No. 5. Are any of these roads or tracks, through being metalled, or by reason of the large general traffic or otherwise, rendered unfit for travelling stock traffic; if so, state which?

There is no metal used in any part of my district but in the streets of Deniliquin. In very wet seasons the road between Deniliquin and Moama gets a good deal cut up by the general traffic, but, as I remarked in my answer to No. 4, I cannot, now the land is sold on each side, point out how this can be avoided, and even in such seasons it reduces itself to an item of expense, as the owners of the land allow travelling stock to go through their land at a reasonable charge.

No. 6.

No. 6. If any of them are unfit for stock traffic, say whether it is possible to make new stock roads in the place of those which are unfit, and divert the traffic to the new roads.

I can only refer you to my remarks in Nos. 4 and 5. The road from Deniliquin to Moama is the only road in my district of which I consider drovers have cause to complain, and at present I cannot point out how it can be remedied.

No. 7. Can the droving roads or tracks in your district be made more direct or turned through other country for feed or water; if so, state how and in what direction, and show the direction by marking it in red dotted lines on the maps.

These roads or tracks were all chosen in the early times as being the best situated for grass and water, as also being the most direct route to the Victorian market, and in my opinion cannot be changed for the better.

No. 8. Are any new droving roads or tracks required in your district; if so, say in what directions, and mark them in red dotted lines on the maps?

The same answer will serve as for No. 7, and when any new droving roads are required from back blocks or new country, they are always made without any obstructions from the run-holder whose leased land they go through.

No. 9.—Are there any portions of the roads or tracks in your district obstructed by fencing or otherwise; if so, state the nature of the obstructions, and how they should be removed?

I do not think there are any obstructions, but cannot possibly say; but my reasons for thinking so are, that a great many of the drovers using these roads are men who have been many years on the roads, and are well acquainted with what the law gives them, and if obstructed would at once bring it under notice, and in the position I have the honor to hold I feel sure I would have known of it, and should such a complaint be made to me I will at once bring it under your notice.

No. 10.—What ought to be the size and description of public gates on droving roads and tracks?

I would not advise gates being allowed on public roads, but slip-panels, and to open as follows,—

No. 11.—Are there any gates on the roads in your district; if so, report as to number and fitness, and position, marking same on map?

There are no gates on any of the public roads in my district, but such as described in the diagram of No. 10.

No. 12.—Say whether any of the crossing-places at the rivers, or gaps, or sidings, or gullies, or mountains, can be improved; and if so, at what expense; and state where, at one or both sides of any of the important crossing-places, reserves are necessary for improving the approaches to these crossings, and mark them on the maps.

There are now bridges at all the important crossing-places, all of which are used by sheep and in some cases by cattle. The most important crossing-place for cattle, long known as Maiden's Yards, Moama, have for a long time been both unfit and unsafe for the crossing of cattle or horses; the posts and rails are all rotten; the forces or crushes into the river washed down by the falling in of the river banks,—to remedy which would require new yards, which I consider could not be put up and proper approaches made at a less cost than £400. Mr. M'Intosh, the late lessee, after spending over £100 last year on the old yards, has erected new yards on his private property higher up the Murray, but it yet remains to be proved if they will answer as well as the site of the old yards.

No. 13.—Are there sufficient reserves for feeding and watering travelling stock in your district, especially in the neighbourhood of towns and crossing-places?

The principal crossing-places are at towns, where the reserves cannot be increased, and at such places as Deniliquin, where the reserves are in the hands of the Town Council, and who give their herdsmen orders to oblige travelling stock to keep to the road, where a day's rest would be most useful.

No. 14.—If not, state what additional reserves are required, and their extent in each case, and mark their position on the map.

No. 15.—Have travelling stock, passing through or along Crown Lands in your district, in every case free access to and through the half-mile in width to which they are entitled, and also to all reserves that may have been notified for feeding and watering travelling stock; if not, how are they obstructed, and how is the obstruction to be removed?

No. 16.—Are the reserves set apart for travelling stock trespassed upon by other stock; if so, say by whom, and how these reserves should be protected for the use of travelling stock?

Since the receipt of the circular to which this is a reply, I have made it my business to bring about conversations with the most experienced of the drovers as to any grievance they might have, and have heard no complaints; and I would most respectfully suggest that it be notified to the droving public by advertisement to them to lodge complaints where they consider they have grounds, as they alone can be judges as to whether they get their rights or not, and as I said in No. 9 I feel sure if they did not I would have heard.

No. 17.—Are any dams, tanks, or wells, required to be made on any of the roads or tracks in your district; if so, state their position on the maps and probable cost?

At present I am not in a position to advise on the above, but with more experience, if I see the necessity of tanks or dams, I will bring the matter under your notice, with the probable cost.

A. M'COLLOUGH,
Inspector of Stock, Moama.

12.—DUBBO DISTRICT.

STOCK INSPECTOR BROWN to OFFICER IN CHARGE, OCCUPATION OF LANDS.

Dubbo, 15 September, 1874.

SIR,

In reply to your communication of the 28th ultimo, with reference to water reserves on travelling stock routes being partly fenced, also treating of gates of insufficient width, and fences erected across main roads,—I do myself the honor to state that a report as to such will be forwarded, and receive my earliest attention.

I have, &c.,

JOHN S. BROWN,
Inspector of Stock.

STOCK INSPECTOR BROWN to THE CHIEF INSPECTOR OF STOCK.

Dubbo, 29 January, 1875.

SIR,

As requested per circular of the 30th November, last, I do myself the honor to lay before you the following report:—

DROVING ROADS AND TRACKS IN THE SCAB DISTRICTS OF DUBBO AND CANNONBAR.

Question No. 1.—The roads and tracks used by travelling stock in these districts are as under:—

The Bogan and Macquarie Rivers, The Duck, Gunningbar, Marra, Marthaguy, Merri Merri, and Talbragar Creeks, also part of the west side of the Castlereagh River; these run parallel to the streams. Those approaching to right angles or cross country are as follows:—

From Wingaden, on the Castlereagh, to the main Merri Merri Road, at Quambone, in some instances continuing a south-west course to the Marthaguy, and thence to the Macquarie River.

From Coonamble, *via* Tooloom and Bringesse's, on the Merri Merri; Tonaung, on the Marthaguy; and thence to Mayabone, on the Macquarie.

From Gelargumbone, on the Castlereagh, to Colli, on the Marthaguy; and thence down the Marthaguy until its intersection with the main road from Warren to the Marthaguy.

Again from Collic to Timberabongie, on the Macquarie, *via* Coalbaggin and Burrowan.

From Galgandra to Dubbo, on the Macquarie, *via* Coalbaggin.

From Mundooran to Wellington, *via* Cobbera; and from Mundooran to Dubbo, *via* Cobbera and the Talbragar.

From Wellington to Obley, *via* Curra Creek.

From Dubbo to Obley, *via* Wanbangalang.

From Narromine to Obley, *via* Wallaby Springs and Dilladerry; and from Narromine to the Bogan, at Balgandramine, *via* Wallaby Springs and Tomingly Creek.

From the junction of the Gunningbah with the Billeringa Creek to Nyagin on the Bogan.

From Cannonbar to Nyagin on the Bogan.

From Boggabadah on the Bogan to the Lachlan River, *via* Pangie and Craway Creek.

No. 2.—The main road from Bourke up the Bogan River is generally on the west side, especially in flooded time, until it arrives at a point on the river known as Nyagin; there it crosses to the east side, and to this particular point I would draw your attention: Sheep in going down the Bogan often omit crossing at this point to the west side; the result is that they get entangled between the river and the Gunningbar and Duck Creeks, which in many instances is a serious cause of delay, and in flooded times much loss might occur, as a succession of watercourses flow into the Bogan from the eastward. Therefore I would advise the closing of the present track on the east side of the river from Nyagin to a point about 1 mile below the junction of the Duck Creek with the Bogan; at that the main road from Cannonbar to Bourke is cut; to make to this point travelling stock in flooded times would necessitate a bridge over the Gunningbar and Duck Creeks, which, in addition, is a very low flooded country. On the other hand, a bridge at Nyagin would at once give all stock free outlet to the west side of the river, and also do away with all risk in time of flood.

From Nyagin up to Tabratong the road crosses and recrosses the river several times, and again from Tabratong to Derribong or Terribong; over from there it adheres to the west side of the river until it reaches Genanagay, thence on to Forbes; but returning to Nyagin I would advise the road on both sides of the river up to Bulgandramine being reserved for travelling stock: for instance, sheep have been detained for many days at Derribong, those going down the river were not allowed through Mrs. Martell's West Bogan blocks, and those coming up the river were stopped by Mr. Kerr from travelling further on the east side. This matter has been much complained of as a serious loss to fat stock, they being much knocked about,—when a track up the east side of the river to Balgandramine would have removed all difficulties,—or otherwise a bridge at Derribong.

The main road from Bourke or the Darling up the Macquarie is divided until it reaches Warren, one line keeping what is known as the Marra Road and the other the Duck Creek; that which comes across to the Duck Creek is most used—not being so flooded.

Taking Warren as a starting point upwards, and although the west side of the river is mostly used, still I would recommend the roads on each side of the river as at present being retained.

No. 3.—In ordinary seasons I consider the number of cattle and sheep that travel the Bogan Road is fully 300,000, and the number that travel the Macquarie 250,000, on the Talbragar, 400,000; about half the Queensland stock make for the Bogan, and the other half cross the Macquarie near Dubbo.

No. 4.—I consider a main droving road should be $1\frac{1}{2}$ mile wide, but intersecting roads of short lengths might be reduced to 1 mile.

The second question in No. 4 is peculiar to answer, for the droving roads or tracks are being reduced continually by selectors, so that stock have to travel on half their allotted width,—nor are any such boundaries defined.

No. 5.—I consider the main road down the Talbragar, as it gets near Dubbo, much injured for travelling stock purposes, owing to the large quantities of land that have been taken up, and is being now rapidly fenced in.

No. 6.

No. 6.—And I consider it quite practicable at present, to make a “new” stock route, by a slight deviation.

No. 7.—One of the droving roads from the Northern Districts has been much injured as it draws near Dubbo; no reserve of any extent has been made near that township, and consequently large mobs of sheep and cattle are hurried when they get within a few miles of the town and river, pushed across and driven away; and I would propose, as now shown on the chart (county of Lincoln), that a stock line should be reserved, commencing at the junction of Mitchell's Creek with the Talbragar, and taking a south-west course to the Macquarie River, a distance of about 18 miles to Murrumbidgee; there the stock would have the advantage of those large reserves lately proclaimed for stock purposes, and adjoining each other, situated in the county of Lincoln, parish of Murrumbidgee, No. 23, 5,900 acres, and No. 24 in the county of Lincoln, parish of Gueric, 712 acres; this would be a fine route for stock going to the Southern markets, and the large reserves above mentioned would be on the direct line, and by crossing the river just below Cornish and Cruikshank's portion of 320 acres, to the west side, the stock would still be on a large reserve, having the advantages of a fine country to travel through, and thinly populated. This route must soon become of great value to stockowners, as on both sides of the river there is plenty of spare country to proclaim large stock reserves, and on this line there will be an immense stock traffic, as the reserves would be of very great value to stock travelling up the Macquarie to the Sydney or Bathurst markets.

The next droving road is one also coming from the north, and leaves the Castlereagh at Galgandra; thence on to the Macquarie, crossing either at Dubbo or some of the falls below; thence to the south *via* Obley or Balgandramine.

Another road of great importance is that from the Marthaguy, leaving it at Colli, touching at Baggabah and Burroway, on the Macquarie, to Timberabangie; at that part there is a fine fall, and much stock are constantly crossing from both up and down the river, and from the Northern Districts.

The next line that I would bring under your notice is that which leaves the Castlereagh at Coonamble, making for the Lachlan River some few miles below Condoblin, and touching at the following places,—Toooloom, Burgess's, on the Merri Merri, Marthaguy, at Wild's, *via* the Back Creek; thence to Tananbong; thence on to the Macquarie, at Mayabone; thence keeping a westerly direction, crossing the Marra, Middle, Crooked, and Duck Creeks; thence crossing the Gunningbah, a short distance below its junction with the Billeringa, making the Bogan at Nyagin; thence following the course of that stream upwards to Muda or Mudall Large Waterhole—here the river should be crossed, or not higher up than Bagabah, and a southerly course held for the Lachlan River *via* Crawing Creek. This route from the Bogan has been travelled by stock, and is considered much better than the route from Dandaloo to the Lachlan; and from my own knowledge I would prefer it; one has been tested, the other offers many difficulties, and drovers are afraid to attempt crossing.

The next road is only 22 miles long, but is a main channel from Cannonbar on the Duck Creek, to Nyagin on the Bogan. Stock very often in coming up from the Darling turn off at Cannonbar, taking this track for the Bogan; and on the other hand, stock coming down the Bogan often require to make the main Bourke Road, *via* Cannonbar; this track is much used by travelling stock, and I would advise its being retained for that purpose, although, I believe, objected to. I would also draw your attention to a portion of road between Limestone Gully, in the parish of Gueric, county of Lincoln and Wellington. In time of flood, stock have to travel through portions of purchased land owned by Mr. John Brown, of Cannonbar, causing much annoyance to fat stock drovers. I have marked a proposed line, and I have also shown a double dotted line, which I believe has been lately surveyed, and which goes just round the corner of the paddock; this is a very bad piece of country to get over, it being excessively hilly, broken-up, and traversed with rugged limestone ridges, quite enough to cripple any fat stock going to market; this, if adopted for that purpose, will be the worst piece of road between Dubbo and Wellington, and must be very expensive to make and keep in order; the track I have pricked out is one that is used, though objected to by the “Crown tenants,” and also by people of business on the main road from Ponto to Wellington; it is however a fine level tract of country, and a quiet line of road, just suitable for travelling stock purposes, and on that I should strongly advise being reserved for that purpose.

The old road from Wingaden on the Castlereagh to Quambone on the Merri Merri has been obstructed by several fences; the owners of the runs through which that road passed have objected to stock going that way, turning them some 10 miles round; the original line was from Wingaden to Carribeah or Quambone, *via* Caniamba, on the Nedgera Creek and Tundee; this road was much used, and is one that I would advise being retained for the use of travelling stock.

PUBLIC GATES.

Public gates, in my opinion, should be double, each gate 7 ft. long, making an opening of 14 ft. for vehicles, and on each side of the gate there should be a dead panel, and then three slip-panels, to admit of stock drawing quietly through the roadway, though the gate should be well logged in flat country, but if timber is scarce, then have the clay well burnt, and such should be raised in the gateway at least 10 in. above the general level of the country, and 20 ft. on each side of the gate; this is very necessary, as without, the gateway becomes hollow, and a deep pool of water is the consequence, quite preventing one from opening the gate when in a buggy, without getting wet to the knees.

A public gate does not require to be very high, nor of heavy timber, 4 ft. is plenty high enough for top-bar, four bars, 4 in. x 1 in., mortised into a 2½ in. head and 6 x 3 butt, diagonal brace to each gate, bolts to be used instead of nails. The above description of gate, if well put together, will last for a long time.

There are gates in my districts—those on the droving roads number about 80, the slip-panels over a hundred; some of the gates are very well got up, opening and shutting easily; others are of the worst possible description, in fact disgraceful; some are only about 11 ft. wide, and badly hung; gates should shut back so as to be out of the way of stock.

The slip-panels in many instances are quite as much as a man can put up, and each panel having five rails.

The crossing-places on the Macquarie, and also on some of the trivial streams, require improving, but the expense would not be great. A bank on one side might require cutting away of the Macquarie, or the bottom of a creek logging or stoning; the banks of the Macquarie would only require looking to, as the bed is quite sound. It would not entail the same expense in making these cuttings as dam-making, and I believe one shilling per cubic yard would be the outside value.

RESERVES

RESERVES FOR GRASS AND WATER.

This is a most important question, and I would advise that each side of the river at Timberabongie be reserved up to 4,000 acres, also one at Minan, on the north side, 2,000 acres; one at Brilbah Fall, or as near it as can be procured on the south side, 2,000; one on the Magraguy, which is the main track from the Castlereagh at Galgandra to Victoria *via* Dubbo, 2,000 acres; one at the junction of Mitchell's Creek with the Talbragar or Erskine—this should be a large reserve of at least 4,000 acres; one at Drilmarrannah Creek near Campbell's selection, about 2,000 acres, embracing each side of the creek; one at Byandra Creek, where the road crosses, of 2,000 acres. This is a large stock route between Dubbo and Obley, the greatest portion should be on the west side of the road, but embracing each side of the creek, the largest portion being on the south side; one at the crossing-place on Towingley Creek of 2,000 acres, adjoining the village reserve; one at Bulgandramine on the Bogan south side of 4,000 acres; one at Derribong, each side of the Bogan River, 2,000; one when the road crosses the Bogan, near the boundary of Lower Tobaratong at the old station, each side of river, 2,000 acres; one large reserve at Old Maddall Waterhole. This should be large, as then the great road to the Lachlan and Southern Districts must cross the Bogan, directing its course for Craway Creek, and through the best Bogan country, 8,000 acres would not be too large, say 4,000 acres on each side of the river: one at Nyagin, 3,000 acres on the west side, also the same on the east side of the Bogan; one where the Bogan Road junctions with the Duck Creek and Macquarie Road (that is the great high road to Bourke) on the west side of the river—this should also be a large reserve, and embrace each bank of the Bogan, area 6,000 acres; one on the north side of Duck Creek, commencing a quarter of a mile below the Cannonbar Bridge and running upwards, keeping the creek as a frontage for 2 miles, then crossing to the south side, and continuing a line from the creek south 1 mile; thence by a line west until it crosses the continuation of a line forming the eastern boundary of the suburban blocks of the Cannonbar township.

There are not sufficient reserves for feeding and watering travelling stock in my districts, and the following are certainly necessary in addition to those already mentioned:—

A large reserve is necessary on the main road between Narromine, on the Macquarie River, and Wallaby, commencing at a little blind creek or watercourse running across the main Wallaby Road, upon the Euromedah side of the clear ridges of Rylie and Alexander's Obley station, and running for $1\frac{1}{2}$ mile fronting each side of the road leading to Wallaby, and running back about 1 mile from each side of the road. This reserve would be on the Mount Park Euromedah Run and known as "Obley Ridges and Springs." Stock have to travel 12 miles from the Macquarie River before reaching water except that situated on the proposed reserve; this is the only water between the Macquarie and Wallaby, and is always made for by drovers.

Another that I should propose and one that would be very valuable to travelling stock, is situated at the main crossing place on the Cookaburra Creek, on the main road to Bourke, between Timberabongie and Minore Falls. This reserve should run up the creek on *each side* from the road, and its area should be 2,000 acres—this would secure the only lasting water.

Another that I would strongly advise would commence from where the road from Gunningbar Creek (this is on the new proposed route from Coonamble to the Lachlan River), and running down the west side of the creek, so as to secure the Cookendoon Waterhole, which is situated about 3 miles below the junction of the Billeringar with the Gunningbar. This reserve should be 6,000 acres, as soon it must have a great deal of travelling stock to support, and here is the only lasting water in time of drought.

Another reserve that I would advise is situated on the Macquarie River, commencing at the south-east corner of Wemebar Run, and running up the river to Mr. D. M'Killop's fence; about 4,000 acres.

I would also advise, when the new proposed stock line leaves the Talbragar at the junction of Mitchell's Creek, to proclaim a reserve of 2,000 acres midway between that and the Macquarie River, near a place known as the "Pine Camp"; here at some future date a Government tank could be constructed, as this line must ultimately become of much value to the stock drover.

Another large reserve on the Macquarie River, where the proposed stock route crosses the reserve, should be 4,000 acres on each side of the river if possible; this is very necessary, as stock may require to wait pending sale transactions that may be carried on in either Wellington or Dubbo, and which may direct their route to the Sydney or Victorian markets.

Another reserve which is much required would be on the Macquarie River, just where the Wellington "Ten-mile Circuit" touches that stream, county of Lincoln, parish of Guerie, Limestone Gully; this would join the present small reserve there, and would be well situated, as it would be just a nice stage from Wellington *via* the "new recommended stock track" from Limestone Gully to that township; the area should if possible be 2,000 acres.

Also a reserve on the Merri Merri at Burgess's (new proposed stock route), 2,000 acres; one on same route at Mayabone on the Macquarie River of 4,000 acres, each side of river; one at Mingeto on the Bogan, junction of Buri Creek (new proposed stock route marked on chart), 4,000 acres.

Travelling stock have not free access to half mile on each side of all tracks, and consequently I have advised the "new stock routes," namely,—from the junction of Mitchell's Creek to the Macquarie River at Murrumbidgee; from the Ten-mile Waterhole to the junction of Buri Creek with the Bogan. The first avoids much fenced-in country and small farms, driving through the township of Dubbo, &c.; the second some 5 miles of road much fenced in each side, with bog and slush in winter. This would also refer to the proposed line from Limestone Gully to Wellington.

With reference to removing any obstructions that may interfere with travelling stock, I would propose that whatever is allowed on each side of any stock route should be reserved for such, no fencing permitted within that boundary, and if fenced on one side extended on the other.

The reserves for watering and feeding travelling stock are in many instances fenced in, that is, enclosed in large paddocks of 10,000 acres or more; these reserves are rendered almost useless to the public, many are not known, but the majority are so eaten down with the paddock sheep that fat cattle can only take a drink and then leave. These reserves become very valuable to the run-holder especially near towns, and of little to the public; complaints are very rife under this head, teamsters can hardly make use of them for a day's rest, but must water and move on; a simple watering area of 10 acres would be of as much benefit as the present reserves, so eaten down are they by the holders on whose runs they are proclaimed, and this seems to increase as the country is more fenced in.

The reserves set apart for travelling stock purposes are in every case trespassed on by adjoining owners, so that travelling stock reap no benefit, and unless the reserves and roads for those purposes are respected, the gazetting of additional reserves will be of more value to the Crown tenant than the drover; and I am of opinion that some officer should be appointed to attend to this matter, and instead of impounding the stock (unless stray stock), about which there is much difficulty, as the distance in some cases would be 50 miles to the nearest pound, I believe fine would answer every purpose, making it progressive.

Some dams are required, and those on the main stock line from Coonamble to the Lachlan River I would direct your attention to. A dam could be erected at little cost in the Tooloom Creek—this would make the water more lasting; and another on the Merri Merri—this would be quite sufficient to pass stock on to the Macquarie at Mayabone, from the Macquarie they would have plenty of water and grass *via* Cookendoon Waterhole to Nyagin on the Bogan.

Tanks would be necessary after leaving the Bogan in some seasons they could be done cheaper than in others, and it would require judgment in selecting the spots of ground in that country. From 13d. to 18d. would be the probable cost per cubic yard; when removed far from the river it would entail additional expense, but all could be easily carried out by appointing a person to examine the country and report; local advice would be beneficial; the tanks would require to be about 12 miles apart—this would allow sheep water every other day.

The crosses in red denote gates on the main tracks, but the scale of map is so small of the Duck Creek and Marthaguy country, that it is impossible to place them in anything like position.

I know of no reserves but what are in use, that is, either used by the public generally or monopolized by the Crown tenant.

As far as experience has gone, wells are quite a failure in these districts,—that is, in the salt bush country, for salt-water is always procured, excepting in the "Monkey,"—a tract of country between the Castlereagh and the Macquarie,—which appears to have been in ages past a large river, now filled with sand; in that formation water is procured at from 10 to 18 feet in depth, of fine quality, but the supply in very dry seasons seems to fall short, and the opinion is that it is a channel of large holes filled with sand.

In conclusion I would add, that I have found it quite impossible to procure all the information required; some of the charts give little information, nor are the reserves on some of them marked, neither have I had an opportunity of receiving information which would have given much assistance, from the resident Government Surveyor, as that gentleman was on leave of absence.

I have, &c.,
JOHN S. BROWN,
Inspector of Stock.

STOCK INSPECTOR BROWN TO THE CHIEF INSPECTOR OF STOCK.

Dubbo, 31 January, 1875.

SIR,

I would solicit your attention relative to the cost of "tanks," which should more properly have been entered in that report forwarded in connection with "charts"; such merely mentioned the probable cost per cubic yard, but estimating the number of sheep that would travel up the Bogan to Muddall and across to the Lachlan in one year to be 200,000, and cattle 12,000, with tanks placed at distances of 12 miles, and each tank capable of watering 17,000 sheep or 1,000 head of cattle, and allowing each sheep three gallons a day for twenty days, and each bullock twenty gallons per day for twelve days, would require eight tanks of about 10,000 yards each; these at 15d. per cubic yard would amount to £625 each, or a total of about £5,000; this would allow a good margin for evaporation and soakage, as the sheep would only drink every other day. The tanks would require to be about 15 feet deep, 300 feet long by 60 feet wide, fenced on each side and across the watering ends, which should be logged and made fan-shape. In some instances 15d. might be considered too high or not enough, but I believe it could be fairly accepted as an average.

I would advise that the tanks should not be more than 12 miles distant from each other, as at greater distances stock would become so excessively thirsty in hot weather that all control over them would be lost, consequently they could not be brought steadily to the water.

The approaches to the water should slope 1 to 3, the fencing and logging would cost about £35 or £40 per tank, and the inclination of the side banks would depend on the nature of the soil; but 1 to 1 would suit well in the West Bogan country.

I am of opinion that each tank could be finished ready for public use at an outlay of £665; this would include, perhaps, all unforeseen items, leaving the tanks in a thoroughly durable condition for a total sum of £5,320.

I have mentioned eight tanks as the distance across from Boggabadah on the Bogan, to the elbow below Condoblin on the Lachlan, is, I believe, about 120 miles; but as the line gets nearer the Lachlan River, dams perhaps (if the nature of the country would admit) could be adopted instead of tanks, which would reduce the expenditure.

I have, &c.,
JOHN S. BROWN,
Inspector of Stock.

STOCK INSPECTOR BROWN TO THE CHIEF INSPECTOR OF STOCK.

Dubbo, 12 April, 1875.

SIR,

I do myself the honor to advise the reservation of the following portions of country for the use of travelling stock, namely:—4,000 acres situated on the eastern bank of the Bogan River, about half-way between Mr. Andrew T. Kerr's Derribong Station, and the junction of the Tomingly Creek on the Oaks Run, now occupied by Stracharn Brothers.

Also one on the Tomingly Creek, about 7 miles from its junction with the Bogan River, area 2,000 acres, and to embrace each side of that watercourse.

Another

Another on the main road between Dubbo and Forbes, situated about 6 miles from Wambangalang Station, and 3 from Old John's station. This piece of country is known as the Gum Flat, and is much used by travelling stock. The largest portion of the reserve should be on the west side of the main road embracing each side of the watercourse, area about 2,000 acres.

I have, &c.,
JOHN S. BROWN,
Inspector of Stock.

13.—EDEN DISTRICT.

STOCK INSPECTOR TRESILIAN TO THE CHIEF INSPECTOR OF STOCK.

Eden, Twofold Bay,
14 April, 1875.

SIR,

In reply to your circular, as in margin, referring to circulars of 28th August and 1st September last, in regard to the droving roads and reserves for feeding stock, &c., in my district, I do myself the honor to reply as follows :—

1.—DROVING ROADS AND TRACKS.

1. Main roads, Eden to and from Bega, to and from Cathcart, and Cathcart to Delegate *en route* to Gippsland.
2. None.
3. About 5,000 head of cattle to Gippsland, and 1,000 to Eden for exportation. No sheep.
4. Two chains wide. Yes.
5. The roads in my district are good, with the exception of Pambula to Cathcart.
6. None unfit for travelling stock.
7. From Cathcart to Little Plain *via* Bald Hill and Maharatta. On this line there would be better feed and water if land not selected.
8. Answered as above.
9. None of the main lines. There has been a great deal of selection of land between Cathcart and Little Plains, and this might be an obstruction to stock travelling that way.

2.—PUBLIC GATES.

10. 12 feet wide and self-acting.
11. None.

3.—CROSSING-PLACES.

12. The crossing-places are all good, unless in times of great floods, which are rare.

4.—RESERVES FOR GRASS AND WATER.

13. No.
14. Reserves are required at Cathcart, Maharatta, and Delegate.
15. So far as I know they always have.
16. Having no reserves in my district there is no trespass.
17. None, the country is well watered.

I have, &c.,
JOHN T. TRESILIAN,
Inspector of Stock.

14.—FORBES DISTRICT.

STOCK INSPECTOR DAVIS TO THE CHIEF INSPECTOR OF STOCK.

Forbes, 11 February, 1875.

SIR,

In reply to your circular dated the 30th November last (74-1,820 S.B.), I have the honor to forward to you the following particulars, with all the maps you sent to me with the above-mentioned circular :—

DROVING ROADS AND TRACKS.

1. I have marked all the droving roads generally used in my district for travelling stock thus —
2. There is a road on both sides of the Lachlan River, and the preference is given to the north side, which is the best in flooded time, but the south side is the safest in dry weather.
3. I estimate the stock passing along these roads during the year at 300,000 sheep and 20,000 cattle.
4. I consider all droving roads should be reserved and left open, say 20 chains on each side, the whole length of the road, and additional reserves at the principal watering-places. All the roads that are fenced, in my three districts, are wrong in this respect. A road 2 chains wide is not suitable for large numbers of stock.
5. There are two roads to which I would beg to call your attention, viz., the road leading up the Lachlan River; from the bridge on the south side it is enclosed for the first 6 miles, and no feed or water all the way, and there is another very bad place at Reagan's, on the Bland, where many cattle and sheep get bogged between the fences, and teams cannot travel, and have to camp for many weeks at a time. The former could be remedied by turning the stock road round at the back of Mr. J. B. Farrand's selection, and the latter by diverting the traffic to the left side (in going from here) of Mr. Reagan's paddock, and I may mention here that all the roads near Orange, Molong, and Wellington, and in all places where roads are fenced, they are totally unfit for stock traffic, especially fat stock going to market.

6. I have stated in answer 5 how the stock traffic might be diverted to avoid two bad places, and in my opinion the Government should not alienate land within a quarter of a mile on each side of all the main roads.

7. I do not know of any roads that could be improved, or made more direct, except those I have mentioned, and those I have marked on the maps.

8. I have marked a new road leaving the Bogan River at 'Bogabeda,' and leading across country to the Lachlan River, at Euabalong, marked thus in red, - - - -; also a new road from Parkes to the Upper Bogan, also marked in red dotted lines, These roads would be a great convenience to travelling stock, and would save great distances, the former about 160 miles and the latter about 40 miles. It may not be out of place to mention here, that I have marked, and strongly recommend, a road all the way on both sides of the Bogan River. I have marked it in red, - - - -. Stock (fat and store) are often compelled to camp at the various crossing-places on the Bogan when the river is up, whereas if there was a road all the way on both sides they could move along all right.

9. A road leading to the water on south side of river, about $1\frac{1}{2}$ miles above Forbes, is obstructed by Mr. Thomas Tozer. This road is measured 2 chains wide, and Tozer has fenced it in to about 9 feet at one place, and at another place he has placed a haystack upon it, and ultimately fenced it right across so that travellers and stock cannot go to the water. The season is dry and water scarce, and travellers make sad complaints of this road being closed. I should think it would not be a difficult matter to compel Tozer to remove the obstruction. Marked thus in red on the map, R over J conjoined.

10. The size of gates on public roads and tracks should be not less than 18 feet wide, and properly and substantially hung, with strong hinges, and kept in good order, and the gateways should be kept well metalled so as to prevent the usual bog-hole in the roads at nearly all public gates.

11. There are seventy-three gates on roads in my districts. Most of them are wide enough, but sadly out of order and neglected. They are mostly made in two posts (which is right), but so badly hung that they will neither stay shut or open unless they be fastened, and cattle often knock the props away, when the gates will swing half to and stop the stock; besides, there is in wet weather a boghole in nearly every gateway, so bad that one can only reach the gate on horseback, and a person driving has no alternative but to go to his hips in mud and dirty water at nearly all the gates on public roads in my districts. Sheep will not readily face this water and dirt, so that there should be wide slip-panels left for stock a little away from the gates. I have marked all the gates in numbers with red ink, placing the numbers nearly as possible where the gates are. No. 1 to 73.

12. I do not think the crossing-places or sidelings in my districts could well be improved, owing to floods at times. Reserves at both sides at all the crossing-places would have been a wise provision, but unfortunately the land has been alienated by the Crown in most places and reserved in others, so that there is not much to be done in that way.

13. There are not sufficient reserves for travelling stock in my districts. I have marked fifty-eight new reserves in my districts, indicating the area by red dots. They are all very much wanted, and would be a great advantage to persons sending stock to market. In making reserves it is advisable to make it known that such has been withdrawn from lease, otherwise squatters drive off travelling stock and do not allow them to camp. The reserves which I have marked with black dots are not used, because people do not know whether they are withdrawn from lease or not.

14. I would recommend that reserves for travelling stock to feed and water upon be not less than 2,000 to 3,000 acres; when we consider that two or three different mobs may be on the same reserve the same night it might be wise to make the reserves larger, say 4,000 acres.

15. Travelling stock have free access to the half-mile on each side of the roads in my districts, but not to reserves in all cases, for unless reserves are withdrawn from lease the lessee of the run will not allow travelling stock to feed, water, or camp on them.

16. Reserves set apart for the use of travelling stock are constantly trespassed upon, either by the owner of the run upon which the reserve has been made or by the nearest free selector, and I think it is the best way to protect them for the purpose intended, would be to instruct all poundkeepers to impound all stock found trespassing upon such reserves.

17. I recommend seven new dams for the use of travelling stock, and have marked them + on the maps. They are much needed, and would be a great blessing to all travellers; and I may add here that there is a very waterless piece of road leading into Wagga Wagga from here. I am informed upon good authority that there is no available water for stock from Wagga Wagga to Jerriwa, a distance of 45 miles, and in dry time the distance is 15 miles more on to Cummings's, and those who go that way from here always suffer much, and some sheep are always dropped on the way. I am informed also that these dams would probably cost 1s. 6d. per yard; and I am inclined to think so, for labour is very scarce and dear, and men would require to cart water for their own use a long way while constructing the work.

I have, &c.,

W. WHITTEN DAVIS,

Inspector of Stock.

15.—GLEN INNES DISTRICT.

STOCK INSPECTOR LOWE TO THE CHIEF INSPECTOR OF STOCK.

Glen Innes, 12 October, 1874.

SIR,

I have the honor to acknowledge the receipt of a communication from you inclosing me a letter from the Officer in Charge, Crown Lands Occupation Branch, asking for information respecting the water and other reserves in my district.

In reply thereto, I beg to state that I wrote to the district surveyor for information on this subject, and his reply was that *none of the reserves in my district adjoining main or other roads were fenced in*; and from my intimate knowledge of the district I can corroborate this statement.

I have, &c.,

CHARLES B. LOWE,

Inspector of Stock.

Stock

STOCK INSPECTOR LOWE TO THE CHIEF INSPECTOR OF STOCK.

Glen Innes, 8 March, 1875.

SIR,

In reply to your printed circular of 30th November last, asking for information about the droving roads and reserves in my district, I beg to furnish you with the following information.

1. I return map of district showing in red lines over the black the roads already in use as stock roads, and in red dots those proposed as necessary.

2. There are no rivers or creeks in my district having a road on both sides of them.

3. I enclose separately an estimate of the number of sheep and cattle which pass annually through and on the different stock roads in the district.

4. I consider about 10 chains a fair width; some of the roads being through purchased land have only 2 chains. Where the land has not been alienated they are wide enough as far as I can ascertain.

5. None of them are unfit by reason of metalling, &c.

6. None.

7. They cannot be improved.

8. Only one. On the road from Ashford to Glen Innes a branch road is required, turning off at Strathbogie and passing through Vegetable Creek, thence through Ranger's Valley to the Great Northern Road at Dundee.

9. None of the roads are obstructed by fencing.

10. There should be two gates, each 12 feet broad, on all droving roads, or else a gate and slip-rail to allow plenty of room. Gates of the description in diagram enclosed seem to answer best.

11. There are no gates on the Great Northern Road except through the Tenterfield paddocks, and they are never closed. On the road from Warialda to Ramornie there are on Bannockburn two double gates, one single gate (as per diagram), and one slip-rail. On Waterloo two large single gates about 12 feet wide. From Ashford to Inverell on Bukulla there are three double gates about 12 feet wide, and on the Glen Innes line to Grafton through Newton Boyd, two slip-rails 10 feet wide.

12. There are no bad crossing-places on any part of the rivers or creeks in my district.

13. I believe that reserves of 640 acres should be proclaimed about every 10 miles along stock roads, arranging them so that they would occur as often as possible at crossing-places to creeks and rivers and on both sides of same.

15. Stock have every access to the half-mile on both sides of the road. As to reserves for feeding and watering travelling stock, I can see no notice of them on the map, so cannot tell. Water reserves are considered by the squatters to have been made especially to protect them, and they reserve to themselves the sole right to graze over them, and indeed they are included in the area of Crown Lands for which they pay rent.

17. On the road from Inverell to Glen Innes one tank is required, as there is a stretch of country nearly 20 miles without water in dry seasons. I could not mark the exact position on the map, but it would be somewhere about 10 miles from Inverell. The cost would be about £100 or £150.

There is no other information with reference to roads or reserves that I can think of that would be interesting or useful to the Government.

I have, &c.,

CHARLES B. LOWE,

Inspector of Stock.

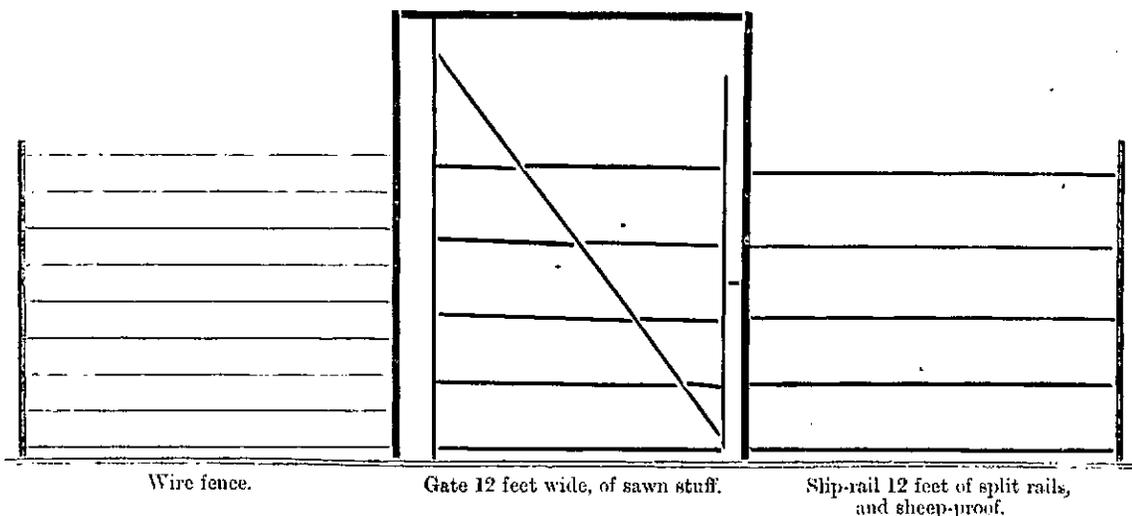

Rough estimate of the number of travelling sheep and cattle passing along each of the stock roads in Glen Innes District.

By the Great Northern Road *via* Tenterfield and Glen Innes, going south to Riverina, sheep (store) 10,000; cattle (store) 2,000. From Bonshaw side, *via* Tenterfield to Ramornie, cattle (fat) 1,000. From the Clarence through Tenterfield and Bonshaw, cattle (store), 2,000. From the Clarence by the Newton Boyd line through Glen Innes and Inverell, cattle (store), 2,000. From Inverell side to Ramornie and Grafton, *via* Glen Innes, sheep (fat), 3,000; cattle (fat), 1,000. From Bonshaw and Ashford side to Ramornie, through Glen Innes, cattle (fat), 1,000; sheep (fat), 2,000. From Inverell side to Armidale, say cattle (fat), 500; sheep (fat), 1,000. From Bonshaw side, *via* Ashford and Inverell, going south to Liverpool Plains, &c., cattle (store), 1,000; sheep (store), 8,000.

Memo.—the numbers of cattle and sheep passing through to Ramornie vary very much, according to the price of stock; when fat cattle are cheap, the number going down is larger by far than when they are dear, and the same with sheep. I have endeavoured to give a fair average.

C. B. LOWE.

Plan of gate and slip-rail to be used on crossing roads.

Wire fence.

Gate 12 feet wide, of sawn stuff.

Slip-rail 12 feet of split rails,
and sheep-proof.

16.—GOULBURN DISTRICT.

STOCK INSPECTOR CHARTERIS TO THE CHIEF INSPECTOR OF STOCK.

Goulburn, 11 September, 1874.

SIR,

I have the honor to acknowledge the receipt of your memo. of the 1st instant, just come to hand, enclosing circular dated 28th ultimo from Occupation of Lands Office, also your own report for the year 1873.

I beg to state, with regard to the matters referred to in the accompanying circular, I shall make every inquiry, and shall also attend duly to your own request with respect to reserves, and report to you at some early date.

I have, &c.,

F. M. CHARTERIS,
Inspector of Stock.

STOCK INSPECTOR CHARTERIS TO THE CHIEF INSPECTOR OF STOCK.

Goulburn, 15 September, 1874.

SIR,

Referring again to your circular 74/1,636 with accompanying memo. of 1st instant, I have the honor to inform you that, upon making inquiries, I find that nearly every reserve is trespassed upon, some of them fenced or partly fenced in, and that minor roads in all parts of my district are encroached upon and obstructed.

To ascertain the extent of these encroachments would take months, and I wish to understand how far my instructions extend. Am I to visit all these reserves and obstructed roads, and report upon the facts, or am I to take action only when these matters are brought before me?

The amount of work necessary to enable me to report upon these matters would absorb my time for at least three months, and I wish to have more definite instructions, because if my information were to entail the necessity for my appearing at Court to sustain actions against persons unlawfully occupying Crown lands or reserves, there is no saying how long I may be engaged in that duty alone.

I have, &c.,

F. M. CHARTERIS,
Inspector of Stock.

STOCK INSPECTOR CHARTERIS TO THE CHIEF INSPECTOR OF STOCK.

Goulburn, 20 February, 1875.

SIR,

Referring to your circular of November 30th, 1874, I have the honor to make the following replies:—

I.—DROVING ROADS AND TRACKS.

Nos. 1 & 3. From Goulburn Main Southern Road towards Yass. Estimated number of stock travelling, sheep 30,000, cattle 15,000. From Goulburn Main Southern Road towards Berrima, sheep 10,000, cattle 8,000. From Goulburn to Bungonia, sheep 3,000, cattle 1,000. From Goulburn to Boro, sheep 3,500, cattle 1,200. From Goulburn to Currawang, sheep 4,000, cattle 1,500. From Goulburn to Lake Bathurst, sheep 2,000, cattle 1,000. From Goulburn to Collector, sheep 1,000, cattle 400. From Goulburn to Gurrundah, sheep 1,500, cattle 700. From Goulburn to Gullen, sheep 15,000, cattle 5,000. From Goulburn to Pijar, Crookwell, and Binda, sheep 10,000, cattle 2,000. From Goulburn to Laggan and Cooksvale, sheep 1,100, cattle 3,000. From Goulburn to Laggan and Bolong Level, sheep 3,000, cattle 4,000. From Goulburn to Taralga, sheep 3,000, cattle 5,000. From Berrima to Moss Vale, sheep 6,000, cattle 2,000. From Cross Roads to Taralga, *via* Banarby, sheep 5,000, cattle 3,000. From Taralga to Abercrombie, sheep 2,000, cattle 1,500. From Marulan to Bungonia, sheep 6,000, cattle 5,000. From Bungonia to Lake Bathurst and Boro, sheep 8,000, cattle 4,000.

2. Only one case in which roads run nearly parallel on two sides of the Wollondilly, viz., one to Gurrunda and the other to Pomerooy, the latter scarce ever used for stock.

3. See above, No. 1.

4. 1 chain to 1½ chain. All right.

5. Only the Main Southern Road metalled to any extent, but all quite fit for stock to travel over.

6. Answered by No. 5.

7. 1st, certainly not. Chiefly through purchased land.

8. The present roads are ample.

9. The following roads are obstructed by gates and slip-rails:—From Goulburn to Lake Bathurst, by one gate at Bronti; from Taralga to Cross Roads, by gates and slip-rails; from Goulburn to Gurrundah gate near Currie's 2,000 acres; from Bungonia to Lake Bathurst and Boro, two slip-rails at Balcomb's now Fulljame's and gate at Bronti. These should be removed by instructions issued from the Lands Department to the proper officer.

II.—PUBLIC GATES.

10. Not less than 10 feet. Gates should be single, and as light as compatible with strength.

11. Only one, at the boundary between Bradley and Faithfull. In parish of Gundry a good and sufficient gate, sheep-proof, 10 feet wide, well hung.

III.—CROSSING-PLACES.

12. The crossings are quite sufficient for stock, though most require improving for general traffic.

IV.—RESERVES FOR GRASS AND WATER.

13. The reserves for stock are very insufficient.

14. At Bungonia fronting Bungonia Creek on its north bank. At Yarralan Creek in the parish of Yarralan, on road from Bungonia to Lake Bathurst. Not less than a section in each case.

15. The roads with very few exceptions run through purchased lands, and I am not aware of any reserves left exclusively for feeding and watering travelling stock. Any reserves that I have visited are village reserves and other small reserves; and these are in some cases enclosed and in all trespassed upon. Reserve No. 13, parish of Goulburn, enclosed, claimed as part of the Rossi Estate. At junction of Yass and Collector Roads, parish of Wologorang, trespassed upon by Cahill and the neighbours' cattle and horses. At 2nd Bredalbane Plain, of the *vr* about 500 acres are enclosed by Mr. Chisholm, and 100 acres left open on north side of road. Reserve at Wollandilly River, Pajar, trespassed upon by R. Siggs, with sheep. On road to Gurrundah *vr*, at J. Chisholm's 931 acres, enclosed by Mr. Chisholm. On road from Goulburn to Boro, in parish of Gundry *vr*, east of Bradley's 1,179 acres, fenced in by Mr. S. Emanuel of Landsdown, enclosed in a 5,000-acre paddock.

16. Answered in No. 15.

V. 17. Not required.

Par. 2. No further information to give.

3. Not in possession of any reliable facts.

4. In reply to the 4th par., I would state that I have marked as nearly as possible on the maps the position of the various obstructions on roads, reserves, or recommended reserves. Obstructions by a blue \times on roads. Reserves enclosed or obstructed by red cross \times . Recommended reserves, blue border. Droving roads in Argyle, black and red. The maps which were forwarded to me from your office last November I now beg to return to you.

I have, &c.,

FRED. M. CHARTERIS,
Inspector of Stock, Goulburn.

19.—HAY DISTRICT.

STOCK INSPECTOR KEIGHRAN TO THE CHIEF INSPECTOR OF STOCK.

Hay, 23 June, 1875.

SIR,

In compliance with instructions conveyed in your circular 74-1,820 s.b., of the 30th November last, I beg to report on the various matters to which my attention was requested therein, viz. :—

I.—DROVING ROADS AND TRACKS.

1. The roads used for travelling stock are the main road from the Darling, *viâ* Mossgiel, Booligal, and the One-tree, thence to Hay, and from Hay going south, *viâ* Sixteen-mile Gums, Pine Ridge, Black Swamp, and Wanganella, to Deniliquin.

Stock travelling from the Upper Lachlan and that part of the district go by way of Euabalong, Hillston, Wheelbah, and Booligal, thence to Hay. In favourable seasons large numbers of stock leave the Lachlan River at Hillston and Wheelbah, and travel by way of Gunbar, Gillah, and the Gum Swamp, striking the Murrumbidgee River, between Illilawa and Hay. This latter road has been greatly used by drovers and others since 1870. Also, stock travelling to market from the Upper Lachlan sometimes turn off at Uabba, and go by Scrubby Ranges, Cocopara, to Darlington Point, on the Murrumbidgee River, thence to Cudgee, Urana, and from there to the Springs, on the north-eastern line. I am not aware that this route is a proclaimed road, that is from Uabba to Darlington Point, but it is a great convenience to settlers and other residents in the Upper Lachlan district. Although in summer seasons water for stock is not procurable, it is only used in wet seasons. Stock from the Lower Lachlan district travel by Oxley, Maude, crossing the Murrumbidgee at the latter place, thence to Tehelery or Dry Lake, and on to Deniliquin.

2. There are roads on both sides of all the rivers, and the stock travel on either side according to the season, but the south side of the Lachlan is generally preferred—no choice on either sides of the Murrumbidgee.

3. I estimate the number of stock that travel these roads annually—sheep about 800,000, and cattle 12,000.

4. I consider that a road 2 chains in width sufficiently wide to travel stock, and the roads in my district are correct in that respect.

5. There are no metalled roads in this district, and the roads are quite fit for travelling stock.

6. None of the roads are unfit, and it would be difficult to better them.

7. The droving roads or tracks cannot be made more direct, and could not be diverted so as to better them.

8. There are no new droving roads or tracks required.

9. All the roads have fences intersecting them, but none that will interfere with the traffic in any way.

II.—PUBLIC GATES.

10. Gates should not be less than 13 feet in width (double gates), and for the benefit of travelling cattle there should be at each side of the gate not less than six panels of post and rail fence, with two slip-panels in close proximity to the gate, as fat stock get greatly knocked about by trying to force them through swing gates, especially when there is nothing only naked wire on each side of the gate.

11. There are 142 gates on the roads in this district, from 12 to 13 feet wide; most of them are double gates, and the remainder single. Their positions are quite suitable, but for fitness they require the post and rail fence as before mentioned.

III.—CROSSING-PLACES.

12. It is impossible to improve on the present crossing-places.

IV.—RESERVES FOR GRASS AND WATER.

13. Plenty of reserves for the purposes mentioned.

14. No additional reserves required.

15. There are no complaints whatever of obstructions to travelling stock going through Crown Lands, and they have free access to everywhere they are entitled to travel.

16. The reserves are not fenced in, and the sheep belonging to the station on which the reserves are situated feed over it when on that part of the run.

V.

V.—DAMS, TANKS, AND WELLS ON DROVING ROADS.

17. One large tank is much required between Hay and the One-tree on the road to Booligal, to be placed at a distance of about 15 miles from Hay, as the travelling stock in summer-time, through not being able to procure water on the One-tree Plain, have to travel down the Lachlan River to Oxley, and thence to Maude, or *vice versa*, as their destination requires, making an extra distance of 50 miles between Booligal and Hay. There are Government wells and tanks on the road leading from Booligal to Wilcannia *via* Mossgriel.

18. I have no other information to give with respect to roads, tracks, or reserves; drovers make their camping-places to suit their stages, which greatly depends on the season; and as to reserves, if there were twice as many more reserves they would be useless to legitimate stock travelling to market, as they would be taken advantage of by those parties who annually travel their sheep, commonly called "grass-caters." The squatters in this district allow a deal of latitude to legitimate travelling stock.

19. I have been droving stock on nearly all the roads and tracks throughout the Colony, and always found it the same; there never was grass on any of the reserves to feed cattle—eaten down by travelling sheep, or sheep from the settler's run. There is no part of the road between Wilcannia and Deniliquin so bare of grass as the reserves.

20. I don't pretend to understand mapping, therefore you will please excuse any mistakes that I may have made. On the map the One-tree is made to appear on the eastern side of the road from Hay to Booligal, whereas it is on the western side, about $\frac{3}{4}$ of a mile from the road. There is no indication of a road leading from Oxley to Booligal on the south side of the Lachlan River, whereas there is, and it is mostly used by travelling stock; it comes out at the One-tree and joins the road which I have dotted out. I have dotted the Gillah Road, as it is called, from Hay to Hillston, also the road or track from Uabba to Darlington Point. The runs in this district are all fenced, and, where the fences intersect the roads, are on an average of about 5 miles apart, except about the homesteads, when they are much closer, say from 2 to 3 miles. Overall Plain and Wallaby Run (Moore's) has only a ring fence, so that the road from M'Evoy's boundary to Booligal is not intersected by any fence whatever. I have had no occasion to use the map for the county of Boyd, therefore return intact.

I have, &c.,
JOHN A. KEIGHRAN,
Inspector of Sheep.

20.—MAITLAND DISTRICT.

STOCK INSPECTOR BURNES TO THE CHIEF INSPECTOR OF STOCK.

Maitland, 16 September, 1874.

SIR,

I have the honor to inform you that there are no difficulties in bringing stock to market through this district, there being plenty of water on the route.

There are no gates on the roads within the coast district of Maitland, and through the Port Stephens district there are one or two gates across the road, but very few stock travel on that line, and I never heard any complaints made by the drovers.

I have, &c.,
THOMAS BURNES,
Inspector of Stock.

STOCK INSPECTOR BURNES TO THE CHIEF INSPECTOR OF STOCK.

Maitland, 3 February, 1875.

SIR,

I have the honor to report that a reserve for travelling stock could be got on a piece of Crown land about a mile and a half beyond Bishop's Bridge, on the south side of the road leading to the Wollombi. There is a good deal of Crown land on the south side of the road towards the Tulumby Mountain, and I think nearly extends to Millfield, and there is water on that back country. At the Black Waterholes 6 miles beyond Bishop's Bridge, and on the south side of the road, there is Crown land, but of a very poor description; if the trees were ringbarked it would answer. There is a great deal of good timber on it that I should say would pay for the ringbarking. The next place is near Cessnock, known as the Bell Bird Creek; there is Government land there, and a little water. The Pigsties, 2 miles further on, and nearer Millfield, is a better place. Near Millfield and on the south side of the road there is a good deal of poor land belonging to the Crown; I also saw water on it. Ringbarking would do it a great deal of good. Beyond Millfield, and towards the Wollombi there is no land fit for a reserve. At Laguna on the west side of Mr. R. Wiseman's 800 acres, between the road and Mount Finch, there is Crown land that ought to be reserved. The next place is at or near Mount Manning, where a large reserve should be left; there is water on it. I find there are several small reserves on the road, but I could not find them out, as there is no person living on the road but those interested in keeping the land. There is a small reserve near Simpson's Pass that ought to be enlarged. The country is very barren and of no value; and at Twelve-mile Hollow there ought to be a reserve left, I think, twelve miles from Wiseman's Ferry.

I now proceed from Maitland to the Paterson. There is a piece of Church and School land on the Maitland side of Tocal—this ought to be reserved; I think Mr. Nowlan rents it. The next place is after crossing the river at Mowbray, and about a mile and a half beyond and joining the Gostwick Estate (Cory's), there is Crown land and a reserve could be got there. A small dam made across the creek would save water. There is fine timber on the ground. There is another place beyond Wallaroba, and joining Mr. James Hook's place (Wine Gully), where a small reserve could be got. After passing the river at Dungog all the land is purchased, belonging to the A.A. Company, along the road as far as the head of the Manning, the Church and School lands run on the west side of it all the way. A reserve ought to be left at Cox's Creek, about 6 miles from Dungog, on the way to Gloucester.

A.

A road for travelling stock could be made from Berrico to Dungog (it certainly would be rather rough) through Church and School Lands.

I may as well mention that the charts for my district are on such a small scale that they are of no use to me.

I have, &c.,
THOMAS BURNESSE,
 Inspector of Stock.

DROVING ROADS AND TRACKS.

1. The road from Maitland to Wiseman's Ferry; the road from Singleton to Maitland, also the road by the Cockfighters' Creek to Maitland; the road from Gloucester to Maitland.
2. The roads in this district are not near a river.
3. The cattle on the Singleton and Cockfighters' Road, coming to market, are about 16,000, and sheep about 55,558. The Gloucester Road, cattle (store) 10,000.
4. Width for stock travelling, 1 mile on each side of the road where it can be got.
5. Roads that are not metalled are best, but where the road is a chain wide they do not suffer.
6. No, the land is all purchased, but stock are all brought by the old road from Singleton.
7. No.
8. No; from the land being all purchased the roads could not be altered.
9. The roads are generally fenced on both sides, so that no alteration could take place.
10. There are no gates on the roads in this district, and as gates are used for counting stock, it is not necessary to have them over 12 feet wide, and that is as large as they could be made to stand; but two of that width could be placed on the road where large numbers of travelling stock pass.
11. None.
12. The road to Wiseman's Ferry is very narrow in some cases, but from the nature of the country it could not be improved. The rivers on the Gloucester line can be crossed easily if not flooded. In a short time the rivers will all be bridged on that line.
13. There is not sufficient reserves near Maitland, in fact there is none, and stock are kept in the auctioneer's paddock, where there is plenty of water—otherwise water is scarce.
14. On the road from Singleton there is no Crown land. I have marked several places on the map on the Sydney Road.
15. Does not apply to this district, as all the land is occupied.
16. There are no reserves for travelling stock in this district. One or two small reserves have been left beyond the Wollombi, but the country is so very poor that they are almost worthless. After passing Mount Manning the whole of the country ought to be left for stock travelling—it will never be occupied for any other purpose.
17. A few dams might be made on the reserves marked on the map, although the country is generally well watered.

THOMAS BURNESSE,
 Inspector of Stock.

21.—MENINDIE DISTRICT.

STOCK INSPECTOR WILKINSON to THE CHIEF INSPECTOR OF STOCK.

Menindie, 7 December, 1875.

I.—DROVING ROADS AND TRACKS.

1. Roads used for travelling stock, as marked on map with red and black lines.
2. Used on both sides of the river. Stock cross from one side to the other when the river is low—no preference.
3. Cattle annually travelling on roads through district, about 3,000. Sheep travelled on river roads during 1874 were 134,192; on Barrier route, *via* Thackeringa, 91,399. During 1875, up to date, on river road 94,938, on Barrier road 86,466.
4. One mile? Yes.
5. No metal in district; roads only unfit in time of heavy floods.
6. None. New roads marked on map.
7. See maps—proposed roads.
8. See map.
9. There are fences crossing all roads, but there are gates or slip-rails so as stock can pass.

II.—PUBLIC GATES.

10. 12-foot double gates, or 9-foot double slip rails.
11. Yes; fourteen gates on east side of Darling, nine on the west side of river, and six on the Barrier route, from Menindie to Thackeringa. The gates are not, on the whole, good; as timber for rails or gates is difficult to procure in this district. Iron gates would be preferable, as the intense heat in summer destroys the wooden ones.

III.—CROSSING-PLACES.

12. There are only two crossing-places in this district, viz., Menindie and Wilcannia, both worked by punts; that at Wilcannia well looked after, the one at Menindie very indifferent.

IV.—RESERVES FOR GRASS AND WATER.

13. Yes.
14. None.
15. Yes. Gates are on all roads; no other obstructions, except in time of floods.
16. Yes; station sheep depasture on all these roads. Could not protect them without fencing in the roads, or shepherding the station sheep.

V.—DAMS, TANKS, AND WELLS ON DROVING ROADS.

17. Yes; tanks as marked on map. Thackeringa, Silestra, and Inkerman, Acacia Creek, Quandong, and Bechecha Lake; cost 1s. per yard, plough and scoop work.

In reference to proposed tank at Thackeringa, it has been suggested to me by many owners and drovers, that a quarantine reserve should be made from the boundary of South Australia up to proposed tank at Thackeringa, there is a good watercourse for tank.

	£	s.	d.
Cost of Tank, 100 yards by 30 yards by 10 feet deep, 10,000 yards @ 1s. per yard	500	0	0
Fencing { 150 posts } 300 @ 1s.	15	0	0
{ 150 rails }			
Five wires, 5 cwt.	7	10	0
Two gates	2	0	0
Erecting fence	5	10	0
Estimated cost	£530	0	0

JOHN NORTON WILKINSON,
Inspector of Stock.

22.—MERRIWA DISTRICT.

STOCK INSPECTOR ROPER to THE CHIEF INSPECTOR OF STOCK.

Merriwa, 29 January, 1875.

SIR,

In compliance with the request contained in your circular, dated 30th November, 1874, I have now the honor to report that I have personally examined the different droving roads and tracks in my district and the reserves thereon so far as practicable, and as explicitly and concisely as lies in my power I beg to reply as follows to the seventeen subjects you have placed before me:—

I.—DROVING ROADS AND TRACKS.

- The most eastern droving road in my district crosses the range over a gap near the head of Branch Creek, down that creek to Ellarston, on to Belltrees, Bellevue, and Segenhoe, to Aberdeen.
Road No. 2 crosses the Great Dividing Range, the northern boundary of my district, over a gap named Crawney's Pass, *via* Arndell's, M'Donald's, F. R. White's, Timor, Waverley, Gundy, Bellevue, and Segenhoe, to Aberdeen.
Road No. 3 follows the Great Northern Railway Line, crossing the Dividing Range near Murrurundi.
Road No. 4 crosses the Dividing Range at the head of Miller's Creek over to Coulson's Creek down that Creek to Merriwa, and to Peberdy's, on Hall's Creek, the southern boundary of my district; there is a branch of this road from Merriwa to Scone, crossing the Wapunguy, Hall's Creek, Wybong, Cuien, and Dartbrook.
Road No. 5 enters my district from the north-westerly, over the Dividing Range, about 8 miles from Cassilis, on to Collaroy, Bogabri to Merriwa, where it junctions with road No. 4.
Road No. 6 crosses the divide after passing Elliot's, of Turree, and Fitzgerald's, of Tongay, and goes on to Armstrong's, of the Green Hills, where it joins the road to Mudgee from Cassilis, along that road past M'Donald's, and over the head of the Goulburn River, the west extremity of my district.
- Owing to the conformation of rivers and creeks it will be found preferable sometimes to be on one side and sometimes on the other; as regards some of the creeks in my district, there is no proclaimed road on either side—even down the Merriwa or Smith's Rivulet I believe there is no road.
- My estimate of the number of cattle and sheep annually travelling on each of the stock roads above enumerated is as follows:—
Road No. 1. Sheep 5,000, but this number would be much increased by seasons of drought forcing stock to travel to the ranges for grass and water; and 1,500 head of cattle, chiefly, if not altogether, the property of Messrs Campbell & Hungerford.
Road No. 2. Say 40,000 sheep and 20,000 head of cattle.
Road No. 3. Along Railway Line. I have no means of ascertaining the number, even approximately, as so many small lots for local trade pass along to and from, and so many reach the railway stations on their way to Maitland, Sydney, or other markets.
Road No. 4, on Coulson's Creek Road; say 50,000 sheep and 25,000 cattle, but the number varies so in different seasons. A wet season the number would be less than I have given; a dry season, more.
Road No. 5. 50,000 sheep and 25,000 head of cattle, travelling Cassilis Road. Three years since there were many more.
Road No. 6, or Rylstone and Mudgee Road; say 50,000 sheep, 20,000 cattle.
- A droving road should be at least 3 chains in width, with reserves every 6 miles. None of the droving roads in my district are right in this respect.
- Only the Great Northern Road can affect cattle travelling in my district, owing to its being metalled. The black soil which prevails here is favourable for travelling in the dry weather, and the very reverse in wet weather.
- I cannot say any of the roads are unfit for stock traffic at present, but believe that they will become so as settlement progresses, unless provision is made to prevent it.
- I have marked in red dotted lines on the map the droving roads or tracks which can be made more direct.
- I have marked new droving roads or tracks required or may be required in my district, in red dotted lines on the map.

9. Slip rails and gates may be looked upon as obstructions, but they are, I think, preferable to narrow lanes. The only road I have known fenced across here, after being in use by the public for more than thirty years, was the subject of litigation here, but the adjudicating Justices seemed to attach no value to the evidence adduced. It is scarcely for me to state the reasons why.

II.—PUBLIC GATES.

10. The gates on droving roads should be 20 feet in width, slip-rails should not be allowed. The present swing-gate is not sufficiently wide. Why not have a gate grooved on its bottom ledge, so as to run on a rail; where would be the difficulty of running back one of these gates on the rail 10 feet, and the other the same distance in the opposite direction, thus securing the required space for egress and ingress of 20 feet?

11. On road No. 1 there are eight gates; on road No. 2 there are ten gates and one slip-rail, from Crawney's Pass to Bellevue, where it joins road No. 1; on road No. 3 there are only the toll-bar gates; on road No. 4 there are two gates. They are chiefly swing-gates, and (say) 10 feet in width; at Terragong reserve an excellent double swing-gate.

III.—CROSSING-PLACES.

12. My district can only be entered from the east, north, and west, by gaps in the ranges; with the exception of the gap near Murrurundi, all are unimproved. Next to Murrurundi westward is a gap at the head of Sparks' Creek, through the cedar brush, and as the best gap in the range was a favourite road for travelling stock years ago, before the Warrah Company fenced their estate on the north and several selectors on the south side of the range, stopping traffic for cattle over this gap.

The next gap westward is Miller's Creek gap—a bad gap, at least not nearly so good as M'Donald's Creek gap, a few miles further west.

The next gap is called the Courage Young Gap, at the Nain, only used by the settlers in the locality; and more westerly is the Moon Rock Gap, near the head of the Krin River, upon which I have long ago reported—as, if a travelling stock road could be formed this way, it would head the Warrah Company's estate, along the western boundary of that estate, through the township at Black Creek, with grass and water everywhere in ordinary seasons.

As regards your request for me to point out wherever reserves are necessary, I would suggest in reply that it be made an established principle that all travelling stock routes be 3 chains in width, with reserves every 6 miles.

At every important crossing a reserve should be made; and, however hopeless it may be to have such a suggestion carried out, I cannot help pointing out how conducive it would be to the interests of stock-owners to have reserves exclusively for travelling stock adjacent to all railway stations where any number of stock are placed on the trains to be taken to market.

IV.—RESERVES FOR GRASS AND WATER.

13. There are not sufficient reserves for feeding and watering travelling stock in my district, and my reply on this subject, as well as to the next number (14), will be a repetition of what I stated in answer to subject No. 4, viz., a droving road should be at least 3 chains wide with reserves every 6 miles.

15. Travelling stock passing through Crown lands in my district are not interfered with, nor are they obstructed in making use of the reserves, but the drovers are indifferent about making for reserves with no grass thereon. That is the great obstruction, the reserves being denuded of grass by the stock owned by squatters and selectors residing adjacent thereto.

16. The reserves are in every instance trespassed upon by other stock owned by squatters and selectors located near them, who look upon it as their right. Every one must know that so long as the reserves are as at present managed, so long will they be useless for travelling stock. The only certain way to protect them will be by fencing them in, and charging a small fee from those who use them, to defray the expenses that must necessarily be incurred in securing the grass for travelling stock. It is generally imagined—universally known—that an extensive reserve in any neighbourhood is one of the strongest inducements for an intending selector to fix his *locus in quo* adjacent thereto. I feel assured if it is intended that these reserves should be useful for travelling stock, that ultimately they must be fenced in with gates and locks thereon, and placed under the charge of the inspectors of the different districts, who will have to be empowered to engage men under them, to look after certain lines of road, their actions to be governed by the information easily gathered from each drover that passes; *all statistics relating to travelling stock will then be correct, and sheep and cattle stealing will have become a thing of the past.*

V.—DAMS, TANKS, AND WELLS ON DROVING ROADS.

17. I do not anticipate any expenditure of this nature will be required in this district. There are some of the reserves made at a distance from water, and it may be found necessary to adopt some method of providing water thereon by artificial means.

In conclusion, permit me to state there are but nine reserves for travelling stock in my district, viz.:—On road No. 1, distance 45 miles, no reserve; on road No. 2, 46½ miles, one reserve; on road No. 3, 36 miles, no reserve; on road No. 4, 44 miles, four reserves; on branch road to Scone, 40 miles, three reserves; on road No. 5, 34 miles, no reserve; on road No. 6, 35 miles, no reserve. And, in the belief that it is of the utmost importance to stockowners and to the Colony at large that every possible convenience should be afforded fat stock while travelling to market, I beg to reiterate my reply to subject No. 4, viz., that all droving roads should be at least 3 chains in width with reserves every 6 miles, and this will make it unnecessary for me to propose any new reserves or to mark them on the maps as you desire.

I have, &c.,
JOHN ROPER,
Inspector of Stock.

23.—MUDGEE DISTRICT.

SHEEP INSPECTOR SINGLE TO THE CHIEF INSPECTOR OF STOCK.

Mudgee, 21 December, 1874.

SIR,

Referring to circulars of August 28th and September 1st, relative to droving roads and reserves for feeding, watering, and camping travelling stock, I now do myself the honor to report on same in accordance with your request :—

DROVING ROADS AND TRACKS.

- 1st. What roads and tracks used? Answer—Two; one by way of Rylstone, the other Bocoble.
 2nd. Where there are roads or tracks on both sides of creek or river? Answer—There are no roads by side of creeks or river. The free selector and sheep and cattle owner have taken up all the water frontages.
 3rd. Give an estimate of the number of cattle and sheep which travel these roads? Answer—About 6,000 sheep and 300 head cattle weekly.
 4th. What do you consider a sufficient width for droving roads or tracks? Answer—Half-a-mile on each side.
 Are those in your district right in this respect? Answer—No; many miles are fenced in at both sides. If not, say which are not? Answer—Both of them.
 5th. Are any of these roads, through being metalled, &c.? Answer—There are no metalled roads until you come out on the Sydney Road, and then only a few miles.
 6th. If any are unfit for stock traffic, &c.? Answer—There is no possibility of finding new roads.
 7th. Can the droving roads or tracks in your district be made more direct? Answer—The roads or tracks cannot be made more direct or through a better country. (*See marked on map.*)
 8th. Are any new droving roads or tracks required in your district? Answer—No, only those marked on map ought to be surveyed at once, and kept from being taken up by selectors.
 9th. Are there any portions of the roads or tracks obstructed by fencing and otherwise? Answer—Yes, they are obstructed by fences, most of it being purchased land.
 10th. What ought to be the size and description of public gates on droving roads and tracks? Answer—12 feet wide.
 11th. Are there any gates on the roads in your district? Answer—Yes, three; one at Tongbong Gap, one near Rylstone, and one at Round Hill, Bocoble Road.
 Size, description, and position? Answer—The proper size and description, and I think where they should be.

CROSSING-PLACES.

- 12th. Say whether any of the crossing-places at the river or gap, &c., can be improved? Answer—Yes; at Reedy or Wialdra Creek, and at Slasher's Flat, on the Cudgegong, where the bridge is to be erected. I cannot give an idea what the expense would be.
 Where reserves are necessary at crossing-places? Answer—At Reedy Creek at both sides.

RESERVES FOR WATER AND GRASS.

- 13th. Are there sufficient reserves for feeding and watering travelling stock, especially in the neighbourhood of townships? Answer—No: all crossing-places on river or creek are fenced to the public road, with two exceptions—Slasher's Flat and Apple-tree Flat. At both places it is the mail road, and not the road stock travels.
 14th. If not, state what additional reserves are required? Answer.—Reserves cannot be made, because the land is taken up. I have marked places for reserve on map.
 15th. Have travelling stock passing through or along Crown lands to half-a-mile in width? Answer.—They have not that width only at places, being obstructed by selectors' fences; the reserves are at a distance from water, with few exceptions.
 16th. Are the reserves set apart for travelling stock trespassed upon by other stock? Answer.—Yes, by free selectors as a pre-emptive right.
 How should these reserves be protected for travelling stock? Answer.—By allowing the pound-keeper of the district to impound therefrom.
 17th. Are any dams, tanks, or wells required, &c., &c.? Answer.—Cannot give any information until the roads or tracks are surveyed where dams or tanks could be made.
 The Government should at once order a survey to be made, selectors are taking up land daily, and if it is delayed those that I have marked out will be taken up. You request me to mark the old and new tracks separate. I cannot do so, as part are old and new, and could not define them accurately. I have forwarded the maps marked at once, thinking that the sooner they were in your hands the better, so that they may be at once surveyed. I shall be most glad to give every assistance to the surveyor. In furnishing the above information, and in marking out the map, I have done so to the best of my knowledge and judgment after having travelled both; the only roads practicable for travelling stock to obtain feed and water are those marked on the map. I have also made every inquiry from drovers and stockowners passing. Hoping the above will be satisfactory,—

I have, &c.,
 HENRY SINGLE,
 Inspector of Sheep.

STOCK INSPECTOR SINGLE TO THE CHIEF INSPECTOR OF STOCK.

Sydney, 9 April, 1875.

SIR,

I have the honor to draw your attention to my report suggesting certain roads and reserves for travelling stock in this district, more especially to that portion suggesting that the Crown lands situated between Mudgee and Cullenbone should be reserved from sale, as there are several parties desirous of purchasing.

2. I may state that should the land referred to be sold, parties travelling to market with fat stock will be put to great inconvenience, as there is no other land available for them to camp or graze on for many miles, unless by placing them in paddocks.

I have, &c.,
HENRY SINGLE,
Inspector of Stock, Mudgee.

24.—NARRABRI DISTRICT.

STOCK INSPECTOR JONES TO THE OFFICER IN CHARGE, OCCUPATION OF LANDS.

Sheep Inspector's Office,
Narrabri, 14 September, 1874.

SIR,

I have the honor to acknowledge your circular of 28th ultimo, having reference to reserves being fenced or partly so, also gates on main roads being too narrow for travelling stock.

I will make a strict inquiry and report at an early date, and will then avail myself of the opportunity of making some remarks with reference to stock (especially cattle) passing this township.

I have, &c.,
J. W. JONES,
Inspector of Stock.

STOCK INSPECTOR JONES TO OFFICER IN CHARGE, OCCUPATION OF LANDS.

Sheep Inspector's Office,
Narrabri, 3 October, 1874.

SIR,

Referring to your circular of 28th August, in reply I have the honor to report as requested for your information,—

1. With regard to reserves on the road from Narrabri to Little Bumble, I have made a personal inspection, and find the Reedy Water-hole Reserve, No. 367, notified 1 October, 1867, is nearly all enclosed by and within the Gundimain fence. Reserve No. 402, notified 28 October, 1867, on Mundi Creek (or Ten-mile Creek) is also enclosed by the Gundimain fence, a small corner excepted, as shown in the plan at the local Land Office. The general reserve, one-quarter mile wide, from Narrabri to Moree, is also fenced on one side close to the road (as now used), from Bald Hills to Ten-mile Creek, thus causing travelling stock some inconvenience, as complained of. It must however be understood that the fence was erected previous to the last reserve for stock being made. I am also informed of some reserves being or about to be fenced on Henriendi, but will visit that locality next week and report.

2. With reference to gates, as complained of, some in my district are not sufficiently wide for travelling stock. I will mention those too narrow, and about the width: One gate, Bald Hill, Gundimain fence, 14 feet wide; Dungalear and Bundaburena (Barwon), about 18 feet wide; Euroka, Yawindah, and Brewon, are, I believe, rather narrow, also about 20 feet wide; Gundebluie, Monie River, is also narrow, and must of necessity cause some inconvenience in bringing large mobs of stock to market.

3. With regard to the main road being entirely closed, causing stock to be taken many miles round, I am not aware of any such inconvenience existing in any portion of my districts.

4. With regard to taking past this township, alluded to in my letter of 14th ultimo, I would strongly urge that the prayer of the Narrabri Jockey Club (or their agents) be not complied with, because it would then be almost impossible to take cattle past this township, as the land they require is not to race upon but to enclose a piece of water most valuable for travelling stock, and thereby leaving only as a road over a lime kiln and brick yard, whereas if the racecourse be retained as it is it will leave more room for travelling and not cause unnecessary delay and inconvenience to travelling cattle.

I have, &c.,
J. W. JONES,
Inspector of Stock.

STOCK INSPECTOR JONES TO THE OFFICER IN CHARGE, OCCUPATION OF LANDS.

Stock Inspector's Office,
Narrabri, 17 October, 1874.

SIR,

I beg to inform you that I have made an inspection of reserves and fences on Baambah and Henriendi.

I find there plenty of reserves for travelling stock, if withdrawn from lease, and some mark to define and point out to travellers where such reserves are to be found.

With regard to fencing, I find from 1 to 2 miles of fence, erected close to the main road, on Henriendi, erected now some considerable time.

Men are, however, preparing fencing stuff, and are instructed to fence in the river side of run close to the road, thus enclosing in the run a valuable water reserve from travelling stock (a lagoon never known to be dry in any season).

I would also recommend a larger reserve near the bridge, on Turrawon Run, as travellers are much harassed by the owner demanding one shilling per team for depasturing on the run. There is already a reserve, but far too small for the use of teamsters and travellers generally.

I have, &c.,
J. W. JONES,
Inspector of Stock.

STOCK

STOCK INSPECTOR JONES TO THE CHIEF INSPECTOR OF STOCK.

Stock Inspector's Office,
Narrabri, 16 June, 1875.

SIR,

I have the honor, herewith, to hand you map referred to in your circular of the 30th November last, together with my report thereon, as complete as possible now, though not to my own satisfaction. We require much larger maps, and more accurate, &c. Should I, however, in the course of my travels find that I have omitted anything important, I will at once communicate the fullest information to you.

I have, &c.,

J. W. JONES,
Sheep Inspector.

STOCK INSPECTOR JONES TO THE CHIEF INSPECTOR OF STOCK.

Stock Inspector's Office,
Narrabri, 16 June, 1875.

SIR,

Referring to your circular of 30th November last, having reference to droving roads and tracks, &c., together with maps upon which to mark roads as referred to above. I have the honor to hand you list of roads and tracks now in use, and a few new ones which I think desirable to open up for travelling stock.

Section I.

1. I beg to submit a list of the old roads now in use for travelling stock. Commencing at the upper end of my district, which is about Coocoobindi, or the Rock, on the left bank of the Namoi River; thence by the left bank of that Namoi, *via* Turrawon, Glen Quin, Cooma Molley, Wee Waa, Bulgaree, Bullerawa, Pilliga, Milchomie (old road), Come-by-Chance, near Bunglegully, and Goangra, to Walgett.
2. Commencing at the bridge on the Namoi River; thence *via* Narrabri, on the right bank of that river, Gundimaine, Tuladona, Merah, Drildool, Millie, Bucklebone, Yarraldool, and Kercargo; then crossing the Namoi to Goangra and Walgett.
3. Commencing at Clay's, 4 miles below Narrabri; thence *via* Gallatheral, Boggy Creek, Bumble, and Moree.
4. Commencing on the Ghean Creek, on the Narrabri and Moree Road, and on the Malaraway Run; thence by that creek to Millicy Inn, then crossing the Waterloo Creek near Millie; thence on the left bank of the Millie, or Thalaba Creek, *via* Bunnabuna, Oriel, Merriwinbone, crossing and recrossing the creek several times, as road now in use; thence from Merriwinbone to Pocketaroo; and thence by the left bank of the Barwon to Colerendabri.
5. Commencing at Weetee Waa, about 4 miles below Wee Waa; thence by Loder's fence to Gunderah Creek; thence to Loder's old dam on Piam Creek; thence *via* Burran, and surveyed line, to Collytoodala, on the Thalaba Creek.
6. Commencing at Walgett, crossing the Namoi at Walgett; thence by the left bank of the Barwon *via* Urie Urie, the Brothers, Murkerdool, Collierindabri, crossing Collymongool and Caid Murray.
7. Commencing at Walgett; thence on the left bank of the Barwon, *via* Uroka, Yanwindah, Moorabie, Brewon, thence to Brewarrina.
8. Commencing at Euminingbah, on the right bank of the Barwon; thence up the Barwon, *via* Dungalear, Bundabarina, Collierwindabrie, and Mogil Mogil, and thence to Mungindi.
9. Commencing at Mogil Mogil, thence *via* Gundablueie to Guoolooma, in Queensland; this road will be much used on completion of the Walgett Bridge.
10. Commencing at Euminingbah as above; thence by the Barra Waterhole; thence *via* Leanillo and Gumble Gubbon, on the Narran River.
11. Commencing at Euminingbah, thence down the Barwon, *via* Gingie, Ulah, Milrea, Boorooma, and on to Brewarrina.
12. Commencing at Boorooma; thence *via* the Narran Hut, Wilby Wilby, Gumble Gubbon, Angledool, Yarranbah; thence into Queensland.
13. Commencing on the right bank of the Barwon, about 4 miles above Ulah, on the Gingie Run; thence *via* Comeborrah Springs and Grawin to Wilby Wilby, on the Narran.
14. Commencing at Gindibline, on the Moonie River; thence *via* Boorara to the Narran, joining road No. 12.
15. Commencing at Walgett; thence to Kilgar, on the Castlereagh; thence by the right bank of that river, *via* Kedgor, Billa, North Takom, Bimble, to Coonamble.
16. Commencing at Coonamble; thence by the left bank of the Castlereagh, *via* Buggle, Wingadee, Comogolan, Newgal, Pollybrenon, Boggera, then crossing the Castlereagh, and thence to Brewon on the Barwon.
17. Commencing at Kidgor, as in road No. 15; thence Heness to Moorabie, on the Barwon.
18. Commencing at Come-by-Chance, near Bungie Gully; thence, *via* Boolerrora, *via* Taroon to Coonamble, or *via* Tyronebone to Urawilkee.
19. Commencing at Coonamble; thence, *via* Nebia, Urawilkee, Terridgerie, to Barradine.
20. Commencing at Denabalie sheep station; thence, *via* Kilmorie, Urawilkee, to Barradine.
21. Commencing at Teclubo, on the Namoi; thence, *via* Wangan, to Barradine.
22. Commencing at Pilliga; thence, *via* Wangan, to Barradine.
23. Commencing at Gallatheral; thence by surveyed line to Gurly Point, on the Namoi.
24. Commencing at Molly Crossing, on the Namoi River; thence *via* Gallatheral, Edgeroi, Berrigal, to Rocky Creek.
25. Commencing at Werribilla or Collarendabri; thence *via* Gamallulla, near Pian Gobla to Yarranbob, on the Narran, and known as the Sixty-mile track.

The New Roads I would beg to propose are,—

1. Commencing at Merriwinbone, on the Thalaba Creek; thence by Cryon, on Pian Creek; thence by a track to the Lower Pian Ridge, 4 miles below Bucklebone, and on Bucklebone Run; thence *via* Bucklebone, crossing the river at or near Millie; thence by the old line to Pilliga.

2.

2. Commencing at Drildool, on the Namoi River; thence to Burren; thence by the left bank of the Pian Creek to Gorian; thence by that creek and track to Urie Urie, thus making the circuit complete in the roads.

3. Commencing at Cooma, near Narrabri; thence by Bohena and Boyle's, on the Borrah Creek; thence by Cain's Rocky Glen to Coonabarabran.

4. Commencing at the Rocky Crossing at Yarraldool, thence *viâ* Bungle Gully to Denabli, to join the Pilliga and Walgett Roads.

I would here mention that stock do not travel *viâ* Wallah Thurribri and Bogabri North, on the right bank of the Namoi—they avail themselves of the bridge; even the Burburgate proprietors cross their sheep at Burburgate, and travel them on opposite side of river, and cross them at the bridge again. Few stock pass down or up through Gundimaine, or Tuludona, or Namoi; all travellers prefer the other side.

Section II.

2. Referring to the second clause of your circular, travellers prefer the right bank of Namoi from Weetee Waa, 4 miles below Wee Waa, to Kercargo, in good weather, and Namoi low; but in winter or wet weather the left bank is always taken, as it is impossible to travel on the right bank in bad weather.

3. I would estimate the cattle 20,000, and sheep from 80,000 to 100,000.

4. I would consider the present width of road, 1 mile wide, not too much, unless the road could be reserved for travelling stock; then one half-mile would be a sufficient width, with proper reserves and a list of reserves posted at the various Police and Post Offices.

5. None of the roads are entirely unfit for travelling stock; the most inconvenient is by Clay's, 4 miles below Narrabri, and Narrabri itself; when the racecourse is vested in trustees and fenced, will be almost impracticable. The road as now proposed, *viâ* Barrab Creek, will in a measure meet this when the river is low, not otherwise, as all stock will come past Clay's and Narrabri for the bridge to get out back.

6. Answered in the above.

7. I do not think any alteration can be made to public advantage.

8. I have mentioned four new roads, and so marked as requested.

9. Some obstructions along the Narribri Road by conditional purchases, and where they are fenced. Henriendi has some fence put up in Mr. C. Eather's time. Mr. Clark, the present lessee, has posts laid along the ground, but not erected. The latter can be removed by order of the Government. Milchomie has a new road and water fenced in, thereby causing stock to travel from Bunglegully to Pilliga, a distance of about 28 miles. The old road joins the creek in several places, and a much better road for stock in the summer months. The lessee should erect gates on the old line.

10. Public gates ought to be made of light American pine, and well braced and strapped with iron, and to consist of two gates each 12 feet wide.

11. The gates chiefly consist of heavy sliprails 15 feet or 16 feet long, and sometimes two set of them. Mr. Fletcher, of Wee Waa, has three light gates. Mr. Bargot, on the Moonic, has some good gates, but rather narrow, though I have not heard of any complaints from that cause.

Section III.

12. I do not think any improvement is at present required at crossings for travelling stock, but I would recommend that there be large reserves made on both sides of every crossing. Such reserves could be revoked when not required.

Section IV.

13. More reserves are required, but it is impossible for me to mark them on the present size map, one not a surveyor. I would beg to suggest that all roads be reserved 1 mile wide, for six or twelve months, and a surveyor with the inspector should traverse those roads, and make reserves where necessary, and the surveyor would do such work correctly.

14. I have marked some reserves, but cannot do it to my satisfaction on so small a map, and I may here add in many cases very inaccurately made.

15. I believe all stock have access to water throughout my district (Milchomie excepted), nothing worth mentioning in this respect.

16. All reserves are trespassed upon by Crown tenants—I know of no exception. They should be marked with white or red paint, and put under the care of an officer of the district. I will further report should I in my journeys see anything of which the Government should be in possession.

I have, &c.,

J. W. JONES,

Inspector of Stock.

STOCK INSPECTOR JONES TO THE CHIEF INSPECTOR OF STOCK.

Sheep Inspector's Office,

Narrabri, 31 March, 1875.

SIR,

Referring to your circular of 30th November last (No. 74-1820 s. B) and your verbal instruction to report upon Gurly specially,—I have now the honor to report for your information that I have visited Gurly for the purpose of seeing for myself, so as to report as correctly as possible the kind of country the proposed road for travelling stock is intended to traverse.

2. I travelled over the road as surveyed, commencing on the ridge from Edgeroi to Gurly, at back of Mr. Irving's selection; thence the surveyed road to Plain Creek and Gurly Creek; thence, though not surveyed, the road for 3 miles consists of myall plains and a small dense oak scrub; after that the road must pass through a very dense oak scrub of about 4 miles or 5 miles in length, without a break, and no permanent water the whole distance.

3. I next travelled down the creek from Gurly to Bumble, at the junction of the Gurly Road with the Narrabri and Moree Road, and on this road there are only two permanent waterholes, and on each of these—as far as I ascertain—reserves are made, thus securing the water for travelling stock when required.

required. Windindillah is the first water from Gurly, a distance of 8 miles; at Gurly there is none only made water: and from Gurly to Gallatheral, a distance of 30 miles, *via* Myall Hollow, there is not a drop of permanent water, though it is true Mr. Macansh has large dams for his own stock; they would not be for the use of the public travelling with stock, and water can only be secured at a large outlay.

4. The road at present in use is quite equal to all demands, if water be made in Gallatheral Creek, Ten-mile Creek, Geehan Creek, and Little Bumble Creek. This road is and always will be required for travelling stock, and should be the first to be improved by making water, &c., to be of most use to the public generally.

5. Gurly has been improved by fencing and dam-making, &c., at a cost of at least £30,000, that until there is some demand for roads I am of opinion it would be desirable to retain as much as possible the run entire for so valuable a Crown tenant, one who is so desirous of improving the run; and if these roads are as proposed it would open out the country for loafers, and thus to a great extent destroy a valuable property without a demand for it.

6. At the same time, there is not the same facilities for making or reserving water on the proposed road through Gurly as there is along the old line between Narrabri and Moree; and further, by securing water on the latter road would be of vast importance for the Barwon stock *via* Millie, which passes that way for the Maitland and Sydney markets.

7. While strongly recommending the present road in use, I would urge that ample reserves be made along the Gurly Creek and elsewhere, to meet any future demands, so that the Government may open a road at any time when so required.

8. I would beg to suggest that, while it is necessary to have plenty of roads for our fat stock, yet opening of unnecessary roads will only encourage loafing, and thereby deprive the Crown of much of her revenue, because if runs are so much intersected with unnecessary roads the lessee cannot pay the same rental as heretofore.

9. I would further recommend that all roads and reserves for travelling stock be withdrawn from lease, and that a small tax be imposed upon all travelling stock and teams to pay for making and maintaining a supply of water for stock and teams.

10. I am informed there is no demand for a stock road through Gurly, at the same time teams and others are not stopped in any way.

I have, &c.,
J. W. JONES,
Inspector of Stock.

25.—PORT MACQUARIE.

STOCK INSPECTOR DUCAT TO THE OFFICER IN CHARGE, OCCUPATION OF LANDS.

West Kempsey, 15 September, 1874.

SIR,

I have the honor to reply to your circular No. 74—1,636 M, received to-day.

1. There are no reserves marked out in this district for the use of travelling stock, but in my opinion such reserves will soon be an absolute necessity, as conditional purchases for grazing purposes are being pushed out and taken up rapidly.

2. I am aware of several slip-rails having been placed by conditional purchasers on the main lines of road used by travelling stock, and only of the width stated in your circular, being only 10 or 12 feet wide, at same time I have never heard any complaints having been made by drovers.

I have, &c.,
JOHN DUCAT,
Inspector of Stock.

STOCK INSPECTOR DUCAT TO THE OFFICER IN CHARGE, OCCUPATION OF LANDS.

West Kempsey, 26 September, 1874.

SIR,

I have the honor to draw attention to my letter of 15th instant, in reply to your circular No. 74—1,636 M, wherein I state that no reserves for the purpose of camping stock had been made. I was not aware that any such had been marked out, nor could I receive any information at the Land Office here of such reserves.

2. I have now seen Mr. Surveyor Herborn, who is out up the river on duty, who informs me that there are five reserves on the south bank of the river, situated on the main line of road to New England, and two on the north bank; that new portions will be reserved at suitable positions.

3. All reserves in this district being open ground are subject to the trespass of stock belonging to the runs on which reserves are made; in no instance does any one appropriate any one of them to his special use.

4. It would be of much advantage to me for reference if maps of the counties of Dudley, Macquarie, and Raleigh were forwarded me. I am often applied to for information on positions of conditional purchases and different reserves.

I have, &c.,
JOHN DUCAT,
Inspector of Stock.

STOCK INSPECTOR DUCAT TO THE CHIEF INSPECTOR OF STOCK.

West Kempsey, 3 May, 1875.

SIR,

I have the honor to submit my report of the stock roads in my district.

County Dudley.

1st. There are two roads through this county, one by the river, and the second a track known as Eyfe's Hill Road, and the chief or main stock road. This track has never been proclaimed as a road, only so from usage. It is the best adapted for stock travelling in all weathers, and in constant use. I have marked

marked its direction by a red dotted line to where it joins a blue dotted line, the latter showing an old road that has this year been supplemented by the Roads Fund to be repaired from Rolland's Plains to Kempsey. This route is the main stock road from the Upper Macleay to Maitland, Manning River, Port Macquarie, &c.

The river road is used chiefly by stock to Kempsey and for local consumption. The crossings are very numerous, but easily accessible, being low shingly beds both sides. On the north bank of the river is a road to New England in course of construction by Government grants.

Macquarie, Raleigh, and Fitzroy.

The roads in each of these counties are under the Government Road Inspector's care, and have an annual grant voted for construction and repairs.

2. During flood times the Fife's Hill Road, in County Dudley, is the only road that can be used. At all times the preference is given to it for stock travelling, as the stony crossing-places by the river tend to cripple stock. All stock only travel by the main roads in the three other counties.

3. By Fife's Hill Track, by way of Rolland's Plains, the average annual number of stock is about 2,000 head, by the river road about 1,000 head; sheep, nil. Macquarie County, *en route* to Maitland by Hastings River Crossing, about 3,000 head; same county, from Upper Hastings, about 1,000 head cattle; sheep, 370 head.

Fitzroy and Raleigh Counties.

Annual average number of cattle about 200 head; sheep, nil.

4. There is little or no fencing on the roads in these counties, and no limit is ever allowed for travelling stock. All proclaimed roads in these counties are a chain wide, which I believe to be sufficient width for the number of travelling stock here. Fife's Hill Track has not been yet proclaimed as a public road.

5. No metalled roads in these four counties.

6. These roads are all well adapted for stock travelling, being well grassed and watered and sound.

7. A short diversion of the Fife's Hill Track could be made from Wabro Creek to Parabel Creek, as shown on the map by a blue line—it would save 3 miles.

8. No new roads required.

9. There are three fences across the road at Moparabah Station, Parabel Creek, a slip-rail and horse-gate on each for travellers and stock. These fences are on purchased land. No complaint has ever been made about them. Two fences cross the road at Yessaba Creek, on the Rolland's Plains Road, one fence being the boundary of a conditional purchase made by George Irvin Scott, the other fence is placed and crosses a village reserve to enable Mr. Scott to secure water to his conditional purchase; the floods in the creek debar fencing up to it; a slip-rail and horse-gate are in each of these fences. The positions of the obstructions are marked by a short blue line at each place. In the town of West Kempsey two portions of streets are shut up, one being used in a grazing paddock, the other street being under cultivation. I have marked them by a blue line from Smith-street to the river. There was much complaint of these obstructions preventing stock having access to the river during dry weather.

10. Public gates would require to be at least 12 feet wide, I believe, as double gates of 6 feet wide each, to prevent them consequently breaking down; made of sawn timber.

11. There are no public gates in any of these counties; the slip-rails already mentioned are situated where the road shows to go through the fence at the blue lines.

CROSSING-PLACES.

12. The crossing at the Hastings River, at T. C. P. Morton's purchase of 1,267 acres, urgently requires opening and widening; the banks on the south side will only allow of three or four beasts to go up at a time, causing great risk and detention in crossing cattle over. The north bank is a scrub that requires falling and widening; the cost would be about £60. The crossing is marked thus O. A siding at the top of Fife's Hill is much in want of making, also two or three small gullies from Orcen Creek to Wabro Creek, the banks opening, when the whole track would be even passable for drays during floods in the river—cost in all about £100. A siding on Trapand's Hill is also in a dangerous state—it might be widened at a cost of £100.

RESERVES FOR GRASS AND WATER.

13 & 14. There is, I believe, only one stock reserve on the line of road in use for stock, the others being village reserves (some others have been surveyed on the original line of road to New England; that road has now been set aside for the one surveyed and being made by the north bank of the river); a few others are necessary. I have marked them on the map, No. 1, Stock and Water Reserve; No. 2 (at Skillion Flat) Stock and Camping Ground. Both these have lately been marked out by the district surveyor on too small a scale, only 10 chains by 40 chains, my opinion being that either a stock or camping reserve should not be less than 1 mile square. Nos. 3, 4, 5 as stock reserves will no doubt soon be much required free selection is pushing out so fast.

15. All travelling stock have no limits to feed and water along all the roads, and have full and free access to any reserve marked out.

16. The reserves are all open, and all bush cattle may and do feed across them at will; these cannot well be prevented unless by fencing. Yessaba Creek, v.r.m. 7, I have already shown is partly fenced off by G. I. Scott to enclose water to his conditional purchase, No. 56.

17. No dams, tanks, or wells are required in any one of these counties.

It is now so many years since I have travelled through any of the other counties or on the roads, nor are there any drovers pass through by this coast district, that I am not in a position to add any information that would be reliable or of any advantage; the roads have been much changed, and free selection has so altered the frontages that I could not trust to any former experience I was possessed of. All stock travelling have such latitude allowed them through these counties that no alteration could be suggested.

I have, &c.,

JOHN DUCAT,

Inspector of Sheep.

26.—SINGLETON DISTRICT.

STOCK INSPECTOR ALFORD TO THE CHIEF INSPECTOR OF STOCK.

Singleton, 21 September, 1874.

SIR,

I have to report for your information,—

1. There are two or three of the water reserves in my district partly fenced in, not by the pastoral tenant but by persons owning purchased land adjoining, and travelling stock are not prevented grazing thereon.
2. I am not aware of any narrow gates being left to obstruct travelling stock, or of any main road being entirely closed.
3. I may also report that there are great complaints of the owners of land adjoining two of these reserves grazing their stock thereon, viz., one near Muswellbrook, on Sir Thomas Mitchell's line of road, and the other at Sadler's Creek, on the road from Denman to Jerry's Plains.

I have, &c.,
 EDWARD ALFORD,
 Inspector of Stock.

STOCK INSPECTOR ALFORD TO THE CHIEF INSPECTOR OF STOCK.

Singleton, 16 June, 1875.

SIR,

Referring to your circular (74/L820, S.B.), November 30th, 1874, I beg to forward you the following replies to the questions therein stated :—

I.—DROVING ROADS AND TRACKS.

- Question 1. The one marked red in the map.
2. The only road is the one marked red in the map.
3. 30,000 cattle, 75,000 sheep.
4. I consider that the droving roads or tracks through Crown lands should be half a mile wide, and through purchased land 2 chains wide. The roads in my district, being mostly through purchased land, are 2 chains wide.
5. No.
6. There are none unfit for traffic.
7. They cannot be made more direct, or turned through better country.
8. No new roads required.
9. No roads or tracks are obstructed.

II.—PUBLIC GATES.

10. A single gate 15 feet wide.
11. There are no gates on the roads in my district.

III.—CROSSING-PLACES.

12. Two substantial bridges are required, one at Jerry's Plains at the place marked + on the map ; and at the crossing-place at Denman, which I cannot mark, as the map sent does not extend far enough north to indicate where the crossing is. Cattle and sheep are frequently detained at these crossing-places when there are freshets or floods in the river, and sometimes for a considerable time, whereby the value of the stock is greatly depreciated.

IV.—RESERVES FOR GRASS AND WATER.

13. There are not sufficient reserves for feeding and watering travelling stock.
14. There are no Crown lands in my district available for cattle reserves at crossing-places or in the neighbourhood of towns, except a village reserve situate about 9 miles east of Warkworth, which should be converted into a cattle reserve. It is useless at present for cattle, as there are generally about 2,000 sheep on it belonging to the adjoining occupier. It is also trespassed upon by straggling stock. The maps sent do not extend sufficiently to enable me to mark the position of the reserve.
15. Yes. No obstructions.
16. One of the reserves has been trespassed upon by the late Mr. F. White, and it is occasionally trespassed upon now. Trespassing could be prevented by appointing persons to protect the reserves, and the officers who could perform that duty most economically would be the present staff of inspectors.

V.—DAMS, TANKS, AND WELLS ON DROVING ROADS.

17. None are required.

I have, &c.,
 E. ALFORD,
 Inspector of Stock.

MEMO.—The maps sent me only show the Maitland cattle road from Warkworth to 4 miles west of Jerry's Plains, and omit all notice of that road from Black Creek to Warkworth, and from 4 miles west of Jerry's Plains to Hall's Creek ; thus only showing 12 miles out of a length of 60.—E. A.

27.—TAMWORTH DISTRICT.

STOCK INSPECTOR DOWE TO THE CHIEF INSPECTOR OF STOCK.

Tamworth, 21 September, 1874.

SIR,

I have the honor to acknowledge the receipt of your memo. of the 1st September, 1874, and will make strict inquiry into all matters referred to in the circular accompanying the same, dated 28th August, 1874, and numbered 74/1,636 x, and report on any such obstructions that may be on the travelling stock roads in this district.

I may add that, as it is so difficult to obtain the information required relative to the roads, boundaries of reserves, or alienated lands, from the district surveyor, if a plan of the same could be obtained from the Survey Office, and sent up to me, it would greatly facilitate matters.

I have, &c.,

THOMAS DOWE,
Inspector of Stock.

STOCK INSPECTOR DOWE TO THE CHIEF INSPECTOR OF STOCK.

Tamworth, 9 February, 1875.

SIR,

In answer to your letter of the 3rd instant, and numbered as per margin, with county maps ^{75:202, S.B.} forwarded, I have the honor to inform you that I have marked the roads to the best of my ability, according to instructions contained in your circular of 30th November, 1874, but beg to say that there are many by-roads used for travelling stock in this district, which are not marked on the plans sent; nor is it possible for me to place them in their respective positions, the plans sent being of such ancient date that even some small creeks are left out altogether; however, I may say that there being so many selectors now in this district, and many of them being owners and consequently purchasers of stock, principally sheep, that all roads, with the exception of those stated in my report of the 28th January, 1875, are used for the purposes of travelling stock. The road from Boggabri *via* Gunnedah and Breeza to Murrurundi I should say has an annual estimate of 75,000 sheep and 5,000 head of cattle travelling. From Boggabri *via* Mellally, Tamba, to Coolah, 100,000 sheep and 12,000 head of cattle. From Barraba, *via* Borah, Carroll, to Gunnedah and Breeza, 65,000 sheep and 4,000 cattle.

2. The road from Tamworth *via* Nundle, Cranrui, to Maitland, &c., 18,000 sheep and 3,000 head of cattle. The road from the Moonbi to Tamworth, from thence to Carrabubula, Weriss Creek, to Murrurundi, also Carrabubula *via* Breeza, Pine Ridge, down the Warrah Lane to Merriwa, 70,000 sheep and 10,000 cattle. The roads from Yarraman, Black Creek, Tamba, Bundilla, Coomoo Coomoo, Trinkey, Colly Blue, &c., to Coolah, 60,000 sheep and 12,000 cattle. The road from Gunnedah, *via* Woondooba, Bando to Tamba, 15,000 sheep and 3,000 head of cattle. The road from Tamworth, *via* Sumerton, to the different settlers on the Peel and Namoi, 7,000 sheep and 500 head of cattle. All other roads have a smaller number of stock annually travelling on them.

3. With regard to the reserves for travelling stock in this district it is impossible for me, with the references to hand, as well as the information to be obtained by examining the maps, to tell which are reserved for the use of travelling stock and which are not, so I have only marked two as being wanted, both being on Wambramarra Creek on the road from Nundle to Crawney. Although there should be many more made in the district, I am not in a position to mark the same on the maps herewith sent.

I have, &c.,

THOMAS DOWE,
Inspector of Stock.

Answers to Questions asked in Circular of the 30th November, 1874, and numbered 74/1820, S.B.

1st. The only roads not used for travelling stock in this district are those passing through the A.A. Co. grant, Warrah, from Black Creek to Doughboy Hollow. The road from Tamworth to Goonoo Goonoo and Wallabadah, through the estate of the Peel River Land and Mineral Co., and the road from Tulcumbah *via* Carroll to Gunnedah, on the north bank of the river Namoi.

2nd. On account of the rivers often being in a flooded state, I would propose that all roads, where possible, should be open to the use of travelling stock.

3rd. It would be impossible to estimate the number of stock annually travelling on these roads or tracks, but can state that the principal portion travel to market either by Boggabri, Gunnedah, Breeza, to Murrurundi or Merriwa, or up Cox's Creek *via* Mellally, Tamba Springs, to Cassilis.

4th. I consider nothing less than 6 chains a sufficient width for travelling stock; all the roads in this district being much too narrow.

5th. This district is now too thickly populated, as well as there being too much land bought up, to think of making any new roads in place of the old ones.

7th. The roads cannot be made more direct, unless through the A. A. Co. grant, from Warrah to Doughboy Hollow.

8th. *a* A road wanted from Yarraman, down the creek to reserve 287; from thence to the Pine Ridge *via* Denby Point and Kickerbill, Mooki River, to enable stock to reach the Quirindi terminus.

b A road from Long Point, on the Mooki, to Colly Blue, to enable store stock from New England, &c., to get on the several branch roads leading from there to their several destinations.

c A road from Tarpoly Creek, on the Barraba Road, *via* Ironbark Creek to Bundarra; although this route is not much used at present, as the country becomes more thickly populated it will be greatly used as a travelling stock route.

9th. One gate 12 feet wide, on the boundary of Messrs. Dight Bros. run, on the road from Carroll to Gunnedah; also one slip-panel on the boundary of Messrs. Dight & Christian's run, on the road from Carroll to Breeza; five gates on the road from Boggabri to Mellally, on Messrs. Clark Bros. Gullendaddy; four of these being double, and one a large swing-gate. Four slip-panels on Wallhollow run (Messrs. Christian & Co.), on the road from Breeza to Pine Ridge, and from Werris Creek to the Pine

Pine Ridge; two slip-panels on Trinkey (Messrs. Wever's), on the road from Bando to Colly Blue; one double gate at Bando (Messrs. White Bros.), between Melally and Bando. I may mention that I have heard no complaints from drovers relative to these gates, with the exception of the fourth gate, on Gullendaddy Run, known as Melville Gate, which is placed in a low spot, and consequently it is almost impossible to get stock through in wet seasons.

10th. Two swing-gates, 10 feet wide, each to open either side, being on side posts, with three bars, and where necessary wired to render them sheep-proof.

11th. There are no public gates in this district.

12th. None of the crossing-places at the rivers, or gaps, or sidings, or gullies, or mountains, can be improved, as every wet winter the crossings alter considerably.

13th. There are not sufficient reserves in this district.

14th. *d* There being no reserve for travelling stock, in the neighbourhood of Tamworth, I would suggest that the Government reserve a portion of the town common for that purpose—say 320 acres.

e That large reserves be made on each side of the Peel River, at the crossing known as Crotty's, below Menindebri; both these reserves should be large. A reserve wanted at Dead Horse Gully, about 5 miles from Manilla, on the road to Tamworth.

f A reserve on the Manilla, on Messrs. Harden & Eastwood's Run, as close to the Manilla crossing as practicable. A reserve at Tarpoly Creek, on the road from the Manilla to Barraba. A large reserve on Borah Creek, on the road from Barraba *via* Borah to the Namoi, known as O'Mullane Crossing, on the road to the Peel and Carroll.

g A reserve wanted between Barraba and Cobbadah. A reserve between Bando and Tamba, also between Bando and Trinkey, and about 5 miles from Bando. A reserve between Coomoo and Trinkey, one at Yarraman, and one between Black Creek and Tamba Springs. I may mention that where possible all the reserves already made for the use of travelling stock should be enlarged, and surveyors instructed to mark out reserves all over the district, at distances not exceeding 12 miles, for the convenience of travelling stock, surveyors being able to tell correctly whether the land is private property or otherwise.

h On the arrival of the railway at Tamworth, a reserve will be required at Quirindi, Weriss Creek, and Currabubula.

15th. Almost all squatters in this district have Crown lands fenced to a greater or less extent along the Government roads.

One reserve has been partly fenced off by Messrs. White Bros., about 4 miles down Cox's Creek from Bando, on the road to Melally. I cannot say how the obstruction is to be removed.

16th. All the reserves set apart for the use of travelling stock are trespassed on either by the squatter or selector adjoining, and when the travelling stock get to them there is no feed left.

17th. All the reserves on Gullendaddy Run being now dry but one, sheep have to travel three and a half days without water. A well should be dug on each of these reserves, with troughs, &c., for watering travelling stock. A tank should be made at the Round Island between the Pine Ridge and Miller's Creek, stock in this dry time not being able to get water for about 27 miles. A tank wanted between Trinkey and Coomoo Coomoo. A tank wanted between Tamba and Black Creek. A tank wanted between Gunnedah and Woondooaba, also one between the latter place and Bando.

Relative to other districts, I hear from drovers that Mr. M'Master, at Bunja Creek, Coolah, has the reserve fenced so that stock cannot water without trespassing.

That there is a house and stable owned by Mr. Peperty, on the main road, at Hall's Creek, between Merriwa and Denman, by which drovers are greatly inconvenienced.

Also, that Mr. James Allison, Oakey Creek, has fenced off the reserve for travelling stock, to the great inconvenience of drovers.

Should new reserves or roads, &c., be granted, I would suggest for the convenience of drovers and others, that plans showing the various roads and reserves in each district be printed, to enable all persons when travelling with stock to know when they were trespassing or otherwise. I should say that there would be a ready sale for these plans.

I have, &c.,
THOMAS DOWE,
Inspector of Stock.

28.—WAGGA WAGGA DISTRICT.

STOCK INSPECTOR BRENTNALL to THE CHIEF INSPECTOR OF STOCK.

Wagga Wagga, 25 September, 1874.

SIR,

I am in receipt of your circular of 28th ultimo, relative to the difficulties experienced in bringing travelling stock to market, and after making strict inquiries into the difficulties complained of, I have the honor to inform you that in nearly every instance where reserves are left for the use of travelling stock they are with the run fenced in and otherwise used by the pastoral tenants.

I have also the honor to inform you that it is the usual rule to have gates from 10 to 15 feet wide, passing through which stock are considerably delayed and even damaged, in fact so bad have some become that it is difficult and even dangerous for a buggy to pass through; besides which the gates on each side are rendered more difficult for passage by the erection of what are termed "breaks" put up as baulks to the station sheep passing through.

I have also the honor to inform you that in some cases the main route is entirely closed, thus compelling stock to go round some miles, but only in a few instances.

I have, &c.,
CHAS. J. BRENTNALL,
Inspector of Stock.

STOCK INSPECTOR BRENTNALL to THE CHIEF INSPECTOR OF STOCK.

Wagga Wagga, 16 February, 1875.

SIR,

I have the honor to reply to your circular of 30th November last, referring to the circulars of 28th August and 1st September, regarding the droving roads and reserves. I

I have the honor to inform you that after personal examination of as many of the roads and tracks as time has permitted me to make since I received your instructions, I beg to forward to you such information as I have been able to acquire, and, deeming it the better way to report as concisely as I can, I reply to your questions as numerically proposed:—

1. From Narrandara to Gundagai, *via* Wagga Wagga, on each side of the river Murrumbidgee, also from Urana to the cross roads meeting the road on southern side of the Murrumbidgee to Wagga Wagga; also from Wagga Wagga, *via* Hanging Rock, Mundawadara to Woolandool, thence to Billabong Creek; also from Wagga Wagga to Albury, *via* Sandy Creek, Manjiplah and Cockindina; also from Wagga Wagga to Main Sydney Road, *via* Book Book and Kyamba; also from Wagga Wagga to Cootamundra, *via* Junee and Bethungra; also from Wagga Wagga to Forbes, *via* Junee, Combaning, and the Rocks, and Morangarell; also from Wagga Wagga to Merool Creek, *via* Kindra and Cowabec.

2. All the roads referred to I consider absolutely necessary at all seasons.

3. On the up river road as many as 500,000 sheep have been known to travel on either side in a dry season, and comparatively few cattle. On the main road from Lachlan to Wagga Wagga, *via* Combaning and Junee, about 150,000 sheep and 10,000 head of cattle; other minor roads in proportion.

4. I consider that where roads are enclosed they should be at least 4 chains wide, but wherever practicable one half-mile on each side of the road should be allowed for grazing purposes. Many of the roads in my district are "not right" in this respect, free selection of lands, in a great many instances immediately on the highway, having limited droving accommodation to the road in some instances—in some instances only 1 chain, and no instances more than 2 chains wide. All the roads are more or less affected in this respect, but more especially those on each side of the river, some of which by fenced and unfenced selections, and by the fencing of Crown lands, have become almost untrafficable for travelling stock.

5 & 6. None.

7. The roads specified are required as they at present stand, but additional roads might be proclaimed, *viz.*:—The road from Forbes to Wagga Wagga, leaving the present road at Marsden's on Bland Creek, crossing the creek, taking a course through Billabong Creek Run, through West Bland Plains, Jamieson's Back Creek Run, Barmodinan; thence by Posey's Mandamar Station, George Haiman's Merool Creek Station; thence to Mimosa, to Junee, where the present road is met. Also to Narrandara by same route to Haiman's, Merool Creek, where the present road is met. Also to Cudgelico, Lachlan River, *via* present route to Merool Creek; thence *via* Bygo, Yalgagin, Walandry, and Merringreen, to Cudgelico and Lachlan River. As the roads above mentioned pass through the country not included in the county maps forwarded to me, and the places mentioned by me are not sufficiently indicated in the Colony map, I am not able to show them as requested.

8. Yes, as shown above.

9. Yes, by the fencing in of Crown Lands within half-a-mile of the road, especially on the main roads on both sides of the river.

II.—10. 14 feet wide, with ample accommodation of shifting panels at least 2 chains wide.

11. Yes. Innumerable, of every possible size and description.

III.—12. The crossing-place at Morangarell over the Bland Creek should have a bridge over; several people have been drowned there, and petitions sent down, but as yet nothing has been done. This is most urgent. A good bridge could be put up to answer all purposes for about £600.

IV.—13. No.

14. A piece of vacant land on the western boundary of the town should be reserved as a camping-place, for which a numerous signed petition has been sent to the Minister for Lands from the residents of Wagga Wagga, at Wallace Town, as shown on the plan; 2 miles square at Junee, Hurley's and Bethungra the same.

15. No. They are obstructed by fencing; the only way to remedy it is by removing the fencing.

16. Yes, by neighbouring stockholders. They should be placed in charge of Crown Lands Rangers, which duty could be filled by the Inspectors of Stock.

V.—17. Tanks or dams are very much required at Wallace Town, Junee, and Hurley's. Numerous petitions have been sent down to this effect. The expense of each would not exceed at the utmost £400.

I have the honor to inform you that I have no other information respecting reserves, &c.

I may also state that I have personally examined the new tracks proposed by me, though in some cases out of my district, being more than a hundred miles from Wagga Wagga, hence my delay in furnishing this report.

I have, &c.,

CHARLES J. BRETNALL,

Inspector of Stock.

29.—WARIALDA DISTRICT.

STOCK INSPECTOR RIDLEY TO THE CHIEF INSPECTOR OF STOCK.

Warialda, 21 June, 1875.

SIR,

Referring to your circular of the 30th November last, I have the honor to report four droving roads for travelling stock. Commencing from the crossing-place at Goondiwindi, Queensland, travelling south through this district the nearest road. Commencing at Bogabilla *via* Merriwa, Coppymorambilla, Pooloona, Welbon, Midkin, or Bogree, crossing the Big River at Booloona, thence *via* Wee Bollo Bollo, crossing the Mehi River to Moree, Tycannah, Burible, Millie, and Narrabri, or Welbon *via* Coorah, Cowbail, Binguang, Benabar, Wirrah, Yarrawall, and Mungindi, or Caidmurry, Collymungool, and Collyredubri to Walgett.

Welbon *via* Midkin, Boolooroo, crossing to Moree, or Tareelari, crossing the Big River at Pallamallawa, thence up the Big River *via* Binneguy Gravesend, crossing the river again at Gineroi *via* Molroy, crossing Myall to Bingera. Or, from Gineroi, on the south side of the river, *via* Singapor, Banghut, Pallal, Derra Derra, crossing the Gwydir at Eulouri, and over Bell's Mountain to Cobbidah Station, and through Cobbidah Barraba.

The

The second nearest road, commencing at Bogabilla, *via* Merriwa, Coppymorambilla, Tooloona, Cox's Creek, Gunyerwaralda and Bogamildi to Pallamallawa, crossing the Big River there; thence *via* Binnequy, Mungibundi, Wee Bolo Bolo, Moree, and Tycannah, the same route to Millie and Narrabri, or down the river as before to Walgett. The third road, not quite so near as the before-mentioned, also commencing at Bogabilla and Merriwa *via* Boonal, Tucka Tucka, Holdfast, and up the M'Intyre to Yetman; thence across the Common *via* Blue Bobby Plain to Yallaroi and Gunyerwaralda and Bogamildi; thence *via* Pallamallawa, crossing the river there, and then *via* Moree to Narrabri, or down the Big River to Walgett as before.

Or, from Gunyerwaralda *via* Oregon to Warialda and Bingera, crossing the river there; thence from Bingera Station and main line of road to Cobbidah and Barraba.

The fourth road is a long way round, commencing at Bogabilla, thence up the M'Intyre *via* Tucka Tucka to Yetman, and then *via* Trigamon to Wallangra; thence *via* Gramon and Reedy Creek or Gragin to Myall Creek and Bingera, crossing the river there, thence to Cobbidah and Barraba as before; or from Bingera *via* Molroy and Gineroi, crossing the river there; thence to Cobbidah and Barraba as before. Or from Bingera *via* Molroy and Gineroi, crossing the river there, thence *via* Singapoor and Binnequy down the river to Moree and Narrabri, or Walgett as before. This road is at least 100 miles round, but all the sheep had to travel by this road to Walgett *en route* to Victoria in the great drought.

There was another road from Gundiwindi that stock used to travel on some twenty years ago, and which has never been used in my time. I think it ought to be opened again, as it would be a very great convenience to stock travelling from Queensland, particularly in a dry season, but I have no doubt there would be great opposition to its being opened again.

Commencing at Bogabilla and going down the M'Intyre *via* Boobera and Boronga; thence to Kunopia to Galan, Coorah, Welbon, and Moree, or Kunopia down the river to Walgett. The first road is the nearest with the exception of the last, but stock can only travel upon it in a good season, as there is no water upon it for 50 miles, between Coppymorambilla Lagoon and Welbon, in a dry season. The second and third roads are generally used the most, but I have known sheep to travel on them for three days without getting water in a dry season.

In the great drought the fourth road was the only road that sheep could travel upon to get water, and then I have known them to travel two days at a stretch without any.

All the roads in this district are badly watered for travelling stock in a very dry summer.

I consider all these roads should be reserved from sale half a mile wide for travelling stock, with a large reserve for camping where there is water, or water made at least every fifteen miles; but it is too late now for these reserves in this district, as in a great many places on the M'Intyre River the land is purchased close up to the road; and the same between this and Inverell, the land is purchased close to the road.

The Inverell Road is also very badly watered—there is no water anywhere on it in a dry summer, with the exception of private dams.

1. All the roads mentioned are used for travelling stock.
2. There are roads on both sides the Big River in places, and the best sides for travelling stock.
3. There have been as many 350,000 sheep travelling on these roads, but I should say the general average would be about 150,000, and about 10,000 or 15,000 cattle.
4. I consider half a mile ought to be reserved from sale on every road for stock travelling, with a reserve for camping every 10 or 15 miles. The land is purchased in many places close up to the road between Warialda and Bingera, and Warialda and Inverell, and down the M'Intyre, and in many places only 1 or 2 chains left for the road.
5. The road is only metalled in a few places between Warialda and Bingera, and Bingera and Cobbidah, where the mail coach travels.
6. I think the roads everywhere in this district want repairing for any traffic.
7. I do not think the roads can be made more direct, but they could be made better by making more reserves and dams for camping where there is no water, and culverts over the creeks and gullies.
8. I have not heard of any new droving roads or tracks required in this district.
9. There are some portions of the roads and tracks obstructed by fencing, but gates or slip-rails of the usual width are put in the places.
10. The usual widths of public gates on droving roads are 5 yards, with double gates.
11. There are some gates on the roads in this district, between Warialda and Inverell, two on the Reedy Creek Run, and four between Warialda and Wallangra, also three gates between Myall and Bingera, all about the usual size, double gates.
12. There are a great many crossing-places, and gaps, and sidings in this district want improving. In the first place there is the gap between Bingera and Cobbidah, known as the Devil's Elbow, a very bad place; then there is the crossing-place at Myall Creek, between this and Bingera, on the main road, a very bad place; also the crossing-place at this creek on the road to Oregon; also the Back Creek, between Oregon and Gunyerwaraldi; also the deep gully between Oregon and Bogamildi; also the Mosquito Creek, between Bogamildi and Moree; also both crossing-places of the Big River, on the Boolooroo Run; and a large reserve at the lower crossing-place for camping, on the road to Moree; also the crossing-place of the M'Intyre, between Goondiwindi and Bogabilla and a large reserve for camping; also the crossing-place at Mungindi, on the Lower Barwon, between New South Wales and Queensland; also many others too numerous to mention. Almost all these places want cutting on both sides. I cannot estimate the expense.
13. There are not sufficient reserves for feeding and watering stock in this district, and where they are they are not large enough, and always encroached upon by either squatter or free selector.
14. Additional reserves are required for feeding and watering stock in every part of this district. I cannot mark the map properly, as all the stations are not given, and another thing, I am not a sufficient surveyor to mark what you ask me.
15. Travelling sheep generally take their half-mile on each side the road, but they are generally hunted on by the owner of the station until they get off his run.
16. All the reserves are encroached upon by the owners of the station or the free selector, everywhere in the district.
17. Dams, tanks, or wells, all required for droving stock on every road in the district in a dry season. I cannot state the cost. I shall be very happy to give you any further information that I can, but I am

am not engineer enough to give you the probable cost, or estimate the value of all the cuttings, sidings, dams for watering stock, and culverts, in this district.

To improve the crossings of the rivers, creeks, and gaps, and make culverts and dams, and find tanks for watering stock, would cost some thousands of pounds.

The roads in this district I think are the worst in the Colony, in fact they are a disgrace to the district. Go all over Queensland and you won't find such bad roads as there are here, without you go out to the Palmer.

I cannot mark the maps—I am not a surveyor enough to understand them properly. I have spoken to a surveyor about it, and shown him the maps and questions asked, and he says that I cannot do it; to mark the creeks properly with those maps, that it would take a good surveyor to do it.

I have, &c.,
F. W. RIDLEY,
Inspector of Stock.

30.—WENTWORTH DISTRICT.

STOCK INSPECTOR M'CLYMONT TO THE CHIEF INSPECTOR OF STOCK.

Wentworth, 19 September, 1874.

SIR,

In acknowledging receipt of your memo. dated 1st instant, with accompanying communication from the Occupation of Lands Office, concerning reserves, &c., for travelling stock, I have the honor to inform you that the matters therein referred to shall have my immediate attention; and in order to assist me in making the required report, I will feel obliged by your procuring for me from the Government Printer a list of the gazetted reserves in the district, and if possible a suitable map, to enable me to trace the roads and lands reserved for the use of travelling stock. I fear I will not be able to get any information from the district surveyor, who appears to have too much work to do.

I have, &c.,
A. M'CLYMONT,
Inspector of Stock.

STOCK INSPECTOR M'CLYMONT TO THE OFFICER IN CHARGE, OCCUPATION OF LANDS.

Wentworth, 28 September, 1874.

SIR,

I have the honor to acknowledge receipt of your circular dated the 28th ultimo, respecting the difficulties experienced in bringing stock to market.

On making inquiry into the matters therein referred to, I have now to report to you that in this district some of the water reserves have been partially fenced in by the pastoral tenants.

That there are no public roads surveyed in this district; and in consequence of the nature of the country—its being liable to periodical floods—there are more tracks than one used by stock travelling on the same route.

That on these tracks some of the gates are not more than 10 feet and very few over 12 feet wide, whilst in many places the land is wholly fenced off upon one side of the tracks.

I am not aware that any of the tracks formerly used have been entirely closed up.

There has been only one reserve proclaimed in the district for the use of travelling stock—that situated at the crossing-place on the South Australian border; and as the pastoral tenants and the owners of the adjoining land are depasturing stock thereon, it is of very little use for grazing purposes.

The great difficulty experienced in bringing stock to markets is the want of a surveyed road with large reserves subject to certain regulations, and this difficulty will increase as the lands on the river frontages are being alienated.

Where the sheep are shepherded, it is the practice for the lessee of the run to eat up as much of the grass as he can on both sides of the road.

I have, &c.,
A. M'CLYMONT,
Inspector of Stock.

STOCK INSPECTOR M'CLYMONT TO THE CHIEF INSPECTOR OF STOCK.

Wentworth, 12 March, 1875.

SIR,

Referring to your circular, dated the 30th November last, in regard to the droving roads and reserves for feeding, watering, and camping travelling stock in this district, I have now the honor to report to you the following particulars with respect to the country over which I do duty:—

I.—DROVING ROADS AND TRACKS.

No. 1. The road on the route from Euston to Wentworth, commencing at Coltwang, on the Murray River, at the line dividing the counties of Tailla and Wentworth; thence following the course of said river *via* Gol Gol Bridge, Wentworth, the Anabranche bridge, Merona, and Lake Victoria, to the South Australian boundary.

No. 2. Commencing near Lowe Lowe on the Murray River, thence up the west bank of the Anabranche Creek, *via* Wilpatara, Bulpanga, and Popiltah Lake; thence keeping to the west of that lake, and the flood waters of the Anabranche and Darling to Menindie.

No. 3. Commencing at the Anabranche Bridge, near the junction of that creek with the Murray River, and following up on the east bank of said creek, *via* Wilpatara, Bulpanga, Bunnemigie, Stony Creek, outside Yellow Lake, to the Untah Waterhole on the Anabranche; thence along the course of the creek

creek to Yartha Lake, and keeping round the west side of that lake to Cooona Point, on the Darling River, about 6 miles above the creek, flowing into Yartha Lake; and thence along the west bank of the Darling to Menindie.

No. 4. From Wentworth up the west bank of the Darling, and joins No. 3 main road about 5½ miles above Yartha Creek.

No. 5. From Wentworth up the east bank of the Darling, *via* Pooncaira and Morara Station to Menindie.

Minor Roads and Tracks used when practicable, and during high floods:—

No. 1. Commencing at the Merguon Reserve, on the Murray River, about 6 miles above Wentworth, thence north-westerly, and joins No. 5 main road, near Tapio Station on the Darling.

No. 2. Commencing on No. 5 main road, near Pooncaira, on the Darling River; thence easterly, through the back country blocks, *via* Arumpo Run; thence south-easterly to Prungle Run; and thence southerly to Euston, on the Murray River.

No. 3. Commencing at Prungle Run on No. 2 minor road, thence south-easterly and south to Paika Lake and Balranald, on the Murrumbidgee River.

Tracts Nos. 2 and 3 are occasionally used by stock travelling from the upper and middle Darling country to the Victorian markets, and when practicable is a shorter route and a much better grassed than along the river frontage.

No. 4. That on No. 4 main road, commencing at Sturt's Billibong, about 20 miles above Wentworth; thence westerly and south westerly to Wilpatara, on the Anabranck Creek; thence across that creek westerly and south-westerly, to join No. 1 main road at Lake Victoria.

