It is a matter of great regret, that some skilful architect, or some one at least educated as such, was not associated in the Commission, to note the many details which can be judged of only by an architect, by process of actual inspection. In lunatic asylums, as in hospitals, the association of the physician and architect is very requisite; but in the absence of such association, it can only be hoped that this report will not prove "an impracticable set of theories from a medical man's point of view," as has been predicted by an architect of eminence; or rival the but too stubborn facts in brick and mortar, which architects, when working alone, have in many cases erected, even of late years, as hospitals for the insane.

The papers and reports which have been collected, include—

- The Lunacy Statutes of England, Scotland, and Ireland, complete;
- The Lunacy Statutes of New York, New Jersey, and Massachusetts;
- The Lunacy Statutes of France;
- A complete set of Reports of the Scotch Lunacy Commissioners; the Massachusetts Board of State Charities; the Canadian Inspectors of Asylums and Prisons; and an almost complete set of Reports of the English Lunacy Commissioners;
- The more recent Reports of the Irish Inspectors of Lunatics; the Belgian Lunacy Commissioners; and the New York Charity Commissioners;

Reports,

Reports, with copies of rules and regulations, from almost every English and American asylum visited, as well as from several of those on the Continent;

Copies of the French and Belgian Government Regulations for the Administration of Asylums;

The French Statistics of Insanity;

The Report of the English Parliamentary Commissions on Lunatics; and besides these, a large number of books, pamphlets, and papers on asylum construction and organization.

These materials having been collected, it became a matter for anxious consideration in what form the mass of information contained in them, digested and systematized, could be submitted to the Government of New South Wales, so as to carry out the special objects of the Commission. After mature deliberation, it appeared best to draw up a Report of British and Foreign Hospitals for the Insane, not according to mere geographical division, but according to the general principles of construction and organization; and to supplement this by a series of suggestions for the establishment of an asylum system, and the construction and management of asylums—with particular reference to local and other conditions existing in New South Wales, drawn from the above report, from books and papers, and, indeed, from all the sources of information to which travels and inquiries have given access.\*

---

\* In this Report few comments are ventured, upon any want of order, arrangement, or cleanliness in the asylums visited, or comparisons made, which may seem invidious, between the different institutions. It is thought that the wishes of the New South Wales Government will be best carried out by noticing all that is worthy of imitation, and passing lightly over special faults dependent on management, and not on structure, except where such faults may illustrate a point in the Report, or afford evidence of value against a system of management. The Government of New South Wales is engaged in remodelling its own institutions on the excellences of those of the principal European and American establishments—not in discovering abuses and correcting errors in those less worthy of imitation.

---

## REPORT

"One of the first indications of a healthy moral feeling in a community, together with the security of private right and the advance of property, is the provision made for the helpless poor; and where they are neglected, one of the best sign of a hopeful social condition and of fitness for self-government, is wanting." Capt. Spratt: *Travels and Researches in Crete*.

"Hospitals are in some sort the measure of the civilization of a people." Sir Ranald Martin: *System of Surgery*.

"To my eyes, a Pauper Lunatic Asylum, such as may now be seen in our English Counties—with its pleasant grounds, its airy and cleanly wards, its many comforts, and wise and kindly superintendence provided for those whose lot it is to bear the double burden of poverty and mental derangement—I say, this sight is to me the most blessed manifestation of true civilization the world can present."—*The Harveian Oration*, 1886: By George Paget, M.D., Cantab.

BEFORE proceeding to the question of asylum construction, it may be well to consider, as briefly as possible, the various existing methods of providing for the insane; who may be thus classified:—

- 1st. Indigent or pauper—supported almost, if not entirely, by the local or general Government.
- 2nd. Non-pauper—supported either by friends, or from their own estates.
- 3rd. Criminal.
- 4th. Idiots.
- 5th. Inebriates.

1st. Indigent or pauper. Provision has been made for this class in—*A*, Private Dwellings,—*B*, Farm Asylums,—*C*, Close Asylums.

### A.—PRIVATE DWELLINGS.

A large number of the insane, supported by local authorities, are provided for in private dwellings in England, Scotland, France, Belgium, and other countries. In England 6,638 (or upwards of one-sixth of the entire number) of the chronic and harmless class of insane, are thus accommodated in the houses of their relatives, to whom a small weekly payment, varying in different cases, is made. The Poor Law Medical Officers of the district are charged with the duties of visitation and report on this class. The visit is made once every three months; and the report, which is submitted to the Board of Guardians, states whether the patient is well cared for, and may or may not properly remain out of an asylum. The Reports are sent to the Commissioners in Lunacy; but, since this class of patients, though officially under their care, do not come absolutely under their inspection, very little information upon the working of the system can be obtained.

In France, in 1860, 53,167 of the insane were living in private dwellings, out of a total number of 84,214, or 35·75 per cent. of the entire number of lunatics, and 91·26 per cent. of the entire number of idiots; but since no special care is exercised by the State over the insane who are out of asylums, it is almost impossible to arrive at a knowledge of their general condition.

In Scotland, the insane accommodated in private dwellings have, since 1858, come under the guardianship of the Commissioners in Lunacy—the Deputy Commissioners visiting every patient so accommodated once in six months in the nearer, and once in one or two years in the far-off districts. The working of the system and the condition of the patients may be learned from an examination of the Annual Reports of the Scottish Lunacy Board, and from a summary of the Reports of the first four years, which has been published by Dr. Arthur Mitchell, one of the Deputy Commissioners in Lunacy for Scotland.\*

In 1862, the total number of pauper patients living in private dwellings was 1,741, of whom 1,338 were living with relatives, 334 with strangers, and 69 alone. These—numbering 33 per cent. of the whole number of pauper insane in the country—all belonged to the so-called harmless and manageable class, and had been placed, or allowed to remain in private dwellings, under the sanction of the Board of Lunacy; those among them who were not boarded with relatives having been placed with their guardians under a warrant from the Sheriff. The Lunacy Board is invested by law with the all but complete control of the pauper lunatics of the country; it can withhold or withdraw its sanction to their residence in private dwellings, and take whatever steps may be necessary for the removal of patients to asylums. "It is directly responsible for their proper keeping, and accordingly their condition is personally examined and inquired into with as great regularity as possible; and, in addition to this, Parochial Surgeons are required to visit them at stated times, and the Inspectors of the Poor to make annual and other returns regarding them."†

From January, 1858, to the end of 1862, 4,922 visits were paid to the dwellings of these patients, and a separate report on each patient was forwarded to the Board. The object of these visits is stated, in the Second Annual Report of the Board of Lunacy for Scotland, to be—"First, to procure the removal to asylums of such patients as there were reasonable grounds for thinking were still capable of being restored to sanity, or, at all events, of being improved in mental health, under asylum treatment; secondly, the removal of those who, from the nature of their malady, or from the circumstances in which they are placed, there was reason to fear might prove dangerous to themselves

or

\* *The Insane in Private Dwellings*: By Arthur Mitchell, M.D.—1864.

† *Op. Cit.*, p. 30.

or others; and lastly, the removal of those who, from their mental and bodily ailments, could not be properly cared for at home. Another equally important object was, as far as possible, to insure the proper treatment of those patients whose removal to asylums was dispensed with."

In short, as Dr. Mitchell\* observes, "The object of these visits was to secure that removal had not been dispensed with in cases which were not suitable for management in private dwellings, and that a reasonable provision existed for the safe and comfortable keeping of those who were;" and, "excepting always those cases in which bodily infirmities and peculiarities of mental disease make extra comforts necessary, it has been thought satisfactory when these patients are found to be treated in all respects like the sane poor around about them, and among and with whom they live. In the vast majority of cases, it is enough if the patient is really treated as a member of the family in which he lives—if he is not half-naked and in rags, whilst they are warmly and sufficiently clothed—if he does not sleep in an out-house, or on the bare floor, while they have comfortable beds—if his meat is not thrown to him as if he were a dog, while theirs is decently served—if he is not unwashed and filthy, while they are clean; and so on, in other respects."

Under this system of visitation, carried out with great zeal by the Board of Lunacy, the condition of the insane in private dwellings has immensely improved, and at this time compares favourably, as far as their comfort and happiness are concerned, with that of the insane in the Poor Houses of Scotland—the wards of which are, as a rule, in their arrangements for the well-being of the patients, much in advance of those in England. The mortality is also less. Dr. Mitchell gives the following table:—†

Mortality—Percentage on Annual Number Resident.

	Pauper Patients in Private Dwellings.	Patients in Lunatic Wards of Poor Houses licensed for Chronic Cases only.
1858 .....	5.4 .....	9.4
1859 .....	4.6 .....	9.5
1860 .....	5.0 .....	10.1
1861 .....	4.5 .....	13.1

and the cost is thus stated by the same authority:—

The Average Daily Rate of Maintenance, over 5 Years, has been—	
The Public and Private Asylums .....	£0 1 3½
In Lunatic Wards of Poor Houses .....	0 0 11½
In Private Dwellings .....	0 0 5½

This system, as it exists in Scotland, is not without its evils. The number of pregnancies occurring in imbecile or insane patients, under such a system, is out of all proportion to that which is found in close asylums—where also, unhappily, such a thing is not totally unknown; and a momentary consideration of the life led by the parish fool or "softy," even under the best circumstances, will show that it is by no means a desirable one. It has, for these and other reasons, met with the sharpest criticism in England; and yet, on a study of the evidence which is adduced in its favour by Dr. Mitchell, and in the Reports of the Lunacy Board of Scotland, its marked advantages are apparent; and it is impossible to do other than admit that, under such a system, fairly and strictly worked, a certain proportion of the chronic insane may, in almost all countries, be provided for and kept in comfort, happiness, and health, at a cheaper rate than in county asylums or the wards of poor-houses. The number, however, can never be very large; and it is noteworthy that in Scotland, where the existence of a poor and scattered population—many of them of the cottier class—affords peculiar advantages for the carrying out of the system, the number of patients so accommodated is only one-third of the entire number of pauper insane, and has been slowly and steadily diminishing ever since the visitations of the Board commenced.

A new country must, however, form a complete exception. There can be little doubt that it would be impossible now, and for many years to come, to provide such accommodation as would be fitting, or to carry out this system to even the least extent in New South Wales, where the population is a changing one, the mass comparatively wealthy, and the class, with whom lodging and care is found for the patients in Scotland, does not exist.

In America the system has attracted much attention; but so far has been thought, and doubtless has been, impossible in the majority of the States of the American Union: but the Massachusetts Board of State Charities, impressed with what has been done in Scotland, has eloquently advocated a trial at least of it in Massachusetts, one of the oldest and most settled States of the American Union.

A considerable number of insane are provided for in private dwellings in Belgium, but instead of being scattered throughout the country they are collected in one District—the Colony of Gheel—a description of which, written on the spot, and free, it is hoped, from the bias of extreme opinion, will show the nature and peculiarity of this insane Colony, which, spite of cross railways and diligences, has been visited by a large number of physicians and others interested in the care and treatment of the insane.

The Colony of Gheel, has been described by many of its visitors, some of whom have vaunted it highly, whilst others have deprecated it with systematic hostility. French, German, Belgian, and English literature is voluminous on this subject, and around

\* *Op. Cit.*, p. 32.

† *Op. Cit.*, p. 90.

around the Colony has arisen a storm of controversy. To M. Jules Duval\* we owe the fullest description we have of the colony; but nothing but personal inspection can satisfy any one really interested in the subject, or enable him to realize Gheel as it exists. The colony is situated in the district called the Campine, in the Province of Antwerp, in Belgium. It may be reached either from Antwerp or Brussels: the railway going to the small town of Herenthals, and the remainder of the journey being made in a *diligence*. The colony includes an area of about 30,000 acres, and its population is 11,000, about a quarter of whom live in the town of Gheel, whilst the remainder are spread over the country around, in a total of 2,000 houses. In the town itself these houses are usually of brick or stone; but in the country around they are not uncommonly made of osiers, plastered with mud, and thatched with straw or reeds. They are the dwellings, in fact, of a poor peasantry. Among this population are scattered the large number of 1,040 insane, sent from every part of Belgium, who are in charge of 780 "hosts" or "nourriciers."† Of these, 100 are paid for by their friends, the remainder are paupers living at the cost of the commune to which they belong. They live in the houses with the families of their hosts, work with them in the workshops or the field, and lead a life varying, in most respects, little from the ordinary life of the sane. The largest number of the insane accommodated in one house is four, but this number exists in one house only,—a house in the town in which good accommodation is provided for the patients, who pay well. In several houses three insane are accommodated, and in many two, but it is more common to find only one living in a house. The insane colony is under a Commission, comprising the Governor of the province and other officials, and a medical man appointed by the Government, who are the governing or administrative body corresponding to the usual board of asylum governors, and have drawn up a complete and stringent code of rules for the control of the colony. The board appoint the medical staff: a medical director who receives 4,500 francs a year and a house; and four physicians, one of whom is in medical charge of each of the four sections into which the colony is divided. There are also a secretary, an assistant secretary, and four "gardes" or supervisors of sections. The infirmary, which has been erected within the last five years, is placed at a short distance from the town. It contains rooms for the medical director and secretary, and store rooms for the entire colony; and is a small and complete asylum for forty patients. The rooms are lofty and of large size. The bedding and furniture are good, and the arrangements generally very complete. It contains rooms and airing courts,—1st, for quiet cases; 2nd, for violent cases; 3rd, for those under observation on admission. The rooms for patients under observation are 7; for violent, 2; for dirty, 1; the remainder are for quiet patients.

When visited it contained 26 inmates, 12 of whom were old and dirty demented cases, 2 only were violent. The infirmary is intended to accommodate—1st, all patients on arrival, so that they may be observed and relegated to such a part of the colony as may be best fitted for them; 2nd, all sick who, on the report of the physicians of sections or of the physician-in-chief, are removed to the infirmary, to receive there such care and treatment as are difficult to obtain in the cottiers' houses; and, 3rd, all who suffer from temporary acute attacks of insanity, and whose continuance at large might be dangerous or injurious to themselves or the inhabitants of the district.

The more quiet cases of the insane only are sent by the Government to Gheel. None requiring constant restraint—no known suicidal or homicidal patients are sent, or any who are likely to disturb the public peace or offend public decency. On arrival at the colony they are placed in observation rooms at the infirmary. In the course of a few days, if found to be quiet and manageable, they are sent to one of the houses kept by the nurses or hosts. Of these latter a list approved by the governing board is kept by the medical director. On this list are entered only the names of such people as are of good conduct, and have provided such accommodation for the insane in their homes as is required by the law regulating the colony. This accommodation is a room containing 500 cubic feet, or about 12 cubic metres, for each individual; with a boarded or paved floor, a window at least 50 centimetres square; with iron or wooden bedstead, and wool or hair mattress, straw palliasse, coverlet, blanket, sheets, &c. Names are removed from the list by the governing board for misconduct, for cruelty or ill treatment of patients, or for other reasons. The director is the sole judge of the fitness of the situation to which he sends the patient, and the person to whom he is entrusted. In the houses around the small town are placed, as far as possible, such of the insane whose physical or moral state renders more frequent and continuous attention necessary. In a separate quarter are to be found the imbecile and idiots. In another department, in which there is no stream of water, are placed, as far as convenient, the epileptic; whilst in the more remote houses, in the habitations on the moorland, hard by the woods, are the more violent, turbulent, and noisy.‡

The patients from the Walloon Provinces are placed, as far as possible, together, in a section where the hosts speak the French language. The

\* Gheel, ou une Colonie D'Aliénés vivant en famille et en liberté: Par Jules Duval, Ancien Magistrat, Vice-Président de la Commission Centrale de la Société de Géographie de Paris.—Paris, 1867.

† The term "nourricier" is applied to those receiving indigent patients paid for by the public; whilst "host" is applied to those receiving patients paid for at superior rates by their friends. The words, however, are used almost indiscriminately.

‡ Of this class Dr. Bulckens writes as follows:—"Exercise is an instinctive craving of the maniacs; we isolate them, but we permit them to have free air for the unreserved use of every muscle, for their vociferations, for their gestures. Their excitement, meeting no obstacle, shows itself freely; but it is not long in exhausting itself. Having no other hearers than the woods, the moors, and the feeble report of the neighbouring echoes, the insane are but little encouraged to repeat their boisterous conduct,—so true is it that a man, in a state of reason as well as in a state of madness, often requires an audience for the production of certain bizarre actions and to find a stimulant to his eccentricities."

The hosts, or "nourriciers," number, as has been said, 780. The following table, from Dr. Bulckens' report for 1860, gives their various occupations at that time; the number has since increased:—

Husbandmen .....	372	Turner (wood) .....	1
Shopkeepers .....	25	Dyers .....	2
Shoemakers .....	17	Rope-makers .....	2

643 \*

It is important to note that the insane are not placed only with peasants, but among artisans and townspeople; that is to say, among every class of inhabitants. People, well-to-do as well as poor, receive the insane in their houses, and the prosperity of the colony depends mainly on the amount of money flowing to it as payment for the care bestowed on them. In selecting a host for a patient, the director is guided by the mental condition of the patient, and by the life to which he has before been accustomed. Patients pursuing trades are placed, as far as possible, with people of their trade in the town—shoemakers with shoemakers, and tailors with tailors; or, if used to agricultural work, they are sent into the country districts. If the patient and the host to whom he is confided get on well together—if the host and patient agree, and are equally satisfied with each other—the patient may remain for years in one house. But their lodgings are often changed by the director; and, on the register of such changes, kept in the director's office, the following are found to be the chief causes:—

1. "For continual discontent of patient";
2. "For want of care by nurse";
3. "At request of nurse";
4. "For sanitary reasons."

The patients live with their guardians as members of their families, and occupy themselves as their guardians direct. Not unfrequently the patients are induced to work for, or with, their guardians for slight wages, or an occasional present in money, clothes, tobacco, or some small luxury; and in many cases kind treatment has so attached patient to host, that he willingly labours for love. The recompense for work is a matter resting between patient and host, but all cruelty or compulsion to work is forbidden. On walking through the town or country, patients may be met everywhere, strolling about the town in idleness, engaged in doing errands for their hosts, or working at their trades or in the fields—some alone, and some with their hosts. Ordinary agricultural operations are to be seen in all the fields—weeding corn, planting potatoes, digging, carrying manure, &c. Some patients are to be seen nursing or rocking children; some engaged in cooking or other household avocations; some peeling potatoes, feeding cows, or churning. One insane woman is provided by her host with a small basket, containing needles, cotton, small household stores, &c.; with these she goes through the colony as a pedler, selling her stores, and bringing home the money. The work, in many cases, seems a great safety-valve; some, if interrupted in it, become at once excited and noisy; but in other cases it is by no means all work and no play, and those found seated at a shoemaker's bench in the morning, may be met going fishing in the afternoon. A few only refuse all work, and either wander about, or sit in the chimney-corner or their own rooms. The best possible understanding seems generally to exist between patient and host. It is to the interest of both that such should be the case. The patient, if kindly treated, will repay the kindness by work, whilst the host can indulge the patient in a variety of ways for diligence and good behaviour. In some cases they are most carefully and jealously watchful of the property of their nurses, and the attachment between them and the children of the family is frequently very strong.†

The nurses are forbidden to use any correction or restraint, except the camisole or belt, without being authorized to do so by the medical director, but in addition to the use of the camisole and belt, another instrument, which certainly comes under the head of restraint, is somewhat freely used. This is called an "*entrave*," and consists of leglets of iron, or leather, joined by a small chain. When on the legs it prevents the patients wandering far from home; they can walk with it, but only slowly. From fifteen to twenty patients are said to wear these affairs, either constantly or at times.

The

\* Rapport sur l'établissement d'Aliénés de Gheel: Par M. le Dr. Bulckens, 1860.

† The care with which the insane nurse the children is extreme; and in one house, when the "*ceinture de force*" was produced for inspection, a small child cried bitterly, because she imagined it was about to be applied to her lunatic friend who was standing by.

The payments made by the commune, or district, for their indigent insane, vary with the prices of provisions, and other necessities; they are received by the Commission, or governing board. In 1867 the total sums paid were, for—

Quiet patients, 7½d. a day  
More noisy, 8d. „  
Dirty, ... 8½d. „

and this was apportioned as follows:—

Centimes.

53·78 to nourricier for food, care, and lodging;  
7 for medical care;  
10·22 for clothes;  
4 for charges of administration.

75 centimes.

The extra sum, in the case of the more noisy and dirty, goes to the nurses. For patients paid for by their friends, the arrangement is a private one; but the Government fix a tariff to be paid for medical care by such lunatics, varying with the sum paid for their maintenance. The clothing is managed by the central administration, who buy materials, and hire tailors and seamstresses. Stores are kept at the infirmary, and from these, clothing is issued at stated times to the nurses, an entry being made of each article in a book kept by the nurse. This book contains the rules for the government of the colony issued by the Commission, and serves also to record the visits to the different cottages of the supervisors of sections and the medical officers, who enter their names at each visit. The clothing seems good and serviceable; and the insane are, in most cases, better clothed than their nurses. The accommodation provided for the paying patients varies with the rate of pay, and is in some instances excellent in every respect.

For indigent patients the accommodation provided in the town is, as a rule, fair; but the best that can be said for that in the country districts is, that it is, generally, better than that enjoyed by the families themselves. The Flemings of the cotter class are not a cleanly race. The common sitting-room of the family, which is often the bed-room also of some members of it, is generally extremely dirty: the room has frequently no flooring but the hard mud. From it opens directly the cow-shed; and a mingled odour of cows and manure fills the whole house. But in this the lunatic is in the same position as the family whose house he shares, except that he often seems to appropriate the chimney corner. The food provided for the insane is the same as that eaten by the family: meat three or four times a week, rye and wheaten bread, potatoes, coffee, &c. In clothing, as before said, the lunatic is better off than his nurse. His sleeping room is almost always the best in the house. The bedding provided for him is sufficient, and, though wanting in cleanliness, cleaner than that of the nurse, which is not under inspection. In 13 years 5 suicides only have occurred: 4 by hanging and 1 by drowning. Open wells exist at almost all the houses, and near many of them are small streams. The ordinary house knives are constantly left about—indeed no precaution is taken in this matter; and although known suicides, homicides, and incendiaries are excluded from the colony, it is a matter for wonder that accidents are so few. In the same period 2 cases of illegitimate children have been born from insane women, whilst a third is *enccinte*. This is sad enough, but as before remarked such an event is not altogether unknown in close asylums. Police regulations are framed by the Government with special reference to the insane. They are not permitted to frequent wine shops or inns; and innkeepers are forbidden to sell them intoxicating liquor. Certain hours are fixed after which they are not allowed in the streets, and the pipes smoked by them must have covers, so as to prevent accident; but there is little or no restriction in their going and coming. They frequent the dancing and concert rooms, which are open two or three times a week, and join in the amusements to be there found; whilst the number of churches at Gheel serve to supply plentifully their religious wants. Looking at Gheel as a whole, it is easy to see that it is not a “paradise of fools,” as represented by some of its visitors; neither does it merit the emphatic condemnation which has been bestowed on it by others. 1,000 insane, or almost one-fifth of the entire insane population of Belgium—the numbers of which are—

Indigent .....	3,886
Paying patients .....	1,560
	5,446

are here maintained; and it cannot be doubted that they are more happy and, in many respects, as comfortable as they would be if provided for in a close asylum, with its many appliances and its artificial life: as well washed, as well bedded, perhaps as well fed, they are not; they have not the constant medical care, and the varied amusements, of an asylum; but they are leading a life which is to them a natural one. There is a freedom, spite of camisole and leglet, which cannot be found in ordinary asylums; and the chances of cure are as great, if not more so. It must always be remembered that Gheel is intended, under present regulation, for the more quiet\* and chronic cases only. The large mass are beyond all hope of cure when sent, so that the statistics of the place cannot

\* Many of the cases are indeed so “quiet” and manageable, that it seems strange that their friends (if friends they have) should ever have sent them from home.

cannot be compared with those of ordinary asylums; but it cannot be doubted by all who carefully examine the subject, that the colony is good in principle, useful to the country and to the insane, and, in most respects, excellently managed. The existence of Gheel with its large number of insane living in private families, has undoubtedly greatly influenced the minds of thinking men in all countries, and had a great effect on the provision made for the chronic class of insane. The system of placing the insane in private dwellings as now pursued in Scotland; the cottages attached to large asylums, in which the insane are placed with the artisans and labourers at the asylum, are both steps in the same direction. But though Gheel is flourishing—though the number of people willing to receive patients and comply with the Government regulations has yearly increased—it has been found impossible, even in Belgium, to commence a new colony of a similar kind. Such an attempt in the Walloon Provinces—where the main requisites, a poor proprietary owning small patches of land, and a wide extent of country, existed—has signally failed. On referring to the list of nurses, it will be seen that a large proportion, 372 out of 643, are husbandmen. They are of the cotter class, owning the little plot of land, generally from 2 to 3 acres, occasionally 6 or 7, on which their houses stand; the land being, as a rule, reclaimed from the unproductive moorland which exists to a great extent in the Campine. But, besides these two conditions—a cotter class in a large open district, not easy to find in any country—there is a peculiarity in the Gheeloise character which exists nowhere else. A fine race, vigorous and intelligent, distinguished for their native virtue, their simplicity, and their affectionate disposition. So far from having degenerated by constant contact with the unfortunate beings whom they receive with so much kindness, they have preserved intact both their moral conscience and their reason; and, by centuries of association with the insane, there has grown up and become ingrained in their minds a fixed idea of confidence in the generally inoffensive character of the insane, that they are to be won by kindness, and that harsh measures are unnecessary except for exceptional cases; and, in addition to this, a sense of public spirit, a belief in Gheel as a grand and good institution, the upholding of which is part of their duty in life. So that each inhabitant, whether occupying the position of nurse or not, feels himself responsible for the good treatment of the insane of the colony; and thus the total sane population of 11,000 is watching over the welfare of the 1,000 insane. This explains, in no small degree, how it is that liberty is possible to the insane, and why accidents are infrequent. The existence of Gheel is, in fact, an accident. Its origin is lost in the night of time among monkish legend and priestly exorcism. It is said that in the sixth century a young Irish princess, called Dymphne, converted by a priest named Gerebert, fled with him from the criminal love of her pagan father, who, however, pursued her, found her at Gheel, and decapitated her with his own hand. This young princess in process of time became Saint Dymphne. At her shrine the insane were cured of their malady, and she was soon considered by the population as the patron saint of these unfortunates. In the twelfth century a beautiful church was raised in her honour, and the history of the colony commences. Mad people were brought on a pilgrimage to the tomb of this saint: many, it is said, were cured. A small cottage was built near the church, as a residence for the insane during the time prayer for their cure was made; and this (which still exists, and is occasionally used for its original purpose) was the first beginning of what is called the Gheel System. Little by little those who were not cured—either lingering in the hope that the saintly intervention might yet come, or left without means of reaching home—were lodged in the houses of the peasantry near, who have in the course of long years grown to understand their peculiarities; and so a custom inspired by faith has been transformed into a permanent institution, which has of late years been placed under Government control. To make another Gheel is, then, impossible; but it is not impossible to learn the lesson which it teaches—that a large proportion of the quiet insane may be provided for safely and cheaply, with increased happiness to themselves, in private dwellings.

A mode of providing for the insane in private dwellings has of late years been to some extent put in practice, and found many advocates both in England and Scotland.

Dr. Bucknill some years ago placed, in labourers' and artisans' cottages near the Devon County Asylum, the limited number of patients of the chronic harmless class. The payments for their support were made from the asylum funds, and their clothes were also supplied from the same source. The distance from the asylum allowed of constant and effective supervision; and, at the same time, the amusements of the asylum were at the command of those of the patients for whom they were deemed suitable.

This experiment answered all the expectations of its promoter, and the example thus set has been followed in other asylums. At Montrose, a few patients are lodged with those servants of the institution who are already provided with houses, and the superintendent, Dr. Howden, is awaiting the erection of other cottages for the artisans of the institution, to carry out the system more fully.

At the new Surrey Asylum, some 30 quiet patients are accommodated in the houses of the farm bailiff and gardener; and at Gloucester, Mr. Toller, the superintendent, has filled two small cottages on the asylum estate with harmless patients, with the best results.

Dr. Lockhart Robertson, of the Sussex County Asylum, the Editor of *The Journal of Mental Science*, has warmly advocated a development of this system as preferable to that existing in Scotland. It is suggested, that, as the ordinary asylums become full, the more chronic and quiet patients should be accommodated in cottages near—first with the gardener, gate-keeper, and other servants of the institution, and then in the cottages of the neighbouring villages; and that they should be under the supervision of the superintendent of the asylum, and removable to and from it as alteration in their symptoms might

might render necessary. The asylum would thus become the centre of a district more or less peopled with insane. It would supply the clothing, medicine, and minor comforts necessary; and, whilst the patients were enjoying the domesticity and individuality of life in private houses, and deriving pleasure from social intercourse, free from the monotony of ordinary asylum routine, they would still be under its protecting wing, and perhaps find it a "present help" in time of trouble.

This idea has received the assent of some of the most celebrated of asylum superintendents both in England and Scotland, and deserves the deepest consideration of all interested in asylum management.

### B.—FARM ASYLUMS.

THE amount of land possessed by several of the English and Scotch Asylums, and cultivated by the inmates, is large. At Elgin, an asylum for 55 patients, there is an estate of 92 acres; at the Three Counties Asylum there are 216 acres under cultivation; at the Sussex County Asylum, 100; and at other English and Scottish Institutions, an almost equal amount. But this is in connection with a Close Asylum, and differs somewhat from what is known as the Farm Asylum, of which the best specimen is the Colony of Fitz James, at Clermont sur L'Oise, in France.

At Clermont, about 40 miles from Paris, on the Northern Railway, is the most noteworthy establishment for the care and treatment of the insane in France. It consists of three departments,—the "Asylum" proper, and the Colonies of Fitz James and Villiers. The institution is entirely a private enterprise of the three Brothers Labitte. Dr. Gustave Labitte is the Physician and Medical Director; he resides at the asylum and has an assistant medical officer, whilst there is a resident physician at Fitz James, who is responsible for the medical care of the patients there and at the branch establishment at Villiers. One of his brothers, M. Auguste, undertakes the general and financial management; and the other, M. Alexandre, superintends the vast agricultural operations which form the most distinctive feature of the establishment. Each of these is assisted by a staff of clerks, stewards, and supervisors. The total number of patients is about 1,400: and of these, 300 are "pensionnaires," paid for at various rates by their friends (the lowest rate is 700 hundred francs a year); and the rest (1,100) are paupers, paid for by the Governments of the four departments, from which they are received, at the rate of 1 franc a day, or 5s. 10d. a week. For this sum they are boarded, lodged, and clothed, and receive all necessary medical treatment and care.

The "Asylum," which is in the town of Clermont, contains 1,000 patients, and differs but little from ordinary proprietary asylums both in England and France. There are here workshops at which all the clothes and boots used by the pauper patients are made, and ordinary carpenters', painters', and glaziers' work is done; and there is also a large bakery at which bread is baked for the asylum and the colonies, and a vegetable garden, of 40 acres, in which all the vegetables necessary for the asylum are grown.

The colonies are two in number. At the first, situated at Fitz James, about two miles from the town of Clermont, 300 patients are accommodated and employed; and at the second, which is at the village of Villiers, some four miles distant, are 100 patients. A few of these are pensionnaires, but the majority are paupers. At Fitz James, a large building—not unlike a sea-side hotel or boarding house, nicely furnished, and containing billiard and reading rooms—affords accommodation for the male pensionnaires, and a plainer building near is occupied by the paupers. This building is of three stories: the ground floor is divided into dining and day rooms, and the upper two stories are used as associated dormitories. The buildings are all substantial, and fairly furnished. There are baths, lavatories, and all necessary fittings,—substantial, but of the plainest kind. The women are accommodated in separate buildings a little removed from those occupied by the men. That for the pensionnaires is a fair sample of a small French château, surrounded by gardens and trees, and fitted with all the requirements of a modern house for ladies. At Fitz James and Villiers are placed all the quiet and manageable patients who can be drafted from the "asylum." The principle of the colonies is labour. The pensionnaires work if they choose, and a few do so; but, the paupers are expected to work, and the 1,000 acres—500 at Fitz James and 500 at Villiers—are cultivated by them, under the direction of a limited number of attendants and workmen. The system of work is as follows:—The patients go to their work in squads of a dozen or fifteen individuals, under the charge of an attendant or *chef d'escouade*, who directs their work and supervises them. Several squads are sometimes united together, according to the work to be done, but each squad is under the direction of its chief. The working hours differ in summer and in winter, but are on an average 6 daily. Each patient receives occasionally a small present from his earnings, according to the importance of his work, with an addition to the fixed allowance of food. The entire establishment of Fitz James is a large farm in the highest state of cultivation, with all the accessories of stables and barns for cattle, and sheep; steam flour mills and threshing machines, and excellent agricultural implements. 30 working bullocks and 20 horses are kept. The sheep number 500; 300 are kept in pens and fed. There are 30 cows, a large piggery, fowls, rabbits, pigeons, &c.; and, though the patients are employed from morning to night in every part of the farm and buildings, there are no walls or arrangements for security differing from any common dwellings, and the colony is as little like an ordinary asylum as possible. The women are not employed in field work, as it is found that much supervision is necessary when the sexes are mixed; they live in detached buildings, which are walled round, and are employed in laundry work.

The

The washing is done with very little machinery,—two of the ordinary French steam pumps, and a centrifugal wringer, being all. The river Beronnelle traverses the length of the building, and is so walled in that the laundresses stand on either side at their scrubbing boards, as may be seen by the open river-sides all over France. The water, used as it flows, is constantly fresh and plentiful. For drying, there is a drying steam closet, and on an upper story a wooden building, with movable louveres, through which the air is constantly passing. Cooking in both male and female departments is done with coal, which is found cheaper than steam. The patients employed in farm work look wonderfully robust and well. The clothing supplied to them is rough, and less expensive than seen in most French and all English asylums, but it is serviceable and appears fitted for work. The women almost all wear sabots. There is a band; and concerts and other amusements are encouraged. The curé of the village of Fitz James is the chaplain to the colony; and the patients attend the village church, where special seats are appropriated to them.

The distinctive features of this establishment are well worth the attention of all interested in the treatment of the insane. They are,—

1. The large amount of land under cultivation;
2. The freedom from restraint in the shape of walls, &c., or "*l'air libre*," as Dr. Labitte himself calls it;
3. The care with which one part of the establishment is made to work with the other, so that the whole shall be as much as possible self-contained and self-supporting.

1st. Deducting the number of pensionnaires, who do little or no work, from the total asylum population of 1,400 we have, in the total establishment under the care of the Brothers Labitte, 1,100 indigent insane; and, by the more quiet and harmless patients from among this total number, we have 1,000 acres of land cultivated in the best manner—an average of almost 1 acre per patient; far in excess of the cultivation practised in any English asylum. The work is done almost entirely by the patients.

Dr. Labitte gives the following as the population of the colony, and the manner in which they are employed—

Indigent Patients	Men.....	170
	Women .....	87
Pensionnaires.....	Men.....	21
	Women .....	28
		306

The 170 indigent male patients are employed as follows:—

Field work .....	60	Steam-engine .....	1
Care of poultry yard and offices .....	15	Farrier .....	1
Cow-houses .....	8	Turner .....	1
Stables .....	6	Wheelwright .....	1
Piggeries .....	8	Painter .....	1
Sheep-folds .....	4	Butchers .....	2
Care of horses and implements... ..	5	Boys, more or less occupied according to their ability .....	22
" <i>Hommes de peine</i> " .....	10		170
Indoor work .....	20		
Kitchen .....	3		
Millers .....	2		

The 87 indigent women are all employed, and some of the pensionnaires also. These latter pay only the lowest price at which pensionnaires are received, and are lodged in the female section and not at the little château. Dr. Labitte gives the following table:—

Washing .....	50	General indoor work .....	6
Ironing .....	4	Sewing .....	25
Folding .....	8		107
Drying rooms .....	8		
Carrying linen .....	6		

or 20 pensionnaires, and the whole number of indigents. There is a chief attendant (*surveillant en chef*) for the male, and another (*surveillante en chef*) for the female department. The attendants and workmen for the entire colony are,—

For male side—

8 domestics for house work	1 shepherd
7 chief attendants ( <i>chefs d'escouade</i> )	1 miller
4 attendants	1 butcher
7 carters	1 engineer
2 cowherds	1 cook

For women—

4 domestics	3 attendants.
5 chief attendants ( <i>chefs d'atelier</i> )	

The

The domestics are occupied entirely with the paying patients; so, there are 11 attendants—(7 chefs d'escouade, and 4 ordinary)—to 170 patients, or about 1 to 15, for the males; and 8 to 107—(87 indigent and 20 paying)—or 1 in 14, for the females. In considering the work done, it must be remembered that not all the quiet patients are employed in farming and washing, but only such whose prior occupation fits them for it, and such as are likely to be benefited in mental or bodily health. In addition to the farming and washing operations at the asylum proper, bread is made and baked for the asylum and its two colonies, clothes are made, and carpentering and other work done.

2. The freedom from restraint, in the shape of walls. The establishment for men has in no respect the aspect of an asylum. There are no walls, and the fences are those which ordinarily surround a farm; and yet, with this, escape and attempts at it are not more than ordinarily common, the number being about five a year, and no suicide has taken place in the colony. The plan adopted shows what amount of liberty may be allowed to the quiet classes of the insane, *i. e.*, in this case to almost one-fourth of the population resident in an asylum. Out of the entire asylum population of 1,400, 400 are here allowed to live under circumstances which approach as nearly as possible to those under which the sane exist, the sole care being to keep up an efficient staff of attendants.

The department for the women is surrounded by a wall, and entered through a gate the portress of which is a lunatic. The wall is employed almost entirely to separate the sexes. It is found impossible to allow to the women at Fitz James the same liberty as is enjoyed by the men, solely because the admixture of the sexes is undesirable. If the male and female departments were placed at a greater distance from each other, the women's department would be also without walls, and some of the patients would be employed in field work, which is frequently done by women in all parts of France.

3. The next feature of the establishment is the care, well worthy of imitation in public institutions, with which one part is made to fit into and work with the other, so as to make the entire undertaking, as much as possible, self-contained and self-supporting. Vegetables and fruit required for the patients at the colony are grown at the farm, and a considerable quantity of corn also, though not enough for the entire supply. This is ground by steam at the farm, sent to the asylum at Clermont, and made into bread for the use of the entire institution. Cows are kept, and milk for the supply of all thus obtained; and no small part of the meat required for consumption is obtained from cattle, bred, reared, and fattened at the farm. Whilst the farm thus supplies food, the clothes for the patients are made and repaired almost entirely in the asylum proper; bedding is also made and repaired there, and all necessary carpenters' and painters' work is done; the washing for the entire establishment is done by the women at Fitz James.

The entire establishment is said to be extremely remunerative; whilst the price at which indigent patients are received, is less than the sum which they are found to cost in most of the departmental asylums of France.

Dr. Labitte, writing in 1861, says of the establishment of Fitz James—"The colony has now existed in its completeness for four years, and every day we note its success in the more prompt amelioration in the mental condition of the sick who are susceptible of cure, and in the facility which we find in directing and occupying those who at first were regarded as turbulent and incapable of rendering the least service."—"We are then convinced that this system of colonization is most efficacious to arrive at non-restraint and '*la vie à l'air libre*', which are the subjects of so much discussion. All idea of restraint and seclusion tends to disappear in a place of residence which presents no character of seclusion, and where everyone pursues, with as great liberty as possible, his usual avocations, and meets in a life in common, wisely directed, an example of order and of work."

That the establishment has been a success since the time this was written may be seen from its present condition, and from the fact that another farm of equal extent has been lately added. A full examination of the system of Farm Asylums shows that it is economical, and calculated to promote the comfort and happiness, and be beneficial to the mental health, of the inmates. At the farm there are twenty-two idiot or imbecile boys, for whom the country air is considered beneficial. They have a day-room, a school, and a dormitory, completely separated from those occupied by the other patients. They spend four hours a day in school; and in the intervals of lessons, some occupy themselves on the farm or in cleaning the courts, and the remainder walk or play in the fields. When they have attained a certain age, they are sent, if sufficiently tractable, to the workshops at the asylum, and taught a trade. At the asylum there are, from among these children, two tailors, a shoemaker, a carpenter, and a joiner, usefully occupied.

There is a gradually growing belief in the wisdom of employing the insane in outdoor, and especially agricultural, avocations; and the Department of the Seine, lately engaged in remodelling its institutions for the insane, has endeavoured to adopt, to some extent, the principle of the Farm Asylum at the beautiful new asylums of Ville Evrard and Vaucluse, both situated immediately beyond the suburbs of Paris. Each of these asylums, intended for the more quiet class of the insane, and for such as are likely to be benefited by agricultural labour, has attached to it 700 acres of land. Excellent farm buildings have been erected; and it is intended to practise agriculture on a large scale, with all the accessories of good implements and machinery, by means of the inmates.

## C.—CLOSE ASYLUMS.

By far the most common mode of providing for the insane is in the Close Asylum—the “*Asile Fermé*” of French writers—and under this designation come all State, Provincial, District, County, and Borough Asylums; all Hospitals for the Insane, and Proprietary Houses, as generally constituted, as well as Parochial Asylums and Special Wards in Poor-houses. The principle in all cases is the same. The asylum is arranged to accommodate a given number of insane, who are kept, more or less, under lock and key; isolated from the world and the ordinary life thereof; subjected to such medical or other treatment as is thought beneficial; made to conform to the routine necessary for the working of the machinery of asylum government; and superintended, watched, and ministered to by a staff of paid officers and servants. These asylums, alike in the main principle, differ in the form of government, in their structure and organization, and in various details of arrangement.

A very large number of the more chronic class of the indigent insane are accommodated in the poor-houses of the parishes and unions to which they belong; in England, Scotland, and the United States, separate wards, are, as a rule, set apart for their use, and these wards have, in some cases, grown into distinct asylums. In Scotland, the parochial asylums are simply a development of the poor-house ward; and the large asylums which exist in the cities of New York, Boston, and Philadelphia, are of the same character, and are under the immediate management and control of the parochial or town authorities. The poor-house wards for lunatics in England have been for many years, in only too many cases, modified prisons. The authorities have been content to maintain the unfortunate lunatics in security; their food has been of the poorest, their lodging of the roughest: whilst a minimum of cleanliness only was possible, and means of recreation and employment almost unknown. In the disclosures recently made by the Lancet Commission, the crying evils of the entire poor-house system were laid bare, and the condition of the lunatic, as well as that of his sane brother, revealed. It is true that the lunatic wards, being under the nominal supervision and the occasional visitation of the Commissioners of Lunacy, were, in most cases, much better in every particular than those occupied by the other inmates; but much was then, and still is, to be desired. It would be wrong not to add that, in a few of the English poor-houses, all the requirements of the insane have been attended to, and the arrangements have met with the approval of the Board of Lunacy. The lunatic wards in the Scotch poor-houses are in most respects much better appointed than those further south. The wards at Dundee contrast most favourably with those of the lunatic asylum of the same town; those at Perth are in almost all respects excellent; and at Edinburgh, even in the Old Darien House, there is cleanliness and comfort. Means are taken in most of the poor-houses in Scotland to give the insane such small amount of recreation as can be afforded by a few newspapers, and an occasional walk beyond the bounds of the airing-yard; and some employment is found for the majority of the inmates; but the “*juvantia*” of a well-organized asylum are wanting.

The condition of the lunatic wards in the poor-houses of the United States may be judged of from the following extracts from Dr. Willard's Report, on this subject, to the Legislature of the State of New York:—

“The investigation shows gross want of provision for the common necessities of physical health and comfort, in a large majority of poor-houses where pauper lunatics are kept. Cleanliness and ablution are not enforced; in a few instances the insane are not washed at all, and are unapproachably filthy, disgusting, and repulsive. In some of these buildings the insane are kept in cages and cells, dark and prison-like, as if they were convicts, instead of the life-weary deprived of reason. They are, in numerous instances, left to sleep on straw, like animals, without other bedding.”

“Those confined in cells are extremely filthy, most of them not using vessels; and their excrements are mixed with the straw on which they lie. Their straw is changed only once a week; and those lunatics, besmeared with their own excrement, are not allowed to come daily to the open air, eat in the same filthy apartments, and are not washed from one year's end to another.”

Dr. Willard eloquently remarks—“It is a painful thought that, among the poor patients, who, from the ills of life, suffer mental alienation—fathers depressed from losses and anxiety; mothers exhausted with child-bearing, and the rearing of a large family; the youth from vice or disappointed hopes; and the foreigner, among strangers, looking wistfully back to his native home—that these, all suffering from diseases which might have been stayed, should be thrust into miserable poor-houses, and almost compelled to suffer the miseries of incurable lunacy.”\*

The poor-house wards, grown into distinct asylums, contrast most painfully with the excellent State asylums of the country. The amount of restraint is excessive, the number of attendants small, the accommodation most defective (the division for violent patients at Blackwell's Island, New York, is sadly deficient in every asylum requirement), and the means of employment and recreation almost absent. The main cause impeding improvement in these institutions, is the system of government in which the “guardian” element, and this not altogether free from political spirit, is very apparent. The medical officer is not the superintendent of the institution; there is a divided authority, a vicious system in the appointment of servants, and, with all this, a parsimony which is happily a rare thing in the noble institutions for the insane in the United States. The New York City Asylum is, in most respects, vastly superior to that of Philadelphia.

The

\* Report on the Insane in Poor-houses and Receptacles—made to the Legislature of the State of New York, by Dr. Sylvester D. Willard, 1865.

The treatment of the insane poor, even of the most chronic and harmless class, in the wards of a poor-house, appears to be a great mistake. It has only one recommendation, that of economy; and it is worthy of note that, in Scotland, where the requirements of the insane are most attended to, and the character of the poor-house accommodation most satisfactory, the expense of maintenance approaches very nearly to that of the district asylums. Dr. Mitchell\* gives the following as the average daily maintenance rate for pauper patients for 5 years—

In public and private asylums	s. d.
.....	1 3½
In lunatic wards of poor-houses	0 11½

and if, as has long been threatened by the committees of the district asylums, a larger price for care and treatment is charged for the acute, and consequently more troublesome cases, from those parishes which provide for their chronic cases in poor-houses, the entire cost for pauper insane to these, will be about the same as to those parishes which now confide the whole of their insane—acute and chronic cases alike—to the care of the district asylum.

In those English poor-houses in which the most satisfactory and complete arrangements have been made, the weekly cost of maintenance is as follows:—

	s. d.
City of London.....	6 7
Camberwell .....	7 6
Eagle House (St. Saviour's) .....	4 6
Bath .....	6 0
Chorlton-on-Medlock .....	6 11
Manchester New .....	5 9
Halifax .....	7 0

The lunatic hospitals of England, among which Bethlehem, St. Luke's, and those at York, Lincoln, and Northampton are best known; the Royal Asylums of Scotland; and the three institutions of a similar character in America: the M'Lean Asylum at Boston, the Bloomingdale Asylum at New York, and the Philadelphia Hospital for the Insane, accommodate only a small number of the indigent, but are devoted mainly to the insane of the great middle classes.

All these institutions were founded either in the last century, or in times prior to that—in some cases by public subscription, in others by the munificence of one individual; and are now possessed of property to a greater or less amount. This property in most cases consists of the asylum building and estate; in some of the Royal Asylums of Scotland these are still encumbered with debt, but in others, there is a good annual income. The government is in the hands of trustees, governors, or directors; some being so *ex officio*, according to the charter obtained by the corporation at its foundation, some because elected to the office, and the remainder by payment of a qualifying subscription to the funds of the institution. These governors or trustees manage the affairs of the institution by a committee of their number who form a board of control, appoint all officers, and apply the income to the purposes designed by the founder or laid down in the charter of the institution. In the majority of instances, accommodation is afforded in these institutions for the insane of the great middle class, whom their malady has reduced to circumstances of comparative poverty, which prevent their paying largely for their support. These are admitted either at reduced rates of board, or absolutely without payment, and are maintained in the institution either for certain fixed periods during which the malady is considered curable, as at Bethlehem, St. Luke's, and the Philadelphia Hospital, or till cure or death arrive, as in the Royal Asylums in Scotland and others. In some of these institutions, accommodation is provided for the rich, who pay more or less handsomely for their maintenance, (the surplus of such payments accruing to the asylum funds); and for paupers, who are paid for by the parishes to which they belong. The entire pauper insane of the county of Northampton are thus accommodated in the Northampton Lunatic Hospital, and the insane of the Borough of York in the lunatic hospital of that place.

The county and borough asylums in England, the district asylums in Scotland, and the county asylums in America, are greatly alike in constitution and government; the basis on which all are established is the parish system, by which the poor and insane are supported by the more well-to-do of their fellow-parishioners. These asylums have been erected either by funds drawn at once from the county rates, or by borrowed money which is repaid by instalments from these rates. The government is in the hands of the Justices of the Peace of the county, who, by an executive committee or board of control, appoint all officers, and arrange for the admission and discharge of patients; and the payments for their support, by the different unions and parishes. The power of the Magistrates is accurately defined by the legislature, and the constitution of the asylum fully laid down in the same manner. The departmental asylums of France, and the provincial asylums of Belgium, Holland, and some of the German States, differ from the county asylums of England in some minor respects only; the chief of which is that the Central Government interferes more actively in their management. All financial and general control is, however, in the hands of the prefect or chief officer of the department or province. The State asylums of the United States and some of the German States, as Baden and Brunswick, &c., are more distinctly Government institutions; they are erected and kept in repair by the State, and are in all respects Government property; the officers are appointed by the State Executive, or by a Board of Control nominated by it; but the maintenance of the patients is made to fall to some extent on the parishes and townships from

\* *Op. Cit.*, p. 90.

from which they are sent, the payments being collected by the Government. In the State asylums of Germany and America, special provision is always made for patients able to pay for their maintenance.

In providing for the indigent insane, private enterprise has, in most countries, entered into competition with the Local or General Government; but it is in England that the system of proprietary houses has been most largely developed. Near London, and in other parts of the county are large asylums, owned and administered by private individuals, containing from 200 to 500 pauper patients, paid for by the parishes to which they belong.

Almost all these proprietary houses in England are close asylums, and are licensed by the Board of Lunacy, and visited at least once a year by the Commissioners. They are in many respects satisfactory refuges for the insane; and in more than one instance, private enterprise is in advance of public charity, in its adoption of modern improvements, and in the minor economies of household management; but, taken as a whole, the accommodation to be found in proprietary houses, and the arrangements for the comfort and treatment of the patients, are less satisfactory than in county asylums. And it cannot but be admitted, that the principle which permits a private individual, to enter into a commercial speculation in the care and treatment of the insane, is at the bottom wrong; and that this sale of the insane to any one who will undertake to provide for them at the smallest cost, may, except under the strictest supervision, lead to abuses which, though not impossible in public establishments not managed for profit, are far less likely to occur in them than in private houses. It is somewhat remarkable that proprietary asylums for pauper patients are unknown in America.

It will now be necessary to describe the general construction and organization of asylums for the insane of the

#### INDIGENT OR PAUPER CLASS.

##### SITE.

Under the head of site are to be considered:—

- 1st. The site itself, as regards elevation and soil;
- 2nd. The aspect;
- 3rd. Distance from town.

*Elevation.*—Almost the entire number of recently built hospitals for the insane are placed in elevated positions, and command extensive views, some of which are among the most beautiful in the countries to which the asylums belong. It is difficult to find buildings possessing greater advantages, as regards view, than the Coton Hill Asylum, near Stafford, which has a fine view of agricultural scenery in the one direction, and of the town of Stafford in the other; the Worcester County Asylum, which has a rich agricultural district near, and the Malvern Hills in the distance; and the Sussex, at Hayward's Heath, from which the South Downs are visible. The new Surrey Asylum stands on an open moor, and looks over a fine stretch of country; and these are a few only of English asylums which are placed in situations rich in natural beauty. The American asylums, as a rule, command views of singular beauty and extent; and some of the more recently built of the Continental asylums are finely placed. The summit of a hill has been generally chosen, and the slope in front is made to serve for airing grounds. In some instances,—as at the Criminal Asylum, Broadmoor, and at Cupar, in Fifeshire,—the slope is so rapid that a full view of the surrounding country is visible over the high walls at the lower extremity of the ground; and in other asylums, by placing the wall in a slightly sunken position, the view is easily obtained, and the airing grounds thus lose almost all their prison-like appearance.

*Soil.*—But little choice has been exercised as regards soil. In the list given below, we have asylums standing on clay, gravel, chalk, sand, and other strata:—

Sussex .....	Whealden clay,
Essex .....	gravel,
Worcester .....	clay,
Three Counties .....	clay—chalk subsoil,
New Surrey, Brookwood .....	sharp gravel,
Colney Hatch .....	clay,
Derby .....	sand,
Bristol City .....	millstone grit,
New Stafford .....	gravel,
Northampton .....	iron-stone;

and abroad the nature of the subsoil is equally various.

*Aspect.*—The great majority of European and American asylums front the south or south-east. Occasionally, as at Prestwich near Manchester, the frontage is to the south-west; and in other asylums a slight change in the aspect of the building has been made, because of peculiarities in the form of the ground on which it stands.

*Distance from Town.*—A few asylums—such as Bethlehem, and the Female Asylum at Ghent—were originally placed in towns; but the greater number of those which now occupy urban or suburban positions, were formerly at a small distance from the town, which in its growth has encroached upon them. This has been the case at Leicester, Northampton, Stafford, Gloucester, and Prestwich, at St. Yon, Rouen, and Charenton, Paris, where the asylums are now in close proximity to the town. For the large majority of new asylums, country sites have been chosen at a distance ranging from one

## LUNATIC ASYLUMS.

17

one to five miles from the town. The following table will show the distance from town, with the railway communication, of a number of English asylums. The distances are approximate only; it was almost impossible to obtain them with exactness:—

Name.	Place.	Nearest Large Town.	Distance.	Railway Station.
Gloucester County .....	Gloucester .....	Gloucester .....	Suburbs .....	1 mile.
Worcester " .....	Powick .....	Worcester .....	4 miles .....	4 "
Stafford " .....	Stafford .....	Stafford .....	Suburbs .....	1 "
New Stafford " .....	Burntwood .....	Lichfield .....	4 miles .....	2 "
Derby " .....	Mickleover .....	Derby .....	5 " .....	5 "
Lincoln " .....	Bracebridge .....	Lincoln .....	2 " .....	2 "
Leicester " .....	Leicester .....	Leicester .....	Suburbs .....	1 "
(1) Lancashire " .....	Prestwich .....	Manchester .....	4 miles .....	4 "
(2) Essex " .....	Brentwood .....	Brentwood .....	Suburbs .....	1 "
(3) Three Counties—Beds, Herts, and Hunts .....	Arlesly .....	Hitchin .....	4 miles .....	1 1/2 "
(4) Middlesex .....	Colney Hatch .....	London .....	5 " .....	At Asylum.
New Surrey .....	Brookwood .....	London .....	25 " .....	3 miles.
Sussex .....	Hayward's Heath .....	Brighton .....	12 " .....	1 1/2 "

Idiot " .....	Eastwood .....	London .....	30 " .....	2 "
		Reigate .....	3 " .....	2 "

REMARKS.—(1) Omnibus communication with Manchester. Suburbs extend almost to asylum.

(2) These asylums are within easy reach of London, and trains are frequent. A tramway runs from the nearest station to Colney Hatch and the Three Counties Asylums; and coals, stores, and sometimes patients, are brought to the asylum by it.

An examination of this table will shew that with few exceptions, the English asylums are placed in close proximity to large towns—near, as a rule, the largest town of the district to which they belong—the distances ranging from 1 to 5 miles. Most are within easy railway communication, and two, Colney Hatch and the Three Counties, have stations close at hand, and tramways running into the asylum yards. The only three asylums which are removed any distance from large towns are the Sussex County, which is 12 miles from Brighton, with which, however, railway communication is easy; the New Surrey, at Brookwood, which is within easy reach of a railway station; and Broadmoor, which can be reached by two distinct lines of rail, and is only 5 miles from the town of Wokingham, which contains about 5,000 people. The price of land, and the fine estates to be acquired for a moderate sum, appear to have influenced the directors considerably as to the choice of site in all three cases; and other arguments, derived from the nature of the class of insane for whom Broadmoor was intended, had weight in the selection of a site for that institution.

The asylums in Scotland are, as a rule, even more easily reached than those in England. The Royal Asylums of Scotland are generally suburban. The beautiful new asylums of Montrose, the Fife District, near Cupar, and the Haddington District, near Haddington, are all within about 2 miles of the chief town of the district; and the Perth District Asylum, recently erected at Murthly, is only 6 miles from Perth, and has a station within 200 yards of the asylum, and a tramway into the asylum yard.

The American State Asylums are either suburban, or placed at a distance from the city which seldom or never exceeds 3 miles; and where they are thus far removed, they are either within a few hundred yards of a railway station, or within a mile of the terminus of one of the many lines of street cars. The greatest care appears to have been taken in the selection of a site as near the town as possible.

In France, the new Departmental Asylums are generally placed at a short distance only from the chief town of the department. The new asylum at Quatre Mares is about 2 miles from Rouen. The Asylum of Evreux is less than 3 miles from that town, whilst, of the three new asylums for the Department of the Seine, one, that of St. Anne, has been placed actually in the suburbs of Paris, where it is more or less surrounded by houses; and the two others, Vacluse and Ville Evrard, are at a distance of some 7 miles, but within easy railway communication. Two railway stations are within an easy walk of the latter asylum.

The newest of the German asylums are placed in the immediate neighbourhood of large towns. At Frankfort, Hamburg, and Göttingen, the asylums are not more than a mile from the city; whilst the beautiful new asylum at Ghent, which bears the name, and was the crowning labour of the life of, the great Belgian psychologist, is within 1 mile of the city. The best of the Dutch institutions for the insane, Meereenberg, is about 3 miles from the large town of Haarlem.

## LAND.

The Table given below will show, as accurately as it was possible to ascertain, the amount of land possessed by various asylums in Europe and America, and the amounts under cultivation as farm and garden.

Asylum.	Population.	Pleasure Grounds, including Airing Courts.	Pasture.	Arable, including Garden.	Total.	Remarks.
Worcester County	570	20	30	50	100*	*40 acres are rented.
Sussex	700	30*	70	100	200	*Includes plantation and wood.
Essex	580	10	10	76	96	
Three Counties	528	20	16	216*	252	*Garden, 54 acres.
New Surrey	150	.....	.....	.....	150	Farm not yet formed.
Middlesex County	2,000	80	35	35	150	
Gloucester	590	10	35	35	80	
Derby	380	50*	.....	50	100	*Includes pasture.
Lancashire	1,000	25	51	20	96	
Leicester	400	15	14	51*	80	*Spade cultivation.
Stafford	520	.....	.....	.....	100	Farm not yet made.
Stafford	520	17	40	20	77*	*40 acres rented.
Lincoln	500	10	.....	30*	40	*Spade cultivation only.
Bristol Borough	200	14	6	12	32	
Coton Hill L. Hospital	140	10	40	30	80	
Northampton	450	15	10	50*	75	*Spade cultivation only.
Retreat, York	130	28*	.....	12*	30	*Spade cultivation only. Pleasure grounds include pasture.
Elgin District	80	12	.....	70*	92	*Spade cultivation only.
Perth	220	.....	.....	.....	60	Farm not yet complete.
Haddington	100	2	.....	10	12	
Fife	213	7	10	40	57	
Montrose Royal	380	30	10	70	110	*30 acres rented annually.
Government Hospital, Washington.	380	105	100	25	230	*70 acres park and woodland; in treaty for 150 more.
Pennsylvania State	350	18	40	72*	130	*Farm under plough, 30 acres.
Northampton (Mass.) State.	417	.....	.....	.....	200	
New Jersey State	500	45	52	23	120	25 acres woodland.
New York	618	60	140*	.....	200	30 do *pasture & arable.
Evreux, Département Eure.	500	60	90*	.....	150	30 do *do
Quatre Mares, Département Seine Inferieure.	700	.....	.....	.....	100	
St. Anne, Dépt. Seine	600	.....	.....	.....	14	* }
Ville Evrard, do.	600	.....	.....	.....	750	
Vauchuse, do.	600	.....	.....	.....	700	
Colony of Fitz James, at Clermont.	1,400	.....	.....	.....	1,000	
Meerenberg, Holland	600	20	.....	50	70	Lake, 1 acre.
Guislain's Asylum, Ghent.	468	15	.....	20	35	
Hamburg	350	20	.....	45	65	
Illenau	450	12	.....	30	42	5 acres woodland.
Frankfort	200	10	.....	30	40	
Göttingen	300	.....	.....	.....	20	

\* These figures have been calculated from the amounts given in French hectares: 1 French hectare = 2·471 acres.

The proportion of land per patient varies greatly; but the advantages attending the possession of a good asylum estate, are evidently becoming more appreciated, since the newer asylums have, as a rule, larger grounds than those founded during the last century, and there is an outcry from most of the older institutions for more land. In some cases, as at Stafford and Worcester, land for cultivation by the patients is rented. In some of the British asylums, as Northampton, Lincoln, Leicester, Elgin, and Haddington, cultivation is done entirely by the spade, and the results are gardens in which a large supply of vegetables is grown. In some cases the product is so large as to supply the institution completely; and at Leicester vegetables are sold to the amount of £300 annually. At other asylums, as at Montrose, and the Three Counties, horses are kept, cereal crops are grown, and all the ordinary agricultural operations are performed, sometimes by the aid of good machinery. At the Three Counties Asylum, onions (200 tons of which are sold) and other garden produce realize annually a sum of £1,000. The American State asylums have estates which are relatively larger than those of the British asylums. The comparatively small price of land has perhaps been an inducement to buy more. Agricultural operations are carried out with great completeness; but in several of the asylums patches of woodland have been left, which will eventually be cleared and cultivated, or cut into walks and ornamental grounds. At the Government institution at Washington, which is in every respect a model institution, the asylum estate now consists of 230 acres, and the governors are in treaty for a further tract of 150 acres.

The

The importance of a large estate is fully appreciated in France. In the Department of the Seine, in which three new asylums, calculated to contain 1,800 patients, have recently been erected, the attached estates are 1,450 acres in extent; and at Ville Evrard the large farm of 750 acres is worked entirely by the patients. Twenty horses and twelve working bullocks are kept; and a large number of agricultural operations are performed with excellent implements, chiefly of English make. Fifty cows are kept, besides sheep, pigs, fowls, &c. Large quantities of butter and cheese are made.

It is admitted on all hands, and the evidence to be obtained on the subject is convincing, that gardens and farms may be and are in most cases cultivated, not only with vast benefit to the patients, but with considerable profit to the asylum. Were it worth while to enter into calculations on this subject, statistics could be given which would undoubtedly prove this position. But the Colony of Fitz James, a large lunatic establishment conducted by private enterprise, is the best proof on this subject.

From an examination into the amount of land possessed by the German institutions in the above table, it would appear that in this country the value of land in connection with asylums is not fully appreciated; but it must be remembered that in two of the German institutions, Frankfort and Hamburg, the population is almost exclusively derived from towns, and consists of people unused to agricultural pursuits. At Göttingen, earnest application has been made by the Superintendent for a larger extent of land. At Guislain's Asylum, Ghent, the population is chiefly a manufacturing one, and a large number of the inmates are employed in weaving, so that land is not so necessary.

Before proceeding to the question of asylum construction, two points are to be considered,—1st, the separation of the acute and chronic cases; and, 2nd, the size of asylums.

#### SEPARATION OF THE ACUTE AND CHRONIC CASES.

In Germany, for many years past, the insane have been divided into acute and chronic—curable and incurable.

"In the mode of providing for the treatment of the two classes apart, two plans are pursued,—one termed that of 'absolute separation', and the other of 'relative connection'—the former consists of placing recent and chronic cases in buildings completely detached, each one having its own staff, organization and management; the latter, whilst keeping the chronic and recent cases apart, possesses a common medical and general administration, in a building composed of two principal sections, either forming part of the same structure (as at Illenau, in Baden), or detached but within the same area (as at Halle, in Saxon Prussia)." \*

The system of "relative connection":—The separation of the hospital from the asylum—has always been more fanciful than real, and may now be regarded as abandoned. In the more lately built asylums of Germany, the system of mingling curable and incurable cases has again been adopted; and at the same time considerable doubts seem to have arisen in the minds of German psychologists as to the advantages of the "absolute separation" system—the formation of separate asylums for acute and chronic cases.

In Great Britain, France, and America, until recently, no division of cases founded on curability has been adopted; and every asylum has contained acute and chronic, curable and incurable, cases in varying proportions. The large accumulation of chronic insanity, and the urgent need of increased provision for the more acute cases, have, however, directed the minds of those interested in these matters to the German system of separate asylums for acute and chronic cases; and in several instances such separate asylums have been erected.

In the Department of the Seine, where three new asylums have been recently erected; one of these is set apart for the more curable cases in their recent stage; two for the same class in their more chronic condition; whilst the old asylums of Bicêtre and Salpêtrière are appropriated to the incurable patients.

In the United States, the Tewksbury Asylum in Massachusetts has been specially provided for the chronic and harmless insane; and in the state of New York, a new asylum called after the late Dr. Willard, in recognition of his labours on behalf of the great class of incurably insane, is intended entirely for cases of this kind.

The Justices of the Peace for the County of Stafford, have recently erected a new asylum at Lichfield, to which the chronic and incurable cases from the old asylum at Stafford, are being drafted; and the Justices of the Peace for the Metropolitan Asylum District, have decided upon erecting asylums for the chronic insane of that district, near Watford and Croydon—each asylum to be built on the pavilion plan, and to contain 1,500 patients.

In

---

\* The State of Lunacy: Dr. Arlidge, p. 141.

In Great Britain and America the liveliest discussion has arisen on this subject; and in both countries the majority of those interested in asylum management are decidedly averse to the separation of the curable and incurable insane.

The English Commissioners in Lunacy, (who condemn the use of the terms curable and incurable), consider that a general asylum to contain both acute and chronic cases, is on the whole best, and have until lately,—except in the cases of the more populous counties, such as Middlesex and Lancashire, where the erection of distinct asylums for the more chronic cases was sanctioned,—confined themselves to suggestions for the erection of buildings of an inexpensive and homely character, in connection with existing asylums for the accomodation of this class. In their annual report for 1867, page 72, however, the Commissioners thus state their more recent views on this subject:—

“In view of the evident tendency there is to convert workhouses into asylums, we think that the question of relieving the asylums in many counties of the harmless idiots, imbeciles, and epileptics, by the erection of establishments for these classes of a less expensive character than heretofore, and thus rendering the present asylums effective for the reception of curable cases, and such as require special care, can no longer be avoided.”

“We are of opinion that for the classes above alluded to, buildings of a simple style, intermediate in character between the workhouse and the asylum, and consisting chiefly of cheerful, spacious, and well-ventilated day rooms and dormitories, might be constructed at a comparatively moderate cost. Without, also, any diminution in the substantial comfort and well-being of the patients as respects clothing, diet, or care, we believe that the cost of maintenance would be less than in the county asylum, and need be little more than in the lunatic wards of the best regulated workhouses.”

It will be seen that this recommendation is only “in view of the evident tendency there is to convert workhouses into asylums”—it is distinctly to meet an evil; it is an expedient mode of provision for the insane, and not an altogether satisfactory and good one.

The chief arguments for the maintenance of acute and chronic cases in one asylum, are,—

1. That when two asylums exist, although they may be designated Asylums for “Acute” and “Chronic” Cases—“Primary” and “Secondary” Asylums—the words “acute” and “chronic,” and “primary” and “secondary,” will never be used by the masses, who will at once recognize the true character of the institutions, and apply the terms “curable” and “incurable” to them.
2. That great pain may be given to the patients by their removal to an asylum for incurables; the greater part being quite sensible to the change. That they will feel doomed to utter hopelessness; and will lose, with hope, self-respect, and so sink into irretrievable degeneration, all the little chances of cure that still remain, vanishing.
3. That pain will be inflicted in many cases on relatives and friends, to whom the consignment to an “incurable” institution leaves no more to hope for; whilst, on the other hand, it will serve as an excuse for neglect by such relatives as are glad to find a pretext for it.
4. That all institutions in which chronic or incurable cases alone are maintained are liable to degenerate in their character. The very nature of the cases tends to exert an unfavourable influence on the minds of all officers and attendants. The office of physician is a peculiarly ungrateful one, since he can have no recompense for his trouble in the recovery of his patients. Interest is thus gradually lost in all treatment, and the institution is conducted by mere routine. The safe and economical keeping of the patients soon becomes the ruling idea; and under this the patients will sink mentally and physically, and those in whom some chances of recovery still remained on admission, (and cases have been known to recover in asylums after a residence of fifteen or twenty years) will become utterly hopeless.
5. That the admixture of acute and chronic cases in an asylum, and the classification which such admixture allows, is useful as a part of moral treatment. That the quiet and chronic cases are often useful as companions for the more recent ones, while the change of patients, the going and coming of the curable cases, is useful to the so-called incurables, by keeping up hope, which should never be allowed to die, and affording change of companionship.
6. That when two asylums, one for acute and one for chronic cases, are placed in one district, the district is necessarily larger in area, and consequently the asylum for the acute is less easily accessible to the population generally, and so less useful; the usefulness of an asylum for the insane being greatly dependent upon its proximity to those who require its care.

In addition to these reasons, the extreme difficulty of classification in many instances, the impossibility of pronouncing any patient incurable, and the constant possibility of acute paroxysms in chronic cases are pointed out; and it is argued that, as far as cost goes, the chronic insane may be maintained in buildings of a simple character in connection with ordinary asylums, quite as cheaply as in distinct asylums; that good diet is as necessary for the chronic as the acute cases; and that the number of nurses and the amount of medical supervision may be regulated according to their needs.

Resting upon these arguments, the Scottish Commissioners in Lunacy, and the vast majority of the superintendents of asylums both in Great Britain, France, and America, consider that the separation of the insane into two classes, and their maintenance in distinct establishments, is wrong in principle, and calculated to be strongly prejudicial to their best interests; and this is also the opinion of the English Commissioners, though, yielding to the force of circumstances, they have given a general sanction to the establishment of asylums for chronic cases.

The arguments which are used by those who consider separation justifiable—arguments entitled to attentive consideration, since they are used by men who, though a minority in point of number, occupy a prominent position among those who have attentively considered the requirements of the insane,—are based rather upon considerations of expediency than upon the absolute right or wrong of the question.

These arguments are—

- 1st.—That the structural adaptations and the general organization of an ordinary asylum are unnecessary for a large number of the more chronic cases, and that they can be provided for, more economically in an asylum of simple construction, with a smaller proportionate staff of officers and attendants than are employed in ordinary asylums.
- 2nd.—That by separating the very chronic cases, greater opportunities are afforded for the proper treatment of the more curable, especially in the now crowded condition of the asylums of almost all countries.
- 3rd.—That provision in asylums, even with an incomplete organization, is preferable to such provision as is generally afforded in workhouse.

It is pointed out also that, as a rule, the patients feel little depression or despair when removed to asylums for chronic cases, and that not unfrequently the older patients, instead of acting beneficially on the new comers, stand to them in somewhat the position of Job's comforters, and are eloquent on the injustice of their own detention, and upon the miseries which are likely to befall their new acquaintances.

Among those who favour the general scheme of separating the acute and chronic cases, few are found to recommend their absolute division into two distinct classes. Even Dr. Arlidge, one of the most prominent supporters of the idea of the two classes of asylums, does not contemplate "the existence of a primary asylum without the presence of more or fewer chronic cases retained in it for the best medical or moral reasons," or a secondary asylum "exclusively the abode of incurables." And, upon the whole, it must be considered that the balance of argument is strongly in favour of one asylum, to contain both classes in such proportion as they occur in each district.

#### SIZE OF LUNATIC ASYLUMS.

In Great Britain the size of asylums varies immensely. In the City of Norwich, and the Caermarthen, Haddington, and Elgin Asylums, the number of patients is under 100, whilst the large asylums for the County of Middlesex—Hanwell and Colney Hatch—contain, respectively, 1,693 and 2,026 patients. The Lancashire Asylums are large also. The one at Lancaster contains 836, and the one at Prestwich 962 patients. The Asylum for the West Riding of Yorkshire contains 1,124, and the Old Surrey Asylum 914 patients. But by far the large majority of English asylums contain between 400 and 600 patients. The new institutions for the counties of Surrey, Stafford and Cheshire have been planned to contain 500 patients each; and the new Scotch District Asylums for Perth and Cupar 250 only. In America the State Asylums, almost without exception, were built to contain originally 250 patients; but all those in the Eastern States have gradually been added to till the numbers range between 400 and 600,—only one institution, the New York State Asylum, containing over that number.

On the Continent, many of the older institutions have grown gradually to a large size. The asylum at St. Yon, near Rouen, contains 900 patients; and the older Paris asylums of Salpêtrière and Bicêtre considerably over that number.\* But for the new institutions on the Continent, wherever placed, the maximum number is fixed at 600; and in many cases a much smaller size is preferred.

In

\* The average population of the Departmental Asylums of France was, in 1860, 402.

In table No. 1, following, are shown the number of patients contained in the English county and borough asylums, and the weekly maintenance rate. In table No. 2 the number of patients contained in some of the best modern asylums in Scotland, America, France, Germany, &c., is given.

## CONSTRUCTION.

Under this head are to be considered—

1. The form of building.
2. The number of stories.
3. The material.
4. The architecture; and subsequently matters of detail must be examined under various headings.

The main forms of building which are found to exist, on an examination of European and American Asylums, are—

1. The corridor or ward form.
2. The house form.
3. The block or pavilion form.
4. The cottage.

1. The Corridor Form.—This, under various modifications, is the most general form adopted in asylum construction. The insane in almost all countries were originally housed in dilapidated prisons or unused monasteries; and these buildings have left their image on, and given a style to, the structures which were subsequently erected for the special accommodation of the insane.

The first asylums which were erected consisted of a central corridor with small rooms opening from it along each side; the corridor itself serving as dining and day room, and the small cells on each side serving as sleeping rooms for the inmates. Each floor was thus a complete asylum, and a number of such floors placed end to end and story above story—either in a linear, in some modification of the H form, or as a □—constituted the asylum, which was always under one continuous roof. This form may still

still be seen at the Bootham Asylum, York, and at St. Luke's, two of the earliest English institutions specially built for the accommodation of the insane; and it is the one which—though almost extinct in England—with certain minor modifications, is still adhered to in the large majority of American institutions. The best modern examples of this, the corridor plan with rooms on each side, are the Government Asylum at Washington, the Hospital for the Insane at Philadelphia, and the State Asylums of Utica, Trenton, and others. In Appendix G, No. 1, will be found a plan of the Washington Asylum, and from an examination of this plan the peculiarities of this form will be understood. In England the asylums so constructed were found dark and gloomy, whilst the ventilation was extremely imperfect. The modifications introduced by American architects have served to overcome these difficulties. Instead of appropriating all the rooms leading from the corridor to sleeping accommodation, some of large size have been made into cheerful dining and day rooms, which command views of the surrounding country. By means of end windows, and by occasionally doing away with the dividing wall between room and corridor, and so making the former, lighted by a large window, a recess from the latter, the corridors have been made fairly light; and by the employment of an elaborate and expensive system of artificial ventilation, the whole buildings are, as a rule, well ventilated and healthy. But, even with all the improvements, the corridors used as places for promenade are less cheerful than the corridors with rooms only on one side, most frequently seen in English asylums; and the cost of the system of ventilation is sufficient to destroy the chief argument in favor of the plan—that of diminished cost of construction in comparison with those asylums in which the corridor has rooms on one side only. In England and on the Continent, in all modern asylums in which the corridor plan is adopted, the small rooms are placed on one side only, whilst on the other are large windows which make the corridor remarkably light and cheerful. Recesses with bay windows are sometimes formed, in which the patients can sit and work. The Essex County Asylum (see Appendix G, Nos. 2 and 3)—is a fair example of this plan, the essentials of which are that each ward is a complete asylum—the corridor serving as day and dining room, and the sleeping rooms opening from it. The objections to this system are, that the asylum is spread over an immense area, is costly in construction from the immense length of corridor and consequent roofing required, and that there is in it “an absence of all those domestic and social arrangements and provision which exist in the homes of English people. The peculiar combination of day and night accommodation is without analogy in any house; whilst the sitting, working, reading, and taking meals in a corridor—a place used also for exercise, and for the passage of persons from one part of the asylum to another—represent conditions of life without parallel among the domestic arrangements of any class of the community.”\*

2. The House Plan—Is more modern in its idea; and whilst the asylum is still continued under one unbroken roof, and presents the outline of an ordinary corridor or ward asylum, the day and night accommodation are as far as possible separated from each other, by devoting the greater part of the ground floor to the purpose of day rooms, and using the floor or floors above entirely as sleeping rooms; reserving only on the ground floor, accommodation for certain classes of patients, as the paralytic, aged, and infirm, who can with difficulty mount or descend stairs, and sometimes the violent and refractory, who, however, are frequently better accommodated in special buildings. In this plan, which has been adopted in several of the more recent British asylums,—at Murthly near Perth (for a plan of which see Appendix G, Nos. 4 and 5), at Cupar in Fifeshire, and in the modern Continental asylums at Evreux in France, Meerenberg in Holland, and the Hamburg City Asylum, (Appendix G, No. 15) the corridor becomes narrowed to a passage of communication only. The advantages of this plan are that the condition of the patient is assimilated to that of ordinary life, by the separation of the sleeping accommodation from that required for the duties and employments of the day—the supervision of the patients by the attendants is more complete—ventilation is more easy, since the windows and doors of the sleeping rooms from which the patients are removed can be kept fully open all day, and those of the day rooms all night; whilst the cleaning, always a matter of difficulty in the ward plan, is rendered easy from the fact that the floors are in use at different times.

3. The Block or Pavilion Plan—Of which the essential feature is “that of breaking up hospitals of any size into a number of separate detached parts, having a common administration but nothing else in common,”† is well known in its application to modern hospitals, of which the Herbert Hospital at Woolwich, the Lariboisière at Paris, and the Pauper Hospital at Chorlton, near Manchester, are the most conspicuous and well known examples. It is a still further development of the house plan. The asylum consists of a series of detached buildings or blocks, each of which resembles in construction a large house. The ground floor is used almost entirely for day accommodation, and the upper rooms are used solely as sleeping apartments. The general arrangement is more home-like—the separation of one class of insane from another is more complete—ventilation is rendered more perfect and easy—and should infectious disease make its appearance within an asylum, it is less likely to spread through the entire establishment than in the corridor or house plans.

This arrangement of asylum building is not uncommon in the form of addition to old asylums in England. It is to be seen at Prestwich and at the old Chester Asylum; but the new Asylum for the County of Cheshire at Macclesfield is the only complete asylum which has been built on this plan (see Appendix G, Nos. 6 and 7); and in this the blocks, instead of being completely isolated, are connected by means of passages, from one side of which open all the dormitories intended for occupation by one patient only.

The

\* *State of Lunacy*: Arlidge, p. 203.

† *Notes on Hospitals*: By Florence Nightingale.

The Pavilion or Block Plan for asylums, carried out in its entirety, has been advocated by Dr. Lockhart Robertson\*, and other distinguished alienist physicians; and the greater number of the new asylums of France are on this plan. At Auxerre, in the Department of the Yonne, a beautiful asylum has been in working order for five or six years; and the three magnificent asylums for the Department of the Seine—St. Anne at Paris (see Appendix G, No. 8), Ville Evrard (see Appendix G, No. 9) and Vaucluse—are on this plan.

4. The Cottage.—The Cottage System—in which a limited number, from twelve to twenty patients are accommodated in a building which is completely isolated, and which is in the cottage form—an aggregation of such buildings composing the asylum—has been ably advocated by several English alienist physicians. Mr. Toller, of the Gloucester County Asylum, has written an excellent paper on this subject†, but so far as has been ascertained, no asylum has as yet been erected entirely on this system.

At Yarra Bend, near Melbourne, some 500 patients out of a total population of 1,000 are accommodated in cottages; and at the Devon County Asylum, the Gloucester Asylum, and others, a certain number of the more quiet cases are so accommodated with great success, with increased comfort to the patients and relief to the asylum. At Montrose Asylum, a few quiet patients are accommodated with the workmen and artisans employed on the estate, and living in cottages near the asylum. Carried to this extent, and as supplementing an ordinary asylum, the cottage system has worked admirably, but when more fully employed, the system has not, on the whole, been found to answer. The inconveniences which have been felt in this arrangement have been chiefly from difficulties of supervision, owing to the large space over which the asylum extends.

The best form of cottages, whether for a complete asylum or as an adjunct to an existing institution, are the "conjoined cottages" designed by Mr. Stack and Dr. Campbell, at the Essex Asylum (see Appendix G, Nos. 10 and 11), which, though an addition to the existing institution, are in themselves a very beautiful and complete small asylum to contain seventy-five patients. There are three cottages joined together by a covered way; each is intended to hold twenty-five patients, and consists of two stories. On the ground floor are a day room, four single dormitories, a nurse's room, a scullery, water-closet, and bath; on the upper story is an associated dormitory for twenty-one patients, with nurse's room overlooking it, store-room, and closet. Provision is made for the erection of another cottage when necessary; the kitchen, dining-hall, and store-room, common to the three, being of larger size than at present needed.

This conjoined cottage plan, stands midway between the cottage plan pure and simple, and the block or pavilion plan, and is well worthy of imitation, whether for a complete asylum of small size, or as an addition to existing structures.

In this sketch have been mentioned the peculiarities of all the marked systems of asylum construction at present in use, so far as has been ascertained; but there remains to be noticed an English asylum in which the house, block, and cottage systems, are combined into a very satisfactory whole. The New Surrey Asylum at Brookwood (see Appendix G, Nos. 12, 13, and 14) was designed by Mr. C. H. Howell, after much study of English and Continental asylums. The main structure is chiefly on the house plan, and designed to contain rooms for administration, and divisions for the cases recently admitted, and the sick, which shall be near to and therefore more immediately under the superintendence of the resident physician. The convalescent and working patients are accommodated in four detached blocks,—the latter in connection with the workshops on the male, and the laundry on the female side; and the more quiet patients are accommodated in the houses of the gardener and farm bailiff, placed at some little distance from the asylum, each of which will contain about twenty patients, and be under the immediate supervision of those officials. In this plan some of the best points of each system are introduced, and the whole seems very complete and satisfactory.

The number of stories in asylums varies considerably. Some of the older institutions, as the old Stafford, have four stories. The modern French asylums, on the pavilion plan, have two only, but the majority of English and American institutions—and among these those working most satisfactorily and well—have three stories over part if not all the building. The more violent and refractory cases are usually accommodated in buildings of one story only, in British, French, German, and American asylums; and frequently, when the asylum is on the corridor or house plan, the buildings for the noisy are completely detached and isolated from the main building.

The material for asylum construction varies considerably, as might be expected. Out of nineteen English asylums visited, fifteen were of brick, some totally unornamented, some faced with white stone, and two or three of the more recent, as the New Surrey at Brookwood, and the New Stafford at Burntwood, of variously coloured brick. The former of these is roofed with blue tiles; but the large majority of English asylums have slate roofs.

The French asylums are more usually of stone, as St. Anne's, Ville Evrard, Evreux, and Charenton; some few, as Quatre Mares, are of brick. The American asylums are also more usually of stone, as are also the German, but the material which is most readily procurable, seems to have been usually selected.

The architectural style which prevails in asylums may be described as the "Old English" or Domestic Style. Occasionally in Great Britain we find a highly ornate structure, such

\* *Pavilion Asylums*.—A paper read before the annual meeting of the Psychological Association, held in Edinburgh, 1866.

† *The Advantages of the Cottage Plan for the Accommodation and Treatment of the Insane*: By E. Toller, M.R.C.S.

such as the Derby Asylum, which rejoices in tower and pinnacle, and is really a very handsome building, in the perpendicular style, but the majority of English asylums are striking rather from their size than their beauty. In America the asylums are frequently ornamented by handsome classic fronts, as at Utica, Trenton, and Philadelphia. On the Continent the asylums do not markedly differ in style from those in Great Britain.

#### WATER SUPPLY.

This inquiry will include—

1. The source and mode of supply.
2. Quantity.
3. Storage.
4. Precaution against fire.

And subsequently, the arrangements for, and fittings in bath rooms and lavatories.

The sources are—

- a. The ordinary town supply.
- b. Wells.
- c. Running streams.
- d. Springs.
- e. Surface drainage.

a. *Town Supply.*—The majority of asylums built near towns are supplied from the ordinary town water works, and the facility with which water is thus obtained, as well as the diminished cost, are strong arguments for placing an asylum as near a town as possible. Prestwich, Gloucester, Leicester, Montrose, St. Anne's Paris, Hamburg, Frankfort, and other asylums are thus supplied. With the supply from a town, either tanks may be entirely dispensed with, as at Hamburg and St. Anne's—or placed over the wards, as at Prestwich and Gloucester—or one large tank may be employed, as at Montrose, where the asylum is more than 2 miles from the town.

b. *From Wells.*—The majority of those asylums situated at a distance from town, and some of those, as Colney Hatch and Stafford, within the reach of town water, are supplied from wells, which are either artesian or of ordinary construction. Artesian wells are in use at Colney Hatch and the Sussex County. At the Three Counties there is a fine well with "headings," capable of containing a reserve supply of 60,000 gallons. The Cupar, Haddington, Derby, Ghent, Göttingen, Quatre Mares, and other asylums, also obtain their supplies from wells; and with two or three exceptions, to be presently mentioned, the supply is obtained by means of steam pumps. The water is raised to large tanks, placed either in towers distinct from or at the ends or over the centre of the building, and thus distributed by gravitation, either direct to pipes, as at Sussex, or through minor tanks placed over the wards, as at Colney Hatch. At Quatre Mares a windmill and hand pumps are used, and are far from effectual. At Guislain's Asylum there is a well in each court, and only small tanks; and pumping water is a constant, monotonous, and distasteful labour for the patients. At Haddington, a small asylum for 100 inmates, the pump is worked by a horse; and this method answers well.

c. *From Running Streams.*—This plan is adopted at the French asylums of Evreux and Ville Evrard; at the latter, the River Marne is the source. At Harrisburg, in the United States, and at Worcester, the water is in each case passed through filters, and raised to a general reservoir or water tower, and then distributed at once, or through minor tanks by gravitation. Steam power is used for raising the water, except at Evreux, where an extremely ingenious hydraulic pump, or "bélier hydraulique," is in use. The water is by this raised to a neighbouring hill, and passes through filters of sand, charcoal, and gravel, into a large tank, from which it flows to the house.

d. *Springs.*—This is the most usual source of supply in American institutions, and is the entire source also at the Essex and Bristol Asylums, and at Meerenberg in Holland, (where the water flows from the neighbouring sand hills), and it is the chief one at the New Surrey. Here, the water is first received into reservoirs, generally placed at some distance from the asylum, is pumped from them into tanks over or near the building, and so distributed by gravitation.

e. *Surface Drainage.*—This method is in use at Broadmoor, and for part of the supply at the New Surrey. The method of supply, and the appliances required, are the same as where the water is obtained from springs.

In the three methods last mentioned, it will be seen that the pump and steam-engine will, as a rule be placed at a distance from the asylum, and that thus the steam-engine will not be effective for turning washing or other machinery, or the boilers for the supply of steam to the kitchen, or for heating water for the laundry and bath rooms. But at the Worcester Asylum a deep tunnel has been cut, running with an incline from the stream to the asylum. The stream passes through filters and then along the tunnel to the asylum well, and is thence pumped up to the main tank. The steam-engine being near the main building, is thus available for other purposes beside pumping.

2. *Quantity.*—The quantity which can be obtained at by far the majority of asylums is unlimited. This is the case in most of the American, in many English, and some continental institutions. A few only, as Broadmoor, the New Surrey, Cupar, Bristol, &c., are straitened in this respect. The minimum amounts procurable are at Bristol and the New Surrey. At the former, about 25 gallons per head *per diem* are procurable; at the New Surrey, about 20; but every exertion is being made to increase the quantity.

At the French and German asylums, the amounts used are much smaller, since the closets have no water supply.

3. Storage.—The arrangement of tanks differs materially, and without obvious cause. At Hamburg and St. Anne's, supplied from the town, there are none. At Sussex and the Three Counties, supplied from a well—Montrose, supplied partly from town and partly from a well—and Evreux, supplied from a running stream—one large tank placed in the centre of the building supplies all needs. At Prestwich, Gloucester, and other asylums supplied from towns, small tanks over each ward are in use. But in many asylums, as Derby, Essex, and Worcester, there are both large or main, and smaller or ward, tanks. This is also the case at the New Surrey, where, however, the smaller tanks are placed over, and intended for the supply of each block.

4. Precautions against fire.—A few asylums, as Colney Hatch, Derby, and the Pennsylvania Hospital, have been made more or less fire-proof by the use of vaulted roofs of fire-proof brick to the corridors, iron doors, and other contrivances; but in the majority of asylums this has not been thought necessary, and reliance is usually placed, in case of fire, on hydrants, both in and around the building. At St. Anne's, Paris, and some other town asylums, the town fire-brigades are looked to for rescue; at Cupar, fire-buckets and the patent contrivance called "l'extincteur," are alone relied on; at the French and at some English institutions the ordinary fire-engines are kept; but at the vast mass of asylums a system of hydrants has been established in connection with the ordinary water supply. At Prestwich the supply from the town is sufficient to enable a hose to be played on or over the roof at all times; and the same is often the case from the tanks in other institutions; but in almost all the American, in the Bristol, Montrose, and other asylums, arrangements are made by which the pipes for the supply of the hydrants can be connected with the steam-engine. Generally the pipes for the hydrants are given off between the well or reservoir and the tanks, and are so worked by steam-power. At the New Jersey institution, in addition to hydrants inside and outside the building, three fire extinguishers are kept constantly charged with carbonic acid gas at a pressure of 75 lbs.

At several of the American, British, and Continental asylums, the patients and attendants are drilled at intervals of a fortnight, month, or longer, in the use of the hose, engines, or whatever apparatus against fire may be provided. At Prestwich the windows are sometimes cleaned outside by means of the hose.

At several asylums rain water is carefully collected from the buildings, stored in a tank over the laundry, and used for washing purposes with great saving to the institution.

As supplementary to the question of water supply, arrangements to promote the cleanliness of the patients may be considered under the heads of—

#### 1, Baths,—2, Lavatories,—3, Sinks.

1. Baths. The questions of interest as regards baths are—1, the situation in which they are placed,—2, their material and fittings,—3, their number.

In the British Asylums the baths are generally placed in small rooms opening from each corridor, in number sufficient to serve for the patients of the ward or division; and this is also the general custom in America. But it is found that a bath-room in each division entails an expensive arrangement of both serving and discharge pipes; and that, as the majority of asylum inmates are well able to be removed from their wards, general bath-rooms, one for each sex, are cheaper, and, on the whole, fully as convenient.

There are general bath-rooms at the Sussex, Colney Hatch, and Montrose Asylums, established subsequent to the erection of the institutions, in which baths were provided and still exist in each ward; and at Perth and Cupar, where the general bath-rooms formed part of the original plan. The system of general bath-rooms seems almost universal on the Continent: they are in use at Evreux, Ville Evrard, St. Yon, St. Anne's, among the French Asylums, at Ghent also, and in the newer German institutions; and, where they have not been adopted,—as at Quatre Mares, Meerenberg, and Illenau,—instead of baths for each ward or corridor, each section of the asylum has been supplied with a small room containing two or three baths.

In most institutions in which general baths have been established, it has been considered necessary to make special provision for certain classes of the inmates—the sick and violent. In the French and German Asylums, and at Ghent and Meerenberg, there is a movable bath on wheels for the infirmary, whilst a fixed bath is placed in the division for the excited, or for patients on admission; and at Perth and Cupar a fixed bath is placed in both the infirmary and the division for excited patients.

The proportion of baths appears to be, in the English and American Institutions, about one to twenty patients; and in the Continental Asylums it is somewhat less.

The material varies. In America enamelled or painted iron is chiefly used because it is difficult to procure slate or earthenware. On the Continent, tin or copper seems usually employed; and the latter is used in England at the Three Counties, Worcester, and Essex; enamelled iron is also used in some English asylums; but the baths most commonly in use are the Stourbridge fireclay, which are in every respect excellent.

In some asylums the baths are so fitted that the hot and cold water mix before entering; in others they enter separately; but in almost all, the taps are so placed as to be under the command of an attendant's key.

In

In the French and Belgian, and in some German asylums, the baths have lids of wood or brass made to bolt on to the bath, and fitted so as to keep the patient in the water, a small opening being allowed for the neck. This contrivance is also in use in the "separate building" of the Morningside Asylum. At St. Anne's, Paris, a canvas cover is used instead of a wooden or brass one. The baths are almost invariably placed at such a distance from the walls as will allow the attendants to pass all round. In some asylums, as at Washington, they are raised on a small platform, so as to allow the attendants to reach the patient without unpleasant stooping; whilst at others, at Ghent and Göttingen, they are sunk about a foot in the ground, so as to give the attendants more command over the patient.

Bath-room floors are usually of cement; and in most asylums removable wooden gratings are placed upon this, so as to raise the attendants, and the patient on leaving the bath, from the wet floor.

Shower-baths exist in all British asylums, but are seldom used. At Cupar, rain shower-baths are fitted over the ordinary baths, and are found useful as tonics, the shock from them being small. The douche is seldom seen in British institutions.

In America, not a single shower-bath is to be seen in any asylum. The advantages resulting from its use are considered to be more than counterbalanced by the abuses to which it is liable, and the accidents which result from it; so that it has been agreed to banish it altogether.

In France, and in the asylums of Southern Germany, the shower-bath is much used as treatment; and every bath-room is fitted with the douche. Both douche and shower are administered, at intervals, to patients confined in the warm-bath, by means of the covers mentioned above. Plunge-baths exist in a few asylums only. At Illenau, in Baden, there is a stream running through the grounds; and excellent bathing-places have been made for both men and women.

At several English asylums, Turkish baths have been erected. At Sussex, where the building is a lean-to against the laundry, and was erected at a cost of £50, there is a hot-room, douche-room, and dressing-room. The douche-room is fitted with mild and severe douches, and can be used as a vapour-bath. The building, though small, answers every purpose, and has been found extremely useful. At Colney Hatch, a more elaborate and costly Turkish bath has been erected, and is in constant use.

The bath-houses which have been fitted in some of the new French asylums, at St. Anne's and Ville Evrard, are wonderfully complete in their arrangements. They are centrally placed, and consist of separate rooms for foot-bath, ordinary bath, Roman bath, shower-bath, special showers for head, spine, loins, and other parts of the body; a vapour-bath, in which vapour alone, or mixed with aromatic or resinous substances, can be given, and a sulphur-bath. In addition, there is a special room for fumigation, dressing-rooms, &c.

At Evreux, where the system is not quite so elaborate, the bath-house (*vide* Appendix F, Fig. 1) consists of a central passage, with rooms on each side. On one side are the boiler-room, in which water is heated for all the baths, two dressing-rooms, a Roman bath-room, and a pulverizing bath, in which the patient sits in a box, with his head out, and by an ingenious contrivance, water is thrown over him, in a fine spray, either alone or mixed with medicinal substances in solution. On the other side are a foot-bath room, fitted with hot and cold water, and containing eight pans; a bath-room, in which are five ordinary baths, with arrangements for the douche and shower to each; and a shower-bath room, in which shower-baths of three various degrees of force for the head, one for the spine, a circular or barrel shower, and a lumbar shower, are fitted.

Bath rules, issued by the English Commissioners, as well as those in use at several English institutions, will be found in Appendix A, No. 4. Printed rules do not exist in American or Continental institutions. In the majority of British and American asylums, a warm bath is given once a week, in some, as at Montrose, Prestwich, New Surrey, &c., clean water is used for each. At Prestwich each patient is allowed a given quantity only, which is gauged by the attendants; but in many institutions two, three, or four are bathed in the same water. At the Sussex Asylum, in addition to the baths, the patients are placed on stools, are well soaped, and have water thrown over them by means of bowls. Strong round towels are generally used in the bath-rooms.

In the Continental institutions the patients are, as a rule, bathed about once a fortnight. At Evreux, notwithstanding the magnificently arranged bath-house, the patients get hot baths only once a month, and have their feet washed every five days.

The lavatories in asylums are generally fitted with about one basin to ten patients, in addition to the basins placed in the dormitories. At the Prestwich Asylum, counting the entire number in the asylum, there is a basin to every  $2\frac{1}{2}$  patients. The lavatories are usually placed in the corridor, or in a small room leading from it, and as near the dormitories as possible; and one is usually placed on the ground-floor, in those asylums which have only day-room accommodation therein, for day use. In the new French asylums the lavatories are in a small recess off each ward.

Sometimes the basins are fixtures—porcelain, set in slate or lead, as at the Essex Asylum, and the new asylums at Ville Evrard, St. Anne's, and Evreux; or they are set on a pivot, and empty by tilting into a sink below, as at Derby, Meerenberg, Hamburg, &c.; but usually ordinary earthenware basins are used, set in a shallow leaden or slate trough, or in a hole cut in wood or slate; the channel for drainage being underneath, and basins being emptied through the hole in which they ordinarily stand.

In

In some English asylums both hot and cold water is laid on ; but this is not, as a rule, considered necessary, cold water serving all purposes. At Quatre Mares and Ghent the water is not laid on, but small tanks, over each lavatory, are filled by hand every morning ; the consequence of which is, that the water supply at the lavatories is always extremely scanty.

Sometimes a tap is placed over each basin, at others one or two serve for all, the basins being filled at them. In some of the Scotch institutions, where the basins are fixed, they are filled and emptied by an opening at the bottom. This system is bad, since, on turning the tap to admit clean water, a small quantity of the dirty water last used re-enters. Plugs for basins are found either to stick or get lost, the chain attaching them invariably getting broken. At Evreux, Hamburg, Göttingen, and other institutions, the taps over the basins are quite simple ; and the entire water supply can be cut off from the entire lavatory range by an attendant's key. By this arrangement it is not necessary to lock the lavatory every time after using it, as is done in some English asylums.

Sinks are usually placed near the bath and lavatories, and are fitted with hot and cold water for cleaning purposes.

#### DRAINAGE.

This includes a consideration of—

1. The different systems of sewage which have been adopted in asylums.
2. The arrangement of pipes—(a) for lavatories, bath-room and kitchen, laundry and sinks ; (b) urinals and closets where these are in use.
3. The ultimate disposal of sewage matters carried by these pipes.

The different systems of disposal of feculent matter which have been adopted in asylums, may be arranged under the heads of—

1. The Water-closet System.
2. The French or "Tinette" System.
3. The Dry Earth System.

In this report it will only be possible to describe these systems and their various modifications with the utmost brevity.

The Water-closet System is in universal use in British and American asylums, and in some Continental ones. The water is so arranged as to flow either when a plug or handle is pulled, when the person using the closet sits down on or rises from the seat, or when the door is opened or shut. The latter arrangement is the most simple, and most generally effective.

A modification of the ordinary closet has been made by the Messrs. Macfarlane of Glasgow, and called a Closet Range\* ; it is to be found in use in the airing courts of several English asylums, as at the Sussex, and in the wards of the Perth Asylum and the Asylum for Idiots at Earlswood. It consists of a common trough of iron, divided by partitions and wooden seats, so as to accommodate from two to a dozen persons according to its size. Three or four inches of water are kept in the trough, and into this the excreta drop. At fixed times, by a simple contrivance, the whole contents of the trough are emptied into the sewer pipes, and the trough is charged with fresh water. The range is not altogether free from smell, and requires frequent emptying ; but the arrangement is perhaps the simplest and best for out door closets fitted with water, for public institutions of any kind.

In England, ordinary water-closets usually consist of a pan or bucket and a valve below, which opens by means of the same mechanical contrivance as controls the water supply, allows the excreta and water to escape, and afterwards closes more or less tightly, and acts in addition to the trap in preventing smell from the closet pipes and sewer. But in the majority of American asylums the closets consist of the pan only, the opening at the bottom of which is always patent to allow of the elaborate and excellent ventilating system which is in use in most of the best American asylums, and which, with a plentiful water supply, renders the American closet cleaner and sweeter than the vast majority which are to be found in English asylums. The system in use may be understood on reference to Appendix F, Fig. 2, copied from the Report of the Government Hospital for the insane at Washington.

Each closet has a free water supply, generally flowing on opening the door, is well trapped, and, in addition, has a special ventilating tube passing off between the pan and the trap. This tube is carried to a general shaft, which either communicates with the main chimney of the boiler furnace, near its base, or passes upward to the roof, and is warmed by means of a row of gas jets ; there is thus a strong upward current in the shaft, and consequently a downward current through the pan of the closet. On placing a piece of lighted paper in the closet-pan in some of the American asylums, the flame, and sometimes the paper, is drawn strongly downwards ; and the closet thus, instead of contaminating the atmosphere, acts as a ventilator and purifier of the part of the house in which it is placed.

In some institutions, as at Utica, the ventilating pipes, instead of being carried to the main chimney or a general shaft, pass at once separately to the roof ; in these the draft is not so strong, but the closets are perfectly sweet, without any warming apparatus.

At

\* This range is figured in the Report of the Commission on Barracks and Hospitals.

At New Jersey, the trapping of the closets has been abolished, and the main sewer itself communicates by means of a shaft with the common chimney stack. In this asylum there is also a strong downward draught in each closet and urinal; but should the system at any time get out of order, the smell from the sewer might penetrate by means of the closet to the entire asylum; this accident is to some extent provided against by two special ventilating shafts to the sewers, which are carried up above the roof, and, fitted at the top with Archimedean screw ventilators, which are so arranged as to revolve with the slightest breeze above, or the pressure of warm air from below, and lift or pump out the air from the shaft by means of a screw projecting into it.

Second, the French or "Tinette" System.—In this the closets and urinals are, as a rule, placed out of doors, either quite detached in the courts, or at the end of a block of building from which they can be entered. In each small building there are seats and urinals; and below there are placed small tins which receive the fæces and water. These closets are generally arranged to open from the back; and every morning or night the contents of the small tins are emptied into larger ones placed in a cart, and are then conveyed to some distance from the building, mixed with earth, and covered over for two, three, or four, years, when decomposition is more or less finished, and the mixture of earth and fæces, now solid, is used as a fertilizing compound for the land. There is no water supply to the closet. The advantages of this system are the ease with which the excreta unmixed with earth or water, and so, small in bulk, are removed; its subsequent utilization, the compound of earth and excreta being of the highest value; and the diminished cost of asylum construction, since the expensive arrangement of piping for water supply, and drains and sewers for subsequent removal, are not required. But these advantages are more than balanced by the constant stink which proceeds from all French closets so arranged. In most French asylums, closets with water supply are used in the houses for the officers, and in some of the rooms for better class patients; but sewers are not in use except at town asylums like St. Anne's, and there they are made to communicate with the town sewer. The usual arrangement, is that large tins are placed in the basement of the house, and form a very temporary cesspool, which receives excreta and water supply from the closet, and is removed every two or three days and replaced by others. At Guislain's Asylum, Ghent, a modification, and certainly an improvement on the French System is in use, but need not be described here.

In some of the German asylums, as Hamburg and Göttingen, a modification of the French system is employed. It is known as the "Systeme d'Arcet," and is in many respects similar to the Pneumatic System of Captain Liernur, which is now in use at the Hague and some other Continental cities.\* In the "Systeme d'Arcet," the closets are fitted in the building, but no water is employed; and ventilation by means of a system which is very like that used in America, *in petto*, is intended to serve instead of water in removing smell. The rough sketch Appendix F, Fig. 3, may assist in explaining the principle.

The excreta descend into a cloaca in the basement, from which a ventilating shaft passes to the ordinary chimney of the ward or section. Fires are kept constantly alight, summer and winter, in one grate, which is used for minor or ward cookery; and the draught in the chimney so caused serves to ventilate the cloaca and closet.

The cloaca is cleaned out every two or three months; and the major part of its contents are removed two or three times a week by a pneumatic process. A strong zinc or iron vessel, fixed on wheels, is filled with steam and allowed to cool; it is then attached by a connecting pipe to the cloaca, and on a cock being opened, the contents of the

\* In this system, "small iron reservoirs are placed under the pavement of all principal street crossings, each reservoir being connected by means of small iron pipes with the privies of the houses next to it, in such a manner that no offensive gases can escape; in other words, from every single privy a continuous air-tight passage leads into the next subterranean street reservoir, without the intervention of any cesspool. The pipes are provided each one with a valve, to be worked from the side walks of the street, so that the communication between each privy and a street reservoir can be established and cut off at will. These valves remain always hermetically closed, except during a short moment when the privy contents are to be discharged into the street reservoir connected with it, which occurs during the night in the following manner:—A locomobile steam-engine, working an air-pump, is drawn near the small subterranean street reservoir, to exhaust the air out of it and out of the entire system of main and branch pipes, up to the hermetically closed house valves, which are then, one after the other, opened and shut again, thus discharging the privy contents, including its gases, into the street reservoir. If the vacuum made in the reservoir and pipe system is complete or nearly so, the mechanical force of the atmospheric column rushing in, the moment a house valve is open, equals that of some 30 hurricanes. In order to maintain this vacuum, while a number of privy pipes are discharged one after another, the air-pump standing near the reservoir is kept continually in motion, creating a constant draught, which causes all discharges to fly just into the reservoir and nowhere else, like so many shots from air-guns. The urine, exceeding the solid fæces about eight or nine times in volume, affords sufficient moisture, not only to prevent the excrement from drying or caking, but also to keep the whole mass in so fluid a state that removal is easy, unfailling, and complete, especially under the abovementioned powerful blast operating upon it. All the privies and their pipes will thus be every day thoroughly cleaned of solids, fluids, and gases, and be filled with fresh air instead. After all the house valves have thus been successively opened and shut—an operation which practice has shown can hardly be done quick enough—the small reservoir itself is emptied by pneumatic pressure into a hermetically closed waggon reservoir attached as a sort of tender to the air-pump carriage. This done, the connecting pipes, by which the movable apparatus communicates with the stationary one under the pavement, are uncoupled, and the locomobile with its tender proceeds to the next reservoir, and then to another and another until the tender is filled. As the particular street where this will occur can by practice be pretty accurately known beforehand, arrangements are made that, when arriving there, the locomobile meets an empty tender drawn by two horses, which changes place with the full one, thus allowing the sewerage operation to go on without interruption, the filled tenders being always drawn away by the horses to a temporary dépôt, where they are decanted by direct hydraulic pressure into air and water tight barrels, which are then at once sent like any other goods, by rail or steamboat to the lands requiring the excellent fertilizer thus collected."—*On Sewage*: By C. Krepp.

the cloaca pass into the vacuum in the iron vessel, the cock is then again shut, and the iron vessel disconnected and drawn away into the fields, where its contents, mixed with earth, serve for agricultural purposes.

The system is condemned strongly by both Dr. Reye, at Hamburg, and Dr. Ludwig Meyer, at Göttingen. The constant fire is found to be expensive, and the closets as might be expected, are extremely offensive.

At Hildesheim the Systeme d'Arcet is in use with the addition of water supply, and is found to answer much better.

The third system of sewage—that known as the Dry Earth System—is in use in the airing courts and farm buildings of one or two English Asylums, and has lately been fitted at the Special Asylum Hospital, Prestwich, and in some of the wards of the Criminal Asylum, Broadmoor, and found, as far as experience at present goes, to work admirably. At this latter institution the closets are placed in buildings which jut from the corridors and admit of cross ventilation. The earth is thrown on the excreta by a mechanical arrangement working from the seat. The divisions between the closets are of enamelled slate, and the vessels to receive the excreta are of zinc on wheels.

We have next to consider the arrangement of pipes leading—(a) from sinks, lavatories, bath-rooms, kitchens, and laundries; and (b) from urinals and closets, when these are in use.

In some of the British Asylums the lavatory and bath-room pipes join at once with those from the closets and urinals, and pass to the sewers, the common pipe being trapped before entering. In others a much better arrangement exists, each set of pipes continuing separate and being trapped before entry; whilst in some, which have been more recently fitted, the closet-trap is placed close to it, and the pipes from bath-rooms, lavatories, and sinks are either trapped separately or after union, but before entering the sewer. At Meerenberg and Guislain's Asylum, Ghent, the closet and urinal, and the sink and lavatory, or lavatory and bath pipes are kept permanently distinct. The former are conducted to a tank, from which the sewage matters are pumped, and subsequently utilized; whilst the latter are allowed to empty themselves into neighbouring water-courses, and so drain away. Arrangements for ventilating either the closet or the lavatory and bath-room pipes do not appear to exist, and are not, as a rule, considered necessary.

In America, as has been seen above, the closets are almost all ventilated in front of the trap; and in some asylums great care is taken that the two sets of pipes should enter the sewer separately—those from the lavatories, sink, &c., being trapped before entry.

In the English and American asylums large sewers are required; and, as a rule, the asylums standing on high ground, the fall is great, and drainage rapid and complete.

In some asylums—as at Murthly and the Pennsylvania Hospital, to instance two among many—the rain-pipes from the roof pass into the drains, and serve to flush them; but at other institutions, as Lincoln and Broadmoor, arrangements have been made by which the whole quantity of water stored in the tanks over the asylum can be rapidly discharged through the sewers, and in this way they may be thoroughly cleansed. This is done at regular intervals. The sewers are ventilated at some institutions by openings communicating with the external air; but in one British institution, at Montrose, the main sewer is connected with the general boiler chimney by a shaft, and is so ventilated. In the majority of continental asylums, the sewers are very small. At Evreux the excreta from the officers' quarters, and the water from lavatories and sinks, are carried by a small sewer into the neighbouring river, and at Hamburg and St. Anne's into the town sewers. No arrangements appear to exist for flushing.

At Quatre Mares and Ville Evrard there are no sewers. The water from sinks, baths, lavatories, &c., is carried, in the former institution, by drain pipes, into small tanks in the garden, over which it is thrown to supply at once moisture and some fertilizing compound; and at the latter, the drains run into a long open trench at a little distance from the asylum, where the water evaporates or soaks away, and the salts and more solid matter left are dug out and applied to the land.

Under the third head is to be considered the ultimate disposal of the sewage matter.

In asylums situated in or near towns, the sewers from the building open at once into those of the town, and the sewage is lost; but the value of sewage matter is now generally understood, and some or all of it is in most asylums applied to the lands belonging to the institution with abundant results.

The methods employed vary somewhat, but the following are those most in vogue:—

1. Collection of the solids in tanks by deposition, whilst the fluids are allowed to escape.
2. Irrigation, with or without tanks.
3. Filtration.

Each of these will be shortly described.

By the first method, in use at Colney Hatch, the Bristol Asylum, the New Jersey State Asylum, and others, the entire sewage is received into two or more tanks, where it is, in some cases, mixed with carbolic acid. The solids are gradually deposited, and the fluids escape by overflow into neighbouring streams. At fixed periods the tanks are emptied, and the contents applied to the land. This, though a step in advance of that where the entire amount of sewage is wasted, is still a most imperfect system, since it is well known that the most valuable constituents of sewage are contained in solution, and these are the very parts which are allowed to escape to pollute streams into which they fall. This system is carried out in some asylums by choice, and defended

on

on hygienic grounds, on which something will be said further on; but in others it is more or less a matter of necessity, since the amount of land belonging to the institution is either too small to allow the entire amount of sewage to be used on it, or so situated as to make it extremely inconvenient to do so. At Colney Hatch the entire sewage from 2,500 people is collected in a multiple tank; and, after being mixed with carbolic acid and lime in small quantities, the solid part is all employed on the land belonging to the asylum, and a part of the fluid is also so utilized by a system of closed pipes: the remainder is allowed to escape into a small stream beneath the asylum.

Irrigation with tanks is the means most commonly employed, and may be seen at Worcester, Derby, Sussex, Broadmoor, the Government Asylum, Washington, and other institutions. It seems, on the whole, most simple, most effective, and most generally applicable. The tanks are generally placed at a distance of about a quarter of a mile from the house, and are constructed to hold only two or three days' supply. From them, either by overflow, or by means of pumping two or three times daily, the sewage, fluid and solid, is distributed over the land by gravitation, in trenches, or by open wooden troughs. The tanks are placed, if possible, sufficiently above the land to be irrigated to allow of ready fall; or, where this is impossible, the sewage is raised by hand or horse pump to troughs at a higher level, from which it can gradually be led on to the land, as at Montrose, Derby, and the Three Counties. In this system—unless in very close proximity to a town or the asylum itself—there seems to be no need of mixing disinfectants with the sewage; all experience proving that sewage matters are not obnoxious when used in their recent state, and before poisonous gases are disengaged by storing for a long time in tanks. The sewage is generally applied to a few acres of rye grass with such abundant results, that four or five crops are obtained in the course of a year; but there seems to be no good reason why arable land should not be treated in the same manner with an equally good result. At Leicester this is done; and the exact line at which irrigation commences is marked by the cabbages being at that spot almost twice as large as those on the ground immediately above it. The amount of solid matter deposited in the tanks is small, and they seldom need cleaning. Irrigation without tanks can be employed where the fall is good, and the land for irrigation of such an extent and so situated that the entire sewage may be applied to a part only, whilst the remainder is subjected to ordinary agricultural operations. Grazing land is peculiarly fitted for this; and, perhaps, the best example of the system to be found in British asylums is at the Old Stafford Asylum.

At this institution the sewage from the asylum itself and from the neighbouring prison—the two containing a population of about 1,400 people—is applied to a series of small meadows lying immediately beneath the asylum, and in close contiguity to the town of Stafford. Where the main sewer terminates is a small shed in which lime and carbolic acid are mixed with the sewage in the following simple way. Two casks are placed side by side; in the first, which stands some six inches above the other, is placed lime, and in the second carbolic acid. A small stream of water runs from a tap into the cask containing lime; the overflow from this runs into the carbolic acid cask: and this again overflowing drops immediately into the sewage flowing beneath. A little lime and carbolic acid are added to each cask daily; and two or three times a day the contents of each are well stirred. The total costs of disinfectants for the sewerage from 1,400 people is 1s. 3d. a day; and it appears to be quite sufficient, since no smell is perceptible in the asylum, or on the fields themselves under irrigation. No complaints have ever been made from the town since the above system has been in force; and no illness which could be in any way connected with the sewage has appeared in either the asylum or the neighbouring parts of the town. The sewage thus disinfected can be turned either to the right or left, and is distributed in open trenches and wooden troughs over the meadows, one-half being under irrigation at a time. Enormous crops of hay are grown, and abundant feed for cows obtained both in summer and winter. A honey-combed and blackened hay rick, which had taken fire in eight or ten places, and been a source of anxiety and trouble to all concerned for three or four weeks, whilst testifying to the firmness and strength of the grass grown in the meadows, suggested a caution in dealing with the hay obtained therefrom, which requires much more complete drying than when obtained from land less richly manured.

The third system is filtration—and this may be effected in two ways. In the first, ashes or earth are placed in a tank into which the sewage is admitted at the bottom—the filtration then takes place upwards, the more or less pure water running away by overflow from the top of the tank. This appears to be effective and simple, the only difficulty being the carting ashes and earth to the tank, and their subsequent removal, for application to the land, when saturated with sewage matter; and in this, it must be admitted, there is more trouble and expense than in the irrigation system. Its advocates consider the extra trouble and expense well compensated for by its superiority to the irrigation system in matters of hygiene—of this more presently. It is practised at Lincoln. The second method of filtration,—which is used at the Fife District Asylum, Cupar, and the Perth District Asylum at Murthly, and at the Northampton Asylum, Massachusetts, consists in collecting the sewage into a tank capable of holding two or three days' supply, and running it from this, either by natural fall or by means of a hand or horse pump, on to a mound of earth collected for the purpose, into which it is allowed slowly to filter. This earth is placed on a layer of large stones through which the water, clear and without smell, drains off; and the saturated earth is removed at intervals, to be replaced by a fresh supply. Both at  
Cupar

Cupar and Murthly the filtration method is supplemented by a sewage cart, in which liquid sewage is received from the tank and distributed over the land by means of small openings in the pipe running along the back of the cart.

The advantages and disadvantages of this system are exactly those of the system of upward filtration mentioned above.

It must be remarked that, wherever tanks are employed, two at least are necessary, so as to allow of cleaning at certain intervals. At the Fife District Asylum this difficulty is to some extent obviated by the employment of a large iron stirrer or agitator, which is used for some minutes twice daily before running the sewage on to the earth, for which the natural fall is sufficient.

Of these three systems, then, there appears to be no doubt that that by irrigation, with or without tanks, is the cheapest, simplest, and most generally applicable. The question remains, if its use is calculated to induce fever, diarrhœa, &c., or to be in any way prejudicial to the inmates of the asylum itself or others in its immediate neighbourhood.

The system is in full work at Northampton, Leicester, Montrose, and Stafford, &c., often in close proximity to the asylum, and sometimes very near to the town; and though careful inquiries were made, it was not found that any evil results directly attributable to it had been noticed. At Leicester, where it is used within 200 yards of the buildings, some attacks of low fever and diarrhœa have been experienced, but never to any great extent, or beyond what might be fairly attributable to matters of diet or weather. At Montrose, during and before two attacks of diarrhœa, the wind blew almost constantly from exactly the opposite direction to the fields under irrigation; and the experience at Stafford speaks volumes for the healthiness of irrigation when employed without tanks, and with a small amount of disinfectants.

A valuable letter on this subject, by Mr. Rawlinson, the eminent civil engineer, is contained in the Twenty-first Report of the English Commissioners of Lunacy; in which it is clearly pointed out that where sewage is not collected in cesspools, but is used immediately by irrigation, no stench is caused or disease induced. After a thorough examination of this subject, he arrives at the conclusion that "a daily application of sewage to land in a fresh state is the only way in which sewage ought to be used."

As an appendix to the subject of sewage, an examination of the use to which the kitchen and other refuse is put in asylums,—and, subsequently, an inquiry into the number, situation, and fittings of urinals and closets,—may be useful.

In asylums, public and private, in Britain, the Continent, and America, almost without exception, the refuse from the kitchen and sculleries, the parings of potatoes, the refuse of other vegetables, and the scraps left at meal-times by the patients, are all carefully collected, and are used for feeding pigs. The asylum piggery is, as at Broadmoor, Northampton, Gloucester and many other asylums, often excellently arranged, fitted with every new appliance in the shape of feeding troughs and kitchen for boiling and cooking the food, is carefully drained, and is not unfrequently a source of interest both to patients and officers. It is generally placed with the other farm buildings, and is often shown with pride. The number of pigs kept varies much with the size of the asylum, and with the provision which can be made for them from the asylum farm in addition to the refuse from the asylum itself. Sometimes from a dozen to twenty only are kept; but the number not unfrequently mounts much higher, even to sixty or seventy. There are in one American institution considerably upwards of a hundred, and it is considered profitable to buy and cart the refuse from a large city hotel to assist in feeding them. Pigs, when properly managed, are no doubt an important matter in asylum economy. The refuse, if sold, fetches a very small price, and yet alone will feed a fair number of pigs. At the Lincoln Lunatic Hospital—an institution chiefly for better-class patients, and with only a small amount of land and no farm—the refuse was for many years sold; when it was impossible to obtain for it the usual price, the administration decided on building piggeries; and the profits which accrued from buying, fattening and then selling the pigs—which is not so profitable as killing them and using them in the asylum—during one year were sufficient, after deducting the sum usually obtained by selling the refuse, and some other expenses, to pay entirely for the construction of the piggeries.

The refuse is generally supplemented largely by materials for food grown on the farm and garden. Sometimes the pigs are bought, fattened, and sold;—this is usually the case at private institutions receiving patients of a better social class, with whom pork is not a favourite food; but at other institutions the pigs are bred, fed, fattened, killed, and eaten in the asylum; and at several institutions, as at Stafford and Broadmoor, there are smoking houses for bacon. Pork forms an agreeable change of diet to the inmates, and, when thus home-fed, is usually much cheaper than other meat, and so an economy to the asylum.

To show how small economies are practised in some asylums, it may be well to mention that at the Pennsylvania Hospital for the Insane at Philadelphia, and at the State Asylum at Harrisburg, soap for the use of the laundry and for ordinary house cleaning, is made at the asylum from refuse fat obtained by skimming pots and pans and from the scraps left by the patients. At the former institution the entire amount of soft and hard soap required for washing, and for all except toilet purposes, is thus obtained. The apparatus is sufficiently simple.

*Closets*

*Closets and Urinals.*—The situation, number, and fittings of urinals and closets may be briefly noted here, although, as will be seen in a subsequent part of this Report, it is not proposed to adopt the usual water-closet system in almost universal use in English and American asylums.

In most asylums in which indoor closets are used, they open immediately from the corridor, generally at one end; but in several asylums a better arrangement has been adopted, and the closets are placed in buildings jutting and partially detached from the ward so as to afford better ventilation. In the new asylums at Murthly and Cupar, and the New Surrey, this arrangement has been adopted; but unfortunately the ventilation allowed is not a cross ventilation passing between the closets and the main building, which is the best form. (See Appendix F, Figs. 4 & 5.)

At the new building, and at the hospital for the Prestwich Asylum, (see Appendix F, Fig. 6), and at one or two other asylums, the buildings are partly detached, and free cross ventilation is allowed. In asylums where urinals are provided, they generally are made to adjoin the closets; but in several instances, instead of a special urinal, utensils of gutta-percha or other material are kept in the closets, and the contents after use emptied into the closet-pan.

At the New Stafford Asylum, a small passage running off at right angles from each ward, communicates with a semi-detached building in which are closets, urinal, bath-room, and a small scullery. At the Washington Asylum, each closet is contained in a fair-sized room opening from the ward; in this room are a closet, urinal, sink for washing utensils, and a cupboard in which the ventilating and discharge pipes and the opening to the trap are placed. In the cupboard are kept during the day, all the chamber utensils of the wards, which are emptied every morning, remain in the cupboard all day, and are replaced under the beds at night. In almost all indoor closets, wherever placed, there is a window exactly over the seat to serve for light and ventilation.

The number of closets necessary, seems to be usually fixed at the rate of one for every fifteen or twenty patients. In some asylums this number is exceeded, but it appears to be sufficient. At the Sussex Asylum, the number averages one to twenty, two are placed in each ward, and two in each bed-room flat. The number of urinals is in about the same proportion.

In the airing courts, the closets and urinals are generally placed as far away from the buildings as possible, and the water supply to them is usually scanty. In some asylums rain water is trusted to alone for flushing the closets and urinals; and where water is supplied to the former, it is generally wanting in the latter, which are generally more or less offensive.

The means of water supply for the closets have been already mentioned. In the urinals the supply is sometimes arranged so as to drip or trickle constantly; but more usually they are flushed at intervals by means of a tap accessible only to an attendant's key.

In English institutions, glazed earthenware pans for the closets, (the pan and pipes being all boarded in), with wooden seats, are almost universal. Earthenware urinals are also generally used; but in America the pans and urinals are almost universally of cast-iron, enamelled. The pans are fitted with small wooden rims for the patient to sit on; but in all water-closets, urinals, bath-rooms, and sinks, nothing is boxed up; everything is left open and exposed to view, so there is no harbour for vermin, no confined spot for foul air, and no wood or other material to absorb moisture, except the floors, which are usually polished or painted. The general shape of the American hopper or pan will be understood by reference to the plate (Appendix F, Fig. 2). In the few institutions on the Continent in which water-closets and urinals are used, the arrangements do not differ materially from those in use in English institutions. At St. Anne's, Paris, they are all by an English maker. In those institutions in which other modes of removing excreta than that by means of water supply are in use, the number of closets and urinals is in about the same proportion to the number of patients. In the French asylums the closets are placed either in semi-detached or totally detached buildings, and no indoor closet exists except in the infirmary ward or in the quarters of the officers.

#### WARMING.

The various modes of warming buildings are—

1. Open fires.
2. Hot air.
3. Hot water.
4. Steam.

Every one of these modes has been adopted in warming asylums, sometimes alone and sometimes in combination. In Great Britain the open fire-place prevails, but other methods are used as accessories.

At the Three Counties, Prestwich, Leicester, and Haddington Asylums, the warming is entirely by means of open fires without any accessories. At Murthly, the New Surrey, and the Sussex, air chambers are used in addition; and at Broadmoor, stoves are placed at the bottom of the staircases. In several asylums, Hayden's system of hot air is used, either alone, as at Bristol, where it is not a success, and where hot water has been fitted in the wards having an eastern aspect; or as an addition to, or in conjunction with open fires, as at the Old and New Stafford Asylums and Colney Hatch. At Derby the hot air is used on Sylvester's method, in addition to open fire-places.

places in the day rooms. At Cupar and Worcester the hot air system is fitted, but not used; and it also exists, and is used, in three or four wards at the Gloucester Asylum. At the Lincoln Asylum fires are used in the day rooms and dormitories, and hot water in single rooms and corridors. At the Sussex Asylum hot water is used in the infirmary and refractory wards. Hot water is used also in the new block at Broadmoor intended for violent women. Steam is not used in any English asylum visited.

It will be seen, then, that, with the exception of the Bristol Asylum, open fires, either alone or in combination with some other means, are used in all the English asylums mentioned above; and those asylums in which they exist either alone or with the addition of air chambers, the warming is every way satisfactory.

The hot air system, which is extremely expensive—the asylums of Colney Hatch, Bristol, and Derby, in which it is used throughout, being among the most expensive as regards construction among the English asylums,—is by no means always a success, and may be pronounced a decided failure as regards the Bristol Asylum.

Hot water seems a useful mode of warming for the rooms devoted to the sick, who are liable to feel changes of temperature with especial acuteness, and for whom, therefore, a more fixed and general warmth is necessary; and in the department for the violent class, where open fires are likely to lead to mischief, and their cheerful appearance is not appreciated by the patients.

Connected with the subject of open fire-places are the precautions which have been adopted to protect the inmates from fire. The heavy iron railing, completely covering the fire, and fastening by means of a lock, which is familiar to all who have visited Tarban Creek, has almost disappeared from English asylums. So far as has been ascertained, it is used only at the old and new Stafford Asylums, in the former of which some few years since a suicide from burning occurred, and induced the superintendent to replace the heavy locked guards which he had before removed. It is admitted by most English superintendents that open fire-places are chiefly dangerous, rather from accident than design; that guards are necessary rather to keep the clothes of careless patients from contact with the fire than to prevent their throwing themselves on it, or using it mischievously; and the light guards or railings which are now adopted in almost all English institutions, are quite sufficient to prevent accidents. They consist of either—(1) a high ordinary children's fender, made of wire, with strong upright pieces, on the top of which are brass knobs, such as are in use at the Three Counties, Gloucester, Worcester, and other asylums; (2) a light wire guard fitting exactly over and covering in the fire, and fastened with a catch, as at Cupar; or (3) a high iron rail, quite open, and either plain as at the New Surrey, or of a handsome gothic pattern as at Essex, Sussex, and Prestwich. At the latter, a small low fender is placed inside. At at least three asylums, Haddington, Montrose, and Murthly, simple ordinary fenders alone are used—there are no guards, and, as Dr. Howden of Montrose observes, no accidents.

In America there seems to be no diversity of opinion among those who have the charge of the hospitals for the insane, in reference to the proper mode of warming these institutions,—the Association of Medical Superintendents having unanimously resolved that "all hospitals should be warmed by passing abundance of fresh pure air from the external atmosphere over pipes or plates containing steam under low pressure, the temperature of which at the boiler, does not exceed 212 F., and placed in the basement or cellar of the building to be heated", whilst "the boiler for generating steam should be in a detached structure." The air is generally driven by a fan worked by a steam engine, over the steam pipes, and then through shafts in the basement which branch to the various wards and rooms. The hot air is made to enter the rooms in some cases near the floor, in others near the ceiling—the latter seeming to be the preferable method—and the whole building is kept thus at a sufficiently high temperature. This method, which is in common use in the United States in large hotels and other buildings—and in which either hot water as at Washington, or steam as at Northampton, New Jersey, New York State Asylum, and the Philadelphia Hospital, is used—has been almost universally adopted in the State asylums of America, and—considering the extreme cold of the American winter\*—is perhaps the best which could be adopted. It is so manifestly unnecessary and unfitted for the climate of New South Wales, that a lengthened description of its arrangements is not requisite. It may be mentioned, however, that the steam or hot water pipes in the basement are in three series, so that one, two, or three can be used at a time, according to external temperature. Every part of this system of heating and ventilation has been fully elaborated, and works excellently.

In French asylums the methods vary considerably. In some asylums, as at Evreux,—where there are open fires guarded closely by wire guards in the lower story, and, in addition, an elaboration of the air chamber,—the air is admitted to a box round the fire-place and so warmed, and is then conveyed by openings into the ward, and by shafts into the adjoining rooms, and also upwards in a shaft alongside or around the chimney into the dormitories above. The seclusion rooms are warmed by a small hot air apparatus in the basement.

At St. Anne's, each pavilion is warmed by a separate small hot water apparatus placed in the basement. The air passes over the pipes placed in the basement, and then by shafts to each ward. There is no direct radiation. The same furnace supplies hot water for the use of the building.

At

\* At the time several of the American asylums were visited, the thermometer stood at from 10 to 18 degrees below zero in the open air.

At Quatre Mares the warming is done by stoves and open fire places; at the Charenton by direct radiation from hot water pipes placed in a box in the centre of the larger rooms.

At Ville Evrard, under the centre of the basement of each block is a small furnace; the air is admitted through a wide opening, and having being warmed, is conveyed by tubes into each ward, the openings being wheel gratings in each floor. There is an ingenious arrangement near the furnace, by means of which the shafts leading to certain wards can be shut, and the wards left unwarmed. There are also fire-places in the day rooms.

At Guislain's Asylum, Ghent, the warming is entirely by stoves of a peculiar construction placed in the centre of each ward. The stove, in which coal is burnt, has an outer iron jacket with holes opening to the ward. The space between the stove and jacket communicates directly with the open air by means of a shaft in the floor leading to the side wall. The air enters at the wall, is warmed in the jacket, and escapes through openings in the jacket into the ward. Each stove has a small shelf for keeping warm, soup, &c.

At Meerenberg, the heating throughout is by means of steam, the pipes being laid in the floor of the lower wards, and the heat entering by direct radiation through gratings. The air warmed in the lower story is carried up through shafts in the walls into the upper ones.

In the German institutions the heating is chiefly by means of the German stove, placed in the corridors and rooms; but this is assisted in Göttingen by hot air, which is driven by a fan worked by a steam engine over iron plates, and carried by means of shafts to the small rooms—and at Frankfort the chapel, amusement room, and the rooms, both dining, day rooms, and cells, devoted to the excited class are warmed by means of air, which is driven by a fan over pipes filled with steam, and so through shafts into each room. In the rooms generally the German stove is in use. At Hamburg the German stove is in general use, but the corridors have steam pipes, with direct radiation in addition, and the block for the excited class is warmed by hot air.

#### LIGHTING.

Under this head must be considered—

1. Windows.
2. Gas and lamps.

In examining the Windows of Asylums, it will be necessary to note—

Their position and proportion to wall space,  
Material and method of opening,  
Size of panes,

Guards, and such accessories as shutters, blinds, and hangings.

1. Position and proportion to wall space.—In most asylums, both in Europe and America, the windows bear a proportion of about one-sixth to the wall space, but they vary in this respect considerably; almost all, however, are sufficient to make the room cheerful and light, and to assist materially in ventilation. In the vast majority of asylums, the windows are placed completely within reach of the patients, and they are usually so low in the day rooms as to enable the patients to see out of them when seated on a chair or form near. In some asylums, as at Derby, where a passage of communication for the service of the house is placed at the back of the ward, the windows of the dormitories are placed over it, and are thus high and out of reach of the patients, giving the rooms a very dismal appearance; this depends on structure,—but at Meerenberg nearly all the dormitory windows are purposely placed completely out of reach. In other asylums, as at Colney Hatch, the windows in the day rooms for the violent class of patients are placed high and out of reach; but this is not a common arrangement in day rooms, though common in the seclusion cells in both British and Continental asylums.

2. Material and mode of opening.—In the older British asylums the window frames are usually of iron, and open either by a sash (which, with iron frames, is singularly heavy and inconvenient), or on a pivot perpendicularly—the openings being merely narrow slits, as at Bethlehem, the form of which is well known; or wider, and less prison-like, as at Leicester (see Appendix F, Fig. 7), and in the violent wards of the Murthly Asylum,—or in sections outwards, either the upper third, or a portion of it, being usually made to open. In this form the iron frame is, almost always, continued over the opening, in the shape of bars. In all these forms the window can only be opened by an attendant's key. In the more recently built asylums, and in almost all the more recent additions to the older institutions, the windows for the ordinary wards are made either of wrought-iron cross pieces, set in wooden frames, or they are entirely of wood; and the mode of opening is usually by means of a double sash, chocked top and bottom to 4 inches, so as to prevent the windows being opened beyond that extent.

By some superintendents the iron cross pieces set in the wooden frame, are considered much the best form of window; but others object to it—first, on account of its expense; and, secondly, because of the breakage which is caused in all glass set in iron frames, through the shrinking of the metal in cold weather; and they consider the window frames entirely of wood—which have been fitted in several of the most recently built institutions, as the New Surrey, the New Stafford, and the Murthly and Cupar Asylums—as the best form. The advantages of the opening by means of the ordinary double hung sash, permanently chocked top and bottom, so as to prevent the window opening beyond the extent of 4 or 5 inches, are almost universally admitted in England; and this method is adopted in nearly all new institutions.

An

An improvement on the permanent chock has, however, been fitted to the windows in the additions to the Prestwich and old Chester Asylums, and in the New Surrey.

At the two former the upper sash is permanently chocked, so as to open to a distance of 5 inches only; but in the lower half there is no permanent wooden chock, but a strong lock is let into the window frame, and when the bolt is shot out it enters a slit in the window jamb, so that the window can be opened to 5½ inches, or closed at pleasure; but by shooting back the bolt, which is done by an attendant's key, the window can be opened to the full height. The slit in the jamb is guarded by a metal plate, like an ordinary bolt plate, except in being much longer. (See Appendix F, Fig. 9.) At the New Surrey both sashes are capable of being opened to the full extent, or chocked at a height of 5 inches, by means of locks fitted in the frames; but the superintendent, Dr. Brushfield, reports the arrangement of bolts as complicated, and liable to get out of order. He expresses his preference for the plan used at Chester, and invented by himself, which, he says, is simpler, cheaper, and more efficacious.

In the United States the double sash is in general use for asylum windows. The frames are sometimes entirely of wood, and open freely both at top and bottom, in which case there is a wrought iron grating (the bars of which correspond to the divisions of the windows, and are not seen when the window is shut) placed outside. Sometimes the upper half is of iron, and fixed, and the lower half of wood, opening freely. In this case the grating is placed outside the lower half only. In a few instances both parts of the sash are of iron, balanced, and opening top and bottom to the extent of 5 inches only.

The Continental asylums are usually fitted with some modification of the French *croisée* in either wood or iron frames. The lower two-thirds of these windows open down the centre, and are placed under the regulation of an attendant's key. There are seldom any arrangements to prevent them opening to their full extent when once unlocked, and the consequence is that they are less frequently opened than the windows in English asylums. At Evreux there is a chain to prevent the window opening beyond 4 or 5 inches. At Hamburg a small portion of the upper third of the windows is made to open, and some ventilation is thus secured. At the new asylum, Ghent, there is a peculiar arrangement, invented by, and called after, Guislain. As seen from the inside it presents the appearance shown in Appendix F, Fig. 10. Below the window, which is of the ordinary French type, is an opening, closed with shutters on the inside. On opening these an ornamental iron guard is seen. The window is made to open, but is usually kept closed, and the small shutters below are opened for ventilation. This window is in use at the new infirmary, Gheel.

3. Size of Panes.—The date of erection of an English asylum may almost be judged by the size of the panes in the windows. In the older asylums the panes are almost all small; but in some of the more recent examples of asylums, the windows are not to be distinguished by the size of their panes from those of ordinary houses. At the Cupar Asylum the panes are about 2 feet square, and are considered by the superintendent much too large. In the American asylums the panes are usually about 6 inches by 12, and in the Continental ones they are similar in size, and, in all respects, like those most usually seen in private houses.

4. Guards.—The iron bars and wire guards, which were formerly so common over asylum windows, have all but disappeared. In no public English asylum, so far as has been ascertained, are bars fitted to the windows, except at the Criminal Asylum, Broadmoor, and there, on the men's side, the form is as ornamental and unprisonlike as possible. Wire guards were in use in the violent wards at Colney Hatch, and in the women's side at Murthly only, out of all the asylums visited. At the latter institution the windows in the violent ward are only 2½ feet from the ground, and the guards are used because the breakage was found to be great in the windows thus placed so unnecessarily low.

In the modern Continental asylums, even with the large *croisées* opening to their full extent, iron bar guards are not used. A few exist at Quatre Mares, but there are none at St. Anne's, Ville Evrard, or Evreux, and there are none at Hamburg; but at Frankfort and Göttingen there is an outside frame of iron—at the former of an ornamental Gothic pattern. The windows in most of the seclusion rooms have wire guards. In the American asylums bar guards are more used, and are fitted to all the windows except those having iron frames, and balanced so as only to open to 5 inches top and bottom. At some institutions simple bars are used, corresponding in their crossings to the divisions of the window; but at others an ornamental wrought-iron guard is used to fill in the space to which the windows open, and when painted white is not unsightly. Wire guards are placed over the windows in the rooms for violent patients, in several American institutions.

5. Shutters and Hangings.—Shutters of various forms may be seen in the British asylums; but they appear to be considered necessary only for the rooms occupied by single patients, who are, as a rule, of the more violent class; and, for purposes of decency, in associated dormitories placed on the ground floor.

For the single rooms the shutters are made either to fold back, and lock against the wall by the attendant's key; to slide sideways, out and in, of the adjoining thickness of the wall; or, what appears to be the best form, to slide up from a locked receptacle beneath the window. All these forms, both when closed and open, are under lock and key. At Prestwich the shutters slide up from below the window, and can be fastened by an attendant's key, either when three parts, or fully up; so as, in the former position, to allow of some light in the room, and of fuller ventilation by means of the window open at the top.

When

When shutters are used for associated dormitories they are generally ordinary folding shutters, fastened by a bar, as in use at Cupar and Bristol.

Shutters appear to be seldom used in Continental or American institutions except for single rooms, and then they are similar in fitting to those in use in England. The form most generally adopted in America is the one sliding from within the adjoining wall. At the McLean Asylum each shutter has two small panes of plate-glass in it, so as to allow light to the room. The windows of single rooms used for seclusion at St. Anne's, Ville Évrard, and Evreux, are fitted with shutters, which can be closed or opened by means of cords pulled from outside the door of the room.

Upon the blinds and hangings with which asylum windows are furnished, no small part of the cheerfulness and homelike appearance of the rooms depend.

Almost all British asylums have window blinds in the corridors, day-room, and dormitories, most usually white; sometimes yellow, as at Bristol; sometimes green, as at the Sussex; or Venetian pattern, as at Gloucester: and, in addition to these, in some asylums, hangings are placed over the windows, and serve to abolish the bareness which is only too common. At Bristol the hangings are variously coloured; at Lincoln, red and white; and at Prestwich, a gay red. The material is usually cheap. At Prestwich it is a red twilled calico, and, in addition to the ordinary hangings, it is placed as a fixed blind over the lower part of many of the windows, in corridors, day rooms, and large dormitories; and in the larger day and dining rooms there are curtains of the same colour, which are exceedingly pretty and effective. The windows of corridors and day rooms occupied by female patients are, in several institutions—Worcester, the Three Counties, Derby, Gloucester, and others—ornamented with white net curtains, made by the patients.

The Continental asylums are but little behind the English ones in their blinds and hangings. Blinds are almost universal. White hangings are not uncommon, especially for dormitories; and at Hamburg the hangings of red and brown are particularly homely and nice.

In the American institutions yellow calico, or Venetian blinds, are generally in use. Sometimes hangings are seen, but less commonly than in England, in the rooms inhabited by indigent patients.

In some institutions the windows for special wards differ from those ordinarily in use. In the infirmary ward at the New Sussex, windows similar in construction to those at the Leicester Asylum (see Appendix F, Fig. 7), but with wooden frames, serve excellently for ventilation; but the wards for violent cases, and the seclusion room, are more generally those in which special provision is made, either by placing the windows high and out of reach, which is almost always objectionable, or by making the windows stronger than those in the other parts of the institution. At Murthly the windows in the violent ward are in iron frames, and open like those in the infirmary wards at the Sussex. This appears to be the best form. In the American and Continental institutions the windows in the rooms for excited patients differ little from those in other parts, except from being sometimes placed high, and out of reach, or else guarded with wire. In the seclusion rooms in the new French asylums, the windows, which are on the sash principle, in wooden frames, can be opened or shut by cords which are pulled in the corridor, outside the door.

*Gas.*—Nearly all public asylums are now lighted throughout with gas, the only exceptions coming under observation being Guislain's Asylum, Ghent, and the asylum at Evreux, which are lighted by means of paraffine lamps, and Quatre Mares, near Rouen, which is at present lighted with oil, but to which gas is soon to be fitted. When asylums are situated near town, the gas is supplied from the town works; but in those at a distance, gas is made on the asylum estate with apparatus belonging to and worked under the superintendence of the asylum authorities. This is done in many institutions in Great Britain, on the Continent, and in America; and, in most instances, it is found that gas can be made at a price which, counting the cost of apparatus, differs very little from that charged by the gas companies. It is found that arrangements can generally be made with gas companies, to supply gas to a large public institution situate at any distance within 3 miles of the outskirts of a town; and it is, as a rule, found desirable to obtain the supply in this way, if possible, so as to avoid multiplying the separate departments of an asylum, and so increasing the difficulties of management and superintendence, which, under any circumstances, must be great.

At the Sussex County, and at Stafford, the gas apparatus belonging to the asylum was disused as soon as gas could be obtained from local companies. At the former institution the cost is said to be somewhat increased, but the saving of trouble and responsibility to the management is very great; at Stafford it is obtained at a cheaper rate than it could be manufactured; and the same is the case at the New York State Asylum, where the manufacture was discontinued because it proved to be a nuisance to the institution.

At the State Asylum, Broadmoor, the gas works were erected and for some time worked under the asylum management; but it has been deemed advisable to deliver over the apparatus to a gas manufacturer, who keeps it in repair and, finding his own coals, supplies the asylum with gas at a fixed price per 1,000 feet.

The gas works at asylums are generally placed at some distance from the main building. In several asylums the site selected is near the farm buildings. One man is generally found able to manage the works and keep up a constant supply.

In some American institutions gas is made by very ingenious processes. At the Government Asylum, Washington, petroleum is used, and the apparatus is much smaller and more handy than usual.

At

At the New Jersey State Asylum, and at the New York Inebriate Asylum, gasoline or automatic gas is used, and is reported to answer well in every respect, and to be cheaper in its manufacture. The apparatus is described in the report of the asylum for 1866, as the "Solar Gas Machine," patented by O. P. Drake, of Boston, and furnished through the agency of Messrs. Ferris & Co., Philadelphia. By this arrangement the building has been successfully lighted at a considerably diminished cost as compared with the old system of lighting by gas made by the heat process. The fixtures consist of a wrought-iron tank for receiving the gasoline (which is a high proof naphtha), three close pans or vessels of cast-iron called evaporators, into which the liquid is drawn from the receiving tank, and a large meter wheel driven by weights which passes the air over the liquid. In its passage through the evaporators and over the naphtha the air becomes so charged with the vapour that it burns like gas. The only attention demanded by the apparatus is to supply the liquid and wind up the weights once in twenty-four hours, requiring from five to ten minutes time. These fixtures are placed in a room under the pavement outside of the foundation walls of the centre building, where they are considered quite as secure against accident as any form of gas works." The objections to the process are that it is liable to explosion. A fatal accident has occurred from the use of this form of gas at the Treasury Buildings, Washington; and a low temperature will cause the mixture of air and naphtha to separate, the naphtha being deposited in the gas pipes. It has, however, so far answered admirably at the New Jersey Asylum, and Dr. Buttolf, the superintendent, is enthusiastic in its praise.

Gas is used in most asylums for the chapels, amusement rooms, day rooms, corridors and associated dormitories, the burners being placed in the rooms. Where it is desirable to light single rooms, the burners are generally placed in the corridor outside, and made to light the room through a small pane of glass over the door. In some Continental asylums all the dormitories are lighted by burners placed in the corridors. The gas fittings which are in use in public asylums are usually of a simple kind, burners without glasses being used in many asylums for all the wards; whilst at others, in the rooms for quieter patients, glasses, simple or ornamental are used, and the result is a much steadier light and a more finished and homelike appearance. It has been the custom, and still is so in many asylums, to place all the gas burners out of reach of the patients; but in recently finished asylums the burners in the majority of the rooms are not placed higher than in private houses. In the American asylums, it is only in the wards for the most violent that the gas is placed out of reach; and in some wards for better class patients, chess and reading gas lamps are fitted to the burners by tubing, and allowed to stand on the tables.

At the Montrose Asylum the burners in the passages and staircases are fitted to short pipes about 6 inches long, placed high, and projecting from the wall at such a slope as to make it impossible for patients to hang anything, or themselves on them.

At the Murthly and other asylums, besides the ordinary tap, by means of which gas can be cut off from the entire establishment, separate taps, accessible only to the chief attendant of the ward by means of a key, exist in every ward and on each staircase; so that the gas is completely under command, and interference, either accidental or mischievous, with the ordinary tap near the burner will be almost powerless to cause accident.

At the New York State Asylum the gas supply of each division separately, can be cut off by a tap in the basement. At Ville Evrard no glasses are used; but every gas jet has a small metal cover so arranged as to throw down the rays of light, and is protected below by a gauze wire netting, so that it can only be lighted from above. No glasses are used, but the cover and net give the light a furnished effect. (See Appendix F, Fig. 8.)

In most asylums lights turned down to a candle size are kept burning in the corridors all night. It has been much debated whether similar lights should be kept burning in the associated dormitories also. It is considered essential for the preservation of good order by some superintendents, and is adopted throughout the asylum at Lincoln Hamburg and other institutions; but in the majority of asylums the dormitory lights are put out when the patients go to bed, except in the infirmary and the dormitories occupied by some of the noisier class. The lights in all the closets and urinals on the dormitory flats are usually kept in all night.

#### VENTILATION.

The methods by which asylums are ventilated may be divided into—

1. Artificial, including—
  - a. By propulsion.
  - b. By extraction.
2. Natural—
  - a. By means of doors, windows, and fire-places only.
  - b. By means of openings in addition to these:

and under this head will be considered, as accessory to the subject, the amount of cubic space provided for patients.

It will not be considered necessary to discuss the subject of ventilation as a science or in its bearing on health, or to describe at length any of the various systems of artificial ventilation in use; but simply to note the various methods, and to inquire how far they answer the end proposed.

Natural

**Natural Ventilation.**—In one or two British asylums, as at Cupar, and in several Continental institutions, as at Ville Evrard, Quatre Mares, and Frankfort,\* natural ventilation by means of open windows, doors, and fire-places is trusted to entirely, and seems completely to answer for the ordinary wards of asylums—but these are decidedly the minority; and in most instances some additional means of ventilation are in use, consisting of openings in the walls as accessories to the natural openings.

At the Essex and Three Counties Asylums, small openings are cut directly through the wall near the ceiling; these are grated, and serve for the exit of foul air. At Leicester, there are small openings for exit in communication with each chimney. At Sussex, there are openings both near the floor and near the ceiling of each room to serve for ingress and egress of air; these openings all communicate directly with the open air.

At Frankfort and Göttingen, there are small openings for exit in the walls of each room near the ceiling, which are carried up for a little distance in the wall, and then open to the air.

At Meerenberg, Murthly, and Lincoln,† in the wards for excited patients at Quatre Mares, and other institutions, shafts for the exit of foul air pass from each ward, and then, after uniting, to the roof; but no heat is applied to cause drafts in these, and no openings for the ingress of air except the natural ones exist.

At Evreux and the New Surrey there are similar shafts, and in addition special air chambers in connection with the grates serve for the entrance of fresh air; and at the latter, these are also grated openings, closable at will, near the floor of each room, for the same purpose.

All these asylums, then, and others which it is not necessary to mention, are ventilated by natural means—by windows or doors only, or by some openings for the ingress or egress of air, one or both, in addition to these; and in all, the ventilation is good and seems to serve every purpose. But it is noteworthy also that those with windows, doors, and fireplaces only, and those with the more simple accessories in addition to these, seem as well ventilated as those in which there is an elaborate arrangement of ventilating shafts.

**Artificial Ventilation.**—Artificial ventilation is never employed alone in British asylums, but only as an accessory to the natural method. The most usual mode of employing it is that by extraction, heat being generally the agent. The principle of this is well known, and the system is used at Pentonville Prison and many other public institutions. In most instances Hayden's system, or some modification of it, is employed, and, as an accessory, is reported to be successful at Bristol, Colney Hatch, Worcester, Gloucester, the M'Lean Asylum, Boston, and other institutions; but it has been tried and abandoned as useless at the Leicester and Essex Asylums, and wherever used, is more or less expensive. At Guislain's Asylum, Ghent, the exit shafts are heated by small paraffine lamps. At some institutions, as at Montrose, the main shaft is heated by placing the hot water tanks in or near it; and at St. Anne's, the chimney of the furnace used for warming the wards passes through it and serves to cause an up-current. The expense is in these cases less than when special fires are lighted for this purpose. At the Derby Asylum, Sylvester's method is in use. At the Prestwich Asylum, a simple process of ventilation by extraction is in operation. The fresh air is admitted from the basement through openings in the floors closable at will. The vitiated air passes through openings placed near the ceilings in the lower, and in them in the upper wards, into shafts leading to the roof. On the top of these is fitted a revolving fan, working by the wind and turning a pumping screw in the shaft, by means of which the air is extracted from the wards. The apparatus, called an Archimedean screw ventilator, is so fitted that the slightest breeze suffices to turn it; and in very calm weather, the heated air from below forcing its way up is sufficient to set it in motion. This process of ventilation by extraction is inexpensive, and is reported to answer very well.

In the large majority of American institutions artificial ventilation by propulsion is used, and in winter is trusted to almost entirely; the windows at the New York State Asylum at Utica, for instance, being fastened down during the winter months. In this system, the air is in the winter driven by a large fan worked by machinery over steam pipes, and thus, warmed, enters the wards by openings, near the ceiling at the Utica Asylum, and near the floor in the majority of the institutions. The vitiated air leaves by other openings, generally near the ceiling, but at the Utica and New Jersey institutions near the floor, which pass into shafts opening in the roof.

At the New Jersey Asylum, for some wards, a system of extraction by means of heat is in use in addition to the system of propulsion. In summer the windows are opened, and the fan becomes only an accessory to natural ventilation. At Washington Asylum, the fan is used only in summer—in winter the double system of shafts, and the difference in temperature between the atmosphere inside and out, serving for the purposes of ventilation. At the Frankfort Asylum, the system of propulsion by means of a fan is in use in the wards devoted to the more excited patients. Artificial ventilation by propulsion seems in America to have succeeded more thoroughly than the same system when employed in Europe. At the Lariboisière Hospital, Paris, those wards in which this system is employed are far from sweet, and the system has been a total failure in other

\* At Frankfort a somewhat elaborate system of ventilation by propulsion is in use in wards for the excited class; and at Quatre Mares there are in the wards for the same class special openings for exit leading to a shaft and so to the roof, but not artificially warmed.

† At Lincoln, an apparatus exists for warming these shafts, and so causing an upward current; but it is not found necessary, and is never used.

other institutions. In the cold weather of America, when it is difficult to open windows without lowering too much the temperature of the room—and with the form of building adopted for American asylums, with its enclosed corridor and large number of single rooms—the system is undoubtedly successful, and perhaps the best method that could be employed; but it is costly, and quite unnecessary in buildings constructed on the pavilion, or even the single corridor or ward plan, in milder climates.

*Cubic Space.*—In dealing with asylums, it will, as a rule, be sufficient to calculate the cubic space only, without taking note of the superficial area; since the rooms, whether in English or Foreign asylums, seldom, if ever, exceed a height of 12 or 14 feet, and the fallacy which arises from overlooking the fact that, to secure any given cubic space by simple loftiness of a room, does not imply that adequate superficial area is also given, is not here felt. With rooms under 15 feet high, if the cubic space is sufficient, the superficial area must be sufficient also. The English and Scotch Commissioners in their suggestions to architects (Appendix A, Nos. 1 and 2), direct that "the general height of each story should not be less than 11 feet," and proceed to fix, as the minimum dimensions—550 cubic feet for associated dormitories, 770 cubic feet for single dormitories, and 220 cubic feet for day-rooms; the latter exclusive of galleries or corridors. The dormitories appropriated to sick bed-ridden patients are to be of "somewhat larger dimensions."

The Association of Medical Superintendents of American Institutions for the Insane propose (Appendix A, No. 3) "that no chamber for the use of a single patient should ever be less than 8 by 10 feet, nor should the ceiling of any story occupied by patients be less than 12 feet in height"; dimensions which give 960 cubic feet for a single patient, or 260 in excess of that suggested by the English Commissioners.

The following table, in which the size of the rooms is given, as stated by the medical officers in charge of the various establishments, will show that the minimum given by the English and Scotch Commissioners, has, as a rule, been exceeded in Great Britain; whilst these dimensions are small, compared with those in some of the American and Continental institutions:—

Asylum.	Single Dormitories.	Associated Dormitories.	Day Rooms with Corridor.	Hospital.	Remarks.
Lancashire County Asylum, Prestwich.	900	650	{ 750 males 620 females }	2,000	Hospital consists of single and associated rooms, averaging about 800.

In the new lunatic asylum, Madras, 1,500 cubic feet is the space fixed for European patients.

In

In the Perth Asylum, and in several other institutions, the number of cubic feet contained in each room is painted on the door; it is therefore known to every officer and servant; and a visitor by counting the beds can ascertain at once if the space allowed for each patient is sufficient.

#### DAY AND NIGHT ACCOMMODATION.

Under this heading are to be considered—

1. Day or sitting rooms.
2. Dining-rooms.
3. Dormitories.
4. Airing grounds.

*Day and Dining Rooms.*—It need scarcely be said that in all modern asylums separate rooms are provided for the patients by day and night, and that they do not sleep in the rooms in which they live. In the corridor or ward system in its simplest form, as in some of the corridors at Colney Hatch, the corridor is used as sitting-room and dining-room; and in most of those asylums in which provision, other than the corridor, is made for sitting-room, the accommodation for dining and for sitting, is as much as possible separated, the patients dining in either the corridor or sitting-room, as may be most convenient. At the new asylum at Hamburg, the corridors, which are usually little more than passages of communication—the patients spending their time in the special day-rooms leading from them—are fitted with tables which fold flat against the wall, and at dinner time are pulled out and spread for use, and the corridor thus becomes a long dining-room. As asylum construction has advanced, there has been manifested—whatever the special form of the asylum—a desire to provide special dining-room accommodation. In the American asylums the day and dining rooms—both completely distinct, and used for the purposes indicated by their names—open from the corridor, a special dining-room being provided for each ward. At the new asylum at Ghent, at Frankfort, and at the new asylums for the Department of the Seine, the same plan of separating day and dining rooms has been followed; and so general has this become that it may be laid down as an established, and almost universally recognized principle of asylum construction. It is now the almost universal opinion in England, among those interested in asylum management, that a general dining-room, to which all the patients can go at meal hours, is much preferable to dining-rooms placed in connection with each ward; and both the English and Scotch Lunacy Boards have suggested this in their instructions to architects. (See Appendix A, Nos. 1 and 2, Sec. 9.)

Such dining-rooms are in use in several English and Scotch asylums,—having been added to asylums already in existence, as at the Sussex, Prestwich, Montrose, Stafford (for the male side), and part of Colney Hatch,—or having formed part of the original plan, as at Cupar, Fife, Murthly, Brentwood, Haddington, and Macclesfield. At the Sussex Asylum, Hayward Heath, the Prestwich Asylum, and Montrose, there are two dining-rooms, one for males and the other for females. At Lincoln 100 of each sex are accommodated in two large dining-rooms, but usually one room serves for both sexes, who use opposite sides. So far as has been ascertained, a common dining-hall for the patients does not exist in any asylum out of Great Britain, except the new asylum founded by Guislain at Ghent. It is entirely for males and receives 450 inmates; and of these upwards of 200 dine together in a common dining-hall. The violent, the dirty, and the idiots, of whom there is a large number, have each a dining-room.

*Dormitories.*—The dormitory accommodation provided in almost all asylums is both in single rooms and in associated dormitories; the proportion which the former bear to the latter varies considerably.

When asylums were first built, the large majority of the patients were accommodated in single rooms; the opinions then entertained as to the character and treatment of the insane, and the style of building of which the asylum was an elaboration—the monastery, or the prison—both tending to make the cellular system prevail. Whilst, however, all authorities on prison management, have, from year to year, advocated the more complete isolation of the prisoner from his fellows, the views of all the leading men on asylum construction, have gradually tended in an exactly opposite direction; and association is now almost as fully advocated for the insane, as isolation is for the criminal. Still, it is universally agreed, that certain classes of patients—the violent, the noisy, the dirty, and the demonstrative—should be accommodated in single rooms, for the benefit of themselves and the other inmates of the asylum; but it is by no means agreed what is the proportion which it is necessary to separate from the others, so that peace and quiet may reign throughout the asylum at night. The question is an important one, as influencing considerably the form of construction—it being much more expensive to build twelve single rooms, each to contain one patient, than one room to contain twelve; whilst the latter will be ventilated with much greater ease than the former.

The English and Scotch Boards in their instructions (see Appendix A, No. 1 and 2) state, that “the proportion of single rooms throughout the asylums need not exceed one-third”, and that the “single rooms should be chiefly in the wards appropriated to the excited and sick”, and “a few should be available for special cases in other wards”; but it is considered by most superintendents of English asylums, that the number here mentioned is unnecessarily large, and that an asylum may be conducted with quiet and order in which

the proportion of single rooms is much less. In no British asylum for pauper patients—so far as is known—is the number so large. The following table will show the proportions which exist in some of the more recent institutions:—

Derby.....	1 to 4	—or four patients accommodated in
Prestwich .....	1 to 6	associated rooms for every one in
Bristol .....	1 to 5	a single room.
Three Counties.....	1 to 12	
Sussex .....	1 to 7	
Worcester .....	1 to 6	
Colney Hatch .....	1 to 6	
Essex .....	1 to 4	
Leicester .....	1 to 4	
New Surrey .....	1 to 11½	
Montrose .....	1 to 7	
Cupar .....	1 to 5½	
Murthly .....	1 to 4	
Broadmoor (criminal) ...	{ 1 to 4 male.	
	{ 1 to 2 female.	

Dr. Robertson, of the Sussex Asylum, thinks 1 to 7—the proportion at the institution under his care—a little too small, but believes that 1 to 6 would work well. Dr. Howden also considers 1 to 7, in the institution under his care at Montrose, as too small. But Dr. Brushfield of the New Surrey believes that the comparatively small proportion which exists in the asylum under his care, 1 to 11½, will be quite sufficient, even when the asylum is full, which it is not at present. At the Fisherton House Asylum, which contains upwards of 450 pauper patients, 200 of whom are criminals, there are no single rooms of any kind.

It is somewhat curious that the proportions considered necessary in France and in America should differ from that existing in Great Britain in opposite directions. In the American asylums these are—

New York State.....	6 to 1	—or six patients accommodated
Northampton (Mass.) State.....	3 to 1	in single rooms to every one
New Jersey .....	3 to 1	accommodated in associated
Pennsylvania .....	3 to 1	rooms.
Washington .....	4 to 1	

whilst at the new French asylums they are—

At St. Anne's.....	16 to 600
Ville Evrard .....	6 to 600
Evreux .....	8 to 500
Quatre Mares .....	8 to 400
St. Yon .....	15 to 800

proportions even more strikingly small, as compared with the English, than the American are large. Dr. Morel, one of the most eminent French alienist physicians, considers that any asylum may be properly managed with one single room for 50 patients. And M. Parchappe, late Inspector of Asylums in France, in his *Treatise on Asylum Construction*, states, that 1 single room for every 12 males, and 1 for every 11 female patients is ample. At Guislain's Asylum, Ghent, the proportion is 24 to 480, or 1 to 20; whilst in the Dutch and the new German asylums the relative numbers are—

Hamburg .....	8 to 600
Göttingen .....	1 to 12
Frankfort .....	1 to 4

In these numbers the proportion is given for indigent patients only: in all countries the proportion of single rooms for paying patients is much larger.

A larger or smaller proportion of single dormitories will be necessary, according as the asylum is intended to contain acute or chronic cases; and cases of a special class, like those for which the Broadmoor Asylum was erected, require a proportionately large number of single rooms: but all the asylums mentioned above, with this exception, are general asylums to accommodate all classes of cases, and as such are on one level in their requirements. The cause for such a difference in the proportion cannot be found altogether in the difference in temperament and character of the insane, as was suggested frequently in America; for, though the American insane are undoubtedly, as a rule, irritable as compared with those in Great Britain, and may so require more separation, whilst the French and Germans are more quiet and manageable, and may do well with less,—still, the difference in the proportion of single and associated dormitories is too great to be accounted for on this ground only. The habits of the lower class of the population of the different countries must be taken into account in any attempt at an explanation of this great difference.

In France and Germany the lower classes are much accustomed in their ordinary life to sleeping in association. The entire male members of the family, or several of them, occupy one dormitory; and the liking for privacy in bed-room accommodation, which is felt among all classes except the very lowest in England, does not exist in France; consequently a patient in a French asylum would accept the fact of accommodation in an associated dormitory as natural and right. On the other hand, associated dormitories are exceedingly uncommon in America. The mass of the population are better off, and able to procure for themselves better houses than in England; a great privacy

in

in bed-room accommodation therefore exists; so that a bed in an associated dormitory would be considered in many cases as a degradation, and be the cause of irritability and perhaps violence. It must also be remembered that the American asylums contain many patients who, though paupers in reality, are by the kind laws of the States called by the name of indigent only, and are provided for with a liberality, even in the matter of bedroom accommodation, which is not accorded to the pauper class in England.

In some of the English asylums, as at Colney Hatch and Worcester, the associated dormitories, which are additions to the original building, are of large size. 86 patients are contained in one room at Colney Hatch, and 78 in two rooms at Worcester. At Prestwich 44 are accommodated in a single dormitory in the new block of buildings; but in the more recent asylums, as at Brookwood and Murthly, the number seldom exceeds 20, and from 8 to 12 appears to be the more usual number. In the new French and German asylums the dormitories are generally made to contain from 12 to 20; the small dormitories containing from 3 to 6 patients, which are frequently seen in English asylums, are not common abroad.

*Airing Grounds.*—In some of the older asylums the airing courts—small yards within high walls—were all the ground which it was thought necessary to possess for the exercise and amusement of the patients; and one small patch was allotted to the patients of every one, two, or three wards: but in later years, without discarding the courts, it has been thought necessary to modify greatly their character in many asylums, and to enclose an extensive amount of land as pleasure grounds and gardens for the patients, in which they may take walks accompanied by the attendants. In most English asylums the number of airing grounds is from two to four for each sex. In the large asylums only, as at Prestwich, four are found. At Colney Hatch the immense population renders a larger number absolutely necessary: there are seven on each side in this asylum. At the Sussex County Asylum there are three on each side,—one for the great mass of the patients, one for the more violent class, and one for the infirm and sick. The same arrangement exists at the Old Stafford Asylum, and at the Essex and Derby; and if the airing yards are sufficiently spacious, this number would appear to fulfil all requirements. In some recent asylums, as at Burntwood, Cupar, Murthly, and Montrose, a still smaller number—two only—have been provided on each side, one for the violent and one for the remaining population; but in the case of the two latter asylums extensive grounds for exercise have been also provided.

In the French asylums the patients are generally divided into six or seven classes, and for each of these an airing court is set apart. At Evreux there are seven for each sex, at Ville Evrard eight; and at the former, in addition, large general grounds exist. At Quatre Mares there are seven, at Frankfort and Hamburg four for each sex. At Meerenberg, in Holland, besides large general grounds, there are twelve airing courts for each sex, all beautifully planted and containing aviaries, &c., and what is very remarkable and, it is believed, unique, not one is walled: each has a wooden paling from 3 to 4 feet high separating it from the others and from the surrounding grounds. Dr. Everts reports that the escapes, and attempts to escape are not more frequent here, than in other institutions. It must be remembered that several of these courts are for paying patients. According to the experience of English asylum superintendents, such classification of the patients in airing courts is not necessary. The mixture of patients occupying different wards is found to act well, the change of face and companionship being beneficial to all classes; whilst the substitution of one large airing court for several small ones, affords room for exercise which was before impossible, and gives an idea of freedom which before was never felt. These reasons have led to the suggestion of the Commissioners for England and Scotland, that "the enclosed airing courts need not be more than two in number on each side, and should be of ample extent, so as to afford proper means for healthful exercise." (See Appendix A, Nos. 1 and 2.)

The airing grounds in most modern asylums are extremely cheerful, and are all planted with trees and laid out as gardens. In some cases gardens exist only in those devoted to the more quiet classes of patients; but in others, and especially on the Continent, even the courts set apart for the most violent are beautifully planted, as at Meerenberg and Quatre Mares. At Guislain's Asylum, Ghent, the airing yard for the most refractory class is perhaps the most beautiful and the best kept in the asylum. The borders, when this place was visited, were full of flowers, and these are seldom or never destroyed by the patients, who keep to the walks, and do not trample on the beds. At the Maison de Santé "Le Strop," near Ghent, the violent patients are kept from walking over the beautifully arranged flower beds by a piece of thin galvanized wire fixed at a height of about three feet to posts set at the corners of the beds. In some asylums, as at Broadmoor, small plots of ground are given to the patients, who cultivate them with interest and pleasure. The courts in many asylums, besides being well planted, and so furnishing gratification in themselves, afford, either from the slope on which they are placed, or by sinking the walls in a ha-ha, extensive views of the surrounding scenery. In almost all, either verandahs, summer-houses, or covered sheds are provided as a refuge from both sun and rain. At the Derby Asylum a tent is fixed in the large court, in the summer months; and at Sussex large canvas awnings are spread. There are fixed seats in plenty, pet animals and birds, and in many, skittle alleys, ball or racket courts, and croquet grounds.

In almost all English asylums, water-closets have been placed in the courts, with urinals for the men. These are generally in small buildings at the corner of the court furthest from the asylum, and are supplied with water from a separate tank placed over them. At the Gloucester Asylum, earth-closets are in use in the courts.

At

At the new asylums at Ville Evrard and Evreux, the tinette or French sewage tin is placed in small buildings at the extremities of the airing courts, and removed every morning through a hole in the wall of the court. A cart traverses a sunken road extending round the outer walls of the courts, and collects the tins from all the closets.

In America, the airing courts, as in English asylums, are only two or three in number on each side. At the Government asylum there are no special courts, but the general grounds are of large size and surrounded by a wall. They are very beautiful, and contain, besides deer, rabbits, &c., a menagerie in which there are bears, jaguars, raccoons, grey squirrels, &c.; there is also an apiary. The patients are never allowed in the grounds without attendants.

The general airing grounds which exist in all the American State asylums,—which are surrounded by only slight fences, often of wood, contain generally grass and woodland, and are frequently beautifully kept,—are becoming common now in Europe. They may be seen at Hamburg and Frankfort, and at Meerenberg, (where the wood is extensive and singularly beautiful, and where the grounds are ornamented by a lake in which swim numerous water fowl). Such grounds exist also in England, at the Sussex, Essex, Bootham Asylum York, Friends' Retreat, Colney Hatch, Leicester, Northampton, New Surrey, and several other asylums. They are found to be of especial benefit to convalescent and quiet patients. In the American institutions, special small buildings used as reading rooms, summer house, and museums of natural history and curiosities for the amusement of the patients, are placed in the grounds.\*

#### FLOORING, FITTINGS, AND FURNITURE OF ROOMS.

It is only possible in this report to note briefly the different particulars which come under this heading; and in doing so it will be best to mention such as are common to all the ordinary rooms of an asylum, and subsequently those which are to be found in dormitories, day, or dining rooms separately.

Wooden floors are almost universal in asylums, but at Quatre Mares and St. You the day and dining rooms are paved with brick, and are in consequence cheerless and cold. In the Derby Asylum, slate floors are used for the rooms for dirty patients; and for the same class, floors of cement are in use at Hamburg, but seem to possess no special advantages.

In a few of the older English asylums, as Stafford and Gloucester, the floors are of oak; but deal has been used in most modern English asylums, whilst pine is in common use in the American and in some Continental institutions. In almost all the American, in some of the French—Quatre Mares, St. You, and St. Anne's among the number—and in most of the more modern German institutions, the floors are waxed or oiled and subsequently polished. This is rare in English institutions, though it may be seen occasionally, as at Stafford, and seems to serve little purpose except in the rooms for the more dirty patients, where offensive matters are thus prevented from soaking into the wood, and the floors are more easily cleaned. The arguments which are used as to the advisability of polished floors in hospitals, have little application to asylums.

In many English institutions—among them Worcester, Sussex, Essex, Derby,—the walls are left unplastered; but in the newer Scotch asylums, some of the English, as Bristol, Prestwich, and the New Surrey, and the American and Continental asylums, the walls throughout are either plastered or cemented. The walls of almost every asylum, whether plastered or not, are coloured, painted, or papered. In Great Britain, the corridors and day rooms are generally painted over the lower third, and a coloured wash applied to the upper, a line of bright coloured paint dividing one from the other and serving for ornamentation. In some asylums the coloured wash is mixed with size before application, and is found to last much better; and in others it is thought better to paint the upper part as well as the lower, a different colour being generally chosen; this latter is the method most usually adopted in France. The colouring of the rooms in German asylums is generally very pretty and effective. In America, the walls are as a rule painted throughout of some light colour, a pale brown or drab. At Meerenberg the day rooms are painted and the dormitories washed white. The same mode of colouring is in some institutions used for dormitories as for day rooms; but in England it is not uncommon to see both single and associated dormitories papered with pretty neat patterns; and at the new asylums at Murthly, Cupar, and Montrose, every room is papered. At the two latter varnish is applied over the paper; it gives increased brightness to the pattern and allows of washing. At Cupar, for the closets, bath-rooms, corridors, and amusement rooms, a paper of a square encaustic tile pattern has been chosen, and is singularly ornamental. The general effect of the colouring is decidedly pleasing. It is usually considered advisable to use ordinary white limewash for the walls of rooms occupied by the dirty class of patients.

The mode of furnishing the day or sitting rooms of asylums varies very much in different countries and in different institutions. In most of the French institutions serviceable strong furniture—a fair supply of tables and chairs, the latter generally with rush seats, is placed in the rooms; and this is almost all. The same may be said to be the

\* In the Museum in the grounds of the New Jersey State Asylum at Trenton, is placed as a curiosity a specimen of the "English asylum knife." The peculiar shape of this well-known instrument—its utter dissimilarity to an ordinary table knife, and its sharp edge for about an inch contrasting strongly with the rounded bluntness of the remaining portion, are strongly likely to suggest self immolation to anyone sane or insane into whose hands it may fall.

the general character of the furniture in America and Germany; but in some institutions in both these countries, much more ornamentation and comfort are attempted. At Frankfort there is a plentiful supply of pictures for the walls, plants in the windows and in pendent baskets, and birds in ornamental cages, and the chairs and sofas are padded and made comfortable. At Göttingen, most of the seats, both chairs and sofas, are of cane, light and pretty, and the general furnishing is excellent. At Hamburg the walls are ornamented with pictures, the furniture is good and comfortable, and rush mats are placed along all the corridors. At each of these latter institutions there are clocks in the wards, which are much appreciated and seldom or never broken by the patients. At New Jersey and Utica, in the wards devoted to more quiet patients, there are comfortable chairs and sofas, and abundance of pictures, small statuary and plants; and considerable efforts are made to make the wards homely and cheerful. In most American asylums the rocking-chair is to be seen and is apparently liked. At Washington, especial care has been taken in furnishing the wards; each corridor is fitted and furnished with some special wood, cherry, oak, laurel, &c., and is named from this instead of being numbered as usual. The seats are handsome and good; there are many single and multiple arm-chairs; a plentiful supply of plants; well made book-cases for the ward libraries; aquaria; cages for birds, flying squirrels, and other pets; and, as at New Jersey, a little fountain constantly playing, in which swim gold and other fish. But it must be confessed that, on the whole, the sitting-rooms and corridors of English institutions have an air of homeliness and comfort which contrasts favourably with all, except such model asylums as that at Washington, and a few other American and Continental institutions.

The tables in English asylums are generally well polished, and sometimes, as at Leicester and Colney Hatch, covered with coloured cloths. The chairs are substantial and good, generally of the Windsor pattern, and with arms. There are sofas and chairs stuffed with hair, and covered with American cloth; multiple arm-chairs, or seats with divisions at intervals, which give to each patient his own place, and arms to support him, and prevent any one patient lying down and monopolizing the room of three or four; folding-chairs, fitted with sacking seats, as at Sussex; wicker-chairs, as at Leicester; and, in fact, every contrivance to make the patients comfortable. Along the centre of each corridor is a strip of matting or linoleum. In the windows there are a profusion of plants, either standing in smartly painted pots, or hanging in pendent flower-baskets, aquaria, fern cases, birds in aviaries or cages. Cases of stuffed birds, and cabinets for the ward-library, are placed in convenient places; and, in the majority of the women's wards are to be seen net or other covers for small tables, anti-macassars, and other knickknacks, worked by the female patients. To keep up, both in winter and summer, a supply of plants for the wards, handsome green-houses have been erected at several of the English pauper asylums.

The supply of pictures is almost invariably good; and in many institutions there are high class prints, and good photographs and etchings, all framed with taste. Plaster statuary is an effective and common ornament; and, occasionally, as at Colney Hatch, a little coloured glass in the windows adds an extra effect. Looking glasses are generally to be seen, and are much appreciated; and maps seem almost always to interest the patients. Occasionally a small drinking fountain is fitted to the day-room or corridor wall, as at Cupar, and serves to allay the thirst which is often a prominent symptom in some forms of insanity.\* In most asylums there are closets in the day-rooms, or one small store room is set apart for patients' extra clothes, men's caps and winter cloaks, and women's bonnets and shawls; and, in some asylums, a row of pegs for caps and bonnets is placed in each sitting-room or corridor, and found convenient and safe. By far the greater part of all asylum furniture is made, both in European and American institutions, in the asylum itself. The tables, sofas, and some forms of chairs,† as well as the stands for flowers, and the frames for pictures, are made in the carpenters' shops, frequently by the patients; and the sofas and chairs are stuffed and restuffed by the asylum upholsterer and his "patient" assistants.

