1875-6.

NEW SOUTH WALES.

REPORT

OF THE

COUNCIL OF EDUCATION

UPON THE CONDITION

OF THE

PUBLIC SCHOOLS

FOR

1875.

Presented to both Houses of Parliament, in pursuance of Act 30 Vict. No. 22, sec. 27.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1876.

THE COUNCIL OF EDUCATION TO HIS EXCELLENCY THE GOVERNOR,

SUBMITTING

REPORT UPON THE CONDITION OF THE PUBLIC SCHOOLS FOR 1875.

To His Excellency SIR HERCULES GEORGE ROBERT ROBINSON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor-in-Chief of the Colony of New South Wales and its Dependencies, and Vice-Admiral of the same.

MAY IT PLEASE YOUR EXCELLENCY,

We have the honor, in compliance with the requirements of the Public Schools Act, to submit this our Ninth Annual Report upon the condition of Public Schools, being that for the year 1875.

I.—COUNCIL.

During the past year the Council consisted of the same Members as in 1874, viz. :—

Stephen Campbell Brown, Esquire, M.L.A.
 William Augustine Duncan, Esquire.
 The Honorable Thomas Holt, M.L.C.
 The Honorable John Smith, M.D., M.L.C., President.
 The Honorable Sir Alfred Stephen, C.B., K.C.M.G., M.L.C.

It is to be noted, however, that Mr. Holt withdrew from the Council after the termination of 1875, and that his name does not appear among the signatures to this Report.

The duties of President were performed by the Honorable John Smith during the year ending 31st December; and on the expiration of that period he was again unanimously re-elected to the office, for the year 1876.

II.—NEW REGULATIONS.

In consequence of the Resolution passed by the Legislative Assembly that Regulation 2 ought not in future to be enforced, it became necessary to expunge that rule from the code. The Council further deemed it expedient to take advantage of the occasion thus offered to revise the whole of the Regulations. Much time and consideration were accordingly devoted to the revision, and the task of re-casting the Regulations, when agreed upon in substance, was entrusted to Sir Alfred Stephen who kindly consented to undertake the duty. The revised Regulations were finally adopted by the Council on the 29th November, 1875, and took effect from the 1st January of the present year. The Council passed and recorded a vote of thanks to Sir Alfred Stephen in consideration of the trouble taken by him in connection with these Regulations. In this Report will be found various allusions to the new Regulations, and their effect upon the different points of the system administered by the Council.

III.—GENERAL STATISTICS.

During the past year the number of Primary Schools maintained or aided by the State has, for the first time in the history of the Colony, exceeded one thousand. The subjoined return exhibits a net increase of forty schools upon the number in operation in 1874, forty-one Public Schools and eighteen Provisional Schools having been added to the list, and six Half-Time and thirteen Certified Denominational removed therefrom.

SCHOOLS.

Year.	Public.	Provisional.	Half-time.	Denominational.	Total.
1867	288	31	6	317	642
1868	318	103	38	289	748
1869	336	146	61	264	807
1870	359	164	82	241	846
1871	378	181	96	229	878
1872	396	194	101	211	902
1873	400	216	117	209	942
1874	420	244	122	204	990
1875	461	262	116	191	1,030

The aggregate number of pupils enrolled has also increased by 4,072. In Public Schools the increase of enrolled scholars amounted to 5,109, and in Provisional Schools to 784, while the Half-Time Schools show a diminution to the extent of 112, and Certified Denominational Schools of 1,709 pupils.

PUPILS.

PUPILS.

Year.	Public.	Provisional.	Half-time.	Denominational.	Total.
1867	28,434	733	267	35,306	64,740
1868	34,284	3,113	593	35,930	73,920
1869	37,593	4,788	1,242	37,026	80,649
1870	39,731	5,185	1,445	36,460	82,821
1871	43,494	5,633	2,267	35,919	87,313
1872	46,458	6,673	1,792	33,564	88,487
1873	48,831	7,466	2,209	33,512	92,013
1874	53,702	8,002	2,462	36,218	100,384
1875	58,811	8,786	2,350	34,509	104,456

From the more general interest manifested in the subject of primary education during 1875, it might have been anticipated that the schools would have exhibited evidences of greater prosperity, and such expectations would doubtless have been realized but for adverse circumstances. The prevalence of sickness of a serious nature throughout the year, by which the suspension of many schools for lengthened periods was rendered necessary, the floods with which the Colony was visited in the earlier months, and the long drought the effects of which were severely felt in the latter part of the year, all affected school attendance unfavourably; but notwithstanding these drawbacks, regular attendance, as may be seen from the following table, has declined but slightly.

Proportion of pupils in average attendance to the average number enrolled:—

Year.	Public School.	Certified Denominational.	All Schools.
	Per cent.	Per cent.	Per cent.
1872	69·3	67·5	68·6
1873	67·	65·7	66·
1874	65·7	64·	65·6
1875	64·8	64·	64·5

Appendix A.

The returns for the last quarter of 1875, however, show a decided improvement as regards regularity of attendance over those of the preceding year. During that quarter, the number of pupils in average attendance was in Public Schools 67·5 per cent., and in Denominational Schools 66·5 per cent. of the number enrolled. In all schools the proportion was 67·6 per cent.

The payments on account of school fees amounted to £56,246 12s. 8d., an increase of £2,740 7s. 6d. The number of free scholars was raised from 6,426 in 1874, to 6,600 in 1875.

FEES.

Year.	Public.	Provisional.	Half-time.	Denominational.	Totals.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1867	14,404 0 10½	162 12 5	18 9 7½	16,134 5 10	30,719 8 9
1868	17,588 8 11	1,099 14 11	77 15 11	15,398 3 9	34,164 3 6
1869	20,658 19 7	1,981 9 9	174 13 8	16,803 10 11	39,618 13 11
1870	21,113 8 10½	2,077 10 6	234 0 10	16,158 3 2½	39,583 3 5
1871	24,824 0 8	2,154 2 3	284 4 3	16,240 14 6	43,503 1 8
1872	27,048 18 11	2,701 4 6	456 9 3	15,787 9 11	45,994 2 7
1873	28,579 15 11½	3,430 15 11	529 16 11	16,406 18 0	48,947 5 11½
1874	31,656 1 7½	3,670 1 11½	769 13 0½	17,440 8 7	53,536 5 2
1875	33,985 12 6½	3,860 14 4½	677 9 9½	17,722 15 11½	56,246 12 8

IV.—PUBLIC SCHOOLS.

Appendix B.

An increase of 41 in the number of Public Schools, as already noticed, took place in 1875. Of the 420 in operation in 1874, four were closed last year; and forty-five new schools were added to the list. These consisted of five schools formerly in existence, and re-opened in 1875; five converted from Denominational, and twelve from Provisional Schools; and twenty-three entirely new schools. Considering that seventy-one applications for new Public Schools to provide means of instruction for 5,583 children were received in 1875, and that forty-seven of them were acceded to, it might have been expected that a larger number would have been brought into operation. The great difficulty experienced by the Council in obtaining sites, and the inability of the architect to keep pace with the demand for plans and specifications of the necessary buildings, will explain in a great degree the delay which has taken place in completing the arrangements requisite to enable the schools to be opened.

Appendix C.

The desire for the establishment of Public Schools has doubtless been greatly stimulated by the Resolution passed by the Legislative Assembly on April 20th, 1875, on the motion of Mr. Parkes. The terms of that resolution were—"That so much of the Regulation of the Council of Education, numbered two, under the head of 'School Administration,' which requires in the case of the establishment of Public Schools the contribution from private sources of one-third of the cost of erecting and furnishing school buildings, inclusive of schools now in course of construction where sufficient funds have not been privately subscribed, ought not in future to be enforced."

The belief is very generally entertained that by this Resolution the people are entirely exempted from raising local contributions, either for the repair of school buildings or for any other purpose in connection with the schools. Demands are consequently now made upon the Council, not only for the entire cost

cost of Public Schools on their first establishment, but also for additions, repairs, furniture, and improvements generally, at the sole expense of the public. Applications for grants for these purposes are on this account not only more numerous, but, from the absence of the check furnished by the necessity for contributing one-third of the cost, are less restricted by considerations of economy than in previous years. There is therefore greater need for rigid inquiry and for exact information in dealing with such applications, while a corresponding increase in the amount of work under this head is entailed upon the Council and its officers.

V.—PROVISIONAL SCHOOLS.

The number of Provisional Schools in operation during the year was 262, consisting of 216 of those existing in 1874 and forty-six newly opened schools. Seventy-nine applications for aid to Provisional Schools were received in 1875, of which forty-nine were granted, fifteen were refused, and the remainder were still under consideration at the close of the year. Appendix D.
Appendix E.

The new Regulations have made an important change in the relation of the Provisional Schools to the Council. In some instances it has been found that these schools were regarded by their supporters as virtually Denominational, notwithstanding that aid had been originally granted by the Council on the express condition that they should be conducted in every respect as Public Schools. Moreover, the teachers being appointed by the Local Boards did not at all times consider themselves amenable to the Regulations, were often but poorly qualified, and in many cases were procured with difficulty and after delays that proved injurious to the schools. These defects are remedied by the 92nd Regulation, which prescribes the character both of the instruction and management of Provisional Schools, and by the 31st Regulation, by which the appointment of teachers is vested in the Council. In connection with this latter point, it is necessary to state that means have been adopted for maintaining a regular supply of teachers sufficiently acquainted with the duties they are required to perform in Provisional Schools.

VI.—HALF-TIME SCHOOLS.

A slight decrease is observable in the number of Half-Time Schools, but in a majority of cases the schools removed from the list continue in existence as Provisional Schools. In such instances the population of the localities has increased to such an extent as to warrant the appropriation of the whole time of a teacher to one school. Appendix F.

Applications still continue to be received for the establishment of Half-Time Schools which provide the means of instruction for sparsely peopled localities. More than a hundred such places are thus supplied that must otherwise have remained destitute of any assistance by the State as regards primary education. Appendix G.

VII.—INSPECTION.

Owing to the increase in the number of schools and in the amount of business to be transacted in connection with them, it became apparent early in the year that the existing staff would be inadequate to the proper inspection of all the schools.

The Council accordingly resolved to form two new districts and to appoint two additional Inspectors. In the Southern portion of the Colony, the Bathurst, Goulburn, and Braidwood districts contained the largest number of schools, and required their Inspectors to spend the greatest amount of time in travelling. On these grounds, a certain number of schools were removed from each of these districts and included in a new district, of which Yass is the centre. For similar reasons, some of the schools included in the Armidale District, in the North, were separated into a new district, of which Grafton is the head quarters, and which extends along the coast from the Tweed to the Hastings. For the Yass District, the Council selected Mr. J. H. Murray who had been trained in the Mother Country, and had served in the National and Public Schools of the Colony for a period of twenty years. The charge of the Grafton District was conferred upon Mr. T. Dwyer, whose service, though extending over a shorter period, had been such as to indicate the possession by him of the necessary qualifications for the office. The inspection of schools in the Bathurst District was performed by three Inspectors in addition to the officer in charge, the latter having been unable through ill-health to discharge the duty. Notwithstanding this assistance, twenty-one of the schools in the district were not inspected in 1875. Mr. Murray having been engaged for a time in examining schools in the Bathurst District, was thereby prevented from entering upon his own proper duties till a comparatively late period of the year, and as a consequence was compelled to omit the inspection of twenty-six schools. With these exceptions, the duty of inspecting schools appears to have been performed with fair regularity and diligence. The annexed table exhibits the number of schools inspected in each district.

Districts.	Number of Schools or Departments existing during the year.	Number fully inspected.	Number not fully or regularly inspected.
Albury.....	63	55	8
Armidale.....	48	39	9
Bathurst.....	78	57	21
Braidwood.....	90	83	7
Camden.....	106	102	4
Cumberland.....	92	92	...
Goulburn.....	89	85	4
Grafton.....	67	62	5
Maitland.....	90	84	6
Mudgee.....	68	63	5
Newcastle.....	104	88	16
Sydney.....	110	110	...
Yass.....	77	61	26
Total.....	1,082	971	111

The condition of schools generally is estimated by the Inspectors with reference to a fixed Standard which takes account of all the various points of school management. Appendix H.

The

The subjoined table shows the percentage of each class of school, reaching, falling below, or rising above this standard.

Schools.	Below Standard.		Up to Standard.		Above Standard.	
	1874.	1875.	1874.	1875.	1874.	1875.
Public.....	33.3	31.7	37.4	36.9	29.3	31.3
Provisional.....	78.2	75.6	17.6	19.6	4.2	4.6
Half-time.....	38	54.6	42.4	32	19.6	13.3
Denominational.....	46.5	47.9	39.9	31.6	13.6	20.4
All Schools.....	45.6	46.3	34.8	31.8	19.6	21.3

Compared with the results obtained in 1874, little improvement is shown in schools of any description, though it is but reasonable to suppose that the large number of new schools brought under inspection for the first time may have increased the proportion of those returned as below the standard.

Needlework.....	4,899	4,196	2,356	1,060	12,511

A larger number of pupils (48,713) were examined than in any previous year. As regards proficiency, little improvement could be expected, considering the circumstances already described that militated against regular attendance at school. With the exception of writing and geography, no decided advance can be recorded in any subject; but on the other hand no material retrogression, as may be seen from the foregoing table, is discernible. This, having regard to all the facts of the case, cannot be regarded as unsatisfactory.

VIII.—TEACHERS.

a. Pupil-Teachers.

THE number of applicants for employment in the capacity of Pupil Teacher during 1875 was 135 only—a marked decline from the numbers of previous years. A larger proportion, however, was successful in passing the required examination, the number found eligible for appointment being 82. By the Regulation now in force on this subject (No. 63 and Appendix B) the qualifications required of applicants for the office of Pupil Teacher have been slightly raised. No difficulty is apprehended in obtaining an adequate supply of suitable candidates in consequence of this step, which, moreover, has an important bearing upon other provisions for the maintenance of the staff of teachers.

Equally

Equally satisfactory results are apparent from the examinations of Pupil Teachers holding appointments in schools. The percentage of failures was but 13·7, while that for 1874 was 16.

In the new Regulation No. 63, provision is also made for an extended course of instruction for Pupil Teachers. Some time may possibly elapse before full effect can be given to this provision, but it is hoped that by this means a more thoroughly qualified class of candidates may be prepared for the training school.

For the purpose of comparison with the previous year's results, the following statistics are given:—

	1875.	1874.
Applicants examined.....	135	193
" successful	82	102
" unsuccessful	53	91

Pupil Teachers promoted:—

From Class IV to Class III.....	90	60
" III to " II.....	57	61
" II to " I.....	56	48
" I to Training School	54	34
Failing to gain promotion.....	41	39

b. Training School.

Besides the 54 first class Pupil Teachers who were found to be eligible for admission to the Training School, 31 applicants were examined with a view to test their suitability for training, and of these 22 were successful. Of the whole number of the candidates that completed the course of training, 59 gained classifications, as shown in the following Table:—

Classification.	Males.	Females.	Total.
CLASS II.			
Section A	0	5	5
" B	12	13	25
CLASS III.			
Section A	6	4	10
" B	4	6	10
" C	7	2	9
Total.....	29	30	59

Two of the candidates failed to gain classification.

The necessity for raising the standard of qualification for admission to the Training School had on many occasions made itself felt, by the fact that, after undergoing six months' instruction, some of the candidates gained very low classifications. In 1874, for example, eight candidates obtained the lowest classification, and nine others only one grade above it; while in the past year two failed altogether, nine were placed in the lowest rank, and ten in the lowest but one. Moreover, as the want of thoroughly competent teachers to fill vacancies in the larger schools became increasingly urgent, the Council was compelled to devise means for meeting the demand. On these grounds the Council has provided:—

1. A higher standard of qualifications for admission to the Training School. (Regulation 55 and Appendix D.)
2. A longer period of training and extended course of instruction. (Regulation 57 and Appendix D.)

The experiment of teaching History in the Training School will, in accordance with the latter provision, be tried during 1876.

c. Examinations.

Examinations under the provisions of Article 37 of the Regulations of 8th March, 1869, were held as usual during the year 1875, with the following results:—

Total number examined	219
Promoted	85
To III C	26
" B	23
" A	25
II B	5
" A	5
" B	1
Failed to gain promotion	134
Total	219

For several years past a large number of failures has been recorded, and it may be inferred that a certain proportion of teachers in the lower grades will never be found qualified for promotion, however often subjected to the test of examination. The Council determined therefore, in the revised Regulation, to omit the provision requiring teachers holding the two lowest classifications to undergo examination every year, and (Regulation 44) to leave it optional with teachers whether they would endeavour to gain promotion by that means.

On the other hand, it was found that teachers possessed of comparatively meagre attainments, secured by Article 39 of the old Regulations promotion to grades entitling them to the charge of schools which they could not efficiently conduct. The new Regulation on this subject, No. 46, remedies this defect, and only allows of promotion, for good service, under restrictions that effectually guard against advancement to the higher grades of persons unequal to the increased responsibilities of such a status.

The

The total number of teachers promoted under the provisions of the rule formerly in force was 30, viz. :—

To III A	4
II B	8
" A	4
I B	4

d. Emoluments.

At the close of 1875 there were 1,504 teachers in the service of the Council, viz. :—975 principal teachers in charge of schools, 220 assistants, and 309 pupil teachers.

Their emoluments amounted in the aggregate to £156,044 6s. 0½d., of which £99,797 13s. 4d. was paid by the Council, and the remainder £56,246 12s. 8¾d. consisted of school fees. The average amount paid was £103 15s. 0½. From more precise calculations, however, it appears that the remuneration of principal teachers was, for 1875, at the following rate:—

	Salary.	Fees.	Total.
	£	£	£
Teachers holding certificates of I A	150	251	401
" " B	138	169	307
" II A	126	98	224
" " B	114	86	200
" III A	102	42	144
" " B	90	32	122
" " C	78	23	101

In country schools a residence is generally provided in addition.

The emoluments of teachers in the various classes of schools, but excluding pupil teachers, are exhibited in the following Table:—

Schools.	Salary.	Fees.	Total.
	£ s. d.	£ s. d.	£ s. d.
Public	96 6 6½	57 0 5½	153 7 0
Provisional	44 17 1¾	14 12 5¾	59 9 7½
Half-time	66 2 1½	11 9 7¾	77 11 9½
Church of England.....	99 3 5½	72 13 8¾	171 17 2¼
Roman Catholic.....	92 4 7½	54 2 7¾	146 7 3¼
Presbyterian.....	111 15 9¼	75 5 4	187 1 1½
Wesleyan	95 15 3¼	68 19 4	164 14 7¼

Although the foregoing statistics disclose some improvement in the pecuniary position of teachers generally, the Council was of opinion that the remuneration of those holding low-class certificates, and employed in the smaller Public and Denominational Schools, as well as those in charge of Provisional Schools, was insufficient. In the new Regulations (48 and 50) provision, therefore, is made for a considerable increase in the salaries of these teachers from 1st January, 1876. By this increase it is hoped that no classified teacher will receive less than £120 per annum in addition to a residence.

IX.—LOCAL SUPERVISION.

With a view to improve the character of the local supervision, of which complaint has been made in former Reports, the revised Regulations Nos. 67, 68, 69, and 70 exhibit in a more systematic form than heretofore, the various duties expected of Local Boards. Moreover, there has been some reason to suppose that the omission by Inspectors to give notice of their visits of inspection has contributed to render Local Boards indifferent to the welfare of the schools under their care. This ground of complaint has been removed by the 73rd Regulation, which requires that, at one inspection in each year, the Local Board shall be invited to be present, due notice being given to the Chairman or Honorary Secretary. In future the Council hopes to be able to report more favourably of the performance of the duty of local supervision.

X.—FINANCE.

Although the Parliamentary Vote for primary schools was increased from £120,000 to £180,000, the increase was not available until the month of September, and hence the Council was unable to give effect to the resolution of the Assembly until late in the year. The total amount at the Council's disposal was £183,059 16s. 8d., consisting of the following items:—

	£	s.	d.
Balance from 1874	...	873	8 11
Vote for Public Instruction...	...	180,000	0 0
Church and School Estates Revenue	...	2,186	7 9
Total	...	£183,059	16 8

Adding to this the amount of local contributions received in 1875 towards Buildings, £4,049 12s. 11d., and the sum paid as School Fees, £56,246 12s. 8¾d., there would be a grand total of £243,356 2s. 3¾d.

The past year has been one of great trial to many of the schools, and if no great progress can be recorded, the circumstances detailed in previous portions of this Report may be viewed as furnishing a satisfactory explanation of the fact. Not to have retrograded is as favourable a state of things as could, under such adverse influences, reasonably have been expected.

We submit this as our Report upon Public Schools for the year ending 31st December, 1875; and in testimony thereof we have caused our corporate seal to be affixed hereto, this twenty-ninth day of March, one thousand eight hundred and seventy-six.

(L.S.)

ALBURY DISTRICT.

INSPECTOR'S GENERAL REPORT FOR 1875.

I HAVE the honor to submit for the information of the Council of Education this General Report upon the condition of the Public, Provisional, Half-time, and Certified Denominational Schools in the Albury District for the year 1875.

During the year new schools were brought into operation at Booligal, Clarendon, Hopefield, Morven, and Morebringer; final arrangements were made for the establishment of schools at Bungo-wannah, Coree, Downside, Forest Hill, Nangus Creek, Tooma, and Tarramia; the Provisional Schools at Germanton (Ten-mile Creek), Mount Adrah, Urana, and Wondalga were converted into Public Schools; and the necessary steps taken to re-open the Public School at Moulamein.

Owing to reduced attendance, due partly to decrease of population and partly to local differences, the Non-vested School at Eunonyhareenyah had to be closed in the early part of the year, and there is little prospect of its being re-opened for some time, as on the occasion of my last visit to the locality in July there were only eight children whose attendance could be guaranteed.

As in previous years, the residents in newly-formed agricultural areas evinced a commendable degree of interest in assisting to provide the means of education for these localities; and wherever fifteen or more children of the school ages may be found within a radius of two or three miles from some common centre, there are few places in this district at which a school is not either in operation or in course of erection. At present the chief impediment to educational progress is the delay that occurs in the survey of lands selected, approved, and applied for as sites for vested schools. Until the Council obtains a legal title to these lands all action for the erection of the necessary buildings has to be deferred; and it sometimes happens that before the title is perfected the local promoters of the schools have grown apathetic or become dissatisfied; and the children for whom they were primarily intended have lost no inconsiderable portion of the time in which they could best acquire the training and instruction which these schools should have supplied. The inconvenience arising from the delay here referred to is so grave as to make it worthy of consideration whether special arrangements could not be made with the Survey Department to facilitate the acquisition of titles to sites for vested Public Schools. It may be urged in support of such a course, that the liberal provision recently made for the erection of school buildings would be enhanced if this matter of survey could be expedited.

In my General Report for 1874 attention was invited to the fact that the fulfilment of the "residence clause" of the *Crown Lands Alienation Act of 1861* operated in numerous cases against the education of children in rural districts. It is true that the recent change in the Land Laws has virtually abolished this incentive to ignorance, by depriving minors under sixteen of the right to select; but it has also rendered the education of conditional purchasers between the ages of five and fifteen years more precarious, by reason of the very rigid supervision now exercised over those whose term of residence is not yet completed. It is very undesirable that this legal hindrance to the work of popular education should be longer continued, and I venture to point out that it could be obviated by the adoption of a regulation whereby a certificate of attendance at any school in the Colony would be accepted in lieu of residence from conditional purchasers between the ages of five and sixteen years.

The material state of the schools vested in the Council shows progressive improvement. Within the year new buildings were opened at Wilcannia and Hopefield; the schoolhouse at Balranald was enlarged; a teacher's residence provided at Tumut; and substantial improvements made to the school premises at several places. Contracts were also accepted for the erection of school buildings at Bruceedale, Germanton, Jindera, Jerilderie, Morebringer, and Urana; and steps taken to provide similar accommodation at Downside, Forest Hill, Mount Adrah, Adelong, and Moama. The result of the efforts made to provide suitable accommodation and equipment for the schools in this district may be perhaps best shown by a comparison of the value of the property vested in the Council at the close of the years 1870 and 1875. For the former year it was appraised at £13,000, and for the latter at £22,000, showing a net increase in five years of £9,000. The charge of this property is not the least important of the Teachers' duties, and it is gratifying to note that in a large majority of the schools the care with which it is discharged merits unqualified praise; and in only one instance during the year was there reason to suspect the want of reasonable oversight.

The supply of books, maps, and other educational appliances annually granted by the Council was found sufficient for the requirements of nearly all the schools visited; and, as regards the few in which the stock of working materials was limited, the deficiency was due to isolated position and the want of any regular means of carriage to the localities. In the distribution of requisites for schools, valuable assistance is yearly afforded me by the Teachers of the Public Schools at Albury, Adelong, Deniliquin, Gundagai, Tumut, Wagga Wagga, and Wentworth, who receive for, and forward to the schools in their respective neighbourhoods the supplies forwarded by the Council's agent at Sydney.

For the first five months of the year the attendance of pupils at every school in the district was more or less affected by the prevalence of measles and other forms of juvenile sickness. An unusually cold, rainy, and prolonged winter caused a reduction of the daily average in most of the country schools; and towards the close of the September quarter those at some of the large centres of population had to be closed for a time as a precautionary measure to prevent the spread of scarlatina. For the reasons here specified the aggregate attendance of pupils during the first six months was 10 per cent. less than the number for the corresponding period of 1874; and for the September quarter 5 per cent. less; but with the return of more favourable weather the attendance rapidly increased, and the number of pupils on rolls for the closing quarter of the year exceeded that for any previous period. Due regard being paid to the exceptional circumstances here indicated, it may be stated that the requirements of punctuality, order, attention, and the other conditions to a healthy and well regulated system of discipline were as satisfactorily met as in previous years.

Inquiry as to the number of children residing within a reasonable distance of schools maintained by the State, but not in attendance thereat nor otherwise receiving instruction, was carefully made, and with very encouraging results. As compared with the returns for 1874, the number of absentees for

for the current year shows a considerable reduction, and gives ground for the belief that a healthy growth of public opinion and a clearer perception of parental duty are influencing many of those who heretofore withheld from their children the means of education placed at their disposal by the State.

It is scarcely necessary to point out that the causes which led to a reduced and an irregular attendance of the pupils during the major part of the year must have had a corresponding effect upon the work of instruction. And this was found to be the case more especially in grammar and geography. In these subjects the number of pupils whose attainments ranged from fair to good was 10 per cent. less than in the previous year. In reading and arithmetic the high degree of proficiency recorded for 1874 was fully sustained; and in writing and dictation there was a slight improvement in favour of 1875. Viewed as a whole the results achieved may in the circumstances be accepted as satisfactory evidence of educational progress, and of the competency and industry of the Teachers. A summary of my special report upon each school is annexed.

EDMUND H. FLANNERY,
Inspector of Schools.

Inspector's Office, Albury, 21st January, 1876.

ANNEX A.

SUMMARY of Reports upon Public, Provisional, and Half-time Schools, inspected during year 1875.

I.—PUBLIC SCHOOLS.

ADELONG :—Regular inspection, 3rd and 4th June.

Enrolled :—Boys, 64; girls, 49; total, 113. Present :—Boys, 39; girls, 32; total, 71.

This school is held in non-vested premises affording very inadequate accommodation. There is a full supply of working materials, and the general organisation is as good as circumstances permit. A want of punctuality is the most noticeable defect in the discipline; and the prevalence of measles and whooping cough during the three months preceding the date of inspection caused a considerable reduction in the attendance, and seriously interfered with the work of instruction. The pupils' attainments, though not so high as for the previous year, show a fair approach to the requirements of the standard.

ADELONG CROSSING :—Regular inspection, 2nd June.

Enrolled :—Boys, 18; girls, 18; total, 36. Present :—Boys, 14; girls, 12; total, 26.

The material state of the school is good, and the premises are neatly kept. Five-sixths of the children of the locality are enrolled and attend with reasonable regularity. The work of instruction is conducted with zeal and industry, and the average proficiency of the pupils is tolerable.

ADELONG, UPPER :—General inspection, 15th April.

Enrolled :—Boys, 18; girls, 19; total, 37. Present :—Boys, 6; girls, 6; total, 12.

On date of inspection a majority of the pupils were suffering from measles, and others were absent through fear of contagion. All the children in the locality are enrolled, and from the behaviour and answering of those present at examination it may be assumed that the training and instruction afforded by the school are reasonably judicious and profitable.

ALBURY (Primary) :—Regular inspection, 10th, 11th, and 12th August.

Enrolled :—Boys, 84; girls, 81; total, 165. Present :—Boys, 74; girls, 69; total, 143.

Recent improvements to the school buildings and playgrounds have rendered the material state of the premises excellent. The general discipline is of fair worth, the work of instruction is duly regulated. The results range from fair to good, and the progress made since last inspection warrants the formation of a "Fifth Class."

ALBURY (Infants) :—Regular inspection, 16th August.

Enrolled :—Boys, 72; girls, 59; total, 131. Present :—Boys, 64; girls, 46; total, 110.

A neat and well ordered schoolroom, amply found in suitable educational appliances. The routine admits of a judicious alternation of "lessons" and "play," and the methods of teaching are fairly intelligent. The average proficiency of the children is up to standard.

BALRANALD :—Regular inspection, 1st November.

Enrolled :—Boys, 45; girls, 33; total, 78. Present :—Boys, 36; girls, 30; total, 66.

The schoolhouse has been enlarged since last inspection, and the accommodation is now adequate and of fair quality. The attendance is unpunctual, and many of the pupils are slovenly in dress; otherwise the discipline shows improvement and fair efficiency. The instruction is duly regulated; the methods of teaching are tolerably skilful, and the pupils' attainments average moderate. A large influx of new pupils and the recent promotions from class to class account in part for this limited proficiency.

BATLOW :—Regular inspection, 14th April.

Enrolled :—Boys, 24; girls, 17; total, 41. Present :—Boys, 17; girls, 15; total, 32.

The premises have recently been fenced, and the school buildings painted. Owing to the prevailing epidemic (measles) the attendance has for some time been partial; but the discipline is of fair quality, and the results of instruction exceed tolerable.

BLACK RANGE :—Regular inspection, 23rd July.

Enrolled :—Boys, 13; girls, 16; total, 29. Present :—Boys, 13; girls, 15; total, 28.

The premises are non-vested, unfenced, and deficient of out-buildings. The school is suitably furnished and fairly organised. About two-thirds of the children in the locality are enrolled; the discipline is tolerably effective, and the instruction is productive of moderate results.

BLOWRING :—General inspection, 22nd April.

Enrolled :—Boys, 21; girls, 17; total, 38. Present :—Boys, 19; girls, 14; total, 33.

The schoolroom is small, and increased accommodation is much needed. Otherwise the organisation is judicious; the moral tone of the school pleasing, and the instruction profitable. The general proficiency ranges from very fair to good.

BOWNA :—Regular inspection, 4th August.

Enrolled :—Boys, 16; girls, 18; total, 34. Present :—Boys, 11; girls, 11; total, 22.

The schoolhouse is a wooden building of mean appearance and in bad repair. There is an ample supply

supply of furniture, and the internal arrangements are reasonably judicious. The pupils are very irregular in attendance, and their parents appear to attach very little value to the school. The work of instruction is profitable, and notwithstanding the many drawbacks to its success, the average attainments rank as fair.

COOLAC :—Regular inspection, 17th May.

Enrolled :—Boys, 19 ; girls, 16 ; total, 35. Present :—Boys, 13 ; girls, 12 ; total, 25.

A slab building roofed with shingles, fairly furnished, and fully provided with working materials. Nine-tenths of the children in the locality are enrolled ; the moral aspect of the school is pleasing ; and the results of instruction show a fair approach to the standard of proficiency.

DENLIQUIN :—Regular inspection, 18th and 19th October.

Enrolled :—Boys, 73 ; girls, 34 ; total, 107. Present :—Boys, 71 ; girls, 33 ; total, 104.

The accommodation for pupils is rather limited ; in other respects the material state of the school is good. The discipline is lax, and the pupils' attainments range from moderate in the lower classes to tolerable in the upper grades. The comparatively meagre results of instruction are in part due to the prevalence of scarlatina, through which the school had to be closed for a short period preceding the date of examination.

EDWARDSTOWN :—Regular inspection, 1st June.

Enrolled :—Boys, 9 ; girls, 17 ; total, 26. Present :—Boys, 5 ; girls, 13 ; total, 18.

The schoolhouse and residence need repairs, and the premises are unfenced. The school is amply supplied with working materials, but the attendance is partial and irregular. Reasonable progress has been made since last inspection ; and the actual proficiency of the pupils averages tolerable.

FOREST VALE :—General inspection, 13th December.

Enrolled :—Boys, 20 ; girls, 7 ; total, 27. Present :—Boys, 17 ; girls, 6 ; total, 23.

A neat and well ordered schoolroom, amply found in the necessary working materials. All the children in the locality are enrolled and attend regularly ; the moral aspect of the school is pleasing ; the good progress is being made in the several subjects of instruction, and the actual proficiency of the pupils averages fair.

GERMANTON :—General inspection, 14th December.

Enrolled :—Boys, 15 ; girls, 19 ; total, 34. Present :—Boys, 13 ; girls, 17 ; total, 30.

The premises in which the school is held temporarily are very unsuitable, but tenders for the erection of vested buildings have been accepted. The attendance is, in general, regular, and punctual ; the discipline is effective ; and good progress is being made in the work of instruction. The average proficiency is fair.

GOCUP :—Regular inspection, 7th May.

Enrolled :—Boys, 32 ; girls, 30 ; total, 62. Present :—Boys, 23 ; girls, 23 ; total, 46.

A spacious schoolroom, well furnished, and tastefully arranged. All the children in the locality are enrolled, and attend regularly ; the disciplinary arrangements are very good ; the work of instruction is conducted with zeal and industry ; very satisfactory progress has been made since last inspection, and the general results may be estimated as very fair.

GUNDAGAR :—Regular inspection, 10th and 11th May.

Enrolled :—Boys, 47 ; girls, 43 ; total, 95. Present :—Boys, 30 ; girls, 40 ; total, 70.

At date of inspection the premises needed repairs and improvements which have since been effected. The general organisation is judicious, and the results of instruction show a fair approach to the standard.

HAY :—Regular inspection, 25th and 26th October.

Enrolled :—Boys, 60 ; girls, 40 ; total, 100. Present :—Boys, 38 ; girls, 26 ; total, 64.

A weathershed is needed. In other respects the material equipment is complete ; the discipline admits of favourable report ; and, due regard being had to the interruptions caused by bad weather and the prevalence of juvenile sickness, the results of instruction are reasonably satisfactory.

HOWLONG :—General inspection, 16th September.

Enrolled :—Boys, 25 ; girls, 42 ; total, 67. Present :—Boys, 20 ; girls, 40 ; total, 60.

The premises are unfenced, and the teacher's residence needs enlarging. There is an ample supply of furniture and working materials suitably arranged and tastefully kept. 90 per cent. of the children in the locality are enrolled, and attend with very fair regularity ; the moral condition of the school is healthy ; and the work of instruction realises fairly satisfactory results.

HOPEFIELD :—General inspection, 22nd September.

Enrolled :—Boys, 19 ; girls, 19 ; total, 38. Present :—Boys, 15 ; girls, 19 ; total, 34.

A new school opened four months previous to date of inspection. Its material state is excellent, and there is a liberal supply of educational appliances. Wet weather and bad roads have kept down the average attendance during the winter months ; and as the great majority of the pupils have not been at school for more than one quarter, the actual proficiency is small, but the progress made may in the circumstances be regarded as fairly satisfactory.

JEREELDERIE :—General inspection, 8th October.

Enrolled :—Boys, 30 ; girls, 13 ; total, 43. Present :—Boys, 30 ; girls, 13 ; total, 43.

This school is held temporarily in non-vested premises affording very moderate accommodation. The general organisation is as good as circumstances permit ; the disciplinary arrangements are judicious, the attendance is good, and the results of instruction fairly meet the requirements of the standard of proficiency.

LAKE ALBERT :—General inspection, 24th June.

Enrolled :—Boys, 13 ; girls, 32 ; total, 45. Present :—Boys, 8 ; girls, 12 ; total, 20.

The material state of the school is good, the general discipline is effective, and the instruction is based upon correct methods. The results average fair. The attendance on date of inspection was unusually small, owing to the inclemency of the weather.

MOAMA :—

MOAMA :—Regular inspection, 11th November.

Enrolled :—Boys, 34 ; girls, 27 ; total, 61. Present :—Boys, 29 ; girls, 21 ; total, 50.

The premises are non-vested, and but ill adapted for school purposes, both as to accommodation and equipment. Four-fifths of the children in the locality are enrolled ; the attendance is reasonably regular, and the moral tone of the school is pleasing. Fair progress has been made within the year in most of the subjects of instruction, and the average proficiency shows a tolerable approach to the standard.

MOREBRINGER :—General inspection, 15th September.

Enrolled :—Boys, 16 ; girls, 17 ; total, 33. Present :—Boys, 16 ; girls, 17 ; total, 33.

The school is held temporarily in a small hut, badly furnished, and in every respect unsuitable for educational purposes. The ordinary attendance falls below 50 per cent. of the numbers on rolls,—the chief cause being the negligence of parents. The few pupils who attend regularly evince fair proficiency, but the average results of instruction are small.

MULLENJANDRA :—General inspection, 9th December.

Enrolled :—Boys, 11 ; girls, 19 ; total, 30. Present :—Boys, 10 ; girls, 14 ; total, 24.

Repairs and improvements to the premises are much needed, but the internal organisation of the school is fairly satisfactory. For a considerable portion of the year the attendance was partial and irregular, but since the present teacher took charge a decided improvement has taken place in this and all other features of the general management ; and the present condition of the school may be estimated as tolerable.

MULWALA :—Regular inspection, 24th September.

Enrolled :—Boys, 15 ; girls, 18 ; total, 33. Present :—Boys, 13 ; girls, 16 ; total, 29.

The premises are non-vested and need repair—but the supply of furniture and working materials is suitable and sufficient. The discipline is judicious and effective ; the proficiency in reading and writing is satisfactory, but in other subjects the results are meagre.

NARANDERA :—Regular inspection, 5th October.

Enrolled :—Boys, 24 ; girls, 15 ; total, 39. Present :—Boys, 23 ; girls, 15 ; total, 38.

A spacious schoolroom fully provided with the necessary educational appliances. Its organisation is very unsatisfactory—the floors, windows, and furniture showing many signs of rough usage and neglect. The pupils are unpunctual, and many are negligent in dress ; the lesson documents are incomplete, and the results of instruction fall short of moderate.

TATTAI :—General inspection, 12th November.

Enrolled :—Boys, 12 ; girls, 13 ; total, 25. Present :—Boys, 11 ; girls, 11 ; total, 22.

The premises are unfenced, and need some minor improvements. The schoolroom is well furnished, and its internal arrangements are excellent. In its various features the moral aspect of the school is pleasing ; the instruction is duly regulated, and the results average fair.

THURGOONA :—Regular inspection, 5th August.

Enrolled :—Boys, 40 ; girls, 38 ; total, 78. Present :—Boys, 38 ; girls, 37 ; total, 75.

The premises present an exceedingly neat and well-ordered appearance, and the general organisation is judicious. All the children of the locality are under instruction ; the discipline is highly effective, and the moral tone of the school excellent. The work of instruction is prosecuted with zeal and industry ; substantial progress has been made since last inspection, and the general proficiency ranges from good to very good.

TUMBERUMBA :—Regular inspection, 8th April.

Enrolled :—Boys, 20 ; girls, 19 ; total, 39. Present :—Boys, 19 ; girls, 18 ; total, 37.

The schoolroom is well furnished and fairly organised. Three-fourths of the children in the locality are enrolled ; the attendance is irregular, and the pupils evince but little interest in their work. The general proficiency ranges from moderate to tolerable.

TUMUT :—General inspection, 28th and 29th April.

Enrolled :—Boys, 53 ; girls, 63 ; total, 116. Present :—Boys, 41 ; girls, 39 ; total, 80.

A teacher's residence, lavatories, and weathersheds have recently been erected, and the material state of the school now ranks as excellent. Owing to the prevalence of sickness the attendance on date of inspection was unusually low, but the moral condition of the school is in other respects very pleasing. The instruction is duly regulated, and based upon intelligent methods. The results range from fair to good, the average proficiency being very fair.

URANA :—General inspection, 28th September.

Enrolled :—Boys, 12 ; girls, 11 ; total, 23. Present :—Boys, 11 ; girls, 10 ; total, 21.

The school is held temporarily in non-vested premises, affording sufficient accommodation, but of poor quality. Two-thirds of the children in the locality are under instruction. The general discipline is passable ; and the results of instruction approach to moderate.

WAGGA WAGGA (Boys) :—Regular inspection, 22nd, 23rd, and 25th June.

Enrolled :—165. Present :—138.

The accommodation is rather limited for the present attendance, but in other respects the material state of the school is all that could be desired. In its various features the moral aspect of the school is very pleasing ; the instruction is duly regulated, and in its results the exceptionally high standard attained for the previous year has been fully sustained. The general proficiency of the pupils warrants the formation of a "fifth class" and the promotion of all except those in the lowest draft of the "first class" to a higher grade of classification.

WAGGA WAGGA (Girls) :—Regular inspection, 21st and 22nd June.

Enrolled :—114. Present :—85.

The accommodation is adequate, and the general equipment of the school satisfactory. On the whole the discipline is reasonably healthy ; the methods of teaching range in kind and quality from moderate to very fair, and the general proficiency is tolerable. In the higher classes very fair work is being done.

WAGRA :—Regular inspection, 16th December.

Enrolled :—Boys, 23 ; girls, 15 ; total, 38. Present :—Boys, 14 ; girls, 11 ; total, 25.

The schoolhouse is a slab building in fair repair, but indifferently organised. The attendance is partial

partial and irregular, and the general discipline lax. The methods of teaching are chiefly mechanical; the instruction is not regulated by the prescribed lesson documents, and the average proficiency of the pupils is small.

WOOMARGAMA :—Regular inspection, 10th December.

Enrolled :—Boys, 23; girls, 15; total, 38. Present :—Boys, 10; girls, 6; total, 16.

The school buildings are suitable and substantial, but need to be kept with greater neatness and care. Five-sixths of the children in the locality are enrolled, but the quality of the attendance is poor. The proficiency of the pupils in reading, writing, and grammar is fair, but in the remaining subjects very moderate.

II.—PROVISIONAL SCHOOLS.

COOBA CREEK :—General inspection, 27th May.

Enrolled :—Boys, 17; girls, 7; total, 24. Present :—Boys, 10; girls, 7; total, 17.

A new schoolhouse, tolerably furnished and fairly found in working materials. Three-fourths of the children in the locality are enrolled, and the government is mild but unsystematic. Moderate progress has been made in reading and writing, but in other subjects the proficiency attained is very small.

FERNDALE :—Regular inspection, 17th April.

Enrolled :—Boys, 9; girls, 12; total, 21. Present :—Boys, 8; girls, 11; total, 19.

A suitable schoolroom, judiciously organised and neatly kept. The discipline is healthy, and fair progress is being made in the leading subjects of instruction. The average proficiency exceeds tolerable.

HILLAS CREEK :—General inspection, 11th June.

Enrolled :—Boys, 11; girls, 6; total, 17. Present :—Boys, 9; girls, 6; total, 15.

The hut in which the school is temporarily held is in every way unsuitable; but steps are being taken to provide the necessary buildings, and it is expected that they will be ready at the close of the year. With four exceptions, all the children in the locality attend, and the general discipline is of very fair worth. The instruction is well regulated, and the pupils' proficiency fairly satisfactory.

HUON :—Regular inspection, 8th December.

Enrolled :—Boys, 13; girls, 18; total, 31. Present :—Boys, 4; girls, 5; total, 9.

Since last inspection the premises have received substantial repairs, and the material state of the school is now reasonably good. All the children of school ages in the locality are enrolled, but owing to harvesting operations the attendance on date of visit was unusually small. From the answering of those present it may be inferred that the general results of instruction average moderate.

LACMALAC :—General inspection, 4th May.

Enrolled :—Boys, 12; girls, 14; total, 26. Present :—Boys, 11; girls, 13; total, 24.

The schoolroom is too small for the ordinary attendance, but in other respects its material state is tolerable. Three-fourths of the children in the locality are enrolled and attend with fair regularity. The general discipline is lax, and the results of instruction average indifferent.

MAJOR'S PLAINS :—Regular inspection, 14th September.

Enrolled :—Boys, 9; girls, 13; total, 22. Present :—Boys, 5; girls, 9; total, 14.

The general organisation of the school is fairly satisfactory, but the pupils are unpunctual and irregular in attendance. In other respects the discipline is judicious. Fair progress is being made in the more important subjects of instruction, and the general proficiency of the pupils shows a tolerable approach to the requirements of the standard.

MOUNT ADRAH :—Regular inspection, 10th June.

Enrolled :—Boys, 20; girls, 9; total, 29. Present :—Boys, 13; girls, 6; total, 19.

The schoolhouse is in fair repair and well furnished, but the general organisation is faulty. The attendance is partial, and many of the pupils are irregular. An injudicious classification obtains; the methods of teaching are mechanical; and the results average very moderate. A change of teachers has since been effected, by which the condition of the school has been improved.

MORVEN :—General inspection, 9th July.

Enrolled :—Boys, 9; girls, 9; total, 18. Present :—Boys, 7; girls, 6; total, 13.

An excellent schoolhouse, but partially furnished and indifferently organised. The attendance is irregular; the general discipline lacks system; the methods of teaching are obsolete, but applied with fair industry; and the average proficiency of the pupils is very moderate.

WANDOOK :—Regular inspection, 12th October.

Enrolled :—Boys, 6; girls, 6; total, 12. Present :—Boys, 6; girls, 6; total, 12.

This school is held in premises lent by one of the members of committee, and fairly suitable for the purpose. Owing to the apathy of parents, bad roads, and other causes, the attendance of pupils at this school has, since establishment in June, 1874, been much below the promised average; and there is but little prospect of improvement in this respect. The work of instruction is duly regulated; the methods of teaching are suitable; and the average proficiency is fairly up to standard.

WANGANELLA :—Regular inspection, 21st October.

Enrolled :—Boys, 8; girls, 14; total, 22. Present :—Boys, 8; girls, 12; total, 20.

The premises need fencing, but in other respects the material state and equipment of the school rank as very fair, and its moral tone is pleasing. In reading, writing, and dictation, fair progress has been made since last inspection; and in the remaining subjects the pupils' proficiency is moderate.

WELAREGANG :—General inspection, 12th April.

Enrolled :—Boys, 9; girls, 13; total, 22. Present :—Boys, 8; girls, 13; total, 21.

The schoolhouse is a new slab building, suitable in design and fairly furnished. About four-fifths of the children in the locality are enrolled, and regular in attendance; the general discipline is tolerably effective; reasonably good progress is being made in reading and writing, but the average proficiency in other subjects is very moderate.

WONDALGA :—General inspection, 16th April.

Enrolled :—Boys, 14; girls, 4; total, 18. Present :—Boys, 11; girls, 4; total, 15.

The schoolhouse is in tolerable repair and fairly equipped. Not more than three-fifths of the children in the locality are enrolled; the disciplinary arrangements are tolerably suitable. In the three leading

leading subjects of instruction the pupils' proficiency average moderate, but their answering in the other subjects prescribed by the standard was comparatively small.

III.—HALF-TIME SCHOOLS.

TARCUTTA, LOWER:—General inspection, 14th June.

Enrolled:—Boys, 12; girls, 12; total, 24. Present:—Boys, 9; girls, 11; total, 20.

A residence for the teacher has recently been provided, and the equipment of the schoolroom is suitable. All the children in the locality are enrolled and regular in attendance; but in other respects the discipline is weak. Due regard being paid to the recent influx of new pupils, the general proficiency of the pupils may be considered as moderately satisfactory.

TARCUTTA, UPPER:—General inspection, 15th June.

Enrolled:—Boys, 11; girls, 7; total, 18. Present:—Boys, 11; girls, 6; total, 17.

The bark hut in which this school is held affords very poor accommodation and is unsuitably furnished. All the children in the locality attend with fair regularity; and the average results of instruction approach to tolerable.

EDMUND H. FLANNERY,
Inspector of Schools.

Inspector's Office,
Albury, 19th February, 1876.

ARMIDALE DISTRICT.

INSPECTOR'S General Report for the year 1875.

IN the early part of the year the Armidale District was subdivided, and all schools on the coast within the basins of the Rivers Hastings, Macleay, Nambuccra, Bellenger, Clarence, Richmond, and Tweed were handed over to the supervision of Inspector T. Dwyer, under the designation of the Grafton District. At present the Armidale District comprises within its limits the whole of the northern table-land, and that portion of the western plains drained by the Rivers Namoi, Gwydir, and Macintyre—the schools on the first-named river being added to, when those on the coast were withdrawn from, my district.

Within the limits last defined, there have been brought into operation during the year three new Public Schools—Barraba, Dundee, and Gunnedah; and five new Provisional Schools—Bryan's Gap, Herding Yard Creek, Keepit, Vegetable Creek, and Walgett. The Half-time Schools at Killalee and McIntyre Flat have been closed during the year, owing to the paucity of attendance in the case of the latter school, and the unsuitableness of the building provided for school purposes at Killalee. The Half-time Schools on Saumarez Creek have been closed, and their place is supplied by a good Public School, securing an attendance of pupils more than double of that reached in the two Half-time Schools. Altogether, forty-eight schools have been in operation during the whole or part of 1875, viz. :—

25 Public Schools.
21 Provisional Schools.
1 Church of England School.
1 Roman Catholic School.

—
48 Total.
—

All parts of the district in which schools were situated have been visited; and six ordinary, nineteen regular, and twenty general inspections have been made. Nine schools did not receive full inspection; but, of these, four were opened after the date of my visit and consequent thereon, and the remainder were not in operation when due, and visited, for inspection.

Speaking generally, it may be said that the educational wants of the district are very fairly provided for. There are indeed some few localities where the establishment of Provisional Schools is possible, but where steps have not been taken by the residents for providing the necessary buildings and furniture, in the expectation that legislative enactment may relieve them from the necessity for such expenditure. The condition of the school buildings and general equipment have, in many instances, materially improved. Provision has been made for the erection of first-class school premises at Tamworth, Inverell, and Bingera; and more or less extensive repairs and additions have been effected at Barraba, Boggabri, Dundee, Maryland, Rocky River, Tenterfield, and Uralla. Viewed in their educational aspect, the condition of the schools is not so good as, under favourable circumstances, it should be; the average proficiency in each class of school inspected being as follows:—

Public Schools..... Tolerable to fair.
Provisional Schools..... Moderate to tolerable.
Certified Denominational Schools... Tolerable to fair.

Of the schools inspected, 62 per cent. fell below the requirements of the standard, 18 per cent. met the requirements, and 20 per cent. exceeded them. For the previous year the results were—

55 per cent. below the standard.
17 " " up to " "
28 " " above " "

Considerable allowance, however, should be made for the serious interruption to the attendance occasioned by the prevalence of protracted epidemic sickness that characterised the earlier half of the year. Many schools were closed for two and three weeks; and the attendance at all schools in the district was injuriously affected for several months. Notwithstanding that the attainments of the pupils show a falling off as compared with those of last year, it is pleasing to observe general improvement in school discipline, and the better order and moral tone prevailing as a consequence. The absence of a uniform system of school drill, referred to in former reports, is still, however, a serious defect.

The Teachers as a body maintain a character for respectability and industry. A few cases have occurred where the intemperate habits of the Teacher have formed the subject of complaint to the Council; and, in two instances, dismissal has been the consequence. All Teachers due for examination under the provisions of Article 37 of the Regulations were subjected to the ordeal, but only one (out of six) gained a higher classification. Three Teachers were promoted for good service, under Article 39 of the Regulations; and all the Pupil Teachers in the district, except one, passed successful examinations.

The character of the local supervision still leaves great room for improvement. In some cases, periodic Board meetings are held, and matters pertaining to the school discussed; but in no instance has systematic visitation of the school been practised throughout the year. The Boards whose supervision leaves least room for complaint are those of the Public Schools at Bowling Alley Point, Glen Innes, Inverell, Nundle, Tamworth, and Uralla.

Summaries of reports on all schools examined during the year are appended.

J. D. BRADLEY,
Inspector of Schools, Armidale District.
ARMIDALE

ARMIDALE DISTRICT.

ANNEX A.

Summaries of Reports upon Public and Provisional Schools examined during the year 1875.

I.—PUBLIC SCHOOLS.

ARMIDALE (V.) :—General inspection, 26th, 27th, 28th October.

Number enrolled :—Boys, 119 ; girls, 82 ; total, 201. Number present :—Boys, 99 ; girls, 71 ; total, 170.

1. Extensive and urgent repairs and additions to the premises are needed. The school is well found in all necessary working appliances, and the general organisation is good.

2. The attendance has been seriously affected by sickness and change of teachers during the year, but is now steadily increasing. The pupils attend with very fair regularity, and, with few exceptions, are punctual. The discipline is healthy and shows improvement, more especially in the points noted as defective at the last inspection. The moral tone of the school is very good.

3. All the prescribed subjects are taught, and, in addition, elementary Latin and Algebra are included in the course of instruction for the Fourth Class. The lesson documents are carefully compiled, and the teaching, as a whole, is marked by industry and intelligence. Except in the case of the lowest class, the attention of the pupils is prompt and well sustained ; and, otherwise, very fair mental training is shown. The average proficiency is *fair to very fair* ; and the results are by no means unsatisfactory when allowance is made for the many hindrances to progress that have occurred during the year.

BARRABA (V.) :—General inspection, 13th August.

Number enrolled :—Boys, 14 ; girls, 14 ; total, 28. Number present :—Boys, 10 ; girls, 14 ; total, 24.

1. The playground is unfenced, and some minor repairs to the building and furniture are needed. The general organisation is tolerable.

2. The pupils, as a whole, are regular and punctual. In other respects the discipline is lax, and the attention and mental training of the pupils defective.

3. Singing and drawing are not taught ; otherwise the prescribed course of instruction is followed. The methods, as far as observed and judged by results, are of tolerable merit. Rote work appears to be too much relied upon. The average proficiency of the pupils rates at *moderate to tolerable*.

BENDEMEER (V.) :—Regular inspection, 15th September.

Number enrolled :—Boys, 21 ; girls, 20 ; total, 41. Number present :—Boys, 14 ; girls, 13 ; total, 27.

1. The premises are in reasonably good condition, but the schoolroom is small and badly shaped, and prevents proper organisation. Under the circumstances, the arrangements made by the teacher are fairly satisfactory.

2. School drill has not received sufficient attention, but the discipline is in most respects fair ; and the appearance and general demeanour of the pupils are creditable.

3. The course of instruction is complete ; the teaching earnest ; and the methods, on the whole, suitable. The average proficiency of the pupils *exceeds tolerable*.

BOGGABRI (V.) :—General inspection, 28th September.

Number enrolled :—Boys, 12 ; girls, 17 ; total, 29. Number present :—Boys, 12 ; girls, 16 ; total, 28.

1. Except that a weathershed is needed, the material condition and organisation leave little to be desired.

2. The attendance has fallen off considerably since last inspection, but the pupils enrolled attend with very fair regularity and punctuality. The discipline, as a whole, is very fairly effective.

3. All the prescribed subjects are taught, and the instruction is judiciously regulated. The teacher shows an acquaintance with good methods ; but it is very doubtful that they have been diligently applied, the average proficiency of the pupils being but *tolerable*. Some irregularities in the conduct of the teacher have seriously operated against the interests of the school.

BOWLING ALLEY POINT (V.) :—Regular inspection, 18th November.

Number enrolled :—Boys, 27 ; girls, 27 ; total, 54. Number present :—Boys, 27 ; girls, 16 ; total, 43.

1. The premises generally are in good condition and well kept, and the organisation is equally satisfactory.

2. About 75 per cent. of the pupils enrolled attend regularly, and good punctuality is secured. In other respects the results of the discipline continue to be very satisfactory—the attention of the children being ready and well sustained, their appearance and demeanour pleasing, and mental training very fair. The moral tone of the school is very good.

3. The course of instruction comprises all the prescribed subjects, and is regulated with very fair judgment. The methods are fair in themselves, and the teaching is energetic and painstaking. The average proficiency of the pupils *exceeds fair*. Much credit is due to the teacher's wife for the nature and extent of the assistance rendered by her.

BRODIE'S PLAINS (N.V.) :—Regular inspection, 6th July.

Number enrolled :—Boys, 5 ; girls, 7 ; total, 12. Number present :—Boys, 4 ; girls, 3 ; total, 7.

1. The premises are in very fair condition, but the schoolroom is not large enough for the prospective requirements of the locality. The organisation is very fair under existing circumstances.

2. The attendance at and previous to, inspection shows a great diminution. This, in part, is attributable to the prevalence of measles, but the main cause is the unpopularity of the teacher. The order is good, and the pupils are well behaved, obedient, and respectful. The government, however, appears to have been characterised by undue harshness.

3. All the prescribed subjects are taught, and the instruction is fairly regulated. The teaching is marked by energy and fair skill, and the pupils are trained to habits of industry and self-reliance. The average proficiency *exceeds fair*.

BUNDARRA (V.) :—Regular inspection, 15th July.

Number enrolled :—Boys, 18 ; girls, 25 ; total, 43. Number present :—Boys, 18 ; girls, 20 ; total, 38.

1. The premises generally are in good condition and neatly kept. The enlargement of the schoolroom is a pressing want. The accommodation afforded is insufficient for the present attendance of pupils, and there is every prospect of substantial increase in the enrolment. There is an adequate supply of all necessary working appliances, and otherwise the organisation is good.

2. The discipline is sound, and the order and moral tone are good. More attention, however, to drill is necessary.

3. The course of instruction is in accordance with the "Standard," and the lesson documents are framed with very fair skill, and appear to be duly observed. The teaching is energetic and painstaking, and the mental training and average proficiency of the pupils are *fair*. The attainments, though not quite equal to those of last year, are not unsatisfactory when allowance is made for the unfavourable circumstances—epidemic sickness, and illness of teacher—that for some time back have affected the school.

DUNDEE (N. V.):—General inspection, 27th May.

Number enrolled:—Boys, 13; girls, 8; total, 21. Number present:—Boys, 6; girls, 4; total, 10.

1. The school is conducted in temporary premises pending the completion of extensive repairs to the proper schoolhouse. The furniture in use is sufficient in quantity, but generally speaking of an unsuitable kind. The organisation is in other respects bad.

2. Nothing approaching to discipline is observable, and neither teacher nor pupils appear to have any notion of order. The condition of the school in this respect is as low as that of any I have visited.

3. No documents have been framed by which to regulate the teaching, if what has been done deserves to be called teaching; and the results are barely appreciable. On the commonest matters arising out of the reading or other lessons, the pupils exhibit the most pitiable ignorance. The average proficiency is *bad*.

(The services of the Teacher have been dispensed with.)

GLEN INNES (V.):—General inspection, 16th and 17th June.

Number enrolled:—Boys, 76; girls, 62; total, 138. Number present:—Boys, 43; girls, 38; total, 81.

1. The school buildings are new and of an excellent description. Accommodation for boarders, however, is desirable; and the Teacher's residence requires enlargement accordingly. The school is well found in working appliances, and otherwise the organisation is very good.

2. The attendance has been lower than usual of late on account of sickness. Ordinarily the pupils are regular and punctual. The government is effective; and the order and moral tone, good.

3. The course of instruction is complete and well regulated; the methods are suitable and skilfully applied; and the teaching is marked by earnestness and energy. In all the classes the pupils are very attentive under examination, and exhibit evidence of careful mental training. The average proficiency is *fair to very fair*. These results are creditable for the short time the school has been in operation, and promise well for the future.

GUNNEDAH (V.):—General inspection, 27th September.

Number enrolled:—Boys, 38; girls, 41; total, 79. Number present:—Boys, 31; girls, 33; total, 64.

1. The premises are of brick, well arranged, and new; but the schoolroom is too small for even the present attendance, and many more pupils may be expected. In all points for which the teacher is accountable the organisation is good.

2. The attendance is increasing daily, and the pupils are regular and punctual. In its other effects the discipline is very satisfactory.

3. The school has only been in operation for about a month, consequently the absolute attainments are but small. Good work has been done nevertheless. The classification is correct, and the lesson documents are well arranged and duly observed. The teaching is energetic and skilful. The average proficiency of the pupils is *nearly tolerable*.

INVERELL (V.):—Regular inspection, 8th and 9th July.

Number enrolled:—Boys, 41; girls, 43; total, 84. Number present:—Boys, 39; girls, 37; total, 76.

1. The schoolroom is much too small for the requirements of the place, but steps are in progress for the erection of new and more commodious premises. The present buildings are in very fair repair and well kept; and the garden and other surroundings are creditable to the teacher. There is an adequate supply of apparatus and books, and otherwise the organisation is very fair. 2. The attendance is just recovering from serious interruption occasioned by the prevalence of measles. Ordinarily, however, it is much lower than might reasonably be expected in so large a town. As a rule, the children are clean in appearance and well-behaved, but their attention under instruction is not sufficiently active. 3. All the prescribed subjects are taught, and the instruction is, on the whole, judiciously regulated. There is still no fourth class in the school, and its absence, together with the comparatively low results reached in all but the second class under the assistant teacher, reflect great discredit on the teacher. The reading throughout the school is very unsatisfactory, and there is evidence of a want of thoroughness in the teaching, and an absence of proper mental training. The average proficiency of the pupils is about *tolerable*—the attainments in third class being much below the requirements of the "Standard."

KELLY'S PLAINS (V.):—General inspection, 17th May.

Number enrolled:—Boys, 10; girls, 12; total, 22. Number present:—Boys, 6; girls, 7; total, 13.

1. The buildings are in very fair repair, but need cleaning and painting. The condition of the schoolroom is dirty and untidy in the extreme. The organisation, as far as the teacher is concerned, is very indifferent, and the state of the school records most unsatisfactory. 2. The attendance has dwindled away since the appointment of the present teacher, who on account of his slovenly habits and for other reasons is deservedly unpopular. The few pupils present at examination were obedient and well-behaved, but this doubtless is the result of former training. 3. Nominally all the prescribed subjects are taught; but the instruction appears to have been haphazard and feeble. In most subjects fairly satisfactory results were obtained at examination, but simply in consequence of the thoroughness of the former teaching. The average proficiency is *tolerable to fair*.

(Consequent upon the report on this inspection the teacher's services were dispensed with.)

MARYLAND (V.):—General inspection, 3rd June.

Number enrolled:—Boys, 23; girls, 35; total, 58. Number present:—Boys, 20; girls, 30; total, 50.

1. The buildings are new and of a very fair description; but both schoolroom and teacher's residence afford insufficient accommodation. The stock of books and apparatus is ample, and the organisation otherwise is good. 2. The attendance is good both as regards regularity and punctuality; and nearly every child in the locality of the school age is enrolled. The discipline is salutary but needs to be more precise, and the moral tone of the school is very fair. 3. All the prescribed subjects are taught, and the instruction is fairly regulated. The methods are in general appropriate, and the teaching is animated and fairly effective in most subjects. The average proficiency of the pupils *exceeds tolerable*.

NARRABRI (V.):—Regular inspection, 30th September.

Number enrolled:—Boys, 21; girls, 22; total, 43. Number present:—Boys, 20; girls, 22; total, 42.

1. The premises are in the same condition as when last inspected, but extensive repairs are about to be effected. The furniture is sufficient and in good condition, and the same remark applies to the books; but much of the apparatus—wall-tablets and pictures—has been so damaged by silverfish as to be useless. 2. The attendance is small considering the population, but the pupils enrolled are regular and

and punctual. The discipline seems sound and effective—the general demeanour of the pupils and moral tone being good. 3. The classification is in general correct, and the lesson documents are very fairly arranged. The teaching seems energetic and careful, and the average proficiency of the pupils is *fair*.

NUNDLE (V.) :—General inspection, 19th and 20th November.

Number enrolled :—Boys, 51 ; girls, 48 ; total, 99. Number present :—Boys, 45 ; girls, 44 ; total, 89.

1. The premises generally speaking are in good condition, but do not afford sufficient accommodation for either pupils or teacher. A water-supply is also much required. There is an ample supply of apparatus and books, and the general organisation, as far as circumstances admit, is very good. 2. About 90 per cent. of the school population attend, and a very satisfactory degree of regularity and punctuality is secured. In other respects the discipline is equally effective ; and the order, appearance, and demeanour of the pupils leave very little to be desired. 3. The prescribed course of instruction is followed, and the lesson documents are compiled with skill and neatness. The classification is correct, but general promotions are now necessary. The methods are appropriate, and appear to be applied with vigour and earnestness. Under examination, the attention of the pupils in the first class is very good ; in the second, third, and fourth classes, excellent. The degree of mental training evinced is very satisfactory also. The average proficiency of the pupils *exceeds very fair* ; and as far as the teacher is accountable, the general condition and results are highly creditable.

ROCKY RIVER (V.) :—General inspection, 30th August.

Number enrolled :—Boys, 24 ; girls, 26 ; total, 50. Number present :—Boys, 16 ; girls, 23 ; total, 39.

1. Weather-shed, hat-room, and lavatory are not provided ; otherwise the material condition may be considered good. The shed is much needed, as the playground affords no shelter from sun or rain. There is a sufficiency of furniture, apparatus, and books ; and in other respects the organisation is very fair. 2. The pupils attend punctually, and under favourable circumstances about three-fifths of the number enrolled are regular in their attendance. The discipline generally is salutary, and the order and moral tone are good. 3. All the prescribed subjects but singing are taught. The classification is in the main correct, though at present the numbers preponderate unduly in the lowest class. The methods of teaching are very fair in kind and general results—the average proficiency reaching *fair to very fair*.

SAUMAREZ (V.) :—General inspection, 9th September.

Number enrolled :—Boys, 21 ; girls, 33 ; total, 54. Number present :—Boys, 12 ; girls, 20 ; total, 32.

1. The school buildings have been removed to a more central site, and with beneficial results. A water-supply is urgently needed. The schoolroom is commodious and suitable, and there is an ample supply of furniture, apparatus, and books. In other respects the organisation is but tolerable, and the condition of the school records is not satisfactory. 2. An increased attendance is secured, and the degree of regularity and punctuality observed is creditable. The order is very fair in most respects, but would be improved by the agency of school drill. 3. The classification is defective, and the instruction is not regulated in sufficient accordance with the "Standard." The teaching is painstaking and earnest, but the methods are not very suitable. The average proficiency of the pupils is but little above *indifferent* ; but the school has been in operation for only a short period, and disadvantages have been contended with since its opening.

TAMWORTH (V.) :—General inspection, 5th and 8th November.

Number enrolled :—Boys, 75 ; girls, 52 ; total, 127. Number present :—Boys, 64 ; girls, 35 ; total, 99.

1. The school buildings are unfit for occupation, but the erection of new and suitable premises on a better site have been provided for. The organisation is very fair under existing circumstances. 2. The attendance has increased, but not more than one-third of the school population are enrolled. About 75 per cent. of the pupils are regular in their attendance, and the degree of punctuality secured is good. The discipline has improved considerably, and the order and moral tone of the school are now very fair. 3. The course of instruction is complete and judiciously regulated. The classification is defective, but proper organisation in this respect is prevented by the insufficiency and unsuitableness of the accommodation. The methods are of very fair merit, and the teaching seems energetic ; but corresponding results are very difficult of attainment under existing circumstances. The average proficiency of the pupils is *tolerable*.

TENTERFIELD (V.) :—Regular inspection, 8th and 9th June.

Number enrolled :—Boys, 84 ; girls, 80 ; total, 164. Number present :—Boys, 71 ; girls, 50 ; total, 121.

1. The spouting of the main building is very defective, and the whole of the external wood-work needs painting. In other respects the material condition of the premises is reasonably good. There is an adequate supply of furniture, apparatus, and books, and the organisation is good. 2. The attendance of the pupils is satisfactory as regards punctuality, and the degree of regularity secured is very fair. The discipline is of a high order, and the moral tone of the school is very good. 3. The course of instruction is complete and judiciously regulated, and the classification of the pupils in general correct. The methods of the principal teacher, as far as observed, are appropriate, and his teaching is marked by zeal and energy. The assistant teacher is, however, not sufficiently animated, nor does he exercise sufficient vigilance over the actions of his class. The average proficiency of the pupils is *fair*, and would have been higher but that very general promotions recently made have brought down the standard of attainments.

TINGHA (N.V.) :—General inspection, 16th July.

Number enrolled :—Boys, 14 ; girls, 16 ; total, 30. Number present :—Boys, 11 ; girls, 6 ; total, 17.

1. The schoolroom is a weather-board building, large and comfortable, and well equipped with all necessary appliances. The interior arrangements are neat, and the school property is well kept. 2. At present the attendance is low on account of measles ; but, under favourable circumstances, it is not nearly so good as it should be in view of the population. The order, generally speaking, is good, though at times the younger pupils are somewhat unsteady and careless in their answering. 3. Singing and needlework are omitted from the course of instruction ; the classification is appropriate, and the lesson documents are compiled with fair judgment ; the methods are fair, and the teaching appears to be energetic and painstaking ; the average proficiency is *nearly fair*.

URALLA (V.) :—General inspection, 1st and 2nd September.

Number enrolled :—Boys, 49 ; girls, 43 ; total, 92. Number present :—Boys, 41 ; girls, 39 ; total, 80.

1. Both schoolroom and residence have recently been enlarged, and they are now in excellent condition and adequate to all requirements. The school is well found in working appliances, and otherwise the organisation is good. 2. A full and very fairly regular attendance is secured, and the degree of punctuality is very satisfactory except in a few cases. The discipline is judicious, and the order and moral tone very good. 3. The course of instruction is complete and well regulated. The classification is, at present, rather low, but general promotions are about to be made. The teaching is earnest and painstaking, and the methods of the principal teacher are on the whole good ; those of the pupil teacher rate at tolerable to fair. The general proficiency of the pupils *approaches very fair*.

VIOLET

VIOLET DALE (V.) :—Regular inspection, 10th September.

Number enrolled :—Boys, 21 ; girls, 15 ; total, 36. Number present :—Boys, 10 ; girls, 10 ; total, 20.

1. The schoolroom presents rather a mean appearance, but affords fair accommodation for the present attendance of pupils. There is a sufficiency of working appliances, and, as a whole, the organisation may be estimated at fair to very fair. 2. The attendance is low on account of sickness. Ordinarily the degree of regularity and punctuality secured is very fair. The discipline is steadily improving, and the order and moral tone are very fair. 3. All the prescribed subjects but singing are taught. The timetable and lesson programmes are carefully compiled, and the classification is in the main correct. The lessons given indicate careful preparation on the part of the teacher, but his instruction has not sufficient force and penetrativeness. The average proficiency of the pupils rates at *tolerable to fair*.

WALCHA (V.) :—General inspection, 8th December.

Number enrolled :—Boys, 32 ; girls, 22 ; total, 54. Number present :—Boys, 29 ; girls, 17 ; total, 46.

1. The buildings are in need of extensive repairs, and the fencing is dilapidated and useless. Desks are required for first class, and several of the maps are old and incorrect. As far as the teacher is accountable the organisation is good. 2. A very fair attendance of pupils is secured, and about 80 per cent. are regular. The discipline is correct on the whole, but possibly inclining to severity. The conduct and appearance of the children are creditable, and the moral tone is good. 3. All the prescribed subjects but singing are taught, and the instructional documents are compiled with very fair judgment. The classification is in the main correct, but promotion from the lower grades is necessary. The teaching seems to have been energetic and painstaking, and the methods, as far as observed, are of very fair merit. The average proficiency of the pupils *exceeds fair*.

WALLABADAH (N.V.) :—Regular inspection, 20th September.

Number enrolled :—Boys, 33 ; girls, 28 ; total, 61. Number present :—Boys, 29 ; girls, 28 ; total, 57

1. Since last inspection the exterior of the building has been coated with weatherboards over the slabs, and its appearance and comfort have been much improved thereby. There is a sufficiency of books and apparatus, and the organisation is good. The defects and omissions in the keeping of the school records noted at the last inspection are not now observable. 2. The attendance is regular and punctual. The discipline is healthy ; and the appearance and demeanour of the pupils, order, and moral tone, are good. 3. All the prescribed subjects are taught, and the lesson documents are very creditably compiled. The classification is judicious, the teaching vigorous, and the methods of a very fair order. The average proficiency of the pupils is *nearly fair*, and would doubtless have been higher, but for the prevalence of epidemic sickness.

II.—PROVISIONAL SCHOOLS.

ASHFORD (N.V.) :—General inspection, 23rd July.

Number enrolled :—Boys, 13 ; girls, 11 ; total, 24. Number present :—Boys, 9 ; girls, 7 ; total, 16.

1. The building is fairly suitable, but needs repair. Desks and book-press are required, and the stock of working materials is insufficient and in bad condition. 2. The pupils are irregular and unpunctual in their attendance, and the discipline is not sufficiently exacting in these points. The general order is but moderate. 3. There is no "Standard of Proficiency" in the school ; and, as a consequence, the classification of the pupils and instructional arrangements generally are very defective. Appropriate methods of teaching are but little understood ; and the instruction is mainly mechanical. The average proficiency of the pupils is *indifferent*.

CARROLL (V.) :—Regular inspection, 6th October.

Number enrolled :—Boys, 12 ; girls, 11 ; total, 23. Number present :—Boys, 9 ; girls, 6 ; total, 15.

1. The building is good of its kind, and fairly equipped, but the organisation as effected by the teacher is only moderate. 2. The attendance fluctuates considerably. The children are well behaved, but, beyond this, have little idea of order, and their power of attention is small. 3. All the prescribed subjects but singing are taught, and the instruction is regulated by the usual documents. No opportunity was afforded of observing the methods employed, as the teacher was absent through illness ; but, judged by results they are of a rather low order. The average proficiency of the pupils is *very moderate*. Some allowance, however, should be made for the preponderance of new pupils on the day of examination.

COCKBURN RIVER (N.V.) :—Regular inspection, 15th October.

Number enrolled :—Boys, 17 ; girls, 12 ; total, 29. Number present :—Boys, 11 ; girls, 9 ; total, 20.

1. The building, furniture, &c., are sufficient for existing requirements, and the general organisation is fair. The attendance has been very unsettled for some time past owing to the prevalence of sickness, but is daily improving. The discipline continues satisfactory, and the order is good for the class of school. 3. The classification is tolerably correct, and the compilation of the lesson documents effected with fair judgment. The methods are tolerably appropriate, but the results of the teaching are below those of last year, probably owing to the interruption to the attendance occasioned by sickness. The average proficiency rates at *moderate to tolerable*.

DUNGOWAN (N.V.) :—General inspection, 17th November.

Number enrolled :—Boys, 11 ; girls, 10 ; total, 21. Number present :—Boys, 11 ; girls, 10 ; total, 21.

1. The building is good of its kind, but not centrally situated. The furniture is sufficient in quantity, but unsuitable. There is a very fair supply of books and apparatus. In other respects the organisation is moderate. 2. The pupils are regular and punctual in their attendance. In its other effects the discipline is tolerable. 3. All the ordinary subjects but singing are taught, and the instruction is regulated by the usual documents. The instruction seems careful, but the teacher has but a limited acquaintance with appropriate methods. The pupils give very fair attention under examination, and their average proficiency is about *moderate*.

ELSMORE (N.V.) :—General inspection, 7th July.

Number enrolled :—Boys, 7 ; girls, 8 ; total, 15. Number present :—Boys, 6 ; girls, 7 ; total, 13.

1. The schoolhouse is a bark building, large, cleanly kept, and tolerably comfortable. The school stock is ample, but has been supplemented at the expense of the teacher. The furniture is fairly suitable, and otherwise the organisation is reasonably good. 2. At the time of inspection measles were very prevalent, and the attendance was thereby diminished. Ordinarily, however, the attendance is lower than it should be. Of the pupils enrolled nearly all are regular and punctual ; and the effects of the discipline in other respects are in general satisfactory. Although the order is not of a high character, there is much in the appearance and demeanour of the children pleasing to observe. 3. The lesson documents are compiled with care and are fairly suitable ; and, though the methods employed are in themselves defective, the industry and earnestness that characterise the teaching go far to compensate for the deficiency. The average proficiency of the pupils rates at *tolerable to fair*.

GLEN MORRISON (V.) :—Regular inspection, 7th December.

Number enrolled :—Boys, 20 ; girls, 13 ; total, 33. Number present :—Boys, 9 ; girls, 9 ; total, 18.

1. The slabs need closing, and a large number of the window-panes are broken. In other respects the buildings are in good repair. Since last inspection suitable furniture has been provided, and the organisation is now in essential points reasonably satisfactory. 2. The pupils enrolled attend with fair regularity, but many parents neglect to send their children to school. The discipline has improved considerably, and the moral tone of the school is fair. Singing and drawing are not taught. The lesson programmes are tolerably suitable, but the time-table is faulty. The teaching appears to have been painstaking, and the average proficiency of the pupils is *tolerable*.

KENTUCKY (N.V.) :—Regular inspection, 31st August.

Number enrolled :—Boys, 10 ; girls, 15 ; total, 25. Number present :—Boys, 6 ; girls, 6 ; total, 12.

1. The buildings are fairly adequate to present requirements, and there is a sufficiency of all necessary working appliances. The general organisation, as far as the teacher is accountable, is tolerable. 2. The attendance has been affected by sickness, and about half of the pupils were absent from this cause on the day of examination. The discipline and moral tone are fair. 3. Except as regards singing, the prescribed course of instruction is followed. The lesson documents are fairly suitable and appear to be observed. The methods are of tolerable merit, and the teaching appears to have been careful and painstaking. The average proficiency of the pupils is *tolerable*.

MOREE (N.V.) :—Regular inspection, 5th August.

Number enrolled :—Boys, 11 ; girls, 17 ; total, 28. Number present :—Boys, 9 ; girls, 17 ; total, 26.

1. The school is still conducted in the Wesleyan Chapel, and proper organisation and discipline are obstructed by the presence of chapel furniture. The furniture proper to the school is not of a fit description ; and, altogether, the material part of the organisation is but indifferent. 2. The attendance is, in general, regular and punctual. The discipline has improved in some respects, but the movements of the pupils are still noisy and irregular. The moral tone is fair. 3. The lesson guides are but moderately suitable. The methods, as far as noted, are mainly mechanical, but the teaching seems to have been painstaking, and in some subjects reasonably satisfactory results are produced. The average proficiency is *moderate to tolerable*.

QUIRINDI CREEK (V.) :—Regular inspection, 22nd September.