No. 5. Commencing on No. 4 main road, on the 10-mile point above Polea Station, on the Darling; thence westerly keeping round Yartha Lake, and joins No. 3 main road. This track is used when Yartha Creek is flooded.

Question 2. There are roads required on both sides of the Darling River and Anabranck Creek. By making crossing-places and bridges at certain places the preference would be given to the shortest route by fat stock going to market, either to Melbourne or Adelaide, as the case may be.

3. The estimated number of stock annually travelling on the roads from the Darling to and from South Australia—is cattle about 10,000 and sheep about 150,000. On the road from the Darling, to and from Victoria, about 12,000 cattle and 20,000 sheep. I cannot give an approximate estimate of the numbers annually travelling on each of these roads and tracks; it depends upon season and the height of the floods as to which road they travel on.

4. I consider 3 chains a sufficient width for droving roads. There are no surveyed roads in this district, but where travelling stock have got access to the half-mile to which they are at present entitled on both sides the road, it is considered sufficient.

5 and 6. There are no metalled roads, or roads otherwise unfit for stock travelling in ordinary seasons in this district.

7. None of the droving roads now in use can be diverted without expending large amounts in making artificial watering places, constructing bridges, and making approaches thereto.

The road on the west bank of the Anabranck can be made more direct, by diverting it across the creek flowing into Popiltah Lake, and marked on the map. The crossing-place on this creek can be made practicable, during ordinary floods, at a trifling cost.

8. A more direct track, and through better country for feed, can be made from the Anabranck to the crossing-place on the South Australian border, which can be used to great advantage by stock travelling to the Adelaide market in the winter season or after heavy rains; the direction is marked on the map.

9. Since the runs have been fenced in I suppose the gates erected across the roads are considered an obstruction, and there are a great many such on all the roads throughout the district; on an average there are gates every 6 or 7 miles. It is a difficult matter to recommend a remedy for this obstruction. I would propose granting greater privileges, by making reserves solely for the use of travelling stock.

II.—PUBLIC GATES.

10 and 11. There are no public gates in this district. The description of gates used are common swing-gates, from 10 to 12 feet wide. The only complaint made of their obstructiveness is that they will not open and close of their own accord.

III.—CROSSING-PLACES.

12. There are no improvements required on any of the crossing-places used at present.

IV.—RESERVES FOR GRASS AND WATER.

13. There are not sufficient reserves for feeding and watering travelling stock in the district. Not having access to any authority on this subject, I am unable to know what reserves have been already specially set apart for the use of travelling stock. There are several places notified as watering-places for stock, but I have been informed that these are only reserved for the use of the lessees of the runs. I only know of one reserve which has been notified for the use of travelling stock in this district.

14. For the purpose of feeding, watering, and camping stock legitimately travelling, I would recommend that reserves at least 2 miles square be made where practicable—say every 6 or 7 miles apart, along the roads and tracks throughout the district, and that the same be protected solely for their use. In consequence of the meagre information afforded on the map furnished to me, and from not knowing the boundaries of such lands as may have been already reserved for other purposes, or of lands alienated, I am unable to mark on the map the position of the required reserves.

In addition I would recommend that larger reserves be made—say 4 square miles, near to crossing-places and townships—at the following places where marked on the map:—

(1.) On No. 1 main road, near the Anabranck, about 6 miles from the town of Wentworth.

(2.) On No. 3 main road, near Bulponga, on the Anabranck, a reserve and crossing-place is required to No. 2 main road, for stock travelling to South Australia.

(3.) On No. 5 main road, about 4 miles north from the town of Wentworth.

(4.) On No. 5 main road I would recommend a reserve for a crossing-place on the Darling, Cooona Point, on No. 3 main road.

(5.) On Wilpatara, on the Anabranck, a reserve is required for a crossing-place.

15. Travelling stock passing through Crown Lands have not in every case free access to the half-mile they are entitled to on both sides of the roads; as in several places the lessee of the run has encroached upon that right by erecting a fence along one side of the road, fencing off from that side the bends or angles of the rivers and creeks. Also, in places where the road runs parallel and close to the banks of river and creeks, travelling stock have got access to feed only on one side of the road. As a remedy for these obstructions, I would recommend granting the privilege of having access to the full width to which they may be entitled, on the opposite of the road from such fence or other obstruction. And also by making sufficient permanent reserves for watering and feeding stock, in which case I think that access to one quarter of a mile on both sides of a road will be sufficient, instead of one half mile as at present.

16. In this district there is only one reserve that I am aware of, as set apart for the use of travelling stock, viz., that situated near the crossing-place on the South Australian border, and it is trespassed on, both by the lessee of the run and by a conditional purchaser of adjoining land.

It is a difficult question to solve which is the best way of protecting reserves for travelling stock. Now, the lessees of Crown Lands have their stock running at large. I consider these reserves would be of no use for feeding unless they were fenced off from all other lands, and some one appointed (who would have to reside on them) to prevent trespass.

I strongly recommend, if such reserves are to be made at all, it should be done at once in this district, before all the water frontages become alienated. Regulations for their protection could be made at some future time.

V.—DAMS, TANKS, AND WELLS.

17. A tank is required on No. 4 Minor Road, about half-way between the Anabranche and Lake Victoria. The cost of excavating same will be 1s. 2d. per cubic yard; sinking wells in this district is so very expensive, that it is out of the question to attempt it for the use of travelling stock; and tanks cannot be depended on for any length of time, the rainfall is so little and the evaporation so great in the summer-time.

I beg further to report to you that, from information received, a new road is urgently required, to start from outside of my district. From near Menindie, on the Darling, across to the Barrier Ranges to join the South Australian surveyed road, near Brinkworth Well, on the border. On this route there are great natural facilities for obtaining water, in catching-places on the surface; and by sinking a few wells, all the stock traffic from Queensland, the Upper and Middle Darling country, would be diverted to this route in all seasons, to the Adelaide markets; I have no doubt the Inspector at Menindie will be able to mark the best route for this new road.

I have, &c.,
A. M'CLYMONT,
Inspector of Stock.

31.—WINDSOR DISTRICT.

STOCK INSPECTOR CLEEVE TO THE CHIEF INSPECTOR OF STOCK.

North Richmond, 7 October, 1874.

SIR,

In accordance with your instructions of the 15th September, requesting me to inspect the stock droving road from Richmond along Bell's Line Road to the point where that road intersects the main road from Mudgee to Wallerawang, &c. I beg herewith to submit to you the following information:—Firstly, I propose to bring under your notice the places and situations required to be set apart for reserves for feed and water for the convenience of travelling stock; they may appear numerous and close together, but the country is so poor and mountainous that the reserves would soon be exhausted from the quantity of stock using them, if there were not plenty of them.

Starting from Richmond, the first proposed reserve for feed and water is situated about 15 miles, or about $3\frac{1}{2}$ miles from foot of cut rock, on the south side of Bell's Line Road, area proposed, $1\frac{1}{2}$ mile long, and $\frac{1}{2}$ a mile deep. Connor's Swamp, about 2 miles from Taberago, 20 miles from Richmond. Feed and Water Reserve, on north side of Bell's Line Road, commencing at a tree known as the 2-mile Beach Mark, thence west along Bell's Line 1 mile and 1 mile deep, purchased land in front of this proposed reserve.

"Timmins Swamp," about 35 miles from Richmond, on the north side of Bell's Line; proposed area, 1 mile square, Water Reserve.

"New Found Out," about 37 miles from Richmond, at the turn off to Mount Wilson: proposed area, $\frac{1}{2}$ a mile on each side of marked-tree line leading to Mount Wilson, and 1 mile deep, Feed and Water Reserve. Junction of Old Bell's Line and Maddock's Line, a feeding reserve for 2 miles on west of Maddock's Line and 1 mile deep, commencing at the junction of the two roads 48 miles from Richmond.

"The Slide," about 41 miles from Richmond, on south side of road, about $\frac{1}{2}$ a mile square, a water reserve. (This ought to have come before the junction reserve.)

"Happy Valley," about 50 miles from Richmond, on south side of road, area $\frac{1}{2}$ a mile square. Water reserve, Kangaroo Creek, about 56 miles from Richmond, commencing where road leaves Kangaroo Creek, running back or east towards Brown's accommodation-house, 2 miles and $\frac{1}{2}$ a mile each side of road, for feed and water.

I wish now to bring under your notice that the stock do not travel along the surveyed road from Kangaroo Creek, but take a new track known as the Ben Bullen Track; the drovers have from their own contributions had a track made, but the free selectors are now talking of stopping them; it is of the utmost importance that this track be declared as soon as possible a Government road. The very fact of the drovers having had a track cleared shows their ideas on the subject.

This track leaves Maddock's Line where the Maddock's Line Road branches off from Kangaroo Creek on the Walgan Road, thence to Gardener's selection, and striking the main Mudgee Road at Welsh's public-house; the advantages of this track—a saving in distance of 5 miles, good feeding and watering-places on (supposed to be) Government land.

At present one selector of 40 acres on this line (Ben Bullen) claims both sides of the main water in his selection, but I think it is impossible for a selection of 40 acres to be measured on both sides of a main

main water; on the strength of it he extorts money from the drovers for watering, though there is plenty of water at the back of his selection; but, so to speak, he blocks the gangway and cannot be got at. This wants looking into. The selector's name is Chester.

Respecting Mount Wilson, I am afraid it will not be of much use to travelling stock. The turn off is at a place known by the drovers as New Found Out, and is 3 miles from the road. It is rather difficult of access, and the stock would have to go in and out on the same track, thereby no headway can be gained, and I consider it is not much superior to New Found Out Reserve. If a decent track could be found from Mount Wilson to the Bald Hill, or any way towards Tomah, it (Mount Wilson) would be valuable as a reserve. At present the brush is too high to put stock into it with safety, but a bush fire would remedy this evil.

Respecting improvements in the Bell's Line Road, I might suggest the best way to remedy this evil would be for the Government to give a large amount towards the repairs; as I am quite sure the present Road Trust, composed of Messrs. Lamrock, Bowen, and Comerie, have made great improvements since they have taken the trust, and it is surprising, considering the money at their disposal, the cuttings and roadwork they have done.

The two worst places are Mount Tomah and Jacob's Ladder. I estimate these places would require £200 each to be expended on them to make them good.

Before closing this, I would like to bring under your notice that a reserve is required on the Bulga Road, where that road crosses Wheeney Creek.

I have, &c.,
G. A. CLEEVE,
Inspector of Stock.

STOCK INSPECTOR CLEEVE to THE CHIEF INSPECTOR OF STOCK.

North Richmond, 18 October, 1875.

SIR,

I beg to forward you the description of track used by the drovers of stock across Bell's Line, and known as the "Ben Bullen Track."

The starting point being where Maddocks' Line leaves Kangaroo Creek, at a distance of 4 miles beyond or north-west of Brown's accommodation-house, thence northerly along a cleared track for a distance of 4 miles, where the Walgen Road is intersected; thence northerly to Gardiner's house, at the head of Ben Bullen Swamp, a distance of 5 miles; thence northerly to the gap where this track junctions into the main Mudgee Road at Welsh's Public House. Total distance of Ben Bullen track about 14 miles.

I might further state that a selector named Chester, adjoining Barton's ground, is the party who charges the drovers for feeding on Ben Bullen Swamp, though believed to be Government ground, and perhaps the Government ground around Chester's selection could be declared a reserve for the present, till the line is surveyed.

I have, &c.,
G. A. CLEEVE,
Inspector of Stock.

STOCK INSPECTOR CLEEVE to THE OFFICER IN CHARGE, OCCUPATION OF LANDS.

North Richmond, 7 October, 1874.

SIR,

In compliance with your letter of the 28th August, 1874, instructing me to report on the obstructions (if any) to the reserves, &c., for travelling stock, I beg to inform you that I have visited the reserves situated in my district, and find that there are no obstructions.

I have, &c.,
G. A. CLEEVE,
Inspector of Stock.

STOCK INSPECTOR CLEEVE to THE CHIEF INSPECTOR OF STOCK.

SIR,

I beg to enclose replies to the various questions contained in your circular of the 30th November, 1874:—

I.—DROVING ROADS AND TRACKS.

1. Bell's Line, Bulga, Blue Mountain, and Wiseman's Ferry.
2. Chiefly over mountain country, crossing rivers and running parallel to them.
3. Bell's Line, cattle 8,000, sheep 50,000; Bulga, cattle 6,000, sheep 30,000; Blue Mountain, cattle 2,500, sheep 10,000; Wiseman's Ferry, cattle 200, sheep 5,000.
4. Three chains. Most of the tracks are over barren mountains. The tracks are unenclosed. In the Coast Scab District, the Blacktown and Western Roads are both of insufficient width.
5. The Western Road, as regards the metalling.
6. Cannot advise any way of making new roads or diverting the traffic.
7. Only in one case, that is the western end of Bell's Line, already specially reported on.
9. No obstructions, excepting on Ben Bullen Swamp, on the western end of Bell's Line, upon which I have specially reported in previous report.

II.—PUBLIC GATES.

- 10 and 11. There are no public gates in this district.

III.—CROSSING-PLACES.

12. The crossing-places are tolerably good, excepting in times of flood. A high level bridge over the Hawkesbury River at North Richmond would facilitate the transit of stock.

IV.

IV.—RESERVES FOR GRASS AND WATER.

13 and 14. Besides those places recommended by me as feeding and watering reserves in my special report on Bell's Line, additional reserves are required where the Bulga Road crosses the Colo and Wheneey Creeks *en route* to the Kurrajong, on both sides of the creeks, of an area of 500 acres each.

15. No obstruction.

16. Not trespassed on.

V.—DAMS, TANKS, AND WELLS.

17. None required.

I beg to state that I have received no map "on a large scale" showing Bell's Line, and it is impossible to mark the places suggested as reserves and watering places on the small-scaled map; but I conclude that my former report on this road gave the required information, and for this reason no large-scaled map similar to that showing the Bulga Road was sent.

I have, &c.,
G. A. CLLEEVE,
Inspector of Stock.

MEMO.—The two reserves recommended are shown with dotted red lines in the north-west corner of the map of the County of Cumberland. Also, one of these reserves, viz., the place where the Bulga Road crosses Colo River, is shown in the south-east portion of the map of the county of Hunter.

32.—YASS DISTRICT.

STOCK INSPECTOR TURNER TO THE CHIEF INSPECTOR OF STOCK.

North Yass, 26 April, 1875.

Sir,

With reference to your circular of 30th November, 1874, I have the honor to enclose information to the best of my ability, on the questions therein contained,—also, to forward the maps which were sent by you,—and beg to state that I am unable to indicate by marking on them, the positions of the obstructions, reserves, or portions of the roads or tracks you refer to, inasmuch as they are not shown in the maps; and at the same time to state, I am not in a position to give the required information as regards other districts of the Colony, being perfectly unacquainted with any but my own.

I have, &c.,
THOMAS TURNER,
Inspector of Sheep.

1. Any that are suitable for stock driving.
2. No preference can be given to any roads or tracks on either side of the rivers and creeks in my district that are used for travelling stock.
3. Cannot form an estimate of the number of sheep or cattle travelling through my district annually, as many must pass without my seeing them.
4. A quarter of a mile on either side; not any of them right in this respect.
5. That portion of the main Southern Road passing through my district metalled throughout, rendering it partially unfit for travelling stock.
6. To avoid the above-named road, travelling stock in most cases take the tracks that are used for the purpose of travelling.
7. Roads or tracks for travelling purposes in my district cannot be turned or made more direct.
8. None.
9. Some few obstructions by fencing, but where such exist, gates or slip-panels are placed.
10. Two rods wide I consider a fair width for slip-panels for the use of travelling stock.
11. Yes. Cannot form an estimate as to their number, as they often vary in position.
12. Crossing-places at the rivers and creeks used by travelling stock in various places, at which I consider reserves unnecessary.
13. Not sufficient reserves generally for travelling stock.
14. Impossible for me to state, there being so much purchased land.
15. Travelling stock have free access to the half-mile in width in all cases, where not prevented by purchased lands.
16. Reserves in almost all cases are used by the adjoining stockowners, unless when occupied by travelling stock.
17. No tanks, dams, or wells required to be made on any roads or tracks for the use of travelling stock.

THOMAS TURNER,
Inspector of Stock.

33.—YOUNG DISTRICT.

STOCK INSPECTOR WILDASH TO THE CHIEF INSPECTOR OF STOCK.

Burrowa, 26 October, 1874.

Sir,

Referring to your letter of the 1st September, enclosing circular from the Occupation of Lands Office, in which there are difficulties represented to the Government, in consequence of reserves on the travelling stock routes being in some places fenced in, or partly so, by pastoral tenants or others, I have the honor to inform you that I am aware at the present time of two cases only in my districts in which any portion of lands are fenced in on any point of the travelling stock routes—causing at these places

places so slight a divergence of the road that I consider it not in any measure detrimental to travelling stock. In both these cases I have ascertained that the land was so enclosed previous to the notification of travelling stock roads of 18th July, 1873.

2. That in all cases that have come under my observation where gates are placed across the travelling stock roads, there is also a double slip-panel for the convenience of such stock at these points.

No main routes, such as are laid down in the charts, for the use of travelling stock, are to my knowledge entirely or otherwise closed.

3. I am fully aware that owners of land adjoining reserves for travelling stock depasture their stock on many of them, and I have not the slightest doubt that it is done in almost all cases of unenclosed reserves.

I have, &c.,

C. C. WILDASH,

Inspector of Stock.

STOCK INSPECTOR WILDASH TO THE CHIEF INSPECTOR OF STOCK.

Burrowa, 26 October, 1874.

SIR,

In referring to your letter of the 24th of September, I have the honor to state that there are various routes or droving roads for travelling stock from Forbes and the Lachlan River to Wagga Wagga and Narandera, namely:—One from Cowra to Wagga Wagga and Narandera *via* Young, Marengo, or Condoblin; one from Cowra down the Lachlan River to Narandera *via* Hay; one from Forbes to Wagga Wagga and Narandera *via* Young; one from Forbes to Wagga Wagga and Narandera *via* Morangarell; one from Forbes to Wagga Wagga and Narandera *via* Marsden and Stumbey Creek.

2. From several of these roads passing entirely through other districts than mine, I am not in a position to give approximately an estimate as to how many cattle or sheep travel by them during the year.

3. I do not conceive that these roads could be shortened, but capable of much improvement by making necessary reserves for travelling stock to water, and have their regular camping grounds.

4. I should say it is essentially necessary that reserves should be made for travelling stock in the neighbourhood of Forbes and Narandera, also at Wagga Wagga to a large extent, at which place there appears always to have been a great rendezvous for stock travelling for the Victorian markets.

I have, &c.,

C. C. WILDASH,

Inspector of Stock.

STOCK INSPECTOR WILDASH TO THE CHIEF INSPECTOR OF STOCK.

Burrowa, 1 March, 1875.

SIR,

With reference to your circular of 30th November last, I have the honor to supply you now with what information I am at present able, with regard to the droving roads and reserves for feeding, watering, and camping travelling stock in my district, also to forward the maps received from you, which I shall be again glad to have as you mention, when the information is collated by the Surveyor General.

I regret to think that the information you seek is very short of what you may require, and may mention that I have taken every trouble to make all inquiries from the proper sources, as well as endeavouring to make myself acquainted by personal inspections, in order to give the necessary information.

With regard to any information from other or neighbouring districts, I regret to say that from my own personal knowledge of them, and the little opportunity of seeing any one who is able to give me any, I am not in a position to do so. I will, however, further endeavour to gain such that I can when going about my district.

I have, &c.,

C. C. WILDASH,

Inspector of Stock.

Answers to Questions.

1. Every road or track in this district is used, if suiting the convenience of travellers.
2. There are no roads on either sides of any creeks which are not required, as they lead to other districts.
3. It is impossible to form even an approximate estimate.
4. I think a quarter of a mile on each side of the road sufficient. Roads in this district are of this width.
5. None metalled, and none unfit for stock travelling.
6. See No. 5.
7. The tracks are so numerous that travellers have no difficulty in driving in a direct road.
8. It would be advisable to have droving roads proclaimed and land reserved from sale on all principal roads in the district, namely, from Yass and Goulburn to Wagga Wagga, Young, Forbes, and Cowra. Tracks are marked in red ink so far as these tracks are laid down on the maps; but very few are laid down, and it would be impossible for me to show their exact position on the maps.
9. Some are obstructed by fences, but at many of them gates and slip-rails are left on the roadway for travellers.
10. Generally the openings are about two rods wide, and this I consider fairly sufficient.
11. There are a number of gates on many of the tracks, but I can form no estimate of their number as they are fluctuating. The tracks on which these gates are not being marked on the maps, their position cannot be marked.
12. Many of the crossings might be improved, but the mode or expense of doing this I cannot determine, it would require the services of a road engineer to do this. Reserves are advisable at the crossings, but at many places the lands have been already sold.

13. I have never been furnished with a list of reserves referred to in this question, and cannot obtain the information at the Land Offices. I am therefore unable to give a reply.

14. See No. 13.

15. Only in two cases within my knowledge have the fences or paddocks interfered to a slight extent, by which stock have to go round a fence instead of through a corner of a paddock. This does not, however, obstruct the travelling.

16. So far as I know of the existing reserves, they are used generally by the owners of the adjoining runs when not occupied by travelling stock.

17. The principal roads on which it would be desirable to have wells or tanks, are on the road to Wagga Wagga beyond Wallendoon, Young *via* Grenfell to Forbes, Young to Yeo Yeo Creek, Marsden to Forbes, and Young to Cowra. Without making a special survey of the roads, and obtaining information as to lands sold, &c., which I cannot procure, it would be difficult to note exactly where such works could be carried out; the expense I can form no idea of, beyond the fact that it is difficult to get dam-makers to work at 1s. per cubic yard.

I have, &c.,
C. C. WILDASH,
Inspector of Stock.

1875-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SPECIAL REPORT FROM THE SELECT COMMITTEE

ON

DISEASES AFFECTING LIVE STOCK ;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE,

MINUTES OF EVIDENCE,

AND

APPENDIX.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
3 *February*, 1876.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1876.

1875-6.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES NO. 8. FRIDAY, 26 NOVEMBER, 1875.

6. DISEASES AFFECTING LIVE STOCK (*"Formal" Motion*):—Mr. J. S. Smith moved, pursuant to Notice,—
- (1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into, and report upon, the prevention of the Diseases affecting Live Stock, and the constitution and working of the Stock and Brands Branches.
- (2.) That such Committee consist of Mr. T. G. Dangar, Mr. Lord, Mr. Garrett, Mr. Hay, Mr. Phelps, Mr. Robertson, Mr. Stuart, Mr. W. H. Suttor, Mr. Day, and the Mover.
- (3.) That the Proceedings of, and Papers referred to, the Select Committee of last Session, be referred to the said Committee.
- Question put and passed.

VOTES NO. 35. WEDNESDAY, 2 FEBRUARY, 1876.

2. PAPERS:—
- Mr. Garrett laid upon the Table,—Return to an Order, made on 21st April, 1875, in reference to the Inspection of Sheep, and the Convictions that have taken place under the Diseases in Sheep Act. Mr. T. G. Dangar (*by consent*) moved, without Notice, That the Returns having reference to number of Sheep and Convictions under Diseases in Sheep Act; also, Return of Reports, &c., from Stock Inspectors, laid upon the Table of the House, be referred to the Select Committee now sitting on Diseases affecting Live Stock.
- Question put and passed.

* * * * *

3. DISEASES AFFECTING LIVE STOCK:—Mr. J. S. Smith (*by consent*) moved, without Notice, That the Select Committee on Diseases affecting Live Stock have leave to make a Special Report.
- Question put and passed.

VOTES NO. 36. THURSDAY, 3 FEBRUARY, 1876.

2. DISEASES AFFECTING LIVE STOCK:—Mr. J. S. Smith (*by consent*) moved, without Notice, That the name of Mr. Farnell be substituted for that of Mr. Stuart as a Member of the Select Committee on "Diseases affecting Live Stock."
- Question put and passed.
5. DISEASES AFFECTING LIVE STOCK:—Mr. J. S. Smith, as Chairman, brought up a Special Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee for whose consideration and report this subject was referred, on 26th November, 1875, together with Appendix.
- Ordered to be printed.

 DISEASES AFFECTING LIVE STOCK.

 SPECIAL REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 26th November, 1875,—with power to send for persons and papers, to inquire into and report upon the prevention of the Diseases affecting Live Stock, and the constitution of the Stock and Brands Branches,—and to whom was referred, on the same date, the Proceedings of, and Papers referred to, the Select Committee of last Session, and, on the 2nd February, 1876, the Returns having reference to number of Sheep and Convictions under Diseases in Sheep Act, and Return of Reports, &c., from Stock Inspectors,—beg to submit the following Special Report to your Honorable House :—

Your Committee, having taken the evidence of the Witnesses* named in the margin, recommend that the services of all the Inspectors of Sheep, with the exception of those on the Borders and those in the Coast Districts, be dispensed with at the end of this year.

* A. Bruce, Esq.
W. Hay, Esq., M.P.
G. Day, Esq., M.P.

JNO. S. SMITH,

Chairman.

No. 2 Committee Room,

Sydney, 3rd February, 1876.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 15 DECEMBER, 1875.

MEMBERS PRESENT:—

Mr. J. S. Smith,		Mr. Phelps,
		Mr. Day.

Mr. J. S. Smith called to the Chair.

Entry from Votes and Proceedings appointing the Committee, and referring Papers thereto, read by the Clerk.

Printed copies of the Papers referred, before the Committee.

Committee deliberated.

Ordered, That Alexander Bruce, Esq., be summoned to give evidence next meeting.

[Adjourned to Friday next, at *half-past Two* o'clock.]

FRIDAY, 17 DECEMBER, 1875.

MEMBERS PRESENT:—

Mr. Day,		Mr. T. G. Dangar,
Mr. Phelps,		Mr. W. H. Suttor.

In the absence of the Chairman, Mr. W. H. Suttor called to the Chair *pro tem*.

Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

WEDNESDAY, 22 DECEMBER, 1875.

MEMBERS PRESENT:—

Mr. J. S. Smith in the Chair.

Mr. W. H. Suttor,		Mr. Day.
-------------------	--	----------

Alexander Bruce, Esq. (*Chief Inspector of Stock and Registrar of Brands*), called in and examined. Witness *handed in* certain documents, which were ordered to be appended. (*See Appendices A 1 to*

A 4.)

Witness withdrew.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

TUESDAY, 18 JANUARY, 1876.

In the absence of a quorum, the meeting called for this day lapsed.

THURSDAY, 20 JANUARY, 1876.

MEMBERS PRESENT.

Mr. J. S. Smith,		Mr. Hay.
------------------	--	----------

In the absence of a quorum, the meeting called for this day lapsed.

THURSDAY, 27 JANUARY, 1876.

In the absence of a quorum, the meeting called for this day lapsed.

WEDNESDAY, 2 FEBRUARY, 1876.

MEMBERS PRESENT:—

Mr. J. S. Smith in the Chair.

Mr. Day,		Mr. W. H. Suttor,
Mr. Hay,		Mr. T. G. Dangar.

Committee deliberated.

Alexander Bruce, Esq., called in and further examined.

Witness *handed in* certain documents, which were ordered to be appended. (*See Appendices A 5 and*

A 6.)

Witness withdrew.

William

William Hay, Esq., M.P., a Member of the Committee, examined in his place.
George Day, Esq., M.P., a Member of the Committee, examined in his place.
Committee deliberated.

Motion made (*Mr. T. G. Dangar*), That the Chairman be instructed to draw up a Special Report, to be submitted to the House, recommending that the services of the Inland Inspectors of Sheep be dispensed with at the end of this year.

Question put and passed.

[Adjourned to To-morrow, at *Three o'clock*.]

THURSDAY, 3 FEBRUARY, 1876.

MEMBERS PRESENT:—

Mr. J. S. Smith in the Chair.

Mr. W. H. Suttor,		Mr. T. G. Dangar,
Mr. Hay,		Mr. Day.

Entry from Votes and Proceedings referring papers to Committee, read by Clerk.

Chairman submitted Draft of Special Report, which was read 1^o as follows:—

Your "Committee" recommend that the services of the Inland Inspectors of Sheep be dispensed with at the end of this year.

Amendment proposed (*Mr. W. H. Suttor*), That the words "do not" be inserted after the word "Committee" in the first line.

Question,—That the words proposed to be inserted be so inserted,—put.

Committee divided.

Aye, 1.		Noes, 3.
Mr. W. H. Suttor.		Mr. Hay,
		Mr. Day,
		Mr. T. G. Dangar.

And so it passed in the negative.

Further Amendment proposed (*Mr. Hay*), That all the words after the word "Committee" be omitted, with a view to the insertion of the following words:—"having taken the evidence of the witnesses* named in the margin, recommend that the services of all the Inspectors of Sheep, with the exception of those on the Borders and those in the Coast Districts, be dispensed with at the end of this year."

Amendment put and *agreed to*.

Special Report as amended *agreed to*.

Chairman to report to the House.

Committee deliberated.

[Adjourned to Wednesday next, at *Two o'clock*.]

LIST OF WITNESSES.

	PAGE.
Bruce, Alexander, Esq.	7, 8
Day, George, Esq., M.P.	12
Hay, William, Esq., M.P.	11

LIST OF APPENDICES.

[To the Evidence of Alexander Bruce, Esq., 22 December, 1875.]

	PAGE.
A 1.	
Copy of Circular sent to the Boards of Sheep Directors in reference to the retention of Inland Inspectors, with accompanying Memo.	13
A 2.	
Abstract showing opinions of the various Boards, in reply to Circular	14
A 3.	
Réplies of the various Boards to Circular.....	14
A 4.	
Paper containing detail of Memo. forwarded to the different Boards, with Circular	28

[To the Evidence of Alexander Bruce, Esq., 2 February, 1876.]

A 5.	
Return showing number of sheep in the various districts under the supervision of Inland Inspectors	29
A 6.	
Additional replies received from Sheep Directors to Circular	30

- Alex. Bruce, Esq.
22 Dec., 1875.
13. Do you think the Committee would be justified in taking the opinion of the directors as representing the opinion of the sheep-owners? I think so.
14. *Chairman.*] I understand it is in this way: a meeting is called of the different sheep-owners of a particular district, and these when they meet elect directors. If they do not meet by a certain date the Government gazette certain directors—is not that the case? Yes; I will read the section of the Act. (*The witness read the 4th section of the Sheep Act.*)
15. *Mr. Suttor.*] What rule guides you in the nomination of directors, when you are called upon to do so? I nominate the old directors.
16. *Mr. Day.*] They are always large sheep-owners? Yes. In some cases, where parties have left the district, I refer to the member or to the Chairman of the Board of Directors.
17. *Chairman.*] In the case of a vacancy occurring in the Board, how is it filled up? In the same way as the annual appointment: a meeting is called by the Minister to fill up the vacancy, and in such cases I may say I have generally to nominate, as the sheep-owners do not take the trouble to attend a meeting to elect only one director.
18. *Mr. Day.*] Is there not a certain amount of money put at the disposal of each Board for the expenses? No, they are allowed £1 a day for travelling expenses; they send in their vouchers. There is no sum put at the disposal of each Board.
19. What does travelling expenses mean—the travelling expenses of the directors from their places of abode to the place of meeting and back again? Yes; there is no allowance for their time. I will put it in a way you will at once understand:—Mr. Mitchell, of Woomargama, has two days' travelling expenses to attend a meeting of Directors at Albury, that is £2, the distance from Albury being 30 miles.
20. Then he would be allowed the same to Mullengandra? No; he could attend the meeting there, and go back again the same day, the distance being only 10 miles.
21. Then he would be allowed only £1? Yes; but if he were to go to Albury, he would not be able to do the business and return on the same day.
22. Then is this amount defined in any way, or is it unlimited? It is defined by the regulations to be £1 a day.
23. I mean the gross amount allotted to any Board? There is a sum put on the Estimates of £200 for the whole Colony.
24. Is it unlimited—can they travel as much as they like? It is for me to certify to the vouchers, and if they had not been attending on the business of the Act I would not feel it to be my duty to certify. I know whether a meeting takes place or not, and its object.
25. *Mr. Suttor.*] You only pay travelling expenses when a meeting is called by the Chairman of the Board? Yes.
26. *Mr. Day.*] Every one of these Boards, both inland and on the border, receives £5 if five directors attend a meeting? Yes, for one day each.
27. Does not that amount to a very considerable sum of money? We have never overrun the amount placed on the Estimates—£200 a year. I now beg to hand in the various answers to the circular already referred to. (*The witness handed in the same. Vide Appendix A 3.*) I would also beg to hand in a paper in which I have prepared in greater detail what in substance is contained in the memorandum forwarded by me with the circular to the Inland Boards already before the Committee. (*The witness handed in the same. Vide Appendix A 4.*)
28. Will you prepare against the next meeting of the Committee a return of the amount of contribution paid by those who are in favour of the retention of the sheep inspectors, as compared with that paid by those who are opposed to such retention? I will.

WEDNESDAY, 2 FEBRUARY, 1876.

Present:—

MR. T. G. DANGAR,
MR. DAY,

MR. HAY,
MR. W. H. SUTTOR.

JOHN S. SMITH, Esq., IN THE CHAIR.

Alexander Bruce, Esq., further examined:—

- A. Bruce, Esq.
2 Feb., 1876.
29. *Chairman.*] I think you are aware that this Committee wish to bring up a Progress Report with regard to the retention or non-retention of the sheep-inspectors in the interior of the Colony? Yes.
30. Having read the various reports that have been sent to you by the directors throughout the Colony, will you give your individual opinion as Chief Inspector of Stock? Would it be out of place to ask the Committee to take up the matter in the order in which I have dealt with it,—first with respect to the sheep, and then with the other subjects?—
31. We know, from the perusal of the answers to the circular, that a large number of sheep-proprietors think the inspectors should be retained, but we want your opinion? My individual opinion is that in the meantime they are not doing work that calls for their being retained, but that if they had the different things to do I have mentioned they ought to be retained.
32. That is in regard to cattle? In regard to cattle; in regard to their being inspectors of pounds and several other matters.
33. Do we understand this,—that with regard to their inspecting sheep they have scarcely any duty to perform? So far as disease is concerned. They have duties under the sheep Act, with respect to branding and with respect to travelling, with respect also to the payment of contributions, and various other duties under the Act, but not strictly speaking with respect to disease.
34. Are there very many cases brought under your notice of dereliction of the Act with regard to travelling or branding? A good many; I may mention that a return, which has been called for by Mr. Dangar, in which those cases that have occurred within the last two years are given, will probably be laid on the Table of the House to-night. That includes a statement of their duties, and the number of convictions.
35. What we want to gather from you is, whether as to sheep alone, the inspectors of the interior should be

- be retained or not—is there sufficient duty for them to perform? Speaking with reference to disease in sheep, under the Sheep Act, there is not. A. Bruce, Esq.
2 Feb., 1876.
36. Not sufficient to justify you in recommending the Committee to retain them? That is, speaking with reference to the Sheep Act alone.
37. *Mr. Hay.*] How many coast inspectors are there? Do you mean border inspectors?
38. No, on the seaboard, leaving yourself out as Chief Inspector? One at Eden, Shoalhaven, Sydney, Windsor, Maitland or Newcastle, Port Macquarie, the Clarence.
39. Are sheep landed at these various places? Yes.
40. Quarantined? Yes.
41. Have you any idea how many have been quarantined at Eden and Shoalhaven? A few at Shoalhaven.
42. Any at Eden at all? Occasionally a lot from Monaro.
43. Newcastle? A great many at Newcastle.
44. Port Macquarie? Very few.
45. Is there any need for an inspector at Windsor? He has to watch Broken Bay and the Hawkesbury River, which is the boundary of the coast district.
46. Are any sheep landed at Broken Bay? No, but he has to watch the coast district.
47. On the border—between here and Victoria—you have, I think, four or five? Two at Albury, one at Corowa, one at Moama, one at Euston, and one at Wentworth.
48. *Mr. Day.*] Is there none on the South Australian border? The inspectors at Menindie and at Wentworth take the whole South Australian border.
49. How do they manage to supervise stock crossing the border from South Australia to New South Wales? Owners intending to introduce sheep give notice that they are to cross, and the inspector examines them.
50. Have they to travel from Menindie to the South Australian border? From Menindie to the Barrier Ranges; they cross at a place called Thackeringa into the Menindie district.
51. *Mr. Hay.*] May I ask you how many you have on the Queensland border? One at Tenterfield, at Warialda, and at Bourke.
52. That would be about seventeen altogether to guard the outposts of the Colony? Yes.
53. How many interior inspectors have you, irrespective of the border and coast inspectors? There are eighteen.
54. With regard to these boundary riders, I suppose you are aware that they were put on at the Murray at the time when the sheep on the stations on the opposite side were scabbed? Yes.
55. It is not to be supposed that every inspector is to have a lieutenant to do active work under him. I wish to know whether you would advise, if we were dispensing with the interior inspectors, we should not also dispense with the boundary riders, who act as lieutenants to the inspectors on the borders? To a large extent the question of boundary riders has been left to the directors in the district. There has been a reminder sent periodically asking them to dispense with them when they could, but they have been anxious to keep them on, and as we are not certain about the cleanness of Victoria, it is desirable they should be retained for the present.
56. When there was a good deal more scab within 50 miles of the Murray we had not these people; it was only when it appeared on the opposite side of the river they were appointed? Yes.
57. I suppose you are aware from the reports you receive from the Inspector of Sheep in Victoria that there is no scab within a hundred miles of the Murray? I do not know that.
58. The Acheron is the only one that has been affected, and that has been twelve months clean, though they are going to allow twelve months longer to see if there are any signs of the disease. That is a hundred miles from the border. The question comes whether these boundary riders are such superior men that they should be kept on at £150 a year to do nothing, or whether if a necessity for them should arise we could not get them at a moment's notice? The directors should look after that.
59. *Chairman.*] I suppose it is not usual for these boundary riders who are paid £150 a year to be allowed to take other employment? No, so far from it that they are required to do so many miles a day, to visit certain places, and to report themselves.
60. *Mr. Day.*] How many boundary riders are there between Albury and Walleragang? About six now.
61. They might be dispensed with, as there is no scab there? I thought so, and intimated to the directors that I thought they might be dispensed with; but, as I have said, this is a local matter, and it has been left in their hands.
62. *Mr. Hay.*] Generally it is the same with boundary riders as with inspectors, each has his particular friend—is it not so? It may be.
63. *Mr. Dangar.*] At your last examination you promised to produce a return of the number of sheep in the districts in which the sheep directors were in favour of and against the retention of these inspectors—have you that return? Yes. (*The witness handed in the same. Vide Appendix A 5.*)
64. In a return which you handed in at your last examination, it appears that the expense of the inspectors, as shown there, is £7,350, while the gross expenditure is £11,582? I believe a return called for by you, now before the Committee but not handed in by me, shows that to be the case, but the Estimates will show.
65. Do you consider the appointment of these inspectors by the local Boards objectionable or not? I think the objection lies in this—that there is no stipulation as to qualification. I do not know that there would be any improvement in transferring the appointment to the Government; in some cases there might be—in others there might not. We have had some appointments made by the Government that were not better than those made by the directors. One advantage would be that the person appointed would frequently not be a local man—he would have no connection with the district.
66. There would be greater responsibility? Yes, but if any change were made at all it should be with reference to the requisite qualification.
67. Some of these appointments are made by these Boards? Yes.
68. Are there often differences between them as to the persons to be appointed? Yes, it is inconvenient for these several Boards to meet at the same time at the same place, as some of the directors are dragged a long way from their homes; there could be an improvement made upon that.
69. What would you suggest? That each Board should meet at its usual meeting place, and the majority of votes should decide.
70. You think it better that the appointment should rest as it is than that it should vest in the hands of the Government? I am doubtful upon that point—the great necessity is the guarantee of the possession of qualification on the part of the person appointed.

- A. Bruce, Esq. 71. In your circular to the different Boards of directors you say one reason for retaining inspectors is that they are the best persons for determining roads and reserves—Will you state your reasons for that opinion? So far as travelling stock are concerned, the inspector has a better opportunity of seeing what they require than anybody else. His duty is to meet travelling stock at all points, and to examine them, and he would see how they fared as to feed and water.
- 2 Feb, 1876.
72. Is it your opinion that he is better qualified to do this service than the surveyor of the district? I do not think his opinion should be acted upon alone, without reference to the surveyor. The report of the inspector now goes to the district surveyor, who has, in fact, to decide where the roads and reserves shall be.
73. Do you not think that these inspectors being appointed by local Boards might be influenced in their recommendation of roads and reserves? No doubt they might, but their decision is not final; they merely point out the wants of a district, the matter is then referred to the district surveyor, and then to the Minister.
74. Are there any amendments required in this present Scab Act? I think some amendment is required in respect to the coast districts, to enable sheep to go back from market or from the neighbourhood of a market with less inconvenience and expense than now.
75. Then I infer you think it unnecessary that sheep coming into the county of Cumberland should be dipped three times? Yes, I think it might first be reduced to one dressing, and at length to a mere inspection.
76. Do you not think if it were possible for you to travel about and to exercise some supervision of these inland inspectors this Act might be much better carried out? I think so decidedly; I think I may have neglected my duty somewhat in this respect, but the department has so long been in an unsettled state—there has been so much uncertainty as to the retention of the inspectors, that I have not asked permission lately to go out. If the inspectors are retained and they have some of the other duties given them which I have mentioned, I have no doubt at all that they would do very good service and would give value for the money they receive in the way of salaries; and I believe that we might ultimately get rid of pleuro-pneumonia.
77. It would be necessary for an Act of Parliament to be passed before these new duties could be imposed upon the inspectors? Yes, in every case, and that is why I have not asked them to do anything with regard to cattle. Some measure should be passed to give them charge of pounds. In respect to this I am often receiving letters such as one I have here, dated the 1st, from a gentleman, calling my attention to the way in which the stock are cruelly starved in a pound in the neighbourhood of Sydney.
78. I infer from your evidence that you are in favour of temporarily retaining these sheep inspectors with the view of imposing extra duties upon them hereafter, but if those duties are not imposed you think they might be dispensed with? If the Committee think the suggestions I have made should be carried out—then the inspectors should be retained, as I am confident, especially from what I have seen lately, in respect to pleuro-pneumonia, that we should be able to get rid of the disease. There is also another matter in which they would be of service—I allude to the prevention of sheep-stealing. This crime is decidedly on the increase. A gentleman called at my office to-day who lost 500 sheep from the neighbourhood of Cassilis. The superintendent traced them as far as Barraba, where he found them with the brands altered. There is a regular gang of sheep-stealers there that works with one or two other gangs in different parts of the Colony.
79. Have you any other papers you wish to hand in? I hand answers from four additional Boards in reference to the retention of the inland inspectors. (*See Appendix A 6.*)
80. *Chairman.*] Have you had opportunities of conversing with these sheep inspectors who have been appointed by the local Boards? I had frequently, when I was out from 1864 to 1868.
81. Latterly? Latterly I have been very little out.
82. Do you know whether many of the appointments made were of individuals who would have a thorough knowledge of scab if it did break out? I believe that was looked on as a qualification by most Boards, but I cannot speak positively, because I had no power to put the question. No qualification has been required, and as I have before stated, I think there should be some examination before appointment.
83. Do you not know, of your own knowledge, that these inspectors who have been appointed are men who have a thorough knowledge of scab if they see it? I do not know.
84. You think it would be objectionable to appoint men to this office who do not know what scab is? I know a good many are acquainted with it, for we have a good many of the old inspectors.
85. *Mr. Hay.*] Have you ever had any complaints made against these inspectors for dissipation and drunkenness? Now and then there have been some complaints.
86. *Mr. Dangar.*] Have you ever known the duties of some of them to be so slight as that they have been able to perform other duties, such as carrying ballot-boxes about the country? They have made applications to the Minister to be allowed to do it.
87. And they have done it? Yes.
88. And for which they have had extra pay? I do not know.
89. Who performs their duty during the time they are occupied? They get leave, on the understanding that one of the directors will do the duty.
90. *Mr. Hay.*] How do you think they could be useful in preventing sheep-stealing; in what way could they do that duty better than the police? In the first place, they know more about sheep, they would be much more likely to notice anything suspicious with regard to ear-marking or branding of sheep. If an inspector were a sharp man, he would notice in a little lot of sheep whether there were different sorts, and he would have all the sheep-owners and their brands registered in his register-book.
91. Do you think the men who stole the sheep would bring them to him to show them? No, but in the course of his duty as scab inspector he would go over the runs, and would see the sheep.
92. If called upon? He has the power to enter upon any run at any time.
93. *Chairman.*] Is there any stated time during the year that the scab inspector has to visit the district? He has to visit every run in it once a year at least.
94. Are you aware that in many instances a scab inspector does not visit a particular run once in three years? I am not aware; I would not say that such a thing has not occurred.
95. *Mr. Dangar.*] Have you ever known any of these inspectors to act as Deputy Returning Officers at elections? I think I have heard of such cases.
96. From your knowledge of local inspectors, would you consider, as a rule, they are well versed in the knowledge of scab? Taken as a whole I should think they are; there may be exceptional cases.
97. *Chairman.*] Have you any further papers you wish to lay before the Committee? No other papers in reference to the retention of the inland inspectors.

98. *Mr. Suttor.*] Supposing it were thought not desirable to abolish the office of interior inspectors, would you recommend the amalgamation of some of the districts? I would propose that they should be retained with a view of dealing with cattle disease, and if cattle disease is to be dealt with a full staff will be wanted. Even although cattle disease is not to be dealt with, it would certainly be useful to retain inspectors to see to the working of the Brands and Cattle-stealing Prevention Acts.
99. For the purpose of carrying out the Scab and Sheep Acts you would not require them? They are not actually required, so far as disease is concerned, but they are required for other purposes under the Act.

A. Bruce, Esq.
2 Feb., 1876.

William Hay, Esq., M.L.A., examined in his place:—

100. *Chairman.*] You have heard Mr. Bruce's evidence given to-day before the Committee, and we wish to gather from you whether, from your individual experience, and from what you have heard from Mr. Bruce to-day, you think the inspectors in the interior should be retained or not? So far as my opinion goes, and it is founded on experience, they are quite unnecessary for carrying out the Sheep Act with respect to disease and have been for some time past.
101. Are you of opinion that the inspectors on the coast and border should be retained? Decidedly.
102. You would recommend that the office of interior sheep inspectors should be abolished? Yes, that is my opinion.
103. *Mr. Suttor.*] All? Yes, the whole of them, for you cannot dismiss one without the other; there is no reason why one should be retained and the rest go; but in dismissing them I should recommend that they should have twelve months' notice or pay.
104. *Mr. Day.*] Do you think from your experience of sheep that it is necessary to have these inland inspectors to prevent people travelling without giving notice and without branding? No, I think the squatter through whose runs they pass will look sufficiently after that, and as far as branding goes I do not see why the police should not lay information against people not having their sheep properly branded. They would receive half the penalties.
105. Taking your district of Riverina, where most of the country is fenced in and the sheep are turned out to the paddocks, will there not be a great deal of boxing and mixing if no notice is given of sheep travelling? There is notice given under the Impounding Act, not under the Scab Act, I think.
106. Under the Land Act? Yes.
107. Then if these inland inspectors were dismissed you would propose to leave the whole of their duties in the hands of the police? Yes; if there is no disease I cannot see what duties they have. All the outcry about branding was in consequence of the disease, in order to be enabled to identify the sheep; and I do not see why the police should not look after travelling stock passing a township to see that they are properly branded.
108. The duties I more particularly refer to are registering premises where sheep are taken for the first time, and also returning sheep, and returning at the proper time? These returns go to the Clerks of Petty Sessions—the inspectors have nothing to do with the returns. You get the notice from the Clerk of Petty Sessions even now.
109. You would recommend that these various duties should be carried out by the police? Yes.
110. *Mr. Dangar.*] Previous to the passing of this Act they were carried out by the police? Yes, and the Dog Act also.
111. *Mr. Day.*] At the present time the scab inspectors carry out the Brands Act as well? The Brands Act in sheep.
112. And cattle? As to the Brands Act, with respect to cattle I do not think sheep inspectors should be kept for that—I fancy the police should see the law carried out in that respect.
113. You think cattle as well as sheep owners should pay for that? Yes.
114. *Chairman.*] In your experience have you known these sheep inspectors to have been very diligent in the performance of their duties? I am sorry to say not; they generally visit the home stations once a year, but they make no inspection.
115. They do not ask to go through the flocks? No, I never knew an instance. As a matter of form, in the border districts before removing sheep you have to get a permit; but this is given by the inspector, who never sees the sheep.
116. *Mr. Suttor.*] Are you aware that sheep are subject to another disease—catarrh? I have never had any experience of the disease, I have never had catarrhed or scabbed sheep within the Colony of New South Wales.
117. Are you aware that the inspectors are required to look after catarrh as well as scab in sheep? I am not aware of that.
- (*Mr. Suttor handed the Act to witness.*)
118. Do you know that catarrh is a disease that breaks out among sheep without being introduced? I have had no experience of that. I believe from what I have heard from others that it is a disease that will break out without any contact with diseased sheep; that is to say, it will originate from circumstances such as the low condition of the sheep without contact, which scab will not. It is infectious after it has originated I understand.
119. Are you aware that many years ago catarrh among sheep was a great scourge in New South Wales? Some fifteen years ago in Monaro sheep were affected with catarrh, and I am aware that in travelling they infected other flocks.
120. You never can tell where an outbreak may take place of catarrh among sheep? I do not know whether there has been any recent outbreak of catarrh.
121. *Mr. Day.*] As a very large sheepowner having had great experience, you are favourable to the abolition of the sheep inspectors in the interior? I think their office a perfect sinecure; the men have nothing to do; and it is unfair to the Country that a staff of idlers should be kept up unless there is some good reason for it.
122. *Mr. Suttor.*] Have you had any experience of foot-rot and worm disease? Of foot-rot—not of worm disease.
123. Do you think foot-rot infectious? No.
124. Or contagious? I do not think so? I have found in some places the fore legs of sheep diseased and their hind legs perfectly sound. After many years' experience I think foot-rot is not infectious.

William Hay,
Esq., M.L.A.
2 Feb., 1876.

George Day, Esq., M.L.A., examined in his place:—

- George Day, Esq., M.L.A.
2 Feb., 1876.
125. *Chairman.*] You have had an opportunity of hearing the evidence both of Mr. Bruce and of one of ourselves, Mr. Hay; will you kindly give us your own view with regard to these inland inspectors, whether in your opinion they should be retained or otherwise? I do not think they should be retained; I think they are perfectly useless.
126. You have had, I believe, a large experience in sheep? Yes, I have had thirty-five years' experience in this Colony.
127. And you think from that experience you have an intimate acquaintance with the requirements? Yes, and from my experience I do not believe these inland inspectors are at all beneficial, or of any use at all to the stockowners of this Colony.
128. Are you of opinion that the inspectors on the border and coast districts should be retained? Yes, I think all the inspectors on the borders should be retained for the present, as I think they are doing good service.
129. And in the coast districts? Yes, and on the borders of Queensland, Victoria, and South Australia, because they are not thoroughly free from scab in Victoria, and for the small amount of cost it is better to be on the safe side than to risk disease coming to the Colony. For that reason I think the border and coast inspectors should be retained for some time to come.
130. *Mr. Dangar.*] Are you of opinion that the provisions of the Act can be carried out without the services of these persons? Yes, I think so. Parties travelling sheep through a run without giving twelve hours' notice to the owner are liable to a heavy fine.
131. Do you not find that this giving notice in some cases necessitates the employment of two men instead of one? I think the Act might be amended in such a way as to give a great deal more satisfaction on both sides. In many cases it is necessary to have three hands with travelling sheep.
132. Do you consider that there is sufficient employment for these men? I think many of them have nothing to do at all, and many find employment and earn money in other ways.
133. *Chairman.*] In your experience do you know that they frequently visit the different stations? They do visit, but very seldom; I think the only inducement for them to visit is to get convictions so that they may obtain half the fines.
134. Do they frequently ask to see different flocks of sheep? I never knew them ask to see sheep.
135. *Mr. Dangar.*] You think then that they rather harass than benefit the stockowner? I do not know that they harass, they look carefully after the Act, for if they can get a number of convictions on which the fines amount to £10, they receive half, or £5, which is equal to a week's work.
136. *Mr. Suttor.*] Do you think the supervision on the borders is so good that it would be impossible for infected sheep to cross? No, I do not; I think scabby sheep might be introduced very easily, but it is to a certain extent a means of prevention.
137. Supposing scabby sheep were to find their way into the interior of the Colony, and these inland inspectors were dispensed with, do you not think the sheepowners would find themselves in an awkward predicament? I think it would be impossible for scabby sheep to get into the interior of the Colony without inspection and without infecting the districts through which they would pass.
138. Do you not know that in one case scab broke out on the Bogan, in the very centre of the country? Scabby sheep would not be likely to go to the Bogan without infecting the country through which they passed. At that time I presume sheep could travel from one country to the other without supervision; but the country is now free from scab, and it would be impossible to bring scabby sheep into it, because they would have to pass the border inspectors. The only way in which scab could be introduced would be by diseased sheep swimming across the river, but it is not likely they would travel away to the Bogan.
139. We know as a fact that for a considerable distance on the Victorian side there is no scab? There is no scab within a hundred miles of the Victorian border, and their quarantine regulations are much more stringent than ours.
140. Do you think if the boundary riders were under stricter surveillance they would be more efficient? I do not think it matters much about their efficiency at the present time, because, whether they are efficient or not, there is very little scab for them to prevent.
141. Are you aware that they frequently undertake other work than that they are paid for under the "Prevention of Scab in Sheep Act"? Yes, some of them—not the boundary riders, because the inspectors are there to look after them, and they have to travel from one station to another along the borders.
142. *Mr. Suttor.*] Have you any experience of catarrh? Yes.
143. From your knowledge of catarrh do you think it desirable to do away with all interior inspectors? If we had an outbreak of catarrh in this country I do not think it would be desirable to do away with the inspectors, but I think until we have it is as well to save our money, for we can always get as good men as these at five minutes notice if we want them. If a man has 100,000 sheep now he has to pay £50, and that is a considerable sum, and while the country is free from disease and we keep the border protected we are safe.
144. *Chairman.*] Do you think in many instances the directors are quite capable of dealing with the matter without any inspectors? I think so. I think the directors are quite sufficient in the interior parts of the Colony.
145. Do you think they are more efficient in many instances than the inspectors? I think they are, for they have a greater interest at stake, not only as far as concerns themselves but their responsibility to others, besides they are scattered about the country, perhaps a hundred miles apart, and they are on the ground and would be better able to give assistance.

DISEASES AFFECTING LIVE STOCK.

APPENDIX.

[To the Evidence of Alexander Bruce, Esq., 22 December, 1875.]

A 1.

[Circular.]

Department of Lands,
Sydney, August, 1875.

Sir,

I am directed by the Minister for Lands to request that you will favour him, on or before the 15th October next, with the opinion of your Board as to the desirability of retaining or dispensing with the services of the inspector for your district, and to forward for your consideration the accompanying copy of a memorandum submitted to him with regard to that question by the Chief Inspector of Stock.

2. I am to add that the information here asked is required for the Committee now sitting in the Legislative Assembly, respecting the Diseases affecting Live Stock, and the constitution and working of the Stock and Brands Branches.

The Chairman of the
Board of Sheep Directors,

I have the honor to be,
Sir,
Your most obedient servant,

Memo.

INLAND INSPECTORS.

THE reasons for retaining these officers are the following:—

Sheep Act.

1. There is a certain amount of risk that, although there are border and coast inspectors, sheep infected with scab might be allowed to pass them unobserved, and thus spread the disease throughout the Colony, without its being detected, if the inland inspectors were all removed.

2. There is also still some risk of outbreaks of catarrh occurring.

3. There are many provisions in the Sheep Act, relating to the branding and travelling of sheep, which require to be carried out, even when there is little or no risk of disease, and which would fail to be so if there were no inland inspectors. Owners will never be at the trouble of looking after each other with regard to these matters, and as a rule they would much rather pay inspectors to prosecute than do so themselves. The directors, again, would neither have the time nor the inclination to see these provisions of the Sheep Act enforced.

Worms and fluke.

Discussion has lately arisen as to whether sheep affected with these ailments should not be prevented from travelling into districts in which they do not naturally exist, as there is no doubt that sheep infested with these parasites carry the infection to sheep which would not otherwise be affected, and it is very probable that some action will ere long require to be taken to prevent this.

Cattle disease prevention.

It is universally admitted that something ought to be done with respect to pleuro-pneumonia—that, at any rate, cattle actually affected with that disease should not be allowed to travel, and thus sow the infection broadcast as they go. Indeed some go so far as to propose the compulsory inoculation of all herds infected with pleuro, and there are certainly very strong grounds for advocating that course, as the returns lately received at this branch show that, taking the owners in all the different districts in the Colony who have inoculated, there are *eighteen* “for” to *one* “against” inoculation.

If any measure were passed for dealing with this disease, cattle-owners would require to contribute to the payment of the inspectors' salaries; and, if they did, 5s. per 1,000, or one-fourth of a farthing per sheep, would then be sufficient as contribution under the Sheep Act.

Brands and Cattle-stealing Prevention Acts.

1. Under the Brands Act the inspectors assist owners in registering their brands.

2. They see the provisions of the Act in regard to branding, droving, &c., carried out. If they are not, the Brands Act would very soon become a dead letter, and the trouble and expense of registering in a great measure lost.

3. They aid the police in the detection of sheep and cattle stealers. This is especially the case in regard to sheep-stealing which with the turning out of sheep is becoming rife in many parts of the Colony, as they examine the stock in the course of their duty as inspectors, and can take notice of any suspicious brands and marks with which they may meet.

Impounding Act.

It has been proposed that inspectors of stock should be inspectors of pounds, and a Bill giving them the supervision of pounds and poundkeepers has been in type for the last four or five years.

A pound now, instead of being a convenience to a district, is often only a nuisance, and this arises almost entirely from the want of supervision; poundkeepers in many instances doing to a great extent as they like.

Droving roads and reserves.

Inspectors have recently been called upon to report upon these roads and reserves, and these officers are in the best possible position to do this duty, and to protect the interests of the public so far as travelling stock are concerned.

When the question was put to the different Boards of Directors in 1872, as to whether the services of the inland inspectors could be dispensed with,—

12	answered in the negative,
4	answered in the affirmative,
and 2	sent no reply.

18

Although there was a considerable majority in favour of retaining the inspectors, it is probable that it would have been still larger, if the Boards had been aware of the proposal to give the inspectors other work to do and reduce the sheep contributions.

The Under Secretary for Lands.

A 3.

ARMIDALE.

C. D. Fenwick, Esq., to The Chief Inspector of Stock, Sydney.

Armidale, 8 October, 1875.

Sir,

I have the honor to enclose report of a meeting held in Armidale by Board of Sheep Directors.

I have, &c.,

C. D. FENWICK.

At a meeting of the Board of Sheep Directors for the district of Armidale, held this seventh day of October, at the Court House, Armidale, in accordance with instructions received from the Under Secretary for Lands, in his communication dated 18 August, 1875, addressed to the Chairman of the Armidale Board of Sheep Directors—present at said meeting, C. D. Fenwick and E. C. Blomfield—it was unanimously resolved that the three (3) reasons for retaining the inland sheep inspector are fully recognized, and that it is highly desirable that such officer be retained in this district. Also resolved—

Regarding worms and fluke

that the Board do not consider the danger of contagion sufficient to preclude sheep from travelling.

Cattle disease prevention.

The Board consider that cattle should be inoculated before starting on any journey, and that inoculation is decidedly beneficial and should be made compulsory.

Brands and Cattle-stealing Prevention Acts.

Impounding Act.

Droving roads and reserves.

Respecting the above, the Board think that the sheep inspector may be reasonably expected to assist in carrying out the provisions of the above Acts, in addition to the other duties of his office.

C. D. FENWICK,
Chairman.

BATHURST DISTRICT.

H. Rotton, Esq., to The Under Secretary for Lands.

Blackdown, Bathurst,
26 August, 1875.

Sir,

Referring to your circular letter of the 18th instant, I have the honor to inform you that I convened a meeting of the Sheep Directors of the Bathurst Board for the purpose of taking your letter into consideration, which was held this day. Notice was taken of the memorandum of Mr. Inspector Bruce embodying reasons for the retention of the inland inspectors, and the enclosed memorandum was unanimously agreed to as the Board's answer to your letter. It will be observed that the memorandum is an answer to Mr. Bruce's reasons taken seriatim, and may therefore be considered to apply to the question generally rather than to this district in particular. The Board has taken this course because its members do not desire to be understood as recommending the dispensing with the services of the inspector of their district unless it may be determined to dispense with the whole staff of inland inspectors.

I have, &c.,
HENRY ROTTON,
Chairman, Bathurst Board of Sheep Directors.

Memorandum referred to.

The whole Colony being now free from scab, it is considered that the coast and border inspectors ought to be able to prevent its spreading to the interior, should it by any chance be again introduced. It seems unnecessary to employ a staff of district inspectors only for the purpose of preventing the barely possible contingency of scab escaping the notice of the coast and border inspectors, and, unless inland inspectors can be found other duties, we think the expense of retaining them unwarranted.

As to Mr. Inspector Bruce's reasons, taking them seriatim, we say:—

1st. The risk is very little.

2nd. 10th Victoria No. 8 provides.

3rd. These provisions are now more vexatious than useful, and now that scab is eradicated would be better to be repealed.

Worms

Worms and fluke.

Doubtful if any legislative interference would have any beneficial effect, or indeed if it could be operative.

Cattle disease prevention.

Not within our province as sheep directors to advise upon, but we may say, even if it should be considered advisable to legislate upon this matter, it is very doubtful if scab inspectors generally would be competent persons to appoint as cattle inspectors also.

Brands and Cattle-stealing Acts.

Cases have come under our knowledge by which the Brands Act has been made an instrument of annoyance by over-zealous officials rather than useful in the prevention of cattle-stealing, and we have come to the conclusion that the Brands Act as a whole is of very doubtful utility. The Cattle-stealing Prevention Act has been in force many years, and seems to have worked satisfactorily without the intervention of an inspector, but it is proposed to consolidate these and other Acts, and a Bill for that purpose—"Stock-stealing and Straying Prevention Bill" has been submitted for our consideration and report. Should this Bill be passed into law it would render the appointment of inspectors compulsory, but as to that Bill we have reported as follows:—"We are of opinion that the Acts now in force are quite sufficient for the purposes contemplated by this Bill, that passing it into law would be over-legislation, and that many of its clauses would be far more troublesome and vexatious to stock-owners than useful. The present Brands Act we consider of doubtful utility, and the circumstances of the Colony now render advisable the repeal of several of the clauses of the Scab Act. Should this Bill pass, it would render necessary the permanent establishment of a department which was originally only temporarily erected to meet certain circumstances then existing, which have since if not altogether ceased, at least become so much ameliorated as to require but little interference."

Impounding Act.

In municipal towns, pounds are under the control of the Corporations, and in the country places they are under the frequent observation of the police, and of persons impounding and releasing stock, and the poundkeepers are besides obliged to give security and are under severe penalties for misconducting, &c.

Roads and reserves.

District or licensed surveyors appear the most fitted for this duty.

Correct copy of resolutions passed by Bathurst Board of Sheep Directors, at Meeting of Board, held 26th August, 1875, no dissentient present,—

CHAS. M'PHILLAMY, Esq.
JOHN N. GILMOUR, Esq.
HENRY ROTTON, Esq.
JOHN M'KINNON Esq.

HENRY ROTTON,
Chairman.

BREWARRINA.

J. Govan, Esq., to W. W. Stephen, Esq.

Milroy, Brewarrina,
13 September, 1875.

Sir,

In reply to your circular of date 18th August last, I have to-day forwarded to the Minister for Lands the opinion of the Board of Sheep Directors as to your memo. headed "Inland Inspectors."

I have, &c.,
JAMES GOVAN,
Chairman.

J. Govan, Esq., to The Minister for Lands.

Milroy, Brewarrina,
13 September, 1875.

Sir,

In compliance with the request of a circular forwarded to me by Mr. W. W. Stephen, I called a meeting of the Board of Sheep Directors, and I now attach the minutes of said meeting, *re* inland inspectors, which I trust will give you the information you require.

I have, &c.,
JAMES GOVAN,
Chairman Board Sheep Directors.

Memo.

INLAND INSPECTORS.

The reasons for retaining these officers are the following:—

Sheep Act.

1. There is a certain amount of risk that, although there are border and coast inspectors, sheep infected with scab might be allowed to pass them unobserved, and thus spread the disease throughout the Colony, without its being detected, if the inland inspectors were all removed.
2. There is also still some risk of outbreaks of catarrh occurring.
3. There are many provisions in the Sheep Act relating to the branding and travelling of sheep which require to be carried out, even when there is little or no risk of disease, and which would fail to be so if there were no inland inspectors. Owners will never be at the trouble of looking after each other with regard to these matters; and as a rule, they would much rather pay inspectors to prosecute than do so themselves. The directors, again, would neither have the time nor the inclination to see these provisions of the Sheep Act enforced.

Worms and fluke.

Discussion has lately arisen as to whether sheep affected with these ailments should not be prevented from travelling into districts in which they do not naturally exist, as there is no doubt that sheep infested with these parasites carry the infection to sheep which would not otherwise be affected; and it is very probable that some action will ere long require to be taken to prevent this.

Cattle disease prevention.

It is universally admitted that something ought to be done with respect to pleuro-pneumonia,—that, at any rate, cattle actually affected with that disease should not be allowed to travel, and thus sow the infection broadcast as they go. Indeed some go so far as to propose the compulsory inoculation of all herds infected with pleuro; and there are certainly very strong grounds for advocating that course, as the returns lately received at this branch show that taking the owners in all the different districts in the Colony who have inoculated, there are *eighteen* "for" to *one* "against" inoculation.

If any measure were passed for dealing with this disease, cattle-owners would require to contribute to the payment of the inspectors' salaries; and, if they did, 5s. per 1,000, or one-fourth of a farthing per sheep, would then be sufficient as contribution under the Sheep Act.

Brands

Brands and Cattle-stealing Prevention Acts.

1. Under the Brands Act the inspectors assist owners in registering their brands.
2. They see the provisions of the Act in regard to branding, droving, &c., carried out. If they are not, the Brands Act would very soon become a dead letter, and the trouble and expense of registering in a great measure lost.
3. They aid the police in the detection of sheep, and cattle stealers. This is especially the case in regard to sheep-stealing, which with the turning out of sheep is becoming rife in many parts of the Colony, as they examine the stock in the course of their duty as inspectors, and can take notice of any suspicious brands and marks with which they may meet.

Impounding Act.

It has been proposed that inspectors of stock should be inspectors of pounds, and a Bill giving them the supervision of pounds and poundkeepers has been in type for the last four or five years.

A pound now, instead of being a convenience to a district, is often only a nuisance, and this arises almost entirely from the want of supervision; poundkeepers in many instances doing to a great extent as they like.

Droving roads and reserves.

Inspectors have recently been called upon to report upon these roads and reserves, and these officers are in the best possible position to do this duty, and to protect the interests of the public so far as travelling stock are concerned.

When the question was put to the different Boards of Directors in 1872, as to whether the services of the inland inspectors could be dispensed with,—

12 answered in the negative,
4 answered in the affirmative,
and 2 sent no reply.

18

Although there was a considerable majority in favour of retaining the inspectors, it is probable that it would have been still larger if the Boards had been aware of the proposal to give the inspectors other work to do and reduce the sheep contributions.

The Under Secretary for Lands.

A.B., 22 Apl, 75.

Brewarrina, 11 September, 1875.

Copy of minutes at a meeting of Sheep Directors held this day at the "Sportsman's Arms Hotel."

Present: James H. Doyle.
James Govan, Chairman.

Inland inspectors.

We agree with 1st and 3rd clauses of memo. attached under heading "Sheep Act."

Worms and fluke.

We have never known these diseases in the salt-bush district.

Cattle diseases prevention.

We are averse to compulsory inoculation, and further think that to prevent travelling pleuro cattle would be difficult. We would suggest that the drover should kill and destroy, by burning or burying, any cattle showing disease while travelling. We think that cattle-owners should contribute towards inspector's salary.

Brands and Cattle-stealing Prevention Acts.

We agree with clauses 1st, 2nd, and 3rd under this heading.

Impounding Act.

We think that pounds should be left under the inspection of the police in each district.

Droving roads and reserves.

We think sheep inspectors well qualified to inspect and report on roads and reserves.

We decidedly think that the inspector is needed in our district.

For Sheep Directors,
JAMES GOVAN,
Chairman.

SINCE writing about the necessity of keeping our inland sheep inspector, I have received letters from two brother sheep directors, who write as follows:—

"It appears to me that there is no necessity to maintain a local sheep inspector, as long as the coast officers and those on the Victorian and South Australian border are thoroughly efficient officers. There can be no danger of scab infection, and it is scarcely advisable to maintain officers merely to see that travelling stock are branded, and that is virtually all the officers here have been doing for a long time past."

As far as the matter of inland inspectors go, had our meeting been a full one the advisability of retaining these officers would have been a decided affair. I am of opinion that some official must be kept, if only to thoroughly inspect travelling sheep, as many drovers are very careless and pick up sheep.

I have, &c.,
JAMES GOVAN,
Chairman Sheep Directors, Brewarrina.

BOOLIGAL.

R. Edgar, Esq., to The Minister for Lands.

South Thononga,
Booligal, 11 December, 1875.

Sir,

I have the honor to acknowledge receipt of circular of the 12th November, forwarded by the Chief Inspector of Stock, in reference to the retention and employment of the inland inspectors of stock; and I beg to inform you that, in my opinion, the retention and employment of the said inspectors is most desirable, and I am afraid if such inspectors were discharged a serious loss would accrue to stock-owners and the country generally.

I have, &c.,
RICHARD EDGAR,
Sheep Director.

CANNONBAR.

CANNONBAR.

W. H. Clements, Esq., to The Minister for Lands.

Lower Cageldry,
Vid Obley, November 27, 1875.

Sir,

In reply to circular received from the Chief Inspector of Stock, Sydney, requesting, on your behalf, to know my individual opinion as to the desirability of retaining or dispensing with inland inspectors of stock, I have the honor to inform you that I am decidedly of opinion that they are not required.

In answer to the reasons adduced by the Chief Inspector of Stock in favour of their retention I reply:—

- 1st. Border and coast inspectors should be sufficient protection.
- 2nd. No reason for apprehension that I am aware of.
- 3rd. The provisions relative to branding sheep are for the most part not required and should be rescinded. A large amount of labour and injury to wool is incurred without any corresponding benefit. As to the travelling provisions, owners will attend to their own interests in that respect.

Worms and fluke.

I am of opinion that sound districts are liable to become infected by the introduction of sheep infested with these parasites, but there are great difficulties and conflicting interests to contend with in passing a prohibitory measure.

Cattle disease prevention.

Same as last.

Brands and Cattle-stealing Prevention Acts.

- 1st. One office in Sydney should be sufficient.
- 2nd. Owners' and police supervision sufficient.
- 3rd. Same as last. Never know of a conviction through their (inspectors') instrumentality.

Impounding Act.

Not sufficient importance to warrant their retention on that account.

Droving roads and reserves.

Surveyors should be as competent to report upon them.

I do not wish this to be understood to apply to the inspector of this district more than others, for I believe him (Mr. J. S. Brown) to be quite as competent and efficient an inspector as any other, and if any are retained I certainly recommend him.

With reference to sheep branding I would suggest that the registry be made at one office in Sydney, and that only one person be allowed to use the same brand throughout the Colony.

I have, &c.,
W. H. CLEMENTS,
Sheep Director, Cannonbar.

J. Brown, Esq., to The Chief Inspector, Sydney.

Bellmount House,
Cannonbar, 6 December, 1875.

Sir,

I have the honor to say, in answer to your circular headed "Inland Inspectors," first—

That although there may be risk of scab by sheep travelling from the neighbouring Colonies, that sheep inspectors are a farce, for it would be greatly the fault of the directors if such a thing should be allowed; not so now, as they may be gulled by inspectors not attending their duty, and I can say I verily believe a mob of infected sheep may easily travel up my district and the inspector know nothing of them, unless the Board of Sheep Directors took the chief part of the inspector and made inquiries into these matters. If again the provisions of branding was not carried out, who is there here to see even this point, if the owners did not take able steps themselves, and the Sheep Act enforced?

There is one clause in the Act deserving of amendment, viz., that owners travelling should give every occupant not less than twelve hours and not greater than forty-eight hours notice of his intention to enter the run of another.

Second. The inoculation of cattle is the greatest absurdity of all. My neighbour, Mr. Ashcroft, is constantly inoculating his herd, and is always troubled with pleuro, and I have been compelled to shift my herds from Duck Creek and put sheep on the country. Inoculation is a snare, and none but those experienced know better. I, for one, inoculated my herd for two years, but was quite satisfied with the result to not do so any more.

The registration of brands has been in my opinion a great boon to cattle and sheep stealing, for similar brands have been registered in these districts, and cattle-stealing carried out with the greatest impunity, and in a great measure the Act protected them in so doing, and I think that unless we can get a better law, that inspectors are little or no good, for in my district alone it would take twenty inspectors to prevent cattle-stealing; it in itself has become quite a science with the duffer, for in years gone by they only wanted unbranded calves; now that class only look for fat and marketable stock to steal, and get a much quicker return for their risk, and its a very small risk. When to be considered that the Brands Registration Act would be a dead letter, I for one would consider it far better than if it were in force, as then we could follow up the old system of branding on the rump and ribs, which would do away in a great measure with the carrying off large mobs of cattle by thieves. You can in all probability form an idea of the state of cattle in this district by the last cattle-stealing cases brought before the Dubbo Quarter Sessions.

Trusting you will not misconstrue any of my remarks,—

I have, &c.,
JOHN BROWN.

W. W. Richardson, Esq., to The Minister for Lands, Sydney.

Moonagee,
Cannonbar, 18 November, 1875.

Sir,

In reply to a circular from the Chief Inspector of Stock with reference to the retention of the inland inspectors, I beg to inform you that in my opinion their services should not be dispensed with, as in the event of an outbreak it would be difficult to replace practical men at a moment's notice, and as the fund from which their salaries are paid comes wholly from the squatters, or rather sheep-owners, as long as they are willing to pay the contribution I cannot see why the question should be raised. I may mention that what is generally thought unfair and unjust is that the services of the inspectors are now more generally required in cattle affairs, and that the owners of cattle do not pay one penny towards the maintenance of these officers.

I have, &c.,
W. W. RICHARDSON.

CARCOAR.

W. M. Rothery, Esq., to The Minister for Lands.

Clifden, Carcoar,
November 13, 1875.(Circular.)
75-2,293 S-B.

Sir,

In reply to your letter of 12th instant in reference to a letter addressed to the Chairman of the Board of Sheep Directors, Carcoar, I beg to state no intimation of such a letter reached me.

As regards the forwarded printed reasons for retaining the services of the inland inspectors, all my experience in live stock of forty-four years in New South Wales enables me to agree wholly with them.

In paragraph 3, under the head of "Brands and Cattle-stealing Prevention Acts," I would suggest the inspectors being instructed to give the earliest information to the police of any suspicious cases their constant peregrinations may bring under their notice, and that the inspectors be instructed to assist the police in the prosecution, and that the police, who have no such knowledge of sheep as an inspector has, should have notice to that effect.

Inspectors of stock should be inspectors of pounds, with instructions to prosecute, and should be specially directed to prosecute where the poundkeeper leaves his pound and collects stock for his pound,—a common practice in these parts.

I have, &c.,
W. MONTAGU ROTHERY.

W. Glasson, Esq., to The Minister for Lands.

Trevellian, Blayney,
November 30, 1875.

Sir,

In reply to your request with respect to the retention and employment of inland inspectors of stock, I beg most respectfully to say, as it is proposed to give the inspectors of stock other work to do, and to reduce the sheep contributions, I am decidedly of opinion the inspectors should be retained.

I have, &c.,
WM. GLASSON,
Sheep Director, Carcoar District.

T. H. West, Esq., to The Chief Inspector of Stock.

Cudgelo, Cowra,
December, 5/75.

My dear Sir,

In answer to circular dated November 12th, I beg to state I do not think there is any necessity for the retention and employment of inland inspectors of stock. In this district there has not been for many years either scab or catarrh; there is a little fluke and worms among the young sheep, but not in our immediate neighbourhood. About Carcoar, Blayney, No. 1 Swamp, and Mount Macquarie, fluke always prevails, as the country is principally low marshy flats. The sheep in the neighbourhood of Cowra are at present in a very healthy state; even foot-rot seems to be wearing out—it only prevails where it is neglected. The dry seasons have assisted its cure in a great measure.

I am, &c.,
THOS. H. WEST.

Thos. R. Icely, Esq., to the Minister for Lands.

Coombing Park, Carcoar,
November 28, 1875.

Sir,

I have the honor to acknowledge your letter of the 12th instant, requesting my opinion as to the desirability of retaining or dispensing with the services of the sheep inspector of this district, and in reply, beg to state (as my individual opinion) that I think it will be a mistake to dispense with the inland inspectors.

The reasons given for retaining their services by Mr. Chief Inspector of Stock, in his memo. of the 22nd April last, are, in my opinion, very pertinent to the question, and have my approval.

I have, &c.,
THOS. R. ICELY,
Chairman of the Board of Sheep Directors, District of Carcoar.

At this season of the year it is almost impossible to get a meeting of sheep directors, and this has caused the delay in my reply, which I hope is yet in time for your requirement.

CONDOBOLIN.

J. Holt, Esq., to W. W. Stephen, Esq.

Wooyes, Eauabalong,
25 September, 1875.

Sir,

In reply to your circular referring to sheep inspectors, we are of opinion that the retention of that office is most desirable as a safeguard against the travelling of diseased stock, and we thoroughly agree with the reasons stated in the second page of your circular for retaining the said officers.

We are further of opinion that in many cases it would be advisable to join the duties of the inspection of pounds and stock, but that in some places, where the pounds are far apart and the number of travelling stock very great, this would not be feasible unless the inspector had an assistant.

I am, &c.,
JOSEPH HOLT,
Chairman of Condobolin Sheep Board.

COONABARABRAN.

W. M. Ronald, Esq., to A. Bruce, Esq.

Nebea, Coonamble,
20 November, 1875.

Dear Sir,

Referring to your printed circular, which should have had my attention sooner, but being busy shearing it got overlooked; for the same reason I have not been able to attend a meeting of the Board of Directors. With regard, however, to the retention or otherwise of the inland inspectors, I am quite of opinion they should be employed. There are many diseases sheep are liable to, and an outbreak may occur at any moment; it is absolutely necessary to have inspectors then—much better, therefore, have them ready for any emergency.

I am, &c.,
W. M. RONALD.

Report of H. Kelly, Esq.

Sheep Act.

1. I am entirely in favour of retaining sheep inspectors, their salaries being a charge only upon the class interested.
2. I do not think these ailments are infectious.

Cattle

Cattle Disease Prevention Act.

3. I do not think diseased cattle should travel, or, if they did, the carcasses of all dead beasts should be burned by the owner. I am not in favour of compulsory inoculation—the owner of the stock will do what is best to protect his own interests.
4. I think these Acts should be continued, and the duties discharged by sheep inspectors in connection herewith are very important.
5. I think sheep inspectors, or some other person, ought to be appointed to inspect the pounds. The Impounding Act also, in my opinion, requires very great amendment.
6. I certainly think the interests of persons travelling with stock ought to be protected.

14/12/75.

A. H. KELLY,
Garrawilla, Boggabri.

The Chief Inspector of Stock to H. Kelly, Esq.

Circular. 75/2,293. S.B.

Department of Lands,
Sydney, 12 November, 1875.

As no answer has been received in reply to the circular of which the accompanying is a copy, addressed to the Chairman of your Board, with respect to the retention and employment of the inland inspectors of stock, and as it is likely that you will now be too much engaged with your shearing to attend any meeting of the Board which might be called, I am directed by the Minister for Lands to request that you will favour him with your individual opinion in regard to these questions.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

Memo.

INLAND INSPECTORS.

The reasons for retaining these officers are the following:—

1.—*Sheep Act.*

1. There is a certain amount of risk that, although there are border and coast inspectors, sheep infected with scab might be allowed to pass them unobserved, and thus spread the disease throughout the Colony without its being detected, if the inland inspectors were all removed.
2. There is also still some risk of outbreaks of catarrh occurring.
3. There are many provisions in the Sheep Act relating to the branding and travelling of sheep which require to be carried out, even when there is little or no risk of disease, and which would fail to be so if there were no inland inspectors. Owners will never be at the trouble of looking after each other with regard to these matters; and as a rule, they would much rather pay inspectors to prosecute than go so themselves. The directors, again, would neither have the time nor the inclination to see these provisions of the Sheep Act enforced.

2.—*Worms and fluke.*

2. Discussion has lately arisen as to whether sheep affected with these ailments should not be prevented from travelling into districts in which they do not naturally exist, as there is no doubt that sheep infested with these parasites carry the infection to sheep which would not otherwise be affected; and it is very probable that some action will ere long require to be taken to prevent this.

3.—*Cattle disease prevention.*

It is universally admitted that something ought to be done with respect to pleuro-pneumonia—that, at any rate, cattle actually affected with that disease should not be allowed to travel, and thus sow the infection broadcast as they go. Indeed some go so far as to propose the compulsory inoculation of all herds infected with pleuro; and there are certainly very strong grounds for advocating that course, as the returns lately received at this branch show that, taking the owners in all the different districts in the Colony who have inoculated, there are *eighteen* "for" to *one* "against" inoculation.

If any measure were passed for dealing with this disease, cattle-owners would require to contribute to the payment of the inspectors' salaries; and if they did, 5s. per 1,000, or one-fourth of a farthing per sheep, would then be sufficient as contribution under the Sheep Act.

4.—*Brands and Cattle-stealing Prevention Acts.*

1. Under the Brands Act the inspectors assist owners in registering their brands.
2. They see the provisions of the Act in regard to branding, droving, &c., carried out. If they are not, the Brands Act would very soon become a dead letter, and the trouble and expense of registering in a great measure lost.
3. They aid the police in the detection of sheep and cattle stealers. This is especially the case in regard to sheep-stealing, which, with the turning out of sheep, is becoming rife in many parts of the Colony, as they examine the stock in the course of their duty as inspectors, and can take notice of any suspicious brands and marks with which they may meet.

5.—*Impounding Act.*

It has been proposed that inspectors of stock should be inspectors of pounds, and a Bill giving them the supervision of pounds and poundkeepers has been in type for the last four or five years.

A pound now, instead of being a convenience to a district is often only a nuisance, and this arises almost entirely from the want of supervision; poundkeepers in many instances doing to a great extent as they like.

6.—*Droving roads and reserves.*

Inspectors have recently been called upon to report upon these roads and reserves, and these officers are in the best possible position to do this duty, and to protect the interests of the public so far as travelling stock are concerned.

When the question was put to the different Boards of Directors, in 1872, as to whether the services of the inland inspectors could be dispensed with,—

12 answered in the negative,
4 answered in the affirmative,
and 2 sent no reply.

18

Although there was a considerable majority in favour of retaining the inspectors, it is probable that it would have been still larger if the Boards had been aware of the proposal to give the inspectors other work to do, and reduce the sheep contributions.

The Under Secretary for Lands.

A.B.,
22 Apl./75.

J. L. Brown, Esq., to The Chief Inspector of Stock.

Coonabarabran,
17 December, 1875.

Sir,

In reply to your circular of 12th ultimo, as to the retention of scab inspectors, I am quite in favour of their being retained, for there are such numbers of stock continually travelling which require looking after.

Sheep-stealing is also becoming of more frequent occurrence, and the inspectors are of great assistance to the police in checking this evil.

I have, &c.,
J. L. BROWN.

D. M'Rae, Esq., to The Chief Inspector of Stock.

Brauxton House,
Hunter River, 14 December, 1875.

Sir,

In reply to your circular of 12th ultimo, which I have only now received, I beg to state that it is my firm opinion that the inland inspectors of stock ought to be retained, for several reasons.

Although the Colony is at present free from disease, it is difficult to say when disease may break out amongst our flocks.

Hitherto in this Colony, in fact until very recently, all the sheep were shepherded, but under the present system of fencing in runs the sheep are turned out into large paddocks; therefore, in the event of any disease being introduced, it would be much harder to be dealt with than in former times, when the flocks were more under the control of the owners, by having them shepherded. In proof of this, they have been attempting and using every effort for the last twenty years to get rid of scab in Victoria, in which they have not yet succeeded, simply because their sheep were paddocked.

I have no hesitation in saying that it would be very imprudent to reduce the present staff of stock inspectors.

I have, &c.,
DUNCAN M'RAE.

DUBBO.

J. Penzer, Esq., to The Minister for Lands.

Bundemar,
Dubbo, 27 September, 1875.

Sir,

As your circular of the 18th August, requesting to know the opinion of the Board of Sheep Directors for this District—"as to the desirability of retaining or dispensing with the services of our inspector,"—reached me at a time when it would have been extremely inconvenient for several members to have attended a meeting of the Board, I communicated with them by letter, and I have now to inform you that those from whom I have received replies, forming a majority of the Board (and I think the other members also), are in favour of retaining the inspector. I may add that I have put the question to several sheep-owners if they are in favour of doing away with the inspectors, and they have all replied in the negative. It seems, however, to be the opinion not only of sheep-owners, but some cattle-owners also, that the inspectors ought to be made inspectors of cattle as well as of sheep, and that cattle-owners should contribute towards their maintenance. They might be made just as useful to owners of the one as to owners of the other. But we think the Chief Inspector is labouring under a mistake when he says they aid the police in the detection of sheep and cattle stealers; passively perhaps, but certainly not actively. The examination of stock too is generally dispensed with, unless specially requested; except stock travelling.

We think also that the stringency of some of the provisions of the Sheep Act might now with advantage be relaxed, especially section 42. Sheep intended to be travelled long distances, if once legibly branded, and reported as such by the inspector nearest to the station from whence they start, it should be sufficient that any subsequent inspector examining these sheep on the road, and finding some of the brands worn out or otherwise indistinguishable, to order them to be rebranded, and failing compliance, then to summons the offender. Further, when no disease exists, a person purchasing sheep from another in the same district should not be required to brand them with the letter T if they bear the station brand. Cases of great hardship have occasionally come under our notice from the operation of this clause, and we think there is no necessity to make this Act oppressive.

There are many things in connection with live stock where inspectors might be more useful; as for instance, in the application of remedies for the cure of different diseases to which sheep and cattle are liable. Worms and foot-rot in sheep appear to be spreading rapidly throughout the country, and if a cure could be found for these diseases, it would be a boon to the persons whose flocks are so infected, as well as a gain to the country at large. The same remarks apply to diseases in cattle.

Finally, we think the department might be made an increasingly useful one; might be effective without being oppressive, and that the inspectors, along with other duties, might add that of collecting valuable information from observation, in connection with different diseases affecting those valuable animals, horses, cattle, and sheep.

I have, &c.,
J. PENZER,
Chairman of the Board.

FORBES.

H. Clements, Esq., to W. W. Stephen, Esq.

Eugoura, Forbes,
September 6, 1875.

Sir,

In answer to your circular letter of the 18th August last, I beg to state that I have ascertained the opinion of our Board as to the desirableness of retaining the inspector of sheep for the district of Forbes. All the directors are of opinion that he should be retained, for the third reason that is given under the Brands and Cattle-stealing Prevention Acts, inasmuch as the inspector has facilities which the police cannot possibly have.

The majority of the Board are willing, as far as they are personally concerned, to pay double assessment if another inspector was appointed, as the three districts, viz., Forbes, Molong, and Condobolin Districts, are altogether too large to be efficiently inspected by one person. We think that other reasons advanced by the Minister for Lands substantial reasons for retaining a sheep inspector.

With regard to your remarks as to the members of Boards who were in favour of dispensing with the sheep inspectors, ours was one, but as the inspector has been given (as you say) other duties, the Board are now of a different opinion than that they gave in 1872.

I have, &c.,
HANBURY CLEMENTS,
Chairman of the Board of Sheep Directors, Forbes.

GOULBURN.

GOULBURN.

F. R. L. Rossi, Esq., to W. W. Stephen, Esq.

Goulburn,
21 September, 1875.

Sir,

A meeting of the Sheep Directors was held at Goulburn on Tuesday the 21st September, 1875, when the circular letter of the Under Secretary, Department of Lands, was considered, and the Board were of opinion that it would be unadvisable to discontinue the services of the inspector of stock.

I have, &c.,
F. R. L. ROSSI,
Chairman.

F. M. Charteris, Esq., to The Chief Inspector of Stock.

Goulburn,
21 September, 1875.

Sir,

I have the honor to inform you that at a meeting of the Board of Sheep Directors, held at Goulburn, on Tuesday, 21st September, 1875, for to take into consideration the circular letter of the Under Secretary for Lands, that it were the opinion of the Board it would be unadvisable to dispense with the services of the inspector of stock for the district.

I have, &c.,
FREDK. M. CHARTERIS,
Inspector of Stock, Goulburn.

GUNDAGAI.

A. Rankin, Esq., to Chief Inspector of Stock, Sydney.

Bombowlee Station,
Tumut, 16 November, 1875.

Dear Sir,

In reply to your communication of 12th instant, I beg to state that I approve of the retention of the services of the inland inspectors of stock.

Yours obediently,
ANGUS RANKIN.

J. Osborne, Esq., to Chief Inspector of Stock, Sydney.

Bonbarlo, Gundagai,
November 16, 1875.

Sir,

In reply to your circular, dated November 12, 1875, I beg to state that I am directly in favour of retaining the services of the sheep inspector for this district, and would think it most unwise to have such services dispensed with.

The items contained in copy of memorandum submitted by the Chief Inspector of Stock to the Minister for Lands I perfectly agree with in all except that portion relating to sheep affected with worms or fluke, and from my experience I believe that sheep so affected would be cured by removal to a healthy district, and that no danger exists of infecting other flocks.

I am in favour of inoculation of cattle affected with pleuro-pneumonia, and even those not affected, as a preventative.

I have, &c.,
JAMES OSBORNE.

HAY.

F. Chambers, Esq., to The Under Secretary for Lands.

Pevensay, Hay,
October 6, 1875.

Sir,

In pursuance of the request contained in your favour of the 18th ultimo, I called a meeting of our Board of Sheep Directors for this day.

Only one director besides myself was able to attend, in consequence of all being busy with their shearing operations, the remainder writing to say they were unable to attend, but expressing their views as to the desirability of retaining or dispensing with the services of the inspector of the district. And all agree in considering that it would be most undesirable and unwise to do away with any of the inland inspectors, and quite concur with the Chief Inspector in the reasons given by him for retaining their services (which reasons accompany your circular of the above date), especially noting his third reason. And we all go even further than the Chief Inspector, and consider that it would even be advisable to appoint more inspectors throughout the Colony; the stock-owners feeling that these inspectors are their only protection against the introduction of disease and the *abuse of droving roads and reserves*.

We are of opinion that should the inland inspectors be done away with, and disease by any chance break out, great injury and in many cases ruin might be caused to the stock-owners before new inspectors could be appointed.

We can testify to the fact that the services of our district inspector are being constantly called into requisition—more especially with regard to the carrying out of the Branding Act.

I may also mention that I have received letters from several of the sheep-owners of this district expressing their views on this matter, which are in substance exactly the same as those expressed above.

I have, &c.,
F. CHAMBERS,
Chairman of the Board of Sheep Directors, Hay.

MERRIWA.

F. White, Esq., to The Under Secretary for Lands.

Harbon Vale,
Blandford, 20 October, 1875.

Sir,

In reference to your circular letter of the 11th August, 1875, I have had the enclosed documents (being the opinions of the several Sheep Directors for the district of Merriwa, whose signatures are attached) forwarded to me this day, with a request that I would add my own opinion and forward the whole to you, which I now beg herewith to do.

A meeting of the Directors has not been called to consider this matter, for the reason, I believe, that no Chairman has yet been appointed.

I am, &c.,
FREDK. WHITE,
Harbon

Harben Vale,
Blandford, 28 October, 1875.

I AM of opinion that the inland inspectors of sheep might be retained with great advantage, if competent men could be obtained to fill the office. To effect this object the district, I think, might be enlarged and higher salaries paid, to which the owners of cattle and horses ought to contribute.

A more efficient system of control and supervision I think ought to be established, as the inspectors under the present system are practically under little or none; and in many cases their duties are very negligently, if at all, performed. Many of them also, I believe, are totally unacquainted with the disease, scab, to guard against which is the first object of their appointment.

With regard to the inspector of this district, I am of opinion that unless more efficiency can be obtained, that his services ought to be dispensed with.

FREDK. WHITE,
Sheep Director.

Collaroy,
Merriwa, 12 October, 1875.

I AM entirely adverse to the abolition of inland sheep inspectors, for the reason that I am at a loss to see who is to do their work.

It has been suggested that the police should take their place, but I consider that they have already more than they can efficiently look after.

The district where the writer resides gives ample proof of the necessity of an active inspector. We have one of course, but he is practically useless, never going his rounds or visiting the flocks of the different owners round about; and the inconvenience arising from the want of an officer, to whom we can go for information, or, if necessary make complaints, is severely felt.

I consider also that every individual sheep inspector is an additional safeguard against disease, and that their abolition would greatly facilitate the spread of scab, should it ever make its appearance amongst us again.

CHAS. F. CLIVE,
Sheep Director.

Merriwa, 26 September, 1875.

I CONSIDER inland inspectors a useless expense. If disease should by any chance pass the coast or border inspectors; directors, being interested, are more likely to detect it than paid inspectors.

I believe a heavy penalty inflicted on parties having diseased sheep in their possession and not reporting the same to nearest director, would be a better safeguard than inspectors.

The police are more likely and better able to see the provisions of the Sheep Act, in reference to branding and travelling stock, carried out than any one else.

J. COOPER,
Sheep Director.

Brindley Park,
Merriwa, 1 October, 1875.

I AM of opinion that the inland inspectors may now be dispensed with, and in their place an additional number of border inspectors should be appointed.

As regards the Sheep Act, if sheep infected with scab were by any chance allowed to pass the coast or border inspectors the inland inspectors would not be likely to detect the infection, as, from what the writer can learn, the inspectors are most lax in their visits of inspection amongst the flocks in their respective districts, and especially in this district no attention is paid by the inspector to the proper carrying out of the branding of sheep.

Under the Impounding Act I consider that the police would be more effective as inspectors of pounds, there being usually two or three stationed at every town or village where a pound is established.

JAS. B. BETTINGTON,
Sheep Director.

F. Brown Esq., to The Chief Inspector of Stock, Sydney.

St. Aubins, Seone,
15 November, 1875.

Sir,

Your circular, of the 12th instant, accompanied by memo. on inland inspectors, but not the copy of the circular addressed to the Chairman of the Board of Directors for this district, and which I should like to have seen, duly reached me.

In reply to your request for my individual opinion with regard to the questions submitted, I am in favour of the retention of the inland inspectors; their duties should be increased as well as their salary. The supervision of pounds and looking after the public reserves might advantageously be given them; at the same time they should have the power to impound from these reserves, or their appointment would be useless. The compliance with the provisions of the Brands Act should also be more strictly looked after, and penalties enforced where the law has been clearly evaded, &c.

Some legislation with regard to fluke and worms in sheep, pleuro-pneumonia in cattle, &c., seems probable,—is an additional reason for retaining their services.

I have, &c.,
FREDERICK BROWN,
Sheep Director for the District of Merriwa.

MOLONG.

F. J. Smith, Esq., to The Under Secretary for Lands, Sydney.

Derowie, Toogong,
27 September, 1875.

Sir,

With reference to your circular of the 18th August, 1875, addressed to the "Board of Sheep Directors, Molong," I have the honor to inform you that at a meeting held at Molong on the 22nd inst. it was unanimously held—

1st. That it is not advisable to dispense with the services of the inland inspectors at present.

2nd. That a measure should be passed by the Legislature to make cattle-owners contribute to the cost of the department, the whole of which is now borne by the sheep-owners, although the former receive equal benefit from the labours of the inspectors with regard to brands, &c.

I have, &c.,
F. JAGO SMITH,
Chairman of Molong Board.

MUDGE.

MUDGEE.

J. Atkinson, Esq., to Chief Inspector of Stock.

Mudgee, 15 November, 1875.

Sir,

In reply to your letter of the 12th instant, requesting me, as one of the sheep directors of this district, to give my individual opinion as to the retention of inland inspectors of stock, I beg to say that I am decidedly of opinion that their services should be retained, but that the sheep contribution might be reduced, considering the work performed by the inspectors is in no way relating to sheep.

I have, &c.,
JAMES ATKINSON.

Chief Inspector of Stock to S. A. Blackman, Esq.

(Circular.) 75-2,293. S.B.

Department of Lands,
Sydney, 12 November, 1875.

Sir,

As no answer has been received in reply to the circular of which the accompanying is a copy, addressed to the Chairman of your Board, with respect to the retention and employment of the inland inspectors of stock, and as it is likely that you will now be too much engaged with your shearing to attend any meeting of the Board which might be called,—I am directed by the Minister for Lands to request that you will favour him with your individual opinion in regard to these questions.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

I AM in favour of the present sheep inspectors being retained, and that they be given the supervision of the pounds, which are gradually becoming a nuisance instead of a convenience under the present system.

S.A.B.

Marginal Notes by R. W. Cox, Esq.

Memo.

INLAND INSPECTORS.

THE reasons for retaining these officers are the following:—

Sheep Act.

1. There is a certain amount of risk that, although there are border and coast inspectors, sheep infected with scab might be allowed to pass them unmobserved, and thus spread the disease throughout the Colony without its being detected, if the inland inspectors were all removed.
2. There is also still some risk of outbreaks of catarrh occurring.
3. There are many provisions in the Sheep Act relating to the branding and travelling of sheep which require to be carried out, even where there is little or no risk of disease, and which would fail to be so if there were no inland inspectors. Owners will never be at the trouble of looking after each other with regard to these matters; and as a rule, they would much rather pay inspectors to prosecute than do so themselves. The directors, again, would neither have the time nor the inclination to see these provisions of the Sheep Act enforced.

I am strongly of opinion that inland inspectors should be retained.
R. W. COX.

Worms and fluke.

Discussion has lately arisen as to whether sheep affected with these ailments should not be prevented from travelling into districts in which they do not naturally exist, as there is no doubt that sheep infested with these parasites carry the infection to sheep which would not otherwise be affected; and it is very probable that some action will ere long require to be taken to prevent this.

I do not agree with this—fluke cannot be communicated.
R. W. COX.

Cattle disease prevention.

It is universally admitted that something ought to be done with respect to pleuro-pneumonia—that, at any rate, cattle actually affected with that disease should not be allowed to travel, and thus sow the infection broadcast as they go. Indeed some go so far as to propose the compulsory inoculation of all herds infected with pleuro; and there are certainly very strong grounds for advocating that course, as the returns lately received at this branch show that, taking the owners in all the different districts in the Colony who have inoculated, there are eighteen "for" to one "against" inoculation.

I agree with this, and am in favour of inoculation.
R. W. C.

If any measure were passed for dealing with this disease, cattle-owners would require to contribute to the payment of the inspectors' salaries; and, if they did, 5s. per 1,000, or one-fourth of a furling per sheep, would then be sufficient as contribution under the Sheep Act.

Brands and Cattle-stealing Prevention Acts.

1. Under the Brands Act the inspectors assist owners in registering their brands.
2. They see the provisions of the Act in regard to branding, droving, &c., carried out. If they are not, the Brands Act would very soon become a dead letter, and the trouble and expense of registering in a great measure lost.
3. They aid the police in the detection of sheep and cattle stealers. This is especially the case in regard to sheep-stealing, which with the turning out of sheep is becoming rife in many parts of the Colony, as they examine the stock in the course of their duty as inspectors, and can take notice of any suspicious brands and marks with which they may meet.

Impounding Act.

It has been proposed that inspectors of stock should be inspectors of pounds, and a Bill giving them the supervision of pounds and poundkeepers has been in type for the last four or five years.

This should be done.
R. W. C.

A pound now, instead of being a convenience to a district, is often only a nuisance, and this arises almost entirely from the want of supervision; poundkeepers in many instances doing to a great extent as they like.

Droving roads and reserves.

Inspectors have recently been called upon to report upon these roads and reserves, and these officers are in the best possible position to do this duty, and to protect the interests of the public so far as travelling stock are concerned.

When the question was put to the different Boards of Directors in 1872, as to whether the services of the inland inspectors could be dispensed with,—

12 answered in the negative,
4 answered in the affirmative,
and 2 sent no reply.

18

Although there was a considerable majority in favour of retaining the inspectors, it is probable that it would have been still larger if the Boards had been aware of the proposal to give the inspectors other work to do and reduce the sheep contributions.

The Under Secretary for Lands.

A.B., 22 Apl. /75.

N.

N. P. Bayly, Esq., to The Secretary for Lands.

Havilah, near Mudgee, 15 November, 1875.

Sir,

I have the honor to acknowledge receipt of circular addressed to me by Mr. Bruce, on 12th instant, and beg to express my decided opinion that it would be most unwise to abolish the office of inspector of stock.

The Colony is at present free from that scourge known as scab in sheep; but should any attempt be made to relax the law, as at present so vigilantly and efficiently carried out by sheep inspectors, there is no manner of doubt it would soon find its way into the Colony again. And there are many other reasons besides those so well and truly explained by Mr. Bruce in his circular of August last why it is absolutely necessary to retain sheep inspectors.

My opinion is that any opposition will entirely arise through the narrow-minded views of sheep contributors, and want of that consideration which the importance of the matter demands.

I have, &c.,
N. P. BAYLY.

NARRANDERA.

J. Holloway, Esq., to The Minister for Lands.

Estella, Wagga Wagga, 4 December, 1875.

Sir,

In answer to a circular from the Chief Inspector of Stock with respect to the retention and employment of inland inspectors, and requesting me to forward you my views on these questions, I have the honor to state that, from observations in my immediate neighbourhood, I am led to the conclusion that, in the absence of the infectious disease known as scab, the retention and employment of inspectors is of little if any use, as in most instances I believe the situation is that of sinecure only, and my opinion is that the sooner inland inspectors are dispensed with the better.

I have, &c.,
JOHN HOLLOWAY.

F. Jenkins, Esq., to The Minister for Lands.

Buckingbong, 15 December, 1875.

Dear Sir,

I regret very much that I have not been able to afford you the information required relative to inland inspectors of stock, &c. This is on account of the extra pressure of business at this time of year. I beg to do so now.

And have the honor to be, &c.,
FRANK JENKINS.

F. Jenkins, Esq., to The Secretary for Lands.

Buckingbong, 15 December, 1875.

Dear Sir,

I have the honor to inform you that I am in favour of the retention of inland inspectors of stock, and agree generally with the reasons for retaining these officers. My individual opinion is that no diseased sheep or cattle should be allowed to travel at large; that the inspectors should be inspectors of "pounds," "droving roads," and "reserves"; and that the services of these officers are "generally" required.

I have, &c.,
FRANK JENKINS.

NARRABRI.

A. J. Doyle to The Under Secretary for Lands.

Sir,

For the information of the Honorable the Minister for Lands I have to state that, in compliance with his request, a meeting of the Narrabri Board of Sheep Directors was held at Narrabri on the 19th instant, at which all the members of the Board attended.

Copies of the resolutions passed at said meeting are herewith enclosed.

I have, &c.,
ALFRED J DOYLE,
Chairman.

A. J. Doyle, Esq., to The Chief Inspector of Stock, Sydney.

Killarney, Narrabri,
12 July, 1875.

Sir,

I have the honor to inform you that your communication of the 26th April last, requesting the opinion of the Narrabri Board of Sheep Directors, as to the most desirable place for the inspector to reside, was duly considered by an adjourned meeting of the Board holden at Narrabri on the 9th inst., and it was unanimously considered that Narrabri, as the key to the district, was the most suitable place. According to statistics placed before the Board it appears that, in the years 1872, 1873, 1874, there were 651,044 sheep and cattle inspected at Narrabri, while only a comparatively small number were inspected at Pilliga and Walgett; doubtless many more sheep must have passed through Walgett than were seen by the inspector and therefore not given in the returns; yet there cannot, in the opinion of the directors, be the least doubt as to Narrabri being the most advantageous spot for the inspector to reside at. Regretting that, in consequence of my long absence from the district, the subject matter of this communication was not attended to at an earlier date,—

I am, &c.,
ALFRED J. DOYLE,
Chairman N.B.S. Directors.

RESOLUTIONS passed at a meeting of Narrabri Board Sheep Directors, held at Narrabri on 19th October, 1875, in compliance with request contained in communication from Under Secretary, Lands, dated 18th August, 1875.

Proposed by James Mosely, Esq., seconded by William Pirie, Esq. :—

"That the Narrabri Board decidedly consider that the inland inspectors should be retained, and that, in addition to their duties as sheep inspectors, they should be inspectors under the 'Brands and Cattle-stealing Prevention Acts,' 'Impounding Act,' and any other Acts that may be passed for the protection of stock-holders, or suppression of diseases in stock." Carried unanimously.

Proposed by W. Pirie, Esq.; seconded by D. M. Fraser, Esq. :—

"That, in the event of the foregoing duties being imposed upon sheep inspectors, this Board suggest that fair salaries be paid the inspectors, so as to enable them to do their duty fairly in all seasons, and that no portion of any fines be received by them." Carried unanimously.

ALFRED J DOYLE,
Chairman

PILLIGA.

APPENDIX.

25

PILLIGA.

W. Evans, Esq., to The Chief Inspector of Stock.

Bungle Gully,
November 23, 1875.

Sir,

I am of opinion that the inland inspectors of stock should continue to be employed.

I remain, &c.,

WILLIAM EVANS.

W. J. Cousens, Esq., to The Chief Inspector of Stock.

Urawilkey, November 24, 1875.

Sir,

I have the honor to be in receipt of your communication and circular, dated 12th November instant, and have the honor to state that I am individually of opinion, concerning the first three clauses, that inland inspectors are necessary, and where their duty is carried out with integrity, that sheep-owners benefit to a great extent, not only by means taken to prevent the spread of diseases, but also the supervision of travelling stock.

I am not prepared to give my opinion as to compulsory inoculation for pleuro, but I am myself in favour of inoculation for pleuro.

With reference to making inspectors of stock inspectors of pounds, I think it would be desirable, as at present they have very little supervision.

At the late meeting summoned by the Chairman of the Board of Sheep Directors, Pilliga, I did not get notice in time, or would have attended.

I have, &c.,

WALTER J. COUSENS.

B. B. Campbell Esq., to The Minister for Lands.

Bulgarric, December 7, 1875.

Sir,

In reply to a circular from the Chief Inspector of Stock, I beg to say I am of opinion that it is necessary to retain the inland inspectors, on condition that they fulfil all the Chief Inspector's reasons for retaining them.

I have, &c.,

B. B. CAMPBELL.

H. Day, Esq., to The Minister for Lands.

Coghill Station,
December 5, 1875.

Sir,

I am in receipt of a circular from the Chief Inspector of Stock, and am quite of opinion of his reasons for retaining the inland sheep inspectors.

I have, &c.,

HENRY DAY.

T. G. Dangar, Esq., to The Minister for Lands.

Pilliga, 6 Oct., 1875.

Sir,

I do myself the honor to inform you that a duly convened meeting of the Board of Sheep Directors for Pilliga District was called by me by advertisement and circular to take place here this day, to consider your circular of the 18th of August last, but which could not be proceeded with in consequence of a quorum not being present.

I have, &c.,

THOS. G. DANGAR,
Chairman Pilliga Board Sheep Directors.

Perhaps in cases such as this the opinions of the individual directors might be asked, as there is little chance, at this season of the year, of a meeting being held.—A.B., 13/10/75. The Under Secretary for Lands.
Approved.—T.G., 14/10/75.

T. G. Dangar, Esq., to The Chief Inspector of Stock.

Bullerawa, Wee Waa,
4 November, 1875.

Sir,

In reply to your letter of the 19th ultimo, No. 75/2293 S.B., I do myself the honor to state that I am of opinion that all inland sheep inspectors could well be dispensed with. They only harass and annoy stock-owners, and paid too much for the paltry services they perform. I decidedly think the Coast and Border inspectors should be retained.

At any time scab made its appearance the Government have the power to appoint.

I have, &c.,

THOS. G. DANGAR,
Sheep Inspector for Pilliga District.

QUEANBEYAN.

A. Cunningham, Esq., to W. W. Stephen, Esq.

Lanyon, Queanbeyan,
12 October, 1875.

Sir,

I have the honor to acknowledge the receipt of your circular of 18th August, addressed to the "Chairman of the Board of Sheep Directors, Queanbeyan," and to state, for the information of the Minister for Lands, that a special meeting was held yesterday, for the purpose of considering the said circular, with its accompanying memo. by Mr. Bruce.

The Directors present were Andrew Cunningham, Thomas Rutledge, and William Davis.

The matter in question was fully discussed, and I am authorized to state that we are unanimously of opinion that the services of a sheep inspector for this district are *not* required, nor have they been for a very long time, and that they may therefore be dispensed with, without any detriment to the sheep-owners and stock-holders generally.

I am also to add the directors feel confident that, in the event of any emergency arising in connection with the "Sheep Diseases Prevention Act," the powers conferred on them by the 13th clause of the said Act, coupled with their own individual interest in such an important matter, would be quite sufficient to set them in motion.

This may be regarded as an answer to the Chief Inspector's reasons for retaining the services of inland inspectors generally, but this Board desires to guard against it being supposed that it has any reference to border and coast sheep inspectors.

I am further to state that, in the opinion of this Board, any legislation intended to prevent the spread of worms and fluke in sheep would most likely prove to be harassing and ineffective. The same would apply to compulsory inoculation of cattle, as we regret to say it has done in the practical working of the Brands Act, which is very generally regarded as of very doubtful utility.

I have, &c.,

A. CUNNINGHAM,
Chairman of Board.

APPENDIX.

G. Loder, Esq., to The Chief Inspector of Stock.

Abbey Green,
13 November, 1875.

Sir,

Yours of 12th instant was the first intimation I had that any opinion of the Sheep Directors was solicited. If our Chairman received the notice, he did not disclose or summon the local directors to discuss the matter. After receiving yours yesterday, he then told me he had received such a notice, but thought I was too busy to attend a meeting, and would himself reply; to that I objected, and desired him to call a meeting for Tuesday next, after which you will receive our opinion.

I have, &c.,
GEO. LODER.

G. Loder, Esq., to The Chief Inspector of Stock.

Abbey Green,
2 December, 1875.

Sir,

I have the honor to acknowledge receipt of your circular 75/2,293 S.B., dated 12th November. In reply, beg to inform you that our Chairman did not summons the directors as you requested, but had a corner interview with the sheep inspector's brother, Mr. John Alford, and informed me a few days ago, did what he considered necessary, that was, advising that the whole of the inspectors be continued in office through the Colony. That not being my idea, I would suggest that only the coast and border inspectors be continued. The whole of the Colonies being free of scab, I think the district inspectors unnecessary.

I have, &c.,
GEO. LODER.

SINGLETON.

Messrs. Brown and Alford to The Secretary for Lands.

Singleton, 22 November, 1875.

Hon. Sir,

We are in receipt of a circular from A. Bruce, Esq., Chief Inspector of Stock, with respect to the retention and employment of the inland inspectors of stock or dispensing with their services and the number of to which their duties apply. We beg to state that those officers are yet highly necessary and would recommend their retention.

We are, &c.,
JOHN BROWN.
J. ALFORD.

J. C. T. McDonnett, Esq., to The Secretary for Lands.

New Freugh, Singleton,
30 November, 1875.

Sir,

Having considered the purport of your circular of 12th instant from Chief Inspector of Stock, requesting my individual opinion with regard to certain questions respecting the retention and employment of the Inland Inspectors, I have the honor to report that, until receiving your reasons for retaining these officers, my impression was it was a useless expenditure of public money, and that these appointments were a perfect sinecure as far as being acquainted with what has been done in this district; but should the various duties as therein enumerated be carried out in their integrity, and the additional one of inspecting the various pounds be carried out, I think the services of these inspectors would be worth their retention.

With regard to the prevention of disease pleuro-pneumonia, I am far from being convinced as to the judicious and expedient necessity of compulsory inoculation, having great doubts as to its efficacy.

I have, &c.,
J. C. T. M'DONNETT.

TAMWORTH.

P. G. King, Esq., to The Under Secretary for Lands.

Tamworth, 8 October, 1875.

Sir,

In reply to your circular letter, dated 18th August, I have the honor to inform you, for the information of the Minister for Lands, that at a duly advertised meeting of Sheep Directors for the district of Tamworth, at which Mr. John Gill and myself were present, the following replies to the memorandum referred to were agreed to, affirming in the first place the retention of the services of the inspector for the district, but expressing the opinion that to retain them it will be necessary to collect only one-fourth of the sheep assessment, leaving a large margin for the general expenses of the Stock and Brands Branch of your Department.

Replies to memo. :-

Sheep Act. (See above.)*Worms and fluke.*—Sheep affected with worms should not be allowed to travel into districts where they do not exist whether naturally or by introduction. "Fluke" may travel.*Cattle disease prevention.*—Compulsory inoculation is not recommended, nor is legislation required.*Brands and Cattle-stealing Prevention Acts.*—(See above.) Brands ought to be placed on animals in the order prescribed by the Act.*Impounding Act.*—Inspectors of stock should be inspectors of pounds. No pound ought to exist where there is no police station.I have, &c.,
PHILIP G. KING,
Chairman of the Board of Sheep Directors at Tamworth.

URANA.

C. M. Lloyd, Esq., to The Secretary for Lands.

Yamma, Urana, 6 October, 1875.

Sir,

I have the honor to inform you that, at a meeting of Sheep Directors for the Urana District, held at Urana on the 5th instant, to take into consideration the circular from your department, dated 18th August, 1875, as to the opinion of the Board as to the desirability of retaining or dispensing with the services of the inspector of the district, it was unanimously resolved that, in the opinion of the Board, the inspector's services should be retained.

I have, &c.,
CHARLES M. LLOYD,
Chairman of Sheep Directors, Urana.

YASS.

YASS.

R. A. Barber, Esq., to The Under Secretary for Lands.

Yass, 13 September, 1875.

Sir,

At a meeting held by the Board of Sheep Directors, at Yass, on the 9th instant, in accordance with circular from the Minister for Lands,—proposed by Mr. J. F. Gray, and seconded by Mr. J. M'Bean, that Mr. R. A. Barber be elected Chairman for the meeting.

The Board of Sheep Directors unanimously agree on the subject of the indispensability of retaining the services of the district inspector, and entirely acquiesce in the substance of the memorandum of the Chief Inspector attached to the Minister's circular above referred to.

The district inspector reported to the meeting that all sheep throughout the district are in a more healthy and thriving condition than for years past.

I have, &c.,
R. A. BARBER.

WAGGA WAGGA.

T. W. Hammond, Esq., to The Under Secretary for Lands.

Wagga Wagga,
16 September, 1875.

Sir,

With reference to your letter of the 18th August, requesting the opinion of the Board of Sheep Directors for the District of Wagga Wagga as to the desirability of retaining or dispensing with the services of the inspector of stock for this district, I beg to state that Messrs. Cox, King, and myself met, and were quite unanimous in believing that the inspector's services should be retained. The reasons set forth in the Chief Inspector's memo. are so ample that we feel it unnecessary to add to them.

I have, &c.,
THO. W. HAMMOND,
Chairman.

WALGETT.

J. R. Doyle, Esq., to The Minister for Lands.

Walgett, 16 December, 1875.

Sir,

I received a circular from the Chief Inspector of Stock, dated 12th November, requesting me to give my opinion, and forward the same to you, as to the desirability of retaining the inland inspectors. I would not advise the dismissal of the inland inspectors, but I would suggest that each of them should be called upon to send in quarterly reports, either to the Chief Inspector or to the Board of Directors, stating the number of stock they had inspected; and also, the different parts of their districts they had visited. As many thousands of stock cross and recross the Barwon, near this township, which are not seen by any inspector, I would also suggest that the police be instructed to look more strictly after drovers and their delivery notes; very many drovers take stock from all parts of this large district, and deliver the same at the sale-yards, Sydney, or Maitland, without ever being called on to show their delivery notes; in fact, so seldom are drovers called upon to show their delivery notes, that some do not think it necessary to get a delivery note at all, and when this state of things becomes generally known, I fear the old habit of years ago will be renewed by that of taking cattle whenever a chance offers. In October last I had a bullock taken from this run, some 350 miles, to Maitland Sale-yards: the bullock was by chance seen in the yards by my cousin, and claimed for me; my agents then wrote and informed me of the fact. If the inspectors or police were more strict, cases of this kind could not occur. If they do not look more closely after travelling stock the Brands Act will soon become a dead letter. I also think the pounds should be looked after more strictly; at present they assist horse-stealing, or the next thing to it. I may have a valuable horse; the fellow who takes a fancy to my horse does not like to run the risk of stealing him, so he has him smuggled away to some byway pound, and he is sold, and for a mere trifle. Cases of this kind are but too common. I will state here another reason why poundkeepers should be under a strict supervision. Some years ago I paid £13 for a horse, and he was knocked down to a neighbour for £15, at Walgett pound sale. A year or so after the pound books were left with me, and I saw the above-mentioned horse set down in the pound book as having been sold for £5; thus the poundkeeper had the benefit of something like £10. I pointed this matter out to the P.M. then acting, but as the poundkeeper had left with one or more warrants out against him no steps were taken with regard to the false entry in the pound book.

I have, &c.,
J. R. DOYLE,
Sheep Director, Walgett.

G. A. Murray, Esq., to The Chief Inspector of Stock.

Milrea, 8 December, 1875.

Sir,

In answer to your favour of 12th ultimo, with respect to the retention and employment of the inland inspectors of stock, my opinion is that, for the reasons you give in your circular, as well as for other causes, it would be of advantage to the several districts, as well as the country at large, to retain the services of those gentlemen.

I have, &c.,
G. A. MURRAY,
Sheep Director, Walgett.

WENTWORTH.

Mr. A. M'Clymonts, to The Chief Inspector of Stock.

Wentworth,
30 October, 1875.

Sir,

I have been requested by the Board of Sheep Directors to forward you the prefixed copy of minutes of a meeting held here on the 27th instant.

I have, &c.,
A. M'CLYMONTS,
Inspector of Sheep.

MINUTES of meeting of Sheep Directors, held this day, the 27th of October, 1875, at Wentworth.

Present:—Wm. Crozier, Esq., D. H. Ludmore, Esq., Thomas C. Brooke, Esq., Chairman.

The Chairman stated:—"Having seen from the Press, the Under Secretary for Lands has written to some of the Boards of Sheep Directors, asking for an opinion on the advisability of retaining or dispensing with the services of the local inspectors,—No communication of the kind has been received by this Board, yet the matter is of such importance I have called you gentlemen together to discuss the question, and place the views of this Board before the Chief Inspector of Stock in Sydney."

After

After some discussion, the following Resolutions were unanimously agreed to :—

- 1st. This meeting is clearly of opinion that, as the local inspectors are the sheep-owners' only protection against the introduction of diseased sheep, it would be most unwise and unjust to the Colony in general to dispense with their services especially so as attempts have so recently been made in some quarters to legalize the introduction of Victorian sheep into this Colony.
- 2nd. This meeting is also of opinion, to carry the proposed new Brands Act out effectually, an additional inspector will be required in this district, as stock are constantly going to and from Victoria and South Australia, by routes lying 20 to 70 miles apart, in opposite directions, thus rendering it quite impossible for one inspector to see *all* the stock passing through the district.
- 3rd. This meeting also desires to place again on record its opinion that legislation is urgently required to prevent sheep affected by fluke or foot-rot from travelling through clean districts; and that all persons in charge of travelling stock, not with sheep alone but every kind of stock, ought to be by law compelled to give the usual twenty-four hours notice before entering on any run.

THOS. C. BROOKE,
Chairman.

YOUNG.

J. Pring, Esq., to The Under Secretary for Lands.

Crowther, Marengo,
16 September, 1875.

Sir,

Referring to your circular of 18th ultimo, in which the Sheep Directors for the Sheep District of Young are requested to send you their opinion as to the desirability of retaining or dispensing with the services of the inspector for this district, I beg to inform you that I called a meeting of the Board, to be held at the Court House, Young, on the 15th instant. No other member of the Board but myself attended; I have, however, received letters from two of the Directors, viz. :—Mr. G. Campbell, of Cowra, and Mr. W. D. Campbell, of Burrowa, in which they both express their opinion that the services of the inspector for this district should be retained, an opinion which I fully endorse.

I have, &c.,
JOHN PRING,
Sheep Director.

A 4.

REASONS for retaining the services of the Inland Inspectors of Stock, and suggestions for their employment in new duties.

I.—THE PREVENTION OF DISEASES IN STOCK.

1. *Scab and catarrh (Sheep Act of 1866.)*

1. If the inland inspectors were removed there is a risk, although perhaps only a slight one, that notwithstanding there are border and coast inspectors, sheep infected with scab might be allowed to pass into the interior unobserved, and thus spread the disease throughout the Colony, without its being detected, as it would now be, by the inland inspectors.

2. There is still some risk of outbreaks of catarrh occurring.

3. There are many provisions of the Sheep Act, such as those in sections 40, 42, 48, 58, 67, 68, 69, 70, 72, 74, 75, 76, 79, and 80,—relating to travelling sheep, coast district sheep, droving, branding, registration of sheep and runs, and the payment of contribution, which would be very imperfectly carried out, and in many cases entirely neglected in the inland districts, if the inspectors there were dispensed with. Owners will not enforce these provisions, and as a rule would much rather pay the small contribution now levied (half a farthing per sheep), and let the inspector enforce the Act than do so themselves; for although they did not object, which they in almost every case do, to prosecute their fellow-owners for breaches of the Act, it would, even as a mere matter of £ s. d., be better for them to pay the inspector than lose their own time over these cases. Although, therefore, there is now no scab in the Colony, and the inspectors in the inland districts have very little to do in preventing its introduction there, the owners in these districts claim that they are entitled, as they pay their share of the contribution, to the services of an inspector to see the provisions of the Act to which reference has been made carried out and thus save them the loss of time and annoyance of enforcing them themselves; for although originally passed for the prevention of disease, and still useful for that purpose, they have been found to be very necessary for the protection of property, and of great service to owners in the working of their stations and the travelling of stock.

There are certainly owners in the inland districts who would allow these provisions of the Sheep Act to fall into disuse rather than contribute to the expense of retaining the services of the inspectors in these districts; but it is believed that those who hold these views are in the minority; and if, as it is here proposed, there were other duties assigned these officers, and a considerable proportion of their salaries made up from other sources than the Sheep Fund, there would be very few, if any, owners in the inland districts who would ask for the removal of their inspectors.

4. Supposing again that, with the exception of those in the Hay and Wagga Wagga districts (which are too near the Victorian border, and too much exposed to infection for their inspectors to be dispensed with), the inland inspectors were removed, the saving on the whole estimate would only be about $\frac{1}{3}$ th of a farthing per sheep, or about 2s. 6d. per 1,000,—not enough to admit of any material reduction on the present rate of contribution.

2. *Worms, Fluke, and Foot-rot.*

It is now generally admitted that these ailments are in many parts of the Colony, to a certain extent at least, infectious or contagious, and the owners in those districts where these ailments have been introduced by sheep from other localities are beginning to ask for some law which will prevent sheep affected with these ailments from travelling into districts in which the sheep are naturally free from them, and would remain so if these diseased sheep did not infect their runs.

The evil here pointed at is a very serious and growing one, and some action ought, as soon as possible, to be taken to remedy it. One remedy which has been proposed appears feasible, so far as it goes. It is that the contribution now paid on sheep should be raised, to a large extent, by a travelling rate per mile on all travelling sheep per 1,000, according to the distance they pass through Crown Lands. Such a rate would bear comparatively lightly on all owners whose sheep were travelled legitimately to market; while it would fall so very heavily on those travelled for grass and water, or leaving their own unhealthy runs in order to pass the dangerous season of the year in districts free from these ailments, that they could not afford to travel, and would give it up. If any law of this nature, or any other measure with the same object in view were passed, the inland inspectors would require to be retained to see it carried out.

3. *Pleuro-pneumonia.*

It is now almost universally admitted that something ought to be done to stay the spread of pleuro-pneumonia, and that at any rate cattle actually affected with this disease should not be allowed to travel as they now do, sowing the seeds of the disease broadcast as they go. Some again, go so far as to propose the compulsory inoculation of all cattle infected with pleuro; and there are certainly very strong grounds for advocating that course,—as the returns lately received show that, taking all those owners in the several districts who have practised inoculation,—there are eighteen in favour of that treatment, to one against it.

If any measure were passed for dealing with this disease, cattle-owners would require to contribute to the payment of the inspector's salary; and in that case 5s. per 1,000, or a fourth of a farthing per sheep, would then be sufficient from sheep-owners.

II.—BRANDS AND CATTLE-STEALING PREVENTION ACTS.

THE following are some of the duties of the inland inspectors under these measures, namely,—

1. They assist owners in registering their brands.
2. They see that the provisions of these Acts in regard to branding, droving, notice of impounding, &c., are carried out. If they did not, these measures would be entirely neglected, and all the trouble and expense of registering would, to a large extent, be lost.

3. They aid in the detection and conviction of duffers and cattle-stealers. This is especially the case with regard to sheep-stealing, which is every year becoming more rife, with the turning out of sheep, as inspectors have the opportunity, while examining stock, in carrying out their other duties, of observing anything suspicious about their brands or marks, and communicating with the police or the rightful owner of the stock.

