was one of the reasons, as far as the report goes.
1590. That he could not pay his men—that he had money sent up to pay his men, and there was a report that he was short? I heard so, and I have grounds for thinking so.
1591. Mr. Clements has been re-appointed since he was dismissed? The reason, I believe, he was dismissed for that is, that he came over to me and asked me to lend him £60. I said, "I am no money lender." He said, "I am afraid I will be dismissed; I have drawn "cheques and have paid them to Mr. Wightman, and they will be returned, as I have no "funds." I said, "Rather than you shall be dismissed I will let you have the money." I gave Mr. Wightman the money, and I have never been paid since.
1592. He was dismissed, and he then became a contractor with Mr. Greer? I think so; my answers are only from report; I do not know these things as facts.
1593. You perhaps have passed over the Sandy Creek Bridge near Muswellbrook—Donohue's? Yes.
1594. You are aware that Mr. Martindale erected that bridge? I was not aware.
1595. Have you heard complaints about that bridge being too narrow? Yes, from most people travelling on the road.
1596. The same applies to Falbrook? Yes.
1597. It is dangerous for a driver to walk alongside of his bullock team when passing over that bridge with a loaded dray? It is not safe.
1598. As an old resident and a judge of work, do you apprehend any accident from the narrowness of that bridge? If proper care is not taken, if a man goes alongside of his dray, it is very likely.
1599. If the bullocks are young, for instance? There is more danger from horses.
1600. Does not Mr. Hannington reside near Doughboy Hollow? I think he resides near the Willow Tree.
1601. Do you consider that gentleman competent for his duties as a road overseer? I have no way of knowing what is his competency, for I have never been with him on the works.
1602. How long has he been stationed there? About six months.
1603. You have heard no complaints in your neighbourhood as regards Mr. Quodling's general conduct and superintendence? No; the men do not like him.
1604. For why—what reason? He is too particular, I suppose.
1605. Is it generally reported in the district that he forces the men to do their duty; to work their regular hours, and to fulfil their contracts? They have objected on account of his looking about the works.
1606. He looks after it well? Yes.
1607. From your observation, you have no reason to suppose that he does not regularly attend to his duty? I always considered him to attend to his duties very properly; he is a very proper young man; his general conduct and behaviour are very good.
1608. When Collett was superintendent and visited that part of the country, did he continue long in his inspection? He used to go and look at the works frequently.
1609. Have you known him to travel from Muswellbrook to Doughboy Hollow and back again the same day? I only saw Mr. Collett when he came there and when he went away. I could not tell where he had gone.
1610. The piece of road you complain of is below the Gap near Murrurundi—the bad piece of road that is not ballasted? You mean on the Murrurundi side.
1611. Yes. Do you remember Mr. Greer carting sand on that road in August last? He had contracts there; I do not know what he was doing.
1612. *By Mr. Dick*: Were you in Murrurundi in August last? I do not know whether it was August, September, or October. I am in the habit of going there three or four times a year.
1613. *By Mr. Dangar*: The place I mean is about three-quarters of a mile from Murrurundi—Brodie Bridge? That is not the place I mean at all. I mean half-way up the range. The road is very good all along there.
1614. Do you think the alteration in the diversion made by Mr. Collett is an improvement in the road? It will be an improvement.
1615. I mean as to the two lines—there was a deviation from the original line—do you think the second plan is superior to the first? The line was surveyed at first by Mr. Debnam, and afterwards by Mr. Wells; Mr. Wells made one or two alterations.
1616. Which, in your opinion, is the best line, the first or the second? They were nearly together. There was only a slight deviation here and there; it was the same line. Mr. Bennett was down; I think he was a week there nearly.

1617. Before Mr. Quodling was appointed Mr. Collett had the superintendence of that part of the road? I think so.
1618. Before Mr. Bennett resigned? Yes.
1619. The work by Mr. Martindale had commenced before Mr. Quodling took charge? Yes, for some time; Mr. Bayley was the superintendent in the first instance.
1620. Mr. Brown has nothing to do with that part of the road? I am not aware. I have seen Mr. Brown there a good many times.
1621. Does Mr. Brown superintend from the Gap to Murrurundi? I do not know where he superintends; I have seen him there looking at the work.
1622. *By Mr. Lucas*: Can you tell me who is in charge of the Doughboy Diversion now—what superintendent is in charge? I do not know whether Mr. Hannington or Mr. Coghlan is in charge.
1623. Is Mr. Coghlan up there now? He was on the line when I came down.
1624. How long has he been there? He succeeded Mr. Quodling.
1625. Do you know how much money was subscribed to the Collett testimonial? Between £20 and £30 I think it was.
1626. Are you aware whether the Liverpool Gap was first pitched? A great portion of it was.
1627. Do you know what was put over the pitching? Trap, in parts of it.
1628. Other parts? The other parts were gravel.
1629. *By Mr. Hoskins*: What do you mean by gravel? It was a mixture of earth and gravel together.
1630. *By Mr. Lucas*: Was there any pipe-clay? It has a white appearance; that was merely for blinding.
1631. How thickly was this gravel put over the pitching? I could not tell.
1632. You have no idea whether it was a foot, six inches, or three inches—have you seen any of that stuff thrown off the roads on to the sides? Yes; there were men who went into the centre of the road, and threw it on either side to make a road through it.
1633. What has been put on the road since? It has been pitched with trap unbroken, and broken metal has been put on the top of that.
1634. Then there is a second coat of pitching? Do you mean the part that was out of repair?
1635. No; I mean the part that was first pitched, and which then had a mixture of clay and gravel on it? I could not say whether this part which was out of repair was pitched at all; a great portion of it is now being pitched.
1636. *By the Chairman*: You stated that after you remonstrated with these gentlemen who were soliciting subscriptions, their collection ceased? Yes.
1637. Do you know of your own knowledge that the collection ceased? They told me so.
1638. You know nothing of it except from hearsay—they said the collection ceased? Yes.
1639. *By Mr. Dalgleish*: At the same time they took your subscription after your expostulation? Yes.
1640. Although they said they would not take any more? They took it. I refused at first, but I afterwards gave it to them.
1641. *By Mr. Garrett*: Do you know who originated the testimonial? I think it originated with the contractors.
1642. You do not know whether it originated at any meeting? There was no meeting I think.
1643. You subscribed simply as a matter of business? Not as a matter of business. I belonged to the Maitland Road Trust some years ago, and I thought if I refused Mr. Collett might think I had some feeling against him, and I generally give to everything as far as I can.
1644. You said something about Mr. Quodling's general character—that the men found fault with him? Yes.
1645. The men you alluded to were the contractor's men? The men who worked for the contractor.
1646. Have you ever been on the works when you have heard any remarks made about Mr. Quodling by the men? I have never been on the works—it was in my own place.
1647. Was he in his manner to the workmen affable and conciliatory? I never saw anything wrong in his behaviour—nothing to find fault with.
1648. In his manner to the workmen? I never was on the works with him, but I have heard the men say they thought he ought never to have moved in this matter.
1649. Then it is since he has moved in this matter that you have heard the complaint? Yes.
1650. Not before Mr. Quodling resigned? Yes, before he resigned; but this matter was talked of before he resigned—these matters were mooted.
1651. How long? I should say a month or so.
1652. From whom did you hear it? From the workmen.
1653. Did you ever hear Mr. Quodling speak of it before he resigned? I have heard Mr. Quodling talk of the work not being as it ought to be.
1654. Did you ever hear him mention, before he resigned, any intention to bring any charge against the Commissioner? I have heard Mr. Quodling say repeatedly that the works had been done badly.
1655. How long ago was that? Some months ago.
1656. Did he state the ground of his complaint against the manner in which the work was being done? The men thought it was not right that Mr. Quodling should come along the work and condemn it.

- Mr. Thomas
Evans.
9 Dec., 1861.
1657. Was that the men? Yes.
1658. With regard to Mr. Quodling's complaints as to the way in which the work was being done some months ago, did he state the specific nature or ground of his complaints? I have heard him find fault with the way in which the work was being done in general.
1659. Was this privately or publicly? I have heard him say so to me, and in conversation with others.
1660. In your public-house? Yes, in conversation.
1661. Have you heard him speak in this way in the public part of your public-house? Yes, when Mr. Hannington, Mr. Martindale, or Mr. Donaldson, (Mr. Martindale's young man,) has been with him.
1662. Have you ever heard the men complain of Mr. Quodling using violent language against them? Never; on the contrary, I have heard the men whom Mr. Quodling has employed speak highly of him; they said Mr. Quodling was a man who would have things done as they ought to be done.
1663. With regard to the narrow bridges, have they any side rails? Over the Doughboy Diversion?
1664. No, over Sandy Creek? Yes, it has side rails.
1665. What is the width—twelve feet? I never took that notice; it is a narrow bridge.
1666. The bridges on the Doughboy Diversion are wider? Yes, much wider. One bridge in particular is very good, the decking is planked, the others are of split stuff.
1667. How long is it since you have been on the Doughboy works? I have lived in the neighbourhood three years and a half.
1668. How long is it since you last saw the works? Within the last fortnight.
1669. Are the bridges completed? Some of them.
1670. Are they tarred? Yes, I think so.
1671. How many of them are there to be completed? I think there were only two wanted completion; they are all completed with the exception of side-rails.
1672. Then they are all tarred? Yes; of course the side rails would be painted.
1673. The floors? I do not know whether they were to tar the floors, because I believe they were to put metal on the floors.
1674. The beams are tarred? Yes.
1675. You did not notice as to the spiking of the bridges? No.
1676. Do you think the widening of the bridges is any improvement? Yes.
1677. Do you think it was necessary? Yes.
1678. *By Mr. Hoskins*: Did you ever hear Mr. Quodling, when he made complaints of the manner in which the contract was being performed, complain to the men themselves? I have heard the men say he complained.
1679. To whom did he complain, to them, to the contractor, or to his agents? To the overseers, the gangers, or whatever they were called.
1680. Have his complaints been very frequent as to the manner in which Mr. Martindale was performing his contract? It has been matter of conversation for months.
1681. Of conversation in your house between Mr. Quodling, Mr. Hannington, and Mr. Martindale? Yes; and when these gentlemen have not been present, I have heard Mr. Martindale say so.
1682. You have heard Mr. Martindale say that Mr. Quodling was frequently complaining? Yes.
1683. Have you heard the character of the complaints? As to the whole of the works; but, as far as I am able to judge, the framework of the bridges is very good, both as regards workmanship and timber. I do not think better work could be done. The decking is, I think, the only objectionable part.
1684. You have stated that Mr. Martindale told you that, by the terms of his contract, he was obliged to keep the Liverpool Range roadway for a certain time? Not by the terms of his contract, but that he had agreed to do so.
1685. Did he tell you the nature of his agreement? It is about two or three months since he spoke to me, and he said he had about another month.
1686. How long was that after it was opened? I could not say.
1687. What was he to receive for doing that? I do not know that he was to receive any thing—he did not say. He has two men always employed upon the road, because heavy-loaded drays cut it up so much.
1688. I want to know whether he at any time, in the course of conversation, told you that he was to receive any remuneration for keeping the road in order after it was opened? I never heard.
1689. How many men are employed by him? Always two; but after rain the road gets bad, and a lot of men are then put on.
1690. How soon after the road was opened was it that it got so bad as to be impassable? The first thing—almost immediately afterwards—before Mr. Quodling took charge.
1691. Can you give us an idea how long after? About two months.
1692. The roadway was cut up? I could not speak for a certainty.
1693. This roadway was impassable? It was nearly so.
1694. Between a month and two months after it was formally opened? Yes.
1695. Did you ever hear Mr. Hannington express dissatisfaction at the manner in which the work was being carried out—the Liverpool Range contract? Yes.
1696. You have a distinct recollection of the fact? Yes.
1697. What did he say? I have heard him say that no person could pass it.
1698. Why could they not pass it? That was his business, not mine.
1699. Was it because the work was badly performed—did he assign a reason for expressing that

- that opinion—was it because the contract was not properly carried out? I suppose that was the reason.
1700. Yet it was carried out afterwards? I am speaking about the Doughboy Diversion.
1701. I am speaking about the other place? I never heard him say anything about that.
1702. With reference to the Liverpool Range contract, you say the road there was impassable a few weeks after it was formally opened, but there were two men kept upon it by the contractor? There were always two men on the new road. When heavy drays of two tons or two tons and a half weight pass over it they furrow it up, and these men are employed to fill up the ruts. I do not know how long it was afterwards; I do not know when the Government took the road out of Mr. Martindale's hands.
1703. Can you tell when the traffic went on it? I think before Mr. Martindale had done with it; I cannot speak to facts or dates.
1704. You have heard a great deal of conversation with reference to Mr. Martindale—various reports with reference to the antecedents of Mr. Martindale? Yes; in the first instance, when he got the contract the men did not like working for him.
1705. You heard that he had had contracts in Victoria? Yes.
1706. Have you heard any particulars? Yes, I have; but sometimes men will speak disrespectfully of others without their deserving it.
1707. Will you tell us what you did hear? I have heard that he failed in some contracts in Victoria, and that he failed to pay his men.
1708. Did you ever hear that any Government officer in Victoria had refused to allow him to have any more contracts in that Colony? No.
1709. *By Mr. Dick*: You stated some time since, that Mr. Clements was short in his accounts, and you lent him money to pay them? I do not know whether he was short in his accounts; he drew cheques and had no funds.
1710. And he asked you to lend him money? Yes.
1711. How long is that ago? Eighteen months or two years.
1712. Mr. Collett was not Commissioner of Roads then? I do not know whether Mr. Collett was Commissioner of Roads or not, but that was the fact; Mr. Collett knew nothing about it.
1713. Was any representation made to Government about that? Not that I am aware of.
1714. You obliged him as a friend, to prevent him getting into trouble about the matter? He thought because he had been opposed to Mr. Wightman in politics that Mr. Wightman would report him, and he was afraid of being dismissed. I said, rather than he should be dismissed I would lend him the money.
1715. It was to prevent its coming to the ears of the Government? I do not know whether the Government knew anything about it. He subsequently paid all these dishonoured cheques except mine. He asked me at the time whether he should give me any security; I did not take any, and I have not since been paid.
1716. You stated that Mr. Clements was dismissed? I only know that from hearsay.
1717. Do you know whether he is now dismissed? No; I heard he was suspended, as I came through. I was told by Mr. Greer, and I was told by the coachman who drives between Scone and Murrurundi.
1718. Do you think the Northern Road has been improved, upon the whole, since Mr. Collett's appointment? Yes.
1719. Was it part of Mr. Quodling's duty to superintend the Liverpool Range contract? I do not think it is in his district.
1720. Can you tell me what Mr. Hannington and Mr. Quodling were doing on the Liverpool Range? I never knew they were on the range.
1721. I thought I understood you to say they were? No.
1722. *By Mr. Dangar*: Although you lent money to Mr. Clements he was at that time under Mr. Collett—as overseer under Mr. Collett? Yes.
1723. Before Mr. Collett was made a Commissioner? Yes.
1724. You observed the day labourers passing up and down the road to work? Whereabout?
1725. Along the road from your residence to Maitland? I could not say whether they were day labourers or not.
1726. Men working along the roads in ones and twos? Yes.
1727. You observed how they were employed in filling ruts? I had not an opportunity of seeing much, because I was in the mail, and travelled most of the journey by night.
1728. *By Mr. Lucas*: Do you know whether the bridges were tarred when Mr. Quodling resigned? I think they were.
1729. You say the floors were to be covered with metal or earth? They were not when I saw them, but I understood they intended. One bridge was decked with sawn timber, the others with slabs.
1730. Would you not expect the roads to be improved where large sums of money were expended upon them? Of course, otherwise it would be of no use to lay it out.
1731. Are they as much improved as you would have expected from the large amount expended? Hardly.
1732. *By Mr. Hoskins*: Mr. Dick asked you whether you did not think the Northern Road had been improved since Mr. Collett was appointed—do you know when Mr. Collett was appointed to look after those roads? Mr. Collett has had charge of the northern roads for some years.
1733. *By Mr. Dick*: Mr. Quodling states that “a regular loose and discreditable system” has been carried on since Mr. Collett has been in office—can you give us any information about this loose or discreditable system? I do not know anything about the system.

Mr. Thomas
Evans.

9 Dec., 1861.

Andrew Loder, Esq., J.P., of Colly Creek, examined:—

- A. Loder,
Esq., J.P.
9 Dec., 1861.
1734. *By the Chairman*: Are you a squatter? Yes.
1735. Were you formerly a Member of the Legislative Assembly? I was.
1736. Are you a Magistrate? I am.
1737. Do you live near what is called the Doughboy Diversion? It is part of my squattage.
1738. Then I presume you are tolerably well acquainted with the character of the public works both at the Doughboy Diversion and on the northern line of road generally? Yes.
1739. This Committee has been appointed to inquire into the circumstances connected with the resignation of Mr. Quodling, who has made some charges against Mr. Collett, and also to extend their inquiries to the management of the works generally in the northern district—Have you any statement to make with reference either to the particular or to the general inquiry? I think I have. I am aware that Mr. Collett has been superintendent of the northern road for some considerable time. For the first two or three years that he was there I noticed that the culverts and the gravelling were not done as in my opinion they should have been, and I frequently spoke to Mr. Collett upon the subject; but at that time I was under the impression that Mr. Collett was rather too easy with the contractors, and that the culverts were not properly spiked or done in a workmanlike manner, and that instead of gravel a great quantity of loam was put upon the road. I must confess that at that time I thought it was merely an oversight of Mr. Collett, and that he was not so strict as he should be on the part of the Government, until about two years since, when I was coming down to the Assembly, and Mr. Martindale, the present contractor, overtook me on the road. At that time he was on the railway at Singleton.
1740. In what capacity? I believe as a sub-contractor. He overtook me at a place called Harpur's Gate, and I was passing over a particularly bad piece of road, my horse sinking up to his knees. He said, "This is a splendid road." I said "Is it? I am not aware of it." He said, "It is macadamized." I replied, "Surely you do not mean it." He said, "Mr. Collett passed this twenty months ago as macadamized. Mr. Miller was the contractor, and received 12s. 6d. a yard (for half a mile of it), but he and Mr. Collett understand each other. It is all right." From that time my suspicions were aroused.
1741. Was this after dinner that you saw Mr. Martindale? It was about two o'clock in the day. When I reached the Northumberland Hotel Mr. Robertson was standing at the door; he was at this time Minister for Lands and Works. He asked me how the roads were. I told him they were very bad indeed. I said, "You came down yesterday; you had an opportunity of seeing them. Did you notice that piece of road at Harpur's Gate?" He said, "It is without exception the most villainous piece of road I ever travelled over in my life." I said, "I am glad to hear you say that, for your favourite contractor, Miller, got 12s. 6d. a yard for doing that, eighteen months since." Mr. Robertson made use of an expression about my belonging to the Murrurundi clique, with rather strong language.
1742. Do you mean to say that the Minister for Lands used strong language? I am telling it as it occurred.
1743. I will not press you to repeat what he said? I think it is unnecessary; it was more emphatic. I must confess from that conversation—the conversation with Martindale—and some other matters that came under my notice, that I intended to have brought this matter forward if I had remained in the Assembly. When I came to Sydney I asked Mr. Robertson if he had kept his promise to inquire about the payment of this 12s. 6d. a yard, and he said he would put Captain Martindale in motion and let me know the result. Although I spoke to him several times about it, I did not hear the result; and on Saturday last when I saw him he said that at that time they were dividing the Lands and Works offices; that he had made a memorandum on the subject, but did not know the result; that he had left it for the Minister for Works to see into. On the same day I saw another piece of work called gravelling, which Miller had, at a place called Nailors, and I am satisfied I do not exaggerate when I say that there might have been a handful of gravel to a barrow-load or to a cart-load of loam.
1744. I suppose you are well acquainted with the meaning of the terms gravel, sand, and loam? I believe I am; I have taken notice of such matters for a considerable number of years.
1745. *By Mr. Hoskins*: Was it black loam? No, sandy loam; you may guess what it was like when Mr. Robinson said—"It is too bad; Arnold will be in town to-morrow; I intend to take him out and put a stop to it."
1746. *By Mr. Dick*: How long is that ago? Somewhere about two years ago, when I was coming up to the Assembly. With respect to the Liverpool Range, I must confess that considering such a large amount of money was expended upon it, it was impassable a very short time after.
1747. *By the Chairman*: After it had been opened? After it had been opened.
1748. Impassable for what? I saw thirty bullocks on a dray, and they could not go above six inches at a time, and I saw a man walking behind—I think they call him a permanent man—a German whom I always see upon the road—throwing large boulders into the wheel tracks, stones of a very large size.
1749. Are you aware whether this man was employed by the Government or by the contractor? He said he was employed by Mr. Martindale; that he was the only man on the road, and that Mr. Martindale was getting £50 a month, for six months, for keeping the Liverpool Range road in repair.
1750. Do you know this man's name? No, but I know him well; he is on the road now, or was the other day—in fact I have seen him on the road the last three or four months. He told me that he was the only man on the road, and that he got £2 a week from Mr. Martindale, and that Mr. Martindale got £50 a month from the Government.

1751.

1751. *By Mr. Dick*: Is he now getting £50 a month? I do not know from my own knowledge, only from what he told me. At the time he spoke to me he said the six months would expire in about six weeks. It was impassable, or nearly so, for several weeks; but not expecting this Committee would be set in motion, I did not jot down dates.

A. Loder,
Esq., J.P.

9 Dec., 1861.

1752. *By the Chairman*: Will you specify the place? The Liverpool Range, the contract on which Mr. Martindale got £700 for additional work, from the top of the Gap down to Brodie's stone-quarry.

1753. *By Mr. Dick*: The main road to Armidale? Yes. After this man telling me that he was the only man who was employed on the road, and had been for two months; passing by, two weeks after, I saw a second man working with him. I said, "Have you got a mate; how long have you had him?" The other man then said he had been with him some time. I said I had been up and down the road for several months, nearly every week, and I had never seen him.

1754. Do you know this man's name? No. I have known the German, by sight, for some years; he has been living at Murrurundi; in fact he was living upon an estate of which I am trustee. I do not know the particular date when the road was opened, but I noticed after it was opened for traffic, that several times when passing immediately after wet weather, that it was shut up by two panels of fence that would exclude the public. This was when the teams were in the habit of travelling up and down.

1755. With reference to the piece of road, was it after heavy rains—? Yes, after heavy rains it was impassable; parties have preferred going up the old road. It is well known on the road as the pipe-clay piece, where I saw the thirty bullocks; it was the part where Mr. Martindale got £700 for his extra contract.

1756. *By the Chairman*: As regards that, your knowledge is not personal—you speak as to general report as to the contract? I believe I was in the Assembly when £1,500 was voted, and when I asked whether that had finished the work, I was told by Mr. Martindale that he had got £700 for additional work.

1757. *By Mr. Dick*: Who superintended the work at that time? I believe Mr. Martindale; I have seen him frequently on the road. Mr. Collett, I believe, had charge of it as the Government officer.

1758. At that time Mr. Martindale was not the contractor? Yes, he was.

1759. You say he was superintendent? Do you mean the particular officer? I always looked upon Mr. Collett as the head of the Northern Road, if that is what you mean.

1760. Who certified to the £700? I do not know who certified. This particular piece of road, where I saw the thirty bullocks had such difficulty in getting on, was known as "the pipe-clay piece."

1761. *By the Chairman*: Can you specify the locality more particularly? About half-way from Brodie stone-quarry to the top of the range—I do not know the exact distance in yards. Even when the road was first opened, it was cut up very much, within a week afterwards, in consequence of (I do not know what the technical term is) the drains that carry off the water under the bridges—water-boxes they call them—there is no protection to the water-boxes at the neck, so that at the first thunder storm these were partially choked, and instead of the water running down these water boxes, it overflowed the road.

1762. Did you notice this all along the road, or at this particular place? At this particular place, because I travel almost every week to Murrurundi; there must be some one placed there to clear away the rubbish from the neck of the water boxes, or they get choked. The road is decidedly narrow, dangerously so.

1763. You speak of the road generally? Of the Liverpool Range.

1764. It is decidedly narrow? Yes; the other day I had the greatest difficulty in avoiding an accident. I was going up the range, driving a couple of horses, and a bullock team was coming down; they were not well managed, and the consequence was that I was driven off the road; had the road been a reasonable width, I could have drawn up to allow the dray to pass.

1765. You mean that it is so narrow that two vehicles cannot pass abreast? They cannot, unless they are under perfect control.

1766. Have you anything more to say, with reference to this particular part? There is one other matter I wish to call the attention of the Committee to—the way they are doing the road at present, where they are repairing it. In the first instance, the metal was broken to a certain size, and presented a nice appearance; but the men who are now repairing are putting large lumps of five or six pounds weight. When I spoke to him the other day about it, he said "What is the good of putting small stuff on it—I have done that several times?"

1767. What man was that? The same German that I have referred to. To-morrow will be a week since I rode over that road, and I thought to have brought some of that pipe-clay stuff from it—I did bring some of the stone, which I will produce.

1768. Have you concluded what you have to say, with regard to the range? Yes, I have; farther than that, not only is the gravelling defective about Maitland, but, in very few places is it good, though good may be obtained at a reasonable distance from the road, but the gravel has been taken, generally speaking, from close to the road, and in one instance, the part near the Nailers, it was taken from the very edge of the road. Since then—I do not know whether it was done by the Government or by the contractor—a quantity of this that was put on as gravel has been taken off the road.

1769. By whom was that taken off? I cannot say, but it was removed by horses and carts, at whose expense I cannot find out. That was several months after I had called Mr. Robertson's attention to it. I also called Mr. Collett's attention to the gravelling repeatedly—dozens of times I might say. I noticed that Miller's contracts were much worse carried out with regard to the gravelling than other parties'.

1770.

A. Loder,
Esq., J.P.

9 Dec., 1861.

1770. You say you noticed that Mr. Miller's contract was worse carried out than others—is there an improvement since Mr. Martindale has become a contractor? I noticed it prior to the remark made by Mr. Martindale about Mr. Collett and Mr. Miller understanding each other.

1771. Do you think Mr. Martindale's contracts have been generally better carried out than Mr. Miller's? The only works I have seen of his are the Liverpool Range and the Doughboy Diversion.

1772. The Liverpool Range you have just described? Yes.

1773. Will you state what you have to say respecting the Doughboy Diversion? The Doughboy Diversion is narrow also, and the stumping is very different from any I have seen on roads before. In many places you may see the stumps breast high. It is merely stumped the width of the road—twelve or fourteen feet. I stepped it the other day, and found the metalled part was only about twelve or thirteen feet, and there might be a yard on either side of the metal properly stumped.

1774. What would you say would be the entire breadth, speaking roughly, from one side to the other, taking the road and the clearing? It might be eighteen feet from side to side—from edge to edge. Many of the stumps are breast high on the side of the road.

1775. How were the stumps taken off? They were sawn off.

1776. Sawn level? One or two feet above the level of the ground.

1777. Is that within the yard on each side? No, that is cleared, and the stumps are taken out.

1778. There is something done farther on? Yes, there is a drain on the side of the cutting, and perhaps a yard on the other side of the metal, making eighteen feet in width that is properly stumped, but the road should be about a chain wide in appearance.

1779. What is done to that? I merely call the attention of the Committee to that, because parties who are not initiated into the way in which these works are really carried out are deterred from tendering, supposing that this work will really have to be done according to the plan and specification; but Mr. Martindale, being already initiated, knew that he need not do that; he therefore tendered and got this work, and other parties were not able to do so on that account.

1780. These other portions that were partially stumped you say were simply sawn off? Yes, some two feet, some one foot above the ground. The reason I wish to draw your attention to this matter is that he, knowing how the work was to be done, tendered for £80 a mile, and sub-let it to other parties for about £60, so that he gets a profit of £20 a mile without any trouble.

1781. Then is there about a yard on each side of the macadamized road properly cleared? Yes, about eighteen feet altogether is properly cleared.

1782. The remainder, amounting to about a chain, is done in the way you describe—that is, half a chain on each side? Yes; the roads are usually from a chain to a chain and a half wide.

1783. Is the timber taken away after the stumps are cut down? Yes; and the stumps are left standing, presenting a very unsightly, unfinished appearance.

1784. Then there is no timber left lying under the embankment? No, except a solitary stump; there is one stump I noticed left on the road like a butcher's block.

1785. You are not sure whether these stumps may be taken out yet by the contractor? I noticed that Mr. Cowper, in answer to a question from Mr. Dangar, said the road was finished; but I should say it would not be finished for a month or more.

1786. Is it open to the public? No; I came over on horseback, but a dray could not come over.

1787. You are not in the habit of giving credence to everything that is reported to be said in the Assembly, I suppose? No; I am not indeed.

1788. Do you know anything as to the fencing of the Doughboy Diversion? Yes; I took particular attention.

1789. How much is there? I did not notice the extent, but the quality.

1790. What was the quality? It was very bad indeed; if I were superintendent I would never allow such to be put up.

1791. In what particular is it bad? The posts are too light, the gauge is altogether wrong; a two-year old bullock might get between the bottom rail and the ground in; I do not see what is the good of it; it is not strong enough to prevent a dray going over.

1792. Did you notice whether sufficient lap was given to the rail? I did not notice that; but the posts were very light.

1793. Did you notice the material on the road? Yes.

1794. What is the character of the material—what is its quality? Part of the material is very good; in fact there is an abundance of good material within a few yards of the road; but I noticed that some of the shale that was got out of the cuttings and from the edge of the road, was put on the road instead of trap.

1795. In saying that shale was put on instead of trap, do you mean that there was no trap where the shale was, or that it was mixed with it—how do you know that it was intended for trap? I have seen the contract, and it says trap shall be put on, and there was abundance of trap.

1796. Was there no trap on the road where you say the shale was put on—was it all shale or trap? I went along the road for a hundred yards, and there was little else but shale.

1797. Do you suppose this was put down as macadamizing the road? I have no doubt that was the intention.

1798. And there was plenty of trap in the neighbourhood? Abundance—no end of it.

1799. Was there plenty of shale? Yes.

1800. Is that to be got nearer? That is to be got from the edge of the road.

1801. What is the difference of the effect of putting shale and of putting trap on it? It is less expensive to the contractor.
1802. What is the effect of it upon the road—does it crumble? Yes; rainy weather has a great effect upon it; it slakes and crumbles to pieces.
1803. *By Mr. Lucas*: Does it slake something like lime? Yes; it is useless for road-making, except where you cannot get better; it is a waste of money to put it where you can get trap.
1804. *By the Chairman*: Can you give us any information with regard to the slabbing of the abutments? Before the approaches were made, I noticed that the slabbing was very open, and done in a very slovenly way. (*The witness produced specimens of trap and shale.*)
1805. Is this a piece of trap (*handing a piece of stone to the witness*)? That I call trap. This (*referring to a piece of shale*) I took off the centre of the road.
1806. Is there any large quantity of trap there? Yes; and a great quantity of the other.
1807. Will you complete what you were saying with reference to the abutments? The slabbing is not sufficiently close in my opinion, and I should have liked to have seen the slabs stouter, because they are of stringy bark.
1808. Are you aware whether it was the fault of the contractor or of the contract—did you compare this with the contract? I do not blame the contractor for doing anything he has done; it is in his pocket to slum everything of the sort if he can.
1809. Can you make any statement with regard to the spiking of the flooring? I cannot. I noticed three (if not four) of the bridges that were slabbed.
1810. In what way was that slabbing done? The slabs were narrow, and my first impression was that they were rather slight, but when I examined them I found they were stouter than I had expected, but they were decidedly narrow.
1811. Are they the worse for being narrow, if there are plenty of them? I think so; I prefer, for any purpose, pretty wide slabs.
1812. Do you know whether they were tarred, or could you judge whether they were tarred? The slabs put upon the floor were not, so far as I could see; the approaches were tarred, but not the flooring.
1813. Do you know whether the creek was blocked up at all, by earth having been thrown into it? It is blocked up now.
1814. What is likely to be the effect of that? The action of the water will cut away the embankment.
1815. Is it likely to damage the embankment? Yes; there can be no second opinion about that.
1816. Are you aware whether it was the business of the contractor to leave the creek open? No.
1817. Do you know Mr. Martindale at all? Not much. I know him by sight, to say "How d'ye do," when I meet him. I will make one remark before I leave this part. I believe the metalling on this Doughboy Diversion was to be broken to a certain gauge, but I noticed that for about a quarter of a mile—some considerable distance, however, on the northern end of this road—that the stones are of three or four pounds weight, instead of being of about a quarter of a pound.
1818. Do they look as if they had passed through a gauge? It must have been a very large one. I was very much struck with the appearance of the crown of the road in one place, and I had passed along some twenty or thirty yards before I got off to examine it, and I found a large flat stone as the centre of the road, with no broken stone upon it, and this was a part of the road which was supposed to be finished.
1819. How large was this stone? About fifteen inches by eighteen; and there was no broken metal on the top.
1820. Would you judge from that, that there was not a sufficient thickness of metal above the pitching? In these places there was no broken stone at all, otherwise I could not have seen this large stone.
1821. Was this large stone put down with the flat part upwards? The stones were laid in that way to cover as much surface as possible.
1822. Is that the usual way of putting on stones? It is not the way it is done in the neighbourhood of Sydney I observed, but it is the way it is done on the Northern Road.
1823. You do not know whether it is done in accordance with the contract? No; but it is very much better to lay the stones on their edges.
1824. You spoke of having seen a copy of the contract? Yes, I did.
1825. Was it an authorized copy—one on which you could rely? I believe it was; I saw it in Mr. Quodling's hands.
1826. In regard to these several particulars you have given information about, you cannot say whether they were contrary to the contract; but with regard to the clearing, you said that was not in accordance with the contract? With regard to the metalling, I said the metal was to be trap of a certain gauge; but with regard to the other matters, I go from what I understand to be the case. I made the remark to Mr. Martindale—"When Mr. Collett was last down did he not object to your stumping?" He said—"No, it was approved." I said the stumping was very different from what had been done by Mr. Heritage and others I have seen. He said—"Well, it is passed."
1827. I suppose you know Mr. Collett personally? Yes, I do.
1828. What is your general opinion, since the roads were placed under Mr. Collett, as to the character of the roads—has there been a great improvement? There has been a considerable improvement in the roads since Mr. Collett took charge, but they are not near so good as they should have been from the money expended.
1829. You think, judging from the money that has been expended, not so much has been done

A. Loder,

Esq., J.P.

9 Dec., 1861.

A. Loder,
Esq., J.P.

9 Dec., 1861.

done as ought to have been? No. I must give Mr. Collett credit for having been very active some years ago. He had then a large number of men on the road, but he was not properly assisted by his overseers; as far, however, as he was concerned, he was very active, and was constantly backwards and forwards.

1830. Has that always been the case? In respect to the weekly work.

1831. Was that when Mr. Collett held an inferior situation to that he holds now? Yes.

1832. Does Mr. Collett now visit the roads tolerably often? He does not; but Mr. Collett's duties must necessarily have increased very much.

1833. Do you know anything of Mr. Quodling personally? Yes, I do. I became acquainted with Mr. Quodling about two months ago, and I will tell you how. I had heard—indeed, it was spoken of frequently in the district—that he had objected to work on the line. This was so unusual a thing, in fact it was the first instance of the kind I had heard of, for an overseer to object to a contractor's work.

1834. It was considered a remarkable circumstance? Yes; and I desired to make his acquaintance.

1835. Did you become acquainted with Mr. Quodling in consequence? Yes; I assure you it was a case that was so remarkable —

1836. Had you any opportunity of ascertaining the way in which Mr. Quodling performed his public duties? I have never been on the works with Mr. Quodling.

1837. Can you speak of Mr. Quodling's competency to do the work he was put to? I cannot; but hearing of his objections, and riding over the road, I thought his objections well founded. I have taken particular notice of the roads for the last two years, and I travel up and down them very frequently.

1838. Do you know whether Mr. Quodling had any quarrel with Mr. Collett? I am not aware whether there was any quarrel between Mr. Collett and Mr. Quodling. I understood it to be more of a misunderstanding, in the first instance; but since, so far as I can find out, it has terminated in something approaching to a quarrel.

1839. Do you think it had anything to do with this unusual circumstance? The first intimation I had of any disagreement between Mr. Collett and Mr. Quodling was the following:—I went down on one occasion to the Bench at Murrurundi, and I had occasion to go to Wightman's to have some lunch; Captain Scott had a private room there, and the coffee-room being full, he invited Mr. Quodling and self to have some with him. Some one brought in some papers, as if from the post, to Mr. Quodling, and after he had opened them I saw that he was much annoyed, and he shewed a paper to Captain Scott. This was a letter from Mr. Collett, stating that he trusted Mr. Quodling would not for the future make any remarks in ink upon the vouchers. This was a voucher for some £500 he had been required to sign; and I noticed words to this effect:—"Mr. Collett requests Mr. Quodling will not make remarks in ink upon the vouchers, as it will necessitate in this case, as in all others, fresh vouchers." This was the first time that I knew of any misunderstanding between Mr. Collett and Mr. Quodling.

1840. Then you know nothing of Mr. Quodling's capacity or mode of doing his duty? No further than I have stated. I heard that he had objected to one culvert, as to the way the pitching was done, and also as to the description of metal placed on the surface, and I considered his objections generally well founded.

1841. Do you know Mr. Hannington, the road overseer? I do.

1842. Do you know anything of his character or capacity? I have had no opportunity of judging.

1843. Do you know anything of Mr. Clements? I do.

1844. Do you know anything that occurred lately of a peculiar kind? If you were to ask me the same question with respect to his capacity —

1845. State all you know of him? Mr. Clements, like several other overseers, has got his experience at the expense of the country. Mr. Clements came particularly under my notice, for he was quite a new hand, and I saw him throwing away hundreds of pounds.

1846. Of his own? No; Government money.

1847. In what way? He was experimentalizing on a piece of road between Doughboy Creek and Liverpool Range, and he was also making a bridge at a gully about half way up the range.

1848. In what capacity? As a road overseer; he was making a bridge out of stones; placing stones one on the top of another. Whether it was by day labourers or weekly men I do not know, but he had a gang under him, and he was placing stones on top of each other, the width of the road, about six feet high, to go across a gully. I said, "What is this for, Mr. Clements?" He said it was for a new sort of culvert. I said, "Do not you think the first thunder-storm the chinks will all be filled up, and you will have a miniature waterfall?" He said, "No; it was particular open." However, it was as I predicted—the first thunder-storm it was a miniature waterfall, and it is now filled up with *débris* from the hill.

1849. This was a piece of work being performed by a road overseer, and not by a contractor? Yes; and nearer Mr. Evans' house he made a cutting for about a hundred yards, and threw the loose earth from the side on to the crown of the road, and before it was consolidated he began to pitch it, and after pitching it he put from nine inches to a foot of clay on the top. I told him it would never answer; and the first dray that went over destroyed it. I believe that hundred yards cost about £300.

1850. Did you see the piece after the dray had destroyed it? Yes; it had to be done over again.

1851. Then you judge from these circumstances that Mr. Clements was not acquainted with his duties? I do.

1852. Has he become a competent officer since at the expense of the public? I am sorry to say he has not.
1853. What general character does he bear—was he dismissed—do you know anything of his dismissal? Not from my own knowledge; it is notorious that he was dismissed.
1854. Do you know anything of the reason, or of his general character? Unfortunately he was occasionally addicted to drunkenness.
1855. Do you know that of your own knowledge? Yes.
1856. Is he now in the Government service? He was up to within a short period; he has been suspended quite recently.
1857. Was there not a superintendent named Brown placed over him? Yes.
1858. Did you hear anything from Mr. Brown as to the reason of Mr. Clements' dismissal? I do not know Mr. Brown, except by sight.
1859. Did you ever report the circumstance with regard to Mr. Clements to the Government? I have reported to Mr. Collett about his incapacity when he was at Doughboy Hollow; not by letter—personally.
1860. What answer did Mr. Collett make? I do not remember any particular answer that he made. Mr. Collett said he would see to anything I told him; but he did not see to it. When I spoke about these culverts and embankments he said he would see to it, but he never did see.
1861. Were those culverts made by Mr. Clements? No, by a contractor; they were badly made, and when I complained, there was no improvement. I suggested, when these culverts were being done by contract, that it would be very much better if an officer were sent to inspect them before they were approved, because as soon as they were done they were covered up with earth, and it could not afterwards be seen whether any spikes were put in. One in particular that I called attention to was approved, and a dray fell through shortly after. The slabs were made out of a dead stringy-bark tree that I had known for many years; this was split up into slabs; and the men did not even attempt to bore them with a gimlet, but they put in three-inch nails, which did not go through and were bent over. The day after Mr. Collett left, a dray drove on it and went through.
1862. Do you know anything of Mr. Bayley, the superintendent, who was up there? I have seen him.
1863. Do you know anything of his character or capacity? No, I do not; with respect to his capacity, it was told me that he had condemned the pipe-clay piece.
1864. He told you—? No; he told several parties, who told me that he had condemned the pipe-clay piece.
1865. Since Mr. Quodling's resignation, do you know whether anything has been done with regard to these works that was not done before? When I came over the road, last Tuesday, I saw pitching being taken up and put down again, and I saw Mr. Martindale on the spot, particularly active making several alterations about the culverts and drain, and the pitching also.
1866. Might not these works have been carried on in order to finish the contract? Some of the pitching was being taken up again.
1867. Was anything else being done with regard to the slabbing of the bridges? They were putting up side-rails. I had to get off and lead my horse, where there were no side-rails.
1868. Do you remember any iron-work having been taken off a bridge? I reported it to Mr. Arnold.
1869. What did you notice? I did not see it myself, but I was told of it, and I made a report to Mr. Arnold.
1870. Do you know anything of a testimonial having been given to Mr. Collett some time ago by the public, or by anybody? My attention was called to it.
1871. How long ago? I do not remember the particular date.
1872. Was it five or six months ago? I really cannot say. It was presented to Mr. Collett when I was in Sydney, last May.
1873. How did you gather any information respecting it—do you know of it personally, or from hearsay? One or two parties wrote to me about it.
1874. By whom were you informed of it? In the first instance a party told me he had seen Mr. Clements, Mr. Greer, and Mr. Martindale, going about to try to get subscriptions.
1875. You may as well tell us what you know yourself? When I heard this I wrote to a person to inquire if it was so, and he wrote to say that it was.
1876. Will you mention the name of this gentleman? Mr. Neale, of Murrurundi.
1877. Were you applied to, to join in the testimonial? I was not.
1878. Did you see anything in the papers about it? It was afterwards presented to Mr. Collett.
1879. What was the amount? I do not know.
1880. Was it presented by the gentlemen in the district? It originated with three contractors.
1881. You only know that from hearsay? Something even beyond hearsay. I find that no one moved in the matter until it was undertaken by these three parties.
1882. Do you think he deserved that testimonial? I think he deserved it at their hands.
1883. Not from the public? Not from the public. The reason my attention was drawn so forcibly to it was, that I knew Mr. Collett was to come up and approve, or otherwise, of this large contract of Mr. Martindale; also of a contract of Mr. Greer, and a contract of Mr. Clements. That is how my attention was so forcibly drawn to it.
1884. *By Mr. Dalgleish:* This presentation was immediately before the passing of these contracts? It was initiated. I was told that Mr. Collett was expected in three or four days.