The dormitory furniture is, in most English asylums, as good and well-fitted for its purpose as that placed in the day-rooms. In the best furnished asylum dormitories there is a bedstead with all its necessary belongings, a small box to serve as seat for the patient, and to contain his clothes at night; a washstand fitted with jug, basin, and pail; and a small slip of carpet by the bedside, to stand on when dressing. Sometimes chairs are placed both in the single and associated rooms. On the principle, which must be kept in mind in the furnishing as well as constructing an asylum, of making the patient as much at home and his surroundings as little exceptional as possible, simple washstands, fitted with ordinary crockery, are placed in all the single rooms occupied by patients to whom it would be safe to entrust them. In the associated dormitories, multiple washstands are generally placed in the centre of the room. In some asylums, as at Prestwich, Cupar, Murthly, special lavatories outside the rooms are provided. Brushes and combs, and looking-glasses are supplied, whether the patients wash in their rooms or in lavatories. In the majority of asylums the towels are used more or less in common; but in others, each patient is provided with a separate towel, which

\* In some French asylums, a tin of weak cocoa is placed at the entrance of each pavilion for the same purpose.

† Common wooden or Windsor chairs can, as a rule, be bought cheaper than they can be made in the institution.

which is hung by the side of his bed, as at the Parochial Asylum at Glasgow, or placed over the small box containing clothes as a cover, as at Meerenberg. Earthenware chamber utensils are generally used; the india-rubber and gutta-percha ones are found to wear out, and to be little necessary except for epileptics who drop those made of earthenware and break them by accident. The dormitories are seldom ornamented with pictures.

The dormitories in the American asylums have all the furniture which is considered necessary in the English institutions; and many are models of comfort and cleanliness. The washstand is almost always placed in the room, and this is thought preferable to separate lavatories. Earthenware utensils are almost universally used.

In France, the small boxes for clothes by the side of each bed are fitted also to contain the chamber utensil, which is often pewter, or some other metal. The dormitories in French asylums seldom have carpets by the side of the bed, and the patients in most of the newer asylums wash in special lavatories; and, instead of a small box placed by each bedside to contain the clothes of the patient, large boxes are placed in convenient positions in the dormitories, which serve as seats for, and contain the clothes of, from six to eight or ten patients.

The dormitories in German asylums, as a rule, have no furniture except the beds and tin or pewter chamber utensils, and look very bare. The washing is done in special lavatories, as at Hamburg and Frankfort; or in a row of basins standing on a wooden shelf, and supplied with water from a tap in the corner of the room, as at Göttingen. In some asylums, however, as at Frankfort and Illenau, the associated as well as the single dormitories have for each patient a small box for utensil and clothes, and a rush-bottomed chair.

The bedsteads and bedding in use in asylums may be discussed at greater length. In American institutions, almost without exception, the bedsteads are of polished wood, and fitted with removable wooden slabs or lath bottom pieces, which can be washed or scoured on becoming dirty.

In France and Belgium the bedsteads are almost invariably iron, and fitted with elaborate springs, made either of thin slips of wood strung by means of leather on galvanized iron wire, or of coils of wire of an hour-glass pattern.

In each country the form of bedstead in use is believed to be best fitted for its purpose.

In Germany the bedsteads are usually of painted wood, with removable slab bottoms; and the same form is in use at Meerenberg, in Holland, where all the bedsteads are painted white, the paint being thick and shining, and looking almost like white enamel.

In Great Britain several varieties of bedsteads are in use. At Derby, Bristol, Gloucester, the Three Counties, Cupar, Murthly, Colney Hatch, and other institutions, iron bedsteads are used; and at some institutions a decided preference is expressed for them as more cleanly; but in the majority of British asylums—Sussex, Essex, Worcester, Prestwich, Lincoln, Leicester, Stafford, and York Lunatic Hospital—wooden beds are to be seen, well and strongly made, and polished; and their appearance is decidedly in their favour. It is stated that if well made, they are more cleanly than those of iron; that no cracks and crannies exist in which vermin can harbour; that they are safer with violent patients than iron; that they require little repair or repolishing, whilst iron requires constant repainting; and, lastly, that they can be, as indeed they usually are, made in the asylum, and so new wards, or a new asylum, can be supplied from the asylum workshop.

The bedstead bottom is usually of sacking, occasionally laced, but more often fitted on iron bars, which are fixed to the bedstead by screws, and by means of which the sacking can be kept constantly tight. The sacking is easily removable for scrubbing, and can be fitted to either iron or wooden bedsteads. In some institutions webbing, crossed and screwed to a removable wooden frame, is used; in others removable wooden slabs only. The iron bedsteads have usually thin plates of iron at the bottom.

The bedsteads are in some wards in French and Belgian asylums fitted with curtains, and, in the female wards in some English asylums, have valances. For special cases, bedsteads of different patterns are made. For epileptics, low bedsteads, about a foot or less from the ground, are used, and seem to serve every purpose. Sometimes ordinary bedsteads are fitted with removable iron or wooden guards to the side, to prevent patients falling out during a fit; and in some institutions cribs, more or less padded, are used; but these do not, as a rule, seem to be considered necessary. At the Lincoln Asylum ordinary bedsteads, made low, are used for those whose fits generally take place during the day, and cribs for those who are attacked at night.

In English and American institutions, where the night attendants wake all wet and dirty cases at fixed times, and lead them to the closets, special bedsteads are seldom used for this class; but in French and Belgian asylums, the bedsteads for these patients are specially made with zinc or tin bottoms, sloping to a central hole, under which a pan is placed to receive the urine, which trickles through. This arrangement may occasionally be seen in British institutions; sometimes, as at Cupar, canvas, perforated with several holes, is nailed or otherwise fastened on to a removable wooden stretcher, and used instead of zinc.

It is rare to find beds fastened to the floor, even in the divisions for the most violent patients; but the practice is not altogether unknown in England. It is in use in some rooms at the New York State Asylum, Utica, and in the special seclusion rooms at Ville Evrard, and other French asylums. At Meerenberg, the beds for the dirty patients are fixtures.

The material for bedding is usually a hair mattress in British institutions,—alone when the bottom to the bedstead is of canvas, or on a straw palliase when it is iron or wood.

wood. In the American and German institutions, there are usually both hair mattress and straw palliasse; and in French and Belgian asylums, flock beds, over straw palliasses, are used. Very few institutions use straw alone, and coir is very rarely employed, except for special cases. At Hamburg the beds are straw entirely, stuffed in a peculiar way so as to be elastic. At Montrose chaff is used; and some of the beds at the Three Counties are of straw only. For dirty cases the provision varies very much. Sometimes hair alone is used. The mattress is made in three pieces, and the middle piece when wet or dirty, is removed, the hair being washed and dried. Coir is used at Prestwich; sea grass, which can be bought for about 1d. a lb., at Worcester, Lincoln, Evreux, and Ville Evrard; colza seed husk, at Ghent; and straw bags, in most American asylums, and at Cupar.

In some asylums mackintosh covers are placed over the mattresses; or the mattress is covered in mackintosh, and subsequently in ticking, and made with a hole in the centre, through which all fluid may escape.

In some French asylums deep cribs are filled with sea grass, and tightly stuffed. This is simply covered with a sheet; the portion found wet is removed every morning, and the remainder smoothed, and again covered with the sheet and used.

The pillows in asylums are usually made of the same materials as the beds. At the New Jersey State Asylum, those for destructive patients are of coarse sponge, which is first cut into small pieces, soaked in glycerine, and squeezed almost dry by passing it between rollers; it afterwards remains soft. It is about as cheap as horse hair, and does not mat; and if the pillows are torn by the patients, and the stuffing scattered, it is very easily collected.

At the Lincoln Asylum the pillows for the epileptics are covered with open cheese cloth, and are loosely stuffed with horsehair, so that the patient turning on his face in a fit may be able to breathe through it.

Especially care seems to be taken that the counterpanes or coverlets should be coloured, and as bright and cheerful as possible. Scarlet and white, scarlet and black, in distinct patterns, blue and yellow, may all be found; but in some asylums plain white is preferred.

In some few institutions the bedding is folded for the day, in the usual military style, but this is by no means common; in most, the bedding is left as much exposed as possible for an hour or so, and then made for the night. In a few asylums the lower sheet is placed on the bed in its ordinary position, the upper being folded around the blankets and counterpane at the bottom of the bed. At Meerenberg both palliasse and mattress are set up edgewise on the bedstead, and the bedding folded in the usual barrack style.

In those asylums in which there are special dining-rooms, the walls are painted or coloured after the same fashion as the sitting-rooms. Plain tables, with benches, are generally considered sufficient furniture. In the vast majority of asylums, white table cloths are laid at dinner-time; and at Montrose small jars, in which natural or artificial flowers and evergreens are placed, are used to ornament the centres of the tables during meal-times. Dining-rooms are, as a rule, fitted with cupboards, in which the forks and spoons, as well as plates, cups, tumblers, &c., are kept. The knives are in most institutions collected immediately after meals, counted, and placed in a special box, which is locked by an attendant's key.

Some of the American asylum dining-rooms are fitted with small closets, in which coils of steam-piping are placed; and the plates are warmed in these, whilst the joints stand on a dish at the top, and so are kept warm. The order and neatness with which the cupboards for crockery, glass, &c., are kept, is remarkable.

In British asylums the meals are usually served on neat crockery. Mugs are used at dinner, and ordinary cups at tea; and sometimes the salt-cellars and pepper-casters are of crockery also. Occasionally a few wooden plates, or tin drinking cups, are to be seen; but these are the exception. In many of the asylums—Worcester, Three Counties, Bristol, &c.—the crockery is made specially for the institution, and bears the initials of its name. At Cupar, and one or two other places, the crockery is all very thick and heavy, and made specially for asylum use by Donald and Co. of Edinburgh. The male and female departments have a different pattern.

The knives used in asylums in Great Britain are usually of a peculiar pattern, and sharp only for about one inch near, but not at, the point. Sometimes knives of some metal composition are used, which cannot be sharpened; but many asylum superintendents laugh at these precautions; and at the Sussex, New Surrey, and other institutions, steel knives, differing little or nothing from those in ordinary use, are given to the patients. The forks are generally three-pronged, and made of composition.

In America and France the crockery is almost always white. In the French institutions a few ordinary knives are used; but from the nature of French cookery, spoons and forks are generally all that is necessary.

In America the English "asylum knife" is laughed at, and the majority of the patients use ordinary table knives and forks. Common glass tumblers are used frequently, instead of mugs.

For those patients who cannot be trusted with knives, (generally a minority,) the food is cut by attendants, and spoons or forks are given to them.

In most asylums in which the dining-rooms are at a distance from the kitchen, care is taken to keep the food as hot as possible, whilst carrying it through the corridors and passages. In the American asylums there are steam-tables and closets in the kitchen, in which the food is placed and kept hot whilst being prepared for the wards.

It

It is carried in bright, tightly-closed tins, fitted with shelves, and placed on a waggon running on a tramway in the basement, and ultimately raised, by means of lifts, to the wards. In some of the French asylums the dishes are placed in tin closets, made to close tightly, and set on wheels, and so taken to the wards.

In England special tins are provided, which patients or attendants carry; sometimes these are fitted with false bottoms for hot water, as at the New Surrey. The refuse is sent back to the kitchen from each dining-room in the tins.

#### STAIRCASES AND STAIRS, BELLS.

*Stairs*—In almost all English asylums the stairs are of stone. In America iron is used. The form of construction is in both the same. The flights are all short and straight, and the well is built up. Wooden handrails let into a groove in the wall are fitted to most stairs. At the New Surrey the handrail is iron. In some English asylums the well in the centre of the staircase is made use of as a ventilating shaft; and at Washington it is pierced with dust-tubes reaching from each landing place to the basement. Closets for clothes are also placed in it.

*Passages*—The passages leading from one part of an asylum to another are, in America, generally of stone. In England and the Continent brick, red and black, is more used, laid in patterns. In some asylums Minton's Unglazed Tiles are used for passages; they look well and are not expensive.

*Bells*—In the greater number of asylums there is no arrangement of bells throughout the establishment, but at a few they are used. At the Glasgow Royal Infirmary a dial telegraph in the entrance hall near the superintendent's office summons attendants from any ward required; and there is a similar arrangement at Worcester, near the door of the board room. At Murthly a bell and a speaking-tube pass from every corridor to and from the house surgeon's room. At Evreux an elaborate system of electric bells connects the superintendent's office with every part of the house; and at the New Surrey, the superintendent's house, placed at a distance, is connected with the asylum by an electric bell, which is only used on an emergency.

THERE are three classes of the insane for whom provision of a special kind is made. These are:—

1. The convalescent and more quiet patients.
2. The sick and infirm; and
3. The violent and excited.

#### 1ST.—CONVALESCENTS AND MORE QUIET PATIENTS.

In some countries special asylums have been erected for the more quiet class of the insane. The advisability of separating the different classes, and their treatment in different asylums, has already been discussed, so that it will be only necessary to examine here what provision is usually made for them when they are retained in an ordinary asylum.

In very many cases but little difference in accommodation is made for the quiet and chronic patients, but at several English asylums, rooms have been built specially for them. At the Worcester Asylum, a special block to contain 100 quiet patients has been erected. It consists of two stories. On the ground floor is a corridor with six single dormitories; at one end a day-room, and at the other a dining-room, with a small attached kitchen, scullery, store-rooms, &c., opening from it; and on the upper floor two large associated dormitories and six single ones, so that the block forms almost a complete asylum. The main part of the cookery is, however, done in the ordinary hospital kitchen. The rooms are nicely furnished, and are in every way comfortable. Of the 100 patients, 50 work in the laundry, 35 sew, 12 work in the kitchen and scullery, and 3 clean the rooms.

At the Prestwich Asylum new buildings for 500 patients of the more quiet class were erected at a cost of £60 per patient, exclusive of furnishing. They are connected with the old buildings by long corridors from which open single dormitories, and consist of two blocks, each containing 250 patients. On the ground floor are four day-rooms, two large and two small, opening one into the other; the other two stories above these consist of dormitories only, all being associated, and the largest containing 44 beds. The closets, lavatories, urinals, and bath-rooms, are semi-detached and well ventilated.

At the Old Chester Asylum similar additional buildings for quiet cases have been constructed for 200 patients, at a cost of £39 per head; and, at Colney Hatch, about 100 women have been similarly provided for, of whom 86 sleep in one dormitory.

At the New Surrey, special blocks and cottages have been devoted to the convalescents, in which the number of single rooms is much smaller than in the other parts of the asylum.

At Leicester a new wooden structure has been recently erected for 100 patients, 50 of each sex. It consists of two day-rooms on the ground floor, and dormitories above, is warmed by hot water, has all the necessary fittings in the shape of attendant's rooms, closets, &c., and has cost only £12 a head.

At

At the Gloucester Asylum a few quiet cases are accommodated in detached cottages.

The general character of the accommodation which is provided for this class of cases is that of simplicity of construction—large day-rooms and associated dormitories, built at a cost considerably less than that of the remaining parts of the asylum.

#### 2ND.—THE SICK AND INFIRM.

At Derby and Gloucester among English asylums, at the New Jersey and New York State Asylums, at Göttingen, and at some few others, the sick are treated in the ordinary wards. The reasons given for the absence of special provision are that it is as undesirable to associate different classes of insane when sick as at other times, and that the sick are better treated in their own wards, and under the attendants who know their mental peculiarities, and to whom they are accustomed, than when removed to a special infirmary or hospital ward. But these reasons are allowed in the majority of asylums to have little weight, and there are few in which special provision is not made for the sick and infirm. The ward, or section set apart as an infirmary, consists, when complete, of an associated dormitory, some single rooms, and a day-room; but sometimes one associated dormitory is alone provided. In the new French asylums a special block is devoted to this class; but in British institutions one ward in the main building, on the ground or first floor, and as near to the administrative department as possible, is usually selected. The cubic space allowed is generally greater than in other parts of the building. At Worcester it is 1,100 cubic feet, at Colney Hatch 1,000; and in some institutions special contrivances for extra ventilation are adopted. At Montrose there are openings in the floor communicating with the basement and admitting a supply of fresh air; and at the Sussex a special form of window has been adopted. Usually additional fireplaces serve for warmth as well as ventilation; and occasionally the division for the sick is warmed by hot water, from which the heat is said to be more equable. In some cases, as at Cupar, all the floors are oiled or varnished and waxed. In many institutions a small kitchen is attached to the infirmary, or a gas stove, as at Washington and Meerenberg, serves to make or keep warm the small medical comforts necessary for the sick. A special closet is as a rule provided, and a bath, either fixed, as at Murthly and Cupar, or movable, as at Evreux and Ville Evrard. The furniture is of a more comfortable kind than that in the other rooms, arm-chairs and padded sofas and settees predominating.

The accommodation provided differs in amount, ranging from one-sixth at Cupar, the New Surrey, the Three Counties, and the modern French asylums, to one-fourteenth at Montrose, the Sussex County, and the Old Stafford; one-sixteenth at Colney Hatch; and one-twentieth at Prestwich. The more usual proportion is one-tenth of the whole, and this seems as a rule to be considered sufficient.

The cases treated in the infirmary are the sick, the paralytic, and extreme cases of epilepsy, and in many institutions a number of the old and infirm who require special attention.

At Evreux there are two divisions: in one, cases of bodily disease are treated; in the other, such of the patients whose mental peculiarities require special attention. At Guislain's Hospital, at Ghent, there are three rooms, in which the sick are divided into clean, dirty, and a middle class between the two.

In addition to ordinary infirmary wards, special hospitals for infectious diseases have been established at Colney Hatch and Prestwich; and there is also a cottage hospital at the Sussex Asylum. At Montrose, during an epidemic of cholera, a ward was built over an outhouse and fitted with closets and other conveniences; it is now used as an extra store-room, but is convertible into a hospital ward for infectious diseases at any moment. The hospitals at Colney Hatch and Prestwich, are, in times when no infectious disease exists in the asylum, used as rooms for quiet female patients; and the latter, which was erected for 50 patients at a cost of £60 per head, serves admirably for this purpose. (See Appendix G, Nos. 16 and 17.)

#### 3RD.—THE VIOLENT AND EXCITED.

The various provision which has been made in different asylums and in different countries for this class shows the diversity of opinion which exists as to what is necessary for their care and treatment.

In a few British asylums—notably at Lincoln and Montrose—no special provision for this class is made. The noisy and violent are associated with the ordinary patients, so that one or two are present in most wards, without special inconvenience or disturbance. At the former, no padded room has existed for ten years past; and at the latter, these rooms, as in other asylums, are used mainly for epileptics and general paralytics, who are likely to injure themselves by falling on the floor or against the wall. In the majority of British asylums a special ward in the main building is set apart for this class; and it differs little—except in the somewhat larger number of its single rooms, and in its ornamentation and the comfort of its furniture—from the other divisions. The windows are placed low; and guards are seldom used, except, as at Murthly, under special circumstances. The warming is generally by open fires, and for these small wire guards alone are used.

Certain special rooms are commonly provided. In many asylums one padded room for each sex is considered sufficient,—the padding being generally coir or horsehair, covered with painted canvas or strong mackintosh sheeting, fastened to the walls in distinct pieces, each about 18 in. or 2 ft. wide; whilst mattresses, similarly covered and

raised on gratings, are placed on the floor. In others, a larger number of padded rooms is provided, besides one or two panelled to a height of 8 feet from the floor by smooth boards. At Colney Hatch, in addition to three or four half-padded rooms for epileptics, there are eleven padded rooms for the males and six for the females. In most of these there is a padded seat in the corner next the corridor, under which a chamber utensil is placed and removed as necessary from the outside. In other asylums, besides padded rooms, special strong or seclusion rooms are provided,—the walls being cemented, the windows placed high, and capable of being covered with shutters, and the door strong. At Prestwich three such rooms are provided for each sex; at Bristol and other asylums, one. At Montrose and Cupar panelled rooms are used, in the former instead of, and in the latter in addition to, padded ones. In the American asylums, the division for the excited class is generally more markedly distinct in its character, than in the English institutions. The rooms are generally very unfurnished; the dormitories all single—a very large proportion fitted with wire or wooden gratings to the windows; and some of the beds and chairs are fixed by screws to the floor. Padded rooms are never used in the United States asylums; but there are usually two or three panelled-rooms, and special seclusion, or strong rooms. At Washington six, and at New Jersey and the Pennsylvania State Asylum four such rooms exist. The walls are cemented, the windows either placed high, or protected by strong guards or shutters, and the pan of a water-closet fixed in each room, the water supply of which is under lock and key from the corridor outside. At one or two of the American asylums the section for violent patients is in two or three divisions, in which they are classified,—the worst division consisting of rooms and a corridor for three or four patients only. At New York the patients are removed from one to the other, or from these to the other sections of the house, according to their conduct; and the classification is thus used, to some extent, as a disciplinary measure.

The Continental institutions make various kinds of provision for the violent class, which everywhere is distinguished, and more or less separated, from the rest. At Göttingen and Hamburg, there is a division, in which there are six seclusion rooms, cemented, and lighted by windows placed high up, and a panelled room. A similar arrangement exists at Illenau. At Hamburg there is a small special airing court for one violent patient at a time. Padded rooms are rarely seen in Continental asylums: there is one at Meerenberg, copied from those in England, the material being horsehair covered with leather.

At the Morningside Asylum, Edinburgh, the M'Lean Asylum, Boston, the new French asylums at St. Anne's, Ville Evrard, and Evreux, Guislain's Asylum, Ghent, and the Frankfort Asylum, the buildings for the violent class have certain marked characters, which it may be well briefly to note.

At Morningside a detached block of building for each sex contains the more excited of the patients. These, called the "separation buildings," are entirely of one story, and contain about 80 to 90 patients each. The accommodation consists of two corridors, two day-rooms, and dormitories. The corridor and day-rooms are panelled over the lower half, and painted or papered over the upper. The former are warmed with hot air; but the latter have open fires, which are without any protection, except an ordinary fender. All the bedsteads are iron, and fastened to the ground. There are two padded and four seclusion rooms for each sex; the seclusion rooms are panelled to a height of 8 feet, and, as well as the padded rooms, are very large, containing a cubic space of 1,800 to 2,000 feet. The windows are placed high, and are fitted with sliding shutters. The floors of the padded rooms are waxed and polished. On the male side there is a special strong room, which has cemented walls, and is lighted from the roof. There are two airing courts for each sex.

At the M'Lean Asylum, Boston, the blocks for noisy patients are also detached. Each will accommodate 17 patients; and is a small asylum complete in all except kitchen, and fitted with a somewhat elaborate warming and ventilating system. There are two stories corresponding in general arrangements; but the upper being for a somewhat less excited class of patients, the furniture is more comfortable, and some minor ornamentation exists. Each floor consists of a corridor, 93 feet by 14, with bay windows at each end, guarded by bars placed inside, and, at a distance from the windows of 2 or 3 feet, the space so cut off being used for flowers, &c.

The rooms, which are all single, open from each side. Each has a cubic space of 1,000 feet. The walls throughout are plastered with a mixture of mortar and sand, and are rubbed smooth, but not painted or coloured. The floors are laid in patterns, the woods being of different colours, are all oiled and polished, and before oiling were Burnetized (soaked in chloride of lime under hydraulic pressure). The room windows are ordinary double sashes in wooden frames, with bars outside.

Each window is fitted with a shutter, which slides out of the wall, can be locked when open or closed, and has in it plate glass panes, so as to prevent the rooms being extremely dark when the shutter is closed. The beds are all of wood, made very strong, have rounded tops, and are fixed in the centre of the room. In one corner of each room is a solid seat, and in another, one with a hole for use as a closet. Under this is introduced from the corridor an ordinary chamber utensil, which is emptied when necessary by an attendant. Each door has an inspection plate of plate glass in the form of a diamond; and there is an opening through the wall, so as to allow of food being passed from the corridor, if necessary, without opening the door. Two attendants for each floor have rooms opening from the corridor.

At Ville Evrard (see Appendix G, No. 9), and St. Anne's (see Appendix G, No. 8), the blocks for violent patients are completely detached, and are the same in general arrangement; three rooms for each sex being provided at the former asylum, which is intended for a more quiet class of cases than are admitted at St. Anne's. At the latter special

special rooms for nine are provided. These rooms open from a crescent shaped corridor; and immediately opposite the door is a second opening into a small airing court, which is planted, and has grass, turf, and a wall sunk in a ha-ha fence at the further extremity, so as to allow of view. The window of the room which looks out into the airing court is protected with wire netting. It is a double sash, and can be opened or shut by means of cords pulled from the corridor, and in the same way can be covered with a sliding shutter. Each room contains a strong fixed bedstead, and in the corner a self-acting water-closet, the zinc chamber utensil fitted to which, can be removed from the corridor. Between every two rooms, occupying the angle caused by their divergence, is a small court covered with glass, and having windows looking on to the airing court on each side. Here the patient is allowed to walk up and down while his room is being cleaned and aired, and when wet weather prevents his taking exercise in the court. One cell in each block has a panelled wall, the remainder are cemented.

At Evreux the same general arrangement, with a special airing court for each patient, exists; but there are two rooms for each patient, one for day and one for night use; and one extra room has no windows, and is kept permanently dark. The windows are high, and out of reach of the patients, and there are no closets in the corner. The doors at Evreux are all fitted with a little panel through which food can be given to the patient. In all three asylums the rooms contain from 1,000 to 1,200 cubic feet. They are warmed by means of hot water at Ville Evrard and St. Anne's, and ventilated by extraction by means of heat; and at Evreux warmed by hot air, and ventilated by shafts in the wall passing to the roof.

At Guislain's Asylum, Ghent, the quarter for violent patients is made to accommodate 46. It consists of a corridor and day-room for day use, two associated dormitories, each to hold 13 patients, and an attendant's, and 20 single rooms. These single rooms contain each 1,000 cubic feet, and are placed in the form of a crescent between two corridors, into one of which they have a door, and into the other a barred unglazed window. The windows in the two corridors are placed exactly opposite each other, and, by means of an opening over the door and the barred windows, admit of tolerably free ventilation. This plan of placing the rooms between two corridors is almost universal in Belgium, and has been adopted in the small new asylums at Gheel, but it is difficult to see its exact advantages.

The warming is by stoves in the corridor. There is one general airing court; and by means of doors the corridor can be divided into six portions, so as to give any one, two, or more patients a distinct piece, and allow of exercise without communication with other patients.

The special section for violent cases at Frankfort is on the double corridor system, and does not differ materially from that at Ghent, except that it is warmed by steam and ventilated by propulsion, and that each room has a closet, the pans in which are removable from one of the corridors.

The proportion of violent patients for whom provision is generally made, would appear to be about one-tenth. At Edinburgh the block for violent women will contain one-eighth of the entire number. At the McLean Asylum, Boston, and Guislain's Asylum, Ghent, about one-tenth are provided for; and this would appear to be about the usual number in the rooms for the violent class in British asylums. In the French asylums the number specially provided for is very much less.

#### KITCHENS.

The points for consideration concerning asylum kitchens are, their number, their position, the modes of cooking, and the accessory rooms.

In most asylums the entire cooking for patients, attendants, and officers is done in one kitchen; and in all cases except where the asylum buildings are much scattered, or a separate building for paying patients exists, as at Meerenberg, Glasgow Royal, and Morningside Asylums, one properly fitted kitchen appears to be all that is necessary. In most English asylums the kitchen is a one-storied building, with a high open roof, well ventilated, and with windows in the roof or near it, situated immediately behind the centre or administrative block of the building, and accessible by means of covered ways from every part of the institution. In the newer German asylums at Hamburg, Frankfort, Göttingen, &c., the room is of this character and in this position. In the older German asylums, of which Illenau may be taken as a type, the kitchen is on the lower floor of a two-storied building, and is grimy from smoke, and perpetually more or less full of steam when cooking operations are going on. In most French institutions the room is on the ground floor, large and well ventilated, but other rooms are placed over it. This is the case at St. Anne's, Quatre Mares, and Ville Evrard; but at Evreux the English plan has been followed, and the asylum kitchen is a one-storied building with open roof. The kitchens at Meerenberg are also of this kind. In the American asylums the kitchen is placed on the basement, and is generally fairly ventilated. From it tramways are laid all over the basement, and the food is conveyed to the upper story by lifts.

The major part of the cooking in all asylums is done by steam, the meat, pudding, &c., being boiled by steam in jacketed boilers, and the potatoes steamed in large square boxes made of iron. In addition to this there is generally an open fire-range for roasting, fitted with such apparatus as is necessary for the minor cooking, requisite for the tables of officers. This range is occasionally large enough for roasting for the entire establishment, but more usually is small and intended only for officers, in which latter case the patients' dinners are baked in the ovens used for baking the bread.

At

At the Meerenberg Asylum, the entire cooking, boiling, and roasting is done by gas. At Colney Hatch, the Three Counties, the Stafford Asylum, the Lunatic Hospital, York, and the French asylums of Ville Evrard and St. Anne's, all roasting and frying is done by gas, both for officers and patients; and in all cases it is found clean, handy, and economical.

Special care is taken in some asylums to carry off the steam. At the Leicester Asylum the boilers are placed in a glass case with sash windows, and so, shut out from the kitchen; and at Hamburg, a hood is placed over the entire boiler-range, to receive the steam, and conduct it by a tube immediately to the open air.

The modern French and German kitchens are excellently arranged. As at Colney Hatch and some other English asylums, the entire cooking apparatus is placed in the centre of the kitchen, and benches or dressers round the outside, serve for the preparation of the food. The steam-boilers in the French asylums are hung on pillars, through which the steam passes to the jacket. The vessels are slung on pivots (see Appendix F, Fig. 11), and can be tilted so as to be emptied or cleaned; the lid lifts by means of a weight, and over each boiler is a tap from which it is filled with cold water. The whole arrangement is simple and handy, and admits of being kept beautifully clean. The German asylums at Hamburg and Göttingen are fitted in much the same manner, but the boilers are built in, and so do not tilt on a pivot; and the front of the brickwork is faced with white glazed tiles.

In all asylums there is a scullery, opening from, or placed near, the kitchen; and in many, an additional room in which the vegetables are washed and prepared, sometimes by hand and sometimes by ingenious machinery. The boilers are frequently placed in the scullery, so that all steaming is done there, and the kitchen left free for roasting and the preparation of food.

In eight out of every ten English public asylums, and in the majority of the American ones, the whole of the bread for the consumption of the house is made. Sometimes the kneading is done by hand, at others, as at the Sussex County Asylum, by Stevens' Kneading Machine; and the baking done in ordinary brick, or specially fitted, iron ovens. At the New Jersey State Asylum, a very complete apparatus is employed for making aerated bread, which is used by the entire establishment. It is sweet and palatable, and the officers and attendants and the constant residents do not tire of it, as is generally found to be the case in British institutions in which it is used,—the secret apparently lying in the fact that sufficient only for the day's supply is made, and that it is always eaten fresh. Stale aerated bread is dry and insipid. It is stated that it is cheaper to make aerated than ordinary bread, both processes having been tried in the same institution. It is found as a rule more economical to make bread in an asylum than to buy it; but this is only in institutions of a certain size, where the baker is kept constantly employed. At the Cupar, Murthly, and some of the smaller institutions it is found cheaper to buy it; and this is also the case at the Lunatic Asylum, York, and the Gloucester Asylum, which are near, or rather almost in, large towns. At Stafford the bread is supplied from a prison near. For Continental institutions the bread is generally bought; but at Ville Evrard, a bakehouse is about to be erected, and bread is made at Ghent, Illenau, and one or two other asylums. In many English asylums all the beer required for the establishment is brewed; and at some it is found economical to buy coffee green, and roast it.

In most asylums either a sausage machine or a patent mincer is in use, to chop small, all food required for patients suffering from general paralysis, and for those accustomed to swallow their food without mastication.

At Cupar, Murthly, and Ghent, ingenious machines are in use for cutting bread, so as to give a certain weight in each slice without weighing; and at New Jersey State Asylum and the Glasgow Royal Asylum, biscuits are made for the patients—at the former, by machinery.

In most American asylums there is an ice-house; and the ice, gathered by the patients in winter, is stored for summer use. It is sometimes extremely useful in medical treatment.

Patients generally assist the cooks and bakers in the asylum kitchens and bakeries, and almost all the vegetables are washed and prepared by them. A few superintendents, as Dr. Nichols, of Washington, object to patients as assistants in the kitchen, because they are frequently not cleanly in their habits.

#### LAUNDRY.

Asylum laundries are, generally, either partially or wholly detached buildings. At Broadmoor, the New Jersey State Asylum, and the Pennsylvania Hospital for the Insane, they are at some distance from the asylum, and near the spring from which the water supply of the institution is derived. In most cases, the laundry consists of washing, drying, mangling and ironing rooms; but in addition to these there are at some asylums—as the Essex and Ville Evrard—a linen reception-room, (in which all linen is received from the wards as it becomes soiled), folding and mending-rooms. At some institutions there is either a separate laundry for the very dirty linen, as at Broadmoor and Sussex, or a room attached to the laundry, in which it is washed, as at Prestwich, Montrose and New Jersey.

The water in asylum laundries is almost universally warmed by steam. Sometimes the steam pipes are brought directly into the washing-trays, as at Murray's Asylum, Perth, and some of the American institutions; at others, hot water is laid on. The mode of washing differs materially in different countries. In the majority of American institutions machinery is used to a very great extent, whilst the patients either do not assist  
at

at all or only in a small degree. The machinery consists either of what is called the "shaker" machine (invented and patented by a member of that sect); or the hydraulic clothes washer, made by a company in Cincinnati, for washing; a centrifugal wringer; and mangles worked by steam. In some of the English asylums, machinery is also largely used; there are few institutions in which some one of the many forms of Stamper, Dashwheel, or Dolly, does not exist; and the centrifugal wringer is universal. Occasionally, the mangles are also worked by machinery; but in almost every institution a considerable number of female patients assist at washing. In some English asylums, as Essex and Gloucester, the washing is, almost entirely, done by hand, such small machinery as exists for washing, wringing, or mangling, being turned by hand. In the Scotch asylums, the washing is more frequently done by hand than in English institutions; and the only machinery in use in the Cupar, Murthly, and Montrose Asylums is a centrifugal wringer, turned by hand, the patients, with two or three paid laundresses, doing the entire washing of the asylum.

The amount of machinery in use in Continental asylums is, as a rule, small. At St. Anne's, the French system of filtering the hot lye through the clothes is in use. The linen is placed in large tubs, with a compartment at the bottom, from which the lye is pumped up by machinery and allowed to flow over the top, it filters into the compartment, and is again raised by the machinery. At Göttingen and Meerenberg, there is a washing machine worked by steam, and a centrifugal wringer; but at Ville Evrard, St. Yon—at which the entire washing for 900 patients within its own walls, and 700 at Quatre Mares, is done—and at Ghent no machinery exists. The clothes are first boiled in huge coppers and then washed by hand. At Ghent and one or two other Continental asylums, clumsy movable wooden tubs are provided; but in all the British institutions, fixed square tubs, at which the women stand, are placed round the wash-house against the wall. These have a cold, and either a hot water or a steam supply. The boilers and machinery are placed in the centre. Drying is done mainly in closets warmed by steam, the clothes being placed either on wooden or zinc horses, or on wires fixed or made to revolve in the closet. A large drying and airing-ground is also attached to most institutions. At the Colony of Fitz James, at Meerenberg, and at the M'Lean Asylum, Boston, special arrangements are made for drying clothes in covered sheds, which are without artificial heat. These sheds are fitted with movable louvres, which exclude rain but admit air, such as may be seen in the drying-rooms of leather or paper manufactories. At Montrose, the drying-closet is used very little, the large open drying-yard serving all purposes, except in very bad weather.

The ironing, folding, mending, &c., are always done by patients. In the American asylums, and at Meerenberg, the irons are generally warmed at gas stoves. In several English and Scotch asylums, cap crimpers are fixed to a table and are heated by steam.

A special foul linen laundry is very useful in asylums. The linen of some patients is made so filthy that it is found desirable to wash it apart from the rest, and this is done either in a small detached laundry in which all the laundry operations are completed, or in a room for washing only; the remaining operations of drying, mangling, &c., being done in the ordinary laundry.

At the Worcester Asylum, instead of a room, the special foul linen laundry is a shed against the main building, quite open on both sides, so that all offensive smell at once escapes, and a similar building exists at the Jersey State Asylum. At this latter institution, all the dirty linen is placed first in a shallow tray with a hole in the centre, and well brushed while water is poured on to it; and at the Prestwich Asylum, a tank is constructed to hold the major part of the soap suds and dirty water which drain from the laundry in one day. In this the specially foul linen is placed every night. In the morning the tank is emptied, the water allowed to run into the ordinary drains, and the clothes taken out and washed in a special room by machinery. At Cupar, a tank for foul linen is placed in a small offshoot from the laundry. In this it is soaked for twenty-four hours before being washed in the ordinary manner. The soiled linen is in some asylums kept in a box in the scullery, and sent to the laundry every morning. In others, a basket is placed in the lavatory or storeroom. In some one or two, as at Colney Hatch, boxes are placed in the airing courts, to which the linen is taken from the nearest wards during the day, and removed to the laundry every morning, or two or three times a week; but at the Essex and Derby, and the female side of the Sussex, it is sent to a special room in the laundry at once.

#### CHAPEL.

A large room, in which religious services can be conducted, has become an essential part of an asylum; and such a room exists in every well-ordered establishment in great Britain, on the Continent, and in America.

In some of the Scotch and American asylums, this large room, generally handsomely decorated, is used also as an amusement room. In the Scotch asylums, all the public amusements are held in it; but in the American institutions, it is used only for lectures and magic-lantern exhibitions, whilst a separate room is used for dancing.

In all English and Continental institutions it has been deemed advisable to have a separate room for amusement, and the chapel is fitted specially for religious services. In the English and German asylums, the chapel is sometimes a room in the main building, but usually it is semi or totally detached. In all instances it is thoroughly ecclesiastical in its fittings and ornaments; and in not a few English asylums, is one of the prettiest churches in the district. At the Prestwich, Sussex, Worcester, and New Surrey Asylums, and at the Northampton and York Lunatic Hospitals it is a totally detached handsome gothic

gothic structure, fitted with excellent taste; and at the Essex Asylum is semi-detached, and radiant with gilding and stained glass. In the French asylums the chapels are always detached buildings and remarkable for their beauty; and fine, detached, ecclesiastical looking edifices, have been erected at Ghent, Meerenberg, and other places.

As a rule the chapel is used by one denomination only, that of the majority, the other paid or unpaid chaplains of the institution, performing service in rooms temporarily devoted to the purpose; but in Germany it is used for both Protestant and Catholic worship; the special ornaments and accessories necessary for the service of each sect being kept in small locked closets in the vestry, or the chapel itself.

The following table will show in round numbers, the average attendance of asylum inmates at divine service, in seventeen British and American institutions. In the French and German asylums it is generally stated, that about a half or rather more attend the religious services.

	Inmates.	Attendance.
Prestwich .....	962	600
Sussex .....	506	380
Gloucester .....	586	270
Worcester .....	540	290
Three Counties .....	534	250
Essex .....	554	270
Colney Hatch .....	2,026	700
Bristol .....	206	110
Derby .....	342	150
Stafford .....	469	320
Leicester .....	391	270
Murthly .....	220	180
Cupar .....	213	150
New Jersey State .....	500	260
New York State .....	608	300
Washington .....	380	240
Pennsylvania State .....	380	160

From this last it will be seen that the attendance is in only two cases less than half the entire asylum population (in these, the number is restricted by the small size of the chapel); whilst in several it is more than three-fourths of the entire number of inmates.

In some Asylums two services are held in the chapel on Sunday, and one or two week-day services in addition; in others, morning prayers are read daily, in addition to the Sunday services. The large majority of asylum chapels contain either harmoniums or organs, which are used in the services of the church. Choirs, composed of patients and attendants, have been formed; and the Protestant services in Great Britain and America, and those of the Catholic Church in France and Belgium, are performed with a reverence and decorum which are not surpassed in any of the ordinary churches.

#### DEAD-HOUSE AND CEMETERY.

The only asylums in which special detached buildings do not exist for the reception of the dead, are some of the American institutions. At New Jersey and Washington, the dead are placed in rooms in the building and removed as soon as possible. In British, French, and German asylums, a dead-house is considered absolutely necessary. It is, as a rule, placed at some little distance from the asylum, as much out of sight as possible, with a door opening at once upon the road to the cemetery or nearest town. In some institutions the dead-house consists of one room only; but in the majority of British, and in most of the modern French and German asylums, there are two rooms, one for *post mortem* examinations, and the other for a reception room in which friends can view the body. At the New Surrey Asylum two small reception rooms have been built, one for males and the other for females, each sex attending to its own dead; and between the two is the room for *post mortem* examinations. In most Continental asylums, and in one or two English institutions, there is a mortuary chapel in connection with the dead-house.

When asylums are situated at a distance from a town, a special cemetery for the institution is generally made, and it is often planted and kept with extreme care. The little cemetery at Illenau, in Baden, under the shadow of the Swartz Mountains, bright with flowers, and ornamented with monuments of exquisite taste—among which the venerable and eminent medical director points out those belonging to some members of his own family—is one of the most peaceful and beautiful spots to be imagined.

#### AMUSEMENT ROOM.

Almost all modern asylums possess a room in which the inmates can be collected for concerts, dances, lectures, theatrical exhibitions, and other amusements, at which it is desirable that as many as possible should be present.

In some asylums, as at St. Yon in France and the New Surrey, some of the work-rooms, at the former a large room generally used for sewing, and at the latter two workshops, separated ordinarily by a removable wooden partition, are used for this purpose. In the Scotch asylums the room in which religious service is held is used also for the associated amusements; but generally a special room is set apart for this purpose. This is frequently handsomely decorated, made brilliant with gilding and colour, and well lighted. A fixed stage or platform is usually placed at one end—sometimes there is a gallery for

for musicians or visitors; and, as a rule, a piano is a part of the furniture. At the Pennsylvania Hospital for the Insane the room is beautifully coloured, and lighted from the roof by gas, below which glass is placed, so that the warm air does not enter it. At the Hamburg Asylum there is a suite of three rooms, in one of which minor refreshments, beer, &c., are served during the evening. In some of the English asylums, where the patients dine in a general hall, as at the Bristol, the Three Counties, and the Old and New Stafford, this is used as an amusement room.

It is found that from one-half to three-fourths of all inmates are capable of enjoying or are likely to be benefited by the ordinary amusements provided.

#### LIBRARY.

In a few asylums, as at Worcester, Colney Hatch, Hamburg, Montrose, and others, a special room is set apart for a library; and this, used as reading room also, is not uncommon in institutions which contain patients of the better classes; but in the majority of asylums for pauper patients the main store of books is kept in cases, either in the room allotted to the chaplain, the Board Room, or the room in which the friends of patients are received. In the British asylums generally, book-cases made to contain a small library, are placed in each corridor or day room. The libraries of many asylums are large. At Prestwich and Colney Hatch there are 2,000 volumes, at the Three Counties 1,700. The supply of newspapers and periodicals is also liberal. At Prestwich 13 or 14 (six or eight copies of some), at Montrose 21, at Worcester 25, and at Morningside 30 cheap serials, besides ordinary newspapers, are taken. At the Sussex Asylum a subscription is paid to Mudie's Library, and a most liberal supply of newspapers is provided. The money for the supply of books and papers is either granted as an annual sum by the Governing Board, or given in small sums on application by the Superintendent or Chaplain, under whose direction the library is more usually placed. The American asylums possess, as a rule, excellent libraries, and, like the English institutions, are well supplied with newspapers and periodicals. At the New Jersey State Asylum the library is partly supported by fancy work made by the patients, and either sold at shops or kept in a case in the entrance hall and sold to visitors. At the New York State Asylum the exchange papers of several local journals are bought at small cost. The supply of newspapers and books is much smaller in the French than in the English and American institutions; and in none of the Continental asylums is it at all liberal.

At the Prestwich Asylum all the periodicals are bound by a bookbinder who is a patient, and who has a small room set apart for his work. At three asylums a small paper, written entirely by patients, men who are "mad, nor-nor-west" only, is published. These literary curiosities—*The Morningside Mirror*, *The York Star*, and *Murray's Royal Asylum Literary Gazette*—are sent forth to the world monthly or quarterly. *The Morningside Mirror* is printed in the asylum; and the profits derived from the sale of all go to the library funds of the asylums.

THERE remains to be considered the provision made for the accommodation of the officers, servants, and attendants; and in addition, the various rooms used for administration may be enumerated.

In the majority of asylums, both in Great Britain and on the Continent, the superintendent lives in a suite of rooms in the main building, and this is generally the case in America; but in several of the most recently established British and Continental institutions, as the New Surrey, the Montrose, Murthly, Cupar, Hamburg, Meerenberg, and others, the house for the superintendent is detached, and at a short distance from the asylum. At several of the older institutions, as Worcester, Gloucester, Morningside, &c., a new detached house has been built for the superintendent, and the rooms formerly occupied by him used for some other purpose. At the Pennsylvania Hospital for the Insane, the Bloomingdale Asylum at New York, the Retreat at Hartford, and other American institutions, the superintendent's residence is also detached. The chaplain, if resident, has usually either a detached house, or two rooms in the building. The remainder of the officers, the assistant physicians, the steward, the matron or housekeeper, the chief attendants or supervisors, and the attendants and servants, are as a rule accommodated in the building itself.

To each of the officers two rooms are usually allotted in the centre of the building, but in some of the newest British asylums, a sitting-room and two bed-rooms have been set apart for the assistant physician. The steward, when married, lives out of the asylum, a certain sum being allowed for rent, or a house built for him.

In the British asylums dinner is served for each of the officers in his own room. In America, the assistant physicians and chaplain (if resident) generally dine at the superintendent's table, and the matron and steward dine together; or some other arrangement is made, by means of which the number of separate meals provided is made as small as possible.

To the head attendants, two well-furnished rooms each are usually given—sometimes one room only with an additional room for a common dining-room.

The English system of asylum management gives special dormitories to all the attendants; sometimes two or three, but more usually one, being placed in a comfortable furnished room containing for each individual about 1,000 cubic feet. These rooms are distributed throughout the asylum, and are generally so placed as to overlook the associated dormitories and the day-rooms by means of windows.

In

In one or two English asylums, as at Gloucester and Lincoln, the junior attendants sleep in the associated dormitories with the patients, generally in a corner bed, the seniors having each a room; and this, though objected to by the attendants at first, is found to work well. In the Scottish System no special dormitories are set apart for the attendants. In each ward is a room in which the attendants keep their clothes, and in some cases dine; but every attendant sleeps in associated rooms with the patients. This arrangement is supposed to prevent accidents. It is, however, to some extent, difficult to carry out, since the attendants very much prefer rooms to themselves. At the Gartnavel Asylum, Glasgow, especial difficulty has been found in inducing attendants to sleep in the dormitories with the patients—sometimes £2 a year has been given in addition to the ordinary wages to compensate for the want of privacy, but even this has not been found sufficient inducement, and good attendants have left when it has been insisted on; so that at that institution the attendants have now, as a rule, separate dormitories.

In America the attendants have invariably special sleeping rooms so placed as to overlook the few associated dormitories which exist in American asylums; and the same is the rule in French asylums.

At Quatre Mares, Meerenberg, Hamburg, Göttingen, and in most of the Belgian asylums, the attendants all sleep with the patients in the wards; their beds have usually curtains, and sometimes a chest of drawers and a chair are placed by the side of each. At Frankfort and Illenau a few have special rooms, but the remainder sleep in the patients' dormitories.

The further arrangements made for the comfort of the attendants vary considerably. The most usual plan is to provide a special dining-room for the attendants and house servants of each sex, which is used also as a sitting-room in the evenings after the patients are in bed.

Sometimes one large dining-room only is provided. Occasionally the attendants dine in the ward or common dinin-grooms after the patients. In some of the Scotch asylums they dine in a small room opening from their ward, and in America generally with the patients, taking the head of the table. For the house, the kitchen, and laundry servants, and for such men as bakers, storekeepers, and others, who live in the asylum, dormitories are provided, either near the departments in which they work, or in a special part of the building. The third story in the centre of the building is not unfrequently used as dormitories for the house and other servants; and in the new French institutions sleeping accommodation is provided for the kitchen, laundry, and other servants in the block containing the kitchen and store rooms.

Besides rooms for officers, servants, and attendants, rooms are provided for administration and for stores. A room for the meetings of the governing body, a superintendent's office, dispensary, steward's office, chaplain's office; store rooms for clothing and utensils, for meat, bread, and groceries; a cutting out and sewing room, a schoolroom, and rooms in which the friends of patients can visit them, are among those most usual and necessary.

In the French asylums, the dispensaries take up a large space, and the *pharmacien* is almost always an important member of the asylum staff.

The visitor's rooms, one for each sex, are usually comfortably furnished, ornamented with pictures, and made as homely and attractive as possible. At Ville Evrard there are four for each sex, so as to allow as much privacy as possible to patients in their interviews with their friends. At the Sussex Asylum, the visitor's room is used also as schoolroom and library, and there being fixed times for both school and visiting, serves all purposes admirably.

The farm buildings, piggeries, and stables at many asylums are excellently arranged. They are, as a rule, situate at a short distance from the asylum, and every improvement in structure and fittings has been adopted.

#### ORGANIZATION.

*Asylum Government and Inspection.*—Asylum government is even of greater importance than asylum construction, and a consideration of the various forms which exist in older countries will, no doubt, be useful as a guide to that which is most fitted for a young and growing colony.

The public institutions for the insane in England are County and Borough Asylums, the State Asylum for Criminally at Broadmoor, and the Lunatic Hospitals, which, although in the hands of more or less close corporations, are not conducted for the profit of the corporation or of any individual.

The government of the county and borough asylums is in the hands of the Justices of the Peace of the county or borough, and that of the lunatic hospitals in the hands of a body composed of *ex officio* governors or subscribers, and by them is delegated under Act of Parliament to a committee of visitors, numbering not less than seven, elected annually, and entrusted with the entire government of the asylum, the making of all rules, the appointment, dismissal, and superannuation of all officers, and servants, and the general and financial management, so long as the additions, alterations, and improvements do not cost more than £400 in one year, in excess of the ordinary repairs.

This committee of visitors exercise a general control over the affairs of the institution, meet once a month, or as often as may seem fit, and delegate to the superintendent, the resident representative of the committee, such authority as they please, looking to him for the good government of the institution and estate. The committee make annually a financial and general report to the whole body of Justices, and improvements suggested by them are sanctioned at a general meeting, and provision made for extraordinary payments.

It

It is ordered by the Act of Parliament regulating the government of asylums, that not less than two members of each committee of visitors shall, together, once at least in every two months, inspect every part of the asylum of which they are visitors; see and examine every lunatic therein, and the order and certificate for the admission of every lunatic admitted since the last visitation, entering in a book kept for the purpose any remarks they may deem proper to make as to its condition and management; and any three visitors may order the discharge of any person, conditionally on trial, or absolutely.

The State Asylum at Broadmoor has been placed under the management of a council of supervision appointed by the Secretary of State for Home Affairs, with powers similar to those exercised by the committee of visitors of county asylums, some provisions being made for the discharge of special cases or their transfer to ordinary asylums, under the warrant of the Secretary of State. The general rules for the government of all public asylums, made by the committee of visitors, must be submitted to, and approved by, the Secretary of State, and when approved by him are printed and abided by, being only altered after like approbation; but regulations and orders for the management and conduct of the asylum, not inconsistent with such general rules, may be made or altered at any time without such approbation being necessary.

The Commissioners in Lunacy, a body specially appointed by the Crown, consisting of five honorary and six paid members,—three of whom are physicians and three barristers-at-law,—are charged with the visitation and inspection of all public asylums, once or oftener in every year. One physician and one barrister at least are charged with the visitation of every asylum—to inquire whether the provisions of the law have been carried out as to construction, visitation, and management, and also as to the regularity of the admissions and discharges of patients therein and therefrom—whether Divine service is performed, or coercion practised—as to the classification of patients, number of attendants, dietary, occupations, and amusements, and such other inquiries as shall seem to them meet. The general condition of all asylums is set forth in the annual report of the board to the Lord Chancellor. All plans for building, enlarging, or improving asylums, are to be submitted to the Commissioners in Lunacy, reported on by them to the Secretary of State, and approved by him before adoption.

The district asylums of Scotland are almost identical with the English county asylums, and the Royal asylums do not differ materially from the English lunatic hospitals.

Their general mode of government is also almost identical; the district asylums being governed by a district board selected from the commissioners of supply and the magistrates of boroughs in the district, and the Royal asylums by a board of governors consisting of subscribers and others.

The Commissioners in Lunacy for Scotland, two paid officers appointed by the Crown, who are assisted by two Deputy Commissioners, are charged with the inspection of all asylums, their duties being similar to those of the English Commissioners. All rules and regulations for the government of asylums are made by them, and submitted to the Secretary of State for Home Affairs for approval before being carried into effect. They make an annual report on the condition of all asylums to the Secretary of State.

The parochial asylums of Scotland are merely developments of the lunatic wards which exist in almost all poorhouses. They are under the immediate government of the guardians or other parochial authorities, and subject to the inspection of the Commissioners in Lunacy.

In Ireland, the governors of all district or public asylums are appointed by the Lord-Lieutenant in Council, the number for each asylum not exceeding eight, and they are unpaid. They are charged with the erection, establishment, and regulation of asylums, and with the appointment, dismissal, and superannuation of all officers and servants; but the appointment of the superintendent is left in the hands of the Lord Lieutenant, who determines also the staff of officers, defines their duties and salaries, and makes all rules and regulations for their guidance.

The Inspectors of Lunatic Asylums in Ireland, two in number, appointed by the Crown, are charged with duties of inspection and report, similar to those of the English and Scottish boards, and are, in addition, members of the boards of governors of all asylums.

The Central Criminal Asylum at Dundrum is placed immediately under the supervision and control of the Inspectors of Lunatic Asylums, who are at once the governing and inspecting body of the institution.

In the United States of America, the public asylums consist of Town and State Asylums; the Central Government Institution for Soldiers and Sailors, and for the District of Columbia, at Washington; and lunatic hospitals similar in character to those existing in England. The town asylums which exist at Boston, New York, and Philadelphia, are in connection with the poorhouses of those places, and correspond to the parochial asylums of Scotland in character. The governing body are either the city authorities, or commissioners appointed by them.

The State asylums are the property of the whole State, erected and maintained at the State expense by sums voted in Parliament, and, therefore, corresponding closely to the asylums in this Colony. The State Executive does not govern these institutions, but appoints a board of management for each asylum. The exact mode of appointment and the powers delegated to these boards vary somewhat in the different States, but they are universally unpaid, except as regards expenses. In the State of New Jersey, the managers are ten in number; they hold office for five years, two retiring each year, and being eligible for re-appointment; they have the entire control of all the property and concerns of the institution, appoint superintendents and determine the salaries of all officers, make all rules and regulations for the management of the asylum, visit and inspect it weekly,

manage

manage the general and financial affairs of the institution, and regulate the discharges of patients. An annual report of the general and financial condition of the asylums is made to the Governor, and by him presented to the Legislature with the estimates for the following year. Certain rules are laid down in the act regulating the asylum for the guidance of the superintendent, to whom is given the appointment of all officers subject to the approval of the managers.

In the State of Massachusetts, the government of each of the three State Lunatic Asylums is vested in a board of five managers or trustees, one of whom retires annually but is eligible for re-appointment; they manage the general and financial affairs of the institutions, make all laws, appoint officers, fix salaries, visit and inspect the asylums monthly, and present an annual report to the State Government. Two trustees can discharge a patient on the advice of the medical superintendent. In the other States the constitution and powers of the board of managers differ very little from those in New Jersey and Massachusetts. The Central Government Asylum at Washington is managed by a board with similar powers.

The lunatic hospitals of the United States, at Philadelphia, Boston, and New York, are governed by committees of the subscribers.

Except in the States of Massachusetts and Vermont, the lunatic asylums are under no inspecting board corresponding to the Commissioners in Lunacy; but in Massachusetts, the Board of State Charities, which consists of five unpaid members and a paid agent and secretary, are charged with duties of inspection of lunatic asylums among the other charities of the State, and include in their annual report a full account of the general condition of these institutions. And in Vermont there is a Commissioner in Lunacy charged with inspection. The appointment of a similar board to that of Massachusetts is contemplated in the State of New York.

In France the Departmental Asylums which correspond to the County Asylums of England,—the asylums belonging to the Hospices, similar in constitution to the Lunatic Hospitals of England—and the Charenton, which is a State institution—are the public institutions for the care and treatment of the insane.

The French Departmental Asylums are placed under the Minister of the Interior, and from his office, in accordance with that centralization which distinguishes all French Government institutions, are issued a dietary and general regulations for their management. The Minister also nominates all the directors, physicians, and assistant physicians, from a list of three furnished by the Prefect of the Department. The salaries of these officers are fixed according to length of service. There is however a general committee—"Commission de Surveillance"—consisting of five members, nominated by the Prefect of the Department, who meet once a month, are charged with the general and financial management of the institution, and the appointment of all officers except the director and medical staff.

There is a Board of Inspection for the French asylums consisting of three members, one of whom visits each asylum once a year. The inspectors are also charged with inquiry into the sanitary condition of prisons. Their reports are made to the Minister of the Interior but are not published. Once in about ten years an elaborate statistical report on lunacy is issued from the Bureau of the Minister of the Interior.

The asylums of the Department of the Seine are not under the inspection of the ordinary inspectors of asylums, but under a special inspector for the department. Charenton is under the management of a committee of five members appointed by the Minister of the Interior.

The Public asylums of Belgium are under the control of a committee of management for each province, nominated by Royal decree, composed of five, seven, or nine members, with the Commissioner of the District as president, who manage the general affairs of the institution, sign the certificates for the discharge of patients, appoint all officers, and control the finances of the institution. They direct their attention particularly to the circumstances of the patients on leaving the asylum, assist them in obtaining their livelihood, and report each year upon the general and financial condition of the institution under their charge, to the Minister of Justice, in whose department the asylums are placed.

There is also a board of inspectors appointed by the Minister; it consists of three members, one of whom is a physician. Every asylum in the kingdom is visited annually, and a report made to the Minister and subsequently published.

The public asylums of Holland are chiefly, if not entirely, provincial, and under nearly the same system of government as those of Belgium—a Provincial Board of Control and a Government Board of Inspection.

In Germany the public asylums are under very various forms of government. In the, till lately, free cities of Hamburg and Frankfort, the governing body, exercising all the ordinary functions of a board of control, are committees appointed by and from the members of the city council. In Baden there is no board of control. The Government appoint the superintendent, and exercise a direct control over the affairs of the institution, one of the Ministers visiting it himself or sending a special commissioner occasionally; and this would appear to be the more usual mode of government in the smaller German States. In Hanover, the asylums were formerly under the Minister of Education and Public Charity, who appointed all officers and exercised general financial control over the institutions, paying them an occasional visit. The Government is now in a transition stage.

*Superintendent.*

*Superintendent.*—In all British asylums, and in the vast majority of American and Continental institutions, the superintendent of the asylum is the medical chief. In a few French asylums the physician is charged with the merely medical duties of the institution, and the general management is in the hands of a director; but this system has been found to work badly, and in all the newly organized French asylums, the duties of general superintendence are placed in the hands of the chief physician. In the city asylums of the United States, the authority is divided, and the ill effects of divided responsibility are plainly visible in the condition of the institutions. In the City Asylum at Philadelphia, where the physician is that, and nothing more, and the warder is responsible to the governors for the general management of the institution, the wards are dirty, there is a marked absence of personal cleanliness [among the inmates, the use of restraint is excessive, and the general condition of the asylum most unsatisfactory. The New York City Asylum is, owing to the energy of its medical officers and its governing board (The Commissioners of Public Charities and Correction), a useful institution, doing its work fairly if not in the best manner; but the evils resulting from divided responsibility are sufficiently apparent.

In the asylums of Colney Hatch and Hanwell there are two medical officers with equal power, the one in charge of the male and the other of the female department of the asylum; whilst the general government is exercised by the committee of visitors and the steward. The faulty condition of these two institutions is well known; and though the enormous size of the establishments, and the paucity of medical officers, may account to some extent for this condition, it cannot be doubted that no small share of it is due to the divided authority which exists.

The duties with which the superintendent is charged vary somewhat in different institutions. In the vast majority of asylums he is supreme, governing the asylum and estate, directing every department, and responsible for the condition of the asylum and all its belongings to the governing body; whilst in a few instances, as at the Three Counties Asylum, he is held responsible for the asylum only, and the management of the farm is undertaken by the committee of visitors themselves. The patronage entrusted to him also varies. In the American asylums, he, as a rule, nominates to the board of managers all the officers, and appoints and discharges all attendants and servants; but in the English, Scotch, and Irish Asylums, the appointment of officers and servants rests entirely with the committee of visitors, who, however, generally delegate their authority to him so far as attendants and servants are concerned, reserving to themselves the right, which is given them by act of Parliament, of the subsequent approval of the appointments or dismissals made by him. In the case of the officers he is generally consulted, though the Committee make the appointments.

On examining closely the general condition of asylums, those are almost always found to be best managed in which the physician is the superintendent, one, and supreme—in which the committee of visitors act only through him and with his advice—and in which the appointment and dismissal of all attendants are delegated to him: and those are found to be least satisfactory, in which the responsibility is divided—in which the committee of visitors or controlling board meddle in the internal management of the institution and direct, themselves or through other officers, any part of it, appoint and dismiss attendants, or clip in any way the authority of the medical superintendent.

The salaries attached to the office of superintendent in different British and Foreign asylums will be seen from the following tables and the appended remarks.

TABLE shewing the Salaries of eighteen Superintendents of British Asylums, with the number of Patients and the number of Assistant Medical Officers.

Asylum.	Number of Patients.	Number of Assistants.	Salary of Superintendent.	Remarks.
			£	
Bristol .....	206	.....	.....	In the majority of English asylums the superintendent is supplied with lodging, coals, candles, vegetables, and garden produce. Frequently washing for himself and family is done in the asylum laundry.
Derby .....	342	1	.....	
Leicester .....	391	1	500	
Stafford .....	469	1	.....	
Lincoln .....	502	1	650	
Sussex .....	510	1	550	
Three Counties .....	534	1	550	
Worcester .....	540	1	600	
Essex .....	554	1	800	
Gloucester .....	590	2	500	
New Surrey .....	650	1	600	At the Lincoln, Sussex, and Worcester Asylums, the superintendent's house is furnished throughout for his use.
Lancashire—Lancaster .....	836	2	600	
"    Prestwich .....	962	2	750	
York—West Riding .....	1,124	2	.....	
Colney Hatch .....	2,026	2	{ 600 600 }	At Colney Hatch there are two physicians, each with an assistant.
Perth District .....	220	1	350	
Cupar .....	213	1	300	
Montrose .....	380	1	400	

TABLE

TABLE showing the number of Patients and the number of Assistant Medical Officers in Foreign Asylums.

Asylum.	Number of Patients.	Number of Assistants.	Remarks.
Quatre Mares.....	715	1	At St. Anne's there are two physicians; every physician in the French and Belgian Asylums has, besides assistant medical officers, two pupils, or "internes," who have completed a part of their medical education, and are therefore useful to some extent as assistant medical officers.
St. Yon .....	950	2	
St. Anne .....	600	.....	
Ville Evrard .....	600	1	
Evreux .....	500	1	
Guislain's Asylum, Ghent .....	450	1	In the Dutch and German Asylums, the medical officers next in rank to the chief are usually distinguished as 2nd, 3rd, and 4th physicians; and the juniors are called assistants. The assistants, as in the English Asylums, all possess medical degrees, except at Göttingen, where the junior is a pupil only.
Meerenberg .....	600	4	
Hamburg .....	350	2	
Frankfort .....	200	1	
Göttingen .....	300	2	
Illenau .....	450	6	
Washington .....	380	3	
New Jersey State .....	500	2	
Pennsylvania State.....	380	2	
Northampton .....	420	1	
New York State.....	608	3	

In the French asylums there are five classes of physicians, receiving 3, 4, 5, 6, and 7 thousand francs a year respectively. The classification depends on length of service. When the physician is also director, he receives an additional salary, which varies in the different departments. The highest rate of pay, 7,000 francs, is equal to between £290 and £300 a year. In addition to this—house, coals, gas, vegetables, &c., are allowed; and in some cases a carriage and horses, which are bought and maintained for his special use.

In Germany, the salaries of superintendents range from about £160 to £350 a year; house, light, vegetables, &c., being also supplied. At Göttingen and Hamburg, the salary of the superintendent is £300, and at the latter place, a carriage and pair of horses are also kept for his use.

At Meerenberg, the salary of the superintendent is £450 a year, with house and board for himself and family.

In the American asylums, the salary paid ranges from about £300 to £600 a year, but house and board for both the superintendent and his family are also found, and carriage and horses are kept for his use. In the larger of the American asylums, the superintendents consider their appointments to be worth from 5,000 to 6,000 dollars, or £1,000 to £1,200 a year.

In almost all asylums, rules are drawn up by the Government for the general guidance of the superintendent.

*Assistant Medical Officers.*—The assistance which is given to the superintendents of asylums in the performance of their duties, by the appointment of junior medical officers, is less in England than in any other country. No English asylum containing less than 200 patients has an assistant medical officer, and none with less than 500 have two; whilst the enormous establishment at Colney Hatch has only two physicians and two assistants for a population of upwards of 2,000 patients.

In America the number of assistant medical officers is usually larger, in proportion to the number of patients, than in England; and the Pennsylvanian State Hospital for the Insane, and the Washington Asylum, each having 380 patients, have respectively two and three assistant medical officers.

The "internes" in the French asylums render efficient assistance to the superintendent; and yet without counting them the proportionate number of assistants is equal to that in English institutions.

In the German asylums, the number of medical officers is usually in the proportion of about 1 to every 100 patients; but at Illenau this number is even exceeded, and seven medical officers are occupied in the care and treatment of 450 patients, giving an average of between sixty and seventy to each—a proportion which is a striking contrast to Colney Hatch, where each medical officer has 500 patients under his care.

In the English and American asylums, the dispensing of medicines is, as a rule, the duty of the assistant medical officer; but in the Continental asylums, even at Illenau, there is a "pharmacien" specially charged with this duty.

The assistant medical officers invariably live in furnished rooms in the asylum, and receive board, and all necessary fires, lights, &c., in addition to their salaries.

The paucity of medical officers in such establishments as Colney Hatch and Hanwell, renders individual treatment absolutely impossible, since the superintendent must necessarily be much occupied in the non-medical duties of his office.

The

The multitude of medical officers at Illenau, where there is one to every sixty or seventy patients, is to some degree objectionable. The expenditure for medicines—surgical appliances, wine, beer, &c., not being included—in that institution, for three successive years, is—

1865.	1866.	1867.
6,113	5,578	5,762 florins,

an average of upwards of £480 a year, or more than £1 *per patient per annum*, which—considering that the cost for medicines in English asylums is, on an average, about 4s. 2d. per inmate—needs no comment.

*Consulting Medical Officers.*—In Ireland one or more consulting physicians, receiving generally an annual payment of from £100 to £150 a year, are attached to every asylum, and are charged with the duties of occasional visitation, and the treatment, in consultation with the medical superintendent, of all cases in which their opinion and advice may be deemed necessary. The same system exists in a few Scotch asylums—Aberdeen, Dumfries, Dundee, and Glasgow. To many of the French asylums there is attached a consulting surgeon, who receives about £50 a year; his duties being to visit the asylum weekly, and give his advice concerning the treatment of all surgical cases upon which the medical superintendent may think it desirable to consult him. But such consulting medical officers are not attached to any of the English or American institutions, and their appointment is generally regarded as not only unnecessary, but objectionable. In the English asylums the medical superintendent is allowed to call in a physician or surgeon, when his opinion or advice is deemed necessary in any difficult medical or surgical case; and such physician or surgeon is paid his ordinary fees for his visits to the asylum inmates. In one or two cases, as at Gloucester and Leicester, the committee of visitors nominate the physician or surgeon whose assistance and advice shall be obtained, and he bears the title of Consulting Medical Officer to the Institution; but usually the selection is left entirely to the medical superintendent, and with him rests also the decision as to the cases, and the number of visits which shall be paid.

*Chaplain.*—In the asylums of almost all countries it is thought necessary to provide for the spiritual needs of the inmates. In all French asylums the chaplains are resident officers, and the same is the case in the majority of Belgian and German institutions. In British institutions a resident chaplain is the exception. In some few asylums, however, the chaplain is resident, a detached house being provided for him, as at Colney Hatch, Prestwich, and Essex. In other cases, though non-resident, as at Sussex and Worcester, he holds no other appointment, and devotes himself entirely to the duties of his office; but in the remaining instances, he is the vicar or incumbent of a neighbouring church.

The number of services, and the salary attached to the office, vary as the chaplain has other duties or not.

In those asylums in which the chaplain holds no other appointment, the salary attached to the office ranges from £200 to £250 a year. Two services are performed on Sunday, and morning prayer is read daily either in the chapel or the rooms of the asylum.

In one or two English asylums, and in the Pennsylvania Hospital for the Insane, sittings are taken in the district church, and some few of the patients, whose behaviour is not likely to attract attention, are permitted to attend.

At the Colony of Fitz James at Clermont in France, a large part of the church is appropriated to the insane, who form the majority of the population of the village.

In most asylums, the paid chaplain belongs to the same religious denomination as the majority of the inmates; but every facility is given for the ministrations of clergy of other sects. In some of the German asylums, and at Meerenberg in Holland, there are two paid chaplains to the institution; and at Illenau both are resident officers, and officiate in the same chapel at different times.

In the United States, where no large majority of the inmates belong to any one religious denomination, the arrangements are somewhat peculiar. In the New York State Asylum the chaplain “happens” to be an Episcopalian, but his predecessor was a Presbyterian; and Wesleyan and Baptist ministers frequently officiate for him. At the Government Asylum, Washington, six chaplains are appointed, of the leading denominations of the district—Episcopalian, Methodist, Roman Catholic, Baptist, Lutheran, and one other; each is paid 100 dollars, or something over £20 annually, and performs the service for two months in the year in the asylum chapel, visiting all the sick, and burying all the dead, of his own denomination. The patients are curiously enough expected to attend the ministration of all the chaplains in succession.

At Northampton, Massachusetts, and other asylums, the religious services are provided for by the steward, clergy of different denominations being invited by him to come on Sundays in rotation, each being paid 5 dollars for the service.

*Officers.*—The staff of asylums varies much with the size of the institution; but in all certain heads of departments exist.

The commissariat and clothing department of an asylum, as well as the immediate management of the farm and garden, is usually placed under an officer, designated secretary, clerk, agent, steward, or storekeeper in English and American asylums, and *econome* in those of France and Belgium. To this officer are given such assistants as are

are necessary for the clerical or other duties of his office. In some institutions the steward is also treasurer, and receives and disburses large sums of money under the direction of the board of governors; but in the French asylums there is always a special officer for this duty, called a "receiver," and in English and American institutions a treasurer is generally specially appointed. In some places, the superintendent undertakes the immediate direction of the agricultural and horticultural operations, and gives all orders to the farm bailiff and gardener; and this appears to be in most respects preferable to placing this department under the direction of the steward. Occasionally, as at the Three Counties, the Sussex, Montrose, and other asylums, the committee of visitors undertake the immediate management of the farm. At the Criminal Asylum at Auburn, U. S., the superintendent also undertakes the duties of steward; and the experiment has been tried in the three State asylums of Massachusetts, the superintendent being steward, and having under him a staff of servants for the more menial duties of his office; this, however, was found not to work well. At the Worcester Asylum a steward has been appointed. At Taunton, the duties of steward are performed by the housekeeper, and at Northampton, by a man who is nominally cook, but really steward, with superintendence of the kitchen. In the Government Asylum at Washington, the commissariat and clothing departments are under the management of a woman, who performs all the duties to the satisfaction of the governors.

In some of the Belgian asylums, where the institutions are generally for one sex only, the commissariat, as well as the nursing and general attendance of the patients, is undertaken by the members of a religious order. At Guislain's Asylum, Ghent, every officer, except the medical staff and the chaplain, and every servant and attendant, are members of a lay-brotherhood. To the superior of this fraternity is paid by the governing body of the asylum a sum of 90 centimes a day for each inmate; and for this are furnished diet, according to a certain scale, clothes, approved by the governors, and attendants and servants in the proportion of one to every ten patients.

A similar system exists in the asylums for women, the Sisters of Charity undertaking the entire commissariat and nursing of the institutions.

In many ways this system is a success; but it is open to grave objections, the first and greatest of which is that it is a speculation, meant of course to conduce, as far as possible, to the pecuniary advantage of the religious corporation. It is thus liable to lead to a constant antagonism between the medical superintendent, whose duty and whose interest it is, to see that the dieting and clothing of his patients are such as will conduce best to their comfort and recovery; and the superior of the order, whose interest lies in providing only such food and clothing as will fulfil the conditions of his contract. Another objection is the *esprit de corps* which exists among the entire staff, and makes it difficult for the medical superintendent to detect abuses, or carry out such orders as seem to him fitting.

In the majority of British asylums, the superintendence of the kitchen and laundry, and that of the female attendants and domestic servants, with a general supervision of the entire female side of the institution, are entrusted to the matron, who has such assistants as are necessary in carrying out the duties of her office; but in several asylums in Great Britain, and in the majority of American institutions, although the title has been retained, the duties of the matron are those of "housekeeper" only, and consist of the superintendence of the kitchen and laundry and domestic servants; whilst the supervision of the wards on the female side, and of the attendants engaged therein, is entrusted to the chief attendant or supervisor of the division. In some British institutions, as at Sussex, Montrose, and others, the title of "housekeeper" has been adopted; and there can be little doubt but that the division of duties, which is almost universal in America and Germany, and which is advocated by many asylum superintendents in Great Britain, will eventually become general, and that the asylum matron, both in position and in name, will soon be extinct. In the French asylums the general direction of the laundry and kitchen, as well as the supervision of the female patients, their nursing and general attendance, is confided to the members of a religious sisterhood, the superior of which is at once housekeeper and chief attendant, having charge of the kitchen, laundry, and officers, and the supervision of attendants and patients.

*Attendants.*—The attendants may be divided into—1st, Chief attendants; 2nd, Day attendants; and 3rd, Night attendants.

Chief attendants, charged with the special duties of supervision of the patients, the attendants, and the wards, and acting as the medium of communication between the ordinary attendants, and the superintendent, exist in the vast majority of asylums, though under different names. In English asylums, they are called Head or Chief Attendants; in America, Supervisors; in France and Belgium, *Surveillants* or *Surveillantes en Chef*. In some few English asylums the matron and steward, either by themselves or by assistants, are charged with the duties of supervision; and in others, as the Three Counties and Derby, though the chief attendant on the male side bears his proper title, and is not under the direction of the steward, the assistant matron, who is responsible to her superior, performs the duties of supervision on the female side of the establishment. The *surveillante en chef* in the French and Belgian asylums, is always the local superior of the religious sisterhood, performing the duties of attendance. One chief attendant seems to be generally considered sufficient for each division of the establishment; but at New York State Asylum, at Meerenberg, Evreux, and Illenau, there are three for each sex. The greatest care is taken in many institutions to place the chief attendants or supervisors in what

is really their proper position, that of important officers of the institution. Good salaries are given; and in the Bristol, Worcester, Lincoln, Derby, and other asylums, two good rooms are set apart for each.

The Day attendants are employed in very varying numbers in different institutions. The following table will give their proportionate number to the inmates in some of the principal institutions, both in Europe and America.

Asylum.	Proportionate Number of Attendants to Patients.	Remarks.
Derby County .....	1 to 15	
Bristol Borough .....	1 „ 16	
Middlesex County, Colney Hatch .....	1 „ 12	
Essex do. ....	1 „ 12	
New Surrey do. ....	1 „ 14	
Gloucester do. ....	1 „ 16	
Sussex do. ....	1 „ 15	
Three Counties (Beds, Herts, and Hunts) ..	1 „ 13	
Stafford County .....	1 „ 14	
Leicester do. ....	1 „ 14	
Lincoln do. ....	1 „ 13	
Worcester do. ....	1 „ 15	
Lancashire do. (Prestwich) .....	1 „ 12	} The artisans, laundresses, &c., act as attendants, and are included in the number.
Murthly District .....	1 „ 10	
Edinburgh Royal .....	1 „ 10	
Cupar District .....	1 „ 13	
Montrose Royal .....	1 „ 16	
Glasgow Royal .....	1 „ 13	} For indigent patients only; the proportion for paying patients is greater. The majority of the patients in this institution are chronic cases.
Massachusetts State Asylum, Northampton	1 „ 20	
New Jersey Asylum .....	1 „ 11	
New York do. ....	1 „ 8	In the American asylums, a certain number of the patients are always of a better class, pay for their maintenance, and require a larger number of attendants.
Pennsylvania do. ....	1 „ 10	
Washington Government Asylum .....	1 „ 10	
St. Yon, France .....	1 „ 10	
Evreux .....	1 „ 12	
Quatre Mares .....	1 „ 20	
Ville Evrard .....	1 „ 20	This asylum is intended mainly for quiet cases.
St. Anne, Paris .....	1 „ 10	
Hamburg .....	1 „ 11	
Göttingen .....	1 „ 10	} This proportion is for the indigent patients only. The asylum is, however, chiefly for acute cases. This includes artisans.
Illenau, Baden .....	1 „ 7	
Ghent (Guislain's Asylum) .....	1 „ 10	
Meerenberg .....	1 „ 10	Proportion for indigent patients only.

In the English asylums reading and writing are considered indispensable qualifications for an attendant; and in some asylums a more general education is insisted on. The age at which attendants are taken ranges from 18 to 35; but in most asylums it is not deemed advisable that they should be younger than 21. In the French asylums the male attendants are much older than in the English institutions.

There is great difference of opinion among superintendents as to the desirability of placing the attendants in uniform. It is objected that it is expensive, especially when there is frequent change of attendants—a new comer can with difficulty be induced to wear an old uniform;—that it is apt to give a warder-like appearance to the attendants; that it leads to offensive nicknames given by the patients; and that it prevents the attendants (women especially) indulging their own taste, and so does away with what is to many a great pleasure.

The objections are met by the suggestions, that the uniform selected should be as little costly as possible, and should not be worn by attendants until they have been in the asylum some months, and can be regarded as more or less permanent servants of the institution; that it should be as little like the uniforms worn by the police or prison warders as possible; and, that the dress for the women should be made attractive in colour, shape, and minor ornamentation. The great advantages of uniform, as leading to the immediate recognition of the attendant by official and other visitors to the institution, and the help it renders to the superintendent in regulating the dress of the attendants, which is apt to run into extravagant ornamentation on the one hand, or untidiness on the other, are fully pointed out by those who consider uniform desirable.

Out of thirteen English County Asylums visited, the whole of the attendants were in uniform in seven, and the men in two others; in the remainder no uniform was worn.

The Scotch and American attendants object as a rule to uniform, and it is not worn in any of the asylums.

In the French and Belgian asylums, the women are generally members of a sisterhood, and wear the dress of their order. The men in the Belgian asylums are also members of religious orders; but in France such is not the case. The men, however, almost invariably wear uniform. At Evreux the patients and attendants are all dressed in a suit of grey cloth, and the attendants are distinguished by green bands

to

to their caps. In the German asylums, uniform is not generally worn. At Meerenberg, a very becoming dress has been selected by the superintendent, and its adoption is left to the option of the attendants, the superintendent expressing his opinion in its favour. Partly in deference to his wish, partly because found to be becoming and not more expensive than ordinary dress, it has been, all but, universally adopted by the attendants. The keys are usually either worn on a band, strap, or ribbon at the waist, or carried in the pocket. In some of the English asylums the attendants are provided with whistles to summon assistance in case of need, but they are seldom used, and scarcely necessary. The payments made to attendants are regulated by the price of labour in the different countries, but it is almost universal to treat them with the utmost consideration.

In many institutions the supply of food is unstinted. At Prestwich, the joints are sent in, and the attendants help themselves; but there is a fixed allowance of 2 pints of beer; in others special dietaries are given, of which the following may stand as fair examples:—

*Worcester County and City Asylum.*

Male.		Female.

A liberal allowance of leave is generally granted, the regulations differing in different asylums, but all being framed so as to allow the attendants recreation, and a change from the wearing duties of their position, at short intervals. The most usual arrangements for leave seem to be the following:—

One whole and two half days a month .....	Colney Hatch.
One day and two evenings every three weeks .....	Essex and Prestwich.
Three half days a fortnight .....	Gloucester.
Two evenings a week, and every third Sunday .....	Leicester.
One day a fortnight, and every third Sunday .....	Cupar.
Every second Sunday .....	Glasgow.
One day a month, and two evenings a week, one-third, one-half, and the whole of each Sunday, in rotation .....	New York State.

In most institutions arrangements are made for allowing seven, ten, or fourteen days absence to each attendant in the year, board wages usually being given during the time of absence.

Special arrangements are made in some asylums, to allow the attendants leave on Sundays. At the Glasgow Royal Asylum, at Montrose, and at Meerenberg, the artisans who are not attendants do duty as such on Sundays, in rotation, and receive extra pay, so as to allow the attendants to be absent.

Married attendants are, as a rule, allowed to sleep out of the asylum. At the Leicester Asylum, where all the male attendants are married, each sleeps out of the asylum on two nights a week.

It is not generally considered advisable to provide special amusements for the attendants, apart from the patients. At some institutions an attendants' and servants' party is given annually, to which they have the privilege of inviting friends. The system of punishment for neglect of duty, varies. It is an almost universal rule, that, whenever a patient escapes through the negligence of an attendant, the whole or part of the expenses of the recapture, are stopped from his wages. In some asylums a series of fines, ranging in amount from 6d. to 5s., are inflicted for breaches of discipline, and the sum thus collected, is added to the amusement fund of the institution; in others, leave of absence is stopped as a punishment; whilst in the majority, warning, and dismissal on repetition of the offence, seem to be all that is necessary for good discipline.

The female attendants in asylums are, almost invariably, unmarried. In some asylums married male attendants are preferred. At Leicester all the male attendants are married, and at the Sussex Asylum, a large proportion. Marriage seems to act well in attaching attendants to the institution; no male attendant has left the Leicester Asylum for five years. At the Worcester and Washington Asylums, married couples are placed in charge of the male wards, and the plan seems to answer. In the male infirmary ward at the New Surrey Asylum, the attendants are a married couple.

The Sisters of Charity, who undertake the nursing and attendance in French asylums, belong generally to an order specially founded to care for the sick and insane, and are, in most cases, favourably reported of by the superintendents of asylums. They are obeyed better by the patients than ordinary attendants would be, since their religious character gives them additional influence. They are under excellent discipline; and, spending their lives in asylums, gain a special knowledge, and are most efficient assistants in the treatment of the insane. The *esprit de corps*, however, which distinguishes them, makes the detection of abuses difficult, and the strong religious element which displays itself in all their surroundings, (and which, unless particular care is taken to prevent it, even extends to the ornamentation of the wards with pictures and images of a character far from cheerful), are objections to nursing by sisterhoods. At the Charenton at Paris, the nursing is superintended by sisters of a religious order, and the more menial duties performed by attendants under their direction.

Night attendants, to patrol the asylum during the night, attend to such patients as are sick or sleepless, and rouse those who are dirty and conduct them to the closets, are appointed in most asylums. In a few of the Scotch institutions, where the attendants sleep in the wards, there is no night watch; and in some of the French asylums there is a special attendant in the infirmary only. At Hamburg, Leicester, the male side of the Derby Asylum, and other institutions, the ordinary attendants do night duty in turn; but in the large majority of asylums the night attendants are specially appointed, and do no other duty. One for each sex is usually considered sufficient, but in large asylums, such as Colney Hatch and Prestwich, two or three are absolutely necessary. In some asylums, convalescent patients assist the night attendants. At the Glasgow Royal Asylum, three night attendants for each sex are on duty every night; every wet and dirty patient is raised; and so thoroughly is cleanliness enforced in this way, that on the occasion on which this asylum was visited, there had been but one wet bed among 563 patients for several nights previously. The Superintendent reports, that it is an advantage to employ a large staff of night attendants, if only to save labour in washing and cleaning.

Where one attendant only of each sex is employed, Dent's "tell-tale" Clock, placed in a ward as far distant as possible from the room set apart for the night attendant, is a useful mode of checking the rounds; but where more than one is employed, it is of little use, since it is possible for one to press in the small pegs around the dial, and so record the rounds hourly, whilst the other is asleep. This clock is used in several English and Scotch institutions; and a much more elaborate instrument is in use in some American ones—wires pass from every ward to the clock, and the exact time at which each wire is pulled is registered on a small circle of paper marked with the hours, and fitting on to the clock dial.

In the majority of the asylums, the attention of the night attendant is ensured by frequent and irregular visitation on the part of the medical officer or supervisor, and by selecting trustworthy attendants. At the New York State Asylum, it is part of the duty of the night attendants, to empty the straw or hair made wet or dirty from the beds, and replace it with clean material; this, being more troublesome than waking the patients at fixed times, ensures the due performance of this part of the night attendants' duties.

*Artisans and Servants.*—Attached to and forming part of the establishment of every asylum is a staff of domestic servants and artisans. Those found most generally necessary are—

Laundress,	Gardener,
Laundrymaid,	Farm labourer,
Cook,	Tailor,
Kitchenmaid,	Shoemaker,
Dairymaid,	Carpenter,
Housemaid,	Blacksmith,
Band instructor,	Painter and glazier,
Engineer,	Plumber,
Gasman,	Upholsterer,
House-porter,	Matmaker,
Butcher,	Basketmaker,
Baker,	Printer,
Brewer,	Brushmaker.

The domestic servants are usually engaged by the year, and are boarded and lodged in the asylum, whilst different arrangements are made as regards the other servants and artisans. At Prestwich, Worcester, Morningside, and other asylums, all the artisans are attendants living in the asylum, employed with the patients in the workshops during the day, and returning with them to the day rooms after working hours, their position being just the same as that of the other attendants; but, as a rule, they are employed at weekly wages, and either live in cottages on the asylum estate, or in the neighbouring towns or villages, their work ceasing at the ordinary working hours.

The engineer, gardener, and farm labourers, are almost always provided with cottages on the asylum grounds.

The following lists give the establishments in the Sussex, Lincoln, and Worcester County Asylums, which contain 510, 502, and 540 patients, respectively:—

#### SUSSEX COUNTY ASYLUM.

##### ESTABLISHMENT.

##### *Officers.*

Medical Superintendent .....	£550	{	Furnished apartments, coals, gas, vegetables, and washing.
Chaplain .....	200		
Clerk to Visitors .....	60		
Assistant medical officer .....	100	{	Furnished apartments, board, lodging, and attendance.

† Non-resident.

*Diet.*—The dietaries of twelve English County Asylums, the Borough Asylum of Bristol, the Northampton Lunatic Hospital, the Royal Asylums of Montrose and Edinburgh, and the District Asylums of Fife and Kinross, as well as the diet table issued by the Commissioners in Lunacy for Scotland for the lunatic wards of poorhouses, and that fixed by the Inspectors of Lunatics for the Criminal Asylum at Dundrum in Ireland, will be found in Appendix B.

In the majority of American asylums there is no published diet scale. A list similar to the one given below, chiefly intended for the guidance of the steward and cook, is to be found in most asylum kitchens; but it is not adhered to with any exactness, and no quantities are given. All the patients receive an unstinted allowance of food. This system appears to have originated when food was almost as cheap as air. With the present prices of all articles of diet in America, such free dieting is extravagant in the extreme.

#### PENNSYLVANIA STATE LUNATIC HOSPITAL DIETARY.

MONDAY.		
BREAKFAST.	DINNER.	SUPPER.
Tea and coffee, Bread and butter, Cold ham.	Vegetables, Soup, Rice.	Tea, Bread and butter.
TUESDAY.		
Tea and coffee, Bread and butter, Fried potatoes.	Vegetables, Roast meat, Bread.	Tea, Bread and butter, Mush.
WEDNESDAY.		
Tea and coffee, Bread and butter, Steak.	Vegetables, Fish, Bread.	Tea, Bread and butter, Gingerbread.
THURSDAY.		
Tea and coffee, Bread and butter, Fried mush.	Vegetables, Soup, Rice.	Tea, Bread and butter, Rusk or rolls.
FRIDAY.		
Tea and coffee, Bread and butter, Fish.	Vegetables, Fish, Bread.	Tea, Bread and butter, Mush.
SATURDAY.		
Tea and coffee, Bread and butter, Steak or hash.	Vegetables, Roast meat, Rice.	Tea, Bread and butter, Stewed peaches or apples.
SUNDAY.		
Tea and coffee, Bread and butter.	Vegetables, Ham, Pie.	Tea, Bread and butter, Gingerbread.

Poultry, toast, warm cakes and corn bread, sausage, fresh fish and fruit (in season), rice and bread puddings, may be given occasionally, in place of some of the others mentioned above.

Cocoa may be substituted occasionally for tea.

A dietary for the use of the pauper asylums in France is published by the Minister of the Interior, and to this all the asylums are expected to adhere more or less closely. This dietary, with one slightly modified from it in use in the asylums of Quatre Mares and St. Yon, will be found in Appendix B.

The dietary which is in use for pauper patients at the Hamburg Asylum, and which is a fair sample of the dietaries for patients of this class in German Asylums, will also be found in Appendix B.

At the Meerenberg Asylum meat is given five days a week, and fish once; on the remaining day the dinner consists of bread and vegetables.

From an examination of the different dietaries, it will be seen that beer is given in almost all the English and Scotch asylums. In the German, Dutch, and Belgian asylums beer is given, and in those of France either wine or cider. In the United States no form of alcoholic drink is given, except as part of the medical treatment and under the special orders of the physician.

*Clothing.*

*Clothing.*—It does not appear to be considered advisable to clothe the patients in asylums, in one uniform style or colour. In some few French asylums a semi-military uniform is worn by the male patients; and, considering the military character of the French people, and the curious uniformity which may be noticed in the colour and shape of the clothes ordinarily worn by the French peasantry, it is perhaps less objectionable there, than elsewhere. In Great Britain or America a uniform would at once suggest a prison.

The patients are almost invariably clothed comfortably and well, and changes are made to meet the different temperatures of winter and summer. In Great Britain the dress for men usually consists of cord or fustian trousers, and blue, gray, or brown cloth jackets and waistcoats, with felt wide-a-wake hats, or cloth caps, sometimes made like those usually worn by sailors, sometimes "glengarries."

In some asylums cord or fustian suits are given to the working patients. Special suits are almost invariably kept for Sunday, and these frequently differ in material from those ordinarily in use. In the summer months duck trousers and blouses and straw hats are worn. The women are generally clad in prints or ginghams in summer, and in linseys in winter, and when out of doors wear woollen plaid shawls and straw bonnets.

The cloth for the men's dress is usually chosen of several colours and patterns, so as to give as much diversity of appearance as possible. Grays and browns of a sort of blanket tweed are reported to be more economical than, and certainly are preferable in appearance to, a blue cloth. Different patterns are chosen for the prints and linseys worn by the women, and all possible variety secured in the colours of their shawls and bonnet ribbons. All necessary under-clothes are allowed; and all the minor articles, such as neck-ties and handkerchiefs, as well as caps for the more elderly women, are given, and the wearing of them enforced.

The greatest possible care is taken to keep the clothes clean, neat, and free from holes. The destructive patients are clad in ticken, strong linen, or canvas dresses; and no patient is allowed to be without boots and shoes. It is rare to find a patient with a torn dress, or shoeless. For those who undress themselves, the dresses and boots are fastened with small locks, or by means of patent buttons, which can be undone only by an attendant's key. In the German, Dutch, and Belgian asylums, the clothing is, as a rule, neat, and the same care is taken to enforce tidiness, and to prevent the patients divesting themselves of their clothes, or tearing them, as in Great Britain.

In the French asylums the patients, as a rule, wear sabots; and it is no uncommon thing to find the clothes of the men ragged and dirty. They contrast in this respect very unfavourably with the patients in English institutions; but it is in America that the greatest want of care as regards dress is found. Good serviceable clothes are provided, but it is no unusual thing to find a number of patients more or less in rags; and almost invariably a certain proportion are without boots and shoes. The natural irritability of the Yankee seems to vent itself in destroying his clothing. A large number of the shoeless patients are found on inquiry to be Irish; not being accustomed to wear shoes, they find them uncomfortable and take them off—at least, such is the explanation given by the American superintendents of asylums. Ticken and canvas dresses are employed in some American asylums, but others are entirely without them; and locks and patent buttons to prevent the patients undressing themselves, or taking off their boots, are never used.

The strong dresses used in English asylums are made usually of ticken, derry, strong linen, or canvas, and are lined inside with flannel, and made as comfortable as possible. With care on the part of the attendants, the number of such dresses found necessary, is, however, very few. In some English asylums containing 400 or 500 patients, one, two, or three only are to be found in strong dresses. Sometimes, however, the number is larger.

For destructive patients, quilted bed coverlets are employed. One or two blankets are quilted between canvas or the material called ticken; and these are found to be warm and not uncomfortable.

In most asylums almost the entire clothing of the patients, as well as their boots and shoes, are made in the institution. The materials are bought, and all the cutting out and sewing, done by hired labour, or by the patients themselves. Hats, caps, and bonnets are, as a rule, bought. In some few institutions, where the population is more exclusively an agricultural one, it is found profitable to buy some of the clothes ready made, and in others boots, or the tops of them, are bought. The average annual cost for clothing in English Pauper Asylums is about £2 per patient.

In the English asylums the most scrupulous attention is paid to the cleanliness of the body and bed linen of the patients: the former is, as a rule, changed twice weekly, and the latter once. At Colney Hatch, and one or two other institutions, it is however considered sufficient to change the body linen of all except the working patients once a week only. At the Worcester, Lincoln, and other asylums, one sheet and a pillow-case a week are allowed to each patient, the upper sheet of one week serving as the under one of the next. In the American institutions it is, as a rule, considered sufficient to change everything once a week. In the Continental and Scotch institutions a weekly change of body linen is generally considered sufficient, whilst the bed linen is allowed to remain for a fortnight. In one institution in Scotland the bed linen for women is changed once a month only, whilst the men are indulged with one sheet and a pillow-case a fortnight.

*Labour.*—The occupations pursued by asylum inmates, vary with the amount of land possessed by the institution, and with the capacities and former avocations of the inmates. In districts in which the population is largely agricultural, this form of employment is encouraged, because more suited to the capacities of the inmates; and where the asylum population is drawn more distinctly from the manufacturing or artisan class, the workshops contain a larger number of those fitted for employment than in purely agricultural districts. In some few instances only, has it been deemed advisable to introduce special manufactures, and these chiefly where the large number of the inmates are already practised in the manufacture of some one staple commodity. At the Dundee Asylum a certain number of the patients are employed in hand-weaving, by means of which all the sheeting and towelling used in the asylum are made. At Ghent, flax is grown on the asylum farm, and a large number of patients are employed in preparing it for the looms, which, to the number of seven or eight, are constantly worked by patients, and at which bed-ticking, towelling, and sheeting are made.

The employment of the patients is generally directed to the manufacture of articles which are intended for use in, as well as for the benefit of, the asylum; and this is found more generally profitable than the manufacture of goods for sale, or for other public institutions. At some few cases the amount of garden and agricultural produce is so large that it cannot be consumed in the asylum, and is therefore sold, the sums realized being occasionally very large. The sale of other articles is very small. A few mats and baskets are made for sale at the Sussex Asylum, fishing nets at Montrose, mats and brushes at Colney Hatch, and straw and wicker work at Ghent. At the Sussex County, clothes are also made for the Eastwood Idiot Asylum, and at Hamburg, mats for the hospital of the same place; but these are exceptions to the general rule.

The employments at which most patients are occupied are agriculture, which always heads the list, tailoring, bootmaking, carpentering and upholsterer's work for the men, and laundry work, sewing, and knitting for the women. A certain number of both sexes are employed in the service of the house; and a few men usually assist in the kitchen. Occasionally labour of a special kind is performed in the asylum. At the Morningside Asylum a hired printer, with the assistance of patients, prints all the reports and returns of the institution; and some printing is also done in the Gloucester Asylum.

In some institutions, employment which is not in itself profitable to the institution, is encouraged for the benefit of the patients, to distract their thoughts and prevent their brooding over the miseries, real or imaginary, of their life, as well as to afford exercise to their muscles. At Meerenberg, a number of the feeble and imbecile patients are employed frequently in sawing wood; and at the Gartnavel Asylum the same class pick cotton or oakum with little or no profit to the institution, but, it is hoped, with benefit to themselves.

From an examination of the returns furnished by English asylums, it may be stated that an average of from 50 to 70 per cent. of the entire number of inmates are employed in work calculated to benefit the institution; whilst in Scotland the proportion is even a larger one.

The following returns for six English and four Scotch asylums will show the numbers employed, and the special occupations in which they are engaged:—

#### LINCOLNSHIRE COUNTY ASYLUM.

Garden and farm labour ...	608		
	1,411		1,566

Total, 2,977.

In the German, Belgian, and Dutch asylums, the number of patients employed is fully as large as in the British institutions.

At Ghent, 50 per cent. work six or seven hours a day, largely to the profit of the institution, and 25 per cent. in addition, do something in the shape of work. At Meerenberg, 70 per cent. are employed; at Hamburg, 65 to 70 per cent.; and at Göttingen, 60 per cent.

The number employed in the French asylums visited was markedly less than in those above mentioned. At St. Yon, near Rouen, out of 950 patients, of whom about one-eighth are pensionnaires, 300 patients only are employed; and at Quatre Mares 250, from a population of 715. But in the Statistics of Insanity published by the French Government in 1861, it is stated that during the previous six years, the average proportion of workers in the departmental asylums was 63 per cent.

The work done by the patients in American asylums is, as a rule, considerably less than in those of Great Britain and Germany, and in some cases less than those in France. In the Asylum of the State of Massachusetts, the system of work appears to be better organized than in most of the asylums of the United States; and yet in the Fourth Report of the Board of State Charities of Massachusetts it is stated, that "It is certain that in none of our hospitals (for the insane) are the patients so generally or so usefully employed at real work as they are in some of the foreign establishments, especially in the English, even making allowance for the difference in their previous habits."

In the American asylums the washing is done chiefly by machinery; very few patients are employed in the wash-house and laundry; and the employment of the insane in the kitchens is also objected to by some American superintendents. The total number of those employed does not average more than 25 per cent.

In

In the Twenty-third Annual Report of the New York State Asylum, the result of five years observation and registration of the number of workers, and the amount of work accomplished in the institution is recorded; and it appears that 22 to 25 per cent. is the highest estimate of six hours workers who could be depended upon.

In the British asylums, extra diet and such small luxuries as tobacco and snuff, are usually given as a remuneration for work; and attached to most asylum dietaries are the fixed allowances given as extras to working patients. Special indulgences as regards clothes are also granted to some; a new bonnet or coat, or one of peculiar material, being the reward for diligent labour.

At the Broadmoor Criminal Asylum, and at Fisherton House Private Asylum, as well as some other English institutions, the patients receive fixed sums of money, for all work done after certain hours; and this money they are allowed to spend in minor luxuries through the attendants.

In some of the French asylums there is an elaborate system of remuneration for work. In 1860, the sum of £3,800 was expended in the departmental asylums of France, to recompense patients who worked. It is one of the rules of the institution at Quatre Mares, that every patient shall receive the sum of 15 francs on his discharge from the asylum; and this sum is made up by the work of the patient himself. To every patient who works, 10 centimes a day, 5 centimes for half a day, and 2½ centimes for a quarter, are accredited in the asylum accounts. These sums are allowed to accumulate till they reach the amount of 15 francs, which is reserved till the departure of the patient. All sums over this are either paid to the patients at fixed times, and spent by them through the attendants, or accumulate in the asylum treasury, to be paid to him on his discharge. All sums revert to the asylum in case of death, and some of the money is employed in making up deficiencies for those patients who obtain their discharge before their earnings amount to 15 francs. In addition to this system of remuneration, the workers are allowed better diet than the remainder of the patients.

At Ghent, small pecuniary payments are made for work; and both there and at Meerenberg small presents, such as pipes, snuff boxes, tobacco, &c., are given, as well as extra diet, to the industrious patients.

*Amusements.*—There is a more organized system of amusement, with greater variety in its form, in the asylums of Great Britain, than in those of any other country.

In the day-rooms, chess, draughts, bagatelle, cards, cardboard skittles, and other games are always accessible to the patients; and the bagatelle and chess boards, and other necessary implements, are at the same time plentiful in number, and excellent in construction and finish. Billiard tables are seldom to be found in British asylums devoted only to pauper patients.

The outdoor games most in vogue are croquet, for which excellent grounds have been made in several institutions, fives, bat and ball, and cricket, at which the asylum "eleven" are frequently sufficiently expert to play successfully, both on their own ground and elsewhere, the members of neighbouring clubs. Quoits are played at Prestwich, Worcester, and other asylums; athletics are practised at the Three Counties and at Murthly; and football and archery are both recognized amusements in British asylums. In Scotland several asylums possess "curling" ponds, which in summer serve the purpose of ornamental water, whilst in winter they afford the patients an opportunity of enjoying a national game.

In English asylums, the system of labour has been so developed, that but little time is left during the day for amusement, all the patients capable of playing at the various games, being usefully employed. In some institutions special times are allowed for amusement, and the Saturday half-holiday movement, has found its way into more than one asylum; but it is in the evening, after working hours, that the ordinary amusements are most practised, and that patients sit down to cards or chess. At this time, too, take place the specially organized associated entertainments. At fixed times, generally at intervals of a week or so, but sometimes much more frequently; the whole of the inmates capable of enjoying themselves, or of deriving benefit from the association, and the amusement provided; meet in the amusement room or dining-hall of the institution, for a dance, concert, lecture, or reading, a magic lantern exhibition, or a conjuring or theatrical performance. The arrangements vary in different asylums, but the dances, concerts, and lectures, are usually held weekly or oftener, and the theatrical performances are reserved for Christmas and other high festivals. Both sexes are allowed to associate at the dances.

These associated amusements are generally organized within the asylum. The listeners and performers at concerts, lectures, readings, or theatricals, are asylum inmates, patients, attendants, or officers; but in many cases extraneous assistance is obtained, and entertainments are given by either amateur or professional musicians, singers, lecturers, &c., sometimes entirely without remuneration, and at others on payment by the asylum authorities of all necessary expenses. Many asylums possess magic lanterns; at others they are hired for the evening.

The programmes selected from a large number of those obtained in British asylums, which are printed in Appendix C, will show some of the forms of amusement by means of which it is endeavoured to lessen the monotony of asylum life.

Music enters largely into asylum amusement. The large majority of asylums have bands formed by officers, attendants, and patients. In some (as the Three Counties, Lincoln, and Prestwich), the musicians play both string and wind instruments.

At

At the Prestwich Asylum the band is composed of forty performers, of whom the medical superintendent is one, and it is superior in all respects to the bands of many regiments. The band is always an important aid to asylum concerts, and other amusements, and frequently plays in the airing grounds on summer evenings. Pianos exist in most asylums, either in the wards, or the amusement room; and singing classes for the practice of both sacred and secular music are common, and render important aid in the service of the church and the evening entertainments.

In the American asylums dances are less practised than in the English ones. In some few, association of the sexes at this amusement is not allowed. The general character of the associated entertainments differs also somewhat from that of those in use in English institutions, and instruction rather than amusement is its leading feature. The American lecture system, wonderful in its organization and eminently characteristic of the people, has found its way into the asylums, and takes a prominent position among the "amusements" therein. The assistant medical officers, people of learning and position in the neighbourhood, and itinerant lecturers, take part in the courses of lectures which are given in every asylum, on subjects more or less scientific and abstruse. Almost every asylum possesses a collection of philosophical instruments, air-pumps, electrical machines, &c., to illustrate these lectures; and the patients seem to enjoy what would be but very dry bread indeed to any but an American lecture-loving audience. Magic lanterns form a standing amusement in American asylums; the slides are in most cases photographic, and are shown by the aid of the oxy-hydrogen light.

At the Pennsylvania Lunatic Hospital, Philadelphia, light gymnastics have been introduced for the female patients, and whilst serving as amusement, are an important aid in treatment. These gymnastics, which are now in use in many American schools, were introduced by Dr. Dio Lewis. They are performed in a light loose uniform, which permits great freedom of motion, and, when thoroughly carried out, seem to exercise almost every muscle in the body. With these exercises, and roll skates the patients pass two or three hours, on one or two evenings a week very pleasantly.

In the Continental asylums indoor amusements are similar in character to those in use in England and America; but, in addition, dominoes and billiards are to be found in every asylum. Billiards, being much more played among the lower classes on the Continent than in England, are a more necessary and fitting amusement than they would be in English institutions. There is, however, a marked want of outdoor games. In the majority of Continental asylums music serves as the chief mode of amusement. When dances are permitted, the sexes are not, as a rule, allowed to meet.

In some asylums a fixed sum is voted annually for the amusement of the patients. At Prestwich £50, and at Worcester, £10 are voted by the governing body for the support of the band. At Colney Hatch and other institutions, small sums are voted as needed. At the Essex Asylum the sums obtained by the sale of rags, bones, and old iron are devoted to purposes of amusement, and all fines incurred by attendants are generally devoted to the same purpose. At Montrose there is a special fund to which donations to the amount of £200 have been made. At Utica the patients make fancy work for sale, and occasionally a theatrical performance is given by the asylum dramatic company, to which the public are admitted at a charge of 50 cents. per head, the proceeds being handed over to the amusement fund of the institution.

The asylum library ranks high among the amusements of most institutions.

The amusements are not confined to the asylum boundaries; large numbers of the patients frequently go for picnics and tea parties in the neighbouring country. A favourite amusement at Quatre Mares, near Rouen, is a military march into the country, the column being headed by the asylum band. Visits to the public gardens, concerts, penny readings, and theatrical and other performances, are permitted to the quieter patients, under the charge of attendants; and it is no uncommon thing to see an omnibus or waggon load of the patients, on an English racecourse, amused spectators of all that is to be there seen.

*School.*—A school in which ordinary elementary education is given to asylum inmates—not only to the idiotic and feeble-minded children, but to all such as are without elementary education and considered capable of receiving it—has been organized at Sussex, Lincoln, Stafford, Montrose, Gloucester, Perth, Morningside, Illenau, Quatre Mares, and other institutions. The school is sometimes under the care of paid teachers, sometimes under the steward, matron, or chief attendants, and occasionally is more immediately the work of the chaplain.

By some superintendents it is spoken of as "a good moral and mental measure." The English Commissioners in Lunacy have more than once written in its favour, and visitors to asylums have grown eloquent in praise of "this noble and philosophical attempt to build the mind anew on the ruins of outraged feeling, or enfeebled judgment, or whatever may be the form of injury sustained, by conveying new ideas to the perceptive powers, and by calling up, by means of education, faculties which were previously unknown or dormant, or which may prove to be healthy or antagonistic to those diseased."\*

But some among the ablest of asylum superintendents state at once that it is useless, or "not much good;" whilst others speak of it rather as a pastime than as yielding any beneficial results. In some asylums the time spent in school is employed by the patients chiefly

\* Wendt's "Account of Asylums in the North of Europe," quoted by Pritchard in "Annales d'Hygiène, 1836," and by Dr. W. A. F. Brown, in "What Asylums were, are, and should be."

chiefly in writing letters to their friends, in which they are assisted by the teachers. At Stafford Asylum, when the school-room was visited, nearly half the patients were discovered sitting with their books wrong side up; and on making inquiry concerning the ability of the patients to read, it was found that all who possessed that accomplishment, owed it to other than asylum teaching.

*Classification of Patients.*—The insane are divided into two great classes, acute and chronic; and as has been already seen, these are in some places accommodated in separate asylums under totally distinct government; whilst in others, the plan known in Germany as that of "relative connection" (*relativ-verbundung*) is pursued,—the acute and chronic cases being kept apart, whilst the general and medical administration is one, and the same.

The blocks recently built in connection with some English asylums (as at Prestwich, Chester, Devon, and Wakefield)—and the "detached day-rooms and associated dormitories near the wash-houses on the women's side, and the workshops and farm buildings on the men's," recommended in the Tenth Report of the Commissioners in Lunacy, for the more quiet patients, and which are to be seen in the New Surrey Asylum—approach in principle to the "relative connection" system of Germany; but no absolute separation of the acute and chronic cases is made, and the exact character of the residents in these is a matter of medical classification. The acute and chronic cases are mixed, as in the distinct sections of the modern French asylums, or in the asylum wards of the English and American institutions; the quietness of behaviour, and the capacity for work—not the curable or incurable nature of the case—being considered in the classification made.

The principle which is adopted in classifying the inmates in the majority of asylums in Great Britain, America, France, and Belgium, (and in Germany also, subsequently to the division into curable and incurable,) is that of similarity in the more marked phases of their malady. The quiet, the violent, the epileptic, the dirty, the demented, are separated one from another for convenience of treatment on the one hand, and for their own comfort on the other.

The exact classification adopted differs in almost every asylum, partly owing to its structure, and partly to the peculiar views on this subject which are held by the superintendent; but that in use in some of the best managed institutions in Europe and America is as follows:—

Worcester:—In 7 wards for each sex—1, sick and infirm; 2, imbecile and idiotic; 3, convalescent; 4, excited and violent. The remaining 3 wards are occupied by patients varying between the convalescent and violent classes.

Sussex:—1, sick and infirm; 2, epileptic and idiotic; 3, recent cases; 4, convalescent; 5, violent. Further divisions by wards.

Three Counties:—1, sick and infirm; 2, epileptic; 3, imbecile and idiotic; 4, convalescent; 5, violent.

Derby:—1, old and infirm; 2, epileptic and paralytic; 3, workers; 4, quiet chronic cases; 5, convalescent; 6, violent.

Leicester:—1, old and infirm; 2, epileptic; 3, well-behaved; 4, excited.

Prestwich—in 4 blocks:—1, sick and infirm; 2, quiet and feeble; 3, convalescent and workers; 4, excited. Further divisions by wards.

Colney Hatch:—1, infirm and sick; 2, idiots and imbeciles; 3, convalescent; 4, quiet; 5, dirty; 6, refractory. There are various sub-divisions, as the males are in 24, and the females in 22 wards.

Bristol:—1, infirm; 2, epileptic; 3, convalescent; 4, violent.

New Surrey:—1, sick; 2, recent cases; 3, workers; 4, rough and noisy. Dr. Brushfield does not advocate elaborate classification, and thinks even noisy patients, when divided and placed one or two in each ward, are quieter and do better, without annoying hurtfully the quieter patients, than when placed with others of a similar class in a violent or excited ward.

Essex:—2 galleries on each side for more excited and noisy patients; beyond this no special classification.

Lincoln:—A separate class is made of epileptics; but for the remainder very little classification is attempted, or thought desirable. One ward may contain worse cases than another, but nothing like a violent or excited ward is made. The cases are associated so as to act beneficially on each other.

Cupar and Murthly:—1, sick and infirm; 2, ordinary cases; 3, violent.

Montrose:—Little or no classification is attempted. The cases are mixed as much as possible, so that bad cases are placed in each ward. There is a special infirmary ward.

New Jersey:—1, recent; 2, demented; 3, convalescent; 4, excited. The total number of wards is 16, and 9 are considered indispensable. The remaining classification is founded partly on mental and partly on social status, congenial people being placed together. No special epileptic ward or infirmary.

Washington:—10 wards:—3 chief divisions: quiet, somewhat violent, and violent. No epileptic or infirmary ward.

Pennsylvania State:—Quiet, somewhat violent, and violent. There are 10 wards for subdivision.

New

New York State Asylum:—There are 12 wards for each sex; and the classification is founded entirely upon the behaviour and self-control of the patients. Even social position is very little taken into account. The patients range from convalescence to violence, and removal from a ward to the one below it in class, is made to serve for purposes of discipline. There is a special ward for demented cases.

St. Anne:—In 7 sections: 1, sick; 2, quiet; 3, excited. The other 4 are occupied by those ranging between quietness and violence.

Ville Evrard:—In 7 sections: 1, infirm; 2, dirty; 3 and 4, tranquil; 5, excited. The other sections are occupied by patients varying between the more tranquil and excited classes.

Evreux:—1, idiots; 2, old and infirm; 3, sick; 4, dirty; 5, convalescent; 6, workers; 7, excited; 8, violent.

Charenton:—1, sick; 2, epileptic; 3, paralytic; 4, dirty; 5, chronic and tranquil; 6, violent.

Quatre Mares:—1, sick; 2, idiotic; 3, epileptic; 4, demented; 5, dirty; 6, convalescent; 7, working; 8, violent.

St. Yon:—1, sick; 2, idiotic; 3, dirty; 4, demented; 5, quiet and convalescent; 6, violent.

Guislain's Asylum, Ghent:—1, sick; 2, idiots; 3, dirty; 4, demented; 5, quiet and convalescent; 6, violent.

Meerenberg:—1, quiet; 2, infirm and old; 3, epileptic; 4, idiots; 5, quiet; 6, violent.

Göttingen:—1, recent; 2, epileptic and dirty; 3, quiet; 4, violent and noisy.

Hamburg:—1, recent; 2, dirty; 3, workers; 4, noisy; 5, violent.

In the majority of these asylums, the number of wards gives opportunities for minor subdivision.

It will be seen that the classification in the French asylums, is more elaborate than in those of Great Britain and the United States, in which there is a marked and increasing inclination to abolish minute classification, and to substitute for it an arrangement of cases, founded on individuality of character.

In the American and Continental asylums, as almost every institution contains accommodation for patients of different social grades, the classification is necessarily to some extent modified by this circumstance. In some English pauper asylums care is taken to separate those who have formerly moved in different social positions—and who, through adverse circumstances, (the chief of which has been in many cases the nature of their malady,) have been brought to poverty,—as far as possible from those who have always belonged to the indigent classes.

At the Essex County Asylum, a certain number of those of superior education are placed in a small separate cottage; and at Leicester, those of this class, though entering the asylum as paupers, and paid for by the parishes to which they belong, are placed in the division occupied by the paying patients, with whom their social position more accords.

*Animals.*—The animals kept in an asylum are of two kinds, those for the amusement of the patients, and those for the profit of the institution. The latter however may, and do often serve, as means both of employment for, and interest to, the patients.

The animals kept for amusement are, deer, goats, rabbits, guinea pigs, &c.; and to these may be added birds of many kinds, peacocks, pheasants, guinea fowl, pigeons, singing birds of almost all kinds, jays, magpies, ravens, jackdaws, starlings, parrots, ducks, fancy fowls, &c.

At the Washington Asylum a small menagerie is kept in the airing grounds, in which there are bears, jaguars, raccoons, grey squirrels, &c.

The animals kept for profit are pigs, cows, horses, sheep, &c. The profit to be derived from pigs has already been mentioned in treating of the disposal of refuse. Cows are generally found in both British and Foreign asylums to more than pay all expenses, and are kept in sufficient number to supply the entire institution with milk. In one or two English institutions (as at Essex) placed in grazing counties, a good supply of milk is obtained from farmers in the neighbourhood; and this is thought to be more economical than keeping cows, but is decidedly opposed to the general experience. At Murthly the quantity of land under cultivation is not yet sufficient to start a dairy, and milk is obtained by contract. In these cases the milk supplied is carefully tested by the lactometer, and the standard of purity rigidly enforced.

Cattle breeding at the Derby Asylum is a subject of much interest to both officers and patients. The asylum possesses a beautiful breed of Durham cattle, and more than once prizes have been carried off at the agricultural shows held in the district.

The number and character of the horses kept, depend on the wants of the establishment, and range from one small pony, employed to cart the refuse from the house to the farm and bring back vegetables, to a number of cart and carriage horses. Horses are required for pumping, carting, and for farm labour when anything more than spade husbandry is attempted.

Asylum farms being chiefly arable, sheep are not generally kept; but at Broadmoor there is always a small number, and at Prestwich, Sussex, and other asylums there are generally a few awaiting slaughter.

It is a moot question whether poultry farming is profitable in asylums, or not. Sometimes the poultry yard is said to pay well, whilst at others it has been entirely abolished.

abolished as asylum property, and the superintendent or farm bailiff keeps a few fowls for his own use. There seems to be no question that poultry farming is generally profitable, even without the important help of a farm yard, and that it is doubly so when so helped; under such circumstances it is difficult to understand why asylum poultry yards should be less profitable than others, if properly conducted. The secret would appear to lie in the honesty or dishonesty of those in charge of them.

*System of Supply.*—In the majority of asylums the commissariat is supplied almost entirely by contract; but at the criminal asylum, Broadmoor, the Prestwich and Sussex Asylums, the Pennsylvania Lunatic Hospital, the New York State Asylum, and the Government Asylum at Washington, different systems are pursued.

At the Criminal Asylum, Broadmoor, all the provisions and stores are bought in the market; and this is considered better, and less likely to place temptation in the way of officers having charge of the commissariat department, than the contract system. At Prestwich, Sussex, the New York State, and the Washington Asylums, cattle and sheep are bought in the market by the steward, kept on the asylum farm, and slaughtered as required; and the same system is pursued to a minor extent at the Northampton Lunatic Hospital. At Prestwich the saving by this method is said to be very large, amounting to £600 during the first year, after the system of contract was given up; and in other institutions this system of supply is most favourably reported of.

In the proprietary houses in England, from which public institutions may often take a lesson in household economy, the stores and food are usually bought in the market, and not contracted for.

*Provision for Relief of Patients on Discharge.*—At Hanwell, Colney Hatch, Gloucester, Leicester, and other asylums, special funds, called in memory of, and intended to serve as a monument to, the late Queen Dowager, exist, out of which the immediate necessities of patients on discharge from the asylum are defrayed. At the Three Counties Asylum a sum of money was left for a similar purpose by a Mr. Rowe. Dr. Campbell of the Essex Asylum some time since addressed a letter to the noblemen and gentlemen of the county, asking for contributions for the establishment of a special fund for this purpose; and the result was a sum sufficient for all the needs of the patients. These funds are all at the disposal of the managing committee of the institution. At Stafford, two legacies lately left to the asylum are about to be applied as the nucleus of a similar fund. So generally is the need of some such provision felt, that advantage is taken in many asylums of the 38th section, 25 and 26th Vict., c. III., which directs that any two of the Committee of Governors may permit a patient to be absent on trial, an allowance being made to him not exceeding his charge in the asylum. Almost all patients in indigent circumstances are thus discharged on trial, and receive an allowance from the asylum for certain fixed times after they have left its walls. At Prestwich, the offertory made by officers, attendants, and visitors, at the Communion in the asylum chapel, are devoted to the relief of necessitous patients on discharge. In some of the French asylums, as has been already mentioned, fixed sums accruing from the accumulations of remuneration for labour are paid to each patient on leaving the asylum; and the Committees of Management of the Belgian Asylums, are specially charged in their instructions with the placing of patients in situations after their discharge.

*Asylum Reports.*—Asylum reports are of three kinds:—

- 1st. Those made by attendants and chief attendants to the Medical Superintendent, showing the daily working of the asylum.
- 2nd. Those made at fixed times by the Board of Control, which include reports from the Medical Chief, Chaplain, and other officers, showing the financial and general working of the asylum.
- 3rd. Those made by the Inspectors on the condition and further requirements of the institutions.

In the Asylums of Great Britain these three kinds of reports are made with great regularity. The senior attendant of every ward makes a daily report, showing the total number of patients; the number admitted, discharged, or dead; employed, with the kind of employment; secluded; having fits; attending amusements; escaped, or attempting escape;—with various other particulars. Selections of the forms for these reports, in use in British asylums, will be found in Appendix D, Nos. 1, 2, 3, 4, 5. In some asylums these reports are summarized. The form for the weekly summary used at the Bootham Asylum, York, will be found in Appendix D, No. 6. The night attendant of each division of the house makes a morning report, showing the number of patients specially visited; and the number wet, dirty, noisy, having fits, or receiving medicine. Forms for these reports will be found in Appendix D, Nos. 7 and 8; and a form for a weekly summary of night attendants' reports which is in use at the Essex County Asylum, in the same Appendix, No. 9.

These reports of both the day and night attendants are placed in the hands of the chief attendant of each division, who draws up a summary of them and submits it to the medical superintendent either before or at his morning visit. Forms for these reports will be found in Appendix D, Nos. 10, 11, and 12; and for a weekly summary of them, see Appendix D, No. 13. In Appendix D, No. 14, is a form of weekly report by chief attendant, furnished by a Commissioner in Lunacy for the Report on Colonial Hospitals and Lunatic Asylums drawn up by the Colonial Office. In Appendix D, Nos. 15, 16,

17, 18, 19, and 20, will be found forms for the use of attendants, showing the number of articles made or repaired by patients; sent to, or received from the laundry; ward inventories; and stores and bedding requirement lists; which have been selected from those in use in British asylums.

All these various reports are kept for the examination of the Boards of Control and Inspection, and serve to assist the medical superintendent and other officers in their reports of the working of the institutions.

The Board of Control of almost every public asylum in Great Britain issues an annual report, which includes reports of the working of the institution by the medical superintendent, chaplain, and other officers, a financial statement, and such medical and other statistics as it may be deemed fit to publish. This report is printed, and more or less widely distributed.

Annual reports on the condition and requirements of all public and private asylums are made either to the Lord Chancellor or the Secretary of State for Home Affairs by the separate Boards of Commissioners or Inspectors of England and Wales, Scotland and Ireland. These reports comprise a general statement of the condition of the asylums, drawn from the observations of the Commissioners at their visits to the different institutions, and from the statistical and other returns furnished to them; and the requirements of the various institutions are more or less fully pointed out. In no other countries have such complete systems of asylum reports been established.

In the United States printed forms for chief attendants' reports are in use in a few institutions only; in the majority they are either written or made verbally. The ordinary attendants are not expected to make reports, and the night attendants' reports are either verbal ones, or made in such written form as may seem most convenient. At the Pennsylvania Hospital only is there a special form for night attendant's report. The Board of Control of all Asylums in the United States issues an annual report, which includes that of the superintendent, and is at once general, financial, and statistical. This report is made to the Governor of the State, and is printed for general distribution. The Board of State Charities of Massachusetts publishes a report of the condition of the establishments for the insane, in its annual volume of reports; and the Inspector of Asylums for the State of Vermont also publishes an annual report.

In the large majority of the Continental asylums no system of attendants' reports has been instituted, all communications between the chief attendant and medical superintendent being verbal, and made usually before the morning visit to the wards. At Meerenberg, however, the Superintendent, Dr. Ewerts, was so much struck, during a visit to England, with the excellence of the English system, that he established on his return a similar system of reports, which has ever since been continued; and at Hamburg the chief attendant of each division makes a written report.

The medical directors of the departmental asylums of France make annual reports to the members of the commission of superintendence or board of control, which include accounts of the financial, general, and medical service of the institutions, but these reports are not regularly published by the boards; and the reports of the Inspectors of Asylums, which are made annually to the Minister of the Interior, are never published by that officer. Once in six or eight years or so, an elaborate volume of statistics on lunacy matters, drawn up with extreme care, from returns made from the various asylums, is published by the French Government. The last volume comprises the period between 1854 and 1860, and is a work of unusual interest and value.

The Board of Control of the City Asylums of Germany publish annual financial statements, but general reports of the condition of these and other German asylums are only made at uncertain intervals, and none of the reports of the inspecting officers, where such exist, are ever published.

The Belgian inspectors report annually upon the condition of the asylums of the kingdom to the Minister of Justice; these reports are published, and are of considerable value.

#### STATISTICS.

In the Letter of Instructions, accompanying the Commission which this Report is intended to fulfil, is the following passage, which presents especial difficulties—"You will carefully observe different methods of treatment, and obtain statistical evidence of the results so far as is practicable."

The whole question of Asylum Statistics is in a most unsatisfactory state. The superintendents of asylums publish statistical tables more or less elaborate, and containing a large amount of valuable information. "While, however, the facts recorded may be identical in many, if not in most of the reports, the form in which they are recorded varies so greatly, that it becomes impossible to tabulate them for the purpose of showing general results."\* Calculations have been made on totally different bases, rendering a comparison of the results simply impossible; and evidence the most unsatisfactory and loose has been admitted. Even from Dr. Thurnam's book on this subject,† which shows abundant knowledge, and abounds in elaborate calculation, little having a practical value is to be gained, except on some special points.

The English Commissioners in Lunacy, having been pressed by the Home Secretary to examine some statistics referring to rates of mortality and proportions of alleged recovery, thus record the results of their examination:—"The result was, in all respects to confirm us in the distrust with which we have found reason always to regard such

\* *Twentieth Report of the Commissioners in Lunacy, 1866.*

† *The Statistics of Insanity.*

such returns as at the best of doubtful accuracy, and, even when reliable in that respect, very unsafe in determining practical questions. We pointed out to the Secretary of State that the observations on which calculations of that kind are necessarily founded, are, for the most part, too imperfect to justify general inferences; and that, when even the best observation has been employed as the basis of such statistics, there is no general conclusion to be drawn that the special circumstances in almost every case will not modify."

On the subject of the proportion of insane to population,—a point, it would be imagined, on which satisfactory data might be soon obtained,—little trustworthy evidence exists. It is only in Massachusetts, where a special commission of inquiry on this subject has presented to the Legislature a most painstaking report; in some of the smaller German States, where German perseverance has attained trustworthy results; in England, Scotland, and France, where special care is taken to work out statistics on almost every subject; and in the colonies, where the population is as yet comparatively small, and the entire number of insane, with few exceptions, come under the cognizance and care of the Government; that the proportion can be stated with anything like exactness.

Dr. Griesinger, in his treatise on insanity\*, quotes the following remark of his learned countryman, Dr. Fleming, on this subject:—"It is, at the present time, satisfactorily demonstrated that, with respect to mental diseases, no statistics exist whereon conclusions may be founded regarding the curability of these diseases, or the efficacy of the remedial means employed"; and adds, "I quite agree with him in the latter point; but I cannot at all endorse his statements regarding the curability of insanity"; and he subsequently points out the fact that the statistics furnished by various asylums, where the methods of treatment are essentially different, are almost precisely similar.

On this point there can be little or no doubt. At Illenau, where £480 worth of medicine is administered annually by seven physicians to 450 patients; and at Göttingen, where £50 worth of drugs serve for 240 patients, and reliance is placed mainly on good feeding, wine, &c., the percentage of recoveries is not markedly different. In English asylums, where the opiate, the stimulant, or the expective treatment is most in vogue, no marked difference in the percentage of recoveries can be discovered, beyond what may be traceable to other causes than treatment alone; and in France and Southern Germany, where the shower-bath is largely employed, and in America, where it is never used, the proportion of recoveries is almost the same. In the Bicêtre two directly opposite methods of treatment were at one time followed in different sections; and the results as to recovery were then exactly similar.

In fact in the best asylums of all countries, where order, system, and care are fully carried out, the average percentage of recoveries is almost identical, whatever may be the prevailing mode of medical treatment. Under these circumstances, it may be seen that statistical evidence as to the results of treatment is practically unattainable.

There are several points on which statistics of greater or less value have been obtained, and these, as being of interest to the Colony, will be briefly noted here.

They are—

- 1st. The proportion of insane to population.
- 2nd. The maintenance rate in different asylums.
- 3rd. The cost of asylum construction.
- 4th. The curability of patients sent at different periods.

1st.—The proportion of insane to population.—Of scarcely any country in the world do we possess quite trustworthy statistics. In some cases the number of those in public asylums have been given, whilst the large mass in private asylums and work-houses has been omitted. In others, insanity proper has been taken into account, whilst idiocy and cretinism have not been reckoned; whilst in a few cases only has care been taken to make a searching inquiry into the number of lunatics under all the different provisions made for them; and to estimate together the lunatic, the idiot, and the cretin in public and private asylums, in poorhouses, and in private families. It will be well, therefore, to accept almost all statements on this subject with some reservation. The statistics from Massachusetts, Scotland, England, and France, and from some of the smaller German States, are, however, among the most satisfactory, and approach nearest to the truth.

In Massachusetts, a special commission was appointed by the Legislature in 1854, to inquire into the number and condition of the lunatics within the state. The most searching inquiries were made, the entire number of physicians in the state being asked to assist in the investigation; and in 1855, a report was issued, in which the number of insane, including lunatics and idiots, was stated to be 1 in 302 of the population.

In Scotland, where the insane residing in private dwellings come under the immediate visitation of the Board of Lunacy, the number of insane is ascertained with tolerable though not absolute accuracy. In 1866, the number under official cognizance in asylums, poorhouses, and private houses, was 6,616; whilst about 1,900 were known to the Commissioners as resident in private dwellings, maintained from private resources, and not under statutory control, and 46 were in the Criminal Asylum, Perth,—making a total of 8,562. The estimated population† at that time was 3,153,413, giving a proportion of 1 in 368.

In

\* *Mental Pathology and Therapeutics*: By W. Griesinger, M.D.—p. 456.  
† *Twenty-ninth Annual Report of the Registrar General, 1866.*

In England, the double machinery of the Poor Law Board and the Board of Lunacy are employed to ascertain the number of insane; but still the returns are known to be more or less imperfect. In 1866, the total number known to the Commissioners in Lunacy was 49,082. The estimated population,\* 21,210,020, giving a ratio of 1 in 432.

In Ireland, the returns of the Inspectors of Lunacy, which do not include any patients living in private dwellings, give, for 1866, a total of 8,962 insane in asylums, gaols, poorhouses, &c.; the constabulary returns give a number of 8,200, with friends, or at large—making a total of 17,162. The estimated population\* was at that time 5,582,625; and the ratio therefore 1 in 325.

In France, the elaborate statistics published by the French Government show that the ratio of insane to total population was, in 1861, 1 in 444.

In some of the small States of Germany, (Brunswick, and Holstein,) accurate statistics have shown the ratio to vary from 1 in 300 or 350.

The only other European countries, in which anything approaching to accurate returns have been made, are Belgium and Norway.

The ratio of insane to population in the neighbouring colonies† at the present time, as kindly given by the superintendents of the asylums, is—

Tasmania: Estimated population, 98,455; number of insane 267, or 1 in 368.

South Australia: Estimated population, 172,860; number of insane 231, or 1 in 748.

In New South Wales, the estimated population is now 447,620; the number of insane, including idiots, 1,156, or 1 in 387 of population.

A full consideration of this subject must inevitably lead to the conclusion that the ratio of insane to population has been almost invariably understated. In Massachusetts alone has the proportion been ascertained with absolute accuracy, and there it is 1 in 302. In England and Scotland, the double machinery of the Boards of Lunacy and Poor Law, and, in the latter country the special visitations of the Deputy Commissioners in Lunacy, have avowedly failed to give more than an approach to accuracy; and these boards in their construction and powers, possess such means of obtaining information as is possessed by scarcely any public bodies in other countries. All foreign statistics, then, on these subjects must be received as guesses at truth rather than truth itself. It is the opinion of authorities, that, could accurate statistics be obtained, the ratio of insane to population would in all countries approach if not equal that in Massachusetts.

Dr. Nicholls and other American physicians express a decided opinion that accurate statistics in all the more eastern and settled states would show the proportion to be quite equal to that in Massachusetts.

Dr. Morel in France, and Dr. Ludwig Meyer in Germany, express the same opinion as regards the number in these two countries; and Dr. Tuke states that he has little doubt that the proportion in Scotland is still higher than that already given.

In the Australian Colonies, although the total number of insane in asylums come under the special cognizance of the Government, the returns do not show a correct ratio to population. A certain number both of lunatics and idiots reside with their friends; and in up-country districts are to be seen occasionally half-witted individuals, who would undoubtedly come under certificate of lunacy, and help to swell the number of insane provided for by Government, if kind-hearted men did not accept their fitful labour as equivalent to their board and lodging, and stand towards them in the relation of protectors and friends; but their numbers are on the whole small, and the statistics in the colonies present a nearer approach to truth on this point than those furnished by most older countries. The ratio in the older settled colonies of Tasmania and New South Wales differs very little. In the newer colonies, the mass of chronic insanity with which all older countries are burdened has not had time to accumulate. At least fifty years are necessary for such accumulation, and not until after that time can the number of insane in a country be looked upon as being of any value for purposes of comparison.

In the Colony of New South Wales there are causes of insanity, special and peculiar, beyond those operating in European countries, in America, or even in some of the other colonies:—

- 1st. A large number of the early population came under exceptional circumstances, and the relations of crime and insanity are very intimate. The number of insane in a criminal population is always large. In New South Wales, in 1846, according to statistics prepared by Dr. Campbell, there was 1 insane in 450 of the bond, and 1 in 1,780 of the free, population—a vast and striking difference.
- 2nd. The changes of early colonial life—its ups and downs—and the mental tension which accompany the excitement of soon-got wealth, and the depression caused by its frequent and rapid loss—cannot but be largely productive of insanity. Under this head may be reckoned the influences of the gold diggings in this and neighbouring colonies.
- 3rd. The lonely life of the shepherd, alternating with prolonged periods of debauchery.
- 4th. The abuse of ardent spirits in a warm climate.

On

\* *Twenty-ninth Annual Report of the Registrar General, 1866.*

† Returns asked for from Victoria have not been forwarded.

On the other hand, some causes potent in the production of insanity, exist here in much less force than in other countries. The grinding poverty—the struggle for existence, taxing both mind and body, and so acting as a predisposing and exciting cause of insanity, is here almost unknown; whilst a “pre-eminent salubrity” of climate and outdoor habits of life are strongly calculated to diminish the amount of mental disease.

The proportion of insane to population has undoubtedly increased during the last twenty years.

In 1846, according to tables prepared by Dr. Campbell, there was 1 insane person in 1,115. At the next census, the proportion had risen to 1 in 400. At the present time it is 1 in 387.

This increase is to a great extent accounted for by the growth of a large mass of chronic insanity; which perhaps even yet has scarcely reached its full limits. In the earlier emigrant days of the Colony, notwithstanding, as has been said by an authority on this subject, that every emigrant ship brought one or two either insane or soon to become so, the vast mass of the population came in the prime of mental and bodily health. Their insane had been left behind with their sick in their fatherland. It would necessarily take some years for those becoming insane and remaining incurable to grow old within the asylum walls, and reach by accumulation to that number of old, chronic, and incurable cases, with which all other countries are burdened. It may be fairly estimated that, if the full extent of increase from this cause has not already been reached, it must soon be so and that the number of removals by death will equal the proportionate number of yearly entries on this great chronic list, and so a balance will be effected.

Upon the whole, then, though the contemplation of this mass of suffering humanity must occasion deep sorrow; the Colony of New South Wales has cause for a feeling of satisfaction on estimating the number of its lunatic population. With some special causes in addition to those existing elsewhere, the ratio of its insane to population is not now markedly above that in most of those countries where the number has been ascertained with even tolerable exactness. These special causes will, it is to be expected, gradually disappear; the convict element will become fainter; the excitements of life will diminish; it may fairly be hoped that the use of poisonous alcoholic compounds will diminish, also, with the increase in quantity and the diminution in price of wholesome colonial wine and beer; as well as under the better moral feelings of the future. With the diminution of these; the special causes of insanity in older countries may make their appearance; but it can scarcely be supposed that the ratio of insanity will rise higher than at present. A ratio equal to this, though the burden is great, is borne cheerfully by states not more wealthy than New South Wales, both in the old world and the new.

2nd.—The maintenance rate in different asylums.—The maintenance rate in the entire number of English County and Borough Asylums is given in a former part of this report.

In the Scotch District and Royal Asylums the sums charged for maintenance by the governing boards are:—

	s.	d.
At Perth District Asylum .....	9	4
„ Fife and Kinross do. ....	9	4
„ Haddington do. ....	9	6
„ Montrose Royal Asylum .....	8	6

The average maintenance rate for pauper patients in the Public and District Asylums of Scotland for 1865 was 9s. 2d. a week, and in the Public Asylums of Ireland for 1866, 9s. a week.

In the French Departmental Asylums, the average weekly cost of patients for the seven years from 1854 to 1860 was 7s. 9d. In the asylums visited it was in 1866—

	s.	d.
At Quatre Mares .....	7	3
„ St. Yon ... ..	7	0
„ St. Anne's .....	12	0
„ Ville Evrard .....	7	6
„ Evreux .. ..	7	1

At St. Anne's the number of acute cases is large, and the cost of maintenance consequently greater.

In the American asylums the weekly maintenance rate is larger than in the European institutions:—

	s.	d.
At Washington .....	20	10
„ New Jersey State Asylum .....	16	8
„ Massachusetts do (Northampton) ..	15	0
„ New York State Asylum .....	18	8
„ Pennsylvania do .....	15	0

In the German asylums it is—

	s.	d.
At Hamburg .....	7	0
„ Frankfort .....	11	8
„ Göttingen .....	8	0

At

At Meerenberg it is 8s. 8d., and at Guislain's Asylum 5s. 3d., exclusive of the salaries of the medical officers and chaplain.

In the Australian Asylums the maintenance rate is—

	s.	d.
At Adelaide .....	15	3½
„ New Norfolk .....	11	8

The cost of maintenance in the Asylums of New South Wales:—

	s.	d.
Tarban .....	7	8
Parramatta.....	8	5

exclusive of clothing, which, according to calculations made by Mr. Statham, senr., some years since at Parramatta, may be reckoned at from 2s. 8d. to 3s. a head weekly.

3rd.—Cost of asylum construction.—The following table will show the cost of construction of thirty among the most modern of the British and Foreign asylums, intended mainly for indigent patients, and of three—Coton Hill, Cheadle, and the Pennsylvania Hospital—for patients of a better class. The cost per head, as will be seen, ranges from £88 to upwards of £400. The new French asylums for the Department of the Seine, St. Anne's, Ville Evrard, and Vacluse, will cost, when completed, £720,000 for 1,800 patients, or £400 a patient; their structure and fittings are all very extravagant. The more modern English asylums have cost about £150 a head, including furniture and land. The proposed new asylum for Victoria is estimated to cost £373 per patient. The architect, Mr. Vivian, considers it could be built in England for £188 per patient.

Asylum.	No. of Patients originally built for.	Total cost of Building.	Cost of Building per head.	Cost of Furniture per head.	Total cost of Land.	Remarks.
Derby .....	300	76,179	254	23	7,928	
Essex .....	450	65,855	146	.....	8,000	
Prestwich .....	514	69,531	135	14	11,412

Manchester Do. (Cheadle). ..	.....	.....	300*	.....	.....	*Includes 52 acres of land, and furniture.
Pennsylvania Hospital .....	250	.....	300*	20	.....	*Includes furniture.

4th.—The curability of patients sent at different periods.—The importance of the early treatment of lunacy can scarcely be over-estimated; and the following extracts from the published works of authorities on this subject may fairly find a place here:—

"TABLE showing the average proportion of recoveries in cases of recent and longer duration when admitted to the Friends' Retreat, York, from 1796 to 1867, inclusive.\*

Duration of Disorder when admitted.	Proportion of Recoveries per cent. of the Admissions.		
	Male.	Female.	Mean.
First Class.—First attack, and within 3 months .....	71.428	72.330	71.910
Second Class.—First attack, above 3 and within 12 months...	45.833	47.143	46.308
Third Class.—Not first attack, and within 12 months .....	58.484	68.055	64.000
Fourth Class.—First or not first attack, and more than 12 months .....	12.766	20.982	17.233
Average.....	41.740	48.772	45.601

From the above it will be seen that, when the disease was taken in time, and treated within 3 months, above 71 per cent. of the patients admitted into the Retreat, up to the present year, have been cured."

"At Winnenthal, the number discharged recovered—of those admitted within the first 6 months of the disease—amounted to 68 per cent.; after 2 years' illness, 18 per cent.; and after a duration of  $4\frac{1}{2}$  years, 11 per cent."†

"In cases which come under proper treatment within the earlier months of the disease, the proportion of recoveries may be estimated at 70 per cent."‡

"It is a well established fact that 70, if not 80, per cent. of cases of insanity admit of easy and speedy cure, if treated in the early stage, provided there be no strong constitutional predisposition to cerebral and mental affections; and even when an hereditary taint exists, derangement of mind generally yields to the steady and persevering administration of therapeutic agents, combined with judicious moral measures, provided the first scintillations of the malady are fully recognized, and without loss of time grappled with, by remedial treatment. A vast and frightful amount of chronic and incurable insanity exists at this moment within the precincts of our county and private asylums, which can be clearly traced to the criminal neglect of the disease in the first or incipient stage."§

"The evidence that comes from our own and from many other hospitals shows that the diseases classed under the general term insanity, are among the most curable of maladies of their severity, provided they are taken in season, and the proper remedies applied and continued. In recent cases the recoveries amount to the proportion of 75 to 90 per cent. of all that are submitted to the restorative process; yet, it is an equally well established fact that these disorders of the brain tend to fix themselves permanently in the organization, and that they become more and more difficult to be removed with the lapse of time. Although three-fourths to nine-tenths may be healed if taken within a year after the first manifestations of the disorder, yet, if this measure be delayed another year and the diseases are from one to two years standing, the cures would probably be less than one-half of that proportion."§

"Oneida County sends all her insane here *at once*, and the result is a large percentage of cures and a very slow increase of incurables. From January 1843, the opening of the asylum, to January 1865, Oneida County sent 796 patients—489 at public, and 307 at private charge. Of these 796 patients, there were, January 1st, 1865—

In this asylum at public charge .....	32
Do. at private charge .....	10
In Oneida County Asylum .....	50
	92
Since recovered, or now convalescent .....	7
	85

"Of the 85 who remained uncured, 9 were epileptic, 1 paralytic, 18 were chronic cases, and 12 were demented imbeciles when admitted, and were received only for custodial care."

"Thus

\* *The Seventy-first Report of the Friends' Retreat, near York.*

† *Mental Pathology and Therapeutics*: By W. Griesinger, M.D., 1867, p. 451.

‡ *Obscure Diseases of the Mind and Brain*: By Forbes Winslow, M.D., p. 9.

§ *Report on Insanity and Idiocy in Massachusetts*: By The Commission on Lunacy, 1855.

"Thus, it appears that of all the insane of this county during 23 years, but 10 per cent. remains to be permanently provided for. This exhibit fully justifies the opinion of Dr. Edward Jarvis, that, under favourable conditions of early treatment, but 10 per cent. will be left among the constant insane population."\*

All these extracts, which might be supplemented by many others, tend to show the vast importance of early treatment. No effort should be spared to place all patients under treatment as soon as possible. The English Lunacy Acts are framed to compel the early sending of all pauper lunatics, and provide that, after an asylum shall be established in any county or borough, "no pauper who shall have *lately* become lunatic, shall be received, or lodged, or detained in any house or place other than a county or borough asylum, or public hospital, or licensed house, for a longer period than shall be requisite for obtaining an order for his removal to such asylum", and "that every person wilfully detaining in any workhouse any such lunatic, insane person, or idiot, for more than fourteen days shall be deemed guilty of misdemeanour."

These enactments and others to the same effect, if fairly carried out, may accelerate the sending of insane paupers, and all others coming immediately under the charge of the authorities; but the majority of all insane patients are, primarily at least, under the charge and authority of their friends, and therefore not amenable to any laws to compel early sending. In some of the States of the American Union an inducement is offered to the friends of patients—a premium awarded to them for lodging their insane in the public hospitals during the early stages of their malady—by enactments which direct that when a person in indigent circumstances, not a pauper, becomes insane, and satisfactory proof is adduced that his estate is insufficient to support him and his family, or, if he has no family, himself under the visitation of insanity, he shall be admitted into the asylum and supported at the expense of the freeholders of his county, for one, two, or three years, without being placed on the list of paupers. Under this law, all artisans, small farmers, and other persons of small estate, seek at once a refuge in the asylum, where they are supported free of expense, and their property remains for the benefit of their families; instead of waiting, hoping for a cure, and trusting to treatment outside the asylum walls, whilst their estate is being gradually dissipated, and they are brought nearer, and nearer, and at last into, pauperism.

This enactment seems worthy of all imitation for its humanity and wisdom; and it is by such means—by excellently constructed and well managed institutions; by the employment of officers of high character; by the adoption of a proper nomenclature, in which the intents of the institutions are set forth; and by affording every facility for visitation and inspection—that the American state hospitals for the insane have obtained a high place in the estimation of the American people, and that the insane are committed to them much more readily, and at earlier stages of their malady, than is the case in England; whilst, at the same time, private asylums find little favour, and exist only in small numbers.

#### RESTRAINT AND SECLUSION.

No report on insanity can be considered satisfactory which does not include some consideration of the use of restraint in the treatment of the insane; and this subject, as well as the use made of shower and warm baths in the various countries visited, will be here considered.

No mechanical restraint was in use in any of the institutions visited in Great Britain; and, from an examination of the reports of the Commissioners in Lunacy for England and Scotland, it would appear that the "non-restraint system" is now in almost universal use in England, and that restraint is employed only in rare and exceptional cases in public and district asylums in Scotland. In the parochial and private institutions of that country recourse is more frequently had to it.

In 1853, the English Commissioners in Lunacy addressed a circular letter to the superintendents and medical proprietors of all the lunatic asylums, registered hospitals, and licensed houses in England and Wales, requesting a statement of their views on the subject of seclusion and restraint. The answers to this circular are published in the Eighth Report of the Commissioners; and the following, from Dr. Bucknill, at that time superintendent of the Devon County Asylum, and now Commissioner for the Visitation of Chancery Lunatics, is one of the fullest statements of opinion on the subject:—

"In the Devon County Asylum, restraint is never employed, except in surgical cases; in these, of course, the same principles must be adopted for the insane as are necessary for the sane, to insure that absolute quietude of parts which is essential for the advantageous conduct of the healing process. It is not denied that cases have occasionally arisen in which it has been difficult in the extreme to avoid the imposition of restraint; for instance, those of suicidal patients who have endeavoured to effect their purpose by thrusting articles of clothing and other substances down the throat, by beating the head against the wall, and by other means which are scarcely capable of being obviated by any watchfulness on the part of the attendants.

"A patient is still resident in this asylum, who endeavoured to commit suicide by lacerating the veins of the fore-arm with his teeth, and who bit out from his arm large pieces of flesh in the attempt. Had these efforts continued, it would not have been possible

\* *Annual Report of the New York State Asylum, Utica, 1866.*

possible to have avoided the imposition of restraint, except by defending the arm by hard leather sleeves—by restraining the teeth, in fact, instead of the limbs.

"The occurrence of such cases, however unfrequent they may be, renders it impossible to deny that the imposition of mechanical restraint may, in rare instances, be necessary for the safety of the patient.

"Mechanical restraint in the treatment of the insane is, like the actual cautery in the treatment of wounds, a barbarous remedy, which has become obsolete from the introduction of more skilful and humane methods, but which may still be called for in exceptional and desperate cases. It may be said, that as these cases are so rare—that as large asylums are conducted for many years without one of them being met with—that as they do not appear, they may be considered as if they did not exist.

"The abolition of restraint was an indispensable starting point for efficient reform, since its employment was combined with a multitude of evils which its removal rendered intolerable. Under restraint, the management of the insane could be conducted by a small number of attendants, without calling upon them to exercise either self-control, intelligence, or humanity; there was little need of medical skill, or employment, or recreation; it was found that the easiest plan of controlling the lunatic was by appeals to his lowest motives, especially to the most debasing of all motives, to fear.

"Without restraint, these conditions were reversed, and, above all, it became necessary to influence and control the insane by higher and better motives. In my opinion, the essential point of difference between the old and new systems consists in this, that under the old system the insane were controlled by appeals to the lowest and basest of the motives of human action, and under the new system they are controlled by the highest motive which in each individual case it is possible to evoke.

"The lunatic is unable, without assistance, to control his actions so that they may tend to his own well-being and to that of society. He is, therefore, placed under care and treatment, that he may be restored to the power of self-control; under care, that while this power remains impaired, he may be assisted in its exercise. This assistance may come in the shape of a strait waistcoat, or in the fear of one; or it may come in the sense of duty imposed in the operation of a gentle but effective discipline, of honest pride, desire of approbation or personal regard, or the still nobler sentiments of religion. The first motive, that of fear, belongs to man and the animals, and its exercise is degrading and brutalizing; the latter motives are human, and humanizing in their influence, and their development is the true touchstone of progress in the moral treatment of mental disease. It was the brutalizing influence of fear, and the degrading sense of shame, which constituted the true *virus* of mechanical restraints.

"In repudiating the use of mechanical restraints in the Devon Asylum, the above principle has been kept in view with a jealous anxiety, lest the moral effects of restraint should present themselves in some other form. It would seem that it is more easy, or at least more consistent with our nature, to rule by fear than by love. And the annoyances caused by the insane on their immediate attendants, are hard to be endured without exciting a spirit of retaliation. For this reason, the plan of manutention, or holding violent patients for a long time by the hands of attendants, scarcely deserved the name of a reform; and seclusion injudiciously and harshly employed is liable to the same objection. If a patient is to be ignominiously thrust into a dark and comfortless cell, and detained there for an indefinite period, on the occasion of any outburst of temper or irritability, it may well be doubted whether mechanical restraint does not possess some advantages over such a system; and the French physicians may be perfectly justified in preferring the *gilet* to their own *cellules de force*. But, in my opinion, seclusion differs widely from restraint in its capacity for beneficial employment. Restraint, except in cases so rare that they may be left out of consideration, is always an unmitigated evil. Seclusion, wisely employed, is frequently an important and valuable remedy. The character of seclusion as a remedy, has never recovered from the attacks made upon it by the advocates of mechanical restraint. They represented, truly enough, that a patient walking about pleasure-grounds with his arms tied to his sides, was capable of more enjoyment than he would be if shut up in a dark and narrow cell with all his limbs at liberty. In this objection, the fundamental principle of the new system was overlooked—that neither by restraint, seclusion, nor any other means, was it permissible to inflict upon the insane any unnecessary or avoidable suffering, or any indignity or degrading coercion, whether of a physical or moral kind. But the possible abuse of a thing is no valid argument against its use; otherwise there is no important remedy, medical or moral, which might not be equally objected to.

"That seclusion should not be resorted to merely as a punishment for improper conduct, or as a means of getting rid of a troublesome patient, I readily allow; but the extreme irritability of some insane patients, the uncontrollable fearfulness of others, and the reckless violence of a few during periods of epileptic excitement, are such that a removal from the society of their fellow-patients cannot be withheld from them without sacrificing their interests and safety. In the employment of seclusion everything depends upon its method. In the Devon Asylum, the padded room is rarely used except as a sleeping room for feeble patients who are liable to get out of bed and to fall against the walls at night. Its principal use, therefore, is not for seclusion. The attendants should have the power to impose seclusion only under the most pressing emergencies, for brief periods, and until the medical officer can arrive. Seclusion, being a remedy, should be directed solely by the medical man, whose care it should be to abstract from it every

punitive

punitive characteristic. The easiest mode of doing this is to invest it with a medical character—to speak of it as necessary for health, and even to add some other remedy more purely medical. In numerous instances I have observed the most beneficial effects result to the mental condition of patients, from the confinement to bed which had become necessary from some not very serious bodily disorders—a sore leg, for instance—and have derived therefrom on this subject hints which I have found not without value.

“It is not, however, often possible to confine a patient to bed for the sake of mental quietude. The relaxation so produced might increase the nervous irritability which it was desirable to obviate. On this account, it is found an excellent plan to seclude irritable patients in the open air—to place them alone in an airing court, where they can be kept under observation, and where, by solitary exercise, they can walk off their excitability. On this account, also, seclusion rooms should be light and cheerful sitting-rooms, furnished with means of occupation and amusement—the very reverse of *cellules de force*. Where such rooms are not attainable, a vacant corridor, gallery, or day-room should always be preferred to the cramped space of a single sleeping-room. Seclusion, used as a remedy, should be made as agreeable as possible. It is thought of some importance that patients should, in many cases, have the power of ingress and egress to and from their rooms. At the opening of this asylum, the bed-room doors of one whole ward were supplied with ordinary door-handles on the outside, so that the patients might enter their rooms without the aid of the attendant's key. In each ward where seclusions are not prevalent, single room doors have been prepared with ordinary door-handles and latches within and without, in order that the seclusion may as frequently as possible be robbed of its coercive character. Used in this manner as a remedial agent, seclusion as little deserves the opprobrium of being coupled with restraint as the warm bath, or any other means of allaying nervous irritability. When possible, the patient is persuaded to submit to separation before excitement has developed into violence, and the employment of force has become requisite. If seclusion is always looked upon as an evil, it becomes an evil by being postponed until it is needful to enforce it by superior physical strength.

“There is, however, another aspect under which seclusion must be considered, wherein it is not remedial—wherein it is acknowledged to be an evil, by its use being justified as the least of two evils of which the annoyance and danger of the patients in general is the greater. It can not be denied that insanity frequently displays itself by excitement of the malignant passions, and that some of the most depraved of mankind terminate their career in asylums. Towards these, seclusion must occasionally be employed in its harsher form, as a coercive means to prevent the welfare of the many from being sacrificed to the passions of a few. But, under a well-developed system of industrial employment, aided by medical remedies, this repressive kind of seclusion is rarely necessary, and, in this asylum, certainly forms by far the least frequent reason of its employment. Habits of industry, propriety, and order are inculcated with so strict a surveillance as to leave to the ill-disposed but little opportunity for the indulgence of vicious propensities. By these means habits of self-control are gradually established; and frequently, in the end, self-respect is so far awakened that it becomes both prudent and just to withdraw surveillance.

“Finally, I think that a marked distinction should be drawn between seclusion used as a remedy, and seclusion used as a means of coercion. It has, in my opinion, been too exclusively viewed in the latter light; and, while I feel that it is essential to reduce to a minimum this and every means of coercion, I am convinced that it is unwise to brand with an opprobrious character an important means of comfort and of relief to many of the greatest sufferers from mental disease.”

In the second edition of the *Manual of Psychological Medicine* by Drs. Bucknill and Tuke, this Report is republished, Dr. Bucknill prefacing it with the statement, “We entertain privately the same opinions on the employment of restraint and seclusion as those which six years ago we expressed to the Commissioners in Lunacy.”

On examining the reports of other asylum superintendents it will be found that they agree in the main with the opinions expressed by Dr. Bucknill. The opinion, however, is in many cases expressed that restraint is never necessary, never justifiable, and always injurious. By some few there is a more distinct advocacy for restraint in certain cases. “With every disposition to advocate the disuse of restraint to the utmost extent, I am compelled to admit that the results of my experience in this asylum up to the present time, lead me to the conclusion that cases may occur in which its temporary employment may be both necessary and justifiable”, writes Dr. Wilkes, at that time medical superintendent of the Stafford County Asylum, and now a Commissioner in Lunacy; and Dr. Sutherland gives a similar opinion.

During the last few years there has been a certain reaction in the feelings of superintendents of asylums on this subject; in quite half of the asylums visited, although restraint was not practised, its advantage in certain cases was distinctly admitted; and it does not now meet with the all but wholesale condemnation which was accorded to it some few years ago.

In Northern Germany, Belgium and Holland, the non-restraint system is in use in a few institutions. Dr. Ewert, of the Meerenberg Asylum, visited England in 1854, and was so much struck with the absence of restraint that he determined

on adopting it on his return. The number restrained at Meerenberg has been since this date.

The camisole has been the only means of restraint employed. It was used in each case once only, and generally for some special cause—to keep on dressings in cases of carbuncle, &c., or to prevent accident in the treatment of surgical affections.

Dr. Ewerts regards it as an unmixed success, and speaks with pride of having been the first to carry out the non-restraint system on the Continent. His example has not been followed by other Dutch physicians; but the prominent members of the modern school of psychological medicine in Northern Germany have taken up this question warmly, and “non-restraint” is carried out fully by Griesinger at Berlin, Reye at Hamburg, and Ludwig Meyer at Göttingen. At Hamburg, after six years’ experience, the system is pronounced in every way successful.

Dr. Meyer, at Göttingen, speaks of it as a decided success, although from a deficiency of asylum accommodation, the number of acute cases is greater in German than in English institutions; and adds, that although he does not doubt for a moment that a limited number of cases are best treated by restraint, still an asylum can be worked smoothly and well without it, and where it is allowed, it is always liable to be abused. The restraining apparatus is said to be kept under lock and key, and never used without the physician’s order; but this never is really carried out. Again, the knowledge that restraining apparatus exists, has a baneful influence on the more sane of the patients: it gives them a feeling of insecurity when they see it used on others—a sort of feeling that their turn may come, and so the asylum becomes to them a prison-house and not a hospital. The adoption of the non-restraint system has not been found to increase the amount of seclusion in those German asylums where it has been tried.

At Guislain’s Asylum, Ghent, restraint is very rarely used. When visited, no person was subjected to it, and only one was in seclusion.

Great as has been the success attending the trial of complete non-restraint in these Continental institutions, in the vast majority of institutions for the insane on the Continent, restraint is still used.

In the French asylums the camisole or strait waistcoat is the only means employed, but it was found in use in every asylum visited, except at Evreux, where it was said to be used occasionally. The number, however, found in restraint was, as a rule, small. At St. Yon, out of upwards of 900 patients, three only were in the camisole; at Charenton, four; at Ville Evrard, one. At Quatre Mares, with 700 patients, the morning report showed four under restraint. At the Bicêtre the number restrained was larger than in the majority of French asylums, and one child of seven years old was wearing the camisole. At St. Anne’s, where the number of acute cases is large, the total number in restraint was twelve, six of each sex.

There would appear to be in France a growing desire to lessen the amount, if not entirely to abolish the use, of restraint. In 1858, Dr. Morel of St. Yon visited England for the special purpose of inquiring into the system of “non-restraint” as there practised, and returned fully convinced of its advantages, and of the possibility of carrying it out completely. His work on this subject,\* published in Paris in 1860, contains the most valuable testimony to the advantages of the system; but, owing to the greatly overcrowded state of the St. Yon Asylum, Dr. Morel has found it impossible to carry out the system fully, though his belief in its advantages has not diminished.

In the German asylums in which restraint is employed, bed-straps, and sometimes the chair, are used, as well as the camisole. At Illenau, four out of 450, and at Frankfort five patients out of a total number of 160, were found in restraint; but in one of these there was fracture of the leg, and the bed-straps were absolutely necessary to keep the patient quiet, and so allow of union of the bones.

In America restraint is even more largely used than on the Continent.† At the Criminal Asylum, Auburn, U.S., there is a liberal use of handcuffs, besides other means; and in the City Asylum of Philadelphia men are also to be seen with heavy wristlets fastened to a chain passed round the waist; but these are exceptional cases. In the State

\* *Le Non-Restraint, ou de l’abolition des moyens coercitifs dans le traitement de la folie*: Par M. le Docteur Morel.

† In the poorhouses of Pennsylvania and other States, where there is no system of inspection, restraint in some of its worst forms is practised. In some instances the patients are placed in square boxes, of a coffin shape, with a hole for the head, and fastened up against the wall.

State asylums and lunatic hospitals, the camisole, muff, wristbands, and bed-straps form the chief means of restraint; but in some cases chair-straps and crib beds are used:

At the New Jersey State Asylum, three patients were found in restraint, and four in seclusion.

At the New York, six patients on the female side were restrained; and though none were absolutely in seclusion, since the doors of the rooms were open, one was strapped to her chair, and another was in a crib bed.

At Washington two patients were found in restraint, and seven in seclusion;

At the McLean Asylum, Boston, three in restraint, and two in seclusion;

At Northampton, four in restraint and three in seclusion;

At the Pennsylvania State Asylum, one in restraint and two in seclusion;

At the Pennsylvania Lunatic Hospital, one in restraint, and none in seclusion.

The bed-straps and crib beds are used in those cases in which a horizontal position is deemed necessary, owing to the weakness of the patient; and the general use of restraint is justified by statements that the patients in America are, as a rule, more violent, that they possess larger ideas of personal freedom, with a greater want of discipline, than in Europe. In personal communications and written reports, the opinion is always expressed that restraint is absolutely necessary for the proper treatment of a certain number of the insane.

Dr. Kirkbride, one of the best known of asylum superintendents, thus writes on this subject, in the Report of the Pennsylvania Hospital for 1852:—

"Restraint is necessary in every hospital for the insane."—"It is no advance to give up restraining apparatus and substitute frequent and long-continued seclusion. An individual may really be more comfortable and much better off in the open air with some mild kind of restraining apparatus on his person, than he would be confined to his chamber without it."—"Although fully impressed with the conviction that the frequent use of restraining apparatus is a great evil in any hospital for the insane, it has not been deemed necessary to resolve that it should never be used in this institution."

During a personal interview, he said—"It is very useful in a few cases: in a minor number it is the best form of treatment. Patients sometimes ask for it, and to cease altogether to use it, in obedience to popular clamour, is to cut yourself off from a useful, and indeed valuable means of treatment—the best indeed for a limited number of cases. All restraint is an evil if it can be done without; so is laudanum; still a judicious physician will not banish narcotics from his armoury, but will use them with discretion. In many cases it seems better to confine a patient's hands in wrist-straps or camisole, and turn him into a corridor or court, than to shut him up alone. Seclusion is always bad; no teaching by means of the senses is going on the while, and patients who have bad habits almost always practise them when in seclusion. Some patients seem less humiliated by mechanical than by personal restraint."

Dr. Gray, the Superintendent of the New York State Asylum, and the Editor of the *American Journal of Insanity*, in the Twenty-first Annual Report of the Utica Asylum, states his belief, that the English system is founded on a false theory of the treatment of insanity, and details the practice pursued in that asylum, so that the public may have "just and distinct views in what the necessity and extent of restraint consists, and appreciate the nature and importance of its use in certain cases."—"It is resorted to in controlling for given periods cases of great restlessness or high excitement, with a view of husbanding the general strength and promoting calmness. Many cases, especially in the acute stage of mania, if left to themselves, or given the freedom of the ward, would soon exhaust their vital powers by excessive muscular action. Excitable, noisy persons thus restrained during paroxysms, are more tranquil, and are able to remain in association with others in the wards or sitting-rooms, instead of being secluded; and their personal comfort is really promoted by this partial restraint. We are of opinion, also, that the moral as well as the medical effect of this treatment is much better than that of seclusion."

The greater violence of the American patients over those in European asylums, which is given as one reason for the use of restraint, is certainly not apparent to a casual visitor. The prevailing characteristics of American insanity, as seen in the Eastern States, are irritability and fidget, not violence. The patients are restless and tear their clothes—(is it that they want tobacco to chew or a stick to whittle?)—but they are not more violent than the patients in English asylums. In all the arguments for restraint used by American physicians the evils of seclusion are pointed out, but there is, as a rule, more seclusion, notwithstanding the restraint, in American than in English asylums. In two American asylums only was no person found in seclusion—the Philadelphia Lunatic Hospital and the New York State Asylum—whilst in several British asylums, as Stafford, Leicester, Bootham, York, Montrose, and Murthly, it is never practised; and in those institutions in which seclusion is used, the proportion is decidedly less than in American institutions.

In some British asylums seclusion is practised more or less as a disciplinary measure; in others, simply as treatment in those cases where quiet and absence from light are necessary. It has been completely abolished in a certain number of British institutions, because it is liable to abuse; but its occasional use for short periods, and purely as a matter of treatment in cases of violent mania, is generally considered beneficial.

The amount of seclusion in Continental asylums is, as a rule, not large; but wherever the amount of restraint was found to be larger than ordinary, the amount of seclusion was large also. At Illenau and Frankfort the amount is larger than at Hamburg, Göttingen, and Meerenberg. Dr. Morel, in his efforts to introduce "non-restraint,"

restraint," has not increased the amount of seclusion. At St. Yon, with a population of over 900, not one was found in seclusion.

The shower-bath, once one of the most common agents in the treatment of insanity, is falling greatly into disuse. In very few British asylums is it now used systematically as a depressant in acute cases of insanity; and where used, it is seldom prolonged beyond two or three minutes. In some asylums it is used as a tonic, as a stimulant in some cases of dementia, and as a means of correcting faulty habits; but for these purposes the shock only is required, and a few seconds serve all purposes. At Montrose it is used only at the patients' own request; and at more than one English institution its use is altogether forbidden. At the Cupar Asylum a rain shower-bath is fitted over the ordinary baths, and this is found quite sufficient to act as a tonic and stimulant. In almost all English institutions the shower-bath is kept locked, the keys being entrusted to the assistant medical officer or chief attendant.

In the Continental institutions the shower-bath is somewhat more used than in those of Great Britain; but its use is not more frequent at Hamburg, Göttingen, Meerenberg, and Ghent than in English asylums. At Illenau, and in some French asylums, it is used in connection with the warm bath as a depressant.

In America its use has been totally abandoned, owing to the strong prejudice felt against it by the public, and its liability to abuse.

The warm bath is employed medically in most British and American asylums; but in many it is only used very occasionally, and in none is it prolonged much beyond half-an-hour. In most Continental asylums, it is a prominent and much used remedial agent, and is continued for periods varying from half-an-hour to three hours. During its use cold cloths are applied to the head, or the douche, or shower-bath used at intervals; and to judge by the writhings and contortions of the patient, and his frantic yells as he rolls over and over in the bath in which he is restrained by a locked lid, leaving his head only free, this treatment is in the highest degree painful.

It is not a little curious that, owing more or less to popular clamour, and to a fear of the abuses to which they are liable; mechanical restraint has been virtually abandoned in Great Britain, and the shower bath has ceased to be used in America, and so a mode of treatment, useful in a certain number of cases, is lost to the physician in each country.

#### ACCOMMODATION FOR PATIENTS PAYING FOR THEIR MAINTENANCE.

England, which has provided with a marked liberality for her insane poor, has also made some public provision for those of the insane who are able to pay for their maintenance, but this has been left mainly to private enterprise, and the large number of private or proprietary asylums attest at once the want which exists and the efforts which have been made to meet it.

A certain number of patients paid for by their friends are to be found in almost all county and city asylums, but they live with, receive the same diet and treatment, and are often in social degree little above, the pauper class.

The noble charities of St. Luke's and Bethlehem founded in times gone by, and the Lunatic Hospitals at York, Northampton, Lincoln, Exeter, Manchester, Leicester, Norwich, Liverpool, Gloucester, Nottingham, Oxford, Coton Hill, and the Retreat for the Society of Friends, vary in their origin and constitution, but have one general end. In them are maintained at low rates of payment, patients belonging to the poor and middle classes, who can ill afford to defray the expense incurred in a private asylum. In some, no charge whatever is made for care and treatment; in others a portion of the income is set apart as a fund destined for the relief of the poorest inmates; whilst, in a third class, patients of all ranks are received at varying rates of pay, and the larger payments from the rich serve to assist in the support of those who can pay but little.

They are all governed by committees selected from the contributors, and are public institutions in the sense that no individual has any direct pecuniary interest in them.

In the lunatic hospitals are maintained a total of 1,842 non-pauper insane, whilst the large number of 3,228 are accommodated in licensed houses.

In general arrangements the lunatic hospitals differ from the asylums in the following particulars:—

The number of patients is as a rule less. Bethlehem, which is the largest, contains 277 inmates.

A larger number of the patients are accommodated in single rooms. At Cheadle, almost all the dormitories are associated, each containing four beds, three for patients and one for an attendant; but at Northampton, Lincoln, Coton Hill, and the Friends' Retreat, there is one single room for every two or three patients at least. The single rooms are generally given to those paying higher rates of board and are much preferred by the patients.

The rooms are more or less comfortably furnished according to the rates of payment. The single rooms contain chests of drawers and ordinary washstand, where from the form of insanity it is possible to allow them, the majority of the rooms are carpeted, and the general fittings assimilated as closely as possible to those with which the patients are surrounded in their ordinary life. The patients generally have one room only, but where a sufficient sum is paid, a sitting-room and bed-room are allowed.

The patients generally dine in small parties in association.

Besides the ordinary officers, a special *companion* is found useful for the females to assist in amusing them and directing their needle and other work. The attendants

at

at the Retreat number 1 to 6 patients, at Coton Hill 1 to 4, at Northampton 1 to 7, at Bethlehem 1 to 6, at Lincoln 1 to 5. They vary greatly in number with the different classes of patients, and with those paying high rates have more the character of servants than attendants. Frequently patients pay for a special attendant. The attendants sometimes wear ordinary clothes, sometimes a neat uniform or livery. The dress of the patients is either found by the friends or made in the institution by paid labour, and charged to the friends. The patients are dressed as much as possible in accordance with their social position.

The amusements for this class of patients invariably include a billiard-room and a good library, and the usual associated amusements are encouraged, the patients frequently assisting in both musical and theatrical performances. Carriages and horses are either kept or hired for the use of the patients, and a certain number taken for long drives almost daily. It is found difficult to find employment for male patients. They are removed altogether from the labouring class, and will do very little manual work. Some few find amusement and occupation in gardening, and others pursue mechanical occupations of various kinds, carpentering, painting, &c. It is thought advisable to encourage literary occupation, and discussion classes are found to be generally beneficial in exciting mental activity and relieving the monotony of asylum life. The diet is varied and every care is taken to serve it as nicely as possible.

The rates of payment vary considerably.

The general maintenance rates in these institutions range from 11s. 2d., to £1 10s. 4d. weekly.

	£	s.	d.
At the Lincoln Lunatic Hospital it is .....	0	16	11
Colon Hill .....	1	5	0
Bethlehem .....	1	2	10
York .....	1	1	0
The Retreat .....	1	1	3

At Coton Hill, the rates of payments by the patients range from 2s. 6d. to 6 guineas weekly.

There are three classes :—

- 1st. Those paying 4 guineas a week and upwards, who have a bed-room and sitting-room and a special attendant.
- 2nd. Those paying sums ranging from 25s. to 4 guineas, who sleep generally in single rooms, and dine at one of three common tables according to their mental condition.
- 3rd. Those who pay less than 25s., the maintenance rate of the institution, and are therefore recipients of its charity. These sleep for the most part in associated dormitories and dine at one of three common tables.

At the Friend's Retreat, York, the general payments range from 8s. to 30s., and there is a limited number of patients who pay sums varying from 2 to 5 guineas a week, and receive better accommodation accordingly.

At the Bootham Asylum, York, the rates of payment range from 4s. to 5 guineas. The farms which belong to these institutions are worked chiefly by means of paid labour.

Pauper patients are received into the Lunatic Hospitals of York and Northampton and the Leicester Lunatic Hospital is in connection (as the Coton Hill and Manchester institutions were formerly) with the county asylum, but the paying and pauper patients are kept in separate wards.

The Royal asylums of Scotland differ only from the English lunatic hospitals, in the fact that into all are admitted pauper patients, who are paid for by the parishes to which they belong. The paying patients are kept in special wards (sometimes, as at Glasgow and Edinburgh, in detached buildings), and the arrangements for the patients are in most respects similar to those in the English hospitals.

The number of paying patients in the Royal Asylums, of Scotland, is 853, whilst 252 are in private asylums.

In France, a large number of paying patients are accommodated in private asylums, the property either of individuals or of religious houses. Some find a home in the hospices, and the noble state institution, the Charenton, serves to contain a large number; but provision is made in the greater number of the departmental asylums for patients of this class—sometimes in rooms in the main building, at other times in detached houses, as at Quatre Mares. They are usually divided into three or four classes.

At the asylum of St. Yon, the rates of payment are,—1st class, 6 francs a day, which entitles the patient to a sitting room and a special attendant; 2nd class, 4 francs; 3rd class, 2 francs 50 centimes; 4th class, 1 franc 50 centimes; 4th class receive the same diet as paupers, and the rooms set apart for them are furnished in a similar manner to those of the pauper class.

The number of attendants for the paying patients in French asylums is generally about 1 to 6.

In the United States, every State asylum affords accommodation to patients of all classes, and there are also institutions corresponding in character to the English lunatic hospitals.

In the majority of the State institutions separate galleries are set apart for the paying patients; but at the New York State Asylum the sole classification is founded on the power of self-control of the patient, and social distinctions are levelled.

The

The rates of pay range from 5 to 12 dollars a week.

The number of private asylums in the United States is very small owing to the general popularity of the state asylums.

The union of pauper and paying asylums is almost universal in Germany, Belgium, and Holland. At all the asylums visited certain rooms were set apart for patients paying for their maintenance. These are usually divided into three classes according to the rate of payments. At Hamburg the paying patients are placed in a detached building.

### CRIMINAL LUNATICS.

The term Criminal Lunatic is applied, with not the strictest propriety, to two distinct classes.

1st. Those, who whilst insane, commit criminal acts, are, in fact, insane first, and criminal, so far as the *act* is concerned, afterward;

2nd. Those who become insane whilst undergoing imprisonment, are criminal first, and insane subsequently.

The first class, those who are insane, and who, under the influence of insanity, commit crimes, which, when sane, they would, in many cases, regard with horror,—are, when brought to trial, either found insane on arraignment, or acquitted on the ground of insanity, and are absolved from all responsibility; but, for the safety of mankind in general, are maintained in safe keeping.

The second class, who, whilst in prison for crimes committed when in a presumed state of sanity, are attacked with mental disease, are maintained in safe keeping, because their insanity does not absolve them from the consequences of their former acts.

It may be well to see how these two classes are provided for in those countries, which have instituted special provision for the criminal insane.

In England, the State Asylum for Criminals at Broadmoor, was originally intended to receive all classes of the criminal insane—those found insane on arraignment, or acquitted on the ground of insanity before the superior courts—and those who become insane whilst undergoing imprisonment, whether in Government prisons or county gaols, but the accommodation was found to be wholly insufficient, and it has been deemed advisable to restrict its use to—

1. Those found insane on arraignment, or acquitted on the ground of insanity and confined during Her Majesty's pleasure;

2. Those who become insane whilst undergoing sentence in Government prisons, and so belong to what is ordinarily known as the convict class:

thus leaving a large mass of people—all those becoming insane while undergoing sentence in minor prisons, and such as are found insane when brought up for trial, and acquitted on the ground of insanity in minor courts—who come under the general definition of criminal lunatics to be provided for in county asylums. In many asylums the insane of these classes are found so little objectionable that they are maintained in the ordinary wards, their prior history being kept as secret as possible: but in other asylums they are sent by the asylum authorities to Fisherton House, Salisbury, an establishment conducted by private enterprise, in which insane of the criminal class are received and specially provided for. To this establishment are sent also by the county asylum authorities almost all of the insane belonging to the convict class, who, on the expiration of their sentence are discharged from Broadmoor, and sent to the county asylums.