The Brands Act confers great benefit on stock-owners in the following among other ways:—

- (1.) In the recovery of stray stock.
- (2.) In the settling of questions of ownership.
- (3.) In aiding to put down duffing and stock-stealing.
- (4.) In making a brand all but *prima facie* evidence of ownership.
- (5.) In preventing the brands of superior breeds of stock from being pirated;

and if the inland inspectors were removed, these benefits would be lost to a great extent, as the provisions of the Brands Act would seldom or never be enforced.

III.—INSPECTORS OF POUNDS.

It has been proposed that the inspectors of stock should be made inspectors of pounds, and a Bill assigning them that duty has now been in type for the last five or six years, and on two or three occasions been read a first time in Parliament.

A pound, as pounds are now generally conducted, is not unfrequently anything but a convenience. This arises entirely or almost entirely from the want of proper supervision. As things now are, poundkeepers at a distance—as the majority is from the place of Petty Sessions—can do very much as they like, and often do what is quite illegal with little or no risk of detection. For instance, they can among other things starve the pound stock, purchase at their own sales, sell to any one they like, and if they were so inclined, even embezzle the proceeds of the pound sales.

Under the supervision of the inspector for the district, who would frequently visit the pounds, see how the stock were treated, and examine the books, these derelictions could scarcely occur.

IV.—SUPERVISION OF TRAVELLING STOCK.

Inspectors have recently been called upon to report—

- (1.) As to whether travelling stock are getting the grass and water to which they are entitled while passing through or along Crown Lands.
- (2.) Whether any of the droving roads or the access to any of the reserves were obstructed.
- (3.) Whether any fresh reserves or droving roads were necessary.

And it was contemplated to put the reserves set apart for travelling stock into their charge and give them the power of impounding the stock trespassing on these reserves from adjoining lands, or suing their owners for the trespass.

The inspector moving about as he constantly is in his district, is in a much better position than any one else to supervise the passage of travelling stock through it, and to see that while they obtain the grass and water to which they are entitled they do not trespass nor "loaf" upon the owner of the run.

V.—CROWN LAND RANGERS OR BAILIFFS.

Inspectors have also in some cases been doing duty as these officers, and enforcing the existing regulations with respect to the illegal occupation of Crown Lands, the cutting of timber, and the removal of stone and other material from these lands; and all these duties they could very well attend to, without neglecting those they were more especially appointed to carry out.

VI.—COLLECTION OF STATISTICS.

This is another duty inspectors could discharge in the country districts, and more efficiently than any other class of collectors that could be appointed, without neglecting their regular work. In fact, the collection of statistics would lead them over the very ground, and to a large extent obtain the very same information as they now collect as inspectors of stock. As it now is the statistics are very far from reliable. Several propositions have been made for appointing properly qualified paid collectors; and there is no doubt but that the inspectors could do this work at a far less rate of remuneration than any one else, besides being thoroughly responsible for the manner in which it is done.

In conclusion, supposing that it might not be necessary, now that the Colony is free from scab, to keep up a full staff of inspectors for the mere purpose of carrying out the provisions of the Sheep Act, to which reference has been made, or any single act or duty which has been mentioned,—still it may be highly expedient to employ such a staff at the joint expense of several Acts which require special officers to enforce their provisions, and to pay the inspector a proportionate share of salary in each case from the proper fund for the several duties assigned to him. In this way the charge would be comparatively light on all the funds, even on that of the Sheep Act, while a full staff of officers would be maintained, and the work properly carried out.

[To Evidence of Alexander Bruce, Esq., 2 February, 1876.]

BOOLIGAL.

G. C. Loughnan, Esq., to The Chief Inspector of Stock.

Melbourne, 6 January, 1876.

Sir,

Having been absent from the Lachlan, in consequence of winding up my late father's affairs, I only got your circular the other day in reference to the question of retaining the services of the Sheep Inspectors. In reply, I give my opinion decidedly in favour of retaining them, for all the reasons enumerated on the back of circular, and I think it would be very well indeed if they had some control over the poundkeepers.

I have, &c.,

GEO. C. LOUGHNAN,
of Booligal.

R. A. Molesworth, Esq., to The Chief Inspector of Stock.

Cowl Cowl, Lachlan River,
28 December, 1875.

Sir,

In answer to yours of the 12th November, I beg to inform you that I am in favour of retaining the inland inspectors of stock, as they are of great use in preventing cattle and sheep stealing, and could be made of great service in reporting on roads, and by getting the supervision of pounds they could stop many abuses. They could also stop cattle travelling with pleuro if thought advisable; and I think all cattle-owners in this district think cattle actually affected should not be allowed to travel.

I have, &c.,

R. A. MOLESWORTH.

COONABARABRAN.

David Watt, Esq., to The Chief Inspector of Stock.

Pine Ridge, Denison Town,
14 December, 1875.

Dear Sir,

I am in receipt of your letter in reference to the inland inspectors of stock. I believe it would be a great mistake to do away with the services of the inspectors. I attribute the sound healthy state of the stock of the Colony to the efficient manner in which inspection is carried out, and I believe the directors of this district are in favour of continuing the inspectors. There are very few squatters indeed who do not pay the contribution with satisfaction.

I have, &c.,

DAVID WATT.

WALGETT.

D. M. Rose, Esq., to The Chief Inspector of Stock.

Llanillo, Walgett,
17 December, 1875.

Sir,

I am decidedly in favour of retaining the services of the inland inspectors, so long as they are controlled in the exercise of their duty, and not allowed to use the arbitrary powers conferred on them to the annoyance and unnecessary delay and expense of legitimate travellers. I also think it demoralizing for public officers to receive half of the fines, and would suggest that the fines be paid into the general fund, and the salaries of the inspectors raised. I am opposed to over-legislation in the matter of disease in stock, and consider that if wormy and fluky sheep are prevented from travelling into a salt-bush region, you inflict a great injustice on the unfortunate owners of said sheep, and I doubt very much whether fluky sheep do carry the infection along with them. I know nothing of worms, but have had over thirty years experience of fluke and have cured tens of thousands with salt-bush alone.

On the whole, I am in favour of retaining the inspectors, increasing their salaries, and depriving them of the moiety of the fines.

I have &c.,

D. M. ROSE.

SINGLETON.

W. G. M'Alpin, Esq., to The Chief Inspector of Stock.

Bulga, 17 December, 1875.

Sir,

On receipt of yours, 12th November, I was quite surprised to hear you had not received the circular which I had filled in and sent about the 14th October. I gave you my opinion on all the different questions as far as my individual opinion went; and I told you in the circular I am not a sheep-holder now. I wish you to withdraw my name as one of the sheep inspectors now, having only just a few running about. I beg to decline acting as one of inspectors.

Therefore, I beg to remain,

Yours respectfully,

W. G. M'ALPIN.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE LEGISLATIVE ASSEMBLY.

VOTES No. 8. FRIDAY, 26 NOVEMBER, 1875.

- 6. DISEASES AFFECTING LIVE STOCK ("Formal" Motion):—Mr. J. S. Smith moved, pursuant to Notice.—
 - (1.) That a Select Committee be appointed, with power to send for persons and papers, to inquire into, and report upon, the prevention of the Diseases affecting Live Stock, and the constitution and working of the Stock and Brands Branches.
 - (2.) That such Committee consist of Mr. T. G. Dangar, Mr. Lord, Mr. Garrett, Mr. Hay, Mr. Phelps, Mr. Robertson, Mr. Stuart, Mr. W. H. Suttor, Mr. Day, and the Mover.
 - (3.) That the Proceedings of, and Papers referred to, the Select Committee of last Session, be referred to the said Committee.
 Question put and passed.

VOTES No. 35. WEDNESDAY, 2 FEBRUARY, 1876.

- 2. PAPERS:—
 - Mr. Garrett laid upon the Table,—Return to an Order, made on 21st April, 1875, in reference to the Inspection of Sheep, and the Convictions that have taken place under the Diseases in Sheep Act. Mr. T. G. Dangar (*by consent*) moved, without Notice, That the Returns having reference to number of Sheep and Convictions under Diseases in Sheep Act; also, Return of Reports, &c., from Stock Inspectors, laid upon the Table of the House, be referred to the Select Committee now sitting on "Diseases affecting Live Stock."
 - Question put and passed.
- 3. DISEASES AFFECTING LIVE STOCK:—Mr. J. S. Smith (*by consent*) moved, without Notice, That the Select Committee on "Diseases affecting Live Stock" have leave to make a Special Report.
 - Question put and passed.

VOTES No. 36. THURSDAY, 3 FEBRUARY, 1876.

- 2. DISEASES AFFECTING LIVE STOCK:—Mr. J. S. Smith (*by consent*) moved, without Notice, That the name of Mr. Farnell be substituted for that of Mr. Stuart as a Member of the Select Committee on "Diseases affecting Live Stock."
 - Question put and passed.
- 5. DISEASES AFFECTING LIVE STOCK:—Mr. J. S. Smith, as Chairman, brought up a Special Report from, and laid upon the Table the Minutes of Proceedings of, and of Evidence taken before, the Select Committee for whose consideration and report this subject was referred, on 26th November, 1875, together with the Appendix.
 - Ordered to be printed.

VOTES No. 38. TUESDAY, 8 FEBRUARY, 1876.

- 3. PAPER:—Mr. Garrett laid upon the Table,—Return to an Order made on 27th April, 1875, in reference to Reports from Stock Inspectors.
 - Ordered, That the Documents be referred to the Select Committee now sitting on "Diseases affecting Live Stock."

VOTES No. 62. TUESDAY, 21 MARCH, 1876.

- 3. PAPERS:—Mr. Garrett laid upon the Table,—

(4.) Final Return to an Order, made on 16th July, 1875, in reference to Diseases affecting Live Stock. Ordered, that the Documents be referred to the Select Committee now sitting on "Diseases affecting Live Stock."

VOTES No. 69. FRIDAY, 31 MARCH, 1876.

3. DISEASES AFFECTING LIVE STOCK:—

(1.) Mr. J. S. Smith (*with the concurrence of the House*) moved, without Notice, That the Report by the Registrar of Brands on the Brands Act of 1866, and on the sketch of the measure which has been framed for its amendment, together with Papers relating thereto, laid upon the Table on the 3rd instant, be referred to the Select Committee now sitting on "Diseases affecting Live Stock." Question put and passed.

* * * * *

VOTES No. 121. WEDNESDAY, 12 JULY, 1876.

9. DISEASES AFFECTING LIVE STOCK:—Mr. J. S. Smith, as Chairman, brought up a Progress Report from, and laid upon the Table the Minutes of Proceedings of, and Evidence taken before, the Select Committee for whose consideration and report this subject was referred on 26th November, 1875, together with Appendix.
Ordered to be printed.
-

1875-6.

DISEASES AFFECTING LIVE STOCK.

PROGRESS REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 26th November, 1875,—“with power to send for persons and papers, to inquire into and report upon the prevention of the Diseases affecting Live Stock, and the constitution of the Stock and Brands Branches,”—and to whom were referred, on the same date “the Proceedings of, and Papers referred to, the Select Committee of last Session,”—on the 2nd February, 1876, “the Returns having reference to number of Sheep and convictions under Diseases in Sheep Act; also Return of Reports, &c., from Stock Inspectors,”—on the 8th February, 1876, “the Return to an Order, made on 27th April, 1875, in reference to Reports from Stock Inspectors,”—on the 21st March, 1876, “The Final Return to Order made on 16th July, 1875, in reference to Diseases affecting Live Stock;” and on the 31st March, 1876, “the Report by the Registrar of Brands on the Brands Act of 1866, and on the sketch of the measure which has been framed for its amendment, together with Papers relating thereto,”—have agreed to the following Report:—

Your Committee having examined the witnesses named in the *List, and considered the documents referred to them, have arrived at the following conclusions:—

1. That your Committee are unable to conclude the inquiry during the present Session, owing to the number and variety of the subjects contained therein, and they recommend that it be resumed early next Session.

2. That your Committee have taken sufficient evidence to convince them that it is necessary to amend the Diseases in Sheep Act of 1866 and the Imported Stock Act of 1871, and they recommend that Bills be prepared by the Government during the recess, and introduced during next Session of Parliament, to amend those Acts.

3. That the suggestions made by the Chief Inspector of Stock, in paragraphs 5 to 19 inclusive of Appendix AA 1 to his evidence, should be embodied in the Bill for the amendment of the Diseases in Stock Act.

4. That the suggestions made by the Chief Inspector of Stock, in paragraphs 1 to 10 inclusive of Appendix AA 2 to his evidence, should be embodied in the Bill for the amendment of the Imported Stock Act.

5. That your Committee have been unable to enter fully into the consideration of the Sketch Stock Stealing and Straying Prevention Bill which has been referred to them, and in regard to which they have taken some evidence, but they have seen sufficient of its provisions to arrive at the conclusion that it contains the materials necessary for an effective measure, and would recommend that a Bill based thereon be framed during the recess and introduced next Session.

6. That the amendments proposed by the Sketch Stock Stealing and Straying Prevention Bill relative to the Brands Act would lessen the work and the expense of carrying out the provisions of that measure; and your Committee are of opinion, from the evidence adduced, and the information contained in the Return referred to them of the reported cases of stock-stealing, that any alteration of the law which would tend to put down that crime is urgently called for.

JNO. S. SMITH,
Chairman.

No. 2 Committee Room,
Sydney, 6th July, 1876.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 15 DECEMBER, 1875.

MEMBERS PRESENT :—

Mr. J. S. Smith, | Mr. Phelps,
Mr. Day.

Mr. J. S. Smith called to the Chair.

Entry from Votes and Proceedings appointing the Committee, and referring Papers thereto, read by the Clerk.

Printed copies of the Papers referred, before the Committee.

Committee deliberated.

Ordered, That Alexander Bruce, Esq., be summoned to give evidence next meeting.

[Adjourned to Friday next, at half-past Two o'clock.]

FRIDAY, 17 DECEMBER, 1875.

MEMBERS PRESENT :—

Mr. Day, | Mr. T. G. Dangar,
Mr. Phelps, | Mr. W. H. Suttor.

In the absence of the Chairman, Mr. W. H. Suttor called to the Chair *pro tem*.

Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

Alexander Bruce, Esq., called in and further examined.

Witness handed in certain documents, which were ordered to be appended. (See Appendices A 5 and

A 6. *Special Report of 3 February, 1876.*)

Witness withdrew.

William

William Hay, Esq., M.P., a Member of the Committee, examined in his place.

George Day, Esq., M.P., a Member of the Committee, examined in his place.

Committee deliberated.

Motion made (*Mr. T. G. Dangar*), That the Chairman be instructed to draw up a Special Report, to be submitted to the House, recommending that the services of the Inland Inspectors of Sheep be dispensed with at the end of this year.

Question put and passed.

[Adjourned to To-morrow, at *Three o'clock*.]

THURSDAY, 3 FEBRUARY, 1876.

MEMBERS PRESENT:—

Mr. J. S. Smith in the Chair.

Mr. W. H. Suttor,
Mr. Hay,

Mr. T. G. Dangar,
Mr. Day.

Entry from Votes and Proceedings referring Papers to Committee, read by Clerk.

Chairman submitted Draft or Special Report, which was read 1^o, as follows:—

Your "Committee" recommend that the services of the Inland Inspectors of Sheep be dispensed with at the end of this year.

Amendment proposed (*Mr. W. H. Suttor*), That the words "do not" be inserted after the word "Committee" in the first line.

Question,—That the words proposed to be inserted be so inserted,—put.

Committee divided.

Aye, 1.

Noes, 3.

Mr. W. H. Suttor.

Mr. Hay,
Mr. Day,
Mr. T. G. Dangar.

And so it passed in the negative.

Further Amendment proposed (*Mr. Hay*), That all the words after the word "Committee" be omitted, with a view to the insertion of the following words:—"having taken the evidence of the witnesses* named in the margin, recommend that the services of all the Inspectors of Sheep, with the exception of those on the Borders and those in the Coast Districts, be dispensed with at the end of this year."
*A. Bruce, Esq.
W. Hay, Esq., M.P.
G. Day, Esq., M.P.

Amendment put and agreed to.

Special report as amended agreed to.

Chairman to report to the House.

Committee deliberated.

[Adjourned to Wednesday next, at *Two o'clock*.]

WEDNESDAY, 9 FEBRUARY, 1876.

In the absence of a quorum, the meeting called for this day lapsed.

WEDNESDAY, 16 FEBRUARY, 1876.

MEMBERS PRESENT:—

Mr. J. S. Smith in the Chair.

Mr. Day,

Mr. T. G. Dangar,

Mr. Farnell.

Entries from the Votes and Proceedings, substituting the name of Mr. Farnell for that of Mr. Stuart on this Committee, and referring Papers to the Committee, read by the Clerk.

Papers before the Committee.

Committee deliberated.

Alexander Bruce, Esq., called in and further examined.

Witness handed in a Paper, suggesting amendments required to be made in the "Sheep Diseases Prevention Act," which was ordered to be appended. (*See Appendix A.A.I.*)

Ordered, That Alexander Bruce, Esq., be summoned to give further evidence next meeting.

[Adjourned to Tuesday next, at *Two o'clock*.]

TUESDAY, 22 FEBRUARY, 1876.

MEMBER PRESENT:—

Mr. Day.

In the absence of a quorum, the meeting called for this day lapsed.

WEDNESDAY,

WEDNESDAY, 15 MARCH, 1876.

MEMBERS PRESENT :—

Mr. Farnell,		Mr. W. H. Suttor,
Mr. T. G. Dangar,		Mr. Day.

In the absence of the Chairman, Mr. Farnell called to the Chair *pro tem*.
 Entry from Votes and Proceedings, referring documents to the Committee, *read* by the Clerk.
 Alexander Bruce, Esq., called in and further examined.
 Witness asked leave to withdraw certain Papers in reference to Pleuro-pneumonia which were handed in by him on 2nd February, 1876.
 Witness withdrew.
 Committee deliberated.
 Motion made, (*Mr. T. G. Dangar*) and Question,—That certain documents handed in by Mr. Bruce on 2nd February last, be withdrawn,—put and passed.
Ordered, That Alexander Bruce, Esq., be summoned to give evidence next meeting.
 [Adjourned to Wednesday next, at *Two* o'clock.]

WEDNESDAY, 22 MARCH, 1876.

MEMBERS PRESENT :—

Mr. J. S. Smith,		Mr. Farnell.
------------------	--	--------------

In the absence of a quorum, the meeting called for this day lapsed.

FRIDAY, 24 MARCH, 1876.

MEMBERS PRESENT :—

Mr. Farnell,		Mr. Day,
Mr. T. G. Dangar,		Mr. Hay,
Mr. W. H. Suttor.		

In the absence of the Chairman, Mr. Farnell called to the Chair *pro tem*.
 William Halliday, Esq. (*Grazier*), called in and examined.
 Witness withdrew,
 Committee deliberated.
Ordered, That W. H. Suttor, Esq., M.P., be requested, and Alexander Bruce, Esq., summoned to give evidence next meeting.
 [Adjourned to Wednesday next, at *Eleven* o'clock.]

WEDNESDAY, 29 MARCH, 1876.

MEMBERS PRESENT :—

Mr. Farnell,		Mr. W. H. Suttor.
--------------	--	-------------------

In the absence of a quorum, the meeting called for this day lapsed.

THURSDAY, 6 APRIL, 1876.

MEMBERS PRESENT :—

Mr. J. S. Smith,		Mr. Farnell.
------------------	--	--------------

In the absence of a quorum, the meeting called for this day lapsed.

WEDNESDAY, 12 APRIL, 1876.

MEMBERS PRESENT :—

Mr. J. S. Smith in the Chair.

Mr. Farnell,		Mr. T. G. Dangar,
		Mr. Day.

Alexander Bruce, Esq., called in and further examined.
 Witness *handed in* Paper suggesting amendments required to be made in the "Imported Stock Act of 1871," which was ordered to be appended. (*See Appendix AA 2.*)
 Witness withdrew.
 Committee deliberated.
Ordered, That W. H. Suttor, Esq., M.P., be requested, and Samuel Clift, Esq., be summoned to give evidence next meeting.
 [Adjourned to Wednesday next, at *Two* o'clock.]

WEDNESDAY,

WEDNESDAY, 19 APRIL, 1876.

In the absence of a quorum, the meeting called for this day lapsed.

THURSDAY, 18 MAY, 1876.

MEMBERS PRESENT:—

Mr. J. S. Smith in the Chair.
Mr. W. H. Suttor, | Mr. Farnell,
Mr. Day.

Alexander Bruce, Esq., called in and further examined.
Witness withdrew.
Committee deliberated.
Re-assembling of the Committee to be arranged by the Chairman.
[Adjourned.]

THURSDAY, 1 JUNE, 1876.

MEMBERS PRESENT:—

Mr. Farnell, | Mr. Hay,
Mr. W. H. Suttor.

In the absence of the Chairman, Mr. Farnell called to the Chair *pro tem*.
Joseph M'Gaw, Esq. (*Grazier*), called in and examined.
Witness withdrew.
The Hon. J. B. Wilson, Esq., called in and examined.
Witness withdrew.
James Henry Davidson, Esq. (*Grazier*), called in and examined.
Witness withdrew.
Committee deliberated.
Re-assembling of the Committee to be arranged by the Chairman.
[Adjourned.]

FRIDAY, 9 JUNE, 1876.

MEMBERS PRESENT:—

Mr. J. S. Smith in the Chair.
Mr. T. G. Dangar, | Mr. Day,
Mr. Farnell.

James Wilson, Esq. (*Grazier*), called in and examined.
Witness withdrew.
Committee deliberated.
Re-assembling of the Committee to be arranged by the Chairman.
[Adjourned.]

THURSDAY, 29 JUNE, 1876.

MEMBERS PRESENT:—

Mr. Farnell, | Mr. Day.
Mr. T. G. Dangar, | Mr. W. F. Suttor.

In the absence of the Chairman, Mr. Farnell called to the Chair *pro tem*.
Committee deliberated.
Resolved, That the Chairman be instructed to draw up a Progress Report, to be submitted next meeting.
Re-assembling of the Committee to be arranged by the Chairman.
[Adjourned.]

THURSDAY, 6 JULY, 1876.

MEMBERS PRESENT:—

Mr. J. S. Smith in the Chair.
Mr. Farnell, | Mr. Day.

Chairman submitted Draft Progress Report. Same read and agreed to.
Chairman to report to the House.

LIST OF WITNESSES.

	PAGE.
Bruce, Alexander, Esq. ...	
Day, George, Esq., M.P. ...	
Hay, William, Esq., M.P.	
} <i>Evidence printed with Special Report of 3 February, 1876.</i>

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MINUTES OF FURTHER EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

DISEASES AFFECTING LIVE STOCK.

(The previous Evidence taken before this Committee, with the Appendices thereto, will be found printed with the Special Report brought up on 3 February, 1876.)

WEDNESDAY, 16 FEBRUARY, 1876.

Present:—

MR. T. G. DANGAR,
MR. DAY,

MR. FARNELL,
MR. J. S. SMITH,

J. S. SMITH, ESQ., IN THE CHAIR.

Alexander Bruce, Esq., further examined:—

1. *Chairman.*] I believe you have framed some amendments which you propose should be made in the Sheep Act? Yes. *(The witness handed in the same. Vide Appendix AAL.)*
2. The first suggestion you make here, is—"The definition as to size of paint brand in the interpretation clause to be omitted, and the term 'legible' inserted." Do you think it is not necessary to have a paint or tar brand? It is necessary to have a brand, but its legibility is of more importance than its size. There is another matter that has occurred to me since I framed this suggestion. Some parties have been in the habit of using one brand for a fire-brand and another for a tar-brand, and it is a question whether they should not be confined to one brand for both purposes. Some of the brands would suit well enough for a paint or tar-brand that would not suit for a fire-brand.
3. There are many letters that you could use for a tar-brand that you could not for a fire-brand, because many letters are prohibited? Yes, and you could not put a large brand on the nose.
4. I see you suggest a new clause, that—"A Board of Examiners be appointed by the Government, consisting of one medical man, one veterinary surgeon, and the Chief Inspector of Stock." Will you explain why you think this necessary? Some qualification is necessary to prevent what has occurred in several cases; parties have been appointed who were, by general opinion, considered unfit for the duty.
5. Is there anything in the Act providing for a Board of Examiners? Nothing; that suggestion you will see is marked as new.
6. You also propose—"The Board to be guided by regulations to be made from time to time by the Governor in Council"? That would follow as a matter of course.
7. "No person to be eligible for nomination for the office of Inspector who does not hold certificate of fitness from the Board." You are aware that the Committee have reported that they think Inspectors are not necessary? Inland Inspectors.
8. This you intend to apply only to Border and Coast Inspectors? As far as the staff remains, of course; in fact in that case it would be more than ever important that the Inspectors should be perfectly fit—if the staff were reduced.
9. You propose the next as a sort of addendum to sections 5, 6, and 7? Yes. It has been found this year, for the first time in electing Directors, that in some districts the small sheep farmers have been able to swamp the larger, and I would propose cumulative voting, as this may be considered a sort of municipal matter.
10. You propose "Sheep-owners to have votes at all meetings called for the election of Directors as follows, viz.:—Owners of 500 sheep and under, one vote; owners of sheep and under two votes; and one additional vote for every additional sheep"? Yes, the question is, where the line should be drawn for two votes—whether it shall be for 5,000 and upward till you come to 10,000, and then another vote for (say) every 5,000 sheep, or where.

346—A

A. Bruce,
Esq.

16 Feb., 1876.

- A. Bruce, Esq. 11. *Mr. Day.*] Do you not think it should be less than 10,000 for two votes, or may you not upset the object you have in view? Perhaps so.
- 16 Feb., 1876. 12. *Mr. Dangar.*] You merely suggest the principle of cumulative votes? Yes.
13. *Chairman.*] Your sixth suggestion is an addendum to section 12? It is an amendment of that.
14. Of the whole clause? No; of one of the provisions. The old Act says—"Whenever the Minister may consider that the services of one Inspector are sufficient for two or more Districts the Directors in such Districts shall meet together in some place to be appointed by the Minister and nominate an Inspector for such Districts." When an inspector is appointed for more than one district, it is found to be inconvenient to take Directors away from their homes to attend meetings in other districts.
15. *Mr. Dangar.*] You propose that the Directors in each district should meet, and that the majority of votes of the three Boards should carry the nomination? Yes.
16. *Chairman.*] Suggestion 7 is merely that, where the Directors shall not meet, the Governor in Council shall appoint the Inspector? Yes.
17. I hardly understand your eighth suggestion—"Sheep while being carried by rail, so long as they are not infected, not to be subject to the provision relating to quarantine, nor to those relating to the Coast District, if they start from a portion of the Colony not within that district"? Suppose there were a quarantine somewhere between Bathurst and Sydney—in a portion of the country including the railway—if sheep were to start from Sydney by rail as the law now stands, they could not go on to Bathurst because they would be going through quarantine; but if they remained in the trucks there would be no risk in their doing so; and there is a clause in the Home Act to the same effect as this suggestion, by which sheep are allowed to pass through quarantine so long as they remain in the train. In the same way, sheep going to Goulburn by rail from Bathurst, or Mudgee, would be detained at the Parramatta Junction, though they never left the trucks, because they come within the coast line.
18. You do not think there would be the slightest danger? There would be no danger so long as they were not taken out of the trucks.
19. Your ninth suggestion is, "Owners travelling sheep under the 41st section to give not less than twelve nor more than forty-eight hours notice of intention to pass through or along a sheep run."—Is not that in the old Act? The words "not more than forty-eight hours" were in the old Act of 1863, but in the existing Act the only words are "not less than twelve hours."
20. Is there not a clause to that effect in the old Land Act? No, the provision in the existing Sheep Act was supplemented by regulation, but there was a question as to whether it could be done by regulation, as it was a material point.
21. Your tenth suggestion has reference also to clause 41—"Such notice not to be necessary where the run is separated from the road by a sufficient fence, nor in regard to sheep while being carried in a conveyance"? Yes.
22. You next say "In clause 42, instead of 'such owner's' station brand the wording should stand 'an owner's.' The clause would then run thus—"Every owner of travelling sheep which are not legibly branded with the letter T in addition to an owner's known or station brand, shall for every such sheep so unbranded incur a penalty not exceeding sixpence, and not less than one penny"? Yes; the reason for that is this,—a butcher or dealer buys say a thousand sheep, starts with them on the road, and they are his sheep, and as the law now stands he would be obliged to brand them with his brand before he travels them. It is enough to have an owner's brand, that is the brand of the owner from whom he bought them, and the letter T.
23. "Fees for sheep in quarantine to be fixed by regulation instead of by schedule under the Act."—Will you explain that? As it stands now the fee is fixed too high, at a shilling a day for sheep in quarantine, and a regulation was made fixing it at sixpence; but here again there was the same question as to the power of altering the fee by regulation. There is a profit to the quarantine at sixpence, and it was thought to be sufficient to charge that rate. There is another thing. There are times when the regular quarantine cannot take all the sheep imported, and these special quarantines have to be appointed. In those cases there ought to be no fees exacted where the land proclaimed is owned or rented by the owner of the sheep. The matter should be left in the hands of the Government, who would fix the rate of fees according to the cost, and remit them where they were under no expense.
24. *Mr. Farnell.*] You have in fact to appoint more quarantines than one? Yes. There are now 500 sheep in special quarantine at Homebush, and more than 1,000 sheep altogether in quarantine about Sydney.
25. Then by this regulation the fees might be fixed according to the circumstances for the time being? Yes.
26. *Chairman.*] You next propose to reduce the number of days' quarantine from sixty to thirty? I propose to reduce it, but I thought I had left the number of days blank to be filled up when the Bill was framed. It would be quite safe with thirty days; sixty days unnecessarily increases the expense and trouble to the owners of sheep, who are at considerable expense in conveying the sheep here and thence to their stations. This is especially the case in regard to those who have brought sheep from Victoria, and have to take them back to Riverina.
27. *Mr. Farnell.*] How would it answer to have a clause framed in this way—not less than thirty nor more than sixty, leaving it discretionary? This quarantine is for uninfected sheep. If there were any doubts as to their cleanness there might be reason for giving power to increase the time, but we have little or no doubt about that, as they are examined before landing.
28. *Chairman.*] With reference to your 14th suggestion, is this a new clause or an alteration of the 55th? It is an alteration. It is here suggested to work the clause by regulation. Now it is a hard and fast law, and is not carried out. Under it sheep coming from Morpeth by steamer are subject to certain examination and restrictions. The clause is of use only when there is scab in the Colony; and it was because scab was in the Hunter district that we were very particular about sheep coming by the steamers. Now that there is no scab the law is a dead letter, but there ought to be power to put it in force when necessary.
29. Your 15th suggestion is—"Sheep coming within the Coast District to receive one and as many more dressings and at such times as the Governor in Council may by regulation direct, before leaving it"? Yes. Now they have to undergo three dressings and to stop for twenty days, and this is altogether unnecessary, as there is no disease in the Colony. When the neighbouring Colonies are altogether clean, the dressing might be dispensed with, and the sheep allowed to go back on inspection.

30. Suggestion 16 is with reference to clause 72—"Every owner to have only one ear-mark, but if he owns more stations than one, and they do not adjoin, he may use one ear-mark for each station. Where they do adjoin, to use only one ear-mark for each set of adjoining stations"? The ear-mark would be another link in the evidence in cases of sheep-stealing if this were carried out. I believe there is no necessity for owners having more than one ear-mark. They would, of course, also have the age ear-mark, which need only be small—merely a slight notch on the side of the ear.
31. The next is new altogether,—“No owner to cut off more than one-fourth of a sheep's ear in marking, nor cut it straight across, nor re-mark a sheep's ear on purchasing it from the original breeder”? The original owner could put his own or station mark on (say) the right ear for ewes, and on the left for wethers. These marks are of great use in drafting. When sheep get mixed they are drafted by the ear-marks. I think the ear should be rigidly preserved for the ownership mark, and paint brands used for distinction brands. In many cases the fire-brand is a blotch, or it would be very easy to blotch it if a thief got hold of the sheep, and it is therefore comparatively unreliable.
32. *Mr. Dangar.*] How could you allot a different ear-mark to each owner where there were fifty or a hundred owners in a district? I believe you could; you can get a great many when you set yourself to do it. I believe the number of ear-marks is almost illimitable. I do not think there would be any difficulty in getting 100 different ear-marks for a district. In Riverina I believe sheep-owners stick closely to one ear-mark. They do not mark the ear for the different classes of sheep further than by the simple notch; for the age, on one ear for the ewes and on the other for wethers, and they indicate the age by the position of the notch on the ear—running up one side and down the other—but they do not make a swallow-tail for one class of sheep, a straight across cut for another, a half-penny for another. If the plan here suggested were carried out it would be of great use, considering how easily the paint brands are shorn off and fire brands are blotched.
33. *Chairman.*] Your 18th suggestion is,—“All ear and other marks and all distinctive working brands or marks denoting the age, class, or breed of sheep, to be registered with the Inspector for the District along with the sheep brand.” You propose to register the particular age brands? Yes; neighbours could have a particular mode of denoting the different ages, which the Inspector would record with the entry of the brand in his register.
34. *Mr. Dangar.*] All the age brands would be alike in the one district? They are not bound to be; one man might begin on one side and another on another.
35. How could they do that if there were fifty in a district? I do not say they could in every case in a district, but as regards neighbours, one man might have the age mark in one way and another in another, and still be done by notches. It is with the view of identifying ownership that the suggestion is proposed.
36. *Chairman.*] Suggestion 19th is this:—“In cases of prosecutions for offences and convictions, the inspector be entitled to receive an order for travelling expenses incurred by him in serving the summonses and carrying the prosecution through, but not any moiety of the fine, which shall all be paid to the credit of ‘Sheep Account’ at the Treasury. That is entirely different from the old clause? It is an alteration of only a small portion of the clause, which says—“such penalties after deduction of the expenses incurred in their recovery shall be paid by the Clerk of Petty Sessions, one-half to the informer or prosecutor, and the remaining half to the Colonial Treasurer, to be placed to the credit of the ‘Sheep Account’ hereinbefore described.”
37. You propose that the inspector shall be entitled to receive an order for travelling expenses—that is from the Board I suppose? No, he should be allowed his expenses by the Bench, and not receive half the fine.
38. *Mr. Dangar.*] Does not the dipping of sheep in the county of Cumberland lead to very great inconvenience? Yes, as it is now.
39. Is there anything you could suggest to lessen that inconvenience? What I have already suggested—that there should be one dipping instead of three, and that they should be allowed to go as soon as they had got their dipping.
40. Is any record sent to your office from local districts as to the registration of fire or tar brands? No.
41. Do you think any inconvenience arises from the registration of the same brand in two districts? Yes, I have had some cases of that, where the owners of the brand are neighbours though in different districts.
42. Could you suggest anything that would remedy this evil? That each inspector should send me annually, or perhaps half-yearly, a list of brands registered with him, and then I would be in a position to see whether the brands in the adjoining districts clashed, but it would be necessary that power should be given by the Act to make one party alter.
43. Could you suggest any better mode of giving notice by the sheepowners than the present. It seems to me a very heavy tax on sheep-owners, as it necessitates three men with a flock of sheep where one or two would be sufficient? It might be done to some extent by requiring a written notice, extending the time within which notice can be given to from seven to ten days, and allowing notice to be sent by post.
44. Do you think on a run where there are fences it is necessary to give notice at all? No, not where the fence between the road and the run is sufficient.
45. Under the present law it is? Yes.
46. Would you suggest the abolition of notice in that case? Yes, and in the case of sheep carried in a conveyance, notice has now to be given where stud sheep are carried in a conveyance.
47. Are you of opinion that when a vacancy takes place in a Board of Directors that it might be filled up by the remaining members of the Board, instead of being referred to the Minister? I think it might be; it would save time and trouble if the Board were allowed to do so for the current year.
48. Do you not think it would be of very great advantage to the stockholder if the laws existing respecting stock were consolidated? Yes, I think so.
49. Have you ever given this subject consideration with a view to the consolidation of the law? Yes; *Mr. Forster* asked me to put materials together for that purpose, and there was a sketch of Bill drawn up and printed, having that object in view. That sketch has been dealt with by the Stock Conference in November, 1874.
50. And approved? It was gone over clause by clause, and it has since been printed by order of the House among the papers laid on the Table on Diseases affecting Live Stock.

- A. Bruce, Esq. 51. *Mr. Day.*] What evils have you found to arise from similar brands being registered in adjoining districts? I have not had very many cases brought under my notice, and perhaps that arises from my not having got, as I might have done, a return of the brands. But not having power to deal with the matter should there be two similar brands owned by neighbours in adjoining districts, I do not ask for the brands.
- 16 Feb., 1876. 52. Have you heard any complaints? I had a complaint yesterday, and I have had others before.
53. Do you think from your experience that it is necessary to give notice of the brands in weaning? I have had a good many complaints from different parts about neighbours not behaving to each other as they ought to do, and that there has been considerable inconvenience and loss on that account. I think if there could be a workable provision framed with respect to notice it ought to be made law.
54. You think it is necessary to compel owners to give notice to their neighbours of their intention to brand at the weaning? I think it is desirable, but I have heard considerable doubt expressed as to whether it is practicable. Suppose an owner had a number of small neighbours, as is sometimes the case, he would find it inconvenient to send notice to all and to have them all present at muster. Some would not like to be troubled with it.
55. They need not come? But they might come. Something of the sort is very much needed where there is a particular muster, such as that of weaning, and perhaps some other musters, and with the turning out of sheep this is becoming much more necessary because it is not now as when the sheep were shepherded and kept more in hand. Sheep now are becoming more like cattle, and stray from one man's run to another.
56. I suppose you are aware that it is impossible to mother lambs at weaning and branding times? Quite impossible.
57. Are you aware that the usual custom is to count the ewes, and to allow a lamb for every wet one? I do not know that; I have not had any practical experience in the working of turned out sheep. I know that fences are often imperfect and get burned or broken down, and that sheep belonging to different runs get mixed.
58. Do your inspectors ever exercise any inspection over the branding of sheep and see that they are properly done? They ought to see that they are legible.
59. Have they power to do so? Yes, it would not be a brand unless it were legible according to the provisions of the Act. I think the Act is somewhat defective on that point; it says—"a brand shall be conspicuous." It would be conspicuous if it were merely a large blotch; it should be legible.
60. *Mr. Farnell.*] What are the boundaries of the quarantine land for the coast district of Sydney? It comes through beyond Picton in a line to the junction of the Nepean and Warragamba, and then it keeps the Hawkesbury River to below Windsor at Sackville Reach.
61. Was there not an agitation some time ago for the alteration of these boundaries—to make them nearer to Sydney? Yes.
62. And it was refused? Yes; a line between Parramatta and Homebush was asked for, but it was seen that that would practically be having no boundary at all; for to maintain such a line would require a regular staff of men all along it. Its being a mere imaginary line, there would be no difficulty in putting sheep across it at night; and as soon as butchers found their sheep getting poor they would put them over the line and sell them as store sheep to be taken up the country. Now we have a line that we can ensure, besides being at a distance from the market.
63. Do you remember what reasons were given at the time, in addition to those you have now stated for not enlarging the boundary? Yes. There was another reason,—that fat sheep sold at Homebush required for Parramatta and other towns in the county of Cumberland would have to be dipped before they could be taken over the coast line.
64. *Mr. Dangar.*] From the reports received by you do you find that sheep-stealing is on the increase? Yes, and the suggestions I have made with regard to ear-marks were so with the view of affording additional links of evidence in cases of sheep-stealing.

WEDNESDAY, 15 MARCH, 1876.

Present:—

MR. T. DANGAR, | MR. DAY,
MR. W. H. SUTTON.

JAMES S. FARNELL, ESQ., IN THE CHAIR.

Alexander Bruce, Esq., further examined:—

- A. Bruce, Esq. 65. *Chairman.*] When you were examined on a previous occasion before this Committee you produced certain documents in reference to pleuro-pneumonia? Yes.
- 15 Mar., 1876. 66. I believe you desire to withdraw those papers, in order that you may submit them to the Committee in a different way? With a view to their being laid upon the Table of the House and ordered to be printed. I have also prepared other papers which have been laid upon the Table of the House and ordered to be printed, in reference to the Stock and Brands Branch, but they are not yet printed.

FRIDAY, 24 MARCH, 1876.

Present:—

MR. DAY, | MR. FARNELL,
MR. T. G. DANGAR, | MR. HAY,
MR. W. H. SUTTON.

JAMES S. FARNELL, ESQ., IN THE CHAIR.

William Halliday, Esq., called in and examined:—

- W. Halliday, Esq. 67. *Chairman.*] Where do you reside? At Brookong Station, in the Murrumbidgee district.
68. You are a large pastoral occupant? Yes.
- 24 Mar., 1876. 69. Have you observed anything in reference to the working of the present Stock Act? There are several things that I think require amendment in connection with the Act. I think, for instance, that the voting powers of the holders of stock require amendment. 70.

70. There have been some elections recently of directors in the Deniliquin district? Yes; the facts of that case I am not acquainted with, but I believe there has been some difficulty. W. Halliday,
Esq.
24 Mar., 1876.
71. There has been a great deal of dissatisfaction expressed? Yes, I believe so.
72. I believe of late years a large number of small holders of stock have come into existence? Yes.
73. And in the election of directors they have an equal voice with large owners? Yes; owners of 500 sheep have an equal right with owners of 50 or 100 thousand.
74. Could you suggest to the Committee any principle that you think ought to be carried out in reference to the election of these directors? I think one vote should be allowed for from 500 to 10,000 sheep, two votes for from 10,000 to 15,000, with an additional vote for every 5,000 up to (say) 60,000, and after that one additional vote for every 10,000 sheep over 60,000.
75. Then you approve of the principle of cumulative voting according to the number of stock? Yes.
76. Have you observed anything particular in reference to the working of the various Boards of Directors throughout the Colony? Scarcely any of them have done any work, because there has been no occasion for them to do much.
77. I presume you mean that there is no scab? There has been no scab for some years in this Colony, so that, with the exception of the Boards on the frontier, there has not been much for them to do. On the frontier they have had to keep a careful watch against the introduction of disease.
78. Under these circumstances would you think it advisable to do away with these Boards? Certainly not. I think the great body of the stockowners would decidedly object to that, seeing that the expense of maintaining them is very small.
79. Is there not scab in some of the neighbouring Colonies? I am not aware whether Victoria has been proclaimed clean or not; if it has been it is very lately. I know there were one or two stations in quarantine as late as a month ago, and I believe scab does exist still in Victoria.
80. That being the case, you think it is necessary to keep up these Boards throughout the Colony? I do, most decidedly.
81. Do you think they could be worked more economically than they are now? I scarcely see how they could.
82. Do you think it would be safe to dispense with any number of boundary riders, or to reduce the number of inspectors? I certainly would not reduce the number of boundary riders, nor the number of inspectors either. Looking at the magnitude of the interests at stake, I think the charge upon the stockowners is a very small one, and that we ought to be careful how we diminish the amount of protection afforded. With regard to the quarantine regulations, I think the time ought to be diminished: it ought to be reduced from sixty to thirty days.
83. Do you think it is really necessary that all sheep imported into New South Wales should be quarantined in Sydney or in the suburbs? Yes, for some time to come.
84. Would you think it desirable to establish quarantine stations on the border? I think not for the next twelve months, looking at the state of the Victorian sheep. I think the present system of quarantining sheep ought to be continued for the next twelve months at all events.
85. You complain of the length of time sheep are required to remain in quarantine? Yes; there is no necessity to keep them so long; every practical man knows that even if scab is detected, thirty days is ample to cure them. Why then keep them other thirty? The loss is sometimes considerable from deaths while in quarantine, through the different ways of looking after the sheep, and the loss is greater in sixty days, than it would be in thirty. Thirty days is ample for all practical purposes.
86. There was a Special Report from this Committee recommending that the services of the inspectors of sheep, with the exception of those on the borders and the coast districts be dispensed with at the end of this year? I would decidedly object to that, because there are other things to be attended to besides scab; for instance, fluky sheep are often sent travelling, and if the inspectors are not there to compel the owners to bury or destroy those that die on the road the disease is liable to be propagated. I am myself more afraid of fluke than of scab even. I would almost as soon have a flock of scabby sheep travel through my run as a flock of fluky sheep, many of which would be left dying on the wayside. The inspectors ought to be there to look after such matters as that. In fact the services of the inspector for the Wagga Wagga district were called into requisition very frequently last year to grapple with that difficulty.
87. In fact then, even if the whole of the Colonies were free from scab, you would still think it necessary to keep up the machinery connected with stock? Yes, I think so, seeing that the cost is so slight compared with the magnitude of the interests at stake. I do not think sheep-owners would grumble at the expense, but would prefer things to remain as they are.
88. Do you experience any difficulty in reference to travelling sheep? I have experienced great loss from what we call the loafing gentry, going about the country feeding their sheep on the reserves and on other people's runs. I know of one man who bought 50,000 sheep immediately after shearing, and unblushingly advertised for drovers to travel these sheep till the winter rains came on. The reserves were never intended for anything of that sort.
89. Do you think the services of the inspectors could be made use of for the purpose of controlling travelling sheep? I do if you give them more ample powers. I would suggest that when sheep are intended to travel, permits should be issued to these men for a given time long enough to enable them to reach their destination, and that there should be a fee for the renewal of such a permit, which fee should be doubled every time the permit was renewed; and in the event of the sheep coming to market and going into consumption the fee should be remitted, because it would be improper to levy a charge of that sort on stock travelling legitimately to market.
90. Sheep are liable to other diseases besides scab? Yes; fluke and worms are more dangerous to sheep than scab; the losses caused by them are far greater.
91. *Mr. Day.*] Does that apply to Riverina? Yes, I believe it is a well-known fact that sheep in the mountainous parts of Riverina are fluky and liable to propagate the disease when removed from the mountains. I have known as many as 9,000 sheep out of 30,000 to die in six weeks travelling from the mountains to a salt bush station in Riverina, and only for the inspectors these dead sheep would have been left lying about the ground, at the risk of propagating the disease.
92. I understood you to say that this applied to the whole of Riverina? It would apply to the northernmost portion of it.
93. That is a very small portion of Riverina? There are a large number of sheep there.

- W. Halliday, Esq. 94. There is no fluke on the northern side of the Sydney road? I am not prepared to say there is no fluke, but the general opinion is that to the north of the Sydney road it is safe.
- 24 Mar., 1876. 95. *Chairman.*] I believe sheep are liable to the disease called small-pock, are they not? I have heard of it, but it never came under my notice.
96. You are aware that on the Continent it has spread very largely? I believe so, but I do not think there is much risk of it in this Colony. Worm, fluke, and scab are the diseases sheep are most liable to here.
97. You are aware of the law with regard to the rate of travelling sheep? Yes, six miles a day.
98. Do you think that a fair rate? I think it is. But I certainly think they ought to be compelled to travel in a legitimate manner, that is to say, not to go about eating the grass of their neighbours' runs without paying for it. The Government has proclaimed reserves, and if they eat this grass the Revenue ought to benefit by it, unless the sheep are legitimately travelling to market. The great bulk of the stockowners consider this a very great grievance.
99. In your opinion there ought to be some provision by which the inspectors could deal with travelling stock feeding on other people's runs? Yes; I can only suggest a remedy in the shape I have mentioned—a permit to travel sheep to their destination, and at the expiration of that permit they should pay for its renewal from time to time.
100. Are you aware of any recommendations made by the Inspector of Stock as to branding and marking sheep? Yes, the Inspector of Stock would like to alter the clause in the Act so as to have the term "legible" inserted. That I decidedly object to, because it would bring about any amount of difficulty in determining what is a legible brand.
101. As to ear-marking, does any difficulty ever arise in that respect? Very great difficulty sometimes. I think each station, or a group of stations in the same neighbourhood, should be confined to one ear-mark, to be called the station ear-mark; and that ear-mark should not be interfered with by the owner himself or by purchasers of the sheep; that is to say, I would certainly object to any other mark being put on the same ear. I would operate upon the other ear for the age-mark. I would look upon the station ear-mark as the same as a fire-brand, not to be tampered with in any way; but I would allow full power to operate upon the other ear.
102. Is it absolutely necessary to ear-mark the sheep in reference to age? Yes; you cannot work a station to advantage without it. When drafting sheep you must have the ear-mark to guide you, otherwise there would be any amount of confusion; the sheep would get mixed up all together. I consider it strictly necessary for the proper working of a station to have an age ear-mark.
103. Is there not some difficulty experienced at times in the prosecution of people for sheep-stealing, in the identification of the sheep? Yes, it is a very difficult matter.
104. Could you make any suggestions as to how that difficulty may be met? I could not make any better suggestion than I have already made, that the station ear-mark should not be tampered with once it was put on.
105. Could you state to the Committee any general information, or anything in reference to this matter that you think ought to be done? In the first place I would define what a brand is. As I have said, I object to the term "legible" as proposed by the Inspector of Stock; but I think the size of the brand should be defined, and my own idea with regard to the size of it is, that it should be 4 inches in length by three-eighths in width. I am satisfied the term "legible" would lead to confusion.
106. What kind of brand do you refer to? The tar or pitch brand. The fire-brand might be an inch, as in the present Act. I think too that owners of travelling cattle should give notice when they are coming upon a run. Cattle have been on my run as long as ten days, and I have known nothing of it. I think that is a substantial grievance. Why should these men be allowed to roam about the country without giving notice, any more than men travelling with sheep? I have had as many as 2,000 head of cattle on my run for ten days, and I knew nothing about it—in wet weather when the ground was boggy; and we did not care to ride our horses about. There can be no hardship in compelling these men to give notice. Any stock travelling should be compelled to give notice of their passing to the owner of the run.
107. What would you think a sufficient notice? The same notice as is required in the case of sheep—not less than twelve hours nor more than forty-eight hours.
108. Do you know whether cattle in your part of the country are at all affected with pleuro-pneumonia now? I believe there is some little of it in the Wagga district.
109. You are not a breeder of cattle yourself? To a small extent; my stations are principally sheep stations.
110. I presume you have given some consideration to this question of pleuro-pneumonia? Yes.
111. Do you think inoculation is a preventive? Yes, I think so from what I have seen of it. I think it ought to be made compulsory by law.
112. Are you aware whether the cattle in that part of the country are affected with any other disease than pleuro-pneumonia? I should think not. No disease among cattle has come under my observation for many years except pleuro-pneumonia.
113. *Mr. Day.*] You said that in your opinion the inspectors in the interior should not be dispensed with. Can you give the Committee any further information with regard to the duties they carry out, or that you think they ought to carry out? They are very useful in causing diseased sheep that die when travelling to be destroyed, and so lessen the danger of infection.
114. Is there any other reason why they should be kept on? I think they should attend to the reserves throughout the Colony and look after travelling stock generally. One inspector generally informs another when any sheep are travelling. I believe the inspectors are acquainted with the whole career of sheep travelling from their starting to their destination—they watch over them generally. That is one reason why they should be retained.
115. Do these inspectors often visit your station? I see them perhaps two or three times a year. If there is any occasion for their coming, they do so. If there have been any diseased sheep left on the roadside, they come and cause the owners to destroy them, and sometimes they prosecute for neglect to do so.
116. When they come they generally visit the sheep on the station? Not as a rule.
117. Did you ever know them to inspect your sheep? No, never.
118. You stated in one answer that you think quarantine should not be allowed anywhere but in Sydney? Not

Not for the next twelve months. I think the measures that have been taken have been very successful so far, and we are not yet aware that Victorian sheep are all clean, and therefore I think we ought to wait another twelve months before making any alteration.

W. Halliday,
Esq.

24 Mar., 1876.

119. Do you think it would be possible for scabby sheep to pass through if quarantine were allowed on the Border? Yes, there would be greater danger of their escaping there than in Sydney.

120. Is it not possible for them to pass through in Sydney? Almost impossible; and I think it very probable that if a quarantine station were proclaimed either at Albury or Moama, they would get away.

121. Are you a Director of Sheep in the Urana District? Yes.

122. I scarcely understand how you would propose to deal with sheep travelling in search of grass? I think a permit should be given before allowing sheep to travel.

123. I do not see how that would do much good? That permit would terminate (say) at the end of a month, and a fee would be charged on the renewal of it. If a man asked for a renewal of his permit, there could be no doubt what his object would be.

124. Might not a man ask for a permit for a very long journey, say from the Darling to the mountains, or from the mountains to the Darling? If he were buying sheep in the mountains to take to a station on the Darling I should call that legitimate travelling.

125. Supposing a man asked for a permit to travel (say) from the neighbourhood of Wilcannia to Tumberumba, do you think you could prevent him from going to Tumberumba and back? I do not think the permit should extend to give him time to go there and back. In fact I would not make any permit for a longer time than a month. I think if a man travels sheep for more than a month he ought to pay for the grass they consume, unless they are travelling to market, and then I would give him a rebate of the whole of it.

126. What charge would you suggest? I think the charge should be sufficient to make it unprofitable to travel. I would, if possible, compel men to keep their sheep on their stations, improve their country, and make water, in place of eating the grass of other people who go to the expense of doing this. I cannot see why these men should use the reserves of the Colony, and pay nothing for them.

127. *Mr. Dangar.*] I presume your experience is chiefly confined to the border districts? I have had experience in the inland districts as well.

128. Do you consider that the inspectors have sufficient employment under the present Act? They do not seem to have very much to do, but at the same time I would object to any diminution in their number. I think they might do more work.

129. Do you not find the present Act troublesome as regards travelling stock—that is, as regards giving notice. It almost necessitates having two or three men travelling with a flock of sheep. Could you suggest anything to remedy that? There is only one man required to give notice. One man could give the notices for 10,000 sheep.

130. You cannot suggest any better plan than the present? No.

131. Do you not think there ought to be some guarantee of the competency of the inspectors—some rigid examination as to their knowledge of disease? Yes, I think they should be examined.

132. Does your Board elect the inspector for the district? Yes.

133. Have you found that there are any difficulties in the election of inspectors where there are more Boards than one? I have never had experience of it, but I can see that there might be a difficulty.

134. You said inoculation was a preventive for pleuro-pneumonia; you do not think it is a cure? I do not think it is an absolute cure—it is merely a preventive. It depends upon how it is applied. I have seen it almost an absolute cure, and I have seen it a lamentable failure. It depends very much upon the sagacity of the man applying it. I would make it compulsory.

135. *Mr. Day.*] Where you have noticed that, do you know the kind of virus used? I do not. I have no experience personally, but I have seen the operations of my neighbours in the northern portion of Victoria.

136. *Mr. Dangar.*] I suppose you are aware that the inspectors of stock have been asked to report upon roads and reserves;—do you think they are competent men for that purpose, and not liable to favouritism? The same remark might apply to any man. I think they are just as little liable to favouritism as any one else.

137. Do you think they are more competent than surveyors or Commissioners of Crown Lands? I think they ought to know better what is wanted for travelling stock; but it might be better that the Commissioner of Crown Lands should have something to do with it. I think they ought to know the requirements of the district, but their report should be subject to the recommendation of the Crown Lands Commissioner. I would scarcely give them full power to act upon their own judgment.

138. *Mr. Hay.*] Do you think one of these inspectors is the proper person to say whether a reserve for travelling stock should be made on my run or on another person's run, when I am one of the Directors over him? It is almost a false position to put a man in. I would subject their reports to the revision of the Crown Lands Commissioners.

139. *Mr. Suttor.*] Do you know from your own knowledge whether fluke, foot-rot, and worm are contagious? I believe they are in certain country. I believe that in country favourable to them they could be propagated in that way.

140. Did you ever know of cases of fluke, foot-rot, or worm in the salt-bush country? No, I believe that would check it, but I do not believe it would cure it; I do not believe it would spread.

141. Are you of opinion that it would be desirable to include these diseases under the Act? I think fluke ought to be included. Catarrh is not known now. I have never had any experience of that disease. I should certainly be of opinion that if catarrh broke out in a flock of sheep they should be destroyed at once, and that there should be a tax on the stockowners of the Colony to reimburse the owners.

142. Do you know that catarrh in sheep is one of the diseases under the Scab in Sheep Act? I am not aware of that.

143. Do you think it would be desirable to establish quarantine stations at Albury or Moama? I would not for twelve months. I would not be favourable to allowing any sheep to be quarantined anywhere but in Sydney for twelve months.

144. You said that in your district parties have been prosecuted for leaving dead sheep on runs—Can you inform under what law that is done? I do not know; I presume it was under some Act. The inspector got a conviction. Large numbers of dead sheep were left on the side of the road, and the inspector prosecuted, and compelled the parties to destroy them. I think there is a clause in the Act empowering him to do so.

W. Halliday, Esq. 145. Is it not almost impossible to distinguish one fire-brand from another—are they not all blotched as a rule? Yes. I would rely more on the ear-mark. I would not allow the ear to be cut straight across, or allow two marks on the one ear used for station marks.

24 Mar., 1876. 146. You spoke of compelling persons travelling cattle to give notice—Do you not think it would be desirable to permit notices to be sent by post where mails run? I do not think I would give them that privilege. The letter might not be delivered, and they might say they had posted it when they had not done so, and the statement could not be proved to be false. I would make it compulsory to serve the notices personally. It is not a very great tax. Stock travel as a rule in large numbers, and it does not entail much extra cost to deliver the notices. Only one man is required, and he could be of assistance during a great part of the day in other ways.

147. Can you give any reason why inoculation should be compulsory? It has come under my notice on a large scale in Victoria. The losses some squatters have been subjected to through not doing it have been far greater than the loss after inoculation. In cases where it has been done properly, I believe it has been successful in saving a great number of stock.

148. Where the let alone principle has been adopted, has not the result been equally good? No, I believe the let alone system has not been successful in any one instance.

149. Do you know of your own knowledge that pleuro is a contagious disease? I believe it is; I have known my own cattle take it in that way.

150. Do you know of any other disease having been mistaken for pleuro? No, I am not aware of it.

151. Do you know of any large holders of cattle who are of a contrary opinion to that expressed by yourself? Yes. I believe the holders of stock generally are not unanimous in anything.

152. Have you any knowledge of the opinions of scientific people on this matter? I believe scientific people recommend inoculation.

153. Mr. Day.] Have you had any experience of scab? Yes.

154. Do you think the inland inspectors are competent to detect scab in sheep? I could not say that they are, because they have not had anything to do with it for so long.

155. Mr. Suttor.] You think they ought to be examined as to their knowledge? Yes; I do not think any man ought to be eligible as an inspector unless he has been examined by a medical man as to his knowledge of scab, or unless he has had practical knowledge by having been engaged in curing scab on a station. There are many such men in Victoria now.

156. Mr. Day.] How do you elect the inspector in your district? There has never been any election since I went there. The scab inspector was there when I went there, and to all appearance he gives satisfaction. No alteration has been mooted. In fact any man can discharge the duties of scab inspector at the present time. I am not prepared to say whether the inspectors are efficient men or not.

157. Did you ever hear of any smuggling of sheep across the Border? I have heard reports of it, but never anything definite.

158. Chairman.] Have you paid any attention to the working of the Brands Act, as to cattle and horses? No special attention; my attention has been more confined to sheep.

159. Are you aware whether sheep directors generally are in favour of retaining the inspectors? Yes, I think they are almost unanimous that the whole staff should be retained.

160. Mr. Day.] If inoculation for pleuro were made compulsory, what plan would you suggest for getting proper virus? I think the Government Veterinary Surgeon ought to be the man to test it before it is despatched for the purpose of being used.

161. Are you aware that the best virus may spoil in one day? I am not.

162. Are you aware that it is almost impossible to get good virus? I should not think so; I can scarcely believe that is the case. I believe any quantity can be got off one dead beast. The most successful cases I have known have been cases of that sort. I have never heard that there was any difficulty in getting virus. I am not prepared to say what would be the best mode of getting it. It is a mere detail which the Board could work out very easily. I think it ought to be made compulsory, and I have no doubt means would be found to grapple with the difficulty you suggest, though I am not prepared to suggest any plan.

163. In ear-marking sheep, how many distinguishing marks could you put on the two ears? I would only put one mark—the station mark—on one ear; but it would require a good deal of calculation to say how many different marks could be put on the other ear.

164. Mr. Dangar.] Has it come under your knowledge that sheep-stealing is on the increase? It has not, in New South Wales.

165. Is not fluke caused by over-stocking and want of salt? The attack is more deadly if you do not use salt, but I do not think that is the sole cause of it.

166. I do not understand how you think the inspectors prevent the spread of this disease? By preventing travelling parties from leaving diseased dead sheep lying about. As a rule, when sheep are affected with fluke, they are sent travelling before they all die, either for sale or change of pasture; and it is then the inspector is useful, in compelling the destruction or burying of those that die on the way-side.

167. Chairman.] Do you desire to make any general statement? No, I do not know of anything else beyond what has been mentioned.

WEDNESDAY, 12 APRIL, 1876.

Present:—

MR. T. G. DANGAR, | MR. DAY,
MR. FARNELL.

J. S. SMITH, ESQ., IN THE CHAIR.

Alexander Bruce, Esq., further examined:—

A. Bruce,
Esq.

168. Chairman.] I believe you have some papers which you desire to lay before the Committee: What are they? Amendments which, I think, are called for in the "Imported Stock Act of 1871." The witness handed in the same. Vide Appendix AA 2.

12 April, 1876.

169.

A. Bruce,
Esq.

12 April, 1876.

169. *Mr. Farnell.*] Is that document similar in its character to the proposal you made some time back to include pigs in the Act? Yes, and goats; and also with reference to ships' cows, which now remain on board while the ship is in port.
170. The fund for the administration of the Imported Stock Act is now in debt to the Consolidated Revenue? Yes, and has been for two or three years back.
171. Have you any suggestions to lay before the Committee? I have handed a list of suggestions to the Chairman—perhaps it will be best to take them *seriatim*.
172. *Chairman.*] Your first suggestion is—"To omit New Zealand from the definition of 'Australian Colonies,' as New Zealand refuses to join the others in prohibiting stock from places outside the Australian Colonies"? Yes.
173. *Mr. Farnell.*] Is it a fact that the New Zealand Government has refused? Yes, at least the New Zealand Parliament have refused.
174. The Government themselves were anxious to fall in with the views of this Colony? Yes.
175. And prepared a Bill which was laid before the Parliament of New Zealand and rejected? Yes.
176. *Chairman.*] How long was that ago? A little over two years ago.
177. The second suggestion is—"To alter the definition of the term 'imported stock,' so as that it will apply to Australian stock (cows) put on board London and other ships in the Colonies and brought back again"? You will see the term imported stock in the Act defined "Imported Stock—All stock arriving by sea not the produce of the Australian Colonies," and it is not an uncommon practice for captains to take home cows and bring them back again as milkers.
178. *Mr. Farnell.*] Is there any danger to be apprehended from cattle that go home in ships in that way and are brought back? Almost the same danger as if they were shipped in London, because most ships buy sheep and pigs for ship's use in the London market, and these are attended by the same person as the cows, who would be in contact with both.
179. And the cows would be liable to infection on board ship? Yes, in that way.
180. *Chairman.*] The Act, as it is at present, does not touch this matter? The Act, as you see, only applies to stock *not the produce of Australian Colonies*.
181. Have you known of any instances of this kind of cows having been shipped here? Yes, the captains frequently purchased cows here. They got them cheaper, which induced them to buy.
182. *Mr. Farnell.*] They sometimes exchange the cows they bring out for others here. Yes, they often exchanged a dry cow for one in milk.
183. Are you aware that at the present time there is much disease in England? Yes, foot and mouth disease has been exceedingly prevalent. Some short time ago a statement was made that through the prevalence of this disease there had been a loss of thirteen millions sterling in twelve or eighteen months.
184. So far as your last advices are concerned, the disease is still in England? Yes, though it was abating a little. It generally abates in winter-time, as there is not so much traffic in cattle. Store cattle are not then taken so much to markets and fairs.
185. Are you aware whether the disease is brought to England from Continental Countries now as much as formerly? It has during the last few years been brought in a good many cargoes; but they now kill the whole cargo if one is infected with the disease, and do not allow any of them to leave the port alive. The disease, however, has, as I have said, been very prevalent all over the United Kingdom itself.
186. Have you any knowledge whether any of these infectious diseases exist in the United States? I know that pleuro-pneumonia does. I do not know that at the present moment foot and mouth disease exists there—it has been there. We have little or no information from America respecting the diseases in stock.
187. San Francisco, is that free from disease now, both in sheep and cattle? Scab in sheep is very prevalent in California. I do not know that foot and mouth disease is there.
188. Could you tell the Committee anything with reference to the existence of disease in India? Rinderpest and foot and mouth disease are both there.
189. Is our law ample for dealing with cattle and sheep that may be brought from India to this Colony? Yes, if amended as proposed. We have at present a total prohibition.
190. *Chairman.*] Your third suggestion is—"To amend definition of the word 'Stock' so as to make it include pigs, goats, and other stock now omitted."? The present definition of "stock" in the Act only includes "cattle and sheep."
191. *Mr. Dangar.*] What is your object in wishing to include pigs? Because pigs are just as liable as cattle and sheep to foot and mouth disease; in fact, they would be more likely than cattle to bring it here, because it is a disease that remains for some time in the feet, and an animal like the pig, from the manner in which it is kept, would be more likely to be landed without it being seen.
192. You think it would be requisite to include pigs and goats: what animals do you include in "other stock"? The disease is carried by deer, and the clause might be made to include any other animals the Minister might think necessary.
193. *Mr. Farnell.*] By proclamation? Yes.
194. *Chairman.*] Would deer be included in "stock"? Scarcely. Instead of the word "stock" the word "animals" might be substituted. I may mention, that recently both Victoria and Queensland have put the question to us whether our Act applies to pigs. In their pigs are prohibited.
195. *Mr. Farnell.*] The Victorian Act gives the Government larger powers to make regulations than ours? Yes. Their Act is worked almost wholly by regulations.
196. *Mr. Day.*] Do I understand you to say that the disease in the feet of pigs would communicate itself to cattle? Yes.
197. If pigs were imported to this Colony with foot disease it would communicate the disease to the cattle? Yes; either pigs to cattle or cattle to pigs.
198. Then the disease is identical in both? Yes; it is the same disease.
199. Would goats do the same thing? Yes.
200. *Chairman.*] Your fourth suggestion is—"To provide a penalty for persons trespassing on quarantines"? Some parties landed at the quarantine ground and insisted on seeing the stock while they were in quarantine. It was not right for them to do so. It was at the time the cattle with foot and mouth disease were upon Garden Island.
201. In proclaiming these quarantines, you cannot prevent people landing upon that island? I think they

A. Bruce,
Esq.

12 April, 1876.

they should be prevented, at any rate, from coming near the cattle. We obtained permission from the Imperial Government to use the island and to proclaim it a quarantine.

202. I suppose a good many people land in boats? Yes; and we do not mind that, if they do not come near to the stock.

203. *Mr. Day.*] I suppose permission would be given if it were asked for? It is not intended to prevent people altogether, but simply to prohibit them from going near the cattle without permission. I have only given the heading of the proposed clause in the paper handed in. When the clause is framed, the words "without the written authority of the Minister" would be added.

204. Your fifth suggestion is—"To enact that importers be at the expense of keeping stock in quarantine; at present the expense is borne by Cattle Fund"? Yes.

205. *Mr. Farnell.*] Are they now at the expense of the Cattle Fund? Yes.

206. I understood you to say that there was no Cattle Fund? The Cattle Fund borrows from the General Revenue. There is no provision in the present Act for taking fees for keeping the stock.

207. *Mr. Day.*] There are no fees charged for cattle in quarantine now? No.

208. Then the public have to pay for all the cattle in quarantine? Yes, they would have to do so if there were not a prohibition, until the Act is amended.

209. *Mr. Dangar.*] The Cattle Fund pays when it is in a position to do so? Yes.

210. When it is not, then the expense of keeping cattle in quarantine is paid from the General Revenue? Yes.

211. *Mr. Day.*] Where does this Cattle Fund come from? There was a fund that was raised in 1866 by levying a contribution on cattle, but that is now exhausted.

212. Then virtually there is no Cattle Fund? No.

213. *Mr. Farnell.*] There is no law by which you can raise this Cattle Fund? No.

214. *Chairman.*] Suppose sheep were in quarantine, would they be paid for from the Sheep Fund? Sheep from the neighbouring Colonies pay under the Sheep Act. We do not allow sheep from any other part of the world to come in at present; no payment is therefore at present required.

215. If sheep come from Victoria? They come as intercolonial sheep under the Sheep Act. We have the power to charge fees under it.

216. *Mr. Day.*] Then, does the Committee understand you to say that when cattle are placed in quarantine they are paid for out of the General Revenue, but that when sheep are placed in quarantine they are paid for by their owners? Where sheep are imported from places within the Colonies, they pay quarantine fees; but if sheep and cattle from places outside the Colonies were imported, they would, under the "Imported Stock Act," as it stands, pay no fees.

217. I am speaking of the Colonies, and I ask do the owners of sheep pay for their sheep while they are in quarantine, and the owners of cattle pay nothing under similar circumstances? There is no quarantine for intercolonial cattle.

218. Can you bring cattle from Melbourne here without any inspection? With inspection—we inspect them although we have no power to do so, but there is no quarantine.

219. Suppose you find them diseased? We have never found any of them diseased. We would take the law into our own hands if we were to find any diseased.

220. Are you aware that they have an Act in Victoria to prevent our cattle going beyond the Border unless inspected? Yes.

221. Then we are entirely at their mercy, as they can send diseased cattle as fast as they like, and we have no remedy; we cannot send our cattle there? Yes, as far as diseases now prevailing in the Colonies is concerned. We have no Cattle Act.

222. *Mr. Farnell.*] Have we no power under the law to prevent the importation at all from neighbouring Colonies? Yes, we could do that, if there is reason to believe that any disease not now existing in Australia has broken out in any Colony.

223. Under the existing law if they do come in we have no power of quarantining cattle, but we have the power of quarantining sheep under the Act? Under the Sheep Act we can quarantine sheep; but under the Imported Stock Act the power is only in reference to certain diseases,—diseases not known in the Colony.

224. *Mr. Day.*] Then virtually, if sheep and cattle were to be imported to this Colony with foot and mouth disease, we could not prevent them from landing? Yes, we could; but we could not prevent them from landing if they had pleuro-pneumonia.

225. What are the diseases included in the prohibition—pleuro-pneumonia alone? No, not pleuro-pneumonia, but "cattle plague" or rinderpest, "foot and mouth disease, sheep pox, and any other disease which the Governor with the advice of the Executive Council, by proclamation in the *Gazette*, declares to be a (new) contagious or infectious disease for the purposes of this Act."

226. I understood you to say a minute ago that you could not prevent them coming? We can prevent cattle infected with these (new) diseases, but not with pleuro-pneumonia.

227. Then you consider the Act very insufficient as far as cattle are concerned? Yes; as a general measure, and principally because it does not deal with pleuro-pneumonia in any way.

228. *Chairman.*] The sixth suggestion is—"To provide for the keeping of ships' stock in quarantine on the island while the ship is in the harbour;"—that has relation chiefly to anything the ship may take back, as milking cows? Yes, and sheep bought for the ship's use.

229. You think it necessary they should be kept in quarantine while the ship remains? While they are on board the ship there is continual intercourse between the ship and the shore, and if there should be anything the matter with the stock, the infection might be carried on shore. It would therefore be much safer for the stock to be sent to the quarantine on the island until the ship is going away, when they could be put on board again. There is every convenience at the quarantine for keeping them.

230. The seventh is—"To extend the time during which stock after they are landed are to be held to be imported, from one to three months"—what do I understand from that? Supposing the prohibition were taken off, and stock were allowed to land on undergoing quarantine,—I propose to extend the period during which they are to be held to be imported stock after they land, and to be dealt with as such, from one to three months. And if our ports were open again for stock from England, they should only be admitted after a quarantine of three months upon the island. Fourteen days is much too short—the incubation of several diseases exceeds that time considerably.

231. You mean that it should be discretionary with the inspector whether it should be one or three months? No, the present law says not less than fourteen days; but I think the period should be extended to three months.

A. Bruce,
Esq.
12 April, 1876.

232. You mean by this, not less than one month nor more than three? It might perhaps answer to make it discretionary for the Government to fix the quarantine at any time between one and three months.
233. The eighth suggestion is—"To provide for the eradication of these diseases among our own stock, should it happen that any of them were attacked"? As it is there is nothing in the existing Act giving power to deal with any of our own stock, should the disease be discovered among them. For instance, if any imported cattle had been smuggled on shore in Sydney, and were brought into contact with any of our cattle and infected them, there is no power under the present Act to enable the Government to deal with such cattle.
234. Number nine—"To provide funds for carrying out the Act, which are now exhausted." In what way do you propose to provide funds? By levying contributions on cattle—a rate of say a half-penny a head, that would raise about £6,000 which would be ample for some years.
235. On cattle alone? On cattle alone.
236. *Mr. Farnell.*] Should that be an annual assessment? No, it would be the same as under the Sheep Act—the Government should have the power to reduce or to remit the contribution for any year as they thought fit, and from year to year.
237. We have no diseased cattle now in quarantine? No, nor have we had for a considerable time.
238. *Mr. Day.*] You do not think £6,000 would be more than enough to carry this object out? It would be enough for four or five years. The expenses would be comparatively small, even if the ports were opened again, seeing that the importers would have to pay the expenses of their own cattle—it would be only a question of the expense of inspectors in Sydney and one or two other ports.
239. Would you not suggest that there should be inspectors in the interior? Not for the purposes of this Act. If pleuro-pneumonia or diseases now existing in this Colony were to be dealt with, it would have to be put upon a different footing. This Act applies only to diseases unknown in this Colony.
240. Do you not think it would be a good thing to prevent cattle affected with pleuro-pneumonia from travelling? Yes, I think that ought to be done.
241. Has it ever come to your knowledge that cattle with pleuro-pneumonia have travelled? Yes; applications are made to me continually to stop them, but I have no power to do so. From different parts of the Colony I get reports from inspectors that mobs of travelling cattle are infected.
242. Would not the expense of these inspectors come out of this fund? An Act for dealing with pleuro-pneumonia would require to be framed altogether differently. This Act only deals with diseases not now existing in the Colony.
243. Would it not be possible to amalgamate the two Acts in one? Yes. The measure framed by the Conference, and now before the Committee, does so.
244. *Mr. Farnell.*] A Bill was introduced into the Legislative Assembly some time back, to this effect, with reference to dealing with cattle in this Colony? There were some provisions in this Bill with respect to giving notice of diseased travelling cattle and sheep which were objected to by a good many members, as it was mixing up two subjects; and it was thought better to omit them, to facilitate its passing.
245. *Mr. Day.*] Is it not possible to frame one Act to meet both these cases, that is—imported stock and stock travelling in this Colony? Yes, it is quite possible to do so.
246. Would it not be better to embrace both in one Act than to have two separate Acts? The amendments in this Act are more urgently required than those to which you allude, and as the former are plain and short they are not likely to be objected to by any one; but if a more comprehensive measure were introduced, a considerable time would pass before it could be got through.
247. You consider it absolutely necessary to have an Act of Parliament with respect to diseased stock travelling in the interior of this Colony? I do, most certainly.
248. Cattle as well as sheep? Cattle as well as sheep.
249. *Chairman.*] No. 10 is—"To withdraw from the inspector half the penalty now paid him, and pay whole into Cattle Fund." At the present time the inspector gets half the fines? Yes.
250. You think it would be a better arrangement if he did not get this half? Yes, decidedly.
251. How would you propose to pay him if he has to travel—would you allow him travelling expenses? The question of travelling expenses would scarcely arise under this Act, but in the performance of the other duties it would.
252. *Mr. Farnell.*] What do you propose to do with the fine? To pay it into the Cattle Fund.
253. *Mr. Day.*] It is not proposed now to give the inspector half the fines inflicted by the Bench under the Act in lieu of travelling expenses? It was advanced as a plea for the retention of this provision, that the inspectors were put to considerable expense in serving the summonses and prosecuting, and it was thought better that it should be specially stated in the Act that the inspectors were to get these expenses. A good many Benches had refused them, although the Attorney General has given an opinion that they were entitled to receive expenses and mileage for serving summonses—the police having refused to serve them.
254. Can foot and mouth disease be cured in quarantine? Stock with foot and mouth disease would be destroyed.
255. Can rinderpest? No, stock would also be destroyed if affected by that disease.
256. Then there is no quarantine at all for those diseases? No, only for the stock apparently sound. If those which land apparently sound become diseased they would also be destroyed. Stock are put in quarantine because they come from countries where those diseases prevail.
257. Is foot and mouth disease an insidious disease—does it show itself at once, or is it some time before it manifests itself? The incubation of it is comparatively short.
258. What length of time elapses from the time of the beast first catching the disease until it becomes apparent? From three to seven or eight days.
259. Once the beast catches it, is there no cure? Yes, not 2 per cent. of those attacked by the disease die; but it is an exceedingly infectious disease, and reduces the cattle to a very low condition. It is estimated in England that from mere loss of condition every animal attacked by the disease is reduced on an average £2 in value.
260. Would it not be resorting to a very severe measure to destroy cattle having this disease if it can be cured so readily? It would in one sense, but the risk of landing diseased stock and spreading the disease here is so very great, that extreme measures are necessary. If the disease were once introduced here, it would kill our cattle wholesale; for through being affected in the feet, they would be unable to get either grass or water.

- A. Bruce, Esq.
12 April, 1876.
261. These cattle would not mix with ours if they were placed in quarantine? No, that is certainly a pretty good preventive, but it is spread in so many ways that there would be great risk in importing stock at all while the disease is very prevalent in England. For instance, a case occurred some time ago in Sydney, where this disease broke out in cattle which were landed and believed to be free but which proved to be infected. We could not imagine the cause until some twelve months afterwards I heard the particulars from the captain of a sister ship, to whom the butcher of the ship which had brought the diseased cattle communicated the facts of the case. It seemed that a few days after they sailed from London foot and mouth disease broke out among the sheep put on board for the ship's use. The butcher stamped the disease out by killing all the sheep that appeared to be affected. He skinned them and put the skins away, until the ship was within three or four days' sail of Sydney, when they had rough weather, and he took them to pad the cattle stalls to prevent the stock being injured by the rolling of the vessel. The cattle were ailing when they landed, but the disease did not definitely disclose itself until two or three days afterwards. This bears out what I have said, that the disease may not appear for two or three months after contact with the diseased object. When the disease abates, stock from England might be again admitted under the quarantine I have mentioned.
262. You say that only about 2 per cent. of the cattle attacked die of foot and mouth disease? Yes, but in England they get hot mashes and are attended to in every way. Food is taken to them which would be utterly impossible here. It is reckoned that during the last fifteen years the losses from the disease in Great Britain and Ireland amounted to from seventy to eighty millions. The loss there from pleuropneumonia alone is estimated at two millions annually.

THURSDAY, 18 MAY, 1876.

Present:—

MR. DAY,
MR. T. G. DANGAR,

MR. FARNELL,
MR. W. H. SUTTON,

J. S. SMITH, ESQ., IN THE CHAIR.

Alexander Bruce, Esq., Chief Inspector of Stock, called in and further examined:—

- A. Bruce, Esq.
18 May, 1876.
263. *Chairman.*] Have you received any information about the new disease that has broken out among sheep in Victoria, and to which there seems to be something similar in England and on the Continent? It is said to be the "Braxy" of Scotland, a blood disease—*anthrax*. Some fortnight or three weeks ago I asked Mr. Curr, the Chief Inspector of Stock in Victoria, to send me particulars respecting it, and he telegraphed that he would, but I have not had them yet. From the account I have seen there is very little doubt that if it is not "braxy" it is some disease of the same nature—an anthrax disease. The Cumberland disease is one of the forms of anthrax.
264. You cannot form any idea when you will get this information from Mr. Curr? No; I have noticed since, that the Government in Victoria are prosecuting an inquiry as to the nature of this disease. The only risk we stand of its being introduced into this Colony would be by sheep by sea. There are no sheep allowed, as you know, to cross the Murray from Victoria.
265. *Mr. Day.*] How could we get it by sea, if imported sheep are put into quarantine for sixty days? As it seems to be a disease of that sort it might lie latent in the system. I do not say we would allow it to spread, but we might have it introduced. It might be brought here and disclose itself in quarantine.
266. Would it be possible for that disease, or any disease like it, to lie latent for sixty days? No, not for sixty days; I would not say that, but it might be brought here into quarantine.
267. I suppose you are aware that the Cumberland disease does not lie dormant for sixty days? No, but I believe it is considerably longer in the system than people generally imagine. If this is "braxy," it is a contagious disease.
268. They do not know what it is? They have not declared authoritatively what it is.
269. Have any sheep died of it? A considerable number.
270. In one locality? In different localities.
271. All over Victoria? Not all over Victoria, principally in the western district.
272. All from the same disease? Yes.
273. *Mr. Farnell.*] Do you know how it was introduced into Victoria? No; it is in Scotland an endemic disease; it belongs to certain localities—and there it is occasioned by different states of the weather, and different conditions of the animal; for instance, sudden changes from poverty to fatness—the same as brings on blackleg, and perhaps Cumberland disease with us.
274. *Mr. Day.*] This disease then could not originate here; it must be introduced by imported sheep? I do not know that. Anthrax is common all over the world; we have it in two or three forms here.
275. But suppose we were thoroughly clear of that disease, would it be possible for it to break out without introduction by imported sheep; I would not say it would not, because all these diseases are thought to be, to a considerable extent, dependent on miasma.
276. It is quite possible, you think, for disease of that kind to break out without importation? Yes, I believe it is. It is peculiar to certain localities under certain circumstances. Notwithstanding that, it is contagious.
277. Once it starts? Yes.
278. I suppose there is no cure for it? No cure. Only preventive measures are of any use. The best stoppage of the disease is change,—change of the sheep from the place they are on to another.
279. *Mr. Farnell.*] Did I understand you to say there is no cure? There is no known cure for any of these blood-poisoned diseases. We have had different forms of blood-poisoning here lately. We have had it attacking horses, which is not usual.
280. *Mr. Day.*] It would attack a man? Of course it would by inoculation.
281. *Mr. Farnell.*] The "Brands Act of 1866" was brought into operation under the Registrar General's Department? Yes, with my assistance.
282. But you had no responsibility in the working of the Act? No, not until it was transferred to me.

283. Although you assisted the Registrar General in bringing it into working order, you had nothing to do with the working of the Act subsequently? No, not from 1868 until it was transferred to my branch lately. I was about eighteen months superintending its initiation.

A. Bruce,
Esq.
18 May, 1876.

284. Was the working of the Brands Act as convenient and satisfactory under the Registrar General's Office as under the Stock Department since it has been transferred? There are so many questions relating to stock and country matters connected with the brands, that its proper place is I think where it is now—in the Stock Branch. The way the registration was carried out in the Registrar General's Office, in one respect, did not facilitate the work. Instead of amalgamating with the original directory the new brands that were registered year by year, they were made into separate parts. You will understand that when an application is made to register a brand, a search has to be made to see whether it has been registered before. Under this system, when the brands were transferred to me, a search had to be made in some twenty places to see whether the brand applied for had been registered before; that is to say, a search had to be made in six parts of the Horse Directory and six parts of the Cattle Directory, in the Quarterly Lists of Brands, and in the applications that had accumulated during the quarter, making in all some twenty places. This caused great waste of time, besides uncertainty. Since the brands have been transferred, I have had all the different parts of the Horse Directory amalgamated, and the same with the Cattle Directory; and when an application is made for a brand, I have now only to search in two places instead of twenty, which expedites the work very much. On this account it had fallen about twelve months into arrear, and these arrears have been pretty well wiped off. Another thing that caused great delay and inconvenience was, that the applicant when he made application for a brand was told he could not use the brand until it was registered. As it had to be published so often, and the work was in arrears this amounted to his not being able to use it for some six or eight months after the application was made for it. To get over this difficulty applicants now receive permission to use the brands, after search has been made to see that no similar brands had been already granted, at their own risk of challenge. The applications for brands are published to give other owners a right to challenge if they think fit; but such a thing seldom or never takes place. Owners now, on making application, are allowed to make use of the brands, subject to this after-right of challenge, and in this way can use a brand as soon as it is allotted to them. There have been several other alterations made which I consider advantageous. For instance, at the time when the brands were transferred to me, new brands were being made by adding a diamond or some other sign to the brand previously registered; and this was creating considerable confusion, as brands allotted in that way were sometimes allotted to people in the same neighbourhood as those who owned the other brand *minus* the sign. There was no necessity for anything of this sort being done, because before leaving the Registrar General's Office, in 1868, I made up a list of some twenty thousand available two-letter brands. There are other matters that require some alteration, but the principal things that are wanted are an alteration to enable the two Registers (the Horse and Cattle) to be put into one, and to shorten the time during which a brand is published for challenge; which can only be done by an alteration of the Act.

285. During the time the registration was carried out at the Registrar General's Office, was it not a fact that you used to have a large number of applications from stock-owners and others in reference to this registration business? I had a good many applications for advice as to selection of brands and that sort of thing. Having been connected with it at the Registrar General's Office, a good many persons came to me after I left. Then again, the Country Inspectors were Deputy Registrars of Brands, assisting parties in applying for brands, and seeing that the Brands Act was carried out; and I had certain duties to do still under the Act, through having the supervision of these deputy registrars.

286. Did not that lead to some confusion? Considerable confusion and some little disagreement between me and the Registrar General.

287. Do you know whether, when the brands were under the Registrar General, he did not do away with the country registrars? Yes, the Registrar General several times objected to their employment; he said he did not see the necessity for their being employed.

288. Is the Act being worked more economically now than previously? I can scarcely say it is, on account of the arrears. There is another matter that I might allude to in speaking of that. When the first applications were received for brands, an alphabetical list of the owners applying for brands was kept, in order that we might be in a position to tell any one that inquired at the office who had registered brands. This list was made up when I left the Registrar General's Office, in a rough shape, with the view to its being re-copied and kept as a register of the people who had had transactions with the Brands Branch; but it was never done; and fresh names were interlined until it was in such a state that a clerk has had to be employed to make up the list afresh. It was not even kept up in this way. No entries had been made in it for some time before the branch was transferred to me, so that no notes were kept of parties who had registered their brands, and the only way in which they could tell whether a brand was registered was by ascertaining what the brand applied for was, and searching in the list of brands. The consequence was, this work had to be all done over again, and this entailed considerable expense. It is a very long job to make up a register of thirty-five thousand names and addresses; and then the arrears which I have mentioned have besides to be worked off. On the whole, therefore, the branch has not been worked more economically since it was transferred to me than it was before, through these arrears. When it is in proper working order, and the amendments proposed are made in the Act,—shortening the time of publication, making fewer publications necessary in the *Gazette*, and putting the Horse and Cattle Registers into one,—then it could be worked so economically that I believe the revenue would about meet the expenses.

289. In page 3 of your report, among the papers laid before the Committee, you have referred to the system of registration, the time occupied in registering, and the defects of the existing Act. Does the Bill that you have prepared provide for all these defects? I think it does, so far as I am able to judge.

290. *Mr. Dangar.*] Are there any important things that you think ought to be submitted to Parliament at once for alteration? There were two or three matters that I brought under the notice of this Committee as urgent. They were in the shape of proposed amendments to the Sheep Act and Imported Stock Act. Those would be different from the amendments of the Brands Act, which the Committee have just been considering. These amendments are required, but they are not urgent. I may say I made these suggestions with regard to the Sheep and Imported Stock Acts with the view to a report upon them being brought up by the Committee during the present Session, and considered by the Government during the recess. One of the suggested amendments of the Sheep Act, cumulative voting at the election of directors, if it is to be carried out, would require to be passed before the beginning of next year.

291.

- A. Bruce, Esq.
18 May, 1876.
291. The mode of election of directors? Yes, about which there have been some disputes. And then there is a very urgent matter about sheep which come to Sydney market but cannot go back without three dressings.
292. *Mr. Suttor.*] The Act ought to prevent any two persons from using the same brand? Yes.
293. Is there any arrangement between the two Governments of Queensland and New South Wales with respect to brands? Yes, there is an arrangement that we do not use the same brands that they use, and they do not use our brands. They have a peculiar form of brand. Their brands are all two letters and a numeral in a line.
294. In Queensland they have a brand so distinctive that it can always be distinguished from a New South Wales brand? Yes.
295. Could the same principle be carried out with the other Colonies? Yes. The Government of South Australia brought in a Brands Act providing for brands with two numerals and one letter.
296. If that were not done, our Brands Act could be defeated to a certain extent? Yes. If the proposed Act be adopted in South Australia, only Victoria will be standing out, and I have heard that something of the same kind was in view there too. It would be an easy matter to get a different system for Victoria; for instance, three numerals in a line.
297. *Mr. Farnell.*] I see that by the bill you have prepared you propose repealing the Act for the better prevention of Cattle-stealing and the Sale of Stolen Cattle? It is nearly incorporated with this.
298. You propose to repeal the whole of these Acts? Yes, and to provide for the same matters in this Bill.
299. Have you made use of the provisions of that Act so far as they can be made applicable in this Bill? Yes. This Bill re-enacts the old Act, with some few additions and amendments.
300. The first part of this Bill, I observe, provides for brands? Yes. The first new thing is "Inspectors of Brands." That is merely an alteration of name. The deputy registrars of brands are now inspectors, but under a wrong name. Their correct designation will be Inspectors of Brands.
301. You propose to amalgamate the Horse and Cattle Registers? Yes; it is proposed that an owner shall take the same brand for his horses as for his cattle, and then of course there would be but one register.
302. *Mr. Dangar.*] Then it would be necessary for every owner to make fresh application? Each owner would have to elect which brand he would prefer.
303. *Chairman.*] He can do the same at present—use the same brand for horses as for cattle? A great many do, but some do not.
304. You want to make it imperative? Yes. If an owner applied for a cattle brand, we have never given that brand to any one else for horses.
305. *Mr. Dangar.*] These brands are quite useless as evidence in the Law Courts, are they not? This Bill would make them better evidence than what they are now. The brand is a very considerable link in the evidence—and then there is the use it is to the police and others to let them know whose cattle they are looking at; but as it is the case now that no two men in the two Colonies own the same brand, it ought to go a long way as evidence.
306. Has it not been decided that a breeder can brand where he likes? Yes.
307. You first commence on the near rump? That is the way the numbers run; but suppose you begin at No. 3, the law says the next owner must brand on No. 4; so that it does not matter where you begin till all the places are filled up.
308. Take a case where an owner commences on the last number—where does the next man begin? On No. 1, and the police seeing that, would know that the last had been branded before the first. There is a penalty imposed for going out of the regular order, as going from portion No. 1 to the last portion would be. An owner putting on a second or subsequent brand must brand on the next succeeding portion; and in that way it does not matter where he begins, for it is thus plain when there are two or more brands who is the last owner branding.
309. *Chairman.*] You mean that it does not matter what part of the beast the original brand is put on? No. If you begin on No. 3, the next owner must brand on No. 4, and the next on 5; and the only case of doubt would be where No. 1 and No. 6 were both branded on. In that case there would be some consideration required as to which was the last brand; but you would see that No. 1 must have been the last put on because there would be a space between 1 and 6. The advantage of allowing owners to begin on any portion is that it allows neighbours to take different positions for their brands, which is a convenience, as they thus know from the mere position of the brand to whom the stock belongs. Another advantage is that some owners, who have large brands which they cannot conveniently put upon the rump, may put them on the ribs if they prefer it.
310. Do not the majority of people at the present time having registered brands both for horses and cattle, use the one brand for both? Yes, the majority do.
311. *Mr. Farnell.*] I see you have made a provision in the 63rd section of this Bill for poundkeepers to brand cattle sold out of a pound? Yes.
312. How do you propose that that shall be carried out—how are they to determine which is the last brand? They would be in the same position as owners. They would see what brand was last, and would put the pound brand next subsequent to that. They would place themselves in the position of owners who would have to brand, that is, they would brand in the order laid down by the Act.
313. *Mr. Suttor.*] Why is it necessary for poundkeepers to brand at all? There is said to be a good deal of wrong work going on about selling out of the pound; people saying they have bought stock out of the pound when they have not; again, when an animal has got a pound brand on, the former owner will know that it has been sold out of the pound if he comes across it. It is a recommendation that has been made by a good many, and seems to be a useful one.
314. *Mr. Dangar.*] Does this proposed Bill of yours interfere with the existing Impounding Act? No; the same clauses are in it as are in the present Brands Act.
315. *Mr. Farnell.*] Do you propose to brand any cattle that might be sold out of a pound that are unbranded when impounded? Yes; every animal sold out of a pound would be branded, whether previously branded or not.
316. *Mr. Dangar.*] The 10th clause of this Bill provides a "penalty for using branding irons contrary to three preceding sections"; what is meant by that? It was thought that it would entail very little trouble on blacksmiths to keep an account of the brands they made, and that such a provision would be

a considerable check on people using brands that were not registered; but it is not very essential, and if it be thought that it is not thoroughly practicable it might be left out. Brands cannot be readily branded unless branding irons are made; and this clause would be a considerable check that wrong branding-irons are not made. There is a clause respecting which there has been a good deal of discussion—the 34th clause. It would be rather hard to make it thoroughly practicable. Like many other provisions it has been put into the Bill as being apparently a good thing, without being at all certain that it is practicable. I have spoken to one or two gentlemen who have a good many small settlers round them, as to whether they would think it an inconvenience to give the required notice, and I understand that the smaller settlers usually had notice and attended these musters, but that the larger owners never knew when the smaller owners were mustering.

A. Bruce,
Esq.
18 May, 1876.

317. *Chairman.*] Referring to that part of the 36th section relating to fire brands on sheep; are you aware that in branding sheep upon the face, very frequently, in heavy-wooled sheep, the brand becomes entirely obliterated unless you remove the wool? Yes; I believe in some sheep you have not room to put the brand on the face so as that it remains legible; but sheep are worked principally by the ear-mark, and it would be only where there was a question of disputed ownership that the fire brand would be of use. It would be of use then when closely examined. I think it is most desirable to register the ear-mark; it would be a very material link in the proof of ownership. There would be no difficulty in getting different ear-marks for all the owners in any district, and the same system could be followed with regard to sheep ear-marks as with regard to brands—the owners of the largest numbers of stock could have the most legible ear-marks allotted to them.

THURSDAY, 1 JUNE, 1876.

Present:—

Mr. HAY, | MR. W. H. SUTTON,
JAMES S. FARNELL, Esq., IN THE CHAIR.

Joseph M'Gaw, Esq., called in and examined:—

318. *Chairman.*] You are engaged in pastoral pursuits? Yes.

319. Where do you generally reside? Principally at Burrabogie, in the Murrumbidgee District.

320. This Committee has been appointed to inquire into the various Acts affecting stock, the branding of stock, and diseases of stock. You are aware that under Act of Parliament certain powers are given to Boards, and so on? Yes.

321. And you are aware that, under that Act, certain powers are given to stockholders to elect those Boards? Yes.

322. Is there any dissatisfaction existing at present as to the mode of election under the law? I have heard that there is, but I have not had much experience of it in the neighbourhood in which I live.

323. You are aware that it is intended there should be some future legislation on the subject? I understand that is the intention.

324. Could you give the Committee your opinions upon the matter,—for instance, as to what should be the qualification of the electors of these Boards? According to the Act the qualification is one vote for from 500 to 8,000 sheep. I would propose that for every additional 5,000 sheep over and above the 8,000, the owner should have an additional vote.

325. That is you would adopt the accumulative principle? Yes.

326. What did you say was the lowest number you would fix? I would leave the law as it stands now, that is one vote for from 500 to 8,000 sheep; but for every additional 5,000 I would entitle the possessor to an additional vote.

327. What is your opinion as to the working of these local Boards? I think they are very useful, in fact I do not see how you would get along very well without them.

328. Do you think it is necessary to retain the inspectors? Yes, I think so.

329. As they are now? I think so; giving them perhaps some additional powers, and perhaps a little more work to do.

330. Do you think it advisable that a quarantine station should be established anywhere on our borders? I think not at present.

331. You practically understand our quarantine laws and regulations? Yes, I have had considerable experience with them.

332. And you suggest no improvement in our quarantine laws—I speak more particularly in reference to the importation of sheep from the neighbouring Colonies? The only thing I would suggest would be perhaps a shorter term of quarantine. Sheep have now to remain in quarantine sixty days. I think it would be perfectly safe to allow their removal in a month. Sheep are presumably clean when they are brought here, every care having been taken to prevent infection and to keep them from getting away; and when they are dipped here, I think thirty days quarantine would be quite sufficient.

333. Have you heard that some new disease has broken out amongst sheep on the Continent and in England? I have heard it, but I do not know anything about it.

334. You are aware that the Government has power to prohibit the importation of stock from the neighbouring Colonies, or from any other countries? Yes.

335. Have you noticed anything in that law which you think requires amendment? No. I think it is right that the Government should have the power to prevent the importation of stock when considered necessary to do so.

336. Notwithstanding New South Wales and Queensland are clear of scab, you still think it wise to keep up the present machinery as provided by law? I think it is.

337. Suppose the whole of the Colonies were clear of scab, do you think it would then be wise to keep up the present machinery? I think it would. There are other diseases besides scab, affecting sheep, as much to be dreaded perhaps as scab.

338. Diseases that might voluntarily break out? Yes; and it is a great check to the introduction of disease to have inspectors keeping watch: like a watchman guarding a warehouse, though he may not catch

J. M'Gaw,
Esq.
1 June, 1876.

J. McGaw,
Esq.
1 June, 1876.

a thief for years, it is possible his vigilance may prevent thieves coming. If stock is allowed to come in indiscriminately, there is no doubt we should have scab or other diseases before long. If the present machinery is kept up it will be a check against the introduction of disease.

339. Are you aware that the disease I have spoken of as having broken out amongst sheep has very much extended in Victoria? I have heard it, but I only know it from hearsay.

340. Have you had much experience with cattle? Very little; we have only 200 or 300 head.

341. Just sufficient for station purposes, I suppose? Yes, just a small stud herd. I have not had much experience with cattle.

342. Can you give the Committee any information in reference to pleuro-pneumonia? No; I think if I saw a beast suffering from it I should know it was the disease, but that is all.

343. Can you give the Committee any information as to the desirableness of legislating to make inoculation compulsory? I believe that such legislation is considered to be necessary by a great number of people. If inoculation is desirable, it would be better to make it compulsory upon all stockowners to adopt it, in the same way that vaccination of children is compulsory. But I cannot say of my own knowledge that inoculation of cattle is absolutely necessary.

344. Do you know whether there are any defects in the present law in reference to travelling sheep, as to the branding and marking of them, and so on? I cannot find anything in the Diseases in Sheep Act about the distance which sheep should travel within a given time. The Crown Lands Act provides that they shall travel 6 miles a day.

345. I am speaking now in reference to the marking of sheep? I think it would be well that there should be an ear-mark. It is so, I think, on all well-regulated stations—they have one mark that is not interfered with as a rule; and I think it would be a very good thing if it were made compulsory on all stockowners to adopt it.

346. Have persons any difficulty in identifying sheep that are stolen? They have great difficulty. I have heard of cases where the owner has had no doubt that stolen sheep belonged to him, but the ear-mark having been tampered with, he has been unable to obtain a conviction.

347. Can you suggest anything to the Committee in reference to the working of the present law, or any amendments which you think should be made in it in a general way? No, I do not think I can.

348. *Mr. Suttor.* You said in answer to the Chairman that, in the election of local Boards of directors, it would be advisable to have an accumulative system of voting—how do you arrive at that conclusion? We have a large interest at stake, and we have a right to say who shall represent us on the Board of directors. If I was the owner of 500 sheep, I should not have the same interest as the man with 100,000.

349. Why is there such a difference of opinion amongst the proprietors of sheep—I take it that the object of setting the machinery in motion is to keep clear of scab? To keep clear of diseases of all kinds.

350. You said you thought the inspectors should have additional powers—what additional powers do you think they ought to have? I speak of their powers over travelling sheep. At present I do not think an inspector could interfere. Suppose for instance, I had a hundred thousand sheep, and travelled them along the public roads of the Colony at the rate of only two or three miles a day, I do not think the inspector would have power to interfere with me. My run has a frontage of about 22 miles to a road, and within the last few weeks a man with travelling sheep took a week to cross it. My man left him on a small reserve proclaimed for camping travelling sheep, and within a few chains of the boundary of the run. We found afterwards that he had camped on the reserve during the night and fed his flock on the run the next day. The reserve is only something like 150 acres in extent. After he had travelled his flock two or three days longer, he sent me a written notice that he was coming back again. He did come back, and spent nearly another week in crossing by the run. We afterwards received another notice, that he was coming back again. That occasioned me a loss and inconvenience—I had to keep a man on horseback to go backwards and forwards to watch the sheep pass.

351. How could an inspector interfere in such a case when he has a large district to look after? I might lay the information, the inspector might have power to prosecute—I do not mean to say that I could make a law that would work better than the present law. I only point out that such things do occur, and might occur every day.

352. Still you have your remedy at law by bringing an action for trespass? I really do not see under what Act I could prosecute.

353. Of course you cannot prosecute for trespass, but you could bring an action for damages? Of course the Crown Lands Act says the stock shall be travelled at a certain rate.

354. And you think it would be desirable to create such a case as you speak of an offence? I think so; I think it is a case that ought to be constituted an offence by law. I admit that it would be hard to make a law to meet all cases.

355. With respect to quarantine, do you think the present regulations require more than is necessary? I do. I think sixty days quarantine is absolutely unnecessary. Thirty days would be quite sufficient. I speak perhaps rather selfishly in the matter. I am in the habit of bringing sheep from Victoria, and having to place them in quarantine for sixty days occasions me great expense, whilst the sheep are probably injured. At times I have lost the use of them for the season.

356. Is it not better to do too much than too little, rather than run the risk of getting scab introduced? Decidedly; I would rather go to any inconvenience than run the risk of introducing disease of any kind.

357. With regard to inoculation—you are aware there is great diversity of opinion respecting it? Yes; I cannot say anything about it myself. Some twelve or thirteen years ago I had some cattle inoculated and lost many of them. I have since thought the virus could not have been good, and that the cattle were poisoned.

358. With respect to ear-marking sheep, do you think, in view of there being a large number of proprietors, many of them small proprietors, it would be possible to give each man a distinctive ear-mark? I think it would; not perhaps a distinctive mark for every proprietor in the Colony, but for every proprietor in a district. It is an easy thing to vary the ear-mark, keeping one ear for the station mark,—say the right ear for the ewe, the left ear for the wether.

359. Are there many conditional purchasers in your district? Not a great many.

360. There are some? Oh, yes. They all like to have a few sheep; some of them, I think, have a thousand or two.

361. Of course they would each require a distinctive mark? They would. It might be difficult for them

to

to have it, because they buy store sheep, and it would be difficult for them to have brands of their own unless they were allowed to alter the brands on the sheep they buy.

362. It is difficult to get a distinctive ear-mark for all these small holders? I think it would be. I might sell some sheep to a conditional purchaser, and a few of mine might afterwards get into his flock. I should not be able to say which were those I sold him and which were not.

363. *Chairman.*] You are aware that the law provides that cattle and sheep shall be travelled a certain distance per day in one direction? Yes, that is provided in the Crown Lands Amended Act.

364. Are you aware that the same provision has existed for some years in the Impounding Act? No, I was not aware of it.

365. *Mr. Hay.*] The thirtieth section of the Impounding Act reads as follows:—"Occupants of unenclosed Crown lands through which any public road or thoroughfare pass may not impound any cattle horses or sheep travelling along or through any such road or thoroughfare unless they be at the time of seizure at a greater distance from the centre thereof than half a mile. Provided however that unless prevented by rain or flood such horses or cattle shall be moved on or along such road or thoroughfare at least ten miles and such sheep at least six miles in one direction within every successive period of twenty-four hours,"—so that you might have exercised your right and impounded those sheep—the inspector could do nothing more than you could have done yourself? Perhaps, then, it would not be wise to make any alteration of the law in that respect.

366. *Chairman.*] What I understood you to complain of in regard to travelling sheep is that they travel, not with the view of their being taken to market or any particular place, but with the view of procuring food for them? There is no doubt it is done to a very large extent. I have not suffered from that sort of thing for the last few years, because the seasons have been exceptionably good, and feed has been plentiful; but I suffered from it this year and also seven years ago very much indeed.

367. You will see that under the twelfth section of the Amended Land Act, under the heading "Miscellaneous," there is the same power as is conferred by the Impounding Act, namely, that if drovers do not travel cattle at the rate of twelve miles, and sheep at the rate of six miles per day in the same direction, you have your remedy, as was pointed out by Mr. Suttor, at common law. Would you suggest any alteration? I think not.

368. That is, you do not suggest any summary way of dealing with people who did not comply with the Act in regard to travelling stock? I have thought it over a good deal, and heard it discussed often, but I do not think I ever heard anything workable proposed as a remedy. I have heard it proposed that the owner of a run should be allowed to charge such people, but I hardly think such a provision would work.

369. *Mr. Hay.*] Inasmuch as the Crown Lands Act provides that Crown Lands within half a mile of a public road, on each side, shall be reserved for travelling stock, do you not think the Crown might legitimately impose a small license fee for the time of travelling; for instance, Queensland sheep are frequently travelled for six months in our territory, grazing and fattening by the way, whilst no charge is imposed? There is no doubt that such a charge might be fairly made, and it would be a very good thing if it were made; but the difficulty would be in working such a provision. It might be somewhat unjust to levy a charge on stock going to market, and it would be difficult to draw the line.

370. If it was a charge of a very moderate nature, do you not think it would be as legitimate a charge as charging rent for Crown Lands? Yes.

371. I have known people that had a very small area of land, who kept their sheep alive by travelling them six months in the year? I had known cases of that kind. I know of two small runs fifty miles apart, the stock belonging to which have been kept going backwards and forwards rather than on the runs.

372. Do you think it would be advisable to legislate to remedy these abuses, or do you think they will be likely to die out from its being a very unprofitable way of keeping sheep? It is not a profitable way of keeping sheep, and I think it has died out very much of late years.

373. *Mr. Suttor.*] I suppose such abuses will be cured as the lands are bought up? Yes, when the land is bought up the runs will be fenced, and the stock will be confined to the main roads. In my case the road is along the river from point to point; and even if I had the land purchased on both sides of the road, I could not fence along the road, as the fence would keep my own stock from getting in to the river. There are, no doubt, other stations in the same position.

374. *Mr. Hay* suggested a license fee: do you not think that if a license fee were charged it would give the owners of travelling stock additional rights, whilst it weakened the rights of the lessees? If they paid any license fee they would consider they had a right to be on the land, as they do now; at the same time they would have to travel a certain distance every day in one direction.

375. *Chairman.*] You have spoken of some selectors who have sheep: do they follow any other occupation than grazing? Not in our district. A few of them plough a little for hay, but it is a very precarious way of making money.

376. Is there any further suggestion you would like to make to the Committee? No, I think I have given the Committee everything I could think of.

377. *Mr. Suttor.*] What is the present state of the health of the sheep in your district? Very healthy; we have no disease there. There is a little footrot, but very little.

378. It is not likely that any disease would be generated by local circumstances? Not in my immediate neighbourhood.

379. *Chairman.*] No fluke? No. I have seen fluke there ten years ago; it was brought on to the station by some sheep which I had sent to the mountains at the head of the Murrumbidgee. I sent the same sheep there twice, and they did get fluke, and a number died after they got back to the station.

380. Were any of the other sheep that were not sent up to the mountains affected? Not that I am aware of.

381. They were not affected by the sheep that were brought down and which had the fluke? No, I have not seen anything the matter with any of the other sheep, either at that time or since. I got rid of those I speak of as soon as I could. A number of them died; some I fattened.

382. That is to say, the fluky sheep did not affect those that were not fluky? Not so far as I am aware of.

J. M'Gaw,
Esq.

1 June, 1876.

Hon. J. B.
Wilson, Esq.
1 June, 1876.

The Hon. John Bowie Wilson, Esq., called in and examined:—

383. *Chairman.*] You are aware of the object for which this Committee has been appointed? I am; and I may state that I have been requested by several large stockowners, principally in the Riverina district, to come before this Committee, chiefly to give expression to their views with regard to the Act, as they find it impossible to come to Sydney to express their opinions themselves. I may mention that I have been requested by Mr. Richard Blackwood, of Hartwood, and Messrs. Blackwood and Ibbetson, of Wanganilla, and Mr. Cochrane, of Widgiewa, to attend this Committee. The principal points they wished me to speak about were, first, the mode of electing directors to the local Boards. At present only a single vote is given to one flockmaster, whatever number of sheep he may own. And they are of the same opinion as Mr. M'Gaw, who has just given his evidence, that there should be a cumulative system of voting. They say that a man with 500 sheep—and there are many free selectors with that number in the Riverina district—has as much power as the man who has a hundred thousand; whereas the small holder pays little or nothing towards keeping up the present system of inspection. Another reason they urge is this: that to a small owner it would be a matter of comparatively trifling moment if his sheep were scabby, and consequently a small owner has not the same interest in keeping the country free from disease as the large owner has. If scab broke out amongst a flock of a few hundred, the owner could manage to keep the disease down and perhaps cure them, and he would suffer no material injury; whereas, if I might use the expression, it would be death to the large proprietor. They think therefore that if one vote be given for (say) from 500 to 8,000 sheep, an additional vote should be given for every additional 5,000 the owner might possess. The only object these gentlemen could possibly have in view is to keep the flocks of the country free from disease.

384. At the time the present law was passed there were very few small owners of sheep? They were so few that they were not worth taking into consideration in passing the law. But the great bulk of the free selectors in the Riverina district are not agriculturists, they use the land as pastoralists, for grazing purposes. Their first object is to get a flock or two of sheep, and their interests become to some extent antagonistic to those of the large stockowners.

385. They are thus carrying on pastoral pursuits on a small scale? Not only that, but they think they would be benefited if there were greater freedom of intercourse between the two Colonies. They have not the same fear of disease being introduced from Victoria, where the disease exists; and of course if they saw it would benefit them, they might wish for freer intercourse between the two Colonies. There is another matter I desire to refer to, that is, the placing of quarantine stations on the river Murray. The gentlemen whom I represent think it would be dangerous in the extreme to establish quarantine grounds on the Border. They prefer to incur the expense of bringing the sheep round to Sydney by sea than run any danger of introducing scab. They appear to have very great dread of quarantines on the Murray for that reason. Every care is now taken to prevent sheep crossing the border. When the river is low, watch is not only kept by the Government boundary riders, but they have boundary riders of their own; and every exertion is made to keep the Victorian sheep from trespassing.

386. Then you think it would be to the interests of the country to retain the boundary riders? I not only arrive at that conclusion from the attention I have given to the subject myself, but the gentlemen whom I represent also think it would be detrimental to the interests of the Country to do away with any of the officers appointed under the Diseases in Sheep Act. The Country is put to no expense by having those officers—they are paid out of a fund raised by a special tax on the flockmasters. The flockmasters pay that tax willingly, as a sort of insurance fee that their stock will be kept free from scab. Mr. M'Gaw has suggested that certain additional duties should be imposed upon the inspectors. I think they ought to be called upon to keep, as far as possible, a supervision over travelling stock; so that in case disease broke out amongst stock travelling, the inspectors could insist upon those in charge taking proper means to destroy the carcasses when the animals died, and by that means prevent infection.

387. You have had large experience yourself in pastoral pursuits? About nineteen years.

388. And have given a great deal of consideration to the subject? Yes, both from being connected with pastoral pursuits so long, and being connected with them also as Minister.

389. As Minister you had to administer this particular Act? Yes, and I have always been strongly in favour of it.

390. And your own opinion is in accord with the opinions of the gentlemen whom you now represent? Most decidedly. In my opinion the Colony has derived incalculable benefits from this Act. I may mention that during the time I was Minister there was only one flockmaster who objected to pay the tax.

391. The information you have given to the Committee has reference principally to sheep? Yes.

392. Can you give the Committee any information respecting diseases in cattle, such as pleuro-pneumonia, and as to the advisability of legislating upon the subject of inoculation? It is a very difficult matter. I have not that faith in inoculation which some people appear to have—I think it is of doubtful efficacy. So far as vaccination in the human subject is concerned, I have not only no faith in it, but a perfect dread of it—so much so that no power on earth would compel me to have one of my children vaccinated. Instead of a blessing I think vaccination has become a great curse to the community. And I am very doubtful as to the efficacy of inoculating cattle against pleuro-pneumonia. I was appointed a member of a Commission which had powers given it to examine some cattle that were affected with pleuro-pneumonia; and one thing that struck us when the cattle were killed was that many of them were found to be in a convalescent state. I do not think the mortality from pleuro-pneumonia is so great as is sometimes imagined. I think deaths that arise from other diseases are often put down to pleuro-pneumonia. My own impression is that the breeding of cattle is becoming so fine and close, both in these Colonies and in Europe, that the cattle are more liable to inflammatory diseases than they were before. I believe it is very questionable whether the Colony will derive any great advantage from stock-owners breeding from high-bred stock, which many people appear to be so anxious about.

393. In inoculating a beast against pleuro-pneumonia, do you think it possible to infect that beast with some other disease? There is no doubt of it. For instance, to draw an analogy between the cow and the human being,—we know that it is a well established fact that hundreds, and I believe thousands, of children have been infected with diseases through vaccination, such as syphilis. I have seen in this city heart-rending cases of children being ruined for life through vaccination.

394. That is, they have been vaccinated for small-pox, and in the process other diseases have been conveyed into the system? Numbers have become impregnated with syphilis. There is no means of ascertaining whether

whether the vaccine is pure or not. It may be taken from a child apparently healthy, and yet be impure, in consequence of latent diseases which may be in that child's system. And thus disease is transmitted from one child to another. I think the subject of compulsory vaccination is a very dangerous one to touch upon. Generally speaking, the squatters of New South Wales are a very enlightened class of men; and if it can be proved to them that inoculation is a safeguard against pleuro-pneumonia I think it would soon be generally adopted.

Hon. J. B.
Wilson, Esq.
1 June, 1876.

395. Do you think that a wise provision of our law which gives the Government power to prohibit the importation of stock? I think it is a very wise provision, but it is a power that ought to be exercised with a great deal of care. I think there is often a desire to carry it too far. When a person is well stocked with imported cattle, he has of course no desire that any other person should go into the same trade. It is a power that requires very great discretion in its exercise. I happened to be Minister for Lands some years ago when it was proposed to stop the importation of cattle, and I did everything in my power to oppose it. I may mention another circumstance that occurred when I was Minister for Lands, with reference to some cattle that showed symptoms of foot and mouth disease after they had been a short time in the Colony. I am not now alluding to Mr. White's cow; but to some cattle that were placed on Dawes' Point. I paid a great deal of attention to them, and I am perfectly convinced that those cattle were perfectly sound when they were landed in New South Wales. They were very high bred cattle, and had been fed on stimulating food on the voyage out—oil-cake, hay, and other things. It was during the heat of summer when they were landed, and they were placed in an unfortunate situation, where there was neither sufficient air nor water at their command. I am convinced that any cattle under similar circumstances would soon show symptoms of foot and mouth disease. I am therefore led to believe that the disease was not introduced to the Colony, but was generated here. The cattle were in close sheds, with the heat of the sun pouring down upon them. I visited them in company with Dr. Cox, who has a knowledge of stock, and as soon as the axe was set to work and portions of the sheds knocked down, so as to admit the air freely, the cattle commenced to improve.

396. You think that so long as a wise discretion is used the law is beneficial? I think it is a power that ought to be in the hands of a Government, but it should be used very charily indeed. There is another subject upon which I should like to make a remark or two, that is the ear-marking of sheep. It is the opinion of most of my friends, especially in Riverina, that it would be an advantage to reserve a particular ear for a station brand—say the near ear for a ewe and the off ear for a wether, and that steps should be taken to prevent the station brand from being tampered with. Then in case of any sheep being stolen, if they were followed up with rapidity, *prima facie* evidence might be obtained of the station brand having been tampered with; in fact, there would be strong presumptive evidence of their having been tampered with.

397. It would facilitate the detection of stolen sheep? Yes, and would act as a preventative to theft.

398. *Mr. Suttor.*] I understand that your disapproval of vaccination arises from practice—do you see anything wrong in it in theory? I object to it on principle also. I think we ought not to generate disease in any of our children under any particular circumstances. If we choose to bring up our children as we ought to do, with healthy constitutions, we can act independently of vaccination, and not fear the disease it is thought to avert.

399. Still if it is a preventative? I do not believe it is a preventative. During the last small-pox epidemic at Marseilles, 75 per cent of those who were attacked, and some of the worst cases, were persons who had been vaccinated. There is very great difference of opinion on the subject. But I am convinced from what I have heard that an opinion against vaccination is gaining ground amongst medical men at Home.

400. And you think there is a strong analogy between the vaccination of a human being and the inoculation of cattle? I believe there is.

401. And from your experience with the inoculation of cattle, you think it would be useless? My prejudices are against it. As far as the inoculation of cattle is concerned, I have had little practical experience, but I object to it in theory. I think a great deal more has been attributed to pleuro-pneumonia than need have been. It is not uncommon for cattle travelling to get inflammation of the lungs, and it is often put down to pleuro-pneumonia.

402. There are diseases which may be mistaken for pleuro-pneumonia? Yes; as soon as a drover finds the cattle breathing hard and holding their heads down, he concludes they are suffering from pleuro-pneumonia.

403. You think, in the light of our present knowledge on the subject, it is not desirable to legislate to make inoculation compulsory? Most decidedly not. If I were a Member of the Assembly, and a Bill was brought in to make inoculation compulsory, I would vote against it in the present state of our knowledge.

James Henry Davidson, Esq., called in and examined:—

404. *Chairman.*] Where do you reside? At Warbreccan, near Deniliquin.

405. I believe you are engaged in pastoral pursuits? Yes.

406. Principally in sheep farming? Principally sheep—I have very few cattle.

407. You are aware of the object for which this Committee was appointed? Yes.

408. Have you paid much attention to the working of the Stock Act? With regard to sheep I have. For the last two years I have filled the office of director on one of the Boards in the district in which I reside.

409. You are elected to that office, are you not? Yes, by the various sheepowners of the district.

410. Is there any fixed scale as to the number of sheep an owner must have to qualify him to vote for a director? The owner of from 500 to 8,000 sheep, or his duly authorized overseer, may vote at the election of directors.

411. The owner of 500 sheep is entitled to one vote—the owner of a hundred thousand is only entitled to one vote? Yes.

412. Do you think it would be wise in any future legislation to provide for accumulative voting in proportion to the number of sheep a person may own? I think an accumulative system of voting ought to be established.

J. H.
Davidson,
Esq.

1 June, 1876.

J. H.
Davidson,
Esq.
1 June, 1876.

413. What number of sheep would you fix as the lowest number that should entitle the owner to vote? The Act gives a vote to owners of from 500 to 8,000 sheep. I think an additional vote should be given for every 5,000 or 8,000 sheep above that number.
414. We want to get at some minimum number as entitling a person to one vote, and then to adopt a number for the accumulative system? I think up to 8,000 should be the minimum entitling an owner to one vote—an owner or his duly authorized superintendent.
415. What is the maximum number of votes you would give to one owner? I should be inclined to allow a vote for every additional 8,000 sheep he may possess above 8,000. I would not limit the number of votes. It might be based on the number of sheep or on the amount of contributions paid.
416. Being a director you have had a good deal of experience as to the working of these Boards? I have had some experience.
417. Generally speaking, do you think they work satisfactorily? So far as my knowledge extends, up to the appointment of directors for the current year at Deniliquin, the Boards there always worked satisfactorily and smoothly.
418. Is it your opinion that the whole of the machinery now constituted by law should be kept in existence, irrespective of whether we have scab or other disease in the Colony or not? I think so decidedly, otherwise the law would become a dead letter.
419. That is you are in favour of the retention of the inspectors? Yes; if we do not the law will be of no use.
420. New South Wales is now I believe free from scab? I believe it is.
421. Are there any other diseases you know of existing in the Colony? I believe fluke and worms exist in some parts of the Colony.
422. Are those diseases contagious or infectious? It is a moot point; I believe they are.
423. There are many more small holders of sheep than there were some years ago? Yes.
424. That is, persons who have taken up small areas of land? Yes.
425. Do you think that will eventually have a tendency to deteriorate the quality of the sheep and wool? By having small holdings?
426. Yes, holdings such as are now in existence? Not necessarily; it depends upon the care which owners bestow upon their flocks.
427. What is your opinion with reference to the establishment of quarantine grounds on the Borders—say between Victoria, South Australia, or Queensland, as the case may be? I see no objection to it, provided there is no scab in the neighbouring Colony, and it is found desirable to establish quarantine grounds; but it would be dangerous to establish them until it is ascertained beyond all doubt that the neighbouring Colony is free from scab.
428. That is, you would prefer the law to be carried out as it is carried out now—that sheep, wherever they might be brought from, should be brought by sea into the county of Cumberland? Decidedly.
429. Although it is a great inconvenience and expense to owners of sheep, still you think, as a safeguard, the law should be carried out as it is now, in preference to establishing quarantine grounds on the Border? Most certainly.
430. Are you aware whether scab exists at the present time in Victoria? I am informed that it does. I do not know of my own knowledge; I believe it does, and very close to the Border.
431. Are you also aware that recently another disease has broken out that is devastating the sheep there? I do not know anything about it myself; I have heard of it.
432. With reference to the ear-marking of sheep, could you give the Committee any information how it could be carried out in any way which would render it possible to detect sheep-stealing, or that would give some proof or evidence that the sheep had been stolen? If it were possible to adopt a system of ear-marking, giving an ear-mark to each owner, it would be a good thing to do; and I would make any interference with that mark punishable, whether by the purchaser or anyone else.
433. Do you think it possible to carry out the theory of ear-marking? I think it could be done.
434. Are you aware that they have a system in Queensland? I am not aware of it.
435. You think something of the kind could be carried out? I think so.
436. Has any difficulty been experienced in travelling sheep by the obliteration of the brand-mark—could you make any suggestions with respect to that? I have never known any trouble to occur. It takes a long time to obliterate a paint or tar brand if it is properly done in the first instance.
437. What about fire-branding sheep on the nose? I believe it would be the most effectual way of distinguishing an owner's sheep—that is if a character or letter could be got that will make a clear brand—one that will not blotch.
438. Are you aware whether there are persons who travel sheep through the country for the purpose of depasturing them, and not with the legitimate object of travelling them? I know there are people who have done it; but I do not think there are many who do it now.
439. Could you suggest any legislation that could take place to meet such cases, beyond the provisions of the present law for travelling stock? No, I know of no means of preventing it. If owners or persons in charge were made to travel sheep 6 miles a day they would gain but little by travelling their sheep.
440. Suppose a person did not travel his sheep 6 miles a day, but kept them on the road for a longer period than is allowed by law, do you think there ought to be any summary power given to deal with cases of that kind, or would you leave the lessees or owners of the runs injured to take proceedings in the superior Courts by action for damages? The law fixes a certain distance for sheep to travel in one direction every successive twenty-four hours; and in case that provision is infringed I think the aggrieved person should be allowed to summon the aggressor to the nearest Bench of Magistrates, and a small fine should be inflicted. I think some power of that kind should be given.
441. That is, there should be some speedy way of dealing with persons who loiter along the road with travelling sheep? Yes, on their failing to comply with the conditions of the Act.
442. Have you had any experience with regard to cattle? Not very much.
443. What is your opinion in reference to inoculation for pleuro-pneumonia? It is hard to give an opinion. Opinions on the subject are so much divided.
444. But what is your opinion? I believe in inoculation. I do not exactly say it is a preventative, but I think it mitigates the disease—it lightens it.
445. I understood you to say that the cattle you have are merely for station purposes? Merely for station purposes.

446. Could you suggest anything to the Committee in reference to this matter of stock—anything you have thought of as likely to be useful in legislating on the subject? As regards the inspectors, I think they should be retained. As regards pleuro-pneumonia, I think that cattle that are suffering from it should be dealt with in the same way that scabby sheep are dealt with—the owners should quarantine them in some place on their run, and the animals should not be allowed to leave it until pronounced healthy by the inspector.

J. H.
Davidson,
Esq.

1 June, 1876.

447. Do you think it a wise provision that when sheep are travelling through the country, notices must be sent to the holders of runs by which the sheep are to pass? I think it would be a grievous thing if the owner through whose run they are to pass did not receive notice. If the notices were simply posted the sheep might go on the run at any time; but if a messenger delivers the notice, the owner of the land through which the sheep are to pass is in a position to know about what time to expect them on his land, and he may see them through. As a rule, the owner of the run has to send a man with the travelling sheep to see them through, and to keep any of his own sheep from mixing with the travelling sheep.

448. The present mode of giving notice is advantageous in enabling the holder of the run to take steps to prevent any of his sheep from getting boxed up with the travelling sheep? I think the provision should remain as in the Act, and the notice should not extend over forty-eight hours, nor be less than twelve hours. If the person in charge of travelling sheep is allowed to send notices by post he may never send them; he may make all sorts of excuses, such as that the letter went astray.

449. Are there many selections taken up on your run? A good many.

450. Are those selections used principally for keeping sheep? Yes, all, with the exception of one. One man has some cattle as well as sheep.

451. Is there no cultivation going on? Very little.

452. Is the land suitable for agricultural purposes? The people who have taken it up say it is. My experience has led me to the contrary opinion.

453. *Mr. Suttor.*] In speaking of the voting power of directors, you think it should not be given to persons possessing less than 8,000 sheep? No; I meant one vote for 500, and up to 8,000, as provided by the Act, and an additional vote for every 8,000.

454. Are you aware that a Progress Report of this Committee has recommended that the inspectors should be done away with? I am not aware of it.

455. Do you think it would be wise for the Committee to reconsider that decision? If their decision is in favour of doing away with the inspectors, I think it would be very wise of them to reconsider it. Without the inspectors I do not see how the law is to be carried out.