Number enrolled :—Boys, 14 ; girls, 11 ; total, 25. Number present :—Boys, 13 ; girls, 11 ; total, 24.

1. Except that the slabs need closing, the condition of the building is very fair. Some alterations to the furniture, suggested at the last inspection, have been effected, and the material part of the organisation is now reasonably good. In other points, for which the teacher is accountable, the organisation is but moderate. 2. The attendance has been interrupted by sickness and the death of the late teacher. The general discipline is tolerable, and the order is better than formerly. 3. The classification is defective, and no lesson programmes have been prepared. The teaching is painstaking but mechanical, and the average proficiency of the pupils *very moderate*.

ROCK VALE (N.V.) :—General inspection, 16th December.

Number enrolled :—Boys, 17 ; girls, 6 ; total, 23. Number present :—Boys, 17 ; girls, 5 ; total, 22.

1. The school building is of slabs, roofed with bark, and is tolerably suitable. The furniture is of good quality, but barely sufficient, and the supply of books and apparatus is fairly adequate to existing requirements. 2. The pupils enrolled attend with very fair regularity and punctuality ; but more than one-third of the number of children of the school age in the locality do not attend the school, owing to the indifference and neglect of the parents. The general demeanour and conduct of the pupils are very fair on the whole. The discipline, however, appears to be rather lax and indulgent. 3. Singing and drawing are omitted from the course of instruction. The time-table and lesson programmes are of tolerable merit and appear to be observed. The pupils give very fair attention under examination ; and their average proficiency is *tolerable*.

SIX-MILE SWAMP (N.V.) :—General inspection, 31st May.

Number enrolled :—Boys, 15 ; girls, 11 ; total, 26. Number present :—Boys, 11 ; girls, 6 ; total, 17.

1. The school accommodation is at present very inadequate, and the organisation indifferent. 2. The children attend with very fair regularity and punctuality ; but in other respects the results of the discipline are not very satisfactory. 3. Except as regards singing and drawing, instruction in the prescribed subjects is given ; but neither time-table nor lesson programmes have been prepared. The classification is faulty. The attention of the pupils under examination is unsteady, and their attainments are low. The average proficiency is *indifferent*.

WANDSWORTH (N.V.) :—Regular inspection, 2nd July.

Number enrolled :—Boys, 7 ; girls, 7 ; total, 14. Number present :—Boys, 7 ; girls, 6 ; total, 13.

1. The premises are unfenced, but otherwise the material condition is reasonably good ; and the supply of furniture, apparatus, and books is sufficient and suitable. The organisation, as far as the teacher is accountable, is fair. 2. The attendance is regular and punctual, but the school population has decreased, and it is with difficulty that an attendance sufficient to secure payment of the minimum salary is maintained. The children are obedient and well behaved, and the general order and moral tone are very fair. 3. Singing and drawing are not taught, but otherwise the prescribed course is followed. The classification is tolerably judicious, and the lesson documents are suitable and apparently duly observed. The methods are not of much merit in themselves, but the teaching is painstaking and produces *fair* results.

WEE WAA (V.) :—Regular inspection, 2nd October.

Number enrolled :—Boys, 12 ; girls, 15 ; total, 27. Number present :—Boys, 10 ; girls, 11 ; total, 21.

1. The premises are in good condition and suitable, but the playground needs fencing. There is a sufficient supply of furniture, apparatus, and books ; and otherwise the organisation is fair. 2. The attendance for a considerable time back has been interrupted by sickness. Ordinarily the pupils attend with very fair regularity and punctuality. The order and moral tone of the school are very fair. 3. The classification is tolerably judicious, and the lesson documents in general are suitable. The methods are of tolerable merit, and the average proficiency of the pupils *exceeds tolerable*.

J. D. BRADLEY,
Inspector of Schools, Armidale District.

BATHURST DISTRICT.

INSPECTOR'S General Report for 1875.

I.—AMOUNT AND DISTRIBUTION OF THE MEANS OF EDUCATION.

At the beginning of 1875, there were 120 schools or departments on the list for this district; but in the second quarter of the year, 30 of the schools then on the list were transferred to the "Yass District." During the last three (3) years arrangements were made for bringing 60 additional schools into operation in the district; and at the end of 1875 the number on the list was 114.

The existing schools are very fairly distributed throughout the district, but there are still a few localities in which the educational arrangements are not satisfactory. In three places (Bathurst, Orange, and Sofala) there are too many schools in existence; and in twelve or thirteen localities new schools are still needed. The following list will show the localities for which schools have still to be provided—the aggregate school population residing in such localities being about 450:—

Name or description of locality.	Kind of School needed.
At Euabalong—on the Lachlan River, 45 miles west of Condobolin	A Provisional School is needed.
At Ccdgillico Lake—16 miles south of Euabalong	Do.
At Bumbury—on Orange and Parkes Road	Do.
At Gilcomundry—do.	Do.
On the Orange and Forbes Road	Four Half-time Schools are needed.
In the locality between Toogong and Cargo	A Provisional or a Public School is needed.
At Borenore—8 miles west of Orange	A Public School is needed.
At the Canobolas—near Orange	A second Public School is needed.
At Lower Lewis Ponds and Ophir	Two Half-time Schools are needed.
At Torrens—near Vittoria	A Public School is needed.
At Brown's Creek—near Blayney	Do.
At Mundurama—new township	Do.
And in the locality between O'Connell and Brisbane Valley	Half-time Schools are needed.

During 1875 "Forms of Application" for the establishment of schools under the Council were forwarded to the localities named in the foregoing list, and by the end of 1876 nearly all these localities will, I think, be provided with schools.

II.—CONDITION OF THE EXISTING SCHOOLS.

Since the date of my last Report the material condition of a large number of the existing schools has been improved. During 1875 arrangements were completed or were in progress, for the erection of 24 new buildings for Public Schools; and it is likely that the whole of such buildings will be ready for occupation before the close of 1876. During the greater part of 1875, I was unable, through illness, to undertake the work of inspecting schools. Under the circumstances the Council directed Mr. Inspector O'Byrne, of Mudgee, and Mr. Inspector Murray, of Yass, to examine a large number of schools in my district; and those gentlemen have furnished their own separate reports upon the schools they examined. The schools in Bathurst and those in the western part of the district were examined by me in the latter part of the year. Of the schools so examined I am able to report that in most instances satisfactory progress is being made. The Public School at Forbes, and the three departments of the Public School (Non-vested) at Bathurst, have greatly improved in numbers and efficiency since last inspection. The Forbes school will soon need an infants' department to accommodate its increased attendance. Bathurst requires superior vested school buildings, and I am glad to be able to report that satisfactory arrangements for the erection of such buildings have now been made. Statistics showing the estimated proficiency of the schools examined by me are forwarded separately, and the detailed statements for Public, and Certified Denominational Schools will show the condition of each school visited.

The teachers in the district are, as a body, conscientious, industrious, and painstaking in the discharge of their duties; and they appear to be earnestly endeavouring to improve both in attainments and practical skill.

I cannot report that there is any marked improvement in the character of the supervision exercised by School Boards. In a few instances the Boards attend to their duties with care and regularity; but, speaking generally, the local supervision exercised throughout the district is but moderately beneficial in promoting the interests of education.

III.—PROGRESS AND FUTURE PROSPECTS OF THE SCHOOLS.

Fairly satisfactory progress is, I think, being made in the existing schools throughout the district; and by the end of 1876, nearly every locality which has a school population of not less than 12 children will probably be provided with the necessary means of education; but at the same time I am decidedly of opinion that a very large number of the children in the district will still derive no advantage from the means of education provided, unless the Legislature frame a law to render "school attendance" compulsory.

Bathurst, 1st March, 1876.

J. HUFFER,
Inspector.

ANNEX A.

DETAILED STATEMENT of the Condition of Schools inspected in 1875.

I.—PUBLIC SCHOOLS.

BATHURST (Boys—N. V.) :—Visited, 17th December, 1875. Regular inspection.

Number present :—98.

1. The school is conducted in premises belonging to the Presbyterian denomination. The material condition and organisation are only tolerable; but arrangements have now been made for the erection of suitable vested buildings. The supply of requisites is sufficient. 2. The discipline is good. 3. All the prescribed subjects are taught; the classification is appropriate, and the teaching is carried on with intelligence and earnestness. 4. The proficiency in the second and third classes is very fair, and in the fourth class it is very good. (On the day of inspection 12 of the regular pupils were absent.)

BATHURST (Girls—N. V.) :—Visited, 16th December. Regular inspection.

Number present :—95.

1. The material condition and organisation are fair. The supply of requisites is sufficient. 2. The discipline is very satisfactory in all respects. 3. The course of instruction is that prescribed; and the classification is very fairly appropriate. The methods are suitable, and they are applied with earnest industry. 4. The proficiency ranges from very fair to good.

BATHURST

BATHURST (Infants—N.V.) :—Visited, 13th December. Regular inspection.

Numbers present :—Boys, 74 ; girls, 60 ; total, 134.

1. The new building is greatly needed for this department. *Suitable* infant-school arrangements cannot be made in the premises now occupied. The department has a good supply of requisites.
2. The discipline is healthy.
3. The subjects of instruction are those prescribed ; the classification is appropriate ; and the methods are suitable.
4. The proficiency ranges from very fair to good.

CONDOBOLIN (N.V.) :—Visited, 2nd December. Regular inspection.

Numbers present :—Boys, 16 ; girls, 19 ; total, 35.

1. New vested buildings are being erected for this school. The *present* organisation is very unsatisfactory.
2. The pupils are very fairly regular, and they are clean and neat in appearance. In other respects the discipline is defective.
3. The prescribed subjects are taught, drawing excepted. The instruction is tolerably well regulated, but the methods are unsuitable and ineffective.
4. The proficiency ranges from indifferent to moderate.

CARGO (N.V.) :—Visited, 8th December. Regular inspection.

Numbers present :—Boys, 29 ; girls, 29 ; total, 58.

1. Arrangements are being made for the erection of new vested buildings. The material condition of the present building is indifferent, and, in other respects, it is unsuitable for school purposes. The supply of requisites is fairly satisfactory.
2. The discipline is in all respects fairly effective.
3. Singing is omitted from the proscribed course. The teaching is carried on with industry, but the methods are only tolerably suitable.
4. The proficiency ranges from tolerable to fair.

FORBES (V.) :—Visited, 25th and 26th November. Regular inspection.

Numbers present :—Boys, 87 ; girls, 40 ; total, 127.

1. Additional furniture is needed, and the schoolroom should be whitewashed. Arrangements have been made for the erection of a teacher's residence and for improvements to the school premises. It is probable that an infants' department will shortly have to be organised. The supply of requisites is fairly satisfactory.
2. The discipline is very fairly satisfactory, and the attendance at the school has greatly increased since last inspection.
3. The prescribed subjects are taught with intelligence and industry ; the lesson documents are carefully arranged ; and the classification is very fairly appropriate.
4. The proficiency is very fairly satisfactory.

GERMAN HILL (V.) :—Visited, 9th December. General inspection.

Numbers present :—Boys, 9 ; girls, 7 ; total, 16.

1. A supply of suitable furniture is needed ; the school-ground should be fenced, and the buildings should be lined with boards or with lath and plaster. The supply of requisites is tolerably satisfactory for the present attendance of pupils.
2. The discipline is good.
3. The prescribed subjects are taught with intelligence and skill.
4. At the date of inspection the school had only been in operation a month. There should be a larger attendance of pupils, but in other respects very satisfactory progress is being made. There is a private R.C. school in the locality.

MARCH (V.) :—Visited, 10th December. General inspection.

Numbers present :—Boys, 6 ; girls, 7 ; total, 13.

1. A porch, a lavatory, a tank, and a playshed are needed ; and the school-ground should be divided for boys and girls. Arrangements have been made for enlarging and improving the teacher's residence.
2. The pupils are only moderately regular, but in other respects the discipline is fair. On the day of inspection a large number of the pupils had been kept at home to assist in harvest work, &c.
3. The classification is fair, and the instruction is carefully regulated. The methods are only moderately suitable, but they are applied with industry and painstaking.
4. The proficiency is tolerable.

PARKES (N.V.) :—Visited, 19th and 22nd November. Regular inspection.

Numbers present :—Boys, 30 ; girls, 30 ; total, 60.

1. Since the date of inspection new vested buildings have been completed and occupied.
2. The pupils are very irregular in their attendance, but in other respects the discipline may be considered as fairly satisfactory.
3. All the prescribed subjects are taught, drawing excepted. The classification is tolerably appropriate. The instruction is fairly well regulated, and it is carried on with industry.
4. The proficiency is about tolerable. (A new teacher has been appointed since the date of inspection.)

ROCKLEY (V.) :—Visited, 30th December. Regular inspection.

Numbers present :—Boys, 24 ; girls, 11 ; total, 35.

1. The school buildings are only moderately suitable, and they are in bad repair. A new site has been obtained, and arrangements are being made for the erection of new buildings. The supply of requisites is fairly satisfactory.
2. The pupils are tolerably regular. In other respects the discipline is fair.
3. The prescribed course of instruction is followed ; the lesson documents are tolerably suitable ; the classification is appropriate ; and the teaching is carried on with industry and fair skill.
4. The proficiency is about fair.

TRUNKY (N.V.) :—Visited (by Mr. Allpass), 7th May. General inspection.

Numbers present :—Boys, 6 ; girls, 3 ; total, 9.

1. There is no playground ; otherwise the material condition and organisation are tolerable.
2. The attendance of pupils is much smaller than it should be ; but in other respects the discipline is fair.
3. The prescribed subjects are taught ; the methods are suitable and applied with industry.
4. The proficiency is fair. There are two (2) private schools (one R.C.) in the locality. (The Public School has been closed since the date of inspection.)

WHITE ROCK (N.V.) :—Visited 24th December. General inspection.

Numbers present :—Boys, 16 ; girls, 13 ; total, 29.

1. New vested buildings are much needed for this school. Mr. McPhillamy has promised to give a suitable site for such buildings. There is a fair supply of school requisites.
2. When the river is crossable the pupils are very fairly regular and punctual in their attendance. In other respects the discipline is good.
3. The prescribed subjects are taught (singing excepted) with intelligence and industry. The classification is appropriate ; and the instruction is properly regulated.
4. The proficiency is above fair.

II.—PROVISIONAL SCHOOLS.

CURRAJONG (N.V.) :—Visited, 23rd November. General inspection.

Numbers present :—Boys, 16 ; girls, 14 ; total, 30.

1. The material condition and organisation are only moderately satisfactory. The supply of requisites is sufficient.
2. The discipline is fair in all respects.
3. Object lessons, singing, and drawing

drawing are omitted from the prescribed course; the instruction in the other subjects is carried on with painstaking industry. 4. The proficiency ranges from indifferent to moderate.
(This school is only aided temporarily; it will be closed if the new buildings at Parkes—2 miles distant—should be found sufficient for the accommodation of the children from both places.)

MANDAGERY (V.) :—Visited, 7th December. General inspection.

Numbers present :—Boys, 4; girls, 6; total, 10.

1. The building and furniture are tolerably suitable for a Provisional School. Whitewashing and other improvements are needed. A few "First Books" and a supply of slate pencils are also needed. 2. The discipline is tolerably satisfactory. During the week of my visit many pupils were kept at home to assist in harvest work; the usual attendance is about 20. 3. Reading, writing, dictation, arithmetic, grammar, geography, and object lessons are taught with painstaking industry. 4. The proficiency is moderate.

J. HUFFER, Inspector.

DETAILED STATEMENT of the Condition of Schools in the Bathurst District, examined during the year 1875.

BOWENFELS (V.) :—Regular inspection, 7th September.

Numbers enrolled :—Boys, 25; girls, 28; total, 53. Numbers present :—Boys, 23; girls, 9; total, 32.

Now out-offices have just been completed. The walls want whitewashing, and some repairs are required to the roof; otherwise the material condition is pretty good. A good supply of requisites and furniture is found in the school. The discipline secures very fair order and attention. All the prescribed subjects are taught except singing. The classification is correct, and the instruction is suitably arranged. The methods are not very skilful, but they are industriously applied. The results are tolerable.

CARANGARA (N.V.) :—General inspection, 16th September.

Numbers enrolled :—Boys, 15; girls, 30; total, 45. Numbers present :—Boys, 13; girls, 22; total, 35.

The building was not originally designed for a school, and it has a patched-up appearance. It is low, and the light and ventilation are imperfect. The residence is very small, and out-offices have yet to be provided. About two-thirds of the pupils are regular; nearly all are clean and neat in person. There is a sufficient supply of school requisites,—some defects were noticed in the records. Fair order is maintained. The usual subjects for three classes are taught. A very large proportion of the pupils were found in the first class, and it was too much subdivided. The methods are suitable, but more vigour and thoroughness are required. The proficiency, measured by the two lower standards, is tolerable.

COOERWUL (N.V.) :—Regular inspection, 27th August.

Numbers enrolled :—Boys, 38; girls, 41; total, 79. Numbers present :—Boys, 26; girls, 29, total, 55.

The schoolhouse is a fine spacious stone building, intended to answer the double purpose of church and school. The furniture has been constructed with the same ends in view, without very well securing either. The school is well supplied with working appliances. More than three-fourths of the pupils are regular, and punctuality is pretty good. Cleanliness is fairly attended to. The discipline secures very fair order and attention. The instruction is not well regulated—the same set of programmes being made to serve more than one quarter. The teaching is intelligent and earnest. The proficiency is very fair.

ESKBANK (N.V.) :—General inspection, 6th September.

Numbers enrolled :—Boys, 50; girls, 43; total, 93. Numbers present :—Boys, 20; girls, 26; total, 55.

This is a new wooden building designed as church and school. The accommodation is ample, but the furniture is not of the most suitable kind. There are sufficient school requisites—the discipline is good. Two-thirds of the pupils are regular and punctual. Owing to the backward state of the pupils, singing and drawing had not been introduced when the school was examined. The instruction is very well regulated, the methods are suitable, and the teaching is animated and effective. The proficiency is nearly tolerable. There were only two classes in the school, but it had been open only for six weeks.

EGLINTON (N.V.) :—Regular inspection, 24th August.

Numbers enrolled :—Boys, 28; girls, 29; total, 57. Numbers present :—Boys, 22; girls, 14; total, 36.

The material condition is very indifferent, and a new vested school is required. The furniture is good and sufficient. The school materials are adequate to present wants. The schoolroom was very dirty, and had not been swept for some days. The pupils are reasonably clean, orderly, and attentive. The marching in and out of school is not orderly, but in all other respects the discipline is very fair. The prescribed subjects are taught, and the instruction is very well regulated. It is creditable to find more than half the children in the third class. The results are about tolerable.

GUYONG (V.) :—Regular inspection, 15th September.

Numbers enrolled :—Boys, 25; girls, 20; total, 45. Numbers present :—Boys, 17; girls, 15; total, 32.

The premises are nearly new, and they are substantially built. The interior of the schoolroom needs to be plastered. A kitchen, a verandah, and a few other improvements are necessary to complete the organisation. The records have been kept with gross negligence. The classification is pretty good, and the methods are reasonably intelligent—they should be more earnestly applied. The proficiency is between moderate and tolerable.

GOSLING CREEK :—General inspection, 24th September.

Numbers enrolled :—Boys, 29; girls, 25; total, 54. Numbers present :—Boys, 19; girls, 18; total, 37.

This is a new weatherboard school; it is in good condition so far as the wants have been supplied, but there are several defects in the material organisation. About three-fourths of the pupils are regular and punctual. Cleanliness is satisfactory, and the tone of the school pretty good. The prescribed subjects are taught, and the instruction is well regulated. The singing is very creditable. The proficiency exceeds moderate.

HARTLEY (V.) :—Regular inspection, 7th September.

Numbers enrolled :—Boys, 18; girls, 23; total, 41. Numbers present :—Boys, 14; girls, 19; total, 33.

The material condition of this school is indifferent. The residence is very unsuitable. The school is fairly supplied with working materials. Nearly three-fourths of the enrolled pupils attend regularly. The general discipline is between fair and very fair. The methods appear to be fairly intelligent, but the results are somewhat disappointing. The average proficiency is barely tolerable.

HARTLEY

HARTLEY VALE (N.V.):—Regular inspection, 10th September.

Numbers enrolled:—Boys, 32; girls, 35; total, 67. Numbers present:—Boys, 20; girls, 17; total, 37.

The schoolroom is built of slabs and roofed with bark. The building is used as a church; it is well lighted and ventilated. The furniture is good and sufficient. The premises and pupils were very clean and tidy. The instruction is well regulated, and the work of the school seems to be carried on with industry and care. The results are between tolerable and fair.

ICRLY (N.V.):—General inspection, 16th September.

Numbers enrolled:—Boys, 37; girls, 34; total, 71. Numbers present:—Boys, 25; girls, 15; total, 40.

The schoolhouse is constructed of "wattle and daub"; it is roofed with bark. The plastering on the outside is falling off. The interior of the building is in fair repair. The residence is small and bad. The school is fairly supplied with working materials. The classification is appropriate and the instruction properly regulated. The methods are intelligent, and they are applied with reasonable care. The results are nearly fair.

KELSO (N.V.):—Regular inspection, 23rd August.

Numbers enrolled:—Boys, 18; girls, 15; total, 33. Numbers present:—Boys, 14; girls, 7; total, 21.

A vested school in a more central position is very desirable. The whole premises have a gloomy and dingy appearance,—they need a thorough renovation. A fair supply of furniture and working materials is found in the school. The records are carelessly kept. Fair order is maintained in the school, but the marching out is not good. Two-thirds of the pupils enrolled attend regularly, but the enrolment ought to be larger. The prescribed subjects are taught, but the instructional documents should be compiled with greater care. The average proficiency is about tolerable.

LIMEKILNS (V.):—Regular inspection, 19th August.

Numbers enrolled:—Boys, 20; girls, 18; total, 38. Numbers present:—Boys, 15; girls, 13; total, 28.

So far as supplied, the material condition is very good. The most noticeable defect is the want of a kitchen. The residence has only three rooms, and that used for cooking smokes very much. The out-offices are not well kept. Several panes of glass have been broken in the schoolroom windows. The class-room has been converted into a lumber-room. The prescribed subjects, singing excepted, are taught, and the instruction is very well regulated. The general discipline is fair. The methods are of tolerable worth, and they are applied with industry and care. The proficiency is between tolerable and fair.

LUCKNOW (N.V.):—Regular inspection, 18th September.

Numbers enrolled:—Boys, 32; girls, 41; total, 73. Numbers present:—Boys, 18; girls, 28; total, 46.

The schoolroom is unsuitable in several respects. It is very fairly furnished, and the supply of requisites is sufficient. About five-sevenths of the pupils are regular and punctual. The general discipline is good. The prescribed subjects are taught. The methods are intelligent and earnestly applied. The average proficiency approaches very fair.

MOUNT VICTORIA (N.V.):—Regular inspection, 3rd September.

Numbers enrolled:—Boys, 26; girls, 28; total, 54. Numbers present:—Boys, 22; girls, 18; total, 40.

The material condition and organisation are indifferent. A new vested school is wanted. The pupils are regular but not punctual. It is hard to improve this latter feature of the discipline, owing to the scattered state of the population. I think the children living in the vicinity of the school should receive the full five hours' instruction. Cleanliness, order, and attention are fairly satisfactory. The records are correct, but the books are not neatly kept. Except singing, the prescribed subjects are taught. The methods should be applied with more energy. The proficiency is nearly tolerable.

ORANGE (V.):—Regular inspection, 20th and 21st September.

Numbers enrolled:—Boys, 110; girls, 106; total, 216. Numbers present:—Boys, 87; girls, 83; total, 170.

The site, the schoolroom, and the residence are far too small to meet the requirements of a town like Orange. The time has arrived for dividing the school into separate departments. So far as the material condition has been provided, it is in a good state of preservation. The interior of the school should be plastered, and the walls kept free of dust. The school material, when not in use, should be more methodically disposed of. Nearly four-fifths of the pupils are regular, and punctuality is satisfactory. In addition to the usual subjects, the rudiments of Euclid, Algebra, and Latin are taught. The discipline, on the whole, is fair. The instruction is very fairly regulated, and the work of the school is conducted with earnestness. The attainments are not so high as might be expected. The proficiency is between tolerable and fair.

RAGLAN (V.):—Regular inspection, 20th August.

Numbers enrolled:—Boys, 32; girls, 32; total, 64. Numbers present:—Boys, 20; girls, 13; total, 33.

The schoolroom is a new one, but it is not a substantial building. There is no residence for the teacher, and the grounds are unfenced. The furniture is sufficient and good. The school is very well provided with working materials. About five-sevenths of the pupils are regular and punctual; cleanliness is satisfactory. The discipline secures fair order and attention. The prescribed subjects are taught, except singing. The instruction is regulated by the usual documents. Tolerable skill and creditable industry are shown in the methods and their application. The average proficiency is between moderate and tolerable.

RISDAL (V.):—Regular inspection, 26th August.

Numbers enrolled:—Boys, 31; girls, 26; total, 57. Numbers present:—Boys, 19; girls, 14; total, 33.

Since last inspection the grounds have been fenced, but a supply of water has yet to be provided. Hat-pegs are wanted, and the floor of the porch should be repaired. There is no residence. Three-fifths of the pupils attend regularly. Cleanliness is pretty good. The pupils are talkative and do not apply themselves steadily to work. The prescribed subjects, singing excepted, are taught. The teaching should be more earnest and thorough. The attainments approach tolerable.

SPRING GROVE (N.V.):—Regular inspection, 17th September.

Numbers enrolled:—Boys, 23; girls, 30; total, 53. Numbers present:—Boys, 15; girls, 22; total, 37.

The schoolroom is too small—it is in poor repair and otherwise unsuitable. It is well furnished and properly supplied with school requisites. A good site has been secured for a vested building. The pupils are very irregular and somewhat unpunctual. The discipline is very fair. The usual subjects are taught. The instruction is well regulated, and the teaching is industrious. A very large proportion of the children were found in the first class, but it was satisfactory to find that great attention had been paid to that class. The average proficiency ranges between fair and very fair.

WATTLE FLAT (V.) :—Regular inspection, 17th August.

Numbers enrolled :—Boys, 33 ; girls, 23 ; total, 56. Numbers present :—Boys, 22 ; girls, 17 ; total, 39.

The school is a substantial brick building, centrally situated, and affording good accommodation for the number of pupils attending. The playground is unfenced, and there is no residence. The out-offices should be kept in a better state. The school is suitably furnished. The prescribed subjects, except singing, are taught. The instruction is properly regulated, and the methods are suitable, but they should be more vigorously applied. The attainments exceed tolerable.

WYAGDON (V.) :—Regular inspection, 18th August.

Numbers enrolled :—Boys, 21 ; girls, 19 ; total, 40. Numbers present :—Boys, 13 ; girls, 12 ; total, 25.

The material condition and organisation are very fair. The supply of books is sufficient. The records are badly kept. Two-thirds of the pupils attend regularly. The discipline is very fair. The prescribed subjects are taught. The methods are fairly intelligent. The teacher's manner in the school is too boisterous. The average proficiency exceeds tolerable.

WALLERAWANG (N.V.) :—Regular inspection, 26th August.

Numbers enrolled :—Boys, 23 ; girls, 18 ; total, 41. Numbers present :—Boys, 14 ; girls, 11 ; total, 25.

Out-offices have been built, the floor relaid, and new furniture provided since last inspection. The residence is very small. The material condition is pretty good, so far as it has been supplied. Nearly two-thirds of the pupils attend regularly. Cleanliness is fair. The instruction is regulated with tolerable judgment. The methods are of fair worth, but they need to be applied with greater vigour and thoroughness. The results approach tolerable.

II.—HALF-TIME SCHOOLS.

KIRKCONNELL (V.) :—Regular inspection, 13th September.

Numbers enrolled :—Boys, 11 ; girls, 16 ; total, 27. Numbers present :—Boys, 6 ; girls, 11 ; total, 17.

The material condition and organisation of this school are good ; a few minor improvements are required. Scarcely half the pupils attend regularly ; punctuality is satisfactory. The general discipline is very fair. The instruction is well regulated, and the methods are of average merit. The proficiency is tolerable.

LOWTHER (V.) :—Regular inspection, 8th September.

Numbers enrolled :—Boys, 7 ; girls, 8 ; total, 15. Numbers present :—Boys, 7 ; girls, 6 ; total, 13.

The material condition of this school is pretty good. It is well furnished and has a good supply of requisites. The attendance is low and irregular. The instruction is well regulated, and the methods are of more than average merit ; however, they do not appear to have been industriously applied. The proficiency on the two lower standards is tolerable.

III.—PROVISIONAL SCHOOLS.

KANIMBLA (N.V.) :—Visited, 9th September.

Numbers enrolled :—Boys, 12 ; girls, 10 ; total, 22.

The morning of my visit had been showery, and when I reached the school I found it closed and the teacher absent. The material condition is bad. The records are very carelessly kept. The attendance has fallen very low. The school has been closed since my visit.

MILLAMURRA (V.) :—Visited, 17th August.

The school had been closed a short time before my visit. The schoolroom and teacher's residence are of very indifferent structure. A good deal of improvement is necessary to make the premises suitable. The furniture is sufficient, and the school has a fair supply of working materials.

MALMSBURY (N.V.) :—Regular inspection, 14th September.

Numbers enrolled :—Boys, 13 ; girls, 11 ; total, 24. Numbers present :—Boys, 12 ; girls, 7 ; total, 19.

The schoolroom is unpretentious, but a comfortable little building. It is very fairly furnished, and the supply of working materials is sufficient. Three-fourths of the pupils are regular. Cleanliness is very satisfactory. Fair order is maintained. The methods are not skilful, but they are industriously applied. The results obtained on the two lower standards are nearly fair.

YARRAS (N.V.) :—Regular inspection, 20th August.

Numbers enrolled :—Boys, 9 ; girls, 7 ; total, 16. Numbers present :—Boys, 5 ; girls, 6 ; total, 11.

The schoolroom is a pretty roomy, thatched building, used occasionally as a church. The furniture and materials are sufficient. The attendance is very small. Punctuality requires more attention. The pupils are fairly clean, orderly, and attentive. The methods are very mechanical, and the results on the two lower standards only moderate.

DETAILED Statement of the condition of Public, Provisional, and Half-time Schools, inspected during June, 1875.

BLANEY :—Visited, 19th June.

Regular inspection.

Enrolled :—36. Present :—26.

The material condition is fair. The discipline is mild, firm, and effective. The classification is suitable, and the attainments are good. Local supervision hardly exists. In everything for which the teacher can be held responsible the condition is good, and satisfactory progress has been made during the year.

BURKEVILLE :—Visited, 22nd June.

Regular inspection.

Enrolled :—35. Present :—19.

The material condition is fair. The discipline is sound and healthy. The attainments for both classes are a little over fair. The local supervision is merely nominal.

CARCOAR :—

CARCOAR:—Visited, 23rd June.

Regular inspection.

Enrolled:—60. Present:—45.

The material condition is at present only moderate. The discipline is good, and the classification correct. The attainments are a little over fair. The local supervision is at present very slack.

COWRA:—Visited, 25th June.

Regular inspection.

Enrolled:—86. Present:—53.

The building and outfit are good. The discipline is sound and effective. The attainments are very nearly good. Local supervision is merely nominal.

EVANS PLAINS:—Visited, 10th June.

Regular inspection.

Enrolled:—60. Present:—45.

The material condition is very fair. The discipline is sound. The instruction is properly regulated, and the classification is suitable. The attainments are a little in excess of fair. The Local Board hold no meetings, and seem to consider their office as a sinecure.

FIVE ISLANDS:—Visited, 15th June.

Regular inspection.

Enrolled:—35. Present:—21.

The desks are good; in all other respects the material condition is of the worst possible description. The discipline is tolerable. The proficiency of the pupils is as follows:—First class, tolerable; second, between indifferent and moderate; third, indifferent. There is no local supervision.

MT. MACQUARIE:—Visited, 5th June.

Regular inspection.

Enrolled:—47. Present:—29.

The material condition is indifferent; the discipline is bad. The instructional documents exhibit but little skill in their compilation. The attainments are low.

II.—PROVISIONAL SCHOOLS.

COOMBING CREEK:—Visited, 4th and 5th June.

Regular inspection.

Enrolled:—36. Present:—28.

The material condition is of a low type. The discipline is good. The instructional documents are carefully compiled. The attainments are as high as can be expected under all the circumstances of the school. The moral tone is good. The only man who takes any interest in the school is a Mr. Neal, who is not a member of the Local Board.

GRECHAMSTOWN:—Visited, 14th June.

Regular inspection.

Enrolled:—29. Present:—15.

The material condition is the worst possible. The classification is correct. The attainments are nearly moderate. Nothing favourable can be said of the local supervision.

MUNDORAMA:—Visited, 2nd June.

Regular inspection.

Enrolled:—36. Present:—15.

The material condition is very moderate. The discipline is lax, but the children are quiet. The classification is tolerable, and the attainments the same. Correctly speaking, there is no local supervision.

III.—HALF-TIME SCHOOLS.

TRENDON GRANGE:—Visited, 11th June.

Regular inspection.

Enrolled:—34. Present:—28.

The material condition is bad. The discipline is sound. The instruction is fairly skilful. The attainments are over fair for the two classes. The local supervision is almost barren of good results.

VICTORIA CREEK:—Visited, 11th June.

Regular inspection.

Enrolled:—24. Present:—17.

The material condition is of the worst possible description. The discipline is fair and the classification is correct. The attainments are tolerable. The local supervision is of little or no practical utility. The teacher has to collect the money required for any repairs and then superintend its expenditure.

J. H. MURRAY,
Inspector.

BRAIDWOOD DISTRICT.

INSPECTOR'S GENERAL REPORT FOR 1875.

In the Braidwood District 112 schools have been in operation this year. Four, however, not having sufficient pupils to maintain them, were only open for a short period. In June, 22 schools were transferred to the newly-formed district of Yass. Twenty of these were fully examined before the transfer, and an account of each of them will be found appended to this Report. Of the 86 schools remaining,

remaining, all were inspected except Bega, R.C., and Whinstone Valley and Good-Good, Half-Time. The Bega school was without a teacher, when I visited it, and the other two were not established, when I was in their neighbourhood. Altogether, 103 schools were regularly examined and reported on during the year.

2. In 1876, eight or ten schools, in localities where a few people have lately taken up land, will probably be opened, but as every place with anything like a settled population has already its school, there is no scope for any considerable increase. Of the 112 buildings used as schools, 35 belong to the Council, 3 to the English Church, 10 to the Roman Catholic Church, and 64 to private individuals. The estimated value of the Council's property is about £12,000. In growing townships extensive enlargements have been authorized, and in more than half the vested schools substantial repairs have been effected or sanctioned. The work in connection with some of these will extend over portions of the coming year, but before the close of 1876 it may reasonably be expected that all the vested schools in the district will be comfortable both for teachers and pupils.

The majority of the 64 buildings belonging to private persons are small slab rooms put up by local subscription for temporary use as Provisional or Half-time Schools. In most cases no one can say with any certainty that the population in their vicinity will be permanent, or that the sites now considered central will be so ultimately. Schools of this kind are frequently closed on account of the removal of parents; and the buildings, of course, then become useless for school purposes. Of the 64 non-vested schools referred to, I would not venture to predict that more than eleven will be wanted in a few years, in the positions they now occupy. The absorption of small selections and holdings into large estates, the gradual exhaustion of alluvial diggings, and the pretty general abandonment of agriculture for grazing, are all causes that tend in this district to break up existing homes and to disperse the small groups of families by which these temporary schools have been used. While they last, however, they are supplied with sufficient desks, books, slates, and other working materials to enable the teachers to bring up their scholars to the prescribed standard of proficiency; and the expenditure in the way of salaries is, for the number taught, somewhat beyond that which is authorized for full-sized Public Schools.

At the various inspections, about 3,000 children were examined. Partly owing to the irregular attendance produced in the early months of the year by measles and whooping cough, and partly to the increasing demand for children's labour, the teachers as a body have found it extremely difficult to make customary headway with their pupils. The half-time have suffered more than the full-time schools from these influences. Half-time pupils, as might be expected from the scarcity of population that makes only a half-time school possible, are more liable than children in townships to be called on to assist their parents; and when one or two in a family are ill, extra labour is thrown upon the rest, and the attendance at school is then not even quarter-time.

Though the attainments in the schools as a whole are slightly lower this year than last, it is but justice to the teachers to state that the falling off is in no way due to any slackness on their part, but that it is entirely to be attributed to the circumstances I have mentioned. Not a few teachers, indeed, have worked with more than ordinary industry in the hope of counteracting by increased attention the injurious results of irregularity.

Instruction in music and drawing is omitted in several schools, because the teachers themselves have not the requisite knowledge to enable them to deal effectively with these subjects, but it is an exceptional thing to find any other branch of the prescribed course unattempted. The 103 schools inspected show that six Public, two Half-time, one Church of England, and two Roman Catholic Schools exceeded the requirements of the standard; that seventeen Public, thirteen Provisional, fifteen Half-time, two Church of England, and four Roman Catholic Schools reached the standard; and that three Public, thirteen Provisional, twenty-two Half-time, and three Roman Catholic Schools fell below it.

The pupil-teachers employed in the various schools have conducted themselves well, and no complaints of any kind have been made respecting them. Several scholars have presented themselves for examination as applicant pupil-teachers, and if there were opportunities of appointment this number could at any time be greatly increased. There is no difficulty in obtaining suitable persons to become teachers or pupil teachers; the supply indeed exceeds the demand.

A statement as to the condition of each school inspected is appended hereto.

J. C. MAYNARD,
Inspector, Braidwood District.

Braidwood, 31st December, 1875.

ANNEX A.

SUMMARIES of Reports furnished on Public, Provisional, and Half-time Schools during the year 1875.

Throughout these Summaries the technical words used to indicate general proficiency have the following relative values:—

- | | |
|---------------|-----------------|
| 1. Excellent. | 6. Tolerable. |
| 2. Very good. | 7. Moderate. |
| 3. Good. | 8. Indifferent. |
| 4. Very fair. | 9. Bad. |
| 5. Fair. | 10. Failure. |

I.—PUBLIC SCHOOLS.

ARALUEN (Boys—V.) :—Regular inspection, 25th and 26th May, 1875.

Enrolled, 64; present, 45.

1. The material condition is good in all respects. 2. The children are attentive and orderly, and the government is firm and judicious. 3. The attainments are satisfactory, and steady progress has been made since last inspection. The mark for drawing is below the average, but that for all other subjects is above. The general proficiency is *very fair*.

ARALUEN (Girls—V.) :—Regular inspection, 27th May, 1875.

Enrolled, 43; present, 31.

1. The material condition is good. 2. Many of the pupils are still very irregular. The discipline is satisfactory. 3. The whole course of study prescribed in the standard is taught. The mark for reading, writing, and object lessons is above the average, but that for all other subjects is below. The general proficiency is between *tolerable* and *fair*.

ARALUEN (Infants—V.) :—Regular inspection, 28th May, 1875.

Enrolled :—Boys, 25; girls, 28; total, 53. Present :—Boys, 16; girls, 12; total, 28.

1. The room is small, but in other respects the material condition is satisfactory. The junior class is still somewhat noisy and inattentive, but on the whole the pupils are well managed. The mark for reading, writing, and dictation is above the average, and that for all other subjects nearly up to the average. The general proficiency is *fair*.

ARALUEN, WEST (V.) :—Regular inspection, 3rd June, 1875.

Enrolled :—Boys, 63 ; girls, 54 ; total, 117. Present :—Boys, 48 ; girls, 39 ; total, 87.

1. The residence is small and uncomfortable, but in other respects the buildings are suitable, and there is a good outfit of furniture and apparatus. 2. About half the pupils are regular ; they are attentive, obedient, and well under control. 3. The mark for reading, spelling, writing, dictation, and arithmetic is above the average, that for geography, object lessons, and Scripture up to the average, and that for grammar, singing, and drawing, below. The general proficiency is between *fair* and *very fair*.

ARALUEN, UPPER (N.-V.) :—Regular inspection, 4th June, 1875.

Enrolled :—Boys, 22 ; girls, 28 ; total, 50. Present :—Boys, 16 ; girls, 24 ; total, 40.

1. No change has taken place in the material condition of the school since last inspection. 2. When not prevented by sickness or bad weather, the majority of the pupils are regular. More decision and system would be advisable in the discipline. 3. Ordinary progress has been made during the year. The mark for reading, writing, spelling, and dictation is above the average, but that for all other subjects is below. The general proficiency is between *tolerable* and *fair*.

BATEMAN'S BAY (V.) :—Regular inspection, 16th July, 1875.

Enrolled :—Boys, 27 ; girls, 16 ; total, 43. Present :—Boys, 25 ; girls, 15 ; total, 40.

1. The slabs of the new building have shrunk, and the residence is in consequence very uncomfortable. The supply of furniture, apparatus, and materials is sufficient. 2. The discipline is very fair. 3. The mark for arithmetic is beyond the average ; that for reading, writing, and Scripture up to the average ; and that for other subjects below. The general proficiency is between *tolerable* and *fair*.

BIGA (V.) :—Regular inspection, 10th and 13th August, 1875.

Enrolled :—Boys, 75 ; girls, 65 ; total, 140. Present :—Boys, 60 ; girls, 51 ; total, 111.

1. Some slight repairs are needed in connection with the closets and the spouting, but on the whole the material condition is good. 2. The children are not in all cases strictly attentive to their teachers, and more system is needed in regard to small details of discipline. 3. The mark for reading, spelling, grammar, dictation, geography, and Scripture is above the average ; that for writing up to the average ; and that for arithmetic and object lessons below. The general proficiency is between *fair* and *very fair*.

BERGALLA (V.) :—Regular inspection, 2nd August, 1875.

Enrolled :—Boys, 16 ; girls, 21 ; total, 37. Present :—Boys, 16 ; girls, 19 ; total, 35.

1. A tank is required, and the residence needs repairing ; when these works are completed the material condition will be good. 2. Some of the pupils show a tendency to copy, but the discipline in other respects is satisfactory. 3. Substantial progress has been made by all the pupils since last inspection. The mark for reading, spelling, writing, and dictation is far above the average ; that for arithmetic, object lessons, and Scripture is up to the average ; and that for grammar, geography, and drawing is below. The general proficiency is *very fair*.

BOMBALA (V.) :—Regular inspections, 25th and 26th February, 1875.

Enrolled :—Boys, 69 ; girls, 43 ; total, 112. Present :—Boys, 55 ; girls, 33 ; total, 88.

1. Tenders have been accepted for the erection of a new school and for general repairs. These improvements will provide excellent accommodation for all the school children in the town. 2. The discipline is satisfactory. 3. The work is becoming more sound in its character, and there are indications that the school will soon occupy a position in regard to attainments that it has never hitherto done. The general proficiency is *fair*.

BRAIDWOOD (V.) :—Regular inspection, 21st October, 1875.

Enrolled :—Boys, 55 ; girls, 31 ; total, 86. Present :—Boys, 44 ; girls, 28 ; total, 72.

1. The roof is bad and new fences are needed, but in other respects the material condition is satisfactory. 2. The discipline is very fair. 3. The mark for drawing is below the average, but that for all other subjects is above. The general proficiency is between *very fair* and *good*.

CANDELO (V.) :—Regular inspection, 30th August, 1875.

Enrolled :—Boys, 42 ; girls, 25 ; total, 67. Present :—Boys, 36 ; girls, 25 ; total, 61.

1. The brick walls are damp in wet weather. A deep verandah round the building would keep the walls dry and afford shelter to the children in summer. The school is well supplied with all requisites. 2. The discipline on the whole is sound. 3. The mark for reading, spelling, writing, dictation, singing, and drawing is above the average ; that for object lessons and Scripture up to the average ; and that for arithmetic, grammar, and geography below. The general proficiency is between *fair* and *very fair*.

COOMA (V.) :—Regular inspection, 9th and 10th February, 1875.

Enrolled :—Boys, 46 ; girls, 33 ; total, 79. Present :—Boys, 43 ; girls, 33 ; total, 76.

1. When inspected, the school was undergoing extensive alterations and repairs ; when these are completed the material condition will be very good. 2. The discipline is satisfactory. 3. In no subject is the mark beyond the average ; but in all, except grammar, dictation, and arithmetic, it is up to the average. The general proficiency approaches *fair*.

EDDEN (V.) :—Regular inspection, 26th August, 1875.

Enrolled :—Boys, 26 ; girls, 13 ; total, 39. Present :—Boys, 22 ; girls, 9 ; total, 31.

1. An additional room to the residence is needed ; the fences and spouting are out of repair, and the roof requires to be re-shingled. The school is well fitted up with all requisites. 2. The discipline is satisfactory in all respects. 3. The mark for singing and drawing is up to the average, and that for all other subjects much beyond. The general proficiency is *good*.

JEMBAICUMBENE (V.) :—Regular inspection, 9th December, 1875.

Enrolled :—Boys, 21 ; girls, 13 ; total, 34. Present :—Boys, 20 ; girls, 11 ; total, 31.

1. The building is in a good state of repair, and there is an ample supply of all requisites. 2. Under the present teacher the discipline has improved, and the government is firmer and more energetic. 3. The attainments are still low, the general proficiency being *tolerable*.

KIORA (N.-V.) :—Regular inspection, 26th July, 1875.

Enrolled :—Boys, 18 ; girls, 21 ; total, 39. Present :—Boys, 16 ; girls, 20 ; total, 36.

1. No alteration has been made in regard to the material condition of the school. 2. The discipline is good. 3. Unusual progress has been made since last inspection. Except for arithmetic and dictation, the mark for every subject is much above the average.

LITTLE RIVER (V.) :—Regular inspection, 20th October, 1875.

Enrolled :—Boys, 26 ; girls, 28 ; total, 54. Present :—Boys, 24 ; girls, 26 ; total, 50.

1. The slab walls have shrunk and require to be tightened up, a new ceiling is needed, and the chimneys are out of repair. In other respects the material condition of the school is good. 2. The irregularity during the past year has been excessive. The discipline is fair. 3. Ordinary progress has been made since last inspection. The mark for reading and object lessons is above the average ; that for writing, dictation, grammar, and Scripture up to the average ; and that for arithmetic, geography, and drawing below. The general proficiency is *fair*.

MAJOR'S CREEK (V.) :—Regular inspection, 19th November, 1875.

Enrolled :—Boys, 39 ; girls, 35 ; total, 74. Present :—Boys, 39 ; girls, 28 ; total, 67.

1. Since last inspection considerable repairs and alterations have been made, and the building and outfit are now suitable. 2. The discipline has greatly improved and may be called good. 3. Sound substantial progress has been made during the year. Singing and drawing are not taught ; the mark for geography is below the average, but that for all other subjects is above. The general proficiency is between *fair* and *very fair*.

MERIMBUKA (V.) :—General inspection, 23rd August, 1875.

Enrolled :—Boys, 23 ; girls, 25 ; total, 48. Present :—Boys, 12 ; girls, 16 ; total, 28.

1. This is a new school lately finished. The residence is too small and the grounds need fencing, but in other respects the material condition is good. 2. Three-fourths of the pupils are regular. The discipline has somewhat fallen off since last inspection. 3. The mark for writing is up to the average, and that for all other subjects considerably above the average. The general proficiency is *very fair*. The present teacher has only been in charge a short time, and is therefore not entitled to the credit of this mark.

MONKITTEE (N.-V.) :—Regular inspection, 4th October, 1875.

Enrolled :—Boys, 13 ; girls, 11 ; total, 24. Present :—Boys, 13 ; girls, 11 ; total, 24.

1. The building is in a fair state of repair and well supplied with requisites. 2. The children are ordinarily attentive, but there is a want of vigour and effectiveness in the general management. 3. The attainments are unsatisfactory. The mark for every subject is below the average. The general proficiency is between *moderate* and *tolerable*.

NELLIKEN (V.) :—General inspection, 14th July, 1875.

Enrolled :—Boys, 23 ; girls, 14 ; total, 37. Present :—Boys, 20 ; girls, 13 ; total, 33.

1. The residence is too small, but in other respects the material condition is satisfactory. 2. The children are fairly attentive, quiet, and obedient, and the government is firm and systematic. 3. The attainments are as usual very poor. The mark for reading and writing is up to the average, but that for all other subjects is far below. The general proficiency is slightly beyond *moderate*.

NERRIGUNDAM (N.-V.) :—General inspection, 4th August, 1875.

Enrolled :—Boys, 23 ; girls, 21 ; total, 44. Present :—Boys, 17 ; girls, 18 ; total, 35.

1. Additional desks and forms have been provided since last inspection, and the building is now well supplied with all that is necessary. 2. The discipline on the whole is fair. 3. Under the present teacher the instruction is more exact and substantial than it has hitherto been. The mark for reading, spelling, writing, and dictation is above the average ; that for arithmetic and object lessons is up to the average ; and that for grammar, geography, and Scripture slightly below. The general proficiency is between *fair* and *very fair*.

PANBULA (V.) :—Regular inspection, 24th August, 1875.

Enrolled :—Boys, 21 ; girls, 27 ; total, 48. Present :—Boys, 19 ; girls, 25 ; total, 44.

1. Since last inspection additional furniture has been provided, and the outfit is now sufficient. 2. The discipline has improved, and the government is firmer than it was. The mark for reading, dictation, arithmetic, and grammar is above the average ; that for writing and Scripture is up to the average ; and that for other subjects is below. The general proficiency is between *fair* and *very fair*.

TANTAWANGLO (V.) :—Regular inspection, 31st August, 1875.

Enrolled :—Boys, 14 ; girls, 21 ; total, 35. Present :—Boys, 10 ; girls, 15 ; total, 25.

1. The building is in a good state of repair, and is well supplied with furniture, apparatus, and materials. 2. The discipline is good in every respect. 3. The progress made during the year, especially by the younger pupils, has been both rapid and sound. The mark for reading, spelling, writing, dictation, arithmetic, and geography is much above the average, and that for other subjects is well up to the average. The general proficiency is between *very fair* and *good*.

WOLUMLA, NORTH (V.) :—Regular inspection, 16th August, 1875.

Enrolled :—Boys, 9 ; girls, 8 ; total, 17. Present :—Boys, 9 ; girls, 6 ; total, 15.

1. The material condition is good, and the discipline is tolerable. 2. The population here has so greatly decreased that there are now scarcely sufficient children left to maintain a Half-time School. 3. The pupils passed a satisfactory examination in reading, grammar, and dictation ; but the mark for all other subjects was below the average. The general proficiency is between *moderate* and *tolerable*.

WOLUMLA, SOUTH (V.) :—Regular inspection, 17th August, 1875.

Enrolled :—Boys, 27 ; girls, 25 ; total, 52. Present :—Boys, 23 ; girls, 22 ; total, 45.

1. The building is in a good state of repair, and is well supplied with all requisites. 2. There has been an improvement in the regularity of attendance. The discipline is in all respects good. 3. The mark for reading, spelling, writing, dictation, and object lessons is above the average ; that for singing and grammar up to the average ; and that for arithmetic, geography, drawing, and Scripture below. The general proficiency is between *fair* and *very fair*.

II.—PROVISIONAL SCHOOLS.

BELL'S CREEK (N.-V.) :—Regular inspection, 3rd November, 1875.

Enrolled :—Boys, 20 ; girls, 14 ; total, 34. Present :—Boys, 17 ; girls, 13 ; total, 30.

1. The building and the general outfit are bad, but arrangements have been made to erect a new school. 2. In the government of the elder pupils there is a want of firmness, and the discipline throughout is but moderate. 3. The mark for reading, spelling, writing, and arithmetic is above the average ; that for grammar, geography, object lessons, singing, dictation, drawing, and Scripture below. The general proficiency is between *tolerable* and *fair*.

BETTOWYND

BETTOWYND (N.-V.) :—Regular inspection, 1st June, 1875.

Enrolled :—Boys, 15 ; girls, 12 ; total, 27. Present :—Boys, 12 ; girls, 12 ; total, 24.

1. The building is suitable and well supplied with requisites. 2. The government is firm, and the behaviour of the children satisfactory. 3. The mark for reading, spelling, writing, dictation, and arithmetic is up to the average ; and that for grammar, geography, and singing below. The general proficiency is between *moderate* and *tolerable*.

BODALLA (N.-V.) :—General inspection, 3rd August, 1875.

Enrolled :—Boys, 19 ; girls, 29 ; total, 48. Present :—Boys, 16 ; girls, 26 ; total, 42.

1. The schoolroom is somewhat small for the present large attendance, but it is comfortably fitted up and amply stocked with all requisites. The residence is good, and the whole place is neat and well looked after. 2. A little more firmness is required in the government ; but the general tone of the school is healthy, and the children are respectful to their teacher and attentive to their studies. 3. Last year the attainments were very low, but a great improvement has been made since then. The mark for reading and writing is above the average ; that for dictation, grammar, and object lessons up to the average ; and that for other subjects below. The general proficiency approaches *fair*.

BROWN MOUNTAIN (N.-V.) :—Regular inspection, 3rd September, 1875.

Enrolled :—Boys, 12 ; girls, 10 ; total, 22. Present :—Boys, 12 ; girls, 10 ; total, 22.

1. The building is in a satisfactory state, and is fairly well supplied with all necessaries. 2. The children are attentive and in good order. The mark for reading, writing, dictation, and geography is above the average ; that for arithmetic and object lessons up to the average ; and that for grammar below. The general proficiency is between *fair* and *very fair*.

CORROWONG (N.-V.) :—Regular inspection, 23rd February, 1875.

Enrolled :—Boys, 11 ; girls, 20 ; total, 31. Present :—Boys, 9 ; girls, 19 ; total, 28.

1. The material condition is satisfactory in all respects. 2. There is still a want of vigour and determination in the government. The children are not made to learn whether they like to do so or not. 3. The mark for reading and writing is up to the average, but that for all other subjects is below. The general proficiency is between *moderate* and *tolerable*.

DANGELONG (V.) :—Regular inspection, 15th February, 1875.

Enrolled :—Boys, 15 ; girls, 13 ; total, 28. Present :—Boys, 13 ; girls, 11 ; total, 24.

1. The school is in a good state of repair, and is well fitted up with all requisites. 2. There is not much system in the discipline, but the pupils are tolerably attentive and orderly. 3. The attainments are poor ; the mark for every subject being below the average. The general proficiency is *moderate*.

DUKE'S SPRINGS (N.-V.) :—General inspection, 3rd March, 1875.

Enrolled :—Boys, 11 ; girls, 21 ; total, 32. Present :—Boys, 11 ; girls, 18 ; total, 29.

1. This school has but recently been established. The building is too small, but it is not otherwise unsuitable. 2. At the date of inspection the school had been opened but a short time ; and as very few of the children had before been under instruction, their attainments were of course very low.

GINNABROTHERS (N.-V.) :—Regular inspection, 3rd March, 1875.

Enrolled :—Boys, 13 ; girls, 10 ; total, 23. Present :—Boys, 3 ; girls, 7 ; total, 10.

1. The building is reasonably good, and is fairly well supplied with requisites. 2. The discipline in every respect is poor. 3. Writing is taught with average success, and some progress has been made in reading, but all other subjects have virtually been untaught. The general proficiency is *small*.

KIANDRA (N.-V.) :—Regular inspection, 8th March, 1875.

Enrolled :—Boys, 15 ; girls, 11 ; total, 26. Present :—Boys, 10 ; girls, 11 ; total, 21.

1. The accommodation for the children is very defective, but there is no scarcity of ordinary requisites. 2. Last year the amount of talking permitted was excessive ; this year there is far less of it, but in other respects the discipline is as unsystematic as ever. 3. Reading, writing, and spelling are taught with average success, but the other subjects are not. The general proficiency is between *indifferent* and *moderate*.

MOCO (N.-V.) :—Regular inspection, 19th July, 1875.

Enrolled :—Boys, 12 ; girls, 7 ; total, 19. Present :—Boys, 12 ; girls, 7 ; total, 19.

1. The building is in a fair state of repair and is well supplied with necessary materials. 2. About half the pupils are regular. They are attentive, and on the whole obedient and orderly. 3. The mark for reading, spelling, and writing is above the average ; and that for all other subjects below. The general proficiency is *tolerable*.

MUDMELONG (N.V.) :—Regular inspection, 31st May, 1875.

Enrolled :—Boys, 13 ; girls, 16 ; total, 29. Present :—Boys, 13 ; girls, 14 ; total, 27.

1. The school is in a fair state of repair, and is well supplied with furniture and working materials. 2. The discipline is fair. 3. The mark for writing and dictation is above the average, but that for all other subjects is below. The general proficiency is between *tolerable* and *fair*.

NERRIGA (V.) :—Regular inspection, 12th May, 1875.

Enrolled :—Boys, 8 ; girls, 13 ; total, 21. Present :—Boys, 8 ; girls, 12 ; total, 20.

1. The building is in a fair state of repair, and is well supplied with furniture, apparatus, and materials. 2. About half the pupils are regular. They are orderly and attentive. 3. The mark for reading, writing, geography, and Scripture is up to the average ; that for object lessons and dictation slightly below ; and that for grammar and arithmetic considerably below. The general proficiency is *tolerable*.

NEWSTEAD (V.) :—General inspection, 23rd July, 1875.

Enrolled :—Boys, 16 ; girls, 11 ; total, 27. Present :—Boys, 11 ; girls, 9 ; total, 20.

1. Additional desks have been supplied since last inspection, and the inside of the room is now clean and respectable. 2. Two-thirds of the pupils are regular, and the discipline is satisfactory. 3. All the course prescribed in the standard is taught ; and the progress under the present teacher has been both sound and rapid. The mark for every subject is well up to the average. The general proficiency is *fair*.

NIDITYBELLE (N.-V.) :—General inspection, 17th February, 1875.

Enrolled :—Boys, 14 ; girls, 12 ; total, 26. Present :—Boys, 13 ; girls, 10 ; total, 23.

1. The schoolroom is large, and sufficiently well provided with furniture, apparatus, and working materials. 2. For the first time for many years this school is admirably governed. The discipline is

is good, but those of the pupils who have hitherto been spoiled by indulgence do not take kindly to obedient and industrious habits. 3. Sound progress has been made under the present teacher. The general proficiency is *fair*.

RUYNMEDE (V.) :—General inspection, 15th July, 1875.

Enrolled :—Boys, 7 ; girls, 7 ; total, 14. Present :—Boys, 7 ; girls, 6 ; total, 13.

1. The building is in a fair state of repair, and is sufficiently well supplied with working materials. 2. The pupils are quiet, obedient, and tolerably attentive to their studies. 3. The mark for Scripture and dictation is above the average, and that for all other subjects below. The general proficiency is between *moderate* and *tolerable*.

III.—HALF-TIME SCHOOLS.

ADAMINIBY (N.-V.) :—General inspection, 9th March, 1875.

Enrolled :—Boys, 11 ; girls, 13 ; total, 24. Present :—Boys, 6 ; girls, 8 ; total, 14.

1. The building is in a tolerable state of repair, and the supply of furniture, apparatus, and working stock is sufficient. 2. The attendance is still very irregular. The discipline is good. 3. It would be unreasonable to expect the children to know much, considering the few days during which they actually attend in a year. The mark for every subject is much below the average, the general proficiency being between *indifferent* and *moderate*.

BACK CERBEK (N.-V.) :—Regular inspection, 12th November, 1875.

Enrolled :—Boys, 10 ; girls, 4 ; total, 14. Present :—Boys, 10 ; girls, 3 ; total, 13.

1. The building is in fair condition, and the outfit is satisfactory. 2. The discipline is sound. 3. This school is worked with that at Charleyong, but the attainments of the pupils are not relatively as high. The general proficiency is *fair*.

BEMBOOKA (N.-V.) :—Regular inspection, 2nd September, 1875.

Enrolled :—Boys, 7 ; girls, 4 ; total, 11. Present :—Boys, 4 ; girls, 4 ; total, 8.

1. The building is rough, but it is sufficiently good for present requirements. 2. The children have made somewhat better progress this year than last. The mark for writing, grammar, and geography is up to the average, but that for reading, spelling, dictation, and arithmetic is much below. The general proficiency is between *moderate* and *tolerable*.

BIBENLUKE (N.-V.) :—Regular inspection, 19th February, 1875.

Enrolled :—Boys, 5 ; girls, 5 ; total, 10. Present :—Boys, 5 ; girls, 5 ; total, 10.

1. This school is worked with that at Cathcart, and in regard to attendance, discipline, and attainments is in the same unsatisfactory condition.

BOCONNOC (N.-V.) :—General inspection, 11th March, 1875.

Enrolled :—Boys, 7 ; girls, 5 ; total, 12. Present :—Boys, 5 ; girls, 4 ; total, 9.

1. The material condition is reasonably good. 2. Five pupils have attended with ordinary regularity, but the others have been very irregular. The behaviour of the children in school is good. 3. The attainments are low, the mark for every subject being considerably under the average. The general proficiency is between *indifferent* and *moderate*.

BOMBAY (N.-V.) :—Regular inspection, 10th November, 1875.

Enrolled :—Boys, 12 ; girls, 12 ; total, 24. Present :—Boys, 7 ; girls, 7 ; total, 14.

1. No improvement has been made in the material condition. 2. The discipline is fair. 3. The mark for writing is up to the average, but that for all other subjects is slightly below. The general proficiency is *tolerable*.

BORO, UPPER (N.-V.) :—Regular inspection, 10th May, 1875.

Enrolled :—Boys, 9 ; girls, 8 ; total, 17. Present :—Boys, 9 ; girls, 7 ; total, 16.

1. School is held in a clean, comfortable room, and the supply of all requisites is sufficient. 2. The discipline is very fair. 3. The mark for reading, spelling, writing, and dictation is above the average, and that for all other subjects below. The general proficiency is *tolerable*.

BORO, LOWER (N.-V.) :—Regular inspection, 12th May, 1875.

Enrolled :—Boys, 7 ; girls, 7 ; total, 14. Present :—Boys, 5 ; girls, 7 ; total, 12.

1. The building is in a fair state of repair, and is clean and well looked after. There is a sufficient outfit of all requisites. 2. The behaviour of the pupils is good. 3. The mark for writing is above the average ; that for reading, spelling, dictation, grammar, arithmetic, and geography slightly below. The general proficiency is *tolerable*.

BURRAGATE (V.) :—Regular inspection, 27th August, 1875.

Enrolled :—Boys, 6 ; girls, 3 ; total, 9. Present :—Boys, 6 ; girls, 3 ; total, 9.

1. The building is in a tolerable state of repair, and is amply supplied with all requisites. 2. There are not sufficient children now living in the neighbourhood to maintain the minimum average. 3. Under the present teacher the discipline has improved, but the attainments are still very low.

CATHCART (N.-V.) :—Regular inspection, 19th February, 1875.

Enrolled :—Boys, 2 ; girls, 5 ; total, 7. Present :—Boys, 2 ; girls, 5 ; total, 7.

1. The schoolroom is not centrally placed, but it is comfortably fitted up with all necessaries. 2. The attainments of the few children who attend are *moderol*. Since the inspection the school has been closed, and a Provisional School has been opened in a more accessible position.

COBARGO (V.) :—Regular inspection, 6th August, 1875.

Enrolled :—Boys, 13 ; girls, 16 ; total, 29. Present :—Boys, 12 ; girls, 15 ; total, 27.

1. For the existing attendance the school is too small, and the desks and forms are unsuitable. There is a sufficient supply of apparatus and working stock. 2. The government is weak, but the children are tolerably attentive. 3. The first class is admirably taught, but the other classes are not. The mark for reading, writing, and dictation is up to the average, but that for all other subjects is below. The general proficiency is between *tolerable* and *fair*.

COLUMBO (N.-V.) :—Regular inspection, 15th November, 1875.

Enrolled :—Boys, 13 ; girls, 12 ; total, 25. Present :—Boys, 12 ; girls, 12 ; total, 24.

1. The material condition is satisfactory in all respects. 2. The pupils are attentive, orderly, and obedient. 3. Steady progress has been made during the year. The mark for reading, spelling, writing, and dictation is above the average, and that for other subjects slightly below. The general proficiency is *fair*.

CHARLEYONG (N.-V.) :—Regular inspection, 12th November, 1875.

Enrolled :—Boys, 5 ; girls, 12 ; total, 17. Present :—Boys, 4 ; girls, 11 ; total, 15.

1. The schoolroom is clean and comfortable, and is well fitted up with furniture, apparatus, and materials. 2. The discipline is good. 3. The attainments are satisfactory, and solid progress has been made since last inspection. The general proficiency is *very fair*.

DELEGATE (N.-V.) :—Regular inspection, 22nd February, 1875.

Enrolled :—Boys, 16 ; girls, 7 ; total, 23. Present :—Boys, 7 ; girls, 6 ; total, 13.

1. No change has been made in the material condition since last inspection. 2. About half the pupils are regular. They are attentive and properly governed. 3. The mark for reading, spelling, and dictation is above the average ; that for writing and arithmetic up to the average ; and that for other subjects below. The general proficiency is between *tolerable* and *fair*.

DENNIS' FLAT (N.-V.) :—Regular inspection, 13th May, 1875.

Enrolled :—Boys, 3 ; girls, 11 ; total, 14. Present :—Boys, 3 ; girls, 11 ; total, 14.

1. The building is still very dilapidated and uncomfortable, but there is a reasonably good supply of requisites. 2. During the year the irregularity has been excessive, and very little progress has been made. The mark for every subject is below the average. The general proficiency is between *indifferent* and *moderate*.

DURRAN-DURRAGH (N.-V.) :—Regular inspection, 11th November, 1875.

Enrolled :—Boys, 6 ; girls, 15 ; total, 21. Present :—Boys, 6 ; girls, 15 ; total, 21.

1. The building is in a tolerable state of repair, and is sufficiently well provided with requisites. 2. The government is weak and ineffective. 3. Owing to irregularity and to want of vigour in the teaching the attainments are unsatisfactory, the mark for every subject being below the average. The general proficiency is *indifferent*.

FARRINGTON (N.-V.) :—Regular inspection, 17th November, 1875.

Enrolled :—Boys, 17 ; girls, 7 ; total, 24. Present :—Boys, 10 ; girls, 5 ; total, 15.

1. No change has been made in the material condition since last inspection. 2. The discipline is fair. 3. The progress made during the year is not satisfactory. The mark for writing is up to the average, but that for all other subjects is below. The general proficiency is between *indifferent* and *moderate*.

GUNDILLION (N.-V.) :—Regular inspection, 18th November, 1875.

Enrolled :—Boys, 6 ; girls, 3 ; total, 9. Present :—Boys, 6 ; girls, 3 ; total, 9.

1. The building is in a fair state of repair, and is sufficiently well supplied with requisites. 2. The discipline is very fair. 3. The attainments are satisfactory. The mark for reading, spelling, dictation, arithmetic, and grammar is above, and that for other subjects below the average. The general proficiency is *fair*.

HAROLD'S CROSS (N.-V.) :—Regular inspection, 17th November, 1875.

Enrolled :—Boys, 5 ; girls, 8 ; total, 13. Present :—Boys, 3 ; girls, 8 ; total, 11.

1. The building is in a dilapidated state, but the supply of working materials is sufficient. 2. Most of the pupils attend regularly. 3. This school is worked with that at Farrington, and in regard to discipline and attainments is in about the same condition.

JELLAT JELLAT (N.-V.) :—Regular inspection, 12th August, 1875.

Enrolled :—Boys, 6 ; girls, 11 ; total, 17. Present :—Boys, 4 ; girls, 8 ; total, 12.

1. The building is in a satisfactory condition, and the supply of furniture is sufficient. 2. This school is worked with that at Warragubra, and in regard to discipline and attainments is in about the same condition.

LARBERT (N.-V.) :—Regular inspection, 13th December, 1875.

Enrolled :—Boys, 16 ; girls, 6 ; total, 22. Present :—Boys, 7 ; girls, 6 ; total, 13.

1. The schoolroom is large and suitable, and is well fitted up with all necessaries. 2. The discipline is fair. 3. The mark for writing is above the average, that for reading and arithmetic up to the average, and that for other subjects below. The general proficiency is between *tolerable* and *fair*.

LIME KILNS (N.-V.) :—Regular inspection, 13th December, 1875.

Enrolled :—Boys, 11 ; girls, 7 ; total, 18. Present :—Boys, 6 ; girls, 6 ; total, 12.

1. The schoolroom is comfortable, and particularly clean. There is a sufficient supply of furniture, apparatus, and working materials. 2. The pupils are attentive, orderly, and obedient. 3. On the whole, the attainments are satisfactory. The mark for writing and dictation is above the average ; that for reading and arithmetic up to the average ; and that for grammar, geography, and object lessons below. The general proficiency is *fair*.

LARRY'S POINT (N.-V.) :—Regular inspection, 27th July, 1875.

Enrolled :—Boys, 7 ; girls, 12 ; total, 19. Present :—Boys, 6 ; girls, 12 ; total, 18.

1. The building and the general outfit are the same (this year as last). 2. The pupils are regular, and the discipline is satisfactory. 3. The mark for reading and spelling is above the average, and that for other subjects below. The general proficiency is *tolerable*.

MERINGLO (N.-V.) :—Regular inspection, 1st September, 1875.

Enrolled :—Boys, 8 ; girls, 4 ; total, 12. Present :—Boys, 7 ; girls, 4 ; total, 11.

1. The building is suitable, and is fitted up with all requisites. 2. The children are irregular, and very little progress has been made since last inspection. The general proficiency is *moderate*.

ORANMEIR (N.-V.) :—Regular inspection, 18th November, 1875.

Enrolled :—Boys, 9 ; girls, 13 ; total, 22. Present :—Boys, 7 ; girls, 9 ; total, 16.

1. The material condition is satisfactory in all respects. 2. The government is weak and ineffective. 3. The attainments are very poor, the mark for every subject being much below the average. The general proficiency is between *small* and *indifferent*.

POWER'S

POWER'S CORNER (N.-V.) :—Regular inspection, 24th February, 1875.

Enrolled :—Boys, 13 ; girls, 5 ; total, 18. Present :—Boys, 12 ; girls, 4 ; total, 16.

1. The room is comfortably fitted up, and there is a good supply of necessary stock. 2. The majority of the pupils are extremely irregular, and much of the teacher's labour is therefore unproductive. The progress made by the regular attendants is satisfactory. The general proficiency is *tolerable*.

SIX-MILE FLAT (V.) :—Regular inspection, 11th November, 1875.

Enrolled :—Boys, 8 ; girls, 8 ; total, 16. Present :—Boys, 8 ; girls, 7 ; total, 15.

1. The building is much out of repair, but it is well supplied with all necessaries. 3. This school is worked with that at Durran-Durragh, and in regard to discipline and attainments is in the same condition.

SNAPHOOK (N.-V.) :—Regular inspection, 27th July, 1875.

Enrolled :—Boys, 9 ; girls, 13 ; total, 22. Present :—Boys, 9 ; girls, 13 ; total, 22.

1. The schoolroom has been somewhat improved since last inspection, but the place is still very rough. There is a sufficient supply of apparatus and working stock. 2. The children are attentive and respectful to their teacher, but more firmness in the government would be beneficial. 3. The mark for reading and spelling is above the average, but that for all other subjects is below. The general proficiency is *tolerable*.

STONY CREEK (V.) :—Regular inspection, 11th August, 1875.

Enrolled :—Boys, 8 ; girls, 10 ; total, 18. Present :—Boys, 8 ; girls, 10 ; total, 18.

1. The building is in a good state of repair, and is well supplied with furniture, apparatus, and materials. 2. The discipline is good. 3. The mark for every subject is below the average. The general proficiency is *tolerable*.

TARRAGANDAH (N.-V.) :—Regular inspection, 11th August, 1875.

Enrolled :—Boys, 5 ; girls, 7 ; total, 12. Present :—Boys, 4 ; girls, 5 ; total, 9.

1. The material condition is good, and the discipline is sound. 2. The mark for reading, writing, and object lessons is up to the average, and that for other subjects below. The general proficiency is *tolerable*.

TOMBOYE (N.-V.) :—General inspection, 13th May, 1875.

Enrolled :—Boys, 7 ; girls, 6 ; total 13. Present :—Boys, 7 ; girls, 6 ; total, 13.

1. The room is suitable, and is sufficiently well supplied with all requisites. 2. The discipline is good in all respects. 3. Owing to sickness and irregularity the attainments are not as satisfactory as they were last year. The mark for dictation is beyond the average ; that for reading, writing, and dictation up to the average ; and that for arithmetic and grammar below. The general proficiency is *tolerable*.

WANDELLA (N.-V.) :—Regular inspection, 6th August, 1875.

Enrolled :—Boys, 10 ; girls, 7 ; total, 17. Present :—Boys, 10 ; girls, 6 ; total, 16.

1. The schoolroom is in the same condition that it was last year, and answers all requirements reasonably well. 2. The discipline is poor, the main defect being a want of determination in the government. 3. The attainments are not satisfactory. The mark for every subject is below the average. The general proficiency is *moderate*.

WARRAGUBRA (N.-V.) :—Regular inspection, 12th August, 1875.

Enrolled :—Boys, 9 ; girls, 9 ; total, 18. Present :—Boys, 7 ; girls, 8 ; total, 15.

1. The building is in a fair state of repair, and is sufficiently well provided with all requisites. 2. The discipline is loose, and the government weak and ineffective. 3. The attainments are unsatisfactory. The mark for geography is up to the average, but that for all other subjects is below. The general proficiency is between *moderate* and *tolerable*.

WYNDHAM (V.) :—Regular inspection, 28th August, 1875.

Enrolled :—Boys, 5 ; girls, 8 ; total, 13. Present :—Boys, 3 ; girls, 6 ; total, 9.

1. The material condition is satisfactory. 2. A new teacher has lately taken charge. Under him the discipline is improving, and the teaching is conducted with more system. The general proficiency is *small*.

J. C. MAYNARD,
Inspector, Braidwood District.

CAMDEN DISTRICT.

INSPECTOR'S General Report for 1875.

I HAVE the honor to submit my General Report for the year 1875. The information contained therein relates to the adequacy of the means of education in the district as regards amount and distribution, the material condition, organisation, and general discipline of the schools, the subjects and methods of instruction, moral training, and progress of the pupils in learning.

Schools in the District.

At the close of the year there were 101 schools in the District, attended by 5,269 scholars. The following statement shows the number of each class of schools in operation, and the attendance of pupils :—

46 Public Schools, attended by 2,800 pupils ; average for each School	60.
21 Provisional	564 " "
6 Half-time	106 " "
13 Church of England	885 " "
12 Roman Catholic	652 " "
2 Presbyterian	108 " "
1 Wesleyan	56 " "

The aggregate number of scholars at all the schools in the district in the year was 7,093. The average enrolment for the year was 5,340, and the average attendance 3,560 ; but for the last quarter of the year it was 3,659. From the inquiries I made throughout the district during my travels in the course of the year, I found about 800 children of the educable ages not attending school. All these children, however, were not growing up wholly uneducated : some had left school, and others were receiving instruction at home. 344 free pupils attended the schools in the year, but during the last quarter there were only 698. Of the 5,231 pupils enrolled at the time of inspection, 4,024 were present at examination.

Distribution

Distribution of the Means of Education.

As regards the amount and distribution of education in the district, I am of opinion that with the exception of a few very sparsely-settled localities, the schools are fairly distributed among the population; but in several places the number is still in excess of the wants of the people. In my Report for last year, I pointed out that at Camden, Liverpool, Wollongong, Koggarah, and Jamberoo there were three schools at each place; and at Appin, Dapto, Bulli, Wilton, Bankstown, Menangle, Brownlow Hill, and Charcoal Creek there are two schools at each place; and that one school in each of these localities would be quite sufficient. During the year much has been done to remedy this evil. At Wilton and Appin there is now only one school at each place, and at Charcoal Creek and Brownlow Hill arrangements are in progress for the establishment of Public Schools. At Campbelltown the Church of England and Presbyterian Schools have been closed and a Public School established. At Koggarah and Jamberoo, Public Schools are in course of establishment. At Picton there were two Public Schools within a short distance of each other, and one school being sufficient to meet the educational wants of the people the other has been closed. There are still remaining Camden, Liverpool, and Wollongong with three schools at each place, and Bulli, Dapto, Bankstown, and Menangle, with two at each place. Seven schools would be sufficient to supply the means of education to all these localities. In considering this matter it should be remembered that in many cases the Council of Education has no power to reduce the number of schools, because the Public Schools Act provides for the support of two, three, or four existing schools in the same locality so long as the required average number of thirty scholars is maintained at each. It is to be hoped, however, that fresh legislation may shortly enable the Council to close all unnecessary schools, thereby economising the public funds and rendering the existing schools more efficient. During the year applications were received by the Council for the establishment of Public Schools at East Dapto, Narellan, Broughton Vale, Jamberoo, Kangaroo River, and Hurstville; and for Provisional Schools at Woodhill, Forest Lodge, and Bullamayah. All these applications were entertained expecting Woodhill and Forest Lodge, which were declined, being too near existing schools. Arrangements are in progress for the erection of Public School buildings at Narellan, Kangaroo River, Broughton Vale, East Dapto, Jamberoo, Koggarah, Ashfield, Gannon's Forest, Peakhurst, Peterborough, and Brownlow Hill, and the buildings at Gerringong are approaching completion. In some of these cases the selection and conveyance of the sites have caused much delay; but, notwithstanding, great progress has been made in the district during the year. The public generally are more alive than formerly to the necessity of a good education for their children, and the Resolution of the Legislative Assembly, to the effect that all Public Schools are in future to be built wholly at the public cost, has already done much to promote popular education among the people, and I have no doubt but in the course of a few years it will be instrumental in extending education throughout the length and breadth of the Colony. With the exception of a few thinly settled localities, where Half-time Schools could perhaps be maintained, I am not aware of any place in the Camden District where additional schools are required at present.

Condition of the Schools inspected.

Of the 46 Public Schools, 30 are vested and 16 non-vested. Five of the vested buildings are of stone, seven of brick, and eighteen of wood. With very few exceptions they are in good repair, and steps are now being taken for making all necessary additions and improvements. In almost every instance there are suitable playgrounds, out-buildings, and a comfortable residence for the teacher; but there are several schools where lavatories and playsheds have not yet been provided. Generally speaking, the schoolrooms are well ventilated and clean. With two or three exceptions, the grounds are fenced, and the supplies of furniture, apparatus, and books are sufficient. In the majority of the localities where non-vested schools are in operation, measures have been taken for the erection of vested buildings, and the material condition of the Public Schools is improving very rapidly. Of the 21 Provisional Schools, two of the buildings are of brick and nineteen of wood, and only two of them are held in churches. The majority of the buildings are in passable repair, and the supplies of apparatus and books are sufficient, but the furniture is sometimes of an unsuitable kind. The playgrounds are often not enclosed, closets are in several cases wanting, and generally there is no residence for the teacher. The same remarks apply to the Half-time Schools. As regards the Denominational Schools, four are held in churches. In many instances the Local Boards decline to make any further improvements until Parliament has settled the education question. The schools are, however, fairly furnished and well supplied with apparatus and books, and the material condition of the majority of the Denominational Schools is fairly satisfactory.