The convict class of the insane are discharged from Broadmoor, either on becoming sane, their sentence of imprisonment being unexpired, when they are returned to prison; or at the expiration of their sentence, when they are delivered to friends, who promise to see them safely provided for; or, these being wanting, as they usually are, they are sent to county asylums, whence, as stated above, they are often removed to Fisherton House, as being objectionable in ordinary asylum wards. Those who are confined during Her Majesty's pleasure, are, on becoming sane, either liberated on a special warrant from the Secretary which, in some cases, imposes certain conditions, or kept in confinement for the remainder of their days.

The greatest care is exercised in selecting cases for discharge: the milder non-murder cases, or such as have committed murder under the influence of puerperal mania, and whose subsequent type of insanity has not been homicidal, are set at liberty; but all cases in which marked homicidal propensities have been exhibited, and in which it is probable that, should a second attack occur, the type of insanity would be similar to that before exhibited, are kept in confinement.

At the Criminal Lunatic Asylum for Scotland, which is in connection with the General Prison at Perth, the same classes are received as at Broadmoor—those found insane on arraignment or on trial, and detained during Her Majesty's pleasure, and persons becoming insane in Government prisons whilst undergoing sentences of penal servitude; but the line is not drawn rigidly here as at Broadmoor. Prisoners undergoing sentence in minor prisons are sometimes received; these are, however, few in number, and each case is admitted on special application from the prison in which the individual is confined. The application is considered by the surgeon to the general prison, who is also superintendent of the criminal lunatic asylum, and the patient is sent to the criminal or district asylum according to his decision. Cases in which prisoners have shown homicidal or very malicious propensities, and which are thus unfit for ordinary asylum wards, are, as a rule, admitted.

The

The rules for discharge differ somewhat from those at Broadmoor. Patients becoming sane with sentence unexpired, are sent back to prison; but if the sentence expires, and the insanity continues, either they are sent to a pauper asylum, or their cases are specially reported on by the medical officer as fit subjects—because either of the original nature of their offence, as rape, aggravated assault, &c., or of their propensities since becoming insane—for detention in a criminal rather than a general asylum.

It will be seen that, although in the main, the same classes are accommodated in the Scotch Criminal Asylum, as at Broadmoor; yet, instead of being confined absolutely to those classes, others are admitted on a principle of careful selection. The peculiar character of each case as regards its *criminal disposition* being considered. On the same principle cases, admitted from general or local prisons are selected for further residence in the asylum after the date of expiry of their sentence. The system adopted in Scotland is decidedly broader in principle than the one which is followed in England; and its success may be judged of by the fact that no private institution to receive cases discharged from or refused by the state asylums, is wanted in Scotland—at all events, none exists; and provision is made for all criminal lunatics, except those received by the state institution, in the district asylums.

In the Irish State Asylum at Dundrum the principle of selection is carried even further. The asylum was established mainly for the reception of lunatics charged with offences in Ireland, but acquitted on the plea of insanity; but it was made lawful for the Lord Lieutenant to send also persons becoming insane in both Government and local prisons, whilst undergoing sentence.

From the first, the principle of selection would appear to have been adopted; and from a total number of 178 cases which were found in asylums and prisons, on the opening of the establishment at Dundrum, 84 only were selected for confinement in the state asylum, the cases in which the transgression had been trivial, being ordered for detention in ordinary asylums. The following table, from the Report of the Irish Commissioners in Lunacy for 1865, will show that the principle of selection is still fully carried out:—

	Males.	Females.	Total.
Homicides .....	29	7	36
Assaults on the person .....	32	10	42
Attempts to destroy property, and minor offences of all kinds, the parties being dangerously in- clined .....	22	20	42
	83	37	120

The patients accommodated at Dundrum are therefore the most violent of both the two classes into which criminal lunatics are divided—those acquitted on the ground of insanity, and those becoming insane whilst undergoing imprisonment—the nature of the original offence, and the *criminal disposition* of the individual, being the basis of selection.

The discharges appear to be regulated in much the same manner as in the Scotch asylum. In every case a minute examination into the antecedents of the individual is made before liberation is granted. Patients becoming fatuous and decrepit are removed to their respective district hospitals, under order from the Lord Lieutenant.

In the United States, the State of New York alone has established an asylum for criminals; and this is close to, though not immediately in connection with the State Prison at Auburn. In this asylum, which is exclusively for men, are confined only such prisoners as become insane whilst undergoing sentence in the state prisons, and therefore belong to the convict class; all those acquitted on the ground of insanity, or found insane on arraignment, whatever may have been the offence committed, being sent to the ordinary asylums. In the other States of the Union, as no asylum specially for criminals exists, the convict insane are accommodated in special wards in the state prison, as are women in the State of New York; but in no state is it considered necessary to provide special accommodation for those who are acquitted on the ground of insanity. These cases are sent to the ordinary asylums,—and maintained in the same wards and under the same treatment as those in a similar mental condition,—under special warrants from the Governor of the State; and on recovery are reported sane, and discharged or not, according to circumstances. In the State of New Jersey all cases of this kind are, when cured, sent back to the prisons with certificates of recovery; the majority are set free at once, but certain cases, are maintained for observation in the prison, especially if the original crime has been of a peculiarly brutal kind. From the New York Criminal Asylum the convicts, if still insane at the expiration of their sentence, are not sent to the ordinary asylums, but are kept in the criminal asylum, unless their friends give security that they will be provided for by private means, and not become burdensome to the state in some other asylum.

In France and Belgium, and in Germany\* generally, the criminal insane of all classes are placed in the departmental, provincial, or town asylums. In the Department of the Seine accommodation was provided some years since, for the convict class in a building fitted especially for violent patients, in connection with the Bicêtre at Paris. It is of a circular form, in appearance something between a small model prison and a menagerie;

\* A special asylum for the criminal insane exists at Königsberg.

menagerie; and is still used for the accommodation of insane of the criminal class; but their number has long since outgrown its capabilities. Public and professional opinion in France is so decidedly in favour of treating the criminal insane in ordinary asylum wards, that no new building is in contemplation.

In Holland, the convict class of criminal insane are maintained in special buildings in one of the provincial asylums, the managing committee of which has made a contract with the Government to receive them; but no special provision is made for the class acquitted on the grounds of insanity, who are placed in the wards of ordinary asylums.

The almost complete absence of special provision for the criminal insane of all classes, which exists on the Continent of Europe, is very remarkable; but it is in accordance with the opinions of the public and of many of the most distinguished alienist physicians—opinions which have found expression in various pamphlets, and in papers and journals devoted to matters psychological. It is held that insanity should level all distinctions; that the great gulf which separates the convict from the honest man is bridged over by insanity; and that the bondsman should be as the free—that, when sick in body, the prisoner should still be kept within his prison and treated for his malady; but when sick in mind, the prison should be opened, and the badge of the convict forgotten. The few foreign authors (among whom M. Brierre de Boismont is the best known) who have advocated the establishment of special asylums, have recommended them only for those insane persons who have committed murder or are peculiarly dangerous.

From a brief consideration of the classes for whom special provision is made in various countries, it will be well to proceed to a description of what that provision consists.

*The State Asylum for Criminals at Broadmoor* is about 30 miles from London, and 5 from Wokingham in Berkshire. It stands on an eminence on a large open moor, and commands a singularly fine view. It fronts the south, and in that direction the land slopes so rapidly that the whole extent of farm and garden belonging to the asylum, as well as the view beyond, are visible from the airing courts over the high walls. The soil is gravel; the buildings of brick with stone facing, and for the most part of three stories. The divisions for male and female patients are totally distinct, each surrounded by a high prison-like wall, &c. When complete, there will be accommodation for 370 males and 150 females. The present number of inmates is 330 males and 70 females—a total of 400.

The asylum estate is 300 acres—of this the buildings occupy a large portion, but 70 acres are under cultivation as farm and garden, and 20 as pasture; the farm is being gradually enlarged. The farm buildings are placed in front of, and at a short distance only from the asylum; they are substantial and good. 6 horses, 18 cows and heifers, 120 sheep, and 90 pigs form the farm stock, and there are 60 head of poultry in the farm yard. The farming is not done entirely by hand labour, since the number of patients who can be safely employed outside the asylum wall is small; but implements of various kinds are used.

The cubic space is, for single and associated dormitories and day-rooms, between seven and eight hundred cubic feet.

One-half the patients in the female division, and one-fourth on the male side, are accommodated in single rooms. There is no special infirmary.

The warming is done by open fire-places, and by stoves placed in the corridors at the foot of the stairs. In a block, recently erected for women of the most excited class, hot water is used for warming, and is found cheaper than open fires. The stoves are caged in wire; the fire-places have simple high open railings in front.

A system of ventilation by extraction was tried, but not found to answer. Ventilation is now entirely by open windows, doors, and fire-places, except in the new block for women, in which there are accessories in the shape of perforated bricks for the inlet, and shafts opening near the ceiling and leading to the roof for the outlet, of air; and in the No. 6 block for men, in which perforated zinc panes are placed in the upper window sashes.

The entire asylum is lighted with gas. The buildings and gas making apparatus belong to Government, but are let to a contractor, who supplies gas to the establishment at so much per foot, and is bound to keep buildings and apparatus in repair. This is found to be more economical than working the apparatus by paid servants of the institution. A light is kept in each corridor all night.

The windows are in wooden frames, and open at the bottom by an ordinary sash. The open part is covered with an ornamental iron screen, which has nothing prisonlike in its appearance. In a new block for excited women, and in the block for the worst class of males, there are iron gratings over the entire windows, which are in wooden sashes and open top and bottom. There are shutters to the corridor and dormitory windows, locking when both open and shut.

The water supply is from surface drainage over the estate, and is considered somewhat scanty. It is, however, 30 gallons per head per diem, and is pumped by a steam engine from reservoirs at the bottom of the hill to tanks in the centre of the building. The surface draining is still in progress, and the supply will soon be increased. There are fire hydrants round the building, and the attendants practice fire drill occasionally.

The drainage is rapid and easy, because of the great slope of the land. About half-way down the hill are covered tanks for sewage; in these the more solid sewage matters subside, and are mixed with earth and used as manure, whilst the fluid portion is conveyed over the ground below in pipes. The entire amount of water in the tanks can

can be rapidly discharged through the drains ; and ventilating tubes pass from the sewers to a level higher than the roof. The refuse is used to feed pigs, which are bred, fed, killed, and eaten in the asylum. The bacon is cured, and there is a smoking room at the farm.

There is a general bath-room, containing ten baths, which, however, is almost useless, since it is not deemed advisable to allow patients of the criminal class to be removed from their special section of the asylum. There is also a bath-room in every corridor, in the proportion of one to every twenty-five patients ; the baths are copper. Lavatories are placed in each corridor, and consist of a leaden trough in which stand four or five wooden basins ; hot and cold water are laid on.

There are two kitchens, one for each division, partly detached and open to the roof. The boiling is all done by steam in jacketed boilers ; and on the male side the roasting is by gas in iron ovens.

The washing is done chiefly by steam machinery in two laundries, one of which is in the female division. In this all the lighter work is done. The other, for dirty clothes and rough materials, is at the bottom of the grounds, near the water reservoir. The steam engine turns the machinery for the laundry, as well as pumps water for the supply of the house. The engines for the female division are placed above the laundry, so that the straps for the machinery come down through the ceiling. The washing is done by stamping machines ; the wringing by a centrifugal wringer, and by squeezing between two rollers ; the drying is done in closets ; and the mangle is worked by steam.

Water-closets exist in each ward in the proportion of one to every twenty-five patients. The water supply is by pulling a plug. Earth closets have been introduced in the airing courts, and work satisfactorily. The earth is contained in a box at the back of the seat ; and a certain quantity discharged as the weight is taken off the seat by the rising of the person using it. These closets are only emptied once in about two months, and were quite sweet and clean. Earth closets have been substituted also for water-closets in some of the corridors. They are placed in small projections from the corridor, so as to ensure cross ventilation ; a window is placed over each seat. The divisions are of enamelled slate and partial only. The walls are cemented, the closets self-acting, and the receptacles, of galvanized iron or zinc on wheels, can be removed by opening the front of the seat. There are no urinals in the house ; in the airing courts they are of slate without constant water supply.

The male division consists of six blocks, and the female of two, besides the building for administration. The corridors are as a rule narrow, and used chiefly as passages of communication. For each division there are day and dining-rooms opening from the corridors ; and in the block for quieter patients is a reading room in addition. The day and dining-rooms are substantially and comfortably furnished. The floors are all of deal, except in one block, where they are polished oak. The walls are cemented ; the lower half of each is painted, roughly grained, and varnished ; above this is a bright coloured line, and the upper part is washed with light colouring. There are a few pictures in the day-rooms, and some other minor ornaments ; and the corridors have a strip of linoleum in the centre.

The dormitories are coloured throughout. The bedsteads are of polished wood, strong and well made, the bottom being canvas stretched on iron bars and tightened with a screw. Beside each bed is a small box for clothes, with a drawer underneath. There are wooden washstands with basin and ewer, carpet at the bedside, and earthenware chamber utensil, for the majority of the patients. In the rooms for the worst class there are bedstead and small box only, and the utensil is of gutta-percha or india-rubber. The beds are horsehair, the bedding plentiful and good, and each patient is provided with and made to wear a nightshirt. The bedding is all folded for the day in barrack fashion. The dirty patients are few ; and for these hair beds, covered with mackintosh sheeting, and with a hole in the centre, are used. There are two padded rooms in the male, and one in the female division. The padding is kamptulicon, a compound of gutta-percha, and costs £50 per room. It is in slabs, about 2 feet wide, screwed to the wall.

The stairs are of stone, without handrails ; the centre well is bricked up. The flooring of the passages is of asphalte.

The dinner is brought from the kitchen to the dining rooms in large tins, and is served on ordinary crockery. The plates and drinking vessels, even for the worst cases, are earthenware. The ordinary asylum knives are given to some of the patients, but to the more violent class bone knives and forks only are allowed.

There are two rooms set apart for amusements, one for males and one for females. The former, a large handsome room, is fitted with a stage for theatrical performances, and contains a billiard room—the latter is furnished with piano, bagatelle board, &c.

The chapel is placed above the amusement room on the male side, and is fitted specially for the service of the church. It is the only room in which male and female patients are permitted to meet. Morning prayers for the females are always read in the amusement room of their division.

The airing courts are four in number on the male, and two on the female side ; and, though surrounded by high walls, command extensive views, because of the rapid slope of the ground. They contain fixed and movable seats, and are nicely planted, even that for the most violent class being laid out in flower patches. In the airing grounds small patches are given up to individual patients, for cultivation as flower and vegetable gardens, with the happiest results ; patients who take interest in little else, occupying themselves with their special patches. Each airing court contains a verandah and covered walk.

The

The asylum is under the management of a council of supervision (the members of which are reimbursed any expenses they may incur) appointed by the Home Secretary. The general financial management and control is entrusted to this board; but when large sums of money are required, special requisition is made by the board to the Home Secretary. The board inspect all books and the house and farm accounts. All hiring and dismissal of servants by the superintendent is reported to them; and they engage and dismiss all officers, taking the superintendent's advice on the subject. The board meets once in every five weeks.

The asylum is under the inspection of the Commissioners in Lunacy, who visit it annually.

The superintendent is supreme within the institution, and is responsible for its internal management. He lives in a detached house, has a separate garden, is supplied with coals, candles, &c., and receives a salary of £800 a year. He is assisted in his duties by a deputy-superintendent, who also has a detached house, and £400 a year; and a resident medical officer, who receives £150 per annum, board and lodging; and who acts as dispenser.

The remaining officers are chaplain, who is a clergyman of the Church of England, living in a detached house near; steward, with storekeeper and clerk as assistants; and matron.

There is one chief attendant for each division; six principal attendants for the male side, one for each block; and two for the female; and these, with the ordinary attendants, make a total of one to between five and six patients. In the block for violent cases the proportion is one attendant to four patients.

The chief attendant for the male division receives a salary of £140, with a house, but without board.

The attendants are, as a rule, young, and are admitted after the examination prescribed by the Civil Service Commission. They wear uniforms, marked with badges to denote the rank of assistant, ordinary, principal or chief attendant. The men have a grey morning coat, and a blue one for other occasions; the women wear print dresses in the morning, and a black merino dress, white apron and cap, when the morning cleaning is finished. They carry their keys from a leathern belt. The attendants sleeping in the house have each a separate bedroom; and there are separate special dining rooms for the males and females. The regulation for holidays is that each attendant shall have one whole day in every ten; and additional days are granted at the discretion of the superintendent. Two attendants on the female, and six on the male side, one for each block, are told off for night duty, which they enter on at 10 p.m., leaving at 6 a.m. They change every month, and are visited occasionally during the night by the medical officers, but no other mode of checking their rounds is adopted. Dr. Meyer thus describes the care which is taken to make the attendants comfortable, in the report of the asylum for 1867:—

“As the question is of some importance I may perhaps be allowed to state the wages given to the attendants, and the other advantages placed here at their disposal.

Rank.	Wages.	
	Male.	Female.
Principal Attendant .....	£60 to £70	£40 to £50
Attendant .....	£40 to £45	£25 to £30
Assistant Attendant .....	£35 to £40	£18 to £21

The married men are provided with board and uniform; the single men with board, lodging, and uniform. The female attendants are provided with board, lodging, washing, and uniform. Comfortable cottages are provided on the estate for married men, at a reasonable rent; a day school for the children has existed from the opening of the establishment, a weekly payment in the shape of school pence is made by the parents, but the amount thus contributed covers but a small portion of the expense. A Sunday school established in 1863 has been continued with great regularity. The single men and the female attendants occupy well furnished rooms in the asylum. A comfortable reading room with a library, smoking room, and bagatelle room has been provided on the estate, outside the asylum walls, to the support of which the male attendants and servants contribute by a payment of 1s. on joining the service, and a monthly subscription of 6d. The female attendants and servants pay 6d. on joining, and 3d. monthly. In the reading room a dance is held every six weeks, and this winter penny readings have been established and most creditably supported.”

“Those who are willing to exercise a little self-denial in endeavouring to provide to some extent for their families, have had the means brought within their reach by Mr. Gladstone's Act, passed in 1865. A policy can be issued through the superintendent here to any servant for a sum not exceeding £100, without prepayment of premium, which is covered by a weekly deduction from the wages.”

“The families of attendants and servants resident on the estate are attended professionally by the medical officers of the asylum, and further assistance in suitable cases of sickness is given from the offertory fund; but, notwithstanding all these considerations, some married attendants in receipt of the lower rate of wages, find it difficult enough to keep their families in ordinary comfort.”

Notwithstanding all these advantages, however, the attendants cannot, as a rule, be induced to remain long at the asylum, and resignations are very frequent. The class of patients with whom they have to do seems to be very little the cause of this, but it would appear to be owing in great measure to the distance of the asylum from London or any large town. The railway fare from the nearest station, about 5 miles from the asylum, is 5s. to London, and 2s. 6d. to Reading; and the time spent in going and returning makes a serious inroad in the holiday allowed them.

Besides attendants, there are employed at the asylum, or on the estate, a clerk of the works, land steward, laundresses, cooks, and house servants, a carpenter, blacksmith, tinman, gasfitter, mason, plumber, tailor, bootmaker, upholsterer, &c., who are on the permanent staff of the institution, and qualifying for pensions. Besides these, are journeymen at weekly wages.

The artisans are charged with the care of those of the insane who work with them, but do no other duty as attendants.

The classification at Broadmoor is somewhat elaborate. On the male side, the Queen's pleasure men are separated as much as possible from the convicts, the larger number of them being kept in a distinct block in which no convict is placed; a few of the more violent are placed with the violent convicts.

The divisions are into—1, quiet (Queen's pleasure men); 2, invalids and workers; 3, quiet (convicts); 4, ordinary cases; 5, refractory. Each division is in a separate block; and the 6th block is at present unoccupied.

There are thirteen wards in the five blocks. In the refractory block are three wards, containing forty-five patients, under the charge of eleven attendants; and to this are attached two airing courts with high walls, so as to completely separate this class from the remainder. One man, a dangerous impulsive homicide, is kept constantly in a barred room at one end of the gallery.

It is deemed advisable to prevent the patients, especially the more violent class, associating in large numbers. They frequently combine for mischief, although insane; their old convict habits still remaining.

On the female side, one of the two blocks is used for quiet, and the other for violent patients; and in one ward in the former the women detained during Her Majesty's pleasure are kept. The total number of wards on the female side is five. The amount of work done by the patients is small compared with that in some other asylums, because only a few patients can be trusted to work on the farm outside the walls—the garden is within the walls—for fear of escape. Some cannot be trusted with tools, because of their propensities; and a certain number of the Queen's pleasure men are from the class who are unused to manual labour. The number employed is, however, considerable, as may be seen from the following table. The major part of the boots and clothes required by the inmates are made in the institution. All the ordinary sewing is done; and the value of the work done by patients in the workshops alone, without reckoning the laundry, agricultural work and gardening, is upwards of £500 a year.

TABLE showing the daily Average Number of Patients employed during the Month of December, 1867.

Description of Employment.	Male.	Female.	Total.
In the garden and farm .....	18	—	18
„ wards .....	52	30	82
„ laundries .....	9	12	21
„ kitchens .....	4	2	6
„ store room .....	1	—	1

Total .....	124	68	192

	Male.	Female.	Total.
Average number attending chapel during the month of } December, 1867 .....	50	32	82

Some of the women patients work at sewing, &c., and the men knit gloves and curtains, after ordinary working hours; for this they are paid small sums, which they are allowed to spend on minor luxuries, through the attendants. The women thus earn about £30 a year. All the working patients get extra diet, as will be seen from the diet table.

The

The dress of the patients is varied as much as possible, the class and social status of the patients being considered. Some of the better class are allowed to be dressed by their friends. The dress for the lower classes is usually cord trowsers with blue cloth jacket and waistcoat. The day shirts and socks are all changed twice a week; night-shirts, drawers, and guernseys, once a week; sheets and pillow-cases, once a fortnight. For the amusement of the patients there is a good general library; and a small library is kept in each ward, the books being changed at intervals. £150 a year are spent in books and periodicals. There is a bagatelle-board in each block, and cards, dominoes, draughts, &c. In the courts are croquet and bowls; and a band composed of the attendants plays regularly twice a week. There are, in addition, occasional theatrical performances, six or eight times a year, on the male side—the actors being patients and attendants—and dances about as often for the women. A schoolmaster is employed, under the superintendence of the chaplain, to give elementary education to such of the patients as are uneducated.

The diet-tables for patients and for attendants and servants, are given below:—

BROADMOOR ASYLUM Diet-table—Male and Female Patients.

Breakfast.						Dinner.									Supper.					
Males.			Females.			Males.				Females.					Males.			Females.		
Bread.	Butter.	Tea.	Bread.	Butter.	Tea.	Hot Cooked Meat.	Bread.	Vegetables.	Beer.	Hot Cooked Meat.	Bread.	Vegetables.	Beer.	Bread.	Butter.	Tea.	Bread.	Butter.	Tea.

Dinner.	
This Rota is varied by the substitution of pork from the farm. Fish and fruit pies as circumstances allow.	
Sunday .....	Boiled beef.
Monday .....	Roast mutton.
Tuesday .....	Boiled mutton.
Wednesday .....	Roast beef.
Thursday .....	Roast mutton.
Friday .....	Boiled mutton.
Saturday .....	Roast mutton.

Each patient is allowed 1½ oz. tea, 7 ozs. sugar, and 2 pints milk, weekly. Salt, pepper, mustard, &c., as required.

Working patients are allowed, in addition to the above, 4 ozs. bread, 1 oz. cheese, and ½ pint beer for luncheon, and ½ pint beer at 4 o'clock p.m.

The dinners are also varied by fish, fruit pies, meat pies and Irish stew.

The sick and special cases to be dictated at the discretion of the superintendent.

There is in reality no fixed allowance of bread, as the patients are allowed as much as they can eat. Average consumption per head: males, 1lb.; females, 12 ozs.

There

There are printed regulations for the guidance of all officers and attendants.

Three systems of reports are carried out,—

1st. Daily reports of attendants to superintendent.

2nd. Annual report of superintendent to the Council of Supervision, which is accompanied by statistical and other tables, and printed for general circulation.

3rd. Annual report of the Commissioners in Lunacy to the Lord Chancellor.

The system of supply is not by contract; but each article is bought in the market by the steward.

The weekly cost of maintenance per head is about 25s.

The building is reported to have cost between £300 and £400 per inmate; but no accurate information can be obtained on the subject.

The treatment of the patients is on the non-restraint system, but Dr. Meyer considers a strait waistcoat absolutely necessary in some cases; no other mechanical restraint is ever used, and this only very rarely indeed. Shower-baths are very little used, except as tonics. Seclusion is practised for treatment; and as discipline, for refractory conduct, filthy conversation, &c.; and tobacco and other privileges are stopped in cases of misconduct.

It will be seen from the above description of Broadmoor that, though surrounded by walls and possessing some of the characters of a prison, it differs in the main very little from an ordinary asylum, and is made as cheerful and agreeable a residence for the patients as is possible, safety being however as much a consideration as cure. Its distance from London, or a large town, render supply costly, and visiting by friends almost impossible, and prevents attendants staying any length of time in the asylum. The separation between the Queen's pleasure men and the convict class is carried as far as possible, and it is in fact only the more violent of each class, that come in any way in contact with each other, except at the asylum amusements and religious services.

The following Table gives the Classification of Crimes and Sentences of the 515 Patients in the Asylum, during the Year 1867.

Crimes.	Total Number.			Classed under three heads.								
	Males.	Females.	Total.	Found Insane on Arraignment.			Acquitted on the ground of Insanity.			Convicted and Certified to be Insane after Sentence.

*Fisherton House, near Salisbury*, is a proprietary institution for the insane, containing 540 patients, of whom 250 are paupers, paid for by the counties to which they belong; 90 are private patients, paid for by their friends; and the remaining 200 are criminals. Of these, 140 are cases either found insane on arraignment, or those who have become insane whilst undergoing sentences passed by superior courts; and so Government cases, paid for at the rate of 17s. a week, and awaiting removal to Broadmoor. The remaining 60 consist chiefly of those found insane when brought up before minor courts, or those becoming insane whilst undergoing sentences of imprisonment passed by those courts; a few insane are of the convict class, who, their time of sentence having expired, have been sent from Broadmoor to county asylums. The whole of these are

are paid for at the rate of 15s. 6d. a week—the lower price being fixed because they are, as a class, less dangerous, and so require less care—by the counties to which they belong, and would be treated in the public asylums, as the same class are in many counties, if their presence were not thought objectionable by the asylum authorities, who thus farm them out to a proprietary house.

The buildings at Fisherton House consist of irregular, sometimes one-storied, blocks, standing on a large extent of ground. Many of the houses differ little in appearance from private residences. The criminals are kept apart as much as possible, only the more violent of the pauper class being associated with them. The part of the asylum devoted to them differs little or nothing in arrangement from that occupied by the pauper class. There are dining-rooms and day-rooms below, and dormitories above. The latter are all associated, not a single pauper or criminal patient having a private room—an arrangement which exists in no other institution for the insane, but which is reported to work without inconvenience. In the dormitories, which generally contain from ten to twenty patients, attendants always sleep; and in the rooms occupied by criminals the attendants' beds are placed in a strong wooden cage, through which they can see everything that occurs in the ward, but which prevents attack, from patients during sleep. The attendants dine in the same rooms, but after the patients; and are, for criminals, in the proportion of one to five patients. No mechanical restraint is employed; there is no seclusion, no gloves, no ticken dresses, no padded room, and no shower-bath in the asylum, and not a window is barred. Work is given to as many of the criminals as can be entrusted with it; and those who work overtime receive 6d. a day, which they are allowed to spend in anything except beer or spirits, through the attendants.

The criminal class are found to combine for mischief, and require close watching. Some few years since four of them took out a grate, knocked down part of the back of a chimney, and escaped from one of the dormitories, whilst the attendant and other patients slept. These men were all undoubtedly insane.

There is a chaplain belonging to the Church of England, who officiates in a small chapel belonging to the asylum. There is also a large amusement room, in which concerts are held and lectures given; and the more quiet of the criminal class are taken to the amusements, as well as to religious service. Not more than twenty-five criminals are placed in one ward, so that classification is carried out among them as much as possible, and association for evil purposes at the same time prevented.

*Criminal Lunatic Asylum, Perth, Scotland.*—This is the only asylum for criminals in Scotland. It adjoins, and is part of the general prison for Scotland, and is under the rule of the governor. There is a special superintendent, and the surgeon of the prison is the medical officer. It was formerly a prison for boys; but is totally unprisonlike in appearance. The rooms are large and well lighted by large windows, and the general airing grounds very cheerful.

The number of patients is 46—males, 31; females, 15. There has always been this disproportion in numbers.

The two sexes are separated, but no attempt at classification is made. The accommodation consists of two rooms on the ground floor—one used as day and the other as dining-room—and a series of rooms for single dormitories at the back of these. The remaining dormitories are on the first floor.

The day and dining rooms are fine, light rooms, with deal floors. The walls are all plastered, painted over the lower and papered over the upper half, and ornamented with pictures, statuettes, plants, birds, &c. The furniture is remarkably good—mahogany tables, and stuffed sofas and chairs covered with American cloth. The seats in the dining room are substantial padded forms with backs. Cocoa-nut matting is laid down around the tables. Of the dormitories nine are single on the male and ten on the female side, the remainder being associated; but the associated rooms contain only three or four each, except one on the male side, where twelve sleep: all are papered. The bedsteads are iron; the beds hair, with a straw palliasse underneath. There are chairs in all the dormitories, and carpets by the bedside in the women's rooms.

The cubic space throughout is 700 feet per patient.

The windows of the rooms are large, and are all barred outside; but the bars are not offensively heavy. Gas is fitted in all the rooms.

There are bath-rooms in each division.

On the male side are two ordinary padded rooms, and on the female side a boarded room; besides this, three or four other rooms are boarded to a height of 6 or 7 feet. Seclusion is not unfrequently practised. Restraint is also used occasionally by means of locked gloves and canvas jackets for men, and polkas for women. As a punishment, the usual allowance of tobacco and the privilege of exercising in the general grounds is stopped, and parts of the diet are checked for the same purpose.

The women clean the wards and knit and sew, but really do little work, whilst the men do less. They clean the wards, and occasionally tease Manila rope or hair, and keep the garden and grounds in order. The chief obstacle to work is, that the patients cannot be trusted with tools, which might be used as lethal weapons.

The amusements provided are bagatelle, cards, dominoes, draughts, and bowls. A good supply of newspapers and periodicals is also allowed.

Once a year there is a grand new year's entertainment, when both sexes associate at a dance.

The

The airing courts consist of two small gravelled yards, one for each sex; and what is called "The Park," which is a grass lawn of 6 acres. This is used by males and females alternately, is nicely planted, has in it seats, flower gardens, and verandahs; a bowling green, tame birds, &c. It is surrounded by a high wall, but the ground falls rapidly, and there is an extensive view over the wall at the lower end.

The officers consist of Governor of the Prison, who visits the asylum four times a week, and receives a salary of £50 specially for the asylum; surgeon, who visits four times a week, and also gets £50; and superintendent, who is responsible for the good government of the lunatic wards—salary, £150. There are head attendants for each side, ordinary attendants, and a night watch, who are in the proportion of 1 to 5 females and 1 to 6 males. They are dressed as prison warders, and are subject to general prison regulations.

The diet scale for the patients is—

On four days of the week.		
Breakfast.	Dinner.	Supper.
8 oz. of wheaten bread, with $\frac{1}{2}$ pint of tea.	6 oz. of meat, with $1\frac{1}{2}$ oz. of cheese; and either 6 oz. of wheaten bread, and 1 lb. of potatoes, or 12 of wheaten bread.	The same as breakfast.
On two days of the week.		
6 oz. of oatmeal made into porridge, with $\frac{1}{2}$ pint of milk.	2 pints of barley broth, with 8 oz. of wheaten bread.	The same as breakfast.
On one day of the week.		
The same as on two, except that the barley broth is to be $1\frac{1}{2}$ pint instead of two.		

Table-cloths are laid at meals, and the food is served on neat crockery. Knives are not allowed, the food being eaten with forks and spoons.

The weekly cost per inmate has not been calculated apart from the ordinary prison, from which clothes and food are supplied. The washing and cooking are all done in the prison.

*Asylum for Insane Criminals, Auburn, New York State.*—This is the only asylum for insane criminals in the United States. The patients are all of the convict class, sent from the state prisons; prisoners becoming insane in the district gaols are not admitted. The asylum contains at present men only, but preparations are being made to receive women, under a recent Act of the State Legislature. The total accommodation is for sixty-four, but by crowding, the number in the asylum is now eighty.

The asylum is situated close to the celebrated Auburn State Prison, and like it, is under the control of the Inspectors of State Prisons; but it has no other connection with it. Its officers do not hold appointments in the prison, and its commissariat is quite distinct.

The building consists of a centre, containing the dwelling-house of the superintendent, and the administrative offices, kitchens, and store rooms; and two wings, with small cross-pieces at the ends. It stands on a small plot of 6 acres, which is partly planted as airing grounds, but the major part of which is under cultivation as garden, in which all the vegetables required by the institution, except potatoes, are grown. About half-an-acre is boarded round and used specially as an exercising court, for the worst class of patients. The entire estate is surrounded by a high wall, except 2 acres which have lately been acquired, and in which only the more quiet of the patients are allowed to work. Contrary to the general arrangement of American asylums, the single corridor plan has been adopted.

The cubic space of the dormitories is 1,000 feet, and there are no associated rooms. The warming is done by steam pipes in the basement, over which the air passes and ascends to the wards through shafts opening near the ceiling of each room. The shafts for ventilation open near the floor, and pass in the walls to the roof; there is no machinery.

Gas is used for lighting every part. The windows are very large, and are in double-hung wooden sashes, the lower of which opens fully. Each window has strong iron bars on the outside; several have locked wire guards inside, and two have strong wooden shutters. The water supply comes from the prison wells, and is received in tanks in the roof.

The corridors are wide, and have large cheerful windows and wooden floors, but are simply whitewashed, and nothing in the shape of ornamentation is attempted. They are used as day-rooms, and are furnished with a few chairs, benches, tables, &c. In each corridor is a can containing cold water and a cup. For the four wards of which the asylum consists there are two dining-rooms, in which are plain wood tables and seats.

The dormitories have generally stone or brick floors. The walls are cemented and rubbed smooth, and the cement is washed and kept clean. The bedsteads are of wood; the

the beds of straw; and there is no other furniture in the dormitories. Opening from each ward are a bath-room, closet and lavatory, and an attendant's room, the window of which overlooks the corridor. Two attendants are accommodated in each room, which contains about 2,000 feet of cubic space.

The dinner-service is all crockery, and ordinary knives and forks are given to the majority of the patients.

The officers are, superintendent, who is a physician, and who performs also the duties of steward; assistant superintendent, who performs also all the clerical duties; and chaplain, who officiates once a week in a small chapel in the asylum.

The servants are, baker, cook, laundress, gardener, and some house-servants. The attendants number six only—one to thirteen patients. They receive wages of 20 dollars, or 83s. a month, with their board, and get every other evening as a holiday; the patients being locked in their rooms after 7 p.m. A night watchman patrols the building inside and out.

From the small number of wards the classification cannot be great. Three classes are made—convalescents, demented, and violent; all the patients being placed in three corridors during the day, so as to be under two attendants in each.

The labour done is chiefly gardening. Two patients assist the baker (all the bread is made in the house); two assist the cook; six work in laundry; one feeds the cow and horse belonging to superintendent; and one mends clothes, &c.

The amusements consist of cards, draughts, and dominoes, in the corridors; as well as nine-pins, which are small, and played at with india-rubber balls. Out of doors, skittles and ball are provided.

There are no associated amusements. The library is a small one; and since the beginning of the war no newspapers have been provided, as "the intelligence was too exciting." Before that time there was a fair newspaper supply.

The patients are all remarkably well dressed in grey cloth, all the materials being bought and made up in the house by a paid seamstress, who uses a machine for the greater part of the work.

The diet list is given below. The patients, as is the case in almost all American asylums and in the gaols, are unstinted as to quantity:—

#### DIETARY OF ASYLUM FOR INSANE CONVICTS, AUBURN, N. Y.

##### *Breakfast.*

Sunday .....	Picked up fish, bread, and coffee.
Monday .....	Warmed beans, bread, and coffee.
Tuesday .....	Hashed meat, potatoes, brown bread, and coffee.
Wednesday .....	Fried Indian pudding, pickd. fish, coffee, and potatoes.
Thursday .....	Hash, brown bread, and coffee.
Friday .....	Pork, with milk, gravy, boiled potatoes, brown bread, and coffee.
Saturday .....	Fried pudding, stewed potatoes, and coffee.

##### *Dinner.*

Sunday .....	Baked beans, brown bread, and pickles.
Monday .....	Soup, brown bread, and pickles.
Tuesday .....	Stew and brown bread.
Wednesday .....	Corned beef, with vegetables and brown bread.
Thursday .....	Bean soup, brown bread, and bread pudding.
Friday .....	Fish and potatoes, brown bread, and pickles.
Saturday .....	Corned beef, potatoes and cabbage, and bread.

##### *Supper.*

Sunday .....	Bread and butter and tea.
Monday .....	Bread and syrup and tea.
Tuesday .....	Indian pudding, and syrup and tea.
Wednesday .....	Bread and butter, and gingerbread and tea.
Thursday .....	Bread and stewed apples and tea.
Friday .....	Indian pudding, and syrup and tea.
Saturday .....	Bread and stewed apples and tea.

Most of the refuse is sold, but the fat is picked out and used for making soap. The cost per week, including clothes, is 18s. 2d. per head.

Each patient has a warm bath once a week, three or four using the same water; and the linen is all changed weekly. There is no shower-bath in the asylum. Restraint is somewhat liberally used. When visited, three patients were wearing the muff; four, iron handcuffs with chains round the waist; three, wrist straps; one had on a muff, and was strapped into his chair in addition. Three were in seclusion: one was simply placed in his room for a few hours; one was fastened in a crib bedstead—a sort of cage fitting on and tightly strapped or locked to an ordinary bedstead, which prevents the patient sitting up in bed—and had on wrist straps in addition; the third, a dangerous homicide, was kept in permanent seclusion, with straps on his wrists, which were chained to the waist. The attendants are allowed to place the patients in seclusion or restraint, but are ordered to report it immediately after to the superintendent. Dr. Van Anden is of opinion that restraint is absolutely necessary in many cases, and points out that the irons and other forms of restraint have no bad moral effect, since every man has had them on before.

## ASYLUMS FOR IDIOTS.

Institutions for the care and training of idiots and feeble-minded children have, since the undertaking of Guggenbuhl on the Abenberg in 1841, gradually sprung up in Europe and America. There are now special asylums for idiots at Mariaberg and Winterbach in Wurtemberg, at Ecksberg in Bavaria, Hubertusberg in Saxony, at Berlin, Vienna, Coblenz and the Hague; but it is in Great Britain and the United States that the care and treatment of the idiotic and feeble-minded has been most developed as a special study. The noble institutions which now exist in both countries for the special training of the feeble-minded, and the learned treatises which have been written by Dr. Seguin and by other authors, attest the interest which has been taken, and the knowledge which has been gained on this subject.

A large proportion of the idiotic and feeble-minded live with their friends in all countries, supported by them entirely or by payments from the parochial or local authorities. A certain number of the more violent and mischievous, as well as those afflicted with epilepsy, are to be found in most asylums; and in some of these institutions both at home and abroad, a complete separation of the insane and idiotic is made. At the Bicêtre and Salpêtrière in France, at Guislain's Asylum Ghent, at Meerenberg, and at the Gloucester and other English asylums, the dormitories and day-rooms are distinct; and gymnasia, school-rooms, and special teachers have been provided for the physical and intellectual education of the idiotic.

The large majority of the idiot population of Great Britain are to be found residing with friends or in workhouses—in the former case either not legally acknowledged as of unsound mind, or under certificate and subject to the visitation once in three months of the parochial medical officer; and in the latter, usually accommodated in the ordinary wards of the poorhouse. A certain number, and these generally of the worst and most hopeless class, whose idiocy is complicated with severe epilepsy or some form of mental irritation, find a home in the wards of ordinary asylums. Here, the action of the state ceases, and it has been left to private philanthropy to erect and organize special institutions for the care of the idiot, where he may not only be fed, lodged, and clothed, provided with medical attendance, and kept in a state of cleanliness and comfort; but where in addition he may be trained and taught, his moral, mental, and physical powers improved; and his capacity for amusement and employment developed. These institutions, of which the one at Earlswood near Reigate is the largest and best known, now number five in England. They are situated at—

Star Cross, near Exeter,  
Bath,  
Lancaster,  
Colchester,  
Earlswood.

The first stone of an Idiot Asylum for the Four Northern Counties was laid by the Earl of Zetland in June, 1863, and the erection of another institution at Northampton, for the Midland Counties, is under contemplation. In Scotland, there are two, the Baldovan and Larbert Institutions.

In the United States, the Idiot Asylums,—or, to use the name which much better expresses their intention, the Schools for Feeble-minded Children,—are, as a rule, state institutions. There is one in the State of Massachusetts, at Boston; two in New York State, at Syracuse and Randal's Island; one in Pennsylvania, at Medea; and similar institutions have been recently established in Ohio, Connecticut, Kentucky, and Illinois. There is also a private school at Barre in Massachusetts.

All these, both in Great Britain and America, are chiefly and essentially educational establishments; the majority are entirely so, and are not intended for the permanent residence of the idiotic.

In the American institutions the age for admission is fixed at from 6 to 14, though special cases are admitted earlier or later; and the age for discharge is regulated entirely by the nature of the case, and the benefit which is derived from the course of teaching pursued. The pupils are seldom retained beyond 18 or 19, and generally by that time have received all the benefit which the institution is capable of affording to them.

At the Western Counties Idiotic Asylum at Star Cross, near Exeter, and at the Bath Institution, the pupils are kept till the age of 15 only. At Earlswood, the first period of admission is for five years; but, subsequently, arrangements may be made for the permanent residence of the pupil.

From the following description of the Asylums at Syracuse, New York State, and at Earlswood, near Reigate, the general character and working of these and similar institutions may be gathered:—

*Asylum for Idiots, Syracuse, New York State.*—This institution was founded in 1851, under an Act of the Legislature, and is supported almost entirely by annual grants from the state.

The government is vested in a board of trustees appointed by the state, who manage the general and financial affairs of the institution, appoint the superintendent, and report annually to the Governor. It is much more an educational establishment than a hospital. The inmates are pupils, not patients; and though the superintendent is a physician, the greater part of his time is occupied in superintending their physical and mental education.

The

The number of pupils is 140, of whom 20 are paid for by friends, and the remainder by the state. The pay pupils are not wanted or encouraged, since all the room in the institution is required by the state. The payment varies from 210 to 250 dollars a year.

The state patients are chiefly from the lower middle class, and are not, as a rule, paupers. When a family is, perhaps, able to keep a child at home, and yet not able to pay for its board in the hospital, a certificate of indigence is required, and the patient admitted at the expense of the state. The state grants an annual appropriation, which covers all the expenses of the building, officers' salaries, and maintenance, at the rate of 210 dollars for each patient annually; this does not include clothes, which are paid for by the county to which the child belongs, at the rate of 30 dollars per inmate annually.

The building stands on a hill immediately outside the town of Syracuse, is of three stories with a basement, and built of stone. The lower story is used almost entirely as class-rooms; the two upper as dormitories; the basement serves for kitchen and offices; and under this are placed all the furnaces for heating in fire-proof chambers. The superintendent's and officers' rooms are in a central block of building which rises to four stories.

The building is surrounded by fine ornamental grounds, and has a farm attached to it. The amount of land belonging to the institution is 54 acres, and an additional 18 is rented. Of this total amount of 72 acres,—

57 are farm, garden, and orchard; and

15 are occupied by building and ornamental grounds.

The farm is cultivated by a farm-bailiff and one or two men (one a former pupil), and by the older of the pupils, ten or twelve of whom always reside in the farmer's house, dine with him and his wife, and do not come to the asylum except for lessons.

The farm stock consists of seven cows, five horses, and eighteen or twenty pigs.

The institution being mainly educational, only teachable idiots are taken; those insane, epileptic, or greatly deformed, are excluded. The general arrangements of the house are not remarkable. The heating is by hot air, which is considered by the superintendent as less satisfactory than steam. The ventilation is by shafts in the walls, the openings being in or near the ceilings. The water and gas are from the town, and the supply of the former is very defective, so much so, that reliance has been placed mainly on springs on the asylum estate, for some months; it is pumped from these to a reservoir on high ground near the house. Hydrants and hose are placed within the building, to serve in case of fire. The bed-rooms are all associated, holding from four to ten beds; and in each an attendant sleeps. They are ornamented with pictures and toys, and fitted with ordinary windows. The basins, jugs, and other conveniences for washing, are placed in all the rooms. There is one closet for every ten persons in the institution, and a bath for about every fifteen; those for females are placed in the upper stories near the dormitories; but the boys have a large bath-room containing three baths, and a lavatory in the basement. The bedsteads are all iron; the beds either hair or straw, with a cotton layer at the top.

The patients dine in four rooms, in each of which are two or three tables, so that classification is made at meals, according to the mental status and behaviour of the patients. The better classes have table-cloths, the worse none. Most have knives, forks, and ordinary white crockery. The diet is good and varied. The meal hours are—breakfast, 7; lunch, 11; dinner, 1; supper, 5. The patients are all bodily as well as mentally weak; they require good diet and beer in the winter, and yet—from want of out-of-door air and fruit—get into a condition closely resembling scurvy. Their circulation is very feeble, 70 is almost a necessary temperature, and all cuts and wounds heal with extreme difficulty, and leave large marks. Nevertheless, cases requiring removal to a small special hospital connected with the institution, are not common.

The officers of the institution are—

Superintendent, who is supreme,—appointing servants, and nominating all officers;

Assistant Physician, who dines with the superintendent's family;

Matron, who is the mother of the house, and—as the superintendent thinks—the most important officer of the institution;

Steward;

Housekeeper;

5 Teachers.

The latter are young ladies of good education, and often good family; two or three are quite removed from the necessities of teaching, but do so from choice. They receive 300 dollars a year and their board. Each has a separate room. A horse is kept for them to ride and drive, and they have nothing whatever to do with the pupils, except in school-hours, which are from 9 to 12-30, with a short interval for lunch, and from 3 to 4-30. Their rate of pay is fixed at about that received by competent school teachers in the States. They stay a long time, and generally leave only on marriage. They are allowed to punish patients for inattention to lessons, but such punishment is extremely rare.

The remainder of the staff consists of attendants, male and female, in the proportion of 1 to every 10 or 12 patients. Some of the worst class require one attendant to four or five patients. The attendants have entire charge of the pupils, except during school hours. They attend them at meals, and sleep in the dormitories with them, but the school hours are a relaxation for them. They dine in a separate room. Punishment is not practised

practised by them. They report misconduct to the superintendent, who inflicts corporal punishment with a cane, and gives warning and advice, as he sees fit. Dr. Wilbur, the superintendent believes himself to stand in *loco parentis*, and thinks some are best punished through their skins. Other punishments are, stopping dessert at dinner, &c.; but solitary confinement, as tempting to bad habits, is never employed.

There are, besides attendants, house-servants, who clean rooms and corridors on both sides of the house—female pupils assisting on their own side; three laundresses, who have two pupils to assist; cook; baker; three seamstresses; farmer, and out-door labourers.

All washing and bread-making is done in the institution. The material for clothes is bought and made up in the establishment.

The patients remain generally about seven years in the house, and as their residence is intended to fit them for use and life in the world, all teaching has this in view. It consists of two parts—1st, purely educational, and 2nd, practical,—both being so taught as to rouse in every way the patient's attention.

The boys are brought up chiefly to farm work, which Dr. Wilbur considers the most useful employment for idiots as a class. "An idiot ought to live in the country. His physical health requires it; and frequently his moral health too, since his power of resisting temptation is small. Besides, too, at any trade he would rarely become so proficient as to earn good wages under an ordinary foreman, and it would necessitate his living in town." Dr. Wilbur tried shoe-making, mat-making, &c.; but as the boys were only kept for a few years, and could only work at a trade during the last two or three of these at the most, they did not become very proficient, and were not profitable to the institution.

The girls are chiefly educated for household work—sewing and knitting, cleaning rooms, washing plates and dishes, &c. Three assist in the laundry.

The special education is devoted to both mind and muscle. The latter is educated by handling and lifting things; by catching and throwing bags full of beans; by walking over and between the rounds of ladders specially made for the purpose, which teaches them to raise the feet; by climbing ladders also; and finally by a system of light gymnastics, at which some have become proficient. This is done under the care of a gymnast; and Miss Wilbur, the daughter of the superintendent, has a class who perform gymnastics to music. No very active or strong muscular efforts are attempted.

The mental education begins in the nursery (so called), where the attendants have entire charge of the patients; they are dressed and taught to dress themselves, and, as they progress, some of the lower instructions given in the first-class room are attempted. The difference between light and darkness, and colours, are also taught, or shown by means of shutters of peculiar construction.

The class rooms are 5 in number:—

In No. 1, or the lowest, the lessons are intended first to awaken the attention, and then to teach position, form, size, colour, and form and colour combined, making marks on a slate, and telling names of common objects. In this class many of the children are speechless; some say a few words; one repeats both the words and tune of a song, but, parrot-like, without at all understanding them.

In classes 2 and 3 diagrams in form and colour are shown. Form and colour being somewhat learnt, the lesson is continued into pattern and picture. The names of the things shown, are given and repeated by pupil. Words printed and written are shown and are named by the pupils; these are the conventional signs or representatives of the objects, and are used first instead of beginning with the alphabet. Curiously enough the pupils recognize the words when upside down as well as when placed properly, just as they would know a chair or any other object. Afterwards the composition of the word is shown by single letters, which, a word being given as a copy, they have to build up and put together for themselves. Language is learnt by pronouncing the names of the pictures and the words. It is at first very imperfect.

In class 4 lessons in articulation are given. The lessons in form, pattern, and colour are continued, and copies of more or less geometrical or other figures are set on a slate, and the art of writing is commenced. The drawing is carried from simple patterns on a slate to very pretty pencil sketches.

Class 5 is a large one. Here reading, writing, mental and ordinary arithmetic are taught, with geography, advanced drawing, &c. There is a cabinet of objects, and good representations of animals and different kinds of trees as object lessons. The reading is highly creditable. Sums are done in multiplication and fractions. Some of the drawings show both skill and taste, with considerable precision of eye and hand. One of the lessons in this room consists of spelling words. The letters are given mixed up, and they arrange them, and are themselves able to give others in return.

Singing is taught to the more advanced pupils. In the classes both sexes unite and are taught together, but, except at school and meal times, they are kept perfectly distinct. Each lesson lasts about half-an-hour, and the teachers frequently change classes, which is a great relief to them as also to pupils.

There is no Chaplain. The attendants take a few of the most advanced to church, and on Sunday there is a Sabbath school. Prayers are also taught them to say at night. As a rule, Dr. Wilbur objects to their learning anything by rote; he would have them think over each thing as they do it or say it.

The apparatus employed is by no means costly or large. In the nursery, to show light and darkness, are shutters which open in parts. A large square can be opened, or a ray of light let in of almost any shape by special openings. For colour, these openings are filled with pieces of coloured glass.

The

The first things used to excite and fix attention, are small wooden boxes or raised trays, with holes into which as a lesson iron pegs are placed; then wooden buttons or dice with a centre hole, and one plain and one convex surface; these are first threaded any way, then the plain surfaces facing each other. Position is taught by means of a wooden block with holes cut in it, into which pieces of wood fit, all the holes are of one shape and size, but the position is different. (See Appendix F, Fig. 12.)

For teaching size, a similar block is used with circular holes of varying size, and bits of wood to fit them. (See Appendix F, Fig. 13.)

For teaching form, a similar block with the holes and pieces of wood cut into different patterns. (See Appendix F, Fig. 14.)

For colour, cups and balls of five or six colours are used, and the pupil must place the ball in the cup of the same colour; for form and colour combined, coloured cards of bright colours and many shapes are arranged in patterns as a lesson.

In the more advanced rooms liberal use is made of chalk on slates fixed to the walls. Writing commences by the teacher making two dots: which the pupil is directed to join by a line thus !, and this is at first so difficult to many that the dots must be edged in |: so as to prevent straying. In the upper classes words printed on cards, a plentiful supply of single letters, pictures, &c., are used; and finally writing and sketching on books, slates, &c. Counting is taught by means of balls on wires. Numbers are the last and most difficult thing to teach—their relation to each other being a great puzzle.

*Asylum for Idiots, Earlswood, Redhill.*—This asylum—the existence of which is mainly owing to the exertions of Dr. Andrew Reed—differs in many important particulars from the ordinary institutions for the care and treatment of the insane. In its main features it is a school for the education of idiot children; but it is not a school only, since some of its inmates are permanent residents.

It is situated on a clay soil on a slight elevation. The building is of stone, of the H form, and consists of three stories along the front, and two in other parts; it fronts the south, and commands a fair view of more than usually well-wooded farm land, chiefly the property of, and cultivated by, the patients in the institution. The number of these is 420, of whom about 300 are males, and the remainder females. The disproportion in numbers is accounted for to some extent, by the fact that girls, when idiots, are frequently kept at home, and are found useful in minor household work, when boys are quite unable to obtain employment. The asylum estate consists of 140 acres: the house and office stand on 12; 17 are laid out as pleasure ground, play ground, and garden; 50 are pasture, and 47 under cultivation. The distance from London is 25 miles. The small towns of Redhill and Reigate are each about 2 miles off. The inmates consist of two classes: those paid for by their friends, according to a scale regulated by the governing body (the highest rate of payment being £100 per annum), and those elected by the votes of subscribers; and the accommodation provided is in accordance with the scale of payment. Single rooms are only three or four in number, and are appropriated to paying patients; the remainder of the patients sleep in associated dormitories, containing from seven to twenty beds. The percentage of hospital accommodation is one-twentieth, and the hospital is at the top of the building in the third story, where the windows are small and the roof low. The cubic space is 1,000 feet in the single, and 700 or 800 in the associated rooms for each patient. The warming is effected by open fires in the corridors, but chiefly by stoves placed in the basement story, the pipes from which are of iron and pass up the stair-cases to the top of the building. Coke is burned, and the heat given out is sufficient to warm a very large area. The stoves are made by Kinnard & Co., 67 Upper Thames-street, and are called Gurney's Patent. The ventilation is entirely natural. The lighting throughout is by gas, made on the premises at a much cheaper rate than is supplied by the gas company near. The windows open like ordinary house windows, and the panes are very large. The water supply is about 16,000 gallons a day; that for drinking is drawn from a well in the centre of building; that for washing is obtained from a small brook, received into reservoirs and filtered, and then pumped to tanks at the top of the building. For the laundry, rain water is collected from the buildings. L'Extincteur, fire hydrants, and engines, are the precautions against fire. The drainage is easy, owing to the situation of the asylum, the sewage all runs into a large tank where the sediment is deposited; what is necessary for the farm is carried over it by means of pipes, and the remainder is allowed to escape. There is a plunge-bath in the basement story, and bath-rooms throughout the house. Lavatories are only placed in the workshops; ordinary basins being used in all the dormitories. Most of the washing is done by steam machinery; centrifugal machines are used for wringing, and the drying is done in hot closets. The water-closets in the main building are so fitted that water flows on rising from the seat. In the workshop block is one on a new principle; it consists of a large iron trough pierced for six seats, and kept half full of water; by means of a cock this can be emptied and flushed as requisite, and it appears to be very effective. It is by Macfarlane, Saracen Works, Glasgow. The corridors are merely passages to the dormitories. The walls are cemented, painted, and ornamented with pictures; fern cases stand in the windows, and there is cocoa-nut matting on the floor. One large room is used as dining-room, amusement-room, and chapel. All the patients, who can behave well, dine together; those, who cannot, are kept in smaller dining rooms. The boys occupy one side of the dining-room, and the girls the other. The dinner is served with nicety and decorum, and grace is sung by the patients. Ordinary crockery and knives and forks are allowed to all. No smoking by the patients is allowed. Most of the nurses and attendants sleep in the associated dormitories;

tories; and over the laundry are large associated dormitories for the laundry women, servants, &c. They all dine in the central hall after the patients; but males and females have each a room for sitting in at night. No billiard-room or other amusements are provided for the attendants; but those who like, can subscribe a penny a week to the library fund, and so receive books and papers, the chief cost of which are defrayed by the institution. There is a large play-ground and gymnasium on each side, and the rooms in each wing employed as school-rooms, are play-rooms out of school hours. The play-grounds have some grass patches, but no flower beds. The visitors' rooms are large and comfortably furnished. The officers' houses all form part of the building.

The superintendent is supreme in the institution; he hires and dismisses servants, merely reporting that he has done so to the committee, and manages the institution entirely. The officers are appointed by the committee, at his recommendation. There is an assistant medical officer, steward, farm bailiff, clerk, schoolmaster and staff, and workmen to superintend the various trades carried on; on the female side are matron, governess and staff. There are two head attendants—one for each side. The ordinary attendants are all fairly educated, and are taken from 21 to 30 years of age. They are punished for minor offences by fines, which range from 6d. to 2s. 6d., and are taken from a gratuity given to each attendant, after about six months service, in addition to salary. They can leave the institution from 8 to 10 every evening, except a certain number detained on duty, and are allowed fifteen days a year, which they may take all together, or as separate days. The women wear a print dress, white cap, collars, and cuffs; the men a plain livery, with jackets instead of coats. No keys are carried. There are two night attendants on each side, whose rounds are checked by Dent's Clock. The number of attendants to patients varies in the different divisions. The infants have one nurse to six; the girls average one to twelve; the boys one to fifteen. The private cases have either one to one (first class) or one to six (second class). No uniform dress is provided for the patients, the majority of whom are dressed by their friends. The clothes for those dressed by the institution are made in it, as are the shoes also.

The cost of construction per inmate was £90, exclusive of the cost of land.

The institution is entirely supported by public subscriptions and donations, and the payments made for pupils by their friends; and is managed by a committee of the subscribers.

The following extracts from the reports of the schoolmaster and mistress in the general report of the institution for 1866, will show the nature of the education which the pupils receive:—

"The average number of pupils attending from the 1st of April, 1865, to the 31st March, 1866, has been—

Whole time (both morning and afternoon).....	19
Half time (morning one week, afternoon the next) ...	130
Occasionally (two half days each week) .....	2
Average total number .....	151

"The subjects taught have been reading, writing, arithmetic, writing from dictation, shopkeeping, drawing, telling the time, collective object lessons, drilling, speaking, dressing; religious truths and moral sentiments are brought before them as opportunities occur. The duration of the lessons on each subject varies from half an hour to three-quarters. Three of these lessons, differing as much as possible in their nature, are given in each class, both in the morning and afternoon school. Between each of these lessons the pupils are collected in one room, and sing exercises, combining information, such as the multiplication and money tables, &c., and, at the same time, move the head, arms, or legs, to the time of the music. This combination of singing and physical and mental exercise is found very beneficial in awakening their attention, and promoting a cheerful attention to the other subjects.

"Of the 144 pupils now in school:—

15 can read with tolerable fluency in the Gospel of St. John,
11 can read slowly in ditto,
18 can read slowly from lesson boards,
17 know all the letters,
43 know a few letters,
40 know none of the letters.

144

"Writing—

21 can write sentences in copy-books,
23 can write words in copy-books,
14 can write easy words on the slate,
59 can make strokes or the letter O on the slate,
27 can only scribble.

144

"Arithmetic—

*"Arithmetic—*This is mostly taught with the assistance of the black-board, the tables being learned as a singing lesson. The counting is taught with the assistance of beads on wire:—

- 11 can do sums individually,
- 22 can do addition collectively from black board, and count above 100,
- 10 can count above 50,
- 22 can count above 25,
- 48 can count a little,
- 31 cannot count at all.

---

144

---

*"Shop Lesson—*This lesson, originated by our superintendent, Dr. Down, and explained by him in the Report for 1862, although considered play by the pupils, is very instructive. A shop, supplied with groceries, stationery, crockery, toys, &c., also counter, scales, weights, and money, is fitted up in the schoolroom. The pupils are taught to purchase articles in ordinary use. They act as shopkeeper in turn, weighing out articles required, and endeavouring to calculate the price, which is then counted out and paid for by the pupil acting as purchaser. The following statement will give some idea of the results:—

- 28 know all the coins and weights, and calculate the price a little,
- 27 know all the coins, and two or three weights,
- 15 know a few coins and weights,
- 38 know two or three coins,
- 36 know none.

---

144

---

*"Telling the Time—*

- 8 can tell the time to a minute,
- 7 can tell the hours, quarters, and some the five minutes,
- 30 can tell some of the hours,
- 99 not at all.

---

144

---

"The Bible class on the Sunday morning, and the Sunday evening service, continue to produce good results; the answers to questions put on the above occasions often showing that the pupils take an interest in what is brought before them,—that they have a tolerable knowledge of Bible history, and some little idea of the saving truths of Christianity."

"The present number is 130 (102 girls and 28 boys)—

- Of these, 60 attend the Sunday morning Bible class,
- 60 attend the Sunday evening lecture, and
- 54 attend regularly morning and evening prayers,
- 12 girls, who attend school in the afternoon, are engaged in the morning in domestic duties,
- 5 in the workroom all day,
- 3 in the wardrobes,
- 2 in the kitchen.

"The following is a statement of the capabilities of the children:—

*"Reading and Spelling—*

- 13 can read the Bible,
- 7 can read simple lessons,
- 17 can read words of three letters,
- 14 can point out the letters,
- 5 repeat them when told,
- 9 make a sound, and
- 33 are dumb.

*"Writing—*

- 12 write text, round, and small hand very fairly,
- 5 all round hand,
- 9 words of one syllable,
- 20 letters on their slates,
- 30 make strokes and pothooks.

Of the above, 7 write letters once a month, and take great delight in doing so.

*"Arithmetic—*

- 1 in compound addition,
- 1 in compound long division,
- 1 in multiplication (simple),
- 1 in addition (simple),
- 2 can say to six times in the tables,
- 2 can say the whole of the tables,
- 5 can count to 100,
- 8 can count to 40,
- 3 can count to 24,
- 9 can count to 6.

*"Plain*

*"Plain Work—*

30 can work well,  
 14 hem and sew very fairly,  
 9 fairly,  
 12 indifferently,  
 9 can only thread their needles,  
 4 have learnt bed-making as lessons in school, and  
 3 scrubbing."

The education is however not limited to the subjects here indicated; the whole routine of the institution is educational. The greatest attention is paid to physical education by gymnastics. Attention is constantly given to behaviour at table, checking bad propensities, and inculcating habits of propriety; and the entire system of amusement and occupation are also educational.

The number of patients employed in industrial pursuits is as follows:—

<i>Males.</i>	
Carpenters.....	30
Shoemakers .....	15
Mat-weavers and helpers in mat-shops W.....	80
Basket maker .....	1
Tailors .....	28
Farm and garden .....	16
Plumber.....	1
Baker.....	1
Household work .....	26
Laundry.....	8
	<hr/> 189
<i>Females.</i>	
Household work .....	21
Needlework .....	9
Repairing clothes .....	2
Assistant nurses .....	2
	<hr/> 34

From this it will be seen that, though a certain number are employed in agricultural operations, the majority are taught trades. The greater part of the articles made are used in the institution, but mats and a few other things are sold. It is proposed to add brush-making, printing, and upholstering, to the trades taught and practised in the institution, and additional workshops have already been erected.

Children's games of all kinds are encouraged, and associated amusements of various kinds—pantomimes, charades, "Punch and Judy" shows—are given weekly. Music is largely employed at the associated amusements, and the attendants form a really good band; singing is taught to all the more advanced pupils.

Parties are formed for visiting places of amusement. In 1866, 150 of the patients spent a day at the Crystal Palace, and every year there is an annual fete at the asylum, when the grounds of the institution are made gay with tents and flags, amusements of many kinds are provided, and the relatives of the patients are invited to witness, and add to, their happiness.

The following is the dietary for the patients:—

	<i>Breakfast.</i>	<i>Dinner.</i>	<i>Tea.</i>
Ordinary diet ...	{ 6 ozs. bread. ½ oz. butter. ½ pt. cocoa.	4 ozs. cooked meat. 8 ozs. potatoes. 2 ozs. green vegetables. 6 ozs. pudding.	6 ozs. bread. ½ oz. butter. ½ pt. milk and water.
Full diet .....	{ 8 ozs. bread. ½ oz. butter. ¾ pt. cocoa.	5 ozs. cooked meat. 8 ozs. potatoes. 2 ozs. green vegetables. 8 ozs. pudding.	8 ozs. bread. ½ oz. butter. ¾ pt. milk and water.
Middle diet .....	{ 5 ozs. bread. ½ oz. butter. ½ pt. cocoa.	3 ozs. cooked meat. 6 ozs. potatoes. 1 oz. green vegetables. 4 ozs. pudding.	5 ozs. bread. ½ oz. butter. ½ pt. milk and water.
Milk diet .....	{ 4 ozs. bread. ½ pt. milk.	4 ozs. bread. ½ pt. milk.	4 ozs. bread. ½ pt. milk.

The benefits to be derived, even in cases apparently hopeless, from persevering endeavours to develop the dormant physical and intellectual powers, are now so fully established that any argument upon the subject would be superfluous. How abundantly successful such endeavours have been in the institutions of Great Britain and America—how fully all time, all care, and all money, which have been spent in the education of the idiot have been repaid—how fully the position which has been taken upon this subject is justified, may be gathered from the various reports of these institutions. Many entering them in a state of almost complete idiocy have gone out to do useful work in the world—cleanly, decorous, and industrious. The large mass of the inmates have been vastly improved; and the number who have been found unteachable and unimprovable is small.

Some

Some difference of opinion exists as to the form of occupation which it is advisable to teach to boys in idiot schools; the main object being to enable them to earn a living when out of the asylum.

Dr. Wilbur, of the New York State Asylum, at Syracuse, thinks ordinary agricultural occupation preferable, because it is easily taught; is best in a sanitary point of view; and keeps the idiot from the temptations of a town, in which it is almost necessary he should live if he is to maintain himself by means of a trade.

Dr. Howe, of the School for Feeble Minded Children at Boston, who is President also of the Massachusetts Board of State Charities, objects altogether to field work, because of its variety, and because idiots employed at it require more or less constant supervision. He considers that the occupation should be as simple and mechanical in its character as possible; and that coir plaiting, mat and broom-making, are preferable to field work. At Earlswood the majority are employed in the various workshops, and a few only on the farm; the cases are specially selected by the superintendent for each kind of labour; and as the patients generally stay a longer time at Earlswood than in the American institutions, they become more proficient in the various trades which are taught to them.

#### ASYLUMS FOR INEBRIATES.

By an Act passed in 1866, to amend the Acts relating to lunacy in Scotland, it is made lawful "for the superintendent of any asylum, with the previous assent in writing of one of the Commissioners in Lunacy (which assent shall not be given without written application by the patient), to entertain and keep in such asylum, as a boarder, any person who is desirous of submitting himself to treatment, but whose mental condition is not such as to render it legal to grant a certificate of insanity in his case."

Advantage is taken of this Act for the admission, cure, and treatment of dipsomaniacs in the ordinary asylums. But the patients are found to submit very badly to the ordinary discipline of an asylum, and their admission is, as a rule, much objected to by the superintendents. A special retreat for the intemperate is attached to the House of Refuge in Edinburgh.

In England, the Commissioners in Lunacy "having reason to know that there were many persons not insane, who, being conscious of want of power of self-control, or an addiction to intemperate habits, or fearing an attack or a recurrence of mental malady, and being free agents in all respects, were desirous of residing as voluntary boarders in an institution for the insane, with a view to mental treatment and supervision," consulted counsel on this subject in 1863, and were advised that there was nothing in the statutes to prevent the admission of such persons as voluntary boarders in the registered lunatic hospitals. Since that date, some few such patients have been received into the hospitals for the insane. The law forbids such patients to be received into licensed houses, unless they have previously been the inmates of some asylum or licensed house, and under certificate as insane.

Dipsomania, or methylomania, as a form of mental disease, though thoroughly recognized by physicians, has not yet been practically discriminated by the public in England or the Continent of Europe, from "what may be termed a mere physiological condition, in which the human animal chooses to indulge in alcoholic beverages to excess." But it is otherwise in America, where the Asylums for Inebriates at Binghampton, New York State, and at Medea in Pennsylvania, and the Washingtonian Home, Boston, attest the full recognition of this condition as a disease.

The *New York State Asylum for Inebriates, Binghampton*, was first established about nine years ago by a number of philanthropic gentlemen, and has had a somewhat chequered history.

A charter was granted by the state, a number of trustees appointed, a large amount of money subscribed, and a grant voted by the Legislature. Subsequently one-tenth of the amount derived from the sums paid for licenses to sell spirituous liquors was given by the state for the benefit of the institution for a term of ten years. A Dr. Turner was appointed superintendent, and, under his immediate directions, a very handsome perpendicular Gothic building was erected, capable of holding 100 patients. Patients were received, and, during four or five years, a series of reports was issued by the trustees, in which the condition of the institution was represented as extremely flourishing, and its general fittings and accommodation of an almost palatial description.

The superintendent, in these reports, described at length his many qualifications for the office which he held; stated that he had dissected 342 bodies of people who had died from the effects of intemperance; had made *post mortem* examinations of some thousands of others; had treated a prodigious number of cases of *delirium tremens*; and had travelled over almost innumerable miles by steam-boat and railway, as well as on foot, to gather information on the subject of the treatment of the inebriate. The numbers of applications for admission to the asylum were stated to be from 2,000 to 3,000 annually; and the size and number of the rooms for patients and for officers, as well as the fittings of kitchen and offices, and the means of heating and ventilation, were minutely described.

Scandals of various kinds were by degrees heard of in connection with the institution, and such information regarding its general management reached the public ear as to destroy all confidence. A fire at this time completely gutted one wing of the building, and evidence was forthcoming which induced the trustees to dismiss the superintendent and prosecute him on a charge of arson. Of this he was acquitted; but an examination of the system of management showed every species of abuse. It was found

found to be extremely doubtful if the superintendent had ever possessed a medical degree; and an examination of the building showed that the descriptions in the report of the superintendent had been the purest fiction. There was a handsome house and a gigantic conservatory, both of which looked well from a railway passing near, but the latter was quite empty even of fittings; and many of the rooms, the dimensions of which had been minutely described in the reports—the offices, warming and ventilating apparatus absolutely did not exist. The establishment was, in fact, in some respects almost as mythical as the City of Eden.\*

After this exposure, the State Legislature threatened to withdraw the grant and extinguish the institution. It was saved by the exertions of its friends, closed for some months, and re-opened under its present management; and although it had to fight its way against a bad reputation, it is succeeding, and promises to be a very useful institution. The building stands on a bold hill, near the Susquehanna River, and overlooks the large valley and thriving town of Binghamton. It now contains fifty-six patients, all males, accommodated in separate rooms. The rooms are all comfortably furnished, and are arranged on opposite sides of the four corridors, which form the one wing of the institution now in use. The centre is occupied by the superintendent's quarters and the administrative offices; and the other wing, which was burnt, has not yet been repaired. Gas and water are laid on to each room, and there is a well-furnished drawing-room for general use, a large common dining-hall, a billiard-room with three tables, debating and amusement room, chapel, library and reading-room, gymnasium, skittle-alleys, &c. Each corridor has in it bath-rooms, closets, &c.

Of the fifty-six patients, six have been admitted by the trustees free of payment, in accordance with the rules of the institution, which provide that "any inebriate having a permanent home within the state whose circumstances render it necessary, may be admitted to a free bed at the discretion of the committee of management. The applicant or his friends giving satisfactory proof of the inability of the applicant or of his family to remunerate the institution for his support during his stay." The remainder pay sums varying from 5 to 20 dollars a week, the average sum being 12 dollars. The payment varies somewhat with the accommodation provided, and the committee sometimes take into consideration the circumstances of the patients in fixing the rate. All these patients are voluntarily in the asylum, and are not under lunacy certificate. The majority are young men, few being over 35 years of age. In 1865 the State Legislature passed an Act for the better regulation and discipline of the New York State Inebriate Asylum, which provides as follows:—"Any Justice of the Supreme Court, or the County Judge of the county in which any inebriate may reside, shall have power to commit such inebriate to the New York State Inebriate Asylum, upon the production and filing of an affidavit or affidavits, by two respectable practising physicians and two respectable citizens, freeholders of such county, to the effect that such inebriate is lost to self-control, unable from such inebriation to attend to business, or is thereby dangerous to remain at large. But such commitment shall be only until the examination now provided by law shall have been held and in no case for a longer period than one year."—But there were no "committed" patients in the asylum when visited. The mass of the patients are not insane; a few, however, are more or less mentally unsound, and some have epileptiform fits.

The superintendent reports most favourably of their general good behaviour, and of their endeavours to assist in their rescue from the degrading thralldom under which they have fallen. A few have broken all rules, and have either left or been discharged from the institution; but the majority stay for such times as are recommended by the superintendent, and submit to all the rules of the place. The chief of these rules are total abstinence from intoxicating liquors, and confinement to the grounds of the institution.

There are no walls to these grounds, and the patients are placed on their parole in both these respects. At first they are expected to remain entirely in the asylum grounds, but after a residence of some months receive permission to visit the town occasionally. The institution is, in many respects, like a good American hotel, conducted on temperance principles. The patients dine in the common dining-room, at a number of small tables. The superintendent and his family take a separate table in the same room. The staff of servants is just such as would be required in a good hotel, with the addition of two "wardsmen," who have rooms in the corridors, and are entrusted with the special care and general supervision of the patients, attending to them when sick or requiring medical treatment.

The medical treatment, which as a rule is only necessary on the admission of the patient, seems to consist in administering soups, broths, and good diet with such sedatives as may be necessary. Opiates are very little used, and when employed are given by subcutaneous injection. Digitalis and conium are seldom or never employed, and the main reliance for sedative purposes is placed on bromide of potassium, which is administered in doses of from 30 to 60 grains, in cases of delirium tremens and nervous excitement consequent on the excessive use of alcohol. So closely is the principle of

\* "Hey day," said Martin, as his eye rested on a great plan which occupied one whole side of the office. "Hey day, what's that?"

"That's Eden," said Scadder, picking his teeth with a sort of young bayonet that flew out of his knife when he touched a spring.

"Why I had no idea it was a city."

"Haden't you? Oh, it is a city." A flourishing city too! An architectural city! There were banks, churches, cathedrals, market places, factories, hotels, stores, mansions, wharves, an exchange, a theatre, public buildings of all kinds down to the office of the *Eden Stinger*, a daily journal, all faithfully depicted on the plan before them.—*Martin Chuzzlewit*: By Charles Dickens.

of total abstinence carried out, that no wine or spirit is allowed even as a part of medical treatment, and the watery extracts and infusions of drugs are given instead of tinctures. After the nervous excitement has subsided, reliance is placed on good diet. Milk is much used, tea is drank at each meal, and there is always an abundant supply of iced water. The general dietary, like that in use in America, comprises more saccharine and starchy materials than the ordinary diet of English people.

The remainder of the treatment consists in carrying out the routine of a well-ordered household, making the asylum as pleasant a residence as possible, and exciting the inmates to mental and bodily activity. Prayers are read morning and evening, and there is a complete religious service on Sunday. The amusements consist of billiards, cards, chess, draughts, and music within doors, and skating, boating, skittles, and gymnastics. Gardening is encouraged, and some of the patients thus occupy themselves. The evenings are devoted to temperance meetings at which "experiences" are related, and to literary work. Essays on various subjects are read and form the subject of discussion, and recitation is practised. The library is a good one, and the supply of newspapers and periodicals abundant.

Smoking and chewing tobacco are allowed, though discouraged as much as possible.

The officers of the institution are the superintendent (who is a physician), steward, housekeeper, clerk, and chaplain.

The asylum estate consists of 500 acres—300 of these form a fine farm. Twenty cows, besides sheep, pigs, and horses are kept.

A number of patients have been discharged, under the present management, well, and apparently weaned from their vicious propensities, to do their work in the world. Some few have come back again, having relapsed into a state of more or less constant inebriety; but no statistics have as yet been published.

The following extract is from the report of the Superintendent of the Washingtonian Home, an institution for inebriates, capable of containing thirty-five patients, at Boston, Massachusetts:—

"Much care has been bestowed upon the following tables, and, I am well satisfied they are nearly correct. Of course, a part of the statements must involve mere conjecture, at least, as far as the standing of the patients who have left the "Home" is concerned. Yet my knowledge of their standing is quite extensive, and the annexed statement is based upon that knowledge.

There have been admitted to the institution during the year ending December 31, 1865 .....	270
Returned second time .....	26
Returned third time .....	10
Returned fourth time .....	8
Returned fifth time .....	4
Natives of Massachusetts .....	149
Of other States .....	74
Of foreign countries .....	47
Residents of Massachusetts at time of admission .....	220
Of other States .....	39
Of foreign Countries .....	11
Residents of Boston .....	132
Of other parts of the State .....	127
There are now doing well and regarded as reformed, of whom I have certain knowledge, the number of .....	184
There are greatly improved, with the hope of ultimate cure I have no information from .....	42
The number I regard as incurable, and not fit to be at large .....	33
The number of married men .....	10
The number of single men .....	134
Average number of days which each patient has remained in the institution .....	136
Average cost of sustaining each patient while at the Home .....	24
Whole number of paying patients .....	\$36 68
Whole number of non-paying patients .....	124
Of those admitted there have been—	146
Merchants .....	44
Clerks .....	55
Lawyers .....	8
Physicians .....	2
Clergyman .....	1
Balance "comprising artists, mechanics, and one or more from almost every trade and calling, from the learned and scientific professions to the common day labourer."	

#### RECEPTION-HOUSES.

In England, the poorhouses of the various parishes are the only "reception-houses" for the indigent insane; and for those in better worldly circumstances, no provision of this kind is made—the accessibility of asylums of one kind or another rendering it almost unnecessary. In the United States, "reception-houses" at one time existed in connection with most of the large gaols, and were intended for the temporary accommodation of lunatics waiting transport to the distant State Asylums. They, in

course of time however, degenerated into small asylums of the worst type, in which patients were kept for indefinite periods; and have now been almost universally abolished, or else enlarged, modified, and used as asylums for the more chronic classes of the insane. The poorhouses now serve for the temporary accommodation of all insane on their passage to an asylum.

The Belgian Lunacy Law distinctly directs that the authorities in every district shall provide a place of lodgment for the insane waiting removal to asylums, either in the hospitals or *hospices* of the locality, or in some other convenient place; and it expressly forbids their temporary accommodation in prisons, or their association with criminals.

These provisional asylums or reception-houses are placed under strict regulation, and the sojourn of the patients in them is limited to the time necessary for their repose when travelling to, or for the carrying out of the formalities which are necessary before the patient is placed in, the asylum for which he is destined; and they are intended for the benefit of people in good circumstances as well as for the indigent, but the former are charged with the expenses which their stay occasions.

In France and other countries, many of the insane reach the asylums through the hands of the police, and are temporarily confined in gaol; but, in the Department of the Seine, a reception-house forms part of the excellent scheme of provision for the insane which the authorities of the department have organized and placed under the general direction of M. Gerard de Cailleux.

This reception-house is within the boundary wall of, and is attached to, the New Asylum of St. Anne. It is provided for by the same Commissariat, and the Chaplain of St. Anne's visits such patients as need his services, but the medical staff is distinct, and consists of two physicians, whose status and emoluments correspond with those of the junior physicians in French asylums.

The building—for a plan of which, see Appendix G, No. 8—consists of a central part and two wings. In the centre are rooms for the physicians and their servants, as well as the chief attendants; and at the back, cells for the isolation of patients—two for each sex. The wings, which consist of two stories (except at the extreme end of each, where a small third story contains a small two-bedded room for patients who are admitted with infectious diseases) contain each the necessary rooms for twenty patients and their attendants. These rooms are in five divisions, one of which is the infirmary. Each division consists of a day-room on the ground floor, and sleeping accommodation above, for four patients. Each day-room has attached to it a small airing court, which is planted and turfed, and which has the lower wall sunk in a ha-ha, so as to permit a view of the kitchen-garden and houses beyond.

The day-room of the infirmary division is used as a consulting-room by the medical officers; the patients are all seen separately every morning, and notes taken of each case.

The dormitories have, as a rule, four beds, but one is divided into two single and one double-bedded room, each of which is overlooked by a window from the attendants' room. The entire establishment—which is known as the "Bureau d'Admission"—is comfortably furnished, and has all the accessories of a small asylum.

Each of the two rooms for isolation contains about 1,200 cubic feet, and has a small garden opening from it. One room is cemented, the other panelled. One physician takes charge of the patients of each sex, and is assisted by a chief attendant, seven day, and one night attendant—giving the large number of eight day attendants for a maximum of twenty-four patients.

All the insane of the Department of the Seine, who come under the cognizance of the public authorities, are brought to the reception-house from gaols, hospitals, and private residences; and after a period of observation—which is fixed at three days, but which may be shortened or prolonged at the discretion of the Director of Asylums—are sent to the asylum which is considered to be most fitted for them. If the case is an acute one, it is sent to St. Anne's; if the patient is likely to be benefited by agricultural work and country air, to Ville Evrard or Vacluse; if old, idiotic, or epileptic, to the Bicêtre or Salpêtrière. If, on examination, the case is one of delirium tremens, it is usually sent at once to one of the general hospitals; and in cases of a medico-legal character, or of supposed malingering from gaols or the public services, the patients are retained under observation till a satisfactory diagnosis is established. The reception-house is for temporary residence only—for diagnosis and classification, and not for treatment; and no patients now enter any of the public asylums of the department except through it. The number of admissions is from eight to ten daily.

#### LUNACY LAW, AND RULES FOR ASYLUM GOVERNMENT.

An examination of the laws relating to the insane in different countries does not come within the scope of this Report. In compliance with the instructions furnished by the Colonial Secretary, copies of "recent and important Statutes, State Papers, and Department Reports," have been procured, as well as Reports, Rules, and Regulations, of the various asylums visited; and these materials will serve as guides in framing Amendments to the present Lunacy Laws of the Colony, and Rules and Regulations for the Internal Government of the Asylums.

#### SUGGESTIONS.

## SUGGESTIONS.

"Every day adds conviction to the impression that the less the insane are treated as exceptional beings, the better it is both for their interests and for those who superintend them. In other words, the grand object to be kept in view when providing for the accommodation of the insane, is to assimilate their condition and the circumstances surrounding them as closely as possible to those of ordinary life."—Dr. Arlidge : *On the State of Lunacy.*

THE moral and material advantages which follow the system of provision for the insane in private dwellings are undoubted. One-third of the insane population are thus provided for in Scotland, one-fifth in Belgium, and one-sixth in England—with, in the majority of cases, increased comfort and happiness to the patients themselves, and at a diminished cost to the State; but such a system is only possible in an old and settled country. It is necessary that population should so increase as not only to form aggregate bodies, towns, and villages, but to form a united, related, fixed, and settled people, and that the masses shall have received a certain education on lunatic matters, by public papers, and by the existence of well-conducted asylums, before the separate system is adopted. An attempt to place any large number of the insane in private dwellings must necessarily fail in a new Country, Colony, or State. Neither the Belgium system nor the Scotch is possible in New South Wales at present; but the advantages of these should be ever kept in view, and the whole asylum organization should tend towards the development of such systems in the maturer age of the Colony. No effort should be spared to educate the public mind on the subject of insanity, by providing such asylums as are necessary for the care and treatment of the insane, built and organized after the most approved models in older countries—by throwing them freely open to the inspection of the public, and by a publication of all papers and reports concerning them; and every effort should be made to induce families to receive back again their insane members,—who have passed into a stage of chronic and incurable insanity, and who are harmless and inoffensive,—by appeals to their feelings of sympathy and of kindred, and by pecuniary assistance where their circumstances render such assistance desirable. The first committal to an asylum was, in some cases, asked for with pain, and only because the straitened means of the family absolutely demanded it; and when skill, and learning, and care, within the asylum, have done their all, and science is at fault, there is no reason why the patient should not return to his home, where he can be fed, lodged, clothed, and watched over, by those near and dear to him, provided an allowance for his support is made to his family, equal to, or even smaller than, that which he costs in the asylum itself. By this means, relief would be given to the asylums, and comfort to the patient and his friends, whilst, at the same time, the unity and integrity of families, which are threatened by poverty and the misfortune of one of their number, may be preserved, and one step taken in the education of the people in this matter of insanity, concerning which the profoundest ignorance—the greatest misapprehension, and the grossest prejudices exist. In all cases in which the insane are taken care of by their friends, some supervision should be maintained, and at least a quarterly visit paid by a medical practitioner, who should report on the condition of the patient, and the provisions for his good treatment, to the central authority.

The Close Asylum, however, has been, in long years past, and must be in the years yet to come, the chief method in which the insane of all countries, in the acute stages of their malady, are provided for. This method has long been employed in this Colony, and, as affording on the whole the best, safest, and most satisfactory results, will doubtless be continued; but, it is to be hoped, in asylum construction, every modern improvement, and, in asylum organization, every measure calculated to assist in the restoration of the patients, will be adopted. That "hospitals for the treatment of diseased brains, and not cemeteries for the burial of disordered intellect," will be erected and organized, and that the Close Asylum, instead of standing alone, will be combined with, and supplemented by, some modification of the Farm Asylum and the system of accommodation in private dwellings.

A certain number of the insane might be lodged in the houses on the Asylum Estate provided for the artisans and workmen of the institution, or in separate cottages, which may be under less marked routine than that necessary in an asylum; and this would form the germ of a system of provision for the insane in private dwellings, which might be extended as the colony increased in population, and the people became more settled and united.

Before proceeding to offer suggestions for the establishment of an Asylum System, and for the construction and management of Asylums in New South Wales, it may be well to examine the evidence given before, and the suggestions which have been made by, the various Committees and Boards appointed by the Government to inquire into the questions of Asylum construction and management in this Colony; for, in the various papers on this subject, which have, from time to time, been published by the Government of New South Wales, is to be found a mass of information and of valuable suggestion.

In 1855 a Commission of Inquiry on the Lunatic Asylums of New South Wales was appointed. The Members of the Commission were—Drs. Macfarlane and M'Ewan, and Messrs. Nathan, Murray, and Kemp. A mass of valuable evidence was collected, and a comprehensive report made, in which the condition of the asylums was minutely described. The inadequate means placed at the disposal of the superintendent, the want of

of accommodation and appliances, owing to the inherent defects of the building, the impossibility of proper classification, and the absence of all provision for healthy employment or recreation at Tarban Creek, were fully pointed out; whilst the general arrangements at the Parramatta Asylum for chronic and incurable cases met with the qualified approval of the Commission. Finding that, at this time, a considerable sum of money had already been spent at Tarban Creek in repairs and additions still in progress, and having in view the economizing of public expenditure, the Commission at first endeavoured to devise a mode of extending and improving the existing asylum, so as to remedy some of its deficiencies, as well as to provide accommodation for a superior class of patients. The total estimated cost of the improvements was £50,000. It could not be doubted that this was, at best, to use the words of the Commissioners, "a very unsatisfactory suggestion"; and on more mature deliberation, the erection of an entirely new asylum in which the several results of home experience might be combined, was recommended as best for the permanent interests of the Colony. The Commission next proceeded to the question of the proper site for such an asylum, the accommodation to be afforded for the indigent, the provision to be made for patients of a superior class, and the remuneration to be assigned to the medical officers. The following extracts contain the pith of their opinion and advice on these subjects:—

"The extent and position of the land at Tarban Creek undoubtedly afford accommodation for a new asylum, upon a more convenient site than that of the existing one; but there appear to us to be serious objections to such a selection. The locality is isolated, and difficult of access to all persons visiting the institution. All necessary supplies are consequently enhanced in expense; and moreover, the cost of erecting a new building would be considerably increased. Again, although privacy is desirable for such an establishment, absolute isolation is, for many obvious reasons, objectionable.

"In all these respects, the position of Parramatta would be decidedly preferable; and it appears to us that a favourable opportunity arises of placing the new institution upon some part of the Government Domain, now that it is contemplated to relinquish the Government House there as an occasional residence. Such a selection would afford the amplest means of providing all the comforts and appliances of a lunatic establishment upon one of the most improved modern plans. Materials would be easier of conveyance, and labour obtainable at less cost; and it appears to us, from the evidence we have received as to the steadiness and order with which many of the patients in the present establishment at Parramatta are found to work in parties, that some part of the expense might be saved by applying their labour to this important purpose.

"We are of opinion that, in the original design, the means of accommodating 500 patients should be contemplated, although the building might, in the first instance, be completed for half that number only; the subsequent extension being gradual, so as to keep pace with the growing population, and with that proportionate increase in the number of lunatic patients which our experience too painfully teaches us to expect.

"With this and further occasional relief (the transference of the criminal, and a selection of chronic cases, to Parramatta) we trust that the Tarban Asylum may meet the exigencies of the Colony as the curative establishment, during the progress of the new building, without any other outlay than that which may be found absolutely necessary for keeping up repairs.

"The final destination of Tarban Creek would, of course, be matter for future deliberation; and we are not without hope that it may ultimately be made in some way available, so as to compensate for a portion of the new expenditure.

"At present there is no provision in any asylum for patients of a superior class, with a view to that treatment which, by assimilating itself as nearly as possible to their habits of life, would most conduce to their comfort, and best promote their recovery. As occasional instances must occur of families of high respectability being visited with this calamity in the person of some one of their members, and as in almost all such cases an absolute separation from home is desirable, and not unfrequently essential to recovery, we are of opinion that, in the design of a new public asylum, especial attention should be paid to this point, and an express reservation made for the reception of such patients.

"We desire to express our opinion, that prompt and energetic measures should be taken to place the treatment of lunacy, in this Colony, upon the same footing of high and liberal philanthropy on which it now stands at home. The first great step towards the attainment of this object will be the providing an asylum, built, as we have suggested, upon the most approved modern system, with all the necessary appliances for the classification, recreation, amusement, and occupation of the inmates; and the next and equally important care should be taken to secure, from time to time, for the superintendence and management of such an asylum, the highest medical talent, the largest amount of experience, and the greatest benevolence. And we hesitate not to advise that, as the best means towards ensuring a fair combination of these qualities, a liberal remuneration should be assigned to the head officer of the establishment. We think he should be provided for in all domestic particulars at the public expense, and should have an independent salary of at least £750 a year. We are also of opinion that he should have a duly qualified medical assistant holding a diploma in surgery, who might not only give regular daily aid in preparing medicines and superintending patients, but be competent, on an emergency arising from illness or temporary absence, effectually to represent his principal; and we think that for such qualifications and duties, a salary should be assigned of not less than £250 a year, independently of domestic provision."

The Commission next recommend the appointment of a board of supervision. "A mixed board of non-medical and medical members, with such powers of visiting and regulating as would apply not only to public but to any proprietary asylums which may be

be hereafter opened, and also to any private house, in which it shall be judicially known that a person of unsound mind is detained." Such board of supervision "to resemble in its constitution and duties the English board, as nearly as the circumstances of the Colony will admit."

The Commission then proceed, in their report, to a consideration of the law as applicable to lunatics; and after several remarks on its unsatisfactory nature, make the important suggestion that "if the relatives are willing to take charge of the patients themselves, they should be put under recognizances for good and humane treatment; the place of their residence should be noted, and they should be compelled to give information of any change in the destination or state of the lunatic; and moreover, the place where such lunatic is kept, should be liable at all times to visits of the board the appointment of which we have suggested."

Among the evidence taken before this Commission is much deserving of the fullest attention; and the following extracts from the evidence given by Dr. Campbell and Mr. D. Forbes, are so much to the point, that their quotation is right and necessary here.

Dr. Campbell, speaking of Tarban Creek, says:—"The asylum, enlarge it as you will, can never extend to the cemetery of the establishment. All beyond that might be sold in lots to form a township, or anything the purchaser might choose; and the proceeds would not only purchase a small useful farm, but go far to either enlarge the present building, or what is better, erect a new one, as the present is a mere model or idea of what a lunatic asylum should be, and can never, by any art of man or expense, be made a useful large asylum. It was originally designed to accommodate sixty patients. It ought to be sold and converted into a convent or nunnery. It will never be an asylum commensurate with the wants of this magnificent Colony. Besides, its distance from a market is an insuperable objection to its present position. I believe, on my conscience, that one half of the expense it costs the Colony might be saved by a more convenient situation."

Mr. Forbes says:—"With reference to the asylum at Tarban Creek, my idea is, it is in a very bad situation. I think it was a complete mistake to place the asylum there—I think the building at Parramatta is large enough to hold 500 patients, and possesses, with very little alteration, every means of classification."

"The drawbacks to Tarban are very great. It is an inaccessible out-of-the-way place—nobody goes there. The fact of its being such a distance from any town renders it very expensive to make any improvements there. Then, with respect to the medical man, a high salary must be paid to induce him to isolate himself in such a position. There is a plentiful supply of water at Parramatta—they have better water at the lunatic establishment than in the town, and its general salubrity is unobjectionable."

In 1863, Dr. Willson, the Catholic Bishop of Hobartown, addressed a letter to the Colonial Secretary, respecting the lunatic asylums of the Colony, in which, after commenting on the gloomy, ill-constructed building at Tarban Creek, and "its peculiarly ill-chosen" situation, the "sterile nature of the adjoining ground," causing a "want of out-door employment in gardening and farming operations,"—on the want of classification,—the deficient hospital arrangements,—the "woefully wrong" yards,—and the absence of a chapel and amusement room,—he offers the following suggestions:—

"That an asylum capable of affording ample accommodation for 500 patients, should be erected in the neighbourhood of Sydney, not more than two or three miles from it. That this house should be constructed for three classes of patients:—1st. The most numerous, namely, those in humble rank of life, who would be chiefly supported out of public funds. 2nd. A middle class paying (say) 20s. to 30s. a week; and a 3rd class paying according to the comforts they received up to any extent." "I have witnessed" the Bishop adds "for many years the working of such a system, especially in a sanatory point of view, and I believe cures will sometimes be effected in persons in higher ranks in life in such mixed public establishments far better than in private houses for the infirm in mind."

"The advantages of having an hospital near a large city (he continues) are incalculable. Here are a few:—The securing judicious visitation of a properly selected board of commissioners for the general management of so important an institution—a measure absolutely necessary for its permanent well-working. 2nd. The means of procuring the best medical and surgical assistance when required. 3rd. The opportunity afforded, almost daily, to convalescent, quiet, and orderly patients, of visiting the city for amusement, going through the markets, sometimes strolling through the public pleasure grounds, and obtaining that change so beneficial to them, both mentally and physically. 4th. Affording facility to humane and well qualified persons, of gratifying in the asylum, not unfrequently of an evening, patients whose minds are in a state to profit by such kind offices, with music, instrumental and vocal, recitations of short and cheerful pieces, or appropriate readings, and such like friendly acts. 5th. Of affording patients likely to profit by such visits, the means of attending such public exhibitions in the city as offer from time to time suitable for them. Many other advantages might be mentioned."

The further suggestions include "an ample quantity of land so as to afford abundant opportunity for all who could be judiciously occupied in gardening or in cultivating the soil for the commencement of a farm. An ample supply of fresh water from the public works. A spacious chapel, properly arranged and fitted up for each religious community, for divine congregational 'service'; and a large room or hall for recreation."

In a postscript the Bishop mentions, incidentally, "the frightful old factory prison at Parramatta, with its doleful cells and iron bar doors, even for females," and begs leave "most earnestly to differ," for reasons given above, from the recommendations of the commissioners

commissioners of 1855, as regard the selection of Parramatta as the site of the new building." "I believe" he says "it would be a great error to place it there—in fact, quite a calamity of an irreparable kind."

In July, 1863, a Select Committee of the Legislative Assembly inquired into the present state and management of Lunatic Asylums, and subsequently presented to the House a voluminous progress report. The Right Rev. Dr. Willson, Drs. Campbell, Douglass, and Boyd, and Mr. Alloway, among others, gave evidence before this Committee, and the following extracts are interesting and important.

Dr. Willson repeats several of the suggestions contained in his letter; and when asked, if he recommends that there should be three asylums, one near the city and two in the country, said, "I did recommend that in Victoria, and I apprehend the reasons are the same here." Dr. Willson is emphatic in his approval of a board of control, such as exists in Tasmania, where, as he asserts, the system works admirably. Dr. Campbell's evidence is chiefly of value where it relates to the future of lunatic asylums in New South Wales. He says "Tarban Creek is an excellent asylum as far as it goes." "All we want, to make it equal to any asylum in England, is a suitable piece of land for a small farm or amusement ground. A small chapel could easily be built, and would not be very expensive." "There is plenty of land in the neighbourhood belonging to Government, but I have always advocated the selling of that and the purchasing of more suitable land close to the asylum—a beautiful piece of level ground of 12 or 14 acres, that could be brought under the plough with little trouble."

"I do not think seriously you could mend the asylum as it stands, in any additions to it. There is one angle, however (the south-west), that must be completed to give us a little more room. When that is completed, the asylum will be a very perfect little asylum, and quite capable of holding 400 individuals without inconvenience."

"I think it would be a great pity to move the asylum to some other place. I would prefer that other small asylums should be built in different parts of the country, to relieve this to some extent, rather than that it should be abandoned altogether for a new and larger asylum."

"I think we ought to have several asylums in different parts of the Colony. I have a well-founded dislike to large asylums, and I believe it is the prevailing opinion in England, that small asylums are the best. Those of Colney Hatch and Hanwell are a great mistake. I would recommend to build an asylum at Maitland, which would contain about 200; another at Goulburn, to hold 150 or 200; another at Bathurst; and there are large Government buildings at Port Macquarie, which might be converted into a very useful establishment for all the incurables. Three or four other asylums would keep us going forty or fifty years, which is looking a long way forward. I would have them built on the best models, but not very large, so that one well trained medical man could manage one himself, with a proper staff of officers and warders."

"I might recapitulate, as we are on the subject, the places where I have recommended there should be asylums—one at Maitland, one at Goulburn, one at Bathurst, and one in the precincts of Sydney, supposing the present to be abandoned."

"I think there ought to be one asylum in the vicinity, within 3 or 4 miles of a large town, but not in it."

On the subject of inspection, Dr. Campbell says—"If such a course (the creation of three or four asylums) were adopted by the Government, it would be almost necessary that there should be a supervisor or inspector over these hospitals; but whoever was appointed inspector ought to be a man whose knowledge of mental diseases would enable him to carry out the best modes of treatment, upon the broad principles of humanity. I have long wished for such an officer, but seeing that there have been so few asylums in the Colony, I have never advocated the appointment. I would extend the supervision to private houses for lunatics."

Dr. Douglass and Mr. Alloway appear to concur more or less fully in the suggestions of Dr. Campbell, concerning the building of asylums in up-country districts; and Dr. Boyd says—"Of the necessity for an additional asylum there can, I think, be no doubt; and this being the case, it will be well for it to be erected in the immediate neighbourhood of Sydney."

In September, 1865, Dr. Greenup, the Medical Adviser to the Government, addressed two letters to the Colonial Secretary, on the subject of the Lunatic Asylums of the Colony. In the first, he points out the increasing number of lunatics, and the deficiency of accommodation; and in the second, makes some suggestions for the temporary relief of the overcrowded asylums; and after recommending the purchase of "The vineyard property," consisting of 40 acres at Parramatta, for the purpose of erecting temporary buildings, advises the erection of a new asylum for women only, to contain three or four hundred patients on the present asylum farm. "My reasons (he says) for recommending the building to be appropriated to females is, that the range of buildings appropriated to them at Parramatta is not suitable for women, but is well adapted for the refractory class of men. When the female asylum is built, all the women in the present Parramatta Asylum should be removed to the new place, and the present Parramatta Asylum entirely filled up with men."

"I consider the supply of water inexhaustible for the two asylums, and also the gaol."

"On the vineyard property many detached dwellings might be erected for the better class of patients who could pay for the privilege, and also for any patients of refinement or education whom it might be considered right to remove from the mass."

The papers published by the Government enable us to calculate the annual rate of increase in the number of the insane during the last thirteen years.

In

In 1855, the number of lunatics in the Government Asylums was as follows:—

Tarban.....	197	{	120 males 77 females.	}	307 males 169 females	} = 476.
Parramatta ...	279	{	187 males 92 females			
			476			

At the present time (1868) there are, exclusive of invalids—

Tarban.....	620	{	397 males 223 females.	}	744 males 412 females	} = 1,156
Parramatta ...	536	{	347 males 189 females			
			1,156			

or, an increase of 680 in 13 years. Giving an annual increase of 52·4.

The proportion of males to females has remained at about 7 to 4.

In round numbers, then, there has been an annual increase of 52 insane in the Colony during the last twelve years, and this fact deserves the most attentive consideration.

The population of the Colony is still yearly increasing. With increase of population comes, as a natural result, increase of insanity—the number of insane in all countries bearing a certain proportion to population; and it is only fair to assume that the increase, which has been at the rate of fifty per annum for thirteen years past, will continue at that, if not a larger rate. Assuming the annual increase to be fifty only—and on a lower number than this it is not safe to calculate—there will be, at the end of thirty years, the enormous number of 2,500 insane, dependent on the Government for protection and support.

There is, then, an actual and present want of accommodation for 1,156 lunatics, and a prospective want for a much larger number; and to meet these Tarban Creek is capable of containing 300, and Parramatta 400, without crowding.

Before proceeding further, it may be well to examine the fitness of both these asylums for the occupation of people of unsound mind; and the opinions which have been placed on record, by men interested in the welfare, and employed in the treatment of the insane within the Colony, which are given in the extracts above quoted, are here of value. The Commission of 1855 gave a qualified approval of Parramatta as an asylum for incurables to the number of 300; and, after mature deliberation, they, with a wisdom which it is impossible not to admire, recommended the abandonment of Tarban as a hospital for the insane.

Mr. Forbes was emphatic in his condemnation of Tarban, whilst he approved of Parramatta, which he considered large enough, with some alterations, to hold 500 patients.

Dr. Wilson denounced unsparingly both Tarban and the “frightful old factory prison” at Parramatta.

Dr. Greenup, writing in 1865, considers the range of buildings appropriated to females, at Parramatta, as unsuitable for them, though adapted for the refractory class of men, and the remainder of the buildings as fairly suitable for the purposes to which they are applied.

Dr. Campbell, it will be seen, condemned Tarban Asylum, in no measured terms, in 1855, but speaks of it in 1863, when it had undergone considerable enlargement, as an excellent asylum, as far as it goes, and quite capable of holding 400 patients, without inconvenience; but in his scheme for an asylum system he nowhere mentions Parramatta, and so leaves it to be inferred that he does not consider it fitted for the occupation of the insane.

These opinions are in some measure contradictory; but from them can be gathered a general idea, that almost all who have written and spoken on the subject, consider the lunatic establishments of the Colony as unfitted for the purpose to which they are applied. Both establishments meet with more or less condemnation.

After special and close examination of Parramatta and Tarban—both before and since an inspection of the asylums of Europe and America—the conclusion has been arrived at, that the buildings at Parramatta are utterly and completely unfit for the purpose for which they are at present employed. And in this condemnation are included the convict factory, now occupied by the women,—the various buildings occupied by the insane non-criminal men,—and the small prison, which has been somewhat recently erected to serve as an asylum for criminal lunatics. In such buildings the proper care and treatment of the insane is simply impossible. It needs no special knowledge on this subject to see how completely unfitted the old factory, with its gloomy, ill-ventilated cells, with their iron-barred doors, is, as a residence for those mentally afflicted. Let any one who has any doubt upon the subject allow himself to be shut up in one of these dens for one hour only. The new building for criminals seems to have been built solely with a view to the safe keeping of its inmates—a prison within an asylum—a prison, and nothing more—in which treatment, in its full sense, is impossible—and differs, in almost every particular,

particular, from the buildings used as hospitals for insane criminals at Broadmoor, Perth, and Auburn, U.S. A prisoner who is suffering from bodily ailment is universally held to be entitled to all the care and treatment which medical skill can afford, whilst a due regard is had to his safe keeping; and it is unfair and wrong to place him who is suffering from mental diseases, in any but the same position. The remainder of the buildings, as may be seen from an examination of the report on European asylums, are wanting in almost every essential of the modern hospital for the insane.

No amount of money or skill can avail to render Parramatta Asylum a fit residence for the insane, or equal even to the lunatic wards in many of the poor-houses in England; and its early abandonment is unhesitatingly advised. No outlay should be made, except such as is absolutely necessary to keep up repairs whilst other provision for its inmates is being made.

Tarban Creek, originally erected for sixty patients, has been of late years considerably enlarged, and various improvements have been made, at a very great expense to the Colony; but still the question whether it is a good asylum, fitted for the curative treatment of the insane, must be at once answered in the negative. Notwithstanding the beautiful views to be obtained from it, it is, from its inherent structure, the smallness of its windows, the confined nature of its airing courts (which, notwithstanding the open space in front recently enclosed, and converted into airing grounds, must be used occasionally by many, and constantly by a few, for purposes of recreation) extremely gloomy and prison-like. It is, besides, wanting in some of the most marked requirements of a modern hospital for the insane. It has neither amusement hall, chapel, workshops, farm, or proper rooms for attendants; its kitchen lacks almost all modern appliances and fittings, and will not bear comparison with even the poorest appointed of the asylums of Great Britain and the north of Europe. It is extremely difficult of access, so that the cost of victualling and stores is much increased. Visiting is difficult, and it is equally impossible to take the patients to visit the minor amusements which may always be found in Sydney, or any other large town, and to induce such people as would readily, in all charity, contribute to the amusement of the inmates if close at hand, to visit them there.

The great essential for the proper working of an asylum—land for cultivation—is wanting; and though a small amount might perhaps be obtained, it would seem almost impossible to secure 20 or 30 acres—the smallest amount which can be considered satisfactory. Still, though almost all that has been said in disparagement of Tarban may be fully assented to, it must be admitted that its site is eminently satisfactory, in a sanatory point of view; that the buildings are strongly constructed and in good repair, and that it has in it yet a capacity for usefulness. If a fair quantity of cultivatable land can be obtained, and certain alterations and additions are made, it may do good service to the Colony for a few years to come.

It should, however, be clearly understood, that it is doomed at no very distant date, and no very large sum of money should be expended in alterations. Any land purchased might fairly be expected to realize the same, if not a greater sum, in a few years.

If Tarban Creek can be put to some useful purpose, as a Destitute or Benevolent Asylum, the sooner it ceases to be a residence for the insane the better.

In considering the future of asylums in New South Wales, no scheme can be deemed satisfactory which does not bear in mind, if not include, the requirements and necessities of the next thirty years, as well as those of the time now present. It has been seen that the number of insane in the Colony is annually increasing, and that in thirty years, 2,500 is the minimum number which can be calculated on. All hospital provision for the insane must be made with these data in remembrance. It may be objected that this generation should not be burdened with the wants of the next—that sufficient, and more than sufficient, for the day is the evil thereof; but a little consideration will shew that it will be for the good of this generation and the next, and for the permanent interests of the Colony, if the foundation of a system is now laid on which the structures may be reared in time to come; and the cost even may be divided between the present and the future, so that each may bear its share, by borrowing the money required, and repaying it in a given term of years. Bishop Willson says, in his letter above quoted:—"If ever it be reasonable to borrow money on the public security, it must be for such a purpose as I am now advocating. But it would only be fair that the responsibility of paying it should extend over a number of years. The erection of a proper hospital for the insane would not be for the present generation only, but of course for those which are to follow. It would, therefore, only be equitable that those who would derive benefit from it should bear a reasonable share in its original cost." The Royal Asylums of Scotland, established in the last century, and the District Asylums of the same country in this, were built to a large extent with borrowed money, which has since been more or less gradually repaid. The District Asylums are bound to repay money so borrowed, within a period generally fixed at thirty years. The Royal Asylums are not so limited as to time. Some English asylums have been established in the same way, and an Act of Parliament prescribes that money so borrowed shall be completely repaid within thirty years.

Why should not the same method be adopted in New South Wales, and asylums built, of which the central and general offices should serve for the time present, and be large enough to allow of additions to the habitable parts of the asylum at a future time? To build asylums simply for the present, cannot but be a narrow and short-sighted policy.

Before

Before the Committee of the Legislative Assembly, in 1863, Dr. Campbell sketched a scheme of asylum construction; and if this scheme is carried out, and supplemented by the recommendations which have been made by others interested in this subject in the Colony, there will be little left to be desired. After advocating the maintenance of Tarban as an asylum for 400 inmates, he adds—"I think we ought to have several asylums in different parts of the Colony. I would recommend to build an asylum at Maitland which would contain 200, another at Goulburn to hold 150 or 200, another at Bathurst." Dr. Campbell suggests also that the Government buildings at Port Macquarie should be used as an establishment for incurables.

By this scheme about 1,400 insane would be provided for—400 at Tarban, 400 at Port Macquarie, and 600 in the up-country asylums. The buildings at Port Macquarie have since been devoted to other purposes, happily so, since their conversion into fit residences for the insane would have been attended by considerable expense, and the result be eminently unsatisfactory. It is impossible to make even a fair asylum by such conversion. There is then provision for 400 insane, still wanted. Dr. Willson, in his letter in 1863, advocated the building of an asylum for 500 patients in the neighbourhood of Sydney, two or three miles from it.

Dr. Boyd, in his evidence in 1863, suggested the "immediate neighbourhood" of Sydney, for a new asylum.

Dr. Greenup, who wrote in 1865, recommended a new asylum for 300 or 400 at Parramatta.

If we add this asylum for 300, 400, or 500 patients at Parramatta, or near Sydney, to Dr. Campbell's suggestions, we have a complete scheme for the future of asylums in New South Wales.

After an attentive consideration of all the opinions which have been given on this subject, a close examination of the present establishments at Tarban Creek and Parramatta, and an inspection of the asylums of Europe and America, the following are the suggestions offered for the consideration of the Government:—

- 1st. That Parramatta should be abandoned as an asylum as soon as possible, such outlay only being made as will keep it in repair during the erection of new buildings.
- 2nd. That Tarban Creek should be so altered as to bring it more into harmony with institutions for the insane in the mother country, but that no alterations which would demand an extravagant outlay should be made. The chief question of importance as regards this institution is, the possibility of the acquisition of land for agricultural purposes. Failing this, the institution should, like Parramatta, be abandoned as a lunatic asylum. Altered in various particulars, and re-organized after European models; it may serve as an asylum for from 300 to 350 insane (not more) for some few years, but it should never be regarded in any way as one of the permanent institutions of the Colony.
- 3rd. That three new asylums should be erected in such up-country districts as seem most suitable; that these asylums should be near the chief town of the district—Goulburn, Bathurst, Maitland, or wherever else may be selected; that each should be erected to contain at once 200 patients, and so arranged as to be capable of enlargement, by means of blocks, large cottages, or other appropriate buildings, so as ultimately to hold 400 patients; and that the kitchens, laundry, central, and administrative offices, should be built with this end distinctly in view, so that they may either be sufficiently large from the first, or so arranged as to admit of subsequent enlargement.

The practice of distributing the insane throughout the country, possesses many advantages and recommendations, and is now very generally adopted in England and Scotland. The majority of the counties now possess lunatic asylums of their own. The counties of Elgin and Haddington, though possessing only seventy or eighty insane each, have erected their own asylums, instead of placing their insane in the more or less distant asylum of another county, or joining with one or more in the erection of a large building. In those counties where the number of insane has so much increased, as to necessitate the erection of a second or third asylum (as Lancashire, Yorkshire, Surrey, Stafford, and Chester), care has been invariably taken to place the second asylum at a distance from the old one, though as near a large town as possible. Yorkshire possesses asylums at Wakefield and York, and a third has been determined on. The new Stafford Asylum is at Lichfield, whilst the old one is at Stafford; and the new Chester Asylum at Macclesfield, whilst the old one is at Chester. In the United States the same principle of distribution has been followed. Each State possesses its own asylum, and where more than one is necessary, different districts have been chosen, so that the asylums may be at hand, and among the chief centres of population. The same system has been adopted on the Continent. The three asylums of Hanover are placed at Göttingen, Hildesheim, and Osnabrück; and the majority of the French departments\* and Dutch Provinces have their own asylums.

Some

\* Of the eighty-six departments into which France is divided, sixty are provided with asylum accommodation, though in thirty-four only does the asylum belong absolutely to the department.

Some of the reasons for distributing asylums, and placing them within easy access of the people, are pointed out in the following extracts from American reports:—

"From a careful examination of the number of patients sent from the several counties to all the State hospitals in the United States, which kept and published such a record, and a comparison of those with the average number of people in these counties through all the recorded periods of the operations of the institutions, it is shewn that the ratio of patients to the population, sent to the hospital, diminishes constantly with the increase of distance from it."

"The difference of the use made of the hospital by near and remote counties, is not to be explained by the corresponding difference in their necessity, for several of the distant counties, both in Massachusetts and other States, had a larger proportion of lunatics, and yet sent less, and some less than half as many patients to their hospitals."

"This difference is probably due to the difference in the facilities of access, and in the labour and cost of travel. And it must be admitted as an established principle, that a hospital cannot diffuse its advantages equally to the people of any large district."

"Admitting this, then, it must follow that no large central hospital for any considerable extent of territory should be established; but on the contrary, hospitals of a proper size should be scattered as much as possible, and their advantages brought near to the people who ought to use them." \*

"Remote counties, having a population about equal to that of Oneida, have sent a much smaller number of patients to the asylum. The difference is not to be accounted for by the supposition that one part of the State is more subject to insanity than others—it is simply owing to the vicinity of an asylum." †

"Oneida County sends all her insane at once, and the result is a large percentage of cures, and a very slow increase of incurables. I would here add, that of the acute cases admitted from Oneida County, in some years all recovered; and this in a county with a population of over 100,000." ‡

The importance of early treatment is pointed out more fully in a prior part of this report.

By distributing asylums, not only will the patients be sooner sent and so sooner cured, but the long journeys which are always extremely detrimental to the insane, and the expense and difficulty to their friends, will be spared. They will remain among, and accessible to, the visits of their friends—a thing much to be desired for both parties; since, under proper regulation, and with the concurrence of the physician, the visits of friends are frequently most useful to those mentally afflicted; whilst, on the other hand, the feeling of affection for the afflicted one is much more likely to be maintained in a household where he is seen occasionally. People are too much accustomed to "hide" their insane out of their sight, instead of having them always with them, in thought, if not actually.

Asylums in up-country districts will serve also another purpose. Properly managed, they will teach a lesson to all near, and have an influence which no distant asylum, the subject of exaggeration or enchantment, can exercise. They will serve to spread abroad that feeling of charity "which suffereth long and is kind," till the asylum is properly understood, and regarded as a hospital where care and skill are employed in the treatment of those most to be pitied on this earth; not, as is now too often the case, as a prison in which beings, little better than wild beasts, are shut from the gaze of mankind.

It is scarcely necessary to add, that these asylums should be built on the best models, and fitted with the best appliances that can be procured. A qualified medical man should be placed at their head, with such a staff as will enable him to carry out all that is best in asylum organization and treatment.

The districts from which the insane of the Colony now come, and the proportion of the entire number who are sent from country districts to the Sydney asylums, may be, to some extent, gathered from the following list, where the districts from which 313 out of 625 of the present inmates of Tarban Creek Asylum are given.

This list has been most carefully prepared by Mr. Wardley, from papers existing at the asylum. It will be seen that one-half of the inmates only are accounted for. In many of the remaining instances, Mr. Wardley says—"There is no record of the district—the name of some insignificant station has been specified, without any reference to the district where situated, or the nearest post town—many come from distant parts of the country, and are transferred from one constable to another, until all traces of their real homes are lost, and they are often in a condition which renders them unable to supply the information themselves."

In the numbers given there are then 88, out of 313 from up-country Districts; and it is only fair to assume that a much larger proportion of the remaining half of the present inmates of Tarban Creek come from the country. Since the name of "some insignificant station has been specified," and the patients have been "transferred from constable to constable, till all traces of their real homes are lost," clearly these real homes are not in or near Sydney. What is true of Tarban is likely to be true also of Parramatta; and it may be safely stated, that at least one-third of the present population of the asylums has come from up-country Districts.

4th. That a new asylum should be erected in the neighbourhood of Sydney, to contain 500 patients. That it should consist of—(1st) an asylum for the indigent, to accommodate 400—(2nd) an asylum in a detached building, for better class patients, able to pay for their accommodation and support, to contain fifty, and—(3rd) an asylum in a second detached building, for idiots and feeble-minded children, to contain fifty. That each of these should be built according to the best plans to be found, and all placed under the superintendence of one physician with a competent staff.

The exact site for such an asylum is a matter of the greatest importance. Parramatta has been several times proposed, but though it has many advantages, among which may be mentioned its cultivatable land, its excellent water supply, the railway communication with Sydney, and the proximity of a small town,—still, the objection of its distance from Sydney outweighs all that can be said in its favour; and the suggestions of the Right Rev. Dr. Willson—that the new asylum should be in the neighbourhood of Sydney, not more than two or three miles from it—backed as it is, by the recommendation of Dr. Campbell, who speaks of the "precincts" of Sydney, and that also of Dr. Boyd, who speaks of the "immediate neighbourhood,"—should be most carefully considered.

To the reasons for such a site given by Bishop Willson—the securing judicious visitation—the procuring medical and surgical assistance—the opportunity afforded to convalescent and other patients for participating in the minor amusements of the city—the facilities for humane and well-qualified persons of gratifying (in the asylum itself) the inmates by vocal and instrumental music, and other means of distraction (all reasons of weight and wisdom)—many others may be added, among which are, the diminished expense of carriage for all stores—the greater ease with which good attendants can be procured, and the increased length of time they will, as a rule, remain in institutions near large towns.

These and others which will be found set forth at greater length in the section devoted to the question of the most advantageous site for asylums generally, make the immediate neighbourhood of Sydney (if a suitable spot can be obtained with the necessary quantity of land) much preferable to Parramatta. It need hardly be said that railway communication is of immense advantage, especially if a branch line for coals, stores, &c., can be brought into the asylum grounds, as at Colney Hatch, the Three Counties, Murthly, and other British asylums.

The land on the Parramatta Road, in the immediate neighbourhood of Sydney, at Petersham, or Ashfield, would appear to be the site most worthy of the attention of the Government or of any commissioners appointed to consider this subject.

5th. That an asylum for criminal insane should be established at Parramatta, to contain eighty patients, and capable of subsequent enlargement.

The special provision to be made for the paying patients, for idiots, and criminals, will be discussed when treating of these classes, separately.

This scheme in its entirety, will give—

	Indigent.	Paying.	Idiots.	Criminals.
Tarban Creek .....	300	.....	.....	.....
Up-country Asylums .....	600	.....	.....	.....
New Asylum, near Sydney .....	400	50	50	.....
Criminal Asylum .....	.....	.....	.....	80
	1,300	50	50	80

or a total of 1,480,—a little more than 300 in excess of the present number of insane—who, it must be remembered, are increasing at the rate of fifty-two annually.

Site.—

**Site.**—The site to be chosen for an asylum is a matter of primary importance. On it must depend in no small degree the comfort, happiness, and health, both mental and bodily, of the inmates, as well as the cost of the institution and the whole working of its internal economy.

An elevated position is desirable, because more healthy, commanding, as a rule, more extended views both from the rooms and airing grounds, and affording greater facilities for drainage and ventilation. An elevated site has, for these reasons, been chosen with almost curious unanimity for modern asylums in Europe and America, and it is equally advisable in New South Wales. In the suggestions and instructions to architects issued by the Commissioners for England and Scotland,\* it is suggested that "it should not be near to any nuisances, such as steam-engines, shafts of mines, noisy trades, and offensive manufactories, neither should it be surrounded or overlooked, or intersected by public roads or footpaths"; "that the site of the building should be elevated as respects the surrounding country, and, if to be obtained, undulating in its surface and having a fall to the south."

The sub-soil should, if possible, be calcareous, gravelly, or rocky, but if the position is elevated, and drainage good, a clayey sub-soil, such as is occupied by more than one of the best English asylums, is not objectionable.

The aspect, which, in the cold climate of Northern Europe, or in the still colder one of America, is a matter of considerable importance, is one of only secondary consideration in New South Wales, where the seasons are more equable. The southerly and easterly winds are, however, the freshest and most healthy in this Colony, and where the nature of the land will admit, an aspect ranging between south and east should be chosen, and the buildings placed in the northern and western extremity of the land, so as to allow the south and east for the use of the patients. But a site, otherwise good, should not be rejected, simply because such an aspect for the building cannot be obtained upon it.

The question of the distance from town at which an asylum should be placed is one which has been much discussed. The Scottish Commissioners in Lunacy, in their suggestions and instructions\* say, that "the asylum should be as central as possible to the mass of population in the country or district for which it is to be erected, and should be convenient with respect to its easy access by railway or other public conveyance, in order to facilitate the visit, of friends or the supply of stores. It should be within such distance of a town as to command the introduction of gas, water, &c., and of sufficient size to afford the means of recreation and amusement of the medical staff, the attendants, and such of the patients as might derive benefit from a change in the asylum routine."

The advantages to be derived from proximity to a large town are,—

1. Facility of access for patients and their friends, commissioners, inspectors, and Government officials generally, visiting medical officers, &c.
2. Diminished cost of conveyance of coals, stores, and provisions.
3. Facility for amusement of patients—1st. In the asylum itself, by means of exhibitions, concerts, lectures, &c., for which assistance may always be obtained in a large town, either by paying those who make such amusement a profession, or by appeals to amateurs benevolently disposed. In many cases, a distance of three or four miles will present no serious difficulties, but it would be almost impossible to induce an amateur, or professional lecturer, or musician, to travel six, eight, or ten miles without heavy payment—2nd. In the town, by the attendance of fit patients at the public promenades and gardens, lectures, concerts, and exhibitions, and all the minor amusements which a town affords.
4. Supply of gas and water; the former of which, in most instances, and the latter in many, may be obtained much cheaper from the town supply than by any other means.
5. Increased facilities for procuring good attendants, and for inducing them to remain for a longer period in their situations. The importance of a good class of attendants, and these trained to their work, cannot be over-estimated; and that such a class may be induced to take service, and remain for a long time at their work, when the asylum is situated near a large town, is undoubted; whereas, they either refuse service altogether, or having accepted it, stay only very short periods in an asylum removed from a town. This is constantly found to be the case, notwithstanding all the counteracting influences of high pay, excellent regulations, holidays, and kindly treatment at the hands of officials; and it may be safely calculated that a superior class of attendants will be found at all the asylums which are situated near large towns. It is also found that the length of service of attendants is almost always greater in town than in country asylums. Thus, at Leicester, Stafford, Prestwich, and other asylums near large towns, the length of service ranges from one to fifteen years; while at Broadmoor, under the most kind treatment, more liberal pay than is given at any county asylum, with a good library and special amusements for their gratification, they cannot be induced to remain, and the changes are extremely frequent. Whilst advertisements for attendants at Broadmoor are not unfrequently seen in general and special papers, there is little necessity for other asylums, differently placed, to advertise.

Perhaps

\* See Appendix A.

Perhaps an objection to the criminal class of which the inmates of Broadmoor are solely composed, may act as a deterrent; but the testimony of one of the attendants may be quoted as the more likely cause of its unpopularity. "What is the good" said he, "of high wages—we have to give it all to a railway"; five shillings to London; half-a-crown to Reading (the nearest large town), is to say nothing of time, an important matter to an attendant out on a holiday? Amusement and change are necessary to an asylum attendant, and amusement and change he will have, no matter what entertainments are concocted within the asylum walls. However "self-contained" is the asylum organization, something beyond, and away from it, he craves after; and if he is to remain fit for his situation, this change he should have. A very little consideration of what asylum life is,—its constant worry and irritation,—the vexing influence of constant association with crooked people and crooked actions,—are felt often too severely by the asylum physicians, who are only a part of the day with the patients. The attendant has the insane always with him; and if he is to retain that health, that evenness of temper, that mental and bodily spring, that combined firmness and suavity of manner, which are necessary to make him an effective and useful servant, he must escape occasionally from the asylum walls and from the depressing influences of asylum life, and lose all thought of his work, by associating with the sane, either in the quiet of home life, or—what is and always must be attractive to the young, and to the majority of asylum servants—the minor excitements of town life.

If the married attendant cannot have his family within easy access, and the unmarried find rational amusement close to the scene of his work, so that he may lose no time in journeying to and fro, he, in too many instances, will not remain in his place, or remaining, will lose, as the months roll on, health and vigour both of mind and body—that mental and bodily serenity without which an attendant is useless—and will be constantly liable to dismissal as unfitted for his work.

Some asylum superintendents, among whom is Dr. Lockhart Robertson, of the Sussex County Asylum, the Editor of the *Journal of Mental Science*, prefer married attendants for the male wards of the asylum. If such attendants are to be procured and induced to stay, their houses must be near, so as to enable them to enjoy in the evenings the comforts of home life. Such houses will always be more readily obtained in a large town than in any small town or village.

That an asylum should be easy of access is most important for those mentally afflicted, both before and after they have entered its walls. The nearer the asylum to the patient's house the sooner he is likely to be sent to it; and the sooner sent, the sooner likely to return sane to his friends. Delay in submitting the patient to treatment is, in only too many cases, caused by the inconvenience and expenses of a long journey, which are much increased when the traveller is insane. Every mile is an obstacle when the patient may rave as he travels, and require two or three people to restrain his violence or his vagaries. Facility of access is also no less important to the insane, when an asylum inmate, than before his entry. The visits of friends are in many cases good for the mental health, and such visits will be few if distance be great. Then, again, the greater the facility of access, the more thoroughly an asylum is under inspection; and such inspection, whether it be that which an intelligent public accords to all institutions in which it is interested, or those more methodical visits paid by appointed authorities, is useful, both for the asylum itself, its inmates, and all concerned.

The cost of supplies for 300 or 400 people must be greatly increased by the expense of carriage. At the Worcester Asylum, which is situate in a small village four miles from the town of Worcester, Dr. Sherlock states that his calculations prove that 2d. per head per week would be saved, in the maintenance of the patients, if the asylum were 2 miles nearer the town. The same opinions are held by other asylum superintendents.

It is said by some authorities on asylum government, that they should be "self-contained," that is, that they should depend as much as possible on their own resources for amusement, as well as for supplies. Admitting the general advantage of this, and also the excellent organization of amusements which exist in many of the British and American asylums, it must be allowed that important auxiliaries in this matter may be obtained from without, and that no trouble should be spared to induce, at certain periods, amateur or professional lecturers, musicians, and performers, to give, either for pay or as a free donation, entertainments within the walls, to those who cannot be permitted to go beyond. There is a freshness about these entertainments which asylum amusements, however varied, conducted by the same people, cannot have, and they are often relished by the inmates much more than those which are furnished by their constant associates. It may be, and often is easy to induce professional entertainers and amateurs, benevolently disposed to give their services, when the asylum is within a convenient distance; but if the institution were six or eight miles distant, the difficulties would be almost impossible to surmount. Facility of access is therefore necessary for this end, and is not less desirable in order that patients who can safely be trusted may enjoy the public promenades, and gardens, and the other minor amusements of the city.

With reference to the fourth head—the supply of gas and water—it will be found in most cases to be of great advantage, that the asylum should be sufficiently near to a town to render the established supplies available. Gas will be obtained cheaper from the ordinary town supply than it could be manufactured in the asylum itself, and with less probability of derangement of the works. The town supply of water also is likely to be cheaper, and obviates the necessity of the machinery and plant required where the water is obtained from wells on the premises. In the Sussex County Asylum, gas was at first

first made in the institution, but it was found unprofitable, in consequence of the constant breakage and want of repair of pipes, &c. It is now obtained from a gas company, and the asylum works are disused.

Dr. Greisinger in his *Treatise on Mental Diseases*, page 514, thus expresses his opinions on this subject—"In the foremost rank is *facility of access* to the patients, and the capability of constantly receiving fresh cases"—"and further, as a result from this, in all large countries the asylums would be more distributed in different districts."—"The institution must, moreover, be situated in a healthy locality, and where it is possible, in a neighbourhood rich in natural beauties. It may be well to have it in the vicinity of a small town, where the necessary provisions may be had, and intercourse conveniently maintained with the inhabitants. It is needful, also, to have asylums in proximity to large cities. Under no circumstances, however, should an asylum be built within the precincts of a city."

**Land.**—The instructions and suggestions of the English and Scotch Commissioners in Lunacy are very definite as regards the amount of land necessary for an asylum.

"The land belonging to the asylum should, when practicable, be in the proportion of not less than one acre to four patients, so as to afford ample means for agricultural employment, exercise, and recreation; and should be so situate as to offer facilities for any extension which may be deemed necessary at a future period."\*

The Association of Medical Superintendents of American Institutions for the Insane† have unanimously proposed "that no hospital for the insane, however limited its capacity, should have less than 50 acres of land devoted to gardens and pleasure grounds for its patients. At least 100 acres ought to be possessed by every State hospital or other institution for 200 patients."

This proportion of one acre to every two patients is recommended for adoption in this Colony, instead of the minimum of one acre to every four patients, suggested by the British Commissioners.

Taking into consideration the comparatively low price of land in New South Wales, and the immense advantage accruing to an asylum from extensive grounds, which, if not under cultivation, may serve for recreative purposes,—and also the desirability of possessing woodlands, to furnish shade in summer and opportunities of tasteful improvement,—it will be apparent that less than two acres per patient will not suffice.

The full amount which will be required for the institution according to its estimated eventual extent, should, if possible, be acquired at once. It might either be cultivated by the patients in the institution, if sufficiently numerous for the purpose, partly cultivated by hired labour, or let on short lease till the number of patients was sufficient to work it; but as much as possible of it should be brought under cultivation, and vegetables, fruits, root or cereal crops, grown according to the nature of the soil, the wants of the institution, and the capabilities of the inmates. The more an asylum is self-supporting in this respect, the greater will be the economy of expenditure.

By means of a farm in connection with the asylum, the vegetables, fruit, and milk required, may be obtained at a less cost than they could otherwise be procured; and although growing for sale is seldom found so profitable as growing for consumption, the labour of the inmates may sometimes be profitably employed in the production of supplies for the market, and thus contribute materially to defray the expenses of the institution. All authorities are agreed as to the beneficial effects of field and out-door labour, upon almost every form of mental disease; not only is the bodily health of the patients improved by constant occupation in the open air, but the life opens to them a wider portion of the world, with freer movement and more active employment of the faculties. Agricultural work is, in fact, in many cases, a necessary part of treatment, and, as such, may be justifiably carried on to some extent if no profit results, or all the labour employed ends in some loss. Experience has shewn that many patients who have been previously unaccustomed to country avocations, engage in them with pleasure and advantage.

It has been calculated that the labour of the insane is only equal to one-fifth of that of the sane, so that 100 patients are equivalent only in 20 healthy field labourers. In most asylums there will be found 1 inmate in every 5 suitable for field labour, so that in an asylum of 500 patients there will be about 100 inmates capable of such employment. But if it is supposed that only half this number can be so employed, it will be equivalent to the constant labour of 10 healthy men; and what these are capable of effecting in agriculture and horticulture, can be estimated by all those conversant with the matter.

**Separation of Acute and Chronic Cases.**—The question whether it is better to erect asylums which shall contain both acute and chronic cases, or whether a distinct asylum shall be erected for each class, cannot be answered in a general way. The solution of this, like many other practical questions regarding asylums, depends very much upon the population of the district, upon the nature of the existing buildings, and upon the special aims which it is intended to combine with their erection, (*e.g.*, clinical instruction).

It

\* See Appendix A, Nos. 1 and 2.

† See Appendix A, No. 3.

It has been proposed, in a prior part of this Report, that, under certain conditions, Tarban Creek should be temporarily retained as a residence for the insane; and if so retained, the nature of the building is unquestionably more fitted for chronic cases than for those demanding active treatment. But this is only a more or less temporary expedient, and should not be allowed to interfere with the arrangement for the future asylums of the Colony.

Where a large medical school exists, and clinical instruction is given upon mental disease, it may occasionally be advisable to erect a small asylum, mainly devoted to acute cases as affording better illustration for the teacher, in connection with or within easy access of the general hospital of the district. But the study of mental disease is at present so far a specialty that chairs of psychological medicine exist only in a few of the larger medical schools in Great Britain, and such a chair must be so very far in the dim future in this Colony, as to place it altogether out of consideration.

The question of population has an important bearing on this subject. Wherever a large population is crowded within a small space, and two asylums can be made fairly accessible to the whole population of the district, the greatest argument against the separation of acute and chronic cases ceases to exist.

The population of London or Paris, as well as some of the more populous parts of Lancashire and Yorkshire, furnishes a greater number of insane than can with advantage be placed in one asylum. Two asylums are therefore necessary, and, as each of these can be placed within easy reach of the entire population to which they belong, one may be constructed mainly for chronic, and the other for acute cases, if it is found advantageous on general and pecuniary grounds to do so, instead of making each fitted to contain both classes. The Commissioners in Lunacy long since recommended separate asylums for each class for the London Metropolitan Districts.

In New South Wales the population is a remarkably scattered one. Even the district in which Sydney is situated cannot be considered as thickly populated; and any asylum established in Sydney, even should up-country asylums be instituted, must serve for a very large extent of country—an extent so large that it would be on the whole advisable to divide it into two, and place an asylum in each, rather than to establish two asylums, one for acute and one for chronic cases, near Sydney itself.

It will be seen that neither the nature of existing buildings, the requirements of clinical teaching, or the population of the district, necessitate the establishment of separate asylums for acute or chronic cases; and the balance of the argument, as has been already seen in a prior part of this Report, is so strongly in favour of asylums to contain both classes of the insane, that any separate provision cannot be recommended. Every asylum should be expected to contain both acute and chronic cases—and the nature of the buildings, the staff of attendants, and the general arrangements, should be such as to meet the needs of each class.

**Size of Asylums.**—The limits to be fixed on the size of asylums, the number of inmates who should be kept in one institution, under one medical supervision and treatment, and fed by one commissariat, is a question to be settled before the construction is resolved upon.

The recorded opinions of commissioners, superintendents, and inspectors, long practised in the management and arrangement of these institutions, will help to furnish a reliable opinion in this matter.

The English Commissioners of Lunacy are of opinion that an asylum to contain 400 to 500 patients is the best size; but that, on an emergency, they may be enlarged to contain 600 to 700 patients, without sacrificing the special characters which all modern asylums should possess. When there are more than 700 patients, the expenses increase, and all individual treatment vanishes. The superintendent can only know the patients *en masse*, and not individually, and the establishment grows out of effective supervision, although the number of attendants may be increased. This opinion may be found in the reports of the Commissioners, again and again stated during the last ten years. Thus, in 1857, they state—

“It has always been the opinion of this Board that asylums beyond a certain size are objectionable. They forfeit the advantage, which nothing can replace, whether in general management or the treatment of disease, of individual and responsible supervision. To the cure and alleviation of insanity, few aids are so important as those which may be derived from vigilant observation of individual peculiarities; but where the patients are so numerous that no medical officer can bring them within the range of his personal examination and judgment, such opportunities are altogether lost, and amid the workings of a great machine, the physician, as well as the patient, loses his individuality. When to this also is added, what experience has of late years shewn, that the absence of a single and undivided responsibility is equally injurious to the general management, and the rate of maintenance for the patients in the large buildings has a tendency to run higher than in buildings of a smaller size, it would seem as if the only tenable plea for erecting them ought to be abandoned. To the patients, undoubtedly, they bring no corresponding benefit. The more extended they are, the more abridged become their means of cure; and this, which should be the first object of an asylum, and by which alone any check can be given to the present gradual and steady increase in the number of pauper lunatics requiring accommodation, is unhappily no longer the leading characteristic of Colney Hatch or Hanwell.”

In

In 1863 they write—"The difficulties attending the management of asylums containing large numbers of patients, has been repeatedly stated by us, and they continue to be matters of constant experience. In such asylums the careful treatment of individual patients is next to impossible, a proper supervision of attendants is extremely difficult, and the working expenses are generally increased." And again, in 1867—"For every instance of an asylum above the middle size challenging praise, there are, unfortunately, several instances of the opposite kind to be adduced."

The Scottish Commissioners are equally opposed to large asylums. They consider that no asylum should contain more than 350 patients; that the individual treatment of a larger number is impossible; and that cost increases with anything above that number. These opinions they repeatedly express in their various reports.

In 1852 the Association of Medical Superintendents of American Institutions for the Insane unanimously agreed, that "the highest number that can with propriety be treated in one building is 250, while 200 patients is a preferable maximum"; but as the principal asylums in the Eastern States were gradually increased in size to meet the wants of the population, no marked inconvenience was found to result from the congregation of a larger number in one building; and a further expression of the opinion of a majority of the members of the Association on this subject is to be found in a resolution passed at the meeting of the Association, held at Washington in 1866, rescinding that above stated, which is as follows:—

"The enlargement of a City, County, or State Institution for the Insane, which, in the extent and character of the district in which it is situated is conveniently accessible to all the people of such district, may be properly carried to the extent of accommodating 600 patients, embracing the usual proportions of curable and incurable insane in a particular community."\*

The opinions of authors, both English and Foreign, are at accord on this subject. M. Ferrus, one of the Inspectors of Asylums in France, says, in his book entitled "*Des Aliénés*,"—which is quoted at second-hand from Dr. Arlidge's work,†—"An asylum for the treatment of mental disorder ought not to contain above 150, or, at most, 250 patients; but one having a mixed population of cases requiring treatment, of incurables and idiots, may receive 400 or 500 such inmates, provided the physician is afforded sufficient medical assistance."

M. Parchappe, lately Inspector of Asylums in France, says—"After taking every consideration into account, I think the minimum of patients ought to be fixed at 200, and the maximum at 400. Below 200 the economical advantages rapidly decline, without compensatory benefit; about 400, although the economical advantages augment, it is at the detriment of the utility of the institution in its medical character."‡

M. Guislain, the eminent Belgian authority, in his large work on insanity, which is quoted by Dr. Arlidge, says—"It would be absurd to bring together, in the same place, a very large population; it would tend to foster an injurious degree of excitement, would render the management difficult or impossible, would destroy the unity of plan and neutralize all scientific effort. The maximum number ought not to exceed 300 or 350 insane persons."

Dr. Jacobi, in his Treatise on Asylums, which has been translated into English by Dr. Kitching, of the York Retreat, says—"I am convinced that the number of patients should never exceed 200." He is, however, speaking of asylums for acute cases only.

Dr. Arlidge, in his work on the State of Lunacy, mentions the opinions of Roller and Damerow—two of the most eminent of German alienist physicians—on this subject, both of whom consider that asylums for acute cases should be limited to 250, but that those for both acute and chronic cases may admit from 450 to 500 inmates, but no more, and at p. 118 states his own opinion that 600 "represents the maximum which can economically, and with just regard to efficient government and supervision, and to the interests of the patients, be brought together in one establishment."

These authoritative expressions of opinion might, were it necessary, be supplemented by others from different sources. It will be seen that all agree in condemning large asylums, but that some difference of opinion exists as regards the preferable number for maintenance in one establishment. The English and Scotch Boards of Commissioners, and the Association of American Superintendents, all of whom must be understood as speaking of ordinary asylums to which all the insane (curable and incurable) of a district are to be sent, name respectively 500, 350, and 600 as a limit to which the size of asylums may extend. And the eminent Continental authorities, whose opinions have been cited, mention from 350 to 500 as the size for an asylum into which both acute and chronic cases are admitted; and 150 to 250 as the preferable number for an asylum which shall admit acute cases only. The opinions of the superintendents now in charge of both British and

\* See Appendix A, No. 3.

† *On the State of Lunacy*: By J. T. Arlidge, M.D., A.B. London, 1859.

‡ *Des Principes à suivre dans la Fondation et la Construction des Asiles d'Aliénés*. Paris, 1853.

and Continental asylums vary as regards the exact size to be adopted, but agree in the main with those expressed above—in a few instances only is a different opinion expressed. Dr. Robertson, a man of abundant energy, who unites the joint editorship of the *English Journal of Mental Science* with the most admirable management of a county asylum for 600 patients, considers that an asylum for mixed cases, in such proportion of acute and chronic as is generally found in English county asylums, may be enlarged so as to contain 700 or 800 patients and yet work economically, smoothly, and well, with every necessary care for the medical and moral treatment of the patients; and Mr. Holland, of the Prestwich Asylum, Manchester, and Dr. Howden, of the Montrose Royal Asylum hold the same opinion.

The admirable order and system which pervades everything in the Prestwich Asylum, which itself contains 1,000 patients, entitles Mr. Holland's opinion to every weight and consideration; and all who have seen the Montrose Royal Asylum, and talked on asylum management with its superintendent, will feel that his opinion is one well worth earnest thought; but it may be doubted if these opinions are not the expressions of individual and self-conscious power. The talent and powers of administration possessed by a few individuals are no argument in considering the general question of asylum system, and of little value in fixing a limit to the proper size of asylums.

Weighing well all the opinions of eminent men on this subject, and the arguments with which they are backed, and judging from personal inspection of existing asylums, the opinion may be expressed that from 400 to 500 is the preferable size for an asylum, and that 600 should never be exceeded. The asylums which are working smoothly and well, with every care for the treatment of patients, and effective supervision, are, as a rule, below this number; and the table in a prior part of this Report in which the population and weekly maintenance rate of the English institutions is given, will shew that, for economical reasons, from four to five or six hundred is the preferable number. The maintenance rate generally increases when the population is below or above it.

One argument alone exists for large asylums in England. Where the officers are not appointed and paid by the Central Government, the salaries of superintendents and other officers will always bear a certain proportion to the number of inmates, on the broad principle of increased remuneration for increased work. If all asylums were of fixed size, the salaries of officers would be about equal, and afford no temptation to the best men in the medical profession to undertake the special study of psychological medicine. At present some variation in size exists, and to the larger ones are attached salaries which serve as the prizes of the profession, to be bestowed on men of special energy and talent. In a large asylum system, such as exists in England, such men will always be found; and such appointments in greater or less number, should await them, if psychological medicine is to hold its ground, and enlist in its service the master minds of the medical profession. The Commissionerships in Lunacy are too few to meet the requirements of this sort, and half of them are open to a sister profession.

This argument, however, has little weight where the asylums are under the immediate direction of the State and the superintendent is an officer of the Civil Service, since advance of salary may be made to depend on length of service and other conditions, and promotion consist, not in removal from a small to a large asylum, but from one rate of pay to another.

#### CONSTRUCTION.

To make the lunatic as much "at home" as possible,—to make the household arrangements of an asylum resemble those of a large private dwelling-house, so far as is consistent with salubrity of structure, economy of expenditure, and facility of supervision and management,—should be the leading principle in the construction and internal arrangements of asylums.

The corridor plan, with its enforced imitation of the old monastic life, utterly foreign to that pursued by all classes in our day, might on that account alone be fairly rejected, but it has other disadvantages which make it strongly objectionable as a form of asylum construction. The building being closely massed, and the wards and corridors opening one into another, the air of one ward will, however perfect be the ventilation, mix with that of others, and, in the event of infectious diseases attacking any of the patients, the whole number will thus be rendered liable to infection. Ventilation is difficult, for although the windows may be placed opposite to each other, the walls dividing the small rooms from the corridor prevent free currents of air, even when every possible arrangement is made for its ready passage. Elaborate systems of artificial ventilation are therefore necessary, and with this the air is often stagnant. The expense of construction, if the corridor has rooms on one side only, is great, from the long stretch of roofing, &c., which is necessary; and it is fully equalled by the expense attending the artificial ventilation which is absolutely essential, when the rooms open from both sides of the corridor.

The "house" plan, from the fact that the buildings are all under one roof, possesses some of the disadvantages of the corridor plan, but its superiority in most respects to it has been already pointed out. For small asylums, which are not intended to contain more than 200 patients, this plan may be adopted with advantage, and for the central or main building of a large asylum is, perhaps, better than any other; but a large asylum, built entirely on this plan is decidedly objectionable, as bringing too many individuals under one roof, and exposing them to chances of infection, as well as for other reasons.

The cottage plan is the mode of provision for the insane which approaches in its arrangements the nearest to the ordinary home life of the sane; but there are objections to it for a large asylum, which are almost insuperable. These objections are—

- 1st.—The space over which such an asylum must extend, rendering the supervision extremely difficult.
- 2nd.—The difficulties of serving the food to buildings, some of which must necessarily be distant from a central kitchen. (The proposal made by one of the advocates of this system, to do away with the main kitchen, and place small kitchens in every cottage, can scarcely be seriously entertained; and the collection of the patients in a central dining-hall would be attended with some difficulties, owing to the scattered nature of the buildings.)
- 3rd.—The increase in the number of attendants necessary, since it is indispensable for proper asylum management that a number of patients should, except in some special cases, be under the charge of two attendants, one of whom should be always with them. If two attendants are to be placed in each cottage, the number of attendants must be very large, or the cottages made large enough to contain from twenty to thirty patients, and so lose much of their character.

The cottage plan is then not suitable for a large asylum, but should always have a place in an asylum system. What that place is will be subsequently indicated.

The modification of the cottage system which has been adopted at the Essex Asylum is, in most respects, admirably suited for a small asylum for from 100 to 200 patients; but it is not fitted for an asylum to contain more than that number. The size of the cottages, and their communication by a covered way, do away with some of the most cogent objections to the cottage system, and the facilities for the gradual enlargement of an asylum composed of such cottages, according to the growing requirement of a city or district, render it peculiarly well-suited for places increasing in population.

The pavilion, or block plan, is more calculated to fulfil all the requirements necessary for the care and treatment of a large number of the insane in one asylum than any other. The principles of hospital construction which have been laid down by Miss Nightingale, and which are subscribed to by the most eminent authorities on this subject, apply, though with diminished force, to hospitals for mental diseases. The pavilion plan is avowedly the best in a sanatory point of view. The ventilation is comparatively easy, and the facilities for future enlargement great, and that it can be made to serve for the peculiar requirements of the insane, is proved by the asylums of Auxerre, St. Anne, and Ville Evrard in France, which appear to work smoothly and well. The general quiet of these asylums seems much promoted by the complete detachment of the various sections. Objections have been raised to the pavilion or block plan on the score of expense: 1st, in the additional amount of land required, from the fact that the buildings are spread over a larger area; and 2nd, in inherent costliness of structure. The first objection can have little weight in New South Wales; the second is more or less groundless. The Herbert Hospital at Woolwich has certainly cost upwards of £400 per patient; the Lariboisière at Paris has been equally, if not more costly; and the three new asylums for the Department of the Seine, St. Anne, Ville Evrard, and Vacluse, have cost on an average £300 per patient; but at these institutions no expense has been spared, and there has been a lavish expenditure on matters of detail. That it is possible to erect a building on the pavilion principle at a moderate cost, which shall fulfil all the requirements of a good hospital, is proved by the existence of the Pauper Hospital at Chorlton-on-the-Medlock, which has cost less than £60 per head; and there is no reason to believe that a similar building, with all the accessories necessary for the treatment of the insane, would be very much more costly.

The objection made to the pavilion plan,—that the buildings would be so distant one from another as to render supervision difficult if the asylum is large—has more weight. In a linear arrangement of the pavilions, this would be specially the case, but with the buildings placed in echelon or square, they may all be brought within convenient distance, and the difficulties of supervision rendered little more than in an ordinary asylum on the corridor plan. These difficulties may be still further diminished, by placing the accommodation for recent cases close to the administrative or central block, maintaining the principle of isolation by an arcade of two or three arches, and attaching the block for the sick to this in the same manner. These two divisions should be as close to the rooms occupied by the resident physician as possible.

Asylum construction must depend somewhat on the classification of the patients which is considered necessary, and this subject is discussed in a subsequent part of this Report. The classification there recommended is into—

- 1st.—Recent cases.
- 2nd.—Sick and infirm.
- 3rd.—Violent and noisy.
- 4th.—Ordinary patients.

Whilst the idiots are completely separated from the other inmates, and form a 5th class.

The number of divisions which are necessary in an asylum varies with its size. In an asylum for 500 patients, at least six divisions for each sex are necessary; and in this case, the "ordinary" patients may be placed in two divisions; but with a smaller number, three or four will suffice; the "recent" and "ordinary" cases, being amalgamated or not. Thirty to forty patients are a sufficient average number for each division.

For a small asylum, the maximum population of which is never to exceed 200, the modified cottage plan (which may be understood by a reference to Appendix G, Nos. 10 & 11), is the one to be most recommended.

For

For an asylum built originally for 150 or 200 patients, but intended for enlargement, so as eventually to contain 400, the "house" plan (see Appendix G, Nos. 4 and 5) or the pavilion plan are most fitted for the original structure. If the pavilion plan is adopted, the pavilions should be placed close to the administrative block, and connected with it by a short arcade. All subsequent enlargements should be on the pavilion principle, and consist of detached blocks; and the original building which at first contained all the patients, will serve to contain the recent cases and sick only, with perhaps a few others as the asylum grows in size.

For an asylum built originally to contain 500 patients in six divisions, the pavilion or block plan may be mainly adopted, and supplemented by cottages; or plans may be so modified as to embrace the "house," pavilion, and cottage plan, blended into one harmonious whole, as in the New Surrey Asylum (see Appendix G, Nos. 12, 13, & 14).

If the three plans are combined to form one asylum, the two classes who require most constant care and attention (the sick and the acute cases recently admitted), should be placed in the part built on the "house" plan, which will be under one roof with the administrative department, and so within easy access of the resident physician.

The ordinary patients and the violent class may be placed in detached blocks, two or three in number for each sex; and the small asylum town thus built, be supplemented by cottages for the idiotic and convalescent patients. The reasons for separating the idiots as a class from the other patients are mentioned in the section of this Report treating particularly of this class.

The cottage plan is particularly fitted for patients of good education, who are superior to the ordinary inmates of the asylum wards, though reduced by poverty, either prior to or as a consequence of their malady, to the same level. It adds vastly to their comfort to separate them from the other inmates, and the cottages serve also for convalescent and quiet patients, for whom the more strict discipline of an asylum is not necessary. For convalescent patients also, the association with sane people is very beneficial, and they by this means are allowed greater liberty, and are enabled to resume gradually their accustomed life, instead of passing at once from the asylum ward and its artificial existence to the realities of actual life abroad.

The special block for violent and noisy patients, which should be the smallest division of the house, should have connected with it and opening from it, a one-storied building, capable of containing four or five patients. It should consist of corridor and single rooms, and should have one or more small airing courts, opening either from the corridor or the rooms.

**Number of Floors.**—It has been laid down as a principle of hospital construction, that a pavilion should consist of two floors only. How far this is really important as regards hospitals it is difficult to determine, but the reasons which are assigned for such an arrangement have little or no weight in the question of asylum construction; and the experience of English and Foreign asylums shows that, if the upper stories are used as sleeping-rooms only—if the patients leave them in the morning and return to them at night—a third story may be both healthy and convenient, and the cost of construction will certainly be less. Both the English and Scotch Boards of Lunacy have decided that three stories may be used, if the uppermost story be devoted to sleeping accommodation. For many reasons, it is undesirable to add a fourth; and so far as is known no modern building with a fourth story has been erected. With two stories only, ventilation is more easy, since the upper room containing the sleeping accommodation can always be more or less effectively ventilated through the roof, by means of some one of the contrivances for this purpose; but the question as regards the number of stories in an asylum must depend chiefly on the uses to which the rooms on the ground-floor are applied. If the ground-floor is to be divided into day-room and dining-rooms, and so the patients occupy only half of it at once, the number for which it will serve will not be greater than can be contained in one dormitory floor; but if the dining-room accommodation is provided elsewhere, as is advocated in a subsequent part of this Report, the space for sitting or day-room accommodation will be doubled, and made sufficient for the number of patients who can be accommodated in two floors built over it. The space required for sitting and day room accommodation in asylums is reckoned to be about half that required for the night, because the patients are seldom all within doors except at meal times, when they occupy the special dining-rooms, and in the evening, when the common amusement room is frequently in use and relieves the day-room, which might without it be too crowded.

The material to be selected for asylum construction may fairly be that which is most readily procurable, so long as it is durable and not porous. The driving rain which is common in New South Wales tends to make all buildings constructed of porous material damp and unhealthy. Brick or stone equally serve the purpose, but the latter is capable of more architectural effect; and, as asylums should be made as pleasing as possible in appearance, should certainly be selected where there is little or no difference in the cost. The sandstone upon which Sydney stands—which is procured without great expense and worked with ease, and of which almost all the buildings in the city having any architectural pretensions are built, would be an excellent material for an asylum; but there can be no objection to variegated brick, the effect of which is often extremely pleasing. So long as the windows are of large size, the particular style may fairly be left to the architect entrusted with the planning of the building.

*Water*

**Water Supply.**—A full supply of pure water is an important requisite in an asylum, and no site should be chosen where this cannot be obtained.

If the asylum be near the town, the town supply will be found cheaper, and altogether more convenient than any other arrangement; but when at a distance, the supply from a well or spring, especially if this is close to the buildings, is the best method; since the steam-engine, which will always be necessary to pump and fill tanks, may be made to serve other purposes also, as turning machinery, either at the laundry or farm buildings; whilst the boilers which supply it may be used also for heating hot water for baths and lavatories, the kitchen and laundry\*.

No supply from a running stream should be used without careful filtration; and if water is procurable in any other way, surface drainage should not be resorted to, since with this method in use, high farming is almost impossible, without running risk of dire illness to the inmates, from animal poison contained in the water.

The quantity required for the use of an asylum, even when earth-closets are used, is not less than 15 to 25 gallons per head, per diem†.

Professor Parkes, in his treatise on Hygiene, states that 16 gallons per head per diem, at least, are required for cleanliness by people who are in good health, and 38 gallons per head for hospital use—and gives the following tables:—

“From Professor Rankine (*Civil Engineering*, 1862, page 731):—

	Gallons per head, per diem.		
	Least.	Greatest.	Average.
Water supply in towns—			
Used for domestic purposes.....	7	15	10
Washing streets, extinguishing fires, supply- ing fountains, &c. ....	3	3	3
Allowance for trade and waste .....	7	7	7
Total in manufacturing towns.....	17	25	20
Additional demand in manufacturing towns	10	10	10
	27	35	30 ”
	—	—	—
			Gallons.
“Hospital supply—			
For cooking, including cleansing of kitchen .....		2	— 4
For personal washing and baths .....		18	— 20
For laundry washing.....		5	— 6
Washing and cleansing of hospital and utensils .....		3	— 6
Water-closets .....			10
		38	— 46”
		—	—

The instructions of the English Commissioners on the subject are (see Appendix A), “that there should be a constant and ample supply of good water, of which a careful analysis should be made, with a view to determine the proper materials for pipes and reservoirs, and also in order to ascertain its fitness for the purposes of drinking and washing. The quantity, exclusive of rain-water, should at the driest season be not less than 25 gallons per patient, per diem, and the amount should be accurately gauged.”

On this particular, the Scotch Commissioners are not in accord with their English brethren, and suggest 40 gallons per diem as the allowance for each patient, exclusive of rain-water.

The Association of American Superintendents suggest (see Appendix A) 10,000 gallons for 250 patients, or 48 gallons per diem each.

Any unnecessary number of tanks should be avoided. If the supply is from the town they may be done entirely without; but in any other case, one or two large tanks will be necessary, and these may be placed, either separate from, or in the roof of, the building. If the building is on the block plan, a separate tank may be provided for each block; but if not, the experience of some of the best of English asylums seems to shew that minor tanks are unnecessary.

Rain-water should be carefully collected, especially in New South Wales, where water is scarce, and carefully stored in a separate tank placed over or near the laundry. If good-sized underground tanks are made, and the rain-water carefully collected from all the buildings, no small part of the amount necessary for the asylum supply may thus be obtained.

The

\* At the Montrose Asylum two large steam-boilers are placed in a detached building; they serve to heat the air for warming the house, and the water for kitchen, laundry, and general house use, as well as drive two engines, one at the asylum, and the other at the farm buildings close by. One engine pumps water from a well, sewage from a tank, and hot water to the top of the ventilating towers, and can also be made to send water through hydrants in case of fire. The engine at the farm drives thrashing-machine, chaff-cutter, &c.

† At the Gloucester Asylum, where water is from the town supply, 15 gallons per head serves all purposes; at the Leicester Asylum it is under 10; at the Prestwich and Montrose it is about 40.

The expense attending the erection of fireproof arches, iron doors, and other contrivances to render asylums fireproof, has led to their almost universal disuse; and considering that they are at best only a doubtful expedient, their use cannot be recommended. Reliance should be placed mainly on hydrants, for which proper hose should be kept always at hand, placed both outside in the grounds and inside on the staircases. These should be connected both with the ordinary water supply and with the tank; and where a steam-engine exists, the pipes should be so arranged that the water may be played by steam power.

Fire drill, at which attendants and patients should assist, should be practised at fixed intervals, and the hose and other appliances kept always in order.

In asylums in which force of water sufficient to play the hose cannot be obtained, ordinary hand fire-engines should be kept at the asylum, and the patent contrivance called "L'Extincteur" may be also kept at hand.

In a central and convenient position, in both the male and female sections of an asylum, should be placed a general bath-house. In this there should be such bathing arrangements as will serve for all purposes of cleanliness and treatment. For cleanliness, something much simpler and cheaper, and quite as effective as the ordinary baths with their expensive fittings, may be arranged. A fair-sized room, with slate or cement floor, fitted with stools for the patients to sit on, and foot-pans, supplied with water of different degrees of heat, will serve all purposes. The patients can use the foot-pans, sit on the stools and be well soaped, and finally washed by the attendants, by means of hose of small size fixed to the water-taps. This plan of washing is used to some extent at the Sussex Asylum, the water being dashed over the patients by means of bowls; and in a new bath house at the New York City Asylum, it is proposed to fit up a room for this purpose. It is certainly more cleanly than the ordinary bath, where the same water is used for several in succession, and will take less water than it, if fresh water is used for each one.

For treatment, ordinary baths will be necessary, but one or two will suffice in the general bath-room, instead of one to twenty or every thirty patients, which is the necessary proportion when they are used for purposes of cleanliness as well. A shower-bath is useful in certain cases, but one for each sex will be sufficient. The Turkish-bath has been found extremely useful in the treatment of various forms of insanity. Both these should be placed in the bath-house.\* A fixed bath will be necessary in the division for the more excited class of cases, since it is frequently undesirable to move them from their special section of the asylum; and one, either fixed or movable, for use in the infirmary.

The ordinary bath-rooms should have cemented floors, over which gratings should be placed for the attendants and patients to stand on. The baths should be fixed in such a position as will allow the attendants to walk all round. The best material appears to be Rufford's Stourbridge fire-clay, which is used in most English asylums recently erected and in numerous public baths, is comparatively cheap, lasts longer than metal or slate baths, and requires no repair. The chief points as regards fittings are, that the taps should be so placed that they may always be under lock and key, and an arrangement by which the openings for the admission and discharge of the water vary slightly in their level, is preferable to one which allows one opening to serve both purposes, for in the latter case, the deposits which take place in the pipe are pretty sure to be returned in to the tub when the next bath is drawn. By drawing a little cold water in each bath before the hot is admitted, vapour is prevented in the room. Covers for the baths are unnecessary. If a movable bath is used for the infirmary, it should be of galvanized iron or zinc, on wheels.

The lavatories should be placed on each story; one on the ground-floor, for day use; and one on each upper story, for use in the morning. The basins, exclusive of those in the dormitory wash-stands, should be in the proportion of about 1 to every 10 patients; but if wash-stands are not provided in the dormitories, the proportion should not be less than 1 to 4 or 5. The simpler the lavatory fittings can be made, the better. Earthenware basins set in holes in wood or slate slabs, (the basins to be emptied into a trough beneath, through the hole in which they stand, or some such simple arrangement,) are all that is needful or desirable for the quieter wards. For the more excited patients, the basins should be fixed, and the pivot plan, in which the basin cannot be removed, and can be readily emptied, is perhaps the best. Cold water should be laid on to each lavatory. Hot water is certainly not necessary in the climate of New South Wales. The taps over the basins should be as simple and inexpensive as possible; and the entire water supply to each lavatory range should be under the command of an attendant's key, so as to prevent waste of water, or the use of the lavatories by the patients except at fixed times.

A sink should be placed in a small closet near each lavatory, and water should be laid on. In this closet should be kept all brushes, &c., used for cleaning the rooms.

In this arrangement, hot water will be required for the common bath-room, and for the baths in the division for excited and the sick and dirty patients; and it should also be laid on to the sinks in these divisions, since it will be necessary for cleaning purposes in both. The way in which this can best be supplied will depend very much upon the position of the buildings. For the common bath-house, the furnace may be placed in or near it, as in the French asylum; and for the baths and sinks for the excited and infirmary division, small separate boilers may be fitted in each, as at Meerenberg, where the water is heated by gas, which serves also in the infirmary for minor cookery; or all may be supplied by pipes from the kitchen or laundry. It will be seen that, by the use of general baths, the amount of piping both for supply and discharge of water is much lessened.

Drainage.

\* For a plan of a general bath-house to serve both for purposes of cleanliness and treatment, see Appendix F, Fig. 15. On one side of a central passage, is a dressing-room, and a washing-room fitted with foot-pans, douches, and a shower-bath; on the other, a dressing-room, an ordinary bath-room containing two baths, and two rooms fitted for the Turkish-bath.

**Drainage.**—In reviewing the systems of sewage which are used in Europe and American institutions, and in considering which is most applicable to the Colony of New South Wales, one is led irresistibly to the conclusion that the dry-earth system is that most calculated to answer in this country, where the climate is hot, the water supply is scanty,\* and such fittings as are required for a complete system of water-closets costly. The experience which has already been gained of the dry-earth system at the Parramatta Asylum is entirely in its favour. It has, so far, answered admirably in the institutions in which it has been tried in England; and the opinion of authorities on sanitary matters in India is strongly in its favour, as applicable to barracks, hospitals, and public institutions, as the following extract from an elaborate report on the dry-earth system of sewage, made to the Madras Government by the Sanatory Commissioner of Madras, will shew. "The Quartermaster General, in a letter to the Secretary to Government, dated October 19, 1864, says,—'The efficiency of the system, after being largely tried in hospitals and gaols, is reported to be attested by, it may be said, the whole service, there being scarcely a dissentient voice.'"

The Sanatory Commissioner, Madras, in May, 1867, expressed to Government an opinion that "It is no exaggeration to say that, wherever large numbers *under control* are congregated, Mr. Moule's system of conservancy has been entirely successful, and that it is so far a great public benefit," and "as in many stations in India a good system of drainage and water supply are both deficient, Mr. Moule's system of dry-earth sewage is the best means available for our barracks, hospitals, gaols, and other public institutions."

The following additional opinion is from the proceedings of the Sanatory Commissioner for Bengal, August, 1867:—

"When properly carried out, it (the dry-earth system) may be considered as near perfection as any form of conservancy as can be."

The dry-earth system is extensively used for private houses in country situations in England, with the greatest success. With this evidence, and with a full consideration of the climate and water supply of New South Wales, there need be no hesitation in suggesting that the dry-earth system should be adopted for the entire sewage of asylums, including the rooms occupied by the officers of the institution. The closets should be, as a rule, placed outside the buildings, and detached from them, but reached by a covered walk, and so arranged that the excreta can be easily removed by means of a cart brought close to the back of the closet; but for the infirmary, and for each dormitory flat, there should be one or two placed in a projection, admitting of cross ventilation; and a window should be placed over each seat. These closets should be, on the ground-floor, in number about 1 to every 15 or 20 patients. The walls should be cemented, and made as non-absorbent as possible. The divisions between them should be of slate; and the pavement of asphalt or stone, oiled or waxed boards, or some other material which will not absorb moisture. The seat should be of wood, and the closet self-acting; the earth being discharged into the pan on the person using it rising from the seat. The pans should be of porcelain or iron, and of moderate sectional area. No water should be used. The privy pans must be cleaned and scoured with dry earth; the floor dusted with dry earth, and swept. Upon these conditions being complied with, and upon an attention to a number of minor details not necessary to mention here, the success of the dry earth system depends.

The mixture of earth and excreta, called "poudrette," may be either stored at some distance from the building, for future use, or used at once, so long as it is not applied as surface dressing, but ploughed in and covered with a few inches of soil. If applied as top dressing, the sun exhausts its fertilizing properties. Water causes decomposition.

The earth system should be also, if possible, applied to urinals; but the amount of earth required to saturate the urine passed daily by each individual, which has been estimated by the Sanatory Commissioner for Madras at 30 ounces, is very large—not less than 7 lbs.† The labour of digging this quantity of earth, bringing it to, and removing it from the urinals each day, would be enormous, and such as is considered "practically to amount to a prohibition of its use."

As, however, by using the dry-earth for the more solid excreta, there will be no system of drainage-pipes established in the institution, it is impossible to think of introducing it for urine only; and it remains either to apply the dry-earth system to urinals, notwithstanding the labour it will entail (a matter which is not so immediately important in asylums as in other institutions), as has been done in the military male orphan asylum Madras, or adopt some other system.

In the Report of the Sanatory Commissioner for Madras, before quoted, large tins—metal vessels capable of being screwed up and made air and water tight—are recommended to receive the urine, which should be deodorized by the admixture of 6 per cent. of M'Dougall's disinfecting powder, which contains carbolic acid in association with sulphurous acid, lime, and magnesia, or by 3 per cent. of carbolic acid itself. These tins may be fairly tried as an experiment. They should be placed under a porcelain urinal pan, fitted in a separate compartment, built in the same manner, and adjoining both the outdoor and indoor closets. Into the one placed indoors the contents of the  
bedroom

\* At Netley Hospital, Jennings's Closets, which require a good deal of water, take 10 gallons per head, daily. Professor Parkes, *Practical Hygiene*.

† The quantity required for deodorizing the excreta passed in the closet is found to be 2½ lbs. per individual per day.

bedroom utensils, both of the male and female side, should be emptied; and the tins, tightly screwed down, should be removed daily in carts, and replaced by others, in which a fixed proportion of disinfecting material should be placed prior to use. The urine, carted to some little distance from the asylum, should subsequently be mixed with earth and utilized. Urinals should be provided in the proportion of 1 to every 15 or 20 male patients on the ground floor.

It is essential that all closets and urinals should be lighted with gas.

If the dry-earth system is used for closets, and either this or the metal vessels with disinfectants mentioned above for urine, the entire system of pipes to convey water to the closets and urinals, as well as the sewers to carry off the mingled water and excreta, will not be needed, and the structure of the building, and the arrangement for drainage, much simplified.

There will still remain, however, the pipes and drains necessary to carry off the water from bath-rooms and lavatories, kitchen, sinks, and laundry. These various pipes may, according to the nature and level of the ground, or the position of the land under cultivation, all be made to converge to and enter one tank, placed at some little distance from the asylums, or several, placed in various parts of the garden and grounds, as at Quatre Mares, from which, after an admixture of deodorizing material or not, as may be found requisite, the contents may be distributed, either by a system of pipes or by other means, over the garden and farm of the asylum, and so every particle of water, with the fertilizing contents derived from laundry, sink or kitchen, will be utilized. On referring to a prior part of this Report, it will be seen that it is considered essential that all drainage matters should be used for irrigation at once, and not allowed to decompose in tanks or cesspools before being applied to the land. The pipes from the various sinks, lavatories, &c., should be trapped, either at once or before entering the main drain; and ventilating pipes for the drains may be fitted, as at the Herbert Hospital at Woolwich, where iron pipes pass outside the wall, from the bottom of each drain-pipe to above the roof of the building, and are there left open, so as to carry off all obnoxious gases high into the air; but the double-trapping, before entering the main drain, and close to the sink or bath, which is in use at this institution, is clearly not necessary, as the main drain will contain no ordinary sewage matters. Arrangements should be made by which the drains can be flushed at intervals. This is especially necessary in a warm climate; and the best method is that adopted at Broadmoor and other asylums, in which the contents of the tanks placed over the house can be rapidly started through the drains. With the arrangements for collecting all drainage in tanks mentioned above, the water so used will not be wasted; it will merely be discharged from one place and collected in another, and in its passage will have performed a useful service. Every care should be taken that the ground on which the asylum stands is fully drained; and if the site chosen be elevated, this will be sufficiently easy.

**Lighting.**—The requisites for an asylum window are—that it should light the room perfectly, that it should be the main agent in ventilation, that it should be safe, so as to prevent accidents to the patients or allow them to make their escape, and that this safety should be independent of bars or guards, which are quite inadmissible. After an attentive consideration of the various forms of windows in use in asylums, the double hung sash, with framework entirely of wood, made to open top and bottom, and chocked to 5 or 6 inches, seems to be on the whole the best form. Experience has proved its safety; it is one of the simplest and most inexpensive forms of window, and in several English asylums has answered every purpose. In a climate like New South Wales, where a very free opening of windows is necessary—the form of window in use at the Chester and Prestwich Asylums (see Appendix F, Fig. 9), in which the lower sash is made to open freely, but is fitted with a bolt by means of which it can be prevented opening beyond 5 or 6 inches, will be a decided improvement upon those permanently chocked top and bottom. And even freer ventilation, without any diminution in point of safety, may be secured by dividing the window into two parts, and fitting the lower three-fourths or four-fifths as a double sash, whilst the remaining part is made to open on a pivot horizontally. The French windows, when without bars, are decidedly less safe than the double sash, and are difficult to manage so as to regulate the amount of air admitted. The unchocked sash used in some American asylums necessitates bars or guards, and the special windows at Guislain's Asylum, though ingenious, are more complicated and less efficient for ventilation than the double sash. The size of the window and the proportion to wall space are more important in reference to ventilation than light, in a bright climate like New South Wales. If the windows occupy one-fourth of the wall space, they will be large enough for all purposes.\* They should, as far as possible, be placed opposite to each other, and extend to within a short distance of the ceiling, so as to ventilate the whole space of the ward. They should extend to within such a distance of the floor, in the day-rooms, as will allow of the view from them being seen by any one in a sitting position; and, as a general rule, in dormitories and single rooms, should not be placed more than 4 feet from the floor. The panes should be of medium size, not so large as to suggest to a patient the idea of escape through them when broken,

\* The opening for the windows at the additions to the Chester Asylum is 7 ft. x 3 ft. 9 in., and the panes 12 in. x 7½ in. Dr. Kirkbride, in his treatise on Hospitals for the Insane, suggests 5 ft. 6 in. x 3 ft. as a convenient size; it will give two sashes, each containing ten lights 5½ in. x 16 in.; and adds, that glazing should be done from the inside, especially in the upper stories, for facility of repair.

broken, or so small as to give a prison-like appearance to the room. Iron bars are quite unnecessary, and wire guards may also be dispensed with. The wall below the window, instead of being sloped or splayed, may be recessed to admit a seat, as suggested by the English and Scotch Commissioners.

If any associated dormitories are placed on the ground-floor, they should, for reasons of decency, be fitted with ordinary shutters, which may be made to fold against the wall when open, and fasten by a spring catch when shut. It will be necessary to provide shutters for the majority of single rooms wherever they are placed, and for these the best form appears to be that sliding from below, and made to lock, both when fully closed, or only three-parts so, so as to admit of some light and ventilation in the room.

Blinds will be necessary for almost all windows in this sunny climate, and it would be well if these were green or yellow, and if hangings of bright colour, which have an immense effect in making the room cheerful and homelike, were provided for all day-rooms.

The arrangement of windows for the infirmary need not differ from those in the other wards. The sash is one of the best forms, and if found insufficient alone, should be accompanied by some special ventilation. The form of window in use at the infirmary of the Sussex Asylum (see Appendix F, Fig. 7) is a very good one. For the rooms devoted to the more violent class of patients, the windows may be still of the sash form, the cross-bars of iron being set in a wooden frame; or the form in use at Murthly may be adopted.

\* In the two or three rooms used for temporary seclusion, the windows may either be placed high and out of the patient's reach, in the roof or wall, or at the ordinary level and protected by wooden shutters, sliding from below or from the wall at the side. A wooden shutter, perforated for light, may be used, or one fitted with windows of strong plate glass, which will permit the patient to see out.\* In all rooms used for seclusion, the windows should be made so that they can be opened or closed by means of cords pulled from the corridor outside the seclusion room. Wire guards and bars should be avoided, even in the room for the most violent patients.

Every asylum should be lighted throughout with gas, which is at once the safest, cheapest, and most effective mode of lighting. At all times of the year there are two or three hours during which the asylum wards must be lighted, since it is impossible to send the patients to bed at sunset, to pass a long and wearisome night in their dormitories; and every other mode of lighting an asylum is more or less inefficient and unsafe. The thorough lighting of an asylum has really a remedial effect. The few evening hours spent in well-lighted rooms, after the work of the day, are to most asylum inmates its happiest part, as they not unfrequently are in private homes. Any one conversant with asylum life knows that it is then that the indoor games provided—the chess, draughts, and cards—are chiefly played; and it is then that is heard music and singing, either in the day-rooms or in the special amusement room of the place.

If gas cannot be conveniently obtained from a company's works, it may be made on the premises without difficulty, at a cost which will render it cheaper than any other kind of illumination such as it is necessary to have in an asylum.

Some modifications of the ordinary modes of fittings will be necessary in the introduction of gas into an asylum. It appears advisable that pipes should be so arranged that the gas in each staircase and each set of rooms should be capable of being turned off separately, either by a tap in the basement of each division, as at New York Asylum, or by taps accessible only by a special key in the wards and staircases themselves, as at Murthly.

The lights should for the most part be placed so high as to be out of the ordinary reach of the patients. This may not be necessary in all the wards, and is to be avoided when consistent with safety—since a certain amount of light must be lost when the position of the burner is high. In the rooms used by quiet and convalescent patients, the lights may be placed at an ordinary height. The lights in passages and on staircases should be all placed high, and the projecting pipes may be short and droop from the wall, as at the Montrose Asylum, so as to prevent them being used for suicidal purposes. These lights may fairly be left naked, but the lights in day-rooms have an unfurnished look without glasses, and the light will frequently be flickering and bad. A naked light, too, is a constant temptation to mischievous patients. It will be well, therefore, to fix glasses of simple form to all sitting-room lights, especially as the cost is small, and (with care) the amount of breakage trifling; or the lights may be fitted with the cover and gauze which are in use at Ville Evrard. (see Appendix F, Fig. 8.) Lights of candle size should be kept in in all passages and corridors at night, and are useful in rooms occupied by the sick, the epileptic, and the violent and noisy; but the weight of opinion is against their use in ordinary dormitories.