456. Do you think all persons travelling stock, whether sheep or cattle, should be compelled to give notices to the owners of runs? I think they should.

457. Whether sheep or cattle? Yes. There is one remark I should like to make in reference to the establishment of quarantine stations on the Murray—at Moama, say, or on the opposite side of the river, where stock are most likely to be brought—in case of diseased sheep being brought on the New South Wales side of the river, animals would be very liable to escape. If a sheep did escape, it would escape in the midst of a sheep district, right into the heart of that part of the Riverina that lies between the Murray and the Murrumbidgee. It is different in the county of Cumberland. If a sheep escaped in this county it would not be able to find its way to other flocks.

458. That is in the event of sheep coming up from Victoria by rail? And brought into quarantine in New South Wales. It would be difficult to prevent escapes.

459. What remedy would you suggest? The present remedy, prohibiting the importation of stock until the neighbouring Colony is declared free of scab.

460. Under the law sheep cannot now come from Victoria? No, but there has been considerable agitation going on in some parts to get quarantine grounds established on the Border.

461. In your opinion, it would be unwise to establish quarantine stations on the Border? Very unwise.

462. Although it might facilitate the importation of sheep it would be very dangerous? Very dangerous; everything that has been done to prevent the spread of scab under the Acts now in force would go for nothing in a very short time. We should have scab within three months, and the whole of the expenditure that has been incurred would be thrown away.

463. And the introduction of scab into the Colony now would be attended with very disastrous results? The results would be very disastrous indeed.

FRIDAY, 9 JUNE, 1876.

Present:—

MR. DAY,

MR. FARNELL,

MR. J. S. SMITH.

JOHN SAMUEL SMITH, ESQ., IN THE CHAIR.

James Wilson, Esq., called in and examined:—

464. *Chairman.*] I believe you have had large experience in the management of sheep? I have—at home, in Africa, and in this Colony. I am now managing stations the property of the late Dr. Traill.

J. Wilson,
Esq.

465. What length of experience have you had in this Colony? I have been here about seven years.

466. With regard to sheep-branding, can you give us any of the results of your experience with regard to the different ear-marks and fire-brands? Fire-branding is not generally so satisfactory as it should be, on account of the difficulty in putting a good fire-brand upon sheep—the brands are apt to blotch. Ear-marking is also very subject to being defaced or cut out, or else the ear cut off, so that, unless there be some stringent law made to prevent this being done, I do not see how stockowners are going to manage with regard to brands and ear-marks, since wholesale sheep-stealing has become the fashion. The fire-branding, as it is conducted now, is satisfactory in the district in which it is done to a certain extent, that is to say, the inspectors of stock keep a record of all the fire-brands in their own district, but when sheep are removed from that district—when you go in search of and find your sheep—you do not know but some person may have a brand similar to yours in that district, and by the time you have gone to see the district inspector's record and find this out you do not find the sheep. One of the improvements I think absolutely

9 June, 1876.

- J. Wilson:
Esq.
9 June, 1876.
- absolutely necessary is, that a record of brands should be kept in the head office, so that you could find out by telegram in a moment whether a similar brand has been registered there, referring to your own district registry by number. No two brands should be alike. If possible it should be the same with ear-marks.
467. *Mr. Farnell.*] You would have a registration? Yes, a thorough registration of marks, and these marks should be *prima facie* evidence of ownership of stock.
468. *Chairman.*] Do you mean that no two brands should be the same all over the Colony? I am afraid that is impossible, but I have never gone into it to find out whether it would be possible. In order to exemplify what I mean, I may say I have had a great deal to do with a sheep-stealing case lately. A gang of men took a lot of sheep of mine just newly shorn, so that there were no means of identifying them by the wool. I had a station fire-brand and ear-mark upon them, and when I went and found the sheep 200 miles away, through two different sheep districts, and identified my brand, although defaced by the imposition of another over it, I was immediately met by information that this brand I identified was a brand the parties had used previously.
469. Your brand? A brand similar to mine. This rather staggered me, but the brand I found had been defaced by putting another one on it, and it would have been very difficult to find out, only that it had been so recently done that any one with experience could see that the second brand was put on. The law should be, in my opinion, that no brand that had once been registered as a station brand should be allowed to be tampered with at all. If the law were made such that there should be only one ear-mark and one fire-brand apportioned to every station, and their registry open to the inspection of any person, and such a register kept in the central office, no doubt the practice of sheep-stealing would be very quickly discontinued. Also, one of the most important things to be considered at present is to prevent the cutting of the ears off. On the Liverpool Plains, through which I traced these sheep, I examined quietly twenty or thirty different selectors' flocks, and a more incongruous lot of ear-marks, and sheep without ear-marks at all, I never saw—sheep you knew by the wool these parties could not have bred; in several instances long wool crosses, Lincoln and Leicester.
470. *Mr. Farnell.*] In the event of the proprietor of a station selling to some one else, would you permit the brand to be altered? Certainly not. If legislation can effect a thorough system of branding, I should make it imperative that all future marking should be upon a different ear. The fire-brand and station ear-mark would be permanent and the new ear-mark could be worked upon the other ear, as purchased stock, or it could be done with tar.
471. *Mr. Day.*] You would not be able to get a sufficient number of ear-marks to suit all? I am not certain. These things are very strange until one works them out. Mr. Bruce and I had a long talk about it years ago, and he maintained that you can ring as many changes upon ear-marks as upon brands. I think also that there should be a permit to travelling sheep, and that this permit should be countersigned by the parties through whose runs they went as well as the inspectors of stock. This would give opportunity of tracing stolen sheep, the want of which is now a great defect.
472. *Mr. Farnell.*] You think a law embodying the principles you have suggested would be a great check to sheep-stealing? Yes, most undoubtedly.
473. *Chairman.*] Are you aware that owners brand their sheep differently with a fire-brand and tar-brand? They do.
474. Do you think it is desirable that should be the case, or that the fire-brand and tar-brand should be similar? I think if it were made law that the fire-brand should be made *prima facie* evidence of the breeder of the sheep, they ought not be allowed to have a tar brand at all, unless as a class or travelling stock brand, that would only be a simple mark, and would come out every season at shearing. I mean a numeral tar brand for distinguishing the classes that a sheep owner must have for classing his sheep because he cannot go on putting on ear-marks for that purpose.
475. There is a suggestion in the Bill before you that a Board of Examiners should be appointed by the Government, consisting of one medical man, one veterinary surgeon, and the Chief Inspector of Stock—do you think that would work well? I think it would to a certain extent; but if there were a properly qualified veterinary surgeon on the Board, I do not see the necessity for including a medical man; I would rather see a thorough practical sheep-farmer. That Board, I apprehend, would examine inspectors of stock before they were appointed—most decidedly, I consider they ought to be made to pass an examination showing their thorough acquaintance with the subject.
476. With regard to the inspectors themselves, are they necessary in the interior of the country in your opinion? Under the present Sheep Act, which, as one may say, is exclusively confined to scab—and scab having been once eradicated, is not likely to break out again—I should say they might be done away with in many districts, although they are very useful in collecting information and returns. Their duties in connection with the scab law are, you may say, completely done away, as far as the existence of scab is concerned; but there are hundreds of other diseases which want looking after.
477. Are we to understand that if the inspectors had more to do in a general way with the diseases to which sheep are liable, you would approve of their continuance? Yes; but they should be a better class of men, I mean men more conversant with their business.
478. Do you happen to know that any of the present inspectors know nothing about scab? I would not say that, because I have never seen them tried. We have not any scab to test them with. There is another point with regard to the inspectors. When scab was in the country, and the inspectors were first appointed, they received great assistance from the Boards of Sheep Directors, but now those Boards of Directors consider that their occupation is pretty well gone, in so far as that disease is concerned, and they do not make use of them so much. The practical working of the Act is left with the Minister for Lands and the Inspector of Stock, the Directors not taking the same interest in it as before.
479. *Mr. Day.*] Do you believe in fire-branding on the nose? I do; there is no other place.
480. Do you think it possible to find a fire-brand for every owner of sheep in the Colony—such a brand as will not run or blotch? I do not know the number of owners in the first instance, and I do not know the number of brands that might be found. I have never gone into the question in that way; it is really one of figures.
481. Do you think if there were four thousand sheepowners in the Colony, it would be possible to get a distinct brand for each? I could not say without trying to work it out, which I have never done.
482. It would be utterly useless to talk about bringing a Brands Act for sheep into operation, unless we were satisfied that we could get a distinct brand for each owner? You might have a different fire-brand to hold good for each district, and make the difference in the ear-mark. I think by working the two together in that way you could easily get 4,000, and many more.
- 483.

J. Wilson,
Esq.

9 June, 1876.

483. Have you had considerable experience in fire-branding sheep upon the nose? No, only since I came to this country.
484. Are you aware that in eight cases out of ten the fire-brands blotch and run? As far as my experience goes I would not say so in eight cases out of ten.
485. Have you seen many sheep fire-branded on the nose? Yes.
486. Could you detect what brand was on the nose without knowing the station brand? In many cases I could not, but I put that down more to the carelessness with which it is put than anything else—that is to say, that unless I was looking for a particular brand I could not say this was that particular brand without some other guide to it. But then I do not think it is impracticable.
487. *Chairman.*] You would not like to swear, in a Court of Justice, to a sheep by its fire-brand? Certainly not by its fire-brand alone, if it was not a brand I was thoroughly conversant with.
488. *Mr. Day.*] If sheep got mixed on the boundaries of runs—if they got through the fencing for instance—would this brand be sufficient to enable the owners to reclaim their own? There need be no difficulty about that if the owners are on good terms.
489. But supposing they were not friendly—supposing sheep are stolen and taken to another run, how are you to be able to detect your own sheep? That is a very difficult matter to do if they are stolen, and if there is any malice about it.
490. Do you think sheep should be allowed to travel without giving notice? Certainly not.
491. Notice the same as is provided for in this Act? I think the time specified in the Act is rather short in some cases. I think a man ought to get a little more margin.
492. Do you think it would be sufficient to give notice by registered letter? People do not get their letters oftener than once a week or once a fortnight in the country districts. I think there is no hardship in the method of giving notice as travelling is now—not to any person that has an honest intention in travelling.
493. Do you think notice ought to be given to each inspector in passing along? I do. I would give the inspector notice by registered letter, but if the proposed bill is to become law a man would not have to go very far to give notice to the inspector, because the officer of police in every district is to be an inspector.
494. Unless this bill becomes law you are under the impression that the inland sheep inspectors are useless? They are useless for anything with regard to diseases or with regard to travelling sheep, except that they have power to examine sheep, and if an inspector will use his power in that respect with regard to sheep-stealing, the delay involved in getting a search-warrant is obviated; but many of them do not even like to take that position now.
495. *Chairman.*] It is part of their duty to see to brands? Yes; but it is a part more honoured in the breach than the observance.
496. *Mr. Day.*] Any member of the Board of Sheep Directors would have that power? They have power to order the inspector to do it.
497. They can exercise all the powers of the inspector? That is not generally understood among them. After they had got rid of the scab they did not inquire what their powers were, or very much about it. The fact of the Chief Inspector having to nominate sheep directors in so many districts, is evidence that the interest with which they regard the matter has cooled down.
498. *Chairman.*] With regard to the election of boards of directors, do you approve of the present system? No, not as the Colony is now. I approved of it before, because there were not so many small sheep owners; but now I see that these parties are so organized in a bond of hostility to the larger owners I think it will be necessary, in framing a Bill, to give votes more in accordance with the amount of stock held.
499. *Mr. Day.*] Cumulative votes? Yes.
500. In what proportion? That is a matter that would have to be worked out more upon the statements of owners of sheep. As far as our district is concerned, it would work well enough if the owner of sheep up to ten thousand had one vote, and so on in proportion.
501. Do you think the small sheep farmers, in the election of sheep directors, would be likely to do any injury to the large owners, if they had it all their own way? They would; they have a limited interest in the stock, and what could be done in small holdings might be impracticable on larger. They might elect men whom we consider “shady,”—men who would endeavour to nullify the duties of the inspectors under the present Act as vexatious.
502. The boards could do nothing that was not prejudicial to the small owners as well as the large? Perhaps not in a degree, but there is a free masonry amongst small owners that does not exist amongst the large owners. It is rather invidious to express all these things, but really I have seen so much lately in going about that I am quite confident that if the large owners' interests are attended to it will not be by the small sheep owners.
503. How many votes would you give as a maximum? I would give an owner a vote for every station he held; if he had 20,000 sheep in one district, and 20,000 in another he should have four votes.
504. If a sheep owner has different stations in the same scab district, would you give him a vote for every station? Yes.
505. And allow him the privilege of cumulative voting in proportion to the number of his sheep? Yes.
506. What is the maximum number of votes you would give under any circumstances? Five. I think that would meet all questions as the holdings are now.
507. Do you think the Boards of Directors should be allowed to appoint the inspectors? No; I should rather see them appointed on examination by a board. They might nominate.
508. You are aware they have the power of appointing now? I am. They might nominate, but the man nominated should go through an examination. I should wish to see the status of the inspectors very much improved by a qualification from a properly constituted Board, and let the sheep directors nominate, but the appointment to be with the Government.
509. Would you give the Minister for Lands power to ignore their recommendation? No; I think he has enough to do without going into stock matters at all.
510. *Mr. Furnell.*] Has your attention been called to a report from the Inspector of Stock in Queensland, in which he proposes a system of permanently numbering cattle by ear-marks? Yes.
511. Do you think it would be practicable to carry that out in reference to ear-marking sheep? It might be done, but it would require much greater attention than we have given to it yet. The great difficulty would

J. Wilson,
Esq.
9 June, 1876.

would be in making a start. If we were starting fresh it would be easy, but a great many of these brands and marks are in existence now in sheep.

512. Would you be favourable or not to establishing quarantine grounds on the borders of South Australia, Victoria, and Queensland? Certainly I would, until there was a prospect of confederation and working all through together. We are subject to getting disease at any moment.

513. You are aware that the law now is that sheep cannot cross the border, and that if you want to bring sheep from the other Colonies to this you must bring them by sea to Sydney, where they are quarantined? Yes.

514. Would you also have quarantine stations on any of our borders? Yes, for use only in case disease existed in other Colonies. I consider that the quarantine as conducted here is almost prohibitory of introducing stock.

515. Then I understand you to be favourable to the establishment of quarantine stations at the crossing-places on the Border? Yes, for use when necessary; but not making it imperatively necessary that all stock should go into quarantine. Let the stock be inspected, and then if necessary let them go into quarantine. If there were an outbreak of disease we should have the power of shutting off importation of stock at once at the Border.

516. Is it possible to detect disease in sheep immediately—suppose a flock were coming over from Victoria, and the inspector were sent to examine them, would it be possible to tell in every case whether the sheep were diseased or not? No, he might not be able.

517. Then suppose a flock of sheep came over and were inspected and passed, might not disease break out amongst them and be spread to healthy flocks unless they were put in a quarantine for a time? It would be possible.

518. *Mr. Day*] That would be possible at any other point as well? Yes.

519. And therefore to prevent the spread of the disease no sheep should be introduced at any point except Sydney? I do not go to that extent.*

520. *Chairman*.] Does not the present Act give power to establish places for quarantine? Yes, but I think you will find that is for placing runs, or portions of them, under quarantine only in case of scab. There is no general quarantine establishment anywhere but in Sydney, and this is used for stock prohibited and colonial.

521. *Mr. Farnell*.] I want to clearly understand whether you think it would be wise to establish them on the borders of any of the other Colonies on the supposition that disease might be in in any of those Colonies? I certainly think there ought to be two on the Victorian border and one on the Queensland border.

522. You think it would be safe to do that instead of compelling all persons who wish to send sheep to this Colony to send them by sea to Sydney? Yes.

523. Could you suggest any amendment of the law in reference to travelling sheep. Is any inconvenience felt by stock owners generally in consequence of people feeding their sheep through the country at times? I would do away with travelling sheep for grass and water altogether.†

524. *Chairman*.] The man who has no station should have no sheep? The man who has no grass and water should have no sheep, because these are necessary for their subsistence, and he infringes on the rights of his neighbour.

525. *Mr. Farnell*.] Do you think the reserves for travelling stock are sufficient? They are perfectly sufficient for legitimate travelling stock purposes, but not sufficient for a man travelling 10,000 sheep for grass and water. He has the same right now as a *bonâ fide* traveller. These reserves and stock routes are made for *bonâ fide* travellers, but he is not a *bonâ fide* traveller in my interpretation of the matter.

526. *Mr. Day*.] Can you point out any remedy for this evil—persons who have not got any grass travelling their stock merely, to eat up the grass of their neighbours? The way to remedy it would be to make a man make a declaration that his sheep were going to such a place and not to return. At present a man can go through a run and turn round and come back the next day. I think there should be a declaration, with a very heavy penalty for breaking it. Whether a heavy license fee to travel would be any good I have not considered sufficiently to be able to say. I think it would be licensing the evil.

527. What do you mean by a declaration? That a man going to travel stock should make a declaration of their destination, that they were travelling to a certain place direct, either for sale or having been sold, without any reservation about coming back at all. They should not come back; they should travel in one direction. I would have no deception.

528. Would not that interfere with the arrangements of stock-owners who are travelling their sheep for sale,—if they did not meet a market, would you keep them away from their station altogether? I would not allow them to come back by the same route; and the sooner periodical fairs are established in different districts the better. All “loading” stock are said to be seeking a market.

529. *Mr. Farnell*.] Are you aware whether a disease unknown before has broken out among sheep in Victoria? No, I am not aware. I think I did see something about it in the papers, but I am not sure what it is. From the description given it is no new disease, and is identical with the rot—an endemic disease.

530. *Chairman*.] Do you think the area allowed for travelling on each side of the road is excessive? I do not think it is in the back country, but it is so circumscribed inside now that they do not get it.

531. *Mr. Farnell*.] Have you had any experience in inoculating cattle for pleuro-pneumonia? I have. I had a great deal to do with it in Natal for the stock-owners there, where the disease was very virulent, when steps were taken to prevent its spread. I took up a series of questions and replies for the Government there, which I communicated to Mr. Bruce before I came to this country. My replies have been fully borne out by facts since. Inoculation was practised there in 1854, and now is in Natal compulsory. In so far that all stock, as a rule, are sold by auction, and every auctioneer selling stock who does not distinctly and emphatically inform the audience that he will not guarantee them inoculated is liable to the purchaser for the value of the stock that may die within a certain time from an outbreak of disease among them, and for any damage that may accrue to the stock from contact with the diseased cattle. That is the law at the present moment in force there. I was instrumental in getting that law passed, of which I will forward

* NOTE (on revision):—I do not consider water carriage any protection from outbreak of disease, rather the reverse, and the confinement and atmosphere are of themselves deleterious to sheep.

† ADDED (on revision):—There is great inconvenience, and valuable frontages are cut up, the property of the leaseholder, which in other countries would be called a robbery. Besides it engenders very bad feeling.

forward copy. The result is that inoculated cattle always bring about one-fourth more value to the seller, being considered a safe purchase.

J. Wilson,
Esq.

532. Does inoculation prevent the spread of the disease? You cannot say it prevents the spread of the disease, because it is only communicating the disease in a milder form; but it prevents the recurrence of the disease in the same stock.

9 June, 1876.

533. Stock that have been inoculated? During inoculation those that have passed a certain stage will die, but those that survive inoculation will not take the disease again.

534. Then you are in favour of compulsory inoculation? In that way,—that a man should be able to trace whether his stock were inoculated or not.

535. Would you compel all stock-owners to inoculate their cattle? No, because they could not always get virus; but on the outbreak of the disease I should compel any person to give notice of the outbreak of the disease, and to inoculate any stock intended for travelling, if virus was to be had. I would prevent the spread of the disease out of an infected district by stopping uninoculated stock from travelling out of it. At the present time pleuro cattle are left dying on the road, and to my certain knowledge men during the last wool season had their cattle inoculated on the road, and travelled with the newly inoculated cattle. And I have no doubt these cattle would communicate the disease, as many of them were diseased at the time of inoculation.

536. *Chairman.*] Are you aware that high authorities lay it down as very necessary that after inoculation the cattle should have quiet and rest? I am. At present there is no person either to restrain newly inoculated cattle from travelling on the public reserves, nor to make people burn up the stock that die on the road, unless it be a policeman, within municipal boundaries. I should have all these diseases put into the hands of the inspectors of stock.

537. *Mr. Day.*] Do you think inoculation for pleuro-pneumonia should be compulsory? Yes, where it is possible to get virus. I would not say it should be done all over the country at once.

538. Do you think a calf, by sucking a cow, is likely to get the disease from her? Yes it gets the disease almost in form of inoculation from her.

539. Have you known a cow to calve a calf thoroughly rotten with pleuro, and the cow at the same time free from it? No. I have known instances where the cow has been inoculated whilst in calf, and the calf would not take inoculation afterwards.

540. Do you think the disease is contagious and infectious? I do, both, highly so.

541. Have you ever known one part of a paddock or run to be free from pleuro, while it will rage in the most virulent form in the other portion? Yes.

542. Does not that lead you to believe that locality has a great deal to do with it? No doubt it has, but as it is termed in science, the *materies morbi* is greater in one lot of cattle than another, and the locality may influence this.

543. Do you consider pleuro to be epidemic or endemic? I consider it to be both; but the particular position of the cattle, the state of the atmosphere, and the locality, have a very great deal to do with it. Any man might argue that it is endemic on that account, but in reality it is epidemic.

544. Do you think it advisable to prevent cattle affected with pleuro from travelling? I do. They ought to be stopped at once. There are a great many men who start their cattle travelling, and offer them for sale as soon as they find the disease has broken out amongst them.

545. If stock which have started to travel when free from the disease should contract it on the road, what would you do with them? They ought to be blocked and quarantined where you stop them, until they can be inoculated thoroughly.

546. What do you consider the best way of inoculating? Inoculating in the tail.

547. By virus from a diseased beast? Yes.

548. At what stage of the disease should the virus be taken from the lung? You may take virus in almost any stage, but to be effective, you must take it from different portions according to the stage of the disease. The second stage is the best. If the lung has become hepatized, I do not take the virus from it at all, but from the liquid that is in the cavity of the lung. It is a very simple matter to ascertain whether the virus is of a proper nature or not, that is if a man can distinguish between a lymph globule and a pus corpuscle.

549. What do you think is the best way of keeping the virus? The only method I have seen is to absorb it in worsted and keep it dry and free from contact with the air. I do not believe in keeping it like vaccine matter between two glasses. I have heard it can be preserved in hermetically sealed tubes for a long time.

550. You would not advise the use of virus that had been kept long? No. Three days is quite long enough. It should never be used after decomposition has set in. The method of inoculation practised in Natal is a little different from what they use here. They always take the skin up between the finger and thumb, and do not draw blood; they run the needle through between the skin and the flesh, and take care not to touch the bone.

ADDED (on revision):—Inoculation ought to be practised only by skilled men; and its efficacy, depending so much as it does on the virus and performance, would be more generally believed. From an experience of thirty years amongst stock of all sorts, and with reference to this Colony in particular, I would strongly urge the necessity of establishing a thorough school of veterinary science in conjunction with the Sydney University. To excel in pastoral pursuits demands a technical acquaintance with the veterinary art, and to keep pace with the age we live in. Hence we might get Inspectors of Stock, and thorough knowledge to conduct the greatest industry of the country.

DISEASES AFFECTING LIVE STOCK.

APPENDIX.

[To the Evidence of Alexander Bruce, Esq., 16 February, 1876.]

AA 1.

AMENDMENTS REQUIRED IN THE SHEEP ACT.

- Section 2. 1. The definition as to size of paint brand in the interpretation clause to be omitted and the term "legible" inserted.
 Now. 2. A Board of Examiners to be appointed by the Government, consisting of one medical man, one veterinary surgeon, and the Chief Inspector of Stock.
 New. 3. The Board to be guided by Regulations to be made from time to time by the Governor in Council.
 New. 4. No person to be eligible for nomination for the office of Inspector who does not hold certificate of fitness from the Board.
- Sections 5, 6, & 7. 5. Sheep-owners to have votes at all meetings called for the election of Directors, as follows, viz., owners of 500 sheep and under, one vote; owners of sheep and under, two votes; and one additional vote for every additional sheep.
- Section 12. 6. Where one inspector is to be appointed for two or more districts, each Board to meet in its own district and make a nomination, and the applicant receiving the greatest number of votes on the whole to be held to be nominated. If, however, there be an equality of votes for two or more applicants, and the different Boards cannot agree among themselves as to which applicant should be nominated, the Minister to decide.
- Section 19. 7. The Governor in Council to appoint Inspector where necessary, if the Board neglects or delays.
- Sections 29 to 32 and 57 and 58. 8. Sheep while being carried by rail—so long as they are not infected—not to be subject to the provision relating to quarantine, nor to those relating to the coast district if they start from a portion of the Colony not within that district.
- Section 41. 9. Owners travelling sheep under this (41st) section to give not less than *twelve* nor more than *forty-eight* hours notice of intention to pass through or along a sheep run.
- Section 41. 10. Such notice not to be necessary where the run is separated from the road by a sufficient fence, nor in regard to sheep while being carried in a conveyance.
- Section 42. 11. In clause 42 instead of "*such owner's*" station brand the wording should stand "*an owner's*."
- Section 53. 12. Fees for sheep in quarantine to be fixed by regulation instead of by Schedule under the Act.
- Sections 54 & 46. 13. The length of quarantine for introduced and imported sheep to be reduced from sixty to days.
- Section 55. 14. The provisions of section 55 to be worked by regulations, and only put in force when disease existed in the Colony, and then only against the infected and doubtful districts.
- Section 58. 15. Sheep coming within the coast district to receive one, and as many more dressings and at such times as the Governor in Council may by regulation direct, before leaving it.
- Section 72. 16. Every owner to have only one ear-mark, but if he owns more stations than one, and they do not adjoin, he may use one ear-mark for each station: where they do adjoin, to only use one ear-mark for each set of adjoining stations.
- " 17. No owner to cut off more than one-fourth of a sheep's ear in marking, nor cut it straight across, nor re-mark a sheep's ear on purchasing it from the original owner.
- " 18. All ear and other marks, and all distinctive or working brands or marks, denoting the age, class, or breed of sheep, to be registered with the Inspector for the district along with the sheep brand.
- Section 91. 19. In cases of prosecution for offences and convictions, the inspector to be entitled to receive an order for travelling expenses incurred by him in serving the summons and carrying through the prosecution, but not any moiety of the fine, which shall all be paid to the credit of Sheep Account at the Treasury.

[To the Evidence of Alexander Bruce, Esq., 12 April, 1876.]

AA 2.

AMENDMENTS CALLED FOR IN THE "IMPORTED STOCK ACT OF 1871."

1. To omit New Zealand from the definition of "Australian Colonies," as New Zealand refuses to join the others in prohibiting stock from places outside the Australian Colonies.
2. To alter the definition of the term "Imported Stock," so as that it will apply to Australian stock (cows) put on board London and other ships in the Colonies, and brought back again.
3. To amend definition of the term "Stock," so as to make it include pigs, goats, and other stock, now omitted.
4. To provide a penalty for persons trespassing on quarantines.
5. To enact that importers be at the expense keeping stock in quarantine. At present the expense is borne by Cattle Fund.
6. To provide for the keeping of ship's stock in quarantine on the island while the ship is in harbour.
7. To extend the time during which stock after they are landed are to be held to be imported from *one* to *three* months.
8. To provide for the eradication of these diseases among our own stock, should it happen that any of them were attacked.
9. To provide funds for carrying out the Act. They are now exhausted.
10. To withdraw from the Inspector half the penalty now paid him, and pay whole into Cattle Fund.

A. B.,
29 March, 1876.

1875-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DISEASES AFFECTING LIVE STOCK.
(PETITION TO MINISTER FOR LANDS FROM ALBURY AND BILLABONG ASSOCIATION.)

Ordered by the Legislative Assembly to be printed, 21 March, 1876.

To the Honorable James Squire Farnell, Esquire, Minister for Lands for the Colony of New South Wales.
The Memorial of the undersigned Members of the Albury and Billabong Mutual Protection Association,—

HUMBLY SHOWETH:—

That your Memorialists are all engaged in pastoral and agricultural pursuits in the neighbourhood of Albury, and have united together for the suppression of cattle, horse, and sheep stealing and for the protection of their mutual interests.

That your Memorialists regard with the most serious apprehension and alarm the present most unsatisfactory state of the law as regulating the travelling of horned stock from one part of the Colony of New South Wales to another.

That there is nothing in the law as it at present stands to prevent parties with cattle in the very last stage of pleuro-pneumonia from travelling such cattle throughout the country, or from leaving their diseased animals, when unable to travel any further, to die on the roadside or on the reserves or commons, thus inevitably entailing destruction and loss upon the owners of healthy cattle with which these diseased animals may have come in contact.

That on a recent occasion a large mob of cattle that had travelled from the Wagga Wagga District, and amongst which were many animals in the advanced stages of pleuro-pneumonia, depastured all over the country in the immediate vicinity of Albury. That many of these cattle were so hopelessly diseased that they had to be abandoned by the owners as they travelled along, and were thus left to die on the reserves or commons in close proximity to large and valuable herds of cattle.

That many of your Memorialists whose runs were travelled over by these diseased cattle made application to the local Inspector of Sheep, Mr. Lockhart, for protection and redress, but without success; and that so urgent was the necessity and so imminent the danger that your Memorialists were compelled however reluctantly to take the law into their own hands, and to destroy all the diseased animals upon which they could lay their hands.

That the owners of these diseased cattle being unable either on the one hand to dispose of them in the vicinity of Albury, or on the other to introduce them into Victoria, were obliged to retrace their steps and actually travelled them back by the very same route as they had used on their approach to Albury.

That your Memorialists respectfully submit that they ought not to be placed in such a false position or be thus compelled to adopt such extreme measures to protect their own interests.

That your Memorialists would respectfully beg leave to draw the attention of the Honorable the Minister for Lands to the very stringent and, as they believe, admirable measure lately passed by the Victorian Legislature, whereby the Inspectors of that Colony are furnished with ample powers to deal with this most destructive disease.

That your Memorialists feel assured that unless some measure be introduced into New South Wales similar in its character to that now in force in Victoria, very serious loss in some cases and utter ruin in others will be the inevitable result.

That your Memorialists in bringing this matter under the notice of the Honorable the Minister for Lands beg leave respectfully to express their strong conviction that this is a case that calls for prompt and immediate action, and to express a hope that the Honorable the Minister for Lands will introduce some measure when Parliament assembles to meet this great and increasing evil.

And your Memorialists as in duty bound will ever pray.

JAMES McLAURIN, President.
THOMAS MITCHELL, Vice-President.
GEORGE DAY, Treasurer.
JAMES DAY.
ARCHD. PATON.
SAMUEL WATSON.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DISEASES AFFECTING LIVE STOCK.

(SKETCHES OF BILL AND CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 31 March, 1876.

RETURN to complete an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 16 July, 1875, That there be laid upon the Table of this House,—

- “(1.) Copies of the sketches of a Stock Disease Prevention Bill, which
“have been framed and circulated amongst the members of the Conference
“of the Chief Inspectors of Stock, held in Sydney in November, 1874,
“with the view to their coming to an agreement on the details of the
“resolutions they had passed on this subject.
“(2.) A copy of the correspondence which has taken place between the
“Chief Inspector of Stock for this Colony, and the other members of the
“Conference, with respect to these sketches.
“(3.) A Return from Stockowners showing the effect of Inoculation for
“Pleuro-pneumonia in Cattle.
“(4.) Returns from Sheepowners as to the nature, symptoms, prevention,
“and cure of worms, fluke, and foot-rot in Sheep.
“(5.) Copies of any Memoranda which have been submitted by the
“Chief Inspector of Stock, to the Honorable the Minister for Lands, in
“regard to retaining the services of the Inspectors of Stock in the Inland
“Districts.”

(Mr. J. S. Smith.)

SCHEDULE.

No.	PAGE.
1. Report by the Chief Inspector of Stock, showing the result of the inquiry as to the efficacy of inoculation for Pleuro-pneumonia. 2 February, 1876	2
<i>Papers referred to in the above Report.</i>	
2. Circular to Stockowners, with blank form therein referred to, forming Appendix A to Report	12
3. Replies to the foregoing Circular from owners who have inoculated. Appendix B.	13
4. Replies from owners who have not inoculated. Appendix C.	61
5. Abstract of the number of cattle on the Run, the number of times inoculated, the dates of inoculation, the number of cattle inoculated, the percentage showing symptoms of the disease, and the time disease had existed. Appendix D.	78
6. Abstract of virus used; how long kept; how kept; and if preserved, how, and with what success. Appendix E.	78
7. Abstract of the animals killed for virus, stages of the disease, and post mortem appearances. Appendix F.	79
8. Abstract of operations by incision, injection, or with needle and thread, and of different sites of inoculation. Appendix G.	79
9. Abstract of effects of inoculation on cattle generally, on particular sorts of cattle, and on milch cows. Appendix H.	79
10. Abstract of deaths from excessive swellings; their cause; and of the cures tried, and effect. Appendix I.	80
11. Abstract of dates of deaths from disease after inoculation; and of owners' opinions of inoculation, and of compulsory inoculation. Appendix J.	81
12. Abstract of cattle on Runs, of dates of infection, duration of attack, percentages affected, dates of disease leaving, of deaths from disease, and of owners' opinions as to inoculation and legislation. Appendix K.	81
13. Owners' objections to inoculation. Appendix L.	82

II.—INOCULATED HERDS.

1. *The number of answers received from owners was 282.*

This does not by any means include all who practise inoculation; for many of the owners of large herds who have on former occasions reported on inoculation have not done so in this instance; and if all owners possessed of more than 200 head of cattle had done so, the number inoculating would have exceeded 400.

Then again the majority of our cattle-owners possess less than the limit here mentioned (200 head), and a large majority of them practise inoculation.

2. *The number of cattle on the runs of the owners who inoculated was 473,891.*3. *The returns as to the number of times owners have inoculated are as follows.*

12 owners do not reply; 140 inoculated once; 70, twice; 25, thrice; 10, several times; 4, four times; 2, five times; 1, six times; 3, often; 1, seven times; 2, twelve times; 2, twenty times; 3, regularly; 1, annually since '64; 1, thrice annually; and 4 a great many times.

That is, more than $\frac{1}{2}$ of these owners had inoculated once; $\frac{1}{4}$, twice; 1-11th, thrice; 1-20th, several times; and 1-14th different times, ranging from 5 to a great many times.

4. *The number of cattle inoculated is returned at 395,137.*

The number returned in 1869 was 325,194, making together 720,331, from which would have to be deducted some included in both returns. But in neither case were replies received from all who inoculated, nor returns of all cattle inoculated, as owners frequently gave only one lot of cattle though they had inoculated several; and if the lots under 200 are included we may safely assume that in this Colony alone a million of cattle have been inoculated.

5. *The state of the cattle when inoculated is given as follows.*

57 owners make no return, 32 had no disease, 178 report that their cattle were infected in different degrees from 1 to 90 per cent. 5 owners report that their cattle were so variously, 19 that they had different rates of losses in deaths of from 1 to 50 per cent. before they inoculated, and 7 state that they were losing from 2 to 20 a day, and others from 10 to 12 weekly.

Attention is here called to the great prevalence of disease in these herds when they were inoculated, in order that the change which then began to take place for the better may be observed; the infection in every case diminishing almost immediately after the operation; and, in all but a few exceptional cases, disappearing entirely in the course of two or three months.

6. *The time the disease had existed in the herd prior to inoculation.*

53 owners do not say, 25 state they had no disease, 34 inoculated immediately they saw the disease, 183 inoculated at various periods ranging from a few days to 12 months after the outbreak, and 6 from 18 months to 10 years.

When it is considered that the disease had existed in the majority of the inoculated herds for the lengthened periods here mentioned previous to their inoculation, its comparatively speedy disappearance after the operation (generally in one or two months), as shown in No. 11 of this report, could not possibly be attributable to any other cause than the efficacy of inoculation.

7. *Virus used in inoculating.*(1.) *Description of animal killed for virus.*

In 221 cases this question is not answered; in 6, calves were killed; in 13, young cattle; in 10, 2-year old steers; in 5, heifers; in 9, cows; and in 3 cases bullocks. It would seem that so far as the operation is concerned, it is not a matter of importance whether the subject from which the virus is taken be old or young; but it is considered safer, in order to avoid conveying any other disease with which the subject may be affected to the cattle which are about to be inoculated, to select, where practicable, a young animal, otherwise healthy, for virus.

(2.) *Stage of disease in subject killed for virus.*

In 113 cases, this is not given; in 20 cases, the first stage is reported; in 96, the second stage; in 42, the third stage; in 9, various stages; in 3, all stages; in 2, the last stage; and in 2, as dead.

If lung virus is to be used, it is very essential that the animal should be in an early stage of the disease, as even the good looking portions of those lungs in which the disease has reached an advanced stage, and in which any part of the hepatization is very dark, should not be used except in cases of necessity. But if chest virus is used, it would seem that the animal may be in any stage of the disease; and those in the dry form of the disease, *i.e.*, looking flat and hollow—not blown or hoven, as in the wet form,—are the best subjects.

See answers given to questions—returns Nos. 19 and 86. Appendix B.

(3.) *The extent of the hepatization of the lungs.*

In 123 cases this is not given; in 6, it is reported that the left lung was affected; in 5 cases, "one" lung (generally the right) is reported to have been affected slightly, "not much," and to the extent of 1-6th; in 4 cases, various; in 15 cases, "one-fourth" of one lung; in 1, one-third; in 39, one-half; in 2, two-thirds; in 1, "a good deal;" in 29, three-fourths; in 64, the whole; and in some cases, both lungs.

(4.) *The sort of virus used.*

In 36 cases this is not stated; in 174 cases, lung was used; in 54, chest; in 11, water in the chest; and in 25, lung and chest mixed.

The different sorts of virus used are reported as equally efficacious.

Looking again at the amount of risk in using the different sorts, and taking all the returns in which the deaths from excessive swelling exceed 2 per cent., the returns are strongly in favour of the use of chest virus as compared with lung, not only in the proportionate number of the cases where that virus is used, but also in the rate of the deaths in that number:—For while in 259 cases, 169 (about 65 per cent.) are said to have used lung virus, 54 (about 21 per cent.) chest, 11 (about 4 per cent.) water in the chest, and 23 (nearly 9 per cent.) mixed virus,—out of the 60 cases in which the deaths from swelling are given at more than 2 per cent., it appears that there were 43 cases (nearly 72 per cent.) in which lung virus was used, 8 (about 13 per cent.) in which chest virus was used, 2 (about 3 per cent.) in which water was so, and 7 (nearly 12 per cent.) in which mixed virus was used.

Then, again, if the average rate of deaths in the above 60 cases over 2 per cent. be taken, as arising from each of the four different sorts of virus, it will be found that the average rate of deaths in the case of the lung virus was 6 per cent.; in that of chest, 4 per cent.; in that of water, 9 per cent.; and in that of mixed, 6 per cent.

If the foregoing facts with respect to the use of the different sorts of virus be tabulated, they show the following results, namely:—

Percentages.	Lung.	Chest.	Water in Chest.	Mixed.
Percentage of cattle inoculated	65	20	4	9
" " excessive swellings	72	13	3	12
" " deaths from "	6	4	9	6

(5.) How long virus was kept.

In 33 cases this is not stated; in 74, it was used at once; in 155, at various periods, according to the state of the weather, from a few hours to four months—owners being enabled to keep the virus for the longer periods by burying or sinking it in a well or water-hole, or keeping it cool by some other means. Thread steeped in virus and dried proved a failure.

(6.) Preservation of virus with glycerine and other ingredients.

In 99 cases owners do not reply; in 172, they say they never attempted to preserve virus; in 11, they did so with glycerine in quantities varying from $\frac{1}{2}$ to $\frac{1}{4}$ —and in 11 of these cases it was a success; in 8, a failure; and in 7, doubtful.

In one case, each, saltpetre and glycerine, salad oil, turpentine, and filtering through charecoal, are reported as having been successful, as also one case where virus was preserved between glasses; in 2 cases, virus preserved by veterinary surgeons is reported as having failed; and in one case Mr. Pottic's virus had been tried, but not tested.

8. The operation.

(1.) The different modes of inoculating and the result.

19	Owners do not reply.
17	" made incision and put drop of virus in it.
21	" used grooved inoculating knife.
134	" used elongated speying needle or packing needle and worsted thread.
85	" " " " " and cotton wick or twine.
15	" handled needle and worsted thread.
9	" " " cotton wick.

300

From these returns it would appear that all the six different modes of inoculating were effective; and if they are put to the same test as to their innocuousness as was employed in the case of the different sorts of virus, the following results are arrived at, namely:—

After deducting the 19 returns in which there is no reply to this question, there remain 281 cases in which the inoculation was performed in one or other of the six different modes of inoculating.

In 17 of these (or about 6 per cent.) the operation was performed by incision; in 20 (or about 7 per cent.) with the grooved knife; in 134 (about 48 per cent.) with the needle and worsted thread; in 85 (about 30 per cent.) with the needle or cotton and twine; in 15 (about 5 per cent.) with the handled needle and worsted; and 10 (about 4 per cent.) with that needle and cotton or twine.

Then, taking the 60 returns in which the rate of deaths from excessive swelling exceeded 2 per cent., we find that in these the operation was performed in 2 cases (about 3 per cent.) by *incision*; in 8 cases (about 13 per cent.) with the grooved knife; in 25 cases (about 41 per cent.) with needle and worsted thread; in 20 cases (about 33 per cent.) with needle and cotton or twine; in 4 cases (about 6 per cent.) with handled needle and worsted; and in 1 case (about 2 per cent.) with handled needle and cotton and twine.

If, again, the average rate of deaths under the six different modes of operating be taken, it appears when the operation was performed by *incision* to be about 6 per cent.; with grooved knife $7\frac{1}{2}$ per cent.; with needle and worsted $7\frac{1}{2}$ per cent.; with needle and cotton or twine a little over 4 per cent.; with handled needle and worsted 5 per cent.; and in the single case of handled needle and cotton 3 per cent.

In explanation of the high rate shown under the head of needle and worsted, it may be stated that worsted was almost invariably used when inoculation began to be practised; and that a few heavy losses which were sustained at the commencement, when owners had not the necessary experience, brings up the percentage of deaths under that mode of inoculating to the high rate here shown. With more experience the losses sustained with the needle and worsted are now as low, if not lower, than with the needle and cotton or any other mode.

If the foregoing facts in regard to the effects of the different modes of operating be tabulated, they give the following results:—

Percentages.	Incision.	Grooved Knife.	Needle.		Handled Needle.	
			Worsted.	Cotton.	Worsted.	Cotton.
Percentage of Cattle inoculated	6	7	48	30	5	4
" " cases of excessive swelling	3	13	41	33	6	2
" " deaths from " "	6	$7\frac{1}{2}$	$7\frac{1}{2}$	4	5	3

(2.) Seat of inoculation.

249	Owners do not give this information.
14	" inoculated at the tip of the tail.
5	" " 1 inch from tip.
5	" " 2 " " "
2	" " 3 " " " and over.

The nearer the tip or point of the tail the inoculation is performed the better, for two reasons:—

(1st) The farther the seat of the inoculation is from the body of the animal, the more remote is the chance of its being affected with swelling, and

(2nd) If it should be necessary to cut off a portion of the tail through symptoms of mal-inoculation appearing, this can be done and still a portion of the brush left, if the seat of the inoculation be as near the tip as possible. Indeed, some inoculate in the very tip, for the reasons mentioned. As there are no bones there, no injury could ensue, though the operator went deeper than he intended.

9. *Effects of the inoculation.*

(1.) When they became apparent.

In 168 cases owners do not reply as to this.
“ 6 “ “ report no swellings.
“ 8 “ “ a few days and various.
“ 101 “ “ at different periods from 3 to 30 days.
“ 2 “ “ at different periods from 28 to 40 days.

(2.) Percentage showing effects.

164 owners do not reply.
7 “ report none.
3 “ “ one head.
27 “ “ various, from $\frac{1}{2}$ to 60 per cent.
68 “ “ various, from a few to nearly all.

(3.) Extent of effects of inoculation.

In 120 cases owners do not reply.

“ 7 “ “ say none.

And the remaining owners report as follows:—

Slight.—Of these there were 63; and they are returned as a slight dulness in the animal, twisting of the tail, a raising of the hair near the inoculation wound, or a slight swelling there.

Severe.—Of these, 69 cases are reported; and they varied in number from a few to 5 per cent.

Excessive.—Of these, four cases only are returned; in one case 2 per cent., and in three others “some.”

The information under this head is meagre and imperfect.

(4.) Effect of inoculation on milking cows.

In 53 cases owners do not reply.
“ 139 “ “ say the cows were not milked.
“ 57 “ “ “ “ were not affected.
“ 2 “ “ “ “ were not inoculated.
“ 8 “ “ “ “ were affected in the quantity of the milk.
“ 3 “ “ “ “ were affected in quality.
“ 3 “ “ “ “ were affected in both quality and quantity.
“ 1 “ “ say it was doubtful whether or not.

(5.) The percentage of deaths from excessive swelling.

44 owners out of 291 make no report, thus leaving 247 who replied as follows:—

In 77 cases out of 247 (or about $\frac{1}{3}$) the deaths were nil.
“ 155 “ “ (or $\frac{2}{3}$) “ “ did not exceed 1 per cent.
“ 187 “ “ (or about $\frac{3}{4}$) “ “ “ “ 2 per cent.
“ 214 “ “ (or nearly $\frac{4}{5}$) “ “ “ “ 4 per cent.
“ 230 “ “ (or nearly $\frac{4}{5}$) “ “ “ “ 5 per cent.
“ 244 “ “ (or $\frac{5}{6}$) “ “ “ “ 10 per cent.
and 3 “ “ 15 per cent., 60 per cent., and various.

On reference to the dates of inoculation, these returns show a gradual and very decided diminution of late years in the percentage of deaths from excessive swelling; for if they are divided into equal portions—as they would be by drawing a line at the end of 1870—it will be found that, while in the 174 cases prior to that date, there are 33 which show more than 3 per cent. of deaths (including some as high as 10 and 15, and one even 60 per cent.) out of the 173 operations performed, after that date there are only 14 in which the deaths are over 3 per cent., the highest being 5 per cent.—except in a single case, which is only 8 per cent.

This becomes still more apparent by comparing the returns received in 1869 with those of 1875, as to the gross number. They are very nearly the same; there being 279 in 1869 to 287 in 1875. Thus, the “no deaths” are 46 in 1869 to 77 in 1875. The deaths at 1 per cent. and under in 1869 are 96 to 155 in 1875; at 2 per cent. and under, 131 in 1869 to 187 in 1875; under 5 per cent., they are 178 in 1869 to 216 in 1875; while the returns showing 5 per cent. and over are 46 in 1869 to 31 in 1875.

(6.) The causes of excessive swellings.

In 188 cases the deaths were <i>not</i> excessive.
“ 58 “ owners do not say.
“ 17 “ virus from an animal in a too far advanced stage of disease.
“ 4 “ virus was putrid.
“ 1 “ wounding the tail too deeply.
“ 7 “ too hot weather.
“ 1 “ blood in the virus.
“ 1 “ cold, frosty weather.
“ 1 “ neglect.
“ 1 “ crushing in pen.

It is to be regretted that the information under this head is not fuller and more particularly stated, for it is very important that the true cause of the excessive swellings which occur should be discovered and avoided in future. The use of improper virus, and deep and careless inoculating, were, no doubt, at one time the most frequent causes of excessive swelling. But it is believed that inoculating when the weather is very hot is now the most frequent cause of mal-inoculation.

(7.) The cures tried for excessive swellings.

107 owners make no report.
19 “ tried no remedy.
78 “ cut off the tail above the inoculation wound with almost invariable success, if taken at all in time.
83 “ incised the swelling with nearly as great success, if resorted to early.
5 “ fomented, with partial success.
4 “ tried scarring, bleeding inside leg, drawing out the thread, and giving green food, with partial success.

The following *Escharotics* were applied to the incisions and scarifications made in the swellings:—In six cases, butter of antimony; in four, tar and turps; and in one, chalk, sugar, and corrosive sublimate.

Judging from the experience of several quiet pedigree herds which have recently been inoculated, it may now be safely said that, with due care and watchfulness (seeing the cattle every day), and the prompt application of the proper remedies for the prevention of excessive swellings, the deaths from that cause in such herds need not now exceed 1 in 1,000. Even in the case of bush cattle, if they be properly inoculated in moderate weather, and kept for a month after the operation in paddocks, where they can be carefully gone through every day, the losses need not exceed 1 per cent.

10. *Periods when death occurred from disease after inoculation.*

141	owners fail to say.
73	.. return "No deaths."
6	.. shortly, or a few days after inoculation.
24	.. at various periods from 1 to 10 days.
37	.. " " " 1 to 4 weeks.
13	.. " " " 1 to 2 months.
2	.. " " " 2 to 3 months.
4	.. 1 each, 6, 8, 12, and 24 months.

As the bare incubation of the disease extends in some cases to a period of five months, and its average duration has been proved by practical experience in Great Britain to be about six weeks, it is proposed, in this report to hold that all deaths which occur within *three months* of the date of the inoculation, arose through the cattle having been infected previously to their being inoculated; and that, therefore, the operation could have been of no benefit to them. This would allow a period of say *two months* for the duration of the incubation in these few protracted cases, and *one month* for the animal to be ailing after it was observed to be infected, previous to its death.

From the above statement it will be seen that only in four cases did deaths from disease occur at a later period than *three months* after inoculation, and that, therefore, in none but these four cases are they likely to have arisen through failure of the inoculation.

With respect to the length of time which elapsed after the operation in these four cases, the explanation seems to be either that the inoculation was only a partial one (part of the herd having been left uninoculated), and the disease could not be expected to leave the herd till it had run its course among the uninoculated cattle; or that the owners mistook some other ailment of the respiratory organs for pleuro.

It may be that in a few cases the operation, though properly carried out, failed to take effect, and that in these cases the cattle died of true pleuro-pneumonia. If such was the case there would still on that account be no more reason for doubting the general efficacy of inoculation than there is for losing faith in vaccination for small-pox, because now and then an exceptional case of failure occurs in that treatment.

11. *Periods when pleuro finally left the herd after inoculation.*

66	owners make "no reply."
35	.. say "at once" very soon, or in a few days.
85	.. say at different times from 1 to 4 weeks.
34	.. " " " 4 to 8 "
27	.. " " " 2 to 3 months.
5	.. " " " 3 to 4 "
5	.. " " " 4 to 9 "
2	.. " " " 5 years and long time.
16	.. " " not yet, never, and seldom or never.

From the above statement it will be seen that in only 28 cases did the periods when the disease finally left the herds exceed 3 *months*. If reference be made to the owners' replies in their returns, the following circumstances will be found with respect to them:—

- That in 4 cases the herds were badly diseased when inoculated; and it is nothing unusual, when the cattle were in that state when inoculated, for odd animals, suffering from the disease, to linger on for 3 or 4 months before they die.
- That in 11 cases the inoculation was only a partial one, and this was not a fair test as to the effect of inoculation, for, as has been already stated, the disease would not leave the herd till it had gone through the whole of the uninoculated cattle, and it would take a considerable time to do that.
- That in five cases fresh uninoculated cattle seem to have been put on the run or fresh calves have been dropped.
- That in two cases the inoculation had been only comparatively recently performed when the return was made.
- That in only 5 cases was there no apparent reason for the lengthened duration of the disease in the herd; but even in these it is more than probable the explanation is, that the owners mistook tuber-culosis or simple pneumonia for pleuro.

The following table (which has been compiled from the replies contained in these 28 returns) will bear out these explanations:—

No. of Return.	When Disease left the Herd.	Apparent cause of protracted duration of Disease in Herd.	No. of Return.	When after Inoculation did Disease leave Herd.	Apparent cause of protracted duration of Disease in Herd.
3	3 or 4 months	Badly diseased.	113	not yet	Fresh infection.
7	6 months	Fresh infection.	125	4 months	Very badly diseased.
13	not yet	Partial inoculation.	134	5 years	Very partial inoculation.
22	not yet	Do.	136	not yet	Fresh infection.
29	4 or 5 months	Poverty of cattle.	175	not yet	No reason apparent.
32	never	Very partial inoculation.	185	4 months	Very badly diseased.
42	8 months	No reason apparent	188	not yet	Partial inoculation.
44	6 or 8 months	Partial inoculation.	225	9 months	Fresh infection.
46	not yet	Very partial inoculation.	243	not yet	Partial inoculation.
52	seldom or never ..	Do.	244	not yet	Only lately inoculated.
75	never	Fresh infection.	258	3 or 4 months	No reason apparent.
82	not yet	Partial inoculation.	259	never	Very partial inoculation.
94	never	No reason apparent.	275	about 4 months ...	No reason apparent.
100	3 or 4 months	Herd diseased.	276	not yet	Only lately inoculated.
14			14		28 returns.

Besides affording an explanation of the protracted duration of the disease in almost the whole of these cases, this table brings out another fact very clearly indeed,—that if the whole of the herd was inoculated, the disease, in almost every case left it in less than 3 months, while if the inoculation was only a partial one the disease in many instances remained in the herd for periods ranging from 4 months to 4 or 5 years, and in some cases it has never left it at all.

12. Owners' opinions.

(1.) As to the efficacy and practice of inoculation.

7	offer "no" opinion.
11	say they are "doubtful."
234	" " " "in favour."
19	" " " "against."

About 13 for to 1 against inoculation.

These figures show an exceedingly strong case in support of inoculation. Perhaps they are quite as favourable as could possibly be expected, considering the little knowledge many of those who inoculated possessed as to the proper virus and the correct mode of operating. This is borne out to a large extent by the replies given and the reasons adduced by those owners who are not in favour of inoculation and by those who are against it; and, if the circumstances which led owners to hold such views, and the possibility of avoiding these circumstances in future, be considered, the result of the inquiry will be still more favourable to inoculation. For if we take the ten objections (as given in detail and answered in Appendix L) against inoculation, by the nineteen owners who are opposed to it and the eleven owners who say they are in doubts in regard to it (being thirty in all), and divide them into the three following classes—"Avoidable," "Untenable," and "Tenable"—it will be seen that they stand as follows:—

(1.) Avoidable objections.

1. Heavy losses through excessive swelling.

This objection is by far the most general, and is held by nineteen owners.

It will be seen, however, on reference to Appendix L, pages 82, 83, No. 23, I., that these losses need not now occur, and are therefore avoidable.

2. Heavy losses after inoculation through mustering and yarding.

This objection is held by five owners. It may be that the mustering and yarding in some cases hastens the death of diseased cattle, and even perhaps in a few instances leads to the loss of some which would have recovered if they had not been mustered and yarded. But—as has been pointed out—if the owner were to inoculate the mob immediately he detects the outbreak, this loss could not possibly occur. (See Appendix L, page 83, No. 32, II.)

3. The difficulty of obtaining proper virus.

This objection is held by one owner.

It will be seen from what has been said in this Report under No. 7 (4), page 3, and in Appendix L, pages 82, 83, No. 23, I., and 85, 86, No. 52, IV., that the difficulty here referred to no longer exists.

(2.) Untenable objections.

4. Losses from pleuro after inoculation.

This objection is held by three owners.

It is very probable that almost all the cattle which died after the date of the inoculation would have been lost whether inoculated or not, for as the deaths are returned as occurring in every case but four (out of 247) within three months after that date, it is most probable that all these cattle were diseased before they were inoculated. See No. 10 of this Report, and Appendix L, pages 84, 85, No. 37.

5. The disease left the Inoculated and Uninoculated Herds at the same time.

This objection is held by four owners.

It is only reasonable to suppose that if an owner inoculated any of his cattle, he would begin with those among which the disease had broken out; and the explanation of the circumstance here adduced no doubt lies in the fact that this course was followed by the owners in these instances, and that they thus stamped out the disease by inoculating all the cattle coming within reach of the infection. In fact this is the practice regularly followed by owners who believe in inoculation; and they thus, in most instances, eradicate the disease by inoculating only small portions of their herds. See Appendix L, page 83, No. 24, II.

6. Inoculation introduces and keeps disease alive.

This objection is held by two owners.

It is not now generally believed (though it was so at one time) that inoculated cattle can convey the disease to uninoculated. But whether this be the case or not this objection is untenable, for it is here recorded, under No. 6 of this Report, that twenty-five owners inoculated their cattle before they were infected, and thirty-four immediately they saw the first case of disease, in every instance but this, with complete success. The appearance, therefore, of the disease in the owner's herd must be due to some other cause than the one to which he here attributes it.

7. The disease is dying out.

This objection is held by 3 owners. It is not the case that the disease is dying out according to the meaning here applied to that term. Its virulence is no doubt decreasing, but only through the decrease of the subjects liable to infection, and that is being brought about principally by the practice of inoculation. See Appendix L, page 84, No. 32, II., 6-9.

8. The disease is not infectious or contagious.

This objection is held by 6 owners. In raising this objection, owners commit a very great error, principally through mistaking other ailments of the chest for pleuro. There is not a Veterinary authority now in any part of the world who does not hold that pleuro is highly infectious or contagious,—most likely contagious. See Appendix L, pages 84, 85, No. 37, II., 1-9.

9.—Inoculation is not a permanent cure.

This objection is held by one owner. It is not necessary, neither is it claimed for inoculation that it is anything more than a preventive.

(3.) Tenable objections.

10.—Inefficacy of inoculation.

This objection is held by 9 owners. Out of the 10 different objections raised by those who are not in favour of inoculation, this seems to be the only one to which any weight can be attached; and which, if the circumstances that led to its adoption could not be explained, would be valid. But although there may be a few cases in which the inoculation, even when properly carried out, failed to protect the animal inoculated, it is believed that the explanation in the most of these cases lies in the fact that the owners who report that the operation failed mistook tuber-culosis, inflammation of the lungs, or some other affection of the chest or its organs, for pleuro, See Appendix L, pages 84, 85, No. 37, II., 1-9.

Under these circumstances the result of the present inquiry ought of itself to establish the efficacy of inoculation. But when it is considered that these returns (which gives us the fruit of eight on ten years' practical experience acquired by some of our most intelligent and extensive stockowners), are fully confirmed by every inquiry which has been made in this Colony with respect to this question,—that these results are entirely in accordance with the experience of the neighbouring Colonies,—of London,—of South Africa,—of the Continent of Europe,—of America,—and of every other part of the world where this treatment has been adopted,—no one in these Colonies at least will surely now call its efficacy in question.

It may however be useful—especially to those who have not yet tried inoculation,—to notice shortly the following additional facts which come out in the present inquiry, and the fresh evidence which has been obtained from Europe as to its efficacy, since the last inquiry was made, namely:—

(a)

(a) The fact that while all the returns by owners who inoculated (with a few exceptions which have been explained), show that the disease did not last in a herd in which the cattle had all been inoculated more than *three or four months*, it did so in those which had not been inoculated for periods ranging from *one month to ten years*; and in some it is reported as *still* existing, and having done so *all along*. This is the case also with respect to the inoculated and uninoculated cattle in the herds in which the inoculation was only a partial one, and accounts for almost all the cases of protracted duration of disease in inoculated herds. That there exists such a marked difference in the duration of the disease in inoculated and uninoculated herds none—not even the opponents of inoculation—have attempted to deny; and it is utterly impossible to account for this difference on any other supposition than that a true and perfect inoculation takes place, and that the disease is thus made to run its course in a mild form through the whole of the cattle inoculated in a very much shorter time than if they had not been inoculated, and the disease allowed to take its course.

(b) The fact stated by owners in the following returns in reply to question 20, "that they had mixed inoculated cattle, and known inoculated cattle to be mixed, travelled, and even worked with diseased cattle, without their becoming infected in a single instance," namely,—Nos. 1, 7, 10, 17, 19, 20, 28, 30, 36, 38, 39, 51, 54, 56, 59, 63, 76, 86*, 87, 89, 91, 92, 96, 99, 101, 102, 103, 104, 106, 112, 115, 118, 119, 121, 123, 131, 135, 137, 140, 141, 143†, 148, 161, 162, 165, 166, 168, 176, 181, 184, 187, 189, 200, 204, 205, 210, 212, 215, 218, 221‡, 223, 224, 228, 230, 231, 234, 236, 242, 245, 246, 247, 260, 268, 270, 272, 277, 279, 281—*seventy-eight* in all.

* 86. The owner's pure herd has been inoculated for six years, and there has never been a case of disease in it though frequently in contact with cattle affected with pleuro.

† 143. An inoculated worker was yoked up with a diseased one—the latter died without infecting the former.

‡ 221. All workers inoculated but two, and sent on a journey, during which these two died, and none of the inoculated.

(c) The fact stated by owners in the following *forty-four* returns in reply to question 20, "that they never knew properly inoculated cattle to be afterwards affected," namely,—Nos. 4, 8, 14, 25, 33, 46, 47, 49, 55, 56, 58, 60, 66, 68, 74, 81, 89, 90, 97, 98, 101, 105, 114, 120, 122, 130, 152, 155, 158, 159, 172, 174, 191, 192, 197, 211, 225, 226, 230, 244, 258, 265, 266, 276.

(d) The fact stated by owners in the following *twenty-six* returns in reply to question 20, "that when pleuro attacked a herd a second time it was only the uninoculated (the fresh calves which had been dropped after the previous inoculation, and fresh uninoculated cattle purchased) which were affected, namely,—Nos. 17, 19, 20, 22, 26, 32, 36, 40, 73*, 106, 126, 129, 137†, 140, 142, 144, 154, 170, 176, 198, 199, 201, 235, 259, 253‡, 264.

* 73. The owner in this case left sixteen cows uninoculated, and the disease left the rest of the herd in six weeks; but the cows kept dying, and in a few months he lost fifteen out of the sixteen.

† 137. The owner had heifers in one paddock and bulls in an adjoining one. He inoculated the heifers and not the bulls. Not one heifer died, but several bulls. He then inoculated half a camp of cattle and left the other half uninoculated. None of the inoculated died, but the uninoculated in great numbers, though all running together.

‡ 253. Owner sent sixty inoculated workers down the country in his teams, and with them four uninoculated steers, which all died of pleuro, but not one of the workers.

These facts which are so telling are comparatively few; but a great many more of the same sort might have been given if owners had thought of doing so, instead of contenting themselves with a general assertion of their belief in the efficacy of inoculation. And there is no doubt but that similar instances of that fact could have been adduced in hundreds if the owners of little lots of quiet cattle—in which they are of course very much more frequently noticed—had not been excluded by confining the returns to the owners of *two hundred or more* cattle.

(e) The fact that in this Colony alone a *million of cattle* have been inoculated and at least *another million* in the neighbouring Colonies, and that in all but a few exceptional cases every owner who has tried inoculation has always followed up the practice when his cattle were infected.

(f) The fact that almost all the returns received from those owners who tried inoculation and are opposed to it, either show on the face of them sufficient reason for the owners' opposition (in the herd having been badly infected before being inoculated, or in the operation having been improperly performed, or having been a partial one, or for some other cause), or the circumstances which lead them to oppose it can be explained, as they have been in Appendix L.

(g) The very meagre and incomplete returns received from those owners who did not inoculate,—showing that they were afraid to give such full information as would enable a comparison to be instituted between the two classes of stock.

(h) The fact that almost every veterinary authority of any standing on the Continent of Europe, including such men as Professor Gerlach, Director Köll, and Mons. Bouley, the heads of the Veterinary Departments in Berlin, Vienna, and Paris—gentlemen of the very highest rank in their profession in the world—are all firm believers in the efficacy of inoculation.

(i) That Professor Gamgee, of London, Professor Williams, of Glasgow, Mr. Fleming, the author of the Standard Book on Veterinary Sanitary Science and Police, published so recently as last year, as well as other men of eminence in the veterinary profession in Great Britain, are now firm believers in inoculation, and Mr. Fleming adduces the following most important evidence in support of his opinion, vol. 1, page 431:—

"As a means of abridging the duration of the epizooty and averting the dangers attending the development of the disease by natural contagion, Willems, of Hasselt (Belgium), in 1852, proposed the inoculation of cattle exposed to contamination, but which, on careful examination, were found to be yet free from the disease. For some years the result of his experiments were received with discredit or doubt, and the value of inoculation as a preservative or prophylactic measure was negatived by a large majority of veterinarians. It is probable that this was due to the insufficient observation and experience of the authorities, as well as to the fact that inoculation does not produce the characteristic morbid processes that mark the progress of the disease itself; and hence it was contended that animals could not be so protected.

"Nevertheless, for a long time the benefits to be obtained from this measure have been abundantly illustrated in those countries in which, it may be said, the malady prevails almost continually: as in Belgium, Holland, Northern Italy, the Southern Tyrol, and North Germany. France has also, in the opinions of the eminent veterinarians, Bouley and Reynal, advocated a recourse to the operation; the immense utility of which has been so fully recognized by the farmers and cattle breeders of that country, that it is now generally adopted by them.

"Authorities on whose statements the most perfect reliance can be placed assert that, since the adoption of preventive inoculation, the districts and farms in those countries in which the lung-plague permanently prevailed, are now completely delivered from the scourge; and that it is excessively rare for an inoculated animal to be attacked with the disease—the percentage being less than one, and rarely not more than two. In South Africa and the United States of America, as well as in Australia, the measure has also been adopted with great benefit, though the operation has not always been properly performed. In Great Britain it has scarcely been tried; an unwarrantable prejudice having apparently been raised against it when it was first proposed.

" Official

"Official Commissions have been instituted in Belgium, France, the several German States, in Holland, Italy, and other countries, and the conclusions of the majority of these have been favourable to preventive inoculation; the few who have pronounced unfavourably, drawing their conclusions either from very few or doubtful cases, or acting in a very partial spirit." *

* "Theoretically, as Reynal remarks, every analogy is in favour of inoculation for pleuro-pneumonia. We have stated that one attack of the disease gives the animal immunity for life, but that it cannot be communicated by inoculation; at least the peculiar alterations in the respiratory organs cannot be so induced. Nevertheless, inoculation always produces, according to the most conscientious and impartial observers, and before the local phenomena appear, more or less intense febrile disturbance; the local effects being frequently accompanied by similar results in other parts of the body, and the subcutaneous cellular tissue being equally involved. This fact has lent much support to the opinions held with regard to the efficacy of inoculation. *And the alterations produced at the seat of inoculation present absolutely the same fundamental modifications in the connective tissue as in the texture of the lungs; we have the same citron-coloured exudation, at times tuberculous elements, and also an excessive proliferation of the fibro-plastic elements.*"

(2.) Owners' opinions "for" and "against" Compulsory Inoculation.

51	owners	do not reply.
8	"	are neither "for" nor "against."
130	"	are "for" legislation.
5	"	are "for" legislation indirectly or conditionally.
10	"	consider legislation unnecessary.
78	"	are "against" legislation.

282

It is believed that if there had not been considerable misapprehension on the part of owners with respect to this question, the majority in favour of compulsory inoculation of the nature proposed would have been much greater than it is. This misapprehension has arisen in two ways.

(a) Although the question asks owners' opinions as to the expediency of making inoculation compulsory in the case of *infected herds only*, many owners, mistaking this proposal for that for the compulsory vaccination of the human subject, and imagining that the measure, if passed, would oblige all owners to inoculate their cattle whether they were infected or not, have given their opinion against it; whereas if they had observed that it was only in the case of an outbreak of pleuro occurring in a herd that it was proposed to oblige the owner to inoculate, they would have viewed the matter differently, and given their opinion in favour of compulsion of the nature proposed.

(b) A great many owners, again, imagined that if a compulsory measure were passed, they would be obliged to inoculate their whole herd if a single case occurred on any part of the run. This is also a mistake, for it will be seen on reference to Resolution No. 1 of the Conference of Chief Inspectors of Stock held at Sydney in November, 1874, quoted at page 59 of this Report, that it is only proposed to oblige the owner to inoculate the mob to which the affected animal belongs, and is no more intended that the whole herd should in that case be inoculated, than it is required by the Sheep Act that *all* the different flocks on a station shall be declared infected and dressed as if they were so, because an outbreak occurred in *one* of them. If an owner would, *immediately on detecting the disease in his herd*, inoculate the mob in which it occurred, and any other cattle with which those in the infected mob mixed, in nineteen cases out of twenty he would stamp out the disease without further trouble. Should it, however, happen that a second outbreak occurred in another mob, the same course should be adopted with respect to it, and any cattle mixing with it; and as a strict watch would in the meantime be kept on the herd, both by the owner and the Inspector, there can scarcely be a doubt but that any second outbreak would be detected as soon as it was perceptible, and the infection completely eradicated at the second attempt. But even if an owner should fail in a second or subsequent attempt to eradicate the disease, that would be no reason why he should not persevere, for it was no uncommon thing in cleansing a run of scab for the owner to make two, three, and even five and six attempts before he was successful; and the only result of his failure in these cases was to make him more careful and anxious in his next attempt.

There are some owners who are firm believers in inoculation, but who say that a compulsory measure is not required, as they can always check the disease when it appears in their herds; but in following that course they lose sight of the following, among other strong reasons, for compulsory inoculation:—

- (.) The difficulty there is at times in obtaining virus, and the harm which may be done before it can be met with.
- (.) The continually recurring loss and inconvenience through having to inoculate whenever an outbreak occurs, frequently at seasons of the year when it is comparatively dangerous to do so; and
- (.) The danger there exists in indiscriminate inoculation, often carried out by comparatively careless and ignorant operators, of introducing and perpetuating other dangerous diseases of an hereditary nature, such as tuberculosis, to which stock are liable, and which are known to be inoculable.

This however is looking at the question of compulsory inoculation solely as regards the individual owner whose cattle are affected with pleuro, which, to a certain extent is a matter of but little importance, as the loss is only the owner's own; but as regards the public, the question has a very much more important bearing. Shortly stated, it is simply this:—Whether the owner in whose herd an outbreak of pleuro occurs shall be obliged to inoculate the infected mob immediately on the outbreak being detected, and thus stamp out the disease, or whether he should allow it to spread through the whole of his herd, and thus not only keep a dangerous nuisance on his own run, to the loss and injury of his neighbours and of all who may be obliged to travel stock through his run, but also send his infected cattle to market, leaving the diseased ones here and there on the roads and runs as he goes, and spreading the infection far and wide. Now that the efficacy of inoculation has been fully established, such a course is extremely shortsighted and wasteful so far as the owner himself is concerned, most unneighbourly and dishonest towards those whose stock are thus infected by his diseased cattle, and a source of very serious loss to the Colony at large, both in the death of the stock and the reduction of the quality of the meat, while the continuance of the infection in this way is perpetuating a large amount of suffering on our stock which the passing of a compulsory measure might easily avert.

III.—UNINOCULATED HERDS.

1. The number of answers received from owners who did not inoculate their herds is 272.

Answers to the number mentioned certainly were received from these owners, but (as has been already remarked) they have in many cases given no information at all, and have nearly all failed to reply fully to the questions put to them.

Their reasons for adopting that course could not be that they were afraid of the information which they supplied being divulged, so far as they were individually concerned, for it cannot be said that any information given under similar circumstances has ever been made public; and besides, in nine cases out of ten the particulars which they are here invited to supply relate to circumstances which occurred years ago, and no harm could possibly have arisen even if they had been divulged.

Whether, therefore, those owners who failed to give this information were induced to withhold it because they were afraid of affording an opportunity of contrasting the effect of the disease in inoculated and uninoculated herds, or whether they were too careless to reply to the circular sent them, it is exceedingly to be regretted that

that they should have so far failed in their duty to a Select Committee of Parliament and the public as to adopt such a narrow-minded, thoughtless course; for the opportunity has thus in a great measure been lost of contrasting the two sorts of treatment, *i.e.*, inoculating infected herds or leaving them uninoculated; and the Committee cannot but feel very much disappointed in not receiving information which they had a right to expect from every stockowner in the Colony.

2. *The number of cattle returned as being possessed by owners who did not inoculate is 262,991, against 473,891 returned by those who did.*

3. *How long the cattle were infected.*

110	owners	do not reply.
48	„	say their herds were never infected.
55	„	are not infected.
59	„	were so at various periods from 1862 to 1875.
<hr/>		
272		

The herds returned by owners as "never" infected, are principally small,—none of them exceeding 1,200 head, and they are generally less than half that number. In many cases, too, they are evidently recently formed.

2. The answers "not" and "none" infected, seem to imply that the herds were not infected at the time the returns were made,—not that the herd had never been infected. These answers "not" and "none" are therefore not classed with "never."

4. *The time the disease existed in the herd.*

212	owners	do not give this information.
7	„	return various periods, from sometimes to 7 weeks.
9	„	from 2 to 5 months.
26	„	from 6 to 12 months.
18	„	from 18 months to 10 years.
<hr/>		
272		

It will be observed that a very large majority of owners—considerably over two-thirds of the whole number responding to the circular—give no information on this most important point; that, where that information is given, only in seven cases out of sixty, or about one-eighth of the whole number replying, was the period during which the disease remained in the herd less than two months, and that only in sixteen out of sixty, or about one-fourth of that number, was it less than three months,—while in forty-four cases out of sixty, or about three-fourths of the whole of these sixty cases, the duration of the disease is given at over six months, and ranges up in some cases as high as six, eight, and ten years,—thereby fully bearing out all that has been said of the very great and well-marked difference which there is in the duration of the disease in the inoculated and uninoculated herds, and unmistakeably proving the reality of the inoculation, see No. 11 (5), Inoculated Herds, of this Report.

5. *Percentage of cattle affected.*

In 219 cases this is not given.		
30	„	it is given as ranging from slight to 10 per cent.
9	„	from 12 to 20 per cent.
5	„	from 25 to 40 per cent.
9	„	from 50 per cent. to nearly all.
<hr/>		
272		

Here again the information is so very meagre and incomplete as to render it impossible to institute any reliable comparison between the inoculated and uninoculated herds on this point.

6. *Percentage of deaths from the disease.*

In 207 cases this is not stated.		
32	„	it is given as ranging from very slight to 5 per cent.
6	„	from 7 to 10 per cent.
9	„	from 12 to 20 per cent.
9	„	from 23 to 40 per cent.
9	„	from 40 to over 50 per cent.
<hr/>		
272		

It will be observed that, with respect to this most important part of the subject, too, the majority of owners give no information. If, however, the particulars, so far as they are furnished, be taken as a criterion of what they would have been in the other cases if answers had been generally received, it would appear that *about half of the cases* (32 out of 65, the whole number of cases in which answers were given) the deaths ranged from a very few to 5 per cent.; in 1-11th of them from 7 to 10 per cent.; in 1-7th, from 12 to 20 per cent.; in 1-7th, from 23 to 40 per cent.; and in 1-7th, from 40 to 50 per cent.: or taking the returns ranging from 30 to 50 per cent., it appears that they amounted to 1-5th of the whole number replying.

7. *Owners' opinions "for" and "against" inoculation.*

In 155 cases owners offer no opinion.		
13	„	are doubtful.
54	„	are "in favour of inoculation."
50	„	are "opposed to inoculation."
<hr/>		
272		

Although the owners who reply to this question are almost equally divided in opinion as to the efficacy of inoculation, still the majority is on the side of those who are in favour of that treatment. This is fully all that could be expected from those who have hitherto refused to try inoculation; and of itself is a very strong proof of its efficacy.

8. *Owners' opinions "for" and "against" legislation.*

In 100 cases owners offer no opinion.		
5	„	are doubtful.
4	„	say it is "not necessary."
56	„	are "in favour of legislation."
107	„	are opposed to
<hr/>		
272		

It was not likely that many, if any, of the owners who have hitherto declined to inoculate would be favourable to its being made compulsory, and the figures are quite as far in that direction as could be expected.

IV.—GENERAL REMARKS AND CONCLUSIONS.

When, therefore, the facts here adduced with respect to the efficacy of inoculation for pleuro-pneumonia, and the nature and character of that disease, as well as the fruitless efforts which have hitherto been made to stay its spread in this and the neighbouring Colonies, are duly considered, the conclusions arrived at can be none other than those agreed to by the Conference of Chief Inspectors of Stock held in Sydney in November, 1874, namely:—

- (1.) That as in all other parts of the world, so in Australia, every attempt to *cure* this disease has proved utterly futile.
- (2.) That the endeavours which were made in these Colonies to stamp it out, by destroying the infected herds, were complete failures, through the impossibility of maintaining a perfect quarantine of the infected herds.
- (3.) That inoculation for pleuro-pneumonia is now very generally practised, and has proved a thorough preventive against the disease, and
- (4.) That under these circumstances the only course left is, either—
 - (1st.) To let matters stand as they are, and allow those owners who are either too selfish or too prejudiced to inoculate their infected cattle, to travel them as they are now doing from one end of Australia to the other, leaving the dead and dying, and spreading the infection in all directions, whereby the Colonies suffer a loss of something like *half a million* a year, or—
 - (2nd.) To pass some measure which will make the inoculation of infected cattle compulsory, and otherwise regulate the cattle traffic.

Reduced to these two alternatives the decision must be easily arrived at, for it is very short-sighted as well as very unjust, now that the efficacy of inoculation has been established, that mobs of diseased cattle should be allowed to be driven through (it may be) scores of runs on which the stock are free from infection, and infect them; and the only course left is for all the Colonies to pass a compulsory measure containing some such provisions as the following, namely:—

- (1.) That every *mob* of cattle which has become infected be inoculated, when the virus can be obtained in the mob, or in any cattle within a practicable distance.
- (2.) That owners give notice of every outbreak of the disease to their neighbours, to inspectors, and to the public.
- (3.) That no inoculators but those authorized by the Government be allowed to inoculate for others.
- (4.) That properly inoculated cattle depasturing on a run, on the expiry of *six weeks* from the last case of disease, be allowed to leave the run, and to pass over infected ground without being deemed infected.
- (5.) That all travelling cattle actually affected with or suffering from pleuro-pneumonia be killed immediately they are found to be so.
- (6.) That if the travelling cattle in which any animal is thus found to be actually affected be fat stock, they be taken by day to their destination by the roads least likely in the opinion of an Inspector to spread the disease, and timely notice be given by their drovers to all owners of horned stock on or near the road, that the mob is infected.
- (7.) That where the travelling cattle in which any animal is thus found to be actually affected with pleuro-pneumonia are store stock, they be stopped and inoculated as soon as practicable, and afterwards taken to their destination, as provided for in the next preceding regulation; but such cattle be not required to travel more than six miles a day for the first thirty days after being inoculated.
- (8.) That in Colonies in which pleuro-pneumonia exists, the owner of travelling cattle give notice of his intention to cross or pass along runs where stock of the same description are kept, if the road be not separated from the run by a sufficient fence.
- (9.) That drovers do not abandon any travelling stock, nor leave the carcasses of any stock which may die, undestroyed.

If some such measure as here sketched were passed and fairly enforced in all the Colonies for eighteen or twenty months, there would not be *one* outbreak of pleuro-pneumonia for *twenty* which now occur; and if—as would naturally be the case—the strictness of the surveillance were increased as the prevalence of the disease was curtailed, we might fairly expect that in the course of three or four years it would be completely eradicated in all the Colonies; and, as the regulations with respect to the importation of stock from places outside these Colonies are now on a thoroughly efficient basis, pleuro-pneumonia could never again obtain a footing in Australia.

ALEX. BRUCE,
Chief Inspector of Stock,
2nd February, 1876.

No. 2.

APPENDIX A.

CIRCULAR TO STOCK-OWNERS.

Department of Lands,
Sydney, 30 August, 1875.

SIR,

A Return having been called for by Parliament showing the effect of inoculation for Pleuro-pneumonia, with the view to the information being laid before the Select Committee now sitting in the Assembly, respecting the Diseases affecting Live Stock, I am directed by the Minister for Lands to request that you will fill up and re-transmit to the Chief Inspector of Stock the accompanying return on or before the 15th October next; and that you will not only make your answers as full and explicit as possible, but that you will also give any other information which you may consider would tend to further the object of the present inquiry.

2. I am to add, that all information received in this way, so far as you are individually concerned, will be held strictly private.

I have, &c.,
W. W. STEPHEN.

RETURN by Stock-owners, showing the effect of inoculation for Pleuro-pneumonia in Cattle, called for by Order of the Legislative Assembly, 16th July, 1875.

I.—INOCULATED CATTLE.

1. Name and address of owner of cattle, including post town of station where cattle were running.
2. Number of cattle on the run at the dates of inoculation.
3. State how often you have inoculated for pleuro-pneumonia, and give the dates as nearly as you can.
4. Number of cattle inoculated on each occasion.
5. State of cattle when inoculated; if diseased, state percentage of those showing symptoms.
6. How long were cattle diseased before they were inoculated?
7. Describe the animal and lung (*i.e.*, stage of the disease and how much of lung was hepatized or marbled) from which the virus was taken for inoculation.
8. How was virus taken? From the lung or from the chest? If from chest, was it the water in the chest, or the virus found in small quantities near the lung?
9. How long was virus kept before it was used?
10. Did you ever preserve virus; if so, how? If with glycerine or any other ingredient, state the quantity of it added to the virus.
11. State the result of your use of preserved virus.
12. How was the operation performed—with grooved knife, or with needle and thread? If needle and thread, describe them.
13. How, when, and to what extent were the effects—*i.e.*, swellings, twisting, &c.—of the inoculation visible.
14. Were milking cows which were inoculated milked immediately after inoculation? If so, did it affect the milk in quantity, quality, or in any other way.
15. Did any deaths occur from excessive swelling caused by the inoculation? If so, state what percentage, and what means were tried to cure the swellings, and their effect.
16. Did any deaths occur among the inoculated cattle from the disease after the inoculation? If so, how many, and at what dates after the operation.
17. How long after the date of the inoculation was it before the disease finally left the herd?
18. State result of inoculation.
19. Are you in favour of or opposed to inoculation?
20. State here also any circumstance which you may consider proves or disproves the efficacy of inoculation, and especially whether any cattle which were properly inoculated were afterwards exposed to the infection, and, if so, whether or not they were affected by it.
21. Give also any other information which you may consider of value with respect to the disease or to inoculation.
22. *Do you consider that an Act should be passed obliging owners whose cattle are infected to inoculate them, when they can obtain the virus to do so?

II.—UNINOCULATED CATTLE.

1. Name and address of owner of cattle, including post town of station on which the cattle were running.
2. Number of cattle.
3. Dates of infection.
4. State of cattle when infected.
5. How long disease existed in the herd.
6. Percentage of cattle affected.
7. When the disease finally left the herd.
8. The number of deaths from the disease.
9. Present state of the cattle.
10. General remarks.

* The question should be answered, whether the cattle were inoculated or not.

No. 3.

APPENDIX B.

REPLIES TO CIRCULARS.

(No. 1.)

- | Question. | Answer. |
|-----------|---|
| 2. | 1,000. |
| 3. | Inoculated twice—1869 and 1870. |
| 4. | 600 and 400. |
| 5. | About 10 per cent. |
| 6. | About a month. |
| 13. | In about seven days after inoculation the tails commenced to swell; as soon as I noticed them swell I cut off the tails above the swelling. |
| 14. | I never milked the cows at the time of inoculation; it does affect the udder, makes it swell. |
| 15. | I had a few deaths from swelling caused by neglect through not attending to them in time. |
| 16. | A few deaths, but they had the disease at the time. Second, a few days after. |
| 17. | In less than a month. |
| 18. | A perfect cure. |
| 19. | I am decidedly in favour of inoculation. |
| 20. | None of the cattle I inoculated took the disease afterwards, although diseased (travelling) cattle mixed with them. |
| 21. | Every herd should be inoculated, and all travelling cattle that may be diseased should be destroyed as soon as detected. |
| 22. | I do; they can easily obtain the virus if the cattle are infected. |

(No. 2.)

- | | |
|-----|---|
| 2. | 1,200. |
| 3. | Twice—about April and July last. |
| 4. | First, 250; second, 550. |
| 5. | In certain paddocks the disease (pleuro) showed itself, and four or five were continually in the febrile state—some dying and some recovering; cough was generally prevalent. |
| 6. | Among the first lot the disease had existed several months (say, six); the second I inoculated immediately on its appearance. |
| 13. | There were no swellings or twistings, save in one beast, which had a swelled tail, which suppurated and discharged close under the tail near the fundament. |
| 14. | None. |
| 15. | None. |
| 16. | No more than had occurred previously. |
| 17. | About two months. |
| 18. | I had the pleuro before I inoculated, and since I inoculated the disease has left my herd, but I am of opinion that change from a low to a mountain run has assisted in removing the disease. |
| 19. | I am in favour. |
| 20. | Have had no experience. |
| 21. | I am of opinion that there would be no spread of pleuro if sellers of diseased cattle in all the large cattle-yards throughout the Colony were severely punished. I have always brought the disease from the sale-yards at Maitland, and till the last attack have managed by isolation to get rid of it. |
| 22. | I do. |

(No. 3.)

- | | |
|-----|---|
| 2. | About 1,200. |
| 3. | Only once—about April, 1874. |
| 4. | The whole herd. |
| 5. | 450 bullocks purchased from Messrs. Finley & Co., of Goulburn, were in a sad state of disease when delivered a month previously. They affected the station herd, which had never been diseased. About two-thirds of the southern cattle showed the symptoms, and of these about 100 died. |
| 6. | I afterwards learned that the 450 bullocks had been for some time diseased before Messrs. Finley & Co. sold them to me, but cannot state how long. I purchased them about three weeks before inoculating. |
| 13. | Cannot say how long after. The swelled tails were slit, and in a few cases cut off. |
| 14. | They were not milked. |
| 15. | Scarcely any deaths—perhaps 2 per cent. The tails were slit in the first instance, and if they swelled excessively were cut off. |
| 16. | A good many of those showing the symptoms badly at the time of inoculation died afterwards—about eighty or ninety. They kept dropping off at intervals for two or three months. |

(No. 3—continued.)

- | Question. | Answer. |
|-----------|---|
| 17. | Three or four months. |
| 18. | Prevention as concerning the station herd, with the exception of a few which came in contact with the Goulburn cattle. And cure of the latter, except when badly affected before inoculation. |
| 19. | Decidedly in favour. |
| 20. | Cannot say. |
| 21. | Have not had sufficient experience to be able to give any information worth recording. |
| 22. | I do. They can always obtain their own virus when their cattle are diseased, by slaughtering one for the purpose. |

(No. 4.)

- | | |
|-----|---|
| 2. | 1,200. |
| 3. | Once—March, 1874. |
| 4. | 400. |
| 5. | 100 showing symptoms of disease, the rest were not diseased. |
| 6. | These cattle came from Goulburn, and had arrived only three weeks when they had to be inoculated. |
| 13. | Swelling. |
| 14. | No cows were affected. |
| 15. | Twenty-six died. No means were tried to cure the swellings. |
| 16. | None. |
| 17. | Two months. |
| 18. | Good. |
| 19. | In favour of it. |
| 20. | Cattle properly inoculated are not liable to take the disease afterwards. |
| 21. | No other information. |
| 22. | Yes. |

(No. 5.)

- | | |
|-----|--|
| 2. | About 400 head. |
| 3. | I have twice inoculated—once about three years ago—once since; cannot give exact dates. |
| 4. | About 300 head. |
| 5. | Diseased, about ten showing symptoms, 3 per cent. |
| 6. | About three weeks. |
| 13. | First occasion the effects were very slight, showing about a fortnight after inoculation on tip of tail; second occasion the effects severe, swelling of rump, tail, &c., three weeks after inoculation, or even longer. |
| 14. | Cows not milked for some time. |
| 15. | One death only on the second occasion; tail cut off short and gashes made in rump, &c. |
| 16. | There may have been one or two. |
| 17. | All traces disappeared in about three weeks on both occasions. |
| 18. | Most satisfactory. |
| 19. | Certainly in favour. |
| 20. | One beast had no tail, I therefore did not inoculate him, and he was the only beast in my small herd that caught the disease after allowing a reasonable time, but did not die. |
| 21. | I think all cattle should be inoculated whenever virus is obtainable, whether diseased or not, and that the virus should be taken from the lung, not the chest. |

(No 6.)

- | | |
|-----|--|
| 2. | 1,500. |
| 3. | Once—ten years since. |
| 4. | Nearly all at the one time. |
| 5. | About ten in the 100. |
| 6. | A few weeks. |
| 13. | A few lost their tails or part of it. |
| 14. | Did not milk any. |
| 15. | No deaths. |
| 16. | About 1 per cent.; sometimes in a few days. |
| 17. | A month or thereabouts. |
| 18. | The cattle showed an almost immediate benefit; the deaths were fewer in two or three days, and the disease disappeared. |
| 19. | Strongly in favour of it. |
| 20. | Two lots of cattle going to Melbourne were attacked, they were inoculated and the disease disappeared, very few deaths took place after inoculation. I have not had any diseased cattle for ten years. |
| 22. | Not without the disease was prevalent in the neighbourhood. I should inoculate my own, because if properly done it cannot injure. |

- (No. 7.)
- | Question. | Answer. |
|-----------|--|
| 2. | 3,000. |
| 3. | Five times—March, 1873; July, 1873; July, 1874; September, 1874; October, 1874. |
| 4. | 500 store bullocks in March, 1873; 1,000 station mixed herd, July, 1873; 600 young cattle, July, 1874; 300 store bullocks, October, 1874; 200 store cattle, September, 1874. |
| 5. | Lost seventy head of bullocks out of mob before inoculating in March, 1873. Did not lose more than six from swelling after inoculation, and nine from the disease. |
| 6. | Disease showed in cattle for two months in first lot. The other lots were inoculated so soon as one beast showed signs of disease, and when virus could be obtained. |
| 13. | Tail swelled, sometimes up to the root of tail. About ten days after operation, sometimes not for three weeks. Those which were much swollen lost part of the tail, sometimes all of it. |
| 14. | Did not inoculate milking cows. |
| 15. | About 3 per cent. died from the swelling and other causes. If seen in time, and dressed with tar and turpentine, and lanced, they soon recovered. |
| 16. | None. |
| 17. | About six months—a few cases showing out in those which were missed and not inoculated. |
| 18. | We have now not seen a case of pleuro for twelve months on the run. |
| 19. | We are in favor of inoculation. |
| 20. | In one instance we put 300 store bullocks into a paddock by themselves, until we saw two cases of disease; we then mustered all of them but twenty, and inoculated them. No disease showed in those inoculated, but several of those missed died. We have often had cattle die which were not inoculated, and none of which were in paddock with those that had been inoculated, and none of which took the disease. |
| 22. | Yes—when they can obtain the virus—believing it to be a sure preventive, but not a cure. |

(No. 8.)

2. From 1,500 to 2,000.
3. I cannot say; but from 1862 up to the present year say twenty times.
4. From 100 to 1,500.
5. Sometimes diseased—often 25 per cent. showing disease.
6. Not more than fortnight, except in 1869—when I had sold and could not inoculate until fully 25 per cent. died in three months.
13. Only once had I much swelling in hot weather, and with cows. I was then under the impression it was done too deep by a person helping me. Last year I had one out of 300 inoculated with virus from the chest swell and die.
14. I never tried it.
15. I had a good many cows once and about 3 per cent. of bullocks die. I tried cutting into the part and putting in tar and Turner's crease, but with very doubtful success; the weather was hot.
16. I never knew but one case of death after inoculating, and except when the beast was bad at the time of operating; but I have had several skin disease not lasting long and the beast getting fat.
17. I may say in all cases no time elapsed before the disease was stayed, and the cattle were quite well again in a month or five weeks.
18. Sometimes it put cattle back considerably, and it was two months before they were doing well; but I have had them show no ill effects.
19. In favour; nor do I believe any one who has given it a trial can be otherwise. Yet much is to be learnt about it, and nothing proved as yet. A neighbour of mine has had no pleuro in five years; has never inoculated; has brought in cattle; has mixed with some diseased.
20. I never had a lot of cattle yet (I might in the run) which, if not inoculated, but had pleuro, sometimes immediately, sometimes six months after. I never had any disease in those inoculated; I may add, two bulls I got from M'Dougall, of Melbourne, now two years, that were never inoculated, and as yet have not had the disease. I do not believe in infection or contagion. I have seen in many times and places diseased cattle mixed with sound cattle and no evil

- (No. 8—continued.)
- | Question. | Answer. |
|-----------|---|
| 21. | effects; but I think certain times and localities the disease is carried about in the air. I was away for nine years, but I know pleuro was at different times in the herd; and when I came back six years ago, a very large percentage died of it—say 25 per cent. in the year—and I at once inoculated, from which time for two years I had no disease. It then came again in cattle, brought in as store from Maneroo, of which 5 per cent. died before I inoculated, after which none died. The next year I again got store cattle, from Tumut, and after being here six months disease again broke out, and I again lost about 5 per cent. before inoculating, but not 1 per cent. after. And since then I have had several lots of cattle, and always inoculated; but one lot in 1874, I inoculated three times, and each time had—after one or two beasts died of pleuro—no others showing it. None of the cattle I speak of had ever been inoculated before. This year I got 300 bullocks which were said to be inoculated, but after ten days here showed disease; I killed the first and inoculated the rest; only two died since, one of these I think from poverty. |
| 22. | I think it is a very difficult matter to legislate for. First, because virus is not always to be had; but of course, where disease exists, then it is to hand. And I certainly cannot see, as it is almost a proved fact that inoculating is of benefit, why such compulsion is unjust. I think if all cattle, store or breeding, started travelling well inoculated, it would be a benefit to all concerned. |

(No. 9.)

2. Herd cattle, 2,314 head.
3. No disease. None inoculated for many years.
5. When herd inoculated some years ago, diseased stopped at once. Very few losses from swelled tails, &c.
22. Yes; I am of that opinion, as there is no doubt of the disease being contagious.

(No. 10.)

2. 1867, 500; 1871, 600.
3. Twice. First time, September, 1867; second time, August, 1871.
4. 1867, 500; 1871, 600.
5. 1867, about 25 per cent. of cattle showed symptoms of disease; 1871, none were diseased, but pleuro had made its appearance in the neighbourhood.
6. 1867—about two months.
13. First time, 1867, a large number—about 50 per cent.—were much swollen in the tail; second time, 1871, about 5 per cent. only swelled in the tail.
14. On both occasions milking cows were inoculated, but were immediately turned out.
15. In 1867, 5 per cent. died from excessive swelling; tried lancing to cure swelling, and in most cases successful. In 1871 about 1 per cent. died from swelling.
16. None that I am aware of.
17. 1867—about two months.
18. I believe it is a sure preventive against the disease; the cattle thrive remarkably well about six weeks after inoculation.
19. I am in favour of inoculation.
20. None of the cattle inoculated were afterwards affected, and they were exposed to the disease.
21. I believe the pleuro was first introduced on the run by working bullocks. I would now inoculate if I could obtain the virus.
22. I believe an Act should be passed making it compulsory on all owners of cattle, whether diseased or not, to inoculate if virus can be had.

(No. 11.)

2. 400.
3. Once.—November, 1874.
4. 400.
5. Free from disease.
13. Tails swelled to a great extent, had to amputate about 1-5th of them.
14. Cows were not milked for some time after inoculation.
15. Five per cent. died from swelled tails. Tar and turpentine were tried with little effect.
16. No disease appeared among the cattle.
17. Two months after inoculation the cattle were free from disease.

(No. 11—continued.)

- | Question. | Answer. |
|---|---------|
| 18. No disease has appeared in cattle since they were inoculated. | |
| 19. In favour of it. | |

(No. 12.)

2. 350 head.
3. Only once—17th March last.
4. 350.
5. Good; only three showing symptoms.
6. About one week.
13. About two weeks.
14. Never milked after the operation.
15. Three head out of 350; cut the tails off above the swelling.
16. Three, about two weeks after.
17. Two weeks.
18. Good.
19. Favour.
20. Never saw any symptoms after.
21. No better than inoculation.
22. Most certainly.

(No. 13.)

2. 3,000.
3. Three times, viz.: 1871, 1872, 1874.
4. The first time, 3,000; second time, 700; and third time, 800.
5. Had been very bad just before; about 1-8th showing symptoms.
6. About five years.
13. All the cattle swelled more or less; about 4 per cent. badly, and about 2 per cent. lost their tails; some lost their tails about half-way up, some close to the butt.
14. Never milked any cows immediately after inoculation; turned them out for a month.
15. No cattle died from excessive swelling.
16. A few cattle died after inoculation from the disease; about 1 per cent.; cannot give dates.
17. The disease has never finally left the herd.
18. We are very doubtful about the result of inoculation.
19. Cannot offer an opinion.
20. Many of the inoculated cattle were exposed to the infection, and odd ones died from it.
21. Have no information to give.

(No. 14.)

2. 1,000 inoculated twice, first in September 1866, secondly in 1870.
4. 1,000.
5. In a bad state, 5 to every 100.
6. Two months.
13. It is visible in about eight or nine days with a swelling at the bottom of the tail, and a swelling between the hips, and sometimes in the chest.
14. Not any milked for two months.
15. Several deaths from excessive swelling; not any means tried; 2 out of every 100.
16. Yes; a few from nine days to three weeks.
17. About three months.
18. I approve of it.
19. In favour of it.
20. Any cattle that were properly inoculated would not take the disease.
22. I most certainly do.

(No. 15.)

2. 150 head.
3. Once—October 1871.
4. 140.
5. Discased. Out of 170 head about 20 head died by the disease within seven months.
6. Seven months.
13. Swelling of the tail showed in about eight days after inoculation. About six head showed excessive swelling, of which one died, the remainder recovered by bleeding or cutting off a portion of the tail.
14. No.
15. One cow died from excessive swelling.
16. One heifer died from the disease three weeks after inoculation, after which there was no sign of the disease in our cattle for two years.
17. Two years after the inoculation, two head died from the disease; but we did not then inoculate, nor did any more of the cattle show symptoms of the

(No. 15—continued.)

- | Question. | Answer. |
|--|---|
| | disease. Since then we have not observed any sign of the disease. |
| 18. We considered the operation very successful, and that it stopped the progress of the disease in our cattle. | |
| 19. We are in favour of inoculation, but would not wish to see it made compulsory where the disease did not exist in a herd. | |
| 20. Within the last two years the district has not been free from disease; but our cattle have not been attacked by it, neither those that were inoculated nor those that have grown up since the inoculation. | |
| 21. We believe in inoculation if the operation is properly performed and with pure virus, and that the disease is nearly always communicated to sound cattle by introducing diseased animals, or by coming in contact with them. | |
| 22. Yes. | |

(No. 16.)

2. 2,000.
3. Part of the herd purchased twelve months ago, and was inoculated at the time.
5. No account kept.
22. If an Act was passed it would give work to more Government officials.

(No. 17.)

2. 2,000 at one time, and different numbers at other times. 1,800 at Wellerie, Marra Creek.
3. I do not remember how many times, but several times these last three years, and also many times since pleuro first appeared in this district. I think more than ten years ago.
4. It would be hard to tell how many were inoculated the first and many succeeding times, for then the runs were not enclosed, and many strangers were inoculated, and no count was kept, but in the winter of 1867 about 1,200 were inoculated; in 1871 the herd, 2,000, was again inoculated; in 1874, 1,800 were inoculated on the Marra, and the Marebone herd about 1,000 were again done, and since, two lots of weaners, about 500 each time.
5. Diseased, about 6 to 8 per cent. showing symptoms.
6. Perhaps two months.
7. We have used so much virus that it would be difficult to describe each; at first we used to shoot every beast showing symptoms until we got one with good virus. When inoculation was first practised in this district dark virus was used, but we soon learned from experience to use nothing but pale sherry-coloured virus. Sometimes the whole of the lung was hepatized, and when we found one in this state we used the whole of it. Sometimes only a small piece of the lung was hepatized; sometimes half black and half light-coloured, but the black part was always carefully excluded. Generally a young beast, and one that had not shown symptoms many days; head down, ears drooping, flank heaving, eyes sunken.
8. The beast was shot, and then bled, the shoulder taken off, three or four ribs taken out (a butcher's knife will do this), and the lung if affected taken out, if not the beast is turned over and the other side tried; if not too far gone, that is, too black, it is cut up in small pieces and squeezed into a dish or other vessel (if this is not to be got, the hide placed over a cattle track or any small depression in the ground will do), when virus is all squeezed out of the pieces it is then strained through a piece of muslin or any cloth that it will run through, and is then fit for use. We have never used chest virus—that is, the water that is in the cavity of the chest around the lung; we have always squeezed our virus from the lung.
9. In cold weather perhaps three days, and sometimes directly after it was taken.
10. It has kept good for a week by using saltpetre, and also with glycerine; about an eighth of glycerine, and when with saltpetre a small piece in each bottle.

(No. 17—continued.)

- Question. Answer.
11. I have not noticed any swellings result from using preserved virus, and knew one beast to die apparently from pleuro about six months after inoculating with it; and when on the Marra a month ago noticed several weaners that had been inoculated with it nine months ago were very poor, as though they had been sick from pleuro.
12. Always with needle and worsted, a broad flat needle about three or four inches long for grown cattle; and if the calves are drafted separate, a smaller one for them. The needle is run through just under the skin, and a piece of the worsted is left in the wound, about half an inch left hanging out at each end; sometimes the worsted is run right through if the beast is hard to manage, and this done twice is considered sufficient.
13. Generally ten days or perhaps a fortnight, or sometimes a longer period elapses before swelling—that is, bad swelling—is noticed; of course the tail begins to swell around the wound a day or two after the operation is performed, sometimes the tail swells from point to butt, and also the rump at each side; the thighs also swell sometimes—these are considered dangerous symptoms, and the tail is mostly cut off and the swollen parts scarified.
14. We have inoculated milkers and have not noticed any ill effects from using the milk, and did not notice that the quality or quantity of the milk was affected; of course, if the cow swelled much the milk was not used, and sometimes the cows were not milked for a week or so after inoculation.
15. Very few die from the effects, perhaps 1 per cent.; when the tail swells very much it appears to die, and becomes as hard and dry as a stick, we then cut it off above this, when the tail will bleed freely, but the beast sometimes dies after this even. We have known this to happen when very good virus has been used, and suppose then that the bone has been touched, but it is mostly attributed to strong, or too dark virus.
16. Yes, often; but the beast was supposed to have been affected before he was inoculated. It would be hard to fix the dates, for I have known beasts to linger for months, and to get thinner and thinner till they died from weakness; in other cases they recovered after a long struggle; others would be only slightly affected, and recover in a very short time.
17. No. 16 answers this.
18. We are not quite certain that any good results from inoculation, but believe that it is efficient in preventing the disease.
19. I am in favour of inoculation, but do not think it should be compulsory.
20. I have always noticed that none of the old cows that have been inoculated ever become affected, and some of them that have been through the crush and inoculated several times have never swelled after the first time; and I have often seen calves take the disease and die, and their inoculated mothers never show a sign of it. When inoculating the herd, everything that came in was inoculated to make sure, and to save the trouble of drafting them, so that some old cows were done over and over again.
21. I recollect inoculating about 300 weaners at Marebone, and then taking them to the Marra Creek Station, where they were turned out with the herd. About three months after we went down there to inoculate, and all over the run, cattle were to be seen stuck up with pleuro. I then took particular notice of every beast that I saw sick, wishing to discover if any of the inoculated weaners were sick, but could not see one. I knew them all, as their tails were squared, which we always do when inoculating; and every beast that died with pleuro, or that we killed to get virus, we made it a point to examine the tail, but could never find the mark of the needle in a diseased beast.
22. I do not think persons who do not believe in inoculation should be compelled to inoculate, though I am a firm believer in it, and I think most of those who believe in it will inoculate whenever they can get the virus; ours are always inoculated at weaning time, the last time with preserved virus.

(No. 18.)

- Question. Answer.
2. 3,000 and 4,000.
3. Twice—first in 1865, and last year, when I only inoculated the half of the herd that were paddocked.
4. 3,000 in 1865; 1,700 in 1875.
5. In 1865 there were 10 per cent. showing symptoms; in 1875 there were 3 per cent. showing symptoms.
6. Three months in 1865, one month in 1875.
13. In 1865 many lost their tails; in 1875 not so many, but fell away in condition.
14. Yes—they fell away in condition, and did not give half the quantity of milk.
15. In 1865 there were 10 per cent. died; in 1875 there were 5 per cent. died; nothing was tried.
16. Yes; cannot tell, but about a fortnight.
17. A month.
18. Stopped deaths.
19. In favour.
21. Last year, having completed a large paddock, I put the breeding cows into it, about 1,700, and they did not take kindly to the enclosure, but hung round the fence and sulked and fell away in condition, and to that in a measure I attribute their taking the disease.
22. Only in some cases. Cattle should not be interfered with after inoculation, and being driven as stores would be fatal to many.

(No. 19.)

2. 800 at Sutton Forest, 723 at Tarrago.
3. Have practised inoculation for many years, having done about 1,100 head during the months of June, July, and August last.
4. June 450, July 300, August 350.
5. The cattle above mentioned were all northern cattle, and in each of the three lots pleuro was noticeable, say 3 per cent.
6. About two months.
7. In nearly every case of killing a beast for virus, I find one lung marbled and solid, the other lung is seldom much affected. I do not kill a beast till it is in an advanced stage, and only those whose sides fall in and get hollow, believing the blown out or swollen cattle to be more dangerously affected and unsafe to use for inoculation.
8. I never use anything but the pale yellow or amber-coloured water, which is generally found in large quantities in the cavity of the chest.
9. I never use virus older than 24 or 48 hours.
10. Never attempted to preserve virus.
12. With steel needle and worsted, being passed through the last inch of the tail, leaving a short end of the saturated worsted (doubled) in the tail.
13. In inoculating healthy local cattle there is seldom any swollen tails, but the travelled or diseased cattle have say 2 to 3 per cent., which generally appears three or four weeks after inoculation.
14. Have seldom done milking cows, and no difference was noticed in any respect.
15. With common cattle generally, cut off the tail and gash with a knife the rump if swollen. In the case of pure bred or valuable cattle, look frequently at the tail, and, if any inflammation exists, pull out the thread; and, if that does not cure, split the tip of the tail with a sharp knife two or three inches up from the end, this will stop all inflation.
16. Five or six per cent. died after inoculation from one to six weeks after the operation; not many occurring after a month.
17. From six to seven weeks.
18. Have never known it to fail to completely dispel the disease, after a month or six weeks.
19. Strongly in favour of inoculation.
20. Used formerly not to inoculate cattle purchased which appeared sound; but often disease would appear in them, also in cattle with which they were mixed. Latterly, I inoculate nearly everything purchased, for the sake of the convenience of being able to put any other stock with them without danger of infecting.
21. Cattle, if not inoculated, being left with infected stock, seldom fail to become infected, particularly if the cattle are travelled or herded together; but never knew a beast to become infected if it had been inoculated in the manner above described, notwithstanding being travelled and herded with unsound or diseased stock.

(No. 19—continued.)

- | Question. | Answer. |
|--|---------|
| 22. Should be glad to see inoculation made compulsory in infected herds, virus being always obtainable there. The stock are thereby made much more saleable. | |

(No. 20.)

- | | |
|---|--|
| 2. No cattle on the Bonde station have been inoculated. | |
| 4. At Brown Mountain I had 200 heifers inoculated. | |
| 5. No symptoms of disease showed when cattle were inoculated; but several cattle around the neighbourhood had some with pleuro, and some were dying. | |
| 13. Swellings visible generally from fourteen days to one month; the tail generally swollen, some even up to the connection with the tail and the body of the animal. | |
| 14. I never had any cows milked after inoculation within the period of one month. | |
| 15. Yes; about 2 per cent. Lancing the swollen parts with a pocket knife freely until blood flows, which ought to be taken in due time before the swelling reaches the butt-end of the tail, or where it joins the body; if lanced in time, cattle generally recover. | |
| 16. I never knew any; and I have known, by personal experience, to have the calves of inoculated cows die, and the mother not affected—cow being inoculated; and I have also seen inoculated cattle travelling with uninoculated cattle in the same mob, and the uninoculated cattle dying at rate of 10 per cent., and not one of the inoculated cattle affected. | |
| 17. This depended upon circumstances. Cattle infected with pleuro badly, and inoculated at the time, generally take about a month or two—all depending on the effect the inoculation has on the vein. | |
| 18. Inoculation is not so certain to take the right effect on cattle when they have the pleuro as when they are in proper health, and the percentage is certainly 10 to 20 per cent. greater in death than if the cattle were inoculated when not affected with pleuro. | |
| 19. I am certainly in favour of inoculation, and it ought to be compulsory. | |
| 20. I have frequently seen inoculated cattle mixed with uninoculated cattle having the pleuro; and I have never seen any cattle which have been inoculated, that is, the virus properly taken, ever have the pleuro. | |
| 21. I have never known a draft of cattle, which have been driven a long distance, but what the pleuro would appear in them, at their destination, sooner or later, but, if properly inoculated, it will not; and it is a fact, no matter how clean the herd may have been—that is, if no disease ever appeared in the herd—yet, if driven 150 or 200 miles, pleuro will in nine cases out of ten break out amongst them. Although my herd is clean, yet, for the general preservation of property, the herd ought to be inoculated, as inoculation is a preventative against pleuro; but I consider that once cattle are inoculated the increasing herd should also be inoculated, that is the calves, year after year. | |
| 22. I consider an Act, obliging owners of stock to inoculate, should, for the general benefit of the colony, be passed—made compulsory under any reasonable circumstances. | |

(No. 21.)

- | | |
|---|--|
| 2. 6,000 more or less. | |
| 3. Once, in June, 1873. | |
| 4. 1,500. | |
| 5. Diseased. | |
| 6. Six months previous the disease was observed confined to one side the run. | |
| 14. No milkers operated on. | |
| 15. Few if any, cut tails off some. | |
| 16. None observed. | |
| 17. About a month. | |

412—C

(No. 21.—continued.)

- | Question. | Answer. |
|---|---------|
| 18. Seemed to cut off the disease so that it never appeared on upper portion of run. | |
| 19. In favour. | |
| 21. Think it would be advisable if possible to keep cattle in paddock after inoculating to watch results and attend to tails if required. | |
| 22. Certainly not. | |

(No. 22.)

- | | |
|---|--|
| 2. 6,500. | |
| 3. Twice. | |
| 4. Last occasion 400. | |
| 5. First time they were diseased; second time, healthy, can't say what percentage were diseased. | |
| 6. First time three years, second time six years. | |
| 13. Swelling and the loss of some tails, also the death of a number of cattle. | |
| 14. Yes, and the milk did not seem to be affected. | |
| 15. Yes, deaths did occur, cannot say what percentage. | |
| 16. Yes, not many, perhaps one or two per year. | |
| 17. It never left the herd. | |
| 18. Have not followed it up, so cannot say, believe it checked the disease. | |
| 19. Yes, I am in favour. | |
| 20. My belief in inoculation was caused by seeing a great many cattle inoculated in Queensland, and the disease nearly died out for a year or two, then it broke out in the young cattle, old ones none affected. | |
| 21. All the old cattle were running with the infected ones, we gave one sick bull gum leaf tea mixed with bran, and the effect was magical, bull recovered in few days. I believe inoculation is a preventative, but I do not consider that an Act should be passed obliging owners to inoculate. | |
| 22. No, it would be impossible to carry it out. | |

(No. 23.)

- | | |
|--|--|
| 2. 500 head. | |
| 3. Once, four years ago, inoculated 50 head, and had more deaths in them than the rest. | |
| 4. 50. | |
| 5. Fair condition. | |
| 6. A fortnight or three weeks. | |
| 13. Very little swelling. | |
| 14. No milkers inoculated. | |
| 15. Four or five. | |
| 16. Four or five in the course of about 10 days. | |
| 17. About two months. | |
| 19. Not in favour of inoculation, and will inoculate no more. | |
| 20. Have had no disease in my herd until now, in one lot of cattle, not through the herd, I have seen seven or eight dead within the last two months, disease dying out. | |
| 21. No sign of any disease in herd at present. | |

(No. 24.)

- | | |
|--|--|
| 2. 500 head on run in 1865. | |
| 3. Twice; once I think in December, 1865, and again in September, 1874. | |
| 4. On the first occasion I inoculated about 200; last year, 290 head. | |
| 5. I cannot. | |
| 6. In the first instance about one month; in the second about the same time. | |
| 13. In about ten days after inoculation some of the cattle began to swell. | |
| 14. Not much. I should not like to use the milk in any form, for three months after inoculation. | |
| 15. The last time I inoculated more cattle died from the effects of inoculation than from the disease. About 4 per cent.; the means adopted to cure—I opened the swellings, and let the discharge run out. | |
| 16. About 4 per cent. died in a month or five weeks after inoculation. | |
| 17. In the last instance I think it must have left the herd when I inoculated, for I only inoculated 290 out of 800 head, and only one beast of the uninoculated died after. | |
| 18. Worse than worthless. | |
| 19. Opposed. | |

(No. 24—continued.)

Question.

Answer.

21. In the Coast District, where inoculation is resorted to yearly, they are never free from disease; but on Manero (this district) very few inoculate, and consequently very few deaths from pleuro. As far as my experience goes, I am not in favour of inoculation; because those who do not practise it lose fewer cattle (in this district), than those that do—that is, taking a number of years as an average, say five years.

22. No.

(No. 25.)

2. About 3,300.
3. Occasionally, as required, between 1863 and 1865.
4. Not certain as to number of cattle inoculated.
5. Inoculated diseased and healthy cattle. Store cattle purchased from the North showed symptoms of disease after delivery on the station, probably from 15 to 30 per centum.
6. Diseased cattle, together with the majority of the herd, were inoculated as soon as possible from the time they were noticed having symptoms of disease.
7. Animal far gone with disease, with a dark and diseased lung, was always rejected, and the virus of a lightish salmon colour only used for inoculating with.
8. The virus was taken from both lung and chest, and some water was found in the chest intermixed with the droppings of the virus.
9. The virus was generally used as soon as obtained from the lung of a dead beast specially killed for inoculating the cattle with.
10. Did occasionally preserve the virus with glycerine, but did not depend upon it as efficacious, or use it.
11. Cannot say what might be result, as it was not used.
12. The operation was performed with grooved end of toothbrush handles, with sufficient groove to hold 2 or 3 drops of virus. Used also worsted thread in short lengths with needle.
13. Inoculated cattle (not all of them) showed swellings on the tails a few days after being operated on.
14. I do not think the milk of inoculated cows is in any way injuriously affected, except the animal is far gone with the disease.
15. No means were tried to cure the swellings.
16. Death occurred after inoculation with cattle far gone with disease; probably from 5 to 10 per cent., in the course of a few days, or say a fortnight.
17. The disease finally left the herd in about six weeks after the date of the inoculation.
18. The results of inoculation, properly performed with the proper kind of virus, is no doubt a safeguard against the loss or death of the cattle, and a preventative to their being at any future time affected with the disease.
19. Am in favour of inoculation with any cattle suffering from pleuro-pneumonia.
20. I believe that in any case where diseased cattle have been mixed up with healthy cattle on a run, or in the yards, the latter may all take the disease in a mild form, and may never again be subject to the disease, even though they are not inoculated.
21. Except the cattle are suffering with the disease, the necessary virus cannot be obtained, and it is only when the symptoms of disease appears that inoculation can be performed by procuring the virus.
22. I believe cattle owners generally would be disposed to inoculate their calves at branding time, provided they could procure the proper virus.

(No. 26.)

2. 1,303.
3. Only once, March, 1871.
4. 1,303.
5. About 5 per cent.
6. About 7 months.

(No. 26—continued.)

Question.

Answer.

13. About 14 days from day of inoculation, and continued for about 3 months. By swelling of the point of the tail; in some instances the tail enlarged very much.
14. Were inoculated and milked as usual, without the slightest apparent effect upon the quality of the milk; I think the quantity was less.
15. The tails of a few cattle required lancing from excessive swelling. Two deaths occurred through the cattle not being observed in time—the swelling being in the anus.
16. Two head of cattled died very shortly after they were inoculated, but they were so much diseased that nothing would have saved them.
17. Immediately. Some cattle had coughs for a long period after inoculation, but no other deaths have occurred amongst my cattle since they were inoculated.
18. The restoration of the cattle to health. The perfect health of my cattle ever since—my herd now numbering about 500. I sold all my cattle as fat that were intended for market. I do not think the cattle fell off, except what would be expected through yarding, &c.
19. Strongly in favour, from the good results produced in my own cattle; from the success attending my neighbours who inoculated; through no injury being done through inoculating the cattle; and from the fact that the disease immediately disappeared in two herds of cattle my brothers drove from the Clarence to Victoria after they inoculated them. They were dying daily until inoculated.
21. I purposely left two cows uninoculated, and three steers were missed when mustering. Three out of the five died from pleuro.
22. I think all cattle should be inoculated, when the virus can be obtained. All the replies to the enclosed can be made public, and the source from which they are derived; as I think information on public matters kept secretly has not much weight.

(No. 27.)

2. 2,000.
3. Once, September, 1871.
4. 1,200.
5. About 10 per cent. showing pleuro.
6. 2 months.
13. About one per cent. had to be dressed, or tails cut off.
14. No.
15. Some cases swelling reach up to rump, then scarify, which generally heals up right.
16. Never inoculate any showing disease.
17. At once.
18. Can put them in paddocks with diseased cattle with impunity.
19. In favour of it.
20. I have seen it succeed ever since pleuro first came.
21. I do not think it is contagious; changeable weather brings it out principally. I do not think cattle ever take it twice. Absent from home or should have inoculated.
22. No; people could not at all times comply with it, bad season for instance.

(No. 28.)

2. 2,000 head.
3. In '65 and '66. Several times, in all about 6 times, but the same cattle never twice, excepting when I used the bottled impositions sold by Veterinary quacks, which had no further effort than pure water, and the trial of which caused very great loss from delay in checking the spread of the disease.
5. 20 per cent.
6. Perhaps a month or two.
13. Always more or less swelling or inflammation, and in many cases part of tail dropped off. Worst through the incision, having the part wetted with the matter in the incision, and then cut off the remainder of worsted.
15. None.
16. Yes, many; but in all, the cases of death were those diseased before inoculation.
17. A few months, excepting calves, which I suppose took fresh infection from travelling diseased cattle passing through the run.

(No. 28.—*continued.*)

- | Question. | Answer. |
|-----------|--|
| 18. | I believe it was highly satisfactory. I will mention one fact. I had about 150 head of cattle never diseased running many miles away from the infected herd and beyond all public traffic. I at length very carefully inoculated these with my own hands, and within a few weeks joined them with the main herd, while some of the cattle were still sick. Not one of them ever took the disease, or showed anything but the ordinary results of inoculation. |
| 19. | The disease in this district has now lost its virulence and when an odd case does occur (the result of infection always from travelling stock) it is rarely fatal. I thoroughly believe in the efficacy of inoculation, but scarcely think it should be made compulsory, unless Government will undertake to supply genuine material. Now it cannot without very great difficulty be obtained, and if people are to be compelled, the greater number would in any case use improper virus. |
| 20. | See answer in 18. |
| 22. | Only if Government will supply the genuine virus. |

(No. 29.)

2. About 450, more or less.
3. Only on one occasion, towards the end of the year 1869.
4. The whole of the herd.
5. Cattle in low condition when inoculated; some three or four head showing symptoms.
6. Only a short time.
13. Commence swelling, extending to the loin of nine of the cattle, and in others causing the tail to swell up to an immense size.
14. No.
15. The deaths caused from inoculation were some four per cent. Means were tried to reduce the swelling but to no effect.
16. No deaths occurred from the disease after recovery from the inoculation.
17. Some four and a half to five months.
18. The results—the loss of four head to one deceased head from inoculation.
19. Under experienced management it might be beneficial.
22. I would not be in favour of compelling owners to inoculate.

(No. 30.)

2. I have inoculated ever since pleuro first broke out.
3. I have always inoculated whenever the disease showed among the young cattle, the old cattle always being inoculated.
4. Generally about 500.
6. As soon as disease appeared I always inoculate. As soon as I saw one with pleuro I got him, and killed him, and done all young cattle that had not been done before.
13. The swelling shows about nine days after inoculation, if the weather is hot. I never had many swell—not more than three per cent. Get them in the lot and score the tail with a knife above and right through the swelled part. They do not lose their tails.
14. I never milked cows after inoculation.
15. No deaths need occur from swelling if cattle are looked after. I have scored hundreds of tails and never lost one that was done so. If a beast swells, and is not looked after, he generally dies—nine cases out of ten.
16. Cattle that have the pleuro when inoculated sometimes die within a week; other very rare cases linger for a long time—pine away, get lumps in the throat, and at last choke.
17. About two or three weeks.
18. A sure preventative of pleuro.
19. I am in favour of it.
20. I have cattle that were inoculated five years ago, that have been among diseased cattle, and no sign of pleuro on them.
21. The disease is not at all dangerous if properly taken. Inoculation is a sure preventative. Inoculate if possible every time you wean calves, if you can get virus.

(No. 31.)

- | Question. | Answer. |
|-----------|---|
| 2. | 500. |
| 3. | Twice—in 1870 and in 1872. |
| 4. | About 500. |
| 5. | Five per cent. |
| 6. | About three months. |
| 13. | About two per cent. of them swelled from three to six weeks after. Some lost their tails, and some swelled from the tail to the shoulders, but none died. |
| 14. | Were not milking any. |
| 16. | Twelve head, about six months after. |
| 17. | Three months. |
| 19. | Not in favour of it. |
| 22. | I do not think it would be right to pass an Act to compel people to inoculate. |

(No. 32.)

2. 5,000.
3. Three times—March, 1874; April, 1874; and January, 1875.
4. March, 1874, 387; April, 1874, 541; January, 1875, 69.
5. Cannot say any of these cattle were diseased previous to inoculation.
13. Swelling visible from four to eight weeks after inoculation. Hard swellings about the root of the tail.
14. No milking cows inoculated.
15. About three per cent. of deaths from excessive swelling. Means used—cutting off the tail, scoring the swelling with a knife, and dressing with turpentine. Some recovered under this treatment.
16. A few deaths from the disease about four or five weeks after inoculation. Cannot say how many.
17. Never finally disappeared.
18. Cannot say whether any good result has followed from the inoculation, as the cattle were turned into the herd which were not inoculated, and some have died from pleuro since.
19. Opposed to inoculation.
20. As stated above, cattle that had been properly inoculated were afterwards exposed to the infection, and in some instances died from the disease.
21. When the disease makes its appearance in the herd do not knock them about any more than is absolutely necessary, and no serious loss need be feared. To inoculate in such a case would entail a serious loss, not only in the deaths, but the way the cattle would be knocked about would prevent their fattening for some time. As far as can be seen, the uninoculated cattle have not suffered from pleuro to any greater extent than those which were inoculated.
22. I am decidedly of opinion that such an Act should not be passed, as it would cause great expense and trouble to stockowners, without rendering them any benefit in return.

(No. 33.)

3. Some seven times.
17. It was about 3 months before the disease disappeared amongst the inoculated cattle, but I afterwards put uninoculated cattle on the same run when the disease again made its appearance amongst the uninoculated cattle, but the inoculated ones kept all right.
19. I am in favour of inoculation, but certainly not compulsory.
20. My inoculated cattle, on their way to market, passed over runs where diseased cattle were, but they did not become affected.

(No. 34.)

2. 1,000.
3. In 1868 and 1869, about 1,500.
4. 1,000 and 1,500.
5. Those that were diseased were never inoculated, and a great many died.
6. About three weeks.
13. Those that had taken swelled a little; some had to be done over again.

(No. 34.—continued.)

- | Question. | Answer. |
|-----------|---|
| 14. | I have used the milk in 12 hours after; it took no effect on the milk at all. |
| 15. | About five to the hundred died from swelling. |
| 16. | Very few. |
| 17. | Three weeks or a month. |
| 18. | The cattle look better than before. |
| 19. | Greatly in favour of it. |
| 21. | I believe the disease is caused by close breeding. |
| 22. | Yes. |

(No. 35.)

- | | |
|-----|---|
| 2. | 1,000. |
| 3. | 1868 and 1869. |
| 4. | 1,000, 1868; 1,500, 1869. |
| 6. | About a month. |
| 13. | Very few. |
| 14. | Yes, but it did not affect the milk. |
| 15. | About 5 to the 1,000. |
| 16. | Very few. |
| 17. | Six weeks. |
| 18. | Made the cattle look better. |
| 19. | Yes. |
| 20. | I have never known any to have it the second time. |
| 21. | Breeding close will bring the disease again. |
| 22. | Yes, but only in very good seasons, as knocking them about in dry weather will cause disease to come. |

(No. 36.)

- | | |
|-----|---|
| 2. | 2,400 and 760. |
| 3. | Twice—1863 and 1870. |
| 4. | 760 one; 2,400 the other. |
| 5. | In good condition; about 5 per cent. showing symptoms. |
| 6. | Five months. |
| 13. | Swelling to the butt of the tail, very slight, three days after inoculation. |
| 14. | None milked. |
| 15. | Only two died from the effects of swelling, watch them, and cut their tails, if slightly bleed them. |
| 16. | Seventeen died from four to five days after inoculation. |
| 17. | One month. |
| 18. | Found it exceedingly beneficial. |
| 19. | In favour of. |
| 20. | The three joining herds, east, west, and south were greatly affected, dying fast, our cattle greatly mixed, but were not affected by the disease; exception only—one yearling that had not been inoculated. |
| 21. | Not being very well up in the matter, yet, I may state that I have used all kinds of virus, but I find that from the chest is the safest. |
| 22. | Yes. |

(No. 37.)