A. Loder,
Esq., J.P.

9 Dec., 1861.

- A. Loder,
Esq., J.P.
- 9 Dec., 1861.
1885. You have spoken of the width of the roads. Do you know what width the road should be—you state that you have seen the contract? I do not know exactly what width it should be.
1886. You have stated that the clearing was narrower than you thought it should be? What I consider the clearing was merely confined to eighteen feet in width. The trees were merely lopped off, not stumped, as in all other contracts I have seen.
1887. That is to say, the stumps extracted? In all other contracts I have seen about six inches below the surface.
1888. Do you know the contract width of the road that should have been cleared? I do not; but I know in the roads in the northern district it depends upon whether they approach a town; they are from a chain to a chain and a half wide. Before you put any farther questions, there is one matter which my attention has not been drawn to, which I think very material if you wish to have good roads: it is as to pitching being put on before an embankment is consolidated. In my opinion it is impossible to have good roads unless that is attended to. I will refer to an instance where Mr. Clements put on pitching before the earth was properly solid; the consequence was, that as soon as there was any traffic the stone was turned down below and the mud on the top. In the case of the Doughboy Diversion, the earth-work was not sufficiently consolidated before the pitching was put on. I noticed in the contract that it was to be consolidated.
1889. From what you know of pitching, was it pitched by hand, or was it merely large stones thrown on the road from a cart? Thrown from a cart, and then placed side by side by hand.
1890. It is hand pitched? Hand pitched; the small stones at the side were placed on their edges, and the large stones on the centre.
1891. Were the large stones placed on their edges? No, on the flat.
1892. From what you know of the matter, should you consider that the proper way? I should not consider so, but that is the way that contract is done, and the Liverpool Range also.
1893. When you speak of slabs, you mean split timber as contradistinguished from sawn? Split timber.
1894. With regard to shale, you say that this shale very speedily goes to dust? After wet weather heavy drays will crush it.
1895. Will the weather itself have any effect upon the shale? Yes.
1896. Will it have any upon the trap? Very trifling.
1897. Then, independently of the effect of the traffic upon shale, it is desirable to have trap? Where you can get it, as you can here.
1898. What proportion of shale was there to trap or basalt? I could hardly answer that without measuring it; there was a large proportion of trap, but a good deal of shale.
1899. Would every sixth piece be shale? Generally speaking, the shale and trap was not mixed, but was put on in separate places. There might be a quarter of a mile of trap, and then perhaps a hundred yards of shale. Where I got that piece of shale (*referring to a specimen produced*) I should think there must have been a hundred yards of shale. Shale appeared to have been taken out of the cuttings and placed on the road as far as it would go, and then trap was put on.
1900. You have spoken of Mr. Miller as a contractor on the Northern Road at one time; is he still a contractor? The Mr. Miller who used to have the contracts has gone to England, but there is a Miller on the road, a contractor now I believe, a brother.
1901. Where a road is marked out on the side of a hill, is the width of the road made up from the cutting—Is the road scarped out of the hill side, or is it partly cutting and partly embankment to make up the width? There are spurs on the Doughboy Range, and some of the cuttings are tolerably extensive, and others are slight; the earth is cut away from the side and is then thrown down on the other side until the road is eighteen feet wide.
1902. It is partly cut and partly banked? Yes.
1903. It is this part of the road which you consider dangerously narrow? Wherever there is any great fall, as there is on the Liverpool Range, but on the Doughboy there is not so much, with one exception. On the Liverpool Range, if anything were to give way where the fencing is, there would be a very serious accident; but, with the exception of the large cutting, I do not think there is any great fall—not more than five or six feet, excepting the wooden bridges and stone piers.
1904. I understood you to say the drains were not properly formed; on what portion of the line was that? The drains are properly formed, but there is nothing to prevent the necks of the water-boxes filling in; there are no gratings or other means of preventing the rubbish getting into them and choking them up, and when the earth falls in, it chokes them up and causes the water to run down the roadway.
1905. With regard to the testimonial you have spoken of, you are not aware how it was presented, whether publicly or privately? I am not; I believe it was presented publicly. I have no doubt it was, although I was not there.
1906. You stated that some parties had written to you upon the subject—in what way did they write—of what did they complain? I wrote to ask whether it was possible these persons had so far forgotten themselves as to go about to initiate a testimonial to a public officer like Mr. Collett, and I received an answer that they did go about in that way, knowing that Mr. Collett was expected up every day to approve or condemn their works.
1907. Have you any reason to believe that Mr. Collett knew a testimonial was being collected for him by them? I cannot say, but I do not think he could have avoided hearing of it as soon as he came into the town.
1908. *By Mr. Hoskins*: Is it customary to have copies of specifications of any contract being performed in a district, kept at the nearest Police Court? I am not aware.
- 1909.

1909. Have you ever seen that? I cannot say that I have; but I think it would be a great improvement if it were a general practice; because at present the people of a district are quite in the dark as to what a contractor is doing, and anyone who takes an interest in public matters might be a check upon any irregularity if this were done.
1910. Do you know, as a matter of fact, that the largest portion of the works allotted to Mr. Martindale and others, in the vicinity of Murrurundi and Scone, have not been let by public tender? I have heard that immediately after this testimonial, each of these three contractors got a contract without tender.
1911. Can you give a rough guess as to the amount of these contracts? I have heard that one got a contract of £100 without tender.
1912. Have you heard of any higher amount? No.
1913. Can you say whether the extended contract for the work at Liverpool Range was tendered for? I heard the £700 was not done by tender.
1914. Have you heard any reason assigned for that? That the money voted by the Legislative Assembly was not sufficient to finish that work in a proper manner, and it was necessary to expend £700 more.
1915. Which money was expended without the work being open to competition? I understood that was the case.
1916. Do you know whether Mr. Clements got a contract under Government? Yes.
1917. Where? Between Murrurundi and Scone.
1918. Can you state the nature and extent of that contract? No.
1919. Roughly? He told me he had got a contract there.
1920. I should like to know roughly the extent of that contract, whether it involved an amount exceeding £100? I cannot say; it was for re-making the road.
1921. Was there any amount for bridges in it? No, it was for making the crown of the road.
1922. Can you state the length of the contract? No, I cannot.
1923. Can you state whether Mr. Greer ever held a contract under Government? Yes.
1924. Had he in that neighbourhood? Yes, also one about Merriwa.
1925. Do you know the extent of that contract? No.
1926. Can you give a rough guess at the amount? No.
1927. Do you know whether he had it after it had been open to competition? The only thing I know is that each of these parties had a contract after the presentation of this testimonial.
1928. Did Mr. Martindale get the Doughboy contract by public competition—was the contract advertized for tender? I believe the original one was.
1929. Has the original contract been exceeded? Yes.
1930. Do you know that as a matter of fact? I have seen the papers which would lead me to suppose so. I have seen the copy of a letter which would lead me to suppose that it was exceeded.
1931. Do you know whether the extension of the contract was let by public tender? I believe not.
1932. Do you, as a Magistrate acquainted with the contracts which have been let for a considerable time past within the Scone and Murrurundi districts, know whether they are generally let by public tender? I know about my own neighbourhood, but not much about Scone, except when I come down to Sydney, but I am almost weekly on the other road.
1933. Have there been many extensive contracts let in the vicinity of Murrurundi and Colly Creek? The only contracts which have been let to any extent are those of Mr. Martindale and Mr. Heritage. Mr. Heritage's was for clearing from Murrurundi to Tamworth.
1934. That was let by public tender? Yes, that was, to Mr. Heritage, and Mr. Martindale's was originally, but from a letter I saw I came to the conclusion that he was to have a lump sum, and that would vitiate the original contract.
1935. Was there any alteration in Mr. Heritage's original contract, do you know? I have every reason to believe there was a material alteration, but I do not know of my own knowledge.
1936. Have you ever heard it? Yes, it was quite patent; it was notorious that it was altered.
1937. Can you tell us the nature of the alteration? I believe I am justified in telling you as I heard it from several parties. They stated that it was done in this way: that Mr. Heritage tendered for clearing the road between the Doughboy Diversion, the end of Mr. Martindale's contract, and Tamworth, at £50 a-mile a chain wide, and his tender was accepted; but the fact was overlooked that it was to be a chain and a half wide, and that would make it £75 a mile. When Mr. Heritage came to Sydney he went to the Public Works Office and had some words about it, and he left with the intention of having the affair published in the *Sydney Morning Herald*. When he got to the *Herald* Office (as the report goes), Mr. Fairfax, who is a friend of Mr. Heritage, said he thought a note from him would set the matter right. He did send a note to Mr. Rae, and the matter was set right. I was told that Mr. Collett went so far as to say, "Tender that and you will get it," marking down £55; but he did not tender £55, for reasons of his own.
1938. *By Mr. Lucas*: Did you hear his reasons? I did—because he was under the impression that Mr. Martindale had tendered also.
1939. *By Mr. Hoskins*: Did Mr. Martindale tender for this contract? I am not aware.
1940. Who has the contract now? Mr. Heritage.
1941. What are the terms of his contract? I believe a chain and a half.
1942. What is he to get a mile? I believe £50, and that he is sub-letting the work for £40 a mile. I had some men who were clearing this road, and they got £40.

A. Loder,
Esq., J.P.

9 Dec., 1861.

A. Loder,
Esq., J.P.

9 Dec., 1861.

1943. I think you said previously that Mr. Martindale had some contract for clearing some country for a new line of road? Yes, that is Mr. Martindale's contract just below Evans' public house at Chalcott's Flat—from the Doughboy Diversion to Chalcott's Flat.
1944. What is the length of that contract? I think it can be little less than three miles.
1945. Can you tell us what he is getting a mile for that clearing? £80, I believe.
1946. Was this contract allotted by public competition? I am not aware.
1947. Do you know whether it was advertized for tender? I am not aware.
1948. Do you know as a matter of fact, or from what you have heard from persons upon whom you can place reliance, that contracts have been frequently allotted to persons on the Northern Road without being open for public competition? I have heard it frequently asserted.
1949. Is it a common topic of conversation? Yes.
1950. That certain contractors are favoured? Yes.
1951. Who has the allotment of these contracts? Mr. Collett.
1952. Do you know whether these contracts that are allotted are formal contracts, or whether they are entered into in a rough way, verbally? There seems to be a strong impression in the district that Mr. Martindale gets information more readily than anyone else; that he is placed in a position more favourable to himself and unfavourable to the bulk of the tendering public. That is a very common impression, and it is expressed very openly.
1953. Can you say whether the contracts generally that Mr. Martindale has had have been performed in a very slovenly manner? Judging from the only two that have come under my notice, I consider that they are performed in a very slovenly manner.
1954. I understood you to say that persons are deterred from tendering for contracts because they expect that they shall be required rigidly to adhere to the plans and specifications, but that it has generally been found that the person who has had the contract, Mr. Martindale, has not adhered to the specification? He has not adhered to the specification in the Doughboy Hollow certainly.
1955. I understood you to say that you have seen bridges over culverts where the slabs were loose? Yes.
1956. Have you frequently remarked that? No; I noticed two in the neighbourhood of Doughboy Hollow; but that was before Mr. Collett was made Commissioner.
1957. Had Mr. Collett then the charge of the Doughboy Road? Yes.
1958. Which was done by contract? This man got £10 or £12 for each culvert. It was the first work done on the Liverpool Range by contract.
1959. Have you seen other culverts where the slabs have been loose? I have noticed one, somewhere towards Scone, they have had to replace within the last three months.
1960. You are a frequent traveller over these roads and an attentive observer? I do observe pretty well.
1961. You alluded to some place in the vicinity of Evans' public-house—to some work having been performed in a very slovenly manner that was superintended by Mr. Clements—some large pitching that was put upon clay before it had consolidated? Yes.
1962. Had Mr. Collett charge of the road at this time? Yes.
1963. Did he see this work when it was under construction? I cannot say.
1964. You cannot say whether he ever visited it? No.
1965. What was the extent of the contract? It was not done by contract; he had a gang of men under him.
1966. What was the extent of this work? I heard from Mr. Clements that it cost about £300 for this hundred yards.
1967. How long was that ago? Fully three years ago.
1968. How long was it under construction? They were a long time doing it; they got on very slowly with daily labour.
1969. Can you say from your own knowledge whether Mr. Collett visited that locality during the time it was under construction? I cannot remember.
1970. How long do you suppose it was under construction? It must have been several weeks under construction.
1971. With reference to this Mr. Clements, I think you told us that he had a contract between his first dismissal and his reinstatement? Yes; he was a contractor, and was working on the roads, more or less, from the time of his dismissal to his reinstatement.
1972. As a contractor under Government? Yes.
1973. Not as a sub-contractor? As both.
1974. You cannot state the amount of the contract he held direct from Government? I believe he had a partner; whether he took a contract in his own name I cannot say. I have seen him on the roads.
1975. How long have you known Mr. Clements? Since he first went up to the district; he went up as sheep overseer to Mr. Warland.
1976. How long have you known him as road overseer? Afterwards he was dismissed from Mr. W.'s service, and then he became road overseer.
1977. How long is it since he was with Mr. Warland? About five years ago. He was a good bit overseer under the Government; and he was a short time auctioneer at Murrurundi.
1978. You do not, I suppose, know who appointed him? It was during Mr. Collett's time, and I presume Mr. Collett appointed him.
1979. Previous to his being road overseer, had he any knowledge of road-making? I am satisfied he had not, practically; from the way he set about it, he could not have had.
1980. This person is now under suspension for misconduct? I believe he is.
1981. Can you say what thickness of this metal, or shale, has been laid on the road at the Doughboy Diversion? About three or four inches, excepting the crown, which I say was bare.
- 1982.

1982. There was none at all on the crown? None at all.
1983. Do you know that the terms of the contract provide that the metal shall be nine inches deep at the centre, and six at the sides? I had forgotten that; but there is nothing like that quantity.
1984. In no part? In no part.
1985. On the average you think it is three inches? On an average. Of course the big stones alluded to at the north end of Martindale's contract would be three or four inches thick; but on the crown of the road before alluded to, in places, there was no broken stone.
1986. I would like to know whether you have ever taken the trouble to look at these bridges? Yes, I have.
1987. Did I understand you, in reply to a question of Mr. Foster, to say that you knew iron-work had been removed? I was informed of it so late at night, when I was coming from the Bench, that I could not go to examine it; and I wrote to Mr. Arnold the next morning, telling him of the fact, knowing that I could rely upon my information.
1988. Have you since looked to see whether the iron-work has been removed or not? I have not; but Mr. Hannington told me it was correct.
1989. Did you ever hear any remarks made by Mr. Hannington or the contractor, with reference to the removal of the iron bolts? What Mr. Hannington told me was, that through some inattention (as I understood it to be) or oversight in the drawing of the bridges, this strap and iron-work which have been removed was not in them, and Mr. Martindale had given an order to his overseer to remove all the iron-work not in the plans and specifications; and when Mr. Hannington heard that the iron-work had been taken off from one bridge, he remonstrated with the overseer not to strip any more till after Mr. Martindale came down.

A. Loder,
Esq., J.P.
9 Dec., 1861.

TUESDAY, 10 DECEMBER, 1861.

Present:—

MR. DALGLEISH,	MR. HOSKINS,
MR. DANGAR,	MR. LUCAS,
MR. DICK,	MR. MARKHAM.

WILLIAM FORSTER, ESQ., IN THE CHAIR.

Andrew Loder, Esq., called in and further examined:—

1990. *By Mr. Hoskins:* I did not clearly understand your answers in reference to Mr. Heritage's contract for clearing the line; I must therefore ask you for what amount per mile did he put in his tender originally? What I was informed was, that he put in a tender for £50 per mile, supposing the line to be cleared to be one chain wide.
1991. And it was afterwards intimated to him that he ought to have based his calculations upon a chain and a half wide instead of one chain? Yes.
1992. And in this respect he had to amend his tender? Yes.
1993. Did he go to Sydney in order to do this? Yes, I believe so. His intention in going down was, I know, to see Mr. Rae, in order to make the final arrangements for the contract.
1994. When he came down to Sydney, was he informed that the amount he had tendered for was excessive? He was told that his tender was informal, inasmuch as it was for clearing one chain wide of roadway when only a chain and a half was required. Mr. Rae's attention was drawn to this when the tenders reached the office, and thus the mistake was discovered.
1995. Was the mistake rectified? It was.
1996. He amended his tender? He did.
1997. Was it intimated to him by any officer of the Government that he had better put in his tender for any certain amount? What I was informed was, that Mr. Collett wrote with his finger on the table the two figures 55, and said, "Put in for that, and you will get it."
1998. Did Mr. Martindale tender for this work? I do not know as a fact that he did; but it was so reported.
1999. You have heard so? Yes, repeatedly.
2000. For what amount did he tender? That I do not know.
2001. You never heard the amount? I may have heard, but I do not remember.
2002. Mr. Heritage obtained the contract? He did.
2003. I believe that Mr. Martindale also had a contract of the same description? Yes, from the Doughboy Diversion up to Heritage's contract.
2004. What does he receive per mile? I did say in my former examination £80 a mile; but I believe that is under the mark.
2005. Was this let to him by public tender? That I do not know.
2006. Did you ever hear whether it was? I believe I did, but I am not certain on the point.
2007. Did you ever hear what was the amount of the lowest tender upon that occasion? I did not.
2008. Do you know any of the unsuccessful tenderers upon that occasion? No; I am quite unacquainted with them.
2009. I left off my examination yesterday when we had got to the bridges, and to the removal of the iron-work from them. I believe you wrote to Mr. Arnold, the Secretary of Works, complaining that the iron bolts and bands had been removed from some of the bridges? I did.

A. Loder,
Esq., J.P.
10 Dec., 1861.

- A. Loder, Esq., J.P.
10 Dec., 1861.
2010. Did you receive any reply to that communication? I did.
2011. What was the purport of it? It acknowledged the receipt of my note, thanked me for drawing the attention of the Department to the circumstance, and stating that the Secretary for Works intended to get a report from the proper officer on the subject.
2012. Did you hear anything more from the Department in reference to your complaint? I did; I received a second letter, so very different from what I had reason to expect, that I am sorry I did not bring down it with me to lay before the Committee.
2013. Can you explain the purport of it? I am not so very clear as to its purport as I would wish to be. It was so very different from what I expected from the Department that I had determined upon making further inquiries, and following the matter up myself, if this Committee had not been appointed.* After the statement that Mr. Hannington made to me, that he thought the removal of this iron-work would materially weaken the bridge and tend to damage the embankments, I expected a very different answer from that which I received. He told me that the Government had been very much in fault in the first instance, from their not having had all this iron-work inserted upon the plans and specifications; and that he had spoken to Mr. Donaldson (Mr. Martindale's overseer) upon the subject, and that he had given orders to take no more off, until† the bridges could be inspected by Mr. Collett, who was then on a visit of inspection at Kentucky, or Iron Stone, or some place near Armindale. It was to be left on them, to be made a matter of after arrangement between the Government and the contractor.
2014. Mr. Collett afterwards inspected these bridges? I presume so.
2015. And did he affirm the necessity for removing these bolts and bands? That I cannot say.‡
2016. Do you know who had the plans of the bridges at this time? I know nothing about them; I only tell you what Mr. Hannington told me; and you have the statement just as it was given to me.
2017. Were those that had been removed replaced? That I do not know.
2018. Have you seen these bridges lately? I came over them recently, in coming down to Sydney, but I did not examine them so closely as to notice whether the bands and bolts had been replaced. The fact is that the matter escaped my memory at the time, or I certainly should have made a point of doing so.
2019. What is about the length of these bridges? I can only speak from guess, as I have never stepped them. Some of them are possibly about the length and a half of this room; and others are four or five times as long. Some are pretty long bridges, others are short.
2020. Have you seen the specification of the work required on these bridges? I have, but not recently.
2021. You do not remember the terms? I do not.
2022. Did you remark what was stated in the specification in regard to the iron-work on the bridges? I do not recollect the terms now.
2023. Do you consider that the superstructure of these bridges is endangered by the removal of these bolts? I did not look at them sufficiently closely to be able to give a decided opinion on this point.
2024. I believe they are constructed of very massive timber? Yes, very much so.
2025. Are wooden bolts sufficiently strong to tie together such massive material? I noticed that in the other bridges the iron bolts were quite necessary for the permanency of the structure; and I presume they must also be so for that of the bridge from which they were removed. I may mention here that the iron-work was only taken off from one bridge; and, as I explained, I omitted to examine that, from the matter having escaped my memory.
2026. Did you ever, as a Magistrate, represent to the Government that you thought it necessary that copies of the specifications and contracts should be lodged in the Court Houses of the district in which the work is to be executed? I did not.
2027. Would you not consider it desirable that this should be done? I think it very necessary; at any rate it would be very much more satisfactory.
2028. In reference to the clearing and the removal of stumps, do you know the width that Mr. Martindale has contracted to clear? I do not.
2029. Do you happen to know whether he has completed his contract? Yes; he told me the work had been approved by Mr. Collett, so I presume it had been completed.
2030. For the whole three miles? Yes, 2½ or 3 miles.
2031. And what is the width that has been actually cleared? Only the width of the roadway, about 18 feet, that is the only width that is cleared as it should be. In the other parts of the width the trees are down, but the stumps are left standing in most places.
2032. Have you looked at the manner in which Mr. Heritage has performed his part of the line? I have.
2033. What width has he cleared? Without stepping it, I should say about a chain and a half.
2034. And cleared it properly? Yes.
2035. Mr. Martindale's contract joins on to that of Mr. Heritage? It does.
2036. And it is easily seen that he has cleared a less width than Mr. Heritage? Yes.
2037. Mr. Heritage's part is well cleared, and that of Mr. Martindale is not? No; except in the actual roadway, the stumps are nearly all left standing.
2038. On all but a width of about 18 feet? Yes.

2039.

* NOTE (on revision):—I did not say so.

† Revised:—Mr. Martindale's return, who was at Kentucky, Stonehenge, or Armindale.

‡ NOTE (on revision):—I could not have so stated, for Mr. C. has not been up since.

2039. And yet he told you that his contract was finished? Yes, he told me that Mr. Collett had approved it—that “he had passed it,” I believe was his expression.
2040. Have you remarked any deficiency in the number of spikes driven into the slabs that form the flooring of these bridges? I have not; my attention was never called to them.
2041. Then you have not noticed how many spikes have been driven? I have not.
2042. Of course you consider that this description of shale or rock that has been put upon the roadway is very much inferior as road metal to the ordinary trap rock? There can be no second opinion about that.
2043. Would not the contractor be a great gainer by using this easily broken material in place of the harder trap road metal? No doubt it would be a very great advantage to him.
2044. Did you ever hear that there was a deficiency in the quantity of road metal put upon the road way? There is nothing like the quantity specified in the contract placed upon the roadway.
2045. Did you ever hear Mr. Hannington express his dissatisfaction at the way in which contracts generally were carried out? I have.
2046. Did he ever complain in specific terms? He did.
2047. In what terms and where? I was having lunch at Wightman's, at Murrurundi, when Mr. Hannington came in and said he had just been over the works with Mr. Quodling's successor, with whom he had gone to point out the works he would have to see after; and though he was bound to Mr. Collett for procuring him the situation he then held under the Government, yet he could not help speaking the truth, and must say, therefore, that he was not at all surprised at Mr. Quodling's resigning, as, after his representations, there was nothing else that he could do, because the works that had been carried on were most disgraceful.
2048. Were those his words? Yes.
2049. Without your questioning him? He used these very words, without my asking him anything about it.
2050. Where is Mr. Hannington now? I heard, as I came down the road, that he had come on to Sydney with Mr. Collett.
2051. Do you know the large cutting on the Doughboy Diversion? I do.
2052. Do you consider that the roadway there is of sufficient width for the ordinary traffic? My impression is, that at that spot it is wider than at any other part. Certainly I did not notice any particular narrowness of the roadway at that cutting.
2053. You consider it wide enough for the traffic? Yes, at that spot; I do not complain of the width there.
2054. There must be a great deal of water run off these hills down upon the roadway? There is.
2055. Must not that tend, in the course of a short time, to undermine the embankments? My impression is, that the road is here well drained upon the upper side; but the objection I have made is this, that the earth taken from the excavation has been tilted over into the creek, until it has been completely dammed up. As there is no channel left for the water, damage is very likely to occur in that way, from the obstruction to the creek.
2056. Did you ever see the schedule of prices under which this work was executed? I did not.
2057. Have you ever heard what the prices were? I may have done so, but I do not remember them now.
2058. Did you ever hear the exact number of cubic yards that were excavated? Possibly I may, but I cannot say now.
2059. Do you know the width of the clearing, according to the specification, which Mr. Martindale was to perform at the Doughboy Diversion? I do not.
2060. But the roadway, you say, is only 18 feet wide? That is all, as near as I can judge.
2061. Then about a foot on each side of this would be cleared also? No, I must explain this. The width actually metalled is not above 12 feet or 13 feet, and then, with the drain on each side, and the small portion not metalled, the whole width of 18 feet is made up.
2062. The specification states that the clearing is to be one and a half chain wide, and that all stumps are to be removed, except those on the higher side of the embankments. Has this been carried out? I noticed that the stumps were not removed on either side of the embankment.
2063. How long ago is it that these matters you complain of occurred? It has been the same throughout; there has been no difference from first to last.
2064. Has there been any improvement since Mr. Quodling's resignation? I have noticed a very much larger amount of activity on the line since then, and that there has been some alteration in the mode of doing the work. There has been also some pitching been taken up and replaced, and something is also being done to some of the culverts. I do not know what, but I have seen Mr. Martindale very busy on the line making alterations.
2065. You are sure, however, that the clearing is not a chain and a half wide? Most certainly it is not—not cleared as it should be.
2066. With regard to the cutting, do you think that there are 20 feet of solid excavation? I should say not; there is a great deal no doubt, but from the earth having been tipped over into the creek it is difficult to judge of the quantity; but I doubt very much if there are 20 feet of solid embankment.
2067. By the specification it is provided that the roadway shall be 24 feet wide—do you think there is that width? I feel quite assured that there is no such width as that.
2068. You are sure there are not 24 feet? I do not think there are; but that particular part did not strike me as being particularly narrow. There is sufficient room at that cutting for two teams to pass comfortably.

A. Loder,
Esq., J.P.

10 Dec., 1861.

A. Loder,
Esq., J.P.

10 Dec., 1861.

2069. Did you notice any of the masonry? I did not. I am not a judge of masonry, and do not profess to be so.
2070. From your knowledge of Mr. Quodling, do you think that he is a young man in whom the Government might safely repose confidence and entrust with the overlooking of their works? I consider him to be the best man we have had in that district for some years past.
2071. On what account? Because I have found that his objections to the mode of constructing the roads have been well founded. It is not saying very much in his favour to say that he is the best man we have had for years, because we have had but a very indifferent lot of officials for some time past.
2072. Did you find him attentive to his duties? Yes; he appeared so to me. I saw him frequently passing up and down the road by my place before I knew who he was.
2073. How long have you known him? About two months. I think it is about that time since I was introduced to him.
2074. Since then, did you ever have any conversation with him in reference to these contracts? I did.
2075. When? I cannot say positively when, but within the last two months.
2076. How long prior to his resignation? About a month I think, but I cannot speak to within a week.
2077. Will you state, just in general terms, what that conversation was—whether in fact he complained of the contractors and of the mode in which they carried out their contracts? Before I knew him at all, I had heard very many parties—reputable persons, whose opinions are worthy of consideration—complaining of the way in which the works were being carried out—that they were not being done as they should be. Since then, Mr. Quodling complained to me of the same thing.
2078. What was the particular nature of his complaint—was it that Mr. Collett disregarded what he said to him in reference to the work? His complaint was three-fold; first, that the embankments were not allowed to become consolidated before the pitching was placed on them; second, that the metal was not placed at twice upon the pitching; and third, that the metal was scarce in quantity.
2079. Do you consider these complaints to have been well founded? I do; and I also regard the pitching as being defective, inasmuch as the largest surface is placed on the surface of the ground. The stones used are large flat stones, and in almost every case the largest surface is turned upwards, whereby the pitching is not so solid as it should be.
2080. Then has this been metalled with shale or with trap? That question I answered yesterday, as nearly as I could.
2081. Do you happen to know that Mr. Martindale's original contract has been extended? From a copy of a letter I saw, with the signature of Mr. Collett, I think, attached to it, I came to the conclusion that it had been extended.
2082. He had taken the contract for a certain sum, and then that sum was afterwards increased? Yes; that was what I understood from the letter.
2083. Was this increase made by public tender? I should say certainly not, judging from the terms of the letter.
2084. And what amount of money was involved in this extension? The contract was originally taken by Mr. Martindale, for £6,390 odd, and this amount was increased by the letter to £7,000, thus involving an increase of £610, or £615.
2085. Where did you see this letter? With Mr. Quodling.
2086. But where? In the district in which he then was.
2087. What was the purport of this letter? The purport of it was, in so far as I gathered, that on first looking at it, it seemed to me as though it had emanated from Mr. Bayley; but on looking more closely through it, I found that it came from Mr. Collett to Mr. Bayley, stating that certain alterations would be required in the specification for the road work; that some additional excavation would have to be made, and some additional metalling to be laid down; and if I remember right, it said that Mr. Martindale was willing to do it for £7,000. There was a memorandum on it that it was approved, and an endorsement from Mr. Bayley, stating that the original, in Mr. Collett's writing, was in his possession.
2088. Then it was only a copy that was shewn to you? That was all.
2089. What made you suppose that this letter emanated from Mr. Collett? I can only say that that was the impression that reading this document left on my mind.
2090. Was it Mr. Quodling who told you that it came from Mr. Collett? He may have done so, and, if I remember rightly, I think he did so.
2091. Would you recognize the copy that was shewn to you if you saw it again? Yes, very likely.
2092. Is this letter the one you refer to (*copy letter, June 27, 1861, handed to witness*)? It is. I see by this memorandum in Mr. Bayley's writing, and bearing his signature, that he says that the original is in Mr. Collett's handwriting.
2093. Then I presume that Mr. Bayley has the original letter? That I know nothing about. I know nothing beyond what I see here written, and here it says that he has it.
2094. Then this letter would, in fact, be a suggestion to Mr. Bayley from Mr. Collett, that Bayley should write to him, applying for this extension, and naming the sum to be asked for? Most certainly that would be really the effect of it.
2095. You also alluded to the manner in which the Liverpool Range contract was conducted—do you happen to know whether Mr. Bennett condemned the quality of gravel spread on the roadway? I have heard that Mr. Bayley complained to Mr. Bennett of the quality of gravel that had been used; and that Mr. Bennett stated before he left the Colony that the contractor was not to be paid for the work until it was done in a proper manner. But these things will be found in the office of the Commissioner of Roads; at least, I presume so.

2096. How long was this previous to Mr. Collett taking charge of the Northern Road? I really forget. A. Loder,
Esq., J.P.
2097. Do you know if the gravel was removed after Mr. Collett took charge? It was not.
2098. I think you said that you considered this part of the roadway as much too narrow? Yes, I think so; in fact, I am sure so. There can be no question about it. 10 Dec., 1861.
2099. And I believe that only a few weeks after it was formally opened it was quite impassable? It was very bad. It became impassable about—I do not know the exact time when it was opened—but it became impassable about May.
2100. Do you know when Mr. Collett finally approved of the work on this road? I remember the time he came up to inspect it and approve it; but I cannot fix the exact date. I remember the circumstance of his coming up to inspect it, because it was brought particularly to my notice by matters that then occurred; but I do not remember the date.
2101. Can you say about the time—within a month? I cannot say; but it was about the time that the circumstance occurred which was alluded to by Mr. Evans yesterday, when the memorandum for a testimonial to Mr. Collett was being carried about. I remember well that it was on a Sunday that he was up upon the works, inspecting the road. It was on a Sunday morning that he rode over to the Doughboy Hollow, and about the time that this memorandum was being taken round.
2102. And you feel assured then, that these contractors for the works that were to be inspected were carrying about a paper soliciting subscriptions to a testimonial to Mr. Collett, only a few days prior to that gentleman's visit of inspection? Yes, I am quite sure of that.
2103. Did they solicit you to subscribe? They did not.
2104. Was there any difficulty in obtaining good material for road-making upon the Liverpool Range? Not at all. There is some of the best gravel there for road-making that I ever saw, only to get it good would necessitate the carting it up hill, as it is found in the lower part of the range. I never saw better gravel than that procurable at the foot of the range.
2105. You know also, I believe, that Mr. Martindale's contract for this road exceeded the original estimate and tender sent in? I know no farther than what he told me himself.
2106. What did he tell you? He said he was to get £700 beyond his contract, for extra work.
2107. Was this work let by public tender? That I cannot say.
2108. Have you ever looked closely at the construction of the Arnold Bridge at Murrurundi? I have.
2109. What description of timber is used for planking the roadway? I do not know of my own knowledge, as I was not able to judge of it from its being tarred over when I saw it, but I heard two Magistrates of the district expressing themselves very unmistakably on the subject.
2110. Would you object to say who they were? No. One was Mr. Martin. Mr. Wright also told me that when Mr. Collett was waiting in Murrurundi to get a telegram from the Sydney office, as to the name the bridge was to be called—this was on the occasion of the opening of the bridge—they had some conversation together about the white gum that had been used for planking the roadway. Mr. Wright asked him if he thought white gum was a durable wood for the purpose. Mr. Collett answered that he had heard that white gum was objectionable; but that, until he had proved that it was so, he would continue to use it.
2111. Who designed the Arnold Bridge? That I do not know.
2112. Do you consider white gum to be a durable wood? After an experience of 23 years of its properties, I am quite satisfied that it is not.
2113. Do the settlers about that part of the country use it? Not if they can get anything else.
2114. I believe it is more easily worked up than the red gum? No; I think it was used because it was more easily obtained. It is the prevailing kind of timber in that part, and is plentiful, because very few people use it—none in fact, unless they cannot get anything else. It is a most objectionable wood to use where durability is required. I never use it, and an experience of 23 years has decided me not to do so.
2115. With reference to the road at Harpur's Hill that you have spoken about: you have said, I think, that Mr. Martindale stated that this road had been macadamized? Yes, I have.
2116. Did you see any broken metal on that road? I saw a few pieces, but they were very few and very far between. There was certainly not enough to lead me to suppose that there was any large amount of metal laid on the roadway.
2117. And yet Mr. Collett had passed that road as macadamized twenty months previously? I believe it was passed as macadamized.
2118. And was it macadamized? No, nor nothing like it. No person whatever, however ignorant of road-making, would ever imagine it to be so.
2119. Is there any scarcity of metal suitable for road-making at Harpur's Hill? On the contrary, there is abundance of it. The crest of the hill has been cut through to make the roadway, and where the cut has been made there is abundance of stone for the purpose, taken out in process of excavation. It has been used extensively since then, and I had pointed out to me some excellent metal laid on the road, which I was assured had been got from the surfacing on the hill—from stones gathered on the surface.*
2120. Then there is abundance of good metal actually on the side of the road? There is abundance of it.
2121. You stated that Mr. Miller, the contractor, was paid 12s. 6d. per yard for the work he

* NOTE (on revision):—I have seen good metal being since broken at this spot, but that put on by Miller was surfacing. The above is what I stated.

A. Loder,
Esq., J.P.
10 Dec., 1861.

be performed—do you know whether this was for the lineal yard? I only know that Mr. Martindale said he (Miller) was paid that much per yard for about a mile and a-half of it; but whether for the lineal yard or not he did not say. I tried to get some information on this subject, but I could not succeed.

2122. Do you happen to know that Mr. Miller, prior to leaving for England, was reputed to have acquired wealth very quickly? I do.

2123. Had he any great means of his own when he first commenced taking contracts? No; the reverse.

2124. And had he not very extensive properties when he left? I have heard it said so.

2125. What have you heard? I have been told that he had several houses and plenty of money and land before he left the Colony for England.

2126. Have you ever heard or has it come under your notice that Mr. Miller was a very active man at election times? I do not know that he was.

2127. With reference to the metal placed on the roadway at the Nailors—did you ever hear that Mr. Miller was paid for putting a coating of gravel on the road, and that afterwards the work had to be done over again? Yes, I heard so from Mr. Martindale. We had passed over this road at the time when Mr. Martindale alluded to the work, and said that after it had been passed by Mr. Collett it had to be repaired almost immediately. When he mentioned the circumstance, he spoke of Mr. Miller as a contractor very much favoured by the Government.*

2128. Was the roadway well gravelled? The stuff used at the Nailors was not worthy the name of gravel. It was nothing more than white loam.

2129. And this loam had to be removed? Yes, subsequently.

2130. In what way was the road ballasted? That I cannot say, but I know that a great deal of it was removed.†

2131. Did you hear who removed it? I did not.

2132. Nor yet who was paid for it? No.

2133. Do you know Mr. Williams, the road overseer? Yes, by sight only.

2134. Where is he stationed? At Murrurundi.

2135. How long has he been there? I do not know; but some months, I believe.

2136. I believe he fills the situation of road overseer? I believe so, but I do not know what his duties are. I have seen him passing backwards and forwards along the road.

2137. Do you know whether he has ever filled any situation of the kind before? I do not.

2138. Has he any practical experience of the duties of his situation? I do not know. All I know is what Mr. Collett said, or rather, what he was reported to have said in the public prints, and what a Magistrate, Mr. A. Brodie, and C. P. S., Mr. G. G. Brodie, told me they had heard him say at the time. At the public dinner given at Murrurundi, in celebration of the opening of the Arnold Bridge, Mr. Collett made a speech, and in the course of it he congratulated the inhabitants of Murrurundi, not only on having good contractors to carry on their works, but also on having a road overseer to look after the works who was a gentleman by birth and education, who only wanted some practical experience to make him all that was required.

2139. You did not hear him say this? No; I did not attend the meeting; but I was told it by persons who heard it, and upon whose correctness I can rely. Besides, the same thing appeared in the public prints, in the report of the proceedings.

2140. Do you happen to know whether Mr. Hannington has had any practical experience in road-making? I do not.

2141. There has been some diversion in the Doughboy Hollow route from the line originally laid out? Yes. I remember that Mr. Debenham pegged out the line in the first instance; and in the cuttings he had painted pegs driven in to mark his line. I saw him subsequently, and he told me that he had pegged out the line of road to be made. Subsequently another person, a surveyor—Mr. Wells, I believe—came up and surveyed the line, and marked out another route through the Doughboy Hollow, carrying the roadway twice across the creek. I saw his line, and also Mr. Debenham's; and I knew the latter because he had painted his pegs; I was the only one that did so.

2142. Whose line was followed when the road was made? Mr. Debenham's.

2143. Was it superior to that of Mr. Wells? Yes, I think so. It avoided crossing the creek, whilst that of Mr. Wells crossed it twice; this was a manifest recommendation.

2144. Then in fact the original line was followed? Yes. I do not think it was materially altered from the direction first given to it by Mr. Debenham.

2145. And you regard it as an improvement? In so far as the direction is concerned I do.

2146. Have you any objection to name the parties who told you they had heard Mr. Collett give expression to the remark in reference to Mr. Williams? I have not; I had it from Mr. Brodie.

2147. From anyone else? I was told it, in fact, by both Mr. Brodies; by the one who is a Magistrate, and by the other who is Clerk of the Bench.

2148. Where do they live? At Murrurundi.

2149. How many contracts are there in your district that you know of as being taken? Well, the smaller contracts, which are the most numerous, I have never taken any notice of. I have only remarked the large contracts from my attention having been called to them by remarks I have heard from various parties.

2150.

* NOTE (on revision):—I stated from my own knowledge that the road at or near Harpur's Gate, that was said to be macadamized, had to be repaired, or rather, made over again, about two years after. Mr. Martindale stated to me that Mr. Miller was very much favoured, as a contractor, by Mr. Collett.

† NOTE (on revision):—This should be omitted—such a question was not put to me.

2150. What do you call the large contracts? Such as the bridge, the Liverpool Range contract, and the Doughboy Hollow contract. These are the only contracts that involve any amount of magnitude.
2151. If proper publicity were given when tenders are called for, do you think that there are residents in your district who would be inclined to tender for the performance of these works? That I could not say.
2152. *By Mr. Dick:* You are aware that this resignation of Mr. Quodling involves certain charges against Mr. Collett? Yes, I believe it does.
2153. I presume you have come here in support of those charges? I do not know that I come here for that purpose. My reason for attending before this Committee is, that I consider there has been gross mismanagement in the conduct of the public works in our district, for a length of time; certainly long before I knew that there was such a person as Mr. Quodling in existence. So fully was I convinced of this, that had I remained a Member of the Assembly, I should most assuredly have myself called for an inquiry of this character. I saw the great necessity there was for some alteration in the existing system, and even before these contracts I took some steps in the matter, by communicating with the Lands and Works Department. I did this before I even saw Mr. Quodling, and it was by a mere matter of accident that I became acquainted with him.
2154. You take an interest in public works and in their proper execution? So much so as this, that I am sorry to see public money mis-spent.
2155. Will you state to the Committee what circumstances you know of in connection with the resignation of Mr. Quodling? I know little beyond what I have seen in the public prints. But I have seen a letter or two in Mr. Quodling's possession that led me to expect something of the kind. I saw the letter from Mr. Collett to Mr. Quodling, in reference to his complaints about the execution of the works at the Doughboy Diversion, and I knew by that, that there was some misunderstanding or unpleasantness between them; I believe that I may have seen other letters afterwards, but I am not sure on that point.
2156. Then the chief information you have upon the subject of the resignation is gathered from what has appeared in the papers? Yes; and also from Mr. Quodling having told me that he had resigned. He told me he had resigned after he did so, but I do not know whether he told me on what account.
2157. You have only known him since about two months ago? That is about the time; but I had noticed him on the road for a long time before I knew or spoke to him.
2158. He did not consult you as to his resignation? He did not. The first intimation I had of it from him was when he told me that he had resigned.
2159. You have mentioned several circumstances connected with the general management of the roads which you conceive tell against Mr. Collett—can you mention any distinct or specific charges against him? My opinion is, if I must speak it, either that he is incompetent to fulfil the duties of his office, or that he allows contractors to perform their work very much to the prejudice of the Government and in their own favour.
2160. Can you charge him with any direct dereliction of duty? In what way?
2161. In any way—accepting bribes from a contractor, for instance? I never saw him take a bribe; these sorts of things are not done openly; but from Mr. Martindale's remark to me, and from the loose manner in which works are carried out by contractors, I have my own opinion on the subject. One may draw very strong inferences from a number of facts, though they may not be sufficient to form a certainty.
2162. You have spoken of a very strong prejudice in the district you reside in against Mr. Collett—is that in regard to what you here mention? Yes. Nothing can be more strong than the feeling that exists in the district, in regard to the way in which Mr. Collett allows Mr. Martindale to carry out his contract. The subject is a common topic of conversation wherever you go.
2163. If the feeling is so wide spread there must be some grounds for it? I believe myself that there are.
2164. In what way? Why, in this very letter that is now before the Committee, and which was handed to me to identify, there appear to me to be very strong grounds of suspicion.
2165. What letter do you allude to? To Mr. Bayley's letter with the memorandum attached stating that the original in Mr. Collett's handwriting was in Mr. Bayley's possession.
2166. You would not, I presume, condemn any person merely because there was a strong prejudice against him? I should be very sorry to do so.
2167. You would condemn him only on facts clear and unmistakable? As a general rule, yes; but you must be aware that the facts in connection with the taking of bribes are very difficult to come at, for such things are always done in secret. No man publicly takes a bribe, or makes it public after accepting one. If he does anything that afterwards is made public, it must always come out from some accident.
2168. Beyond this suspicion, are you prepared to shew any other mismanagement on the part of Mr. Collett? As I said before, either he is incompetent, or else he allows the contractors, and particularly Mr. Martindale, to carry out their contracts very loosely. One might draw a very fair inference from this fact alone. Thus, for instance, he allows a party to put upon the road less stone than he is required to do by his contract; then if a bridge is to have sawn timber for flooring, slabs are allowed to be substituted, and everyone knows that split stuff is cheaper than sawn timber. Then, in another instance, he may give instructions that a pile in each row may be dispensed with, thus giving an advantage to the contractor. All these things tend to throw money in the way of the contractors, who do not do the work they contract for, and thus the Government does not get full value for the money they lay out.
2169. Do you know on what terms additions to contracts are made? I do not.