As regards the discipline of the schools, the Council's rules relative to cleanliness, order, punctuality, regularity, and government of the scholars receive a considerable amount of attention in most schools of all classes, but there are many where the punctuality of attendance admits of improvement. In the majority of the schools the cleanliness of the pupils is very satisfactory. This is of great importance to the community, because it is so conducive to health and morality. In some schools, however, the daily inspection of the scholars is not sufficiently strict, and the late pupils are seldom inspected before taking their seats. The general rule is, that every morning and afternoon the children fall into parallel lines on the playgrounds before entering school, and the teachers satisfy themselves by personal inspection that they are clean, their hair brushed, and their clothes clean and neat. The teachers are bound not only to promote the health of their pupils, but to protect them as far as possible from everything detrimental to it; and should any of them be suffering from any of those infectious diseases incidental to children, their parents or guardians are requested to keep them at home until perfectly cured. In one-third of the schools the order is good, in forty it is fair, and in the remainder it is tolerable, with the exception of three where it is only moderate. Speaking generally, the government of the schools is mild, moral suasion being the ruling principle; but I did not inspect any in which corporal punishment had been wholly abandoned, neither did I hear of undue severity having been practised by any teacher. The average enrolment of scholars in the district for the year was 5,340, and the average attendance 3,560, being an attendance of 66.6 days per cent. In the Colony of Queensland, where the parents pay no school fees, the average attendance of the scholars enrolled for the year 1874 was 50.5 days per cent. The total number of scholars enrolled in the Colony of Victoria for 1873 was 206,602, and the average attendance for the same period was 97,039, being an average attendance of 47 days per cent. On the 31st of August, 1874, the enrolment of children in England and Wales for the year ending on that date was 2,497,602, and the average attendance for the same period was 1,678,589, being an attendance of 67 days per cent. Viscount Sandon stated in the House of Commons on 30th June, 1875, that he desired to see one-fifth of the whole population enrolled, and an average attendance of one-seventh of the people. That would be an average daily attendance of nearly 75 per cent. of 4,700,000 children. In considering this matter it may be well to remember, that "compulsory attendance is now the law for 43 per cent. of the whole population of England and Wales, and for 80 per cent. of the whole borough population." The *Times* adds, "that such a result should have been voluntarily attained in the course of four years affords very strong evidence that the Legislature might without difficulty extend the same rule to the whole population." The whole number of scholars who attended all the schools in the Camden District within the year was 7,093, and the average attendance for the year 3,560, being a daily average attendance of 50 per cent. This shows a small decrease for this year, which has been caused chiefly, no doubt, by measles and scarlet fever afflicting so many of the scholars. The irregularity in the attendance of the pupils is much to be regretted, because it is so very injurious in many ways. The progress of the regular scholars is retarded, the work of the schools is hindered, the discipline is injuriously affected, the teachers are discouraged

discouraged in their efforts, and the public funds are largely wasted. The civilized nations of the world are now beginning to see that it is better and cheaper to build schools and pay teachers than to enlarge prisons and employ more policemen. There is little doubt but education lessens crime. It appears that "In France, in the year 1868, one-half of the inhabitants could neither write nor read, and that this half of the French people supplied 95 per cent. of the criminals convicted in the French Courts. In the six New England States of America, only 7 per cent. of the inhabitants above ten years of age can neither write nor read, and this section of New England society furnishes 80 per cent. of the New England criminals. The statistical facts connected with Bavaria show that pauperism and crime diminish in proportion as schools increase." It is only a question of time. There is little doubt but sooner or later the compulsory education of the young up to a certain standard must become law in all civilized countries where the Government is sufficiently alive to the interests and welfare of the people.

During the year I inspected and fully examined all the schools in the district, excepting four small schools not in operation when I visited the localities; and I made incidental visits to a large number. I examined every child in every class, and noted the proficiency in the subjects prescribed. Taking into consideration all matters of organisation, discipline, and instruction for which the teachers are held responsible, the following statement will show the efficiency of the schools and the attainments of the scholars:—In four schools the average proficiency of the 605 pupils present was good, in twenty-five schools the 1,339 children examined passed very fairly, in forty schools the 1,218 scholars present acquitted themselves fairly, in twenty-nine schools the attainments of the 813 pupils present were tolerable, and in three small schools the 45 children in attendance showed only moderate progress in learning. The efficiency of the schools may be exhibited more concisely in the following form:—

1 School is very good,
3 Schools are good,
25 " very fair,
40 " fair,
29 " tolerable, and
3 " moderate.

From this statement it can be easily shown that the average proficiency of all the schools is fair. Upon reference to the abridged summaries of my reports herewith appended, it may be observed that the condition of nearly all the Public and Denominational Schools is fair or very fair, and tolerable for the Provisional and Half-time.

QUALIFICATIONS OF THE TEACHERS.

There were employed in the district at the close of the year one hundred principal teachers, six assistants, and fourteen pupil teachers. They have nearly all received more or less training for the work of tuition. They are classified as follows:—

1 First-class,
20 Second-class,
54 Third-class, and
25 Probationers.

The probationary teachers are all, with very few exceptions, employed in the Provisional and Half-time Schools—where the average attendance of scholars is below 25, and in some cases not more than half that number. Generally speaking, the teachers are industrious, anxious for improvement, and painstaking in the performance of their duties. They are aware that their promotion depends upon the condition of their schools—but the irregular attendance of the scholars is much against their success. The labours of a teacher are very arduous, and if it be true that "mothers and schoolmasters plant the seeds of nearly all the good and evil in the world," it must be admitted that the teacher's office is one of great importance and responsibility. He should possess that which Carlyle declares to be "the essential element of genius—an immense capacity for taking trouble," for his office is no sine-cure. Although the position of the Public School teachers may not be all that they could wish, it is rapidly improving, and the profession is now generally acknowledged to be as important as that of any other public functionary. There is scarcely any position under the Government that leads more directly to improve the social well-being of the community. "As is the schoolmaster, so is the school"—and a good school prevents crime, adds to the security of property, and forms the character and manners of the people.

CONCLUDING REMARKS.

New buildings, repairs, and additions are in progress, and the material condition of the schools is improving fast. The organisation, discipline, and instruction are more satisfactory, and the future prospects of the schools are encouraging. The local supervision is in some cases beneficial—but, with regard to many schools, very little active interest is taken in school matters. The names of the free scholars, and the grounds of their admission free, are not regularly reported to the Council at the close of the quarter. Some of the superfluous schools have been closed, and the demand for better school-houses and better teachers is on the increase. I am not aware of any place in the district where an additional Public or Provisional School is required. Abridged summaries of my reports upon the schools are appended.

Inspectors' Office—Sydney, 10th January, 1876.

W. MONTYRE,
Inspector, Camden District.

SUMMARY of Reports for 1875.

The following remarks are abridged statements of my detailed reports upon the condition of the Public, Provisional, and Half-time Schools inspected by me during the year 1875. The remarks chiefly relate to the material condition and organisation of the schools, the general discipline and moral training, the subjects and methods of instruction, and the progress of the pupils in learning.

PUBLIC SCHOOLS.

APPIN (V.):—General inspection, 12th October.

Enrolled:—Boys, 23; girls, 23; total, 46. Present:—Boys, 16; girls, 21; total, 37.

A bell has been supplied since the last inspection, but the buildings need painting and some small repairs. The schoolroom is clean and well ventilated, and the scholars are punctual, clean, orderly, and attentive. All the subjects of instruction prescribed are taught except singing, and the teachers are attentive to their duties. The average attendance of the pupils enrolled is about 72 days per cent. There are six free scholars. It appears, upon inquiry, that there are about twenty children of the school age in the locality not under instruction. 61 per cent. of the questions asked at the examination were answered, and the general management of the school is fairly satisfactory.

ASHFIELD (N.V.) :—Regular inspection, 16th August.

Enrolled :—Boys, 36 ; girls, 23 ; total, 59. Present :—Boys, 23 ; girls, 20 ; total, 43.

The material condition of the school is bad, but new buildings are in progress. The general discipline and instruction are satisfactory. The average attendance of the scholars enrolled is about 62 days per cent. There are only two free scholars. It appears that there are about eight children of the educable ages in the neighbourhood not attending school. The pupils answered 70 per cent. of the questions asked at the examination.

AVONDALE (V.) :—Regular inspection, 3rd December.

Enrolled :—Boys, 27 ; girls, 15 ; total, 42. Present :—Boys, 18 ; girls, 15 ; total, 33.

A lavatory, a weathershed, and repairs to the buildings are required. The pupils are clean, orderly, and attentive to their lessons, but not all sufficiently punctual. All the subjects of instruction prescribed for the classes are taught except singing, and the methods of tuition are intelligent. The average attendance of the children enrolled is 66 days per cent. There are twelve free scholars. The teacher reports that there are seven children of the educable ages in the locality not under instruction. About 70 per cent. of the questions asked at the examination were answered.

ALBION PARK (V.) :—Regular inspection, 1st December.

Enrolled :—Boys, 56 ; girls, 42 ; total, 98. Present :—Boys, 49 ; girls, 34 ; total, 82.

The schoolroom is rather small, and some small repairs to the roof of the residence are required, but otherwise the material condition of the school is good. The schoolroom is clean and well ventilated, and the pupils are punctual, clean, and orderly. All the subjects of instruction prescribed for the several classes are taught except singing, and the methods of tuition are intelligent. The average attendance of the pupils enrolled is about 68 per cent. There are fifteen free scholars. It appears upon inquiry that there are no children of the educable ages in the neighbourhood growing up without school instruction. About 70 per cent. of the questions asked at the examination were answered. Forty-six of the scholars have been promoted to higher classes since the last inspection, and the general management is very fair.

BANKSTOWN (N.V.) :—General inspection, 3rd September.

Enrolled :—Boys, 21 ; girls, 15 ; total, 36. Present :—Boys, 16 ; girls, 15 ; total, 31.

This school is held in temporary premises, and there is no lavatory or playshed, but otherwise the material condition of the school is reasonably good. The children are clean, orderly, and attentive, and all the subjects prescribed for the several classes are taught, except singing. The average attendance of the scholars enrolled is about 67 days per cent. There are eighteen free scholars. The teacher reports that there are about thirteen children of the school age in the locality not under school instruction. Sixteen of the pupils have been promoted to higher classes during the last year. 52 per cent. of the questions asked at the examination were answered, and the efficiency of the school may be estimated as tolerable.

BERKELEY (V.) :—General inspection, 29th October.

Enrolled :—Boys, 23 ; girls, 21 ; total, 44. Present :—Boys, 21 ; girls, 17 ; total, 38.

The premises require repairs, and there is no lavatory or playshed. The punctuality has been improved, and the cleanliness, order, and attention of the pupils are satisfactory. All the subjects of instruction prescribed for the several classes are taught, and the teaching is conducted with considerable earnestness and industry. The average attendance of the pupils enrolled is 66 days per cent. There are four free scholars. The teacher reports that he is not aware of any children of the school age in the locality not attending school. About 60 per cent. of the questions asked at the examination were answered, and the proficiency is fair.

BOOLONG (N.V.) :—General inspection, 18th March.

Enrolled :—Boys, 24 ; girls, 23 ; total, 47. Present :—Boys, 15 ; girls, 13 ; total, 28.

A new residence for the teacher, a lavatory, a playshed, a book-press, and fencing are required. The pupils are clean, nearly all punctual, and tolerably orderly and attentive. Singing and drawing are not taught. The master has been only a short time in charge of the school, and the proficiency of the pupils may be chiefly attributed to the labours of the late teacher. The average attendance of the children enrolled is 67 days per cent. There are no free scholars, and the teacher reports that there are no children of the school age in the locality growing up without school instruction. 63 per cent. of the questions asked at the examination were answered, and the average proficiency of the pupils may be estimated as fair.

BRANDON HILL (V.) :—Regular inspection, 25th November.

Enrolled :—Boys, 35 ; girls, 20 ; total, 55. Present :—Boys, 34 ; girls, 17 ; total, 51.

A lavatory, a playshed, a water-tank, and another room to the residence are required, and the buildings are in much need of painting. The general discipline is satisfactory, and all the subjects of instruction prescribed for the several classes are taught except singing. The teaching is conducted with industry and earnestness, and twenty-five of the pupils have been promoted to higher classes since the last inspection. The average attendance of the scholars enrolled is about 53 days per cent. There are about 20 free pupils, but no children of the school age in the place not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the attainments are very fair.

BROUGHTON CREEK (N.V.) :—Regular inspection, 10th March.

Enrolled :—Boys, 62 ; girls, 66 ; total, 128. Present :—Boys, 52 ; girls, 56 ; total, 108.

A lavatory, a playshed, a class-room, and a bell are required ; the closets are in bad repair, and the buildings are in much need of painting. The pupils are not all punctual, but they are clean, orderly, and attentive. All the subjects prescribed for the several classes are taught, and the teaching is conducted with considerable skill and ability. The average attendance of the scholars enrolled is about 68 days per cent. There are 20 free scholars ; but it appears there are no children of the educable ages in the neighbourhood not attending school. About 68 per cent. of the questions asked at the examination were answered.

BROUGHTON VILLAGE (V.) :—Regular inspection, 26th February.

Enrolled :—Boys, 23 ; girls, 27 ; total, 50. Present :—Boys, 17 ; girls, 25 ; total, 42.

A playshed, a lavatory, a bell, and a kitchen have been supplied since the last inspection. A class-room would be useful ; but in all other respects the material condition of the school is good. The children are clean, and very orderly and attentive. The schoolroom and furniture are kept beautifully clean, and the general discipline is good. All the subjects of instruction prescribed for the several classes are taught with skill and industry. The average attendance of the pupils enrolled is

is 80 days per cent. There are seven free pupils, and about ten children of the educable ages in the locality not attending school. 75 per cent. of the questions asked at the examination were answered, and the general management of the school is satisfactory.

BUNDYWALLA (V.) :—Regular inspection, 11th March.

Enrolled :—Boys, 13 ; girls, 14 ; total, 27. Present :—Boys, 12 ; girls, 13 ; total, 25.

A bell, a lavatory, and a weathershed are required, and the buildings need painting. Measures have been taken for making these improvements. The general discipline is fairly satisfactory, and all the subjects of instruction prescribed for the several classes are taught. The average attendance of the scholars enrolled is 75 days per cent. There are thirteen free pupils ; and six children of the school age in the locality are not under school instruction. About 58 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils may be estimated as nearly fair.

BULLI (V.) :—Regular inspection, 22nd October.

Enrolled :—Boys, 42 ; girls, 49 ; total, 91. Present :—Boys, 35 ; girls, 42 ; total, 77.

The buildings are in much need of painting, and a lavatory and a weathershed are required. The pupils are clean, punctual, orderly, and attentive to their lessons. All the subjects of instruction prescribed by the Council are taught except singing, and the teaching is conducted with industry and care. The average attendance of the pupils enrolled is about 70 days per cent. There are four free scholars, and six children of the educable ages in the locality not attending school. About 75 per cent. of the questions asked at the examination were answered. The average proficiency is between very fair and good.

BULLI, NORTH (V.) :—Regular inspection, 21st October.

Enrolled :—Boys, 10 ; girls, 11 ; total, 21. Present :—Boys, 10 ; girls, 10 ; total, 20.

A lavatory and a weathershed are required, and the buildings are in much need of painting. The population has not increased much during the past year. All the subjects of instruction prescribed are taught except singing, and the teaching is conducted with industry and care. There are no free scholars, but there are three children of the school age in the locality not attending school. About 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

CAMDEN (V.) :—Regular inspection, 30th July.

Enrolled :—Boys, 20 ; girls, 24 ; total, 44. Present :—Boys, 18 ; girls, 14 ; total, 32.

The residence is too small, and the whole of the buildings require to be resingled. The children are not all punctual, but they are clean and orderly and attentive to their studies. All the prescribed subjects are taught, and ten of the pupils have been promoted to higher classes during the year. The average attendance of the pupils enrolled is 60 days per cent. There are two free scholars, and five children of the school age in the locality not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are very fair.

CAMBEWARRA (V.) :—Regular inspection, 17th March.

Enrolled :—Boys, 40 ; girls, 34 ; total, 74. Present :—Boys, 28 ; girls, 28 ; total, 56.

Two additional rooms to the residence have been erected since the last inspection ; but a lavatory, a tank, and a weathershed are required, and the buildings will shortly require painting and resingling. The children are clean, orderly and attentive, and nearly all punctual. All the subjects of instruction prescribed by the Council are taught, and the teaching is conducted with considerable skill and ability. The average attendance of the scholars is 77 days per cent. There are eight free scholars, and about ten children of the educable ages in the locality not attending school. About 75 per cent. of the questions asked at the examination were answered.

CAWDOR (N.V.) :—Regular inspection, 29th July.

Enrolled :—Boys, 31 ; girls, 26 ; total, 57. Present :—Boys, 26 ; girls, 20 ; total, 46.

This school is held in the Wesleyan chapel, and new buildings are required. A bell, a lavatory, and a playshed are wanting, but otherwise the material condition of the school is good. The pupils are all clean, very punctual, orderly, and attentive to their studies. Singing is not taught, but forty-one of the pupils have been promoted to higher classes since the last inspection, and the teaching is conducted with efficiency and success. The average attendance of the pupils enrolled is 65 days per cent. There are 36 free scholars. The teacher reports that the parents of these children have not the means to pay fees. It appears that there are twelve children of the school ages in the locality not under instruction. 70 per cent. of the questions asked at the examination were answered, and the general management of the school is very fair.

COOLANGATTA (N.V.) :—Regular inspection, 19th March.

Enrolled :—Boys, 22 ; girls, 20 ; total, 42. Present :—Boys, 6 ; girls, 11 ; total, 17.

A lavatory and a playshed are required, but, otherwise, the material condition of the school is passable. The general discipline is effective ; but singing and drawing are not taught. The teaching is conducted with attention and industry, and the methods of tuition are intelligent. The average attendance of the scholars is about 64 days per cent. There are four free pupils. 63 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are fair.

DAPTO (N.V.) :—General inspection, 27th September.

Enrolled :—Boys, 17 ; girls, 15 ; total, 32. Present :—Boys, 17 ; girls, 15 ; total, 32.

This school is held in temporary premises, but new buildings are in progress. The general discipline is effective, and all the subjects of instruction prescribed by the Council are taught with intelligence. The average attendance of the scholars is 70 days per cent. There are no free pupils ; but there are about 20 children of the school ages in the locality not under instruction at the school who should attend there. The children answered about 60 per cent. of the questions asked at the examination, and the proficiency of the pupils is fair. The teacher has been only a short time in charge of the school.

FAIRY MEADOW (V.) :—Regular inspection, 8th December.

Enrolled :—Boys, 38 ; girls, 38 ; total, 76. Present :—Boys, 25 ; girls, 29 ; total, 54.

Playsheds, lavatories, and new closets have been erected since the last inspection, and the buildings painted. The material condition of the school is good. The pupils are clean and orderly, attentive to their studies, and nearly all punctual. All the prescribed subjects are taught, and forty of the pupils have been promoted to higher classes during the year. The average attendance of the pupils enrolled is 68 days per cent. There are fourteen free scholars, and about twenty children of the school ages in the locality not attending school. 67 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are nearly very fair.

GLEDSDOOD

GLEDSDOOD (V.) :—Regular inspection, 7th May.

Enrolled :—Boys, 14 ; girls, 15 ; total 29. Present :—Boys, 11 ; girls, 4 ; total 15.

The buildings need some small repairs. The general discipline is fairly satisfactory in most respects. Singing and drawing are not taught, but the instruction in the other branches is carried on with zeal and industry. The average attendance of the pupils enrolled is 66 days per cent. There are six free scholars. About 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is fair.

GLENMORE (V.) :—Regular inspection, 6th May.

Enrolled :—Boys, 21 ; girls, 14 ; total, 35. Present :—Boys, 18 ; girls, 12 ; total, 30.

A playshed and a lavatory are required, and some small repairs to the roof of the building, but otherwise the material condition of the school is good. The pupils are not all punctual, but they are clean, tolerably orderly, and more attentive and industrious than formerly. All the subjects of instruction prescribed by the Council are taught with fair success. The average attendance of the pupils is about 80 days per cent. There are six free scholars, but the teacher reports there are no children of the educable ages in the neighbourhood not attending school. About 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils may be estimated as fair.

JERRARA (V.) :—General inspection, 29th November.

Enrolled :—Boys, 25 ; girls, 16 ; total, 41. Present :—Boys, 18 ; girls, 13 ; total, 31.

The premises require sundry repairs and improvements, which will shortly be made. The pupils are not all punctual ; but they are clean, orderly, and attentive to their lessons. All the prescribed subjects are taught except singing, and the methods of tuition are intelligent. The average attendance of the pupils enrolled is 75 days per cent. There are no free scholars ; but the teacher reports that there are about ten children of the educable ages in the locality not under instruction. 66 per cent. of the questions asked at the examination were answered. The general management of the school is fairly satisfactory.

KIAMA (V.) :—Regular inspection, 22nd November.

Enrolled :—Boys, 166 ; girls, 95 ; total, 261. Present :—Boys, 117 ; girls, 68 ; total, 185.

Arrangements are in progress for the erection of a separate schoolroom for the younger children, and for supplying a new water tank, a lavatory for the girls, and a playshed for the boys. The general discipline is satisfactory. In addition to the ordinary subjects, the elder boys are well advanced in the elements of Latin, algebra, and geometry. The teachers are all very industrious, and most energetic in the performance of their duties. The school is managed with success and efficiency, and it is highly beneficial to the district. Forty-two of the pupils have been promoted to higher classes during the year, and six of the boys and two of the girls have passed the University Public Examination. There are eleven free scholars, and it is estimated that there may be about twenty-five children of the school age in the town and vicinity not under school instruction. The writing and needlework are excellent, and about 91 per cent. of the questions asked at the examination were answered. The general management of the school is very good.

KANGAROO VALLEY (V.) :—General inspection, 23rd March.

Enrolled :—Boys, 26 ; girls, 34 ; total, 60. Present :—Boys, 11 ; girls, 26 ; total, 37.

A lavatory and a weathershed are required, and the buildings are in much need of painting. The pupils are nearly all punctual. They are clean, orderly, and attentive to their lessons. All the subjects of instruction prescribed are taught, except singing. The average attendance of the scholars is 70 days per cent. There are six free scholars, but no children of the school age in the neighbourhood growing up without instruction. About 50 per cent. of the questions asked at the examination were answered, and the condition of the school may be estimated as tolerable.

KOGARAH (N. V.) :—Regular inspection, 26th July.

Enrolled :—Boys, 22 ; girls, 24 ; total, 46. Present :—Boys, 15 ; girls, 20 ; total, 35.

This school is held in temporary premises, but new buildings are in course of erection. The pupils are clean, orderly, and nearly all punctual. All the subjects prescribed are taught with considerable industry and care. The average attendance of the scholars is 66 days per cent. There are two free scholars. It appears that 30 children of the school age at this place are not under instruction. About 60 per cent. of the questions asked at the examination were answered, and the condition of the school is fairly efficient.

LIVERPOOL (V.) :—Regular inspection, 9th September.

Enrolled :—Boys, 53 ; girls, 47 ; total, 100. Present :—Boys, 35 ; girls, 29 ; total, 64.

A lavatory and a playshed are in course of erection, and the building of the teacher's residence will shortly be commenced. With these improvements the material requirements of the school will be complete. The pupils are clean, orderly, and nearly all punctual. All the prescribed subjects are taught, and 13 of the scholars have been promoted to higher classes since last inspection. The average attendance of the pupils is about 65 per cent. There is only one free scholar. 65 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is between tolerable and fair.

MARSHALL MOUNT (V.) :—Regular inspection, 2nd December.

Enrolled :—Boys, 25 ; girls, 28 ; total, 53. Present :—Boys, 21 ; girls, 20 ; total, 41.

A lavatory, a bell, and a playshed are required, and the buildings need painting and reshingling. The scholars are clean, orderly, attentive, and nearly all punctual. Singing is not taught, but the methods of tuition are intelligent, and 39 of the pupils have been promoted to higher classes since the last inspection. The average attendance of the scholars is 75 days per cent. There are no free scholars ; but the teacher reports that there are about 50 children of the school age in the locality not under school instruction. 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

MKROO (N. V.) :—Regular inspection, 15th March.

Enrolled :—Boys, 19 ; girls, 25 ; total, 44. Present :—Boys, 13 ; girls, 15 ; total, 28.

This school is held in temporary premises, but Mr. D. Berry has promised to erect new buildings in a more central position. The pupils are clean, orderly, and industrious. Singing and drawing are not taught ; but the instruction in the other branches is carried on with considerable industry and success. The proficiency in needlework is very satisfactory. The average attendance of the pupils is about 70 days per cent. There are no free scholars, and it appears that all the children of the school ages in the locality are under school instruction. 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is fair.

MENANGLE (V.) :—General inspection, 18th May.

Enrolled :—Boys, 18 ; girls, 28 ; total, 46. Present :—Boys, 14 ; girls, 21 ; total, 35.

A lavatory, a playshed, and a kitchen are required ; but, otherwise, the material condition of the school is good. The pupils are clean, orderly, attentive, and nearly all punctual. All the prescribed subjects are taught except singing, and the methods of tuition are intelligent. The average attendance of the pupils is 68 days per cent. There are twelve free scholars. The teacher reports that there are about fifteen children of educable ages in the neighbourhood not attending school. About 60 per cent. of the questions asked at the examination were answered, and the attainments are fair.

MOUNT KEIRA (N.V.) :—Regular inspection, 28th October.

Enrolled :—Boys, 41 ; girls, 31 ; total, 72. Present :—Boys, 33 ; girls, 27 ; total, 60.

The schoolroom and residence are of an inferior description ; but new buildings are in progress. The working materials are sufficient, and the general discipline is good. All the subjects of instruction prescribed are taught with industry, skill, and intelligence. The average attendance of the pupils enrolled is 66 days per cent. There are three free scholars, and five children of the educable ages in the neighbourhood not under instruction. 70 per cent. of the questions asked at the examination were answered, and the general management of the school is very fair.

MULGOA FOREST (N.V.) :—Regular inspection, 15th October.

Enrolled :—Boys, 23 ; girls, 9 ; total, 32. Present :—Boys, 17 ; girls, 9 ; total, 26.

This school is held in temporary premises, but the School Board has been requested to furnish a description of a suitable site available for new buildings. The pupils are clean and tolerably orderly, but they are not all sufficiently punctual. Singing and drawing are not taught. The average attendance of the pupils is 60 days per cent. There are twenty free scholars, and about fifteen children of the school age in the place not under instruction. 55 per cent. of the questions asked at the examination were answered, and the attainments of the pupils may be estimated as between tolerable and fair.

NARELLAN (N.V.) :—General inspection, 23rd April.

Enrolled :—Boys, 10 ; girls, 15 ; total, 25. Present :—Boys, 8 ; girls, 15 ; total, 23.

This school is held in temporary premises, but new buildings are in progress. The pupils are punctual, clean, and orderly, and the general discipline is creditable ; singing is not taught. The average attendance of the pupils is 60 days per cent. There are seven free scholars, but no children of the school age in the neighbourhood growing up without instruction. About 58 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are nearly fair.

OMEGA RETREAT (V.) :—General inspection, 16th February.

Enrolled :—Boys, 41 ; girls, 28 ; total, 69. Present :—Boys, 28 ; girls, 25 ; total, 53.

General repairs and additions to the buildings are required, and to be made so soon as workmen can be secured. The general discipline is satisfactory. All the prescribed subjects are taught except singing, and the teaching is conducted with industry and earnestness. The average attendance of the pupils is 66 days per cent. There are twelve free scholars, and about ten children of the educable ages in the locality not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the condition of the school is very fair.

PRAKEHURST (N.V.) :—Regular inspection, 1st September.

Enrolled :—Boys, 26 ; girls, 28 ; total, 54. Present :—Boys, 20 ; girls, 21 ; total, 41.

This school is held in temporary premises, but new buildings are in progress. The pupils are punctual, clean, and orderly, and attentive to their lessons. Singing and drawing are not taught ; but the instruction in the other branches is conducted with considerable earnestness and industry. The average attendance of the pupils is 70 days per cent. There are two free scholars, and fifteen children of the school age in the locality not under instruction. About 60 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair.

PICTON, LOWER (V.) :—Regular inspection, 19th August.

Enrolled :—Boys, 82 ; girls, 64 ; total, 146. Present :—Boys, 70 ; girls, 52 ; total, 122.

The improvements noted in my last report are in progress, and the material condition of the school is good. The boys are well advanced in squad drill, and the general discipline is satisfactory. All the subjects prescribed are taught, and the methods of tuition are intelligent and applied with zeal and industry. The average attendance of the pupils is 60 days per cent. There are twenty free scholars. The teacher is not aware of any children in the locality not attending school ; 80 per cent. of the questions asked at the examination were answered, and the general proficiency of the pupils is good.

PICTON, UPPER (V.) :—Regular inspection, 8th July.

Enrolled :—Boys, 21 ; girls, 15 ; total, 36. Present :—Boys, 17 ; girls, 12 ; total, 29.

The buildings are in fair repair, and the working materials are sufficient. The general discipline is passable, and all the prescribed subjects are taught with considerable efficiency. The average attendance of the pupils is 54 days per cent. There are twelve free scholars, and about ten children in the vicinity not under school instruction. About 70 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are very fair. This school has been recently closed, the school at Lower Picton being sufficient to meet the educational wants of the district.

PETERBOROUGH (N.V.) :—General inspection, 12th February.

Enrolled :—Boys, 33 ; girls, 20 ; total, 53. Present :—Boys, 17 ; girls, 12 ; total, 29.

This school is held in temporary premises, but new buildings are in progress. The pupils are clean, orderly, attentive, and nearly all punctual. The small attendance was caused by measles afflicting the children. All the subjects of instruction prescribed by the Council are taught except singing, and the methods of tuition are intelligent. About 50 per cent. of the pupils are regular. There is only one free scholar, and about twenty children of the school age in the locality not under instruction. 60 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair.

ROSE VALLEY (V.) :—Regular inspection, 17th February.

Enrolled :—Boys, 17 ; girls, 21 ; total, 38. Present :—Boys, 12 ; girls, 14 ; total, 26.

A lavatory, a weathershed, new closets, some fencing, and the painting of the buildings are much needed. These improvements are to be made so soon as the workmen can be secured. The general discipline is satisfactory. All the prescribed subjects are taught, and the methods of tuition are intelligent. The average attendance is 50 days per cent. There are six free scholars, and three children of the educable ages in the locality not attending school. 60 per cent. of the questions asked at the examination were answered, and the attainments are fair.

SHELLHARBOUR (V.) :—Regular inspection, 18th February.

Enrolled :—Boys, 31 ; girls, 50 ; total, 81. Present :—Boys, 27 ; girls, 39 ; total, 66.

The material condition of this school is in all respects satisfactory. The pupils are clean, orderly, attentive, and nearly all punctual. All the subjects of instruction prescribed for the several classes are taught, and the teacher is industrious and attentive to his duty. The average attendance of the scholars is 70 days per cent. There are seven free pupils, and about 15 children of the school ages in the vicinity not under instruction. About 66 per cent. of the questions asked at the examination were answered.

TOOLEJOOA (N. V.) :—Regular inspection, 22nd February.

Enrolled :—Boys, 49 ; girls, 56 ; total, 105. Present :—Boys, 38 ; girls, 43 ; total, 81.

The material condition of this school is now fairly satisfactory in most respects, but the facilities for ventilation admit of some improvement. The children are clean and orderly, but they were not all sufficiently punctual on the day of my visit. All the subjects of instruction prescribed by the Council are taught, and the teaching is conducted with considerable skill and ability. The average attendance of the scholars is 77 days per cent. There are seven free pupils and about fifteen children of the educable ages in the neighbourhood not under instruction. About 63 per cent. of the questions asked at the examination were answered.

VIOLET HILL (V.) :—Regular inspection, 26th October.

Enrolled :—Boys, 23 ; girls, 26 ; total, 49. Present :—Boys, 20 ; girls, 22 ; total, 42.

The material improvements recently made are well done ; but a bell, a lavatory, and a water-tank are still required. All the prescribed subjects are taught except singing and drawing, and the general discipline is satisfactory. The average attendance of the scholars is 75 days per cent. There are three free pupils, and seven children of the school age in the locality not under instruction. About 63 per cent. of the questions asked at the examination were answered, and the general management of the school is fairly satisfactory.

WESTBROOK (V.) :—General inspection, 14th October.

Enrolled :—Boys, 29 ; girls, 15 ; total, 35. Present :—Boys, 17 ; girls, 14 ; total, 31.

The buildings need some small repairs, but the supply of working materials is sufficient. The pupils are not all sufficiently punctual, but they are tolerably clean and orderly. Singing is not taught. The average attendance of the pupils is 75 days per cent. There are no free scholars, but six children of the educable ages in the neighbourhood are not under instruction. About 60 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair.

WILTON (V.) :—Regular inspection, 15th December.

Enrolled :—Boys, 29 ; girls, 26 ; total, 55. Present :—Boys, 17 ; girls, 15 ; total, 32.

A lavatory, a playshed, a water-tank, a book-press, a bell, gates, and a small verandah to the residence are required. The general discipline is fairly satisfactory, and all the prescribed subjects are taught except singing. The average attendance of the pupils is 69 days per cent. There are twenty-four free scholars, and six children of the educable ages in the locality not attending school. About 64 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair in most respects.

WOLLONGONG (Boys—V.) :—General inspection, 27th September.

Enrolled :—Boys, 46. Present :—Boys, 36.

A lavatory and a weathershed are wanting, but they will shortly be supplied ; and the front of the buildings is to be painted. These improvements will make the material condition of the school complete. The general discipline is satisfactory, and all the subjects of instruction prescribed are taught with skill and intelligence. The average attendance is 64 days per cent. There are seven free scholars, and ten boys of the educable ages in the vicinity not attending school. About 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is fair.

WOLLONGONG (Girls—V.) :—Regular inspection, 11th August.

Enrolled :—Girls, 47. Present :—Girls, 38.

A lavatory and a weathershed are still wanting, but otherwise the material condition of the school is good. The pupils are all punctual, clean, orderly, and industrious, and all the prescribed subjects are taught with care and intelligence. The average attendance of the pupils is 64 days per cent. There are two free scholars, but no girls of the school age in the town or vicinity not under instruction. About 70 per cent. of the questions asked at the examination were answered. Twenty-three of the scholars have been promoted since the last inspection, and the attainments are very fair.

WOLLONGONG (Infants—V.) :—General inspection, 10th August.

Enrolled :—Boys, 32 ; girls, 24 ; total, 56. Present :—Boys, 29 ; girls, 20 ; total, 49.

The inside walls of the schoolroom have been whitened, and the ventilation and drainage of the premises improved since the last inspection, but a lavatory and a playshed are still wanting. All the prescribed subjects are taught with industry and care, and thirty-two of the pupils have been promoted to higher classes during the year. The general discipline is good, and the management has been much improved under the present mistress. The average attendance of the scholars is 66 days per cent. There are only two free scholars, and the teacher is not aware of any children of the school age in the town or vicinity not under instruction. 70 per cent. of the questions asked at the examination were answered, and the proficiency is very fair.

WOODSROCK (N. V.) :—Regular inspection, 26th November.

Enrolled :—Boys, 43 ; girls, 36 ; total, 79. Present :—Boys, 38 ; girls, 28 ; total, 66.

This school is held in temporary premises, but new buildings are in progress. The general discipline is satisfactory, and the teachers are industrious in the performance of their duties. All the prescribed subjects are taught with skill and intelligence, and thirty-three of the scholars have been promoted since the last inspection. The average attendance is 63 days per cent. There are fourteen free scholars, and the teacher reports that forty children of the educable ages in the neighbourhood are not attending school. About 80 per cent. of the questions asked at the examination were answered, and the general management may be estimated as good.

PROVISIONAL SCHOOLS.

BARRENCARRY :—General inspection, 22nd March.

Enrolled :—Boys, 15 ; girls, 14 ; total, 29. Present :—Boys, 13 ; girls, 10 ; total, 23.

A bell and a clock are wanting, and the grounds need fencing, but otherwise the material condition of the school is passable. The general discipline is tolerable, and all the prescribed subjects are taught except drawing. The average attendance is 66 days per cent. There are no free scholars ; but the

the teacher reports that eight children of the educable ages in the locality are not attending school. About 50 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils may be estimated as tolerable.

BARGO :—General inspection, 18th August.

Enrolled :—Boys, 11 ; girls, 13 ; total, 24. Present :—Boys, 10 ; girls, 10 ; total, 20.

This school is held in a very small wooden building, but a new schoolhouse is in course of erection. The pupils are tolerably clean and orderly, but not all punctual. Drawing and singing are not taught, and the progress of the pupils in learning has been much retarded recently by measles afflicting the children. The average attendance of the pupils is 63 days per cent. There are nine free scholars ; and eight children of the school age in the locality are not under instruction. 50 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are tolerable.

BELLAWONGARAH :—General inspection, 12th March.

Enrolled :—Boys, 13 ; girls, 9 ; total, 22. Present :—Boys, 13 ; girls, 9 ; total, 22.

The schoolroom is a neat weatherboard building, suitably furnished, and the grounds are fenced. The general discipline is satisfactory, and all the subjects prescribed by the Council are taught. The teaching is conducted with attention and care. The average attendance of the scholars enrolled is 80 days per cent. There are six free pupils, and six children of the educable ages in the locality not under instruction. 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is fair.

BOMADERRY :—Regular inspection, 16th March.

Enrolled :—Boys, 10 ; girls, 18 ; total, 28. Present :—Boys, 7 ; girls, 13 ; total, 20.

A comfortable residence for the teacher and new desks have recently been provided ; but a lavatory and a weathershed are still wanting. The general discipline is fairly satisfactory. All the prescribed subjects are taught except singing and drawing, and the teacher is industrious and attentive to her duty. The average attendance of the scholars enrolled is 70 days per cent. There are two free pupils, and the teacher reports that seven children of the school age in the locality are not under instruction. 50 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are tolerable.

BROWNLOW HILL :—Regular inspection, 26th August.

Enrolled :—Boys, 16 ; girls, 15 ; total, 31. Present :—Boys, 16 ; girls, 13 ; total, 29.

Fencing has been erected and repairs made to the building since my last visit, and the closets are partly built. The residence, not being occupied by the teacher, is used for a lavatory and a playshed. The children are clean, orderly, and attentive, and all punctual. Singing and drawing are not taught. The average attendance is 66 days per cent. There are twelve free scholars, but the teacher is not aware of any children of the school age in the locality growing up without instruction. The attainments of the pupils are fair.

BLACKCOLLIE :—General inspection, 30th April.

Enrolled :—Boys, 12 ; girls, 9 ; total, 21. Present :—Boys, 9 ; girls, 9 ; total, 18.

This school is held in a small wooden building. It needs two windows, and the roof requires some repairs. A bell, a book-press, a clock, hat-pegs, and closets are wanting. The pupils are not all punctual, but they are tolerably clean and orderly. Singing and drawing are not taught. The average attendance of the scholars is 52 days per cent. There are no free pupils, and only one girl of the school age in the locality not under instruction. The attainments of the pupils are tolerably satisfactory.

BROOK'S POINT :—General inspection, 13th October.

Enrolled :—Boys, 12 ; girls, 6 ; total, 18. Present :—Boys, 11 ; girls, 6 ; total, 17.

Fencing has been recently erected to enclose the school ground ; but closets, a lavatory, a clock, hat-pegs, and a table and chair are still wanting. The pupils are not all punctual, but they are clean, orderly, and tolerably attentive. All the subjects of instruction prescribed are taught except needlework. The average attendance of the scholars is 80 days per cent. There are ten free pupils, and four children of the school age in the locality not under instruction. The proficiency of the pupils is tolerable, but the records are not quite correct.

BULL MOUNTAIN :—General inspection, 21st October.

Enrolled :—Boys, 11 ; girls, 16 ; total, 27. Present :—Boys, 11 ; girls, 16 ; total, 27.

Fencing, closets, a playshed, a lavatory, a book-press, hat-pegs, a bell, and a fire-place in the schoolroom are required ; but the stock of furniture, apparatus, and books is sufficient. The children are punctual, clean, and orderly. All the prescribed subjects are taught with fair success. About 63 per cent. of the scholars are regular in attendance. There are thirteen free pupils. Twelve of the scholars have been promoted to higher classes during the year, and the attainments are fair.

CORDEAUX RIVER :—Regular inspection, 27th October.

Enrolled :—Boys, 10 ; girls, 20 ; total, 30. Present :—Boys, 8 ; girls, 18 ; total, 26.

Fencing, closets, a playshed, a lavatory, a bell, a book-press, and a kitchen are required ; but the working materials are sufficient. Singing, drawing, and needlework are not taught ; but the methods of tuition have been improved. About 75 per cent. of the pupils are regular and nearly all punctual, and the cleanliness and order are more satisfactory since last inspection. There are nine free scholars, and seven children of the school age in the locality not under instruction. The proficiency of the pupils is tolerable.

MOORFIELDS :—Regular inspection, 31st August.

Enrolled :—Boys, 27 ; girls, 13 ; total, 40. Present :—Boys, 16 ; girls, 8 ; total, 24.

This school is held in the Wesleyan chapel, and the material condition has been much improved recently ; but a clock, a bell, a lavatory, and a playshed are still wanting. The general discipline is fairly effective, and all the prescribed subjects are taught except singing. 62 per cent. of the scholars are regular in attendance. There are nine free scholars ; but only four children of the educable ages in the locality not under instruction. The proficiency of the pupils is fair.

NEW RUN :—General inspection, 26th April.

Enrolled :—Boys, 13 ; girls, 8 ; total, 21. Present :—Boys, 12 ; girls, 8 ; total, 20.

The material condition of this school is very unsatisfactory, and the general discipline needs much improvement. Singing and drawing are not taught. The average attendance is about 50 days per cent. There are nine free pupils, and all the children of the educable ages in the locality are attending school. The attainments of the scholars are tolerable.

OAKDALE :—Regular inspection, 4th May.

Enrolled :—Boys, 11 ; girls, 16 ; total, 27. Present :—Boys, 11 ; girls, 16 ; total, 27.

The material condition of the school is unsatisfactory, and the children are not all sufficiently punctual ; but, otherwise, the general discipline and instruction are tolerably efficient. Singing and drawing

drawing are not taught. The average attendance of the scholars is 60 days per cent. There are twenty-two free pupils, but no children of the school age in the place not under instruction. The attainments are tolerable.

SAGGART FIELD :—Regular inspection, 4th August.

Enrolled :—Boys, 13 ; girls, 13 ; total, 26. Present :—Boys, 12 ; girls, 11 ; total, 23.

A lavatory, a play-shed, a bell, and a clock are required. The pupils are clean, orderly, attentive to their lessons, and nearly all punctual. Drawing is not taught. There are ten free scholars, and two children of the educable ages in the locality not receiving school instruction. The average attendance is 66 days per cent. The attainments of the pupils are tolerable.

St. JOSEPH'S :—General inspection, 29th April.

Enrolled :—Boys, 10 ; girls, 9 ; total, 19. Present :—Boys 9 ; girls, 8 ; total, 17.

The material condition of the school is unsatisfactory ; but the general discipline is fairly effective. All the prescribed subjects are taught, except singing and drawing. The average attendance of the pupils enrolled is 75 days per cent. There is only one free scholar, and no children of the educable ages in the place not attending school. About 50 per cent. of the questions asked at the examination were answered, and the attainments are fair.

SUGARLOAF HILL :—General inspection, 26th June.

Enrolled :—Boys, 18 ; girls, 9 ; total, 27. Present :—Boys, 14 ; girls, 6 ; total, 20.

The material condition of this school is passable, and the supply of furniture, apparatus, and books is sufficient. The pupils are clean, orderly, and attentive, and nearly all punctual. Singing and drawing are not taught ; but instruction is given in the other subjects prescribed with tolerable efficiency. About 66 per cent. of the scholars attend regularly. There is only one free scholar, and all the children of the educable ages in the neighbourhood are attending school. The attainments of the pupils are tolerable.

THERESA PARK :—Regular inspection, 26th August.

Enrolled :—Boys, 9 ; girls, 13 ; total, 22. Present :—Boys, 4 ; girls, 11 ; total, 15.

The material condition of this school is passable ; and the supply of furniture, apparatus, and books is sufficient. The discipline admits of some improvement, as regards cleanliness and punctuality. Sickness afflicting the children was the cause of the small attendance on the day of my visit. Singing and drawing are not taught. There are fifteen free scholars, and five children of the educable ages in the neighbourhood not attending school. About 61 per cent. of the scholars are regular in attendance. The proficiency of the pupils is tolerable.

THE DAIRY :—Regular inspection, 27th August.

Enrolled :—Boys, 9 ; girls, 10 ; total, 19. Present :—Boys, 6 ; girls, 10 ; total, 16.

A lavatory, a playshed, windows for the schoolroom, a book-press, a bell, a clock, and roofing for the closets are still required. The desks and forms are of a bad description, but the apparatus and books are sufficient. The pupils are not all punctual, but they are clean, orderly, and tolerably attentive. Singing and drawing are not taught. There are nine free scholars, and all the children of the educable ages in the locality are attending school. The proficiency of the pupils is tolerable.

TONGARRA :—Regular inspection, 30th November.

Enrolled :—Boys, 23 ; girls, 26 ; total, 49. Present :—Boys, 19 ; girls, 19 ; total, 38.

The schoolroom is rather small, but in fair repair, and the stock of furniture, apparatus, and books is sufficient. The pupils are clean and orderly, and nearly all punctual. All the prescribed subjects are taught, and fourteen of the scholars have been promoted during the year. About 50 per cent. of the pupils are regular in attendance. There are twenty-three free scholars, and seven children of the school ages in the locality not under instruction. About 56 per cent. of the questions asked at the examination were answered.

WATTAMULLA :—Regular inspection, 25th March.

Enrolled :—Boys, 19 ; girls, 18 ; total, 37. Present :—Boys, 16 ; girls, 12 ; total, 28.

A bell and a lavatory are still required, but the supply of furniture, apparatus, and books is sufficient. The pupils are not all punctual, but they are tolerably clean and orderly. Singing and drawing are not taught, and grammar and geography are weak subjects. The school work is in some respects not progressively arranged, but the teacher is apparently industrious. About 70 per cent. of the scholars attend regularly. There are only two free pupils. It appears there are fifteen children of the educable ages in the place not attending school. About 46 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is below tolerable.

WEROMBI :—Regular inspection, 27th August.

Enrolled :—Boys, 9 ; girls, 18 ; total, 27. Present :—Boys, 8 ; girls, 15 ; total, 23.

A lavatory, a playshed, a bell, and a clock are required, but the supply of furniture, apparatus, and books is sufficient. Singing and drawing are not taught, but the general discipline is fairly satisfactory. There are fourteen free scholars. About 65 per cent. of the pupils are regular. There are only two children of the school age in the locality not under instruction. About 50 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is tolerable.

WERRIBERRI :—General inspection, 9th July.

Enrolled :—Boys, 9 ; girls, 11 ; total, 20. Present :—Boys, 6 ; girls, 6 ; total, 12.

The material condition of this school is fairly satisfactory. The pupils are clean and orderly, and nearly all punctual. The average attendance of the children enrolled is about 80 days per cent. The small number present was caused by sickness. There are four free scholars, and only two children of the school age in the locality not under instruction. The average proficiency of the pupils is tolerable.

HALF-TIME SCHOOLS.

BELMORE :—General inspection, 6th August.

Enrolled :—Boys, 20 ; girls, 11 ; total, 31. Present :—Boys, 11 ; girls, 8 ; total, 19.

The furniture, apparatus, and books are sufficient ; but a lavatory, a bell, a playshed, and a book-press are required. About 61 per cent. of the children enrolled are regular and punctual. They are clean and orderly, and the schoolroom is well ventilated. All the prescribed subjects are taught except singing, and the teaching is conducted with industry and earnestness. There are seven free scholars, but the teacher is not aware of any children of the school ages in the neighbourhood growing up without instruction. The attainments of the pupils are fair.

ESSEX HILL :—General inspection, 6th August.

Enrolled :—Boys, 12 ; girls, 12 ; total, 24. Present :—Boys, 7 ; girls, 10 ; total, 17.

A bell, a lavatory, a playshed, a book-press, a clock, and a map of the World are required ; but otherwise the material condition of the school is reasonably good. About 66 per cent. of the scholars are regular and punctual in attendance, and they are clean, orderly, and attentive. Singing is not taught, but the instruction in the other branches is well regulated. There are three free scholars, and seven children of the educable ages in the locality not attending school. The attainments of the scholars are fair.

BIMLOW :—Regular inspection, 28th April.

Enrolled :—Boys, 7 ; girls, 5 ; total, 12. Present :—Boys, 6 ; girls, 4 ; total, 10.

A lavatory, a closet, hat-pegs, a clock, a bell, a book-press, and windows for the schoolroom are required ; but the furniture, apparatus, and books are sufficient. The average attendance of the scholars is 55 days per cent. They are not all punctual, but clean and orderly, and tolerably attentive. Singing is not taught, and the teacher is wanting in industry and energy in the performance of his duty. There are six free scholars, and four children of the educable ages in the locality not attending school. The proficiency of the pupils is only moderate.

MALUNDI :—Regular inspection, 28th April.

Enrolled :—Boys, 4 ; girls, 4 ; total, 8. Present :—Boys, 3 ; girls, 4 ; total, 7.

Windows for the schoolroom, a lavatory, a closet, hat-pegs, and a clock are required ; but the working materials are sufficient. The average attendance of the scholars enrolled is about 80 days per cent. They are not all punctual, but tolerably clean and orderly. All the prescribed subjects are taught except singing. The teaching is not conducted with sufficient industry and care, and the progress of the pupils is slow and unsatisfactory. There are no free scholars, but two children of the educable ages in the locality are not under school instruction. The attainments of the pupils are moderate. The teacher had given notice of his resignation at the date of my visit.

BELOON :—General inspection, 27th April.

Enrolled :—Boys, 5 ; girls, 8 ; total, 13. Present :—Boys, 4 ; girls, 7 ; total, 11.

A lavatory, a closet, a book-press, and hat-pegs are required ; but the books and apparatus are sufficient. The average attendance of the scholars is 66 days per cent. They are clean and orderly and attentive to their lessons. Singing is not taught, and the pupils do not read with sufficient ease and fluency. There are seven free scholars, and six children of the educable ages in the neighbourhood not attending school. The proficiency of the pupils is tolerable.

TOONULLI :—General inspection, 27th April.

Enrolled :—Boys, 10 ; girls, 8 ; total, 18. Present :—Boys, 9 ; girls, 7 ; total, 16.

A lavatory, a book-press, hat-pegs, a bell, and another desk and form are required ; but there is an adequate supply of apparatus and books. The average attendance of the scholars is 66 days per cent. They are punctual, clean, orderly, and attentive to their lessons. Singing is not taught, and the pupils do not read with sufficient ease and fluency. There are nine free scholars, but no children of the school ages in the place growing up without instruction. The proficiency of the pupils is tolerable.

W. M'INTYRE,
Inspector, Camden District.

CUMBERLAND DISTRICT.

INSPECTOR'S GENERAL REPORT FOR 1875.

At the end of the year 1874 eighty-seven schools were in operation in this district. During 1875 five new schools, viz., Burwood—Infants, Rooty Hill and Yarramundi Public, and Bar Point and Peat's Ferry, Half-time, were added to the list ; and one school, viz., Parramatta Roman Catholic, was withdrawn from the supervision of the Council by its Local Board. There were thus ninety-two schools open within the year 1875, and at its close there were actually ninety-one schools belonging to the district, as may be seen from the following enumeration of the different kinds thereof :—

Public Schools	44
Provisional Schools	12
Half-time Schools.....	6
Church of England Schools	17
Roman Catholic Schools.....	11
Wesleyan School	1
Totals	91

During the year the Public Schools have increased by seven, and the Half-time Schools by two ; the Provisional Schools have decreased by two, and each of the lists of Church of England and Roman Catholic Schools has been diminished by one ; while Presbyterian Schools have ceased to exist in the district. In addition to the three new Public Schools above mentioned, the following four have been converted into Public Schools, viz. :—Kurrajong South and Mulgoa Provisional, Parramatta Junction Presbyterian, and Rouse Hill Church of England. Arrangements had also been completed, at the end of the year, for the conversion of the South Creek and Pitt Town Church of England Schools—the former by purchase and the latter by temporary lease—with a view to their amalgamation respectively with the St. Mary's and Grono Park Public Schools. Steps have also been taken at Black Town, Emu, Guildford, and Sackville Reach, for the establishment of Public Schools to replace the existing schools in these localities. The erection of new buildings at Bankham Hills, Five Dock, Lane Cove, Parramatta South, Pitt Town, Ryde, and St. Alban's was sanctioned by the Council before the close of the year. New premises are also needed at Castlereagh, Haslem's Creek, Kellyville, Llandeillo, and Yarramundi. At the majority of these latter places the principal obstacle to taking definite action is the difficulty experienced in obtaining suitable sites ; and it seems desirable, therefore, that the Council should have powers conferred on it to enable it to secure sites in cases of difficulty. Various improvements have been projected or carried out in connection with the Public Schools at Dural, Hornsby, Leichhardt, Lower Portland, Luddenham, Lower M'Donald, North Richmond, Parramatta, Pennant Hills, Penrith, Smithfield, Wallgrove, and Windsor. In fact, one of the most striking features of the year, especially in the latter half of it, has been the zeal manifested in the discovery of material defects, and unusual activity has prevailed in representing the necessity for repairs and improvements. Now that the barrier formerly presented by the requirement of a local quota toward the cost has been removed, much improvement may be expected to take place in the material condition of schools, but the results will be more apparent hereafter than at present. Of the forty-four Public Schools in the district, twenty-five are *vested* and nineteen *non-vested*. The material organisation of a large majority of the latter class is of very inferior quality. The most notable exception to this general statement is the

the Richmond Public School, the premises, so far as they go, being of superior character. It is very desirable, however, that the conversion of this school into a vested one should take place without delay, as its development is retarded by its present character.

All the schools in operation have been visited at least once during the year, and each one has undergone general or regular inspection, of which a report has been furnished to the Council. The inspections have been searching and minute, and embraced a careful scrutiny of each school in regard to its material condition, discipline, and instruction. Besides testing the results of the teaching by the usual prescribed standard, some attempt has been made to estimate at its proper value the influence of the school in a moral as well as educational aspect. The spirit and demeanour manifested by the children, their power of sustained and vigorous application to work, and their general mental culture, have been observed and noted, and a conclusion deduced from these data and special circumstances of the educative worth of each school. There were 4,093 pupils present at the inspections.

The numbers enrolled, the averages and percentages of attendance for each quarter of 1874 and 1875 are shown, for the purpose of comparison, in the following table:—

Quarters.	1875.			1874.		
	Enrolments.	Averages.	Percentages.	Enrolments.	Averages.	Percentages.
March	5,804	3,429.5	59.1	5,806	3,764.58	64.8
June	5,780	3,685.3	63.7	5,806	3,895.29	67.0
September	5,838	4,014.5	68.7	5,794	3,906.0	67.4
December	5,819	4,033.1	69.3	5,821	4,001.46	68.7

A glance at this table will suffice to show that there has been scarcely any increase in the enrolment during 1875, and the mean average percentage thereof is less than that for 1874—the former being 65.2 and the latter 67.0 per cent. The prevalence of sickness among children, from measles and scarlatina, is sufficient to account for the lower average attendances and enrolments of pupils, as compared with 1874. But after making large allowance for these exceptional causes, it is evident that a wide margin of irregularity exists throughout the district. In fact, so uniform is the proportion between the enrolment and attendance, that it seems almost a general law for the average to keep, with little variation from year to year, at about two-thirds of the enrolled numbers. Having called special attention to this evil in previous reports, it seems unnecessary to expatiate on the subject in the present one. It may suffice to reiterate my conviction of the need of legislative interference in the matter. Nothing short of a compulsory enactment will meet the necessities of the case; and the sooner it is grappled with, the better will it be for the intelligence and prosperity of the Colony.

It was pointed out with some particularity, in the Report for 1874, that amalgamations of existing groups of schools might take place with advantage to the quality of the education, and at a saving of expense to the State. At South Creek such a combination was arranged to take place at the beginning of 1876, but at none of the other places has anything been done towards this consummation. It has to be repeated, therefore, that at Burwood, Kurradjong, Lane Cove, Parramatta, Penrith, Petersham, Richmond, Ronso Hill, Ryde, and Windsor the junction of two or more schools would be beneficial in raising the standard of instruction and rendering it less costly to the State. With regard to Petersham, for example, there are four schools connected with the locality, whose highest aggregate enrolments and averages for any quarter during 1875 were respectively 409 and 261. For these schools the Council paid in salaries alone the sum of about £560, while for one school in operation in the district, with an enrolment of nearly 400 children, and an average of 260, the cost in salaries was about £450 for a teaching staff equal to the requirements of the school up to an average of 300 pupils. It thus appears that, with a similar school established at Petersham in lieu of the existing arrangements, there would be a saving in salaries of over £100 per annum. Besides the pecuniary gain, too, there would be the still more important advantage secured to the locality, of greater efficiency and a higher course of instruction. It may be stated, in fine, on this point, that the twenty-eight schools in existence in connection with the places above enumerated might be replaced by a dozen schools capable of furnishing a better and higher education at a cheaper rate.

With reference to the results of the examinations of schools, it may be stated concisely that nearly 40 per cent. of all schools were "up to" or "beyond the standard." This is a somewhat lower proficiency than that obtained for 1874, which was about 42 per cent. It would be wrong to attribute this apparent falling off to want of diligence or neglect on the part of the teachers, rather than to the effects of unusual sickness during the year. It is satisfactory to be able to bear testimony to the industry and faithful discharge of duty by the teachers of this district as a body.

The following percentages will show, in a succinct form, the relative proficiency attained in all the schools, in the ordinary subjects undermentioned:—

Subjects.	Fair to Good.	Bad to Tolerable.	Subjects.	Fair to Good.	Bad to Tolerable.
Reading	57 per cent.	43 per cent.	Geography	64 per cent.	36 per cent.
Writing	74 "	26 "	Object Lessons	60 "	40 "
Arithmetic	33 "	67 "	Drawing	73 "	27 "
Grammar	47 "	53 "	Music	69 "	31 "

It will be observed from this table that arithmetic and grammar give the lowest percentages of proficiency. Attention is needed in the former subject to the attainment of greater speed and accuracy in the simple rules; higher results would be obtained in the advanced rules, if a better foundation were laid in the lower classes. Special stress should be laid on mental arithmetic, the questions given should be of a more varied character, and typical ones more carefully explained, illustrated, and rendered familiar by practice. To improve the grammar, more systematic oral lessons are necessary, and more frequent illustration should be given on the black-board of peculiarities of idiom and the difficulties presented in connection therewith in parsing and syntax. In the reading lessons much time is wasted by the consecutive parsing of each word in a sentence, instead of the parsing of words selected throughout the lesson on account of their difficulty. The teacher's tact and practical skill must be called into play in this matter.

In conclusion, it may be stated that the material condition has been considerably improved during the year, and steps taken for its further improvement in 1876; that the amalgamation of various schools indicated in the Report is desirable; and that the average proficiency is absolutely less than that of 1874—a fact, however, to be explained by the unusual prevalence of sickness among children. To this fact, also, may be attributed the very small increase in the enrolment, and, in part, the low average attendance for the year; but it is believed that the effect of the permanent causes conducing to the great irregularity that prevails can only be successfully grappled with by a compulsory enactment.

J. M'CREIDIE,
Inspector, Cumberland District.

SUMMARIES of Reports on Schools for 1875.

PUBLIC SCHOOLS.

BAULKHAM HILLS (N.V.) :—General inspection, 24th September.

Numbers present :—Boys, 15 ; girls, 17 ; total 32.

There is no teacher's residence, and the schoolroom is only tolerably suitable ; steps have been taken for the erection of new vested premises. The discipline is watchful and prompt, and the pupils are fairly orderly and attentive. The teaching is industrious and energetic, and the results are nearly tolerable. The present teacher has not been long in charge of the school.

BURWOOD (V.) :—Regular inspection, 11th and 12th August.

Numbers present :—Boys, 120 ; girls, 52 ; total, 172.

The school premises are reasonably commodious and of admirable character. The school is excellently appointed, and the property carefully kept. The organisation is unexceptionable. A good attendance is secured. The pupils are regular, punctual, neat in appearance, subducd in demeanour, and well-behaved. The government is genial but vigorous, and productive of excellent order. In short, the discipline is all that could be desired. The course of instruction includes all the subjects usually taught in first-class Public Schools. It is arranged with good judgment, and imparted by approved methods. The following indicates the class proficiency :—First, very fair ; second, very fair to good ; third, very fair to good ; fourth, good ; upper fourth, very good. The proficiency of the school as a whole reaches good. When under examination the pupils are attentive, quick, and thoughtful.

BURWOOD (Infants—V.) :—General inspection, 11th August.

Numbers present :—Boys, 37 ; girls, 22 ; total, 59.

The school premises are complete, and the appointments and teaching appliances are good and ample. The organisation is correct. The pupils are for the most part regular and punctual in their attendance. The government is cheerful and effective, and the moral tone of the school is healthy. The teaching, which covers all the subjects prescribed for infant schools, is reasonably educative. The average proficiency ranges from fair to very fair.

CASTLEREAGH (N.V.) :—Regular inspection, 24th March.

Numbers present :—Boys, 18 ; girls, 22 ; total, 40.

The furniture is suitable, and there is a fair supply of teaching requisites ; but otherwise the school, in a material point of view, is in bad condition. New premises are urgently necessary. The government secures fair order and attention, and the teaching is careful and industrious, but wanting in energy. The average proficiency ranges from tolerable to fair. The attendance has suffered from floods and the prevalence of measles.

COLYTON (V.) :—Regular inspection, 17th March.

Numbers present :—Boys, 15 ; girls, 16 ; total, 31.

The premises require various general repairs, but the school is fairly furnished and supplied with teaching appliances. The pupils are tolerably orderly and attentive, but not sufficiently earnest and vigorous in their application to work. The discipline wants energy ; the teaching is feeble ; and the results are not satisfactory.

DURAL (N.V.) :—Regular inspection, 11th November.

Numbers present :—Boys, 15 ; girls, 26 ; total, 41.

The school is materially in a fair state, and the records are correct. The pupils are tolerably orderly and attentive, and the general discipline of the school is tolerably effective. The teaching is industrious and tolerably effective, the average proficiency being tolerable.

DOBROYDE (N.V.) :—Regular inspection, 26th October.

Numbers present :—Boys, 19 ; girls, 12 ; total, 31.

The position of the school is not central, but otherwise the material condition is fairly satisfactory. Great irregularity prevails among the pupils, but they are fairly orderly and attentive. The discipline is mild, but fairly firm and watchful. Greater animation and energy would improve the teaching, which is careful and systematic. The attainments range from tolerable to fair.

DUNDAS (V.) :—Regular inspection, 21st and 22nd September.

Numbers present :—Boys, 32 ; girls, 31 ; total, 63.

Some repairs are necessary, principally on account of the ravages of the white ant, but otherwise the material condition is good. The pupils are fairly orderly and attentive, and the discipline is mild but defective in energy. When under examination the children do not exhibit sufficient mental activity and vigour in their application to work. Carefulness marks the teaching, but it is greatly wanting in point and force, and the average proficiency is about tolerable.

FIVE DOCK (N.V.) :—General inspection, 2nd December.

Numbers present :—Boys, 23 ; girls, 18 ; total, 41.

There is no teacher's residence, and the building is in need of repair ; but new premises will shortly be erected on a suitable site. The government is mild and wanting in vigour, and the pupils are tolerably self-reliant and accurate. The teaching is industrious but weak in penetrative force, and the results average from tolerable to fair.

GRONO PARK (N.V.) :—General inspection, 18th June.

Numbers present :—Boys, 19 ; girls, 9 ; total, 28.

There is no residence, and the schoolroom and out-offices are constructed of slab and bark. It is tolerably furnished and fairly supplied with needful requisites. The government is mild but firm, fair order and attention being its effect. The teaching is industrious but lacks energy, and the average proficiency is nearly fair.

HASLEM'S CREEK (N.V.) :—Regular inspection, 20th April.

Numbers present :—Boys, 13 ; girls, 13 ; total, 26.

The general organisation is tolerable ; the discipline is mild, but wanting in energy ; and the instruction is regulated with moderate skill. The teaching is marked by industry rather than by point and vigour ; the pupils need greater power of application to work ; and the average attainments range from moderate to tolerable.

HORNSBY

HORNSBY (V.) :—Regular inspection, 5th May.

Numbers present :—Boys, 21 ; girls, 14 ; total, 35.

The residence has been enlarged since last inspection, but a kitchen is still necessary ; and on the whole the material condition is good. The government is effective in securing fair order and attention, and the pupils are fairly accurate under examination. The teaching is industrious and productive of fair results.

HUNTER'S HILL (V.) :—Regular inspection, 22nd and 25th October.

Numbers present :—Boys, 36 ; girls, 17 ; total, 53.

The material condition of the school is good, and the property is kept with care and neatness. The pupils are fairly orderly and attentive, but they are only tolerably vigorous in the performance of their work. Greater disciplinary power is necessary to remedy this defect. The teaching is industrious but lacks penetrative force, and the average proficiency is from tolerable to fair.

KELLYVILLE (N.V.) :—Regular inspection, 25th June.

Numbers present :—Boys, 12 ; girls, 15 ; total, 27.

There is no residence, and the schoolroom and outhouses are constructed of slab and bark. The school is properly supplied with furniture. The erection of vested premises is desirable, but there appears to be a difficulty in obtaining a suitable site. The government is mild but fairly firm, and fair order is maintained. The pupils are fairly attentive ; the teaching is tolerably intelligent and careful ; and the results reach an average of tolerable.

LANE COVE (N.V.) :—Regular inspection, 7th May.

Numbers present :—Boys, 17 ; girls, 18 ; total, 35.

The material condition of the school is not satisfactory, but steps have been taken for the erection of suitable vested premises. The government is effective. The pupils manifest very fair order and attention, and their prevailing spirit and demeanour are pleasing. The teaching is earnest and industrious, and produces fair results.

LEICHHARDT (V.) :—General inspection, 27th October.

Numbers present :—Boys, 45 ; girls, 49 ; total, 94.

The schoolroom is too small, but steps have been taken to erect a classroom, and effect other necessary improvements. The site is not central for the population of the locality. The government is fairly effective, and the pupils are fairly self-reliant and accurate. The teaching is careful and industrious, and the average proficiency is about fair.

LLANDEILO (N.V.) :—General inspection, 27th August.

Numbers present :—Boys, 14 ; girls, 18 ; total, 32.

The material condition is tolerable for the character of the buildings, which are of a rough bush description. The government is fairly effective, and the pupils exhibit fair order and attention. The teaching is careful and fairly energetic, and the average proficiency is from tolerable to fair.

LOWER PORTLAND (V.) :—Regular inspection, 15th November.

Numbers present :—Boys, 13 ; girls, 15 ; total, 28.

The ground is unfenced ; no provision has been made for water on the premises ; and no urinal has yet been erected. These, with other improvements to the premises, are necessary. Otherwise, the material condition is very satisfactory, and ample provision is made for the educational requirements of the locality. The discipline is effective in securing very fair order and attention ; and the pupils manifest very fair accuracy in answering. The teaching is careful and intelligent, and the average proficiency is nearly very fair.

LUDDENHAM (V.) :—Regular inspection, 7th September.

Numbers present :—Boys, 23 ; girls, 22 ; total, 45.

A weathershed and lavatory are requisite to complete the material equipment of the school. In other respects the material organisation is good. The government is firm, and produces fair order and very fair attention. The teaching is industrious and careful, and the average results are about fair.

M'DONALD, CENTRAL (V.) :—Regular inspection, 17th November.

Numbers present :—Boys, 7 ; girls, 7 ; total, 14.

The material condition is tolerably satisfactory. The government is only moderately effective ; it wants vigour and watchfulness. The pupils are weak in self-reliance, and only tolerably orderly or attentive. Their answering indicates but moderate cultivation of the mental powers, and the teaching appears to be earnest and industrious but weak in effect. The average attainments are moderate. The attendance is small, and the school has now, therefore, been placed on the Provisional scale of salary.

M'DONALD, LOWER (V.) :—General inspection, 12th November.

Numbers present :—Boys, 15 ; girls, 8 ; total, 23.

There is a fair supply of general appliances ; but the premises, especially the residence, need repair and improvement, for which steps have been taken. The discipline is only moderately effective. The pupils do not answer well, especially in the highest class. They are tolerably orderly and attentive. The teaching is weak in point and force, and the average proficiency is barely moderate. The attendance at this school is not satisfactory.

MULGOA (N.V.) :—Regular inspection, 31st August.

Numbers present :—Boys, 21 ; girls, 16 ; total, 37.

The material condition is on the whole fairly satisfactory, and the records are correct. The government is firm and watchful, and the pupils are fairly orderly and attentive. The classification is marked by some irregularity. The teaching is painstaking, and the average proficiency is about fair.

NORTH RICHMOND (V.) :—Regular inspection, 29th July.

Numbers present :—Boys, 29 ; girls, 16 ; total, 45.

Steps are being taken for the erection of a kitchen and verandah to the residence, and weathersheds and a lavatory are also required to complete the equipment. Otherwise, the material condition is good. The government is mild, but fails to produce vigorous working habits in the pupils. The classification is suitable in most respects. The pupils are only tolerably accurate under examination, and they are wanting in mental life. The teaching is industrious but defective in energy, and the average proficiency is about tolerable.

PARRAMATTA (Infants—V.) :—Regular inspection, 9th and 10th December.

Numbers present :—Boys, 62 ; girls, 48 ; total, 110.

Some few minor material improvements are necessary ; but, on the whole, the material condition is reasonably satisfactory. The discipline is prompt and vigorous, and secures very good order. The pupils are attentive, and their answering is quick and accurate. The teaching is of a highly educative character ; and the proficiency ranges from fair to very good, the average being from very fair to good.

PARRAMATTA—(Primary—V.) :—Regular inspection, 13th, 14th, and 15th December.

Numbers present :—Boys, 88 ; girls, 55 ; total, 143.

There is no residence, and the playground is too small. With the exception of some few slight repairs and improvements which are necessary, the material condition of the school is satisfactory. The discipline is effective in securing good order and attention. The teaching is earnest and marked by energy and industry. The average proficiency of the whole school is very fair.

PARRAMATTA JUNCTION (N.V.) :—Regular inspection, 23rd February.

Numbers present :—Boys, 12 ; girls, 16 ; total, 28.

The school building is in fair repair, and is tolerably furnished. About two-thirds of the pupils are regular, and they are tolerably orderly and attentive. The discipline is mild but fairly firm, and the moral aspect is tolerable. The teaching is industrious but lacks force, and the average proficiency is barely moderate.

PARRAMATTA, SOUTH (N.V.) :—General inspection, 3rd December.

Numbers present :—Boys, 14 ; girls, 11 ; total, 25.

In its material aspect, so far as the buildings are concerned, the condition of the school is bad, but new premises are in course of erection. The government seems fairly effective, and the pupils are orderly and attentive. The teaching is intelligent and industrious, and the average proficiency somewhat exceeds fair. The attendance has, from various causes, much decreased, and is far from satisfactory.

PENNANT HILLS (V.) :—Regular inspection, 23rd September.

Numbers present :—Boys, 35 ; girls, 36 ; total, 71.

When the repairs and improvements contracted for are accomplished, the school will be in good material condition. The government is mild, but too slack ; and the children are fairly orderly and attentive. The teaching is industrious, but not plied with sufficient energy. The average proficiency is from tolerable to fair.

PENRITH (V.) :—Regular inspection, 19th March.

Numbers present :—Boys, 61 ; girls, 49 ; total, 110.

Weathersheds are requisite, but otherwise the material condition is good. The pupils are orderly and attentive, and the government is vigorous and effective. The teaching is intelligent, and conducted with zealous industry, and the results are reasonably satisfactory.

PROSPECT (V.) :—Regular inspection, 26th February.

Numbers present :—Boys, 14 ; girls, 6 ; total, 20.

The residence needs enlargement, but otherwise the state of the premises is fair. The pupils exhibit fair mental power, and answer with very fair readiness and accuracy. The discipline is healthy, the methods are suitable, and the teaching is animated and productive of results fairly satisfying the standard. Measles lowered the attendance.

REGENTVILLE (N.V.) :—General inspection, 23rd March.

Numbers present :—Boys, 8 ; girls, 20 ; total, 28.

The material condition of the school is only moderate ; but from its non-vested character little can be done for its improvement. The government is mild but firm, and the pupils are tolerably orderly and attentive. The teaching is careful and tolerably effective, and the average proficiency is from moderate to tolerable.

RICHMOND (N.V.) :—Regular inspection, 3rd and 4th June.

Numbers present :—Boys, 71 ; girls, 65 ; total, 136.

There is no residence, and the classroom is too small. A lavatory and weathersheds are also required to complete the equipment of the school. Otherwise, the material condition is decidedly good. The pupils are orderly and attentive, and the discipline is very good. The teaching is intelligent, and conducted with industry and sustained energy. The following are the results :—First and second classes, very fair ; lower third, nearly very fair ; third, nearly good ; fourth, good ; average proficiency, very fair to good.

RYDE (Infants—V.) :—Regular inspection, 11th October.

Numbers present :—Boys, 29 ; girls, 21 ; total, 50.

The schoolroom is fairly equipped and supplied with needful requisites. The government is watchful and firm, and the general spirit of the school is pleasing. The teaching is industrious and energetic, and the average proficiency reaches about very fair.

RYDE (Primary—V.) :—Regular inspection, 12th and 14th October.

Numbers present :—Boys, 46 ; girls, 32 ; total, 78.

The school is fairly supplied with necessary materials and properly furnished. New premises are about to be erected of a more suitable character than the old ones. The government seems mild, but fairly effective in securing order and attention. The teaching is industrious and careful, and the average proficiency somewhat exceeds fair. The pupils manifest fair mental power and readiness in answering.

ROOTY HILL (V.) :—General inspection, 4th March.

Numbers present :—Boys, 13 ; girls, 14 ; total, 27.

Another room and a verandah are needed for the residence, but otherwise the material condition is satisfactory. The discipline is genial and attains fair order, and the answering of the pupils is tolerably accurate. The teaching is careful and industrious, and the average proficiency is from tolerable to fair. The half-caste population of the locality forms about one-half of the attendance.

SMITHFIELD (V.) :—Regular inspection, 3rd August.

Numbers present :—Boys, 29 ; girls, 16 ; total, 45.

The erection of a verandah or weathersheds with a lavatory, and of new closets, are the principal wants of this school. The discipline secures good order and attention, and the pupils answer with very fair accuracy. The teaching is intelligent and animated, and the average attainments approach very fair.

ST. ALBANS

ST. ALBANS (N.V.) :—General inspection, 16th November.

Numbers present :—Boys, 22 ; girls, 13 ; total, 36.

New premises are much and urgently needed to supersede the present very unsatisfactory state of things, and steps have now been taken for that purpose. The government is mild but firm and watchful, and succeeds in maintaining fair order and attention. The pupils are tolerably self-reliant and accurate ; the teaching is careful, and the average proficiency is about tolerable.

ST. MARY'S (N.V.) :—Regular inspection, 9th March.

Numbers present :—Boys, 16 ; girls, 17 ; total, 33.

The material condition of this school is far from satisfactory. The discipline is fairly healthy, and the pupils exhibit fair order and attention. The teaching is careful and industrious, but lacks animation. The average proficiency is about fair.

WALLGROVE (V.) :—Regular inspection, 5th March.

Numbers present :—Boys, 16 ; girls, 15 ; total, 31.

The residence needs enlargement, but otherwise the material condition is satisfactory. The discipline is firm and vigorous, and the prevailing spirit of the school is pleasing. The teaching is earnest, animated, and productive of an average proficiency of from fair to very fair.

WINDSOR (Infants—V.) :—Regular inspection, 11th June.

Numbers present :—Boys, 26 ; girls, 25 ; total, 51.

The schoolroom is quite too small, but steps have been taken to remedy this defect. Otherwise the material condition is satisfactory. The discipline is mild but firm and watchful ; the pupils are orderly and attentive ; and the teaching is animated and intelligent. The average proficiency is from very fair to good.

WINDSOR (Primary—V.) :—Regular inspection, 16th and 17th June.

Numbers present :—Boys, 42 ; girls, 39 ; total, 81.

Various improvements and additions are required to the premises, for which action has been taken. The discipline is firm and watchful, securing very fair order and attention. The teaching is industrious and careful, and the average proficiency is about very fair.

YARRAMUNDI (N.V.) :—General inspection, 25th May.

Numbers present :—Boys, 17 ; girls, 12 ; total, 29.

The school is conducted in the large room of a building rented by the Board. It is only tolerably suitable, but is properly furnished. New vested premises are necessary. The discipline seems firm and vigilant, and has established fair order and attention among the pupils, who are tolerably self-reliant and accurate under examination. The teaching is marked by care and fair energy, and the average reaches tolerable. The school has been only a short time in operation.

PROVISIONAL SCHOOLS.

BARRANJOBY :—Regular inspection, 4th November.

Numbers present :—Boys, 8 ; girls, 8 ; total, 16.

The building is only moderately suitable, and is too far removed from the families that support it. The furniture is clumsy and unsuitable. The government is mild, and the pupils are tolerably orderly and attentive. The teaching is marked by care, but wants animation and energy. The average proficiency is from indifferent to moderate.

BLACKTOWN :—Regular inspection, 24th February.

Numbers present :—Boys, 8 ; girls, 14 ; total, 22.

In its material aspect the school may be pronounced tolerable. The records need greater care and attention. About three-fourths of the pupils are regular, but they are only moderately orderly and attentive. The government is too slack. The answering is only partial, and is wanting in promptness and accuracy. The teaching is productive of poor results, the average being from indifferent to moderate. The population of the locality being sufficient for a Public School, successful steps have been taken for the erection of one.

GREENDALE :—Regular inspection, 2nd September.

Numbers present :—Boys, 21 ; girls, 8 ; total, 29.