- | | |
|-----|--|
| 2. | 450 on the run at the time of inoculation. |
| 3. | We have inoculated three different times, in 1870, and 1871, also in 1872; the last lot were 200 I bought. |
| 4. | First the whole herd, the two second times cattle bought. |
| 5. | The cattle showed no symptoms, but our neighbours were infected, and were inoculated to try and save the spread of the disease. |
| 13. | They swell in from eight to eleven days. |
| 14. | I never milked my cows after inoculation. I do not consider the milk is fit for use until after the cow is quite well, say three months. |
| 15. | We lost about from 6 to 8 per cent. by deaths from swelling; the means we tried, were to get the beast in the crush and cut off the tail to try and make it bleed. |
| 18. | We consider that inoculation is of no use. We killed more cattle by inoculation than if we had left them alone. It is now over three years since we inoculated any cattle, and our herd is perfectly sound, nor have we had during this time a single case. I do not believe in it, and would never try it on my cattle again. I have seen instances of cattle that have been inoculated, and lost part of the tail by it, in about two years take the disease and die. I do not consider the disease to be infectious, for if such were the case hardly any would escape. These are our opinions, and also of a great number of other people that have used inoculation; more |

(No. 37.—continued.)

- | Question. | Answer. |
|-----------|---|
| | cattle are killed by it than if they were left alone. |
| 22. | I do not consider it is necessary to pass an Act to compel people to inoculate; if it is of use, people will adopt it, or any other plan for to save their stock, without any compulsion. |

(No. 38.)

- | | |
|-----|--|
| 2. | 2,000 head. |
| 3. | 1867; once only. |
| 4. | Every beast was thus inoculated. |
| 5. | About 25 per cent. |
| 6. | Three months. |
| 13. | Very much depends on the heat of the weather—mostly about three weeks. |
| 14. | Not used when diseased. |
| 15. | About 3 per cent. loss by putting virus in the tail. Cattle inoculated in the near lape of the neck will prevent the loss. |
| 16. | Nil. |
| 17. | Immediately. |
| 18. | Quite satisfactory. |
| 19. | I believe in inoculation, and have good reasons for doing so. |
| 20. | My cattle since being inoculated have often come in contact with diseased cattle without any of them being affected. |
| 21. | The increase of cattle inoculated are still subject to the disease. But I have never seen a beast inoculated take the disease. |
| 13. | I am astonished that there should up to this time be found any one that would hold out against inoculation. |
| 14. | Such an Act passed would be a benefit to the country at large. |

(No. 39.)

- | | |
|-----|--|
| 2. | 250. |
| 3. | 125 inoculated before I bought them—100, Dec. 28, 1874; 25, Jan. 23, 1875. |
| 5. | I had had for some months odd cases of disease—about 1-3rd of those affected died; of those which recovered, in the case of cows in calf every one slipped her calf. |
| 7. | A 2-year old steer. First lung examined perfectly sound, the other lung partly hepatized, virus only to be obtained from one end by cutting it off and slicing it and letting it drain in a basin, and then only enough to treat 100 head. A 2-year old steer (not mine). Both lungs very bad from cavity in chest. On one side obtained two wine bottles of beautiful virus by merely bailing it out. In 1864, when on the Macquarie, obtained three wine bottles of splendid virus from a milking cow by bailing it out with percussion cap box, one side of the chest, the other lung resembling rich dark plumpudding. |
| 8. | See No. 7. |
| 9. | If carefully corked and sealed it will keep the same time as fresh meat—say two or three days in the middle of summer. In 1864, in winter, I used it for an outside mob of cattle on the twenty-eighth day, quite good. |
| 10. | No. |
| 12. | With a small speying needle and three threads of worsted. |
| 13. | Among those inoculated on the 28th Dec., 1874, two cows were noticed to have swelled tails; about the end of the second week they were fomented with hot water; one recovered, losing her tail; one died in the fourth week, the swelling being internal. Among those inoculated on the 23rd January, 1875, none swelled sufficiently to have them yarded, and none lost their tails. In 1864, on the occasion referred to, one family of four or five head all lost more or less of their tails; none of the others (sixty head) swelled noticeably; none died. I also inoculated forty head for a neighbour lately; none lost their tails or died. |
| 14. | Yes—no noticeable effect. |
| 15. | See No. 13. |
| 16. | One death from pleuro about three weeks after the operation. |
| 17. | Since the death referred to (see No. 16) no deaths from pleuro. In 1864 the beast killed for viru was the only one affected. |

(No. 39—continued.)

- | Question. | Answer. |
|-----------|--|
| 18. | Immunity from future disease, but not a cure to those already affected. |
| 19. | In favour of it. |
| 20. | In 1864 I sold some inoculated steers and also some not inoculated; they were put into a paddock that was or had been diseased; none of those inoculated were affected, of the others several died. I have now some inoculated cattle running in a paddock adjoining what a neighbour calls his hospital paddock full of carcasses of cattle that have died from pleuro, and have no apprehensions. I consider the liquid from the chest the purest virus when it can be obtained. I think the disease is infectious, but it can also be conveyed in the air without any actual mingling of unaffected with diseased cattle. |
| 22. | No; I do not think that the disease is sufficiently fatal in its attacks now to warrant such an amount of interference with all owners as would be caused by such an act. |

(No. 40.)

2. 900.
3. I first inoculated the whole herd, and the two following years I inoculated the increase.
4. The increase was about 300 each year.
5. The herd was diseased, and a large percentage was, I believe, suffering at the time.
6. I do not now remember, but I think two or three months.
13. I believe only seven out of the 900 had swelled tails.
14. I inoculated about 120 milking cows, but they were turned out for a week and then taken in and milked, but the milk did not appear to be at all affected by it.
15. After the inoculation there were nine deaths from all causes; the only remedy tried was by cutting off the part and covering them well with tar.
16. The number as stated above (nine); but cannot say if they all died from the disease, as some may have been hurt in the crushing pen.
17. I sincerely believe the appearance of it was gone in a fortnight, with the exception of some of the tails not being well.
18. The result was that the disease left the herd as far as those operated upon, but about thirty were missed in the muster; it appeared amongst them in the spring, they were at once done and nothing further was seen, for I think it was five years, when a cow the property of Mr. Elsmore, came to one of my dairies and it was soon discovered that she had the disease. One of the dairy cows took it the following week, and another soon followed, which we killed and inoculated the rest, and strange to say it was stamped out.
19. In favour.
20. My working bullocks were, but they never suffered from mixing with them.
22. I think any farmer or grazier having diseased cattles for his own interest he should at once inoculate them. I do not feel inclined to oblige owners to do so, but they ought to be responsible to their neighbour, if through their neglect he caused or allowed his cattle to trespass, and by so doing cause the disease to spread.

(No. 41.)

2. 2,500.
3. Twice—once in 1867, again in 1875.
4. About 1,600, 1867; about 2,000, 1875.
5. About 10 per cent.
6. About a month.
13. Three weeks. Many swellings and twistings. About 5 per cent. had the tails taken off to save them.
14. Inoculated, but did not milk.

(No. 42.)

2. 5,500.
3. Once—about 15th of February, 1874.
4. 1,270.
5. The whole of the 1,270 showed more or less disease; these were store cattle purchased by Mr. Rouse, and some, about 150, had been previously inoculated.
6. Cannot tell, but from appearance I do not think long. The cattle very slightly affected when they first came upon the station.

(No. 42—continued.)

- | Question. | Answer. |
|-----------|---|
| 13. | The effect of inoculation upon the 150 that were inoculated, out of the 1,270 previous to coming upon the station, showed great swelling, so much so that in many cases I had to cut the tails off close up to the butt. They recovered. |
| 14. | The milking cows upon these runs were not inoculated, Mr. Rouse's own breed of cattle never showing symptoms requiring it. |
| 15. | 7 per cent. of deaths occurred out of the 1,270 inoculated. Those which showed any signs of swellings were at once cut off, but many died without showing any other signs than ordinary—in such cases staring, fluttering of flank, and being constantly in same place. |
| 16. | All deaths occurred after inoculation; some very shortly after operation—say two or three days. |
| 17. | About eight months. |
| 18. | Partially satisfactory. |
| 19. | In favour of it, if done as soon after calves are branded as possible, so as to allow them to get strong, and certainly not later than twelve months old. |
| 20. | In my opinion I consider if cattle are diseased when inoculated, you must expect a great proportion of deaths. None of the herd cattle upon these runs were ever allowed to mix with the cattle infected being all subdivided into small paddocks. |
| 21. | Were runs have the necessary improvements upon them to allow of cattle so classed and kept separate by fencing (should anything like pleuro appear) will be the only means of keeping the disease under, and putting a penalty upon any diseased cattle travelling through any cattle paddocks. Travelling stock from the North seem most affected with pleuro. |
| 22. | The owners should be allowed to use their own discretion in the matter, but they ought not to be allowed to travel them when diseased to the injury of others, as I consider the disease infectious. |

(No. 43.)

2. 900.
3. Once—in November, 1868.
4. 900.
14. Did not use the milk.
16. Two only.
19. In favour of; but not compulsory.
22. Should be left to the owners to act as they think fit.

(No. 44.)

2. 6,350.
3. Once—in October, 1874.
4. About 4,000 were inoculated, and the whole herd would have been so treated, but I was unable to procure virus for the remainder.
5. In good health, with the exception of 1 per cent. which were diseased, and nearly all of which I believe to have died.
6. About one month.
13. They were not very closely observed; but such as I saw were one or two instances of loss of portion of the tail.
14. They were all inoculated, but I am not aware of any deterioration in quantity or quality of milk.
15. No deaths ensued.
16. Yes. And I am of opinion that inoculation is of no avail for any animal that has already become affected with the disease.
17. About six or eight months.
18. It stayed the progress of the disease. Its beneficial effect was more immediately to be observed amongst the weaners, who were inoculated as calves at the time of branding, and who have never since shown any symptoms of the disease.
19. Decidedly in favour of it.
20. From the time of inoculation the disease gradually lessened, until it entirely disappeared, with the exception of a few bad cases which had become chronic. The cattle were all exposed to the infection, as there was no attempt made to separate the diseased from the healthy.
22. Yes; if cattle can be inoculated at an early age, as it is then most efficacious. The main difficulty would I consider be the procuring the proper virus when wanted.

- (No. 45.)
Answer.
- Question.
2. 6,000—mixed herd.
 3. Several times at the first outbreak of the disease. Last time, winter of 1874.
 4. Last time about 4,000 head.
 5. Bosh.
 6. At once.
 13. Generally made no sign whatever.
 14. Never knocked off the milking, as the operation was in no way observable, except on about 5 per cent., which it killed.
 15. Among milkers, in a large cheese dairy, 5 per cent. were killed in consequence of the operation. Tails cut off.
 16. Who is to know?
 17. Disease left the herd during the process, both among those that had been inoculated and those that had not.
 18. If the operation is performed in the Autumn months, the result is as a "chip in porridge" arrangement; but if practised in the spring months, the results are most disastrous. I have no doubt but that inoculation keeps the disease alive in a herd.
 19. I am most decidedly in favour of it in *other people's herds*, but will never try it again on my own.
 20. Don't know, or will never be able to find out what properly inoculated means.
 21. If we had no Chief Inspector of Stock, and did not rush so frantically after supposed perfect cures, in time the disease would die out or become so mild that nothing would be thought of it. In fact we had almost arrived at that destination, and would have got on all right only for Mr. Bruce finding time hang heavily on his hands—"For Satan," &c.
 10. If it is really desirable that a true finding of the benefits or otherwise of inoculation should be arrived at, why not ascertain whether those herds that have been continuously inoculated increase faster than those not operated on. But I fear as long as Mr. Bruce is in his present office, it would be hopeless to try and set this question at rest.
 22. If it is desirable that the number of cattle in this colony should be reduced, in my opinion there is scarcely any mode I know of that will attain that object sooner than by inoculating the cattle and making it compulsory.

(No. 46.)

2. 3,000 or 4,000.
3. Inoculated first in December, '74, about 600; about 30 died from swelled tails.
4. 600 and 700.
5. 2 per cent. showed symptoms
6. We don't think that the herd was ever free of the disease since pleuro first appeared in this district.
13. Our last 700 were satisfactorily done in the winter; a few died that had pleuro previous to inoculation.
14. Bunkum.
15. See No. 3.
16. See No. 13.
17. It will never leave it or the Colony either.
18. Good in cool weather.
19. We are in favour of inoculation, although till very recently were strenuously opposed to it; but we value our liberty, so don't make it compulsory.
20. If properly done, we don't think a beast will take the disease twice.
21. Our idea is, allow the owners inoculate or not as they please; if made compulsory there would be more loss of cattle, by enforcing the Act at unseasonable times, than would be killed by this disease if allowed its course.
22. We don't approve of an Act in this matter.

(No. 47.)

2. Never inoculated at Bungonia; no disease.
3. Inoculated cattle about fifteen years ago at Urana.
4. The number about 2,500.
5. About 5 per cent. showed disease.
6. About two months.
13. About 10 or 15 per cent. showed effects of inoculation; but I think those which did not show symptoms benefitted as much as the others.
14. Milking cows not milked after the inoculation.
15. Yes; about 3 per cent. The means tried were lancing the swelled part and putting in tar, by which a good many were saved.

- (No. 47—continued.)
Answer.
- Question.
16. A few deaths occurred during the first two months after inoculation.
 17. No symptoms after the first three months.
 18. It stayed the disease.
 19. In favour of it.
 20. I never to my knowledge saw a beast which I knew to be inoculated ever take the disease again.
 22. I think such an Act is necessary.

(No. 48.)

2. 6,000.
3. Not recorded.
4. Not recorded.
5. Herd partly diseased.
6. Not ascertainable.
13. Effects visible from first perceptible to loss of tail and inflammation up the rump.
14. No experiments been made.
15. Yes; not appreciable enough to be recorded.
16. Yes; but very hard to say if the deaths were from the original disease or from inoculation.
17. Generally the stoppage of the appearance of the disease very quickly followed inoculation; but I have lately witnessed apparently no expected result from inoculation.
19. In favour of; because experience shows considerable benefit, though there may be occasional failures.
20. Proof or disproof is exceedingly difficult.
22. Not in the present state of the disease. I consider it is quite in subjection without any legal interference.

(No. 49.)

2. About 500; as many more died before commencing to inoculate.
3. Once, in the Spring of 1867.
4. About 400.
5. Diseased, about 20 per cent.
6. One year.
13. In about 8 or 9 days a little matter was visible where the cotton was left in the tail. Also, in a few cases swelling in the rump at the butt of tail, and later in the udders of cows.
14. None were milked.
15. About 2 per cent. died from excessive swelling. Cutting the swelling, washing and working the rotten flesh out, first with chalk and sugar and corrosive sublimate, afterwards with the fingers, then applying turpentine and tar.
16. One or two died two or three days after, these were bad with it at time of inoculation.
17. About a fortnight.
18. Thought at time to be complete success.
19. In favour of inoculation.
20. Cattle properly inoculated were exposed to the infection without being affected. The fact that almost every one who has ever tried inoculation approves of it, and continues to practise it, would seem to prove its efficacy.
21. Inoculation should, I think, be performed early in the spring before the weather gets too warm and the flies troublesome. The disease does not appear to have been so bad since the first 2 or 3 years after it broke out, at any rate in the Coast Districts.
22. No. For those favourable to inoculation will do so without compulsion, and self interest will oblige the rest to inoculate if they see their cattle dying while their neighbour's inoculated herd is free from the disease.

(No. 50.)

3. 1863.
5. Dying, about 20 per day.
19. In favour.
20. Diseased cattle should not be allowed to travel. My cattle have never been diseased since.
22. Yes.

(No. 51.)

2. About 8,000.
3. Very often in other places, but on this run in 1873 and 1874.
4. In 1873 about 2,500, and in 1874, 1,500.
5. Slightly diseased in 1873, but sound in 1874.
6. Only a short time.
13. The beast becomes out of order about the third day and the tail gets quite limp, and gradually swells until about the 21st day.

(No. 51—continued.)

- | Question. | Answer. |
|-----------|---|
| 14. | Never inoculated any. |
| 15. | About 1 per cent. in 1873, but only one beast out of 1,500 in 1874; I tried lancing and cutting the tails off, by this means saved some of the cattle. |
| 16. | I never saw a beast die from pleuro after it had been effectually inoculated. |
| 17. | About 3 weeks. |
| 18. | I don't understand this question. |
| 19. | Decidedly in favour of inoculation. |
| 20. | I have known cattle to be travelling, part of them inoculated and part not; the pleuro attacked those that were not inoculated and numbers of them died, whereas those that were inoculated remained quite sound. I could cite dozens of instances of this kind. The whole of this herd was inoculated about 8 years ago, at that time it was estimated that 50 per cent. died from pleuro, and six weeks after inoculation they were quite sound and remained so until 1873. |
| 22. | I am of opinion that such an Act would be of great benefit to the country. |

(No. 52.)

- | | |
|-----|--|
| 2. | At the time I inoculated about 4,000. |
| 3. | Once, about the year 1866. |
| 4. | 500. |
| 5. | Don't remember the percentage showing symptoms. |
| 6. | Don't know. |
| 13. | Don't remember. |
| 14. | Don't know. |
| 15. | Some deaths, do not remember the percentage. |
| 16. | Storc cattle that I purchased on the Richmond River died from the effects of pleuro-pneumonia twelve months after they were on the Macquarie, some having their tails off from the effects of inoculation. |
| 17. | I believe it has been more or less in every herd in the Colony since it first broke out, and that it cannot be eradicated, but at the present time my herd is very healthy, and I believe there is none more so in the Colony. |
| 18. | Those I had inoculated I had more loss in than if they had been left alone. |
| 19. | Decidedly opposed to inoculation, and I believe there are more cattle killed through inoculating than there are die with pleuro. |
| 20. | I firmly believe cattle have pleuro a second time; I had an imported bull that had the pleuro very bad in Windsor, he recovered, twelve months afterwards I sent him to my station, after being there over twelve months he got pleuro again and died a few days after he was attacked with it. |
| 21. | I know one instance on a station near mine on the Macquarie, where they had a hundred head to inoculate, they killed five head before they could get the lung in a fit state for the virus, which was I feel certain, a much larger percentage than they would have lost had they left the cattle alone. |
| 22. | Decidedly not. |

(No. 53.)

- | | |
|-----|---|
| 2. | 1,500, have only inoculated twice, once about seven years ago, the second time two years. |
| 3. | Answered above. |
| 4. | All the herd on the first occasion, about 350 on the second. |
| 6. | Some time. |
| 13. | Some of them lost their tails. |
| 14. | Yes. Not that I know of. |
| 16. | Impossible to tell. |
| 17. | About three months. |
| 18. | Most beneficial. |
| 19. | In favour. |
| 22. | Most decidedly. |

(No. 54.)

- | | |
|-----|---|
| 2. | 2,800. |
| 3. | Inoculated 2,100, about middle of January, 1871, and have not since had occasion to do so. |
| 4. | The above number of cattle were inoculated between 12th and 18th January, 1871. |
| 5. | About five per cent showing symptoms. |
| 6. | About five weeks, in which time about 700 died. |
| 13. | About one per cent. swellings in tail, many of which were very slight; the swellings appeared eight or nine days after inoculation. |

(No. 54—continued.)

- | Question. | Answer. |
|-----------|---|
| 14. | Milking cows were turned out for three or four weeks after inoculation, we cannot say whether it affected the milk. |
| 15. | We did not lose any from swellings; we cured them by lancing, cutting off the tail, or taking the tail off at the loin. |
| 16. | After the above cattle had been inoculated twelve or fourteen days no disease was visible on the run, but appeared the following spring, and in the spring of every year since, but to no great extent. |
| 17. | Very few deaths have occurred on these runs since 1871. |
| 19. | We are strongly in favour of inoculation. |
| 20. | Our experience in this is small, although after our cattle were inoculated in 1871, they were mixing amongst and running on and off amongst an adjoining neighbour's cattle which were dying in great numbers, still we lost no more cattle. Disease may show slightly in a large herd of cattle, as it does every year, at the same time do no damage worthy of note, and if inoculation be compulsory it would be very hard to ask a man to put his herd together in a drought like the present or last summer, when his herd are too weak to walk to the yards, his losses in this wise would be far more than the disease would probably cause. |
| 22. | We think such an Act would be injurious. |

(No. 55.)

- | | |
|-----|--|
| 2. | 500 in 1867, 1,200 in 1874. |
| 3. | Have inoculated three or four times—first in 1867, and last in 1875. |
| 4. | 500 in 1867, and 900 in 1874. |
| 5. | Diseased, but cannot state percentage showing symptoms. |
| 6. | Several months on both occasions; put off inoculating, thinking the disease would expend itself. |
| 13. | From two to three weeks after inoculating have always had some swelled more or less, perhaps from 15 to 20 per cent. |
| 14. | Have continued milking cows after inoculating, and have not noticed any evil effects, excepting in cases where a cow swells badly, in which cases the milking has been discontinued. |
| 15. | Some deaths have always occurred from swelling, but never above 3 per cent.; have often cut off a portion of a swelled tail, which mostly stops the swelling. |
| 16. | An odd beast now and again has died after inoculation, but after three weeks or a month the disease has disappeared. |
| 17. | About a month. |
| 18. | A decided stoppage of the pleuro-pneumonia; believed to be the result of inoculation. |
| 19. | Decidedly in favour of it. |
| 20. | Have known uninoculated cattle to die which were running amongst inoculated cattle, but have never known a beast to take the pleuro upon which inoculation has taken effect. |
| 22. | I do consider that an Act should be passed compelling persons to inoculate as above. |

(No. 56.)

- | | |
|-----|---|
| 2. | 2,000. |
| 3. | Once, about 1864. |
| 4. | 1,500. |
| 5. | 2 to 3 per cent. |
| 6. | About a week or ten days. |
| 13. | The cattle were stiff and sore for a few days. |
| 14. | Were not milked. |
| 15. | One or two out of the 1,500. |
| 16. | There were about 1 or 2 per cent. died the first 10 days after inoculation. |
| 17. | About 10 days. |
| 18. | We have never had it on the run since. |
| 19. | Yes. |
| 20. | We have had cattle in paddocks with those affected, and have never taken it—we mean cattle inoculated with those not. |
| 22. | We think an Act is unnecessary for it. |

(No. 57.)

- | | |
|----|--|
| 2. | About 2,000. |
| 3. | Twice, but a portion only that were brought newly on run about 2½ years ago and 18 months ago. |
| 4. | About 500. |

(No. 57.—continued.)

- | Question. | Answer. |
|-----------|--|
| 5. | Slightly decreases 2 or 3 per cent. |
| 6. | Only visible a few days. |
| 13. | Cattle appeared sick after few days, about 5 per cent. losing portions of tails. |
| 15. | A few tails were cut off; no deaths. |
| 16. | None. |
| 17. | Those sick recovered in about a month each time; not noticed afterwards. |
| 18. | Favourable. |
| 19. | I am an advocate of inoculation as a preventative. |

(No. 58.)

2. From 1,500 to 2,500.
3. Three times—in the years 1874, 1870, and 1865.
4. In 1874, 200 head; in 1870, 35 head; and in 1865, about 1,500 head.
5. In 1874, about 5 per cent. were diseased; in 1870, about 3 per cent.; in 1865, about 5 per cent.
6. First lot, about a month; second lot, about a week; third lot, about two months.
13. About ten or fourteen days after the inoculation, the tails of about 5 per cent. of the number swelled and remained so about a fortnight.
14. The milking cows after inoculation were not milked.
15. About 1 per cent. from excessive swelling. The tails were opened above the swelling so as to allow the blood to flow freely. In some instances the tails were cut off above the swelling.
16. Yes—about 1 per cent. within a period of fourteen days, that is so far as symptoms of disease were perceptible.
17. None of the cattle died from disease after about a fortnight.
18. The cattle after being inoculated appeared drowsy and sluggish in their movements.
19. I am strongly in favour of inoculation.
20. I am of opinion that inoculation checks the progress of disease and prevents cattle from taking the disease again, as I have never had a single case after inoculation.
21. The virus should be taken from the lungs of a young and diseased bullock or cow, about the fifth day, and the animal slaughtered and well bled for that purpose. It ought also to be strained through fine muslin and afterwards passed through filtering paper.
22. I am of opinion that an Act should be passed compelling owners of infected cattle to inoculate when they can obtain virus to do so.

(No. 59.)

2. 150.
3. Several times. I do so when I brand up the calves, and whenever I buy cattle.
4. When pleuro first broke out I owned Kiargathur and Mickybil stations, and then inoculated over 2,000 head of cattle. Since I sold I have always inoculated when I could procure virus.
5. Diseased; about eight or ten per cent. showing symptoms.
6. About a month.
13. In ten or twelve days the tail will show a sore-raised spot and often swell more or less.
14. I have continued to milk cows after being inoculated and never noticed any difference in the quality of milk; if they swelled much we did not milk them.
15. Yes—about 1 or 2 per cent. When the tail shows signs of stiffness from swelling, it should be cut off above the swelling, going up till it bleeds freely, which gives relief and prevents the swelling going to the body.
16. A few may die that were sick when inoculated. I cannot say it is a cure, though I am satisfied it is a preventive.
17. Within a few weeks.
18. I have never known a beast die from pleuro that was properly inoculated and showed signs of the virus taking.
19. In favour.
20. My brother E. H. Lane bought 500 head of cattle last summer. I advised him to inoculate, but he thought them too poor; in less than a month he lost 60 head from pleuro; we then inoculated what remained, and only lost one after, and that was very bad at the time we inoculated. I have

(No. 59.—continued.)

- | Question. | Answer. |
|-----------|--|
| | had my inoculated cattle in paddocks adjoining my neighbour's cattle, with only a split fence between, and his cattle were dying and mine perfectly healthy. I have also had a diseased beast get into my paddock and die there in the midst of my cattle without affecting them in the least. |

(No. 60.)

2. 350 on this run, which have never been diseased.
3. I acquired the practice of inoculation in Riverina, before I came to Monara. I consider once is sufficient if properly performed, excepting some that (at the time) are not predisposed to take the disease; such animals may hereafter require inoculation.
4. Several hundred.
5. Three or four.
6. Considerable time.
13. Much depends upon the weather at the time; if close and muggy, and the virus too old, the effects may be bad and shown by considerable swellings high up the tail, which will sometimes prove fatal even after scarifying or hacking off; if all is favourable, at most the beast will only lose the brush.
14. I think it only affects the quantity.
15. I have never been correctly informed upon the subject, but inferred not more in the worst circumstances than four or five; scarify; various.
16. I am not aware of any; it may be that odd ones did, which were not predisposed to take the disease at the general inoculation.
17. About one month.
18. I don't understand.
19. I am in favour of it.
20. On the Lachlan I heard of one squatter who did not believe in its efficacy, but allowed his herd to die on until he found his neighbours' cattle both above and below had ceased to die after inoculation; he then had his cattle inoculated, and he then saved the remnant of his herd, having previously lost two-thirds.
21. I would not have the slightest hesitation in exposing ever such valuable cattle, if properly inoculated, with diseased beasts.
22. I do.

(No. 61.)

2. About 1,400.
3. Once, and about eight years ago.
4. I had about 120. They were running on the outside of my run.
5. About 5 per cent.
6. About two months.
13. In some cases the swellings were very great.
14. No.
15. Yes, and about 3 per cent.
16. Yes, and about nine days.
19. Yes, I am for inoculation.
22. No.

(No. 62.)

2. 100 head.
3. Once, four years ago.
4. 100 head.
5. Four head only.
6. A month.
13. Swelling—had to cut tails of some of them.
14. None milked.
15. None.
16. Two only, about ten days after.
17. None affected after; disease left them immediately.
18. Cured.
19. In favour.
20. None.
21. None.
22. Were inoculated. Yes.

(No. 63.)

2. 484.
3. Three times—in May, 1875, August, and September.
4. 388 on the first occasion; the remainder on the two subsequent dates.
5. Free from disease.

(No. 63—continued.)

- | Question. | Answer. |
|--|---------|
| 13. Slight swelling in the tail about three days after inoculation. | |
| 14. No. | |
| 15. None. | |
| 16. None. | |
| 19. In favour of inoculation. | |
| 20. After inoculation my cattle came in contact with diseased cattle without any ill effect. | |
| 22. Most certainly. | |

(No. 64.)

- | | |
|---|--|
| 2. 1,200. | |
| 3. Inoculated 600 two years ago. | |
| 4. 600 only. | |
| 5. About 50 head died before inoculation. | |
| 6. About three weeks. | |
| 13. Very few swellings. | |
| 14. Not milked. | |
| 15. A few head died from excessive swelling: only two or three. | |
| 16. Some died after inoculation that were diseased when inoculated. | |
| 17. Cannot say. | |
| 19. In favour of inoculation. | |
| 22. Yes. | |

(No. 65.)

- | | |
|---|--|
| 2. About 1,000. | |
| 3. Twice. To the best of my recollection 1866 and 1871. | |
| 4. 900 and 700. | |
| 5. First sixty deaths, then ten. The disease had showed amongst them about four months previous to inoculation, and about five or six deaths after inoculation. | |
| 13. The only symptoms visible is a small white swelling at the tip of tail, where the needle passed through. | |
| 14. Milking them when inoculated and afterwards, and no difference in flavour or quality as I could perceive. | |
| 16. Five or six deaths within a month after. | |
| 17. About a month as far as I could judge in appearance. | |
| 18. Every appearance of a cure. | |
| 19. In favour. | |

(No. 66.)

- | | |
|--|--|
| 2. 600 head. | |
| 3. Inoculated for pleuro-pneumonia in 1873. | |
| 4. Inoculated only once. | |
| 5. The number of cattle showing symptoms of disease were 10 per hundred. | |
| 6. About a year. | |
| 13. Swelling took place in the tail about a week after the inoculation. | |
| 14. Milking cows were not milked immediately after inoculation. | |
| 15. There was only one died from the inoculation. | |
| 16. There were no deaths among the inoculated cattle, only what showed symptoms of disease before inoculation. | |
| 17. It was about a fortnight after inoculation before the disease left the herd. | |
| 19. I am in favour of inoculation. | |
| 20. Any cattle which were properly inoculated were not infected by the disease afterwards. | |
| 22. I certainly do consider that an Act should be passed to compel inoculation when the virus can be obtained. | |

(No. 67.)

- | | |
|--|--|
| 2. 300 or 400 head, about twelve years ago, <i>i. e.</i> , 1864, or thereabout. | |
| 3. 1864. | |
| 4. Fifty or sixty. | |
| 5. I saw no symptoms in those we inoculated; but in some we killed some years after we saw symptoms of the disease having been in the lungs at one time. | |
| 6. About three or four months. | |
| 13. The tails swell, and sometimes fell off. | |
| 14. I forget. | |
| 15. Yes, but not many. We opened the tails with a knife. | |
| 16. I do not recollect. | |

(No. 67—continued.)

- | Question. | Answer. |
|---|---------|
| 17. The cattle ceased dying from that disease, but half of them died the following from starvation in the drought of 1865. | |
| 18. I think it stopped the disease. | |
| 19. I am in favour of it. | |
| 20. I have known other cattle inoculated which did not die. | |
| 21. I have had very little experience in this disease; it appeared here eleven or twelve years ago. I had the cattle inoculated and it disappeared. My sheep subsequently died, and I began purchasing cattle, that is how the herd has gradually increased from about 150 or 200 in 1865 (the year of drought) to 750 or 760 at present. | |
| 22. Yes. | |

(No. 68.)

- | | |
|--|--|
| 2. 200 head, more or less. | |
| 3. Only once; that was in September, 1871. | |
| 4. All upon the run. | |
| 5. Not more than 3 per cent., for immediately upon perceiving the disease I inoculated. | |
| 6. Cannot say; I inoculated immediately upon perceiving disease. | |
| 13. Usually about from six to seven days after inoculation the tail swelled a little, and the hair looked starchy, or rough, as it were; but in very few cases, if any, did the tail drop off. | |
| 14. No; not until the effects of inoculation had entirely disappeared. | |
| 15. Yes; two. 1 per cent. Cutting open to allow full discharge. | |
| 16. Three; but these evidently were affected previous to inoculation. | |
| 17. Almost immediately. I have never had the disease among the herd since. | |
| 18. It evidently prevented the disease spreading, and to my mind is a sure preventive. | |
| 19. In favour of inoculation, but not compulsory. | |
| 20. I never knew any cattle properly inoculated showing the disease afterwards. | |
| 21. Nothing beyond foregoing, with the exception that I think parties travelling cattle from place to place should be compelled to give due notice (if not verbally, by letter) to owners of runs they pass through. | |
| 22. Yes, I do; but I should think owners whose cattle are infected would have no other alternative; and as for getting virus this is simple, for their own diseased cattle provide it. | |

(No. 69.)

- | | |
|--|--|
| 3. In one case—about eleven years ago. | |
| 4. About six hundred (600) head. | |
| 15. None. | |
| 17. About three (3) months. | |
| 19. In favour of it. | |
| 22. Yes. | |

(No. 70.)

- | | |
|--|--|
| 19. Strongly in favour where disease has appeared; as a <i>preventative</i> is better than a cure. | |
|--|--|

(No. 71.)

- | | |
|---|--|
| 2. 400. | |
| 3. Once, in August, 1863. | |
| 4. About 350 head. | |
| 5. About 20 per cent. | |
| 6. About 14 days. | |
| 13. Yes; a slight swelling. | |
| 14. Never tried any. | |
| 15. None died after inoculation. | |
| 16. None died. | |
| 17. About 10 days. | |
| 18. None died after inoculation. | |
| 19. In favour of inoculation. | |
| 20. None. | |
| 21. Nil. I believe from inoculation that my cattle were saved, and from no other cause. | |
| 22. I am in favour of an Act to pass to compel persons to inoculate. | |

(No. 72.)

- | | |
|---------------------------------------|--|
| 2. 2,000. | |
| 3. Twice during past five years. | |
| 4. 600 and 400. | |
| 5. Store condition, about 5 per cent. | |

(No. 72—continued.)

- | Question. | Answer. |
|-----------|---|
| 6. | In the first case two months; second case, three weeks. |
| 13. | Some swelled about tails; have known cases where effects of inoculation were seen on the ribs; sores and swellings. |
| 14. | Some were; no visible effect. |
| 15. | Yes, about one per cent.; cutting infected tail till it bled, which cured the beasts. |
| 16. | None. |
| 17. | About four weeks. |
| 18. | Perfect cure. |
| 19. | In favour of. |
| 22. | Think the question of inoculating or not should rest with the owner. |

(No. 73.)

2. 370.
3. August, 1872; I had inoculated eleven or twelve year's ago; I cannot say to the time.
4. 140 young cattle 6 months up to two years old.
5. No disease.
13. Swelling; twisting of the tail.
14. It affected the milk in quantity.
15. No deaths from inoculation.
17. Seen no effect of inoculation after six weeks.
19. In favour of inoculation.
20. Ten or twelve years since, when the disease was very bad in this district and in my own cattle, I did not inoculate 16 cows, but kept to milk; in three months after inoculation of other cattle, 15 out of the 16 cows had died.

(No. 74.)

2. 4,500.
3. Once at Maharatta, in 1867. Once at Mila, February, 1874.
4. Maharatta, 1,365 in 1867. Mila, 2,000 in 1874.
5. Sound cattle were inoculated. Thirty head which showed symptoms, were bled and drenched with Stockholm tar and iodine.
6. They showed symptoms of disease two months before inoculation.
13. Nine days after inoculation swelling was visible; a twist in the tail almost immediately after inoculation.
14. Milked next morning, milk used not affected. Also working bullocks at work immediately after inoculated; no ill effects.
15. About 1 per cent. died; tails scarified, and tar and Venice turpentine inserted, the effects of remedy very slight.
16. None.
17. One week.
18. Good.
19. In favour.
20. Our cattle were afterwards exposed to the disease without any ill effects, which proves inoculation if properly done with proper virus—that is, chest virus with slight proportion of lung virus—beneficial.
21. Bleeding is a cure to a certain extent, but inoculation is a preventative.
22. Yes; most decidedly.

(No. 75.)

2. 5,000.
3. In 1868, all the cattle. In 1871, a portion.
4. 5,000 in 1868; 1,500 in 1871.
5. Diseased.
6. A month or two.
13. Tail very much swollen, in some instances even to cause death, in some half-way up, and then fell off. Chest virus not so powerful.
14. Milking herd escaped from pleuro.
15. Some deaths. Tails cut off, which had desired effect if done soon enough.
16. Have seen a few die from disease after inoculation.
17. Never left it for long.
18. In 1871 inoculated 900 weaners that had been tailed and showed no signs of disease with chest virus the same day it was obtained, turned them out, and many had the disease afterwards and died. Next day inoculated 600 heifers that had the disease with the same virus, continued to tail the heifers, and they ceased dying.

(No. 75—continued.)

- | Question. | Answer. |
|-----------|--|
| 19. | Should inoculate if disease were very prevalent. |
| 20. | Believe pleuro-pneumonia not to be infectious, but an epidemic. |
| 21. | The disease that is called pleuro effects cattle very differently now than it did in 1868. Cattle that are affected now are ill for a few days, and either recover or die; most recover. |
| 22. | Most decidedly not. |

(No. 76.)

2. Between 4,000 or 5,000; 2,000.
3. In 1864 inoculated the Eatonswill cattle. In 1873 and 1874 the Nymboida cattle.
4. On the 1st, some 3,000; 2nd, 500; 3rd, 300; 4th 800.
5. On first, could not give a correct percentage, but the disease was very severe. Amongst them could count from twenty to thirty head dead per week. On second, the percentage of those showing symptoms would be about one. On third, only four on the whole showed symptoms.
6. On the first, from six to eight weeks; on the second, about a week; on the third, not a week.
7. 1st. The animal was in what is known as the second stage of the disease. About half of the lung was too far gone for use; from the other half good virus could be had, but the virus already obtained outside lung was purer, that is, free from blood. 2nd. All lung in good state for use, slightly honeycombed, but filled and about it with a sort of lemon-colour jelly matter, "the best virus." 3rd. Lung rather too far gone for extracting virus, but got good virus in the chest.
8. 1st. From chest, the water found there of a very light sherry-colour. 2nd. The lung itself, cut, pressed, and strained. 3rd. The jelly kind of matter found in small quantities about the lung.
9. In all cases never more than forty-eight hours.
10. I have preserved virus to keep good for a few days—1st, by letting the virus run through animal charcoal, bottled and sealed; 2nd, by steeping the setons made of candlewick in virus, drying them, bottled, and sealed; 3rd, by merely hermetically sealing and sinking in deep running water.
11. I only tried the setons, and they acted rather severely, causing much inflammation in the tails.
12. I never would use the knife, only used needle and thread, which I used as follows:—Have a ball of candlewick cut in lengths of two-inch pieces, with a knot at one end of each piece. Put a little virus in a saucer, where the setons or pieces of cotton wick are placed to soak, leaving the end that is not knotted on the edge of the saucer—dry them, they are ready to thread and use.
13. About the fifth day after inoculation the swelling begins to show itself, when, if you examine the tail, it will be found that if the wound made by the needle is of a blackish appearance, and on lifting the scab formed thereon a sort of matter is found underneath, when it is so the beast has gone all safe over the inoculation; but if in place it has a reddish appearance and looks inflamed around it, the tail should be cut off above the inflamed part, or if left the swelling will spread up to the loin, and the result will be either the loss of the whole tail or of the beast.
14. I have inoculated milking cows when milking, and the only effect I could note was the milk being a little watery like, but nothing else.
15. I never lost more than half-a-dozen head from the effects of excessive swelling by the inoculation. If treated as I said in the previous question (13) there is no danger of much swelling, but if allowed to go too far up the only chance that I know is cutting the tail at the last joint, and perhaps have to scarify one or both rumps, and put Stockholm tar over to keep flies off.
16. I never to my knowledge lost a beast from disease after inoculation.
17. In the first, within a month; in the second, in a week; in the third, only two head showed signs of disease—one I killed for virus, the other I bled and inoculated, and got over it.

(No. 76.—*continued.*)

Question.

Answer.

18. The result of my inoculation was very satisfactory. I do not believe it cures or prevents the disease, but checks the severity, that is, it goes through the cattle in a very mild form.
19. I am very strongly in favour of inoculation.
20. One of the principal reasons for my belief in inoculation has been from my own practical experience in watching its success on whichever part of the run the disease has shown itself, and many deaths occurring. As soon as the cattle were inoculated no more deaths occurred. On several occasions I have put a diseased animal in a paddock with a lot more that had been inoculated without in the least affecting them; but on the other hand, on one occasion I put a diseased cow in a paddock to kill for virus, and it chanced to get out into another paddock, where the cattle that were in it had not been inoculated. The result was that in a week I had three or four with the disease. I inoculated at once, and I had no further cases then. One of the principal causes of some persons having failed in deriving the benefit of inoculation has in most cases, I believe, been because the cattle had been inoculated carelessly, or the virus used was bad, and therefore the cattle were actually not inoculated at all.
21. I may mention that doing my inoculation in 1864, at Eatonswill, most of the branding of that year was being done at the time, so calves were all inoculated as they were branded. I requested Mr. T. Hewitt, butcher, at Grafton, some four or five years after to take note of the appearance of the lungs on those bullocks being killed there, and which had been inoculated as calves, and his report was that, without exception, their lungs were in the most perfect state of health; whilst older cattle showed signs of having been more or less affected, showing it by the lung sticking to the ribs more or less.
22. Such an Act I should consider to be for the general benefit of all cattle owners, but should not compel to inoculate after the general herd has been inoculated, unless it be cattle born after such inoculation.

(No. 77.)

2. 800.
3. Twice—about two years ago.
4. About 700.
5. Rather poor; about 5 per cent. with pleuro.
6. About fourteen days.
13. You may see the tail swell three or four days after the inoculation.
14. I have inoculated milk cows and milked them the next day. I could not see any difference in the milk.
15. About 5 per cent. Cut the tail off. I have seen some cattle lose all their tail after inoculation.
16. Seldom any for a period of three years, when required to re-inoculate.
17. About three weeks, in the inoculated cattle.
18. Cattle seem to thrive well after the inoculation.
19. In favour.
20. If properly inoculated lasts for about three years.
21. I can't give any other information than the above.
22. Yes.

(No. 78.)

2. 13,000.
3. Twice—in June, 1873, and April, 1874.
4. First time, 10,000; second time, 3,000.
5. Slight symptoms of pleuro showing on one part of the run.
6. Inoculated at once.
13. Very few swelled tails—the evidence of the virus having taken effect being a small scab on end of tail, and the tail bent upwards sometimes at end.
14. Not milked.
15. No deaths that I know of from this cause. Very few deaths from the disease, about 2 per cent.
17. Three months.
18. Good on this station.
19. In favour.
20. The proof of the efficacy of inoculation is that the disease left the herd. Afterwards they were not exposed to infection.

(No. 78.—*continued.*)

Question.

Answer.

22. I do not think inoculation should be made compulsory, because if, as I think, it is a preventative, the fact of my neighbours not inoculating can do me no harm.

(No. 79.)

2. 100.
3. Once.
4. 90.
5. Sickly. 5 per cent.
6. Four days.
13. Tail generally much swollen.
14. Did not milk cows.
15. Four or five.
16. None.
17. Two months.
18. Satisfactory.
19. In favour of.
20. I consider inoculation will prevent cattle catching the disease.
22. Yes.

(No. 80.)

2. 350.
3. Twice—in 1863, and again July, 1875.
4. 800 head 1863, and 350 in 1875.
5. All sound.
13. Slightly visible about the ninth day.
15. No deaths.
16. None.
18. Very beneficial to the herd.
19. In favour of inoculation.
20. We consider that cattle properly inoculated are not exposed to the infection.
22. We certainly do.

(No. 81.)

2. 350.
3. Twice, 1865, 1871.
4. 200 first, 350 second.
5. Yes. 30 per cent.
6. One month.
13. How, swollen in the tail.
14. Not milked.
15. About 3 per cent. Cut their tails off and saved them.
16. None.
17. About 3 months.
18. Very good.
19. In favour of it, if disease is going about.
20. The cattle properly inoculated were exposed to infection after inoculation, and were not affected by it.
21. None to give.
22. Yes.

(No. 82.)

2. 1,500—Sept. 1874.
3. Once only, during September and October of 1874.
4. 1,500.
5. A lot of 50 head that I had purchased two months before inoculating, and which had the disease when bought, died; up to that time at 30 per cent. The remainder of my cattle during those two months died at about 1 per cent. from after-effects of inoculation—swelled tails, &c. In two months I lost about $1\frac{1}{2}$ per cent.
6. From the time the disease first broke out in this part of the Colony to now there has not been a year but what there has been some deaths from pleuro in my herd, although slight as compared with others. 1 per cent. per annum would cover them.
14. Those I inoculated were not milked again for a month, when no alteration in quality could be detected.
15. I consider I lost about 1 per cent. from swelling within two months after inoculation, and $\frac{1}{2}$ per cent. of cattle that had the disease when inoculated. When swelled in the tail low down, I cured several by cutting it off above the swelling. When high up and about the butt of tail, I well scarified it with a knife. I attribute a number of my losses to not finding the cattle when bad.
16. Since inoculating in September of 1874, I have lost from pleuro, out of those inoculated, about $\frac{1}{2}$ per cent.
17. The disease has not and I do not believe ever will leave the herd. Inoculation is in my opinion a preventative, but not a permanent cure.

(No. 82—continued.)

- | Question. | Answer. |
|-----------|---|
| 18. | On the whole unsatisfactory. |
| 19. | Opposed to its becoming compulsory. My experiences as related above do not warrant my inoculating a mob of 80 bullocks that arrived here some two months since. 5 head have died from pleuro, and there are 4 others bad with it, but which I think will recover. Had I inoculated during first symptoms I consider the chances are my losses from swelled tails, &c., would have been as great. Station cattle are not so easily managed as quiet dairy herds. Further, the 80 head, with the exception of the 9 head, to all appearances are quite sound. |
| 22. | Such an Act would in my opinion be very arbitrary, and not conducive of any great good. |

(No. 83.)

2. Two herds—one of 140 and one of 56.
3. Twice—1864.
4. See above.
5. One herd (the largest one) 6 were diseased at the time of inoculation, 1 shot for the virus, 1 recovered, 5 died; the other, 3 diseased, 1 shot for the virus, 2 died.
6. One month.
13. The tail swelled a little; but I think the large wound made by the needle allowed the matter to escape. They were all well in three weeks.
14. Yes. Lost one-third of their milk, and was not so good in quality.
15. None.
18. Good.
19. I am in favour of it; and it is the general opinion of the dairymen in this district that it is a sure preventive.
20. Two gentlemen here would not have their cattle inoculated when the disease broke out, but let it run its course, until they lost one-third of their herd. They then inoculated a few that were bad with the disease at the time, and in a month the disease was gone.
21. I think the virus ought to be taken from a beast that is not far gone in the disease, and used at once. Have seen very bad effects from virus taken from a beast that was far gone with the disease, and from cattle that had died of it; in fact the effects from virus taken from a beast that died of the pleuro was as bad as the pleuro itself.
22. Yes.

(No. 84.)

2. 4,035.
3. Once—February, 1875.
4. 1,800.
5. Slightly diseased—scarcely 2 per cent.
6. About a month.
13. A few instances of swelling in tail about eight or nine days after operation; a few also were swollen all over the body.
14. The milking cows were not milked for at least a fortnight after inoculation, and no perceptible effects from the inoculation in the milk.
15. Not 2 per cent. died from excessive swelling. Where the swelling was confined to the tail, the tails were either cut off or the knife run through the hide or tail from top to bottom; but without any beneficial results.
16. Unable to say, as not sufficient notice was taken whether they died from the disease or from the inoculation.
17. Somewhere about six weeks.
18. Do not think the result beneficial.
19. If with good virus, and properly administered, it may do good; but I think extremely doubtful.
20. Unable to say whether the cattle were properly inoculated. They were done in the ordinary way by stockmen, who may not have taken the virus in its proper stage.
22. No; an Act of the sort would not be fair.

(No. 85.)

2. About 300 head.
3. Only once, about 10 years ago.
4. 200 head.
5. About 4 per week.
6. About 2 months.
13. A few swelled a little, but came to no loss.
51. No deaths.

(No. 85—continued.)

- | Question. | Answer. |
|-----------|---|
| 16. | I think two died after, but these must have had the disease in them at the time. |
| 17. | I lost none only the two mentioned above at that time, but have lost three lately, which I think was the pleuro. |
| 18. | Very good. |
| 19. | I am in favour of inoculation. |
| 20. | I have had none die from pleuro until lately. |
| 21. | I believe that inoculation is a preventive, and for curing cattle diseased with medicine I think is out of the question. There may be a few young cattle get over it, but I think it would not be 5 per cent. |
| 22. | I do. |

(No. 86.)

2. My herd is composed chiefly of bullocks, which I purchase and fatten to the number of about 1,000 per annum; these I inoculate as purchased.
3. Of this I have kept no record, but since 1865 I have inoculated all cattle that have come into my hands as soon as I could procure the necessary virus. I should estimate that since 1865 I have inoculated about 12,000 head.
4. No record of numbers.
5. In many cases the cattle have been diseased when operated upon, but cannot give the percentage of those affected. In some cases the cattle have been free from disease.
6. In some cases for several months, in others the disease had only just appeared, and some were free from disease.
7. I have usually chosen a beast in the second stage of the disease, when only part of the lung was hepatized; but from more recent experiments I have found that the virus which exudes from the lung of a beast in the third stage of the disease, and is of a clear amber colour, is fully as effective and much less liable to cause inflammation, and will keep better than that procured direct from the lung.
9. In cool weather it may be kept for several days, but in hot weather it must be used within 24 hours.
10. I have never been able to preserve virus, but believe that where ice can be procured it could be kept for any length of time. I have soaked the ends of wool in virus and dried them, but could not detect any symptoms of inoculation in the cattle inoculated with them.
12. With a needle 5 inches long, with a round handle of wood at one end, a flat blade about $\frac{3}{4}$ of an inch long and $\frac{1}{2}$ of an inch wide, with an eye about $\frac{1}{4}$ long and $\frac{3}{4}$ of an inch from the point.
13. I have observed that inoculated cattle begin to show the effect of the operation in about 5 to 7 days; the coat begins to stare, and there is a general dulness and stiffness of the whole carcass, and sometimes a cough; the tail seems limp, and sometimes a little thick at the point; in some few cases the swelling extends to the root of the tail.
15. Yes, about 1 per cent.; I have saved cattle when taken in time by cutting off the tail above the swelling.
16. I have seen deaths after inoculation, but in all cases the cattle were badly diseased before inoculation. I have not noticed dates, but deaths, if any, usually occur within a week or two.
17. I consider a herd perfectly safe a month after inoculation.
18. Immunity from pleuro-pneumonia.
19. I am in favour of it.
20. I have a small herd of stud cattle which I have inoculated carefully for the last six years, and though they have been in contact with diseased stall cattle frequently, I never saw a case of pleuro in the herd, numbering about 100 head of all sexes and ages.
21. My advice is to inoculate whenever virus is to be had, but prefer the spring and autumn, when the weather is cool and green grass plentiful. Take the virus from the cavity round the lung, keep it cool and use it fresh; insert the seton lightly about 1 inch from the tip of the tail.
22. I think the time has passed when a compulsory measure would be of any service.

(No. 87.)

- | Question. | Answer. |
|-----------|--|
| 2. | 1870, about 900, all cattle in the herd; 1871, about 700 stores purchased. |
| 3. | Four times—1863, 1869, 1870, 1871; all in winter or early spring. |
| 4. | 1,500, 220, 900, 700. |
| 5. | All cattle properly done will show symptoms if your virus is any good; should be kept as quiet as possible after inoculation. |
| 6. | At first inoculation great loss was sustained before we could tell what to do or how to go about it. |
| 13. | About one month, opened by lance or knife if inflammation or great swellings exist and matter forms. |
| 14. | No, not being either pleasant or wholesome. |
| 15. | 1 per cent. after including operation, &c. |
| 16. | Answered above. |
| 17. | Two to three months. |
| 18. | Cattle afterwards improved in health and fattened better, even those that were infected at the time of inoculation. |
| 19. | In favour of it. |
| 20. | From 1863 to 1869 our herd was perfectly free from pleuro, although diseased cattle were often passing through the run, as stores from Queensland and other places going south to be sold, and brought here again by purchased stores. |
| 21. | The disease is not nearly so bad or destructive as formerly. We occasionally see a young beast with it even now, which must always be the case unless you always inoculate the calves at branding. Not over 6 head have been found out as dying from pleuro this winter. Old cattle inoculated keep quite right. |
| 22. | I am not in favour of compulsion, the disease being so much milder than formerly; and as I am a believer, if properly done, you can mix any quantity of diseased cattle with them without infecting. |

(No. 88.)

2. About 1,200.
3. Only twice, and the weaners only, both in May, 1874, and May, 1875.
4. In 1874, about 600; in 1875, about 250.
5. About 3 per cent.
6. Do not know.
13. The swellings appeared in about eight days, and ceased in about twenty-eight days.
14. Never tried.
15. Lost about 2 per cent.; did not try anything; let them take their chance.
16. Have not noticed any deaths since inoculation in those that we inoculated.
17. Nearly instantly in the inoculated beasts.
18. Weaners inoculated, and well done, will very seldom take the disease, and only in a very mild form, and scarcely any die.
19. In favour, of course.
20. Have not had sufficient experience, but have no fears of the disease if inoculated young.
22. Yes, especially the young cattle, *i.e.*, weaners, or say at six months old.

(No. 89.)

2. 1,000.
3. Once—in July, 1873.
4. 1,000.
5. Diseased—5 per cent. sick.
6. About one month.
7. The animal killed to obtain virus for inoculation was in fair condition. When killed the beast was in the last stage of the disease, and the lung was nearly all marbled or hepatized.
8. The virus was taken from the chest, being the virus round about the lung, but the lung was not cut to obtain virus.
9. But a few hours.
10. We never preserved virus by artificial means, but have used it a week only on some occasions and found it had the desired effect.
11. Should always prefer fresh virus if it is to be obtained, as the old virus seems to cause the tails to swell.
12. We have always used needle and thread, or rather worsted.

(No. 89—continued.)

- | Question. | Answer. |
|-----------|---|
| 13. | We have sometimes had some 2 or 3 per cent. suffer from swelling after inoculation, but it seldom spreads higher than the tail if proper care is taken to open the infected part or cut off the tail. |
| 14. | Milking cows were not milked after inoculation till all effects had disappeared. |
| 15. | Some deaths through neglect, but have always found that a free use of the knife, if in time, will prevent deaths. |
| 16. | A few deaths occurred after inoculation, but only within the first fortnight. |
| 17. | About one month. |
| 18. | No signs of pleuro in herd since inoculation. |
| 19. | Strongly in favour of inoculation. |
| 20. | Have known cattle that were inoculated to be mixed with diseased cattle, and they never showed any signs of disease. |
| 21. | Consider that inoculation will in all cases prevent pleuro, and if done properly, a herd may be kept sound. |
| 22. | We are strongly opposed to compulsory inoculation, and consider it would be interfering too much with pastoral interests. |
- (No. 90.)
2. 1,500.
 3. Twice—once in March, 1864, and 1870.
 4. 2,000.
 5. Diseased—5 per cent. on first, and 10 on second.
 6. Two months.
 13. Slightly festering.
 14. I never used for a time.
 15. Yes, 2½ per cent.; by cutting the tail off close above the swelling it would stop the swelling.
 16. No.
 17. Two months.
 19. In favour.
 20. Never saw cattle that were properly inoculated affected.

(No. 91.)

2. About three hundred (300.)
3. 1875, April 22nd, 80; June 2nd, 40; September, 8th, 125.
4. 80, 40, 125.
5. Diseased; upon the 1st occasion 5 showed symptoms.

"	2nd	"	1	"
"	3rd	"	1	"
6. About 8 months.
13. A slight irritation in the tail perceptible in about 10 or 14 days. Only four suffered from swelling, say 2 per cent. I have only seen one with the tail twisted.
15. Three—about 1 per cent.—all died, no remedy tried. I cannot account for the swelling, unless the animal, from which the virus was taken had had the disease a day or two too long; the lung may have been a little decomposed.
16. None, except those that were diseased when inoculated.
17. The disease was checked at once by inoculation.
18. The best result possible if properly done. All cattle ought to be inoculated when young if possible. I was very successful with my weaners.
19. In favour of it; most decidedly.
20. I have lost no cattle by pleuro since inoculation. I consider my cattle properly done, having inoculated myself; the first and second lots were both in contact with diseased beasts, yet none have shown symptoms of disease since.
21. I have had 5 head affected in one night through a cold sea breeze after a very hot day; others have died from the same cause. Other people have remarked the same thing in this neighbourhood. In inoculating cattle the disease should be communicated in as mild a form as possible, particularly if the cattle are fat. The cattle mentioned above were bred at Yass, and have not been in contact with affected cattle. The cattle that have died, with the exception of a few, came from the Tumut, from the herd of R. K. Broughton. I have heard lately that he has been breeding in and in for a number of years, which has weakened the constitution of his cattle.
22. Yes; I consider an Act should be passed without delay. I shall inoculate yearly, now that I am buying valuable animals to form a herd.

- (No. 92.)
- | Question. | Answer. |
|-----------|---|
| 2. | About 1,400 on the first occasion, and about 3,000 on the second. |
| 3. | Twice; cannot give the dates when I inoculated. |
| 4. | 1,330 at the first inoculation, about 1,400 at the second. |
| 5. | Not a great many showing pleuro; cannot say what percentage, because the run is scrubby, and could not keep all the cattle together. |
| 6. | One month. |
| 14. | Milking cows were not milked immediately after inoculation. |
| 15. | Yes; cannot say what percentage, because I did not keep an account of what died. |
| 16. | A few within about one week after being inoculated. |
| 17. | Cannot say for certain, but think within one month. |
| 18. | Successful. |
| 19. | In favour of inoculation. |
| 20. | All the cattle inoculated on the first occasion were running with the diseased cattle at the second time that pleuro broke out, but not one of them showed the disease again. |
| 22. | Yes, I am of opinion that inoculation should be compulsory, when it is possible to get the virus. |

(No. 93.)

- | | |
|-----|--|
| 2. | About 100. |
| 3. | Once—in the year 1865. |
| 4. | Eighteen working bullocks. |
| 5. | Clean. |
| 13. | After fourteen to seventeen days a swelling about the size of a hen's egg appeared at the end of the tail. |
| 16. | Five. From the seventh to the twelfth week after inoculation. |
| 18. | Five died and thirteen lived. |
| 19. | I am not. |
| 20. | Mr. Abraham Davis, Double Swamp, Grafton, who has about 150 head of cattle which have been running with inoculated cattle (diseased), drinking from the same water, eating the same grass, and even eating the bones of dead diseased cattle, has never lost a head. |
| 22. | I do not. |

(No. 94.)

- | | |
|-----|---|
| 2. | 500 to 5,000. |
| 3. | Many times (say twenty), from 1863 to 1872. |
| 4. | From 5 to 5,000. |
| 5. | Sometimes diseased to extent of 10 per cent.; other times perfectly healthy. |
| 6. | From one minute upwards. |
| 13. | All depended on state of animal's blood and the weather. |
| 14. | Same remark applies to this. Any blood poisoning, however slight, will affect the milk of a cow. |
| 15. | Not more than at worst 1 to 2 per cent. |
| 16. | Yes. At different times, varying from about a month to twelve months after the inoculation. |
| 17. | Never left the herd while inoculation was being practised. |
| 18. | Though once a strong believer in its being a preventive of pleuro-pneumonia, practice has proved it to be utterly useless. |
| 19. | Strongly against inoculation. Any one believing in it must have had little experience—he merely is a theorist. |
| 20. | Have seen cattle inoculated when diseased, and the p.-p. pass off within a few days as from the results of inoculation—then six months afterwards, when mixed with other clean cattle, take it again, and suffer worse than the uninoculated cattle—and disease pass off just in the same mysterious manner. |
| 21. | I consider pleuro-pneumonia is at all times the result of acclimatic changes and influences, as influenza or measles in the human race; and is very often coincident with the former in its outbreaks. As an instance, I know of four herds, from 40 to 200 miles apart, which on a given day—rather more than two years ago, were perfectly free from pleuro—had all of them, <i>simultaneously</i> , an outbreak, which could be fixed to within 48 hours, and when not the remotest chance of infection from other cattle existed in two of the cases at all events, and this was among inoculated cattle as well as uninoculated. |

- (No. 94—continued.)
- | Question. | Answer. |
|-----------|----------------|
| 22. | Certainly not. |
- lated. People often inoculate just as disease has gone through the herd, and then ascribe to inoculation, the result simply of nature. As an instance, last June twelvemonths, I met a friend who has a herd of cattle in Gippsland in which he had never had a single case of pleuro till within a week or two of the date in question; since when they were dying fast, and he hurried off home, to try inoculation as a forlorn hope. (Disease was still going on, he told me, when I again met him, four months afterwards.) His men started out to muster cattle for inoculation, when, as luck would have it, a change set in, and some days of constant rain followed, rendering the yards a bog, so that not a beast was inoculated. And after that date not one fresh case of pleuro has appeared on the run. "So," as he said, "I have had a narrow escape, as had I been home a few days sooner, I would have had cattle inoculated, and ever after thought it even a cure; instead of leaving it to nature, I should by my own act have done my best to perpetuate the disease,"—which opinion I quite hold with.

(No. 95.)

- | | |
|-----|---|
| 2. | 270 |
| 3. | Once in May, 1874; once in June, 1874; September 8th, 1875. |
| 4. | 250 in 1874; 20 in 1874; 13 in September, 1875. |
| 5. | Four showed symptoms and died; one I killed. |
| 6. | 14 days. |
| 13. | First inoculation with needle—the cattle's tails falling off and swelling—and the cattle kept their tails straight out for several weeks. Second, with knife; only show a little stiffness for about 8 days afterwards. |
| 14. | They did not give the same quantity of milk. I did not use it, and it was not so good, for a month—and majority dried up through inoculating. |
| 15. | 2 calves and 1 steer out of 250, from swellings; they had all more or less swelling of the tail. To cure them, I scarified and bathed them with hot water, and other different means. |
| 16. | 7 cows, about 8 or 9 days after—slipping the calf and swelling in the lungs. |
| 17. | About one month. |
| 18. | Prevented the disease, as I have never had none since. |
| 19. | In favour of inoculation. |
| 20. | My cattle being in paddocks, have never mixed with other cattle since inoculating. |
| 21. | I consider calves ought to be inoculated when branded. |
| 22. | Yes. |

(No. 96.)

- | | |
|-----|--|
| 2. | 750 to 780. |
| 3. | Twice; the first time about 8 years ago, the last time in the latter end of July and beginning of August last. |
| 4. | First occasion, from 5 to 600; last, 750 to 780. |
| 5. | In the first instance, as nearly as I recollect, 40 per cent.; the last instance the disease had not got into the herd. |
| 6. | The first instance, speaking from recollection, a month or more. |
| 13. | The last occasion no swelling or twisting appeared till the heavy frosts and extreme cold set in; and about 40 to 50 head of the gross number swelled, and about 25 head died. |
| 14. | Milking cows were not milked for a fortnight or more after inoculation. |
| 15. | About 25 head died out of the 750 to 780. If seen in time, and the swelling not too great at the root of the tail, merely scoring the tail well or cutting it off does good. |
| 16. | In the first instance, 8 years ago, a good many; I cannot say what percentage or at what time after operation. |
| 17. | In the first instance, as far as I can recollect, from a month to six weeks. |
| 18. | First instance, stopped the cattle dying. |

(No. 96—continued.)

- | Question. | Answer. |
|-----------|---|
| 19. | Decidedly in favour of inoculation. |
| 20. | Having inoculated three lots of cattle this season with the disease amongst them, it has stopped. Have had some of my weaners that were inoculated running for over a fortnight with diseased cattle and never took it. |
| 21. | In every instance where I have known inoculation properly performed amongst diseased cattle, it has stopped or checked it. |
| 22. | Certainly. |

(No. 97.)

- | | |
|-----|--|
| 2. | 1,000 head in January, 1875, running at East Glendon, ten miles from Branxton. |
| 3. | Twice; the first was when the pleuro-pneumonia broke out in this Colony, I think it is about seven year's ago, the disease disappeared then soon after the inoculation. Secondly, in January last. |
| 4. | 100 head on the first occasion, and none died through the inoculation. I had sixty head die then by it before I inoculated them. |
| 5. | Half—January, 1875. I inoculated 1,000 head, the pleuro showed in June, 1874, and got worse up to the time I done them, I had about sixty head die out of a thousand, from June, 1874, till January, 1875. |
| 6. | Seven months I had four head die through the inoculation, and six head through the pleuro after inoculation. |
| 13. | Needle—there will be plenty of the virus follow the thread. I have lanced the swollen parts and cut the tails off when much swelled after inoculation. |
| 15. | Four head died out of 1,000. |
| 16. | Two head in a month or six week's after. |
| 17. | Three months. |
| 18. | My cattle are free from it now, and my neighbours cattle has it. |
| 19. | I am in favour of it. |
| 20. | I never knew them to take it after inoculation. |
| 22. | Yes. |

(No. 98.)

- | | |
|-----|---|
| 2. | 7,000. |
| 3. | I have inoculated three times, once about four years ago; once three years ago; and last January. |
| 4. | The first time, three hundred, the second seven hundred, and the last one thousand. |
| 5. | The cattle were diseased and about 5 per cent-age showing disease. |
| 6. | About one month. |
| 13. | In about a week a few of the tails would swell, but not much; if bad, should be drove in and bled as close above the swelling as possible. |
| 14. | We did not inoculate any milking cows. |
| 15. | We did not have any deaths from swelling after inoculation. |
| 16. | We had not any death amongst inoculated cattle after the inoculation. |
| 17. | Three months. |
| 18. | Inoculation perfectly cured my cattle each time we inoculated, and is a very good thing. |
| 19. | I am in favour of inoculation. |
| 20. | It is not good to inoculate in too hot weather, as it is apt to kill some of them. I never knew any cattle that was once inoculated to be diseased a second time, it will appear in the herd after the inoculation, but it is the cattle that is bred afterwards. |
| 22. | Yes, every person that has cattle should be compelled to inoculate, if they once see the disease in them and can get the virus. |

No. 99.)

- | | |
|-----|---|
| 2. | Three hundred. |
| 3. | Once only, August, 1863. |
| 4. | Three hundred. |
| 5. | Some dying, two out of 300. |
| 6. | About three months. |
| 13. | About ten of the number. |
| 14. | Yes, not that I remember. |
| 15. | Four died, opening with knife using butter of antimony. |
| 16. | Yes, two; about one week. |
| 17. | No signs after the two died. |
| 18. | Good. |
| 19. | I am in favour of. |
| 21. | I have seen inoculated cattle in the same paddock with diseased cattle and not take it. |

(No. 100.)

- | Question. | Answer. |
|-----------|--|
| 2. | 800. |
| 3. | Once—about 1869. |
| 4. | 800. |
| 5. | Ten per cent diseased. |
| 6. | Inoculated six weeks after noticed. |
| 13. | A few swelled a week after, the tails cut off those that showed. |
| 14. | None milked for sometime. |
| 15. | About 3 per cent. died. See question 13. |
| 16. | About 1 per cent. very badly affected when inoculated. |
| 17. | Three or four months |
| 18. | Cattle commenced to fatten. |
| 19. | In favour; decidedly. |
| 20. | Have no positive information to give. |
| 22. | I do. |

(No. 101.)

- | | |
|-----|---|
| 2. | 4,000. |
| 3. | I have never re-inoculated. The operation has been performed in my herd at three separate periods, viz: Jan., 1867, April, 1867, and Nov., 1864. |
| 4. | 3,000 first; 1,000 second time; 600 third time. This has been at the Clarence. |
| 5. | Diseased, 1 per cent. showing symptoms. |
| 6. | About one month in the case of the 3,000; and four months in the case of the 1,000; 2 months in the case of the 600. |
| 7. | Virus was taken from very marbled lungs, and proved to strong, which caused many tails to swell. In the case where virus has been judiciously taken, a mob of cattle have been driven a few miles, when a beast showing very mild symptoms has been selected and part of the lung taken before violent hepatization commenced. The beast should not have advanced to that stage that coughing is caused by gentle driving. |
| 8. | In the case of the 4,000, the virus was taken from the lung from a very diseased lung. In the other two instances water from the chest was taken from beasts very much diseased. |
| 9. | The virus taken from the lung was putrid before being used, through carelessness; the chest water was used immediately after being taken. |
| 10. | No. |
| 11. | No. |
| 12. | 4,000 cattle were inoculated with grooved knife; 600 with needle and thread. |
| 13. | Many died of the first inoculation, say 10 per cent. from swelled tails; none died of the second and third. |
| 14. | Not milked. |
| 15. | First lot. Yes, 10 per cent., as the virus was too strong and putrid when used. The tails were well scored and proved beneficial. Second, no swelling. Third, no swelling. |
| 16. | None of the cattle operated upon have ever shown sign of disease. |
| 17. | No deaths ever occurred after the first fortnight. |
| 18. | Most beneficial when we understood how to take the virus and use it. |
| 19. | Very favourable to the practice as a preventative. |
| 20. | As a proof of the efficacy of inoculation I may mention that the bulls of the herd were excluded from the operation, these nearly all succumbed to the disease, while the inoculated cattle recovered. Yes, some of the inoculated cattle were removed to another run where disease was rife and escaped contagion. |
| 21. | The chest virus of a beast half hepatized may be safely used. It is highly injudicious to inoculate young cattle when being cut and branded; the disease flies at once to the purse and causes swellings and death. The writer lately purchased a run from a Mr. Bagot (who never inoculated until he lost about half his herd) and introduced 200 heifers badly diseased; he inoculated them last Jan. 7th with chest virus which checked the disease at once, and no case has occurred since. Bagot's cattle that remain and stray onto the run are diseased and dying; but mine are now healthy and fat. I wish I could compel Bagot to inoculate. The cattle Bagot has inoculated on his own run are now after eight years of pleuro free from disease. |
| 22. | Yes. If any owner's cattle are infected, the virus can be easily obtained. |

(No. 102.)

- | Question. | Answer. |
|-----------|--|
| 2. | In 1865, 1,500 head; in 1874, 400 head. |
| 3. | Twice—First in September, 1865; second in March, 1874. |
| 4. | First lot, 1,500 head; second lot, 400 head. |
| 5. | First time, 2½ per cent.; second time, half the herd. |
| 6. | First time, two months; second time, six months. |
| 13. | In first lot, a good deal of swelling; in second lot, not much. |
| 14. | Not for a few days. |
| 15. | In first lot 1½ per cent., by cutting off the tail above the swollen part; last lot none. |
| 16. | None of the cattle operated upon now show any sign of disease. |
| 17. | About one month. |
| 19. | In favour; scarcely any losses would occur if the virus is taken at the proper state; in my opinion the virus should never be much darker than sherry. |
| 20. | The ones inoculated were exposed to the disease but did not take it again. |
| 21. | I should recommend March, as the best season in New England; and that cattle be inoculated every seven or eight years. |
| 22. | Yes. |

(No. 103.)

- | | |
|-----|---|
| 2. | About 800. |
| 3. | We only inoculated on one occasion, when pleuro first broke out in the district; we think it was in September, 1864, we had the cattle inoculated. |
| 4. | They were all inoculated, except it might have been a very few odd ones that were not got in at the time. |
| 5. | All that were inoculated did not show much signs of sickness; they could run very well. |
| 6. | The disease first showed in the herd in January; they were inoculated in September following. |
| 13. | Some of the cattle swelled about the root of the tail; we had only to make incisions on two or three; a great number did not show much swelling at all; some lost the brush of the tail. |
| 14. | They were not milked for a few days after inoculation. |
| 15. | We did not find more than five or six die after inoculation. Do not know if they died from inoculation or not. |
| 16. | We do not know that any died, except the five or six referred to above, about that time. We only inoculated once. Since that time we have only had one or two at different times that showed symptoms of having died with pleuro; they were so few that we did not inoculate. |
| 17. | We think in about 2 months. |
| 18. | It seemed in our case to have resulted favourably. |
| 19. | We should inoculate again, if we saw it showing much in our cattle. |
| 20. | Some travelling cattle have since passed over the run our cattle were on and left some that died; but our cattle did not appear to take it from them. |
| 22. | From our own experience, we think inoculation desirable, where disease shows to any extent. |

(No. 104.)

- | | |
|-----|---|
| 2. | 300. |
| 3. | Once, 1872. |
| 4. | 250. |
| 5. | Only one diseased, which was killed to take the virus. |
| 6. | They were inoculated about 3 days after the beast showed the symptoms. |
| 13. | Some few days after inoculation the cattle had their tails swollen and a few were swollen about the rump. |
| 14. | I don't think it would affect the milk. |
| 15. | Three of the cattle died, and there were some which swelled on the rump. A good many were saved by cutting off the tails when very bad, and lancing the rump. |
| 16. | After the swelling caused by inoculation had gone down, no signs of the disease appeared. |
| 18. | Very satisfactory. |
| 19. | In favour of it. |

(No. 104—continued.)

- | Question. | Answer. |
|-----------|---|
| 20. | Since inoculation, some neighbours' cattle were affected, but none of the cattle inoculated here had it. |
| 21. | When inoculating, the operator should be careful, when passing the needle through the tail, not to touch the bone, as the tail will rot right off if the bone is touched. |
| 22. | I think that such an Act would be of great benefit. |

(No. 105.)

- | | |
|------|--|
| 3. | Only once. |
| 4. | 600. |
| 5. | About twenty-five per cent. |
| 6. | About one week. |
| 13. | In about ten or fourteen days, some showed inflammation in the tails, and others did not for some time afterwards. |
| *14. | Yes. I don't think it affects the milk in any way. |
| 15. | Opened the skin slightly, to allow it to discharge, and dress with butter of antimony. |
| 16. | One or two. Cannot fix dates. |
| 17. | Almost at once. |
| 18. | Satisfactory. |
| 19. | Yes. |
| 20. | I have never known them take the disease the second time. |
| 21. | Inoculate at once. |
| 22. | Yes. |

(No. 106.)

- | | |
|-----|--|
| 2. | About 2,500 head. |
| 3. | Changing our cattle at various times, have frequently inoculated, but cannot state dates with accuracy. |
| 4. | From 300 head to 1,000 head. |
| 5. | When cattle begin to show pleuro, we inoculated all cattle indiscriminately in the same paddocks where the pleuro shows. |
| 6. | As soon as we see the pleuro showing, inoculate at once. |
| 7. | The animal affected droops its ears, slimes at the mouth, refuses to feed, coughs if driven fast, and generally stands away from other cattle. |
| 8. | In the first stage of the disease, the virus will be in a liquid state in the chest, which is the most safe time to use it; but it can be taken from the lung and used, by pounding it in a bucket and straining it through very fine cloth or cambric handkerchief. |
| 9. | The sooner used the better; if kept any time, it should be filtered through charcoal before use. |
| 10. | We have preserved virus, by corking a bottle tight and burying it under ground. |
| 11. | Have used it successfully, but prefer it fresh. |
| 12. | With speying needle and candle cotton. |
| 13. | Do not milk cows until one month at least after inoculation. |
| 14. | Consider the milk not fit for use, therefore have never used the milk. |
| 15. | Deaths usually occur from swelling after inoculation; the percentage depends on the virus and weather. If the cattle swell use the lance freely and dress with Venice turpentine. |
| 16. | Have lost as much as two or three per cent. after inoculation, and generally in about nine days to fourteen days, few die after. |
| 17. | About four to six weeks. |
| 18. | We believe in inoculation as a safe preventative. |
| 19. | We thoroughly believe in inoculation. |
| 20. | Have purchased two lots of cattle at the same sale—one lot inoculated and the other not—driven them home, placed them in the same paddock, when the inoculated ones lived and those not inoculated commenced to die. |
| 21. | We cannot tell why or from what cause cattle take pleuro, but we feel sure inoculation will stay the disease. |
| 22. | Most certainly we do. |

(No. 107.)

- | | |
|----|--|
| 2. | 300. |
| 3. | Only once, and they were taken off the run at the time, and in Illawarra. |
| 4. | About 21. |
| 5. | About 5 per cent. |
| 6. | About twelve months, the disease had been on the run at the time I inoculated. |

(No. 107—continued.)

- | Question. | Answer. |
|-----------|--|
| 13. | I could not notice any swellings after; I also examined the cattle after when they were milking and could scarce detect the mark; this was some months after inoculation. |
| 14. | Never done any milking cows. |
| 15. | None. |
| 16. | Only one, and she was diseased when inoculated. |
| 17. | The cattle I here describe were taken away from the herd before inoculated. |
| 18. | No cattle took the disease after. |
| 19. | I believe when properly done it has the effect of stopping the disease. |
| 20. | The cattle that I inoculated were never exposed to infected cattle after. |
| 21. | The above information which I have given you is respecting some cattle—about 300 head of young ones—that were running at Sutton Forest about twelve years ago. We brought away about 30, and after they came to Illawarra four died within a fortnight; we killed one of them that was ill at the time, and inoculated them all but two. None died but one after inoculation—she was ill when done. I therefore have great confidence in inoculation. The above remarks are not very well connected, as it is a long time since I seen anything of the disease; but from the little experience I have had, were the disease to break out in my herd I would not think one moment about inoculating every one. I believe that the excessive swelling arises from inserting the needle too deep, as the skin is very thin under the tail and therefore may affect the spine. |
| 22. | I do, but I believe that the Government should have a proper person appointed to do so, as an awkward hand would be quite as dangerous as the disease. |

(No. 108.)

2. Nearly 4,000.
3. In four months, as virus could be obtained.
4. About 2,000 in above time.
5. Free from disease.
13. In about nine days, tails a little swollen; from fourteen to twenty days some large lumps formed each side of root of tail. Some of these were extracted, and the animals recovered, and others that swelled at the udder and on belly part died.
14. No milking cows inoculated, they were mostly store bullocks or steers.
15. None died from the effects of inoculation, except what swelled under belly, and none of these recovered; not more than one per cent died.
16. There were not any cattle diseased before inoculation.
17. Not in it.
18. As the cattle were not before diseased no result evident, but inclined to believe in inoculation as a preventive.
19. In favour.
20. None have come under my observation.
21. I have very little experience in this matter, and don't feel justified in offering any.
22. I do not consider an Act should be passed, although I would recommend inoculation.

(No. 109.)

2. 300.
3. May, 1874, and July, 1874.
4. 70 in May, 1874, and 120 in July, 1874. This included all the young cattle; many of the old cattle were done years ago.
5. Cattle were diseased, about 4 per cent. showing symptoms.
6. Twelve months, off and on, I had been losing some; but about three months before I inoculated, the pleuro showed to be getting worse amongst the young cattle.
13. Fourteen days after inoculation some swelled about the buttocks and worked up to the hips; those were very stiff for a long time. Where the tail swelled the beast showed all symptoms of the disease, with the exception of the cough.
15. No deaths; I lanced the tail of one, which I think saved it.
16. I have had no deaths amongst the inoculated cattle, though there have been diseased cattle with them at different times and for months.
17. About one month, but I put all diseased cattle away from them at the time, which I did not inoculate.

412—E

(No. 109—continued.)

- | Question. | Answer. |
|-----------|---|
| 18. | I have only seen one show any signs of disease after inoculation, and that one's mother died of it when he (the one referred to) was sucking, about two months before he was inoculated; I think he had the disease in him when done, but he did not die. |
| 19. | I am slightly in favour of inoculation as far as I have personally tried it; I think there is no great risk, and that it is a preventive, as the increase I have had last year, or rather the early portion of this, together with cattle that were not inoculated, got the disease and were running in the same paddock, and none of those that were inoculated took it. |
| 21. | I have had great experience amongst cattle these last 20 years, in the Warrego and Darling River districts, also in Queensland in 1864. I have seen them die on one station as many as two out of three, and the adjoining station would not lose more than 4 per cent. I have several instances of the cow dying and the calf living, which was sucking to the last, and <i>vice versa</i> . |

(No. 110.)

2. 500 head.
3. Twice; once about nine years ago and again about two years ago.
4. About 500.
5. Not diseased when inoculated, but the disease was among surrounding herds.
13. Tails swelled about from five to nine days after.
14. Does not affect the quality of milk, but may not have such quantity for a few days after.
15. Yes, a few—about $1\frac{1}{2}$ per cent. Slit tail lengthwise above where inoculated, and run red hot iron over it; then rub salt in.
16. Yes, a few as above; can't say what dates.
17. About a month.
18. Good.
19. In favour of.
20. Disease did not show afterwards.
22. Yes.

(No. 111.)

3. Inoculated once for fear of disease, 10th July, 1874.
4. The number of them, 15 head. The cattle were inoculated by a man going around the district inoculating.
6. Never diseased.
15. No.
16. None.
19. In favour of it.
22. Yes.

(No. 112.)

2. 700.
3. Once—April, 1874.
4. 700.
5. Diseased—3 per cent.
6. One month.
13. Swellings were noticed in the tail about nine days after.
14. They were not milked for a fortnight after; nothing noticed then.
15. About $\frac{3}{4}$ per cent. died from swellings. The tail was scarified to cure the swellings, cured some, others died, some got right without being touched, the tail came off of its own accord.
16. About $\frac{1}{2}$ per cent. within two months after; none since.
17. About two months.
18. A complete preventive.
19. In favour of.
20. Its effect on this run proves its efficacy. The cattle on the neighbouring runs have had pleuro since; mine have not.
22. Yes.

(No. 113.)

2. About 150.
3. Only once, in the summer of 1863.
4. Inoculated all on one occasion.
5. Cattle were not diseased at the time of inoculation. Inoculated as a preventive.
6. Not diseased.
13. Slight swellings in end of the tail among the cattle in general; a few were severely swollen about the root of the tail, and rump-swellings occurred from one to three weeks after inoculation.

(No. 113—continued.)

- Question. Answer.
14. The milking cows were milked on as usual; did not effect the quantity of milk except in those that were severely swollen.
15. One or two died from excessive swelling; tried scarification of the parts, had no effect, swellings were very hard and remained so.
16. Deaths occurred after inoculation—one cow died about three months after.
17. The disease has been among my cattle ever since I inoculated, a few dropping off every year these last twelve years, up to last winter when I lost the last one.
18. The result of inoculation to me has been that I brought the disease among my cattle by it; whether I would have escaped by not resorting to it I cannot say; others that did not inoculate have escaped.
19. My opinion is rather against inoculation. I would not try it any more, nor would I oppose others doing so.
20. Cannot give a decided answer.
21. I believe that the disease is a visitation of Providence, and that it will run its course notwithstanding all that can be done to prevent it. At the present time I think it is dying out.
22. In the present conflicting state of opinions respecting the efficacy of inoculation or otherwise, I think an Act making it compulsory upon persons to inoculate would act oppressively. I do not believe in the generally contagious character of the disease; if it had been so I would have lost all my cattle before this.

(No. 114.)

2. 1,200.
3. I inoculated about six years ago, and have not had pleuro since.
4. 1,200.
5. There were about 5 per cent. showing symptoms when I inoculated.
6. Six months.
13. If the virus is too strong some of their tails rot off, and they require to be looked after.
14. I did not allow them to be milked for a month.
15. I lost about 5 per cent. with swelling. The only remedy I know is to cut their tails off.
16. A good many died, but I cannot remember the dates.
17. Six weeks.
19. I am opposed to inoculation, unless the herd was very bad with the disease.
20. I do not think a beast which is properly inoculated will ever take the disease again.
21. I do not know of anything but to inoculate if the disease is very bad.
22. I think the owners of cattle should please themselves, as there is more loss in inoculating, unless the disease is very bad, and I have not heard of many herds being very bad for years. The disease comes in a different form to what it did years ago.

(No. 115.)

2. About 1,000.
3. Have inoculated at various intervals during the last twelve or fourteen years.
4. From 200 to 500.
5. Never inoculated without pleuro-pneumonia showing itself amongst the herd.
6. Cannot say how long the cattle were diseased, but invariably inoculated immediately disease was discovered, provided the weather was favourable.
13. I am unable to say, as the effects vary with different animals.
14. Not having been in the habit of milking immediately after disease. I am unable to answer this question.
15. Never recollect losing any cattle from the effects of inoculation.
16. I don't recollect losing any cattle from the effects of inoculation, unless the disease had been on them in great severity for some time previous to being inoculated.
17. Almost as soon as the cattle got over the effects of inoculation.
18. As far as my experience goes I consider inoculation generally puts an end to the disease.
19. Decidedly in favour of it.

(No. 115—continued.)

- Question. Answer.
20. In the whole of my experience I have found inoculation to be the best preventive against the disease; if properly operated upon I never knew cattle to be infected again, even if they were exposed to infection.
21. I always found it good to inoculate in showery spring weather, and immediately after the disease showed itself among the herd. I am greatly in favour of inoculation, but decidedly think that every one should be left to his own experience as to the time best suited for inoculation, without the interference of legislation.

22. No.

(No. 116.)

2. Cannot give number.
3. Inoculated once, cannot give date, it is eleven years since.
4. Kept no account.
14. No.
16. None.
19. In favour of inoculation by doing it myself.
22. Not in favour of an Act.

(No. 117.)

2. 150 head.
3. Three times, 1872-73-74.
4. 150 head.
5. Cattle had been dying for some months, four or five at a time showing plainly the disease.
6. About six months.
13. The above described mode does not much affect the cattle; very little swelling, but a keen observer would at once notice the cattle were sick.
14. I would not like to try it.
15. Out of 150 head I had only two deaths after inoculation, those were bad at the time the operation was performed. I bled copiously and bath the ribs with kerosene as a counter-irritant. In many instances they recovered.
16. Two head, about a week after.
17. At once, with the exception of two head.
18. Improved quickly.
19. I am in favour. There is no mistake in it staying the progress of the disease.
20. Upon each occasion my cattle were affected, and after inoculation the disease stopped almost immediately, have never exposed them to the infection since, but returned them to the same paddocks.
21. I am not aware if a change of pasture would benefit stock after inoculation, at all events it would do them no harm unless coming in contact with other diseased cattle, and then I doubt very much if they would become affected. I believe in it through practical results.

22. Yes.

(No. 118.)

2. 400.
3. Not this last four years.
13. Swelling very little.
14. Yes, were milked; did not affect the milk that I am aware of.
15. No deaths.
16. None that were not diseased when inoculated.
17. Almost directly.
19. In favour.
20. Cattle which have been treated for the disease may be in a paddock with cattle diseased, and will not get affected. My cattle have not had any disease in them that I am aware of since they have been on the station.
22. Yes, in all cases.

(No. 119.)

2. 300 head in 1865; deaths before inoculation, 60.
3. Inoculated 80 head in 1874; no symptoms of disease at the time, but when killing for beef found the lungs adhering to the ribs, which is a sure sign of pleuro.
5. See above.
6. 2 months in 1865.
13. Generally slight swelling at the end of the tail, but in a few cases the swelling will go to the rump, and if not looked after the animal will die.
14. No cows milked within a month after inoculation.
15. No deaths; if excessive swelling, scarify freely.
16. No deaths.
17. Immediately, as far as I could judge.

(No. 119—continued.)

Question.	Answer.
18.	Satisfactory.
19.	In favour.
20.	I know of several herds that have been exposed to infection after inoculation not affected.
22.	Yes; there are some men in this district at present whose cattle are dying with pleuro that do not believe in inoculation.

(No. 120.)

2.	About 400, January, 1874.
3.	Have inoculated in the middle of summer for the last four years.
4.	Commence with about 100 the first year, with the after usual increase.
5.	About 10 per cent. were affected when I commenced to inoculate.
6.	I inoculated immediately the disease showed itself.
13.	I noticed the effect of the inoculation by the twisting of the tail, about fifteen days after.
14.	I turned all out for five weeks, and then found the milk much the same as usual.
15.	I had no deaths from the inoculation, as the virus was not taken from an animal too far gone.
16.	I had a few animals inoculated which had the disease before I inoculated, and they died, but only a few.
17.	About two months.
18.	The result good.
19.	I approve very strongly of inoculation.
20.	I always found inoculation a preventive to the pleuro-pneumonia.
21.	I would be in favour of compulsory inoculation when the virus can be obtained.
22.	All my cattle are inoculated, except the calves of this season, which I shall inoculate as soon as I can get virus.

(No. 121.)

2.	About 400 head well-bred cattle on the run when pleuro broke out in the herd. About 200 head.
3.	Once—about 1864.
4.	200.
5.	Herd diseased; symptoms visible only in a few.
6.	Several months.
13.	Swellings were visible in different parts of the tail three or four days after the operation.
14.	Remarked when milking cows got the pleuro they lost their milk; did not observe any difference in the milk of cows inoculated.
15.	I believe no deaths occurred through inoculation; several had swellings on the tail, and I think two had their tails cut off, which probably saved them.
16.	Three or four deaths took place after inoculation, but were diseased previously, I think in about a fortnight, but am not sure.
17.	I have never lost a beast from pleuro since those above referred to.
18.	That it is a certain preventive, but not a cure.
19.	Every man of practical experience of inoculation must be in favour of it; and it is only those who are ignorant of the mode or have failed through injudicious treatment that are opposed to it.
20.	My cattle were amongst the first infected in this part of the country, when nobody knew anything of inoculation, and I lost 200 out of 400 before I knew how to go about it; as stated above, never lost any after.
21.	A friend and neighbour of mine possessing a small herd, knowing my loss, watched closely, and the first one that was infected with pleuro he slaughtered, and inoculated the rest, and never lost another, though cattle were dying in all directions.
22.	I would not only make inoculation compulsory, but prohibit their removal for (say) three months after inoculation. Virus can always be had from a herd infected.

(No. 122.)

2.	200.
3.	Only in 1865.
4.	160.
5.	When inoculated there were forty dead; the rest had not taken the disease.

(No. 122—continued.)

Question.	Answer.
6.	About two months.
13.	Swelling.
14.	Not milked.
15.	None.
16.	None.
17.	One month.
18.	Some died after; none since.
19.	I would not inoculate till the disease would appear.
20.	I believe inoculation good when disease appears; none properly inoculated were affected.
21.	Severe bleeding is of great service.
22.	I don't think it requires an Act, as on their own account they will inoculate.

(No. 123.)

2.	There were over 3,000 head of cattle on my station in 1864, when the disease broke out in them.
3.	In 1864 I inoculated those 3,000; six months after I inoculated 500 for Mr. Hill, at Tickkeman, 16 miles below my Lower Warrego station; in 1865 I inoculated on the Bokirah Creek, for Andrew M'Kenzie and B. Burrell, 3,500; in 1871, on the Thompson, for G. Forrester, 500.
4.	3,000 for self in 1864; 3,000 and odd—that was in the spring, latter end of same season—for Hill; 500 beginning of 1865; 3,500 for Andrew M'Kenzie and Burrell; 3,500 in 1871 for G. Forrester, Esq.; 500 on the Thompson, Queensland.
5.	All those were dying fast out of Mr. Hill's; there were only 500 left out of 1,000. When I inoculated them six months after there were 480, and all well; all other cattle that I inoculated there, not five out of the 100 died.
6.	My cattle were inoculated as soon as I saw it, that is as I saw the distemper was bad amongst them.
13.	I never had any swellings after the way that I done them.
14.	My milkers were the first I done—about 150; I put them all in the bail to do them; the calves I threw; we put all the cows that were milking in next morning, and there was no difference in their milking.
15.	I never saw one of those milkers bad after; the disease had not got amongst them when they were inoculated.
16.	My bush cattle. A few died, but not three to the 100.
17.	In three months after I sent 100 and odd of the best bullocks that had been in Sydney for years, and there was not a sick beast in the herd.
18.	One and all inoculated on the Warrego, and all the cattle done well; only those done with the seton.
19.	I am in favour, and believe in it; and every squatter should be forced to inoculate, or else be put in quarantine, the same as they were in Queensland before, or else the disease cannot be beaten.
20.	I travelled cattle that I had inoculated through diseased cattle, and they never caught any more disease; also the cattle that I inoculated for my brother Andrew M'Kenzie, and Burrell, were daily mixed on the Narren with James White's, Esq., M.P., and Forrester's, which were badly diseased, and never had disease again. White and Forrester suffered severely through not inoculating.
21.	The beast that you take the virus from for inoculating must be well bled; there must be no particle of blood about the virus that you use, and cattle that are bad with pleuro bleed badly, so that it wants a man that understands how to bleed a beast and take the virus to do so; it is the cause of many a death in cattle—bad virus, and many a cankered tail into the rump, that I would as soon see dead. All cattle that I saw inoculated paid well for the trouble. All those men that did not inoculate suffered severely, such as James White, Esq.; on the Narren and Barwin, G. Forrester, Narren and Barwin. You see by this, where I inoculated in 1871 on the Thompson for G. Forrester, those cattle came from the Barwin, and the disease was in them from 1864, and I know that neither of these gentlemen knew what they lost. At one time it was bad to travel up or down the

(No. 123—continued.)

- | Question. | Answer. |
|-----------|--|
| | Narren for stench; and I believe that it does a man no good to travel amongst so much disease, for I have had my hands very bad before now through getting the skin knocked off them against the crust, I had to use strong caustic water. |
| 22. | I believe that every squatter should be compelled to inoculate as soon as he can obtain virus; and I believe that without that the disease will always be in the country. |

(No. 124.)

- | | |
|-----|---|
| 2. | 150. |
| 3. | Twice—September, 1863; June, 1875. |
| 4. | 2,000 in 1863, 150 in 1875; Demiliquin district, Gunning district. |
| 5. | In 1863 the cattle were slightly infected; in 1875, not at all. |
| 6. | About three months. |
| 13. | The tail became all swollen hard and hung straight; sometimes the hind-quarters swelled, virus taking effect from three days to a week. |
| 14. | Not milked; consider it unwise. |
| 15. | Do not think $\frac{1}{2}$ per cent. died; no means tried. |
| 16. | Cannot say. |
| 17. | As far as I can judge at this date, the disease left immediately. |
| 18. | Perfectly satisfactory. |
| 19. | In favour, most decidedly. |
| 20. | I inoculated after the disease had entered my herd, and I consider I saved them by doing so. |
| 21. | If possible to procure virus, the calves should be inoculated at branding time. My experience is that inoculation is a preventive. |
| 22. | Yes, decidedly; should be made compulsory. |

(No. 125.)

- | | |
|-----|--|
| 3. | Once, late in 1866. |
| 4. | 3,000. |
| 5. | Very bad. |
| 6. | Three months. |
| 13. | Great swellings. |
| 14. | Not milked. |
| 15. | 10 per cent. died from swelling. |
| 16. | Not many died of the disease. |
| 17. | About four months. |
| 18. | I consider good. |
| 19. | In favour. |
| 20. | Do not think any, but cannot say for a certainty. This return refers to the state of the cattle when diseased in 1866. |
| 22. | Yes. |

(No. 126.)

- | | |
|-----|--|
| 2. | About 7,000. |
| 3. | August, 1874; April, 1874; June, 1874. We inoculate generally three times a year, after the weaners are herded and before they are turned out, and we inoculate every beast we purchase. |
| 4. | 659, 808, 740. |
| 5. | Rather low in condition after being herded for three months, two or three in the above lots showing symptoms of pleuro. |
| 6. | As soon as the disease was perceived. |
| 7. | The cattle that show symptoms of pleuro are generally the weaners, after having been herded for three months. When a beast shows disease we kill it, and take the virus from the hepatized or marbled portion of the lung; we squeeze the brown marbled portion, and use it for inoculating. When we notice the beast very hollow, with staring hair, eyes sunk, lagging behind the herd, and when moved about quickly coughing or giving a short grunt, we then think it ripe for virus. We seldom fail in getting the proper virus from any beast we kill. |
| 8. | We have never used the virus from the chest, or any other part but from a portion of the lung. |
| 9. | Sometimes as long as 24 hours. |
| 10. | We have never tried to preserve virus excepting by keeping it cold by enclosing the bottle in which it is put with a wet cloth, which we keep constantly wet. |
| 12. | We use a needle and worsted thread. |
| 13. | About three weeks after inoculation the tail stiffens and occasionally swells, especially about the rump or root. |

(No. 126—continued.)

- | Question. | Answer. |
|-----------|--|
| 14. | We have never milked the cows immediately after inoculation, but believe it does affect the quantity but not the quality much, as the calf sucking does not seem to suffer. |
| 15. | Very seldom any of our cattle die from inoculation. If we find the tail swollen much, we cut it downwards from the root underneath. |
| 16. | We have very seldom seen any cattle die from pleuro after being inoculated, although occasionally a beast does die from the swelling of pleuro, from the inoculated herd, owing to defective operation. |
| 17. | Almost immediately. |
| 18. | Decidedly a preventive to pleuro-pneumonia. |
| 19. | In favour. |
| 20. | The fact that none of our cattle, excepting the young stock that have not been inoculated, not showing the disease, when our neighbour's cattle are frequently dying, and on our run (because they don't believe in inoculating) is as good a proof as can be given. |
| 21. | I think it advisable before inoculating a herd in very good condition, to herd the cattle until the surplus fat is taken off, or put the cattle on low diet before inoculating, for the beast most likely to suffer most from swelling after inoculation is the fattest in the herd. |

(No. 127.)

- | | |
|-----|--|
| 2. | 5,800. |
| 3. | Twice—about 800 each time; first lot in 1868, and 1871. |
| 4. | About 800. |
| 5. | Disease, showing rather bad in only part of herd. |
| 6. | Four weeks. |
| 13. | A little swelling. |
| 14. | Not any. |
| 15. | Not any. |
| 16. | A few deaths for three or four weeks after inoculation. |
| 17. | A long time. |
| 18. | Cannot say. |
| 21. | When cattle showing the disease, I find as good a thing leave them alone and not knock them about. |

(No. 128.)

- | | |
|-----|--|
| 2. | 230. |
| 3. | Once—in I believe 1865. |
| 13. | Swellings in tail and rump, showed in about fourteen days. |
| 14. | Up to the time of the swellings showing, a marked falling off in quantity. |
| 15. | Yes, three-fifths of the herd, scarifying and amputation of tail. |
| 16. | My cattle never had the disease. |
| 19. | I should inoculate if disease appeared in my cattle. |
| 20. | About a score of stray strangers was running with my cattle at the time I inoculated, "of course they were not operated on"; nearly the whole of these died with the disease about ten months afterwards. |
| 21. | I am of an opinion that virus could be preserved by well saturating a fine sort of candle-cotton or something of the kind in the virus, and then evaporate the water, and place the cotton in well dried pickle bottles, cork and seal up. |
| 22. | No, I would leave it discretionary. |

(No. 129.)

- | | |
|-----|---------------------------------|
| 2. | 500. |
| 3. | 268 in 1870. |
| 4. | 400. |
| 5. | Good order when diseased. |
| 6. | Three months. |
| 13. | Two weeks. |
| 14. | Not so much as one would think. |

(No. 130.)

- | | |
|-----|---|
| 2. | 150 head. |
| 3. | Once, in the latter part of 1864. |
| 4. | 50 head. |
| 5. | Fair condition, 10 per cent. showing symptoms of disease. |
| 6. | Disease appeared about two months prior to inoculation, but no diseased cattle were inoculated. |
| 13. | Frequently swelling in the hindermost parts, and tail falls off in some cases. |

(No. 130—continued.)

- | Question. | Answer. |
|-----------|---|
| 14. | Cows never milked after inoculation. |
| 15. | About 3 per cent. died after inoculation, chiefly from swelling; no further means applied to remedy them. |
| 16. | None visible died from the disease. |
| 17. | About six months. |
| 18. | Inoculation results were, about 75 per cent. lived, as those most liable to disease had been inoculated. |
| 19. | In favour of it. |
| 20. | I approve of inoculation if performed before the disease appears. I do not think any cattle properly inoculated were afterwards affected by the disease. |
| 21. | I approve of the virus to be used in an early stage of the diseased beast taken from, and the cattle performed on should show no symptoms of the disease. |
| 22. | I do consider an Act necessary to compel cattle owners to inoculate. |

(No. 131.)

- | | |
|-----|---|
| 2. | 300. |
| 3. | Once in January, 1875. |
| 4. | 300. |
| 5. | 10 per cent. |
| 6. | Three months. |
| 13. | Swelling. |
| 14. | Not milked. |
| 15. | 2 per cent. |
| 17. | Two weeks. |
| 18. | Disease died out. |
| 19. | In favour. |
| 20. | Exposed, not affected. |
| 21. | My opinion is, all cattle should be inoculated when branded. |
| 22. | I consider a law should be passed to compel all owners to inoculate when branding yearly. |

(No. 132.)

- | | |
|-----|--|
| 2. | 1,000 head. |
| 3. | Once, about 1864. |
| 4. | About 600 head. |
| 5. | About 10 per cent. |
| 6. | About six months. |
| 13. | Swelling in the tail. |
| 14. | To the best of my knowledge were not milked for some considerable time after. |
| 15. | None. |
| 17. | About a month or so. |
| 19. | Opposed to it. |
| 20. | Cannot say the inoculation is of any use, as the cattle that were not inoculated stopped dying at the same time as those that were inoculated. |
| 22. | I do not think so. |

(No. 133.)

- | | |
|-----|---|
| 2. | About 800, of which 700 were inoculated. |
| 3. | But once; about October, 1865. |
| 4. | Only once; about 700. |
| 5. | In a thriving condition when inoculated, about 15 per cent. showing symptoms. |
| 6. | About one month. |
| 13. | The effect was generally visible from 14 to 25 days, by the tail seeming stiff and slightly swollen where the needle was drawn through. In some cases the swelling went up the tail to the rump, and caused death to about 5 per cent. The effects were worse in hot weather, through flies blowing the inflamed parts. |
| 14. | Cows in milk were not affected for 2 or 3 days; after that time, especially 8 days, the quantity was affected, and also the quality. I tried to keep it, but it would not keep so long sweet. But I never knew it to affect the calf. I saw the calves quite sound until weaned, although the mother was very much affected. Some cows died while the calf was using the milk; still the calf never showed signs of pleuro. |
| 15. | About 5 per cent. died from swelling going up into the rump. I found bleeding in the vein inside the thigh assist to stop the swelling, when done in time. I bled through the fence, by striking a fleam into the vein, and then let the beast go; about 1 per cent. died from loss of blood. I often scarred the swollen parts deep, and put tar on to keep off the flies. Some I saved from swelling by cutting off the tail above the affected part in time. |

(No. 133—continued.)

- | Question. | Answer. |
|-----------|---|
| 16. | Some died after the inoculation—in one, two, and three months; I think about 2 per cent. of those inoculated. Several head was not found when the inoculation was tried; those seemed as free from disease as the rest after three months. One herd mixing with mine was affected at the same time, but was not inoculated—still they left off dying as soon as mine. |
| 17. | About three months. All cattle round the neighbourhood left off dying, inoculated and uninoculated. |
| 18. | About 5 per cent. died from swelling in the rump, caused by too strong a virus. In using virus, the bottom of the bottle or dish is always strongest. |
| 19. | I would rather not inoculate, from my present experience. |
| 20. | The reason I disapprove of inoculation—I have seen pleuro cattle left on the run, when my herd was free from disease, and not take the disease. I have bought pleuro cattle and put them in a paddock with healthy ones several times, but none of the others were affected afterwards. |
| 21. | I think there is two kinds of pleuro. The first cattle coughed more than those affected of late. When it appeared last, young cattle suffered most. I noticed all that swelled were sure to die. When opened, there was a quantity of yellowish water about the lungs. I believe it to be the best for inoculating, as I have seen it used, and affect the beast, but not kill any. |
| 22. | I for one would not consider that an Act should be passed to compel anyone to inoculate, from my present experience; as I have seen healthy calves suck cows until the mothers have died, still the calves continued healthy for I am certain a year after the death of the mother; and bought cheap cattle sick, when my herd were sound, with no bad results. |

(No. 134.)

- | | |
|-----|--|
| 2. | 400 on Yarrandigen; 900, Dandaloo. |
| 3. | Once; eight years. |
| 4. | 150. |
| 6. | Two years. |
| 14. | Never milked any while they were sick. I should think it would affect the milk both in quantity and quality. |
| 15. | Yes. Could not say how many. Never tried any means to cure the swelling; the cattle took their chance. |
| 17. | Five years. |
| 19. | Opposed. |
| 20. | No pleuro has been here, therefore cannot tell whether the cattle would be affected by it. |
| 22. | No. For the inoculation the cattle would have to be knocked about, and that would make them worse. |

(No. 135.)

- | | |
|-----|--|
| 2. | 800. |
| 3. | Three times. Nine years since, three years, and nine months since. |
| 4. | 400 head, 300, and 200. |
| 5. | Nine years since lost nearly all inoculated through stale bad virus. Second, and last time, very successful. |
| 6. | In first instance some time; second and third in a measure prepared, and took it in time. |
| 13. | Swelled slightly, in some few instances very large. |
| 14. | Yes, it did not interfere with milking, only for about 10 days; but I think we could have milked sooner. |
| 15. | It was useless trying any restorative in the first instance; only two or three, in second or third. Some lost their tails. |
| 16. | Nearly all in first instance, but as I have written before the virus was bad. |
| 17. | In about a month—second, and last time. It disgusts me to think of slaughter in first instance. |
| 18. | Perfect cure in second and third, and those who state to the contrary are humbugs. |
| 19. | Decidedly in favour. I know cattle in this district (calves) inoculated belonging to a dairy—the half inoculated lived; those not, died. |
| 20. | Have already stated. Have seen inoculated cattle in same pasture with infected cattle and no bad result. |

(No. 135—continued.)

- | Question. | Answer. |
|--|---------|
| 21. I can say no more than I have done, feeling perfectly assured that inoculation if taken in time is a perfect cure. | |
| 22. Decidedly, and fine heavily the obstinate brutes that will not. | |

(No. 136.)

- | | |
|---|--|
| 2. 7,000 to 9,000 head. First inoculation, about 4,000 head; second inoculation, about 8,000 head. | |
| 3. 1866 and 1874, both general inoculation of the herd. All store cattle bought during 1867 to middle of 1874, amounting in the aggregate to 7,500 head. | |
| 5. Cattle inoculated were never really free from disease. Percentage sometimes very great; inoculation in such cases being most successful. | |
| 6. Cannot say, but suspect much longer than is generally supposed. | |
| 13. From ten to thirty days after swellings in some cases—the majority a pustulous sloughing. | |
| 14. No. | |
| 15. Many deaths; but the worst cases occurred where the mobs were most affected by pleuro. | |
| 16. Yes. Cannot give numbers. | |
| 17. The disease has really never truly left the herd, as cases—solitary ones—are constantly showing themselves. | |
| 18. It does not act as a preventive, but it has stopped the virulence of the disease. | |
| 19. I consider it is better to leave this question to the judgment of the owners. Am decidedly against compulsory inoculation by legislation. | |
| 20. In 1866. The fat cattle were sold to the Australian Meat Company. In consequence of the establishment not being ready at the time I inoculated the Ramornic herd, I drafted out all the fat cattle in the camps and left them uninoculated. I could discover little difference in the per cent. of deaths in the one case or the other. | |
| 21. It was suspected by the writer and his men that the kangaroos had the disease in 1866, the deaths of these animals being unprecedented. If they had, it is preposterous enforcing inoculation, and it would be well to make further inquiries on this subject. | |
| 22. No. Because it would be impossible to inoculate to eradicate a disease, when the presence of the disease is always necessary for the purpose of inoculation. | |

(No. 137.)

- | | |
|--|--|
| 2. In year 1868, 8,070; in 1873, 8,604. | |
| 3. Twice in April, May, June, July, 1868, and March, April, June, July, 1873. | |
| 4. In 1868, the whole herd; in 1873, all the male cattle—about 3,000. | |
| 5. Disease spreading very rapidly in 1868, beginning on the side adjoining my neighbour, whose cattle had it, about 15 or 20 per cent. showing symptoms. In 1863, not more than 2 per cent. showing symptoms. | |
| 6. In 1868, began to inoculate as soon as disease appeared, but it spread faster than we could inoculate. In 1873, odd cases had been seen for some months before inoculation commenced. | |
| 7. Experimented on lung in various states, but latterly used only virus from fatty substance in the chest. One lung is generally hepatized—sometimes both. | |
| 8. Replied above. | |
| 9. From three days to ten—dependent on weather, and if kept cool. | |
| 10. Used virus preserved with glycerine on a station in Northern Queensland, but have forgotten the proportions employed: I think one-fifth. | |
| 11. Inoculated 7,000 cattle at Richmond Downs, North Queensland, amongst which a few cases of disease had been seen during preceding twelve months. As disease ceased entirely amongst those inoculated, and some tails were seen to be affected, I believe the virus to have been efficacious, especially as subsequently in travelling 250 fat cattle from this run to the Palmer Diggings, of five uninoculated oxen one died from pleuropneumonia, while no other animal was affected. | |

(No. 137—continued.)

- | Question. | Answer. |
|--|---------|
| 12. In 1868, with grooved knife; but as several died after inoculation then, in 1873 I used needle and worsted. As I thought the needles made for me too large, I ground some sail needles, 4 inches long, flat; an attendant ties a knot in the worsted, and dips the end in virus, and cuts it off when the operator has drawn it through the skin as far as the knot, leaving about an inch in the tail. | |
| 13. With virus from fatty substance in chest; have had no deaths from swollen tails extending into the body, and few swollen tails. I have known tails to swell four or five days after inoculation, and once suddenly five weeks after, during some very hot weather with the thermometer over 100 in the shade for several days in succession. | |
| 14. Have not observed. | |
| 15. In 1868, using lung virus, about three or four per cent. died; have tried setons and cutting off the tail, but found neither useful. | |
| 16. Yes, in 1868, when I used the grooved knife, especially when hurriedly done, as it was towards the end of the inoculation, when the blood often flowed freely, and, I think, carried away the virus; but in 1873, when I used the needle, I did not see any cases of disease or death from disease amongst the inoculated. | |
| 17. In 1868, disease continued for some months, but was almost entirely confined to uninoculated stragglers, which had been missed at muster. In 1873 it disappeared as soon as inoculation was completed on that part of the run where the males were. | |
| 18. Result in 1868 not satisfactory, which I attribute to careless use of the knife, and many deaths arising from use of virus squeezed from lung, causing swollen tails; but in 1873, on this run, and in 1874, in Queensland, I entirely got rid of the disease by inoculation. | |
| 19. Strongly in favour; have no doubt of its efficacy now, although I began experimentally, and without much hope of benefit. | |
| 20. On the first appearance of the disease I experimented by inoculating my pure-bred heifers, in a paddock adjoining one with young bulls, which I left undone; not one heifer had the disease, but several bulls died from it until I inoculated them. I then took half the cattle from a camp and inoculated them; none died, but the uninoculated died in great numbers; they were all mixed together again. | |
| 21. On the second visit of disease in 1873, I only observed young cattle, born since 1868, its first visit, to be affected, and this is my neighbour's experience. In 1873 the disease was much milder and did not rush through the herd as before, but lingered on a few cases at a time; but if any cattle were travelled on the road, or even moved to another paddock, the disease was at once very rife. This too is my neighbour's experience as well as my own. | |

(No. 138.)

|--|--|
| 2. 1,376. | |
| 3. Inoculated once in September, 1873. | |
| 4. 1,376. | |
| 5. 3 per cent. on the herd. | |
| 6. About one month. | |
| 13. About 5 per cent. | |
| 14. Were milking cows; did not make any difference in the milk. | |
| 15. About 1 per cent. deaths. Cutting their tails off above the swelling. | |
| 16. Did not remark any that where diseased die after being operated upon. | |
| 17. About six weeks. | |
| 19. In favour of inoculation. | |
| 20. Did not see any of the cattle inoculated take the disease the second time. | |
| 22. I do not. | |

(No. 140.)

- | Question. | Answer. |
|-----------|--|
| 2. | In 1866 there were about 3,500 cattle on Glen at date of disease first appearing. |
| 3. | I inoculated first for pleuro-pneumonia on Glen Elgin and Morven in 1866. I inoculated second for pleuro on Neutonboyd, Glen Elgin, and Morven about May and June 1873. |
| 4. | In 1866 about 3,500 inoculated on Glen Elgin and Morven. In 1873 about 3,000 on Neutonboyd, about 500 on Glen Elgin, and 1,000 on Morven runs. |
| 5. | At each date of the large inoculations in 1866 and 1873, at least 10 per cent. were in an advanced stage of the disease (that is on the parts of the run then inspected). |
| 6. | In 1866 my cattle were about eight months bad with pleuro before I began to inoculate. |
| 7. | The cattle I have slaughtered for virus have invariably been in the second stage of the disease—just when they are inclined to drop behind their mob and get by a waterhole alone—but before the grunting or last stage sets in. The lung nicely marked and about three-fourths of it highly hepatized. If it is all hepatized so much the better. I used the lymph which is found on outside of the lung; it contains a large amount of pure virus. |
| 8. | The lymph I used is found on outside of the lung, it grows in pieces as large as a man's hand, and is charged with very rich virus. In some beasts this lymph is not abundant. I have got enough out of one beast to inoculate 2,000 of cattle. |
| 9. | I use the virus as quickly as possible after taking it. I find it keeps in a fit state for use two days; but on the third I find it becomes putrid and unfit for use. |
| 10. | I have never preserved virus. I lock it as tightly as possible and submerge it in a creek or some large body of water. |
| 12. | I use the ordinary speying needle for inoculation. I put a seton of worsted thread in the needle, dip in the virus, insert the needle as near the tip of the tail as is possible, taking care to skim the skin as lightly as possible, draw the seton through and see that a drop of the virus remains in the incision. |
| 13. | When I first inoculated, in 1866, I used the virus taken from the lung. I lost as many as 5 per cent. by swelling or blood poisoning. In 1873 I did not lose more than $\frac{1}{4}$ per cent., or one in 400 head. |
| 14. | I have not allowed cows to be milked for domestic use until three weeks after inoculation. |
| 15. | In 1866, I lost 5 per cent. by inoculation. I tried cauterly and fomentations, but I never saved a beast's life. In such cases I found the flies the best doctors. 1873 my loss is so trifling that I cannot give it a name, I think one in 400 head is too high. |
| 16. | The deaths which have occurred by disease after inoculation have always been very few indeed. I think 1 per cent. would be as high an estimate as I could give. |
| 17. | I have never seen any new cases become developed after inoculation. Therefore, as soon as the operation is performed the disease instantly stops as if by magic. |
| 18. | The result of inoculation has always been to suddenly stop the disease; and it does this in such a sudden manner that I consider it effects a cure in those beasts not in an advanced stage of disease. |
| 19. | I am in favour of inoculation. |
| 20. | In 1866, at the time of inoculation, a number of cattle were missed, and as the inoculation stopped the progress of the disease, it was not thought worth while to gather the remainder. The disease lurked amongst those cattle for at least eighteen months after the date of inoculation; and although they mixed constantly with the other stock which were inoculated, they did not communicate the disease. |

(No. 140--continued.)

- | Question. | Answer. |
|-----------|---|
| 21. | My experience teaches me that cattle ought to be inoculated in cold weather, as I consider it lessens the risk of blood poisoning. I also think that the lymph found on the outside of the lung is safer than the virus found in the lung. Of course you will pardon my apparent presumption when I tell you that I consider there ought not to be a shadow of a doubt that inoculation is a certain preventive. I also go a little further, and state that I consider it a cure as regards all beasts in an early stage of the disease. In each instance after I have inoculated, the stoppage of death is so sudden that the effect seems curative. I am at present taking delivery of three stations, two delivered to me, one on the Big River (Meroe), and one on the Barwin River (Willerrie); on both stations I found pleuro very bad. I inoculated them last month, stopping the disease, and so far as I have information without loss. |
| 22. | I am decidedly of opinion that an Act ought to be passed that would have the effect of compelling owners to inoculate. For I would inflict a very heavy penalty on stockowners travelling cattle which showed clearly that they were affected with pleuro. Last year I lost £2,000 of cattle by pleuro, which was conveyed to my cattle by drovers and carriers leaving diseased stock on the road passing through my runs. Very stringent means ought to be adopted to compel all persons to inoculate when virus could be obtained. |

(No. 141.)

- | | |
|-----|--|
| 2. | In Oct., 1868, about 150; and in Feb., 1869, about 200. |
| 3. | Oct., 1868; and Feb., 1869. |
| 4. | The first time about 30, and the second 97. |
| 5. | Cattle diseased—about 9 per cent. |
| 6. | In the first instance inoculated about thirty milkers immediately; in the second, about four months after disease appeared. |
| 13. | In the first instance several tails dropped off, and one death from swelling at root of tail twenty-four days after inoculation; in the second instance the first deaths commenced twenty-six days after inoculation; the last forty-three days after inoculation. |
| 14. | There were only two or three being milked at the time, but I did not observe any change in them. |
| 15. | In all, ten deaths from excessive swelling; one was deeply lanced, but died; all that swelled died. |
| 16. | There was but one case of disease after inoculation, and that was an uninoculated cow which recovered. |
| 17. | A few weeks. |
| 18. | Ten deaths, and the disease stamped out. |
| 19. | In favour of inoculation. |
| 20. | The ninety-seven head were in the same paddock with the last case of disease (mentioned in answer sixteen) during all its stages, but none of them took it. |
| 21. | The only suggestion I have to make is to be careful to obtain the virus from a beast in the <i>early</i> part of the disease. |
| 22. | Yes. |

(No. 142.)

- | | |
|-----|--|
| 2. | 300. |
| 3. | Once—January, 1875. |
| 4. | 300. |
| 5. | Good condition; three diseased. |
| 6. | About one week. |
| 13. | Slight swelling of tail, and sleepiness of animal operated upon for a few days after operation. |
| 14. | Not milked. |
| 15. | No deaths. In cases of over swelling and rotting, tail was scarified and salt rubbed in above the swelling. |
| 16. | No. |
| 17. | Can't say. |
| 18. | Prevented spreading of disease. |
| 19. | In favour. |
| 20. | Town cattle uninoculated were running daily with the above herd, and many of them died without the inoculated cattle being affected. |
| 22. | Yes. |

- | (No. 143.) | (No. 146.) |
|--|--|
| Question. | Question. |
| Answer. | Answer. |
| 2. Three to five thousand when first inoculated. | 2. 120. |
| 3. As often as symptoms of the disease showed. First inoculated about 1865, and ever since when I purchased cattle that were not inoculated I have often waited till the disease has broken out, and then done it. | 3. Only once—ten or eleven years since; pleuro being in the immediate vicinity of Ulladulla and Milton; but, where the greater number of my cattle were running—at Woodburn (the Pigeon House) pleuro never reached. Having no proclaimed road, all traffic in cattle was stopped. |
| 4. On first occasion, 4,000; and various numbers since; I last inoculated, 1874, about 200 head, principally young stock. | 4. Something over 70 head. |
| 5. Very bad; can't say what percentage of diseased cattle inoculated in 1865; but since, as soon as a case or two showed and I could procure virus, I operated at once on stock not done before. | 5. The disease became very fatal at once, and I was losing ten or twelve each week. |
| 6. On first occasion, about three months. | 6. About three weeks. |
| 13. In about ten to fourteen days, the tails swelled, some more or less, some rotted about the rump and died, but not many. | 7. Considered in the second stage: the lung about half marbled; the beast stood gathered up; separated itself from the rest; and its sides heaved a good deal, with a cough if you made it to walk. |
| 14. Were not milked. | 8. The virus was taken from the lung; that lying in the chest was considered to be too strong. |
| 15. About 1 per cent. died from swelling and mortification; the swellings were opened, but did no visible good. | 9. Used the same, and next day. |
| 16. No cattle ever died from disease after inoculation. | 10. No. |
| 17. No signs of disease were noticed in inoculated cattle; but cattled missed and not done have often died, and this has been particularly marked in working bullocks. | 12. With a common pack-needle, and candle-wick for thread, dipped in the virus, and drawn through the skin of the tail, at or about the second joint from the top—the thread being cut leaving ends sticking out on each side. |
| 18. Cattle on recovering improved in general appearance. | 13. I had three or four died, which we supposed were ill at the time of inoculation. One died from swelling in the tail—not knowing how to treat it. Two others recovered with loss of tail—from being lacerated, which relieved the swelling. |
| 19. I am very much in favour of inoculation, and will always inoculate cattle that have not been done, and would like to do my weaners annually. | 14. The cattle were milked all the time. Found no difference in the milk. |
| 20. I have known working bullocks that were not inoculated to have the disease yoked up with others that had been done; the diseased ones died, but without any ill effect on those that had been previously inoculated. I have observed this in some 150 workers in my charge, some ten years ago. I have never observed any cattle inoculated to die from pleuro. | 15. Answered in question 13. |
| 21. I have noticed that a great many more cattle die on the lower rich lands from disease, than on the high scrubby, swampy, and mountainous country, which accounts for the many arguments for and against inoculation. I was superintendent for Mr. Bloxsome when the disease first broke out in his cattle; I have been away from his station for the last two years, but my experience here at Willigan, in a small lot of cattle, corresponds exactly with the above. I would be in favour of an Act being passed that all travelling cattle should give notice going through farms or stations, more particularly going through fenced land or paddocks. | 16. Three or four died after inoculation, which I think were bad with the disease at the time of inoculation—died in three or four days. |
| 22. Not until the whole of the country is fenced in. I am of the opinion that inoculated cattle has little to fear from diseased cattle coming amongst them. | 17. I saw no more of it, after about a week from the inoculation. |
| (No. 144.) | 18. I never had pleuro since in my herd. |
| 2. 800 in 1865, all inoculated. | 19. Yes. |
| 4. 800. | 20. From the day that I inoculated, the disease seemed to be arrested at once. My cattle have not since been exposed to the infection, and I have several of the same cattle yet—being of excellent quality, I kept them to breed from. |
| 5. 5 per cent. | 21. My very old cattle are still perfectly sound, and never suffered from lung disease since. I would inoculate every beast I have, if I saw danger in the neighbourhood. |
| 6. Twelve months. | 22. I do consider it necessary that such an Act should be passed by our Legislature. I think if the cattle were once inoculated that it is not necessary to do so again. |
| 13. Merely swelled a little. | (No. 147.) |
| 14. All inoculated and no perceptible difference. | 2. 300. |
| 16. Two or three, and they were very bad at the time of inoculation. | 3. Once in December, 1873. |
| 17. Two months, but a number being very weak it was longer before they got in condition. | 4. 300. |
| 18. None that were operated on were known to be affected after. | 5. Only a few. |
| 19. I am in favour of inoculation. | 6. A month or so. |
| 20. All cattle that I have had operated upon have not been affected again that I am aware of, and numbers of the young ones have. | 13. Did not affect in any way. |
| 22. I do not think it would require an Act to compel any one, if their cattle were diseased, to inoculate. | 14. Did not milk any at the time for seven days. |
| (No. 145.) | 15. None. |
| 3. Once, in December, 1862. | 16. None. |
| 18. It is 13 years next December since I inoculated. I had no disease before in my herd of 250. I employed an experienced person to do it, and the result was very unsatisfactory—I lost 20 per cent. I have been among my own cattle ever since. And I don't approve of it. If I see a beast sick, I rub some tar over the nostril; and I have had no death from pleuro. | 17. Did not appear after in the herd—in a paddock, 300 inoculated—but remained in the herd on the Mara Creek until beginning of March, 1874; then disappeared. As I had prepared to inoculate all my herd, could not find a diseased beast in the herd to get the virus from—and not appeared since. |
| (No. 148.) | 18. Healthy and sound; not a tail lost or affected. |
| 2. In 1865 and 1866, about 2,500 head. | 19. In favour; it is not much expense to the proprietor. |
| 3. First at the end of 1865 and beginning of 1866, not including calves; second time about 1873, only the young cattle on one part of the run. | 20. Did not see any. |
| 4. First time 1,800 head, second time no account kept. | 22. I consider it should be passed at once. |
| 5. If 300 died, perhaps 30 recovered. | |
| 6. Those actually diseased could not be cured, and would only live about fourteen days. | |
| 13. Only about 5 per cent. swelled up the tail; most of the cattle showed no signs. | |

(No. 148—continued.)

- | Question. | Answer. |
|-----------|--|
| 14. | We milked the cows just the same, and did taste anything or catch the disease. |
| 15. | It is too long ago to speak accurately, but very few died. |
| 16. | Some within fourteen days. |
| 17. | Fourteen days. |
| 19. | Most certainly. |
| 20. | The disease was brought to this station by carriers' teams off the road, and those cattle on that part of the run where the travelling teams camp and mix were the first to get diseased, and where we had the most losses, except our own working bullocks, which, though on the same ground, never caught it, because they were the first inoculated. Pleuro first broke out in our herd about December, 1865, we had then about 2,500 head of cattle, and inoculated 1,835 head, not including calves, in 1865-6. We suppose 300 head died of the disease, besides cattle travelling on the road. The disease was not spread through the entire herd, by far the greater proportion died out of one herd of about 370 head. Our cattle are in separate herds, some on one creek, some on another, and those above the head station are distinct from those below and seldom mix. We fully believe in inoculation, the first cattle inoculated were the working bullocks, and not one of them died, though they were the most exposed to infection from other cattle and strange teams. After each herd was inoculated, after the first twelve or fourteen days, hardly one died; those dying previously no doubt were infected before they were inoculated. |

(No. 149.)

2. 1,050.
3. Once, March, 1868.
4. 700.
5. Diseased, 15 per cent. showing symptoms.
6. Six months.
13. About eight, after the tails swelled of some, about 5 per cent.
14. Not milked.
15. Chop the tail off with knife.
16. None.
17. Three months.
18. None died after.
19. In favour of inoculation.

(No. 150.)

2. About 800.
3. Once, in January, 1868.
4. About 700.
5. Very few showing disease, I was advised to inoculate before disease got among the herd.
13. Tails went dead, some swelled in the loins, some in the hips, some in the chest, some in the twist above where the udder or purse sets on.
14. Did not milk them.
15. A few died. By cutting and pulling out a sort of congealed lump in the parts swelled.
19. Opposed to it.
20. I have heard of cattle being inoculated in Gippsland, Victoria, and then took the disease and died, and about 100 head of our cattle which we did not do, done better than them we inoculated.

(No. 151.)