**Warming.**—Upon an examination of the different systems of warming in use in the various European and American asylums, it is impossible to arrive at a conclusion other than that open fire-places, especially when built with air-chambers, as in use in British asylums, form the best, simplest, and cheapest mode of warming asylums in a moderately cold climate. In America, with a temperature standing for some months in the year, at or below the freezing-point, open fire-places would scarcely fulfil the purpose

\* This plan is adopted at the Maclean Asylum, Boston, and seems to answer admirably.

purpose; and the elaborate system of heating by steam, which has been almost universally adopted, is perhaps the best which could be used. The German stoves which are in use on the continent, are cumbrous, and as a rule unsightly. The English Commissioners have suggested (Appendix A) that in English asylums "all the galleries and day-rooms should be warmed by means of open fire-places or open fire-stoves, and in large rooms two fires should be provided. Fire-places should also be built in all associated dormitories." They have added to their suggestion that, "in large rooms, such as the chapel and dining-hall, and in the corridor, further provision for warming may be necessary, by means of some simple system of hot-water pipes in connection with the open fire-stoves or fires." It is well known that the insane, often badly nourished, and with weak circulations, feel the cold acutely; and it is found by experience in the asylums of the Colony, that fires are necessary in the day-rooms for at least four months in the year; but the temperature is seldom or never so low as to make fires in dormitories desirable, and ordinary fire-places would be quite sufficient to warm the larger rooms, such as the chapel and dining-hall. It is therefore suggested that open fire-places should be placed in the day-rooms, and in the chapel and dining-halls, and that they should be fitted with air chambers such as are recommended in the Report of the Commission on Barracks and Hospitals. Fire-places so fitted are in use at the Chorlton Pauper Hospital, and the New Surrey Asylum, and are found more economical than ordinary grates. In some English and Foreign asylums, it has been thought necessary to make special provision for warming some parts of the asylum, such as the infirmary and the rooms devoted to violent cases. The most efficient way of so doing is by means of some simple hot-water apparatus, such as has been adopted at the Sussex County Asylum, and in the department for violent women at Broadmoor; but it can scarcely be doubted that all necessary warmth for the rooms devoted to the sick can be obtained from open fires placed in the dormitories as well as day-rooms, and that a stove, or fire-place properly protected, may serve every purpose in the rooms for the violent. Elaborate, and in every way excellent, as are the schemes for warming and ventilation adopted for the rooms devoted to the violent class, in the Frankfort and other Asylums, they are not necessary in this climate.

When open fire-places are employed, either small guards as used at Cupar, or else high fenders, or a simple guard, should be used to prevent accident; but the heavy locked iron guards, which are prison-like and offensive in appearance, should not be used.

**Ventilation.**—Natural ventilation, with such accessories as may be deemed expedient, and the simpler these are the better, can alone be recommended for an asylum in a temperate climate.

The first necessity is to secure a sufficient amount of air, by apportioning a fair amount of cubic space to each patient; and the second, to allow such constant change of this air as is necessary for health, by means of doors, windows, fire-places, and other openings.

Each room should, so far as possible, be made independent of every other in respect of ventilation; and if the windows are placed opposite to each other, and the space between them left unimpeded—if they are made to go up to within a short distance of the ceiling—if they are of the common sash form, opening top and bottom, and kept almost constantly open—and if there is an open fire-place, no accessories whatever are necessary, and the rooms may be kept perfectly sweet and wholesome. But in so much as these requirements, one or more fail, accessory openings for the inlet and outlet of fresh air, will be, more or less, necessary. The best form of accessory openings for the inlet of air are those in connection with chambers around the fire-place, communicating with the outer air, and with the ward, and by means of which pure air is admitted directly from without, and in winter warmed in its passage to the room; perforated zinc panes to the upper windows; small openings in the walls near the ceiling, of perforated brick or iron, so arranged as not to cause draughts; or the well-known contrivance known as Sherringham's Ventilator, which consists of an air-brick inserted in the wall near the ceiling, and affording a direct communication with the open air, draughts being prevented by a valve to direct the air towards the ceiling. For outlet, a ventilating shaft such as recommended by the Commission for improving the sanitary condition of barracks and hospitals, placed in the opposite side of the room to the accessory inlets opening near the ceiling, and passing in the thickness of the wall to 3 or 4 feet above the roof, where it is protected by louvres to prevent the rain beating down, is applicable to all rooms. Mackinnell's Ventilator, consisting of two tubes, one within the other; the inner of which serves as outlet, and the outer as inlet, is applicable to buildings of one story, and to the upper rooms of those having more than one, and is perhaps the best form for this purpose which has yet been invented.

The size of the outlet and inlet should be apportioned to each other, and depend on the cubic space of the room. The Commission on Barracks and Hospitals, after a series of experiments, have recommended an average sectional area of 1 inch to every 55 cubic feet of room space, as the size of the opening for outlet, and 1 square inch for every 60 cubic feet of contents for inlet, as necessary for perfect ventilation; but here, the doors and windows do not seem to be taken into consideration, though the chimney is reckoned as an additional outlet.

The best, simplest, and least expensive form of apparatus for artificial ventilation is the archimedean or revolving screw-ventilator, which is in use at the Prestwich, New Jersey, and other asylums; and for the top wards of the Chorlton Pauper Hospital.

Where special difficulties present themselves in ventilating the single rooms of an asylum, this apparatus may be used, and can be fitted to the top of an ordinary shaft communicating with one or more rooms.

The ventilation in the wards at the Pauper Hospital at Chorlton-on-the-Medlock—one of the most perfect as well as the least expensive of modern hospitals—is thus described by the architect of that institution, and, though more elaborate than is necessary for an asylum, will show how completely natural ventilation with certain accessories may be made to answer almost every purpose. Artificial ventilation is employed only in the top wards, which are faulty in construction.

"In the east and west walls, or the long sides of the wards, are placed a series of large windows, 4 ft. 8 in. wide, and extending from 2 ft. 9 in. above the floor to the ceiling. These windows are in all cases facing one another, and are divided in their entire height into three subdivisions.

"The lower portion, for about three-fourths of their whole opening, consists of an ordinary double-hung sash; the upper fourth is pivoted, and works in a swivel with cords, to open at any desired inclination. On the top of this swivel light, and in fact forming a portion of it, is a continuous hopper-shaped frame, made of cast-iron. This frame extends the entire width of the window. It is glazed at the front and ends, but a space at the top is left open about two inches wide, and the full length of the frame. This long narrow opening is covered with fine wire gauze, and admits a constant but imperceptible stream of the outer air, which is continually passing across the ward close to the ceiling, towards the corresponding opening in the opposite window. A slightly upward direction is given by the sloping form of the hopper, in order that the air may be thrown towards the centre of the apartment, and be so distributed as to avoid diverse currents.

"Any or all of the three divisions may be opened, more or less, at the discretion of the attendant; but when all are opened to their full extent, the ward will in a very short time be flooded with fresh air.

"Besides this, however, there is the opportunity of obtaining a current from the two extreme ends of the ward, and flushing the upper part with fresh air without opening the doors.

"This is effected by means of a glazed louvre, about 6 ft. high and 4 ft. wide, placed at the entrance end, over the door from the staircase, and at the other or balcony end, by means of a large swivel window, similar in arrangement to those already described. The louvre, which is worked by a very simple mechanical contrivance with lever and screw, may be adjusted to admit more or less air as required, but practically they are very rarely closed.

"There are also, at various points in the walls, air shafts or flues, discharging above the roof level; and the ventilation is further assisted by a considerable number of small air grids or channels, built in the walls, at short intervals, close to the ceiling. These grids have a sloping lip on the inside, projecting about five inches from the wall, with an inclination of about 45° to prevent the air falling at once in a cold volume to the lower part of the ward. A corresponding grid is placed in the opposite wall in each case, and the air appears to take a direction generally across the ward, near to the ceiling. The air being thus admitted in very small quantities, and at very numerous places, diffuses itself without perceptible draughts, and displaces the gaseous portion of the contained air, which naturally rises to the top.

"The form of the small air channels is such that they would hardly be observed if not pointed out, and are therefore not likely to be wilfully obstructed, especially as they are close to the ceiling, and therefore out of reach.

"In the floor of each ward, at a distance of six feet from the outer walls, are a number of hit-and-miss gratings, with galvanized iron horizontal tubes or flues, to conduct the fresh air to the foot of the beds, should it be required in foul cases, or when it may not be desirable to open the windows."

"On the ridge of the roof are revolving ventilators of large dimensions, to promote the ventilation of the top wards, which are partly in the roof so that the windows do not reach to the highest part of the ceiling."

"Each ward is lit at night by three suspended rings of gas-burners over which a funnel-shaped cowl is suspended, which terminates in an iron flue communicating with a shaft in the wall, by means of which the products of the gas are carried off, whilst at the same time an upward current is caused, and a further impulse given to the ventilation during the night, when the windows are usually closed."\* In

\* On the subject of artificial ventilation, the remarks of Dr. Bristow and Mr. Holmes, in a report on the hospitals of the United Kingdom—published in the Appendix to the Sixth Report of the Medical Officer of the Privy Council—are so pointed, and so fully in record with all recent experience on this subject, that they are quoted here.

"We have no hesitation whatever in expressing our opinion, founded in all cases on observation and such an examination of recorded facts as we have been able to make, that every pound (and they have unfortunately been many thousands) which has been expended on these costly and elaborate machines has been wasted. The example of Guy's Hospital is familiar to all medical men in London, and the superiority of the old wards, with natural ventilation, to the new ones connected with the artificial system, is an admitted fact. The utter failure of the very ingenious machinery in use at Lariboisière and other hospitals in Paris, to keep the wards in a healthy or even a sweet condition, proves the inefficiency of such contrivances. These systems (at least, those on the principle "par injection") do no doubt keep up a constant supply of air to the wards, yet they do not ventilate them. No amount of cubic feet of space, no plan of building, no artificial system, no combination of all these adjuncts to a good ventilation, has ever been

In the climate of New South Wales, the cubic space allotted to each patient should somewhat exceed that which is fixed for English institutions, and approach more nearly to the space allowed in some American and Continental asylums. The space for single rooms, should not be less than 1,000 cubic feet, and the associated dormitories should average from 700 to 800. For the day-room accommodation it seems probable that 500 or 600 cubic feet will be sufficient, since the patients will spend by far the larger part of the day in the open air. The rooms, both for the infirmary and for temporary seclusion, should contain certainly not less than 1,500 cubic feet.

The height of 12 feet, proposed by the American Association of Medical Superintendents, seems ample for all the purposes of an asylum room.

Every room should have its cubical contents painted on its door.

**Day and Night Accommodation.**—In all asylums, separate day and dining-room accommodation should be provided. If the same rooms are used for both purposes, it will be found almost impossible to lay the dining-table whilst the patients, frequently mischievous and miscondacted, are present, and to conduct the dining arrangements with such order as is requisite. A smell of dinner will also remain in the rooms which the patients are to occupy during the remainder of the day. This is as objectionable in an asylum as in a private house. Besides this, the absence of the patients for two or three hours, at certain times during the day, from the day room will give an opportunity for opening windows, and completely changing the atmosphere of the apartment, and so be conducive to health.

This being granted, it remains to be seen how far it is advisable to substitute a common dining-hall for small dining-rooms in connection with each ward; and the arguments which have led to the adoption of this system in Great Britain seem valid here. They are,—

First, that the change from the asylum ward, the small journey to and fro, and the meeting with other faces, are useful mentally to the patients.

Second, that the formality which dining in a general hall involves, the routine with which it is accompanied, the grace before and after meat, said by the chaplain or the chief attendant, and the good order which is more likely to prevail where the meal can be under the immediate superintendence of the chief officers of the institution, than when it is conducted under the inspection of the attendant only, in the ward, are useful as drill and organization, whilst the example afforded by the good conduct of the more quiet patients acts beneficially on the more unruly.

Third, that by the substitution of a common dining-hall for a number of small ones with their attached sculleries, asylum construction is facilitated, and ventilation is made more perfect and easy. The ward scullery, unless well ventilated and kept with scrupulous care, must always be more or less a nuisance; and the smell of dinner spread through the asylum is neither wholesome nor pleasant.

Fourth, the dinner can be served better, hotter, and with less labour, in dining-hall attached to the kitchen than in separate dining-rooms at a distance from it.

The English and Scotch Commissioners do not appear to consider separation of the sexes at meal-times important, but there are various reasons why separation should, in an asylum, be as complete as possible; and if the building can be so arranged, it will be well that one dining-room should be provided for each sex, and that they should be placed on each side of the kitchen.

It must, however, be remembered that all English asylums in which the common dining-hall system has been adopted are on the continuous-roof plan, and that therefore the patients, in going to and from the dining-hall, traverse only the corridors or special close corridors of communication, and so do not go into the open air. The block plan of construction has been recommended for this Colony, and in this the patients would have to pass from their special blocks to the dining-hall, under verandahs or covered arcades. This, which on account of the climate is felt to be objectionable in England, and appears to have militated against the adoption of the general dining-hall system in France, in the new asylums on the block principle erected there, need not be an objection here, where the cold is never sufficient to be much felt, and rain is by no means frequent.

It will be advisable, then—1st, that day-room accommodation should be provided for each section of the asylum, at the minimum rate of 500 cubic feet for each person. That a general dining-hall, or two dining-halls, one for each sex, should be built conveniently situate with reference to the kitchen, capable of containing three-fourths of the entire number of inmates. Experience has shown in English asylums, that this number may with safety and advantage be allowed to dine in common. At the Sussex Asylum, the number dining together when visited was upwards of 200 males, out of 240, and upwards of 250 females, out of 320. At Stafford, 200 men out of the total number of 240; and at Murthly, 190 out of 320.

2nd.

found to replace open doors, windows, and fire-places; while, provided with the latter, which are the essentials of good ventilation, many old, crowded, defective hospitals have maintained, for a long series of years, an amount of success which the most eminent examples of scientific structure have never found practicable.

"Considering then, the utter failure of artificial systems, and the perfect success of the natural system of ventilation, is it going too far to say, that to expend money in the construction, and in the maintenance and working of such machinery, would, after our present experience, be wantonly to waste and misapply the funds contributed for the benefit of the poor? The experiment was a natural and a most justifiable one, but it has had a fair trial and failed; any further repetition would be culpable."

2nd. That the day-rooms should be used for all the ordinary purposes of living-rooms.

3rd. That all meals should be served in the dining-hall, and that all patients who can safely be trusted should attend, under the charge of one or more attendants. One attendant should always be left in the ward, to look after any patients who may not be able to dine with the rest, and also to see that the day-room is properly ventilated in their absence.

With the information on dormitory accommodation which is to be found in a prior part of this Report, it may not be difficult to suggest a proportion which will be suited for asylums in this Colony. The mass of the population may be taken as in most respects English in their habits and tastes, and privacy, as regards bed-room accommodation, is not considered more necessary than in England.

English asylums, from which the more quiet cases are drafted to the poorhouses, seem to work well if one-fifth to one-seventh of the patients are accommodated in single rooms. Since the quiet cases are all kept in the asylums, in this Colony, a smaller proportionate number will suffice; and if one-tenth to one-twelfth of the patients are accommodated in single rooms, the provision will be ample, supposing the asylums to contain both acute and chronic cases in ordinary proportion. The suggestions of the British Commissioners, that "the single rooms should be chiefly in the wards appropriated to the excited, the sick, and the patients of dirty habits," and that "a few should be available for special cases in other parts," should be closely followed.

The remainder should be placed in associated rooms, the number of beds in which is a matter for further consideration.

That two patients, especially of the male sex, should never be allowed to sleep together in one room is certain, but the exact number which it is most convenient to accommodate in the associated rooms is somewhat doubtful.\*

The English Commissioners (see Appendix A) content themselves with suggesting that "no associated dormitory should be designed to contain less than three beds," whilst the Scotch Commissioners fix the minimum at six, and the maximum at fourteen. It is doubtful if it is ever desirable to make the rooms smaller than to contain six patients; but there are, in several English asylums, rooms made to contain from twenty to thirty or even more patients, which answer admirably. A larger number (such as is contained in some asylums, as for instance, the monster dormitories of Colney Hatch, where one for women, contains eighty-six beds) is not desirable.

It is therefore suggested that the associated dormitories should range in size so as to contain not less than six or more than thirty beds—from six to twenty being the preferable number.

**Airing Courts.**—Two airing courts for each sex are all that are absolutely necessary for an asylum. One of large size should be devoted to the general body of the inmates, and the other smaller will serve for the small proportion of noisy and violent patients. If a third is added for the use of the sick, infirm, and for special cases such as epilepsy, it will be found frequently useful. It may save the more feeble among the patients from accidents which might happen to them in the large general court.

These courts should be outside the asylum, in front, if possible, of the special wards for whose inmates they are intended, and easy of access from them.

They should be planted with trees to afford shade and ornament, and laid out in gardens, and thus made attractive in themselves. In addition, they should if possible command a view of the surrounding scenery.

If the court is on a rapid slope, the upper part of it will command a view over the lower wall, but even when the ground has only a gentle slope, or is altogether flat, by setting the lower and outer side walls in a ha-ha, a view of the surrounding country may be obtained.

The top of the wall should be on a level with the ground inside, and the slope of the ground towards its base should be gradual, so as to prevent accidents by patients falling or rolling down it.

At the Derby Asylum the top of the slope has been cut into a seat, (see Appendix F, Fig. 16), and here the patients sit in a row, and look out on the fine agricultural country beyond.

In every airing court there should be a sun-shed, and a verandah or covered walk, to afford shade and allow patients so inclined to take exercise in wet weather.

The courts should be walled completely round, for it must be remembered that they are used by all classes. If the male and female courts adjoin, the wall separating them should be so high as to preclude all view of one sex by the other; but the remaining walls should be as little prison-like as possible, and should rather be to prevent straying than escape, since the courts will never be left without one or more attendants, who would observe all attempts at escape by climbing, and immediately prevent them.

At the Murthly Asylum, the large yards for male and female patients are guarded only by an ornamental wire fence, and at the Three Counties Asylum, by a handsome iron railing. The patients have thus an uninterrupted view of the country beyond, with a sense of freedom which is seldom felt in an asylum.

A skittle-alley on the male side, and a croquet ground on the female, are also desirable additions to the airing yards.

In

\* Not long since, in an asylum the name of which it is not necessary to mention, two patients, one recently from hospital and wearing a blue uniform hospital dress, and the other who had been for some time in the asylum, were placed in one room in the evening and locked in. The older patient became envious of the blue uniform of his companion, killed him, tore up the boards of the room, squeezed in the body, and was found in the morning alone and arrayed in the coveted garments.

In the females' airing yard, rocking horses and swings are useful. There should be also a good supply of seats fixed in convenient positions. Pet animals and birds should be encouraged, and an aviary or pigeon cote\* may be made ornamental, and both by itself, and its occupants, afford gratification to the patients. In every court there should be a drinking fountain placed in the shade of the verandah. In short, no effort should be spared to make the airing courts a desirable lounge for the patients, to which they will gladly resort to escape from the monotony of indoor life.

In the courts occupied by the more violent and noisy patients, games are useless, the mental condition of the patients precluding them from the use of them, and they might be dangerous as affording weapons of offence. But even these courts should be planted, and laid out in flower-beds, and efforts made to keep them in good order. That much may be done in this way is evident from the beautifully kept garden in the airing court set apart for violent patients at Guislain's Asylum at Ghent. The walks may be asphalted with advantage, as at the Worcester County Asylum.

In all the courts, earth-closets should be provided for both sexes, and urinals for the males. Besides the airing courts, there should be attached to every asylum some general pleasure grounds, in which the patients, especially those of the quiet class, may take longer and more varied walks than are possible in the courts, under the care of the attendants. These grounds should be fenced in with wooden palings, if they are liable to be encroached upon by the general public, but all fencing should be rather to ensure privacy than to prevent escape. They should consist partly of grass-land on which such games as cricket or foot-ball may be played, and which when not in use, may serve as pasture for cows; and if possible, of wood-land in which walks may be cut.

Airing grounds of this kind are useful in asylums entirely devoted to indigent patients; the more quiet of whom, however, get exercise, and some degree of freedom, in working on the farm and garden; but they are indispensable in asylums in which the better class of patients are received.

The paying class of patients are found to chafe exceedingly, when confined within the limits of an airing court; and grounds in which a more prolonged walk can be obtained are for them an especial necessity.

**Fittings and Furniture for Rooms.**—The flooring of all the day and dining-rooms and dormitories in asylums should be of wood. The boards should be tongued; and the English and Scotch Commissioners in Lunacy suggest (see Appendix A) that there should be a disconnection of the floor and joists at all internal doorways by means of a stone sill. In all cases where a fire-proof construction is not adopted, similar separations, at not greater distances apart than 50 feet, should be made in the floor and ceilings.

There is but little necessity for oiling or polishing the floor, except in rooms devoted to dirty patients.

The walls should be plastered or cemented, and subsequently painted or coloured, so as to make the rooms as cheerful and bright as possible. If the walls are painted to a height of about 4 feet, and a coloured wash applied to the upper part, a dark line or pattern border marking the separation, the effect, (if the colours are well chosen) is remarkably good. The lower part, which is more liable to get dirty, can be always washed with soap and water. The upper half can be recoloured at intervals. This plan is cheaper than papering, and, as a rule, serves every purpose.

This mode of colouring may be applied to all the walls, or those in the dormitories may be coloured throughout, or simply whitewashed. All rooms devoted to dirty patients should be whitewashed.

The doors of all single rooms should open outwards, and be so hung as to fold back close to the wall. Most asylum doors may be fitted outside with ordinary handles. These are in use in several American institutions, at Meerenberg, Hamburg, and one or two English asylums. The rooms look less prison-like, and no accident has been found to result.

The locks to all asylum doors should be made without springs, and they should move without sound. Spring locks are at once dangerous and inconvenient. The "creaking of locks" is one of the most objectionable things in an asylum, and a multitude of keys is to be avoided. The keys for the male and female side of the house should be different, and each attendant provided with one key which will unlock all the doors on his or her side of the house. A simple railway key will serve for each attendant to turn on or off water, gas, or to chock the window sashes, close or open shutters, &c., so that each attendant will have two keys only.

The medical officers and chief attendants should have keys which will open and lock all doors, and, by means of extra wards, double lock them. Those for the male and female sides may be made at each end of a single shaft. Additional safety is secured if all the central offices have special locks, in addition to the ordinary ones, of which the officers and chief attendants only carry keys.

The furniture of all day-rooms should be substantial, and made as comfortable as possible. Good polished tables,—Windsor chairs, with and without arms,—multiple arm chairs—should be the chief articles. Sofas and stuffed chairs should be provided for the sick and infirm. Rocking chairs of simple construction are useful; and no effort should be spared to make the room cheerful, by means of plants, in standing or pendent pots; aquaria and fern cases; cases of stuffed birds; singing and other birds, and small animals in cages; pictures and maps for the walls; plaster figures, looking-glasses, and clocks. A small drinking fountain in the day-room or corridor, may be simply contrived, will be much used by the patients, and save trouble.

The

\* At the Leicester Asylum, the aviaries for pheasants, &c. in the courts, are made out of the old wire guards formerly over the windows. Thus swords have been converted into ploughshares.

The day-rooms should be, in fact, as far as possible, the patients' homes; and though in this climate they will be less used than in England, still on wet days and after working hours they will be in requisition, and should be as cheerful and bright as possible. In the day-rooms, or in the passages leading to them, there should be closets for women's shawls, &c., and rows of pegs for bonnets and caps.

The dormitory furniture should consist of bedstead, bed, and such clothes as the temperature renders necessary; a small box for clothes, which will serve as a seat; a washstand and basin, can, and chamber utensil. Wooden bedsteads well polished look smarter and better, and on the whole are preferable for an asylum. If properly made, they present fewer crevices into which vermin can get than iron ones. They can be made or repaired in the asylum, and they are safer for violent patients.

Sacking bottoms are preferable to wood, since with them no palliasse is necessary. The plan most used in England is to have the sacking fixed to iron bars which can be tightened by means of screws. The arrangement is simple, and allows of easy cleaning.

For epileptics it is not necessary, as a rule, to provide beds of special form; ordinary beds made low seem to be the best, since, if the patients roll from them on to the floor they are not injured. For extreme cases, cribs or bedsteads with movable iron or wood sides may be necessary. For dirty cases, webbing screwed to, or sacking screwed or nailed to, a movable wooden frame, for the bottom of the bed, is simplest and best, and with proper night watching few or no special bedsteads need be used.

For beds and pillows, hair is in the main cheapest and best. The original outlay is large, but hair will last for years and require only occasional picking. Next to hair, coir mattresses are best, and in barracks in India have been found durable, cheap, and in all respects preferable to straw. The coir is not injured by washing, and will last eight or ten years, and if sufficiently often teased, is reported to be equal to horse-hair in comfort.

For dirty and wet patients, the mattresses may be made in three pieces, and the centre piece removed when necessary. All three may be made of horse hair or coir, or the centre of sea-grass or straw. Bags filled with sea grass or straw may be used instead of mattresses for this class of cases. The hair, coir, or sea grass can all be washed and dried, and again used. Every wet or dirty patient should be roused at stated times by the night attendant and conducted to the closet. The number of wet beds will be by this means much lessened, and the cleanliness and comfort of the patients much promoted. Mackintosh covers are too costly for ordinary use.

The general cheerfulness of all dormitories is much increased by brightly coloured counterpanes.

The bedding should, after the patient has left the bed, be as much exposed to the air as possible, and may either be folded in barrack fashion, or what is preferable the bed made as far as the under sheet, and the upper sheet then turned down over the blanket and coverlet.

A small box to serve as a seat and to hold spare, or Sunday, and ordinary clothes during the night, should be provided, and placed at the bedside of each patient. The simpler it is in construction and the more easily cleaned, the better.

On the principle that an asylum should be made to differ as little as possible from an ordinary house, washstands with ordinary basins should be placed in all the rooms for the more quiet class of patients. For the associated rooms, multiple stands, placed in the centre of the room, are best. For the more violent patients, lavatories should be provided close to, and easily accessible from, the dormitories. Common earthenware chamber utensils, made without handles, are best; gutta-percha and India-rubber ones soon wear out, but a few should be provided for epileptic patients who break earthenware ones by accident. Metal utensils are difficult to clean and unsightly.

Brushes, combs, and looking-glasses should be provided at each washstand, and lavatory; and, so far as is practicable, every patient should have his or her own towel, which should be kept by the bedside.

In the corridor or passage leading to, or in the dormitories themselves, should be placed a closet for the dormitory stores, extra bedding, spare clothes for patients, &c. One of these will be sufficient for each division of the asylum. A small room may with advantage be set apart for this purpose.

For the common dining-rooms neat plain wooden tables and forms only are necessary. Table-cloths should be laid, and crockery (plates, mugs, cups, &c.) provided. Tin utensils should be as little used as possible. Ordinary knives, not too sharp, and three-pronged forks, of some common metal, should be allowed, for the majority of the patients, whilst the food for the remainder should be cut into small pieces by the attendants, and spoons or forks given to the patients to eat it with.

Immediately after each meal, all the knives should be collected, counted, and locked up.

If the dining-rooms are close to, and served directly from the kitchen, no tins to keep warm the food will be required.

All possible decorum should be observed at meals.

It might be imagined that the amount of breakage would be large if the patients were supplied with crockery plates, mugs, cups, &c., but such does not appear, as a rule, to be the case. At Murthly, tin drinking cups have been substituted for mugs, owing to the great breakage, but usually no complaints of this sort are heard, and crockery is almost universally used.

All the furniture and the minor articles for ward ornamentation, should as far as possible, be made in the workshops of the asylum.

**Staircases**

**Staircases and Stairs.**—Asylum stairs should be of stone or iron. The flights short and straight. With winding, or long flights of straight stairs accidents are liable to occur. The well in the centre should be built up, and if possible, utilized as linen closets or as linen or dust tubes, by means of which the dirty linen or dust may be quickly transmitted from the upper stories to the basement. Wooden or iron handrails should be provided for all stairs, and let into a groove in the wall.

The passages leading from one part of an asylum to another may be of stone or brick; or Minton's unglazed tiles, which are comparatively cheap, may be used.

**Bells.**—Bells to connect one part of an asylum with another are objected to by the majority of superintendents. By means of them, an attendant may be summoned from a ward when his presence is most needed in it, owing to the absence of his associate or some particular disturbance among the patients. When electric bells are placed in the wards to communicate with the central office, they are liable to be sounded by the patients if placed in an accessible position. They can, however, be so protected as to be reached only by an attendant's key. On the whole, with a well organized institution bells are not much needed. The only bell to be strongly recommended is one to connect the superintendent's house (which should be placed at some little distance from the asylum) with the building. This should only be used in case of emergency.

**Special provision for Sick, Violent, and Convalescent Patients.**—Special provision should be made for three classes.

1st. The convalescent and more quiet patients.

2nd. The sick and infirm.

3rd. The violent and excited.

1st. The convalescent and more quiet patients may be, to some extent, accommodated in cottages, as already suggested, or in detached buildings or blocks. These buildings should be of a cheap, simple, and inexpensive character, and consist mainly of associated dormitories and day-rooms, fitted with the necessary offices, and conveniently situated with reference to the wash-house and laundry on the female, and to the workshops and farm buildings on the male side, since the majority of the patients who occupy them will be able to work in some way or other. These buildings need not be costly. The additions to the Prestwich Asylum cost £60 per patient, and to the Old Chester Asylum £39 per patient, whilst wooden buildings of a more temporary character, yet fulfilling all the purposes for which they are intended, have been built at Leicester, at a cost of £12 per patient.

2nd. The proportion of sick and infirm requiring special care in the European institutions is about 10 per cent. of the entire population. The English and Scotch Commissioners (*see Appendix A*) suggest that "suitable infirmaries, in the proportion of at least one-tenth, should be provided, in which the cubical contents of the sleeping-rooms, should be greater than in other parts of the building, and every room, including the sleeping-rooms, should have an open fire-place."

The sick and infirm in the asylums of New South Wales are, as a rule, considerably less than is found in European countries, and if special provision is made for 7 per cent. it will meet all requirements. These infirmaries should be placed near to the administrative department, and to be complete, should consist of one or more associated dormitories—a few single rooms and a day-room. The cubic space should be 1,500 feet to each patient, and special care should be taken that the ventilation is good. There should be a ward closet, a fixed or movable bath, and a gas stove, at which invalid comforts may be made, or kept hot. The floors may be oiled or polished, so as to be non-absorbent and easily cleaned, and the more comfortable the furniture is made, the more it will conduce to the happiness, if not to the recovery of the patients.

The cases to be treated in the infirmary are the sick, the paralytic, and the extreme cases of epilepsy; and to these may be added such of the old and infirm as require special attention.

3rd. On an examination of the different modes of provision for the insane of the more violent class, it is impossible to recommend any of them for adoption as a whole, though there are points in each from which useful hints may be drawn. The practice adopted at Lincoln, Montrose, and other asylums, of distributing the noisy and violent cases as much as possible in the other wards, and which seems, to be eminently successful in these institutions, is worthy of the greatest consideration, and should undoubtedly be carried out whenever practicable; but the practice of separating a certain proportion of the more noisy and violent patients, is adopted in the majority of asylums, and indicates that the opinion of the authorities on this subject is, at present, in favour of separation.

The buildings, however, need possess little of a special character. There should be a full proportion of single rooms, and one of these may be panelled (for, with the experience of American and Continental Asylums as a guide, padded rooms cannot be considered necessary in any asylum) and another cemented. These will serve for the necessary short isolations, and sometimes also for the sojourn of a whole night.

These rooms, with one or two others, should be placed in a small building of one story opening from the main division for this class of patients, and a corridor and one or two small airing courts should be provided in connection therewith, for exercise and isolation in wet weather. These small airing yards should be turfed and planted, and command a view of the neighbouring country, and should not be mere "air tanks" surrounded by high walls.

The single rooms should all possess shutters sliding from below, and capable of being locked, so as partially or totally to cover the windows. In the two special rooms, which

which should have a cubic space of 1,500 feet each at least, the windows may be made to open and shut by means of cords from the corridors. The floors of these rooms should be waxed and polished, so as to admit of easy cleaning. The panelling and cement will both allow of cleansing the walls; and closets or pan-seats in these rooms are scarcely necessary. There should be an inspection-plate in the door, to allow of observation without disturbing the patient.

The entire number of the more violent class, for whom special provision is made in institutions generally, is, as has been seen, about one-tenth of the whole, but this can scarcely be considered necessary; and if the plans of classification subsequently advocated are adopted, and the more violent patients mingled as much as possible with the quieter ones, one-twentieth of the whole will be all, for whom anything like special provision need be made.

**Kitchen, &c.**—One kitchen, in a central position, is all that is required for an asylum, and in it, if properly arranged, all the food for patients, officers, and attendants, can be cooked. A central position is important, so that it may be within as easy reach as possible of all parts of the establishment. A one-storied building, with high roof (in or near which the windows are placed), and reached by covered ways from the centre or administrative block, is, in most respects, preferable to a basement room, in which ventilation will generally be imperfect. In the kitchen itself all the food except vegetables may be cooked. These are best prepared in the scullery adjoining, in which all the washing of plates and dishes is done.

The kitchen should contain a general range, at which the food for patients and attendants is cooked, and a minor range for the officers. The main cooking apparatus should be placed in the centre of the building, the sides being fitted with dressers and shelves. The greater part of the cookery in asylums is best done by steam, which is found to be cheaper and simpler than boiling by ordinary fires. Meat should be cooked in jacketed boilers, but the steam may be admitted direct to the vegetables. Gas stoves are to be preferred to ordinary open coal fires, as simpler, cleaner, and, whenever the price of gas bears the same relation to the price of coal as it does in England, more economical. The evidence on this point, which has been obtained from those asylums in which gas is used, places this question beyond a doubt.

At the Stafford Asylum it was found by experiment that—

50 lbs. of meat cooked by coal cost .....	1s. 3d.
50 lbs. do. by gas cost .....	0s. 8d.

whilst the dripping obtained from the gas-cooking was worth almost twice as much as that obtained when coal is used. The cost of cooking by gas, therefore, was about one-half of that of cooking by coal. The asylum authorities were so convinced of the superiority of gas cooking in every respect, that all roasting, baking, and frying for officers and patients is now done by gas, and the water for making tea and coffee is also boiled by it.

With respect to this mode of cooking, the following particulars are given in the Annual Report of the Lunatic Hospital at York, in 1865:—

“The gas stove for cooking, which, at the date of my last report, had been too short a time in operation to afford any very conclusive data upon which to form an accurate opinion, has fully satisfied our requirements for a useful and economical mode of cooking. The meat has been uniformly well cooked, and its flavour excellent; and there has been a considerable saving, both of trouble and fuel. In the latter, upwards of £25 have been saved.

“The quantity of gas required to cook between six and seven cwt. of meat, and about twenty large meat pies, per week, has been about 1,600 feet, at a cost of 5s. 7d., or not quite 10d. a day.

“The following experiment was also tried:—Two 12½ lb. joints of beef, identical in all respects, were cooked, the one before an ordinary open fire, the other in the gas stove. Both were thoroughly done; but while the former actually lost in weight 3 lbs., the latter only lost 1 lb.; a result obtained subsequently with four joints of mutton. These facts speak for themselves, and they agree very much with the results obtained in an experiment conducted at the Royal Naval School at Greenwich, before the authorities of that institution, and under the direction of M. Soyer:—

“(A.) 184 lbs. of mutton were roasted by gas, and cost 10½d. (gas being at 4s.) Weight, when cooked, 146 lbs.; dripping, 19 lbs.; gravy, 2½ lbs.; actual loss, 8½ lbs.

“(B.) 184 lbs. of mutton were cooked by Rumford's stove, (the most economical way known). Weight, when cooked, 132 lbs.; dripping, 18 lbs.; gravy, none; actual loss, 34 lbs. (Coke, 102 lbs.; coals, 32 lbs., for oven.) Saving by gas—13 lbs. meat, 1 lb. dripping, and 2½ lbs. gravy. In each case the meat consisted of 23 joints of mutton.”

“The following paragraph appeared some time since in the *Builder*:—

“In a large London establishment, in which 200 of the persons employed were boarded, in 1840, the butcher's meat consumed was 400 lbs. per head per year, and it cost £12 11s. 10d.; in 1850 the quantity consumed was 369 lbs., the cost £9 11s. 7d.; whilst in 1860 the quantity was only 271 lbs., the cost being £8 12s. 0d.

“The explanation afforded is this:—In 1840 the butcher's meat consisted of second-rate joints, containing a large quantity of bone. When roasted, it was placed before a large fire, fixed on spits running through the joints, occasioning great waste, and producing indifferent results in the cooking, the outside being generally burnt and the inside not sufficiently done.

“The

"The inferior joints were abolished, and meat only of the best quality, free from bone, was purchased; the spits were laid aside, and the bottle-jack substituted in their place. The open fire for roasting was still retained.

"The balance sheet for this period shows a decrease of 98 lbs. per head of butcher's meat, and a saving of £3 0s. 3d.

"Another ten years passed, during which the open-fire system was abandoned, and the plan of cooking by gas introduced; this caused a further saving of 98 lbs. per head of butcher's meat, and of money £1 0s. 4d., although the price of meat was higher by nearly 3d. per lb."

Bunsen's Burner, in which air is mixed with the gas before combustion, is found to be best for the gas stoves. Owing to grease and dirt getting into the burners, the holes require cleaning every two or three months, but this is easily done by the gas-man belonging to the establishment.

Asylum kitchens should be supplied with all implements and machinery necessary for the proper preparation of the food for the inmates—large tins for infusing tea, which should never be boiled; mincers, or sausage machines, to mince the food for paralytics and other patients, &c. The steam boilers, which are fitted on pivots, and supplied with water from a tap placed over them, as in the French asylums (see Appendix F, Fig. 11) are in every way to be recommended. The kitchens in the modern French asylums at Ville Evrard and St. Anne's, are, in all respects, models.

Adjoining the kitchen should be placed a properly fitted scullery; and a second room for cleaning vegetables is also useful.

Whenever an asylum contains upwards of 400 patients, bread may be economically made in the establishment, one baker being employed, and all assistance necessary being rendered by the patients. It is thought to be economical to make bread in some institutions below this size, but this is doubtful, especially when they are so situated as to render supply from a town easy.

It is worth further inquiry how far aerated bread can be supplied to, or made in an establishment, at a cheaper rate than ordinary fermented bread. That it is cleanly, wholesome, and, when eaten in its fresh state, palatable, there can be no doubt; but further evidence is necessary before it can be recommended for general use. It is supplied by a company to several of the London hospitals, and the report upon it from St. George's is very satisfactory, but so far as it was possible to ascertain it is not made or consumed in any English institution for the insane.

**Asylum Laundries.**—All the dirty linen of an asylum should be washed by the inmates under the direction of one or more paid laundresses.

The laundry should be detached from the main building, and may be placed at some little distance if water supply is thus made more easy, since the patients employed in it and the paid laundresses will all be in good bodily health, and able to walk backwards and forwards at meal and other times.

It should consist of one large room for washing, a receiving room for dirty linen (since soiled clothes should never be kept in the wards of the asylum), mangling, ironing, and folding rooms; and attached should be a special room or shed for very dirty linen, which it is undesirable to wash with the rest. There should, in addition, be a large drying ground.

The washing room should be of one story, with a high open roof with free openings to allow of the exit of steam and foul air. The walls should be of bare stone or brick, any plaster or cement will peel off from the constant moisture and heat. The coppers and machinery should be placed in the centre, and around should be square washing trays, fixed against the wall, and supplied with hot and cold water from taps over them. The water for laundry use should be heated by steam, and the steam pipes may be brought at once to the bottom of each washing tray, and the water so warmed instead of bringing warm water in pipes.

If steam machinery is used, the bands to turn the machines should come up through the floor, and be boxed in as in the Morningside Asylum. This arrangement is safer than that usually adopted in which they come from above.

Drying closets with artificial heat, in which the clothes are dried on wooden or line horses, are necessary in European asylums, since, without them, prolonged wet weather may cause great inconvenience. But in a comparatively dry climate like New South Wales they will not be necessary. With a large drying yard, and a covered shed fitted with movable louvres at the side, such as are used at leather and paper manufactories, the clothes may all be dried in the open air, which is much preferable to a close closet.

Every precaution to prevent accident from fire should be taken in the laundry, and all crimping machines, may, for this reason, be heated by steam, as at Murthly and Montrose. The irons may be warmed at a small gas stove.

In an asylum, the patients should always be kept as fully occupied as possible, and for the majority of female patients there is no better occupation than washing, as giving muscular exercise, and as being a change from the asylum ward. The entire washing, therefore, of the asylum should be done by the inmates, under the superintendence of one or more paid laundresses; the females should do all the ordinary work, whilst the men should turn mangles and wringers, and do other heavy work. No machinery should be used except such as is absolutely necessary.

In the French asylum of St. Yon, fifty or sixty women are kept constantly employed, and the linen for 1,600 people is washed without any machinery. At the Sussex and Gloucester among English, and at Cupar, Montrose, and Murthly among Scotch asylums,

a minimum amount of machinery is used, and these examples should be closely followed. The centrifugal wringer has been found so universally useful that an exception may be made in its favour; but the many contrivances for washing, many of which are excellent in idea and in practice, should as far as possible be done without.

The specially dirty linen should be soaked all night in a small tank made to contain the soap-suds and water from the ordinary laundry. It should be washed the next day in a machine of some simple form, in a special washing-room. In this room should also be washed all the hair or coir from beds wetted or soiled by dirty patients.

Every care should be taken that the soiled linen is kept as little as possible in the wards or rooms. If the laundry is at such a distance as to make it difficult to send the linen to it as soon as dirty, boxes to receive it should be placed somewhere near the wards but outside the building. In the airing courts or grounds is the preferable position.

**Chapel.**—The arguments for a special chapel in connection with every asylum need not be repeated here. The best argument is the existence of such a chapel in the well-ordered institutions of all countries.

It is, however, a matter of debate whether the room appropriated for dancing and amusement should be used as a chapel also, or whether a room should be specially set apart for religious service only; and, if set apart, whether it should be in the main building or detached. The only countries in which the same room is used for purposes of religion and amusement are Scotland and the United States. To some religious denominations a ball-room or a theatre is, in the absence of a building specially provided for the purpose, a fitting house of prayer; but to others, and, perhaps, to the majority, there is something incongruous in this local association of amusement and religion. It is to many, almost impossible to feel reverence in a place which has lately echoed with laughter, caused by some absurd representation on the stage, and in which, perhaps, the scenic decorations still remain; while the ornaments and accessories of religious service are equally out of place in a room given up for the time to merriment.

It is therefore recommended that two rooms should be provided, one fitted for purposes of amusement, and the other consecrated to religious uses only; and with this arrangement the former may serve also as a general dining-room, and save a multiplication of buildings.

For a chapel within the building, the arguments are, that it can be easily reached by all the inmates in all weathers, that the infirm can attend as well as the hale and strong, and that in consequence it is at all times at the service of a greater number. But the arguments to be derived from weather have scarcely any weight in this Colony; and if the block plan of construction is followed, it will be as easy for the majority of the more weakly patients to reach a centrally placed detached chapel, as one in any of the blocks.

For a detached building the arguments are many. It can be made more ecclesiastical in style, the walk to and fro will afford a change from asylum rooms, and the "going to church" is much more assimilated to the condition of ordinary life, when that church is a detached building, to reach which, it is necessary to put on bonnet and hat, and pass beyond the bounds of the ordinary dwelling-house, and the detached chapel or church is more likely to impress its frequenters with reverential feelings, and bring back the thoughts of other years, than a room within the building, however fitted and ornamented.

For these and other reasons a detached church, ecclesiastical in style, is to be recommended. "It should be of easy access, and capable of comfortably accommodating at least three-fourths of the patients; it should have the usual character and arrangements of a church, and contain no special or peculiar provision for the separation of the sexes"—(Suggestions of Scotch Commissioners, Appendix A). The chapel should always have an organ or harmonium as part of its furniture, and the patients and attendants should be trained and practised in choral music. The services should be held at the ordinary times, and in the ordinary manner on Sundays, shortened possibly to accommodate the restlessness of body and mind of many of the insane, but performed with all decorum. Whatever may be the effect on individual patients (and it will probably be as different as in the members of an ordinary congregation) the general impression is almost sure to be that of reverence and order. In some British asylums the Lord's Supper is administered to certain of the patients, and special religious teaching is given. On this an eminent authority remarks,\* "How far any physician is justified in countenancing such measures as these appears to be very doubtful. I am inclined to think that when patients have advanced so far towards restoration as to be entrusted with such high and holy privileges, they should no longer be detained in an asylum, but should be reinstated in society, and in the possession of rights and discharge of duties of an important but less exciting character."

How far one chapel may be used by the members of two different denominations is a question for consideration; such an arrangement seems to work well in the German Asylums, and is not altogether unknown in the ordinary churches of this and other countries; under proper arrangements, and with a conciliatory spirit, it is doubtful if any valid objection can be raised to such a course.

**Amusement Room.**—For minor amusements the day rooms of the institution are sufficient, but a room where the majority of the inmates can be collected for dances, concerts, theatrical performances, gymnastics, lectures, &c., is absolutely necessary in an asylum.

The reasons why the chapel of the institution should not be used for purposes of this kind have already been stated. Either a special room should be provided, or, what will

\* Dr. Brown on "What asylums were, are, and ought to be."

will serve all purposes, the common dining-room should be so fitted as to serve as an amusement room also.

The dining tables can always be removed. The seats will be useful, and a permanent stage or platform can be erected at one end. A cheerful well-lighted room is adapted for both purposes. It should occupy a central position, and should be large enough to contain three-fourths of the inmates.

A piano should form part of the furniture of the amusement room.

**Library.**—It is scarcely necessary to provide a special room for a library. The main stock of books may be kept in cases in the board room, chaplain's room, or amusement room, or, better still, in a room which will serve for purposes of instruction, and be at once library and schoolroom. A good stock of books is almost necessary in an asylum, and there should be a liberal supply of newspapers, small serials, magazines, &c. These are much read, and are always most acceptable to the patients.

**Dead-house and Cemetery.**—The building for the reception of the dead should consist of two rooms at least. One of these should be the reception room, fitted with shelves for the dead, in which they may be seen by their friends. The other, a room for *post mortem* examinations, in which every convenience for the purpose should be supplied,—a central table, hot and cold water, &c. Both rooms should be well ventilated, and lighted entirely from the top so as to prevent overlooking; and the entire building should be placed in a retired position, as much out of sight as possible, with a door opening at once to the road, so that funerals may take place without attracting notice from the asylum inmates.

It is desirable that the dead should be buried in the ordinary cemetery of the town or district, unless the distance is so great as to make it very inconvenient. Special asylum cemeteries are objectionable, as continuing in death, a separation which has only too often, been a long sorrow already. If a special cemetery is made it should be prettily planted and kept, and be thrown open by the authorities for the use of the district in which the asylum is placed, as is done at Ville Evrard in France.

**Accommodation for Officers and Servants, &c.**—For the superintendent himself, and for his wife and family, a residence apart from the asylum is much to be preferred to one within the building. With an assistant physician resident in the asylum, and an efficient and trustworthy staff of attendants, the constant presence of the superintendent is not necessary.

The superintendent's house may be placed sufficiently removed to give it a certain amount of privacy, and yet be within easy reach of the asylum. It is desirable also that a certain extent of kitchen garden should be set apart for the use of the superintendent; since, if fruit and vegetables are taken from the ordinary asylum garden for his use, it is possible to lead to jealousy and misrepresentation.

The chaplain, if resident, should also be provided with a detached house; and the steward or secretary, if married, is fairly entitled to a house, or to a certain allowance in lieu thereof.

The assistant physician, the housekeeper, and the chief attendants should reside in the building. For the assistant physician, housekeeper, and chief attendants, two rooms each should be provided; or, following the liberality which has been adopted in the more recently erected asylums in Great Britain, there may be an additional bedroom.

For the attendants the English system in which they are, as a rule, provided with special dormitories, seems preferable to that adopted in Scotland. It is extremely important to secure in an asylum the services of a good class of attendants, and to such a class a certain amount of comfort and privacy is necessary. The Scotch system, where the attendants sleep in the dormitories with the patients, undoubtedly has advantage in securing the safety of the patients; and in some Continental institutions there appears to be no difficulty in carrying it out. But the innate love of privacy which characterizes people of the British race has interposed difficulties, even in Scotch asylums, in this respect, and the superintendents of these asylums readily admit that a better class of attendants might be secured if separate dormitories were provided for them.

Considering the wearing nature of the attendant's duties, and the consequent necessity to him of sound sleep, and the general safe working of the English system, it seems desirable that, for the majority at least of the attendants, special dormitories should be provided. A few of the junior attendants may sleep in the rooms where such patients as require special care and attention are placed, but the safety of the patients during the night should be mainly intrusted to efficient night attendants.

The dormitories of the attendants should be placed in various parts of the establishment, and so arranged as to command by a window, a view of the associated dormitories. Each room may be made to contain two attendants, giving to each a cubic space of 1,000 feet, and should be comfortably furnished.

The attendants will be occupied almost entirely during the day in the rooms with the patients, but a common room should be provided for the use of such of each sex as are off duty in the evening. This room, if placed near the kitchen, may be used as a dining-room for the attendants and domestic servants. The comfort of the attendant will be much increased by taking his meals in a common room, instead of in the ward after or with the patients, and no difficulty need arise if half take their meals at once, leaving the other half with the patients. The dormitories of the house-servants, laundresses, and cooks, should be so arranged as to be under the supervision of the housekeeper and steward.

The Scotch Commissioners give the following suggestion for officers' and servants' rooms. (See Appendix A.) "A residence should be provided for the medical superintendent, with kitchen and other necessary domestic offices. Apartments of moderate extent should

should also be provided for the assistant medical officer and pupils, the steward, and the matron, but for these officers a separate kitchen is not required. There should also be appropriate accommodation for the domestic servants of the institution."

The rooms absolutely necessary for the administration of an asylum are, a board room in which the commissioners or board of control hold their meetings; offices for the superintendent, chaplain, steward, and housekeeper (the latter of which may be used also as a cutting-out room for clothing); dispensary; store-rooms for bedding and clothing, utensils, groceries, meat, and bread; and rooms in which the friends of the patients can see them without going into the ordinary day rooms.

It is extremely important that the latter rooms should be of large size (one or two for each sex), so as to receive without crowding any number of visitors—that they should be as comfortably furnished as the ordinary day-rooms, and ornamented like them, so that the friends may gather, from seeing them, a general and fair idea of the internal fittings of the institution, and that the patient may feel at home in them, and not associate the visit of his friends with discomfort and a bare barn-like room.

The rooms for visitors may be made further useful as school-rooms, and as libraries or book stores of the institution.

The workshops of the asylum should be in detached buildings, well-ventilated, and of sufficient size to accommodate all the inmates who can be employed in them. Rooms in the basement of a building are objectionable for this purpose, because usually dark, gloomy, and ill-ventilated. The workshops may be built in connection with the blocks occupied by the more quiet class of patients, those likely to be employed in them.

The farm buildings and piggeries should be so far removed from the asylum as not to prove in any way objectionable on sanitary grounds.

#### ORGANIZATION.

**Asylum Government and Inspection.**—In dealing with the question of asylum government it will be well to consider, first, what are the powers which individuals or boards entrusted with such government have to exercise, and then endeavour so to apportion these powers as to render the government simple and effective. In the *Report on Colonial Hospitals and Lunatic Asylums* issued by the Secretary of State for the Colonies in 1864, these powers are divided into four classes:—1st, making rules or regulations; 2nd, financial administration; 3rd, patronage of (a) officers, (b) attendants and servants; 4th, inspection and supervision; and to these may be added—5th, general management and superintendence.

It will be seen at once that these powers are various in their nature, and that they require very different qualifications for their proper exercise.

In the simplest form of asylum government—a form which exists in some of the minor German states, and in some of the British colonies—the whole of those powers are divided between the superintendent of the asylum and the general Government. The superintendent is intrusted with the management and the patronage, so far as attendants and servants are concerned, whilst the general Government appoint the officers, and undertake the management of the finances, the legislation and the duties of inspection, where such are performed. But such a division is only possible in states possessing a small population.

In the next form of asylum government, the general Government—feeling themselves incompetent to perform the various duties of legislation, finance, patronage, and inspection—have called to their assistance special officers to undertake the latter of these duties. These officers are either appointed to make an annual visit, and report on the general condition of the institution to the Government, as in Baden, Hanover, and other German states, or are charged with more frequent visitation, and with powers of regulating the admission and discharge of patients, as in the colonies of New South Wales, Victoria, &c. The other powers are divided between the superintendent and Government as in the first-mentioned form.

In another form of asylum government, the Executive retains only a general power of legislation, and hands over to a board of control appointed by it and more or less variously constituted, the powers of patronage and finance, and the minutiae of legislation. The powers of inspection are either retained by the Executive or handed over to the board of control.

This form of asylum government exists in the state asylums of America, the city asylums of Germany (Frankfort, Hanover, &c.) and the Colonies of Canada and Tasmania.

In a fourth form of government, which exists under various modifications in England, Scotland, France, Belgium, and Holland, there is—

- 1st. A superintendent of the asylum, who is the chief medical officer charged with the management of the internal economy of the institution and the estate, and with the appointment and dismissal, subject to the approval of the Government, of all attendants and servants.
- 2nd. A board of control, consisting of from five to nine members, men of standing and position, who exercise the power of patronage as regards officers, fix the amount of all salaries, and manage the finances, visit the institution at fixed times, examine into the admission of all patients, order all discharges, and report annually upon the general and financial condition of the asylum.
- 3rd. A board of commissioners or inspectors—mainly professional men, physicians and barristers—who inspect the institution at fixed periods, inquire whether the provisions of the law have been properly carried out as to the

the construction, visitation, and management, whether the admission and discharge of patients is regulated according to law, whether divine service is performed, or coercion practised, &c.—reporting annually upon every asylum to the central government.

- 4th. The central Government itself, which either makes all rules for the guidance of the officers and the general conduct of the asylum, or approves rules made by the board of control (without which approval they are not legal), approves or vetoes all plans for the building, enlarging, or improving of asylums, and appoints the inspectors.

In France and Belgium, where centralization is more in force than in Great Britain, the Government issues dietary scales, appoints the superintendent, and also nominates the assistant physician from a list of three furnished by the board of control; all other officers are appointed by the board.

This form of government is by far the most perfect; and, to judge from the general condition of the asylums of those countries where it exists, altogether the best in its general working. The more closely it is followed in New South Wales, the more satisfactory is likely to be the condition of the asylums.

The first step in the adoption of this system is the appointment of a board of control, and such a board has been already advocated by those interested in asylum management in the colony. Drs. Cox, and Brereton, who were in 1865 Visitors to the Asylums, advised the appointment of such a board in a letter to the Colonial Secretary, and the Rt. Rev. Dr. Willson speaks of a board of commissioners for the general management as “absolutely necessary for the permanent well-working of the asylums of the colony.” The evidence to be derived from an examination of asylum government in other countries points conclusively to the necessity of a board of control; such a board existing almost universally in European countries and in the United States of America, and having already been found a success in Canada and Tasmania.\*

It has been objected that, in a colony, the Chief Secretary, the Finance Minister, and the Auditor General, are the proper board of control, and perform with ease and simplicity all the functions of such a board; and that boards of control are only necessary in institutions, which, like the English county asylums, are not state institutions, and so do not come immediately under the direction of the central Government. But the state asylums of America are essentially and entirely Government institutions, as is also the State Asylum for Criminals at Broadmoor; and it has been deemed advisable to place all these under boards of control, appointed by, and responsible to, the central Government. The chief arguments for the appointment of a board of control are, the gradually increasing business which must beset the members of the Government in a large colony, and which may induce or oblige them to place in the hands of subordinates that which should properly be done by themselves, or to postpone indefinitely the settlement of questions which need immediate consideration; and the fact that the Chief Secretary and Finance Minister are not permanent officials, so that a change of ministry may transfer the asylum government from those interested in and possessing considerable special and practical knowledge on the subject, to others who have never given direct and special consideration to it, and with whom the greatest activity can scarcely compensate for want of specific knowledge. However smoothly and easily the asylums in a small colony may be managed directly by the Government, in a large one, proper and prompt asylum management is scarcely possible without committing to the superintendent a very large general direction, and some share in the financial management, which would largely increase his labours and his responsibility, or appointing a board of control; and in all respects this latter seems preferable.

A board of control should be appointed by the Government for each asylum, or for each district, and should consist of not less than five members, one or two of whom should be medical men, and the remainder men of high social standing residing in the district in which the asylum is situated. The necessary expenses of the board should be paid, and such remuneration made to the professional members as may be deemed fair, but the other members should not receive salaries, the position being entirely an honorary one.

The members of the board may either retain their seats permanently, or one or two members may retire annually, and be eligible for re-appointment.

The duties of the board should be:—

- 1st. The control of the finances of the institution, and the preparation of the necessary estimates for the consideration of the Government.
- 2nd. The appointment and dismissal of all officers, viz., superintendent, assistant medical officers, secretary, chaplain, and housekeeper, subject to the approval of the Government.
- 3rd. The visitation of the asylum, and inquiry into its management and the general conduct of officers and attendants.
- 4th. The inspection of the forms of admission sent with all patients, and the ordering of the discharge of all such as are recovered or for whom their friends promise to make provision. One medical member of the board, being always present to examine the patient and affix his signature to the certificate of discharge.

The board should also be charged with the presentation of an annual report to the Government, in which the general and financial condition of the institution under its care is set forth.

On

\*In the *Report on Colonial Hospitals and Lunatic Asylums*, the Asylum in Tasmania is mentioned as “apparently the best in the Colonies.”

On the appointment of a board of control, asylum government will be thus divided:—

*Superintendence and Management.*—The whole internal economy of the asylum will be under the control of the superintendent, and with him should rest the patronage so far as the appointment of attendants and servants is concerned.\*

*Legislation.*—The making of all general laws, for the conduct of the asylum and for the guidance of all officers and attendants, will be the duty of the Government. A general code of laws will serve for the government of all the asylums of the country; and all marked alteration in such laws should be made, or at least approved, by the general Government; whilst minor alterations which are not contrary to their general spirit may be made by the superintendent or board of control.

*Financial Administration.*—will be under the board of control, exact accounts of the financial condition of the asylum being submitted to the Government with the estimates for each year. The estimates should include a sum for incidental expenses, to be spent at the discretion of the board and not exceeded. (The sum placed under the control of the board is fixed, in the case of the English county asylums and the State Asylum, Broadmoor, at £400 for each year).

*Patronage.*—The appointment of the board of control (and the board of inspection, to be hereafter considered,) will rest with the Government. The board of control will appoint all the officers who are immediately responsible to it, the Government approval being necessary to ratify the appointment. The superintendent will appoint the attendants and servants who come immediately under his directions.

There remain to be considered the duties of *Inspection and Supervision.*—In the United States of America, with the exception of Massachusetts and Vermont; in the city asylums of Germany; in Canada and Tasmania, these duties are undertaken by the board of control, and in some of the German asylums by the central Government; but they are duties which require a special knowledge not likely to be possessed by the ordinary members of a Government—even did their own duties allow the necessary time to be devoted to the subject. They are more or less inconsistent with the functions of a board of control, upon whom indeed, as well as upon the superintendent and other officers, the inspection will be to some extent a check. This check is necessary, since abuses may and do exist even under good forms of Government, and these are much more likely to be detected by inspectors unconnected with the institution, than by those who already hold office in it and are therefore not likely to detect deficiencies in the character of officials, which they have failed to discover as a governing board.

Boards of inspection exist, as has been seen, in Great Britain and Ireland, France, Belgium, and Holland. The State of Massachusetts has appointed a board charged, among other duties, with the inspection of asylums; and the State of New York is now meditating a similar step, whilst in Vermont there is a special commissioner charged with the inspection of asylums. For some years past a board charged with the duties of inspection and report has existed in this Colony; but with the institution of asylums in up-country towns, some change in its constitution will be necessary. It is a question for the consideration of the Government how far the existing board may be changed into a board of control for the asylums of the Sydney District, by an addition to its numbers and an alteration in its powers; whilst another board for general inspection is appointed.

The duties of such a board of inspection should be:—

- 1st. The inspection of all asylums public and private at fixed periods, not less than twice a year; at such inspections inquiry should be made as to their management, as to the regularity of admissions and discharges, the number of attendants, the dietary, and the general conduct of the institution.
- 2nd. The frequent inspection of the criminal asylum, which, it is recommended in a subsequent part of this report, should remain under the immediate control of the Government without the intervention of a board of control.
- 3rd. The frequent inspection of the Reception House at Darlinghurst, and the relegation of all patients confined therein to the asylums most fitted to receive them.
- 4th. The examination of all criminal lunatics, either acquitted on the ground of insanity or found to be insane in prison; and the direction as to their maintenance in the prison for observation, or their transfer to an ordinary or criminal asylum.
- 5th. The transference of patients from one asylum to another for any reasons that may be considered good.
- 6th. The registration, visitation, and official guardianship of all lunatics under certificate, residing with friends or with persons paid for their maintenance, with power of inquiry in all cases of detention and ill-treatment by relatives of any insane person, whether under lunacy certificate or not.
- 7th. The examination of all certificates in lunacy, to see that they are in proper form and that all necessary particulars concerning the history, circumstances, social and mental condition of the patient are given.
- 8th. Inquiry into all cases of complaints in asylums, and all cases in which the Lunacy Acts have been infringed.

The

\* The position and duties of superintendent will subsequently be discussed at greater length.

The inspectors should be required to report annually to the legislature upon the condition of all asylums, and should make such special reports and suggestions as may seem fitting. The annual reports should be printed for the information of the people, who may thus, and by means of the reports of the board of control, become acquainted with the condition of what are not the least important of the public institutions.

It will be seen that other duties, beyond mere asylum inspection, are here assigned to the inspectors.

Special reasons, showing the necessity for the performance of the duties mentioned in the 4th and 5th paragraphs, are given in the section in which the provision for criminal lunatics is treated of, and for those mentioned in paragraph 3 in the section on Reception Houses.

The importance of the visitation of all lunatics under certificate residing with friends or persons paid for their maintenance, is fully recognized by the English and Scotch Law. The commissioners in both countries are charged with this duty. By a recent statute for Scotland the commissioners are empowered to visit any lunatic or person treated as a lunatic, not under certificate, who may have resided under private care more than a year, and who has been subjected to compulsory confinement to the house, or restraint or coercion of any kind. The want of inspectors to visit lunatics in private houses and poorhouses, has been lately keenly felt in some of the states of the American Union. Whilst the state asylums are in every respect model institutions, managed with a liberality and an enlightened philanthropy, which leaves little or nothing to be desired, the condition of many of the lunatic wards of poorhouses are a disgrace to humanity, and such cases as that described in the following paragraph are unhappily only too true:—

"The *Philadelphia Medical Reporter* describes the case of a son of a clergyman who has just died insane at the age of 81, having become insane at college at the age of 21. According to this astounding statement, for nearly two years he was not confined, until his father's life had been repeatedly endangered by his violence, when he was restrained with chains for a couple of years, and then was placed in a strong cage in the garret of the house, whence he never came forth while he lived. No clothing could be kept on him; but in severe weather he would allow himself to be covered with a blanket, which lasted only till his propensity for destruction became stronger than his fear of the cold. His cage was not high enough for him to stand erect, and he remained constantly in a sitting posture, leaning back against the timber when he slept. His limbs could not be straightened, his hair was never trimmed, and for cleanliness he received only the attention given to a poorly kept animal. In fact, he had lost all appearance of a human being, and had nearly lost his faculty of speech. No official or legal investigation of his case, or his class of cases, has ever been made by the Government, but he was left in this pitiable but unpitied state, in the midst of a highly enlightened and Christian people, to howl and shriek and groan, and suffer the unutterable horrors of mental madness for sixty years."\*

The exact constitution of the board of inspectors remains for consideration. In the present condition and number of the asylums of New South Wales, the propriety of appointing a special inspector or inspectors of lunatics may be doubtful from financial and other reasons, and whilst the asylums of the country are within easy reach of each other, as at present, the superintendence of one asylum may be combined with the inspection of others; although such an arrangement can never be altogether satisfactory. It will be for the consideration of the Government how far it may be advisable to appoint a special inspector, to follow the example of the Belgian and Canadian Governments, and combine the inspection of the sanitary condition of prisons with that of the general inspection of lunatics, under one individual or board, or to place all state charities—the hospitals and asylums as well as the prisons and reformatories—under one board of inspection, as is done in Massachusetts.

The Massachusetts board is composed of five honorary members, a paid agent, who is medical man, and a paid secretary. The duties of the Board are to "investigate and supervise the whole system of the public, charitable, and correctional institutions of the Commonwealth, and recommend such changes and additional provisions as they may deem necessary for their economical and efficient administration."

The agent and secretary perform the chief duties of inspection, and are assisted by a large staff of clerks.

The scheme of government which has been sketched approaches, as nearly as possible, to that in practice in England, Scotland, Ireland, France, Belgium, and one or two of the foremost states of the American Union. Such a scheme—in which the duties of each individual or board are clearly defined, and there is no theoretical complication of powers—is likely to work smoothly and well; but if one board unites the duties of control and inspection, or the Government continues to exercise the immediate control of the asylums, confusion and mismanagement are to be anticipated.

**Superintendent.**—The physician of every asylum should be superintendent and chief executive officer of the establishment. He should have entire control of the medical, moral, and dietetic treatment of the patients—the power of appointment and discharge of all attendants and servants—and exercise a general supervision and direction of every department of the institution. He alone should be responsible to the governing body for the state and condition of every part of the institution, and he should be the recipient of all their orders. The importance of an undivided authority can scarcely be over-rated. The medical, moral, and general treatment of the patients are so intermingled that it is impossible to separate one from the other. The ordering of work—  
and

\* *British Medical Journal*.

and work, too, of a particular kind—is frequently of as much importance as the ordering of medicine to the inmates; and the physician must feel his hands tied, when the direction of such work, as well as the mere medical remedies, are not immediately under his direction.

Every asylum is, and should be, one great whole. Its attendants and servants—its farm and gardens—its pleasure grounds—its means of amusement—even its furniture, its table service, and its food—are all part and parcel of one system of treatment; and to secure harmony, economy, and successful results, every one of these must be under the same general control. Everything has some direct or indirect connection with the patients, and should tend, in some way, to their restoration to health.

The whole arrangement of the institution being under the superintendence of the physician, its success will be a matter of pride and interest; and if anything should go wrong, on him will be placed the responsibility.

The salary attached to the office of superintendent should be such as to induce a man of education and of standing in the profession to take upon himself this vast charge and its varied and arduous duties. It should approach, if not equal, income obtained by medical men in the highest rank of their profession in the country where the asylum is situate. This will be, at all times, a fairer standard at which to fix the salaries of the medical superintendents of asylums, than a consideration of the sums paid in other countries, where the cost of living, the customs of the country, and the rate of professional remuneration vary considerably. The salaries and allowances of superintendents in England, America, and some of the Continental asylums may not, however, be without interest in this particular, and details on this subject will be found in a prior part of this report.

The rules drawn up by the Government for the guidance of the superintendent, should be liberal in tone, and should not do more than fix the powers and general duties of the office. The rules which exist in some English asylums concerning temporary leave of absence, are an insult to any superintendent really interested in his work. An almost universal rule, which precludes him from the general practice of his profession, is in the main good. At the Gartnavel Asylum, Glasgow, the superintendent is allowed to practise as a consulting physician in cases of mental disease; and in the rules which have recently been drawn up for the government of the Madras Asylum, the superintendent is directed “to abstain from engaging in general practice, except when called on to visit persons afflicted with insanity.” Such an exception might, with advantage, be adopted in this Colony; and, if the words “mental disease” be substituted for “insanity,” the latitude allowed will be beneficially greater.

The permission to engage in consulting practice of this kind, would act for the benefit of the public, rather than the superintendent. The sum arising from such practice, even in the great city of Glasgow, is very small, in comparison with the salary attached to the position of superintendent. But it is important that the public—in places where “mental disease” is not studied or practised as “a specialty” by physicians unconnected with public asylums—should be able to obtain the advice and assistance of physicians, who have made such cases their particular study, and whose opinion is, therefore, likely to be valuable.

**Assistant Medical Officers.**—The assistant medical officers of asylums should be qualified medical practitioners, whose duty consists in assisting the superintendent in the medical and general duties of his office, and representing him in his absence.

Authorities in asylum administrations have fixed the number of medical officers which are necessary for one establishment. Dr. Kirkbride\* says, that “Where there are 250 patients, especially if there is a large proportion of recent cases, two assistant physicians will be required, one of whom should perform all the duties of an apothecary. In some instances one assistant physician and an apothecary will be sufficient.”

Dr. Arlidge†, after quoting the opinions of French and German physicians on this subject, thus sums up the question:—“Allowing the opinions and practice of the eminent men quoted (Jacob, Parchappe, Roller, &c.), and which, in truth, are shared in by every asylum superintendent, their due weight, it would seem not an extravagant arrangement to allot to an asylum accommodating from 150 to 200 patients (recent and chronic cases together) a physician superintendent, and an assistant, and a similar medical staff to an institution for 300 or 350 inmates all in a state of confirmed chronic insanity, imbecility, and dementia. If the population in an asylum for chronic cases is further augmented from 450 to 600—the latter number we hold to represent the maximum, which can economically, and with a just regard to efficient government and supervision, and to the interests of the patients, be brought together in one establishment. The medical superintendent will require the aid of two assistants and a dispenser.”

It will be seen that the number considered necessary by the authorities is greatly in excess of that which exists in the majority of English institutions, where it must at once be admitted the medical staff is greatly deficient in number. It may be safely stated,

\* *Hospitals for the Insane*, p. 44.

† *State of Lunacy*, p. 118.

stated, after a consideration of the opinions of authorities, and an examination of the working of existing asylums both in Europe and America, that the medical staff of an asylum containing acute and chronic cases in the usual proportion, should never consist of less than 1 to every 250 patients; that whenever the asylum population exceeds 250, an assistant physician should be appointed; and that when the number of 500 is reached, an additional assistant is necessary. With this proportion, the dispensing of medicine can be undertaken by the junior assistant, and the services of a dispenser will not be requisite.

The paucity of medical officers at Colney Hatch, which makes individual treatment impossible, and the excessive number at Illenau, which leads to over medication, are almost equally objectionable.

**Consulting Medical Officers.**—With a medical superintendent of education and standing in his profession, and with properly qualified assistant medical officers, the consulting or visiting physician can never be necessary in an asylum.

The medical treatment of patients suffering from mental disease is best entrusted to medical officers residing in the asylum, and watching the ever varying condition of its inmates. It is not possible for any one who sees insane patients only at long intervals, to prescribe properly for them. The regular visits of a non-resident medical officer are calculated to be strongly objectionable to the superintendent, whose fitness for some of the most important duties of his office, are, by the appointment of such a medical officer, directly called in question.

The opinion and assistance of a consulting physician or surgeon is occasionally desirable in an asylum, in difficult cases of accident or disease; and in such cases, it may fairly be left to the superintendent to call to his assistance any physician or surgeon whose advice he deems most worth having; the remuneration for such advice being made according to the usual scale of medical fees, from the asylum funds.

**Chaplain.**—A chaplain is a necessary officer in every hospital for the insane, and where the institution is of large size, and a majority of the inmates of one religious denomination, the chaplain should undoubtedly be resident, holding no other benefice, and devoting himself exclusively to the religious instruction and comfort of the patients.

In smaller institutions, however, the incumbent of a neighbouring church may fulfil all the requisite duties, in addition to those of his parish. In asylums where there are large numbers of other than one sect, paid chaplains, of two or more religious denominations, should be appointed, and every care taken that the services of each are performed with all possible completeness and decorum.

The utmost facilities should be given for the ministration of clergymen of different denominations, who are not paid chaplains of the institution, and the patients of each particular sect should be permitted to attend.

As regards the position of the chaplain, it may be sufficient to quote the language adopted by the Association of Medical Superintendents of American Institutions for the Insane (Appendix A):—"If a chaplain is deemed desirable as a permanent officer, he shall, like all others engaged in the cure of the patients, be entirely under the direction of the medical superintendent."

It is desirable that two services should be held in the chapel of the asylum each Sunday, and on such other days as may be convenient. A certain number of the patients may be sent to the district church, under the care of attendants.

The duties of the chaplain should include the visitation of all the sick of his denomination, and the burial of the dead, so long as the friends of the patient consent to the interment taking place in the asylum cemetery, or in the churchyard or cemetery of the nearest town.

**Officers.**—An officer charged with the immediate direction of the commissariat and clothing department, a secretary, steward, clerk or agent, is necessary in every asylum; and it seems advisable that such officer should be made also the treasurer or receiver of the institution, and be charged with the receipt and disbursement of all minor sums of money, under the orders of the board of control.

This officer should receive such assistance as may be found necessary in the clerical and general duties of his office, and should either reside in the institution, or at some short distance from it. The salary attached to the office should be such as to induce a man of intelligence and character to accept the varied and responsible duties of the position.

The farm and garden should be under the care of a farm bailiff or gardener, receiving orders immediately from the medical superintendent. In some instances the board of control may interest themselves with great advantage in this department of the asylum, but it is advisable that they should do so in junction with the superintendent, and not independently of him.

The kitchen, laundry, domestic offices, and the supervision of the house servants, should be placed in the hands of a "housekeeper," whose duties shall not extend to a supervision of the wards or female servants. The housekeeper should reside in the asylum, and not less than two rooms should be appropriated to her use.

**Attendants.**—One chief attendant or supervisor should be appointed for each sex, to exercise a general oversight of all the patients and their attendants, and form a medium of communication between them and the medical and other officers of the institution. Their duties will be to ascertain how far the general directions and prescriptions of the superintendent are carried out and the patients' comfort and general treatment attended to. Their supervision will extend to all the apartments and airing grounds, to the bedding and utensils, and to the distribution of food and medicine. Care should be taken to secure the services of persons possessing tact, intelligence, and, above all, a special acquaintance with the insane; and they should receive liberal remuneration and good treatment. The position of the chief attendants should be that of officers of the institution, and two rooms within the building should be set apart for the use of each.

Upon the ordinary attendants of an asylum will depend no small part of the success of the institution, and every care should be taken, to secure the services of young, active, and intelligent persons, to instruct them in the duties of their office, and to induce them to remain in it. A fair education is indispensable. Every attendant should be able to read and write, and possess some knowledge of figures. Careful instruction should be given, not only by definite rules for their guidance, but by personal communication by the superintendent and other officers. "Your first attempt ought to be to cure your keepers; you need not proceed to your patients till you have done so," was the advice given to, and recorded by, an eminent asylum superintendent, now Commissioner of Lunacy for Scotland. With all the supervision that can be given, the comfort of the patients must, in every asylum, be mainly dependent on the attendants, and no exertion should be spared in training them for the duties of their office; and when trained and accustomed to these duties, and to the presence and peculiarities of the insane, it is of the utmost importance to retain their services.

Their dietaries should be good, their bed-rooms comfortably furnished, and sufficient leave of absence should be given at short intervals. Relief from the monotonous and wearisome nature of their duties is an absolute necessity, if health of body and elasticity of mind (both of which are essential for the performance of their duty) are to be preserved. The example of securing to the attendant the Sunday to himself, which is set in European and American institutions, may be usefully followed, and marriage should be encouraged if it tends to make the attendant settle to his work. A man and his wife may be employed with advantage in the male wards of an asylum, especially in those devoted to the sick and epileptic.

With every attention to the comfort and well-being of the attendants, strict discipline is necessary. When a patient escapes from an asylum through the negligence of an attendant, he should be made to bear part, if not all, the expense of recapture. Leave-breaking should be met by fine and reprimand, but a system of fines, carried out fully and enforced for minor offences, is liable to prove irritating to the attendant; whilst stopping leave of absence cannot be recommended, because calculated to prove detrimental to mental, if not bodily health. In several British asylums strict discipline is maintained by reprimand and dismissal only.

The proportion of one attendant to ten patients is fixed by almost all authorities on asylum government. The by-laws for the government of the State Asylum at Washington fix this number. By the Association of Superintendents of American Institutions for the Insane, this proportion is regarded as the minimum at all advisable; and in the rules and regulations for the establishment of asylums by the Belgian Government, it is ordered that "there shall be at least one attendant for every ten patients, except in exceptional cases where the Government may recognize that the number may be reduced without inconvenience." Where the asylum contains acute and chronic cases in the proportion usual in Great Britain, the number of attendants should not be less than one to ten or twelve; but in New South Wales, since the asylums contain all the quiet cases which in Great Britain are sent to poorhouses, one to twelve or fourteen will probably suffice.

The staff of attendants should be quite independent of the artisans and servants of the institution. The system of making artisans attendants is for several reasons objectionable. If an artisan is at all a good workman he must be paid higher wages than an attendant, and will be more profitably employed, therefore, at his trade, than in looking after the patients. When he is content to accept the wages of an attendant, it may be stated, with tolerable certainty, that the work which he will do when employed as an artisan will not be such as to greatly profit the institution. The artisans should be only charged with the care of such patients as work with them during working hours.

Although there are objections to dressing attendants in uniform, the advantages are such as to render them of little weight. The smart appearance of the attendants, the care with which their dress is regulated, their immediate recognition by official and other visitors, are strong recommendations in its favour.

A pattern for the men which is not suggestive either of the police or the prison, and some quiet dark colour, relieved by white cuffs and collar, and made as becoming as possible for the women, are therefore recommended. Every attendant should be taken first on trial for some months, and should not wear uniform till a permanent servant of the institution. The keys should be carried in the pocket, or else attached to a cord and tucked beneath the waistband of the apron.

There

There should never be less than two attendants in each ward, and thirty to forty patients under three attendants is a preferable number. The attendants should be made responsible for the cleanliness of the dormitories and day-rooms; but all cleaning will, as a rule, be done by patients under their superintendence.

An efficient night watch should be maintained by specially appointed attendants, to guard against accident during the night, to minister to the sick, and such as suffer from epileptic fits, to soothe the restless and noisy, and to rouse all such as are dirty, at fixed intervals.

One attendant for each sex will be sufficient for this duty in a small asylum; but with over 400 patients, there should either be two attendants, or convalescent patients may be appointed as assistants. The comfort and cleanliness of the patients will be greatly promoted by a well-regulated system of night watching, and the ordinary attendants will secure sound sleep, without which it is impossible that they should perform their duties. If the attendants are disturbed repeatedly at night, they will, in all probability, be irritable and inattentive during the day, and so utterly unfit for the special character of their work.

If no mechanical method of checking the rounds of the night attendant is employed, vigilance should be secured by irregular visitation; or the emptying and re-stuffing of all dirty beds may be made part of the night attendant's duty, and he will so be made careful that their number is as small as possible.

**Domestic Servants and Artisans.**—A certain number of domestic servants and artisans are necessary in every asylum. The domestic servants working in the laundry kitchen, and dairy, and attending on the officers of the institution, should be boarded and lodged in the asylum, and should not be counted as attendants, although they may be made responsible for the conduct of patients who are temporarily employed with them.

The out door servants and artisans should be in every way distinct from the attendants, but like the domestic servants, should be made responsible for the care of all patients employed with them. As many as possible should be lodged in cottages on the asylum estate; and in these cottages under the care of the artisans, may be placed a certain number of the more quiet and convalescent patients. They may be employed at weekly wages, and boarded, or not, as may be most convenient.

Arrangements should be made by which the artisans may relieve the attendants occasionally on Sundays, and so secure to the latter more frequent leave of absence on that day.

The domestic servants who will be most required in the asylum are,—

Laundress and laundry-maids.  
Cook, kitchen, and dairy-maids.  
Housemaids.

The other servants most requisite are,—

Storekeepers.  
Gardener and farm-labourer.  
Baker.  
Engineer and gasman.  
Porters, and

A certain number of artisans, such as carpenter, tailor, shoemaker, upholsterer, painter and glazier, are indispensable in an asylum, to superintend the patients employed in the workshops, and to execute the minor work and repairs which are constantly necessary in a large establishment. To these may be added, basket, mat, or brush maker, printer, blacksmith, mason, &c., &c., as it may be found profitable to employ the patients in these trades, or to execute the minor repairs necessary to the building or its fittings. A bandmaster or chief musician should form part of the staff of every asylum; he should conduct the musical services of the church, instruct the attendants (and such patients as are capable of learning) in music, both vocal and instrumental, and preside at the concerts, dances, and other amusements which should form part of the asylum routine.

**Classification.**—The exact classification which shall be adopted in an asylum, though a portion of asylum organization, has an important bearing on asylum construction, which must depend, indeed, more or less, upon it.

Certain rules have been laid down, by authorities on asylum construction and management, as to the number of classes for which provision should be made.

The English Commissioners in Lunacy direct that "the building shall be so constructed as to admit of the separation of the male and female patients, respectively, into at least three classes". (Appendix A.) And in addition to this, separate buildings are recommended for the working patients, for the idiotic and epileptic, and for chronic cases, making a total of at least six divisions. The Scotch Commissioners give similar directions, substituting imbecile and fatuous, for epileptic, whom it would appear they do not think it advisable to keep apart.

The

The Belgian Government directs provision to be made for,—1st, the quiet,—2nd, the dirty,—3rd, idiots,—4th, epileptics,—5th, convalescent,—6th, excited,—7th, violent,—in every asylum in which the number of patients exceeds 100; and the American Association of Superintendents of Hospitals for the Insane, advise “that every hospital having provision for two hundred or more patients, should have in it at least eight distinct wards for each sex.” (Appendix A.)

The number of sections, divisions, or wards, which shall exist in an asylum, is a totally distinct question from the exact classification which shall be adopted for the patients. The constant association of large numbers of the insane, of whatever class, is more or less objectionable; and it may be at once admitted that at least six divisions should be made in every asylum for 500 patients, if only to prevent the association of large numbers; but how far a definite classification according to the more marked features of their malady shall be made, is a question for further discussion.

The “Relative Connexion” system of the Germans, in which a line is first drawn between curable and incurable, or acute and chronic,—each class being relegated to a separate section of the establishment,—has never found favour in other countries. It is open to abundant objection, and is now falling into disuse in Germany itself.

The system which has found favour with the English Commissioners, consists of a separation of the working classes from those incapable of employment, and their accommodation in distinct blocks of buildings. This system is, in several respects, objectionable. Almost every patient in an asylum should be more or less a worker. Many, it is true, will do little, but there is always a hope that they will do more, and if separated entirely from the workers they lose all the benefit of example, which operates strongly among the insane. At the same time, the workers will feel themselves a distinct class, working under compulsion, patients only in name, dealt with as labourers and artisans, and therefore wrongfully detained in an asylum. Those of the same trade or employment are associated together during the hours of labour, and it is frequently to their mental advantage that such association should then be broken up, and that they should pass to the society of those who are otherwise engaged.

Neither the classification founded upon the durability of the malady, its curability or incurability, or what has been called the industrial system, can be recommended. The only proper classification is a medical one; and if to this is added a consideration of the social condition, and the peculiar psychological individuality of the patient, everything necessary in the way of classification will be attained.

The provision for patients paying for their own maintenance, and for the idiotic, in buildings detached from the asylum, is considered in a subsequent part of this Report, so that these may be excluded from consideration here.

The sick and infirm,—all those aged and worn out, and suffering from extreme dementia, as well as the worst cases of epilepsy, for whom special provision in the shape of furniture, bedding, nursing, is necessary; the cases recently admitted,—as requiring special medical treatment by reason of their mental condition; and the more noisy and violent class,—those less under self-control, and sometimes needing temporary isolation; are the only patients for whom *classification* can be recommended.

For the whole remaining body of the patients, a psychological arrangement rather than a classification should be adopted.

Those cases should be associated which are least likely to injure, and most likely to benefit, each other, no matter what may be the character or form of their disease, or whether supposed to be curable or incurable. Thus the melancholic and the excitable may sometimes be mutually useful; at others kindred spirits may exercise a beneficial effect on each other. Variety is as pleasant to an asylum patient as to any one else, and it would not be found satisfactory, even if it were possible, to have all our associates like ourselves in their mental characteristics. Social position and education may often be advantageously considered in the arrangement of patients; and those who, when sane, occupied the same social standing, will often be most fitting companions in their insanity, and should, if possible, be placed apart from the other inmates, even though all are now on the one dead level of pauperism. The following remarks on this subject by Dr. Browne, are at once eloquent and to the point\* “It is not enough that the furious should be separated from the docile, or the imaginative from the fatuous. The mind of every individual should be carefully studied; its healthy as well as its insane bearings analyzed, and the relations which they may have with, or the influence they may acquire upon, the minds of others calculated, and groups formed in reference to the result. The violent or malicious may often be confided with perfect safety to the acquisitive, or vain, or religious monomaniac. The happy and the affectionate may be associated with the desponding and despairing, and the helpless idiot may become the adopted child of some mother whose only delusion is, weeping for infants which she never bore. Whole families may be formed; a vain idler may be entrusted to the tutelage and example of three or four industrious knitters or oakum teasers, and being encircled by temptation to exertion,

\* *What Asylums were, are, and should be*: By W. A. F. Browne, M.D., one of the Commissioners in Lunacy for Scotland, and formerly Superintendent of the Crichton Institution for the Insane, Dumfries.

exertion, and stimulated by the desire of rivalry, abstraction from the dormant idea is often the consequence. A contented self-satisfied and active-minded maniac is joined to a timid, a lethargic, and a gloomy maniac, and seldom fails to communicate some portion of those qualities which it is our object to infuse."

"The association of lunatics requires to be skilfully managed; but when classes are formed in conformance to the mutual wants, and wishes, and dispositions of the parties, the system is at once beautiful and self-operating."

It must never be forgotten, in making a distinct class of the more violent and noisy patients, that in many instances, the presence of one or two such patients in the quieter wards will be of benefit to themselves, without being hurtful or annoying to the rest; and that they are more likely to be impressed with the behaviour of the other patients, and conduct themselves quietly and well, than to stir up strife and discord. Every trial should be made, by so dividing the cases as to make the number of violent inmates in the ward specially appointed for them gradually less, and so assimilate its character to that of the ordinary division of an asylum.

The separation of three or four of the noisy and violent from the remainder of the inmates of the ward, will frequently completely alter the character of the entire division,—and the plan adopted for this in the New York State Asylum is worth attentive consideration. Off the most noisy ward, which contains twelve patients, is a small ward to contain four only. These are placed under one nurse. The extremely violent, and those who perpetually behave badly and cause tumults and disturbance in the other wards, are here placed together, and removed as soon as their behaviour is such as to induce the superintendent to place them in other wards.

In many instances, whatever the basis of classification, it will not hold good throughout the 24 hours. The habits and requirements of some patients necessitate other provision at night than that which is made for those with whom they are fitly associated during the day. The day association must therefore be broken up, and a night classification, based on the requirements of the patients, made.

A certain number of the convalescent patients should be placed in cottages, either in bodies of ten or twelve, with an attendant, or in the homes of the artisans or labourers of the asylum. By these they will be kindly treated and cared for, and with them they will lead a life differing from the artificial one of the asylum. They will, at the same time, remain under observation, and so re-enter the world gradually, instead of passing at once over the asylum threshold into the business and cares of life. The remainder may fairly be kept for a time in the wards, where their example is good for the other patients, and they will materially assist the nurses.

Separate wards for epileptics have been advocated, because their care and treatment requires special knowledge on the part of the attendants, and some provision for their safety during the fits to which they are subject, and because it has been thought that they are terrifying and annoying to other patients, whilst the fellow feeling which the particular nature of their malady induces, makes them willing to render assistance to one another in its active paroxysms. All these advantages are, however, more or less outweighed by the utter depression which the perpetual contemplation of epileptic fits is liable to cause to all, both patients and attendants. At the same time, a certain number of the epileptic cases are fitted for work, and should be employed with the ordinary patients, whilst the mental condition of the others renders them more fitted for the violent section of the institution. The cases in which the epileptic fits are very frequent should be placed in the infirmary, and the remainder distributed throughout the hospital, according to their mental peculiarities.

The number of patients who may properly be associated in the various divisions of an asylum, has an important connection with the subject of classification. As a general rule, the numbers in each class should be such as to require the services of not less than two attendants. Divisions ranging from 15 to 40 are preferable. In the more violent ward, 15 to 20 patients, under two or three attendants, are quite as many as should be placed together; whilst in the quieter wards, 40 patients, under two or three attendants, are not too many. A small ward, to contain four or five of the most violent patients, is extremely useful.

**Diet.**—The quantity, the quality, the preparation, and the distribution of the diet of the patients, in an asylum, is, as Dr. Conolly remarks,\* a subject in every way worthy of the careful consideration of the managers, officers, and attendants. "All habitual physical discomfort is opposed to mental recovery, and a scanty, ill-cooked, unwholesome diet, creates a chronic uneasiness and dissatisfaction, impairs the health, and increases the mortality of an asylum. There is some reason to suppose that insane patients, shut within the bounds of an asylum, and necessarily leading a monotonous life, require, as prisoners are said to require, a greater quantity of food than persons who are at large. It seems, at all events, to be established in asylums, that a very low diet conduces to a high mortality, and that the deaths diminish when the diet is improved."

A

\* *The Construction and Government of Lunatic Asylums and Hospitals for the Insane*: By John Conolly, M.D., p. 65.

A fair quantity of wholesome nutritious food is necessary, for the quiet and for the health of the inmates. The saying that "a hungry man is an angry man," the truth of which in ordinary life few will be found to deny, is true to a fourfold extent in an asylum; and the quietest hours of the day in asylum wards are those which immediately succeed the breakfast, dinner, and supper of the inmates. Insanity is, in very many cases, a disease of debility; sometimes it is the direct result of semi-starvation, going on for years; and improved diet is often the chief element in the cure of the patient. Statistics have been published, by both English and French writers, which prove more or less conclusively that the recoveries in asylums are positively increased in number by plentiful and nutritious diet; and the effect of feeding on mental, as well as bodily health, has been noticed by most asylum physicians.

But it is not the mere quantity alone of the food which contributes to the health and comfort of the inmates. The quality of the viands should be carefully attended to, and special provision made for such as, from their physical condition, require an extra allowance of ordinary food, and such nutritious diet as concentrated soup, beef tea, eggs, wine, porter, or brandy.

The preparation, and the mode of distribution, are equally important. The food should be so prepared that any officer of, or visitor to, the asylum could dine from it with satisfaction; and it should be served with cleanliness and decorum, and at fixed hours. The taking of food should be made a pleasure. "The first and chief *amusement* is to eat," laughingly remarks Professor Meyer, the Superintendent of the Göttingen Asylum, one of the leaders of the modern school of psychology in Germany, when speaking of the arrangements of the institution under his care. Meals consisting of a liberal supply of wholesome food, served with cleanliness and order, in a well-furnished and cheerful dining-hall, are the best *amusements* which can be afforded to an inmate of an asylum, and will go a long way towards producing content, which is a good step on the road to cure.

The dietaries of English asylums, given in the Appendix, will serve as a useful guide, as to the quantity and variety of food necessary for the insane; and they may be modified so as to suit the climate, and the habits of the people of this Colony.

**Clothing.**—The clothing of the patients in an asylum merits very careful attention, both as one of the means of preserving health, and one of the things reacting on the mind. In some forms of nervous disturbance, the function of animal heat is interfered with, and warm clothing in chilly weather is especially necessary. The clothing should be regulated by the temperature. No pains should be spared to make the dress of the patients, both male and female, as becoming as possible, and a variety of pattern and colour should be used. Uniformity of dress can be desirable only as a check upon escape from the asylum, and its disadvantages much outweigh the trifling advantage which is gained in this particular. A special uniform, unless distinctly military in type, is almost always suggestive of the prison. The style of dress need not be made too miscellaneous; all needful variety may be secured for the men by two or three distinct colours, whilst prints and winseys admit of almost any variety both in pattern and colouring, and such variety is especially pleasing to the female sex. For men employed in agricultural labour, special suits are requisite; and for all the asylum inmates, newer clothes, or some of a different pattern or material, are desirable for Sunday.

The supply of linen should be sufficient, and such minor articles as neckerchiefs should be provided and worn. It has been well remarked by Dr. Conolly\* on asylum management, that "the number of female patients who go about bareheaded is always greatest where there is most neglect." Caps and bonnets should be provided for the female patients, and every care taken that they are worn, and that their hair is attended to and kept in order. All the patients should be supplied with boots or shoes.

Every precaution should be taken to prevent the patients divesting themselves of their clothing or boots. Constant watchfulness on the part of the attendants may do much to prevent this; but in some cases, locks, instead of laces or buttons, to the boots, and patent buttons which can only be undone by an attendant's key, are necessary, instead of those ordinarily worn. The patient must be "clothed," although not in his "right mind." For destructive patients, strong dresses made of linen or canvas, and so lined as to be as comfortable as possible, should be employed for use during the day, and quilted coverlets at night.

Nothing more completely betrays the character of the management of an institution for the insane than the way in which the patients are clothed. Torn and ragged dresses are the surest proof of neglect.

The change of bed-linen should be at least weekly, for the majority of patients. For some, one sheet a week may be sufficient for all the purposes of cleanliness. Body linen should be changed as often as is necessary, and for the majority of patients this will be twice a week.

With the assistance of a small amount of hired labour, the major part of the bedding and clothing required for the patients may be made in the establishment, at a less cost than they can be purchased ready made. It will perhaps be necessary to purchase hats, bonnets, and a few other articles.

Labour

\* *Op Cit.*, p. 60.

**Labour by Patients.**—That labour is an important agent in the treatment of the insane is so universally acknowledged that the point need scarcely be insisted on. It relieves monotony, it abstracts the mind from dominant and frequently hurtful ideas, it preserves health of body, and it promotes in the highest degree restoration to health of mind. Many patients have worked out their own cure. Its regulation therefore is important, and at the same time it is a source of income and profit to the institution, and serves to lessen considerably the cost of maintenance of the inmates.

Every care should be taken that the employment selected for the patients is such as is best fitted for their mental and bodily condition, at the same time that it is real; calculated to utilize the knowledge and the habits which the patients may have acquired when sane, and to benefit the finances of the institution. Sedentary occupations appear to be less favourable to the recovery of the patients than those which are active in character. Fortunately, agricultural occupation is at the same time healthful and profitable. It is in its variety calculated to interest the patients, to soothe their excited, or awaken their dormant faculties, and to contribute to health by sufficient corporeal exercise. The large majority of the working patients of the male sex should be employed either in farming or gardening, or in tending the pigs or cattle belonging to the asylum, the remainder may be employed in the various trades for which their prior life most fits them. Those trades should, if possible, be selected in which the articles manufactured will serve for use in the asylum. Experience proves that the more self-contained an asylum is, the more self-supporting it is likely to become. The boots and shoes, the clothes and bedding, should be made in great part, if not entirely, by the asylum inmates; and all the carpenters', joiners', painters', plumbers', and other work required done by them also.

For the women, the laundry will afford constant employment. It has been objected to washing by hand, that it is unhealthy, that the stooping position, the steamy atmosphere, and the emanations from soiled linen, are detrimental to health; but with a well-ventilated wash-house, and a proper arrangement of wash-tubs, some of these disadvantages may be obviated; and washing, as affording active corporeal exercise, is peculiarly useful to certain classes of the insane. It is astonishing how much excitement evaporates with the steam of the wash-tub. The remainder of the female patients may be employed in knitting and sewing, and in assisting in the kitchen. A certain number of both sexes will necessarily be employed in house-work, in cleaning the rooms and furniture, and in the necessary minor service of the asylum.

In summer-time, a certain number of women may be employed in field work with advantage.

With a proper selection of occupation for the various classes of patients, little danger is to be apprehended from entrusting patients with tools and implements. Accidents from this cause are very few in asylums, and to run some small risk, and so benefit the great mass of patients, is undoubtedly better than to prevent work for fear of accidents. "Nine-tenths of madmen are neither habitually furious nor malicious, and if they pass the ordeal of such an examination as it is in the power of every man acquainted with the human mind to institute, it would be egregious folly to debar them from a privilege which may contribute to their happiness, and cannot, in ninety cases out of a hundred, interfere with the happiness or safety of others. Should accident occur, and even life be sacrificed, one person has suffered for the good of many; such is all life here, outside, as well as inside, the asylum bounds.

The patients supported at the expense of the State may fairly be expected to work for its benefit. The establishment is fully entitled to the proceeds of the labour of all those supported on charity, but a system of compulsory labour cannot be recommended. There will, as a rule, be little difficulty in setting all to work, who should be permitted to do so, and work should be encouraged by a system of remuneration. The lunatic has no claim for remuneration for his earnings in the asylum, where he is cared for and supported. "The amount of these can be as nothing in liquidation of the debt which he owes for peace and protection, and chance of recovery which he enjoys; and it would be ridiculous, and might be even dangerous, to inculcate upon him that he has any such claim."\* But he is likely to take more interest in his occupations if such remuneration is made, and he is able to see a reward for his daily work.

"Payments in money are not advocated, although in some cases strongly desired, and more irresistible than any other temptation; but it is generally more convenient, and equally acceptable to the other contracting party, to pay in another manner."\* Either better diet or clothing may be given, certain luxuries awarded, or a portion of the earnings of every patient set apart to accumulate till restoration takes place, when it may be delivered to him to meet the exigencies of dismissal.

When a workman, learned in a special trade, is found fit for work in an asylum, it will usually be found equally profitable to himself and to the institution to allow him the means of following his avocation. A bookbinder at Prestwich binds all the periodicals, and keeps in good order the library of the institution; and a clockmaker at Illenau keeps all the clocks of the asylum in repair, and makes others for sale.

**Amusements.**—Means of amusement which demand active muscular exercise, and those directed more immediately to mental distraction, are equally useful, and in this respect the methods of amusing the patients adopted in Great Britain may be closely followed.

The

\* *What Asylums were, are, and should be*: By Dr. W. A. F. Browne.

The supply of games in the rooms should be liberal and varied,—out-door exercise, foot-ball, cricket, fives, ball, &c., should in every way be encouraged; but it must never be forgotten that *work*—useful employment—should always be more inculcated than mere amusement, and that *play* will be more appreciated if it comes as a relaxation from active employment, than if it is attainable at all hours. The evening should be the time during which the ordinary in-door and out-door amusements are most practised, and then should be prepared such extra amusements, both in the wards and in the amusement room, which will produce gratification without hurtful excitement, and at which the majority of the asylum inmates may be permitted to assist. The total number who may usually be permitted to attend the associated amusements is one-half to two-thirds or more. These amusements should consist of dances, concerts, lectures and readings, magic lantern exhibitions, conjuring and theatrical performances; and though in the main the amusements in an asylum must be supplied by the inmates themselves, and be more or less of a mutual character, efficient assistance may frequently be obtained from neighbouring towns, by means of small payments, or by appealing to the charity of amateur and professional entertainers. These in many cases are quite ready to lend their services for the amusement of the patients, who often keenly appreciate the excellence of such performance and the kindheartedness which afford them.

Associated amusements should be held so far as possible on fixed days, to which the patients may look forward; and in providing them, it may be well to avoid the pushing system of amusement which is in vogue in some English asylums, in which almost every evening is occupied by some entertainment or another. This tends to produce a dissipated state of the insane, not less than the sane mind, and forces the patients into an unnatural and artificial liking for excitement, and a craving which may not be easily satisfied on their departure from the asylum, or into a feeling of weariness and disgust with pleasure-seeking. Music must at all times be the great source of amusement in all asylums. Its soothing influences, its marked results on mental disease, have been described by almost all writers on insanity. The evidence on this subject, obtained at the Retreat, York—an asylum belonging to, and containing a large number of, members of the Society of Friends, but into which other people not belonging to the sect are occasionally admitted—is interesting. It is found that the members of the society, who are little used to music, and who seldom are able to play themselves, are very difficult to amuse or to “get at” in their alienation, but that music seems at once to work wonders for all not belonging to the society. “Get them to play,” says the matron of the institution, “and they are soothed at once.” A band is a great assistance in asylum amusement, and a band, small or large, may be almost always obtained from among the attendants and officers; new comers being selected with a special eye to their qualifications in this respect. The talents of patients in this direction should never be permitted to lie dormant. Vocal as well as instrumental music should be practised, and in this a large number of the patients can assist.

Advantage should be taken of all amusements outside the asylum, but easily accessible from it; and visits to such entertainments—flower-shows, concerts, readings, &c., may be made the reward for good behaviour or diligent work, and will frequently be marvellously beneficial to the mental health of the patients.

A school for the idiotic and feeble-minded youth is indispensable in every asylum where these form part of the population; and although there is little practical evidence of the good effect of educational processes upon the minds of the adult insane, it is all but invariably admitted that mental occupation directed to some useful end, mechanical mental work, such as simple arithmetic, or learning by rote, is very likely to prove beneficial to certain forms of mental disease. In such cases, which should be carefully selected, this mode of treatment should be pursued to the fullest extent. A teacher, whose especial duty it would be to superintend the scholastic exercises of such patients, might also be usefully employed at other times in reading to or otherwise assisting to amuse and occupy other patients, and in assisting them in their writing letters to their friends, for which distinct hours may be set apart, and which is to be in every way recommended and encouraged.

**Animals and Birds.**—All such animals and birds as can be kept at small expense and little trouble, and serve in any way to amuse and interest the patients, should undoubtedly be kept in asylums; and in New South Wales, kangaroo, wallaby, and numerous kinds of birds, may be added to, or substituted for, those which are to be found in most European and American asylums.

With a farm, it will generally be found an economy to keep cows, instead of purchasing milk; and in all asylums, pigs should be kept to eat the refuse. Additional food may be grown for them on the farm and garden, and they may be profitably bred, fattened, slaughtered, and eaten in the asylum. Their care affords occupation to a certain number of patients, to whom, as well as others, they are almost certain to be objects of interest; pork will be an agreeable change of diet to the inmates; and with properly constructed piggeries placed at a little distance from the asylum, pigs will be in no way a nuisance.

The number and character of the horses kept must depend entirely on the size and wants of the establishment.

The patients may often be made to take the greatest interest in all animals which are the property of the asylum, and especially when these animals are entrusted more or less to their care; all such interest is healthful, as tending to prevent the introspection to which all the insane are liable.

Relief

**Relief on Discharge.**—Some provision for the relief of such of the patients as are in need, on their discharge, is urgently needed in every asylum, and more urgently in a colony than in an older country. The patient is not unfrequently a stranger in the land; kindred and home are far away; the few ties of friendship which he has formed have been swept away by the dire malady which has prostrated his intellect and ruined his fortunes, and he walks away from the asylum gate a free man, once more in his right mind, but without a shilling and without a friend. He has no character from his last place, it has been lost in the turmoil of his disease. The stigma (unhappily) of the asylum is still upon him, and lucky is he if he meet with the Good Samaritan in the way, and is saved from a return of his malady in the trials for work and for bread which his destitute position render immediately necessary to him. A small sum from a special fund at the disposal of the asylum authorities, or a system of discharge on trial, during which a fixed sum, equal in amount to the maintenance rate of the asylum, should be paid to every homeless and needy patient, and would save many from a return to the asylum, and thus be at once a charity to the individual and an economy to the state.

**Asylum Reports.**—It seems advisable that a complete system of reports should be instituted, and that these reports should consist of three kinds.

- 1st. Reports made by attendants and officers.
- 2nd. Reports made by the board of control.
- 3rd. Reports made by the board of inspection.

The reports made by the attendants should include a statement of,—

- The number of patients.
- " admissions, discharges, and deaths.
- " taking medicine, using the bath, and remaining in bed.
- " attending amusements, &c.
- " in seclusion.
- " employed; the kind of employment being specified.
- " having fits, attempting to escape, suffering from accidents, &c.

In all cases, departures from rule and the reasons for them should be reported, and any other particulars which the medical superintendent may deem necessary, may be given.

These reports should be made daily, and given to the chief attendant.

The night attendants' report should include a statement of,—

- " The number wet, dirty, noisy, sick, destructive, taking medicine, and having fits during the night; and should be delivered to the chief attendant in the morning.

From the ordinary and the night attendants' reports, and from matters which have come under personal observation, the chief attendant's report should be compiled. It should be mainly a summary of the reports which he has received, and as such, will comprise a general statement of the condition of the division of the establishment under his charge. This report should be delivered to the medical superintendent every morning. In the Report on Colonial Hospitals and Lunatic Asylums, published by the Secretary of State for the Colonies, is a form of weekly report by chief attendants, and such a weekly summary of his reports may be made with advantage by the chief attendant of each division; this form is given in Appendix D, No. 6, and some of the forms given in this Appendix may be adopted for the daily reports of ordinary night and chief attendants. It will be found useful to print the forms for the different sexes in different colours.

The use of reports of this kind must be obvious to all who have at all studied the question of asylum organization. They are the best means of keeping the attendants in a state of thorough attention, and preventing them slurring over their duties. "An attendant will slur over many things if he is to have himself for his sole judge, which he will do exactly and conscientiously if he has to write down an account of his measures, and of his reasons for them, for the judgement of superior authorities." And they spare to the superintendent a considerable amount of personal inquiry in his government of the asylum, whilst they afford him at the same time materials on which to ground his own reports.

All the reports made by attendants should be kept for the inspection of the boards of control and inspection.

The reports of officers should be made at least annually, and should embrace a consideration of the entire general government of the institution. The report of the superintendent should include a general statement of the working of the institution, and should be accompanied by such statistical and other tables as are necessary to place fully before the board of control and the world the condition of the institution, and supplemented by financial statements prepared by the steward and secretary. The statistical returns should not serve merely to point out the state and condition of the asylum, but should be available also for scientific purposes, and therefore should be made according to one uniform plan. The English Commissioners in Lunacy have, in their Twentieth Report, published forms for asylum medical statistics, with the view of facilitating statistical comparison. These forms have been adopted in some of the English asylums, and are given in Appendix E, tables 1, 2, 3, 4, 5, 6. In the Report on Hospitals

Hospitals and Asylums from the Colonial Office, the importance of uniformity of plan in the preparation of asylum statistics is pointed out, as well as the difficulties attending their preparation and the tendency which the work has to become too cumbrous for any but the practised statistician to manage. With the idea, therefore, of limiting these returns to such as could be furnished by officers of ordinary intelligence without any unreasonable amount of trouble, modified forms of statistical returns have been drawn, of a short and manageable character, for all asylums, and additional forms for larger asylums, both series of which will be found in Appendix E.

For the sake of uniformity, and a comparison with the statistics of English asylums, the forms issued by the English Commissioners in Lunacy, should, if possible, be adopted in a large colony like New South Wales; and if these are supplemented by the tables for larger asylums, issued by the Colonial Office, all necessary statistics will be obtained. It may however be interesting to furnish tables showing the social condition (married or single), and the religious denomination of the patients.

The reports issued by the board of control may be simply an adoption of, or preface to, that of the superintendent, or it may be deemed advisable to describe fully the operations of the board. They should be made annually.

The report of the board of inspection should enter into the general condition of the asylum, and should be accompanied by suggestions for whatever improvement or alterations may be considered necessary.

The reports of the board of control containing the reports of the superintendent and other officers, and the reports of the inspecting board, should be published annually for the information of Parliament and people. Every care should be exercised in these reports that the objects and aims of the institution are fully set forth by the language employed. The importance of a correct nomenclature can scarcely be over-estimated. "The erroneous views of insanity formerly entertained, and the unfortunate modes of treatment which resulted from them, led to the adoption of terms which are now without meaning, and the continued use of which has an unfavourable influence on the best interests of the insane."\*

The terms "lunacy" and "lunatic" which originated from a popular belief in influences that have long since been shown to have no existence, and have now no meaning in reference to the diseases of the mind, should be replaced by "insanity" and "insane."

The "awful word mad-house" has happily almost disappeared; but the term "asylum" remains, and, though in many ways in itself unobjectionable, has been associated with institutions in which every cruelty and abomination were practised, till it has suffered from the contact, and its original meaning, never very expressive of the purpose to which it was applied, has almost disappeared. There is no reason for, and many against its retention; and it should undoubtedly be replaced by the words "Hospital for the Insane", which are expressive of the curative purposes, which every institution for the insane ought to have. The treatment and care are, or should be the object of all institutions in which the insane are accommodated.

All such terms as "cells" and "keepers", which smack of the prison, should never be heard within an asylum, or used when speaking of the provision for those mentally afflicted. When things are known by their right names, and institutions for the insane seen as they should be, no small part of the horror with which they are commonly regarded, and the stigma which unhappily attached to all who have been their inmates, will disappear, and a proper nomenclature in reports intended for the information of the people is therefore of extreme importance.

#### ACCOMMODATION FOR PATIENTS PAYING FOR THEIR MAINTENANCE.

From the fact that insanity is a disease treated in some measure as other diseases, it is possible that the conclusion may be drawn that in this as in other ailments the great middle classes should be left to take care of themselves, and to pay for their medical attendance and such nursing and care as may be requisite. But the least thought will show that insanity differs materially from all other affections to which mankind are liable—in its nature, which renders it unfitted for treatment at home, whilst at the same time it exposes the patient to ill-treatment from the careless, the greedy, and the cruel, since his complaints, often well-founded, are unheeded—in its duration, which in the shortest cases may be counted in months, and the longer in years—and in its pauperizing effects on the patient and all with whom he is connected.

The long duration of the malady, the costly nature of the treatment, whether the patient is kept at home, in which case he requires the more or less constant attendance of a paid nurse or of some member of his family who might otherwise be winning bread by work; or sent to an asylum in which the care and treatment necessary must be paid for at a high price—are a heavy tax upon those in moderate circumstances. It may safely be said that no form of sickness with which we are acquainted leads so directly to pauperism as insanity; and on this account, as well as on account of the abuses which are so liable to occur where the care and treatment of the insane becomes a matter of commercial speculation, it has become a settled opinion in the minds of those who have carefully considered this question, that, for the insane of the middle classes, as well as for the insane poor, some provision should be made in public institutions where they may pay such sums as they are able, for the care and treatment they receive. Public institutions are fitter residences for this class than private asylums, because the patients can as a rule be maintained at a cheaper rate in them, and because they are less

\* Kirkbride: *On Hospitals for the Insane*.

less liable to abuses of various kinds than asylums kept for the profit of one or more individuals, where the desire for gain and the mental powerlessness of the patient, are constant temptations to depart from the way that is right.

Following the example set by the states of the American Union as well as those of Germany, provision should be made in the Government asylums of New South Wales for paying as well as indigent patients. Such provision should consist of either one section of the ordinary asylum, or, if detached houses, which may be built and increased in number as needed. A separate kitchen should be provided, and the fittings of the various rooms made similar in character to those which the patients are accustomed to at home. Especial care should be taken in providing amusements for the patients, since it will be more difficult to find employment for them than for pauper patients. The lectures and concerts which are given in the common amusement room will be available for paying as well pauper patients, and the one superintendence, commissariat, and government will serve for both classes.

It is doubtful whether it is advisable to provide very high-class accommodation in a public asylum. The wealthy classes are generally able to secure for their insane such accommodation as accords with their position, in proprietary asylums, and their care and treatment may fairly be left to private enterprise. Such princely establishments as Ticehurst (where a pack of harriers is kept for the amusement of the patients), and Brislington in England, Saughton Hall in Scotland, and those at Vanvres and Ivry sur Seine in France, are not likely to be soon established in this country, but every comfort and luxury is obtained for insane as well as sane people by those who have wealth at command.

#### CRIMINAL LUNATICS.

It is not proposed to discuss the advisability of a special asylum for criminals. Such asylums have, with the full concurrence of public opinion, been established in Great Britain and Ireland, and in the most populous states of the American Union; and, following the example of kindred nations, New South Wales has already made special provision for the criminal insane.

The Colonial Secretary is empowered to direct that all persons acquitted on the ground of insanity, the jury finding specially that such persons were insane at the time of the commission of the offence, and all persons sentenced or ordered to be kept in any gaol, prison, or penal establishment, who may be shown to be insane, or unfit from imbecility of mind for penal discipline, shall be sent under warrant to the asylum specially provided. But the asylum so specially provided differs in almost every respect from those which exist for a similar purpose in other countries. Instead of being a cheerful residence for the insane, a hospital for those sick in mind, it is simply a small, ill-regulated prison. The classes sent to it include those who have become insane from the long indulgence of criminal propensities; those in whom some degree of imbecility renders a vicious character still more intractable; and those who have done wrong conscientiously believing it to be right, and have become criminal for want of timely protection during their insanity;—those, in fact, criminal before insane, and those insane before they committed criminal acts.

It may therefore be proper to consider—

1st, What classes should be sent to a special asylum;

2nd, What that asylum should be in construction and organization.

Under the term "Criminal Lunatics" are included two distinct classes—First, those who become insane whilst undergoing imprisonment for offences against the law; and, secondly, those who whilst insane commit criminal acts, and are either found insane on arraignment, or acquitted on the ground of insanity. The first class, again, may be subdivided into "convicts," and ordinary prisoners; or those undergoing penal servitude, and those in prison for minor offences.

The "convict" class has its distinctive characters. It consists for the most part of men who have been long the companions of thieves and ruffians, who have given unrestrained license to the brutalizing influence of their passions, who are learned in prison ways and in prison language, and upon whom the stamp of iniquity is plainly visible, the shadow of insanity hiding but little of the natural depravity of the man. These men, on becoming insane, are frequently extremely dangerous, and are besides not fit associates for the ordinary inmates of an asylum ward. By the non-criminal inmates, especially if capable of reflection (and the mind is never totally eclipsed), and by their friends, the presence of such convicts will be felt as a contamination, and the moral effect of the association is calculated to be extremely bad; besides which, these "convicts" are still under sentence, and have frequently a long time to serve, their insane condition not having released them from the consequences of their crime. For these reasons, the convict class of insane are, as a body, proper subjects for a special asylum.

It is difficult to draw a distinct line between the "convict" class and the prisoners in ordinary gaols; but although among the latter may be found men as utterly depraved and of as criminal disposition as among the former, yet they differ in many respects from them as a body. The offences with which they are charged are often less heinous in character, the number suffering imprisonment for the first time is large, they have not so much caught the language and manner of the criminal class, and on becoming insane are less likely to be dangerous and offensive. In many cases, they are, as far as *criminal disposition* is concerned, little removed from their fellow-men, and their presence has not been found objectionable in ordinary asylums, when their antecedents are kept secret from the other patients. This is the experience in America, where all; in Scotland, where the majority; and in England, where a certain number of this class are confined in the ordinary asylums.

A principle of selection from the criminal class should therefore be adopted. Each case should be specially considered—the nature of the crime—the antecedents of the individual—and the peculiar form the insanity assumes, should be taken into account before determining to which asylum the patient should be sent. Crimes classed as offences against the person, and insanity taking the form of homicidal mania, may be considered to make the patient a fit subject for a special asylum.

The second class of criminal insane should be distinguished altogether from that already named. It includes men morally bad, whose madness is the result of a long course of debauchery, and who differ therefore in little from the criminal; but the large mass are, neither before nor after the act which has brought them under the term criminal insane, of *criminal disposition*. There will come under this category men of honour, probity, and delicacy of feeling, who have pilfered from their neighbour, or, to borrow an illustration from an eminent authority on this subject, “who, in obedience to the supposed command of the Deity, with a faith like that of Abraham, have sacrificed with bleeding heart the dearest object of their affection,” and women of true womanly character, who have, during insanity arising from the “pains and perils of child-birth” slain their offspring. They are criminal as regards the act but not as regards the disposition, and they are legally irresponsible. These unfortunates claim our extreme pity. To place them all in association with the convict class is a wrong to the individual; and, happily, experience has proved that the greater number may safely be kept in the wards of ordinary asylums among those who but for timely protection might have done similar acts.

But, unfortunately, there are some among them whose insanity is of such a type that, except under close and watchful guardianship, they would again commit similar crimes to those with which they are already charged. Some also have passed into this class who have only just escaped the gallows, and owe their lives to the clever sophistry of the advocate, the partisan evidence of the physician, or the muddled brains and maudlin sympathy of the jury. These, for the public safety, must be kept in such close confinement as is impossible in an ordinary asylum, without converting it into a prison, and so sacrificing the comfort and imperilling the chances of recovery of the other inmates.

Selection, then, should be exercised here also. The laws of New South Wales have already mercifully omitted those found insane on arraignment from the operation of the Criminal Lunatics Act, and there can be little doubt that they may be safely treated in an ordinary asylum. To these may be added a certain number of those acquitted on the ground of insanity, leaving those who have committed the higher class of offences, such as murder, treason, and offences against the life or person, or who have shown dangerous homicidal propensities, to the safe keeping of a criminal asylum.

The suggestions, then, which it is thought necessary to make as regards criminal lunatics, are,—

First—That all the “convict” class should be sent to the special asylum for criminals.

Second—That all found insane on arraignment, should, as at present, be treated in the ordinary asylums.

Third—That a special selection should be made from the remaining two classes—certain cases only being sent to the criminal, and the remainder to the ordinary asylums, the cases to be selected for the criminal asylums, being those prisoners in ordinary gaols in whom a *criminal disposition* is markedly apparent, their prior history, the nature of their offence, and their mental condition being duly considered; and those of the so-called “Queen’s pleasure men” who have committed treason, murder, or offences against the person, and whose form of insanity is calculated to lead to a repetition of the original offence.

Provision should also be made for the subsequent transfer to the criminal asylums of any person belonging to the class of criminal insane who it may be found difficult or dangerous to maintain in an ordinary asylum, and to the ordinary asylums of such convicts and others of the insane in the criminal asylums as become demented and fatuous, and so no longer need the special provisions of the criminal, and would not be objectionable in ordinary asylum wards.

It is important, even in a financial point of view, that as small a number as possible should be maintained in a criminal asylum, which from its special character and from the larger number of officers and attendants required must always be more expensive than an ordinary asylum. The weekly maintenance rate at Broadmoor is about 25s. per inmate, whilst in ordinary pauper asylums it is, as a rule, under 10s. The charge for Government cases of criminal insane at the private asylum, Fisherton Home, is 17s., whilst pauper patients are received from the counties at 12s. In Tasmania, the cost of maintenance for criminal insane is 15s. 11d. weekly, whilst the ordinary pauper insane cost 11s. 8d.

The number now maintained in the criminal asylum, or who would be placed in the criminal asylum under the operation of the Criminal Lunacy Act, if the accommodation were sufficient, is very large in proportion to the number it is thought necessary to place in the criminal asylums of Great Britain.

In England and Wales, with an estimated population, in 1866, of 21,210,020, the number of criminal insane in the state asylum or awaiting removal to it, was 540, or 1 to 39,277;

In Scotland, with a population of 3,153,413, it was 46, or 1 to 68,552;

In Ireland, with a population of 5,582,625, it was 132, or 1 to 42,292;

Whilst

Whilst in New South Wales, with a population estimated at this time at 447,620, it is 51, or 1 in 8,776—

And the following table, classifying the present criminal lunatics according to their crimes, speaks strongly in favour of a selection of cases being made :—

CLASSIFICATION of the 51 patients who come under the operation of the Criminal Lunacy Act, in the Lunatic Asylums at Parramatta, on the 17th September, 1868.

Crimes.	Males.	Females.	Total.	Found Insane on Arraignment.			Acquitted on the ground of Insanity.			Convicted and Certified to be Insane after Sentence.

\* Three of the murderers are also serving an imperial sentence, and stand on the books as "British Lunatics."

† One of these stands committed to take his trial for murder.

‡ Of this number, 38 only are at present confined in the Criminal Asylum, owing to want of room.

The discharge of criminal lunatics should be specially regulated. On recovery, all under sentence should be sent, both from the criminal and ordinary asylums, to the prisons from which they were received; and all those whose sentence has expired should be discharged.

The cases of the "Queen's pleasure" class should be specially considered. A certain number may be safely set at liberty, as is proved by the practice at Broadmoor, Dundrum, and Perth. But certain of those whose crime has been homicide, marked by signal atrocity, or who, under treatment, have displayed great malignity of disposition, and according to the best teachings of medical science would be likely to suffer from a second attack of a similar nature, should, even when sane, be kept in confinement. Pitiably though their condition may be, the public safety must be considered before their special welfare, and every precaution taken that no repetition occurs of what has already been done once too often. Certain other cases, it may be necessary, for state reasons, to keep in confinement.

The cases of "convicts" remaining insane after the expiry of their sentence, should in all justice be specially considered also. Where, from the form of the insanity and the character of the individual, the case may be safely treated in an ordinary asylum, it should be sent to one; but, if otherwise, it should be maintained in the criminal establishment. The practices of discharging all convicts still insane on the expiry of their sentence to ordinary asylums, as is done at Broadmoor, and of keeping all (except such as their friends undertake to make special provision for) such in the criminal asylum, as is done at Auburn, New York State, are equally open to objection; the one as unfair to the other inmates of ordinary asylums, and the other as unfair in some cases to the "convict" himself.

The clever prisoner sometimes feigns madness with all the skill of an accomplished actor, and the reckless convict with violent passions, is scarcely at times to be distinguished from the madman. It is important therefore to determine that every case is really one of insanity before it is transferred to an asylum. Every precaution should be taken to detect malingering, and to separate as far as possible those peculiar cases, well known to all who have been connected with prisons, which stand on the debatable ground which separates badness from madness (or rather, in which they both meet), from those in which the insanity is undoubtedly present.

In the English convict prisons, whenever a man becomes awkward, obstinate, or violent—to use the prison term, "refractory,"—he is sent from the public works at Portland or Portsmouth, and from the Pentonville Prison, to Milbank for "observation." This observation is continued for periods varying from a week to six months, or more, till, in fact, the prisoner is either a fit subject for a Lunatic Asylum (so fit, that the medical officers have no difficulty in signing a certificate of insanity), or is so "tamed" that he is sent to his ordinary work and ordinary punishment.

The so-called "observation" consists of placing the prisoner in a special cell, made very strong, lighted either from the roof or high up in the wall, and having attached a separate yard for exercise. Each airing court has a pierced door, so that the warder on duty outside has the prisoner in it almost constantly under observation. If the prisoner tries to tear his clothes, break the door, or is otherwise violent, he is placed in a strait-jacket. If he knocks his head against the wall, a cork cap is put on; sometimes he is hobbled; sometimes his cell is "padded" with cocoa-nut matting, which, whilst sufficiently soft to prevent injury, is also particularly rough and scratchy. No work is allowed, no communication

communication with other prisoners, and no religious services in the church, though the chaplain pays an occasional visit. All braces, shoe-laces, &c., with which he might hang himself, are removed. For bed he has a board instead of the ordinary hammock or iron bedstead. If it appears necessary, the medical officer reduces his diet. He is visited very frequently by both medical officers and warders, and is made to feel that a return to work, to exercise, in connection with the other prisoners, and indeed to all the small pleasures of prison life, depend upon himself. He is under observation and treatment; and the said treatment, though not always of the most pleasant kind, is not strictly punishment. The medical officers report that such treatment does not conduce to insanity, and that the vast majority return to the ordinary prison routine in a longer or shorter period. The cases of supposed feigned insanity are treated in the same way, and often with the same result, but do not escape extra punishment if detected.

There can be no hesitation in recommending a similar course for adoption in New South Wales. Special cells for observation, if they do not already exist, are easily constructed; and there can be no doubt of the importance of a complete investigation of every case before the prisoner is removed to an asylum. If kept even three, four, or five months under observation in the prison, the cases will then reach an asylum almost as quickly as the majority of insane people not criminal, who, from various causes, are detained outside the asylum walls; and if, in addition to this, every case is examined by a specially appointed officer before transfer, few will reach the asylum, but such as are really insane.

At Millbank and Perth Prisons, special wards are set apart for epileptic and weak-minded criminals. The former require some extra watching; and the prison routine, especially where isolation is practised, is thought to conduce to absolute insanity in the latter. Both classes are, therefore, kept apart from the ordinary prisoners, in large, well-ventilated wards; work, eat, and drink in common; and sleep either in cells or dormitories, as seems most fit.

The number of these cases at Millbank is nearly 200.

These precautions to prevent the accession of insanity in a class already strongly predisposed to it, are worthy of the most attentive consideration.

It remains to be seen what an asylum for criminals should be in construction and organization.

On an examination of the Reports on the Asylums at Broadmoor and Perth, it will be seen that they are essentially in their characters places of treatment for the insane, and not merely places for their safe keeping—asylums, and not prisons,—and although at Auburn, U.S., the arrangements for the safe keeping somewhat predominate over those for interesting, amusing, or treating the patients; still, it is essentially, in its construction and organization, an asylum. A stricter discipline, and perhaps a compulsory industry, may be introduced—arrangements may be made for the safe keeping of the inmates; but the main object and intention of all asylums for insane criminals should be their restoration to mental health.

Criminal asylums should be surrounded by a wall, beyond which only such of the insane as can be safely trusted should be allowed to pass, but over which, by placing the asylum on a hill, a full view of the neighbouring country may be obtained. Within this wall should be such an amount of garden-ground as can be cultivated by the inmates of the asylum, and airing grounds for the insane of each sex.

The first necessity in a criminal asylum is classification. The "Queen's pleasure men" are, in every respect, a distinct class from the convict. They should be placed in separate wards, and take exercise in different airing grounds; and only those among them who are extremely violent should be associated in any way with the convict class. The object is to restrain, not to punish, these unfortunate beings. They are pronounced dangerous to society, and are restrained to prevent a repetition of the act which they have committed; but to associate them, well educated and refined as they sometimes are, fully conscious of all their surroundings as they are in many cases, with coarse and ruthless ruffians whose hands are tainted with the most atrocious crimes, would be the direst punishment. But classification should extend further than this. It is well known that the criminal insane are apt to combine for mischief—a peculiarity which is witnessed in no other class of insane, and which seems to depend on their old prison habits—and such combination is always dangerous. It is best met by never allowing the association of a large number—by restricting the number in each division to from fifteen to twenty—and by changing them from one division to another on the slightest appearance of combination for evil purposes. These divisions will serve also as a means of classification according to mental condition.

Temporary association of a larger number may be permitted in an airing-ground for short periods, but not constantly; and it is preferable to separate those of the more violent class completely from the rest, and set apart for them a special court, as is done at Broadmoor.

The accommodation in the asylum should consist of day-rooms and dormitories; the former being used as dining-rooms, since a common dining-hall is not advisable. The single rooms should be sufficient to accommodate about half the entire number. The windows should be protected by light iron bars on the outside; and with this arrangement, the sashes may be of wood, double hung, and made to open freely.

The baths should be placed in each division, so that no unnecessary communication is allowed between the different classes.

One large room will serve for chapel, and for all purposes of amusement.

The attendants should be in the proportion of one to every five or six patients throughout, and in the more violent division there should be one to every four.

The

The dress of the patients should be as little convict-like as possible. Divine service should be performed on Sundays, and every effort should be made to induce the patients to employ themselves usefully.

It has been proposed that industry should be made compulsory in asylums for the criminal insane. There can be no doubt that constant employment has a salutary effect, and tends largely to mental restoration; and from a financial point of view it is also to be encouraged, but it is very doubtful whether occupation of any kind should be made compulsory. The system of rewards for special industry, as practised at Broadmoor, seems much preferable to a system of compulsory labour, which is too suggestive of the prison. If the patients are occupied as far as possible, and given to understand that they will derive an advantage in extra food, or money, for their industry, there are few who will not work. There must always be a difficulty in providing work for the insane of this class, since few can be trusted with tools which might be used as lethal weapons, but a few men may always be employed in gardening; others may be employed at special trades, such as shoemaking, tailoring, &c.; and for the remainder, mat-making, knitting, net-making, or even oakum-teasing, are preferable to idleness. The women may be employed in the laundry, and in knitting and sewing. If money is given for extra work, it may be spent upon minor luxuries by the convict himself, through the attendant, or placed in safe keeping by the officers of the asylum till the patient's discharge.

In most particulars except those above mentioned, a criminal asylum should differ little, if at all, in construction or organization, from an ordinary asylum for indigent patients.

As regards the special government most fitting for an asylum in this Colony, which must necessarily be for some years to come, of small size, it is suggested that it should be separated altogether from the ordinary asylum, and made a special institution,—that it should be placed under the charge of a non-medical superintendent,—that the medical officer of the nearest prison should be responsible for the medical treatment, and pay daily visits,—that the commissariat of the nearest prison should furnish all supplies, the prison chaplain be entrusted with the necessary religious ministrations,—and that the whole establishment should be subject to the frequent visitation of an inspector or other officer appointed by the Government, and not placed like the ordinary asylums, under a board of control.

At Parramatta—the site of the present asylum—there are no obstacles to the carrying out of this system which may not be overcome; and the present criminal asylum, though a model prison, and nothing more, containing scarcely any of the essentials of an asylum, may possibly, with alterations, be made the nucleus of an efficient asylum for insane criminals.

The practice of placing an asylum, even for insane convicts, in connection with a prison, cannot be recommended on general grounds; but it is less objectionable on the whole than uniting it with an ordinary asylum; and union with one or the other is almost necessary, since, for financial reasons, a separate staff of officers and a separate commissariat are not advisable for a small asylum. As the number of inmates increases, and the asylum gradually grows, it may cease to have any connection with the prison, and become a distinct institution like Broadmoor or Dunderburg.

#### ASYLUMS FOR IDIOTS.

Idiots come under the general operation of the laws relating to lunatics, which afford them protection and give them the same legal claims as the insane. But the ordinary wards of asylums are not fit residences for them; their presence in such wards is hurtful to themselves since many are strongly imitative and acquire bad habits and crooked thoughts from those around them, and it is frequently baneful and irritating to the ordinary inmates of the asylum. It is therefore necessary, in dealing with the idiot, to provide him a home apart from the lunatic. The number of the idiot population in a young country will not justify the expense attending the building and organization of a special establishment like those of Great Britain or the United States; and therefore, a division or section of the general asylum should be set apart for idiots only. It seems most advisable, for many reasons, that this section should consist of detached houses or cottages in the asylum grounds, removed from the main building, and kept as distinct as circumstances will permit—sufficiently distinct to maintain a complete separation of the two classes, but near enough to be subject to the superintendence of the chief medical officer of the asylum, and to be fed from the asylum commissariat.\* The main cooking may even be done in the general asylum kitchen, whilst the idiot establishment itself may be so fitted as to be capable of providing for the minor wants of its inmates in this direction.

When a home has been provided with all needful economy, where the idiot may be fed, lodged, clothed, and kept in cleanliness and comfort, away from the prejudicial influences of asylum life, and yet subject to its organization and medical supervision, one large step in the right direction will have been taken. But in establishing such a home, the example of the several States of the American Union may well be followed, and the teaching of the idiot become a matter of state philanthropy, instead of being left to private benevolence, as in England. Such teaching should be directed to develop the germ of mental power which has been accorded to him, to correct faulty habits, and to

\* "I think in the absence of a better plan, a separate cottage, or rather, I should say, a separate house might be organized, keeping the staff as distinct as possible, but under the supervision of the medical superintendent of the lunatic establishment. Nothing is worse than associating idiots with lunatics. The lunatics get annoyed by their presence, and the idiots get entirely neglected."—*Ext. from a letter from Dr. Down, Superintendent of the Earlswood Asylum.*

to improve his physical powers. All human beings are improvable, and each has a right to the means of improvement; this right implies a duty on the part of the others to furnish the means.

"The idiot child whose feeble mental perceptions are strengthened by exercise, who is trained to habits of cleanliness, decency, order, and industry, may remain idiotic and dependent; but is more docile, more happy, more capable, and therefore, a less offensive and more useful member of society than he would otherwise have been." \*

The ordinary child is taught and improved, so that he may become a better man than he would otherwise be, and so the imbecile child should be taught and improved, in order that if he never rises above idiocy he may be better as an idiot. It is important to select trained and judicious teachers. The experience of the American institutions seem to prove that women are much more fitted for this work than men; that they have at once more patience and more tact; and that boys, even when they have attained the age of 17 or 18, never fail to yield to them implicit obedience. It is suggested therefore, that efforts should be made to secure the services of a teacher trained in one of the English schools; and that to her, under the superintendence of the physician of the asylum, the general education of the patients should be intrusted. The girls may be taught sewing, knitting, and household work in the idiot institution itself, and the boys may be employed at trades in the workshops of the general asylum, or employed on the farm and garden.

The main character of the institution should be that of a school, and not an asylum. The greater number of the inmates should pass only a few years of their early life within its walls, and when all that is possible to improve their mental and physical condition has been done they should return to their friends. A few, friendless and homeless, may be allowed to remain permanently within the institution. All those found to be vicious and intractable, and those whose idiocy is complicated with severe epilepsy, may find a home in the ordinary asylum.

The number of idiot children at this time in the asylums of Tarban and Parramatta, is 30; of these 7 are males and 23 females. It is extremely difficult to account for this disproportion in numbers, since in all old countries where in the ordinary population the females considerably outnumber the males, the number of male idiots is invariably found to be larger than the number of the females. In France there are 51.22 males to 48.78 females, and this is about the usual proportion. In idiot schools the proportion of females is generally found to be even less than exists in the general population, since they are more frequently kept at home by their friends, being found teachable to some extent and useful in minor household work.

#### ASYLUMS FOR INEBRIATES.

The necessity for some provision for persons of intemperate habits seems, by the recent Act for Scotland, and by the action taken by the English Commissioners in Lunacy, in obtaining the opinion of counsel upon the legality of allowing such patients to be received as boarders in lunatic hospitals, to be fully recognized in Great Britain; but so far as experience at present goes, the plan of admitting such patients into ordinary asylums is very far from being a satisfactory one.

This class of patients is objected to by almost all asylum superintendents; and a consideration of their peculiarities will suffice to convince any one that ordinary asylums are not fit residences for them, and that their association with the insane is not at all desirable.

The American plan of separate institutions for this class is far preferable in many respects; and such institutions may be expected to render useful service to the community at large. But a consideration of how far such an institution is desirable at present in New South Wales, and whether it should be inaugurated by Government or by private philanthropy, does not come within the scope of this Report.

#### RECEPTION HOUSE.

The Reception House at Darlinghurst, is intended, according to the first and third section of the Act of Council 31 Victoria, No. 19, for the reception of all patients under proper lunacy certificates, pending their removal to a lunatic asylum. No time is however fixed for the duration of the patients' sojourn, and it is important that every care should be taken to make such sojourn as short as possible. The Reception House should not be allowed to become in any way a hospital for the insane; such treatment as is necessary should of course be carried out during the patients' stay, but it should not be continued beyond a few days under the disadvantages of situation, the size, and the inherent character of the institution. Prolonged treatment in such an institution is equally unfair to the superintendents of the ordinary asylums, who receive the patients only after the malady has passed beyond the stage in which it is most under the influence of remedies both medical and moral, and to the patient, whose illness may be prolonged, and his ultimate restoration to health imperilled. Some periodical inspection should be made, to see that the patients are not detained longer than is necessary. Any departure from the law which makes certificates of lunacy necessary before the patient can be received at the Reception House, should only be permitted in very special instances if at all, since such departure may lead to the most serious abuses.

The advantages of the Reception House may fairly be placed at the service of people in good circumstances, who are willing to pay for the accommodation afforded.

FRED<sup>C</sup>. NORTON MANNING, M.D.

October 24th, 1868.

\* Report of Massachusetts Board of State Charities, 1868.

I CANNOT conclude this Report (which has been prepared hurriedly, and under peculiarly disadvantageous circumstances) without an expression of my thanks to all who have assisted me in carrying out the instructions I received from the Government of New South Wales. The Right Honorable the Secretary of State for the Colonies rendered me, with promptness and courtesy, which I cannot too gratefully or respectfully acknowledge, every assistance in his power. To the Commissioners in Lunacy for England and Scotland I am indebted for copies of Statutes and Reports, and for advice which proved most useful. The Inspectors of Lunatics in Ireland furnished me with Reports and other papers, and the Superintendents of the various asylums in England and Scotland received me with marked kindness, and spared no pains to render my visits both profitable and pleasant. In America, Mr. Secretary Seward gave me much useful assistance. From Governor Bullock, of Massachusetts, Dr. Howe, Mr. Sanborn, the Secretary of the Massachusetts Board of State Charities, and the New York Charity Commissioners, I received every possible help; and to the Superintendents of American Asylums I am indebted for an amount of considerate kindness and a hearty hospitality I can never forget. In France, my cordial thanks are due to Dr. Rousillon, Inspector of Asylums, Sir J. Oliffe of the British Embassy, and all the Directors of Asylums I visited, especially to Dr. J. Fabret, Dr. Morel of St. Yon, Rouen, and Dr. Blanche of Paris. In Belgium, to M. Oudart and Dr. Vermeulen, Inspectors of Asylums—the latter of whom accompanied me in my visits to two asylums in Ghent; and to Dr. Ingels, of Guislain's Hospital. In Germany, to Drs. Roller, Ludwig Meyer, and Reye, to whom I owe almost all the information I possess on the subject of German asylums. In Holland, to Dr. Ewerts, who spent a long day in making me fully acquainted with the organization of Meerenberg, and gave me information on the asylum system of Holland. I am indebted for copies of plans to Mr. C. N. Howell, of 3, Lancaster-place, Waterloo Bridge, the Architect of New Surrey Asylum, of whose courtesy this is but scant acknowledgment; to Mr. Stock, of Duke-street, London Bridge, who designed the cottages at the Essex County Asylum; to Mr. Holland, of Prestwich, who designed the additional blocks, and the new hospital at the Prestwich Asylum, and made also the first draft for the New Cheshire Asylum at Macclesfield; to M. Legueux, architect, of Paris, who very politely gave me plans of the new asylums of Ville Evrard; and to Dr. Védie, of the Evreux Asylum, for a tracing of the plan of that institution. The Colonial Architect in New Zealand, Mr. Weaver, supplied me at once with tracing plans of the Auckland Asylum, on stating to him the purpose for which they were intended.

FREDC. NORTON MANNING.

## APPENDIX A.

- I.—Suggestions and instructions in reference to sites, construction and arrangement of Buildings, and plans of Lunatic Asylums, drawn up by the Commissioners of Lunacy, England.
- II.— Ditto ditto ditto Scotland.
- III.—Propositions on the construction and organization of Hospitals for the Insane, agreed to by the Association of Medical Superintendents of American Institutions for the Insane.
- IV.—Bath rules in use in English Asylums, with circular letter by Commissioner in Lunacy, giving general directions with regard to Bathing arrangements.

## APPENDIX B.

- Dietaries in use in English, Scotch, and French Asylums.
- " in the lunatic wards of the poorhouses in Scotland.
- " in the central criminal asylum in Dunderum, Ireland.
- " in the Freiderichsberg Asylum, near Hamburg.

## APPENDIX C.

Programmes of Amusements in English and Scotch Asylums.

## APPENDIX D.

## FORMS.

1. Attendant's Daily Reports.
2. Summary of do.
3. Night Attendant's Reports.
4. Summary of do.
5. Chief Attendant's Reports.
6. Summary of do.
7. Extra Ward Returns.
8. Extra and ordinary Diet Rolls.

## APPENDIX E.

## FORMS FOR ASYLUM MEDICAL STATISTICS.

1. Forms published by Commissioners in Lunacy.
2. Ditto in Report on Colonial Hospitals and Asylums.

## APPENDIX F.

- Fig. 1. Plan of Bath-house at Evreux Asylum.
- " 2. Do. of Water-closet, Washington Asylum.
- " 3. Sketch to explain the *Système D'Arceet*.
- " 4. Position of Water-closet in relation to the Corridor at Cupar Asylum.
- " 5. Do. do. the New Surrey Asylum.
- " 6. Do. do. Prestwich Asylum.
- " 7. Form of Window at the Leicester Asylum, and in the Infirmary at the Sussex, and the Rooms for Excited Patients at Murthly.
- " 8. Gas Lamp at Evreux.
- " 9. Window at the Chester Asylum.
- " 10. Guislain's Window.
- " 11. Kitchen Boiler on a Pivot at Ville Evrard Asylum.
- " 12. Wooden Blocks to teach Position at the Syracuse Idiot Asylum.
- " 13. Do. do. Size do.
- " 14. Do. do. Form do.
- " 15. Plan for a General Bath Room.
- " 16. Ha-ha Fence and Seat at the Derby Asylum.

## APPENDIX G.

## PLANS.

1. Government Asylum, Washington, U.S.
- 2 & 3. Essex County Asylum.
- 4 & 5. Perth District Asylum, Murthly.
- 6 & 7. Chester County Asylum, Macclesfield.
8. St. Ann's Asylum, Paris.
9. Ville Evrard Asylum, near Paris.
- 10 & 11. Cottages, Essex Asylum.
- 12, 13, 14. Surrey County Asylum, Brookwood.
15. Freidrichsberg Asylum, Hamburg.
- 16 & 17. Hospital at Prestwich Asylum.

## APPENDIX A.

## (No. 1.)

## SUGGESTIONS AND INSTRUCTIONS IN REFERENCE TO (1) SITES,—(2) CONSTRUCTION AND ARRANGEMENT OF BUILDINGS,—(3) PLANS—OF LUNATIC ASYLUMS, BY THE COMMISSIONERS IN LUNACY FOR ENGLAND AND WALES.

## No. 1.—SITES.

*General.*

1. The site of an asylum should be of a perfectly healthy character, and offer facilities for obtaining a complete system of drainage. A chalky, gravelly, or rocky subsoil, is most desirable; but if a clayey subsoil only can be obtained, an elevated position is indispensable.

It should not be near to any nuisances, such as steam-engines, shafts of mines, noisy trades, or offensive manufactures; neither should it be surrounded, or overlooked, or intersected, by public roads or footpaths.

*Proportion of land.*

2. The land belonging to the asylum should, when practicable, be in proportion of not less than one acre to four patients, so as to afford ample means for agricultural employment, exercise, and recreation; and should be so situate as to offer facilities for any extension which may become necessary at a future period.

*Form of ground.*

3. The site of the building should be elevated, as respects the surrounding country, and (if to be obtained) undulating in its surface, and cheerful in its position, and having a fall to the south.

*Position and aspect of building.*

4. The building should be placed near the northern boundary of the land; and it is important that the site should afford a plateau of sufficient extent for the structure, and for ready access from the north; the whole of the southern portion of the land being available for the undisturbed use of the patients.

*Locality.*

5. The asylum should be as central as possible to the mass of population in the county or district for which it is to be erected, and should be convenient with respect to its easy access by public conveyance, in order to facilitate the visits of friends and the supply of stores.

*Supply and quality of water.*

6. It is of the utmost importance that there should be a constant and ample supply of good water, of which a careful analysis should be made, with a view of determining the proper materials for pipes and reservoirs, and also in order to ascertain its fitness for the purposes of drinking and washing. The quantity, exclusive of rain water, should, at the driest season, be not less than twenty-five gallons per patient, per diem, and the amount should be accurately gauged.

## No. 2.—CONSTRUCTION AND ARRANGEMENTS OF BUILDINGS.

*General form.*

1. The general form of an asylum should be such as to afford an uninterrupted view of the surrounding country, and the free access of sun and air; and be so arranged as to give the principal day-rooms, on the lowest and middle stories, a southern or south-eastern aspect.

*Entrance and offices to the north.*

2. There should be no road of approach or public entrance on the south side of the asylum.

The general entrance, the porter's room, the reception and visitors' rooms, the committee room, the clerk and steward's office and store rooms, and the other offices, should be placed on the north side of the building.

*Character of building.*

3. As the building is intended for the accommodation of pauper patients, all superfluous external decoration should be avoided; at the same time it should be rendered as cheerful and attractive as due considerations of economy will permit.

*Separation of sexes, and classification.*

4. The accommodation for the male and female patients should be kept distinct on either side of the centre; and the building should be so constructed as to admit of the separation of the male and female patients respectively into at least three classes. As a general rule, the numbers in each class should be such as to require the services of not less than two attendants.

*Stories.*

5. The building may consist of three stories, provided the uppermost story be devoted to sleeping accommodation.

*Buildings for working patients.*

6. Buildings of a cheap and simple character, consisting merely of associated day-rooms and dormitories, without long corridors or other expensive arrangements, should be provided for the use of working patients. These buildings should be placed in connexion with the wash-house and laundry on the female side, and be conveniently situate in reference to the workshops and farm buildings on the male side.

*For idiotic and epileptic patients.*

Provision of an equally simple and inexpensive description should also be made for a portion of the idiotic and epileptic patients, and also for chronic cases.

*Size of chapel and offices.*

7. The chapel, and all offices and parts of the building common to the establishment, such as the kitchen and scullery, the wash-house and laundry, the workshops and store rooms, should be sufficiently spacious to meet the prospective wants of the asylum in case of an increase in the number of patients.

*Position of chapel.*

8. The chapel should not be placed over the kitchen. It should be capable of comfortably accommodating at least three-fourths of the patients. It should have the usual character and arrangement of a church, and contain no special or peculiar provision for the separation of the sexes.

*General*

*General dining-hall.*

9. A general dining-hall, conveniently situate with reference to the kitchen, and capable of being made available for the purposes of recreation, should be provided for the patients of both sexes.

*Officers' residences.*

10. A good residence should be provided for the medical superintendent, with kitchen and other necessary domestic offices.

Suitable apartments of moderate extent should also be provided for the assistant medical officer, the steward, and the matron; but for these officers a separate kitchen is not required.

*Domestic servants.*

There should also be sleeping accommodation for the domestic servants of the institution, with whom might conveniently be associated those patients who habitually work in the kitchen.

*Proportion of single rooms.*

11. The proportion of single rooms throughout the asylum need not exceed one-third. The single rooms should be chiefly in the wards appropriated to the excited and the sick. A few should be available for special cases in the other wards.

*Arrangement of upper stories. Passages and corridors.*

12. In the upper stories, passages of communication of moderate width should be adopted in lieu of wide corridors, and the dormitories should be placed to the south. Generally, long, wide, and expensive corridors should not be constructed, but only so much passage or corridor provided as may be absolutely necessary to connect the several parts of the building.

*Stairs.*

13. The stairs should be built of stone, without winders or long straight flights. The well should be built up, and hand-rails should be provided.

*Staircases.*

14. The staircases should be so arranged that the medical officer, attendants, and others, may pass through from one part to another without necessarily retracing their steps.

*Material for floors. Provision against fire.*

15. All the corridors, and day and sleeping rooms, should have boarded floors; and it is desirable that the boards should be tongued. It is indispensable that they should be of the best wood, and thoroughly well seasoned. The floors of the sculleries, lavatories, and water-closets need not be of wood. There should be a disconnection of the floor and joists at all the internal doorways, by means of a stone sill; and in all cases where a fireproof construction is not adopted, similar separations, at not greater distances apart than fifty feet, should be made in the floors and joists of the galleries or corridors. Provision should also be made for a complete fireproof separation of the timbers of the roof at the same distances, and the parapet should be carried through the roof one foot above the slating.

Oak floors, capable of being cleaned by dry rubbing, are preferable for the corridors and day-rooms.

*Plastering.*

The walls of the galleries and rooms generally should be plastered.

*Number of beds in dormitories.*

16. No associated bed-rooms should be designed to contain less than three beds.

*Height of each story, and dimensions of rooms.*

17. The general height of each story should not be less than eleven feet.

The associated dormitories should not contain less than fifty feet superficial to each bed or patient.

*Dormitories.*

The separate sleeping-rooms generally should be of not less than the following dimensions, viz., nine feet by seven superficial, and eleven feet high. Those appropriated to sick or bed-ridden patients should be of somewhat larger dimensions, and some of these should be provided with a fire-place.

*Size of day-rooms.*

18. The day-rooms, of which there should be at least one in each ward, should contain not less than twenty feet superficial for each patient, and should be calculated for the whole of the patients in each ward, exclusive of corridors or galleries.

*Position of day-rooms.*

19. The day-rooms should be so arranged as to afford ready communication with the grounds, and those appropriated to the aged and infirm should be on the lowermost stories.

*Attendants' rooms.*

20. Rooms should be provided for two or more attendants to each ward, and single attendants' rooms should not be of less dimensions than 120 feet superficial; and, whenever practicable, these should be placed between two dormitories, with glazed doors of communication.

*Windows.*

21. The windows of the day-rooms and corridors should be large and of a cheerful character, and every one be made to open easily, and so as to allow a free circulation of air, but not so far as to expose patients to danger.

The wall below should not be sloped or splayed, but recessed, to admit, if requisite, of a seat.

In the dormitories and single rooms the windows should, as a general rule, not be placed more than four feet from the floor.

*Shutters.*

Sliding shutters should be provided for a majority of the single sleeping-rooms.

*Doors.*

22. The doors of the single rooms should open outwards, and be so hung that when open they will fold back close to the wall.

*Lavatories, baths, and water-closets.*

23. In each ward there should be conveniences for washing the person, a slop-room containing a sink, a store-room or closet, water-closets, and a bath. (In many instances the bath-room may be so arranged as to be available for two or more wards.) It is very desirable that all water-closets, lavatories, &c., should be placed in projections.

*Infirmaries.*

*Infirmaries.*

24. Suitable infirmaries, in the proportion of at least one-tenth of the whole, should be provided, in which the cubical contents of the sleeping-rooms should be greater than in other parts of the building; and every room, including the single rooms, should have an open fire-place.

A small day-room in each infirmary is also desirable.

*Warming.*

25. All the day-rooms and galleries should be warmed by means of open fire-places, or open fire-stoves; and in large rooms two fires should be provided. Fire-places should also be built in all associated dormitories. In large rooms, such as the chapel or general dining-hall, and in the corridor, further provision for warming may be necessary, by means of some simple system of hot-water pipes in connexion with the open fire-stoves or fires.

*Ventilation.*

26. The ventilation generally should be provided for by means of flues, taken from the various rooms and corridors into horizontal channels communicating with a perpendicular shaft, in which a fire-box should be placed for the purpose of extracting the foul air.

*Smoke flues.*

27. In all cases where descending or horizontal smoke flues are used, they should be entirely constructed of brick-work, rendered or pargetted, inside and out; and flues from any of the heating or other furnaces, which are carried up through any of the main walls, should be constructed with a hollow space round them, to prevent the inconvenient transmission of heat into the building during the warmer periods of the year, and to allow of a moderation of the temperature of the building at other periods, when, owing to a change in the atmosphere, it may become inconveniently hot.

*Ventilating flues.*

28. Whenever ventilating flues are constructed of inflammable materials, such as quartering lathed and plastered, a distance of at least twenty feet from their point of connexion with any shaft, furnace, rarefying chamber, or smoke flue, must be constructed entirely of brick, stone, or other fireproof material.

The rarefying chamber for ventilation, together with the adjoining roof, must be entirely fireproof; and a communication should be made with it by means of a slate or iron door-frame.

*Drainage.*

29. The best and most approved system of pipe or tubular drainage should be adopted, with a sufficient fall, so as effectually to carry off to a sufficient distance from the asylum the soil and all other impurities; and the sewage should be collected in closed tanks, and so placed and constructed as to render the contents available for agricultural purposes.

Means of flushing should be provided.

*Airing courts.*

30. The enclosed airing courts need not be more than two in number on each side, and should be of ample extent so as to afford proper means for healthful exercise. They should all be planted and cultivated, and any trees already existing within them should be preserved for shade. The walls should be sunk in a ha-ha.

*Rain water.*

31. The whole of the rain water from the building should be collected in tanks, suitably placed, for the purposes of the wash-house, and, if possible, at such levels as will dispense with the labour of pumping.

Lead is an objectionable material for pipes and reservoirs, as adulterating the water.

*Lightning conductors.*

32. Lightning conductors should be placed on the most elevated parts of the building; and they may be connected with the stacks of iron rain-water pipes, which, in that case, should be fixed so as to answer the double purpose of rain-water pipes and lightning conductors.

*Farm buildings.*

33. Farm buildings, with suitable stables, &c., for visitors' horses, should be provided.

NO. 3.—PLANS REQUIRED.

1. One or more sheets of the Ordnance map, containing the county, borough, or district in respect to which the asylum is to be erected; or some other large map, in which the situation of the proposed asylum, and all the public roads and footpaths in the vicinity thereof, are clearly and fully defined.

Scale of 100 feet to an inch.

2. A general plan of the land (with the block of the buildings and offices), and of the exercise grounds, garden, and road of approach, with the levels of the surface of the ground at the quoins of the building, offices, and fence walls, figured thereon.

Scale of 20 feet to an inch.

3. Plans of the basement, ground, and each other floor of the building and offices; also of the roofs and gutters, and of the principal elevation.

Scale of 10 feet to an inch.

4. Elevation of portions of the principal front, and also of any other parts in which any variation therefrom takes place.

Scale of 5 feet to an inch.

5. Transverse and longitudinal sections, or sufficient portions thereof, to show the construction of every portion of the building.

Scale of 1 foot to  $\frac{1}{2}$  an inch.

6. Plan and section of one separate sleeping-room, dormitory, and eating or day-room respectively, or of part of the same, showing the method of warming and ventilating each; also of the baths and washing-rooms, and water-closets, and the construction of the apparatus for each.

7. An abstract of the draft contract and specification, giving a concise statement of the whole of the intended work; and also a detailed estimate of the building, and the prices at which the different materials and workmanship have been calculated in making the estimate.

8. The thicknesses of the walls, and the scantlings of the timbers of the floors and roofs, to be figured.

9. The general system of heating and ventilation proposed to be adopted throughout the asylum, to be fully described in the drawings and specifications.

10. Each plan to show the several classes and numbers of patients to be accommodated, in the wards, day-rooms, dormitories, cells, galleries, and airing courts, respectively, to which such plan relates.

(No. 2.)

SUGGESTIONS AND INSTRUCTIONS IN REFERENCE TO (1) SITES,—(2) CONSTRUCTION AND ARRANGEMENT OF BUILDINGS,—(3) PLANS,—OF LUNATIC ASYLUMS, BY THE COMMISSIONERS IN LUNACY FOR SCOTLAND.

No. 1.—SITES.

*General.*

1. The site of an asylum should be of a perfectly healthy character, and offer facilities for obtaining a complete system of drainage. A calcareous, gravelly, or rocky subsoil is most desirable; but if a clayey subsoil only can be obtained, an elevated position is indispensable. The land should be capable of profitable cultivation, and it is also desirable that it should afford a supply of water.

It should not be near to any nuisances, such as steam-engines, shafts of mines, noisy trades, or offensive manufactures; neither should it be surrounded, nor overlooked, nor intersected, by public roads or footpaths.

*Proportion of land.*

2. The land belonging to the asylum should, when practicable, be in proportion of not less than one acre to four patients, so as to afford ample means for agricultural employment, exercise, and recreation; and should be so situate as to offer facilities for any extension which may become necessary at a future period.

*Form of ground.*

3. The site of the buildings should be elevated, as respects the surrounding country, and (if to be obtained) undulating in its surface, and cheerful in its position, and having a fall to the south.

*Position and aspect of building.*

4. The principal buildings should be placed near the northern boundary of the land; and it is important that the site should afford a plateau of sufficient extent for the main structure, and for the means of ready access from the north; the whole of the southern portion of the land being available for the undisturbed use of the patients.

*Locality.*

5. The asylum should be as central as possible to the mass of population in the country or district for which it is to be erected, and should be convenient with respect to its easy access by railway or other public conveyance, in order to facilitate the visits of friends and the supply of stores. It should be within such distance of a town as to command the introduction of gas, water, &c., and of one of sufficient size to afford the means of amusement and recreation for the medical staff, the attendants, and such of the patients as might derive benefit from a change in the asylum routine.

*Supply and quality of water.*

6. It is of the utmost importance that there should be a constant and ample supply of good water, of which a careful analysis should be made, with a view to determine the proper materials for pipes and reservoirs, and also in order to ascertain its fitness for the purposes of drinking and washing. The quantity, exclusive of rain water, which should be collected in cisterns on the roof, should, at the driest season, be not less than forty gallons per patient per diem, and the amount should be accurately gauged.

No. 2.—CONSTRUCTION AND ARRANGEMENTS OF BUILDINGS.

*General form.*

1. The general form of an asylum should be such as to afford an uninterrupted view of the surrounding country, and the free access of sun and air; and be so arranged as to give the principal rooms a southern or south-eastern aspect.

*Entrance and offices to the north.*

2. There should be no road of approach or public entrance traversing the grounds. The general entrance, the porter's room, the reception rooms, the committee room, the store rooms, and the other offices, should be so placed as not to interfere with the amenity of the buildings occupied by the patients.

*Character of building.*

3. As the buildings are intended chiefly for the accommodation of pauper patients, all superfluous external decoration should be avoided; at the same time, they should be rendered as cheerful and attractive as due considerations of economy will permit.

*Separation of sexes and classification.*

4. The accommodation for the male and female patients, in the main structure, should be kept distinct on either side of the centre; and this building should be so constructed as to admit of the separation of the male and female patients respectively into at least three classes. As a general rule, the numbers in each class should be such as to require the services of not less than two attendants.

*Stories.*

5. The main building may consist of three stories, provided the uppermost story be devoted to sleeping accommodation.

*Buildings for working patients.—For idiotic and epileptic patients.—Cottages.*

6. Detached buildings of a cheap and simple character, consisting chiefly of associated day-rooms and dormitories, might be provided for the use of working patients. For the females, these buildings might be placed in connexion with the wash-house and laundry; and for the males, be in proximity to the workshops and farm buildings.

Provision of an equally simple and inexpensive description might also be made for a portion of the idiotic, imbecile, and fatuous patients, and also for chronic cases; or cottages might be erected for the accommodation of a large proportion of the working and inoffensive patients, who might be placed either under the care of the families of the attendants, or of cottar tenants of the asylum.

*Situation*

*Situation and size of offices.*

7. All offices and buildings common to the establishment, such as the kitchen and scullery, the wash-house and laundry, the workshops and store-rooms, should be conveniently placed, and be made sufficiently spacious to meet the prospective wants of the asylum in case of an increase in the number of patients.

*Position of chapel.*

8. The chapel should be of easy access, and it should be capable of comfortably accommodating at least three-fourths of the patients. It should have the usual character and arrangement of a church, and contain no special or peculiar provision for the separation of the sexes.

*General dining-hall, library, and reading-room.*

9. A general dining-hall, conveniently situate with reference to the kitchen, should be provided for the patients of both sexes; and also a library and reading-room, capable of serving for the general purposes of instruction and recreation.

*Officers' residences.—Domestic servants.*

10. A suitable residence should be provided for the medical superintendent, with kitchen and other necessary domestic offices.

Apartments of moderate extent should also be provided for assistant medical officers and pupils, the steward, and the matron; but for them a separate kitchen is not required.

There should also be appropriate sleeping accommodation for the domestic servants of the institution.

*Proportion of single rooms.*

11. The proportion of single rooms throughout the asylum need not exceed one-third. The single rooms should be chiefly in the wards appropriated to the excited and the sick, and the patients of dirty habits. A few should be available for special cases in the other parts.

*Arrangement of day-rooms and dormitories.*

12. Passages of communication of moderate width should be adopted in lieu of wide corridors, and the day-rooms and dormitories should be placed on one side, and to the south. Under certain circumstances, the day-rooms or dormitories may occupy the whole breadth of the building.

*Stairs.*

13. The stairs should be built of stone, without winders or long straight flights. The well should be built up, and hand-rails should be provided.

*Arrangement of buildings.*

14. The buildings should be so arranged that the medical officer, attendants, and others, may pass through from one part to another without necessarily retracing their steps.

*Material for floors.—Provision against fire.*

15. All the passages, and day and sleeping-rooms, should have boarded floors; and it is desirable that the boards should be tongued. It is indispensable that they should be of the best wood, and thoroughly well seasoned. The floors of the sculleries need not be of wood. There should be a disconnection of the floor and joists at all the internal doorways, by means of a stone sill; and in all cases where a fireproof construction is not adopted, similar separations, at not greater distances apart than fifty feet, should be made in the floors and ceilings. Provision should also be made for a complete fireproof separation of the timbers of the roof at the same distances, and the parapet should be carried through the roof one foot above the slating.

*Plastering.*

The walls generally should be plastered or lined with Roman cement.

*Number of beds in dormitories.*

16. No associated bedrooms should be designed to contain less than six beds, nor more than fourteen.

*Height of each story, and dimensions of rooms.*

17. The general height of each story should not be less than eleven feet.

The associated dormitories should not contain less than fifty feet superficial to each bed or patient.

*Dormitories.*

The separate sleeping-rooms generally should be of not less than the following dimensions, viz., 9 feet by 7 superficial, and 11 feet high. Those appropriated to sick or bed-ridden patients should be of somewhat larger dimensions, and some of these should be provided with a fire-place.

*Size of day-rooms.*

18. The day-rooms, of which there should be at least one in each ward, should contain not less than 20 feet superficial for each patient, calculated for the whole of the patients in each ward.

*Position of day-rooms.*

19. The day-rooms and work-rooms for females should be so arranged as to afford ready communication with the grounds, and those appropriated to the aged and infirm should be on the lowermost stories.

*Windows.*

20. The windows of the day-rooms and corridors should be large and of a cheerful character, and every one be made to open easily, and so as to allow a free circulation of air, but not in such a manner as to expose patients to danger.

The wall below should not be sloped or splayed, but recessed, to admit, if requisite, of a seat.

*Shutters.*

Shutters should be provided for a majority of the single sleeping-rooms.

*Door.*

21. The doors of the single rooms should open outwards, and be so hung that when open they will fall back close to the wall.

*Lavatories, baths, and water-closets.*

22. In each ward there should be conveniences for washing the person, a slop-room containing a sink, a store-room or closet, and water-closets. It is very desirable that all water-closets, lavatories, &c., should be placed in projections. A bath should be provided in the wards occupied by the dirty patients; but there should be besides general bath-rooms conveniently situated, for the general use of the patients, and the bath should be so placed as to leave all the sides free.

*Infirmaries.*

*Infirmaries.*

23. Suitable infirmaries, in the proportion of at least one-tenth of the whole, should be provided, in which the cubical contents of the sleeping-rooms should be greater than in other parts of the building; and every room, including the single rooms, should have an open fire-place.

A small day-room in each infirmary is also desirable.

*Warming.*

24. All the day-rooms and galleries should be warmed by means of open fire-places, or open fire-stoves; and in large rooms two fires should be provided. Fire-places should also be built in all associated dormitories; but in them and other large rooms, such as the chapel or general dining-hall, and in the corridors and passages, further provision for warming may be necessary.

*Ventilation.*

25. The ventilation generally should be provided for by means of flues, taken from the various rooms and corridors into horizontal channels communicating with a perpendicular shaft, in which a fire-box should be placed for the purpose of extracting the foul air.

*Smoke flues.*

26. In all cases where descending or horizontal smoke flues are used, they should be entirely constructed of brick-work, rendered or pargetted, inside and out; and flues from any of the heating or other furnaces, which are carried up through any of the main walls, should be constructed with a hollow space round them, to prevent the inconvenient transmission of heat.

*Ventilating flues.*

27. Whenever the building generally is not fire-proof, and when ventilating flues are constructed of inflammable materials, such as quartering lathed and plastered, a distance of at least 20 feet from their point of connexion with any shaft, furnace, rarefying chamber, or smoke flue, should be constructed entirely of brick, stone, or other fire-proof material.

The rarefying chamber for ventilation, together with the adjoining roof, should be entirely fire-proof; and a communication should be made with it by means of a slate or iron door-frame.

*Drainage.*

28. The best and most approved system of pipe or tubular drainage should be adopted, with a sufficient fall so as effectually to carry off to a sufficient distance from the asylum the soil and all other impurities; and the sewage should be collected in closed tanks, and so placed and constructed as to render the contents available for agricultural purposes.

Means of flushing should be provided.

*Airing courts.*

29. The enclosed airing courts need not be more than two in number on each side, and should be of ample extent so as to afford proper means for healthful exercise. They should all be planted and cultivated, and any trees already existing within them should be preserved for shade. The walls should be sunk in a ha-ha.

*Rain water.*

30. The whole of the rain water from the building should be collected in tanks, suitably placed, for the purposes of the wash-house, and, if possible, at such levels as will dispense with the labour of pumping.

Lead is an objectionable material for pipes and reservoirs, as adulterating the water.

*Lightning conductors.*

31. Lightning conductors should be placed on the most elevated parts of the building; and they may be connected with the stacks of iron rain-water pipes, which, in that case, should be fixed, so as to answer the double purpose of rain-water pipes and lightning conductors.

*Cottages.*

32. The cottages, if adopted, should be of different sizes, each calculated to accommodate from three to five patients, in addition to the family of the occupier. The male patients should be placed either in single rooms, or in dormitories for three or four, and each cottage should contain a water-closet.

*Farm buildings.*

33. Farm buildings, with suitable stables, &c., should be provided, and also workshops suitable for the employment of the patients, according to the prevalent occupations of the district.

## NO. 3.—PLANS REQUIRED.

1. One or more sheets of the Ordnance map, containing the county, borough, or district in respect of which the asylum is to be erected; or some other large map in which the situation of the proposed sylum, and all the public roads and footpaths in the vicinity thereof, are clearly and fully defined.

Scale of 100 feet to an inch.

2. A general plan of the land (with the block of the buildings and offices) and of the exercise grounds, garden, and road of approach, with the levels of the surface of the ground at the quoins of the building, offices, and fence walls, figured thereon.

Scale of 20 feet to an inch.

3. Plans of the basement, ground, and each other floor of the main building, subsidiary buildings, and offices; also of the roofs and gutters, and of the principal elevation.

Scale of 10 feet to an inch.

4. Elevation of portions of the principal front, and also of any other parts in which any variation therefrom takes place.

Scale of 5 feet to an inch.

5. Transverse and longitudinal sections, or sufficient portions thereof to show the construction of every portion of the building.

Scale of 1 foot to  $\frac{1}{2}$  an inch.

6. Plan and section of one separate sleeping-room, dormitory, and eating or day-room respectively, or of part of the same, showing the method of warming and ventilating each; also of the baths and washing-rooms, and water-closets, and the construction of the apparatus for each.

7. An abstract of the draft contract and specification, giving a concise statement of the whole of the intended work; and also a detailed estimate of the building, and the prices at which the different materials and workmanship have been calculated in making the estimate.

8. The thicknesses of the walls, and the scantlings of the timbers of the floors and roofs, to be figured.
9. The general system of heating and ventilation, proposed to be adopted throughout the asylum, to be fully described in the drawings and specifications.
10. Each plan to show the several classes and numbers of patients to be accommodated, in the wards, day-rooms, dormitories, cells, galleries, and airing courts, respectively, to which such plan relates.

(No. 3.)

ON THE CONSTRUCTION AND ORGANIZATION OF HOSPITALS FOR THE INSANE.

THE Association of Medical Superintendents of American Institutions for the Insane, have unanimously agreed upon the following propositions relative to the Construction and Organization of Asylums; and also requested their publication by the members in their annual reports.

ON THE CONSTRUCTION OF HOSPITALS FOR THE INSANE.

1. Every hospital for the insane should be in the country, not within less than two miles of a large town, and easy accessible at all seasons.
2. No hospital for the insane, however limited its capacity, should have less than fifty acres of land devoted to gardens and pleasure grounds for its patients. At least one hundred acres should be possessed by every State hospital, or other institution for 200 patients, to which number these propositions apply, unless otherwise mentioned.
3. Means should be provided to raise ten thousand gallons of water, daily, to reservoirs that will supply the highest parts of the building.
4. No hospital for the insane should be built, without the plan having been first submitted to some physician or physicians, who have had charge of a similar establishment, or are practically acquainted with all the details of their arrangements, and received his or their full approbation.
5. The highest number that can with propriety be treated in one building is two hundred and fifty, while two hundred is a preferable maximum.
6. All such buildings should be constructed of stone or brick, have slate or metallic roofs, and as far as possible, be made secure from accidents by fire.
7. Every hospital having provisions for two hundred or more patients, should have in it, at least, eight distinct wards for each sex, making sixteen classes in the entire establishment.
8. Each ward should have in it a parlor, a corridor, single lodging-rooms for patients, an associated dormitory communicating with a chamber for two attendants, a clothes-room, a bath-room, a water-closet, a dining-room, a dumb-waiter, and a speaking tube leading to the kitchen or other central part of the building.
9. No apartments should ever be provided for the confinement of patients, or for their lodging-rooms, that are not entirely above ground.
10. No class of rooms should ever be constructed without some kind of window in each, communicating directly with the external atmosphere.
11. No chamber for the use of a single patient should ever be less than eight by ten feet, nor should the ceiling of any story occupied by patients be less than twelve feet in height.
12. The floors of patients' apartments should always be of wood.
13. The stairways should always be of iron, stone, or other indestructible material, ample in size, in number, and easy of ascent, to afford convenient egress in case of accident from fire.
14. A large hospital should consist of a main central building with wings.
15. The main central building should contain the offices, receiving-rooms for company, and apartments entirely private for the superintending physician and his family, in case that officer resides in the hospital building.
16. The wings should be so arranged, that if rooms are placed on both sides of a corridor, the corridors should be furnished at both ends with movable glazed sashes, for the free admission of both light and air.
17. The lighting should be by gas, on account of its convenience, cleanliness, safety, and economy.
18. The apartments for washing, clothing, &c., should be detached from the hospital building.
19. The drainage should be under-ground, and all the inlets to the sewers should be properly secured, to prevent offensive emanations.
20. All hospitals should be warmed by passing an abundance of pure, fresh air from the external atmosphere over the pipes or plates containing steam under low pressure, or hot water, the temperature of which, at the boiler, does not exceed 212 degrees Fah., and placed in the basement or cellar of the building to be heated.
21. A complete system of forced ventilation in connection with the heating, is indispensable to give purity to the air of an hospital for the insane; and no expense that is required to effect this object thoroughly, can be deemed either misplaced or injudicious.
22. The boilers for generating steam for warming the building, should be in a detached structure, connected with which may be the engine for pumping water, driving the washing apparatus, and other machinery.
23. All water-closets should, as far as possible, be made of indestructible materials, be simple in their arrangement, and have a strong downward ventilation connected with them.
24. The floors of both rooms, water-closets and basement stories, should, as far as possible, be made of materials that will not absorb moisture.
25. The wards for the most excited class should be constructed with rooms on but one side of a corridor, not less than ten feet wide, the external windows of which should be large, and have pleasant views from them.
26. Wherever practicable, the pleasure grounds of a hospital for the insane should be surrounded by a substantial wall, so placed as not to be unpleasantly visible from the building.

ON THE ORGANIZATION OF A HOSPITAL FOR THE INSANE.

1. The general controlling power should be vested in a board of trustees or managers, if of a State institution, selected in such a manner, as will be likely most effectually to protect it from all influences connected with political measures or political changes; if of a private corporation, by those properly authorized to vote.

2. The board of trustees should not exceed twelve in number, and be composed of individuals possessing the public confidence, distinguished for liberality, intelligence, and active benevolence; above all political influence, and able and willing faithfully to attend to the duties of their station. Their tenure of office should be so arranged that, where changes are deemed desirable, the terms of not more than one-third of the whole number should expire in any one year.

3. The board of trustees should appoint the physician, and on his nomination, and not otherwise, the assistant physician, steward, and matron. They should, as a board, or by committee, visit and examine every part of the institution at frequent stated intervals, not less than semi-monthly, and at such other times as they may deem expedient, and exercise so careful a supervision over the expenditures and general operations of the hospital, as to give to the community a proper degree of confidence in the correctness of its management.

4. The physician should be the superintendent and chief executive officer of the establishment. Besides being a well-educated physician, he should possess the mental, social, and physical qualities, to fit him for the post. He should serve during good behaviour, reside on, or very near the premises, and his compensation should be so liberal as to enable him to devote his whole time and energies to the welfare of the hospital. He should nominate to the board suitable persons to act as assistant physician, steward, and matron; he should have entire control of the medical, moral, and dietetic treatment of the patients, the unrestricted power of appointment and discharge of all persons engaged in their care, and should exercise a general supervision and direction of every department of the institution.

5. The assistant physician, or assistant physicians, where more than one are required, should be graduates of medicine, of such character and qualifications as to be able to represent and to perform the ordinary duties of the physician during his absence.

6. The steward, under the direction of the superintending physician, and by his order, should make all purchases for the institution, keep the accounts, make engagements with, pay and discharge those employed about the establishment; have a supervision of the farm, garden, and grounds, and perform such other duties as may be assigned to him.

7. The matron, under the direction of the superintendent, should have a general supervision of the domestic arrangements of the house, and under the same direction, do what she can to promote the comfort and restoration of the patients.

8. In institutions containing more than 200 patients, a second assistant physician, and an apothecary, should be employed, to the latter of whom, other duties, in the male wards, may be conveniently assigned.

9. If a chaplain is deemed desirable as a permanent officer, he should be selected by the superintendent, and, like all others engaged in the care of patients, should be entirely under his direction.

10. In every hospital for the insane, there should be one supervisor for each sex, exercising a general oversight of all the attendants and patients, and forming a medium of communication between them and the officers.

11. In no institution should the number of persons in immediate attendance on the patients, be in a lower ratio than one attendant for every ten patients; and a much larger proportion of attendants will commonly be desirable.

12. The fullest authority should be given to the superintendent to take every precaution that can guard against fire or accident within an institution, and to secure this an efficient night-watch should always be provided.

13. The situation and circumstances of different institutions may require a considerable number of persons to be employed in various other positions; but in every hospital, at least all those that have been referred to, are deemed not only desirable but absolutely necessary, to give all the advantages that may be hoped for from a liberal and enlightened treatment of the insane.

14. All persons employed in the care of the insane, should be active, vigilant, cheerful, and in good health. They should be of a kind and benevolent disposition, be educated, and in all respects trustworthy, and their compensation should be sufficiently liberal to secure the services of individuals of this description.

*The above propositions which were adopted in 1852, were supplemented in 1866 by the five following.*

1. The large States should be divided into geographical districts, of such size, that a hospital situated at or near the centre of each district, will be practically accessible to all the people living within its boundaries, and available for their benefit in case of mental disorder.

2. All State, county, and city hospitals for the insane should receive all persons belonging to the vicinage, designed to be accommodated by each hospital, who are affected with insanity proper, whatever may be the form or nature of the bodily disease accompanying the mental disorder.

3. All hospitals for the insane should be constructed, organized, and managed substantially in accordance with the propositions adopted by the Association in 1851 and 1852, and still in force.

4. The facilities of classification or ward separation, possessed by each institution, should equal the requirements of the different conditions of the several classes received by such institution, whether these different conditions are mental or physical in their character.

5. The enlargement of a city, county, or State institution for the insane, which, in the extent and character of the district in which it is situated, is conveniently accessible to all the people of such district, may be properly carried, as required, to the extent of accommodating 600 patients, embracing the usual proportions of curable and incurable insane in a particular community.

(No. 4.)

Office of Commissioners in Lunacy,  
19, Whitehall Place, S.W.,  
8th June, 1857.

Sir,

The Commissioners in Lunacy, having had under their special consideration the subject of the construction, employment, and mode of administration, of baths in asylums, have prepared the accompanying regulations, which they strongly recommend for adoption in all institutions for the insane:—

1. That in no case shall any kind of bath be used as a punishment.

2. That, except for purposes of cleanliness, no bath be used without the authority of one of the medical officers.

3. That no bath be used as a medical agent, or for the purpose of subduing excitement, unless in presence of the medical officer or his assistant, the matron, or deputy matron, or head attendants, and that a record of the employment of the same, and of the exact period of its duration, be kept.