The buildings are constructed of slab, and are well and centrally situated. A separate residence of three rooms is provided for the teacher. The government is mild but tolerably effective, and secures passable order and attention from the pupils. The teaching is regulated by the usual-guides, and is industrious and fairly careful. The average attainments are about moderate.

GUILDFORD :—Regular inspection, 3rd March.

Numbers present :—Boys, 9 ; girls, 6 ; total, 15.

The material condition is tolerable, and the records are correct. The government is feeble, and the pupils exhibit but little self-reliance or accuracy. The teaching is defective in energy and thoroughness, and the results are not satisfactory. The weather and measles lowered the attendance. This school is about to be displaced by a Public one in the locality.

KEMP'S CREEK :—Regular inspection, 9th September.

Numbers present :—Boys, 7 ; girls, 7 ; total, 14.

On the whole, the material condition of this school is moderately satisfactory, and the records are properly kept. The discipline is mild but firm, and productive of fair order. The pupils are tolerably attentive and accurate under examination, and the teaching seems industrious. The average proficiency is tolerable.

KURRAJONG, SOUTH :—Regular inspection, 21st May.

Numbers present :—Boys, 18 ; girls, 17 ; total, 35.

The material condition of the school is only moderate so far as the buildings are concerned, but there is a fair supply of furniture and teaching appliances. The government is mild, but apparently tolerably firm. The pupils are tolerably attentive, and their examination gives fully moderate results. This school has since become a Public one.

LOWER HAWKESBURY :—Regular inspection, 5th November.

Numbers present :—Boys, 12 ; girls, 10 ; total, 22.

In its material aspect the school is tolerably satisfactory. The pupils manifest fair order and attention as the result of the government, and they are tolerably accurate under examination. The teaching is painstaking, and the average proficiency is tolerable.

M'DONALD RIVER :—Regular inspection, 16th November.

Numbers present :—Boys, 14 ; girls, 9 ; total, 23.

The building requires repair, and more furniture is needed. The records are incomplete in some respects. The pupils are not punctual, and the order and attention are small. The government is feeble. The subjects of instruction are incomplete, and the teaching is neither careful nor systematic. The mental progress of the pupils are little cultivated, and the attainments are small. This school has suffered from the illness of the teacher—since deceased.

MULGOA FOREST MOUNTAIN :—Regular inspection, 8th September.

Numbers present :—Boys, 5 ; girls, 11 ; total, 16.

The material condition of this school is not satisfactory. The pupils are not generally punctual, and are only moderately orderly or attentive. The government is feeble ; the methods indicate small skill ; and the teaching is weak in intelligence, and of small penetrative power. The results are indifferent.

NORTH ROCKS :—Regular inspection, 24th August.

Numbers present :—Boys, 7 ; girls, 16 ; total, 23.

The material condition is, on the whole, tolerable. The government seems tolerably effective, and the pupils are passably accurate and fairly attentive under examination. The teaching is marked by industry, and is productive of tolerable results.

PORTLAND HEAD :—Regular inspection, 26th August.

Numbers present :—Boys, 7 ; girls, 6 ; total, 13.

In its material aspect this school is fairly satisfactory. The government is not sufficiently vigorous to secure good working habits in the pupils, who are tolerably orderly and attentive. The teaching is industrious, but only moderately educative. The average proficiency is moderate.

SACKVILLE REACH :—Regular inspection, 26th August.

Numbers present :—Boys, 4 ; girl, 1 ; total, 5.

The material condition is tolerably satisfactory. The government seems only moderately effective, the teaching is of small educative power, and the average attainments of those present were about indifferent. The small number was owing to the measles. Steps have been taken to replace this school by a Public one in the locality.

THE VINEYARD :—General inspection, 21st June.

Numbers present :—Boys, 14 ; girls, 12 ; total, 26.

The buildings need repair, and some furniture is requisite, but otherwise the school is fairly supplied with teaching appliances. A tolerably pleasing spirit prevails throughout the school, as the result of the discipline, which is mild but firm. The teaching is marked by industry, and the attainments average from moderate to tolerable.

HALF-TIME SCHOOLS.**AUSTRALIAN FARM :—Regular inspection, 12th November.**

Numbers present :—Boys, 7 ; girls, 4 ; total, 11.

The school building is in bad condition, and nothing appears to have been done to it since last inspection. The discipline is mild but tolerably firm, and the pupils are tolerably orderly, attentive, and accurate in answering. The teaching is careful, and the results are about tolerable.

BAR POINT :—General inspection, 3rd November.

Numbers present :—Boys, 3 ; girls, 10 ; total, 13.

The school is conducted in a tolerably suitable building, and is supplied with necessary working materials. The pupils are fairly orderly and attentive ; the government is mild but firm ; and the teaching is careful and earnest. The average proficiency is nearly tolerable. The school was only in operation a few months.

PEAT'S FERRY :—General inspection, 3rd November.

Numbers present :—Boys, 4 ; girls, 6 ; total, 10.

The schoolroom is suitable for the attendance, and is tolerably equipped. The government secures fair order and attention, and the teaching is productive of tolerable results. This school is worked with that at Bar Point.

UPPER COLO :—Regular inspection, 27th May.

Numbers present :—Boys, 13 ; girls, 10 ; total, 23.

The closet needs repair or replacing, but otherwise the material condition is fairly satisfactory. The government is effective. The general spirit of the school is pleasing, and the answering of the pupils is quick and fairly accurate. The teaching is marked by energy, and produces an average proficiency somewhat exceeding fair.

WHEENEY CREEK :—Regular inspection, 26th May.

Numbers present :—Boys, 7 ; girls, 7 ; total, 14.

The material condition needs improvement in various respects. The discipline is prompt and vigorous, and secures orderly and attentive habits on the part of the pupils, who are prompt and fairly accurate in answering. The teaching is intelligent and energetic, and the attainments reach an average of fully fair.

WISEMAN'S FERRY :—Regular inspection, 13th November.

Numbers present :—Boys, 6 ; girls, 5 ; total, 11.

The schoolroom is suitable, and is sufficiently furnished for the attendance. The pupils are fairly orderly and attentive, and the government seems watchful and tolerably firm. The teaching is regulated and careful, and the average attainments are fully tolerable.

GOULBURN DISTRICT.

INSPECTOR'S GENERAL REPORT FOR 1875.

I.—MEANS OF EDUCATION.

During the second quarter of the year, the western portion of the District, comprising 24 schools, was attached to the newly formed Yass District. Leaving these schools out of account, there were in existence during the year 89 schools, viz., 37 Public, 30 Provisional, 10 Half-time, and 12 Denominational. These include 8 schools that lapsed during the course of the year, viz. :—

Bamarang, Provisional—On account of the low attendance.
 Berrellan, Provisional—On account of its proximity to Public schools.
 Jacqua (Reefs), Provisional—On account of the low attendance.
 Shaw's Creek, Provisional—On account of the low attendance.
 Waterland, Provisional—On account of difficulties in connection with providing school premises.
 Mullengullenga, Half-time }
 Windellama, Half-time } On account of low attendance.
 Berrima, Roman Catholic—On account of low attendance.

And 4 new schools, viz. :—

Fullerton, Provisional.
 Jacqua (proper), Provisional.
 Maxton, Provisional.
 Muttbilly, Provisional.

The closing of schools on account of low attendance was in most cases the result of families leaving the localities—in one (Shaw's Creek), of the people objecting to the authorized scale of fees—and in others, of local jealousies and disputes. At the beginning of 1876, Half-time Schools will come into operation at Mandemar and Jellore, and a Provisional School at Burrill, in the Ulladulla District. The Council has agreed to establish Public Schools at Woodhouselee, Jerrara (East Argyle), Nowra Hill (Shoalhaven), Milton (Ulladulla), and Burrawang; and, conditionally, at Burrawang East and Yarrunga. Applications have been received also for the establishment of Public Schools at—

North Goulburn—At present supplied by a Denominational School.
 Terrara—At present supplied by a Denominational School, and,
 Cottawalla—At present supplied by a Provisional School:

And for new Provisional Schools at—

Manchester Square,
 Mullengullenga, and
 Yarralaw.

There is some reason to hope that the Pyree Public School will be reopened in new non-vested premises early in 1876. There are several localities in which the means of education are required, but have not yet been provided by the State. The Abercrombie, Murrumbah, Curruella, and Bunnaby are among them. In these places there is but little prospect of getting the people to take the initiatory action required. Excepting that Berrima has now only one school, the unnecessary supply of educational agency in the more populous places, described in former reports, still exists. Of the 89 schools mentioned, 82 were in existence at the end of the year, and 75 were in continuous operation throughout the year. Twelve (12) of the remaining 14 are those which either opened or lapsed during the course of the year. Thus, only two (2) were kept closed for any time in consequence of the difficulty of obtaining teachers. This is a great improvement on former years, and is the result of the scheme now in full operation for training teachers for small country schools. As the rule requiring the appointments to Provisional Schools to be made through the Local Committees is to be superseded, there should in future be no delay in filling vacancies.

II.—SCHOOL FEES.

The scale of school fees mentioned in last year's Report is still in force, and has proved on the whole beneficial. In the outlying districts, however, it is not generally carried out. If the teachers were to attempt to enforce it strictly, some of the parents would withdraw their children and the schools would close. Shaw's Creek is a case in point. The provision for admitting children free or at a reduced rate does not meet the difficulty, as persons professing to be unable to pay in accordance with the scale will not submit their cases for the consideration of the Local Committee or the Council—they insist on paying what they please. This description applies to 18 schools, all small.

III.—INSPECTION. CONDITION OF THE SCHOOLS INSPECTED.

The Provisional Schools at Shaw's Creek and Waterland, and the Roman Catholic School at Berrima, closed early in the year, before I had an opportunity of inspecting them; and the school at Jacqua (proper) came into operation very late in the year. The remaining 85 schools in the district, and also 5 of those transferred to the Yass District, or 90 in all, were fully inspected. Eighteen (18) out of the 85 inspected schools in the district were found to exceed the requirements of the standard, 26 to be up to the standard, and 41 to be below the standard. That is, 51.8 per cent. of the schools inspected met the standard fairly. This is an increase of 8.3 per cent. on the results obtained in 1874. When it is remembered that the schools have suffered severely through the prevalence of measles, this progress may be considered fairly satisfactory. The Provisional and Half-time Schools still stand relatively lowest, but the former are improving at a rate equal to that of the Public and Denominational Schools.

The great majority of the schools are not sufficiently large to require more than one teacher, and the pupils leave at a comparatively early age. These circumstances are unfavourable to the attainment of a high average standard of instruction. That reached is fairly commensurate with the age and time at school of the pupils. Before any attempt can safely be made to raise it, a large and more regular attendance of pupils must be secured.

In consequence of the alteration in the district, a detailed comparison with last year's results is impossible.

Of the character of the local supervision of the schools, little that is new can be said. The recent change with regard to the defraying of the cost of school buildings has relieved Public School Boards of the most difficult of their duties. The good sense and general professional capacity of teachers render extremely rare the necessity for Local Boards performing several of the duties specified in article 70 of the Council's Regulations; in only a few isolated cases are they required to inquire into applications for gratuitous instruction; and their own private and business affairs give them, as a rule, but little opportunity of visiting the schools and inspecting the records,—thus, their functions are practically almost narrowed down to signing documents. Speaking generally, it may be said that the members of the School Boards and Committees are the most suitable persons that can be got.

IV.—SUMMARY. PROSPECTS.

The district has been reduced to workable limits. There are several localities where new schools are required, most of which will in all probability be supplied during the coming year. The schools in existence have made some advance in general efficiency, but nearly one-half still fail to meet

meet satisfactorily the standard by which the Council judges them. As a whole, the state of primary education in the district is indicative of fair progress for the old year, and augurs a continuance of it for the new.

I append summaries of the reports on the schools inspected.

D. S. HICKS.

Inspector, Goulburn District.

Inspector's Office, Goulburn, 31st December, 1875.

SUMMARIES of Reports on Schools inspected during the Year 1875.

I.—PUBLIC SCHOOLS.

BERRIMA (V.) :—Regular inspection, 27th and 28th October.

Enrolled :—Boys, 39 ; girls, 42 ; total, 81. Present :—Boys, 35 ; girls, 39 ; total, 74.

An additional room to the teacher's residence is badly wanted, and the playground requires levelling. In consequence mainly of the closing of the Denominational School the numbers have increased. The internal organisation and general discipline are *good*. The instruction is properly regulated, and produces *fair* results.

BOWRALL (V.) :—Regular inspection, 22nd October.

Enrolled :—Boys, 32 ; girls, 34 ; total, 66. Present :—Boys, 21 ; girls, 25 ; total, 46.

Suitable buildings are provided, but the playground is much too small. Several improvements are required in the fitting up of the schoolroom. Owing to an influx of new scholars the numbers are high. This circumstance and others have unfavourably affected the discipline, which is only *moderate*, and requires to be placed on a proper basis. The course of instruction is complete for a school of three classes. The teaching is by modern methods, and produces results averaging slightly above *tolerable*. The teacher has been only a very short time in charge, and the circumstances under which the inspection took place were unfavourable for his predecessor.

BURRIER (N.V.) :—Regular inspection, 17th May.

Enrolled :—Boys, 25 ; girls, 16 ; total, 41. Present :—Boys, 20 ; girls, 10 ; total, 30.

Some slight improvements in the premises have been effected, but the material organisation is still seriously defective. The internal organisation and general discipline are *tolerably* satisfactory. The classification is too high. The results of the instruction are only little above *moderate*. Considering all the disadvantages, the general results may be accounted *tolerable*.

CHATSBURY (V.) :—Regular inspection, 18th August.

Enrolled :—Boys, 12 ; girls, 13 ; total, 25. Present :—Boys, 8 ; girls, 13 ; total, 21.

The material organisation is *very good* for the locality. The internal organisation is correct in the main, and the general discipline is *very fair*. The school is three-class, and the instruction includes all required subjects except singing. Its results are *tolerable*. The school has revived somewhat, and is now in a state of efficiency approaching *fair*.

COLLECTOR (N.V.) :—Regular inspection, 22nd September.

Enrolled :—Boys, 28 ; girls, 20 ; total, 48. Present :—Boys, 20 ; girls, 17 ; total, 37.

The material provisions are temporary, but unchanged. Various defects occur in the keeping of the school records and documents. Prevalent sickness and bad weather have affected the attendance. The discipline is barely *moderate*—the result of a government confirmedly weak. The course of instruction is incomplete, and the teaching inclines to be superficial. Its results only slightly exceed *moderate*. Various unfavourable circumstances have affected the general efficiency, which however, after making all allowances, cannot be rated above *moderate*.

CROOBYAR (V.) :—Regular inspection, 1st and 2nd June.

Enrolled :—Boys, 54 ; girls, 35 ; total, 89. Present :—Boys, 21 ; girls, 17 ; total, 38.

The material provisions remain unchanged, but measures are in progress for superseding them. The ordinary internal organisation and the general discipline are *fair*. The instruction includes all required subjects up to a fourth-class standard, and is of fair range. Suitable arrangements are made for regulating and imparting it. Its results are from *tolerable* to *fair*. The school was found in a state of efficiency below *fair*, but was inspected under very unfavourable circumstances ; it was not in its normal state, no master being in charge.

CROOKWELL (V.) :—Regular inspection, 8th September.

Enrolled :—Boys, 25 ; girls, 22 ; total, 47. Present :—Boys, 22 ; girls, 16 ; total, 38.

The material organisation is *very good*. The premises are not kept with sufficient neatness and order. The general discipline has greatly deteriorated, and is now barely *moderate*. Suitable instructional arrangements are in force, but the teaching is far from being satisfactorily effective. Its results fall below *tolerable*. The school has declined in both numbers and efficiency. The temporary closing of the school prior to the present teacher's appointment, and the prevalence of measles, account for this only in part. The general management is both loose and weak.

CURRAWANG (V.) :—Regular inspection, 23rd and 24th September.

Enrolled :—Boys, 59 ; girls, 49 ; total, 108. Present :—Boys, 46 ; girls, 32 ; total, 78.

Additions to the premises are wanted. The internal organisation and general discipline are *good*. The instruction is of full range, is properly regulated, and is carried on by approved methods. The state of the first class, taught by the assistant, is only *moderate* ; that of the second, third, and fourth, taught by the master, exceeds *very fair*.

ELING FOREST (V.) :—Regular inspection, 29th October.

Enrolled :—Boys, 12 ; girls, 20 ; total, 32. Present :—Boys, 12 ; girls, 19 ; total, 31.

The material provisions meet existing requirements *fairly*. Internally, the school is properly organised. The general discipline is *fair*. The instruction is generally suitable, properly regulated, and methodically imparted. Its results are *tolerable*. The school is in a state of efficiency from *tolerable* to *fair*. The results compare favourably with last year's.

GOULBURN (Boys—V.) :—Regular inspection, 23rd to 26th November.

Enrolled :—103. Present :—86.

The material organisation is unchanged, various improvements in it are required. The internal organisation is *very fair*, and the general discipline *good* on the whole. The instruction includes the same subjects as formerly, but the standard is lower. There is a falling off in the proficiency of the fourth

fourth class, but the average general proficiency is from *very fair* to *good*. In consequence of a decline in the numbers the teaching staff has been reduced, and several changes on the staff have been caused by resignations. The general management might, with advantage, be more far-reaching and minute.

GOULBURN (GIRLS—V.) :—Regular inspection, 17th, 18th, and 19th November.

Enrolled :—95. Present :—72.

The material provisions are *very fairly* satisfactory. The internal organisation is *good*; the general discipline, *very good*. The instruction is suitable in kind, is imparted by the most approved methods, and produces results approaching *very fair* on the average. Under late peculiar circumstances (known to the Council), the results should be regarded as a basis for progress rather than a measure of past success.

GOULBURN (INFANTS—V.) :—Regular inspection, 15th and 16th November.

Enrolled :—Boys, 110; girls, 92; total, 202. Present :—Boys, 87; girls, 72; total, 159.

The accommodation is limited, considering the large and increasing attendance. The general internal organisation is *good*. The general discipline is *very fair*. The instruction includes all required subjects, is properly regulated, and is imparted by suitable methods. It produces *very fair* results. The second class is relatively weak. The school is in a healthy and progressive state.

GULLEN (V.) :—Regular inspection, 19th April.

Enrolled :—Boys, 8; girls, 23; total, 31. Present :—Boys, 8; girls, 19; total, 27.

A teacher's residence, sheds, and lavatory would complete the material organisation. The general internal appearance of the premises is not indicative of order and taste. The school records are in only a *tolerably* satisfactory state. Suitable general arrangements are in force for the regulation of the instruction, the results of which approach *tolerable*. The discipline also is *tolerably* satisfactory. On the whole, a slight improvement has taken place in the general efficiency of the school, which may now be rated nearly *tolerable*.

GUNNING (V.) :—Regular inspection, 10th and 11th August.

Enrolled :—Boys, 56; girls, 52; total, 108. Present :—Boys, 49; girls, 49; total, 98.

The material organisation may be considered *good*. The internal organisation and general discipline are *very good*, and the moral tone is high. The teaching is skillfully and successfully carried on, and produces *good* results. The school is ably conducted, and is in a *good* state of efficiency.

KANGALOOON (N.V.) :—Regular inspection, 9th March.

Enrolled :—Boys, 22; girls, 23; total, 45. Present :—Boys, 21; girls, 17; total, 38.

The fences are broken down in places. The school buildings remain in the condition last reported. The clock is out of order. Minor defects occur in the lesson register and admission register. The discipline is *good* throughout. Suitable general arrangements are in force for the management of the school. Singing excepted, all subjects prescribed for a three-class school are taught. The pupils' proficiency is from *tolerable* to *fair*.

KANGALOOON, WEST (V.) :—Regular inspection, 11th March.

Enrolled :—Boys, 28; girls, 19; total, 47. Present :—Boys, 24; girls, 14; total, 38.

Late improvements have rendered the material condition satisfactory. Some improvement is observable in respect of the regularity of the pupils' attendance, but wet weather and the demand for children's labour still affect it. The pupils are clean, mannerly, and in *fair* order; but as regards school drill and the habit of self-reliance the government might well be more exacting. A fourth class has been prematurely formed, and the classification is rather high throughout. All required subjects are taught. The average general proficiency is nearly *tolerable*. Too much has been attempted; there is a want of thoroughness in the work.

MARULAN (N.V.) :—Regular inspection, 19th July.

Enrolled :—Boys, 18; girls, 15; total, 33. Present :—Boys, 10; girls, 15; total, 25.

The material organisation and condition are unsatisfactory. The records are incomplete. The general discipline is only *moderate*. The pupils are properly classified, and taught all required subjects except singing and drawing. The instructional results are between *moderate* and *tolerable*. The school is in a *moderate* state of efficiency.

MITTAGONG, LOWER (V.) :—Regular inspection, 19th October.

Enrolled :—Boys, 15; girls, 17, total, 32. Present :—Boys, 15; girls, 17, total, 32.

Very good premises are provided, but a few minor repairs are wanted. The internal organisation is *fair*. The general discipline is *tolerably* satisfactory. The instruction is *tolerably* well regulated, is of a generally suitable character, and is imparted by approved methods. Its results are *tolerable*. The present teacher has reorganised and improved the school. It is now in a *tolerable* state of efficiency; but, considering all things, the value of the teacher's work exceeds that mark.

MITTAGONG, UPPER (V.) :—Regular inspection, 19th March.

Enrolled :—Boys, 25; girls, 16; total, 41. Present :—Boys, 17; girls, 14; total, 31.

The windows are in want of repairs. A few inaccuracies occur in the records, and some of the required wall documents are not in their places. The general discipline is *very fair*. The classification (three-class) of the pupils and the regulation of the instruction are appropriate. Modern methods are practised, but with only partial effect. The teaching lacks thoroughness. Its results only slightly exceed *moderate*.

MOOROCWOOLEN (V.) :—Regular inspection, 9th November.

Enrolled :—Boys, 25; girls, 20; total, 45. Present :—Boys, 21; girls, 18; total, 39.

Minor repairs to the school-house are required. The internal organisation is *fairly* satisfactory. The general discipline cannot be rated higher than *moderate*. The instruction is generally suitable in kind, and produces results from *moderate* to *tolerable*. The past year has been one of severe trial to the school. This being taken into account, the general condition and results, as far as the teacher can be held responsible, may be rated nearly *tolerable*.

MOSS VALE (V.) :—Regular inspection, 26th February.

Enrolled :—Boys, 25; girls, 25; total, 50. Present :—Boys, 11; girls, 12; total, 23.

No alteration in the material condition. The internal organisation and general discipline are *good*. Results approaching *fair* have been produced by the instruction, which includes all subjects required in a three-class school except singing. The prevalence of measles affected the attendance and proficiency of the pupils.

MUMMELL

MUMMELL (V.) :—Regular inspection, 23rd April.

Enrolled :—Boys, 12 ; girls, 18 ; total, 30. Present :—Boys, 9 ; girls, 11 ; total, 20.

The material condition remains unchanged. More care is necessary in the keeping of the school-room and school records. In other respects the organisation is satisfactory. The pupils are well disciplined, and are very attentive to instruction. The teaching produces *fair* results.

MUMMELL, EAST (N.V.) :—Regular inspection, 16th April.

Enrolled :—Boys, 14 ; girls, 15 ; total, 29. Present :—Boys, 12 ; girls, 13 ; total, 25.

The material provisions may be regarded as *tolerably* sufficient for existing requirements. The internal organisation is correct in the main. The discipline is *fair*, and is likely to improve. The teaching is intelligent, and is likely to prove effective. The range of the pupils' attainments is low at present, and the actual proficiency is below *tolerable*. The teacher has not been long in charge.

MYRTLEVILLE (V.) :—Regular inspection, 19th August.

Enrolled :—Boys, 7 ; girls, 8 ; total, 15. Present :—Boys, 7 ; girls, 8 ; total, 15.

The material provisions are more than adequate to existing requirements. There is no prospect of the numbers increasing. The internal organisation and general discipline are *fair*. The instruction has somewhat improved in character, and produces *tolerable* results.

NEW SHEFFIELD (N.V.) :—Regular inspection, 20th October.

Enrolled :—Boys, 31 ; girls, 26 ; total, 57. Present :—Boys, 24 ; girls, 23 ; total, 47.

The material provisions are unchanged and unsatisfactory. The internal organisation and the general discipline are *tolerable*. The instruction is superficial. It produces *tolerable* + results. The school as a whole is below the requirements of the locality.

NORWOOD (N.V.) :—Regular inspection, 16th September.

Enrolled :—Boys, 24 ; girls, 17 ; total, 41. Present :—Boys, 19 ; girls, 14 ; total, 33.

Several improvements are required to the premises. The internal organisation is correct in the main. The general discipline is about *fair*. The instruction is of complete range, is properly regulated, and produces results from *tolerable* to *fair*. Scripture is a weak branch.

NOWRA (V.) :—Regular inspection, 10th and 11th May.

Enrolled :—Boys, 61 ; girls, 34 ; total, 95. Present :—Boys, 45 ; girls, 24 ; total, 69.

The material organisation is *fair*. The general internal organisation is satisfactory. The general discipline is *very fair*. Excepting that the teaching power is not equitably distributed, the general instructional arrangements are satisfactory. The course of instruction is nearly complete for a school of four classes. The results of the teaching are between *tolerable* and *fair* on the average. The proficiency is lowest in the upper classes. Higher general efficiency might reasonably be expected.

PARKESBOURNE (V.) :—Regular inspection, 22nd April.

Enrolled :—Boys, 12 ; girls, 15 ; total, 27. Present :—Boys, 11 ; girls, 14 ; total, 25.

The material condition is satisfactory. The organisation and general discipline are *good*. The work of instruction is carried on with system and success. The pupils have made satisfactory progress. The general results approach *good*, and are creditable to the teacher.

ROBERTSON (V.) :—Regular inspection, 16th March.

Enrolled :—Boys, 17 ; girls, 21 ; total, 38. Present :—Boys, 15 ; girls, 13 ; total, 28.

A few minor improvements, in addition to those in progress, will render the material condition satisfactory. The general internal organisation is *good*. Various causes have combined to reduce the numbers. The pupils are well disciplined. The instruction includes all prescribed subjects up to a third-class standard, is well chosen, and of full range. Its results all round are *very fair*.

ROSLYN (V.) :—Regular inspection, 31st August.

Enrolled :—Boys, 13 ; girls, 10 ; total, 23. Present :—Boys, 13 ; girls, 9 ; total, 22.

The material provisions are fully adequate to the requirements, but minor repairs are required. The records are defectively kept ; otherwise, the internal organisation is *fair*. The general discipline is *fair*. Recent interruptions to the school business have interfered with the instruction, the results of which are little above *tolerable*.

TARAGO (N.V.) :—Regular inspection, 2nd August.

Enrolled :—Boys, 19 ; girls, 14 ; total, 33. Present :—Boys, 18 ; girls, 14 ; total, 32.

The material organisation is now as *good* as is possible in a building designed for church purposes. The internal organisation and general discipline are *good*. The instruction is judiciously regulated, and produces results from *fair* to *very fair* on the average. The school is in a healthy and progressive state.

TARALGA (V.) :—Regular inspection, 24th August.

Enrolled :—Boys, 17 ; girls, 21 ; total, 38. Present :—Boys, 15 ; girls, 15 ; total, 30.

Steps have been taken to render the material organisation satisfactory. The removal of families from the locality, and other causes beyond the teacher's control, have affected the attendance. The internal organisation and general discipline are *very fair*. The instructional arrangements generally are *fairly* appropriate, and the teaching has been productive of *fair* results so far. The teacher has not been long in charge.

TIRRANNA (N.V.) :—Regular inspection, 4th August.

Enrolled :—Boys, 21 ; girls, 11 ; total 32. Present :—Boys, 19 ; girls, 11 ; total, 30.

Material provisions may be regarded as meeting existing requirements *fairly*. The general internal organisation and discipline are *fair*. The instruction is on the whole properly regulated, and is now productive of *fair* results. The school has improved, and is in a *fair* state of efficiency.

TOMERONG (N.V.) :—Regular inspection, 18th May.

Enrolled :—Boys, 11 ; girls, 9 ; total, 20. Present :—Boys, 11 ; girls, 8 ; total, 19.

The material condition is *fair*, and steps have been taken to make it quite satisfactory. The internal organisation is correct on the whole. At present the enrolment includes only a minority of the children in the locality. The general discipline is *moderate* ; it requires to be placed on a proper basis. There are three classes ; and the instruction includes all subjects required for these except singing, but is of very narrow range, and has not well developed the pupils' powers. Viewed as a whole, the school can be regarded as at present meeting the educational wants of the locality but *indifferently*,

indifferently, but there is reason to hope for improvement. The teacher has been but a very short time in charge, and circumstances connected with the removal of his predecessor have been unfavourable to him.

TOWRANG (N. W.) :—Regular inspection, 5th August.

Enrolled :—Boys, 22 ; girls, 19 ; total, 41. Present :—Boys, 21 ; girls, 15 ; total, 36.

Material condition but *moderate*. Internal organisation and general discipline *fair*. Instruction intelligently and earnestly carried on, with results exceeding *fair*.

ULLADULLA (N. V.) :—General inspection, 28th May.

Enrolled :—Boys, 36 ; girls, 15 ; total, 51. Present :—Boys, 18 ; girls, 8 ; total, 26.

The building is a *good* and suitable one, but its furniture and fittings are unadapted to school purposes. The teacher has made *tolerably* suitable general arrangements for conducting the school business. The general discipline is about *fair*. Omissions from the prescribed course of instruction occur, and the teaching is but partially effective. Its results are *tolerable*.

WORRAGEE (N. V.) :—Regular inspection, 12th May.

Enrolled :—Boys, 23 ; girls, 13 ; total, 36. Present :—Boys, 18 ; girls, 12 ; total, 30.

School is still conducted in temporary premises, tolerably suitable as a makeshift. The internal organisation and general discipline are *fair*. Suitable instructional arrangements are in force. The results of examination exceed *fair*. Local jealousies still militate against the success of the school. As far as the teacher can be held accountable, the general condition and results are *fair*.

II.—PROVISIONAL SCHOOLS.

BAMARANG :—Regular inspection, 4th June.

Enrolled :—Boys, 7 ; girls, 13 ; total, 20. Present :—Boys, 6 ; girls, 4 ; total 10.

The material provisions are reasonably sufficient. Internally the school is correctly organised in the main. The general discipline is only *moderate*. Suitable instructional arrangements are in force, but the results of examination are barely *moderate*. The school has declined in both numbers and efficiency, and is in a precarious state. It meets the requirements of the locality but indifferently.

BERRILLAN :—Regular inspection, 13th May.

Enrolled :—Boys, 17 ; girls, 17 ; total, 34. Present :—Boys, 17 ; girls, 16 ; total, 33.

The material condition remains unchanged. A few minor improvements would make it *fair*. The internal organisation and general discipline are *fair*. The instruction is faithfully attended to, and its results are *fair*.

BUNDANOON :—Regular inspection, 4th November.

Enrolled :—Boys, 20 ; girls, 19 ; total, 39. Present :—Boys, 16 ; girls, 15 ; total, 31.

Material organisation unchanged. In view of the enrolment it must be considered unsatisfactory, inasmuch as there ought to be a properly organised Public School. The arrangements for the conduct of the general business are *fair*. The general discipline is *tolerable*. The matter of instruction is barely up to standard requirements. The results of the instruction are about *tolerable*.

BUNGOA :—Regular inspection, 22nd July.

Enrolled :—Boys, 16 ; girls, 9 ; total, 25. Present :—Boys, 12 ; girls, 9 ; total, 21.

Material condition, *very moderate*. Internal organisation and general discipline, *moderate*. The classification is defective, but the other instructional arrangements are *tolerably* suitable in the abstract. The matter of the instruction is poor in quality, and some of it unsuitable in kind. The teaching is superficial and ineffective. The results of the instruction are only *indifferent*.

BURRAGOWANG :—Regular inspection, 3rd November.

Enrolled :—Boys, 14 ; girls, 11 ; total, 25. Present :—Boys, 11 ; girls, 11 ; total, 22.

The material provisions meet existing requirements *moderately*. The internal organisation is *moderate*, faulty classification being the most serious defect. The general discipline is *tolerable* on the whole. The instruction is of incomplete compass and rather poor quality. Its results are *moderate*.

CARRICK :—Regular inspection, 21st July.

Enrolled :—Boys, 11 ; girls, 20 ; total, 31. Present :—Boys, 11 ; girls, 18 ; total, 29.

The material condition is *fair*, and the internal organisation satisfactory on the whole. The general interior aspect of the premises is pleasing. The general discipline is *good*. The pupils are trained to habits of attention, industry, and thought. Their attainments are between *tolerable* and *fair*. Prevalence of sickness seriously interfered with the school work for some time previous to the inspection.

CONGOLA :—General inspection, 25th May.

Enrolled :—Boys, 19 ; girls, 9 ; total, 28. Present :—Boys, 19 ; girls, 9 ; total, 28.

The premises may be regarded as suitable, as a temporary provision. Internally, the school is correctly organised. The general discipline is *good*, and the prevailing spirit healthy. The course of instruction is nearly complete, and the teaching produces *very fair* results.

COTTAWALLA :—Regular inspection, 7th September.

Enrolled :—Boys, 19 ; girls, 21 ; total, 40. Present :—Boys, 15 ; girls, 17 ; total, 32.

The material provisions are fairly sufficient for present requirements. The internal organisation is *fair*. The general discipline is *moderate*, and is the weak point of the school. The instruction is properly regulated, and produces results in excess of *tolerable*.

FRANKFIELD :—Regular inspection, 9th August.

Enrolled :—Boys, 26 ; girls, 21 ; total, 47. Present :—Boys, 19 ; girls, 15 ; total, 34.

The material provisions are fairly adequate to the requirements. The internal organisation and general discipline are *very fair*, and the moral tone is healthy. The instruction is zealously and profitably imparted. Its results all round exceed *fair*. A short time will determine the possibility of continuing the school after the completion of the railway works.

FULLERTON :—General inspection, 2nd September.

Enrolled :—Boys, 11 ; girls, 22 ; total, 33. Present :—Boys, 8 ; girls, 17 ; total, 25.

As a temporary provision, the material organisation is *moderately* suitable. The internal organisation is defective in several important particulars. The general discipline and moral tone are *moderate*. The instruction is of incomplete course and rather narrow range. Its results are barely *moderate*. The school has been recently reopened after a long lapse.

GREENWELL

GREENWELL POINT :—Regular inspection, 14th May.

Enrolled :—Boys, 21 ; girls, 13 ; total, 34. Present :—Boys, 17 ; girls, 10 ; total, 27.

The material provisions meet the requirements fairly well. The internal organisation is satisfactory on the whole. The discipline is about *fair*, and would be higher if the government were administered more vigorously. The pupils are divided into three classes, and taught all required subjects. Their attainments and proficiency have declined, however. The latter is now only from *moderate to tolerable*.

GURRUNDARI :—Regular inspection, 20th April.

Enrolled :—No record. Present :—Boys, 6 ; girls, 9 ; total, 15.

Repairs now in progress will render the material organisation *tolerably* satisfactory for the locality. The keeping of the premises and of the records, the internal organisation, and the attainments of the pupils all clearly indicate serious neglect of duty on the part of the teacher. As far as she is concerned the results are *bad* throughout.

HIGH RANGE :—Regular inspection, 26th October.

Enrolled :—Boys, 12 ; girls, 8 ; total, 20. Present :—Boys, 12 ; girls, 7 ; total, 19.

The material condition is as last reported. The general discipline is *tolerable*, internal organisation barely so. The teaching produces *tolerable* results.

JACQUA (Reefs) :—Regular inspection, 27th July.

Enrolled :—Boys, 6 ; girls, 6 ; total, 12. Present :—Boy, 1 ; girls, 5 ; total, 6.

The material organisation meets existing requirements. The internal organisation and general discipline are *fair*. The course of instruction is complete, and *tolerably* suitable arrangements are in force for regulating it. The teaching has improved, and now produces results from *moderate to tolerable*. In consequence solely of the decline of the gold fields, the numbers have become exceedingly low, and there is but a poor prospect of their rising again.

JANNUNG :—Regular inspection, 21st May.

Enrolled :—Boys, 15 ; girls, 13 ; total, 28. Present :—Boys, 13 ; girls, 12 ; total, 25.

The condition of the schoolhouse is *tolerable*. Internally the school is well organised. The general discipline is *good*. Satisfactory instructional arrangements are in force, and the school business is systematically and successfully carried on. The results of the instruction approach *very fair*.

JANUGARRAH :—Regular inspection, 27th May.

Enrolled :—Boys, 16 ; girls, 9 ; total, 25. Present :—Boys, 16 ; girls, 8 ; total, 24.

The material provisions meet the requirements *very fairly*. The general discipline is barely *tolerable* at the best. The instruction omits singing and drawing, is rather narrow, and produces *moderate* (barely) results. This last is in part attributable to the defective classification of the pupils and regulation of the instruction.

KIRKDALE :—General inspection, 27th September.

Enrolled :—Boys, 20 ; girls, 9 ; total, 29. Present :—Boys, 20 ; girls, 9 ; total, 29.

School is now held in a neat stone building, erected to serve the double purpose of school and church. On the whole, the requirements are *tolerably* well met by the material provisions. The internal organisation and general discipline are *very fair*, and the prevailing spirit is healthy. Suitable instructional arrangements are in force. The teaching is suitable and effective. Its results are from *fair to very fair*.

LAGGAN :—Regular inspection, 3rd September.

Enrolled :—Boys, 14 ; girls, 20 ; total, 34. Present :—Boys, 12 ; girls, 15 ; total, 27.

Material provisions, inadequate and unsatisfactory. Internal organisation, *tolerable*. General discipline and moral tone, *indifferent*. *Tolerably* suitable instructional arrangements have been made, but the teaching is unsystematic and unskillful. The results of the instruction are little above *indifferent*.

MAXTON :—General inspection, 12th November.

Enrolled :—Boys, 11 ; girls, 21 ; total, 32. Present :—Boys, 10 ; girls, 20 ; total, 30.

This school will in all probability be eventually superseded by a properly organised Public School in a central position ; meanwhile the school is carried on in a small log and bark structure, very poorly furnished, and destitute of external appointments. Defects occur in some of the records. The general discipline is *tolerable*. The pupils are appropriately divided into two classes, all subjects required for which are duly provided for with *tolerable* judgment. The general proficiency is *moderate* in both classes.

MIDDLE ARM :—Regular inspection, 5th October.

Enrolled :—Boys, 15 ; girls, 9 ; total, 24. Present :—Boys, 13 ; girls, 9 ; total, 22.

In view of the circumstances and prospects of the school, the material provisions may be considered *moderately* satisfactory. The internal organisation and the general discipline are *very fair*. The instruction is properly regulated and systematically and intelligently carried on. It produces results averaging from *tolerable to fair*.

MOUNT MURRAY :—Regular inspection, 10th March.

Enrolled :—Boys, 15 ; girls, 22 ; total, 37. Present :—Boys, 14 ; girls, 20 ; total, 34.

To render it sufficiently large for the attendance, the whole building, which now comprises school-room and teacher's residence, should be thrown into one room. The school stock is short in some items. Numerous blanks are left in the records. The discipline is *fair*. A suitable two-class division of the pupils obtains. The course of instruction is complete, and the matter generally suitable and of satisfactory range. The results are from *fair to very fair*.

MUMMELL :—Regular inspection, 16th April.

Enrolled :—No record. Present :—Boys, 7 ; girls, 3 ; total, 10.

A fairly suitable building has been provided, which is also used as a church. The schoolhouse is *tolerably* well furnished and stocked. Internally the school is in an utterly disorganised condition. The attendance is declining. No change for the better is to be observed in the discipline, which is but *moderate* at the best. The pupils make no progress in attainments. The school has considerably deteriorated in point of efficiency. The results as a whole can only be rated at *bad*.

MUTBILLY :—General inspection, 21st April.

Enrolled :—Boys, 18 ; girls, 15 ; total, 33. Present :—Boys, 12 ; girls, 10 ; total, 22.

The material provisions are *tolerably* satisfactory. The internal organisation is correct in the main, but requires change in some minor details. The discipline is promising, and has already effected *good* results. The instruction is regulated with *tolerable* judgment, and is imparted by approved methods. It produces *tolerable* results. The school has but recently been established.

PEJAR :—

PEJAR :—Regular inspection, 14th September.

Enrolled :—Boys, 16 ; girls, 17 ; total, 33. Present :—Boys, 9 ; girls, 13 ; total, 22.

Recent improvements render the material condition *moderately* satisfactory. The general discipline is about *tolerable*. The instruction is *fairly* suitable in kind and quality, properly regulated, and carried on by modern methods. Its results exceed *tolerable*.

REDGROUND :—Regular inspection, 6th September.

Enrolled :—Boys, 13 ; girls, 9 ; total, 22. Present :—Boys, 13 ; girls, 8 ; total, 21.

The material provisions meet the requirements *moderately* well. The internal organisation is *tolerable*. The general discipline is barely moderate. The instruction is of imperfect compass, and its results are only *moderate*.

TARLO :—Regular inspection, 17th August.

Enrolled :—Boys, 14 ; girls, 12 ; total, 26. Present :—Boys, 14 ; girls, 12 ; total, 26.

Material condition *very bad*. Internal organisation *fair* under the circumstances. General discipline *fair*. Instruction of rather narrow range, *tolerably* well regulated, and productive of *tolerable* results.

YARRUNGA :—Regular inspection, 18th March.

Enrolled :—Boys, 16 ; girls, 12 ; total, 28. Present :—Boys, 16 ; girls, 10 ; total, 26.

No change in the material condition since last inspection. Internally the school is well organised, and the whole property is carefully and neatly kept. Peculiar circumstances connected with the character of the locality render the maintenance of the numbers somewhat uncertain. The discipline is *good* throughout. The classification (two-class) is judicious, and suitable arrangements are made and carried out for the teaching of all the required subjects except singing and drawing. The general proficiency approaches *very fair* in both classes.

III.—HALF-TIME SCHOOLS.

LONG REACH :—Regular inspection, 24th February.

Enrolled :—Boys, 13 ; girls, 8 ; total, 21. Present :—Boys, 5 ; girls, 2 ; total, 7.

One additional desk has been provided. The room is rather small. The internal organisation is *very fair*. Measles broke out in the locality a few days prior to the inspection and much affected the attendance. All the third-class pupils were kept away. Ordinarily the attendance is regular and *fairly* punctual. The general discipline may be rated *fair*. The results of the instruction are *tolerable* in the first class, and *moderate* in the second.

ROCK-VIEW :—Regular inspection, 24th February.

Enrolled :—Boys, 16 ; girls, 7 ; total, 23. Present :—Boys, 11 ; girls, 5 ; total, 16.

The premises have been improved, and are now in a satisfactory state. The discipline is *fair*. Suitable general arrangements are in force. The matter of instruction is wanting in substance, and the methods lack thoroughness in their application. The average proficiency is below *tolerable*.

MULLENGULLENGA :—Regular inspection, 28th July.

Enrolled :—Boy, 1 ; girls, 4 ; total, 5. Present :—Boy, 1 ; girls, 4 ; total, 5.

The material provisions are *fairly* satisfactory. Both teacher and pupils are unpunctual. As a whole the discipline is barely *tolerable*. The pupils are classified with *tolerable* appropriateness, but the instruction is defectively regulated. Except in the more mechanical exercises, the results of examination are very low—all round, they average below *moderate*. The school has seriously declined in numbers, and is in a very precarious state.

WINDELLAMA :—Regular inspection, 28th July.

Enrolled :—Boys, 5 ; girls, 2 ; total, 7. Present :—Boys, 5 ; girls, 2 ; total, 7.

The school is conducted in make-shift premises—*moderately* suitable as such. Both teacher and pupils are unpunctual. The general discipline is below *moderate*. The pupils are properly classified. The teaching is poor in quality, and comparatively barren of results. The general proficiency of the pupils is *moderate*, but they are generally spiritless and low in intelligence. The school has declined in both numbers and efficiency. The general results are only *indifferent*.

NEW BRISTOL :—Regular inspection, 19th May.

Enrolled :—Boys, 7 ; girls, 9 ; total, 16. Present :—Boys, 3 ; girls, 8 ; total, 11.

Organisation, satisfactory, generally ; general discipline, *fair*. The instruction includes all required subjects except singing, and produces *fair* (nearly) results. The school is in a *fair* state of efficiency.

NORTH HUSKISSON :—Regular inspection, 20th May.

Enrolled :—Boys, 7 ; girls, 10 ; total, 17. Present :—Boys, 5 ; girls, 10 ; total, 15.

Repairs to the premises are wanted. The internal organisation is satisfactory, and the general discipline *tolerably* so. The instruction includes all required subjects except singing, and is faithfully attended to ; its results exceed *tolerable*.

QUIALIGO :—Regular inspection, 29th July.

Enrolled :—Boys, 4 ; girls, 9 ; total, 13. Present :—Boys, 2 ; girls, 9 ; total, 11.

Material condition of the premises, *moderate* ; internal organisation and general discipline, *fair*. The instruction tends to be individual, and is of incomplete compass ; its results slightly exceed *moderate*.

SPRINGFIELD :—Regular inspection, 3rd August.

Enrolled :—Boys, 7 ; girls, 10 ; total, 17. Present :—Boys, 4 ; girls, 8 ; total, 12.

Material provisions, *very fair*. Internal organisation and general discipline, *fair*. The results of the instruction average about *tolerable*. General efficiency, *tolerable*.

RIGHLANDS :—Regular inspection, 25th August.

Enrolled :—Boys, 7 ; girls, 10 ; total, 17. Present :—Boys, 5 ; girls, 8 ; total, 13.

The material condition has been much improved, and now meets requirements satisfactorily. Some of the records are defectively kept ; otherwise, the internal organisation is *fair*. The general discipline is *very fair*. The instruction is methodically imparted, though not regulated by all the required guides ; its results exceed *tolerable*.

YELBRAITH:—Regular inspection, 25th August.

Enrolled:—Boys, 7; girls, 7; total, 14. Present:—Boys, 5; girls, 4; total, 9.

The material condition is seriously defective. Some of the records are defectively kept, and lesson programmes are wanted. The general discipline is *very fair*, and the moral tone healthy. The pupils are properly classified. The teaching produces *fair* results.

D. S. HICKS,
Inspector, Goulburn District.

GRAFTON DISTRICT.

INSPECTOR'S General Report for 1875.

On taking charge of this District, in June, 1875, I found the following schools in operation, viz:—

37 Public Schools, of 38 Departments,
15 Provisional Schools,
4 Half-time Schools, and
6 Denominational Schools,—

in all 63 Schools and Departments.

During the second half of the year teachers were appointed to the Tweed River schools—Murwillumbah Public and Tweed Junction Provisional; a Non-vested Public School was opened at South Arm; and Provisional Schools were established at Coaldale, Tunstall, and Tucki-Tucki. The Provisional School at Raleigh was closed on the 26th March last, that at Nambucca on the 1st October—the teachers in each case having resigned.

There were in operation at the close of the year thirty-nine Public Schools and Departments, eighteen Provisional, four Half-time, and six Denominational—making a total of sixty-seven Schools and Departments, of which sixty-two were fully inspected according to the general form.

The Public Schools at Bowra and Murwillumbah were closed at the time of my visit; the Public School at South Arm and the Provisional Schools at Tunstall and Tucki-Tucki were not in operation sufficiently early in the year to be inspected.

Thirty-four Public Schools, eleven Provisional, four Half-time, and six Denominational, have been in operation for the whole year; five Public and eight Provisional, for only a portion of that period.

New Public Schools have been erected during the year at Tirannia Creek and Woodburn; and new premises are in progress at Strontian Park.

Arrangements for the erection of new and suitable Public Schools in the undermentioned places are now complete, viz:—

Bowra,	Grafton, a new Infant Department,
Gladstone,	Kempsey,
Grafton South,	Lower Southgate.

Tenders for the erection of a new R. C. School at Grafton have been advertised in the local press.

New Public Schools are needed at—

Ennis,	Nambucca,
Harwood Island,	Seven Oaks,
Lawrence,	Wardell.

Although the circumstances of each of the following localities warrant the establishment of Provisional Schools therein, they are at present without any means of instruction, viz:—

Belmore, Upper,	Rawdon Island,
Huntingdon,	Smith's Creek,
Mountain View,	Telegraph Point.

Suitable buildings have been already provided at Huntingdon and Telegraph Point.

In the case of the remaining places, new schoolrooms are being erected by the people, so that I hope to see, in a short time, six additional Provisional Schools in operation, and upwards of one hundred children brought under instruction.

Applications for the establishment of Half-time Schools at Rolland's Plains and Telegraph Point, and at Huntingdon and Sancrox, were fully inquired into.

The Council decided to open such schools in the two first-named places; but, owing to the removal of several families from Rolland's Plains in December, no children of school age remained in that locality, and the necessity for establishing a school there no longer existed. An application to aid a Provisional School at Cornbury Park, near Telegraph Point, is under consideration.

With reference to the application from Huntingdon and Sancrox, it was found on inquiry that the circumstances of each warranted the opening of full-time schools.

The Council has agreed to recognize a Provisional School at Huntingdon; and a new and more central schoolroom is in course of erection on Rawdon Island—close to Sancrox—which the promoters expect to see similarly recognized.

At the Macleay, Nambucca, Bellenger, Clarence, and Tweed River Heads are isolated groups of children who never have had an opportunity of attending school.

I trust to be able to make arrangements before long by which they may in some measure receive the benefits of the Public Schools Act.

The following table shows the distribution of the schools among the centres of population:—

Centres of Population.	Schools.							
	Public.	Prov.	H.T.	C.F.	R.C.	Pres.	Wes.	Total.
Tweed River	1	1	2
Richmond „	8	5	2	15
Clarence „	18	7	1	...	2	28
Bellenger „	2	2
Nambucca „	1	1
Macleay „	8	...	2	2	...	1	...	13
Hastings „	1	4	5
Camden Haven	1	1
Totals.....	39	18	4	2	1	1	2	67

When provision shall have been made for the instruction of the children in the localities cited as educationally destitute, as far as I can judge there will be little room for further school extension in this district, at least for some time.

In a few places the number of schools in operation is in excess of the requirements, and might be advantageously reduced.

The number of pupils enrolled for the whole year is 4,541, and the average attendance 2,363.5, or a little over 52 per cent. of the gross enrolment.

The very unfavourable weather experienced in the first quarter of the year all over the district, and the prevalence of the measles throughout the whole year, account to a certain extent for the low percentage of attendance.

The saddest fact I have to record in connection with this report is, that there are at least 600 children of school age living within a two-mile radius of existing schools that never attend thereat. Those children are growing up in the most lamentable ignorance.

The reasons assigned by parents for depriving their offspring of the advantages of early and regular instruction are so trivial and selfish that I shall not enumerate them here. The only valid excuse I have heard is the necessity for utilizing children's labour at certain seasons. But surely a child 7 or 10 years old can do as much work before and after school hours and on Saturdays as ought to be required of him.

Legislative action alone can in my opinion put a stop to such a deplorable state of things and satisfactorily deal with the important but vexed question of securing the benefits of primary education to all the children of the land.

Of the thirty-nine Public Schools in operation on the 31st December, thirty-four are Vested and five Non-vested, viz., Bowra, Solferino, South Arm, Strontian Park, and Ramornie.

The vested buildings are nearly all centrally situated, and, except in the case of two, securely fenced and provided with out-offices.

As regards their material condition, it may be stated that about 80 per cent. rank from fair to good, the remainder being tolerably satisfactory. Only a few, however, have complete external equipments, including weather-sheds and lavatories.

Repairs and additions have been effected to the following schools during the year, viz. :—Aldavilla, Alumny Creek, Belmore River, Grafton, Gundusimba, Kempsey (C.E.), Smith's Flat.

The Provisional Schools are all wooden structures. In the case of two, the grounds are fenced; in that of eleven, there are no out-offices.

The material condition of the Half-time Schools is tolerable; but except at Sherwood all external appointments are wanting.

Five of the Denominational Schools are built of wood; one—Kempsey Presbyterian—is a brick edifice. Their material state is tolerable; two are without playgrounds, and at Kempsey C.E., no out-offices have yet been erected.

The supply of furniture, apparatus, and books in the greater number of schools fairly meets their several requirements, except in the case of the undermentioned, in which the desk accommodation is inadequate, viz. :—Kempsey Pres., Kempsey C.E., Palmer's Island Pub., Frederickton C.E., Seven Oaks Pub., Summerland Pub., Rainbow Reach Pub., Rocky Mouth Pub. In the Provisional and Half-time Schools the furniture is of the roughest description; but improvement in this feature of their organisation is perceptible. As a rule the teachers carefully look after the Council's property, no instance of waste or carelessness having come under my notice.

In regard to discipline, the aspect of many schools is pleasing, much having been done to make the pupils regular and punctual, clean and neat, obedient and cheerful. The character of the attendance, however, is unsatisfactory in the case of sixteen Public, three Provisional, and three Denominational Schools, in which barely two-thirds of the number enrolled attend with pleasing regularity. Increased effort on the part of the teachers of these schools is imperative to secure a higher percentage of regular pupils.

The order of many schools affords little room for praise, loose marching and noisy class-movements being common characteristics. With those schools in which drill is effectively taught, and whose teachers insist on having the different movements performed with precision, no fault can be found. But where teachers are careless, or themselves noisy, or satisfied with having things half-done, the order is defective, and consequently the attention of the pupils partial and fitful. I look forward to marked improvement in the order of the schools during the present year.

The course of instruction is complete in the case of seventeen Public, two Provisional, and two Denominational Schools. In the others, either singing, drawing, or sewing is omitted from the prescribed range of subjects.

Of the sixty-two schools inspected, thirty-three, or 53 per cent., were below the standard; fourteen, or 23 per cent., were up to its requirements, and fifteen, or 24 per cent., exceeded them. Last year about 55 per cent. were below the standard, 17 per cent. were up to, and 28 per cent. exceeded its requirements. Thus, although the regularity of attendance throughout the year has been materially affected by sickness and other causes, there has been no retrogression in the proficiency of the schools.

The recency of my appointment to this district precludes me from offering any extended remarks on the question of educational progress or the reverse, or from instituting comparisons based on past results. In a few schools I found reading well taught, the pupils enunciating distinctly and reading with ease and intelligence. Oral spelling is practised in all the schools. I observed that "phrase-spelling" was given only by teachers recently from the training establishment.

Of the 2,430 pupils examined in reading, 55 per cent. ranked from fair to good; 36 per cent. as tolerable, and 9 per cent. did badly.

In writing 204 passed as good; 1,314 as fair; 535 as tolerable, and only 11 were below tolerable. The writing lesson is a mechanical operation in nearly all schools, no illustrations as to the principle of formation of the letters being practised. In a few schools the books were dirty and scribbled over, and evidently indicated a want of supervision on the teachers' part. Dictation is taught in all the schools of the district with varying success. Where teachers are zealous and vigilant, the best results, of course, were met with; and steps were taken for the thorough correction of the mis-spelt words—the main business of the lesson, but often the part wholly neglected. In schools conducted by easily-satisfied persons the average number of errors was high, and copying by no means uncommon.

Arithmetic is a weak subject in the majority of schools, partly owing to the inexperience of teachers, and partly to their want of ingenuity in framing questions. I have met with children pretending to do Proportion and Practice, utterly fail in Compound Subtraction. Out of 1,873 pupils examined 72 obtained the mark good; 792 did fairly; 589 tolerably, and the remainder did only moderately.

Grammar is not a popular subject. In a few small Provisional Schools the results were indifferent; in such schools a lesson on this subject is almost a waste of time. The teaching, however, is fairly effective as regards parsing and analysis, in the greater number of schools. But it is only in very few that this knowledge is practically applied to the correction of faulty expressions in speaking and writing. Geography is taught with a fair degree of success. More frequent revision and an increased use of the blackboard are recommended. In this subject 193 ranked as good, 698 as fair, 218 did tolerably well, and 182 moderately. Scripture lessons were used by 475 children; the answering evidenced a fair knowledge of the principal events read of. Object lessons are given in all the schools and to almost all the pupils. In the hands of inexperienced and careless teachers such lessons are productive of little good. Some popular text book is procured, a lesson is called from it, perhaps on some strange animal, and children who are probably unable to point out differences between cattle and horses receive a lecture on the "qualities" and "peculiarities" of this unknown creature. I have invariably advised teachers to begin at home when selecting object lessons for their different classes. I take it to be a sign of skill and industry on a teacher's part when I find him able to give a really effective object lesson. Drawing is taught in the majority of schools with a reasonable measure of success.

success. 1,014 children were taught singing. On the whole singing is popular, and has exercised a beneficial influence on all schools that made any appreciable progress with the subject. Instruction is given in Euclid and Algebra in four Public Schools, viz., Grafton, Kempsey, Swan Creek, and Ulmarra. Latin is also taught in the last-named school. Needlework received its due share of attention throughout the year.

As a body the teachers are a respectable and an intelligent class; all received my suggestions courteously, and with an evident intention of giving them effect. Of their attainments and studious habits I am not in a position to speak with confidence. However, I know that at the present time there are on the Clarence River several teachers engaged in preparing themselves by regular study for examination. These young men are all candidates for admission to the second class. I regret the fewness of the number, for it is of the greatest importance that there should be among our teachers men of superior abilities and attainments. The value of such men is not to be measured by the excellence of their schools, nor even by the benefits their example confers on the schools in their vicinity. Their influence is felt through the entire staff—they lighten the whole mass; they make the office of teacher respectable and respected; and their success not only attracts young men of promise to the service, but stimulates them to devote all their energies to their work. While concurring in the propriety of taking the teacher's efficiency in his school into account in determining his fitness for promotion, I would hold out every facility for undergoing examination to the young men in the profession desirous of raising their classification rather by such means than seeking it under good service clauses or special regulations.

Of the local supervision I cannot speak very highly. In the greater number of schools it is merely of a nominal character. The most efficient Boards are those in connection with the under-mentioned schools, viz.:—Aldavilla, Alumny Creek, Cowper, Grafton, Port Macquarie, Solferino, Swan Creek, and Ulmarra.

Briefly summarising the foregoing remarks, it will be seen that the prospects of primary education in this district are hopeful; several new Public Schools of a superior character have been erected during the year, and for the building of many more arrangements are complete. The material condition of a number of schools has been improved; and the means of instruction have been extended to many remote districts. But the character of the attendance is not as satisfactory as it should be; and notwithstanding the Council's efforts to provide for the instruction of the rising generation, owing to the carelessness and selfishness of some parents, a very large number of children seldom or never go to school at all. The teachers have, on the whole, done honest work. I hope to be able to speak favourably of their studious habits and their desire to improve in practical skill, as my knowledge of them increases.

Summaries of the reports on the schools inspected are transmitted herewith.

Inspector's Office,
Grafton, 31st January, 1876.

T. DWYER,
Inspector of Schools,
Grafton District.

SUMMARY of Reports upon Public Schools inspected in 1875.

ALDAVILLA (V.) :—General inspection, 10th December.

Numbers enrolled :—Boys, 22; girls, 18; total, 40. Numbers present :—Boys, 18; girls, 12; total, 30.

1. The premises are in good condition, and neatly kept. An additional room to the teacher's residence is being erected. The school is well found in furniture and appliances. 2. The pupils attend punctually, but only one-third are regular. In other respects the discipline is fairly satisfactory. 3. Except singing, all the prescribed subjects are taught. The classification is appropriate; and the instruction is properly regulated. The methods are modern; but the teaching is wanting in energy and thoroughness. The average proficiency is from tolerable to fair.

ALSTONVILLE (V.) :—General inspection, 22nd July.

Numbers enrolled :—Boys, 22; girls, 26; total, 48. Numbers present :—Boys, 13; girls, 17; total, 30.

1. This is a new school. The grounds are unfenced and but partially cleared. There is no provision for a supply of good water. The school is adequately found in furniture and educational requisites. 2. Three-fourths of the pupils are regular, and nearly all punctual. The government is firm, and the tone of the school tolerably satisfactory. 3. Singing is omitted from the course of instruction, which is otherwise complete. The classification is suitable; but the instruction is not fully regulated. The methods are of fair worth; and the teaching is reasonably successful. The average proficiency exceeds tolerable.

ALUMNY CREEK (V.) :—General inspection, 7th October.

Numbers enrolled :—Boys, 30; girls, 20; total, 50. Numbers present :—Boys, 28; girls, 18; total, 46.

1. Improvements to the material condition are in progress. The school is amply found in all requisites; and the organisation is very fair. 2. The attendance is marked by punctuality and regularity, except in the case of the elder pupils. The order of the first-class admits of considerable improvement. 2. All the prescribed subjects are taught. The classification is suitable; the instruction is regulated with care and neatness; the methods are of fair worth; and the teaching is reasonably effective. The average proficiency is from tolerable to fair.

BALLINA (V.) :—General inspection, 28th July.

Numbers enrolled :—Boys, 30; girls, 23; total, 53. Numbers present :—Boys, 28; girls, 23; total, 51.

1. The building is old, and considerably damaged by the white ants. Except that another black-board is needed, the stock of appliances is sufficient. The general aspect is tolerably satisfactory. 2. Three-fourths of the pupils attend regularly and punctually. Whispering prevails among the younger children, and a habit of calculating audibly throughout the school. The distribution of the school materials occasions too much noise. 3. Except singing, the course of instruction is complete. The pupils are correctly classified; the instruction is regulated with tolerable judgment and care; the methods are of average merit. The general proficiency is fair (nearly).

BRELLINGER (V.) :—General inspection, 2nd November.

Numbers enrolled :—Boys, 20; girls, 22; total, 44. Numbers present :—Boys, 13; girls, 17; total, 30.

1. The material condition is good; but the accommodation is inadequate. The organisation is, on the whole, satisfactory. 2. Five-ninths of the pupils are regular; all attend punctually. The discipline, in other respects, is fairly effective. 3. The course of instruction embraces all the required subjects except singing. The pupils are suitably classified; the lesson documents are drawn up with fair skill; the methods are suitable; and the teaching is reasonably successful. The pupils answer with self-reliance and thoughtfulness. The average proficiency is fair.

BELMORE

BELMORE RIVER (V.) :—General inspection, 29th November.

Numbers enrolled :—Boys, 36 ; girls, 20 ; total, 56. Numbers present :—Boys, 25 ; girls, 16 ; total, 41.

1. The premises have been lately painted, and present a neat and cheerful aspect. The material condition is good. The school is well organised, and adequately furnished in furniture and appliances. 2. Three-fifths of the pupils attend regularly. The punctuality is very satisfactory. The children are clean, orderly, and attentive. 3. Singing is omitted from the course of instruction, which is otherwise complete. A suitable classification obtains. The lesson documents are carefully constructed. The methods are modern and reasonably effective. The teaching needs to be marked by increased thoroughness. The average proficiency is from tolerable to fair.

CASINO (V.) :—General inspection, 17th July.

Numbers enrolled :—Boys, 34 ; girls, 27 ; total, 61. Numbers present :—Boys, 30 ; girls, 26 ; total, 56.

1. A weather-shed is needed ; and the teacher's residence is but partially lined. Otherwise, the material condition is satisfactory, and the organisation good. 2. Five-sevenths of the pupils are regular ; all attend very punctually. Under the present teacher, the discipline has improved, and secures a healthy moral tone. 3. The course of instruction is complete, except as regards needlework. The classification is suitable, and the instruction properly regulated. Under examination the pupils are subdued, but answer indistinctly. For their ages the range of attainments is low, for which the present teacher is not responsible. The average proficiency is from tolerable to fair. As far as the teacher is responsible, the general condition is satisfactory.

CHATSWORTH ISLAND (V.) :—General inspection, 24th August.

Numbers enrolled :—Boys, 51 ; girls, 35 ; total, 86. Numbers present :—Boys, 39 ; girls, 30 ; total, 69.

1. Painting and some minor repairs are needed. The supply of furniture and working materials is ample. The property is neatly kept, and the general aspect is pleasing. 2. Only 50 per cent. of the number enrolled attend regularly. The punctuality is very good. The children are neat, respectful, and, in the upper classes, attentive. The government needs to be more exacting in matters of detail. 3. All the prescribed subjects are taught. The pupils are suitably classified ; the instruction is fully regulated ; the methods are of modern cast ; the average proficiency exceeds fair.

CORAKI (V.) :—General inspection, 27th July.

Numbers enrolled :—Boys, 22 ; girls, 18 ; total, 40. Numbers present :—Boys, 20 ; girls, 15 ; total, 35.

1. Repairs to the verandah and the roof of the teacher's residence are needed, otherwise the material condition is satisfactory. There is a full supply of all requisites. 2. Three-fourths of the pupils attend regularly and punctually. The other features of the discipline are equally satisfactory. 3. All the prescribed subjects are taught. The pupils are well classified ; the instructional documents are skilfully drawn up ; the methods are intelligent ; and the teaching is marked by industry and care. The pupils of the first and third classes answer with commendable accuracy. The average proficiency is fair (nearly).

COWPER (V.) :—General inspection, 24th September.

Numbers enrolled :—Boys, 33 ; girls, 31 ; total, 64. Numbers present :—Boys, 15 ; girls, 14 ; total, 29.

1. A portion of the fence has been accidentally burnt down. The shed needs flooring. The grounds are covered with tall weeds, which give an untidy appearance to the premises. The school is amply provided with furniture and books. Two additional maps are needed. 2. Two-thirds of the pupils are regular in attendance ; the percentage of punctual scholars is much higher. Those present are neat, respectful, and attentive. 3. Singing and needlework are omitted from the course of instruction. The pupils are suitably classified ; the instruction is regulated with skill and neatness, and imparted by modern and effective methods. The average proficiency is from fair to very fair.

EUROKA (V.) :—General inspection, 7th December.

Numbers enrolled :—Boys, 24 ; girls, 22 ; total, 46. Numbers present :—Boys, 23 ; girls, 22 ; total, 45.

1. The premises need painting. An additional water-closet is urgently required ; and the roof of the teacher's residence is in disrepair. The whole property is kept with marked neatness. The school is well furnished in all the requisite appliances. 2. The pupils are regular and very punctual. In other respects the discipline is satisfactory. 3. Except singing the instruction is of full range. The pupils are judiciously classified, and the instruction is well regulated. Modern and reasonably successful methods are practised. The average proficiency is from fair to very fair.

FERNMOUNT (V.) :—General inspection, 1st November.

Numbers enrolled :—Boys, 13 ; girls, 21 ; total, 34. Numbers present :—Boys, 12 ; girls, 19 ; total, 31.

1. The school is favourably situated, in good condition, and well organised. 2. Two-thirds of the pupils are regular, but the majority are unpunctual. Those present are clean and fairly attentive. The government is wanting in firmness. 3. Singing excepted, the course of instruction is complete. The classification is suitable, but the instruction is not fully regulated. The methods are of an elementary character. The teacher is industrious but inexperienced. The average proficiency is from moderate to tolerable.

GRAFTON (Primary—V.) :—General inspection, 21st, 25th, and 26th October.

Numbers enrolled :—Boys, 132 ; girls, 85 ; total, 217. Numbers present :—Boys, 101 ; girls, 74 ; total, 175.

1. The material condition is very good, but the accommodation is insufficient. The organisation is very satisfactory. 2. Nine-thirteenths of the number of pupils enrolled attend regularly and punctually. Nearly all are neat, attentive, and in good order. Some fourth-class boys, however, indulge in too much whispering. The moral tone is satisfactory. The course of instruction embraces all the prescribed subjects. In addition, instruction in Euclid, Algebra, and Mapping is given to the fourth class. Modern and reasonably effective methods are practised. The following is the proficiency of the different classes :—First, fair + ; lower second, fair to very fair ; upper second, very fair (nearly) ; third, very fair + ; fourth, good. Candidates for the Senior and Junior University Examinations passed successfully from this school on the late occasion.

GRAFTON (Infant—V.) :—General inspection, 20th and 21st October.

Numbers enrolled :—Boys, 71 ; girls, 63 ; total, 136. Numbers present :—Boys, 65 ; girls, 56 ; total, 121.

1. The premises are in very good condition, but the accommodation is far too limited for present requirements, and the ventilation is defective. The organisation is as complete as circumstances will permit. 2. Two-thirds of the pupils are regular ; a larger number attend punctually. Cleanliness is a marked feature of the discipline. Many children are restless and inattentive. The order was injuriously affected by the prevalence of the measles in August and September. 3. No subject of instruction proper to an infant school is omitted. Modern, suitable, and very fairly effective methods are used. The average proficiency is fair (nearly.)

GUNDURIMA (V.) :—General inspection, 23rd July.

Numbers enrolled :—Boys, 21 ; girls, 22 ; total, 43. Numbers present :—Boys, 18 ; girls, 14 ; total, 32.

1. The school has a favourable situation, is amply provided with furniture and apparatus, and is well organised. 2. Four-fifths of the pupils are regular and punctual. The majority are clean and tolerably orderly. The government is mild, and the moral tone reasonably healthy. 3. The course of instruction is complete. The classification is suitable ; the instruction is fully and neatly regulated. Under examination the pupils are subdued. Some exhibit a fair degree of self-reliance, but many are shy and inert. The average proficiency is tolerable (nearly).

KEMPSEY (V.) :—General inspection, 23rd, 24th, and 25th November.

Numbers enrolled :—Boys, 39 ; girls, 47 ; total, 86. Numbers present :—Boys, 36 ; girls, 41 ; total, 77.

1. The buildings are old, shabby-looking, and in disrepair. The accommodation afforded is far too limited. The organisation under existing circumstances is fair. 2. Three-fourths of the pupils attend regularly ; nearly all are punctual. The majority are neat, and, except in the first class, orderly and attentive. The government secures a healthy moral tone. 3. All the subjects laid down in the standard are taught. Instruction in the elements of Euclid and Algebra is given to the fourth class. The classification is suitable, and the instruction well regulated. The methods are modern, and the teaching is zealously conducted. The average proficiency exceeds fair.

KINCHELA CREEK (V.) :—General inspection, 3rd December.

Numbers enrolled :—Boys, 16 ; girls, 16 ; total, 32. Numbers present :—Boys, 12 ; girls, 14 ; total, 26.

1. The building is a substantial structure of sawn slabs, and is in good repair. The play-ground has been cleared of a luxuriant growth of weeds, and a portion fenced off for a garden. The organisation is satisfactory. 2. Barely two-thirds of the pupils enrolled attend regularly ; the majority are punctual. The moral tone is healthy. 3. All the prescribed subjects are taught. The children are suitably classified, and the instruction is well regulated. Modern methods are used. The average proficiency is fair.

LISMORE (V.) :—General inspection, 19th July.

Numbers enrolled :—Boys, 28 ; girls, 29 ; total, 57. Numbers present :—Boys, 28 ; girls, 28 ; total, 56.

1. Weather-sheds are needed, and the premises require painting. Otherwise the material condition is satisfactory, and the school is well found in appliances. 2. Four-fifths of the pupils attend regularly ; their punctuality is still better. Those present are neat, cheerful, and in fair order. The tone of the school is reasonably satisfactory. 3. The course of instruction is complete. The classification is judicious, and the instruction is skilfully regulated. The methods are modern, and the teaching is diligently prosecuted. The average proficiency is fair (nearly) ; Under the present teacher the school has increased its efficiency and popularity.

PALMER'S ISLAND (V.) :—General inspection, 21st August.

Numbers enrolled :—Boys, 30 ; girls, 24 ; total, 54. Numbers present :—Boys, 24 ; girls, 14 ; total 38.

1. The fence is broken in places. A kitchen for the teacher's residence is needed. The desk accommodation is wholly inadequate. In other respects the material condition is satisfactory, and the organisation very fair. 2. Seven-elevenths of the pupils attend regularly and nearly all punctually. Those present are neat, respectful, orderly, and attentive. The tone of the school is healthy. 3. Singing is omitted from the course of instruction, which is otherwise complete. The pupils are classified correctly ; the instruction is regulated with neatness and skill ; the methods are intelligent, and of more than average merit ; and the teaching is energetic and effective. Under examination the pupils yield a ready attention, and answer with spirit and accuracy. The average proficiency is very fair (nearly).

PORT MACQUARIE (V.) :—General inspection, 8th and 11th November.

Numbers enrolled :—Boys, 49 ; girls, 33 ; total, 82. Numbers present :—Boys, 36 ; girls, 28 ; total, 64.

The premises are in very fair condition. Proximity to the sea accounts for the dampness and discolouration of the eastern walls. The school is well found in furniture and apparatus, but the stock of books is insufficient. 2. Three-fourths of the pupils are regular and punctual. Those present are neat, respectful, and very fairly attentive. Stricter supervision is imperative in the playground. The tone of the school is reasonably healthy. 3. The course of instruction is complete. The classification is suitable. The instructional documents are drawn up with fair skill. Modern methods are used ; and the teaching is reasonably effective. The average proficiency approaches fair.

RAINBOW REACH (V.) :—General inspection, 2nd December.

Numbers enrolled :—Boys, 26 ; girls, 33 ; total, 59. Numbers present :—Boys, 21 ; girls, 27 ; total, 48.

1. The site is neither healthy nor pleasant. The premises are only in tolerable repair, having suffered considerable injury by the late flood. The supply of furniture, apparatus, and books is insufficient. 2. Two-thirds of the pupils are regular, the greater number are punctual. Nearly all are clean, tolerably quiet, and attentive. The discipline has improved. 3. Singing and sewing are omitted from the prescribed course of instruction. The classification and occupation are fairly satisfactory. The methods are of tolerable worth ; and the teaching is industrious, but wanting in thoroughness. The school has improved since last inspection. The average proficiency is tolerable.

RAMORNIE (N.V.) :—General inspection, 25th September.

Numbers enrolled :—Boys, 30 ; girls, 20 ; total, 50. Numbers present :—Boys, 24 ; girls, 15 ; total, 39.

1. The premises are in very fair repair. Additional desk accommodation is needed. The school is well found in apparatus and books. 2. Nine-thirteenths of the pupils attend regularly, a higher proportion being punctual. The pupils are clean, respectful, orderly, and attentive. The government is judicious, and the tone of the school healthy. 3. Singing excepted, the course of instruction is complete. The classification is correct, and the instruction is well regulated. The methods are modern and the teaching is zealous and effective. The average proficiency is from fair to very fair.

ROCKY MOUTH (V.) :—General inspection, 26th August.

Numbers enrolled :—Boys, 41 ; girls, 31 ; total, 72. Numbers present :—Boys, 33 ; girls, 24 ; total, 57.

1. An additional water-closet is needed, and the desk accommodation is insufficient. The school is pleasantly situated, and very fairly organised. 2. Two-thirds of the pupils are regular, and nearly all punctual. Those present are tolerably neat, orderly, and attentive. The government to be effective must be firmer. 3. Except singing, all the prescribed subjects are taught. The pupils are properly classified, and the instruction is fully regulated. The methods are modern, the average proficiency is from fair to very fair.

SEVEN OAKS (V.) :—General inspection, 30th November.

Numbers enrolled :—Boys, 50 ; girls, 42 ; total, 92. Numbers present :—Boys, 42 ; girls, 38 ; total, 80.

1. The premises are old, and present a mean and dingy appearance. The accommodation is altogether

altogether insufficient, and the supply of furniture, apparatus, and books is inadequate. 2. Two-thirds of the pupils are regular and three-fourths punctual. Several children—mostly new scholars, are untidy, restless, and indisposed to work. The majority, however, are clean, industrious, and attentive. In other respects the discipline is reasonably effective. 3. All the prescribed subjects are taught. The pupils are classified with passable judgment, and the instruction is regulated by the usual guides. Methods of ordinary value are in use. The average proficiency is fair (nearly).

SOLFERRINO (N. V.) :—General inspection, 16th October.

Numbers enrolled :—Boys, 14 ; girls, 27 ; total, 41. Numbers present :—Boys, 12 ; girls, 16 ; total, 28.

The out-offices are in disrepair ; otherwise, the material state is very fair. The furniture is unsuitable and not properly arranged. The supply of working appliances is sufficient. 2. Three-fourths of the pupils are regular and punctual. The majority are tolerably neat, but noisy and indisposed to work. The government is feeble. 3. Drawing and sewing are omitted from the course of instruction. The pupils are suitably classified. The methods are only of moderate worth and effectiveness. The average proficiency is moderate.

SOUTHGATE (V.) :—General inspection, 23rd October.

Numbers enrolled :—Boys, 25 ; girls, 30 ; total, 55. Numbers present :—Boys, 13 ; girls, 14 ; total, 27.

1. The site is low and subject to floods. The material condition and the organisation are fairly satisfactory. 2. Five-sevenths of the pupils attend regularly and nearly all punctually. Measles reduced the numbers on the day of inspection. The children are clean and attentive. Other features of the discipline are satisfactory. 3. Except singing, the course of instruction is complete. The classification is correct, and the instruction regulated with fair skill. The methods are effective—more of thorough energetic application than of absolute worth. Under examination the pupils answer with care. Their distinct utterance deserves special notice. The average proficiency exceeds fair.

SMITH'S FLAT (V.) :—General inspection, 14th October.

Numbers enrolled :—Boys, 19 ; girls, 28 ; total, 47. Numbers present :—Boys, 12 ; girls, 25 ; total, 37.

1. Improvements are in progress, which, when completed, will render the material condition satisfactory. New desks are also being made. An additional black-board is required ; and the stock of books is inadequate. 2. Two-thirds of the pupils are regular and punctual. The discipline in other respects is very satisfactory. 3. All the prescribed subjects are taught. The classification is correct ; and the instruction is regulated with skill and marked neatness. Modern, suitable, and effective methods are practised. The average proficiency exceeds fair.

STRONTIAN PARK (N. V.) :—General inspection, 27th October.

Numbers enrolled :—Boys, 13 ; girls, 25 ; total, 38. Numbers present :—Boys, 7 ; girls, 15 ; total, 22.

1. The premises are old, small, and totally unfit for school purposes. The furniture is unsuitable, and for want of room improperly arranged. 2. Three-fourths of the pupils attend regularly ; all are punctual. The low attendance on the day of inspection was owing to the measles. Those present are quiet, clean, and attentive. The moral tone is healthy. 3. All the prescribed subjects are taught. The pupils are properly classified ; and the instruction is regulated with fair skill. The methods are modern ; and the teaching is industrious and fairly effective. The average proficiency is fair (nearly).

SUMMERLAND (V.) :—General inspection, 1st December.

Numbers enrolled :—Boys, 17 ; girls, 28 ; total, 45. Numbers present :—Boys, 14 ; girls, 23 ; total, 37.