2. 1,000.
3. Once, in 1864. Have not inoculated since.
4. All.
5. Suffering from the disease to the extent of about 100.
6. Only a short time.
13. Swellings.
14. No.
15. Yes, a good many.
16. Yes, a good many.
17. Some time.
18. I do not consider it satisfactory.
19. I am in favour of leaving it to the choice of the owner whether he will inoculate or not.
20. Two years ago a working bullock suffering severely from pleurostrayed amongst my cattle. I had him driven out into a distant gully, where he remained till he got well. None of my cattle took the pleuro.
21. I am in favour of leaving the owner to do as he

(No. 151—continued.)

- | Question. | Answer. |
|-----------|--|
| | likes. I would not, however, permit him to drive them off his own property during the time they were suffering from the disease. |

22. I am opposed to any law being passed compelling owners to inoculate, whether the cattle were inoculated or not.

(No. 152.)

2. Varying from 2,000 upwards.
3. I have inoculated with good success at various times from 1864 up to present time.
4. The numbers varied very much, as I frequently bought large mobs of store cattle.
5. In store cattle which had come a long journey I am certain that 40 per cent. of them showed symptoms of disease; but I never saw more than 5 or 6 per cent. of the station cattle diseased at one time.
6. I always try to inoculate as soon as possible after the disease breaks out.
7. I have always seen the whole of the lung hepatized; and I believe that about the fifth day after the beast is really sick to be the proper time to kill for virus. If it is left too long, and the beast's sides have fallen in, the virus will be bad and not safe to use.
8. I have always used virus from the lung only. I have also observed a liquid in the cavity of the chest resembling virus taken from the lung, but have not used it, although many experienced persons have told me that it has the same effect as that taken from the lung.
9. I always use it the same day it is taken from the beast, if possible. I do not believe in keeping it more than one day.
10. Never used it; do not believe in preserved virus by any means whatever, further than putting it in a bottle and corking it up tight, and putting it in a deep waterhole over night.
11. I believe preserving virus to be a myth, and it would be a difficult matter to make me believe otherwise, until I saw it proved by actual demonstration.
12. I always use a common penknife first to make the incision, then use the needle and thread after. This I do to prevent the virus from being stripped off too much, putting it through the skin of the tail.
13. If carefully done, not 1 per cent. will be affected, and the swelling (if any) is generally visible from ten to fourteen days after inoculation.
14. Never used the milk of cows directly after inoculation.
15. If carefully inoculated and properly looked after 1 per cent. ought to cover any loss from swelled tails. The instant the tail shows signs of swelling, the beast ought to be taken up and the tail cut off above the diseased part.
16. A small percentage will always die of those who had the disease bad before they were inoculated. I never lost more than 5 per cent. after inoculation.
17. About six weeks after inoculation not a beast could be found sick.
18. I have always found that after cattle were properly inoculated they cease to die directly.
19. I am decidedly in favour of inoculation.
20. I am convinced beyond a doubt that if cattle are properly inoculated you may turn them into a diseased herd with perfect safety.
21. About two months ago I bought a mob of store bullocks at Penrith, which had come from New England. The pleuro was very bad in them. I had them inoculated, and allowed them to rest in the paddocks two weeks afterwards. Then had them brought to Goulburn. They are now in my paddocks at Inverloch, perfectly well, and I only lost altogether about $1\frac{1}{2}$ per cent. I am of opinion that inoculation is like every other profession or calling—it must be learned by experience only. I can remember the time, when inoculation was first introduced, a very large percentage of the cattle died from the effects of inoculation. The sole cause of this was the want of knowledge—how to get the proper virus; also the careless stupid manner they used the knife or needle, by pricking the bone, which is the cause of the swelling in the tail.

(No. 152—continued.)

- | Question. | Answer. |
|--|------------|
| 22. I do not think a compulsory Act necessary. Every man no doubt will inoculate his own cattle to protect himself. | (No. 153.) |
| 2. 800. | |
| 3. Twice—first, 1867; second, in Jany., 1875. | |
| 4. About 400. | |
| 5. About 2 per cent. | |
| 6. In 1867, about eighteen months. 1875, 400 heifers that arrived at station, they showed the disease and were immediately inoculated. | |
| 13. About one in a hundred. | |
| 14. Not milked for a month. | |
| 15. No deaths. | |
| 16. No. | |
| 17. Six weeks. | |
| 18. It was a success. | |
| 19. In favour. | |
| 20. Since the last operation there has been no appearance of any disease on the station. | |
| 22. Yes. | |

(No. 154.)

- | | |
|--|--|
| 2. 150. | |
| 3. First in 1872. Inoculated 50 in October, 1874, and 75 in October. | |
| 5. About five died. Several affected. After inoculation it ceased, saw little or no symptoms of disease. | |
| 6. About three weeks. | |
| 13. Generally swell a little. Sometimes the swelling simply arises to cause a little lump like a small egg. | |
| 14. Never saw any effects in milk or butter. | |
| 15. I can say I never had a beast die with inoculation. I have cut off the tail when swelling appeared to rise too high, sufficient to cause it to bleed. | |
| 16. None of which was properly affected, or had it at the time of inoculation. | |
| 17. About three or four weeks. | |
| 18. The disease always dies away. | |
| 19. In favour of inoculation. | |
| 20. In my experience among my own cattle, the cattle properly inoculated escape the disease, and the young cattle from six months upwards to two years are the most subject to it. | |
| 21. It is my opinion all people should inoculate their young cattle every spring of the year, or as soon as possibly they can get the virus; or have them done by some competent party understanding the business. Shall make it my business to inoculate as soon as I can get the virus, every year's calves over three months. | |
| 22. I believe all people should be compelled to inoculate their cattle, or keep them from associating with their neighbours, under a penalty. | |

(No. 155.)

- | | |
|---|--|
| 2. I have not inoculated the herd for about 11 years, so I forget the number. | |
| 3. About three or four times. Cannot give the dates. | |
| 4. I forget. | |
| 5. They were certainly diseased, but the disease was but light. | |
| 6. Inoculated at once—as soon as I could get virus. | |
| 13. Swelling and twisting of the tail. | |
| 14. Not milked. | |
| 15. By opening the tail or cutting it off prevents death, if swollen. | |
| 16. A few died; date uncertain. | |
| 17. It was among the straggling cattle for nearly twelve months. | |
| 18. Good. | |
| 19. In favour. | |
| 20. Cattle properly inoculated, I believe, will not get the disease. | |
| 21. Do not inoculate when the disease is bad, but as soon as you can get virus. | |
| 22. No. | |

(No. 156.)

- | | |
|---|--|
| 2. Have not inoculated for many years. Reported before as to our first attempt at inoculation. | |
| 3. Only once—some eight or ten years ago. | |
| 4. Some 1,500 or 2,000. | |
| 13. Cattle fell away in condition for a month or so; few, if any, died. No other effects visible. | |

(No. 156.—continued.)

- | Question. | Answer. |
|---|---------|
| 15. No deaths; no swellings. | |
| 17. At once, apparently. | |
| 18. Satisfactory | |
| 19. In favour. If it does no good, it seems to do as little harm. | |
| 22. No. | |

(No. 157.)

- | | |
|--|--|
| 2. 320. | |
| 3. Once; May, 1874. | |
| 4. 320. | |
| 5. Bought 200 bullocks, April, 1874; showed symptoms immediately at the rate of about 10 per week. | |
| 6. Four weeks. | |
| 13. Very little swelling; two only lost portion of tail. | |
| 14. Did not milk for a month. | |
| 15. No. | |
| 16. No. | |
| 17. Had no appearance of disease after inoculating. | |
| 18. Very favourable in my small case, only lost two after inoculating, and they were nearly dead before. The month previous to inoculating lost thirty-five. | |
| 19. In favour. | |
| 20. I believe that I should have lost half the lot if not inoculated, as they were sickening so quickly; I saw no new symptoms after. | |
| 22. Yes. | |

(No. 158.)

- | | |
|--|--|
| 2. About 400. | |
| 3. Once. | |
| 4. About fifty. | |
| 5. One beast showed symptoms only. | |
| 6. Not known. | |
| 13. I examined on the ninth day and found the tails all swelled and matter in the wound, with the exception of one or two, I then pulled out the seton, and squeezed the matter out, and nothing more was required. | |
| 14. The cows were not milked. | |
| 15. No deaths occurred. Pulled seton out, and squeezed tails. | |
| 16. None. | |
| 17. The one that was affected was turned to the bush by herself, and in about three weeks she came back, but was then very weak, and just able to pick a little, but after that we could notice her getting better, although slowly. | |
| 19. In favour. | |
| 20. I may here mention that my cattle being a distance from the line of road travelled by the teams to and from New England, I have not had any trouble with my cattle, but along the line of road where the teamsters' bullocks get mixed up with the cattle, they have had great losses from the disease in this district. We believe that the disease is brought from New England by the teams, and I have known some of my neighbours to have inoculated, and it is always considered a benefit, and I have never heard of any after inoculation to be affected. My opinion is, that inoculation is a great benefit to cattle that are exposed to infected runs. | |
| 22. I think that inoculation should be made compulsory. | |

(No. 159.)

- | | |
|--|--|
| 2. Three to five thousand. | |
| 3. Several times since year 1864, inoculated a small number stud cattle. September, 1875, the disease, although at times visible, has not been very serious last few years. | |
| 5. Herd slightly diseased. | |
| 6. Occasionally a month or six weeks. | |
| 13. About 1 per cent. seriously swollen; have no faith in the efficacy of the inoculation, unless slight inflammatory symptoms are visible. This will be indicated by the hair being raised near the incision on tail. | |
| 14. Think milk was always used. | |
| 15. About 1 per cent. Sometimes cut off tail, other occasions made deep incisions under same near to butt. Not always successful. | |
| 16. Yes, but only within a few days; believe these would have died in any case. | |
| 17. Always in a short time. | |

(No. 159—continued.)

- | Question. | Answer. |
|-----------|---|
| 18. | Believe it to be thoroughly efficacious, if carried out properly. |
| 19. | In favour of. |
| 20. | Do not know of any instance where a beast properly inoculated, as ever afterwards been affected. |
| 21. | In 1870 and '71, I inoculated a second time all my herd, that is, including those inoculated previous years; since then I do not inoculate a second time. |
| 22. | No; but if they fail to do so, they should not be allowed to travel them if diseased, without being liable to be fined. |

(No. 160.)

2. 800.
3. Once—in 1865.
4. 740.
5. Thirty per cent.
6. About three or four months.
13. Swelling.
15. Five per cent.
16. Not any.
17. About three weeks.
18. Very good.
19. In favour.

(No. 161.)

2. About 1,800.
3. I inoculated at various times during the year 1867, as the disease used to show where the cattle was not inoculated.
4. I inoculated about 1,300 or 1,400 during the year 1867.
5. The disease was on one part of the run and spreading fast till stopped by inoculation.
6. Diseased, showing about six or eight weeks on the herd before they were inoculated.
13. There was very few swellings and no deaths.
14. Milking cows was inoculated and kept on milking and no bad effect.
15. Some three or four head swelled slightly and they were lanced and bled in the tail, they got all right, no deaths.
16. There was no deaths in the inoculated cattle.
17. Saw no sign of disease a short time after inoculation.
18. No sign of the disease since the cattle was inoculated.
19. I am in favour of inoculation.
20. The only thing that came under my notice was that my cattle was mixed with diseased cattle, and never showed any sign of the disease.
21. There was two stations adjoining me, their cattle was bad with the disease, and they would not inoculate for over twelve months after the disease came in their herd, they lost large numbers of their cattle, and after a great loss of stock they inoculated, and the disease has not been in their cattle since.
22. I do consider that cattle should be inoculated where the disease is prevailing in the district, for I consider that inoculation is a preventative if properly done, but there is a great many cattle destroyed by being inoculated by incompetent persons.

(No. 162.)

2. From 600 to 700.
3. Three times—first 1867; second, 1870; third, 1873.
4. About 600.
5. About 10 per cent.
6. A fortnight or three weeks.
13. The most of them swells.
14. Not milked.
15. Yes, about two in the hundred; by taking the tail off.
16. Yes, about five to the hundred; from three to four days after; I had the disease at the time of inoculation.
17. One week.
18. At the first instance it stopped our herd in a week or ten days, and in every case it answered.
19. In favour of it, if you get good virus.
20. Those that were inoculated showed no symptoms of the disease, and were not infected in the least.

(No. 162—continued.)

- | Question. | Answer. |
|-----------|--|
| 21. | I believe in soaking the worsted for quarter of an hour in the virus before use; my reasons for being partial to the worsted thread, is because it can absorb more virus than twine. |
| 22. | Yes. |

(No. 163.)

2. 600.
3. Once, about six years ago.
4. 150.
5. Odd ones bad, about twenty.
6. About a month.
13. Swellings.
14. No.
15. No.
16. No.
17. About a month.
18. Satisfactory enough here.
19. In favour of it.

(No. 164.)

2. About 2,500, this is the total number in the herd.
3. Twice: about eighteen months, and two and a half years ago.
4. Under 100, as far as I can remember, the pleuro only attacked a corner of the run on each occasion, and only the cattle running with the diseased ones were inoculated.
5. I do not think more than ten or twelve head showed any signs of disease, but those belonging to the camp were inoculated although to all appearances healthy, the disease did not spread on either occasion.
6. They were inoculated upon the first appearance of the disease.
13. Only one beast was afterwards found with a diseased tail, to my knowledge.
18. I cannot consider the result as anything but favourable, but the attack was probably a slight one.
19. As far as my own experience goes, I am in favour of it, but other people can bring results that are entirely opposite; a good deal must depend upon surrounding circumstances.
20. Pleuro here on each occasion broke out towards end of summer and on different parts of the run, and no appearance of disease has since been seen. I shall do again as I did before, inoculate as quickly as possible after seeing disease on the run, the young cattle running with the diseased ones, but not the rest of the herd, unless pleuro were to appear to be general.
21. I should not inoculate any beast having any sign of disease and so advise instant attention.
22. Before giving any definite reply to such a question I should consider it necessary to be possessed of more information on each side of the question than I at present possess, I have stated what I would do in my own case.

(No. 165.)

2. About 600.
3. 1870, 1872, and 1874.
4. About 200.
5. Dying at the rate of about two a week.
6. About a month.
13. About ten days after many tails were much swollen.
14. I have never milked cows immediately after inoculating.
15. About one per cent. died; I used a little tar to keep flies off.
16. I have lost none from disease after inoculating.
17. No. 6 answers this.
18. I have never had cattle die from disease after inoculating, it has in each case checked the disease.
19. I am decidedly in favour of inoculation.
20. Cattle inoculated by me were exposed to infection in my neighbour's cattle, divided only by a two rail fence, yet they never suffered.
22. I should not make inoculation compulsory, the country here is all fenced, so little fear of spreading the disease, all who believe in inoculating will do so for their own protection.

(No. 166.)

- | Question. | Answer. |
|-----------|--|
| 2. | About 300. |
| 3. | Only once, August, 1873. |
| 4. | Three days per the above number. |
| 5. | All in good order; not over 30 head. |
| 6. | About 14 days. |
| 13. | Several of the cattle lost their tails. |
| 14. | Did not milk any for some time after inoculation, for we did not like to use the milk. |
| 15. | Lost about 14 head by swelling; only washing with warm water done no good. |
| 16. | Lost five after in about eight days. |
| 17. | Saw no disease in my stock since 1873. |
| 18. | I think, to the best of my opinion, that I would have lost a good many only for inoculation. |
| 19. | Favour it decidedly. |
| 20. | After my cattle were inoculated there was diseased stock in my neighbourhood, but none of my cattle were affected. |
| 21. | I should like to inoculate all stock while young—say 18 months old—from good virus. I should feel that I was doing my duty to myself and neighbours. |
| 22. | I am in favour of inoculation, but opinions differ—I am one for it. |

(No. 167.)

- | | |
|-----|--|
| 2. | About 120. |
| 3. | About twelve months ago. |
| 4. | About 90. |
| 5. | Healthy. |
| 13. | Effect—tailless cattle. |
| 18. | Unsatisfactory. |
| 19. | See above. |
| 20. | Young cattle appear to me not to thrive so well after inoculation. |
| 22. | If it can be proved that inoculation will save a person's property self-interest, will be a much stronger inducement to inoculate than passing any number of Acts. |

(No. 168.)

- | | |
|-----|--|
| 2. | 250. |
| 3. | Once, nine or ten years ago. |
| 4. | 250. |
| 5. | Only five or six. |
| 6. | About two weeks. |
| 13. | I had one died—it was swelled. |
| 14. | Did not milk any at the time. |
| 15. | One died; tried no means to cure it. |
| 16. | One died, but don't mind how long after. |
| 17. | Don't remember it. |
| 18. | All got well but one, and done pretty well after it. |
| 19. | I am in favour of it. |
| 20. | There were other cattle about had the disease, but mine did not take it after. |
| 21. | I have no more to give. |
| 22. | Yes, I do. |

(No. 169.)

- | | |
|-----|------------------------------|
| 2. | 1,000. |
| 3. | Once—August 10th, 1875. |
| 4. | 300. |
| 5. | 5 per cent. |
| 6. | Just showing. |
| 13. | Not visible. |
| 14. | None done. |
| 15. | None. |
| 16. | None. |
| 17. | Some short time. |
| 18. | A complete stoppage. |
| 19. | In favour. |
| 22. | Certainly it should be done. |

(No. 170.)

- | | |
|-----|--|
| 2. | 1,600 head. |
| 3. | Inoculated once—about September, 1866. |
| 4. | 1,600 head. |
| 5. | Cattle slightly diseased—about 2 per cent. showing symptoms. |
| 6. | I think about two months, as I did not for a short time believe in inoculation. |
| 13. | Not having any large paddocks at the time of inoculation, I was obliged to let the cattle out, and consequently I could not state to what extent were the effects, though I noticed swellings in some, and a good number lost their tails. |

(No. 170—continued.)

- | Question. | Answer. |
|-----------|---|
| 14. | I did not for some time after have any of the cows I inoculated milked. I kept a few milkers which I did not inoculate. |
| 15. | A very few deaths occurred from excessive swelling. I did not try any means to cure the swellings. |
| 16. | Yes, a few deaths occurred among the inoculated cattle from the disease after inoculation, and about 1 per cent., as near as I could judge. I think, too, about a fortnight or three weeks after the operation. |
| 17. | I can't say for certain, but it was not a great while after. |
| 18. | The result of inoculation was very favourable in my case. |
| 19. | I am in favour of inoculation. |
| 20. | I can only give this proof of the efficacy of inoculation—that I had some working bullocks which I did not inoculate, and the most of them died, and I fancy by inoculation that I prevented the spreading of the pleuro. |
| 22. | I do, most undoubtedly, if the virus be obtainable. |

(No. 171.)

- | | |
|-----|---|
| 2. | 500. |
| 3. | Only once—during the month of June, 1875. |
| 4. | 490. |
| 5. | Only observed the disease in four beasts, two of which were killed, the other two died. |
| 6. | I commenced the very day I felt sure the disease was amongst the herd. |
| 7. | One half the lung appeared very far gone, resembling congealed blood, the other half was hepatized—from this latter the virus was taken. In another case the lung was not so far gone, three-fourths were hepatized, one-fourth just on the turn. |
| 8. | The virus in both cases was taken from the lung. |
| 9. | Nearly all used the same or day after it was taken from the lung. Some was sunk in a water hole, and kept fresh three or four days; some again, mixed with glycerine, was kept for a week, this, too, was sunk in water. |
| 10. | The above was mixed with one-sixth part glycerine. |
| 11. | No experience except as above. |
| 12. | Needle and thread—the needle was like an ordinary sail needle, which I prefer to the handle needle, because it can be better guided, with the object of taking up less of the flesh. |
| 13. | About five days after inoculation swellings were first observed, in some cases a month elapsed, and in one or two cases I was dressing cattle two months after. Only were some twenty out of 490 affected at all; the rest, beyond a slight redness and very slight discharge, evinced no suffering whatever. |
| 14. | In a few cases I believe the milk was affected, but on this point I am rather doubtful. |
| 15. | From swellings I lost only two, and these were poor miserable creatures which would probably have died whether inoculated or not, from the effects of poverty and old age. Several of my best cows were greatly swollen at top of the tail, but recovered after the parts were cut open and then covered with Venice turpentine, and butter of antimony inserted, changed every third day and hot fomentations applied. |
| 16. | After inoculation I lost none from the disease excepting a valuable bull, which was very far advanced before the remedy was applied. |
| 17. | I saw no symptoms after inoculation. |
| 18. | In above remarks the result is pretty well given. I feel sure my herd was saved by inoculation, and yet I am puzzled at the circumstance of ten milking cows, which were not inoculated, having escaped the disease. |
| 19. | In favour, most decidedly, it can do no harm, and may do good. I believe my herd was saved by inoculation. |
| 20. | My ten milkers, running in the paddock with cows affected with pleuro, not taking the disease, might be an argument of some value against the efficacy of inoculation. On the other hand, I cannot believe, unless I had inoculated, my loss would have been limited to four beasts; the inference may be fairly drawn that had I not |

(No. 171—continued.)

- | Question. | Answer. |
|-----------|---|
| | inoculated, the disease would have quickly spread through the herd; then again, is it not reasonable to infer that the ten milkers were saved by inoculation having entirely destroyed the seeds of infection. |
| 22. | I am greatly opposed to compulsory inoculation. If by this means a stock owner can save his herd, he will naturally adopt it, and cannot be injured even if the disease be raging next door. On the other hand, if an unbeliever, let him pay the penalty; his loss cannot injure his neighbours who have adopted the remedy. Compulsory inoculation would necessitate the appointment of numerous officials, whose ignorance in some cases would cause great loss and trouble. |

(No. 172.)

2. 900 in February, 1870.
3. Three times—in 1870, 1872, and 1874.
4. 950 in 1870, 300 in 1872, and 600 in 1874.
5. Diseased in 1870; it went generally through the herd.
6. About three months.
14. In quality.
15. There were about fifteen died. I sometimes cut the tails off, which often cured.
16. I lost about fifteen through inoculation two or three days after. No deaths occurred through disease after inoculation.
17. One month.
18. Perfect cure.
19. In favour of it.
20. I believe in inoculation, as my cattle were dying very fast till I inoculated, when they immediately stopped. I never saw a beast affected after inoculation.
22. Yes.

(No. 173.)

2. 400.
3. Once—in September, 1871.
4. About 400.
5. Showing symptoms every day.
6. About one month.
13. About six days swellings.
14. Were milked; affected quantity.
15. Two cows died which were forward in calf, I think from being crushed in the pen.
16. None.
17. I think about three weeks.
18. Never saw any more of it.
19. In favour.
20. Never saw any cattle affected after inoculated with good virus.
21. Care wants to be taken after with regard to swelling; if the rump swells, open it with a knife; if the tail, cut it off above.
22. Yes.

(No. 174.)

2. Eighty head.
3. Once—12th August, 1871.
4. Eighty head.
5. Half my cattle were away from home. Amongst the half at home I lost three by pleuro-pneumonia.
6. About ten days.
13. I saw little or no effects or swelling.
14. The milkers were inoculated and turned into a paddock, where they were unmolested.
15. No deaths occurred.
16. One young bullock that had been inoculated was very ill; I applied the fumes of sulphur; he got fat; I sold him; he was killed, and the butcher told me he could see he had been ill.
17. The above-mentioned young bullock was the only one that showed any symptoms of pleuro after the inoculation. I think it may have been about three weeks after that he appeared ill.
18. I cannot state any result of the inoculation except that, whereas before inoculation I lost two head that I shot for virus, but the disease was too far gone to be safe; after the inoculation I saw no more of the disease, but in the one case mentioned above in reply to question 16.
19. I am in favour of inoculation.
20. The disease was altogether so mild on my place that I know but little about it.

(No. 174—continued.)

- | Question. | Answer. |
|-----------|---|
| 21. | The half my cattle that were from home were brought home very shortly after the other half was inoculated; they were turned on the run uninoculated, but never broke out with the pleuro. |
| 22. | I think it would be judicious to pass such an Act. |

(No. 175.)

2. 2,500.
3. Once, in December, 1872.
4. About 400.
5. Not diseased.
6. Had not been diseased.
13. The swelling takes place about three days after inoculation, subsequently the tail drops off.
14. Cows were milked immediately. The milk was not affected.
15. About 2 per cent. died. We cured the swelling by cutting the tail off the beast.
16. A quarter percentage died of the inoculated cattle from the disease. Then those which were not disturbed.
17. A few still take the disease, but very slight, and generally recover if not disturbed.
18. Killed more cattle than we cured by it.
19. Opposed.
20. 1st., disturbing the herd by mustering for inoculation; 2nd., cattle were exposed to the infection, and were affected by it.
21. While the disease is prevalent, let the herd remain as quiet as possible. Shoot and burn any beast having the disease so bad as to prevent recovery.
22. I am opposed to the Act, as more cattle die from inoculation than otherwise.

(No. 176.)

2. About 400.
3. I inoculated first in '63 or '64. I only inoculated the working bullocks on the place, about 30, and although the pleuro shortly after broke out in the herd and killed a great many (83 broken-in dairy cows), not one of the inoculated animals ever got the disease. Inoculated all the rest of the cattle soon after the disease broke out, and in about two months the herd was sound.
4. First occasion, about thirty working bullocks; second, about two hundred mixed cattle.
5. The dairy cattle and mixed cattle were (some of them) diseased; of these, some died and others got over it. I do not look upon inoculation as a cure, but a preventive. Have seen many cases recover without being inoculated.
6. About two or three months.
7. The lung appeared very large and solid, like something between liver and lung; cut some of the lung that was of lightest colour, with a clean sherry-coloured liquid showing in the cells, into small pieces, the liquid will run from it and immediately congeal to the consistency of jelly or water arrowroot; squeeze it through a piece of muslin and it will again become liquified, nor will it again congeal. The animal may have been ill two or three or ten or twelve days, there is no rule as to time. A beast that has the pleuro cannot bear to go out of a walk, and if made to trot, will immediately give one or two little coughs; they always like to stand in water, and nearly always die there. There is no greater sign of pleuro than grinding the teeth together. Have heard of virus being taken after death (by C. Long, Gresford) and used successfully.
8. For how taken, see answer to 7. From the lung.
9. Only a few hours, and never used after the second day. It is of the most vital importance that some way of keeping virus for use should be discovered. The Government should offer a reward for the best way of keeping it. Mort's plan would be the best. To be kept at a central position in each district.
10. On this subject, the importance of which can hardly be over estimated, communicate with Mr. John Smith, Singleton, care of Mr. Geo. Loder, Abbey Green, or Mr. A. A. Dangar, Baroona. I again repeat, that the Government should have good virus kept by Mort's process in every district in the Colony, so that those who wished could inoculate and brand at the same time.

(No. 176—continued.)

- | Question. | Answer. |
|---|---------|
| 11. I have never preserved any virus, but have often wished to be able to do so; for, if it could be preserved, it could be tried and proved before using it upon valuable animals, or before inoculating any number. I am satisfied that Mort's freezing process will be very valuable to these colonies for this purpose. | |
| 12. First, with a needle and worsted-thread dipped in the virus; second time, only use a pen-knife; raised the skin just enough to draw blood, then dipped the blade in a small bottle of virus and put the blade through the same hole again. It did just as well as using a seton. | |
| 13. Lost fine bullock out of 30 by swelling. Many cows swelled badly and had to be scarified about the rump and upper part of the tail; but, if the operator understands his business, very few are lost through inoculation. | |
| 14. Cows can be milked. It does not affect either quantity or quality. A cow goes dry in one or two days if she has the pleuro. | |
| 15. One bullock out of 400. Lost less than 1 per cent. by swelling. In bad cases of swelling, the knife must be freely used, and the animal if possible should be fed on very soft green food—green young lucerne is the best. | |
| 16. Yes; some cattle died after inoculation. Do not think it is a cure; in fact, rather think that it hastens the end to inoculate an animal already affected with the disease in its lungs. | |
| 17. Two or three months. | |
| 18. Saved every animal that was inoculated in good time—i.e., months before the disease broke out—and prevented the spreading of disease through the herd after it had broken out, making them again sound in two to three months. | |
| 19. In favour of it; and no one that had seen what I have (a great deal more than I can now write) could possibly be against inoculation. Write to H. H. Brown, Esq. M.P., and Mr. W. Keliker, both of Lostock. | |
| 20. The 30 bullocks that I inoculated in good time were exposed to the infection, but not one of them ever caught the disease; other bullocks that I purchased afterwards, uninoculated, caught the pleuro and died. W. Keliker had his herd (about 250), inoculated in good time—lost 1 by swelling, but never lost any of the inoculated cattle by pleuro. Pleuro afterwards showed in his young stock—i.e., those calved after he had inoculated. | |
| 21. I have often since '64 seen isolated cases of pleuro, and it appeared to be almost a different disease, not so rapid in its effects on the animal, nor so likely to spread to others. In such cases, I should recommend shutting the animal in a close place, and well fumigating with burning sulphur, and a seton to keep a large running sore in the chest; bleeding I have also practised, and I think it is beneficial. All or nearly all thoroughly practical men who have had experience believe in inoculation. Should the disease ever break out again in this district, as it did in '64, I am satisfied that 9 stock-owners out of 10 would inoculate. The Government should have a supply of virus kept at every Court-house in the colony, by means of Mort's freezing process. This would be far better than passing compulsory Acts, as, the virus being within the reach of those who required it, in a few years time, inoculating cattle would be probably be nearly as generally practised as branding them. | |
| 22. No, I do not; for those who did not wish to inoculate would never be able to obtain the virus, while those who did wish would hardly allow any obstacle but distance to prevent them from getting it. An Act should be passed, empowering the Government to declare districts infected, and then, from good virus kept in central positions by Mort's process, inoculate all cattle in those districts, or at any rate all cattle whose owners desired to have them inoculated—the non-inoculators would only punish themselves. | |

(No. 177.)

2. 1,300 head.
3. Twice—about 5 years ago.

(No. 177—continued.)

- | Question. | Answer. |
|--|---------|
| 4. About 1,000. | |
| 5. About 25 per cent. | |
| 6. Inoculated as soon as symptoms were noticed. | |
| 14. Cows were not milked. | |
| 15. A few deaths from swelling. Scarified and salt rubbed in, effect good. | |
| 17. About a month after inoculation no disease was noticed. | |
| 18. Good. | |
| 19. In favour. | |
| 22. No. Some owners do not believe in inoculation. And I do not think it is a very infectious disease; travelling cattle have passed through these stations bad with disease and left no trace behind. | |
- (No. 178.)
2. About 200 head.
 3. Once only—about three years ago.
 4. About 200 head.
 5. Cattle as usual diseased, pleuro being prevalent; I had mine inoculated.
 6. Not affected.
 13. Virus took well in the cattle mentioned, and never lost any by pleuro, nor has it appeared on the run since inoculation.
 14. Did not use the cows for some six weeks after inoculation; then the milk or its produce was not in any way affected.
 15. Ten lost by excessive swelling, or 5 per cent.; no means were used; swelling chiefly in the tail and hind quarters.
 16. Nil.
 17. Did not appear.
 19. In favour, from the result of my experiments.
- (No. 179.)
2. 200.
 3. Twice—the last time July or August, 1874; the first time I cannot remember.
 5. Not diseased after inoculation; about 1 per cent. died.
 6. Not diseased before inoculation.
 13. The tail slightly swollen after from three to four weeks; about 20 per cent.; a few, say $\frac{1}{4}$ per cent., lost the point of tail.
 14. Never milked for two months after inoculation.
 15. No deaths.
 16. About $\frac{1}{4}$ per cent. died from eight to ten days after inoculation.
 18. I have seen no symptoms of disease since.
 19. In favour if properly done.
- (No. 180.)
2. 150.
 3. Three times—1873, 1874, 1875.
 4. Seventy, thirty, fifty.
 5. Free from disease.
 6. Had no disease for two years before.
 13. About one-fourth of the aged cattle swelled, and about two-thirds of the young cattle.
 14. Never used the milk from cows immediately after inoculation.
 15. Did not have any deaths from swellings; opened the tail with a knife; long cuts just through the hide.
 16. Did not have any deaths from the disease since inoculation.
 17. Never had the disease; the virus was got elsewhere.
 18. Cannot offer any opinion.
 19. Slightly in favour of inoculation.
 21. Nothing to give.
- (No. 181.)
2. 3,000.
 3. Once—viz., from 16th February to 23rd March, 1875.
 4. About 2,800.
 5. Only slightly diseased—odd ones dying. Inoculated in consequence of disease breaking out in a very virulent form in a mob of the station bullocks then travelling on road (see question 20.)
 6. Had shown slight signs for two or three years.
 7. Virus was obtained from animals in various stages; from those that only just appeared to be sick to a beast that had lain down to die, the lungs being in some cases nearly healthy, while in the last case were perfectly black. Went by colour of virus; selected that of a very pale sherry

(No. 181—continued.)

- Question. Answer.
- colour; obtained that colour in the beast named as dying, and whose lungs were perfectly black, but this was perhaps chance. Animals most likely to produce good virus generally only slightly sick; am of opinion, however, there is no rule.
8. Chest virus—that is, water found in the chest and the virus found in small quantities round about the lungs.
 9. Sealed up in bottles and burned, throwing a bucket of water over the spot where buried to assist in keeping a cool temperature.
 10. Yes, with glycerine, in proportion of $\frac{1}{4}$ glycerine to $\frac{3}{4}$ virus.
 11. Unsatisfactory; one paddock, consisting of about 1,000 head, being inoculated with mixed virus, did not, after having been inoculated, show any signs of having been so treated; disease, however, has not appeared.
 12. With grooved knife.
 13. The swelling of tails commenced from 16 to 21 days after inoculation; about 5 per cent. lost one or more joints of tail, and about $\frac{1}{4}$ per cent. died from swelling running up to rump and getting too bad before they were seen. Those seen and brought in were cured.
 14. Milking cows not inoculated.
 15. Yes, $\frac{1}{4}$ per cent. Those seen in time were cured by opening the swollen parts at the butt of the tail, deeply running a knife as far as it would go in the lower part of the swelling, and letting the place discharge.
 16. None.
 17. None dying after inoculation, and showing no symptoms; impossible to say.
 18. Satisfactory.
 19. In favour, most certainly.
 20. We started 500 bullocks south, which previous to their starting had been herded on the station for something over six weeks, all of them to appearance being as healthy as possible, among them being 38 that had been inoculated some three months previously. After they left pleuro came among them in a very virulent form, and in a very short time—not more than three weeks—64 head had died or had to be left behind. About ten days after it broke out the mob was inoculated, which without doubt stopped the progress of the disease; but the most important point in the matter being, that although the disease had shown itself in as bad a form as possible, not one of the 38 bullocks previously inoculated were either sick or died.
 21. All cattle on run now inoculated, with the exception of about 200 aged cattle and the weaners; these, if any possibility of getting virus, will be inoculated at weaning before the weaners when herded are turned out.
 22. Divided in opinion. All owners could not muster cattle for the purpose. Not yet clearly proved if pleuro is contagious or not. If only epidemic, individual inoculation ought to answer.

(No. 182.)

2. 130.
3. Only once, in 1865.
5. All diseased.
6. Cannot tell.
13. Several lost part of the tail by rotting away.
14. No.
15. None that I can recollect.
16. Three died after the operation.
17. Apparently about three months.
18. Favourable.
19. In favour of.
22. I consider such an Act very desirable.

(No. 183.)

19. For.
21. On all this I refer you to my former report, furnished years ago. I beg to refer you on all points to the very full report which I gave a number of years ago, when lung disease was prevalent in this quarter, I may state that I consider inoculation not only a preventative, but a certain cure, if per-

(No. 183—continued.)

- Question. Answer.
- formed before the disease reaches its last stage. I lost over two thousand cattle before I began to inoculate, and none after except a few that were nearly dead before they were operated on.
22. I do. Diseased cattle ought to be prevented from travelling.

(No. 184.)

2. About 3,000 head.
3. Inoculated four times, in 1864, 1865, 1866, and 1867.
4. In 1864, 2,000 head; 1865, 800 head; 1866, 800 head; 1867, 500 head.
5. They were diseased; about 5 per cent. showing symptoms.
6. Three months.
13. The only effect visible was the swelling and a weakness of the tail.
14. They were not milked.
15. About 1 per cent. By scarification or cutting a portion of the tail off, it had the desired effect.
16. No deaths, but in 1864 from 2 to 3 per cent. They left off dying about five weeks after the inoculation.
17. From five to six weeks.
18. I believe it is a preventative from pleuro-pneumonia.
19. I am in favour of inoculation.
20. Our cattle after they had been inoculated never caught the disease after, while other cattle which were running with ours but not inoculated seemed to catch the pleuro continually.
21. I believe that all virus for inoculation should be taken from the lungs.
22. I consider that an Act should be passed.

(No. 185.)

2. About 400 head.
3. Several times; first about 1860.
4. About 200 the first time, and the remainder the second time.
5. The first lot were not very bad when inoculated, but the second lot were nearly all diseased.
6. First lot about three months, second lot fully six months.
13. Had no opportunity of making frequent examinations.
14. Yes; but the milk was not used.
15. Yes, a few; cannot say what percentage, not more I think than about 2 per cent.
16. Yes, a few; when the disease became too far developed.
17. I sold a large portion of them off in about four months in capital condition, no appearance of disease about them.
18. Successful.
19. In favour of inoculation.
22. Yes.

(No. 186.)

2. I can't say.
3. Not for five years.
4. 800.
5. On the last occasion I inoculated as a preventative.
6. And no cattle were then diseased.
13. In 3 or 4 days you might observe the swellings, but often a week would elapse.
14. We never milked them after inoculation; we always turned them out.
15. I think about 3 per cent. died from the effects of inoculation. In several cases of excessive swelling resort was had to the knife with favourable results.
16. I could hardly answer that question, but I think very few died of disease after inoculation.
17. With the exception of one bull, we have lost no cattle on Cambaroona for years from disease.
18. Favourable result.
19. I approve of it.
20. My opinion is that if the operation is properly performed, cattle will not suffer from inoculation.
21. I have no other information to offer. With the exception of the one bull mentioned before, I have had no deaths from pleuro-pneumonia for five years, nor any symptoms of disease.
22. I think that cattle properly inoculated will not take disease, and I think an Act should be passed compelling owners to inoculate, if virus is procurable.

- (No. 187.)
- | Question. | Answer. |
|-----------|--|
| 2. | 400. |
| 3. | We have inoculated twice for pleuro. First in 1867, and again about the end of the year 1871, since which date the disease has not appeared in the herd. |
| 4. | In 1867, 300 were inoculated, and 400 in 1871. |
| 5. | The cattle on each occasion were diseased before inoculated, but the percentage actually showing symptoms were small, about 2 or 3 in the herd. |
| 6. | Inoculation was resorted to a few days after the first appearance of the disease. |
| 13. | Swellings did not appear to any alarming extent. I should think not more than 5 per cent. |
| 14. | Cows were not milked after inoculation. I should think the milk would be affected. |
| 15. | About 2 per cent. died from excessive swellings, which I attribute to the cattle having been turned out on the run and not found until mortification had set in. The tail of the beast was cut off when the swelling was excessive, and symptoms of mortification appearing. |
| 16. | I have never known an instance of inoculated cattle taking the disease. |
| 17. | The disease finally left the herd in about a month after the operation was performed. |
| 18. | Most satisfactory. The cattle ceased dying, and appeared to improve in condition faster after the operation was performed than before. |
| 19. | I am strongly in favour of inoculation properly performed. I firmly believe that a beast inoculated with good virus, properly administered, will not afterwards take the disease. |
| 20. | I have known cattle which were inoculated to be exposed to infection in almost every possible form, and in no case have I known an inoculated beast to take the disease. |
| 22. | Owners of infected herds should be compelled by Act of Parliament to inoculate. |

(No. 188.)

2. 15,000.
3. Once, in 1868, when over 12,000 were inoculated; once, in April, 1874, about 2,000 were inoculated.
5. In 1868 the only cattle that the disease was amongst were a few in one paddock (under 300 head), from 10 to 15 per cent. were showing symptoms. Since 1868, when a great many died from pleuro after inoculation, there has never been above 2 or 3 per cent. of the general herd showing symptoms.
6. A very short time in 1868. Inoculation was set about at once, after the disease was seen.
13. About ten days after inoculation the tails of some began to swell. It was always found that there were far more swelled tails in hot weather.
14. Can give no information about this matter.
15. About 4 or 5 per cent. died from swelled tails in the hot weather. The means tried to cure them were chopping off the tails and bleeding.
16. All the heavy losses we had in 1868 were after inoculation. About two months or less after the operation the greatest losses occurred.
17. At certain times of the year there has always been an odd case of pleuro to be seen, but it has never shown itself very bad. In the autumn of 1873 and 1874 it was the worst it has been since 1868.
18. Very unsatisfactory; had fewer losses amongst about 2,000 or 3,000 that were left alone in 1868 than amongst the inoculated ones, and all our subsequent experience tends to prove that it is better not to inoculate.
20. We have always found that cattle that were left alone recovered from the disease as soon, and had less losses amongst them than those that were inoculated. One lot of young heifers, about 1,200 head, that were inoculated in April or May, 1874, showed no signs of the disease at the time, but about a month afterwards the losses were heavier amongst them than any on the run, as many as 4 per cent. dying. We have also found that cattle that are most disturbed during the summer suffer more from pleuro than others.
22. Decidedly opposed to it.

(No. 189.)

2. About 4,000.

- (No. 189—continued.)
- | Question. | Answer. |
|-----------|--|
| 3. | Inoculated the whole herd once in 1867, and 1,800 last year. |
| 5. | Last year the cattle were nearly free from pleuro-pneumonia. I only inoculated a few diseased. Some of them I killed and found the lungs quite black and rotten. |
| 6. | I cannot say; but not long. |
| 13. | In the tail, rump, and sides, in lumps. |
| 15. | Very few deaths. Open the swelling and take out the matter. |
| 16. | Very few. Up to about three weeks after inoculation. |
| 17. | About three weeks. |
| 19. | In favour. |
| 20. | Some of the cattle were exposed. I did not notice them affected. |
| 22. | No; because you may obtain virus, but the state of the cattle may be too poor, and you would lose more by inoculating. |

(No. 190.)

2. 1,200 head.
3. Three times; about seven years ago for the first time; also about four years ago, and also last November, '73.
4. All the herd the first time, nearly all the second time; about 1,200 head.
5. About 4 or 5 per cent. were bad when I inoculated them.
6. About three months, i.e., seven years ago. On last occasion I saw a few and thought it better to inoculate.
13. Some in four days, and some longer.
14. Not milked after inoculation.
15. Very few—2 per cent. about. Cut a piece of the tail off when very bad to make them bleed.
16. I lost about 2 per cent. altogether; whether from the swelling of tail, or disease, or crushing in the yard, or from all three, I can't say.
17. About three months after inoculation it disappeared.
18. From only observing it generally, I cannot be certain as to its results.
19. I would never inoculate unless the disease came amongst them. On the whole, I don't much believe in it.
20. The adjoining herd were not inoculated the last time the disease appeared, and yet it left that herd about the same time as my own.

(No. 191.)

2. In 1874 I inoculated 630.
3. Once in 1874—about September, 1874.
4. 630, in 1874.
5. 1 per cent.
6. Three weeks.
13. Swelling at the butt of the tail.
14. Milked immediately after inoculated; neither affected in quantity or quality, or in any other way.
15. About two out of 100. Means tried, cutting the tail off and scarifying the swelling.
16. Death after inoculation, one—eight days after.
17. About four weeks.
18. No disease appeared since.
19. In favour.
20. If properly inoculated never exposed to the infection; but if wrongly inoculated affects the limbs and swelling in the chest.
21. No other; only inoculating.
22. Yes.

(No. 192.)

2. 12,000 head.
3. Inoculated in 1866-7; also in 1872.
4. Three thousand eight hundred (3,800); also 500.
5. Disease was strong in the herd when I inoculated.
6. The disease was in the herd fully three months before I inoculated.
14. Did not milk after inoculation.
16. I started 2,800 store cattle on the road a week after the inoculation was finished, and lost about 4 per cent. I also started 500 head to Dubbo; they were inoculated ten days before starting, and I only lost four head from disease.
18. Very satisfactory. Loss of 4 per cent. on one lot, 2,800 store cattle to Melbourne; loss of $\frac{1}{2}$ per

(No. 192—continued.)

- | Question. | Answer. |
|-----------|--|
| | cent. on the lot started to Dubbo; loss of $\frac{1}{2}$ per cent. on those on station. |
| 19. | In favour of inoculation, decidedly; and have had extensive experience. |
| 20. | I started, in 1865, 3,000 head of store cattle not inoculated, and lost from deaths 30 per cent.; whereas in 1867 I started another of store cattle for Melbourne that were inoculated, and my losses from disease were only 4 per cent.; and in another instance only $\frac{1}{4}$ and $\frac{1}{2}$ per cent. Whereas in my herd that were not inoculated there was at least a loss of 20 per cent.; and from the same cattle I inoculated some before starting them overland to Melbourne, and lost only 4 per cent. |
| 22. | When the virus can be obtained and the herd infected, I think that owners should be compelled to inoculate. |

No. 193.

- | | |
|-----|---|
| 2. | (11,000) eleven thousand. |
| 3. | Only once, when the young cattle are weaned. |
| 4. | About (2,000) two thousand. |
| 5. | Very little disease showing on the run. |
| 6. | No disease showing in any of the cattle at the time they were inoculated. |
| 13. | Not more than three or four out of every one thousand lost their tails by swelling from the inoculation. |
| 14. | I have not inoculated; and milking cows I prefer inoculating at the age of from six months to two years old. |
| 15. | No deaths that I am aware of. |
| 16. | None that I am aware of. |
| 19. | In favour of. |
| 20. | I believe the percentage of deaths from pleuro-pneumonia to be much less since I have regularly inoculated the young cattle as I wean them. |
| 22. | I would rather say an Act should be passed to force the owners of cattle to inoculate while such cattle are in a sound and healthy condition. I do not consider inoculation a cure, but a preventive of pleuro-pneumonia. |

(No. 194.)

- | | |
|-----|--|
| 2. | 1,500. |
| 13. | The tails of great numbers would drop off. |
| 14. | No experience on that. |
| 15. | Very few deaths afterwards. |
| 18. | I think a preventative but not cure. |
| 19. | In favour. |

(No. 195.)

- | | |
|-----|--|
| 2. | 840. |
| 3. | Twice; about ten years ago, and August, 1874. |
| 4. | About 400 first time, and 840 last time. |
| 5. | About 10 per cent. first time, and 2 per cent. on the last occasion showed symptoms of disease. |
| 6. | About three months. |
| 13. | The tail in most cases swelled slightly, the end of the tail coming off in some cases. |
| 14. | Did not notice any effect whatever in the milk. |
| 15. | Only one death. Opened the swelling, and poured in butter of antimony. |
| 16. | Five or six died after being inoculated, but were diseased before. One died two months after inoculation, but it is most probable that the virus did not take in this case. |
| 17. | About two months. |
| 18. | I believe inoculation to be a preventative if the proper virus is used. I do not think the chest virus is any use whatever. Have seen good results from virus obtained from the marbled lung merely pounded up and used whilst fresh, although excessive swellings and the loss of a good many tails is certain from using this virus. |
| 19. | In favour of it, but do not consider that inoculation should be made compulsory. |
| 22. | No. |

(No. 196.)

- | | |
|-----|--|
| 2. | 1866 about 3,000 head; 1875 about 4,200 head. |
| 3. | Twice, in the years mentioned above. |
| 4. | See No. 2. |
| 5. | In 1866 seven per cent.; in 1875 two per cent. |
| 6. | Six months. |
| 13. | Swellings, and in many cases loss of tail. |
| 14. | Yes, milk not much affected. |

412—G

(No. 196—continued.)

- | Question. | Answer. |
|-----------|---|
| 15. | In 1866 ten per cent. of deaths, in 1875 four per cent. of deaths. No remedy was tried. |
| 16. | Yes. Could not say. |
| 17. | In 1866 about two months; at present there is a little disease among the cattle. |
| 18. | I think it advantageous, as the disease will nearly die out. |
| 19. | In favour. |
| 21. | I believe this year half my cattle were put in a large paddock and they hung round the fence and fell away in condition, which predisposed them to take it. |
| 22. | Yes. |

(No. 197.)

- | | |
|-----|--|
| 2. | 250. |
| 3. | Once, April, 1868. |
| 4. | 250. |
| 5. | One and a half percentage. |
| 6. | From November until April—in that time there were 450 dead. |
| 13. | Swelling in tail. |
| 14. | Not milked until the following summer. |
| 17. | From date of inoculation disease finally left the herd in twelve or fourteen days. |
| 18. | Disease stopped. |
| 19. | In favour. |
| 20. | I believe cattle properly inoculated will not be affected afterwards. |
| 22. | I do not, as any one that inoculated his cattle once knows the good of it. |

(No. 198.)

- | | |
|-----|--|
| 2. | 1,600. |
| 3. | November, 1867, and June, 1875. |
| 4. | 1868, 1,500; 1875, 1,400. |
| 5. | Bad order and condition. |
| 13. | Slight swellings. |
| 14. | Not milked. |
| 15. | Not any I believe. |
| 16. | About twenty or twenty-five died, but these I think were hurt in crush, being in calf, or had disease bad when inoculated. |
| 17. | December; do not see any disease now. |
| 19. | Yes, decidedly in favour. |
| 20. | I saw no disease amongst the cattle inoculated in 1868, all deaths were amongst the young cattle. |
| 21. | I believe disease was brought on the run from freshly inoculated cattle passing through. |
| 22. | No, I believe in inoculation, but think it should be left to the owner's option to do so or not. |

(No. 199.)

- | | |
|-----|---|
| 2. | 1,500. |
| 3. | Once—December, 1873. |
| 4. | 800. |
| 5. | 10 per cent. |
| 6. | About three or four weeks. |
| 13. | 2 per cent. swelled, I think, through the virus being too strong. Cut the tails of three or four. |
| 14. | Milked day after inoculation; found the milk good. |
| 15. | Out of 800 lost about fifteen, caused through inflammation in the gut from the fundament stopping passage; found that the cause in all the deaths. |
| 16. | In a week after being inoculated. |
| 17. | Disease stopped after inoculation. |
| 18. | Good. |
| 19. | In favour. |
| 20. | Pleuro has been in a different part of the run from where the inoculated cattle depasture—about four miles. No appearance of the disease amongst the cattle that were inoculated. |
| 21. | I believe inoculation as a preventive, and that virus can be kept a moderate time by securely corked and sealed, and kept in a deep water-hole. |
| 22. | Some people believe inoculation. I do; others do not. Let them please themselves. Cattle infected ought not to be allowed to leave their run until they are inoculated. |

(No. 200.)

- | | |
|----|--------------------------|
| 2. | 100. |
| 3. | Inoculated once—in 1865. |
| 4. | 100. |

(No. 200—continued.)

- | Question. | Answer. |
|-----------|---|
| 5. | Diseased about one fourth. |
| 6. | About one month. |
| 14. | Not milked. |
| 15. | Three per cent. No means tried. |
| 16. | None. |
| 17. | Those that were diseased at the time of inoculation soon died, within a fortnight, and then the disease disappeared. |
| 18. | Successful. |
| 19. | In favour. |
| 20. | These cattle that were inoculated never had the disease again, though cattle introduced on the run after had the pleuro, and were running with them. |
| 22. | I believe that it is to the owners of cattle advantage to inoculate; still as pleuro does not seem to be so virulent now, and under certain circumstances it is often very injurious to disturb a large herd, I could not accede to a compulsory Act. |

(No. 201.)

2. About 3,000 head.
3. Twice. First in September, 1866; again in February, 1875.
4. About 3,000 head in 1866, and about 2,000 in 1875.
5. When inoculated in 1866 there was odd ones diseased all through the herd, but I could not now say the percentage. In 1875 the disease only showed on one side of the run, and we inoculated all round them, and the disease has left that part, but a few still has it where not done.
6. In 1866 the disease was in the herd about four months before we inoculated. In 1875 we inoculated about one month after it made its appearance.
13. About five per cent. swelled.
14. We did not milk the cows for about ten days after inoculation. I can't say if it affected the milk or not.
15. About one per cent died. Some we cut the tails off, and some were scarified, according to the state they were in. I have seen some bad cases cured by so doing.
16. I have not known above four or five deaths after inoculation from the disease; and in all cases shortly after they were done, I have not known any die after they were one month done.
17. Within one month.
18. Wherever I inoculated the disease has died out.
19. In favour of it.
20. I have known the disease break out on one side of a run, and the owner inoculated at once, and it stopped the disease altogether. This was a neighbouring station. None of the cattle that were inoculated here in 1866 took the disease this year. In all cases they were younger ones.
21. I don't know anything worth communicating.

(No. 202.)

3. Once, in 1873.
4. About 400.
6. There was no disease showing at the time.
14. No.
15. No.
19. In favour of.

(No. 203.)

2. 400.
3. Once, 10 years ago, and again 18 months ago.
4. I forget.
5. All sound.

(No. 204.)

2. First date of inoculating, about 800 head; second date July, 1875, about 2,000, which includes my own and a large number the property of selectors in the neighbourhood, which I operated upon.
3. I have inoculated on two occasions—the first time about eight years ago, and secondly in July last, 1875.
4. First time, about 800 head; second, 2,000.
5. About 2 per cent. showing symptoms of disease. The first time inoculation was adopted more as a preventative than as a cure.
6. About two months.
13. About a fortnight after inoculation several were affected with swellings.

(No. 204—continued.)

- | Question. | Answer. |
|-----------|---|
| 14. | Milking was continued after inoculation without any perceptible decrease in milk or affecting them in any way. |
| 15. | Only two deaths occurred that we are aware of; scarifying was the only means used to those affected by swelling. |
| 16. | Six or eight cattle died within three weeks after being operated upon from the disease. |
| 17. | About a month. |
| 18. | Cattle apparently healthy. |
| 19. | In favour of inoculation. |
| 20. | On the first occasion when I inoculated, cattle on borders of my run were dying from disease, and mine never were attacked. In June and July last, I lost from disease between 30 and 40 head (about 4 per cent.), since which, after inoculating, I have not lost any. |

(No. 205.)

2. 760 head on first occasion.
3. Three times—first October, 1873, 760 head; about April, 1874, 70 head; about April, 1875, 130 head.
4. 760 head, 70 head, 130 head.
5. Diseased on each occasion, but very small percentage, as I inoculated as soon as observed.
6. Few days.
7. Young beast, disease very far advanced, lung considerably hepatized or marbled.
8. Partly from the lung, and mixed with virus found in small quantities near the lung in globules.
9. Twenty-four hours.
10. No.
11. Never used it.
12. Needle and thread, inserted through the thin end of tail.
13. Swelling within a fortnight, loss of tails to the extent of a fourth; deaths, 3 or 4 per cent. in first lot; cut off tails and used tar; considered virus too strong, but never had any disease since in that lot.
14. Don't think cows were milked during time of disease.
15. Died of excessive swelling, 3 or 4 per cent.; cut off tails and used tar with good effect.
16. No deaths after about three weeks; up to that time lost 3 or 4 per cent.; some from disease, but principally from inoculation.
17. About three weeks.
18. Good throughout.
19. As far as my experience has gone, I am decidedly a believer in inoculation; at the same time I may add, that of the last lot operated on, it has been reported to me that two deaths from pleuro has taken place; I was not present at the operation, and believe that the virus or fluid used were taken from the cavity of the chest.
20. The several lots of cattle before spoken of were all purchased, and at various times; the first lot of 760 head, has ever since been exposed to the influence of the disease, inasmuch as the lots afterwards brought on to the run, after being there a few weeks became diseased and were treated for it, and not one of the 760 ever showed any signs. The lot of fat cattle before spoken of was from my Yaraldool Station, Namoi River; the market being low when they arrived here I choosed to hold them, when in the paddocks about a fortnight, pleuro showed itself, I still held them for a few weeks longer, thinking it might leave them, but it seemed to be as bad as ever, the weather became very wet and the cattle began to loose condition, when I picked out about half of the best of them and sent them to market, the disease still in the residue, where it continued more or less for about three months.
22. No, I think owners should be left to their own discretion.

(No. 206.)

2. 4,000.
3. Once—February, 1868.
4. 3,500.
5. Disease had shown in the herd just before inoculation was performed; the number affected was about 5 per cent.

(No. 206.—continued.)

Question.	Answer.
6.	Disease showed in the herd not more than a month before inoculation was performed.
13.	In the tail only, when after about ten days some of the cattle showed swellings to a moderate extent.
14.	Milkers were inoculated, but not milked afterwards for about a fortnight; did not affect the milk in any perceptible way.
15.	A few deaths did occur, we believe about 1 per cent. In cases of excessive swellings the tails were above scab of the inflammation.
16.	We don't know of any cases.
18.	Disease does not now show in the herd.
19.	We are in favour of inoculation.
22.	We are clearly of opinion that inoculation is a preventative to the disease, but think public opinion is not yet ripe for such an Act.

(No. 207.)

2.	10,500.
3.	I have inoculated twelve different herds; commencing in August, 1855, and the last in or about May, 1865.
4.	I cannot give the separate inoculations, but the whole might amount to about 13,000 to 14,000.
5.	You must be a very clever man to state the actual percentage, but the cattle were more or less affected.
6.	Some two months, and some a week.
13.	All showed more or less swellings, except those cattle which had not taken, say about 3 per cent. not shown signs of swellings.
14.	Yes, took no particular notice whether it affected milk.
15.	Yes, about 4 per cent.; had the tail removed and the loins dressed.
16.	I had on several occasions from 30 to 50 per cent.; from one day to fourteen days.
17.	Never kept any calculations.
18.	Don't believe in it, as I found it was not a preventative. There has been more losses caused by inoculation than when left alone.
19.	I am quite opposed to it.
20.	I had several cattle suffering from pleuro when inoculated; I have known these cattle to die of pleuro two years afterwards.
21.	I know of nothing.
22.	Certainly not, it would be better to take them into the yard at once and kill them.

(No. 208.)

2.	100.
3.	Once.
4.	100.
5.	All showing symptoms.
6.	Twelve months.
13.	No swelling.
14.	Cows not milked six months.
15.	No deaths.
16.	None.
17.	At once.
18.	Good.
19.	In favour.
20.	No remarks to make on the above experience.
21.	None to give.
22.	Yes, I consider an Act should be passed for that purpose.

(No. 209.)

2.	About 900.
3.	Inoculated the herd about seven years ago; done so before disease entered, and have not had any affected since that time.
13.	Tail swelled, some required to be cut off.
15.	None.
16.	None.
18.	Prevented disease entering herd.
19.	In favour of it.

(No. 210.)

2.	100.
3.	Once—the spring of 1864.
4.	100.
5.	5 per cent. showing symptoms.
6.	Three months.
13.	Three days after inoculation, swelling of the tail, some losing half of the tail, others losing the brush of the tail, others the swellings went down without their losing any part of their tail.

(No. 210.—continued.)

Question.	Answer.
14.	None milked.
15.	One death from excessive swelling of the tail. We believe it might have been saved if taken in time and the tail cut off.
16.	None died.
18.	We have had no cattle die from the disease since, although it has been among our neighbours' cattle.
19.	In favour.
20.	We inoculated the working bullocks, and they have since travelled through diseased herds and none of them took the disease.
21.	We have had no cattle die from the disease since 1864. The cattle we have now are the offspring of those inoculated during that year.
22.	No.

(No. 211.)

2.	300. Never inoculated any.
3.	Not since 1863, and then only a few workers.
19.	I am in favour of inoculation.
20.	Those which were inoculated were never afterwards affected.
22.	I do.

(No. 212.)

2.	About 120.
3.	Once; in May, 1865.
4.	About 70.
5.	In fine healthy condition, a few head only showing signs of disease, all of which died.
6.	Three weeks or thereabout.
13.	A few days after the operation on root of tail and hips.
14.	They were milked continuously after the operation without any detriment to the milk in quality or quantity, only in the case of swellings.
15.	There were about four deaths, and two recovered from swellings; the means of treatment used were lacerations, fomentation, and soothing unguents.
16.	No more deaths; that is to say, no more fresh cases of disease after inoculation.
17.	Immediately.
18.	On the whole satisfactory, only the swellings.
19.	Opposed to indiscriminate inoculation, but in favour of the operation when performed by careful and intelligent hands, particularly when other means have failed.
20.	Inoculation generally in this neighbourhood stayed the disease, nor were there many if any more fresh cases, although diseased cattle still kept coming into the district.
21.	I have come to the conclusion, by considerable attention, that cattle who may have had the disease, but apparently and really well, are more likely to perpetuate the disease whilst travelling, but when they settle down quietly on a run they soon lose the power of infecting. The disease was carried to this herd by a mob of store or rather fat cattle, from the vicinity of Goulburn (Lupton's), every single beast of which appeared at some time to have gone through the fever, as there were hepatizations and adhesions in every case slaughtered for beef, many of them however were kept alive to old age without infecting more cattle.
22.	In every case where the disease is not stayed within four or five weeks from its commencement, inoculation ought to be made compulsory.

(No. 213.)

2.	About 400.
3.	In 1867, and 1871.
4.	No return, see note.
22.	No.

(No. 214.)

2.	About 1,500.
3.	Once, four years ago.
4.	420 head.
5.	Main body sound, a few stragglers showed symptoms, consequently I inoculated the cattle running on the portion of my run adjoining herds that were diseased.

(No. 214—continued.)

- | Question. | Answer. |
|-----------|--|
| 6. | Not more than a few days to my knowledge. |
| 13. | Some swelled very much up tail, in fact, the whole of the hind quarters, about third or fourth day. |
| 14. | Did not milk any, being firmly of the opinion that inoculation renders the milk unfit for use for some weeks. |
| 15. | Yes, about three per cent. Tried scarifying, but it did not save in all cases, in each case that I cut the tail off I saved the beast, I believe in case of excessive swelling the tail should be cut off. |
| 16. | None that I am aware of. |
| 17. | Saw nothing more of it after cattle recovered from inoculation. |
| 18. | Satisfactory. |
| 19. | Decidedly in favour. |
| 20. | Soon after the cattle were inoculated upon the portion of my run where the pleuro showed, the disease left the herd, and I have seen nothing more of it since, which I consider proves the efficacy of inoculation as a preventive, and I further believe, if resorted to in time, it cures. |
| 21. | I consider great care should be exercised to procure virus from the lung when at the proper stage; my loss resulted from using virus from the lung of a beast that was too far gone; I certainly think when inoculation is properly carried out there is no doubt of its efficacy. |
| 22. | Yes, but consider each party should first be subjected to a test as to competency to procure proper virus and inoculate. |

(No. 215.)

2. 100.
3. I have inoculated three times, once in 1864, also in 1865, and 1871.
4. From fifty to sixty head.
5. In 1865 and 1871, about six or seven per cent. affected.
6. About fourteen days.
13. About a week or ten days after inoculation the tails became inflamed and swollen, and in some cases the tails had to be taken off at the rump to save the beast.
14. The cows were milked as usual, but no alteration in the milk took place to notice.
15. About two per cent. died from inoculation, I opened the hide and cut the diseased part out, or as much as possible, and kept the part well turpented.
16. After ten or fourteen days, I noticed no disease, I had no deaths occur after inoculation, from disease.
19. I am decidedly in favour of inoculation if the virus can be obtained at the proper stage, so that it will not be too strong but still effective.
20. I never saw a beast that was properly inoculated take disease, although always running with affected cattle.
21. The most difficult part of inoculation in my opinion is the obtaining the proper virus; that is if it be too strong it will kill as much as the disease, and if it is not strong enough it will take no effect.

(No. 216.)

2. 520.
3. Once, January, 1871.
4. 520.
5. Good many.
6. Cannot say, as I only took charge a short time previously.
14. Yes. In no way sufficient to be noticed.
19. In favour of.
22. No.

(No. 217.)

21. I bought 100 heifers of the OB over 3 brand down the Mehi, and part of the herd they were travelling with had the pleuro. I had what I bought inoculated. There were some six or seven died, but I believe it stayed the disease.
22. I do not think it should be compulsory.

(No. 218.)

2. 1,000 head.
3. Once, in November, 1866.
4. 700 head.
5. About ten per cent.
6. About one month.
13. About three weeks after the tail swelled.
14. Yes, and the milk was not affected in any way.

(No. 218—continued.)

- | Question. | Answer. |
|-----------|--|
| 15. | Yes, and about two per cent.; cut the tails off. |
| 16. | No. |
| 17. | Almost immediately. |
| 18. | Beneficial. |
| 19. | Most decidedly in favour. |
| 20. | There has not been any disease amongst my cattle since 1866, although cattle on the adjoining stations have been affected. |
| 21. | I believe in inoculation as a preventive. |
| 22. | I do. |

(No. 219.)

2. About 150.
3. Once, March, 1872.
4. About 150.
5. About six had died. About the same number showed symptoms; two of them very badly.
6. About four or six weeks since first affected, but cause not then suspected.
13. Cannot now state particularly, but think they were first observed within a week.
14. No, not milked till apparently recovered.
15. Only one animal died, but it was very much affected before inoculation.
16. Only one, within a week.
17. Observed no fresh cases after inoculation.
18. From date of inoculation no fresh cases were observed, and none since.
19. Decidedly in favour of it.
20. I believe the disease was introduced among my cattle, which are in paddocks, by a bull I have got a few weeks previously. The bull died first, then in a few weeks several cattle died; the cause not then suspected. When satisfied as to the cause inoculation was resorted to. No fresh cases have since appeared.
22. Yes.

(No. 220.)

2. 250 head.
3. Once, June, 1874.
5. Four died from the disease.
6. Three had died about two months before the herd was inoculated. It was from the fourth animal that the virus was taken, and the others were immediately inoculated.
13. One cow died from the effects of inoculation and great poverty. Two others were swelled badly at root of tail, which was slit open and allowed to bleed freely; after doing so they soon got all right.
14. Two cows were milked for family use from the time they were inoculated; the milk was not at all affected.
15. Only one; and the cow was very poor, was not able to stand up when once got down.
16. None died after inoculation from the disease.
17. No disease was noticed in any of the cattle excepting those that died, which was before inoculation.
19. I am in favour of inoculation.
20. There were very few cattle affected in the district at the time of inoculation, but afterwards some of the farmers lost cattle from the disease, but could not say whether any of the inoculated cattle were exposed to the infection.

(No. 221.)

2. 3,500.
3. Once, in 1867; some small lots at various other times.
4. 1,000.
5. Diseased, about 10 per cent.
6. Three or four weeks.
7. All of one lung and part of the other, on one occasion; about half the lung on another.
8. Partly from the lung, and partly water from the chest near the lung.
9. Used the same day and next morning, keeping close and cool.
10. No.
12. With needle and thread; needle, thin, almost flat, about $\frac{1}{4}$ of an inch broad; thread, berlin wool.
13. Swellings few, appearing about ten days or two weeks after inoculation.
14. Yes; did not notice any difference of milk.
15. Two or three; cut out affected parts of rump, and tried cauterization.
16. Some died after inoculation, but could not say if from the disease or effect of inoculation.

(No. 221—continued.)

- | Question. | Answer. |
|-----------|---|
| 17. | About two months. |
| 18. | Of the 1,000 I inoculated just as pleuro was showing amongst them, the loss, I think, was about one to eight of those that were not inoculated, the disease having run through the latter before inoculation was practicable. |
| 19. | Strongly in favour. |
| 20. | In 1867 I inoculated two teams of bullocks for a carrier, who had lost several, killing one to get virus; he lost no more. With same virus I inoculated all my own working bullocks but two, which could not be found in time. About a week after I sent them all on the road where pleuro was raging; within a month both the uninoculated bullocks died from the disease; none of the others took it at all. At same time I inoculated some young bulls I had just got, and turned them out in the herd; soon after the disease appeared in the herd, and I lost several other bulls, but none of those that were inoculated. |
| 22. | No, I do not; I believe inoculation to be a thorough preventive, but no cure. In some cases it would be very hard indeed to compel inoculation, and there is little fear but people will see the benefit soon and take advantage of it, when they can do so without greater loss than by leaving it alone. |

(No. 222.)

21. I have no cattle at present, and it is twelve years since I sold my cattle, but I always found inoculation to be good if it was done right, that is, the virus to be used right by an experienced man. That is all I know.

(No. 223.)

- | | |
|-----|--|
| 2. | 1,000. |
| 3. | Once—about 1863. |
| 4. | 1,000. |
| 5. | About 5 per cent. showing symptoms. |
| 6. | Immediately on showing symptoms of disease. |
| 13. | Swelling takes place from nine to twenty-one days after operation, seldom to any extent if the virus is of a light colour; if of dark colour I find it kills cattle. |
| 14. | Have never used milk after inoculation for one month; a calf sucking is not affected. |
| 15. | None died. Have had to take tail off above swelling; have seen cattle die from being inoculated with dark-coloured virus. |
| 16. | Have had some die that had disease before inoculation, although not showing disease at time of inoculation; had none die after six weeks. |
| 17. | About six weeks after operation among inoculated cattle; for twelve months among cattle not belonging to run that were not inoculated. |
| 18. | Cattle never showed any sign of disease at being inoculated six weeks. |
| 19. | In favour of inoculation. |
| 20. | Have seen cattle mixed and running among diseased cattle, and never saw them take disease after being properly inoculated. |
| 21. | Virus should be taken from a young beast in first stage of disease, and before the lung turns a dark colour. |
| 22. | Should think an Act compelling all owners to inoculate would stamp out disease. |

(No. 224.)

- | | |
|-----|---|
| 2. | 220. |
| 3. | Once—March, '75. |
| 4. | 100. |
| 5. | About 10 per cent. |
| 6. | One month. |
| 13. | Very little swelling, with loss of hair. |
| 14. | Milch cows not inoculated. |
| 15. | No deaths occurred after inoculation. |
| 16. | No. |
| 17. | Six months. |
| 18. | Found it to be effectual. |
| 19. | In favour of. |
| 20. | By observation I consider that inoculation is a preventive against pleuro. No. |
| 21. | Cattle that disease has not shown symptoms of while on the run, if taken on the road and caught in wet weather for any length of time, disease will at once show out on them. |
| 22. | Yes. |

(No. 225.)

- | Question. | Answer. |
|-----------|---|
| 2. | 100 head. |
| 3. | Only once—in 1873. |
| 4. | Sixty. |
| 5. | Unhealthy. |
| 6. | Six months. |
| 13. | Four died with a swelling up the backbone. |
| 14. | Never milked any. |
| 15. | Four died. |
| 16. | None. |
| 17. | Nine months before it left the cattle. Some of the calves died belonging to the cows that had not calved when inoculated. |
| 18. | Good. |
| 19. | In favour; and all persons that travel with diseased cattle without inoculation ought to get six months. |
| 20. | None of the cattle that were inoculated took the disease after. |
| 21. | I consider any man having diseased cattle ought not to be allowed to travel with them. |
| 22. | They should be compelled to do so. |

(No. 226.)

- | | |
|-----|---|
| 2. | 300 head. |
| 3. | Once only about eight years ago. |
| 5. | About half the herd. |
| 6. | About a month. |
| 13. | Very little swelling. |
| 14. | I cannot distinctly remember whether it had any effect on the milk. |
| 15. | Very few deaths. Cutting joint of tail. |
| 16. | Very few in the course of three or four days. |
| 17. | I have noticed wonderful improvement in a fortnight after being inoculated. |
| 18. | I think it has a beneficial effect on diseased cattle. |
| 19. | I am in favour inoculation. |
| 20. | I have not known of any to be affected after being inoculated. |
| 22. | I do not think any Act necessary as all owners will endeavour if possible to prevent the spread of disease among their herds. |

(No. 227.)

- | | |
|-----|---|
| 2. | 500 head. |
| 3. | Once in December, 1870. |
| 4. | 500 head. |
| 5. | Diseased. 1 per cent. showing symptoms. |
| 6. | Pleuro had been among them for about 12 months. |
| 13. | Most of the cattle were swollen about the tail a few days after the operation. Two or three head had to be lanced open near the root of the tail. |
| 15. | About 1 per cent. died from swellings. Lancing was tried with good effect to cure the swellings. |
| 16. | About 1 per cent. died. |
| 17. | About three months. |
| 18. | Satisfactory. |
| 19. | In favour of. |
| 22. | No. |

(No. 228.)

- | | |
|-----|---|
| 2. | About 200 head. |
| 3. | I have only inoculated my cattle once four years ago, and never have had the pleuro since. I believe it done good, for the cattle was dying very fast when I did them; and about a month after the cattle was done the disease left the herd, and I have had no diseased since. |
| 5. | Can't say, cattle on a run loose; I could not say. |
| 6. | About four weeks. |
| 13. | If the virus takes, the tail will swell a little. If the virus be too strong the beast may lose his tail. |
| 14. | Never milk any of the cows after till they were well over the disease. |
| 15. | I lost none from the inoculation to best of my opinion. |
| 16. | A few, one or two that were bad when inoculated, but lost none after two weeks. |
| 17. | Saw nothing of the disease after four weeks. |
| 19. | I favour. |
| 20. | Never knew a beast to take the disease after the inoculation if the inoculation took properly, and I do think that they will take it if the inoculation takes. |
| 22. | Yes. |

(No. 229.)

- | Question. | Answer. |
|-----------|--|
| 2. | None inoculated. |
| 3. | Never for many years. |
| 4. | 1,500 head, years since. |
| 5. | Subsequently lost half the herd. |
| 6. | At the time. |
| 22. | I don't think inoculating will do any harm; but the difficulty is in obtaining the proper virus. |

(No. 230.)

- | | |
|-----|--|
| 2. | 300. |
| 3. | Once—1868. |
| 4. | 300. |
| 5. | Mildly infected; 5 per cent. |
| 6. | About a month. |
| 13. | Swellings. |
| 14. | No recollection. |
| 15. | A few; about 2 per cent. For cure, split the tail or cut it off, as most effectual. |
| 16. | A few; about a fortnight. |
| 17. | About a month. |
| 18. | Only inoculated one, and cannot form result. |
| 19. | In favour. |
| 20. | Inoculation I believe is a preventative if properly done, and have known cattle that had been operated on, exposed to diseased animals without infection. |
| 21. | The disease should be attended to at once. All infected animals removed totally away, not allowing them to have access even to water flowing towards the healthy animals. |
| 22. | Yes; very much in favour of an Act to compel owners of infected cattle to inoculate. Also an Act to compel drovers to destroy infected animals, passing through healthy runs, by fire or burial. |

(No. 231.)

- | | |
|-----|--|
| 2. | About 50. |
| 3. | Only once about three years since. |
| 5. | About 12 showed disease; about 24 had died before inoculation was tried; some few died after, but it soon ceased. |
| 6. | About a month. |
| 13. | They did not swell, with the exception of one, and that cow lost her tail. |
| 14. | Those that had not the disease when inoculated; I have heard it not affects the milk in quantity or quality. |
| 15. | A few died. Only one swelled; nothing was tried. |
| 16. | All that died had the disease when inoculated. |
| 17. | I am not quite sure, but within a month, and they were put with mine that never had the disease; and none of mine ever had the disease, and they were afterwards mixed with S. A. Blackman's herd, and none ever had the disease to this time. |
| 19. | I am in favour of inoculation. |
| 20. | The cattle are now with mine on Mr. J. D. Single's station, and not one of ours have died. |
| 21. | I have given on the other page all the information I can; and I wish every one was compelled to inoculate, by an Act being passed. |

(No. 232.)

- | | |
|-----|--|
| 3. | Once—about five years ago. No disease since. |
| 5. | Disease amongst them—about 5 per cent. |
| 6. | A very short time. |
| 13. | Swollen tails. |
| 14. | Did not use the milk. |
| 15. | One bullock; cut his tail off. |
| 16. | Very few. |
| 17. | Two months. |
| 18. | It saved my herd. |
| 19. | In favour of it. |
| 21. | From observation I notice that other herds not inoculated lost considerable numbers. |

(No. 233.)

- | | |
|-----|--|
| 2. | 1,000. |
| 3. | Only once—about seven years ago. |
| 4. | About 500. |
| 5. | Dying fast; about 20 per cent. |
| 6. | About four or five months. |
| 14. | None milked. |
| 15. | Yes; about 5 per cent.; no means used to cure swellings. |

(No. 233—continued.)

- | Question. | Answer. |
|-----------|--|
| 16. | Cannot tell. |
| 17. | Two or three months. |
| 18. | Cattle left off dying. |
| 19. | In favour. |
| 21. | Great care is requisite in procuring virus, not too old or too strong. |

(No. 234.)

- | | |
|-----|--|
| 2. | 1,500 head. |
| 3. | When the disease first appeared, about fourteen years ago, the whole 1,500 head were inoculated except about 100 cows too far advanced in calf, and those left were done afterwards; eight or nine had, however, died in the meantime. |
| 4. | 1,400 on the first occasion, about ninety on the second; two years afterwards; 160; and in 1869, the disease having appeared in a neighbouring herd, 900 were done. |
| 6. | About four months. 200, I believe, died before inoculation, and about thirty afterwards; a month after, all signs of disease had disappeared from my herd, though strangers were still dying. |
| 13. | The swelling begins in eight or nine days, and I believe I lost about 2 per cent. from excessive swelling. |
| 14. | Never used the milk from cows that had been recently inoculated. |
| 15. | About 2 per cent. When the swelling was excessive we cut the tail off as high up as possible, so that the bleeding might stop the inflammation. |
| 16. | None. |
| 17. | A month. |
| 18. | Healthy cattle. |
| 19. | Decidedly in favour. |
| 20. | As I have stated before—neighbours' cattle died from pleuro on the run among mine (after they recovered from inoculation) without any bad result. |
| 22. | I do not. It has often been impossible to get virus within a reasonable distance, and it is of the utmost importance to have it fresh; besides, the benefit is so decided that all will inoculate should the disease return. |

(No. 235.)

- | | |
|-----|--|
| 2. | 3,000 head. |
| 3. | Inoculated once—January, 1875. |
| 4. | 2,500 head. |
| 5. | Diseased—5 per cent. |
| 6. | Three months. |
| 14. | I did not milk for a month after inoculation. |
| 15. | About 2 per cent. died. Cut and scarified above parts swollen. |
| 16. | Very few died from pleuro after inoculation. |
| 17. | One month. |
| 18. | I have not seen symptoms of pleuro among the inoculated cattle. |
| 19. | I am in favour of inoculation. |
| 20. | I left 500 head on one part of the run which I did not inoculate, and pleuro exists amongst them still. |
| 21. | Last January I branded 1,600 calves and inoculated them at the same time. I found that all the male calves were very much swollen in the purse, and I would not again inoculate and castrate at the same time. |

(No. 236.)

- | | |
|----|--|
| 2. | About 1,800. |
| 3. | We inoculated twice for pleuro-pneumonia, the first time about the year 1869, and the second about twelve months later. |
| 4. | About 600 or 700 head each time. |
| 5. | Cattle were diseased when we commenced to inoculate. Percentage showing symptoms uncertain, supposed to be about one-third. |
| 6. | Three or four months. |
| 7. | I suppose the animal was in the second stage of the disease. In some cases about two-thirds of the lung was marbled, in others the lung was of a jelly-like consistence. If I remember correctly it was when hydro-thorax was present. |
| 8. | Virus was taken from the lung. I have also, when the lung virus could not be procured in sufficient quantity, used it mixed with the water from the chest and found it to answer very well. |

(No. 236—continued.)

- | Question. | Answer. |
|-----------|---|
| 9. | Used the day after it was taken, or the next at the furthest, if kept in a cool place. |
| 10. | I have never used preserved virus. I do not believe in it. |
| 12. | Operation was performed with a common speying needle and sewing twine. |
| 13. | Effects were visible for a month, and in some cases a much longer period; they were swelling of the tail, and in some cases as far as the hips. |
| 14. | I have never inoculated cows during the time they were milking, but should imagine that it would affect the milk both in quantity and quality. |
| 15. | A few deaths occurred from excessive swelling. I believe in some cases through neglecting to scarify the part affected. Percentage uncertain, perhaps from two to five. |
| 16. | I think not; if any, they were very far gone with the disease when inoculated; any not affected with pleuro before inoculation did not take the disease afterwards. |
| 17. | The disease left the herd in about a month or six weeks. |
| 18. | The result of inoculation is protection against any subsequent outbreak of pleuro-pneumonia. |
| 19. | I am in favour of inoculation. |
| 20. | I purchased a bull and inoculated him before the outbreak of the disease in the herd, and although he was running with the diseased cattle never became affected. Cattle first inoculated were not affected the second outbreak. |
| 21. | Salt given in sufficient quantities is a preventative against pleuro-pneumonia, and I believe of other diseases also, but the high price of salt, joined to carriage, puts it out of the power of most people to give it in sufficient quantities to their stock. |
| 22. | I do not think inoculation should be made compulsory, it would only be evaded. |

(No. 237.)

2. About 8,000 head.
3. Only once—in July, 1865.
4. At the above-mentioned date we inoculated 1,500 head of store-cattle, bullocks and cows, before starting them to Demiliquin.
5. Generally very healthy; there may have been 1 per cent. in the herd affected with pleuro at the time, and those only on the boundaries of the runs of the persons who had inoculated.
6. Not at all that we were aware of.
13. The cattle started on their journey three or four days after inoculation, and about a week after that their tails commenced to swell up, and in many instances their bodies also to such an extent that they could not travel, and they were left behind to die or recover as best they could.
15. The parties who were driving the cattle drafted off the swelled ones from the mob and drove them separately, and cut off their tails, &c., but notwithstanding every care and attention they lost 300 head by the way.
16. Could not say.
17. There have been odd instances of inflammation of the lungs in this herd from its formation up to the present time, but nothing worth taking any notice of.
18. Rather expensive as an experiment.
19. The question of inoculation is such a very vexed one at the present time, and opinions differ so widely on the subject, that we have not as yet been able to form any very decided opinion about it. From our own limited experience we are inclined to believe that in the event of anything of the kind breaking out in the herd rest and quiet are most beneficial, in other words that the cattle stand a better chance of recovery if they are not interfered with.
20. When I was on the Bland, in 1873, I assisted a gentleman to inoculate 1,200 bullocks that he had bought from us. He was a firm believer in inoculation, and would not turn these cattle out on his run until he had inoculated them. He assured me that he had not a diseased beast on his run in consequence of inoculating regularly, immediately after their arrival. He sent away for virus to a neighbour who would not inoculate, and who

(No. 237—continued.)

- | Question. | Answer. |
|-----------|---|
| | always, so he said, had a good stock of pleuro on hand. After considerable search there was none to be had, and he was compelled to use some <i>preserved</i> virus that he had saved from a previous occasion. He had preserved it in large bottles, tightly corked, and covered with sealing wax. When this stuff was poured out it was very dark in colour, resembling port wine, having had a good deal of blood in it when taken, and stank so badly that it was with difficulty his men could be prevailed upon to use it, but he seemed quite satisfied that it was all right, and fired away as long as it lasted. I did not afterwards hear from him what was the result of his experiment, but I should certainly be long sorry to inoculate any cattle in which I might be interested with such stuff. It occurred to me at the time that he must certainly have great faith in Providence, and the natural healthiness and hardiness of our cattle. |
| 22. | Not until it has been proved beyond a doubt that inoculation is a preventive. |

(No. 238.)

2. About 800 head about three years ago. Don't know the date; don't keep diary of dates; and once about nine years ago.
3. Twice. Don't know the dates of month.
4. About 800.
5. Never took notice how many had disease when inoculated.
6. About three months.
13. Don't know.
14. Never milked any for a month after inoculation.
15. None as I know of.
16. None that I know of.
17. About a month.
19. In favour.
22. Yes.

(No. 239.)

2. 400 head of cattle.
3. Twice, A.D. 1866 and 1870.
4. 500 first time, 400 last time.
5. All sound except one.
6. Just coming.
13. Some affected in the jaw, some at the butt of tail, about one foot above the scar.
14. Did not milk for two weeks. Not much in quantity and bad quality.
15. Five deaths occurred. We never tried any remedy.
16. The disease never showed in my herd since.
17. Never seen no more of it since.
18. It kept the disease away.
19. In favour of it.
20. I think that cattle, if properly inoculated, will be free from the disease altogether.
22. Yes.

(No. 240.)

2. About 550.
3. Only once, in September, 1865.
5. Very low in condition; only one showed symptoms at the time of inoculation, and that one died after inoculation.
6. About three months.
13. As near as I can recollect, it was about ten to fourteen days before any effects were visible.
14. Some were milked two months afterwards; it did not affect the milk in any way.
15. Several died. I don't recollect how many. I don't know of any cure except cutting off the tail above the swelling.
16. About fifty after the inoculation, within six weeks after; but I think most of them died through weakness, not being able to get out of the bogs and springs.
17. About three months.
18. I don't think there was any result from it, beyond the few that died from its effects.
19. Opposed to it.
20. The lessee of the run adjoining mine did not inoculate his cattle. Though he had the disease among them, he did not lose near so many as I.
21. All the people that I know, who inoculated, did so when the disease had run its course or nearly so, and then attributed to inoculation the disappearance of the disease.

(No. 240—continued.)

- | Question. | Answer. |
|--|---------|
| 22. I think that an Act for such a purpose would be a great hardship to those who do not believe in inoculation. | |
- (No. 241.)
- | | |
|--|--|
| 2. 400. | |
| 3. Can't say. Whenever cattle show symptoms of disease always inoculate. | |
| 4. Can't say. | |
| 5. Good condition. | |
| 6. As soon as disease is observed. | |
| 13. About eight or nine days elapse before the operation takes effect. | |
| 14. The milk of cows after inoculation is affected. | |
| 15. Not of late years. | |
| 16. I think not, unless from the effect of disease. | |
| 17. Almost immediately. | |
| 19. In favour of it. | |

(No. 242.)

- | | |
|--|--|
| 2. 300 head. | |
| 3. Once. | |
| 4. 300 head. | |
| 5. About 35 per cent. affected, and before inoculation about 35 per cent. of deaths. | |
| 6. About three months. | |
| 13. About five per cent. was affected by swelling of the tail. | |
| 14. Not milked for fourteen days. | |
| 15. Only one death. The means tried to cure the swelling was to cut the end of the tail off. | |
| 16. One death. | |
| 17. About three weeks. | |
| 18. My cattle were very much affected, having about 25 per cent. of deaths before inoculation and only one afterwards. | |
| 19. I am very much in favour of inoculation. | |
| 20. My cattle were running with other cattle that was inoculated, and none of those cattle were infected with the disease and my cattle were dying at the rate of 25 per cent. | |
| 22. I am in favour of an Act to compel owners to inoculate. | |

(No. 243.)

- | | |
|--|--|
| 2. 600. | |
| 3. Inoculated once twelve years since; don't know the result. | |
| 4. About 400. | |
| 5. When inoculated pleuro very bad among them. | |
| 6. Several months. | |
| 13. Those done with grooved knife took five weeks before they showed any sign, and then only a slight swelling of the tail. With the needle in about ten days, or some sooner, some swelled right up to the body, others only half the tail; some showed no signs at all; some deaths—can't remember how many. | |
| 14. Never milked them when any symptoms were visible. | |
| 15. Several deaths occurred through excessive swelling; the only remedy tried was to cut off the tail above the swelling. When the swelling reached the body we scarified freely. In nearly all cases we were successful. | |
| 16. Several deaths—can't say how many. | |
| 17. I can't say, it has not finally left the herd, a few dying every year with it; some seasons more than others. | |
| 18. I believe I lost quite as many through inoculation as if I had left them alone. | |
| 19. Where cattle are broken-in and quiet, such as milking cows and well bred bulls and heifers, I should certainly inoculate. Where the herds are large and mixed, I certainly think you kill more than would die had they not been inoculated. | |
| 20. I have had one valuable cow attacked twice with pleuro and never inoculated, and when from home I believe she took it again and died. | |
| 21. I believe in inoculation every two or three years. | |
| 22. I don't believe pleuro to be infectious, therefore I don't believe an Act necessary. | |

(No. 244.)

- | | |
|--------------|--|
| 2. 300 head. | |
|--------------|--|

(No. 244—continued.)

- | Question. | Answer. |
|---|---------|
| 3. Only once; October 2nd, 1875. | |
| 4. 300 at one time. | |
| 5. None. | |
| 6. 6 died about a month previous to inoculation. | |
| 13. About a month after some of the tails commenced to swell, and I cut some off to prevent it getting to the body. | |
| 14. A few were milked this last week; the quantity taken from them was trifling, as the grass is bad. | |
| 15. None. | |
| 16. None. | |
| 17. Has not left yet. | |
| 18. Cannot say at present. | |
| 19. I am in favour of inoculation. | |
| 20. This being my first trial, I have no remarks to make. | |
| 21. From what I have seen I think inoculation is a preventative of the disease. | |

(No. 245.)

- | | |
|--|--|
| 2. 2,000 head first lot, 1,000 head second lot, 300 third lot. | |
| 3. Three times, first time, June, 1860; second time May, 1874; third time March, 1875. | |
| 4. First lot 2,000 head, second lot 1,000, third 300. | |
| 5. Cattle diseased, 20 dying daily—majority showing symptoms. | |
| 6. About three weeks. | |
| 13. Swollen tail about a week after operation; some slightly affected, lost two or three joints of tail; others half the tail; a few, effects not visible. | |
| 14. The milk dried at the appearance of the disease. | |
| 15. No deaths from swelling. | |
| 16. A few died from the disease within a week after the inoculation. | |
| 17. About a week. | |
| 18. A perfect cure. | |
| 19. In favour of it. | |
| 20. My inoculated cattle mixed with diseased cattle and were not affected by it. | |
| 21. Consider it the best remedy yet discovered—No. 18. | |
| 22. I consider that an Act should be passed obliging owners to thoroughly inoculate their cattle once, whether infected or not, if virus be obtainable. | |

(No. 246.)

- | | |
|---|--|
| 2. 1,500, in the year 1865. | |
| 3. Once only, 1865. | |
| 4. 1,500—once only. | |
| 5. 20 per cent. diseased. | |
| 6. Twelve months. | |
| 13. Swellings in some of them; others lost portion or whole of tail. | |
| 14. My cows were milked after inoculation, and the milk appeared pure. I refer, of course, to healthy inoculated cows. | |
| 15. I lost two head that I know of by the swelling going up the spine. | |
| 16. A few which were diseased when I inoculated them died a few days after the operation, but none of those that were inoculated when they were sound. | |
| 17. The herd was free from the disease in about two months, and my cattle have not had it since. | |
| 18. It saved the majority of my cattle. | |
| 19. In favour of it. | |
| 20. My cattle after recovery mixed with diseased travelling cattle passing through my runs, and no ill effects ensued. | |
| 21. I consider inoculation the best remedy yet discovered if good virus can be obtained. | |
| 22. I think an Act should be passed to cause graziers to inoculate their cattle, both diseased and healthy, if they could get the virus fit for the operation, which would be the great difficulty. | |

(No. 247.)

- | | |
|--|--|
| 2. 350. | |
| 3. Three times: twice in the year 1867, and once in 1871. | |
| 4. 1st, 200 head; 2nd, 100; and 3rd, 80. | |
| 5. Affected—20 per cent. | |
| 6. Twelve months. | |
| 13. In first lot a great many swelled from virus being too strong. Second time and third time no deaths, a few slightly swelled in the tail. | |

(No. 247—continued.)

Question.	Answer.
14.	Not milked.
15.	A good many deaths in first inoculating; can't state percentage. Cure by opening the swollen part of the tail, used tar and turpentine in the wound, found great benefit.
16.	Five or six that were diseased when inoculated died within a week.
17.	Some that were not inoculated died six months afterwards.
18.	Preventative; do not believe it to be a cure.
19.	Favour of it.
20.	Never saw cattle that were inoculated ever affected by it, although exposed and amongst diseased cattle.
22.	Yes.

(No. 248.)

2. 500.
3. Only inoculated once, about six years ago.
4. About 500.
5. Cattle were diseased.
6. Don't know.
13. Can't say.
14. They were not milked for some time after.
15. About 3 percentage. Cut the swelled part.
16. No deaths occurred.
17. At once.
19. In favour.
22. I do.

(No. 249.)

2. About 100.
3. Once, about 7 years ago.
4. 60.
5. Affected. 15 per cent.
6. Two weeks.
13. Some lost tails and udders, some tails only.
14. Don't know; did not milk.
15. 10 or 12 died, no remedy tried.
16. Yes, 10 or about; 8 or 9 days.
17. Two or three weeks.
19. I cannot say which is best; have not had sufficient experience.
22. No.

(No. 250.)

2. 400 head.
3. Twice, about November, 1871.
4. 150 first, and 150 on second occasion.
5. Badly affected, about 5 per cent.
6. A month.
13. A good many lost their tails, some swelled up on to the loins.
14. Some were milked, do not know how it effected the milk.
15. None.
16. None.
17. Did not notice anything of the disease after.
18. No cattle had any disease since.
19. In favour of it.
20. Inoculated a few head the second time that had been previously inoculated, but could not see that the second operation had any effect upon any of them.
22. Yes.

(No. 251.)

2. 200 head.
3. I inoculated in January, 1871.
4. 175.
5. Don't know.
6. Don't know.
15. I lost about 7 per cent. from excessive swelling in the body.
16. The disease left after I inoculated.
19. I am in favour of inoculation.
22. I consider that owners of cattle that are infected should be compelled to have them inoculated, but a person should be appointed by Government that understands it.

(No. 252.)

2. 150.
3. Only once, in April, 1870.
4. 140.
5. Diseased, 4 per cent.
6. Several weeks.

412—H

(No. 252—continued.)

Question	Answer.
13.	A few swelled, and many lost the point of the tail.
14.	The cows were milked after the second day; I do not think the milk was affected in any way, but the cows that were milked suffered much more than the cattle that were undisturbed.
15.	Two died from the inoculation, I tried local bleeding, and cutting parts of the tail off.
16.	None.
17.	About four weeks.
18.	I believe it to be a preventative.
19.	I am decidedly in favour of inoculation.
20.	About three years after my cattle were inoculated I took a lot of cattle into my paddock that afterwards proved to have the pleuro. Of twenty cows I was milking at the time, sixteen were inoculated, four were not, they used to mix freely with the diseased cattle; one of the uninoculated cattle took the disease and died, but none of the others.
21.	From my own experience, I think that cattle when inoculated should be disturbed as little as possible for two or three weeks.
22.	Most assuredly, as with two lots of cattle I have assisted to inoculate the disease seemed to be stamped out at once.

(No. 253.)

2. 250.
3. Only once, about 10 years ago, but not my own cattle, of which I give you my experience.
4. 600 or so.
5. 3 per cent. or 4 per cent. were bad.
6. Six months or so.
13. About a week after; swelling of the tail.
14. Never used them for some time.
15. Yes; 1 per cent. or 2 per cent.; cutting off the tail.
16. I did not observe them closely enough.
17. It lingered on a few months.
18. Good results.
19. Yes, if properly done.
20. At the time I inoculated my cattle, I also inoculated the working bullocks to the number of 60. As soon as they were all recovered, I sent them down the country with wool, sending also four young bullocks not inoculated but sound; these last died on the road, and the 60 inoculated ones all came back, though they had passed through diseased country on their way down.
22. Yes.

(No. 254.)

2. Unknown to the present superintendent when cattle were last inoculated.
3. Never bothered myself about it, as never required.
14. Can't say.
17. God knows.
19. In favour of it.
21. If a beast is killed being infected with pleuro, you can't cure the beef.
22. Decidedly not.

(No. 255.)

2. 200.
3. Once, 1873.
4. 200.
14. Did not milk.
15. None died; many had their tails cut off.
16. None died since.
17. About five weeks.
22. Yes.

(No. 256.)

22. I most certainly do consider that an Act should be passed obliging owners of infected cattle to inoculate the herd, whether it had been inoculated previously or not.

(No. 257.)

2. Number of cattle, fifty. I have not inoculated since '71, neither have I had any with pleuro-pneumonia at any time.
4. In 1871 I inoculated about ten calves. They had not the pleuro-pneumonia, nor did any die that I did.
5. The cattle were all in a healthy state at the time I inoculated. I did them as a preventative from pleuro.
14. I did none.

(No. 257—continued.)

- | Question. | Answer. |
|-----------|---|
| 15. | There were not any of them had swelled tails, nor did any die from inoculation. |
| 18. | The hair of the tail stiffened a little near the place of inoculation. |
| 19. | I am in favour of inoculation, but not for compulsory inoculation. |
| 22. | No. |

(No. 258.)

- | | |
|-----|---|
| 2. | 1,000 head about, in different paddocks. |
| 3. | Twice. |
| 4. | First occasion, about 200 head; second ditto, about 400. |
| 5. | First occasion the cattle all sound—never had been diseased (pure Hereford breed and highly bred). Second occasion, those inoculated were store cattle which had commenced to die of the disease. Lost 100 out of a lot of 300. |
| 6. | Last-mentioned lot of cattle I am told did not show symptoms of the disease when they left Mr. McKay's station (formerly Dean's), near New England. They began to die a few days after they were delivered. |
| 13. | Cannot describe these. Refer to Ed. White, Esq. |
| 14. | Never milked cows affected. |
| 15. | None on the first occasion, when the cattle were not diseased. |
| 16. | On second occasion, yes. If the disease was far advanced inoculation did not stop it. |
| 17. | Three or four months, I think. |
| 18. | In my opinion result of inoculation was satisfactory. |
| 19. | I am decidedly in favour of it, when properly carried out. |
| 20. | My experience does not enable me to state any such circumstance; but I am fully convinced that inoculation is most useful. |
| 21. | I found that cattle which were strictly guarded from intermixture with others never took the disease, and when the first cases appeared amongst my cattle they were always traced to strange cattle having mixed with them. The affected beasts I always had drafted into a small paddock by themselves. I have known a cow badly affected, and the calf sucking her did not take the disease, and <i>vice versa</i> , which shows that there are cases where contact does not communicate. |
| 22. | I do; but I am not in favour of compelling owners whose cattle are not infected to inoculate them. |

(No. 259.)

- | | |
|-----|---|
| 2. | 5,580 head. |
| 3. | Two years running, when the disease first appeared. |
| 4. | From 300 to 1,000 head on each occasion. |
| 5. | In good condition, partly fat; about 15 to 20 per cent. on herd. |
| 6. | About four months. |
| 13. | Inoculation varied in date of taking effect by tails swelling. I have had cattle swell in the tail, &c., four weeks after operation. |
| 14. | Never used the milkers during the disease. |
| 15. | Yes. About 5 per cent.; cutting off the tails and scaring in some cases saved them. |
| 16. | Cannot say if they were diseased before or after the date of inoculation; but I believe I lost heavily by inoculation. |
| 17. | It has never left my herd. |
| 18. | Caused more deaths than if it was never performed. |
| 19. | I am opposed to inoculation. |
| 20. | I find herds regularly inoculated are more affected with disease than my herds, which have not been operated upon for the last eight years. |
| 21. | Do not knock cattle about, give them perfect rest if disease makes its appearance. Inoculation will cause the disease to spread in cattle, for they require rest, and are less subject to disease when not knocked about. |
| 22. | No. |

(No. 260.)

- | | |
|----|--|
| 2. | About 600. |
| 3. | Once—in February, 1873. |
| 4. | 600. |
| 5. | Fair condition; about 5 per cent. diseased. |
| 6. | Disease had shown for about three weeks, and was daily increasing. |

(No. 260—continued.)

- | Question. | Answer. |
|-----------|---|
| 13. | Swelling of the tail within three days on almost every beast; in some cases considerably swollen about the seventh day. |
| 14. | I believe I inoculated the milking cows; but do not recollect any peculiarities resulting from it. |
| 15. | Yes. I think six, or 1 per cent. I cut the tails short off some, and with others where the swelling had reached the back, lanced the back on either side the backbone. This treatment was successful in about 20 cases out of about 26. |
| 16. | About 5 head died within the first week. |
| 17. | Within a fortnight there was not a trace of the disease. |
| 18. | The disease was completely exterminated from the herd, and the lives of the cattle saved at comparatively speaking a nominal cost. |
| 19. | Most decidedly in favour of it; consider it the only sure and effectual mode of eradicating the disease. |
| 20. | Read answer to clause 18. Some of my neighbours' diseased cattle have since been in the herd without any injurious effect. |
| 21. | I have recently cured two yearling bulls which were very badly diseased, by dosing them twice a day for a week with 20 drops of carbolic acid in 4 fluid ounces of raw linseed oil. These are all young cattle, the progeny of the inoculated cattle already referred to above, and though I am surrounded by diseased cattle, the property of my neighbours, which are continually dying, I have only had three cases of the disease within almost the last three years. I can only account for this from the fact of their mothers and fathers having been inoculated, and there being so many inoculated cattle amongst them, and conclude that the disease has therefore not the same chance of getting hold of them. It is a remarkable fact that the tails of several of the calves dropped off during the calving the next season after I had inoculated the cows. |
| 22. | No. If the work were not thoroughly understood I believe very serious loss would be the result; and I consider that all those who wish to do so can protect themselves from even the fear of infection by inoculating their own. |

(No. 261.)

- | | |
|-----|--|
| 2. | About 600 head. |
| 3. | I have inoculated three times. About March, 1874; May, 1874; June, 1874. |
| 4. | 70 the first time, 150, and 400. |
| 5. | Cattle diseased, about 10 per cent. showing symptoms. |
| 6. | About six weeks. |
| 13. | Very little swelling; about 5 per cent. lost portions of the tail, but not more than three or four joints. |
| 14. | Never milked any immediately after inoculation. |
| 15. | Had about 1 per cent. die; never did anything for swelling. |
| 16. | Had about 1 per cent. die from the disease in about a fortnight to a month after they were inoculated. |
| 19. | In favour of it. |
| 22. | No. |

(No. 262.)

- | | |
|-----|--|
| 2. | 750. |
| 3. | Twice—November, 1874; May, 1875. |
| 4. | About 600; 40. |
| 5. | Can't say. |
| 6. | Can't say. |
| 15. | Two; cutting tail and employing maggots. |
| 16. | No. |
| 17. | At once. |
| 18. | Successful. |
| 19. | In favour. |
| 22. | Decidedly not. |

(No. 263.)

- | | |
|-----|---|
| 16. | Cattle still continued to die, as is generally the case till the disease has run its course, whether inoculated or not. |
| 18. | Not satisfactory. |
| 19. | Have not had sufficient experience to form an opinion. |
| 22. | Most decidedly not. |

(No. 264.)

- | Question. | Answer. |
|-----------|---|
| 2. | About 2,000. |
| 3. | We only inoculated once—about nine years since. |
| 4. | We inoculated about 1,600. |
| 5. | The disease was just coming in the herd; about 20 head had it. |
| 6. | We only noticed it about a week before we inoculated. |
| 13. | Some in most of the cattle would swell; in fact, I believe if you touched the bone passing the needle through the tail that they would be sure to swell. |
| 14. | We did not milk any cows after the inoculation, or at least not until a good while afterwards. |
| 15. | I think we must have lost about 100 head from swelling; we did not attend to the bush cattle—let them take their chance. |
| 17. | We have never seen disease since in our herd. |
| 19. | We are in favour of inoculation. |
| 20. | At the time the disease showed first in our herd I had twenty-three working bullocks; I inoculated twenty-two of them, the other bullock I had bought about a month before; the person I bought the bullock from told me he had been inoculated, so I did not inoculate him with the twenty-two others; about a month afterwards he took the disease and died; none of the twenty-two bullocks which I inoculated died; the twenty-three bullocks were all running in a paddock together. |

(No. 265.)

- | | |
|-----|--|
| 2. | I have not inoculated this eight years. Number of cattle about 500 at that date. |
| 3. | I inoculated twice that year. |
| 4. | About 300 the first time, and about 100 second time. |
| 5. | About one-third showing symptoms. |
| 6. | About one month; good many died before they were inoculated. |
| 13. | They seemed to be nearly all affected. I had to cut great many of their tails off, and some of the cattle swelled fearfully and bellowed, and some went away and died and never seen them. |
| 15. | I cut their tails above the swelled part; other parts of the animal I did nothing to. About 5 per cent. died. |
| 16. | None; but one died that was affected at the time when inoculation took place. |
| 17. | They left the herd almost at once after inoculation. |
| 18. | It stopped each time that it broke out. |
| 19. | In favour of inoculation. |
| 20. | The cattle inoculated had the same chance; mixed altogether. |
| 21. | I know of no other than inoculation, which I consider is a great preventative. |
| 22. | Yes, I do. I think that it ought to be compulsory. |

(No. 266.)

- | | |
|-----|---|
| 2. | 1,500 head. |
| 3. | Twice—in 1862 and 1863. |
| 4. | 1,500 head. |
| 5. | One-third of the herd. |
| 6. | From four to eight weeks. |
| 13. | Within one week. |
| 14. | They were not milked for some days, and then the milk was deficient. |
| 15. | Yes, about $2\frac{1}{2}$ per cent.; no means were used to cure the swellings. |
| 16. | Yes, about $2\frac{1}{2}$ per cent. About two to three weeks. |
| 17. | In the first instance we inoculated in 1862, but the disease did not leave the herd until 1863, odd beasts continuing to die from time to time. |
| 18. | When we inoculated in the first instance, in 1862, we used virus in too advanced a state, which caused mortification and death. We again operated in 1863, using virus in the second stage of the disease, and using more care in the operation, since then we have never seen the least symptoms of disease. |
| 19. | We are in favour of inoculation. |
| 20. | We have known travelling cattle diseased left on the run and afterwards died without any bad effect showing in the herd. |
| 21. | We consider that if inoculation is properly done, and the virus taken in the second stage of the disease, that there is no fear of contagion afterwards. |

(No. 266—continued.)

- | Question | Answer. |
|----------|---|
| 22. | We consider it is the interest of stock-owners to inoculate without being compelled by an Act to do so. |
- (No. 267.)
- | | |
|-----|--|
| 2. | 200 head. |
| 3. | Once only—in December, 1868. |
| 5. | Dying two or three a day. |
| 6. | About two months. |
| 13. | Several swelled a good deal a week after the inoculation. |
| 14. | Did not milk for two months afterwards. |
| 15. | No deaths from swelling; had to scarify several, and cut joints of tail. |
| 16. | Two head, two or three days after inoculation. |
| 17. | Did not see any sign of disease one week after inoculation. |
| 19. | In favour. |
| 20. | Was not troubled since the above date. |
| 21. | I know several herds about here that were dying with pleuro, were inoculated and ceased dying. |
| 22. | I consider they should be compelled to inoculate to exterminate the disease. |

(No. 268.)

- | | |
|-----|---|
| 2. | About 150 head. |
| 3. | Only on one occasion, in the year 1863. |
| 4. | 150 head to the best of my belief. |
| 5. | Symptoms of disease just exhibiting themselves in a few instances. |
| 6. | As nearly as I can remember about six days, in the few cases referred to in above answer. |
| 13. | As I was absent from home for some time after the inoculation took place, I can furnish no information. |
| 14. | None were milked for a considerable time afterwards. |
| 15. | I cannot say. |
| 16. | No deaths occurred from the disease after inoculation; excepting those which showed symptoms of disease when inoculated—these all died. |
| 17. | Within a month. |
| 18. | I saw no further symptoms of disease, although diseased cattle had become mixed on several occasions with my small herd. |
| 19. | In favour of it. |
| 20. | I can only make the same reply as expressed in answer to 18th question. |
| 22. | I most certainly do. |

(No. 269.)

- | | |
|-----|--|
| 2. | 500 head. |
| 3. | Never inoculated. Pleuro-pneumonia never showing in the paddock cattle, although I once purchased a mob of steers that were diseased, they mixed through the cattle and did not infect them. The diseased gradually died out, from what cause I am not aware. |
| 20. | In the year 1857, partner and self had small station with 1,000 head of clean cattle never diseased. My partner purchased 100 head of a small settler, cattle reported to have pleuro. In about ten weeks it broke out in the herd; we had a number of deaths, and inoculated. In less than two months after inoculation no deaths. We considered the herd clean, no signs of pleuro having shown out after that time. |
| 22. | I am in favour of passing a most stringent law prohibiting diseased cattle from travelling on the roads infecting the whole country. |

(No. 270.)

- | | |
|-----|--|
| 2. | About 2,000 head. |
| 3. | I only once inoculated. More than ten years ago. |
| 4. | All. |
| 5. | Diseased cattle had been killed. Sound cattle were inoculated as a preventative. |
| 15. | Not many deaths. |
| 16. | Herd have ever since inoculation been perfectly free from disease. |
| 18. | Very satisfactory. |
| 19. | In favour. |
| 20. | I know only that in favour of inoculation by hearsay. Pleuro was prevalent around this station, and cattle of mine (a few unknown to me), have even been brought on to this run from infected runs without injurious consequences. |

(No. 270—continued.)

- | Question. | Answer. |
|-----------|--|
| 22. | I believe that the objection against compulsory inoculation of calves at the same time as they are being branded lies chiefly in the difficulty of procuring safe and efficacious virus. Solve the latter difficulty, and none will object to such modified compulsory inoculation. Quite the reverse. |

(No. 271.)

2. 150.
3. Once, in 1874.
4. 150.
5. No disease.
13. Very little swelling.
14. Did not use the milk.
15. No deaths.
16. No.
17. No disease.
18. Good.
19. In favour.
22. Yes.

(No. 272.)

2. 1,500 one instance, 390 store another, 1,600 another.
3. One mob travelling on road inoculated at F. Jenkins's Jillinbar station, Murrumbidgee, January, 1871. Another at Bilengbong station, March, 1871. Another, same place, May, 1871; and many times before at Barratta station, by Messrs. Pepins, Morago station, 1864-1865.
4. The total of above numbers.
5. About 25 per cent. one instance on road. About 10 per cent. on Bilengbong station each occasion.
6. About five weeks with those on road. About four weeks with those on Bilengbong station.
13. In no instance has the swelling been more than 2 per cent., except in virus out of the lung or the chest dry, and in that instance as many as 8 per cent.
14. The cows were still milked, but nothing perceptible in any instance.
15. In one instance I took them in and lanced them, and in some put in a seton but not with any good effect.
16. None but those that were badly affected at time of inoculation, and in many instances they have recovered.
17. About three weeks, but some very weak, and low in condition; but all symptoms gone, as far as cattle taking to feeding again.
18. A perfect preventative, and in many instances a cure when properly done.
19. Strongly in favour.
20. I have had cattle with pleuro badly among them. In those cattle, on two occasions, running for a week at a time, with no bad effect.
21. The sooner cattle are inoculated when they show the symptoms the better for the owner and the Colony.
22. I am a believer in inoculation, and think it ought to be compulsory.

(No. 273.)

2. 1,400.
3. Three times—once 1870. Twice—1873.
4. First, 700; second, 300; third, 400.
5. 20 per cent.
13. Swelled a little about the tail on some occasions.
16. About 2 per cent.
17. About three months.
18. If taken in time consider it a preventive.
19. In favour of inoculation.
22. Consider owners whose cattle are infected should be compelled to inoculate.

(No. 274.)

2. About 100 head.
3. I have inoculated twice, viz., about 10 years ago, and three years this month last time.
4. 80 head of bullocks the first time, and 60 head of mixed cattle the second.
5. The cattle showed disease a few days after I bought them, five of them died, and I killed the sixth for virus.
6. I believe the disease had been among the cattle for six months before I purchased them.

(No. 274—continued.)

- | Question. | Answer. |
|-----------|---|
| 13. | The effects of the operation was visible by the tail swelling, and the scab where the operation was performed in, from a week to ten days. |
| 15. | Only one death occurred from inoculation. |
| 16. | There were no deaths from the disease after inoculation. |
| 17. | About six weeks after inoculation all the cattle looked healthy. |
| 18. | I believe inoculation to be a preventive if done before cattle are affected. |
| 19. | I am in favour of inoculation. |
| 20. | I may state that twelve months ago there were cattle round the back of my paddock bad with the disease, yet there were no symptoms of it in my paddock. |
| 22. | I believe that unless an Act is passed compelling owners of cattle which are infected to inoculate, the disease will never die out. |

(No. 275.)

2. 250 in 1871, now 400 cattle; none diseased in 1875.
3. In 1871 inoculated 250, none since, actual date forgotten.
4. 250.
5. About two in the hundred only showing symptoms, but other herds being bad, I commenced at once.
6. About one week.
7. Killed one two year old heifer, for virus, lung not badly marbled.
8. From the lung taken, which was taken out and squeezed by cutting in $\frac{1}{2}$ -inch pieces.
9. Two days.
10. No.
12. Needle and worsted by insertion 2 inches above the brush, slightly through the skin, leaving the worsted in the skin.
13. Swelled in hips, some a week, and more after.
14. Not milked.
15. Eight in the 100. Cut off the tails above the swelling, which cured all I cut off, but the number I cut I have forgotten.
16. None.
17. About four months.
18. I believe it was beneficial.
19. In favour.
20. Excess of virus applied in my instance was cause of my deaths being so many, I believe inoculated cattle enjoy immunity from further disease of the kind in question if each dead carcase is burnt.
21. I observe where the old bones of beast having died with pleuro-pneumonia is left unburnt, my neighbours' cattle smelling about them became diseased. I have strong opinions that if proper virus slightly applied is a great preventive in this disease.
22. I inoculated all my cattle. I believe such an Act would be very beneficial, and compelling all owners to burn dead cattle.

(No. 276.)

2. About 1,000.
3. Once, about June last.
4. About 1,000.
5. Diseased; about 5 percentage.
6. About four months.
13. Swelling.
14. Yes. No difference.
15. Yes. $\frac{1}{2}$ per cent. Cut tails off, stopped some.
16. Yes, about five per cent. Immediately after.
17. Not finally yet.
18. Stopped disease little.
19. In favour.
20. If properly inoculated, never infected.
21. I think change of climate and country.
22. Yes, by all means.

(No. 277.)

2. 300, in 1864.
3. Twice. In 1864, 150; in 1870, 100 head.
5. In good health; when inoculated, about 90 per cent.
6. About one month.
7. About the half of lungs.
8. From the lungs.

(No. 277—continued.)

Question.	Answer.
9.	12 hours.
10.	Never preserved any.
12.	With needle and thread—a common packing needle.
13.	Swelling in the tail.
14.	Not milked when affected.
15.	Not any died in 1864 from swelling; in 1870, about five died from swelling; no cure tried.
17.	About three months.
18.	Seemed prevent disease.
19.	In favour.
20.	I believe the inoculation to prevent the disease if inoculated before diseased.

(No. 278.)

2.	60 head.
3.	Once; about February, 1874.
4.	60.
5.	Not diseased.
13.	About three days after; one cow only had a swelled tail extending up to the root.
14.	Cows were milked immediately after, and the milk was not affected.
15.	No deaths.
18.	No disease has ever appeared since.
19.	In favour.
22.	Doubtful.

(No. 279.)

2.	About 400.
3.	On two occasions—March, 1866, and July, 1875.
4.	400 first time, and 150 head on last occasion.
5.	The cattle in 1866 had pleuro-pneumonia. These inoculated in 1875 had not about 5 per cent.
6.	About six months.
13.	A few swelled at the butt of tail; one or two died.
14.	Not milked.
15.	About 2 per cent. Cut out the swollen parts under butt of the tail.
16.	No.
17.	About six weeks.
18.	None of the cattle died after or since.
19.	Yes.
20.	After inoculation none of my cattle died, whereas numbers died on adjoining stations, where the cattle were not inoculated.

(No. 280.)

19.	I am in favour of inoculation.
21.	The cattle on this estate never had the disease (I am informed), certainly not since I became the owner; I have inoculated years ago up the country, and found by inoculating it had the desired good effect to prevent the spread of the disease; and in some instances when a beast was ill it got better when inoculated.
22.	I decidedly do.

(No. 281.)

Question.	Answer.
2.	1,500 head; date of first inoculation, May, 1864.
3.	Young cattle, nearly every year since 1864, or when I could obtain the virus; date of inoculation generally about Autumn.
4.	Sometimes 500, at other times 600.
5.	Healthy and in good condition.
6.	As soon as possible after the disease was observed; about a week.
13.	The effects did not show for three or four weeks in some instances; swellings about 2 per cent.
14.	Were not milked for six weeks after inoculation.
15.	About 1 per cent. died; reduced swelling by lancing.
16.	None.
17.	One month.
18.	During my experience from 1864, to present year, 1875, I have always found that the disease disappears shortly from the herd after inoculation. Number of present herd about 2,500.
19.	In favour of inoculation, but not compulsory inoculation.
20.	In taking a draft of fat cattle (400 head,) to Melbourne, a draft of badly diseased cattle were travelling for 400 miles, one day in advance of mine, and at last only half a day; not one of mine were affected by it.
21.	I have to inoculate young cattle only, old cattle that have been inoculated are never affected by the disease.
22.	Do not consider it necessary to pass an Act, owners of cattle are the only losers by neglecting to inoculate them; do not think they injure neighbouring herds by doing so.

(No. 282.)

2.	1,500.
3.	Once—in 1870.
4.	800.
5.	In a diseased state, 10 per cent. showing symptoms.
6.	Inoculated immediately on noticing symptoms of disease.
13.	Swelling commenced in about twelve days, and did not notice any twisting, but perceived them going off their feed and camping under trees.
14.	The cows were milked immediately after, but there was no perceptible change in either quality or quantity.
15.	Yes, about 15 per cent.; the tails were cut off so as to cause bleeding freely.
16.	Yes, forty died out of 360 inoculated; but believe they were suffering from disease some time before inoculation; the deaths occurred at intervals for two months after operation.
17.	Three months.
18.	Noticed nothing particular, except that already stated.
19.	Opposed.
20.	The effects of the inoculation kill more cattle than would probably die if the herd was left alone.
21.	We believe the disease arises from wet seasons succeeded by drought.
22.	No.

No. 4.

APPENDIX C.

REPLIES TO CIRCULARS.

(No. 1.)

Question.	Answer.
2.	About 600 cattle.
3.	Year 1870, and part of 1871.
4.	Stick up by trees, or several cars hanging, and eyes glossy, and wild looking, running at the nose when very far gone.
5.	About eighteen months.
6.	Five out of six.
7.	May or June, 1871.
8.	About one out of two or fifty from 100.
9.	Good health, thank God.

(No. 1—continued.)

Question.	Answer.
10.	From experience I say inoculation will not stop disease. I bought six pure bred cattle in 1873, the herd I bought from was about to be inoculated by an experienced hand, with many letters of acknowledgement; I objected to having mine inoculated, three of which I brought home, those three never were diseased, the other three were inoculated, and ten weeks after inoculation one out of the three died from pleuro-pneumonia, none of my cattle took the disease from this

(No. 1—continued.)

- | Question. | Answer. |
|-----------|--|
| | beast. The disease left my cattle in May or June, 1871, my cattle are now healthy and have been since that date. I have been a squatter since 1848, off and on; in 1874 and some time after, I was a cattle buyer, and occasionally droving my own cattle; I have bought diseased fat cattle on the Macquarie, and by careful droving they were cured when they reached the Melbourne market; I also bought diseased cattle in Queensland, and I found by long stages, and causing the cattle to sweat in cold climates, will kill the cattle so diseased very quick, also it will cause disease in healthy cattle or cattle that looks healthy, from my experience, and I had a good lot; I am entirely opposed to inoculating, it is not a disease, the ill-health of cattle is caused by inhaling bad odour from the ground after floods or heavy rains, removing to healthy climates would do more good. |
| 11. | I am not in favour of inoculation, but very much opposed to it, I believe the disease is not taking in its natural state, but it may be if tampered with. I would not consider my cattle in danger if cattle infected with pleuro-pneumonia were turned out in my herd, travelling cattle and working bullocks, diseased, have been turned out amongst my cattle, and no harm happened to my cattle, there is no reasonable proof to show that it is a taking disorder, as no one in my opinion could say one herd took it from another. |
| 22. | I do not consider a law should be enacted to compel a man to inoculate his cattle, as I do not believe pleuro-pneumonia to be infectious. |

(No. 2.)

2. 150 head.
3. 1864.
4. Fat.
5. From 1864 to 1870, since then there has been an isolated case once or twice.
6. When first affected about two-thirds.
7. 1870.
8. In 1864, about one-half.
9. Sound.
10. I twice inoculated, once effectively, the second time I lost one half, each time weaners.
22. I am altogether opposed to the passing such an Act; if stock owners find that it pays to inoculate, they will do so without compulsion.

(No. 3.)

11. In favour if required.
20. Nil.
21. Nil.

(No. 4.)

2. About 1,000 head.
9. Very healthy.
10. Is no disease, nor do we know that there has ever been any on this run.

(No. 5.)

2. 1,008.
3. None.
9. Good.

(No. 6.)

To the Chief Inspector of Stock, Sydney.
 Sir,—In last mail I received from Mr. M'Leod, Inspector at Euston, some forms to fill up for information about diseases in cattle and sheep on this run. I am happy to inform you we are at present perfectly free of either of the diseases mentioned in the printed form, so it will be unnecessary for me to send on the papers. The Inspector's request was that I should either fill up the papers, if I had information to give, or, if not, to say so.

(No. 7.)

2. 400.
6. Nothing of any consequence.
7. Within a few weeks after its first appearance.
8. Not five per cent.
9. Healthy.

(No. 7—continued.)

- | Question. | Answer. |
|-----------|--|
| 10. | I think and reiterate, that in a country where so much capital is invested for the best breed of cattle which the world can produce, it is a great pity such vast interests should be left so little cared for—our stock inspectors should be qualified veterinary surgeons, with facilities afforded them to have a student with a view of hereafter forming a college, &c., &c. |
| 11. | Opposed, because of the want of our stock inspectors not being experienced to judge or treat a beast, I have sustained serious losses through poisonous herbs and thistles after blossom, which were put down to pleuro, and even attributed to Cumberland disease, my own diligence alone, by watching the cattle and afterwards; after death on examining the stomach I discovered the evil, I have taken precautions since and laughed at the rash conclusion arrived at, six qualified (officials) veterinary surgeons paid from assessment on stock, would confer a great boon to our pastoral interests. |
| 22. | Certainly opposed to such a measure in the absence of qualified officials as above described. |

(No. 8.)

2. 750.
3. 20.
9. All our cattle is in good health at present.
10. Cattle ought not be let travel that is infected, the Inspector of the district ought to have power to stop them from starting off their own station, as I know from experience that cattle will catch the disease from cattle that has the disease. Cattle ought to be inoculated; it may not cure the cattle that is inoculated, but it will stop the disease from spreading at once through the clean cattle.
22. Owners ought to be compelled to inoculate at once when they first see the disease in the herd, under a fine if not doing so.

(No. 9.)

2. 1,100.
3. Never infected.
5. No disease.
9. Healthy.
22. Such an Act might do good, but is not wanted as far as my experience goes in this district.

(No. 10.)

2. 2,000.
3. Nil.
4. Nil.
5. Nil.
6. Nil.
7. Nil.
8. Nil.
9. Free from infection.
10. Inoculation kills more than it cures, in my opinion.
11. Opposed.
22. Let every one do what he likes with his own.

(No. 11.)

2. About 230.
3. At different periods.
4. Fat.
5. Very short time.
6. 2 per cent.
7. Twelve months ago.
8. Five in ten years.
9. Beautiful condition and healthy.
10. Have had about five head died from pleuro in the last ten years. I had one very fine 4-year-old bullock very ill two years ago with pleuro. I got him in the yard, and he was so helpless my two sons and Mr. Bagot's stockman pushed him in by hand into the milking-bail, and bled him in the neck and tail severely; turned him out; saw him the third day, he was no better—worse; got him in again with great trouble, gave him better than a pint of Stockholm tar; in three days the beast was well and feeding with the other cattle. Killed him since for beef. On examining the lungs found them very much gone.
11. No.

- (No. 12.)
- Question. Answer.
2. 360.
10. My cattle are all healthy, and never been inoculated; free from disease of any kind.

(No. 13.)

Nil.

(No. 14.)

2. About 500 head.
3. None.
4. Do.
5. Do.
6. Do.
7. Do.
8. Do.
9. Healthy.
10. Differences of opinion—uncertainty of a supply of virus at all times—undue interference with the private interests of individuals—the certainty, almost, that all diseases would be considered as pleuro, led me to the conclusion that such an Act would be simply over-legislative.
22. Liable to great abuse.

(No. 15.)

2. 3,000.
3. Spring of 1871 and 1872.
4. In splendid condition, and those that were fatest died the quickest.
5. About twelve months.
6. About 10 per cent.
7. In Nov., '72, more store cattle were bought, consequently they brought the disease again; but left the herd in about twelve months.
8. From about 100 to 150.
9. Sound.
10. This is naturally a sound country, and, unless the disease is brought here by stores, the cattle remain sound.
22. My experience has not been sufficient to give an opinion on this point. I think if it has been proved that inoculation is a preventative, that owners should be obliged to do so.

(No. 16.)

2. About 600.
8. None.
9. Healthy.
10. Some people inoculate all their cattle, and I have heard of a great many dying through the inoculation. I have never inoculated my cattle, and have never had any disease.
11. I am opposed to inoculation.
22. I cannot give an opinion.

(No. 17.)

2. 250.
9. Free from disease.
10. No experience—but, believe in its efficacy, from the practical opinions of others.
11. In favour of, decidedly.
22. Yes.

(No. 18.)

2. 1,800.
3. In 1862-63.
5. About 18 months.
6. Not known.
7. In 1863, after heavy floods.
8. Estimated at 40 per cent.
9. Free from disease of any sort, but in low condition from want of good grass.
10. There has been no pleuro amongst my cattle since 1863, though within the last 3 or 4 years cattle on some of the neighbouring runs have had it, some of the infected ones even mixing at times with mine. Pleuro seems to be worse in dry hot weather than any other time, and, as far as I know, attacks the best conditioned cattle more than poor ones.
11. Quite opposed to inoculation; in my opinion, doing more injury to the cattle in knocking them about. I have tried bleeding with milking cows and working bullocks which I consider the best treatment. I think, where it could be given, a drench of tartar-emetic or nitre would be of use.

(No. 18—continued.)