4. Should any new form of bath, or a shower or douche bath, of more than three minutes in duration, be ordered, that the effects in every case be carefully watched by one of the medical officers, and fully reported, with the time of its duration, in the case book.

5. That whenever a wooden frame with a door is used for the douche or shower bath, it be so constructed that the patient be easily seen, and air readily admitted.

6.

6. That, when not in use, the shower bath be kept constantly locked, and the key placed in charge of one of the superior officers.

7. That the days fixed for general bathing be so arranged as to afford to each patient a sufficient supply of warm water. That the matron or her assistant on the female side, and the head attendant on the male side, be present to superintend the process, ascertain by the thermometer the temperature of the water, see that it is properly changed, and an adequate supply of towels, matting, seats, &c., is provided, and especially to observe the bodily condition of the patients, and to report to the medical superintendent any wounds, bruises, or eruptions, or other matters requiring attention.

8. That the hot and cold water taps be so placed, constructed, or protected, as to prevent patients turning on the water, and that the bath be fully prepared, and the temperature ascertained, before a patient is placed in it.

I am, Sir,  
Your obedient servant,  
JOHN FORSTER,  
Secretary.

#### ESSEX COUNTY ASYLUM.

##### *Rules for the Bath Room.*

1. Every patient shall bathe at least once a week, and oftener if necessary.
2. The temperature of the bath must not be lower than 90, nor higher than 98 degrees, unless ordered specially by the medical officer.
3. The attendants are not to allow the patients to have the use of the keys of the baths, nor to bathe themselves, but one attendant is always to be present, who shall use a thermometer to test the temperature of the bath before any patient is permitted to enter it.
4. More than three or four patients are not to be bathed in the same water, but a less number if the supply of water is sufficient; and whenever more than one is so bathed, the warmth of the bath is to be kept up by the addition of fresh hot water, sufficient to maintain the temperature at from 90 to 98 degrees, but no additional hot water must ever be added to a bath during the time a patient is in it.
5. Under no circumstances is a shower or other cold bath to be administered without the special order of the medical superintendent, or in his absence of the medical assistant; and whenever such a bath is given, it shall be in the presence of the matron or head female attendant, or of the male head attendant, as the case may be.
6. All shower baths ordered for medical purposes will be recorded in the case books, by the superintendent or his assistant, showing the date and duration of the shower bath, and the name of the patient subjected to it, and the reasons for its having been ordered; and any attendant placing a patient in a shower bath without a special order shall be guilty of misconduct.
7. The attendants are requested to be careful in seeing that there is an adequate supply of towels, seats, &c., and that each bather is made thoroughly dry before dressing, also that his nails are attended to, and his hair properly cut, and also carefully to observe the bodily condition of each patient, and to report to the medical superintendent or assistant, any wounds, bruises, or eruptions, or other matters requiring attention.
8. In no case whatever is one patient to be allowed to assist another when in the bath, but in every instance the attendant must be present.

D. C. CAMPBELL, M.D.,  
Medical Superintendent.

#### COUNTY ASYLUM, STAFFORD.

##### *Rules to be observed in using the warm bath.*

Gallery No.	Bathing days,
-------------	---------------

1. Every patient to be put into a warm bath at least once in a week, on the day specified above, unless orders are given to the contrary.
2. No patient to be put into a bath in less than an hour and a half after each meal.
3. The water to be changed for every patient, and the bath to be about half filled.
4. The temperature of the water to be about 96° Fahrenheit; and no patient to be put into a bath at less than 90° or above 130° Fahrenheit—unless ordered by the medical officer.
5. Previous to using the bath, the attendant must see that the water is the proper temperature; that the floor of the bath-room is covered with matting; and that each patient is undressed and dressed in the bath-room without any unnecessary exposure to cold.
6. No patients to remain less than five minutes in the bath. During this time their persons are to be thoroughly cleansed with soap and water, and upon coming out of the bath, the attendant is to carefully rub them dry with clean towels.
7. When there is not a sufficient supply of hot water to enable all the patients in a gallery to be bathed on the same day, one half shall be bathed one day and the remainder the next; a list of the names of those not bathed being kept by the attendant, to prevent any patient being omitted.
8. The bath and bath room are to be kept thoroughly clean, and to be used only for the purposes for which they are intended.
9. The hot and cold water, and also the waste water taps, are always to be turned off after being used, and the key to be kept by the attendant.
10. No attendants, on any excuse, to leave a bath-room while a patient is in the bath, or to trust the key of the bath out of their possession.

##### *Rules to be observed in using the Shower Bath.*

1. The shower bath to be administered only by the order of the medical officer.
2. The medical officer, matron, or head attendants, always to be present during the time of using it.
3. The time for remaining in the shower bath never to exceed three minutes.
4. The patient to be thoroughly dried after having the bath.
5. The bath to be used only as a medical agent. The keys for turning the taps of the warm bath, and the keys of the shower baths, to be kept locked up, and out of the reach of patients.

#### COUNTY ASYLUM, PRESTWICH.

##### *Rules to be observed as to bathing the patients.*

- | Female ward, No. | Bathing day, | at |
|------------------|--------------|----|
|------------------|--------------|----|
1. Every patient shall be bathed once a week (unless there is a special medical order to the contrary), and as much oftener as is necessary. Every patient shall be bathed immediately on admission, unless it is ordered otherwise by the medical officer.

2. Every bath to be previously prepared by the assistant matron (or in her absence, the matron), the temperature of the water not to exceed 96°, nor to fall below 90° Fahrenheit, unless specially ordered. The assistant matron (or in her absence, the matron) to see that the patients are properly bathed, their persons cleansed with soap, carefully rubbed dry after the bath, and that they are not unduly exposed to cold during dressing or undressing.

3. The water to be changed for every patient.

4. The assistant matron (or in her absence, the matron) to be present whilst the patients are bathed.

5. The bath taps, of both cold and hot water, to be kept at all times locked, under charge of the attendants, and inaccessible to the patients.

6. An immediate report to be made to the medical officer by the assistant matron, of any bruises, sores, or eruptions existing upon the person of any patient when bathed.

*The shower bath.*

7. The shower bath to be administered only by the special order of the medical officer.

8. The matron shall at all times be present at the administration of the shower bath.

9. No patient shall remain longer than one minute in a shower bath, excepting by the order, and in the presence, of a medical officer, and then for not longer than three minutes.

10. The key of the shower bath not to be accessible to the attendants, but to be kept by the matron and medical officer.

11. Every patient after using the shower bath to be carefully rubbed dry, and quickly dressed, without undue exposure to cold.

**BROOKWOOD ASYLUM.**

*Baths.—Regulations for the guidance of the attendants.*

1. Every patient to be bathed immediately after admission, and once a week afterwards, unless exempted by medical order. Should there be the slightest doubt as to the advisability of bathing any patient, owing to sickness, feebleness, or excitement, immediate reference to be made to one of the medical officers.

2. The name of every patient not having the customary bath to be inserted in the daily report sheet.

3. In preparing a bath, the cold water is always to be turned on first.

4. Before the patient enters the bath, the temperature is to be ascertained by the thermometer, and is not to be less than 88 degrees, nor above 98 degrees. In case of the thermometer becoming inefficient from injury, &c., all bathing operations to be suspended until another be obtained.

5. Not more than one patient to be bathed in the same water. Any infringement of this rule to be entered in the daily report sheet.

6. Under no circumstances whatever are two patients to occupy the bath at the same time.

7. During the employment of the bath, the room is never to be left without an attendant. At all other times the door is to remain locked, and the floor to be kept dry.

8. Under no pretence whatever is the patient's head to be put under water.

9. In the bath the body of each patient is to be well cleansed with soap. After coming out of the bath, especial care must be taken to dry those patients who are feeble and helpless, and to clothe them as rapidly as possible.

10. The keys are never to remain on the bath taps, nor are they to be employed by patients. When not in use, they are to be locked in the attendants' room.

11. Any marks, bruises, wounds, sores, local pain, evidences of disease of any kind, complained of by the patients, or noticed by the attendant during any of the bathing operations, to be immediately reported to one of the medical officers, and also to be entered in the daily report sheet.

12. Any deficiency in the supply of warm water, soap, towels, &c., to be entered in the daily report sheet.

13. The attendants are to bear in mind that, except under medical order, the baths are to be employed solely for the purposes of cleanliness.

14. Neither the cold nor the shower bath is ever to be employed, except under medical order, and then only in presence of one of the officers. When not in use the door of the latter is to remain locked, and the key to be kept in the dispensary.

15. It is the duty of the head attendant to be present at all baths employed under medical order, and to take care that the duration does not exceed the time specified in such order. He is also to supervise the whole of the ordinary bathing operations, to ascertain that the rules are rigidly carried out, and to report to the medical superintendent every infringement that may come to his knowledge.

T. N. BRUSHFIELD, M.D.,  
Medical Superintendent.

June, 1867.

## DINNER.

	Male Patients.	Female Patients.
Sunday .....	Bacon and greens, with fruit or suet pudding.	Roast pork.

DIET

DIET TABLES for Lunatic Wards of Poorhouses, issued by the Commissioners in Lunacy for Scotland.

Breakfast.		Dinner.	Supper.	
Males.	Females.		Males.	Females.
6 ozs. of oatmeal made into porridge, with $\frac{1}{2}$ pint butter milk or skimmed milk, or $\frac{1}{2}$ pint new milk.	5 ozs. of oatmeal made into porridge, with $\frac{1}{2}$ pint butter milk or skimmed milk, or $\frac{1}{2}$ pint new milk. Or 6 ozs. bread, $\frac{1}{2}$ oz. butter, with tea or coffee.	On three days in the week— 1 $\frac{1}{2}$ pint barley broth. 4 ozs. cooked meat, exclusive of the meat in the broth. 8 ozs. bread, or 1 lb. potatoes. The potatoes and meat shall occasionally be served as Irish stew, with the proper quantity of onions; or as meat and potato pudding. On one day in the week— The preceding dinner, with pease-soup instead of broth. On one day in the week— 1 $\frac{1}{2}$ pint pease-soup or broth. 12 ozs. meal pudding or suet dumpling for males, 10 ozs. for females. On one day in the week— 1 lb. potatoes or 4 ozs. rice. 8 ozs. sweet milk. 2 ozs. cheese. 6 ozs. bread. On one day in the week— 6 ozs. cooked meat. $\frac{1}{2}$ lb. vegetables. $\frac{1}{2}$ lb. potatoes. 6 ozs. bread.	6 ozs. of oatmeal made into porridge, with $\frac{1}{2}$ pint butter milk or skimmed milk, or $\frac{1}{2}$ pint new milk. Or 8 ozs. bread, with tea or coffee.	5 ozs. of oatmeal made into porridge, with $\frac{1}{2}$ pint butter milk or skimmed milk, or $\frac{1}{2}$ pint new milk. Or 6 ozs. bread, $\frac{1}{2}$ oz. butter, with tea or coffee.

Broth shall be made with 2 ozs. of meat, exclusive of bone, 2 ozs. of barley,  $\frac{1}{2}$  oz. of pease, 1 $\frac{1}{2}$  of carrots, turnips, or other vegetables, for each ration of 1 $\frac{1}{2}$  pint.

Pease-soup shall be made from 2 ozs. of meat, exclusive of bone, and shall contain in each ration of 1 $\frac{1}{2}$  pint, 2 ozs. of whole or split pease, 1 $\frac{1}{2}$  ozs. pease-flower, 1 oz. vegetables and seasoning.

12 ozs. of meal pudding shall contain 6 ozs. oatmeal, 2 $\frac{1}{2}$  ozs. suet,  $\frac{1}{2}$  oz. onions.

12 ozs. of suet dumplings shall contain 6 ozs. flour, and 2 $\frac{1}{2}$  ozs. suet.

The ration of coffee shall contain  $\frac{1}{2}$  oz. coffee,  $\frac{1}{2}$  oz. sugar, 1 oz. new milk.

The ration of tea shall contain  $\frac{1}{2}$  oz. tea,  $\frac{1}{2}$  oz. sugar, 1 oz. new milk.

On one day in the week, 8 ozs. of fish may replace 4 ozs. of meat; but fish shall be served at least once a month.

Out-door workers shall receive an extra allowance of 2 ozs. of cheese, or 3 ozs. of meat, with 3 ozs. of bread, and half a pint of beer.

The medical officer shall prescribe whatever other extra diet appears to him to be necessary.

Should the scarcity of any articles of diet render it advisable to depart temporarily from the scale laid down in the table, the medical officer shall take care that substances of equally nutritive value are supplied in their stead.

## APPENDIX C.

## PROGRAMMES OF AMUSEMENTS IN BRITISH ASYLUMS.

## DERBY COUNTY ASYLUM.

## THURSDAY EVENING ENTERTAINMENTS.

On Thursday, February 25th, Dr. Hitchman will continue a series of

*Biographical Readings on the Worthies of Derbyshire.*

February 25th—Sir Francis Chantry.

March 3rd—John Flamstead.

March 10th—Thomas Linacre.

March 17th—Sir Richard Arkwright.

March 24th—James Brindley.

March 31st—Joseph Wright.

Quadrilles, country dances, music, songs, and recitations, as usual.

Patients' Entertainment. Christmas Eve, 1866. By special desire, and under the immediate inspiration of the Moon, Her Majesty's servants of the Theatre Royal, Mickleover, will produce a drama, dear to all maternal and paternal hearts, and very suggestive as to "elegant accomplishments" and "scholastic reports," entitled—

"*Nursery Chickweed*," or "*The Heartless Art of 'Taking in' Children*."

In addition to the above performance, the Manager has condescended to allow two Romans, from the banks of the Tiber, to appear in their native costume, and as "*Tall Talk*," "*Fustian*," and "*Rant*," are unknown to the peaceful inmates of the asylum, except through the reported speeches of certain insane demagogues who are permitted to be at large, the said Romans will be allowed to indulge in a classical quarrel.

## PROGRAMME.

Part First.—To commence at 6 o'clock p.m.

Air.....	"Auld Lang Syne"	Band.
Country Dance.....	"Rory O'More."	Band.
Song.....	"West Countryman."	W. B.

Carriages to be ordered at 9 p.m.

THE

## THE GRAND ANNUAL BALL AND CHRISTMAS TREE,

With a distribution of upwards of 1,000 presents, will take place in the Ball-room, on Friday, January 3rd, 1868, commencing at 6 p.m. precisely.

*The Christmas Tree.*

There are trees in the land both fair and grand,  
In the field, or the vale, or the hill;  
There's the stately oak and the silvery beech,  
And the willow over the rill:  
But search as you may, for a year and a day,  
Never a one will you see,  
Be it grand or fair, that can compare  
With our glorious Christmas tree!  
Then hurrah! to the tree that we love,  
A merry song sing we!  
To the tree, all trees of the world above.  
Hurrah for our Christmas tree!

You may search if you please, far over the seas,  
You may read in the cleverest book,  
But you never will know, wherever you go,  
Nor find wherever you look,  
Be it thick, be it tall, be it thin, be it small,  
Of low or of high degree,  
Any plant with the fame of so noble a name  
As that of the Christmas tree!

Then hurrah! to the, &c., &c.

Did ever you know, in the wide, wide world,  
With all its fruits and flowers,  
Apple, cherry, or pear, a tree that could bear  
Such marvellous fruit as ours?  
Wherever you've been, no fruit have you seen,  
No! and you never will see,  
Though you look where you will, and go looking on still,  
Like that of our Christmas tree.

Then hurrah! to the, &c., &c.

And its tapers as bright as the sweet starlight  
Throw out a hundred gleams—  
And pray do you know any tree that can show  
A fruit of silvery beams?  
And so we declare, contradict if you dare!  
That all the world must agree,  
Such a tree there is none, 'neath the moon or the sun,  
As our glorious Christmas tree!

Then hurrah! to the, &c., &c.

*Our own Fireside.**Programme of the Dances.*

1.—Country Dance.....	<i>Four hands across.</i>	8.—Valse.....	<i>Hilda.</i>
2.—Polka.....	<i>Guck-auglein.</i>	9.—Quadrille.....	<i>Pretty Bird.</i>

Black Ralph.....	Dr. Arthur Strange.
Alley Croaker.....	Mr. J. P. Wilton.
Tommy Tinkle.....	Mr. J. H. Simpson.
Red Norris.....	Mr. B. Shadgett.
Williams }.....	Mr. F. Clarke.
Trewoof }.....	Mdlle. Clare Le Roy.
Anne Trevanion.....	Miss Florence Montgomery.
Biddy Nutts.....	Miss Elsie Vernon.
Margaret (wife of Black Ralph).....	Master Williams.
Jack } Children of Ralph.....	Miss Warne.
Polly }	

Wreckers, miners, wedding guests, &c., by distinguished Amateurs.

## Act 1.

- Scene 1.—The Rock of the Armed Knight on the coast of Cornwall. Storm. Wreck of the vessel, and rescue of Richard Penderell.  
" 2.—Old Hall in the house of Gilbert Trevanion.  
" 3.—Interior of Ralph's hut.  
" 4.—Large room in Trevanion's house. Wedding festivities. Appearance of Black Ralph. Death of Anne.

## Act 2.

- Scene 1.—Interior of Ralph's hut.  
 " 2.—Room in Trevanion's house.  
 " 3.—The Churchyard of St. Buryan on the cliffs—night.  
 " 4.—Launce Lynwood's hotel by the sea shore.

## Act 3.

- Scene 1.—Hall in Gilbert Trevanion's House.  
 " 2.—The Logan Rock.  
 " 3.—Pendeen Vau, or the Haunted Cave. Rescue of Anne and death of Ralph.

The performance will conclude with the Laughable Farce of the

*Boots at the Swan!*

(First time of performance) by Charles Selby.

- Mr. Henry Higgins, a gentleman with an unfortunate name and fervent attachment to Emily Trevor ..... Mr. J. Bryan.  
 Frank Friskley, a cavalry captain, with a genius for invention, a propensity for profession, and an attachment for everything but his regiment ..... Dr. Arthur Strange.  
 Peter Pippin, a promising young gentleman in livery, with an inquiring mind and an unfortunate attachment ..... Mr. F. Clarke.  
 Jacob Earwig, "the Boots at the Swan," a free and easy youth, with a talent for pantomime, a refined taste, and a strong attachment to refreshment ..... Mr. J. H. Simpson.  
 Miss Cecilia Moonshine, a romantic lady, a victim to sentiment and light reading, with a fond attachment to extraordinary novelties ..... Mdlle. Ethel de Vismes.  
 Emily Trevor, a young lady with a fortune in perspective, and a confessed attachment to Mr. Henry Higgins ..... Miss Elsie Vernon.  
 Sally Smith, a genteel housemaid, with a good character from her last place, and a slight attachment to a fancy baker ..... Mdlle. Clare le Roy.

Acting Manager, Mr. J. H. Simpson. Scenic Artist, Madame Gassini.  
 Stage Manager, Dr. Strange. Stage Decorators, Messrs. Warne, Mills, and Jenner.  
 Machinists, Messrs. Clutterbuck, Jennings, and Summers.  
 Leader of the Band, Mr. F. Mann.

Doors open at half-past 5. Performance to commence at a quarter to 6 precisely.  
 Carriages may be ordered at a quarter to 10 o'clock.

## MONTROSE ROYAL ASYLUM.

## GRAND CHRISTMAS PANTOMIME.

Positively for the last time this season, on the evening of Friday, 24th Jan., at seven o'clock. Prodigious success! The most brilliant Pantomime of the season.

*Bluebeard, or Harlequin and the Magic Mangold Wurzel!*

The Burlesque is written expressly for the Royal Phaëtonic Theatre, by our own Penny-a-liner, author of "Greybeard; or Harlequin and the Turkey Gizzard;" "Hokey-Pokey Wankey-Fun; or, Harlequin and the Goose's Merry Thought"; and "King Higglety-Pigglety; or, Harlequin and the Magic Pease-Soup." Overtures, splendid orchestral combinations, and other entirely new music, by Commodore Blowhard, H.M.S.

Scenery unparelled, by ..... Signor Daub.  
 The Ballets arranged by ..... Maddle. Wheelabout.  
 The extraordinary and incomprehensible machinery elaborated by ..... Mr. Screwdriver.  
 The gas, magnesium, oxy-hydrogen, and electric illuminations, transformation effects, and frightful explosions (of laughter), by ..... Signor Solderpipe.  
 The dresses and properties entirely new, and got up with the most reckless disregard of expense, by ..... Miss Threadneedle.  
 Tricks and magic business by ..... Messrs. Jalup and Fiddlestick.  
 Balloons, locomotive engines, Armstrong guns, Snider rifles, gun cotton, sticking plaster, nitro-glycerine, seidlitz powders, and other combustibles, not hitherto produced in any pantomime, by ..... Mr. Gammon, late of Spinnage and Company.  
 The Stage arrangements are under the new Stage Manager ..... Mr. Bristol Birdseye.  
 The whole being superintended by Barnum Blarney, Esq., P.U.F.F., &c., &c., late of U.S., now Manager (in the summer time), of the Imperial Opera House at Davis' Straits.  
 The following well-known pantomimic artists having been trained from infancy to tumble head-over-heels (after being brought up on the bottle) under our immediate supervision, are guaranteed as greatly superior to anything in the same line north of the Equator:—

Clown	.....	Mr. Letterbag.
Pantaloon	.....	Mr. Sarsaparilla.
Columbine	.....	Miss Wheelabout.
Harlequin	.....	Mr. Last.

Jokes, practical do., and other comic business, by everybody in particular.

*Burlesque!*

Act. I.—Scene First—An apartment in a Turkish Palace. Bluebeard asleep on the sofa. Guards and pages around him.  
 Curtain rises to the tune of "Come where my love lies dreaming."

## Grand Medley Chorus,

By nobody in particular, followed by the pathetic business, in which many fine sentiments, and selections from the newest Operas will be produced.

Scene Second.—Interior of the paternal abode. Filial obedience, &c., &c.

By-and-by, grand march and procession of the Far-famed Penny Whistle Band, which has been engaged at an enormous outlay.

Solo on the penny whistle, from Don Giovanni, by Signor Mario.

Act II.—Scene—Grand apartment in Bluebeard's Castle. Where Fatima puts her foot in it. In this Act innumerable murders will be committed in the most cold-blooded manner conceivable, quite eclipsing Boucicault and other sensational pretenders.

Finale—Terrific combat. Bluebeard up a tree.

Gorgeous

## Gorgeous Transformation Scene!

(Behind the curtain.)

This part of the performances being invisible, the spectators are expected to behold it with profound amazement.

Oranges and gingerbeer.

*Harlequinade!*

Scene I.—A fashionable perfumer's, in a well-known locality. "Sunnyside Hornpipe," by Harlequin and Columbine. General row. Perfumer comes to grief. The bobbies shaved, and otherwise maltreated.

Scene II.—Somewhere else. Bobbies eat rat-pie. Highway robberies, burglaries, child murder, and other harmless recreations.

Montrose thoroughly drained at last!

After everybody is murdered, all make friends again, and dance the "New Hillside Hoolachin."

Magic Box,

Out of which will be produced something for nobody, and nothing for everybody.

*Grand Finale!*

Dances by the entire company, in which the Provost and Magistrates of Montrose, and gentlemen of the Press, are expected to join.

To avoid crushing, the doors will be opened three days before the performance commences, and parties who wish reserved seats may apply, if they choose, to the King of Abyssinia.

The performance will commence somewhere between Four p.m. and Five a.m.

All the seats in the Boxes, Pit, and Galleries, being already engaged, the gentlemen of the Press will be accommodated on the couples, where, to obviate crowding, they must sit stridelegs. The Hotel attached to the Theatre being quite full, apartments have been secured for strangers from a distance in the Old Royal Hotel, adjoining the Militia Stores, where the sleeping rooms are large and airy. Attendance indifferent. Cold, shower, douche, and plunge baths in the morning.

Apply to Mr. Hird, Hotel-keeper.

## MONTROSE ROYAL ASYLUM.

## ROYAL PHAETONIC THEATRE.—ENGAGEMENT OF OPERATIC TROUPE.

The Manager has much pleasure in announcing that he has completed an engagement with the celebrated Japanese Operatic Troupe of the Prince Satsuma, who have not hitherto appeared on any other stage in Europe or America.

On the Evening of Friday, 25th November, the Manager has secured the services of

**PROFESSOR ANDERSON!!!**

The Wizard of the North-east, who will exhibit some of his most surprising effects!

The performance will commence with the serio-comic duetto,

**LOCHIEL!**

Lochiel ... .. Her Wideawake.

Wizard ... .. Professor Anderson.

*To be followed by selections from some of the most Ancient Operas of Modern Times.*

At 8.45 p.m. precisely, will be performed, the far-famed

**BALLET DES QUATRES ECOSSAIS!**

The renowned Pianists, Mademoiselle Pussie and Signorina Jamsina, will again electrify creation with the equatorial Fantasia of "The Complete Remedy," and the great sensation Nocturne of "Up in the Morning early."

For the last time this season, will be performed, that touching and pathetic tragedy,

**BOX AND COX:***Married and Done For.*

Being a warning to all unprotected males to avoid ginger wine, tea and turn out, and other female snares.

Doors open at Six in the Morning; but it is quite uncertain at what hour the performance will commence. A medical staff will be in attendance, in the event of any one splitting his sides. Life buoys kept on the stage, lest any of the performers should be drowned with applause.

Special Trains will be run on all the principal Lines, and Return Tickets, including admission to the Theatre, may be applied for at any of the Stations on the Scottish North-Eastern Railway—though it is not at all likely they will be obtained.

Spectacles, False Hair, and Goloshes strictly prohibited.

The prices of admission will be regulated by the state of the Barometer; but no money will be refused at the door.

**THE CHRISTMAS PANTOMIME!**

Will be produced shortly, and families wishing private Boxes for the season should apply early to the Carpenter. Opera Glasses, which must be left with the Ticket-collectors after the performance, may be obtained from all the principal Opticians, at prices varying from six guineas to ten and sixpence.

## GENERAL ASYLUM, NORTHAMPTON.

## UNIVERSITY OF SYDNEY.

(REPORT FOR 1867.)

Presented to both Houses of Parliament, in pursuance of the Act of Incorporation,  
14 Vict., No. 31.

*REPORT of the University of Sydney, for the Year ended 31st December, 1867.*

1. In accordance with the provisions of the Act of Incorporation, 14 Victoria, No. 31, the Senate of the University have the honor to submit a Report of their Proceedings during the year 1867, for the purpose of being laid before His Excellency the Governor and the Executive Council.

2. Thirteen students who passed the statutory examination, were admitted to Matriculation.

3. Exemption from attendance on lectures during the current year was granted to the following gentlemen, viz.:—1. The Reverend James White, of Singleton, a student of one year's standing in the University. 2. Mr. John Dillon, a student of two years' standing in the University. 3. Mr. Charles Crompton, late Scholar of Pembroke College, Oxford, whose certificates shewed that he had kept two years' of residence in that University, and who was admitted "*ad eundum statum*," in accordance with the provisions of the By-laws. 4. Mr. Howell Jones Thomas, a student of one year's standing in the Faculty of Arts, and of three years' in the Faculty of Law, in the University of Melbourne, who was also admitted "*ad eundum statum*."

4. The following students passed the examination for the Degree of B.A., viz.:—

E. Barton.	J. Thompson.
P. A. Cooper.	J. Tole.
J. T. Dillon.	E. Dunstan.
W. A. Purves.	J. Garrick.

5. The following students passed the examination for the Degree of LL.B.:—

Andrew Garran, M.A. (University of London).  
Rev. John M'Gibbon, B.A. (University of Sydney).

6. The following Degrees were conferred, the candidates in each case having passed the required examination and complied with the provisions of the By-laws, viz.:—

## B.A.

N. Emanuel.	E. A. Iceton.
G. H. Fitzhardinge.	M. E. Maher.
A. Gilchrist.	H. A. Richardson.
J. Hunter.	J. H. Sullivan.

## M.A.

A. J. Cape.	G. E. Long.
-------------	-------------

## LL.B.

F. E. Rogers.

## LL.D.

J. Donovan.

J. N. Quirk.

## M.B.

Peter Smith.

7. The following Honors were awarded :—

*B.A. Prize for Physics.*

W. A. Purves.

SCHOLARSHIPS.

*For General Proficiency.*

*First year :—* { Richardson.  
                          { Coutts.  
                          { Farrell ("Levey").

*Second year :—* { Alston ("Lithgow").  
                          { Roseby.  
                          { Coutts.

*Third year :—* Cooper.

*Special Subjects.*

"Deas Thomson" (*for Physics*) :—

W. A. Purves.

"Barker" (*for Mathematics*) :—

P. A. Cooper.

"Cooper" (*for Classics*) :—

E. Barton.

Professor Smith's Prize (*for Physics*) :—

D. Cooper. } *æqs.*  
J. Thompson. }

8. The Senate has the pleasure to announce the appointment by the Committee in England, to whom the selection of a successor to the late Professor Woolley was confided, of the Reverend Charles Badham, D.D., Oxford, and D. Litt., Leyden, Head Master of the Proprietary School, Edgbaston, near Birmingham, to the Chair of Classics and Logic in the University. Dr. Badham arrived in the Colony on the 21st March, and at once entered upon his duties.

9. With a view to the extension of the advantages of the University to persons other than matriculated members, and in order to supply to students of every class in the community a standard by which their requirements might be tested, the Senate have instituted Senior and Junior Public Examinations in connection with the University, analogous to the Middle Class Examinations of Oxford and Cambridge. They are conducted by the Professors and Assistant Professors, and such other persons as the Senate may appoint; and at their termination, certificates duly attested, and shewing the special subjects in which candidates have passed, and (in the case of the Seniors) the amount of proficiency exhibited, are granted. Thus a favourable opportunity is afforded for the examination of students and members of schools, by a thoroughly impartial Board. Provision has been made for holding these examinations annually, under suitable restrictions, in all the chief towns of the Colony, should a sufficient number of candidates be found. By-laws establishing these examinations have been approved by the Governor and Executive Council. These, together with a series of regulations for giving effect to them, are appended to this Report (A). At the first examination, held in Michaelmas Term, eighteen candidates presented themselves, viz. :—Twelve for the Junior, and six for the Senior Examinations. Of them the following passed, viz. :—

(Names, in alphabetical order.)

#### JUNIORS.

Anderson—Sydney Grammar School—English, Latin, and Mathematics.

Binnie—Sydney Grammar School—English, Latin, and Mathematics.

Cope—Mr. A. Bates' School—English, French.

Donaldson—Mr. Pendrill's School—English, Greek, French.

Kelly—Sydney Grammar School—English, Mathematics.

M'Lardy—Sydney Grammar School—English, Latin, French.

P. O'Connor—Sydney Grammar School—English, Latin.

Rutledge—Sydney Grammar School—English, Latin, Mathematics.

Walker—Sydney Grammar School—English, Mathematics.

#### SENIORS.

SENIORS.

LATIN.	GREEK.	MATHEMATICS.
1st Class.	1st Class.	1st Class.
Rennie.	0	Sly.
Sly.	2nd Class.	Coghlan.
Curtis.	Rennie.	Rennie.
	Sly.	

10. With reference to the steps taken for the establishment of a Medical School in connection with the University, a communication has been received from the Medical Council of England, to whom application was made for a recognition, on their part, of such of the University lectures and examinations as would form part of the "curriculum" for a Medical Degree, stating that, although at present it was not in the power of the Council to recognize Colonial Degrees, a Bill was now engaging their attention, in which the recognition of such Degrees would receive full consideration.

11. In reply to a request made to the Senate of the University of London for a recognition of the Degrees of this University, it has been formally notified that Degrees in Arts of Sydney would be accepted as equivalent to the Matriculation Examination of London—a privilege which has been conceded to the Universities and great Scholastic Institutions of England.

12. The Senate have much pleasure in announcing the appropriation, by the Trustees, under the will of the late J. Gilchrist, Esquire, of a sum of money to found a Scholarship of the value of £100 per annum, tenable for three years, at University College, London, or at the University of Edinburgh, for a student who should have passed the B.A. examination in this University, or in Melbourne, but who would be expected to pursue his studies with a view to graduation in one of the four Faculties of the University of London. The right of nomination is vested in the two Universities alternately. A copy of the conditions of the Scholarship is appended (B). Mr. Pope Alexander Cooper, University and "Barker" Scholar, and first Classman in Classics, Mathematics, and Physics, in 1866, and who passed the B.A. examination in Michaelmas Term, 1867, has been nominated by the Senate for that Honor.

13. A By-law providing for the election of the Dean of the Faculty of Arts by the Senate triennially, has been passed. A copy is appended (C).

14. Want of funds has prevented the completion of the unfinished part of the building—the fittings of the Laboratory and Geological Museum and Lecture Rooms having absorbed all the available means of the Senate.

15. A report of the Receipts and Expenditure for 1867, duly certified by the Auditor, is appended.

## APPENDIX A.

## UNIVERSITY OF SYDNEY.—BY-LAWS.

## PUBLIC EXAMINATIONS.

1. Two Public Examinations shall be held every year. The one to be called the Junior Public Examination shall be open to all candidates under the age of sixteen years; the other, to be called the Senior Public Examination, shall be open to all candidates who may present themselves.
2. The Public Examinations shall be held at such times and at such places as the Senate may from time to time appoint.
3. The subjects of the Junior Public Examination shall be, the English Language and Literature, History, Geography, the Latin, Greek, French, and German Languages, Arithmetic, Algebra, Geometry, and such other branches of learning as the Senate may from time to time determine.
4. The subjects of the Senior Public Examination shall be those mentioned in section 3, together with Trigonometry, Conic Sections, Natural Philosophy, Chemistry, Experimental Physics, and Geology and Palæontology.
5. Every candidate who shall pass either of these Examinations, or such portions of either of them as may be required by the regulations of the Senate in force for the time being, shall receive a certificate to that effect, specifying the subjects in which he shall have passed, and signed by the Dean of the Faculty of Arts and by the Registrar.
6. No person shall be admitted to either of the Public Examinations until he shall have paid such fees as may be required by the regulations of the Senate in force for the time being.
7. The Professors and Assistant Professors not engaged in tuition, except publicly within the University, together with such other persons as the Senate may from time to time appoint, shall form a Board for conducting the Public Examinations; and of this Board the Dean of the Faculty of Arts, or in his absence the Professor next in seniority, shall be Chairman.
8. At the conclusion of each Examination, the Board shall transmit to the Senate a Report of the result, signed by the Chairman and at least one other Member.
9. Subject to these By-laws, the Public Examinations shall be conducted according to such regulations as the Senate may from time to time enact.

## PUBLIC EXAMINATIONS.—GENERAL REGULATIONS.

1. The Public Examinations shall be held annually at the University in the month of December, commencing on the first Monday after the conclusion of the Michaelmas Term.
2. The fee for admission to the Junior Public Examinations shall be £3, and to the Senior Public Examination £4.
3. No candidate shall be admitted to either of the Public Examinations, unless he shall have notified to the Registrar his intention to become a candidate, specifying the subjects in which he elects to be examined, and shall have paid to the Registrar the required fee, on or before the 16th day of November next preceding.
4. The Examinations shall be conducted by means of written or printed papers, and *vis à voce*, at the discretion of the Examiners.
5. Public Examinations shall be held at any place within the Colony where a person, approved by the Senate, can be found to conduct the Examination; provided always that the aggregate amount of fees paid by candidates at any such place, shall not be less than £20.
6. Local Examinations as provided for in clause 5, shall be held at the same time as those at the University, and shall be conducted as follows:—
  - (a) Copies of the papers to be set at the Public Examinations at the University, together with such additional papers as the absence of *vis à voce* examination may render necessary, shall be transmitted under seal to the person appointed by the Senate to conduct the Local Examination.
  - (b) Candidates shall write out answers to the questions set, in the presence of the person appointed to conduct the Examination, and in accordance with such detailed instructions as may be furnished by the Chairman of the Board of Examiners.
  - (c) The written answers shall be transmitted to the Board of Examiners, who shall examine them, and report thereon to the Senate.
  - (d) The person conducting the Local Examination shall receive such remuneration for his services as the Senate may in each case determine.
7. The Senate may, at their discretion, send an Examiner or Examiners to conduct the Local Examinations at any place within the Colony.
8. The subjects for the Junior Public Examinations shall be those comprised in the following sections:—

## SECTION I.

1. Reading aloud a passage from some standard English author.
  2. Writing from dictation.
  3. The rudiments of English Grammar.
  4. The first four rules of Arithmetic—simple and compound, and the Rule of Three.
  5. Geography.
  6. The outlines of English History since the Conquest; that is, the succession of sovereigns, and the chief events of each reign.
- All candidates will be required to pass in this section.

## SECTION II.

*English Grammar and Analysis.*—History of England: some period not exceeding four reigns, to be fixed annually.  
Physical and Political Geography.

## SECTION III.

*Latin.*—Passages for translation from portions of the works of Latin authors; such portions to be fixed annually.  
Questions on historical and other allusions, and parsing.  
Easy passage for translation from some other Latin author.  
*Greek.*—Passages for translation from portions of the works of Greek authors; such portions to be fixed annually.  
Questions on historical and other allusions, and parsing.  
An easy passage for translation from some other Greek author.  
A fair knowledge of either of these languages shall entitle a candidate to pass in this section.

## SECTION IV.

## UNIVERSITY OF SYDNEY.

5

## SECTION IV.

*French*.—Passages for translation from some standard work; to be fixed annually.

Passage for translation from some other French work.

Easy English sentences for translation into French.

*German*.—The examination in German shall be similar to that in French.

A fair knowledge of either of these languages shall entitle a candidate to pass in this section.

## SECTION V.

*Mathematics*.—Euclid, Bk. I., II., III., IV., and VI. Arithmetic, Algebra to proportion including surds, and simple and quadratic equations.

A satisfactory knowledge of Euclid, Bk. I., II., Arithmetic and Algebra to simple equations, without surds, shall entitle a candidate to pass in this section.

Every candidate, in addition to Section I., shall be required to pass in two at least of the remaining sections.

9. The subjects for the Senior Public Examination shall be those comprised in the following sections:—

## SECTION I.

The same as for the Junior Examination. All candidates will be required to pass in this section, except those who hold certificates of having passed the Junior Examination.

## SECTION II.

1. { English Grammar and Analysis.

2. { English Composition.

3. Civil, Military, and Constitutional History of England during some period not exceeding four reigns; the particular period to be fixed annually.

4. Some standard English work, with philological and other questions arising out of the subject; the particular work to be fixed annually.

5. Physical and Political Geography.

6. The outlines of Political Economy.

A fair knowledge of the first of these four divisions, and of one of the others, shall entitle a candidate to pass in this section.

## SECTION III.

*Latin*.—Passages for translation from particular works; to be fixed annually.

Questions on historical and other allusions, and Grammar.

Passages for translation from other Latin works.

A passage of English for translation into Latin prose.

*Greek*.—The examination in Greek shall be similar to that in Latin.

A fair knowledge of either of these languages shall entitle a candidate to pass in this section.

## SECTION IV.

*French and German*.—The examinations in these languages shall be similar to that in Latin, and a fair knowledge of either shall entitle a candidate to pass in this section.

## SECTION V.

*Pure Mathematics*.—Euclid, Bk. I.—IV. and VI. Arithmetic, Algebra, Logarithms, Trigonometry, to the solution of triangles inclusive, and the elements of Analytical Geometry.

*Natural Philosophy*.—Statics, including the Equilibrium of Forces in one plane, the Mechanical Powers, and the Laws of Friction.

*Dynamics*.—Motion of a particle in a straight line, and projectiles, treated without the use of the Differential Calculus.

A satisfactory knowledge of Euclid, Bk. I.—IV., Arithmetic, Algebra to Quadratic Equations, and Logarithms, shall entitle a candidate to pass in this section.

## SECTION VI.—CHEMISTRY AND EXPERIMENTAL PHYSICS.

1. Inorganic Chemistry, including the composition of several minerals.

2. Organic Chemistry.

3. Heat, Magnetism, and Electricity, statical and dynamical.

A fair knowledge of either of these three divisions shall entitle a candidate to pass in this section.

## SECTION VII.—GEOLOGY AND PALEONTOLOGY.

1. Descriptive Geology, including general description and classification of rocks.

2. General stratigraphical distribution of organic remains.

10. Every candidate, in addition to Section I., shall be required to pass in two at least of the remaining sections.

11. The names of those candidates who shall pass the Junior Examination shall be arranged alphabetically.

12. The names of those candidates who pass the Senior Examination shall be arranged in classes, the names in each class being arranged alphabetically. Separate lists shall be made of those who may specially distinguish themselves in particular subjects, and in these lists the names shall be arranged in classes and in order of merit.

13. After the name of each candidate in the above lists shall be added his place of residence, and the school or other educational establishment (if any) from which he comes to attend the Examination, and the name of his schoolmaster or tutor.

14. The subjects to be fixed annually shall be determined by the Board of Professors in the Faculty of Arts; and the subjects for each year shall be advertised not later than the first day in February of that year, excepting for the current year 1867.

The subjects for the year 1867 shall be determined and advertised as soon as possible.

15. A separate account shall be kept of all receipts and disbursements on account of the Public Examinations.

16. The fees shall be collected by the Registrar, and paid into the general fund of the University, and shall be appropriated in the first place to the payment of all expenses incurred, including printing, stationery, and fees paid to Examiners, other than the Professors and Assistant Professors. The residue (if any) shall be appropriated amongst the subjects of examination in proportion to the number of candidates for examination in each, the portions so appropriated to be divided amongst the Professors and Assistant Professors, who shall have examined in those subjects respectively.

## APPENDIX B.

## APPENDIX B.

## GILCHRIST EDUCATIONAL TRUST.

## TRUSTEES:—

SIR JOHN BOWRING, LL.D., F.R.S.

WILLIAM BURNLEY HUME, ESQ.

ROBERT VERITY, ESQ., M.D.

GEORGE GROTE, ESQ., D.C.L., F.R.S.

RICHARD LEIGH HOLLAND, ESQ.

## SECRETARY:—

WILLIAM B. CARPENTER, ESQ., M.D., F.R.S.

[All communications to be addressed to the Secretary of the Gilchrist Educational Trust, University of London, London W.]

*Conditions for Scholarships instituted by the Gilchrist Educational Trust for the benefit of Youths resident in Australia.*

A Scholarship of the value of £100 per Annum, and tenable for three years, will be annually awarded to a candidate resident in Australia, who shall have graduated in Arts, either in the University of Sydney or in the University of Melbourne, and who shall be desirous of pursuing a further course of academical study in Great Britain, under the following conditions:—

1. Every candidate shall either be a native of Australia, or shall have resided there for the five years immediately preceding his graduation.

2. Every candidate must furnish proof satisfactory to the authorities of the University in which he has graduated, that his age does not exceed twenty-two years.

3. Every candidate must furnish proof satisfactory to the authorities of the University in which he has graduated, that he is qualified, in regard to personal character, to receive the Scholarship.

4. The award of the Scholarship shall be made alternately by the authorities of the Universities of Sydney and Melbourne, at the conclusion of their respective Examinations for the B.A., Degree; the first turn being given to the University of Sydney. If several eligible candidates present themselves on the same occasion, the selection shall rest with the authorities of the University having the turn of nomination; but if in any year an eligible Candidate should not present himself among the graduates of that one of the two Universities to the turn of which the nomination falls, whilst the other of the two Universities can furnish an eligible candidate, such candidate may be nominated to the Scholarship by the authorities of his own University, without prejudice to the exercise of right of nomination by the same University in the succeeding year.

5. Each Scholar shall be allowed an option as to place of study between the University of Edinburgh, and University College, London; but he shall be expected to pursue his studies with a view to graduation in one of the Four Faculties of the University of London.

6. The successful candidate will be expected to arrive in London, and to present himself to the Secretary of the Gilchrist Trust, not later than the first week in the October following his appointment.

7. The Scholarship shall be considered as commencing from the 1st of July following the nomination, and shall be paid in quarterly instalments, on the first days of October, January, April, and July.

8. Each Scholar shall attend in every session at least three courses of lectures at the institution in which he studies (unless specially excused by the Trustees from doing so during the first year); and shall transmit to the Secretary of the Gilchrist Trust, at the conclusion of each session, a certificate from each of the Professors whose lectures he has attended, stating that his diligence and conduct have been satisfactory. Should he not be able to produce such a certificate, or should he be proved guilty of discreditable conduct elsewhere, he shall be considered to have forfeited all claim to the remaining instalments of his Scholarship.

9. Each Scholar will be expected to present himself at the First Examination in one of the Four Faculties of the University of London—Arts, Science, Law, or Medicine—before the termination of the Second (academical) Year\* from the commencement of his Scholarship, unless excused from doing so by the Trustees; and if he do not so present himself (unless by permission of the Trustees), or if he fail to pass, he shall be considered as forfeiting his claim to the remaining instalments of his Scholarship. After having passed the First Examination, he will be expected to pursue his studies with a view to presenting himself at the Second Examination within two (academical) years.

10. The foregoing scheme shall be subject to revision from time to time; the Trustees reserving to themselves the power of altering the conditions of the Scholarships, or of altogether withdrawing them, if they deem it expedient to do either. But no change will be made in such a manner as to affect the interests of candidates already appointed to Scholarships, or in any case without twelve months' notice.

\* Thus, a candidate whose Scholarship commences on the 1st of July, 1868, would be considered as having fulfilled this condition if he pass the First LL.B Examination in January, 1870; or the First B.A., the First B.Sc., or the Preliminary Scientific M.B. Examination, in July, 1870.

## APPENDIX C.

## BY-LAW.

## DEAN OF THE FACULTY OF ARTS.

I. The Dean of the Faculty of Arts in the University shall be elected by the Senate from time to time for a term of three years.

II. The first election to that office shall be held at the meeting of the Senate in the first week of Lent Term, 1868.

III. Thereafter such election shall be held at the corresponding meeting of the Senate in every third year.

IV. Upon any casual vacancy, or upon a failure to make an election at the time required by the foregoing rules, the vacancy shall be filled up for the unexpired residue of the current term of three years, at some meeting of the Senate, to be held within two months from the time when such vacancy shall have become known to the Chancellor, or from the time of such failure to elect.

V. So much of the By-law in chapter X, section I, as is inconsistent with the above is rescinded, and the Dean of the Faculty of Arts to be elected as above provided, shall be President of the Board of Studies in the said By-law mentioned.

31st December, 1867.

WILLIAM CLARK, Accountant.

1868.

NEW SOUTH WALES.

SYDNEY GRAMMAR SCHOOL.

(REPORT FOR 1867.)

Presented to Parliament, pursuant to Act 18th Victoria.

THE SECRETARY TO THE TRUSTEES, SYDNEY GRAMMAR SCHOOL, to THE COLONIAL SECRETARY.

Sydney Grammar School,  
12 October, 1868.

SIR,

I have the honor, by direction of the Trustees of the Sydney Grammar School, to transmit to you, for the purpose of being laid before Parliament, the following Report of their proceedings, and the progress of the School, during the year 1867.

At a Meeting of the Trustees, held on the 7th of January, Professor Pell was re-elected Chairman of the Board for the current year.

At the same Meeting, a letter was read from Mr. Edward Pratt, calling the attention of the Trustees to certain statements made in the Legislative Assembly, on the 20th ultimo, by Mr. William Macleay, seriously affecting his character as a Master in this Institution, and tending very much to injure the School in the eyes of the public, and requesting that an inquiry might be at once made into the truth of Mr. William Macleay's charges. In consequence of the receipt of this letter, an inquiry was instituted by the Trustees; and, from the evidence taken, the Trustees arrived at the following conclusion, viz. :—

“ That the special charge brought against Mr. Pratt by Mr. William Macleay rests entirely upon Mr. Edwards' testimony, which the Trustees consider unworthy of credit; and that the other charges have been disproved, as far as the nature of the case admits.”

A full report of the evidence relating to this inquiry was forwarded to the Government, and was printed by order of the Legislative Assembly, on the 10th of July.

At a Meeting held on the 6th May, the Chairman announced that he had received a letter from R. A. A. Morehead, Esq., resigning his Trusteeship of the School. This vacancy was filled up on the 2nd September, by the election of the Honorable Sir Wm. Macarthur.

On the 3rd June, the Trustees authorized the Head Master to secure the services of a competent Lecturer, to teach the elements of Physical Science.

At the July Meeting, the Board considered and adopted the following regulations for the admission of Free Scholars, viz. :—

1. That every year, a number of boys, not exceeding three, be admitted by the Trustees to a free education in the Sydney Grammar School, such boys to be entitled Foundation Scholars.

2. That the Head Master, the Mathematical Master, and two Examiners, appointed by the Trustees, form a Board, to be called the Examining Board, of which the Head Master shall be the Chairman, and who shall examine candidates for Foundation Scholarships, and report the result to the Trustees.
3. That the subjects for examination shall be—The English Language and History, Geography, Arithmetic, Latin Grammar, Cæsar de Bello Gallico, Book I; Euclid, Book I.
4. That no candidate shall be appointed to a Foundation Scholarship, except upon the report of the Examining Board that he is possessed of more than ordinary abilities or attainments.
5. That at the conclusion of every examination, the Examining Board shall forward to the Trustees a list of the names of those candidates whom they consider eligible, arranged in order of merit, taking into consideration not only the attainments of candidates, but their ages and abilities also, and the probabilities of their deriving advantage from a liberal education.
6. No candidate recommended by the Board shall be considered eligible unless he shall furnish evidence which shall satisfy the Trustees that he is under the age of 14, and that his parents or guardians are unable to pay school fees. A certificate from the Council of Education shall be held conclusive on these points.
7. The Foundation Scholarships shall be tenable for one year, but renewable from year to year upon the recommendation of the Examining Board.
8. The Head Master shall have the power of dismissing Foundation Scholars for bad conduct or for irregular attendance.
9. An examination shall be held annually in the month of December.

A letter was received at the August Meeting, from Mr. Charles S. Mein, resigning his appointment of Assistant Classical Master; and on the 4th November, the Rev. W. H. Roberts was appointed to the vacant Mastership.

On the 2nd September, a Committee, consisting of Dr. Badham, Mr. Windeyer, Mr. Stenhouse, and the Chairman, was appointed to confer with the Head Master on the possibility of reducing the Fees, and on other matters relating to the School which might be brought under their notice by the Head Master.

At the October Meeting, Professor Badham and Professor Pell were appointed Examiners for the Foundation Scholarships.

A Special Meeting of the Trustees was held on the 16th December; and the Report of the Committee appointed on the 2nd September, having been read, it was determined that the working expenses should be reduced, and that after the end of the current year the annual fees for tuition should be reduced from £18 per annum to £16 for the Upper School, and £12 for the Lower.

The Trustees are happy to report that there has been a steady increase in the number of pupils during the past year, that the discipline and efficiency of the School have been most satisfactory; and they have every reason to believe that the reduced scale of tuition charges which they have adopted for 1868 will induce many parents to send their sons to participate in the advantages of an education at the Sydney Grammar School.

The amount of the whole income and expenditure of the School, and the number of pupils who attended during the year, will be found in the annexed Appendix.

I have the honor to be,

Sir,

Your most obedient Servant,

W. H. CATLETT,

Secretary.

## PUBLIC SCHOOL, TOMAGO.

### No. 1.

MRS. WINDEYER to THE SECRETARY OF THE COUNCIL OF EDUCATION.

Tomago, 15 January, 1868.

SIR,

I deem it my duty to inform the Council of Education of the complaints I hear of the Tomago School Teacher, Mr. Drewe. Some of the parents have removed their children; others would do so, but fear if they did, the school would be broken up entirely.

Mr. Drewe is seldom in the school before 10 o'clock in the morning; the children are let out to play for an indefinite time between that hour and 12 o'clock, their dinner hour; the school is closed at 3 o'clock.

The children are making little or no progress, consequently the school is getting into bad repute.

I remain, &c.,

MARIA WINDEYER,  
Secretary.

### No. 2.

#### MEMORANDUM.

Council of Education Office,  
Sydney, 18 January, 1868. } Newcastle District.

Memorandum to J. W. Allpass, Esq., Inspector of Schools.

Tomago. Mrs. Windeyer's letter, dated 15th January, 1868, referred for inquiry and report as to complaints against the teacher.

Immediate.

W. WILKINS,  
Secretary.

*Inspector's report appended.*

J. W. ALLPASS,  
Inspector of Schools,  
Newcastle District.

Newcastle, 30 January, 1868.

### No. 3.

(NEWCASTLE.)

INSPECTOR'S REPORT upon certain charges preferred against Mr. Drewe, the Teacher of the Tomago Public School.

I MET the Tomago Public School Board to-day at Mrs. Windeyer's residence, and conversed with them respecting the alleged conduct of the teacher. The charge of laxity was reiterated; but another charge, relating to improper freedom with an elder girl, was considered to be too intangible for investigation, inasmuch that the father of the girl, Mr. Lunny, stated that it was a gross fabrication; and also, as is frequently the case, no one seemed to have the moral courage to prove, or even to repeat former statements.

In company with Messrs Lunny and Pepper, Members of the School Board, I visited the school and informed Mr. Drewe of the charge of laxity, as set forth in the School Secretary's letter. The charge received a general denial, and a plea was made that "clocks always differ, but every man considers his own time-piece the best." I informed Mr. Drewe that he was said to be a very late riser, and had to hurry into school in an unprepared state, and that his custom was to go home at 11 o'clock to take his breakfast. He admitted that he did go home to breakfast at the time stated, but that it was "because the milk was brought so late"; and, says he, "I am not going without my milk—would you like it?"

3. At the time of my visit there were twelve children present out of twenty-three on the rolls, and I asked the teacher to explain the cause of so small an attendance. His reply was that "he never inquired, and therefore could not tell"; but "he knew that he worked hard enough for the small screw he got." I reminded him that it was his duty to inquire and to record the results in the class roll, to which he replied, "Oh! that is seldom done; not even at the Model School." The latter assertion was, I suppose, intended as a home thrust to myself.

4. On examining the Daily Attendance Book, I found that on the 21st January a record as follows was made—"School closed, Prince Alfred arrived in Sydney." This was done without the sanction of the School Board.

5. Since my last visit Mr. Drewe has constructed a fresh time-table. It is headed as follows:—

"At a specified time the pupils are to assemble in the playground."

I asked for an explanation, and Mr. Drewe replied that "they assembled as they came." I informed him that a time should be stated; when, with a sneer, he asked if he "would also be expected to go into the roads and fetch the children in."

6. Before leaving, I admonished Mr. Drewe, and endeavoured to make him see that he could, by a strict attention to duty, live down slander and gain the goodwill of the people, and that he would at the same time earn the approval of the Council; but I might have spared myself the trouble, for he stated that the people "were a lot of damned blackguards"; and as regards the Council, "if they want more work done, they should give higher pay."

7. If the Council will refer to my report of the 30th October last upon this school, they will see that it is on the whole a favourable one, and also that the testimony of the School Board was favourable. I feel therefore bound to explain that that visit was an expected one, and that the state of this school proves the superior importance of an "ordinary" and unexpected visit.

As regards the change of opinion on the part of the Local Board, I have to remark that for the last few months the school has been held in premises that have enabled the Board to perceive the teacher's indolent habits; formerly he could pass unobserved into the schoolroom, but now he has to walk a short distance to school, and is under the immediate observation of Mrs. Windeyer, the Secretary of the school.

*Recommendation.*

Mr. Drewe's evident indolent habits, and his manifested impudent bearing, convince me that he is unfitted for the Council's service, and I feel compelled to recommend his immediate removal from Tomago.

Newcastle,  
30th January, 1868.

J. W. ALLPASS,  
Inspector of Schools,  
Newcastle District.

No. 4.

EXTRACT from the Minutes of the Proceedings of the Council of Education.  
6 February, 1868.

The Council took into consideration—

Tomago. Inspector's report, dated 30th ultimo, upon certain charges preferred against the teacher of the school, Mr. Drewe.

The teacher to be acquainted, that from this report it is manifest to the Council, that his indolent habits, gross negligence in the performance of his duties, and improper bearing, unfit him for the office of a teacher of youth, and that therefore the Council dismisses him from its service from this date.

No. 5.

MR. S. C. DREWE to THE SECRETARY TO THE COUNCIL OF EDUCATION.

Public School,  
Tomago, 31 January, 1868.

SIR,

The small attendance is owing to sickness—blight and measles.

The libellous and scandalous reports that have been circulated may also have had some damaging effect.

I have a clue as to the originator of those base and unfounded reports, and intend having legal advice on the matter.

I am, &c.,  
SYDNEY C. DREWE.

No. 6.

THE SECRETARY OF THE COUNCIL OF EDUCATION to MR. S. C. DREWE.

Council of Education Office,  
Sydney, 7 February, 1868.

SIR,

I have the honor, by direction of the Council of Education, to acquaint you that a report, dated 30th ultimo, has been received from the Inspector, upon certain charges preferred against you as Teacher of the Public School at Tomago.

2. From this report it is manifest to the Council, that your indolent habits, gross negligence in the performance of your duties, and improper bearing, unfit you for the office of a teacher of youth. I am therefore instructed to inform you, that the Council hereby dismisses you from its service from this date.

I have, &c.,  
W. WILKINS,  
Secretary.

## No. 7.

MESSRS. M'LEOD &amp; LUNNY to THE COUNCIL OF EDUCATION.

Tomago, 12 February, 1868.

GENTLEMEN,

A public meeting was held here on the above date, for the purpose of inquiring into the cause of Mr. Drewe's dismissal from the Council of Education.

Mr. Alexander M'Leod was voted to take the Chair.

"The object of this public meeting is, to hear if there are any complaints against Mr. Drewe, in consequence of his being dismissed from the school he now holds, and also from his being dismissed as a teacher from the Council of Education.

The subject of the Council's letter was *carefully* considered by the meeting, and also any person who had any presumed or real complaint was invited to state them. After the motion had been twice put to the meeting, and after waiting some time and no person laying or grounding any complaint whatever, the presumed complaints were considered as void.

It was then proposed by Mr. B. Lunny, and seconded by Mr. W. Millham, and carried unanimously, "That Mr. Sydney Charles Drewe has the entire confidence of this meeting as a teacher, and that the Council of Education be respectfully invited to review their decision; and also, that the Council of Education be respectfully asked what were the 'preferred complaints,' and who were their authors."

Proposed by Mr. M'Queen, and seconded by Mr. Lunny, "That this meeting desires to record the fact that the Inspector produced a letter said to have been written with the consent of the Local Patrons, by the Local Secretary, which was not the whole fact, and that the Inspector's inquiry was biased"; and was carried unanimously.

Mr. Millham proposed, and Mr. M'Queen seconded, "That this Public Meeting of Parents desire to *express* its sympathy with Mr. Drewe, and trust that the Council of Education will reinstate him in his position as a Public teacher here or elsewhere." Carried unanimously.

The meeting was public and was convened by Public Notice, and also by special invitation, and all persons was invited personally by the call of *Parents* one upon another.

Chairman—ALEX. M'LEOD.

Local Patron—BARTHOLOMEW LUNNY.

Address—

MR. B. LUNNY,  
Tomago Post Office.

## No. 8.

EXTRACT from Minutes of the Proceedings of the Council of Education. 17 February, 1868.

The Council took into consideration—

Tomago. Letter from two members of the Public School Board, dated 12th instant, stating that, at a public meeting, it has been resolved to request the Council to reinstate Mr. Drewe in his office as Teacher of the Public School.

To be informed that, as Mr. Drewe was removed for faults admitted by him, and as the Council's action was taken in view of facts which could not have been known to persons present at the meeting, the Council cannot reopen the question, with due regard to the interests of the school.

## No. 9.

THE SECRETARY OF THE COUNCIL OF EDUCATION to MESSRS. M'LEOD AND LUNNY.

Council of Education Office,  
Sydney, 19 February, 1868.

GENTLEMEN,

I have the honor, by direction of the Council of Education, to acknowledge the receipt of your letter of the 12th instant, reporting the proceedings of a public meeting held at Tomago, on the above date, for the purpose of inquiring into the cause of Mr. Drewe's dismissal as Teacher of the public school at that place; at which meeting it was resolved to respectfully invite the Council to review their decision.

2. In reply, I am instructed to acquaint you that Mr. Drewe was removed for faults admitted by him to the Inspector.

3. As the Council's action in the case of Mr. Drewe was taken in view of facts which could not have been known to the persons present at the meeting, the Council cannot reopen the question, with due regard to the interests of the Tomago School.

I have, &amp;c.,

W. WILKINS,  
Secretary.

## No. 10.

MESSRS. M'LEOD AND LUNNY to THE COUNCIL OF EDUCATION.

Tomago, 20 February, 1868.

GENTLEMEN,

Your letter of the 19th instant has come to hand, and we all exceedingly regret that you will not accede to our wishes.

We do not know that Mr. Drewe admitted of any faults, but contrawise. Whatever facts may have been communicated to the Council of Education were misrepresentations; and the interests of the school will only be served by a full and impartial inquiry, as the future teacher will then know how to act. Mr. Drewe's conduct and teaching has been closely examined, and any faults known to the Council of Education and forwarded to the Chairman and Mr. Lunny, will receive the fullest consideration. In paragraph 2, you state that Mr. Drewe was "removed," but in your letter to Mr. Drewe you write "dismissed from its service." We do not object so much to Mr. Drewe's being "removed," which in itself is loss to us, but for the man to be dismissed upon a while tissue of misrepresentations is neither just to him or to us as a community. We therefore sincerely hope that Mr. Drewe is only removed by you to some other school.

We have, &amp;c.,

ALEX. M'LEOD, Chairman,  
BARTHOLOMEW LUNNY, Local Patron.

## No. 11.

EXTRACT from Minutes of the Proceedings of the Council of Education. 24 February, 1868.

The Council took into consideration—

Tomago. Messrs. M'Leod and Lunny's letter, dated 20th instant, inquiring whether the teacher was dismissed or removed.—Read.

## No. 12.

THE SECRETARY TO THE COUNCIL OF EDUCATION to MR. B. LUNNY.

Council of Education Office,  
Sydney, 27 February, 1868.

SIR,

I have the honor, by direction of the Council of Education, to acknowledge the receipt of your letter of the 20th instant, signed also by Mr. Alexander M'Leod, respecting the dismissal of Mr. Drewe from the office of Teacher of the Tomago Public School.

I have, &amp;c.,

W. WILKINS,  
Secretary.

## No. 13.

MR. S. C. DREWE to THE COUNCIL OF EDUCATION.

Tomago, 21 February, 1868.

GENTLEMEN,

There is much doubt regarding the tenor of your letter to me on the 7th instant, and also your reply to the public meeting.

In your letter to me, you write "dismisses you from its service."

Your letter to the meeting stated "that Mr. Drewe was removed."

By your letting me know whether I am "dismissed from its service" or "removed," you will favour me.

This will be the thirteenth year I have entered upon as a teacher, and all that time I have been more or less under Government inspection. After so long a service, and under the new regulations, I hoped that something good was in store for me; but it seems that my traducers ordained otherwise.

I am, &amp;c.,

SYDNEY C. DREWE.

Address—

Mr. S. C. Drewe,  
Tomago, Hunter River.

## No. 14.

THE SECRETARY OF THE COUNCIL OF EDUCATION to MR. S. C. DREWE.

Council of Education Office,  
Sydney, 27 February, 1868.

SIR,

I have the honor, by direction of the Council of Education, to acknowledge the receipt of your letter, dated 21st instant, and in reply to your inquiry, to state that you were dismissed from the service of the Council as Teacher of the Public School at Tomago.

I have, &c.,  
W. WILKINS,  
Secretary.

## No. 15.

MR. S. C. DREWE to THE COUNCIL OF EDUCATION.

Tomago, 2 March, 1868.

GENTLEMEN,

Some person or persons, who are at present unknown to me, have taken it upon themselves to write to the Council of Education to such a degree as to procure my dismissal from here, and also from the Council's service.

No language, it seems, is severe enough but to be applied to me, neither is there any crime but what is capable of being accomplished by me.

You will naturally inquire what has given rise to such presumptions. To such a question, I am entirely ignorant how to frame a reply, but a *distinct denial*.

The first intimation of any presumed wrong-doing was the presence of the Inspector on the 29th of January. His visit was special and quite *secret*, as neither the Local Patrons or myself had any knowledge of the intended visit. A meeting then took place at the Local Secretary's house, after the persons had been hunted up by the Inspector riding after them. As the meeting was of a private character, through taking place at the Local Secretary's house, I was precluded from attending. After everything had been considered and settled behind my back, the Inspector, with two of the Local Patrons, came to the school to me, the Inspector stating numberless complaints which were untrue; but as I had no knowledge of any inquiry, I could not disprove them but by my own word. Amongst other things complained of by the Inspector was this, "It is reported to me from Sydney that your child makes use of bad language." This so *exasperated* me, after hearing other charges of a like character, that I said any person who could say so was a damned scoundrel. The Inspector then said, "I ought not to say those words." I replied that any person who could speak thus of a child just three years old would say and do anything, for the child can speak but a few words and those few indistinctly. I would wish you to notice particularly that the meeting of the Inspector was called by the Local Secretary writing to the Council of Education for the Local Patrons, and that the Local Patrons *deny all knowledge of the Local Secretary's writing*, and so told the Inspector in the presence of the Local Secretary. There are three Patrons for this school, one of whom is Secretary. The Secretary did not come to the school with the two other Patrons and the Inspector to confront me. The meeting between the Inspector, the two Patrons, and myself, was held at the school, after the affair had been held elsewhere and decision already made. The meeting at the school occupied about one and a half hours. Most of the time was spent by the Inspector relating his trials as a teacher.

I only knew of the Inspector's presence about three-quarters of an hour before he came to me. He came to the school with the two Patrons while I was giving a lesson on the Geography of Asia; and from my being before the Patrons and Inspector, I was determined more than ever that the lesson should be an extra good one, but the Inspector interrupted me, for the purpose it would seem, of throwing me out of the discourse, and for the purpose of showing that I was making mistakes which I did not speak of at all. I do not think it right that he should have acted in that manner, when he as Inspector ought to have known that what I was saying was correct. After the lesson had proceeded some time, and the Inspector meanwhile taking notes, he said, "I had better let the children out, as he wished to speak to me." I did so, and then he stated the presumed complaints, as before written—carelessness and negligence being complained of; and the Inspector, to exemplify that complaint, said, "It was as plain to be seen from the lesson that I had just given, as if I had a glass in my breast, that they all could go to the devil and be damned." This was said *previously* to my saying damned scoundrel respecting my child swearing.

When the Inspector was about to leave, he said, "I am both sorry and glad. Sorry that the inquiry had been called at all, and glad that I could deny the complaints." The regular "General Report" upon my school is a good one; still, notwithstanding all this, I am dismissed from the service of the Council of Education. I have been dismissed by the Council of Education upon presumptions, and without the least opportunity being given me to defend myself in any way whatever.

Upon my receiving notice of dismissal, I told the children what had occurred, and that I would see their parents during the week. I then dismissed them. I shewed the Council's letter to nearly all of the parents, and they all were both annoyed and grieved.

As

As I had done nothing worthy of condemnation, I suggested a public meeting to be held, and let every person who had anything to say as regard complaints, or any opinion to offer, be invited to attend. A report of that meeting has been furnished you as regards the resolutions. Very excited and indignant was the meeting that I should be dismissed. The sympathy that has been accorded me by enraged parents, declaring that justice shall be done me, is overwhelming.

Through the action of the Council of Education, it is the fixed intention of the people to close the school, by not sending their children here, but to other schools, as they say they will no longer be a party to any of the scandalous treatment towards the teachers here for years past; but this last attack, they say, is the worst of any attack yet made upon any teacher ever here.

No letter was produced to me or to any of the Local Patrons in my presence by the Inspector, neither did any person make any complaint.

A large amount of political intrigue has been at work in this matter. I have been reliably informed that a teacher was appointed for this place at least six weeks before the 29th of January, 1868, and of which I had no previous knowledge.

You may perhaps have had an idea of my anxiety to obtain an appointment, and that my being charged with being indolent, negligent, and uncivil bearing—things so subversive to my own personal interest that I must be bereft of reason to cause such things; knowing that to any person of those habits destruction follows them.

From my knowing the influence here, I was more determined and more particular than I have ever been in the cause of education.

I have, &c.,

SYDNEY C. DREWE,  
Tomago.

### MEMORANDUM.

Council of Education Office,  
Sydney, 6 March, 1868. } Newcastle District.

Memorandum to J. W. Allpass, Esq., Inspector of Schools.

Mr. Sydney C. Drewe's letter, dated 2nd March, respecting his dismissal from the Public School at Tomago, referred for your inquiry and report.

W. C. WILLS.  
(Pro Secretary.)

### *Inspector's report.*

As the correctness of my report of the inquiry held at Tomago on the 30th January last can be substantiated by the School Board, it will be useless for me to attempt to deal with Mr. Drewe's distortion of facts.

2. My recommendation for Mr. Drewe's removal from Tomago was based upon the discreditable attention he was giving to his school duties, his expressed indisposition to work harder unless higher pay was given, and his intemperate language respecting the people of the place, as expressed in the presence of the School Board.

J. W. ALLPASS,  
Inspector of Schools,  
Newcastle District.

Sydney, 6th March, 1868.

## No. 17.

EXTRACT from the Minutes of the Proceedings of the Council of Education.  
9th March, 1868.

The Council took into consideration—

Tomago. Inspector's report upon the teacher Mr. Drewe's justification of his conduct.—Read.

## No. 18.

EXTRACT from the Minutes of the Proceedings of the Council of Education, 16 March, 1868.

The Council took into consideration—

*Tomago.* Late Teacher Mr. Drewe's letter, dated 2nd instant, complaining of the manner in which he was dismissed, and of the Inspector's mode of conducting the examination.

The Secretary was instructed to forward copy of Mr. Drewe's letter to the Public School Board, and to request them to report on all matters within their knowledge connected with the matter.

## No. 19.

THE SECRETARY OF THE COUNCIL OF EDUCATION to MRS. WINDEYER.

Council of Education Office,  
Sydney, 18 March, 1868.

MADAM,

I have the honor, by direction of the Council of Education, to enclose herewith, for the information of the Public School Board at Tomago, copy of a letter Dated 2nd inst. from Mr. Sydney C. Drewe, respecting his dismissal from the situation of teacher of the public school at that place.

2. I am further instructed to request the Public School Board to be good enough to examine and report fully on all matters coming within their knowledge connected with the case.

I have, &c.,

W. C. WILLS.  
(Pro Secretary.)

## No. 20.

MRS. WINDEYER to THE SECRETARY OF THE COUNCIL OF EDUCATION.

Tomago,  
21 March, 1868.

SIR,

I beg to acknowledge a letter from the Council of Education, of the 18th instant, enclosing a letter from Mr. S. C. Drewe.

The Local Patrons of the Tomago School desire to say there is no foundation for the charges which Mr. Drewe makes. There was no secret or private meeting held. The Local Patrons met; and the only charges made were, that Mr. Drewe was negligent of his duties—not keeping regular school hours, and allowing the children to be too long out at play. The language said to have been made use of by the Inspector is denied by the two Local Patrons who were present. The offensive words used by Mr. Drewe were said *before* anything had been said about his child using bad words. It is quite untrue that any teacher has been treated in a scandalous manner. It was a report, towards the end of the year, that Mr. Drewe wished to leave Tomago on account of the smallness of the fees; that a former teacher was asked, in case Mr. Drewe left Tomago, would she like to take the school.

We believe that, on the appointment of another teacher, the greater part of the parents will gladly send their children.

I am, &c.,

MARIA WINDEYER.

JAMES PEPPER,  
Local Patron.

P.S.—I sent this letter to the Local Patrons for their signature. Mr. Lunny refuses to sign that part relating to the Inspector. I must, therefore, refer the Council of Education to the Inspector himself.

## TOMAGO PUBLIC SCHOOL.

## No. 2.

A Copy of the latest Report of the Inspector on the said school previous to any proceedings having reference to said dismissal.

Tomago Public School (Vested)—General Inspection, 30th October, 1867.  
Teacher, Mr. S. C. Drewe, Class 3, Sec. B.—Local Secretary, Mrs. Windeyer.

Number of pupils enrolled:—14 boys, 16 girls; total, 30.  
Number of pupils present:—12 boys, 16 girls; total, 28.

1. The material condition of this school is bad, and owing to the extensive ravages of the white ant, temporary premises have to be used. The Local Board has brought the need of repairs before the Council. The school has a reasonable amount of working material, but the furniture and apparatus are unsuitable and much worn.

2. About four-fifths of the pupils are punctual and regular in their attendance. They are clean, orderly, and attentive. The tone of the school is good.

3. The subjects prescribed by the Council are taught. The instructional documents are properly displayed, the organization is satisfactory, the methods of instruction are reasonably good, and moderate progress has been made by the pupils. The following are the results of the examination:—

Reading	...	...	...	...	Fair.
Writing	...	...	...	...	Fair to good.
Dictation	...	...	...	...	Moderate to very fair.
Arithmetic—1st Class	...	...	...	...	Indifferent.
"    Lower 2nd Class	...	...	...	...	Failure.
"    Upper 2nd Class	...	...	...	...	Moderate.
Grammar	...	...	...	...	Only moderate.
Geography	...	...	...	...	Tolerable.
Object Lessons	...	...	...	...	Moderate.

When under examination, the pupils evince a fair amount of self-reliance, but they think and answer somewhat loosely.

4. The teacher appears to be liked by the people, and the School Board reports that both Mr. and Mrs. Drewe are very attentive to their duties. In addition to teaching needlework, Mrs. Drewe takes an active part in the oversight of the elder girls.

5. To sum up: the material condition of the school is bad, the organization and discipline satisfactory, the instruction fair, and the results may be designated as moderate.

*Recommendations:—*

None. The several defects have been pointed out to the teacher, who has promised to attend to the "suggested remedies"; for the present, therefore, no action on Council's part is necessary.

Newcastle, 2nd November, 1867. J. W. ALLPASS,  
Inspector of Schools, Newcastle District.

(E.)

## GENERAL INSPECTION.

INSPECTOR'S REPORT upon the Public School at Tomago, in the Newcastle District.  
Visited on the 30th day of October, 1867. Teacher, Mr. S. C. Drewe, Class 3,  
Section 13:

## I.—ORGANIZATION.

## 1. Situation:—

Is it central? Yes.  
Is it healthy? Yes.  
Is it pleasant? Yes.  
Is it accessible? Yes.  
Is it otherwise suitable? Yes.

## 2. Schoolroom:—

What is its form? Parallelogram.  
What are its dimensions? 35 feet by 20.  
In what state of repair is it? Bad, and has to be abandoned until repaired. In the meantime temporary premises are used.  
Is it suitable? Yes.  
What is its condition as to cleanliness? The temporary premises, satisfactory.

3. Playground :—  
 Give its extent? Half an acre.  
 Is it enclosed? Yes.  
 Are the closets in good condition, suitably placed, and properly arranged? They are in good condition, but badly placed.  
 Is there a shed to protect the pupils from the weather? No.  
 Are there trees for shade? No.  
 Are there flower borders? Yes, a very small one.  
 Has the master a garden—its condition? No.
4. Furniture :—  
 Is it sufficient? Yes.  
 Is it suitable? No.  
 In what condition? Bad.  
 Is it properly arranged? Yes.
5. Apparatus :—  
 Is it sufficient? Yes.  
 Is it suitable? Yes.  
 In what condition? Bad.  
 Is it properly arranged? Yes.
6. Books :—  
 Is the stock sufficient? Yes.  
 In what condition? Good.  
 Are any in use not sanctioned by the Council; if so, give their titles? No.
7. Classification :—  
 How many classes are there? Two.  
 Is the classification judicious? Yes.  
 Is it adapted to the "Course of Secular Instruction"? Yes.
8. Occupation :—  
 Time-table :—Does it agree with the "Act," "Course of Secular Instruction," and "Regulations"? Yes.  
 Does it provide for the constant and profitable occupation of all the pupils? Yes.  
 Is it duly observed by the teacher? I believe so.  
 Are there any vacations and holidays other than those sanctioned by the Council? No.
- Programmes of Lessons :—  
 Are they suitable? Scarcely so.  
 Are they acted upon? I believe so.
9. School Records :—  
 Admission Register—Correctly kept.  
 Class Roll—Nearly correct.  
 Daily Report Book—Correctly kept.  
 Quarterly Return—Correctly kept.  
 School Fee Account Book—Correctly kept. The fees are 6d. per week for one; 4d. each for two or more.  
 Lesson Registers—These have not been kept.

## II.—DISCIPLINE.

10. Punctuality :—  
 At what hour does the school business commence? 10 o'clock, a.m.  
 Is the teacher punctual? Yes.  
 Are the pupils punctual? Yes.
11. Regularity :—  
 What proportion of the pupils attends regularly? About four-fifths.  
 What means are adopted to secure regular attendance? None.
12. Cleanliness :—  
 Of premises? (Temporary.) Satisfactory.  
 Furniture? Satisfactory.  
 Apparatus? Satisfactory.  
 Teacher? Satisfactory.  
 Pupils? Satisfactory.  
 What is the character of the inspection before entering school? As at the Model School.
13. Order :—  
 Are the school operations conducted with order and decorum? Yes.  
 What is the character of the behaviour of the pupils? Satisfactory.
14. Government :—  
 Is the teacher's demeanour in the presence of his pupils becoming? Yes.  
 Is his moral influence beneficial or otherwise? Beneficial.  
 Are the principles of virtue inculcated? Yes.  
 What is the character of the government? Tolerably firm.  
 What is the moral tone of the school? Very pleasing.

## III.—INSTRUCTION.

15. Subjects :—  
 What are the subjects taught? Those prescribed by the Council.  
 Do they accord with the "Course of Secular Instruction"? Yes.

## 16. Methods:—

What are the methods employed? Those that are moderately inductive, but they lack spirit.

Are they suitable? Yes.

Are they effective? Moderately so.

## IV.—SCHOOL BOARD.

Name the members and state the number of visits paid to the school, by each, since the last inspection, as recorded in the Visitors' Book. Mrs. Windeyer, and Messrs. Pepper and Lunny. No visits are recorded, but Mrs. Windeyer is a very constant visitor.

How often are Board Meetings held? Such are not held.

## RETURN OF ATTENDANCE.

## (F.)

## REGULAR INSPECTION.

Public School at Tomago. Visited, 30 October, 1867.

## PROFICIENCY OF THE PUPILS.

*First Class.*

Numbers present:—6 boys, 5 girls; total, 11.

Quarter of enrolment—second.

## Reading:—

Book and lesson—1st Book I.N.B., sec. 3, lesson 16.

(a) Enunciation, &c.—only moderate.

(b) Spelling—tolerable.

(c) Meaning of words—tolerable.

(d) Knowledge of subject—tolerable.

## Writing:—

(a) Copies on slates—fair.

(b) Dictation—"Can a bird fly?"—indifferent.

## Arithmetic:—

(a) Notation—5-10-16-36-47-50—moderate.

(b) Slate work— $2+6+3+9+2+7+5$ —correct, four.

(c) Mental operations—small.

## Object Lessons:—

This class has been grouped with the older children for object lessons, and hence they are valueless to them.

## Singing:—

Has not been taught.

## Summary:—

(a) Attention—fair.

(b) Mental effort—moderate.

(c) Mental culture—small.

(d) General proficiency—very moderate.

*Second Class.*

Numbers present:—4 boys, 6 girls; total, 10.

Quarter of enrolment—third.

## Reading:—

Book and lesson—2nd Book I.N.B., sec. 3, lesson 12.

(a) Enunciation, &c.—fair.

(b) Spelling—poor.

(c) Meaning of words—tolerable.

(d) Knowledge of subject—tolerable.

## Writing:—

(a) Copies, copy books—fair.

(b) Dictation—"As soon as the dawn comes, &c."; five lines—moderate.

## Arithmetic:—

(a) Notation—7,630,019—failure.

(b) Slate work— $56,732+38,795+28,763+59,998$ —failure.

$39,875,678-390,999$ —failure.

(c) Mental operations—moderate.

Grammar:—

## Grammar:—

- (a) Definitions—very moderate.  
 (b) Parsing—four lines from the reading lesson—very moderate.

## Geography:—

- (a) Locality.  
 (b) Uses of a map.  
 (c) Definitions of common terms. } Moderate.

## Object Lessons:—

Subject, "Whale"—moderate.

## Singing:—

Has not been taught.

## Drawing:—

Has not been taught.

## Summary:—

- (a) Attention—fair.  
 (b) Mental effort—fair.  
 (c) Mental culture—moderate.  
 (d) General proficiency—moderate.

*Upper Second Class.*

Numbers present:—3 boys, 5 girls; total, 8.  
 Quarter of enrolment—third.

## Reading:—

Book and lesson—Third Book I.N.B., "Salmon."

- (a) Enunciation, &c.—very fair.  
 (b) Spelling—fair.  
 (c) Meaning of words—fair.  
 (d) Knowledge of subject—fair.

## Writing:—

- (a) Copies—copy books—good.  
 (b) Dictation—writing, good; spelling, very fair; punctuation, fair.

## Arithmetic:—

- (a) Notation, 309,467,309—correct, five.  
 $79,530,009 \times 8,056$ —correct, five.  
 $9,279,530,009 \div 985$ —correct, four.

## Grammar:—

- (a) Accidence—indifferent.  
 (b) Parsing—moderate.

## Geography:—

- (a) Same as the second lower class—fair.

## Object Lessons:—

Subject, "Bees"—fair.

## Singing:—

Not taught.

## Drawing:—

Not taught.

## Scripture Lessons:—

Old Testament—Not examined; New Testament—Not examined.

## Summary:—

- (a) Attention—satisfactory.  
 (b) Mental effort—fair.  
 (c) Mental culture—tolerable.  
 (d) General proficiency—tolerable.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROMAN CATHOLIC ORPHAN SCHOOL, PARRAMATTA.

(LETTER FROM VISITING SURGEON OF, RESPECTING FEES, &c.)

*Ordered by the Legislative Assembly to be Printed, 19 January, 1869.*

THE VISITING SURGEON, ORPHAN SCHOOLS, PARRAMATTA, to THE COLONIAL SECRETARY.

Parramatta,  
15 January, 1869.

SIR,

I have the honor to acknowledge receipt of letter from the Principal Under Secretary, date 13th instant, calling my attention to the remarks of Mr. Hart and Mr. J. Stewart, in the Legislative Assembly, relative to the Roman Catholic Orphan School,—and to state, in reply, that I have never received one farthing in the shape of fees during the seven years I have had medical charge of the school, except my Government salary of £5 17s. 9d. per month, or 3s. 9½d. per diem, for medical attendance on an institution containing three hundred and eleven (311) inmates, seventy-nine of whom are under seven, and fifty (50) under five years of age.

2nd. There is not a single case of cutaneous disease in the institution, nor has there been for many months. Three years ago, a boy was inadvertently admitted without examination, and in a few days there were upwards of ninety cases of itch in the school; but, by energetic treatment, in which I was ably assisted by the sisters, nurses, and head master, Mr. Forshaw, it was *stamped out* in less than three weeks.

3rd. There are at present only nine (9) cases of ophthalmia in the school; three of these are chronic cases in unhealthy children, and have long baffled all treatment, but are now slowly improving. At the Protestant Orphan School, where the drainage is better, and the dry-earth-closet system has been introduced, ophthalmia is practically abolished. The six remaining cases at the Catholic School are cases of simple blight, have come on in the last few days from the heat and dust, and will be well in a week.

4th. I am happy to say that the children of both the Orphan Schools will contrast most favourably, not only as regards freedom from cutaneous diseases and ophthalmia, but also in general health, with those of any other institution, or with an equal number of children selected from private families of any position in the Colony. Previous to the late epidemic of measles, there had not been a single death at the Protestant Orphan School for a period of three years and two months; and during the epidemic, we only lost at the two schools fourteen (14) out of four hundred and fifty-nine cases of the disease, or 2½ per cent.

I have, &c.,

G. HOGARTH PRINGLE, M.D.,

Visiting Surgeon, Orphan Schools, Parramatta.

1868-9.

## ROMAN CATHOLIC ORPHAN SCHOOL, PARRAMATTA.

### No. 1.

THE VERY REV. S. J. A. SHEEHY, V.G., to THE COLONIAL SECRETARY.

Vicar General's Office,  
29 May, 1868.

SIR,

I have the honor, on the part of the Committee of Management of the Roman Catholic Orphan School, to request that Government may be pleased to sanction the dismissal of Sn. Cullen from the office of Assistant Schoolmaster in that institution. He has for some time past been careless and wanting in efficiency; he has been warned that the Committee were dissatisfied with his conduct, and the letter from Dr. Pringle, of which a copy is enclosed, is only the last of several complaints that the Committee have judged to be well-founded. His dismissal, if Government sanction the decision of the Committee, will date from the 30th proximo.

I have, &c.,  
S. J. A. SHEEHY, V.G.

The Inspector of Public Charities, Mr. Walker, will refer to Mr. Inspector Johnson's examination of teachers in this Orphan School, and report generally on complaint herein made.—H.P., 12/6/68.

[Enclosure in No. 1.]

G. H. Pringle, Esq., M.D. to The Very Rev. S. J. A. Sheehy, V.G.

Parramatta, 20 May, 1868.

Rev. and dear Sir,

I am reluctantly compelled, through you, to call the attention of the Committee of the Roman Catholic Orphan School to neglect on the part of the Second Master to his duties in superintending the ablution of the boys. You are aware of the difficulty we experience in keeping the establishment free from itch and other contagious cutaneous diseases. Many of these, when apparently cured, remain lurking in the system, and break out again spontaneously; and, if not detected at once, rapidly spread the contagion through the school. Last week I detected two cases that had evidently been unnoticed for some days; and, in mentioning the matter to the Matron, I was informed that repeated complaints have been made by the attendants of the want of care exercised by Mr. Cullen in superintending the children at the lavatories. I confirmed this by actual inspection, several of the boys having exceedingly dirty ears, &c. As I look upon this as a most important matter for the well-being of the establishment, I trust you will excuse my thus troubling you.

Yours, &c.,  
G. HOGARTH PRINGLE.

### No. 2.

MEMO. OF THE INSPECTOR OF PUBLIC CHARITIES.

12 June, 1868.

It appears that the Very Rev. Mr. Sheehy recommends the sanction of the dismissal of Mr. Cullen from the office of Assistant Schoolmaster, only on a general complaint that for some time past he has been careless and wanting in efficiency; and he forwards a letter from Dr. Pringle, the Surgeon of the institution, complaining of his want of care in exercising a proper supervision over the children at the lavatories.

The duties complained of by Dr. Pringle as having been neglected by Mr. Cullen seem hardly to come within the proper duties of a teacher, and do not therefore appear to me to demand so severe a punishment as dismissal from his office.

At the Protestant Orphan School these duties are performed by a person who is especially appointed, under the title of drill-master, to take charge of the boys at all times when out of school, who gives his whole attention to their moral training and to the cleanliness of their person. This is a work that appears altogether too laborious for any one who has to teach all day; and it is very desirable that a similar appointment should be made in this establishment. The teachers could then be relieved of this kind of duty, except during the temporary absence of the drill-master, when it would be necessary for them to take his duties for the time.

In Mr. Johnson's Report on the examination of teachers at the Orphan Schools, he says, "The teacher has not been trained. He is possessed of tolerable literary attainments and fair natural aptitude for teaching. He expresses an anxiety to obtain training."

"The assistant teacher has been trained, but his duties are only in part scholastic."

"I

"I beg to recommend that steps be taken to obtain for the teacher the necessary training in the Public Training School in connection with the Council of Education. I am of opinion that the teacher, if better qualified in the manner recommended, would, with the assistance of two pupil teachers, constitute ample teaching power for the present requirements of the school."

As there does not appear any complaint of Mr. Cullen's ability to perform the duties of his office as a teacher, I think it would be unjust to remove him on charges of so general a nature; but, if an arrangement could be made for carrying out Mr. Johnson's suggestion, and a drill-master appointed to take charge of the boys when out of school, the moral habits and general deportment of the children would be better attended to and their education quite as efficiently conducted.

R. C. WALKER,  
Inspector of Public Charities.

Send copy of Mr. Walker's report to Mr. Sheehy, saying that I shall be glad to receive any observations he may have to make upon it.—H.P., 13/6/68.

### No. 3.

MR. S. CULLEN to THE PRINCIPAL UNDER SECRETARY.

SIR,

I respectfully ask you to bring the following facts under the notice of the Honorable the Colonial Secretary:—The Very Rev. the Chairman of the Catholic Orphan School has given me notice that he has recommended the Government to remove me from my position in the Orphan School on the 30th instant. My respectful request is, *not* to be removed without getting an opportunity of replying to the preferred complaint.

I respectfully assign a few reasons to show that the Very Rev. S. J. A. Sheehy's complaints against me are not to be received as true on *his* assertion. The Rev. Gentleman has been connected with two other charges against me, and, on explanation, were found *untrue*.

The Vicar-General acts as *judge and accuser* in these charges. He visits here as Churchman, Religious Confessor, and Chairman. He gets up complaints in the two former capacities, and in the last he acts as judge. How can I stand against that?

In November, 1866, the Matron of this school made a complaint against me. It had been well arranged beforehand with her advisers; but when the Committee called for my explanation, one word of that complaint did not turn out to be true. The Committee can contradict me, or produce the *report* and the *reply*.

In July, 1867, the Very Rev. S. J. A. Sheehy and the Rev. Mr. Cunningham (the local Clergyman at Parramatta) made a complaint against me. I can refer to Mr. Hart, M.L.A., for my written reply, and then the Colonial Secretary can decide who has been at fault. It would be bad taste for me to say that the charges brought by two Catholic Priests and a much respected Sister of Charity—that they proved, on investigation, to be *false*—they were; and besides, intensely malignant and uncharitable.

In this last report, the Committee gave me no chance to vindicate my character. The name of Dr. Pringle appears in the present report. It's a relief to have the clerical party out for once; but I firmly and respectfully deny that I am at all responsible to Dr. Pringle, and I assign reasons:—For the last five years, Dr. Pringle did not, as much as *once*, speak to me about my duties or their manner of performance. If he had legitimate control over my actions, was it not his duty to give me either verbal or written orders as to his wishes?—that he never did, nor did any other person for him; consequently, how can the charge of *neglect* be sustained in such circumstances?

If the Doctor only hinted to me that any evil results were arising from my carelessness, I should use all possible means to give satisfaction, and there would be no need of report; but the Vicar General only wants my *removal*, and so Dr. Pringle's influence is unjustly brought forward—that's clear.

Will the Honorable the Colonial Secretary decide that it was my duty to flog sickly children, about five years old, suffering from dysentery brought on by bad and unsuitable diet? Was it my duty to cure or prevent that by flogging? Was it not punishment enough to have large patches of the skin blistered off their backs? This can be certified by examining a few of those unfortunate creatures.

I don't mention this case to explain a word in the Doctor's report, but as a reason that I am entitled to get an opportunity of replying or else have an investigation carried on at the institution. I have other claims on the Colonial Secretary to protect me from *wrong* and injustice.

I came to the Colony seven years ago as Government Schoolmaster on board an immigrant ship. The official documents relative to that appointment can be seen at the Colonial Secretary's Office. Besides, last year, the Honorable the Colonial Secretary asserted his control over the Orphanage. I was then compelled to attend an examination. It was publicly admitted that I was a trained teacher, and did not require to go to school again. On these grounds also I respectfully claim a fair hearing.

The manner in which the present complaint has been made is worthy of attention. It was only on the 8th instant that I was informed of my removal on the 30th. Would it not be fair to get a month's notice? Again, out of the entire twenty-four hours, I have only three for recess. Will the Colonial Secretary admit that all my other duties can nothing avail, supposing I failed in *one* particular.

The

The case is only one of *justice* to me, but it is one of *mercy* to the children. Let it be decided by proper authority how children are to be treated. The case is one of health—I might say one of life and death—to the poor orphans. For all those reasons, I hope I shall not be condemned unheard. I have received too much of that already from the Vicar General and his friends. I deeply regret to give such trouble, but I am only on the defensive. Since I came to this country, I offended against no law; I have infringed on no rules of the institution; I did not neglect my duties in a single particular. To get a trial is not denied to the worst of criminals—I ask no more from the Honorable the Colonial Secretary.

I am, &c.,  
S. CULLEN.

15 June, 1868,  
R.C. Orphan School.

---

No. 4.

THE PRINCIPAL UNDER SECRETARY to THE VERY REV. S. J. A. SHEEHY, V.G.  
Sydney, 16th June, 1868.

VERY REV. SIR,

12 June, 1868.

With reference to your letter of the 29th ultimo, requesting that the Government will sanction the dismissal of Mr. Cullen from the office of Assistant Schoolmaster at the Roman Catholic Orphan School, I am directed to enclose a copy of a Report that has been obtained from the Inspector of Public Charities; and to state that the Colonial Secretary will be glad to receive any observations you may have to make upon it.

I have, &c.,  
HENRY HALLORAN.

---

No. 5.

MR. S. CULLEN to THE PRINCIPAL UNDER SECRETARY.

Parramatta, 22 June, 1868.

SIR,

In the appeal I made a few days ago to the Honorable the Colonial Secretary, I had in view a threefold object: to gain a fair hearing for myself; to call attention to the anomalous position of the Vicar General; and to have the children treated as civilization, and humanity, and progress require. These three things have been so blended, that I could not talk of one without alluding to the other.

My removal is not in itself a serious affair, but the cause of justice is never a trifling affair. I gave facts to show that the Rev. Mr. Sheehy's complaints are not to be received as true till investigated. I could give several other proofs, but I think it quite sufficient to tell the Honorable the Colonial Secretary to see for himself the blistered and torn backs of Harry Miner and Thomas Leech, and then decide was the schoolmaster to be degraded when he did not add his mite of wanton barbarity to cure diarrhœa and dysentery with a *ferula*.

There is another feature in the case—as it concerns the Honorable the Colonial Secretary himself, to which I respectfully invite his kindest and best attention—I mean the prevalence of sore eyes. There are more cases of ophthalmia in the charitable institutions than in the entire population of the Colony united; and to show that I should not be censured for poor children having their eyes covered all over with a disagreeable looking substance, I give my opinion of its cause, and how it can be prevented without the infliction of corporeal punishment. In the dormitory the sore eyes are produced. The ceiling is low. The ventilation could easily be improved; but the chief source of the evil is to make the beds early in the morning, and so confine the night *effluvia* and prevent its escape. Added to this is a greater evil, namely, the bed-clothes absorbing and retaining the damp evaporation which arises from washing the floor. The air in such dormitory must be damp, chilly, and fetid; and when that is inhaled night after night, no wonder if sight, lungs, and health were much worse, if there be truth in sanitary science.

From the dormitory let me go to the refectory; and I say, no wonder that the stomachs of those children cannot perform their functions so as to ensure health and strength. How can children who never have a change of diet be strong? I pass by the *quality* of tea, sugar, and milk supplied. How can orphan children be different from the human race, that they should be kept to the identical same thing over and over? The expense would not be greater to substitute bread and milk for bread and tea in the evenings. During the last six years there was nothing of the kind. Nature rebels against that; illness attends it; then the grand cure must be resorted to—punish, punish.

I earnestly and respectfully call the attention of the Honorable the Colonial Secretary to those things, and let them be considered before any further injustice is dealt out to me. The Vicar General might have my removal effected without referring to the Colonial Secretary; but the reverend gentleman, in keeping with his kind charity, preferred to effect my future *ruin* by the course he adopted. I do not wish to be kept in the Orphanage, nor do I solicit any favour or appointment from the Government, but I earnestly ask for justice. I value it more than life on this occasion.

In

In conclusion, I appeal to the enlightened and experienced opinions of the Honorable the Colonial Secretary to say if I have not acted with a view to order, discipline, and education, and such general matters as tended to the future happiness and well-being of the children.

Can the Colonial Secretary say that I have been helped? There is a boy in the school; I was striving to train him for a pupil teacher; I told him to get a geometry (*sic*) six months ago; he asked it, but did not get it since. From *that one* you may learn several, but I forbear from going into any details. I am only concerned with the Vicar General; and I hope, however lowly my position, that as the case has been referred to the Colonial Secretary's Office, that justice will be strict and impartial.

I again respectfully reiterate to the Honorable the Colonial Secretary, the case involves more than a mere removal.

I am, &c.,  
S. CULLEN.

The Inspector of Public Charities ought to inquire into the facts alleged in this letter.—H.P., 24 June, 1868.

## No. 6.

THE INSPECTOR OF PUBLIC CHARITIES to THE PRINCIPAL UNDER SECRETARY.

Office, Inspector of Public Charities,  
Sydney, 26 June, 1868.

SIR,

I have the honor to report, for the information of the Honorable the Colonial Secretary, that I visited the Roman Catholic Orphan School, for the purpose of inquiring into the allegations contained in Mr. Cullen's letters of the 15th and 22nd instant. With reference to his remarks respecting Henry Miner and Thomas Leech,—I find both these boys, of ages five and six years, are still in the school, and now under his charge. They are continually in the habit of soiling their beds in the night—(the cause of which would seem to be more from some physical infirmity than from any wilful or bad habit, as the Matron informs me that Dr. Pringle believes it to arise from some affection of the kidneys)—and, as a remedy, he ordered a blister to be put on the back of each of these children, over the region of the kidneys; but, to try and check them of this habit, *they were told* it was as a punishment for their bad conduct. I have examined the children, and find they have each had an ordinary blister on them.

Mr. Cullen states that he was never informed that these children were addicted to this, nor was he aware of it; and only learnt the fact from the children themselves telling him the blisters were put on them as a punishment. He also states he has been censured on *previous* occasions, in similar cases, because he did not inflict corporal punishment on the boys, when he knew at the time they had not wilfully committed themselves in this way; but that Dr. Pringle has never spoken to him about the cleanliness of the children, nor has the Matron made any complaint to him for neglecting his duties, and no notice has been taken of anything he has complained of since the first twelve months after he joined the institution.

As regards the complaint of sore eyes, which he attributes to a want of change of diet, and to the beds being made up too early in the morning, and the rooms being washed out while the bedding is in them—I find the beds are made up before 8 o'clock, a.m.; that only the space between the beds in the centre of the floor is scrubbed daily, and the whole of the dormitories are washed out twice a week. The washing of the place is necessary; but it would perhaps be better to have the beds rolled up during the day as in many other institutions, and have them made by the boys in the evening. At present this work is performed by the girls of the institution, the Matron considering it undesirable to put boys on this duty; but in the Protestant Orphan School it is done by the boys, and the beds are made up in the afternoon, which no doubt is the better plan. Some of the children are affected with sore eyes, but no very bad cases and not more in proportion than in other institutions.

As the diet is regulated by a fixed scale containing only certain articles of food, it does not afford the opportunity for making any more than ordinary changes; this I find is done as far as the regulations will allow, and no complaint is made of the children being stinted in their food.

On this occasion I waited while the tea was served out to the children; and I found it to be of a very inferior kind, and not what it ought to be in accordance with the conditions of the contracts, which state that "the articles shall be the best of their several kinds."

His remarks about the pupil teacher refer to a boy named George Hughes, a lad about 16 years of age whom he wished to instruct in the evening, to advance his education so as to enable him to take the position of a teacher; and he desired the boy to apply to the Matron for a book of Euclid, but it was not granted and the boy has been removed from his class without any reason being assigned.

In justice to all parties, it is necessary for me to state that the Matron admits that she has not given Mr. Cullen any instructions about the boys or his duties for a considerable time; and assigns as her reason for not doing so, that on one occasion when she complained to him about his neglect of duty, he desired her to report him to the Committee, and behaved in an insolent manner; the Committee then censured him for  
his

his conduct. This shows an absence of a direct control at the establishment, and a want of cordial co-operation between the officials, which is so very desirable for the welfare of the institution; and it appears to me that all discord might have been avoided had the complaint of the Matron, in the first instance, been forwarded direct to the Honorable the Colonial Secretary.

I have, &c.,  
R. C. WALKER,  
Inspector of Public Charities.

I do not think much attention can be paid to Mr. Cullen's complaints; but disagreements among the persons employed in any institution of this kind must be attended by injury to the institution itself. I concur in Mr. Walker's opinion that the beds ought not to be made up early in the morning. Paper to be re-submitted.—H.P., 30/6/68.

### No. 7.

THE INSPECTOR OF PUBLIC CHARITIES to THE PRINCIPAL UNDER SECRETARY.

The Principal Under Secretary.—Forwarded for information of the Hon. the Colonial Secretary.—R.C.W., B.C., 29 June, 1868.

R. C. Orphan School,  
27 June, 1868.

SIR,

I omitted two matters of some consequence when speaking to you yesterday, to which I respectfully call your attention. First, I forgot to tell you that in the year 1866 there was upwards of *eight acres* of land cleared by myself and a detachment of boys; and that did not cost the Government one farthing expense. If you add to that the value of the wood, the item will be considerable if judged by the expense of clearing the Haslem Creek Cemetery. You might ask, why was that industry discontinued. I was then willing to give even my own leisure hours to advance the business.

I next ask your attention to the *amount of work* required of boys, which I think to be far too much for their years and strength. I give an instance. About the middle of May last, I think Saturday 16th, I was in charge of the entire premises, and at 11 o'clock a.m. I got a message from the Matron to send boys to cart stones from one place to another. The boys had been working hard *four hours* previously, sawing and splitting wood (the daily consumption of which is beyond a ton weight). On getting the message, I said to the boys, "I know ye are tired, and exhausted, and hungry, but I can't help the orders of the Matron; work gently and put on light loads." This deserves particular attention. It was the only message or commands I received from the Matron during the past twelve months; only that it had been so, and that I did not like to become uncivil, I should disobey the orders, tender my resignation, and ask Government protection for the poor orphans.

Bear in mind that the breakfast given to the children is by no means so solid or substantial that they could work severely for five hours on the sustenance afforded by bread and tea even of the best quality. Breakfast is given at 7½, and dinner at 12½. It is a serious matter to require children so long under the scorching heat of the mid-day sun to be employed at work fitted only for horses, carrying or carting stones and heavy clay soil. As I recollect, there is something about insubordination in the charge or charges against me; this must be the case alluded to. I can emphatically say, that from the 1st June, 1867, to 1st June, 1868, I did not receive a single order or command from Committee, Matron, Doctor, or any other except this; and it appears to me now that I was quite wrong to obey the orders under the circumstances. It is well worthy the attention of Mr. Walker that the duties of officers and subordinates should be clearly defined. It would be highly improper that a Matron wishing to carry all with high-handed authority should give ill-timed and peremptory commands, which either must be disregarded by the subordinate or else inflict a serious wrong on unoffending children.

In concluding, I do regret that my friends of the Catholic Orphan School were not "to my faults a little blind, and to my merits a little kind." It's rather strange that neither in my *literary, industrial, or social* duties there was nothing that the Very Rev. Mr. Sheehy could see worthy of recognition or regard; but, on the contrary, to put forward his most influential endeavours to ruin and blight my present and future prospects. He has done public service so I respectfully thank him.

I am, &c.,  
S. CULLEN.

The Inspector of Public Charities.

THE INSPECTOR OF PUBLIC CHARITIES to THE PRINCIPAL UNDER SECRETARY.

Recd. 29th June, /68.—For information of the Hon. the Colonial Secretary.  
The Principal Under Secretary.—B.C., 29th June, /68.—R.C.W.

Parramatta, 27 June, 1868.

MY DEAR SIR,

I have learned with some surprise, from the Superioress of the Roman Catholic Orphanage, that you had been led to understand that some of the boys had been blistered

blistered as a punishment! I beg to assure you that there is not the slightest foundation for any such statement. No blisters are applied unless by my orders and for professional reasons. In cases of incontinence of urine, I invariably give the boys the benefit of the doubt and prescribe. If this fail, and I find the boys wilfully persist in the practice, I advise a good whipping.

The Inspector of Public Charities.

I am, &c.,

G. HOGARTH PRINGLE.

### No. 9.

THE INSPECTOR OF PUBLIC CHARITIES to THE PRINCIPAL UNDER SECRETARY.

Forwarded for the information of the Honorable the Colonial Secretary.

The Principal Under Secretary.—R.C.W.—B.C., 21/7/68.

Parramatta, 13 July, 1868.

SIR,

It appears to me, when you read this, that you will admit there are some things in it deserving your attention. I did not think well to allude to them on the late occasion of your visit, wishing to exclude all irrelevant matter from the subjects mentioned in the Vicar General's complaint.

Your attention has been called to the dormitory and refectory. I adhere to what I have already written, having since given the subject increased attention. I now kindly ask your consideration to *cold weather*, and how it may affect delicate children.

As far as six years' experience has enabled me to judge, I am confident there has been a great deal of avoidable pain and suffering inflicted on children during the winter months. Of *one hundred boys* there are at least one-third who are feeble and unfit to take robust exercise early in the mornings and late in the evenings. There is no house, no shed or such like, to shelter from the chilling blasts that are so trying to the healthiest and strongest constitution. Would it be wrong to admit the younger and weaker portion into the schoolroom? Please to decide that. I was always favourable to that course, but always have been opposed. Next comes the *playground*. From past correspondence with the Committee, I told them, in plain terms, that the boys' playground should be on the western side of the boys' school, and the girls' playground (to be on the late grounds given by the Government) along the Lunatic Asylum. This subject I should prefer to *talk* about. There's nothing more necessary, in a mixed institution like this, than distinct places for public amusement and recreation. It would be painful to allude to the amount of odium I was subjected to for making this suggestion. The reasons for such suggestion are too obvious to dwell on. The present playgrounds are totally unfit, and they are a source of disagreeable daily toil to the children in dusting them. In hot and dry weather the dust arising from the *brooming* inflames the eyes much. For that reason a change should get some consideration.

In respectfully submitting those changes, there cannot be the most remote censure on any person or persons individually or collectively—they involve little or no expense—they would tend to the health, happiness, and character of the children. I have abstained from saying a word on the duties of the schoolroom, not that I am altogether ignorant of the subject, nor indifferent to the advantages of education; but I think the subjects mentioned are far more important and far more deserving of care and solicitude. Putting many words into a few, I should say: "Guard against illness; prevent pain; no severe chastisement except for offences criminal or tending to crime; promote health by wholesome diet, by recreation and judicious manual labour—then educate; cultivate feelings of truth and rectitude; form the mind to manliness and independence of character, adapted to elevate from the desolation and bereavement, which, under the happiest circumstances, must be inseparable from the hard lot of *Orphanage*."

The Inspector of Public Charities.

I am, &c.,

S. CULLEN.

P.S.—At your convenience, if you kindly let me have a few *words* on the School Farm, I should think such a favour; and I hope you won't find such time misspent. As already said, I have no complaints against any person. The most curious reports are getting circulated as to the probable nature of the complaints made against me by the Vicar General. Some think them extraordinary criminal, or that a priest can *do no wrong*.

I must not omit to say that my friends here say, they have recommended to appoint a drill-master. I may tell you that I could not be a "trained teacher" without knowing school-drill. The boy I am teaching will be able to show you that I can teach it.

I'll engage to *drill out* the abuses of past years; and it's more required than giving martial airs to poor blistered and cruelly flogged children.

I am certain you won't receive any tales to my prejudice without telling me; and if I am deficient or incompetent in any necessary qualification, I'll generously admit my shortcoming.—S. C.

## No. 10.

THE VERY REV. S. J. A. SHEEHY, V.G., to THE PRINCIPAL UNDER SECRETARY.

Vicar General's Office,  
16 July, 1868.

SIR,

In answer to your letter of the 16th instant (*sic*), inviting observations on an enclosed Report from the Inspector of Public Charities, in reference to the proposed dismissal of Mr. Cullen, the Assistant Schoolmaster of the Roman Catholic Orphan School, I have the honor, on the part of the Committee, to observe, on the first paragraph of the Report, that the complaint, although conveyed to Government in the general terms "carelessness and inefficiency" had been previously carefully examined in detail by the Committee.

2. The Committee have no wish at all to urge severity, and willingly withdraw their recommendation of Mr. Cullen's dismissal, if Government consider the punishment would be, as it seems to the Inspector, too severe.

3. But still, looking to their experience of the disposition and conduct of Mr. Cullen, the Committee are decidedly inclined to advocate the expediency of his removal, whenever it may be in the power of Government to find him equivalent employment elsewhere.

4. The Committee desire me also to express their cordial concurrence in the suggestion that certain offices for which Mr. Cullen is at present responsible are not well assigned to a teacher, but belong to a drill-master; and they hope that, as soon as may be convenient, Government will be good enough to allow for the institution such additional assistant, charged with the duties described in Mr. Walker's Report.

I have, &c.,  
S. J. A. SHEEHY, V.G.

## No. 11.

THE VERY REV. S. J. A. SHEEHY, V.G., to THE PRINCIPAL UNDER SECRETARY.

Vicar General's Office,  
24 September, 1868.

SIR,

On the 16th July last I had the honor of addressing to you, on behalf of the Committee of the Roman Catholic Orphan School, Parramatta, a letter in answer to a Report made by the Inspector of Public Charities on the case of Simon Cullen, the Assistant Schoolmaster whose dismissal the Committee had proposed for the sanction of Government. The Committee willingly withdrew their recommendation of dismissal, if the Government agreed with the Inspector in thinking that measure too severe a punishment. At the same time, however, they declared that they had not written without carefully examining the complaints that had been made from time to time against Mr. Cullen, and had not acted on vague general charges. Further, looking to their long experience of his disposition and conduct, they still urged the expediency of removing him from the institution so soon as he could be placed elsewhere.

2. I am sorry to say that the Committee can no longer concur in this lenient view of Mr. Cullen's behaviour. Finding that there is no improvement, but that he continues to be, and even in a greater degree, neglectful and offensive, and mischievous in his present position, they desire to press his removal; and they trust that Government will not consider that they are either incompetent to understand, or unwilling to apply, what is required by ordinary justice and charity in the case. They respectfully submit that they are not in this claiming an amount of confidence greater than that which has always been accorded to them by Government in respect of the officer in question.

3. I enclose a copy of a letter which he says he addressed to yourself. It is of itself sufficient evidence of his insolent folly and malignity. How the copy of the letter came into my possession I shall be glad to explain to you, if you wish, in person.

I have, &c.,  
S. J. A. SHEEHY, V.G.

## No. 12.

THE VERY REV. S. J. A. SHEEHY, V.G., to THE PRINCIPAL UNDER SECRETARY.

Vicar General's Office,  
1 October, 1868.

SIR,

I have the honor to inclose two letters received this morning from the Roman Catholic Orphan School, Parramatta, one from the Matron and one from Mr. Forshaw, the Schoolmaster. They are submitted in connection with my letter of the 24th ultimo,  
not

Dated 15 June,  
1868.

not only in support of the Committee's request for sanction to Mr. Cullen's removal, but as showing that some immediate action is necessary in the interest of the discipline and good order of the establishment.

I have, &c.,  
S. J. A. SHEEHY, V. G.

Write to the Vicar General, informing him that as soon as the Inspector of Public Charities returns to town he shall be directed to inquire into the additional charges against Mr. Cullen.—J.D., 5/10/68.

[Enclosures in No. 12.]

The Matron, Roman Catholic Orphan School, Parramatta, to The Chairman of the Committee.

Roman Catholic Orphan School,  
Parramatta, 30 September, 1868.

Very Rev. Sir,

I beg again to call your attention to the great want of order and discipline amongst the boys. They seem to be under no control when out of school, and absent themselves whenever they think proper.

From the enclosed list, you will see it is now a matter of daily occurrence. On the 21st., George Spicer was absent all day. I was not informed of it until between 9 and 10 o'clock p.m., when Mr. Cullen sent to know if I would allow two boys to go to the farm to look for him. I answered,—“No; unless he or Michael went with them.” The latter accompanied them. The boy was not to be found. In the meantime he returned, and climbing up the post entered through the window.

On the night of the 22nd Thomas Spring and Daniel Burnham were out, and said to have slept in the new cemetery next to our farm. Edwards, a child of only nine years of age, was absent from the morning of the 24th to the evening of the 25th; he was found in Sydney, and brought home by a policeman.

Mr. Cullen, who has the general care of the boys out of school, and was also to see them in the dormitories, never informed me of the two boys being out all night.

May I beg of you to use your influence to have a change made. Mr. Cullen is quite unfit for the place he holds; and if matters are allowed to go on much longer the boys will bring disgrace upon the institution.

There are only 100 boys and they have two masters. We have 116 girls under one teacher.

I have, &c.,  
M. A. ADAMSON.

Mr. Jos. Forshaw to the Mother Superioress.

Roman Catholic Orphan School,  
30 September, 1868.

Dear Madam,

I feel bound to call your attention to the case of the boy Spring, who is systematically absenting himself from school.

It appears that on the night of the 28th, to escape punishment, he slipped through the dormitory window on to the roof of the dining hall, thence by the spouting to the ground, and away. He was next at evening prayers on the 29th, slept in the dormitory, but not punished; was at morning prayer and breakfast; not at school, but came to dinner. Thinking Mr. Cullen might explain his absence from school, I asked him about the boy, but received no reply but a studied air of indifference about the matter. It is evidently useless for me to expect any aid from him in restoring the discipline of the boys' school, which has been gradually falling off, until its present aspect really threatens nothing less than open insubordination.

I am, &c.,  
JOS. FORSHAW.

R. C. Orphan School.

## No. 13.

THE PRINCIPAL UNDER SECRETARY to THE VERY REV. S. J. A. SHEEHY, V.G.

Colonial Secretary's Office,  
Sydney, 6 October, 1868.

VERY REVEREND SIR,

In acknowledging the receipt of your letter of the 1st instant, forwarding communications received by you from the Matron and Schoolmaster of the Roman Catholic Orphan School, respecting the conduct of the Assistant Schoolmaster, I am directed by the Colonial Secretary to inform you that, as soon as the Inspector of Public Charities returns to town, he shall be directed to inquire into the additional charges against Mr. Cullen.

I have &c.,  
HENRY HALLORAN.

## No. 14.

THE INSPECTOR OF PUBLIC CHARITIES to THE PRINCIPAL UNDER SECRETARY.

Sydney, 21 October, 1868.

SIR,

In returning the letters of the Vicar General, of 24th September and 1st instant, requesting the removal of Mr. Cullen from his position as Assistant Teacher at the Roman Catholic Orphan School, I have the honor to report, for the information of the Honorable the Colonial Secretary, that I have visited this institution, and personally inquired into the complaints set forth in the correspondence.

I find the conduct and general behaviour of the boys since my visit in August last is anything but satisfactory; and, from the 1st of last month, many of them seemed to have acted as they pleased, going in and out of school when they thought proper, quitting the premises without the knowledge of those placed in charge over them, and obtaining property which none of the officials can account for their having possession of. This property has been sold by the boys in the township, sweetmeats purchased with the money, and brought into the school. Other boys have roved about the town on Sundays, instead of attending church; and neither Matron nor Masters appear to have known anything about it, until the matter has been reported to the Matron by people unconnected with the institution.

As many as fifteen boys at a time have been continually permitted to go to and fro to the farm, a distance of more than half a mile out of sight of the institution, without any person to accompany them; and they have been kept there during the day, under charge of the farm labourer only, and to the prejudice, I consider, of their schooling.

There is an absence of anything like co-operation with the male teachers one with the other; and the Matron does not appear to be empowered with that control over them which is absolutely necessary for the head of such an institution to possess, in order that it may be worked in a proper manner.

Mr. Cullen complains of interference on the part of the Matron and the teacher (Mr. Forshaw) with his control of the boys, and attributes, in a measure, their insubordination, and his own inattention to a more vigilant supervision of the boys when out of school, to this interference.

The boys have a negligent lazy way with them; they destroy their clothes, and in many instances exhibit a total disregard for the commands of their superiors, and have not that cleanly appearance they ought to have. Mr. Cullen admitted to me that he had not reported the absence of the boys or other irregularities to the Matron, and did not accompany them to the farm, because his duties had been interfered with; he also asserted that the minds of all the officials of the institution were prejudiced against him. The fencing of the boys' playground has been allowed to fall into decay, and in many places it is now quite open, which he points out as a reason for their being able to get away without his seeing them.

It is very desirable some immediate action should be taken to restore the school to a proper state of discipline; and, as it is evident to me Mr. Cullen cannot work in an amicable manner with those who are placed over him, and he has not paid that attention to the unscholastic part of the duties allotted to him which he was required to do, I urge that the recommendation of the Vicar General be carried out, and a suitable and properly trained drill-master be appointed at once, to take the entire charge and control of the boys when out of school. The duties of the teacher could then be confined wholly to the instruction of the boys; and arrangements could be made for assisting the teacher, as suggested by Mr. Inspector Johnson—shown in my Report of 12th June last—by the selection of proper monitors.

No complaint whatever has been made against Mr. Cullen as to his fitness as a teacher; some provision might, therefore, be made to procure a place which would be more suitable to his abilities.

The

The absence of distinct and definite regulations showing the duties of each officer and attendant, has, I think, assisted to aggravate this want of co-operation with the officers of the institution; and I beg to call attention to my letter of the 6th June last, submitting Rules for the Protestant Orphan School, in which it is pointed out that, with slight alteration, they would apply equally to this establishment if approved of.

I have, &c.,

R. C. WALKER,

Inspector of Public Charities.

### No. 15.

#### MINUTE OF THE HON. J. DOCKER, COLONIAL SECRETARY.

AFTER attentive consideration of all the papers in this case, I have arrived at the conclusion that the interests of the institution will suffer by the continuance of Mr. Cullen in his present position. I think, therefore, the suggestion of the Inspector should be carried out; but, as circumstances will not admit of my giving the necessary attention to the means to be adopted for this end, I must leave their adoption to my successor in office. J.D., 21/10/68.

#### MINUTE OF THE HON. J. ROBERTSON, COLONIAL SECRETARY.

THE usual steps in such cases should be taken for the removal of Mr. Cullen. With regard to the last paragraph in the letter of the Inspector, I have already given instructions to the effect that that officer should prepare Regulations to him appearing suitable for the Catholic Orphan School, in order that facility for the best consideration of the matter may be given to me. JOHN R.

### No. 16.

#### THE INSPECTOR OF PUBLIC CHARITIES to THE PRINCIPAL UNDER SECRETARY.

MEMO. :—The accompanying letter from Mr. Cullen, respecting the complaints made against him, was only received this day, and might be placed with my Report on the matter of the 21st instant.

R. C. WALKER,

Inspector of Public Charities.

22 October, 1868.—B.C.

#### [Enclosure in No. 16.]

Mr. S. Cullen to the Inspector of Public Charities.

Catholic Orphan School,  
20 October, 1868.

Sir,

As directed yesterday, I beg to furnish you with a written statement about the affairs then under consideration. In doing so, my task is rather cheerless. No matter how the present charge may result, it would be as easy to recall the dead to life as to restore my character from the injury it has already received from the officially admitted falsehoods of previous complaints made against me by the Matron of this institution, and the Very Rev. Mr. Sheehy, and a few others whose names are unworthy of being noticed. The last of these deliberate and malignant falsehoods was preferred as late as three months ago. I let it pass, and I meet the present charge boldly but very respectfully: *not guilty in a single particular.*

The principal item against me is, that about twenty boys were, on a certain day, 23rd ultimo, absent from school. They were; and the wonder is, on the day in question, that the entire school was not off to the farm for a holiday.

Some one of the boys gave out that I got a holiday for them. In the glee and hurry of the moment, all were nearly off; and before there was time to stop the bustle, *eighteen* were out of reach; but they were back at 5 o'clock, tea-hour, and did not commit one wrong act during the day. It would be worse than falsehood to charge me with *neglect* in such a case, and it would be equally untrue to represent that as an *irregularity* on the children's part. It was a mere mistake. They are as good children as can be found on earth. In all that has occurred there were only *four* that deserved sharp punishment, and they received that from me.

I'll not be going into details about other dates given. The highest number that went any day was *seven*, and that only once. *One* only went to Sydney, and he was brought back by the police. The wild roving commenced about the 20th September, and all were settled on the 19th October, the day of your visit. The chief outlaw, Spring, was then under correction; except the *four* boys who took eggs, as I told you, the others cannot be charged with a single act in the way of depredation.

Now, assuming that the boys are what has been represented, how can I be censured. The other teacher had charge from 7 to 8 o'clock in the morning, and from 12 to 1 o'clock at noon. There is no one on earth that could decide with certainty whether it was during the other teacher's time or mine that the children left. Like all past cases, the censure is reserved for me only; though you can see, by the rules and discipline adopted, I am not, in strictness, responsible for a single breach of discipline in the whole institution.

It

It is well that the case has occurred, to show how things are, and what difficulty I had for past years to keep order.

It appears to me I have said enough to exculpate myself, but I must not omit that it would be a hardship to require that I should compel the attendance of every refractory boy who absented himself from lessons through *fear*. Has the other teacher no right to look after the idle, or to compel their attendance? To prevent the late annoyance, the teacher did not say as much as one word. Was that right? Was it not tacitly encouraging the children? Were they not further encouraged, when they saw the daily insults I received in their presence at my lawful business? How could the children respect my position when they saw that one of the *Sisters*, in the Church, on Sundays, would put aside my orders before the public. The Matron, to be sure, can say she *herself* did not do so, but no *Sister* would so act without orders from the Matron. I told you how the Matron and the other teacher acted, in leaving the charge of the School to me on the 22nd September, without even the civility of asking me. I could have left the place at my usual hours; I did not. I think that shows I wished to act in harmony if possible.

I am very anxious to defend the character of the children. In general, it could not be better in all respects. At all times and places boys run off from school and harsh teachers. At present the children are not the offending party. During four months there were fifteen working on the farm—four others going there to and fro; nineteen entirely. Of these, some were stupid; they forgot their lessons, and to escape flogging they ran away. What can be more natural; and that is not the worst of it.

Is it *right* to receive boys back who have been for years apprenticed, and who leave their employers without cause? One such came from Sydney about the 1st September, and was allowed, by orders of the Matron, to mingle with the children. He roused their minds by stories of city life. I always wished to give such up to the *police*. That *lad* took away one of the boys named Spence (who was previously a good boy) for a few days. That is an item against me. I did not send for the absconder to Sydney. I would not allow him amongst the children. I would at once hand him to the authorities; but the Matron thought and acted differently, and now I must be censured.

The Matron gave permission to *four* others to go away, and that without permission from me, on the very day the other teacher was in Sydney. The act was trifling, but the circumstances following were not trifling. It was the origin of all the annoyance. The Matron gave another boy permission to go for three or four weeks to Dr. Pringle. On his return he brought a few others off with him, and was with difficulty got to submit to discipline. I find no fault with the Matron for so acting, but I am not to suffer for the natural results that attend her indiscreet proceeding.

I hope Mr. Walker will consider the large number of boys strolling in and out to the farm of their own accord. Connect all these with what I have said as to how the other teacher and Sisters interfered with my position, and then, in justice, I hope the decision will be the same in my behalf that it has already been on too many occasions. The faults have been magnified. Sufficient causes are given to account for them. They are not in the remotest manner attributable to me. I put a stop to them by lawful means. There will be no recurrence of such trouble, if you duly consider the case, and frame Regulations to stop past abuses.

Wishing that every word I have written may be considered duly respectful,—

I am, &c.,  
S. CULLEN.

P.S.—I should think it a serious and shameful offence to be guilty of insubordination or any disrespectful demeanour to the Matron. I told her in your presence to mention only *one case* when I ever did so, and that I should make the most honorable apology. I think that sufficient for the past, and in future I'll be no worse. But there is a distinction between doing my duties in an official way in Government service, and performing the same duties according to Convent etiquette. To the latter I shall not bow, and while I do my duties in keeping with official requirements, I do not think my superiors can or will ask to compel me to have *personal* respect or religious veneration towards any one who is not deserving of such from me.—S.C.

P.S.—In mentioning that the other teacher insulted me several times in the presence of the children, I hope his conduct will be overlooked; but, for sake of *discipline*, it should not be in future allowed.

Had he been a schoolmaster he would have known better. I am proud of being a schoolmaster; and, any insults received in the schoolroom, from such a person as he is, I can readily bear with easy indifference.—S.C.

## No. 17.

THE PRINCIPAL UNDER SECRETARY to THE VERY REV. S. J. A. SHEEHY, V.G.

Colonial Secretary's Office,  
Sydney, 11 November, 1868.

VERY REV. SIR,

Referring to your letter of the 1st ultimo, and previous communications, relative to the misconduct of Mr. S. Cullen, Assistant Teacher at the Roman Catholic Orphan School, I am directed to inform you that the Colonial Secretary approves of Mr. Cullen being removed from his situation; and to request that you will submit the name of some competent person for appointment in his stead.

I have, &c.,  
HENRY HALLORAN.

## No. 18.

THE INSPECTOR OF PUBLIC CHARITIES to THE PRINCIPAL UNDER SECRETARY.

Recd., 21 Nov., /68.

Forwarded for the information of the Hon. Colonial Secretary.  
The Principal Under Secretary.—R.C.W.—B.C., 21/11/68.

[Enclosures

## [Enclosures in No. 18.]

Mr. Thos. C. Makinson to Mr. S. Cullen.

16 November, 1868.

Sir,

In reply to your note of the 14th instant, I am instructed to say that the Committee do not require you to leave before the end of the present month.

I have, &amp;c.,

THOS. C. MAKINSON,

Clerk to Committee.

Mr. S. Cullen to The Inspector of Public Charities.

MEMO.—I respectfully ask Mr. Walker if he does not think it would be right to apprise the Honorable the Colonial Secretary that the first intimation I had of my removal was to see my *place* advertised in the daily papers. Surely, the rules of official discipline can be made sore enough to inflict punishment without such a proceeding as I complain of.

I ask Mr. Walker to kindly notice that I have a few boys in the Orphanage so far advanced that the present teacher has been unable to give them a lesson during the last six months. Are they to be neglected, and are my services worthy of notice? I leave gratitude or compensation out of the question.

I think it is unnecessary for me again to remind Mr. Walker that I have studied the art of agriculture with care. I had an opportunity of being trained in one of the best model farms in the British Islands. I studied the subject in reference to the soil, climate, and productions of this country. I kindly ask Mr. Walker to bring these particulars under the notice of the Honorable the Colonial Secretary.

S. CULLEN.

Parramatta, 17 November.

## No. 19.

MR. THOS. C. MAKINSON to MR. S. CULLEN.

Vicar General's Office,

Sydney, 13 November, 1868.

SIR,

I am directed by the Committee of Management of the Roman Catholic Orphan School to inform you that the Honorable the Colonial Secretary has approved of your removal from the office of Assistant Schoolmaster in the said Institution.

I have, &amp;c.,

THOS. MAKINSON,

Clerk to Committee.

## MEMO. OF MR. S. CULLEN.

HAVING this day, 27th November, waited on the Honorable the Colonial Secretary, I was kindly informed by him how he was led to give the above *approval*; and having received permission to state any objections I thought proper, I beg to do so briefly and respectfully.

On the 19th October the Inspector of Public Institutions visited the Orphanage, for the purpose of investigating complaints against me. On hearing what they were, and being fully conscious of not being at fault, I expressed a desire that the affair would be amicably settled—that the case of a few boys playing truant was hardly worth the notice of a Colonial Secretary. Neither the Inspector nor Matron agreed. After that I tendered an ample and honorable apology to the Matron, if *one instance* were mentioned in which I acted uncivilly. Could I do more to be conciliating?

I now respectfully object to the whole proceeding subsequent to that offer. Assuming that the charge against me was too serious to receive an apology, was I then not entitled to get a *fair trial*? Was it not in keeping with official requirements to get a copy of the written charge against me; or else let the accusers state their charges in my presence? Mr. Walker dispensed with all such trifles. If the Committee thought proper to remove me, without even asking the sanction of the Government, I should not object. They having obtained the approval of the Colonial Secretary against me is an aggravation of the wrong done me. In justice to myself, I am compelled to report Mr. Walker to the Honorable the Colonial Secretary, for giving erroneous and insufficient data to effect a removal so harsh and unjust to me under the circumstances. Having offered to leave quietly at the end of the year, and to make a due apology if required, was it honorable for the Committee to reject such, and to advertise my position without first intimating to me that my removal was agreed to? The present case should not be decided by the vindictive feelings of the past. They are too clearly manifested in the summary manner I have been dealt with by the Committee.

Mr. Walker was well aware of the ungenerous treatment I received in last July from the Vicar General. There were three other like occasions—they so resulted that I was not so much as reprimanded; but Mr. Walker can join *four wrongs*, and convert them into a *right*. That is the course pursued in the present case.

In conclusion, I charge Mr. Walker with partiality and injustice. He admitted my accusers were only themselves to blame on *their own complaint*; he interrupted me in the most infuriated ill-temper when giving explanation on the 19th October; he did not furnish me with the charges against me; he did not ask the accusers to state their

case

case before me; he was carried away by his own dark surmises, and not by facts and evidence; and, above all, he has misled the Honorable the Colonial Secretary, to whose justice I confidently and respectfully appeal. I trust my language is duly courteous. The deep injuries I have received, my faults magnified, my just deserts passed over or denied—all are capable of producing a tone of discourtesy. I have studied hard for a career of usefulness. I trust the Colonial Secretary will not see me wronged.

S. CULLEN.

POSTSCRIPT.—Mr. Walker told me, on several occasions, that the Committee had not power to effect my removal—that such was out of their province. I hope the Honorable the Colonial Secretary will inquire what Mr. Walker's opinion of me was in July last when he investigated a complaint against me. It is more convenient now to advocate the wishes of the Committee than that of an unfriended individual. Let Mr. Walker be called on to produce the memorandum I gave him on the 29th October. That will show the feelings of my accusers towards me during the past years. My case is too much that of truth and justice. The Colonial Secretary is not the gentleman to act against such, and to inflict irreparable wrong on an individual to gratify the uncharitable feelings of a party.

S.C.

## No. 20.

MR. S. CULLEN to THE COLONIAL SECRETARY.

SIR,

A few days ago you favoured me with an interview, and kindly directed me to state my wishes. I did so, and my chief object was to show that I was not at fault. I did not ask that you should revoke your decision, nor to be restored. I asked no appointment; but I did ask earnestly that you would prevent unnecessary harshness and injustice.

After suggesting a removal myself, it would be ungenerous to complain. The Government Officer for the Department had a written request in my note of the 20th October, that I wished to leave of my own accord. Why then was I given up to the vindictive feelings of the Committee? What need was there for all the subsequent harshness? What need was there to be troubling you with what was already settled and arranged? For all that has occurred Mr. Walker is to blame. His motives and objects are too evident to be mentioned. I was in the *right* when Mr. Parkes investigated; but the very same case becomes a *wrong* when brought before his immediate successors. Rather strange.

Had you time to consider the frivolous complaint, and how it has been magnified—had you considered the course pursued towards me, during the last few years—you would not have committed yourself to an *act* so glaringly wrong. It strikes at justice; it is at variance with recognized official usage; it does away with individual right; and it could not be all these without being an encroachment on the liberties of the country. Can a Government Officer do *as he likes*? And are the Committee to have greater powers than the Executive? To do away with official formality the Executive would not.

Although I feel deeply pained at the entire proceeding, I shall trouble you no more on the subject. I entertain sincere respect for you in your official position; but greater still for your eminent public services.

I am, &c.,

S. CULLEN.

Royal Hyde Park Hotel,  
Sydney, 5 December, 1868.

Mr. Walker should see this.—JOHN R.  
Read.—R.C.W., 8/12/68.

## No. 21.

THE PRINCIPAL UNDER SECRETARY to MR. S. CULLEN.

Colonial Secretary's Office,  
Sydney, 6 January, 1869.

SIR,

In acknowledging the receipt of your further communication of the 5th ultimo, relative to your removal from your position as Assistant Teacher to the Roman Catholic Orphan School, I am directed by the Colonial Secretary to state that the Reports of the Inspector of Public Charities on your case were made prior to the present Ministry's taking office, and that there does not appear to have been injustice or harshness in that officers recommendations; but that, on the contrary, every consideration has been shown you that could under the circumstances have been permitted.

I have, &c.,

HENRY HALLORAN.

## No. 22.

MR. S. CULLEN to THE PRINCIPAL UNDER SECRETARY.

SIR,

I beg to acknowledge the receipt of your communication of the 6th instant, marked 68/7326, wherein you say that the Honorable the Colonial Secretary notifies that my removal was determined on previous to his Ministry coming into office. I know that; but the fact does not alter the demerits of the case. Had there been a score of Ministries, they cannot change the nature of things nor make wrong right.

To be explicit, I do not at all censure the Honorable the Colonial Secretary, under the circumstances; but I do complain of the harshness, injustice, and tyranny subsequently received, through the Colonial Secretary's act, from the Committee of the Catholic Orphan School.

You say the Colonial Secretary does not see any harshness in the conduct of the Inspector of Charities towards me. First, there is harshness in the fact that neither before nor after my removal have I been informed of the charges against me. Although it may be like after death getting the doctor, I should like still to see my enemy full before me.

Mr. Walker did tell me on one occasion, that I was not on sufficiently amicable terms with the Matron. There was no reason why I should; and there are numerous and legitimate reasons there should be no amicable terms. Official civility is all that is necessary in such institutions. How would Mr. Walker like to say that he had been on amicable terms with the late Mr. Eastwood. I do not mean to be offensive, but the case forcibly illustrates the point under consideration.

Having been reported to *three Colonial Secretaries* in a few months, the dictates of self-respect prompted me to leave on the last occasion (the 19th October). Did I not tell Mr. Walker, "Settle the affair—I have made arrangements to leave"? Did I not offer an apology if I gave either insult or incivility during the previous six years? Did I not ask for a copy of the written charges against me? Mr. Walker said, "Write anything you like. The other teacher is responsible for the present state of things." Did not Mr. Walker prevent me from making a necessary explanation. He said, in a state of bad temper which was pitiable to witness—"Sir, the Vicar General is a gentleman. You are not to speak of him in his absence." I was only scrutinizing his public acts as Chairman of the Committee, and had nothing to say in reference to his position as "gentleman" or clergyman. The Inspector of Charities can assume new-born zeal with marvelous facility. A few months previously I had it in my power to entomb the Vicar General in the pit dug by his own hands. Mr. Walker did not then ask me to spare the Vicar General—that he was a "gentleman"; nor did the Inspector of Charities ask me to desist, although the Vicar General was then "*absent*." But the Very Rev. Mr. Sheehy is quite a different man under the *régime* of Mr. Robertson to what he was under Mr. Parkes—so thought the Inspector of Charities. Perhaps he was right.

It is a sorry compliment Mr. Walker pays to the Honorable the Colonial Secretary. Should Mr. Parkes come into office, we may guess who would be the first to make an accomplished bow; and, in such contingency, Mr. Walker would be the first to recommend my reinstatement. The Committee of the Catholic Orphanage have just got the man they wanted.

As a Catholic, it almost dazzles me to think of the grand *future* in store for the Catholic Church of Australia through the wonderful efforts of a few over-zealous pandering Protestants. It is to gratify the whims of a few insignificant individuals, who arrogantly identify themselves as *the Church*, that I have been removed. I defy them all to bring one fault against me. I defy them to show that I was wrong in a single instance as to the government and discipline that should be carried on at the Orphanage.

The Committee have lawyers and theologians in their number. Although it may have been advisable to *remove* me, still there is a maxim—"The end does not justify the means"; others will be found to say the *means* were detestable.

In conclusion, I beg to say, in all candor, that I am far more respectful to the Colonial Secretary than those who are now fawning on him, just because he is at the pinnacle of power.

Royal Hyde Park Hotel,  
7 January, 1869.

I am, &c.,  
S. CULLEN.

My reports on Mr. Cullen's case were made prior to the present Ministry taking office, and I do not consider there is any injustice or harshness in the recommendations; but every consideration has been shown him, that could, under the circumstances, be permitted.—R.C.W., 8/12/68.

Inform—JOHN R., 24 Dec., 1868.

## No. 23.

MR. S. CULLEN to THE PRINCIPAL UNDER SECRETARY.

SIR,

Having come to the Colony in Government Service connected with the Colonial Secretary's Department, and continued therein for six years, I hope the enclosed testimonials may be placed with such official papers of mine as are now ordered to be produced by the Legislature.

I

I hope the Honorable the Colonial Secretary will admit that the circumstances demand this as an act of justice, which I shall regard as a favour and be grateful for accordingly.

Royal Hyde Park Hotel,  
15 January, 1869.

I am, &c.,  
S. CULLEN.

Approved.—JOHN R., 19 Jan., 1869.

[Enclosures in No. 23.]

Certificate from the Commissioners of National Education, Ireland.

THE Secretaries are to inform Mr. Simon Cullen, with reference to his desire to be furnished with a certificate of character, &c., that the books of the office do not contain a record of any complaint against him. On the contrary, Mr. Cullen's character was such as to merit the highest approval of the several Inspectors, as appears from their reports.

Mr. S. Cullen,  
St. Peter's National School, Dublin.

MAURICE CROSS, } Secretaries.  
JAMES KELLY, }

Certificate from Professor Kavanagh, late Head Inspector of Irish National Schools.

17 November, 1860.

MR. SIMON CULLEN had been in charge of a National School in the County of Roscommon for some years while it was in my circuit as Head Inspector. He had been in connection with the National System for fifteen years, during which period he bore the very highest character for zeal and success in the discharge of his duties. He ranks in the Second Division, First Class. Several of his pupils became teachers; and some of them, examined by me, reflect the greatest credit on their master's skill and scholarship.

J. W. KAVANAGH,  
Professor, Catholic University, Dublin.

Certificate from the Clergyman of my native Parish.

I HAVE known Simon Cullen, a native of this parish, for more than ten years, and feel much pleasure in bearing testimony to his religious character and Christian conduct.

As a teacher he was zealous, efficient, and very successful. I know some of his pupils who took the highest prizes at a Diocesan College; several others became competent teachers; while many others distinguished themselves in mercantile business. All were as conspicuous for their secular knowledge as for high moral conduct.

November, 1860.

B. KEARNEY, P.P.,  
Innismagrath, Co. Leitrim.

From the Surgeon-Superintendent on board the immigrant ship "Hotspur."

I FEEL pleasure in bearing testimony to the good conduct of Mr. Simon Cullen. He always displayed willingness, intelligence, and anxiety in the performance of his duties; and was of the greatest service to me in promoting order and regularity among the immigrants.

22 March, 1861.

D. B. NORTH, M.D.

Certificate from The Immigration Agent.

New South Wales,  
Government Immigration Office,  
Sydney, 4 January, 1869.

I HEREBY certify that it appears from the records of this department that Mr. Simon Cullen acted as schoolmaster on board the immigrant ship "Hotspur," which arrived in this Colony on the 24th February, 1861; and that, having performed his duties in a very satisfactory manner, he received payment of a gratuity of £10 (ten pounds) for his services, in accordance with the recommendations of Her Majesty's Emigration Commissioners.

GEORGE F. WISE,  
Agent for Immigration.

Testimonial from the Very Rev. The Vicar General.

St. Mary's, 5 May, 1866.

Sir,

I quite agree with you that it is better and cheaper to run the fence from the cemetery to the creek than to have it as we already decided. Please have it done your way, and I shall go to see the place on Wednesday. I do not like to write to the Mother Superioress, as she does not understand such business.

Mr. S. Cullen,  
Catholic Orphan School.

I am, &c.,  
S. J. A. SHEEHY, V.G.

Memo. by Mr. Cullen.

It may be seen by the foregoing letter of the Vicar General, that my opinion was held in high estimation in May, 1866, when the farm arrangement decided on by the Committee was put aside and mine adopted. The correspondence will show strange alteration in twelve months.

I now express my deep regret that such an *exposé* is about taking place. I asked Mrs. Adamson, the highly respected Benedictine Sister that rules the Orphanage, to have the affair quietly settled, in the presence of the Inspector of Charity, on 19th October last. My wish was discarded. After that I made humiliating advances to the Committee; but the malice of the Vicar General and a few of the Benedictines could neither be appeased nor conciliated.

15 January, 1869.

S. CULLEN.

1868-9.

Sydney: Thomas Richards, Government Printer.—1869.

1868-9.

---

NEW SOUTH WALES.

---

PUBLIC SCHOOLS ACT OF 1866.

(AMENDED REGULATIONS UNDER.)

---

Presented to Parliament pursuant to Act 30 Vict., No. 22, sec. 7.

---

Council of Education Office,

Sydney, 8th March, 1869.

REGULATIONS framed by the Council of Education under the Public Schools Act of 1866, in substitution of the Regulations of 27th February, 1867.

HENRY PARKES,

President.

---

I.—PROCEEDINGS OF COUNCIL.

1.—CONDUCT OF BUSINESS.

1. The Council shall meet for the transaction of business, unless otherwise ordered, every Monday, at 3 o'clock.

2. At each meeting, the Secretary shall enter in the Minute Book an accurate record of every proceeding of the Council; and the Minutes so recorded shall be read over as the first business of the next subsequent meeting, and, after such corrections as may be found necessary to ensure complete accuracy, shall be signed by the President or Member acting in his stead.

3. The President or any two other Members may cause to be convened an extraordinary meeting of the Council, by a letter addressed to the Secretary stating the time and object of such meeting.

4. If any meeting of the Council shall lapse for want of a quorum, it shall be so recorded in the Minute Book, with the names of the Members present.

5. The order of business shall be arranged by the Secretary, subject to the direction of the President, and shall be clearly stated on a Business Paper for the use of each Member.

6. Acts of misconduct or irregularities on the part of the servants of the Council shall, on becoming known to the Secretary, be reported to the President, who shall have power to take any steps that may be considered necessary in cases of importance, submitting the whole matter for the consideration of the Council at its next meeting.

7. The President shall attend at the offices of the Council at least once in every week, to hear complaints or explanations arising out of the conduct of general business.

8. The President shall be entitled to vote on all questions as a Member of the Council, and, in cases of an equality of votes, shall be entitled to give a casting vote as President.

9. No Member shall absent himself from four consecutive weekly meetings of the Council without leave.

10. All meetings of the Council shall be convened by circular signed by the Secretary.

11. In case of his inability to attend any meeting, the President shall explain the cause of his absence by letter addressed to the Council before the hour of such meeting, unless circumstances render communication of the kind impossible; and another Member shall be elected to the chair for that occasion only.

## II.—ELECTION OF PRESIDENT.

12. At the first meeting of the Council in January, in each year, one Member of the Council shall be elected President, who shall hold office until his successor be elected.

13. In the event of the office of President becoming vacant in the course of the year by death, resignation, or otherwise, the Members of the Council shall proceed, within one month, to the election of another President for the remainder of the year in the manner hereinafter prescribed.

14. The President shall be elected by ballot, in the following manner:—

The names of the Members shall be printed on five cards all alike, which, after being initialled by the Secretary, shall be by him enclosed in five blank envelopes, all alike, unsealed, and shall be so distributed to the Members of the Council, either by hand or letter.

Each Member shall erase all the names, except that for which he votes, and shall return the card in the blank envelope, sealed, either by hand or letter, to the Secretary.

The Secretary shall produce, on the day of election, the cards in the original blank envelopes, sealed; and they shall be opened by the President or other Member occupying the chair, and the Member having the largest number of votes shall be held to be duly elected.

Provided always, that in the event of a tie between any two Members, the election between such two Members shall be decided by ballot confined to the Members then present.

## II.—SCHOOL ADMINISTRATION.

### I.—ESTABLISHMENT OF SCHOOLS.

#### 1.—Classes of Schools.

The Council of Education will establish, maintain, or assist, four classes of schools, viz. :—

Public Schools—Section 8, Public Schools Act.

Provisional Schools—Section 13.

Half-time Schools—Section 12.

Certified Denominational Schools—Sections 9 and 28.

#### 2.—Assistance to Schools.

In the case of Public Schools, the Council will contribute, in such proportion as they may deem expedient—but as a rule not more than two-thirds—to the cost of erecting and furnishing school buildings, subject to the provisions of Section 23 of the Public Schools Act. The assistance to the other classes of schools will, as a rule, be limited to payment of Teachers' salaries and supply of school books and apparatus.

#### 3.—Conditions of Grant for Buildings.

Appendix A.

Applications for the establishment of Public Schools must be made upon forms provided for that purpose; and applicants must state the amount that will be locally contributed towards the cost of the necessary buildings, and the names of the persons by whom payment of that sum is guaranteed.

#### 4.—Duration of Pledge.

A pecuniary pledge made by the Council in any year will hold good for that year only; if not taken up within that time, a fresh application will be necessary.

Appendix B.  
Appendix C.

#### 5.—Assistance to Public School on leased land.

When applicants for the establishment of a Public School are themselves willing to provide the requisite buildings, they must be prepared to execute a lease of the premises to the Council for a term of at least five years, at a nominal rent. Before accepting such lease, the Council will satisfy itself, through its officers, that the proposed school buildings are in good repair, sufficient for the purpose, and suitably furnished.

6.—

6.—*Local Contributions.*

All local contributions towards the cost of school buildings and furniture shall be remitted to the Secretary for deposit to the credit of the "Council of Education Building Fund."

7.—*Plans and Dimensions.*

Plans for the erection of Public Schools will be supplied by the Council; but plans locally provided may be adopted, if first submitted to the Council and approved. No schoolroom should be less than 16 feet in width, and 10 feet in height; and at least 8 square feet of floor should be allowed for each child in ordinary attendance.

8.—*Provisional Schools.*

In applying for aid to Provisional Schools, the promoters must adopt the form Appendix D. provided, and must satisfy the Council that the Teachers employed are competent to perform the duties required of them, and that they are persons of good moral character.

9.—*Half-time Schools.*

Half-time Schools under Itinerant Teachers may be established wherever twenty children of the school age are residing within an estimated radius of ten miles from a central point, and can be collected in groups of not less than ten children in each.

10.—*Certified Denominational Schools.*

Applicants for a Certificate to a Denominational School must provide a school-house, sufficient in all respects for the purpose, and suitably furnished; and they may Appendix E. Appendix F. nominate a competent Teacher or Teachers for appointment by the Council.

11.—*Conditions on which Certificates may be withdrawn.*

Certificates will be withdrawn from Denominational Schools, should—

1. The required number of pupils not be maintained.
2. The building become dilapidated, or otherwise unsuitable.
3. The supply of furniture and apparatus become inadequate.
4. The Regulations of the Council be infringed.

12.—*Inscription.*

In the case of every Public School building, whether the property be vested in the Council of Education or not, the inscription PUBLIC SCHOOL, and no other, shall be conspicuously put up on the outside.

13.—*Uses of Public School Buildings.*

No use shall be made of Public School Buildings tending to cause contention—such as the holding of political meetings, or bringing into them political petitions or documents of any kind for signature; and they shall not at any time be converted into places of public worship, unless they shall have been built and kept in repair without aid from public funds.

## II.—ORGANIZATION OF SCHOOLS.

14.—*Grants of School Books.*

Grants of school books and apparatus will be made from time to time, as may be deemed expedient, to all schools under the supervision of the Council, in proportion to the average number of pupils in daily attendance; and a full supply will be granted as a first stock to all schools newly established.

15.—*Character of School Books.*

Such books only as are supplied or sanctioned by the Council shall be used for ordinary instruction.

16.—*Apparatus.*

Apparatus will include maps, diagrams, pictures, black-boards, easels, and ball-frames.

17.—*Registers and Instructional Documents.*

The undermentioned Registers and Forms shall be kept by the Teacher in every school, according to directions supplied with each:—

- Admission Register.
- Class Roll.
- Daily Report Book.
- School Fee Account Book.
- Lesson Register.
- Time-table.
- Programme of Lessons for each Class.

18.—*Returns.*

Quarterly and Annual Returns shall be furnished from every school. The Quarterly Returns, neatly and correctly made out, are to be forwarded to the Inspector of the District, immediately after the close of every quarter. They are to be made out in duplicate, one copy to be furnished to the Inspector, and the other to be retained by the Teacher as a record of the school. No salary due or accruing at the end of any quarter

quarter will be paid, until the Return, properly completed, has been received and certified by the Inspector to be correct. The Annual Return must be forwarded, with the Quarterly Return, immediately after the close of the December Quarter. Negligence in compiling Returns or in keeping School Registers will render a Teacher liable to a fine, or if repeated, to a loss of classification. Teachers found guilty of wilful falsification of Registers or Returns will be instantly dismissed.

#### 19.—*Training of Teachers.*

Applicants for employment as Teachers must undergo a course of training before they can be permanently appointed, unless they have previously been trained in a recognized Training School.

#### 20.—*Classes of Candidates.*

The Council will receive into the Training School established in connection with the Model Public School, Sydney, three classes of Candidates, viz. :—

First Class—Pupil Teachers whose term of service has expired, and Teachers who have already been trained elsewhere.

Second Class—Untrained Teachers who may have been in charge of schools.

Third Class—Persons entering the teaching profession for the first time.

#### 21.—*Qualifications of Candidates.*

Appendix G.

Candidates must apply for admission to the Training School in the form annexed. They must, except in the case of pupil teachers, be at least eighteen years of age, but not more than forty; they must be free from any bodily infirmity likely to impair their usefulness as Teachers; they must be persons of active habits, energy of character, and unblemished reputation; they must satisfy the Council as to their previous history, and must undergo an examination in the following subjects at least :—

Reading—Fourth Book of Lessons of the Board of National Education (Ireland), or some equivalent book, with fluency and expression, and answer on the subject matter in detail.

Writing—From dictation, in a neat and legible hand, with correct spelling and punctuation, a passage from the Fourth Book.

Arithmetic—Questions as far as Proportion and Practice.

Grammar—Parsing a passage from the Fourth Book, and elementary Analysis of Sentences.

Geography—The elementary portions of Geography.

#### 22.—*Conditions of Admission.*

Prior to admission, candidates must make a declaration that they intend *bonâ fide* to adopt and follow the profession of Teacher in schools under the supervision of the Council, and that they will accept a situation in any locality, as the Council may see fit; and they must procure a guarantee from two responsible persons, that the whole expense of their training shall be refunded, if from any cause whatever—death excepted—they should quit the service of the Council within three years from the date of their first appointment or admission to the Training School.

#### 23.—*Term of Training.*

Entrance examinations will be held quarterly, in March, June, September, and December; and the periods of training will be one month, three months, or six months, as may be found necessary.

#### 24.—*Allowances during Training.*

The following allowances may be made to Candidates who satisfy the above-mentioned conditions, and pass successfully the prescribed examination at the close of their training :—

To married couples .....	£7 per month.
To unmarried persons .....	£5 per month.

When the Training School is ready to receive candidates into residence, these allowances may be withdrawn, and board and lodging provided instead.

#### 25.—*Course of Studies.*

The course of studies shall include—

##### 1. Ordinary subjects. (For the whole term of training.)

Reading and Elocution.

Writing—Plain and Ornamental.

Arithmetic—Theory and practice.

Grammar and Composition.

Geography—Physical and descriptive.

School Management.

School Books.

Drill and Gymnastics.

Elements of Singing.

Linear Drawing.

Exposition of the Public Schools Act and Regulations made thereunder.

##### 2. Alternative Subjects. (For Second Quarter only.)

Algebra—As far as Quadratic Equations.

Geometry—The first four books of Euclid.

Science of Common Things.

Domestic Economy.

English Literature.

26.—*Practical Training of Candidates.*

Candidates will be trained in the practical management of schools by attendance at the Model School or such other school as the Council may determine.

27.—*Examinations.*

Oral examinations of the students in the Training School shall be held monthly, with a view to test their attention and progress; and written examinations shall take place quarterly, in January, April, July, and October, when classifications will be awarded to the students according to their attainments and skill in teaching. The Council will not award to students in training a higher certificate than Class II, and no certificate will be issued until the Inspector's Report upon the school shows that the Teacher is successful in his management.

28.—*Classification.*

Teachers will be classified in the following grades according to their attainments and practical skill :—

Class I.....	{	Section A.
		B.
Class II .....	{	Section A.
		B.
Class III.....	{	Section A.
		B.
		C.

29.—*Exhibitions.*

The Council will award exhibitions (not exceeding ten yearly) to Pupil Teachers who exhibit the highest degree of practical skill, and the greatest advance in their attainments, at the termination of their engagement in that capacity, with a view to enable them to undergo a six months' course of training free of expense.

30.—*Appointment and Dismissal of Teachers.*

The appointment and dismissal of Teachers, in all Schools other than Provisional Schools, rest solely with the Council, subject to the provision contained in Section 10 of the Public Schools Act.

31.—*General qualifications of Teachers.*

As a general rule, no Teacher will be appointed to a Public School or to a Certified Denominational School, unless he has been examined and classified; and although in some cases a Teacher may be appointed provisionally who has not undergone such examination, his appointment will not be ratified until his competency has been tested in that manner.

32.—*Qualifications as to attainments and practical skill.*

The attainments of Teachers shall be tested by oral and written examinations, and their skill in teaching by inspection of their schools.

33.—*Board of Examiners.*

The Council will appoint a Board of Examiners, to whom will be entrusted the duty of setting examination questions and revising the answers.

34.—*Subjects of Examination.*

The subjects on which Teachers will be examined are divided into two classes—Ordinary and Alternative. The former embraces those elementary branches with which it is necessary for every Teacher to be acquainted, inasmuch as they form the staple of daily instruction in schools. Reading, Writing, Arithmetic, Grammar, Geography, and the Knowledge of the School Books are of this kind; to which must be added, as being equally requisite, acquaintance with the Principles of School Management, and, if possible, Rudiments of Music and Linear Drawing. All other subjects are styled Alternative, because it is optional with the Teacher to undergo an examination in any of them with which he may be familiar.

35.—*Alternative Subjects.*

The following is the list of Alternative Subjects in which Teachers may be examined :—

Latin: Virgil—Grammar.  
 Mathematics: Algebra to Quadratic Equations, including Surds; Euclid,  
 Books I to VI; and Trigonometry.  
 Chemistry.  
 French.  
 German.  
 Geology, }  
 Botany, } With especial reference to Australia.  
 Zoology, }

36.—*Syllabus of Subjects for each Class.*

THE following is a Syllabus of Subjects in which Teachers will be examined for each grade of Classification.

*For a Third Class Certificate*—Teachers must be examined in :—

*Grammar* : Including Punctuation, Paraphrasing, Parsing, and Analysis of Simple and Combined Sentences.

*Geography* : General and Descriptive.

*Arithmetic* : As far as Decimal Fractions. *Female Teachers*—as far as Proportion and Practice.

*School Management* : Including the Organization, Discipline, and Instruction of Schools.

*School Books* : The Reading Books from the First to the Third inclusive.

*Reading* : Prose and Poetry, from the Lesson Books.

*Writing* : Specimens of Copy-setting, in text, round, and small hands.

*Vocal Music*.\*

*Linear Drawing*.\*

*Female Teachers* : Needlework—Domestic Economy.

\* Failure in these subjects will not necessarily prevent a Teacher from gaining a Classification.

*For Second Class Certificate :—*

*Grammar* : Including Punctuation, paraphrasing, Composition, Parsing, Derivations, and Analysis of sentences.

*Geography* : Physical and Descriptive.

*Arithmetic* : As far as Cube Root, Duodecimals, and Elementary Mensuration.

*Female Teachers*—as far as Decimals.

*Art of Teaching* : The Organization, Discipline, and Instruction of Schools, in greater detail.

*School Books* : The Series of Reading Books.

*Reading* : Prose and Poetry, from the Literary Class Book.

*Writing* : Specimens of Copy-setting in three hands, and of Letter-writing.

*Vocal Music*.

*Linear Drawing*.

*Female Teachers* : Needlework—Domestic Economy.

*Algebra* : As far as, and inclusive of, Quadratic Equations, but omitting Surds.

*Geometry* : The First Book of Euclid's Elements.

*Latin* : Cæsar (De Bello Gallico)—Grammar. (In lieu of the two preceding Subjects.)

*For First Class Certificate :—*

*Grammar* : Punctuation, Paraphrasing, Parsing, Analysis of Sentences, Composition, Style, Derivation, and Prosody.

*Geography* : Physical, Political, and Commercial, with Popular Astronomy and Mathematical Geography.

*Arithmetic* : The whole Theory and Practice as laid down in text-books in common use.

*School Books* : The whole of the Reading Series.

*Reading* : Prose and Poetry.

*Writing* : Specimens of Copy-setting and Letter-writing.

*Vocal Music*.

*Linear Drawing*.

*Female Teachers* : Needlework—Domestic Economy.

*Principles of Teaching* : Including a Knowledge of the Nature of the Human Mind.

*English Literature* : And one Alternative Subject at least.

37.—*Annual Examinations.*

All Teachers holding a lower Classification than Class III, Section A, and not having attained the age of fifty years, will be required to undergo examination annually. Success in the examination will not necessarily entitle a Teacher to a higher classification; but failure will lead to a loss of classification, unless a very satisfactory reason can be assigned for the decrease of attainments. Teachers who desire to be examined with a view to obtain a higher certificate must apprise the Inspector of the District of their wish, and at the same time furnish to him a list of the Alternative Subjects upon which they are prepared for examination.

38.—*Condition of Promotion.*

In order to obtain a First or Second Class Certificate, Teachers must submit to examination in one or more Alternative Subjects; and it is recommended that they should confine their attention to one group of subjects. Teachers who undergo examination for a higher certificate will be expected at every successive grade to show increased acquaintance with the ordinary branches. No higher classification will be awarded, even if an examination be passed successfully by a Teacher, unless the Inspector's Reports upon his school speak in decidedly favorable terms of his ability, industry, and efficiency.

39.—*Promotion for Good Service.*

A revision of classification will be made at the end of three years; and should it appear that, during the three years, a school had increased in numbers and efficiency—that the Inspector's opinion was uniformly favorable—and that the Local Board had reported well of his conduct—the Teacher would then be eligible for one grade of promotion, without being required to undergo an examination. The promotion in such

cases

cases would be equivalent to a reward for patient, sustained, and skilful exertion in the actual work of the school. A Teacher must, however, serve for *five* years in Class II, Section A, before he can be promoted to Class I, Section B, without examination.

#### 40.—*Promotion by Removal.*

Teachers who are desirous of being promoted to larger or more important schools, are to intimate their wishes in this respect to the Inspector of the District, in writing. A list of such Teachers will be kept in the Council's Office; and, except in special cases, promotions will be made in accordance with the principle of classification and seniority.

#### 41.—*Notification of Commencement of Duty.*

When Teachers have been appointed to schools, they are required to report to the Inspector for the District the fact of their arrival at their post, and of their having commenced their duties.

#### 42.—*Duties of Teachers.*

The duties of Teachers are,—

To observe faithfully the Regulations of the Council.

To carry out the Suggestions of Inspectors to the best of their abilities.

To teach according to the Course of Secular Instruction and Standard of Proficiency.

To maintain the Discipline prescribed in the Regulations.

To keep the School Records and to furnish Returns neatly and punctually.

To see that the undermentioned documents are constantly posted in a conspicuous place in the schoolroom, viz. :—

Regulations of the Council.

Notice to Visitors.

Course of Secular Instruction.

Time-table.

Programme of Lessons.

Names of Members of the Local Board.

Scale of Fees.

To take charge of the Public School Buildings and all other property belonging to the Council, and to be responsible for keeping the school premises in good order and repair at their own cost, allowance being made for reasonable wear and tear.

To consult the Local Board and receive their instructions on matters not relating to the internal management of the school.

In schools containing female children but no female Teacher, it shall be the duty of the Teachers' wives to be present at the assembling and dismissal of the pupils, in order that they may take charge of the discipline of the female children; and they are required to teach needlework to the girls during at least four hours in each week. In forming an estimate of the efficiency of schools, the competency and usefulness of Teachers' wives and the amount of time they devote to school duties will be taken into account.

#### 43.—*Remuneration of Teachers—Salary.*

The salaries of principal Teachers in charge of schools will be according to the following scale :—

Class I. ...	{ Section A.....	£150 per annum.
	„ B.....	138 do.
Class II. ...	{ Section A.....	120 do.
	„ B.....	108 do.
Class III. ...	{ Section A.....	96 do.
	„ B.....	84 do.
	„ C.....	72 do.
Probationers .....		60 do.

These will be joint salaries for husband and wife. To single persons, the salary will be £12 per annum less.

#### 44.—*Residence.*

In Public Schools the Council will contribute towards the cost of erecting Teachers' residences on the same conditions as in the case of school buildings.

#### 45.—*Fees.*

If there be more than one Teacher employed in a school, the fees shall, as a general rule, be distributed among them in the ratio of their respective salaries; but Pupil Teachers shall not be entitled to participate in the fees.

#### 46.—*Reduction for Small Attendance.*

The foregoing rates apply only to Teachers in whose schools an average daily attendance of thirty scholars is maintained. If in any case the attendance fall below that number, a reduction may be made in the amount of salary awarded, as the Council may see fit.

#### 47.—*Model Schools.*

In Model Schools special salaries may be awarded to the Teachers, at the discretion of the Council.

48.—*Mistresses.*

Mistresses in charge of separate departments shall be paid two-thirds of the salaries allotted to the classification they hold.

49.—*Assistant Teachers.*

Assistant Teachers may be appointed to schools in which the average daily attendance exceeds seventy. They will be entitled to receive a proportion of the school fees and such salary as may be determined by the Council. Assistants may be—(1) persons who have served for three years at least as Pupil Teachers; or, (2) persons who have been regularly trained in a Training Institution; but no person will be permanently appointed as an Assistant Teacher unless examined and classified.

50.—*Pupil Teachers.*

Pupil Teachers may be engaged for a term of not less than three years, for service in schools in which the average daily attendance has not been less than fifty for the six months preceding the date of appointment, provided the Teacher hold a certificate of classification not lower than Class II, Section B, and that the School is well furnished and well provided with books and apparatus.

51.—*Conditions of Appointment.*

Candidates for the office of Pupil Teacher must be at least thirteen years of age, and free from any bodily infirmity likely to impair their usefulness. Their remuneration will consist partly of instruction to be given by the Teacher, for at least one hour on every school day, and partly in a fixed yearly salary, which is paid by the Council, provided the Teacher certify as to their efficiency and good moral character, and they pass their annual examination in a satisfactory manner.

52.—*Course of Study for Pupil Teachers.*

The subjects to be studied during each year are the following:—

*Before Appointment.—Candidates.*

*Reading:* To read the "Third Book of Lessons" of the Board of National Education (Ireland) with ease, fluency, and expression; to spell well, and to understand the meaning of the passage read.

*Writing:* To write from dictation, in a neat hand, a simple prose narrative, with correct spelling and punctuation.

*Arithmetic:* To know the Arithmetical Tables, and to work the rules as far as Reduction and Proportion.

*Grammar:* To parse and analyze correctly a Simple Sentence taken from the Third Book.

*Geography:* To understand the Geographical Terms, to be acquainted with the Map of the World, and to have a knowledge of the Geography of Australia.

*Skill in Teaching:* To teach a junior class in the presence of an Inspector.

*First Year of Appointment.—Class IV.*

*Reading:* To read the "Fourth Book" of the Board of National Education (Ireland) with fluency and expression, give synonymous words and phrases, and answer upon the subject matter.

*Writing:* To write neatly and correctly from dictation, or from memory, a passage from the Fourth Book.

*Arithmetic:* To work questions in Proportion and Practice.

*Grammar:* To parse and analyze Combined Sentences.

*Geography:* The Geography of New South Wales in detail, and Europe in outline.

*Skill in Teaching:* To discipline one of the lower classes, and give a reading lesson.

*Second Year of Appointment.—Class III.*

*Reading:* To read the Fourth Book with improved intonation and expression; to paraphrase the sentences, and give the derivation of prominent words.

*Writing:* To write, in a neat and flowing hand, an abstract of an object lesson. Subject to be chosen by the Inspector.

*Arithmetic:* To Interest and Vulgar Fractions.

*Grammar:* Parsing of Difficult Sentences; with a good knowledge of Syntax, and the Analysis of Complex Sentences.

*Geography:* Australia, Great Britain and Ireland in detail; Asia in outline.

*Skill in Teaching:* Management of the Second Class, and giving a lesson on Elementary Geography or Grammar.

*Third Year of Appointment.—Class II.*

*Reading:* The "Literary Class Book," with correct intonation and emphasis, paraphrasing, and derivation.

*Writing:* To write an account of the organization of the School, or of the methods of teaching adopted.

*Arithmetic:* To understand the nature and uses of Decimals.

*Grammar:* Increased skill in Parsing, and in the Analysis of Simple and Complex Sentences.

*Geography:* Palestine, in detail—America, in outline.

*Skill in Teaching:* Ability to discipline the Third Class, and give an Object Lesson.

*Fourth*

*Fourth Year of Appointment.—Class I.*

*Reading*: To Read with ease and expression the "Literary Class Book," and reproduce, either verbally or in writing, the passage read.

*Writing*: To write an essay on some subject connected with the Art of Teaching.

*Arithmetic*: Extraction of Roots.

*Grammar*: Prosody—Analysis of Compound Sentences.

*Geography*: Physical Geography in detail—The World generally.

*Skill in Teaching*: Increased skill in the management of Classes, and in giving of Object Lessons.

*53.—Resignation of Teachers.*

Teachers are required to give one month's notice of their intention to quit their situations, such notice to be dated on the first day of any month. As a condition to the payment of the salary for the last month of their tenure of office, they are to hand over to the Local Board all the school property belonging to the Council, and are to make out, in duplicate, an inventory of the same—one copy, signed by two of the Local Board in testimony of its correctness, to be forwarded to the Council, the other to be retained by the Local Board.

*54.—Teachers' Occupations.*

Teachers in the service of the Council of Education are prohibited from engaging in any occupation not having a distinctly educational character, unless the sanction of the Council has been applied for and obtained.

## III.—DISCIPLINE OF SCHOOLS.

*55.—Punctuality and Regularity.*

With a view to the proper training of their pupils, Teachers shall conduct the operations of their schools with punctuality and regularity.

*56.—Cleanliness.*

Habits of personal neatness and cleanliness are to be encouraged among the scholars, by precept and personal example of the Teacher; and, if necessary, may be enforced by his authority. The Teacher is also responsible for keeping the school-rooms and furniture clean and arranged in an orderly manner.

*57.—Order.*

Proper measures shall be taken by the Teachers to instil into the minds of their pupils the necessity for acquiring habits of orderly behaviour, obedience to Teachers and to the rules of the school, and for maintaining a cheerful and modest demeanour. Pupils should also be trained to exhibit due respect for the property of others, whether public or private; to regard the feelings of their fellows; to be honest and truthful, attentive and diligent while under instruction, and conscientious in the discharge of every duty. Every moral virtue, in short, which the Teachers can inculcate by direct instruction, by influence, or by example, should be sedulously cultivated as they may find occasion.

*58.—Government of Pupils.*

In the government of the pupils, all degrading and injurious punishments are to be avoided. The Teacher's discipline must be mild but firm, his manner kindly, his demeanour cheerful and calculated to gain the confidence of his pupils, and his language marked by strict propriety. While he should overlook no offence, his aim should be to prevent the necessity for punishment by the improvement of the offender.

*59.—Corporal Punishment.*

Corporal punishment shall be inflicted in extreme cases only; and the Teacher must keep a record of the time and place at which pupils were corporally chastised, the amount of such punishment, and the nature of the offence.

*60.—Expulsion of Pupils.*

No pupil shall be dismissed from any school under the superintendence of the Council, unless with the express concurrence of the Local Board or of the Council.

*61.—Playground Supervision.*

The conduct of pupils in the playground must be carefully supervised by the Teacher in person; and he must also see that, in proceeding to school and returning therefrom, the behaviour of the scholars is well regulated.

## IV.—INSTRUCTION OF SCHOOLS.

*62.—Course of Secular Instruction.*

The Course of Secular Instruction for each Class shall be as follows; but in Denominational Schools it shall not be necessary to use the Scripture Lessons published under the sanction of the Board of National Education in Ireland:—

*First Class.*

*Reading*: The "First Book" of the Board of National Education (Ireland), or some reading book equivalent to it.

*Writing*: On slates, from copies and monosyllables from dictation.

*Arithmetic*: Notation, to three places of figures—Simple Addition, on slates—Mental operations involving results not higher than 60.  
*Object Lessons*: Domestic Animals and Common Objects.  
*Singing*: Simple Melodies by ear or by Tonic Sol-fa Method.

*Second Class.*

*Reading*: The "Second Book," and the "First Sequel Book" of the Board of National Education (Ireland), or some reading book or books equivalent.  
*Writing*: On slates, from memory and dictation; in books, from copies.  
*Arithmetic*: Notation—Simple Rules—Tables.  
*Grammar*: The Parts of Speech.  
*Geography*: Local Geography—Uses of a Map—Definitions.  
*Object Lessons*: Domestic Animals—Common Objects.  
*Singing*: Simple Melodies by ear or by Tonic Sol-fa Method.  
*Drawing*: Simple Rectilineal Figures, on slates.

*Third Class.*

*Reading*: The "Second Sequel Book," and the "Third Book" of the Board of National Education (Ireland), or some reading book or books equivalent.  
*Writing*: On paper, from copies; and on slates, from dictation.  
*Arithmetic*: Compound Rules and Reduction—The easier Rules of Mental Arithmetic—Tables.  
*Grammar*: Parsing, Syntax, Analysis of Simple Sentences, and Elementary Composition.  
*Geography*: Australia and New Zealand in detail—Outlines of Europe.  
*Object Lessons*: Common Minerals, Vegetables, and Animals—The simpler Manufacturing processes.  
*Singing*: Part Singing, Tonic Sol-fa Method.  
*Drawing*: Fowles' Elementary Drawing Books, Nos. I, II, and III, or some equivalent books.  
*Scripture Lessons*: Scripture Lessons, Old and New Testaments, No. 1 of the Board of National Education (Ireland).

*Fourth Class.*

*Reading*: The "Fourth Book" of the Board of National Education (Ireland), or some equivalent book.  
*Writing*: On paper, from copies and dictation.  
*Arithmetic*: Proportion and Practice—Fractions—Mental Arithmetic.  
*Grammar*: Etymology and Syntax, with Analysis of Sentences—Composition.  
*Geography*: Europe and Asia in detail—America in outline—Elements of Physical Geography.  
*Object Lessons*: Natural History, Manufactures, Elementary Mechanics; Science of Common Things.  
*Singing*: Tonic Sol-fa Method.  
*Drawing*: Fowles' Drawing Books IV, V, and VI, on paper.  
*Geometry*: Definitions and Axioms.  
*Scripture Lessons*: No. 2 Old and New Testaments, Board of National Education (Ireland).

*Fifth Class.*

*Reading*: The "Supplement to the Fourth Book" of the Board of National Education (Ireland), or an equivalent.  
*Writing*: On paper, plain and ornamental.  
*Arithmetic*: Decimals—Roots—Mensuration.  
*Grammar*: Syntax—Prosody—Analysis of Sentences—Composition.  
*Geography*: The World—Physical and Descriptive.  
*Object Lessons*: Arts and Manufactures—Laws of Health—Social Economy—Duties of a Citizen—The Laws.  
*Singing*: Tonic Sol-fa Method—Established Notation.  
*Drawing*: Perspective—Drawing from Models.  
*Geometry*: Euclid, Book I.  
*Algebra*: To Simple Equations of two unknown quantities.  
*Latin*: Smith's Inductive Latin Course; or, Arnold's Henry's First and Second Books.  
*Scripture Lessons*: As in Fourth Class.

63.—*Religious Instruction.*

During an hour of each day (designated in the Time-table) children whose parents desire that they should receive special religious instruction from the pastors or other approved religious teachers of their respective communions, shall be allowed to receive such instruction, so far as the school buildings will admit of distinct classes being formed. Every Public School is to be so arranged as to admit of the formation of one such denominational class at least; and if the simultaneous teaching of more than one be impracticable, it will be necessary to arrange that classes of the different denominations be formed on distinct days of the week. Such arrangements must however be left in a great measure to the good feelings and convenience of the parties concerned,

as circumstances will necessarily vary too much to admit of uniform regulations being applicable in all cases. In Denominational Schools, the occupation of the pupils during the hour allotted to special religious instruction is left entirely to the arrangement of the Local Boards.

64.—*Denominational Books.*

The Teacher shall take care that the religious books employed in the denominational classes be strictly confined to the time and place of denominational instruction, and that they be not left in the way of children whose parents may object to them.

65.—*Methods of Teaching.*

Every Teacher is required to make himself acquainted with improved methods of teaching, and to practise them in his own school, in order that his instruction may be productive of the greatest results.

66.—*Results of Teaching.*

As the efficiency of Teachers will be judged by the attainments and moral improvement of their pupils, the results as well as the methods of instruction should constantly be kept in view.

67.—*Teaching power to be justly distributed.*

Teachers are to provide for the equitable distribution of their time through all the classes, so that no pupils may be neglected.

68.—*Denominational predilections to be respected.*

Nothing must be said or done by Teachers calculated to offend the religious views of any pupil during the period devoted to ordinary instruction.

V.—GOVERNMENT OF SCHOOLS.

69.—*Public School Boards.*

The power to decide upon a Teacher's competency for his office is vested in the Council alone; and it also reserves to itself the power of controlling, through its officers, the internal management of schools. But the Council, for other purposes, will avail itself of the assistance of Public School Boards wherever suitable persons can be found to fill the office. Members of such Boards are appointed by the Governor and Executive Council, on the recommendation of the Council of Education. The Council will not submit for appointment the names of any persons whose habits are intemperate, or whose moral character is not unexceptionable.

70.—*Duties of Public School Boards.*

In addition to the power to visit, inspect, and report conferred on Public School Boards by the Public Schools Act (section 22), the Council will entrust to them the following duties:—

- To make due provision for keeping the school buildings in constant repair.
- To take care that they are not used for any improper purposes.
- To cause a sufficient quantity of suitable furniture and apparatus to be provided.
- To take precautions for excluding from the school, during its ordinary business, all books not sanctioned by the Council.
- To inspect periodically the School Registers and Records, and to countersign the Returns made to the Council.
- To use their influence with parents to induce them to send their children regularly to school.
- To see that the school is open on all the usual school days, and that the Teacher is present at his work.
- To observe whether the Teacher regularly and punctually discharges his duties; to report his conduct to the Council when he is in fault; and to protect him from frivolous and vexatious complaints.
- To suspend a Teacher from office, pending the decision of the Council, should there appear to be *prima facie* evidence of gross irregularity or immoral conduct.
- To sign the Teacher's Monthly Abstract of Salary, provided they are of opinion that his duties have been regularly and punctually performed.
- To be the medium of communication with the Council on behalf of the School.
- To inquire into all applications for gratuitous instruction under Section 17 of the Public Schools Act, and to direct that children shall be admitted free of charge to the schools under their supervision, in all cases in which the inability of the parents or guardians to pay school-fees is satisfactorily proved; and to report at the end of each quarter to the Council the names of children so admitted, together with the names and occupations of their parents or guardians, and the grounds on which they were admitted free.