1. The premises are old and in disrepair, but present a tolerably decent exterior. New out-offices and additional desks are required. The residence is too small for the present teacher's family. The supply of apparatus and books meets the requirements. 2. Three-fifths of the pupils are regular and punctual. The government and tone of the school show improvement since last inspection. Except singing, the course of instruction is complete. The pupils are properly classified ; the lesson documents are drawn up with tolerable skill and neatness. The methods are of average worth, and the teaching is now conducted with increased zeal and success. The average proficiency is from tolerable to fair.

SWAN CREEK (V.) :—General inspection, 6th October.

Numbers enrolled :—Boys, 34 ; girls, 21 ; total, 55. Numbers present :—Boys, 26 ; girls, 19 ; total, 45.

1. Except that the wood-work needs painting, the material condition is very good. The school is fully equipped, and the whole property is neatly kept. 2. Four-fifths of the pupils are regular and punctual. The majority are neat, respectful in demeanour, and attentive. The government is firm, and secures a healthy moral tone. 3. The course of instruction is complete. The classification is suitable ; and the instruction is neatly and skilfully regulated. The methods are modern and effective. The average proficiency is from fair to very fair.

TALOOMBI (V.) :—General inspection, 23rd August.

Numbers enrolled :—Boys, 19 ; girls, 21 ; total, 40. Numbers present :—Boys, 14 ; girls, 21 ; total, 35.

1. The school is favourably situated, and well found in appliances. The organisation is satisfactory. The property is neatly kept. 2. Three-fifths of the pupils attend regularly ; the punctuality is less satisfactory. The pupils are clean, respectful, and in fair order. 3. The prescribed range of subjects is taught. The children are correctly classified ; and the instruction is well regulated, and imparted by reasonably effective methods. The average proficiency is from tolerable to fair.

TIRRANNIA CREEK (N. V.) :—General inspection, 20th July.

Numbers enrolled :—Boys, 13 ; girls, 16 ; total, 29. Numbers present :—Boys, 11 ; girls, 11 ; total, 22.

1. The school is held in temporary premises. The furniture is unsuitable, but sufficient in quantity. Additional maps and books are required. 2. Two-thirds of the pupils are regular and punctual. The majority are clean and respectful. They yield a passive attention, but are very shy. The tone of the school is only moderately healthy. 3. Singing is omitted from the course of instruction, which is otherwise complete. The classification is tolerably suitable. There are no lesson documents. The methods are of moderate worth ; and the teaching is wanting in energy. Under examination the pupils are subdued, but answer neither with self-reliance nor animation. The average proficiency is barely moderate.

ULMARRA (V.) :—General inspection, 20th September.

Numbers enrolled :—Boys, 43 ; girls, 35 ; total, 78. Numbers present :—Boys, 29 ; girls, 27 ; total, 56.

1. The premises are old and unsuitable. There is neither weather-shed nor lavatory. The site is too small. The organisation is as perfect as circumstances will permit. 2. Three-fourths of the pupils are regular ; all attend punctually. Those present are neat, attentive, and in fair order. The discipline in other respects is satisfactory. 3. In addition to the prescribed range of subjects, instruction in Euclid, Algebra, and Latin is given to the fourth class. The pupils are suitably classified, and the instruction is judiciously regulated. Modern methods are used ; and the teaching is marked by earnestness and industry. The average proficiency is very fair +.

WOODFORD

WOODFORD DALE (V.):—General inspection, 28th September.

Numbers enrolled:—Boys, 12; girls, 17; total, 29. Numbers present:—Boys, 12; girls, 14; total, 26.

1. The premises need painting and minor repairs. The accommodation is in excess of the requirements. The school is amply found in all requisites. The property is well kept, and the general aspect is pleasing. 2. Seven-tenths of the pupils are regular and *all* punctual. The government is reasonably effective. 3. The pupils are classified with judgment, and the instruction is regulated with fair skill. The methods are of average merit; and the teaching is painstaking—exceeds fair.

WOODFORD LEIGH (V.):—General inspection, 29th September.

Numbers enrolled:—Boys, 20; girls, 26; total, 46. Numbers present:—Boys, 19; girls, 26; total, 45.

1. The premises need painting. Weather-sheds and additional desks are also required. The property is well kept. 2. Two-thirds of the pupils attend regularly, all punctually. A habit of whispering prevails throughout the school. The government is somewhat lax. 3. The subjects of instruction accord with the prescribed course. The pupils are properly classified; and the instruction is regulated with passable judgment. The methods are suitable and tolerably effective. The average proficiency is fair.

WYRALLAH (V.):—General inspection, 26th July.

Numbers enrolled:—Boys, 13; girls, 21; total, 34. Numbers present:—Boys, 12; girls, 18; total, 30.

1. The grounds are unfenced, the premises need painting, and many of the windows glazing. The school is well found in all necessary appliances. 2. Three-fifths of the pupils are regular; the punctuality is more satisfactory. Nearly all are neat, orderly, and respectful in demeanour. The tone of the school is tolerable. 3. Needlework and singing are not taught, otherwise the range of instruction is complete. The classification is correct, and the instruction is reasonably well regulated. The methods are intelligent; but the teaching lacks vigour and thoroughness. The pupils manifest a becoming demeanour under examination; but, except in the third class, answer with neither self-reliance nor thoughtfulness. The average proficiency is from tolerable to fair.

PROVISIONAL SCHOOLS.

BEECHWOOD:—General inspection, 18th November.

Numbers enrolled:—Boys, 19; girls, 15; total, 34. Numbers present:—Boys, 15; girls, 9; total, 24.

1. The grounds are unfenced; and there are no out-offices. The school-room does not afford adequate accommodation. 2. Five-eighths of the pupils are regular and punctual. Those present are clean, quiet but listless, and in the first class, inattentive. The government is lax. Except sewing, all the prescribed subjects are taught. The pupils are not suitably classified. The methods are elementary; and the teaching is mechanical and lacks vigour. The average proficiency is moderate.

BROMBY:—General inspection, 18th November.

Numbers enrolled:—Boys, 11; girls, 17; total, 28. Numbers present:—Boys, 11; girls, 17; total, 28.

1. The building is centrally situated, in fair condition, and sufficiently commodious. There are no out-offices. The supply of apparatus is inadequate. 2. Four-fifths of the pupils attend regularly, and all punctually. The majority are clean, quiet, orderly, and fairly attentive. The discipline generally is tolerably satisfactory. 3. Singing, drawing, and needlework are omitted from the course of instruction. The classification is suitable. The methods are elementary, but the teaching is painstaking and reasonably successful. The average proficiency is tolerable.

CAMDEN HAVEN:—General inspection, 10th November.

Numbers enrolled:—Boys, 17; girls, 17; total, 34. Numbers present:—Boys, 15; girls, 16; total, 31.

1. The schoolroom is a substantial slab structure, in good repair. The grounds are unfenced, and there are no out-offices. The supply of furniture is insufficient, that of books and apparatus inadequate. 2. Three-fifths of the pupils attend regularly, the majority punctually. The pupils are clean, respectful, tolerably attentive, but dull. The government is lax. 3. Except singing and drawing, the course of instruction is complete. The classification is suitable. The methods are elementary, and the teaching is tolerably effective. The average proficiency is from moderate to tolerable.

CASINO SOUTH:—General inspection, 16th August.

Numbers enrolled:—Boys, 14; girls, 15; total, 29. Numbers present:—Boys, 14; girls, 13; total, 27.

1. The premises are unfenced, and not centrally situated. The supply of furniture and appliances is insufficient. 2. Five-sevenths of the pupils attend regularly; the punctuality is less satisfactory. The children are very clean, but noisy, inattentive, and rude. The government is feeble. 3. All the prescribed subjects, except drawing, are taught. The classification is tolerably correct; the instruction is not skilfully regulated. The methods are of small merit; but the teacher works hard, and is anxious to improve. The average proficiency is moderate+.

COALDALE:—General inspection, 14th October.

Numbers enrolled:—Boys, 11; girls, 11; total, 22. Numbers present:—Boys, 10; girls, 9; total, 19.

1. The material condition is not satisfactory. The furniture though rough is tolerably suitable, and is sufficient for the present attendance. 2. The pupils are regular and punctual. One-half of the number present are clean, and all quiet but very dull. The government is lax. 3. Singing, drawing, and needlework are omitted from the course of instruction. The classification is tolerably suitable. The methods are of an elementary character, but the teaching is painstaking. The average proficiency is from indifferent to moderate+.

COLDSTREAM, LOWER:—General inspection, 23rd September.

Numbers enrolled:—Boys, 13; girls, 14; total, 27. Numbers present:—Boys, 11; girls, 14; total, 25.

1. There are no out-offices. The furniture is unsuitable, and the supply of apparatus and books insufficient. 2. Three-fourths of the pupils attend regularly and punctually. Those present are clean, quiet, tolerably orderly, and attentive. 3. Singing, drawing, and needlework are omitted from the course of instruction. The classification is suitable, and the instruction is properly regulated. The methods are elementary, but vigorously conducted. The average proficiency is from tolerable to fair.

COLDSTREAM, UPPER:—General inspection, 22nd September.

Numbers enrolled:—Boys, 9; girls, 17; total, 26. Numbers present:—Boys, 8; girls, 12; total, 20.

1. The material condition is very fair; and the school is well found in all needful appliances. 2. Nine-thirteenths of the pupils are regular; all attend punctually. The discipline is tolerably satisfactory. 3. Singing excepted, the course of instruction is complete. The instruction is carefully regulated. The methods are of tolerable merit and effect. The average proficiency is tolerable.

ENNIS:—

ENNIS :—General inspection, 15th November.

Numbers enrolled :—Boys, 17; girls, 24; total, 41. Numbers present :—Boys, 16; girls, 22; total, 38.

1. The schoolroom is in tolerable repair; but too small for present requirements, and inadequately supplied with furniture and working materials. 2. The discipline is satisfactory. 3. Needlework excepted, the course of instruction is that prescribed. The classification is suitable; and the instruction fully regulated. The methods are modern and zealously applied. The average proficiency approaches fair.

HARWOOD ISLAND :—General inspection, 20th August.

Numbers enrolled :—Boys, 18; girls, 26; total, 44. Numbers present :—Boys, 11; girls, 19; total, 30.

The premises are unfenced; the out-offices are unsuitable and in disrepair. Additional desks are needed. 2. Three-fourths of the pupils are regular and punctual. The majority are very tidy; and, except in the first class, in fair order. 3. All the prescribed subjects are taught. There are too many pupils in the first class. The instruction is regulated with passable judgment. The methods are mechanical, but the teaching is painstaking. The average proficiency approaches fair.

LAWRENCE :—General inspection, 23th September.

Numbers enrolled :—Boys, 16; girls, 20; total, 36. Numbers present :—Boys, 15; girls, 20; total, 35.

1. There are no out-offices; the grounds are unfenced; and the building is in a dangerous state of disrepair. 2. Three-fourths of the pupils are regular; nearly all attend punctually. In other respects the discipline is tolerable. 3. Except singing, all the prescribed subjects are taught. The classification is correct; and the instruction is regulated with fair skill. The methods are modern and reasonably effective. The average proficiency is fair.

TWEED JUNCTION :—General inspection, 9th August.

Numbers enrolled :—Boys, 15; girls, 11; total, 26. Numbers present :—Boys, 12; girls, 11; total, 23.

1. The schoolroom is a slab structure, in fair repair, but unsuitable and insufficiently furnished and supplied with appliances. 2. Three-fourths of the pupils attend regularly; all are punctual. Those present are tolerably clean, but idle and indisposed to work. The discipline in other respects is only moderately satisfactory. 3. Except singing and drawing, the course of instruction is complete. There are no lesson guides. The methods are elementary. The average proficiency is moderate +.

TYNEDALE :—General inspection, 30th September.

Numbers enrolled :—Boys, 9; girls, 11; total, 20. Numbers present :—Boys, 9; girls, 10; total, 19.

1. The material condition is satisfactory; and the furniture is not properly arranged. 2. Three-fourths of the pupils attend regularly and punctually. Those present are clean, obedient, but inclined to talk. The government is feeble. 3. Singing, drawing, and sewing are omitted from the course of instruction. The pupils are suitably classified. The methods are of moderate worth. The teacher is a very old man. The average proficiency is moderate +.

WARDELL :—General inspection, 28th July.

Numbers enrolled :—Boys, 17; girls, 18; total, 35. Numbers present :—Boys, 13; girls, 10; total, 23.

1. The premises are in tolerable repair; there are no out-offices; the grounds are unfenced; and the organisation is only moderately satisfactory. 2. Three-fourths of the pupils are regular and punctual. In other respects the discipline is tolerably effective. 3. All the prescribed subjects are taught—singing by ear only. The classification is suitable; the instruction is not regulated in the usual way. The methods are of tolerable merit and effect.

WAUCHOPE :—General inspection, 16th November.

Numbers enrolled :—Boys, 12; girls, 16; total, 28. Numbers present :—Boys, 9; girls, 15; total, 24.

1. Out-offices and a verandah to the schoolroom are needed. The supply of furniture and appliances is adequate. 2. Two-thirds of the pupils are regular; but only one-third are punctual. The majority are clean and fairly attentive. The government is lax. 3. Except singing and drawing, all the prescribed subjects are taught. The pupils are correctly classified; and the instruction is well regulated. The methods are elementary; and the teaching is earnest and reasonably successful. The average proficiency exceeds tolerable.

WOLLONGBAR :—General inspection, 21st July.

Numbers enrolled :—Boys, 9; girls, 7; total, 16. Numbers present :—Boys, 9; girls, 7; total, 16.

1. The material state is satisfactory; but the supply of furniture and requisites is insufficient. 2. Nine-tenths of the pupils attend regularly and punctually. The majority are clean, respectful, but very shy. 3. Except singing and drawing, the course of instruction is complete. The classification is suitable. The methods are tolerably intelligent and earnestly applied. The average proficiency is tolerable.

WOMBIAH :—General inspection, 25th August.

Numbers enrolled :—Boys, 17; girls, 12; total, 29. Numbers present :—Boys, 10; girls, 5; total, 15.

Provision for a supply of water is needed; and the premises require painting; otherwise the material condition is very fair. The supply of apparatus is insufficient. Nine-fourteenths of the pupils are regular; nearly all attend punctually. In other respects the discipline is unsatisfactory. 3. Singing and needlework are omitted from the prescribed course of instruction. The classification is faulty; and the instruction is regulated only with tolerable skill. The methods are mechanical, and not energetically applied. The average proficiency is barely moderate.

HALF-TIME SCHOOLS.

DONDINGALONG :—General inspection, 8th December.

Numbers enrolled :—Boys, 5; girls, 3; total, 8. Numbers present :—Boys, 5; girls, 3; total, 8.

1. The premises are centrally situated and in good repair. The supply of furniture, apparatus, and books is adequate. 2. Three-fourths of the pupils are regular, and all attend punctually. The children are neat, orderly, and very attentive. The discipline is very satisfactory. 3. Except singing, all the prescribed subjects are taught. The classification is suitable; the instruction is carefully regulated. Appropriate and effective methods are practised. The average proficiency is from fair to very fair.

PELICAN CREEK :—General inspection, 2nd August.

Numbers enrolled :—Boys, 2; girls, 5; total, 7. Numbers present :—Boys, 2; girls, 5; total, 7.

1. The building is a small slab structure. All external appointments are wanting. The furniture is unsuitable and insufficient, and the supply of appliances inadequate. 2. Nearly all the pupils are

are regular and punctual. Other features of the discipline are only moderately satisfactory. 3. Singing, drawing, and needlework are omitted from the course of instruction. The usual lesson-guides are wanting. The methods are of moderate worth; but the teacher seems industrious and anxious to learn. The average proficiency is barely moderate.

SNERWOOD :—General inspection, 8th December.

Numbers enrolled :—Boys, 5; girls, 7; total, 12. Numbers present : Boys, 5; girls, 6; total, 11.

1. The schoolroom is in very fair repair, and well found in all the requisite appliances. 2. Four-fifths of the pupils are regular. All attend punctually. The discipline is very satisfactory. 3. Except singing, the course of instruction is of full range. The pupils are suitably classified; the instruction is judiciously regulated. The methods are modern, and the teaching thorough and successful. The average proficiency is very fair. This school is worked in conjunction with Dondingalong.

TATHAM :—General inspection, 2nd August.

Numbers enrolled :—Boys, 6; girls, 8; total, 14. Numbers present :—Boys, 6; girls, 7; total, 13.

1. The grounds are unfenced; there are no out-offices. The supply of furniture and appliances is insufficient, and the records are incomplete. 2. Five-sixths of the pupils are regular and punctual. The government is feeble. 3. Singing and needlework are omitted from the prescribed course. The instruction is not well regulated. The methods are of moderate worth. The average proficiency is from moderate to tolerable. This school is worked with Pelican Creek.

MAITLAND DISTRICT.

INSPECTOR'S General Report upon Schools for 1875.

As regards the adequacy of the means of education, the Maitland District is in a reasonably satisfactory condition. There are now comparatively few centres of population where schools, Public or Denominational, are not established or in course of establishment. There are, however, places here and there, especially in out of the way mountainous districts, where families are so few and far apart as to preclude the possibility of readily grouping their children in tens or twelves for Half-time School instruction; and how such children are to be educated is a matter for further legislation, and one that is surrounded by almost insuperable difficulties. Half-time Schools in general do not meet with the public favour they merit, and the establishment of Provisional Schools is not infrequently delayed by the inability or difficulty of people providing the requisite school premises and furniture, by occasional difficulties in securing the services of suitable teachers, and by the operation of that not very popular regulation which virtually excludes small districts, even those permanently settled, from participating in the funds provided for the erection of Public Schools. The people of such districts are generally free selectors or tenant farmers, many of whom are too poor to defray the full cost of providing and furnishing small schools. Among such people in particular, and indeed throughout the district, the recent resolution of the Legislative Assembly, to the effect that local aid towards the cost of erecting Public Schools is no longer to be exacted, meets with general approval; and it is confidently expected that the benefits of such a policy will be extended to permanently settled districts in need of small schools of which it cannot be affirmed with certainty that they will ultimately become Public Schools. Speaking generally, the schools of the district are well distributed, there being two cases only where the prescribed school areas of operation overlap each other and thus give rise to undesirable competitions for numbers, as well as afford unreasonable parents too much scope for interfering with teachers in the performance of their prescribed duties. There are still several places, however,—Morpeth, Maitland, Lochinvar, Singleton, and Muswellbrook,—where the number of schools is in excess; but such excess is gradually disappearing before the steady increasing enlightenment of parents as to the superior advantages of large schools as regards the concentration of teaching power, and the consequent improvements in the range of instruction—in the quality of the teaching, discipline, and supervision—and in the general progress of their children.

At the close of the year 1874, there were 78 schools or 82 school departments in operation; since when the following changes and improvements in the amount and distribution of the means of education have occurred. Public Schools have been opened at Greta and Paterson, and Provisional Schools at Waverley, Rouchell Brook, Sedgefield, Goungoola, and Mount Rivers; the Vere Provisional School and the Infant Department of the Singleton Public School have been reopened; the certificates of the Morpeth C.E., the West Maitland (St. Paul's) C.E., and the Phoenix Park R.C. Schools have been withdrawn; Falbrook P. has fallen to the rank of a Provisional School; and aid to Belltrees Prov. has been declined because its promoters persisted in employing an incompetent teacher. Respecting the closing of the above-named Denominational Schools, it may be proper to affirm that the withdrawal of their certificates has been rather an educational gain than otherwise; for it has had the simple yet highly beneficial effect of transferring the scholars of languishing and ill-conditioned schools to neighbouring ones in higher states of efficiency, material, moral, and intellectual. It is proper to mention, also, that in addition to the changes and improvements already described, efforts have been made to establish schools in the few remaining centres of population needing them; and it is highly probable that such schools will be brought into operation during the forthcoming half-year, viz., at Giant's Creek, Bridgman or Upper Falbrook, Eccleston, Moonan, Rock Hill, and Hafton or Ballington—applications for which are now under consideration. An application for a Public School at Broke has also been considered, of which it may be remarked that the children guaranteed to attend such school are those now attending the local C.E. school. The new Public School buildings of Scone will be ready for occupation in a month or two. It is also highly probable that a Public School will soon be established at Muswellbrook, action in which direction has been taken by persons dissatisfied with the educational condition of the town, notwithstanding it is provided already with two Certified Denominational Schools, attending which, however, there is a large percentage of other denominations.

During the year 90 school departments have been in operation, all of which have been visited, and 88 of which are now (December, 1875) existing, viz.:—Public, 34; Provisional, 28; Half-time, 6; Church of England, 10; and Roman Catholic, 10. Eighty-four (84) of these have received full inspections, General or Regular, according to the requirements of prescribed rules, and many of them have been incidentally inspected when practicable. It should also be noted that the results of such inspections have been measured by the usual high standards of efficiency—material, disciplinary, and intellectual—in which two latter particulars such standards are within the reach of teachers of real ability, spirited energy, and sterling thoroughness of character.

The material condition of the schools in general continues to improve, and is of reasonably very fair merit, considering that two-thirds of the school properties are not vested in the Council. Most of them are sufficiently commodious for the available children of school age, and are provided with reasonably adequate supplies of furniture and other educational appliances; but the majority of them are still more or less in need of such necessary requisites as water-tank, lavatory, bell, or weather-shed, and a few Provisional Schools are still in need of additional furniture of one kind or another,—but chiefly

chiefly desks, book-presses, and clocks. Several school buildings, Public and Provisional, have been repaired and made more comfortable, and action has been taken, not only to repair others, but also to provide the Public Schools of Bishop's Bridge, Gosforth, Cessnock, Lochinvar, Paterson, Muswell Creek, and Murrurundi, with new and superior school premises; and those of Singleton, Hinton, Maitland, and Morpeth, with additional accommodation. Estimating the different classes of schools, in point of their material condition and organisation, they stand thus:—Public Schools, very fair; Provisional Schools, tolerable; Half-time Schools, tolerable; and Denominational Schools, very fair.

According to the School Returns annual and quarterly, the total enrolments of scholars during the year have been 7,158; the average quarterly enrolments, 5,366; and the average weekly attendances, 3,317. Now, in comparing these numbers with those of last year, there are found to be in the first two particulars increases of 11½ and 4½ per cent. respectively; and in the last particular, the very small decrease of 1-110ths per cent. These increases may be accounted for in three ways—the increase in the number of schools, the prolonged enrolment of scholars, and the admission of strangers; and the decrease is due to the occurrence of unusually high floods in March, to the prevalence of epidemics, and indirectly to the present drought. These phenomena have also injuriously affected the regular attendance of scholars; for last year the centesimal rate of regularity was 65, whereas it is only 61 this year. Again, comparing the average weekly attendances with the total annual enrolments, there are found to be no less than 3,841 children whose attendance may possibly have been only one day in each quarter, in order to justify their enrolment. Such a view of the case is doubtless an extreme one, but it is nevertheless clear that, exclusive of those children who never enter a school, there is an enormous number of children who must derive but a small fleeting benefit from the large sums of money expended yearly to promote their advancement in virtue and intelligence. It is clear also that if New South Wales desires to prove herself wise and prudent, she must insist upon her young ones attending the schools that have cost her so much money, trouble, and anxiety to provide.

The state of the attendance, as exhibited on the days of inspection, and as compared with the previous two years' results, is as follows:—

	1873.	1874.	1875.	
Public Schools inspected	40	60	64	Increase, 60 per cent.
Denominational Schools inspected.....	28	22	20	Decrease, 28½ per cent.
Public School children examined	1,458	2,139	2,524	Increase, 63 per cent.
Denominational School children examined	1,722	1,381	1,179	Decrease, 31½ per cent.

The disciplinary condition of the schools is, on the whole, their best feature, and may be regarded as reasonably satisfactory in point of tone, intelligence, and efficiency. In about two-thirds of the schools, chiefly Public, the condition ranks from the standard mark, fair, to very good; in two or three cases only is it radically faulty and censurable; and in the rest, most of which are small Provisional Schools conducted by untrained teachers in the receipt of small salaries, it is healthy and promising, but one or two degrees below the standard requirements as regards punctuality, neatness, and cleanliness of appearances, details of order and regularity, the demeanour and conduct of the pupils, the quality of the government, and the pervading spirit of the school. In about forty schools, the efficiency and tone of the discipline is one or two degrees higher than what is expected of the teachers in terms of their grades of classification, and in four or five instances only is it below the prescribed requirements.

The character of the instruction is in general less satisfactory than that of the discipline in point of intelligence, progress, and efficiency, the results of the examinations in the majority of the schools (69) being one or two degrees below the prescribed standard requirements. This defect is mainly attributable to the irregular attendance of the scholars and to the untrained condition and inadequate competency of the teachers of the small Provisional Schools. It also arises more or less from a lack of thoroughness, vigour, and impressiveness in the teaching; from the lax supervision of the classes silently at work; and from the infrequency and partial efficiency of the examinations, oral and silent. It is gratifying to observe, however, that there are few cases in which the defect can clearly be traced to the apathy, indolence, or wilful negligence of the teachers. It should be noted, also, that in 9-14ths of the schools the efficiency of the instruction is up to or above what is required of the teachers to produce in accordance with their grades of classification, and that in the rest (5-14ths) it is not commensurate with such grades, owing partly to well-marked irregularities in the attendance, and to the recent enrolment of scholars, but mainly to feebleness or lack of skill in the teaching. In the majority of the schools the prescribed subjects are taught, the classification of the pupils is judicious, and the lesson documents are reasonably well framed and observed. In one-fifth of them singing, drawing, and object lessons are more or less neglected—the promotions from class to class advance slowly, and the time-tables and programmes of lessons are rendered next to useless by their lax observance. One remarkable feature of the schools in this district, is the almost entire absence of fourth classes, there being but five instances in which the attendances are so large as to render it expedient and possible to form such classes, appoint additional teachers, improve the quality of the instruction, and extend the course of studies to one or more of these subjects—Geometry, Algebra, Mensuration, Latin, and Military Drill. This feature is one that blemishes the reputation of our school system, that causes elder scholars to be drafted from the school to the workshop too early, and that ought, therefore, to be wiped away by the concentration of children into large schools when practicable.

The efficiency of the teaching in the various subjects of instruction may be inferred from the following centesimal estimate of the numbers who succeeded in reaching and passing the prescribed standards of proficiency:—Latin, 90; Sewing, 88; Geometry, 87; Algebra, 82; Writing, 76; Mensuration, 64; Drawing, 63; Scripture, 50½; Reading, 47; Object Lessons, 42; Music, 49; Geography, 37; Grammar, 32½; Dictation, 31; Arithmetic, 21. But in the comparison of these numbers, it is necessary to remember that the pupils learning the extra subjects, Latin, Geometry, Algebra, and Mensuration, form but a small fractional part (3½ per cent) of those instructed in the ordinary subjects, and that the former subjects receive more attention than the latter do as home lessons. It is also expedient to invite particular attention to the fact that the least satisfactory subjects of the instruction in regard to results are Arithmetic, Spelling, and Composition, notwithstanding the highly important influence which a knowledge of them exercises in fitting young people to meet effectively the exigencies of social life. Classifying the schools, and estimating their intellectual condition according as they reach, pass, or fail to meet the prescribed standard of requirements, they stand thus:—

	Public.	Denominational.
Up to the standard	3	...
Above „ „	13	1
Below „ „	48	19

These numbers are an improvement on those of last year, and also an indication of progress in the Public Schools particularly. It is necessary to observe, also, that among the schools ranked below the standard are some that have approached it nearer this year than last, and there is reason to believe that, but for the prevalence of sickness and partial floods, the condition of the schools would have appeared to far better advantage.

The teachers are on the whole respectable, trustworthy, and attentive to their duties. Among them are several who perform their work with pleasing zeal, painstaking, and superior ability. The majority produce results commensurate with their grades of classification, and the remaining small minority fail to meet existing requirements in consequence of their deficiencies in vigour, intelligence, and ambition. The teachers of the Provisional Schools continue to render the country reasonably useful service, and it is pleasing to observe how most of them strive to maintain respectability of appearance notwithstanding the inadequacy of their incomes.

The local supervision has improved but little during the year. In a few instances it is active and beneficial, fairly so in about one-half of the schools, and unsatisfactory in the rest. In most of the Denominational Schools it is confined to the clergy, many of whom manifest a pleasing interest in the well-being of their schools.

Summing up. The number of schools is steadily increasing, and is close upon satisfying the educational exigencies of the district; but the attendance is comparatively very low and irregular. The material condition and organisation are also steadily improving, and on the whole reasonably satisfactory. In two-thirds of the schools the discipline is sound, intelligent, and improved, and in the rest insufficiently vigilant, exacting, and beneficial. The efficiency of the instruction, however, is less satisfactory, and is below the prescribed standards in 69.84ths of the schools; but it is a little better than it was last year, and is on the whole tolerably satisfactory.

Summaries of reports upon the schools inspected during the year are annexed hereto.

J. S. JONES,
Inspector,
Maitland District.

East Maitland, 8-1-76.

SUMMARY of Reports upon Public Schools inspected in 1875.

ABERDEEN (N.-V.) :—Regular inspection, 30th August.

Numbers enrolled :—Boys, 18; girls, 24; total, 42. Numbers present :—Boys, 9; girls, 10; total, 19.

1. School held in a church; material organisation moderate; water-tank, lavatory, weather-shed, and better furniture needed; stock of apparatus adequate; general aspect bare and untidy. 2. Co-efficient of regular attendance 7-10ths; punctuality, fair; government, mild and fairly intelligent; fair order and diligence maintained; time-table not strictly observed; schoolroom and scholars not sufficiently neat and clean. 3. Prescribed subjects taught except singing and sewing; instruction fairly well regulated; teaching fairly skilful and painstaking. 4. Average proficiency of pupils tolerable to fair.

ABERGLASSLYN (V.) :—Regular inspection, 20th May.

Numbers enrolled :—Boys, 25; girls, 15; total, 40. Numbers present :—Boys, 14; girls, 12; total, 26.

1. Material organisation, moderate; aspect dingy; sundry repairs, bell, lavatory, and additional furniture needed; school records tolerable. 2. Attendance decreased, unpunctual, and irregular; discipline feeble and moderately satisfactory. 3. Prescribed subjects professedly taught; grammar, geography, object lessons, and Scripture lessons neglected; lesson documents not strictly followed; teaching feeble and moderately skilful. 4. Average proficiency and progress of pupils unsatisfactory.

BISHOP'S BRIDGE (N.-V.) :—Regular inspection, 28th July.

Numbers enrolled :—Boys, 29; girls, 20; total, 49. Numbers present :—Boys, 22; girls, 15; total, 37.

1. Material organisation defective; new school premises and furniture needed and about to be provided; supply of apparatus tolerable; school records in arrears and not accurately kept. School fees not regularly paid. 2. Punctuality of attendance very fair; rate of regularity, 2-3rds.; discipline healthy, improved, and fair. 3. Prescribed subjects taught except singing; lesson documents of fair merit; classification low in point of age; teaching, tolerably skilful, and improved in vigour and industry. 4. Average proficiency of pupils, from tolerable to fair.

BRANXTON (V.) :—Incidental inspection, 30th April.

1. Sundry repairs, lavatory, and weather-shed needed; material organisation and internal appointments are good. General aspect respectable. 2. Punctuality of attendance very fair; rate of regularity, 2-3rds.; government healthy and intelligent; conduct and appearance of scholars reasonably satisfactory; very fair order and diligence maintained. Moral tone pleasing. 3. Usual examination of pupils omitted for lack of opportunity.

BROKENBACK (V.) :—Regular inspection, 15th April.

Numbers enrolled :—Boys, 25; girls, 33; total, 58. Numbers present :—Boys, 17; girls, 22; total, 39.

1. Weather-shed, lavatory, and tank needed; material organisation otherwise satisfactory. 2. Attendance increased and tolerably punctual; rate of regularity only 5-9ths; government sound and intelligent; very fair order maintained; pleasing attention given to neatness and cleanliness of appearances. Moral tone very fair. 3. Singing not taught; course of instruction otherwise complete and well regulated; classification appropriate; teaching earnest and very fairly skilful. 4. Average proficiency of pupils nearly fair. Answering not adequately regular and spirited.

CAMPSIE (V.) :—Incidental inspection, 26th February.

This school was visited for the usual regular inspection, but because of very wet weather and the consequent low attendance there was no examination of the five pupils present.

1. A bell, water-tank, and lavatory needed; material organisation otherwise satisfactory, and appearances neat and clean. 2. Attendance very low and irregular, owing to sparseness of population. School fees low and badly paid. 3. Lesson documents of very fair merit, and course of instruction apparently complete.

CRESSNOCK (N.-V.) :—Regular inspection, 18th August.

Numbers enrolled :—Boys, 27; girls, 38; total, 65. Numbers present :—Boys, 20; girls, 19; total, 39.

1. Material organisation unsatisfactory; school-house too small and ineffectual; new school premises and furniture urgently needed; supply of working materials tolerable. 2. Attendance increased, tolerably punctual, and two-thirds regular; government fairly intelligent; pupils fairly well-behaved and orderly, tolerably neat and clean, deficient in culture and zeal; schoolwork deficient in vigour. 3. Prescribed subjects taught except singing; time-table incomplete; programmes of lessons, nil; classification, fair; teaching tolerably intelligent but feeble in point of vigour and efficiency. 4. Average proficiency of pupils moderate.

DEKMORE (V.) :—Regular inspection, 13th May.

Numbers enrolled :—Boys, 43; girls, 44; total, 77. Numbers present :—Boys, 28; girls, 35; total, 63.

1. Repairs to teacher's residence, water-tank, lavatory, weather-shed, and playground fence needed; material organisation otherwise satisfactory. 2. Attendance increased, apparently punctual but irregular; government healthy and effective; appearances neat and clean; pupils orderly and well-behaved but not sufficiently smart and active. Moral tone good in general. 3. Course of instruction complete and third-class range; lesson documents suitable, but classification low and otherwise defective. Teaching earnest, painstaking, and intelligent; additional animation and attention to examinations needed. 4. Average proficiency of pupils fair. Weak subjects of instruction: dictation, arithmetic, and geography.

ELLALONG (V.) :—Regular inspection, 16th April.

Numbers enrolled :—Boys, 11 ; girls, 23 ; total, 34. Numbers present :—Boys, 10 ; girls, 22 ; total, 32.

1. Material organisation moderate ; repairs, additional furniture, water-tank, lavatory, bell, and weather-shed needed. General aspect clean but humble. 2. Attendance low, unpunctual, and irregular ; government tolerably intelligent but not sufficiently exacting and determined ; pupils tolerably orderly and well-behaved, but only moderately zealous and diligent. Moral tone barely tolerable. 3. Course of instruction complete, of third-class range, and tolerably well regulated ; teaching earnest and painstaking, but only moderately skilful, stimulating, and impressive. 4. Average proficiency of pupils moderate and improved. Dictation, moderate ; arithmetic, grammar, and geography, indifferent.

FISHERY CREEK (V.) :—Regular inspection, 11th May.

Numbers enrolled :—Boys, 17 ; girls, 14 ; total, 31. Numbers present :—Boys, 16 ; girls, 12 ; total, 28.

1. Material organisation fair ; repairs, water, lavatory, and a few articles of furniture needed ; school records very fairly well kept. 2. Attendance decreased and irregular but fairly punctual ; government tolerably intelligent ; appearance reasonably neat and clean ; pupils fairly orderly and well-behaved, but deficient in smartness, vivacity, and self-reliance. Moral tone tolerable and promising. 3. Course of instruction complete and third-class range ; lesson documents of fair merit ; teaching earnest, diligent, and tolerably vigorous and skilful. Examinations partially effective. 4. Average proficiency of pupils moderate ; present teacher but recently appointed.

GOSFORTH (V.) :—Regular inspection, 29th July.

Numbers enrolled :—Boys, 23 ; girls, 27 ; total, 55. Numbers present :—Boys, 15 ; girls, 15 ; total, 30.

1. Schoolroom too small for three classes ; teacher's residence inferior ; water-tank, lavatory, weather-shed, and repairs needed ; furniture superior and fairly sufficient. 2. Attendance increased, punctual, and tolerably regular ; government sound and intelligent ; order good ; pupils diligent and well-behaved and fairly intelligent ; moral tone very fair and promising. 3. Course of instruction complete, of third-class range, and appropriately regulated. Methods of fair merit ; teaching zealous and painstaking ; progress of pupils reasonably satisfactory. 4. Average proficiency of pupils improved and fair.

GRETA (V.) :—General inspection, 14th June.

Numbers enrolled :—Boys, 99 ; girls, 115 ; total, 214. Numbers present :—Boys, 73 ; girls, 59 ; total, 132.

1. Accommodation very inadequate, necessitating the hire of an additional schoolroom ; material organisation otherwise superior and satisfactory. 2. Attendance considerably increased ; punctuality very fair ; rate of regularity only 114-197ths ; government healthy and intelligent ; order reasonably satisfactory ; general demeanour and conduct of pupils very fair. Moral tone sound and reasonably satisfactory. 3. Course of instruction complete, of third-class range, and well regulated ; classification judicious ; methods of fair average merit ; teaching zealous and painstaking. 4. Average proficiency of pupils from moderate to tolerable ; school but recently opened—teacher therefore not responsible for low results.

HUSTON (V.) :—Regular inspection, 11th and 12th May.

Numbers enrolled :—Boys, 58 ; girls, 46 ; total, 106. Numbers present :—Boys, 54 ; girls, 40 ; total, 94.

1. Material condition and organisation good ; class-room, lavatory, and additional out-office needed ; general aspect respectable. 2. Attendance well maintained—two-thirds thereof punctual and regular ; government sound and effective ; appearances neat and clean ; order good ; general conduct and demeanour of pupils creditable. Moral tone good. 3. Prescribed subjects taught except singing ; instruction well regulated ; teaching zealous, painstaking, and skilful ; progress of pupils satisfactory. 4. Average proficiency of pupils good ; arithmetic and grammar fair.

LAGUNA (V.) :—Regular inspection, 22nd April.

Numbers enrolled :—Boys, 28 ; girls, 18 ; total, 46. Numbers present :—Boys, 28 ; girls, 18 ; total, 46.

1. Material condition and organisation improved and fair ; appointments adequate ; general aspect clean and comfortable. Flower garden pleasing. 2. Attendance increased and fairly regular and punctual ; government healthy, fairly intelligent, and stimulating ; appearances clean and respectable ; very fair order maintained ; pupils reasonably well-behaved but not sufficiently smart and active. 3. Course of instruction complete, of third-class range, and fairly well regulated ; teaching earnest and tolerably skilful ; examinations insufficiently frequent and effective ; home lessons feeble. 4. Average proficiency of pupils tolerable to fair. Dictation and singing moderate.

LOCHINVAR (N.-V.) :—Regular inspection, 4th August.

Numbers enrolled :—Boys, 39 ; girls, 24 ; total, 63. Numbers present :—Boys, 28 ; girls, 15 ; total, 41.

Situation and material character of the school defective, new school premises needed ; supply of apparatus adequate ; bell, lavatory, and book-press needed ; condition of school records unsatisfactory ; interior aspect untidy. 2. Attendance increased but unpunctual and irregular ; government lax and feeble ; neatness and cleanliness of appearance laxly observed ; class movements disorderly ; playground supervision neglected. Moral tone unsatisfactory and unimproved. 3. Prescribed subjects professedly taught ; lesson documents laxly observed ; classification low and unsettled ; teaching feeble and desultory. 4. Average progress and proficiency of pupils moderate. Arithmetic, geography, object lessons, indifferent.

EAST MAITLAND (V.) :—Regular inspection, 2nd to 5th November.

Numbers enrolled :—Boys, 118 ; girls, 90 ; total, 208. Numbers present :—Boys, 88 ; girls, 69 ; total, 147.

1. Material condition and organisation improved and reasonably satisfactory ; lavatory and additional water-tank needed ; school well found in apparatus and furniture. 2. Attendance steadily increasing ; average rate of regularity (133-206ths) injuriously affected by sickness ; punctuality very good ; government mild, sound, and effective ; appearances neat and clean ; very good order maintained ; general conduct and demeanour of pupils reasonably satisfactory. Moral tone very good. 3. Course of instruction complete, of fourth-class range and well regulated—Geometry, Algebra, Latin, Mensuration, and Military Drill included ; classification fair ; teaching zealous, painstaking, and skilful. 4. Average proficiency of pupils good.

WEST MAITLAND (Boys—V.) :—Regular inspection, 23rd to 26th November.

Number enrolled :—Boys, 208. Number present :—Boys, 208.

1. Weather-shed now provided ; material organisation complete and superior ; cleanliness and care of property only partially satisfactory ; school records incomplete. 2. Attendance punctual, but decreased ; rate of regularity 2-3rds ; government intelligent but not sufficiently strict and vigilant ; washing arrangements and playground supervision defective ; moral tone very fair. 3. Course of instruction complete, of fourth-class range and well regulated—Geometry, Algebra, Latin, Mensuration, and Military Drill included ; teaching zealous, painstaking, and skilful ; steady progress made by pupils. 4. Average proficiency of pupils good. Singing arrangements defective.

WEST

WEST MATTLAND (Girls—V.) :—Regular inspection, 16th to 19th November.

Number enrolled :—Girls, 123. Number present :—Girls, 96.

1. Weather-shed now provided; small closet for brooms, &c., needed; material organisation of superior character, and working materials ample. 2. Attendance slowly increasing; punctuality good; rate of regularity 6-10ths; government firm and intelligent; playground occasionally untidy; appearances otherwise neat and clean; pupils orderly and well-behaved, zealous and diligent; moral tone sound and very good in general. 3. Course of instruction complete, well regulated, and of fourth-class range; occupation of pupils well maintained; teaching zealous, painstaking, and skilful; progress of pupils reasonably satisfactory. 4. Average proficiency of pupils good.

WEST MATTLAND (Infants—V.) :—Regular inspection, 19th, 22nd November.

Numbers enrolled :—Boys, 86; girls, 64; total, 150. Numbers present :—Boys, 64; girls, 42; total 106.

1. Accommodation and supply of furniture inadequate; new infant schoolroom needed; supply of apparatus appropriate and ample. 2. Attendance steadily increasing and very fairly punctual; rate of regularity only 88-151, injuriously affected by epidemics; government mild, sound, and intelligent; good order maintained; conduct and appearance of pupils pleasing; moral tone healthy and pleasing. 3. Course of instruction appropriate and well regulated; classification judicious; teaching zealous, stimulating, and intelligent; management of lower divisions somewhat weak; progress of pupils reasonably satisfactory. 4. Average proficiency of pupils very fair.

MILLEFIELD (V.) :—General inspection, 19th April.

Numbers enrolled :—Boys, 19; girls, 25; total, 44. Numbers present :—Boys, 13; girls, 20; total, 33.

1. Material condition and organisation much improved by the purchase of schoolhouse, teacher's residence, and spacious playground; supply of furniture and apparatus adequate; water-tank, lavatory and bell needed. 2. Attendance decreased by sickness and not satisfactorily regular and punctual; population scattered, roads bad; government improved, firm, and very fairly intelligent; order and cleanliness of appearance very fair; conduct and demeanour of pupils improved and fair. Moral tone healthy and very fair. 3. Prescribed subjects taught except singing; occupation judiciously regulated; teaching animated and fairly intelligent; progress of pupils reasonably satisfactory. 4. Average proficiency of pupils improved and fair.

MORFETH (V.) :—Regular inspection, 21st, 23rd, 25th, 29th October.

Numbers enrolled :—Boys, 108; girls, 89; total, 197. Numbers present :—Boys, 85; girls, 67; total, 152.

1. Additional accommodation, lavatory, weather-shed, and teacher's residence needed and about to be provided; material organisation otherwise satisfactory; general aspect respectable. 2. Attendance increased 20 per cent.; punctuality good; rate of regularity (129-189ths), injuriously affected by sickness; government mild, sound, and effective; pupils clean, cheerful, orderly, and well-behaved, but somewhat deficient in zeal and smartness. Moral tone good and promising. 3. Course of instruction complete, well-regulated, and of fourth-class range; occupation of pupils well sustained; first class too large for the management of a pupil teacher; teaching zealous, painstaking, and intelligent; pupils progressing favourably. 4. Average proficiency of pupils from very fair to good, reduced by influx of new scholars.

MURRURUNDI (V.) :—Regular inspection, 28th, 29th September.

Numbers enrolled :—Boys, 43; girls, 48; total, 91. Numbers present :—Boys, 34; girls, 42; total, 76.

1. School premises old, ill-planned, dilapidated, and unsuitable; new buildings, furniture, and other appointments about to be provided; supply of working materials adequate; general aspect discreditable; school records well kept. 2. Attendance in excess of accommodation; punctuality unsatisfactory; rate of regularity low (66-112ths); government earnest and fairly intelligent, but not sufficiently strict and vigilant in the lower classes, and enfeebled by the defective organisation; moral tone from tolerable to fair. 3. Prescribed subjects taught except singing; occupation of lower divisions insufficiently regular and vigorous; teaching earnest and tolerably skilful; teaching staff inadequate. 4. Average proficiency of pupils tolerable; dictation, arithmetic, and sewing, indifferent.

MUSWELL CREEK (N.-V.) :—Regular inspection, 31st August.

Numbers enrolled :—Boys, 30; girls, 17; total, 47. Numbers present :—Boys, 23; girls, 14; total, 37.

1. Material organisation moderate, new school premises needed, also lavatory, out-offices, water-tank, weather-shed, and bell; supply of working materials adequate; general aspect, inferior. 2. Attendance steadily maintained, tolerably punctual, but irregular (yearly rate 28-52nds); government mild and tolerably intelligent and exacting; pupils tolerably clean, orderly, and diligent; moral tone healthy and tolerably satisfactory. 3. Course of instruction complete, of third-class range, and tolerably well regulated; classification fair, teaching earnest and painstaking but only moderately intelligent and profitable. 4. Average proficiency of pupils moderate +; arithmetic, grammar, and geography indifferent.

OSWALD (N.-V.) :—Regular inspection, 16th August.

Numbers enrolled :—Boys, 27; girls, 19; total, 46. Numbers present :—Boys, 12; girls, 11; total, 23.

1. School-house old, too small, ill-ventilated, and unsuitable; exterior appointments inadequate; desks unsuitable; supply of apparatus fairly sufficient. General aspect of inferior merit. 2. Attendance low and irregular; government very fairly intelligent, but not sufficiently invigorating and exacting; appearances neat and clean; pupils fairly orderly and well-behaved, but not adequately zealous, diligent, and painstaking. Moral tone fair in general. 3. Course of instruction complete, of third-class range, and intelligently regulated; time-table not strictly observed; teaching tolerably skilful—not sufficiently stimulating, impressive, and profitable. 4. Average progress and proficiency of pupils barely tolerable and little improved. Dictation, arithmetic, grammar, geography, and Scripture lessons moderate.

PATERSON (N.-V.) :—General inspection, 11th June.

Numbers enrolled :—Boys, 30; girls, 35; total, 65. Numbers present :—Boys, 24; girls, 26; total, 50.

1. Schoolroom rented, and fairly suitable; supply of furniture inferior in quantity and quality; working materials suitable and sufficient. New premises and appointments needed. 2. Attendance increasing and very fairly punctual, rate of regularity 3-4ths; government healthy and intelligent; pupils clean, orderly, and well-behaved; schoolroom overcrowded with extraneous furniture; dismissal of pupils rather irregular; moral tone very fair in general. 3. Prescribed subjects taught, except singing and Scripture lessons; classification judicious; lesson documents of very fair merit; teaching zealous, painstaking, and very fairly skilful. 4. Average proficiency of pupils moderate to tolerable; school but recently opened.

ROUGHT (V.) :—Regular inspection, 7th December.

Numbers enrolled :—Boys, 30; girls, 15; total, 45. Numbers present :—Boys, 15; girls, 11; total, 26.

1. Painting of school premises needed; material condition and organisation otherwise good; schoolrooms somewhat dirty and untidy; school records carelessly kept. 2. Attendance rather low, in consequence

consequence of sickness and harvesting; rate of regularity 7-10ths; government fairly intelligent; pupils fairly orderly and well-behaved, but insufficiently clean, smart, and active; disciplinary details somewhat neglected; moral tone retrograded and tolerable. 3. Prescribed subjects taught, except singing; time-table not regularly observed; programmes of lessons imperfect; teaching tolerably intelligent and painstaking; progress of pupils tolerably satisfactory. 4. Average proficiency of pupils tolerable; grammar, geography, object-lessons, and Scripture lessons moderate.

SINGLETON (Primary—V.) :—Regular inspection, 15th and 16th June.

Numbers enrolled :—Boys, 54; girls, 45; total, 99. Numbers present :—Boys, 38; girls, 30; total, 68.

1. Material condition and organisation good; schoolroom too small; lavatory needed; general aspect clean and respectable. New schoolroom about to be provided. 2. Attendance considerably increased and punctual; rate of regularity 2-3rds; government sound, strict, and effective; appearances neat and clean; pupils orderly, well-behaved, and more spirited and painstaking in their work; moral tone improved, promising, and good. 3. Course of instruction complete, of fourth-class range, and well regulated; occupation of pupils well sustained; teaching spirited, painstaking, and skilful; progress of pupils reasonably satisfactory. 4. Average proficiency of pupils from fair to very fair.

SINGLETON (Infants—V.) :—Regular inspection, 16th June.

Numbers enrolled :—Boys, 37; girls, 33; total, 70. Numbers present :—Boys, 24; girls, 25; total, 49.

1. Accommodation and supply of furniture not sufficient for the attendance; material organisation otherwise good. 2. Attendance steadily increasing, reasonably punctual, and fairly regular; government mild and intelligent; appearances clean and respectable; good order maintained; appearance and demeanour of pupils pleasing; moral tone sound and satisfactory. 3. Course of instruction complete and appropriate; occupation of pupils well sustained; teaching intelligent and pleasingly zealous, painstaking, and animated. 4. Average proficiency and progress of pupils very fair.

N.B.—The aggregate attendance of these two departments is now 2·6 times greater than it was last year.

STANHOPE (V.) :—Regular inspection, 16th and 19th February.

Numbers enrolled :—Boys, 46; girls, 22; total, 68. Numbers present :—Boys, 34; girls, 24; total, 58.

1. School premises old slab structures; schoolroom tolerably suitable; teacher's residence dilapidated and unfit for habitation; supply of working materials adequate; lavatory and weather-shed needed. 2. Attendance steadily maintained and punctual, rate of regularity 48-67ths; government sound and active; appearances neat and clean; conduct and demeanour of pupils reasonably very fair; moral tone healthy and very fair. 3. Course of instruction complete except singing, of third-class range, and well regulated; methods of very fair merit and applied with pleasing energy; progress of pupils reasonably satisfactory. 4. Average proficiency of pupils very fair and improved.

SUGARLOAF (V.) :—Regular inspection, 14th April.

Numbers enrolled :—Boys, 21; girls, 20; total, 41. Numbers present :—Boys, 14; girls, 14; total, 28.

1. Material condition fair, and supply of furniture and apparatus adequate; teacher's residence of inferior merit; lavatory, water-tank, and weather-shed needed; school records somewhat defective. 2. Attendance reduced by withdrawals to neighbouring school; punctuality very fair; rate of regularity 2-3rds; government healthy, firm, and very fairly effective; appearances clean and respectable; pupils orderly and well-behaved, but deficient in energy, painstaking, and mental culture. Course of instruction complete, of third-class range, and fairly well regulated; occupation of pupils feeble; teaching fairly intelligent but insufficiently impressive and examinatory. 4. Average proficiency of pupils barely tolerable.

VACY (N.-V.) :—Regular inspection, 23rd February.

Numbers enrolled :—Boys, 21; girls, 23; total, 44. Numbers present :—Boys, 13; girls, 18; total, 31.

1. School premises, humble slab structures, tolerably commodious but otherwise unsuitable; new buildings and appointments needed; supply of apparatus fair, but old and worn. 2. Attendance not satisfactorily regular and punctual; wire foot-bridge over Allyn Brook needed; government fairly intelligent but not sufficiently spirited and exacting; appearances not sufficiently clean and tidy; moral tone tolerable. 3. Course of instruction complete, except singing; classification low and depressed; lesson documents tolerable, but not strictly observed; teaching earnest and tolerably skilful, not sufficiently impressive, animated, and examinatory; progress of the pupils slow. 4. Average proficiency of pupils barely tolerable; grammar, arithmetic, and geography moderate.

WALLALONG (V.) :—Regular inspection, 3rd June.

Numbers enrolled :—Boys, 24; girls, 30; total, 54. Numbers present :—Boys, 21; girls, 29; total, 50.

1. Sundry repairs needed, also lavatory and weather-shed; material organisation and appointments otherwise satisfactory. General aspect respectable. 2. Attendance well maintained and punctual—7-11ths regular; government healthy and effective; order uniformly good; demeanour and conduct of pupils satisfactory; moral tone good. 3. Course of instruction complete, of third-class range, and well regulated; occupation of pupils well sustained; teaching zealous, painstaking, and intelligent. 4. Average proficiency and progress of pupils very fair.

WARKWORTH (V.) :—Regular inspection, 16th July.

Numbers enrolled :—Boys, 17; girls, 18; total, 35. Numbers present :—Boys, 13; girls, 17; total, 30.

1. Sundry repairs and additions needed; material organisation and appointments otherwise of superior merit; general aspect respectable; school records inaccurate. 2. Attendance reduced by local removals; punctuality not satisfactory; bell needed; rate of regularity 31-45ths; government healthy and intelligent; pupils clean, orderly, and well-behaved—wanting in spirited energy; moral tone very fair. 3. Prescribed subjects taught, and of third-class range; lesson documents appropriate; classification very fair; teaching earnest, spirited, and very fairly intelligent. 4. Average proficiency of pupils tolerable +; dictation moderate.

WOLLOMBI (V.) :—Regular inspection, 18th and 19th April.

Numbers enrolled :—Boys, 35; girls, 27; total, 62. Numbers present :—Boys, 31; girls, 26; total, 57.

1. Material condition clean and comfortable; material organisation and appointments good; lavatory needed; flower garden pleasing. 2. Attendance reduced by labour market and local removals; Government mild, vigilant, and effective; appearances neat and clean; conduct and bearing of pupils satisfactory; moral tone sound, and very good. 3. Course of instruction complete except singing, of third-class range, and well regulated; teaching earnest, painstaking, and intelligent. 4. Answering, progress, and average proficiency of pupils of very fair merit.

SUMMARY of Reports upon PROVISIONAL SCHOOLS inspected in 1875.

BARRAMIE CREEK (N.-V.) :—Regular inspection, 16th September.

Numbers enrolled :—Boys, 15; girls, 10; total, 25. Numbers present :—Boys, 12; girls, 5; total, 17.

1. Material condition and appointments fair and improved; general aspect clean and comfortable; school records incomplete, and class-roll entries inaccurate. 2. Attendance fairly punctual—rate of regularity apparently 19-24ths; government mild and fairly intelligent—not exacting and invigorating enough in regard to class-work; appearance and demeanour of pupils fairly respectable—below the standard in point of animation and culture generally. 3. Course of instruction complete, and of third-class range; lesson documents of tolerable merit, but not strictly observed; classification tolerable; teaching moderately skilful, stimulating, and profitable. 4. Average proficiency of pupils moderate; grammar and geography indifferent; dictation and arithmetic small.

BELLEVUE (N.-V.) :—Regular inspection, 5th October.

Numbers enrolled :—Boys, 14; girls, 12; total, 26. Numbers present :—Boys, 11; girls, 10; total, 21.

1. Schoolhouse suitable; teacher's residence tolerably so; additional furniture needed; general aspect tolerably satisfactory. 2. Attendance tolerably punctual; rate of regularity 5-6ths; government healthy and tolerably intelligent; pupils tolerably clean, orderly, and well-behaved; school work rather feeble; moral tone tolerable. 3. Course of instruction complete, of third-class range, and tolerably well regulated; classification judicious; teaching earnest and tolerably intelligent, but too stiff and feeble. 4. Average proficiency of pupils barely tolerable.

BULOA (N.-V.) :—Regular inspection, 15th July.

Numbers enrolled :—Boys, 11; girls, 15; total, 26. Numbers present :—Boys, 9; girls, 14; total, 23.

1. Sundry repairs, and additional furniture, and water tank needed; schoolroom commodious and substantial, but dingy and ill-ventilated; supply of school requisites tolerably sufficient. Class-roll entries unsatisfactory. 2. Attendance well sustained; rate of regularity, 3-4ths; punctuality moderate, because of the difficulty of crossing the river; government healthy and fair; appearance, demeanour, and conduct of pupils fair; moral tone fair and promising. 3. Prescribed subjects taught except singing and sewing; lesson documents and classification of tolerable merit; teaching, empirical, promising, tolerably vigorous, and intelligent. 4. Average proficiency of pupils tolerable; geography moderate.

CAERGURLE (N.-V.) :—Regular inspection, 25th February.

Numbers enrolled :—Boys, 14; girls, 16; total, 30. Numbers present :—Boys, 11; girls, 13; total, 24.

1. Schoolhouse commodious and suitable; teacher's residence improved, and tolerably suitable; stock of furniture and other requisites tolerably sufficient; desks badly arranged; school fees low and fairly paid. Attendance well maintained and tolerably punctual; rate of regularity, 22-32nds; river-crossings impediments; government mild and tolerably intelligent; appearances neat and clean; demeanour and conduct of pupils tolerable; performance of class-work feeble and unsatisfactory; moral tone feeble and moderate. 3. Course of instruction professedly complete except in singing and sewing; secondary subjects neglected; instruction ill regulated; classification indefinite; teaching desultory feeble and unsatisfactory. 4. Average proficiency of pupils indifferent. Teacher since dismissed.

CUAN (N.-V.) :—Regular inspection, 14th October.

Numbers enrolled :—Boys, 14; girls, 13; total, 27. Numbers present :—Boys, 12; girls, 12; total, 24.

1. Schoolroom too small; teacher's residence enlarged, and tolerably suitable; supply of furniture fair; working materials inadequate; class roll entries unsatisfactory; other records in arrears. 2. Attendance well maintained, supplemented by night school; punctuality fair; rate of regularity, 2-3rds; appearances neat and clean; fair order maintained; pupils reasonably well-behaved, but dull and awkward; moral tone barely tolerable. 3. Prescribed subjects taught except singing and sewing; indifferent attention given to secondary subjects; lesson documents of inferior merit; register of lessons carelessly kept; teaching tolerably skilful, but desultory and feeble. 4. Average proficiency, progress, and mental culture of pupils barely moderate. Dictation and arithmetic small.

DOYLE'S CREEK (N.-V.) :—Regular inspection, 22nd July.

Numbers enrolled :—Boys, 15; girls, 17; total, 32. Numbers present :—Boys, 11; girls, 13; total, 24.

1. School-house ill ventilated and inadequately furnished; supply of working materials tolerably sufficient; organisation tolerable. 2. Two-thirds of pupils regular and tolerably punctual. Eleven children of school age in non-attendance; government mild and tolerably intelligent—not sufficiently stimulating and exacting in regard to class-work. 3. Course of instruction complete except in singing and drawing, of third-class range, and tolerably well regulated; teaching earnest, painstaking, and moderately skilful; examinations not sufficiently frequent and effective. 4. Average proficiency and mental culture of pupils moderate. Arithmetic and grammar indifferent.

FALBROOK (V.) :—Regular inspection, 3rd September.

Numbers enrolled :—Boys, 11; girls, 18; total, 29. Numbers present :—Boys, 9; girls, 14; total, 23.

1. Material condition improved and fair; supply of furniture and apparatus tolerably sufficient; general aspect improved, and fairly respectable. 2. Attendance, tolerably punctual; rate of regularity, 21-27ths; government tolerably firm and intelligent; order, cleanliness of appearances, and conduct of pupils, of tolerable merit; moral tone healthy. 3. Prescribed subjects taught except singing; lesson documents, of fair merit; classification, threefold and appropriate; teaching earnest and tolerably vigorous and intelligent. 4. Average proficiency of pupils tolerable. Arithmetic, grammar, geography, moderate.

GOORANGoola (N.-V.).

Not visited for want of opportunity. School but recently opened.

GRESFORD (N.-V.) :—Regular inspection, 24th February.

Numbers enrolled :—Boys, 15; girls, 13; total, 23. Numbers present :—Boys, 8; girls, 10; total, 18.

1. Schoolhouse suitable; teacher's residence comfortable; supply of school requisites fair; arrangement of desks objectionable; general aspect clean and respectable. 2. Attendance injuriously affected by river freshets and field operations, tolerably punctual; rate of regularity, 2-3rds; government mild and fairly effective; appearances very neat and clean; pupils well-behaved and tolerably orderly; moral tone healthy and fair. 3. Prescribed subjects taught except singing; secondary subjects rather neglected; lesson documents of tolerable merit but not strictly observed; classification, judicious and threefold; teaching earnest and tolerably intelligent, not sufficiently oral and examinatory. 4. Average proficiency of pupils moderate +.

HOWE'S VALLEY (V.) :—Regular inspection, 3rd December.

Numbers enrolled :—Boys, 15; girls, 17; total, 32. Numbers present :—Boys, 9; girls, 10; total, 19.

1. Sundry repairs needed; school-house rather small; teacher's residence tolerably suitable; supply of furniture and apparatus tolerably adequate; school records not strictly accurate. 2. Attendance increased

increased and tolerably punctual, 3-4ths regular; government empirical and moderately intelligent; class movements irregular; pupils tolerably well-behaved but deficient in animation and diligence. Moral tone barely tolerable. 3. Course of instruction of second-class range and tolerably well regulated; singing and sewing not taught; teaching mechanical and moderately effective; examinations feeble. 4. Average proficiency and mental culture of pupils moderate and promising. Teacher but recently appointed.

KAYUGA (N.-V.) :—Regular inspection, 2nd September.

Numbers enrolled :—Boys, 15; girls, 18; total, 33. Numbers present :—Boys, 8; girls, 9; total, 17.

1. School-house drafty, otherwise suitable and improved; supply of furniture and apparatus fairly sufficient; water-tank needed; general aspect tolerably respectable. 2. Attendance well maintained and tolerably punctual, 2-3rds regular; government mild and tolerably effective; pupils tolerably clean and well-behaved; school-work performed with moderate vigour, industry, and precision; moral tone feeble. 3. Course of instruction elementary and of second-class range; grammar, geography, and object lessons neglected; classification moderately intelligent, lesson documents carelessly observed; teaching feeble and mechanical; mental training of pupils inadequate. 4. Average proficiency and progress of pupils barely moderate.

KNOCKFIN (N.-V.) :—Regular inspection, 19th February.

Numbers enrolled :—Boys, 13; girls, 13; total, 26. Numbers present :—Boys, 8; girls, 2; total, 10.

1. School-house and teacher's residence reasonably suitable; supply of furniture adequate—of apparatus, tolerable; general aspect clean and fair. 2. Attendance temporarily reduced by removals to neighbouring schools; one half of pupils regular and tolerably punctual; government healthy and tolerably intelligent; neatness and cleanliness of appearances very fair; pupils docile and well-behaved, but deficient in smartness and vigour; moral tone healthy and tolerable. 3. Prescribed subjects taught except drawing; lesson documents, moderate—not strictly observed; teaching earnest, painstaking, and moderately intelligent. 4. Average proficiency and progress of pupils moderate.

MIDDLE CREEK (N.-V.) :—Regular inspection, 12th October.

Numbers enrolled :—Boys, 19; girls, 15; total, 34. Numbers present :—Boys, 13; girls, 11; total, 24.

1. Material condition satisfactory; supply of furniture and apparatus tolerable; book-press and water-tank needed; aspect clean and respectable. 2. Attendance well maintained and punctual; rate of regularity, 24-36ths; government healthy and effective; pupils clean, orderly, and well-behaved; moral tone sound and very fair. 3. Course of instruction complete except singing, of third-class range, fairly well-regulated; teaching zealous, painstaking, and tolerably intelligent; progress of pupils reasonably satisfactory. 4. Average proficiency of pupils tolerable +.

MOONAN BROOK (N.-V.) :—Regular inspection, 6th October.

Numbers enrolled :—Boys, 16; girls, 5; total 21. Numbers present :—Boys, 12; girls, 4; total, 16.

1. Material condition improved; school premises tolerably suitable and well furnished; desks unsuitable in design and arrangement; internal aspect clean and tidy. 2. Attendance well maintained and tolerably punctual, rate of regularity 27-37ths; government tolerably firm and intelligent; pupils clean and well-behaved, but insufficiently smart and active; moral tone tolerable. 3. Course of instruction elementary and imperfectly regulated; indifferent attention given to grammar, geography, and object lessons; singing and sewing not taught; classification indefinite, teaching empirical and feeble, but earnest and painstaking. 4. Average proficiency and mental culture of pupils moderate.

MOUNT RIVERS (N.-V.) :—Regular inspection, 10th December.

Numbers enrolled :—Boys, 8; girls, 12; total, 20. Numbers present :—Boys, 8; girls, 9; total, 17.

1. School-house small and unsuitable, and poorly furnished; better building about to be provided; school requisites not delivered—six weeks delayed on the road; school records moderately well kept. 2. Attendance tolerably regular and punctual; eleven children in non-attendance; government empirical and moderately intelligent; order and cleanliness and industry moderate; moral tone feeble and moderate. 3. Subjects of instruction: reading, writing, spelling, and arithmetic; no lesson documents; classification indefinite; teaching earnest and promising, but feeble and mechanical. 4. Average proficiency of pupils very low. School but recently recognized as a Provisional School.

MOUNT THORLEY (N.-V.) :—Regular inspection, 21st July.

Numbers enrolled :—Boys, 14; girls, 13; total, 27. Numbers present :—Boys, 10; girls, 13; total, 23.

1. Hat-pegs, book-press, and water-tank needed; material condition and organisation otherwise fair. 2. One-half of the attendance regular and tolerably punctual; government mild and fairly intelligent; appearances clean and respectable; pupils tolerably orderly and diligent; school operations not sufficiently regular; moral tone tolerable. 3. Course of instruction incomplete, elementary, and imperfectly regulated; no programmes of lessons; time-table not strictly observed; teaching apparently earnest, but only moderately vigorous and intelligent. 4. Average proficiency and progress of pupils moderate.

MOUNT WILLS (N.-V.) :—Regular inspection, 17th August.

Numbers enrolled :—Boys, 11; girls, 11; total, 22. Numbers present :—Boys, 3; girls, 7; total, 10.

1. School-house clean and suitable; book-press, hat-pegs, water-tank, and better out-offices needed; supply of desks, seats, and working materials adequate; school records somewhat inaccurate. 2. Attendance low and irregular; school frequently closed without authority; government healthy and fair; pupils clean, docile, and well-behaved, but feeble in mental energy; moral tone tolerable. 3. Prescribed subjects taught, except singing; lesson documents and classification fair; teaching animated, painstaking, and tolerably intelligent; progress of pupils reasonably satisfactory. 4. Average proficiency of pupils moderate to tolerable.

PARK (N.-V.) :—Regular inspection, 28th September.

Numbers enrolled :—Boys, 13; girls, 19; total, 33. Numbers present :—Boys, 11; girls, 17; total, 28.

1. Water-tank, book-press, and refitting of the schoolroom flooring-boards and desks needed; supply of appliances tolerably sufficient; aspect respectable. 2. Attendance well maintained; moderately punctual; 2-3rds regular; government mild and tolerably effective; pupils fairly clean and well-behaved; class arrangements imperfect; moral tone healthy and tolerable. 3. Prescribed subjects taught, except singing; classification twofold and tolerably judicious; occupation moderately well regulated; teaching earnest and diligent, empirical, and moderately skilful; examinations infrequent. 4. Average proficiency of pupils moderate; arithmetic, grammar, geography, indifferent.

QUORROBOLONG (N.-V.) :—Regular inspection, 16th April.

Numbers enrolled :—Boys, 9; girls, 14; total, 23. Numbers present :—Boys, 8; girls, 11; total, 19.

1. Material organisation reasonably tolerable; windows need glazing; aspect neat and clean. 2. Two-thirds of attendance regular and fairly punctual; government mild, and tolerably intelligent; pupils docile, well-behaved, and tolerably industrious and painstaking; moral tone reasonably satisfactory.

3. Course of instruction elementary and tolerably well-regulated; grammar, geography, and object lessons almost ignored; teaching earnest and moderately intelligent. 4. Average proficiency of pupils tolerable; writing and sewing very fair.

ROUSEHLL BROOK (N.-V.) :—General inspection, 4th October.

Numbers enrolled :—Boys, 12; girls, 16; total, 28. Numbers present :—Boys, 10; girls, 14; total, 24.

1. School held in a temporary church; material condition satisfactory; supply of furniture adequate—of working materials tolerably sufficient; general aspect respectable; water-tank and out-offices needed. 2. Seven-ninths of the attendance regular and punctual; government mild and fairly intelligent; appearances neat and clean; pupils, docile and well-behaved, but diffident and inanimate; moral tone sound, promising, and fair. 3. Sewing and singing not taught; course of instruction otherwise complete, of second class range, and reasonably well-regulated; teaching earnest, diligent, and tolerably intelligent. 4. Average proficiency of pupils barely moderate. School but recently opened.

SEDFIELD (V.) :—General inspection, 8th December.

Numbers enrolled :—Boys, 20; girls, 9; total, 29. Numbers present :—Boys, 15; girls, 4; total, 19.

1. School-house suitable and reasonably well furnished; supply of working materials adequate; aspect neat and clean; water-tank needed. 2. Attendance fairly punctual; rate of regularity 23-29ths; government mild and fairly intelligent; appearances clean and respectable; fair order maintained; pupils docile and well-behaved, but insufficiently smart and active; moral tone healthy and promising. 3. Course of instruction complete, except singing, sewing, and Scripture lessons, of third-class range, and regulated fairly; teaching earnest, painstaking, and tolerably intelligent. 4. Average proficiency of pupils moderate +. School but recently opened.

STOCKYARD CREEK (N.-V.) :—Regular inspection, 26th April.

Numbers enrolled :—Boys, 10; girls, 12; total, 22. Numbers present :—Boys, 9; girls, 12; total, 21.

1. Schoolhouse inferior and in need of repair; furniture insufficient and unsuitable; supply of working materials adequate; general aspect indifferently satisfactory. 2. Six-sevenths of attendance regular, but very unpunctual; government lax and moderately intelligent; pupils tolerably clean and well-behaved, but only moderately diligent, painstaking, and active; moral tone feeble and moderate. 3. Dictation, singing, drawing, object lessons, and sewing not taught; course of instruction otherwise complete and elementary; lesson documents laxly observed; classification of tolerable merit; teaching tolerably earnest, but feeble and mechanical. 4. Average proficiency of pupils indifferent. School but recently opened.

SUMMERHILL (N.-V.) :—Regular inspection, 24th February.

Numbers enrolled :—Boys, 14; girls, 21; total, 35. Numbers present :—Boys, 13; girls, 17; total, 30.

1. Water-tank and additional desks needed, material organisation otherwise reasonably satisfactory, aspect clean and comfortable. 2. Attendance well maintained, not satisfactorily punctual, rate of regularity 2-3rds; wire foot-bridge across the brook needed and practicable; government mild, healthy, and tolerably intelligent; pupils clean, docile, and fairly well-behaved, but not adequately smart and self-reliant; moral tone improved and tolerable. 3. Course of instruction complete and tolerably well regulated for three classes; methods of moderate merit; teaching earnest, and fairly painstaking, and vigorous; secondary subjects feebly treated. 4. Average proficiency of pupils, moderate +, and improved.

VERE (N.-V.) :—Regular inspection, 13th July.

Numbers enrolled :—Boys, 14; girls, 9; total, 23. Numbers present :—Boys, 10; girls, 5; total, 15.

1. Schoolroom commodious, but drafty and inadequately furnished; water-tank, glazed windows, hat-pegs, and book-press needed; daily opening of school unpunctual; teacher's residence 8 miles off. 2. Attendance low and irregular, tolerably punctual, continuance of school doubtful; government tolerably intelligent, but not firm and exacting enough; appearances tolerably neat and clean; pupils docile but insufficiently interested and painstaking in their work. 3. Course of instruction imperfect and elementary; time-table laxly observed; programmes of lessons not provided; teaching tolerably animated and painstaking, but feeble and empirical. 4. Average proficiency of pupils indifferent. School but recently reopened.

WAVELEY (N.-V.) :—General inspection, 7th October.

Numbers enrolled :—Boys, 16; girls, 13; total, 29. Numbers present :—Boys, 12; girls, 8; total, 20.

1. Water-tank, out-offices, and additional desks needed; material condition and appointments otherwise fairly satisfactory. 2. Rate of regular attendance 21-27ths; punctuality fair; disciplinary tone and condition of school tolerable and promising. 3. Course of instruction, elementary, of second class range, and moderately well regulated; lesson documents laxly observed; teaching earnest, diligent, and moderately skilful. 4. Average proficiency of pupils indifferent. School in operation five months.

WEBBER'S CREEK (N.-V.) :—Regular inspection, 18th February.

Numbers enrolled :—Boys, 11; girls, 21; total, 32. Numbers present :—Boys, 11; girls, 18; total, 29.

1. School building used as a temporary chapel; material organisation and appointments tolerable; water-tank and hat-pegs needed; aspect clean and respectable. 2. Attendance increased and tolerably punctual, rate of regularity 21-32nd; government healthy, stimulating, and fairly intelligent; pupils docile and fairly well-behaved; moral tone healthy and fair. 3. Course of instruction complete, of second-class range, and fairly well regulated; classification low in point of age; teaching animated and tolerably intelligent and promising. 4. Average proficiency of pupils tolerable; writing very fair; arithmetic and geography moderate.

WINGEX (V.) :—Regular inspection, 27th September.

Numbers enrolled :—Boys, 13; girls, 15; total, 28. Numbers present :—Boys, 9; girls, 11; total, 20.

1. Water-tank, hat-pegs, and book-press needed; material condition and organisation otherwise satisfactory; general aspect clean and tolerably respectable. 2. Two-thirds of attendance regular and tolerably punctual; government healthy and intelligent; pupils fairly orderly and well-behaved, deficient in mental vigour; moral tone healthy and fair. 3. Prescribed subjects taught except Scripture lessons; object lessons not regularly given; methods of moderate merit; teaching earnest and tolerably profitable. 4. Average proficiency of pupils moderate +. Reading and writing fair.

WYBONG (N.-V.) :—Regular inspection, 15th October.

Numbers enrolled :—Boys, 10; girls, 12; total, 22. Numbers present :—Boys, 4; girls, 2; total, 6.

1. Material condition and organisation reasonably satisfactory; water-tank and clock needed; general aspect clean and comfortable. 2. Attendance temporarily reduced by the prevalence of measles; rate of regularity 19-20ths; government sound and fairly effective; pupils clean, docile, and well-behaved; moral tone fair. 3. Singing not taught; third-class course of instruction otherwise observed and fairly well regulated; teaching diligent, painstaking, and tolerably skilful. 4. Average proficiency of pupils tolerable and improved. Writing good; grammar and geography moderate.

HALF-TIME

HALF-TIME SCHOOLS.

WATAGON CREEK :—Regular inspection, 23rd April.

Numbers enrolled :—Boys, 7 ; girls, 5 ; total, 12. Numbers present :—Boys, 7 ; girls, 5 ; total, 12.

1. Material condition tolerable ; supply of furniture inadequate ; stock of books and apparatus tolerable ; water-tank, clock, and additional furniture needed ; school records carelessly kept. 2. Numbers enrolled :—Boys, 9 ; girls, 13 ; total, 22. Number present :—Boys, 7 ; girls, 7 ; total, 14.

1. The material condition and organisation are tolerably satisfactory. 2. Discipline mild, healthy, and nearly fair in efficiency. 3. Course of instruction complete, except singing ; occupation of pupils fairly well regulated ; teaching tolerably skilful. 4. Average proficiency of pupils tolerable ; writing very fair ; grammar moderate.

WOODBURN :—Regular inspection, 9th December.

Numbers enrolled :—Boys, 10 ; girls, 13 ; total, 23. Numbers present :—Boys, 5 ; girls, 10 ; total, 15.

1. Material condition reasonably satisfactory, and supply of books and apparatus adequate ; water-tank needed. 2. Discipline mild, healthy, and fairly effective. 3. Prescribed subjects taught, except singing ; occupation tolerably well regulated ; teaching earnest and tolerably intelligent. 4. Average proficiency of pupils tolerable and improved.

MUDGEES DISTRICT.

Inspector's General Report upon the condition of the Schools for the Year 1875.

I HAVE the honor to submit, for the information of the Council, my Report on the state and progress of education in the Primary Schools of this district during the year 1875.

At the beginning of the year, the list of schools under my supervision consisted of 42 Public, 17 Provisional, 2 Half-time, 3 Church of England, and 4 Roman Catholic Schools—making a total of 68. Of these the Public Schools at Gunnedah, Boggabri, and Narrabri, and the Provisional Schools at Carroll and Wee Waa, were transferred to the Armidale District, thus leaving 62 schools under my supervision. At the end of the first quarter in the year, the certificate was withdrawn from the C.E. School, Cassilis, and later in the year a Public School was opened in that township. The school at Coolah was transferred from the list of Provisional to that of Public Schools. The new school at Brewarrina was also completed and opened about the middle of the year. Provisional Schools were opened at Camboon, Cannonbar, Baradine, Dick's Camp, Goolma, and Timbriungie. Applications for the establishment of Public Schools were received from Cooyal, Micketymulga, and Round Swamp. At these places it has been decided to build schools. Applications for aid to Provisional Schools were declined at Boogle Creek, near Dubbo, and at Rocky Glen, near Coonabarabran. These applications were refused because of the small number of children in the locality. An application for aid to a Provisional School at Kurndery is still under consideration. It will thus be seen, that during the year, 2 new Public and 6 Provisional Schools were brought into operation—that in three other places effective steps have been taken to establish Public Schools—that 1 Denominational School was closed—that aid was declined to two Provisional Schools—and that one application is still under consideration. The school district now consists of 42 Public, 20 Provisional, 2 Half-time, 2 Church of England, and 4 Roman Catholic Schools—making a total of 70.

Although 35 schools in the Bathurst District were assigned to me for examination yet, owing to the year being generally favourable for travelling, I was able to visit every school in the Mudgee District, and to subject them all to the Regular Inspection, with the exception of six—one of which was closed during the whole year, and the others were only brought under the Council's supervision in the last month of the year. Several incidental inspections were made during the year.