A. Loder,
Esq., J.P.

10 Dec., 1861.

A. Loder,
Esq., J.P.
10 Dec., 1861.

2170. Whether they are done for a round sum, or on a schedule of prices? I know this, that when I see a lump sum of £7,000 given for doing certain additional work, and when I know that this money has to be paid, I naturally look to see what the public get in return for it. If the public get any corresponding advantage I would say nothing about it, but I do not see why the contractor should have all the advantage, particularly when he seizes upon every point in a contract that is favourable to himself, even if it is only to put a pound or two in his pocket, as in the case of the removal of the iron-work from the bridge.

2171. You say that a fair inference may be drawn from certain facts which you allege—how do you make this appear? It is very clear to me that if a contractor has undertaken for a certain price to put a certain amount of cubic yards of metal upon a roadway, and does not put it on, that he must be the gainer by the difference between the quantity he ought to have laid down and that which he has actually laid down. Then, again, if he is allowed to use slabs instead of sawn timber, to dispense with a pile in each bulk, or to use shale instead of trap for metalling, all these would be advantages that no contractor ought to be allowed to have as against the Government.

2172. All these matters you have enumerated would be an advantage to the contractor? No question of it.

2173. Are you aware whether the Doughboy Diversion has been altered from the original line contemplated? Yes; I see by the contract that it has been altered only very slightly.

2174. The original line surveyed by Mr. Debenham avoided the making of two bridges across the creek? Yes. I know that the line marked by Mr. Wells crossed the creek twice.

2175. Was Mr. Debenham, in your opinion, a competent surveyor? I believe so.

2176. And in your opinion his road was the best? Yes.

2177. And was the one adopted? Yes.

2178. You do not know the width of the bridges on the line? I do not.

2179. You are not then aware of the fact that they are 18, instead of 12 feet wide? I am not.

2180. Do you happen to know whether, notwithstanding the iron-work that has been removed, there is still the quantity contracted for? I do not.

2181. Nor yet whether the contractor left, at the time the iron-work was taken away, the number of bolts specified in the contract? Mr. Rae's letter to me stated that there were the specified number.

2182. What reply did you receive to your letter complaining about the deficient number of bolts? The first letter I received was a merely formal one, stating that my letter had been received; and the next letter informed me that the Secretary for Works had received a report from some officer (I forget now what officer), stating that he had examined the bridge and found that there was the stipulated quantity of iron-work in it.

2183. Were you not so informed at the time? Not at the time, for I only got this letter a week or two ago.

2184. You have not got it with you, you say? No; I am sorry that I omitted to bring it, because it was so different from what Mr. Hannington had told me—so different in style from what I had a right to expect*—that I determined to inquire further into the subject, and should have done so if this Committee had not been appointed.

2185. You have stated, I think, that it was notorious throughout the district—spoken of everywhere, in fact—that Mr. Collett was favouring Mr. Martindale in the execution of his contracts? Yes.

2186. What is the nature of this notoriety? It was so notorious that I never rode up or down the road without hearing remarks upon it, from one quarter or another.

2187. From whom have you heard it? From everybody who has ever spoken to me about the roads; it was a common subject of remark.

2188. Can you not specify some of the parties? I have heard it generally spoken of by the inhabitants of Murrurundi, and up and down the road. And so it was about Mr. Miller; the same remarks were also made about him, as to the way in which Mr. Collett favoured him.

2189. That was three years ago, I believe? Yes, about that time.

2190. Did you make any complaint upon the subject to the Minister of Lands? Yes, several times; and Mr. Robertson promised me that he would have the matter inquired into.

2191. Those complaints were made verbally, were they not? Yes; I spoke to Mr. Robertson about it when he was up in the district, and he promised to have the matter looked into.

2192. You subsequently put your complaints into writing? I did.

2193. In order, I suppose, that it should come to the knowledge of Mr. Arnold, the Secretary for Works, that these injurious reports were flying about respecting Mr. Collett? That was not my reason for interfering in the matter. And here I may say that you are very wrong in thinking that I have any prejudice or any ill-feeling towards Mr. Collett. So far from this being the case, I have always been on the best terms with Mr. Collett. I bear him no ill-will, and should not have taken the steps I did if I was not under the impression that he abuses the trust reposed in him by the Government.

2194. You have frequently written to the Minister for Works upon this subject, at different times? No, but I have several times spoken to Mr. Robertson about it.

2195. To Mr. Arnold? No, to Mr. Robertson.

2196. He is Secretary for Lands? Yes; but I allude to a time previous to the division of the Department of Lands and Works.

2197.

* Omitted on revision:—"So different in style from what I had a right to expect."

2197. The principal complaints of mismanagement are, I believe, in reference to the works at the Doughboy Hollow and the Liverpool Range? Yes, the complaint is, that they are not carried out as they should be.
2198. These are the only two works you complain of? Yes, latterly.
2199. Who is Superintendent of the Liverpool Range Road District? Mr. Bayley. I believe it was he, but I am not certain; I believe he used to look after those works, but it is difficult for me to say, as there were so many officers of the Road Department riding about and seeming to take part in the management. I have seen as many as three of them visiting the works. In fact there were sometimes so many that it was hard to say what they found to do.
2200. You stated, I think, that there were two bridges so slovenly constructed that if a cart had been driven over them they must have given way? That was three years ago.
2201. How many bridges and culverts are there on this line of road? On what part of it?
2202. From Maitland upwards? That I could not say, but there must be an immense quantity.
2203. Can you not give a rough guess as to how many? No; there are a great many.
2204. Are there five hundred? I do not think there are so many as that, but there is a large number.
2205. What work was it that Mr. Collett was going to survey and certify to, at the time of the presentation of the memorial or testimonial? That at the Liverpool Range.
2206. That work had been under the charge of Mr. Bayley, had it not? To some extent. I believe he had charge of the work whilst under progress, but under Mr. Collett. I look upon Mr. Collett as being in charge of the roads.
2207. But not beyond the Page—that was the extent of his district? I considered him in charge of the whole line.
2208. Not until after the passing of the Main Roads Act? All through. I understood him to have charge of the road all the way up.
2209. He was then going to survey the works on the Liverpool Range at the time the testimonial was presented to him? I understood that he was so.
2210. But who told you, or who mentioned these circumstances to you? You see you have spoken of so many rumours and reports that it is hard to separate them from facts, and the Committee cannot act upon any information unless it comes from a good source? I would not mention anything that I had not a good authority for. I have no private purpose to serve; and even if I had, I would not state anything that I did not believe to be the truth.
2211. I do not suppose for an instant that you would state anything unless you believed it to be correct; and I may say, with regard to this Committee, that all we desire is to elicit the truth; that is the only object the Committee has in this inquiry. We are prepared to do justice, but we must not condemn a person upon every idle rumour—neither would you, I presume? I should be very sorry to do so.
2212. Was this testimonial you speak of publicly given to Mr. Collett? I believe it was.
2213. He also received a testimonial from the people of Scone? Yes, I believe so. I understood that he received several.
2214. The testimonial you refer to is the one presented in April last? Yes, I believe that was about the time.
2215. Were you asked to subscribe to it? Yes, I believe I was.
2216. Who asked you? Mr. Neale asked me. He said that there was a testimonial getting up for Mr. Collett; that he had been asked to subscribe to it, and that the parties were thinking of coming to me. He asked me if I would subscribe if the list was brought to me. I said, in answer, that it was of no use for them to come to me, as I would not subscribe.
2217. Who is Mr. Neale? A very respectable person, residing at Murrurundi.
2218. He had subscribed to it? No; he said they had been to him, and then asked me if I would subscribe.
2219. There was a public dinner also given to Mr. Collett? Yes, afterwards.
2220. And the report of the proceedings at that dinner was published in the newspapers? I believe it was; but I was in Sydney at the time, and cannot say with certainty.
2221. There were also testimonials to Mr. Collett from Scone and from Muswellbrook? Yes, I believe so.
2222. Do you know the parties who got these up? I do not.
2223. Do you know that Mr. Dangar, the Member for the Upper Hunter, took a very active part in it? I do not.
2224. Will you look at these. (*Reports from Correspondent of the S. M. Herald, published in that paper, handed to witness.*) Can you say if you saw these announcements in the newspapers? I do not remember seeing them in the papers, but I heard of the affair when I came to Maitland, on my road home from Sydney.
2225. You have no doubt, however, but that these accounts were published at the time in the papers? No doubt it was.
2226. Let me ask you whether it was not these public accounts published in the papers that first drew your attention to the matter? No; it was these contractors going about soliciting subscriptions that first drew my attention to it: I remarked it because I considered it improper.
2227. Did you remonstrate with them at the impropriety of which they were guilty? I did not; it was not my business to do so.
2228. You do not know those who went about soliciting subscriptions in Scone? I do not.
2229. And you cannot say whether or not they were contractors? I cannot.
2230. Now about the stumping—was it not the fact that the stumps were only left standing

A. Loder,
Esq., J.P.

10 Dec., 1861.

A. Loder,
Esq., J.P.

10 Dec., 1861.

on the slopes? In point of fact the line is all slopes; the greater part of the road is carried over the spurs of ridges.

2231. Is it not an advantage, rather than the reverse, to leave the stumps standing on the lower side of sidings, rather than to loosen the earth by drawing them out? It is not an objection to leave them standing in places where they will be completely covered over by the earth-works.

2232. Do you know whether it is provided in the contract that the stumps shall be left standing on the higher slope of the embankment? I do not.

2233. I may tell you that the contract provides that the road shall be cleared and stumped for half a chain wide; and that all stumps shall be removed, except upon the higher side of the embankments, where they are to be left standing. Now, were there stumps left in any other places than on the higher side of the embankments? They were not taken out anywhere except in the clear roadway of 18 feet wide.

2234. But you say that the road is nearly all siding? Yes, nearly all; and this is what I want to draw the attention of the Committee to. What is the good, in a practical point of view, of letting a contract of this sort, saying that a certain road is to be cleared and stumped for a certain width, when in point of fact it is not to be so? By such a mode of proceeding you are only putting the country to an unnecessary expense, and uselessly wasting the public money.

2235. Yet everyone can see the specification, and so ascertain the exact quantity of work that is to be done? No doubt; but when they see that tenders are called for clearing and stumping, they are under the impression that all the stumps are to be taken out.

2236. The clause in the contract, however, is specific enough? It would be sufficiently explicit to persons up the country; but not to persons tendering in Sydney.

2237. Where are the specifications to be seen? I do not know.

2238. Are they not sent in the usual way to the Court of Petty Sessions of the district in which the work is situated? That I cannot say.

2239. Are they not sent up to the Murrurundi Bench? I do not know.

2240. You are a Magistrate, and attend that Bench pretty regularly? Yes, but I have to ride sixteen miles to get there; and when there, the Bench duties occupy my time so much that I have no time to make inquiries into other matters.

2241. *By Mr. Hoskins*: In point of fact, has the road been cleared and stumped a chain and a half wide? The trees have been taken off, but the stumps have not been removed, except in the 18 feet roadway.

2242. They have been left upon the lower part of the road as well as upon the upper side? They have.

2243. And are plainly to be seen by everybody? Yes, you cannot help seeing them; some of them have the earth thrown up against them and stand out above it, some three, some six, some nine, some twelve inches, whilst some of them are breast high.

2244. From the way in which the roadway is made, and the narrow line formed, would not the drays if they went beyond this 18 feet of roadway be liable to topple over altogether? No; there is width enough for them, but the 18 feet is the only width formed and metalled.

2245. *By Mr. Dick*: These stumps are on the ground over which the embankment is made? Yes.

2246. Is it not an advantage rather than the reverse to leave them in the ground, so as not to loosen the earth over which the embankment passes? I will quite admit that it is objectionable to loosen the earth more than is necessary; but then, from the way in which the tenders are called for, the Government are made to pay a greater price than they should do.

2247. You have stated that after the presentation each of the contractors in question had a contract allotted to him without tender—how do you know this? I heard a person of the most reputable character, in whose statement I have every confidence, say that they did so.

2248. What did he tell you? He told me that each of them got a contract without tender, to the extent of a hundred pounds.

2249. Was it for the erection of toll-houses? Yes, I believe it was.

2250. Do you happen to know that the sum allowed for the construction of toll-houses has been limited to £100 each? I was not aware of it.

2251. And that it is customary for them to be contracted for without tender? I did not know that.

2252. If the contract is for a bulk sum, what advantage can it be to Mr. Collett to allow the contractor these favours? I do not say what difference it would make to Mr. Collett; but it would be a great deal in Mr. Martindale's pocket in either way, whether he got a lump sum, or whether he contracted for certain work at a certain price.

2253. But if he had to complete all the works for a lump sum, why should Mr. Collett favour him by not insisting upon his completing the work according to his contract—in what way could Mr. Collett gain? That I do not pretend to say.

2254. But surely there must be some object, and what could Mr. Collett's object be in favouring the contractor when the contract was made for a lump sum? I say again that I do not pretend to say what object he had; but taking the fact that he did so, in conjunction with the remark made to me by Mr. Martindale in reference to Mr. Miller, anyone could draw his own inference. Mr. Martindale said to me, when speaking of Mr. Miller being a favoured contractor, that Mr. Miller and Mr. Collett understood each other; and, on the same ground, seeing that Mr. Collett favours Mr. Martindale, I may say that they also understand each other. I think that is only a fair inference to draw.

2255. Then, in plain terms, you are of opinion that Mr. Collett favours him for his own personal advantage? That is my opinion; most conscientiously I think so; and I am not alone

alone in this opinion, for I have heard it publicly stated that Mr. Collett obtained a percentage of the amount paid to the contractors—Miller and Martindale.

2256. From the contractors? Yes, and that is my opinion, I am sorry to say; and that is what the great bulk of the people in the Northern District think also.

2257. Can you tell the Committee the names of any persons who hold this opinion, and whom the Committee could examine on this point? The impression is almost universal throughout the district.

2258. Can you tell us the names of any persons who would be willing to be examined, and who could bring this charge home to Mr. Collett? I do not see what light they could throw on the matter, since they can only surmise as I do, or draw inferences from facts such as I have stated.

2259. Then how is this charge to be substantiated? That I do not know, except this letter can be shewn to be copied from one in Mr. Collett's handwriting, as the memo. of Mr. Bayley affirms. If that is proved, I think it shews a very strong case against Mr. Collett; and then other matters may come out incidentally in the course of this inquiry.

2260. I suppose you are aware that a charge of this kind is a very difficult thing to prove? Yes, but this letter, if shewn to be in his handwriting, in the first instance would form a very strong proof against him, or else why should Mr. Collett take so much interest in Mr. Martindale as actually to write to him telling him what work to apply for, and what amount to tender at?

2261. That is exactly what I wished to know all through your evidence, and now it appears that we have arrived at it, by your stating that you believe Mr. Collett to be handsomely paid for favouring the contractors? Yes; I am very sorry to say so, but that is my impression.

2262. You did not charge him with this, in the complaints you made to the Department? No, I did not have any suspicion of him then. I never for a moment imagined anything of the kind, for I had a high opinion of Mr. Collett until my suspicions were raised by Mr. Martindale's remark about Mr. Miller being a favoured contractor, and that he and Mr. Collett understood each other. Seeing Mr. Martindale a favoured contractor also, it struck me that as Mr. Miller had left the Colony, Mr. Martindale had taken his place as a favoured contractor, and that, like Mr. Miller, he and Mr. Collett understood each other.

2263. When you talk of proving this letter, do you mean that Mr. Bayley wrote it at Mr. Collett's dictation? No, I mean something more than that—that Mr. Collett wrote it in the first instance and handed it to Mr. Bayley, who copied it, retaining the original himself. If you look at the memorandum written on the back by Mr. Bayley, you will see that is the case.

2264. Do you know any parties willing to give evidence who could throw any light upon this charge? I do not; but I should imagine that Mr. Bayley would be the only person likely to throw any light upon it, since it was he who received the letter from Mr. Collett.

2265. Do you know anything of Mr. Martindale? No, I know him only as a contractor.

2266. Is he any relation to Capt. Martindale, the late Commissioner of Roads? No, I believe not.

2267. Does he bear a good character in your neighbourhood? I never heard anything against him; but I do not blame him in any way for the part he has taken in the matter.

2268. How do you mean? I mean that if he gets his contracts in a favourable way, and is allowed to carry them out in a manner favourable to himself, I do not blame him for doing so.

2269. But if he gets paid for doing certain work which he does not do, he commits a fraud; and surely you do not mean to say that you do not blame him for committing a fraud? Put in that way, of course I can do no other than blame him. But if he gets a contract, and then by the favouritism of those above him is allowed to do it in a slovenly manner, I do not see how he is to blame for not doing it better.

2270. But if he colludes with the Commissioner to slum the work, as you state it to be your opinion that he does, is not that a fraud upon the public? If he does so, most assuredly it is.

2271. And then you say that he is not to blame, although he colludes with the Commissioner to rob the public? He is most decidedly to blame in such a case as that.

2272. He would be equally with the Commissioner a party to the fraud? I should think that he would be quite as much to blame as the Commissioner, if he was a party to such a transaction.

2273. I believe that all you have stated about this charge is based upon rumour? There is something more than rumour in that letter; and that I look upon as very strong evidence in favour of the charge.

2274. Have you seen that letter before? Yes.

2275. That very letter? From the memorandum in Mr. Bayley's handwriting, and from other marks, I should say that it was the same.

2276. In whose possession was it when you saw it? In Mr. Quodling's.

2277. At any rate, leaving out this letter, all the other information you have given to the Committee is based on rumour; now do you know any person who can testify to this collusion between Mr. Collett and the contractor? Neither can I testify to any fraud between the Commissioner and Mr. Martindale—certainly not. But from the remark made to me two years since by Mr. Martindale, coupled with the slovenly way in which Mr. Collett allowed the works to be carried out, and then this letter coming on the top of all, I could draw no other inference than that there was some collusion between Mr. Collett and Mr. Martindale.

2278. Can you give us the names of any persons whom you conceive it would be desirable to call, under these circumstances? I do not know anyone who can give the Committee more information than they have at present, with the exception of Mr. Bayley. If that letter is

in

A. Loder,
Esq., J. P.
10 Dec., 1861.

A. Loder,
Esq., J.P.

10 Dec., 1861.

in existence I certainly do not see how it is to be explained away. This is only my own private opinion, and possibly Mr. Collett may be able to shew that he acted perfectly correct in the matter, though I do not see how he can do so.

2279. What I wish to know is, whether you are aware of any persons who can give the Committee direct testimony on this subject? I am not aware of any.

2280. You stated, I think, that there were some faults in regard to the fencing material, and the slabbing of the bridges; now will you state all the faults that you have remarked in reference to the management of the Northern Road? I am not certain whether I mentioned it before, but one great fault I find is, that Mr. Martindale has been allowed to pitch the road before the roadway has become properly consolidated; that I regard as the most material fault of all.

2281. Mr. Martindale has not yet given up the road to the Government? I believe not.

2282. As a matter of fact, it is not yet finished? It is not.

2283. Then do you not consider that it would be premature to blame him until he has handed the road over to the Government? No doubt it would be, but then Mr. Cowper says it is finished.

2284. Now do you not know, as a matter of fact, that it will not be finished for the next six weeks? If more dispatch is not used than has been, it will not be finished then.

2285. Do you not think it would have been better to have left this charge to stand over until the road was finished and given up to the Government? No doubt it would have been; but there are portions of the road that are looked upon as finished, whilst there are others again, that have no metal on them and are nothing like completed. Still there are portions that anyone would presume to be completed, that have been pitched and metalled, and that have had the loam thrown on the metal to bind it, and it is from these that I judge.

2286. Does it not appear to you that by making these charges prematurely, as you have done, you give the contractor an opportunity of making good any deficiencies there may be in his work? That is right enough, but I do not see how this was to be obviated under the circumstances.

2287. You have had some experience you say in work of this kind? Yes, for the last twenty-three years.

2288. In road-making? In that and at anything else in the shape of work. I have had to work, and hard too, in my time, and am a pretty good judge of work of this kind. I know, too, what amount of work a man ought to do in a day. I am considered a good judge of these things in my district, and am often asked to act as umpire or referee by my neighbours.

2289. I think you stated that one of these parties who had been appointed on the road had been a sheep farmer? Not a sheep farmer, but a sheep overseer. He was overseer to Mr. Warland.

2290. And being a sheep overseer, it was not to be expected that he could know anything of road-making? I know that he does not, from what Mr. Collett himself said about him.*

2291. You are a sheep farmer yourself, I believe? I am, but I know something of road making as well as of sheep farming.

2292. Then the two occupations are not necessarily inconsistent? No; it does not follow that they should be so.

2293. If the contract states that the slabs used shall be twelve inches wide, and that in place of the slab of twelve inches, two slabs of six inches wide are used—would that, in your opinion, be an improvement? I should consider that a moderately wide slab was better than one too wide or too narrow.

2294. From your experience, can you say which would be the best, the slab of twelve inches wide, or those of six inches wide? From my own experience, I certainly consider a moderately wide slab to be the best.

2295. What do you call a moderately wide slab? One of from six inches to eight inches wide.

2296. Then if, according to the contract, the slabs were to be twelve inches wide, and if instead of one twelve inches, two of six inches wide are used, there must necessarily be the specified number of bolts used? Of course, if one bolt is put in to each slab, and there is double the number of slabs, there must be more than the number of bolts.

2297. Do you know if this has been done in planking the roadways of the bridges? I believe so. I know they are fastened down, but whether this has been done by bolts or not I cannot say positively; but I think I have seen† them preparing the bolts.

2298. Have you seen the contract under which Mr. Martindale is executing his work? I have.

2299. Did you read it carefully? I cannot say I did.

2300. Where did you see it? At my own place. It was shewn me by Mr. Quodling.

2301. You have no prejudice, I think you said, either in favour of Mr. Collett or Mr. Quodling, or against either of them? I have not; all that I wish is, to see the public works properly carried out and the public money properly expended.

2302. With reference to the fencing, you stated that it was very badly done, that the posts were very light, and that if it had been done for you, you would not have passed it? I would not.

2303. What fencing do you refer to? That on the Doughboy line.

2304. You said, I think, that there was about a mile of it? I do not know the quantity, but

* Revised:—did not, when he was first appointed road overseer, from actual observation.

† Revised:—the heads of spikes above the slabs.

- but if I remember rightly, there is not a mile of it or anything like that quantity. The only place where I observed any fencing was along by the stone coping of the bridge at the Hollow. A. Loder,
Esq., J.P.
2305. I understood you to say that the fencing was bad for a mile? I could not have said anything of the sort, because there is nothing like a mile of it. 10 Dec., 1861.
2306. How much do you think there is? I should not think there was more than eighty yards.
2307. Is it on this side of the range? No, on the other side of the range, going down the Doughboy Hollow Diversion.
2308. And how much is there? I should say not more than eighty or a hundred yards.
2309. The report of Mr. Hannington says that there are only six panels? There is more than that. The stone bridge is a good length. If any person had been putting it up for me, I certainly should not have approved of it or paid for it.
2310. Does it answer the description of the specification, which says that the timber shall be sound iron-bark, box, or red gum; that the posts shall not be less than eight feet long, eight inches wide, and four inches thick; the rails to be nine feet long, six inches wide, and two inches thick? They are not according to contract. They are eight inches on the back, and they may be three inches thick, but there is not a post there that comes up to the four inches; and besides that, they are all running off, being broader and thicker at one end than at the other. They have mortised the broad end, and put the smaller end into the ground, so that the posts have no hold on the earth. That which is below the surface is so slight that nobody would even think of mortising them, even if they could do so.
2311. You speak from observation only, and not from actual measurement? From observation; but then my eye is pretty correct, from long and constant practice. I am sure of this, that they are not according to contract, as you explain the specification to be.
2312. You say that timber is not easily to be obtained at that spot? No, not without going some distance back and up the mountain.
2313. You say that some very good material was to be had there—in what part is it procurable? I say that there is abundance of good material to be got by going higher up the mountain and back from the road; but it is not a very good place for timber.
2314. I think you said that the great fault with the road was that it was too narrow? Yes, too narrow for the traffic.
2315. Do you refer to the Liverpool Range contract when you say this? Yes, principally.
2316. Are you aware that that was done under Mr. Bayley's management, and that Mr. Collett has since widened it? I always understood Mr. Bayley to be Mr. Collett's inferior officer—to be under him and his direction.
2317. However, the Doughboy Hollow line is wider and better? Yes, it is.
2318. Whereabouts was it that you saw the man at work repairing the road for which Mr. Martindale was getting £50 a month? On the Liverpool Range.
2319. For how many miles was it that he got this £50 a month maintenance money? I do not know the exact distance, but it was the extent of his original contract.
2320. Has he still got that contract for maintaining this piece of road? I believe he has; the same man is at work upon it still.
2321. Are you sure that it is £50 a month, or is it £50 a year? I understood distinctly that it was £50 a month; but it is very difficult to get information in regard to these matters; no very great publicity is given to them, especially to those contracts that are not let by public tender.
2322. You do not know the distance that he has contracted to maintain? It is the length of his original contract; it may be about a mile and a half.
2323. May it not be a mere temporary arrangement? No, I understood that he had got it permanently. It was pointed out to me that whilst he was getting £50 a month for maintaining the road, he was employing only one man on it, and was expending only £8 a month.
2324. Was he expending £50 a month over the whole contract in maintaining it in good condition after it was completed? According to my observation, he was not spending more than £8 a month. I never saw more than two men at work on it—one man being employed only occasionally. But Mr. Martindale had a contract independent of this, somewhere about where the pipe-clay stuff was put on the road, just about Brodie's stone-quarry. He pointed it out to me as what he had got the £700 for.*
2325. You say that you had found it difficult to obtain information—to whom did you apply for it? To all those persons whom I considered most likely to give it me.
2326. Did you apply to the road overseers? I did.
2327. Did you ask Mr. Williams? No.
2328. Or Mr. Brown? No; I do not know him; I have never spoken to him since he has been appointed.
2329. Can you say who refused to give you the information you asked for? I did not say that I was refused information, but I have asked it from Mr. Quodling and from parties in Murrurundi, and they all said that they could not give me the information I required.
2330. The overseers in the pay of the Government have not refused to give you information? No, certainly not. The only one I could have asked would have been Mr. Brown, and I did not ask him on account of not knowing him.
2331. With reference to the pipe-clay piece, how do you know it cost £700? Mr. Martindale told me he got £700 for additional work on it.
2332. Is that also on the Liverpool Range? It is.
2333. And on that part of the road which you believe to be under Mr. Collett? Yes.
- 2334.

* NOTE (on revision):—I did not so state it.

- A. Loder,
Esq., J.P.
10 Dec., 1861.
2334. Is that where they shut up the road with a fence? Yes, they put up a few panels of fence across it and so closed the whole line, because as the road was fenced in on one side*, the traffic had to pass round by the old line.
2335. What was this for? To prevent the traffic from cutting up the road.
2336. Was this when the line was out of the contractor's hands—after it had been given up to the Government? I cannot say that it was so, though it was after it had been open to the public traffic.
2337. *By Mr. Dalgleish*: Are you supposed to know what is in other people's minds when they take it into their heads to shut up roads—do they put up any placard or notice stating the reason why they have done so? No.
2338. Then you have no means of knowing what it was done for? No, only from what I observed of the state of the road from the traffic on it.
2339. *By Mr. Dick*: Was it immediately after a heavy fall of rain, or a continuance of wet weather, that the road was closed? No; after a little fall of rain. The panel was taken down and the public were travelling on it when the very wet weather set in.
2340. Where did the traffic go when the road was shut up? Down the old line.
2341. It was better than the new road, I believe, at that time? The public preferred it.
2342. That was a very good reason then for their taking it? It may have been.
2343. Was that the reason why they took it? Yes, because it was a work of very great labour to get up the new line, from the bad way in which the road had been constructed.
2344. Was this the place where you observed the man putting down great lumps of stone? Yes. He was following along the dray tracks, and throwing down large lumps of stone to fill up the ruts that the drays had made.
2345. Did you report this to the officer in charge of the works? I did not.
2346. Is it not a very strange thing that you should have forgotten to do so, when you saw a man taking the Government money and performing work in this manner? I can only say that I did not do so.
2347. You have spoken about protection to the water-boxes—what do you mean by this? I mean that the water-boxes for carrying off the water from the drains and under the bridges or culverts have nothing to protect the mouth of the water-boxes or openings. Of course it is a matter of opinion what that protection should be, but the consequence of there being no protection at all is that the sides fall in, and that this, with the earth that is washed into them by the heavy rains, soon chokes them up, and then the water, instead of passing away by the culvert, collects until it breaks over the roadway, washing away the metal and destroying the made road.
2348. What ought there, in your opinion, to be, to prevent this? The Government engineer should be the best person to give an opinion upon that point.
2349. Are you able to form any opinion as to what ought to be done? I certainly think that the mischief should be obviated as soon as possible. No doubt a little masonry at the mouth of the water-boxes would be an improvement. And whilst I am on this subject, I may remark that there requires to be some protection at the spot where the water makes its exit; because the fall of the large body of water that often comes down soon makes holes, and by and by you will have these undermining the bridges.
2350. Can you say how much has been already expended upon bridges on this line? I cannot.
2351. Who told you that £50 a month was paid to Mr. Martindale for maintaining the line? The man employed by him to work on it.
2352. How is the road maintained—that part which is completed, from the Doughboy Hollow? It is let out on contract in different lengths. There are some men employed at different places, called maintenance men; but there are a number of small contracts on the road.
2353. Then it is kept in order by a number of small contractors? No; the small contractors I speak of are making it; at the Willow Tree, for instance, and at Kangaroo Flat, and all along the road.
2354. *By Mr. Hoskings*: You do not know the amount of these small contracts? I do not.
2355. Nor yet how many there are of them? No.
2356. *By Mr. Dick*: With reference to the other contracts, do you think they have been well carried out? All the bridges are well done. The small bridge at Kangaroo Flat is a very good and substantial one. The bridge at Tamworth I have not seen since it has been completed.
2357. What is the length of the road from Armidale to Maitland? The distance from Armidale to Tamworth is 75 miles; then between 60 and 70 miles from Tamworth to Murrurundi; altogether, in round numbers, it is about 250 miles from Armidale to Maitland.
2358. And out of the whole of this length of 250 miles, do you object only to the construction of two bridges? No; I object to most of the gravelling that has been done on the road from Singleton upwards. With regard to the bridges, I never found fault with the wood-work of many of them, except that I drew attention to the platform of the Arnold Bridge being of white gum.
2359. You said, I think, that you did not know how much had been expended, or was now voted for the construction of bridges on the whole of this line? Since when, may I ask, because your question refers to a very indefinite period?
2360. Say, during the last year? I do not know.
2361. Do you know a man named Fox? I do.

2362.

* *Inserted on revision*:—and a steep bank or cutting on the other.

2362. What was he when you first knew him? A clerk in a produce store.
2363. He was a contractor, I believe? Yes.
2364. What character does he bear? I have always considered him to be a very quiet, harmless man; he is generally thought to be so.
2365. Is he a man in whom dependance can be placed, or one that would not be likely to write anything but the truth? I know nothing of him, either for or against him; and as I believe every man to be an honest man until the contrary is proved against him, I must presume that he is an honest man; I have no reason to believe the reverse of him.
2366. Do you know anything of Mr. Quodling's private character? Nothing beyond what I have observed during the last two months since I have known him.
2367. Do you know anything about his private habits? I believe he is a very steady young man.
2368. And has always been so? I have no reason to suppose to the contrary.
2369. Have you ever heard him accused of drinking to excess? I have never known even the shadow of a suspicion against him in this respect; and before I was introduced to him I have repeatedly seen him up and down the road, and have never seen him otherwise than steady and diligent in the performance of his duty.
2370. Is he temperate in his style of address to the men? I cannot say; I have had no opportunities of judging.
2371. Can you give the Committee any further information tending to prove that there has been a regular loose and discreditable system of management carried on since Mr. Collett has been in office? I should fancy that this would best be proved by the production of official documents.
2372. Can you give the Committee any information on the subject? Nothing beyond what I have already stated.
2373. *By Mr. Dangar:* Has Mr. Fox now left Murrurundi? I have not seen him for a long time.
2374. For months or for years past? I cannot exactly say how long; but the last time I saw him he told me he had a contract half-way up Warland's Range, between the crossing-place and the top of the range.
2375. Do you know any parties of the name of Hill in Murrurundi? I did.
2376. They make themselves very busy in elections? They did.
2377. They have lately been appointed to situations under Government? I cannot say.
2378. You recollect the German—you have spoken about him already? Yes.
2379. Do you recollect his being employed under Mr. Newcomen? I do not.
2380. Was not Mr. Newcomen the superintendent previous to Mr. Quodling taking charge? He was.
2381. Do you know the reason why he resigned? I do.
2382. What was it? It was stated that he kept stores on the road, and that he made the men deal with him. It was said, too, that if the men did not get their supplies from him they were very soon dismissed from the work.
2383. Have you heard of men being dismissed for not taking flour from his store? I have heard so.
2384. And for not taking tea and sugar? Yes, it has been said so.
2385. And he was allowed to employ his horse and bullock teams on the road in the service of the Government? I have heard it so said, and I believe he did.

[*Here Mr. Forster vacated the Chair, and it was taken by Mr. Hoskins.*]

2386. Has not Mr. Quodling's competence for the office of road superintendent been confessed on all hands—do you not believe that he is a superintendent equal, in all respects, to Mr. Newcomen? I should say that he was much superior.
2387. Do you approve of appointing superintendents from the list of the road overseers? If they are deserving men, certainly I do. I should say that was the very best plan to be followed, if they are deserving men.
2388. Are you aware that Mr. Newcomen was a certain time on trial before his appointment as road superintendent was confirmed? I cannot say that I was aware of it; but, following out this question, I may state that this is one of the objections I have to the present system of road management—gentlemen are appointed and put into these situations without having the least practical acquaintance with the work they have to superintend. Now, I think that if labouring men even were selected it would really be better than having such persons as now fill these offices, because they would, at all events, have some practical experience of the work they had to look after.
2389. Would the road overseers be able to act as road engineers? Not unless they were trained to it.
2390. Have not persons tendered for works for less sums than Mr. Miller or Mr. Martindale, and yet not got the contract? I do not know that such has been the case.
2391. Have not contracts been given to persons without their tendering for them at all? I have heard that such a thing has been done.
2392. Have you ever seen the scale of prices for work allotted to different parties; so much for making, so much for forming, so much for ballasting, and so much for cutting and for draining—the scale as directed by the department? No; I have not.
2393. Do you recollect the Murrurundi toll house and gate being let without tender? I do not. I heard that it had been let without tender, but I do not know who was the contractor.
2394. This German that you speak of, is he the man who lives out near Paddy Cummins? I believe not; he was living at Murrurundi.

- A. Loder,
Esq., J.P.
10 Dec., 1861.
2395. Are you aware that Mr. Martindale sub-lets some of his contracts to Mr. Greer? Yes, so Greer told me; he said he had taken part of Martindale's contract
2396. How long was Mr. Debenham pegging out the Doughboy Hollow line? That I cannot say.
2397. Mr. Thomas Miller has gone to Europe, I believe? Yes, so I understand.
2398. Has Mr. Greer any contract in Murrurundi? No; he has one at the Willow Tree; he is blasting and quarrying stone there.
2399. Have you heard whether contracts that have been tendered for have been taken at a large sum less than the specifications from the office, which other contractors have tendered for? I do not understand the question.
2400. *By Mr. Lucas:* With reference to this German who told you that Mr. Martindale was receiving £50 a-month for keeping up a certain part of the road in repair, what piece of road was it that he referred to? The piece known as Martindale's contract, and extending down from the Liverpool Range Gap in the direction of Murrurundi; a distance probably of a mile and a half.
2401. Was that the piece of road which Mr. Martindale had had the contract for completing? It was.
2402. Do you know that a difference of some 30 or 40 per cent. can be made by the manner in which the work of a contract is performed? Yes; I know that a very large sum can be made, varying of course according to the extent of the contract.
2403. Do you suppose that if contractors had known the way in which the work was to be performed, and that shale instead of metal was to be put upon the road, that they would not have tendered for very much less than they did? I do.
2404. You say that you do not blame the contractor for doing the work in this slovenly manner? No; I do not blame him for not doing it better when he found that it would be passed as it was.
2405. Whom then do you blame? The person who overlooks him, and the head of the department, who passes the work; I myself blame Mr. Collett; in this I may be wrong, as the blame may rest somewhere else; but I look upon him as the head of the department.
2406. Some of the earth-work from the cuttings on his contract have been tipped over into the creek? Yes; the earth from the large cutting.
2407. And this has had the effect of filling up the watercourse? Yes; it has stopped the course of the creek.
2408. Will it necessitate the cutting of a new watercourse? It will do so before long, but has not yet.
2409. Have you heard whether it is proposed to cut a new watercourse? Yes; I did hear that it was intended.
2410. Did you hear the price at which it was to be done? I did hear, but I forget what it was.
2411. Was it the usual price paid for work of that kind in the neighbourhood? I was told not.
2412. It is not commenced yet? I passed there this day week, but I could not observe whether they had commenced it or not.
2413. Have you seen the contract and specification for the works on the Arnold Bridge contract? I have not.
2414. I think you say that you do not of your own knowledge know that white gum has been used for the flooring of the bridge? I do not; but I may say that Mr. W. Martyn, J.P., told me this day week, when I was in Murrurundi, that he could prove unmistakably that the flooring was of white gum.
2415. It does not require much experience for a person to know when a road is well made, particularly when he has been in the habit of travelling during 20 or 30 years of his life? No; it does not require much experience, but it requires a certain amount of knowledge of the subject to enable a man to point out the defects that exist.
2416. Will you look at this specification. (*Specification of Mr. Martindale's contract handed to witness*)? If you turn to the metalling clause, you will see that the roadway is to be metalled for a width of 18 feet; and that the metal is to be laid to a depth of 9 inches in the centre, and 6 inches at the side of the road.
2417. Is the road, as far as you have observed, in accordance with this clause of the specification? No; I have already said that I did not think the metalled width to be more than 13 feet, and therefore there is not the 18 feet of metalled surface. There is nothing like 9 inches of broken metal on the centre, nor of 6 inches on the side of the roadway. The metal used is not the best and hardest that is to be obtained, for instead of being blue-stone, it is only common basalt. The metal is not broken to a $2\frac{1}{2}$ inch gauge, nor anything like it by a long way; and as to the metalled surface being 18 feet wide, I feel quite convinced about that; it is nothing of the kind. I set it down at 13 feet, and my eye seldom deceives me; I am too much accustomed to these measurements.
2418. Then you say that there is not 9 inches of metal on the centre and 6 inches at the side? No, nor nothing of the sort. The metal is not there; and anyone could see that it is not.
2419. The metal is to be spread in two layers of equal thickness, the first to be well consolidated before the second is spread. The metal to be broken on the road-side, and left in heaps to be measured by the Superintendent. The first layer must be spread on the road before the second layer is begun to be broken. Now, has all this been done? This I cannot say anything about.
2420. The other portions of the road are to be ballasted and spread with good clean ridge or river gravel? I saw no ridge or river gravel spread upon the road.

[Here Mr. Hoskins vacated the Chair, and Mr. Forster resumed it.]

2421.