71.—*Local Boards of Denominational Schools.*

The Council will recognize and correspond with the Local Boards of Certified Denominational Schools, Provisional Schools, and Half-time Schools. It is hoped that the Local Boards of these Schools will perform the same duties as the Public School Boards.

## VI.—CONDUCT OF SCHOOLS.

72.—*Daily Routine.*

The following Daily Routine shall be observed in all Schools aided or maintained by the Council of Education :—

8 $\frac{1}{2}$ or 9 $\frac{1}{2}$	}	Pupils to assemble in the play-ground, all school materials to be prepared for lessons.
8:55 or 9:25		
9 or 9 $\frac{1}{2}$	}	Pupils to be arranged in ranks, inspected as to personal cleanliness, and marched into school.
10 $\frac{1}{2}$ or 10 $\frac{3}{4}$		
10 $\frac{3}{4}$ or 11	}	Lessons to commence as noted in the Time-table.
11:55 or 12:25		
12 or 12 $\frac{1}{2}$	}	Recess for ten minutes, to be spent in the play-ground by Pupils and Teachers.
	}	Lessons to be resumed according to the Time-table.
	}	Class Rolls to be called and marked.
	}	School to be dismissed.

*Afternoon.*

12 to 1 or 2, or 12 $\frac{1}{2}$ to 2	}	Recess for dinner and recreation, under the superintendence of the Teachers.
12 $\frac{1}{2}$ or 1 $\frac{1}{4}$		
12:55 or 1:55	}	Pupils to re-assemble in the play-ground ; materials to be prepared for lessons.
1 or 2		
2:55 or 3:55	}	Pupils to be arranged, inspected, and marched into school.
3 or 4		
	}	Lessons to commence as noted in the Time-table.
	}	Roll to be called and marked.
	}	School to be dismissed.

73.—*General Time-table.*

The Time-table mentioned in the foregoing Daily Routine is the following :—

9 to 10, or 9 $\frac{1}{2}$ to 10 $\frac{1}{2}$	}	Special Religious Instruction, or, in Public Schools, Ordinary Instruction.
10 to 12, or 10 $\frac{1}{2}$ to 12 $\frac{1}{2}$		
12 to 1 or 2, or 12 $\frac{1}{2}$ to 2	}	Ordinary Instruction.
1 to 3, or 2 to 4		
	}	Recess.
	}	Ordinary Instruction.

Should the hour appropriated to Special Religious Instruction prove to be inconvenient, the Council may sanction an alteration on due cause being shown.

74.—*Vacations.*

The Vacations sanctioned by the Council are—a fortnight at Christmas, a week at Easter, and a week at Mid-winter.

75.—*Holidays.*

The specified Holidays, other than those occurring in Vacations, are—Anniversary of the Colony, and Queen's Birthday.

76.—*Notification of Holidays and Vacations.*

Teachers are required to state on their Time-tables the ordinary Vacations and specified Holidays of the school.

77.—*Closing School at unusual time.*

Schools are never to be closed by Teachers upon any of the usual school days without the written consent of the Local Boards, who must satisfy themselves that the circumstances are sufficiently urgent to warrant that step ; and Local Boards shall not grant permission for the closing of schools for more than one day, without the sanction of the District Inspector or of the Council.

## VII.—INSPECTION OF SCHOOLS.

78.—*Credentials of Inspectors.*

Inspectors and other persons deputed by the Council to visit schools shall be furnished with credentials under the Corporate Seal.

79.—*Duty of Teachers to Inspectors.*

Teachers are required to treat Inspectors, as the representatives of the Council, with deference, to carry out their suggestions for the improvement of schools, and to obey their instructions in all matters relating to the Public Schools Act and the Regulations of the Council.

80.—*Duty of Local Boards to Inspectors.*

Local Boards are required to afford every facility to Inspectors in the execution of their duty.

81.—*Powers and Duties of Inspectors.*

Inspectors are authorized to enforce the observance of the provisions of the Public Schools Act and of the Regulations ; but their decisions are subject to appeal to the Council. They are further empowered to examine into the condition of schools, and to inquire into all matters which it may be expedient to report to the Council. They are authorized

authorized to determine all questions of school management, and are empowered to take the teaching of a class or of the whole school into their own hands for a time, to show the teacher how defective methods may be improved.

#### 82.—*Conduct of Inspectors.*

In their intercourse with Teachers, Inspectors will be guided by a feeling of respect for their office and of sympathy with their labors. They will manifest towards Teachers a spirit of truest courtesy, treating them at all times with the kindness which the difficulties of their position render proper.

#### 83.—*Observation Book.*

The Inspector's remarks upon the state of a school visited by him will be entered in the "Observation Book" of the school, which, as a School Record, should be carefully preserved. Entries therein are not to be erased or altered.

#### 84.—*Visitors.*

The public may have free access to every school maintained or aided by the Council, during the hours of secular instruction—not to take part in the business, or to interrupt it; but, as visitors, to observe how it is conducted.

#### 85.—*Duty of Teachers to Visitors.*

Every Teacher of a school under the supervision of the Council is required to receive courteously visitors who purpose to inspect it, to afford them free access to the schoolroom, and full liberty to observe what books are in the hands of the children or upon the desks, what tablets are hung up on the walls, and what is the method of teaching; but Teachers are by no means to permit any person to interrupt the business of the school, by asking questions of the children, examining classes, calling for papers of any kind, or in any way diverting their own attention or that of their scholars from the usual business. This restriction is of course not intended to interfere with the provision made in Section 19 of the Public Schools Act, whereby access is afforded to Clergymen and Religious Teachers, for the purpose of communicating special religious instruction, nor is it intended to apply to official visits of Local Boards, or to visits of Members of the Council of Education. Should visitors wish for information which they cannot obtain by personal inspection, it will be the duty of the Teacher to refer them to the Local Board or to the Council.

#### 86.—*Visitors' Book.*

Every Teacher is required to have the "Visitors' Book" lying upon his desk, in which visitors may enter their names, and, if they think proper, any remarks. Such remarks the Teachers are by no means to erase or alter.

### APPENDIX.

G.

Date  
Residence

Gentlemen,

I have the honor to apply for admission to the Public Training School at \_\_\_\_\_ as a Candidate for employment as a Teacher under the Council of Education.

It is my intention *bonâ fide* to adopt and follow the profession of Teacher in the Schools of the Colony maintained or aided by the Council of Education, and I engage to accept a situation as Teacher in any locality the Council may deem fit.

In compliance with the requirements of the Council, I declare that I am free from any bodily infirmity likely to impair my usefulness as a Teacher; and I enclose testimonials as to my moral character. I am prepared to undergo the entrance examination; and, if admitted, I undertake to observe carefully all the Regulations of the Training School.

Messrs.

1868.

NEW SOUTH WALES.

INDUSTRIAL SCHOOL FOR GIRLS, AT NEWCASTLE.  
(REGULATIONS.)

Presented to both Houses of Parliament, in pursuance of the Act 30 Vic. No. 2, sec. 3.

Colonial Secretary's Office,  
Sydney, 18th August, 1868.

THE following Regulations for the Industrial School at Newcastle for Girls, having been made by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the 3rd clause of the Industrial Schools Act of 1866.

HENRY PARKES.

MATRON-SUPERINTENDENT.

1. The Matron-Superintendent will have entire charge of the Institution, and be held responsible for all the property belonging to the Government. She will visit and inspect every part of the Establishment daily, and ascertain that the whole is under efficient management and control. She will attend the daily musters, and appoint such girls as she thinks fit for performing domestic and other duties.

2. She will be held responsible for the proper discharge of all duties to be performed by the various officers of the Establishment; and she will be guided, from time to time, by such instructions as she may receive from the Colonial Secretary.

3. She will see that the girls are properly instructed by the Teacher or Teachers,—that they are taught habits of cleanliness, industry, and diligence; and she will be expected to do everything in her power to encourage, by force of example, moral and pious conduct amongst those entrusted to her care.

4. She will see that a portion of every day, except Saturday and Sunday, is devoted to teaching the girls some branch of useful industry, and especially all the duties of household management.

5. She will see that the girls are treated with kindness, combined with strict discipline, and check every instance of harsh conduct on the part of the officers or attendants.

6. She will see that the food is good and sufficient; that it is properly cooked, and served with regularity and order. She will also examine the Store and Diet Books, to see that the proper quantities are supplied.

7. She will keep a Register for recording the name of every girl admitted into the Institution; entering such particulars as can be ascertained respecting age, religion, parentage, &c.; also, how the girls are disposed of on leaving the Establishment; and, in case of death, the cause should be stated.

8. All complaints made by the officers, attendants, or the girls, must be carefully looked into by the Matron, in order that any abuses or infringement of regulations may be checked and rectified. The

Matron-Superintendent may suspend any officer for neglect of duty, or improper conduct, pending the decision of the Colonial Secretary, and shall have power to hire or discharge any of the servants not appointed by executive authority.

9. She must attend the Visiting Surgeon when he visits the sick, and take every care that his instructions are properly carried out.

#### VISITING SURGEON.

10. The Visiting Surgeon is to visit patients in hospital at least twice every week, or oftener if required. He is to attend the Institution at any time when he may be sent for by the Matron-Superintendent.

11. A Medical Journal is to be kept at the Institution, in which he will record all cases of sickness, disease, or death, with any particulars he may consider necessary.

12. He will see every girl that is admitted into the Institution, and examine into the state of her health, in the presence of the Matron-Superintendent; and make an entry of the result of such examination in the Medical Journal.

13. In the event of death, he should make an entry in the Medical Journal, specifying the name of the girl, the date, cause of death, with any other particulars he may consider necessary, and report the same to the Matron-Superintendent as early as possible.

14. When medical comforts are ordered, it will be necessary for him to enter, in an Order Book to be kept for the purpose, the name of the child for whom they are required, with the quantities of the articles to be supplied; and he will also have to certify to the correctness of the account for the same, on the voucher for the Colonial Treasurer.

#### TEACHER OR TEACHERS.

15. The hours for the school instruction will be from 9 o'clock to 12 o'clock a.m., and from 2 o'clock to 4 o'clock p.m. The Teacher in charge should be in attendance and have the school-room ready for commencing duties punctually at 9 o'clock.

16. She will receive the girls from the House Matron before school hours, and see that they are all clean and tidy in person; and any who may appear to her not to be so should be sent back. She will then call the muster roll, and report to the Matron-Superintendent any girls who may be absent.

17. Prayers are to be read to the girls by the Teacher and the Matron-Superintendent, by arrangement, according to their different religious persuasions, before the school duties commence, and in the evening before bed-time.

18. As many Monitors as the Teacher may consider necessary may be selected by her as assistants in the School, to whom she will give one hour's additional instruction, between 12 and 1 o'clock each day.

19. In case of the appointment of Assistant Teachers, they will perform their duties subject to the direction of the Teacher in charge, in all matters of instruction and school management.

#### HOUSE MATRON.

20. She will overlook the internal arrangement of the Institution,—will see that the dormitories are cleaned and thoroughly aired,—that the soiled and other bedding is taken to the laundry, and counted over to the Laundress. She will take care that the dining hall, hospital, &c., are kept properly clean, and that the female servants are attentive to their duties.

21. She will preside in the bath-rooms whilst the girls are being washed, will be present at all musters, and assist the Superintendent.

in inspecting the girls twice daily. She will appoint, subject to the approval of the Matron-Superintendent, the girls required to assist in the house-work.

22. She will see that the dormitories are properly lighted for the night, and every requisite for the convenience of the girls duly provided. She will be present at the evening muster in the dormitories, and will see that the lamps are turned down at Nine p.m. in winter, and Half-past Nine in summer, and that the outer doors of the dormitories are secured.

23. She will take care that every child, upon her admission, is immediately stripped, well washed, and clothed in the dress provided by the Government; and that, on leaving the Institution, every girl be furnished with clean and suitable clothing.

24. She will see that the house is thoroughly cleaned every Saturday, so as to secure a due observance of Sunday. She will notify to the Matron-Superintendent the name of any officer or servant applying for temporary leave of absence, and the provision to be made for the performance of the duties of the applicant during such absence.

25. She will keep all spare bedding and other articles drawn for the use of the Establishment in her stores, the key of which shall always be in her possession.

26. She will cut out, and measure off, all material for clothing, and will brand the same, if intended for the use of the Institution, when made up, subject to the directions of the Matron-Superintendent.

27. She will visit the dormitories in the morning and evening, to see that the girls rise and retire at the proper hour, and keep order while they are dressing and undressing.

28. She will on all occasions attend the girls when they are in the playground or out of school, unless relieved by the Matron-Superintendent, or Assistant.

#### CLERK AND STOREKEEPER.

29. He will receive and weigh all stores as they are delivered at the Institution by the contractor, and issue the same according to the scale, punctually at the hours specified in the Time-table.

30. He will make all entries in Register, Warrant, Store, and other Books of the Institution,—copy all documents, and write whatever letters may be required.

31. He will keep an account of, and issue all hardware and other stores for the use of the Institution.

32. He will assist the Matron-Superintendent at all times—when requested by her to do so—in carrying out any instructions she may consider necessary to give, for the preservation of order and discipline in the Institution.

#### ASSISTANT.

33. She will render every possible assistance to the House Matron in the discharge of her duties, from whom she will directly receive her orders; and she will not leave the Institution herself, nor allow any of the servants to do so, without the permission of the Matron-Superintendent, obtained through the House Matron.

34. She will be present in the dining-hall during the meals of the girls, will frequently visit the kitchen whilst the same are being cooked and carved, and will see that the food is served up properly.

35. She will daily inspect the coppers and cooking vessels, and will see that the kitchen is kept scrupulously clean.

36. She will frequently in the day visit the laundry, and see that the duties of that part of the Institution are effectively and economically performed.

37. She will see that the lavatory and bath-room are kept in perfect order.

38. She will assist the House Matron, morning and evening, in the dormitories, to see the girls rise and retire at the proper hours.

39. She will on all occasions, when required to do so, attend the girls when they are in the playground or out of school.

#### GATE-KEEPER.

40. He will open and close the gates at the hours appointed by the Matron-Superintendent, and see that no person is permitted to visit the quarters set apart for the girls, without first being introduced at the Office of the Institution.

41. He will regularly ring the bell at the time specified in the Time-table.

42. He will take every care that no one from the outside holds any communication whatever with any of the inmates of the Institution.

#### COOK AND LAUNDRESS.

43. The Cook will draw the food from the Storekeeper punctually when the store-bell rings, and observe proper care and economy in cooking the same.

44. The Cook will also see that the dining-room, tins, spoons, knives, forks, &c., and all culinary vessels, are kept in perfect order, and will teach the girls placed under her how to cook, and be clean in their habits.

45. The Laundress will teach the girls washing, ironing, mangling, &c. She will be at all times careful that none of the house or body linen is lost or destroyed, and she will be responsible for the security of the same, until delivered to the House Matron or Assistant.

46. The Laundress will see that the laundry is at all times kept clean, and she will be held responsible for the conduct of the girls placed under her.

#### VISITORS.

47. A Visitors' Book will be kept, in which all ladies and gentlemen who visit and inspect the Institution must be courteously requested to enter their names, with date of visit, and any remarks they may think proper to make.

48. Strangers wishing to visit any of the inmates must explain to the Matron-Superintendent, or, in her absence, to the officer in charge, their relationship to the inmate whom they desire to see, the object of their visit, and any other particulars that the Matron-Superintendent may desire to know; and either the House Matron or Assistant must be present during the interview of any such stranger with an inmate.

49. The relatives and friends of the inmates will be required, on every occasion of a visit, to enter their names in a separate book kept for that purpose.

#### LIBERTY OF INMATES OUTSIDE THE WALLS.

50. Any girl who has proved herself to the satisfaction of the Matron-Superintendent to be trustworthy, may be permitted to go on errands outside the walls.

51. Any numbers of the girls whom the Matron-Superintendent has reason to believe may be so trusted, will be permitted to attend Divine Worship outside the walls, on such occasions and under the charge of such officers as the Matron-Superintendent may approve.

#### RELIGIOUS WORSHIP.

52. The inmates must attend Divine Worship every Sunday within the Institution. If no clergyman is in attendance, prayers must be read by the Matron-Superintendent or the Teacher.

1868-9.

## NEW SOUTH WALES.

## INDUSTRIAL SCHOOL FOR GIRLS AT NEWCASTLE.

(FURTHER REGULATIONS.)

Presented to Parliament, pursuant to Act 30 Vict., No. 2, Sec. 3.

Colonial Secretary's Office,  
Sydney, 29 December, 1868.

THE following Regulations for the Industrial School for Girls, at Newcastle, having been made by His Excellency the Governor, with the advice of the Executive Council, in substitution of those published in the *Supplementary Government Gazette* of the 18th August last, are published in accordance with the 3rd clause of the Industrial Schools Act of 1866.

JOHN ROBERTSON.

## SUPERINTENDENT.

1. The Superintendent will have entire charge of the Institution, and be held responsible for all the property belonging to the Government. He will visit and inspect, with the Matron, every part of the Establishment daily, and ascertain that the whole is under efficient management and control. He will attend the daily musters to see that proper order is observed. Charge of Institution.

2. He will be held responsible for the proper discharge of all duties to be performed by the various officers of the Establishment; and he will be guided, from time to time, by such instructions as he may receive from the Colonial Secretary. Responsible for duties of officers.

3. He will see that the girls are properly instructed by the Teacher or Teachers,—that they are taught habits of cleanliness, industry, and diligence; and he will be expected to do everything in his power to encourage, by force of example, moral and pious conduct amongst those entrusted to his care. Moral training.

4. He will see that the girls are treated with kindness, combined with strict discipline, and check every instance of harsh conduct on the part of the officers or attendants. Treatment.

5. He will see that the food is good and sufficient; that it is properly cooked, and served with regularity and order. He will also examine the Store and Diet Books, to see that the proper quantities are supplied. Examination of food, &c.

6. He will keep a Register for recording the name of every girl admitted into the Institution; entering such particulars as can be ascertained respecting age, religion, parentage, &c.; also, how the girls are disposed of on leaving the Establishment; and, in case of death, the cause should be stated. Register to be kept.

7. All complaints made by the officers, attendants, or the girls must be carefully looked into by the Superintendent, in order that any abuses or infringement of regulations may be checked and rectified. The Superintendent may suspend any officer for neglect of duty or improper conduct, pending the decision of the Colonial Secretary, and shall have power to hire or discharge any of the servants not appointed by Executive authority. Power to suspend officers and dismiss attendants.

## MATRON.

- Household duties. 8. The Matron will act under the orders of the Superintendent, and give directions for carrying out all arrangements for the proper working of the household duties of the Institution.
- To appoint girls for work. 9. She will attend the daily musters, and appoint such girls as she thinks fit for performing domestic and other duties.
- School roll. 10. She will see that all the girls, whose names are entered on the School Roll, attend punctually each day.
- Prayers. 11. She will, in the absence of a Clergyman, read prayers on Sundays, when required by the Superintendent to do so.
- To direct House Matron and Assistants. 12. She will direct the House Matron and Assistants in their duties; and overlook all the internal working of the Establishment.
- Industrial training. 13. She will see that a portion of every day, except Saturday and Sunday, is devoted to teaching the girls some branch of useful industry, and especially all the duties of household management.
- Attendance on Visiting Surgeon. 14. She must attend the Visiting Surgeon when he visits the sick, and take every care that his instructions are properly carried out.

## VISITING SURGEON.

- Visits. 15. The Visiting Surgeon is to visit patients in hospital at least twice every week, or oftener if required. He is to attend the Institution at any time when he may be sent for by the Superintendent.
- Medical Journal. 16. A Medical Journal is to be kept at the Institution, in which he will record all cases of sickness, disease, or death, with any particulars he may consider necessary.
- Inspection of children admitted. 17. He will see every girl that is admitted into the Institution, and examine into the state of her health, in the presence of the Matron; and make an entry of the result of such examination in the Medical Journal.
- Deaths. 18. In the event of death, he should make an entry in the Medical Journal, specifying the name of the girl, the date, cause of death, with any other particulars he may consider necessary, and report the same to the Superintendent as early as possible.
- Medical comforts. 19. When medical comforts are ordered, it will be necessary for him to enter, in an Order Book to be kept for the purpose, the name of the child for whom they are required, with the quantities of the articles to be supplied; and he will also have to certify to the correctness of the account for the same, on the voucher for the Colonial Treasurer.

## TEACHER OR TEACHERS.

- Hours. 20. The hours for the school instruction will be from 9 o'clock to 12 o'clock a.m., and from 2 o'clock to 4 o'clock p.m. The Teacher in charge should be in attendance and have the school-room ready for commencing duties punctually at 9 o'clock.
- Muster roll. 21. She will receive the girls from the House Matron before school hours, and see that they are all clean and tidy in person; and any who may appear to her not to be so should be sent back. She will then call the muster roll, and report to the Matron any girls who may be absent.
- Prayers. 22. Prayers are to be read to the girls by the Teacher and the Matron, by arrangement, according to their different religious persuasions, before the school duties commence, and in the evening before bed-time.
- Monitors. 23. As many Monitors as the Teacher may consider necessary, may be selected by her as assistants in the school, to whom she will give one hour's additional instruction, between 12 and 1 o'clock each day.
- Assistant Teachers. 24. In case of the appointment of Assistant Teachers, they will perform their duties subject to the direction of the Teacher in charge, in all matters of instruction and school management.

## HOUSE MATRON.

25. She will, under the direction of the Matron, overlook the internal arrangement of the Institution,—will see that the dormitories are cleaned and thoroughly aired—that the soiled and other bedding is taken to the laundry, and counted over to the Laundress. She will take care that the dining-hall, hospital, &c., are kept properly clean, and that the female servants are attentive to their duties. To overlook internal arrangements.

26. She will preside in the bath-rooms whilst the girls are being washed; will be present at all musters; and assist the Superintendent and Matron in inspecting the girls twice daily. To preside at bath-rooms.

27. She will see that the dormitories are properly lighted for the night, and every requisite for the convenience of the girls duly provided. She will be present at the evening muster in the dormitories, and will see that the lamps are turned down at nine p.m. in winter, and half-past nine in summer, and that the outer doors of the dormitories are secured. Dormitories.

28. She will take care that every child, upon her admission, is immediately stripped, well washed, and clothed in the dress provided by the Government; and that, on leaving the Institution, every girl be furnished with clean and suitable clothing. Children to be properly clothed.

29. She will see that the house is thoroughly cleaned every Saturday, so as to secure a due observance of Sunday. She will notify to the Superintendent the name of any officer or servant applying for temporary leave of absence, and the provision to be made for the performance of the duties of the applicant during such absence. Establishment to be cleaned on Saturdays.

30. She will keep all spare bedding and other articles drawn for the use of the Establishment in her stores, the key of which shall always be in her possession. Stores.

31. She will cut out, and measure off, all material for clothing, and will brand the same, if intended for the use of the Institution, when made up, subject to the directions of the Matron. Clothing.

32. She will visit the dormitories in the morning and evening, to see that the girls rise and retire at the proper hour, and keep order while they are dressing and undressing. Dormitories.

33. She will on all occasions attend the girls when they are in the playground, or out of school, unless relieved by the orders of the Superintendent. Playground.

## CLERK AND STOREKEEPER.

34. He will receive and weigh all stores as they are delivered at the Institution by the Contractor, and issue the same, according to the scale, punctually at the hours specified in the Time-table. Weighing of stores.

35. He will make all entries in Register, Warrant, Store, and other Books of the Institution,—copy all documents, and write whatever letters may be required. Books of Institution.

36. He will keep an account of, and issue all hardware and other stores for the use of the Institution. Accounts.

37. He will assist the Superintendent at all times—when requested by him to do so—in carrying out any instructions he may consider necessary to give, for the preservation of order and discipline in the Institution. To render assistance when necessary.

## ASSISTANT.

38. She will render every possible assistance to the Matron and House Matron in the discharge of her duties, from whom she will directly receive her orders; and she will not leave the Institution herself, nor allow any of the servants to do so, without the permission of the Superintendent. To receive orders from Matron and House Matron.

39. She will be present in the dining-hall during the meals of the girls; will frequently visit the kitchen whilst the same are being cooked and carved; and will see that the food is served up properly. Meals.

40. She will daily inspect the coppers and cooking vessels, and will see that the kitchen is kept scrupulously clean. Cooking.

- Laundry. 41. She will frequently in the day visit the laundry, and see that the duties of that part of the Institution are effectively and economically performed.
- Bath-room. 42. She will see that the lavatory and bath-room are kept in perfect order.
- Dormitories. 43. She will assist the House Matron, morning and evening, in the dormitories, to see the girls rise and retire at the proper hours.
- Playground. 44. She will, on all occasions, when required to do so, attend the girls when they are in the playground, or out of school.

## GATE-KEEPER.

- Gates. 45. He will open and close the gates at the hours appointed by the Superintendent, and see that no person is permitted to visit the quarters set apart for the girls, without first being introduced at the Office of the Institution.
- Bells. 46. He will regularly ring the bell at the time specified in the Time-table.
- To prevent communication with inmates. 47. He will take every care that no one from the outside holds any communication whatever with any of the inmates of the Institution.

## COOK AND LAUNDRESS.

- Drawing of provisions. 48. The Cook will draw the food from the Storekeeper punctually when the store-bell rings, and observe proper care and economy in cooking the same.
- Dining and cooking utensils. 49. The Cook will also see that the dining-room, tins, spoons, knives, forks, &c., and all culinary vessels, are kept in perfect order, and will teach the girls placed under her how to cook and be clean in their habits.
- Laundress. 50. The Laundress will teach the girls washing, ironing, mangling, &c. She will be at all times careful that none of the house or body linen is lost or destroyed, and she will be responsible for the security of the same until delivered to the House Matron or Assistant.
- Laundry girls. 51. The Laundress will see that the laundry is at all times kept clean, and she will be held responsible for the conduct of the girls placed under her.

## VISITORS.

- Visitors' book. 52. A Visitors' Book will be kept, in which all ladies and gentlemen who visit and inspect the Institution must be courteously requested to enter their names, with date of visit, and any remarks they may think proper to make.
- Strangers to explain object of visit. 53. Strangers wishing to visit any of the inmates must explain to the Superintendent, or, in his absence, to the officer in charge, their relationship to the inmate whom they desire to see, the object of their visit, and any other particulars that the Superintendent may desire to know; and either the Matron or House Matron must be present during the interview of any such stranger with an inmate.
- Relatives. 54. The relatives and friends of the inmates will be required, on every occasion of a visit, to enter their names in a separate book kept for that purpose.

## LIBERTY OF INMATES OUTSIDE THE WALLS.

- Girls permitted outside walls. 55. Any girl who has proved herself to the satisfaction of the Superintendent to be trustworthy, may be permitted to go on errands outside the walls.
- Girls may attend Divine Worship. 56. Any number of the girls whom the Superintendent has reason to believe may be so trusted, will be permitted to attend Divine Worship outside the walls, on such occasions and under the charge of such officers as the Superintendent may approve.

## RELIGIOUS WORSHIP.

- How Prayers to be read. 57. The inmates must attend Divine Worship every Sunday within the Institution. If no Clergyman is in attendance, prayers must be read by the Matron or the Teacher.

1868-9.

NEW SOUTH WALES.

REFORMATORY SCHOOL FOR GIRLS, AT NEWCASTLE.  
(REGULATIONS.)

Presented to both Houses of Parliament, in pursuance of the Act 30 Vict., No. 4, sec 3.

Colonial Secretary's Office,  
Sydney, 23rd March, 1869.

THE following Regulations for the Reformatory School for Girls, at Newcastle, having been made by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the 3rd clause of the Reformatory Schools Act of 1866.

JOHN ROBERTSON.

SUPERINTENDENT.

1. The Superintendent will have entire charge of the Institution, and be held responsible for all the property belonging to the Government. He will visit and inspect, with the Matron, every part of the Establishment daily, and ascertain that the whole is under efficient management and control. He will attend the daily musters to see that proper order is observed. Charge of Institution.

2. He will be held responsible for the proper discharge of all duties to be performed by the various officers of the Establishment; and he will be guided, from time to time, by such instructions as he may receive from the Colonial Secretary. Responsible for duties of officers.

3. He will see that the girls are properly instructed by the Teacher or Teachers,—that they are taught habits of cleanliness, industry, and diligence; and he will be expected to do everything in his power to encourage, by force of example, moral and pious conduct amongst those entrusted to his care. Moral training.

4. He will see that the girls are treated with kindness, combined with strict discipline, and check every instance of harsh conduct on the part of the officers or attendants. Treatment.

5. He will see that the food is good and sufficient; that it is properly cooked, and served with regularity and order. He will also examine the Store and Diet Books, to see that the proper quantities are supplied. Examination of food, &c.

6. He will keep a Register for recording the name of every girl admitted into the Institution; entering such particulars as can be ascertained respecting age, religion, parentage, &c.; also, how the girls are disposed of on leaving the Establishment; and, in case of death, the cause should be stated. Register to be kept.

Power to suspend  
officers and dismiss  
attendants.

7. All complaints made by the officers, attendants, or the girls, must be carefully looked into by the Superintendent, in order that any abuses or infringement of Regulations may be checked and rectified. The Superintendent may suspend any officer for neglect of duty or improper conduct, pending the decision of the Colonial Secretary, and shall have power to hire or discharge any of the servants not appointed by Executive authority.

### MATRON.

Household duties.

8. The Matron will act under the orders of the Superintendent, and give directions for carrying out all arrangements for the proper working of the household duties of the Institution.

To appoint girls for  
work.

9. She will attend the daily musters, and appoint such girls as she thinks fit for performing domestic and other duties.

School roll.

10. She will see that all the girls whose names are entered on the School Roll attend punctually each day.

Prayers.

11. She will, in the absence of a Clergyman, read prayers daily, and on Sundays, to such children as are of her religious persuasion, when required by the Superintendent to do so.

Children to be pro-  
perly clothed.

12. She will take care that every child, upon her admission, is immediately stripped, well washed, and clothed in the dress provided by the Government; and that, on leaving the Institution, every girl be furnished with clean and suitable clothing.

Meals.

13. She will be present in the dining-hall during the meals of the girls; will frequently visit the kitchen whilst the same are being cooked and carved; and will see that the food is served up properly.

Cooking.

14. She will daily inspect the coppers and cooking vessels, and will see that the kitchen is kept scrupulously clean.

Laundry.

15. She will frequently in the day visit the laundry, and see that the duties of that part of the Institution are effectively and economically performed.

Bath-room.

16. She will see that the lavatory and bath-room are kept in perfect order.

Establishment to be  
cleaned on Saturdays.

17. She will see that the house is thoroughly cleaned every Saturday, so as to secure a due observance of Sunday. She will notify to the Superintendent the name of any officer or servant applying for temporary leave of absence, and the provision to be made for the performance of the duties of the applicant during such absence; and she will not leave the Institution herself, nor allow any of the officers or servants to do so, without the permission of the Superintendent.

Stores.

18. She will keep all spare bedding and other articles drawn for the use of the Establishment in her stores, the key of which shall always be in her possession.

Clothing.

19. She will cut out, and measure off, all material for clothing, and will brand the same, if intended for the use of the Institution, when made up, subject to the directions of the Superintendent.

Dormitories.

20. She will visit the dormitories in the morning and evening, to see that the girls rise and retire at the proper hour, and keep order while they are dressing and undressing.

Playground.

21. She will on all occasions attend the girls when they are in the playground, or out of school, unless relieved by the orders of the Superintendent.

Industrial training.

22. She will see that a portion of every day, except Saturday and Sunday, is devoted to teaching the girls some branch of useful industry, and especially all the duties of household management.

Attendance on  
Visiting Surgeon.

23. She will attend the Visiting Surgeon when he visits the sick, and take every care that his instructions are properly carried out.

## VISITING SURGEON.

24. The Visiting Surgeon is to visit patients in hospital at Visits. least twice every week, or oftener if required. He is to attend the Institution at any time when he may be sent for by the Superintendent.

25. A Medical Journal is to be kept at the Institution, in Medical Journal. which he will record all cases of sickness, disease, or death, with any particulars he may consider necessary.

26. He will see every girl that is admitted into the Institution, Inspection of children and examine into the state of her health, in the presence of the Matron; admitted. and make an entry of the result of such examination in the Medical Journal.

27. In the event of death, he should make an entry in the Deaths. Medical Journal, specifying the name of the girl, the date, cause of death, with any other particulars he may consider necessary, and report the same to the Superintendent as early as possible.

28. When medical comforts are ordered, it will be necessary Medical comforts. for him to enter, in an Order Book to be kept for the purpose, the name of the child for whom they are required, with the quantities of the articles to be supplied; and he will also have to certify to the correctness of the account for the same, on the voucher for the Colonial Treasurer.

## TEACHER.

29. The hours for the school instruction will be from 9 o'clock Hours. to 12 o'clock a.m., and from 2 o'clock to 4 o'clock p.m. The Teacher in charge should be in attendance and have the school-room ready for commencing duties punctually at 9 o'clock.

30. She will receive the girls from the Matron before school Muster roll. hours, and see that they are all clean and tidy in person; and any who may appear to her not to be so should be sent back. She will then call the muster roll, and report to the Superintendent any girls who may be absent.

31. Prayers are to be read to the girls by the Teacher and the Prayers. Matron, by arrangement, according to their different religious persuasions, before the school duties commence, and in the evening before bed-time.

32. As many Monitors as the Teacher may consider necessary Monitors. may be selected by her as assistants in the school, to whom she will give one hour's additional instruction, between 12 and 1 o'clock each day.

33. She will assist the Matron, morning and evening, in the Dormitories. dormitories, to see the girls rise and retire at the proper hours.

34. She will, on all occasions, when required by the Superin- Playground. tendent to do so, attend the girls when they are in the playground, or out of school, and instruct them in needle-work.

## CLERK AND STOREKEEPER.

35. He will receive and weigh all stores as they are delivered Weighing of stores. at the Institution by the Contractor, and issue the same, according to the scale, punctually at the hours specified in the Time-table.

36. He will make all entries in Register, Warrant, Store, and Books of Institution. other Books of the Institution,—copy all documents, and write whatever letters may be required.

37. He will keep an account of, and issue all hardware and Accounts. other stores for the use of the Institution.

38. He will assist the Superintendent at all times—when To render assistance requested by him to do so—in carrying out any instructions he may when necessary. consider necessary to give, for the preservation of order and discipline in the Institution.

## COOK AND LAUNDRESS.

- Drawing of provisions. 39. The Cook will draw the food from the Storekeeper punctually when the store-bell rings, and observe proper care and economy in cooking the same.
- Dining and cooking utensils. 40. The Cook will also see that the dining-room, tins, spoons, knives, forks, &c., and all culinary vessels, are kept in perfect order, and will teach the girls placed under her how to cook and be clean in their habits.
- Laundress. 41. The Laundress will teach the girls washing, ironing, mangling, &c. She will be at all times careful that none of the house or body linen is lost or destroyed, and she will be responsible for the security of the same until delivered to the Matron.
- Laundry girls. 42. The Laundress will see that the laundry is at all times kept clean, and she will be held responsible for the conduct of the girls placed under her.

## VISITORS.

- Visitors' Book. 43. A Visitors' Book will be kept in the Superintendent's Office, in which all ladies and gentlemen who visit and inspect the Institution must be courteously requested to enter their names, with date of visit, and any remarks they may think proper to make.
- Strangers to explain object of visit. 44. Strangers wishing to visit any of the inmates must explain to the Superintendent, or, in his absence, to the officer in charge, their relationship to the inmate whom they desire to see, the object of their visit, and any other particulars that the Superintendent may desire to know; and either the Matron or Teacher must be present during the interview of any such stranger with an inmate.
- Relatives. 45. The relatives and friends of the inmates will be required, on every occasion of a visit, to enter their names in a separate book kept for that purpose.

## PUNISHMENT.

- Punishment to be awarded by the Superintendent. 46. No officer or attendant will be allowed to punish any girl summarily, but the names of such girls as may misconduct themselves must be sent in, with the nature of offence, to the Superintendent, who may award such punishment hereinafter named as he may consider sufficient.
- Mode of punishment. 47. The mode of punishment to be,—black list, meals by themselves, cells during play hours, and cells with bread and water, as the Superintendent may determine, not exceeding seven days for any one offence.

1868.

## NEW SOUTH WALES.

## NAUTICAL SCHOOL-SHIP "VERNON."

(REPORTS RESPECTING.)

Presented to both Houses of Parliament, by Command.

THE INSPECTOR OF PUBLIC CHARITIES to THE PRINCIPAL UNDER SECRETARY.

Office, Inspector of Public Charities,  
Sydney, 28 July, 1868.

SIR,

I have the honor to state, for the information of the Honorable the Colonial Secretary, that I have made several visits to the Nautical School Ship "Vernon," and I am able to report at this date that everything is progressing in a satisfactory manner; several changes have been made in the staff of the vessel, since my first visit in April last, which have proved advantageous both for working the ship and for instructing and training the boys.

The appointment of a second boatswain's mate, at £100 per annum, which took place on the removal of the boatswain, appears to meet every requirement; and the duties are said to be better performed in every way, while the working of the ship goes on more harmoniously. The change effected on the 1st instant in the schoolmaster is I think a beneficial one, as the boys appear to have made but little progress under their former teacher; some of the younger boys are imperfect in the alphabet, and many in their first reading lessons. There are only a few of the boys who can read fairly; the writing and ciphering is very indifferent, but steps are now being taken to correct this. All who are sufficiently advanced are taught grammar and geography, but the progress is slow. Some of the school-books are very much mutilated, showing that proper care has not been exercised by the late teacher during the school hours. Those boys who are capable of receiving nautical instruction are taught by Captain Mein—one hour in the winter, and two hours in the summer—in the evenings, after the daily duties of the ship have been performed.

A trade instructor for tailoring was appointed on trial for one month, in May last, in order to apply the labour of the boys to make up the winter clothing; but he was not a suitable man, consequently little or no progress was made towards clothing the boys. He left at the end of his month, and the appointment of his successor, Mr. Edward Byrne, took place on the 4th instant. The appointment of Mr. Pickering as instructor for boot-making took place about the same time. Both these instructors appear to be well suited for their duties, and take a proper interest in teaching the boys placed under them for instruction. Some of the boys are beginning to sew very well, but there are hardly any of them strong enough in the hands to work the stout material used for trowsers which it was found necessary to get in order to supply the place of a suitable serge, there being

none in Sydney at the time sufficiently strong for the purpose required; this difficulty will, however, be overcome before next winter. All the boys are now provided with their winter clothes, with the exception of about twenty who have not yet received their stout cloth trousers; but these are being made up as fast as possible. A requisition has already been sent in for the material to make the summer clothing, in order that it shall be commenced so as to prevent any delay in changing the clothes at the proper time, and to be ready at an early period next year to commence the winter supply.

Considerable progress has been made in bootmaking, and they only commenced at the beginning of the present month; about twenty pair of boots have already been completed, and they will soon be able to make them either for sale or for other institutions.

The total number of boys admitted up to the present time is ..... 113.

From these 14 have been apprenticed out,

1 was killed by an accident,

4 were discharged by authority of the Executive Council,

2 deserted.

Total..... 21

Leaving ..... 92

On board at this date, who are of the following ages:—

1 at 3 years.	6 at 10 years.
1 at 4 do.	13 at 11 do.
5 at 6 do.	14 at 12 do.
2 at 7 do.	14 at 13 do.
8 at 8 do.	9 at 14 do.
12 at 9 do.	6 at 15 do.
	1 at 16 do.
—	—
29	63

	—

Each boy is allowed to select the trade he feels inclined to adopt. A carpenter has been employed since the opening of the institution, but there is no other kind of work performed except what is required for the use and repairs of the ship; and there is no regular blacksmith, but rough repairs are performed by members of the crew, with a portable forge which has been supplied, and is sufficient for the present to put the boys in training for the forge.

The whole of the boys are divided into four divisions; and every morning after prayers each division is told off to its respective duties, and again in the afternoon at 3 o'clock, viz.:—

1st Division to School.

2nd Division to Seamanship.

3rd Division to Drill.

4th Division to Trades.

All the boys in the ship are taught seamanship and drill, in the regular way, whether they take the other trades or not. The duties of the divisions are changed in the afternoon, so that all may have their proper time at school, seamanship, trades, or drill. Each day the several divisions are appointed to a different course of duty, Saturdays and

and Sundays excepted, there being no drill on those days—so that all the boys receive a regular course of instruction ; and from 4 o'clock p.m. until 6 o'clock p.m. each day, after the school and drill duties are over, they are all sent down to the trade instructors to assist at the work in a general way. By doing this, those boys who have decided on being sailors gain a knowledge of the other trades and help the work through.

The whole system appears to be working very well, and the addition of the trade instructors will prove a great benefit to the institution. Committals have not been made to the ship as fast as was first anticipated, and the present numbers are hardly sufficient to perform all duties of the ship, as many are of ages too young to do the heavy work ; but everything is kept remarkably neat and cleanly, and it is surprising to see how well the boys handle the guns and perform their drill. The vessel is commodious, convenient, well ventilated, and quite capable of holding 300 boys. Most of the general fittings and internal carpentering work have been performed on board by the ship carpenter, with the assistance of the boys ; and when the last requisitions which have been passed for the supply of tools and other articles are completed, it will enable more of the boys to be instructed in useful occupations. A spun-yarn winch is now being fitted up, and they will soon be able to make a considerable quantity of spun-yarn that can be sold and help to form a revenue for the institution. Caulking tools are also being supplied, and this work will be done by the boys, which will make a saving in the expenses. A proper store-room has lately been fitted up on board for the clothing and soft goods, which are placed under the charge of the purser, so that an efficient check can be placed upon them. No provision had been made for this up to the present time. Other fittings necessary for keeping the clothing and bedding in proper order are also being put up, which affords instruction to the boys in carpenters' work.

Occasionally the Captain takes the boys out in the boats, down the harbour fishing, or to exercise them in gun-drill in the boat. They are well supplied with provisions and appear to enjoy excellent health, none of them being laid up at the present time.

I have, &c.,

R. C. WALKER.

THE SUPERINTENDENT, NAUTICAL SCHOOL-SHIP "VERNON," to THE PRINCIPAL  
UNDER SECRETARY.

(No. 61.)

N. S. S. "Vernon,"  
3 August, 1868.

SIR,

I have the honor to report, for the information of the Honorable Chief Secretary, as follows:—

1. That the number of boys now on board is ninety-two (92); five are laid up with bronchitis, one rheumatism, seven others on the sick list with sore feet, sore throats, and slight indisposition. Influenza is generally throughout the ship; Dr. Alleyne has been attending and prescribed for the sick; all are much better to-day than on Saturday last. The attention of the boys to ship's duties and conduct during the past week has been good.

2. The conduct of the crew good; Quarter-master Cook returned on board convalescent on Tuesday last; the rest of the crew and officers are suffering from influenza. Quantity of articles made during the past week:—Trowsers, b. cloth, 2; serge shirts, 4; caps, 5; canvass trowsers, 8; boots, 7.

3. The Rev. Mr. Byrne, R.C., held service on Sabbath last. The Church of England service was read by the schoolmaster. His report is attached.

I have, &c.,  
J. S. V. MEIN,

The Schoolmaster, Nautical School-ship "Vernon," to The Superintendent.

N. S. S. "Vernon,"  
1 August, 1868.

SIR,

In submitting another report to you concerning the boys under my charge, I am happy to be able to say that a very considerable improvement has taken place in their general conduct and demeanour. Upon the whole, the boys have behaved with very great propriety while in school; and although some of them have from mere idleness and trifling not made so much progress as I could have wished, and as they should have done, still the greater number of them have made considerable progress in several branches. There is a marked improvement in reading and writing in the case of all the boys of the fourth classes of all the divisions; I cannot however speak so favourably in regard to the progress made in arithmetic, although even in this branch of their studies several of the boys have improved not a little. During the week now ended, I have devoted a considerable portion of time to grammar, and the boys, with one or two exceptions, have been very attentive to the oral instructions imparted; but I have not had much time for teaching geography. However I hope to be able to attend to this branch of education more hereafter, when I have less of my time occupied in drilling my pupils in the theory of the rules of arithmetic. Many of the boys have sharp intellects, and if I could only succeed in directing their energies in a right direction, they would ultimately reflect not a little credit on myself, the "Vernon," and all concerned.

The junior boys have, upon the whole, done very well during the week; John Little especially has improved very much. The same remark applies to his brother Charles, though in a less degree.

I have further to remark that there are three very idle boys who won't work all I can do with them, viz., Emanuel Wright, Joseph Bethel, and George M'Ilwrath; they are very idle and trifling fellows.

I have, &c.,  
JOHN L. M'SKIMMING,  
Schoolmaster.

THE SUPERINTENDENT, NAUTICAL SCHOOL-SHIP "VERNON" to THE PRINCIPAL  
UNDER SECRETARY.

(No. 62.)

N. S. S. "Vernon,"  
10 August, 1868.

SIR,

I have the honor to report, for the information of the Honorable Colonial Secretary, as follows:—

1. That the number of boys at present on board is ninety-three (93); two are laid up with bronchitis, and one with a swelled knee-joint. Dr. Alleyne has been in attendance each day. The attention of the boys to ship duties and conduct during the past week has been good. The conduct of the crew has been good during the past week. The amount of clothing made during the past week has been—Trowsers, 7; shirts, 1; leather waist belts, 130; boots, 4 pairs. The schoolmaster read the Church of England Service. His report for the past week is attached.

I have, &c.,  
J. S. V. MEIN.

The

## NAUTICAL SCHOOL-SHIP "VERNON."

5

The Schoolmaster, Nautical School-ship "Vernon," to The Superintendent.

N. S. S. "Vernon,"

8 August, 1868.

Sir,

Since my last report to you regarding the conduct and attention of the boys under my charge, I have not much to bring under your notice. During the week now ended, all the boys have advanced, more or less, in the various branches of their education, and a good many of the senior boys are evidently more interested in the work of the school, and more desirous of excelling their class-fellows than they were when I took charge of the school.

The conduct of the boys in school has been very good. My time is now much less employed than it was at first in endeavouring to secure quiet and order, and so a greater amount of work is gone through in school hours.

The only boys who have been idle and inattentive are Michael Brennan, James M'Beth, David Craig, and Emanuel Wright.

From the Weekly Report you will see that John Little is still very good and has made considerable progress in his lessons. The boy John Finlay has also behaved well, and, although a dull boy, has wonderfully improved in reading and arithmetic.

I may state that I have procured a number of small periodicals, such as "The Band of Hope Review," "The Cottager and Artisan," and "The Sabbath School Messenger," which, with your permission, I shall give out to Protestant boys on Sabbaths for perusal.

I would also suggest for your consideration the idea of forming a library of interesting and instructive books for all the boys. A very few pounds would suffice for this object, as I think I could obtain a goodly number of these volumes for this purpose from personal friends. Mr. Houlding has given me a copy of each of his works as his contribution.

I have, &amp;c.,

JOHN L. M'SKIMMING,

Schoolmaster.

THE SUPERINTENDENT, NAUTICAL SCHOOL-SHIP "VERNON" to THE PRINCIPAL  
UNDER SECRETARY.

N. S. S. "Vernon,"

17 August, 1868.

SIR,

I have the honor to report, for the information of the Honorable the Colonial Secretary, as follows:—

1. That the number of boys at present on board is ninety-three (93); one boy is laid up with a rash, and another with a swelled knee-joint. The attention of the boys to ships duties and their conduct during the past week has been good.

2. The conduct of the crew during the past week has been good. The amount of clothing made during the week ending 15th August has been as follows:—Trowsers, 11 pairs; shirt, 1; boots, 6 pairs. The schoolmaster read the Church of England service. His report for the past week is attached.

I have, &amp;c.,

J. S. V. MEIN.

The Schoolmaster, Nautical School-ship "Vernon," to The Superintendent.

N. S. S. "Vernon,"

15 August, 1868.

Sir,

In again submitting my report to you, I have to remark that the conduct of the boys during the week now ended has been very good. The demeanour of the boys is now almost all that one could desire, and would not a little astonish any one who had seen the school some six weeks ago. The whole of the boys have improved a good deal in reading, spelling, and writing. The boys of the higher classes, in all the divisions, have made considerable progress in arithmetic and English grammar also. We have not had much time as yet to devote to geography. The boys have only had a few lessons on the map of Europe; but I propose next week to begin with the map of New South Wales, and to prosecute the subject until they are well acquainted with the geography of all the Australian Colonies.

I have, &amp;c.,

JOHN L. M'SKIMMING,

Schoolmaster.

THE SUPERINTENDENT, NAUTICAL SCHOOL-SHIP "VERNON," to THE PRINCIPAL  
UNDER SECRETARY.

(No. 64.)

N. S. S. "Vernon,"  
24 August, 1868.

SIR,

I have the honor to report, for the information of the Honorable the Chief Secretary, as follows:—

1. That the number of boys now on board is ninety-four (94), all in good health. Their conduct, and progress made in their various studies, duties, and trades during the past week have been fair.

2. The conduct of the crew during the past week, good. The number of articles made on board during the week:—Cloth trowsers, 11; serge caps, 9; blucher boots, 7 pairs.

3. The Rev. Mr. Chapman, of H.M.S. "Brisk," addressed the Protestant boys on Sabbath afternoon. The Church of England service was read by the schoolmaster in the forenoon. His report is attached.

There has not been any Roman Catholic Clergyman on board for three Sabbaths past; a boat has been sent regularly to the wharf for him.

I have, &c.,  
J. S. V. MEIN.

The Schoolmaster, Nautical School-ship "Vernon," to The Superintendent.

N. S. S. "Vernon,"  
22 August, 1868.

Sir,

In again submitting my report to you, I have to state that all the boys have conducted themselves very well during the week now ended. In fact there is not one boy in the bad conduct list in the weekly report.

All the boys in the senior classes have made more or less progress in reading, spelling, arithmetic, and grammar; and a large number have done very well in all these branches, and in mental arithmetic.

The boys in the junior classes have also all made very considerable progress during the week, and are now able to read and spell much better than they could do a month ago.

I have, &c.,  
JOHN L. M'SKIMMING,  
Schoolmaster.

THE SUPERINTENDENT, NAUTICAL SCHOOL-SHIP "VERNON," to THE PRINCIPAL  
UNDER SECRETARY.

(No. 65.)

N. S. S. "Vernon,"  
31 August, 1868.

SIR,

I have the honor to report, for the information of the Honorable Chief Secretary, as follows:—

1. That the number of boys now on board is ninety-five (95), all in good health; their conduct during the past week has been good, and progress made in their various studies, trades, and duties, fair.

2. The conduct of the crew has been good. Articles made during the past week:—Boots, 10 pairs; cloth trowsers, 11 pairs; serge caps, 13; canvass trowsers, 3 pairs.

3. The Church of England service was read by the schoolmaster on Sabbath last. His report is attached.

I have, &c.,  
J. S. V. MEIN.

The Schoolmaster, Nautical School-ship "Vernon," to The Superintendent.

N. S. S. "Vernon."  
29 August, 1868.

Sir,

In again submitting my report to you upon the conduct and progress of the boys under my care, I have to remark that the whole of the scholars have made very considerable progress during the past week.

The senior boys in all the divisions have improved a good deal in reading, writing, grammar, and geography. As to arithmetic I cannot report so very favourably, for although a fair amount of work has been gone through in this branch, yet the boys do not seem to take so much interest in it, and require a vast amount of driving and drilling to secure progress.

The

The junior boys have also, with one or two exceptions, done well during the week. The two boys David Jones and Francis Ryding are very lazy, and will learn nothing well although able enough to do so.

I have, &c.,

JOHN L. M'SKIMMING,  
Schoolmaster.

THE SUPERINTENDENT, NAUTICAL SCHOOL-SHIP "VERNON," to THE PRINCIPAL  
UNDER SECRETARY.

(No. 66.)

N. S. S. "Vernon,"  
7 September, 1868.

SIR,

I have the honor to report, for the information of the Hon. Chief Secretary, as follows:—

1. That the number of boys now on board is ninety-six (96), all in good health; their conduct and attention to duties during the past week has been good.
2. The conduct of the crew, good. Articles made during the past week:—Blue drill trowsers, 1 pair; flannel shirts, 20; leather fenders for boats, 36; boots, 9 pairs; old boots repaired, 4 pairs.
3. The Rev. Mr. Quirk, R.C., held service on Sabbath last. The Church of England service was read by the schoolmaster. His report is attached.

I have, &c.,

J. S. V. MEIN.

The Schoolmaster, Nautical School-ship "Vernon," to The Superintendent.

N. S. S. "Vernon,"  
5 September, 1868.

Sir,

Since my last report was given to you, upon the conduct and progress of the boys under my charge, I have continued my efforts to secure the improvement of all my pupils in reading, spelling, and arithmetic; the progress made by almost all of them has been fair. The senior boys have not only made considerable progress in these branches, but also in grammar and geography. All the boys who are writing, with one exception, have improved very much.

The general conduct of the boys has been upon the whole good, and I can now command the most perfect order and attention by a word.

The boy David Martin is very idle and troublesome, and Robert Reynolds is very careless while engaged in writing.

I have, &c.,

JOHN L. M'SKIMMING,  
Schoolmaster.

THE SUPERINTENDENT, NAUTICAL SCHOOL-SHIP "VERNON," to THE PRINCIPAL  
UNDER SECRETARY.

(No. 67.)

N. S. S. Vernon,  
14 September, 1868.

SIR,

I have the honor to report, for the information of the Hon. Colonial Secretary, as follows:—

1. That the number of boys at present on board is ninety-seven (97), all in good health; their conduct and attention to their various duties during the past week has been good. On Friday morning last, the 11th instant, the boys, to the number of 59, left the ship at 8 o'clock, to proceed by train to Werrington, the residence of the Hon. Colonial Secretary. They returned to the ship without accident, and without any attempt having been made to escape.
2. The conduct of the crew (with the exception of George White, Qr. Master, who left the ship yesterday on leave and has not since returned) has been good. Articles made during past week:—Flannels, 2; dungaree trowsers, 9; caps, 6; boots, 11.
3. The Rev. Mr. McDowall, C.E., and Mr. Byrne, R.C., held service on board last Sabbath. The schoolmaster's report is attached.

I have, &c.,

J. S. V. MEIN.

The

---

The Schoolmaster, Nautical School-ship "Vernon," to The Superintendent.

N. S. S. "Vernon,"

12 September, 1868.

Sir,

In presenting another report to you, I have to remark that the conduct of all the boys during the week now ended has been good, and the progress made by almost all of them has been very encouraging and satisfactory.

The boys in the senior classes have improved in grammar, arithmetic, and writing; some of them in a very marked degree, and all of them more or less. However I cannot say as much about their manner of reading; they still read in a careless sing-song way, and I cannot get them broken off from this acquired habit. All the boys in the junior classes have improved very much also; the boy Thomas Wiley is the only one who has not made some progress.

I have &c.,

JOHN L. M'SKIMMING.

Schoolmaster.

1868-9.

## NEW SOUTH WALES.

# NAUTICAL SCHOOL-SHIP "VERNON."

(REGULATIONS.)

Presented to Parliament, pursuant to Act 30 Vict., No. 2, sec. 3.

Colonial Secretary's Office,  
Sydney, 13th January, 1869.

THE following Regulations for the Nautical School-ship "Vernon," having been made by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the 3rd clause of the Industrial Schools Act of 1866.

JOHN ROBERTSON.

## REGULATIONS FOR THE NAUTICAL SCHOOL-SHIP "VERNON."

### THE SUPERINTENDENT AND COMMANDER.

#### Charge of Institution.

1. The Superintendent will have entire charge of the Institution, and be held responsible for all property belonging to the Government; he will visit and inspect every part of the ship daily, and ascertain that the whole is under efficient management and control; he will attend the daily musters, and appoint the boys for work under the various divisions.

#### Responsible for duties of Officers.

2. He will be held responsible for the proper discharge of all duties to be performed by the various Officers of the Institution; and he will be guided, from time to time, by such instructions as he may receive from the Colonial Secretary.

#### Training.

3. He will see that the boys are properly instructed by the Schoolmaster—that they are taught habits of cleanliness, industry, and diligence; and he will be expected to do everything in his power to encourage, by force of example, moral and pious conduct amongst those entrusted to his care. Those boys who are capable of receiving nautical instruction are to be taught by the Superintendent and Commander, one hour in the winter and two hours in the summer.

#### Treatment.

4. He will see that the boys are treated with kindness, combined with strict discipline, and check every instance of harsh conduct on the part of the Officers or Instructors.

#### Register to be kept.

5. He will keep a Register for recording the name of every boy admitted into the Institution, entering such particulars as can be ascertained respecting age, religion, parentage, &c.; also, how the boys are disposed of on leaving the Institution; and, in case of death, the cause should be stated.

#### Power to suspend Officers and dismiss Instructors.

6. All complaints made by the Officers, Instructors, or the boys, must be carefully looked into by the Superintendent, in order that any abuses or infringement of the Regulations may be checked and rectified. The Superintendent may suspend any Officer for neglect of duty or improper conduct, pending the decision of the Colonial Secretary, and shall have power to hire or discharge any of the Instructors not appointed by the Executive authority.

#### CHIEF OFFICER.

#### To take charge in absence of Superintendent.

7. The Chief Officer will take charge of the Institution in the absence of the Superintendent, and will see that all orders are punctually and efficiently carried out; he will have to keep watch,

and assist the Superintendent to instruct the boys in navigation and seamanship, when required to do so; he will also be held responsible for the issue of Boat-swain's stores.

#### PURSER.

Charge of Stores and Clothing.

8. The Purser will have charge of all Stores and Clothing, except those placed under the Boatswain, and he will be held accountable for the same before issue. No Stores or Clothing of any description are to be issued without the orders of the Superintendent. Upon receipt of the provisions from the Contractor, the Purser, with the Steward's assistance, will weigh out the rations, and see that each Mess has its fair allowance.

#### VISITING SURGEON.

To visit at least twice a week.

9. The Visiting Surgeon is to visit the sick at least twice a week, or oftener if required; he is to attend the Institution at any time when he may be sent for by the Superintendent.

Medical Journal.

10. A Medical Journal is to be kept at the Institution, in which he will record all cases of sickness, disease, or death, with any particulars he may deem necessary.

Inspection of boys admitted.

11. He will see every boy that is admitted into the Institution, and examine into the state of his health, in the presence of the Superintendent, and make an entry of the result of such examination in the Medical Journal.

Deaths.

12. In the event of death, he should make an entry in the Medical Journal, specifying the name of the boy, the date, cause of death, with any other particulars he may consider necessary, and report the same to the Superintendent as early as possible.

Medical Comforts.

13. When Medical Comforts are ordered, it will be necessary for him to enter, in an Order Book to be kept for the purpose, the name of the boy for whom they are required, with the quantities of the articles to be supplied; and he will also have to certify to the correctness of the account for the same, on the voucher for the Colonial Treasurer.

#### SCHOOLMASTER.

Hours of attendance for teaching.

14. The hours for the school instruction will be from 9 o'clock to 12 o'clock noon, and from 1 o'clock to 4 o'clock P.M. The Schoolmaster in charge should be in attendance and have the school-room ready for commencing duties punctually at 9 o'clock.

Muster Roll.

15. He will receive the boys from the Commanding Officer at school hours, and see that they are all clean and tidy in person; any who may appear to him not to be so should be sent back; he will then call the Muster Roll, and report to the Superintendent any boys who may be absent.

Prayers.

16. Prayers are to be read to the boys at divisions every morning by the Schoolmaster.

Monitors.

17. As many Monitors as the Schoolmaster may consider necessary may be selected by him as Assistants in the School, to whom he will give one hour's additional instruction, between 4 o'clock and 5 o'clock P.M.

#### CARPENTER.

Instruction to Carpenter.

18. The Carpenter to work at his own trade, and to instruct the boys who may be told off as carpenters during the day; he will also have to take charge of a night watch.

#### MASTER-AT-ARMS.

Responsible for Cleanliness of Boys.—Escape of Boys from Lower Deck.

19. The Master-at-Arms to have charge of the lower deck, and to be responsible for the order and cleanliness of the same; he should see that the boys properly wash themselves, and that their clothes are clean and tidy. Every morning he will have to muster and inspect the boys before divisions with the Chief Officer, and to report when all are present; he will be held responsible for the escape of any boys from off the lower deck, and will also have to perform the duties of Gunner.

#### BOATSWAIN'S MATES.

Watches.—Boatswain's Stores.

20. The Boatswain's Mates have to perform their duties under the Commanding Officer, and to keep watches when required; they will have to instruct boys in seamanship and boats; the senior Boatswain's Mate to have charge of Boatswain's Stores, which are not to be issued without the orders of the Commanding Officer.

#### WARDERS.

Watch on Lower Deck.—Washing at Divisions.—Care of Bags, Clothes, &c.

21. The Warders or Seamen Instructors to keep watch on the lower deck both by day and by night, under the immediate orders of the Master-at-Arms; one to attend the boys when washing, at divisions, and inspection; they are to see that all bags are properly stowed away, the boys' clothes in order, and the decks kept clean. Clothes are not to be left on the lower deck, nor allowed to hang between decks. Mess traps, tables, stools, &c., must be kept clean and in good order. The Warders will also have to instruct the boys when required to do so.

#### QUARTERMASTERS.

Watch, upper deck.—Boats to be kept off.—To report boats approaching.

22. The Quartermasters or Seamen Instructors to keep watch on the upper deck both day and night, to instruct in seamanship and boats; when on the watch to keep off all boats from alongside, unless they have business with the ship; to see that boys do not go over the side, unless by orders; to report all boats approaching the vessel to the Commanding Officer; at night all boats to be hailed and warned off, unless they have an order on duty.

#### BARBER.

Hair to be cut once a month.—Charge of Bath-room.

23. The Barber to perform both Bugler and Barber's duties, to attend the boys with the Warder when they are washing; each boy's head to be examined once a month, and his hair cut. He will also take charge of the bath-room, and see that it is kept clean and in proper order.

#### STEWARD AND COOK.

Boys to be instructed.

24. The Steward and Cook to perform their own duties, and instruct such boys as may be placed under them in their art.

## TAILOR AND SHOEMAKER.

## Trade instruction.

25. The Tailor and the Shoemaker will have to instruct any boys who may be told off to them in their trades, and will have to take charge of them whilst at work.

## GENERAL RULES.

## Caution to Officers.

26. Every Officer must bear himself in such a manner before the boys as not to set a bad example by either word or deed; and not only any offence such as drunkenness will be visited with instant dismissal, but such dismissal will follow from ascertained unsuitableness without any special bad conduct.

## Book for Visitors.

27. A Visitors' Book will be kept, in which all ladies and gentlemen who visit and inspect the Institution must be courteously requested to enter their names, with the date of visit, and any remarks they may think proper to make.

Strangers to explain relationship to boys when visiting.—Warders to be present during interviews with boys.

28. Strangers wishing to visit any of the boys must explain to the Superintendent, or, in his absence, to the Officer in charge, their relationship to the boy whom they desire to see, the object of their visit, and any other particulars that the Superintendent may desire to know; and either the Master-at-Arms or Warder must be present during the interview of any such stranger with a boy.

## Relatives to enter names in book.

29. The relatives and friends of the boys will be required, on every occasion of a visit, to enter their names in a separate book kept for that purpose.

## Boys permitted on shore.

30. Any boy who has proved himself to the satisfaction of the Superintendent to be trustworthy, may be permitted to go on errands on shore.

## Boys permitted to attend Divine Worship on shore.

31. Any number of the boys whom the Superintendent has reason to believe may be so trusted, will be permitted to attend Divine Worship on shore, on such occasions and under the charge of such Officers as the Superintendent may approve.

## Prayers to be read by Schoolmaster in absence of Clergyman.

32. The Officers, Instructors, and boys must attend Divine Worship every Sunday on board the ship; if no Clergyman is in attendance, prayers must be read by the Schoolmaster.

## PUNISHMENT.

## Punishment to be awarded by the Superintendent.

33. No Officer or Instructor will be allowed to punish any boy summarily, but the names of such boys as may misconduct themselves must be sent in, with the nature of offence, to the Superintendent, who may award such punishment, hereinafter named, as he may consider sufficient.

## Punishments to be awarded in presence of Ship's Company.

34. All punishments shall be administered at divisions after prayers, every morning (Sundays excepted), when the whole of the boys and Ship's Company are present.

## Mode of punishment.

35. The mode of punishment to be, black list, mast-head, meals by themselves, loss of dinner, cells during play-hours, cells with bread and water.

## Restriction to punishment.

36. Corporal punishment not to exceed six cuts with the cane on the hand. For stealing, immoral conduct, and malversation, the boy to be placed over a gun,

and punished with a plain leather strap, but no more than twenty stripes shall be given for any offence. This last mode of punishment is only to be resorted to when all other chastisements have failed to have effect upon the conduct of any boy, or in cases of very gross breach of discipline.

## CLOTHING BOYS.

37. As soon as a boy has been entered, he is to be sent to the Barber to have his hair cut and his head examined; he is then to have a warm bath and be turned over to the Boatswain in charge, who will supply him with a hammock, bag, clews and lashing, a bed, blanket, and bed cover, which are to be legibly marked before being issued.

38. As soon as the clothes are received, an Instructor, told off for the purpose, is to take them to be marked and issued, and he is to see the boy place them in his bag. No further supply of clothes is to be issued without the sanction of the Commanding Officer.

39. The following articles of clothing are to be supplied to each boy during the year:—

2 pairs blue cloth trousers	1 hat (cabbage-tree)
2 do. drill do.	1 ribbon with name
1 pair canvas trousers	1 neckerchief
1 canvas jumper	1 knife and lanyard
2 blue serge frocks	1 rug
2 blue drill do.	1 blanket
2 flannel shirts	Needles and thread
2 pairs socks	2 combs
2 pairs boots	2 towels
1 comforter	1 scrubbing brush
2 caps	2 pocket handkerchiefs

1 clothes brush, with blacking brushes and blacking, for every mess of twelve boys.

## MESSING.

40. Two boys are to be told off as Captains to each mess; they are to wear a distinctive badge, and to be selected with great care; they should be boys of good character and of good disposition; they are to be held responsible for the good order of their messes, and to portion out the food to each boy. At 11.30 A.M., one Cook is to lay out the table with the mess traps, &c., and one is to go to the coppers for the meat, &c.; this is to be divided, and a portion put into each plate by the Captain of the mess, under the superintendence of the Seamen Instructors and Master-at-Arms. The boys are to be ranged outside of the stools, standing. When the dinner has been portioned out, it is to be inspected by the Chief or other Officer; the senior boys of each mess are then to say grace, the boys are to take their places, and to dine with their caps off. If on inspection it is found that any boy has an undue proportion of bone, the senior boy should be made to exchange dinners with the one that has an unfair share given him; by this means this selfish practice will be easily corrected.

## Apprenticeship.

41. Each boy, upon being apprenticed, or otherwise discharged from the ship, will receive a certificate of service, signed by the Superintendent and Commander, of the following form:—

No.

CERTIFICATE of Service on board the Nautical School-ship  
"Vernon."

Name.	No.	Entry.	Discharge.	Conduct.	Abilities.		Trade.
					Seamanship.	Gunnery.	

Captain's signature.

42. Each boy, upon being apprenticed to the sea, is to be supplied with the following outfit:—

1 bed	2 pairs socks
1 blanket	1 canvas bag
1 rug	1 rack comb
2 pairs trousers	1 small tooth comb
2 blue shirts or jumpers	1 jack knife and lanyard
2 flannels	1 knife and fork
2 caps	1 spoon
1 pair boots	1 plate
1 comforter	1 panikin
1 neckerchief	1 Bible
2 towels	

43.

#### SCHOOL ROUTINE. Working of Divisions.

Days.	A.M.	P.M.
Monday.....	1st division, starboard watch	1st division, port watch.
Tuesday.....	2nd do., do. do.	2nd do., do. do.
Wednesday	General sail drill .....	1st do., starboard watch.
Thursday ...	1st division, port watch	2nd do., do. do.
Friday .....	2nd do., do. do.	1st do., do. do.
Saturday ...	Clean ship.....	Clean ship.
Sunday .....	10-30. Divine Service	1-0. Church of England Sabbath School. 3-0. Roman Catholic Sabbath School.

#### Changing divisions.

44. Every Friday afternoon a different division to be sent to school, so that each boy will receive the same number of hours' schooling during the month.

#### Idle boys.

45. Idle and inattentive boys who will not learn, but play, will be kept in to study during their play-hours, till they give signs of progress.

Boys not to be called out of School.

46. Boys are not to be called out of school, under any circumstances, without the permission of the Superintendent.

#### Books to be kept posted up.

47. The following books are to be kept posted up by the Schoolmaster, and ready for inspection at any moment, viz.:—Register of Average Attendance at School, School Routine, Progress Book, School Record Book, and Quarterly Examinations.

#### INSTRUCTION IN SEAMANSHIP.

##### Classes.

48. The boys are to be arranged in classes, and a system devised by which a boy will be gradually passed out of one class to a higher one, a register of which is to be kept by the Instructors.

#### FIRST INSTRUCTION.

##### Drilling.

49. The names of all the masts and yards, decks, &c., and drilling at the monkey topsail yard on the gangway, also learning to pull in a boat.

#### SECOND INSTRUCTION.

##### Sailor's work.

50.

Reef knot	Cat's-paw
Bowline knot	Sheep-shank
Bowline on bight	Carrick bend
Running bowline	Bend hawsers
Clove hitch	Sling a cask
Timber hitch	Inside clench
Blackwall hitch	Outside clench
Two half hitches	Clap on siggers and stoppers
Rolling hitch	
Bend studding sail	
halyards	

For this instruction, a jackstay is to be stretched along, and set up; at intervals of three feet, pieces of rope, one fathom long, are spliced in it; each boy in the class will hold one of these in his hand, and wait the orders of the Instructor, who is to give directions which knot or bend is to be made; and when it is finished, each boy will wait until the Instructor comes round to examine the work, and to explain its uses.

#### THIRD INSTRUCTION.

##### Splicing, pointing, &c.

51.

Long splice	To make a clue
Short splice	Worming
Eye splice	Parcelling
Mathew Walker knot	Serving
Stopper knot	Strapping blocks
To make a grummet	Turning in dead eyes
To make a Turk's head	Reeving a lanyard
To make a point	Rattling down rigging
To make a gasket	To point ropes
Shroud knot	To pass an earing

#### FOURTH INSTRUCTION.

##### Naming Rigging, &c.

52. The boys are to learn the names of all the running rigging and blocks, to set up rigging, as also to use the palm and needle. Each boy is to be able to sew a seam and work an eyelet hole well.

Instruction not to be continued too long.

53. The foregoing should be varied with the gunnery instruction. No boys should be kept long at any instruction, otherwise they will get tired and weary, therefore the seamanship instructions are to be alternated with the gunnery classes. The hours for changing the instructions are to be 10-15 A.M. and 2-15 P.M.

##### Pulling in Boats.

54. Two boats are daily to be sent with the boys that are in the first instruction, to learn to pull; and on Wednesday afternoon and Thursday forenoon the watch not at school are to man all the boats, and to go away for the purpose of boat exercise, viz.:—Under sail, to practice getting up and down masts, making and shortening sail, tacking, wearing, reefing, steering by compass, attending sheets, halyards, &c.

#### TRADES.

Boys to be told off to Trades.

55. One division of boys is to be told off to trades at 9 o'clock A.M. and 1 o'clock P.M.; all trades-boys to be sent to their respective trades after divisions, at 4 o'clock P.M., until 6 o'clock P.M.

#### GUNNERY.

##### Exercise with Guns, and Powder and Shot.

56. Boys to be taught the first, second, and third instructions of gun drill with detail, manning both sides, and handspike drill, also cutlass and rifle drills. Occasionally to be exercised with powder, that they may be accustomed to its use, and when practicable to be exercised with shot; they are also to be taught to aim at a movable target; a boat pulling abreast of the ship, to be used for that purpose.

#### SUMMER ROUTINE.

##### MONDAY.

4-30 A.M. Turn the hands up.

4-45. Instructors to inspect hammocks, then stow them.

5-3. Three divisions to clean upper decks. Boats to be lowered, washed out, and gear cleared; one division to bathe.

7-0. Breakfast.

7-30. Watch to clean, stow bags. Watch below clean lower deck.

7-45. Overhaul lifts and braces.

8:0. Cross top-gallant royal yards, loose sails, one watch to square yards, spread awnings, flemish down ropes, clean wood-work, and sweep decks; one watch at quarters to clean guns and arms.

8:30. Clean lower deck.

8:45. Inspection of all decks, boys to fall in at bugle call for muster with their Instructors, to see they are all properly washed, cleaned, and combed.

9:0. Divisions and prayers, after which the boys are to be told off for exercise, viz.:—One division at gun drill, one division at seamanship and boats, the remainder at school, agreeably to the school routine.

10:15. Roll of drum, stand at ease ten minutes, boys in the first instruction to go over the masthead; change drill—boys that were at gunnery exercise to rifle drill.

11:30. Furl sails, square yards, reeve clothes-lines; cooks and captains of messes to prepare the dinner tables.

11:45. Inspection of messes.

Noon. Dinner.

1 P.M. Boys to fall in by sound of bugle, clear up and inspect lower deck; the divisions to be told off as in the forenoon, viz.:—One division to be told off to gun drill, one division at seamanship and boats, the remainder at school.

2:15. Roll of drum, stand at ease ten minutes, and change drills—boys in the first instruction to go over the masthead, one division at sword drill, one at seamanship and boats.

4:0. Dismiss drills, down topgallant yards.

5:0. Supper.

5:30. Fire stations. Hoist up all boats not required, after which boys to bathe and skylark.

7:0. Stand by hammocks.

7:10 P.M. Furl or haul over hammock cloths.

8:30. Captains of messes report to the Instructors that their messes are cleaned up. The Instructors are to see that all the boys are in bed before the rounds.

9:0. Rounds.

#### TUESDAY.

4:30 A.M. Turn the hands up. Instructors to carry on the same routine as on Monday; after prayers the boys to be told off to drills—one division at gun drill, one at seamanship and boats.

10:15. Roll of drum, change drills as on Monday.

11:30. Furl sail.

P.M. Boys fall in as before, one division at gun drill to change to sword drill, one division at seamanship and boats; routine as on Monday.

#### WEDNESDAY.

A.M. Routine as before.

9:15. General sail drill, boys to be exercised, making, shortening sail, reefing, &c.; this to be alternated with drilling at stations and manning the ropes.

11:30 A.M. Clear up decks.

P.M. Boys not at school, at general boat exercise, except newly raised boys, who will be exercised at the monkey sail.

4 P.M. Dismiss drills.

#### THURSDAY.

A.M. Routine as before.

9:15. General muster per open list, then one watch at school, and one at general boat exercise, except newly raised boys, who will be exercised at the monkey sail.

The clothes are to be mustered as follows:—One watch (not at school) on the first Thursday; the other watch on the second Thursday of every month.

Every boy should bring with him for inspection at divisions on Thursday, hammock and clothes stops, knife, and combs.

P.M. Mend clothes.

#### FRIDAY.

A.M. Boys not at school to exercise at general quarters, except junior boys, who will exercise at topsail drill or boats.

1 P.M. Boys not at school to assemble under arms for general rifle drill. After supper, wash clothes.

#### SATURDAY.

A.M. Hands up at 4:30. Get all bags on deck, rig engine, lead hose along, &c., lower all boats, overhaul the gear for cleaning, up all mess traps, stone lower deck and poop.

7:0. Breakfast.

10:0. Down all bags, stone upper deck and fore-castle.

P.M. Air bedding, square yards, repair ratlines, &c.; one watch at quarters to clean guns, after which clean all boats and scrub the gear.

4 P.M. Divisions to serve out, clean hammocks (alternate weeks). Every boy to be passed through the bath on Saturday afternoon, if the weather will admit of it. The Ship's Corporal to attend to muster them. After supper, sling clean hammocks.

#### SUNDAY.

A.M. Hands up at 5:30. Sweep all decks.

9:30. Divisions.

10. Divine Service.

1 P.M. Sunday School.

3. Roman Catholic do.

NOTE.—Clothes-lines to be rove on Tuesdays and Fridays before 3:30 P.M. Hammock gauntlines to be rove on Monday after supper, and the hammocks scrubbed the next morning, and triced up at 8 A.M. When the weather is warm, the boys to bathe three times a week, at 5:30 P.M. Every boy's hair is to be cut, and his head examined by a Barber, the first week of every month. Boats' crews, messenger, and side-boys, to be changed every Monday morning at 7 A.M. The Barber to attend divisions when the boys are inspected. All the boys to be examined in March, June, September, and December, as to their proficiency in school, gunnery, and seamanship; the result to be inserted in the Progress Book against each boy's name, as also his conduct during the quarter. All boys in the first instruction to go over the masthead at the hours of changing drills. The Instructors are always to attend with them whilst going aloft. Anything that may occur to interrupt the proper carrying out of the Routine Regulations, must be reported to the Superintendent.

#### WINTER ROUTINE.

##### MONDAY.

6 A.M. Hands up.

6:15. Lash up and stow hammocks, under the inspection of the Seamen Instructors.

6:30. Clean decks.

7:15. Breakfast.

7:45. Watch below clean lower deck, stow bags, &c.

7:55. Watch fall in, sweep upper deck, coil down ropes, lower boats, &c., according to weather.

8:30. Square yards, spread awnings if required, clean wood-work, &c.

9:15. Bugle to sound, boys fall in for inspection.

9:30. Divisions and prayers, after which boys are to be told off for exercise, viz.:—One division at gun-drill, one division at seamanship and boats, and the remainder at school, according to school routine.

10:30. Roll of drum, stand at ease ten minutes, and change drills.

11:45. Inspection of messes.

Noon. Dinner.

1 P.M. Boys fall in at sound of bugle, clear up and inspect lower deck. Divisions to be told off as in forenoon.

2:15. Roll of drum, stand at ease ten minutes, and change drills.

3-30. Divisions assemble at sound of bugle, and drills dismissed.

4. Hoist up all boats not required.

4-30. Supper.

5. Fire stations.

7-30. Hang up hammocks, and down all bags.

8. Rounds. (The Seamen Instructors are to see that all the boys are in bed before the time for rounds.)

#### TUESDAY.

A.M. Routine as on Monday.

1 P.M. Boys fall in as on Monday; one division at gun drill to change to sword drill.

Routine as on Monday.

#### WEDNESDAY.

A.M. Routine as on Monday.

9-30. After prayers, general sail drill; boys are to be exercised making and shortening sail, &c.; this to be alternated with drilling at stations and manning ropes.

P.M. Boys not at school, at general boat exercise, except junior boys, who will exercise at the deck topsail.

#### THURSDAY.

A.M. Routine as on Monday.

9-30. After prayers, a general muster per open list, then one watch at school and one at general boat exercise, except junior boys, who will be exercised at the deck topsail.

The clothes are to be mustered as follows:—One watch (not at school) on the first Thursday, the other watch on the second Thursday of each month. Every boy should bring with him for inspection at divisions on Thursday, hammock and clothes stops, knife, and comb.

P.M. Routine as on Monday.

#### FRIDAY.

A.M. Boys not at school to exercise at general quarters, except junior boys, who will exercise at topsail drill or boats.

1 P.M. Boys not at school to assemble for general drill (to land if practicable).

#### SATURDAY.

6 A.M. Hands up, get all boys on deck, rig engine, and pass hose along, &c., lower boats and overhaul the gear for cleaning.

7-15. Breakfast.

7-45. Up all mess traps, and stone lower deck.

10. Down all bags, stone upper deck, poop, and fore-castle.

1 P.M. Air bedding, square yards, repair ratlines, &c.; one watch at quarters to clean guns and complete gear, after which they are to clean all boats and scrub the gear.

4. Divisions—to serve out, clean hammocks on alternate weeks. Every boy is to be passed through the bath on Saturday afternoon, weather permitting. The ship's Corporal to attend to muster them. After supper, sling clean hammocks.

#### SUNDAY.

6 A.M. Hands up, sweep all decks.

10. Divine Service.

2 P.M. Sunday School.

NOTE.—Hammocks are to be scrubbed after breakfast on alternate Tuesdays, and triced up to dry in

the early part of the forenoon, on which days prayers at 10 A.M., or earlier if practicable. Clothes are to be washed on Tuesdays and Fridays at 2-15 P.M. Hammocks are always to be collected and inspected at divisions, and issued in the same manner. Clothes-lines are to be rove at 11 A.M. on washing days. Hammock gauntlines are to be rove every Monday after supper. Every boy's hair is to be cut, and his head examined by the Barber, the first week of every month. Boats' crews, messengers, and side-boys, are to be changed every Monday, at 7 A.M.

#### RULES TO BE OBSERVED BY THE SEAMEN INSTRUCTORS AND BOYS OF N. S. S. "VERNON."

1.—Instructors are expected on all occasions to show an example of cheerfulness and willing obedience in executing their several duties; they are not only to abstain from using violent or harsh language themselves, but they are uniformly to discourage all improper conduct in others.

2.—The Instructors in their several stations are expected to report all skulking characters, and to point out all those who, by activity and good conduct, deserve encouragement.

3.—Nothing whatever is to be taken in at, or thrown out of, the ports, nor are any clothes to be hung about the chains, head, rigging, or in the messes between decks.

4.—When any duty is being carried on, the strictest silence is to be kept.

5.—All complaints are to be made on the quarter-deck, to the Commanding Officer, in order that they may be communicated to the Commander.

6.—It is the duty of every boy to report all skulkers and lazy characters, in order that they may be made to do their share of the work.

7.—It is the duty of every boy to detect a thief, as a common enemy to all on board; and any boy screening or holding communication with a thief will be considered as equally bad in character, and will not be allowed to mess with the other boys. No article can ever be lost on board, therefore everything found is to be taken to the ship's Corporal for its proper owner.

8.—All quarrelling and fighting will be severely punished, and on no account are cards, dice, or gambling of any sort, to be allowed in any part of the ship.

9.—If any boy should disobey the orders of his Instructor or Captain of Mess, he will be punished.

10.—Selling or exchanging clothes, and all traffick-ing, is strictly forbidden, and will be punished by the forfeiture, on both sides, of the article so sold or exchanged, and further as may be deemed necessary.

11.—The boys are to be mustered at divisions, according to the instructions to which they belong. The Warrant Officers in charge of the boys, assisted by their Instructors, will be responsible for the progress they make in their instructions; they will take care never to allow them to appear otherwise than clean in their skin and orderly in their clothes.

12.—All are expected to feel a proper pride in their ship, and to merit encouragement by showing activity and a cheerful spirit in the performance of their several duties.

1868-9.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF  
THE LEGISLATIVE ASSEMBLY.

VOTES, No. 20. TUESDAY, 12 JANUARY, 1869.

20. Training-ship "Vernon":—Mr. Driver moved, pursuant to Notice,—  
 (1.) That a Select Committee, with power to send for persons and papers, be appointed to inquire into, and report to this House upon, the general management of the Training-ship "Vernon."  
 (2.) That such Committee consist of Mr. Robertson, Mr. Parkes, Mr. Neale, Mr. Tighe, Mr. Alexander, Mr. Farnell, Mr. W. Campbell, Mr. Burns, and the Mover.  
 Debate ensued.  
 Question put and passed.

VOTES, No. 54. FRIDAY, 12 MARCH, 1869.

5. Training-ship "Vernon":—Mr. Driver moved (*with the concurrence of the House*) without Notice,—  
 (1.) That the Select Committee appointed to inquire into, and to report to this House upon, the general management of the "Training-ship 'Vernon,'" be authorized to make visits of inspection to that ship.  
 (2.) That the said Committee be authorized to require the services of a shorthand writer in such visits of inspection, and to take any evidence they may think necessary for their inquiry.  
 Question put and passed.

VOTES, No. 62. THURSDAY, 25 MARCH, 1869.

4. Training-ship "Vernon":—Mr. Farnell, as Acting Chairman, brought up a Progress Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 12 January, 1869, together with Appendix.  
 Ordered to be printed.

TRAINING-SHIP "VERNON."

---

PROGRESS REPORT.

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 12th January, 1869,—“ *with power to send for persons and papers*”—“ *to inquire into, and report to this House upon, the general management of the Training-ship ‘Vernon’*”—have agreed to the following Progress Report :—

Your Committee have examined numerous witnesses, but are unable, at this late period of the Session, to complete the inquiry into the matter referred to them. They therefore beg to lay before your Honorable House the evidence taken, and recommend that the inquiry be resumed next Session.

JAMES S. FARNELL,

Acting Chairman.

No. 2 Committee Room,

Sydney, 25 March, 1869.

---

# PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 20 JANUARY, 1869.

MEMBERS PRESENT :—

Mr. Burns,	Mr. Tighe,
Mr. Farnell,	Mr. Driver,
Mr. W. Campbell.	

Mr. Driver called to the Chair.

Committee deliberated as to their course of proceedings.

*Ordered*,—That Captain Mein (Superintendent of the Training-ship "Vernon"), be summoned to give evidence at the next meeting.

[Adjourned to Friday next, at 11:30 o'clock.]

FRIDAY, 22 JANUARY, 1869.

MEMBERS PRESENT :—

Mr. Driver, in the Chair.

Mr. Burns,	Mr. Tighe,
Mr. Farnell,	Mr. Parkes,
Mr. Neale.	

Captain J. S. Mein (*Superintendent and Commander of Nautical School-ship "Vernon"*), called in and examined.

Witness handed in certain documents having reference to this inquiry. (*Vide Appendix, A 1 to A 21.*)

Mr. Burns objecting to a question put by the Chairman to elicit the names of certain boys on board the "Vernon"—

Witness withdrew.

Committee deliberated, and decided that the names should be taken down, but not printed.

Witness recalled, and examination continued.

Witness produced "Black-list Book," and withdrew.

Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 10 FEBRUARY, 1869.

MEMBERS PRESENT :—

Mr. Driver, in the Chair.

Mr. Tighe,	Mr. Alexander,
Mr. Farnell,	Mr. Neale,
Mr. W. Campbell,	Mr. Burns.

Captain J. S. Mein, again called in and examined.

Witness withdrew.

*Ordered*,—That Mr. M'Skimming (Schoolmaster), Mr. Cook (Quartermaster), and Mr. Martin (Chief Officer), be summoned for next meeting.

[Adjourned to Friday next, at Eleven o'clock.]

FRIDAY, 12 FEBRUARY, 1869.

MEMBERS PRESENT :—

Mr. Driver, in the Chair.

Mr. Burns,	Mr. W. Campbell,
Mr. Farnell,	Mr. Neale,
Mr. Parkes,	Mr. Tighe.

Mr. George Martin (*Chief Officer of the "Vernon"*), called in and examined.

Witness withdrew.

Mr. John Locke M'Skimming (*Schoolmaster*), called in and examined.

Witness withdrew.

*Ordered*,—That Mr. James Gorman (Master-at-arms), Mr. James Pickering (Shoemaker), and Mr. Edward Byrne (Tailor), be summoned for next meeting.

[Adjourned to Wednesday next, at Eleven o'clock.]

WEDNESDAY,

WEDNESDAY, 17 FEBRUARY, 1869.

MEMBERS PRESENT:—

Mr. Driver, in the Chair.

Mr. Parkes,		Mr. Farnell,
Mr. Neale,		Mr. W. Campbell,
Mr. Burns,		Mr. Tighe,
Mr. Alexander.		

Mr. James Gorman, V.C. (*Master-at-arms*), called in and examined.

Witness withdrew.

Committee deliberated.

*Ordered*—That Mr. Cook, Mr. James Pickering, and Mr. Edward Byrne, be summoned for next meeting.

[Adjourned to Friday next, at *Eleven* o'clock.]

FRIDAY, 19 FEBRUARY, 1869.

MEMBERS PRESENT:—

Mr. Burns,		Mr. Tighe,
Mr. Farnell,		Mr. Parkes,
Mr. Alexander.		

In the absence of the Chairman, Mr. Burns took the Chair for this meeting.

Mr. James Pickering (*Trade instructor—shoemaking*), called in and examined.

Witness withdrew.

Mr. Edward Byrne (*Trade instructor—tailoring*), called in and examined.

Witness withdrew.

Mr. William Cook (*Quartermaster*), called in and examined.

Witness withdrew.

Committee deliberated.

Clerk instructed to summon H. G. Alleyne, Esq. (*Health Officer*), for next meeting.

[Adjourned to Friday next, at *Eleven* o'clock.]

FRIDAY, 26 FEBRUARY, 1869.

MEMBERS PRESENT:—

Mr. Driver, in the Chair.

Mr. Tighe,		Mr. Farnell,
Mr. Neale,		Mr. W. Campbell,
Mr. Alexander.		

Clerk submitted "Return of Cost of Boots made on board the 'Vernon'"—made by Mr. Pickering, which was ordered to be appended. (*Vide Appendix B.*)

H. G. Alleyne, Esq., M.D. (*Health Officer*), examined.

Witness withdrew.

Clerk instructed to write to Henry Parkes, Esq., M.P., intimating that the Committee would be glad to receive any information on the subject he might be willing to afford.

*Ordered*,—That A. Springel and J. Robinson (*Boatswain's mates*), be examined next meeting.

[Adjourned to Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 3 MARCH, 1869.

MEMBERS PRESENT:—

Mr. Driver, in the Chair.

Mr. Parkes,		Mr. Burns,
Mr. Farnell,		Mr. W. Campbell,
Mr. Tighe.		

Clerk submitted Communication from Captain Mein, enclosing Letters from various persons giving favourable testimony as to the conduct of boys employed by them from the "Vernon," and Extracts from the Visitors Book.

Clerk also submitted Statement of Captain Mein relative to the working of the Institution since its establishment, and suggestions as to its future management, &c., which was read by the Chairman.

*Ordered*

Ordered to be appended. (*Vide Appendix A 22.*)  
 Henry Parkes, Esq., M.P., a Member of this Committee, examined in his place.  
 Mr. Abraham Springel (*Boatswain's mate*), called in and examined.  
 Witness withdrew.  
 Mr. Joseph Robinson (*Boatswain's mate*), called in and examined.  
 Witness withdrew.

[Adjourned to Friday next, at *Eleven o'clock*.]

*FRIDAY, 5 MARCH, 1869.*

MEMBERS PRESENT :—

Mr. Farnell, | Mr. Neale,  
 Mr. W. Campbell.

In the absence of the Chairman, Mr. Farnell took the Chair for this meeting.  
 Committee deliberated.

[Adjourned to Thursday next, at *Eleven o'clock*.]

*THURSDAY, 11 MARCH, 1869.*

MEMBERS PRESENT :—

Mr. Driver, in the Chair.

Mr. Alexander, | Mr. Farnell,  
 Mr. Parkes.

Mr. Edward N. Waller (*Purser*), called in and examined, and produced Letter-book of the ship.

Witness withdrew.

Mr. William Shaw (*Carpenter*), called in and examined.

Witness withdrew.

Mr. Joseph Brady (*Barber and Bugler*), called in and examined.

Witness withdrew.

Mr. James Gorman, V.C. (*Master-at-arms*), again called in and examined.

Witness withdrew.

Committee deliberated, and requested the Chairman to move the House for permission for the Committee to make visits of inspection to the "Vernon," accompanied by a short-hand writer, for the purpose of taking evidence if necessary.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

*THURSDAY, 18 MARCH, 1869.*

MEMBERS PRESENT :—

Mr. Burns, | Mr. Farnell,  
 Mr. W. Campbell.

In the absence of the Chairman, Mr. Farnell took the Chair for this meeting.

Clerk read extract from Votes and Proceedings of 12th March, authorizing the Committee to make visits of inspection to the "Vernon."

Committee deliberated, and proceeded on a visit of inspection.

*THURSDAY, 25 MARCH, 1869.*

MEMBERS PRESENT :—

Mr. Farnell, | Mr. Tighe,  
 Mr. W. Campbell.

Mr. Farnell read a letter which he had received from the Chairman, which he read, as follows :—

"Wednesday, 24 March, 1869.

"My dear James,

"I have been confined to my bed since Monday night with an attack of gout, and am still unable to put my feet to the ground. Will you, therefore, kindly ask Mr. Vivian to call a meeting of the "Vernon Committee" for to-morrow at 11, to consider Progress Report. You will please draw it up and bring it up to the House to-morrow night, as I am afraid I will not for some few days be able to do anything.

"Yours faithfully,  
 RD. DRIVER."

"J. S. Farnell, Esq., M.L.A.

In the absence of the Chairman, Mr. Farnell took the Chair.

Acting Chairman submitted Progress Report.

Same read, verbally amended, and agreed to.

Acting Chairman requested to report to the House.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

## TRAINING-SHIP "VERNON."

FRIDAY, 22 JANUARY, 1869.

Present:—

MR. BURNS,  
MR. DRIVER,  
MR. FARNELL,MR. NEALE,  
MR. PARKES,  
MR. TIGHE.

RICHARD DRIVER, JUNR., ESQ., IN THE CHAIR.

Capt. James Seton Veitch Mein examined:—

1. *Chairman.*] You are Master of the training-ship "Vernon"? Yes, I am Superintendent and Commander of her.
2. What is the date of your appointment? I cannot say just now. I joined the ship on the 13th of February, 1867.
3. Has the ship since you joined her been fitted out as a training-ship? Yes.
4. Under whose direction was it fitted out? Under my own directions, with the approval of the Colonial Secretary.
5. Were your recommendations in every case carried out in respect to fitting up the ship? I cannot say just at present as to that.
6. You cannot say? I came here unprepared, not knowing what questions I should have to answer—I did not know anything specially I should have to answer; if I had, I should have come prepared.
7. *Mr. Parkes.*] Surely you can answer that? Nearly in every sense I think they were.
8. *Chairman.*] How many officers have you on board the ship? Sixteen,\* all told, I believe.
9. Can you name them? Yes. Mr. Martin, chief officer; Mr. Waller, purser; Mr. M'Skimming, schoolmaster; Shaw, carpenter; Gorman, master-at-arms; Springle, first boatswain's mate; Robertson, second boatswain's mate; M'Fadden, senior warder; Holmes, another warder; 4 quartermasters, viz.,—Joyce, Neale, Cook, and Gray.\*
10. Have you any regulations that have been made for the government of the vessel? They have lately.
11. Within the last month? Yes, within the last two or three days.
12. *Mr. Neale.*] Had you no regulations for the conduct of the vessel previous to that? We had rules, but no regulations; we had one set for the lower deck.
13. *Chairman.*] One set for the lower deck! Had you no rules for the general management and government of the ship? There were written rules prepared by myself.
14. Were those rules in force up to the time that these regulations were made? They were in force, but they were not so strictly carried out as the regulations are now.
15. Can you produce a copy of those rules? Yes. (*Vide Appendix A 1, 2, 3 and 4*) I have an order book, and I used to write the orders down in it.
16. Do you produce the order book? I have not got it with me, but it can be produced if it is required. All the orders have been copied out of it by the purser.
17. Do you produce the books kept on board the vessel? Yes, I have them all outside in a cab.
- 18.

Capt.  
J. S. V. Mein.  
22 Jan., 1869.

\* NOTE (on revision):—Nineteen (19), all told, including myself and two (2) instructors.

\* NOTE (on revision):—Also, Brady, bugler; Alleyne, steward; Moore, cook; Byrne, tailor; Pickering, shoemaker.

- Capt.  
J. S. V. Mein.  
22 Jan., 1869.
18. What are your duties on board the vessel? To superintend the ship.
  19. The general superintendence of the vessel? The general superintendence of the vessel—the command of the ship.
  20. What are the duties of the chief officer? To carry out my orders and instructions.
  21. The duties of the master-at-arms? He is in charge of the lower deck, to see that the boys are kept clean.
  22. Anything further? He has to do gunner's duty as well, to drill the boys when required, to look after the messing, clothing, and so on.
  23. How many boys are there at present on board the ship? 124 boys belong to the ship at present—one is in the Infirmary.
  24. Have any complaints been made on board ship as to improper practices being carried on among these boys? One complaint has been made.
  25. Only one? Only one. There was also one the other day, which I investigated too—I forgot that.
  26. No other cases have been reported on board the vessel? No other cases, to my knowledge.
  27. You have no doubt about that, have you? I have no doubt that these are the only cases that have been reported to me. One boy complained about other boys, but there were no reports from any of the officers.
  28. Is that what you mean by saying that no other complaints have been made? No complaints have been made to the officers of the ship.
  29. Then statements reached your ears on board the ship of other cases? One boy has stated other cases of boys who had left the ship.
  30. Then you say that, until recently, but one case had been reported? Yes, except this statement of the boy about other boys who had left, which I investigated and found no foundation for.
  31. Investigated when? I cannot say the day.
  32. Since the Committee has been appointed? I have investigated one since the Committee has been appointed.
  33. Any previous? One previously.
  34. What was done in that case? Three boys were punished.
  35. What was the third boy punished for? Because he said he had done something bad himself, but there was no proof.
  36. He admitted it? Boys are not to be believed—they are frightened into this sort of thing.
  37. You punished this boy because he was frightened? He was punished because I thought him a bad boy.
  38. In what respect? In playing with the other boys.
  39. What do you mean by playing with the other boys? I had no proof that he ever committed any wrong, only the boy stated so himself.
  40. How came the boy to make this statement? I cannot tell; I presume he said so before the master-at-arms and the other officers.
  41. I do not want the names taken down in the evidence, but will you state the names of the boys?  
Mr. Burns objected to the question.  
The witness withdrew.  
The Committee deliberated.  
The witness was again called in.
  42. What was the precise charge made against these boys? The charge made against the boys was for sodomy, but you will allow me to explain something about it. The man who made the charge was Quarter-master Cook. He said that he did not see anything wrong take place; he merely said he saw them in the head with their trowsers down and their persons exposed.
  43. *Mr. Farnell.*] I think it would be as well for you to state first the charge made, then how you investigated it, and then the statement given in evidence? The man who made the charge said he did not see anything take place, he only supposed so; and on investigating it, I found that nobody in the ship saw anything of the kind.
  44. *Chairman.*] But you punished the boys? I punished the boys for being in a suspicious position.
  45. Was a boy named —— concerned in that? Yes.
  46. Did you investigate that charge yourself? I investigated that charge myself.
  47. What witnesses were examined? I may omit some, but the boys themselves were examined; Quarter-master Cook, the person who made the charge, was examined.
  48. I think I understood you to say that that was the first case that was reported to you? Exactly.
  49. Did you ever tell any person on board, that cases of sodomy had been reported to you before that case? Never.
  50. Never to any one on board the ship? No.
  51. Did you at any time tell any one on board the ship, that it was a very common practice in public schools in this Colony? Never on board the ship. I told some person on shore, not connected with the ship at all.
  52. And that a boy had been punished for the same offence at the school to which you belonged? Yes, I knew several instances at the school I belonged to.
  53. You never mentioned this fact on board to any one? Never to my knowledge. I might to Mr. Martin have been talking about it; he was at school with me.
  54. *Mr. Burns.*] You mean Mr. Martin your chief officer? Yes; I may at some time when we have been talking together.

55. *Mr. Parkes.*] Did you mean the actual crime of sodomy, or did you mean that sexual uncleanness which boys exhibit in their own persons to one another? I do not mean the actual crime of sodomy—I mean boys playing with themselves. Capt.  
J. S. V. Mein.  
22 Jan., 1869.
56. That is the thing which you mean occurred at school? That is what I mean.
57. *Chairman.*] That is what you meant when you described the case you spoke of as sodomy? I do not believe that sodomy ever actually took place.
58. Have any similar cases been reported to you? One case has been reported to me since this matter was brought before the House; it was reported to me on Sunday last. I investigated that case, and found there was no truth in it at all; it was a charge trumped up; it would never have got into the boys' heads if they had not seen these cases in the papers.
59. Have you two boys on board named ——— and ———? Yes.
60. Has any report been made to you about those two boys? That is the very case I am speaking of.
61. When was that report made? Last Sunday morning was the first I heard of it.
62. *Mr. Parkes.*] Will you state the result? The boy who made the accusation was punished for false accusation.
63. *Chairman.*] You are quite certain of that? I am quite certain of that; I took a copy of the evidence.
64. When was the offence alleged to have taken place? Two Sundays before, but that was the first time it came to my ears.
65. Had you a boy named ——— on board? Two.
66. What were their Christian names? ——— and ———.
67. Was any complaint made about the boy ———? There was a complaint made about him.
68. What was the complaint about him? Abusing himself, in the head.
69. Was it inquired into? Yes.
70. What became of it? He was punished.
71. By abusing himself, you mean playing with his person? Yes.
72. *Mr. Farnell.*] You mean in the head of the ship? In the head of the ship.
73. *Chairman.*] Is the ship under naval regulations? No, the regulations are here.
74. Have you copies of the regulations you say have been in force? Here are the lower deck regulations. (*Vide Appendix A 5.*)
75. Whose duty is it to report cases of misconduct? The chief officer reports to me.
76. Who to the chief officer? Any person who sees it occur—the boys may report them.
77. Whose particular duty is it to report to the chief officer? Any person in the ship.
78. It is not the particular duty of any officer? Only the master-at-arms has charge of the lower deck; he reports anything that occurs there. Any officer can report to the chief officer.
79. You have two instructors on board, have you not? Two trade instructors—a shoemaker and a tailor.
80. What time is taken up by the boys daily in receiving instruction from either of those people? They are told off at 9 o'clock to the trades; at 12 they are changed; they come up and get their dinners; they are told off again at 1 until 4, when drills are dismissed. That is in summer; in winter, of course, it is different.
81. What is the average attendance per day—how many hours per day for each boy? Perhaps he might not get it at all one day; they get it in turns the same as the school, in divisions.
82. How many hours a week should you say a lad receives instruction from either person? Those who are receiving instruction as shoemakers get 15 hours a week each, the tailors 21 hours a week each.
83. Have complaints been made as to the clothing of these boys? No.
84. At any time? Last year the boys were for a certain time badly clothed, but we made canvas clothes for them.
85. Were all the boys on board supplied with flannels? As fast as they are made they are: they lose them very often. They are supplied with the right number, but they are constantly losing them. There are one or two of the boys on whom we find we cannot keep the flannels; they throw them away as fast as they are given to them. There is one boy especially on whom we find it difficult to keep any clothes. He is hardly right in the head I think—the boy seems a little silly.
86. Where is the washing done for the boys? The boys wash their clothes themselves.
87. At what time? Twice a week—Tuesday and Friday; hammocks once a fortnight, on Tuesday morning.
88. Are they occasionally compelled to wash in the rain? No, they wash in the bath-house, *i.e.*, when it is raining.
89. Are they occasionally compelled to wash in the rain? They may have been occasionally, but they have been in the rain very seldom.
90. Has it been reported to you that the lads have occasionally turned in with wet clothes on? No, never.
91. If such a thing has occurred on board ship, it has been entirely without your knowledge? Entirely without my knowledge; it is the first I have heard of it.
92. It has never been reported to you by any officer? Never; if it had been, I would not have allowed it.
93. Have complaints reached you of anything uncleanly on the part of these boys? In what way?
94. Are they allowed to have lice and vermin upon them? They always come on board with lice on their heads—nearly every boy comes on board in that state.

- Capt. 95. Who is the Health Officer? Dr. Alleyne.
- J. S. V. Mein. 96. Do you recollect his paying a visit to the vessel about ten days ago? He comes on board nearly every day.
- 22 Jan., 1869. 97. Do you recollect this particular visit a week or ten days ago? I cannot say.
98. Did you not hear that he called the attention of the officer to the state of a boy's head, who was standing in the gangway? Yes, I heard of that. I was out of the ship at the time.
99. How long had that boy been on board the ship at that time? I cannot say. I do not just now know exactly who the boy was.
100. We shall be compelled to have you here again—perhaps you will be good enough to prepare yourself to answer this question. Was that the only case—the only case of his drawing attention? No, he has prescribed for the boy's head.
101. Repeatedly? Some few times. I have great difficulty in getting them to use mercurial ointment, and he objected to it. He said it was not a nice thing to use. Boys frequently come on board with vermin, and from these they get to other boys who are sick and ill.
102. What are the working hours on board ship? They are in the rules. They turn out at half-past 4 in summer-time.
103. Are they in the habit of turning out at half-past 4 in winter? No.
104. Never? Not to my knowledge.
105. Do you sleep on board? Always. I seldom sleep out of the ship, and I never heard of it.
106. Never until now? I am quite certain I did not in winter; they could not, without my knowledge.
107. At what time in winter? 6 o'clock, then half-past 5, and so on; it goes gradually down or up, as the days shorten or lengthen.
108. Are the boys encouraged or rewarded in any way on board the vessel? They are encouraged in good conduct.
109. In what way? They get stripes on their arm, or good conduct badges.
110. For good conduct? Yes; good conduct boys also have an opportunity of being first apprenticed.
111. Has your attention been called, at any time, to the state of the provisions sent on board? Yes, it has.
112. By whom? I think I called attention to it myself; I do not remember any other officer pointing it out. Yes; the purser pointed it out once or twice.
113. What has been done in such cases? The contractor has been written to.
114. Have complaints been made of insufficient food on board? No.
115. If these matters have been reported to any person, the reports have never been furnished to you? No.
116. You have no doubt about that? No doubt that it has not been reported as insufficient—that they have not had enough to eat.
117. That is what I mean? Never.
118. You say the whole of the books you have been requested to produce are here? As far as I know.
119. I want the old punishment book? It is here.
120. The old one? Both are here.
121. The old one is not in use just now on board the ship? No.
122. *Mr. Burns.*] Did you say that you had no rules for the management of the ship till recently? No authorized rules.
123. You had some regulations of your own framing? Some rules I wrote out.
124. Were those rules approved by the Colonial Secretary? I do not think they were ever submitted. These are the only ones approved by the Colonial Secretary, which I have here.
125. When you said, just now, that you punished three boys on suspicion,—did you mean that their conduct was improper, but short of the charge? Yes, the charge was not proved against them; I did not think it took place; the boys were too young to do anything of the kind, but I believed they had been acting improperly.
126. Have you any return showing the trades of the boys? No.
127. Will you furnish a list of the boys, the trades they are learning, and the number of hours per day they devote to the learning of these trades? (*Vide Appendix A, 6, 7, 8, 9, and 10.*)
128. *Mr. Tighe.*] What were the ages of these boys who committed these acts for which you punished them? If I bring the entry book, you will see it.
129. Do not you remember? About ten or eleven.
130. Not older? No; I think one was younger.
131. It took place in the head of the vessel in every case? No; this case that came before me, which I investigated last Sunday, was supposed to have taken place in the lower-deck, at night.
132. The third case? In the head of the vessel. There are two cases I know about.
133. Is that the only place in the vessel where, in the day time, anything of that kind could possibly occur without being at once discovered? Yes; there is always an officer on watch on deck.
134. Could you keep any watch on the head of the vessel—could you not station an officer, or one of the elder boys, there? I have that now.
135. Since this case has been reported to you? Yes.
136. Since this new regulation has been made, it is not possible for anything of the kind to occur again without being immediately discovered? No.\*
- 137.

NOTE (on revision):—That is, if the look-outs do their duty.

137. Since you say one of these cases occurred in it—how would it be possible to prevent such occurrences? One man is on watch all night.
138. Has that been since the report? No, a man was always on watch between decks all night.
139. Is there a light kept burning all night? Yes.
140. Did you take any precaution to secure that the man did not go to sleep while on watch? There is one watch on deck to call him every half-hour.
141. He is supposed to be awake, and walking up and down? To walk up and down to see that everything is right, and that the boys are all asleep in their hammocks.
142. What punishment did you give the boys? They were flogged over the guns.
143. How many? Twelve stripes.
144. How many boys? There were three boys who were well flogged in the first instance, and two in the last instance, and one put in the cells.
145. Is it your opinion that the practice has prevailed to any extent among the boys? I do not think so; I do not think sodomy has been committed in the ship at all; but the offence the boys were punished for was for being found together in the head.
146. Then the two boys you punished for being in a suspicious position—you do not suspect they were attempting any crime of that kind when they were found in the ship's head? They might have been attempting, but I do not think they committed any crime of that kind; I do not think they are old enough.
147. *Mr. Farnell.* You think they had the intention, but not the ability? I think they had not the ability; they might have had the intention; they were in a suspicious position.
148. *Mr. Tighe.* These same two boys, if they stay long enough on board the ship—if they do not alter their ways or reform—when they get a little older, will be likely to have not only the intention but the ability? I think the punishment of the ship will cause them to alter their ways; one of them is very small; one of them is in the hospital.
149. *Chairman.* What is the matter with him? Fever, I believe; he was sent by Dr. Alleyne's order.
150. *Mr. Burns.* It is open to any one on board the vessel who observes anything improper to report it to you? Yes, the custom is to report through the chief officer.
151. *Mr. Tighe.* Who is now stationed in the head of the vessel—one of the boys? One of the elder boys walks across the fore-castle—that is only since these cases came before me. He was not there before—the man on the poop was supposed to look all round the vessel.
152. *Mr. Parkes.* As commander of the "Vernon," you are simply in the position of any other commander of a ship? Yes.
153. As Superintendent, your duties are defined under the Industrial Schools Act, are they not? Yes.
154. That is, because the provisions of the law render it necessary a Superintendent shall be appointed to do certain things, which certain things are defined? Yes.
155. When you state that no regulations were framed, you simply meant no such regulations as are required by the Industrial Schools Act to be made by the Executive Council? Exactly.
156. You mean the regulations provided for by law? By law.
157. But rules were made for the government of the ship, were they not? Yes.
158. And these rules were observed? They were observed, as far as I knew.
159. Were they found sufficient for the good order of the ship? Yes.
160. Do you remember the reason stated why regulations should not be promulgated by the Executive Council—do you remember ever hearing it stated that it was desirable to gain experience before regulations were promulgated by the Executive Council? I think I do, now you bring it to my memory.
161. You yourself transmitted to the Colonial Secretary the draft regulations? Yes.
162. And the Colonial Secretary declined to give force to them, and explained that it was desirable to gain more experience before such a step as that was taken? Yes.
163. With regard to the manner in which these boys are domiciled—Do they sleep in berths, in which they can come at each other at night? They sleep in hammocks.
164. Which are slung at a certain distance from each other? Yes, fourteen inches apart.
165. It would be impossible for one boy to reach another, when in these hammocks, except with his hands? Yes, except with his hands or feet.
166. A light burning during the night, and a person pacing the decks to see that no impropriety takes place? Yes.
167. That light has always been kept burning, a person has always been placed on duty between decks, and the boys have never slept except in hammocks slung in the manner you have stated? Except those who have been in the cells.
168. In the normal state of the school? Yes.
169. Did you yourself attend a large school when a boy? Yes, I attended several large schools.
170. Have you seen anything more improper among the boys of the "Vernon" than you know to have taken place in these large schools—are the boys generally as well behaved? Yes.
171. And as free from any indecency? Just the same.
172. Have you had much experience of large ships where boys have been apprenticed? Yes, a good deal.
173. Did you ever know of any indecency among boys there? Not that I know of.
174. As far as your experience of large schools is concerned, you saw as much indecency among the boys in them as on board the "Vernon"? As much, and worse.

- Capt.  
J. S. V. Mein.  
22 Jan., 1869.
175. You say you have seen worse conduct among boys in large schools than you have known on board the "Vernon"? I have seen worse conduct in large public schools than I have on the "Vernon."
176. I think you have stated distinctly to the Committee that the charges of unnatural offences were disproved, or rather not proved to your satisfaction? Not proved.
177. I think you stated also to the Committee your disbelief that any unnatural offence had occurred on board the ship? I disbelieve it entirely.
178. That is your deliberate opinion? That is my deliberate opinion.
179. Do many persons visit the ship? A good many; not so many as formerly.
180. Members of the Assembly? Yes, Members of Assembly also.
181. Has any one ever expressed an opinion adverse to the discipline, good order, and cleanliness of the ship? Never.
182. These persons have come to visit the ship suddenly, without notice? Quite unexpectedly; some have gone on board when I have not been there.
183. Do you know whether any dissatisfaction exists among the boys? I have not heard any expressed.
184. Have you heard the Colonial Secretary ask the boys whether they had any complaint to make? Yes.
185. Was it not my practice, whenever I went on board, to ask this question of the boys? It was.
186. What response did they make? They said they had none.
187. That response was given by all the boys? Yes.
188. Quickly? Quickly; with no hesitation.
189. I did that more than once? You did.
190. *Mr. Farnell.*] You have stated that the boys on one occasion were short of clothing—How do you account for that? I think the Estimates were not passed in the House—that was the reason. The requisitions were in, but I could not get a supply because the vote was not passed.
191. *Mr. Parkes.*] The Government refused to authorize the supplies till the Estimates were passed? Exactly.
192. *Mr. Farnell.*] Is the food supplied to the "Vernon" supplied by a contractor? By a contractor.
193. And the stores for the ship? By contractors too.
194. Is everything that is supplied to the ship contracted for? Some extra things that are not in the contract we have to get ourselves.
195. Upon your own responsibility? Yes, small things that are not in the contract.
196. *Mr. Tighe.*] Just a trifle, I suppose? A few trifling things.
197. *Mr. Farnell.*] You say these boys received stripes over their arm for good conduct, and stripes over the gun for bad? Silver stripes over their arm.
198. Which did they prefer, the stripes over their arms or stripes over the guns? They would rather have stripes over their arms, I suppose.
199. It is usual on board ship when people get up early, to have coffee? The men get coffee, the boys hominy.
200. Do they get it at half-past 4? No; they breakfast at 7.
201. They do not get any coffee? No.
202. Do you not think they are as much entitled to coffee as the men? It might disagree with them.
203. *Mr. Parkes.*] What progress, in your judgment, have the boys made under their present teacher, Mr. M'Skimming? I think they have made fair progress; nothing very remarkable.
204. Do you think a single teacher is sufficient to attend to the boys, so far as you can judge? I think so—the schoolmaster only gets one division at a time.
205. *Chairman.*] You say the boys generally are as well behaved as the boys at any public school that you have seen? Yes.
206. Did you ever see the master of a public school swearing at the boys? I have often heard masters in a public school swear.
207. Very frequently? Not very frequently—at times.
208. Do you ever do it? Not to my knowledge.
209. Did you ever do it? I might have done it in one instance.
210. Not more than once? I am not aware of it.
211. You keep a monkey on board the vessel? Yes.
212. Has anything been said to you about him by the boys? No.
213. Is he not in the habit of making exhibitions that the boys should not witness? I do not know that he is.
214. Have you never heard it? Heard what?
215. Of his playing with his person? All monkeys do that.
216. He is kept there for the boys to look at? To amuse the boys.
217. That is the amusement he affords? He plays with them, and runs about the deck with them.
218. *Mr. Parkes.*] Do you mean that he is kept merely to exhibit himself indecently to the boys? No, such a thing never struck me.
219. Is that what you meant when you said all monkeys will do it? All monkeys will play with themselves. You may see them in the Gardens, not only when boys but when ladies are walking round.
220. *Mr. Farnell.*] When you referred to public schools you did not mean our public schools as established under the Public Schools Act? No, I have never been inside one of them.

221. *Mr. Parkes.*] You meant large schools that are open to the public? Yes. I have letters here from some of the apprentices, and from some of the owners of vessels that have taken these boys. (*Vide Appendix, A 11, 12, and 13.*) Also, a list of the boys apprenticed and discharged. (*Vide Appendix A, 14 and 15.*) I also hand in a scale of the victualling. (*Vide Appendix A 16.*) Also, a copy of the present regulations. (*Vide Appendix A 17.*)
222. *Mr. Parkes.*] Are the regulations recently adopted by the Executive Council, for the most part the draft regulations sent in by you? Yes. I also beg to hand in an extract from the *Herald*, and copies of letters from the Colonial Secretary's Office; also, copy of the regulations for the examination of officers. (*Vide Appendix, A 16, 17, 18, 19, 20, and 21.*)

Capt.  
J. S. V. Mein.  
22 Jan., 1869.

WEDNESDAY, 10 FEBRUARY, 1869.

Present:—

MR. ALEXANDER,	MR. FARNELL,
MR. BURNS,	MR. NEALE,
MR. W. CAMPBELL,	MR. TIGHE.

RICHARD DRIVER, JUNR., ESQ., IN THE CHAIR.

Captain James Seton Veitch Mein further examined:—

223. *Chairman.*] Did I understand you to say, when you were last examined, that no boys had been punished for the crime of sodomy? No boys had been punished for the crime of sodomy.
224. And that none had been charged with it? They had not been charged with it. I think I stated last time the particulars of the charge.
225. You still adhere to the statement you made on the former occasion? Decidedly.
226. This is the charge-book (*handing a book to witness*)? This is the black-list book.
227. Will you look at this entry, page 19? Yes, I see it is written across in red ink.
228. What is the charge entered? Nothing was proved. It is entered by the master-at-arms.
229. By whose authority? I told him to keep the book myself.
230. The charge there entered is sodomy? It is.
231. Was the boy punished? The boy was punished.
232. What was the punishment? He had a dozen cuts with the tawse, one month cells, and bread and water for seven days, and to be kept from all the other boys until further orders.
233. How long was he kept from the other boys? I cannot say exactly the length of time; till he improved, and was found to be a good boy.
234. When was that alteration made in red ink? I think some time after, when the book came up to me.
235. How often was the book brought to you about that time? It was not sent regularly; you can see that by the way it is initialled.
236. You cannot fix any date when the alteration was made? No.
237. Was it before or after the appointment of this Committee? That I cannot say; it might have been after. The book was only kept for reference for myself. I did not think about its being produced.
238. There is another entry, at page 78. Will you look at that—the offence there was entered as sodomy (*handing the book to witness*)—is it not so? Yes, it is put here as that.
239. Has that also been altered? Not altered; a red-ink mark is over the top.
240. The word "attempt," or "attempted"? It is "attempt at."
241. Has been written in red ink over the original entry? Over the other man's entry.
242. By whom is that written? All this is by the master-at-arms.
243. The word "attempt" is your own? Yes.
244. When was that written? I cannot say; at the same time the other was.
245. You are certain of that? Yes.
246. What caused you to make these alterations? In looking over the book I saw it down, and as I knew it was wrong I made the red-ink mark.
247. Had you no other reason? I cannot say that I had.
248. Was it not in consequence of statements made out of doors? I cannot say—it might have been.
249. Was it not after this Committee was moved for in the Legislative Assembly? I cannot say whether it was before or after; it might have been after.
250. Was that boy punished? Yes.
251. What punishment did he receive? A dozen cuts with the tawse, a month in the cells, and bread and water for seven days; to be kept from all other boys till further orders.
252. Will you look at another page, page 91—Another boy appears to have been punished for the same offence? Yes.
253. Was any alteration made there? No, only two red-ink strokes.
254. By whom were these made? They were evidently made by me.
255. When? I cannot say.
256. Was that entry also made by the master-at-arms? Yes, all this writing is his.

257.

- Capt.  
J. S. V. Mein.  
10 Feb., 1869.
257. Under whose directions were these charges entered? I think he entered them of his own accord, because this book was kept by him, and was sent up only occasionally to me.
258. Is it part of the duty of the master-at-arms to keep this book? No, the chief officer keeps it.
259. Was it at that time? At that time I gave it him, because I had so much other work to do.
260. When did you give it to the chief officer? At the beginning of the year.
261. Before or after the appointment of this Committee? Before, I think—I do not know anything about the appointment of the Committee—I do not know what time the Committee was appointed—I forget.
262. At the time these charges were entered by the master-at-arms, it was his duty to enter them? Yes, I gave him the book to keep.
263. Who communicated the charges to him? I cannot say.
264. Whose duty was it to do so? Any person's under whose notice anything of the kind might come.
265. Cannot you give the Committee any idea as to whose duty it was to report such cases? No I cannot, further than that it would be the duty of any person, seeing anything going wrong, to report it.
266. Whose duty would it be to award the punishment? I award the punishment in the presence of the ship's company.
267. Then he would take the punishment from yourself? Yes; but he would enter it in the book afterwards.
268. How often did you see this book? Not very regularly; you can see that from my initials.
269. Are you not in the habit of seeing it almost daily? No.
270. Weekly? Not even weekly; I asked for it weekly, but often I did not get it at the time, and then the pressure of other business put it out of my head for the time.
271. Have you been in the habit of asking frequently for this book? Occasionally.
272. Not frequently? Not at stated intervals, as will be seen from the book—I could not get it.
273. Do you mean by that, that it was impossible for you to get the book when you wanted it? Not at all; I could get the book by going for it, or sending for it.
274. And you say you never noticed these charges before? Noticed them before when?
275. Before you made the alterations there? I did not pay attention to it, I had so much other work to do; it is as much as I can do to get through my own work.
276. *Mr. Tighe.*] You state that in page 19 of that book a boy is entered as having committed the disgraceful offence the Chairman has mentioned? Yes.
277. Is only one boy mentioned in that charge? There is only one boy.
278. How could only one boy commit the offence which has been mentioned? It was said to be with the other boy mentioned in page 78.
279. Those two boys are connected in the same charge? Yes.
280. Do you investigate these cases yourself? Yes.
281. Do you keep any account of the evidence given? I did not in this case.
282. Is it usual to keep any record of the evidence given in cases of this kind? I did not think it of sufficient importance—I did so in the last case.
283. Was the case one which deserved to have the name of so serious an offence applied to it? No.
284. Was it an offence of a milder degree? Of a milder degree.
285. Why of a milder degree? Because, to my belief, it never occurred.
286. It was an act of indecency? They were exposed, and in a suspicious position.
287. It was not proved? It was not.
288. Were any of the other cases proved to be real attempts? Not any.
289. What was the nature of the other two cases? Three boys were all brought up at one time.
290. All for one offence? The charges were investigated at one time, and I never heard of any other, except the one I alluded to when I was last before the Committee.
291. You have no record of the evidence given? No.
292. Who gave evidence against them? Quartermaster Cook.
293. Was he witness to the fact? He was the officer who reported the offence.
294. From his own observation? From his own observation—he surprised the boys in the head, in a suspicious position.
295. What induced you to make these red-ink marks after the entry was made? I do not know; I just put them down because I saw it wrongly entered.
296. What caused you to suppose that it was wrongly entered? Because the actual thing did not take place.
297. Did you make an investigation which led to that conclusion? Yes.
298. What investigation? By inquiry from them all, and from this man's evidence; and when the book came up afterwards I made these red-ink marks.
299. It was in consequence of this investigation? Yes, it was not true.
300. Would the evidence lead you to suppose that if these boys had not been surprised by Quartermaster Cook, that the offence would really have taken place? No, it would not; because I do not think the boys were old enough to do anything of the kind.
301. How old are they? Nine and ten I think.
302. Did you take any steps after these charges had been made, to prevent conduct of the kind occurring again in the vessel? In what way, may I ask you?
303. By having one of the elder boys in the head of the vessel, by having lights, and so on? Yes, we always had lights below.

304. Do you think it is impossible such things can be repeated now that these precautions are taken? I do not think it is possible they can do it without being seen.
305. How many cases of the kind have been reported to you? This case here.
306. That is only one case of the three boys? There was another case which I never could make out; and there is one case which I have investigated since the Committee has been appointed.
307. What were the ages of the boys into whose conduct you made this investigation? I did not get their ages, but I think one was about fourteen and the other about nine.
308. You have told us that the arrangements made and the precautions taken by you, since the first charges were brought before you, would prevent the repetition of such offences, and you now tell us that there have been such practices since the appointment of this Committee? No, I said that charges had been made, but nothing was proved.
309. It was a false accusation? Yes.
310. Have you a record of the evidence in that case? I have a record of the evidence in that case.
311. Was it a malicious and spiteful charge? Yes, by other boys, to get them punished. I told them I believed it was untrue, and one of the boys afterwards came forward and said it was all false.
312. Therefore, in reality there have been only two cases where there have been any colour or ground for the charge? Really only one case—the one of the boys in the head.
313. Was the other case proved to be false too? There was nothing proved about it.
314. I am referring to the case at page 91—was that proved to be false? I could get no information about this at all.
315. What was the boy punished for then? Being generally a bad boy.
316. He must have been punished for some specific act? He was a dirty boy, generally speaking.
317. He was charged with this offence before you, on the occasion in question? It was not so strong as the term used here. He was charged with playing with other boys.
318. Indecently playing? Yes.
319. Was he really guilty of that? I could get no proof.
320. Why then did you punish him? Because it was my impression that he was naturally a bad boy.
321. *Mr. Neale.*] What was the punishment inflicted upon him? A dozen cuts with the tawse.
322. *Chairman.*] Something else beside? Seven days bread and water, cells for a month, and to be kept from the other boys until further orders.
323. *Mr. Tighe.*] There must have been something serious in the nature of the charge to induce you to give him such a sentence? It was his dirtiness and filth, and playing with other boys. He said he was filthy himself; it was from his own mouth I punished him.
324. Who takes down the evidence given when you try a case? I generally write it down myself.
325. Does the person who gives the evidence sign it? No.
326. Is it read over to him? Sometimes. I do not go through a regular form in any case. This was all verbal.
327. *Mr. Alexander.*] Is it not usual in this institution to keep a diary or journal of the whole of the proceedings? There are several books kept. I keep a private journal, and there is the log-book.
328. Is not that in the hands of the Committee? If they wish to have it, it can be produced.
329. Are any of these cases you have referred to, noted down in that book? I think not—only in the punishment book.
330. How can you account then for that book (*the punishment book*) being so particularly written up? This is kept by the man in the lower deck. We did not keep proper books till the regulations of the ship were made. We have had these only lately.
331. What I object to is the way in which that book is kept? That was kept only for my private information, that I might see what boys were good and what bad, in order to award good conduct stripes.
332. I think the Government should direct that a record should be kept of all that occurs on board the ship? We have a log book kept by the chief officer, and the punishment book also kept by the chief officer.
333. What is the general conduct of these boys? I think generally their conduct is good.
334. How do you account for the punishment of this boy in the way you have stated, when there was no specific charge against him? Because he acknowledged himself that he was a dirty boy.
335. *Mr. Tighe.*] You mean that he was indecently dirty? That he was indecently dirty. I had no authority from the Government to punish him in this way, but I thought it best to do it.
336. *Mr. Burns.*] You were satisfied that this boy, although he had not been guilty of the charge laid against him at the time, had behaved improperly? I do not think he was guilty of the charge, but he was guilty of misconduct.
337. His conduct generally was bad? His conduct was bad.
338. Have you had any complaint made to you of the boys making use of bad language when people have been passing in boats, particularly ladies? Yes. Only on one occasion when females were present in a boat, and then the boys were addressed in the first instance by the people in the boat.

Capt.  
J. S. V. Mein.  
10 Feb., 1869.

- Capt. 339. Have you punished them on charges of this kind? Yes, I think so.  
 J. S. V. Mein. 340. Who has charge of the magazine? The master-at-arms.  
 10 Feb., 1869. 341. Are the boys allowed to go there by themselves? Not by me.  
 342. Has it been the practice for them to do so? Not that I know of.  
 343. Your attention has not been drawn to it? No.  
 344. Could they behave improperly there if they were so disposed? They ought not to be allowed to go there—they might blow up the ship. It is quite against my orders for any of them to go there without the master-at-arms or some other officer.  
 345. What time is allowed for learning trades on board the Vernon? That is stated in the paper I have handed in.  
 346. How many hours per day are the boys employed in learning the duties of sailors? They are at that all day—not always the same boys—they are in divisions.  
 347. At what time are those boys who are learning trades expected to be absent from their trades, to learn other duties? Twice a week they are absent, perhaps three times a week. On Saturday they clean the ship; they do not work at trades on Saturday; they are engaged in cleaning the ship all day long; on Friday they have gun drill, and on Wednesday they have sail drill.  
 348. What is the regular routine of the work, with regard to the time the boys devote to learning trades, and the time they devote to ship work? It is all in the regulations.  
 349. Are the boys who are learning trades usually later at work than those who are learning to be seamen? No, I do not think so—they are working at trades till 6 o'clock; and at that time generally the other boys hoist the boats up.  
 350. At what time do the boys who are learning to be seamen leave off work? They are dismissed drill at 4 o'clock in the afternoon.  
 351. Have they work to do after that? They are hoisting boats up and clearing the decks generally till supper time, and attend to other duties connected with the ship after their supper is over.  
 352. What is supper time? 5 o'clock.  
 353. Would they not then have the advantage by one hour of the boys who were learning trades? I do not think so.  
 354. Are not the boys who are learning trades kept at work till 6 o'clock? Yes, but they have an hour, and the boys who are learning to be seamen are employed in hoisting boats and so on after drill.  
 355. Do you not think the tendency of giving boys who are learning seamanship more time for play than the others is, to discourage the boys generally from learning trades? I do not think so, because the tradeswork is easier work than the other.  
 356. Could it not be so managed that all should commence and end at the same time, although learning different matters? It might be so arranged, but there would then be complaints that the boys did not get a sufficient number of hours work at their trades.  
 357. How many hours a week are the boys engaged in learning their trades? Shoemakers fifteen hours a week, and tailors about twenty-one.  
 358. How many hours a week are the boys engaged in learning to be sailors? From twenty to twenty-two hours.  
 359. How many hours is each boy at school per week? Six and a quarter hours, exclusive of the time spent at Sunday-school, and occasional night school.  
 360. Are the boys allowed to follow the bent of their own inclination, as to whether they will become tailors, shoemakers, or sailors? Their own inclination, when they are at a proper age to understand. If they are very young, they are put down as too young to make a choice.  
 361. *Chairman.*] What do you consider a proper age? Between ten and twelve.  
 362. *Mr. Burns.*] During what hours are all the officers required to be on board the vessel—they get leave of absence, I suppose, at times? Yes, they must not be twelve hours out of the ship.  
 363. Does that apply to the tradesmasters as well as to the other officers? It has not been applied to them hitherto, because it was thought better, as they were married men, that they should live on shore.  
 364. Are not some of the other men married? Several of them.  
 365. Are they allowed to live on shore? No; if they break their leave they are reported to the Colonial Secretary.  
 366. What amusements are provided for the boys on board? Not many.  
 367. Do you think music might be introduced there, as it has been at Randwick? I think it would be a very good thing if it were. We have a musician on board, but I do not think he would be able to teach them—we have not the instruments.  
 368. Do you think if music were introduced, you could form a band? Yes, and I think it would be a great thing if that could be done.  
 369. You are aware that they have a band at Randwick? Yes; but economy has been impressed upon me, and if this were carried out it would be necessary to have a teacher who must be paid something.  
 370. *Mr. Campbell.*] Do I understand you to state that you never had any regulations to guide you in the management of the ship till lately? I had no authorized regulations—I had regulations written out by myself.  
 371. You have been allowed to do as you have pleased since you first took charge? No, I have not been allowed to do as I have pleased, because I have been directed by letters from the Colonial Secretary.  
 372. *Mr. Farnell.*] In reference to these boys who were charged with the offence of sodomy, whose evidence did you take against them? Quartermaster Cook's.  
 373. Any other evidence? I heard the boys' own statement; there was no other.

Capt.  
J. S. V. Mein.

10 Feb., 1869.

374. The boys that were charged? Yes.
375. That was in defence? I do not think there was any other evidence.
376. Was that evidence taken down when given? It was not taken down.
377. Do you not think that when so grave a charge was preferred, the evidence should be taken down in writing? I think it might have been taken down in writing, but I did not think at that time it was of much importance, because it was not proved. I see now that it would have been better if it had been taken down.
378. You were judge in the case; and, from the evidence taken by you, you believe the offence was not proved? Yes; and the man who reported it said he did not see anything take place.
379. He first made a report charging these boys with sodomy, and then in his evidence did not prove the charge? He did not prove that it took place, only that he saw them in a suspicious position with their persons exposed.
380. These boys were punished? Yes.
381. What were they punished for—for a less offence? For a less offence—not for the actual crime.
382. What was the offence for which they were punished? I do not know what term to apply to it—dirtiness.
383. *Mr. Alexander.*] Would you consider there was an attempt? They might have been attempting, but they were so young.
384. *Mr. Farnell.*] There must have been two boys to commit such an offence? Two boys were concerned.
385. Did you punish them both? I punished them both. I have their ages here—ten and nine.
386. Why did you make these marks in red ink in the book? I made them some time after, because it was not the real thing; it ought not to have been written down as that.
387. As it was written down, did you think it right to alter it? I have not altered it. I have merely made a remark, and I thought I was justified as Superintendent in making any remarks.
388. Have you not a book with a record of these charges made by the quartermaster? That is the only record.
389. Did I not understand you to say that you had taken down the evidence? That was in another case.
390. You have that written down in another book? Yes.
391. Do not you think you should have recorded the former statement also? Perhaps I should have done so.
392. And stated whether it was a less offence or not? Perhaps I should.
393. Then, the only case you have recorded is the last case, which has taken place since the appointment of this Committee? Yes. I thought I might be asked some questions about it, and I took down the evidence myself.
394. Are any of these boys guilty of filthy habits, but of a less abominable character than sodomy? I hardly know in what way you mean.
395. I think you will find in your black-book some record of what I refer to? Some of the boys have, I know, been filthy.
396. You mean that they have been filthy in their own persons, by the practice of onanism? In that way—one or two.
397. Is the supervision on board the "Vernon" now such as to prevent the repetition of this offence? I think so.
398. Do you think the supervision sufficient to prevent onanism? I think so.
399. I see by the return you have laid before the Committee, you have not given, in particular, the number of hours the boys are engaged in school? It is in the regulations.
400. I understand that the boys are not all in school together, but are sent in divisions? There are four divisions; one goes in the forenoon and the other in the afternoon of alternate days, so that the whole of the four divisions attend in two days.
401. The whole of the boys do not receive instruction on the same day? No, unless they attend the night school. I have not had it lately, because there has been too much work to do, and some of the officers have been laid up.
402. I see here, in the "Summer Routine," "5:30, fire stations; hoist up all boats not required; after which, boys to bathe and skylark"—What does that mean? To have a swim, and play about the ship. We do not follow that out exactly, because we take them to Garden Island to bathe, from fear of sharks.
403. "Skylarking" is a man-of-war phrase? It is a sailor's phrase for playing.
404. Are these the only hours allotted to these boys for play? No, they play between 12 and 1 o'clock, and on Saturday afternoon. On Sunday they go to the Sunday-school.
405. Are any of these boys proficient in the trades they are now being taught? Not yet.
406. How long have these instructors been on board the ship? I cannot tell exactly; I think they joined the beginning of last winter.
407. *Mr. Campbell.*] Are these entries made in the book before or after the boys are punished? After the boys are punished—the same day.
408. Does it not strike you as rather unjust in that case where you could not prove sodomy, that the boy should have been punished, and that the offence should be so entered in the book? The entry is not right certainly.
409. *Mr. Farnell.*] Are there any boys there whose friends or parents pay for them? Yes.
410. How many? There are thirteen, I think on the list, but they do not all pay. I think there are eight who pay, but thirteen are supposed to pay.

Capt.  
J. S. V. Mein.  
10 Feb., 1869.

411. At what rate do they pay per week? From 2s. up to 7s. £80 at the end of last year was paid into the Treasury.
412. Whose duty is it to see that these payments are made? Mine.
413. Have you reported these cases? I summoned in one case. When I think I cannot get the money, I report the matter to the Colonial Secretary.
414. *Mr. Alexander.*] By summoning do you generally get the money? I did in that instance—that is the only instance.
415. *Chairman.*] Do you keep a list of the boys whose parents are liable for the maintenance of them? Yes, I have it entered in a book.
416. You keep a proper book showing the amounts ordered to be paid by the Magistrates, and the amounts actually paid? Yes.
417. How many persons have paid? About eight.
418. There are five defaulters? Yes. I think they want writing to, and that they will then pay.
419. Have you furnished any return of the defaulters? I send in a return monthly to the Treasury.
420. Have you sent in that return to the Treasury? Yes, every month it goes in.
421. You say the charges about which you have spoken were preferred by Quartermaster Cook? Yes.
422. Did he prefer the whole of them? No.
423. Who preferred the second charge? Do you mean the one that was made after the appointment of the Committee?
424. No, before? I cannot say who preferred it.
425. Have you any book shewing by whom that charge was preferred? I do not know that I have.
426. You say it was in consequence of an investigation that you discovered this crime had not been committed? My investigation.
427. Was that investigation made before the boys were punished? At the time.
428. Then that would have been long before the appointment of this Committee? Long before the appointment of this Committee, of course.
429. Is Quartermaster Cook still on board your vessel? Yes.
430. *Mr. Tighe.*] Are the charges entered in that book consecutively, as they are made? I would not vouch for this book at all; it is kept merely for the information of myself.
431. Is there any date over them? Yes.
432. Can you explain the reason why the boy mentioned at page 19, and the boy mentioned at page 78, which you say is one case, are on pages so widely apart the one from the other? I cannot explain, unless it is from the difference in the initials of the names.
433. In the case to which you have referred as having occurred since this Committee was appointed, where boys were falsely accused, how did you deal with the boys who made the false charge? I punished them.
434. What punishment did you give them? They were flogged with the tawse.
435. Were they aware that they would be flogged, when they acknowledged that they had given that false evidence? They were quite aware.
436. Do the boys receive any religious instruction from clergymen? They go to church, and a clergyman comes on board, but not regularly.
437. They do not receive instructions of the kind generally given in Sunday-schools? The Roman Catholic clergyman comes on board on Sundays, but not regularly.
438. Does no other clergyman come on board, or have you no Sunday School teacher? The schoolmaster teaches the Protestant boys their religious duties.
439. The Roman Catholic boys are well provided for? By their own clergymen.
440. Has this schoolmaster been long there? Not very long—I do not think he has been there twelve months.
441. Was John M'Geane, who wrote to you from South Grafton, under Mr. M'Skimming's care and tuition? Yes.
442. How long had he been under Mr. M'Skimming's tuition? From the time Mr. M'Skimming came on board till about the 23rd December.
443. Had the boy had any teaching before he went to Mr. M'Skimming? Yes, from the former schoolmaster—he had more than twelve months altogether.
444. Was he totally ignorant of his letters before he received instruction on board the "Vernon"? I do not think he was; I think he knew his letters.
445. Did he know anything more than his letters—could he read and write a little? I would not be positive.
446. How old was he when he left? About fifteen.
447. Was he a boy of ordinary intelligence or capacity? He was very dull.
448. You have seen this letter of his dated 15th January, 1869? Yes.
449. Do you think that is a fair sample of the progress made by the boys at school on board the "Vernon"? I think many of the boys make better progress than this.
450. Do you not think a boy of fifteen years old who had been under instruction for upwards of twelve months, should be able to write more accurately than this? An intelligent boy would.
451. Would you refer this evident deficiency to the want of capacity in the boy, or to the want of sufficient teaching? I do not think he had much capacity to learn.
452. Is there any examination by persons outside of the boys in the school? No.
453. Do you not think it advisable that the Government should send an Inspector occasionally to examine this school, in the same way as they are now sent to examine the Public and Denominational Schools? I think it would be advisable.
454. Would it not be likely to stir up the master to greater exertion? I think it would be advisable.

455. Even allowing for incapacity, do you not think this letter shews the boy had not been instructed so much as he might have been? Perhaps it does. Capt.  
J. S. V. Mein.  
10 Feb., 1869.
456. If you had a son fifteen years old, and for any reason that might be supposed you had been prevented from having him taught before, would you be satisfied with the progress evidenced in this letter if you had paid for his instruction for a year at school? I should not; but you must recollect that the boys have to attend to other things besides their lessons at school.
457. How many hours a day? If he went to school on Monday, he would not go again till Wednesday, and then not till Friday.
458. Do the majority of the boys make better progress than this? Yes.
459. Have you no means of testing whether the schoolmaster does his duty or not? No; the boys have never been examined by a Government official unconnected with the establishment.
460. Is there likely to be any means adopted soon—are you aware of any steps having been taken? I cannot say.
461. *Chairman.*] You said, just now, that it was quite against your orders to allow the boys to go into the magazine? Yes, unless somebody is with them.
462. Do you know whether they have been on any occasion? I do not know that they have gone there without the master-at-arms.
463. Do you know whether they have been down alone on more than one occasion? No.
464. If they have done so —? There must have been neglect on the part of the man who is in charge of the magazine, or of the chief officer.
465. Do these boys wear boots with heavy nails in the soles? No, they have pegged boots; there may be a few small nails in the heels, but they are not allowed to wear nails in their boots, because they would tear the decks.
466. Do you know whether on any occasion the boys have thrown their boots down into the magazine? I do not.
467. It has not been reported to you? No.
468. You are certain of that? I am certain—never.
469. Do you know whether your chief officer has been spoken to upon the subject? No; they threw their clothes down—not their boots.
470. Are you certain whether the officer has been spoken to about it? No.
471. It is clearly against your orders? Yes.
472. It was the duty of your chief officer, in your absence, to see that your orders were obeyed? Yes, he has my orders.
473. *Mr. Alexander.*] How long do you think it would take, under your present system of teaching, that is, devoting fifteen hours a week to the purpose, to make boys efficient in their trades? I do not know much of the trades, but I think they ought to learn a trade in three years.
474. Under ordinary circumstances, boys are apprenticed for three or five years to learn a trade, the whole of their time being devoted to it; how, then, can you expect a boy to learn a trade in the same period, being engaged only fifteen hours a week? I think it is a waste of time. I believe a trade might be learned in a much shorter period; indeed I think some of the boys can make a rough pair of boots now.

FRIDAY, 12 FEBRUARY, 1869.

Present:—

MR. BURNS,		MR. FARNELL,
MR. CAMPBELL,		MR. PARKES.

RICHARD DRIVER, JUNR., ESQ., IN THE CHAIR.

Mr. George Martin examined:—

475. *Chairman.*] What are you? Chief Officer of the "Vernon."
476. How long have you been so employed? From 3rd March, 1868. Mr. G. Martin.  
12 Feb., 1869.
477. Do you recollect when the "Vernon" was opened as a training ship? I recollect from accounts in the papers—not otherwise.
478. What are your duties on board? I am supposed to have the general supervision of the work, to take the captain's orders, and to see them carried out; also, to take the captain's place when he is absent, or laid up by sickness.
479. How many boys are there at present on board the ship? 126, I think.
480. How many of them are taught trades? I could not say, off-hand. I think there are about 18 learning one trade, and about 16 the other.
481. How many hours per diem are these boys instructed in any trade? I could not state with certainty, off-hand. I think there are about 18 learning to be shoemakers, and about 16 learning to be tailors; but the numbers vary much, as some of the boys that were training as sailors have become shoemakers and tailors, and others from those trades have become sailors. Lately, as I have learned from the tradesmen, the tailors get 21 hours, and the shoemakers 18 per week.
482. Whose duty is it to keep the time-table? I believe the tailor keeps one for his own information, but no person is authorized to do so.

Mr. G. Martin. 483. No regular time-table has been kept on board? No other than that of the ship's routine duties.

12 Feb., 1869. 484. Have the boys had a choice as to the trade they should learn? As far as I have seen, they have always had their choice. I have nothing to do with that. The captain inquires, I believe, what trade the boy wishes to learn.

485. Has any attempt been made, as far as you know, to interfere with the free choice of the boys in that respect? Not that I am aware of. The boys who learn trades get longer hours than the sailor boys. That may act as a slight objection to their learning trades.

486. Are the boys advised by any one as to their choice of a trade? No person has anything to do with it but the captain; he inquires, when they come on board, as to what they will be.

487. Have you never done so? I have never done so.

488. Have you never advised one of the boys to leave his trade and to take to the sea? Never, nor to change his trade.

489. When charges are preferred against any of the boys, to whom are they reported in the first instance? At present they come to me; that has been the practice since about the 1st of December of last year; before that they were made to the master-at-arms.

490. Do you know the black or punishment book? I keep it at present myself; until the 1st of January it was kept by the master-at-arms.

491. What led to the change? I believe Captain Mein's own words were, that the master-at-arms had not been sufficiently impartial in sending in the names of boys; he thought he had favoured some and disfavoured others.

492. Did the captain tell the master-at-arms so? I do not know; he merely mentioned this in speaking to me.

493. Have any charges of sodomy been preferred against any boys on board? Yes, two or three charges have been made—one before I went there; I could not say that it was sodomy—it was indecent conduct of some kind. Since I have been there, there has been one brought forward by Quartermaster Cook; it was inquired into, and three boys were punished for it.

494. Was the charge in that case proved? Quartermaster Cook said he would not say that it actually took place, but from the position of the boys when he discovered them he had a suspicion that it did.

495. Where was the offence said to have been committed? In the ship's head.

496. In the fore part of the ship, just under the bowsprit? Just under the bowsprit.

497. Is it not the fact that one of the boys was found lying on his side? I cannot explain his position. Cook said the boy's trowsers were down, and the other boy was in such a position as to lead him to suspect the offence.

498. The boy was punished? The boy was punished, and another, not implicated in that, but in some other transaction.

499. The quartermaster was examined as a witness on that occasion? He was, by the captain, and the master-at-arms was present.

500. In whose presence are these charges usually investigated? In the case of a crime of that nature, by the captain, but formerly the master-at-arms would investigate it, and then report it through me to the captain, for further investigation, and the captain punished.

501. In whose presence are these charges now investigated? Any charge in the nature of a grave crime is investigated by the captain, in my presence, and very likely of the master-at-arms; there is no settled rule, but I have usually attended.

502. Have any charges been preferred where the parties making the charge have not been called to give evidence? Not that I am aware.

503. Have any been made to you? There was a charge; I cannot say it was sodomy. Let me explain—it is the third case; it did not come before me in that form, but some boys preferred a charge against others of skylarking between decks; I passed it over to the master-at-arms to inquire why the boys were allowed to skylark, in order that he should ascertain whether the warders were doing their duty.

504. Did you know a person named M'Evoy lately employed on board the ship? Yes; as one of the warders.

505. Do you recollect his making any charge to you last Christmas-day? No.

506. Do you not recollect his making any report to you on that day? I think he did, about one boy charging another with having done something to a third boy, behind the tanks in the hold. When the boys came up, I asked whether one of them had used the expressions he was charged with; he denied having used them. I then asked the others, but could get no certain information of the words having been used\*.

507. Was M'Evoy examined? He was standing by at the time.

508. Do you recollect any one being punished? No; except for telling lies.

509. Are you sure any boy was punished? I think a boy named —— was punished.

510. What was the punishment? I think four or five cuts with a cane on the hand. This boy denied having used the words.

511. Was he not confined to the cells for four hours? No, he was not, as far as I can remember.

512. Could you ascertain by reference to the punishment book? I could if it was entered. (*The witness referred to the book.*) ——'s name is not entered here. The master-at-arms, I believe, was in the habit of entering the punishment when it amounted to six cuts—nothing under that—so that the boy could not have been punished so severely.

513.

\* NOTE (on revision):—Except from the boy ——, who positively asserted that —— had used the words in reference to him, ——

513. Do you know a boy named ——— ? He is the captain's servant at present, and has Mr. G. Martin been on board ever since the vessel was established, I believe.
514. What are his duties ? Cabin-boy and servant to the captain—he is apprenticed to 12 Feb., 1869. him, I believe.
515. By whom was he apprenticed ? By the Colonial Secretary, I believe.
516. Is he instructed in any trade on board ? Nothing, except as cabin-boy and body servant—as steward he may be.
517. In what condition are these boys as to cleanliness ? I think they are very clean.
518. How long have they been so ? When I first joined the vessel they were very dirty—scarcely a boy could keep himself clean ; but they have been improving every day.
519. Since you have been on board ? They might have been improving before ; I only speak of my own experience. They often come on board in a filthy and ragged condition—filthy and lousy.
520. Do they remain so for any time ? No. We now cut their hair off as soon as they come on board ; formerly we were not allowed to do so, and their hair was then only combed.
521. You have a barber on board, have you not ? Yes.
522. Has it not been mentioned that the boys were very lousy ? I have mentioned it to the captain, and he has recommended that their heads should be combed.
523. Were these reports frequently made ? Not very frequently—perhaps once a month it has been stated that the boys have been very dirty. I made a special report on one occasion, and he said they must be combed and kept clean. They have been combed every day since.
524. Have you ever seen the captain drunk on board ? Never.
525. Have you heard it stated on board that he had been drunk ? I have heard that the accusation was made before I went on board, but I could not speak from my own observation.\*
526. Have you two boatswains on board ? Two boatswain's mates.
527. What are their names ? Springle is one, and Robinson the other.
528. How long have they been on board ? They were both there when I was appointed, and have been there ever since ; but Robinson was quartermaster some time until the boatswain left the vessel ; Robinson was then made boatswain's mate.
529. Does the captain swear at the boys at all ? I never heard him swear, but I have heard him use such an expression as "You may go to the devil," once, I think.
530. Is the food you get on board good ? It is now better than it has been ; it has been very indifferent.
531. When did the change take place ? There has been better food since Mr. Sutherland came on board—the meat has been better.
532. Did Mr. Sutherland come on board after he accepted office—since he has been Minister for Works ? Since he has accepted office.
533. Have the boys, since you have been on board, complained of scarcity of clothing ? There has been no cause of complaint. I beg pardon—I misunderstood the question. They were very ragged when I went on board, but now there is no cause of complaint.
534. When did the change take place ? They could never be kept supplied until we had the tailor and shoemaker on board, and even then we could not overtake the demand.†
535. Do you know whether the captain has interfered with the religion of the boys ? I believe there have been boys who have been entered as of one religion, who have afterwards been found to be of another.‡
536. That is not an answer to my question ? I cannot say that he has interfered with them.
537. Have you had any conversation with the captain about this inquiry ? Yes, we have spoken together about the matter.
538. Was anything said by either of you about sticking to each other ? Not on my part.
539. Was anything said by either of you about sticking to each other ? The captain may have made the observation that the interest of the ship would be better served if we both stuck together.
540. Was that before or after the captain was examined ? I think he was talking about observations made by some third party ; I think it was after—I will not be positive about the time ; we have often talked about it, both before and since.
541. Can you suggest any improvement in the management of the vessel ? I understood, when I first joined the vessel, that it was only an experiment ; and that the experience which would be gained in its working might enable the Government to establish proper rules for the management of the vessel. Perhaps if certain rules were now framed, the boys might have more hours for school than they have at present.
542. Have you ever reported the provisions as being bad ? Very often.
543. To whom ? I did not understand that it was my duty to report the state of the provisions, but the purser's ; he had the control and issue of the provisions. I have spoken to him about them, and also to the captain.
544. Is there a magazine on board the vessel ? There is.

545.

\* NOTE (on revision) :—Question : Have you heard it stated that he has been accused of being drunk on board ? Answer : I have heard that the accusation was made before I went on board, but I could not speak from my own observation that he was so accused.

† NOTE (on revision) :—The demand was for summer clothing in advance ; and the winter clothing will not be ready when winter sets in, at the present rate of progress.

‡ NOTE (on revision) :—I understood the question here put to be—Did the captain endeavour to proselytize any of the boys ? The captain did interfere in one case with a boy's religion, although I pointed out at the time that he was acting erroneously ; but I believe he so acted more from obstinacy of disposition than from any desire to proselytize.

- Mr. G. Martin. 545. Is it properly fitted up? \* It is a safe place, as far as I can judge.
546. Has it been pointed out by any person that the magazine is not properly fitted?
- 12 Feb., 1869. Never to my knowledge.
547. Who has charge of it? The master-at-arms has the immediate charge, and I have control over him. It is supposed not to be open without my orders.
548. What is kept in the magazine? Powder, shot, and shell. There has been also some iron-work belonging to the guns kept there, and some other things, but yesterday it was all taken out.
549. Are the boys allowed in the magazine, or near the magazine, without being in charge of any person? No boy was allowed there unless he was sent by the master-at-arms; he might have gone down to get up the single-sticks, or something for the guns.
550. In making entries in the book, from whom did the master-at-arms receive instructions? This book was kept before I joined the vessel. The master-at-arms then made his report of misconduct on a slip of paper, and sent it in to the captain, who wrote the punishment under it in red ink.
551. And handed it to whom? It was handed to me after I came on board, to see that the punishment was carried out.
552. What became of the slip? It was never kept to my knowledge; the entry was made from the slip, by the master-at-arms, if the boy was sentenced to receive six cuts, but anything under that punishment was not entered.
553. The master-at-arms made the entry in the book from the slips he received from the captain? He received the slips from the captain, through my hands, and no doubt he made the entries.
554. Mr. Burns.] I understood you to say that, when the boys went on board, the captain asked them what trades they would like to follow? Yes.
555. That is the practice? That is the practice.
556. Are they asked to choose a trade immediately after they enter the vessel? Sometimes they are not for two or three weeks or a month. The captain's own words on the subject are—"It is better to let them settle their minds—they are not able to judge in so short a time."
557. Do you know whether any persuasions are used by the officers to induce them to choose a trade? Not by me.
558. It is quite a matter of free choice with them? As far as I know.
559. Do not you think that the circumstances of the boys who are learning trades being kept at their work longer hours than those who are learning to be sailors, would tend to discourage boys from becoming tradesmen? I think it might have that effect.
560. Is it not the fact that you discontinue the general work of the ship with the sailor boys at 4 o'clock? Yes.
561. And the boys who are learning trades are often kept at work till 6? Yes. The other boys are employed in hoisting up boats and clearing up the decks after 4 o'clock.
562. That is almost play? It can be done in half an hour.
563. Then they have an hour and a half longer than the other boys for play? Yes, but they are frequently called away for other work.
564. Do you not think that some arrangement could be made on board the vessel, by which the boys who are learning to be sailors and those who are learning to be tradesmen could leave off work at the same time? They might all leave off at 4 o'clock, but I believe the present arrangement was made to meet the complaint of the tradesmen that they had not sufficient time to teach the boys.
565. Have you ever observed the boys at work when they have been learning their trades? Frequently; I walk round to see that they are at their work.
566. Do they show capacity for learning the trades taught on board? As far as I can learn they do. Both the tradesmen tell me the boys are very apt.
567. They have manufactured a good deal of clothing since they have been on board? Yes, all the boots worn by the boys are made on board, and they have also made boots for the Industrial School at Newcastle.
568. I see, by a Return handed in to the Committee, that there are 66 boys learning to be sailors, 11 learning to be carpenters, 18 to be shoemakers, 13 to be tailors, and 11 too young to make a choice. It would appear from this return that the majority of the boys are learning to be sailors? The majority are.
569. There is no one but the captain who asks the boys what trades they would like to learn? No one by authority, but others might ask them.
570. Have you been present when the question has been put to them? Sometimes I have.
571. Can any person make a complaint direct to the captain, if he observes anything wrong on board? It generally comes through me.
572. Have you ever heard any complaint of boys using indecent language when persons have been passing in boats, particularly ladies? I think some boys have been punished for it; I cannot say exactly; I think there was a case one Sunday when I was out of the vessel. I cannot say whether it was for anything indecent, but it is against orders to call out to any one from the vessel.
573. Is the boys' clothing good? Very good.
574. Was it good some time ago? It was not.
575. Is there great care observed on board in regard to the boys' personal cleanliness? They wash every morning, have a fresh-water bath every Saturday, and they are frequently taken to Garden Island in order that they may bathe.

776.

\* NOTE (on revision) :—I understood the question to be—Is it a safe place?

576. Has it ever been the practice to scrub the ship on Sunday? Not that I am aware; I think once there was about 14 feet square of soot fell on the deck, and it was cleaned. Mr. G. Martin.  
12 Feb., 1869.
577. Who has charge of the magazine? The master-at-arms.
578. Can the boys get access to the magazine without his consent? No one is supposed to go there without his orders.
579. No one is supposed; but as a matter of fact, do the boys go there without his orders? I dare say they could get off the hatch, and go down; but there is a warder constantly on watch between decks, to prevent improprieties, and if he observes any of the boys disobeying orders, it is his duty to stop them at once.
580. Have the trademasters ever made any complaint as to not receiving co-operation from the officers of the ship in carrying out their duties? They have never made any to me.
581. During what hours have the trademasters, according to the regulations, to be on board? From 9 to 6.
582. Then they may absent themselves from the ship, if they think fit, after 6 o'clock? They do immediately, and after 12 o'clock on Saturday.
583. As a rule, the ship work ceases at 4? Yes.
584. You think arrangements might be made by which the boys learning trades might discontinue work at the same time as the sailor boys? Very easily.
585. What amusements have the boys on board the ship? Very little. Some of them go into school in the evening, and either the purser or myself attends to them; they make any inquiries they like, and they have any books they may wish to read, or play at dominoes.
586. Do you not think music might be introduced? With great advantage.
587. I suppose you know that they have a band at the Randwick Asylum? I have heard so.
588. Have you any person on board who could teach? The barber is called a musician, but I do not think he is capable of teaching.
589. Do you think it advisable that music should be introduced? I do—it would engage the boys' attention and keep them out of mischief.
590. Do you keep many monkeys on board? None at all; the last monkey died about a month ago.
591. Do you think the monkey's death was a desirable consummation? I never paid any particular attention to it.
592. Do you think his habits were likely to improve the boys? Like other monkeys, he was addicted to obscene practices.
593. Have you heard any remarks made on board the ship about the monkeys? None at all.
594. Were there not complaints frequently made about the food, before Mr. Sutherland went on board? It was very often talked about.
595. Whose fault was it that the ship was not better supplied? The complaints were passed on to the captain.
596. Whose duty was it to examine the food\*? Mine, to see that the boys had good food.
597. Have complaints been made to the contractor that the food was not good? Not through my hands. I understood that they had been made, but without effect.
598. Now, you say, the food is sufficient and of good quality? Yes, excepting that the beef is sometimes bad, but that may be expected occasionally.
599. But as a general rule the food is good? Yes. The boys do not like hominy in the morning—they say they will not eat it; and they have not sufficient bread without the hominy.
600. They prefer bread to hominy? Yes.
601. *Mr. Farnell.* Whose duty is it to receive the provisions from the contractor? Mr. Waller, the purser, goes to the wharf every morning, and brings the provisions on board; and he reports if the supply is short, or of bad quality.
602. He has power to object to receive it from the contractor, if it is not good? There is a dispute on that subject; the contractor says he will not take it back unless the opinion of a third person not connected with the vessel is taken.
603. Has this contract all the usual provisions of ordinary contracts? I have had no experience of such matters, and therefore cannot say.
604. When once it is brought on board, you have no power of refusing it? I believe we can. I know, in the case of milk, that the contractor refused to receive it back after it had been taken on board the vessel.
605. Are these complaints reported to the captain? Almost invariably.
606. Has he taken any action in the matter, or reported it to the Colonial Secretary? I do not interfere with the captain's business. I do not know.
607. You have stated that you were present at certain investigations with reference to the punishment of some of the boys? Yes.
608. That was when the captain investigated these cases? Yes.
609. Were you always present? I cannot say that I was always present, but I have been on several occasions.
610. In what capacity are you present, to assist him in giving judgment? I think he requires my presence that I may see he deals fairly.
611. Have you any voice in the decision? None whatever.
612. Have you been present when the evidence has been taken down? Yes.

613.

\* NOTE (on revision) :—When cooked.

Mr. G. Martin. 613. Has this evidence been taken down in writing? It was in one case—a charge of sodomy, which the captain took down in writing.

12 Feb., 1869. 614. Is that evidence recorded? The captain has it on board; the charge was groundless, and the boys were punished for making a false charge.

615. After hearing the evidence, does the captain consult you as to his decision, or ask your opinion? He never consults me; in fact, when I suggest, he seems as though he would rather I would not interfere.

616. He is sole judge in the matter? He is.

617. So far as your presence is concerned, it is of no use whatever? No more than to see fair play.

618. You are not allowed to interfere? I am not allowed to interfere, but I see what is going on; I may ask questions, but I have no voice in the decisions.

619. You are allowed to ask questions? I may ask questions.

620. You have no report of any of these cases that have been previously tried? Not that I am aware of; only this last one.

621. Are the charges that are made against these boys made verbally, or in writing? Verbally. The offence and punishment are afterwards entered in this book.

622. Do you not think it would be as well if all the charges made against these boys were made in writing? Before it goes to the captain it is in writing; it comes to me verbally, and I write it.\*

623. Do you examine into the merits of the case before you pass it on to the captain? There are many trivial charges which I examine myself. If it is an important charge, such as this of sodomy, I take it to the captain for examination.

624. You convey that in writing to the captain? No; the captain examines into the case himself. This last case he took down in writing. He sometimes writes both the offence and punishment under it; but, as a rule, I write the offence, and he puts down the punishment under it in red ink.

625. I understood you to say that you received charges from some officer on board, whose duty it was to make them? Any person can make them to me.

626. I understood you to say that you then put these charges in writing, and delivered them to the captain? If they are of a grave nature, I pass them on to him, for further investigation.

627. In writing? Not in writing; after investigation I put down the nature of the offence, and he writes the punishment under.†

628. Then there is no regular record of the proceedings kept? No more than this book furnishes. I keep another book on board the vessel, of a similar nature to this.

629. You said something with reference to the boys being filthy, and having vermin in their heads. Do you know whether the ship itself is clean? As far as I can judge, it is very clean.

630. Supposing all the boys were taken out of the ship, and a number of clean boys were put on board—do you think the latter would be likely to get vermin in their heads? No.

631. Have the officers felt any inconvenience from vermin being in the ship? I have not.

632. I suppose you are aware that, when emigrant ships become dirty, and vermin get into them, clean people who go on board may be attacked by vermin? In emigrant ships there are fittings which harbour vermin, and they cannot be cleaned properly; but there are no fittings on board the "Vernon." The boys sleep in hammocks, which are taken down and scrubbed.

633. You think the ship is free from vermin? Except it may be bugs. I have heard complaints of their being in the fore-castle, but not from the boys.

634. Mr. Campbell.] Do you still keep single-sticks and odds and ends in the magazine? No, we took them away yesterday.

635. Do you know how much powder is kept in the magazine? I think twelve cases of ammunition, live shell and powder.

636. Do you know how many cases would be enough to blow up the ship? One case would be sufficient.

637. Hitherto you have allowed these odds and ends to be kept in the magazine? I have had nothing to do with it.

638. Is it not the first officer's duty to look after everything? It is now.

639. Was it not before? No. Words have passed between myself and captain, at various times, respecting these things, and he has now thrown the responsibility of the whole of the subordinate officers upon my hands.

640. It is generally understood that everything is to pass from the captain through you? Yes.

641. It is now carried out in that way? Yes, and has been for about a month past.

642. Are precautions taken about lights going into this magazine? There are never any lights taken there.

643. Mr. Burns.] Can a boy reach the magazine from the hold? He might go and break it through, if he had an axe.

644. Mr. Campbell.] How could any one see without a light, if it is low down in the ship, as magazines are usually placed below the water-line? They are usually kept under the

\* NOTE (on revision):—These charges are brought to me verbally or written, by any person who may choose to make them; and after satisfying myself of their correctness, I pass them on to the captain, always in writing, with the exception of charges of a grave nature (such as this of sodomy), which are investigated and reduced to writing by the captain himself.

† NOTE (on revision):—This is an error. These grave charges are written by the captain himself, and he also writes the punishment.

the water-line—this one is not. There is a scuttle over it, on the main deck; and over Mr. G. Martin. that, on the poop, there is a skylight.

645. You are sure it is perfectly safe? Yes, except it were struck by lightning. All 12 Feb., 1869. the powder is in cases. There is a platform, about 4 feet off the deck, and the powder is kept on that.

646. The opening is from the top, and not from the side? From the top.

647. *Chairman.*] The boys wash their own clothing, do they not? Yes.

648. Has it been reported to you, on any occasion, that the boys have been compelled to turn in with wet clothing on? I think it was the case once.

649. Only once? Only once. The boys were hoisting up the boats, I think, and got wet. I forget what it was exactly.

650. Can you speak with any degree of certainty upon that subject? I cannot.

Mr. John Locke M'Skimming examined:—

651. *Chairman.*] What are you? Schoolmaster on board the "Vernon."

652. How long have you been so employed? From 1st July, 1868.

653. Have you, on any occasion, heard it stated by Capt. Mein that cases of sodomy have occurred on board the "Vernon"? Yes. Mr. J. L.  
M'Skimming.  
12 Feb., 1869.

654. Did he mention how many? He did not particularize them; he said there had been previous cases. It was on a Sabbath day, after a certain case had occurred.

655. About how long since? I think about the beginning of September—on the 3rd of September. I could not be mistaken that it was early in September.

656. Have you yourself seen anything that would lead you to suppose that such practices prevail? I have seen things done in the school that led me to suppose something nasty was going on sometimes, with very little boys.

657. Have you reported this matter? I did mention it to the captain once. Two little boys were working with their privates under the table. I suspected them, and watched them by looking from my seat, which is placed between two ranges of tables, so as to prevent a distinct view, but from the way they were working their bodies, I suspected something nasty, and I took the boys out, and whipped them on the bottom with my open hand.

658. And afterwards mentioned the matter to the captain? And afterwards mentioned the matter to the captain.

659. What was done by the captain? Nothing in reference to the case of these boys.

660. How many boys attend at school? We have them in divisions. There are four divisions—thirty in each of two divisions, and thirty-one in each of the two others; but I have had as many as forty-seven and fifty-four on other occasions. On Wednesday morning, when there is general drill, I have only four, six, or seven.

661. These boys are not general in their attendance on the school? On Wednesday, the day of the general drill, only the little boys, who are of no use, are sent to school—they are sent to be out of the way; the others are on deck, on the spars, or in the rigging. I have the numbers entered in the book. That was not kept before I joined the ship—only the average attendance, but now I keep the daily attendance.

662. Have you that book with you? I was not called upon to bring papers. I can show it from the 1st July.

663. Some of these boys are almost constantly under your notice? They are all, at one time or other. There are, as I have said, four divisions: the first division of starboard on Monday morning; the first division of port on Monday afternoon; the second division of starboard on Tuesday forenoon; the second division of port on Tuesday afternoon. On Wednesday forenoon there is general sail drill, and of course all the big boys are out, and there are only four, six, seven, or nine little fellows there. On Wednesday afternoon there would be, according to the routine, the first division of starboard again; on Thursday morning the first division of port; Thursday afternoon, the second division of starboard; Friday forenoon, the second division of port; and on Friday afternoon, to equalize the divisions, they come in rotation, so that one division comes in the third time in each week once a month. So that the boys virtually have school twice a week, except the division that comes in once in four weeks three times.

664. How many hours per week do the boys receive instruction in the school? The divisions that come in the forenoon are there two hours and twenty minutes, and the boys who come in the afternoon are in three hours less ten minutes. They are allowed ten minutes for a little exercise, or to go to the head; so that those in the afternoon get thirty minutes more than those in the forenoon.

665. Have you seen vermin on the boys in the school? Plenty of them.

666. On more than one occasion? Yes.

667. Does that occur frequently? I have seen it not so much of late, within the last fortnight or three weeks, but I have seen them more or less on some of the boys, and I have got them on myself.

668. Up to the last fortnight or three weeks? Yes.

669. You have no doubt of that? No; the children at home have got very large ones from me that I have taken from the ship.

670. Do you know whether other persons on board the ship have seen them? I know other persons have found them on their clothes after they have gone home from their work on the ship. It has been stated to me by some of the tradesmen.

671. Have you seen the boys at school without flannels? Yes.

- Mr. J. L. M'Skimming. 672. Frequently? Occasionally. There is one now in the school with no flannel. He has not had one on for the last four or five times. I have found fault with him for it—have asked him whether he had any flannel, and told him not to come again without it.
- 12 Feb., 1869. 673. Did he make any reply? He is a peculiar boy—I think he is a little silly.
674. Do the boys occasionally sleep in school? Very often.
675. How do you account for that? I think they get too little sleep at night—they are up too early in the morning. I have reported as many as fifteen out of thirty-five in one division to the captain as sleeping in the school.
676. At what time do they rise in the morning? Of my own knowledge I cannot speak—I do not live on board. I have not slept on board excepting one stormy night in winter, when I could not get off.
677. Have you heard the captain swearing at the boys? Well, I could not exactly say I have heard him swear at them; I have heard him speak roughly to them, as Joseph did to his brethren.
678. Is the food you get on board good? It has improved within the last fortnight; before, it was very bad often.
679. Have you ever complained of it? Several times.
680. To whom? I complained of it to Mr. Walker, on one occasion, in the presence of the captain. Mr. Martin was also present. We were at the table as Mr. Walker came through the room with the captain; and I remember Mr. Martin said it was a piece of some "old scrubber" they had sent us—complaining of the meat. Those were the words Mr. Martin used to Mr. Walker.
681. *Mr. Burns.*] Who did he mean had sent you the scrubber? The contractor.
682. *Chairman.*] How are the boys punished on board? By cuts with a cane on the hand, and by flogging over the gun for more serious crimes, by being deprived of their dinners, by being set up in a row—what they call being black-listed—which is rather fun to them than anything else.
683. Have they been punished with undue severity, in your opinion, at any time? In several instances, had I been the head of the establishment, I should not have awarded such severe punishments. I might have given harder punishments, severer in degree, but not of the same kind; but that is a matter in which there may be difference of opinion.
684. The captain had a monkey on board? Yes.
685. Was he in the habit of performing nasty, disgusting tricks before these boys? He was; I have seen it myself.
686. In the captain's presence? Not that I am aware of.
687. The monkey is dead now? Yes.
688. Do you know whether the captain has at all interfered with the religion of the boys? I think he has; I have had words with him, on two or three occasions, with reference to the matter.
689. When? I could not exactly give you the date just now, but I could come near it. It was with reference to the boy ———, first of all; that was on the second Sabbath after the "Challenger" came in the last time, because the chaplain, the Rev. Mr. M'Douall, was on board at the time—either the second or the third Sabbath. I had Sabbath-school in the forenoon, and he came in the afternoon.
690. What took place between you and the captain on that occasion? After prayers were begun, and I was sitting with my prayer-book and Bible before me, the door was thrust open, and this boy was pushed in. Believing and knowing this boy to be a Roman Catholic, I set him up in a corner, and kept him there till prayers were done.
691. How did the captain interfere? After the boys were all out, and the chaplain was gone to put off his surplice, and I was still speaking to the boy ———, as I had asked him before, when he entered the school, to satisfy myself as to his religion, the captain stepped into the school-room; and I said—"Here is a boy who says he is a Roman Catholic, and I believe he is, who has been pushed in here after I had sent him up." "Make him a Protestant," he said. I said—"He says he is a Catholic," when he repeated the same thing in a very imperious way.
692. What became of this boy ———? He is still on board.
693. What religion is he now? Roman Catholic.
694. Is that the only case? There have been several others.
695. Can you name any others? There was the boy ——— who was sent to me as a Protestant boy, and was so considered for about three months. He has been made a Roman Catholic.
696. By whom? By the captain's orders.
697. Have you had any conversation with the captain about these boys? I have.
698. Have you protested against his interference? I could not protest exactly; but I showed him that it was likely to bring the institution into trouble, as nothing was more likely to provoke hostility. I took the boy ——— to him one Sunday. I had spoken to the captain sometimes, when I had been off duty, about such cases, as I was unwilling to be a party to the teaching of boys who, in my conscience, I believed to be Roman Catholics. I took this boy out of the Sunday-school to the captain, in the presence of Mr. Martin, and said—"This boy is sent to me again, and he still says he is a Catholic"—
699. Were only Protestant boys sent to you for instruction? They were all sent to me for secular instruction in the week, but on Sabbath, Protestants only were sent to the Sunday-school, where I read prayers, and gave general, though not sectarian, instruction.
700. You say you spoke to the captain on several occasions about these boys? Yes, we had pretty strong words, because he speaks very gruffly to me.

701. *Mr. Burns.*] Have you been present at any time when the boys, after their arrival on board, have been asked the trades they would like to learn? No. Mr. J. L. M'Skimming.
702. You are not aware how it is boys are led to select their trades? No.
703. Are you aware of any interference with their choice in the matter? Not of my own knowledge. 12 Feb., 1869.
704. Do you think the arrangement in regard to the time the boys are at school, also in regard to the time they are at their trades, might not be improved? I think it might be, very much.
705. Do you think the boys generally might learn their respective business or trade, and —? I think the routine of the ship might be altered, and made something like that of institutions of a similar nature elsewhere, so that every boy might be at school every day.
706. Is there not now quite an uncertainty as to the attendance of the boys? Quite an uncertainty. The boys are piped out of school—the captain's pet boys, and sometimes they lose their instructions for a fortnight.
707. Is it not the fact that, under the present system, the boys are often away from school on days when, according to your arrangement, they should be present? All boys belonging to the port or starboard division should be present at one time, and I go to the captain or chief officer if I miss a boy.
708. Are you aware of any tendency on the part of the officers of the ship—I mean either of the superior officers, the captain, or the chief officer—to discourage the boys from learning trades? I know nothing in regard to the chief officer, but I do know something with regard to the captain; and from the views he entertains with reference to the purpose of the vessel, I think it likely he would discourage trades; in fact, he said to myself there should be no trades at all on board.
709. He would prefer that the boys should all be sailors? Yes.
710. Are you aware that the boys who learn trades are kept at work some hour or two longer than those who are learning to be sailors? Of my own knowledge I do not. I leave the vessel as soon as I close the school.
711. Are the boys who learn trades at work when you leave the vessel? Yes, they have been at work when I have been detained on board till 5 o'clock; and recently, when I was on board till 6, they were at work until then.
712. The boys learning to be sailors? Knock off work at 4 o'clock, or half-past 4.
713. Boys learning trades are at work after that time? I could not speak from my personal knowledge.
714. Do you not think the tendency of that arrangement is to discourage boys from learning trades? Yes, I should think it would, the class of boys who are on board; they are anxious to get quit of any kind of labour as soon as possible.
715. Is it not likely to create a feeling of disgust to the learning of trades? No doubt it has that tendency.
716. When you spoke of the food being bad on board, to whom did you complain in the first instance? I spoke to Mr. Martin of the bad cooking.
717. Had your complaint reference to the cooking only? And to the food also; we could not touch it sometimes.
718. The contractor did not supply proper food? It was not good when it came to our table; I could not look at it often.
719. Do you not know that there is a provision in the contract that, if any well-founded complaint be made, a Board should be called to determine the matter? That is not my department, but I believe there is.
720. You have complained of the food? I have complained to the captain several times, and I mentioned to Mr. Sutherland that the food was bad, especially the food I got myself when Mr. Martin was not on board—on the Sabbath.
721. You say that during the last fortnight there has been an improvement? There has been an improvement generally in everything since the appointment of this Committee.
722. You have stated that you have seen vermin on the boys? Yes; in two cases I picked them off, and put them on the boys' hands to throw them overboard.
723. Was that recently? About two months ago.
724. Have vermin appeared on the boys till recently? Yes, but they have all been overhauled, and have been carefully looked after within the last fortnight. I have seen their heads swarming with large bugs behind their ears, and have called the attention of the master-at-arms to them frequently.
725. Are you satisfied with the progress made by the boys generally? Considering the time they are at school, I think they have done very well—a great many of them, but a good deal more could be made of them if they had more time in school.
726. Can you make any suggestion to the Committee as to the re-arrangement of the time? I think the time of attendance in the forenoon and afternoon should be equalized. I think there would be no difficulty now, since there are so many boys on board to carry out the sailors' duty, to give each boy two hours and a half or three hours' school in the forenoon or afternoon, and I think I could then make something of them that would give satisfaction.
727. You are aware of the object for which the "Vernon" was first established? As an industrial and training school.
728. Can you, at your leisure, prepare a paper to submit to the Committee, making suggestions for its improved management, as to the arrangement of time, and other matters? I am very much engaged, but will endeavour to do so.
729. When you spoke of the captain interfering with the religion of the boys, what did you mean by interference? That he did not take proper means to ascertain whether the boy ——— was a Catholic or not, but said to me, in a very dogmatical way,—“Make him a Catholic, make him a Catholic.” 730.