From the facts above stated, it will appear that a fair amount of success has attended the Council's efforts to meet the educational wants of the people scattered over this remote district. It is gratifying to find schools springing up in many localities where a few years ago such a thing was not dreamt of. The continued desire for the acquisition of land which has manifested itself during the last few years has tended greatly to scatter the population; and, were it not for the operation of the Public Schools Act, many thousands of children would grow up wholly uneducated. It is not necessary that I should dwell on the baneful results that, under such circumstances, would arise to the State, nor that I should point out the blessings that may be expected from the ready diffusion of the means of education. It is sufficient to state the fact, that wherever a few families have settled down and can collect twelve or fifteen children, the Council seeks out and follows these pioneers of settlement with a school of one kind or other. Even where ten children can be mustered at each of two points, within a reasonable distance, there the children can obtain education by means of Half-time Schools. It is to be regretted that these latter schools, owing to prejudice against them and ignorance of their utility, are by no means so popular as they ought to be.

Although many of the school-houses in rural and remote places are very indifferent structures, yet wherever the buildings are vested in the Council every effort consistent with reasonable economy is made

made to render the material condition and organisation suitable to the wants of the locality. Speaking generally, a good deal has been done in the course of the year to make the appearance of schools more attractive, and their material condition more comfortable. This remark applies principally to the Public, and in a less degree to the Provisional, Schools vested in the Council of Education. Little improvement has been effected to the Non-vested Public and Provisional Schools. I have always thought that these schools should be built on public lands. There are many reasons why this should be the case. Those who have paid any attention to the matter must have noticed that the vested schools are usually much better structures than those built on private sites. In this district, wherever a new school is to be built, I endeavour to secure a site on Crown Lands; but, owing to two causes, my efforts have not always been successful. It is a very common thing for the denomination numerically strongest in any locality to organise for the erection of a building to do double duty as church and school. There are many obvious objections to this procedure. The denominations in the minority are always dissatisfied: the school is regarded as denominational in character, and it receives but a cold and languishing support from all save the denomination in whose interest it has been established. Besides, the law does not allow the Council to spend a sixpence on improving the material condition of such schools; and hence, when improvements, however urgent, are asked for, they can only be effected by the tardy and uncertain efforts of the inhabitants. Therefore, in non-vested schools of every kind, we frequently find the material organisation very imperfect—often no residence, no out-offices, no fences, no water-supply, and the furniture scanty and unsuitable. As might be expected, it is more difficult to keep schools of this description in constant operation, because the poor accommodation induces the teachers to be on the constant look-out for change. No doubt, in the more settled districts a number of these non-vested schools was inevitable, as springing out of a former state of things; but in nearly every place in this inspeccional district—towns excepted—good and suitable sites can be got on Crown Lands, and there can be no excuse for establishing these semi-denominational schools. In previous reports I urged the necessity of having the surveyors instructed to reserve sites for schools as they proceed with their surveys of the different localities. These gentlemen have great opportunities of judging where centres of population will settle, and it would entail little additional trouble to survey sites and thus have them to hand when required. The establishment of schools urgently needed have in many instances been delayed more than a year, in consequence of the Council not being able to get the land surveyed and transferred. As a case in point, I would refer to Camboon, near Rylstone. Within the last five or six years the land in that locality has all been free-selected. There are over thirty children in the immediate neighbourhood and a school is much wanted. In October, 1874, I convened a meeting of the inhabitants, and it was decided to apply for a school. A site was given and half the cost of the proposed buildings subscribed locally, but up to the present time (February, 1876) we have been unable to get the land surveyed. Of course the people are quite disgusted with the delay, and it is idle to speculate when the matter will be settled. All this delay could have been obviated if the site had been reserved when the farms were surveyed.

I venture to refer to another matter in connection with school grounds which I think worthy of attention. In places where there is abundance of Crown Lands, I cannot see why the school area should be limited to 2 acres. It appears to me that these areas ought to be enlarged to 20 or even 40 acres. In the first place, a paddock would be provided for the horses of the children who have too far to walk to school. In many places children would go 5 and 6 miles to school if their horses could be secured during school hours. Hundreds of children would thus attend who now get no education whatever. Besides, the intention of the Lands Act is to settle people on the waste lands, and to have them utilized. I think it would be an advantage to allow the minimum area of selection to each school, where it can be conveniently done. The condition of residence is certain to be fulfilled, and I cannot see why the schoolmaster should not have a patch of land, to the cultivation of which his spare hours and those of his children might be devoted. As being intimately connected with this matter, I would respectfully urge the advisableness of granting a small bonus to every teacher who cultivates a neat garden, and keeps his school and its surroundings a pattern of order and cleanliness. A couple of hundred pounds expended in this way would be money well spent. In some other countries this system of bonuses has been resorted to with very beneficial results, owing to the emulation it causes amongst teachers. The educative influence of a well-cultivated garden on the minds of young persons is so obvious that I need say nothing in support of the proposal. Indeed, I believe the wider question of agricultural schools will ere long occupy a place in the consideration of the Education Department.

The next point I beg to refer to, in connection with the schools of the district, is the question of fees. The total amount of fees paid during the year was £3,443 12s. 6d. The amount paid by the Council in teachers' salaries was £5,872. The average attendance for the year was 2,545. It will thus be seen that every child in average attendance paid fees at the rate of £1 7s. 0½d., whilst the Council paid in salaries at the rate of £2 6s. 1d. per head. The total number of free children entered on the books in course of the year was only 395, or about 7 per cent. of the whole number of children whose names appeared on the books. This shows an improvement in the matter of fees. I am sure that a larger amount could be got if the teachers adopted more system in collecting their accounts. It is very rarely I hear parents complaining of having to pay a trifle for the education of their children; and I am bound to say that the cry for free education, as far as I can judge, has not arisen from any unwillingness on the part of parents to pay the small fee charged. In my opinion, it will be a mistake to abolish fees. I believe people will value education less when they have to make no direct payment for it. It is a fact known to every one engaged in teaching, that free scholars are less regular than those who pay. Besides, no man is improved by having the family responsibilities he is able to discharge put away from him. What can be more equitable than that those who receive direct benefits from schools should make some direct payment for the advantages they receive? Parents who can afford it ought to be required to contribute something towards the cost of educating their children, whilst the Government should allow a capitation fee to the teachers for pupils whose parents cannot pay. If such a regulation existed, the non-paying pupils would be regarded by teachers as a desirable class in the schools. I know the proposal to pay salaries wholly from the state coffers is popular with teachers, but it is open to question whether the school-work will be so carefully done when their emoluments are independent of parents. In addition to these considerations, it must be borne in mind that up to the present time more than one-third of the cost of the department has been met by fees. Is it wise to give up such a respectable item of revenue because the country happens to be prosperous at present? It sounds very well to talk about free education; but many of those who now clamour for it, will be amongst the first to raise a cry against the expensiveness of the department. The proposal to appoint teachers as collectors of fees to be paid into the Consolidated Revenue, is open to two very strong objections. In the first place, little will be paid; and in the next, the cost and trouble of effectively checking the accuracy of the returns will be very great. Without casting an imputation on teachers, I am of opinion it is morally wrong to expose needy men to the constant temptation that will arise in the collection of these petty accounts. I cannot see how any effective plan can be devised for testing the accuracy of the returns that must be furnished.

Excepting for the prevalence of measles, the year was generally favourable for school attendance. Taking the numbers for the December quarter as a fair basis of calculation, I find that in Public, 66·2 per cent., in Provisional, 72·5 per cent., and in Denominational Schools, 64·6 per cent. of the numbers enrolled attended regularly. I am somewhat surprised to find the Provisional Schools standing highest in this respect. Indeed, I expected a contrary result. There is one thing certain, however—that many children are never sent to school from one year's end to the other. This arises either from carelessness of parents, or, as in many instances, from schools being too distant for the children to walk. It is to be hoped that some plan will soon be devised by which the blessings of education may be brought home to the hundreds of children scattered on the stations. Even where schools are established, some alteration in the law is required. Let anyone ride into a country township between 10 and 12 o'clock in the morning, and he cannot fail to be struck with the number of children he will observe loitering about.

I believe the only way of coping with the evil is by a compulsory law. Free education is usually regarded as a corollary from compulsory education; but if the propositions are closely examined, it will be found that they do not bear that relation to each other. A man is compelled to feed, clothe, and house his children, and nobody complains that it is tyranny. Each year primary education is made more attractive, and is brought prominently before the notice of the public, yet through avarice or indifference on the part of parents, the efforts of the state to diffuse education is rendered in some measure abortive. From inquiries made, I am led to believe that not more than 44 per cent. of the children between the ages of 4 and 14 will be found in the schools of this district on any given day. Every year hundreds of children reach manhood, and are expected to discharge the duties of citizenship intelligently, although their minds are darkened by the ignorance of infancy. In view of these indisputable facts, is it not idle to assert, as many do, that with the increasing attractions of modern education, and with the spread of enlightenment, our schools will be full without having recourse to compulsion?

The progress made in the various subjects of instruction is indicated by the Table of Proficiency already placed before the Council, and the general condition and state of attainments, in each school, as measured by the standards, are given in the Detailed Statement appended. On the standard for reading, including spelling, meaning of words, and explanation of the subject matter, 52 per cent. passed very creditably. The proficiency in writing, including dictation, may be regarded as very satisfactory, 61·3 per cent. having passed well. In arithmetic, the answering was not nearly so good. About 30 per cent. passed a satisfactory examination, and 27·5 per cent. exhibited a tolerable acquaintance with the work prescribed for them. In grammar, 46·3 per cent. passed a fair or good examination; whilst the answering in geography was better,—54·4 per cent. having been well up to the requirements of the standard. With regard to the other subjects of instruction, there is nothing special to be remarked; they are taught with varying success in different schools, according as the teachers are intelligent and enthusiastic. It may be stated generally, that the requirements of the standard have been fairly met in all schools, save in a few small and unimportant ones conducted by untrained teachers. The rudiments of Geometry, Algebra, and Latin are taught in five or six of the best-conducted schools. It is encouraging to find that Provisional Schools are conducted better than they were some years ago. This arises from the judicious arrangements recently made by the Council for training the teachers before their appointment. I am glad to be able to report that I found little difficulty in supplying teachers for small schools during the year.

The general body of teachers in this district have shown themselves earnest and intelligent in the discharge of their duties. Very few complaints of misconduct or neglect have been received. The number of pupil teachers employed is steadily increasing. It is only fair to say that these young persons do a great deal of hard work in the schools, and, as a rule, do it well. I think the salaries of pupil teachers, especially females, should be increased. A nurse-girl of fourteen or fifteen years of age receives better pay—and has her board and lodging to boot—than a female pupil teacher. I think £18 per year far too little for any girl competent to discharge the duties of pupil teacher.

In fine, the year has been favourable for school work, and a fair amount of progress has been made throughout the district.

G. O'BYRNE,
Inspector, Mudgee District.

DETAILED Statement of the condition of Schools in the Mudgee District examined during the year 1875.

I.—PUBLIC SCHOOLS.

BOURKE (N.-V.) :—Regular inspection, 16th and 17th November.

Numbers enrolled :—Boys, 35; girls, 22; total, 57. Numbers present :—Boys, 23; girls, 8; total, 31. The room in which the school is now held is wholly unsuitable; a new school is an absolute necessity. The supply of furniture and working materials is sufficient. Owing to the prevalence of measles, and to the unsuitable accommodation, the attendance was low and irregular in the latter part of the year. Cleanliness is satisfactory, and the discipline very fair. The prescribed subjects are intelligently taught. The average proficiency approaches fair.

BREWARRINA (V.) :—General inspection, 18th and 19th November.

Numbers enrolled :—Boys, 24; girls, 14; total, 38. Numbers present :—Boys, 16; girls, 9; total, 25. This school is a new brick building, in excellent condition, well furnished, and suitably supplied with working materials. As regards cleanliness and order, it is in a very creditable condition. The classification is suitable, and the instruction well regulated. The methods are of fair merit, and the work is conducted with energy and zeal. At present there are only two classes in the school, the average proficiency of which is moderate. The school has been in operation only three months.

BURBUNDULLA (N.-V.) :—Regular inspection, 1st June.

Numbers enrolled :—Boys, 18; girls, 14; total, 32. Numbers present :—Boys, 14; girls, 12; total, 26. The school is held in the church; the presence of the pews gives the room a crowded appearance, and interferes with the organisation. In other respects the material condition is very fair. There is a good supply of books and apparatus. Cleanliness is satisfactory. The general discipline is not good, the government being weak. The instruction is not well regulated, nor the methods skilful. Greater vigour and thoroughness in teaching is necessary. The proficiency is scarcely moderate.

CASSILIS (N.-V.) :—Visited, 24th June.

This school was closed at the time of my visit. It had previously been a C. E. Denominational School, but the required attendance could not be maintained. It was converted into a Public School during the second quarter of the year. The number of pupils now enrolled is 42. The Council has decided to build a vested school in this town.

COONABARRABRAN (V.) :—Regular inspection, 29th and 30th November.

Numbers enrolled :—Boys, 26; girls, 43; total, 69. Numbers present :—Boys, 20; girls, 33; total, 53. The material condition is very fair. The school is well furnished, but indifferently supplied with working materials. The discipline is rather lax, and, as a consequence, the order is not good. The records are carelessly kept. The methods are suitable, but they do not appear to be earnestly applied. Satisfactory progress has not been made during the year. The average proficiency is nearly tolerable.

COONAMBLE (V.) :—Regular inspection, 26th November.

Numbers enrolled :—Boys, 38; girls, 21; total, 59. Numbers present :—Boys, 33; girls, 18; total, 51. The school is centrally situated, but the site is subject to floods, and it has consequently been decided to build new premises on higher ground. The school has been repaired and painted by the teacher; the material condition may now be regarded as very fair. A flower garden has also been formed, which very much improves the appearance of the place. The discipline secures very fair order; the instruction is properly regulated, and the classification is correct. The methods are of average merit, and the results produced are nearly fair.

COOLAH (N.-V.) :—Regular inspection, 19th June.

Numbers enrolled :—Boys, 18; girls, 10; total, 28. Numbers present :—Boys, 10; girls, 7; total, 17. The material condition is the same as reported in previous years—it is fair. Three-fourths of the pupils are regular and punctual. The discipline is, as a whole, fair. The prescribed subjects are taught and the instruction is properly regulated. The methods show fair intelligence, and the attainments are between tolerable and fair.

CRUDINE

CRUDINE (V.) :—Regular inspection, 22nd March.

Numbers present :—Boys, 23 ; girls, 22 ; total, 45. Numbers present :—Boys, 13 ; girls, 14 ; total, 27.

The defects in the material condition adverted to in last year's Report still exist, but effective steps are being taken to have them remedied. Cleanliness is satisfactory. The discipline secures fair order and attention. Want of punctuality and regularity marks the attendance, but yet these features of the discipline are not so unsatisfactory as they were last year. All the prescribed subjects are attempted. The instruction is regulated by the usual documents. The teaching is not skilful, but it is industrious. The results produced exceed moderate.

CUDGEONG (N.-V.) :—Regular inspection, 2nd August.

Numbers enrolled :—Boys, 18 ; girls, 13 ; total, 31. Numbers present :—Boys, 13 ; girls, 8 ; total, 21.

The school is conducted in the church. The building affords very fair accommodation ; it is not well furnished, but the supply of working materials is adequate to the wants of the school. The discipline is effective, and the tone of the school pleasing. The instruction is fairly regulated, and the teaching is careful. Only the standards for two classes have been applied, and the proficiency on these is nearly tolerable.

CULLENBONE (N.-V.) :—Regular inspection, 16th June.

Numbers enrolled :—Boys, 22 ; girls, 21 ; total, 43. Numbers present :—Boys, 7 ; girls, 13 ; total, 20.

This school was closed for a considerable time, and it had not long been re-opened when it was examined. A small house has been built as a residence. The windows are very much broken, the walls need to be repaired, and new closets are badly wanted. The furniture is old and badly made ; the whole material condition is very indifferent. About three-fifths of the pupils are regular and punctual. Cleanliness, order, and attention are tolerable. The instruction is carefully regulated, and the teaching is painstaking. The methods, however, are not skilful, and the attainments are little better than indifferent.

DURBO (V.) :—Regular inspection, 1st, 2nd, and 3rd November.

Numbers enrolled :—Boys, 77 ; girls, 62 ; total, 139. Numbers present :—Boys, 71 ; girls, 47 ; total, 118.

The grounds have been fenced, new sheds erected, and other improvements made since last year. When the works in course of construction are finished, the material organisation will be excellent. More than three-fifths of the pupils attend regularly, and punctuality is satisfactory. The discipline does not secure prompt and willing obedience, and there is evidence of the governing power being weak. The pupils are pretty well classified, and the instruction is intelligently arranged. The methods are suitable and earnestly applied, but the results are not so high as might reasonably be expected. The average proficiency is barely tolerable.

GOODRICH (N.-V.) :—Regular inspection, 28th April.

Numbers enrolled :—Boys, 20 ; girls, 26 ; total, 46. Numbers present :—Boys, 14 ; girls, 18 ; total, 32.

Out-offices have been provided since last inspection. The schoolroom, which is in fair repair, is commodious and pretty well adapted for the purpose. It is scantily furnished, and fairly found in working appliances. The pupils are irregular and unpunctual. The discipline is loose and ineffective. The methods are of only moderate skill, and they are weakly applied. The proficiency is between indifferent and moderate.

GULGONG (Boys—V.) :—Regular Inspection, 21st July.

Number enrolled :—Boys, 62. Number present :—Boys, 53.

Materially considered the school is in excellent condition. The whole organisation is good, and the premises are well kept. Three-fourths of the enrolled pupils are regular and punctual. Notwithstanding that good schools are now provided, yet many children on these "diggings" never enter them. The prescribed subjects are intelligently taught. The instruction is properly regulated, and the work is carried on with fair zeal. The average proficiency is fair.

GULGONG (Girls—V.) :—Regular inspection, 20th July.

Number enrolled :—Girls, 53. Number present :—Girls, 41.

The material condition and organisation of this school are very good. Cleanliness is also good. The attendance has fallen off considerably during the year. This in a great measure is owing to the failing of the "diggings." The discipline and tone of the school are satisfactory. The prescribed subjects are taught, and the instruction is well regulated. The methods are fairly suitable, and industriously applied. The average proficiency is fair.

GULGONG (Infants—V.) :—Regular inspection, 22nd July.

Numbers enrolled :—Boys, 34 ; girls, 18 ; total, 52. Numbers present :—Boys, 32 ; girls, 17 ; total, 49.

The school is in good condition, well furnished, and properly supplied with working appliances. About 8-13ths of the pupils are regular and punctual. Cleanliness, order, and attention are good. All the subjects prescribed for an infant school are taught. The classification is appropriate, and the instruction intelligently regulated. The methods are good and earnestly applied. The proficiency ranges from fair to very fair.

GUNTAWANG (V.) :—Regular inspection, 16th April.

Numbers enrolled :—Boys, 10 ; girls, 26 ; total, 36. Numbers present :—Boys, 9 ; girls, 15 ; total, 24.

The school is new, in excellent condition, and well found in appliances for teaching. The residence has been put in repair, and the whole material condition may be regarded as very good. The pupils are very irregular, and punctuality needs to be enforced with a firmer hand. Fair order is maintained. The instruction is carefully regulated, and the classification is pretty good. The teaching appears painstaking, but from want of thoroughness, the attainments are not up to the standard. The proficiency is scarcely tolerable.

HARGRAVES (V.) :—Regular inspection, 9th March.

Numbers enrolled :—Boys, 27 ; girls 38 ; total, 65. Numbers present :—Boys, 21 ; girls, 29 ; total, 50.

To render the organisation complete, a lavatory and play-sheds are required. In other respects the material condition is very good. The school is well furnished with all appliances for teaching. About 5-6ths of the pupils are in regular attendance. The discipline is good, and the tone of the school satisfactory. Some carelessness was observed in the mode of keeping the school records. The classification and methods are suitable. The proficiency exceeds tolerable in the first class, and is nearly very fair in the second and third classes.

HILL END (Boys—V.) :—Regular inspection, 15th and 16th March.

Number enrolled :—Boys, 99. Number present :—Boys, 72.

Sheds have been erected, and substantial improvements made to the material condition during the year. The organisation is now very good. The school is well equipped with working appliances. About 5-7ths of the pupils are regular and punctual. The discipline is very good. The school is worked with intelligence, zeal, and success. The average proficiency exceeds fair. There is a very good fourth class in this school.

HILL END

HILL END (Girls—V.) :—Regular inspection, 16th and 17th March.

Number enrolled :—Girls, 73. Number present :—Girls, 55.

In material condition and organisation this school is similar to the boys'. The pupils attend with fair regularity. The discipline secures good order and attention. The prescribed subjects are taught. The pupils are well classified, and appropriate methods are used. The average proficiency is fair.

HILL END (Infants—V.) :—Regular inspection, 18th March.

Numbers enrolled :—Boys, 43; girls, 52; total, 95. Numbers present :—Boys, 22; girls, 34; total, 56.

It would be an advantage to have a few desks placed in this department. The condition and organisation are good. Only about 4-7ths of the pupils attend regularly. Cleanliness, order, and attention are very fair. The subjects for infant schools are taught. The work of the school is sensibly arranged. The methods are appropriate, and a fair amount of earnestness marks the teaching. The proficiency ranges from moderate to fair.

ILFORD (N.-V.) :—Regular inspection, 11th February.

Numbers enrolled :—Boys, 26; girls, 20; total, 46. Numbers present :—Boys, 23; girls, 12; total 35.

The school is very badly situated. The condition and organisation are very indifferent. A new school in a suitable position is badly wanted. The pupils are tolerably regular and punctual; cleanliness is pretty well attended to. The discipline has improved, and very fair order is maintained. Except singing, the prescribed subjects are taught. The instruction is fairly regulated; the teaching is industrious, but it is slow and wanting in thoroughness. The average proficiency exceeds moderate.

IRONBARKS (V.) :—Regular inspection, 28th April.

Numbers enrolled :—Boys, 24; girls, 17; total, 41. Numbers present :—Boys, 21; girls, 14; total, 35.

The grounds need to be properly fenced, and the buildings painted. In other respects the premises are in good condition, and they are well supplied with all requisites for teaching. The prevalence of measles caused the attendance to be low and irregular about the time of examination. The pupils are clean, punctual, and orderly. The usual subjects are taught, and the instruction is very well regulated. The methods are appropriate and industriously applied. The proficiency is fair.

LAWSON'S CREEK (N.-V.) :—Regular inspection, 16th July.

Numbers enrolled :—Boys, 11; girls, 9; total, 20. Numbers present :—Boys, 7; girls, 9; total, 16.

The school-house is a very inferior one, and there is no residence for the teacher. The furniture and appliances are sufficient for the present requirements. The pupils are very irregular and unpunctual; the attendance has been very small during the greater part of the year. The discipline secures fair order. The instruction embraces the prescribed subjects, except singing. The methods are tolerably intelligent, but they have not been applied with vigour or success. The proficiency, measured by the two lower standards, is nearly tolerable.

MERREWA (V.) :—Regular inspection, 22nd June.

Numbers enrolled :—Boys, 35; girls, 33; total, 68. Numbers present :—Boys, 27; girls, 27; total, 54.

The schoolroom, teacher's residence, and the whole premises are in a wretchedly dilapidated condition, and successful teaching in such a place is almost an impossibility. Eleven-thirteenths of the pupils are regular and punctual. Cleanliness is fair. The discipline seems fair order in the higher classes, but the first class is not so well controlled. Nearly half the pupils are in the first class, and the services of a pupil teacher are much needed in the lower portion of the school. The instruction is very well regulated, and the teaching is intelligent and painstaking. More vigour, however, in the application of the methods is desirable. The proficiency approaches fair.

MOBELLAH (N.-V.) :—Regular inspection, 27th May.

Numbers enrolled :—Boys, 92; girls, 63; total, 155. Numbers present :—Boys, 53; girls, 31; total, 84.

At the time of examination the school was held in a church; the building was too small for the attendance, but a considerable falling off has taken place since. The school is fairly furnished, and has a tolerable supply of working materials. The pupils are not sufficiently regular—they are tolerably clean and tidy. The discipline secures very fair order and attention. The instruction is fairly regulated, and the methods are suitable. The proficiency ranges from moderate to tolerable. Many of the children at examination were new to school.

MOLONG (V.) :—Regular inspection, 27th April.

Numbers enrolled :—Boys, 39; girls, 29; total, 68. Numbers present :—Boys, 33; girls, 22; total, 55.

The material condition of this school has been improved, and may now be regarded as fair; it is well furnished and has a good supply of working materials. The prescribed subjects are taught, and the work of the school is well arranged. The discipline is good, and the tone of the school very satisfactory. The methods are appropriate, and they are applied with zeal and effect. The average proficiency is very fair.

MUDGE (Boys—V.) :—Regular inspection, 7th and 8th June.

Number enrolled :—Boys, 73. Number present :—Boys, 55.

The material condition is the same as reported in previous years. A new school suitable to the requirements of the town will shortly be built. The pupils are regular, punctual, clean, and orderly. The classification is good; the methods are suitable and earnestly applied. Greater thoroughness and success marks the teaching than in previous years. The average proficiency exceeds very fair.

MUDGE (Girls—V.) :—Regular inspection, 6th and 7th April.

Number enrolled :—Girls, 70. Number present :—Girls, 55.

The schoolroom is very unsuitable, but a new one will shortly be provided. The attendance is regular and punctual. The girls, as a rule, are extremely clean and neat in person; their demeanour in the school is very creditable. The course of instruction embraces the usual subjects. The classification is good, and the work is conducted with well sustained vigour. Most of the fourth class girls did very well in arithmetic. The average proficiency exceeds fair.

MUDGE (Infants—V.) :—Regular inspection, 6th April.

Numbers enrolled :—Boys, 56; girls, 87; total, 173. Numbers present :—Boys, 53; girls, 62; total, 115.

The room is far too small for the attendance, and at the end of the year it was found necessary to occupy two rooms belonging to the teacher's residence. The school is poorly equipped for an infant department. The pupils attend with fair regularity; they are generally clean and neat in dress. The discipline is effective. The usual subjects are taught. Approved methods are used. The school is worked with energy and very fair success. The proficiency ranges from fair to very fair.

PIPECLAY CREEK (V.) :—Regular inspection, 31st May.

Numbers enrolled :—Boys, 36; girls, 20; total, 56. Numbers present :—Boys, 15; girls, 10; total, 25.

This is a very neat and comfortable school-house and residence. The grounds and all the surroundings are well kept. The attendance was low in consequence of sickness in the neighbourhood when the school was examined. Punctuality is not satisfactory. The discipline is very fair. Singing is not taught. The instruction is well regulated and the methods are of average merit. The proficiency exceeds tolerable.

PONTO (V.) :—Regular inspection, 10th May.

Numbers enrolled :—Boys, 14 ; girls, 14 ; total, 28. Numbers present :—Boys, 6 ; girls, 8 ; total, 14.

In material condition and organisation the school is in the same state as last year. The attendance has not been so good, owing to a growing desire to have a school on the other side of the Macquarie River. As a rule, parents are very unwilling that their children should run the risk of crossing the river to and from school. The prevalence of measles also lowered the attendance at the time of examination. All the prescribed subjects have a place in the school routine. The instruction is regulated by the usual documents. The methods are of tolerable worth, but the teaching should be more energetic. The proficiency is nearly tolerable.

PYRAMUL (V.) :—Regular inspection, 10th March.

Numbers enrolled :—Boys, 20 ; girls, 28 ; total, 48. Numbers present :—Boys, 16 ; girls, 17 ; total, 33.

The material condition and organisation are very unsatisfactory. There are no out-offices, and the grounds are unfenced. A new school is required at this place. The records are carelessly kept. The discipline secures fair order, but the pupils are shy and evince little power of thought. The instruction is not regulated in accordance with the Council's regulations. The school has not been efficiently worked, and the attainments are unsatisfactory. The proficiency is between indifferent and moderate.

RYLSTONE (V.) :—Regular inspection, 10th February.

Numbers enrolled :—Boys, 37 ; girls, 26 ; total, 63. Numbers present :—Boys, 30 ; girls, 23 ; total, 53.

The schoolroom and the teacher's residence are too small. Lavatories and a weather-shed are also required. The internal organisation is very fair. The pupils attend with fair regularity and punctuality. Cleanliness is also satisfactory, and the tone of the school pretty good. The records show a creditable number of promotions during the year. The classification is pretty good, and the instruction is regulated in the prescribed way. The methods are of fair merit, but they are applied too discursively—more thoroughness is wanted. The average proficiency approaches tolerable. The services of a pupil teacher are required.

SPRING FLAT (V.) :—Regular inspection, 26th May.

Numbers enrolled :—Boys, 23 ; girls, 24 ; total, 47. Numbers present :—Boys, 10 ; girls, 11 ; total, 21.

The material condition and organisation are pretty good. The materials for working the school are sufficient. The records are badly kept, and the instruction is not regulated in accordance with the Council's directions. The teacher has been generally negligent. Singing is not taught. The pupils attend with tolerable regularity. The discipline secures fair order, but the pupils have no self-reliance. The proficiency exceeds indifferent.

TAMBAROORA (V.) :—Regular inspection, 11th and 12th March.

Numbers enrolled :—Boys, 42 ; girls, 41 ; total, 83. Numbers present :—Boys, 28 ; girls, 24 ; total, 52.

The grounds have been securely fenced, and other improvements effected. The condition and organisation are now very fair. Cleanliness is barely tolerable. Regularity and punctuality are reasonably satisfactory. The instruction is very carefully regulated, and the teaching is tolerably skilful. The average proficiency is about tolerable. Some addition to the teaching staff is needed.

TRON, UPPER (V.) :—Regular inspection, 23rd and 24th February.

Numbers enrolled :—Boys, 26 ; girls, 24 ; total, 50. Numbers present :—Boys, 25 ; girls, 20 ; total, 45.

This school is in good material condition, and it is fairly organised. Both the premises and children were clean and tidy. There is enough material for working the school. The records are correct and well kept. Nearly four-fifths of the pupils attend regularly. The discipline secures pretty good order. The methods are not skilful, but they are applied with care. The proficiency approaches tolerable.

UARBRY (N.-V.) :—Regular inspection, 15th June.

Numbers enrolled :—Boys, 21 ; girls, 15 ; total, 36. Numbers present :—Boys, 2 ; girls, 4 ; total, 6.

Although I examined the school on a fine day, yet in consequence of the boggy state of the locality surrounding, very few of the children could attend. A better site has been obtained, and a new school is in course of erection. All the prescribed subjects, except singing, are taught. The instruction is properly regulated, and the teaching is industrious but spiritless. Writing is well taught. The proficiency of the few pupils examined ranged from tolerable to fair.

WARREN (V.) :—Regular inspection, 11th November.

Numbers enrolled :—Boys, 30 ; girls, 30 ; total, 60. Numbers present :—Boys, 24 ; girls, 23 ; total, 47.

A verandah has been put round the school, which answers well for a weather-shed, and gives the building a neat appearance. The schoolroom is rather narrow, but in other respects it is suitable and in good repair. The pupils are regular, punctual, clean, and orderly. The prescribed subjects, except singing, are taught. The instruction is fairly regulated, and the teaching is painstaking though not very skilful. The average proficiency is tolerable.

WELLINGTON (V.) :—Regular inspection, 19th and 20th April.

Numbers enrolled :—Boys, 82 ; girls, 50 ; total, 132. Numbers present :—Boys, 76 ; girls, 42 ; total, 118.

The schoolroom has been enlarged and play-sheds provided. In point of accommodation and furnishing, the school is in excellent condition. The discipline is effective in every particular, and the school sustains a high character for efficiency. Owing to the increasing attendance an additional pupil teacher is required.

WILBERTREE (V.) :—Regular inspection, 28th May.

Numbers enrolled :—Boys, 20 ; girls, 18 ; total, 38. Numbers present :—Boys, 13 ; girls, 13 ; total, 26.

The grounds have been fenced and a dam made since last inspection. The material condition is good, and the accommodation afforded in the school is equal to the wants of the locality. About 5-8ths of the pupils are regular. Punctuality and cleanliness need increased attention. Singing is not taught, and drawing is only taken up occasionally. The instruction is regulated by the usual documents. The methods are fairly intelligent, but they need to be more earnestly applied. The proficiency is scarcely moderate.

WINDEYER (V.) :—Regular inspection, 8th March.

Numbers enrolled :—Boys, 21 ; girls, 22 ; total, 43. Numbers present :—Boys, 14 ; girls, 12 ; total, 26.

Some repairs are needed to the windows and roof of the building. The play-ground is covered over with a thick scrub. A supply of water is needed. The pupils are neither regular nor punctual ; they are tolerably clean. Fair order is maintained, but the pupils have very little self-reliance. The methods are unskilful, and have produced only very indifferent results.

II.—PROVISIONAL SCHOOLS.

CAMROON (N.-V.) :—General inspection, 16th December.

Numbers enrolled :—Boys, 22; girls, 11; total, 33. Numbers present :—Boys, 8; girls, 6; total, 14.

This school was opened during the year. It is conducted in a slab hut, roofed with bark. The floor is not boarded. It is moderately supplied with furniture and working materials. The records are properly kept, but the instructional documents are not well understood. Very fair order is maintained. The pupils are divided into too many classes. The methods are not skilful, and the results are small. Writing is very fairly taught.

COOMBER (N.-V.) :—Regular inspection, 30th July.

Numbers enrolled :—Boys, 13; girls, 10; total, 23. Numbers present :—Boys, 12; girls, 7; total, 19.

The roof and the floor have been repaired since last inspection. The schoolroom is now tolerably comfortable. The furniture is short in supply and of bad quality. The working materials are sufficient. Much more system is observed in the management of the school than formerly. The methods are not skilful, but they are applied with care. The results of the examination are between moderate and tolerable.

DUNGABEE (N.-V.) :—Regular inspection, 8th February.

Numbers enrolled :—Boys, 9; girls, 15; total, 24. Numbers present :—Boys, 8; girls, 9; total, 17.

A new residence has been provided for the teacher, but the school-house remains in the same condition—it is indifferent for the purpose. The furniture and book supply are sufficient. There are only two classes in the school, but this division is suited to the present attainments. The instruction is carefully regulated, and the work of the school is carried on with untiring industry. The teacher has not much experience, but by attention to his duties he produces creditable results. The proficiency on the two lower standards is nearly fair.

GONGOLGAN (N.-V.) :—Regular inspection, 15th November.

Numbers enrolled :—Boys, 14; girls, 16; total, 30. Numbers present :—Boys, 11; girls, 10; total, 21.

The school is now held in an old hut, at the rear of a public-house. It is wholly unsuitable. A new school is required in this township, and steps have been taken to provide it. There is a fair supply of school materials. The pupils are fairly regular and punctual. The classification is not judicious, and I found it difficult to apply the Council's standards. Singing and drawing are not attempted. The teacher does his best to discharge his duties properly, but the results produced are little better than indifferent.

GUNDY (N.-V.) :—Regular inspection, 3rd May.

Numbers enrolled :—Boys, 12; girls, 16; total, 28. Numbers present :—Boys, 8; girls, 15; total, 23.

The school-house is a neat little building in very good repair, and affording ample accommodation for the present requirements of the locality. The pupils are fairly clean and orderly. The classification is not good, nor is the instruction well regulated. The teaching should accord more closely with the standards. The methods are too discursive, and greater thoroughness is needed. The proficiency ranges from indifferent to moderate.

LIMESTONE FLAT (N.-V.) :—Regular inspection, 3rd August.

Numbers enrolled :—Boys, 12; girls, 11; total, 23. Numbers present :—Boys, 11; girls, 7; total, 18.

The roof of the building wants mending, and the cracks between the slabs should be closed. The furniture is scanty and badly made. The pupils are fairly clean, orderly, and attentive. On the whole, the discipline is reasonably satisfactory. The instruction is properly regulated. The methods are not skilful, but by industry they produce fair results. Only the two lower standards were applied.

MERRENDEE (N.-V.) :—Regular inspection, 14th May.

Numbers enrolled :—Boys, 22; girls, 9; total, 31. Numbers present :—Boys, 18; girls, 9; total, 27.

The schoolroom and teacher's residence are in a very dilapidated condition. The school is tolerably well supplied with furniture and working materials. The pupils are regular and punctual, and in other respects the discipline is effective. The classification is appropriate, and the instruction well regulated. The methods are intelligent and energetically applied. The attainments are between fair and very fair.

NARRANGO (N.-V.) :—Regular inspection, 31st August.

Numbers enrolled :—Boys, 10; girls, 6; total, 16. Numbers present :—Boys, 7; girls, 4; total, 11.

The general organisation and discipline are fairly satisfactory. The attendance is small, and there are only two classes in the school. The pupils are clean and well-behaved. The results of the examination are tolerable on the two lower standards.

NEWREA (N.-V.) :—Regular inspection, 28th April.

Numbers enrolled :—Boys, 15; girls, 14; total, 29. Numbers present :—Boys, 8; girls, 7; total, 15.

The school was conducted in a most wretched old bark hut, which afforded very slight protection either from rain or sun, more than half the roof having rotted away. A new school has since been built by the inhabitants. The pupils are tolerably regular and punctual. Except singing, the prescribed subjects are taught. The instruction is fairly regulated. The teaching is industrious, and the methods are reasonably intelligent. At the time of inspection the school had only been a few months in operation, and the proficiency scarcely reached moderate.

ORLEY (N.-V.) :—Regular inspection, 30th April.

Numbers enrolled :—Boys, 11; girls, 8; total, 19. Numbers present :—Boys, 11; girls, 6; total, 17.

The school is held in the church used by the different Protestant denominations. The building is commodious and suitable, but poorly furnished. The supply of working materials is insufficient. Regularity and punctuality have improved during the year. Fair order is maintained. The instruction is not properly regulated, and the teaching is unskilful and ineffective. The proficiency is little better than indifferent.

SALLE'S FLAT (N.-V.) :—Regular inspection, 11th March.

Numbers enrolled :—Boys, 14; girls, 14; total, 28. Numbers present :—Boys, 13; girls, 11; total, 24.

The material condition of this school is tolerable. It is fairly supplied with working materials. A fair proportion of the pupils attend regularly and punctually. Cleanliness requires more care. The course of instruction is fairly regulated, and it embraces the prescribed subjects. The teaching is of fair skill, and it is industriously applied. The proficiency on the three standards ranged between moderate and tolerable.

SPRINGFIELD (N.-V.) :—Regular inspection, 17th June.

Numbers enrolled :—Boys, 16; girls, 22; total, 38. Numbers present :—Boys, 10; girls, 12; total, 22.

The floor has been boarded, a fire-place built, the roof lined with calico, and the walls white-washed since last examination. The premises are now in fair condition. The discipline secures very fair order. Cleanliness of the pupils should receive more attention. The instruction is fairly regulated, but the lessons are not registered. The methods are of tolerable merit, but they are not applied with sufficient spirit to produce satisfactory results. The proficiency scarcely reaches moderate.

TARA (N.-V.) :—Regular inspection, 4th August.

Numbers enrolled :—Boys, 12; girls, 13; total, 25. Numbers present :—Boys, 9; girls, 8; total, 17. The people have built a new school at this place; it is substantial and fairly suitable. The attendance is neither regular nor punctual. The teacher has no idea of discipline, and consequently the order is very bad. The seventeen children present were divided into seven classes, and I found it really impossible to apply the standards when testing the attainments. I estimate the proficiency as small.

TUREE CREEK (N.-V.) :—Regular inspection, 21st June.

Numbers enrolled :—Boys, 10; girls, 16; total, 26. Numbers present :—Boys, 8; girls, 12; total, 20. In size, material condition, and furnishing, this school-house is fairly suitable for the requirements of the locality. Nearly 5-Gths of the enrolled pupils are regular and punctual. Except singing, the prescribed subjects are taught. The discipline secures fair order and attention. The teacher is inexperienced, but earnest and industrious. The proficiency exceeds moderate.

WOLLAR (N.-V.) :—Regular inspection, 18th December.

Numbers enrolled :—Boys, 13; girls, 12; total, 25. Numbers present :—Boys, 6; girls, 4; total, 10. The schoolroom is a very good one, but it is indifferently furnished. Since last inspection, out-offices have been provided, and working materials supplied. Owing to harvesting and other causes, the attendance was very low on the day of examination. The discipline is moderate. The classification is too minute, and the instruction is badly arranged. The methods are mechanical, but the teaching is painstaking. The proficiency is very indifferent.

III.—HALF-TIME SCHOOLS.

BERI CREEK (N.-V.) :—Regular inspection, 29th October.

Numbers enrolled :—Boys, 11; girls, 6; total, 17. Numbers present :—Boys, 9; girls, 6; total, 15. Out-offices have not yet been provided. In other respects the material condition is fair. The school is pretty well supplied with working materials. A good proportion of the pupils attend regularly. Cleanliness, order, and attention are very fair. The prescribed subjects, excepting drawing, are taught. The methods are modern, and the results approach tolerable.

NUBBYGLYN (N.-V.) :—Regular inspection, 29th October.

Numbers enrolled :—Boys, 4; girls, 7; total, 11. Numbers present :—Boys, 3; girls, 5; total, 8. Although some improvements have been made to the school-house, yet the condition and organization are indifferent. A promise has been given that some necessary improvements will be made. The pupils attend regularly. The methods are pretty good, and the teaching is painstaking. The proficiency on two standards approaches tolerable.

Mudgee, 19th January, 1876.

G. O'BYRNE,
Inspector, Mudgee District.

NEWCASTLE DISTRICT.

General Report for the year 1875.

During the year 1875 ten new schools were opened, of which one was Public and one Denominational, five were Provisional, and three Half-time; two Half-time Schools were converted into a Public and Provisional School respectively. Infant departments were opened in connection with the Plattsburg Public and Newcastle Roman Catholic School; and the Public School at Parading Ground was reopened. Tarrigal and Wyong Creek Provisional, and John's River Half-time were closed—the two latter only temporarily; and the certificate was withdrawn from the Church of England School at Gosford. At the close of the year the number of schools in existence was 104, viz., fifty-six Public, sixteen Provisional, sixteen Half-time, nine Church of England, and seven Roman Catholic.

Since the abolition by the Council of the condition heretofore observed in granting aid for building Public Schools, viz., that one-third of the cost should be raised by the local promoters and committees, and the substitution instead of a rule providing for their complete erection entirely at the public expense, very great impetus and encouragement have been given to the establishment of these schools; considerable improvements have been already effected in some existing ones; and operations on a much higher and more extensive scale than any hitherto carried on are likely to be demanded for some time to come, in order to provide adequately for growing requirements, to remove present defects, and render the educational machinery of the country commensurate, as far as possible, with that very liberal expenditure authorized by Parliament for extending and perfecting its action and influence.

Already new buildings are either authorized or in process of erection at Clarence Town, Gosford, New Lambton, Laurieton, and Wyong Creek; extensive improvements are to be effected in other places; and numerous applications, on the subject of building and repairs, may be expected during the current year. Under such circumstances—the want of a school being the only condition requisite to insure its establishment—there need be no serious apprehension that any locality will be neglected, provided its inhabitants will only take the trouble of making known their requirements.

The number of schools inspected last year was eighty-eight; the number not inspected, sixteen; and the reasons for the non-inspection of these schools may be stated as follows: six were closed when I was visiting in their respective neighbourhoods; in one the teacher had not been recognized by the Council; in two I found no attendance, owing to sickness in one case and rain in the other; and seven were not inspected for want of time.

At the date of inspection, 6,408 children of school age were enrolled, and of these 4,844, or nearly 76 per cent., were present at examination. Considering that early in the year many portions of the district were visited by a disastrous flood, to which succeeded at various intervals diseases specially affecting the children, and almost entirely emptying, sometimes for weeks together, many schools, the proportion of pupils in actual attendance compared with the enrolment may not be regarded as unsatisfactory. Besides reducing the attendance, these causes, as a matter of course, but especially the sickness, materially retarded the progress of the scholars, and exercised a very depressing influence on the efficiency and usefulness of the schools.

Most of the material defects pointed out in last year's Report have been either removed or are soon likely to be; and the material character of the schools of the district evinced, in the past year, a decidedly upward tendency, while the wants of individual localities were met with all available despatch. At the present time there are only about six really unsuitable and badly appointed schools in the whole district; and the average worth of all, in a material point of view, may be estimated as about very fair. As regards their moral tone also the schools examined are very fair. Respecting their value and utility in the actual work of instruction, as judged by the results of examination, there is, as a whole, no advance on the estimate given for the preceding year, which was from tolerable to fair; but this is an average by no means insignificant for so large a number of cases, and especially when viewed in comparison with the difficulties and hindrances already mentioned.

Judging

Judging from the substantial encouragement given to teachers by the revised regulations, in the shape of increased salaries, as well as from their own natural desire to maintain or enhance their successes, or correct and improve their misdirected or ineffectual efforts, it may be asserted with some confidence that the future prospects of many—indeed I might say of most—schools in this district are fairly encouraging, and that under ordinarily favourable conditions, both external and internal, the next annual report will have to record a higher and more general progress.

Detailed statements showing the condition of the schools examined are appended as usual.

WM. DWYER,
Inspector.

Newcastle, 27th January, 1876.

DETAILED Statement showing the condition of the Public, Provisional, and Half-time Schools inspected in 1875, as regards—

1. Their material condition.
2. Their moral character.
3. The subjects and methods of instruction.
4. The proficiency of the pupils.

PUBLIC SCHOOLS.

BANDON GROVE :—General inspection, 20th September.

Present at examination :—Boys, 18 ; girls, 14 ; total, 32.

1. The condition of the schoolroom, and the supply of furniture and apparatus may be considered fair ; but the kitchen, out-offices, and fencing need partial renewal. 2. The moral tone of the school is good. 3. The subjects are fairly suitable and properly arranged ; the methods intelligent, careful, and effective. 4. The average proficiency is about fair.

BARRINGTON :—Regular inspection, 3rd December.

Present at examination :—Boys, 11 ; girls, 11 ; total, 22.

1. The buildings are unsuitable, in bad repair, and only of a temporary character ; but the schoolroom is tolerably well organised. 2. The discipline is fairly intelligent and effective ; and the moral tone very fair. 3. The subjects are reasonably appropriate, and arranged with tolerable care and skill ; the methods are tolerably intelligent and effective. 4. The average proficiency approaches tolerable.

BLUE GUM FLAT :—Regular inspection, 4th June.

Present at examination :—Boys, 15 ; girls, 8 ; total, 23.

1. The accommodation is sufficient ; but the buildings, though fairly suitable, are not of a substantial character, nor thoroughly weatherproof. The schoolroom is well provided with requisites, and, as a whole, effectively organised. 2. Except that the children are irregular, the moral tone of the school is very fair. 3. The classification is suitable ; and the occupation appropriate and arranged with satisfactory care and skill. The instruction is fairly intelligent, earnest, and, under the circumstances, passably effective. 4. The average proficiency is tolerable ; and the general character of the school fair.

BOORAL :—Regular inspection, 13th October.

Present at examination :—Boys, 20 ; girls, 16 ; total, 36.

1. The premises are suitable and well kept ; and the school is effectively organised. 2. The moral tone of the school is good. 3. The subjects are appropriate and suitably arranged ; the instruction is fairly intelligent, energetic, and effective. 4. The average proficiency is nearly fair, and the general character of the school very fair.

CLARENCE TOWN :—General inspection, 8th and 9th September.

Present at examination :—Boys, 42 ; girls, 34 ; total, 76.

1. The premises continue unsuitable and in very bad condition ; but new ones are about to be erected. Under the circumstances, the organisation of the school is reasonably effective. 2. The general order and moral tone of the school are good. 3. The subjects agree with the standard, and are properly arranged ; the instruction is intelligent, skilful, and effective. 4. The average proficiency is very fair ; and the general character of the school good.

COORANBONG :—General inspection, 31st May.

Present at examination :—Boys, 18 ; girls, 25 ; total, 43.

1. The building is fairly suitable and in good condition, but negligently kept. The arrangement of furniture, apparatus, and books, and the general organisation are unsatisfactory. 2. The moral tone of the school is tolerable. 3. The occupation is partially and confusedly arranged, but, as far as it goes, in accordance with the standard. The instruction is awkward and poorly effective. 4. The average proficiency is little more than indifferent.

CUNDELTOWN :—General inspection, 27th October.

Present at examination :—Boys, 24 ; girls, 25 ; total, 49.

1. Extensive repairs and improvements are needed and authorised. The schoolroom is suitable and well organised. 2. The moral tone of the school is very fair. 3. The subjects are appropriate and fairly arranged ; the methods reasonably intelligent, skilful, and effective. 4. The average proficiency is fair.

CROKI :—Regular inspection, 19th November.

Present at examination :—Boys, 25 ; girls, 33 ; total, 58.

1. The premises have undergone extensive repairs, are now very much improved, and fairly adequate to the requirements of the place. The school is well provided with furniture and appliances. 2. The moral tone of the school is good. 3. The subjects are suitable and properly arranged ; the methods intelligent, earnest, and effective. 4. The average proficiency is nearly very fair.

CROOM PARK :—Regular inspection, 24th September.

Present at examination :—Boys, 8 ; girls, 9 ; total, 17.

1. The general condition of the premises is satisfactory ; and the school is fairly organised. 2. The moral tone of the school is very fair. 3. Except singing the prescribed subjects are taught, and arranged with fair care and skill. The instruction is passably intelligent, earnest, and painstaking. 4. The average proficiency is nearly very fair.

DINGO CREEK :—Regular inspection, 11th November.

Present at examination :—Boys, 16 ; girls, 13 ; total, 29.

1. Except the teacher's house, the premises are fairly suitable, carefully preserved in good condition, and sufficient for the wants of the place ; and the school is intelligently and skilfully organised. 2. The moral tone of the school is good. 3. The prescribed subjects are taught and properly arranged ; and the instruction is painstaking, judicious, and effective. 4. The average proficiency is nearly fair.

DUMARESQ

DUMARESQ ISLAND :—Regular inspection, 3rd November.

Present at examination :—Boys, 14; girls, 16; total, 30.

1. Except as regards the supply of water, the premises are now in fair condition; and the school is well provided with furniture and appliances. 2. The moral tone of the school is good. 3. The subjects are appropriate and suitably arranged; the methods fairly intelligent, skilful, and effective. 4. The average proficiency exceeds fair.

DUNGOO :—Regular inspection, 17th September.

Present at examination :—Boys, 25; girls, 15; total, 40.

1. The condition of the main buildings is good; and the organisation of the school reasonably effective. New furniture is, however, needed. 2. The moral tone of the school is good. 3. The subjects are suitable, and in general well arranged; the instruction is intelligent, earnest, and reasonably skilful. 4. The average proficiency is nearly very fair.

GHINNI GHINNI :—General inspection, 15th November.

Present at examination :—Boys, 15; girls, 11; total, 26.

1. The premises are in very good condition, suitable, and well appointed; and the organisation of the school is very good. 2. The moral tone of the school is fair. 3. The subjects are suitable and fairly arranged; the methods reasonably intelligent and passably effective. 4. The average proficiency is nearly tolerable.

GOSFORD :—Regular inspection, 8th June.

Present at examination :—Boys, 25; girls, 31; total, 56.

1. The schoolroom is much too small, in bad repair, and very poorly organised. The erection of new premises has been authorized. 2. The moral tone of the school is very fair. 3. Except singing and drawing, the prescribed subjects are taught, and fairly arranged in the requisite guides. The instruction is intelligent, earnest, and effective. 4. The average proficiency and general character of the school is very fair.

HEXHAM :—General inspection, 13th August.

Present at examination :—Boys, 11; girls, 14; total, 25.

1. The premises are only passably suitable and in moderate repair, but central and convenient for a portion of the district; the organisation of the school is tolerable. 2. The moral tone of the school is very fair. 3. Scripture lessons are omitted from the instruction, which otherwise accords with the standard. The methods are fairly skilful, intelligent, and effective. 4. The average proficiency exceeds fair.

HAMILTON (Primary) :—Regular inspection, 10th to 12th August.

Present at examination :—Boys, 65; girls, 46; total, 111.

The premises are suitable and in very good condition, but unprovided with a lavatory or playshed. The furniture and appliances are abundant and effectively arranged. 2. The moral tone of the school is good. 3. Drawing, singing, needlework, and elementary geometry are added to the ordinary subjects; and all are regulated with care and reasonable judgment. The methods are intelligent and skilfully applied. 4. The average proficiency is very fair; and the general character of the school, good.

HAMILTON (Infant) :—Regular inspection, 12th August.

Present at examination :—Boys, 59; girls, 50; total, 109.

1. The room is small, badly ventilated, and wholly unsuitable; and the organisation of the school is very defective. 2. The moral tone of the school is very fair. 3. The occupation is suitable and properly regulated; the instruction skilful and fairly effective. 4. The average proficiency exceeds fair; and the general character of the school is very fair.

HANBURY (Primary) :—Regular inspection, 11th to 13th May.

Present at examination :—Boys, 65; girls, 62; total, 127.

1. The premises are suitable, in very good condition, and fully provided with furniture and appliances. 2. The moral tone of the school is good. 3. The classification is correct; the occupation is suitable, and arranged with suitable care and judgment. The methods are of fair average merit as witnessed, but not satisfactorily effective. 4. The average proficiency is a little over tolerable.

HANBURY (Infant) :—Regular inspection, 14th May.

Present at examination :—Boys, 69; girls, 57; total, 126.

1. The accommodation is unsuitable, being only a portion of the main room cut off by a wooden partition. The organisation is fairly effective, but the teaching power insufficient. 2. The moral tone of the school is good. 3. The classification and occupation are satisfactory; the instruction is intelligent, judicious, and fairly effective. 4. The average proficiency is fair.

KINCUMBER :—General inspection, 11th June.

Present at examination :—Boys, 12; girls, 14; total, 26.

1. The premises are in good condition, and fairly suitable, and the school is effectively organised. 2. The moral tone of the school is fair. 3. The subjects are fairly appropriate and judiciously arranged; the methods are intelligent, reasonably judicious, and effective. 4. The average proficiency exceeds tolerable.

LAMBTON (Primary) :—General inspection, 20th to 22nd July.

Present at examination :—Boys, 107; girls, 107; total, 214.

1. The accommodation is inadequate, and the light and ventilation are defective; but the premises are, as a whole, in good condition, and the school is well organised. 2. The habits of the children are to some extent noisy and their manners disagreeable; but, viewed as a whole, the moral tone of the school may be considered good. 3. The subjects are suitable, and the methods fairly intelligent and skilful. 4. The average proficiency exceeds fair, and the general character of the school is very fair.

LAMBTON (Infant) :—General inspection, 7th July.

Present at examination :—Boys, 98; girls, 83; total, 181.

1. As a whole, the material condition of the school is good. 2. The moral tone of the school is very fair. 3. The instruction is fairly intelligent, vigorous, and effective. 4. The average proficiency is nearly tolerable. Promotions amounting to 75 per cent. of the numbers enrolled had been made only a short time prior to the examination.

MANGROVE CREEK :—General inspection, 21st June.

Present at examination :—Boys, 15; girls, 6; total, 21.

1. The premises are in all respects tolerable, and the organisation of the school is fair. 2. The moral tone of the school is very fair. 3. The subjects are appropriate and tolerably well arranged; the methods are moderately intelligent, painstaking, and effective. 4. The average proficiency and general character of the school are about tolerable.

MARLEE :—Regular inspection, 12th November.

Present at examination :—Boys, 13; girls, 10; total, 23.

1. The premises are suitable, sufficient, and well appointed, and the organisation of the school is satisfactory in all respects. 2. The moral tone of the school is fair. 3. The ordinary subjects only are taught, but they are fairly suited to the capacities of the children, and arranged with reasonable care and skill. The methods are earnest, fairly intelligent, and judicious. 4. The average proficiency is fair.

MARKWELL :—Regular inspection, 14th October.

Present at examination :—Boys, 13; girls, 13; total, 26.

1. The building is much too small, in bad condition, badly lighted and ventilated, but provided with a moderate stock of furniture and apparatus. The ground is unfenced and without the necessary buildings. The erection of new premises is authorised. 2. The moral tone of the school is fair. 3. Except singing and drawing, the prescribed subjects are taught and arranged in the requisite guides with passable care and skill. The methods are tolerably intelligent and effective. 4. The average proficiency is nearly tolerable.

MINIMBAH :—General inspection, 22nd October.

Present at examination :—Boys, 20; girls, 12; total, 32.

1. The building is new, fairly suitable, and reasonably well provided with furniture and appliances, but the ground is not enclosed nor provided with the requisite out-offices. 2. The moral tone of the school is very fair. 3. The subjects are fairly suitable and properly arranged; the methods are reasonably intelligent, earnest, and effective. 4. The average proficiency exceeds tolerable.

MITCHELL'S ISLAND :—Regular inspection, 22nd November.

Present at examination :—Boys, 24; girls, 25; total, 49.

1. Extensive repairs and improvements are required; but the premises, as a whole, are in fair condition, and reasonably adequate to present wants. The school is effectively organised. 2. The discipline is unsystematic, injudicious, and of poor effect; and the children are addicted to awkward and disagreeable habits. 3. The classification is too minute; the occupation accords with the standard, except as regards singing and drawing, which are omitted; the lesson guides are carelessly prepared; and the instruction is, in general, feeble and indifferently profitable. 4. The average proficiency slightly exceeds moderate.

MONKERAI :—Regular inspection, 8th December.

Present at examination :—Boys, 10; girls, 12; total, 22.

1. The premises are old, dilapidated, and unsuitable, and the organisation of the school is indifferent. 2. The moral tone of the school is fair. 3. Except singing the prescribed subjects are taught, and arranged with passable care and skill. The instruction, regarded as a whole, is of tolerable value. 4. The average proficiency exceeds tolerable.

MOSQUITO ISLAND :—Regular inspection, 26th August.

Present at examination :—Boys, 15; girls, 16; total, 31.

1. The buildings are in good condition and fairly suitable. The organisation is reasonably effective. 2. The moral tone of the school is fair. 3. Singing and drawing are not taught; but, otherwise, the subjects accord with the standard, and are suitably arranged. The instruction is fairly appropriate and skilful. 4. The average proficiency is fair.

NELSON'S PLAINS :—General inspection, 29th April.

Present at examination :—Boys, 16; girls, 14; total, 30.

1. The situation is low, and traces of the late flood were abundantly evident in the schoolroom, the appearance of which was very neglected and cheerless. The furniture is old, and the general organisation unsatisfactory. 2. The moral tone of the school is fair. 3. The subjects taught do not fully accord with the standard, nor are they subject to any arrangement worth mentioning. The instruction wants energy and proper direction. 4. The average proficiency is nearly tolerable.

NEWCASTLE (Primary) :—Regular inspection, 27th to 30th July.

Present at examination :—Boys, 131; girls, 78; total, 209.

1. Important repairs and improvements are needed; but the main buildings are in good condition, and the organisation of the school is effective. 2. The moral tone of the school is very good. 3. The course of instruction accords with the standard; and comprises, moreover, drawing, singing, elementary geometry, algebra, and mensuration—all suitably arranged and taught with intelligence, skill, and effect. 4. The average proficiency is very fair, and the general character of the school very good.

NEWCASTLE (Infant) :—Regular inspection, 3rd August.

Present at examination :—Boys, 96; girls, 74; total, 170.

1. The schoolroom is suitable, and reasonably well provided with furniture and appliances. 2. The moral tone of the school is very good. 3. The subjects are appropriate and suitably arranged; the methods are earnest, fairly judicious, and effective. 4. The average proficiency is nearly very fair; and the general character of the school good.

NEWCASTLE, SOUTH :—Regular inspection, 21st to 27th April.

Present at examination :—Boys, 142; girls, 99; total, 241.

1. The building is unsuitable and in bad condition, but organised as effectively as circumstances permit. A new school of two departments has since been erected. 2. Allowing for the inconveniences of the room, the moral tone of the school is very fair. 3. The subjects are suitable and properly arranged; elementary Latin and geometry, drawing and vocal music are taught. The methods are in general earnest, intelligent, and well applied. 4. The average proficiency is nearly very fair; and the general character of the school nearly good.

ONYBIGAMBAH :—Regular inspection, 25th August.

Present at examination :—Boys, 27; girls, 15; total, 42.

1. The building is fairly suitable, and reasonably well provided with the more essential articles of furniture and apparatus. The playground is without shade or lavatory. 2. Most of the pupils are fairly clean, attentive, well-conducted, and orderly. 3. The instruction accords, for the most part, with the standard, and is arranged with tolerable care and skill; the methods are intelligent, reasonably judicious, and effective. 4. The average proficiency and general character of the school are about fair.

OXLEY

OXLEY ISLAND :—General inspection, 4th November.

Present at examination :—Boys, 13 ; girls, 20 ; total, 33.

1. The schoolroom is old and unsubstantial, but well and cleanly kept, and tolerably well organised. The premises as a whole are in fair condition. 2. The moral tone of the school is good. 3. The instruction is appropriate and intelligently arranged; and the teaching is careful and reasonably effective. 4. The average proficiency exceeds tolerable.

PLATTSBURG (Primary) :—General inspection, 4th and 5th August.

Present at examination :—Boys, 55 ; girls, 51 ; total, 106.

1. The premises are new and suitable, but not quite completed in certain particulars. The school is effectively organised. 2. The moral tone of the school is very fair. 3. The subjects are suitable, and properly arranged; the methods reasonably skilful, earnest, and effective. 4. The average proficiency exceeds fair, and the general character of the school is very fair.

PLATTSBURG (Infant) :—General inspection, 5th August.

Present at examination :—Boys, 64 ; girls, 52 ; total, 116.

1. The room is too small for the requirements; and the necessary furniture was not, but has I believe since been, provided. At the time of inspection the organisation was unsatisfactory. 2. The moral tone of the school is fair. 3. The subjects are appropriate and suitably arranged; the methods fairly skilful and effective. 4. The average proficiency exceeds fair, and the general character of the school is very fair.

RAYMOND TERRACE :—General inspection, 28th April.

Present at examination :—Boys, 20 ; girls, 15 ; total, 35.

1. The premises are unfinished, and still in the hands of the contractor, but occupied under pressure of circumstances. At present the organisation is tolerable. 2. The moral tone of the school is very fair. 3. Except singing, the prescribed subjects are taught and properly arranged. The methods are modern and of fair merit. 4. The average proficiency is nearly fair; and the general character of the school fair.

REDBANK :—Regular inspection, 5th November.

Present at examination :—Boys, 26 ; girls, 18 ; total, 44.

1. The site is unsuitable; the schoolroom old, and in poor repair, but clean and passably presentable. Light and ventilation are defective; but the organisation is moderate as a whole. 2. The order and moral tone are fair. 3. Singing is not taught, but otherwise the subjects accord with the standard and are regulated with passable skill. The methods are reasonably intelligent and effective. 4. The average proficiency exceeds tolerable.

SEAHAM :—Regular inspection, 3rd September.

Present at examination :—Boys, 14 ; girls, 12 ; total, 26.

1. The premises are in fair condition, and sufficient for the wants of the place. The furniture is old and indifferently suitable; but the general organisation is tolerable. 2. The moral tone of the school is fair. 3. Except singing and drawing, the prescribed subjects are taught; and the lesson guides are fairly suitable and well constructed. The teaching is earnest and tolerably effective. 4. The average proficiency approaches tolerable.

STOCKTON :—General inspection, 15th December.

Present at examination :—Boys, 50 ; girls, 53 ; total, 103.

1. The building is reasonably sufficient, suitable, and in good condition; but the ground is not enclosed, and there is no lavatory or playshed. The general organisation is fair. 2. The moral tone of the school is very fair. 3. The subjects are fairly appropriate, and suitably arranged; and the methods possess commendable energy and skill. 4. The average proficiency is tolerable. The school was only about three months in operation.

TARBEE :—Regular inspection, 24th and 25th November.

Present at examination :—Boys, 42 ; girls, 19 ; total, 61.

1. Gates and a better fence are needed in front, and the fences all round are in want of repair. The buildings are substantial and suitable, and the schoolroom fairly organized. 2. The habits, manners, and demeanour of some of the boys are unsatisfactory; but the general moral tone of the school may be considered fair. 3. All the subjects prescribed are not taught, nor is the construction of the lesson guides in strict conformity with the classification and general routine. The teaching in itself is intelligent, appropriate, and fairly skilful, but judged by results not satisfactorily effective. 4. The average proficiency is about fair.

TELEGHERRY :—Regular inspection, 7th December.

Present at examination :—Boys, 11 ; girls, 16 ; total, 27.

1. Since last inspection the school has been lined and painted, and is now in very fair condition, suitable, and reasonably well organised. Owing to the prevalence of sickness the attendance was small. 2. The moral tone of the school is very fair. 3. The classification and occupation are fairly suitable; the lesson guides constructed with care and passable skill. The instruction is careful and moderately effective. 4. The average proficiency is nearly tolerable.

THALABA :—Regular inspection, 25th September.

Present at examination :—Boys, 19 ; girls, 21 ; total, 40.

1. The buildings are of inferior character, in poor repair, unsuitable, and indifferently furnished and organised. 2. The moral tone of the school is indifferent. 3. Except singing, the prescribed subjects are taught, and arranged with passable care and skill. The methods are intelligent in the abstract, but very deficient in energy and skilful application. 4. The average proficiency is about moderate.

TINONEE :—Regular inspection, 26th November.

Present at examination :—Boys, 36 ; girls, 27 ; total, 63.

1. The premises are suitable, in good condition, and sufficient for present wants. Improvements were in process of execution, which, when complete, will leave little room for complaint as regards the material character of the establishment. 2. Viewed as a whole, the moral tone of the school may be considered good. 3. Except singing, the prescribed subjects are taught and suitably arranged. The instruction is intelligent, skilful, and effective. 4. The average proficiency is very fair.

WALLSEND (Primary) :—Regular inspection, 19th to 24th March.

Present at examination :—Boys, 131 ; girls, 74 ; total, 205.

1. The accommodation is insufficient—a defect since removed—but otherwise the premises are in excellent condition, adequately furnished, and very thoroughly organised. 2. The moral tone of the school is excellent. 3. The classification and occupation are appropriate; the instruction is judicious, well applied, and effective. Singing, drawing, elementary Latin, geometry, and algebra are added to the ordinary subjects. 4. The average proficiency is very fair, and the general character of the school may be estimated as from good to very good.

WALLSEND

WALLSEND (Infant):—Regular inspection, 24th March.

Present at examination:—Boys, 45; girls, 50; total, 95.

1. The accommodation is utterly inadequate, and in consequence the organisation of the school is cramped and defective. A new and capacious room has been since erected. 2. The moral tone of the school is good. 3. The subjects are appropriate, but not fully and explicitly arranged; the methods are earnest and fairly effective. 4. The average proficiency exceeds tolerable. Most of the children were only after recovering from measles.

WARATAH:—General inspection, 25th February.

Present at examination:—Boys, 42; girls, 24; total, 66.

1. The buildings are new, suitable, and provided with all essential requisites; the organisation is appropriate and effective. 2. The moral tone of the school is only moderate. 3. The subjects are suitable and passably arranged; the methods are wanting in energy and judicious application. 4. The average proficiency is only moderate.

WINGHAM:—Regular inspection, 9th November.

Present at examination:—Boys, 28; girls, 16; total, 44.

1. The premises are unsuitable and awkwardly situated, but in tolerable repair; the school is fairly organised. 2. The moral tone of the school is very fair. 3. The classification and occupation are judicious, the subjects are properly arranged, and the methods are fairly intelligent and skilful. 4. The average proficiency exceeds fair.

WOOLLA WOOLLA:—General inspection, 8th November.

Present at examination:—Boys, 21; girls, 16; total, 37.

1. The schoolroom is new, suitable, and well organised; but the teacher's residence is very old, insufficient, and in bad repair. 2. The moral tone of the school is good. 3. The subjects are appropriate and suitably arranged; the methods reasonably skilful and intelligent. 4. The average proficiency varies from tolerable to fair; and the general character of the school is fair.

PROVISIONAL SCHOOLS.**DINGO CREEK:—Regular inspection, 10th November.**

Present at examination:—Boys, 10; girls, 5; total, 15.

1. The condition and organisation of the school are barely moderate; and its general usefulness is of very small value. 2. The moral tone is tolerable. 3. The more important subjects are professedly taught and passably arranged; but the methods are very mechanical and ineffective. 4. The average proficiency is very indifferent.

ERINA:—Regular inspection, 9th June.

Present at examination:—Boys, 13; girls, 14; total, 27.

1. The building is in passable condition; but the furniture is unsuitable and of a rough description. The general organisation is tolerable. 2. The moral tone of the school is fair. 3. The occupation is fairly appropriate and moderately well arranged; the methods are of tolerable value. 4. The average proficiency exceeds moderate.

KELVIN GROVE:—General inspection, 29th November.

Present at examination:—Boys, 19; girls, 8; total, 27.

1. The schoolroom is substantial and passably suitable, but not well lighted and aired. The general organisation is moderate. 2. The moral tone is tolerable. 3. The subjects are fairly appropriate and passably arranged; the methods are reasonably intelligent and effective. 4. The average proficiency is nearly tolerable.

KIMBRIKI:—General inspection, 30th November.

Present at examination:—Boys, 7; girls, 13; total, 20.

1. The schoolroom is tolerable as to condition, accommodation, and organisation. 2. The moral tone of the school is moderate. 3. The classification is injudicious; and the occupation badly arranged but suitable in character. The instruction is very mechanical and of poor value. 4. The average proficiency is indifferent.

LOWER MANGROVE:—Regular inspection, 19th June.

Present at examination:—Boys, 10; girls, 3; total, 13.

1. The building is very old, leaky, and uncomfortable; the furniture is rough and indifferently suitable; and the organisation, as a whole, is unsatisfactory. 2. The moral tone of the school is indifferent. 3. The subjects are passably suitable and moderately arranged; the methods are mechanical and ineffective. 4. The average proficiency is very indifferent.

MYALL RIVER:—General inspection, 15th October.

Present at examination:—Boys, 9; girls, 11; total, 20.

1. The schoolroom is in tolerable condition, and provided with a moderate stock of furniture, apparatus, and books; but the ground is unfenced and unprovided with out-offices. 2. The moral tone of the school is very fair. 3. The subjects are fairly appropriate and arranged with reasonable care and skill; the methods are fairly judicious and effective. 4. The average proficiency is fair.

NEWPORT:—Regular inspection, 2nd June.

Present at examination:—Boys, 16; girls, 13; total, 29.

1. The state of the building, and the organisation of the school are tolerable. 2. The moral tone of the school is fair. 3. The classification is fairly judicious; the occupation reasonably suitable and passably arranged; the instruction is mechanical, but earnest and painstaking. 4. The average proficiency is nearly tolerable.

OAKENDALE:—General inspection, 10th September.

Present at examination:—Boys, 11; girls, 8; total, 19.

1. The condition of the room, and the stock of furniture, apparatus, and books are, in all respects, reasonable; and the general organisation is fair. 2. The pupils are attentive, well-conducted, and orderly. 3. The subjects are fairly suitable and passably regulated; the methods fairly energetic and careful. 4. The average proficiency is fair.

SALISBURY:—General inspection, 22nd September.

Present at examination:—Boys, 14; girls, 9; total, 23.

1. The building is unsuitable in every respect, and very poorly organised. 2. Under the circumstances, the moral tone is tolerable. 3. The subjects are fairly suitable, but not fully and skilfully arranged; the methods are mechanical, but tolerably earnest. 4. The average proficiency is indifferent.

HALF-

HALF-TIME SCHOOLS.

BOOLAMBAYTE:—Regular inspection, 18th October.

Present at examination:—Boys, 5; girls, 12; total, 17.

1. The condition of the premises and the organisation of the school are in all respects tolerable.
2. The moral tone of the school is fair.
3. The organisation is fairly suitable and well arranged; the instruction intelligent in itself but wanting zeal and energy.
4. The average proficiency exceeds moderate.

BULLADELAK:—Regular inspection, 18th October.

Present at examination:—Boys, 9; girls, 7; total, 16.

1. The schoolroom and its general equipment are tolerable.
2. The moral tone of the school is fair.
3. The occupation is fairly judicious, and passably arranged; the instruction intelligent, but without satisfactory energy and care.
4. The average proficiency exceeds tolerable.

GLENWILLIAM:—Regular inspection, 13th September.

Present at examination:—Boys, 10; girls, 9; total, 19.

1. The buildings are now in fair condition, and the school is pretty well organised.
2. The moral tone of the school is very fair.
3. The subjects are suitable and arranged with reasonable care and skill; the instruction is fairly intelligent, active, and interesting.
4. The average proficiency is nearly fair.

GLENMORE:—Regular inspection, 21st September.

Present at examination:—Boys, 3; girls, 7; total, 10.

1. The building is unsuitable and in bad condition, and the organisation is only indifferent.
2. The moral tone of the school is tolerable.
3. The subjects are suitable, and regulated with tolerable skill and care; the instruction is in all respects passable.
4. The average proficiency is tolerable.

HANGING ROCK:—General inspection, 29th October.

Present at examination:—Boys, 8; girls, 10; total, 18.

1. The condition and organisation of the room are tolerable.
2. The moral tone of the school is very fair.
3. The subjects are appropriate, and suitably regulated; the methods, fairly intelligent and effective.
4. The average proficiency is very fair.

ISLAND FLAT:—General inspection, 22nd June.

Present at examination:—Boys, 5; girls, 13; total, 18.

1. The building is old and unsubstantial, but moderately suitable, and provided with a moderate stock of furniture, apparatus, and books.
2. The moral tone of the school is tolerable.
3. The subjects are fairly appropriate, but not fully arranged; the methods are moderately intelligent and effective.
4. The average proficiency exceeds tolerable.

JOHNSON'S CREEK:—General inspection, 4th December.

Present at examination:—Boys, 7; girls, 4; total, 11.

1. The condition and the organisation of the school are tolerable.
2. The moral tone of the school is fair.
3. The subjects are suitable and fairly arranged; the methods intelligent and reasonably skilful.
4. The average proficiency exceeds moderate.

LANDSDOWNE:—Regular inspection, 29th October.

Present at examination:—Boys, 7; girls, 3; total, 10.

1. The building is in fair condition, reasonably suitable, and passably well provided with furniture and appliances.
2. The moral tone of the school is very fair.
3. Except singing and drawing, the prescribed subjects are taught and suitably arranged; the instruction is intelligent and fairly judicious.
4. The average proficiency varies from fair to very fair.

M'LEAN RIVER, LOWER:—Regular inspection, 20th October.

Present at examination:—Boys, 5; girls, 8; total, 13.

1. The building and organisation are tolerable.
2. The moral tone of the school is very fair.
3. The subjects are appropriate and fairly regulated; the methods are reasonably skilful and effective.
4. The average proficiency is fair.

M'LEAN RIVER, UPPER:—Regular inspection, 20th October.

Present at examination:—Boys, 11; girls, 4; total, 15.

1. The premises are of a rude character, in a wild situation, but answer tolerably well under the circumstances. The organisation of the school is passable.
2. The government of the school is intelligent, the discipline effective, and the order very fair.
3. The subjects are suitable, carefully arranged, and skilfully taught.
4. The average proficiency is fair.

UNDERBANK:—Regular inspection, 21st September.

Present at examination:—Boys, 7; girls, 9; total, 16.

1. The building is tolerable in all respects; and the general organisation of the school moderate.
2. The moral tone of the school is fair.
3. The subjects are fairly suitable and passably arranged; the instruction is tolerably earnest and painstaking.
4. The average proficiency is nearly fair.

WOLLOMBA RIVER:—General inspection, 25th October.

Present at examination:—Boys, 6; girls, 10; total, 16.

1. The building is new, substantial, and fairly suitable; the stock of furniture and appliances reasonable; and the organisation fair.
2. The moral tone of the school is fair.
3. The subjects are fairly appropriate and arranged with passable ease and skill; the methods are reasonably careful and intelligent.
4. The average proficiency exceeds moderate.

WILLOW POINT:—Regular inspection, 26th October.

Present at examination:—Boys, 5; girls, 9; total, 14.

1. The building is a very indifferent one, and the playground destitute of shade, water, or out-offices. Altogether the state of the premises is very unsatisfactory; but repairs are promised. The furniture and organisation are moderate.
2. The moral tone of the school is very fair.
3. The subjects are fairly appropriate and tolerably well arranged; but the lesson guides are not suspended, owing to the exposed condition of the room. The methods are passably careful, but want energy and experience.
4. The average proficiency exceeds tolerable.

WARD'S RIVER:—General inspection, 4th December.

Present at examination:—Boys, 8; girls, 6; total, 14.

1. The room is reasonably suitable and in good condition; and the general organisation, fair.
2. Most of the pupils are regular and punctual, clean, attentive, and orderly.
3. The subjects are suitable and properly arranged; the methods intelligent, fairly skilful, and effective.
4. The proficiency varies from tolerable to fair.

SYDNEY DISTRICT.

INSPECTORS' Report upon the condition of Public, Provisional, and Certified Denominational Schools for the year 1875.

THREE new schools have been opened during the year, namely, Marrickville Infants, Bilocla Provisional, and Clontarf Provisional. One department—Parramatta-street R.C. Boys'—has been closed. The number of schools or departments in operation is 110. These are divided as follows:—

Public	39
Provisional	3
Church of England	35
Roman Catholic	24
Presbyterian	3
Wesleyan	5
Hebrew	1

These schools, if properly distributed and in some instances reorganised, would in all probability fairly meet the educational wants of the district for some time to come. Some localities are provided with a superabundance of schools, other places have none. The following may be instanced where Public Schools are needed:—Lower Woolloomooloo, Haymarket, Ultimo, Darlington, Balmain East, Balmain West, Double Bay, Darlinghurst, Waverley.

The great obstacle to the establishment of schools in this district lies in the difficulty of procuring suitable sites. We think, however, that if the Council were to appropriate a sum of money for this purpose, much of the difficulty might be overcome. It appears to us also desirable, for various reasons, that no unnecessary delay shall occur in the purchase of suitable sites. The 39 existing Public Schools afford accommodation for 6,000 pupils; the number in actual attendance is 9,820; and this number would be much increased were Public Schools available in all centres of population. At the lowest calculation, therefore, Public Schools are required at once to accommodate 3,800 children. The schools at Botany Road (Waterloo), Newtown, Surry Hills, Pyrmont, and St. Leonards, are conducted in non-rested premises. They are literally crammed with children; the accommodation is for the most part of a wretched character, and the work of education is carried on amid serious drawbacks. Indeed many of the other schools of the city are overcrowded; lavatories, weather-sheds, hat-rooms, and lobbies are utilized for teaching purposes; the atmosphere in these is close and stifling; and thus serious injury is being daily done to the health of hundreds of children.

All the schools in the district were fully inspected during the year and incidentally visited as often as opportunities offered. The number of incidental inspections effected, however, was less than in any previous year. This arose from occasional changes in the inspectorial staff, and the consequent interruptions to the regular work of inspection.

Substantial additions or improvements have been made to the following schools since last report:—Devonshire-street, William-street, Balmain C.E., St. Andrew's C.E., St. Philip's C.E.