2421. Will you look at the section of the specification which refers to the slopes? Yes, I have it.
2422. Are the edges of the embankments hand-packed? I did not notice that the edges of the slopes were; but the pitching was hand-packed.
2423. The contract specifies that all slopes where through rocks, are to have a fall of six inches to the foot, and where of earth, of a foot to a foot. Banks to be as shewn on the cross sections, and where no cross sections are shewn, to be $1\frac{1}{2}$ to one. Where slopes are shewn steeper than this, the best rubble from the cuttings is to be selected to face the outside, where it is to be carefully hand-packed? In travelling up and down the road, I have never seen any hand-packing on the edges of the embankments.
2424. I think you said that you could not give an opinion in regard to the masonry? Yes, I said so.
2425. The specification provides that all the roots and stumps on the line of road are to be eradicated, and that the holes left are to be filled up with gravel—has that been done? No stumps have been eradicated, except for the width that I have already spoken of.
2426. With regard to the width of the cuttings, are they thirty feet wide, as required by the specification? That I cannot say. It would require careful calculation and measurement to decide this, whereas I have only noticed them as I rode over the road, and measured them with my eye.
2427. You have spoken of the pipe-clay that was laid on one part of the road—do you know that the late Commissioner of Roads condemned this pipe-clay or bad gravel? Yes, I do.
2428. And was it afterwards passed by the present Commissioner of Roads? Mr. Bayley stated to me that it was so. He told me that Mr. Collett passed it, and that his objection was not taken notice of.
2429. Mr. Bayley objected to it? He did.
2430. And yet it was passed by Mr. Collett? Yes; so Mr. Bayley told me.
2431. How long was that ago? I cannot exactly say; but it was immediately subsequent to Mr. Bennett's leaving the Colony. This, however, I am not very clear about, though I think that by inquiry, it will be found that I am correct in saying so.
2432. Is that part of the road being now re-made, or undergoing repair? No; I saw nothing being done there, except a little trifling repairs. There is some more pitching being done immediately below it, towards Murrurundi.
2433. *By Mr. Hoskins:* You stated, in reply to Mr. Dick, that you were asked to contribute to this testimonial, and that you said emphatically that it was of no use for them to ask you; may I inquire why you stated that it was of no use? I have my own opinions about matters of this kind. When persons are in the receipt of a good salary, and when they only do the duty for which they are well paid by the country, I see no possible occasion for getting up testimonials; neither am I favourable to getting up dinners to persons who can well afford to pay for them out of their own pockets; I would much rather give a dinner to somebody who wanted one, and could not afford to pay for it. Besides, I did not think Mr. Collett entitled to a testimonial; that was the main reason.
2434. Will you state why you did not consider him entitled to a testimonial? I have already stated the reason. That he was not sufficiently strict with the contractors, and the other persons who were under him.
2435. I am not quite clear about these excavations. You have read the specification in regard to them, and now can you tell me whether you believe that there is any portion of them 24 feet wide? I have stepped it at several points, and I have made it about 13 feet. In no portion is it 24 feet wide.
2436. Then in no part is the width of the cutting more than 13 feet? I am speaking of the metalled portion of the road; that is what I understand when I speak of the roadway. When the metal is laid, it is packed on each side with large stones to keep it up, so that there is a portion on each side—say about six inches—exposed and with no metal on. Taking from one edge of this exposed surface to the other, I reckon it to be only 13 feet wide.
2437. But, from the water-table on one side of the road to that on the opposite side, what should you say was the width? There is a clear space on each side, from the packing at the edge of the metal to the water-table, of, I should think, about 2 feet; so that there would be a width of 18 feet from one water-table to the other.
2438. You are sure there are not 24 feet? Well, possibly it may be 20 feet across, but certainly it is not more.
2439. In no portion of the road? At what we call the big cutting it is wider than that.
2440. That you consider a better width? Yes; it struck me as being a good width.
2441. It did not strike you as being too narrow? No, not at all. It is wider there than at any other place.
2442. What is the average height of the embankments? I cannot say.
2443. Is there room for two bullock drays to pass each other comfortably on the road? I think not; and that is the main reason that I consider the roads to be so objectionable.
2444. And the effect of two bullock teams meeting on these embankments would be, that one would be crowded off, and would be tumbled down over the embankment into the gully below? I apprehend very great difficulty in the case of teams passing each other. Unless the bullocks are exceedingly tractable, accidents are sure to occur.
2445. If a bullock team is crowded off this embankment, what depth would it fall before it reached the bottom? I do not so much apprehend any difficulty about this embankment; but, in other places, there would be very great difficulty for two teams to pass each other. I noticed, as I was coming down by the mail, that as we came up the bullock drays were forced to pull off the metalled road to let us pass, and the moment they did so their drays sank in the soft shale that composes the road. In no portion is there room for two vehicles to pass each other on the metalled roadway.

A. Loder,
Esq., J.P.

10 Dec., 1861.

A. Loder,
Esq., J.P.

10 Dec., 1861.

2446. And in consequence of the drays being forced to turn off the metalled road, the water-tables and drains are completely cut up and destroyed? Yes.

2447. Then, of course, in the construction of the roadway, the terms of the specification have not been complied with, since it should have been 30 feet wide in some places and 24 feet in others? That can be easily ascertained by actual measurement; but I am sure that they are not that width. To shew how narrow the road is, I noticed, at that very spot to which Mr. Martindale drew my attention, a little episode which I may perhaps be permitted to mention to the Committee:—Whilst I was passing, a bullock driver had got possession of the centre of the road with his dray, when a horse team came along the road, and finding it impossible to pass, the driver asked the other men to draw off a bit. After a good deal of strong language had been used on both sides, the driver of the horse team asked the other man to draw his leading bullocks off the road a bit, so that he might have a chance of passing. The bullock driver consented; but the moment he turned his bullocks off the metalled road they went up to their bellies in the soft shale at the road side. This brought on another storm of words, and the men were very nearly coming to fisticuffs as I passed on. But it is not here only, for the roads are not sufficiently wide through the whole district.

2448. But if they had been 24 feet wide, that would have been amply sufficient to have allowed two teams to pass each other? Yes, amply.

2449. That width of roadway has not been provided? No; and what I call the roadway is the metalled portion of the road; that is what I would wish to be understood as referring to, when I speak of the roadway.

2450. The roadway, you say, is wider at this big cutting? Yes, it has that appearance; but they have not finished it yet. I observed them at work cutting out from it when I last passed—a week ago.

2451. Do you know that a good portion of this roadway is not cut out of the solid ground, but that it is made ground? Yes; a great deal of it is made ground—made from the material pitched over from the cuttings.

2452. You have told the Committee your opinion of Mr. Collett in a very plain and outspoken manner, therefore I may perhaps be permitted to ask you whether it has not been a common topic of conversation, and a common cause of astonishment, that Mr. Collett should have, in so short a time, acquired so large an amount of property in the Northern District? I must say that it has.

2453. Is he not considered to be one of the largest land owners in Singleton? I do not know; but I remember seeing a report of a meeting held in Singleton some time back, when they were thinking of having a municipality there. Mr. Collett was present at that meeting, and is reported to have said, that he was favourable to the object of the meeting, though he would be the most heavily taxed of anyone present.

2454. Can you give us any idea of the amount of money laid out in contracts in Murrurundi during the last three or four years? No; I only took an interest in the larger works—the bridge, the Liverpool Range, and the Doughboy Diversion; but there have been a very large number of small contracts that I have scarcely noticed.

2455. Do you know the road between Warland's Ranges and Murrurundi? I do.

2456. Do you know what has been expended there? I have heard Mr. Collett express an opinion about that road; but it was not done by contract work.

2457. What was done there? They gravelled the whole road over the range, a distance of about three or four miles.

2458. Do you know what amount has been expended over this work? I have heard that it cost £4,000 or £5,000; but of course I do not speak with any authority on this point.

2459. Can you say whether that amount has been judiciously expended? No; I do not. It cost too much in the first place, and in the next place, a much better piece of road could have been made for the money. Now, it is very much too narrow—the common complaint with all our roads. However, all these particulars could be got at by returns from the office of the Commissioner for Roads.

2460. Did Mr. Quodling ever tell you that he could not continue to perform his duties with satisfaction to himself at the Doughboy Diversion, because of the very unsatisfactory way in which Mr. Martindale was carrying out the work? He told me that the unsatisfactory way in which Mr. Martindale carried out his contract had led to a great deal of unpleasantness; that he had made certain representations to Mr. Collett, in regard to the work, and yet that Mr. Collett had passed it.

2461. He told you that he had represented the matter to Mr. Collett? Yes, and that Mr. Collett had entirely disregarded his representations.

2462. Did he make any other statement to you? Yes, he made many similar complaints.

2463. Did he state upon another occasion that his objections had been explained away, personally, to Mr. Collett, by Mr. Martindale? He did.

2464. Did you ever hear the contractor, Mr. Martindale, make any personal explanation in your presence, in reference to Mr. Quodling's objection to his manner of carrying on his contract? No.

2465. I think you said that Mr. Martindale is performing another contract on another portion of the Liverpool Range? Yes, that is recently.

2466. What is the nature of it? He is pitching a piece of road; and on this matter I was surprised that it was not taken up by Mr. Williams, for the public were driven off the road for nearly two months. Trees were put across the road to prevent the traffic coming on it, and there it was left for two months, whilst Mr. Martindale was away performing a contract upon New England, somewhere.

2467. Whereabouts is this piece of road? About two miles from his other contract; on the top of the range.

2468.

2468. Do you know if Mr. Collett authorized these works to be carried out? I cannot say.
2469. What is the extent of the contract? The length?
2470. Yes; what distance does it extend? About 100 yards.
2471. Was it let by public tender? No; I never heard of any tender having been called for.
2472. Who designed or laid out the old road over the Liverpool Range? The first pioneers of that part of the country. They went over that line when they first penetrated into the country beyond the range, and it has been in use ever since.
2473. Do you know the improved road that has been made by the side of Murrurundi, and to the right of the new line? That is the old line of road I speak of.
2474. I do not mean the original Doughboy Road? There are only two roads going up the range; one is the old line, made by the first settlers who crossed the range, and which has been in existence for the last thirty-five years; the other is of recent date, having been made within these last few years, and has the name of Bennett's piece of road.
2475. Has not a good deal of money been laid out upon the old road? Yes, a good deal.
2476. How long ago? It must have been some time back, because the Bench at Murrurundi had the laying of it out. Afterwards, however, some of the money was spent under Mr. Collett's superintendence.
2477. About how long was it? Perhaps about five or six years ago.
2478. Was there not money laid out there so recently as three or four years ago? Yes, I think it was about that time that some money was laid out upon that range. I recollect having some conversation with Mr. Collett upon the subject, and at that time he and I seemed to be very much of one opinion, and that was, that it was a pity to take up the new line after so much money had been spent upon the old one, and when such a small additional sum would put it in good order.
2479. Did he say how much was expended on the old line? I do not remember whether he said how much, but most probably he did. I cannot now call the amount to mind, but it could not have been less than £1,000. I think, however, that it must have been more than that. The Murrurundi Bench expended £400, and with the money placed at Mr. Collett's disposal there must have been quite £1,500 spent there from first to last. I think it was a pity that the new line was carried out at all, for even if the old line had been made and metalled, it would not have cost more than the new one, and would have been a better road.*
2480. Did Mr. Collett ever visit the works at the time when the German was filling up the dray rucks with large stones in the way you have described? No; I never heard of his doing so.
2481. You have never heard that Mr. Quodling was addicted to intemperance? No, I never heard anything at all said against Mr. Quodling, and never knew that there was even the shadow of a suspicion cast upon him on the point of intemperance, and I was therefore very much surprised when Mr. Dick put such a question to me as he did.
2482. With reference to the persons named Hill that have been spoken about—what appointments were given to them? He first went down to Shoalhaven, to collect specimens of wood for transmission to England for the Great Exhibition; since then I believe he has got an appointment either on the Southern or Western Road; but I may say about Mr. Hill, that we never had a road overseer like him in the district, either before or since.
2483. As a competent overseer? Yes, of course that is what I mean.
2484. Do you think, as a general rule, that it is the custom in the Roads Department to place in the situation of road overseers persons who have had no experience whatever in road-making? I think that since Mr. Hill has left we have never had a thoroughly experienced road overseer appointed in our district.
2485. Do you know who appoints these road overseers? I have always understood that Mr. Collett has the appointment. Mr. Hannington told me he received his appointment from Collett, so that I presume the others would do so also.
2486. Do you know the nature and extent of Greer's contract on the road near the Willow Tree? Mr. Martindale has that contract, and sub-lets it to Greer.
2487. Mr. Greer has a contract at Merriwa? Yes; but that also he takes from Mr. Martindale, who is the contractor with the Government.
2488. What is the nature of the work that Mr. Greer is executing at the Willow Tree? There is a stony hill there, and they are quarrying and blasting in order to make a road up the hill.
2489. Is it an extensive work? Yes, passably so.
2490. How many men does he keep employed there? About six or eight.
2491. Was that contract let to Mr. Martindale by tender? I cannot say.
2492. How many yards of the Doughboy Creek do you think have been filled up by the earth tilted into it from the cuttings? I should say that there cannot be less than 60 or 80 yards filled up in this way.
2493. And you say that no person is at present employed to cut a new channel for the water? I saw no evidence of it when I last passed there. I looked down as I rode along, but saw nothing doing, whereas if there had been I must have seen it.
2494. Do you know the price that Greer is getting for his work from Mr. Martindale? I do not.
2495. You cannot say then, whether it at all approaches the amount that Mr. Martindale himself receives from the Government? No, I cannot.

2496.

* NOTE (on revision):—I stated that half of the money spent on the new line would have made a good road of the old, although the gradient would not have been so easy.

A. Loder,
Esq., J.P.

10 Dec., 1861.

2496. *By Mr. T. Garrett*: In the first part of your evidence you related a conversation that had taken place between you and Mr. Martindale whilst on the road, in which conversation the name of Mr. Miller was introduced? I did.

2497. And Mr. Martindale said then, that Mr. Collett and Mr. Miller understood each other? Yes, that was what Mr. Martindale said.

2498. In another part of your evidence, in speaking of the testimonial that was being got up by the contractors, you used the words "I think he deserved it at their hands"? I did.

2499. What did you mean by that? I meant what I have stated more than once in the course of this examination, that Mr. Collett was not sufficiently strict with the contractors, in making them carry out their works in accordance with their contracts. He allowed the work to be done in the most slovenly manner; whilst there was neither the quantity of work or of material that the Government ought to have had for the money they paid for it. It was for this reason—for the favouritism shewn them—that I made the remark that he deserved the testimonial at their hands.

2500. Do you wish the Committee to believe that this conduct of Mr. Collett arose from his inefficiency as an officer, or from some other and more discreditable notice on his part? It arose from either the one or the other.

2501. But from which? Why, either would be equally fatal to Mr. Collett's character as a public officer.

2502. Which do you think it is? I have already fully explained my view—that, taking the conversation of Mr. Martindale in reference to Mr. Miller, in conjunction with the favouritism shewn to himself, and the memorandum said to be in Mr. Collett's handwriting, I could only come to the conclusion that some more discreditable motive than mere inefficiency was at the bottom of Mr. Collett's conduct.

2503. You are not in the possession of any facts by which to fix him with this charge? I am not.

2504. Then you refer his conduct either to a want of knowledge of the duties of his office, or to corruption? Yes; to one or the other. But then, from the facts of the conversation, in conjunction with the loose way in which Mr. Martindale in particular is allowed to perform his contracts, and this letter that has been produced, I am afraid that there is some truth in the report current, that Mr. Collett gets a per centage on Mr. Martindale's contracts.

2505. What grounds have you for this belief? I have just stated them—that these facts, together with this letter, are such, that the inference I draw from them is not an unfair one.

2506. But leaving out these, have you any other grounds of suspicion? I have no other source from which to obtain such grounds, unless indeed Mr. Bayley was examined. He appears to me to be the only person who is at all likely to throw any light upon the matter. Here is the fact before us, that Mr. Collett goes out of his way as a public officer, to put a contract into Mr. Martindale's hands. Surely there are grounds of suspicion in this very fact.

2507. Mr. Martindale got a contract for £6,300? Yes.

2508. And extra work being required, the amount was increased to £7,000. That is exactly the case.

2509. And you think that is corruption in Mr. Collett? No, not what you have stated; but the corruption lies in this—that a letter is written in Mr. Collett's own handwriting, as proved by Mr. Bayley's memorandum, recommending Mr. Martindale to apply for this extra work at a particular price, and that this application should have to be sent in to Mr. Collett for his approval.

2510. But Mr. Martindale having the contract for the original work, would be likely to have the preference for the extra work? That may be; but when we find a public officer in Mr. Collett's position going out of his way for any contractor, it was not by any means an unfair inference to draw, to say that he had some interest in so doing.

2511. Do you know the circumstances which led to this memorandum being put on the back of the letter by Mr. Bayley? I do not.

2512. Have you noticed the date of the paper? No, only that I see it is dated some time ago.

2513. Is it not usual—supposing that extra work is found necessary, in order to finish a contract in a proper way—is it unusual to give such additional work to the person holding the contract, at a fixed price? I fancy that if additional works were required, the proper way would be to let the matter go through the regular official form, instead of the head of the department going out of his way to write to the contractor, telling him for what amount to tender for the work.

2514. Do you not know that it is necessary for the officers of the department to examine the works as they are in course of progress, and that upon such examination, other work not specified in the contract is often found necessary? If Mr. Collett examined the works, and so found other works necessary, he must have done so before he left Sydney, for this letter was written before he arrived at Murrurundi to inspect the line; but if it were done after inspection, why could it not have been done regularly? His clerk might have written the letter from the office of the department in the usual way, and then an application could have gone in; instead of which, Mr. Collett writes to Mr. Bayley, and Mr. Bayley sends a copy of the letter to Mr. Collett.

2515. As a matter of fact, I believe there are extra works required beyond those in the original contract? There are.

2516. Supposing them to be required, would the works be complete without them? That I am not prepared to say; but this is a fair inference to draw—that when plans and specifications are drawn out it is to be assumed that if the officer is efficient they will contain in them all that is necessary for the work; and then this further work coming on the top of them

them gives rise to the idea, either that there is inefficiency or something worse; but it has always been a matter of surprise to me that there never is anything reliable in the plans and specifications, for they are always exceeded when the work comes to be executed.

2517. It is usual then, to exceed the original contract? It seems so.

2518. *By the Chairman:* Do you know one Henry Howard, of Lochinvar? I do not.

2519. There was a question put to you by Mr. Dick, which seemed to imply that you had come here to give evidence in consequence of some collusion between you and other parties. May I ask you what your motive was in coming before this Committee—was it solely from a regard for the public interest, or was it with a desire to injure or denounce anyone? It certainly was not with the latter object.

2520. Have you come expressly to give evidence in favour of Mr. Quodling, or expressly to make out a charge against Mr. Collett? I never had the slightest idea of anything of the kind. It is my regard for the public interest that has alone induced me to come forward in a matter that cannot be anything but exceedingly unpleasant.

2521. And that is your only object? That I am satisfied is the only object I have in view. I have long felt that there was something radically wrong in the management of the Roads Department, and, as I before said, if I had remained in the Assembly I should have brought the matter forward, and have obtained a Committee of inquiry to see into the general management of the roads.

2522. You never had any quarrel with Mr. Collett? Not at all; on the contrary, we have always been on the best terms together.

2523. And you owe him no ill-will? Not the slightest.

2524. Nor are you particularly inclined to favour Mr. Quodling? I am not; I only desire fairly to speak the truth as to what I know.

2525. *By Mr. Garrett:* With regard to the £700 contract of Mr. Martindale on the Liverpool Range, are you aware whether that was let without tender? I believe it was.

2526. But you think the extra work was necessary? Mr. Martindale told me the extra work was necessary, as that specified in the contract was not sufficient to complete the road as it should be.

2527. Do you know if this mode of letting without calling for public tenders is contrary to the rules laid down by the Department for managing the roads? I do not.

2528. Do you know what their rule is? I do not.

2529. Who were the parties who originated the testimonial that you have referred to? There were three of them—Mr. Martindale, Mr. Greer, and Mr. Clements.

2530. Mr. Martindale was a contractor at that time? He had just completed his Liverpool Range contract at that time, for £2,200, or something of that sort, and Mr. Collett was coming up to inspect it.

2531. Was Mr. Clements also a contractor? Yes; he told me that he had contracts, previous to this, to be approved of by Mr. Collett at this visit.

2532. Greer also was a contractor? He was.

2533. On his own account, or only under Mr. Martindale? I believe he had a contract on his own account.

2534. Do you know, of your own knowledge, whether all these three parties who had made themselves active over the testimonial obtained works without contract afterwards? I do not know of my own knowledge, but I know that it was subsequently talked about in the district, and was said that they did so.

2535. Do you know the amount that was subscribed to this testimonial? I do not.

2536. Do you know the amount that these three persons subscribed? No, though I heard that Mr. Martindale had subscribed £5. I cannot say whether this is the case or not; but I was informed that the list was headed with his name for £5.

2537. I believe that you object to testimonials on principle? To that description of testimonial.

2538. You object to testimonials to public officers? I object to giving them to public officers who are paid good salaries for what they do; but when the public officer does not do his duty to the extent that one has a right to expect from a person in his position, I most certainly object to any testimonial being given.

2539. You think then, that Mr. Collett did not do his duty? I do.

2540. In what? In not keeping the parties to a strict performance of their contracts. It may be that he has too much of the milk of human kindness in his composition, and may not like to refuse favours that are asked of him. There are some persons who cannot say "No"; but they are not the men to fill such situations as Mr. Collett holds.

2541. You have spoken of the property that Mr. Collett possessed—do you know what Mr. Collett came into possession of, prior to his entering into the Government service? I do not.

2542. Do you know what his position was, as regarded finances? Not from my own private knowledge; but it was patent to the public what his position was.

2543. How long has he been in the Government service? I do not know.

2544. Nor what he had when he entered it? No.

2545. He may have had pecuniary means that you knew nothing about? He may.

2546. With regard to the bridge to which Mr. Clements was making some repairs, near the Doughboy Hollow, is that standing yet? It is.

2547. How long is it since it was erected? Possibly about four years.

2548. It could not then have been so very badly constructed? But I must qualify this by saying that, though it is standing, it is not standing as a bridge, for it has been silted up, and the water, instead of passing under it, breaks over the roadway. It has been metalled twice; but owing to the large body of water that breaks over the roadway, the metal is carried away with the first heavy rain. It is not, therefore, as a bridge that it stands, but rather as a miniature waterfall.

- A. Loder, Esq., J.P.
10 Dec., 1861.
2549. Would a wooden bridge of the same dimensions have stood? Yes; because there would have been a passage for the water under it. I suppose that the span is not above four or five feet; and the large quantity of silt that is washed down from the mountains by the heavy rains has choked up the small openings left between the stones, and so forced the water over the roadway.
2550. Did you ever take notice of the depth and thickness of the pitching on the roads? I have; I have remarked it frequently.
2551. Do you know the thickness at which it ought to be laid by contract? I do not. I know that the metalling has to be nine inches at the centre.
2552. I am speaking of the pitching? The way they do the pitching is by putting the smaller stones at the edge of the roadway, and the larger ones at the centre, gradually increasing them in size so as to form a convex surface.
2553. You cannot say that the pitching is not nine inches thick at the centre? I think it is the broken metal you refer to, and that is not nine inches in the centre, or anything like it.
2554. I allude to the pitching, which the specifications declare shall be nine inches thick in the centre—is that so? It may be.
2555. Have you been asked any questions as yet in regard to the pitching? No; I have not, as I remember.
2556. Now with regard to the metalling: Suppose that there be nine inches of pitching, three inches of broken metal, and two and a half inches of binding; would not these together be more than equal to nine inches of broken metal? No, certainly not; especially if the metal were put on at two different times, as provided for in the contract.
2557. With regard to the spreading of the shale that you noticed at one place, was it laid down upon the bare earth, or on the foundation of the road—on the natural soil, or on the rock or pitching of the road? It was laid down on the pitched road.
2558. You have only known Mr. Quodling for two months? It is about two months ago since I was introduced to him.
2559. Have you had an opportunity during that time of knowing his character for efficiency as a public officer? I have had opportunities of seeing him up and down the road for a much longer time than that. Besides that, I have heard the objections he has made to the construction of the road, and these give me the idea that he must be an efficient officer, or he would not have found them out.
2560. Have you yourself heard him making these objections? I have.
2561. Have you ever heard him, in any public place, denounce the way in which the works have been carried on by the contractor? I have heard him state that they were not carried on as they should be, in the private room of an inn, if that may be regarded as a public place.
2562. Who was present? Myself and Captain Scott.
2563. That was when you were introduced to him? No; but that was the first time that I knew that there was any difference made between Mr. Martindale and other contractors.
2564. Was that when the voucher was produced? It was.
2565. Did he complain of payments having been made to the contractor before the voucher had been sent back to the Department? He complained both of the money having been paid, and of the remark that had been made on the voucher.
2566. He shewed it to you? Yes.
2567. At that time? He did.
2568. Do you think that the remarks made were either offensive or improper? He might have considered them so; because I think that he had good grounds for complaint of Mr. Collett, for his having taken up the cudgels on behalf of the contractor as against his own overseer.
2569. Do you regard this memorandum as taking part with the contractor against Mr. Quodling? I do, most assuredly.
2570. Do you draw that inference solely from the remarks upon the document, which were solely to the effect that Mr. Quodling should not have made his remarks in ink, and which did not in any way go into the merits of the question between him and the contractor? Yes, I believe that was the purport of the memorandum.
2571. Then do you draw your inference from the memorandum itself, or from what Mr. Quodling said to you at the time? From both.
2572. As regards the copies of the specifications, do you not know that copies are always sent to the Benches nearest to where the work contracted for is situated? I do not. I have already explained that when I visit the Court House the Bench duties occupy my whole time. I have a distance of 16 miles to ride from my place to Murrurundi, and I have not much time to give to other matters than the Bench business.
2573. There has been some statement with regard to Mr. Hannington having come down the country with Mr. Collett? Yes, I understood that he had come down with Mr. Collett.
2574. How did you hear this? The week before last—since this inquiry has been commenced. When I was coming down on the mail, the contractor, who drives the coach himself, told me that Mr. Hannington and Mr. Collett had gone down the country. He also said, that whatever might be the result of this inquiry, it would at all events do some good, because he had never seen the officers of the department so active as they had been for the last few weeks.
2575. Did he say that Mr. Collett and Mr. Hannington were travelling in company? No; only that they had gone down the country.
2576. *By Mr. Lucas:* Have you heard that the overseers on the northern line of road were horsed by the contractors? I have heard it said that it was a pity Mr. Brown allowed himself to be under a compliment to the contractor, by having their horse to ride upon.

WEDNESDAY, 11 DECEMBER, 1861.

Present:—

Mr. ARNOLD,
Mr. DANGAR,
Mr. DALGLEISH,
Mr. DICK,

Mr. T. GARRETT,
Mr. HOSKINS,
Mr. LUCAS,
Mr. MARKHAM.

WILLIAM FORSTER, Esq., IN THE CHAIR.

The Commissioner of Roads present in the room.

Mr. Robert Quodling called in and further examined:—

2577. *By Mr. Dick:* At your last examination you stated that you could not furnish certain information because you had not your books? Mr. Chairman, before I answer any of Mr. Dick's questions, I want to explain to you, I rather inadvertently the other day made use of an expression; I said I believed Mr. Dick was paid to confuse me in this inquiry, and I would like to explain how I arrived at that conclusion. (*After some conversation on this point, the witness proceeded.*) My reason for using the expression I did, stating that I believed him to be paid, was founded on a conversation he had with me, when he asked me to show him my documents and hand over my case to him. Mr. Robert Quodling.
11 Dec., 1861.
2578. *By the Chairman:* Where at? At Pochlman's Café, in George-street; he wanted to go through my documents and take the case over, as a private friend and solicitor.
2579. What did you understand by this offer? Those were the words; I did not hand him over the documents because I heard —
2580. Have you had any further communication with Mr. Dick? No.
2581. Is Mr. Dick a private friend of yours? I do not know that he is.
2582. *By Mr. Dalgleish:* Had Mr. Dick and you been on terms of intimacy previously? Yes.
2583. *By the Chairman:* Is that all your statement? That is all.
2584. *By Mr. Dick:* Was this conversation with me before the motion was brought forward in the House? It was after the Committee was granted.
2585. Did you call at my office the next day? I do not recollect; I did call at your office.
2586. Did you call at my office the next day after the conversation you speak of? I think not.
2587. When then? I saw you twice, and you spoke about it at two different times.
2588. You stated you could not give me some information the last time you were examined because you had not your books—have you those books now? I do not know what information you require.
2589. Do you not recollect the questions I asked you last time? No; I do not recollect them.
2590. You stated that you could inform us of the last day you saw Mr. Hannington? The last time I saw him was when I was on my road to Sydney.
2591. What date was that? I cannot remember the date.
2592. I think I understood you to say that the last time you measured the works was on the 11th September? My last report about the works —
2593. I do not ask for the date of your last report about the works—I ask what was the last day you measured the works? November 5th is the date of my last return. That is compiled from Mr. Hannington's return. I can scarcely recollect what I did say to Mr. Dick on the last day I was examined; but when I read over my evidence, if there are any errors as to dates, I suppose I am at liberty to be re-examined to explain them.
2594. Can you tell the Committee on what day you last measured the works? I do not recollect the last day.
2595. Did you make any entry of it? I cannot tell you the date.
2596. Did you make any entry of it? I cannot tell you the date.
2597. My question is, did you make any entry of it? Where?
2598. Did you make any entry of it? I have made an entry of it.
2599. In what book? I am not in a position at present to tell you.
2600. Do you mean to say you do not know in which book it is? I cannot give you the information now.
2601. Do you mean to say you do not know in which book it is? I do not know at the present time.
2602. Have you a journal with you? I have several books with me.
2603. Tell the Committee where you were on the 11th September? I am not certain whether I was in Murrurundi or on the Doughboy works. I think that is the date of Mr. Collett's arrival there—I would not be certain.
2604. Were you in charge of Doughboy works at that time? I was.
2605. How did you measure the works? I was not asked to measure them that day.
2606. I ask how you measured the works about that time? In the ordinary way.
2607. Who was with you? Mr. Donaldson was with me.
2608. Who is he? The contractor's agent.
2609. Did you measure them with a tape? Yes, a portion of them; a great portion I took off from the drawings.
2610. Did he hold the tape? No, one of the workmen held the tape.
2611. Is it usual to measure works in that way with the contractor's men? Yes.

- Mr. Robert Quodling.
- 11 Dec., 1861.
2612. Do you not think that practice might lead to great abuse? No, I do not think it would. It is usual in all cases.
2613. You mean in all cases where you have superintended? Where the contractor is absent from his work for ten weeks, of course you cannot expect him to be there to hold the tape.
2614. Is it not usual to have a man employed by the Government to hold the tape? No, I never knew an instance in all the railways I have been on.
2615. What railways have you been on? On the Parramatta and Liverpool, the Liverpool and Campbelltown, Parramatta to Blacktown—those three lines.
2616. When you measured the works there, did you always measure with the contractor's foreman? I was then employed for the contractor.
2617. What amount of earth-work did you measure the last time you measured the works? I have not the measurements of the earth-work; I have some measurements that Mr. Hannington made with the contractor's agent? I have not them with me.
2618. I thought you said Mr. Hannington was unable to measure? He booked with the contractor's agent.
2619. Was he able to measure the work himself? No.
2620. What did you mean by saying they were his measurements? I have the return forwarded from him to me.
2621. Have you the book that you were asked to bring when you were before the Committee the other day, shewing the measurements of the earth-work? I do not recollect it.
2622. Did you come to this Committee with the intention of giving all the information you could? Yes.
2623. Did you expect to be examined with reference to all these matters? I expected to be examined with reference to my letter.
2624. Generally, with reference to the Northern Roads? With reference to the works I was on.
2625. Why did you not bring this book with reference to the earth-work? Because I placed no reliance on that statement.
2626. You placed no reliance on your own book? Not on the measurements Mr. Hannington has taken; I have taken off all the quantities from the sections.
2627. Do I understand you to say that you placed no reliance on your own book? No, on Mr. Hannington's measurements I place no reliance. All measurements can be taken off from the sections and from the drawings.
2628. Can the measurements of what work has been done be taken off the sections? Yes.
2629. That is supposing it to be properly done according to contract? Yes.
2630. Not supposing it is deficient a certain quantity? Then, of course, you must deduct the deficiency.
2631. You would have to measure the deficiency in order to deduct it? Not in all cases, because you can take the distances between the pegs; the line is all pegged out, and every chain is numbered.
2632. Did it always happen that the deficiency occurred between two exact points? Every chain on the line was numbered; I could tell the mileage at any particular point.
2633. Do I understand that any deficiency in the work always commenced at one peg and ended at another? Not at all times; it might be 12 or 20 feet from either of the pegs.
2634. You measured from the pegs? Yes.
2635. In order to get at it, unless it comes from two known points, it is necessary to measure the deficiency? It is necessary if you cannot get a starting point.
2636. Was there not an error of five feet in laying out the north approach to the bridge? To what bridge?
2637. The last bridge? Not to my knowledge. I can soon tell you. Do you know the name of the bridge?
2638. No, I do not know the name of the bridge? Then I cannot tell you.
2639. The last bridge that was erected nearest the Willow Tree? No, I do not know of any errors in any of the setting out of the bridges.
2640. Had you the earth-work under your charge in that bridge—especially under your charge? I had a portion of the earth-work under my charge. I know the piece of work Mr. Collett alludes to; it is a piece of work I condemned, and refused to pay the contractor for.
2641. Will you answer the question? I want to explain.
2642. You will have every opportunity of explaining; answer the question first. Had you the earth-work in that bridge specially under your charge? I stated before, I had the earth-work for a certain period.
2643. Did Mr. Collett discover any error? Mr. Collett never discovered any error; any errors that were made were pointed out to Mr. Collett.
2644. If Mr. Collett did not discover the error he did not reprimand you for it? He did not reprimand me at all for it.
2645. Do you know a work called the big cutting? I have seen it.
2646. Was that under your charge? It was, for a time; but that was commenced by the contractor without any order from Mr. Bayley or myself. He had a private note that he shewed to Mr. Bayley; and he also shewed the same letter to me, with reference to that big cutting. Mr. Collett was in the habit of writing private letters to the contractor with reference to the works. That letter was shewn to me. He turned down a portion, and did not let us see the rest.
2647. What was the letter about? Directing Mr. Martindale to commence the works.
2648. Why do you call it a private letter—did it come from the department? It was a private letter from Mr. Collett.

2649. Did it appear to come from the Department of Works? No; I say it was a private letter. Mr. Robert Quodling.
2650. Had it no official appearance about it? It had no official appearance about it. In fact he would not shew me the letter; he only shewed me a few lines, and turned down the other portion. 11 Dec., 1861.
2651. How then do you know it did not bear any official appearance? I know it did not. Of course if it bore any official appearance he would not have objected to let me read the whole letter.
2652. Do you know whether Mr. Martindale had made any complaint that Mr. Bayley would not allow him to begin the last cutting at Doughboy? Mr. Bayley said he had received no orders from Mr. Collett to commence it.
2653. Did he state this in your presence? Yes.
2654. To whom? To Mr. Martindale.
2655. What did Mr. Bayley say? Mr. Bayley refused to measure up the work, and I refused to measure up the work at this particular time.
2656. I am now asking you what he said about beginning the big cutting? He said he had received this letter.
2657. *By Mr. Hoskins*: Who said? Mr. Martindale said so; and he turned down the portion with reference to the cutting. I recognized the hand of Mr. Collett, stating he was to commence the work; and no official intimation had been sent to either Mr. Bayley or myself with reference to it.
2658. *By Mr. Dick*: About what time was this? I could not give the exact date; I think it was in February; I believe it to have been in February.
2659. You took charge of the works in February? Yes, I believe that was the date I took charge.
2660. Do you know whether Mr. Martindale made any complaint of Mr. Bayley not allowing him to begin the large cuttings? I do not know whether Mr. Martindale ever did make any complaint. I heard Mr. Martindale ask Mr. Bayley to measure these big cuttings, and Mr. Bayley said he had received no orders; there was no arrangement made as to the price of the works, and Mr. Bayley had no official information.
2661. How do you know that? He stated that in my presence. Mr. Bayley is coming down, and of course his evidence can be taken.
2662. Look at this letter, dated 18 February; just read that to the Committee? (*The witness read the letter referred to. Vide Appendix A.*) Well, Mr. Bayley had received no instructions about this.
2663. You may as well read the notes upon it? (*Witness read the same.*) I think that has been written since this inquiry. It might not be.
2664. You state you think that memo. in red ink has been written later than the other? I did not state that.
2665. What did you state? I said I thought this memo. had been written since the inquiry.
2666. Not the red ink? I do not know about the red ink.
2667. Which part do you believe has been written since this inquiry? Mr. Collett's note upon it.
2668. Why do you believe it—for what reason?
- [*The question being objected to, witness directed to withdraw. The Chairman ruled the question in order. Witness recalled.*]
2669. Why do you believe that memo. was written after this inquiry began? I think so, from the way that is written there. There is a great deal of difference in the ink; if you notice, "61-21" is very different to this memo.
2670. You believe so, from the appearance of the document? I believe so, from its appearance.
2671. *By Mr. Arnold*: Is your belief that this was written after this inquiry began—is your belief in that statement as strong as it is in any other statement you have made? From the appearance of that document, I think it was.
2672. You have the same faith in this belief of yours as in any other statement you have made?
- [*The question being objected to, witness directed to withdraw. Committee deliberated. Mr. Forster resigned the Chair. Mr. T. Garrett called to the Chair. The Chairman ruled the question in order. Witness recalled.*]
2673. I asked whether your belief that this minute of Mr. Collett's was written since this investigation began, and not at the time it purports to be written, is as strong as your belief in the other statements you have made during this inquiry? I decline answering the question.
2674. *By Mr. Dick*: In reference to this big cutting, where is the work called the big cutting? It is on the Doughboy Diversion.
2675. Were the levels right on the big cutting? Yes, it was carried out according to section.
2676. Were the levels altered by Mr. Collett—did he correct them? No.
2677. Who laid out the sections of the Doughboy Diversion? I believe one of the draftsmen in the office. Mr. Collett did not lay them out.
2678. I am not asking who did not lay them out. Do you know who did lay them out? I believe Mr. Debenham surveyed the line.
2679. Have you seen Messrs. Bennett and Wells' plan of the line? What line.
2680. This Doughboy Diversion? Yes, I have seen it.

Mr. Robert Quodling. 2681. Do you know whether Mr. Collett made any alterations in the bridges? Mr. Collett abandoned the first line laid out—at least the line laid out by Mr. Wells—and took this line of Mr. Debenham's at a certain point on the works.

11 Dec., 1861.

2682. Do you know whether Messrs. Bennett and Wells' line was objectionable on account of there being so many curves? I had the drawings here the other day; I have not got them with me at the present time.

2683. Did not the Chairman, Mr. Forster, at the previous meeting, ask you to bring all the papers relating to this inquiry? I do not recollect. At any rate I have had them here several times.

2684. Have you a good memory? Yes, very good.

2685. You can recollect matters that took place six months ago? Yes, perfectly.

2686. Or twelve months ago? I do not know about that.

2687. How is it you cannot recollect what took place last week in this Committee? I had the documents here before.

2688. I ask you how it is that you cannot recollect what took place last week in this Committee? I do recollect what took place.

2689. Do you recollect the Chairman asking you to bring all the papers? I believe he told me to bring the papers—not any particular papers.

2690. Why did you not bring all the papers here to-day? I have not got them with me.

2691. Why have you not got them with you? I would have brought them if I had thought of it; if I had thought I would have been asked these questions I would have brought them with me. I could bring them at any other time.

[Witness directed to withdraw. Committee deliberated. Witness recalled.]

2692. *By the Chairman*: Have you in Sydney the plan alluded to? Yes.

2693. Have you any objection to produce it to-morrow morning? Not the slightest.

2694. Messrs. Bennett and Wells' plan of the Doughboy Diversion? Yes, both their names are marked on the plan.

2695. You can produce that to-morrow morning? Yes.

2696. *By Mr. Dick*: Have you any other papers in Sydney that relate to this investigation? Yes, I have papers connected with it.

2697. Have you any objection to produce them to-morrow morning? No, no objection. I have several papers here I want to hand in to the Committee.

2698. Have you any objection to bring to the Committee all the papers you have relating to this matter? Not the slightest. I will bring all I have with me. I have written for a great number of papers; I think I shall have to go to Tamworth for more.

2699. Are your task books in Sydney? No.

2700. Where are they? In Tamworth, I believe; I left them there.

2701. Have you got your field book? I have a field-book.

2702. What do you mean by a field book? An ordinary book for measurements.

2703. Had you a private field book and a public field book? I have a public field book.

2704. And a private field book? I have a book with private memoranda; this is the book with the measurements in.

2705. *By the Chairman*: Will you hand it in? Yes, but I shall want it to refer to; I know there is a great deal here that Mr. Collett would like to get information from—a great deal in this book.

2706. If it is information bearing on this inquiry —? It is information bearing on the inquiry; but it is information I do not wish to hand in till I am asked the questions; if it is kept from Mr. Collett, that is all I care about.

2707. *By Mr. Hoskins*: Would you have any objection at the termination of this inquiry to hand this book in? Not the slightest.

2708. *By Mr. Dick*: To whom does this book belong? It belongs to the Government.

2709. Do you refuse to hand it in? I do not refuse.

2710. Will you hand it in now? I want it to refer to.

2711. *By the Chairman*: I may explain that you will be allowed to refer to it? If you demand the book, you may take it, but I want to refer to it.

2712. *By Mr. Dick*: Will you hand the book in now? I state that I wish to have it to refer to.

[Witness directed to withdraw. Committee deliberated. Witness re-called.]

2713. *By the Chairman*: With regard to this book, the decision of the Committee is, that you produce the book, that you hand it in to the Clerk, but you will have every opportunity of referring to it, and it will not go out of the possession of the Clerk? Of course I will hand it in then. (*The witness handed in the same.*)

2714. *By Mr. Dick*: You say you measured the work at the big cutting? I have taken measurements there.

2715. When did you measure it? I have frequently taken the heights of the buoys.

2716. When did you measure it last? I took some depths as I was coming down the last time I was on the Doughboy Works.

2717. What date was that? It was in October, the latter end of October.

2718. Did Mr. Collett ever tell you, you were unable to measure the work? Never. The works were not in my charge when he asked me about the measurement.

2719. What did he say to you about the measurement? He asked me about the measurements of the Doughboy cutting; I said the works were not in my charge; and another thing, the contractor has been knocking down the buoys, and it was impossible to get an

accurate

accurate measurement, only an approximate estimate could be arrived at, when the calculations were taken from the cross sections that Mr. Debenham took.

Mr. Robert
Quodling.

2720. Then Mr. Collett did ask you to measure the big cutting? He never asked me to measure it, at least he spoke in this way—he asked me my opinion as to an estimate of the quantity; he said something about measurement, but the works were not in my charge; at the time he asked me Mr. Bayley was on the works.

11 Dec., 1861.

2721. Was it because the works were not in your charge that you refused to measure them? I have stated already that the buoys were knocked down, and accurate measurements could not be obtained from the present state of the cutting, without it was taken from the transverse sections of Mr. Debenham's survey.

2722. *By Mr. Dalgleish:* What are these buoys—are they not portions of earth from the original level, left in order to facilitate the measurement? Yes, to take the heights.

2723. Left at different distances along the cuttings? Yes.

2724. These buoys are necessary, in order to get a measurement? Yes, they are necessary.

2725. It is usual in all works of cutting to leave these buoys? It is usual. At this time, these buoys were nearly all knocked down.

2726. The cross section shews the original ground to be cut? Yes.

2727. And you were willing to give an approximate measurement from the cross sections? Yes.

2728. Seeing that it was impossible to give it otherwise, from the buoys being knocked down? Yes.

2729. *By Mr. Arnold:* Are the transverse sections and the cross sections you speak of the same thing? Yes, they are similar.

2730. You use the terms as synonymous? Yes.

2731. *By Mr. Dick:* Have you any other field book than the one you have handed in? No.

2732. These measurements appear to me to extend from February to April? Yes.

2733. Have you made any measurements since that? No, I was directed not. Mr. Bayley took the works over, and I think Mr. Bayley has a considerable number of measurements.