- Question. Answer.
22. I certainly object to inoculation being made compulsory. Let those inoculate who approve of it. I know parties in favour of inoculation, but not to make it compulsory.

(No. 19.)

2. 2,800.
3. Heavy losses in 1865, and again a slight loss in 1872; first time some were inoculated, second time none.
4. In good condition the second time; the first do not remember.
5. First time for two or three years, second time for less than one year.
6. First time about 50 per cent., second time about 10 per cent.
7. The end of 1872.
8. The first time fully 25 or 30 per cent., the second time about 5 per cent.
9. No disease of any kind among them.
10. The first time pleuro appeared on Glengarry, an attempt was made to stay its ravages by inoculation (operation performed by Mr. Pottie), but without success, disease spreading all over the run, and affecting the cattle inoculated, as well as uninoculated. On its second appearance, no attempt was made to inoculate, but only to confine the disease to the part of the run where it first appeared, which was successfully done.
22. No. I think inoculation will certainly cause a heavy loss and spread the disease, and whether it is in any degree a preventive is very uncertain. The only place to look for a solution of the question is England, where the cattle are confined under the eyes of skilled observers. The people who will fill in these forms are, with a few exceptions, utterly incompetent to make a scientifically accurate observation, and any other is worse than useless, as it tends to mislead.

(No. 20.)

22. The cattle have not been inoculated. Although pleuro has been very slightly among the cattle, inoculation has never been tried.

(No. 21.)

2. 245.
3. Not affected.
9. Healthy.
10. None.
11. Opposed.
22. I think not.

(No. 22.)

2. Generally 1,100 or 1,200.
3. March, 1869. When our cattle was infected.
4. Very poor. Caused by the long drought.
5. Three years.
6. I think about 70 per cent.
7. In 1872.
8. I believe fully 50 per cent.
9. Healthy, but very poor.
10. The only thing we did was to turn a large paddock into an hospital, and as we found sick ones put them in; but we could not keep down the disease. It got through every part of the run, Not seen a single case since the above time.
22. By all means. If it should show here again in my time it will not need an Act to cause me to inoculate.

(No. 23.)

10. It is now about 14 years since pleuro first made its appearance on the Lachlan. During the above period this neighbourhood has never been free from pleuro. The above in my opinion is strong evidence that pleuro is not very contagious. I believe that pleuro is engendered by impaired constitutions inhaling certain gases. I recommend inoculation because it is not much trouble, and if properly done, not over 1 per cent loss in doing weaners.
11. I am in favour, simply because it is not much trouble, and if properly done little or no risk. I have known numbers of cattle to take pleuro after they were considered to have been properly inoculated.

(No. 23—continued.)

Question. Answer.
22. I do not think inoculation should be compulsory. The people should be at liberty to do it or not. I do not agree with our Melbournites. When a beast takes pleuro, in my opinion his constitution is impaired.

(No. 24.)

Forms not returned; states that he has had no experience.

(No. 25.)

2. 800.

9. Healthy at present.

(No. 26.)

2.

3.

4.

5.

6.

7.

8.

9.

Herd very slightly affected some time ago, but have no dates or particulars.

9. Sound, but rather low condition.
10. Condition of cattle attributed to having no rains in spring, hence very poor grass during summer months. Have seen far more deaths from inoculation than in adjoining herds who did not inoculate.

22. No. I do not consider an Act compelling owners to inoculate either necessary or just.

(No. 27.)

2. 300.

3. 1874.

4. In good condition.

5. Nine months.

6. I do not know.

7. June, 1875.

8. Fifty head.

9. Good health.

10. Cannot say.

11. In favour.

22. I believe there should be a law.

(No. 28.)

Nil.

(No. 29.)

The Chief Inspector of Stock, Sydney.—Sir.—My cattle never has been diseased, therefore I never inoculated.

(No. 30.)

Sir.—I beg to inform you that I never inoculated any cattle, nor have I any faith in it.

(No. 31.)

2. 2,600.

3. None.

9. In good health.

10. None.

11. Opposed.

22. No.

(No. 32.)

2. 100.

3. March, 1872.

4. In good condition.

5. 10 months.

6. 40 per cent.

7. December, 1872.

8. 25.

9. Sound, good health.

22. I do not agree with compulsory inoculation.

(No. 33.)

2. 600.

(No. 34.)

To the Chief Inspector of Stock.—Sir.—I have never at one time been the owner of above twenty head of cattle (Durhams), and which have not to the present shown any symptoms of lung disease. These cattle have been kept in paddocks well hedged and fenced, with access to good water, and quite undisturbed. The few general observations I now offer are the result of twenty-five years experience and personal attention. In the first place, no beast of mine did I suffer to be inoculated. For several years the disease flourished in this neighbourhood, and was violent in a 700 acre field on the opposite

(No. 34—continued.)

Question. Answer.
side of the road, where many died from its effects. Some of these had been inoculated for experiment and placed in this field, where most of them died. Others were working oxen and station cattle. During the long term above mentioned I have slaughtered six or seven head of my own cattle, which were in every organ perfectly sound and no symptoms of lung disease. Inoculation I have always regarded as a piece of quackery, at times a very dangerous one. Doubtless by its influence a state of inflammation may be set up, but the same may be done with a piece of putrid flesh of any kind and with the same disastrous results. The practice has also been condemned by the first minds of Europe as totally at variance with such laws as govern the diseases of cattle, and by such men as are competent in my humble opinion to offer advice on such matters. I should therefore be opposed to compulsory inoculation, whether in a clean or diseased herd.

P.S.—This communication in the form of a letter I thought preferable to filling up the printed forms, not having station cattle; and trust this course may be acceptable to the Chief Inspector of Stock.

(No. 35.)

Nil.

(No. 36.)

2. 60.

3. Nil.

9. Good.

10. They have not been affected.

22. Yes.

(No. 37.)

No information.

(No. 38.)

2. 1,000.

9. Good.

22. Yes.

(No. 39.)

2. 5,500.

3. We have not had pleuro bad since '69.

4. Good condition.

5. About three months.

6. About 10 per cent.

7. Disease left the herd three months after being infected. We lost 20 or 30 head of cattle from pleuro since, but not any number.

9. No sign of pleuro.

10. When cattle get pleuro, if left alone and knocked about as little as possible, they will soon recover. Have seldom seen cattle get pleuro that have once had it.

22. No, but I think cattle infected, if left on runs by travelling mobs, should be destroyed by the people leaving them, under a heavy penalty for not doing so.

(No. 40.)

9. Healthy.

11. Opposed to inoculation.

22. No. I do not believe in inoculation.

(No. 41.)

2. 250.

(No. 42.)

2. 1,200.

3. Many years ago.

4. Rather poor.

5. About two years.

6. Nearly the whole of them.

7. About four years ago.

8. About one-third.

9. Healthy, but very poor.

10. Want rain very badly.

11. Opposed to compulsory inoculation.

22. No. As I think it would be impossible to obtain the virus; and to put the cattle together in a poor state would kill them.

(No. 43.)

2. About 40 head.

9. In good health. Only one pea-cater.

(No. 43—continued.)

Question.

Answer.

10. Nothing more to say.
11. In favour of it.
22. Yes.

(No. 44.)

2. About 1,100.
3. Never infected.
9. No disease.

(No. 45.)

The Chief Inspector of Stock, Sydney.

Sir,—I have inclosed return papers re diseases in stock, and beg to state that when pleuro-pneumonia was rife in this district this station was in the hands of other occupants, so that I am not in a position to fill up the returns. I am happy to be able to state, there is not the slightest sign of disease amongst our cattle at present, nor has there been for several years. I am also happy to state there are none of the sheep affected with worms, fluke, or foot-rot; and having had no experience in the above mentioned affections, I am not in a position to advise as to their nature or prevention. Number of sheep, 35,000; number of cattle 600. These sheep and cattle are now depasturing on our Chah Sing and Jagur Runs, near Moulamein. Apologizing for not being able to give information to the questions solicited in the enclosed return papers.

(No. 46.)

2. Now only about ninety, having sold principal herd some years ago.
3. A few died of pleuro in 1862-63.
5. Nearly two years, 1862 and 1863.
6. About 1 per cent.
7. About end of 1863, when greater part of herd was sold.
8. No deaths from pleuro-pneumonia since 1863; two cows have died lately from a disease corresponding with that lately reported as novel, viz., paralyzing of hind quarters.
9. Poor but generally apparently healthy.
11. Opposed to inoculation from observation during many years, when I had a large herd on this run. Out of a herd of about a thousand, I lost, I think, nine head from pleuro-pneumonia, while neighbours with a few hundred head and practised inoculation lost nearly their all.
22. Decidedly opposed to compulsory inoculation.

(No. 47.)

10. The disease has not been in this district for the last ten years, except in cattle brought by the butchers from Braidwood and Berrima Districts. Inoculation so far as I am aware, was not resorted to when the disease was here.
11. From what I have heard as the experience of owners in the Ulladulla District, I am in favour of inoculation as a preventative.
22. I do.

(No. 48.)

2. 140 head.
9. Healthy.
10. I would approve of it among herds where this disease is; also, I never knew it to break out among cattle which were properly inoculated. If a person inoculated one, all should be inoculated, for those that were not inoculated would take it from those that were, which I saw a proof of.
11. Opposed to it, as far as my experience leads, that is, in localities where this disease is not.
22. I consider that cattle owners should be left to their own discretion as regards their stock being infected; for people who are not experienced in the matter are liable to do an amount of injury.

(No. 49.)

2. 2,000 under or over.
9. My cattle at present are healthy.
10. I never took anything to do with inoculation. I never studied the length of time the pleuro existed in my herd. I do not hold with inoculating cattle at all.

412—I

(No. 50.)

Question.

Answer.

2. About 1,200 head.
3. In the year 1865, the cattle were slightly affected with the disease.
4. Rather weak from bad seasons.
5. About 12 months.
6. The percentage of cattle affected was about 15.
7. The year 1866, and since then the disease has not appeared in the herd.
8. 2 per cent.
9. Good condition and health.
10. I am of the opinion that cattle are much better if they are not inoculated, even when the disease shows in the herd, as the loss is much greater from the mustering and consequent knocking about of the cattle in this climate, than from the disease itself if the cattle are left alone.
22. I do not consider that an Act should be passed to oblige any owner to inoculate his cattle when infected with pleuro, for the reason above stated.

(No. 51.)

2. 250.
3. Not used.
5. Three weeks.
7. No symptoms at present.
8. Seven, as near as I can tell.
9. Good.

(No. 52.)

2. 780.
10. In March or April last, two or three young beasts were supposed to be infected, showing some of the symptoms of pleuro, but not being able to procure virus the herd was not inoculated, nor have any fresh cases been observed.

(No. 53.)

2. 1,000.
3. Nil.
4. Nil.
5. No disease.
6. None.
7. Never was in it.
8. Nil.
9. Healthy.
22. No.

(No. 54.)

11. I am in favour of inoculating grown cattle, but not under two years old.
22. I certainly think an Act should be passed compelling owners of stock to inoculate when they observe the disease setting in.

(No. 55.)

2. About 600.
3. Never had any infected.
22. Yes.

(No. 56.)

Nil.

(No. 57.)

2. 3,500 head.
4. Had no disease since purchasing, which is over four years.
9. Healthy.
10. Having had the management of large herds of cattle for twenty years (Hoskisson's), Gwydir District, we never inoculated any. My neighbour (Lloyd), Mennala Station, had his herd inoculated, and had considerably more die than we had, but will not say they were skilfully done.
22. I would not consider it necessary, and would think it an arbitrary law if passed.

(No. 58.)

2. 1,800.
3. There has been no pleuro-pneumonia since 1867-8.
4. Good condition.
5. About twelve months.
6. Nearly all.
7. The latter end of 1868.
8. About from 500 to 600.
9. Generally healthy.
11. In favour, certainly, if virus can be obtained, though I did not inoculate, owing to circumstances and ignorance of the operation.
22. I think it advisable.

- (No. 59.)
- | Question. | Answer. |
|--|---------|
| 2. 3,000. | |
| 10. I consider that an Act should be passed obliging owners of cattle travelling to report their arrival on a station. This would, in my opinion, tend greatly to lessen the spread of diseases. | |
| 22. Decidedly not. | |

(No. 60.)

2. 120.
9. Sound.
11. I am not in favour of inoculation.

(No. 61.)

2. None.
3. None.
4. None.
5. No time.
6. None.
7. None.
8. None.
9. In good order and condition.
10. All the cattle are in prime health, and no signs of any disease.
22. I cannot form any opinion on the subject, never having any disease, and never tried the effects of inoculation.

(No. 62.)

2. 300.
9. Healthy.
10. Have had no disease since the run was stocked with cattle, about three years ago. I intended to inoculate last year, but was unable to obtain virus.
22. Decidedly not. I consider it too late to inoculate after a herd has become infected.

(No. 63.)

2. 500.
3. Never been infected.
9. Healthy, but rather out of condition, owing to long winter and much frost cutting off the feed.
10. Consider it a very good preventive to disease to keep a few lumps of rocksalt constantly on the camp for cattle to lick. Think the Government in the interest of the public should encourage the use of rock salt by removing duty, and carrying it as cheaply as possible by railway, &c., &c.
22. Do not consider this at all necessary.

(No. 64.)

2. About 450.
3. I have had no disease in my cattle for six or seven years.

(No. 65.)

9. Free from any disease.
10. Have known cattle travelling, some of which were inoculated; those not inoculated took the disease, and many of them died, while those that had been properly inoculated showed no sign of disease.
11. In favour of inoculation. Am confident of its being a preventative.
22. Consider an Act should be passed obliging owners of cattle to inoculate as a preventative of pleuro-pneumonia.

(No. 66.)

2. About 800.
3. About 18 months after its first appearance in this colony—don't recollect date.
4. Rather poor and low condition at the time it first appeared.
5. Very severe for two years; after that a few yearly; none the last year and a half.
6. After the first two years, about four to five per cent., lately not so many.
7. On or about 18 months ago.
8. Kept no account.
9. Free from disease and in fair condition.
10. None to make.
22. I do not—knowing that many lost more than I did by inoculating their cattle when none were dying; mine were not inoculated.

- (No. 67.)
- | Question. | Answer. |
|---|---------|
| 2. 11,000. | |
| 3. Have not been infected. | |
| 9. Healthy. | |
| 10. None to offer. | |
| 22. To the above question, no. But an Act should be passed obliging owners who have breeding herds of cattle to inoculate all calves at the time of branding or marking, by which means pleuro-pneumonia might eventually be entirely eradicated. | |

(No. 68.)

2. (100) one hundred head, old and young.
3. Never infected.
4. Never had pleuro-pneumonia.
5. Never showed any symptoms of pleuro.
6. None.
7. When the few head that were brought from the Berrima District died out, which was only a few weeks after arrival.
8. About twelve head in all.
9. Every beast in the best health possible.
10. I have not seen any symptoms of the disease on this farm, since the few that came from Burrarorang, or the Berrima District, died, which was about 1863. At that time they were dying all round me, lying in the creek where my cattle watered; but I never had one to take the disease, and my cattle were running among diseased cattle at that time, but never caught it. I believe it was the change of climate and over-driving that caused the disease to break out among them as it did, and in particular on a beast that has been inoculated. Inoculation acting on the lung, the change would bring it on, as most cattle killed after inoculation has part of the lung gone and growing to the ribs.
22. I do not, as I believe that I would be ruining my herd by inoculating, and putting the disease (pleuro) into them; I mean to say, if the pleuro is not in the herd; but if pleuro is once established in a herd then no harm can be done; but I do not think owners should be obliged to inoculate, as I believe a beast inoculated ought not to be bred from, as is proved from the fact of a beast's lung growing to its side after healing by inoculation, has had a lung disease and so may the calf.

(No. 69.)

2. 1,200.
5. No disease.

(No. 70.)

2. 400 head mixed herd.
3. Eleven years ago, in 1864, in November.
4. In good condition, mostly fat.
5. About fifteen months.
6. The whole of aged cattle within a few, they mostly young cattle which had no disease.
7. About February, 1865.
8. About quarter of my stock of cattle at that time.
9. All perfectly healthy. Have lost a few of my yearlings last winter with blackleg, say six head. They were in first class condition at the time of taking the disease, and died inside of twenty-four hours generally. All the remainder of my cattle are healthy and in good condition.
10. It was travelling stock which was for shipment to New Zealand, in 1864, from Twofold Bay, from the Lachlan District, which left pleuro with death and destruction in its wake, or else pleuro-pneumonia would never have visited Manaro.
11. Those cattle were said to be inoculated; if so, they were bad, and left disease for miles around the track they travelled.
22. I do not believe in inoculation at all, so consequently will be against legislation.

(No. 71.)

2. 700 head mixed cattle. Has had no disease in my cattle these last ten years. Then pleuro slightly.
9. Is healthy.
22. Do not believe in inoculation at all on Manaro, as such would never have been required or known in this district, only for travelling stock.

(No. 72.)

Question.

Answer.

2. 200.
10. I have much pleasure in stating that pleuro-pneumonia has never shown itself to any extent on this run; nor has the cattle ever been inoculated. In districts where cattle are infected, and dying from the want of proper treatment, I consider it would be wise if Parliament were to pass an Act obliging owners to inoculate if such had the desired effect.

(No. 73.)

2. About 200.
3. In the years 1863 and 1864.
4. In good condition. Some were fat when they died.
5. About twelve months.
6. About 30 per cent.
7. In the year 1864.
8. 20 per cent.
9. In good health.
10. Have not seen any disease in my cattle since the above-mentioned years.
22. My cattle have never been innoculated, and I do not believe in compulsory inoculation.

(No. 74.)

Nil.

(No. 75.)

Nil.

(No. 76.)

The Chief Inspector of Stock, Sydney.

Sir,—In answer to your communication of 20th August, on the subject of inoculation for pleuro-pneumonia in cattle, I have the honour to state that the whole of my herd is entirely free from this disease, and that I have not had occasion to inoculate any of my herds, never having had the disease amongst my cattle.

(No. 77.)

2. 6,000.
5. Disease first broke out in the herd in 1864; and loss from disease during that year being about 7 per cent.
8. 2 per cent. will cover the loss from pleuro-pneumonia since 1865.
9. Healthy.
22. Certainly not.

(No. 78.)

Nil.

(No. 79.)

2. 1,000.
3. None.
4. None.
5. None.
9. Healthy.
11. Opposed.
22. Yes.

(No. 80.)

2. 60.
3. None affected.

(No. 81.)

2. From three to 500.
4. Grunting, eyes sunken, discharge from nose, hang about water-holes, continually sipping, do not appear to chew the cud.
9. Perfectly sound.
10. I have been living on my present run for the last eleven years, during which time I have only had three or four isolated cases of pleuro-pneumonia, and destroyed the animals infected. I have lost cattle by another disease, which I believe to be the coast disease, the animal pines away for some months, has a cough when moved quickly, but does not grunt as in pleuro, and chews the cud. I do not believe it is infectious. I believe rock salt placed about the run to be a preventive.
11. I am opposed to inoculation of a clean herd, as I believe it introduces the disease, but in favour when seriously infected.
22. Most certainly if infected to any extent.

(No. 82.)

2. 319.
3. 1863.
4. Good order, if I recollect right.
5. About twelve months.

(No. 82—continued.)

Question.

Answer.

6. Do not recollect, but not many, although I had more than twice the above number.
7. I believe, in 1864.
8. Do not recollect.
9. Thin after the winter, but healthy.
10. Some years ago two of my neighbours, M'Intosh and Oakes, inoculated, I believe, with great loss; five miles north from here. Mr. Stevenson also inoculated, with it was said fifty per cent. loss too, and south-east of Swallows' Nest.

11. No.

22. No.

(No. 83.)

2. Forty.
3. None.
4. Never was infected.
8. None.
9. All healthy.
10. I am in favour of inoculation when cattle are infected with pleuro-pneumonia.

(No. 84.)

2. 750.
3. All times of the year.
4. They become very wild and miserable looking, and will not feed, and foam at the mouth.
5. A continuation, more or less, but gradually disappearing.
6. Of late not over ten per cent.
7. Has not quite left it yet.
8. Cannot exactly say.
9. Good health but very poor on account of bad supply of grass.
10. I have seen my neighbours' herds inoculated by a person who was considered competent, and a very large number of the cattle died after it—a far larger percentage of deaths than those had that did not inoculate. I have tried a remedy of bleeding quiet cattle, and cutting the tips of their tails off, and many instances proved successful.
11. I am strongly opposed to it.
22. No. I do not consider that any such Act should be passed, I should let the owners of stock to please themselves.

(No. 85.)

2. 11 head is all I have.
9. In good condition and health.
22. I do.

(No. 86.)

2. 1,700.
3. No known infection in this herd for the last two years.
9. Appear all free from any disease.
22. I do not think a compulsory law would have any good effect, many stockowners believe inoculation tends to spread the disease and keep it alive in the Colony.

(No. 87.)

2. 200; no disease amongst them. I give them plenty of rock salt, and I believe that if cattle got plenty of rock salt that they would not have many diseases.

(No. 88.)

2. 3,000.
3. The last broke out in September, 1870.
4. In good condition.
5. Three or four months.
6. As near as I could ascertain 10 per cent.
7. About nine months.
8. About 5 per cent.
9. Quite healthy, and no appearance of disease for the last four or five years.
22. I certainly would not allow my cattle to be inoculated with any description of virus taken from the lungs.

(No. 89.)

2. 400.
3. None.
8. None.
9. Very healthy.
10. If a beast of mine took the disease, I should directly take him from the others to endeavour to prevent, but I do not believe in inoculation. Having seen cattle die after inoculation, whether caused by the improper performances or not, I am not in a position to say.

(No. 89—continued.)

- | Question. | Answer. |
|--|---------|
| 11. Decidedly opposed to it, not having it among the cattle. | |
| 22. No, for the reason that if my cattle are healthy, why should they be inoculated. | |

(No. 90.)

- | | |
|---|--|
| 2. 3,500. | |
| 3. 1869. | |
| 4. A little low. | |
| 5. 6 months. | |
| 6. Uncertain—should think about 20 per cent. of those under 12 months. | |
| 7. 1869. | |
| 8. 10 per cent. of those under 12 months. | |
| 9. Quite free from disease. | |
| 10. We consider inoculating a herd with disease in it, a more certain way of causing a larger percentage of deaths. | |
| 11. Opposed to it. | |
| 22. Certainly not. | |

(No. 91.)

Nil.

(No. 92.)

- | | |
|--|--|
| 2. 1,500. | |
| 3. Cattle never infected at Triamble, but a small milking herd at Pell were badly infected. | |
| 4. Strong. | |
| 5. Some months. | |
| 6. Over 50 per cent. | |
| 7. Do not remember. | |
| 8. About 20. | |
| 9. Healthy. | |
| 10. At Triamble in the county of Wellington, where nearly all my cattle run, none died from pleuro, or were infected to my knowledge, the cattle were carefully watched and prevented from mixing with diseased cattle, other cattle near suffered badly and were inoculated. My cattle at Triamble being isolated and out of the way of travelling stock, I believe to be the reason why they escaped. Where nearly all my cattle run, in the county Wellington, we never inoculated, and never lost a beast from pleuro. Owners of cattle near us inoculated, and lost a great many. I do not think sound cattle should be purposely inoculated with a disease which they might never take otherwise; I am also opposed to inoculation, because I believe pleuro to become to a certain extent hereditary, having frequently noticed young stock bad with pleuro amongst cattle that had had the disease, whilst young cattle whose mothers were never diseased (from the time of the first appearance of pleuro in the colony to the present day) never took the disease. | |
| 11. Decidedly opposed. | |
| 22. Most certainly not. | |

(No. 93.)

- | | |
|---|--|
| 2. 260. | |
| 3. 8 years ago. | |
| 4. Good condition. | |
| 5. 6 months. | |
| 6. 4 per cent. | |
| 8. 3. | |
| 9. Good health—free from disease. | |
| 10. Have administered castor oil with good results, and always smear with tar the noses of cattle and the sheds, bails, &c. | |
| 11. In favour of. | |
| 22. I do. | |

(No. 94.)

- | | |
|--------------------|--|
| 2. 300. | |
| 3. Never infected. | |
| 9. Healthy. | |

(No. 95.)

- | | |
|---|--|
| 10. Our cattle had pleuro-pneumonia in 1866 for about nine months, when the disease suddenly left the herd, and has not appeared since. | |
| 11. Opposed. | |

(No. 96.)

- | | |
|---------------------------|--|
| 2. Say 600. | |
| 3. About ten years since. | |
| 4. In good condition. | |
| 5. About twelve months. | |

(No. 96—continued.)

- | Question. | Answer. |
|--|---------|
| 6. About 10 per cent. | |
| 7. About nine years since. | |
| 8. About 5 per cent. | |
| 9. Perfectly free from disease. | |
| 10. Those who are always inoculating their cattle will never be free of the disease. I give plenty of rock salt as a preventative, which is always better than a cure. I have seen cattle diseased that got plenty of salt, but never saw any of them die. | |
| 22. No, a plague should never be encouraged; and if we cannot keep it out, try to moderate it by giving rock salt. Why should I or any other be compelled to bring the disease amongst our healthy cattle? | |

(No. 97.)

- | | |
|---|--|
| 2. 400. | |
| 3. 1865. | |
| 4. Hanging at the ears and frothing at the mouth. | |
| 5. Three months. | |
| 6. 8 per cent. | |
| 7. June, 1865. | |
| 8. 5 per cent. | |
| 9. Good order. | |
| 10. None, only I have never inoculated. | |
| 22. I do not. | |

(No. 98.)

22. No.

(No. 99.)

Nil.

(No. 100.)

- | | |
|---|--|
| 10. As I don't believe in inoculation, therefore have never tried it. | |
|---|--|

(No. 101.)

- | | |
|-----------------------|--|
| 2. About 7,000. | |
| 3. About 1864. | |
| 4. Healthy. | |
| 5. Ever since. | |
| 6. Not known. | |
| 7. In it yet. | |
| 8. Not known. | |
| 9. Slightly infected. | |
| 22. Certainly not. | |

(No. 102.)

- | | |
|--|--|
| 2. 6,000. | |
| 3. Always slightly affected since first breaking out. | |
| 4. Fair condition. | |
| 6. Very slight. | |
| 8. Impossible to say—not many. | |
| 9. Slightly troubled with pleuro. | |
| 11. Do not know what to say, as never had an opportunity of testing the efficacy of inoculation. | |
| 22. No. | |

(No. 103.)

- | | |
|---|--|
| 2. 2,500. | |
| 3. Almost every year since 1867. | |
| 4. In good condition. | |
| 5. For several years. | |
| 6. About 75 per cent. | |
| 7. In 1874. | |
| 8. The first year, 1867, about 50 per cent. died; proved from actual muster. | |
| 9. Free from disease. | |
| 10. I believe the disease is constantly amongst cattle which are not inoculated, but they do not die so much as they did at first, but as a rule 5 per cent. per annum die every year. I have seen working bullocks which had been inoculated travelling with ours which were not inoculated, and they did not die, whereas the ones which were not inoculated died to the extent of 50 per cent. I have never inoculated cattle myself, but I have seen numbers which have been inoculated, and I thoroughly believe that it is beneficial, and I intend to inoculate Mr. M. H. Moule's cattle next year, and I also intend to inoculate some cattle which I have in Queensland. | |
| 11. I am decidedly in favour of inoculation. | |
| 22. I do. | |

(No. 104.)

- | | |
|---------|--|
| 2. 400. | |
|---------|--|

(No. 104—continued.)

- | Question. | Answer. |
|--|---------|
| 6. $\frac{1}{2}$ per cent. | |
| 8. One. | |
| 9. Healthy. Poorer than at same time of year in former years, owing to grasshoppers and severe winter of 1875. | |
| 10. I may remark here that a calf of mine whose mother was put to E. Jones, Esq's stud, bull "Bismarck" was by E. J. inoculated by mistake. The calf seemed to recover, but one month after showed all the symptoms of the disease; he died ultimately. The disease (pleuro) has been in the herd of the above named gentleman, whose run joins mine. A beast of his (diseased) got amongst mine and died. It did not to all appearances affect mine. I have not inoculated my cattle. Referring to the above, ten months ago a number—about 200 head—of diseased cattle (pleuro), badly diseased, were branded in my yards, some of them so bad I could not get them out of my home paddocks. My milkers, stud bull, and others were constantly mixed with the diseased cattle. In no case was my cattle affected. My opinion is that the disease is not infectious, that is one beast coming in contact with another, but is an atmospheric malady. My cattle, a number of choice ones, came in contact with the diseased lot (30 of which I drew into the river after death), and not one was affected. | |
| 11. I would leave the matter in the hands of owners. | |
| 22. I would leave the matter in the hands of the parties most interested. | |

(No. 105.)

- | | |
|--|--|
| 2. Fifty milking cows on conditional purchase, New South Wales. | |
| 4. In good condition. | |
| 5. For twelve months, in 1868. | |
| 6. 20 per cent. | |
| 7. Died out in 1869. | |
| 8. 15 per cent. | |
| 9. Free from all disease. | |
| 11. Opposed. My belief is that if inoculation was stopped that pleuro-pneumonia will die out in a few years. | |

(No. 106.)

- | | |
|--|--|
| 2. 200, more or less. | |
| 3. Not infected. | |
| 9. In good condition. | |
| 11. I am in favour of inoculation when necessary. | |
| 22. An Act should be passed to compel owners of infected cattle to inoculate when they can obtain the virus. | |

(No. 107.)

- | | |
|---|--|
| 2. 3,000. | |
| 3. February, 1874. | |
| 4. In good condition. | |
| 5. About five weeks. | |
| 6. About $\frac{1}{2}$ per cent. | |
| 7. March, 1874. | |
| 8. Six. | |
| 9. Cattle at present healthy. | |
| 10. The six cattle were first affected with pleuro about ten years ago, and a large percentage then died of this disease. Since that time the disease has appeared two or three times, but the heaviest loss was in February, 1874. These cattle were never inoculated. | |
| 22. As it has not been proved beyond dispute that inoculation is a preventive of pleuro, I do not think that owners of cattle should be compelled to inoculate. | |

(No. 108.)

- | | |
|------------------------------|--|
| 2. About 400 head of cattle. | |
| 3. None. | |

(No. 109.)

- | | |
|---|--|
| 2. 400. | |
| 3. They have not been infected. | |
| 8. None. | |
| 9. Healthy. | |
| 10. If the cattle are infected I think a law should be passed obliging owners to inoculate, and a competent person to obtain the virus appointed. | |

(No. 110.)

- | Question. | Answer. |
|--|---------|
| 2. 6,000. | |
| 3. Odd cases for the last five years. | |
| 4. Various times, too numerous to mention. | |
| 5. Impossible to say; odd beasts are to be seen off and on every year. | |
| 6. Impossible to say, but believe nearly all on the run. | |
| 7. None seen for the last three months. | |
| 8. Possibly 100 within the last five years. | |
| 9. Healthy. | |
| 10. I am decidedly against compulsory inoculation. Our losses are quite heavy enough without having to kill them by Act of Parliament, and that I consider would be the effect of compulsory inoculation. I have had a very large experience among cattle, and am certain those who inoculated have suffered more than those who left their cattle alone. Only a few months ago I noticed Mr. Walter Lamb's cattle were attacked, one of them killed, and the others did not die after being inoculated. The advocates for inoculation at once said, "See what inoculation has done!" But I say there is no proof that the cattle would not have recovered just as well if they were left alone, and give the following instance in support of what I say:—At the very time Mr. Lamb's cattle were attacked, a working bullock running among the quiet cattle here about the station had the disease badly. I had him left alone and he recovered, and none of the others died, although he was running among them every day, both before and after the disease, and was frequently yarded with the others. This is only one of many instances I have observed for the last ten or twelve years. And I have this advantage over Mr. Lamb. My bullock recovered, his was killed, and that at any rate I have one beast the best of him. | |

(No. 111.)

- | | |
|--|--|
| 2. 5,000. | |
| 3. Have always had pleuro. | |
| 4. In good health. | |
| 5. For the last six years. | |
| 6. About 5 per cent. | |
| 7. Is in the herd now. | |
| 8. About 2 per cent. | |
| 9. In fine condition and good health. | |
| 10. I did not inoculate my cattle, as I believe the deaths arising from inoculating would be more than I lose by pleuro. I believe in inoculation as a preventive but not as a cure, and I do not think that an Act should be passed making inoculation compulsory. It would be a very hard Act to be carried out, and very little if any good would result from it. | |

(No. 112.)

- | | |
|--|--|
| 2. 300. | |
| 4. In good condition. | |
| 6. Nearly all. | |
| 7. Spring. | |
| 9. Good condition. | |
| 10. Having only been owner of this run for sixteen months, I cannot give much information as the cattle were just recovering from the disease when I bought. | |
| 22. No. | |

(No. 113.)

- | | |
|---|--|
| 10. I believe that the free use of salt will act as a preventive and probably as a cure for pleuro if used in the early stage of the disease, but I will only give one case in support of this belief. Two bullocks got away in yokes, after a week they were found, one of them had been dead for twenty-four hours from pleuro, the other bullock was released and did not afterwards take the disease. This last bullock was in the habit of licking salt every evening. | |
| 11. I am not in favour of inoculation, but opposed to it upon the grounds that I have observed that pleuro-pneumonia has disappeared simultaneously from among those herds that have not been inoculated, and those have, in the same district. | |
| 22. Certainly not. It should be left entirely to the discretion of the owner. I believe that inoculation very often brings the disease into a herd, and at least may aggravate it. | |

- Question. (No. 114.)
Answer.
22. Yes. (No. 115.)
2. About 2,000.
 3. 1870, 1871.
 4. Good condition.
 5. Eighteen months.
 6. 10 per cent.
 7. 1871.
 8. About 150 head.
 9. Free from disease.
 10. My cattle had pleuro for about eighteen months; my neighbour Mr. Scott's cattle mixed with them, and ran together with them for the whole period, and not one of them took pleuro. The pleuro broke out in some cattle (belonging to a person named Clarke) running on Mr. Scott's run, twelve miles from my station; Mr. Scott inoculated on that division of his run, and said the pleuro ceased; but, strange to say, the pleuro died out simultaneously on my station, although I never inoculated. The above circumstance, in my opinion, disproves the necessity for inoculating.
 22. Utterly opposed to inoculation. (No. 116.)
 2. 300.
 3. During two years—1868 and 1869.
 4. In good condition, but rather crowded on the run; and to prevent their trespassing on neighbours' runs were often turned back, causing them to be mixed too closely.
 5. Two years.
 6. Cannot tell, but believe it went through the whole herd, as many were noticed sick slightly, and appeared quite well in a few days. In January, 1870, they were taken to Cawa, where they had plenty of room, and left off dying.
 8. 30 per cent.
 9. Healthy. They were not inoculated.
 10. Inoculation was not so well known when our cattle were sick and dying as it is now; and I did not then believe in it; but I have ample reason for changing my mind since, as I know that it stopped the ravages of the disease in the herds of two of our neighbours. I have made up my mind to inoculate, should the disease make its appearance in our cattle again, and lose no time about it.
 22. Yes. Our cattle were never inoculated. (No. 117.)
 2. About 300.
 3. Never affected.
 5. Never.
 9. In good condition, and no disease.
 11. To a great extent. Yes. (No. 118.)
 - Nil. (No. 119.)
 2. 1200.
 11. I have been among and owned cattle these last thirty-five years, but never seen much of inoculation done; but I am of opinion that inoculation is good if done in proper time.
 22. Yes. (No. 120.)
 2. 3,000.
 3. Not infected.
 9. Sound.
 10. No disease here.
 11. In favour of.
 22. Yes. (No. 121.)
 2. 3,000.
 3. These cattle have not had the disease for at least more than three years.
 9. Healthy.
 22. No, most decidedly not. Such an Act would be most iniquitous, and would be compelling many people to do what they are convinced is most injurious to their cattle. (No. 122.)
 2. 300.
 3. None.
 9. Fair healthy condition.
 11. Am opposed to inoculation.
 22. I don't think so.

Question. (No. 123.)
Answer.

 3. Never.
 22. I am opposed to an Act being passed for compulsory inoculation. (No. 124.)
 10. We have no diseased cattle. We have had no experience in inoculation, therefore can't give an opinion on this matter. (No. 125.)
 2. About 1,000.
 3. None.
 9. Healthy.
 10. No symptoms of any cattle disease has appeared amongst our herd. I saw some years since a number of cattle inoculated, and more died from the effects of the inoculation than I think would have died from the disease had they not been inoculated, owing to the operation being performed by inexperienced men and bad virus.
 11. I am in favour of inoculation, where virus can be got and cattle in danger of being affected.
 22. No. I do not think it should be compulsory. (No. 126.)
 2. 500.
 3. None.
 4. Never infected.
 5. Never existed.
 6. None.
 7. Never had it.
 8. None.
 9. Healthy.
 10. I have seen a great number of cattle bled in the jugular, and the disease pass away, keeping those bled away from any diseased ones.
 11. I am in favour.
 22. I consider that an Act should be passed obliging owners whose cattle are infected to inoculate. (No. 127.)
 2. About thirty head.
 3. No disease of any kind has existed on my station during the past seven years.
 9. Healthy and condition fair.
 22. I certainly do consider that owners of cattle should be compelled to inoculate, where disease is found to exist—having witnessed the effects in other herds, I am strongly in favour of the process. (No. 128.)
 2. About 4,000.
 9. Healthy.
 10. There has been a few losses, as will be in any large number of cattle, but I cannot say I have seen a decided case of pleuro-pneumonia since I have been here. I have seen and known of many stations where inoculation was done in Victoria, but never heard of it being of much use, and have known them die as fast after the inoculation as before and without it.
 11. Having only arrived in New South Wales a few months, I do not feel competent to answer this question. In Victoria, I cannot say I found that inoculation was of much use.
 22. If we do not thoroughly believe in inoculation, we could not wish an Act to be passed to oblige us to inoculate. (No. 129.)
 2. 400.
 6. Nil.
 9. Healthy and in fair condition.
 22. Certainly not. (No. 130.)
 2. 40.
 3. I have no diseased cattle whatever.
 6. None.
 8. None.
 9. Good health. (No. 131.)
 2. At time of disease about 100, have at present 100 head.
 3. 1865.
 4. In very good condition.
 5. I think about 2 years.
 6. As near as I can think, about 8.
 7. Cannot say.
 8. Cannot recollect.
 9. Very fair.
 10. The only remedy I ever tried was to keep cattle from water; I have kept cattle from water for

- (No. 131—continued.)
- Question. Answer.
- 14 days when bad, I then gave a small quantity once a day for from 5 to 8 days, and out of three, two recovered. I have known one cow to be five weeks without water and recover; she was so bad I drove her away in a back gully, and got her there in 5 weeks after very poor—I took her to water and she recovered.
11. I am in favour so far as in skilled hands it may be a preventative, but in unskilled hands I think it is poison altogether; the principal thing is to know when you see the virus whether it is good or bad, and very few know that yet, not one out of 100 or more.
22. No; as I think a great many cattle has been destroyed by unskilled hands inoculating them. I am in favour of cattle being paddocked when diseased and kept by themselves.
- (No. 132.)
2. 1,800.
3. Don't know. Pleuro has been in the herd more or less since I purchased (about 4 years ago), but only to a trifling extent; sometimes there would only be 3 or 4 ill with it, and sometimes considerably more.
4. Don't know.
5. See answer to No. 3.
6. About $1\frac{1}{2}$ to 2 per cent.
7. Not yet.
8. About 1 per cent.
9. Healthy.
11. I am neither, as I have no practical experience of the result. None of my neighbours have inoculated since I came here (nearly 4 years ago) and for myself I know I have not lost more than 1 per cent. through pleuro, if that; and I reckon I would have lost quite as many if not more had I inoculated.
22. Not unless they are travelling, or their runs are insecurely fenced, in which case it is advisable to adopt any measure which may be considered necessary to prevent the disease from spreading.
- (No. 133.)
2. 389.
4. Poor.
6. 5 per cent.
8. 3 per cent.
9. Sound.
22. Every man should be at liberty to act as he likes with his own without the assistance of persons elected to spend public money—not private.
- (No. 134.)
2. 100.
3. March, 1872.
4. Good condition.
5. One month.
6. Five per cent.
7. April, 1872.
8. Four.
9. No appearance of disease.
10. I do not consider pleuro-pneumonia a contagious disease; my cattle were all running upon 300 acres of land, yet only 5 out of 100 were effected with the disease.
22. I consider such an Act would be a very arbitrary one, entailing a great deal of loss and trouble, and not at all necessary.
- (No. 135.)
2. 200 head. Never inoculated.
22. Yes.
- (No. 136.)
2. 500.
3. Never had the disease.
22. Not in this district.
- (No. 137.)
2. 300.
3. Never had pleuro-pneumonia.
22. Yes.
- (No. 138.)
2. 400.
3. Free from disease.
- (No. 139.)

2. 500.
3. None.
4. Never.
9. Healthy.
11. In favour.
22. Yes.
- (No. 147.)
2. About 500 head.
3. No disease.
22. No.
- (No. 148.)
2. 250.
11. Opposed.
22. No.
- (No. 149.)
- 2,400.
- Nil.
- (No. 150.)
4. Not infected.
- (No. 151.)
22. From my experience in my own cattle as given above, I am doubtful as to the efficacy of inoculation, as every cattle owner has a deep interest in this matter I think he or she should be left to use their own judgment in the matter. * But I am firmly of opinion that an Act should be passed prohibiting diseased stock of any kind from travelling, as is the case with sheep.
- (No. 152.)
2. 250.
7. Not diseased.
- (No. 153.)
3. Never had disease in herd, nor any experience in inoculation.
- (No. 154.)
2. About 1,400 head on the New South Wales side of the river, the remainder in Queensland.
3. I have only purchased the station twenty months since, and have not inoculated the herd or had any occasion to do so, as there is no pleuro on the run.
9. Quite free from disease of any kind.

Question.	Answer.
10. I believe the herd was inoculated about seven years since by the late Mr. J. Logan, and the losses were very heavy by inoculating with preserved virus.	
22. I decidedly object to compulsory inoculation, as it is the opinion of many that it is useless when done, and that you will kill more cattle than would be carried off with the disease.	
	(No. 155.)
2. 2,000.	
11. I am opposed to inoculation.	
22. I am opposed to compulsory inoculation. The cattle on this run have not been inoculated.	
	(No. 156.)
2. 4,000.	
3. Ten years ago.	
4. Poor weaners.	
5. Never left it.	
6. 2 per cent. for the last seven years.	
7. Still in it, but nothing to speak of.	
8. 50 per cent. first year, never bad since.	
9. Very poor.	
22. Certainly not; don't believe the disease will ever be very bad again.	
	(No. 157.)
2. 320.	
4. Never infected.	
22. Yes.	
	(No. 158.)
10. Free from disease.	
	(No. 159.)
2. 1,000.	
3. Free from disease.	
22. Yes.	
	(No. 160.)
	Nil.
	(No. 161.)
2. 2,000 to 3,000 head.	
3. From 1864.	
4. In good condition, and otherwise healthy.	
5. From 1864, when it was very severe to 1872, occasionally disappearing and again reappearing.	
6. In 1864-5, quite 25 per cent.; subsequently gradually diminishing to 2 per cent. or 3 per cent.	
7. 1872-3.	
8. Fully 20 per cent. in 1864-5, since when the losses have been trifling.	
9. Free from disease.	
10. Ever since my cattle have been kept in paddocks, and free from stragglers, I find them free from disease.	
22. I am opposed to compulsory inoculation, but think owners of diseased cattle, whatever the form of disease, should be compelled to remove them from contact with healthy stock—their own or other people's, and power given to destroy such diseased stock at the owner's expense, if upon notice he fails to remove them to place of isolation.	
	(No. 162.)
	Nil.
	(No. 163.)
2. 70.	
11. I am in favour of it.	
22. Yes.	
	(No. 164.)
2. About 700 head.	
9. Very sound.	
10. In favour of a bill to prevent infected cattle from being introduced into a sound district.	
11. In favour.	
22. Strongly in favour.	
	(No. 165.)
2. 400.	
11. In favour of.	
22. Yes.	
	(No. 166.)
2. 350.	
3. None.	

Question.	Answer.
4. None.	
5. None.	
6. None.	
7. Never had it.	
8. None.	
9. Good.

9. Healthy.	
22. No.	
	(No. 173.)
2. 200.	
10. Have seen cattle bad with the disease, and after inoculation done well.	
11. In favour of inoculation.	
22. Most certainly.	
	(No. 174.)
2. 150 head.	
3. None infected.	
5. None.	
9. Perfectly healthy.	
10. An Act to compel the owners of travelling cattle to destroy any diseased stock left on the roadside would much prevent the risk of disease spreading.	
22. Cannot give any opinion in the matter, the number of our cattle being too insignificant to be able to form a judgment about inoculating.	
	(No. 175.)
2. About 850 head.	
3. None are now affected, but twenty were during winter.	
5. Six months.	
6. Perhaps 3 per cent.	
7. In September last.	

(No. 175—continued.)

- Question. Answer.
8. About fifteen.
9. Free from disease.
10. When the disease first broke out in the country, about 300 died out of 900 then on the station. Some thirty head of valuable cows and bullocks were inoculated, and they all died I believe, but I suppose were not properly inoculated.
22. No, I do not think so.
(No. 176.)
2. 700 to 800.
3. At intervals.
4. Good.
5. Now and then a beast has been attacked and recovered.
6. One or two.
7. Not known.
8. Not known.
9. Good.
10. The cattle about here are generally very healthy, None are inoculated.
22. No, it could not be enforced.
(No. 177.)
2. 500.
10. We have never inoculated any cattle, and have had no disease for eight years, till the last nine months; in that time about sixty head had been attacked, half that number died, and the rest recovered; to some cattle we gave a small bottle of Pain Killer, diluted in half pint of water; nearly everyone so served recovered. The disease seems to have entirely left the herd.
22. No.
(No. 178.)

4. Nil.
5. Nil.
6. Nil.
7. Nil.
8. Nil.
9. Healthy.
10. There has been no disease among cattle on this station for several years.
22. I don't think an Act of that kind necessary.
(No. 179.)
2. 2,500.
3. Never infected.
9. Healthy.
11. In favour.

(No. 180.)

Sir,—I have received your letter of 8th instant, reminding me that you had sent returns required by Parliament under the Disease in Stock Act, and that I had not filled up said returns. In reply, I beg to inform you that I will not fill up those returns, because I cannot honestly reply to the questions—I am not able to do so.

(No. 181.)

I am in receipt of yours, asking for the returns regarding diseases, &c., of stock in New England. My reason for not having made any return was, that I have had so little experience in New England, that I did not consider myself justified in making a report. Regarding pleuro, I have not had any experience, which must be my excuse for not having filled in the returns, as I consider none but those who can speak authoritatively on these points ought to do so. I must, however, apologize for not having written to inform you of my inability to reply to the questions asked.

(No. 182.)

2. 1,500
9. Good; no disease. Cattle uninoculated.
10. As long as the cattle are well let them alone, when the disease shows I believe they should be inoculated as soon as virus can be got.

(No. 183.)

2. 200.
3. Not infected.
4. Never have had disease.
5. Nil.
6. Nil.
7. Nil.
8. Nil.
9. Healthy.

412—K

(No. 183—continued.)

- Question. Answer.
10. I have been fortunate to escape the disease, except when it first appeared about 1863 and 1864, when it came and left a large herd of 4,000, in some ten days killing about 5 per cent. leaving a few cases of chronic disease behind; the following year I purchased 800 head with the disease among them, the disease did not communicate itself to the cattle before located on the run.
22. Decidedly not; inoculation has destroyed a considerable number of beasts.

(No. 184.)

Nil.

(No. 185.)

2. 1,000 head.
3. 1874.
4. Coughing, stiff in walking, generally go into water and remain there to die.
5. About four months.
6. Cannot say, but think about ½th.
7. 1874.
8. Twenty head.
9. Quite free from pleuro-pneumonia.
10. I consider if the Government were to appoint local farriers, or men of skill, who could give advice or assistance when stock are infected, it would be much more beneficial than have paid officers to prosecute squatters, who often transgress in ignorance. I consider it best to burn the carcasses of all cattle found dead of the disease than to inoculate. I have done so with twenty head found dead on my station out of 600, and this prevented the spread of the disease, as my herd is now quite free of the disease.
11. I am opposed to inoculation.
22. No.

(No. 186.)

2. 450 head.
3. None this year.
8. Lost sixty head last year.
9. Healthy.
10. I have seen 3,000 inoculated, and they were dying twelve and fourteen per day before they were inoculated, and three days after there were no more deaths, but the virus was good, matter mixed with it and taken from the lung. Had to kill fourteen head before the right virus could be got, which was clear as sherry wine, and done with a needle in top of tail, after cutting off the hair.
22. I think so; but it is very hard to obtain the right virus to do so.

(No. 187.)

2. 200.
3. Not infected.
22. Yes.

(No. 188.)

2. 5,109 head.
3. Latter end of August, and month of September, 1875.
5. About seven weeks.
6. About 1 per cent. on whole herd.
7. Unable to say positively.
8. Fifty counted, may be a few unseen.
9. Very healthy.
10. When pleuro is known to be in the herd they are left as quiet as possible, no driving about or mustering, as it only accelerates the disease. Some few die, but many recover. The disease in this herd is very light, nothing like what pleuro was when it first broke out in Riverina. I believe in course of time the disease will work itself out. From my own experience I can justly say I have seen more cattle die from the effects of inoculation and yardings than I have from the disease in herds that were left in quietness.
22. Most certainly not. I think owners of cattle ought to be the best judges of their own affairs.

(No. 189.)

2. 1,500.
3. My cattle have been slightly affected on and off for these last three years.

- (No. 189—continued.)
- Question. Answer.
4. In good condition generally.
5. Still exists.
6. Very small. I have only lost to my knowledge about 25 head during the three years.
8. 25 in three years.
9. My cattle are now in good condition.
10. About three years ago the disease made its appearance on my run. It attacked a milking cow which, as soon as I discovered what was the matter with her, I had her destroyed, and the carcase burnt. About a week after another showed symptoms of the disease, which I also killed; and so on until I destroyed four head. The disease then disappeared for some time, but I have lost cattle occasionally with it since. Last year the disease broke out in a small herd of quiet cattle in the Manning district. They were dying off rapidly, and the owner inoculated them. Since then he has only lost a few; and they are supposed to have been affected before the operation.
11. I am of opinion that where cattle are so situate that they can be properly attended to after the operation, that inoculation is beneficial, and would strongly recommend it.
22. I have every confidence in inoculation, but would not recommend compulsory inoculation, as I think in some districts it would prove more disastrous than the disease, as the cattle could not be properly attended to.
(No. 190.)
2. 25.
3. About the beginning of August, 1875.
4. In fair condition.
5. Four months.
7. Still existing.
8. Three.
9. Recovering from disease.
10. From my experience, extending over a period of twenty years, I have always found bleeding the best cure for pleuro-pneumonia, if taken in time. When you find the beast affected cut one or two joints of his tail off, and he is almost certain to recover.
11. I am not in favour.
22. I do not.
(No. 191.)
2. 30.
3. Nil.
4. Nil.
5. Nil.
6. Nil.
7. Nil.
8. Nil.
9. Healthy and strong.
10. The above cattle have never been inoculated, and never infected with pleuro-pneumonia.
22. Yes.
(No. 192.)
2. In the year 1868 about 800 head.
3. Cannot recollect.
4. In fair store condition.
5. About twelve months.
6. Almost the whole herd.
8. From 15 to 20 per cent.
9. Healthy, and quite free from disease.
10. My neighbours inoculated for pleuro, and I consider their losses were as great as mine, if not greater, and their stock did not cease dying until the general turn for recovery came; and my herd that had not been inoculated recovered as rapidly as those that had been. I may state that almost all I slaughtered after the disease had abated showed symptoms that they at one time had had the disease by one lung growing to the ribs.
11. Opposed to inoculation.
22. No.
(No. 193.)
- Nil.
(No. 194.)
- Nil.
(No. 195.)
- I have none of the diseases mentioned in my stock that I am aware of, and consequently am unable to give any information on the subject
- (No. 196.)
- Question. Answer.
2. 3,500.
4. There is no disease in the herd.
10. Since 1865 there has been no outbreak of pleuro-pneumonia in this herd; occasionally a single beast has been found ailing, and on being killed has been found to be affected with pleuro-pneumonia, but the disease has never spread in the herd.
22. From previous experiences, I think that inoculation may be of value as a preventive of pleuro-pneumonia, and I consider that an Act should be passed obliging owners whose cattle are infected to inoculate them.
(No. 197.)
- Nil.
(No. 198.)
22. I am of opinion that all cattle owners should be compelled to inoculate whose cattle are affected, or whose cattle run in the immediate vicinity of cattle infected with pleuro-pneumonia.
(No. 199.)
2. 400.
8. None.
9. Healthy.
11. No.
22. No.
(No. 200.)
2. 1,000.
3. None affected.
11. In favour of inoculation.
22. No, I do not.
(No. 201.)
22. Do not consider that inoculation should be compulsory.
(No. 202.)
10. I have only been an owner of cattle since 1870, and have never had any pleuro-pneumonia in my herd; but from what I have heard and seen I thoroughly believe in inoculation, and would immediately inoculate my cattle if I saw any symptoms of the disease.
(No. 203.)
2. 2,500 of uninoculated cattle now on the run.
9. Free from pleuro.
10. I have not had any experience in inoculation, so you must excuse me not filling up all the form. There is odd cases of pleuro in the herd occasionally, but never to any extent. My opinion of inoculation is that it kills more cattle than what would die from pleuro itself. I have seen cattle that have been inoculated and afterwards take the pleuro the same as those that was never inoculated.
11. Opposed against inoculation.
22. No.
(No. 204.)
2. 8,000.
3. Not diseased.
9. Healthy.
22. I do not consider it should be made compulsory to inoculate, as the benefits arising from it are still doubtful.
(No. 205.)
2. 600.
7. Never in it.
9. First-class, and very healthy.
11. I don't think it necessary.

2. 600.
3. 1863.
4. Slightly.
5. One month.
6. 2 per cent.
7. 1863.
8. 1½ per cent.
9. No disease since 1863.
10. No faith in inoculation. Would not allow my cattle to be inoculated on any consideration.

- | Question. | (No. 209.) | Answer. | Question. | (No. 218.) | Answer. |
|-----------|--|---------|-----------|--|---------|
| 2. | 1,000. | | 2. | 1,000. | |
| 9. | Free from disease. | | 3. | Not infected. | |
| 10. | Pleuro does not show itself on this run, although it appears on one or two neighbouring ones. | | 9. | Healthy. | |
| 11. | Opposed. | | 22. | No experience. | |
| 22. | I do not think that inoculation should be made compulsory. | | | (No. 219.) | |
| | (No. 210.) | | | Nil. | |
| 3. | Never. | | 22. | No. I have had nothing to do with cattle infected for many years. | |
| | (No. 211.) | | | (No. 220.) | |
| 2. | About 3,000. | | 2. | 400 head. | |
| 3. | Having never inoculated cannot give the required information. | | 3. | No disease. | |
| 9. | Healthy. | | | To questions 3, 4, 5, 6, 7, and 8, I cannot reply, as my cattle are and have been healthy for some years past. Occasionally symptoms of the disease have appeared, but considering it only the effects of the disease which possessed the animals some years since, I have on each occasion had the animal destroyed and burnt to prevent the disease again breaking out. | |
| 22. | No, decidedly not. | | | 9. Healthy. | |
| | (No. 212.) | | 10. | In consequence of the healthy state of my cattle at present, and for some years past, I have not had an opportunity of judging of the efficacy or otherwise of inoculation; but from the number of arguments which I have heard advanced in favour of inoculation, I am of opinion that persons possessing valuable stock should, if procurable, have a supply of virus on hand, in order to try the result of inoculation. My limited experience does not render me competent to advise with respect either to the disease or to inoculation. | |
| 2. | 1,200 head. | | | 11. Never have had an opportunity of noticing the effects of inoculation. | |
| 10. | I am not aware of any disease or infection amongst my cattle, therefore I cannot from experience give any information. | | 22. | No. | |
| 22. | If it can be shown that inoculation is a remedy, I think owners of infected cattle should be compelled to inoculate them. | | | (No. 221.) | |
| | (No. 213.) | | | 10. No disease. | |
| 2. | 2,900. | | | Nil. | |
| 11. | We are unable to answer any of these or the foregoing questions with accuracy, having only within the last few months purchased the station; but we have heard that a few young cattle were inoculated a year or two ago, but with what effect we know not. At present we believe that pleuro-pneumonia is not among them. | | | (No. 222.) | |
| 22. | According to the present existing state of affairs in regard to stock in the Colony, we do not think that inoculation should be made compulsory. | | | (No. 223.) | |
| | (No. 214.) | | 2. | 300. | |
| 2. | 120 head. | | 3. | Never infected. | |
| 3. | No infection. | | | (No. 224.) | |
| 12. | I am decidedly in favour of inoculation as a preventive measure; but on this station, where cattle are in paddocks, and no roads intersecting it, do not consider it necessary to inoculate the cattle. | | | (No. 225.) | |
| 22. | I consider such an Act would be beneficial; and would also cause publicity, to be given in any outbreak of disease, under a heavy penalty; also that all carcasses of dead animals should be burnt. | | | (No. 226.) | |
| | (No. 215.) | | 2. | 70. | |
| 2. | 132. Sometimes more, sometimes less; the number varies according to what are bought or sold. | | 3. | About six months ago. | |
| 4. | No pleuro-pneumonia has ever existed on my run or amongst my cattle. | | 4. | In fair condition. | |
| 9. | Very healthy. | | 5. | The last six months. | |
| 10. | I believe that pleuro-pneumonia is exceedingly infectious. All my cattle are kept in paddocks, and frequently changed from one paddock to another. Every endeavour is made to keep strange cattle from hanging about the outside fences. My cattle have salt from time to time, particularly those that are kept in the natural grass paddocks. I believe that artificial grasses possess a saltiness in their nature. | | 6. | 15 per cent. | |
| 11. | Opposed. | | 7. | About 3 weeks ago, the last one was attacked. | |
| 22. | Most certainly. | | 8. | 4. | |
| | (No. 216.) | | 9. | Apparently very good. | |
| 2. | 443. | | 10. | I believe the disease was brought by working bullocks, one or two having died on the road—my neighbours' cattle then took it—alongside my paddock. | |
| 9. | Sound and healthy. | | 22. | I do not think owners should be compelled to inoculate unless when the disease is virulent; healthy cattle I should think were better let alone. | |
| 10. | Cannot state of my own knowledge whether any of this herd have been inoculated, but believe not. Since delivery in June of this year no symptoms of pleuro have shown. | | | (No. 227.) | |
| | (No. 217.) | | 2. | 300. | |
| 2. | 900. | | 3. | Nil. | |
| 3. | Year of 1866. | | 6. | There is none affected. | |
| 4. | Low in condition. | | 9. | Healthy. | |
| 5. | Two years and upwards. | | | (No. 228.) | |
| 6. | The whole herd, so far as experience showed. | | | Nil. | |
| 7. | In 1868. | | | (No. 229.) | |
| 8. | 400 and upwards. | | 5. | I have never had the disease in my cattle. | |
| 9. | First-class. | | 10. | About four years ago the cattle in the paddocks adjoining mine had the pleuro, and my cattle were not affected by it, which I ascribe to my having rock salt for my cattle. Some of my | |
| 10. | Inoculated cattle is the cause of keeping pleuro-pneumonia in the country. This is my belief. | | | | |
| 22. | I do not. I have not inoculated mine. My stock has not shown any symptoms from the date above. | | | | |

- (No. 229—continued.)
- Question. Answer.
- neighbours had the pleuro in their cattle some years ago, and after inoculation the disease disappeared.
11. Yes, I am in favour of it.
22. I do.
- Nil. (No. 230.)
22. I don't consider it to be of any good to inoculate. (No. 231.)
9. State of cattle, healthy.
10. Not had cattle long enough to know anything about the disease. (No. 232.)
2. 200.
10. Never had the disease, and therefore have no experience in the matter.
22. Yes. (No. 233.)
2. 900 head.
11. I am in favour of inoculation.
22. Yes, certainly. (No. 234.)
2. I have only thirty head of cattle left, all my others are gone to Queensland.
22. If people choose to let their cattle die, let them. (No. 235.)
4. Never had disease in the herd; no experience of inoculation.
11. Opposed to it.
22. No. (No. 236.)
- Nil. (No. 237.)
- No experience. (No. 238.)
10. We have only about 200 head of cattle on the run, no disease among them, and we have no experience in the treatment of animals suffering from pleuro-pneumonia. (No. 239.)
22. No. (No. 240.)
2. About 7,500.
3. Not infected.
9. Healthy.
10. A small percentage of cattle are usually affected by a swelling in the throat, which ends fatally almost always; it however, is quite distinct from pleuro-pneumonia. I have never inoculated, but observing its effect on neighbouring stations I consider its effects injurious, particularly on cattle already affected. In this dry salt-bush country I consider it quite unnecessary. (No. 241.)
11. Opposed.
22. No. (No. 242.)
2. 3,000.
5. Since my occupation of this run (about two years), there have been a few head of cattle die of pleuro, say 1 per cent. in that period; I never separated the infected cattle from the herd, believing the disease not to be infectious; and my conclusion has been borne out by the result, it having quite disappeared at present. I believe this disease has been known in this neighbourhood for many years, occasionally showing itself for a few months, but never having caused much mortality. I have had travelling cattle pass through this run in a very bad state, some dying on the run, and could not trace any ill effects to my cattle in consequence.
22. I do not consider owners should be obliged to inoculate, as in the first place it is questionable if the cure is not as bad as the disease, and of course believing the disease not to be infectious it is unnecessary for the protection of neighbouring cattle. (No. 243.)
2. 300.

- (No. 243—continued.)
- Question. Answer.
3. About three years since.
4. In good condition.
5. About two months.
6. There were about thirty head of cattle in the paddock where the disease broke out, and fourteen took it.
7. About two months after its first appearance.
8. Two.
9. Healthy.
10. I think all travelling store cattle ought to be inoculated at least ten days before leaving the station. I have had the disease in my paddocks four different times during the last ten years, and each time by travelling cattle.
22. Yes, most certainly; all travelling cattle. (No. 244.)
10. In more than one instance I have known the disease stayed in its course by inoculation. This disease being so contagious any law to prevent the spread of the disease must naturally be accepted as a great boon to stock owners, and the fact of their being no preventive law to meet such, shows a gross disregard to the best interests of the country.
11. I am in favour.
22. I do, but think that prevention is better than a cure. (No. 245.)
2. 8,000.
3. I think Spring, 1866.
4. Considered good.
5. About a month.
6. About 20 per cent.
7. Never finally.
8. Cannot tell, think 15 per cent.
9. Occasional death.
10. I do not think it proved the inoculation is beneficial, all is guess work; when my herd was affected, the herd on the opposite side of the creek was also affected; they were inoculated, and died more than mine; both herds were mixed, and both left off dying at the same time.
11. I am totally opposed to inoculation, I have never inoculated, but have watched results on other herds, and from what I have seen I am convinced that it is impracticable in bush herds and useless where practised.
22. I think it would a monstrous injustice, and I feel sure the Legislature will perpetrate such a piece of stupidity. (No. 246.)
2. About 200, late over 600.
3. Never had infection.
9. Splendid.
10. Breeding and thriving, fast.
11. Decidedly against it. A perfect farce.
22. Acts of this description, like Scab Inspectors, will also be a farce. (No. 247.)
2. 50 head.
9. Healthy.
11. Have not had sufficient experience to offer an opinion. (No. 248.)
- Nil. (No. 249.)
- Nil. (No. 250.)
2. 400.
3. Nil.
4. Nil.
5. Nil.
6. Nil.
7. Nil.
8. Nil.
9. Healthy.
10. If the proper virus could be obtained, my opinion is it would prove effectual.
22. Yes. (No. 251.)
2. 2,700.
3. No infection.
22. Certainly not.

(No. 252.)
 Question. Answer.
 2. 2,000 head.
 3. From May to September.
 4. The cattle were in good sound condition up to the time of the disease breaking out,—the symptoms of the disease being a very severe cough when stirred, and a rough glaring coat.
 5. About five months, the disease being at its worst about July.
 6. About 2 per cent. or perhaps 2½ per cent.
 7. The disease not entirely left as yet, but very slight indeed—hardly noticeable.
 8. Nearly 2 per cent.
 9. Very good.
 10. I am a slight believer in inoculation, although owning a herd uninoculated. I may mention that I purchased a number of young bullocks that were inoculated about eighteen months previous, and they died equal to those that were not inoculated; and they were inoculated by a gentleman that has had considerable experience in inoculation, and has inoculated a great number of cattle, the above-mentioned bullocks having been sold by me shortly after I purchased them.
 22. I do not consider that an Act should be passed obliging owners to inoculate when they can do so as yet.
 (No. 253.)
 Nil.
 (No. 254.)
 2. 400.
 4. None have been affected on the run.
 11. Neither.
 22. No.
 (No. 255.)
 2. 700.
 3. Not infected.
 9. Free from disease.
 22. I think they ought to be inoculated.
 (No. 256.)
 2. 200.
 10. In my opinion all cattle ought to be inoculated, with a view of stamping the disease out of the country.
 22. Unless people are compelled to inoculate, they will not do it; an Act should be passed obliging them.
 (No. 257.)
 2. 200.
 9. Healthy.
 (No. 258.)
 2. 600.
 9. Healthy.
 10. Good condition.
 22. No.
 (No. 259.)
 2. 300.
 3. Some time in 1869.
 4. In good condition.
 5. About ten months.
 6. 26 per cent.
 7. Some time in 1870.
 8. Seventy.
 9. Healthy and in good condition.
 11. I am in favour of inoculation.
 22. I have not had experience enough to know.
 (No. 260.)
 2. 1,000.
 3. Never infected.
 9. Thriving.
 11. I would not insist on owners inoculating.
 22. No.
 (No. 261.)
 Nil.
 (No. 262.)
 As I have no inoculated cattle, having no pleuro in

(No. 262—continued.)
 Question. Answer.
 the herd, I am unable to answer any of the questions.
 (No. 263.)
 I am unable to answer these questions; my cattle have never had pleuro-pneumonia.
 22. No, it is not proved yet that inoculation is either a prevention or cure.
 (No. 264.)
 2. 200 head.
 3. 1869.
 4. Fine condition.
 5. Six months.
 6. Team working bullocks, and about 5 per cent.
 7. About six months after first shown.
 8. Eight head working bullocks; suppose about half the wild cattle.
 9. Sound and healthy.
 22. Yes.
 (No. 265.)
 22. Having had no experience in the treatment of pleuro-pneumonia, and am therefore not competent to answer this question.
 (No. 266.)
 2. 4,000.
 3. Not infected.
 9. In good health.
 10. Cattle have not been infected since present owner has had the station.
 22. Have had no experience among inoculated cattle.
 (No. 267.)
 2. 400.
 3. None.
 4. Coughing and drooping the head.
 5. We never had it in the herd.
 6. We had only three this many years.
 8. None.
 9. Good.
 10. We use tar by rubbing it on the nostrils, and taking about one quart of blood from them.
 22. Yes.
 (No. 268.)
 22. I do not believe in Act being passed for the above purpose.
 (No. 269.)
 This return is rot, we have had no cattle with pleuro-pneumonia for years, so I cannot fill it up; I believe it is absurd to pass an Act to make inoculation compulsory; can't people do what they like with their own?
 (No. 270.)
 2. 2,400.
 11. I am certainly not in favour of it.
 (No. 271.)
 2. 150.
 9. No disease amongst them.
 10. In 1865 we had about 4,000 head of cattle, and they commenced to die from pleuro-pneumonia; we never inoculated; two of our neighbours had about 1,000 cattle each; they both inoculated; our cattle left off dying at the same time as our neighbours who inoculated. Sometime after we sold our cattle, but kept our milkers; we now have about 150 head of cattle, and they never have the pleuro-pneumonia amongst them; we think inoculation is all nonsense.
 22. We think no Act should be passed compelling inoculation, as owners of cattle is sure to inoculate if they find it to their advantage to do so.
 (No. 272.)
 Nil.

No. 5.

APPENDIX D.

(Inoculated.)

ABSTRACT of the number of Cattle on the Run, the number of times Inoculated, the dates of Inoculation, the number of Cattle Inoculated, the percentage showing symptoms of the Disease, and the time Disease had existed.

Number of Cattle on run.	Number of times Owners had Inoculated.	Dates of Inoculation.	Number of Cattle Inoculated.	Percentage showing symptoms of Disease when Inoculated.		Time Disease had existed in Herd when Inoculated.
473,891	12 Not stated. 140 Once. 70 Twice. 23 Thrice. 4 Four times. 2 Five times. 1 Six times. 10 Several times. 3 Often. 1 Seven times. 3 Regularly. 1 Annually since /64. 1 3 times annually. 2 Twelve times. 2 Twenty times. 4 Great many times. APPENDIX L.

Owners' Objections to Inoculation.

- I.—Heavy losses by excessive swelling, heavier than if they had not inoculated.
 II.—Heavier losses after inoculation through spreading infection, mustering, and crushing.
 III.—The difficulty of obtaining virus.
 IV.—Heavy losses from pleuro after inoculation.
 V.—The disease left the inoculated and uninoculated at same time.
 VI.—In those parts of the Colony where inoculation is practised the disease is always found, for inoculation introduces and keeps it alive.
 VII.—The disease is becoming less virulent and will die out.
 VIII.—Cattle are infected oftener than once with pleuro, and it is not infectious or contagious but the result of climatic changes, and outbreaks are frequently occurring.
 IX.—The operation is not a permanent cure.
 X.—Inefficacy of inoculation. Inoculated cattle died two months after the operation.

Abstract of Owners' Objections to Inoculation.

No. 23. (⁵⁰/₂)

I.—That the losses from the operation were heavier than if he had not inoculated.

1. It does not appear at all certain from his return that the losses of which he complains arose solely from the operation, for in reply to question 13 he says there was very little swelling among the inoculated cattle. If this were the case, it is not unreasonable to suppose that the losses which he has put down as caused by excessive swelling, under question 15, were really the result of the disease, and that the four or five head which he lost were actually infected when they were inoculated, though exhibiting no outward symptoms of the disease. This supposition is strengthened by the fact that the disease had been for a fortnight or three weeks in his herd before he inoculated, and by his reply to question 16, where he states that he lost four or five head (the same number) about ten days after the inoculation.

2. Of all diseases affecting domesticated animals, pleuro-pneumonia is the most insidious. The period of its incubation, according to the best authorities in England and the Continent, averages fully forty days, and ranges from a minimum of five days to a maximum of five months. As this is the case, there can be no doubt but that the four or five head which the owner states died from the disease ten days after the date of the inoculation were infected when they were operated upon, for an owner would naturally inoculate the cattle amongst which the disease was most prevalent, and would thus be certain to operate on some which were diseased though they exhibited no outward symptoms of being so, and which could not possibly be protected by inoculation, unless it were a cure as well as a preventive; we are therefore fairly entitled, in discussing the question of the efficacy of inoculation in the course of this inquiry, to hold that if an animal died within three months of the date when it was inoculated, it had been infected prior to that date, for this would be only putting the length of the incubation at about two months, as the incubatory stage would in most cases cease and the symptoms that it was diseased become apparent a month at least before it died.

3. But supposing that the deaths alluded to were the result of excessive swelling, and that he thus suffered the extraordinary loss of 10 per cent. from the effects of the operation, that may account for his being opposed to inoculation, but it is no reason why the practice should be condemned; for, if we take the general experience of the Colony, we find, when the operation is properly performed and the cattle looked after as they should be after inoculation, that the loss need seldom exceed 2 per cent., and that it generally does not exceed 1 per cent. This is

fully borne out by the returns, for the later inoculations as a rule are attended with much fewer losses from excessive swelling than those of an earlier date. Those sustained by the owner in this instances must have arisen through some mistake on his part, either in selecting or keeping the virus, or in its application, which the experience gained during the last few years in the mode of carrying out the operation and caring for the cattle afterwards would now enable him to avoid. In fact, if the returns showing heavy losses be referred to, it will be found that in almost every instance where the losses are severe the inoculation was performed previous to 1870; and that where any of those owners who had these heavy losses inoculated on more occasions than one, the heaviest losses were almost invariably on the first occasion. So well is the practice now understood, that qualified and responsible inoculators can be found who would perform the operation at a reasonable rate, and guarantee that the owner's loss did not exceed 2 per cent.

4. The experiment, again, in this case was not a satisfactory one, inasmuch as only a portion of the herd, and a small one (1-10th) was inoculated, and the owner does not say that the inoculated cattle were marked in any way to distinguish them from the general herd. Where this is not done, the actual result of the inoculation of a portion of a herd cannot be ascertained with any degree of certainty.

No. 24. ⁽¹³⁾₍₁₃₎

His objections are:—

I.—He lost more cattle (4 per cent.) from the effects of the inoculation than from the disease.

If he had performed the operation as he ought, and attended carefully to the cattle afterwards, he need not have lost anything like so large a percentage as this; as it was, he allows the operation stayed the disease, and although it is scarcely to be imagined that his losses if he had not inoculated would in 1874 have been so heavy as he admits they were in 1864 (66 per cent.), he cannot be certain that they would not have been much more than were caused by inoculation. Sec 23, I, 2 & 3.

II.—The disease left the uninoculated cattle in his herd at the same time as it did the inoculated.

Instead of this being a reason against inoculation, it is a very strong one in its favour, in this way,—when the owner inoculated, he no doubt operated upon the portion of his herd which was most diseased. In fact he would most likely inoculate all the mobs or lots to which the disease had spread; and the inference is, that he (as many have done) inoculated every head exposed to infection, and thus stayed its spread—*i.e.*—stamped it out. And what tends to support this supposition is the notorious fact with respect to pleuro-pneumonia, that a certain amount of actual contact between the diseased and sound animals is necessary to propagate the disease. Again, supposing that this unexpected disappearance of the disease about the same time from the inoculated and uninoculated cattle could not be accounted for in this way, the instances where uninoculated cattle mixing with the inoculated continued to die while the inoculated remained unaffected, are *twenty times* more numerous than such cases as that here alluded to; and it is an almost invariable rule that the stragglers on a run which are not inoculated with the herd invariably succumb to the disease, while the inoculated cattle remain sound. In any case, the diminution of the amount of the infection by means of the inoculation would give the other cattle a very much better chance of escaping an attack.

III.—The Coast District where inoculation is practised is never free from pleuro, while in Manero where very few inoculate there is very little disease.

The reason for the prevalence of the disease in the Coast District is simply this,—that a constant movement of stock is going on there, especially in the dairying portions of the district; and where this is the case—with such an amount of infection as there now is in so many parts of the Colony, and the reluctance on the part of many owners to inoculate,—the prevalence of disease in the Coast District is easily accounted for; while its comparative rareness in Manero is to be attributed, not to the non-practice of inoculation, but to the little movement of stock in that part of the Colony, and the small number of droving roads passing through it.

No. 31. ⁽²⁰⁾₍₁₎

Her objections are:—

I. She lost twelve head of cattle from disease twelve months after they were inoculated.

Supposing that these cattle were opened when they died, and that it was ascertained beyond all doubt that their death was caused by pleuro-pneumonia, it requires to be explained how it can be said she lost these cattle from disease twelve months after they were inoculated, when she says in answer to the immediately preceding question that the disease finally left the herd three months after the cattle were inoculated.

But supposing this can be satisfactorily explained, then the question arises as to the fitness of the virus she used (she obtained it from a neighbour), and until that can be proved her return cannot have very great weight. Besides, she only gives the result of one inoculation, while she inoculated on two occasions, and the return is otherwise a meagre one.

No. 32. ⁽⁶⁴⁾₍₃₀₎

His objections are:—

I.—Cattle that were properly inoculated and afterwards exposed to the infection in some cases died of the disease.

1. As the deaths here alluded to occurred within four or five weeks of the date of inoculation, they must have arisen through the animals being diseased when inoculated. See answer to 23, I, 2.

There may, no doubt, be some few exceptional cases in which inoculation like vaccination fails to take effect and protect the animal inoculated; but although this is the case, that fact need no more shake the owner's faith in the efficacy of inoculation, than that the few failures which occasionally occur in vaccination should raise a doubt as to its efficacy.

The owner here only inoculated a small portion of his herd, and it does not appear from his return that he took sufficient pains to note with certainty the effect of the operation, or to distinguish the inoculated from the uninoculated cattle. Sec 23, I, 4.

II.—The mustering and knocking about the cattle when they are infected causes loss of cattle and condition, and the owner says that the proper mode of dealing with the herd in such a case is not to disturb it more than is absolutely necessary, and no serious loss need be feared.

1. Any one can see that if the mob in which an outbreak of pleuro-pneumonia occurs is inoculated immediately on the first case being detected, or what is better still immediately on its becoming known that it had been in contact with the infection, the disease would in nine cases out of ten be stamped out before it had time to spread; and that it would in such a case be impossible for the owner to sustain any appreciable loss in inoculating, for the number of cattle requiring to be mustered and inoculated would be small, and the cost and trouble trifling. It is only when the owner procrastinates, and puts off inoculating from day to day and week to week, till the disease spreads throughout a great part of his herd, that the loss and inconvenience here alluded to are likely to occur; and if they do, the owner has only himself to blame for neglecting to carry out a most obvious duty.

2. As it is proposed by the owner in this case, to keep cattle which became infected quiet, and to let them take their chance; we will here endeavour to ascertain how far it is possible to carry out that treatment, and what consequences would result from it. 1st, to the owner himself; and 2nd, to the public.

1st. *As regards the owner himself:—*

3. Supposing that an owner is resolved to adopt the course here recommended, there must in that case be no mustering for market, and if properly followed up, not even for branding, so long as the disease exists in the herd, and that would depend upon its size and other circumstances; judging from the experience of former years, the disease in a herd of 3,000 or 4,000 will last from say twelve to eighteen months; in a herd of 5,000 to 7,000 for two or three years, and in some cases as long as five or six years. It would be quite impossible to keep from disturbing the herd for a tithe even of the shortest period here mentioned, so far as mustering for branding is concerned, and even for market there are very few owners who could possibly afford to allow anything like the time mentioned to elapse without disposing of their "cast" of stock. The chances therefore are, that although the owner decided to leave his cattle alone he could not do so, and that in cutting out and yarding even for branding, but more especially when sending them to market, he greatly increased the virulence of the disease and sustained heavy losses, very much heavier than if he had inoculated when he first noticed the disease.

4. Then supposing that this system were generally followed, the disease must spread in all the Colonies, for infected cattle would then as a matter of course (and they do so now to a large extent) be travelling in all directions, sowing the seeds of the disease broadcast as they go, and inflicting heavy losses on the owners of the stock they infect.

The losses are even now very great, amounting in all the Colonies to something like £500,000 a year. But if everyone were to give up inoculating, and to adopt the policy which this owner recommends, the losses sustained by stockowners would simply be ruinous, for the infection would then be ten times more rife than it now is, and the losses consequently very much greater; and although the opponents of inoculation refuse to acknowledge the fact, it is to the very general practice of inoculation that their losses from pleuro are comparatively light.

2nd. *As regards the Public:—*

5. The adoption of this recommendation would be neither more nor less than giving owners a license to keep the infection alive in their own herd, and to spread it right and left throughout the Colony, thereby inflicting ruinous losses on their brother stockowners and rendering it impossible for the disease ever to be eradicated; for not only would the run of an owner whose cattle are diseased thus prove a hotbed of infection on which almost every head of cattle passing through it would become infected (and store cattle, fat cattle, working bullocks, or stray cattle, are constantly passing through runs other than their own), but as the owner is compelled to send a portion of his cattle to market every year, these cattle being infected would of course infect hundreds, perhaps thousands, while travelling to their destination. In fact this is what is now actually going on in the case of those owners who refuse to inoculate their infected cattle, although the efficacy of inoculation has been fully established; and it is very strange that those who take that course see neither the great injustice they are inflicting on their fellow owners who practise inoculation, nor how very shortsighted such conduct is as regards their own interests, for the infection which they thus spread and perpetuate very soon again invades their own herds and the injustice recoils on themselves.

While this is the case as regards those owners who refuse to inoculate on the disease breaking out among their cattle, it must be patent to everyone that if the herd is inoculated on the first appearance of the disease, the cattle, even if they are comparatively widely infected before the outbreak is noticed (and with ordinary care they need seldom or never be so), are very soon free from all infection, and neither contaminate other stock which may be passing through their run nor carry the infection to others when they are themselves travelling to market.

6. Having noticed the probable effect as regards the owner and the public of this recommendation to let the infected cattle alone, we will now consider what the assertion in this return is worth, that if this policy were adopted "there would be no serious loss." It is evident that this assertion is based on the assumption that the virulence of the disease is dying out, and that it is becoming very much milder in its nature and character, for it is generally allowed that the first outbreak of pleuro-pneumonia carried off some 30 per cent. of our cattle stock.

It would not, however, be hard to prove from the recent experience of stockowners in these Colonies that this is altogether a fallacy; for many of them could, if called upon, prove from their own experience that pleuro has within the last year or two, when the same circumstances were present, been quite as virulent as when it first spread throughout the Colonies. But the circumstances are entirely altered, and this accounts for the diminution in the virulence of the disease. The number of animals now susceptible of the disease is very greatly diminished; and it is a well established rule, that with the diminution of the number of its possible victims, the virulence of every infectious or contagious disease is proportionally decreased, and we know that this decrease has actually taken place in the number of cattle liable to be infected with pleuro; for what between the frequent outbreaks of disease in the uninoculated herds, but more especially through the very general practice of inoculation, by far the larger proportion of our cattle stock are now protected; and when an outbreak occurs, the percentage attacked and the deaths from the disease are thus comparatively small.

7. But supposing our experience were such as to induce us to the belief that pleuro is gradually becoming less virulent in Australia, we would be altogether wrong, considering the comparatively short time the disease has been among our cattle, to jump at such a conclusion in the face of the opinions of the highest veterinary authorities in Europe, where pleuro has been long known and studied. They hold that its virulence is quite as great now as it was a century ago, and that if the deaths are fewer than they then were, that circumstance arises solely from the enforcement of more effective sanitary laws, and from the cessation of those violent curative measures to which some time ago it was the custom to resort, and which only tended to destroy the stock. The fact that in almost every country in Europe, including Great Britain and Ireland, the owners of cattle affected with pleuro are compelled by law to destroy them, is conclusive evidence of the opinion held there as to its nature, and that it is considered to be as virulent and deadly now as ever it was.

8. It was said when the first outbreak of pleuro occurred in this Colony that the climate and mode of management of our stock would tend to ameliorate the virulence of the disease, but this was found to a very great extent at least to be a mistake; and although the percentage of losses in Australia, where the cattle are not as a rule so closely packed together as in Europe, did not range quite so high, they amounted to at least one-third of the whole number of the herds attacked; and losses from this disease will, under the same circumstances, occur to the same extent as they did then if the virulence of the attack were not lessened in the manner we have noticed by the practice of inoculation.

9. Many of those who suppose that pleuro is becoming very mild in its effects are no doubt—as explained in the remarks on the next return—mistaking that disease for tuber-culosis, or simple pneumonia.

No. 37. ⁽²⁸⁾
(1)

The objections here are:—

1. The heavy losses sustained by inoculation. Answered 23, I, 2 & 3.

2. Cattle which had been inoculated, and which had lost a part of their tails, took the disease two years afterwards and died.

1. There is very little doubt but that the explanation of this objection is that the inoculated cattle which the owner here says died of pleuro-pneumonia were carried off by tuber-culosis, *i.e.*, consumption (see Return 143, reply to question 21) or what is generally known in the colonies as "rot" in the lungs, or by some of the many

other ailments to which these organs and the pleuro are subject; and that not only in this instance, but also in a great many others where owners say there had been a few cases, and only a few, of pleuro among their cattle, the ailment was not pleuro but tuber-culosis, or some of those other affections of the lungs or chest,—for the outward symptoms in such cases are identical with those of pleuro, the same organs being affected.

2. Tuber-culosis in cattle is generally a hereditary, but sometimes also a local disease. It is common to all parts of the world, and has always been more or less prevalent in Australia. In this Colony it is most generally met with in those cold upland districts where cattle frequent the "Lick Holes," and on low lying river flats—even in some parts of the salt-bush country.

3. The symptoms of the third stage of tuber-culosis as given by Mr. Fleming, F.R.G.S., in his Manual of Veterinary Sanatory Science and Police, published in 1875, are the following:—"The cough is harassing, the back arched, the head low and protruded, the mouth partially open and tongue pendulous; the horns, ears, and limbs cold; a prolonged moan is emitted in respiration, and the inspiration is irregular and gasping, while there is a dark coloured foetid diarrhoea, and not unfrequently considerable impaction of the rumen." Professor Armatage again gives among the other symptoms of this ailment, the following:—"The cough is oppressive; the animal evidently suffers extremely, as depicted by the arched back, obstinately refusing to move; the head low and protruded * * * and uttering a plaintive moan at intervals."

4. When, however, a *post mortem* examination is made, the difference between the diseases is easily recognized. For while in tuber-culosis there are considerable deposits of tuber-culous matter in all its stages, from hard, light, grey, semi-transparent nodules of different sizes to "rot" or "pus" on the lining membranes of the chest, on, and even in the lungs, and on the pleuræ, and sometimes along the back to the kidneys. In pleuro-pneumonia, again, there is no pus or rot, but one or perhaps both lungs are more or less hepaticized or marbled, and a greater or lesser effusion of lymph is found in the cavity of the chest.

5. There is another ailment which has frequently been mistaken for pleuro-pneumonia—"Sporadic" (*i.e.* epidemic) "Pneumonia," or inflammation of the lungs, a disease which occasionally attacks the cattle depastured on the higher lying portions of the Colony in the early part of spring, generally after a track of high cold wet westerly winds; and when suffering from this disease the cattle exhibit all the outward symptoms of pleuro. The difference between them is, however, easily discerned in the following ways:—1st, sporadic-pneumonia spreads very much more rapidly than pleuro; 2nd, it extends very little if any beyond the ground over which the full force of the wind has passed; 3rd, when the affected cattle are killed and the lungs examined, it is found that instead of their being hepaticized as in pleuro, they are in most cases studded over with tubercles, and in some cases have abscesses and pus; and 4th, instead of this ailment lingering like pleuro for many months—perhaps years—and carrying off considerable numbers of the cattle, the sporadic disease leaves the cattle in the course of a few weeks, and they are soon doing well again, with a loss or deaths of perhaps 1 or 2 per cent.

6. To say, as some owners do, that they had an attack of pleuro in their herd and only lost 1 or 2 per cent., is of itself all but conclusive proof that the ailment was tuber-culosis or sporadic pneumonia, and not pleuro, for it is contrary to all the experience of these colonies, as well as of all other parts of the world, for its effect to be so lenient as these owners report.

7. Unless, therefore, the lungs of cattle which die of chest disease are examined and found to be hepaticized, it is very wrong to take it for granted, as it has been the almost invariable custom to do of late, when any of the respiratory organs of an animal was affected, that they were carried off by pleuro, especially when that disease is not known to exist at the time in the district. Such an examination as here indicated used to be made on all well-managed stations on the death of horses, cattle, or sheep, and ought still to be so in every case, care, of course, being taken that the person making the examination does not expose himself to inoculation from the dead animal.

8. There is no doubt but cattle which have recovered from an attack of pleuro are to a considerable extent weakened in the lungs and chest,—losing as they frequently do, from a fourth to three-fourths of one of the lungs, —and are thus rendered more liable to be affected by tuber-culosis, or inflammation of the lungs; for these ailments have of late years become more prevalent than they formerly were.

9. From what has been said, it will be evident that many of our owners have been unwittingly mistaking one disease for another, through neglecting to ascertain the real cause of the deaths occurring among their cattle; and then they have gone still farther astray, and declared pleuro-pneumonia to be neither infectious nor contagious; although it is notorious to all those owners who have studied the nature and character of the disease, that it is very much so; and that for the last ten or fifteen years at least, no veterinary authority of any standing in any part of the world has doubted this fact.

No. 45. (3)

His objections are:—

- I.—The large percentage of deaths from excessive swelling. Answered 23, I, 2 & 3.
- II.—The disease ceased simultaneously among the inoculated and uninoculated cattle. Answered 24, II.
- III.—The disease would die out. Answered 32, II.

No. 52. (14)

His objections are:—

- I.—He had more deaths from inoculation than if he had let the cattle alone. Answered 33, II, 1, and 23, I, 2 & 3.
- II.—Purchased cattle which had been inoculated and lost portions of their tails died twelve months after they were inoculated.

It is not certain that the cattle here referred to were properly inoculated. They may not have been so though they lost portions of their tails by the operation. Stinking virus, which is comparatively useless, or deep wounds in the tail with needle or knife would lead to its loss.

III.—Cattle are affected oftener than once by pleuro.

There are instances on record where animals have suffered from more than one distinct attack of pleuro, but these are exceedingly rare, and it is all but certain that the bull here referred to suffered from either tuber-culosis or simple pneumonia, and not from pleuro—not at any rate on one of these occasions. See answer to 37.

IV.—The difficulty of obtaining the right sort of virus and the number of cattle which has sometimes to be killed in order to obtain it.

If owners had attended to the explicit directions which have been published from time to time by the Government of this Colony for inoculating, they would have had no difficulty in obtaining the proper virus and performing the operation correctly. Any intelligent stockman after reading these directions (especially those published in 1868 and after that year) and seeing one or two cattle affected with pleuro opened, would be able to do all that was required; but as it has latterly been found that chest virus (which is more plentiful and more easily recognized than that from the lung) answers as well as the lung virus; and as a great deal more information on the

subject has within the last few years been obtained, any person of ordinary intelligence can now inoculate without the slightest difficulty. In fact they now generally do so, for there are very few stations in the Colony where the owners or some of the stockmen are not qualified to inoculate when required.

No. 82. ($\frac{10}{26}$)

His objections are:—

I.—That every year pleuro has attacked his cattle and caused a loss of some 1 per cent.

These losses were no doubt attributable to tubercular or some other chest disease, and not to pleuro—(see 37, II, 1 to 9),—and therefore this objection is groundless.

II.—That the operation is not a permanent cure and only a preventive.

If inoculation be a preventive it is all that can possibly be required of it; and if carried out in every case immediately on an outbreak occurring, would very soon eradicate the disease in the Colony.

III.—If he had inoculated he would have lost more by the operation than he did by the disease.

This is answered under 33, II, 1 & 24, I, 2 & 3, and he himself allows that with care, losses through excessive swelling might be avoided.

No. 84. ($\frac{17}{15}$)

He does not consider the result beneficial.

As he got rid of the disease in six weeks after inoculating, and only lost some 2 per cent. from all causes after the operation—both from the disease and excessive swelling—the result was surely anything but unsatisfactory; for although he only inoculated a portion of his herd, he seems to have operated on all among whom the infection had spread, and thus stamped it out.

No. 93. ($\frac{30}{17}$)

His objections are:—

That he lost a large percentage of those he inoculated from the disease after the operation.

In this case either the inoculation was improperly carried out (he does not say how or where the virus was obtained), or the cattle were infected when inoculated. This latter supposition seems to be the more likely; for he must have obtained the virus either in his own herd or in his neighbours; and in either case the infection, although not apparent, may have reached his workers. See 33, II, 1, and 23, I, 2 & 3.

No. 94. ($\frac{19}{19}$)

His objections are:—

I.—He has proved inoculation to be utterly useless; cattle which had been properly inoculated dying at periods varying from one to twelve months after the date of operation.

With regard to the cattle which died within three months of the date when they were inoculated, the presumption is, that they must have been affected when operated upon. See answer to 23, I, 2 and 3.

With respect, again, to those which died at a later period than three months, the explanation is, either that the operation was improperly performed, or that the cattle died of tuberculous or simple pneumonia, and not of pleuro. See 37, II, 1 to 9.

II.—That pleuro is the result of climatic changes, and therefore not infectious or contagious. See 37, II, 1 to 9. The coincidences which the owner adduces here are somewhat remarkable, but they cannot be accepted as proof either "for" or "against" the efficacy of inoculation.

No. 113. ($\frac{41}{6}$)

His objections are:—

I.—Deaths occurred after inoculation; one cow died of the disease about three months after. Answered 37, II, 1, to 9.

II.—He brought the disease among his cattle.

Although he saw no symptoms of his own cattle being affected with pleuro, it is more than probable that they actually were so, as the disease was in his neighbour's herd; and that his cattle would have been attacked whether he had inoculated or not. At any rate, it is not now at all certain that inoculation does propagate the disease, as it was once thought it did.

III.—That the disease is not infectious or contagious, and a few deaths occur from it annually.

He is mistaking tuberculous for pleuro. See 37, II, 1 to 9. And if it is not infectious, how could the inoculation spread the disease as he says it did in No. 2.?

No. 127. ($\frac{7}{21}$)

The owner here is undecided. The information in his return is somewhat meagre and calls for no remark.

No. 132. ($\frac{21}{8}$)

His objections are:—

That the uninoculated cattle stopped dying at the same time as the inoculated. Answered 24, II.

The test here was not a complete one—600 head out of a herd of 1,000, and the return is besides rather meagre. See 23, 4.

No. 133. ($\frac{10}{12}$)

His objections are:—

I.—The heavy losses sustained through excessive swelling. Answered 23, I, 3.

II.—Uninoculated ceased dying at the same time as the inoculated. Answered 24, II.

III.—The disease not infectious or contagious. Answered 37, II, 1 to 9.

No. 134. ($\frac{103}{12}$)

He says:—

That the knocking about the cattle get in mustering and inoculating is worse for them than the disease.

Answered 32, II, 1. As he only inoculated about 150 out of 400, his experience is not very conclusive. His return is besides a meagre one. See 23, 4.

No. 145. ($\frac{23}{9}$)

His objections are:—

I.—That he sustained very heavy losses by inoculation.

He can give no particulars, having, as he says, employed an experienced person to perform the operation. The operator does not seem to have known his business. See 23, I, 2 & 3.

No. 150. ($\frac{47}{8}$)

His objections are:—

I.—He had heard of the failure of inoculation in Gippsland.

This is no sufficient objection, as it only amounts to a vague report, and besides there is no certainty as to the operation having been correctly performed. He does not say that his own experience confirms this report.

II.—The uninoculated cattle did better than the inoculated.

Answered 24, II. The return is a meagre one.

No. 151. ($\frac{33}{3}$)

His objections apparently are:—

I.—The heavy losses he sustained from inoculation. Answered 23, I, 2 & 3.

II.—He seems to think pleuro not infectious or contagious.

There is little doubt but the ailment in the case alluded to here was tuber-culosis. See 37, II, 1 to 9.

The owner proposes that diseased cattle should be prevented by law from travelling.

No. 168. ($\frac{35}{17}$)

The owner in this case gives no reason for his objection to inoculation; and his return is in other respects a meagre one.

He only inoculated a portion of his cattle. See 23, I, 4.

No. 175. ($\frac{9}{28}$)

His objections are:—

I.—He lost more cattle by inoculation than if he had not done so, through mustering, and thus spreading the infection. 32, II, 1, and answered 23, I, 2 & 3.

It will be seen that the losses which the owner dreads could not possibly occur if the mob in which the outbreak occurred was inoculated immediately on the first case being noticed.

II.—The herd ought not to be disturbed when it is affected. Answered 32, II, 1 to 9.

No. 188. ($\frac{21}{17}$)

His objections are:—

I.—Heavy losses from excessive swelling. Answered 23, I, 2 & 3.

II.—Heavy losses after (within two months of) inoculation.

The cattle which died must have been affected, although showing no symptoms of the disease when inoculated; and the fact that as many as 10 to 15 per cent. in one lot showed symptoms of the disease tends to confirm this supposition, supported as it is by the fact that the inoculation of the disease is (as has already been pointed out) exceedingly protracted, extending in some cases to a period of five months. See 23, I, 2.

III.—That the mustering and inoculating causes more deaths than if the cattle were left alone and allowed to take their chance. Answered 32, II, 1 to 9 and 175, I.

IV.—That the disease is comparatively mild and does not spread—odd cases constantly occurring on the run.

There is every reason to suppose that the odd deaths here referred to were caused by tuber-culosis or inflammation of the lungs and not by pleuro. See 37, II, 1 to 9.

No. 207. ($\frac{14}{5}$)

His objections are:—

I.—Heavy losses by the operation. Answered 23, I, 2 & 3.

II.—Extremely heavy losses (30 to 50 per cent.) from 1 to 14 days after the operation.

The losses here mentioned are most unusual, and such as have seldom or never been reported. If they were caused by the disease they cannot be attributed to the inefficacy of the operation, occurring as they did within a fortnight; and must have arisen through the animals being affected long prior to their inoculation, and so generally as to die to the extent they did. See 23, I, 2.

III.—He found that inoculation was not a preventive.

The only circumstance which he quotes in support of this assertion is that several cattle which were suffering from pleuro when inoculated died of the disease two years afterwards.

Although these cattle had died of pleuro, that fact in no way affects the question of the efficacy of inoculation, as it is not claimed for inoculation that it is a cure as well as a preventive, which it would require to have been in this case to have acted beneficially on the two diseased cattle.

There is little doubt, however, but the true explanation of the death of these cattle is, that they were carried off by tuber-culosis or simple pneumonia; for it is certain that if the inoculation had not protected them from an after attack of pleuro, the first attack would have done so.

The owner in this case makes another extraordinary statement. He says he began to inoculate in 1855, that is three years before the disease was introduced into Australia, six years before inoculation was attempted in any of the colonies, and about eight years before the disease showed itself in the district from which the report comes.

No. 237. ⁽⁴⁰⁾/₁₅

His objections are:—

I.—Heavy losses (20 per cent.) from excessive swelling in cattle inoculated in 1865, a few days prior to their starting to travel. Answered partially 23, I, 2 & 3.

The extremely heavy losses in this case seems to have arisen—

(1.) From the operation having been improperly performed.

At that time, 1865, the correct mode of inoculating was not generally understood, and it is more than probable that in this instance either improper virus was used, or the operation was badly carried out.

But (2), and chiefly, through taking the cattle on the road so soon after the operation, and before the inoculation had run its course. Any one can see how very likely these cattle would be to suffer from excessive swelling through being taken on the road so soon after the operation, instead of being allowed to remain quietly on their run for, say, 30 days at least; and there is no doubt but the driving was in this case the principal though not the only cause of the excessive swelling which occurred among the cattle.

The owner, however, does not say if all the cattle which he lost died from excessive swelling, and it is more than probable that some of them were carried off by the disease and not by excessive swelling, as it had made its appearance on the borders of the run prior to the cattle leaving it, and had most likely infected them.

The slight losses to which the owner alludes as occurring annually in his herd are explained at 37, II, 1 to 9.

No. 240. ⁽⁵⁶⁾/₈

His objections are:—

The heavy losses he sustained after inoculation.

This owner's reasons for being opposed to inoculation do not seem to be valid; for the heavy losses which he suffered evidently arose from the poverty of his cattle, and not from the operation. He does not complain of losses from excessive swelling.

No. 249. ⁽¹³⁾/₂₅

In this case the owner is undecided whether or not it is best to inoculate.

No. 259. ⁽⁵²⁾/₁₂

His objections are:—

I.—Heavy losses by inoculation (5 per cent.) by excessive swelling. Answered 23, 2 & 3.

The unsatisfactory result of the inoculation was also no doubt largely due to his cattle being badly affected before he inoculated—as many as 15 to 20 per cent. being visibly affected when they were operated on.

It is to be noticed that there is a great discrepancy in his return of affected cattle under the uninoculated portion of the return and the inoculated. In the one case he puts the affection at 15 to 20, and in the other at 2 to 4 per cent.

II.—Had less loss than those who inoculated regularly.

It is scarcely to be expected that he could speak with any degree of certainty as to the effect of inoculation on any but his own run, and as none of the owners of runs in the same district as his make mention of such losses in their returns as he asserts were sustained, their reports must be taken in preference to his.

III.—It is better to let cattle alone, and allow the disease to take its course. Answered 32, II, 1 to 9.

He allows the disease is still in the herd, and that it has been in it for more than ten years; while, where the whole of the herd was inoculated, in no instance (except perhaps in that of some odd lingering case of disease), has it existed in a herd beyond three months. But it is more than probable that, although pleuro has been in his herd for years at a time, the ailment to which he alludes has in many cases been tuber-culosis or pneumonia and not pleuro.

No. 263. ⁽¹⁾/₂₀

In this case the owner does not consider that he has had sufficient experience to form an opinion. He gives little or no information, and the reason for his doubts with respect to the operation cannot be gathered.

No. 282.

His objections are:—

I.—The heavy losses he sustained from excessive swelling, inoculation kills more than the disease. Answered 23, I, 2 & 3.

II.—The disease is not infectious or contagious. Answered 37, II, 1 to 9.

1875-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BRANDS ACT OF 1866.

(REPORT OF REGISTRAR OF BRANDS ON, WITH SKETCH OF AMENDING BILL.)

Ordered by the Legislative Assembly to be printed, 3 March, 1876.

SCHEDULE.

NO.	PAGE.
1. Report by the Registrar of Brands on the Brands Act, and on the sketch of the measure which has been framed for its amendment	2
<i>Papers referred to in the above Report.</i>	
2. Form of application for Brand	6
3. Certificate of application	6
4. Circular informing applicant that the brand applied for might be used, subject to challenge	7
5. Circular informing applicant that the brand applied for is registered, and submitting modification for acceptance ...	7
6. Form of acceptance of modification suggested	8
7. Certificate of registration.....	8
8. "Stock Straying and Stealing Prevention Bill." Appendix A	9
9. Circular forwarding No. 8 for consideration of the several Boards of Sheep Directors. Appendix B.....	41
10. Opinions of the several Boards of Sheep Directors and Stockowners on each section of No. 8. Appendix C	41
11. Explanatory Notes on No. 8. Appendix D.....	48
12. Report of the Registrar of Brands, Queensland, for the year 1873. Appendix E	53

REPORT ON THE BRANDS ACT, AND ON THE SKETCH OF THE MEASURE WHICH HAS BEEN FRAMED FOR ITS AMENDMENT.

THE EXISTING ACT.—THE BRANDS ACT OF 1866.

I. THE APPLICATIONS FOR REGISTRATION AND FEES RECEIVED.

The Act was passed on the 5th October, 1866, and came into operation on the 1st of January, 1867.

It had thus, at the 1st of January last, been in operation for nine years; and the following tables will show the number of applications for brands and transfers, the amount received for fees, and that disbursed for expenses during that period.

I.—RETURN showing the number of Applications made for Registration and Transfers, and amount of Fees received up to 31st December, 1875.

Year.	Number of Applications for new Brands.	Number of Transfers.	Amount of Fees received.
1867	20,690	19	£ 14,520 19 1
1868	1,348	25	1,378 12 9
1869	1,371	28	1,083 8 6
1870	1,316	40	674 2 3
1871	1,584	35	781 12 0
1872	1,798	49	890 16 6
1873	2,297	44	1,119 12 8
1874	2,679	30	1,358 16 9
1875	3,011	85	1,504 3 6
	36,094	355	28,312 4 0

II.—RETURN showing the Annual Expenditure under the "Registration of Brands Act of 1866," from the passing of that Act up to the 31st December, 1875.

Service.	1867.	1868.	1869.	1870.	1871.	1872.	1873.	1874.	1875.	Total.

Total	4,426 8 4	5,889 0 6	2,204 3 1	1,949 17 1	1,650 17 7	1,914 17 3	2,273 13 2	1,828 17 5	2,276 14 4	24,414 8 9

Treasury, New South Wales,
14th February, 1876.

The principal items of expenditure in this return (No. 11) are:—

Printing machine, printing, and type	£9,780	16	3
Deputy Registrars	8,290	9	9
Assistant Registrar and Clerks' salaries	4,996	4	8
		<u>£23,067</u>	<u>10</u>	<u>8</u>

STATE OF THE FUND.

Receipts per Return No. 1	£23,312	4	0
Expenditure per Return No. 2	24,414	8	9
Debit balance 31st December, 1875	<u>£1,102</u>	<u>4</u>	<u>9</u>

It will thus be seen that the funds under the Act are exhausted, and that payments are being made from the General Revenue. Section 22 of the Act provides that this may be done to the extent of £1,000, but that amount has been exceeded, and it will be necessary to ask Parliament, during the present Session, to vote an additional credit to meet the expenses of the Act, pending provision being made by assessment on stock or otherwise, for raising the funds required to meet the expenses of the Act.

If the recommendations made in this report be carried out the expenses will be very much reduced, as they might have been so long ago had the necessary alterations been made.

THE SYSTEM OF REGISTRATION.

1.—How applications are dealt with.

1. On receipt of application (Form No. 1) it is numbered and the applicant's name, number of horses and cattle, and amount of fees paid, are entered in fee book in consecutive order as received.
2. Certificate of application (Form No. 2 herewith) is then made out and forwarded to applicant.
3. A search is next made in the Directory, in the Gazettes containing the brands published during the year, and among the applications in hand, and should the brand applied for be available, applicant receives circular as per Form No. 3 herewith.
4. Should the brand applied for not be available, a modification is suggested for applicant's approval, as per Form No. 4 herewith, which is also accompanied by Form No. 5.
5. Applicant's name and address with number of application are then transcribed into the Alphabetical Register of names.
6. At the end of each quarter of the year a list of the brands granted, the names of applicants, their addresses, and the number of each application, is made out in the alphabetical order of the brands, for publication in the *Government Gazette*.
7. If, at the expiry of *two months* from the date of the first notification, no objection has been taken to the brand, it is held to be duly registered and a certificate of registration (Form No. 6 herewith) is forwarded to the applicant.

2.—Time occupied in registering.

Under the present Act, as brands are only published quarterly, a period ranging from one to three months must expire before a brand can be prepared for publication, and then with the time occupied in making up the brands in alphabetical order, and transcribing the list of applications and particulars for the Government Printer, and the further time (two months) required by the Act for the brand to be advertised in the *Government Gazette*, a period of six or eight months altogether must now elapse from the time an application was made before a brand can be registered. As this was the case it was deemed desirable, in order to admit of an applicant using the brand as soon as it was allotted (as they very frequently require to do) to issue the Circular (Forms Nos. 3 and 4 herewith), authorizing him to use it, subject to the conditions therein stated.

III.—DEFECTS OF THE EXISTING ACT.

1. The time thus occupied in registering a brand is at least three or four times longer than it need be, and besides causing the owner considerable inconvenience, it entails a great deal of unnecessary labour and expense on the branch through the numerous and expensive publications in the Gazette, and the many notices required to be transmitted. It will be observed that the printing expenses are over £1,000 a year, and amount in all to £9,780 16s. 3d.

2. Then the Act requires that two separate registers—one for horses and the other for cattle—shall be kept, thereby causing nearly twice as much trouble and expense as is necessary, and rather impairing than improving the efficiency of the Act. One register for both kinds of stock would answer every purpose. It has been found to do so in Queensland.

3. These and other defects in the framing and provisions of the Act have arisen through its having been the first measure of the sort passed in any of the Colonies. A very much more workable and effective Act, based upon the experience of this Colony, has been in force in Queensland since the beginning of 1872, and has proved of very great benefit. (See Report by Registrar of Brands, Brisbane, for 1874—Appendix E hereto); and a Bill on the model of the Queensland Act, passed the Legislative Assembly of South Australia last year but lapsed in the Council.

SKETCH—STOCK STEALING AND STRAYING PREVENTION BILL.

I.—SKETCH BILL.

It was seen from the first that our Act required amendment in a great many important particulars, and the above measure (the Stock-stealing and Straying Prevention Bill), which includes the whole of the provisions of the Cattle-stealing Prevention Bill of 1853, was framed with the view to collecting material for the preparation of an amending measure, and Forms Appendix A hereto.

II.—REFERENCE OF SKETCH TO BOARDS OF DIRECTORS.

With that view this sketch was forwarded to the various Boards of Sheep Directors throughout the Colony in the month of November, 1874, with a circular, marked B hereto, inviting them to meet and express

express their opinions on its provisions, not by any means with the idea that it was in a shape fit to be brought before Parliament; for it was known to contain many provisions respecting the practicability of which, in their then shape at least, there were great doubts; but it was thought better to include every suggestion which seemed to be of any value, under the impression that as it was to be submitted to practical men the objectionable provisions would either be altered so as to be made workable, or struck out, as the case might require.

III.—REPLIES BY BOARDS.

Only a few of the Boards responded to this invitation, and where they did do so their opinions have been arranged, as far as possible, in the order of the sections of the Bill to which they refer, and are submitted herewith as Appendix C.

IV.—EXPLANATORY NOTES ON SKETCH.

A series of explanatory notes on the different sections of the sketch have also been framed, and are submitted herewith as Appendix D.

V.—OBJECTS OF THE BRANDS ACT AND SKETCH BILL.

Before closing this report it may not perhaps be out of place to notice here some of the benefits (which are most important both in a moral and monetary point of view) arising from the Brands Act, and which are certain to accrue from the passing of some such measure as that sketched. They are as follows:—

1. *The recovery of stray Stock.*

All poundkeepers have copies of the Brands Directories, and no horses or cattle properly branded can now be sold out of pound without notice being sent to the actual owner. Those settlers also who supply themselves with copies of these Directories (they only cost 2s. 6d. each), are in a position to send each other notice of stray stock being on their runs. There is no doubt but that the Brands Act has in this way largely assisted fencing, to bring about the very marked diminution which has of late years taken place in the number of stock sold out of pound.

2. *The settlement of ownership.*

The stated order of branding laid down by the Act is of great use in settling questions of disputed ownership, and thereby preventing litigation, as the branding under the Act, like the endorsements on a bill, shows the different hands through which the animal passes, as well as the order in which it did so.

3. *The putting down duffing and cattle-stealing.*

(1.) As there are not now two brands alike in New South Wales nor Queensland (and we will soon be able to say the same with regard to South Australia, for which we understand a Brands Act has been prepared), the practice which was by far too common of persons claiming animals merely because they bore a brand similar to their own, while they knew they were not their property, will be at an end.

(2.) It puts a stop to the system of duffing, which was followed in a good many districts of duffers putting some figure, letter, or mark, other than their own brands, on the progeny of stray cows or mares, till the animals had outgrown the knowledge of their rightful owners and left their mothers,—as every one will now be obliged to brand with his registered brand.

(3.) Again, when there was no stated order of branding, it was uncertain, when two or three brands were on an animal, in what order they had been branded; and owners, who were dishonest, took advantage of this to claim and re-dispose of stock originally sold by them, but which had strayed back to their runs. A stated order of branding prevents this.

(4.) It will assist in putting a stop to that description of duffing which is practised by altering brands, either by changing the letters, characters, or numerals in the brand, or by making an addition to the brand itself; for it will confine owners to one registered brand, and thus circumscribe the range of possible alterations too closely to afford the duffer sufficient scope for making the change in the brand he would wish.

(5.) By means of the Brands Directory the police are guided to the detection of cases of horse and cattle stealing, as they are able at any time to see who *ought* to be the rightful owner of such stock, and to communicate with him by telegram if their suspicions are aroused.

(6.) By the surveillance now exercised under the droving provisions of the Act, and the examination of the drover's delivery-note and owner's way-bill, the practice, which was at one time but too prevalent, of drovers picking up cattle as they passed through runs and disposing of them along the road, will be stopped, as the risk of detection will now be too great to be run. By means of these provisions also the wholesale cattle-stealer will often be detected.

(7.) And generally the Act will create far greater certainty as to the ownership of brands, whereby convictions in cases of duffing and cattle-stealing will be very much more easily brought home to the offenders.

4. Although such a measure does not go the whole length of making a brand *prima facie* evidence of ownership, yet as a similar measure (but with an entirely different system of brands) has been passed in Queensland, it is now an established fact that no two persons in the two colonies will own similar brands,* and there is now a certainty as to the ownership of brands and stock which is constantly telling against the duffer and cattle-stealer in many ways not originally contemplated, and of course brands now go a great way to prove ownership.

5. *The registration of an owner's brand secures it from being pirated*—used by another—and this also is of great importance to the breeder, who has by sound judgment and careful breeding improved his stock and raised them in character and value.

6.

* When there were only some 19,000 or 20,000 brands applied for, it was found that in several cases as many as 200 applicants had applied for the one brand, and in one case as many as 250 did so. Under these circumstances the counsel for persons accused of stock-stealing were quite justified in cautioning juries, as they invariably did, to put no reliance on brands as proof of ownership. Now, however, the case is altogether different, for a brand is all but proof of ownership.

6. In concluding this enumeration of the advantages which this measure will confer on stock-owners, it may be stated that the single benefit of its rendering it impossible for any animal bearing the owner's brand to be sold out of pound in any part of the Colony without his receiving notice, is far more than sufficient to repay all the trouble and cost which it has entailed; and we have only to consider how ample and correct the information is with which it supplies the police and owners themselves as to the ownership of stock, and how broad and sound a basis it lays for future legislation for the suppression of stock-stealing, to see the advantages of such a measure if carefully framed and effectively enforced.

7. Farther, it is very essential that the registration of brands should be made compulsory, and that no two owners should be allowed to use the same brand, for, with the great increase in the number of selectors during the last few years, and the consequent large increase in the number of owners of stock, there would be a vast amount of confusion and litigation through different owners claiming the same brands, if a Brands Act were not in force, and if there were no restriction on owners using brands we would find those who were inclined to be dishonest selecting land on stations and adopting the station brand as their own, for the express purpose of duffing the settler's stock.

8. With respect to the amendments proposed to be made by the new Bill on the present Cattle-stealing Prevention Act, the leading principle of that Act, which gives certain sorts of cattle-stealing less disreputable designations and prosecutes for a less heavy penalty, is no doubt the correct one, seeing that in some of the country districts that crime is looked upon by many as a very venial offence, and that there is in these districts a very general sympathy for those who are convicted of stock-stealing.

9. Keeping in view, therefore, that fact, it is proposed in the new Bill in all cases where there is the least chance of failure in securing a conviction for cattle-stealing, or where there is any dislike on the part of the owner of the stolen stock to prosecute for the graver offence, to give it a less heinous name, and bring the case before a Court of Petty Sessions instead of sending it to a jury.

10. The following advantages would accrue from such a course:—

- (1.) Owners who now refuse to prosecute persons living in their neighbourhood for duffing their calves because they can only do so for the higher offence, would, in most cases, readily come forward and file an information if the case could be taken before the Petty Sessions, and the penalty be only a fine or a short imprisonment.
 - (2.) The expense and trouble would be far less to prosecutors in the lower Court, and this would be an inducement to prosecute for duffing.
 - (3.) The case would be quickly disposed of in a Court of Petty Sessions, and the sympathy with cattle-stealing and duffing, which now prevails in some parts of the Colony, and influences the decisions of juries in cases of cattle-stealing tried in the higher Court, would be avoided.
 - (4.) Convictions would thus be far more certain and speedy, especially as evidence would be admitted under the proposed Bill which would not now be allowed in trials for cattle-stealing; and although the punishment would be very much lighter it would be quite high enough, considering the certainty of its being again speedily inflicted should the offence be repeated, to put down duffing and even cattle-stealing. It would, in fact, make both callings unprofitable, and if it did there is not the least doubt but that they would be speedily left alone.
- (Lastly.) The new provisions for regulating the travelling and slaughtering of stock would tend greatly to the suppression of stock stealing; for if they had not this effect directly they would indirectly, through their rendering the duffer and cattle-stealer liable to a penalty for the omission of some duty which these provisions require, and which it is impossible for him to carry out if he be acting dishonestly.

VI.—NECESSITY FOR SUCH MEASURES.

That there is very great need for some such measure as this there cannot be any doubt, for stock stealing is allowed on all hands to be, next to drunkenness, the curse of the Australian Colonies.

Even in its more venial forms cattle-stealing is thoroughly demoralizing and frequently the stepping-stone to bushranging and other heinous crimes. Of late years horse and cattle-stealing may not, perhaps, be quite so rife as they once were, but there is scarcely a day passes in which one or more cases of stock-stealing are not reported in the daily papers either as having been discovered, or as being prosecuted. Sheep-stealing, again, with the turning out of sheep is becoming exceedingly common, and unless steps are soon taken to check it, this crime, from the impunity with which it can now be carried out, must steadily increase.

ALEX. BRUCE,
Registrar of Brands.

22nd February, 1876.

No. 2.

SCHEDULE E.

"REGISTRATION OF BRANDS ACT OF 1866."

To the Registrar of Brands, Sydney,—

186

Sir,
 I enclose the authorized fees for the registration of the brand belonging to
 as mentioned in the Schedule of particulars given below, and have to
 request that you will register such brand accordingly. Applicant.

SCHEDULE REFERRED TO.

Brand to be Registered.		Former Brand.		Applicant.		Number of Cattle and Horses owned by Applicant.	Amount of Fees.		
Horses.	Cattle.	Horses.	Cattle.	Name.	Address.		£	s.	d.

I, _____ do hereby solemnly declare that the several matters and things contained in the above application are true, to the best of my knowledge and belief.

Declared before me, at _____ this _____ }
 day of _____ 186 _____ }

J.P.

No. 3.

SCHEDULE F.

"REGISTRATION OF BRANDS ACT OF 1866."

Certificate of Application No.

Sydney, 187

Horses. THIS is to certify, that an application for the registration of the brand mentioned on the margin hereof, has been received by me, and numbered as above, from

Cattle. with the sum of _____ as the authorized fees for the registration thereof in terms of the provisions of the abovenamed Act.

ALEX. BRUCE,
 Registrar of Brands.

ORDER OF BRANDING.

SCHEDULE C.

Position and Order of Brands on Horses.

- Portion I.—Embracing the near shoulder.
- " II.— " off do.
- " III.— " near rump, hip, and thigh.
- " IV.— " off do.
- " V.— " near ribs and saddle.
- " VI.— " off do.

SCHEDULE D.

Position and Order of Brands on Cattle.

- Portion I.—Embracing the near rump, hip, and thigh.
- " II.— " off do.
- " III.— " near back and ribs.
- " IV.— " off do.
- " V.— " near shoulder.
- " VI.— " off do.
- " VII.— " near loin.
- " VIII.— " off do.

1. The breeder or person imprinting the first brand on (unbranded) horses may do so on any of the portions mentioned above in Schedule C, and on (unbranded) cattle on any of the portions mentioned in Schedule D ;

Thus—

Thus—William Jones places his WJ brand on the off shoulder (portion II) of his foals, and on the off back (portion IV) of his calves.

John Thomas places his JT brand on the near shoulder (portion I) of his foals, and on the near back (portion III) of his calves.

Andrew Smith places his AS brand on the near ribs and saddle (portion V) of his foals, and on the near rump (portion I) of his calves.

Peter Henderson places his PH brand on the near ribs and saddle (portion V) of his foals, and on the near loin (portion VII) of his calves.

2. The person imprinting the *second* brand on any stock *must* do so on the portion already branded on, one inch at least below the *first* brand, if there be room on that portion; and, if not, then on the portion which, in conformity with Schedules C and D, is the next in order to that already branded upon, according as the stock to be branded are either *horses* or *cattle*.

Thus—William Jones sells a horse which is branded WJ off shoulder (portion II) to John Thomas, who, finding there is room on that portion, imprints his brand JT one inch at least below the WJ.

Peter Henderson again sells a horse which is branded PH on the near ribs and saddle (portion V) to Andrew Smith, who cannot find room to brand on that portion under the PH, and therefore places his brand on the next (portion VI), the off ribs and saddle.

3. The person intending to imprint the *third* brand on any stock will either brand as explained above on the same portion as the *second* brand, if there be room on that portion, and if not, then on the portion next in order thereafter, in conformity with the above Schedules; and so on in that order until all the portions are branded upon:

Thus—John Thomas sells a horse branded WJ off shoulder (portion II) and JT near rump (portion III) to Andrew Smith, who, finding there is room on the latter portion, puts on his own brand AS at a distance of *one* inch below the second brand JT.

But William Jones sells a horse branded JT near shoulder (portion I) and WJ off shoulder (portion II) to Andrew Smith, who, not finding room to place his brand AS under the WJ brand on portion II, does so on the near rump (portion III.)

4. If an owner imprint the first brand on any portion other than I, then portion I will in that case in the branding of horses follow and be branded upon after portion VI, and, in that of cattle, after portion VIII; after which the branding will proceed in the order laid down in Schedules C and D.

Thus—John Thomas purchases a horse from William Jones, branded AS near ribs and saddle (portion V) and PH off ribs and saddle (portion VI); and, finding no room on that portion to place his JT brand, he imprints it on the near shoulder (portion I); and Poundkeepers and others, being aware that a consecutive order of branding is always maintained, will know, through the portions between I and V not being branded upon, that the branding began on the latter (portion V), and that portion I is the last branded upon, and they will send notice accordingly. In the foregoing example the portions would be branded upon in the following order, V, VI, I, II, III, IV.

-

SYNOPSIS

OF

STOCK STRAYING & STEALING PREVENTION BILL 1874.

I.—PRELIMINARY:

- Sec. 1. Commencement and title.
 2. Repeal of "Act for the better prevention of Cattle Stealing" 17 Victoria No. 3 and the "Registration of Brands Act of 1866" 30 Victoria No. 12 and 37 Victoria No. 17.
 3. Interpretation clause.

II.—APPOINTMENT POWERS AND DUTIES OF REGISTRARS AND INSPECTORS OF BRANDS.

4. Inspectors of Brands may be appointed.
 5. Power of entry by Inspector and assistants and penalty for impeding them.
 6. Inspectors to examine weekly list of brands furnished to Petty Sessions by Inspectors of Licensed Slaughter-houses.

III.—BRANDS AND BRANDING IRONS.

7. Only one brand to be allowed each owner unless he has more than one run not contiguous.
 8. Owners to use the same brand for both horses and cattle.
 9. Brand makers to be licensed by Inspectors and to keep an account of all brands made by them.
 10. Penalty for making using or owning brands contrary to the three next preceding sections.

IV.—ALLOTMENT AND REGISTRATION OF HORSE AND CATTLE BRANDS AND BRANDS DIRECTORY.

11. The Chief Inspector of Brands to be Registrar and Deputy Registrars of Brands may be appointed.
 12. Applications for brands to be made in the form of Schedule C and Registrars to grant receipt for and enter application in sec book.
 13. If not previously registered the brand applied for to be notified in the *Gazette*.
 14. If there be no objection raised within a month from the date of notification the brand to be registered to the applicant.
 15. How brand applied for is to be modified when similar to one already registered.
 16. Registrar may alter or refuse to register brands similar to those registered in any adjoining Colony except in certain cases.
 17. Registrar may alter or refuse to register brands which are likely to be mistaken for or which could be altered into brands used in the same locality.
 18. Brands applied for may be used previous to registration.
 19. No modifications of or other dealings with brands or stock under this Act to affect mortgages on stock or stations.
 20. Brand Directory to be published annually.
 21. *Gazettes* containing notification and Quarterly Lists of Brands and the Brands Directory to be held to be the Register of Brands.
 22. Copies of *Gazettes* with notifications and lists of brands to be supplied to Inspectors and poundkeepers.

V.—RECORD OF SHEEP AND DISTINCTIVE BRANDS AND MARKS.

23. All sheep above the age of six months to be branded with owner's brand exception with respect to travelling sheep.
 24. Inspector to keep a record of sheep and distinctive brands and marks.
 25. Owner intending to use a sheep or distinctive brand or mark to intimate the same to the Inspector for the district and obtain certificate of record.
 26. When two or more owners intimate similar distinctive or sheep brands or marks the Inspector may allot them modifications which they shall adopt.
 27. Where the stock of owners in different districts are likely to mix and both owners use the same sheep or distinctive brand the Chief Inspector may require either owner to alter his brand.
 28. Penalty for breach of any of the six next preceding sections and proof offence.

VI.—

VI.—TRANSFER OF HORSE AND CATTLE BRANDS.

- Sec. 29. Mode of applying for transfer of Horse and Cattle Brands.
 30. Mode of transferring brands in register: Transfers to be published in *Gazette* and re-registered.
 31. Mode and record of transfer of distinctive and sheep brands and marks.
 32. Where owner sells the run and not the brand the purchaser to re-brand the stock.

VII.—MUSTERING.

33. Owners when mustering stock for weaning or removal from run to give notice to neighbours.

VIII.—BRANDING AND MARKING.

34. Position and order of brands and marks on stock and stock to be held to be branded with the brand which appears to be the last branded according to the foregoing order.

IX.—MISBRANDING AND BRAND ALTERING.

35. Penalty—
 (1.) For branding or marking stock not belonging to proprietor of brand or mark.
 (2.) For wilfully destroying defacing or altering any brand or mark.
 (3.) For cutting or cropping off more than one-fourth the ear of stock in ear marking.
 (4.) For using another person's brand or mark without his authority.
 (5.) Using any unregistered or unrecorded brand or mark.
 36. Stock with defaced or altered brands to be impounded and only released on person claiming them making a declaration that he is the owner thereof.
 37. Stock with defaced or altered brands not released from Pound in due course to be sold.

X.—TRAVELLING STOCK—DROVERS PURCHASERS AUCTIONEERS &C.

38. Owners to give notice of their intention before starting stock to travel.
 39. Owner droving to carry way-bill and hired drover delivery-note.
 40. Travelling stock may be examined and way-bill or delivery-note checked by any Justice Inspector or Police officer agent or proprietor of run.
 41. The way-bill or delivery-note when correct to be indorsed when wrong the wrong stock to be impounded.
 42. Drover losing way-bill or delivery-note to apply for interim one from nearest Police or Inspector.
 43. Way-bill or delivery-note to be handed over with stock to the consignee who is to preserve and produce it.
 44. The drover in certain cases to give notice that he means to drive stock through or along a run and to approach or cross the boundary within *six* hours of the time notified.
 45. Penalty for breach of any of the *seven* next preceding sections.
 46. Drover having stock wrongly in his possession may be apprehended and taken before a Justice.
 47. Penalty for purchasing or receiving stock not in or wrongly described in drover's way-bill or delivery-note or stock which the drover has not produced the written authority of the owner for the drover to sell.
 48. Acts and duties required of auctioneers and salesmen on the receipt and sale of stock.