Mr. J. L. M'Skimming. 730. I see you have about 124 or 125 altogether? I think there are eighty Protestant boys in the Sabbath-school. Last Sabbath I had seventy-five or seventy-six present. One was sick, and there were two little fellows who the doctor said were not to come to school.

12 Feb., 1869.

731. Does not a Roman Catholic clergyman visit the vessel? Yes.

732. Does he hold a service there? In the afternoon he has a sort of Sabbath-school.

733. I suppose he has the same facilities for performing service there as others have? Yes. In fact, by the arrangements of late, my school has been seriously interfered with. I have been turned out of it, and have been able to give the boys little more than half an hour's teaching. Last Sabbath they had only 37 minutes.

734. You hold service in the Sabbath-school? In the forenoon the boys go to their respective churches.

735. They go ashore? Yes, to Dr. Steel's; and the Roman Catholic boys to St. Mary's Seminary.

736. The service you refer to as being held on board is in the afternoon? Yes.

737. When you also hold a Sabbath-school? Yes. The Roman Catholic clergyman comes on board about 3 o'clock.

738. There is no interference with the boys, as regards their religion, to send the children to the services of a religious denomination, to which denomination they do not belong? The captain and I have had some words about that.

739. Do you think there is a disposition on the part of the captain to make proselytes? I would not say that; but boys who have been Roman Catholics have been made Protestants for three months, and then he has made Catholics of them. On Sabbath, 6th December —

740. *Mr. Parkes.*] What is the process of making a person a Protestant or a Catholic? I do not know.

741. *Mr. Burns.*] What you mean is, that boys who have been entered as Roman Catholics he has compelled to attend Protestant worship? I do not think there has been till recently any entry of the religion of the boys in the books.

742. What you mean is, that boys who have since been found out to be Catholics have attended the Protestant service? Roman Catholic boys have come to attend the prayers of the Church of England. It was so in the case of this boy —

743. Was he sent in by the captain's orders? Yes. I told him I thought this boy was a Roman Catholic, as I had asked him if he had gone to St. Mary's, and he said he had gone often. I also asked him if he had got holy water, which is a sure test, and he said yes.

744. How old is that boy? About thirteen. He is a big, stout fellow, and was sent in for stealing from St. Francis' Church.

745. I presume nothing is done to interfere with the boys in determining to what religion they belong? There is a boy named —, and as I had some doubts about his religion, I asked his mother, when she came on board, to what religion he belonged. She said she was a Catholic, but the boy's father was a Protestant, and his step-father also was a Protestant. I said—"Where was the boy christened?" She said by Mr. Styles, of Windsor, at the English Church. I knew by the name that he was a clergyman of the Church of England. I had some doubt what to make the boy, but thought, as his father was a Protestant, he also should be one. On Sabbath, the 6th December, the captain and I had some words about it. When I went on board, the captain received me in the school-room, and said—"I have made — a Catholic." "Indeed!" I said, "You may make him what you please for me—you may make him a Mohammedan, if you like."

746. Your statement is to this effect,—that the captain made a Roman Catholic a Protestant, and afterwards made a Protestant a Catholic? He made the same boy go back from being a Protestant to being a Roman Catholic. I may state that I know another officer on board has remonstrated with him.

747. Quite recently? About the same boy —

748. Who was that other officer? Mr. Martin.

749. The effect of your evidence is, that, so far as you are concerned, the boy should exercise a free will? They should have fair play—they should be brought up in the religion of their parents; and, in a doubtful case, it is not the captain, but the Colonial Secretary, who should decide; but he is above the Colonial Secretary, if you believe him.

750. You have been on board the vessel how long? Since the 1st of July, 1868.

751. From your observation, do you not think it desirable that two or three of the officers should meet, and hear, when the boys were admitted on board, what denomination they belonged to? I think it is desirable.

752. Instead of allowing one person in an arbitrary way to decide it? I think it very desirable that some person from the Colonial Secretary's Office should visit the ship (say) once a month.

753. Do you feel that you are able to teach all these boys? By the present arrangement I have only thirty-one boys in the school at one time; but I have had eight classes in eight different stages of instruction.

754. Do you get assistance from pupil teachers? I may take a pupil teacher if I please. I did select one; but I soon dismissed him, as I found he was not qualified.

755. Do you not think you might select some boys as pupil teachers? There is not one I could really trust, as the moment my back is turned they begin to strike the smaller boys. There is one little boy who is a pretty good scholar, but he is too young.

756. You do not find the boys wanting in intelligence? No, they are very smart; there are a few dull boys.

757. Do you think some additional amusement might be provided for them? I think they should have more play, and less work.

758.

758. *Mr. Farnell.*] Do you think the hours of labour are too many for these boys? I think so. Mr. J. L. M'Skimming.
759. You said something about a pupil teacher having been turned out of the school—What was your objection to him? The first was, that he had stolen a loaf after divisions one morning; second, there was a charge of sodomy circulated or brought against him. 12 Feb., 1869.
760. That was your objection? That was one; there was yet another. I found he pronounced many little words wrongly, and struck the boys if my back was turned. I could not trust him at all. I gave him a trial for a week.
761. You state that you have only one boy in the establishment who is at all fit for a pupil teacher. He is not fit.
762. What is your objection to other boys? If I have given a class to any of the boys to hear the rest read, I have found they have only played together, and I have had to go over the work again.
763. Do you require assistance? If what I have suggested were carried out, and half the boys were to attend school at one time, I should, to do the boys justice, require a pupil teacher.
764. Have you had large experience in teaching? I have.
765. I suppose you are a properly trained schoolmaster? I taught when I was a little fellow, with my father. I studied four years at Glasgow, and I have taught both in Glasgow and Edinburgh.
766. Have you ever taught in a public school? No.
767. Have you taught in a denominational school? In Scotland we have parish schools. In Glasgow I have taught in private families.
768. Have you ever taught in any schools in the Colony? No. I have examined schools in the Colony. I have visited them, examined the classes, and looked to their working.
769. Have you been trained to teach in a way similar to the plan adopted in our public schools? I have not been trained, but I understand the working of public schools.
770. Have you introduced that system of teaching on board the "Vernon"? As far as I could carry it out.
771. Has there been any inspection? There has been no inspection, except that visitors have come on board and seen the boys in school.
772. Have they examined the classes in your school? No. They have been at liberty to do so.
773. You say you have had large experience in teaching, and that some of the boys on board this ship have been guilty of dirty practices. Have you known boys to be addicted to similar practices in any of the schools with which you have been before acquainted? I never saw anything of the sort.
774. It appears, from what you have stated, that there is no continuous instruction of these boys? No. The boys I have on Monday forenoon I have not in the school again till Thursday.
775. Is not that a very great drawback to the teacher? Certainly it is.
776. Have you any other means of ascertaining the religion of the boys than of asking them themselves? Not generally; but in this case of ——— I had other means.
777. I understand your position there is secular teacher? I am; but on Sabbath I am a sort of chaplain, and give them religious instruction, without anything of a sectarian character.
778. That is, to the Protestant boys? Yes.
779. Do you think it is any part of your duty to examine any boy as to his particular religion? I examined this boy as to the reason of his being sent in, and why he was crying; and he said the carpenter struck him with a colt and sent him in.
780. With respect to the vermin that you have seen upon these boys, do you think they have been introduced by boys who have been sent in from the different Police Courts, from time to time? I have seen them on boys who have been there a considerable time—not on new arrivals; but I have not the management of anything with regard to their cleanliness. I speak only of what I have seen in school.
781. This, I think you say, has been the state of the boys for a long period? Yes, ever since I have been on board the vessel.
782. Every boy in the school, I suppose, is not in this condition? No, there are some clean boys.
783. What means are taken now to clean these boys? Recently they have cropped every boy's head, and smeared it with tar or some black mixture.
784. With tar? I do not know what it is, but it reminded me of sheep I have seen at home.
785. Do you know whether the ship itself is clean—free from vermin? There are bugs on board.
786. No other vermin? Cockroaches. There are mice, I suppose—yes, I have seen mice.
787. You mentioned that you have taken lice from the ship yourself? Yes.
788. To your own home? Yes—very large ones.
789. Have you heard any other of the officers complain of the same thing? I have heard the tailor say, on one occasion, that he had them on him after he went home.
790. Have you heard any of the officers who live on board make any complaint? I have heard Mr. Martin say that he had his cabin painted, as there was a slight indication of bugs; and I heard the steward say that there were a great ———
791. You do not think these bugs were caused by the introduction of new boys? I have got them in the books in school, starved looking things; and I have got them among the paper taken off the shelves.

- Mr. J. L. M'Skimming. 792. Do you teach navigation to any of these boys who are intended for a seafaring life? None of them are sufficiently advanced for that. Very few of them can even read very well. The captain is supposed to give lessons once or twice to any who have got that length; but there is only one boy at present who has got beyond reduction in sums.
- 12 Feb., 1869. 793. You are, I suppose, as a teacher, competent to teach navigation? I would not undertake to teach the practical part, but I have all the mathematics necessary. There is only one boy who has received a lesson or two. I believe he has gone to sea. Mr. Martin teaches them the points of the compass on deck.
794. That is no part of your duty? No.
795. Mr. Parkes.] I do not understand clearly what you mean by saying the boys were piped out of school? Suppose the captain wishes to go on shore, and the first starboard division are in school, the man pipes for the gig boys; and if there are any of them in the division, they go out of the school.
796. The 'gig boys go out of the school, but you do not mean that the school breaks up in consequence—only the four boys who belong to the gig go out? Yes; two boys, or four, or it may be only one.
797. You have named some boy who, you say, was put on board for stealing? Yes, —; it was reported in the papers.
798. Are you sure of that? I saw it in the *Herald*, after he was put on board.
799. Did you see the warrant under which the boy was put on board? No.
800. Have you read the Industrial Schools Act? I have.
801. It is not for any offence against the law that boys are put on board under the Act? Not according to the Act; but if they are found in company with known bad boys running about the streets, the Act provides that they may be sent on board the "Vernon."
802. The Act does not make any provision for offences against the law, such as stealing? No, it only provides for boys who are found running about the streets in company with bad boys.
803. You say this boy was put on board for stealing? That was what he was put on board for; the captain said it was so.
804. What I want to know is, whether he was put on board for stealing. He might have been brought up on the charge, acquitted, and subsequently sent on board for being found running about the streets as you have stated? It might be so.
805. You say distinctly he was put on board for stealing, which would be an illegal putting on board? It was so stated in the papers,—that he was taken up for that, and put on board the "Vernon."
806. Mr. Campbell.] Did I understand you to say that all the boys had to learn trades—Was that so, or could they decline? There are so many boys shoemakers, so many tailors, and others sailors.
807. Are they obliged to learn one of these trades, whether they like it or not? I cannot say that.
808. Mr. Parkes.] I think you stated that the ship was established as an industrial training school? As a reformatory.
809. I think you also stated that the captain had an aversion to trades being taught on board? That he said so himself.
810. Are you aware that the ship was really established as a nautical school, and that trades are taught on board only because the Government have no other industrial school where trades can be taught? I know it is called the Nautical School, the "Vernon."
811. Are you not aware that trades were introduced there only as a temporary expedient, until other schools were established? I was not aware of that.
812. And that the ultimate intention was to make it a nautical school exclusively? I was not.
813. I presume that floating schools in other parts of the world are established for nautical purposes only? I have not had any experience in such matters.
814. You do not know anything of the floating school established at Melbourne? I do not.
815. Are you not aware, as a matter of fact, that it is entirely a nautical school, and that it is the same in all similar cases in England; but that, in this instance, the ship being large, and to save the expense of establishing separate industrial training schools, trades were introduced until the ship should be filled up with boys who desired to be sailors, and other schools were established for those who desired to learn trades? I am not aware of that.

WEDNESDAY, 17 FEBRUARY, 1869.

Present:—

MR. ALEXANDER,  
MR. BURNS,  
MR. CAMPBELL,

MR. FARNELL,  
MR. NEALE,  
MR. PARKES.

RICHARD DRIVER, JUNR., ESQ., IN THE CHAIR.

Mr. James Gorman, V.C., examined:—

- Mr. J. Gorman, V.C. 816. *Chairman.*] Are you employed on board the training-ship "Vernon"? Yes.
817. In what capacity? Master-at-arms.
- 17 Feb., 1869. 818. Have you ever served in the Navy? Yes.

819.

819. For what period? Thirteen years.
820. In what capacity? My last rating was captain of the main-top—captain of the after guard.
821. Were you ever employed on board a training-ship before? Yes.
822. Where? On board the "Victory" at Portsmouth, and also on board the "Rolla" brig.
823. For what period? I was a naval apprentice on board this vessel for two years.
824. Are you acquainted with the duties of master-at-arms? Yes.
825. What are those duties? The master-at-arms has all the charge of the boys; the inspection of them, to see that they are properly clean; the regulating of them in their messes; with the assistance of the ship's corporals, to see to prevent any breach of discipline among them; he has charge of the lower deck, and of the clothes that are issued to the boys.
826. Anything further? Nothing further.
827. Do you discharge these duties on board the "Vernon"? Not at present. I beg pardon. I should have stated, with regard to the duties of the master-at-arms, that he receives all reports to be forwarded to the quarter-deck. That is all.
828. Do you discharge these duties on board the "Vernon"? Not at present.
829. Did you ever discharge them? Yes.
830. What duties do you discharge on board the "Vernon" now? I am merely doing the general duty now; the chief officer has done a good deal of the master-at-arm's duty lately.
831. Did he always discharge these duties? No.
832. What led to the change? I do not know, but I think Mr. Martin thought I had too much authority, and that I was interfering with his duty.
833. Did you at any time interfere with his duty? Not that I know of.
834. Was any reason assigned to you for the alteration? No. In carrying out the captain's orders, and doing my duty, I offended Mr. Martin on several occasions. The captain gave me full charge of the lower deck, and I did the duty there up to the time of Mr. Martin's coming on board the ship, and he then took that duty from me by degrees until I had nothing whatever to do with the lower deck. If I sent one of the ship's corporals to do anything, he would take him away and send him about other things. If the captain gave me orders to do anything and I sent a man to do it, Mr. Martin found fault with it, and took him away from it.
835. Would such an interference hinder you in the discharge of your duty? It did.
836. Was any reason assigned for his interference? No, not that I know of.
837. Who attends the boys on board when they are suffering from sickness? There is no person told off to do that. I have had to do it ever since I have been on board the ship.
838. There has been no person specially told off to perform that duty? No. In a ship of war there is a man they call the sick bay man—a man who attends to the sick, and who is paid for that purpose. There is no such person on board the "Vernon."
839. Was there such a person on board the two vessels you have already alluded to? Yes.
840. Speaking from your experience, you consider it necessary such a person should be appointed? Yes. Sometimes there are a good many boys laid up.
841. Do you think such an appointment could have been made without increasing the expense of the ship? No.
842. Have the boys been excused from work when on the doctor's list? I have seen boys sent to work, by the chief officer, who were on the doctor's list, who have had mustard poultices on them only the day before. They were scrubbing tables and stools on deck, and came down wet through; and I spoke to the doctor about it on the following day (Sunday), because he pointed out that the boy's chest was very much rubbed, and I told him it could not be avoided.
843. Can you tell me the names of these two boys? There were four boys—Stilsby, Holyhead, George Evans, and W. Collier.
844. Are they at present on board the ship? Yes.
845. You say the doctor called your attention to something? Yes, about their chests being rubbed.
846. Did he say anything further? When I told him the cause of it, he ordered the boys' hammocks down, and said they were to lie in them.
847. Was Mr. Martin aware, when he ordered these boys to turn to, that they were on the doctor's list? Yes.
848. Was any remonstrance made by any person on board about it? Not that I know of.
849. How was he aware of it? Some of the sick boys have their hammocks aft, and Mr. Martin attends with the doctor when he comes on board.
850. How long have you been on board the "Vernon"? Twenty-two months, I think.
851. Have the boys, during that time, been supplied with sufficient clothing and food? No.
852. How were they supplied with clothing during the last winter? Very poorly indeed.
853. Do you know whether any complaint was made to the captain as to the scarcity of clothing? Yes.
854. By whom? By me.
855. On more than one occasion? On several occasions we were all employed making canvas clothes, flannels, and different things that the boys had to wear.
856. Were immediate steps taken to remedy this state of things? The captain used to say that the requisitions were in, and he could not get them passed.
857. Have you at any time observed vermin on the boys? Yes.

- Mr. J. 858. Frequently? Yes.  
 Gorman, V.C. 859. Do you recollect one remarkable case on board? No.  
 17 Feb., 1869. 860. A case where a portion of the back of a boy's head had been eaten away? Several boys came on board in that state, but lately there was a boy observed with sores on his head, where his condition must have been owing to the neglect of the barber.  
 861. How long had he been on board? Twelve months.  
 862. Was his head very filthy? Yes. He was a very small boy—quite a child.  
 863. Did you notice them on more than one of the boys? No, only that one with sores. There were several boys with vermin on their heads.  
 864. Are not the boys generally in that respect very filthy? They are.  
 865. Who has charge of the boys' clothing on board? The purser, before they are served out to the boys, and the boys have charge of their own after.  
 866. I think you said it was a portion of your duty to see the boys at meals? Yes.  
 867. Have you observed the quality or quantity of the food supplied to them? Yes.  
 868. Has the food been deficient in weight sometimes? Yes.  
 869. On more than one occasion? Yes.  
 870. Has the deficiency been made good? Not until lately.  
 871. What kind of food have you been supplied with on board? Bad.  
 872. Almost continuously? Yes, up to within the last two months, when the meat has been a little better.  
 873. How is the boys' washing done on board? It is done in iron tubs on the deck. So many boys go to each tub, and each boy washes his own.  
 874. Are the boys all able to wash? No. I was going to explain that they all, except the very small boys, were required to wash their own. I have to station a large boy to wash for a smaller one, so that some of the boys have to wash their own as well as a smaller boy's.  
 875. How often is this clothing washed? Twice a week.  
 876. Is it true that the boys are half naked when they wash their clothing? Yes. Last winter, in particular, a great number had only on their flannel, and that had to be taken off to be washed. The canvas clothes that they had on would get wet, and when they have come down below, they have had to turn into their hammocks quite naked.  
 877. Has that been a frequent occurrence? Several times. I went up to Mr. Martin on one occasion, and told him there were sixteen boys below wet through, with no flannels, and I had no clothes to shift them into; and the answer he made me was, that he could not help it—it was the captain's order that they were to have only one flannel.  
 878. What are the working hours on board, for the boys? This summer it was from half-past 4, and I have seen them at work till 8 at night.  
 879. Were they at work all that time? They had not a half-hour to call their own during the whole of the day. If you will allow me, I will run off the day's work:—Turn out at half-past 4 in the morning, lash up hammocks and stow them; wash decks; at a quarter to 7 sound the quarter bugle; breakfast at 7; half-past 7 the watch is called on deck; watch below to clean the lower deck; after the lower deck is cleaned that watch has to wash themselves; they are then employed till 9 o'clock, and they then go to divisions; after divisions there are prayers, going to school, drill, seamanship—that takes all hands. They are kept there then till seven bells, half-past 11, and there is then generally something for them to do on deck. Quarter to 12, sound the quarter bugle; 12, dinner. Sometimes, not every day but sometimes, they are called up in the middle of dinner to stand by wash clothes—that takes them till 1 o'clock. They fall in at 1 o'clock, when they go on with the routine again, school, drill, seamanship, till 4 o'clock, when they muster again. Then there are boats to hoist up, awnings to furl, ropes to coil up—that takes them until 5, when they go to supper. From half-past 5 until 8 o'clock I have seen them washing their clothes.  
 880. Is any time set apart for the recreation of these boys? No; they cannot have any recreation on a day like that, with the work allotted to it. Ten minutes are allowed from a quarter past 10 in the forenoon, and from a quarter past 2 in the afternoon.  
 881. Are the boys encouraged, in any particular way, to conduct themselves properly on board? No.  
 882. Do you think it desirable they should be? I think so.  
 883. Are they not rewarded with a stripe on their arm? They do not value that.  
 884. Are they rewarded in that way? Yes, they have had conduct stripes given to them, but the boys never have any privileges allowed them. In the home ships a boy is allowed to go on shore on his liberty—a good conduct boy. If he misbehaves himself during the week, that liberty is stopped; but on board the "Vernon" there is no liberty—there is no privilege allowed—the boys are kept in constant confinement.  
 885. You have had charge of the lower deck, have you not? Yes.  
 886. Is there sufficient light below at night? No.  
 887. What light is there? There were nights last winter when there were no lights at all.  
 888. Are lights required there? Yes.  
 889. For what purpose? For the ship's corporals that are on watch there; and the boys in their messes of an evening require lights, which they never have. The boys when they go below in the evening lie about the deck, the mess tables and stools that are for their accommodation are triced up overhead. There is one lamp hung in the centre part of the ship, and the boys are lying about the deck and some running about the deck; there is no amusement for them. I asked the captain, some time ago, to allow the boys to have a small bit of candle in each mess, to allow them to sit at the table, and on their stools of an evening, so that they might amuse themselves in different ways, by reading, playing at dominoes, or drafts. I thought he would have no objection to them, but he took no notice of it.

890. Did he make any reply to your suggestion? No; he said he thought there was quite sufficient light. I told him there was sufficient light at that time, after the boys were all asleep in their hammocks, but not during the time they were below—from 6 in the evening till half-past 8, when they turned into their hammocks.

Mr. J.  
Gorman, V.C.  
17 Feb., 1869.

891. That is on winter evenings? Yes.

892. Is there is a magazine on board this ship? Yes.

893. In your opinion, is it properly fitted? No.

894. Why not? He complained of the expense.

895. Who? The captain. The magazine was made under my direction. The captain allowed me to plan it; and I told him it would have to be lined with lead, and made water-tight, and to have water placed in the fore part of the magazine, in case of fire. The lead was brought on board, and was on board some days; but when the captain found out the price of it, he sent it back again.

896. Have you ever pointed out to the captain that the magazine was not properly fitted? Yes. I have applied for a padlock and bar for the hatch, but I have never got it.

897. What was the padlock required for? The hatch that goes over the magazine just drops down into the hatchway, and it is customary to have an iron clasp over this, and to padlock it on to the deck, to prevent the boys from going into it.

898. In its present condition, can persons get into the magazine? Yes, they can go into it, but not without being seen. They could not lift up the scuttle without me or some other person seeing them.

899. Can it be got at from the lower deck? The scuttle is on the lower deck—through it you go into the magazine.

900. Is it not possible to get from any part of the ship to it, without being observed? Yes, from the hold they can go right underneath it. The magazine is built 6 or 8 feet off the bottom, so that any one can go right underneath it.

901. Is it desirable that it should be allowed to remain so? It is a risk.

902. A very great risk, is it not? It is. If the boys were so inclined, they could leave a light in the hold, and there is a great deal of rubbish there that would burn.

903. Who has charge of the magazine? Mr. Martin at present. From the 1st of January he has had it.

904. What does the magazine contain? Powder, shot, shell, fuses, boats' magazine, and rockets. That is all of any consequence.

905. What quantity of powder? Ball cartridges, 150; round blank cartridge, 1,100; powder for large guns, 520 pounds; diaphragm shell, 100; common shell, 50; fuses, 150.

906. What is in the hold of the ship? Water tanks, large stones for ballast, and one cell.

907. I think I understood you to say that boys could get near the magazine from the hold? Yes.

908. How often are the decks of the vessel washed? The upper decks are washed every day.

909. How? There is an engine, and buckets are employed, and it is scrubbed with cocoanut shells. The boys have to go on their knees and scrub the decks. The lower deck is washed sometimes twice a week.

910. Did you ever see the decks washed in a similar way elsewhere? Yes, but not so much of it. The boys are kept too long at it.

911. What time are they occupied? On Saturday they commence in the morning, and they are not finished till 2 in the afternoon, and then they have to go and wash themselves. Their time is occupied till 5 o'clock every Saturday evening.

912. Do you keep any books on board the vessel? Not now.

913. Did you keep any? Yes, the punishment or black-list book.

914. Is this the book (*handing a book to the witness*)? Yes.

915. The entries are in your handwriting? Yes.

916. How were those entries made? I entered the boys' names alphabetically, so that if I wanted a particular boys' name as ———, or ———, I turned to it. I entered the nature of the offence, and the punishment the captain had given.

917. How did you ascertain the nature of the offence? Any small offence I investigated myself, but any heavier case was left to the captain. I sent in the nature of every case to the captain in writing, and he would put down the punishment himself, and I saw it carried out and entered it.

918. Do I understand that the entries in that book were made from memoranda furnished by the captain? By the captain.

919. *Mr. Neale.*] Verbally or in writing? In writing. Everything that is down there is copied from a piece of paper as the captain would send to me, word for word.

920. *Chairman.*] Are any cases of a serious nature entered there? Yes.

921. Will you state them? There are four.

922. Can you give the names of the four boys who are implicated in these four cases? ——— was the first. That was for onanism, in the head. That is some time ago.

923. *Mr. Parkes.*] How long has ——— left the ship? Six or seven months.

924. Is it not longer than that; was he not among the first boys who were apprenticed? Yes. He is in the harbour now, in the ———

925. *Chairman.*] How old was ———? I should judge about sixteen or seventeen. He was the biggest boy we had in the ship.

926. What was done with him? His punishment is here (*referring to the book*)—a dozen lashes with a cane over the breech, one month's hard work, to be kept from all intercourse with other boys, three days' bread and water, and solitary confinement in the cells.

927. What is the charge as entered there? As the captain terms it—"For immoral misdemeanor of malversation and continued misconduct." That is copied from the captain's paper that he gave me.

- Mr. J. Gorman, V.C. 928. By whom was the case reported to the captain? By one of the boatswain's mates—  
17 Feb., 1869. Springle.
929. In your presence? No. The boatswain's mate was on the end of the jib-boom at work, and he saw the boy, and took him aft to the captain at once.
930. *Mr. Farnell.*] How do you know that? The boatswain's mate told me that himself.
931. You did not hear the case investigated by the captain? I do not remember it.
932. *Chairman.*] Can you refer to any other case? Yes.
933. Will you be good enough to do so? ——— and ———.
934. What were they charged with? Sodomy.
935. By whom was the charge made or reported to the captain? Mr. Cook was the man who saw them, and he took them to the chief officer, who sent them to me. I questioned the boys about it, and ——— told me that ——— was trying to root him—that was the word he made use of; but the quartermaster, Mr. Cook, when he brought the boys down to me, said—"Here you are, Mr. Gorman; here is a case of sodomy with these two boys." These were the words he made use of. I asked the boy ——— where he had seen this before, and he said he had seen it with boys in the ship. I asked him what boys, and he mentioned the names of two boys, one of whom was away, and the other still on board named ———. I sent for ——— had him in my cabin, and questioned him about it, and he told me the boys who had attempted it with him. He mentioned some boys who were away at sea, and two boys who were on board. Then I sent for these two boys, and he accused them, in my presence, of the offence.
936. *Mr. Parkes.*] Of what offence? Attempting this with them on different occasions, in different parts of the ship. I told Mr. Martin about it; the captain was on shore that day—it was Saturday. They were locked up, and I made a complaint to the captain, by word of mouth, on the Sunday morning. He had Mr. Cook and myself up about it, and ordered me to have the three boys locked up. The three boys were confined in the cells till next morning, and next morning the three boys were punished for sodomy, one dozen cuts with the tawse.
937. What is that? A piece of rather broad leather cut into twelve or thirteen strips of about the thickness of a black lead pencil, to imitate a cat-o'-nine tails, one month's cells, bread and water, and to be kept from all other boys till further orders.
938. What is the description of the offence in this book? Sodomy.
939. *Chairman.*] As originally entered by you? Sodomy; "attempted" has been put there since the book has been taken from me.
940. *Mr. Parkes.*] Hitherto, in all your previous evidence, you have spoken of it as an attempt? The boy ——— described to me that these boys attempted to do it with him.
941. Did any evidence come before you personally to satisfy you that the offence had been actually committed? I cannot say that.
942. If that be so, is not the correction in accordance with the fact? According to the evidence given by Mr. Cook, I thought the captain was satisfied himself that the offence had been committed. I did not see it myself.
943. *Chairman.*] Was this charge investigated? Yes.
944. After the investigation, you received a minute from the captain, and made that entry from it? Yes.
945. *Mr. Parkes.*] Whose handwriting is the word "attempted" in? I do not know; it is not mine. I should say it was the captain's.
946. *Chairman.*] How long did that book remain in your possession after the entry was made? About two months.
947. When did you give up that book? Some time in December, I think.
948. Was that book given up by you before or after the appointment of this Committee? Before.
949. Whilst you had charge of the book, did the captain ever ask to see it? Yes; I used to send the book to him about once a week; when there were not many reports, perhaps once in three weeks or a month, as you will see from his initials at the bottom of the pages.
950. These initials were all there before you gave up the book to the captain? Yes.
951. So that he had frequent opportunities of seeing the charges as entered? Yes.
952. Do you believe that sodomy has been committed on board the vessel? I can say that the attempt has been made; I could not say for certain that it has actually been committed.
953. Have the attempts been of frequent occurrence? These boys it is hard to believe—they tell tremendous stories among them. That is a very bad habit they have got hold of.
954. You have no doubt that attempts have been made? Attempts have been made—I have no doubt of that. The boys have had every opportunity.
955. Has any case been reported to you in which the boys have been charged with using filthy language? Yes.
956. Do you remember one case in particular? Yes.
957. A case where some ladies were passing the ship in a boat? Yes.
958. In whose presence was the language used—in the presence of any officer of the ship? I do not think it was. I think it was one Sunday afternoon, and one of the boys came down to me and spoke to me about it. I had the boy down, and questioned him about it, and he told me he did say so, and I reported him to the captain for it.
959. Was he punished? No; he was forgiven, because he had acknowledged it.
960. Do you recollect the nature of the language? Yes. \* \* \*
961. Do you drill the boys in their different drills? Yes.
962. Is that a portion of your regular duty? No, not as master-at-arms.

963. Why does that duty devolve upon you? I was asked, when I joined the ship, if I could do so; I said I could do it in my spare time. I have performed the duty since I have been in the ship; and, lately, I have had five hours and a half drill in a day to do, which is too much.

Mr. J.  
Gorman, V.C.  
17 Feb., 1869.

964. That is in addition to your ordinary duties? Yes.

965. How many hands have you in your department? Two ship's corporals; but they are doing watchman's duty, and not ship-corporal's duty. I am supposed to have two ship's corporals to assist me with these boys, but I never have but one at a time, on account of their being six hours on watch and six off, night and day. Lately, these men's authority has been confined to the lower deck, as mine has been also. A boy may commit himself on deck, in my presence, but I must not speak to him.

966. Why is that? It is all Mr. Martin's doing. When he is on deck, no person but himself is to interfere with the boys. He has brought me up about it, and he has given distinct orders to the warders not to leave the lower deck upon any occasion, and not to interfere with the boys on deck; so that the boys, when they get out of my sight, in the lower hold, in the bath-house, or in the head, can get up to these games that have come out. There is no one to look over them.

967. Do you consider the boys in a proper state of discipline? No.

968. Can you explain why? Mr. Martin has encouraged these boys to come past me to him with all their complaints, and they are running to him from morning to night. It is showing them too much partiality, in the commanding officer of a ship like that. The consequence is, that if the boys are spoken to by anyone else, they take no notice whatever—they take no notice of what I say to them; but if you speak harshly to them, they say they will go and tell Mr. Martin. At one time, if a boy were spoken to, and told to do anything, he went and did his work without any bother at all; it is not so now.

969. You think the boys are encouraged in this? Yes.

970. You have two trade instructors on board, have you not? Yes.

971. Have the boys freedom in their choice of a trade? I cannot answer that question.

972. Do you know whether they have been interfered with at all? Yes, I know they have been interfered with.

973. By whom? By the captain.

974. In what respect? In persuading the boys from their trades; that, I know, was done as lately as the night before last, when the boy Connell was taken up out of his hammock to the captain's cabin, who persuaded him to leave his trade, and go to some farm. When he returned to his hammock I asked him where he had been, and he told me. I have also heard that he has persuaded other boys to leave their trades.

975. *Mr. Burns.*] Do you know that of your own knowledge? I have heard it from the boys themselves,—that they have been had up to the captain for that purpose. Boys that have been learning shoemaking have been taken from their trade, and have gone away to a station. ——— and ——— were both shoemakers. Boys would leave their trade on purpose to get out of the ship—that I know.

976. *Mr. Parkes.*] Have you ever heard the captain persuade any boy to take that course? I never was present.

977. You are merely repeating what the boys told you? Yes. I know very well the boys have been persuaded to leave their trades.

978. The captain is legally the superintendent of the ship, is he not? Yes.

979. Do you not think it is the duty of the superintendent to offer advice to the boys, according to the several circumstances in which they may be placed? According to what I have been told, he has persuaded them.

980. You did not hear him persuade them? No.

981. *Mr. Burns.*] How old are the boys who have so left the ship when they have been learning the trade of shoemaking? 14 and 15 I should say these two boys were.

982. Can you tell how long they were learning? ——— and ——— were there from the beginning.

983. From the opening of the ship? No, from the commencement of teaching trades on board.

984. What I understand you to say is, that you have heard that the captain has tried to influence boys in their choice of a trade? Yes.

985. Have they told you that he preferred their being sailors? Yes. I was told that by ———, ———, and ———.

986. Was it at different times they told you, or together? Both together,—that they were had up.

987. *Mr. Alexander.*] Are you inclined to believe all they say? No, but I did believe these, because I know the boys will volunteer for anything to get away from the ship. I know these two boys were a long time at shoemaking—almost from the beginning.

988. *Mr. Farnell.*] If they will volunteer anything to get away from the ship, then they require very little persuasion from the captain, or from any one else? I should think these boys were getting on very well in their trade. I have passed the remark often when I have seen them at work.

989. *Chairman.*] Do you think it would be possible to lessen the cost of maintaining the ship? There is one thing I can say for a certainty,—that it does not require two commanding officers in the ship, because it has caused a deal of disturbance in the ship. In obeying the captain's orders, I have offended the chief officer.

990. In simply carrying out the orders of the captain? In simply carrying out the orders of the captain.

991. Can you name any instance in which you have done so? One day, I was making some sails, and the captain spoke to me about some hammocks that had to be numbered; I told him how many I had, and he gave me an order to get some numbered,

Mr. J.  
Gorman, V.C.  
17 Feb., 1869.

bered, ready for some boys who were coming on board. I sent the corporal to get these hammocks up and number them. He was two days about it. While he was doing them, Mr. Martin came down and asked who set him about it, and he told him Mr. Gorman. He made him drop it, and go on deck, and bring down the hammocks from the hammock netting, which was not his duty. The hammocks remained, and the captain spoke to me about it, and I told him what Mr. Martin had done. This all caused disturbance between me and Mr. Martin. It was the same with respect to the lower deck. Mr. Martin took the charge of the lower deck from me, and told me not to send men down there for the future; he would do it. The deck got dirty, and the captain found fault with it. I told him that Mr. Martin had taken the charge of the lower deck from me, and he spoke to Mr. Martin about it. The captain himself has passed the remark that I and Mr. Martin could not agree. Somehow Mr. Martin thought I had too much authority in the ship—that I had too much duty to do, and was interfering with him in doing my own duty.

992. You think two commanding officers are not required? If the chief officer is to do the master-at-arms' duty, the master-at-arms is not required.

993. Do you think the services of one or other could be dispensed with, without any detriment to the discipline of the vessel? If Mr. Martin thinks he understands the duty of master-at-arms. But he has often asked me about the duty, and it is not likely that any one who has not been on board a ship where there has been a master-at-arms should understand the duty. The captain himself does not understand it; and when I asked him to write out my duty, he told me he was aware that I understood my duty without his writing it out.

994. Some regulations have been recently prepared for the management of the ship? There is a deal of the same routine that there was before. There is a slight alteration about the trades, and one or two other simple things, but I have a copy of the old regulations outside, which I have had ever since I have been in the ship. You will find that this routine has been copied from some other regulations.

995. By whom were the old regulations prepared? I cannot say. Either from some training ship at Melbourne, or the captain got them from some person.

996. *Mr. Burns.*] Do you think the time for learning trades or seamanship could be better apportioned out? Yes; the boys do not get sufficient time—they get too much drill. The boys who are at trades only get it once in two days.

997. They do not get sufficient time for learning their trades? No.

998. Do you find, from conversation among the boys, any indisposition on their part to learn trades? No; they prefer anything to being sailors at present, because they have too hard work.

999. How then do you account for the circumstance that there are more boys learning to be sailors than to be tradesmen? They cannot accommodate all the boys who would volunteer to learn trades at present.

1000. Although the boys prefer trades to being sailors, there are more sailor boys than boys learning trades? Yes.

1001. That arises from the tradesmasters not being able to teach so many? They could teach them if they were allowed to do so.

1002. If they were allowed—How do you mean? They could accommodate more if they had them.

1003. Who prevents the boys choosing to learn trades? I cannot answer that.

1004. You say they are not allowed—What do you mean? They could teach them if they had the boys.

1005. You say the boys would like to learn? Yes, you could tell from their conversation that they would.

1006. What impediment is there in the way of having these trades taught them? Perhaps the tradesmasters can tell better than I can.

1007. You are under the impression that there is some objection, on the part of some official, to their learning trades? Yes; I believe the captain will not allow too many boys to learn trades, on account of the work of the ship.

1008. The captain would prefer their being sailors? Yes—that I know.

1009. Do you not think it undesirable that boys who are learning trades should be kept later at their work than those who are learning to be sailors? Yes.

1010. Is not the tendency of that regulation to discourage boys from being tradesmen? Yes; for although none of them have much recreation, the sailor boys are at play two or three nights a week, while the others are confined to their trades.

1011. Have you observed the boys at work at their trades? Yes.

1012. Do they seem to like their trade? Yes.

1013. And to be steady at their work? Yes. They are noisy sometimes.

1014. You think there is generally a disposition among the boys to learn trades? Yes.

1015. Do you think they would like to learn other trades than those taught on board the vessel? Yes; several boys have volunteered to be blacksmiths, but there is no one to teach them, and they have been sent to the tailors or shoemakers.

1016. Carpenters? There is a carpenter on board.

1017. You think the circumstance of there being so many sailor boys on board the ship, in comparison with the others, arises from a disposition to check their learning trades? Yes.

1018. *Mr. Tighe.*] Is the conduct of the boys generally good or bad? Good. They are wild. If a little encouragement were given to the boys, they would be much better than they are.

1019. These filthy practices to which you have referred, do you think they are general? No, I think they originated with the boys who were in the ship at the beginning—boys who had served a good deal of time in gaol. It was these boys who left that sting in the vessel. There was one boy I had constantly to watch.
1020. You think these boys had been in gaol? Yes.
1021. These boys who have been picked up about the streets, vagrant boys, you do not think they are that way inclined? No.
1022. These four cases you have mentioned, would you attribute them in any way to the mode of conducting the management of the ship? The boys are allowed to go about in so many parts of the ship, and myself and the ship's corporals are confined to one deck during the time they are playing or skylarking on the upper deck.
1023. You think these practices might have been prevented, if better arrangements had been made? If the ship's corporals had been allowed to do their proper duty.
1024. Before the discovery was made, had you reason to suspect such a thing might happen? Yes; there was one boy whom I had to watch very closely, and I had to shift him, for I found he was always hanging about a strange boy.
1025. How old was he? 15 or 16.
1026. Had he been in gaol? He came from Parramatta—I do not know whether he had been in gaol. I took this boy, and had his hammock hung aft in the lower deck by himself, and would not allow another boy to sleep near him.
1027. There are better arrangements now? Yes; the boys' hammocks are hung more open than they were before.
1028. If that change had been made before, boys of that description who had been sent on board the "Vernon" would not have had an opportunity of carrying out their filthy practices? Not so well in the hammocks, but it might have been done in the bath-house, in the hold, or in the head.
1029. *Mr. Parkes.*] You said, just now, that some of the boys were very filthy with vermin? Yes.
1030. Generally speaking, do the boys come on board in a filthy state? Sometimes they do—very bad.
1031. Speaking generally, in what state do they come on board? On an average, there is not above one clean boy in six when they come on board.
1032. That is the state of the boys when they come on board—that five out of six are filthy? Yes.
1033. Speaking generally, what is the state of the boys after they have been on board a short time, as compared with their state when they came on board? Clean. At one time, when I had charge of the ready-made clothing, and a boy came on board in this state, I sent him to the bath-house, had his hair cut, and I have cut it myself, had him washed, and all his old clothes thrown overboard, and he has gone into new clothes at once. These boys were clean; but latterly, and since last winter, as the boys came on board, their hair has been cut, and their clothes have been washed and given to them again. I had no way of preventing this, for I had no new clothes to give them.
1034. Speaking with general reference to the condition of the ship, I understand you that the boys are clean, as compared with what they were when they came on board the ship? Yes.
1035. You said, in a former part of your evidence, that the boys were washing their clothes till 8 o'clock at night—Did you mean that they had done so every night? Several times.
1036. That is not an answer to my question. I want to know whether it was one night in a week, one night in a fortnight, or how often? Last New Year's night it was twenty minutes past 8 when they were finished. Some of them did not begin to wash till after supper every night. It would be much better in wet weather for the clothes to be washed in the morning than in the evening.
1037. You do not mean to convey to the Committee that they were washing clothes every night till late in the evening? Not every night. They commenced, in summer, to wash after supper every night; and, at times, they were at it till 7, and on other nights till 8 o'clock.
1038. Not very often? No, the average was 7.
1039. *Mr. Farnell.*] You have stated that the boys were short of clothing? Yes.
1040. How long did that state of things exist? The whole of last winter.
1041. Can you give us any reason for being short of clothing? There was one tailor appointed, and when he came on board the ship the boys were in rags. He cut out—I cannot say the number, but I should think a hundred pairs of trousers, and he asked the captain to have them run up on shore. He was given to understand that he would have sufficient help on board; but when he came on board he found he had none, as none of the boys were able to make up new clothing. He had a machine on board, and he made up some twenty or thirty pairs of trousers and a few shirts, which were given to the boys as fast as could be made. That man then left, and myself and the other men then had to finish the clothing he had cut out, as the boys were literally naked. When the present man came on board, he found us finishing trousers and making flannels, as fast as we could, to clothe the boys. It was done with the idea of saving expense.
1042. You said something about the quality and quantity of the food supplied to the ship? Yes.
1043. Whose duty was it to receive the food from the contractor? The purser's.
1044. Does he weigh the provisions he receives from the contractor? I do not think so.
1045. Is it any part of your duty to look after the provisions? No, only when they come to the messes cooked.

Mr. J. 1046. You stated that it was short weight—How did you ascertain that? By the  
Gorman, V.C. quantity that came to the mess; I have seen boys with not more than four ounces of  
meat.

17 Feb., 1869. 1047. Did you weigh it? No; I could tell from the quantity the boy had.

1048. You saw it cooked? Yes.

1049. Have you any doubt the proper quantity was received on board the ship? I have  
doubt that the proper quantity was sent on board the ship.

1050. You believe that the contractor did not supply the proper quantity of food?  
Yes, I believe so.

1051. You have a scale of rations on board? Yes.

1052. It is the duty of the purser to receive the proper quantity from the contractor?  
Yes.

1053. If the purser does not weigh these rations when they are delivered by the con-  
tractor, how can he know that they are short? The purser must have weighed them,  
because he has told me, when I have spoken about it, that the contractor had delivered so  
many pounds of meat and so many loaves of bread short.

1054. Did you ever report this to any one? Yes, to the captain. I know in the com-  
mencement that no one looked after the quantity—that it came on board, and was sent to  
the cook.

1055. There was no check upon the contractor as to whether he supplied the proper  
quantity or not? I will go by what Mr. — the purser told me himself; he told me lately  
that there had been so many pounds of meat short, and so many loaves of bread.

1056. As to the quality of the food—what particular kind of food do you complain of?  
The corned beef on Sundays. I have shown it to the captain.

1057. How long has that been bad? Three months.

1058. Are you not aware that beef is generally bad now? I am not going to blame the  
contractor for the beef, because it comes on board on Saturdays, and there is no harness  
cask to put the meat into, and it is exposed till next day. It becomes bad from being  
brought on board and exposed so long.

1059. What trades are these boys taught? Shoemaking, tailoring, and shipwrighting.

1060. Can a trade be properly taught to boys under the circumstances of the ship?  
Not as she is now, because you must take into consideration that a great number of  
infants are on board the ship—quite infants—children who are not able to do the work of  
the ship. There is a routine written out for all the work to be done at a time, and the  
boys are divided into certain divisions; and in each of these divisions there are a number  
of these very small boys who can do nothing, but they fill up the numbers, so that  
the strength of the boys is not sufficient to do the work of the ship. It is the  
same in the lower deck with respect to the messes. I have ten boys in each mess, and I  
am obliged to distribute the smaller boys among the different messes, so that in each  
mess there are some that are not able to wash their own plates or to do any other work,  
so that the other boys have to attend to these things for them. Out of the 125 boys on  
board the ship, there are not above 50 working boys; so that, in order to get the work of  
the ship done, we are obliged to call away the boys from their trades to attend to it.

1061. Would it not, in your opinion, be better to encourage the boys to learn seaman-  
ship, or agriculture, or some other manual labour of a useful kind, than to learn such  
trades as they are taught on board? It would be much better for the boys to be taught  
sailing only on board; but at present, if you were to ask the lads on board the  
“Vernon” if they would prefer trades to sailing, they would all prefer trades.

1062. Are the mechanical trades taught on board the “Vernon” taught with the view  
of making their labour productive, and of lessening the cost of the ship? Yes.

1063. That is the object? I do not know whether it is the object, but I know the boys  
can make all the clothes that are required on board the ship, and that they also make  
boots for themselves and for the school at Newcastle.

1064. Have these boys assisted in making any clothing? Yes.

1065. Have they made any clothes for the officers? No.

1066. Not for the officers of the ship? No; the officers have to provide their own  
clothes.

1067. None of the clothing of the officers is made on board? Not that I know of.

1068. It appears to me from your evidence, that the ship is not managed satisfactorily,  
in your opinion? No.

1069. If you were in command, do you think you could manage it much better than it is  
now managed? I could make her a great deal better than she is.

1070. You say these boys are given to telling stories? Yes.

1071. It is not very easy to believe them? No.

1072. Have these offences you have referred to been reported to the captain, and investi-  
gated by him? By him. They were investigated by me first, and then I took the boys to  
the captain afterwards.

1073. Were they investigated in your presence? Yes.

1074. Whose evidence did he take? Mr. Cook's, the man who caught them in the act,  
in the head, and he punished the boy — on his own confession; and the other two  
boys that — mentioned as having attempted it with him were not punished.

1075. From what I understand, no one saw these boys in the fact? Only this man  
Cook who brought them to me.

1076. Was any man called in to see whether the act had ever been committed? Not  
that I am aware.

1077. *Mr. Alexander.*] Was there no medical man on board? No; but Dr. Alleyne  
attends every day.

1078.

1078. What is the age of the youngest child you have on board? Three years and a half.
1079. *Chairman.*] Have you any nurses on board? No.
1080. *Mr. Farnell.*] You have stated that there were boys on board who had been previously convicted and been in gaols? Yes. A good number of them have gone away.
1081. Are you aware that the "Vernon" is an industrial school ship, and not a reformatory? I hardly know what tack it has been on. It is called, I believe, an industrial nautical school.
1082. You are aware that it is not a reformatory? I am not aware.
1083. *Mr. Campbell.*] Are the hammocks slung right forward—do they come right aft on the main-deck from the fore-cabin? They hang from the fore end of the ship, and reach nearly aft to my cabin.
1084. How long have they been altered? They were altered last week.
1085. Now they have the whole of the main-deck? Yes, each hammock interlocks; before they did not. Formerly, there were only fourteen inches between each boy, now there are twenty-eight inches; so that, although as they lie they could play with each other, they cannot get out of one hammock into another.
1086. *Mr. Farnell.*] Are you on good terms with the chief officer? We cannot be at all times, because Mr. Martin does not understand the duty of a master-at-arms; that is what has caused disputes between us. When I have been performing my duty, and trying to carry out my work, he has thought I have been taking his duty out of his hands; and he has lessened my authority, by giving me to understand that I was not to interfere with the boys on deck.
1087. You do not like taking orders for the performance of your duty from a person who does not understand those duties as well as yourself? I do not refuse to obey his orders. When I am performing my duty, he thinks I am encroaching on his. He thinks he ought to have charge of the lower deck, and he took it from me unknown to the captain, for the captain told me it was my duty.
1088. Did he desist then? No, he interferes to the present day on the lower deck.
1089. *Mr. Campbell.*] You were in the Navy? Yes.
1090. Did you ever hear a quartermaster question the first lieutenant's authority—I suppose you were appointed to the "Vernon" because you had been in the Navy? I was recommended by two officers who had been shipmates of mine.
1091. Do you think a first lieutenant would have no right to question you, or to give his orders to you? I think he would have.
1092. You have a right to pass your opinion upon his knowledge? The captain gave me his orders, and in carrying them out I have gone against the chief officer. The chief officer and captain have been in opposition to each other off and on, and in obeying one I have offended the other.
1093. In the Navy the first lieutenant —? Receives orders from the captain, and delivers his orders to the officers of the different departments; and if those orders are not carried out, the officer in charge bears the blame.
1094. *Mr. Alexander.*] The first lieutenant receives his orders from the captain, he gives them to the master-at-arms, who again gives them to the ship's corporals? Yes, so it goes down; and if the work is not carried out in the different departments, the first officer falls back upon the officer in charge of the department.
1095. The captain gives no commands? The first lieutenant is the proper officer to deliver the orders of the captain.
1096. *Mr. Campbell.*] About washing the decks on Saturday—you say they are not finished till 2 p.m.? Yes.
1097. Did you ever know a ship to be cleaned before that time? Yes.
1098. Is a man-of-war cleaned before that time? Before seven bells in the forenoon—before dinner. I was never on board a ship where the decks were kept wet later than that, unless after a ship had been caulked, and the decks required extra holystoning. As a rule, the decks are finished up before seven bells.
1099. I do not mean the quarter-deck, but between decks? Yes, the ship was cleaned throughout; the afternoon was taken up with the rigging aloft.
1100. *Mr. Alexander.*] I understand that the contention between you and the chief officer is in consequence of the duties not being properly defined? Yes.
1101. If they were defined, there would be no contention between you and the chief officer? No, because the captain would see me righted.
1102. Whose duty would it be to see to that? The captain—the superintendent.
1103. *Chairman.*] You have a steward on board? Yes.
1104. What are his duties? He attends on the captain and officers of the ship.
1105. The captain and officers only? The chief officer and purser are the only two who mess on the deck under the poop.
1106. Is the steward's time fully occupied in attending to these three gentlemen? He performs no other duty that I know. He was doing purser's duty during the time the purser was sick—going for the provisions.
1107. Does he discharge any duty at all for the actual benefit of the boys on the ship? No.
1108. You receive no assistance from him whatever? No.
1109. You have a cook as well? Yes.
1110. Any other person employed in the cabin? The private servant employed by the captain—one of the "Vernon" boys who was taken by the captain as an apprentice.
1111. The boy named Whitmore? Yes.
1112. He was apprenticed to the captain to learn what? Stewarding, to be a private servant; he is merely assisting the steward.

Mr. J.  
Gorman, V.C.  
17 Feb., 1869.

- Mr. J. Gorman, V.C. 1113. Have you ever heard of that boy being insolent to the officers on board? He was insolent on one occasion to one of the ship's corporals.
1114. Was a complaint made? Yes, the man made a complaint to me, and I told him to take it up to the mate.
1115. Do you remember the captain speaking sharply to the man for daring to complain of his boy? I was not present myself, but I believe he made the complaint to Mr. Martin; and the captain had the man up, and did speak to him very smart; in fact, the captain told M'Evoe that the boy was a better boy than he (M'Evoe) was a man.
1116. I understood you to say that the boys had been better fed lately? Yes; a good many of the boys do not eat the hominy.
1117. Mr. Farnell.] Have they sugar with the hominy, or salt? Treacle. Some boys have bread and water for breakfast—they cannot touch the hominy.
1118. Mr. Alexander.] How do you account for that? They do not like it.
1119. If they were hungry they would like anything? They will not eat the hominy.
1120. Mr. Farnell.] These boys go to school a certain number of hours a day? Yes.
1121. Do you think they attend sufficiently long to be taught anything? I think if the boys had more schooling and less drill, it would be better for them. There are a great number of little boys in my division, who are of no use for musket or gun drill; but these being in the division, are kept out of school with the others when the division is at drill.
1122. Do these boys receive lessons from any one besides the schoolmaster? I believe the captain has taught some of the boys in the evening.
1123. Navigation? Yes, I believe some of the boys who have gone away to sea had some instruction in his cabin. There were only two boys to my knowledge,——— and———
1124. You have stated that you requested the captain to define your duties as master-at-arms? Yes.
1125. He never did so? No.
1126. Has the captain been in the Navy? No, neither the captain nor the chief officer has been under naval routine, and that is what has thrown things out; they have endeavoured to conduct the business of the ship according to naval routine, without understanding it.
1127. It appears to me, from your evidence, that you are the only person on board who understands these things? I am the only person on board, with the exception of one of the boatswain's mates. I think both have been on board a man-of-war, but it is a great number of years since, in the case of one of them.
1128. Your superior officers are inferior to you in their knowledge of the general conduct of a nautical school? They have not had my experience in the management of a nautical school; for in the beginning, I was a naval apprentice when the system of naval apprentices was commenced in 1848. There were 200 of us boys on board the "Victory," and we had a brig after we had been six months on board. There were seventy boys taken and sent to this brig, which was sent out into the Channel, and was cruising about. After the boys had been on board this vessel a certain time, they were fit to go to sea. I was kept eight months beyond my time as a naval instructor to the boys. After they had served their time, they were drafted to the sea-going boys. None of the boys sent on board this ship were under the age of thirteen, and they were all able to do for themselves. In the "Vernon," which is a large ship, there is a great deal of work to be done, and there are a large number of small boys who are unable to do anything.
1129. Mr. Alexander.] After you had served eight months as naval instructor, what position did you hold? First class boy, and then I was only rewarded with a star on my arm.
1130. Mr. Farnell.] You think on board the "Vernon" the labour of the boys is too great? Yes, the work comes very heavily on those boys who are able to work, for they have to do it all; the children are too small, many of them.
1131. It is a heavy day's labour for the larger boys? Yes.
1132. Would it be a heavy day's labour for a man? Yes. My hours are from 6 in the morning till 9 at night, and when I lie down at night I am knocked up altogether.
1133. Do you sleep on board? Yes.
1134. Have you found any inconvenience from vermin on board—lice? No, but when I have been among the boys, I have picked one off my jacket.
1135. Is the ship itself clean? There are bugs on board.
1136. You are aware that sometimes this kind of vermin gets into the skin of the vessel, and it is difficult to get rid of them—in immigrant vessels, for instance? I do not think it is the case with the "Vernon." There are bugs, but not lice. In the fore part of the ship the men were swarmed out. Mr. Martin's cabin has been painted; and since it has been painted, the bugs have come right through the seams into the cabin again.

FRIDAY, 19 FEBRUARY, 1869.

Present:—

MR. ALEXANDER,  
MR. FARNELL,MR. PARKES,  
MR. TIGHE.

JOHN FITZGERALD BURNS, ESQ., IN THE CHAIR.

Mr. James Pickering examined:—

1137. *Chairman.*] You are engaged on board the "Vernon"? Yes.
1138. In what capacity? As shoemaking instructor.
1139. How long have you been so employed? Since the 6th July last.
1140. How many boys have you under you, learning your trade? Twenty on my list.
1141. Are you on board every day? Yes, from 9 to 6.
1142. And the boys are almost constantly under your observation? Yes; that is, the divisions that are with me.
1143. Have you observed any immorality among the boys since you have been on board? No.
1144. Have you observed any improper practices among the boys? No, I know of none from my own knowledge—only from hearsay.
1145. You know of no improper conduct on the part of the boys, of your own knowledge? I do not.
1146. As a trademaster, have you had proper facilities afforded you for teaching the boys? I have been interfered with in regard to boys who have been under my instruction, and who have been taken from me suddenly without my consent. After they have been sent to me by the captain, he has taken two or three away.
1147. How long had they been with you before they were removed? Only about three months.
1148. Where were they sent to? Two of them were sent away from the ship, one has not been sent away yet.
1149. Were these boys that were sent away apprenticed elsewhere? With the exception of the one who is on board, I believe they were.
1150. Are the boys who are under you allowed sufficient time to learn your business? No, they are not.
1151. Could you suggest any better arrangement than the present, with regard to the time during which the boys should be kept at work? Yes, I think the boys who are drafted off to me should, I think, during the time they are with me, not be required to do any sailing. One division is now sent to me in the morning, and they should remain until dinner-time, and not be liable, as they are at present, to be called from me to tie up awnings, when there are sailors on deck who could do it.
1152. Have you found an indisposition, on the part of any officer on board, to allow the boys to learn trades? There has been a great deal of coercion used to prevent the boys going either with the tailor or myself. For example, six or seven weeks ago, I heard Mr. Martin, the chief officer, speaking to a boy as he stood in front of me, and I caught the words "for my sake." The boy came over to me and said—"Mr. Martin wants me to leave shoemaking and go to sea." Said I—"Does he?" "Yes, he does." I said—"What did he say to you?" The boy replied—"He said—'Will you be a sailor?' I said—'No, sir, I like shoemaking. I was shoemaking before I came here, a little.' He said—'If I ask your mother, will you, if she consents?' I said—'No, sir.' 'Will you for my sake?' I said—'No, sir.'"
1153. The boy told you this himself? Yes. I heard the words "for my sake" myself, but I did not know what it referred to; but as he was looking at me, and I had been subject to this kind of thing before, I thought he must be referring to something of the sort.
1154. *Mr. Parkes.*] Do you think there was any great harm in that? No, I do not think so, only the boy chooses his trade himself.
1155. You said that the boys were taken away from you without your consent? Yes; I never was told that they were going to be taken away.
1156. Are you the superintendent of the ship? No.
1157. Do you not think it is the duty of the superintendent of the ship to see what can be done to promote the interests of the boys? Yes, certainly; but the captain sent them to me in the first instance.
1158. When you were appointed as overseer to the shoemaking, were you told you were to have the control of the boys? No.
1159. Were you not told that you were to act in everything under the directions of the superintendent? Yes.
1160. If the superintendent thinks it is for the interest of the public, and the interest of the boys themselves, to send them out of the ship to good masters, and he does that with the consent of the Minister, have you anything to do with that? No, and I never attempted to dictate in the matter in any way, nor have I spoken to the captain about it; but I thought, as the question was asked, it was my duty to answer it. I have made no complaint, either in or out of the ship.
1161. I should imagine from this inquiry, that every man in the ship sets up his authority against the superintendent? I have not done so in any way.
1162. *Chairman.*] You were not consulted with reference to the shifting of the boys? I never expected it. I have carried out the regulations as far as I have been able, and have made no complaint; and I would not have mentioned the matter now if you had not asked me the question.

Mr. J.  
Pickering.

19 Feb., 1869.

1163.

- Mr. J. Pickering.  
19 Feb., 1869.
1163. You have complained that boys have been suddenly removed from you before they have learned their trade, and that no reason has been assigned to you? No, I have not complained.
1164. You assumed that you had no right to have a reason given to you for the removal of the boys from under you? No, I did not expect the captain, or any one else, to ask me.
1165. *Mr. Parkes.*] Was it never explained to you—and if it was not explained to you, did it never occur to you—that it was not necessarily intended, because a boy was put under you, to teach him the trade of shoemaking, but that he was sent to you because he was houseless—had been found in the company of vagrant or disreputable people—to save him from harm,—that the Government does not undertake to keep this boy in all cases to teach him a trade, but to keep him and provide for him until a master can be found, and in the meantime puts him to something to teach him to be useful,—that he is put to you to learn shoemaking, not necessarily for three years, but sufficiently long to enable the Government to make provision for him in private life—The very law gives the superintendent power, after twelve months, to apprentice any boy to a farmer, or person engaged in any other occupation, with the approval of the Colonial Secretary? When you gave me the situation, you told me some of the boys were constitutionally unable to go to sea, and these boys must have something to do, and you appointed me to instruct these boys; and most of those who are under my teaching would be physically unable to follow the occupation of a sailor, and are only suited for a sedentary employment.
1166. *Chairman.*] How many boys have you under you, on an average? Never less than twenty.
1167. And you say most of these boys are not suited to any other employment? They are boys who have no strength; the parents of many have pursued vicious courses, and the boys suffer from secondary symptoms.
1168. *Mr. Parkes.*] You do not mean to say that most of the boys are physically weak? The boys under me average from ten to fourteen years of age, and some of these, I suppose from their parents having lived vicious lives, have secondary disease, or are constitutionally sickly. They are generally weak boys—not like children under ordinary circumstances.
1169. *Chairman.*] During what hours have you these boys with you to learn your trade? I have them from 9 till 12, and from 1 till 6.
1170. Every day? Every day.
1171. Do you find that the arrangement of the vessel for the teaching of other trades than yours, as the trade of a tailor, of a sailor, or of a carpenter, in any way interferes with your duty? No, we work altogether harmoniously, so far as the ship is concerned; in fact, I am quite comfortable in the situation, and so are the boys, if we only had the boys left with us apart from the sailing.
1172. At what time do you leave off each day? At 6 o'clock.
1173. At what time do the boys who are learning to be sailors leave off? At 4 o'clock, my boys; and the trade-boys are kept at work two hours longer than the sailors.
1174. Do you think that is desirable? No, the boys complain of it; they say it looks like punishment to them. Several boys have complained of it to me, but I have never spoken of it, for I did not think it part of my duty.
1175. Do you think arrangements could be made on board that would enable you to have your boys at work just the same time as the others—to begin and leave off at the same time? I am sure it could be so done.
1176. What would you suggest? That they should leave off at 4 o'clock.
1177. Could they all leave off at one time, without the boys interfering with each other? They would not interfere, for my boys have nothing to do with the others.
1178. What is the reason they leave off at different times? I do not know, excepting that it is the order of the superintendent.
1179. Are you aware of any attempt, on the part of any one besides the first mate, to interfere with the boys in choosing a trade? No, I am not indeed, I have always received the greatest kindness from all the officers on board, with the exception of that instance I have mentioned.
1180. You would suggest some alteration in the time devoted to the teaching of trades to the boys? Yes, the suggestion I should offer would be, that the trade-boys should leave off at the same time as the sailors, in order that they might have some time for play during the day. It is to be remembered that they are only boys.
1181. You are not yourself aware of any impropriety on the part of the boys? No.
1182. In fact, their conduct generally has been good? Yes, there are some very good boys; indeed, there are some I regard with sincere affection.
1183. You find them tractable and submissive? Yes, generally.
1184. *Mr. Parkes.*] You have had some experience in schools, and Sunday-schools? Yes.
1185. You have been brought in contact with boys a great deal? Yes.
1186. Do you see anything inferior in these boys to other boys, in their conduct or general demeanour? No, I do not; I think the boys are good boys—a great many of them; in fact, they are no worse than boys in Sunday-schools generally.
1187. Are you not surprised that boys brought from the streets—and many of them from what is termed the scum of society—should be so good? Yes, I was surprised when I went on board to see the boys so well behaved.
1188. *Chairman.*] You found them respectful and well behaved? Yes, many of them much better than ordinary boys out of doors; they never speak, even to an inferior officer, without addressing him as “sir.”

1189. There is nothing in the conduct of these boys to call for particular comment to their prejudice? No, not that has come under my notice. (*The witness produced a pair of boots.*) These boots were made by a boy who has been with me six or seven months; they were made for the institution at Newcastle.

Mr. J.  
Pickering.

19 Feb., 1869.

1190. *Mr. Parkes.*] Were these begun and finished by a boy? Yes, excepting that the knife work or cutting out was by me.

1191. They were made by a boy who was taught by you? By me.

1192. How long had this boy been under you? About seven months.

1193. Have you all the facilities for carrying on your trade in the most economical manner? Yes. I should like to have a workshop, so that I might not come into antagonism with the sailors. Now, when the boys come out of school there is a great rush, and they crowd round me so that there is the greatest difficulty in keeping order. Since Mr. Gorman has given up charge, the lower deck is like Bedlam sometimes with the noise.

1194. Has it not occurred to you that these inconveniences which arise are attributable to a state of things which ought not at all to exist, namely, to the teaching of trades on board a ship which ought to be taught on shore; but that this is simply a temporary arrangement, in consequence of there being room in the ship, to avoid the expense which must have been incurred if another establishment had been formed on shore; that it was not likely that sailors would agree with cobblers—you will pardon my using the word—Have you found any unpleasantness, beyond what would naturally arise from tradesmen being employed to teach boys on board a ship which the captain had previously understood would be devoted to nautical purposes? No; I have received the greatest kindness from all on board. They detest my trade—not me; and I endeavour to adapt myself to my circumstances, and never to give them cause of offence.

1195. They do not interfere with you in carrying on your trade? Not in the slightest degree.

1196. Not by remarks? Not by remarks. I may show the amount of work done by these twenty boys in six months. They have made, for Newcastle Industrial School, 123 pairs of boots; for the ship, 137. We have repaired (that is, soled and heeled) 50 pair; made fenders for boats, 30; boys' belts, 144. We have also made three yacht cushions. The boys have done the ornamental work on leather for Mr. Kinloch. In fact, there are some of the boys on board who have such a natural disposition for the trade, that I think if they were put on an island, with a little leather, they would learn their trade. In fact, I regard the boys with a great deal of affection, and that is the reason I do not like to part with them to do sailing, for they hate sailing.

1197. *Chairman.*] You work harmoniously with the other officers? Yes, as far as I know; they never complain to me, nor I to them.

1198. *Mr. Farnell.*] You complain that these boys are kept at work too many hours? The boys complain of it; but for my part, if I were told to stop till 9, I would do so; but the boys complain that they should be kept at work till 6 o'clock and have no play, while the boys who are at school or sailing leave off at 4 o'clock. After 6 o'clock they have to scrub and wash their clothes; that occupies them some time; so that some of the boys have no play at all.

1199. When parents put their children apprentice to the trade of shoemaking, until what hour do apprentices work? That depends upon the disposition of the master. Some men are tyrants, and keep their boys till 12 at night; others are more lenient and merciful, and will not let them work too late, but allow them to have play-hours like other boys, till they arrive at a proper age to devote themselves entirely to their work.

1200. Do your boys wash their clothes after they have done work? Yes, sometimes.

1201. Do any of the boys who are learning trades with you go to school? Yes; I have one division in the morning, and they go to school in the afternoon.

1202. *Mr. Parkes.*] With respect to these alleged immoral practices, do you think anything criminal in the eye of the law has taken place among these boys? I could not of my own knowledge say they have, but I have heard rumours.

1203. What is your opinion? My opinion is that there have been three or four boys on board, one of whom ran away the other day, who, I could be almost sure, were addicted to these practices.

1204. How do you form your opinion—from what circumstances? Only from the disposition of the boys, and from their confessions to the master-at-arms. There are two or three very bad boys on board.

1205. I should think there were more? I do not think there are many. I was astonished to find that, out of 125 boys, most of them taken off the streets, there should be so few bad.

1206. One would be almost inclined to think, from your statement, that the best way of training boys was to let them run about the streets, if there were only two or three bad boys out of 120 on board this ship? Only two or three who are of very bad character—who seem to be addicted to vice of every description.

1207. No direct proof has come before you of any immorality between the boys amounting to criminality? Not that I know, of my own knowledge. I would not like to say what I hear.

1208. Do you not think that all matters of that kind should be dealt with with the greatest care? Yes.

1209. That no noise should be made about such cases, unless there were an absolute necessity for a noise? I may state that, after I went on board, Mr. Martin took me on the quarter-deck, and said to me that it would be well not to let anything transpire of what took place on board the vessel, unless it was necessary to do so; and I have never done so—directly or indirectly spoken of what has taken place—since I have been there.

1210.

- Mr. J. Pickering.  
19 Feb., 1869.
1210. When I ask you whether you think it is necessary to act with the greatest caution in such cases, I do not mean that any criminality should be overlooked, or that anything deserving of notice should be allowed to pass by without observation, but whether you do not think matters of that kind, unless amounting to actual criminality, should be dealt with by the officers of the ship? Yes.
1211. Have you seen any indisposition, on the part of the officers of the ship, in such cases, not to punish? No.
1212. As far as you know, any case of that kind has been punished? Yes, as far as I remember just now.
1213. There has been no trifling with it? There has been no trifling with it.
1214. Could it do anything other than harm to have it bruited abroad? I think it could only do harm, because so many false constructions might be put upon the matter.
1215. In your opinion, there has been no failure of duty, on the part of the officers, in punishing such offences when they have been discovered? So far as my knowledge has gone, there has been every disposition to punish any crime when it has occurred—there is no attempt to overlook it.
1216. There has been no indisposition to punish? None.
1217. On the contrary, these cases have been properly inquired into, and the boys have been punished for improper conduct? Yes.\*
1218. From your experience as a teacher of boys in Sunday-schools—from your general knowledge as a man of family —? I have four children.
1219. Should you, or not, have expected habits of this kind among boys collected in large numbers off the streets, and who have been associated with the most vicious and depraved? The thought never occurred to me until this moment.
1220. What do you think, now that the matter has been brought before you? I think some of the sins are what boys might be expected to be guilty of who are brought from the street.
1221. If such vices are to be expected anywhere, would it not be among such boys? Yes.
1222. They are not brought there for being good boys, but because they are considered dangerously bad? Yes.
1223. Was it not to be expected that almost every crime would develop itself among such boys who have had no instruction in good, and before whom examples of vice have been continually present? Yes.
1224. And yet you say these boys behave as well as any boys you ever saw? As well as any boys I have come in contact with, excepting two or three. In fact, every visitor has been astonished at the good behaviour of the boys.
1225. *Mr. Tighe.*] Do you know these particular boys who are so extremely bad? Yes.
1226. Do you know anything of their previous history? I have not the slightest knowledge of the previous history of any boy in the ship.
1227. You do not know whether they have been convicted criminals—whether they have been in gaol? I have no knowledge of their antecedents.
1228. *Mr. Alexander.*] You said that, from the time Mr. Gorman gave up charge of the lower deck, the boys have been particularly troublesome? Yes, because he visited punishment on the boys promptly, and was always among them. He was a terror to the bad boys, and the good boys regarded him with affection, and would not do anything to displease him. In fact he had only to speak, and all was peace and quietness.
1229. What was the cause of Mr. Gorman giving up the lower deck? I cannot say. I believe some misunderstanding between himself and Mr. Martin. I know nothing of my own knowledge.
1230. You do not think the removal of Mr. Gorman tended to the good management and order of the ship? Of the lower deck. He had nothing to do with the upper deck, as far as order was concerned.
1231. You consider that the removal of Mr. Gorman from the lower deck tended to disorganize the boys? From not visiting them with immediate chastisement. I do not know whether Mr. Gorman is removed, except from the circumstance that, when boys misconducted themselves, or went to sleep at their work, which they are very apt to do, I had to report the matter by writing it on a slip of paper and handing it to Mr. Gorman in the evening before I left the ship, who transmitted it to Mr. Martin, next morning I believe, so that they might be punished; but one morning I took the report as usual to Mr. Gorman, who referred me to Mr. Martin, saying—"He has taken the charge out of my hands." It was only in that way I knew Mr. Gorman had given up charge—he said he would not accept my report.
1232. Since Mr. Martin has taken charge of the lower deck, what has been the general conduct of the boys—has it been better or much worse than it used to be under Mr. Gorman's supervision? It is not so good as it was, simply because Mr. Martin is not down there so much as Mr. Gorman; he has other duties to attend to, and there are only the warders there, to whom they pay no heed. If Mr. Martin were there as much as Mr. Gorman, peace would be restored; because the moment Mr. Martin sets his foot below, there is order.
1233. *Mr. Parkes.*] Apart from the "Vernon" altogether—confining yourself to your own trade—do you think you could make the work performed by the boys under you so remunerative as to meet the cost of their support? To take the whole of the boys?
- 1234.

\* NOTE (on revision) :—There were two cases which I had forgotten :—One in which a boy named McGrane was not punished at all for making use of indecent language to females alongside the ship; the other was the case of Petit and Beckyham, which was not punished for two or three weeks after it was reported. With the exception of these cases, the officers have been prompt in administering punishment, so far as I have had means of knowing.

1234. No. Suppose you had forty or fifty boys under you, without any impediment to your carrying on the industrial training of the boys entrusted to you for instruction, do you think you could in time make the work done by the boys sufficiently remunerative to meet the cost of their support? I am hardly prepared to say.

1235. You could make it much lower than it is at present? Yes; because in training boys in the first instance you have to waste a good deal of stuff, which you would not do after they had been with you twelve months.

1236. Have you made a calculation of the results of your labour now? No; I was not aware that I should be examined upon that point.

1237. Could you form some estimate of the results of the boys' labour for a given time, say a week or a month, or for any other period, taking the cost of the material used, the expense of victualling and clothing, so that the Committee might see the difference between the cost and the actual profit? I could not do that, because I do not know the actual cost of the material used on board.

1238. You could do this, at all events,—you could give the number of pairs of boots turned out in a week, or in any other stated period; you could give the value of the material, and the market value of the goods when turned out? I could not do that at present, because the stuff is used up.

1239. You do not mean that you have stopped work? I have not yet, but I have sent in a requisition for more stuff for six months' supply; and the captain said he should not bother about it—he would set the boys to do something else, as we should be two months without supplies.

1240. Even supposing that to be the case, I do not see how that can stand in the way of giving in this return. You know the market value of boots of the description made by you, and also the cost of material? I do not know the price paid by Government, but I believe it to be very high; as an instance, I had to get a box of eyelets the ordinary price of which is 1s. 10d., and I was told the price of these was 6s. 6d.\* (*Vide Appendix B.*)

Mr. J.  
Pickering.

19 Feb., 1869.

Mr. Edward Byrne examined:—

1241. *Chairman.*] You are one of the trademasters on board the "Vernon"? Yes.

1242. How long have you been so employed? Seven months and nineteen days.

1243. Have you had any improper practices, on the part of the boys, brought under your notice since you have been there? I have.

1244. When? Frequently.

1245. Will you specify some instances? Upon one occasion I was told a case of sodomy had occurred.

1246. Will you state what you know yourself? I know nothing of my own knowledge.

1247. You only heard it by report? That is all.

1248. Do you know of any other instance of improper conduct? Yes; a case was told me by several boys, that occurred with a boy who went away to sea, and who is now in the harbour.

1249. That did not come under your observation? No.

1250. *Mr. Parkes.*] That was before you were in the ship? Yes.

1251. You used the adverb "frequently," just now? Yes.

1252. Did you mean to apply that word to reported cases of sodomy? No, to bad practices.

1253. Immorality? Yes.

1254. You did not mean that reported cases of sodomy occurred frequently? No; three times.

1255. *Chairman.*] And of those cases you knew only by report? That is all.

1256. Have they occurred since you have been on board? Since I have been on board, although I have heard of other cases.

1257. You do not know of any other cases of immorality? No; I have heard of others.

1258. They have also occurred since you have been on board? No.

1259. *Mr. Parkes.*] Did any cases come under your own observation? None whatever.

1260. *Chairman.*] How many boys have you under you? Thirteen is the largest number I have had. If the boys had had their own choice, I might have had double the number.

1261. How do you know that? I know that for several reasons—from the boys themselves telling me they desired to be tailors. In one case the mother of a boy whose father keeps a large shop in George-street, came to me, and requested me to speak to the captain about it. I told her she had better do so herself, and she afterwards told me she had done so, and he had refused.

1262. Do you know of your own knowledge that the captain or officers ever tried to persuade the boys from being tradesmen? Only from the boys who have told me that the captain and the first officer have tried to persuade them to go to sea, or to go bullock-driving.

1263. Have the boys themselves told you this frequently? Yes.

1264. Different boys have told you that? Yes.

1265. At different times? At different times. Very lately—since this inquiry has been going on—the first officer asked one of my boys if he would not like to become a cook.

1266.

Mr.  
E. Byrne.

19 Feb., 1869.

\* NOTE (on revision):—I find I am in error here, as I have since found, by reference to the contract list, under the head of stationery, that these things are tendered for at 1s. 6d. per box, so that I have actually paid more by 4d. per box than the Government.

- Mr. E. Byrne. 1266. Did he tell you that himself? Yes.
1267. You never have more than thirteen boys? That is all.
1268. And you are satisfied you might have had more, if they had not been persuaded by the officers not to learn your trade? Yes.
- 19 Feb., 1869. 1269. *Mr. Parkes.*] Is it not the superintendent's duty to inquire of the boys what trade they would like to be, and even to advise them in the matter? I do not know what his duty is.
1270. Have you never read the Industrial Schools Act? No.
1271. As a matter of fact, it is his special duty—So far from its being any impropriety in him to inquire of the boys and to advise them as to their trades, he would neglect his duty if he did not do this very thing—Are you not aware of that? I think it is very improper, in this way:—If the Government think fit to employ me as a tailor on board with the view of instructing these boys, after I have been instructing them for six or seven months, and trying to bring them forward, it is unfair of the head of the department to endeavour to induce them to leave me, to go to sea or to bullock-driving.
1272. Did it never occur to you that it is no part of your business to form an opinion upon the subject? I have formed the opinion, but I kept it to myself until you asked me. I have never asked the boys, when they have come on board, to be tailors, but they crowd around me and say they wish to learn the trade.
1273. *Chairman.*] When the boys come to you in the first instance, are they sent by the captain? Yes.
1274. And you are satisfied, from what has come under your observation, that an influence has been at work to dissuade them from being tradesmen? I feel quite satisfied of it.
1275. Do you think the present arrangements as to the time for learning trades are the best that can be made? I do not think they are.
1276. Could you suggest any improvements? I think I could.
1277. Will you state them? I think, in this way:—To commence work at 9 o'clock; they have then during the morning to help to clean the vessel. From 1 to 4 half the boys could be at tailoring and half at school, alternately. I think 4 o'clock is sufficiently late for the boys to work; in fact, the sailor boys often do not work later than half-past 4. The tailors and shoemakers are down below at work while the other boys are at play, and it looks to the former like a punishment.
1278. You think work on board, whether on the part of sailors, tailors, or shoemakers, should cease at the same time? I think so, as the boys have been up from half-past 4, which I think is too early, if I might venture to express an opinion. In fact, the boys are often so weary that they go to sleep over their work.
1279. *Mr. Alexander.*] Of course you are aware that the bulk of these boys are taken off the streets? Yes.
1280. You have stated that the mother of one of these boys keeps a large shop in George-street? Yes; I can give her name —
1281. *Chairman.*] You said, just now, that the boys were taken away from you suddenly, without any reason being assigned? I said it would be very unfair to remove them in that way, but the two officers have tried to do so, as far as I am informed.
1282. Have any of the boys who have been learning your trade of you been sent away from the ship? No.
1283. Your statement is, that attempts have been made to get them away? Yes.
1284. *Mr. Farnell.*] Who made the attempt? Both the officers—that is, the captain and first mate. It was so reported to me.
1285. *Chairman.*] You know that through the boys themselves? Yes.
1286. Although it may not be your business to form an opinion in the matter, you think the officers should not take them from you suddenly? I think so.
1287. What is the longest time that any particular boy has been under you already? I have had two or three, I think, ever since I was appointed.
1288. Do you find them generally willing to learn your trade? Generally willing.
1289. Do you find the boys obedient and submissive? There is only one out of the thirteen that I cannot give a good character to.
1290. Do you find them as willing to learn their business as other boys you have met with? Yes; they are very sharp and quick.
1291. Have you had much experience among apprentices? In several shops where I have been they have had apprentices.
1292. Have you found these boys quite as well-behaved as those in the shops where you have been? Yes, rather more forward in picking up their business.
1293. *Mr. Tighe.*] They would have their wits sharpened in the streets? Yes.
1294. *Chairman.*] Their behaviour in the ship was as good as that of boys in the shops where you have been? Quite as good, as far as I can see.
1295. Have you had every facility you required to enable you to teach these boys? There have been some little drawbacks; one is, that I cut out at a table placed aft, and on Saturday there are perhaps fifty boys around me on the lower deck, scrubbing it with cocoa-nut husks and sand, and the water is thrown down from buckets, so as to wet my feet, and often the work itself.
1296. Could the work you have been doing been done at some other time? I have asked Mr. Martin to hand-wash the deck. I would have been willing to stand to cut out in the wet, but I wished to be out of this eternal wash. He said it would be breaking the rules of the ship, that it must be washed fore and aft, and it could not be done in any other way. I have been placed in that position for seven months, and have never gone home with dry feet on Saturday.

1297. *Mr. Farnell.*] I suppose you would like to have a nice little establishment fitted up for yourself and boys? I have been at sea before—I have spent between three and four years of my life at sea, and when I went on board the "Vernon" I expected to meet with some difficulties.
1298. When you were at sea, were you engaged as a tailor? I did not expect too much when I went on board.
1299. *Chairman.*] You think, with the means at their disposal, they could give you better accommodation? Yes; as a proof of that, since this inquiry commenced, when there was washing down, the captain or mate, I am not certain which, gave orders that I could cut out in the school-room. There is no school held on Saturdays, and the same course might have been taken the whole seven months, without inconvenience to any person.
1300. For whom do you make clothes? For the boys.
1301. Have you any statement to show what work you have done since you have been on board? I have a rough calculation. I could not get a proper account from the purser, but I took this from a book I kept for my own information; and I find that, during the time I have been there, we have made 287 pairs of trousers, 150 flannels, 93 serge shirts, 228 dungaree jumpers, 128 caps, besides repairing, which is done frequently.
1302. *Mr. Tighe.*] You save the ship a great deal of money in making these things—I suppose you would have to buy them if they were not made on board? Certainly.
1303. *Chairman.*] Have you made any estimate of the value of the work? I have not.
1304. As compared with the cost? I have not.
1305. You could do it? Yes.
1306. *Mr. Farnell.*] You know nothing of these bad practices you have spoken of? No.
1307. Only what you have been told by the officers? Yes.
1308. By the boys and officers of the ship? By the boys and officers.
1309. Has not Mr. Martin lately undertaken the duties which Mr. Gorman used to perform? Yes, I understand he has, as regards the lower deck.
1310. Is there as much order and regularity on the lower deck as there was formerly? By no means.
1311. How do you account for that? Mr. Gorman being constantly on the lower deck, and personally superintending, he was there to correct any impropriety that might transpire, whereas Mr. Martin came down only occasionally; he could not see what took place—his duties took him all over the ship.
1312. Do you punish the boys? No, I never lifted my hand to or struck a boy since I have been on board.
1313. You report them? I report them when they misbehave themselves. I used to report them to Mr. Gorman, and that is how I found out that Mr. Martin had taken charge of the lower deck, for I was informed that I would have to report to Mr. Martin instead of to Mr. Gorman.
1314. You know that the "Vernon" was established as a nautical school for the purpose of training boys for sea? I do not know what the intention was.
1315. Have you never read the Act? Never.
1316. *Mr. Parkes.*] Was she not called the nautical school-ship? Yes.
1317. *Mr. Farnell.*] How is the material used by you supplied—by contract? I believe it is, but I have had nothing to do with ordering the material. I might, however, say, that the material which has been purchased is of the very worst description—it is most unsuitable for the boys, and the consequence is that they are beginning to be in rags.
1318. *Mr. Parkes.*] Have you complained of that—have you taken advantage of the visits of the Inspector of Charities to mention it? I am not permitted to make any complaint.
1319. Have you spoken of it, in order that it might be reported? I have said to the purser that I thought it was very bad stuff, but the captain said he believed it was very good—that, indeed, he was accustomed to use it when he was a boy; but it has turned out to be very inferior.
1320. *Mr. Alexander.*] What kind of stuff is it? Chinese dungaree.
1321. *Mr. Farnell.*] The material is given over to you, and you have no power of rejecting it? No power whatever.
1322. Have you a sewing machine on board? No, there was at first.
1323. Do you teach these boys to cut out? No, I have not come to that stage of the business yet.
1324. Is there any want of cleanliness on board? In the boys under me?
1325. Yes? None whatever.
1326. With the boys generally in the ship? Do you mean as regards lice?
1327. Yes? I have seen them in any quantity.
1328. In their heads? Yes, and on their clothes.
1329. Were they brought there by the boys from the shore? I have no doubt of it. But when I went on board they were very filthy with lice; so much so that I took some of the boys myself to Mr. Martin, and stated that they were unfit to be sent down to me.
1330. How long had these boys been on board? Some months.
1331. *Mr. Tighe.*] Might these lice have been harboured in the ship? I should not think it.
1332. Are they not sometimes in ships? I never heard so.
1333. Do not ships that have brought over Chinese sometimes get a number of lice in them? Not head lice; I think they do not live in any place but the head.
1334. It is only head lice you have seen on the boys? I have seen body lice on them.

Mr.  
E. Byrne.  
19 Feb., 1869.

- Mr. E. Byrne. 1335. These are brought on board and remain in the ship? Yes, no doubt. After I have left the ship—although I have changed my clothes—I have found lice on me when I have got home.
- 19 Feb., 1869. 1336. Do you think the labour required from the boys is too great? I do.

Mr. William Cook examined:—

- Mr. W. Cook. 1337. *Chairman.*] You are employed on board the Vernon? Yes.
1338. What office do you hold? Quartermaster.
- 18 Feb., 1869. 1339. How long have you been so employed? I have been in her about eleven months.
1340. Will you explain what are your duties? My duties on board are to keep watch night and day, and to instruct the boys, when not on duty on the poop; to keep boats away at night; to hail the lower deck at night, and to see that all is right. When not on duty on the poop, each quartermaster takes it in turn to go in the boats, and to instruct the boys how to pull.
1341. The boys are constantly under your supervision? Yes. The quartermaster on the poop is not supposed to leave the poop. There are four quartermasters: one below, two knocking about the decks instructing the boys, and the other on the poop keeping the time.
1342. Have you ever observed any improper conduct on the part of the boys? I reported a case to the chief officer about six months ago.
1343. What was the offence committed? I did not see the offence actually committed, but I found the two boys together, with their clothing unfastened, in a position of great suspicion.
1344. *Mr. Parkes.*] Do you know whether the medical man who visits the vessel was spoken to about this? I do not know.
1345. *Chairman.*] Were both these boys punished? Yes.
1346. Do you know of any other instance of immoral conduct on board the vessel? No.
1347. What is the behaviour of the boys generally? Generally, take them all through, they are pretty fair boys, considering that a great many of them are taken off the streets.
1348. There are only a few who are very vicious? Yes.
1349. *Mr. Parkes.*] You are a sailor, of course? Yes.
1350. And have sailed in ships where there have been boys? Yes.
1351. Are the boys on board the "Vernon" as well behaved as boys on board ordinary ships that you have seen? Yes, they are, as a rule.
1352. *Chairman.*] Are the boys as submissive and respectful as most boys elsewhere? Yes.
1353. Are those boys who have chosen the sea as a profession likely to make good seamen? Yes. Some of the boys who have been sent away are smart active boys, and I have seen some of them since they have come back from sea.
1354. Do you know what kind of trade the boys prefer to learn on board—whether they like to be sailors, shoemakers, or tailors, as a rule? I do not think many of them care about being sailors.
1355. They prefer trades? Yes.
1356. Have you ever been present when the boys have been asked by the superintendent of the ship as to what business they would like to learn? No, I have not.
1357. When you say that the boys prefer trades, is that what you have heard themselves say? That is what I have heard themselves say.
1358. Are the boys on board the vessel generally clean in their personal habits? Some are very clean, and some are dirty in their habits.
1359. Could some arrangement be made, by which the boys who are learning trades could leave off work at the same time as those who are learning seamanship? That could be done.
1360. Is there any reason why boys who are learning to be sailors should not work as long as those who are learning to be tradesmen? No, I cannot show any reason why.
1361. Is it not the case, that the boys who are learning trades are at work an hour and a half, or two hours, longer than those who are learning to be sailors? Yes, it is the case.
1362. I believe the sailor boys leave off at 4 o'clock, and the others at 6? Yes.
1363. Is that undesirable, do you think? I think it is right, as far as that goes, that the tradespeople should work till 6 o'clock.
1364. *Mr. Farnell.*] Do the superintendent and officers of the ship agree pretty well together, as far as you know? Yes, as far as I know.
1365. Do you think these boys are too many hours employed at labour? I do not know much about it myself. I never was in a man-of-war. They say they are man-of-war's rules on board; but there is a boatswain's mate on board who knows more about it than I do, and he says the hours are too long.
1366. For little boys? Yes. There are about thirty very small boys who are not able to do anything.
1367. Do you know what hours they have for play or recreation? Ten minutes in the morning, and ten minutes in the afternoon, and meal hours.
1368. *Mr. Alexander.*] About this difference between the chief officer and the master-at-arms, do you know anything of the reasons for Mr. Gorman's removal from the charge of the lower deck? I am not aware of his being removed from the lower deck.
1369. His functions have been taken away from him? I believe there has been a little difference between Mr. Gorman and Mr. Martin, about Mr. Martin taking full charge of the lower deck.
1370. Do you think that has tended to improve the order and discipline in that portion of the ship? No, I do not.
- 1871.

1371. Is it now as efficient as when Mr. Gorman had charge of it? No.  
 1372. Has Mr. Martin been on board a man-of-war? I am sure I do not know.  
 1373. I suppose you know that Mr. Gorman has? Yes.  
 1374. Is it not considered necessary that the same regulations should be carried out on board the "Vernon" as those on board a man-of-war? Yes; it is supposed that all the rules are carried out there the same as on board a man-of-war.  
 1375. You do not know whether they are or not? No; I have never been on board a man-of-war.  
 1376. *Mr. Farnell.* Are the provisions supplied on board generally good? They have been pretty bad till the last three months.  
 1377. Have all kinds of provisions been bad? Yes.  
 1378. Are they better now? Yes, they are better now; I believe the captain spoke about it.  
 1379. *Mr. Alexander.* What is the general clothing of the boys; is it good or bad? It is pretty good, considering the stuff they have got—it is blue dungaree.  
 1380. Does that wear well? Yes, it is good clothing for summer, but not for winter.  
 1381. Do you mean that they have nothing but dungaree material for winter clothing? Since I have been on board they have had some of that dark blue cloth made for winter.  
 1382. For trowsers and coats? Yes, and serge for shirts.  
 1383. How does that wear? It seems to wear very well. Since the tailor has been on board he has been making dungaree clothing.  
 1384. Do you consider that suitable stuff for the boys' clothing? In summer-time. Of course they wear flannels under their dungaree jumpers.  
 1385. Would not duck be a better material? Yes, a deal better.  
 1386. Why is it not used? I do not know.  
 1387. Have you never represented to the purser that duck clothing would be more suitable for the boys than this dungaree? I never have.  
 1388. You have thought so? Yes; duck is mostly used in the Navy.  
 1389. Duck and canvas? Yes, and serge.  
 1390. For winter, what would you suggest as the best material for clothing? I should think, for the boys, serge.  
 1391. Would not that be too light—would not pilot cloth be better? Yes.  
 1392. *Chairman.* Whose business is it to examine the provisions when they are brought on board the ship? I do not know; I never saw any one examine them.  
 1393. Does not the purser go to receive them? Yes.

Mr. W. Cook.

19 Feb., 1869.

FRIDAY, 26 FEBRUARY, 1869.

Present:—

MR. ALEXANDER.	MR. FARNELL,
MR. W. CAMPBELL,	MR. NEALE,
MR. TIGHE.	

RICHARD DRIVER, JUNR., ESQ., IN THE CHAIR.

Haynes Gibbes Alleyne, Esq., M.D., examined:—

1394. *Chairman.* You are medical officer of the ship "Vernon"? I was asked to do the duty till other arrangements were made, and I have been doing the duty since it has been established. H. G. Alleyne,  
Esq., M.D.  
 1395. Have you been in the habit of visiting the ship frequently? Every day almost; certainly six times a week. 26 Feb., 1869.  
 1396. What has been the average duration of your visits? Various—from five minutes to half an hour.  
 1397. Are the boys generally healthy on board? Yes, very healthy. Until lately there was an epidemic sore throat among them, which I attributed to the dampness between decks.  
 1398. Are the 'tween decks very damp? They are; but measures have been lately taken to dry them by means of swing stoves.  
 1399. At whose suggestion? I suggested that.  
 1400. How long since? Some time since I suggested that; I forget when they were procured.  
 1401. Did you not complain to the captain of the dampness between decks? Yes, I mentioned it to him, and asked him to make a requisition to the Colonial Secretary for the supply of these stoves.  
 1402. Do you recollect when that suggestion was made? No; but it is some time since.  
 1403. Upwards of three months? Yes.  
 1404. Six months? I should think so.  
 1405. When was it carried out? It was carried out intermittently always, but I do not think regularly.\*  
 1406. I believe you have cautioned them against washing between decks? Yes, I have. From the first I disapproved of frequent washings—at least, of washing more frequently than could be avoided. In fact, I would not have had them washed at all if I had had my own way in the matter; but the captain stated, and there was some reason in it, that the nature of the wood being soft, the decks did not stand holystoning, as they got scruffy.

\* NOTE (on revision):—The swing stoves were furnished immediately, and the use of them has been carried out intermittently, but I do not think regularly; but they have been used, I believe, whenever the decks were washed.

H. G. Alleyne, scruffy. I have asked that the decks should be washed, when necessary, with fresh, instead of salt water, as the salt water soaks into these soft boards to such an extent, that, when it is damp weather, the place is not fit to be inhabited.

26 Feb., 1869. 1407. It is unfit for children? It is unfit for children, or any other persons, when allowed to remain damp. I think that the decks are now washed with fresh water, and the stoves lighted afterwards.

1408. Was this washing between decks continued after you had spoken about it? It was; and they used the stoves afterwards.

1409. I believe you have given orders for fires to be lighted on the lower deck? Yes; these swing stoves were to be used; these are the fires.

1410. How many of them were lighted at one time to commence with? I do not remember. I never superintend the operation myself; I do not consider that part of my function; in fact, I have no authority. I only suggest these things as matters of sanitary arrangement, but I think they ought to have half a dozen on board: it is a large deck. I do not know in practice what was done.

1411. You say some of these boys have suffered from sore throat? Latterly they have been free from it; for some weeks—they are quite well now.

1412. Were those boys under your attendance? Yes. I saw them all and prescribed for them, and directed what should be done for them.

1413. Do you remember ordering mustard poultices for some lads? Yes, at that time I ordered a good many.

1414. Did you see those boys afterwards at work on the following day? I do not know that I did on the following day. I generally turn them out myself. My instructions are that, if they are seriously ill they shall not be dismissed for work till I direct.

1415. Have your instructions been attended to on all occasions? Probably not on all occasions, but generally they have been.

1416. Cannot you call to mind a particular case in which you complained on board? No.

1417. You have no recollection of having done so? No; except in the case of the purser, who sent one Sunday to me to see him, as he was very ill; and when I went off, the following day, at great inconvenience to myself, to see him, I found he had gone ashore, and I was very much annoyed about it.

1418. Are there any medical comforts on board the ship? Yes, a few. There is no store of medical comforts kept there. I recommended they should not be, as I believed it would be attended with great waste, as there was no convenience on board for keeping or issuing them; and I thought it better, when there were any special medical comforts required, to order them off as they were required, at the time, in small quantities. I think that is the course pursued.

1419. Have you ever ordered any to be given to the boys? Yes, from time to time. I look upon milk as a medical comfort, and arrowroot, and things of that kind; and I always order these when I see boys sickly or weakly, and not able to take the ordinary food of the ship.

1420. You say the boys on board are generally very healthy? I think they are. I would not actually call them healthy, robust boys; but I think any one who had seen them when they went on board and who saw them now, would admit that they were greatly improved in *physique* since they have been on board. A large number of them came on board with broken down constitutions—sickly, delicate looking creatures—but I think they are improved in their *physique*.

1421. Do the boys suffer from ringworm and other skin diseases? A great many. Ringworm is not an easy thing to cure rapidly in individual cases, and it naturally spreads among a lot of boys; there is always some case of ringworm.

1422. Always?\* I dare say there is. I have directed what should be done as cases appear, but it is a kind of thing which spreads very rapidly.

1423. I suppose you merely pay a flying visit to the ship? No. Although I receive no pay for it, I take as much trouble as if I got a regular salary for it; and I see the boys in the same way as if they were patients for whom I was to be paid.

1424. Do not you think if you were visiting patients, and any of them were suffering from ringworm, you would see it? I only see the cases that are brought to me. I have not time to go round and examine every boy. When I go on board, after visiting those I know are sick, I ask the officer on deck if any others are sick, and if he tells me there are, I have them brought on deck and examine them.

1425. Can you suggest to the Committee any improvement in the management of the ship? In what respect?

1426. In any respect? If you refer to the general management, I have thought from the beginning that there has been a want of discipline throughout the ship. The commander, in the first place, seemed to me never to have sufficient authority to deal with cases. He had not the authority of a commander of a man-of-war, or even of a merchant ship. He did not seem to have the power of the superintendent of an ordinary establishment on shore. He got instructions from the Colonial Secretary's Office, from time to time, as occasions arose which required them; but I believe, until lately there have been no rules issued at all with respect to the management of the ship, excepting these which he received from the Colonial Secretary; now, however, there is a code of regulations which has been issued by the authority of the Governor and Executive Council.

1427. Mr. Tighe.] Do you think the defects in the management are attributable to incapacity on the part of the captain, or to his not being armed with sufficient authority? To his not being armed with sufficient authority. I do not think any man, however good

he

\* NOTE (on revision):—I dare say there is, on account of the frequent importation of the disease furnishing fresh sources of contagion. I have directed what should be done, &c., &c.

he might be, would have a ship or any establishment in efficient order without having more authority than he appeared to me to have.

H. G. Alleyne,  
Esq., M.D.

1428. *Mr. Farnell.*] Have any complaints been made to you of any malpractices—such as boys having been guilty of unnatural offences? No; of course they would not make any complaint to me—it would be considered a thing out of my province altogether; but

26 Feb., 1869.

some time ago, the captain of the ship told me that an attempt of that sort had been made, and asked me what I thought he ought to do. I recommended him to have the boy flogged. He said he could not do it without reference to the Colonial Secretary's office, to get instructions as to what course he should pursue in reference to such disgraceful conduct; and I believe he was informed that he had no power to do anything of the kind, in the absence of regulations approved by the Governor and Executive Council.

1429. Have you noticed that any of the boys have been filthy in the head—that they have had vermin about them? Yes, I have noticed lice on one or two occasions; and I have given my opinion as to the best mode of dealing with such cases. Almost all the boys who come on board have lice; and of course vermin rapidly spread among a number of boys, unless individual cases are at once dealt with, and the animals exterminated. I recommended that, when boys were brought on board, their hair should be cropped short; but I believe there was some objection to its being done. There have been many cases of lice on board, on account of the many importations, but I believe the boys are all clean now.

1430. The regulations of the ship, as regards the labour of these boys, are, that they shall turn out at half-past 4 in the morning in the summer, and turn in at 9 at night; and it appears that they have very little play during that interval. Do you think these hours too long for boys such as those on board the "Vernon"? I do not think so. There are a great many boys there who ought not to be there at all—they are too young. Some are there who ought to be under the care of women nurses; but I do not think the kind of work they do is at all injurious to them. They are sitting down, and learning various things—shoemaking work, for instance. They are not kept hard at work. A good deal of the work they do is out-of-door work upon the deck, which is good exercise for them. Others go in boats, but they are never over-worked; and I think, indeed, it would be better if they were kept a little closer at work.

1431. We have been told in evidence that some of these little boys go to sleep at their work? I have never remarked that myself, but it is very possible the boys do as they would at school; but I think the general appearance of the boys shows that they do not suffer, for the *physique* of the boys has improved wonderfully.

1432. Are the boys on board the "Vernon" constitutionally healthy? A good many of them have bad constitutions, strumose constitutions, probably in many cases from their birth, and in other cases generated by bad diet and hardship when very young.

1433. Has your attention ever been called to the diet on board the ship? Yes; and some alterations were made at my suggestion. The diet at first was very liberal, but it appeared to me to be more suitable for adults than for children, and I made some alterations, such as giving them treacle, and hominy, and in some cases varying it. I think, upon the whole, it is a good diet; they seem to thrive on it.

1434. Have any complaints been made to you as to the quality of the diet? On two occasions: one with respect to the meat, and the other with respect to the milk furnished when ordered by me. A representation was made to the Colonial Secretary's Office on the subject, and in each case the cause of complaint was removed.

1435. *Mr. Campbell.*] Are not the boys, when put on the sick-list, kept separate from the rest till you allow them to mix with the others? You mean to say they are not discharged from being sick?

1436. Till they are discharged they have slept separately? That is the rule.

1437. You do not know whether it is carried out? I think it is.

1438. Do you not think that rule ought to be strictly enforced? Undoubtedly; but there is no actual division. They all sleep on one clear deck, but the sick are kept in their hammocks.

1439. Like a sick boy? The hammocks are swung towards the stern—towards the after part of the ship.

1440. Ringworm could easily be eradicated? I do not put the boys to bed for ringworm.

1441. Could you not keep those boys who have ringworm separate from the other boys? Not unless there were a barricade erected.

1442. *Mr. Tighe.*] You have nothing to recommend except the extension of the captain's power? That appears to me to involve the whole question as respects discipline, &c., &c. I do not think a man ought to be at the head of an establishment of that sort, unless he is fit to be entrusted with sufficient power to conduct it properly. I do not think it possible for any person to work it efficiently without extensive powers.

1443. As far as his power has extended, has he conducted it to your satisfaction? I think he is a very active man in the discharge of his duties.

1444. *Mr. Campbell.*] As far as you know, do the captain and subordinate officers get on together—do they pull together? I believe they do not, generally speaking.

1445. You think that is entirely in consequence of the captain not having sufficient power in his own hands? I think so.\*

\* NOTE (on revision):—But it is right that I should add, that I have no knowledge of the nature of the instructions that the captain received for his guidance, and that I have formed the opinion I have expressed on this point solely from statements that he has made to me, and from remarks that I have heard made by some of the subordinates, to the effect that they regarded him more in the light of a teacher of navigation and seamanship than in that of the head and director of the institution.

WEDNESDAY, 3 MARCH, 1869.

Present :—

MR. BURNS,	MR. FARNELL,
MR. W. CAMPBELL,	MR. PARKES,
MR. TIGHE.	

RICHARD DRIVER, JUNR., ESQ., IN THE CHAIR.

Henry Parkes, Esq., M.P., examined in his place :—

Henry Parkes, 1446. *Chairman.*] You are a Member of this Committee? I am.

Esq., M.P. 1447. You desire, I believe, to give some evidence to this Committee? There are several points upon which I think it would be desirable that the Committee should have my evidence.

3 Mar., 1869.

1448. You recollect the time when the training-ship "Vernon" was purchased by the Government? I do.

1449. You then held office as Colonial Secretary? I did.

1450. And the whole of the arrangements connected with the conversion of that vessel into a training-ship were brought about by you? Not exactly. I was a Member of the Government at the time; and, in the office I held as Colonial Secretary, it came within my department to bring into operation the provisions of the Industrial Schools Act of 1866. Under that Act the "Vernon" was established as an Industrial School, but the arrangements under which my action was taken were of course the result of Cabinet deliberations.

1451. The establishment of these Industrial Schools was a matter in which you took a very great deal of interest at the time? Yes, I took a considerable amount of interest in the establishment of the "Vernon" as a training-ship. The Industrial Schools Act, as the Committee are aware, is unlike most Acts of the kind with which I am acquainted, inasmuch as it gives power to seize boys who may be found in certain conditions, and does not authorize the receiving of destitute children, merely because they may be in destitute circumstances. For example, if a widowed mother on her death-bed wishes to hand over her child to be brought up and trained on board the "Vernon," the authorities have not the power to take the child even at the mother's wish. The child must be found, at the time he is taken, in one or other of certain states of existence described in the Act—sleeping out-of-doors, without a home, in company with vagrants, thieves, or prostitutes, or some similar position laid down by the Act—then the law gives power to the police to apprehend the child, and bring him before a Magistrate. I am not aware of any Act containing similar provisions being in operation in any other country.

1452. You have heard most of the evidence which has been given before this Committee? About the half of it. I have not been able to attend all the meetings of the Committee.

1453. Can you offer any suggestions to the Committee with regard to the improvement of the management of the vessel? I do not think I can. If the Chairman does not desire to ask me any more questions as to the origin of the institution, I would like to state to the Committee the considerations which influenced me in establishing the "Vernon" as a training-ship, and the main object the Government had in view in establishing it.

1454. We shall be happy to hear them? I do not remember distinctly what special circumstances operated on the minds of my colleagues, and led them to decide upon establishing the first Industrial School afloat instead of on shore; but I have no doubt that I myself was influenced by the facts adduced before a Select Committee of the old Legislative Council, appointed, on my motion, to inquire into the expediency of establishing a Nautical Training-school in our harbour. That inquiry was conducted by me; and the result of the evidence obtained was to so forcibly impress on my mind the necessity for the establishment of a school of the kind, that I was mainly influenced by that in the decision which I came to. At the same time, I cannot call to mind the circumstances which influenced my colleagues in coming to this decision. It was decided then that the first Industrial School should be afloat, and the "Vernon" was the vessel selected for the purpose. She was purchased from Towns &amp; Co.; and she was chosen because, of all the vessels available in the harbour, from her build and arrangement, she appeared to be the best adapted for the purpose required—from her superior beam, and her spacious 'tween decks, offering an amount of room and accommodation which must be noticed by every person paying her a visit. The object in the first instance was simply the establishment of a Nautical School. For that only was the "Vernon" purchased, for that only was she intended, and she is described in all the Government papers and official documents as the Nautical School Ship "Vernon,"—that is the designation given to the vessel and invariably used in all official correspondence. Thus, though she is an Industrial School under the Act, she has always been designated the Nautical School Ship, and was designed from the first to be a Nautical School Ship, and that alone. No thought of introducing trades, such as are now taught on board, was for a moment entertained when the training-ship was first established. Prior to the Act coming into force the Government had been given to understand that there were a large number of boys in a neglected and destitute state in the lanes and streets of Sydney. It was found, however, when the Act came to be put in force that there were not nearly so many children as had been represented, coming within the provisions of the Act. The "Vernon" had been purchased on the assumption that a certain large number of children would be brought on board; whereas a much smaller number came within the meaning of the Act. Thus, it was seen before long, that there was an amount of room on board the vessel that would not be likely to be filled up for some years to come; and that she was larger than was required merely for

for nautical training purposes. When this conclusion had been arrived at, the next determination the Government came to was that, instead of establishing other schools ashore for teaching trades, it would be better, as a matter of economy, to have these trades taught on board the ship, where every necessary for discipline was already provided. That is how the tailoring and shoemaking came to be introduced on board the "Vernon," at a subsequent stage of the experiment. They were introduced about eight months ago. I thought it necessary that this should be explained, as the explanation offers an elucidation of some of the misapprehensions which have appeared in portions of the evidence. Thus, it does not appear to me at all surprising that the gentleman in charge of this vessel, being a nautical man, with all the feelings and prejudices of his training, should look with disfavour upon the introduction of trades into a vessel which he had been led to regard as a nautical training-ship only. Of course he must obey the instructions of the Government, and conduct the vessel as he may be directed; but there is no doubt that he would much prefer to have the ship confined to the original object for which it had been established, rather than to have trades taught on board. With regard to the general management of the vessel, I think it has been as successful as could have been expected. I have been on board many times, at all hours, and at most unexpected times, without any notice of my intention being communicated to the ship, and I have invariably found the vessel clean and in a state of perfect order. The boys, considering their character and the condition of life from which they have been taken, have generally shown a combined activity and intelligent appreciation of what is being done for them that is highly gratifying. And certainly, in their answers in school, they have evinced an amount of mental quickness and general apprehension quite equal to that shown by boys of the same age and class in most other schools. I have also visited the ship in company with persons well qualified to form an opinion upon the mental and moral progress made by the boys; and these persons have declared themselves surprised at the quickness and mental appreciation of some of these answers, as well as highly pleased at the discipline, cleanliness, and good order of the vessel. With regard to getting the right sort of person to manage an institution of this kind, I may inform the Committee that the difficulty of doing this is very great, even in England. That has always proved one of the greatest obstacles to the successful carrying out of the reformatory system. Even in a country containing twenty millions of population, the great obstacle in the way of proper reformatory treatment is the difficulty of getting persons fitted for the duty—a man with the necessary intelligence and strength of character, at the same time with the patience necessary to enable him to put up with the waywardness and vicious propensities of the offenders, with the sincere and earnest desire of overcoming and correcting the evils—a man who will give them right instruction at the proper moment, whilst at the same time he has that rare qualification of being able to train the understanding to a perception of moral obligations. I remember that the Reverend Sydney Turner, who was Inspector of Prisons, and who had formerly been Inspector of Reformatories in England, says, in a letter to Mr. Adderley, that the main difficulty in the way of successful reformatory treatment had been that of being unable to get persons with the rare combination of qualifications necessary for the proper treatment of neglected children.

1455. Do you think the present superintendent possesses this rare combination? I should not think he did. I should say, judging of his character in so far as it has come under my observation, that he is remarkable for infirmity of temper. This is a very great drawback to the efficiency of any gentleman filling the office of superintendent of such an institution as this. That is his great fault, I believe,—a want of control over his own feelings and temper. I remember a charge being preferred against him, when I was in office, by his chief officer. This was very carefully investigated by the Sheriff and Capt. Hixson, who were appointed by the Government to inquire into it. The result of their inquiry, which was conducted with an amount of patience and solicitude to get at the truth that I have seldom seen exceeded, showed that the superintendent had been exceedingly careful in maintaining discipline and good conduct on board the ship, but that he had the fault of giving way to outbursts of temper.

1456. Were no complaints made to you, whilst in office, respecting the management of the ship? In what way?

1457. By any of the officers employed on board? I do not think I remember any formal complaints being made to me on the subject. Discharged officers have from time to time come to me with complaints, and have made random charges against the superintendent, but they never followed them up or made formal charges in a way I could deal with. I think I recollect on one occasion, a carpenter, who had been dismissed, coming to me with a long string of charges against the superintendent, none of which I considered sufficient to require inquiry.

1458. Was not the Inspector of Charities requested by you to make some inquiry into certain matters connected with this institution? I do not remember at this moment whether he was or was not. If he were so directed, he would have reported, and his report will be in existence.

1459. Do you remember a charge of intemperance which was brought against the superintendent? Yes; that was the charge brought by the chief officer, Mr. Wycherley.

1460. What became of that charge? I have already explained that that charge was not substantiated.

1461. Will the record of the proceedings at that inquiry appear in the Colonial Secretary's Office? Yes. Evidence was taken, and a report was sent in by the Board, accompanied with the evidence. These will be in the Colonial Secretary's Office.

1462. *Mr. Burns.* Was it Mr. Wycherley who made a charge against the captain? Yes.

1463.

Henry Parkes,  
Esq., M.P.  
3 Mar., 1869.

Henry Parkes, Esq., M.P. 1463. And was Mr. Wycherley discharged in consequence? He was discharged as the result of the inquiry by the Board.

1464. Was any charge made against him? That I am not prepared to say; but I believe the report recommended his removal.

3 Mar., 1869.

1465. Was there any charge against Mr. Wycherley before he made the charge against the captain? I cannot remember. The papers are easily procurable, and they will disclose all these particulars. As far as I am concerned, I do not now remember all the precise facts.

1466. In speaking about the object for which the "Vernon" was purchased—from the manner in which you examined the witnesses, it seemed to me that you tried to impress the Committee with the idea that it was in the power of the superintendent to influence the boys in their choice of a trade? I should think it to be the duty of the superintendent to inquire into the fitness of the boys for any particular trade, to consult their wishes, and by judicious questioning to arrive at their true bent, and at the same time to correct by his advice any false notions the boys may have contracted. I think it is a very important part of the duty of the superintendent to pay great attention to this point,—to ascertain the dispositions of the different boys placed under him, and their fitness for various trades and callings, in order to guard against the probability of their arriving at some wrong decision—a decision which in these cases is but too often come to by the pressure of accidental circumstances affecting the boys at the hour. Even in private life, where boys have the advantage of the best counsels, nothing is more common than for a youth to choose a wrong calling, to follow it wearily for years, and then, convinced of his mistake, to throw it up, and to find himself compelled to begin life afresh. If it be difficult for boys under these circumstances to come to a correct conclusion, it must be much more so for boys placed as they are on board the "Vernon." On this account, then, I consider that the superintendent is bound to inquire into and to decide upon the calling for which in his mind the boys are best fitted; and knowing this to be his duty, I should distrust any stories coming to me from second-hand about his advising the boys. And I should distrust it for this reason, that, coming from second-hand, no one could know whether the superintendent was not questioning the boy with a view of getting the necessary knowledge to enable him to form an opinion.

1467. Do you think it desirable that he should discourage them from becoming shoemakers or tailors, and should influence their decision to be sailors? I should not care about giving an opinion on that point, until I see more clearly than I have yet done that he has done so. As I said before, I should disregard all evidence on that point, because, coming from second-hand, his object could not be known.

1468. Then as to the "Vernon," your evidence would lead us to infer that the superintendent had derived the idea that it was to be used as a nautical school, and nothing else? I have explained that he must have had that idea in the first instance. The subject of the alteration was never broached to him prior to its being determined upon by the Government. When it was decided upon, he was sent for by me, and in the interview I had with him, I stated the case very fully to him. I pointed out to him, as I have done to the Committee, that, as there was plenty of room on board the "Vernon," trades could very well be introduced there without interfering with the nautical training, and at much less cost to the public. I took the trouble to explain all this very fully, in order that the thing might be done as harmoniously as possible, and with as little grating of adverse interests as we could contrive. As far as my recollection serves me, instead of making any objection, the superintendent fell at once into the view propounded by the Government, and voluntarily proffered to do all he could to promote so desirable a change. That is my impression of the interview between us; and since then, I have seen no instance of the superintendent dissuading a boy from following any calling he might choose; on the contrary, I have seen him take a very great deal of interest in getting boys apprenticed to country masters, to gentlemen on farms, stations, and so on.

1469. Do you not think the boys ought to be allowed some discretion in the choice of the trade they are to follow for life? I am of opinion that the boys should be left the fullest liberty of choice, the superintendent taking the precaution that no boy should decide upon a calling manifestly improper or unsuited to him, or under immature or false impressions. And more than that, my instructions to the superintendent, repeated times out of number, were that every deference should, as far as possible, be paid to the real wishes of the boys.

1470. Do you not think that these boys will be as useful to the Colony, as tailors and shoemakers, as they would be if they were sailors? Most assuredly. In every case I would leave it to the boy's own natural taste or bent of mind. It would be as unnatural to send a boy to sea, when he disliked the ocean, as it would be to compel a boy to be a shoemaker, when all his wish and desire were for a more active life.

1471. *Mr. Farnell.* As I understand you, the "Vernon" was established solely for the purpose of teaching the boys on board the sailing business? She was established as a nautical school ship, and she is so called in all Government documents. She is designated everywhere in official circles—The Nautical School Ship "Vernon."

1472. Then it was not the intention of the promoters of the institution that the boys on board should be taught trades? Not at the time of the establishment of the vessel.

1473. It was found necessary, after the establishment of the vessel, to make some departure from the original plan? It was afterwards considered desirable to do so, on the ground of economy only. There was plenty of room to spare on board the "Vernon," and it would not have been possible to have established a second institution without going to some considerable expense. We had on board the "Vernon" a superintendent,

and

and all the necessary officers for carrying out the discipline of the vessel; and if we established a second institution, a second and a similar staff of officers would have been required. Thus it was considered cheaper to have the boys who were to be taught trades placed on board the "Vernon," than to create a second establishment. But I never considered this as anything more than a mere temporary arrangement, to last for some four or five years. My own view of the action necessary to be taken, in order to carry out fully and properly the intentions under which the Industrial Schools Act was framed, is that, in addition to the nautical school ship, there should be on shore a trades industrial school, at which the different trades of blacksmith, carpenter, tailor, shoemaker, &c., should be taught to the boys; and that there should also be an agricultural industrial school, in which the boys might learn the ordinary routine of country life, and the duties necessary to be performed upon farming and grazing establishments. There would thus be, at the least, three industrial institutions—a nautical school, a trades school, and an agricultural school—the last being established somewhere in the interior, in connection with a farm of some 200 acres or so.

Henry Parkes,  
Esq., M.P.

3 Mar., 1869.

1474. If boys have been sent on board the "Vernon" after they have been convicted of offences against the law, have they been so sent improperly? Boys are not sent there for offences against the laws.

1475. Are you aware that there are now two or three boys on board the "Vernon" who have been in gaol? That might possibly be, because the case against them has been dismissed, in order to permit of their being afterwards sent on board the "Vernon." It must be illegal to commit them to that vessel as a punishment for an offence; the vessel was never intended for anything of the kind.

1476. It was never the intention, in establishing these industrial schools, that boys and girls who had been convicted of offences, and suffered imprisonment in gaol, should be sent to them? Not exactly. I do not think that there was any intention of shutting these schools against boys who had been previously convicted of offences; but they were certainly never intended for the reception of boys committed to them as a punishment for an offence. For example, if a boy committed a petty larceny and was sent to gaol, and, after undergoing his punishment, was found with thieves or prostitutes, he could be sent on board the "Vernon." He could not, however, be sent there as a punishment for the thieving.

1477. Boys offending in this way should be sent to a reformatory, and not to an industrial school—We have a Reformatory Schools Act, I believe? Yes. The intent of that is to establish schools for young persons who have been convicted of offences; to establish, in fact, a kind of juvenile prison, so that young offenders, perhaps convicted of a first offence, might be kept separated from adults who were older and more hardened in crime.

1478. To send juvenile offenders there, instead of sending them to gaol? Yes.

1479. Is it not part of the duty of the Inspector of Public Charities to visit such an institution as the "Vernon"? Most certainly. He ought to visit the vessel frequently; and I should suppose that he did so.

1480. Have you seen a Report from the Inspector of Public Charities, dated the 28th July, 1868? I have.

1481. In that Report I believe he speaks in favourable terms of the ship and its management? I think he does, from what I remember of it.

1482. He suggests some alteration; and I also see that there are, attached to the same Report, weekly reports from the captain and schoolmaster of the vessel? Yes, weekly reports have been sent in from the captain and schoolmaster, during the whole time the vessel has been established. The superintendent sends in a weekly report, and to this is appended a report from the schoolmaster. The report you allude to embraces all the weekly reports for a given time, since the last report from the Inspector—perhaps a month or six weeks.

1483. *Mr. W. Campbell.* With regard to the inquiry into the conduct of the superintendent, I believe you say that it was not proved that he was drunk upon the occasion referred to? I think it was not proved. My impression, from what I can remember of the case, is, that some very credible witnesses gave it as their opinion that the superintendent was not drunk at the time he was alleged to have been so; and, if I am not mistaken, the Attorney General happened to be on board about the same time that the captain was said to have been drunk, and was in communication with that officer. I do not know if that appears in evidence, but I am aware that such is the fact—that Mr. Martin went on board the "Vernon" with some ladies, that he was in company with the superintendent about the very time when it was alleged that the superintendent was drunk, and that he did not notice that the superintendent was at all affected by liquor. A lieutenant of one of the men-of-war also said that the superintendent had been on board his vessel shortly after the time when he was said to have been drunk, and that he was then quite sober.

1484. Are you aware that the lieutenant who gave that evidence was himself tried by Court Martial, and dismissed the service for drunkenness? I do not remember. The thing occurred some time back, and the particulars have escaped my memory. They will all be found in the papers.

1485. Do you think the captain has sufficient authority in his vessel to enable him to maintain discipline amongst his crew? I think so. He is captain of the ship, and, at the same time, he holds office under the Act as a superintendent of an industrial school. He thus occupies two positions, each of which confers a large amount of authority upon him. In the first place, he has command of the ship, in the same way as he would have of any other ship of which he was captain—he has as full power, as commander of the

Henry Parkes, "Vernon," as he would have of any vessel sailing out of the port, of which he happened to be commander; and, in the second place, he has all the authority which the Act confers upon the superintendent of an industrial school. I am aware that, in a letter to the Committee, the superintendent has suggested that he should have the power of dealing with his crew in his own way, and independently of the Government. I believe that practically he has that power, and has always had it; because no one has ever yet been appointed to the "Vernon" in any capacity, without that person having been first sent to the superintendent to be examined, and without his approval of such person's fitness for the office. The plan I invariably pursued was this:—When an application was sent in for any vacant situation on board the "Vernon," I sent the person applying to the superintendent, to pass him through an examination, and to judge of his fitness for the office applied for. If the superintendent reported the applicant to be fit for the office, he was appointed—that is, if no one fitter than he were pointed out. Thus—if there were five applicants for a vacant office, they would be referred to the superintendent, for his examination and report; and if he reported one of the five to be fitter than the others for the office, that one would be appointed. In this way, I consider that practically he had the selection of his own crew.

Esq., M.P.  
3 Mar., 1869.

1486. But if he found that any who had been appointed were unsuited to the position, could he dismiss them? No; but in all cases where he gave good and sufficient reasons for their not being continued in the service, they would be dismissed. This has invariably been the case. It seems to me that, having had the opportunity of examining applicants and reporting on their fitness, he should show some cause for their dismissal, after they have been appointed.

1487. But he does not then have the same authority on board his ship that captains of other vessels possess? Practically, he has just the same power.

1488. Not if he has to apply to the Colonial Secretary before he can discharge one of his crew? If he has been able to give reasons for any change he has desired amongst his crew, the Government have never stood in the way of that change being carried out.

1489. That is, whilst you were in office? Yes; but I should imagine that any gentleman holding the office I lately filled would follow the same plan, especially in regard to such an institution as this, in which it was so important that the superintendent should have full power. It strikes me that, in such an institution, no Minister would care to take upon himself the responsibility of making appointments independent of the superintendent, but that he would prefer to throw as much responsibility as possible upon the superintendent. I know that was the case whilst I was in office, and I believe that gentlemen who follow me will only be too glad to do the same.

1490. I understand then, that you have not that amount of confidence in the superintendent, as to allow him to discharge his own crew without first appealing to the Colonial Secretary? I certainly cannot recommend any such power being placed in the hands of the superintendent.

1491. *Mr. Burns.* What is your opinion of the suggestion of the superintendent—that the vessel should be removed to Middle Harbour, and that the workshops should be established ashore? I do not say anything about the removal; but it appears to me that, in his suggestion, he has mixed up the two things of a reformatory and an industrial school. He has used language of this kind—that the "Vernon" should be further utilized by being made a receptacle for juvenile delinquents. Now, I doubt very much whether a reformatory and an industrial school will ever act well together—that is, in connection with each other, and in the same institution. Though there will of course be some bad boys amongst those sent on board the "Vernon," yet there are some who are very good boys, who have committed no fault; and it would not be at all right that these should be mixed up with boys of the criminal class. That is why it would never do to mix up the two things, of the industrial school for the purely unfortunate, and the reformatory prison designed for the reception of criminal boys.

1492. No reformatory has as yet been established? I think the present Government has established one for girls, in a part of the building at Newcastle used as a female industrial school. I do not think myself that it will be a success.

1493. You have said that you think it desirable to establish a model farm, as an agricultural industrial school? Yes, I think it would be very desirable.

1494. The boys brought up at such a school would afterwards be more useful to the Colony, than if they had been brought up as seamen, or as tailors or shoemakers? Yes, but the main idea of establishing a nautical training school in a large seaport town like Sydney was, that we should thus be able to collect and rear in habits of industry a large number of boys of the class peculiar to seaport towns—sons of seafaring men, or boys who had been reared about the wharves, and who would thus naturally have some taste for the sea. It was thought that, by getting these boys together, training them to habits of discipline, and giving them a certain amount of education to take out with them into the world, a valuable use would be made of a class of wild natures, which if left neglected would turn out the very worst elements we could have in our community, but which, if well disciplined in such an institution as the "Vernon," would turn out a hardy, well regulated, and reliable colonial marine, which would be a credit to the Colony. I should also like to mention—now that I think of it—when in office, I made it a rule not to apprentice these boys to any one not belonging to the Colony; thus, I would not apprentice a boy as a sailor to any vessel which did not belong to the Colony, invariably refusing to bind them to vessels which would take them away, and so deduct them as it were from our population. I did not think the Government would be justified in bringing up, educating, and training these boys at the public expense, merely to hand them over afterwards to some other Colony or some other country. I had made the same

same rule with regard to other Colonies as I had applied to foreign countries. I had an application from a gentleman in Queensland, who desired to have two or three of these boys as apprentices; but I refused the application, on the ground just stated—that, after all the expense the Colony had gone to, I had no right to send them out of the Colony. I may also remark that I have noticed, when I have been present in Committee, that questions have been put to the different witnesses with regard to the quality of the food supplied on board the "Vernon." On this point I would wish to say, that on several occasions—I think I may say on many occasions—I have visited the ship when the boys have been at dinner. On every occasion when I happened to be present at the dinner-time, I went round the tables, examined the food, eat a portion of the bread, as I always do when I visit public or charitable institutions, and looked at the potatoes or other vegetables, and on all occasions I have found them to be such as I should be glad to eat of myself. On some of these occasions ladies have been with me, and they have also examined the food, and have declared that they considered it to be very good.

Henry Parkes,  
Esq., M.P.  
3 Mar., 1869.

Abraham Springel called in and examined:—

Mr. Abraham  
Springel.  
3 Mar., 1869.

1495. *Chairman.*] You are employed on board the "Vernon"? Yes.  
 1496. In what capacity? As boatswain's mate.  
 1497. How long have you been on board? About twenty-two months.  
 1498. You have been on board continuously, up to the present time, for twenty-two months? Yes.  
 1499. *Mr. Parkes.*] You were amongst the first appointments, I believe? Yes.  
 1500. *Chairman.*] How were you appointed—how did you get engaged as boatswain's mate? I came down to the wharf and saw Captain Mein, at the wharf where the ship was lying when they were fitting her up.  
 1501. Had you any conversation with him? Yes; I asked him if he wanted any hands. He said not just then, but he should by and by. And I said, that if I thought I could get a berth on board, I would not try to get anything else to do until the ship was ready. I left the "Geelong" on her last trip, and was looking for a berth, and I saw in the papers they were fitting out the "Vernon," so I went on board to see the captain.  
 1502. Had you known Captain Mein before? No. I first saw it in the papers, and I went down to the wharf and asked the captain if he wanted a boatswain's mate or a quartermaster. I said I saw in the papers that the "Vernon" was going to be put in commission as a training-ship for boys, and if it was, I said, I thought I should suit, as I knew a little about the service.  
 1503. Did you send in a written application for the berth? Yes.  
 1504. Who did you send it to? To Mr. Parkes, the Colonial Secretary.  
 1505. Were you examined before you were appointed? Yes.  
 1506. Who by? By Captain Mein.  
 1507. Were you ordered to go to Captain Mein to be examined? —  
 1508. And you were examined? Yes.  
 1509. What did he ask you? Whether I was fit for a boatswain's mate or a quartermaster; and I said yes, and that if I was not, I should not apply for the berth.  
 1510. Did he not ask you anything further? No.  
 1511. Not where you had been? No. He knew I had been in the Navy, because I showed him my certificate, and he saw my discharge from the "Geelong."  
 1512. Then you have served in the Navy? Yes.  
 1513. In what capacity? In all capacities—up from a boy to an able seaman.  
 1514. How many years were you in the Navy? Ten years and nine months.  
 1515. And you produced your certificate to Captain Mein? Yes.  
 1516. Did you receive a good character in that certificate? Yes.  
 1517. On seeing your certificate, I suppose Captain Mein recommended you for appointment? Yes.  
 1518. And from the character you received in that certificate, he did not think it necessary to ask you many questions? I suppose not.  
 1519. And you have been on board the "Vernon" ever since? Yes.  
 1520. Do you know how the boys wash their clothes on board? Yes, that is my duty,—to see to the washing of the clothes.  
 1521. And how do they wash them? With their hands, in tubs on the main deck, and with soap and water. They begin about 5 in the evening, and it is sometimes past 8 before they are all finished washing.  
 1522. Then it is your duty to look after the washing? Yes, to inspect the clothes after they are washed, and see that they are properly clean.  
 1523. Have you seen lice on the boys' clothes? Yes.  
 1524. More than once? Yes.  
 1525. Frequently? Yes.  
 1526. So frequently as to be an ordinary occurrence? Yes, pretty often.  
 1527. Have you seen them on the clothes when the boys have been washing them? No; after they have washed them, when they have been brought up to me for inspection.  
 1528. When you saw this, did you call the attention of the chief officer to what you had seen? Yes, I reported it to him.  
 1529. When? Several times.  
 1530. And what did he say? He told me to put them in boiling water in a bucket.  
 1531. Did you do so? Yes; I got some boiling water in a bucket, and put the clothes into it along with some soda which I got from below.

- Mr. Abraham 1532. And you have seen this repeatedly? Yes, six or seven times.  
 Springel. 1533. Have you seen vermin on the boys? No; on the boys' flannels.  
 3 Mar., 1869. 1534. Had the boys been long in the ship when you saw these vermin on them? Some had, and some had not.  
 1535. Did you ever know the boys to have to wash their clothes out in the rain? Yes, they have done that.  
 1536. More than once? Yes.  
 1537. Has it not been a common occurrence that they have had to wash their clothes out in the rain? I do not know about a common occurrence, but when it has happened to rain when they have been washing their clothes they have not been sent in out of the rain. They have been obliged to go on with the washing on deck, because of there not being room enough for all of them to go into the bath-house.  
 1538. Have the captain and the chief officer been aware that the boys were out in the rain washing their clothes? Well, they must have known it.  
 1539. And yet neither the captain nor the chief officer have ordered the boys out of the rain? No; leastways not until they have been wet through, then they have come on deck and said, send the boys below.  
 1540. Is the bath-house too small to contain all the boys at once? Yes, for all of them to wash their clothes at the same time.  
 1541. How many will it accommodate? From forty to fifty.  
 1542. Did you ever see the captain drunk on board the vessel? Not since the last investigation.  
 1543. When was that? This March twelve months.  
 1544. Was he drunk then? He was.  
 1545. Have you any doubt about it? No. I saw him when he came aboard. He had been aboard a brig lying in the harbour, and a boat from the brig brought him aboard the "Vernon." I saw he was the worse for liquor when he came aboard.  
 1546. Do you know two boys on board the "Vernon" named Maher and Butler? Yes, I know them both; but Maher is not on board now—he has gone away.  
 1547. Have you seen the captain beat these boys? I saw him beat the boy Butler.  
 1548. What did he beat him with? With a rope's end. He was on the poop, and he took a rope's end that was there.  
 1549. Was the punishment a very severe one? Yes; but I do not think he struck him any way out of the way; it was not so bad.  
 1550. Did you see him beat Maher? No, I did not see it. I know he did beat him, but I did not see him do it.  
 1551. You saw him after he had been beaten? Yes. I was down below mixing paints, and he came down to where I was. I asked him what was the matter with him, and he told me the captain had been beating him.  
 1552. Did he appear to be suffering from the effects of the beating? He was crying, that is all. It was his crying made me ask him what was up.  
 1553. Is the captain a good-tempered man? Well—  
 1554. Is he a severe man? He is rather quick-tempered, but I do not think he is a severe man, not by any means.  
 1555. Were the boys sufficiently clothed last winter—had they clothing enough to keep them warm? No, they were very poorly clad.  
 1556. They were very insufficiently clad? Yes, very.  
 1557. Did you ever hear the boys complain of the cold? Yes; when they have been washing decks in the morning they have complained to me of the cold. They have only a canvas jumper and a pair of trousers, and no flannel, and that was not enough to keep the boys warm. Half the boys were without flannels last winter.  
 1558. Half the boys were without either flannel or serge shirts during last winter? Yes, and without the blue clothing.  
 1559. How long was that the case—that they were without flannel or serge? About six weeks or two months.  
 1560. Have you heard the boys complain of the bad quality of the food supplied to them? I have not heard the boys complain. It is not my duty to be on the lower deck at meal times, so that I have not heard the boys say anything about the food.  
 1561. Do you yourself know whether the quality of the food has been good or bad? It has not been any too good. Very bad beef has come on board sometimes—so bad that we have spoken to the captain about it.  
 1562. And after the captain was spoken to, were any steps taken to rectify what you complained of? I do not know whether any steps were taken, but there has not been much improvement on it any how.  
 1563. Then the provisions, even now, are not good? No; only a week ago we had very bad beef sent aboard.  
 1564. Were you on board the "Vernon" last Christmas Day? No, I was on shore.  
 1565. Have you ever known the boys to be fed on meat alone? No.  
 1566. What I mean is, have you ever known them to be fed on meat, without either bread or potatoes? No, I do not.  
 1567. Did you ever hear of it? No.  
 1568. Have you never heard that the boys have been a whole day with nothing but meat to eat—neither bread nor potatoes being served out to them? No. I am not much on the lower deck at meal time.  
 1569. What food do you get on board? Meat and potatoes; those are the chief things. May-be we get a carrot or two, at times.  
 1570. Are these provisions of good quality? No, we have not had good meat for some time.

1571. Have you ever had any words on board the "Vernon" with Mr. Martin? I have never had any words with him—not to say anything to speak of. He gave me an order once that I could not obey. He ordered me to wash decks one Sunday morning, and I told him it was against the captain's orders—that the captain had ordered me not to wash decks on Sunday morning.
1572. And what did he say to that? He said that he was chief officer of the ship, and did I know that I had to obey him. I said I was willing to do so if it was not against the captain's orders. I said—"Only let the captain give me the order, and I will do it for the time to come."
1573. Was that all that took place between you? Yes, that was all.
1574. Has the cook ever been put over the ship's side? Yes, he has.
1575. What was it for? Well, that I do not know.
1576. Who put him over? Mr. Martin and the boys.
1577. Did he order the boys to put him over? Yes, something like it, only I cannot say for certain. I was away on the fore-castle at the time, and this happened in the waist, and I do not know myself how it was.
1578. Did you never hear what it was for? Well, I did hear something, but I cannot say for sure. It was something about Mr. Martin going into the galley, and the cook did not like it, and then they had some words, and the end was the cook was put over the side.
1579. Does Mr. Martin ever give orders different from those given by the captain? That I cannot say; he never did to me—no further than that deck affair. The captain gave me very strict orders not to wash decks on Sunday, and that was how it was I came to tell Mr. Martin that I could not obey him until the captain gave me orders.
1580. Then, as a matter of fact, Mr. Martin did issue orders at variance with those given you by the captain? Yes; but I did not do what he ordered me.
1581. But Mr. Martin ordered it to be done all the same? He ordered it, but it was not done. I knew my duty too well to disobey the orders of the captain.
1582. Did he give you orders more than once to wash decks on Sunday? No; it was only once, and then I told him what the captain had ordered.
1583. Are the boys in a good state of discipline? Yes; some of them are well up in their duties.
1584. I do not mean that—I mean with regard to their conduct—are they well-behaved? Yes, most of the big boys are.
1585. Do they conduct themselves properly on board? Yes, pretty well. They require a good deal of driving, you know. All the older boys have left the ship, and they are mostly youngsters now, and they do take a deal of driving to get them along.
1586. Have you had your mess-tubs taken away from you? Yes.
1587. What was that for? They said they wanted them on the lower deck for the boys.
1588. You were not on board the ship on Christmas Day? No; I was ashore on leave.
1589. *Mr. Burns.*] Whose duty is it to receive the provisions from the contractor? It is Mr. Waller's business.
1590. He is the purser, is he not? Yes.
1591. Have you complained to him about the bad quality of the provisions supplied to you? Yes; we complained to him and to the chief officer.
1592. To both of them? Yes.
1593. Has their attention been drawn more than once to the bad quality of the provisions? Yes, several times.
1594. And, notwithstanding your complaints, they have still continued to be bad? Yes; there is very little improvement even now.
1595. Do you understand that Captain Mein has complete and entire control of the ship—that he has complete and sole charge of her? Well, no; I cannot say I do.
1596. You know that he is captain, and that, as captain, he is sole master of the ship? Oh, yes; I understand that.
1597. *Mr. W. Campbell.*] Have you no awnings aboard the ship? Yes; we have deck awnings fore and aft.
1598. And do not these prevent the rain from falling on the boys when they are washing clothes on deck? No; they are not rain awnings; they are only meant for keeping off the sun, and are no good for rain.

Mr. Abraham  
Springel.

3 Mar., 1869.

Joseph Robinson called in and examined:—

1599. *Chairman.*] You are employed on board the "Vernon"? Yes.
1600. In what capacity? As boatswain's mate.
1601. How long have you been so employed? Ever since the ship was first commissioned.
1602. By whom were you appointed? By the Honorable Mr. Parkes.
1603. Did you apply to the captain, in the first instance? Yes; I went to Captain Mein first, and showed him my papers, and told him I had been in the Navy.
1604. Did you produce your certificate, and show it to him? Yes; and I told him where I had served, and in what ships.
1605. The certificate, I suppose, gave you a good character? Yes, it gave me a very good character.
1606. Were you examined prior to your appointment? Yes.

Joseph  
Robinson.

3 Mar., 1869.

1607.

Joseph  
Robinson.  
3 Mar., 1869.

1607. Who by? By Captain Mein. He questioned me about the duties that would be required of me, and he seemed satisfied at my answers.
1608. Then, upon his favourable report, you were appointed? Yes, I suppose that was the way of it. I was sent to the captain, and he examined me, and then afterwards I was appointed; so I suppose he reported favourably about me.
1609. You had been some years at sea before you were appointed to the "Vernon"? Yes; I had worked my way up in the Royal Navy from a boy.
1610. And you remained in it—how many years? About thirty-five years altogether; twelve and a half years in the Royal Navy.
1611. Do you ever see the boys washing their clothes on board? Yes; that is my chief duty,—to look after the washing of the clothes. All the clothes go through my hands.
1612. Are the clothes generally very clean? Not always. Sometimes I have seen their flannels in a very filthy state.
1613. Then your attention has been called to the filthy state of the flannels? No; but I have noticed them when the boys have brought them up to me to be examined.
1614. There were vermin on them? Yes, there were.
1615. And what did you do when you saw this? I got some hot water and soda, and had them washed in that.
1616. Has this been very frequent? No; only now and again, when we get fresh boys aboard, and then its only on the smaller boys. The big boys keep themselves clean enough; but most of the big boys are now gone, and nearly all those there now are very little fellows.
1617. *Mr. Parkes.*] Are there not many of the boys now on board who are mere infants, who ought not to be there at all? Yes; they are nearly all little boys, now that most of the big ones have gone.
1618. Are there not many of them who, by reason of their tender age, can only be kept clean by the care and attention of a woman? Yes; there are some of them altogether too young to wash their clothes. All the boys have to be treated alike, and these little ones have to turn out to wash clothes the same as the rest. They are too young to manage, and so me and the other boatswain's mate, we have to do it for them. These little chaps are all placed under the guidance of the bigger boys; but then the bigger boys are only youngsters themselves, and there's no reliance to be placed in them.
1619. Is there not one of the children who is not more than two years or two years and a half old? Yes; there is one who was not more than two years old when he came aboard the ship.
1620. *Chairman.*] Did you ever see the captain drunk on board? I never saw him to say drunk aboard the ship; but I saw him at one time, as I judged him to be, the worse for liquor.
1621. Do you recollect a monkey the captain kept on board? I do.
1622. That monkey was in the habit of playing nasty tricks on the deck? Well, not more than monkeys do. You see, monkeys are —
1623. Did he go on with these dirty tricks? Well, I cannot say; I never took particular notice of the monkey. I have always got plenty to employ me when I am on the deck, and I have no time to look after monkeys. The boys give me all my work to do.
1624. Did you ever see the captain punish the boys? Yes, I have.
1625. What with? With a cane, and sometimes with a rope's end.
1626. With anything else? No, not with anything else, that I remember.
1627. Did you ever see him use his walking-stick to punish the boys with? That is what I mean by a cane. Just a light walking-cane, that he carries in his hand.
1628. That is not what I mean. Did you ever see him strike the boys with a stout walking-stick which he carries? No, I have not. He usually sends for the cane of the master-at-arms.
1629. Did you ever see a boy named Butler punished? No, not in my recollection.
1630. *Mr. Parkes.*] Is the captain generally good-tempered towards the boys? Well, he is generally; but then, you see, he is rather fiery in temper, and the tricks of these boys urge him up to that pitch that he forgets himself. But those boys are not easily handled, for there are some of them that would ruin the patience of any one.
1631. *Chairman.*] Is he a kind man? He pays great attention to the boys, looking after them and inspecting them. But, be as kind as you like, and it is no good with most of them boys, you will never do any good with them if you do not punish them.
1632. Should you call him an unkind man? No, certainly not.
1633. Do the boys get good food on board the vessel? It is better now than it has been for some time. A little time ago it certainly was not good.
1634. Have you ever known the boys to be a whole day without potatoes or bread? No, I have never seen that. I see the provisions come aboard mostly every day, and I always see bread and potatoes.
1635. Do the boys always get bread and potatoes? I see them come aboard the ship. I do not know if the boys get them, because I am not below when the boys are at meals; but, as they come aboard, I suppose they get them the same as all hands.
1636. You do not know, then, that within ten days the boys were three times without bread or potatoes for four-and-twenty hours? No, I do not. I have seen the meat and bread and potatoes come aboard, and I have always seen sufficient for all the boys, as well as for the ship's company.
1637. You will not undertake to say that they have not been without bread and potatoes on these occasions? No; I cannot say whether they do get it, or whether they do not. I only

Joseph  
Robinson.

3 Mar., 1869.

only know that the bread comes aboard every day; but, as I have nothing to do with inspecting the tables, I cannot say what the boys get.

1638. Do you remember that the attention of the Inspector of Charities was called to this, and that he made some inquiry into the matter? Yes, I remember that.

1639. And he reported that the excuse which was made was, that the potatoes were not cooked, and that was how the boys did not get them? Yes, I recollect that now quite well. The potatoes were not cooked enough at dinner, and the boys could not eat them. But if they did not have them for dinner, they had them for supper; I remember that very well.

1640. Do you know this of your own knowledge? Yes; I was on the deck when the chief officer came to the cook, and told him that the boys complained that the potatoes were not cooked, and that they could not eat them. He ordered that they should be cooked for the boys' supper instead.

1641. And were they cooked? Yes.

1642. Will you undertake to say that the boys got that day for supper the potatoes they ought to have had for dinner? Yes, I saw them myself. I saw them taken from the cookhouse down to the lower deck.

1643. Are the boys at present on board in a good state of discipline? With regard to the discipline of the ship, the boys act as near up to the mark as you can expect boys like them to do. Most of them have only been a short time on board, and they are not well up in discipline as yet.

1644. I mean as regards their conduct on board—are they well-behaved? Well, pretty well, considering.

1645. Were you on board the ship last Christmas Day? Yes, I was.

1646. Do you recollect a pudding that was made on that day? I do, well.

1647. Do you remember seeing it being mixed up? No; but I saw the trough afterwards in which it had been mixed up.

1648. What trough was it? Where all the offal and refuse from the galley is put into.

1649. So the pudding was made in the trough which is usually the receptacle for the ship's offal? Yes.

1650. And what became of it after it was cooked? It was issued out to the boys and men. I do not know what the boys did with it, but I know the men did not eat it.

1651. Was it not thrown away? I do not know what became of it; the men did not eat it, I know that.

1652. Whose fault was this? The cook's, of course.

1653. Was any complaint made about it? No, not that I know of; I do not think there was.

1654. Was it your duty to report anything of this kind coming to your knowledge? No; it was the duty of the master-at-arms to make all reports.

1655. However, the pudding was mixed up in this trough in which the cook's offal was thrown? Yes; there is no doubt about it. The cook did not deny it.

1656. *Mr. Parkes.*] Was there no attempt made to clean this tub or trough before using it for mixing the pudding? Yes. The cook said he had cleaned it out; but, as I said, it was not the thing to mix a pudding in after what it had been used for, and I told him he ought not to have done it.

1657. Do you think it was clean before it was used for the purpose? That I cannot say. He said he had cleaned it out as well as could be. The only excuse he made, when I said he ought not to have used that, was, that he said there was nothing else large enough on board the ship to mix the pudding in.

1658. *Mr. Burns.*] You say the captain is of a hasty temper? Yes, he is rather quick-tempered at times; but then it is soon over.

1659. But yet that he is not unkind to the boys? No, I never saw him unkind to any of them.

1660. *Mr. Tighe.*] Do the captain and the chief officer exhibit that amount of interest and zeal in the cleanliness, comfort, and good conduct of the boys, that is to be expected from gentlemen holding such positions as they do? I have been with a good many men in my time, and as good officers as could be; but as to Mr. Martin, I never met with a man who took more interest in the boys than he does.

1661. And the captain? He takes an interest in them too; but then he is not so much with the boys as the chief officer is. He comes sometimes to inspect them, and the like of that; but Mr. Martin is always with them.

1662. Do the captain and chief officer receive all the support they have a right to expect from the ship's company? The ship's company are bound by their articles to carry out all the lawful orders of the captain and chief officer.

1663. Does the master-at-arms support the captain and mate? I always found him to obey all orders given to him. I never heard anything to the contrary.

1664. And do the ship's company endeavour to co-operate, to the full extent of their power, with the master and mate? Yes; they act on the chief officer's orders chiefly.

1665. Did you ever see the boys ill-used by the master or mate? Not ill-used. I have seen the captain cane them, but not so bad as all that; not more than a parent would do if he was caning a bad child.

1666. How do the men behave on board—do they ever break the rules of the ship? There are some of them break their leave at night—that is all. We have a very good set of men now.

1667. Do they give the captain much trouble? Not now. The men we have now are a very quiet set of men, and they all obey orders, only that they sometimes break their leave at night. That is the only thing against them.

1668,

- Joseph Robinson.  
 3 Mar., 1869.
1668. Then it is not the case that the men cause the work of the ship to go on unpleasantly by reason of their misconduct? Not the men that are there now.
1669. Then it was the case formerly? Yes, with some of the former men we had.
1670. Somehow or other the captain and them did not seem to hit it together.
1671. And did that contribute to make the work go on unpleasantly on board the ship? I will not say that. I will not say that it interfered with the work; but it made things uncomfortable on board.
1672. Did you ever see the men conduct themselves disrespectfully towards the captain? Not the men we have now.
1673. Did you see the men who were sent away? Yes; I saw one of them giving impudence to the captain. I was not to the fore, so I do not know what he said. I was out on the boom end at the time, and did not hear what it was about; but I could see he was insolent. He was dismissed for unruly conduct.
1674. Has the captain done everything he possibly could in order to introduce order and discipline amongst the boys? I think he has, as far as he could. As far as I could see, he has done everything in his power for the boys.
1675. Have any of the trade instructors ever attempted to thwart the captain in carrying on the discipline of the ship? Not that I know of; they are out of my way altogether.
1676. Have you heard them inducing the boys not to go to sea, but instead of that to learn trades? Not to my knowledge; they might have done it, and me none the wiser. My duty lies on deck, and I do not come in their road.
1677. Have you heard any instances of unnatural offences having been committed on board? I have heard reports of such a thing.
1678. And do you think there is any foundation for the report? I do not know of anything, except the case of the two boys who were found in a suspicious place, and in an improper position. The quartermaster saw them. One was lying down under the bits of the bowsprit, and the other was close to him.
1679. Do you think it is consistent with the good order of the ship, or the good conduct of the boys, that such practices should be allowed to prevail? I do not know about prevail, but that case of the two boys was the only one I ever heard of, and I do not think there was much in that. There may have been some of the boys guilty of self-abuse, but that is all.
1680. Is that prevalent? No; there are only two or three cases that were ever brought to light, as far as I can remember.
1681. Then you think that these charges of improper conduct have no foundation? I do not think so. Even in the case of the two boys found by the quartermaster, I do not think there was anything in it, for neither of them exceeded ten years of age.
1682. *Mr. Farnell.* What time do the boys get up in the morning? About half-past 4, in the summer-time.
1683. And what time do they leave off in the evening? If it is washing day, they do not knock off until about half-past 8 in the evening.
1684. How many hours recreation do they have? They get ten minutes at a quarter after 10; next, they get ten minutes at a quarter after 2; then at 4 o'clock we clear decks; and then about one bell they get a quarter of an hour to play about the deck.
1685. Do you think the hours of labour are too many for boys of that age? Yes, I think so. It is too long to keep boys at it—at least, that is my opinion.
1686. Do the boys themselves complain of the long hours they have to work? Yes, they have complained repeatedly. The hours are too much for them. There is a deal of trouble to get them along, especially as some of them are very young.
1687. When you were a boy, did you ever work so many hours? No, and I was brought up in the Navy. They keep you going there; but I never had such hours as these.
1688. Are the provisions bad? No, they are not bad now. They were some time ago, but now they are as good as could be expected on board any ship.
1689. Do the boys get the same provisions as the ship's company? Yes, the provisions are the same for all hands. There is no distinction between what is for the boys and what is for the men.
1690. What vegetables do you have? Potatoes, and carrots, and parsnips, and cabbages, sometimes.
1691. Are your meals cooked in a cleanly manner? Yes; our present cook seems a very good man. The last cook we had was not a clean man, and the captain discharged him.
1692. How long was he on board? About five or six months, and there were several complaints about him, until at last the captain discharged him.
1693. Has the cook all the appliances for cooking on board? Yes, he has got them now. There is a new apparatus, and it seems to be a good one; and new kettles have been supplied for the hominy.
1694. Do the boys seem to like the hominy? No, they do not.
1695. Do you know whether Captain Mein has ever received any naval training—whether he has ever been in the Royal Navy? No, I do not know.
1696. Has the chief officer had such a training? I think not.
1697. Has the master-at-arms? Yes, he has been in the Navy.
1698. From his having been in the Navy, do you think that he would be a better man than the captain or chief officer to have the discipline of the boys left in his hands? I would not say that. I should not like to say that he was better fitted for it than the captain; because a man may make a very good officer on board a ship, and yet not be the man to have the charge of the vessel.

Joseph  
Robinson.

3 Mar., 1869.

1698. You say that the captain punishes the boys. Does he chastise them when he sees offences committed, or on the report of the proper officers of the ship? On the report of the officers. The captain comes up on deck in the morning, at divisions, and then reports are made to him of all the boys who have committed offences; then the captain punishes them, according as he thinks they deserve it.
1699. *Chairman.*] Where do they get it—over the gangway, do they not? Yes, when it is a heavy offence; but not without it is very serious.
1700. And where do they get it when it is not a heavy offence? Over the hand, for lighter offences; what they call pannums, the same as they do in the Navy.
1701. You are never with the boys when they are in school? No. No one is admitted into the school during school hours.
1702. Are the boys ever taken out of school to pull the captain's gig? I cannot say. They might have been; but I have nothing to do with them in school.
1703. A certain number of the boys are, I believe, told off as a crew for the captain's gig? Yes; there is a crew of five for the captain's gig.
1704. Then, if these five happened to be in school when the captain wanted his gig, they would have to be taken out of school? Yes; if the captain's gig was wanted, I suppose the boys would have to go, whether they were in school or out of school.
1705. Do you think the majority of the boys on board—leaving the infants out of consideration—are calculated to make good seamen? No, I do not. None of them seem to care much about seamanship; the greater part of them seem to prefer to learn trades.
1706. *Mr. Farnell.*] When you shipped on board the "Vernon," did you not understand that it was to be a nautical training-ship for seamen? Yes, that was my idea of it, certainly.
1707. You did not think it was to be a ship for learning trades, like tailoring and shoe-makers? No, I did not.
1708. Is the discipline on board the "Vernon" stricter than in a man-of-war? No, not so strict, nor nothing like it.
1709. Do they get up as early on board a ship of war as they do on the "Vernon"? Yes, just about the same; all hands are turned out at about half-past 4 or 5.
1710. Do they have to work longer hours? No; they generally do all the work about a man-of-war before breakfast, and then they are told off into watches, and they take watch and watch on deck; one watch is on deck whilst the other is below, during the day.
1711. Are the rations brought alongside the ship by the contractor? No; a boat is sent to fetch them round to the wharf at Woolloomooloo. The contractor fetches them down to the wharf, and we take them off in our boat.
1712. Does the purser go to the wharf to receive them from the contractor? Yes.
1713. Does he weigh the rations as they come on board? I have seen him do it, but I do not think he does it always.
1714. *Mr. Campbell.*] When you shipped on board the "Vernon," did you ship under the captain—under Captain Mein? Yes.
1715. Do you believe that the captain could dismiss you, if your conduct was such as he did not approve of? No. I know that he would have to go to the Government before he could dismiss me.
1716. I suppose you consider that the ship is under the captain? Yes; all on board are bound to obey his lawful orders.
1717. And you said that you shipped under the captain? Certainly I did, and I am under him still.
1718. And who do you consider the captain to be? Captain Mein, the Superintendent of the Nautical Training-ship "Vernon."
1719. But you say he did not ship you? No; I was appointed by the Honorable Mr. Parkes.
1720. And you say, also, that he has not the power to unship you? Yes; I can only be unshipped by the Colonial Secretary. I know that, because I was appointed by the Colonial Secretary.
1721. How do you consider yourself under him, when he has not appointed you, and when he cannot unship you? I consider myself as being under his orders.
1722. *Mr. Parkes.*] I suppose that you, as a boatswain's mate of the "Vernon," consider yourself amenable to the captain of that vessel, whoever that officer may be? Most certainly I do.
1723. And to all the other officers aboard, who are under him and above you? Yes, certainly; just the same as in a man-of-war—you have to obey the orders of any officer who is over you.
1724. You do not expect to receive instructions as to your duty from the Colonial Secretary, although that official appointed you? No; I look to the captain of the ship for my orders, and I know it is my duty to obey them.
1725. Do you feel yourself to be as much under the orders and directions of the captain of the "Vernon" as you would consider yourself to be under the captain of any other vessel sailing out of the harbour, on board of which you may have shipped? Yes, quite as much.
1726. *Mr. W. Campbell.*] Would not the captain of any other vessel have more authority, on account of his being able to ship his own hands and to unship them at his own will? He would not have very much authority if he was not able to do so.
1727. *Mr. Burns.*] The captain of an ordinary merchant vessel can discharge his hands or not, just as he thinks fit? Not always. It depends upon how the men sign articles. He would have to prove misconduct against them before they could be discharged.

- Joseph Robinson. 1728. But for misconduct he can discharge them? Yes, by handing them over to the police, and proving his case against them.
- 2 Mar., 1869. 1729. And then he can discharge them without appealing to his owners? The owners have nothing to do with it. It is for the Magistrates to decide. The captain cannot discharge the men. He brings his charge against them, and then the Magistrates say whether the men shall be discharged or not.
1730. *Mr. W. Campbell.*] Then you look upon the Colonial Secretary for the time being as a kind of commodore or vice-admiral, during whose presence the captain has no power to act? No, I do not look at it in that light. He is in the same position as the Magistrates; and Captain Mein, instead of appealing to the police, would appeal to the Colonial Secretary to order the discharge of any man who misconducted himself.

THURSDAY, 11 MARCH, 1869.

Present:—

MR. ALEXANDER, | MR. FARNELL,  
MR. PARKES.

RICHARD DRIVER, JUNR., ESQ., IN THE CHAIR.

Mr. Edward Nestor Waller examined:—

- Mr. E. N. Waller. 1731. *Chairman.*] You are purser on board the training-ship "Vernon"? I am.
- 11 Mar., 1869. 1732. What are your duties? I have to receive the provisions, and to issue them. I also receive the clothing as it comes on board, and issue the clothes as they are made.
1733. Is it your duty to inspect the provisions brought on board? I inspect the provisions before they are brought on board.
1734. As you receive them at the wharf? As I receive them at the wharf.
1735. Is it your duty to inspect all provisions brought on board? Yes.
1736. Has it been your duty from the date of your appointment to the ship? Yes.
1737. To examine not only the quantity but the quality of the provisions? Yes.
1738. Have any complaints been made as to the quality of the provisions sent on board? Frequently.
1739. By whom? By the men and officers of the ship.
1740. Were those complaints well founded? Yes, I think so.
1741. How came you to pass them? I never passed them. I always forwarded them on to the captain.
1742. Had you no power to reject them when they were brought to the wharf? I had power to reject them; but the beef, when it was brought to the wharf, looked good, and we did not find it bad until it was cooked.
1743. Then, did these complaints apply only to such articles as beef and mutton? To beef, mutton, and vegetables; but the meat is the principal thing that has been found fault with.
1744. Have the provisions been good or bad? They have been much better lately, but they had been very bad before this Committee sat.
1745. Did you report these complaints to the master of the ship? I have reported them on several occasions. I have also reported the quality of the meat to the Inspector of Public Charities.
1746. You think no improvement took place in the quality of the provisions in consequence of those complaints? I do. Perhaps for one or two days after we complained there may have been a slight improvement, and then it would fall back to its old state again.
1747. Do you weigh the provisions on receiving them? Yes.
1748. Are the provisions received daily? Yes; those that are consumed for the day are issued daily.
1749. Then you have no more than one day's stock of meat on hand at one time? No, except on Saturdays. On Saturday we get our Sunday's supply.
1750. When the provisions are bad, or deficient in weight, how is the deficiency made up? On one occasion I went to a butcher myself, and got the weight made up. A quantity was received that was unfit for human food, and I asked the captain's permission to go and get some in lieu of it. After I came back, he kicked up a most awful row about it, as it appeared that I should have been back by divisions.
1751. After giving you an order to go for it? Yes.
1752. Was the meat on that occasion condemned at the wharf, or taken on board the ship? Condemned at the wharf.
1753. As being unfit for food? Yes.
1754. I understand you to say that, on your return to the ship, you asked permission of the captain to go and procure other meat on shore; that he gave you permission? Yes.
1755. And that you obtained the meat? I did.
1756. What took place on your return? The captain found fault with me about it, for going on shore a little before divisions. I told him it was the only time I could have chosen, as otherwise the meat would have come on board too late to be prepared for dinner.
1757. When the provisions were brought on board, and found to be unfit for food, how has the deficiency been made up? I have never rejected any from the ship at all.
1758. But you say complaints have been made? The deficiency has never been made up at all.

1759.

1759. Where the provisions have been found to be deficient in weight? I have written to the contractors about that, and have received the deficient weight, in bread especially, the following day.

Mr. E. N.  
Waller.

1760. The deficiency has not been made up the same day? No.

11 Mar., 1869.

1761. Then the boys would receive short allowance for that day? Yes.

1762. I understand you to say that you reported these matters to the captain? Yes, I have.

1763. How often do you think you have reported to the captain about the inferior quality of the provisions? I have reported several times about it.

1764. Do you write the letters for the captain? I do.

1765. Carry on his correspondence? Yes; he drafts the letters, and I merely copy them.

1766. Do you recollect a man named Powell, who was on board? Yes.

1767. What was he? Boatswain.

1768. Was he discharged? Yes.

1769. For what? For insubordinate conduct, I believe.

1770. Do you recollect writing a letter about him to the Colonial Secretary, or copying a letter? Yes.

1771. Can you produce a copy of that letter? I can. (*The witness referred to a letter-book.*) The letter in reference to his dismissal is not here; it was suppressed, and not allowed to be written here.

1772. Are you certain of that? Yes; I received orders not to enter it in the letter-book. I left a blank page where it should have been written.

1773. Can you explain the reason why these orders were given? Yes; the reason was, that no person should see what it was about.

1774. Who said so? Captain Mein.

1775. Do you recollect the contents of that letter? No; it is so long since it was written that I do not recollect.

1776. Were you at the time the letter was written, in a position to state whether its contents were true or false? I do not think they were altogether correct.

1777. Can you state any particular in which it was not correct? No; I am really non-plussed about that just now. I had a copy of the letter, but the copies of all the letters I kept were destroyed while I was sick, so that I am at a loss—having nothing to put my hand on.

1778. Were you confined on board the ship by illness? No, I was sent on shore.

1779. During your absence from the ship——? The whole of the drafts of these letters were destroyed.

1780. In whose handwriting were they? All in Captain Mein's.

1781. Do any letters appear to have been removed from the book—cut out? (*The witness examined the book.*) No, I have not missed any letters; in fact, I have not much access to the book now—I am obliged to leave it in the captain's cabin.

1782. The book, when you went on shore, you left in the captain's cabin? Yes.

1783. Were these drafts kept in it? No; they were all kept on a shelf in my office—all filed. I kept them for a particular reason. The captain used sometimes to find fault, and say there were mistakes in the copies of the letters in the book, and I used to produce his own drafts, to show that there were not. The captain himself told me that he had destroyed them while I was sick; and the reason he gave was, that it was a bad plan to leave letters lying about.

1784. Do you recollect sufficient of the contents of the letter with reference to Powell, to be able to state to the Committee whether the statements put forth in the letter were true or false? No, I could not recollect it now.

1785. If the letter itself were produced, could you give any information to the Committee about it? I think so.

1786. About what time was the letter written? Some time in the month of June—between the 3rd and the 8th.

1787. Have you had any conversation with Captain Mein or Mr. Martin since the appointment of this Committee? Yes.

1788. Have you heard anything said on board, by either of them, about persons giving evidence before this Committee? Yes, I have heard one or two things about them.

1789. By whom? By Captain Mein; never by Mr. Martin.

1790. What has the captain said—Has he said he would make it too hot for any person giving evidence before this Committee? No, never.

1791. Anything of that character? No.

1792. Did you ever say he did, to any one? I do not recollect it.

1793. Are you quite certain you never said so? I do recollect saying something about it, but I do not recollect what it was.

1794. Did you, at any time, state that the ship would be made too hot for those who had given evidence? I recollect saying something about it now, but I forget to whom.

1795. How came you to say so? From words that have transpired from the captain.

1796. Do you recollect what the captain said about it? I have heard him frequently say it would all end in smoke.

1797. Anything else? I have also heard him say he did not care a fig.

1798. What else—What induced you to say he would make it too hot for any one giving evidence—Did the captain say so? I recollect saying something of the sort.

1799. *Mr. Parkes.* Did he ever use the words, that the ship would be made too hot to hold the witnesses? I do not recollect whether it was about giving evidence before this Committee at all. It was a different thing altogether I alluded to; it was about sodomy. I heard it rumoured in the ship, that whoever took tales on shore he would make the ship too hot to hold them.

- Mr. E. N. Waller. 1800. *Chairman.*] You were induced to say so from something you heard from the captain? Yes.
- 11 Mar., 1869. 1801. *Mr. Farnell.*] Have you any other duties to perform, as purser of the ship, besides receiving the provisions? Yes; I go away in the boats, and I do the duty of clerk.
1802. Have you anything to do with inspecting the tradesmasters—with looking over them? I have no connection with that department whatever, except issuing goods to them as they require them.
1803. Do you understand upon what terms the rations are supplied to the "Vernon"? Yes.
1804. Have you a copy of the contract? I have, on board.
1805. Is there not a condition in the contract, that you shall call in arbitrators or persons to judge the provisions? Yes.
1806. Have you ever done so when the provisions have been bad? Yes; on the occasion I have referred to, I called the man from the boat, and the carter, with myself.
1807. Is it not your duty, when provisions are bad, to go and get good provisions, and to charge them to the contractor? Yes.
1808. On how many occasions have you done so? Only once.
1809. Have these complaints referred only to the beef and mutton? I have never heard any complaints of anything else.
1810. Do you get fresh meat every day? Yes; beef five times a week, and mutton once, except in the summer, when we have mutton twice, and salt beef on Sundays.
1811. Why do you have salt beef on Sunday? Because we are not able to keep mutton.
1812. You do not receive provisions on Sunday? No; we receive them on Saturday, for Sunday.
1813. Do you always report these cases to the commander? Yes.
1814. Have you any power to act without first acquainting him? No.
1815. Does the commander ever inspect the provisions, at any time, when the boys are at meals? Only in the absence of the chief officer. When the chief officer is sick, as he is at present, he inspects the boys at their meals.
1816. Was a person of the name of Harris employed on board the "Vernon"? Yes.
1817. What was he on board? Second officer.
1818. Do you know how long he was there? No; he joined the ship before I did.
1819. Has he left the ship since you have been there? Yes.
1820. How came he to leave her? He resigned.
1821. Do you know whether he made any complaint, or found any fault, when he was engaged on board the "Vernon"? I heard him grumbling—but it was more of a personal character than anything else—against the commander.
1822. Did you or the commander, at any time, receive any blackguard letters from Harris, while he was there? I received one with reference to the captain, and, I believe, the captain had one.
1823. What was the nature of the letter you received? The letter written to me was not of a gentlemanly kind; one expression was rather strong.
1824. Did it complain of Captain Mein's conduct, as commander of the ship, or was it merely of a private nature? Merely of a private nature.
1825. Do you know whether the commander ever interfered with the religion of the boys? I never knew him to do so.
1826. Did he ever order boys of one religious persuasion to attend the Sunday-school of another? I heard of one boy named Reynolds; but I believe the captain thought he was doing right there.
1827. The schoolmaster holds a Sunday-school for Protestant children? He does.
1828. I suppose it is difficult to ascertain the religion of the boys, sometimes? It is, very difficult.
1829. Does the schoolmaster correct the boys, or leave it to the commander to do so? The schoolmaster did correct them at one time, but he does not now; he sends in a report now.
1830. He does not correct them for misconduct in school? Not now.
1831. Do you know whether the schoolmaster ever ill-treated the boys, or chastised them with undue severity? Yes; I have seen marks on them after he has beaten them.
1832. What did he beat them with? I have seen him beat them with a ruler; but he usually beats them with a short cane.
1833. Has he been in the habit of doing so? Not lately—not for some considerable time.
1834. Has the commander ever checked or reprimanded him for correcting boys with unnecessary severity? I am not aware.
1835. Do you know what is the commander's general treatment of the boys? It varies; sometimes he is very kind, and at others he is just the reverse.
1836. Is he an even-tempered person, or sharp? Very sharp—passionate.
1837. Does he agree pretty well with the officers of the ship? With two or three of them; not with all throughout the ship.
1838. There is not a good understanding generally, between the officers and commander? No, there is not.
1839. Has any officer of the ship been lately put under arrest? Yes, the master-at-arms.
1840. When? On Saturday last.
1841. Do you know on what charge? Insubordination and impertinent language; neglect of duty, and insubordination.
1842. *Mr. Parkes.*] What do you mean by being put under arrest? He was virtually under arrest,—he was suspended.

1843. You mean suspended from duty? He was suspended, and was placed under arrest. I believe orders were given that a man should accompany him whenever he wanted to go to the upper deck. Mr. E. N. Waller.
1844. *Chairman.*] The man you refer to is outside now? He is outside now. 11 Mar., 1869.
1845. *Mr. Farnell.*] Do you know anything about the cleanliness of the boys—as to the state of their heads? They are very clean now.
1846. Are they well supplied with clothing? No; the clothing is not supplied fast enough—it cannot be made fast enough. They wear them out so quickly that a few weeks after they are supplied they are in rags.
1847. Does the captain ever advise any of the boys not to become tradesmen? I have never heard him; he has often told them anecdotes about the sea, and asked them whether they would not like to be sailors.
1848. You know the "Vernon" is a nautical training-ship? Yes.
1849. Do you know whether the tradesmasters ever exercise an influence with the boys, to induce them to become tradesmen? Only one occasion I heard Mr. Byrne, the tailor trade-instructor, giving the boys some anecdotes of the misery of a sea life.
1850. Do you know whether the boys ever complain of being worked too much? I never heard any complaints from them.
1851. They get up at half-past 4? At 5 I believe it is now.
1852. The time varies—in summer they get up at half-past 4? Yes.
1853. At what time do they knock off? It is supposed to be at 4; but generally it is 5, and sometimes 6 o'clock. At 4 they clear up decks.
1854. Do you think that is too long for little boys? Yes.
1855. You have some very young children? Yes, some as young as three years.
1856. Who takes care of them? Only some of the bigger boys.
1857. *Mr. Parkes.*] Little children of three years do not do much work? No; of course they are allowed to play about.
1858. *Mr. Farnell.*] They go to school? No; they are too young. They do not go to school under five.
1859. *Chairman.*] Did you hear Mr. Byrne telling these anecdotes you speak of? I was standing by.
1860. What were they? It was no particular anecdote; but he was telling them the sort of life a sailor's was—something, I believe, of his own experience.
1861. *Mr. Alexander.*] Robinson Crusoe? No; some of his own adventures.
1862. *Chairman.*] Was he speaking to boys of his own class? To boys in his own department.

---

Mr. William Shaw examined:—

1863. *Chairman.*] What are you? Carpenter on board the "Vernon." Mr. William Shaw.
1864. How long have you been so employed? About thirteen months. 11 Mar., 1869.
1865. *Mr. Farnell.*] Are you the ship carpenter of the ship? Yes.
1866. Are you also employed in the capacity of instructor to any boys who choose to learn your trade? Yes.
1867. How many boys have you under you? About nine, at the present time.
1868. Have you sufficient carpenter's work to employ these boys? Yes, all they are able to do.
1869. What carpenter's work do you do on board? Ship's fittings—ship's work generally.
1870. Is the commander of the ship always on board? Yes; he is very seldom on shore.
1871. Unless when away on official duty? He has a liberty day as well as the rest of the men. On Saturday he is away from about 10 in the morning till 5 or 6 in the afternoon.
1872. Does the commander appear to take an interest in the welfare of the boys generally? Yes, I think he does, as far as I see of him.
1873. Are the officers generally on good terms with the commander? I cannot say they are now. Since this inquiry commenced, there does not seem to be any good feeling in the ship.
1874. Was there a good feeling previously? Yes; I never saw anything else till now.
1875. Did you ever have any dispute with the commander? No.
1876. Have you been to sea? Never.
1877. You are a shipwright? Yes.
1878. Do you know anything about the duties of a nautical training ship? No.
1879. Of course you have nothing to do with the general duties of the ship? Yes; on Sundays I keep the chief officer's watch when he is on shore, and keep the first watch every night.
1880. Were these nine boys under your continual care and instruction? As an officer of the ship, I consider that all the boys were under my care when I was on duty; but these boys were specially under my instruction as carpenter. There are about two of them I think who have been four or five months with me; the rest are very often shifting. Most of the boys I have had have left the ship.
1881. I suppose the boys you have under your instructions go to school sometimes? Yes.
1882. What kind of carpenter's work are they employed at? Sawing and planing, principally; in fact, none of the boys I have are big enough for ordinary carpenter's work, excepting one I have had lately, within the last few days.

1883.

- Mr. William Shaw. 1883. If you instruct these boys only for a short period, and they are then taken away, your instruction will be wholly lost? It may be of use to them afterwards.
1884. How long a time would it be necessary for a boy to be under instruction to make him a carpenter? About five years.
- 11 Mar., 1869. 1885. Are the provisions on board the "Vernon" good, or have they been good? No.
1886. What has been the complaint against them? They have been generally very bad. In my opinion, the provisions have generally been bad, excepting the sugar.
1887. Do you get the same kind of provisions as the boys? Yes.
1888. Do you get up at the same hours as the boys—at half-past 4 in summer? No, I get up at 7 o'clock; but I keep watch till 12 at night.
1889. Do any of the officers turn out at half-past 4? Yes, some turn out at 4 to relieve the watch.

---

Mr. Joseph Brady examined:—

- Mr. Joseph Brady. 1890. *Chairman.*] What are you? Bugler and barber on board the "Vernon."
1891. How long have you been so employed? Eleven months.
1892. *Mr. Farnell.*] It is your duty, I suppose, to cut the boys' hair? Yes.
- 11 Mar., 1869. 1893. Have you noticed that the boys' heads were not clean at times; that they had vermin in them—lice? When I first joined the ship, the boys' heads were rather dirty at times.
1894. You say you are the bugler? Yes.
1895. You do not pipe the boys to work with the bugle, do you? No, for muster and dinner bugle.
1896. How often, every day, do you play the bugle? Eleven times.
1897. Do you ever play the fife? Yes.
1898. Do you know anything with reference to the duties of the commander there—whether he is constantly on board the "Vernon?" I think he is constantly on board, but I do not know anything with reference to his duty.
1899. Do you know whether he is on good terms generally, with the officers of the ship? Yes, I believe he is.
1900. So far as you know? As far as I know.
1901. Do you know whether, at the present time, the commander and officers are not on very good terms? I believe at the present time the commander and some of the officers are at variance.
1902. So far as your observation enables you to judge, do you think the commander uses due diligence, or all means in his power, to provide for the comfort and welfare of these boys? Not in all respects.
1903. In what respects do you think he is deficient? In regard to the clothing of the boys.
1904. Do you know whether that is his fault or not? I cannot say whether it is or not.
1905. *Chairman.*] Are not the boys very much better found than they were? Yes.
1906. *Mr. Farnell.*] Have you had any conversations on board with respect to this Select Committee sitting on the "Vernon?" All I knew was, that a Select Committee was appointed.
1907. Have you heard any remarks with reference to those persons who might be called upon to give evidence, or who had given evidence? No.