2734. You took no measurements since the 28th April? I have taken no measurements except for my own information, as I was directed by Mr. Collett not to measure.

2735. It was no part of your duty to take any measurements after that? It was not, but I have taken measurements.

2736. Was it your duty to make fortnightly returns after that? I had not charge after that date—Mr. Bayley was on them.

2737. How long did Mr. Bayley remain on them? I cannot tell you from memory, but he is summoned, and you can obtain his evidence.

2738. Did Mr. Bayley leave in July? Mr. Bayley left in August.

2739. Who has had charge of the works since then? I had, for a portion of the time.

2740. Did you make any measurements since you had charge of that portion? No, because, as I stated in my reports, the contractor had orders to do them without measurement.

2741. How did you arrive at that conclusion? I took measurements, but I was directed to make returns without measurements, according to slips I received from Mr. Bayley.

2742. Did you receive those instructions in writing? No, verbally from Mr. Collett.

2743. Where was Mr. Collett? On the Doughboy Diversion.

2744. About what time was this? I think Mr. Bayley was present at the time.

2745. What did Mr. Collett say? He stated that no measurements were required; I think I can give you the words he used. (*The witness referred to a memorandum book.*) At any rate he stated that no measurements were required, as the contract was a lump sum.

2746. But in order to see what money he was entitled to, surely it was necessary to make some measurements? I did it for my own information, but I was not furnished with the amount paid to him.

2747. Notwithstanding you were told not to measure you did measure? I did.

2748. Have you those measurements? I have not.

2749. Are they in Sydney? Some of them are in Sydney. I can swear to any evidence I have already given as to the quantity required to complete the contract.

2750. When? At the last date when moneys were paid to Mr. Martindale without my certified voucher.

2751. At what date was that? I handed in the document; I cannot tell you without it—it is a £300 voucher.

2752. When did you hand it in? I think it was on the second or third days' evidence.

2753. Had you no other use for a field book except on this work? No; I noted anything that was important; it is a mere memorandum book.

2754. I do not see anything else noted? There is at the other end.

2755. *By Mr. Dalgleish:* Do you consider the other end of the book to be private? No. There are copies of specifications and information to guide me, compiled from documents I received from the office.

2756. *By Mr. Dick:* Were there no other works that it was necessary to enter in this field book? There are no other entries there. That is only given as a memorandum book; I applied for memorandum books, and they sent me these.

2757. Every surveyor has what is called a field book? Yes, but I was not a surveyor; I was a Road Superintendent. A surveyor's field book is very different to a memorandum book.

2758. You call this a memorandum book? Yes, I know what a field book is.

2759. I asked whether you had a field book? I supposed you meant that book; that is the only book I have of the description you spoke of.

2760. I meant what I said—a field book? You may term that a field book, one portion of it. It is for general memos.

2761.

- Mr. Robert Quodling.
11 Dec., 1861.
2761. You stated that one of the channels was filled up at Doughboy Creek, or Mr. Loder stated it—you heard him state so? Yes, I believe it is filled up.
2762. Were you ordered to cut a new channel to prevent the undermining of the embankments? Mr. Collett arranged with the contractor to cut a new watercourse, and I was directed to make this out as a task agreement for Mr. Martindale, and to pay him 2s. a cubic yard for cutting a fresh watercourse, and my letter is in the office forwarding this estimate; I suppose it can be easily obtained.
2763. *By Mr. Dalgleish*: What was the material? It was soil—earth-work.
2764. No rock? No rock.
2765. *By Mr. Dick*: Did Mr. Collett direct you to cut a new channel to prevent the undermining of the embankment? I have just answered the question.
2766. Please to answer it again? I have stated that Mr. Collett directed him to make a new watercourse, and I was to make it task-work.
2767. Did Mr. Collett direct you to cut a new channel to prevent the undermining of the embankment? He did not direct me; he directed Mr. Martindale to do it.
2768. Did you send in an estimate? I did. The prices were agreed on by Mr. Collett and the contractor, without any reference to me whatever.
2769. How was it that you forwarded an estimate that you did not make? I think in the letter I explained it. Mr. Collett arranged about it, and he directed me to send it in.
2770. *By Mr. Dalgleish*: Was it usual for you to have the terms of your letters dictated to you? This was an arrangement made by Mr. Collett and the contractor; no question was asked me with reference to it.
2771. I understood you to say Mr. Collett had directed you to write a letter of a certain import? Yes.
2772. To himself? To himself.
2773. *By Mr. Hoskins*: Where is the letter? I saw it on the table.
2774. *By Mr. Dick*: What is the use of asking you to make an estimate of works if the price is already agreed upon by the Commissioner of Roads? He told me to send it in, so that it would clear him up from the case, and tried to put it on to my shoulders.
2775. Did he say this? He told me to send this in.
2776. Did he say it was to clear him up? I believe that was his object, and I stated in my letter that I forwarded the return, if you will produce it and read it, at the prices agreed on by the Commissioner himself.
2777. I ask you what is the use of calling on you for an estimate of the work if the price is already agreed upon? They wanted it as a record I suppose—Mr. Collett wanted it, and he told me to send it in. I could get the work done for half the sum.
2778. Why did you not so report? Because the work was let to him by Mr. Collett. Who was I to report to?
2779. Did you consider it your duty to obey Mr. Collett's instructions, and to report anything he chose to tell you? If Mr. Collett made an arrangement with the contractor, being a subordinate officer, I had to carry it out; at least I was supposed to do so.
2780. What do you say was the price agreed upon? I do not know from memory.
2781. What price do you say you could get it done at? Well, I could get it done at a considerably less sum than what was forwarded.
2782. You said half the price? Perhaps half the price.
2783. And now you say you do not know what the price was? I do not want to state the price.
2784. Do I understand you to say you could get it done for half the price you certified for? I have not certified for it; I only sent it in as directed.
2785. At the time you sent in that letter did you know you could get it done for half the price? Yes.
2786. Why did you not report it? What was the use of reporting it to Mr. Collett; Mr. Collett let the work without any question to me as to the price.
2787. At the time you wrote this letter the work had been commenced? The work had not been commenced—not the whole of it.
2788. Then it was not too late to point out that it could be done cheaper? There was no use in pointing it out after the Commissioner had let the work.
2789. How do you know there was no use? I considered there was no use. It was no use fighting with my own finger.
2790. *By Mr. Hoskins*: Were you sure this work was let at this time? Yes, I am satisfied it was; I am satisfied Mr. Collett let it, and never made any reference to me in the matter.
2791. *By Mr. Dick*: Whereabouts was this that it was let—who was present at the time it was let? I cannot tell you from memory; Mr. Martindale was present.
2792. And Mr. Collett was present? Mr. Collett was present.
2793. And you were present? I was present.
2794. The work was required, I presume? I do not know; I suppose Mr. Collett thought it was.
2795. You were there when the agreement was made? I was there when Mr. Collett agreed to give Mr. Martindale these prices, and this is my note I made at the time.
2796. Read your note—about what date was it? I think it was about the 10th or 11th of September; I would not be certain which.
2797. What is the date in your book? I have got the 11th of September.
2798. You believe it was on that day, or the 10th? I believe it was about that date.
2799. *By Mr. Hoskins*: Please to read your memorandum? (*Witness reading*) "Drain to be cut at the foot of embankment at the big cutting, so as to carry watercourse away from the foot of embankment; to be let to Mr. Martindale, as task agreement, at 2s. 6d. per cubic yard"—

2800. *By Mr. Dick*: 2s. 6d.? 2s. rather; it is 2s. I have made a mistake in drawing it out. "Extra culvert north end of retaining-wall, second-class task agreement." Mr. Robert Quodling.
2801. *By Mr. Dalgleish*: What was the price of that? I think it is £15. 11 Dec., 1861.
2802. *By Mr. Dick*: Was the amount stated at the time? Yes, the amounts were stated.
2803. Have you any other note of what took place? Yes, there are some other notes.
2804. Have you any objection to read them? Yes, I have an objection.
2805. *By Mr. Dalgleish*: Have they reference to this matter? No reference to the matter he is speaking about.
2806. *By Mr. Dick*: Are they simply with reference to other matters that took place at this time? Yes.
2807. *By Mr. Hoskins*: Do they refer to this cutting? No.
2808. *By Mr. Dick*: Did you at that time think Mr. Collett was letting the work too high? Yes, I did think so.
2809. Or did you subsequently ascertain that it was too high? I knew at the time he was giving him too much money for the work.
2810. Did you tell Mr. Collett so? No; Mr. Collett never referred to me, and never asked me a question with reference to it; he let it to the man without any reference to me.
2811. Where were you at the time? On the works.
2812. Where? At the big cutting, at the time he let the watercourse.
2813. You must have heard all this, as you took a note of it? I did hear it.
2814. There was no concealment on Mr. Collett's part? I do not know if any concealment was meant.
2815. *By Mr. Dalgleish*: Were you intended to hear it? Yes, I was intended to hear it.
2816. *By Mr. Dick*: You know, I suppose, that when two people have anything to say that they wish to conceal they would be likely to go on one side? They were on one side a considerable time after they left the work; they were continually together and on the work.
2817. You were continually with Mr. Martindale, I suppose, about the works? No; I was at times with him.
2818. You have been frequently with him? Yes.
2819. *By Mr. Dalgleish*: At this time were Mr. Collett, Mr. Martindale, and yourself, continuously together during the discussion as to the letting of this work, or did Mr. Martindale and Mr. Collett go on one side and leave you while they discussed the matter? I was standing close to them.
2820. The whole time? Yes; but Mr. Collett never spoke to me on the subject; he turned round, and Mr. Martindale pointed out the work to him, and then Mr. Collett turned to me and said, "give it to Mr. Martindale at 2s. a cubic yard."
2821. You do not know that there was any private agreement between them—the agreement was made when the three of you were present? Yes.
2822. *By Mr. Dick*: You state that at that time you knew the work could be done for half the price? Yes.
2823. For 1s. a cubic yard? Yes, I could get men to do it for 1s. a cubic yard for cutting out grit of that description.
2824. Will you state the names of any parties who would have done it for that? I can state fifty.
2825. Will you state the names of any who would have done it? I cannot tell you the names of every man that was employed, because I knew some hundreds.
2826. Will you state the name of one man who would have done it for 1s. a yard? No, I will refuse to state any names at all. I know the work can be done; I know the value of the work.
2827. Did you ask any other contractor what he would do it for? No, I did not ask any other contractor.
2828. There is the letter you referred to—will you read it? (*Witness read the letter. Vide Appendix B.*) The last work mentioned here was let to him in a public-house, without any reference to me.
2829. But you were present at the time? Yes.
2830. *By Mr. Hoskins*: Are you sure that Mr. Collett directed you to write that letter to him purporting to emanate from you? Yes. I state in the letter that the prices were agreed on by himself.
2831. *By Mr. Dick*: In the specification or contract is there a clause that extras are to be taken at a schedule of prices? I think it is always understood that any extras to a contract are paid for at the same price as the contract, if they are extras, if it is an extension of the contract.
2832. Was not the contract for a lump sum? It was let originally at a schedule of prices.
2833. And afterwards at a lump sum? Yes, so I am told by the letter.
2834. Do you know the schedule of prices? I do not; I have not been furnished with any copy of them; I know some of the prices; I dare say I know the whole of them, but I was never furnished with them from the office.
2835. Has Mr. Clements had any contract under you during this year? I do not recollect.
2836. Had Mr. Greer? I believe Mr. Greer did carry out —
2837. Any contract under you? Yes.
2838. What contract? Some ballasting near the Willow-tree, I think.
2839. What do you mean by you think? It was at the Willow-tree—ballasting.
2840. You are sure? Yes.
2841. Who employed him? I employed him.
2842. On your own authority? On my own authority.
2843. Did you consult Mr. Collett? No.

- Mr. Robert Quodling.
11 Dec., 1861.
2844. Mr. Collett did not direct you to give him any employment? No, but sums of money were placed in my hands to carry out certain works.
2845. You employed whom you thought proper? I employed whom I thought proper.
2846. Has Mr. Miller had any contract under you, during the present year? I believe not.
2847. *By Mr. Hoskins*: Do you not keep a list of the works under your charge? Yes, but I know he has not; Mr. Miller is not in my district at all.
2848. *By Mr. Dick*: Are there no entries of what you call task work? Yes, there is a task book.
2849. Is that a private memorandum book or a task book? A task book.
2850. Have you that with you? No.
2851. Is it in Sydney? No, at Tamworth.
2852. Who introduced the system of task-work? I believe Mr. Bennett, the head Engineer for Roads.
2853. Do you know? Mr. Bennett told me he introduced it at the time Captain Martindale was in office.
2854. Is it a good system? It is a good system if it is not abused.
2855. Do you know whether Mr. Collett introduced the system? I am satisfied he did not introduce it.
2856. Will you call it a "loose and discreditable" system? I decline answering that question.
2857. *By Mr. Hoskins*: Will you explain what you mean by this task-work? It is supposed that the Superintendent should have the power of letting and carrying out certain works, without advertising.
2858. To working men? To working men.
2859. What is the general extent of these contracts? Up to a couple of hundred pounds, I believe, and many go higher.
2860. Have you let contracts amounting to £200, without consulting your superior officer? No, I think not.
2861. *By Mr. Dalgleish*: What is the highest sum you have let contracts for in that way? £150 is about the highest.
2862. *By Mr. Hoskins*: How long ago is that, that you have let contracts amounting to that sum, in that way? Since I have been on there; I cannot tell you the date.
2863. *By Mr. Dick*: Is this task-work system a part of what you call the "regular loose and discreditable system carried on since Mr. Collett has been in office"? I decline answering that question also.
2864. What system do you refer to as being "loose and discreditable"? The whole management generally. I have given sufficient evidence of it, I think, already.
2865. Will you tell us the particular points of management you refer to? No, I cannot; you can take it from the evidence I have given; I have a great deal of evidence yet to produce, and I decline answering that question, without the evidence will prove there is that discreditable system. I think you have had sufficient proof already.
2866. You state that you "can produce documents to prove there is a regular loose and discreditable system"—have you any documents with you? I have handed a great many in.
2867. Have you any with you now? No.
2868. Have you any others to hand in? Not relating to that.
2869. Have you handed in all the documents relating to the "loose and discreditable system?" I think so; I am not certain.
2870. What do the documents that have not been handed in relate to? To the works generally; I shall have to go to Tamworth for some of them.
2871. Before you complete your evidence? Yes.
2872. You referred to the plans and drawings of Messrs. Bennett and Wells—did you take out any quantities from their cross sections? Yes.
2873. When? I have taken them out on evenings, for my own information.
2874. How many evenings? Well; I have taken them out at my leisure.
2875. What do you call your leisure? In my own time.
2876. How many times have you taken them out? Well, I have taken them out.
2877. How many times? I have taken them out; as to the number of times it is a ridiculous question you are putting.
2878. Have you any books shewing the measurements you made? I have no books to give to you at the present time.
2879. No books to give to the Committee you mean? No.
2880. Have you any books that will shew the quantities in the cross sections? I can give you the quantities in the cross sections.
2881. Now? Not now; if they are required.
2882. I am asking for them? Well, I decline giving them at the present time.
2883. Have you any books that will shew the quantities? I have, for my own information.
2884. Will these books shew the quantity of earth and the quantity of rock from the drawings? I have already declined answering your question.
2885. Were these quantities given in order to check the contractor's work? How to check it?—it is a general rule that, in every work before it is let by public tender—before it is let at all—the calculations are made from the sections, shewing the quantities to be excavated, of earth, and the quantities in each of the embankments.
2886. To check the contractor's charges? Yes; it is a general thing.
2887. Well, if that was carried out according to that contract, would any further measurements be necessary? Yes, further measurements would be necessary.
2888. After the quantities were ascertained in the first instance? No; to arrive at the amounts the contractor was to be paid.

2889. I thought I understood you to say the quantities were taken out in the first instance? Yes, the quantities are taken out in the first instance. Mr. Robert Quodling.
2890. Then when the contractor has finished his work surely you know what the quantity is without measuring? But the works were not finished. I can tell you the quantities, but Mr. Collett cannot tell you. 11 Dec., 1861.
2891. Why? Because he does not know the quantities.
2892. How do you know he does not? I admit that after the work is completed you can tell without any measurements, from the sections and drawings, the total quantities of earth-work.
2893. Exactly, in the same way as you said you could tell us what was deficient on looking at the plans just now? Yes, if you had a starting point.
2894. What did you mean by saying that Mr. Collett could not know this? I do not think he does know it.
2895. Why do you say he does not know it? Because I know from Mr. Collett's manner on the work that he has no knowledge of work; he has not the slightest knowledge of measurements or anything that I have seen yet; he could never give me any instructions.
2896. Do you consider yourself competent to give your opinion of Mr. Collett? Yes, I do.
2897. From your experience on public works? From my experience on public works.
2898. How long has your experience extended over? I have been ten years employed altogether in receipt of salary.
2899. In receipt of salary as what? Principally on railways, and in the Road Department, and in the Survey Department.
2900. In what capacity? I was lately Superintendent of Roads.
2901. Previous to that? I was then agent for the contractor.
2902. What did you call yourself? I had charge of the whole measurements for the work.
2903. Of course when you give us an opinion like that the Committee have a right to ascertain the value of that opinion, and therefore I wish to know what experience you have had? I have stated sufficient.
2904. How long were you agent for the contractor? A considerable time.
2905. Five years? Yes, more than five years.
2906. In this Colony? In this Colony and in Melbourne.
2907. During that time you had the continual measurement of works? I had.
2908. Similar to those in Doughboy Hollow? The heaviest description of railway works we have had.
2909. Similar to those in Doughboy Hollow? Yes, something similar.
2910. Have you any objection to tell the Committee your age? I am twenty-three.
2911. Did Mr. Collett ever order you to send in a final measurement of the work? No; I have no official—
2912. I am not asking about what you have officially? I have no documents directing me to send—
2913. I am only asking whether he told you verbally, or in writing? He told me at Singleton that he would want me to go through the works on their final completion.
2914. How long ago was that? I forget the date; I believe it was in May when I was travelling up from Sydney; I was on leave for a time. I stated then that it was no use, that no measurements could be made if the buoys were knocked down; and I declined doing anything of the sort.
2915. Were the buoys knocked down then? I stated that at the final completion, it was impossible to make any measurements, or to see how it was done, if I had not the sole superintendence while it was being carried out.
2916. Do I understand you that the buoys were knocked down in May last? The buoys were not knocked down in May last.
2917. Why then should you have stated to Mr. Collett that it would be impossible to measure at the end of the works if they were knocked down? I told him it would be impossible without the sole supervision over the works while they were in progress; it was no use asking me to certify after another officer had charge; I could not certify for a thing I knew nothing about.
2918. Was it not competent to you to see what had been done? No, I could not do so.
2919. Why not? Because I could not do so.
2920. From the nature of the works? Yes.
2921. By Mr. Dalgleish: Was the rock irregular in its formation, or in regular strata—did the depth of the earthwork vary? It varied considerably.
2922. And this would affect the payment for the work done? Yes.
2923. And it is with regard to that you say you could not know unless you were there continually? Yes; for instance, if the pitching was put on when the embankment was bad and boggy, after it was metalled, I could not tell whether the embankment had been consolidated according to specification.
2924. It is in this light you say you could not tell by going through the works? Yes; I told Mr. Collett at the time I could not certify to a thing I knew nothing about.
2925. By Mr. Dick: In May last? Yes.
2926. Who had charge of the works at that time? I believe Mr. Bayley had.
2927. Had you not charge jointly with him. I thought I understood you to tell me the other day that you had charge of the earth-work, and Mr. Bayley of the bridges? Yes, a portion of them.
2928. What time was that? I cannot tell you the date I left Mr. Bayley.
2929. In that book I found some of your joint measurements? Yes, the last entered here is April 18th, but Mr. Bayley has some other measurements in his own book which can be produced.

- Mr. Robert Quodling.
11 Dec., 1861.
2930. Just look at that letter of May 3rd, written by you—just read the first page? The whole of the cuttings were not carried out then. (*Witness read from a letter handed to him, dated Doughboy Hollow, May 3rd, 1861, and signed "Robert Quodling."*) "The contractor is progressing favourably with this contract the earth-work; will be ready in a month for final measurement." I suppose I may be allowed to explain about this. It was on my return from Sydney, about the 27th May I believe, that Mr. Collett then told me I would have the final measurement of the whole works—I would have to certify to them finally; it was on a Sunday, I would not be certain of the date, but it was in May, subsequently to this letter—I think it was on the 26th May; I was told then that Mr. Bayley was to take these works and I would have to report and certify to them finally, and I told the Commissioner that if he placed them in the hands of Mr. Bayley, Mr. Bayley would have to certify—that I could not be responsible for work he superintended.
2931. That would not prevent your being able to certify for the work? Yes, it would; I would not certify for £7,000 without knowing something about the works.
2932. I take it, all you would have to certify would be that the work agreed upon was done, and done properly? I could not do that without I had continual supervision of the works.
2933. You told him that as far back as May? Yes, I think it was on my return from Sydney, at Singleton.
2934. At that time you made no remonstrance about the manner in which the work was being done? No; regular payments were sent in.
2935. What was Mr. Collett's manner to you—did he treat you with openness and confidence? Well, generally.
2936. Did he appear as if he was striving to conceal anything from you? Well, I do not know if he was striving to conceal anything from me.
2937. You state that the work was conducted properly for a certain time—when were your suspicions as to mismanagement first aroused? Well, the first time I forwarded a voucher when I took charge of the works from Mr. Bayley, I then objected—the first thing I did was to object.
2938. When your suspicions were aroused? That was the time I objected; that was the time I returned the voucher.
2939. *By Mr. Hoskins*: What was the date? I think the 12th August.
2940. When you considered the works entirely in your charge? Yes.
2941. *By Mr. Dick*: The first time was when you took the works from Mr. Bayley? Yes, I took them on that date.
2942. That was the first time your suspicions were aroused? Well, I do not know; I had my own suspicions at different times. I have had great suspicion of Mr. Collett ever since I knew him as a Road Superintendent. I used to see then the way he treated his contractors; and of course I had my own private opinion of Mr. Collett.
2943. It is very easy to have suspicions, is it not? It is very easy.
2944. Can you tell us the ground of your suspicions? From Mr. Collett's manner that he treated his contractors.
2945. Did he fold them in his arms? Not exactly; I did not see him embrace them at any time.
2946. How did he treat them? He was continually using the horses of contractors, and always had a posse of them about him every time he visited the works.
2947. What time of year was this? I do not know; I cannot give you the date.
2948. Can you tell me any one place where he had a posse of them about him? I used to see him at Murrurundi.
2949. It was at Murrurundi? Yes.
2950. How long ago? I do not recollect the date. And Mr. Collett's nephew being employed and Mr. Martindale finishing his work, that aroused my suspicion. Mr. Martindale going over to complete some work that Mr. Collett's nephew had taken in hand—from the Northern Road to the Southern.
2951. When was that? I have not the date.
2952. About the time—was it this year? It was this year, I believe.
2953. What part of this year—July or January? I cannot give you the date.
2954. Whose horses do you say he used? I believe they belonged to the contractor.
2955. What contractor? I have seen him using Mr. Martindale's horses; the last time he was up he used one of Mr. Martindale's horses.
2956. Have you ever used a horse belonging to a contractor? No.
2957. You have never borrowed a horse from a contractor? No.
2958. Borrowing a horse from a contractor would be a ground of suspicion in your mind? That would be, in a measure.
2959. That is one of your suspicions; can you tell us any other? I have a great number of suspicions, but I decline stating them to you.
2960. Does Mr. Collett usually ride or drive? He generally drives.
2961. Did you ever see him driving the contractor's horses? I have seen a great number with him.
2962. A great number of horses with him? Horses and men; and Mr. Martindale continually boasted that he could do what he liked—he had Mr. Collett all right, and he did not care about me objecting to anything. It was his continual boast throughout the district, and I will bring men to prove that he has said he would put aside Quodling altogether, and soon shift him out of his billet.
2963. You have heard him yourself? He has told me as much.
2964. Where did he say that? It is not convenient for me to tell you at the present time.
2965. Was it at Murrurundi? Yes; and on the works he has told me that.
- 2966.

2966. I think you stated that Murrurundi was not in your district? Murrurundi was not my district.
2967. *By Mr. Dalgleish*: How far off? Four miles, I believe.
2968. Is it the nearest town to your district? Yes; the nearest post office.
2969. *By Mr. Dick*: Where did you reside usually in the district? Tamworth was my head quarters.
2970. What places were your letters usually addressed to? To Tamworth, generally.
2971. Did you ever go to Glen Innes? Yes.
2972. How long ago was that? I cannot give you the date at present.
2973. Was it this year? Yes, I was there this year; I had charge of that road for the Bench of Magistrates, and the letter directing me to take that road can be produced from the office; it was sent to me by Captain Martindale.
2974. You are getting on at a great rate? I want to explain about my going to Glen Innes; Mr. Collett referred to that in a letter, if I had been at my post, and I want to explain that I had been at Glen Innes.
2975. Was Glen Innes in your district? No; I took charge of the road from Armidale to Glen Innes, for the Bench of Magistrates.
2976. How far is Glen Innes from your district? I think it is sixty miles from Armidale, and Armidale was the end of my road.
2977. By whose leave were you at Glen Innes? I have not the copy of the letter, but I believe the original can be produced from the office, from Captain Martindale during the time he was in office, directing me to superintend the road for the Bench of Magistrates at Armidale.
2978. What do you mean by the original being produced from the office—I suppose you received the original letter? Yes, I received the letter. I was to receive payment of the actual expenses I incurred.
2979. You went there by Captain Martindale's direction? I did.
2980. Who paid the expenses? I state that the Bench of Magistrates defrayed my expenses, and I had Captain Martindale's authority to receive them. The Bench of Magistrates at Armidale were also informed. I would have brought the letter with me if I had known.
2981. *By the Chairman*: Will you have it in the morning? It is at Tamworth; most of my papers are locked up. I have written for any that are obtainable.
2982. Will you be able to produce it before the termination of this inquiry? It would be better to have the letter from the office; there are copies of everything there.
2983. *By Mr. Dick*: You say you have the letter at Tamworth? I have.
2984. Have you ever been to Glen Innes during the time Mr. Collett has been Commissioner of Roads? I do not recollect. I think I wrote to the Bench of Magistrates, stating that Mr. Collett had an objection to my superintending their works, and the matter was broken off. I am not certain whether I did go. It can be produced. I have not the dates. My bills can be produced from the Armidale Bench.
2985. Did you ever recommend Mr. Hannington as being an efficient officer? No; I do not recollect recommending Mr. Hannington as an efficient officer.
2986. Did he ever make any measurements for you which you took for granted, without checking them yourself? Never.
2987. You always checked his measurements? I always checked them.
2988. Did I understand you to say, some time ago, that it was no use checking his measurements? I checked any simple measurements he made, that any schoolboy could do.
2989. You only checked such measurements as you thought a schoolboy could do? And any that were of importance.
2990. Did he measure the big cutting? I believe he did with Mr. Donaldson.
2991. Do you think he was able to measure it? I do not think he was able to measure it; Mr. Donaldson was able to measure it.
2992. Were you there at the time? No.
2993. Do you recollect, some time ago, that you went from Armidale to Tamworth and back with Mr. Collett? Yes.
2994. You were about a week together at that time, were you not? That was in April, I believe.
2995. Do you recollect travelling with Mr. Collett from Armidale to Tamworth? I do.
2996. Did you ever make any remonstrances about the management of the road then? The management of which road?
2997. The management of the Northern Road? That was the first visit of Mr. Collett.
2998. You made no remonstrance at that time? Mr. Collett never paid moneys at that time without my certificate, to my knowledge.

Mr. Robert
Quodling.
11 Dec., 1861.

APPENDIX.

A.

Murrurundi, 18 February, 1861.

Sir,

I have the honor to inform you Mr. Bayley will not allow me to begin the large cuttings at Doughboy deviation until the cross sections of Mr. Debenham are sent up to him; I have any quantity of men waiting to begin, and would feel obliged by your giving Mr. B. instructions what to do, or allow him and me to get the best gradient we can.

W. R. Collett, Esq.,
Commissioner of Roads,
Sydney.

I have, &c.,
JOSEPH MARTINDALE.

.Write

Mr. Robert Quodling. Write Mr. Martindale that he can proceed as rapidly as he likes with all the *other* cuttings, and that on Mr. Quodling's voucher for work done, money will be paid to his acct. each fortnight.—
W. R. C. 28/2/61.

11 Dec., 1861.

Mr. Martindale informed personally—S. G. S.

B.

Tamworth, 17 September, 1861.

Sir,
I do myself the honor to forward estimate for works on Doughboy Diversion, extras to contract.

Mr. Martindale has commenced the works at the prices agreed upon by you.

I have, &c.,

ROBERT QUODLING.

The Commissioner for Roads,
&c., &c., &c.,
Sydney.

EXTRAS on Doughboy Diversion Contract:—

	£	s.	d.
200 c. yds. in drain, to divert present watercourse from foot of bank at big cutting, @ 2s.	20	0	0
1 2nd class culvert	15	0	0
200 l. yds. of road to form, pitch, and metal, from end of present contract to "Evans Inn"	104	0	0
	<u>£139</u>	<u>0</u>	<u>0</u>

ROBERT QUODLING,
16 Sept., 1861.

Approved.—These items are to be charged to task-work, and not as part of the original contract, which is a bulk sum for £7,000.—W. R. C. 20/9/21.

THURSDAY, 12 DECEMBER, 1861.

Present:—

MR. ARNOLD,	MR. T. GARRETT,
MR. DALGLEISH,	MR. HOSKINS,
MR. DANGAR,	MR. LUCAS,
MR. MARKHAM.	

WILLIAM FORSTER, Esq., IN THE CHAIR.

Mr. Robert Quodling again called in, and still further examined:—

- Mr. Robert Quodling.
12 Dec., 1861.
2999. *By Mr. Dangar:* You were a Road Superintendent before Mr. Collett's appointment as Commissioner? I was.
3000. When Mr. Collett was appointed Commissioner did you intimate to him your wish to resign—at your first interview with him, when you visited him at first? No.
3001. Did you remonstrate with him in any way at that time? I did on his first visit; I told him when he asked me as to —. It was not at the time of his first visit as Commissioner of Roads that I remonstrated with him; it was after he made a remark about sending in returns without the necessary details, I told him he had got the wrong person to deal with; that I would not certify for anything I did not conscientiously believe to be correct.
3002. Where did this occur? At Murrurundi.
3003. At the inn there, Mr. Wightman's? Yes, at the inn.
3004. What did Mr. Collett say when you made that remark? He laughed, that was all; he did not make any other remark. I think I told him I would rather break stones.
3005. Are you not aware that Mr. Bayley certified to Mr. Martindale's work? I have it from Mr. Bayley himself, that he condemned, and I was present when Mr. Bayley condemned a great quantity of gravel on the Liverpool Range.
3006. Did not Mr. Bayley refuse to certify to the metal? Mr. Bayley mentioned to Mr. Collett about the metal upon that road.
3007. About the time that Mr. Bennett resigned? The contract was not in a forward state when Mr. Bennett resigned.
3008. What I want to ask you is whether at the time of Mr. Bennett's resignation, there was not some amount of work done by Mr. Martindale previous to that? There was an amount of money due to him for the Liverpool Range; and the gravel was condemned by Mr. Bayley, and condemned by Mr. Bennett, the engineer; and Mr. Martindale was informed that no payments would be made till the proper material was supplied. That letter can be obtained from the office—the letter of Mr. Bennett to the contractor, stating that no further payments

- payments would be made. After Mr. Collett's appointment, in April, about the time that this testimonial was given, Mr. Collett approved of this gravel—the whole of it, and set aside the Engineer's objection, and Mr. Bayley's, the Superintendent.
3009. Mr. Martindale has frequently re-let portions of his work? I believe nearly the whole of it. Mr. Robert Quodling.
12 Dec., 1861.
3010. Have the sub-contractors performed their work satisfactorily? Not in all cases; they perform it according to the terms of Mr. Martindale's arrangement with them.
3011. By sub-letting, Mr. Martindale, I suppose, has made a profit upon the contract? Considerable.
3012. You cannot specify the profit he has derived from any one contract? From the whole—the metal, the pitching, the earth-work, everything—he has got a considerable profit.
3013. He sub-let to Mr. Greer some portion of the original contract? Yes.
3014. Did you hear Mr. Greer state—? I know that for the clearing he let for £50 a mile, and the amount he received would be about £88—it would come out that—so that he cleared in that one case alone fully £30 a mile. That was not according to the specification.
3015. You are aware that Mr. Martindale was allowed a long extension in his contracts, from the specified time? I believe he was allowed some extension.
3016. Do you know how long? No, I do not.
3017. Are Mr. Martindale's contracts finished in No. 2 district now? The Doughboy Diversion?
3018. Yes? He had not finished when I left the district; it would take them fully two months to complete it, when I left; and a considerable sum of money.
3019. Was the fencing put up when you left? No.
3020. The fencing was not according to the specification? No.
3021. The portion of the Liverpool Range you had the superintendence of was in Mr. Collett's charge? I had nothing to do with the Liverpool Range, although I was present when Mr. Bayley condemned the gravel.
3022. Who was Superintendent before you, in No. 2 district? Mr. Newcomen.
3023. How did he leave the works—when you took charge were they in a satisfactory state? I did not take charge from Mr. Newcomen. The works were handed over to me by the Engineer for Roads, Mr. Bennett. Mr. Newcomen was not present; he had left the district some time before I took charge.
3024. Mr. Brown is now Superintendent of the Gap? To Doughboy Hollow Creek, I believe; I do not know whether there is any alteration.
3025. You had a longer distance to superintend than was comprised in No. 1 district? About thirty-five miles more.
3026. Your salary was how much a year? £400.
3027. How much was Mr. Brown's? £600, I believe.
3028. Your district was thirty-five miles longer than Mr. Brown's? I believe so.
3029. I believe your father has been an engineer for a great number of years? He has been surveying for a great number of years.
3030. He is still in Government employ? Yes.
3031. In what part of the country? I think on the Southern Road; I do not know the length of his district.
3032. You have a brother also an engineer? No; I have one brother under the Engineer for Railways; he is a clerk.
3033. You therefore had an opportunity of learning the profession from, perhaps, your father? No, I had no opportunity of learning from him.
3034. You left Mr. Hannington on the work when you resigned? I saw him at Murrurundi, when I was on my way to Sydney.
3035. He did not speak of coming to Sydney then? No.
3036. Has not Mr. Collett often, at public meetings and in private conversation, spoken of your competency, since he has been Commissioner? He spoke of me at Tamworth, when a deputation waited upon him about the streets, and stated that he had every confidence in me as a practical engineer.
3037. Whom were you under as overseer, before you were appointed to No. 2 district? I was directly under Mr. Bennett, the Engineer for Roads.
3038. For how long? I think eight or nine months.
3039. Did Mr. Bennett ever make a complaint of your inefficiency? Never.
3040. Is it the fact that you obtained your promotion through Mr. Bennett? I believe through Mr. Bennett; but those documents you can get from the office. I think Mr. Bennett recommended me for the promotion, and I believe Mr. Arnold confirmed his recommendation.
3041. There never were any complaints made to the office, as respects your inattention to duty or incompetency? Never.
3042. Did Mr. Hannington measure the works and give you that certificate of his own free will, or did you ask him for it? He measured the works of his own free will, but he compiled that letter from the notes I took on the works.
3043. Did he make any objection? Not the slightest; he thanked me for giving him the information. I have not his letters with me, or else I could produce—I could produce all his letters, and will hand them in when I get them from Tamworth.
3044. You have these letters at Tamworth? Yes, a great number of letters.
3045. When Mr. Bayley was transferred from the Murrurundi District to Yass the works were handed over to you? Yes.
3046. All the works? All the works.
- 3047.

- Mr. Robert Quodling.
12 Dec., 1861.
3047. Without any reservation or restriction whatever? Without any restriction whatever.
3048. Have you seen Mr. Bayley since he has been appointed to Yass? Never.
3049. And have had no correspondence with him? I never had any correspondence with him.
3050. How often had you seen Mr. Collett before he was appointed Commissioner—how often did he pay a visit to his district—to the end of his district? I believe he paid a monthly visit.
3051. You never heard of his being there oftener? I never heard of his being there oftener; he might have been on some very particular occasion.
3052. When he travelled to Armidale on duty as Commissioner, do you think the short time he stopped at Bendemeer was sufficient to inspect that bridge? I think it was quite long enough for him to stop; for if he had stopped from that time till now he could not have expressed an opinion upon the work, for he knew nothing about masonry then, nor does he now.
3053. He asked you no questions? No questions; he could not ask me questions.
3054. What was the use of his stopping then? He only stopped a minute or two—his stopping there was of no use.
3055. Did he pass any remarks? No remark at all.
3056. Did you understand that part of his duty during that journey was to inspect that bridge? I do not know what his duties were; I suppose he reported that he had inspected the bridge.
3057. Your district extends to Armidale? To Armidale.
3058. Does the main road end there? Yes.
3059. From Armidale to Tenterfield is a by-road? It is a minor road from Armidale to Tenterfield.
3060. Had the Millers any contracts in your No. 2 district? Not while I was Superintendent.
3061. Did you ever see Mr. Brown there while you were Superintendent? I saw Mr. Brown at Doughboy Hollow.
3062. Were any other parties with him at the time? Yes.
3063. Who were they? Mr. Doyle, Mr. Miller, Mr. Clements, and Mr. Williams.
3064. Mr. Doyle and Mr. Williams are road overseers? Yes.
3065. Mr. Miller and Mr. Clements were contractors? Yes; I believe they were.
3066. Had they a number of horses and gigs? Yes; they travelled there.
3067. You do not know at that time that Mr. Miller was in the habit of lending the Superintendents and overseers horses and gigs, to convey them from Scone to Muswellbrook to and fro? Report says that the contractors have been doing that; but I cannot speak from my own knowledge.
3068. Did you see the list you spoke of, the Murrurundi list, of contributors for Mr. Collett—the one that was got up at Scone and Muswellbrook? No, I did not see the one at Scone and Muswellbrook; but I saw the one at Murrurundi, in the hands of the contractor, Mr. Martindale.
3069. Are you aware that there was a second at Scone and Muswellbrook? I believe there was.
3070. Do you know the amount that was subscribed altogether? At Murrurundi I believe it was something like £40 or £50.
3071. Did you subscribe? No.
3072. Were you asked? No.
3073. Why? I am sure I could not tell you why.
3074. Are you aware that these contractors and overseers were seeking subscriptions from any others except those connected with the roads? I do not know that they were seeking subscriptions from parties that were not connected with the road.
3075. Do you recollect any amount on the list—you saw the names? I recollect seeing Mr. Martindale's name; I think £5 was before his name; there were others, but I cannot speak from memory; witnesses are summoned who presented the purse.
3076. Was the list published? No, I think not.
3077. Was Mr. Bayley's name to it? I do not know; I think not.
3078. Mr. Hannington's? No, I think not.
3079. Mr. Wightman's? I could not tell you; I believe Mr. Wightman gave something.
3080. Mr. Wightman was a contractor, or his brother? They are in partnership, I believe.
3081. They had a contract? They had a contract.
3082. Did you ever notice the Sandy Creek Bridge? No; I had nothing to do with it.
3083. Did you ever hear that Mr. Martindale had that contract? Mr. Martindale told me that he built that bridge; but I know nothing about it.
3084. Are those specimens of the metal put on (*referring to specimens of trap and shale lying on the table*)? I believe that is the description of metal put on.
3085. Was there much of the proper metal used? Yes, a considerable quantity; there was about 700 or 800 yards of this shale.
3086. You have often seen, have you not, the scale of prices from the office, for cutting and forming road? No; there is no scale of prices that I know of.
3087. Not sent to you? Not sent to me.
3088. Are you aware that there is a scale of prices kept in the Road Department? I am not aware of any scale of prices being kept.
3089. You have not known of contractors taking jobs of work, without tendering, by this scale of prices, on the main road? I know of no scale of prices.

3090. When letting a piece of work without tender, do you, as Superintendent, make your own bargain, apart from Mr. Collett, the Commissioner? Not in all cases, but I have done so. Mr. Collett has let works to Mr. Martindale without referring to me, but any other works I expected to have the power to let them myself, and to employ whatever contractors I pleased, at reasonable prices. I had a discretionary power to let those works
3091. Are you aware that contracts have been taken at a very large sum less than the prices in the office—that is, in No. 2? They have been taken at a less price.
3092. Than the amount specified in the office? I do not know of any scale of prices that is held in the office; I never knew of any scale of prices that was held.
3093. Are you aware that there was any scale of prices fixed by Captain Martindale or Mr. Bennett before they left the Colony? I am not aware of any.
3094. For ballasting, making roads, or cutting drains by the yard? I think prices vary a great deal.
3095. How much of Mr. Martindale's contract was there to complete when you were made the Superintendent? When the works were handed over to me?
3096. Yes? I have given in the quantities.
3097. How many overseers have you? Two.
3098. Are you aware how many Mr. Brown has for his hundred miles? I have heard that he had three overseers and one or two assistants, but I cannot give you any correct information on that point.
3099. Were you allowed any forage for horses besides salary? No.
3100. *By Mr. Lucas:* How long have you been employed in the Works Department? Nearly two years—about two years, I think.
3101. Were you some time upon the Western Road? Yes, I believe I was on the Western Road about eight months.
3102. Where did you go after that? I was appointed then to the superintendence of the second district of the Northern Road.
3103. Then you went direct from the Western to the Northern Road? Yes.
3104. From whom did you receive your appointment? From Mr. Arnold; I think Mr. Arnold was in office at the time I was appointed.
3105. To whom did you consider yourself responsible upon the Northern Road—who were your superior officers? Mr. Collett was my superior officer.
3106. Did you consider yourself responsible to him for your acts on the road? Yes, in a great measure.
3107. The whole of the Doughboy Diversion was placed under your supervision? Yes.
3108. Had that work been commenced when you went there at first? Mr. Bayley had charge of the works when I went there.
3109. You received a letter on the 8th February which gave you full charge? Yes.
3110. You have handed that letter in? Yes.
3111. You continued in charge until the 7th March, when you received a letter which somewhat modified your power? Yes.
3112. You were then in charge in conjunction with some other person? Yes, with Mr. Bayley.
3113. Do you condemn or find fault with any works between the 8th February and the 7th March? No, I did not; I pointed out to Mr. Collett the bad description of metal that was being broken by the contractor.
3114. Between those dates? Between those dates.
3115. From whom did you receive those letters—from the Works Department? Yes; at least one of them was from Mr. Collett, I believe the other was from the Works.
3116. You received a letter dated 5th July? Yes, I believe I received a letter of that date.
3117. Did that letter again give you full charge of the works? It was directing me to take charge of the works from Mr. Bayley—he was appointed to Yass.
3118. How long after you received the letter of the 5th July did you find fault with any of the works? Did I take charge?
3119. No. How long after you received the letter of the 5th July did you find fault with the works? I did not take charge till the 12th August, and when I took charge I then sent in my report to the Commissioner. Mr. Bayley did not leave till about the 12th of August.
3120. Then you did not take full charge, as directed in that letter? Not till Mr. Bayley left, or a day or two before he left.
3121. Had you any fault to find with the works between the 7th March and the 5th of July? There was the metal, as I explained before; I pointed out the metalling to Mr. Collett.
3122. I am now speaking of the letters of the 7th of March and the 5th of July—did you find fault between those dates? No, I think not; I do not recollect reporting anything.
3123. Do you know of any money having been paid to the contractor after you refused to certify? Yes I do, there were two payments made.
3124. After you refused to certify? Yes.
3125. Did the Commissioner visit the works between the time of your refusal to certify and the time of the payments being made? The Commissioner of Roads visited the works immediately after I sent in the return stating that the contractor had not done sufficient to entitle him to an advance.
3126. Was it after your return was sent in? The money was paid before the Commissioner paid his visit there.
3127. I want you clearly to understand the question: whether the Commissioner for Roads visited the works between the time of your refusal to certify and the time the money was paid on account of the work for which you refused to certify? No, he came up immediately after; he had visited the works of course, some time previously.