With few exceptions, all the schools are suitably furnished and reasonably well organised. There is no marked deficiency of educational appliances, but many of the articles supplied by the Council's agent are of very inferior quality. Complaints from teachers on this score are well nigh general.

In two or three instances a remissness was observed in the keeping of the school records, and a tendency to allow the "Punishment Book" to fall into disuse.

The average enrolment of pupils for the year slightly exceeds 20,000, and the average attendance 12,600. Compared with previous years, there is thus a serious falling off in the regularity. This is mainly, if not altogether, due to the large amount of juvenile sickness that has prevailed throughout the year.

Under ordinarily favourable circumstances, the attendance is marked by fair regularity: at the same time it is proper to state there is ground for improvement in this feature of school discipline. In about nine-tenths of the schools, the pupils attend with very fair punctuality: in the remainder they are more or less addicted to lateness. In almost every instance, however, where unpunctuality prevails, the cause is largely attributable to the indifference or negligence of the teacher.

The means for ensuring cleanliness among the pupils are becoming more complete year by year. To all the leading schools proper lavatories have been attached, and in nearly all the remainder different kinds of substitutes are used. Military drill is taught with more or less success in most of the schools of the district. In addition to two drill instructors, who are specially employed for the purpose, a large number of teachers are fully competent to teach drill. The results arising from this instruction are beneficial in a high degree. The school movements are performed in a precise, orderly manner; the pupils are trained to yield a prompt obedience and to exhibit a quiet, respectful demeanour. It is worthy of remark that where this drill is most efficiently carried on, the other features of the discipline are correspondingly improved, and the necessity for corporal punishment sensibly diminished.

The government in four-fifths of the schools is mild and judicious, and the order in about the same number of a satisfactory character.

The general discipline has much improved, and may be estimated as very fair.

A few instances excepted, reasonable judgment is shown in the classification of the pupils. It were well, however, if a higher standard were generally aimed at. The number of schools in which a fourth class exists is 17, consisting of 11 Public and 6 Denominational. In 5 schools only—all Public—is to be found a fifth class. It is not creditable to any teacher in charge of a school to which a large infants department is attached not to be able to maintain a higher class than a third.

In about five-sixths of the schools the instruction is well arranged and systematized; in the remaining sixth, the lesson documents regulating it are poorly compiled. Reasonable effort is, however, made in all to render the teaching progressive and effective. The methods in use are appropriate, usually based on intelligent principles, and applied with earnestness, industry, and skill. In two or three cases they savour of empiricism, but they are not the less diligently or faithfully applied. Rote learning is little practised, text-books are all but ignored; the teaching is for the most part *vis à voce*; accompanied by a liberal use of the black-board. But good methods are of little avail where defective discipline prevails. It is rarely, if ever, the case, that a teacher whose power of governing is small proves capable of producing anything but very meagre results. Failing to secure or maintain the pupils' attention, he makes no lasting impressions on their minds, and his lessons become little better than waste talk. Fortunately, the number of teachers of this stamp is rapidly diminishing.

Of the subjects of instruction—reading, object lessons, Scripture lessons, trigonometry, and mensuration are taught well: writing, grammar, geography, drawing, music, geometry, algebra, mensuration, and Latin, very fairly: dictation and arithmetic, fairly. Compared with similar estimates given in last year's Report, decided improvement is discernible. This improvement is most marked in grammar, trigonometry, algebra, mensuration, and Latin.

The examinations held during the year were partly oral and partly written. More than ordinary attention was devoted to dictation and composition, and the results obtained in these subjects, although not quite satisfactory, are a great advance upon those of previous years. With regard to arithmetic, it may be observed that the standards applied are considered high, and are seldom met in the case of girls' schools. This will explain, in part, why the results in this subject are usually lower than those obtained in other branches. It is satisfactory, however, to be able to state that the methods employed in the teaching of arithmetic are rapidly becoming more rational and more effective.

Viewing

Viewing the condition of the several classes of schools, we find six Public Schools below, nine up to, and twenty-one above the standard. Of Provisional Schools, two are below, and one up to the standard: while of Denominational Schools, fifteen are below, twenty-nine up to, and twenty above the standard. Last year, the number of Public Schools below and above the standard were seven and sixteen respectively, as against six and twenty-one this year. In the case of Denominational Schools, the improvement is even more marked; for while in 1874, the number of schools below and above the standards were twenty-five and eight respectively, this year these numbers have altered to fifteen and twenty. Substantial progress has, therefore, been made since last report.

Of the schools above the standard, the following deserve to be specially mentioned for marked efficiency:—Fort-street Boys', Fort-street Girls', Cleveland-street Boys', Cleveland-street Girls', Cleveland-street Infants', William-street Girls', William-street Infants' in the first class: and Darlinghurst C. E., St. James' C. E. Girls', Double Bay C. E. Infants', and Waverley Presbyterian, in the second class.

The teachers of the district are a hard-working, intelligent, and respectable body of persons. All have been trained for their office. A large proportion of those filling the more important positions have graduated from the rank of pupil-teacher, and having been originally selected from their possessing natural aptitude for teaching, are now among the most efficient teachers in the service. Of the rest, several are below the requirements of metropolitan schools, while others are neither studious nor improving. Few among them voluntarily offer themselves for examination, and this may be taken as an indication of insufficient earnestness and enthusiasm. The pupil-teachers continue to render valuable service. Many of them are of far greater use than assistants; with few exceptions they are studious, diligent, and anxious to please. It is a point worthy of consideration, that the number of applicants for the office is rapidly becoming less, and their character deteriorating. This may be due to the superior attractions offered by other kinds of employment, but the matter is nevertheless one that requires to be carefully weighed.

We are inclined to think that the scale of remuneration is too low, especially for pupil-teachers of the fourth class. It is unreasonable to expect that youths who can obtain £50 per annum to start with in other Government departments will seek to become pupil-teachers at £30, more especially when the preliminary examination prescribed for the latter is not less difficult than that laid down for the Civil Service.

Local supervision of schools remains unchanged. In a few it is active and beneficial; in the great majority it nominally exists. We are inclined to believe that, in the Sydney District at least, local supervision of Public Schools might be harmlessly dispensed with.

As pointed out in previous reports, free schools require to be established in the chief centres of population, to meet the wants of a large number of children at present running about the streets. These are for the most part the offspring of drunken or vicious parents, and are growing up in ignorance and vice. Unless brought under the healthy influence of a good school, they are likely to become pests to society, and to add considerably to the expense of Government. Such schools will have to be conducted somewhat differently to our present Public Schools; the discipline in particular would have to be less strict and exacting.

Another want in connection with our educational system is the establishment of several infants schools. Sites sufficiently large for these might be obtained in the more populous parts of the city, where it would be difficult, if not impossible, to secure a more complete school organisation. These schools would be found useful auxiliaries to those already in existence, and meet the necessities of a large number of children at present attending no school.

Reviewing the work of the year, it is satisfactory to be able to report that in all essentials of school management good progress has been made. The organisation has improved, the discipline is healthy, and the work of teaching is carried on in an earnest and efficient manner.

The improvement in the condition of both Public and Denominational Schools is marked and decided.

Inspectors' Office,
22nd December, 1875.

EDWIN JOHNSON, } Inspectors.
JAMES W. ALLPASS, }

ANNEX.

DETAILED Statement of the condition of Public and Provisional Schools in the Sydney District, visited during the year 1875.

The remarks under head 1 relate to the material condition of schools; under 2, to their moral character; 3, to the subjects and methods of instruction; 4, to the proficiency of the pupils.

PUBLIC SCHOOLS.

BALMAIN (Primary—V.) :—General inspection, 13th, 14th, 15th, 16th April.

Numbers present :—Boys, 214; girls, 133; total, 347.

1. The schoolroom is utterly insufficient to accommodate the present attendance. Two additional schoolrooms for the girls and infants are urgently needed. The closets are badly situated—too small, and otherwise objectionable. There is an abundance of suitable educational appliances. The records are correctly and neatly kept. 2. About four-fifths of the pupils attend regularly. They are also punctual, cleanly, well-behaved, and in excellent order. The government is firm and effective, and the moral tone high. 3. The course of instruction accords with that prescribed, and is well regulated. The methods are modern, and applied with energy, intelligence, and effect. 4. The proficiency of the classes may be exhibited thus :—First, barely tolerable; second, tolerable to fair; upper second, fair to very fair; third, very fair; fourth, very fair; fifth, good. The average ranges from fair to very fair. The school is in a good state of efficiency.

BALMAIN (Infants'—V.) :—Regular inspection, 20th April.

Number present :—Boys, 79; girls, 85; total, 164.

1. The school is conducted partly in a class-room and partly in an old shed. Neither building is capable of accommodating more than one half of the pupils at present packed therein. The atmosphere in both rooms is foul and stifling. There is a sufficiency of working materials, but writing has to be taught under disadvantages, there being no room for desks. 2. For a long time past the attendance has been greatly reduced by the prevailing epidemics. It is fast becoming more settled and numerous. Ordinarily, the pupils are regular, punctual, clean, and in fair order. 3. The usual infants' school course is followed. Fair judgment is shown in the compilation of the lesson documents. The methods are modern, and applied with zeal and painstaking. 4. The following are the results of examination :—First class, barely tolerable; second, tolerable to fair; third, fair. All things considered, very fair work has been done, and the school is in a fair state of efficiency.

BOTANY (V.) :—Regular inspection, 23rd August.

Numbers present :—Boys, 35; girls, 26; total, 61.

1. The premises are good but ill-kept; the school is amply furnished and properly organised. 2. Very fair order is maintained, and the pupils are reasonably industrious. The attendance is undesirably low for the locality, but the teacher is in no way responsible for the causes. 3. The highest class is a third, and the prescribed course of instruction is observed. 4. The proficiency of the pupils ranges between fair and very fair.

BOTANY

BOTANY ROAD (N.V.) :—Regular inspection, 28th April.

Numbers present :—Boys, 95 ; girls, 81 ; total, 176.

1. The school continues to be conducted in what was the Congregational chapel ; this is altogether too small for the purpose and occupies a bad site. It is provided with as much furniture as its limited area will admit. There is a good supply of working materials. The records are neatly kept. 2. The attendance has largely increased, the school being literally crammed with children ; they are fairly regular, punctual, clean, and well-behaved. Good order is maintained, in the circumstances. The government is mild, but reasonably firm, and very fairly effective. 3. The instruction is of full range, up to the requirements of a third class, is well-regulated, and imparted with earnestness, energy, and very fair ability. 4. The position of each class, in respect to proficiency, is as follows :—First, good ; upper first, good ; second, good ; third, very fair to good. Very satisfactory work has been done within the year.

BOURKE-STREET (Boys'—N.V.) :—Regular inspection, 9th, 10th, 11th February.

Number present :—133.

1. The interior of the schoolroom needs recolouring, and more suitable forms require to be provided ; otherwise, the school is reasonably well organised, in the circumstances. 2. The attendance is marked by tolerable regularity ; it is injuriously affected by the prevailing epidemic. The pupils are very unpunctual and in bad order. Examination is in the circumstances irksome, laborious, and unsatisfactory. 3. Fair provision is made for systematizing the teaching. All the prescribed branches are taught, and the methods are in the main of modern cast. 4. The proficiency of the classes is as follows :—First, fair ; second, very fair ; third, tolerable ; fourth, tolerable—the average lying between tolerable and fair.

BOURKE-STREET (Girls'—N.V.) :—Regular inspection, 10th, 11th February.

Number present :—123.

1. As stated in former reports, the premises in which this school is held are defective in matters for which there is no remedy—the more noticeable are the absence of a proper playground, and of a weathershed ; the out-offices also are very undesirably situated. In a general sense, the organisation is unexceptional. 2. The government is effective in a marked degree, and a good moral tone pervades the school. 3. In most respects the instruction is effective, and in range includes all the subjects prescribed for a school having a fourth class. 4. The results of the examination places the general proficiency between fair and very fair.

BOURKE-STREET (Infants'—N.V.) :—Regular inspection, 9th February.

Numbers present :—Boys, 112 ; girls, 69 ; total, 181.

1. The premises are small and but tolerably suited to their uses. What has been said in the report on the girls' school, respecting material defects, applies to this department. There is an ample supply of working appliances, and the school is in the circumstances satisfactorily organised. 2. The children are under good discipline. 3. The full infants' course of instruction is followed—the methods employed are suited to the capacities of young children. 4. The proficiency ranges between fair and very fair.

CAMPERDOWN (Primary—V.) :—General inspection, 25th February.

Numbers present :—Boys, 40 ; girls, 29 ; total, 69.

1. The condition of the school-house is good, but the teacher's residence is in a bad state of repair ; of teaching appliances the stock is ample ; the furniture, however, does not meet the wants of the school ; the records are neatly kept, and the general organisation of the school is good. 2. The discipline is about fair, its weak feature being an undue leniency. The attendance has been for some time affected by the prevalent sickness. 3. The pupils are educated in an intelligent manner ; and inclusive of that required for a fourth class, the instruction is of full range. 4. The general proficiency averages fair, or in the several classes as follows :—Second, very fair ; third, moderate to tolerable ; fourth, fair to very fair.

CAMPERDOWN (Infants—V.) :—Regular inspection, 25th February.

Numbers present :—Boys, 23 ; girls, 17 ; total, 40.

1. The schoolroom needs to be partitioned off from the primary department, and provided with gallery and desks ; there is a very fair supply of other educational appliances ; the premises are carefully kept. 2. The small attendance is due to the prevalence of measles ; under ordinary circumstances about seven-ninths of the pupils attend regularly ; the punctuality is fair, and the cleanliness and order are good. 3. The course of instruction is that laid down for infants' schools ; the teaching is animated, earnest, and vigorous. 4. The proficiency is very fair.

CLEVELAND-STREET (Boys—V.) :—Regular inspection, 10th, 13th, 14th, 15th, 16th, and 21st June.

Number present, 334.

1. In all respects the material state of this school is thoroughly good, and an effective organisation obtains. 2. The moral tone of the school is good, and the pupils are under excellent discipline. 3. The school course includes the subjects prescribed for a department having a fifth class. 4. The position of the several classes in point of efficiency is as follows :—First, very fair+ ; second, good ; upper second, good ; third, good to very good ; upper third, good ; fourth, tolerable ; fifth, good to very good.

CLEVELAND-STREET (Girls—V.) :—Regular inspection, 8th, 9th, 10th, 14th, 15th, and 16th June.

Number present, 307.

1. The schoolroom is suitable, in very good repair, and cleanly kept ; it is abundantly provided with excellent furniture and apparatus ; in all other respects the organisation is reasonably complete. 2. Bad weather and sickness have temporarily reduced the attendance ; the pupils are fairly regular and punctual, modest and respectful in demeanour, and extremely well-behaved ; the government combines firmness with mildness, is judiciously administered, and secures excellent order ; the moral aspect of the school is pleasing, and calculated to impress favourably. 3. A judicious classification obtains ; the instruction is of full range, well devised, and imparted by appropriate methods ; the teaching is characterized by energy, diligence, and thoroughness. 4. The following is the proficiency of the several classes :—First, fair to very fair ; second, very fair+ ; upper second, good ; third, very fair ; upper third, good ; fourth, good ; fifth, very good. Both teachers and pupil-teachers work with enthusiasm and success.

CLEVELAND-STREET (Infants—V.) :—Regular inspection, 8th and 9th June.

Numbers present :—Boys, 304 ; girls, 209 ; total, 513.

1. A class-room is urgently needed ; in other respects the school premises are thoroughly good. An effective organisation obtains. 2. The children are under excellent control, and their appearance is pleasing. 3. The full infants' school course has been taught in an effective manner. 4. The position of the several classes is as follows :—First, very fair+ ; second, good ; upper second, very fair to good ; third, good ; upper third, good to very good ; fourth, good (nearly) ; fifth, good to very good. The head class is more than ordinarily proficient in arithmetic.

DEVONSHIRE-STREET (N.-V.) :—Regular inspection, 23rd March.

Numbers present :—Boys, 62 ; girls, 38 ; total, 100.

1. Since last inspection a class-room has been erected ; there is a very fair supply of suitable furniture and apparatus, and a sufficiency of other educational appliances. 2. Measles and the nearness of the Easter holidays were said to have reduced the attendance considerably ; ordinarily, however, the pupils attend irregularly ; they are tolerably punctual, clean, and fairly behaved ; the government is mild but somewhat deficient in firmness ; the general discipline has however improved, and may be regarded as healthy. 3. All the prescribed subjects are taught up to the requirements of a third class ; the instruction is fairly regulated for the second and third classes, but badly for the first ; the methods are modern in character, but need to be applied with greater earnestness and vigour. 4. The proficiency of the several classes may be described thus :—First, moderate ; upper first, tolerable + ; second, fair to very fair ; third, tolerable to fair—the average lies between tolerable and fair.

FORT-STREET (Boys—V.) :—Regular inspection, 14th, 15th, 16th, 17th, 20th, 21st, 22nd, 23rd, 24th, 27th, and 28th September.

Number present, 435.

1. The schoolroom is in very good repair, well-designed, and excellently appointed. In all points of practical organisation there is little room for improvement. 2. From various causes the attendance was less than usual on the days of examination. In general the pupils attend with fair regularity. The punctuality is also commendable. The remaining features of the discipline are not less satisfactory. The government is vigorous and effective. Excellent order is maintained, and the moral tone of the school is all that could be desired. 3. The course of instruction includes the subjects prescribed for a school of the kind, together with plane trigonometry. It is regulated by the usual lesson documents, which are well arranged. The methods are modern and applied with energy, intelligence, and skill. 4. The following is the proficiency of the several classes :—First, very fair ; second, very fair to good ; upper second, good (nearly) ; third, good to very good ; upper third, very good + ; fourth, good to very good ; upper fourth, good ; fifth, excellent. The range of examination was unusually wide, and the tests applied searching in a high degree. Notwithstanding, it is satisfactory to be able to report that the pupils evinced a full and intelligent acquaintance with the subjects of examination, and demonstrated by their answering that the teaching is of a thoroughly educative character. The school sustains its reputation for marked efficiency.

FORT-STREET (Girls—V.) :—Regular inspection, 7th, 8th, 9th, 13th, 14th, 15th, and 16th September.

Number present, 376.

1. The schoolroom is well planned, commodious, and in good repair. It is liberally furnished with educational appliances. All necessary out-buildings are provided. That part of the organisation for which the teacher is responsible is excellent. 2. A very fair attendance is maintained. It is marked by reasonable regularity. The pupils are also punctual, neat and becoming in appearance, modest and respectful in demeanour, and well-behaved. The government is genial but sufficiently firm, and effects very good order and a pleasing moral tone. 3. The instruction is of full range up to the requirements of a fifth class, arranged with good judgment, and imparted with vigour, earnestness, and skill. 4. The following is the proficiency of the several classes :—First, tolerable ; second, very fair ; upper second, very fair ; third, good ; upper third, good ; fourth, tolerable to fair ; upper fourth, very good + ; fifth, very good +. The school is in a creditable state of efficiency. Marked improvement is visible in the teaching of arithmetic, composition, and dictation.

FORT-STREET (Infants—V.) :—Regular inspection, 7th, 8th, and 9th September.

Numbers present :—Boys, 183 ; girls, 153 ; total, 336.

1. The school buildings are good and well furnished. The organisation is very good. 2. Excepting when sickness interferes, the average attendance is three-fourths of the number enrolled. 3. The course of instruction is of full range, and the methods of instruction employed are suited to children of tender age. 4. The proficiency in the several classes ranges from fair to good.

GLEBE (Primary—V.) :—Regular inspection, 8th, 9th, and 12th July.

Numbers present :—Boys, 89 ; girls, 58 ; total, 147.

1. These school premises are thoroughly good, and the schoolroom is well appointed and organised. 2. The discipline is on the whole effective. 3. The instruction, which includes the branches expected of a school having a fourth class, is judiciously regulated, and imparted with earnestness and vigour. 4. The proficiency of the pupils averages fair, or in the several classes as follows :—First, fair (nearly) ; second, fair + ; upper second, fair + ; third, fair ; fourth, fair.

GLEBE (Infants—V.) :—General inspection, 22nd June.

Numbers present :—Boys, 84 ; girls, 65 ; total, 149.

1. The schoolroom, a new one, is of thoroughly good character. The school is amply supplied with material, and is excellently organised. 2. The discipline is very good, and the moral tone of the school healthy. 3. The full infants' school course is observed. The instruction is modern and methodical in cast, thoroughly suited to the capacities of the children, and effective in results. 4. The average proficiency lies between good and very good.

MANLY (V.) :—Regular inspection, 3rd March.

Numbers present :—Boys, 34 ; girls, 13 ; total, 47.

1. An additional lavatory is required for the use of the boys, and something needs to be done to improve the closet accommodation. With these exceptions, the school buildings are in very fair repair, and furnished with a sufficiency of educational appliances. 2. Bad weather and the measles have combined to reduce the attendance. Ordinarily it is about two-thirds of the number enrolled. The pupils are reasonably punctual, clean, and in fair order. The government is mild, but somewhat deficient in vigour and firmness. The moral tone is healthy. 3. All the prescribed subjects are taught, Scripture excepted. The instruction is regulated by the usual documents, which are drawn up with tolerable judgment. The methods are of modern type, and are applied with fair earnestness and industry. 4. The proficiency of each of the classes is fair. The pupils are attentive under examination, but the answering is deficient in spirit and intelligence.

MARRICKVILLE (Primary—V.) :—Regular inspection, 16th August.

Numbers present :—Boys, 52 ; girls, 32 ; total, 84.

1. Excepting that it is much too narrow, the school-house is in good condition, and its appointments are satisfactory. A sound and effective organisation obtains. 2. The discipline effects good order, and the pupils are very fairly industrious and self-reliant. 3. The instruction is judiciously regulated, and covers the subjects prescribed for a school having a fourth class. 4. In point of proficiency the classes stand thus :—Second, fair to very fair ; third, very fair ; fourth, very fair.

MARRICKVILLE (Infants—V.) :—General inspection, 16th August.

Numbers present :—Boys, 53 ; girls, 41 ; total, 94.

1. The schoolroom is substantially built, very roomy, admirably ventilated, and well provided with suitable infants' school appliances. 2. The attendance is good and rapidly increasing. It is marked by fair regularity. The pupils are also punctual, neat in appearance, and very fairly conducted. The government is mild, but needs to be characterized by greater vivacity. The prevailing tone of the school is healthy. 3. Excepting Scripture, all the prescribed subjects are taught. A fair effort has been made to systematise the teaching. The methods are appropriate and applied with earnestness and diligence. 4. The following is the proficiency of the several classes :—First, fair (nearly) ; second, fair ; third, fair.

NEWTOWN (Primary—N.-V.) :—Regular inspection, 24th February.

Numbers present :—Boys, 38 ; girls, 38 ; total, 96.

1. The site is much too limited. The schoolroom is a good one, is very fairly arranged, fairly furnished, and properly organised. 2. The attendance on the day of inspection was low, and it has of late been so owing to prevalent sickness among children. The pupils are very inattentive, and the discipline is in other respects but fairly effective. 3. The highest class is a fourth, and for such a school the course of instruction is of full range. 4. The average proficiency does not exceed tolerable.

NEWTOWN (Infants'—N.-V.) :—General inspection, 24th February.

Numbers present :—Boys, 47 ; girls, 29 ; total, 76.

1. The schoolroom is so small that proper or desirable organisation is impossible. There is an insufficiency of apparatus and books, but this will soon be remedied. The schoolroom is clean and its appointments are neatly arranged. 2. For some time past the attendance has been extremely low, caused by the prevalence of measles. The numbers at present are gradually improving. Ordinarily, the pupils attend regularly and punctually. They are also clean and well dressed. The government is mild, but vigorous and effective. 3. The usual routine of infants' schools is observed. The methods are suitable, intelligent, and effective. 4. The average proficiency ranks between fair and very fair. The teacher has been but recently appointed, and is doing good work.

NORTH SYDNEY (N.-V.) :—General inspection, 8th July.

Numbers present :—Boys, 32 ; girls, 23 ; total, 55.

1. The school-house is too small and in bad repair. There is neither play-shed nor lavatory, and the water-closets are in a disgraceful state. The teacher's residence is in bad order, not rain-proof, and very unhealthy: There is a sufficiency of educational appliances ; and the whole property is, so far as the teacher is concerned, carefully preserved. 2. A very fair attendance is maintained. The pupils are tolerably regular, fairly punctual, and well behaved. The government is mild, but reasonably firm and effective. Very fair order is secured, and the general discipline of the school is healthy. 3. Fair judgment is evinced in the classification. All the prescribed subjects are taught ; the instruction is reasonably well arranged, and imparted by approved methods. 4. The following is the proficiency of the several classes :—First, tolerable to fair ; second, fair to very fair ; third, fair +.

PADDINGTON (Boys—V.) :—Regular inspection, 5th and 6th June.

Number present :—173.

1. The school premises are complete, in excellent condition, and well kept. The organisation in its several features is good. 2. Excellent order is maintained, and the moral tone of the school is healthy. 3. The methods of instruction evidence intelligent care, and all the prescribed subjects are included in the course. 4. The general proficiency averages as follows :—First, moderate to tolerable ; second, very fair + ; upper second, very fair ; third, very fair + ; fourth, very fair to good.

PADDINGTON (Girls—V.) :—Regular inspection, 1st and 3rd June.

Number present :—119.

1. The schoolroom is an excellent structure, in very good repair, and suitably furnished. The school stock is sufficient and in good order ; considerable pains taken with the records, and the organisation, as a whole, may be pronounced very good. 2. Sickness has for some time past lessened the attendance. The pupils are punctual, have a neat and cheerful appearance, and evince a modest and fairly subdued demeanour. Were a little more vigour infused into the government, the discipline would in all likelihood be unexceptionably good. 3. Little exception can be taken to the school routine. Good judgment marks the arrangement of the lessons ; the teaching is methodical and painstaking, although somewhat deficient in life and penetrative force. 4. The following is the proficiency of the several classes :—First, very fair to good ; second, very fair + ; third, fair ; fourth, very fair. The school improves in efficiency.

PADDINGTON (Infants—V.) :—Regular inspection, 2nd June.

Numbers present :—Boys, 117 ; girls, 98 ; total, 215.

1. The school-house is in very good repair, very fairly suitable, and well found in all requisite appliances. The records are correctly kept. 2. A good attendance is maintained, and it is marked by very fair regularity. The pupils are also punctual, neat and cleanly in person, and well-behaved. The government is judicious and promotive of very good order and a healthy moral tone. 3. The usual infants' school course is observed. The instruction is regulated with very good judgment, and applied with vigour, vivacity, and effort. 4. The proficiency of the several classes is as follows :—First, very fair to good ; second, very fair to good ; third, good. The school is in a good state of efficiency.

PITT-STREET (Primary—N.-V.) :—General inspection, 13th May.

Numbers present :—Boys, 34 ; girls, 25 ; total, 59.

1. There is no playground ; otherwise, the condition of the school premises is satisfactory. 2. Four-fifths of the pupils enrolled are regular and punctual, and nearly all are clean in person. The order and attention rank as fair. The government is wanting in strictness and firmness. 3. The course of instruction prescribed for a school having a third class is followed. 4. The average proficiency is but tolerable.

PITT-STREET (Infants—N.-V.) :—Regular inspection, 13th May.

Numbers present :—Boys, 36 ; girls, 24 ; total, 60.

1. The school is conducted in a portion of the primary department. There is no room for desks. The supply of teaching appliances is ample. 2. The attendance is marked by irregularity ; the pupils are also but moderately punctual. Owing to the large amount of restlessness which prevails the order is unsatisfactory. The government needs to be more vigilant and effective. 3. There are two classes, and the instruction is, in consequence, of limited range. It is regulated with tolerable judgment. The methods are modern, but need to be applied with increased vigour and efficiency. 4. The following are the results of examination :—First class, tolerable ; second, moderate. The pupils are inattentive, and appear to make little progress in learning.

PYRMONT (Primary—N.-V.) :—General inspection, 13th and 14th July.

Numbers present :—Boys, 60; girls, 31; total, 91.

1. The site is rocky, uneven, and very limited in extent. The school-house is in a bad state of repair, its appointments are to a considerable extent of inferior kind, and the room is so crowded that there is not more than 1 foot of space between the tiers of desks and scarcely 3 feet in front of the classes. As indicated, the property does not belong to the Council, and there is no present remedy for the stated defects. In the circumstances, the organisation could not be better. 2. The pupils are orderly, attentive, and industrious, and as a whole the discipline is excellent in its influences. 3. In addition to the subjects prescribed for a school whose highest class is a fourth, the course of instruction includes elementary Latin and Algebra. 4. The average proficiency slightly exceeds good. The estimate of the teacher's work, as a whole, is very good.

PYRMONT (Infants—N.V. :—Regular inspection, 14th July.

Numbers present :—Boys, 46; girls, 50; total, 96.

1. This department of the school is taught in a room of very limited size. As stated in the report on the primary school, the premises are ill-conditioned and unsuitable. The organisation is correct. 2. The children are reasonably orderly, and the tone of the school is healthy. 3. The full infants' school course is followed. 4. The results of the examination are :—First class, very fair; second, very fair to good; third, good (nearly).

St. LEONARDS (N.-V.) :—Regular inspection, 11th May.

Numbers present :—Boys, 91; girls, 74; total, 165.

1. The school-house is a substantial structure in good repair, but the interior requires white-washing. It is liberally supplied with suitable educational appliances. There is neither lavatory nor playground. 2. The attendance has largely increased under the present teacher. The pupils are regular, punctual, clean, and well-conducted. Good order is maintained, and the government is judicious and effective. 3. The instruction, which is of full range up to the requirements of a third class, is well regulated. The methods are appropriate and applied with earnestness, painstaking, and satisfactory results. 4. The following is the proficiency of the several classes :—First, very fair; second, very fair; third, fair +. The teacher has done good work for the time he has been in charge.

SUSSEX-STREET (N.-V.) :—Regular inspection, 22nd February.

Numbers present :—Boys, 43; girls, 36; total, 79.

1. With the exception that it is low-pitched, the schoolroom is a good one. The site is objectionable, and the closets are badly placed. Vested premises in the immediate neighbourhood are in course of erection. The existing organisation is of satisfactory character. 2. Very fair order is maintained, and, with a few exceptions, the pupils are clean and well-behaved. 3. The subjects prescribed for a school of three classes are taught. 4. The proficiency somewhat exceeds tolerable.

SUSSEX-STREET, SOUTH (N.-V.) :—Regular inspection, 27th April.

Numbers present :—Boys, 72; girls, 60; total, 132.

1. The building, a rented one, is commodious, and well lighted and ventilated. The property is carefully kept, and the organisation is very effective. 2. The government is characterised by mildness and firmness, and the general tone of the school is satisfactory. 3. The course of instruction is of full range; the methods of teaching are modern, and the whole business of the school is executed with quietness, zeal, and energy. 4. The proficiency averages very fair +.

TEMPLE (V.) :—Regular inspection, 24th March.

Numbers present :—Boys, 28; girls, 14; total, 42.

1. The schoolroom is substantially built, well situated, and well furnished. There is an ample supply of apparatus and books. The school records are creditably kept. 2. Measles were very prevalent in the district at the time of inspection, hence the comparatively small number of pupils present. Usually, the average is about 5-8ths of the number enrolled. The pupils are punctual, clean, subdued in demeanour, and well-behaved. The government is mild, firm, and effective, and induces a healthy moral tone. 3. The instruction is of full range up to the requirements of a third class, and is judiciously regulated. The methods are of an approved kind, and are applied with vigour and much painstaking. 4. The attainments of the several classes may be estimated thus :—First, fair; second, fair to very fair; third, fair. The average exceeds fair.

WATSON'S BAY (N.-V.) :—General inspection, 18th March.

Numbers present :—Boys, 29; girls, 14; total, 43.

1. The school premises have been repaired by the present teacher, who has expended both labour and money to render them reasonably comfortable and inviting. This he has fairly succeeded in doing, although a large portion of the fencing has yet to be made good. The school is fairly provided with furniture and apparatus, but the supply of reading books is insufficient. 2. About five-sevenths of the pupils attend regularly and with fair punctuality. The pupils are quietly behaved, and in very fair order. The government is mild, genial, and fairly effective. 3. The instruction includes all the prescribed branches, Scripture lessons excepted. No satisfactory reason has been given for the omission of this subject. No reliable lesson documents have yet been compiled, and there is nothing to show that the teaching has been of a systematic or progressive character. 4. The following is the proficiency of the several classes :—First, moderate; second, moderate; third, fair. The average approaches tolerable.

WILLIAM-STREET (Girls—V.) :—Regular inspection, 19th, 20th, and 25th May.

Number present :—254.

1. A fine commodious class-room and play-sheds have been erected since the last inspection. The school is liberally found in working appliances, and the organisation as a whole is very complete. 2. The attendance is numerous and increasing. The pupils are regular, punctual, clean in person, modest in demeanour, and well behaved. The government is mild, judicious, and effective. Very good order is maintained, and the moral tone is excellent. 3. The instruction is of full range, and well regulated. The methods are modern, and are applied with vigour, tact, and skill. 4. In point of efficiency the several classes stand thus :—Second class, fair to very fair; upper second, good (nearly); third, very fair; upper third, very fair; fourth, good to very good. The pupils are attentive, self-reliant, and intelligent. They answer with spirit, thoughtfulness, and accuracy.

WILLIAM-STREET (Infants—V.) :—Regular inspection, 17th, 18th, and 19th May.

Numbers present :—Boys, 202; girls, 179; total, 381.

1. A new schoolroom for the use of the babies has been erected since the last inspection. It is very fairly adapted to the purpose. Weather-sheds have also been provided. These buildings have improved the accommodation. All necessary educational appliances are in use, and the organisation as a whole is very complete. 2. The attendance is large and rapidly increasing. The pupils are reasonably regular, punctual, neat in person, and in very good order. The government is judicious and effective, and the
tone

tone of the school cheerful and healthy. 3. All the subjects forming the usual infants' school course are taught. The instruction is well regulated, and imparted in a vigorous, animated, and intelligent manner. 4. The proficiency of the several classes may be described thus:—First, good; second, good; third, good to very good; fourth, good; fifth, good to very good. The school is in a very good state of efficiency, and does credit to the teachers.

BOTANY HEADS (Prov.):—General inspection, 25th March.

Numbers present:—Boys, 15; girls, 4; total, 19.

1. The schoolroom is much too small. It is fairly found in suitable educational appliances. The records are correctly kept. 2. 19-24ths of the pupils attend regularly. They are clean, punctual, and in good order. The moral tone of the school is healthy. 3. All the prescribed branches are taught. The instruction is properly regulated. The methods are modern and are diligently applied. 4. The following is the proficiency of the several classes:—First, fair; second, fair to very fair; third, fair. The school is in a fair state of efficiency.

BULOELA (Prov.):—General inspection, 7th June.

Numbers present:—Boys, 14; girls, 12; total, 26.

1. The site of the school is not a satisfactory one, but the premises are good, well furnished, and fairly supplied with teaching appliances. As a whole, the organisation is of tolerable worth. 2. A satisfactory attendance is secured. The pupils exhibit very fair punctuality, are tidy and pleasing in appearance, but have small conception of orderly behaviour. 3. Except singing all the prescribed subjects are included in the school-course, but as yet the range taken is low. 4. The proficiency of the several classes is as follows:—First, moderate to tolerable; second, moderate; third, tolerable.

CLONTARF (Provisional School):—General inspection, 7th December.

Numbers present:—Boys, 8; girls, 8; total, 16.

1. A portion of one of the buildings connected with the Clontarf pic-nic grounds has been divided off for school purposes. In itself the room is suitable, and it is sufficiently supplied with furniture and teaching appliances. For obvious reasons the site is objectionable, but in the meanwhile no better can be obtained. 2. The average attendance is thirteen of nineteen pupils enrolled. The children present at the examination were clean, tidy, orderly, and well-behaved. They were, however, but tolerably punctual. The government appears mild and judicious. 3. The classification is tolerably satisfactory, and the same value attaches to the lesson documents. At present there are but two classes; to these the prescribed branches of instruction are taught. 4. The school has been in operation under the present teacher but a few weeks. The examination was fairly satisfactory.

YASS DISTRICT.

Inspector's General Report upon Public, Provisional, Half-time, and Denominational Schools, for the Year 1875.

1. There have been in operation in this district for the whole of the year nineteen Public, thirty-one Provisional, fourteen Half-time, three Church of England, and six Roman Catholic Schools.

During the year Public Schools were established at Elizabeth Field and Frogmoor, and a Provisional School at Mugwill; and arrangements are in progress for the establishment of Public Schools at Murrumburrah, Wallendbeen, Jindalce, Brawlin, Smithtown, Brundah, and Yass. When Public Schools have been established at those places the northern and western parts of this district will be fairly supplied with the means of education. I have not yet been able to visit the other parts of the district, but in the absence of applications for the establishment of schools it may be presumed that the means of education in those portions of the district are, for the present, fairly sufficient.

2. The total number of pupils present in the various schools examined by me since last June was 1,260. And the examinations were conducted in such a way as to test the individual relations of all those pupils to the standard of proficiency approved by the Council for the guidance of both teachers and inspectors. In reading, somewhat less than a third of the number of pupils examined passed satisfactorily. In only a small number of schools examined were the pupils required by their teachers to give the meanings of the words occurring in their reading lessons. The vacant stare of the scholars when required at the examination to give the meanings of words of common occurrence was proof that to them this was a new exercise. Writing is looked upon by many teachers as an exercise in which their pupils require but little attention from them, and although a somewhat greater number passed in writing than in reading, yet the number was much smaller than it should have been. Arithmetic: The manner of teaching this subject and the results produced are in a high degree unsatisfactory, both as regards the practical utility of the knowledge acquired and the mode of acquiring it as a means of intellectual development. Grammar: The remarks made above respecting arithmetic apply with equally great force to grammar. Geography: The didactic method is that which is adopted in most of the smaller schools in teaching geography, and small results have been produced by it. Many of the pupils knew little or nothing about the nature and uses of a map, and were unable to lay it upon the floor correctly in relation to the cardinal points. Rivers having a northern course when traced upon the map from their source to the sea were understood to run uphill. This mistake was not discovered until attention was directed to the course of the river or stream in the locality. It should be understood that requiring pupils to commit to memory bare physical facts is not teaching geography. Scripture lessons are only taught in the higher classes. Higher results were elicited by examination in this subject than in any other. Singing: Three-fourths of the pupils examined were not learning to sing at all. This is the more remarkable as no subject is of more value in an elementary school in proportion to the small amount of time required to teach it. It produces a cheerful lively spirit that is in vain looked for in schools where singing is not taught; so that, apart from its intrinsic value as a source of high mental enjoyment, music should as an element in moral culture have a prominent place in every school time-table.

3. Judging by the records of the last inspection the general proficiency of the schools examined was as a whole less than at the previous examination. This was attributed to the large amount of juvenile sickness and wet weather that prevailed during a great part of the year. Notwithstanding those hindrances to progress, the following schools were found to be in a higher state of efficiency this year than at last inspection, viz.:—The Public Schools at Blayney, Carcoar, Cowra, Grenfell, Young, Murrumbateman, and the E. C. School at Yass. The Public School at Young and the E. C. School at Yass manifested a high degree of efficiency. The E. C. School at Yass made this good progress in spite of its wretched miserable material condition.

4. There is reason to hope that, with the removal of the hindrances to progress mentioned in the preceding paragraph, much higher results may be expected at the examination of 1876.

J. H. MURRAY,
Inspector, Yass District.

ANNEX.

SUMMARIES of Reports furnished during the second half of the year 1875, on Public, Provisional, and Half-time Schools.

PUBLIC.

BINALONG :—Visited, 3rd September, 1875. Regular inspection.

Enrolled :—40. Present :—24.

The schoolroom is in fair condition; in all other respects the material condition is bad. The discipline is loose. The instruction is regulated with fair skill. The attainments are low. Local supervision hardly exists.

BOWNING :—Visited, 1st November. Regular inspection.

Enrolled :—35. Present :—33.

The material condition is bad. The instruction is regulated with only moderate skill. The attainments are low; so also is the mental culture of the pupils. The local supervision is barren of good results.

BURROWA :—Visited, 9th and 10th August. General inspection.

Enrolled :—45. Present :—35.

The material condition, with few exceptions, is very good. The discipline is satisfactory. The instruction is properly regulated; and the attainments, for the ages and classification of the pupils, are fair. The local supervision is merely nominal.

COOTAMUNDRA :—Visited, 9th September. General inspection.

Enrolled :—34. Present :—28.

This school had been in operation only a few weeks at the time of my visit, and as no systematic instruction was hitherto available in this township it was found almost impossible to examine the scholars by the standard of schools under the Council. Everything in connection with the school at present, however, gives promise of satisfactory results in the future.

CUNNINGGAR :—Visited, 3rd November. Regular inspection.

Enrolled :—22. Present :—19.

The material condition is fair; the discipline is mild but not firm. The instruction is carefully regulated. The attainments are somewhat low, especially in arithmetic. The spirit of the school is wanting in life. The local supervision by Mr. Campbell is commendable.

GRENFELL :—Visited, 7th December. Regular inspection.

Enrolled :—82. Present :—60.

Excepting the want of a teacher's residence the material condition is good. The discipline is sound, the instruction well regulated, the attainments satisfactory, and the whole spirit of the school is pleasing. The local supervision is intelligent, watchful, and encouraging to the teachers, and in every way beneficial.

GRENFELL (Infants) :—Visited, 3rd December. Regular inspection.

Enrolled :—89. Present :—64.

The material condition is good, the discipline sound, the instruction properly regulated. The attainments are good, for the ages and classification of the children. This school is a pleasing example of one of the best infant schools. The local supervision is active, beneficial, and intelligent.

GUNDAROO :—Visited, 22nd October. Regular inspection.

Enrolled :—32. Present :—22.

A supply of water is urgently required; with this the material supply is good. The discipline is wanting in firmness. The instruction is regulated with only moderate skill, and the attainments are low. The local supervision is marked by lethargy.

HARDEN :—Visited, 5th November. Regular inspection.

Enrolled :—26. Present :—22.

There is nothing at present belonging to the school, save the books, &c., supplied by the Council. The discipline is fairly effective. The instruction is regulated with fair judgment. The attainments are tolerable. The local influence at present is inactive, pending the erection of the school premises by the Council.

MURRUMBATEMAN :—Visited, 17th August. General inspection.

Enrolled :—27. Present :—24.

The material condition, excepting the teacher's residence, is good. The discipline is sound. The attainments, all circumstances considered, are satisfactory. The moral tone of the school is high. The local supervision is little more than nominal, the members never meeting except when required by the teacher.

TIPPERARY GULLY :—Visited, 16th November. Regular inspection.

Enrolled :—37. Present :—33.

The school is non-vested. The material condition is bad. The discipline is fair, but not strict. The instruction is tolerably well regulated. The attainments are nearly fair. There is no local supervision.

WOMBAT :—Visited, 22nd September. Regular inspection.

Enrolled :—47. Present :—21.

The material condition, except in a few small matters, is excellent. The discipline is sound and healthy. The instruction is properly regulated. The attainments are as high as under the circumstances can be expected. The local supervision at present produces no good results.

YOUNG :—Visited, 11th, 12th, and 15th November. Regular inspection.

Enrolled :—107. Present :—77.

As respects the schoolroom, classroom, closets, and school appliances, the material condition is good. The instruction is properly regulated. The classification is correct. The attainments are high: Latin, French, Algebra, Geometry, are well taught to the extent professed by the pupils. The domestic arrangements for the boarders are satisfactory. In reference to the material requirements of the school, the local supervision is apathetic, and requires an infusion of new life and energy.

YOUNG

YOUNG (Infants) :—Visited, 30th September. Regular inspection.

Enrolled :—110. Present :—80.

The material condition, as far as the schoolroom and appliances are concerned, is good. The discipline is sound. The instruction is properly regulated, and the attainments are satisfactory. The whole aspect of the school is pleasing. The local supervision, as far as it goes, is beneficial.

II.—PROVISIONAL.

BACK CREEK :—Visited, 2nd June. Regular inspection.

Enrolled :—37. Present :—20.

The material condition is of a very low type. The discipline secures quietness, but not attention to work. The instruction is unskillfully regulated. Local supervision can hardly be said to exist, no meeting having been held for about two years. Two of the three members of the Local Board, however, in response to my invitation, were present at the examination, and promised to see to the tenure of the school site.

BARWANG :—Visited, 4th November. Regular inspection.

Enrolled :—23. Present :—26.

The material condition is wretched. The discipline is healthy. The instruction is tolerably well regulated, but omits singing, drawing, Scripture, and sewing. The attainments in the subjects that are taught are tolerable. The local supervision is not exercised with any good results to the school. £50 were raised by subscription for the erection of a Public School, and the promoters expended £40 of this sum in constructing a slab and bark hut upon Crown Land, and then one of their number, in the name of the teacher appointed, free-selected 40 acres, including the site upon which the school was erected. By this transaction the money contributed for a public benefit was devoted to a private use, and the residents deprived of their fair share of the Education grant, which would have enabled them to have their children's education conducted in a decent, comfortable, and healthy building, instead of in an unfloored badly-roofed slab and bark hut, situate alongside a public road, and without any closet accommodation of any kind whatever.

BOBBORAH :—Visited, 2nd November. Regular inspection.

Enrolled :—24. Present :—20.

The material condition is miserable. The discipline is strict but harsh in tone. The instruction is unskillfully regulated. The attainments are small, and the value of the school may be described as being better than none. The Local Board have practically considered their duties ended by the erection of a bare slab hut and the appointment of an untrained teacher.

TWO-MILE CREEK :—Visited, 17th September. General inspection.

Enrolled :—24. Present :—12.

Except the schoolroom itself the material condition is bad. The discipline is firm. The instruction is badly regulated. The methods are individual and unskillfully applied. The attainments are as follows :—First class, indifferent; second class, a little over small. The existence of the school in its present condition and management gives no satisfaction to the people it is intended to benefit, and its recognition by the Council prevents the people making an effort to obtain a good school.

III.—HALF-TIME.

BEGGAN BEGGAN :—Visited, 7th September. Regular inspection.

Enrolled :—9. Present :—7.

This school is taught in a rude slab hut, the property of Mr. Toohey. The merest elements of reading, writing, and arithmetic only are taught, and in these branches only small results are produced. This school should be removed to the village of Beggan Beggan about a mile from its present situation. The local supervision produces no beneficial effects.

CULLINGAR CREEK :—Visited, 7th September. Regular inspection.

Enrolled :—12. Present :—7.

This school is taught in a slab hut, which, like that of Beggan Beggan, is private property. Except in position, everything stated above respecting the Beggan Beggan school applies equally to this school. Both these schools were injuriously affected by the late prevailing sickness among children.

SUMMARIES of Reports furnished on Public, Provisional, and Half-time Schools, during the year 1875.

I.—PUBLIC SCHOOL.

QUEANBEYAN (N.V.) :—Regular inspection, 20th April, 1875.

Enrolled :—Boys, 34; girls, 32; total, 66. Present :—Boys, 32; girls, 28; total, 60.

1. No improvement has been made in the material condition of the school, but tenders have been invited for the erection of new and suitable buildings. 2. The discipline is fair. 3. The mark for geography and grammar is above the average; that for reading, writing, and Scripture up to the average; and that for other subjects below. The general proficiency is *fair*.

II.—PROVISIONAL SCHOOLS.

BUNGENDORE (N.V.) :—Regular inspection, 4th May, 1875.

Enrolled :—Boys, 19; girls, 13; total, 32. Present :—Boys, 14; girls, 8; total, 22.

1. The material condition is satisfactory in all respects. 2. The pupils are attentive and well-behaved, and the government is kind but reasonably firm. 3. The mark for reading, writing, spelling, and dictation is above the average; that for arithmetic and Scripture up to the average; and that for other subjects below. The general proficiency is *fair*.

GINNINDERRA (N.V.) :—General inspection, 27th April, 1875.

Enrolled :—Boys, 5; girls, 20; total, 25. Present :—Boys, 5; girls, 16; total, 21.

1. A fireplace is much needed. Most of the children come from a great distance, and on cold wet mornings have no opportunity of drying and warming themselves. The school is well supplied with all requisites. 2. The pupils are orderly and attentive. 3. The mark for dictation and singing is up to the average, but that for all other subjects is below. The general proficiency is *moderate*.

HOSKINSTOWN

HOSKINSTOWN (N.-V.) :—Regular inspection, 14th April, 1875.

Enrolled :—Boys, 14 ; girls, 17 ; total, 31. Present :—Boys, 10 ; girls, 15 ; total, 25.

1. The building is in a fair state of repair and there is a sufficient outfit of furniture and working materials. 2. Partly owing to irregularity and partly to the system of teaching, the attainments are poor. Reading and dictation have been taught with tolerable efficiency, but the mark for all other subjects is much below the average. The general condition is *indifferent*.

MAJURA (N.-V.) :—General inspection, 16th April, 1875.

Enrolled :—Boys, 7 ; girls, 14 ; total, 21. Present :—Boys, 6 ; girls, 11 ; total, 17.

1. This is a newly established school. The building is substantial and is well fitted up with furniture and working materials. 2. The discipline is good in all respects, and the attendance of the children is exceptionally regular. 3. During the short time the children have been under instruction they have made sound and rapid progress. The general proficiency is between *fair* and *very fair*.

MICHELAGO (N.-V.) :—General inspection, 5th February, 1875.

Enrolled :—Boys, 19 ; girls, 10 ; total, 29. Present :—Boys, 15 ; girls, 6 ; total, 21.

1. The material condition is satisfactory in all respects. 2. The children are quiet but apathetic. 3. The characteristic of the whole school is want of thoroughness. Nothing has been mastered. The mark for grammar is up to the average, but that for all other subjects is much below. The general proficiency is *moderate*.

NEW LINE (N.-V.) :—Regular inspection, 6th May, 1875.

Enrolled :—Boys, 19 ; girls, 8 ; total, 27. Present :—Boys, 19 ; girls, 7 ; total, 26.

1. The schoolroom is comfortable and the outfit is satisfactory. 2. The discipline is good. 3. During the year the children have made rapid progress. The mark for reading, spelling, writing, grammar, and geography is above, and that for the other subjects close up to, the average. The general proficiency is between *fair* and *very fair*.

KOHAN (Fell Timber) N.-V. :—General inspection, 29th April, 1875.

Enrolled :—Boys, 13 ; girls, 11 ; total, 24. Present :—Boys, 10 ; girls, 9 ; total, 19.

1. This is a newly established school. The building is small, but it answers all present requirements reasonably well. 2. The pupils are attentive, obedient, and quiet. 3. Having been but two months under instruction their attainments are necessarily low.

ROSSI (N.-V.) :—Regular inspection, 14th April, 1875.

Enrolled :—Boys, 7 ; girls, 13 ; total, 20. Present :—Boys, 7 ; girls, 13 ; total, 20.

1. The building is somewhat small, but in other respects it is suitable. There is a sufficient supply of furniture, apparatus, and materials. 2. The discipline is fair. 3. The attainments are satisfactory and good progress has been made since last inspection. The mark for grammar, geography, reading, spelling, writing, and dictation is above the average, and that for arithmetic and object lessons up to the average. The general proficiency is between *fair* and *very fair*.

STONE HUT (N.-V.) :—Regular inspection, 28th April, 1875.

Enrolled :—Boys, 10 ; girls, 14 ; total, 24. Present :—Boys, 10 ; girls, 14 ; total, 24.

1. The schoolroom is in a good state of repair, and is well supplied with all requisites. 2. The discipline is satisfactory. 3. The mark for reading, spelling, and writing is far beyond the average, and that for arithmetic is below. All other subjects are practically not taught. This omission brings down the general proficiency to *tolerable*.

TUGGRANONG (N.-V.) :—General inspection, 21st April, 1875.

Enrolled :—Boys, 15 ; girls, 17 ; total, 32. Present :—Boys, 14 ; girls, 17 ; total, 31.

1. The building is too small, and the accommodation for the teacher is altogether inadequate. There are sufficient desks and forms, and the supply of apparatus and materials is fair. 2. The pupils are obedient and attentive, but they are sluggish and appear to take but little interest in their work. Their attainments are unsatisfactory, the general proficiency being *indifferent*.

WETANGERA (V.) :—General inspection, 27th April, 1875.

Enrolled :—Boys, 13 ; girls, 14 ; total, 27. Present :—Boys, 13 ; girls, 14 ; total, 27.

1. This is a new slab building, and at the time of inspection had only been opened a few days. All the pupils were examined, but none were able to do more than read easy books and write simple copies.

III.—HALF-TIME SCHOOLS.

CARWOOLA (N.-V.) :—Regular inspection, 15th April, 1875.

Enrolled :—Boys, 13 ; girls, 15 ; total, 28. Present :—Boys, 13 ; girls, 15 ; total, 28.

1. The school requires to be better lighted, and to have more suitable sitting and writing accommodation provided. 2. At the date of inspection the present teacher had only been a short time in charge, and cannot be held responsible for the children's attainments. The mark for every subject is below the average, the general proficiency being *indifferent*.

FOXLOW (N.-V.) :—Regular inspection, 15th April, 1875.

Enrolled :—Boys, 5 ; girls, 4 ; total, 9. Present :—Boys, 5 ; girls, 4 ; total, 9.

1. The schoolroom is suitable, and is supplied with sufficient furniture and working materials. 2. The attainments of the children are low. This school is worked with that at Carwoola, and in regard to proficiency is in the same condition.

INGLEWOOD FOREST (V.) :—Regular inspection, 5th May, 1875.

Enrolled :—Boys, 11 ; girls, 11 ; total, 22. Present :—Boys, 8 ; girls, 9 ; total, 17.

1. Since last inspection the school has been removed to a more central position. The present building is rough, but it is well fitted up with desks and materials. 2. This school is worked with that at Rossneath, and in regard to discipline and attainments is in the same condition.

ROSSNEATH

ROSSNEATH (V.) :—Regular inspection, 3rd May, 1875.

Enrolled :—Boys, 10; girls, 5; total, 15. Present :—Boys, 6; girls, 2; total, 8.

1. The building is in a fair state of repair, and is well supplied with all requisites. 2. The discipline is tolerable. 3. The attainments are low. For no subject are the attainments up to the average. The general proficiency is *moderate*. The small attendance on the day of inspection was caused by wet weather.

M'DONALD'S FLAT (N.-V.) :—General inspection, 4th February, 1875.

Enrolled :—Boys, 7; girls, 7; total, 14. Present :—Boys, 3; girls, 7; total, 10.

1. Since last inspection the school has been removed to a more central position. The present room is tolerably suitable. The furniture is rough but sufficient, and there is a satisfactory supply of apparatus and working stock. 2. The discipline is good in all respects, and the children are regular in their attendance. 3. Sound and rapid progress has been made. The mark for reading, spelling, writing, and dictation is above, and that for other subjects well up to the average. The general proficiency is *very fair*.

J. C. MAYNARD,
Inspector, Braidwood District.

YASS DISTRICT.

SUMMARIES of Reports on Schools inspected by the Inspector of the Goulburn District, during the year 1875.

I.—PUBLIC SCHOOL.

BINDA :—Regular inspection, 19th February.

Enrolled :—Boys, 13; girls, 9; total, 22. Present :—Boys, 13; girls, 9; total, 22.

The material provisions are suitable and sufficient for present requirements. The internal organisation is *good*, and the discipline *very good*. The course of instruction includes all subjects required by a fourth-class standard. The pupils' general proficiency exceeds *fair*. In consequence of the removal of families from the locality the numbers have been lowered, and the continuance of the school is rendered doubtful.

II.—PROVISIONAL SCHOOLS.

MARKDALE :—Regular inspection, 15th February.

Enrolled :—Boys, 13; girls, 10; total, 23. Present :—Boys, 11; girls, 9; total, 20.

The schoolroom has been floored since last inspection. Fencing and a water-supply are wanted. The records are in a very defective state, and several of the required wall documents are not in their places. Nearly all the children in the locality belong to the school, and attend with very fair regularity. They are unpunctual, however, and are generally slow and dull. The instruction is not based on the Council's requirements and is confined to reading, writing, and arithmetic. Writing is the only branch in which results worthy of the name have been produced. The general proficiency is *indifferent* in the first class, and *small* in the second.

WALNER :—Regular inspection, 17th February.

Enrolled :—Boys, 14; girls, 16; total, 30. Present :—Boys, 13; girls, 16; total, 29.

The premises have been improved, and are now fairly suitable. Some minor errors occur in the records. As a whole the discipline is *fair*. The pupils are divided with tolerable appropriateness into two classes, and all subjects required for these (singing by ear) are taught. The results of examination average nearly *fair*.

III.—HALF-TIME SCHOOLS.

CURRAN'S CREEK :—Regular inspection, 16th February.

Enrolled :—Boys, 9; girls, 8; total, 17. Present :—Boys, 8; girls, 6; total, 14.

Three new good desks have been provided. The general internal organisation is *good*. Lately, the attendance has been affected by measles. In the main features the discipline is *good*. The pupils are properly classified. All required subjects are provided for, and the teaching is suitable. The average general proficiency exceeds *fair*.

LOST RIVER :—Regular inspection, 16th February.

Enrolled :—Boys, 5; girls, 12; total, 17. Present :—Boys, 4; girls, 5; total, 9.

Three new and suitable desks and forms have been provided. The internal organisation is *good*. Measles has affected the attendance. The general discipline is *good*. The character of the instruction is the same as at Curran's Creek (q.v.) Its results are between *tolerable* and *fair*.

D. S. HICKS,
Inspector, Goulburn District.

APPENDIX I.

RECEIPTS and DISBURSEMENTS of the Council of Education, from 1st January to 31st December, 1875.

RECEIPTS.		DISBURSEMENTS.	
	£ s. d.		£ s. d.
To Balance from 1874	873 8 11	GENERAL MANAGEMENT.

1875-6.

NEW SOUTH WALES.

REPORT

OF THE

COUNCIL OF EDUCATION

UPON THE CONDITION

OF THE

CERTIFIED DENOMINATIONAL SCHOOLS

FOR

1875.

Presented to both Houses of Parliament, in pursuance of the Act 30 Vic. No. 22, sec. 27.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1876.

THE COUNCIL OF EDUCATION TO HIS EXCELLENCY THE GOVERNOR,

SUBMITTING

REPORT UPON DENOMINATIONAL SCHOOLS FOR 1875.

To His Excellency SIR HERCULES GEORGE ROBERT ROBINSON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor-in-Chief of the Colony of New South Wales and its Dependencies, and Vice-Admiral of the same.

May it please your Excellency,

We have the honor, in compliance with the requirements of the Public Schools Act, to submit this our Ninth Annual Report upon the condition of Certified Denominational Schools, being that for the year 1875.

At the close of the year, 191 Certified Denominational Schools were in operation, being thirteen less than in 1874. Of the 204 schools existing in the latter year, certificates were withdrawn from the undermentioned :—

Bishop's Bridge	}	Church of England.
Cassilis		
Gundagai South		
Narellan		
Paterson		
Clarence Town	}	Roman Catholic.
Double Bay		
Nerrigundah		
Dapto	—	Presbyterian.

Besides these, Rouse Hill (Church of England) and Parramatta Junction (Presbyterian) were converted into Public Schools at the request of their respective Boards; and the Wesleyan and Presbyterian Schools at West Maitland were voluntarily discontinued by their promoters on the opening of the Public School in that town. The names of all the foregoing schools are consequently omitted from the Return of Certified Denominational Schools. Certificates were also withdrawn from the schools enumerated below, for the reasons specified, in 1875 :—

Appendix A.

Gosford, C.E.	}	Small attendance.
Morpeth, C.E.		
Appin, R.C.		
Bargo, R.C.		

West Maitland (St. Paul's), C.E.—Dilapidated condition of the school buildings.

Berrima, R.C.	}	Certificates voluntarily surrendered.
Parramatta, R.C.		

As the schools included in this list were in operation under the Council during portion of 1875, they will be found in the Return.

In the revision of the Regulations, of which mention is made in the Report upon Public Schools, a question connected with the withdrawal of Certificates occupied the attention of the Council.

It is provided by the Public Schools Act (section 28) that no certificate shall be withdrawn from a Denominational School so long as there shall be in "regular attendance" at such school not less than thirty children. The meaning of the phrase "regular attendance," however, is not defined in the Act, and it was necessary therefore for the Council itself to construe it. Finally, after much consideration, the Council thought it desirable to place that construction on record—attaching to the words such a definite signification as would, while ensuring uniformity of decision, enable the supporters of Denominational Schools to see the precise condition under which certificates are legally liable to withdrawal. The result is embodied in the 20th and 21st Regulations, which will be found to supply an inflexible, and therefore impartial, rule, by which schools of every denomination can be judged.

Appendix B.

Two applications for certificates were received during the year—Plattsburg, Roman Catholic, and Stockton, Church of England. The former was granted, but as the necessary arrangements for bringing it under the Council's supervision could not be made in 1875, it has not been included in the Return of Schools in operation in that year. The application from Stockton was declined, but the school has since been organized as a Public School.

Appendix C.

Appendix D.

In this Report, as in those furnished in previous years, an account of the general condition of Denominational Schools is comprised in the remarks upon Public Schools. The usual detailed reports upon the several schools are appended. A summary of information as to the number of pupils enrolled, and in average attendance, and the amount paid for school fees, may be found in the annexed Return.

From the Church and School Estates Revenue the undermentioned sums were appropriated to the different classes of Certified Denominational Schools:—

						£	s.	d.
Church of England	555	1	1
Roman Catholic	331	7	6
Presbyterian	118	18	8
Wesleyan	87	16	7
						<hr/>		
						1,093	3	10

We submit this our Report upon the Certified Denominational Schools, for the year ending 31st December, 1875; and in testimony thereof we have caused our corporate seal to be affixed hereto, this twenty-ninth day of March, one thousand eight hundred and seventy-six.

W. WILKINS,
Secretary.

(t.s.)

{ J. SMITH, President.
W. A. DUNCAN.
S. C. BROWN.
ALFRED STEPHEN.

APPENDIX A.

ATTENDANCE of Children at the Denominational Schools, as certified by the Local Boards, for the Quarter ending 31st December, 1875, or for the last Quarter of that year during which the Schools were in operation.

Table with columns: Name of School, Number of Children on Rols. (Boys, Girls, Total, Church of England, Roman Catholic, Presbyterians, Wesleyans, Others), Average Attendance (Boys, Girls, Total), Expenditure from Public Funds (Salaries, Books and Apparatus, Travelling Expenses and Horige, Buildings, Rent, Furniture, &c.), Local Contributions (Buildings, Furniture, &c., School Fees), Total. Includes a sub-section for CHURCH OF ENGLAND SCHOOLS.

APPENDIX A—continued.

ALBURY DISTRICT.

SUMMARY of Reports upon the Certified Denominational Schools inspected in 1875.

ADELONG (R.C.) :—General inspection, 7th June.

Enrolled :—Boys, 38 ; girls, 37 ; total, 75. Present :—Boys, 23 ; girls, 26 ; total, 49.

A weathershed and lavatory are needed, otherwise the material equipment of the school is reasonably good, and the whole premises are neatly kept. Owing to the prevalence of sickness the attendance on date of inspection was much below the average. The general discipline is vigorous, the instruction duly regulated, and the average proficiency is tolerable. The present teacher has been but a short time in charge.

ALBURY (R.C.) :—Regular inspection, 26th and 27th July.

Enrolled :—Boys, 87. Present :—Boys, 81.

Since last inspection the premises have been fenced. The material state of the school is in other respects good, and the general organization satisfactory. The discipline is fairly effective ; the work of instruction duly regulated ; and the average results show a fair approach to the requirements of the standard.

COROWA (C.E.) :—Regular inspection, 20th September.

Enrolled :—Boys, 41 ; girls, 32 ; total, 73. Present :—Boys, 30 ; girls, 24 ; total, 54.

The school buildings need painting and general repairs—a lavatory and weathershed have yet to be provided. So far as the teacher can be held responsible, the general organization is commendable, and the grounds present an exceedingly neat appearance. Three-fourths of the children of the locality not in attendance at private schools are enrolled, but the attendance is irregular and the discipline weak. The teaching is painstaking and the pupils' attainments average tolerable.

JRGONG (R.C.) :—Regular inspection, 18th May.

Enrolled :—Boys, 22 ; girls, 21 ; total, 43. Present :—Boys, 13 ; girls, 18 ; total, 31.

The schoolhouse is in good repair, fairly furnished, and judiciously organized. Three-fourths of the children in the locality are enrolled, and the attendance is reasonably regular. Otherwise the discipline is very effective and the moral tone of the school healthy. In the several subjects of instruction substantial progress has been made since last inspection, and the general proficiency ranges from very fair to good.

TEMUT (R.C.) :—General inspection, 30th April.

Enrolled :—Boys, 30 ; girls, 30 ; total, 60. Present :—Boys, 22 ; girls, 21 ; total, 43.

This school is now conducted in the Catholic Church, a roomy building in fair repair and tolerably equipped for school purposes. Three-fourths of the pupils attend regularly, and the requirements of good discipline are fairly met. The work of instruction is prosecuted with zeal and industry, and the results show a tolerable approach to the requirements of the standard.

EDMUND H. FLANNERY,
Inspector of Schools.

ARMIDALE DISTRICT.

SUMMARY of Reports upon Certified Denominational Schools examined during the year 1875.

I.—CHURCH OF ENGLAND.

TAMWORTH (C.E.) :—Regular inspection, 15th and 16th November.

Number enrolled :—Boys, 69 ; girls, 48 ; total, 117. Number present :—Boys, 60 ; girls, 38 ; total, 98.

1. Since last inspection important repairs and additions have been effected, and the material condition and general organization of the school may now be considered good. 2. The attendance has increased, and is, under favourable circumstances, marked by very fair regularity, and but few of the pupils are unpunctual. The discipline is effective, and the order has improved sensibly since the ordinary inspection in April last. The moral tone of the school is good. 3. The course of instruction is complete and well regulated, and Latin is taught to the senior pupils. The methods employed are in general appropriate, and the teaching is diligent and painstaking. The results, however, are not proportionately good ; but great allowance must be made for the many disadvantages contended with during the year. The average proficiency of the pupils is *nearly fair*.

II.—ROMAN CATHOLIC.

ARMIDALE (R.C.) :—General inspection, 5th September.

Number enrolled :—Boys, 38 ; girls, 36 ; total, 74. Number present :—Boys, 30 ; girls, 22 ; total, 52.

1. The buildings continue in very fair condition, and the supply of furniture, apparatus, and books is sufficient and suitable. 2. The attendance of pupils is fair as regards regularity and punctuality. The order is good except in the case of the younger pupils ; and the moral tone of the school is very fair. 3. The course of instruction is complete, and the classification made with fair judgment. The methods of the principal teacher are fair—of the pupil-teacher moderate to tolerable. The pupils give very fair attention under examination, and show tolerable mental training. The average proficiency is *tolerable to fair*.

J. D. BRADLEY,
Inspector of Schools,
Armidale District.

BATHURST DISTRICT.

DETAILED statement of the condition of Schools inspected in 1875.

CERTIFIED DENOMINATIONAL SCHOOLS.

BATHURST (R.C.—Boys) :—Visited, 15th December.

Number present :—96.

Regular inspection.

1. A new floor has been laid in the schoolroom. A lavatory and a playshed are needed to complete the organization. The supply of requisites is very fairly satisfactory. 2. The pupils are regular and punctual ; and in other respects the discipline is good. 3. All the prescribed subjects are taught—singing excepted. The lesson documents are carefully arranged. The methods are suitable, and they are applied with earnestness. 4. The proficiency in 1st class is tolerable, in 2nd and 3rd classes very fair, and in the 4th class very fair to good.

BATHURST (R.C.—Girls) :—Visited, 14th December.

Number present :—84.

Regular inspection.

1. The arrangement of the desks is unsuitable. In other respects the organization is satisfactory. The school is well supplied with requisites. 2. The discipline is healthy, and the prevailing spirit of the school is pleasing. 3. The prescribed course of instruction is followed ; the classification is appropriate ; and the school work is carried on with intelligence and zeal. 4. The proficiency ranges from very fair to good.

BATHURST (R.C.—Infants) :—Visited, 13th December.

Numbers present :—Boys, 48 ; girls, 107 ; total, 155.

Regular inspection.

1. The material condition and organization are the same as in 1873 and 1874. The supply of requisites is very fairly satisfactory. 2. The discipline is healthy. 3. The instruction is properly regulated. The methods are very fairly suitable, and they are applied with painstaking industry. 4. The proficiency in the first class is fair, and in the second and third classes it ranges from very fair to good.

J. HUFFER,
Inspector.

DENOMINATIONAL

DENOMINATIONAL SCHOOLS.

SOFALA (C.F.) :—Regular inspection, 16th August.

Numbers enrolled :—Boys, 30 ; girls, 6 ; total, 36. Numbers present :—Boys, 28 ; girls, 4 ; total, 32.

The schoolroom is a commodious building, well lighted, and properly ventilated. The residence is in a very dilapidated condition, and the fences are falling down. The school is well furnished, and possessed of a good supply of working materials. About five-sixths of the enrolled pupils attend regularly. Cleanliness, order, and attention are satisfactory. The classification is suitable, and the instruction is carefully regulated. The teaching needs more vigour. The attainments are only moderate.

SOFALA (R.C.) :—Regular inspection, 16th August.

Numbers enrolled :—Boys, 32 ; girls, 33 ; total, 65. Numbers present :—Boys, 20 ; girls, 21 ; total, 41.

The fencing of the playground should be completed, and the out-offices removed to a more suitable position. The interior of the school wants white-washing. About three-fourths of the pupils are regular and punctual. Talking in class should be disallowed ; in other respects the discipline is fair. The prescribed subjects are taught, and the instruction is regulated by the usual documents. The methods are of tolerable worth, and appear to be industriously applied. The proficiency is nearly tolerable.

24/1/76.

G. O'BYRNE,
Inspector, Mudgee District.

BRAIDWOOD DISTRICT.

SUMMARIES of Reports furnished on Certified Denominational Schools, during the year 1875.

I.—CHURCH OF ENGLAND SCHOOLS.

BRAIDWOOD :—Regular inspection, 22nd October, 1875.

Enrolled :—Boys, 39 ; girls, 21 ; total, 60. Present :—Boys, 35 ; girls, 19 ; total, 54.

1. The material condition of the school is satisfactory. 2. The discipline is very fair. 3. Singing is not taught. The mark for drawing is below the average, that for arithmetic is up to the average, and that for all other subjects is above. The general proficiency is between *very fair* and *good*.

MORUYA :—Regular inspection, 20th July, 1875.

Enrolled :—Boys, 33 ; girls, 48 ; total, 81. Present :—Boys, 25 ; girls, 35 ; total, 60.

1. The material condition is satisfactory in all respects. 2. There is room for considerable improvement in the discipline ; the younger pupils are particularly inattentive and disorderly. 3. The mark for reading, writing, dictation, and arithmetic is above the average, and that for other subjects slightly below. The general proficiency is *fair*.

II.—ROMAN CATHOLIC SCHOOLS.

ARAUEN :—Regular inspection, 2nd June, 1875.

Enrolled :—Boys, 56 ; girls, 48 ; total, 104. Present :—Boys, 38 ; girls, 31 ; total, 69.

1. The material condition is the same this year as last. 2. The children are attentive, respectful to their teacher, and well under control. 3. The mark for reading, spelling, writing, dictation, grammar, and geography is above the average, that for arithmetic is up to the average, and that for object lessons and singing is below. The general proficiency is between *fair* and *very fair*.

BRAIDWOOD :—Regular inspection, 27th and 28th October, 1875.

Enrolled :—Boys, 67 ; girls, 63 ; total, 130. Present :—Boys, 51 ; girls, 54 ; total, 105.

1. The material condition is satisfactory in all respects, and the discipline is sound. 2. Singing and drawing are not taught, but the mark for all other subjects is above the average. The general proficiency is between *very fair* and *good*.

COOMA :—General inspection, 11th February, 1875.

Enrolled :—Boys, 33 ; girls, 26 ; total, 59. Present :—Boys, 23 ; girls, 19 ; total, 42.

1. The building is shabby and dilapidated, and there is a want of respectability and comfort about the whole place. 2. About one-third of the pupils are regular. The discipline is fair. 3. The attainments are low, and the whole spirit of the school is depressing. The mark for reading is satisfactory, but that for all other subjects is below the average. Since the inspection a better schoolroom has been provided, and a fresh teacher has been placed in charge.

JEMBAICUMENE :—Regular inspection, 19th October, 1875.

Enrolled :—Boys, 35 ; girls, 40 ; total, 75. Present :—Boys, 33 ; girls, 31 ; total, 64.

1. The building is a comfortless cold place, but it is sufficiently well provided with furniture, apparatus, and materials. 2. The discipline is satisfactory in all respects. 3. The new teacher is conducting the school with energy and judgment. The mark for dictation and arithmetic is up to the average, and that for all other subjects above. The general proficiency is between *fair* and *very fair*.

MORUYA (Boys) :—General inspection, 22nd July, 1875.

Enrolled, 45. Present, 43.

1. There is abundance of accommodation in this school, and, except that a few more hat-pegs are needed, the general outfit is satisfactory. 2. The discipline is tolerable. 3. The attainments are low, and little progress has been made since last inspection. The average proficiency is between *moderate* and *tolerable*.

MORUYA (Girls) :—Regular inspection, 21st July, 1875.

Enrolled, 50. Present, 46.

1. Blinds are needed for the windows on the north side of the building, but in other respects the material condition is satisfactory. 2. The pupils are still too irregular in their attendance. The discipline is sound. 3. The attainments of the lower division of Class 1 are scarcely up to the standard, but the condition of all the other classes is highly creditable to the teacher. The mark for reading, spelling, writing, dictation, grammar, geography, and object lessons is above the average, and that for arithmetic and drawing up to the average. The general proficiency is *very fair*.

REIDSDALE :—

REIDSDALE:—Regular inspection, 4th November, 1875.

Enrolled:—Boys, 31; girls, 30; total, 61. Present:—Boys, 18; girls, 22; total, 40.

1. The school is now held in the new building. There is no fireplace, but in other respects it is very suitable. There is an adequate supply of furniture and working stock. 2. The discipline is good. 3. Its attainments are satisfactory, and substantial progress has been made since last inspection. Drawing and singing are not taught. The mark for arithmetic is slightly below the average, but that for all other subjects is above. The general proficiency is between *fair* and *very fair*.

J. C. MAYNARD,
Inspector, Braidwood District.

CAMDEN DISTRICT.

CERTIFIED DENOMINATIONAL SCHOOLS.

SUMMARY of Reports for 1875.

THE following remarks are abridged statements of my detailed reports upon the condition of the Denominational Schools inspected by me during the year 1875. The remarks chiefly relate to the material condition and organization of the schools, the general discipline and moral training, the subjects and methods of instruction, and the progress of the pupils in learning.

CHURCH OF ENGLAND SCHOOLS.

ASHFIELD:—Regular inspection, 24th August.

Enrolled:—Boys, 56; girls, 27; total, 83. Present:—Boys, 47; girls, 24; total, 71.

Playsheds and lavatories are required and there is no residence for the teacher, but the supply of furniture, apparatus, and books is sufficient. About 58 per cent. of the children enrolled are regular, but they are not all punctual. There are proper facilities for ventilation, and drill instruction is given to the boys. The pupils are clean and orderly. All the prescribed subjects are taught, but only nine of the pupils have been promoted to higher classes during the year. There are no free scholars, and the teacher is not aware of any C.E. children of the educable ages in the locality not at school. About 70 per cent. of the questions asked at the examination were answered, and the proficiency is very fair.

CAMDEN:—Regular inspection, 27th July.

Enrolled:—Boys, 49; girls, 29; total, 78. Present:—Boys, 44; girls, 26; total, 70.

Lavatories and playsheds are needed, and the walls of the classroom and porch of the residence require to be rebuilt. The closets should be painted. About 66 per cent. of the scholars are regular and punctual, and the general discipline is satisfactory. All the prescribed subjects are taught with industry and care. There are five free scholars, but the teacher is not aware of any C.E. children of the educable ages in the town or vicinity not under school instruction. About 70 per cent. of the questions asked at the examination were answered, and the attainments of the scholars may be estimated as very fair.

CAMPELLTOWN:—General inspection, 21st June.

Enrolled:—Boys, 21; girls, 15; total, 36. Present:—Boys, 11; girls, 6; total, 17.

Lavatories and playsheds are wanting, but otherwise the material condition of the school is passable. The children are clean and orderly and tolerably attentive, but not all punctual. All the subjects of instruction prescribed by the Council are taught. The average attendance of scholars is 75 days per cent. There are four free scholars and about thirty C.E. children of the school age in the town and vicinity not under instruction. About 51 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is tolerable.

CANTERBURY:—Regular inspection, 10th September.

Enrolled:—Boys, 37; girls, 24; total, 61. Present:—Boys, 27; girls, 12; total, 39.

Arrangements have been made for cementing the walls, repairing the roof, and the painting of the schoolroom. The supply of furniture, apparatus, and books is sufficient. About 64 per cent. of the scholars are regular and nearly all punctual. They are clean, orderly, and attentive, and the schoolroom is well ventilated. All the subjects of instruction prescribed are taught, and the teaching is conducted with considerable industry and earnestness. There are seven free scholars and ten children of the school age in the locality not under instruction. The attainments of the pupils are fair.

DAPTO:—Regular inspection, 3rd December.

Enrolled:—Boys, 40; girls, 32; total, 72. Present:—Boys, 35; girls, 27; total, 62.

A clock and hat-pegs have been supplied since the last inspection, but a playshed, lavatories, a kitchen, and the painting of the buildings are still much needed. The supply of apparatus and books is sufficient. 71 per cent. of the scholars are regular, and nearly all punctual. They are clean, orderly, and attentive, and the schoolroom is well ventilated. All the subjects prescribed are taught except singing, and the methods of tuition are intelligent. Thirty-nine of the pupils have been promoted to higher classes during the year. There are nine free scholars. The teacher is not aware of any children of the school age in the locality not under instruction. The attainments of the pupils are very fair.

ENFIELD:—Regular inspection, 17th September.

Enrolled:—Boys, 46; girls, 43; total, 89. Present:—Boys, 32; girls, 28; total, 60.

The material condition of this school is satisfactory, and the apparatus and books are sufficient. The average attendance of the scholars is 64 days per cent., but they are not all punctual. They are clean, but rather restless and talkative. All the subjects prescribed by the Council are taught. There are no free scholars; but ten children of the school age in the locality are not under instruction. Twenty-three of the pupils have been promoted to higher classes during the year, and the proficiency is tolerable.