XI.—REGISTRATION OF SLAUGHTER-YARDS RULES OF SLAUGHTERING INSPECTION OF HIDES &C.

49. All slaughter-yards except those licensed to be registered at the nearest Police Station.
 50. No stock unless in case of accidents or stock killed by drovers and shepherds for rations to be slaughtered except at licensed or registered slaughter-yard.
 51. Duties of occupant of registered slaughter-yard:—
 (1.) To keep account of stock slaughtered.
 (2.) To take the hide off the whole body except the legs.
 (3.) To preserve the hide days for inspection when cured or dried.
 (4.) To do so for hours when sold green.
 (5.) To produce hide for inspection when required.
 52. The purchasers of green hides other than those taken off in licensed slaughter-yards to take and keep description of the animal and brands.
 53. Penalty for breach of any of the four next preceding sections.

XII.—ILLEGAL POSSESSION OF STOCK OR MEAT.

54. Penalty for possession of stolen stock or meat and mode of proof of breach.
 55. Penalty for illegal possession or working of stock belonging to another owner.

XIII.—

XIII.—RESTITUTION OF STOLEN STOCK.

- 56. Justice may issue warrant to Police to apprehend person having stolen stock and to seize and detain the stock until information is disposed of.
- 57. On hearing complaint Justices may order restitution of stock.
- 58. Vendee who returns the stock or price may recover from vendor.
- 59. If vendor does not pay he may be imprisoned.

XIV.—MISCELLANEOUS—INCLUDING GENERAL PENALTIES.

- 60. Poundkeepers to keep copies of Brand Directories open for inspection.
- 61. When stock are impounded notice to be given to registered owner of last brand or to supposed owner.
- 62. A Pound brand to be used for each Public Pound.
- 63. Penalty for placing stock in a paddock yard or other enclosure without the proprietor's sanction.
- 64. Penalty for false entry forging or altering books documents etc.

XV.—REGULATIONS.

- 65. Regulations may be made and if so to be laid before Parliament.

XVI.—RECEIPTS AND EXPENSES.

- 66. All fees and moieties of fines etc. collected under this Act to be paid into the Registration of Brands Account at the Treasury except fees for interim way-bill or delivery-notes received by the police force which shall be paid into the Police Reward Fund.
- 67. The Colonial Treasurer to pay expenses from Registration of Brands Account or if funds at its credit be insufficient out of moneys voted by Parliament.

XVII.—LEGAL PROCEDURE.

- 68. How notices are to be served and what is to be held to be service.
- 69. For the purposes of the Act proof that stock are branded with a registered brand to be *prima facie* evidence that the owner of the brand branded the stock.
- 70. Brand to be taken so far in all Courts as proof of ownership in cases of stock stealing.
- 71. Mode of recovering penalties and moneys payable under the Act.
- 72. Offender may be imprisoned if penalty be not paid.
- 73. Justices may send summary cases for trial to higher Courts and juries may find verdicts of guilty for minor offences.
- 74. Convictions under this Act to bar further proceedings.

XVIII.—SAVING CLAUSE.

- 75. Actions against Justices Inspectors or the Police not to lie unless proof of corruption or malice.
-

38^o VICTORIÆ, 1875.

A BILL

To prevent the Straying and Stealing of Stock.

WHEREAS it is expedient to make better provision for the ^{Preamble.} recovery of Stray Stock and the suppression of the stealing of Stock Be it therefore enacted by the Queen's Most Excellent Majesty by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled and by the authority of the same as follows :—

I.—PRELIMINARY.

1. This Act shall come in force on the first day of one thousand eight hundred and seventy- and may be cited as the "Stock Straying and Stealing Prevention Act of 187 ."

2. From and after the commencement of this Act the Act ^{Repeal of 17 Vic. No. 3 30 Vic. No. 12 and 37 Vic. No. 17.} seventeenth Victoria number three intituled "*An Act for the better prevention of Cattle Stealing and the Sale of Stolen Cattle*" the "Registration of Brands Act of 1866" and the Act thirty-seven Victoria number seventeen intituled "*An Act to amend the Registration of Brands Act of 1866*" are hereby repealed But nothing herein contained shall be deemed to affect any act or thing lawfully done or commenced or any delivery-note given or recognizances taken in pursuance of the provisions under any of the said repealed enactments before the coming into operation of this Act All offences

offences committed and causes of action or complaint which shall have accrued by reason of the violation of any of the said repealed enactments and all fines and penalties incurred thereunder before the coming into operation of this Act shall be prosecuted and enforced respectively as if this Act had not been passed.

Interpretation of terms.

3. The following words and terms in inverted commas shall for the purposes of this Act bear the meanings set against them respectively unless the context otherwise indicate—

- “Brand”—The permanent impression of any letter sign or character branded on any stock.
- “Brand Directory”—The list of brands of horses and cattle registered under this Act or under the Act hereby repealed compiled by the Registrar of Brands and published in the *Government Gazette* whether such lists are in the form of notifications of applications for brands or in that of the latest edition of the Brand Directory.
- “Carcass”—The carcass including the head horns legs hoofs tail hide and hair or wool of any stock and any other portion of such carcass.
- “Cattle”—Any one or more bulls cows oxen steers heifers or calves.
- “Delivery Note”—The memorandum under the hand of the owner or his superintendent or agent of any travelling stock delivered into the charge of any drover other than the owner of such stock containing the particulars set forth in Schedules O 1 or O 2 hereto.
- “Distinctive Brand”—Any brand other than a brand registered by the Registrar of Brands which the owner is empowered by this Act to imprint on any horses or cattle to denote the ownership of an individual member of a family or partnership where a general family or partnership registered brand is used or to mark the class age or description of horses or cattle or any other circumstance which the proprietor may require to mark.
- “District”—In questions relating to Inspectors and Deputy Registrars of Brands the word district shall mean the sheep district as defined in any proclamation under the “Diseases in Sheep Act” in force for the time-being for which such Inspector or Deputy Registrar shall be appointed and in questions relating to Clerks of Petty Sessions Justices or members of the police force the police district in which such Justices Clerks of Petty Sessions or members of the police force are empowered to act.
- “Drover”—The person (whether the owner or drover employed by the owner) driving or in the possession or charge of any “travelling stock.”
- “Fee Book”—The book containing a list of the applications to register horse and cattle brands in numerical order as received by the Registrar of Brands.
- “Governor in Council”—The Governor with the advice of the Executive Council.
- “Hide”—The hide or skin of any stock or any portion of such hide.
- “Horses”—Any one or more horses mares colts fillies foals asses or mules.
- “Inspector”—The Chief or any Inspector of Brands or of Stock.
- “Justice”—Any Justice of the Peace.
- “Mark”—Any mark or cut upon the ear dewlap or any other portion of the body of any stock marked or cut by or for the owner of such stock.
- “Minister”—The Minister for the time-being charged with the administration of this Act. “Mis-branding”—

- “Mis-branding”—The branding of any stock with a brand other than that of the owner of such stock.
- “Occupant”—The owner or proprietor whether jointly or in severalty of any run yard or premises or his authorized agent or superintendent.
- “Owner”—The proprietor or owner whether jointly or in severalty of any stock or his authorized agent or superintendent.
- “Police”—Any superintendent inspector sergeant or other member of the police force.
- “Proprietor”—The owner or proprietor jointly or in severalty of any brand registered or any brand or mark recorded under this Act or the authorized agent or superintendent of such proprietor.
- “Record of Distinctive and Sheep Brands”—The books to be kept by the Inspectors of Brands for recording the Distinctive and Sheep brands to be used in their respective districts.
- “Register of Brands”—The copy of the Brand Directory or of the *Government Gazette* containing any notification of the application for any registered horse or cattle brand signed by the Registrar as such register.
- “Registrar”—The Registrar of Brands or any Deputy Registrar of Brands appointed hereunder and authorized to act as such Registrar.
- “Residence”—The house homestead residence or head station of any owner or proprietor.
- “Run”—Any land run station farm yard or premises whether freehold or leasehold or any place where stock are or have been kept or depastured.
- “Sheep”—Any one or more rams ewes wethers or lambs.
- “Sheep Brand”—A fire brand on the face or a brand made of paint pitch or tar on the shoulder back ribs or rump.
- “Slaughter-yard”—Any yard or premises at which any stock have been are being or are intended to be slaughtered.
- “Stock”—Any one or more horses cattle sheep goats as hereinbefore defined or any one or more goats alpacas or pigs or any portion of the skin hair wool horns or carcass of any such stock.
- “Travelling stock”—Any stock while being driven taken or carried on any land not being land leased by or in the occupation of the owner of such stock.
- “Way-bill”—The memorandum under the hand of the owner or his superintendent or agent of any travelling stock in his own charge containing the particulars set forth in Schedules N 1 or N 2 hereto.

II.—APPOINTMENT POWERS AND DUTIES OF INSPECTORS OF BRANDS.

4. The Governor in Council may from time to time appoint a Chief and other Inspectors of Brands and such inspectors shall for the purposes of this Act be invested with the same powers as the police.

Inspectors of Brands with same powers as police to be appointed.

5. Every police officer shall be an Inspector of Brands and every Inspector of Brands may at any time enter upon any land in order to inspect any stock or any branding-iron book way-bill delivery-note or document relating or purporting to relate to the driving sale or slaughtering of any stock and may take possession of any such stock carcass branding-iron book delivery-note or way-bill or other document in respect of which any breach of this Act or of any regulations following thereon has been or is being committed And any person refusing to allow an inspector to enter as aforesaid or refusing when required by him to produce any stock hide branding-iron way-bill delivery-note or document of which he is in possession or can produce or hindering or impeding him in the execution of his duty shall for every such offence incur a penalty not exceeding *fifty* pounds.

Police officers to be Inspectors—Inspectors powers.

Penalty for obstructing inspector.

Inspectors of slaughter-houses to furnish list of brands to Inspectors of Brands.

6. Every Inspector of a slaughter-house licensed under any Act regulating the slaughtering of cattle shall when required by the Minister furnish the Inspector of Brands for the district in which such slaughter-house is situated with a weekly list of the brands marks and descriptions of all stock slaughtered at such slaughter-house under a penalty not exceeding *ten* pounds.

III.—BRANDS AND BRANDING-IRONS.

Only one brand allowed owner unless he has more than one run not contiguous.

7. One brand and no more shall be allowed to each owner unless he is the proprietor of more runs than one not adjoining each other when in that case but not otherwise he may be allotted one brand for each of such runs.

Owners to use same brand for horses and cattle. Brand to be legible size.

8. Every owner possessed of both horses and cattle shall use the same brand for horses as he uses for cattle and such brand shall be of sufficient size to make a clear and legible impression. Provided however that the branding-iron used in branding horses may be of smaller dimensions than that used in branding cattle.

Brandmakers to be licensed and to keep a record of brands made.

9. It shall be lawful for the Inspector of Brands for any district from time to time to issue licenses to such persons as may apply for the same to act within such district as licensed brandmakers. And such inspector shall keep an account of all such persons to whom such licenses shall have been issued. No brand shall be made by any person other than by a brandmaker licensed as aforesaid. And no brand shall be made by any licensed brandmaker unless the applicant for such brand produce to him the certificate of the registration of the said brand to such applicant or a certificate under the hand of the inspector for the district in the form of Schedule A hereto. And every such licensed brandmaker shall imprint on every brand made by him a permanent mark or stamp shewing that he was the maker of such brand and shall also keep an account of all such brands together with the names and addresses of the persons to whom such brands have been so supplied in the form of Schedule B hereto.

Penalty for using brand contrary to three preceding sections.

10. If any person shall use or have in his possession a branding-iron which has not been made by a licensed brandmaker as hereinbefore provided or who shall use or attempt or permit to be used or have in his possession or at his yard or on his premises any branding instruments by which a brand other than that made and registered as required by this Act may be impressed upon stock or shall fail to comply with any of the provisions of the *three* next preceding sections hereof such person shall on conviction for every such offence incur a penalty not exceeding *fifty* pounds. Provided that brands made and in use previous to the passing of this Act may be marked or stamped and entered as aforesaid by any brandmaker in the district in which they are so used. Provided also that this section shall not apply to sheep pitch paint or tar brands recorded as such with the Inspector of Sheep.

IV.—REGISTRATION OF HORSE AND CATTLE BRANDS.

Chief Inspector to be Registrar—Deputy Registrars may be appointed.

11. The Chief Inspector of Brands shall be Registrar of Brands and the Governor in Council may from time to time appoint one or more Deputy Registrars whose acts under the direction of the Registrar shall have the same force and effect as if done by him.

Brands to be applied for in form of Schedule C.

12. Upon the passing of this Act any person requiring a horse or cattle brand shall deliver or transmit to the Registrar an application in the form of Schedule C hereto accompanied by the authorized fee for the same as fixed by Schedule D hereto for the registration of brands. And the Registrar shall deliver or transmit to such applicant a receipt in the form of Schedule E hereto for such application and shall forthwith make an entry thereof in the Fee Book in the form of Schedule

Registrar to grant receipt and enter application.

Schedule F hereto kept by him for the entry of such applications and shall at the same time mark upon the said application the number which it bears in the Fee Book.

13. Upon the entry in the Fee Book of any application as aforesaid the Registrar shall make a search and ascertain whether or not the brand therein applied for is similar to any brand already registered or applied for and if not he shall forthwith cause such first-mentioned brand and the name and address of the applicant for the same together with such other information as may be necessary to be notified in three different issues of the *Gazette* in the form of Schedule II hereto.

If not previously registered or applied for brand to be registered.

14. If within *one* month from the date of the first notification of any brand in the *Gazette* as aforesaid no objection be made to the allotment of the said brand to the applicant therein named such brand shall be and be deemed to be the registered brand of such applicant and he shall receive from the Registrar a certificate of registration thereof in the form of Schedule G hereto.

If no objection within a month brand to be registered.

15. Where the proprietor of a brand registered under this Act can adduce to the Registrar a sufficient reason for making the alteration the Registrar may on application in writing by such proprietor cancel the registration of the said brand and allot him a new brand on receipt of application and payment of the fees as hereinbefore provided. But where the Registrar considers the reasons insufficient the alteration asked for shall not be made.

16. If on search it be found that the brand applied for has been already registered or applied for the Registrar shall through the post intimate to the applicant the fact of such similarity and suggest a modification of the said brand. And if within *one* month of the date of such intimation the Registrar shall not receive from such applicant a modification of his brand rendering it dissimilar to any brand already registered or applied for the Registrar shall notify the modification so suggested by him in the *Gazette* as the brand of such applicant and shall notify and register the same in the manner hereinbefore provided and the modification of the brand so registered shall thereupon be and be deemed to be the brand of such applicant accordingly.

How brand applied for is to be modified when similar.

17. It shall be lawful for the Registrar to require the owner of any horse or cattle brand similar to those used in any adjoining Colony to alter the same and to refuse to register any such brands which may hereafter be applied for. If any owner who shall receive notice from the Registrar to alter his brand as hereby required shall not within *one* month from the date of the receipt of such notice deliver or transmit to the Registrar such an alteration or modification of the said brand as he may consider necessary the Registrar shall allot such owner a modification thereof and shall notify publish and register such modification as the brand of such owner in manner hereinbefore provided with respect to modifications allotted by the Registrar. And the brand so modified and no other shall be and be deemed to be the brand of such owner. Provided however that if any brand registered in an adjoining Colony belongs to an owner who is the occupant of a run in the said Colony and also in this Colony such brand may be registered in this Colony if it be dissimilar to any brand already registered there and if the application for the registration of such brand bear the approval of the Registrar of Brands for the said adjoining Colony.

Registrar may refuse to register and alter brands similar to those registered in adjoining Colonies.

Proviso.

18. Notwithstanding anything herein contained the Registrar may refuse the owner of a horse or cattle brand already registered to alter the same if he considers that such brand is likely to be mistaken when blotched for any horse or cattle brand already registered and used in the same locality or that such brand could be easily altered into any other brand used in such locality. The Registrar may in like manner for either of the said reasons refuse to register any brand which may be applied for. And if an owner who shall have received

Registrar may refuse to register and alter brands likely to be mistaken for or altered into brands used in the same locality.

notice from the Registrar to alter any such brand as aforesaid shall not within *one* month from the date of the receipt of such notice transmit or deliver to the Registrar a modification of such brand approved of by the Registrar he shall allot such owner a modification thereof and shall notify publish and register the same in manner hereinbefore provided with respect to modifications allotted by him in the case of similar brands And the modifications so registered and no other shall be and be deemed to be the brand of such owner.

Brands applied for may be used previous to registration.

19. Notwithstanding anything herein contained any brand which shall have been allotted to any applicant whether such brand be that originally applied for by him or any modification thereof may be used by such applicant on his horses or cattle upon his obtaining from the Registrar a receipt in the form of Schedule E hereto for the application for the said brand Provided however that all brands so used previous to registration shall be subject to challenge and alteration as provided by this Act.

This Act not to affect mortgages on stock or stations.

20. No modification of any brand made in conformity with this Act nor anything herein contained shall in any way affect any mortgages or other security under the Act

Victoria number
or any Act relating to the mortgage of stock or stations.

Brand Directory to be published annually

21. Immediately after the *thirty-first* day of December in each year the Registrar of Brands shall compile and publish a Brand Directory for the Colony containing a correct and complete list in alphabetical order of all the horse and cattle brands registered in the Colony and the other particulars contained in Schedule II hereto.

The Gazette containing notifications and the Brands Directory to be held to be the register of brands.

22. The *Gazette* containing the notification of any horse or cattle brand as aforesaid shall after the registration of such brand when marked and signed by the Registrar as such be and be deemed to be the Register of Brands for the month preceding the date of the said *Gazette* and shall continue to be such Register until the brands therein mentioned are again published in the Brands Directory for the Colony containing the brands mentioned in such notifications when that Directory and the latest editions thereof marked by the Registrar aforesaid shall in so far as not altered by any subsequent notice in the *Gazette* be and be deemed to be such Register.

Brand Directories to be furnished to Inspectors Pound-keepers and C. P. S.

23. Copies of all *Gazettes* containing notifications of brands or notices of the transfers of brands and of all Brands Directories shall as published be furnished to each Inspector keeper of a public pound and Clerk of Petty Sessions throughout the Colony.

V.—RECORD OF SHEEP AND DISTINCTIVE BRANDS AND MARKS.

All sheep except travelling sheep to be branded with their owners brand.

24. All sheep above the age of six months shall be branded and kept legibly branded by the owner thereof with a brand which shall have been duly recorded as next hereinafter provided But it shall not be necessary for travelling sheep although they may have changed owners since they were branded to be branded with the sheep brand of their then owner if they are legibly branded with the brand of their previous owner.

Inspector to keep Records of Sheep and Distinctive brands and Marks in his district.

25. The Inspector of Brands shall keep *two* books in the form directed by the Registrar of Brands one for the entry of sheep brands and marks used in his district to be called the "Sheep Brands Record" and the other for the entry of horse and cattle distinctive brands and marks to be used as aforesaid to be called the "Distinctive Brand Record."

All Sheep and Distinctive Brands and Marks to be recorded before being used.

26. Every owner before using any sheep brand or mark on sheep or any distinctive brand or mark on horses and cattle shall send an intimation of his intention in the form of Schedules I 1 or I 2 hereto to the Inspector of Brands for the district in which such brand or mark is intended to be used And such inspector shall make an entry of the said brand or mark in either record as the case may be.

27. If two or more owners in the same district intimate their intention to use similar sheep or distinctive brands or marks the inspector may where necessary allot such modifications thereof to one or more of such owners as shall render the said brands or marks dissimilar. And such owners shall adopt the modifications thus allotted to them accordingly. Provided that no distinctive brands or marks shall be allotted to any person who is not the owner of a registered horse or cattle brand.

If proprietors intimate similar sheep or distinctive brands or marks inspector may modify same.

28. If it shall occur that two or more owners whose runs are in the same neighbourhood although in different districts intimate similar sheep or distinctive brands or marks to their respective inspectors the Registrar of Brands may if necessary allot such modifications of the said brands or marks to such owners as shall render them dissimilar and such owners shall adopt and use such modifications as their brands and marks accordingly.

Chief Inspector may modify brands and marks of proprietors in different districts when similar.

29. Every owner who shall brand or mark any sheep with a sheep brand or mark or any horses or cattle with a distinctive brand or mark not recorded as hereinbefore provided or who shall offend against or fail to comply with any of the provisions of the *five* next preceding sections shall for every such offence incur a penalty not exceeding *fifty* pounds.

Penalty for breach of any of the next *five* preceding sections.

VI.—TRANSFER OF BRANDS AND MARKS.

30. Any proprietor wishing to transfer the right of any registered horse or cattle brand and the person to whom such right is intended to be transferred shall make and sign in the presence of a Justice or Commissioner for taking affidavits a memorandum in the form set forth in Schedule J hereto and shall transmit the same to the Registrar of Brands together with the fees chargeable on such transfer as set forth in Schedule D hereto.

Mode of applying for transfer of horse or cattle brands.

31. Upon the receipt of a memorandum of transfer as next aforesaid and of the authorized fees for the same the Registrar shall make an entry thereof in his Fee Book and shall cancel the original registration of such brand standing in the name of the transferor and shall re-register the same in the name of the transferee and such transferee shall thereafter be and be deemed to be the registered proprietor of such brand and the Registrar shall notify all such transfers in the *Government Gazette* after the monthly notification of brands registered under this Act.

Mode of transferring and registering transfer of horse or cattle brands.

32. When it is intended to transfer any sheep or distinctive brand or mark recorded as hereinbefore provided the proprietor intending to make such transfer shall forward a memorandum thereof in the form of Schedule J hereto duly completed and attested as aforesaid to the inspector for the district who shall make the necessary entries in his Record and transmit a certificate of the transfer of such brands and marks to the transferee.

Mode of transferring and recording sheep and distinctive brands and marks.

33. In the event of any owner selling a run but not selling all the stock bearing his registered or recorded brand or mark nor transferring such brand or mark to the purchaser of the said run such purchaser shall with his own brand and mark re-brand and re-mark the whole of the stock purchased with such run.

Where owner transfers run but not all the stock nor the brand purchaser to re-brand stock.

VII.—MUSTERING.

34. Every owner possessed of or more horses or more cattle or or more sheep shall give all the occupants who are possessed of a like number of similar stock and whose land approaches at any point within *one-quarter* of a mile of that occupied by such owner not more than *ten* nor less than *five* clear days notice in writing delivered personally or sent by registered letter through the post of all musters for collecting weaners and horses cattle or sheep intended

Owners mustering stock in certain cases to give notice to their neighbours.

intended to be removed from such owners land and sheep intended to be branded And such owner shall permit the said occupants or their employes to attend and assist at such musters Any owner or other person failing to comply with any of the provisions of this section shall on conviction for every such offence incur a penalty not exceeding *one hundred* pounds.

VIII.—BRANDING AND MARKING.

Brands and marks to be imprinted and made as follows.

35. All brands shall be imprinted upon stock in a clear and legible manner as follows namely—

Horse and Cattle Brands.

Order and position of horse and cattle registered brands.

(a.) Every registered brand shall be imprinted on one or other of the portions allotted in Schedule K hereto and in the consecutive order therein indicated and each piece or portion shall be imprinted in the position in which the same appears in the Brand Directory.

First registered brand may be imprinted on any portion.

(b.) The breeder or person imprinting the first registered brand upon any horses or cattle may brand upon any of the portions mentioned in Schedule K hereto he thinks fit.

If first brand is not on No. 1 then that portion in horses to follow No. 5 and in cattle No. 7.

(c.) If the breeder's or first registered brand be branded upon any portion other than number *one* then number *one* shall be held in the case of horses to follow and shall be branded upon after portion number *five* and in the case of cattle after portion number *seven*.

Second or subsequent brand to be under that last branded or on next portion.

(d.) Every second or subsequent brand intended to be imprinted upon any horses or cattle shall where there is space sufficient for that purpose be imprinted on the same portion as and at a distance of not less than *one and a half* inches nor more than *two and a half* inches from and directly underneath the brand which in accordance with the order of branding prescribed by this Act is the immediately preceding brand on such horses or cattle And where there is not space sufficient for any such second or subsequent brand on the said portion then such second or subsequent brand shall be imprinted on the portion which in accordance with this Act is the next in order to the said first-mentioned portion and in the position hereinbefore prescribed.

Sheep Brands.

Sheep brands to be on the face horn shoulder ribs back or rump.

(e.) Every sheep fire-brand shall be imprinted on the face or horn and every pitch tar or paint sheep brand on the shoulder ribs back or rump and in the order which may from time to time be prescribed by regulation hereunder.

Distinctive Brands and Marks and Sheep Marks.

Position of distinctive brands on horses and cattle.

(f.) Every distinctive brand shall be imprinted on the cheek neck off rump or hoof of horses and on the cheek neck or off shoulder of cattle and in the order which may from time to time be prescribed by regulation hereunder.

Position of distinctive marks on horses cattle and sheep.

(g.) Every distinctive mark on horses or cattle and every such mark on sheep shall be made and marked thereon as the Minister may from time to time direct by regulation under this Act.

Stock to be held to be branded and marked with last brand or mark in accordance with Act or Regulations.

And all stock shall be deemed to be branded or marked with the brand or mark which shall appear to be the last brand or mark upon such stock according to the order prescribed by this Act or any regulation thereunder And any person failing to comply with or offending against any of the provisions of this section shall on conviction for every such offence forfeit and pay any sum not exceeding *fifty* pounds or at the discretion of the Court any sum not exceeding *five* pounds for every head of Stock branded or marked contrary to this Act or any regulation thereunder.

IX.—MIS-BRANDING AND ALTERING OR USING UNREGISTERED OR UNRECORDED BRANDS OR MARKS.

36. Every person found guilty of any of the following offences shall on conviction for every such offence incur a penalty not exceeding *one hundred* pounds or any sum not exceeding *ten* pounds for every head of stock with respect to which any such offence was committed or at the discretion of the Court such person may on conviction for every such offence be liable to imprisonment with or without hard labor for any period not exceeding *six* months namely:—

- (1.) Wilfully or negligently branding or marking with his own registered or recorded brand or mark any stock of which he is not the owner or wilfully or negligently causing or permitting any such stock to be branded or marked with his registered or recorded brand or mark. Penalties for any of the following offences
For branding or marking stock not belonging to proprietor of brand.
- (2.) Wilfully destroying defacing or altering any brand or ear or other mark on stock or causing or being privy to the destruction defacement or alteration thereof. For destroying or altering a brand or mark.
- (3.) Cropping or cutting off more than one-fourth of the ear in marking any stock or cutting the ear straight across. For ear cropping.
- (4.) Using with any felonious intent the brand of any other person without his authority. For using another's brand or mark without authority.
- (5.) Using any unregistered or unrecorded brand or mark. Or unregistered brand or mark.

And the fact of any such stock being on the run of such person for *two* months without his having given notice to the rightful owner of such stock or to the officer in charge of the nearest police station or to the nearest inspector of such mis-branding destruction defacing alteration cropping cutting or marking or the fact that any stock bearing any such brand as aforesaid had been claimed or used by any person as his property shall be *prima facie* evidence of such person having committed a breach of this section. Evidence of offence.

37. If any stock be found bearing a brand or mark partially or wholly destroyed defaced or altered or if the ear or dew-lap of any stock shall have been cut or cropped contrary to this Act or if any stock be branded otherwise than is provided by this Act or by that hereby repealed then the police or any inspector or Justice or occupant of any land on which such stock may be shall (when such stock do not belong to such occupant) forthwith cause the same to be impounded in the nearest public pound Provided that this section shall not apply to any stock the brands or marks on which have been accidentally blotted in branding or accidentally defaced if the owner of the said stock shall have given notice in writing of such blotching or defacing to the inspector for the district Provided also that this section shall not apply to stock marked previous to the passing of this Act but it shall in the case of all stock said to have been so marked be incumbent upon the owner thereof to prove that such marking took place previous to that date And any occupant or other person failing to comply with any of the provisions of this section shall on conviction for every such offence incur a penalty not exceeding *fifty* pounds. Stock with altered brand or mark to be impounded.
Proviso as to accidental blotching.
As to stock mark previous to this Act.

38. All stock impounded as next hereinbefore provided shall be dealt with as required by the Impounding Act in force for the time being And the poundkeeper of such pound shall not deliver such stock to any person claiming the same unless such person shall make a statutory declaration before a Justice that he has seen the said stock and is the owner thereof and shall have otherwise established his ownership to the satisfaction of some Justice residing in the district wherein the said pound is situated and paid the pound fees and all other charges and expenses due on such stock If any such impounded stock shall not be claimed and released at the expiration of the time fixed by the said Impounding Act for stock of a like description to remain

in

in pound prior to their being offered for sale such first-mentioned stock shall thereupon be sold by the poundkeeper having charge of the same in accordance with the provisions of the said Act and the proceeds of the sale thereof shall be dealt with in the same manner as in the case of any other impounded stock.

X.—TRAVELLING STOCK.

Notice to be given to police or inspector that stock are to start to travel.

39. Every owner shall before starting any travelling stock give the nearest inspector or the officer in charge of the nearest police station notice in writing by messenger or by registered letter of his intention to start such stock containing the particulars set forth in Schedule L hereto. And the said notice shall be given to such inspector or officer within the time specified in Schedule M hereto according to the distance between the yard where such stock are to be collected previous to starting and the station of such inspector or officer.

Owner driving to carry way-bill.

40. Whenever any person being the actual proprietor of any travelling stock or the superintendent of such proprietor intends to act as the drover of such stock he shall provide himself with a way-bill containing the particulars set forth in Schedules N 1 or N 2 hereto according as such stock are horses cattle or sheep. And if it is intended that any person other than such proprietor or his superintendent shall act as the drover of such stock then the owner shall deliver to such person a delivery-note containing the particulars set forth in Schedules O¹ or O² hereto according as such stock are horses cattle or sheep. Provided that if the purchaser of any stock shall not personally take delivery thereof the vendor his superintendent or authorized agent taking delivery of such stock on the purchaser's account shall give a delivery-note as required by this Act to the drover.

Hired drover—delivery-note.

Proviso.

Stock may be examined and way-bill or delivery-note checked.

41. Any Justice officer of police inspector of brands or of sheep or any agent duly authorized by the Minister in that behalf or the occupant of any run through or along which any stock may be travelling if such run is not separated by a sufficient fence from the road by which the same are travelling may require the drover of such stock to produce the way-bill or delivery-note for the same and may compare the brands on such stock with the brands described in such way-bill or delivery-note. And the drover of such stock on being so required shall produce such way-bill or delivery-note as the case may be and he and his assistants shall permit aid and assist such Justice officer inspector agent or occupant to inspect such stock as aforesaid.

Drover to assist at inspection.

Way-bill or delivery-note when correct to be endorsed when not stock wrongly in drover's possession to be impounded.

42. Any Justice inspector officer of police agent or occupant inspecting travelling stock as aforesaid and being satisfied of the correctness of the way-bill or delivery-note thereof shall endorse the same with the place date of such inspection and his signature and address. But should any travelling stock in the possession or charge of any drover not appear in any such way-bill or delivery-note or not be fully and accurately described therein or should such Justice inspector officer of police agent or proprietor have any reasonable grounds for suspecting that any stock in the possession or charge of any drover have been stolen such Justice officer of police inspector agent or occupant may if necessary cause the stock so omitted inaccurately described or suspected of being stolen to be impounded in the pound nearest to the place where the said inspection was made. And such stock shall be kept in such pound at the expense of their owner until they shall be claimed by him and the pound and other expenses thereon shall have been duly tendered and paid and a complete and accurate way-bill or delivery-note shall have been produced to the keeper of such pound and the other requirements of this Act with regard to such stock complied with.

43. Should the way-bill or delivery note of any travelling stock be accidentally lost or destroyed the drover in charge thereof shall forthwith apply in writing to the nearest inspector of brands or to the officer in charge of the nearest police station for an interim way-bill or delivery-note as the case may be and such inspector or officer shall on application grant an interim way-bill or delivery-note for such stock containing the particulars set forth in Schedules P¹ or P² hereto according as such stock are horses cattle or sheep And the drover so applying shall for such way-bill or delivery-note pay to the said inspector or officer the sum of *one* pound and also any expenses incurred by such inspector or officer in ascertaining the brands of such stock.

Drover losing way-bill or delivery-note to apply for interim one to police or inspector.

44. Every drover on arrival at his destination shall with the stock in his charge deliver his way-bill or delivery-note to the consignee therein mentioned.

Way-bill or delivery-note to be handed over to consignee.

45. Notwithstanding anything contained in the "Sheep Act of 1866" or in any regulation made thereunder every drover intending to drive any stock on or across any run having an area of not less than *two thousand* acres where stock of the same description as the said first-mentioned stock are kept or depastured or along any road intersecting or forming the boundary-line of any such run shall unless the said road be separated from such run by a sufficient fence give the occupant thereof not less than *twelve* hours nor more than *seven* days notice in writing of such intention by delivering the same at such proprietor's house or homestead or at the head station on such run And every such drover shall also in like manner deliver a like notice at every police station and at the residence of every inspector situated within mile of the road by which such stock are travelling Provided that every such notice shall state the day and hour when the drover intends that such stock shall first approach or cross the boundary of the said run or pass the said station or residence and such stock shall not approach nor cross such boundary nor pass such station or residence more than *six* hours sooner nor *six* hours later than the hour specified in such notice.

Drover in certain cases to give notice of approach of stock in his charge to proprietor of runs police and inspectors.

46. Every drover or other person who shall fail to comply with any of the requirements of the *seven* last preceding sections hereof shall be liable on conviction for every such offence to a penalty not exceeding *fifty* pounds or at the discretion of the Bench any sum not exceeding *ten* pounds for every head of such stock if the number exceed *three* head.

Penalty for breach of seven preceding sections.

47. Any drover who shall have in his charge any stock not described or not fully and accurately described in his way-bill or delivery-note or any stock suspected of being stolen or who shall not produce a way-bill or delivery-note when called upon as aforesaid may be apprehended and brought before any Petty Sessions by the police or by any inspector or Justice and such drover shall on conviction for every such offence incur a penalty not exceeding *fifty* pounds or at the discretion of Justices any sum not exceeding *ten* pounds for every head of such stock if the number thereof exceeds *five* head And all stock fully and accurately described in the way-bill or delivery-note of any drover apprehended as herein provided may be forwarded to their destination by order of any Justice at the risk and expense of the owner of such stock.

Drover having stock wrongly in his possession may be apprehended.

Stock correctly in way-bill or delivery-note to be sent on by Justice.

48. If any person purchase or receive from a drover any stock not described or incorrectly described in any such way-bill or delivery-note or any stock for which the drover such drover not being the actual owner nor the agent nor superintendent of the actual owner thereof shall not produce a written authority from such owner to the said drover to dispose of such stock or if any person receive into his yard or premises or knowingly permit or allow to be placed therein any stock which there are reasonable grounds for supposing have been stolen he shall on conviction in a summary way for every such

Penalty for purchasing or receiving stock not correctly in way-bill or delivery-note.

such offence be liable to a penalty not exceeding *fifty* pounds or at the discretion of the Justices any sum not exceeding *ten* pounds for every head of such stock if the number exceeds *five* head.

Duties of auctioneers and salesmen on receipt of stock.

49. Every auctioneer or other person receiving stock for sale shall—

- (1.) Demand and receive from the drover along with the stock in such drover's charge the way-bill or delivery-note for the same and shall give the drover a receipt for such stock and way-bill or delivery-note.
- (2.) He shall carefully preserve such way-bill or delivery-note for *twelve* calendar months after the receipt thereof.
- (3.) He shall enter in a book to be kept by him for that purpose all the particulars set forth in such way-bill or delivery-note and also the date of the arrival and sale of such stock and the name and address of the purchaser thereof.
- (4.) He shall take from the purchaser a receipt for the said stock and
- (5.) He shall produce for inspection such book way-bill delivery-note or receipt when required by the police or by any inspector or Justice.

And every auctioneer or other person who shall not comply with any of the provisions of this section shall on conviction for any such offence be liable to a penalty not exceeding *one hundred* pounds.

XI.—REGISTRATION OF SLAUGHTER-YARDS INSPECTION OF HIDES &C.

All slaughter-yards except those licensed to be registered with police.

50. Every slaughter-yard shall be registered by the occupant thereof at the nearest police station and such occupant shall furnish a particular description of the proposed slaughter-yard and shall pay a fee of *one* shilling for every such registration. Provided that the provisions of this Act relating to the registration of slaughter-yards shall not apply to slaughter-houses or places licensed under the Act fifth William the Fourth number one or any Act amending the same.

All stock to be killed at registered or licensed slaughter-houses—Exceptions.

51. No stock shall be slaughtered at any yard or place other than at a slaughter-yard registered or licensed as aforesaid except in the case of accidents to any stock and in the case of stock killed at out stations by shepherds or stockmen for rations or stock killed for rations by drovers while travelling or to wild or unmanageable stock shot on the run and not skinned or dressed.

Duties of occupant of registered slaughter-yard.

52. Every occupant of land having a registered slaughter-yard thereon who shall at any time after the expiration of *three* months after the passing of this Act slaughter or cause or permit to be slaughtered at such yard any stock shall do permit and cause to be done the following acts matters and things namely :—

To keep a description of stock slaughtered.

- (1.) He shall in a book to be kept by him for that purpose make a clear and legible entry of all stock intended to be slaughtered specifying in such entry the particulars set forth in Schedule Q hereto and shall when required produce such book to any Justice inspector of stock or officer of police.

To skin the whole body except the legs

- (2.) He shall in dressing any head of stock take off the whole of the hide thereof including that of the head ears and tail but exclusive of that on the legs below the knee.

To keep the skin for fourteen days when dried.

- (3.) He shall if such hide be intended to be salted cured or dried carefully preserve the same entire and in good condition with the hair or wool and horns (if any) and the brands and marks thereon at the time of slaughtering such stock for not less than *fourteen* days thereafter or until such hide shall have been inspected by an inspector or by the police.

(4.)

- (4.) He shall if any hide be not intended to be salted cured or dried keep the same entire and in good order and condition as last aforesaid for not less than *forty-eight* hours after the slaughter of such stock or until the said hide shall have been inspected by the police or an inspector. To keep skin for forty-eight hours when sold green.
- (5.) He shall also when required at all reasonable times during the said respective periods of *fourteen* days and *forty-eight* hours produce any such hide and ears and horns (if any) to the police or to any inspector or Justice and allow the same to be marked as inspected. To produce skin when required by the police inspector or Justice.
53. The purchaser of any such hide commonly known as a green hide or his agent shall in a book to be kept for that purpose enter a full and accurate account of the marks and brands on such hide and of the colour and sex of the animal from which the same was taken and shall when required produce such book and such hide if in his possession to any inspector Justice or member of the police. Provided that this section shall not apply to the hides of stock slaughtered at a slaughter-house licensed as aforesaid. Duties of purchaser of green hides. Hides from licensed slaughter-houses.
54. If any person shall fail to comply with any of the provisions contained in any of the four last preceding sections of this Act or slaughter any stock in any yard without having first obtained the sanction of the occupant thereof he shall for every such offence incur a penalty not exceeding *fifty* pounds. Penalty for breach of four preceding sections.

XII.—ILLEGAL POSSESSION OR USE OF STOCK OR MEAT.

55. If any witness shall make oath before a Justice of the Peace that there is reasonable cause to suspect that any stolen stock or the skin or carcase of any stolen stock is in any yard paddock dwelling-house or other place it shall be lawful for such Justice to issue a warrant directing any inspector or police officer to search such yard paddock dwelling-house or place and if any stock or the skin or carcase of any stock so suspected to have been stolen shall be found in the possession of any person in or at such yard paddock dwelling-house or other place specified in such warrant with the knowledge of such person it shall be lawful for any Justice before whom such person shall be brought (unless such person shall satisfy the said Justice that he came lawfully by the same) to commit such person to the nearest gaol or lock-up in which he can be conveniently confined in order that he may be brought forward for trial at the next Court of Petty Sessions (unless he enter into such bail with one or more sufficient securities as may be required for his appearance before such Court which any Justice is hereby authorized and required to take) and if such person so apprehended after proof upon oath of such finding of such stock skin or carcase as aforesaid shall not satisfy the Justices sitting at Petty Sessions in open Court that he came lawfully by the same he shall forfeit and pay any sum not exceeding *one hundred* pounds together with the costs and charges previous to and attending his conviction. Penalty for possession of stolen stock or carcase.

56. If any person shall take work drive or in any manner use any stock the property of any other person without the consent of the owner or other person in lawful possession thereof such person shall on conviction for every such offence incur a penalty not exceeding *one hundred* pounds or any sum not exceeding *ten* pounds for every head of stock so taken worked driven or used or at the discretion of the Court be imprisoned for any period not exceeding *twelve* months. Penalty for taking using working or driving another's stock.

XIII.—RESTITUTION OF STOLEN STOCK.

Justice may issue a warrant to apprehend person having stolen stock and to seize stock.

57. Any Justice upon complaint or information on oath that any stock suspected to have been stolen are in the possession of any person may issue a summons to such person requiring him to appear at a time and place mentioned in such summons before any two Justices or in the discretion of such Justices may issue a warrant in the first instance to apprehend and bring such person at a time and place mentioned in such warrant before any two Justices and also if such Justice shall think fit may issue his warrant to seize any such stock suspected to have been stolen and detain the same until such information or complaint shall have been disposed of.

On appearance of person summoned or on proof of service Justices may order restitution.

58. If on the appearance of such person so summoned or apprehended or on proof of the service of such summons personally or by leaving the same at the usual or last known place of abode of such person *two* days before he was required to appear it shall seem to such Justices after hearing evidence on oath or affirmation that such stock were stolen within the period of *one* year preceding from the person making complaint or laying the information it shall be lawful for such Justices to adjudge him to be the owner of such stock and to issue a warrant under their hands and seals to seize such stock wheresoever the same may be found and to restore and give peaceable possession thereof to the person so adjudged to be the owner as aforesaid. Provided always that nothing herein contained shall be construed or taken to discharge any person from any criminal prosecution for felony to be afterwards brought against such person or to prevent the Justices committing such person for trial or to deprive any person of any right he may have or might have had before the passing thereof.

Vendee who delivers stock or pays back sum received may recover from vendor.

59. Any person from whom or from whose possession any stock shall have been taken under any such warrant as last aforesaid may recover from his vendor the amount paid by him as the purchase money of such stock and any vendor of such stock who may repay or be compelled to repay the purchase money he may have received for such stock may in like manner recover from his vendor the amount he may have paid such last-mentioned vendor as the purchase money of such stock and it shall be lawful for any Justice of the Peace upon complaint on oath made by any such person or vendor as aforesaid or any person on his behalf that such person or vendor has paid for such stock and that such stock have been taken from him or that he has paid or been compelled to repay the amount he received to summon the party selling to such last-mentioned person or vendor to appear before any two Justices or to issue his warrant for the apprehension of such party selling and upon his appearance or in default thereof upon proof of the due service of such summons such Justices are hereby empowered to examine the parties or either of them and their respective witnesses (if there be any) upon oath touching the purchase and payment of the amount of the purchase money for such stock and the restitution of the stock purchased by such complainant or the repayment of the sum received by him and to make such order for the repayment of that amount with the costs incurred in the recovery thereof as shall to such Justices appear reasonable.

If amount be not paid defaulter may be imprisoned.

60. In case the amount so ordered to be paid shall not be paid forthwith or at the time to be appointed by such Justices the same shall be levied by distress and sale of the goods and chattels of the party on whom such order for payment shall be made and if such

such distress cannot be made or shall prove insufficient such Justices are hereby empowered to cause the party upon whom the order shall be made to be apprehended and committed to any gaol or house of correction there to remain for any period not exceeding *three* months unless payment of the said amount and of all costs and expenses attending the recovery thereof shall be sooner made. Provided that the execution of such order shall be stayed for such time as such Justices may order if the person from whom or from whose possession such stock may have been taken or on whom such order for payment shall be made shall forthwith enter into a bond to the complainant with two sufficient sureties to the satisfaction of such Justices and in such amount as they may think reasonable conditioned to prosecute to conviction within the time aforesaid the person guilty of having stolen such stock and such conviction within the time aforesaid shall supersede the order so made by such Justices as aforesaid and no subsequent proceedings shall be had thereon or upon the said bond. Provided also that it shall be lawful for such Justices on the application of such party and notice to the said complainant to extend the time aforesaid.

XIV.—MISCELLANEOUS.

61. Every poundkeeper Deputy Registrar or Inspector or Clerk of Petty Sessions shall keep a copy of the latest edition of the Brand Directory and copies of the *Gazettes* containing the quarterly lists and monthly notifications of registered brands not included in such directory and shall on the receipt of a fee of one shilling permit a search in such Brand Directory and *Gazettes* at all reasonable hours. And every poundkeeper Deputy Registrar Inspector or Clerk of Petty Sessions who shall fail to comply with any of the requirements of this section shall on conviction for every such offence incur a penalty not exceeding *five* pounds.

Poundkeepers
Inspectors and
Clerks of Petty
Sessions to keep
Brands Directories
open for inspection.

62. When any stock are impounded the poundkeeper shall forthwith send notice thereof to the proprietor of the brand which shall appear last in order on such stock as by this Act provided. And when the poundkeeper has any reason to suppose that such stock belong to a person other than the proprietor of the said brand such poundkeeper shall in every such case send notice of the impounding both to the proprietor of such brand and the supposed owner of such stock. Every poundkeeper who shall neglect or delay to send any such notice shall on conviction for every such offence incur a penalty not exceeding *ten* pounds.

Notice of impounding
to be sent to proprie-
tor of last brand and
supposed owner.

63. The Registrar of Brands shall allot to each public pound throughout the Colony now established or which may hereafter be established a brand for such pound and shall register the same accordingly. And the keeper of such pound shall on the sale of any horses or cattle impounded in such pound brand the same with such brand on the portions and in the order prescribed by this Act in such manner as to show that the said brand is the last brand at that time imprinted on such horses or cattle. Any poundkeeper who shall fail to comply with the provisions of this section shall on conviction for every such offence incur a penalty not exceeding *fifty* pounds.

Brand to be allotted
to each pound and
stock sold to be
branded with it.

64. Every drover or other person who shall place any stock in a paddock yard or other enclosure without the consent of the occupant thereof shall on conviction for every such offence incur a penalty not exceeding *fifty* pounds. Provided that this section shall not apply to Crown lands within half a mile of any road on which travelling stock have right of depasturing.

Penalty for placing
stock in yard or other
enclosure without
occupant's consent.

Penalty for false entry forging uttering &c. &c.

65. Any person who shall knowingly insert or cause or permit to be inserted any false entry of any matter relating to any brand or mark on stock in any receipt certificate way-bill or delivery-note or in any extract therefrom or in any book or paper containing any entry respecting any stock or who shall forge or alter or shall offer or utter dispose of or put off any receipt certificate way-bill or delivery-note knowing the same to be forged with the intent to defraud or who shall wilfully or unlawfully destroy deface injure or alter or cause or permit to be destroyed defaced injured or altered any such receipt certificate way-bill delivery-note or extract with such intent shall on conviction for every such offence be deemed guilty of a misdemeanor and shall be liable at the discretion of the Court to imprisonment with or without hard labor for any period not exceeding *three* years.

XV.—REGULATIONS.

The Governor and Council may make regulations.

66. The Governor may from time to time make any regulation not repugnant to the true intent and meaning of this Act for carrying out the provisions thereof with respect to any of the following matters or things namely—

- (1.) The powers and duties of Inspectors and Registrars of Brands.
- (2.) The mustering of stock and giving notice to neighbouring owners.
- (3.) The mode of registering and recording sheep and distinctive brands and marks.
- (4.) The registration of wool bale brands.
- (5.) The form and signification of brands and marks and the mode and order of branding and marking.
- (6.) The droving and sale of stock.
- (7.) And all other matters of detail necessary for carrying this Act into effect.

Penalty for breach of Regulations.

And all such Regulations shall on being published twice in the *Government Gazette* have the full force of law and shall be laid before Parliament And any person offending against or failing to comply with any such Regulations shall for every such offence incur a penalty not exceeding *twenty* pounds.

XVI.—RECEIPTS AND EXPENSES.

Disposal of fees and moneys collected under the Act.

67. All moneys collected by the Police Force under this Act as fees for interim way-bills and delivery-notes and the registration of slaughter-yards shall be paid into the credit of the Police Reward Fund And all fees and expenses as well as all moneys of every description collected by the Registrar of Brands or by the Inspectors of Brands shall be paid to the Colonial Treasurer or to such other person as shall be authorized by him to receive the same and shall together with all moneys which may on this Act coming into force be at the credit of the "Registration of Brands Account" at the Treasury be carried over to the Trust Fund to the credit of the said account.

How expenses incurred in carrying out the Act are to be paid.

68. The Colonial Treasurer shall under warrant of the Governor out of the "Registration of Brands Account" aforesaid or in the event of the funds at the credit of that account being inadequate out of such moneys as may be appropriated by Parliament for the purposes of this Act pay all necessary expenses incurred in carrying out the provisions of this Act Provided that all such appropriations shall be recouped to the Consolidated Revenue Fund when there is a sufficient balance to the credit of the said "Registration of Brands Account."

XVII.—

XVII.—LEGAL PROCEDURE.

69. Any Brand Directory as herein defined purporting or appearing to have been published by the Government Printer shall in any action suit prosecution or trial be received without proof as *prima facie* evidence of the statements matters and things contained therein.

Directory to be *prima facie* evidence.

70. Where by any of the provisions of this Act it may be necessary to give any notice or send any document to any person such notice or document may be communicated or sent to such person either by registered letter or delivered to him personally or left at his usual or last known place of abode or business.

Mode of giving notice required by the Act.

71. For the purposes of any prosecution or action under this Act any registered brand upon any horses or cattle and any recorded brand or mark on any stock in the district in which the same was recorded but not elsewhere shall be *prima facie* evidence of the ownership of such registered brand or of such recorded brand or mark and of the stock bearing such brand or mark being the property of the proprietor of such brand or mark. And proof that stock are branded with a brand found in the possession of or known to belong to any person or that stock are marked with a mark known to have been used by any person shall if such stock are depastured on the run or among the stock of any such person or are usually claimed by such person be *prima facie* evidence that such person branded or marked such stock.

For the purposes of the Act registered and recorded brands and marks to be *prima facie* evidence of proprietorship of brand and stock.

72. On a person being charged with stealing any stock it shall be competent for the officer prosecuting on behalf of the Crown to give evidence that the brands or marks appearing upon the stock alleged to have been stolen are the brands or marks of the person charged on the information to be the owner of such stock or of some person through whom such alleged owner claims and such evidence may if in the opinion of the Court the other circumstances proved warrant such a course be taken into their consideration in determining the question of ownership of such stock.

In prosecutions for stock stealing registered and recorded brands and marks to be taken so far as proof of ownership of stock.

73. Every penalty for any offence against this Act or any regulation thereunder and any fees charges or moneys made payable hereby where not otherwise provided for may be recovered at any time within *twelve* months after the date of the commission of such offence or of the payment of such fees charges or moneys having become due in a summary way before two or more Justices of the Peace who may hear and determine the matter. And the penalty inflicted by such Justices shall be levied by distress and sale of the offender's goods and chattels and in failure of distress shall be enforced in manner provided by the Act

Mode of recovery of penalties and of moneys payable under the Act.

and any Acts amending the same. And all penalties collected under this Act shall be paid one half to the informer and prosecutor and the other half to the credit of the Brands Act Fund. Provided that stock in the charge of any drover shall for the purposes of this Act be and be deemed to be the goods and chattels of such drover.

74. Upon non-payment of any fine forfeiture or penalty under this Act either immediately or within such period after the conviction as such Justices at the time of such conviction shall appoint and where no mode of proceeding is hereby prescribed such Justices may commit such offender to any gaol or house of correction in the said Colony with or without hard labor for any period not exceeding *three* months where the sum remaining unpaid shall not exceed *ten* pounds *four* months where the said sum shall exceed *ten* pounds and not exceed *twenty* pounds and *six* months where the said sum shall exceed *twenty* pounds unless the said sums shall be sooner paid.

On non-payment of penalty offender may be imprisoned.

Justices may send cases under this Act to higher Court.

Juries in trials for felony may give verdict for misdemeanor.

Convictions under this Act or remissions to bar further proceedings.

Actions against Justices Inspectors or Police.

75. If the Justices before whom any person shall be brought under this Act charged with the offence of illegally possessing using branding or marking another person's stock shall from the evidence given against such person be of opinion that there ought to be a prosecution for felony it shall be lawful for such Justices to abstain from adjudicating in a summary manner thereon and to deal with the case as one to be prosecuted at the Supreme or Circuit Court or Court of General Sessions And if the jury upon the trial of any person charged before any Court with the offence of stealing any stock shall be of opinion that such person did not commit the felony with which he is charged but did commit the misdemeanor before mentioned it shall be lawful for such jury to acquit such person of the felony and to find him guilty of such misdemeanor and he shall thereupon receive sentence accordingly although such person may never have been charged or accused of such misdemeanor before any Justices or otherwise.

76. If any person convicted as last aforesaid under this Act shall have paid the sum adjudged to be paid together with costs if awarded under such conviction or shall have received a remission thereof from the Crown or shall have suffered the imprisonment awarded for the non-payment thereof he shall be released from all further or other proceedings for the same cause.

XVIII.—SAVING CLAUSE.

77. No action at law shall lie against any Justice Inspector officer of police owner or occupant for any matter or thing done or commanded to be done by him in pursuance of the provisions of this Act unless there be proof of corruption or malice and unless such action be commenced within *three* calendar months after the cause of action or complaint shall have arisen and if any Justice Inspector or officer of police shall be sued for any matter or thing done in pursuance of this Act he may plead the general issue and give the special matter in evidence.

CIRCULAR TO SEVERAL CHAIRMEN OF THE BOARDS OF SHEEP DIRECTORS.

Stock Branch, Department of Lands,
Sydney, November, 1874.

SIR,

I am directed by the Minister for Lands to forward to you a copy of a Bill for the prevention of the losses which now arise through the straying and stealing of stock, *i.e.*, the consolidation of the Brands and Cattle Stealing Prevention Acts,—and to request that when you have perused the proposed Bill, and given your co-directors an opportunity of doing so, you will call a meeting of your Board, at which the principal stockowners in your district should be invited to attend for its discussion clause by clause; and that you will favour me, on or before the 1st January next, with a copy of the resolutions which may be passed at the meeting with respect to the Bill or any of its provisions.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

34.

Albury	The following substituted:—"Every owner possessed of horses, cattle, or sheep shall give notice to all occupants who are possessed of any horses, cattle, or sheep, whose land approaches at any point within one mile of that occupied by such owner, not more than ten nor less than five days' notice in writing, delivered personally or by registered letter through post, of all musters for collecting stock of any kind for any purpose whatsoever; and such owner shall permit the said occupants or their employés to attend and assist at such musters. And any owner or other person failing to comply with the provisions of this section shall, on conviction of every such offence, incur a penalty not exceeding one hundred pounds, or, at the discretion of the Bench, not exceeding twelve months' imprisonment."
Bathurst	Against.
Brewarrina	Against.
Corowa	The following amendments suggested:—That in the second line of clause 34 the blank should be filled by the number "one," and should read thus: "Or one or more sheep

Corowa (continued) ...	shall, &c."; that in the fifth line of clause 34 the word "five" should be altered to "one," and read thus: "Not more than ten nor less than one clear day's notice, &c."; and that in the ninth line of the same clause the word "branded" should be omitted, and should read as follows: "Sheep intended to be fire-branded or lambs to be cut and docked. And such owner, &c."
Dubbo	For, with a slight alteration.
Glen Innes	Insert twenty-four hours instead of five days; but doubt if clause be practicable in settled districts.
Goulburn	Not practicable in settled districts, and only so in pastoral districts in the case of lots of 300 sheep and upwards. Time should be fixed at one clear day. Permission to attend musters struck out.
Grafton	Against.
Port Macquarie	Insert two days instead of five.
Port Stephens	For.
Wentworth	Fill up blanks with "ten horses, ten cattle, and fifty sheep," and after "branded" insert "or shorn."
Young	Alter clause to read "not more than five days nor less than twenty-four hours."

35 (a).

Albury	For.
Bathurst	Against.
Brewarrina	Against.
Corowa	For.
Dubbo	This is a formidable looking clause without doubt, and we think all the inspectors in the country would fail to make it intelligible. In branding horses no part of the body which the saddle touches should be used. Then the penalty proposed by this

Dubbo (continued)	clause for putting your brand, say 3 inches from another brand on the same beast, is something more than extravagant.

36 (1).

Albury	For.	Dubbo (continued) ...	affected in this way, and the usual mode is to take the ear off. So in purchasing a lot of sheep the owner puts his ear-mark on them, if possible. Under this clause he would be liable to a heavy penalty for so doing. Further, nine out of every ten persons found guilty of stealing will suffer <i>six months'</i> imprisonment sooner than pay £100.
Bathurst	Against.		
Brewarrina	Against.		
Corowa	For.		
Dubbo	This clause, as it stands, is a terrible one. Ear-marking cattle and sheep no doubt requires attention, but to subject a person to a penalty of £10 for every head of stock (unless stolen) the ear of which he takes one-third, half, or whole off, would be a hardship indeed. Sheep, for instance, are very liable to cancer on the ear, and if the ear is taken off near the head it frequently gets well, and the sheep is cured. I have known as many as 100 in 10,000	Glen Innes	For.

Bathurst	Against.	Port Macquarie	For.
Brewarrina	Against.	Port Stephens	For.
Corowa	For.	Wentworth.....	For.
Glen Innes	Impossible to give notice of blotching to Inspectors.	Young	Stock so frequently blotch in branding—both horses, cattle, and sheep—which is not observed until next muster that we deem this clause severe, and should only apply to brands being placed over others for the purpose of defacing.
Goulburn	There would be a great hardship sometimes imposed where the pound was a long distance away. A notice to an Inspector or the police was sufficient where the pound was more than 10 miles distant, while in such cases a declaration of ownership might be made to the person giving the notice.		

38.

42.

Albury	This clause substituted: "Any person travelling with stock, horses, cattle, or sheep shall, previous to entering of the scab districts with such stock, give notice in writing either personally or by registered letter to the Inspector of the District at least three days before entering such scab district, and should the Inspector not attend at the boundary of such district, or as near thereto as possible, then it shall be necessary for the said owner to give notice in writing to the nearest police officer to the boundary of the said scab district. The said Inspector or police officer as the case may be shall first demand the way-bill or delivery-note, and then thoroughly inspect the whole of such stock, and compare the brands and descriptions with the delivery-note, and should the said Inspector or police officer be satisfied that all the stock are duly described in the said way-bill, then in that case the delivery-note shall be indorsed by the said Inspector or police officer as correct. And any person failing to comply with this section of the Act shall on conviction before any two Justices forfeit and pay any sum not exceeding one hundred pounds, and in default of immediate payment be liable to six months imprisonment. But should the said Inspector or police officer have reasonable grounds to suppose that there are cattle, sheep, or horses in the said mob of such owner not described in the said way-bill then it shall be lawful for the said Inspector or police officer to take possession of the said stock and place them in the nearest pound to the place where such inspection was made, and the said Inspector or police officer shall have power to apprehend the owner or person in charge of such stock, and to bring the said party or parties before the nearest Bench of Magistrates there to be dealt with as such Bench of Magistrates may deem fit."	Albury—continued.

 Brewarrina..... Against.
 Corowa..... For.
 Dubbo..... Not practicable. (See 50, 51, and 52.)
 Glen Innes..... For.
 Goulburn..... For.
 Port Macquarie..... For. "Clause 53 was highly approved of in so far as to compelling every purchaser of a green hide to keep an inventory of such hides; but from the fact of our points of egress from these Districts being chiefly by sea, it was suggested that some plan should be adopted by which a descrip-

tion of such hides being shipped should be open to inspection. It is not likely that masters of vessels would undertake to examine every hide brought for shipment, but if they were made subject to a penalty for receiving hides without a certificate of their being entered on the books of the Inspector of Slaughter-houses or Deputy Registrar of Brands, it would act as a check to the at present indiscriminate shipment of stolen hides."

SCHEDULES.

All agreed to except K 1—

Albury	Should be altered as follows:—	Young	Portion I near shoulder.
	Portion I embracing near shoulder.		" II off shoulder.
	" II " off shoulder.		" III near rump.
	" III " near neck.		" IV off rump, or if room,
	" IV " off neck.		2in. underneath 1, 2, 3, & 4.
	" V " near saddle.		" V near saddle and ribs.
	" VI " off saddle.		" VI off saddle and ribs.

K 2.

Albury	Portion 1 near rump and thigh.	Young	The person first branding should brand on the near rump. 2nd, 2in. underneath. 3rd, 2in. underneath second brand. When near rump filled up as above, then the next person branding shall take the off rump and brand following brands similar to those on near rump. The same plan of branding to be adopted on near back, then off back, then near loin, then off loin.
	" II off rump and thigh.		
	" III near back and ribs.		
	" IV off back and ribs.		
	" V near shoulder.		
	" VI off shoulder.		
	" VII near loin.		
	" VIII off loin.		

EXPLANATORY NOTES ON PROPOSED STOCK STRAYING AND STEALING PREVENTION ACT.

I.—PRELIMINARY.

1. Provides for the commencement and title of the Bill.
2. Repeals the existing Cattle Stealing Prevention Act, being 17 Victoria, No. 3, and the Brands Act of 1866, 30 Victoria, No. 12, with the Amended Brands Act of 1873, 37 Victoria, No. 17, to amend and re-enact them as one measure—the proposed Bill.
3. Is the interpretation clause.

II.—INSPECTORS OF BRANDS.

4. Under this section the Governor in Council may appoint inspectors of brands with the same powers as the police for the purposes of the Act. They would, in most cases, be the inspectors of stock.
5. Enacts that police officers are to be *ex-officio* inspectors of brands and defines inspectors' powers. The duties of the inspectors of brands would be to see that the stock are branded in accordance with the Act—to look after the registration of slaughter-yards—and to enforce the droving and other provisions of the Act. Being a special measure for a special purpose, special officers should be appointed to see its provisions duly carried out, otherwise they would not be so, and the Act would to a great extent prove a dead letter. The powers here proposed to be conferred upon inspectors and the police are absolutely necessary if they are to be put in a position to do their duty effectively, and are no greater than those already possessed by them under the Sheep and Police Acts.
6. Provides that inspectors of licensed slaughter-houses are to furnish the inspectors of brands with list of brands of stock slaughtered at these slaughter-houses. As the inspectors of brands are better acquainted with the owners of the different brands than the police they would be more likely to detect anything wrong or suspicious in the slaughtering of stock at the various slaughter-houses and would at once communicate with the owner of the brand when they saw anything to arouse their suspicions. The same list would answer both for the inspector and the Bench, it being sent in the first instance to the inspector who would examine it and report to the Bench. These lists are now regularly taken by the police, but not as a rule turned to any practical account.

III.—BRANDS AND BRANDING IRONS.

7. Enacts that an owner is only to have one brand, unless he has more runs than one not contiguous, when he may have a brand for each. The object of this is to circumscribe the scope of alteration to the one brand, and thus stop brand altering.
8. Provides that the horse and cattle brands shall be the same. There is no valid reason why an owner should be allowed to use one brand for his horses, and another for his cattle; but there are a good many reasons why he should use the same brand for both, though perhaps of a different size.
 - (1.) If different brands for the two classes of stock are allowed, one owner might have a brand for horses and another the same brand for cattle; and it will easily be seen that this would not only give rise to confusion but would put it within the power of either party to get the other into trouble by branding stock of the description for which his brand was not intended, thereby leaving it to be inferred that the other owner had imprinted the brand with the view of appropriating the animal on which it appears.
 - (2.) It is better to have the horse and cattle brands both the same, as owners and stockmen would frequently be led to discover the owner of cattle through recollecting his horse brand, and *vice versa*.
 - (3.) Separate registers for horses and cattle make the work of registration very nearly double what it would be with one register for both, and doubles the expense.
9. Provides that blacksmiths making brands shall register themselves as brandmakers at the nearest police station, and mark and keep account of the brands they make. Objections have been taken to this section, but they do not seem of much weight, as all the blacksmith would have to do would put him to very little trouble; and there is no doubt but that the clause would be very beneficial, as people cannot use unregistered brands if they are not made. It is not, however, a very material one, and if the feeling be against it it could be omitted.
10. Imposes a penalty for having or using unregistered brand or a brand not authorized by the Act.

IV.—REGISTRATION OF HORSE AND CATTLE BRANDS.

11. Provides that the Chief Inspector of Stock is to be Registrar of Brands; and for the appointment of Deputy Registrars.
12. Lays down the mode of applying for brands, and how the Registrar is to acknowledge the receipt of the application, and to enter it.
13. Provides that if a brand applied for appear not to be similar to any already registered, it be advertised three times in the Gazette, to enable owners who may wish to do so to object to its allotment to the applicant.
14. Enacts that if no objection be made within a month it is to be registered to applicant. By the present Act this cannot be done under two months, in addition to three months or nearly three months lost before the brands can be published.
15. Owner may, with the sanction of Registrar, obtain an alteration of his brand.
16. If brand be similar to one already registered the Registrar will suggest modification, which the applicant must accept, or within a month propose another dissimilar to any brand already registered; otherwise modification suggested will be registered to him.
17. Registrar may refuse to register, and may alter brands already registered, which are similar to any brands used in any of the adjoining colonies, in order that the brands in the two colonies may be quite dissimilar, and that an owner in either colony may be able, in prosecutions for cattle-stealing, to say that neither in this colony nor in Queensland is there a similar brand to his. The Queensland Government adopted a system of brands (two letters and one numeral in a line) different from that in use in this colony, on the understanding that no more brands of that description (a few had been registered) were to be allotted; and it is to carry out this arrangement that this section has been framed.
18. Registrar may refuse to register, and may also alter brands likely to be mistaken for, or easily altered into, brands used in the same locality. The reason for taking this power will be at once seen, when it is recollected that there are some brands so much alike as to be certain to create confusion, if they were allowed in the same locality. This power is also necessary for another reason. Dishonest persons have in some districts purposely obtained brands as similar as possible to those of some stockowners in their neighbourhood, for the purpose of changing these brands into their own.
19. Brands applied for may be used previous to the registration being complete. The object of this clause is to meet a case where a person, who has not previously registered a brand, purchases stock, and requires to brand them at once. Although he cannot obtain his certificate of registration and his right to the brand allotted to him, is subject to challenge for a month after its advertisement in the Gazette—in ninety-nine cases out of every hundred it would never be so—for the allotment was only made after search had been made in the register, and after the brand was found to be dissimilar to any brand already registered.
20. This Act not to affect mortgages on stock or stations.
21. A Horse and Cattle Brand Directory to be published annually. As the cost of this is only two-shillings and sixpence, it ought to be far more generally subscribed to by stockowners than it now is. They would find it convenient and useful on many occasions.
22. Copies of the Gazette containing notifications of brands, and the Brands Directory specially signed by the Registrar, as such to be held to be Register of Brands. The object of this is of course to save the useless trouble and expense of transcribing all the same information as these Gazettes and Directories contain.
23. Copies of the Brand Directories to be furnished to inspectors, poundkeepers, and Clerks of Petty Sessions.

V.—RECORD OF SHEEP AND DISTINCTIVE BRANDS.

24. Provides that all sheep shall be branded with their owner's brand; but travelling sheep, if they bear an owner's brand, need not be branded with that of their then owner. Now that sheep are being turned out, it is imperative that they should be branded. The exception here made in favour of travelling sheep is a safe and necessary one, for it would knock fat sheep about a good deal to rebrand them with the actual owner's brand; and if the sheep bear an owner's brand and the letter T, their ownership can be readily enough established.

25. Enacts that the inspector shall keep two books for the purpose of recording the sheep and distinctive brands and marks used in his district. In order to avoid confusion, and keep the two operations and two classes of brands quite distinct, the registering of these sheep and distinctive brands and marks by the inspector for his district, is called "recording," while the term "registering" is made to apply solely to registration of horse and cattle brands carried out by the Registrar in Sydney. "Distinctive brands" are defined in the "interpretation clause" as "Any brand other than a brand registered with the Registrar of Brands which the owner is empowered by this Act to imprint on any horses or cattle to denote the ownership of an individual member of a family or partnership when a general family or partnership brand is used, or to mark the class, age, or any other circumstance which the proprietor may require to mark." It is believed—indeed, the experience of Queensland, where this recording is now to a considerable extent carried out, has already proved it—that the registering with an officer in the district of the sheep, and distinctive brands and marks, will have a most beneficial effect, for the record will not only be another link in the chain of evidence of ownership, but will put a stop to a good deal of quiet safe duffing now going on by the duffer car-marking the stock till he can safely put his brand upon it. Besides, as regards sheep, on which it is so difficult to put a legible firebrand, it is most essential that each owner's ear-mark should be registered and known, and that no two owners in the same locality should have the same ear-mark.

26. Enacts that owners intending to use sheep and distinctive brands and marks shall intimate their intention to the inspector before using them, and that the inspector shall enter these brands and marks in his record. This would entail but little trouble on owners and no expense, as the inspector would record the brands or marks without charge.

27. Gives the inspector power to modify brands or marks when similar to any already recorded.

28. Empowers the chief inspector to modify these brands and marks in those cases where owners' lands adjoin, though they are in different districts.

29. Provides a penalty for using unrecorded brand or mark, or for committing a breach of any of the provisions relating to these brands.

VI.—TRANSFER OF BRANDS AND MARKS.

30. Lays down the mode of applying for transfer of registered horse and cattle brands.

31. Provides how transfer is to be carried out and registered.

32. Gives the mode of transferring and recording sheep and distinctive brands and marks.

33. Provides that where an owner transfers his run, but not all his stock nor his brand, to the purchaser, the purchaser must rebrand the stock he gets with another brand.

This might be specially provided for by conditions of sale; but it is sometimes overlooked, and it is better to be settled by law.

VII.—MUSTERING.

34. Enacts that the owner possessed of or more horses, or more cattle, or or more sheep should give notice to owners of neighbouring land with a similar number of either description of stock of all musters for weaning or branding sheep, and of all musters for the purpose of removing any sort of stock from such land.

This is a very difficult subject to deal with, but at the same time something ought, if possible, to be done in regard to it, in order to make those owners who will not now behave in a neighbourly manner to their neighbours do so.

It is a matter of frequent occurrence for horses, cattle, and sheep (especially sheep now that they are turned out) to stray on to neighbouring runs, and the proprietors of these runs, even when they are not so dishonest as to wish to appropriate these stragglers, not unfrequently refuse to put themselves to any trouble to enable the owners of the stray stock to recover them. In this way considerable numbers of lambs and sheep are lost, and even cattle and horses.

Then, again, when owners have dishonest neighbours, and those neighbours are not obliged to give notice of musters, not only would stray stock very seldom be recovered, but such neighbours as these might steal any number of stock without being detected, as no one sees what they are doing in mustering, weaning, branding, or sending away stock.

It was to remedy this state of things that the clause was proposed, and it would no doubt do so to a large extent; but while it did it would at the same time entail considerable trouble in all parts of the Colony, and in some parts—such as the more thickly-settled portions—it is feared it would be altogether impracticable, except in the case of the muster of comparatively large lots of stock for removal from their runs, say 50 horses, 100 cattle, and 200 or more sheep.

Perhaps, however, the proposed clause would be still more improved—

First. By shortening the time for giving notice of musters to not more than five days nor less than twenty-four hours.

Second. By confining the scope of the section to mustering for weaners and sheep for branding.

Third. By omitting the portion empowering persons to assist at musters.

Fourth. By inserting a proviso enabling neighbours, by mutual agreement, to dispense with these notices.

Fifth. By empowering the Governor in Council; from time to time, to make such alterations in the section, by regulations, as might be found necessary.

VIII.—BRANDING AND MARKING.

35. Provides how brands are to be imprinted on stock.

Horse and Cattle Brands.

(a.) Fixes, by schedules K 1 and K 2 the portions of the horses and cattle, and the order in which they are respectively to be branded.

It does so for the following reasons:—

(1.) To enable poundkeepers, stockowners, and others, on seeing an animal (if its owner has been careful to brand it as required by the Act), to ascertain whose brand is the latest imprinted on it, and thus to know and send notice to the actual owner. Without such a provision this would, of course, be quite impossible after more than one brand was imprinted.

(2.) It prevents disputes between the owners whose brands are on an animal as to which of them is the rightful owner—the order of branding settling the question.

(b.) By this sub-section breeders are allowed to put the first brand on any portion they like.

This is permitted—First, because it is inconvenient and tends to confusion among neighbouring breeders, especially in the winter season, when the coats of the stock are long, or when their brands are at all similar, to have the breeder's, or first brand, always placed on the same portion. Second, because it would be impossible to place large brands of two lines upon some of the portions. Third, because breeders hold different opinions as to the best positions for branding, some strongly objecting to placing brands on horses in a prominent part and branding under the saddle, while others like to have them on the shoulder, or some other portion where they will be readily seen. As, therefore, the end for which the order of branding is laid down can be attained as well the one way as the other, it is here proposed to allow breeders to have their choice. It would only be when all the portions were branded upon—which in practice they would never be—that any doubt would arise in this way as to which was the last brand.

(c.) This sub-section provides that when a breeder begins to brand on any portion other than No. 1, that portion shall follow and be branded upon after portion No. 5. Thus, supposing that the breeder's horse brand was placed on portion No. 4, the next brand would be imprinted on No. 5, the next on No. 1, and the next on No. 2; and there could be no doubt at any stage of this branding, which was the latest brand imprinted.

(d.) Enacts that every second or subsequent brand shall, where there is room, be imprinted on the same portion under the next preceding brand, or, if there is not room under that brand, then on the next portion, according to the order laid down in the schedule.

This is, of course, necessary to show which is the last brand imprinted.

While it is the case that the order of branding here described has been generally carried out, exception has been taken to it by some owners, who say that it is difficult, if not impossible, to observe it without roping or putting every head of cattle in a bail; and they wish the system altered so as to allow of the second or subsequent brand being imprinted upon either the back or the loin. Their proposal does not affect the branding of horses, which would stand as it is.

As regards cattle, there is no doubt but that if the proposed alteration were carried out store cattle could then be more easily branded than they now are, while a well-marked order of branding could still be maintained.

There would, however, be this objection to the alteration: that it would cause some confusion, as poundkeepers and others would for a time be unable to ascertain which was the last brand; and it would give owners some additional trouble through causing them, in many cases, to rebrand their cattle.

If these alterations were made, sub-sections *a*, *b*, *c*, and *d*, of section 35, would be made to apply solely to horses; and then some such sub-section as the following would require to be framed in regard to cattle, while the schedule, fixing the order of branding, would require to be altered to suit the change, by making, say, the near back No. II, off back No. III, near loin No. IV, off loin No. V, off rump, hip, and thigh, No. VI, near ribs No. VII, off ribs No. VIII, and near shoulder No. IX.

Cattle Brands.

"The breeder, or person imprinting the first brand on cattle, may brand on any of the portions except II, III, IV, and V, mentioned in schedule K 2 hereto. But the person imprinting the second brand on any cattle shall do so on portion No. II, the third on portion No. III, the fourth on portion No. IV, and the fifth on portion No. V; and, if more brands are to be imprinted on any cattle they shall be so on the portions, and in the consecutive order laid down in the said schedule: Provided that if the first brand shall have been imprinted on any portion other than portion No. I, then portion No. I shall in that case follow and be branded upon the portion No. VIII.

With respect to damage to the hide through branding, it may be stated that the brands on the rump and ribs do most damage, the former through being on the most valuable part of the hide, and the latter through being on the centre of the side, when the hide is divided. Those on the loin and back next as injurious; those on the shoulder next; and those on the neck next, or least of all.

Sheep Brands.

(e.) Provides how and where sheep brands are to be imprinted, and takes power to regulate their branding, should it at any future time be found expedient to do so.

Distinctive Brands and Marks and Sheep Marks.

(f.) Lays down the position of these brands on horses and cattle, and takes power, as in preceding sub-section, to make rules regulating the order, &c., in which these brands are to be used.

It is here proposed to allow brands on the hoofs of horses, as distinctive. These, when freshly made, and for five or six months afterwards, are very legible; and as they can, of course, in broken-in horses (and they would only be used in their case) be removed when required, they will no doubt be adopted by those owners who live in towns, when putting their horses out to grass, as well as by others who have a dislike to branding on the body of the horse.

(g.) Prescribes the position of distinctive marks on horses, cattle, and sheep, and again takes power, if found expedient to do so, to regulate the order of marking by regulations.

With more experience in these matters it may be found more expedient and practicable to lay down a stated order of marking; and if it can be successfully done, the marks on stock would go much farther than they do now to prove ownership.

The concluding paragraph of the section declares that all stock are to be held to be branded and marked with the brand and mark which, according to the Act and Regulations, appears to be the latest branded or marked on such stock, and provides a penalty for any breach of the Act or Regulations with respect to branding or marking.

IX.—MIS-BRANDING ON BRAND, OR MARK ALTERING, &c.

This section inflicts a penalty for offences relating to the branding of stock, more particularly for (1) "duffing" or "nuggeting" in branded stock; (2) brand-altering or "faking"; (3) mark-altering, ear-cropping, &c.; (4) using another person's brand feloniously; and (5) using an unregistered brand, practices which are notoriously still too common in some parts of the colony.

(1.) "Duffing" or "nuggeting," i.e., the branding of young or unbranded stray stock (clean skins) by a person other than the owner of such stock. Although this is apparently a venial crime, it is in reality one of the most dangerous and demoralising; for if, as is sometimes the case with owners who are not strictly honest in this respect, the dependants or servants of the owner of a run learn to "duff" unbranded stock for him, they will not be slow to put their teaching into practice on their own account when they come to occupy land, and they will easily quiet their conscience with the saying which is so frequently heard in the bush that "there is no harm in the poor man, when he needs it, taking a bit of beef from the squatters, as many of them take plenty of calves."

As, therefore, duffing or nuggeting unbranded stray stock is the *fons et origo* of cattle-stealing, stockowners should not leave a stone unturned to put it down, and with that view they should use their best endeavours to get some such measure as this passed, and then prosecute on every occasion when a breach of its provisions has been committed.

(2.) Brand altering or "Faking."—This sub-section is aimed at an unscrupulous, daring, and, we regret to say, comparatively numerous class of cattle stealers, located in gangs in different parts of this and the neighbouring colonies, and in several cases the different gangs evidently co-operate, and pass stock from one to the other. These duffers are generally hangers-on and reputed stockmen to some station-holder of doubtful character, with whom they no doubt share their plunder. Their usual course of action is to start away from the place at which they are harboured, to some station at a considerable distance, and make a sweep of everything both branded and unbranded, of which they can safely lay hold—driving them back by unfrequented tracks or through the bush, to yards and paddocks in out-of-the-way places on their harbourer's runs, where they have the necessary appliances—in the shape of brands for forming small angles, strokes, circles, and half-circles, for altering the brands on the cattle they seize. This they do, from long practice, very neatly and legibly, and complete their work by making the new portion look like the old. They also, of course, alter the ear marks. After this they put their own or their harbourer's registered brand on the proper branding portion of the beast to show that it is the latest branded, and the work is complete. But they take care to keep the stolen stock as much as possible out of sight till the freshness of the altered branding and the rebranding have completely worn off.

As we said it is the more daring class of duffers who follow these practices, the men who are, in fact, wholesale stock stealers, and, as their depredations are heavy, every effort should be made to put them down, especially as it is from this class that almost all our bushrangers have sprung.

(3.) This sub-section forbids ear-cropping, or cutting off more than a fourth of the ear in ear-marking, or cutting it straight across. This of course does not apply to cutting off the ear for disease, only for using the "crop" as an ear-mark.

The first thing a duffer now does, especially in the case of sheep, is to deface the ear mark, and such a provision as this is urgently required, as the "crop" ear-mark is becoming by far too common.

(4.) Makes it penal for any one to use another's brand without his permission.

As penalties are enacted against owners for negligently imprinting their brand on other person's stock, it is necessary that they should be protected against the risk that would arise through persons using their brands to get them into trouble, although if they were to keep their brands, as they ought to do, under lock and key, nothing of the sort would be likely to occur.

(5.) Forbids the use of unregistered brands. It will be very seldom that a witness can be found who can prove that he actually saw the duffer put his brand upon an animal. It is necessary, therefore, in order to secure convictions, to provide that certain circumstances are to be considered conclusive evidence of the fact of the person, whose brand the animal bears, having branded it; and it is believed that the provisions of this section, which have been framed for that purpose, are not too stringent or likely to lead to the punishment of any but the guilty; as the honest owner who makes a mistake has only to report the fact to the nearest inspector or constable, or to the owner of the stock, to be held blameless. If the period proposed to be allowed him to do this be considered too short it might be lengthened, but we think two months are quite long enough to enable the owner, who means to do what is right, to discover his mistake and report as required.

37. Provides that stock with blotched, altered, or defaced brands or marks, may be impounded by the police or inspector, unless owner has given notice of such alteration or defacing as before mentioned.

If, as it is proposed under this measure, power is taken to impound animals bearing any such brands or marks, the stock on the runs of persons suspected of these practices could be regularly examined by the police or an inspector, and all those with questionable or suspicious looking brands or marks placed in the pound, where they could be thoroughly overhauled, and, it might be, their proper owners discovered. Even if they were not, it is very unlikely, with all the chances against him of his convicting himself, should he claim any of these stock that the brand alterer or pseudo owner of the animal would come forward and make a declaration before a Justice as he will be required by this measure to do, that he is the actual owner of the animal. Then, again, every mob of cattle which a suspected owner started would be thoroughly overhauled as soon as they were on the road or immediately after, under the droving clauses, and all stock bearing suspicious brands would be dealt with as here provided. In this way, as no stock to which there was any suspicion attached could be removed without being overhauled, and the doubtful ones stopped and impounded, brand altering would be found to be a risky and unprofitable speculation, and would cease to be followed.

Should the *bona fide* owner again, by mistake blotch the brand of any of his stock, he could, by making a memorandum of the circumstance in his herd book, with a description of the animal on which the blotch brand appears, and letting the circumstance be known as soon as discovered to the nearest inspector or police, satisfy the Bench, should the question ever be raised, that the blotching was purely accidental. In any case the inspector or police would have very little difficulty in discriminating between accidental and intentional blotching of brands, and in cases of brand or mark altering again this difficulty would not occur, and would prosecute or not as the case required.

38. Provides that stock with defaced or altered brands or marks, which have been impounded are not to be given up to the person claiming them, unless he make a declaration that they are his property, and that such stock not released are to be dealt with as if they had been impounded in the ordinary way.

As we have already said the effect of this section will be that the duffer will lose his labour and cease to alter brands, for he is too cautious to run any risk; and he would seldom or never make this declaration, as he does not know but the actual owner of the animal, or some of his employes, may be in a position to swear to it irrespective of the brands altogether. He would therefore, as a rule, never claim the animal once it was in pound.

X.—TRAVELLING STOCK, DROVERS, AUCTIONEERS, &c.

39. It is believed that if this section could be carried out as printed it would prove one of the most effective clauses in the Bill for putting down the stealing of stock; for if the thieves could not get away with and dispose of their plunder they would soon cease to steal. And under the provisions of this section, as printed, no stock to which there was the least suspicion attached need be permitted to leave the district in which they were previous to starting without being thoroughly examined by those who would be acquainted with the brands which ought to be on the stock of the owner starting them; and every animal of which there is any doubt would of course be stopped. Nor, if there were any suspicion attached to a drover, need the surveillance stop here; for, if notice of his starting were given, his stock could be carefully overhauled, not only in their own district but after they have been for some days on the road; and it could be kept up by the police and inspectors in the different districts communicating with each other till the cattle reached their destination. Where, again, there is no reason to doubt the correctness of the owner starting stock, the inspection need be very seldom made. In this way the requirements of this section would not fall too heavily on the inspectors and police, neither would they on owners. All they are required to do is to give the police or inspector such notice as would enable them, should they think it necessary, to inspect the stock before they start. They have not to wait beyond the time specified in the Act, and if neither the police nor the inspector put in an appearance, the owner starts them all the same.

But, although this would work very well in the back country and on large runs, the provisions of this section would be impracticable in the more thickly settled portions of the Colony; and if the clause is to be retained at all it must be very much modified. With that view, I would propose the following alterations in it:—First: I would, after the third word in the section, "shall," add the words "where practicable," and at the end of the section the following proviso: "Provided that in every case in which it shall not be practicable to give the notice hereinbefore specified of the starting of any such stock, the drover of such stock shall in that case give the first inspector or officer of police, whose station is within _____ miles of the road by which such stock are travelling, such notice of their approach as shall enable him to examine them: Provided also that such last-mentioned notice shall be given within _____ miles of the same place from which such stock started to travel: Provided also that this section shall not apply to stock sent by railway: And provided also that in any proceedings under this section for the non-delivery of any notice by an owner or drover, it shall not be necessary for the complainant or informant to establish the fact that such notice was not given, or that it was practicable to give such notice, but the proof of the due delivery of such notice, or that it was impracticable to give any such notice shall be on the defendant.

In this way it is believed that the clause might be retained, as it would put drovers in the thickly settled districts, where the longer notice is impracticable, to very little trouble to report themselves at the first police-station they passed, and that would answer every purpose. If three miles is considered as taking them too far off the road, two miles might be inserted, but less would not do, as drovers might then be enabled to evade the notice by purposely keeping away from the police stations.

40. This section provides that if the owner act as drover he shall carry a way-bill; and if the person in charge of the stock be a hired drover he shall carry a delivery-note. There is also a proviso added to enable the vendor to give delivery-notes to the purchaser's drover.

This, and sections 40 to 49, are intended to stand in the place of what are termed the droving clauses (viz., 14, 15, and 16) of the existing Brands Act, which it is proposed to repeal.

It is very necessary—whether the owner or his employé be the drover—that he should carry an authenticated list of the descriptions and brands of the stock in his charge, and produce it when called upon, in order that the inspector or police may be able to see that there are no stock but what ought to be in his charge. By the droving provisions now in force only the hired drover is obliged to carry such a list; and the thief has merely to say that he is the owner of the stock to escape challenge. The clause also contains the provisions now in force in the Brands' Act, obliging the hired drover to carry a delivery-note.

This and the other droving clauses aim at the detection of the stealing of stock by drovers while they are on the road; but especially at a description of this crime which, before the Brands' Act was passed, was frequently committed by drovers apparently respectable. Allusion is here made to the practice which prevailed to a very great extent, because it was a comparatively safe one, of a drover, as he passed through a run, putting a few head, or perhaps a single beast belonging to the run into his mob, and taking it on with him. If challenged with having a beast which did not belong to him, the driver ascribed its presence to the animal having itself unobserved joined the mob, and gave it up. If not, he took it on, and when he had gone to such a distance from the run where the theft was committed as would make it safe for him to offer the beast for sale to some one on the roadside at a moderate figure, he would do so, and pocket the proceeds.

The provision obliging both owners and hired drovers when travelling with stock to carry authentic lists of the stock with which they start, would completely put down this sort of cattle stealing, as the risk of being detected by the police or the inspectors (who check the stock with these papers) driving an animal not described, or wrongly described in the way-bill or delivery-note, would be too great to be encountered.

41. Gives any Justice, the inspector, the police, the agent of the Minister or proprietor of the run where it is an open one, power to stop and inspect travelling stock, and check them with way-bill or delivery-note, and binds the drover to assist in their inspection.

42. Lays down the course of action of the Justice, inspector, police, agent, or proprietor examining travelling stock. When necessary, they may impound any stock not correctly entered in the way-bill or delivery-note, and the stock thus impounded are to be dealt with as required by the Impounding Act, if not released by their proprietor.

43. Provides for the supplying of an interim way-bill or delivery-note, should the original be lost or destroyed. This is to be granted by the nearest inspector or officer in charge of the nearest police station, and the obtaining of it would be little or no trouble to the drover, who really lost either of these papers; while the bringing of the stock thus prominently under the notice of the inspector or police would effectually answer the purpose for which they were intended. The inspector, or police, as the case may be, to whom the application for an interim way-bill or delivery-note is made, would, of course, carefully examine the stock and inquire into the circumstances under which they are being travelled; and where there was sufficient reason for doing so would take possession of them. In most cases the policeman or inspector would be able

able to telegraph to the inspector or police in the district from which the stock started if the drover was the actual proprietor of the stock, and where there was a hired drover, to the person whose brand the stock bears, and to satisfy himself as to the correctness of the drover's statement previous to granting the interim way-bill or delivery-note; and where he could not do so he would intimate the fact of his having granted such a paper to the inspector, the police, or the owner of the brand by letter.

If again, there were anything at all suspicious about the case, although not enough to warrant the detention of any of the stock, the inspector or policeman examining them would send a notice of their approach to the inspector of police through whose district they would next pass, and he, on examining the stock, would send to the next, and so on to their destination. In this way stock travelling with an interim way-bill or delivery-note, would actually be under surveillance from the time it was granted till they were delivered or sold.

44. Provides for the drover handing over his way-bill or delivery-note with the stock, to the consignees.

45. An alteration in the corresponding clause of the Sheep Act is here proposed. This clause gives drovers more chances and more time of giving the required notice to owners of runs through or along which they pass, while it at the same time makes the notice much more definite and more easily attended to by these owners. It will be noticed that cattle and horse as well as sheep drovers, will, under this measure, require to give notice. This will be an immense improvement, both as tending to stay the spread of disease and to put down stock stealing. The portion of this section requiring notice to be given to an inspector and the police should be struck out.

46. Provides for the infliction of penalty on a drover not complying with the droving provisions of the Act.

47. Provides for the apprehension of the drover where necessary.

48. Inflicts a penalty on persons purchasing stock not correctly entered in a way-bill or delivery-note. This is very necessary, and will have a good effect, for if drovers who stole cattle could not find purchasers for them they would soon give up stealing. This clause also requires those purchasing stock from drovers to make certain that they have the owner's authority to sell, under a like penalty. This clause also inflicts a penalty on occupants of yards who allow doubtful characters to put stolen stock into them. This would catch those disreputable owners of runs who are in league with stock-stealers, and allow them to make use of their yards to carry out their nefarious practices.

49. Provides that auctioneers shall keep an account of all stock passing through their hands and produce their books, as well as the way-bills or delivery-notes, when required by the proper authorities. This will not only make auctioneers more careful with respect to those from whom they receive stock for sale, but it will enable the police to trace stolen stock better, and to make up their cases for the prosecution more correctly.

XI.—REGISTRATION OF SLAUGHTER-YARDS, INSPECTOR OF HIDES, &C.

50. Provides that all yards at which stock are intended to be slaughtered shall be registered as such with the officer in charge of the nearest police station; but this section does not apply to licensed slaughter-houses.

The object of this is, of course, to increase the certainty of punishing those who kill other people's cattle in the bush, and at out-of-the-way yards. For instance, it would be much easier to prove that a beast had been killed at such and such a place or yard than to bring home a case of cattle-stealing against the parties concerned, and a conviction and £50 fine for killing in the bush, or at an unregistered yard, would tend as much to deter the thieves from again committing the offence as a conviction for cattle-stealing.

51. Provides that no stock is to be slaughtered but at a licensed or registered slaughter-yard, but in special cases thereby excepted.

52. This section lays down the duties which the owner of a registered slaughter-yard is required by the Bill to perform, with the view, of course, of detecting parties slaughtering stolen stock.

No. 1 sub-section provides that full particulars of all stock slaughtered shall be kept and produced by the owner when required by the police.

By the present Act the police have the power, on warrant, of searching for meat supposed to have been stolen, and if this obligation to keep this record of the animal slaughtered does not lead to the conviction of the thief for cattle-stealing, it would in all probability secure his being mulcted in a heavy fine for omitting to enter, or for incorrectly entering, the description of the animal stolen. Thus, suppose that the meat was found and no entry made, or incorrectly made—as it would most probably be—the penalty would be sharp and certain.

No. 2. Provides that all the skin necessary for identification should be taken off in skinning. It is especially necessary for the sake of identification that the skin of the head should be taken off, and also the ears; and as it pays (it is always flayed in South America) there is no reason why it should not be so.

No. 3. Provides that the hides, when taken off (if cured and dried), are to be preserved for fourteen days; and although hides were intended to be worked up into ropes, or taken for other home uses, they would nevertheless have to be kept for that time. The objects of these provisions are too obvious to require explanation. The police would, of course, examine the hides and slaughtering book of all owners, whose residences they passed in the course of their other duties; but they would exercise a special supervision in these respects over the slaughtering-yards, premises, and books of those parties who were suspected of cattle-stealing.

No. 4. Deals with hides sold in a green state to tanners. Those disposed of in the coast districts in this state require to be specially looked after in this way. Persons slaughtering should be made to keep these hides as long as possible, for if they once get into the tanners pits the chances of detection, should they be from stolen stock, are exceedingly small.

No. 5. Provides that hides and horns shall be produced to police, and follows as a matter of course on Nos. 1 and 2.

53. Provides that tanners purchasing, and carriers and others receiving, the hides of horses and cattle in a green or uncured state, should keep an accurate account of their description and brands in a book to be kept for that purpose. Not only are the hides of stolen stock which have been slaughtered for meat disposed of to the small tanners in the coast districts, but stock have been stolen and slaughtered for the sake of their hide and fat alone.

54. This section enacts that any breach of the four next preceding sections shall be punished by a fine not exceeding £50.

XII.—ILLEGAL POSSESSION OF STOCK OR MEAT.

55. Inflicts a penalty on persons having in their possession stock or meat suspected of being stolen for which they cannot account.

This is the same as the corresponding section in the existing "Cattle-stealing Prevention Act," except that the word "stock" has been introduced into it, and the words "yards or paddocks" inserted to suit this addition.

56. Provides that a person taking, working, driving, or in any manner using any stock, the property of another, without his consent, shall be liable to a penalty.

This clause is intended to put a stop to the mean unneighbourly practice, followed by some, of working or sweating horses which do not belong to them. It is also intended to reach those who are caught driving off stock with the intention of stealing them, but to whom the crime of cattle-stealing cannot be brought home. The section, however, is not correctly drawn, for, as it now stands, an owner driving stray stock on his run would be liable to the penalty were he to drive them (as he of course would have to do) without the owner's consent. The section should be altered by omitting the word "drive" where it now stands, and after the word "thereof" in the third line, inserting the following words: "Or drive any stock without consent as aforesaid on any land not in the occupancy of such person."

XIII.—RESTITUTION OF STOLEN STOCK.

57. Enacts that a Justice may issue a summons to the person having stolen stock in his possession to appear, or at once apprehend him; and may seize stock supposed to be stolen.

This section is the same as that in the existing "Cattle-stealing Prevention Act."

58. Provides that after proof of summons having been served on person appearing, Justices may order restitution.

This is also as in present Act.

59. Enacts that vendee who delivers up stock or pays back the sum he received may recover from the vendor.

This is also provided in the present Act.

60. Provides for the imprisonment of the person with whom stolen stock is found, in default of his making restitution, as in existing Act.

XIV.—MISCELLANEOUS.

61. Provides that poundkeepers, inspectors, and Clerks of Petty Sessions, shall keep copies of directories, and produce them when required, on payment of a fee of 1s.
62. Enacts that notice of the impounding of stock shall be sent to the owner of the last brand; and when poundkeeper has any reason to believe that some person, other than the owner of that brand, is the owner of the stock, then he must send notice to that person also.
63. Provides that a brand shall be allotted to each pound, and that all stock sold out of pound shall be branded with the pound brand.
- The object of this is to enable owners to know what stock are so sold and what are not, and to prevent dishonest owners from claiming stock which they have sold. It will also prevent rogues from pretending, as they sometimes now do, that stock which they have stolen had been purchased at pound sales.
64. Enacts that a person placing stock in any premises, yard, or other enclosure without the consent of the occupant, shall be liable to penalty.
- This is required, for by section 48 owners who allow stock to which any suspicion attaches to be placed in their yards or premises, are liable to a penalty; and if this penalty were not enacted, stock might frequently be put into yards and on to premises without the occupant's knowledge, and get him into trouble.
65. Enacts a penalty for false entries, forging, uttering, defacing, or altering documents, &c., required under this Act.

XV.—REGULATIONS.

66. Provides for the making of Regulations under the Act.
- Although the measure is a comparatively long one and the attempt has been made to provide as far as possible for every case that is likely to occur, it is so largely made up of details and is of so comparatively recent origin as to be very likely to call for fresh regulations in matters of detail before many years are over; and as any regulations made would be confined to such matters, there can be no objection to the power being taken to make them.
- The regulations would of course be laid before Parliament.

XVI.—RECEIPTS AND EXPENSES.

67. Enacts that moneys collected by the police as fees for interim way-bills or delivery-notes should be paid into the police "Reward Fund," and all moneys collected by the Registrars and inspectors into the brands account.
68. Provides that the expenses under the Act are to be paid out of the brands account, and when that account is inadequate, from an advance from the Consolidated Revenue; but advance to be repaid from brands account when in funds.

XVII.—LEGAL PROCEDURE.

69. Enacts that the Brands Directory shall be received as *prima facie* evidence of the statements and things contained in it.
70. Provides that in giving notice it shall be delivered personally or left at address, or sent by registered letter.
71. Enacts that for the purposes of the Act, a registered or recorded brand or mark shall be *prima facie* evidence of the ownership of such brand and stock; and proof that stock bearing a person's brand have been usually claimed by such person, is to be held to be *prima facie* evidence that he branded such stock.
- As it is only for prosecutions under this Act (not for prosecutions for felony) that a brand is to be held to be *prima facie* evidence, there can be no objection to such a provision.
72. Provides that in prosecutions for stock stealing, brands and marks shall be taken so far as proof of ownership.
- This is necessary, as, although it would be generally considered as going too far to make a brand *prima facie* evidence in prosecutions for stock stealing (felony), still brands are now so very much more certain proof of ownership—seeing that no two men in the whole colony have the same brand—that benches, Judges, and juries ought to lay far more stress upon the evidence supplied by brands than before the Brands Act was passed. Before that Act was passed, it was a very common thing for an Advocate, in defending a person charged with stock stealing, to tell the jury they were to place no weight whatever upon the evidence afforded by a brand; and they were, perhaps, right in making such statements, for it was found when the Brands Act was passed, that there were more than 200 persons in the colony claiming some of the brands.
73. Lays down the mode (the usual summary one) of enforcing penalties and recovering fees and moneys under the Act.
- The proviso at the end of this section should be struck out.
74. Gives the Bench power to imprison defendant on non-payment of penalty.
75. Provides that Justices may send cases brought under this Act to a higher Court; and juries in trials for felony may find a verdict for misdemeanour.
76. Provides that convictions under this Act shall bar further proceedings.

XVIII.—SAVING CLAUSE.

77. Enacts that no action shall lie against any person taking action under this Act, unless there be proof of corruption or malice, and then the action must be brought within three months of the cause of action.

No. 12.

E.

1874.—Queensland.—Legislative Assembly.

REPORT OF THE REGISTRAR OF BRANDS FOR THE YEAR 1873.

(Laid on the Table of the Legislative Assembly by Command, and Ordered to be Printed, 7th May, 1874.)

To the Honorable the Colonial Secretary.

Brisbane, 9 March, 1874.

Sir,

I have the honor to present my second Annual Report on the working of the Brands Act.

The number of brands issued during the year have been 2,695, which, with those issued during the first six months the Act was in operation, give a total of 7,702 allotted and registered up to 31st December last. The present monthly average of registrations is 160, so that over 8,000 brands have now been allotted.

From an experience of eighteen months in the working of the Act, all the District Inspectors concur in the opinion that it has been instrumental in suppressing cattle-stealing; and from the significant circumstance that no single instance has come within their knowledge of any stock bearing registered brands having been stolen, we may reasonably anticipate that as the old brands die out cattle-stealing will decrease. The fact that travelling stock are under the almost constant surveillance of justices, constables, and inspectors, and the power given by the Act to the latter to enter at any time upon any place where horses and cattle are kept, has greatly conduced to keep cattle-stealers in check. It is satisfactory to be in a position to report that several gangs of known cattle-stealers in the settled districts have been dispersed by the operation of the Act. In East Moreton, for instance, three notorious "cattle-planters" have, during the past year, left their former haunts, and for the first time for years—so far as known—are supporting themselves by manual labour. From the outside districts the reports are equally satisfactory. In the Mitchell District, for instance, Inspector Ahern, who has been stationed in the district as a member of the police force for seven years, reports from his own personal experience that the Act has been productive of almost incalculable benefit in the suppression of horse and cattle stealing.

During the year several heavy penalties have been inflicted on parties for branding or ear-marking stock the property of others, in some instances by means of spurious brands and marks.

The power conferred by the Act on Benches of Magistrates to summarily adjudicate, and inflict heavy money penalties in such cases, is, in my opinion, one of the most valuable provisions of the Act. The numerous facilities for detecting

detecting infringements of the Act, the difficulty of evading conviction, and the prospect of a £50 penalty by a Bench of Magistrates, will have a more deterring effect on cattle-stealers than the remote chance of imprisonment under the law as it existed prior to the passing of the Brands Act, when, as a matter of fact, a conviction for cattle stealing before a jury, on the mere evidence of a brand or mark, was an almost impossibility. That these large discretionary powers have not been abused is abundantly evident from the fact that one only of the many cases adjudicated has been appealed against; whilst the leniency extended by the infliction of merely nominal penalties for breaches of matters of detail has in most instances been acknowledged by the offending parties.

In no instance has any but a nominal or the minimum penalty been imposed where the surroundings of the case have shown that the offence was the result of mere neglect or ignorance and with no criminal intent.

The provisions of the 29th section have again been found of great value in preventing the alteration of brands and ear-marks. By this section all animals bearing altered brands or marks are held to be unbranded, and may be impounded. Several cases of altered brands have been dealt with in this way since my last Report, and it is needless to state that in no instance have the offenders ventured to release them.

The value of the travelling sections has been amply illustrated in the detection and punishment of drovers having in their possession animals not included in their way-bills and delivery-notes, and of which they could give no satisfactory account.

Complaints still continue as to the existence of "duffing" (i.e., branding neighbour's calves), but these are for the most part confined to the unsettled districts. This mode of cattle-stealing has unfortunately come to be looked upon by many as a very venial offence, and can only be put down by a determined effort on the part of the stock-owners themselves. In two cases of this nature the maximum penalty of the 27th section (£50) has been inflicted. All money penalties imposed under the Act go to augment the fund for defraying the cost of its administration.

The uncertainty as to the ownership of unbranded cattle over 1 year old, running on Crown lands, is unsatisfactory, and calls for legislation. At present the general impression appears to be that the smartest stock-riders have the best title to all unbranded cattle running on Crown lands not under lease or license. This opens the door to serious abuses, and, as has frequently been shown, has a most demoralising tendency. I had the honor to report specially on this question, and would beg to repeat my suggestion as to the advisability of granting licenses or permits by tender or otherwise to persons of known good repute to collect all unbranded stock, in which no right of property can be shown, found depasturing on unoccupied Crown lands; such persons, and no others, to have the right to collect and dispose of them.

In consequence of several of the characters used in our registered brands having a tendency to blotch, several modifications in the shape have been allowed. Some of the Inspectors, however, report that complaints on this head are much less numerous now that stockowners bestow more care, with improved appliances in branding.

Cattle-stealing, for the purpose of slaughter, has unfortunately reached alarming proportions in some parts of East and West Moreton during the past two years, principally, it is alleged, from the increased value of hides. Although this does not come within the scope of our duties, the Inspectors have used every means within their power to assist in putting it down. Several amendments in the present Slaughtering Act have been suggested with a view to check this traffic; but the most practicable, as it appears to me, as being the least liable to impose vexatious restrictions upon honest persons, is that suggested by the East Moreton Inspector, and is to the effect that anyone (not being a licensed slaughterman) before killing a beast, be compelled to send notice to the nearest police station, or to one of his neighbours, and to supply a return of the age, sex, colour, and brands of each animal killed, witnessed, if possible, by one of his neighbours. To this I would add a suggestion that slaughtering cattle on open runs and away from homesteads should be strictly prohibited. Legislation on this subject, to be at all effective, must aim at making slaughtering in all cases to be done openly and above board. The present Slaughtering Act is most defective, and until more enlarged powers are given to the police in the way of search, especially in the case of hides, the Act will continue, as at present, a useless encumbrance on the Statute Book.

Complaints have been made to me by a few breeders of pure-bred stock, as to the inconvenience of being restricted to the neck and cheek for imprinting distinctive brands. I do not see any valid objection to allowing the breeder, or person imprinting the first brand, to place his stud or herd-book number immediately above or below his registered brand; but this can only be done by an amendment of the Act.

An ingenious and useful system of numbering cattle, by means of notches in the ears, has for years been in use amongst American breeders, which has the advantage over fire-brand numbering, in that it does not disfigure nor destroy the hides, whilst the notches show plainly in winter, when there is a difficulty in deciphering fire brands.

I am indebted to Mr. W. Vaughan Jenkins, of Callandoon, for details of this system, he having used and reported favourably of it in his pure herd. I give the details of the system as an appendix to this Report, in the hope that it may find its way into general practice amongst those who keep herd-books in this Colony. If generally adopted, stockmen and others in charge of cattle would become familiar with it, so as to be able to read it with nearly as much facility as ordinary numerals.

The Inspectors have received much assistance from the police. The East Moreton Inspector states that the sergeants in charge of the Cleveland and Humpty Bong Stations have been most indefatigable in this respect.

Amongst stock-owners, also, it is satisfactory to know that there is a growing disposition to keep the Inspectors posted up as to infringements of the Act.

I have, &c.,
P. R. GORDON,
Registrar of Brands.

APPENDIX.

SYSTEM OF PERMANENTLY NUMBERING CATTLE BY EAR-MARKS.

One notch <i>over</i> left ear signifies	1
Two notches <i>over</i> left ear	2
One notch <i>under</i> left ear	3
Three notches <i>under</i> left ear	9
One notch <i>over</i> right ear	10
Two notches <i>over</i> right ear	20
One notch <i>under</i> right ear	30
Three notches <i>under</i> right ear	90
One end off <i>left</i> ear	100
One end off <i>right</i> ear	200
The two last together	300
The point of <i>left</i> ear cut square off	400
The point of <i>right</i> ear cut square off	500
The latter and notch for 100 added	600
The right ear cut square and notch for 200 added	700
Both ears cut square across the points	800
The latter and notch for 100 added	900
Punch hole in <i>left</i> ear	1,000
Two punch holes in <i>left</i> ear	2,000
Punch hole in <i>right</i> ear	3,000
The two last together	4,000

Giving a total of 3,999.

If a unit on the check is used to denote the year of birth, the higher numbers (which above 300 are somewhat complicated) would not be required.

P.R.G.

NEW SOUTH WALES.

GOULBURN CATTLE SALE-YARDS.

(BY-LAWS FOR REGULATION, &c., OF.)

Presented to Parliament as required by Law.

Colonial Secretary's Office,
Sydney, 24th June, 1876.

GOULBURN CATTLE SALE-YARDS.

BY-LAWS.

THE following By-laws, made by the Council of the Borough of Goulburn, for the Regulation and Management of the Cattle Sale-yards thereof, having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published as required by law.

JOHN ROBERTSON.

BOROUGH OF GOULBURN.

BY-LAWS for the Regulation and Management of the Cattle Sale-yards of the Borough of Goulburn made and passed in pursuance of the "Goulburn Cattle Sale-yards Act of 1875."

1. The said Cattle Sale-yards of the Borough shall be open for the reception and delivery of cattle and other live stock on every lawful day from sunrise to sunset.

2. There shall be appointed for such Cattle Sale-yards an Officer to be called the Inspector thereof whose duties shall be as follows—

- 1. To see that the By-laws or regulations be duly observed.
- 2. To demand and receive all fees and charges due under the said By-laws or regulations.
- 3. To allot the yards to the use of the parties bringing cattle thereto for sale in such manner as in each particular case may seem to such Inspector most convenient.
- 4. To preserve order and cleanliness within the said Cattle Sale-yards and the precincts thereof and to summarily eject therefrom any person creating a riot or disturbance or cursing or swearing or using any gross or indecent language or being guilty of any gross cruel or indecent conduct therein.

3. No person or persons shall obstruct the Inspector or his assistants in the performance of his or their duty or shall release any cattle from the said Sale-yards before the fees and charges have been duly paid (the proof of which payment shall rest with the party charged with a breach of this regulation) nor shall remove the same from the said yards or from one part of them to another without the authority of the Inspector and any person committing a breach of this By-law in any respect shall be liable to a penalty not exceeding £5.

4. The owner or any person in charge of any cattle which shall break or injure the said yards or any part thereof or any erection connected therewith shall forthwith repair and make good such damage or injury or in default of his so doing shall be liable to forfeit and pay a penalty not exceeding twice the cost of repairing and making good such damage or injury.

5. Any person or persons who may be found drunk or disorderly within the said Sale-yards or the precincts thereof or cursing or swearing or using gross profane or abusive language therein or who shall cruelly beat or illtreat any animal therein shall forfeit and pay for every such offence any sum not exceeding £5.

6. The party or parties placing cattle in the said Cattle Sale-yards or any other sale-yards within the said Borough for sale and also the auctioneer or agent to whom the same shall be brought for such sale and the person or persons bringing any cattle to any premises in the said Borough for slaughter and also the occupier of such premises shall be liable for the payment of all fees and charges accruing thereon.

7. Any person or persons who may place cattle in the Cattle Sale-yards of the Borough for sale and also for all cattle brought for twenty-four hours to supply such cattle with sufficient food and water shall for every such offence forfeit and pay any sum not exceeding £5 and in case of such neglect for such space of twenty-four hours at any time the Inspector shall cause such cattle to be supplied with sufficient food and water and the person so neglecting as above shall be liable to repay the cost of the same including a reasonable charge for labour and attendance.

8. The following fees and charges shall be paid and taken for all cattle brought to the said Cattle Sale-yards or yarded in or brought to any other sale-yards or premises within the Borough of Goulburn for sale and also for all cattle brought to any premises within the said Borough for the purpose of being slaughtered, that is to say—For every horse mare gelding foal ass or mule the sum of one shilling. For every bull cow ox heifer steer or calf the sum of sixpence and for every sheep lamb pig or goat the sum of one half-penny.

9. The following charges shall be paid and taken for use of the yards for travelling cattle or for cattle occupying the yards for any purpose other than that of being sold therein—For every horse mare gelding foal ass or mule the sum of three pence per head for each night. For every bull ox cow heifer steer or calf the sum of one penny per head for each night. For every sheep lamb pig or goat the sum of five shillings per one thousand for each night or any less number in proportion according to that rate.

10. The said fees and charges shall be payable by the several persons hereinbefore rendered liable to pay the same so soon as the cattle in respect of which they are chargeable shall be brought to the said Cattle Sale-yards of the Borough or yarded or brought to any other sale-yard or premises in the said Borough for sale or for slaughter and the same shall be paid accordingly into the hands of the Inspector of the said Cattle Sale-yards or his assistants. Provided that such Inspector may with the consent of the Mayor for the time being arrange with the owner or occupier of any sale-yards other than those of the Borough or of any premises for the slaughter of cattle or with any auctioneer conducting sales in the Borough Sale-yards for making weekly returns or statements of all the cattle brought to their yards or premises respectively for sale or slaughter or of all cattle sold by such auctioneer since the time up to which the next preceding return shall have been made and for payment upon such weekly return. And if any person shall fail to make payment as herein first above provided or shall after arranging as aforesaid make any false or incorrect return or statement therein or shall omit from the same any of the required particulars of cattle or shall fail to make faithful weekly payments in accordance with such arrangement he shall be liable to a penalty not exceeding £10 for any such offence.

11. If any person so liable as aforesaid to pay any fees or charges under these By-laws shall refuse or neglect to make

payment thereof as hereinbefore provided the same shall without prejudice to any other remedy be recoverable with costs in the same manner as a penalty is recoverable under the "Municipalities Act of 1867."

12. The said Inspector or the Council shall upon demand (and if he or they shall so require in writing) refund the fees and charges paid in respect of cattle intended for sale but not afterwards sold within the said Municipality and if any person shall obtain any such refund by wilfully making any false or incorrect statement he shall (without reference to any other liability) forfeit and pay a penalty not exceeding £5.

13. Any person who shall neglect to comply with these By-laws or be guilty of any breach thereof shall in cases where no special penalty is provided be liable to a penalty not exceeding £2.

14. In construing these and any future By-laws or Regulations made under the said Cattle Sale-yards Act the word "cattle" shall have the same meaning as expressed in "the Goulburn Cattle Sale-yards Act of 1875."

Passed by the Municipal Council of the Borough of Goulburn this fourth day of May one thousand eight hundred and seventy-six.

WILLIAM DAVIES, Mayor.

1875-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

STOCK-STEALING.

(CASES REPORTED AND CONVICTIONS OBTAINED IN YEARS 1874 AND 1875.)

Ordered by the Legislative Assembly to be printed, 27 June, 1876.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 28th March, 1876, That there be laid upon the Table of this House,—

“ A Return showing the number of cases of Stock-stealing reported to the Police in the years 1874 and 1875, and the number of convictions obtained.”

(Mr. T. G. Dangar.)

RETURN showing the number of cases of Stock-stealing reported to the Police in the years 1874 and 1875, and the number of Convictions obtained.

Year.	Cases of Stock-stealing reported to the Police.	Convictions obtained.
1874	959	173
1875	1,056	177

In a large proportion of the cases reported to the Police as robberies the stock was subsequently recovered, having merely strayed.

Police Department,
Inspector General's Office,
Sydney, 22 June, 1876.

EDMUND FOSBERY,
Inspector General of Police.

1875-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

IMPROPER IMPORTATION OF STOCK INTO VICTORIA.

(CORRESPONDENCE BETWEEN GOVERNMENTS OF NEW SOUTH WALES AND VICTORIA.)

Ordered by the Legislative Assembly to be printed, 29 June, 1876.

CORRESPONDENCE between the Government of New South Wales and the Government of Victoria, relating to the improper importation of Stock into that Colony, laid on the Table of the House in accordance with the reply given by the Minister for Lands to Mr. Macintosh's questions in reference thereto.

SCHEDULE.

Correspondence relative to the improper introduction of Stock into the Colony of Victoria.

NO.	PAGE.
1. Memo. from the Chief Inspector of Stock to The Under Secretary for Lands, relative to the improper introduction of stock into Victoria, with minutes thereon. 22 March, 1876	1
2. The Colonial Secretary of New South Wales to the Chief Secretary of Victoria, in reference to the above. 25 March, 1876.....	1
3. The Chief Secretary of Victoria to the Colonial Secretary of New South Wales in reply, with minutes thereon. 12 May, 1876	2

No. 1.

CHIEF INSPECTOR OF STOCK TO THE UNDER SECRETARY FOR LANDS.

Prohibition against the introduction of Stock from places outside the Australian Colonies.

22 March, 1876.

MEMO.—I have the honor to bring under the notice of the Honorable the Minister for Lands the fact that entries appear in the Victorian Statistical Register for the year ending 31st December, 1874, of the introduction of eleven cattle and 1,033 sheep from the United Kingdom, and fifty-six sheep from the Colony of New Zealand, and to suggest that the Chief Secretary for Victoria be asked to state whether these entries are correct.

Approved.—T.G., 22 March, 1876. The Principal Under Secretary—B.C., 22 March, 1876.—
W.W.S.

No. 2.

THE COLONIAL SECRETARY TO THE CHIEF SECRETARY, VICTORIA.

Colonial Secretary's Office,
Sydney, 25 March, 1876.

SIR,

With reference to the prohibition of the introduction of stock from places outside the Australian Colonies, I have the honor, at the instance of my colleague the Secretary for Lands—whose attention has been drawn to the fact, that in the Victorian Statistical Register for 1874 appear entries of the introduction of eleven head of cattle and 1,033 sheep from the United Kingdom, and fifty-six sheep from the Colony of New Zealand—to request that you will have the goodness to state whether those entries are correct.

I have, &c.,
JOHN ROBERTSON.

No. 3.

THE CHIEF SECRETARY, VICTORIA, to THE COLONIAL SECRETARY.

Chief Secretary's Office,
Melbourne, 12 May, 1876.

SIR,

No. 2

With reference to your letter of the 25th of March last, inquiring if certain returns in the Victorian Statistical Register for 1874, relative to the introduction of sheep and cattle from the United Kingdom and New Zealand, are correct, I have the honor to inform you that it is reported to me that from inquiry it appears 319 of the sheep entered in the statement furnished for the Statistical Register as from the United Kingdom really came from Tasmania; the remaining 714 sheep and the 11 head of cattle came from the United Kingdom; but, although the entries were not passed until 1874, the ships which brought them arrived here in 1873. The 56 sheep from New Zealand arrived from that Colony in 1874, and were landed in Victoria during that year.

I have, &c.,
JOHN S. MACPHERSON.

The Secretary for Lands.—JOHN R., 17/5/76. The Under Secretary for Lands, 17/5/76—B.C., H.H. Though the statements made herein appear to me extraordinarily strange, I do not see any good that would possibly arise from pursuing the correspondence further.—T.G., 22/5/76.

Mr. Bruce,—Note within decision, and return to me.—W.W.S., 22nd May.

Noted and returned. The Principal Under Secretary, B.C., 22nd May, 1876.—W.W.S. Returned, Colonial Secretary's Office, 23rd May, 1876. Put by, 26/5/76.

[3d.]

1875.

NEW SOUTH WALES.

GLEBE ISLAND ABATTOIRS.

(ORDERS AND REGULATIONS.)

Presented to Parliament, pursuant to Act 14 Vict. No. 36, sec. 4.

The Treasury, New South Wales,
16th November, 1875.

PUBLIC ABATTOIRS, GLEBE ISLAND.

His Excellency the Governor having been pleased, with the advice of the Executive Council, further to amend the Orders and Regulations concerning the Public Abattoirs at Glebe Island, as published in Treasury Notice of the 23rd November, 1874,—it is hereby notified, that in lieu thereof the following shall be enforced, from and after the first day of January, one thousand eight hundred and seventy-six.

JOHN ROBERTSON.

PUBLIC ABATTOIRS, GLEBE ISLAND.

ORDERS AND REGULATIONS.

1. The Abattoir shall be opened daily (Sundays excepted) for the despatch of business, from the 1st October to the 31st March, from the hours of 5 o'clock a.m. to 7 o'clock p.m. (except on Mondays and Saturdays, on which days the Abattoir will be opened from 2 o'clock a.m. to 7 o'clock p.m.), and from the 1st April to the 30th September, from 6 o'clock a.m. to 6 o'clock p.m. (Fridays excepted, on which day the Abattoir will be open from 6 o'clock a.m. to 7 o'clock p.m.); and no slaughtering of cattle will be permitted during any other hour or day than the days and hours above mentioned. Pigs, however, may be slaughtered and dressed at the Abattoir during the whole of Friday nights, between the 1st November and the 1st March in any year. During Sunday, it will be permitted to drive in and yard cattle.

2. The slaughter-houses shall, with the exception of six beef and six mutton slaughter-houses, be retained in the hands of the Government for the use of persons slaughtering therein.

3. Six beef and six mutton slaughter-houses shall be submitted to public competition, by lease, at an upset price of £175 per annum for the beef, and £110 per annum for the mutton, slaughter-houses.

4. An inspection fee of threepence per head shall be charged upon every head of cattle slaughtered in the leased houses.

5. Parties desirous of using the slaughter-houses reserved by the Government shall be permitted to do so on payment of the following fees:—

	s.	d.
For every ox, cow, bull, heifer, or steer (including an inspection fee of 3d.)	1	0
For every calf (including an inspection fee)	0	6
For every sheep or lamb	0	1½
For every head of swine	0	6

6. All fees shall be paid to the Inspector or Assistant Inspector of Abattoirs on demand, who shall pay the same into the Colonial Treasury under such directions as he or they shall from time to time receive from the Secretary for Finance and Trade.

7. Printed receipts shall be given to all parties paying fees.

8. No person shall slaughter or yard any animal at the reserved Abattoirs, without the sanction of the Inspector or Assistant Inspector.

9. The hours during which cattle may be driven in and yarded for slaughter shall be from 5 a.m. to 8 a.m. between the 1st October and 31st March, and from 6 a.m. to 8 a.m. between the 1st April and 30th September in each year; and cattle shall in all cases be inspected before slaughter. Milch cows and stall-fed cattle may be driven in between the hours of 2 and 4 p.m.

10. In all cases where cattle are brought to the Abattoirs in carts to be killed or dressed, notice shall be given to the Inspector or Assistant Inspector before such cattle are killed or dressed, and the hours for killing and dressing the same shall be from 9 a.m. to 4 p.m.

11. Should any animal die while in the cattle-pens connected with the Abattoir, the owner of the same, or person occupying the cattle-pen at such time, shall immediately remove the animal entire from the island, and destroy the same forthwith.

12. All animals on which fees are chargeable shall be reported to the Inspector or Assistant Inspector of Abattoirs, at his office without delay, and the fees paid forthwith.

13. Sheep and cattle will not be permitted to remain in the Abattoir-pens for more than forty-eight hours from the time of being brought in.

14. No person or persons using any of the slaughter-houses shall expose for sale diseased meat, and no such person shall refuse or neglect to at once remove and destroy any diseased carcass or carcasses of cattle, when ordered to do so by the Inspector or Assistant Inspector of the Abattoirs.

15. The lessee or occupier of any slaughter-house shall thoroughly cleanse the same, to the satisfaction of the Inspector or Assistant Inspector, immediately after slaughtering has been carried on, and with respect to the offal and blood, may select and shall immediately remove, not later than six o'clock p.m. daily, such portions, not being the whole of such offal and blood as the said lessee or occupier may require for disposal as human food, the remainder thereof to be the property of, and to be removed by the Government.

16. The premises attached to, and the roadways in front and rear of each slaughter-house shall be kept clean by the lessee or person occupying or using the same, to the satisfaction of the Inspector or Assistant Inspector of Abattoirs.

17. The lessees of Abattoirs in which sheep or pigs may be slaughtered shall furnish to the Inspector or Assistant Inspector, at their respective offices, a monthly return of all such animals as shall have been slaughtered at such Abattoirs, on or before the 4th day of each month.

18. No hide, carcass, or spleen of any horned cattle (not having been previously inspected), shall be removed from any slaughter-house until after the same has been inspected by the Inspector or Assistant Inspector of Abattoirs.

19. No meat shall be blown at the Abattoir, and should any be found blown, the owner of the same, or the person blowing the meat, will be held liable.

20. The lessee or occupier of any slaughter-house shall cause the blood of all animals slaughtered therein to be immediately received into a pan provided for that purpose, which will be removed by the Government, who will undertake the removal and disposal of all blood from the premises, except as hereinbefore provided.

21. Should the lessee or occupier of any Abattoir slaughter between the hours of 6 p.m. and 6 a.m., he shall cause the blood of the animal or animals slaughtered to be received into the pan placed there for that purpose, and put aside the same when filled. A sufficient number of pans will be provided by the Inspector of Abattoirs.

22. Cattle as they are brought in for slaughter shall be kept separate from those already in the yards, until the brands of those so brought in shall have been inspected.

23. All hides, skins, heads, feet, and offal shall be removed from the Abattoirs only by way of the read at the rear of the buildings.

24. The hours fixed for driving animals into the pens of the reserved mutton slaughter-houses shall be from 6 a.m. to 6 p.m. between the 1st October and 31st March in each year; and between the 1st April and 30th September the hours shall be from 7 a.m. to 4 p.m. in each year.

25. It is strictly prohibited to place candles or lights of any description upon or against the walls, or upon or against any portion of the woodwork of the Abattoirs or stables, or any other building or buildings in connection therewith; and the lessee or person occupying the Abattoir or stable where such prohibited candle or light is found will be held responsible for the same.

26. In cases where water is found running to waste in any Abattoir, the lessee or occupant will be held responsible for such waste.

27. Gambling is prohibited on Glebe Island.

28. Any person wilfully or negligently causing injury to any Government property of any description whatever on Glebe Island will be held responsible for the same.

29. The Inspector or Assistant Inspector, or any other officer connected with the Glebe Island Abattoir, may at any time enter to view any of the slaughter-houses connected with the Abattoir, whether leased or otherwise; and no person or persons shall obstruct, molest, or assail with abusive language either the Inspector, Assistant Inspector, or any other officer connected with the Abattoir, while in the execution of his or their official duties.

30. It shall be competent for the Inspector of the Abattoir at any time, should any person or persons occupying any of the houses reserved by the Government, be found breaking or continuing to break any one or more of the regulations made concerning the Public Abattoirs at Glebe Island, to refuse to allow such person or persons to use any of the houses reserved by the Government.

31. The owner or person in charge of any cart or vehicle used for the transmission of meat from the Abattoir shall keep the same, and the awnings used therewith, in cleanly and proper condition, to the satisfaction of the Inspector or Assistant Inspector of the Abattoir. The Inspector may, when he considers it necessary, order any of the carts or vehicles used as aforesaid to be properly painted, and any such cart or vehicle shall not be used for the transmission of meat from the Abattoir until such order shall have been complied with to his satisfaction.

32. The lessee or occupier of any beef slaughter-house shall cause the contents of the paunches and intestines to be deposited on the manure heap at the rear of the Abattoir; and the lessee or occupier of any sheep or pig slaughter-house shall cause the contents of the paunches and intestines to be deposited in the shoot erected for that purpose.

33. Any person or persons offending against any of the orders and regulations contained in paragraphs 1, 6, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, shall for each and every offence forfeit and pay a sum not exceeding five pounds nor less than twenty shillings.