---

Mr. James Gorman, V.C., further examined:—

- Mr. James Gorman, V.C. 1908. *Chairman.*] You have before given evidence on this Committee? Yes.
- 11 Mar., 1869. 1909. How have you been treated on board since then? I have been watched very much by the chief officer, and he has tried several times to make me commit myself, by annoying me in various ways. Last Saturday morning, while washing the lower deck, with all hands down below, I had both fore and main ladders unshipped, and the gratings of the fore and main hatchways off. Mr. Martin came down below, and he sung out—"On deck there, all the boys that are doing nothing." I placed one man at the main hatch, to prevent any of the boys from falling down, and I went to the fore hatch myself. Mr. Martin sent a boy to me, to say that he wanted me. I turned round and looked aft, to see if I could take the other man from the main hatchway to relieve me. I found he was in the same fix as myself, so I waited for two or three minutes, till the other man came out of the fore-castle, and I gave him charge of the fore hatch, and then went to Mr. Martin myself. He told me to send the boys on deck that were doing nothing. When I looked round I could see no boys that were idle, and I said—"In two or three minutes I shall be able to send all the boys on deck who are about the ladder and hatches." The boys I did send I had to knock off from the work they were at. Mr. Martin told me then—"Another time I send for you, you will come and obey my orders." I said I could not leave the fore hatch, as the boys were all running about there, and would be liable to be knocked down the hatchway, which had only about six inches of combing to protect it. There was no more said to me then about it; and I knew nothing further of it until the afternoon, at 3 o'clock, when an official letter was given to me; and when I opened and read it, I found, for disobeying orders, and disrespect (I think the word was) to the chief officer, I was suspended. I asked Mr. Martin what the orders were I had disobeyed, and he told me, for not coming to him in the morning when

when he sent for me. Three accidents have happened at this same hatchway, and one boy was killed through having these hatches off; and it is an order of the ship that, when any of the hatches are off, some officer is to be stationed by the hatchway to watch it till the gratings are fixed again. So, from the way I was fixed, I could not leave at that time.

Mr. James  
Gorman, V. C.  
11 Mar., 1869.

1910. It would have been impossible for you to have done so without a breach of the regulations of the ship? Yes; and if a boy had fallen down while I was away, I should have been answerable for it. Then it was I was placed under arrest.

1911. What do you mean by being placed under arrest? I was confined to my cabin, and the ship's corporals had strict orders that no person was to speak to me, and I was to speak to no one. I had to get my meals in my cabin, and if I wanted to go on deck, to the closet, I was passed up by the corporal. That is the way I was treated till Saturday night. When the captain came on board, Mr. Martin came down to me, and told me that I might walk up and down outside of my cabin as far as the after hatch.

1912. *Mr. Parkes.* What do you mean by a corporal? They are now changed into warders, but they used to be called the ship's corporals—Mr. M'Fadden and the other.

1913. They are not called corporals? They were called ship's corporals at first, and I call them so from habit; their names have been changed to warders.

1914. *Chairman.* Are you still under arrest? I am still suspended. I am allowed now to walk about, but no person is allowed to speak to me, so it appears; for Mr. M'Skimming, the schoolmaster, came to my cabin and asked me the question—"Were you subpoenaed to-day?" I said—"Yes." He sat down on the end of my chest and was reading, when the captain came down and stood at my door. He spoke to Mr. M'Skimming very harshly indeed, and told him he had no business whatever to speak to me—he had no business on that deck at all, that he had to remain on the upper deck—that was his place. He afterwards came back to my cabin, and told me I ought to know better than to speak to anybody.

1915. What reply did you make? I made no answer; in fact, I have been afraid to make any answer, either to Mr. Martin or to himself.

1916. That has been his course of conduct ever since you gave evidence here? Yes. I have been watched about the ship by the officers; and if two men are seen together, they consider it a conspiracy.

1917. Has your attention been directed to a return, published by order of the Legislative Assembly, with reference to the cost of fitting up the ship "Vernon"? Yes; I saw it in the newspaper the day before yesterday.

1918. Have you carefully considered that return (*handing the same to the witness*)? No, I have not looked at it much. There are some things in it that seem rather extortionate.

1919. Can you name them? There is one thing in particular—the ship's binnacle.

1920. That is useless? Yes. It is having so many unnecessary things on board that made the cost of the ship run up so much.

1921. What was a binnacle required for on board the "Vernon"? I do not know. It is required only for a ship going to sea.

1922. Is it ever used on board? I have never seen it. A binnacle is a square wooden box, in front of the wheel, to hold the compass. The reason there are so many things on board is, that the ship was fitted up at first to go to sea. That was the captain's idea, for he told me himself. The rigging, chain ties, and runners for the after masts and yards have never been used.

1923. Not for the instruction of the boys? No; they are drilled only on the foremast. They have a suit of sails for the foremast, but none for the after masts; so that all these things have been lying idle—they have never been required. There is also a gun-carriage, trail, and limber for a field-piece, which is never used. When I was sent for, I told the captain that it was too heavy for use; and it has been lying idle ever since it has been on board.

1924. What do you suppose would be its cost? I have no idea. £20 or £30 it must have been.

1925. You think more money than was absolutely necessary has been expended in fitting out that ship? I should say so.

1926. Many articles have been purchased for it that are of no earthly use? Of no use whatever for that ship.

1927. *Mr. Alexander.* You speak of being under arrest or suspension. What is the usual course adopted in cases of disobedience of orders? In a ship of war I should be placed under arrest in just the same way—confined to my cabin, and cut off from all communication with everybody.

1928. Afterwards, is not inquiry made into the cause? Yes, of course; the captain of the ship inquires into it. In this case the captain never spoke to me about it at all, and I have never been before him.

1929. You are at the present time under arrest, without inquiry having been made into your conduct? Yes.

1930. *Chairman.* On board a man-of-war a court-martial would be held? If the case were sufficiently bad for it; but the captain of the ship could settle such a case as this.

1931. *Mr. Alexander.* Has the captain asked you no question with reference to this action of the chief officer? No.

1932. He still continues the punishment? Yes. There are the two warders, who will be able to tell you what orders they received from Mr. Martin, because one of the men came to me in my cabin (Mr. M'Fadden) and told me I would have to get my meals in my cabin, for he had asked Mr. Martin; that was after he had received orders from the man he

Mr. James Gorman, V.C. he relieved. I believe there was also a third party who received orders about me—the boatswain's mate.

11 Mar., 1869. 1933. How long a time elapsed from the chief officer sending word to you that he required your attendance, until you were able to go to him? Not more than four minutes; because I saw the man come out of the fore-castle to relieve the other, and I stopped him and asked him to take charge of this fore hatch, and then I went aft to Mr. Martin.

1934. Has there been no expression of opinion by the officers of the ship in your case? I have not had an opportunity of speaking to them—in fact, I have avoided them, because I was given to understand that I was prohibited from speaking to them.

1935. Do you think Mr. Martin had the means of ascertaining the purport of the evidence you had given before this Committee, from your own observation? I do not think so.

1936. *Chairman.*] Do you know whether they have had a printed copy of the evidence on board? There has been some talk on board of their getting something of the evidence I had given.

1937. You have heard that? Yes.

1938. *Mr. Alexander.*] Are you inclined to think the captain used your evidence antagonistically to you? Yes.

1939. And the chief officer also? Yes.

1940. *Mr. Farnell.*] When were you placed under arrest, or suspended? On Saturday afternoon, at 3 o'clock.

1941. There has been no investigation into your case? No; it was at — o'clock I received the letter; and I believe Mr. Martin acted on his own responsibility in the first orders that were given, because the captain made some alteration when he came on board.

1942. According to naval custom, you ought to have been brought before some tribunal—either the captain or some others—soon after you were placed under arrest? Yes.

1943. And the charge should have been stated against you? Yes.

1944. That has not been done in this case? No.

1945. I suppose there were no means taken, by the commander or chief officer, to cause you to disobey the summons of this Committee? No.

1946. Had you to ask permission to come here? I had to do so when I came. The captain sent to ask whether I was subpoenaed, and I sent my summons to him, which he did not return. When I came on shore, I went to the captain; and when the waterman came alongside, I said—"Will you allow me to go on shore about this Committee?" He said—"Yes; but mind you come straight back to the ship again."

1947. *Chairman.*] Did you not come on shore in the ship's boat? No, I did not, because the ship's boat lands at the Point, where it is very rocky and difficult to get up; and whenever I am on liberty, I have a waterman's boat to take me to the Circular Quay. It would be too much to ask to take the ship's boat so far, and would occupy too much time.

# TRAINING-SHIP "VERNON."

## APPENDIX.

(To Evidence given by Captain Mein, 22 January, 1869.)

### A 1.

#### ORDERS.

QUARTERMASTER always to be kept on watch, both night and day; any boat coming alongside to be reported to the officer in charge of the deck.

Master-at-arms to attend to his own duties.

A sentry to be placed in the between decks, to keep the carpenters and others from throwing dirt through the ports.

No person belonging to the crew of the ship to hail the vessel from the shore, but to make a signal for the sentry for a boat, if wanted; sentry to keep a sufficient look-out, so that he may see him.

J. S. V. MEIN.

No smoking allowed on main deck, nor abaft mainmast on deck, or elsewhere, except in smoking hours.

Purser to see after the rations, and serve out to each individual the proper quantity granted by the Government; also, to take entry of every boy's name, &c., that may be sent on board.

J. S. V. MEIN.

All officers to appear on deck in uniform, when the Government uniform has come out. They are to supply uniform at their own expense, and, at all times, to appear clean and tidy.

25 May, 1867.

J. S. V. MEIN.

#### Order for Summer.

Hammock gauntlines to be rove on Monday, after supper, and the hammocks scrubbed next day, in the morning, and triced up at 8 a.m. Messenger and side boys to be changed every Monday, at 7 a.m.

Swearing, or bad language of any kind, to be reported to the Superintendent. It is strictly prohibited.

10 September, 1867.

J. S. V. MEIN.

Ship to be scrubbed round outside, at least once a week, and washed outside more frequently, if Ship to be practicable (*i.e.*, every day).

12 September, 1867.

J. S. V. MEIN.

Any person going on leave at any time to be reported to the Superintendent. All or any boats or persons coming alongside to be reported to the Superintendent promptly.

12 September, 1867.

J. S. V. MEIN.

Pay attention to the rule in summer routine, that instructors are to attend with the boys always whilst going aloft.

16 September, 1867.

J. S. V. MEIN.

The hammocks to be stowed properly, and boys not allowed to jump them down with their feet.

16 September, 1867.

J. S. V. MEIN.

Quartermaster not to be used as messenger, except in a great emergency.

17 September, 1867.

J. S. V. MEIN.

Boats not to be sent away, for any person or thing, without first reporting to the Superintendent.

17 September, 1867.

J. S. V. MEIN.

Boys in school not to be called out on any pretence without the special orders of the Superintendent.

17 September, 1867.

J. S. V. MEIN.

There are not to be so many officers on the poop, spying with glasses, on Sundays; if they wish to spy, they can do so from other parts of the ship, without mustering on the poop.

30 September, 1867.

J. S. V. MEIN.

The messing deck of the boys is never to be left at night without a ship's corporal; if a boy is obliged to come on deck, the corporal is to hand him over to the officer or quartermaster on deck.

15 October, 1867.

J. S. V. MEIN.

When Government or other boats come alongside, all boatmen are to keep in their boats, unless they have a special permission to come on deck.

19 October, 1867.

J. S. V. MEIN.

The boys are to be examined every Friday morning, to see that their skin is in a healthy condition, so as to be able to report to the Doctor.

30 October, 1867.

J. S. V. MEIN.

The officer in charge of the watch at night will go round the lower deck every half-hour, to see that all is correct, and that the watch on the lower deck is awake.

28 January, 1868.

J. S. V. MEIN.

Ship's boats are not to be used for shore people on any account.

6 June, 1868.

J. S. V. MEIN.

Quartermasters, when upon duty on shore, to wear blue jackets with crown and anchor buttons, plain caps.

Warders, the same uniform as they have at present.

Boatswain's mates, blue jackets, crown and anchor buttons, with three buttons on the cuffs. White trousers to be the uniform dress for summer, and blue for the winter, for all officers, without exception.

21 November, 1868.

J. S. V. MEIN.

All officers to appear on deck in uniform, and at all times to appear clean and tidy; on liberty, they can wear plain clothes.

Renewed from 25 May, 1867.

J. S. V. MEIN.

Stores to be issued with steward's assistance.

Purser to issue rations daily, with the assistance of the steward, and, in his absence on leave, the steward to perform the duty, and to be responsible. No boy is to be allowed to enter any store-room unless accompanied by an officer, and all store-room doors or hatches to be kept constantly locked up, except when articles are required to be taken out or put in.

1 December, 1868.

J. S. V. MEIN.

New boys.

Newly joined boys are not to be taken upon excursions, or landed on the mainland, nor allowed to go near the shore, until they have been at least three (3) months on board.

1 December, 1868.

J. S. V. MEIN.

Boys for punishment.

Boys that are up for punishment are to fall out by themselves until after prayers, when they are to be brought forward. This line of distinction is made between the good and bad conduct boys, so that they may all endeavour to be good.

N.S.S. "Vernon," 1 December, 1868.

J. S. V. MEIN.

## A 2.

### SUMMER ROUTINE.—To take effect

September.

#### MONDAY.

4:30 A.M. Turn the hands up.  
 5:45. Instructors to inspect hammocks, then stow ditto.  
 5:30. Three divisions clean upper decks, &c. Boats to be lowered, washed out, and gear cleaned; one division to boats.  
 7. Breakfast.  
 7:30. Watch to clean stow bags. Watch below to clean lower deck. Side-boys and messengers to be told off.  
 7:45. Overhaul lifts and braces.  
 8. Cross top-gallant and royal yards, loose sails; one watch to square yards, spread awnings, flemish down ropes, sweep decks; one watch at quarters to clean guns and arms.  
 8:30. Clean lower decks.  
 8:45. Inspection of all decks. Boys to fall in at bugle call for muster with their instructors, to see they are all properly washed, cleaned, and combed.  
 9. Divisions and prayers, after which the boys are to be told off for exercise, viz.:—One, gun drill; one division at seamanship and boats; the remainder at school, agreeably to the school routine.  
 10:15. Roll of drum, stand at ease ten minutes; boys in the first instruction to go over the mast-head; change drill, boys that were at gunnery exercise to rifle drill.  
 11:30. Furl sails, square yards; cooks and captains of messes to prepare the dinner tables.  
 11:45. Inspection of messes.  
 Noon. Dinner.  
 1 P.M. Boys to fall in by sound of bugle, clear up and inspect lower deck; the divisions to be told off as in the forenoon, viz.:—One division to be told off to gun drill, one division at seamanship and boats, the remainder at school.  
 2:15. Roll of drum, stand at ease ten minutes, and change drills; boys in the first instructions to go over the masthead, one division to sword drill, one at seamanship and boats.  
 3:30. Dismiss drills, down topgallant yards.  
 5. Supper.  
 5:30. Fire stations; hoist up all boats not required; after which, boys to bathe and skylark.  
 7. Stand by hammocks.  
 7:10. Furl or haul over hammock cloths.  
 8:30. Captains of messes report to the instructors that their messes are cleaned up. The instructors are to see that all the boys are in bed before rounds.  
 9. Rounds.

#### TUESDAY.

5 A.M. Turn the hands up. Instructors are to carry on the same routine as on Monday. After prayers, the boys are to be told off to drill—one division to gun drill, one at seamanship and boats.  
 10:15. Roll of drum, change drill, as on Monday.  
 11:30. Furl sail.  
 P.M. Boys fall in as before—one division at gun drill to change to sword drill, one division at seamanship and boats; routine as Monday; washing clothes.

#### WEDNESDAY.

A.M. Routine as before.  
 9:15. General sail drill. Boys are to be exercised making, shortening sail, and reefing, &c.; this to be alternated with drilling at stations and manning the ropes.  
 11:30. Clear up decks.  
 P.M. Boys not at school, at general sail exercise, except newly raised boys, who will be exercised at the monkey sail.  
 3:30. Dismiss drills.

#### THURSDAY.

A.M. Routine as before.  
 9:15. General muster per open list, then one watch at school, and one at general boat exercise, except newly raised boys, who will exercise at the monkey sail. The clothes are to be mustered as follows:—One watch (not at school) on the first Thursday, the other watch on the second Thursday of every month. Every boy should bring with him, for inspection at divisions on Thursday, hammocks and clothes stops, knife and comb.  
 P.M. Mend clothes.

#### FRIDAY.

A.M. Boys not at school to exercise at general quarters, except junior boys, who will exercise at topsail drill or boats.  
 1 P.M. Boys not at school to assemble under arms for rifle drill.  
 After supper, wash clothes.

#### SATURDAY.

5 A.M. Hands up; get all boys on deck, rig engine, lead hose along, lower all boats, overhaul the gear for cleaning; up all mess-traps, stone lower deck and poop.  
 7. Breakfast.  
 10:0. Down all boys, stone upper deck and fore-castle.  
 P.M. Air bedding, square yards.  
 2. One watch at quarters to clean guns, after which, clean all boats, and scrub the gear.  
 4. Divisions to serve out clean hammocks alternate weeks. Every boy to be passed through the bath on Saturday afternoon, if the weather will permit of it.  
 P.M. The ship's corporal to muster them; after supper, sling clean hammocks.

#### SUNDAY.

## SUNDAY.

5:30 A.M. Hands up; sweep all decks.  
 9:30. Divisions.  
 10:0. Divine Service.  
 1:0 P.M. Sunday School.  
 3:0. Roman Catholic Sunday School.

NOTE.—Clothes-lines to be rove before 3:30 on Tuesdays and Fridays; hammock gauntlines to be rove on Monday after supper, and the hammocks scrubbed the next morning, and triced up at 8 a.m.

When the weather is warm, the boys to bathe three times a week, at 5:30 p.m. Every boy's hair is to be cut, and his head examined by a barber, the first week of every month. Boats' crews, messengers, and side-boys to be changed every Monday, at 7 a.m. The barber to attend divisions when the boys are inspected. All the boys to be examined in March, June, September, and December, as to their proficiency in gunnery, schooling, and seamanship; the result to be entered in the progress book against each boy's name, as also his conduct during the quarter. All boys in the first instruction are to go over the mast-head at the hour of changing drills. The instructors are always to attend with them whilst going aloft. Every boy is to be medically examined once per month.

J. S. V. MEIN,  
 Superintendent.

14 Sept., 1867.

These Rules are to be observed as far as circumstances will admit. A few cases will arise, that they cannot be followed to the letter; such cases to be reported to the Superintendent.

J. S. V. MEIN.

EDMUND T. HARRIS,  
 Acting Chief Officer.

## A 3.

## WINTER ROUTINE.

May, 1868,  
 N. S. S. "Vernon."

THE following shall, until further notice, be the routine on board this ship:—

## MONDAY.

6 a.m. Hands up.  
 6:15. Lash up and stow hammocks, under the inspection of the seaman instructors.  
 6:30. Clean decks.  
 7:15. Breakfast.  
 7:45. Watch below clean lower deck, stow bags.  
 7:55. Watch fall in, sweep upper deck, coil down ropes, lower boats, &c., according to weather.  
 8:30. Square yards, spread awnings, if required, clean woodwork, &c.  
 9:15. Bugle to sound, and boys fall in for inspection.  
 9:30. Divisions and prayers; after which, boys are to be told off for exercise, viz.—one division at gun drill, one division at seamanship and boats, and the remainder at school, according to school routine.  
 10:30. Roll of drum. Stand at ease 10 minutes, and change drills.  
 11:45. Inspection of messes.  
 Noon. Dinner.  
 1 p.m. Boys fall in at sound of bugle, clear up and inspect lower deck; divisions to be told off as in forenoon.  
 2:20. Roll of drum, stand at ease 10 minutes, and change drills.  
 3:30. Divisions assemble at sound of bugle, and drills dismissed.  
 4. Hoist up all boats not required.  
 4:30. Supper.  
 5. Fire stations.  
 7:30. Hang up hammocks and down all bags.  
 8. Rounds.  
 (The seaman instructors are to see that all the boys are in bed before the time of rounds.)

## TUESDAY.

A.M. Routine as on Mondays.  
 1 p.m. Boys fall in as on Monday, one division at gun drill, to change to sword drill.  
 Routine as on Monday.

## WEDNESDAY.

A.M. Routine as on Monday.  
 9:30. After prayers general sail drill; boys are to be exercised making and shortening sail, &c.; this to be alternated with drilling at stations and manning the ropes.  
 P.M. Boys not at school, at general boat exercise—except junior boys, who will be exercised at the deck topsail.

## THURSDAY.

A.M. Routine as on Monday.  
 9:30. After prayers, a general muster per open list, then one watch at school and one at general boat exercise—except junior boys, who will be exercised at the deck topsail.  
 The clothes are to be mustered as follows:—One watch (not at school) on the first Thursday, the other watch on the second Thursday of each month. Every boy should bring with him for inspection at divisions, on Thursday, hammocks and clothes stops, knife and combs.  
 P.M. Routine as on Monday.

## FRIDAY.

A.M. Boys not at school to exercise at general quarters, except junior boys, who will exercise at topsail drill and boats.  
 1 p.m. Boys not at school to assemble for general drill; to land if practicable.

## SATURDAY.

6 a.m. Hands up; get all boys on deck, rig engine and pass hose along, &c., lower boats, and overhaul the gear for cleaning.  
 7:15. Breakfast.  
 7:45. Up all mess traps and stone main deck.  
 10. Down all bags, stone upper deck, poop, and forecabin.  
 1 p.m. Air the bedding, square yards, repair ratlines, &c.; one watch at quarters to clean guns and complete gear, after which they are to clean all boats and scrub the gear.  
 4. Divisions to serve out clean hammocks on alternate weeks. Every boy to be passed through the bath on Saturday afternoon, weather permitting; the ship's corporal to attend to muster them. After supper, sling clean hammocks.

SUNDAY.

## SUNDAY.

6 a.m. Hands up, sweep all decks.  
10. Divine Service.  
2 p.m. Sunday School.

NOTE.—Hammocks are to be scrubbed after breakfast on alternate Tuesdays, and triced up to dry in the early part of the forenoon, on which days prayers at 10 o'clock, or earlier if practicable. Clothes are to be washed on Tuesdays and Fridays at 2-15 p.m. Hammocks are always to be collected and inspected at divisions, and issued in the same manner. Clothes-lines are to be rove at 11 a.m. on washing days; hammock gauntlines are to be rove every Monday after supper. Every boy's hair to be cut, and his head examined by the barber, the first week of every month. Boats' crews, messenger, and side boys, are to be changed every Monday, at 7 a.m.

J. S. V. MEIN,  
Commander.

6 June, 1867.

Ship's boats are not to be used for shore people on any account.

J. S. V. MEIN.

## A 4.

*RULES to be observed by the Seamen Instructors and Boys of N.S.S. "Vernon."*

1. Instructors are expected on all occasions to show an example of cheerfulness and willing obedience in executing their several duties. They are not only to abstain from using violent or harsh language themselves, but they are uniformly to discourage all improper conduct in others.

2. The Instructors, in their several stations, are expected to report all skulking characters, and to point out all those who, by activity and good conduct, deserve encouragement.

3. Nothing whatever is to be taken in at, or thrown out of, the ports, nor are any clothes to be hung about the chains, head-rigging, or in the messes between decks.

4. When any duty is being carried on, the strictest silence is to be kept.

5. All complaints are to be made on the quarter-deck to the Commanding Officer, in order that they may be communicated to me.

6. It is the duty of every boy to report all skulkers and lazy characters, in order that they may be made to do their share of the work.

7. It is the duty of every boy to detect a thief as a common enemy to all on board; and any boy screening or holding communication with a thief will be considered as equally bad in character, and will not be allowed to mess with the other boys. No article can ever be lost on board, therefore everything found is to be taken to the ship's Corporal for its proper owner.

8. All quarrelling and fighting will be severely punished, and on no account are cards, dice, or gambling of any sort to be allowed in any part of the ship.

9. If any boy should disobey the orders of Instructor, or Captain of Mess, he will be punished.

10. Selling or exchanging clothes and all trafficking is strictly forbidden, and will be punished by the forfeiture, on both sides, of the article so sold or exchanged, and further as may be deemed necessary.

11. The boys are to be mustered at divisions, according to the instructions to which they belong. The Warrant Officers in charge of the boys, assisted by their Instructors, will be responsible for the progress they make in the instructions; they will take care never to allow them to appear otherwise than clean in their skin and orderly in their clothes.

12. All are expected to feel a proper pride in their ship, and to merit encouragement by showing activity and a cheerful spirit in the performance of their several duties.

J. S. V. MEIN,  
Commander.

N.S.S. "Vernon,"

13 May, 1867.

## A 5.

## MESSING.

Two boys are to be told off as captains to each mess. They are to wear a distinctive badge, and to be selected with great care. They should be boys of good character, and of good disposition. They are to be held responsible for the good order of their messes, and to portion out the food to each boy. At 11-30, one cook is to lay out the table with the mess traps, &c., and one is to go to the coppers for the meat, &c.; this to be divided, and a portion put into each plate, by the Captain of the Mess, under the superintendence of the Seamen Instructors and Master-at-Arms. The boys are to be ranged outside of the stools, standing. When the dinner has been portioned out, it is to be inspected by the Chief or other Officer; the senior boys of each mess are then to say grace. The boys are to take their places, and to dine with their caps off. If, on inspection, it is found that any boy has an undue proportion of bones, &c., the senior boy should be made to exchange dinners with the one that has an unfair share given to him; by this means this selfish practice will be easily corrected.

J. S. V. MEIN.

## A 11.

Master, Barque "Dashing Wave," to Capt. Mein, Nautical Training-ship "Vernon."

Sydney, 19 January, 1869.

Sir,

I have been desired by the owner of my vessel (Mr. W. Andrews) to report to you respecting the two boys I have as apprentices, transferred from the "Vernon," and it affords me much pleasure to mention that they have conducted themselves properly, worked hard, kept themselves clean, and otherwise given me every satisfaction. Of course, the previous training on board the "Vernon" materially assisted them in seamanship; and I also found them anxious and willing to learn anything they did not previously know—things which, as a fact, cannot be learned without practical sea experience.

I am, &amp;c.,

H. VANDERVORD,

Master, Barque "Dashing Wave."

## A 12.

Master of the "Ashburton," to Capt. Mein, Nautical Training-ship "Vernon."

Sydney, 21 January, 1869.

Dear Sir,

Having just returned from a voyage to San Francisco, I take this early opportunity of reporting on the two boys whom I took from the above ship as apprentices. It gives me great pleasure to say that they turned out in every way to my satisfaction, and too much praise cannot be given to you for the judicious manner in which you had them trained. Two better lads I could not wish to have on board my vessel; and should their future conduct be as good as their past, I can safely say that, at no distant period, they may aspire to posts of responsibility in the profession.

I am, &amp;c.,

C. SMITH,

Master of the "Ashburton."

## A 13.

John M'Grane, to Capt. Mein, Nautical Training-ship "Vernon."

South Grafton,

January 15, 1869.

Dear Sir,

I take much pleasure in writing those few lines to you, hoping that they will find you in good health as it leaves me at present. I like Grafton verrey well. I have got a good master and misses; my master has bough me plenty of clothes. I was verrey sick coming down. I was verrey sorry to hear that St. Maryes Church was burnt down; I have not gon to church as yet, but I hope I shall soon go; I have plenty to eat and drink, and not mutch to do. I have seen williams me dermit and collier; I was up on williams and me dermits station for three or fore dayes; they ar all wll, and sends ther kind love to all on board, in which I Join, and remain,

Dear Sir,

your obedient,

Servant, JOHN M'GRAN,

please excues my spelling.

A 17.

## A 17.

Colonial Secretary's Office,  
Sydney, 13 January, 1869.

THE following Regulations for the Nautical School-ship "Vernon," having been made by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the 3rd clause of the Industrial Schools Act of 1866.

JOHN ROBERTSON.

## REGULATIONS FOR THE NAUTICAL SCHOOL-SHIP "VERNON."

## THE SUPERINTENDENT AND COMMANDER.

*Charge of Institution.*

1. The Superintendent will have entire charge of the Institution, and be held responsible for all property belonging to the Government; he will visit and inspect every part of the ship daily, and ascertain that the whole is under efficient management and control; he will attend the daily musters, and appoint the boys for work under the various divisions.

*Responsible for duties of Officers.*

2. He will be held responsible for the proper discharge of all duties to be performed by the various Officers of the Institution; and he will be guided, from time to time, by such instructions as he may receive from the Colonial Secretary.

*Training.*

3. He will see that the boys are properly instructed by the Schoolmaster; that they are taught habits of cleanliness, industry, and diligence; and he will be expected to do everything in his power to encourage, by force of example, moral and pious conduct amongst those entrusted to his care. Those boys who are capable of receiving nautical instruction are to be taught by the Superintendent and Commander, one hour in the winter and two hours in the summer.

*Treatment.*

4. He will see that the boys are treated with kindness, combined with strict discipline, and check every instance of harsh conduct on the part of the Officers or Instructors.

*Register to be kept.*

5. He will keep a Register for recording the name of every boy admitted into the Institution, entering such particulars as can be ascertained respecting age, religion, parentage, &c.; also, how the boys are disposed of on leaving the Institution; and, in case of death, the cause should be stated.

*Power to suspend Officers and dismiss Instructors.*

6. All complaints made by the Officers, Instructors, or the boys, must be carefully looked into by the Superintendent, in order that any abuses or infringement of the Regulations may be checked and rectified. The Superintendent may suspend any Officer for neglect of duty or improper conduct, pending the decision of the Colonial Secretary, and shall have power to hire or discharge any of the Instructors not appointed by the Executive authority.

## CHIEF OFFICER.

*To take charge in absence of Superintendent.*

7. The Chief Officer will take charge of the Institution in the absence of the Superintendent, and will see that all orders are punctually and efficiently carried out; he will have to keep watch, and assist the Superintendent to instruct the boys in navigation and seamanship, when required to do so; he will also be held responsible for the issue of Boatswain's stores.

## PURSER.

*Charge of Stores and Clothing.*

8. The Purser will have charge of all stores and clothing, except those placed under the Boatswain, and he will be held accountable for the same before issue. No stores or clothing of any description are to be issued without the orders of the Superintendent. Upon receipt of the provisions from the contractor, the Purser, with the Steward's assistance, will weigh out the rations, and see that each mess has its fair allowance.

## VISITING SURGEON.

*To visit at least twice a week.*

9. The Visiting Surgeon is to visit the sick at least twice a week, or oftener if required; he is to attend the Institution at any time when he may be sent for by the Superintendent.

*Medical Journal.*

10. A Medical Journal is to be kept at the Institution, in which he will record all cases of sickness, disease, or death, with any particulars he may deem necessary.

*Inspection of Boys admitted.*

11. He will see every boy that is admitted into the Institution, and examine into the state of his health, in the presence of the Superintendent, and make an entry of the result of such examination in the Medical Journal.

*Deaths.*

12. In the event of death, he should make an entry in the Medical Journal, specifying the name of the boy, the date, cause of death, with any other particulars he may consider necessary, and report the same to the Superintendent as early as possible.

*Medical Comforts.*

13. When medical comforts are ordered, it will be necessary for him to enter, in an Order Book, to be kept for the purpose, the name of the boy for whom they are required, with the quantities of the articles to be supplied; and he will also have to certify to the correctness of the account for the same on the voucher for the Colonial Treasurer.

SCHOOLMASTER.

## SCHOOLMASTER.

*Hours of Attendance for Teaching.*

14. The hours for the school instruction will be from 9 o'clock to 12 o'clock noon, and from 1 o'clock to 4 o'clock p.m. The Schoolmaster in charge should be in attendance and have the school-room ready for commencing duties punctually at 9 o'clock.

*Muster Roll.*

15. He will receive the boys from the Commanding Officer at school hours, and see that they are all clean and tidy in person; any who may appear to him not to be so should be sent back; he will then call the Muster Roll, and report to the Superintendent any boys who may be absent.

*Prayers.*

16. Prayers are to be read to the boys at divisions every morning by the Schoolmaster.

*Monitors.*

17. As many Monitors as the Schoolmaster may consider necessary may be selected by him as Assistants in the School, to whom he will give one hour's additional instruction, between 4 o'clock and 5 o'clock p.m.

## CARPENTER.

*Instruction to Carpenter.*

18. The Carpenter to work at his own trade, and to instruct the boys who may be told off as carpenters during the day; he will also have to take charge of a night watch.

## MASTER-AT-ARMS.

*Responsible for Cleanliness of Boys.—Escape of Boys from Lower Deck.*

19. The Master-at-Arms to have charge of the lower deck, and to be responsible for the order and cleanliness of the same; he should see that the boys properly wash themselves, and that their clothes are clean and tidy. Every morning he will have to muster and inspect the boys before divisions with the Chief Officer, and to report when all are present; he will be held responsible for the escape of any boys from off the lower deck, and will also have to perform the duties of Gunner.

## BOATSWAIN'S MATES.

*Watches.—Boatswain's Stores.*

20. The Boatswain's Mates have to perform their duties under the Commanding Officer, and to keep watches when required; they will have to instruct boys in seamanship and boats; the Senior Boatswain's Mate to have charge of Boatswain's Stores, which are not to be issued without the orders of the Commanding Officer.

## WARDERS.

*Watch on Lower Deck.—Washing at Divisions.—Care of Bags, Clothes, &c.*

21. The Warders or Seamen Instructors to keep watch on the lower deck, both by day and by night, under the immediate orders of the Master-at-Arms; one to attend the boys when washing, at divisions, and inspection; they are to see that all bags are properly stowed away, the boys' clothes in order, and the decks kept clean. Clothes are not to be left on the lower deck, nor allowed to hang between decks. Mess traps, tables, stools, &c., must be kept clean and in good order. The Warders will also have to instruct the boys when required to do so.

## QUARTERMASTERS.

*Watch, Upper Deck.—Boats to be kept off.—To report boats approaching.*

22. The Quartermasters or Seamen Instructors to keep watch on the upper deck, both day and night; to instruct in seamanship and boats; when on the watch to keep off all boats from alongside, unless they have business with the ship; to see that boys do not go over the side, unless by orders; to report all boats approaching the vessel to the Commanding Officer. At night all boats to be hailed and warned off, unless they have an order on duty.

## BARBER.

*Hair to be cut once a month.—Charge of Bath-room.*

23. The Barber to perform both Bugler and Barber's duties, to attend the boys with the Warder when they are washing. Each boy's head to be examined once a month, and his hair cut. He will also take charge of the bath-room, and see that it is kept clean and in proper order.

## STEWARD AND COOK.

*Boys to be instructed.*

24. The Steward and Cook to perform their own duties, and instruct such boys as may be placed under them in their art.

## TAILOR AND SHOEMAKER.

*Trade instruction.*

25. The Tailor and the Shoemaker will have to instruct any boys who may be told off to them in their trades, and will have to take charge of them whilst at work.

## GENERAL RULES.

*Caution to Officers.*

26. Every Officer must bear himself in such a manner before the boys as not to set a bad example by either word or deed; and not only any offence, such as drunkenness, will be visited with instant dismissal, but such dismissal will follow from ascertained unsuitableness without any special bad conduct.

*Book for Visitors.*

27. A Visitors' Book will be kept, in which all ladies and gentlemen who visit and inspect the Institution must be courteously requested to enter their names, with the date of visit, and any remarks they may think proper to make.

*Strangers*

*Strangers to explain relationship to boys when visiting.—Warders to be present during interviews with boys.*

28. Strangers wishing to visit any of the boys must explain to the Superintendent, or, in his absence, to the officer in charge, their relationship to the boy whom they desire to see, the object of their visit, and any other particulars that the Superintendent may desire to know; and either the Master-at-Arms or Warden must be present during the interview of any such stranger with a boy.

*Relatives to enter names in book.*

29. The relatives and friends of the boys will be required, on every occasion of a visit, to enter their names in a separate book kept for that purpose.

*Boys permitted on shore.*

30. Any boy who has proved himself to the satisfaction of the Superintendent to be trustworthy, may be permitted to go on errands on shore.

*Boys permitted to attend Divine Worship on shore.*

31. Any number of the boys whom the Superintendent has reason to believe may be so trusted, will be permitted to attend Divine Worship on shore, on such occasions and under the charge of such officers as the Superintendent may approve.

*Prayers to be read by Schoolmaster in absence of Clergyman.*

32. The Officers, Instructors, and boys must attend Divine Worship every Sunday on board the ship; if no Clergyman is in attendance, prayers must be read by the Schoolmaster.

#### PUNISHMENT.

*Punishment to be awarded by the Superintendent.*

33. No officer or instructor will be allowed to punish any boy summarily; but the names of such boys as may misconduct themselves must be sent in, with the nature of offence, to the Superintendent, who may award such punishment, hereinafter named, as he may consider sufficient.

*Punishments to be awarded in presence of Ship's Company.*

34. All punishments shall be administered at divisions after prayers, every morning (Sundays excepted), when the whole of the boys and ship's company are present.

*Mode of punishment.*

35. The modes of punishment to be—black list, masthead, meals by themselves, loss of dinner, cells during playhours, cells with bread and water.

*Restriction to punishment.*

36. Corporal punishment not to exceed six cuts with the cane on the hand. For stealing, immoral conduct, and malversation, the boy to be placed over a gun, and punished with a plain leather strap, but no more than twenty stripes shall be given for any offence. This last mode of punishment is only to be resorted to when all other chastisements have failed to have effect upon the conduct of any boy, or in cases of very gross breach of discipline.

#### CLOTHING BOYS.

37. As soon as a boy has been entered, he is to be sent to the barber to have his hair cut and his head examined; he is then to have a warm bath and be turned over to the boatswain in charge, who will supply him with a hammock, bag, clews and lashing, a bed, blanket, and bed cover, which are to be legibly marked before being issued.

38. As soon as the clothes are received, an instructor, told off for the purpose, is to take them to be marked and issued, and he is to see the boy place them in his bag. No further supply of clothes is to be issued without the sanction of the Commanding Officer.

39. The following articles of clothing are to be supplied to each boy during the year :—

2 pairs blue cloth trousers	1 hat (cabbage-tree)
2 do. drill do.	1 ribbon with name
1 pair canvas trousers	1 neckerchief
1 canvas jumper	1 knife and lanyard
2 blue serge frocks	1 rug
2 blue drill do.	1 blanket
2 flannel shirts	Needles and thread
2 pairs socks	2 combs
2 pairs boots	2 towels
1 comforter	1 scrubbing brush
2 caps	2 pocket handkerchiefs

1 clothes brush, with blacking brushes and blacking for every mess of twelve boys.

#### MESSING.

40. Two boys are to be told off as captains to each mess; they are to wear a distinctive badge, and to be selected with great care; they should be boys of good character and of good disposition; they are to be held responsible for the good order of their messes, and to portion out the food to each boy. At 11:30 A.M., one cook is to lay out the table with the mess traps, &c., and one is to go to the coppers for the meat, &c.; this is to be divided, and a portion put into each plate by the Captain of the Mess, under the superintendence of the Seamen Instructors and Master-at-Arms. The boys are to be ranged outside of the stools, standing. When the dinner has been portioned out, it is to be inspected by the Chief or other Officer; the senior boys of each mess are then to say grace, the boys are to take their places, and to dine with their caps off. If on inspection it is found that any boy has an undue proportion of bone, the senior boy should be made to exchange dinners with the one that has an unfair share given him; by this means this selfish practice will be easily corrected.

*Apprenticeship.*

41. Each boy, upon being apprenticed, or otherwise discharged from the ship, will receive a certificate of service, signed by the Superintendent and Commander, of the following form :—

No.

CERTIFICATE of Service on board the Nautical School-ship "Vernon."

Name.	No.	Entry.	Discharge.	Conduct.	Abilities.		Trade.
					Seamanship.	Gunnery.	

Captain's signature.

42. Each boy, upon being apprenticed to the sea, is to be supplied with the following outfit :—

1 bed.	2 pairs socks.
1 blanket.	1 canvas bag.
1 rug.	1 rack comb.
2 pairs trousers.	1 small tooth comb.
2 blue shirts or jumpers.	1 jack knife and lanyard.
2 flannels.	1 knife and fork.
2 caps.	1 spoon.
1 pair boots.	1 plate.
1 comforter.	1 panikin.
1 neckerchief.	1 Bible.
2 towels.	

#### SCHOOL ROUTINE.

43. *Working of Divisions.*

Days.	A.M.	P.M.
Monday.....	1st division, starboard watch ...	1st division, port watch.
Tuesday .....	2nd do., do. do. ...	2nd do., do. do.
Wednesday .....	General sail drill .....	1st do., starboard watch.
Thursday .....	1st division, port watch .....	2nd do., do. do.
Friday .....	2nd do., do. do. ...	1st do., do. do.
Saturday .....	Clean ship.....	Clean ship.
Sunday .....	10.30. Divine Service .....	{ 1.0. Church of England Sabbath School. 3.0. Roman Catholic Sabbath School.

#### *Changing divisions.*

44. Every Friday afternoon a different division to be sent to school, so that each boy will receive the same number of hours schooling during the month.

#### *Idle boys.*

45. Idle and inattentive boys who will not learn, but play, will be kept in to study during their playhours till they give signs of progress.

#### *Boys not to be called out of School.*

46. Boys are not to be called out of school, under any circumstances, without the permission of the Superintendent.

#### *Books to be kept posted up.*

47. The following books are to be kept posted up by the Schoolmaster, and ready for inspection at any moment, viz. :—Register of Average Attendance at School, School Routine, Progress Book, School Record Book, and Quarterly Examinations.

#### INSTRUCTION IN SEAMANSHIP.

##### *Classes.*

48. The boys are to be arranged in classes, and a system devised by which a boy will be gradually passed out of one class to a higher one, a register of which is to be kept by the Instructors.

#### FIRST INSTRUCTION.

##### *Drilling.*

49. The names of all the masts and yards, decks, &c., and drilling at the monkey topsail yard on the gangway, also learning to pull in a boat.

#### SECOND INSTRUCTION.

##### *Sailor's work.*

50.	Reef knot.	Bend studding sail haulyards.
	Bowline knot.	Cat's-paw.
	Bowline on bight.	Sheep-shank.
	Running bowline.	Carrick bend.
	Clove hitch.	Bend hawsers.
	Timber hitch.	Sling a cask.
	Blackwall hitch.	Inside clench.
	Two half hitches	Outside clench.
	Rolling hitch.	Clap on siggers and stoppers

For this instruction, a jackstay is to be stretched along, and set up ; at intervals of three feet, pieces of rope, one fathom long, are spliced in it ; each boy in the class will hold one of these in his hand, and wait the orders of the Instructor, who is to give directions which knot or bend is to be made ; and when it is finished, each boy will wait until the Instructor comes round to examine the work, and to explain its uses.

#### THIRD INSTRUCTION.

##### *Splicing, pointing, &c.*

51.	Long splice.	To make a clue.
	Short splice.	Worming.
	Eye splice.	Parcelling.
	Mathew Walker knot.	Serving.
	Stopper knot.	Strapping blocks.
	To make a grummet.	Turning in dead eyes.
	To make a Turk's head.	Reeving a lanyard.
	To make a point.	Rattling down rigging.
	To make a gasket	To point ropes.
	Shroud knot.	To pass an earing.

#### FOURTH

## FOURTH INSTRUCTION.

*Naming Rigging, &c.*

52. The boys are to learn the names of all the running rigging and blocks, to set up rigging, as also to use the palm and needle. Each boy is to be able to sew a seam and work an eyelet hole well.

*Instruction not to be continued too long.*

53. The foregoing should be varied with the gunnery instruction. No boys should be kept long at any instruction, otherwise they will tired and weary, therefore the seamanship instructions are to be alternated with the gunnery classes. The hours for changing the instructions are to be 10-15 a.m. and 2-15 p.m.

*Pulling in Boats.*

54. Two boats are daily to be sent with the boys that are in the first instruction, to learn to pull; and on Wednesday afternoon and Thursday forenoon the watch not at school are to man all the boats, and to go away for the purpose of boat exercise, viz:—Under sail, to practice getting up and down masts, making and shortening sail, tacking, wearing, reefing, steering by compass, attending sheets haulyards, &c.

## TRADES.

*Boys to be told off to Trades.*

55. One division of boys is to be told off to trades at 9 o'clock a.m. and 1 o'clock p.m.; all trades-boys to be sent to their respective trades after divisions, at 4 o'clock p.m., until 6 o'clock p.m.

## GUNNERY.

*Exercise with Guns, and Powder and Shot.*

56. Boys to be taught the first, second, and third instructions of gun drill with detail, manning both sides, and handspike drill, also cutlas and rifle drills. Occasionally to be exercised with powder, that they may be accustomed to its use, and when practicable to be exercised with shot; they are also to be taught to aim at a movable target; a boat pulling abreast of the ship, to be used for that purpose.

## SUMMER ROUTINE.

*Monday.*

4-30 a.m., Turn the hands up.  
 4-45. Instructors to inspect hammocks, then stow them.  
 5-3. Three divisions to clean upper decks. Boats to be lowered, washed out, and gear cleared; one division to bathe.  
 7-0. Breakfast.  
 7-30. Watch to clean, stow bags. Watch below clean lower deck.  
 7-45. Overhaul lifts and braces.  
 8-0. Cross topgallant royal yards, loose sails; one watch to square yards, spread awnings, flemish down ropes, clean wood-work, and sweep decks; one watch at quarters to clean guns and arms.  
 8-30. Clean lower deck.  
 8-45. Inspection of all decks, boys to fall in at bugle call for muster with their Instructors, to see they are all properly washed, cleaned, and combed.  
 9-0. Divisions and prayers, after which the boys are to be told off for exercise, viz:—One division at gun drill; one division at seamanship and boats; the remainder at school, agreeably to the school routine.  
 10-15. Roll of drum, stand at ease ten minutes, boys in the first instruction to go over the mast-head; change drill—boys that were at gunnery exercise to rifle drill.  
 11-30. Furl sails, square yards, reeve clothes-lines; cooks and captains of messes to prepare the dinner tables.  
 11-45. Inspection of messes.  
 Noon. Dinner.  
 1 p.m. Boys to fall in by sound of bugle, clear up and inspect lower deck; the divisions to be told off as in the forenoon, viz:—One division to be told off to gun drill, one division at seamanship and boats, the remainder at school.  
 2-15. Roll of drum, stand at ease ten minutes, and change drills—boys in the first instruction to go over the masthead, one division at sword drill, one at seamanship and boats.  
 4-0. Dismiss drills, down topgallant yards.  
 5-0. Supper.  
 5-30. Fire stations. Hoist up all boats not required, after which boys to bathe and skylark.  
 7-0. Stand by hammocks.  
 7-10 p.m. Furl or haul over hammock cloths.  
 8-30. Captains of Messes report to the Instructors that their messes are cleaned up. The Instructors are to see that all the boys are in bed before the rounds.  
 9-0. Rounds.

*Tuesday.*

4-30 a.m. Turn the hands up. Instructors to carry on the same routine as on Monday; after prayers the boys to be told off to drills—one division at gun drill, one at seamanship and boats.  
 10-15. Roll of drum, change drills as on Monday.  
 11-30. Furl sail.  
 p.m. Boys fall in as before, one division at gun drill to change to sword drill, one division at seamanship and boats; routine as on Monday.

*Wednesday.*

a.m. Routine as before.  
 9-15. General sail drill, boys to be exercised, making, shortening sail, reefing, &c.; this to be alternated with drilling at stations and manning the ropes.  
 11-30 a.m. Clear up decks.  
 p.m. Boys not at school, at general boat exercise, except newly raised boys, who will be exercised at the monkey sail.  
 4 p.m. Dismiss drills.

*Thursday.*

a.m. Routine as before.  
 9-15. General muster per open list, then one watch at school, and one at general boat exercise, except newly raised boys, who will be exercised at the monkey sail.  
 The clothes are to be mustered as follows:—One watch (not at school) on the first Thursday; the other watch on the second Thursday of every month.  
 Every boy should bring with him for inspection at divisions on Thursday, hammock and clothes stops, knife, and combs.  
 p.m. Mend clothes.

*Friday.*

*Friday.*

A.M. Boys not at school to exercise at general quarters, except junior boys, who will exercise at topsail drill or boats.

1 P.M. Boys not at school to assemble under arms for general rifle drill. After supper, wash clothes.

*Saturday.*

A.M. Hands up at 4.30. Get all bags on deck, rig engine, lead hose along, &c., lower all boats, overhaul the gear for cleaning, up all mess traps, stone lower deck and poop.

7.0. Breakfast.

10.0. Down all bags, stone upper deck and forecastle.

P.M. Air bedding, square yards, repair ratlines, &c.; one watch at quarters to clean guns, after which clean all boats and scrub the gear.

4 P.M. Divisions to serve out clean hammocks (alternate weeks). Every boy to be passed through the bath on Saturday afternoon, if the weather will admit of it. The Ship's Corporal to attend to muster them. After supper sling clean hammocks.

*Sunday.*

A.M. Hands up at 5.30. Sweep all decks.

9.30. Divisions.

10.0. Divine Service.

1 P.M. Sunday School.

3.0. Roman Catholic do.

NOTE.—Clothes-lines to be rove on Tuesdays and Fridays before 3.30 P.M. Hammock guantlines to be rove on Monday after supper, and the hammocks scrubbed the next morning, and triced up at 8 A.M. When the weather is warm the boys to bathe three times a week, at 5.30 P.M. Every boy's hair is to be cut, and his head examined by a barber, the first week of every month. Boats' crews, messenger, and side-boys, to be changed every Monday morning at 7 A.M. The Barber to attend divisions when the boys are inspected. All the boys to be examined in March, June, September, and December, as to their proficiency in school, gunnery, and seamanship; the result to be inserted in the Progress Book against each boy's name, as also his conduct during the quarter. All boys in the first instruction to go over the mast-head at the hours of changing drills. The Instructors are always to attend with them whilst going aloft. Anything that may occur to interrupt the proper carrying out of the Routine Regulations must be reported to the Superintendent.

## WINTER ROUTINE.

*Monday.*

6 A.M. Hands up.

6.15. Lash up and stow hammocks, under the inspection of the Seamen Instructors.

6.30. Clean decks.

7.15. Breakfast.

7.45. Watch below clean lower deck, stow bags, &c.

7.55. Watch fall in, sweep upper deck, coil down ropes, lower boats, &c., according to weather.

8.30. Square yards, spread awnings if required, clean wood-work, &c.

9.15. Bugle to sound, boys fall in for inspection.

9.30. Divisions and prayers, after which boys are to be told off for exercise, viz.:—One division at gun-drill; one division at seamanship and boats; and the remainder at school, according to school routine.

10.30. Roll of drum, stand at ease ten minutes, and change drills.

11.45. Inspection of messes.

Noon. Dinner.

1 P.M. Boys fall in at sound of bugle, clear up and inspect lower deck. Divisions to be told off as in forenoon.

2.15. Roll of drum, stand at ease ten minutes, and change drills.

3.30. Divisions assemble at sound of bugle, and drills dismissed.

4.0. Hoist up all boats not required.

4.30. Supper.

5.0. Fire stations.

7.30. Hang up hammocks, and down all bags.

8.0. Rounds. (The Seamen Instructors are to see that all the boys are in bed before the time for rounds.)

*Tuesday.*

A.M. Routine as on Monday.

1 P.M. Boys fall in as on Monday; one division at gun drill to change to sword drill.

Routine as on Monday.

*Wednesday.*

A.M. Routine as on Monday.

9.30. After prayers, general sail drill; boys are to be exercised making and shortening sail, &c.; this to be alternated with drilling at stations and manning ropes.

P.M. Boys not at school at general boat exercise, except junior boys who will exercise at the deck topsail.

*Thursday.*

A.M. Routine as on Monday.

9.30. After prayers, a general muster per open list; then one watch at school and one at general boat exercise, except junior boys who will be exercised at the deck topsail.

The clothes are to be mustered as follows:—One watch (not at school) on the first Thursday, the other watch on the second Thursday of each month. Every boy should bring with him for inspection at divisions on Thursday, hammock and clothes stops, knife and comb.

P.M. Routine as on Monday.

*Friday.*

A.M. Boys not at school to exercise at general quarters, except junior boys who will exercise at topsail drill or boats.

1 P.M. Boys not school to assemble for general drill (to land if practicable.)

*Saturday.*

*Saturday.*

6 A.M. Hands up, get all boys on deck, rig engine, and pass hose along, &c., lower boats and overhaul the gear for cleaning.

7-15. Breakfast.

7-45. Up all mess traps, and stone lower deck.

10. Down all bags, stone upper deck, poop, and fore-castle.

1. P.M. Air bedding, square yards, repair ratlines, &c.; one watch at quarters to clean guns and complete gear, after which they are to clean all boats and scrub the gear.

4-0. Divisions—to serve out, clean hammocks on alternate weeks. Every boy is to be passed through the bath on Saturday afternoon, weather permitting. The ship's Corporal to attend to muster them. After supper, sling clean hammocks.

*Sunday.*

6 A.M. Hands up, sweep all decks.

10. Divine Service.

2 P.M. Sunday School.

NOTE.—Hammocks are to be scrubbed after breakfast on alternate Tuesdays, and triced up to dry in the early part of the forenoon, on which days prayers at 10 A.M., or earlier if practicable. Clothes are to be washed on Tuesdays and Fridays at 2-15 P.M. Hammocks are always to be collected and inspected at divisions, and issued in the same manner. Clothes-lines are to be rove at 11 A.M. on washing days. Hammock gauntlines are to be rove every Monday after supper. Every boy's hair is to be cut, and his head examined by the Barber, the first week of every month. Boats' crews, messengers, and side-boys, are to be changed every Monday, at 7 A.M.

## RULES TO BE OBSERVED BY THE SEAMEN INSTRUCTORS AND BOYS OF N. S. S. "VERNON."

1.—Instructors are expected on all occasions to show an example of cheerfulness and willing obedience in executing their several duties; they are not only to abstain from using violent or harsh language themselves, but they are uniformly to discourage all improper conduct in others.

2.—The Instructors in their several stations are expected to report all skulking characters, and to point out all those who, by activity and good conduct, deserve encouragement.

3.—Nothing whatever is to be taken in at, or thrown out of, the ports, nor are any clothes to be hung about the chains, head, rigging, or in the messes between decks.

4.—When any duty is being carried on, the strictest silence is to be kept.

5.—All complaints are to be made on the quarter-deck, to the Commanding Officer, in order that they may be communicated to the Commander.

6.—It is the duty of every boy to report all skulkers and lazy characters, in order that they may be made to do their share of the work.

7.—It is the duty of every boy to detect a thief, as a common enemy to all on board; and any boy screening or holding communication with a thief will be considered as equally bad in character, and will not be allowed to mess with the other boys. No article can ever be lost on board, therefore everything found is to be taken to the ship's corporal for its proper owner.

8.—All quarrelling and fighting will be severely punished, and on no account are cards, dice, or gambling of any sort, to be allowed in any part of the ship.

9.—If any boy should disobey the orders of his Instructor or Captain of Mess, he will be punished.

10.—Selling or exchanging clothes, and all trafficking, is strictly forbidden, and will be punished by the forfeiture, on both sides, of the article so sold or exchange, and further as may be deemed necessary.

11.—The boys are to be mustered at divisions, according to the instructions to which they belong. The Warrant Officers in charge of the boys, assisted by their Instructors, will be responsible for the progress they make in their instructions; they will take care never to allow them to appear otherwise than clean in their skin and orderly in their clothes.

12.—All are expected to feel a proper pride in their ship, and to merit encouragement by showing activity and a cheerful spirit in the performance of their several duties.

## A 18.

EXTRACT from the *Sydney Morning Herald*, 14 January, 1869.

The barque "Ashburton," Captain Smith, arrived yesterday afternoon from Puget Sound, with a cargo of timber, consigned to order. Captain Smith reports of his passage that he sailed from Port Gamble, Puget Sound, 8th November, at 8 a.m.; cleared Fuca Straits, 9th, at 8 p.m., with a strong breeze from S.E., gradually hauling to the S. and S.W., and increasing to a gale; next day, at noon, it blew a complete hurricane from S.S.W.; had a continuance of S. and S.W. gales until the 19th; afterwards moderate weather from the S. and S.E. until the 4th December, when we got the N.E. trades in latitude 22° N.; carried strong N.E. trades until the 12th December, when we lost them in latitude 20° N.; had light variable winds until the 16th, when we got the S.E. trades in 3° S.; crossed the Equator on the 14th December, in longitude 154° 35' W.; 5 a.m., 21st December, passed Reirson's Island; 11 p.m., 26th December, passed Savage Island; 1 p.m., 29th December, passed Fylstaart Island; 10th January, 8 a.m., passed Howe's Island; had S.E. and E. winds all the latter part of the passage. On the departure of the "Ashburton" from this port, Captain Smith shipped as apprentices two lads from the training-ship "Vernon"; and it is satisfactory to learn that they have not only conducted themselves in every respect so as to meet the approbation of their commander, but have advanced themselves in nautical science to an extent that will enable them, in a short time, to occupy the position of officers. The names of the youths referred to are James M'Ivory and James Plowright.

## A 19.

N. S. S. "Vernon,"  
26 September, 1867.

Sir,

With deep regret I have to report the boy *Albert Dempsey* of malversation.

He has been reported to me to-day of having been in the habit of abusing himself; and, upon questioning him, he admitted the fact.

He has also been charged with other immoral conduct, but the evidence is not quite clear.

At present I have placed him in a separate apartment, and made him mess by himself, until I receive instruction how his case is to be dealt with, and what punishment is to be inflicted; or if it would not be better to remove him, so as to deter others from following his bad example.

I have, &c.,  
J. S. V. MEIN.

## A 20.

The Principal Under Secretary to The Superintendent of Nautical School-ship "Vernon."

Colonial Secretary's Office,  
Sydney, 30 September, 1867.

Sir,

I am directed by the Colonial Secretary to acknowledge the receipt of your letter of the 26th instant, respecting the misconduct of the boy named Albert Dempsey, and to say that the offence of which the boy has been guilty is one of a scandalous character, less accessible to legal coercion than to influences of a moral kind.

It appears to Mr. Parkes, that an attempt should be made by you to convince the offender of the unmanly and degrading character of the offence, and to stimulate him to a mode of thought which would render the repetition of the offence almost impossible.

It is particularly the duty of the Superintendent of an institution like the Vernon Nautical School, to anticipate and deal with, if not to prevent such disgraceful proceedings; but failing to influence the offender in such manner as is suggested, it would then be the duty of the Superintendent to adopt such other corrective measures as the separation from the others, the restriction of diet, or such other means as may appear to him most desirable.

I have, &c.,  
HENRY HALLORAN.

## A 21.

In examining men for the "Vernon," Captain Mein must ascertain—

1. Course of life for the last seven years.
2. Whether married; and if so, how long, and number of children.
3. Whether content to live on board.
4. Whether strictly sober.
5. Educational capabilities. Must also judge of character yourself, which is very important, viz.:—Whether addicted to swearing or fits of bad temper, and whether likely to have correct notions of the proprieties of life.

You must impress upon *all*, even the *Cook*, the necessity of such a manner and bearing before the boys as not to set a bad example even by words or deed. And you must tell them, that not only any offence such as drunkenness will be visited with instant dismissal, but that the dismissal will follow from ascertained unsuitableness, without any special act of bad conduct.

H.P.—12/4/67.

## A 22.

Captain Mein to the Chairman of the Committee on N. S. S. "Vernon."

N. S. S. "Vernon,"  
2 March, 1869.

Sir,

Before the evidence is closed relating to the management of the N. S. S. "Vernon," I beg most respectfully to bring under the notice of the Committee the following particulars of the establishment of the institution, and the difficulties which have been encountered in properly carrying out its primary object.

From the inauguration up to the present time, the greatest difficulty has been experienced in obtaining officers and men properly qualified for the duties required of them; and, consequently, numerous changes have taken place aboard the vessel. In very many cases, during the earlier period of the working of the institution, it was almost impossible to preserve that degree of discipline necessary on board a vessel of this kind. Officers and men, who had made faithful promises of obedience to all orders, and generally to carry out with zeal and efficiency the instructions received from their superiors, instead of so doing, either disregarded their duties, or performed them in a careless and negligent manner; and when reprimanded, exhibited a spirit of insubordination which tended materially to disorganize the discipline of the ship, and to frustrate the objects of the institution.

This want of discipline among the men I attribute, in a great measure, to the insufficient authority I possessed in shipping and discharging them. This authority, which every commander of a vessel possesses, is, I think, absolutely necessary; and since the recent Regulations for this vessel have been in force, by which such power is afforded me with regard to those not appointed by Executive authority, I have found the crew more entirely under my control. Beyond this, I think it would be perhaps advisable, for the better management of the institution, if the right were conceded me of recommending my officers for the approval of the Honorable the Colonial Secretary.

Another difficulty which this establishment has experienced has been, that both officers and men, from the peculiar character of the institution, have had, in a great measure, all their duties to learn; and as the vessel itself was, in the first instance, not sufficiently equipped for the purposes intended, the institution has only been gradually progressing to a state of efficiency. It is, therefore, at present hardly possible to judge of the amount of good likely to arise when it has had sufficient time to mature itself.

Notwithstanding, however, these disadvantages, there can be no doubt that the establishment of this vessel has produced beneficial results. It has now been in operation since 20th May, 1867; and, from that time to the present, 159 boys have been received on board. Of these, 8 have been discharged to their parents or otherwise, and 23 have been apprenticed out as follows:—

- 9 as sailors.
- 4 " stockkeepers.
- 3 " general servants.
- 2 " grooms.
- 3 " farmers.
- 1 " cabinet-maker.
- 1 " shoemaker.

Most of the boys thus apprenticed out came on board with the reputation of being bad characters; but it is gratifying to learn that their masters have in all cases appeared perfectly satisfied with their conduct, and that applications are now being received for apprentices faster than they can be drafted out. The certificates that I have recently laid before you, and those which I have now the honor to hand in, will support my statement that the boys' conduct has met with the approval of their masters.

Five enclosures.

One

One of the boys of the ship, who has been apprenticed to me as cabin boy and servant, has afforded me very great satisfaction. He is constantly sent by me on errands to all parts of the city. I have frequently trusted him with sums of money to make payments with, and in every instance his conduct has been most trustworthy.

I would here beg to remark that, on every occasion in which the boys have been taken out to pleasure excursions, I have been congratulated upon their good behaviour and orderly conduct, and that they bear favourable comparison with any other school-boys.

Arrangements have now been made for the boys to attend the churches of their own denominations on shore on Sunday, and also for their clergymen to come on board on one afternoon in the week to give them religious instruction. The boys' conduct when on shore is highly satisfactory, and they have been reported to me as being most orderly and attentive during divine worship. On all these occasions when taken on shore, either for pleasure parties or attending divine service, there has never been any attempt of desertion.

There can be no doubt, therefore, from these circumstances, that great benefit has resulted from this institution, especially when it is considered that these boys, who a few months ago were prowling about the wharves of this city, or were the associates of thieves and prostitutes, have been so far reformed, and have conducted themselves in such an orderly and diligent manner.

In conclusion, I would most respectfully offer for your consideration the following suggestions, which, if carried out, would be for the future advancement of the objects of this institution, and of permanent benefit to this Colony:—

1. To remove the "Vernon" from her present moorings, and moor her in Middle Harbour, above the spit, abreast the Government reserve, or lands not yet disposed of by sale, and made a receiving ship for all male juvenile delinquents.

The reserve to be enclosed in with a high, close fence; working parties to be told off daily to erect substantial workshops and sheds for trades, such as shipwrights, carpenters, boatbuilding, blacksmiths, shoemakers, tailors, baking, quarrying, &c. Large tanks could be quarried out of the rock to hold a quantity of water, and the rest of the ground laid out as a farm. Cows could be kept, to produce sufficient milk for the establishment and to make butter for the market.

2. For the efficient training of seamen, to purchase a small vessel, either a schooner or brig, as a tender to the "Vernon," of about 100 tons—a good weatherly craft—which, I think, could be obtained ready for sea for about £800. This vessel could go to sea when wanted for exercise, or could be made use of in going either to the Islands or a cruise along the coast, on visits to lighthouses, or any special Government service, and to be entirely worked by the boys from the receiving ship "Vernon." The boys would thus become really practical sailors.

The shore working party could be conducted, as nearly as possible, on the Red Hill Farm system, or Mettray, as would be found from experience the best adapted to the juveniles of this Colony. A Reformatory, Industrial School, and Training Vessel for seamen, would thus be all under the one superintendence, and be an easy distance from Sydney, where the head of the department could inspect at any moment required; and being under one superintendence and staff, the expense would be much less than by separate establishments. From this depot the whole Colony could be supplied with trained artisans, agriculturists, servants, and seamen.

The expense of adopting these suggestions would not be attended with any material increase of the present estimate for this institution. The boys who are on board the "Vernon" have now acquired such habits of industry that all the manual labour required could be furnished from the decks of this vessel, and it would be only necessary to engage the services of one or two skilled persons to direct their energies in certain special departments.

I have, &c.,  
J. S. V. MEIN.

(To Evidence given by Mr. J. Pickering, 19 February, 1869.)

#### B.

RETURN of Estimated Cost of Boots made on board the N. S. S. "Vernon," by order of the Select Committee of Legislative Assembly, for six months ending 17th February, 1869:—

No. of pairs made.	Without salary : per pair.	With salary : per pair.	Contract price per pair.	Retail selling price per pair.
	s. d.	s. d.	s. d.	s. d.
260	2 7½	7 7	5 6	6 6

NOTE.—This is the first six months the boys have been at work. Every half-year, if the boys are allowed to continue at the trade, they will increase the work, and by this means lessen the cost per pair; and after a short time (say eighteen months), they will not only lessen the price, but bring in a return, because they will become more proficient, and a greater amount of work will be done. I am sorry I cannot obey the commands of the Committee in regard to cost of victualling and clothing the boys, as I am not able to obtain the desired information.

I am, &c.,  
JAMES PICKERING,  
Trademaster, N. S. S. "Vernon."

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

BALMAIN CEMETERY, PETERSHAM.

(PETITION—CERTAIN INHABITANTS OF PETERSHAM.)

*Ordered by the Legislative Assembly to be Printed, 28 January, 1869.*

To the Honorable the Members of the Legislative Assembly of New South Wales,  
in Parliament assembled.

The humble Petition of the undersigned Owners and Occupiers of Land, in  
the Parish of Petersham,—

SHewETH :—

That your Petitioners either own or occupy land in the parish of Petersham,  
and in the vicinity of the so-called Balmain Cemetery.

That in every instance, your Petitioners occupied the said land prior to the  
establishment of the same Cemetery.

That such of your Petitioners as are owners of land, have laid out large sums of  
money in erecting dwelling-houses, and in improving their property.

That the establishment of the said Cemetery in their vicinity interferes very  
materially with the ease, comfort, and enjoyment of your Petitioners, has already  
become a nuisance, and threatens, at no distant day, to be a fruitful source of disease.

That your Petitioners, from the time when the promoters first mooted the project  
of the said Company for the Cemetery, up to the present day, have done everything in  
their power to prevent the establishment of so great a nuisance amongst them.

That they took proceedings in due course of law to abate the nuisance of the  
said Cemetery, but were advised by counsel, that the Act of Council 19th Victoria,  
No. 30 (the Marriage Laws Consolidation Act), had repealed the only Act in force in  
the Colony for the regulation of burials, namely, the 6th George IV, No. 21.

That your Petitioners are thus left entirely without remedy, and subject to this  
nuisance, although, when the Necropolis Act of last Session was passed by your  
Honorable House, it was expected that that Act would have the effect of preventing all  
burials in and around Sydney, except in the said Necropolis.

That the said Necropolis has been established at great cost to the public; and it  
is therefore, in the opinion of your Petitioners, opposed to sound policy to allow  
individuals to compete with it, by the establishment of a nuisance.

Your Petitioners, therefore, humbly pray your Honorable House to take the  
foregoing premises into your favourable consideration, and to re-enact clause 10 of the  
6th George IV, No. 21, or to pass such other Act on the subject as in your wisdom may  
seem meet.

And your Petitioners, as in duty bound, will ever pray, &c.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

BURIALS REGULATION BILL.

(PETITION—BALMAIN.)

---

*Ordered by the Legislative Assembly to be Printed, 12 March, 1869.*

---

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents of the Borough of Balmain,—

SHEWETH :—

That your Petitioners have observed with great satisfaction that a Cemetery for the interment of the dead of all denominations has been opened on the Balmain Road.

That your Petitioners have been informed that a few interested persons have presented a Petition having for its object the closing of the said Cemetery.

Your Petitioners beg the attention of your Honorable House to the great distance that they reside from the Necropolis, and the hardship it would entail upon them to be compelled to convey their dead to that place of interment.

Your Petitioners assert, without fear of contradiction, that no nuisance can possibly arise from the Cemetery in question, the regulations of which are quite unobjectionable ; and your Petitioners have been informed and believe that the Company have offered and are willing to submit the same to the inspection of Government.

Your Petitioners, therefore, humbly pray that your Honorable House will not pass a Bill now before it which would have the effect of closing the Balmain Cemetery.

Dated this 6th day of March, 1869.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

**BURIALS REGULATION BILL.**  
(PETITION—FROM THE MUNICIPAL COUNCIL OF BALMAIN.)

*Ordered by the Legislative Assembly to be Printed, 12 March, 1869.*

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

GENTLEMEN,—

This Petition humbly sheweth that a Bill to provide for the Burial of the Dead is now before your Honorable House, which, if passed into law, would have the effect of closing the Balmain Cemetery.

That the said Cemetery is of great advantage to the inhabitants of the Borough of Balmain, inasmuch as from the furthest point of the township the distance does not exceed three (3) miles; whereas, to the Receiving-house at Redfern, the distance is not less than five (5) miles, from whence the dead would have to be taken to the Necropolis at Haslem's Creek.

That your Petitioners would respectfully deny the statement or allegations which have been made that any number of inhabitants live near the Cemetery, or that it is likely ever to be the centre of a large population; but that, on the contrary, it would be difficult to find a piece of ground so admirably adapted for the purpose to which it is devoted.

Your Petitioners would respectfully remark that, in order to prevent a repetition of those nuisances which many Cemeteries, both public and private, have created, it would be advisable that your Honorable House should take the management of all Cemeteries under its own control.

And your Petitioners, as in duty bound, will ever pray.

Signed and sealed on behalf of the Council of the Borough of Balmain, on the eighth day of March, in the year of our Lord one thousand eight hundred and sixty-nine, by me—

F. R. ROBINSON, (L.S.)  
Mayor of Balmain.

1868-9.

## BURIALS REGULATION BILL.

(PETITION—RESIDENTS IN THE VICINITY OF THE BALMAIN CEMETERY,  
PETERSHAM.)

---

*Ordered by the Legislative Assembly to be Printed, 12 March, 1869.*

---

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned owners and occupiers of land, residing  
in the immediate vicinity of the Balmain Cemetery, Petersham,—

HUMBLY SHEWETH:—

That your Petitioners have been informed and believe that a Petition has been presented to your Honorable House, by some few residents in the vicinity of Balmain Cemetery, setting forth that the establishment of the said Cemetery will depreciate the value of the property which they hold in the neighbourhood; that it is likely to become a nuisance to them, and a source of disease to the inhabitants of Petersham; and praying that your Honorable House would take steps to prevent such danger by closing the said Cemetery.

Your Petitioners have every reason to believe, from experience gathered both at Home and in this Colony, that so far from the establishment of a Cemetery in any neighbourhood depreciating the value of property, it tends on the contrary to enhance it. Your Petitioners further believe that no nuisance is likely to arise from the establishment of the Balmain Cemetery under the regulations now in force there.

Your Petitioners, many of whom are in humble circumstances, would respectfully urge on your Honorable House the necessity which exists for the establishment of Cemeteries easily accessible; as very many of your Petitioners and others would be prevented, by the loss of time and cost of transit, from ever seeing the graves of those whose memories they cherish, should they be compelled to inter their dead in the Necropolis at Haslem's Creek.

Your Petitioners would therefore pray—that, before acceding to the prayer of the Petition now before your Honorable House for the closing of the Balmain Cemetery, your Honorable House will cause such evidence to be taken in the premises as you may deem fit.

And your Petitioners, as in duty bound, will ever pray, &c.

Dated this sixth day of March, 1869.

**BURIALS REGULATION BILL.**

(PETITION—CLERGYMAN AND CHURCHWARDENS OF ST. PETER'S, COOK'S RIVER.)

---

*Ordered by the Legislative Assembly to be Printed, 16 March, 1869.*

---

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of the undersigned [Clergyman and Churchwardens of  
St. Peter's, Cook's River,—

SHEWETH :—

That whereas a Bill has been introduced into your Honorable House professing  
“to provide for the Burial of the Dead,” by closing all Burial-grounds within the distance  
of one mile from any town or hamlet, &c.,—your Petitioners beg to represent that the  
Burial-ground of St. Peter's, Cook's River, is perfectly free from anything injurious to  
the health, or offensive to the senses ; inasmuch as every grave is seven feet deep, and only  
one body allowed to be buried in any grave, and no grave is permitted to be re-opened.  
Therefore, your Petitioners pray that a clause be inserted exempting St. Peter's Burial-  
ground aforesaid, so that it may be permitted to remain as a Burial-ground for the benefit  
of those parishioners who avail themselves of it.

And your Petitioners will ever pray.

**BURIALS REGULATION BILL.**

(PETITION—CERTAIN FREEHOLDERS, &c., PARISH OF ST. PETER'S, COOK'S RIVER.)

---

*Ordered by the Legislative Assembly to be Printed, 16 March, 1869.*

---

To the Honorable the Legislative Assembly of New South Wales in Parliament assembled.

The humble Petition of the undersigned freeholders and householders of the parish of St. Peter's, Cook's River, in the Police District of Sydney,—

HUMBLY SHEWETH:—

That your Petitioners have seen with pleasure the introduction into your Honorable House of a Bill to regulate the Burial of the Dead.

That the Burial-ground attached to the Parish Church of St. Peter's has now become closely surrounded by dwelling houses, and has long been in such a state as to demand the interference of the Legislature.

That when a grave or vault in the said Burial-ground is opened for the reception of another body, it is found full either of water or of noxious pent up gases. The former has to be baled out before the required interment can take place, and the latter disseminate themselves through the atmosphere and cause the circulation of a large amount of pestilential air. In either case, the exhalations arising threaten those living in the neighbourhood with epidemic diseases of the worst character.

That your Petitioners have been desirous of closing the said Burial-ground, but have been able to find no law that will enable them to do so in the ordinary course.

That your Petitioners are willing to leave the matter in the hands of the Executive Council if it be armed with the necessary power for acting as is proposed by the Bill now before your Honorable House.

Your Petitioners therefore humbly pray your Honorable House to pass the said Bill for regulating the Burial of the Dead, with such amendments as to your Honorable House may seem meet, so as to leave it to the Executive Council to declare when a burial should, or should not, continue to be used.

And your Petitioners, as in duty bound, will ever pray, &c.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

MRS. MARY SINGLETON.

(PETITION OF.)

---

*Ordered by the Legislative Assembly to be Printed, 6 January, 1869.*

---

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of Mary Singleton,—

RESPECTFULLY SHEWETH :—

That your Petitioner is the widow and sole legatee under the will of the late Benjamin Singleton, of Singleton, Hunter River.

That, in or about the year 1836, the Government built a Court House at a place called Minimba, near Singleton.

That the inhabitants of Singleton were inconvenienced thereby, and, in public meeting assembled, resolved to address the Government to the following effect :—

“That Mr. Benjamin Singleton agreed to build a Court House and Lock-up, similar to the plan and specification, in the town of Singleton, on condition that the house and land at Minimba should be given up to him, and that, in the meanwhile, he would provide accommodation for the sittings of the Bench of Magistrates and Clerk of Petty Sessions, in a room adjoining the mill.”

This offer was accepted by the Colonial Secretary, on the 3rd of December, 1838, and in 1839 the site, &c., proposed for said building was approved, and in 1841, August 30th, the building, &c., was occupied and used by the Government as a Court House, &c., from that date up to 1868, without any remuneration whatever from the Government to the said Benjamin Singleton or his assigns.

Your Petitioner believes that the Government have never had a proper title to Minimba, and therefore could not comply with their engagement with Mr. Singleton.

Your Petitioner, however, conceives that that does not invalidate her claim to compensation for use and occupation for thirty years.

That your Petitioner has in various ways sought to obtain compensation from the Government, without avail, and being in reduced circumstances, is unable to carry on a suit in the Supreme Court ; she is therefore barred from what she conceives to be her just rights.

Your Petitioner, therefore, respectfully prays that your Honorable House would take the matter into its consideration, and grant her inquiry by Committee into the whole matter, and cause such redress as by inquiry the case may require.

And your Petitioner, as in duty bound, will ever pray, &c.

MARY SINGLETON.

## EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES, No. 24. TUESDAY, 19 JANUARY, 1869.

4. Mrs. Mary Singleton (*"Formal" Motion*):—Mr. Wilson moved, pursuant to Notice,—
- (1.) That a Select Committee, with power to send for persons and papers, be appointed to inquire into and report on the Petition of Mrs. Singleton, presented by him on the 5th January.
- (2.) That said Committee consist of Mr. Foster, Mr. Lucas, Mr. Burns, Mr. Bell, Mr. Tighe, Mr. Farnell, Mr. Dodds, Mr. Neale, Mr. Wisdom, and the Mover.
- Question put and passed.

VOTES, No. 25. WEDNESDAY, 20 JANUARY, 1869.

3. Member of Legislative Council as Witness:—Mr. Wilson moved, That the following Message be carried to the Legislative Council:—

MR. PRESIDENT:—

The Legislative Assembly having appointed a Select Committee "to inquire into and report on the Petition of Mrs. Mary Singleton," and that Committee being desirous to examine the Honorable Bourn Russell, Member of the Legislative Council, in reference thereto, requests that the Legislative Council will give leave to its said Member to attend and be examined by the said Committee, on such day and days as shall be arranged between him and the said Committee.

*Legislative Assembly Chamber,*

*Sydney, 20th January, 1869.*

Speaker.

Question put and passed.

VOTES, No. 26. THURSDAY, 21 JANUARY, 1869.

6. Mrs. Mary Singleton:—Mr. Wilson, *with the concurrence of the House*, moved (without notice), That the Return to an Address of the Legislative Council, containing Copies of Correspondence relating to the "Land Claim of Mrs. Mary Singleton," ordered by the Council to be printed on 5th December, 1855, be referred to the Committee now sitting on the Petition of "Mrs. Mary Singleton."
- Question put and passed.

\* \* \* \* \*

10. Member of Legislative Council as Witness:—The Speaker reported the following Message from the Legislative Council:—

MR. SPEAKER,

In answer to the Message from the Legislative Assembly, dated the 20th day of January, 1869, requesting leave for the Honorable Bourn Russell, a Member of the Legislative Council, to attend and be examined before a Select Committee of the Legislative Assembly, appointed to inquire into and report upon the Petition of Mrs. Mary Singleton, the Council acquaints the Assembly, that leave has been granted to its said Member to attend and be examined by the said Committee, if he think fit.

*Legislative Council Chamber,*

*Sydney, 21st January, 1869.*

T. A. MURRAY,

President.

VOTES, No. 43. TUESDAY, 23 FEBRUARY, 1869.

3. Mrs. Mary Singleton:—Mr. Wilson, as Chairman, brought up the Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee for whose consideration and report this matter was referred on the 19th January, 1869, together with Appendix.
- Ordered to be printed.

 PETITION OF MRS. MARY SINGLETON.
 

---

---

 REPORT.
 

---

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 19th January last,—“*with power to send for persons and papers,*” “*to inquire into and report on the Petition of Mrs. Singleton, presented by Mr. Wilson, on the 5th January,*”—to whom was referred, on the 21st January,—“*the Return to an Address of the Legislative Council, containing Copies of Correspondence relating to the ‘Land Claim of Mrs. Mary Singleton,’ ordered by the Council to be printed, on 5th December, 1855,*”—have agreed to the following Report:—

Your Committee, having examined the witnesses named in the margin, are of opinion that it has been fully proved that, in the year 1841, Mr. Benjamin Singleton did, by agreement, build, and hand over to the Government, the Court House at Singleton, and ground attached. That the said Court House has, since that date, been in the possession of the Government, but that no payment for the same has yet been made.

M. Fitzpatrick, Esq.  
Hon. Bourn Russell,  
M.L.C.  
E. G. Ward, Esq.  
A. Bell, Esq., M.P.  
John Williams, Esq.  
John Luca Esq., M.P.  
John S. Adam, Esq.

Your Committee are further of opinion that the right of the Petitioner, Mrs. Singleton, to the assets in her late husband's estate, has been clearly shewn, and that she alone has any valid claim to compensation.

Your Committee therefore recommend Mrs. Singleton's claim to the favourable consideration of the Government.

J. BOWIE WILSON,  
Chairman.

No. 1 Committee Room,  
Sydney, 19 February, 1869.

# PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 20 JANUARY, 1869.

## MEMBERS PRESENT:—

Mr. Lucas,	Mr. Wilson,
Mr. Farnell,	Mr. Burns.
Mr. Tighe,	

Mr. Wilson called to the Chair.

Committee deliberated as to their course of proceedings.

Chairman requested to take the usual course for obtaining the leave of the Legislative Council for the attendance of the Hon. Bourn Russell to give evidence.

*Ordered*,—That the Under Secretary for Lands be summoned to give evidence at next meeting, and to produce all the papers in the case.

[Adjourned to to-morrow, at 10:30 A.M.]

THURSDAY, 21 JANUARY, 1869.

## MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. Burns,	Mr. Tighe,
Mr. Forster,	Mr. Farnell,
	Mr. Bell.

Michael Fitzpatrick, Esq. (*Under Secretary for Lands*), called in and examined.

Witness handed in Report from the Crown Solicitor, dated 28 June, 1866. (*Vide Appendix A.*)

Witness withdrew.

Committee deliberated, and decided to examine the Hon. Bourn Russell, M.L.C., at next meeting.

Clerk instructed to send usual letter, when leave shall have been given by the Legislative Council.

[Adjourned to to-morrow, at 10:30 A.M.]

FRIDAY, 22 JANUARY, 1869.

## MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. Bell,	Mr. Burns,
Mr. Tighe,	Mr. Farnell,
Mr. Neale,	Mr. Lucas.

The Honorable Bourn Russell, M.L.C., called in and examined, by leave of the Legislative Council.

Witness produced a Map of the Town of Singleton; also, a copy of the Conveyance from Creditors to Benjamin Singleton, junior; also, Deed, dated 7th December, 1852—B. Singleton, junior, to B. Singleton, senior; also, B. Singleton's Will and Probate.

Witness handed in Extract from Mortgage Deed; also, Declaration made by Benjamin Singleton, junr., 19th January, 1869. (*Vide Appendix, B 1 and B 2.*)

Committee deliberated, and

[Adjourned to Wednesday next, at 10:30 A.M.]

WEDNESDAY, 27 JANUARY, 1869.

## MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. Tighe,	Mr. Farnell,
Mr. Bell,	Mr. Burns,
	Mr. Neale.

Committee deliberated.

Clerk instructed to summon Mrs. Burdekin, or her Agent, to give evidence at next meeting.

[Adjourned to to-morrow, at 10:30 A.M.]

THURSDAY,

THURSDAY, 28 JANUARY, 1869.

MEMBERS PRESENT :—

Mr. Wilson in the Chair.

Mr. Farnell,		Mr. Tighe,
Mr. Bell,		Mr. Dodds.

Clerk submitted a letter from M. Burdekin, Esq., M.P., which he read at length, by direction of the Chairman, as follows :—

“ Macquarie-street, Sydney,  
27 January, 1869.

“ Sir,

“ I have the honor to state, in reply to your letter of this date, requesting the attendance of Mrs. Burdekin, or her Agent, at a meeting of the Select Committee on the Petition of “ Mrs. Mary Singleton,” that Mrs. Burdekin would feel much pleasure in affording the Committee every information in her power. I am, however, desirous to say, that all particulars relating to Mrs. Singleton’s claim to compensation, as regards the Court House at Singleton, so far as the rights of Mrs. Burdekin and her sons are affected thereby, will be found fully stated in the correspondence with Government on the subject. I think it will be found more convenient to the Committee to refer to written documents, especially as legal questions come into consideration. I believe the correspondence and all other papers will be obtainable from the Crown Solicitor.

“ O. F. Kelly, Esq.,  
Legislative Assembly.”

“ I have, &c.,  
MARSHALL BURDEKIN.”

Committee deliberated.

Edward Grant Ward, Esq. (*Deputy Registrar General*), called in and examined.

Witness produced Registers of Memorials of Mortgages of 1838, 1840, and 1841, containing particulars of the several Mortgages referred to in the Enclosure to letter No. 43 of the Correspondence referred to this Committee.

Witness withdrew.

Committee deliberated.

Archibald Bell, Esq., M.P., examined in his place.

Committee deliberated, and decided to summon the Crown Solicitor to give evidence at next meeting.

Clerk instructed to send usual letter, requesting John Lucas, Esq., M.P., a Member of this Committee, to favour the Committee with any information he may possess, at next meeting.

[Adjourned to Tuesday next, at 10:30 A.M.]

TUESDAY, 2 FEBRUARY, 1869.

MEMBERS PRESENT :—

Mr. Wilson in the Chair.

Mr. Tighe,		Mr. Burns,
Mr. Bell,		Mr. Farnell.

John Williams, Esq. (*Crown Solicitor*), called in.

Committee deliberated, and, at the suggestion of the Witness, decided to postpone his examination, in order to enable him to peruse the evidence of the Deputy Registrar General, which the Clerk was instructed to forward to him.

[Adjourned to Friday next, at 10:30 A.M.]

FRIDAY, 5 FEBRUARY, 1869.

MEMBERS PRESENT :—

Mr. Wilson in the Chair.

Mr. Lucas,		Mr. Dodds,
Mr. Farnell,		Mr. Tighe,
		Mr. Bell.

John Williams, Esq., called in and again examined.

Witness produced various documents, from which he quoted during his examination.

Witness handed in Extract from the Memorial of the Mortgage of 13th January, 1838, from Benjamin Singleton to John M’Intosh.

Ordered to be appended. (*Vide Appendix C.*)

Witness withdrew.

Committee deliberated.

Motion

Motion made (*Mr. Tighe*), and *Question*,—"That Mr. Williams be requested to take Counsel's opinion upon the effect of the devises in the Will of the late Benjamin Singleton, in the event of the Crown Law Officers not thinking it a matter in which they could be required to advise thereon officially,"—*agreed to*.

Clerk directed to write to Mr. Williams accordingly.

John S. Adam, Esq. (*Chief Draftsman, Surveyor General's Office*), called in and examined.

Witness promising to produce a plan described in Appendix C, at the next meeting,—withdrew.

John Lucas, Esq., M.P., a Member of this Committee, examined in his place.

Committee deliberated, and *ordered*—that John S. Adam, Esq., be further examined at next meeting.

[Adjourned to Wednesday next, at 10:30 o'clock.]

### WEDNESDAY, 10 FEBRUARY, 1869.

#### MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. Tighe,		Mr. Bell,
		Mr. Farnell.

John S. Adam, Esq., called in and again examined.

Witness *produced* plan, shewing site for Court House described in Deed of Mortgage, from Benjamin Singleton and Mary his wife, to John Macintosh, of 12th and 13th January, 1838.

Witness withdrew.

[Adjourned to Wednesday next, at 10:30 o'clock.]

### WEDNESDAY, 17 FEBRUARY, 1869.

#### MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. Wisdom,		Mr. Farnell.
-------------	--	--------------

John Williams, Esq., called in and again examined.

Witness *handed in* copy of Counsel's opinion (*Mr. Gordon*) on the effect of Singleton's Will.

*Ordered to be appended.* (*Vide Appendix D.*)

Witness withdrew.

Committee deliberated.

*Resolved*,—on motion of Mr. Wisdom,—“That the sum of £5 7s. 6d. be paid to Mr. Gordon, Barrister,—fee to Counsel for advising on effect of Singleton's Will.”

[Adjourned to Friday next, at 10:30 o'clock, to consider Draft Report.]

### FRIDAY, 19 FEBRUARY, 1869.

#### MEMBERS PRESENT:—

Mr. Wilson in the Chair.

Mr. Wisdom,		Mr. Farnell,
Mr. Bell,		Mr. Tighe,
Mr. Burns,		Mr. Neale.

Chairman submitted and read Draft Report.

Committee deliberated.

Motion made (*Mr. Burns*), and *Question*,—"That the Draft Report, as read, be the Report of this Committee,"—*agreed to*.

Chairman to report to the House.

## EXPENSE OF WITNESS.

Name of Witness.	Profession or Condition.	Nature of Expense incurred.	Expenses allowed.	Total Expenses allowed to Witness.
John Williams.....	Crown Solicitor ...	Procuring Counsel's opinion on effect of Singleton's Will.	£ s. d. 5 7 6	£ s. d. 5 7 6

## LIST OF WITNESSES.

	PAGE.

1868-9.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PETITION OF MRS. MARY SINGLETON.

THURSDAY, 21 JANUARY, 1869.

Present:—

MR. BURNS,	MR. FORSTER,
MR. TIGHE,	MR. BELL,
MR. FARNELL,	MR. WILSON.

JOHN BOWIE WILSON, Esq., IN THE CHAIR.

Michael Fitzpatrick, Esq., Under Secretary for Lands, called in and examined:—

1. *Chairman.*] You have received a copy of the Petition of Mrs. Mary Singleton, setting forth her claim to be compensated in respect to the Court House at Singleton? I have. M. Fitzpatrick, Esq.
2. You have with you the papers connected with the case? Yes.
3. Since the Committee issued the summons requesting you to attend and produce these papers, my attention has been drawn to a number of printed papers, forming a Return to Address, laid on the Table of the House, in the year 1855, on motion of Mr. Nichols; and, on looking through these papers, I think the great bulk of the papers you have in your possession are included in that Return? I think it very likely, but I cannot answer the question now. I only got the summons to attend within the last twenty minutes, and I have not had time to look at the papers, which, indeed, were not in my possession until a few moments ago, when I sent for them for the purpose of coming here. I may say that a report from the Crown Solicitor, dated 28th June, 1866, appears to me to contain the gist of the whole affair, and the grounds on which the Government have decided not to act in the matter.
4. Perhaps it would be as well if you were to hand in that paper? Very well. (*Handed in. Vide Appendix A.*) 21 Jan., 1869.

FRIDAY, 22 JANUARY, 1869.

Present:—

MR. BELL,	MR. FARNELL,
MR. BURNS,	MR. LUCAS,
MR. TIGHE,	MR. NEALE.

JOHN BOWIE WILSON, Esq., IN THE CHAIR.

The Honorable Bourn Russell, M.L.C., attending by leave of the Legislative Council, examined:—

5. *Chairman.*] I suppose you are aware that the object of this Committee is, to inquire into a Petition of Mrs. Mary Singleton, for compensation for a Court House and land at Singleton? I am. The Hon. B. Russell, M.L.C.
6. You have been connected with the town of Singleton for many years, I believe? I have been more or less connected with Singleton since 1834.
7. 22 Jan., 1869.

The Hon.  
B. Russell,  
M.L.C.  
22 Jan., 1869.

7. Are you personally acquainted with any of the circumstances stated in this Petition of Mrs. Singleton? I am; I was a storekeeper at the time, and had a branch store at Singleton, and I was there when the Court House was built by Mr. Singleton. I was there off and on. My residence was at Maitland. I built myself, two years previous to that, at Singleton.

8. The Petition states that, in the year 1836, the Government built a Court House at a place called Minimba, near Singleton; that the inhabitants of Singleton were inconvenienced thereby; and that, at a public meeting, they resolved to address the Government as to this inconvenience caused by the distance of the Minimba Court House from Singleton. Have you any recollection of that circumstance taking place? I have a recollection of it, though I was not present at the meeting; but I have a paper here which states the circumstance. It is a former Petition of Mrs. Mary Singleton to the Government, which states the circumstances of the case, and upon which a correspondence was carried on with the Government, through Mr. Andrew M'Dougall. There is a letter published in the Return to an Address respecting Mrs. Singleton's claim, laid on the Table of the Council in 1855, which states that the inhabitants of Singleton were dissatisfied with the distance of the Court House at Minimba from the town of Singleton, and they petitioned the Government that the Court should not be held there; and, by a letter, which I hold, the Government suspended the holding of the Courts there for one month, which afterwards was made permanent. They did not hold Courts there afterwards.

9. Was that before or after the building of the Court House by Mr. Singleton, that the suspension of the holding of the Courts at Minimba took place? It was before.

10. Where was the Court held during the intervening period? In a room at Singleton's Mill.

11. The accommodation being given by Mr. Singleton? Yes, by old Mr. Benjamin Singleton.

12. In consequence of representations made at this public meeting, as I understand, Mr. Singleton entered into an agreement with the Government to build a Court House at Singleton, equal to the Minimba Court House? He did; and I hold in my hand the conditions upon which he agreed to do it. These conditions will be found in a letter (No. 2 in the Return to Address before referred to) from Mr. Deas Thomson, the then Colonial Secretary, to Mr. Andrew M'Dougall.

13. This agreement, as far as you know, was carried out by Mr. Singleton, in building this Court House? It was, with a slight difference, which was an addition to what he agreed to do; that is, the present old Court House is said to be three feet higher than the one at Minimba,—costing a little more money, as a matter of course, in consequence.

14. From the correspondence which was laid on the Table of the Council, in 1855, it would appear that the Government were not in a position to complete their agreement, as far as concerned the handing over of the Minimba Court House to Mr. Singleton, because it was built on the land of a Mr. Cobbs? That is so.

15. Are you aware whether, from that time up to the present, Mr. Singleton or his heirs have ever received any compensation from the Government, for the erection of this Court House? I am aware they have not; neither compensation nor consideration of any kind.

16. Has this Court House, from the year 1841 to the present date, been in possession of the Government, and used by them as a Court House? It was used by them as a Court House until last year; it is still in their possession, and, I believe, at this moment, is occupied by a stand of arms that was sent up there for the Volunteers.

17. It is stated—or at least, one would gather from the correspondence laid on the Table in 1855—that Mr. Burdekin laid a certain claim to this Court House and land, on account of a mortgage. Do you know anything of the circumstances connected with that? I do. In fact, I was present at the conversation respecting this mortgage, with Mr. Burdekin and Mr. Singleton, at which it was clearly stated by Mr. Burdekin that, at any time Mr. Singleton might have the property back, by simply paying off the mortgage and interest. As the question has been raised, I made it my business, yesterday, to search the Registry Office; and I find that the mortgage of Mr. Benjamin Singleton to Mr. Thomas Burdekin was made on the 25th and 26th days of August, 1841, and that it was registered on the 28th August, 1841. That mortgage sets out separately every allotment in the town of Singleton,—it is a large affair,—and this allotment on which the Court House is built is specially excepted. I now produce a map shewing that it is so excepted; and it is so far acknowledged by the Burdekin family, that they published this map, and show it as excepted. This is a map of the town of Singleton. (*Map produced, and Court House allotment pointed out.*) If you will take that, and compare this exception with it, which I vouch is a true copy of that portion of the mortgage, you will find that that is the piece reserved for the Court House, and is not mortgaged to Mr. Burdekin, and never was.

18. *Mr. Burns.*] Did you ever make search to see whether there was any mortgage by Mr. Singleton, subsequent to this mortgage? There were several mortgages, but they have been answered, I believe, and I believe a printed letter will be found, completely showing that they did not touch this matter at all. There is a letter from Mrs. Mary Singleton, in this published correspondence, showing that these mortgages had no reference to this land whatever; and further, I believe they were all satisfied.

19. Have not the Burdekin family set up some claim as respects the land reserved for a Court House? They have, but they have no claim as shown by that mortgage.

20. *Chairman.*] It is on that mortgage they base their claim? It is on that mortgage they base their claim, I believe.

21. Will you hand in this extract from the mortgage deed? I will. (*Handed in. Appendix B 1.*) When I got this first, I was not sure of its correctness, and I wished to satisfy myself of it. I went yesterday to the Registry Office for that purpose. 22.

22. Then we are to understand from your evidence, that you believe Mr. Burdekin's heirs or executors have no claim whatever on this Court House, or on the land on which it has been built? I am satisfied they have not. It would not have been so excepted if they had. There were other allotments in Singleton at the time, which were also excepted. I was myself the owner of twenty-seven allotments in Singleton, and they have no claim whatever upon them—not one of them.

The Hon.  
B. Russell,  
M.L.C.

22 Jan., 1869.

23. Are you aware of what Mr. Singleton paid for the erection of this Court House? I do not know of my own knowledge, but I have heard it stated that it cost £900. I myself built a place at Singleton, something about the same in extent, which cost me between eight and nine hundred pounds, and about the same time—a little previous to it.

24. Mrs. Singleton must, from the circumstances within the knowledge of the Committee, be now an old lady? She is at present upwards of seventy years of age, I believe. She is a very fresh woman for her age.

25. Do you think there is any information that she could give the Committee, that we cannot get in some other way, without putting the old lady to the great trouble of coming to Sydney? I do not think she could give the Committee any information. I had long conversations with her on this subject, about a fortnight or three weeks ago, and I have obtained all the information from her that she could give. I find that her memory is a little defective, and that she does not recollect many things which we are prepared to show, by documentary evidence, really took place. I think I have documents here that will give most of the evidence that the Committee will require. Of course it is not for me to dictate to the Committee whom they should call, or anything of that sort. This Court House, if I might go on to state, was taken possession of by the Government, under the agreement, on the 30th day of August, 1841, as will be seen from the original document I hold in my hand, signed by Mr. Percy Simpson, the Police Magistrate. (*Document produced.*)

26. Will you read that paper? *The witness read as follows:—*

“ Police Office, Singleton,  
“ 30th August, 1841.

“ At the request of Mr. John Lucas, builder, I hereby certify that he has, this day, on the part of Mr. Benjamin Singleton, voluntarily surrendered up possession to me of the new house built by him in Singleton, in the vicinity of the lock-up, for the purpose of being used as a Court House, by the police of Patrick's Plains, in lieu of the room hitherto gratuitously occupied by the Bench of Magistrates, at the Mill House, Singleton.

“ PERCY SIMPSON,  
“ Police Magistrate.”

27. It has been in the possession of the Government ever since? It has.

28. This arrangement appears to have been entered into by Mr. Singleton long before any of the Singleton property was mortgaged to Mr. Burdekin, which will account for the omission of this portion in the deed of mortgage? The arrangement was made in 1838, and the mortgage was made in 1841.

29. *Mr. Tighe.* Was the mortgage you looked at yesterday an original mortgage, or a transfer of some previous mortgage? It is an original mortgage.

30. Because, in the papers published, there is mention made of a mortgage made by Mr. Singleton in 1838, to Mr. John Mackintosh? There were four or five other mortgages.

31. The mortgage to Mr. Mackintosh was afterwards, in 1841, transferred to Mr. Burdekin? He bought that up as part of the advance to Singleton, I should presume.

32. You are quite sure the mortgage you looked at yesterday was not that transfer? I am quite sure of that.

33. Supposing it should appear that this land on which the Court House stands was never mortgaged to Mr. Burdekin or any one else, and that it remained in the estate of Mr. Singleton, does it follow that Mrs. Singleton would be then the rightful possessor or owner of the property? I should think not in that way; but she does not claim to be the rightful possessor of it under such circumstances. The circumstances under which she claims to be the rightful possessor of the property are these:—When Mr. Benjamin Singleton became insolvent, there was a Mr. Stewart appointed Official Assignee; I believe his name was George Charles Stewart. He, in carrying out, as he thought, his duties as Official Assignee, in taking possession of the property of Mr. Singleton, seized upon the property of all the family—sheep, cattle, horses, and everything he could lay his hands on. The family were determined not to put up with this, and they commenced an action against Mr. Stewart, as Official Assignee, and they cast him in damages to the extent, I believe, of from £1,400 to £1,600. I believe the creditors refused to pay the amount, and he was unable to pay it; but they consented to make over the property to Benjamin Singleton, junior, who was representative of all the rest of the family in this action, to satisfy that claim or debt. The property was so made over, and I produce a copy of the conveyance. (*Produced.*) The original was supposed to have been lost; and I have an affidavit from Benjamin Singleton, junior, stating the circumstances, something as I have related them. But I find, by these printed papers, that that document which was supposed to have been lost, is actually in the hands of the Colonial Secretary. It is referred to, and ordered to be sent to the Lands Department; therefore they have it. (*See Enclosure 3 in No. 43 in the Return to Address, 1855.*) The property being thus vested in Benjamin Singleton, junior, by that document, he makes it over to his father, Benjamin Singleton, senior, by this document, dated 7th December, 1852. (*Deed produced.*)

The Hon.  
B. Russell,  
M.L.C.

22 Jan., 1869.

34. Is that registered? It is. Some time afterwards Mr. Benjamin Singleton died; and, by will, which I produce for perusal, left the property to his wife, Mary Singleton. (*Will and probate produced.*) The will divides the property amongst all the children after her death.

35. Then Mrs. Singleton has only a life interest? Yes.

36. *Mr. Farnell.*] Does that include the property this Court House is built upon? It includes all kinds of property, the residue of the estate.

37. This land upon which the Court House is erected, is a portion of that residue? It is, being reserved from the mortgage to Mr. Burdekin.

38. Strictly speaking, if I understand you, it is not reserved by the mortgage deed—but the mortgage deed does not take in this piece of land in the description of the land included? No, it is not included.

39. This plan you produce to-day was prepared, you say, at the instance of Mr. Burdekin? Yes, it is the one they sold by.

40. That is, Mr. Burdekin cut the land up into allotments and sold them? It was cut up before, but there is a portion in addition called South Singleton, I think, now. This plan cut up all parts that were not previously cut up into allotments, and they had them advertised for sale by that plan.

41. Mr. Burdekin sold by the plan now produced by you? Yes.

42. *Mr. Tighe.*] If Mr. Singleton, the elder, considered himself the owner of the property at the time he became insolvent, and was under the impression that it had not been mortgaged, would he not have set down this Court House as an asset in his estate? I do not know whether it was so; it might have been so for anything I know; I do not know what assets he set down in his estate. But we have the facts stated in this affidavit of Benjamin Singleton, junior, which I think it would be as well to have read. (*Read and handed in. Vide Appendix B 2.*)

43. I suppose the creditors in the estate never objected to that document, transferring the assets to young Singleton? Not that I am aware of; it seems to have been by their consent.

44. Do you know that there is amongst the papers an opinion of the Crown Solicitor, stating that that document was voidable by the creditors, it not having been made by the direction of the creditors, pursuant to the Insolvent Act? That is a mere opinion; they never took any steps in the matter that I am aware of.

45. *Mr. Farnell.*] I understand by this Petition of Mrs. Singleton, that she is asking for compensation on account of her husband having erected a Court House, and handed it over to the Government, in lieu or in exchange for another Court House built at an inconvenient place for the inhabitants of Singleton? That is so.

46. She grounds her claim on the fact of her husband having done this,—that she is entitled to the cost of erecting these buildings, and of the land? She does not make any specific claim; she asks to be remunerated, leaving it to the Government to say what that shall be.

47. Do you think that Mrs. Singleton is entitled to compensation for this land—supposing, for instance, she cannot give a title to the Government after they do compensate her? I believe she can give a title.

48. She has nothing but a life interest, I understood you to say? She has a life interest, and for the rest she can fall back upon the children, who are all perfectly willing to join in the conveyance.

49. In the event of the Government compensating Mrs. Singleton, would she be prepared to convey the property to the Government for what title she can give—and would her children join her in the conveyance? I am sure they would; there would be no difficulty in that respect.

50. *Mr. Tighe.*] Are they of age? Yes, all of them.

51. And within reach? Yes, within a few days' communication.

52. *Mr. Farnell.*] Does the property go to any one on the death of Mrs. Singleton? It is divided in equal parts among the whole of the children.

53. Would the whole of these children join in the conveyance with Mrs. Singleton? I am satisfied they would.

54. In that case Mrs. Singleton would be in a position to give the Government a good title to this land? I think so. Of course, I am not a lawyer, but I think it is pretty clear that the legal title is in her.

55. *Mr. Burns.*] Will you turn to page 19 of the printed papers—I will ask you to look at letter No. 36—a letter from Mrs. Burdekin to the Colonial Secretary, dated 9th March, 1850? Yes.

56. In that letter Mrs. Burdekin gives a description, both in the body of the letter and in the plan at foot of it, of the land on which the Court House is erected. You observe that Mrs. Burdekin says the land "is a corner allotment with frontage of 173 feet 6 inches and 138 feet to Elizabeth and Bourke Streets respectively." Then there is appended to the letter a plan. Does that plan correspond with the plan you now produce here? Yes; it is block 18; the block is not numbered here, but it is in the plan I produce.

57. You see that, according to the plan Mrs. Burdekin has sent to the Government, the land on which the Court House stands is bounded on one side by Hunter-street? That is the block of land—not the allotment on which the Court House stands. There is no question but that the legal title is in her, for portions of block 18 is not included in the mortgage.

58. Do the boundaries in Mrs. Burdekin's plan correspond with the description of the land excepted from the mortgage? Yes.

59. And you have no doubt that the land now claimed by Mrs. Burdekin is that excepted from the mortgage? No.

60. You say you estimate the cost of the buildings erected by Mr. Singleton at £900? I have been informed they cost about that amount.
61. Are you aware that Mrs. Burdekin wrote to the Government, on the 4th October, 1849, stating that it was estimated the Court House had cost Mr. Singleton £400? I am aware that such a letter was written by seeing it in print, but that is very far wide of what the cost must have been at the time. I imagine Mrs. Burdekin's information is defective in some way.
62. When you speak of £800 or £900, you speak of your own personal knowledge of the cost of building at Singleton at that time? Yes; I built a building similar in size, which cost between £800 and £900.
63. *Mr. Bell.*] You could not have it built now for £1,500, perhaps? I dare say not.
64. *Mr. Tighe.*] Are you quite sure the mortgage you have referred to is the only one in connection with this matter? I believe it to be so. I believe all the other mortgages were taken up by Mr. Burdekin when he got the land conveyed to himself, and all who knew Mr. Burdekin knew he would not take a second mortgage if he could help it.
65. Have you read that enclosure 1 in No. 43? I have. It goes on the supposition that the whole of Mr. Singleton's grant at Singleton was mortgaged to Mr. Burdekin, which is not the fact.
66. Is the mortgage you speak of, from which you made the extract yesterday, referred to in that enclosure at all? It says—"By a plan indorsed on the deed of 24th July, 1841, afterwards referred to, it appears that the steam-mill is situated at a great distance from, and, in fact, in a totally different part of the town to that in which the Court House stands." That so far carries out what I have stated, that these were looked upon as separate properties, and were so divided in Mr. Singleton's own mind.
67. Is the mortgage you referred to yesterday, the one mentioned in this paragraph? I believe it is.
68. If you look at the last two lines of that paragraph, you will find that this was not a mortgage to Mr. Burdekin in the first instance, but a mortgage to Mr. Cullen, who transferred to Mr. Burdekin? Yes.
69. I understood that you were under the impression that the mortgage you looked at yesterday was an original mortgage from Mr. Singleton to Mr. Burdekin? Yes.
70. If so, that cannot be the mortgage referred to in this paragraph? I am not quite clear about that. I think myself, that the circumstances are these,—that Mr. Burdekin found the money, and that, perhaps, this may be an exception to it, and Singleton paid off the mortgages.
71. *Chairman.*] Allow me to draw your attention to the fact that the next paragraph mentions a "mortgage in fee, with power of sale, from Mr. Singleton, senr., to Mr. Thomas Burdekin, of 150 acres of land at Singleton, and "Singleton Inn" and steam-mill, (subject to two prior mortgages of £1,000 and £600), these prior mortgages being those to Mr. Thomas Cullen and Mr. Thomas Dyer Edwards. Now it is shown, in this same document, that neither of these two mortgages in any way affected the land on which the Court House is situated? Not at all.
72. Consequently, that point cannot affect Mrs. Singleton's claim? I do not see that it can. I did not see that, when I made the remark about the mill; but I know that, in his own mind, Mr. Singleton treated these as separate properties.
73. The plan shown on page 20 of the Return to Address in 1855, is identical with block 18 on the plan you have produced? Yes, so far as the reserve for the Court House is concerned.

The Hon.  
B. Russell,  
M.L.C.

22 Jan., 1869.

THURSDAY, 28 JANUARY, 1869.

Present:—

MR. BELL,  
MR. DODDS,

MR. FARNELL,  
MR. TIGHE.

JOHN BOWIE WILSON, ESQ., IN THE CHAIR.

Edward Grant Ward, Esq., Deputy Registrar General, examined:—

74. *Chairman.*] You have been summoned to attend here to-day, with the view of producing the registration of certain mortgage deeds? The summons is, to produce a mortgage; but I must inform the Committee that I have not the mortgage in my possession, but merely the memorial of the mortgage. At this time deeds were registered by memorial, and not by deposit of a sworn copy, as at present.
75. I suppose the information will be given of what was mortgaged? Yes.
76. Have you got there (*referring to books produced by the witness*) a mortgage to Mr. Thomas Dyer Edwards, by Mr. Benjamin Singleton? Yes, one from Mr. Benjamin Singleton to Mr. Thomas Burdekin, which is the mortgage mentioned in the summons to me.
77. *Mr. Tighe.*] Is that the original mortgage? The memorial of the mortgage.
78. Of the original mortgage—not of a transfer? Not of a transfer.
79. What is the date? There is no date—the date is left out, but it is sworn the 21st August, 1841.
80. *Chairman.*] It appears that this mortgage to which you allude, to Mr. Thomas Burdekin, is subject to two prior mortgages—one for £1,000, and one for £600. The one for £600, to Mr. Thomas Dyer Edwards, appears to be in May, 1838? That will be in a previous book to that I have here. It does not state in this memorial that this present mortgage

E. G. Ward,  
Esq.

28 Jan., 1869.

E. G. Ward, Esq. mortgage mentioned here is subject to any other mortgage. This present mortgage is a mortgage for £1,000, but it does not mention that it is subject to any other mortgage, which, I think, it would, if it were.

28 Jan., 1869. 81. Will you be kind enough to see whether there is a mortgage to Mr. Thomas Cullen, of October, 1840? That will be in a previous book too. I can send for those two books at once. (*The witness sent for the books.*)

82. *Mr. Tighe.*] Can you state the boundaries? The property is described here as "157 acres, situated in Patrick's Plains, in the parish of Whittingham, in the county of Northumberland, being the largest portion of the newly formed township of Singleton, and situated on the banks of the Upper Hunter, which said land is part of the land mentioned and described in two grants, both issued under the hand of Sir Richard Bourke, Governor of the said territory of New South Wales, one dated 20th December, 1835, and the other the 6th June, 1836, and more particularly shewn by the portion coloured red in the plan thereunto annexed, together with the inn called or known by the name of the 'Singleton Inn,' and the steam flour-mill thereon erected and built." That is all the description of the land.

83. Is there any means to define the part of the land described? It is impossible.

84. In point of fact, it is not in your power to give us an accurate description? No, not from the records of the office, unless there are any deeds long subsequent to the registration of this deed—that is, after the system of registration by memorial was abandoned, and the system of registration by a sworn copy was adopted—then I could, of course.

85. Is there any such deed? It would take a long time to search, unless we had some information to go by. There is a subsequent deed of reconveyance of this mortgage, registered 28th August, 1841, a week afterwards, from Mr. Burdekin to Mr. Singleton; and there is also a subsequent mortgage registered on the same day from Benjamin Singleton and Mary his wife of the first part, Parry Long, as trustee, of the second part, and Thomas Burdekin of the third part. This describes a variety of land allotments in Singleton, and is a mortgage for £2,000.

86. *Chairman.*] Will you be kind enough to see if there is reference made to the blocks by number in this mortgage? There is in this memorial.

87. Will you look at block No. 18? (*The witness referred to the memorial, and read the descriptions of the sections.*) I do not see the number 18. I have lot 17, lot 19, and various other lots, but not lot 18.

88. *Mr. Farnell.*] There is a memorial giving a description of the land that is mortgaged? Included in a subsequent mortgage to the one I have just read. I do not see No. 18 here; there are 17, 19, 20, 21, and so on.

89. *Mr. Tighe.*] Does this (*the memorial*) purport to define the land included in this mortgage? Yes.

90. No. 18 is excluded from that altogether? Yes.

91. What is that? A mortgage of all the various portions I have been reading.

92. What reference has it to the former one you have referred to? The former mortgage has been reconveyed for £1,000.

93. Is that equivalent to the cancellation of the former mortgage? Yes. The next memorial I find is the mortgage from Benjamin Singleton and his wife, to Thomas Burdekin, for £2,000, of the various portions I have read here.

94. In that, reference is not made to any portion of land numbered on the map 18, bounded by George-street, Hunter-street, Bourke-street, and Elizabeth-street? No; the numbers seem to run almost consecutively, commencing from the lower, and rising to the higher numbers. The memorial passes from 17 to 19, omitting 18.

95. How do you identify this plan with the plan referred to in that mortgage? We cannot; this refers merely to the plan in the original mortgage.

96. Where is that? Attached to the original mortgage, which we have not got in our possession, as the system of registration was then merely by memorial.

97. What is the date of that document? 25th and 26th August, 1841.

98. Then it is clear that, up to August, 1841, in your opinion, this particular piece of land, No. 18, referred to here, was not mortgaged by Mr. Singleton to Mr. Burdekin? I should say it was not. I have not made a careful search through the whole, from the commencement of registration to this date, in August, 1841, but I will do so.

99. Subsequently to 1841, was there any mortgage, or were there any mortgages, from Mr. Singleton to Mr. Burdekin? I have caused a search to be made, to the year 1862, and can find none.

100. *Mr. Farnell.*] The land could not be identified from the description given in the first mortgage? No.

101. *Mr. Tighe.*] Nor from the second, on the supposition that this is a true map—(*referring to the map before the Committee*)? No—if that is a correct subdivision. That could be ascertained only by a comparison of the various lots with that plan.

102. *Mr. Farnell.*] Are the lengths of the lines given in that memorial? No.

103. And no bearings? No bearings. It merely says, bounded on the west by so and so—easterly boundary.

104. That description is very vague? Yes; so it is in all the old maps.

105. *Mr. Tighe.*] Did the Crown Law Officers—who, on one or more occasions, have given an opinion in regard to this matter—get their information from your books? I cannot say. It is the first time I have heard anything of it myself.

106. *Chairman.*] Are you aware of any mortgage of the land at Singleton, by Mr. Benjamin Singleton, to Mr. Thomas Burdekin, of a later date? I am not.

The books sent for by the witness having been produced, the witness referred to a memorial of the 9th May, 1838.

107. Will you be kind enough to tell us what does that mortgage include? This memorial is a mortgage from Benjamin Singleton, and Mary his wife, on one part, and Thomas Dyer Edwards of the other part, of all that plot piece or parcel of land or ground situate in the town of Singleton, at Patrick's Plains aforesaid, containing by estimation three acres or thereabouts, be the same more or less; bounded on the south-east by John-street; on the south-west by a reserve; on the north-east by lot on a public chart thereof numbered 246, and a straight line to Hunter's River; and on the west by that river, being lot numbered 270 on the said chart; and also all that mill and buildings now erecting and being built upon the said piece or parcel of land and hereditaments, together with the steam-engine, machinery, and apparatus thereto belonging; and also, all those several pieces or parcels of land, or allotments of ground, situate in the town of Singleton aforesaid, and being lot numbered 7; and also, lots number 15 to 22 inclusive; also, lots number 41, 42, 71, 72, 73, 76, 77, 92, 93, 94, and 95; also, lots number 103 to 109 inclusive; also, lots 142 to 158 inclusive; also, lots 167 to 176 inclusive; also, lots number 179 to 201 inclusive; also, lots 205 to 221 inclusive; also, lots 224, 225, 228, and 229; and also, lots 260 to 274 inclusive, marked on the said public chart thereof; all which said several allotments or pieces or parcels of land are particularly delineated by a plan indorsed on the back of the said indenture of release by way of mortgage: Together with all rights, members, and appurtenances whatsoever to the said several pieces or parcels of land, or allotments, hereditaments, and premises, belonging, or in anywise appertaining. Mortgage to secure £600." The next is dated 26th October, 1840—Memorial of mortgage from Benjamin Singleton to Thomas Cullen; and the description of the land is—"all that piece or parcel of land situate lying and being in the town of Singleton; bounded on the east by John-street, by a line bearing north  $2\frac{1}{2}$  chains; on the south by a line bearing west to the Hunter River 3 chains; on the north by a line bearing west 3 chains to the Hunter River; and on the west by the Hunter River  $2\frac{1}{2}$  chains; and also, all that messuage or tenement and steam-mill, with the engine-house thereunto belonging and adjoining the same, and which said steam-mill is known by the name of the Union Mill. Mortgage for £1,000, registered 605, Bk. Y."
108. *Mr. Tighe.*] You told us of a third mortgage? That was for 157 acres.
109. The mortgage dated 9th May, 1838, the mortgage dated 26th October, 1840, and the mortgage of 157 acres, have all been cancelled, have they not? I do not see any cancellation or any release of these two first mortgages, but there is of the third one. There is a release of that dated 24th August, 1841, and on the 25th August a fresh mortgage is registered for £2,100. The mortgage of £1,000 is released, and a fresh mortgage of £2,100 is executed.
110. *Chairman.*] Is there no mortgage registered on the 28th August, 1841? On the 25th and 26th August.
111. When was it registered? On the 28th August; at least, it was sworn on that date. That is one of which I went through the parcels.
- The witness again referred to the memorial.
112. *Mr. Tighe.*] Upon further reference to the mortgage deed dated 25th and 26th August, 1841, do not you find that the statement you made, a little while ago, in respect to section No. 18, was incorrect, and that section No. 18, described as being "bounded by Elizabeth-street, Hunter-street, Bourke-street, and George-street" is included in the mortgage, with the exception of a portion of the lot or section that was reserved for a Court House and —? Yes, I overlooked this before, because the writing is small and close, and I merely hastily glanced at the numbers. It does not say whether it is a section or lot—it says "a piece of land marked."
113. Then, although the lot or section 18 is included in the mortgage, yet that portion of section 18 comprising the Court House reserve is not really included in the mortgage? It is excepted.
114. Then the Court House was never mortgaged at all by Mr. Singleton to Mr. Burdekin? Not by this memorial certainly.
115. Shall we be right in understanding that the Court House is reserved, and was never mortgaged at all by Mr. Singleton to Mr. Burdekin, unless it were included in these two previous mortgages which you have referred to, of May, 1838, and October, 1840? Unless it was in some subsequent mortgages.
116. Or in one of those two mentioned? Yes.
117. Both these two previous mortgages comprise lands bounded by the Hunter River? Yes.
118. And are not of large extent—only three or four acres? They refer to small portions on the Hunter River.
119. The Court House is a considerable distance from the river, is it not? I do not know anything about Singleton. In the description of this piece marked 18, it says it commences at "the north-east corner of a reserve for a new Court House."
120. Suppose this particular lot on which the Court House stands were included in that mortgage of 157 acres, to which you have referred, has not that mortgage been released or cancelled? Yes.
121. So that that goes for nothing? Yes.
122. We have four mortgages before us; and the Court House can by no possibility be mortgaged to Mr. Burdekin, unless it be included in one of these  $3\frac{1}{2}$ -acre mortgages which are on the banks of the river? No.
123. According to this plan, how far would you suppose the Court House is from the banks of the river? About 22 chains.
124. Would it not then be physically impossible for that allotment on which the Court House stands to be included in any of the  $3\frac{1}{2}$ -acre allotments on the banks of the river? I should think so.

E. G. Ward,  
Esq.  
28 Jan., 1869.

- E. G. Ward, Esq.  
28 Jan., 1869.
125. It is not then in one of these two, the 157-acre mortgage has been cancelled, and it is specially excepted in the fourth mortgage? It is not specially excepted, but it has not been included.
126. I would like to draw your attention to an enclosure in a letter from Mr. Billyard, the Civil Crown Solicitor, dated 23rd August, 1850. In the last paragraph of that enclosure, evidently referring to the fourth mortgage we have now been talking about, he says—"It is probable that in one of the three earlier mortgages the piece of land on which the Court House stands is included, but this point could not be ascertained without the aid of a surveyor"? It may have been included in the 157-acre mortgage.
127. I think you have clearly shewn that the Court House was not included in the two earlier mortgages? I think it could not have been.
128. It does not matter whether it was included or not in the third mortgage, as that has been made void by a release? Yes.
129. *Chairman.*] In this memorandum of Mr. Billyard's, this fourth mortgage, of August, 1841, which is now the only actual mortgage in existence, is not alluded to at all? It is not alluded to at all; the mortgage of July, 1841, not of August, 1841, is alluded to. That is the date of the mortgage of 157 acres.
130. Which has been cancelled? Which has been discharged.
131. *Mr. Farnell.*] There has been no subsequent mortgage to Mr. Burdekin, since the 25th and 26th August, 1841? I cannot say—I am not aware of any.
132. In the description of No. 18 in this mortgage, the memorial of which was registered 25th August, 1841, the reserve for the Court House is excluded? It does not specially exclude it—it commences by describing section 18 from a certain corner of reserve for a Court House, and it goes right round the boundaries of a reserve for a Court House. It excludes it in that way, but it does not exclude it in specific terms. It omits it from the description.
133. *Mr. Tighe.*] That is quite as strong as if it were specially excepted? Yes.
134. *Mr. Farnell.*] The land is described as being bounded on two sides by the Court House reserve, and on the other sides by streets? Yes.
135. Which of course clearly excludes that portion of land from the description of section 18? Yes.

---

Archibald Bell, Esq., M.P., a Member of the Committee, examined in his place:—

- A. Bell, Esq., M.P.  
28 Jan., 1869.
136. *Chairman.*] You are well acquainted with the town of Singleton? I am.
137. You have been for many years? For many years.
138. Do you remember the building of the Court House by Mr. Singleton? I do.
139. Do you remember the Government having been in possession of that Court House from that to the present time? Yes.
140. You have heard certain evidence given by the Deputy Registrar General, of the existence of two mortgages of small allotments of land, of from 2 to 4 acres, on the banks of the Upper Hunter, at Singleton? I have.
141. Do you think, from your knowledge of the country, that such mortgages could include the Court House? It is quite impossible.
142. *Mr. Tighe.*] These mortgages are of the land adjoining the old mill? Yes, I think so. There are six or seven allotments between the Court House and the river, adjoining the old mill—I have one myself; there are six or seven, or more.
143. *Mr. Farnell.*] How far is it from Singleton's Mill to the Court House reserve? I should call it something less than half a mile, at a guess; in the bush I should call it half a mile.
144. *Chairman.*] When this Court House was built by Mr. Singleton, where was the Court held in Singleton? At the mill.
145. Are you aware whether the mill was then the property of Mr. Singleton? Yes.
146. And he allowed the Government to use it as a Court House? He did, for many years.
147. *Mr. Tighe.*] You heard Mr. Ward read an extract from the mortgage from Benjamin Singleton to Thomas Cullen, of a steam-mill and other property, comprising some small extent of land? Yes.
148. If you will look to the Crown Solicitor's (Mr. Billyard's) enclosure in his letter to the Colonial Secretary, dated 23rd August, 1850, you will see reference made to that mortgage—I mean the mortgage from Singleton to Cullen—in which he uses these words:—"Mortgage from Mr. Benjamin Singleton, senior, to Mr. Thomas Cullen, of messuage and steam-mill; and also all that messuage or tenement and Court House, and also all that weather-boarded storehouse, both adjoining the said steam-mill, and also all that tenement or store near to the said steam-mill." Now, from your knowledge of the present Court House, and your knowledge of the steam-mill and of the country generally, and from your recollection of the extract that was read by Mr. Ward, in which he points out that this particular mortgage refers to the mortgage of land bounded by the river Hunter,—from all these different means of forming an opinion, should you say that it is possible the present Court House can be the Court House there referred to as adjoining the steam-mill? Certainly not.
149. Then that Court House must mean the old Court House? The old Court House adjoining the steam-mill; I have frequently been in it. It was found to be so noisy at the old Court House, that Mr. Brown gave up a room in his place till this other Court House was built.

---

FRIDAY,

FRIDAY, 5 FEBRUARY, 1869.

Present:—

MR. BELL,		MR. FARNELL,
MR. DODDS,		MR. LUCAS,
	MR. TIGHE.	

JOHN BOWIE WILSON, Esq., IN THE CHAIR.

John Williams, Esq., examined:—

150. *Chairman.*] You have seen the evidence of the Deputy Registrar General, as to certain mortgages of land at Singleton, made by the late Mr. Benjamin Singleton? I have. J. Williams,  
Esq.

151. Will you state the conclusions you have arrived at? I will, and perhaps it may also be as well to state the steps by which I have arrived at that conclusion. The first mortgage is for £1,000, from Benjamin Singleton, senior, to John Mackintosh, dated 13th January, 1838, and registered No. 390, Book M, said to contain two parcels of land—90 acres and 40 acres. I think it will be found that that contains a third parcel; and it is impossible to tell, from a mere reference to parcels, whether the land on which the Court House is built is included in that or not. I think a surveyor could speak as to that, and it is material, because this mortgage was transferred to the late Mr. Burdekin. There is then a mortgage for £600, from Benjamin Singleton to Thomas Dyer Edwards. From Mr. Ward's evidence, and from the description in the deed, I think it is clear that the Court House reserve is not part of the mortgage to Edwards. There is then a mortgage—Singleton to Thomas Cullen—of date 26th October, 1840, and in that it is mentioned that the mortgaged property comprises the steam-mill and the Court House. Mrs. Singleton, however, states that this is not the Court House erected upon the land for which she now claims compensation. In Mrs. Singleton's letter of 6th May, 1853, she states that the mortgage to Cullen was dated in 1838. That is a mistake. The mortgage to Cullen was the 26th October, 1840; but it appears by the correspondence in the printed papers, in a letter of Mr. Simpson, the Police Magistrate, dated 31st August, 1840, that Mr. Singleton informed him it was his intention to have the present Court House completed in the course of nine months. It would seem, therefore, that this could not have been the Court House included in the mortgage. The next mortgage appears to be one dated 24th July, 1841—Benjamin Singleton to Thomas Burdekin—registered 21st August following, No. 901, Book W. The parcels in that are described by a general description, and in it, I think, there can be no doubt the site of the Court House was included. There then appears to be a reconveyance of the lands described in this mortgage of date 21st August, 1841. That is registered No. 96,\* Book W; and there is then a mortgage lease and release, dated 25th and 26th August, of a large number of parcels of land—Singleton to Burdekin—to secure £2,100. From the evidence given by Mr. Ward, and a reference to the description of the land, I think it is clear that the site of the Court House is not included. It seems to me that these two mortgages are one transaction. Of course this can be mere matter of surmise; but I think it probable, looking at the dates and the sums, that the mortgage of the 24th July, 1841, which is to secure £1,000, and describes the land by general description, must have been only the first step towards the final mortgage, very likely made because an advance was required before there was time to get a proper description; and that when a proper description was obtained, a conveyance was made. That which was intended to be the final mortgage, containing the proper description and setting out the whole of the loan, was then executed. Unless, therefore, the mortgage I have first referred to, of January, 1838, contains the site of the Court House, no title thereto is at present in the representatives of Mr. Burdekin.

152. Then the release which you have mentioned, which was after September, 1841, was then included—this mortgage of Mackintosh? It may or may not have been—that is matter of survey. The reconveyance is of the same parcels as are set out in the general description given in the mortgage of 24th July, 1841; whether that includes any portion of the parcels mentioned in the mortgage of 13th January, 1838, I cannot say; that is the only difficulty I see.

153. *Mr. Lucas.*] If that includes the parcels —? Then they should be reconveyed. The present claimant's title seems to arise in this way:—Singleton's estate was sequestrated, and George Charles Stewart was appointed trustee. By indenture of 11th November, 1843, Stewart conveyed the Court House land to Benjamin Singleton, junior. I notice that Mr. Billyard, in his evidence on the Singleton title, at page 23 of the printed papers, objects to this conveyance, as not having been made in pursuance of the provisions of the Insolvency Act, not having been advertised in the *Government Gazette*, and other proceedings of that nature not having been taken. I think this objection, however, is got rid of by 3rd section of 11th Vict., No. 14, an amendment of the Insolvent Act. Benjamin Singleton, junior, then seems to have conveyed, by indenture of 7th December, 1852, the Court House lands, to Benjamin Singleton the father. This deed is registered 18th February, 1859, No. 719, Book 59. It might be necessary here to ascertain whether at this time Benjamin Singleton, senior, had obtained his certificate. Benjamin Singleton, by will, in 1853, devises this land, but the devise is so singularly worded that I could not, without more time than I have been able to give to its consideration, express an opinion upon it. I should perhaps also mention, that in none of the papers can I find that

\* NOTE (on revision):—This is not the correct number.

J. Williams,  
Esq.  
5 Feb., 1869.

that the attention of the Crown Land Officers has been called to, or that information has been given to them, of the reconveyance by Burdekin of the mortgage for £1,000, back to Singleton. Their opinions, therefore, were given without a knowledge of this exceedingly material fact; for, by referring to page 23 of the printed papers, it will be seen that Mr. Billyard's remarks on Mrs. Burdekin's title only make reference to the mortgage of the 24th July, 1841, which contains a general description—150 acres, &c. The first reference made by Mrs. Singleton to the mortgage in which the Court House land appears to be excepted from block 18, is by an extract from that mortgage, so far as parcel 18 is concerned, being appended to a memorial to His Excellency, dated 22nd August, 1868. She never appears to have been aware of the fact herself, before that time.

154. *Chairman.*] If this Court House, now the subject of inquiry, had been included in the mortgage to Mackintosh, what necessity would there have been for excluding it so pointedly from the last mortgage to Burdekin? That is a matter of inference I can scarcely answer—I cannot tell in what way the mortgage to Mackintosh and the mortgage to Burdekin affect or do not affect each other. It seems to me that the two mortgages to Burdekin carry out a single transaction, which, as I have suggested, was commenced by a general description being inserted in the first mortgage made, when part of the loan was advanced to the borrower, and perfected by a more formal description being inserted in the second mortgage, the full consideration being included in such mortgage, and the first mortgage reconveyed.

155. Then that would be no reason why this Court House should be excluded in the first instance, and yet redescribed in Burdekin's mortgage? But we have no proof that the person who drew the last mortgage had any knowledge of the former mortgage—no proof that he did not treat this as a single transaction.

156. But he must have been acting under instruction—he must have had minute instructions as to the exclusion of this Court House from the mortgage deed? That is mere matter of surmise. It is very plain that Mr. Burdekin thought at this time it was included in his mortgage, because the letter in which he claims to be paid for the land is dated 23rd March, 1842, page 8 in the printed papers, which is subsequent to the mortgage in which the land is omitted to be included.

157. *Mr. Tighe.*] Are there any means of ascertaining whether this Court House is in the fresh mortgage to Mackintosh? A surveyor might be able to tell, by reading the description, whether it is or not, but from the hasty glance I gave it at the Registrar's Office, I could not pass an opinion.

158. Could you tell us whether it is necessary to survey it, or whether the Surveyor General could give an opinion, from an examination of the papers? That involves the question of survey.

159. *Mr. Lucas.*] What was the date of the reconveyance? 23rd and 24th of August, 1841, and the date of the next mortgage, 25th and 26th August, 1841, and both were registered the same day—28th August, the reconveyance immediately preceding the mortgage.

160. *Mr. Farnell.*] The descriptions themselves are very vague, are they not? In the first mortgage they are rather vague. I could not say they are so vague as that a surveyor could not follow them. I have now before me an extract from the memorial of registration of mortgage, 30th January, 1838—Singleton and wife to Mackintosh—and beg to hand it in. (*Vide Appendix C 1.*) In Mrs. Burdekin's claim of title, there is "bargain and sale from the Sheriff of the Colony, of all the estate and interest of Benjamin Singleton, senior, in and to various allotments numbered according to a plan attached. One of the allotments is said to be 'bounded on the north by Elizabeth-street, commencing at the north-east corner of a reserve for a new Court House.'" As this is, I think, a sale of the equity of redemption, it is probable that the description in this bargain and sale agrees with that in the mortgage, as I notice that Mr. Billyard remarks that this conveyance does not recite a month's notice of the intended sale, in the *Government Gazette*, which is only required in cases of the sale of equity of redemption. It is probable, therefore, that this was the sale merely of the equity of redemption of lands included in the mortgage, and that the description in this deed agrees with the description in the mortgage. The only information I have upon this head I derive from Mr. Billyard's minute in page 23 of the printed papers.

MEMO.—I have made search at the office of the Insolvent Court, and find that Benjamin Singleton's estate was placed under sequestration in 1842, and that George Stewart was appointed Assignee, 31st May, 1845, and that Singleton obtained his certificate of insolvency on 4th February, 1852.

John S. Adam, Esq., examined:—

J. S. Adam,  
Esq.  
5 Feb., 1869.

161. *Chairman.*] I hold in my hand an abstract of mortgage by Benjamin Singleton and Mary his wife, to John Mackintosh, dated 13 January, 1838, in which certain lands at Singleton are described as being mortgaged. We are anxious to find out whether the piece of land upon which the Court House has been built is included in the land mortgaged here. Could you get a tracing made of this land at Singleton, tinting in a particular manner the four portions of land mentioned in the mortgage deed, so that we could identify the piece of land described? Yes, I have little doubt that the descriptions could be followed on the plan. I shall endeavour to have it done.

John

John Lucas, Esq., M.P., a Member of the Committee, examined in his place :—

162. *Chairman.*] Will you be kind enough to state any facts that you know with regard to this claim of Mrs. Singleton? I went to Singleton the last week of January, 1841; I accompanied Mr. Benjamin Singleton, junior, to the Court House then erected at ———, took the dimensions of the Court House there, and contracted with Mr. Benjamin Singleton to erect a Court House similar to that in the town of Singleton. I advised, after the contract was taken, that some alterations should be made; the ceiling in the Court House was very low, and I recommended that the Court House at Singleton should be several feet higher, and some other alterations and improvements which increased the cost of the new building. At the time I went there, the lock-up and enclosure were erected, and to all appearance must have been built some two or three years before. I built the Court House, completed it, and, at the request of Mr. Singleton, delivered possession to Mr. Percy Simpson, then Police Magistrate. The entire cost was something over £800. I may also say that my attention has been drawn to a mortgage of 26th October, 1840, to Thomas Cullen, in which a Court House is mentioned. That could not have been the Court House in question, because the Court House was not commenced until March, 1841, and I know of my own knowledge the then Court House of Singleton was held in a wing of the steam-mill mentioned in this mortgage as the steam-mill. That must evidently have meant the Court House then held in the mill. Shortly after I gave up possession to Mr. Simpson the late Benjamin Singleton became insolvent. He owed me a sum of money for the building of the Court House; and, as the whole of the property fell into the hands of Mr. Burdekin, it suggested itself to me that Mr. Burdekin would pay me the amount due. I, therefore, on my return to Sydney, made application to him, but he ignored the fact altogether, said that he had nothing to do with it, that the site of the Court House at Singleton was given to Government by Mr. Singleton, and he had nothing to do with it. I then put in my claim for some portion of the money that was due to me. In consequence of the assignee at the time selling a lot of property that did not belong to him, an action was entered by the family, and damages were recovered; and as I was one of the creditors of the estate, I was called upon to pay a portion of the damages, and it was decided that the whole of the assets of the estate, whatever they might be, should be handed over to the family, to clear the estate of the liabilities.

J. Lucas, Esq.,  
M.P.

5 Feb., 1869.

163. Was there a meeting of the creditors? There were several meetings. There was a meeting of creditors after I returned to Sydney, and I know I went as one, and consented to the transfer of this property to Benjamin Singleton, junior, and I and all the creditors were glad to get rid of our liability in that way.

164. You state that the lock-up was built previously to the Court House—What do you believe was the value of that lock-up? It was a wooden building, with two cells, and a passage between, with two rooms at the back for the lock-up keeper. It is many years ago since I saw it; but as well as I can remember, it was built of sawn timber, thick planking, one end of slabs grooved top and bottom, and made very strong to keep in the felons; because at that time all persons committed for any crime had to be forwarded to Sydney, and they stayed at this lock-up on their passage from the country to Sydney. The outside enclosure was of slabs also, enclosed in this way—a very substantial affair. I should imagine the value of the lock-up and enclosure could not be less than £250 or £300.

165. *Mr. Bell.*] You say you took the contract. What was the Court House built of? Brick, with stone foundation, plastered inside, and well finished. At this time (1841) everything was very dear; I had to get my lime from Maitland; carriage was dear, and I think I had to pay 4s. 6d. a bushel for lime. I know I had to pay a very high price for bricklayers, for at that time there was only one set of bricklayers there, and I had to get them from Maitland. I think I also got the window-sills and stone steps also there.

166. Did that £800 odd include the fittings? Yes, just the same as the Court House at ———, with the exception of being a very superior building in every way.

167. *Mr. Dodds.*] There is only one apartment? Only one apartment.

168. No small rooms? No small rooms. It was not necessary for the Magistrate or any one to live at the Court House—the lock-up-keeper kept it clean. It was one room, with four walls.

169. *Mr. Bell.*] There is a partition in the Court House now? There was no partition then.

170. *Mr. Dodds.*] A small room for the clerk? That has been added since. I am now speaking of 1841. Mrs. Burdekin, some time after I returned to Sydney, hearing that I had built the Court House, sent to me, and I had an interview with her. She told me that she was then making a claim upon the Government for compensation for the loss of the site of the Court House, and I then said she had no claim in the matter.

171. Do you remember the length and breadth of this building? I do not, but I think it was 40 feet long, by 20 broad.

172. What was the thickness of the walls? Fourteen inches brick-work; in fact, my instructions from Mr. Singleton were, that the building should be in every respect superior to the other, so that there should be no cavilling. There was no writing between us; he came up to my place; I shewed him my plan; of course I knew how it was to be built, and he told me to make an estimate of what I could do it for; I did so; there were not two words about it, and he said—"I will give it." I think I asked him £670—somewhere about that, for the building first, and there was about £170 or £180 for extras.

173. *Mr. Tighe.*] You found everything? I found everything.

174. What was the value of land at that time? The value of allotments of the usual size at Singleton was from £40 to £60, and as high as £80 in some places, but only about £10 or £12 at M'Dougall's, and ———

175. About that place? £40, £50, or £60, according to the locality. This was one of the best sites in the town.

176. The ground would be worth about how much? There were about three or four allotments; the land would be worth fully £200.

WEDNESDAY, 10 FEBRUARY, 1869..

Present:—

MR. BELL,

MR. FARNELL,

MR. TIGHE.

JOHN BOWIE WILSON, ESQ., IN THE CHAIR.

John Sheddon Adam, Esq., further examined:—

J. S. Adam, Esq. 177. *Chairman.*] You were requested, if possible, to define upon a tracing the land specified in a particular mortgage to a person of the name of Mackintosh—Have you been able to do it? I have been able to do it approximately—not exactly. (*The witness produced a tracing.*)

10 Feb., 1869.

178. This land marked within the red is the land that you believe to be defined in this mortgage to Mackintosh? Yes, the various portions edged red are approximately those described in the deed.

179. And you believe that the Court House, or the site of the old Court House, is not included in the land mentioned in that mortgage? It is not included. I may mention that that is not the same plan as is shewn in the lithograph, but is from a tracing of Mr. Bemis's plan, in the possession of Mr. Licensed Surveyor Seecombe.

180. *Mr. Farnell.*] Did Mr. Meehan originally lay out this land in lots? I understand so; the lithograph accompanying the papers is from a subsequent plan by Mr. Lewis.

181. *Chairman.*] It is easy enough to define the position of the Court House upon either plan? Yes, it is shewn in the same position on both plans.

WEDNESDAY, 17 FEBRUARY, 1869.

Present:—

MR. FARNELL,

MR. WISDOM.

JOHN BOWIE WILSON, ESQ., IN THE CHAIR.

John Williams, Esq., examined:—

J. Williams, Esq. 182. *Chairman.*] You have been requested by the Committee to obtain the opinion of counsel as to the effect of the late Benjamin Singleton's will—Have you done so? I have.

17 Feb., 1869.

183. Have you a copy of that opinion? I have a copy of the case submitted by me to counsel—Mr. Alexander Gordon, and the opinion given by him.

184. Is it the opinion of counsel that Government would be justified in paying Mrs. Singleton's demand? It is. (*The witness handed in counsel's opinion. Vide Appendix C 2.*)

185. Such being the opinion of Mr. Gordon, do you know any other reason why the Government should not settle this claim of Mrs. Singleton's? None, except that which arises from the long lapse of time.

186. What is the time? Thirty odd years; that would be a bar to her legal claim.

187. Does the action she has taken at various times—the demands she has made—keep alive her claim? No, no continuous demand keeps alive a claim; it requires an actual entry, followed by possession, for that.

188. *Mr. Farnell.*] That is to say, the Government have had an adverse possession for thirty years? Yes.

189. *Mr. Wisdom.*] It shews she always had a claim? Yes; it does not affect her legal position, but it may affect the equitable consideration of the case, as far as the Government is concerned.

# PETITION OF MRS. MARY SINGLETON.

## APPENDIX.

(To Evidence given by Michael Fitzpatrick, Esq., Under Secretary for Lands, 21 January, 1869.)

### A.

The Crown Solicitor to The Under Secretary for Lands.

Crown Solicitor's Office,  
Sydney, 28 June, 1866.

Sir,

I have the honor to return herewith the papers relating to Mrs. Singleton's claim to be paid for the land at Singleton upon which the Court House is built; and, with reference to the suggestion of the Surveyor General that I should be instructed to advise whether Mrs. Singleton, in the abstract now delivered on her behalf, shews a title to the land at Singleton upon which the Court is built, to state, shortly, how Mrs. Singleton's claim arose, and the steps hitherto taken with respect to it.

By the papers now sent, it appears that the correspondence as to the conveyance of this land to the Government dates as far back as 1838; that Mr. Benjamin Singleton having, in 1842, applied for compensation for this land, Mr. Thomas Burdekin, by letter of date 23 March, 1842, informed the Colonial Secretary that all Mr. Singleton's interest in this land had been assigned to him; and that, for the reasons given in his letter, he declined surrendering the Court House and premises to the Crown, but had no objection to the Government occupying them on sufferance. In 1844, Mr. Singleton having become insolvent, an application was made, on behalf of the trustees of his estate, with reference to this land, which the Colonial Secretary, by letter of date 26 April, 1844, refused to comply with, on the ground that Mr. Singleton had not performed his part of the agreement. In 1849, a negotiation was entered upon with Mrs. Burdekin, as to the purchase money to be paid for this land (see pages 17, 18, 19, and 20 of the printed correspondence), which she offered to transfer with the buildings for £350. The Surveyor General, however, reporting that the land was of the value of £40 only, nothing further was done. In May, 1850, the Government were applied to on behalf of Mr. Benjamin Singleton, junr., who had purchased the interest of the trustees of his father's estate. The Crown Solicitor was requested by the Colonial Secretary to report upon the conflicting claims of Mrs. Burdekin and Mr. B. Singleton, junr., which he did by letter of date 23 August, 1850, in which he states that he had investigated their titles, and was decidedly of opinion that neither party could establish a clear title to the property in question, and recommends the Government to retain possession, without paying rent or making any acknowledgment of title in either claimant, until some person had established a clear title to the premises by due course of law. Of this, both Mrs. Burdekin and Mr. Singleton were informed, by letter of date 20 October, 1850.

In December, 1852, Mr. Benjamin Singleton obtained a conveyance, from his son, B. Singleton, junr., of the interest purchased by the latter from the trustees; and in March, 1853, Mr. Singleton memorialized the Governor to cause a sum of £650 to be placed on the Estimates for payment for this land. This memorial was referred to the Crown Solicitor, who advised that a copy of his report of 23rd August, 1850, should be transmitted to Mr. Singleton and Mrs. Burdekin, and that each should be requested to offer any observations thereon they should deem advisable; and this was done, under cover of letter of date 30 April, 1853.

Shortly after this, Singleton died, leaving all his property to Mrs. Singleton, the present claimant, who, as the person then entitled, in a letter to the Colonial Secretary of date 4 May, 1853, acknowledged the receipt of the copy of the Crown Solicitor's report, and stated her objections to Mrs. Burdekin's claim, and furnished information upon questions raised by the report referred to. Mrs. Burdekin, also, by letter of date 17 May, 1853, replied to the Crown Solicitor's report; and both letters were forwarded to the Crown Solicitor.

On 28th June, 1855, the Crown Solicitor reported that he had submitted a case to the Solicitor General, who was of opinion that, under the circumstances in which the title was placed, the Government should pay nothing to either claimant, and that the title was too much involved for either to be in a position to convey a clear and unincumbered estate in fee; and without such conveyance, no payment should be made. Of this, both Mrs. Burdekin and Mrs. Singleton were informed.

Mrs. Singleton then, by letter of 11th November, 1853, made other proposals to the Government for a settlement. This was also referred to the Crown Solicitor, who reported that it did not shew any ground for deviating from the advice of the Solicitor General; and Mrs. Singleton was so informed, by letter from the Colonial Secretary, of date 16th February, 1854; and nothing further appears to have been done, by either Mrs. Burdekin or Mrs. Singleton, until November last, when Mr. Dalton, on behalf of Mrs. Singleton, without any reference to the previous correspondence or to Mrs. Burdekin's claim, forwarded to the Surveyor General the abstract upon which I am now requested to report.

The whole of the correspondence upon this subject has been printed as a Return to an Address from the Legislative Council, dated 24th July, 1855; but I am not aware whether any action was taken by the Council in the matter.

The title shewn by the abstract now delivered is the same as that upon which Mr. Solicitor General advised in 1853 (excepting that now Mr. B. Singleton's will is abstracted), and Mrs. Burdekin and Mrs. Singleton are in the same position with respect to the claim for compensation as they then were. I would, therefore, suggest that Mrs. Singleton be referred to the letter from the Colonial Secretary to her, of date 16th February, 1854, and informed that there appears to be no reason for altering the decision of the Government upon her claim, as communicated to her thereby.

I have, &c.,

JOHN WILLIAMS,  
Crown Solicitor.

Inform as advised. J.B.W.—2 July.  
Mr. Iceton, 10 July, 1866.

B 1.

August, 1841.

[Extract.]

Mortgage by applicant, and release. Benjamin Singleton & Uxor, 1st part; Parry Long, 2nd part; Thomas Burdickin, 3rd part. Registered, 28th August, 1841.

And also, all that piece or parcel of land situate at Singleton, aforesaid, marked 18 on the plan, bounded on the north by Elizabeth-street: Commencing at the north-east corner of a Reserve for a new Court House; on the east by George-street; on the south by Hunter-street; on the west by Bourke-street; again on the north by the south boundary of the Reserve, aforesaid; again on the west by the east boundary line of the Reserve aforesaid.

Search made, 22nd January, 1869, and found to be correct. In 5th Book, 28th August, 1841.  
Mortgage dated 25th and 26th days of August, 1841.

B 2.

I, BENJAMIN Singleton, of Singleton, in the Colony of New South Wales, gentleman, do solemnly and sincerely declare as follows:—That Benjamin Singleton, the elder, of Singleton, in the said Colony, gentleman, my father, lately deceased, became insolvent in or about the year one thousand eight hundred and forty-two, and that one Mr. Stewart—I believe his name was George Charles Stewart—of Sydney, in the said Colony, gentleman, was appointed the Official Assignee of the insolvent estate of the said Benjamin Singleton, the elder. That the said Mr. Stewart, as such Official Assignee, got possession of some horses belonging to the children of the said Benjamin Singleton, the elder, and sold the same, by order of the creditors in the said estate. That the said children brought an action against the said Mr. Stewart for the value of the horses, and a verdict was found for them in damages. That the creditors in the said estate, on such verdict for damages being obtained against the said Mr. Stewart as such Official Assignee, instructed him that, if the said children would agree to accept the remainder or residue of the said insolvent's estate which was then in his hands, in lieu of the damages obtained, that he the said Mr. Stewart should release to them the remainder of the said estate. That the said children agreed to accept this offer, and a release was accordingly made and executed by the said Mr. Stewart, as such Official Assignee, in favour of me, this declarant, who was then acting as trustee in the matter for the said children, they being my brothers and sisters. That the said release was dated in or about the year one thousand eight hundred and forty-three, and was to the effect that the said Official Assignee granted, conveyed, released, assigned, and transferred to me, this declarant, the remainder and residue of the insolvent estate, both real and personal, of my father, the said Benjamin Singleton, the elder, including real property in Singleton, aforesaid. That on obtaining such release, I soon after conveyed and assured the said real and personal property to my father, the said Benjamin Singleton, the elder. That, to the best of this declarant's knowledge and belief, the deed of release made and executed by the said Mr. Stewart in my favour as aforesaid, of the remainder and residue of the real and personal estate of my father, the said Benjamin Singleton, the elder, is lost and cannot be found. And I make this solemn declaration conscientiously believing the same to be true, and under and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty Queen Victoria, intituled, "*An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales and to substitute Declarations in lieu thereof and for the suppression of voluntary and extra-judicial Oaths and Affidavits.*"

BENJAMIN SINGLETON.

Taken and declared by the declarant, at Singleton, }  
before me, this nineteenth day of January, }  
A.D. 1869,—

WM. C. LESLEY, J.P.

(To Evidence given by John Williams, Esq., 5 February, 1869.)

C 1.

No. 290 M.

Date of deed—12th and 13th January, 1838.

Date of registration—15 January, 1838.

Benjn. Singleton, and Mary his wife, to Jno. Macintosh.

DESCRIPTION.

ALL that capital messuage or tenement with the mill outbuildings and appurtenances thereto belonging called by the name of Singleton's Inn situated at Patrick's Plains aforesaid bounded on the south-east by John-street and on the west by the river and also all that parcel of land situated at Patrick's Plains aforesaid and containing by estimation 90 acres more or less and bounded on the north by Mr. John Brown's grant on the east by Mr. Howe's grant and on the south-east by a line of allotments part of the town of Singleton numbered respectively from 1 to 42 and by lots 243 244 245 and 259 and also all that parcel of land situated at Patrick's Plains aforesaid containing by estimation 60 acres more or less bounded on the south by Dutton's and M'Dougall's grants on the north-west by John-street on the north by William-street and on the north-east by a continuation of Bourke-street and also all that parcel of land situated at Patrick's Plains aforesaid containing by estimation 40 acres more or less bounded on the south (commencing at John-street) by Mr. M'Dougall's land on the west by Yeoman's land to Hunter's River on the north by that river to lot 251 and on the south-east by lot 248 and by lots 92 to 111 together with all outhouses &c.

## C 2.

## CASE.

Herewith is a copy of the Will of Benjamin Singleton, bearing date the 21st April, 1853.

Counsel is requested to advise,—

1. What estate the testator's widow, Mary Singleton, takes under such will.
2. Whether payment having to be made for land of which Benjamin Singleton was seised in fee at his death, and which he had agreed to transfer to the Government in consideration of other land being given to him in exchange, but the title to which the Government are unable to perfect, any compensation which might be claimed under the circumstances stated, may be legally paid to Mrs. Singleton.

## COPY WILL.

This is the last will and testament of me Benjamin Singleton of Singleton in the county of Northumberland in the Colony of New South Wales miller I desire that all my just debts testamentary and funeral expenses be paid as soon after my decease as can conveniently be done I give devise and bequeath unto my wife Mary Singleton all the estate whether real or personal of which I may be possessed at the time of my decease and all or any other estate or estates either in reversion expectancy or remainder to which I now am or might hereafter become entitled to in any ways whatsoever for her use during her life and to her heirs or assigns And in case of her decease without making any disposition of the same by will or otherwise then I give devise and bequeath the same or remainder thereof to my three sons William Benjamin and George Australia Singleton In trust to collect sell and dispose of the same and to divide the proceeds thereof among all my children share and share alike The share of my daughter Mary Lloyd to be for her own use and benefit independent in any way of her husband George Lloyd and the shares of my children John and Sarah deceased to be divided equally with their children share and share alike And I make constitute and appoint my dear wife Mary Singleton and my sons William Benjamin and George Australia Singleton Executrix and Executors of this my last will and testament directing that in all things my said sons shall follow the directions and be under the control of my said wife in the collection disposal or otherwise of all or any of my said estate And hereby revoking all or any will or wills codicil or codicils heretofore made I publish and declare this to be my last will and testament this twenty-first day of April one thousand eight hundred and fifty-three in the presence of those who at my request in my presence and in the presence of each other have subscribed their names as witnesses.

BENJN. SINGLETON.

Witness,—

JAS. CURTIS EASTMORE,  
Solicitor, Singleton.  
WALTER ROTTON.

## COPY OPINION.

1. The testator evidently does not intend his widow to take an *absolute interest* in the real and personal estate devised and bequeathed to her, inasmuch as he proceeds to deal with the property in a manner entirely inconsistent with the supposition of such a previous disposal of it. Nor can the testator be taken to have given to his widow *only a life estate*, since the terms of his subsequent dealing with the property necessarily involve a supposition of her having a larger interest, and are in fact equally inconsistent with the idea of the gift being merely of a life estate, as with the idea of its being an absolute interest. If, however, the will be read as giving to the widow an estate or *interest for life, with a power of disposition by will or otherwise*, then the whole devise becomes consistent and intelligible. The testator devises and bequeaths unto his wife all his real and personal estate for her use during her life, and to her heirs or assigns, that is, persons to whom she may give it, either by will (reading the word "*heirs*" to mean "*devisees*") or in some other way; and he then directs that, in case of her decease without making any disposition of the property by will (that is, giving a title to *devisees*), or otherwise (that is, giving a title to *assigns*), the property or the remainder (that is, what has not been disposed of by will or otherwise) shall go to persons whom he names. With regard to reading the word "*heirs*" as "*devisees*" or *heirs created by will*, it results from its being evident that the word "*heirs*" is not used by the testator in its ordinary and proper meaning, and then gathering from the words and tenor of the will the signification which he must have intended to be affixed to it.

I am, therefore, of opinion that the testator's widow, Mary Singleton, takes, under the will, an estate for life, with a full power to dispose of the property by will or otherwise.

2. I see no reason why the compensation claimed should not be paid to Mrs. Singleton; but it will be proper that the executors of the testator's will who have proved should, as such, join in the receipt, as a legal discharge to the Government for the payment.

ALEX. GORDON.

1868-9.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## DR. FREDERICK BEER.

(PETITION OF.)

*Ordered by the Legislative Assembly to be Printed, 14 January, 1869.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, Frederick Beer, M.D., C.D., and O.D.,—

SHEWETH:—

That your Petitioner arrived in this Colony, and commenced the practice of his profession in the City of Sydney, in the year one thousand eight hundred and fifty-three.

That your Petitioner was very successful in his said practice, and in the years one thousand eight hundred and fifty-four and one thousand eight hundred and fifty-five, and at the date of your Petitioner's arrest, hereinafter mentioned, was in receipt of an income of one thousand eight hundred pounds per annum.

That during that period your Petitioner was the medical attendant of Phillis Brown, known as the wife of Michael George Brown, an officer in Her Majesty's Customs in Sydney aforesaid.

That your Petitioner, being well acquainted with the curative effects of the extract of belladonna, used that drug with very great success in his professional treatment of the said Phillis Brown, in the year one thousand eight hundred and fifty-three, as dressings on blisters and in suppositories containing three grains of the extract.

The said Phillis Brown suffered from a ring stricture of the rectum.

That on the tenth day of February, one thousand eight hundred and fifty-six, your Petitioner attended the said Phillis Brown professionally, she being at the time pregnant and in great danger of miscarriage, and suffering acutely from irritation in the rectum. Your Petitioner then prescribed suppositories, each containing five grains of the extract of belladonna, one to be introduced when the pains were excessive, and repeated every three hours if required, to prevent such miscarriage.

That the miscarriage of the said Phillis Brown was prevented, and the said Phillis Brown was, in the month of March of that year, delivered of a living child.

That on the fourth of March, one thousand eight hundred and fifty-six, your Petitioner was arrested by Inspector James Singleton, without warrant, and before any information was signed, charged with administering half a drachm of belladonna to the said Phillis Brown, with intent to procure a miscarriage, and your Petitioner was detained in custody.

That the said charge was heard before James Sheen Dowling, Esquire, Police Magistrate, Sydney, on the fifth, sixth, seventh, tenth, and eleventh days of March, one thousand eight hundred and fifty-six, and your Petitioner was committed to take his trial at the next Criminal Court.

That the Attorney General, as Grand Jury, did not find a Bill against your Petitioner.

That your Petitioner was prosecuted by the Australian Mutual Provident Society, and on the thirty-first of March, one thousand eight hundred and fifty-six, the Solicitor of the said Australian Mutual Provident Society applied to the then Solicitor General for permission to deliver a Brief to a Junior Counsel to assist in the prosecution of the case, which was granted.

That on the seventh day of April, one thousand eight hundred and fifty-six, an information was filed against your Petitioner, charging your Petitioner, in the first count, with administering belladonna with intent to procure abortion; and in the second count, with administering poison with intent to kill and murder the said Phillis Brown; and the trial of your Petitioner, on such information, commenced on the ninth day of

April, one thousand eight hundred and fifty-six, and was continued during the tenth, eleventh, and twelfth of the same month, before His Honor Mr. Justice Therry and a jury of twelve persons. The prosecution was conducted by Arthur Todd Holroyd, Esquire, a Counsel for the Australian Mutual Provident Society; and your Petitioner has since discovered that the presiding Judge, the said Arthur Todd Holroyd, and several of the jury were members of the said Australian Mutual Provident Society prosecuting your Petitioner.

That your Petitioner only obtained a copy of the depositions on the sixth day of April, one thousand eight hundred and fifty-six, although previously and frequently applied for; and feeling conscious in his innocence of the charge on which he had been committed, did not employ Counsel to defend him; and it was only on his trial, on hearing the information read, he was the first time informed that a capital charge was laid against him.

That your Petitioner's diary for the year one thousand eight hundred and fifty-five, containing entries of attendances, operations, and medicines for Phillis Brown, was in custody of the police, at the Central Police Office, and at the suggestion of Mr. Singleton, was not locked up with your Petitioner in his cell; but on the following morning, the sixth of March, the said diary was not given up to your Petitioner, and your Petitioner has not seen it since.

That during the first day of your Petitioner's trial the presiding Judge offered your Petitioner the assistance of Counsel, which your Petitioner declined; but in the evening of that day—your Petitioner being again urged by the Judge—asked that Mr. Darvall or Mr. Broadhurst might be assigned as his Counsel. Your Petitioner had cross-examined Mrs. Phillis Brown, and upon being interrupted by the Judge in his cross-examination, had stated his ability to prove the witness had been diseased, and was swearing falsely.

That on the second day of your Petitioner's trial Mr. Blake was assigned his Counsel; but your Petitioner never instructed him, or had any conference with him in any manner.

That on the evening of the third day your Petitioner insisted upon calling further evidence, when Mr. Blake left the Court; Mr. John Cornelius Horner, formerly an assistant of your Petitioner, was giving evidence in your Petitioner's favour, and was about referring to your Petitioner's ledger, Mrs. Brown's account being kept by him, to prove that suppositories similar to those prescribed on the tenth of February, one thousand eight hundred and fifty-six, had been taken by Mrs. Phillis Brown on the twenty-fourth of April, one thousand eight hundred and fifty-five, the nature and quantities of belladonna, dressings, Dzondi pills, and other medicines prescribed for, and taken by, Mrs. Brown, under your Petitioner's professional treatment, and the identity of the accounts in the ledger with the receipted accounts produced by Mrs. Brown, already in evidence on the trial,—when His Honor stated it was impossible to finish the case that night, and adjourned the Court to the following day.

That upon the opening of the Court on the fourth day your Petitioner's ledger could not be produced. Your Petitioner asked for leave to continue the examination of witnesses for the defence—to recall John Cornelius Horner, and to allow him to call Dr. Willmott, then in Court—when His Honor refused to allow your Petitioner to call any other witnesses, stating—"Your Counsel closed your case yesterday; besides, your trial has already lasted four days."

That your Petitioner had subpoenaed the following witnesses:—Dr. Salter, J. C. Horner, Mrs. Nesbitt, Mr. Seath, Thomas Dent, J. Rim, Mr. and Mrs. Russell, Mr. Robinson, Mrs. Hickey, Mr. Hargraves, Mr. Dean, Mr. Reynolds, and Ann Ray, and they were in attendance to give evidence in your Petitioner's favour. Your Petitioner's Counsel had not closed the case, inasmuch as Mr. J. C. Horner was being examined when Mr. Blake left the Court, and your Petitioner, by the refusal of the Judge, was prevented from proving, not only his perfect innocence, but that Mrs. Phillis Brown was altogether unworthy of credit.

That the prosecution of your Petitioner was entrusted to a private company, and was most unfairly conducted by Mr. Holroyd, who adduced evidence of effects said to have immediately followed the introduction of the suppositories, and of appearances the result of belladonna which he, a medical man, well knew to be false, and which appearances could not exist until after death; and also in the production of evidence immaterial to the issue, and not in support of the information, which could only have the effect of inflaming the minds of the jury, and prejudiced them against your Petitioner.

That your Petitioner was found guilty upon the perjured testimony of Phillis Brown and Michael George Brown, and the evidence of medical men, of the deadly effects of belladonna, who had had no experience in its application, and who did not attend the said Phillis Brown professionally, or examine her before giving such evidence; as your Petitioner submits, as honorable men, they were bound to do.

That the said Phillis Brown was stated by Mr. Holroyd to be in a good state of health, and upon this false statement the medical testimony was based, although Mr. Pritchard's evidence, given at the Police Office, informed him that Dr. O'Brien had reported unfavourably of her state of health, and that no life could be accepted when it was known that cancer had ever existed—when, in fact, the said Phillis Brown was, at the time of the administering of your Petitioner, suffering from *Rokitansky's* stricture in the rectum, the result of venereal disease, much excited and inflamed by cold and exposure, and threatenings of miscarriage.

That the suppositories prescribed by your Petitioner had the effect of preventing the miscarriage of the said Phillis Brown, and during your Petitioner's trial she was nursing the child with which she was pregnant on the tenth of February.

That

That your Petitioner received a sentence of ten years' imprisonment and hard labor; and was removed to Cockatoo Island, where your Petitioner was placed under old convict overseers, and for a period of four years was subject to the extreme hard labor of that penal establishment.

That during that period your Petitioner, by good conduct and extra labor, became entitled to a ticket-of-leave eighteen months sooner than the time prescribed by the regulations, and received a ticket-of-leave on the twenty-first of April, one thousand eight hundred and sixty, and left Cockatoo Island.

That in the month of September, one thousand eight hundred and fifty-seven, your Petitioner, through his brother, Francis Beer, laid all the facts before the first medical authority in England—namely, Sir Benjamin Collins Brodie, Baronet, Physician to Her Most Gracious Majesty the Queen, with a view to obtain his opinion thereon.

That your Petitioner obtained the written opinion of Sir Benjamin Collins Brodie on the case, containing the following passages:—"I cannot have the smallest hesitation in saying that both the charge and the verdict are utterly absurd. I can understand that Dr. Beer might have prescribed the use of belladonna to Mrs. Brown, with a view to prevent premature labour, but I cannot suppose that he or anyone else would dream of prescribing it for the purpose of procuring abortion";—thus showing that the practice and prescription of your Petitioner in Mrs. Brown's case was correct.

That on the tenth day of June, one thousand eight hundred and fifty eight, your Petitioner obtained an interview with His Honor Mr. Justice Therry, whilst on a visit to Cockatoo Island. The opinion of Sir B. C. Brodie having been shown to him, when His Honor recommended your Petitioner to present a petition to the Executive Council, and said "That by the verdict of the jury the case was taken out of his hands, but that the opinion of Sir Benjamin Collins Brodie threw a new feature on the whole case; that the petition would be referred to him, and he would report favourably on it, and on that account it would not be necessary for your Petitioner to prove the disease of the bowels of Mrs. Brown, of the existence of which His Honor had since an opportunity to convince himself by the evidence of other medical men who had professionally attended her.

In obedience to the suggestion of Mr. Justice Therry, your Petitioner applied to Samuel North, the Visiting Magistrate at Cockatoo Island, on the twentieth day of the said month of June, for permission to present a petition to the Executive Council, when your Petitioner was informed that he would not be allowed to present such petition.

That on the seventh day of May, one thousand eight hundred and sixty, your Petitioner presented a petition to His Excellency Sir William Denison, praying for a remission of the remainder of your Petitioner's sentence; but without success.

That on the twenty-fourth day of April, one thousand eight hundred and sixty-one, a petition was presented to the Honorable the Legislative Assembly at Sydney, signed by one thousand five hundred and sixty-four inhabitants of the District of Braidwood, stating that, from circumstances which had transpired since your Petitioner's conviction, they had good reason to believe that your Petitioner was not guilty of the offence for which he was so convicted, and that evidence which was not forthcoming at the trial of your Petitioner, and which could not then have been obtained, would prove that he was not guilty of such offence, and that he was, therefore, wrongfully convicted.

That the Honorable the Legislative Assembly appointed a Select Committee to take this petition into consideration, with power to send for persons and papers, and that such Committee sat on the first, twentieth, twenty-second, twenty-sixth, and twenty-eighth days of November, one thousand eight hundred and sixty-one; third, sixth, tenth, sixteenth, and eighteenth days of December, one thousand eight hundred and sixty-one, taking evidence thereon; and by their report to the Legislative Assembly, dated the sixteenth day of January, one thousand eight hundred and sixty-two, they found it was established incontrovertibly, that many persons, whose evidence most probably would have seriously affected the decision of the trial, were either in Court, or waiting to be examined, whom your Petitioner was not permitted to produce, and that evidence had since been procured which would further tend to exculpate him from the crime for which he was convicted—viz., that of Sir Benjamin Brodie, and the evidence of other witnesses examined by the Select Committee.

That the evidence of Dr. Salter, Dr. Alloway, Dr. Berncastle, Dr. Brown, Dr. Eichler, Mr. W. J. Anderson, Mr. M. Egan, Dr. Cox, and Dr. Boyd, proves incontrovertably,—

- (1.) That abortion could not have resulted from the use of belladonna, as administered; on the contrary, that its effects would be to prevent abortion.
- (2.) That it could not have caused the death of the child, except through the maternal system.
- (3.) That, as it was administered to the mother, none of the effects stated to have immediately followed the introduction of the suppository could result from its use, as a very considerable period must elapse before it could be dissolved and absorbed.
- (4.) That, as a rule, the quantity could not in any way be dangerous.

And Mr. Dent's evidence proved,—

- (5.) That your Petitioner had been constantly in the habit of prescribing this drug for other patients, in larger doses than those used in this case, therefore there was nothing unusual in its application there.

That

That it must not be lost sight of, that whereas your Petitioner was convicted of administering half a drachm of belladonna, not more than five grains, or one-sixth of that quantity, was ever taken in one day, and the directions for its administration were, to persist in its use only according to its effects, which, if injurious, would have very gradually developed themselves.

Without in any way impugning the decision arrived at by the jury who tried the case, who, on the evidence before them, could perhaps have arrived at no other conclusion, the said Committee had no hesitation in reporting, from the evidence laid before them, that the use of belladonna, in the way prescribed, could not have procured abortion, and, on that ground, they absolve Dr. Beer altogether from the charge on which he was found guilty.

The said Select Committee was of opinion that your Petitioner ought to have had an opportunity afforded him of placing his case before the Executive Council, and that the Visiting Magistrate was not warranted in refusing your Petitioner permission to forward a petition to the Executive, as suggested by Mr. Justice Therry, as it was clear that the letter of Sir Benjamin Brodie was precisely within the category prescribed by the regulation quoted by the Visiting Magistrate in justification of his refusal.

That in the year one thousand eight hundred and sixty-two your Petitioner presented a petition for a free pardon to His Excellency the Governor; but His Excellency did not see fit to authorise a compliance with the prayer of his petition.

That on the twenty-fifth day of May, one thousand eight hundred and sixty-four, your Petitioner applied to His Excellency the Governor for a reconsideration of his case; and in reply your Petitioner was informed, that there did not appear to be any grounds for authorising a compliance with his application.

That on the thirteenth of April, one thousand eight hundred and sixty-six, your Petitioner, having served out the whole sentence of ten years, left Braidwood for Sydney, and on the twentieth of the same month left Sydney for Shanghai, by way of India.

That your Petitioner commenced the practice of his profession at Shanghai aforesaid, and for four months was very successful, having been chosen as medical attendant to the Customs there—when your Petitioner's trial and sentence in this Colony was spoken of by rival practitioners, and your Petitioner at once lost position and practice, and was compelled to leave Shanghai.

That on the second of June, one thousand eight hundred and sixty-seven, your Petitioner arrived in Calcutta, and there commenced the practice of his profession with very great success, and was appointed medical attendant to the families of twelve of the Baboos, at a salary of one hundred pounds per annum each, and having gained the esteem of the professors of the University, and some members of the Senate, and had a professorship in pathology promised your Petitioner; but after nine weeks' residence, your Petitioner's trial and conviction being spoken of, your Petitioner was compelled to leave Calcutta.

That your Petitioner returned to Sydney on the thirteenth of September, one thousand eight hundred and sixty-seven, for the purpose of clearing himself from the foul stain which his conviction had cast upon him, and soon after prosecuted Michael George Brown for perjury; and although your Petitioner proved, by the evidence of many witnesses, the perjury on six different assignments, the case was dismissed by the Police Magistrate.

That your Petitioner, by his Solicitor, endeavoured to obtain the direction of the late Attorney General for the prosecution of the said Michael George Brown for perjury, but without success.

That the said Phillis Brown died in Sydney aforesaid in the month of June last, and after death was examined by W. J. Anderson, Esquire, Fellow of the Royal College of Surgeons, and J. C. Gilhooley, Esquire, and on the same day your Petitioner received from Mr. Anderson the following certificate:—

"We hereby certify, that on the 23rd June, 1868, we made a digital examination of the rectum of the body of Phillis Adolphia Brown, in the Lord High Admiral Inn, Botany-street, Surry Hills, and found, about an inch from the external orifice, a narrow annular stricture, and about an inch above this another stricture, also annular, but broad, thick, and evidently of long standing.—W. J. Anderson, F.R.C.S., 12, South Head Road."

On the twenty-seventh of August, one thousand eight hundred and sixty, your Petitioner obtained an affidavit from John Redhead, Surgeon, as follows:—

"I am a duly qualified medical practitioner, and was so on or before the month of September, one thousand eight hundred and fifty-seven.

"In the last-mentioned month and year, I attended Mrs. Phillis Brown professionally; she then resided in Cumberland-street, in the City of Sydney, in the Colony aforesaid. On examining her I found she was suffering from an organic stricture of the rectum, in the form of a ring, about an inch from the sphincter ani. I found that the disease was one of long standing, and that she had been previously treated for its reduction, but without success. She was, when I was called in, in a state of continued irritation. The Phillis Brown above mentioned is the same person who, in the month of April, one thousand eight hundred and fifty-six, appeared as a witness and gave evidence at the Criminal Court, in Sydney, against Dr. F. Beer, on his trial for the administration of belladonna to the said Phillis Brown."

That from the fourth day of March, one thousand eight hundred and fifty-six, to the twenty-sixth of April, one thousand eight hundred and sixty, your Petitioner was imprisoned

imprisoned at Darlinghurst and on Cockatoo Island, and that during such period the whole of the effects of your Petitioner were taken away and disposed of, to the great pecuniary loss of your Petitioner.

That your Petitioner has already expended upwards of one thousand pounds in procuring evidence for the Select Committee of the Legislative Assembly, and in the prosecution of his case, and against Michael George Brown, besides seven hundred pounds expended by your Petitioner's brother, on your Petitioner's behalf, in going to England and obtaining the opinion of Sir B. C. Brodie.

Your Petitioner submits to your Honorable House that the prosecution of your Petitioner was, in fact, a persecution from first to last. That the arrest of your Petitioner before any information was signed, and consequently without warrant, was an illegal act.

That the trial of your Petitioner without a finding, was illegal. That the said trial was but a semblance of justice.

That no members of the prosecuting society should have been permitted to join in judging, prosecuting, condemning, or sentencing of your Petitioner. That the trial of your Petitioner was an unfair and illegal proceeding, and that the sentence, degradation, misery, and hardship, during his ten years' sentence, and subsequent degradation, were not only illegal, but a false imprisonment of, and undeserved punishment to, your Petitioner.

Your Petitioner, therefore, humbly prays your Honorable House to take the premises into your consideration, and by the resolution of your Honorable House, recommend your Petitioner to the favourable consideration of Her Most Gracious Majesty for a special pardon, in order that the honorable position in society held and enjoyed by your Petitioner before his said prosecution and sentence, may be restored to him; and that your Honorable House may grant to your Petitioner such redress as may seem just to your Honorable House.

And your Petitioner, as in duty bound, will ever pray, &c., &c.

---

MRS. MARY FOGG.  
(PETITION OF.)

---

*Ordered by the Legislative Assembly to be Printed, 9 March, 1869.*

---

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Mary Fogg, of Fish River, Reid Flat,—

RESPECTFULLY SHEWETH:—

That at the Court of Quarter Sessions held at Yass in the month of October in the year one thousand eight hundred and sixty-four, your Petitioner's husband, William Fogg, was convicted of stealing one cow, and sentenced to one year's imprisonment which he fully served.

That at the time of his conviction a person named Jamieson was indebted to him in the sum of seventeen hundred pounds, the price of a station and stock of which your Petitioner's husband was the owner for many years.

That proceedings were instituted by the Crown, and your Petitioner's husband's property declared to be forfeited, in consequence of which Jamieson's representatives paid over the debt due by them to the Crown.

That the confiscation of this sum has been ruin to your Petitioner and her large family.

That, as your Petitioner believes, confiscation under such circumstances is not now resorted to in the Colony.

Your Petitioner humbly prays that your Honorable House will direct an inquiry into the circumstances, when your Petitioner will be prepared to prove that the property in the run and stock sold to Jamieson was realized by the hard industry of herself and family, and in no degree the fruit of crime; and upon such being made to appear, your Petitioner begs that your Honorable House will cause such steps to be taken in the premises as to your Honorable House may seem fit.

And your Petitioner, as in duty bound, will ever pray.

MARY FOGG.

1868-9.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF  
THE LEGISLATIVE ASSEMBLY.

VOTES, No. 35. TUESDAY, 9 FEBRUARY, 1869.

9. Rev. Denis M'Guinn, late R.C.C. at Carcoar :—Mr. Roberts moved, pursuant to Notice No. 1,—
- (1.) "That" this House will, on Friday next, resolve itself into a Committee of the Whole, to consider of an Address to the Governor, praying that His Excellency will be pleased to place on the Supplementary Estimates for the present year a sum of money equivalent to the amount of salary due to the Rev. D. H. M'Guinn, late Roman Catholic Minister at Carcoar.
- (2.) That the foregoing Resolution be embodied in an Address, and presented to His Excellency the Governor.
- Debate ensued.
- Mr. Mate moved, That the Question be amended by the omission of all the words after the first word "That," with a view to insert the following words, viz. :—
- "the claim of the Rev. D. H. M'Guinn to a stipend be referred to a Select Committee for consideration and report.