Mr. Robert Quodling.

12 Dec., 1861.

Mr. Robert
Quodling.
12 Dec., 1861.

3128. After you refused to certify did he visit the works before the money was paid. You were asked to certify for certain works—you say you refused to do so, and the money was paid after you refused to certify. Now did the Commissioner visit the works between the time of your refusal to certify and of the payment of the money? The Commissioner visited the works after I refused to certify.

3129. Before the money had been paid? No; the money had been paid.

3130. Then the money was paid, presuming upon the personal explanation of the contractor, after you had refused to certify? Well, I believe so.

3131. Without any inspection whatever? Without any inspection whatever.

3132. Did I understand you to say that money was paid on account of the Doughboy Diversion, on the 13th of August, and that the vouchers were sent, by the Works Department, to you, upon the 28th, with a request that you would certify for the works already paid for, fifteen days before? No; the money was paid on the 13th of August, and the vouchers were forwarded to me on the 30th October, to certify. I made a memo. on the voucher when I received it.

3133. The voucher was actually sent two months after the money was paid? Yes; and at the time I refused to the £470 odd item I did not know of this £500 that had been paid seven days previously.

3134. Did you ever know this to be done on any other contract—did you ever know money to be paid before the work was certified—without a certificate from the officer superintending the work? Never in any service in which I have been employed.

3135. In other cases the works were certified first, and the money paid afterwards? In all cases.

3136. Have you ever refused to certify for works in consequence of their having been improperly performed? I have stated that already, with reference to clearing, consolidation, and metal.

3137. After refusing to certify have you again been required to certify? Yes; the returns have been forwarded to me.

3138. Again? Yes.

3139. By whom? From the office.

3140. Did you receive instructions to give the contractor every facility in carrying on his contract? Yes, I did; I received a letter from Mr. Collett.

3141. What did you understand by that letter? I thought it was a license from Mr. Collett to let the contractor do whatever he liked.

3142. You considered that these instructions went to the extent of authorizing you to certify for works which had not been done, or which had been improperly performed? I think Mr. Collett's meaning, when he wrote me that letter—at least I cannot state his meaning—but I received such a document from him, that I was to give every facility to the contractors, though I had previously given every facility to them in forwarding their work; but I would not let them do just as they liked. I wanted the works carried out according to the specification, and it was in consequence of that, that this letter was sent to me.

3143. You received a letter from Mr. Hannington, dated the 24th of October? Yes.

3144. You are aware that some objections are made in that letter, with reference to works stated not to have been performed, or improperly performed? Yes.

3145. First, it says, "Clearing.—This has not been carried out by specification. The clearing of the main road is bad, there being many stumps left above ground"—is that the truth? Yes.

3146. "The timber is still lying on the ground, not having been cleared away; in fact, in many places the banks are formed and resting upon the timber"—what is meant by that? I mean that the timber was not all removed from the sides of the embankment. The specification states that the stumps may remain on the side of all embankments, that is, where they will be covered by the fallen roadway.

3147. I believe the specification says the embankments are to be trimmed with rubble stone, hand packed on the sides of the embankment—has that been carried out? That has not been done; the batter has not been trimmed throughout the line.

3148. In answering that question, you refer to the time when you resigned? No. These quantities are from the last payments that were made, not to the date of my resignation.

3149. It says, "The earth-work around the abutments of bridges, culverts, and retaining-walls has not been performed"—how has it not been performed? The priming of the earth-work—the earth-work has not been primed through. The earth-work of the retaining-wall and bridges has not been primed.

3150. "The consolidation—to this clause I would call your particular attention—"The pitching is bad; in many cases much sunken, in consequence of the road not being well consolidated before commencing work"—do you know that of your own knowledge? Yes, I know it of my own knowledge.

3151. "Fencing, only six panels put up"—is that also true? That is true.

3152. The letter says, "Metal—this is another serious and very important item—we have neither proper quantity nor quality"—is that also correct? That is also correct; I will bring a witness to prove the quantity paid for.

3153. This letter says, "1,511 yards of metal has yet to be spread, of which 1,016 is not yet broken"? Yes, that is correct; it is an approximation as to the quantity delivered and spread, but the total quantity of metal in the aggregate is correct.

3154. "The flooring is neither tarred nor spiked"? That was the case when I left the works.

3155. "The slabbing of abutments and landward side of bridge, to hold embankment, not slabbed"—was that the case? They were not slabbed at that time.

3156.

3156. Do you know this of your own knowledge? Yes, I know it of my own knowledge.
3157. In this letter you say the contractor wished to make this an extra charge, although in the specification it is so specified? It is so specified.
3158. It is stated here, that "the creek is blocked up through the earth from the cuttings having been tipped into the creek"—had the contractor the right to tip the stuff where he liked? The specification states, "The earth to be deposited where directed by the Road Superintendent."
3159. That is yourself? Yes.
3160. Did you direct it to be tipped there? No, I did not, but Mr. Collett did.
3161. This letter states—"The amount required to complete the work, which I estimate at £1,800 to £2,000"—are you of opinion that that amount was required? Yes, fully that amount was required at the time I reported.
3162. At that time there was only £1,000 in hand? So I was informed.
3163. Besides, there was a per-centage to be kept back upon this work? A per-centage of twenty per cent., which would amount to £1,400 on £7,000, the gross amount of the contract.
3164. In your letter to the Minister for Works you say, that independently of this quantity of works which should have been completed, there were works which should have been condemned—what works do you refer to? There was a considerable quantity of metal and pitching that should have been condemned, which would add to the other amount.
3165. You say there is a quantity of pitching without consolidation, that should be condemned? Yes.
3166. What amount should you consider? About 900 yards very bad; it has been carried out without the consolidation clause having been taken notice of; it is a very soft embankment.
3167. Which has not been properly performed? Not properly performed.
3168. And which should have been condemned? Yes.
3169. What is the value of that work? 6s. 6d. per lineal yard I believe has been paid; but the formation cannot be consolidated now without that is all taken off, and the convexity kept up with continual coats of pitching.
3170. I suppose it is not difficult to get explanations from contractors, or to get them to sign vouchers? A contractor would say anything or do anything to get money.
3171. Is it usual for persons who have to supervise work to be supplied with copies of the plans and specifications? It is usual to send the documents, but they were not handed to me in this case.
3172. Unless the person who is in charge is supplied with the plans and specifications, is it possible for him to tell whether the works are being properly performed or not—could you tell whether they were properly performed if you had not the plans and specifications? I could tell whether the works were carried out in a creditable manner, by going over them.
3173. You could not tell whether they were carried out according to the plans and specifications, unless you had these documents or a copy of them? No, but I could tell whether the work was carried out properly without the specification or plans.
3174. Is it possible for a person in charge of works to certify as to the value of the work done, or the amount which should be advanced, unless he is made acquainted with the amount of the contract or the schedule of prices? Of course he cannot tell without he is told the amount of the contract and the sum paid.
3175. Were you ever officially acquainted with the amount of the contract? The only official information I had about the total amount of the contract was the letter with the department stamp upon it which was handed to me by Mr. Bayley. That I have handed in to the Committee already.
3176. Do you know that any alteration was made in the manner of carrying out the work? I see in the letter sent from the Department of Works, dated 30th October, the first letter you received after you sent in your resignation—with reference to your finding fault with the metal—"This is simply ridiculous, because pitching, after mature deliberation, was substituted for a portion of the broken metal." Did you know that pitching was substituted for broken metal? I was told there that it was. I saw by the slip that pitching was substituted for broken metal, because there was no pitching in the specification.
3177. At the very same price? I see the very same price per cubic yard.
3178. Is there any difference between the prices of broken metal and pitching? A considerable difference; the pitching could be supplied much cheaper.
3179. Do you think it could be supplied for a little more than half? For little more than half—the description of pitching that is put down.
3180. This letter also says:—"And from your inability to measure accurately." Can you measure accurately? Yes, any description of works I have ever seen in the Colony.
3181. Can you measure brick-work? Yes.
3182. Stone-work? Yes.
3183. Bridges? Yes.
3184. Cube timber? Yes, everything.
3185. Earth-work? Yes.
3186. Did Mr. Collett or any other person ever question your ability to measure? No, it was never questioned.
3187. You one day handed me a note—on the second day that you were here—with reference to yourself? Yes.
3188. Is that it? Yes.
3189. From whom did you receive that? From Mr. Gibbons.
3190. Who is now employed by the Government to superintend the Wollongong and Kiama Harbour Works? Yes. (*The witness handed in the same. Vide Appendix A.*)

- Mr. Robert Quodling. 3191. Had Mr. Gibbons an opportunity of testing your qualifications as to the measurement? He had.
- 12 Dec., 1861. 3192. But no person upon the public works ever before questioned your ability to measure? No.
3193. Do you think if you were incompetent to measure work you should have retained your position as Superintendent of Roads? I think I should not have been retained if I were incompetent to discharge my duties.
3194. Particularly measuring? Particularly measuring.
3195. This letter says, "The big cuttings were paid for in a lump sum under your estimate." Did you give an estimate? No, I had not charge of the works.
3196. Did you ever give an estimate in to the department, as to the value of that work? Never.
3197. It says as "to 'the repeated payments of money before it was due,' I am directed to 'inform you that the Commissioner requested that fortnightly vouchers should be sent in, 'which you neglected to do'?" I sent in fortnightly vouchers when the contract was commenced first, and I took charge of the works, but after these payments the first thing, when I took over the works from Mr. Bayley, in August, or very soon afterwards, I received a voucher stating that money had been paid, and of course when such a practice was carried on by the Commissioner, I felt that I should not be justified in sending in any return, because I could never know the amount that had been paid. When I objected to certify to the £470 voucher, I knew nothing of the £500 which had been paid seven days previously.
3198. It says, "although the financial part does not concern you."—I presume if the works are under your charge, and you are requested to sign vouchers, you have a right to satisfy yourself whether a sufficient quantity of work has been performed? I think it is very requisite.
3199. The letter goes on to say, "at no time has more than eighty per cent. been paid to the contractor;"—is that the fact? I have only that letter for it.
3200. Is it your opinion? It is not my opinion; my opinion is that the per-centage has not been retained, putting aside all other objections.
3201. How long has this contract been in progress? I believe it was commenced in the latter part of January, or the beginning of February, and it is in progress at the present time.
3202. Do you know how often the Commissioner visited and inspected this contract? I have seen him there I think three times—three or four times.
3203. During the time you were there? Yes.
3204. From February until when? I have met him when I had not charge of the works.
3205. From the nature of road-making, does it not require constant supervision? Constant supervision.
3206. If the pitching were performed, and covered with metal during the absence of the Commissioner, it would for some time be impossible for him to say whether the road had properly consolidated, and the pitching had been properly performed? It would soon speak for itself—the traffic would tell whether it had been consolidated or not.
3207. Do you know some new road just this side of Doughboy? Yes.
3208. How was that work done? I believe that was done by Mr. Martindale.
3209. Was it a cutting? There was a considerable amount of cutting and earth-work.
3210. Was it pitched? The greater portion of it was pitched.
3211. Was it coated with metal after that? A portion of it was coated with metal.
3212. The portion that was pitched—had that a coating of metal? Yes; a portion is pitched and metalled, and a portion is pitched, and I cannot say gravel, but mud or pipe-clay was put on it.
3213. Was pitching put over that pipe-clay? Not to my knowledge. I think they were doing something of that sort when I was coming down the range, but I did not take particular notice.
3214. Then you do not know whether that road has been pitched over what they call gravel or metal? I believe it has been, in one or two particular places.
3215. I see by the plans and specifications, the cuttings are to be thirty feet wide? Yes, they are nearly all cut to that width.
3216. I understood you to say that the line was altered after the contract was taken? It was altered after the contract was taken.
3217. Who altered it? Mr. Collett, I believe; he did not adopt Mr. Bennett's line, which had been let to the contractor.
3218. You said that in adopting the new line he had done away with two bridges, which, if they had been erected, would have cost £2,000? Yes, they would have cost fully that.
3219. Who had the benefit of that saving—the public? On the other line there was an extra quantity of earth-work, but I do not think it was an equivalent. I have taken out the calculations myself, and I think instead of the contract being £7,000 it ought only to have been £6,000.
3220. There should have been some deduction? Fully £1,000 should have been deducted for taking the contract as it was altered.
3221. Instead of a reduction there was an increase of £700 odd? Yes.
3222. What is the usual price of cutting, per cubic yard? The price paid to the contractor for one portion of the contract, 1s. 5d., and for the extra work, 1s. 10d.
3223. What is the value of metal—what is it broken for per yard? It can be broken there for about 2s. 6d. per yard, and some of it can be broken for less.
3224. That is for the breaking only? Yes.
3225. What would be the cost of quarrying and laying it upon the road? The metal is all handy; there is not half a mile lead upon any portion of the contract for drawing.

3226. What do you think metal can be got for, broken, spread, and finished, per yard? The price the contractor was paid he could get a good profit from. Mr. Robert Quodling.
3227. What was that? 6s. 6d. a cubic yard.
3228. You handed in a letter, or a copy of a letter, from Mr. Bayley, to the Commissioner of Roads, dated 27th June, 1861, recommending some extra work, and the prices which should be allowed? Yes; I handed it in as a letter I received from Mr. Bayley. 12 Dec., 1861.
3229. This letter was dated 27th June, 1861? I believe that was the date.
3230. *By Mr. Dalgleish*: What could the stone be broken and spread on the road for? I could make a profit of fully 1s. a cubic yard out of the price of 6s. 6d. I could make more if I were allowed to use shale.
3231. How much more could you make out of it, if you were allowed to use shale? I could make a shilling a yard more; it would cost a shilling a yard less for breaking.
3232. *By Mr. Lucas*: Speaking of that letter from Mr. Bayley to the Commissioner, recommending the extra work, and the price to be allowed for it, did you see a copy of that letter in the handwriting of Mr. Collett? I did not; but Mr. Bayley told me he had Mr. Collett's letter, and I asked him to write on the back of the letter that he had the original draft, and he did so, and his memo. is on it, stating that he holds the original draft, and that the letter alluded to is a fair copy.
3233. That letter you handed in? Yes; a fair copy of the one given to him by Mr. Collett, and sent in as an original from himself.
3234. Then are we to understand that the Commissioner requested Mr. Bayley to copy the document, and forward the copy to him, as if it had originated with Mr. Bayley? Yes.
3235. Then the recommendation for the extra work, as well as the prices, came from Mr. Collett, and not from Mr. Bayley, as the letter would lead one to suppose? From Mr. Collett.
3236. Did you ever see any other documents of the same nature, from the Commissioner, or any other superior officer? No; but there is a similar instance, where Mr. Collett let the task-work, and directed me to send in an estimate, after he had already let the work to the contractor. I sent in an estimate, and stated that I forwarded the estimates of such a work, at the prices agreed upon by himself.
3237. After agreeing for the prices he requested you to send in an estimate, after telling you the prices he had made an agreement for? Yes.
3238. What was the use of such an estimate? I suppose he wanted it for his own purposes.
3239. Did you ever measure these cuttings at Doughboy Diversion? Yes, I have measured the most of them.
3240. There is a large cutting which you and Mr. Donaldson measured, did you not? Yes, we measured several cuttings—I measured so that I might be able to give information.
3241. Was there one that contained about 10,000 yards? I do not know a cutting that contained that quantity.
3242. What contract had Mr. Martindale upon the Northern Road? The Doughboy Diversion; and he had the extension from the end of the Doughboy contract to the Willow Tree. He had also some other work, extras, to contract at the village of Doughboy Hollow. I think he had some other works upon the lower portion, but I can only speak to my own district.
3243. Was not that the principal work upon the road? Yes.
3244. Do you know the amount of money spent upon the Northern Road this year? No. There is an extensive clearing contract carried out through the whole district—throughout the whole line I had charge of.
3245. How did you get the information that £6,000 had been paid upon the works to that date? I was told verbally by Mr. Collett that £5,500 had been paid.
3246. When? Either on the 11th or 12th September. Since then there had been a £200 payment, and a £300, making £6,000 in all.
3247. That left only £1,000 to be paid upon the contract? It left only £1,000.
3248. Mr. Hannington's letter to you, dated 24th October, stated that there was from £1,800 to £2,000 worth of work to be done, and that Mr. Martindale had drawn something like £2,200 over what was agreed upon? Yes, fully that amount of money.
3249. You handed in a specification, did you not, of the work? Yes.
3250. Do you know whether that was the specification under which the works were originally tendered for? I believe that to be a copy of it.
3251. Do you know whether the original tender or contract was for a lump sum or a schedule of prices? It was advertized to be let at a schedule of prices. The copy I handed in is a fair copy of the one forwarded to me at the time it was advertized.
3252. How was it changed into a lump sum? By the letter I have referred to—Mr. Bayley's letter.
3253. Have you any idea of the value of the works done, according to the schedule of prices? Yes, I have taken them out, to arrive at the statement I have made there, with reference to the value of the work to complete it at that time.
3254. I am speaking of the present line of road, if properly completed according to the schedule of prices at which the contract was originally tendered for—what would be the value of the work; would it amount to £7,000? No, I think it would amount to only £6,000, that is at the schedule of prices the contractor has taken.
3255. What is the schedule of prices? I have not any official copy to hand in to the Committee.
3256. *By Mr. Hoskins*: Have you ever seen the schedule of prices? I have seen it; at least I have seen a copy.
3257. *By Mr. Lucas*: Do you know Mr. Donaldson? Yes.
3258. Who is he? He was agent for the contractor, Mr. Martindale.
3259. Did you and Mr. Donaldson measure a cutting at Doughboy Hollow? Yes.

- Mr. Robert Quodling. 3260. Why did you measure that cutting? Because I had not confidence in Mr. Collett.
- 12 Dec., 1861. 3261. Why did Mr. Donaldson measure it? I asked him to assist me and he did so; but the contractor did not know he was doing it.
3262. What were the contents of the largest cutting? The quantities I make for the largest cutting, and they can easily be checked by cross sections, are 14,300 cubic yards.
3263. That is the contents of the largest? Yes. I have taken these quantities out from the cross sections.
3264. Did Mr. Donaldson assist you in measuring that work? Yes, in taking the depth.
3265. You understood that in the first instance that was to have been done by a schedule of prices? Yes.
3266. You never knew it was to be altered to a lump sum till you received this letter signed by Mr. Shairp? Of course the letter I received from Mr. Bayley told me it had been altered to a lump sum. This cutting was measured by Mr. Donaldson and Mr. Hannington, and they made a less amount than I did.
3267. A less number of yards? A less number of yards; and I found out an error of 200 cubic yards in the cutting.
3268. This cutting was included in the lump sum? Yes.
3269. What is the price for cuttings and earth-works in that neighbourhood? Earth-works can be sub-let at about a shilling a cubic yard. There is no running required, of any extent.
3270. I am speaking of the works as they are, including runs and everything? They can be done for 1½d. a yard right through.
3271. You say there were about 700 yards of shale broken—did you report this? I have not reported it; I have pointed out the shale to Mr. Collett, and he said he approved of it.
3272. You shewed the shale which you disapproved of to Mr. Collett, and he said he approved of it? Yes.
3273. Is this the sort of shale (*referring to specimens lying on the table*)? Yes, similar to that.
3274. When did you do that? I also reported about the metal not being broken down to the two and a half inch gauge—the trap is not, the shale is. I mentioned, on August 16th, that this was not done.
3275. *By Mr. Garrett*: Did you report that in writing? Yes.
3276. *By Mr. Lucas*: According to the documents you have handed in, the contract was, to supply 2,600 yards of basalt? Yes.
3277. Was the price of that 2,600 yards included in the lump sum of £7,000? Yes, I understood Mr. Bayley so from these documents.
3278. From the letter which you handed in, which went from Mr. Bayley to the Commissioner? Yes.
3279. This shale, when it is exposed to weather, will it slake like lime? It will not stand any traffic; it does not stand the weather well.
3280. It slakes like lime? Not to any great extent; not like lime, but it will not stand the weather; neither will it stand any traffic.
3281. You said there was actually broken 1,584 yards—was the 700 yards of shale included in that 1,584 yards? Yes, that was the total quantity paid to the contractor.
3282. Then, in reality, there was only 884 yards of metal broken? That is all.
3283. Were the bridges also included in this lump sum? Yes, I believe they were.
3284. Were there any alterations or extras with reference to the bridges—we have heard that the bridges were extended from twelve to eighteen feet? Yes, and some of the bays were done away with; some of these were two less than the second drawings sent from the Office—the bridges on the D line. After this arrangement drawings were sent for bridges on the D line, that was the deviation line; and these bridges were not carried out according to the drawings sent from the Office. In one bridge there were two bays omitted.
3285. The other bridges were extended in width? Yes, they were made wider.
3286. Was the same number of piles put in as originally intended? Not on this D line. I have handed in a memo. of Mr. Collett's, which he made in Mr. Bayley's book.
3287. Can you tell us the number of piles? Three only have been used, and there is a memo. that three piles were to be used instead of four in the bridges on the D line.
3288. Then, although the bridges were extended in width, they had fewer piles than was originally intended? Less piles, and no more girders.
3289. With reference to the spiking, Mr. Hannington says that there was only one spike at the end of the flooring—is it not necessary that there should be two spikes at least put at the ends? It is necessary, but they were not put in at the time I made these notes.
3290. No matter whether the bridges were extended in width or not, there should be two spikes at the end of each slab? Yes, there should be.
3291. I understood you to say that you were told before two witnesses that two clauses were struck out of the specification? I was told with reference to the clearing, by Mr. Collett, that it would do, he was satisfied. I was told with reference to the consolidation, when I pointed it out to him, that he was quite satisfied, and he directed the contractor to go on with his work. Mr. Donaldson was present, and a workman whom I can bring forward who heard him; Mr. Donaldson took a memo. of it at the time, as I directed him to do so; I directed him at any time that Mr. Collett made any remark, to make a memo. and keep a copy of it, so that it might be produced if there were any dispute afterwards.
3292. This was done after Mr. Collett was appointed Commissioner of course? Yes.
3293. You say that he told you personally? He told me personally.
3294. You have been asked questions on several occasions which you have declined to answer—why have you declined? Because I have not documents to hand in; many of the documents I require are in the department, and can be moved for.
3295. Have you been offered a situation since you resigned? No.

3296. No situation has been offered to you since you resigned? No.
3297. Did you hold out any inducement to Mr. Hannington to write that letter? No inducement. Mr. Robert Quodling.
3298. You told him previously to his writing that letter that you intended to resign? Yes; I told him I had objected to certain works, and that if he thought my objections well founded he might send in a letter to me. I had no objection to let him see the notes I had made, and he could compare my notes with the specification. He was present of course when I was going through this work, and he wrote that letter. 12 Dec., 1861.
3299. You have objected to hand in certain documents, can the originals of those documents be obtained from the Works Department? A great number of them. I have my reports in a book, and as it is a private book I do not like handing it in to the Committee.
3300. You made several written reports, did you not? Yes.
3301. Can you give the Committee the dates of those reports? (*The witness referred to a memorandum book*) One is dated September 30th; another, November 5th; and another, August 16th. I have not the dates here, but my reports can all be obtained at the Office.
3302. Did you object to these works personally to Mr. Collett? Yes.
3303. Can you refer to the dates—was it on the ground? Yes; I objected to the metalling when Mr. Collett paid one of his visits. I think Mr. Bayley made a note at the time. I always objected when I had an opportunity of catching Mr. Collett on the works. The last time he visited the works I pointed it out to him. I think it was either the 11th or 12th September when I received a reprimand about stopping the contractor. I referred Mr. Collett to the consolidation clause, but he persisted in allowing the contractor to carry on.
3304. I suppose the originals of all these documents you refused to hand in can be got from the Office? A great number of the documents are there.
3305. Have you any objection to give the Committee a list of the documents you refuse to hand in? There are many documents I have not in my possession to hand in.
3306. The dates of those you think can be obtained from the department? I cannot—I have a number at Tamworth.
3307. Who is the contractor for Bendemeer bridge? Mr. Dowell.
3308. Who selected the site? Mr. Bennett, the Engineer for Roads, and Capt. Martindale.
3309. They were your superior officers? Yes.
3310. Did the foundation of the bridge ever sink? Never to my knowledge.
3311. Was the bridge carried out according to the plans and specification? It was.
3312. Was it inspected by your superior officer? It was, if you can call Mr. Collett's visit to the work an inspection visit. He was on the work, but he never made any comment whatever. He was on the works when the first abutment was completed—the abutment on the Tamworth bank of the river.
3313. In the case of this bridge you were found fault with for giving a certificate? Yes, I received a letter from the Office, stating that the money on account of this contract should not have been paid till the work had been inspected by an officer of the department from Sydney. In reply to that I wrote the following letter to the Commissioner. (*The witness read the same. Vide Appendix B.*) I have the Engineer's letter directing me to found on the shingle, and my letters with reference to this Bendemeer bridge can all be obtained in the Office.
3314. Was any fault found with the manner in which that work was performed? There was never any fault found with the work; the only fault was that found by Mr. Collett about the certificate.
3315. A flood came immediately after the bridge was finished, and washed some of the green mortar out of the joints? Immediately after the abutment was built the flood came.
3316. What damage did it do? It took the mortar out of the joints, and left the joints and beds quite open.
3317. Did it carry away any masonry? It did, a portion of it; when the mortar was taken out of the beds some of the masonry was displaced—a few of the stones came out.
3318. Was it built of stone or brick? Of stone.
3319. Was it to be set in cement? No, to be set in mortar.
3320. And it was so set? There was a portion of it set in cement—the cement was supplied by the Government. I wrote to the Engineer requesting him to supply me with sufficient cement to build the abutment above ordinary water level, and this is the reply I received—(*The witness handed in the same. Vide Appendix C.*)
3321. You carried out the works according to this instruction? Strictly according to my instructions.
3322. It was in consequence of the flood coming that the abutments were damaged? Yes.
3323. I suppose you know that some bridges which have been built for years between Campbelltown and Parramatta have been totally washed away by floods? Yes, I saw some of them. I would wish to hand in the specification for the Bendemeer bridge to the Committee.
3324. Is there a clause in that specification that it should be done to the satisfaction of the Commissioner for Roads? It states that it shall be carried out to the satisfaction of the Road Superintendent and Engineer for Roads.
3325. *By Mr. Hoskins*: According to the specification? Yes.
3326. *By Mr. Lucas*: Had the contractor to keep up the bridge for any period after being finished? No, he was to hand it over at once. The timber that was used in making the coffer-dam was to be taken from the contractor at the engineer's valuation, on the completion of the works; the cement was to be supplied by the Government, and the contractor was to be paid for the men employed in using the cement, and for using concrete where concrete was used. Some small portion of concrete was necessary on the abutment on the Tamworth bank of the river.

Mr. Robert
Quodling.

12 Dec., 1861.

3327. Government was to supply the cement? Yes, the contractor had nothing to do with the cement. I must explain to the Committee that this Bendemeer bridge was not in regular course masonry. I was directed by the engineer to build it, and the specification stated that it was to be irregular bond; so that a vertical as well as horizontal bond would be secured, and it was carried out strictly to those instructions. No course was to be flush on the top.
3328. *By Mr. Hoskins*: Was there any deviation from the original contract? There was no deviation.
3329. For what were you found fault with? That is the letter I received. I stated in my report, dated July 3, from Doughboy Creek, that the abutments at Bendemeer bridge were completed; that I had made out the balance, and had measured up the works finally; and then I received this letter, dated August 29, stating that I should not have certified to the balance.
3330. You will hand in copies of both those letters? Yes.
3331. Had your superior officer complained that the contractor had not carried out the contract with reference to the abutments, according to the specification? That is the only complaint they made to me; they said I should not have certified to the work till it had been inspected by an officer from Sydney.
3332. Had you any special instructions to that effect? I never received any instructions.
3333. *By Mr. Garrett*: Did you ever receive instructions to certify? It is usual, when a contract is finished; and I sent down the balance in every instance when a contractor had finished his contract under me. I forwarded the contractor's sheet, with my certificate.
3334. *By Mr. Lucas*: Were you requested to certify to that (*handing a paper to witness.—Appendix D to first day's examination*)? I did certify to that, and made that remark.
3335. "Certified as requested; but I do not think Mr. Martindale has done sufficient work to entitle him to this advance."—What did you mean by "Certified as requested"? I knew that voucher would be of no use.
3336. How were you requested merely by having this voucher forwarded to you? "Please certify and return."
3337. Whose writing is that? It was written by some one in the office; I think by Mr. Shairp.
3338. Is that in pencil? Yes.
3339. You did certify, but put this note? Yes—"Certified as requested; but I do not think Mr. Martindale has done sufficient work to entitle him to this advance."
3340. You sent that to the office in Sydney? Yes.
3341. Some time after, it was returned to you, with some other remark? Yes—"Mr. Quodling will please not to make any remarks *in ink* on the voucher. This cannot be forwarded to the Auditor General on account of this unusual proceeding. If Mr. Quodling had not stopped Mr. Martindale from going on with his pitching much more would be then due, and this was done contrary to the recent circular.—W. R. C., 7/9/61. Mr. Quodling to note remarks, and certify to fresh voucher herewith, to be returned. 7/9/61." I did not send fresh vouchers, nor did I return this.
3342. Why did you not send another voucher as requested? Because I knew the contractor had not done the amount of work to entitle him to the advance, and I was not going to lend myself to any person.
3343. That was the reason you held that back? Yes.
3344. When Mr. Collett visited the works, how did he inspect them—did he remain long upon them? No, a very short time; he just walked through.
3345. Did he stop a day there? He took a day altogether; he walked from Murrurundi to the Willow Tree, and back again to Murrurundi.
3346. How far is that? I think eleven miles from Murrurundi to the Willow Tree. He would go through to the Willow Tree, and return the same evening. I never knew him to visit the works twice the same day.
3347. There is another voucher I see for £500 (*referring to a document previously handed in.*) This has also, I see, written upon the face of it, in pencil,—“Mr. Quodling please certify”—did you certify for this? No.
3348. Why? At the time I refused to certify to that other voucher I did not know of this £500, and I did not receive that until the 30th October to certify to, although it was made out on the 13th August. There is a pencil memo. on it from the clerk.
3349. This was paid on the 30th of August, and was not forwarded to you to certify till the 30th October? That is the date I received it at Tamworth.
3350. Do you know what description of timber was used in these bridges? Principally stringy-bark.
3351. Do you know of any white gum having been used? No.
3352. I understand that the principal objection you have to the bridges is with reference to the tarring—the works are tolerably good? Generally the work is pretty well carried out, what there is of it.
3353. You say the excavations are properly performed? They are not all completed.
3354. Was there any of the earth-work tipped into the creek at the Doughboy? Yes.
3355. To stop the watercourse? Yes; both at the big cutting and at the cutting north of the retaining-wall.
3356. Does that involve the necessity of having a fresh watercourse cut? Yes, it will do so.
3357. What will be the probable expense of cutting that watercourse? It will cost a considerable amount.
3358. What do you call a considerable amount? I did not take out the quantities for the one north of the retaining-wall, but I think it will cost £50 or £60 to divert the stream at that particular spot.

3359. *By Mr. Hoskins*: Did you give an estimate yesterday? That was for the big cutting.
3360. *By Mr. Lucas*: I am speaking of the expense it will cost to open these watercourses—are we to understand that there are two watercourses filled up? Yes, there are two filled.
3361. What will be the probable expense of those cuttings? About £70 or £80 the two.
3362. Do you know whether these have been let? One has been let—the smaller of the two.
3363. By the job, or at per yard? At 2s. a cubic yard.
3364. Is that the usual price? No.
3365. What could you have got it done for? 1s. a cubic yard.
3366. Is that in consequence of there being any carting required? No, it is only casting.
3367. You have said the same cutting would cost 14d. a yard? Yes; that is allowing for a slight lead.
3368. Would you have allowed this earth to be tipped into the creek, if you had your will? No, I would not; I made the contractor shift a great portion of the earth-work.
3369. According to the specification, he had to put it where he was required by the Superintendent of the road? Yes, up to a certain length.
3370. If it had been tipped where you required it to be tipped, would it have necessitated the cutting of these new watercourses? No, the watercourses would not have been required.
3371. There was some masonry—was that performed according to the specification? No.
3372. Will you shew where it is deficient—there is the clause (*referring to the specification*)? The principal portion of the work is done very well; but it states here that the wall is to be coped with a heavy course, not less than two feet in width, and the back of the wall to be built with sets-off, as in the drawing. That has not been carried out; the coping has not been put upon the wall at all, and Mr. Collett has arranged to pay Mr. Martindale an extra price for placing this coping on the wall, although it should have been carried out at the same price as the rest of the work.
3373. How do you know such an arrangement was made? Because they were speaking of it together, and Mr. Collett told me to send in an estimate of the probable cost.
3374. Although it is specified there to be carried on at the same price? Yes.
3375. *By Mr. Hoskins*: How many lineal yards of coping are there? I have not the drawings. Mr. Bayley can give you a great deal of evidence about that.
3376. *By Mr. Lucas*: Has the formation clause been properly carried out? No.
3377. In what respect? The traffic has not been turned on in fine weather, nor is the formation consolidated as specified there.
3378. The metal clause, has that not been properly carried out? It has not been carried out; it has not been broken to a two inches and a half gauge.
3379. Is it the best metal? A portion of it is the best, as I stated before.
3380. That is the 884 yards you have spoken of? Yes.
3381. 700 yards are not of the best metal? No, it is of an inferior quality. The specification also states that the metal is to be put on in two coats.
3382. Was it put on in two coats? No; the first was to be consolidated before the second was to be put on, and the second was not to be broken until the first had been spread, in order that it might be seen that the contractor had put the proper quantity on—to check that he did.
3383. That check is best carried out by having the heaps on the road measured? Yes; and when the first is spread then the second coat may be broken.
3384. Will you read the clause with reference to ballasting, and see if that has been carried out? There has been no ballasting on the line at all.
3385. How do you account for that? There was none ordered by Mr. Collett, and none required. There is a clause here about ballasting “should any be required,” but none was required.
3386. Will you look at the clause about “slopes,” and see whether that has been carried out? (*The witness read the clause.*) There has been no trimming done at all to any of the embankments.
3387. Is there anything else deficient? The slopes and cuttings have been generally carried out according to this, but there have been one or two instances where they have not, where the slopes have been made more than is shewn here.
3388. *By Mr. Hoskins*: Have you made any statement before this Committee relative to matters of fact which you are not prepared to verify on oath if necessary? Any statement that I have made with reference to these works I can certify on oath—any matter of fact that has been brought forward.
3389. With reference to this coping, can you give an approximate estimate of the length of coping that has been constructed, and which ought to have been charged at the same rate as the other work? My meaning is this, that the coping should be put on the wall and carried on at the same price per cubic yard as the other work; that the wall was built by the contractor up to the level of the coping, and then the coping was not required, and Mr. Collett was going to arrange with the contractor to give him an extra price for that work, as the contractor refused to carry out the coping.
3390. Do you think it was necessary to have any coping on that wall? Yes, very necessary, in order to protect the wall from the weather.
3391. What was the length of the coping according to the specification—how many lineal yards? I cannot tell from memory; the quantity is not down on the specification.
3392. There is no stone coping erected? No.
3393. And you think it is necessary there should be, for the preservation of the wall? I do.
3394. Do you think there has been any coping placed on the wall since you resigned? There may have been since I resigned, but I cannot speak of what has taken place since I left. There may be masons employed doing it now.

- Mr. Robert Quodling. 3395. Did you not state that Mr. Collett directed you to make an additional estimate for the coping? Yes.
- 12 Dec., 1861. 3396. Will you give us the purport of the conversation? He told me to prepare an estimate for the coping of the retaining wall.
3397. An additional estimate? Yes; and afterwards he told me it was not to be done at present; it was to wait till the 1862 money was voted for it.
3398. And this coping was included in the original specification? Yes.
3399. What was the date of this conversation? September 11th.
3400. Can you give us an approximation to the expense that would be occasioned by putting a coping on this wall? The difference in price would be considerable; stones averaging two feet in width could not be supplied so cheaply as rubble masonry; although it was specified to be carried out at the same price.
3401. Can you give us an approximate estimate of the cost of the coping of this wall? I cannot; but I can state that it was not carried out.
3402. *By Mr. Dalgleish*: How much per yard? £2 10s. a cubic yard for the coping.
3403. How many yards would be required? I could not tell from memory. Mr. Bayley could give that.
3404. *By Mr. Hoskins*: Have you ever been censured for making remarks in ink on other contractors' papers? Never.
3405. Have you ever done so before? I have never had occasion to do so with any other contractor.
3406. Can you tell us the date when you, in company with Mr. Donaldson, measured the excavation at this last cutting? We took measurements every time I visited the works. I think the 28th October was the last time I took a lot of depths with Mr. Donaldson.
3407. Was that subsequent to your resignation? I resigned on the 24th.
3408. Did you not, in reply to Mr. Lucas, state that 14,300 yards had been removed from this large cutting? Yes.
3409. Were you furnished with a schedule of prices for this large work? No.
3410. Have you seen the schedule of prices? Yes.
3411. Who had it? I saw it in the hands of the contractor.
3412. Of Mr. Martindale? Yes.
3413. Did Mr. Martindale tell you that was the schedule of prices? Yes; and I think Mr. Bayley had a schedule of prices.
3414. Do you remember the schedule of prices for excavation, per cubic yard? Yes, 1s. 5d.
3415. Have you made a calculation of the amount Mr. Martindale received for this cutting, and the amount he should have received according to the schedule of prices? I have not made a calculation, but I have given in the quantities, and you can take the amount paid. I do not know the amount the contractor has been paid on account of these cuttings. I was never asked to give an estimate for them.
3416. Do you not know how much excavation you have certified for as having been performed? I know the quantities I certified for with Mr. Bayley.
3417. Do you know how much excavation Mr. Martindale has been paid for? I do not know how much he has been paid for; it was to be a lump sum, and the earth-work was not taken out separately.
3418. Is it not customary, in making an estimate of the cost of carrying out any work, to make an estimate of the cost of the various kinds of work comprised in it? Yes.
3419. Do you know whether an estimate was made of the cost of excavation originally? I know of no other documents than those I have handed in. When I asked Mr. Bayley to explain how he arrived at the sum of £7,000, he stated that Mr. Collett and Mr. Martindale had made the arrangement, and that Mr. Collett had given him the document to give me, with the original measurement made by himself. He could not give me any other information.
3420. Have you ever remarked, in any other contract, that estimates have not been sent in of the different descriptions of work to be performed, and the prices? In other contracts a detailed estimate was sent in.
3421. And the price to be paid for each description of work? Yes.
3422. This is the only exception you ever knew? This is the only exception I have ever known.
3423. What was the price per cubic yard you paid, in those contracts you yourself had the power to allot to contractors? For that description of work, about 1s. a cubic yard, some of it 14d., but I could get plenty of men to do it for 14d.
3424. What did Mr. Martindale receive? 17d., I think.
3425. You have seen the prices? Yes, but I should like to have the schedule laid upon the table; I have not the Government document to produce.
3426. Why do you say it was 1s. 5d. a yard? I saw 1s. 5d. on the document, and I was told by Mr. Bayley it was 1s. 5d.
3427. Then you do not know the gross amount Mr. Martindale has received for this cutting? Not for this cutting; I know the gross amount he has received on account of the work, but to single out each item I could not.
3428. You say that Mr. Martindale has received £2,200 more than he was entitled to under his contracts,—will you tell us what contracts, and how you arrive at that conclusion? By the statement I have handed in, by the quantity finished at the time the last payment was made.
3429. Has he received £2,200 in excess of what he ought to have received on this one contract? Yes, and if you money out the quantities I have given—and I am ready to swear to those quantities—you will find that my statement is correct.
3430. How many contracts have you yourself allotted to persons to perform? I could not tell you the number.
3431. I mean on the Northern Road? A considerable number.
- 3432.

Mr. Robert,
Quodling.

12 Dec., 1861.

3432. Give us an approximation? I cannot guess.
3433. Were they fifty? Yes, more than fifty.
3434. What was the maximum amount of the contract you had the power to allot? I could not tell you from memory.
3435. Give a rough guess—has it been £500? I could not give a rough guess.
3436. Have you let to the amount of £500? No.
3437. Have you to the amount of £100? Yes.
3438. Have you £200? I do not think I have.
3439. Have you in excess of £100? I think I have.
3440. Who directed you to allot these contracts? The Commissioner of Roads.
3441. Did the Commissioner of Roads express his approval or disapproval of the manner in which you allotted these contracts, or did he give you instructions as to the manner of allotting contracts? He gave me no instructions.
3442. Did you allot these contracts, or were they subject to competition? In most instances they were advertised.
3443. Where did you advertise them? In the local papers. The *Tamworth Examiner* and the *Armidale Express*.
3444. What was the average price paid for excavation similar to this cutting? There was no excavation; they were for ballasting and approaches to bridges. The excavation in the approaches to Tamworth bridge was of a different character to the portion you are referring to; it had to be carted to and from the approaches.
3445. Have you never let any excavation in a contract similar to this, where there has been mere excavation without any carting? No, I included the ballasting and excavation together.
3446. Did Mr. Collett positively state you were not to measure the work performed by Mr. Martindale? Yes, he gave me positive instructions; and he told me at the time, in September, "In a month from this date send down a return for Martindale, for £500."
3447. Did he tell you that you were not to certify to work performed by Mr. Martindale? He did not tell me anything of the sort.
3448. What did he tell you in reference to this matter—what were the instructions he gave you with reference to Mr. Martindale? He told me no measurements were required; it was for a lump sum, and that I was not required to send in measurements. He stated, "In a month from this date you send down a return for Martindale, for £500."
3449. What was the date in September? The 11th of September. I think I said I would not do anything of the sort if I thought the contractor had not £500 due to him for his work.
3450. You have a distinct recollection of that? I am quite certain of it.
3451. Have you, on any other occasions, received similar instructions with reference to other contractors? Never; the proper vouchers had to be forwarded before payment was made.
3452. Do you know whether the Minister for Works has anything to do with these vouchers, or to give authorization for the payment of money on these vouchers, before payment can be made? I do not know what the Minister for Works has to do.
3453. As a Superintendent of Roads, you do not know that the Minister for Works has anything to do with the payment of money to contractors? I was not directly under the Minister for Works, and I do not know.
3454. Do you know whether Mr. Collett, before authorizing the payment of money to contractors, has to receive the sanction of the Minister for Works? I do not know whether he has or not.
3455. You said that Mr. Bayley had not received any intimation from Mr. Collett that Mr. Martindale was to commence the excavation before he was informed of it by Mr. Martindale himself? I say that Mr. Bayley had not received a letter informing him.
3456. Then Mr. Martindale was authorized to commence the work without Mr. Bayley, the gentleman in charge, knowing anything about it? Yes.
3457. Did you ever know a similar instance, where a Government officer in charge of works did not receive any intimation of a contract having been taken until he was informed by the contractor himself? I never knew an instance where the contractor was informed before the Superintendent, or that the Commissioner corresponded with the contractor without the correspondence going through the Superintendent.
3458. Did Mr. Bayley complain that he was treated with disrespect in this matter? I do not know whether he complained officially.
3459. He did complain privately? Yes, he has.
3460. Do you know whether he ever wrote officially to Mr. Collett, complaining that Mr. Martindale treated him with disrespect, or that he had commenced work without authorization from him? I do not know; I cannot tell what Mr. Bayley might have done.
3461. Yesterday you said that a complaint was made that you had not laid out the approaches rightly to one of the bridges for this contract—who made that complaint? I do not know that the complaint was made; the question was asked.
3462. The question was asked you by Mr. Dick? Yes.
3463. Is it part of your duty to lay out the approaches to bridges? Yes; it is a very simple matter.
3464. Have you a plan to go by? Yes.
3465. Was this carried out according to specification? Yes; any I laid out was laid out in a proper manner.
3466. Did Mr. Collett ever find fault with you, for the manner in which you had laid out the approach to a bridge? He could not, as I always laid the approaches out according to the plans I received.
3467. Did you ever receive any reprimand by letter, for the negligent way in which you had laid out the approach to this bridge? Never.

- Mr. Robert Quodling. 3468. Do you know whether, when Mr. Hannington was first engaged, he was able to measure work? He was not able when he was engaged.
- 12 Dec., 1861. 3469. *By Mr. Dangar*: Is he now? No; he is not competent now, at least I would not like him to take any work for me.
3470. *By Mr. Hoskins*: Would you, if some one had taken a contract from you, be satisfied to pay the contractor upon Mr. Hannington's measurement? Not by a long way.
3471. You say you have been accustomed to measure contracts for contractors? Yes.
3472. In what contractor's service have you been? In Mr. Randle's and in Mr. Gibbons' service, in Melbourne and in Sydney; I stated here yesterday that I was on the three lines of railway, and had the sole charge of the measurements up to the time that I left.
3473. How long were you in the service of these contractors? Better than five years altogether.
3474. What salary were you receiving at the time you were leaving them? £4 a week I had at the time I was leaving them; but I had upwards of that in Melbourne some six years ago.
3475. *By Mr. Arnold*: In whose service did you receive £4 a week? Mr. Gibbons.
3476. *By Mr. Dalgleish*: You say you have received much more—how much more have you received? I cannot state the amount from memory, but it was very hard work; we were at work morning and night, and received extra pay.
3477. In whose service were you then? Mr. Randle's.
3478. *By Mr. Hoskins*: You were employed on the Western Road previously to this? Yes.
3479. Had you charge of large contracts? Yes.
3480. Who was your Superintendent there? The Engineer for Roads.
3481. Did you ever, in any instance, know the contractor to receive money without the voucher being signed by the Road Superintendent, as to the work having been performed for which he was receiving money? I never knew an instance where a contractor could get money without the certificate of the Superintendent.
3482. Can you tell us what has been the per-centage retained by Government for the completion of contracts, in other cases than that of Mr. Martindale? It varies.
3483. What is the average? In some cases 80 per cent. is paid, in others 85, and in others 90, but on the average about 20 per cent. is retained, and in the Doughboy contract it is stated that 20 per cent. is to be retained.
3484. Do you know, as a matter of fact, whether 20 per cent was retained? It was not retained, according to the information I received.
3485. Who is the road overseer between Bendemeer and Armidale? Mr. Hawkins.
3486. How long has he been in the service of Government? Five or six years.
3487. Is he competent to measure work? Yes.
3488. Is there a road overseer between Doughboy Hollow and Bendemeer? No, between Doughboy Hollow and Goonoo Goonoo.
3489. What is his name? Hannington.
3490. There is no one between Goonoo Goonoo and Tamworth or Bendemeer? Yes.
3491. Who is he? I had charge of that portion myself.
3492. Were the road overseers entrusted with the disbursement of the public moneys to the contractor? The money is forwarded through the Superintendent.
3493. And paid by him to the contractor? By the road overseers to the contractors generally.
3494. Can you inform us, from your knowledge of the salaries paid to persons engaged in road-making generally, whether the services of persons accustomed to this business could have been obtained for the salary paid to Mr. Hannington? Persons could be obtained who understood measurement. An overseer's salary at £255 a year is better than a second class Superintendent at £400.
3495. You were speaking of Mr. Donaldson—is he capable of measuring work? Yes, he has had considerable experience.
3496. Do you know what salary he receives from Mr. Martindale? I do not know.
3497. Do you know the average salary of persons employed under contractors? No, I do not; I believe about £250.
3498. Persons who are accustomed to the work, and who can measure work? Yes.
3499. Do you know Mr. Clements, the road overseer at Murrurundi? I have seen him.
3500. Do you know anything about him? I know nothing about him.
3501. Did you hear that he had been dismissed? I have heard, but I know nothing about him.
3502. Do you happen to know whether he had a contract under Mr. Collett? I believe he has had contracts, but I cannot speak to that.
3503. Do you know Mr. Williams, the road overseer? Yes.
3504. Do you know how long he has been in the Government service? I think nearly twelve months.
3505. Do you know whether he could measure work when he was first engaged? I have understood so.
3506. Can he measure now? I cannot state from my own knowledge, whatever my opinion may be.
3507. Do you know whether he had been accustomed to road-making before he held that office? He might have been, but I should think he had not.
3508. Did you ever hear Mr. Collett state that he would make an efficient overseer when he had acquired practical experience? He said that at a public meeting.
3509. With reference to this letter which purported to have emanated from Mr. Bayley to Mr. Collett, but which was written by Mr. Collett, intimating that Mr. Martindale's contract would require extension, what induced you to take a copy of that letter? I did not take a copy of it; a copy of it was handed by Mr. Bayley to me.

3510. Did you ask Mr. Bayley for a copy of that letter? I asked for any documents he might have, connected with the works, and he handed me that among others.
3511. Are you sure he has the original? He told me he had the original; in fact, he wrote a memo. on the back to that effect.
3512. Can you tell us the date on which you got that copy from him? I think it was the 12th August.
3513. Previous to your resignation? Yes.
3514. Had you contemplated resigning then? No.
3515. Did he voluntarily tender this document to you? I asked him for the whole of the documents connected with the works, so that I would have something to guide me in carrying them out.
3516. Do you know whether this extended contract was allotted to Mr. Martindale in accordance with the terms contained in this letter—this letter ostensibly written by Mr. Bayley to Mr. Collett—was he to receive the amount specified? It stated that he was to receive it.
3517. Do you know whether he has received it? I am told that he received £5,500 up to a certain date, and that since that date he has had £500 lodged to his credit.
3518. How much is there still in hand? Leaving a balance of £1,000.
3519. Still in the hands of the Government? Yes.
3520. Then this extended contract was not let by public tender? I do not think it was.
3521. Did you ever hear it was? I never heard it was.
3522. Did you ever see it advertised? Never.
3523. Are you positively assured that Mr. Collett asked you to write this letter of 13th September to him, with reference to this cutting at Dougboy Creek? He did direct me to write it.
3524. As emanating from yourself? Yes, as an arrangement between me and the contractor.
3525. The arrangement was not made between you and the contractor? It was not. I had nothing to do with it at all.

Mr. Robert
Quodling.
12 Dec., 1861.

APPENDIX.

A.

15, Hunter-street,
4 December, 1861.

Dear Sir,

In answer to yours of this date, asking me if I think you competent to measure works, &c., I beg to say that I have every confidence in your measurements.

Mr. Robt. Quodling.

Yours truly,
JOHN GIBBONS.

B.

Tamworth,
29 August, 1861.

Sir,

I have the honor to acknowledge receipt of letter No. 61-1093, informing me that five casks of cement have been shipped for Bendemeer, also stating that the balance of the contract for the masonry should not have been paid, unless previously passed by you or some officer from Sydney. I respectfully beg to inform you that this was a task agreement made by Mr. Bennett, the late Engineer, and I was not aware that it was necessary to have the work passed as stated.

I will be careful that this shall not occur again.

The Commissioner of Roads,
&c., &c., &c.

I have, &c.,
ROBERT QUODLING.

C.

Road Engineer's Office,
Sydney, 11 December, 1860.

My dear Sir,

I have received yours of the 8th, from Tamworth and Bendemeer. It will take three months to get up cement, and nothing can be done to the superstructure until the cement is got up and abutments built; under the circumstances you had better go down as deep as you can, and found on the shingle, using the largest and flattest stones you can get, and cement instead of mortar for the bottom courses as far as your cement will go. I do not approve of mixing lime and cement—it spoils both. I send herewith tracing paper. Be sure you have a good solid foundation, secured from wash of water.

R. Quodling, Esq., Tamworth.

Faithfully yours,
WILLIAM C. BENNETT.

TUESDAY,

TUESDAY, 17 DECEMBER, 1861.

Present:—

MR. DALGLEISH,
MR. DANGAR,
MR. T. GARRETT,

MR. HOSKINS,
MR. LUCAS.
MR. MARKHAM.

WILLIAM FORSTER, ESQ., IN THE CHAIR.

Mr. Robert Quodling again called, and still further examined:—

- Mr. Robert Quodling. 3526. *By Mr Hoskins*: Here is a letter ostensibly from you to the Commissioner for Roads, dated 17th August, which you handed in to the Committee on the 11th instant (*the Hon. Member read the same*)—now, did you write this letter to Mr. Collett without any instructions from him? I had his instructions to write it; I had nothing to do with the letting of the work.
- 17 Dec., 1861. 3527. Had you his instructions to write this letter? Yes.
3528. Had you his instructions also to attach this schedule of prices? Yes; that is the estimate.
3529. For what work was this; what was it connected with? Extras on the Doughboy Diversion contract.
3530. What were the extras? As stated there, an extra portion of cutting for a drain to divert the present watercourse from foot of bank at big cutting, for a culvert, and for a piece of road opposite Evans' Inn.
3531. Is that all comprised in this £139? Yes.
3532. Has this anything to do with the cutting in the creek? Yes, that is the upper item—"200 cubic yards in drain, to divert present watercourse from foot of bank at big cutting, at 2s per yard."
3533. Then, did Mr. Collett arrange with Mr. Martindale as to the terms of the contract without asking your concurrence? Yes; he let the work without asking me anything about it.
3534. And he directed you to write this letter to him, intimating that this work was required, and that you had agreed with Mr. Martindale upon this scale of charges yourself? I do not know his object; he told me to write that to him.
3535. This letter is apparently from you to the Commissioner of Roads? Yes.
3536. You there state that you "forward an estimate for works?" Yes, at prices agreed upon by himself, not by me. In forwarding that estimate, I would not send it in as my own, but stated that they were not the prices agreed upon by myself, for I had nothing to do with the agreement.
3537. Do you consider the price to be paid for excavation here excessive? I think so; I can get it done for 1s. a cubic yard, mere casting out a drain.
3538. You could get men to perform similar contracts under you at 1s. a yard? Yes.
3539. Now, in the specification of this original contract, was any provision made, or any stipulation made, that the channel of this creek should not be filled up? No; the only clause in the specification was that the earth was to be deposited where directed by the Road Superintendent; but it is understood in all contracts that if a creek be blocked up by earth, there must be another outlet cut by the contractor, to secure his embankment.
3540. Did you at any time represent to the contractor that he ought not to have stopped up this channel? Yes; I have often shewn him that the wash of the water would carry away the embankment.
3541. But he persisted? Yes; he had the Commissioner's order.
3542. After your remonstrances did he persist in filling up this channel? Yes; he took no notice of my remonstrances at any time.
3543. Did he persist in filling up this channel? Yes.
3544. Did you point it out to Mr. Collett? Yes, he said it did not matter, he would cut a new watercourse.
3545. Did Mr. Collett tell you that Mr. Martindale would be paid an additional sum for cutting a new watercourse? Yes, he did.
3546. Did he previously, when you remonstrated with Mr. Martindale? No, he did not tell me then, but he has since agreed to give him these prices.
3547. Did you ever direct Mr. Martindale to remove the earth a farther distance away from the part of the embankment that overlooked this creek? I never directed him to remove it; I pointed out to him that he was blocking up the creek, and shewed him the clause in the specification, that the Road Superintendent had the power to direct the disposal of the earth for a certain length.
3548. Did you tell him where to deposit the earth? Yes, I pointed out to him that it would be better to use the good earth in the large cutting to top up the soft embankment. It was a very good description of material, and would have been very good for repairing the portion of the road where the surface was a dark soil.
3549. Would he have had to remove this earth a farther distance if he had obeyed your instructions? Yes.
3550. If he did not do so, he disobeyed your orders? Yes.
3551. That was a violation of the contract? Yes.
3552. Can you give an approximate estimate of the gain which accrued to Mr. Martindale from stopping up this creek, beyond what he would have received had he deposited the earth where you told him? The way the cutting is carried out now, it is just casting; if the earth had been removed to the place I directed there would have been carting, which would have cost 2d. or 3d. a cubic yard more.
3553. Therefore to that extent he is a gainer? Yes. There is a difference in the lead; he has had no carting to do in this cutting—it is all shifted by barrows.

3554.

3554. Yet by the terms of the contract, he was to deposit the earth where directed by the Road Superintendent? Yes. Mr. Robert Quodling.
3555. You remonstrated with Mr. Collett? I have told Mr. Collett it was very objectionable to throw the earth in the creek in that way—the roadway would never stand. 17 Dec., 1861.
3556. This letter also refers to some other contracts which were let without competition—“200 cubic yards of road to form, pitch, and metal, from end of present contract to Evans' Inn, £104.” That is part of the Doughboy Extension? Yes; that was let in Evans' Inn; it was not subjected to competition, nor was reference made to me about it.
3557. Has it been customary in any other contracts over which you have had charge, for the Commissioner of Roads, or your superior officer, to consult with you when making a contract with a contractor? Certainly; I never knew an instance where the Commissioner made a contract without consulting me as to the price; in fact I had orders to advertise in the local papers for the works I carried out.
3558. Can you tell me how many cases have come under your knowledge in which Mr. Collett has allotted contracts to contractors without submitting them to competition? Not many on my road—only these to Mr. Martindale; this is the most important; there is another contract for the extension of the Doughboy contract to the Willow Tree Inn.
3559. What contract is that? The building of culverts and ballasting of road; I forget the amount of the contract, but it can be very easily obtained in the Office.
3560. When did he obtain that contract? In June, I think.
3561. From whom did he obtain it? The Commissioner; I was told by him to give him the work.
3562. Can you give a rough guess of the amount of money involved in this contract? Something over £100; I cannot tell from memory.
3563. Was it let by public tender? It was not.
3564. In all other cases, with the exception of Mr. Martindale's contracts, had you, as Road Superintendent, orders to advertise any contracts to be let by tender? Yes, I had orders to advertise them. I did not advertise all the small contracts, but any that were at all large I advertised.
3565. What was the maximum amount of contract you yourself have allotted to persons, which have not been subject to competition? I could not tell from memory.
3566. Have you not memoranda to which you can refer? All my returns are in the Office, and can be easily obtained.
3567. Have you known Mr. Collett to let any other contracts to any other person than Mr. Martindale, without submitting them to public competition? No, he has not let any on my road.
3568. To no person? No.
3569. Not to Mr. Clements? Not on my road.
3570. Nor to Mr. Greer? No.
3571. Have you minutely inspected the works since you resigned? Yes, I have been through the works.
3572. Do you know as a matter of fact, whether any iron bolts or straps have been removed from any of the bridges? Yes, I saw the places where they had been shifted; I saw the holes before they were plugged, before the girder was altered, where the strap came on the pile.
3573. Had they been removed subsequently to your resignation? I believe they were removed about the time of my resignation; I could not speak positively, but I know the iron was removed.
3574. Were you cognizant of their removal when you were a Government officer? Yes, I think I was; it was pointed out to me by Mr. Hannington.
3575. Did you say anything about it? I spoke to the contractor's agent, and he said he had orders from the contractor to take them off. I told him not to shift any more till he heard more about it.
3576. Did he continue to remove the iron-work after you told him not? I do not think he did.
3577. Did you ever in your experience, know any contractor, or contractor's agent, to make any alteration in the mode of carrying out a contract without consulting the Road Superintendent? I never knew an instance where a contractor could do so, but he did so in that case.
3578. Did he tell you he had received any instructions from any person to do so? The contractor's agent told me he had instructions from Mr. Martindale.
3579. Did Mr. Collett know anything of this? No.
3580. What was removed? They are called screw tang bolts; they are bolted on to the pile and go through the girders.
3581. Then the whole superstructure rests upon them? They tie the superstructure upon the piles or piers.
3582. In the event of these bolts and straps being removed, do you consider it would endanger the safety of the superstructure? In cases of floods there would be nothing to hold it down.
3583. Have these iron bolts been replaced by any others? No.
3584. Are the holes empty in which the iron bolts were inserted? They were when I last saw them.
3585. There was nothing in the holes? Nothing.
3586. Have you heard that anything has been put in since? I have heard they have been plugged up.
3587. What with? Wooden plugs, and tarred over.
3588. Do you consider that wooden pegs or bolts would be equally as secure as iron ones with iron clasps? When I saw them they were merely plugged up; they are not wooden bolts; they are just plugs put in the holes.
- 3589.

- Mr. Robert Quodling. 3589. Were they solid pieces of wood inserted in the holes? Yes.
3590. Did they reach to both extremities? No; I think they were just driven in and tarred on the face.
- 17 Dec., 1861. 3591. You are not sure? No.
3592. You consider that the superstructure would not be safe in consequence of the removal of these iron bolts and straps? I think it would not; I think they are very necessary in the fabric.
3593. Do you know whether it was provided by the specification that iron bolts and straps were to be used? I am not sure; I think it states, and I think straps are shewn on some of the drawings.
3594. Are you sure they are? Yes, I have seen them.
3595. Then their removal would be a violation of, or a departure from, the original terms of the contract? Yes, I believe so.
3596. Have you ever heard of any persons represent that they considered the bridges were insecure in consequence of the removal of these bolts—any of the contractor's men? Many of the men were speaking to me about them, but of course I do not take any notice of what the men say to me.
3597. You know Mr. Greer and Mr. Clements? I have seen them; Mr. Greer has done some little work for me.
3598. Do you know whether they were engaged in going about with a list soliciting subscriptions? Mr. Martindale and Mr. Greer were, but I cannot speak for Clements; I believe he was, but I cannot speak positively.
3599. Do you know whether these men intimated to their employes that they would be expected to subscribe? I cannot speak positively, but I believe they did.
3600. Do you remember the day when Mr. Collett visited the Liverpool Range Road way with Mr. —, and expressed his final approval? No, I could not tell, I had no opportunity of knowing.
3601. Do you not know the day when he visited it? No; I recollect the time he was up there—it was in April—but whether he passed the work and gave the contractor his final certificate in April I could not say.
3602. Do you know when the road was finally opened? I could not tell the date. It was open and shut directly. There was a shower of rain.
3603. Subsequent to that road being open it was in a very bad state, almost impassable was it not, or was it a good road? The old road?
3604. No, the road made by Mr. Martindale? It was not a good road, because the gravel used was of a very inferior quality.
3605. On what portion of the road was the gravel inferior—the upper or lower portion? The upper portion—the gravel was better on the lower.
3606. Would there have been any difficulty in obtaining trap for metalling the road? There is an abundance of trap all along the road, and scarcely any carting would have been required.
3607. How soon after the ordinary traffic travelled over that new road was it in an almost impassable state? I could not tell you the date; it was the time of the heavy rain. It was a regular bog; the horses would go through the pitching and gravel into the formation.
3608. Did you ever hear that Mr. Martindale had to keep that road in repair for a certain time? He told me so.
3609. Did he tell you the conditions? I think he told me he was to receive £50 or £60 a month.
3610. You have a distinct recollection of the fact of his telling you so? Yes.
3611. Do you know what amount of labour was employed upon this road after it was opened? I used frequently to travel over the road, and I never saw more than two men—sometimes there might be three for a day or so—but there were two men kept regularly on it, I believe.
3612. How were these men employed—were they filling up ruts? Filling up ruts and attending to the road.
3613. Did he tell you how long he had to keep it in repair? He did tell me, but I could not recollect; some five or six months.
3614. What pay did his labourers receive? £2 a week I think they were getting; at least one of the men told me so.
3615. These were the men employed to keep the road in order? Yes.
3616. What was the date of your last visit to the Doughboy Diversion, subsequently to your resignation, when you minutely inspected all the works? The 28th October, I think, was my last visit.
3617. Have there been any material alterations in the work between the date of your resignation and of your last visit? No alteration; they were going on in the same way.
3618. Do you know whether the contract is completed now? No, I cannot tell; report tells me so in the papers, but it could not have been completed if there has not been an increase in the number of hands employed there since I left.
3619. Do you know Arnold Bridge, Murrurundi? I have seen it.
3620. Did you ever look minutely at the structure? Yes, several times.
3621. Can you tell me what kind of timber the floor is composed of? I could not, for it was tarred over, and I did not take particular notice.
3622. Did you ever look at it before it was tarred? I cannot say that I have minutely observed the flooring.
3623. Are you in the habit of using much timber on culverts and bridges on the road? I have been, a good deal.

3624. Do you consider white gum a good timber for bridges? No; I would not use it for anything.
3625. Why? Because it is not a durable wood.
3626. In the course of your evidence you have referred to a nephew of Mr. Collett, for whom you say Mr. Martindale performed some contract? Mr. Martindale told me he was going to complete a contract that Mr. Collett's nephew had failed to carry out. The contract was not in Mr. Collett's nephew's name, but in the name of Frazer; but Mr. Collett's nephew was the party carrying it out, and was the only party on the works. Mr. Martindale went over, paid all the debts of Mr. Collett, and completed his contract.
3627. What is the name of Mr. Collett's nephew? Mr. Benjamin Collett. He is now, or was, employed on the Western Road, as agent, or—I could not tell you what he is; but I believe him to be working with Mr. Martindale, on contracts on the Western Road.
3628. Has Mr. Martindale contracts on the Western Road? I believe he has; he told me so himself.
3629. Where was this contract you have alluded to—the contract Mr. Martindale was taken to finish? At Camden.
3630. In whose name was the contract taken at Camden? I think in the name of Frazer.
3631. Who was this Frazer? I do not know.
3632. Where is he now? I do not know where he is at the present time.
3633. Mr. Collett's nephew ostensibly had charge of the work? Yes; in fact, Mr. Collett's nephew told me so himself.
3634. When was Mr. Martindale removed from the Northern Road to this place—in what month? I think in the month of April; I would not be certain.
3635. Do you know whether this contract was let by public competition—this contract which Mr. Martindale was called upon to complete? Originally I believe it was.
3636. Do you know whether, when the original contractor failed to complete it, it was re-let by public tender? It was not.
3637. You feel sure of that? I feel certain of it.
3638. You know, as a matter of fact, that the contractor went away to the Southern Road? Yes, I saw him there.
3639. Did he remove any portion of his staff? Yes, and I saw him engaged on the Southern Road. I was not on duty at the time, but was away on leave.
3640. Were you in charge of the Northern Road at the time he removed his staff? Yes.
3641. Do you know how many men and what material he removed? He did not take a great deal of material, for I believe he purchased the plant and tools from Mr. Collett, or Frazer and Co., or whatever the partnership was.
3642. How long was he away completing this contract? I cannot tell you.
3643. Is it completed now? I do not know.
3644. In every case, with the exception of the contracts which Mr. Martindale had, was it compulsory upon the Superintendents of the roads to send in fortnightly vouchers of the amount of work performed by the contractor during the fortnight? I had a letter to that effect; but in the general conditions signed by the contractor it was stated that payments would be made monthly, at the rate of eighty per cent. upon the work performed. I received a letter from Mr. Collett that Mr. Martindale was to be paid every fortnight, at the rate of ninety per cent.
3645. Did Mr. Collett in every other case deduct the proper per-centage? Yes.
3646. Twenty per cent.? Whatever the proper per-centage was.
3647. In every other case but that of Mr. Martindale, did the Government or the Commissioner of Roads refuse to pay any money on account of work performed, until you had sent in a voucher to the head Office that a certain quantity of work had been performed? He never had an opportunity of refusing, for I always forwarded the vouchers; I never knew any moneys to be paid to a contractor without my voucher.
3648. In this case Mr. Collett gave special instructions that exception was to be made? Yes, he did by this letter.
3649. *By Mr. Garrett:* With regard to this letter instructing you to certify to payments to Mr. Martindale to the extent of ninety per cent., have you that? I have already handed it in. I have here the specification of the Bendemeer bridge, which I would wish to hand in.
3650. Is that the original specification? It is a copy which was handed to me.
3651. Have you not marked out a portion of that? No, those portions were crossed out previously.
3652. Did you not cross some of them this morning? Yes, but they were marked to be omitted before. I have obliterated them, to prevent their being printed.
- [*The witness handed in the specification, with the understanding, on the part of the Committee, that the original should be produced from the Office.*]
3653. The original contract for the Doughboy Diversion was, I think, six thousand odd pounds? £6,379, I believe.
3654. How was the remaining amount made up? I handed in a letter explaining that.
3655. It was for extra works? It was stated there to be for extra works.
3656. Were the works extra works? I know nothing more about them.
3657. From the character of the works, can you say whether they were such that the necessity for them could be discovered only after the work was commenced—could the necessity for them have been discovered when the work was originally designed? Of course it could, if proper quantities had been taken out before the contractor had signed.
3658. But were they extras, considering that they had not been included in the original contract? It states that they were extras, but I do not know that they were.
3659. From your knowledge of the procedure in contracts, is it not usual to give payment for any extra works not included in a contract? Yes; at a schedule of prices.

- Mr. Robert Quodling. 3660. Was that the proceeding in Mr. Martindale's case? I know nothing farther about it than the letter.
- 17 Dec., 1861. 3661. He got these payments because these were extra works beyond the original contract? I do not know anything about the works; Mr. Bayley could not explain anything about them; he could not tell me anything about them.
3662. You say that on the 11th September there was only £1,000 to be paid to Mr. Martindale; did that sum include the cost of these extras? I believe it did. I am not certain about the date being the 11th September, but I was told by Mr. Collett the amount paid, and since that £500 has been paid, which made up £6,000 to the date of the last payment. I could not state from memory whether it was the 11th of September, but I gave the date in.
3663. Did you measure the work of the big cutting yourself? Yes, and have computed the quantities from the cross sections.
3664. And you made the quantities 14,300 cubic yards? I gave in the quantities.
3665. Is that the actual quantity? That is the quantity I made.
3666. What was the amount estimated? I do not know; I asked Mr. Bayley to explain how he arrived at the £7,000, and he could not tell me.
3667. You mean the original contract? Yes; I wanted to know how he arrived at the £7,000.
3668. With regard to the big cutting, what was the amount estimated? I have already explained that Mr. Bayley was unable to give me any details.
3669. Was it paid for per yard, or as a lump sum? I know nothing more than what you see by the letter I have handed in; it states there that it is a lump sum.
3670. That is, the letter accepting the contract? The letter I have handed in to the Committee.
3671. When did you last measure the works? I forget now—I stated the date some time ago; I measured the works frequently—I was continually measuring the works.
3672. When did you last measure the works, for the purpose of reporting upon them? The last report I sent in was compiled from the reports I received from Mr. Hannington. The instructions I received stated that the reports sent in by the Superintendent of Roads were to be compiled from the last reports of the overseers.
3673. Was it part of your duty to measure the works? Yes; I wanted to know —
3674. Was it part of your duty to do so? I was told not to do so, but I did it for my own satisfaction.
3675. Then you admit that you exceeded your instructions? I have got the measurements.
3676. You admit that you exceeded your instructions? I do not admit anything of the sort; I think I had a perfect right to take them for my own protection.
3677. Were you responsible for the measurements—you say you were instructed to take your reports of the measurements from the reports of your subordinates? Yes, that was when I did not visit the works personally myself.
3678. When did you last measure the works? I forget now; I gave that in.
3679. Surely you can recollect the date? On the 28th October I made the last measurement.
3680. That was after you resigned? Yes.
3681. When did you last measure the works before you resigned? I forget now the date—it was on the date of one of my last visits.
3682. Try and recollect? I have given it in.
3683. Was there any period fixed for the completion of this contract? I believe there was a time fixed.
3684. What time? I could not tell.
3685. Do you know whether that time has expired or not? I believe so.
3686. On what grounds do you base that belief? I have some slight recollection about the time.
3687. Is it named in the specification? I believe it is, but I had no official information about the time.
3688. When you left, on the 24th October, the works were then in the possession of the contractor? They were.
3689. With reference to the report of Mr. Hannington, how was that drawn up? I have already stated that it was drawn up from notes made by myself.
3690. Are they in that field-book? No.
3691. Are they in a private book of your own? They are.
3692. Then it was Mr. Hannington's duty to measure these works, and not yours? No, it was Mr. Hannington's duty.
3693. You said you were instructed not to measure? Yes, but Mr. Hannington only obeyed my orders in doing what he did.
3694. When did you give him the order? I forget.
3695. Was it previous to the 24th or afterwards? Previous.
3696. What is the date of Mr. Hannington's letter? The 24th of October.
3697. This letter dated the 24th October, was it handed to you that day and drawn up that day? I do not recollect.
3698. When did you receive it? I stated to Mr. Dick that I was not certain about the time.
3699. You could not have received it before the period at which it was dated? I do not think I could.
3700. Where did you receive it? At Murrurundi—at Wightman's, I think; I am not certain, but these are matters, of course, I did not take particular notice of.

3701. You seem to have taken a good deal of notice of things? Anything that affected me certainly I did. Mr. Robert Quodling.
3702. To a certain extent this affected you; it is compiled from your notes? Yes, it is my own composition in a measure; he could not have written it without my notes. 17 Dec., 1861.
3703. Was it usual for Mr. Hannington to draw up his reports at your dictation? It was usual for Mr. Hannington to come to me for advice upon his reports.
3704. And then you had to report upon his report—was not Mr. Hannington under you in the office? He had nothing to do with the office.
3705. Had he anything to do with you? He was an overseer under me.
3706. To whom had he to report? To me.
3707. Did you think it a proper course to dictate to your officer what he should report? In that instance Mr. Hannington was not competent.
3708. In what respect? He was not competent.
3709. Could he write? Yes.
3710. Was this his own composition? No, I say it was not; it was compiled from my notes.
3711. Was it his composition? I took notes of the quantities to complete, I compared them with the memos. and shewed him the quantities required to be done, and he then copied that letter from the memos. I had shewn him.
3712. Do you think that a proper proceeding from a superior officer? They were the only documents I had with reference to the contract. I had no official documents to make him acquainted with the state of the contract.
3713. Was he left in charge of the work when you left? I think not.
3714. What occasion had you to hand over documents to him? It was not when I left. I said I had no official documents to hand over to him.
3715. Was it not Mr. Hannington's duty to inspect the works? Yes.
3716. And to report to you? Yes.
3717. Do you think it was proper that you should supply the material for a report and should then approve that report? It was only in that letter. I had fortnightly reports from him as to a certain length of pitching and metalling.
3718. You considered him competent to make that? Any schoolboy could do that.
3719. Could he take out the quantity in this cutting? No, he made a measurement with Mr. Donaldson, and by calculating the cross section I detected an error of 200 yards.
3720. You are not sure of the actual date, nor of the place where you received this? Yes.
3721. You admit that you supplied Mr. Hannington with your material? He came to me for advice; he could not know what was to be done without coming to me, for I had the notes and memos. of the work.
3722. He had the works to look at? Yes, but he could not tell the deficiencies without coming to me.
3723. With regard to the copy of the specification, where did you get that from? I think I have stated, from Mr. Bayley.
3724. Did Mr. Bayley state to you that that contained his original instructions? Yes, he handed that to me as the specification of the contract.
3725. Did he state that that was the specification? That that was the specification.
3726. He did not tell you where he got it from? He stated that he had received it from the Office. I had a similar copy, which was sent to me at Tamworth when it was advertised. That is a fair copy of the one I have in my possession.
3727. The contract you say was for a lump sum? I know no more than the letter tells me.
3728. Is that what you take from the letter? It states that it is to be for a lump sum of £7,000. I know nothing more about it.
3729. Being for a lump sum, would you consider it necessary to take all the measurements? Yes, very necessary.
3730. As the work proceeded? Yes, before advances were made.
3731. Supposing the contract were for a lump sum, and the big cutting contained 2,000 or 3,000 cubic feet more than the estimate, would that be the contractor's loss? I have already stated that I know no more than the letter states.
3732. You know the quantities that were estimated? I have given in the quantities actually taken out.
3733. Do you know the quantity that was estimated? No, I do not.
3734. With reference to the testimonial to Mr. Collett, did you subscribe to it? No, I did not.
3735. Did you ever subscribe to a testimonial to anyone over you on that road? I do not know that I ever did.
3736. Was a testimonial ever got up for Captain Martindale? I believe there was.
3737. Did you subscribe to that? Yes, but he was not over that road.
3738. He was over the roads? But he had left the department, and that was given by the officers and not by the contractor.
3739. After he resigned? I do not know whether it was after he resigned; it was about the time of his resignation. I know no contractor subscribed to that.
3740. *By Mr. Hoskins:* It was given by the officers of his department, as a testimonial of esteem? Yes, as a testimonial of esteem.
3741. Did you ever know testimonials to be given by contractors to public officers? I never knew of an instance.
3742. *By Mr. T. Garrett:* Do you know any reason why contractors should be prevented from joining in a testimonial of esteem to a public officer? I think if a Commissioner for Roads takes money from a contractor he must do something for that money.
3743. How many contractors subscribed? All of them.
3744. How much did it amount to? I believe about £50 or £60.

- Mr. Robert Quodling. 3745. A statement has been made in the paper that it amounted to a hundred guineas—is that true? I cannot say. I believe it was not so much.
3746. How much was subscribed by the contractors? I am not certain about the amount.
- 17 Dec., 1861. 3747. The testimonial was participated in by other persons, I presume? I believe it was, but it was carried round by contractors. I saw it in the hands of Mr. Martindale and Mr. Greer; they were collecting the money.
3748. You think that is one of the matters discreditable to Mr. Collett? Yes, I think it was discreditable.
3749. You say "many matters;" what are any other of the many matters alluded to in your letter? The general way in which Mr. Collett treats this contractor.
3750. In what way does he treat him? In the way I have already stated.
3751. What is that? I cannot give you the whole evidence over again without you put the questions over again.
3752. I ask you upon what grounds you base the charge that Mr. Collett behaves in a discreditable manner? I think the evidence has proved that.
3753. Let us have facts—when have you seen them together? Frequently.
3754. What passed when they were together? I cannot tell you what passed.
3755. How do you know he acted discreditably—we have this one fact, that he accepted a testimonial to which the contractors subscribed, and which they took round—what other fact have you? With reference to the payment of this money, and taking the personal explanation of the contractor in preference to the report of the Superintendent. I think that is very discreditable to a gentleman holding his position.
3756. When did he do that? I cannot give the date.
3757. With reference to what work? With reference to the Doughboy works.
3758. Have you ever had any conversation with Mr. Loder, with reference to this inquiry? Yes; Mr. Loder stated the conversation we had.
3759. At Wightman's? Yes, at Wightman's.
3760. On any other occasion? Yes, several times.
3761. Did you inform him before you came down the country, that you would press this charge against Mr. Martindale? I cannot give you any more evidence than you have already.
3762. I am asking you upon what you base your charge of Mr. Collett's having acted in a discreditable manner? I handed over the documents I received from the Office with Mr. Collett's remark, and said I would not submit to it; that I would shew the matter up if Mr. Collett persisted in doing it; that I would bring the matter forward.
3763. With reference to this voucher? With reference to the work generally. Mr. Loder was speaking then about the work at Liverpool Range, and several other contracts.
3764. Have you yourself any contracts on the Northern Road? No.
3765. In the Northern District? No; nowhere.
3766. Were you present when the site of Bendemeer Bridge was decided upon? No; I was present when Mr. Bennett pointed out the site that had been determined on.
3767. Was Mr. Collett with you then? No.
3768. Is it usual to ballast a road as well as to pitch it? I do not know about its being usual.
3769. Do you consider it necessary on an ordinary road to ballast, and then pitch it? It would depend entirely upon the description of road you wanted to make; it would not be necessary on a dry formation to pitch it.
3770. Are there any pieces on the Northern Road where the road is both ballasted and pitched? Yes, I think there are some. There is a piece in Armidale which I have done, but it was very boggy there.
3771. Was that task or piece work? It was task work.
3772. There is some complaint about part of the road not having been ballasted where the Superintendent of the road directed that it should be ballasted—is not pitching more expensive work than ballasting? Not in all cases; good ballasting costs as much as pitching, but bad ballasting, or mud, as it was here, can be put on much cheaper of course.
3773. If it were pitched instead of mud-ballasted it would be a great improvement? I do not think it would; the traffic could not run on pitching alone.
3774. Are there any places on the Northern Road where the contract has directed it should be ballasted and it has been pitched? I think you are alluding to the Liverpool Range; that was not under my charge. There is no ballasting on the Doughboy contract.
3775. *By the Chairman:* When you first took office, did you get any specific instructions from any Government officer above you? No, I got none when I was appointed.
3776. Did you, at any time when you were in office, get instructions pointing out your duties? I several times got circulars with reference to work.
3777. These were circulars addressed to others as well as to yourself? Yes.
3778. How did you find out what your duties were? When I was first employed I was under the Engineer for Roads, and he explained what he wanted and what I was to do.
3779. Did you get instructions principally by verbal communications? On the Western Road, principally.
3780. Do you know whether that was usual with an officer in your position? I believe it was with all overseers.
3781. Can you state whether it was part of your instructions to stop any work that you thought was being badly done? In the general conditions it states that the work is to be done to the satisfaction of the Road Superintendent and overseer.
3782. So that if you found fault, it was in the power of the Superintendent above you to allow any work to be performed in any way, whatever your opinion might be; the opinion of the officer above you was conclusive as to the way the work was performed? Yes.

3783. Have you received any offer of re-appointment since you have resigned? No, I have had no offer. Mr. Robert Quodling.
3784. Did you ever, in the course of your duties, receive any intimation from any contractor, amounting to what might almost be called a bribe? I did; but I would not like to allude to that at the present time. 17 Dec., 1861.
3785. *By Mr. Hoskins:* In connection with this inquiry, or the work connected with this inquiry? I should not like to allude to it.
3786. *By Mr. Garrett:* Is that person in the service still? I decline alluding to it.
3787. *By Mr. Hoskins:* Have you, since you have been Superintendent of the Northern Road, had an offer of a bribe? I decline answering the question.
3788. *By the Chairman:* Do you know anything of the iron spiking of a bridge at Doughboy having been taken out? Yes, I have explained that it had been taken out.
3789. When Mr. Bayley was associated with you, was he above or below you? I think he was on an equal footing; I do not know that he was above me.
3790. Were Mr. Bayley and you always on good terms? Yes.
3791. Are you now? I believe so; I do not know to the contrary; I have never corresponded with Mr. Bayley since I left the Doughboy works.
3792. Did Mr. Bayley never say anything which implied his doubt of your competency—of your equal competency with himself? No, he never could.

WEDNESDAY, 18 DECEMBER, 1861.

Present:—

MR. DANGAR, MR. T. GARRETT,		MR. HOSKINS, MR. LUCAS.
--------------------------------	--	----------------------------

WILLIAM FORSTER, ESQ., IN THE CHAIR.

Mr. William Coghlan called in and examined:—

3793. *By the Chairman:* Are you aware for what purpose this Committee has been appointed? With reference to Mr. Quodling's Resignation. Mr. William Coghlan.
3794. And also with reference to the public works? Yes. 18 Dec., 1861.
3795. What office do you hold? Road Superintendent.
3796. That is the name of your office? Yes.
3797. You succeeded Mr. Quodling, did you not? Yes.
3798. All the duties Mr. Quodling was supposed to perform are in your hands now? With reference to one work, the work at Doughboy Hollow, I have not been instructed to take that into my hands as yet.
3799. At what time did you first take office? My appointment dates from the 1st November.
3800. That is to your present office? Yes.
3801. Were you promoted? Yes.
3802. What office did you previously hold? Road overseer.
3803. Is that a grade under? Yes.
3804. Had you a Superintendent over you? No; it was over the line from Sydney to Penrith, where there is no Superintendent.
3805. Who was the superior officer next over you? The Commissioner.
3806. Who checked your work in that case, when you were overseer? The only check was in the Office, and the Commissioner's visits to the district.
3807. There were two offices different from each other—the road overseer and Superintendent? Between Sydney and Penrith is an exceptional case; generally on the roads there is a Superintendent over the overseers.
3808. Do you mean that the duties of the road overseer from Sydney to Penrith were precisely the same as those you have now to perform as Superintendent? Yes, so far as responsibility is concerned; I have now a larger district.
3809. Will you describe the duties of Road Superintendent, so far as you can, to this Committee? To make specifications for the works required.
3810. Do you mean by that, that you have to prepare the plans of works? Yes.
3811. If a bridge has to be made, do you prepare the plans? Not for bridges; road-making, forming, and metalling.
3812. Your duties are to draw out specifications for the construction of roads apart from bridges? I fancy so; I have done nothing yet in the way of making specifications on the Northern Road. I am now taking charge of some works going on there, and of some men who are working by the day.
3813. Where did you gather this notion of your duties that you are to make specifications of works, and to superintend the making, forming, and metalling of roads? I was overseer under Mr. Dawson, on the Western Road, for some time; when there, he used to make out the specifications for contracts for metalling.
3814. State the duties you are now actually performing as Road Superintendent? I have got twelve men at work by day labour, maintaining the road, and there are two bridges being built.
3815. "Maintaining the road," what do you mean by that, keeping it in repair? Keeping it in repair, filling up holes.
3816. That is after the contractor has finished his work? No, that is where there has been no contract.

- Mr. William Coghlan.
18 Dec., 1861.
3817. Simply keeping the road in order, which has not been made by the contractor at all? That is part of my duty. A clearing contract is going on for about fifty-eight miles, that is partly finished; about sixty men are employed at that under a contractor; that I have to see properly done.
3818. What is your precise duty with regard to this particular contract? To see it carried out according to the specification.
3819. Have you the specification placed in your hands? I have not it here.
3820. Was it placed in your hands when you were placed over the road? No; one of the overseers has a copy of the specification.
3821. Is that the authorized specification? I cannot say; I never looked at it particularly.
3822. You say it is your duty to see the works carried on according to the specification—how can you do that if you have not the specification? I have seen a copy in the overseer's hands.
3823. How do you know that that is a correct copy? I do not know that it is; if it is not a correct copy I suppose he would not shew it as correct. He got it I understood from Mr. Quodling.
3824. The overseer is an officer under you? Yes.
3825. When you were placed in charge, did you get no copy of the specifications from the superior officer? No; I was supposed to get them from Mr. Quodling.
3826. Did you get them? I was directed to apply to Mr. Quodling at Tamworth.
3827. After he had resigned? Yes.
3828. Supposing Mr. Quodling had refused to give you the information you required? Instructions were sent to the overseer, Mr. Hawkins, to take charge in case of Mr. Quodling leaving; but Mr. Quodling heard I was appointed, and waited till I came up.
3829. If he had gone? The overseer would have taken charge, and would have given the papers to me.
3830. If he had gone—tell us what actually did occur—you say one of your duties is to see that certain contracts are carried out by the specification—how can you perform that duty if the specification is not placed in your hands by some responsible authority? I go according to the copy of the specification shewn to me by the overseer.
3831. You presume that to be correct? Yes.
3832. You entirely depend upon that placed in the hands of the Superintendent? Yes, for the present.
3833. Is it your intention to get another specification from anyone else? Mr. Quodling left Tamworth in such a hurry that he forgot to give me many of the papers. I have written to him for them several times, but he appears to have been so much taken up with this Committee that he has not sent them.
3834. Suppose they are not supplied by him? The originals are in Phillip-street Office, I take it for granted.
3835. How do you derive this notion of your duties—you say your duties are to superintend twelve men who are maintaining the road, and to see that a certain contract is carried out by the specification, and that specification you say is in the hands of the overseer? There are several contracts.
3836. Will you mention them? There are two bridges being built, and two clearing contracts. There is one bridge being built at Uralla; Mr. Heritage is the contractor; the bridge is 60 feet long and 18 feet roadway. The bridge at Saumarez Creek is similar to the other, and the contractor is the same. One clearing contract, as well as I recollect, is 85 miles long; Mr. Dowell is the contractor; it is from Goonoo Goonoo to Armidale. The other clearing contract is from near Doughboy to Goonoo Goonoo; Mr. Heritage is contractor for the last. These are the only works going on at present.
3837. Have you now stated all the works placed under your charge? Yes; I have had no instructions about Doughboy as yet.
3838. From whom did you get instructions to take charge of these works? I had orders from the Commissioner.
3839. In writing, or verbally? In writing; I had a letter stating that I had been appointed.
3840. From whom? From the Chief Clerk, Mr. Shairp, stating that I had been appointed Road Superintendent in the second Northern District, and directing me to proceed to Tamworth, where I would get the necessary information from Mr. Quodling.
3841. These were your instructions? Yes.
3842. After Mr. Quodling had resigned? Yes.
3843. You were referred to Mr. Quodling for information? Yes; he was the only person who could give me the necessary information, either himself or the person left in charge.
3844. You were left entirely to take your information from Mr. Quodling? With reference to the works then going on under his charge.
3845. Did you get instructions from no one else? In the letter I received I was directed to apply to him for information.
3846. Did Mr. Quodling give you instructions to take charge of those particular works? No.
3847. Who gave you instructions to take charge of those particular works? I had instructions to take charge of the second district of the Northern Road, and for details I was referred to Mr. Quodling.
3848. You have stated that certain works are under your charge at present; from whom did you obtain instructions to take this special charge? The fact of my being appointed to the works in that district I understood to mean that I was to take charge of the works in it.
3849. From those general instructions, you understood that you were to take charge of those special works? Yes.
3850. You have no charge of Doughboy? When I arrived at Tamworth I sent a report to Sydney to say that I had got no specification from Mr. Quodling of the works at Doughboy,
and

and as they were nearly done now, any report I might make on that part of the works could give very little information. I got no reply to that report, and consequently the works at Doughboy being nearly finished, I determined not to take charge of them unless I received special instructions to do so *

Mr. William
Coghlan.

18 Dec., 1861.

3851. Then in fact you acted either entirely upon the instructions you received from Mr. Quodling, or upon your own judgment when you got there? Upon my own judgment when I got there most of all.
3852. Your own judgment led you to the conclusion to take charge of these particular works, and not of Doughboy? My judgment led me to write to Sydney, and pending a reply, not to take charge of the Doughboy works.
3853. How do you arrive at the conclusion that you are to see that certain contracts are to be carried out according to a certain specification—whence do you derive that notion of your duties? From being told to take charge of the district as Superintendent.
3854. You did not get instructions from Mr. Quodling to that effect? No; he told me there were certain works going on, in answer to my inquiries.
3855. How do you know that it is your duty to see that a certain contract is performed according to a specification in the hands of an overseer? I have been five years in the service, and that has been the duty of every Superintendent I have been under.
3856. You derive it from the fact of your general knowledge of your duties before? Yes.
3857. Is that the case with regard to all the contracts? Yes.
3858. Have all the overseers got specifications which they can go by? All the contracts at present being done are two clearing contracts, for which the overseer has a specification.
3859. Both overseers, or is there only one overseer? There are two overseers, but the specification for both contracts is the same. I have seen the specification in the hands of one overseer; I did not ask for the other, understanding that they were both the same; the clearing is continuous, divided between two contractors. I was informed by Mr. Quodling that the clearing was uniform throughout.
3860. You say certain bridges are placed under you? Yes.
3861. Who holds the specifications for those bridges? The overseer has the plan of them. I have seen no specification; the overseer builds the bridge from the plan.
3862. You understand the plan of a bridge to mean the same as a specification? I can build a bridge from a plan; the specification is a written plan.
3863. All you know of the bridges is, that there is a plan in the hands of the overseer? Yes.
3864. There is nothing specifying the particular size of the timbers, the number of spikes to be used? You can derive that from the plan; all the information necessary for us we can get from the plan.
3865. Is the same overseer over all these bridges and roads? No, I have two overseers; the two bridges are under one overseer; the other overseer I understand to be in charge of Doughboy.
3866. What is the name of the latter? Mr. Hannington.
3867. And the other? Mr. Hawkins.
3868. Will you state the part of the road under Mr. Hannington? From Doughboy Hollow to Goonoo Goonoo.
3869. Are there any bridges under him? No, excepting those in the Doughboy contract.
3870. State the portion of work under the other? From Bendemeer to Armidale.
3871. Are there any bridges there? Two.
3872. With regard to the roads, the two overseers hold specifications? Yes, with reference to the clearing, I have only seen one in the hands of Mr. Hawkins; that specification I understood to refer to the entire length of the clearing.
3873. You did not think it necessary to compare them? I understood they were the same; I did not ask for the other; I do not know that there is another in existence.
3874. This one specification, did it apply to the whole length of the road? So I understood.
3875. Could you not judge from the specification itself? Not without being told. Mr. Quodling and the overseers told me the road was to be cleared throughout according to the specification.
3876. With regard to the bridges, you say you derive all your information from the plan? Yes, I have never seen a specification of the bridges.
3877. Does the plan tell how many spikes are to be driven into the slabs? I cannot be quite sure, not having the plan with me.
3878. Does the plan say whether the slabs are to be tarred or not? No.
3879. Does the plan intimate the width, the size, and thickness of the slabs? Yes.
3880. Does the plan tell you anything about the fencing? There is no fencing except the handrail—of course that is shewn. With reference to the tarring and painting, I will explain that the contractor's tender shews me that he tendered a certain amount for tarring and painting.
3881. Was the tender placed in your hand? Not the tender sent to the Office, but I got the contractor's copy, and from that I found the price for tarring and painting, and the price for building the bridge.
3882. Have you anything to do with the price? It was shewn to me what the price was. The works were in progress when I got there, and, as I was responsible, I asked the price for building the bridge.

3883.

* NOTE (on revision):—This was not exactly my answer. I did not "report to Sydney", in the first instance, that Mr. Quodling had not given me the "specification"; the rest of this answer is correct. (Mr. Quodling did not give me the specification.)

- Mr. William Coghlan. 3883. With regard to the roads, you say you judged of your duties from the specification in the hands of the overseer? Yes.
- 18 Dec., 1861. 3884. Does this specification give you all the particulars with regard to consolidation, pitching, and so on? That question refers to the Doughboy contract, which I have not taken charge of. The pitching, trimming, and fencing, is not going on on the other part of the road.
3885. You declined taking charge of that, in consequence of the position you found it in? Yes, without special instructions to take charge. I understood that the work being nearly finished, Mr. Collett himself would be up in a short time; and I expected that he would ask me to meet him there, and go over the works with me.
3886. And you would then take your instructions from him? He would inform me what was to be done, and I would have my own opinion as to how it had been done.
3887. How long have you been in the service? About five years.
3888. Are you led to believe that the mode adopted in taking charge of works, in your case, is the same as that adopted in other parts of the Colony? I cannot say.
3889. Is it usual to send a Road Superintendent to take charge of roads and bridges without instructions from his superior officer? I should think not.
3890. Why did you find yourself in this position? Because, having been so long in the service, it was thought unnecessary to give me all the details. Mr. Quodling having been so long in the service, as well as myself, we would be able to arrange all these things.
3891. Did it not strike you as rather odd, that Mr. Quodling having just resigned, you should be referred to him for instructions—he might have refused? I thought, as he was acting as Superintendent, he would be bound to give me his information.
3892. You thought—but suppose he had not? If not, I could have referred to the Office in Sydney.
3893. Did it not occur to you to get instructions from the Office in Sydney, which might supersede the necessity of an application to Mr. Quodling? I called at the Office, and asked about my instructions, and Mr. Shairp referred me to Mr. Quodling.
3894. Did he refer to you personally or by writing? He wrote, I think, to Mr. Quodling, telling him to give me all the necessary information and papers, and Mr. Quodling wrote to say he would give me all the information necessary.
3895. Have you a copy of that letter? I have not brought it with me.
3896. Will you be able to furnish it to the Committee? If I have it in town I will forward it to-day; if not, I will send it from Tamworth.
3897. Will you send all the documents out of which you gathered your instructions? The only document I can furnish you with on that head is Mr. Shairp's letter. If the information I had received from Mr. Quodling had not been sufficient for me to go on with the works, I would have applied to the Office, where the originals of these specifications are.
3898. Did you consider that the instructions you got from Mr. Quodling were sufficient? They were not so full as they ought to have been, but they were sufficient to enable me to go on for the present.
3899. Not sufficient for the Doughboy contract? I did not take that in charge.
3900. You did not think Mr. Quodling's instructions sufficient with regard to Doughboy? He declined to give me any.
3901. Have you reported this to the Office? No.
3902. Did you report that Mr. Quodling declined to give you information? No; I have explained that I made a report, and pending any reply, I did not take charge.
3903. Did you state that you had not full information from Mr. Quodling about the other part of the road? I did not report exactly to that effect. There was one particular instance of the clearing contract—I wished to know the amount of the contract and the payments that had been made. I think my letter to the Office was to the effect that Mr. Quodling being hurried had not time to give me the information; I therefore applied to the Office and got it.
3904. As Road Superintendent, the next officer above you is Mr. Collett, is he not? Yes.
3905. With regard to the Doughboy Diversion, you stated just now that it will be very soon finished? It appears so to me.
3906. Can you state when you think it is likely to be finished? I do not know what the contract is for doing it.
3907. I do not wish to press the question; if you know anything about the Doughboy contract it will be as well to state it? It is so far finished that the mail drove over it when I came down.
3908. Is the road in a good state? I consider it is.
3909. Is it well metalled from beginning to end? I think the quantity of metal on it is not sufficient.
3910. Is there a sufficient width of road? I think it is wide enough. I have heard some complain that it is not. There are some parts of the road only twenty-four feet wide.
3911. Did you notice the quality of the metal? There are two kinds—one very hard, that is blue stone.
3912. Commonly called trap? It is very hard; the other is also a trap, but of a very inferior kind to this hard stone.
3913. Another kind of trap? Yes.
3914. Can you shew any specific distinction between these two sorts of trap? Merely as to hardness and durability, and difference of colour.
3915. Are they both trap, are you sure? The inferior stone is what I have generally called trap.
3916. Are you a mineralogist? No, I am not; I do not profess to understand the scientific distinctions. The inferior metal is generally understood to be trap.
3917. On the whole you think it is a tolerably good road at Doughboy Diversion? I think it is good there.

3918. Are the bridges well made? I think they are; the bridges were all very nearly finished before I saw them, so that I cannot give any opinion as to their foundations.
3919. Was the road opened and stopped again? This Doughboy Diversion?
3920. Yes? Not that I am aware of.
3921. It has never been opened to the public? No.
3922. You say your duty is to see that the contractor does certain works according to plans and specifications—plans in regard to bridges, and specifications in regard to roads; have you anything to do with the money part of the contract—to vouching that a certain work has been done before payments can be made? Yes, I sign the vouchers.
3923. Would it be regular to pay money without your certificate? My opinion is that the Commissioner, as my superior officer, has a right to differ from my opinion; he is supposed to know more than I do.
3924. Would it be irregular? I never knew an instance of the kind.
3925. You never knew money to be paid without a certificate from the Road Superintendent? I never did.
3926. In any instance? No.
3927. Still, if it were done by your superior officer, you would not consider it your duty to object? It never occurred in my experience, and I do not wish to give an opinion.
3928. Suppose it were to occur, would you simply submit? It would be a matter for consideration; I do not know how I might act.
3929. But it never has occurred in your experience at all? It never has occurred.
3930. Has it occurred to you to refuse certificates at any time when you thought work was not done properly? No.
3931. You have never been placed in that position? Never.
3932. Then in fact, wherever you have been the work has been well done? I see to that before I make a return.
3933. What is the duty of the road overseer under you, with regard to the same contract? His duty is to see the works properly carried out in my absence. I have 135 miles of road to superintend.
3934. Would he ever pass certificates in your absence? Not without my signature.
3935. Would you consider your overseers responsible for any certificates they might pass? Responsible to me?
3936. Would you consider it your duty, if an overseer certified that a contract was done, to examine it, after his certificate? That would depend upon circumstances; if I had reason to believe the work was not well done, and I had not seen it for some time, I would consider a personal examination necessary; but if I had sufficient faith in the overseer, I would certify when the vouchers were sent in, without inspecting.
3937. If you saw a contractor were doing his work badly—putting pitching on the road before it was properly consolidated, would you consider it your duty to stop, or would you simply wait till he came to you for your certificate? If I saw anything wrong I would stop it at once.
3938. The contractor might go on in spite of you? If he did, he would go on at his own risk.
3939. Would you refuse to certify? If he would not do it as I wished, I would order him to stop, or see that he did it rightly.
3940. Has it ever occurred in your experience that contracts have been modified or altered at all by the superior officer over you, in regard to the terms or mode of carrying them out? I think it has; I do not exactly recollect an instance, but I think there have been changes made on the Southern Road, in Mr. Bennett's time, in the road contract.
3941. By the Superintendent? By the superior officer over the Superintendent.
3942. I presume these alterations have never been to any great extent—that they have never amounted to any great alteration of the contract? There have been some considerable alterations in that road, amounting to a good deal of money.
3943. Do you know by whom they were made—by the Government or by the overseer? Mr. Bennett, as Engineer, the Superintendent, and the contractor, agreed on these alterations being made.
3944. The Engineer and the contractor? The Engineer and contractor, with the Superintendent.
3945. Then the consent of the whole three was necessary to modify a contract? Yes.
3946. I suppose that was done openly? Yes.
3947. It was done for the public benefit? Yes, it was either to make an extension of the time of the contract, or a change in the width of bridges.
3948. In that case some change was made in the terms of the contract? Yes, the contractor would receive more or less, as the contract was extended or lessened.
3949. Do you think the Commissioner for Roads, I do not say from incapacity, but from not being upon the works, is generally qualified to determine whether the works are properly done or not? I should say not, unless he saw them.
3950. He would not be qualified to act in opposition to the opinion of the Road Superintendent, who is always upon the spot? With reference to work that was actually done, whether it was done properly or not, if the Commissioner had not seen it he could not say whether it was done.
3951. He could not say whether a macadamized road was properly consolidated in dry weather—whether the ballasting was laid on? Certainly not, without seeing it.
3952. The Road Superintendent is the only person who could judge? The Road Superintendent more than he, being constantly on the road.
3953. Does the Road Superintendent act in opposition to the overseer's report? The road overseer is responsible to him, and takes his instructions. The Road Superintendent, I fancy, should

Mr. William
Coghlan.
18 Dec., 1861.

Mr. William
Coghlan.

18 Dec., 1861.

should attend the works once a month; during that time, if anything has been improperly done it can easily be rectified; in the meantime the overseer should see that the work is properly done, or report to the Superintendent.

3954. In regard to this modification or alteration of the contract, has it been done by writing or by verbal arrangement? I think there has been a verbal arrangement, in the first instance, and a written agreement afterwards.

3955. A fresh agreement? No, an additional memo. In the first instance it has been verbally agreed to.

3956. Generally there has been a written document? I think so; I do not recollect having seen one, but I fancy there must have been.

3957. Will you state whether these are the two kinds of traps you have referred to (*handing the specimens previously produced to the witness*)? That is the hard blue stone (*the trap*), we call that honey-comb; it is got in boulders.

3958. Is that the best kind? Yes. This (*the shale*) is the other sort.

3959. Do you call that trap? Yes; that is rather a bad specimen of the stone on the road; it is lighter coloured and thinner in the joint.

3960. Would you not call that (*the second specimen*) stratified rock? Yes.

3961. Are you aware whether trap is a stratified rock? No, I do not understand the scientific distinction.

3962. That (*the second specimen*) is the inferior sort of trap you saw on the road as well as the other? Yes, but this is of a worse kind than that on the road generally.

3963. Is that the sort of stone you have seen on the road at Doughboy? Yes, this is like some of it, but it is a bad sample.

3964. Would you say there is no stone on the Doughboy Diversion as bad as this? Yes.*

3965. Will you say in what proportion this stone is placed on the road—is there a larger or smaller proportion of the good? I should say there are two-thirds of good, and one of the other.

3966. Do you know what effect rain would have upon the inferior stone? If it were all like this it would go into mud. This is a soft piece of stone, but the generality of the stone is better than this. I think this is a bad piece picked out.

3967. I will not press this question, but if you like to answer it you can—can you give any opinion as to the competency of Mr. Quodling to superintend works? I have no actual knowledge as to his competency, as I have never had an opportunity of judging; but as far as I can learn from conversation with him, I think he is a competent officer.

3968. What is your opinion of Mr. Hannington's efficiency—the overseer under you? I should not wish to answer that question.

3969. That is a question which it appears to me you are bound to answer, as he is a public officer, but Mr. Quodling is not a public officer—you must know something of the efficiency of the officer under you? I have not been able to form an opinion of him; I have met him only once on the works.

3970. Do you know anything of the competency of the other overseer? I think he is very competent; I have seen him a good deal.

3971. What is his name? Hawkins.

3972. Are Mr. Quodling and you on good terms? Yes; I have been acquainted with Mr. Quodling for some time.

3973. Did you notice, in passing over the Doughboy Diversion road, whether the creek was blocked up by any earth which had been taken away from the road or other works? I did not remark it.

3974. Do you know anything of the position of the contractor, in regard to funds that are due to him for the Doughboy Diversion contract—do you know how much has been paid to him? By report, I understand £6,000.

3975. You know nothing of your own knowledge? No.

3976. Do you know Mr. Martindale the contractor? Yes.

3977. Do you know anything of his general reputation as a contractor? He has done a bridge for me on the Parramatta Road, while I was overseer.

3978. Have you a good opinion of him? I think he carries out his work very well.

3979. Is that your only knowledge of Mr. Martindale? I knew him in Melbourne eight years ago.

3980. Did you know anything of his mode of doing works in Melbourne? I had very little to do with him in the way of works there. In fact, the time I had to do with him was eight years ago. *I saw the question asked in the House as to whether I was employed under Mr. Martindale, either in New South Wales or anywhere else: I never was.

3981. As a public officer I must caution you, if you know anything about Mr. Martindale that bears upon the public service—I will not, nor will this Committee have a good opinion of the interest you take in your duty, if you refuse to give information—It appears that you knew something about him in Melbourne? I knew him in Melbourne as a contractor.

3982. What was his public reputation—was he considered to have performed his work well? In the works I have known I believe they were done well, but I understand he has been insolvent; that is the worst I have heard of him.

3983. Insolvent as a contractor? Yes.

3984. Did the Government lose any money? I think not, but I do not know.

3985. Was he engaged in matters of a questionable kind? In nothing that I know of.

3986. Were you employed in the public service under the Government of Melbourne? Yes.

3987. Were you employed near Mr. Martindale—you say you were not under him—were you employed superintending any works he did? I superintended some work he did for a very

- very short time, but I left the Office before the work was finished. He commenced this work under my superintendence, and I left the work before it was finished.
3988. Did you bring testimonials from the Government of Melbourne, as to the performance of your duties? No, I have had testimonials, but I lost them. I was under Mr. Perrin, who gave me a testimonial, but I lost it.
3989. You did not leave for any — ? The reason of my leaving was to take a contract; I was partner in a contract, and I resigned my superintendence because I believed there was more money to be made in that way than in the Government service.
3990. You were partner in a contract at Melbourne? In Victoria, not exactly in Melbourne.
3991. When you gave up the taking of contracts you entered the public service here? No, I was some time on the diggings of Victoria before I came here.
3992. From the diggings you came here and entered the public service in New South Wales? Yes; I was first employed on some small contracts near Mudgee, under Mr. Dawson. After that I was appointed an overseer by Mr. Dawson; and as I was acquainted with Mr. Bennett in Ireland, on his recommendation I was taken by Mr. Dawson as an overseer.
3993. You say you had good testimonials from the Victorian Government? From Mr. Perrin, the engineer I was with.
3994. I suppose any reference as to the performance of your duties must be made to Mr. Perrin? Mr. Perrin, I believe, is dead.
3995. Is Mr. Steavenson acquainted with you at all? I do not recollect the name.
3996. Is he not the Government officer in charge of the roads? He was not in my time.
3997. Can you mention no other name? Mr. Perrin was my immediate superior.
3998. The only testimonial you had from Victoria was signed by Mr. Perrin, and he is dead? Yes, from Victoria.
3999. There is no one you can refer to there as evidence of your having given satisfaction to the Victorian Government—none of the Ministers? I do not think so. I was acquainted with very few persons. I was with Mr. Perrin up the country all the time I was there.
4000. Do you not know anything of Mr. Bayley? No, I do not know him.
4001. Is there not a Mr. Clements on the Northern Road? I do not know him.
4002. Did you notice a statement lately made by Mr. Cowper, that the Doughboy Diversion works were finished? I think I saw in the papers that they were on the point of completion.
4003. Not that they were finished? I fancy that is the way I read it.
4004. You have stated already that they are on the point of completion? As far as I know.
4005. Can you state anything with regard to the Doughboy—the clearing of the road on either side, did you notice whether that had been done—did you notice that as you were going along? It never occurred to me to look at it.
4006. Do you know anything of the road called the new cutting? That is out of my district.
4007. Can you state anything as to the condition of the road there? It is very good now.
4008. What kind of metal is on? As far as I can recollect, it is a pitched road with gravel over.
4009. Is it open to the public at this moment? Yes.
4010. Was it closed lately and opened again? Not that I am aware of.
4011. How long have you known it to be open? It was open five weeks ago when I went up, and also when I came down.
4012. Was it open during all that time? I do not know.
4013. You consider it a good road? It was a good road when I came down, and it was so also when I went up.
4014. Have you seen it after any rain? No; there were some heavy showers, but nothing to injure a road.
4015. What is the nature of the work done—what you call maintaining the road by twelve men? The men are engaged principally in filling up any holes in the road—in filling up the tracks.
4016. These are men paid daily wages or weekly wages? They are on day wages.
4017. Who looks after these men when you are not on the circuit? There is no one looking after them now; they are all down here.
4018. When the overseers and yourself are all up there, is there an overseer over these men? At present one overseer has four men in his division, the other has four, and I have four.
4019. What overseers are here now? Mr. Hannington and Mr. Hawkins.
4020. Do you know what brought them here? They have been summoned to this Committee; at least Mr. Hawkins has; I do not know whether Mr. Hannington has.
4021. By Mr. Hoskins: Do you know positively that Mr. Hannington is here in town? I think I heard some one say he saw him yesterday. I know he came down here, and he had not returned when I left Murrurundi.
4022. By the Chairman: If he is in town, how long has he been here? He ought to have been here on Tuesday week.
4023. Who is doing his duty in his absence? I had to attend to it as far as possible.
4024. He is the officer immediately under you; how is it that he has come down without your actual cognizance—did he get leave from you? No. I do not know whether he got a summons from the Committee.
4025. If he were summoned? I got a telegram from him, saying he was off to Sydney.
4026. Was that the way overseers communicated to you that they were about to leave their districts? It appears he was hurried off here.

Mr. William Coghlan.
 18 Dec., 1861.

- Mr. William Coghlan. 4027. How does it appear? From the telegram he sent, otherwise he would have written a note I should think.
- 18 Dec., 1861. 4028. Is a telegram from an inferior officer of yours a sufficient notice? I consider not, but I fancied he had been summoned to this Committee, and that a summons from the Committee would decide —
4029. Why do you fancy that? I fancied that he had got a summons to come down immediately.
4030. Do you consider it to be your duty to supervise the proceedings of this Committee—why should you imagine, because you got a telegram from Mr. Hannington that he was off to Sydney, that he had a summons from this Committee? I did not disbelieve him.
4031. Did he state that he was summoned? I do not recollect whether he said “I am summoned” or not.
4032. Your impression was, that when he left he was coming to give evidence before this Committee? Yes.
4033. And you considered it to be your duty to provide for his absence as well as you could? Yes.
4034. Mr. Hawkins you say is in Sydney—are there any other subordinate officers in Sydney? Those are the only two I have.
4035. What work had Mr. Hannington under his charge when he left for Sydney? Four day-men filling holes along the road.
4036. Was that all? He was in charge of the Doughboy contract, I understood, when he went up there.
4037. You understood—who told you? I saw him on the ground, and I took it for granted that he was in charge, he being the officer.
4038. Can you say how many men are employed on this contract now? I do not know how many; I think I noticed about fifteen or eighteen men when I was going up. I came down on Sunday this time, so that I do not know how many men were employed then.
4039. Do you consider it consisted with Mr. Hannington’s duty to leave his work without having first obtained permission from you as his superior officer? I do not, but I expected that having been summoned by this Committee he felt that to be a sufficient authority.
4040. Who is superintending all this work now? Nobody.
4041. There is nobody overlooking the contractor’s work? No.
4042. Are you in the habit of allowing overseers to leave their work without, in the first instance, applying to you for permission? I never had an overseer under me before.
4043. In future cases, shall you consider it your duty to prevent their leaving without permission? If they left without permission I should report them.
4044. Do you consider yourself immediately responsible for the road overseers being on the works they are appointed to overlook? Yes.
4045. And therefore would you consider yourself responsible for their absence? I should think it my duty to report to the Office that they were absent.
4046. Have you the power of dismissing an overseer? I do not know; I fancy not; I never asked that question.
4047. Shall you consider it necessary to ascertain whether Mr. Hannington received permission to leave his work or not, to visit Sydney? I shall now consider it necessary, from the questions you have asked me, but I took it for granted he had been summoned.
4048. What instructions did you receive on your appointment, as to your acting in connection with the road overseers? I had no instructions in particular about that.
4049. Are they to act independently of you? No; I fancy I was supposed to know the duty so well, having been long in the service, that it was not necessary to give me instructions. I consider that the overseer is responsible to me.
4050. If you consider them responsible to you, would you not consider it their duty to obtain permission to leave the works? Yes.
4051. In this case your permission was not asked? It was not asked.
4052. Do you happen to know, as a matter of fact, that Mr. Hannington was summoned here to give evidence? No, I do not. It would be my duty to ask leave of the Commissioner before leaving my district; but having received this summons, I thought it was compulsory upon me to attend without receiving permission, because as I was on the way down from Armidale when I received the summons, I thought, as I understood the Commissioner was coming up, I would make it my business to see him on the way.
4053. Did you make it your business to see him on the way? Yes.
4054. Did you ascertain from him whether Mr. Hannington was summoned to attend the Committee? No; it never occurred to me.
4055. What situation did you fill in the Colony of Victoria? Road Superintendent, under the Engineer.
4056. What salary did you receive? £1 a day—£6 a week.
4057. You were paid by the week? Fortnightly, I think I was paid.
4058. You were a Government officer? Yes.
4059. How long were you in that service? I was on and off, sometimes surveying, sometimes making sections, sometimes in charge of works, nearly two years altogether.
4060. Are you a surveyor? Yes.
4061. By profession? Yes, I have been under a civil engineer at Home for five years, at surveying, levelling, and works of every kind.
4062. You have had a practical acquaintance with road-making, of course? Yes.
4063. Did you receive any instructions when you were entering upon the road superintendence of Victoria, with reference to the performance of your duty? No.
4064. You received no instructions? No. I was at first appointed an overseer in Victoria, at 15s. a day, and was ordered to get ten men together to repair the roads. It was at the time

- time of the great excitement and rush. I was ordered to do the best I could with ten men.
4065. In what year was that? 1852.
4066. In those days the Road Department was in a very disorganized state? Yes, there were officers changed almost every two months.
4067. Had you, previously to leaving, road overseers under you? No.
4068. You never had any subordinates under you—Government officers? I think not; never as officers, only as workmen.
4069. Had you the supervision of contracts there? No, not exactly; the engineer was the person in charge, as far as passing work was concerned. I measured and laid out the work, but I had not the passing of any work.
4070. Did you draw up specifications for works? No, it was not the same position as a Road Superintendent in this Colony—they are called Road Engineers there, at least they were at that time.
4071. You were not placed immediately in charge of contracts? My principal work was to lay the contract out, to measure the work, and to see that it was properly done.
4072. How much per cent. were the Government in the habit of retaining in their hands from the contractor till the completion of the work? I think it was 25 per cent.
4073. Did you, as Road Superintendent, have to send in vouchers certifying to the quantity of work that had been performed? I sent in to the Engineer, but it was his business to send the vouchers in; I measured the work and sent in the details.
4074. You sent in no vouchers as you do here? No.
4075. You said you had contracts? Yes, I resigned in order to take contracts.
4076. Did you take contracts immediately from Government? No, I joined a man who had a contract.
4077. What was his name? Lawlor.
4078. Did you ever have a contract with any other person? No.
4079. Did you ever take a sub-contract under any person? No.
4080. Was that the only contract you had? That was the only one with Lawlor.
4081. How long have you been a Road Superintendent? I have only recently received the appointment—five weeks.
4082. On what day did you arrive at Tamworth, to take charge of the district? Five weeks ago to-day—the 12th November.
4083. Did you meet Mr. Quodling on your arrival there? Yes.
4084. Had he remained there from the date of his resignation till that day? I think he told me he had been up the country.
4085. Did you inform Mr. Quodling you had been directed to receive information from him with reference to the contracts? Yes.
4086. Did he give you instructions? Very little; he did not give me what I required.
4087. What contracts were under Mr. Quodling's charge? These clearing contracts, and the two bridges. There were details of small jobs, maintenance men, and those things, I was anxious to get.
4088. Did you obtain them? Not all. He came away in a great hurry, and promised to leave me the papers at Tamworth, but he forgot it I suppose, and I went on to Armidale.
4089. You told him you required more papers? Yes, some details; he said he would make them out and leave them.
4090. Will you tell us what works those papers referred to? One small bridge in Tamworth, I asked him for the plan and details of that.
4091. Any other work? I wished to know where I would find the men who were to be paid; there were some vouchers sent in by him, and I asked him to leave word where I could find the men to whom the money was due.
4092. They were Government men—maintenance men? Yes.
4093. Were there any instructions with reference to these contracts with which you were not provided? He gave me no information with reference to the large contracts.
4094. Did you expect to get instructions from him? Yes.
4095. Did you make any complaint about not receiving them? I asked him for them, and he said the specification for clearing I should get from Mr. Hawkins, and the plan of the bridges also. I did get all the specifications necessary for the big contracts from Mr. Hawkins; it was for that reason I did not think it necessary to complain.
4096. Then you have been provided with all the information that Mr. Quodling could furnish you with, with the exception of the account of the maintenance men—where the men were working? Yes, all but the small bridge at Tamworth; I have not had information about that.
4097. Have you made any complaint to the Central Office that you have not been furnished with the specification? I have not complained; I asked Mr. Shairp, if he saw Mr. Quodling, to speak to him about it.
4098. You consider that you have been furnished with sufficient information upon every matter, with the exception of this bridge and of these maintenance men? For information as to payments on the contracts, he referred me to the Sydney Office; and I had sufficient information, some from Mr. Quodling, and some from the overseer, to enable me to carry on the works.
4099. Did you ask any person in the Office for definite instructions? Yes, Mr. Shairp.
4100. What was his reply? He told me Mr. Quodling had been requested to give me any necessary information.
4101. On what date was that? About the 6th or 7th November.
4102. Was Mr. Quodling at that time a Government officer? I do not know.
4103. Had he resigned? I understood he resigned on the 25th October.
4104. Can you tell me whether a Road Superintendent, when taking charge of any work, expected

Mr. William
Coghlan.
18 Dec., 1861.

Mr. William
Coghlan.

18 Dec., 1861.

expected to receive instructions from his predecessor, whether that predecessor had resigned or been discharged? Yes, I fancy so.

4105. Has that been the custom? I do not know an instance of an overseer or Superintendent having been discharged or resigned, but I know an instance of one having been changed from one district to another; and in all such cases it is customary for the retiring officer to give the fullest information to his successor.

4106. You never knew an instance of a Road Superintendent or overseer being discharged or resigning previous to this of Mr. Quodling? I know Mr. Hall on the Mudgee Road resigned, but I was not concerned on the road at the time; whether he gave instructions to his successor or not I do not know. I have been changed from one district to another myself, and it has always been customary both to give and to receive information.

4107. You say it is the duty of a Road Superintendent among others to draw up specifications for contracts for earth-work, metalling small bridges, and so forth? Yes.

4108. Are they expected to draw out these specifications, irrespectively of the Commissioner altogether? When they are made out they are generally forwarded to the Office in Sydney.

4109. Do you happen to know whether the Commissioner for Roads has ever himself drawn out specifications, and directed you to send them to the Office? I do not know anything of the kind. I have had no specifications made out since Captain Martindale resigned. At that time I know on the Western Road, the Superintendent, with the assistance of the overseer, used to make out specifications, and forward them to the Office in Sydney; that was the system.

4110. And the Road Superintendent was considered to be the person responsible? The specifications were sent to the Office, and checked by Mr. Bennett, the Engineer.

4111. Has that been the practice recently? I have had specifications on the Parramatta Road that I think were made by the Engineer, in the Office in Sydney.

4112. You did not draw up these specifications? No, they were handed to me on taking charge of the Parramatta Road works.

4113. Have you received instructions to draw out specifications, and afterwards to submit them to the approval of the Commissioner? No, I have not, but I expect to receive instructions directly the Estimates are passed, and when we know what money we have to spend.

4114. You gave some evidence with reference to the Doughboy contract; you spoke merely from cursory observation made when you travelled over it? That is all.

4115. You travelled over it in the mail? Yes, I walked over some of it going up.

4116. Did you look particularly to the manner in which the contract was being performed? No, not into the details.

4117. What is the average width of the roadway? I never measured the width, but I understood that in some places the road was only 24 feet wide.

4118. Can you not, from being so much in the habit of measuring work, form some idea? In some parts it was 53 feet, in others 50, in others 40, and in some not more than 24.

4119. What is the width of the roadway? The width of the pitching I understand is 18 feet.

4120. Mr. Forster asked you something with reference to plans of the work, and you said you could form some idea of how it was to be performed by plans—but are you not, as Road Superintendent, provided with proper plans and specifications, in detail? It has been generally the case.

4121. Has there ever been any departure from this rule? In this particular instance of the bridges I have seen no specifications.

4122. What bridges? These two bridges I have mentioned as being in progress.

4123. Nobody has any specification? I have never seen any specification; I have had a plan.

4124. Are you not provided with a specification, stating the quantity of timber, the thickness of the coating of tar, paint, and so forth—everything connected with the work? Not in this instance.

4125. Have you in any other instances known a departure from this practice? I think not.

4126. Have you made any application for specifications in detail? No.

4127. Why not? I did not consider them necessary.

4128. Why did you not consider them necessary? I have already had so many bridges built that I fancy the plan is sufficient to go by.

4129. If there were any deviation from the regular practice, would you not think it necessary to call the attention of the authorities in Sydney to it? I did not in this case. If there had been any difficulty between me and the contractor, any dispute as to the way in which the work was to be done, then I would have applied for a specification; but as long as I got the work done to my satisfaction I did not see the necessity. The plan is very detailed; it shews the timber, the iron-work, and so forth.

4130. You know nothing about the bridges in the Doughboy Diversion? No.

4131. Between the Doughboy Diversion and Armidale how many contracts are there going on now? There is a clearing contract; one clearing contract is finished, the other is in progress.

4132. Which is the one finished, and which the one in progress? The one in progress is from Goonoo Goonoo to Armidale. That, I believe, was originally in three contracts; one contractor has the lot.

4133. What are the others? The two bridges I have mentioned.

4134. Are there no other clearing contracts? I have mentioned the one in progress.

4135. Which is the one finished? From the Doughboy to Goonoo Goonoo.

4136. Who had that contract? Mr. Heritage.

4137.

4137. Is there any other contract going on between the Doughboy and Goonoo Goonoo? Mr. William Coghlan.
There is a small task for cutting some rock away near the Willow Tree.
4138. Who has that? Mr. Martindale, I think.
4139. What is the extent of that? I believe it to be cutting 500 yards of rock.
4140. What is he to receive for it? I do not exactly recollect the price.
4141. Who has charge of that? Mr. Hannington.
4142. Do you not consider that you have charge of the work over him? Yes.
4143. Do you not consider that you should have the price? I have the price, but I do not remember it.
4144. Have you the specification? No.
4145. Was that let by public tender? No. It is only a small task of 500 cubic yards of rock to be cut away. What the price is to be I do not recollect; I should say about 3s. a cubic yard.
4146. Are there no other contracts between Doughboy Diversion and Goonoo Goonoo? No; I do not recollect any other.
4147. Is there not another contract between the Doughboy Diversion and Goonoo Goonoo? No; I do not recollect any other.
4148. Is there not another contract between the Doughboy Diversion and the Willow Tree, besides this one you have alluded to? Not unfinished. There have been some culverts there, but I think they are finished.
4149. How long have they been finished? I am not aware.
4150. Has there been a contract for clearing at Apple-tree Flat? I do not know—Mr. Heritage's and Mr. Martindale's contracts meet.
4151. Do you know where Mr. Martindale's commenced and where it terminated? I understand it commenced at the end of the metal.
4152. Is it completed? I do not know; I understand he had the clearing of the part he has formed and metalled.
4153. Do you know whether he had the clearing of three or four miles in length? I do not know; if he had it would be on the part he has formed and metalled.
4154. Beyond that—between that and Apple-tree Flat? I never thought he had.
4155. You know then of no contract except those of Mr. Heritage and Mr. Martindale near the Willow Tree? I do not recollect any other; these culverts I believe were built by Mr. Martindale, and these were the only contracts between Doughboy and the Willow Tree.
4156. How long have they been completed? They were finished when I went by; whether they are passed or not I do not know; if they are not paid for, the vouchers will go through my hands I suppose.
4157. I again ask you whether you happen to know whether Mr. Martindale had a contract for clearing beyond Doughboy Extension, between that and the Willow Tree? I always was of opinion that his contract ended with the metalling contract.†
4158. When you assumed your duties, you never received any information that there were any other contracts than the ones you have alluded to under construction in your length of the road? If Mr. Martindale had a clearing contract up there, it must have been finished when I went up; I understood at that time there was only Mr. Heritage's contract.
4159. Are you allowed to allot contracts to any persons for public works without submitting them to competition? Yes; small tasks I have let several times without tender.
4160. Have you ever received any instructions with reference to this matter? Yes; on the Southern Road, on the occasion of the Commissioner's visit there; I was then overseer; he pointed out several small pieces that required improvement; he noted down the amount of money he thought it ought to be done for, and gave me authority after he arrived in Sydney to spend certain amounts upon these jobs. They were done without tender.
4161. Do you happen to know the maximum amount of any contract allotted by yourself or by any Government officer on the road without being submitted to competition? I have sent in returns of all the moneys I have expended without tender during the time I had charge of the district between Parramatta and Penrith. Before I came there I was on the Southern Road, and I think about £900 was spent there without tender.
4162. What was the maximum amount of any one contract? I think about £100 was the largest contract that I ever let without tender; but there was a bridge on the Parramatta Road let by the Commissioner without tender, the price of which is £295; that is the largest I know of anywhere.
4163. There have been no contracts allotted since you took charge of the Northern Road? No.
4164. Do you know whether Mr. Martindale has performed any contract on the Southern Road within any reasonable time? I believe he has a contract at Camden. When I was on the Southern Road I was a long way farther up, and therefore I do not know anything of that part. I was at Gundagai.
4165. You do not know this of your own knowledge? No.
4166. Did you receive any particular instructions with reference to signing vouchers, when you were appointed to this office? No; not to this present appointment.
4167. Supposing that a Road Commissioner paid a contractor a sum of money in excess of the agreement, and you were Superintendent of the work, would you feel it to be your duty to remonstrate with the Commissioner? Yes.
4168. What amount of money is it customary to keep in hand in contracts—how much per cent.? Ten per cent. I think that has been the usual thing lately.

4169.

* NOTE (on revision):—I never have heard anything of the contract referred to in these questions, nor do I think it exists.

† Revised:—I do not believe he had.

- Mr. William Coghlan.
18 Dec., 1861.
4169. Do the terms vary with different contractors? They do vary; they are not always the same; we have kept 25 per cent. on some.