FOXGROUND:—Regular inspection, 24th February.

Enrolled:—Boys, 33; girls, 11; total, 44. Present:—Boys, 18; girls, 8; total, 26.

A lavatory and a playshed are still required, but the working materials are sufficient. About 70 per cent. of the scholars are regular and nearly all punctual. They are clean, orderly, and attentive. Singing and drawing are not taught, but the instruction in the other branches is properly regulated. There are no free pupils, but ten children of the educable ages in the locality are not attending school. The attainments of the scholars are tolerable.

JAMBEROO:—

JAMBEROO :—General inspection, 9th February.

Enrolled :—Boys, 26 ; girls, 30 ; total, 56. Present :—Boys, 25 ; girls, 28 ; total, 53.

A lavatory and a playshed are wanting, and the buildings are in much need of painting. The general discipline is satisfactory. All the subjects prescribed are taught, and the methods of tuition are intelligent, and applied with industry and earnestness. The average attendance is 57 days per cent. There are seven free pupils and four C.E. children of the educable ages in the locality not under instruction. The attainments of the scholars are very fair. This school will be closed when the Public School in course of erection has been completed.

LIVERPOOL :—Regular inspection, 8th September.

Enrolled :—Boys, 58 ; girls, 39 ; total, 97. Present :—Boys, 49 ; girls, 32 ; total, 81.

A bell, a lavatory, a playshed, and a new residence for the teacher are required, but the stock of apparatus and books is sufficient. About 64 per cent. of the scholars are regular, and nearly all punctual. They are orderly, clean, and attentive, and the boys are well advanced in squad drill. All the subjects of instruction prescribed by the Council are taught, and twenty-five of the scholars have been promoted to higher classes during the year. There are six free scholars, and about fourteen C.E. children of the school age in the town and vicinity not under instruction. The proficiency of the scholars is very fair.

LORD'S FOREST :—Regular inspection, 13th December.

Enrolled :—Boys, 22 ; girls, 20 ; total, 42. Present :—Boys, 6 ; girls, 4 ; total, 10.

This school is held in the English Church, and it is to be closed when the Public School in course of establishment has been opened. About 75 per cent. of the scholars are regular, and nearly all punctual. The small attendance on the day of my visit was caused by scarlet fever afflicting the children. All the prescribed subjects are taught. There is only one free scholar, and about twenty-five children of the school ages in the neighbourhood not under instruction. The proficiency of the pupils is fair.

MACQUARIE RIVER :—Regular inspection, 30th November.

Enrolled :—Boys, 31 ; girls, 24 ; total, 55. Present :—Boys, 25 ; girls, 20 ; total, 45.

A lavatory, a playshed, a bell, hat-pegs, and another closet are required, and the buildings are in much need of painting. The supply of apparatus and books is sufficient. About 70 per cent. of the scholars are regular, and nearly all punctual. They are clean, orderly, and industrious, and the school-room is well ventilated. All the subjects of instruction prescribed by the Council are taught. There are five free pupils, and about fifteen children of the school age in the locality not under instruction. The proficiency of the pupils is above fair.

WOLLONGONG :—Regular inspection, 22nd September.

Enrolled :—Boys, 64 ; girls, 46 ; total, 110. Present :—Boys, 55 ; girls, 44 ; total, 99.

A lavatory, a playshed, and a bell are still required ; but the supply of furniture, apparatus, and books is sufficient. About 70 per cent. of the scholars enrolled are regular, and nearly all punctual. They are clean, orderly, and attentive. All the subjects of instruction prescribed by the Council are taught with skill and ability, and forty-four of the pupils have been promoted to higher classes during the year. There are six free scholars, but it appears there are no C.E. children of the school age in the town or vicinity not under school instruction. The attainments of the scholars are good.

WOONONA :—Regular inspection, 20th October.

Enrolled :—Boys, 32 ; girls, 30 ; total, 62. Present :—Boys, 22 ; girls, 21 ; total, 43.

The material condition of this school is unsatisfactory. The buildings and fences need repairs, and a lavatory, a playshed, and a bell are required. About 56 per cent. of the scholars are regular, and nearly all punctual. They are clean, and tolerably orderly and attentive. All the prescribed subjects are taught except singing. There are three free scholars, and about seven children of the educable ages in the place not attending school. About 56 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is between tolerable and fair.

ROMAN CATHOLIC SCHOOLS.

CAMDEN :—Regular inspection, 28th July.

Enrolled :—Boys, 15 ; girls, 26 ; total, 41. Present :—Boys, 15 ; girls, 25 ; total, 40.

The material condition of this school is not satisfactory. The residence is unfit for occupation, the closets need repairs, and lavatories are required, but the furniture, apparatus, and books are sufficient. The average attendance of the pupils is about 56 days per cent. They are unpunctual, but tolerably clean and orderly. The schoolroom is clean, and well ventilated. All the subjects of instruction prescribed are taught, and twelve of the pupils have been promoted to higher classes since the last inspection. There are five free pupils, and ten Roman Catholic children of the school ages in the town and vicinity not under instruction. The attainments of the scholars are nearly tolerable.

CAMPBELLTOWN :—Regular inspection, 3rd August.

Enrolled :—Boys, 50 ; girls, 38 ; total, 88. Present :—Boys, 46 ; girls, 32 ; total, 78.

The material condition of the school is reasonably good, and the general discipline is satisfactory. The furniture is not of modern construction, but the supply of apparatus and books is sufficient. All the prescribed subjects are taught, and twenty-two of the pupils have been promoted during the year. The average attendance of the children enrolled is 64 days per cent. There are no free scholars, and the teacher is not aware of any Roman Catholic children of the school age in the town and vicinity not under instruction. 75 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is between very fair and good.

CHARCOAL CREEK :—Regular inspection, 24th September.

Enrolled :—Boys, 49 ; girls, 32 ; total, 81. Present :—Boys, 36 ; girls, 30 ; total, 66.

A residence for the teacher, a lavatory, a bell, and a playshed are required ; but the supply of furniture, apparatus, and books is sufficient. The general discipline is passable in most respects, but singing is not taught. The average attendance of the pupils is 72 days per cent. There are ten free scholars, but the teacher is not aware of any Roman Catholic children of the educable ages in the locality not attending school. 60 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair.

DAFTO :—Regular inspection, 7th December.

Enrolled :—Boys, 24 ; girls, 19 ; total, 43. Present :—Boys, 21 ; girls, 15 ; total, 36.

A playshed and lavatories have been supplied since the last inspection, but a water tank and a kitchen for the teacher are very much needed. The supply of furniture, apparatus, and books is sufficient,

sufficient, and the government and general discipline of the school are satisfactory. Singing is not taught. There are eight free pupils, and about seven children of the educable ages in the neighbourhood not attending school. The average attendance of the scholars is 72 days per cent. Sixteen of the pupils have been promoted to higher classes during the year. The teaching is conducted with industry and earnestness, and 76 per cent. of the questions asked at the examination were answered.

IRISHTOWN :—Regular inspection, 2nd September.

Enrolled :—Boys, 29 ; girls, 24 ; total 53. Present :—Boys, 17 ; girls, 13 ; total 30.

This school is held in the Roman Catholic Chapel, and the material condition is passable. About 52 per cent. of the scholars enrolled are regular, and nearly all punctual; they are clean, and tolerably orderly and attentive. All the prescribed subjects are taught except singing. There are twenty-three free scholars, and about twelve children of the educable ages in the neighbourhood not under instruction. About 53 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is above tolerable.

JAMBEROO :—Regular inspection, 10th February.

Enrolled :—Boys, 24 ; girls, 25 ; total, 49. Present :—Boys, 19 ; girls, 21 ; total, 40.

A lavatory, a playshed, and hat-pegs are required, but otherwise the material condition of the school is reasonably good. The pupils are clean and orderly, but they are not all punctual. About 50 per cent. of the scholars are regular in attendance. There are only two free scholars, and about ten children of the educable ages in the neighbourhood not attending school. All the prescribed subjects are taught, and the attainments of the scholars are fair.

LIVERPOOL :—Regular inspection, 7th September.

Enrolled :—Boys, 27 ; girls, 33 ; total, 60. Present :—Boys, 25 ; girls, 25 ; total, 50.

A lavatory is required, and the buildings are in much need of painting; but otherwise the material condition of the school is reasonably good. The pupils are clean, orderly, and tolerably attentive, and the boys are well advanced in squad drill. The average attendance is 75 days per cent. Singing is not taught, but sixteen of the scholars have been promoted to higher classes during the year. There are fourteen free scholars, and sixteen Roman Catholic children of the school age in the locality not under instruction. The attainments of the pupils are fair.

MENANGLE :—Regular inspection, 19th May.

Enrolled :—Boys, 28 ; girls, 19 ; total, 47. Present :—Boys, 20 ; girls, 15 ; total, 35.

A lavatory and a weathershed have been recently supplied, and the material condition of the school is fairly satisfactory. About 70 per cent. of the scholars enrolled are regular, and nearly all punctual. They are clean, orderly, and attentive to their lessons. Singing and drawing are not taught. There are no free scholars, and the teacher reports that he is not aware of any Roman Catholic children of the educable ages in the neighbourhood not attending school. About 60 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair.

THE OAKS :—General inspection, 5th May.

Enrolled :—Boys, 16 ; girls, 28 ; total, 44. Present :—Boys, 8 ; girls, 20 ; total, 28.

This school is held in a small wooden building, but arrangements are in progress for the erection of a new school-house. The pupils are clean, orderly, and attentive. All the prescribed subjects are taught. The average attendance of the scholars enrolled is 68 days per cent. There are nine free pupils, but the teacher is not aware of any children of the school age in the place not under instruction. 53 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is above tolerable.

ROCKY POINT :—Regular inspection, 26th July.

Enrolled :—Boys, 16 ; girls, 23 ; total, 39. Present :—Boys, 7 ; girls, 7 ; total, 14.

A residence for the teacher, a lavatory, a playshed, and some repairs to the schoolroom floor are needed. The supply of furniture, apparatus, and books is sufficient. About 66 per cent. of the scholars are regular in attendance, but the general discipline is lax. All the prescribed subjects are taught. There are two free scholars, and eight children of the school ages in the neighbourhood not under instruction. The attainments of the pupils are tolerable.

SPANIARDS' HILL :—General inspection, 20th May.

Enrolled :—Boys, 30 ; girls, 17 ; total, 47. Present :—Boys, 20 ; girls, 15 ; total, 35.

The school grounds have been recently fenced; and a playshed and lavatory are in course of erection. With these improvements the material condition of the school will be passable. The pupils are clean and orderly, but they are not all punctual. Singing is not taught. The average attendance of the scholars enrolled is 67 days per cent. There are no free pupils, and no children of the educable ages in the locality growing up without school instruction. The progress of the pupils in learning is tolerable.

WOLLONGONG :—Regular inspection, 9th August.

Enrolled :—Boys, 49 ; girls, 11 ; total, 60. Present :—Boys, 36 ; girls, 9 ; total, 45.

A weathershed, a lavatory, and repairs to the teacher's residence are still wanting, and the schoolroom is in much need of painting. The working materials are sufficient. The children are clean, orderly, and attentive, and all the prescribed subjects are taught except singing. The average attendance of the pupils enrolled is 70 days per cent. There are four free scholars, but no children of the educable ages in the town or vicinity not under school instruction. 63 per cent. of the questions asked at the examination were answered, and the proficiency of the scholars is above fair.

PRESBYTERIAN SCHOOLS.

CHARCOAL CREEK :—Regular inspection, 23rd September.

Enrolled :—Boys, 21 ; girls, 28 ; total, 49. Present :—Boys, 15 ; girls, 15 ; total, 30.

A playshed and lavatory are in course of erection, and a bell will be supplied shortly. With these improvements the material condition of the school will be passable. The pupils are clean and orderly, but not all punctual. All the subjects prescribed are taught with considerable attention and industry, and eighteen of the scholars have been promoted to higher classes during the year. The average attendance of the pupils is 64 days per cent. There are no free scholars and no children of the school age in the locality not under instruction. The attainments of the pupils are fair. The small attendance on the day of inspection was caused by sickness afflicting the children.

CAMPBELLTOWN :—

CAMPBELLTOWN :—General inspection, 22nd June.

Enrolled :—Boys, 38 ; girls, 21 ; total, 59. Present :—Boys, 29 ; girls, 7 ; total, 36.

The material condition of the school needs some improvements, but the general discipline is good, and the management has been much improved under the present master. All the prescribed subjects are taught with efficiency. About 67 per cent. of the scholars enrolled are regular. There are no free scholars, and only five Presbyterian children of the school age in the town and vicinity not under instruction. 63 per cent. of the questions asked at the examination were answered, and the attainments of scholars are above fair. The small attendance on the day of inspection was caused by sickness afflicting the children. This school will be closed when the Public School in course of erection has been completed.

WESLEYAN SCHOOL.

ROCKY POINT :—Regular inspection, 13th August.

Enrolled :—Boys, 23 ; girls, 31 ; total, 54. Present :—Boys, 17 ; girls, 20 ; total, 37.

There is no residence for the teacher, lavatory, bell, or playshed, but a porch has been built and the schoolroom repaired since the last inspection. The working materials are sufficient ; but the schoolroom and maps are in a very dusty and neglected condition. The pupils are clean, and the order and attention are passable. Singing is not taught. The average attendance of the pupils is 61 days per cent. There are six free scholars, and about ten children of the educable ages in the locality not under instruction. The proficiency of the pupils may be estimated as tolerable.

W. MINTYRE,
Inspector, Camden District.

CUMBERLAND DISTRICT.

SUMMARIES of Reports on Denominational Schools for 1875.

CHURCH OF ENGLAND SCHOOLS.

BURWOOD :—Regular inspection, 22nd April.

Numbers present :—Boys, 20 ; girls, 17 ; total, 37.

Certain repairs and improvements have been effected on the premises since last inspection. The organisation may be pronounced fairly satisfactory. Mildness but firmness characterises the government ; the pupils are orderly and attentive, and the general spirit of the school is pleasing. The instruction is properly regulated ; the teaching is careful and industrious, and the average proficiency very fair.

CABRAMATTA :—Regular inspection, 3rd September.

Numbers present :—Boys, 13 ; girls, 15 ; total, 28.

In its material aspect the school is tolerably satisfactory, but the site is not central for the bulk of the population of the locality. The discipline is tolerable, and secures passable order and attention. Under examination the pupils are tolerably accurate and manifest moderate self-reliance. Want of power marks the teaching, which is only of moderate utility. The attainments range from moderate to tolerable.

CASTLE HILL :—Regular inspection, 10th November.

Numbers present :—Boys, 20 ; girls, 31 ; total, 51.

Since last inspection the residence has been enlarged and other improvements effected on the premises. Reasonable accuracy is exhibited by the pupils when under examination, and the discipline secures very fair order and attention. The teaching is earnest and productive of results averaging nearly very fair.

COBBITY :—Regular inspection, 3rd September.

Numbers present :—Boys, 24 ; girls, 12 ; total, 36.

The material condition of this school may be pronounced fairly satisfactory. The general discipline is tolerably effective in the maintenance of order and attention. The answering of the pupils is tolerably self-reliant and accurate, the teaching is industrious but wanting in force, and the average proficiency is from moderate to tolerable.

EMU :—Regular inspection, 22nd March.

Numbers present :—Boys, 26 ; girls, 12 ; total, 38.

There is a fair supply of necessary working materials, but the premises need painting and repairs. The discipline is tolerably effective, and the pupils show passable self-reliance and accuracy under examination. The teaching is industrious but wanting in penetrative force, and the average proficiency is tolerable.

KURRAJONG NORTH :—Regular inspection, 20th May.

Numbers present :—Boys, 19 ; girls, 13 ; total, 32.

The residence needs improvement, but otherwise the material condition is fair. The pupils are fairly orderly and tolerably attentive. The government is mild, but lacks vigour. Though painstaking, greater power is needed to make the teaching impressive. The average proficiency is nearly tolerable.

PARRAMATTA :—Regular inspection, 8th and 9th December.

Numbers present :—Boys, 72 ; girls, 42 ; total, 114.

In its material aspect the condition of the school is satisfactory. The discipline is effective in securing very fair order and attention. When under examination the pupils manifest fair mental activity, and answer with reasonable promptness and accuracy. Intelligence and energy characterise the teaching, and the average proficiency is from fair to very fair.

PARRAMATTA NORTH :—Regular inspection, 6th and 7th December.

Numbers present :—Boys, 66 ; girls, 45 ; total, 111.

The material condition of the school is, on the whole, satisfactory. The discipline is mild but firm and vigilant, and has secured orderly and attentive habits on the part of the pupils, who exhibit considerable self-reliance and very fair accuracy under examination. The teaching is marked by animation and energy, and the average proficiency is nearly very fair.

PENNANT HILLS :—Regular inspection, 22nd September.

Numbers present :—Boys, 24 ; girls, 22 ; total, 46.

Various repairs and improvements are required to the residence, but the schoolroom is in good condition. Greater energy is needed in the government of the pupils, who are fairly orderly and attentive. The teaching is earnest and careful, but lacks vigour. The average proficiency is nearly tolerable.

PETERSHAM :—

PETERSHAM :—General inspection :—28th and 29th October.

Numbers present :—Boys, 62 ; girls, 63 ; total, 125.

There is no residence for the teacher, but otherwise the material condition is fairly satisfactory. The government seems mild but fairly firm, and produces fair order and attention on the part of the pupils. The teaching appears to be industrious and fairly careful, but needs greater vigour and point. The average attainments are nearly fair.

PITT TOWN :—Regular inspection :—22nd June.

Numbers present :—Boys, 11 ; girls, 11 ; total, 22.

The schoolroom needs colouring and some repairs. The records are not kept with neatness, and are incorrect in some respects. The discipline is lax, and the order and attention are indifferent. The teaching lacks point, and is not tested by vigorous questioning. Only indifferent results are obtained, and the general state and spirit of the school are far from pleasing.

RICHMOND :—Regular inspection, 2nd June.

Numbers present :—Boys, 33 ; girls, 26 ; total, 59.

The schoolroom is commodious and suitable, and the residence has undergone some repairs since last inspection. The material condition is good on the whole as regards the schoolroom and its appliances. The classification is faulty in some respects for a school under one teacher. The government is productive of fair order and attention. The teaching is industrious ; and the average proficiency ranges from tolerable to fair.

ROUSE HILL :—Regular inspection, 24th June.

Numbers present :—Boys, 23 ; girls, 21 ; total, 44.

Since last inspection the schoolroom has been put into a state of repair, and some new furniture has been added to the stock. The government is fairly effective, and the pupils manifest tolerable self-reliance and accuracy under examination. Care and industry distinguish the teaching, but it is defective in point and energy ; and the attainments average tolerable. This school has since been converted into a Public one.

RYDE :—Regular inspection, 13th October.

Numbers present :—Boys, 42 ; girls, 29 ; total, 71.

The material condition is good, and the records are neatly and correctly kept. Fair efficiency characterises the discipline ; and the pupils under examination evince fair readiness and accuracy. The teaching is marked by industry and care rather than by energy, and is productive of fair results.

SEVEN HILLS :—Regular inspection, 25th February.

Numbers present :—Boys, 20 ; girls, 12 ; total, 32.

The material condition is fair ; the discipline needs greater energy and watchfulness ; and the instruction requires more careful regulation. The regularity is of an average character. But little mental activity is exhibited by the pupils ; and the teaching fails to educe results beyond moderate.

SOUTH CREEK :—Regular inspection, 16th and 17th March.

Numbers present :—Boys, 39 ; girls, 30 ; total, 69.

One of the closets needs replacing, and the residence requires repair. The government is fairly effective ; and the pupils manifest fair self-reliance and accuracy. Energy and industry mark the teaching, and the attainments range from tolerable to fair. Action has been taken for the purchase of the premises and the amalgamation of this with St. Mary's Public School.

WILBERFORCE :—Regular inspection, 25th August.

Numbers present :—Boys, 21 ; girls, 37 ; total, 58.

The material condition of the school is on the whole fair. The government is genial, but needs greater power in ensuring vigorous application to work. The pupils are fairly orderly and attentive. The methods are suitable, but the teaching needs greater thoroughness. The average proficiency is about tolerable.

WINDSOR :—Regular inspection, 10th June.

Numbers present :—Boys, 31 ; girls, 29 ; total, 60.

The schoolroom is in fair order, but the residence is in need of repair. The school is fairly supplied with teaching requisites. The government is mild, and secures fair order and attention. The teaching is industrious, and the average proficiency somewhat exceeds tolerable. Greater power of application on the part of the pupils, and more promptness and accuracy are desirable in order to obtain satisfactory results.

ROMAN CATHOLIC SCHOOLS.**CABRAMATTA :—Regular inspection, 10th September.**

Numbers present :—Boys, 14 ; girls, 13 ; total, 27.

The schoolroom has just been put into a state of repair, which the character of the building—slab with bark roof—necessitates at periodical times. The government needs greater energy and vigilance to repress copying and prompting. The pupils are far from punctual, and only tolerably orderly and attentive. The teaching is industrious, but productive of only moderate results.

CONCORD :—Regular inspection, 11th March.

Numbers present :—Boys, 28 ; girls, 11 ; total, 39.

The material condition is now fairly satisfactory. The records are neatly and correctly kept. The discipline is mild but wanting in energy, and the pupils are tolerably attentive. The teaching seems industrious, but is not marked by vigour. The average proficiency is about tolerable.

KURRAJONG :—Regular inspection, 19th May.

Numbers present :—Boys, 18 ; girls, 17 ; total, 35.

The material condition is, on the whole, only tolerable. The government needs greater energy and watchfulness, and the pupils are only tolerably orderly and attentive. The methods are not of an educative character, the teaching wants intelligence and penetrative force, and the attainments only reach moderate.

LANE COVE :—Regular inspection, 6th May.

Numbers present :—Boys, 15 ; girls, 9 ; total, 24.

The general organisation is not satisfactory, and the records are not well kept in some respects. The government is lax, and fails to produce orderly or attentive habits. The answering of the pupils is far from quick or accurate, and their mental powers seem little exercised. The teaching is but little educative, and is productive of barely indifferent results.

NELSON :—Regular inspection, 23rd July.

Numbers present :—Boys, 17 ; girls, 16 ; total, 33.

The material condition is tolerable. The government is only moderately effective. The classification is irregular in some respects. The pupils are only moderately orderly or attentive. The methods are indifferent, the teaching is wanting in intelligence and energy ; and the attainments are from indifferent to moderate.

PARRAMATTA :—Regular inspection, 27th April.

Numbers present :—Boys, 30 ; girls, 15 ; total, 45.

No improvement has been effected on the material organisation since last inspection. The discipline is fairly healthy ; the instruction is properly guided ; and the pupils are fairly self-reliant. The teaching is industrious and intelligent ; and the average proficiency is about tolerable. Through the action of those connected with the school, the attendance had been much diminished at the date of inspection, and some time afterwards the school was withdrawn from under the supervision of the Council.

PENRITH :—Regular inspection, 10th March.

Numbers present :—Boys, 32 ; girls, 21 ; total, 53.

Various improvements are necessary to render the material condition of the premises satisfactory, and there is no residence. The government is mild but lax, and the pupils are only tolerably self-reliant and accurate. The teaching is industrious but wanting in energy, and the average proficiency is about tolerable.

PETERSHAM :—Regular inspection, 21st April.

Numbers present :—Boys, 18 ; girls, 8 ; total, 26.

The schoolroom is suitable, but the residence is too small and not of a comfortable character. About three-fifths of the pupils are regular. The government is mild and secures tolerable order and attention. The teaching is industrious, but defective in point and vigour ; the pupils do not exhibit sufficient animation or accuracy in their answering, and the average proficiency is about tolerable.

RICHMOND :—Regular inspection, 1st June.

Numbers present :—Boys, 23 ; girls, 37 ; total, 60.

The school is conducted in the church, and is fairly equipped with teaching appliances. There is a small residence, but it is damp and uncomfortable. Steps are being taken, however, for the erection of a new one. The general spirit of the school is pleasing, and the government commands fair order and attention. The teaching is industrious and careful, and the attainments are fairly satisfactory.

RYDE :—Regular inspection, 14th October.

Numbers present :—Boys, 24 ; girls, 20 ; total, 44.

The schoolroom is too small, and, on the whole, the material condition is only tolerable. The government is prompt and vigorous, and the pupils are orderly and attentive. The teaching is energetic, the children exhibit very fair readiness and accuracy in answering, and the average proficiency approaches very fair.

VILLA MARIA :—Regular inspection, 15th October.

Numbers present :—Boys, 25 ; girls, 33 ; total, 58.

The stock of appliances and the general material condition are fairly satisfactory. The discipline maintains orderly and attentive habits in the pupils, who answer with spirit and very fair accuracy. The teaching is energetic and painstaking, and the average proficiency is nearly very fair.

WINDSOR :—Regular inspection, 9th June.

Numbers present :—Boys, 44 ; girls, 34 ; total, 78.

The schoolroom is suitable and fairly found in necessary appliances, but the residence is too small. The government is judicious, and ensures fair order and attention. The teaching is careful and industrious, and the average proficiency is about fair. The general spirit of the school is pleasing.

WESLEYAN SCHOOL.

CASTLEREAGH :—Regular inspection, 25th March.

Numbers present :—Boys, 32 ; girls, 18 ; total, 50.

There is no residence, but otherwise the material condition is fairly satisfactory. The pupils are tolerably orderly and fairly attentive, and the general discipline is tolerably effective. Earnestness and industry mark the teaching, but it fails in point and force. The results reach from tolerable to fair.

GOULBURN DISTRICT.

SUMMARIES of Reports on Denominational Schools, for 1875.

I.—CHURCH OF ENGLAND SCHOOLS.

BURRAWANG :—Regular inspection, 16th March.

Enrolled :—Boys, 15 ; girls, 22 ; total, 37. Present :—Boys, 2 ; girls, 6 ; total, 8.

A well has been sunk ; but hat-pegs, a fireplace in the schoolroom, a lavatory, and repairs to the verandah of the teacher's residence are badly wanted. Minor omissions occur in some of the records. The prevalence of measles has greatly interfered with the numbers for some time past. Ordinarily they are very low in comparison to the whole population. There were not sufficient pupils present at the inspection to justify a final estimate of the discipline and the value of the instruction. Suitable instructional arrangements have been made. The methods have not changed in character ; they have produced results in the children examined ranging from moderate to tolerable throughout.

GOULBURN :—Regular inspection, 9th, 10th, and 11th February.

Enrolled :—Boys, 111 ; girls, 60 ; total, 171. Present :—Boys, 94 ; girls, 43 ; total, 137.

The premises are in the same dilapidated state already reported. The teacher makes the best general arrangements he can under the circumstances. The discipline is good, the only defect being the want of a thorough school drill. The classification is judicious. The course of instruction is complete, elementary algebra being an extra. Teaching is carried on with vigour, system, and thoroughness.

ness. General promotions were made shortly before the inspection, and several of the most advanced pupils left the school. The pupils are attentive, and evince a *fair* degree of effort and mental culture. The general proficiency is *fair* in the first class, and rises through the successive classes to nearly *good* in the fourth—average, nearly *very fair*.

NORTH GOULBURN:—Regular inspection, 8th February.

Enrolled:—Boys, 31; girls, 21; total, 52. Present:—Boys, 17; girls, 17; total, 34.

No change in the material organisation. The internal organisation is satisfactory under the circumstances. The attendance is *fairly* numerous, regular, and punctual. The general discipline has gradually improved under the present teacher, and is now *very fair*. Singing and drawing are omitted from the course of instruction. In the other branches the proficiency averages from *moderate to tolerable*.

SUTTON FOREST:—Regular inspection, 2nd November.

Enrolled:—Boys, 44; girls, 32; total, 76. Present:—Boys, 32; girls, 29; total, 61.

Recent improvements have rendered the material condition *very fair*. The internal organisation and general discipline are *good*. The instruction is properly regulated and methodically imparted. It is *tolerably* suitable in kind, and produces results averaging from *tolerable to fair*. The school is in a *fair* state of efficiency.

TERRARA:—Regular inspection, 5th and 6th May.

Enrolled:—Boys, 25; girls, 44; total, 69. Present:—Boys, 25; girls, 33; total, 58.

Several important material improvements are required. The teaching power is barely sufficient; otherwise the organisation is *fair*. The general discipline falls below *tolerable*. A want of composure among the pupils is observable, and some of the elder ones are inclined to be petty and forward in their conduct. The classification is too high, and is not well adapted to the circumstances of the school. The results of the instruction are below *tolerable*.

II.—ROMAN CATHOLIC SCHOOLS.

GOULBURN (Boys):—Regular inspection, 13th and 14th July.

Enrolled:—63. Present:—59.

The general normal organisation may be considered *very fair*. The discipline exceeds *fair* on the whole. Singing is taught by an unrecognised teacher, and all other required subjects, up to a third class standard, by the regular teachers. The results of the instruction are *fair*. The first class is much the weakest. At the time of inspection, and for some time previous, the school was suffering from the disadvantage of a temporary diminution of the teaching staff.

GOULBURN (Girls and Infants):—Regular inspection, 21st to 25th June.

Enrolled:—Boys, 37; girls, 140; total, 177. Present:—Boys, 26; girls, 111; total, 137.

The material condition is *very good*. The recognised teaching power is insufficient, but an unusually large staff of teachers composed of persons unknown and irresponsible to the Council is employed. The discipline of the girls' branch is *very good*; of the infants', *fair*. The pupils are judiciously classified, and are carefully instructed in all required subjects up to a fourth class standard. In the girls' branch the results of examination exceed *very fair*; in the infants' they are *fair*. Denominational peculiarities are not confined to the hour set apart for *special religious instruction*, but are so incorporated with the general routine and business as to render the conduct of the school essentially Roman Catholic.

MITTAGONG:—Regular inspection, 21st October.

Enrolled:—Boys, 17; girls, 13; total, 30. Present:—Boys, 15; girls, 12; total, 27.

The material organisation is unchanged—it is very imperfect. The attendance has again fallen below the required minimum, and there is no reasonable prospect of keeping up an average of thirty. The school is still conducted as a Public School. On the whole the discipline is *fair*. The classification of the pupils and the regulation of the instruction are defective. The results of the instruction are about *fair*.

TARALGA:—Regular inspection, 26th August.

Enrolled:—Boys, 35; girls, 25; total, 60. Present:—Boys, 30; girls, 21; total, 51.

The material provisions are *tolerably* satisfactory. The internal organisation, the general discipline, and the character and results of the instruction all rank about *tolerable*. The school has increased in numbers.

ULLADULLA:—Regular inspection, 26th May.

Enrolled:—Boys, 29; girls, 25; total, 54. Present:—Boys, 23; girls, 21; total, 44.

Some improvements to the premises are required. The internal organisation is as good as circumstances will allow. The general discipline is *very good*. The instruction includes all required subjects except singing, is of satisfactory range, is properly regulated, and produces results approaching *good*.

III.—PRESBYTERIAN SCHOOL.

SHOALHAVEN:—Regular inspection, 6th and 7th May.

Enrolled:—Boys, 57; girls, 27; total, 84. Present:—Boys, 46; girls, 24; total, 70.

The material provisions meet existing requirements but moderately. The internal organisation and general discipline are *very good*. Singing excepted, all required subjects up to a fourth class standard are taught, and elementary Latin and algebra are added. The instruction is of full range, and is imparted carefully and skilfully. The attainments of the pupils average *very fair*. In consequence of the increased attendance a pupil teacher has been appointed.

D. S. HICKS,
Inspector, Goulburn District.

GRAFTON DISTRICT.

CERTIFIED DENOMINATIONAL SCHOOLS.

SUMMARIES OF Reports on the Certified Denominational Schools inspected in 1875.

CARR'S CREEK (Wesleyan):—General inspection, 11th October.

Numbers enrolled:—Boys, 18; girls, 23; total, 41. Numbers present:—Boys, 15; girls, 18; total, 33.

1. Painting is needed, and an additional tank is required. The school has a sufficient stock of all requisites. 2. Five-eighths attend regularly; all are punctual. The children are clean, quiet, but listless, tolerably orderly and attentive. The government is lax. 3. The course of instruction is complete. The pupils are suitably classified; the instruction is regulated with tolerable skill. The methods are of tolerable merit, and produce results ranging from moderate to tolerable.

FREDERICKTON

FREDERICKTON (C.E.) :—General inspection, 10th December.

Numbers enrolled :—Boys, 44 ; girls, 38 ; total, 82. Numbers present :—Boys, 24 ; girls, 23 ; total, 47.

1. The premises are old and in tolerable repair. The supply of apparatus and books is insufficient. 2. Two-thirds of the pupils are regular ; with the exception of four, all attend punctually. Of those present, a few are untidy and several unsteady. The government is wanting in vigour. 3. The course of instruction is that prescribed. The lesson documents are drawn up with fair skill and neatness. The methods are modern ; but the teaching, to be effective, must be prosecuted with increased energy and perseverance. The average proficiency is from tolerable to fair. The school shows improvement since last inspection in April.

GRAPTON (R.C.) :—General inspection, 19th October.

Numbers enrolled :—Boys, 58 ; girls, 58 ; total, 116. Numbers present :—Boys, 30 ; girls, 26 ; total, 56.

1. The building is old and shabby-looking from without. The appearance inside is better. The furniture is neither suitable nor sufficient, and the supply of apparatus is scarcely adequate. 2. Three-fifths of the pupils attend regularly and punctually. Sickness reduced the numbers on the day of inspection. Those present are for the most part neat. Whispering is prevalent throughout the school. The government is wanting in firmness and energy. 3. Singing excepted, all the prescribed subjects are taught. The classification is suitable ; the lesson guides are drawn up with fair skill. The methods are modern and applied with tolerable zeal. The average proficiency is from tolerable to fair.

KEMPSBY (C.E.) :—General inspection, 26th November.

Numbers enrolled :—Boys, 30 ; girls, 29 ; total, 59. Numbers present :—Boys, 25 ; girls, 24 ; total, 49.

1. There are no out-offices, otherwise the material condition is fair. Three additional desks are needed. 2. Two-thirds are regular ; a larger proportion attend punctually. The government is lax, and the tone of the school only tolerably satisfactory. 3. Singing is omitted from the course of instruction, which is otherwise complete. The classification is suitable, and the instruction is carefully regulated. Modern methods are practised, but the teaching is wanting in zeal and thoroughness. Under examination the pupils are subdued, but answer neither with sprightliness nor thoughtful accuracy. The average proficiency is nearly tolerable.

KEMPSBY (Pres.) :—General inspection, 24th and 25th November.

Numbers enrolled :—Boys, 40 ; girls, 40 ; total, 80. Numbers present :—Boys, 31 ; girls, 33 ; total, 64.

Another water-closet is needed, and additional desks are required. The premises are neatly kept, and the general aspect is pleasing. 2. Three-fourths attend regularly, and all punctually. The order in the case of the second and third classes is fair, and has improved since last inspection. 3. Except singing, the range of instruction is complete ; the classification is still too minute, but improvement is evident ; the instruction is properly and neatly regulated. The methods have improved, and the teaching is vigorously conducted. The average of proficiency is fair (nearly).

ULMARRA (Wes.) :—General inspection, 21st September.

Numbers enrolled :—Boys, 23 ; girls, 18 ; total, 41. Numbers present :—Boys, 16 ; girls, 13 ; total, 29.

1. There is no playground, and very little shelter from the sun. The schoolroom is in good repair and well found in appliances. The furniture is unsuitable. 2. Nine-fourteenths are regular and punctual. The majority are clean and, except among the younger pupils, tolerably attentive ; but their demeanour is not as respectful as it should be. The government is lax. 3. All the prescribed subjects, except singing, are taught. The classification is suitable, and the instruction tolerably well regulated. The methods are of moderate worth, and the teaching is not vigorously prosecuted. The average proficiency is from tolerable to fair.

MAITLAND DISTRICT.

SUMMARY of Reports upon Certified Denominational Schools inspected in 1875.

I.—CHURCH OF ENGLAND SCHOOLS.

BROKE :—Regular inspection, 14th July.

1. School held in a church. Material condition and organisation : water tank, lavatory, and weathershed not provided ; school records, fair ; old school records, thoughtlessly destroyed. 2. Five-ninths of attendance regular and reasonably punctual ; government tolerably intelligent but insufficiently firm and exacting ; pupils not sufficiently orderly and attentive to their work ; supervision of playground lax ; moral tone, tolerable and unimproved. 3. Prescribed subjects taught, except singing, of third-class range, and tolerably well regulated ; teaching earnest and tolerably intelligent, but not sufficiently impressive and profitable. 4. Average proficiency of pupils, moderate + ; drawing, tolerable + ; arithmetic and grammar, indifferent.

BUCHANAN :—Regular inspection, 13th April.

Numbers enrolled :—Boys, 20 ; girls, 20 ; total, 40. Numbers present :—Boys, 15 ; girls 17 ; total, 32.

1. School-house commodious, clean, and suitable ; supply of furniture and apparatus, very fair ; water tank, lavatory, weathershed, and bookpress needed. 2. Punctuality of attendance, fair ; rate of regularity, 30-53rds ; government, healthy and intelligent ; pupils clean, docile, and well behaved, — deficient in mental vigour ; moral tone, reasonably very fair. 3. Prescribed subjects taught, except singing ; classification and lesson documents of fair merit ; teaching animated, painstaking, and tolerably intelligent ; examinations, insufficiently frequent and effective. 4. Average proficiency of pupils, tolerable + ; writing, very fair ; geography, moderate.

DENMAN :—Regular inspection, 15th September.

Numbers enrolled :—Boys, 30 ; girls, 27 ; total, 57. Numbers present :—Boys, 14 ; girls, 16 ; total, 30.

1. Ventilation of schoolroom imperfect ; lavatory and weathershed needed ; material condition and organisation very fair ; aspect clean and respectable ; class roll entries of attendance very unsatisfactory. 2. Attendance irregular and tolerably punctual ; pupils clean, docile, and tolerably orderly, diligent, and painstaking ; moral tone, tolerable, — too much whispering and copying. 3. Course of instruction complete, of third-class range, and fairly well regulated ; teaching earnest, painstaking, and tolerably skilful ; examinations not sufficiently frequent and effective. 4. Average proficiency of pupils, moderate to tolerable ; arithmetic and grammar, indifferent ; writing, very fair.

JERRY'S PLAINS :—Regular inspection, 23rd July.

Numbers enrolled :—Boys, 33 ; girls, 24 ; total, 57. Numbers present :—Boys, 23 ; girls, 18 ; total, 46.

1. School held in a church ; material condition tolerable ; supply of furniture and other requisites very fair ; lavatory, weathershed, and repairs to windows needed ; general aspect not adequately clean and tidy. 2. Two-thirds of attendance regular and punctual ; pupils clean, docile, and very fairly well behaved ;

behaved; performance of school work not sufficiently vigorous, quiet, and orderly; moral tone fair. 3. Prescribed subjects taught except singing; classification three-fold and fair; instruction tolerably well regulated; teaching earnest, painstaking, and tolerably intelligent—requires to be more stimulating and impressive. 4. Average proficiency of pupils tolerable; writing very fair; arithmetic and geography moderate.

EAST MAITLAND :—Regular inspection, 11th and 12th March.

Numbers enrolled :—Boys, 78; girls, 56; total, 134. Numbers present :—Boys, 51; girls, 48; total, 99.

1. Lavatory, water-tank, weathershed, and additional out-offices needed; material condition and organisation otherwise satisfactory. 2. Attendance is well maintained—punctuality very fair—rate of regularity 7-10ths; government mild and fairly intelligent, but not satisfactorily vigilant and determined in the suppression of whispering, listlessness, and copying, especially in the upper classes; appearances very fairly neat and clean; school work performed with inadequate quietness, precision, and vigour. Moral tone tolerable. 3. Course of instruction complete; classification faulty; lesson documents very fair; silent lessons not adequately supervised; teaching zealous and tolerably intelligent—insufficiently impressive and examinatory. 4. Average proficiency of pupils barely tolerable; writing very fair; arithmetic and grammar moderate.

WEST MAITLAND (St. Mary's) :—Regular inspection, 18th March.

Numbers enrolled :—Boys, 65; girls, 41; total, 106. Numbers present :—Boys, 33; girls, 24; total, 57.

1. Lavatory and colouring of schoolroom walls needed, condition of out-offices very unsatisfactory; material condition and organisation otherwise satisfactory; school records well kept. 2. Attendance increased and very fairly punctual—rate of regularity 7-12ths; government mild and intelligent; very fair order maintained; pupils docile and fairly well-behaved—not adequately zealous and attentive to their work; moral tone fair in general. 3. Course of instruction complete; lesson documents very fair; classification rather low; teaching earnest, diligent, and tolerably effective. 4. Average proficiency of pupils moderate to tolerable; writing fair; arithmetic indifferent.

WEST MAITLAND (St. Paul's).

This school had deteriorated so much in numbers and material condition that its certificate was withdrawn in the early part of the year.

MORPETH :—Incidental inspection, 8th February.

Numbers enrolled :—10. Numbers present :—7.

1. Material condition and appointments satisfactory. 2. Attendance very low—only ten during the four weeks ending 6th February. The average attendance for the year and half-year ending 26th December, 1874, were 21 and 17.8 respectively; and in consequence of such reduced attendance the certificate of the school was withdrawn on the 31st March of this year.

MUSWELLBROOK :—Regular inspection, 25th and 26th August.

Numbers enrolled :—Boys, 64; girls, 47; total, 111. Numbers present :—Boys, 42; girls, 36; total, 78.

1. Schoolhouse commodious and tolerably suitable, but old and within the reach of floods; lavatory and weathershed needed; supply of school requisites adequate. 2. Attendance pretty well maintained and reasonably punctual—rate of regularity 2-3rds; government healthy and very fairly effective; pupils clean and cheerful; moral tone very fair. 3. Course of instruction complete, singing excepted; lesson documents very fair; classification rather low in point of age; methods of fair merit; teaching zealous and vigorous, but not equally impressive and profitable. 4. Average proficiency of pupils nearly fair; writing, drawing, and sewing very fair; dictation and arithmetic moderate.

SCONE :—Regular inspection, 8th and 13th September.

Numbers enrolled :—Boys, 59; girls, 56; total, 115. Numbers present :—Boys, 45; girls, 38; total, 83.

1. Weathershed needed; material organisation and supply of requisites satisfactory. General aspect clean and respectable. 2. Attendance fairly punctual—2-3rds regular; government mild and fairly intelligent; appearances neat and clean; pupils fairly orderly and well-behaved, not sufficiently thoughtful and painstaking; lower division too talkative and unsteady; moral tone about fair. 3. Course of instruction complete and of third class range; lesson documents and classification very fair; teaching zealous and spirited—not sufficiently impressive and profitable. 4. Average proficiency of pupils tolerable; writing and sewing very fair; grammar, geography, and arithmetic moderate.

SINGLETON :—Regular inspection, 18th and 21st June.

Numbers enrolled :—Boys, 61; girls, 26; total, 87. Numbers present :—Boys, 37; girls, 14; total, 51.

1. Lavatory, book-press, and recolouring of schoolroom walls needed; material condition and organisation otherwise good. 2. Attendance considerably decreased—twenty children enrolled not in actual attendance, seventeen of them attending other schools; punctuality very fair; rate of regularity 2-3rds; government very fairly intelligent—not adequately watchful and strict; class movements, playground supervision, and general conduct of pupils partially satisfactory; moral tone barely fair; 3. Course of instruction for three classes complete; lesson documents very fair; classification faulty; teaching earnest and tolerably effective; occupation of silent classes not adequately enforced; answering of pupils feeble. 4. Average proficiency of pupils moderate to tolerable; writing and drawing fair; arithmetic, dictation, grammar, and geography moderate.

WOODVILLE :—Regular inspection, 23rd March.

Numbers enrolled :—Boys, 26; girls, 21; total, 47. Numbers present :—Boys, 18; girls, 13; total, 31.

1. School property flooded and damaged in the early part of March; lavatory and weathershed needed; material organisation otherwise very fair. 2. Attendance of children partially secured; rate of regularity only 28-45ths; government mild and fairly intelligent—not uniformly strict and watchful; general character of pupils tolerable; moral tone tolerable. Results of incidental inspection partially satisfactory. 3. Course of instruction for three classes complete and fairly well regulated; revision of time-table needed; teaching earnest, diligent, and tolerably effective; examinations not sufficiently frequent and patient. 4. Average proficiency of pupils barely tolerable; writing, fair; arithmetic, indifferent.

II.—ROMAN CATHOLIC SCHOOLS.

BLANDFORD :—Regular inspection, 9th October.

Numbers enrolled :—Boys, 26; girls, 47; total, 73. Numbers present :—Boys, 22; girls, 36; total, 58.

1. Schoolroom large enough, better ventilation and additional furniture needed; clock useless; bell, lavatory, water-tank, and weathershed not provided; material organization fair; general aspect tolerably clean and respectable. 2. Attendance increased and fairly punctual; rate of regularity only 48-82nds; government healthy and tolerably effective; schoolroom not sufficiently neat and clean; pupils fairly well-behaved—not satisfactorily cheerful, active, and painstaking; moral tone tolerable.

3. Course of instruction complete for three classes; time-table of moderate merit; programmes of lessons not strictly followed; teaching tolerably skilful and energetic; lower divisions and examinations in need of greater attention. Progress of pupils not satisfactory. 4. Average proficiency of pupils moderate; sewing, very fair; dictation, arithmetic, grammar, object lessons, indifferent.

LOCHINVAR :—Regular inspection, 4th and 5th August.

Numbers enrolled :—Boys, 22; girls, 27; total, 49. Numbers present :—Boys, 19; girls, 22; total, 41.

1. Material organisation objectionable; school held in a church; supply of furniture adequate but clumsy; supply of apparatus adequate; lavatory and weathershed needed. 2. Six-tenths of the attendance regular and moderately punctual; school irregularly closed on twenty-three occasions; government healthy and fairly effective; pupils reasonably clean and well behaved; school work not vigorous enough; moral tone about fair. 3. Prescribed subjects taught, except singing and drawing; classification threefold and fair, lesson documents tolerable; teaching zealous, and tolerably intelligent and effective; examination inadequate. 4. Average proficiency of pupils between moderate and tolerable (4.5); object lessons fair; arithmetic indifferent.

EAST MAITLAND :—General inspection, 9th and 10th March.

Numbers enrolled :—Boys, 66; girls, 53; total, 119. Numbers present :—Boys, 42; girls, 37; total, 79.

1. School now conducted as a mixed school of one department, instead of two as before; school-room commodious and adequately appointed; ventilation imperfect; school records partially satisfactory. 2. Two-thirds of attendance regular—punctuality very fair; government mild and tolerably effective; playground supervision lax; pupils fairly clean, orderly, and well behaved—not adequately diligent and painstaking; results of incidental inspection partially satisfactory; moral tone tolerable. 3. Prescribed subjects for three classes taught, except drawing; lesson documents and classification tolerable; teaching earnest and tolerably painstaking—not adequately oral, stimulating, and examinatory. 4. Average proficiency and progress of pupils moderate; writing, fair; arithmetic, grammar, geography, indifferent.

WEST MAITLAND (Boys) :—General inspection, 6th, 7th, and 8th April.

Numbers enrolled :—Boys, 88. Numbers present :—Boys, 80.

1. School premises plain, commodious, and substantial; material organisation of superior merit; bell needed. 2. Attendance considerably decreased by removals to a private school; rate of regularity 2.3rds; discipline feeble, retrograde, and barely tolerable; moral tone partially satisfactory; results of incidental inspections partially satisfactory. 3. Prescribed subjects for three classes taught, except singing; instruction in military drill given; lesson documents very fair; classification faulty; teaching zealous and very fairly intelligent, but inadequately effective because of feebleness in the discipline; pupils not sufficiently diligent and painstaking; occupation of silent classes feebly enforced. 4. Average proficiency of pupils between moderate and tolerable.

WEST MAITLAND (Girls) :—Regular inspection, 26th and 31st May, and 1st June.

Numbers enrolled :—Girls, 106. Numbers present :—girls, 76.

1. Larger playground, lavatory, bell, and hat-room needed; schoolroom commodious, well lighted, and admirably neat and clean; organisation very fair. 2. Attendance steadily maintained, but not satisfactorily punctual; rate of regularity 84-117ths—too low for the teaching staff; government mild and intelligent, not uniformly strict and vigilant; dismissal of pupils insufficiently quiet and orderly; animation and self-reliance manifested by pupils inadequate; moral tone healthy and fair. 3. Course of instruction complete for four classes, and tolerably well regulated; time-table needs revising; teaching zealous and painstaking, but not sufficiently stimulating and impressive in the lower classes; progress of pupils partially satisfactory. 4. Average proficiency of pupils :—Second class, moderate; upper second, moderate to tolerable; third class, moderate to tolerable; fourth class, fair.

WEST MAITLAND (Infants) :—Regular inspection, 2nd June.

Numbers enrolled :—Boys, 56; girls, 58; total, 114. Numbers present :—Boys, 33; girls, 39; total, 72.

1. Material condition good; schoolroom clean, airy, and commodious; appointments of school-room adequate; playground too small; hat-room too dark and narrow; bell and lavatory needed. 2. Attendance well maintained and tolerably regular, but unpunctual; government mild and fairly intelligent, not adequately strict, vigilant, and effective in the suppression of idleness and disorder; class movements and playground supervision partially satisfactory; moral tone tolerable. 3. Course of instruction appropriate and fairly well regulated; teaching zealous, animated, and tolerably intelligent—too partial in its effects; answering of pupils too feeble. 4. Average proficiency of pupils barely tolerable.

MORPETH :—Regular inspection, 22nd March.

Numbers enrolled :—Boys, 47; girls, 44; total, 91. Numbers present :—Boys, 35; girls, 24; total, 59.

1. Lavatory, weathershed, and recolouring of the schoolroom walls needed; material organisation and supply of school requisites satisfactory. 2. Attendance reasonably punctual and tolerably regular; government vigorous and very fairly intelligent, not resolute enough in enforcing diligence and painstaking; appearances respectable; moral tone fair. 3. Course of instruction complete, of third class range, and very fairly well regulated; teaching earnest, diligent, and fairly intelligent—not equally impressive and profitable; additional attention to examinations and silent lessons needed. 4. Average proficiency of pupils tolerable; writing and drawing, very fair; arithmetic, grammar, and geography, moderate.

MUSWELLBROOK :—Regular inspection, 27th August.

Numbers enrolled :—Boys, 44; girls, 30; total, 74. Numbers present :—Boys, 39; girls, 23; total, 62.

1. Weathershed and lavatory needed; material condition, aspect, and organisation satisfactory. 2. Attendance well maintained and tolerably punctual; rate of regularity 42-73rds; 3-8ths of other denominations; government healthy and intelligent; pupils clean, orderly, and very fairly well-behaved; moral tone very fair and promising. 3. Course of instruction of third class range, singing omitted; occupation of pupils very fairly well regulated; teaching zealous and very fairly intelligent; more attention to lower divisions needed; employment of monitors irregular. 4. Average proficiency of pupils, fair; writing and drawing, very fair; arithmetic, moderate.

PHOENIX PARK :—Regular inspection, 10th May.

Numbers enrolled :—Boys, 14; girls, 14; total, 28. Numbers present :—Boys, 12; girls, 11; total, 23.

1. Site low and affected by floods; schoolroom small, ill-ventilated, and tolerably well furnished; supply of working materials tolerable; organisation moderate. 2. Attendance low and irregular, and school fees low and badly paid; government moderately effective; moral tone moderate. 3. Prescribed subjects for two classes taught, except singing; occupation of pupils feeble and moderately well regulated; teaching moderately skilful. 4. Average proficiency of pupils indifferent.

SINGLETON :—

SINGLETON:—Regular inspection, 22nd and 23rd June.

Numbers enrolled:—Boys, 68; girls, 74; total, 142. Numbers present:—Boys, 39; girls, 47; total, 86.

1. Material condition, aspect, and organisation good. 2. Attendance well maintained and very fairly punctual; rate of regularity 2-3rds; government healthy and very fairly intelligent; class movements quiet and orderly in the upper divisions, not adequately so in the lower; pupils clean, docile, and well-behaved, not sufficiently smart, diligent, and painstaking; moral tone fair. 3. Prescribed subjects taught, except singing; lesson documents appropriate; classification still too minute; teaching earnest and diligent, not adequately impressive, intelligent, and profitable in the lower classes. 4. Average proficiency of pupils barely tolerable.

J. S. JONES,
Inspector, Maitland District.

MUDGEE DISTRICT.

DETAILED Statement of the condition of Denominational Schools in the Mudgee District, examined during the year 1875.

I.—CHURCH OF ENGLAND SCHOOLS.

MUDGEE (Primary):—Regular inspection, 12th, 13th, and 14th July.

Numbers enrolled:—Boys, 48; girls, 33; total, 82. Numbers present:—Boys, 45; girls, 29; total, 74.

The material condition and organisation are good. The defects are want of playshed and lavatory. The discipline is of a very high order, and the tone of the school is exceedingly good. The usual subjects for four classes are taught. The methods are good, and they are applied with energy and success. The average proficiency is very fair.

MUDGEE (Infants)—Regular inspection, 14th June.

Numbers enrolled:—Boys, 83; girls, 55; total, 138. Numbers present:—Boys, 57; girls, 32; total, 89.

The school has been newly boarded, the walls whitewashed, a good gallery and suitable furniture provided during the year. A shed has also been erected. The organisation is now suitable for the efficient working of the school. About seven-twelfths of the pupils attend regularly. Little fault can be found with the punctuality, and cleanliness is satisfactory. The order maintained in the upper classes is fair, whilst in the lower class the discipline is ineffective. The instruction is pretty well regulated, but the records are loosely kept. The methods evince tolerable skill, but they should be applied with more earnestness. The average proficiency is between indifferent and moderate.

II.—ROMAN CATHOLIC SCHOOLS.

GULGONG (N.V.):—Regular inspection, 19th and 20th July.

Numbers enrolled:—Boys, 61; girls, 61; total, 122. Numbers present:—Boys, 53; girls, 56; total, 109.

The schoolroom is commodious and in very fair repair. A gallery and additional furniture have been provided during the year. The school is well found in working appliances. Some defects were noticed in the mode of keeping the school records. About three-fourths of the pupils attend regularly. Punctuality is not satisfactory. The pupils are fairly orderly and attentive. The methods are tolerable. The proficiency is between tolerable and fair in the first and second classes, and moderate in the third class.

HILL END (N.V.):—Regular inspection, 19th March.

Numbers enrolled:—Boys, 45; girls, 47; total, 92. Numbers present:—Boys, 21; girls, 25; total, 46.

Lavatories and playsheds have still to be provided. The furniture is not well designed nor is it well arranged. The attendance is irregular, and it has decreased a good deal during the year. Cleanliness should receive more attention. The pupils do not yield prompt and united attention. As a whole, the discipline is weak. Except singing, the prescribed subjects are taught. The methods are tolerable, but they ought to be applied with greater vigour. The proficiency is moderate.

MUDGEE (N.V.):—Regular inspection, 13th and 15th December.

Numbers enrolled:—Boys, 83; girls, 12; total, 95. Numbers present:—Boys, 57; girls, 9; total, 66.

Owing to the opening of a Convent School nearly all the girls were removed at the beginning of the year. This circumstance will account for the marked falling off in the attendance. The material condition of the school is good; it is well furnished, and properly supplied with working materials. The discipline is good. The pupils work vigorously, and display a very creditable amount of self-reliance. The methods are good, and applied with energy and zeal. The proficiency ranges from very fair to good.

WELLINGTON (N.V.):—Regular inspection, 21st April.

Numbers enrolled:—Boys, 24; girls, 30; total, 54. Numbers present:—Boys, 22; girls, 24; total, 46.

Since last inspection the school has been removed to the church. The accommodation is good, but the internal organisation is not so satisfactory. A new school is in course of erection. About seven-ninths of the pupils are regular and punctual. Cleanliness, order, and attention are fairly satisfactory. The instruction is well regulated, and the methods are intelligent and applied with fair industry. The school has improved in attendance and efficiency under the present teacher. The proficiency exceeds tolerable.

Mudgee, 19/1/76.

G. O'BYRNE,
Inspector, Mudgee District.

NEWCASTLE DISTRICT.

DETAILED Statement showing the condition of the Certified Denominational Schools inspected in 1875, as regards—

1. Their material condition.
2. Their moral character.
3. The subjects and methods of instruction.
4. The proficiency of the pupils.

DUNGOG (C.E.):—Regular inspection, 16th September.

Present at examination:—Boys, 21; girls, 14; total, 35.

1. The premises are in fair condition; and the general organisation of the school is reasonably effective. 2. The moral tone of the school is fair. 3. The subjects are suitable and tolerably well arranged; the methods are mechanical but passably careful. 4. The average proficiency slightly exceeds moderate.

KINCUMBER

KINCUMBER (R. C.) :—Regular inspection, 10th June.

Present at examination :—Boys, 9 ; girls, 10 ; total, 19.

1. The schoolroom is small, awkward and unsuitable in shape, but in moderate repair and very pleasantly situated. The furniture is clumsy and badly arranged, and the general organisation defective. 2. The children are fairly regular, punctual, clean, and orderly. 3. Object lessons, singing, and drawing are not taught, otherwise the subjects accord with the standard, but are not regulated by any guide. The methods are of small value. 4. The average proficiency and general character of the school are about moderate.

LAMETON (R. C.) :—General inspection, 23rd and 24th February.

Present at examination :—Boys, 59 ; girls, 49 ; total, 108.

1. The building is in good condition and fairly suitable, the stock of furniture is not quite sufficient, but the general organisation is reasonably effective. 2. The moral tone of the school is fair. 3. The subjects are appropriate and fairly arranged ; the methods intelligent, earnest, and reasonably effective. 4. The average proficiency exceeds tolerable ; and the general character of the school is fair.

MILLER'S FOREST (C.E.) :—General inspection, 10th December.

Present at examination :—Boys, 20 ; girls, 20 ; total, 40.

1. The premises are reasonably suitable and sufficient, and the school is tolerably well organised. 2. The moral tone of the school is fair. 3. Except singing the prescribed subjects are taught and arranged with passable care. Judged by results, the instruction appears to want energy and judgment, but, as witnessed, evinces considerable pains. 4. The average proficiency is slightly in excess of moderate.

MILLER'S FOREST (R. C.) :—General inspection, 30th April.

Present at examination :—Boys, 22 ; girls, 16 ; total, 38.

1. The school is in tolerable condition, passably sufficient and suitable, though awkward in shape, and provided with a reasonable supply of furniture and appliances. 2. The moral tone of the school is very fair. 3. The subjects are appropriate and fairly regulated ; the methods intelligent, skilful, and effective. 4. The average proficiency and general character of the school are very fair.

NEWCASTLE (C.E.—Christ Church) :—Regular inspection, 10th to 16th March.

Present at examination :—Boys, 91 ; girls, 62 ; total, 153.

1. The premises are fairly suitable, sufficient, in good condition, and well provided with furniture and other requisites. The general organisation is effective. 2. The moral tone of the school is very good. 3. The instruction is appropriate and well arranged, intelligent, reasonably impressive, and effectual. 4. The average proficiency varies from tolerable to fair, and the general character of the school is nearly very fair.

NEWCASTLE (C.E.—St. John's) :—Regular inspection, 30th August.

Present at examination :—Boys, 24 ; girls, 26 ; total, 50.

1. The buildings are in good condition, and the schoolroom is fairly provided with furniture, apparatus, and books. 2. The discipline is weak, and the moral tone only tolerable. 3. The classification is low ; the occupation is fairly suitable, and arranged with passable care and skill ; the instruction evinces increased carefulness, but wants energy and judgment. 4. The average proficiency is tolerable to fair, and the general character of the school may be considered above fair.

NEWCASTLE (R. C.—Boys) :—General inspection, 8th and 9th March.

Present at examination :—Boys, 94.

1. The schoolroom is suitable, in good condition, fairly furnished, and in general effectively organised. 2. The moral tone of the school is good. 3. The instruction is suitable and properly arranged, intelligent, fairly judicious, and effective. 4. The average proficiency is from fair to very fair, and the general character of the school is very fair.

NEWCASTLE (R. C.—Girls) :—Regular inspection, 18th to 20th August.

Present at examination :—Girls, 107.

1. The accommodation is reasonably sufficient and suitable ; the schoolroom well provided with furniture, apparatus, and books ; and the general organisation satisfactory. 2. The order and moral tone of the school are very good. 3. The classification is correct ; the occupation suitable and well arranged ; drawing and vocal music are added to the ordinary subjects. The instruction is very intelligent, judicious, and effective. 4. The average proficiency is nearly very fair, and the general character of the school good.

NEWCASTLE (R. C.—Infants) :—General inspection, 17th August.

Present at examination :—Boys, 62 ; girls, 77 ; total, 139.

1. The accommodation is insufficient for present wants, but the premises are well situated, and in good condition ; and the school is fairly organised. 2. The moral tone of the school is fair. 3. The occupation is appropriate as a whole ; the instruction is earnest, intelligent, and reasonably effective. 4. The average proficiency is nearly fair, and the general character of the school is very fair.

RAYMOND TERRACE (C.E.) :—Regular inspection, 21st May.

Present at examination :—Boys, 27 ; girls, 23 ; total, 50.

1. The condition of the premises and the organisation of the school are in all respects fairly satisfactory. 2. The moral tone of the school is very fair. 3. The classification and occupation are suitable ; the instruction wants energy and impressiveness, but it is properly arranged and intelligently imparted. 4. The average proficiency slightly exceeds tolerable.

RAYMOND TERRACE (R. C.) :—Regular inspection, 20th May.

Present at examination :—Boys, 20 ; girls, 22 ; total, 42.

1. The buildings are old and in bad repair, but cleanly kept and under the circumstances passably effective. The general organisation is tolerable. 2. The discipline shows improvement ; and the moral tone of the school is very fair. 3. The classification and occupation are fairly appropriate ; the lesson guides are prepared with care and passable skill ; the instruction is mechanical, but careful and tolerably effective. 4. The average proficiency is tolerable.

STROUD (C.E.) :—Regular inspection, 6th December.

Present at examination :—Boys, 18 ; girls, 16 ; total, 34.

1. In essential respects the premises are in good condition, and the schoolroom is very suitable and fairly organised. The discipline is weak ; and the children are, for the most part, noisy, talkative and unsteady. 3. The classification and occupation are fair, and the lesson guides passable ; but the instruction is wanting in energy and skilful direction. 4. The average proficiency is nearly moderate.

UPPER BENDOLBA (C.E.) :—Regular inspection, 23rd September.

Present at examination :—Boys, 15 ; girls, 21 ; total, 36.

1. Since last inspection the schoolroom and teacher's residence have been materially repaired, and are now in fair condition. The school furniture continues unsuitable ; but, as a whole, the organisation may be considered tolerable. 2. The order and moral tone are fair. 3. The occupation is suitable and arranged in the requisite guides ; the instruction is moderately intelligent and earnest, but wanting in judgment and skilful direction. 4. The average proficiency is a little over tolerable.

WALLSEND (C.E.) :—Regular inspection, 24th August.

Present at examination :—Boys, 26 ; girls, 21 ; total, 47.

1. The building wants cleansing and renovation, but is essentially in fair condition and provided with the requisite furniture and appliances. 2. The pupils are clean, attentive, well behaved and orderly. 3. The occupation is suitable and properly arranged ; the instruction is intelligent, vigorous, and well applied. 4. The average proficiency exceeds very fair.

SYDNEY DISTRICT.

DETAILED statement of the condition of Certified Denominational Schools in the Sydney District, inspected during the year 1875.

THE remarks under head 1 relate to the material condition of schools ; under 2, to their moral character ; 3, to the subjects and methods of instruction ; 4, to the proficiency of the pupils.

BALMAIN (C.E.) :—Regular inspection, 5th May.

Numbers present :—Boys, 95 ; girls, 68 ; total, 163.

1. Since last inspection a fine schoolroom 60 ft. by 30 ft. has been erected. It is provided with furniture of a tolerable quality. There is a good supply of apparatus and books. It is in contemplation to build weathersheds at an early date. 2. Rainy weather has temporarily reduced the attendance. Ordinarily, about three-fourths of the pupils attend regularly. Little exception can be taken to their cleanliness or punctuality. Very fair order is maintained, and the pupils' behaviour is respectful and fairly subdued. The government is slightly wanting in vigour, but is otherwise judicious. 3. The instruction includes all subjects for a school having a fourth class. It is regulated with very fair ability. The methods are modern, and applied with earnestness and diligence. 4. The proficiency of the several classes is as follows :—First, fair ; second, tolerable ; upper second, tolerable+ ; third, fair+ ; fourth, fair, nearly. The average attainments are fair, nearly.

BALMAIN (R.C.) :—Regular inspection, 23rd August.

Number present :—Boys, 48.

1. There is no proper playground ; the closets are on a piece of ground separated from the school premises, and there are no lavatories. The school is provided with suitable appliances, and the property is fairly kept. 2. The attendance is improving. The pupils are fairly regular and punctual, tolerably neat in appearance, and in very fair order. The government is mild and effective, and the moral tone healthy. 3. All the prescribed subjects are embraced within the course of instruction, which is regulated with fair judgment. The methods are appropriate and appear to be applied with earnestness and painstaking. 4. The proficiency of the several classes is as follows :—First, tolerable ; second, tolerable ; third, fair—the average being tolerable+.

BOTANY (Wesleyan) :—Regular inspection, 4th May.

Numbers present :—Boys, 12 ; girls, 13 ; total, 25.

1. The school has not a supply of water, and there is no weathershed for the children. In other respects the material condition of the school is satisfactory. 2. The pupils are very irregular in attendance, owing to their being in many cases employed in the market gardens around. They are tolerably orderly, but they are inattentive and very dull. 3. There are but two classes, a first and a second. Their instruction is unskilful and ineffective. 4. The proficiency of the pupils examined lies between indifferent and moderate.

CAMPERDOWN (R.C.) :—Regular inspection, 10th May.

Numbers present :—Boys, 27 ; girls, 27 ; total, 54.

1. At the time of the inspection the general condition of the premises was bad ; the organisation was also very defective. 2. Many of the pupils were unpunctual, and also dirty in appearance. Inattention and disorder were prevailing features. 3. A three-class course of instruction was followed, but the teaching lacked life and vigour. 4. The proficiency of the school averaged between indifferent and moderate.

CHIPPENDALE (Wesleyan) :—Regular inspection, 12th October.

Numbers present :—Boys, 105 ; girls, 93 ; total, 198.

1. The premises are good, the rooms being spacious, well-arranged, and amply found in appliances. The organisation is good. 2. The pupils are very fairly punctual and becomingly dressed, but many of them are persistently indolent and noisy, and in one or two instances rudely behaved. Without doubt the normal condition of the discipline is one of marked laxity. 3. The highest class is a third, and to that extent the course of instruction is of full range. There is no doubt that the business of the school is earnestly prosecuted, but the intentions are frustrated by the defective discipline. 4. The average proficiency in the primary classes does not exceed tolerable. The infants' class is satisfactorily taught. The school as a whole stands thus :—First or infants' class, fair to very fair ; second, moderate ; upper second, fair ; third, tolerable.

CHRIST CHURCH (Primary) :—Regular inspection, 5th August.

Numbers present :—Boys, 131 ; girls, 61 ; total, 192.

1. This school is in material condition good, and the organisation is correct. 2. Excepting the class under the head teacher's immediate control, and which is taught in a separate room, the school is a very disorderly one. 3. Geometry is not included in the course, otherwise the subjects prescribed for a school having a fourth class are taught. The instruction is regulated by the usual guides, but it is feeble and ineffective in many respects. 4. The proficiency of the classes is as follows :—First, moderate ; second, tolerable ; third, indifferent ; fourth, tolerable.

CHRIST CHURCH

CHRIST CHURCH (Infants) :—Regular inspection, 3rd and 4th August.
Numbers present :—Boys, 61 ; girls, 53 ; total, 114.

1. The schoolroom is suitable, in good repair, and well furnished ; all necessary out-buildings are provided. 2. The attendance is about stationary ; it is marked by tolerable regularity. The pupils are also fairly punctual, clean in person, and in fair order. 3. All the required branches are taught. The instruction is well regulated and based on appropriate methods. 4. In point of proficiency the school classes stand thus :—First, fair ; second, very fair ; third, fair to very fair.

COOK'S RIVER (C.E.) :—Regular inspection, 27th October.
Numbers present :—Boys, 54 ; girls, 50 ; total, 104.

1. The schoolroom is spacious, well furnished, and amply supplied with material. The organisation is sound. 2. The pupils are clean and tidy, and on the whole orderly. The moral tone of the school is healthy. 3. The teaching evidences method and energy in its treatment. 4. The highest class is a third. The average proficiency in the several classes reaches very fair nearly.

COOK'S RIVER (C.E.—Infants) :—Regular inspection, 27th October.
Numbers present :—Boys, 43 ; girls, 41 ; total, 84.

1. The inside of the schoolroom needs re-colouring, and the clock to be repaired. Otherwise the school is reasonably well found in working material, and the organisation may be described as very fair. 2. About three-fourths of the pupils attend regularly. They are also reasonably punctual and very well behaved. The government is judicious, and productive of good order and a cheerful healthy tone. 3. The usual infants' school course is followed. The methods are suitable and applied with diligence and earnestness. 4. The proficiency of the classes is as follows :—First, fair+ ; second, fair ; third, very fair.

COOK'S RIVER (R.C.) :—Regular inspection, 20th May.
Numbers present :—Boys, 14 ; girls, 19 ; total, 33.

1. This school is held in a wing of the Roman Catholic church building. The fences are in bad condition, and the lavatory is a make-shift shed reared against the closet. The organisation is of fair worth. 2. Of late the attendance has been seriously affected by the prevalent sickness among children. The discipline is lax. 3. Professedly the instruction deals with the subjects prescribed for a school of three classes, but the methods are of inferior type. 4. The proficiency of the pupils is very indifferent.

DARLINGHURST (C.E.) :—Regular inspection, 26th May.
Numbers present :—Boys, 55 ; girls, 27 ; total, 82.

1. The building (a stone structure) affords sufficient accommodation, and is in good repair. There is a proper supply of furniture, apparatus, and books, and the organisation is of correct character. 2. About three-fourths of the pupils are reasonably regular and punctual in attendance, and also neat and well-behaved. The government is firm and effective, and the tone of the school pleasing. 3. The subjects of instruction are in accordance with the prescribed standard. The methods are modern, and are applied with energy and tact, and the teaching is characterised by zeal and perseverance. 4. The proficiency is as follows :—First class, very fair ; second, very fair to good ; third, good, nearly.

DARLINGHURST (C.E.—Infants) :—Regular inspection, 26th May.
Members present :—Boys, 54 ; girls, 23, total, 77.

1. The schoolroom is a superior structure, in excellent repair, and well furnished. The supply of necessary apparatus is sufficient. The records are correctly kept. 2. Infantile sickness has of late interfered with the attendance, which is ordinarily of a fairly regular character. The pupils are punctual, neat in person, and well behaved. The government is judicious, and the order very fair. 3. The course of instruction accords with that prescribed for infants' schools. The lesson documents are properly devised, and the methods are suitable and painstakingly applied. 4. The proficiency of the several classes may be described thus :—First, very fair ; second, very fair ; third, very fair +.

DOUBLE BAY (C.E.) :—Regular inspection, 19th October.
Numbers present :—Boys, 40 ; girls, 44 ; total, 84.

1. As a whole the premises are good and well kept. The schoolroom is airy, well lighted, sufficiently furnished, and well found in material. An effective organisation obtains. 2. The pupils are reasonably regular and punctual in attendance. The discipline is good, and the tone of the school healthy. 3. The instruction, which is methodical in design, has been carefully and earnestly treated. 4. The classes stand thus in point of proficiency :—First, fair ; second, fair to very fair ; third, fair to very fair.

DOUBLE BAY (C.E.—Infants) :—Regular inspection, 19th October.
Numbers present :—Boys, 65 ; girls, 51 ; total, 116.

1. Fair accommodation is provided for the pupils in attendance, but the room occupied by the babies is badly ventilated. All necessary furniture is provided. 2. The attendance has largely increased. The pupils are fairly regular, reasonably punctual, neat in appearance, and well behaved. The government is judicious and effective. Good order is maintained. 3. All the subjects embraced within the usual infants' school course are taught. The instruction is well arranged, and imparted by appropriate methods. 4. The following is the proficiency of the several classes :—First, good ; second, good + ; third, good +. The present teacher is doing creditable work.

ERSKINE-STREET (Presbyterian) :—Regular inspection, 2nd September.
Numbers present :—Boys, 32 ; girls, 29 ; total, 61.

1. The schoolroom, which is over a store, is a good one, and is well furnished. The area of the whole property is of considerable extent, but, with the exception of a piece of land measuring about 30 feet by 18 feet and intended as a playground, the site is so occupied by business places that proper recreation cannot be afforded to the pupils of the school. The organisation is of passable worth. 2. As a rule most of the pupils attend with fair regularity. They are reasonably punctual, and with few exceptions are tidily dressed. The government is lax, and the order is as a result very unsatisfactory. 3. By far the greater number of the pupils in attendance were mere infants. The prescribed subjects of instruction are included in the course, but the range taken is low, and in cast and tone the school falls below the average of those in the Sydney district. 4. The results in the several classes are as follow :—First, moderate to tolerable ; second and third, tolerable.

GLEBE (C.E.) :—Regular inspection, 4th August.
Numbers present :—Boys, 52 ; girls, 36 ; total, 88.

1. The material condition of this school remains very unsatisfactory. It has neither a proper supply of water nor a weathershed for the children. The interior of the schoolroom requires cleansing, and the furniture is both insufficient and unsuitable. The pupils are faultily classified, otherwise the organisation is of passable worth. 2. The children are pleasing in appearance, very fairly punctual, and their attendance is reasonably regular. The government is lax and ineffective. 3. Subjects prescribed for a school having a third class are taught, but not in a very effective manner. 4. The proficiency in the several classes averages between moderate and tolerable.

HAYMARKET.

HAYMARKET (R.C.—Boys):—Regular inspection, 23th July.

Number present:—120.

1. On the whole, the material condition of the school is good, and it is satisfactorily organised. 2. In most respects the discipline is good. 3. Inclusive of the subjects prescribed for a school having a fourth class, the instruction is of full range. 4. Omitting the lower second class, which has been defectively taught, the proficiency ranges between very fair and good. The lower second class is about tolerable.

THE HEBREW SCHOOL:—Regular inspection, 15th February.

Numbers present:—Boys, 22; girls, 15; total, 37.

1. The room in which the school is taught is a good one and its appliances are sufficient. The school records have been disgracefully kept, and the whole organisation is very faulty. 2. The children were fairly well-behaved during the examinations, but seen under ordinary conditions the school is a disorderly one. 3. In the prescribed subjects of instruction the range taken is very low. 4. Accepting what has been attempted, the proficiency of the classes stands thus:—First, fair to very fair; second, fair; third, tolerable.

KENT-STREET NORTH (R.C.—Boys):—Regular inspection, 26th October.

Number present:—111.

1. The schoolroom is in good repair, well lighted and ventilated, and very fairly found in suitable educational appliances. Necessary out-buildings have been erected, and the whole property is properly kept. Except that the "punishment book" has been allowed to fall into disuse, the records are in a satisfactory state. 2. A respectable attendance is maintained in the face of an active local opposition. The pupils are fairly regular and punctual, clean in appearance, and well conducted. The government is genial but firm, and secures good order. 3. The prescribed course of instruction for a school of three classes is observed. Fair judgment is shown in the classification; the methods are appropriate, and applied with earnestness, energy, and very fair ability. 4. The following is the proficiency of the several classes:—First, good (nearly); second, good; third, very fair. The average lies between very fair and good.

KENT-STREET NORTH (R.C.—Girls):—Regular inspection, 26th October.

Number present:—101.

1. The building is suitable and in proper condition, but its site is not a good one. The proper out-offices are provided, and the school is well found in furniture and appliances. The organisation is effective. 2. The children attend with reasonable regularity. They are punctual, clean, orderly, and well-behaved. The moral tone of the school is healthy. The instruction is methodically and carefully prosecuted. 4. The highest class is a third. The proficiency of the school averages very fair.

KENT-STREET SOUTH (R.C.—Boys):—Regular inspection, 20th July.

Number present:—76.

1. With the exception that the school has neither playground nor weathershed, the premises are suitable and good. The schoolroom is properly furnished and supplied with material. The school is effectively organised. 2. Very good order is maintained, and the moral tone of the school is healthy. 3. The instruction is vigorous and searching in its application, and embraces all prescribed subjects. 4. The proficiency is as follows:—First class, very fair +; second, very fair to good; third, very fair; fourth, very fair to good.

KENT-STREET SOUTH (R.C.—Girls and Infants):—Regular inspection, 13th July.

Numbers present:—Boys, 31; girls, 83; total, 114.

1. The school is conducted in a church. The building is a good and commodious one, but occupies a very small area. There is no playground, only a mere side entrance. The furniture is of a makeshift character—constructed to meet the wants of both church and school. The apparatus and books are sufficient in quantity and in very fair order. 2. The attendance is improving, and may be considered fair in the circumstances. The pupils are tolerably regular, fairly punctual, but only moderately clean. Some improvement may be expected in the last matter when the lavatory has been provided with towels. Very fair order is maintained, but the government would appear to be deficient in suavity. 3. All the prescribed branches are taught, up to the requirements of a third class; the instruction is properly arranged, and imparted by modern methods. 4. The following is the proficiency of the several classes:—Lower first, fair to very fair; first, fair; second, very fair; third, fair.

NEWTOWN (C.E.):—Regular inspection, 10th and 11th November.

Numbers present:—Boys, 46; girls, 34; total, 80.

1. A proper lavatory and a weathershed have yet to be provided, otherwise the school premises are good and properly appointed. The several features of the organisation are correct. 2. Under ordinary circumstances a good attendance is secured. The pupils are tidy, cheerful, and on the whole orderly, but the discipline fails to overcome indolence. 3. The highest class is a third, and the course of instruction is in accordance. The teaching has been honestly and patiently prosecuted, but the pupils in many instances are extremely indolent. 4. The proficiency averages slightly above fair in each of the classes.

NEWTOWN (C.E.—Infants):—Regular inspection, 11th November.

Numbers present:—Boys, 19; girls, 35; total, 54.

1. The premises are very fairly conditioned. The schoolroom is suitably furnished and passably organised. 2. During the past three weeks the attendance has, through infantile sickness, been some twenty lower than usual. The children are of pleasing appearance, but they require to be subjected to a more enlivening mode of treatment. 3. The pupils are arranged in two classes, and so far the infants' school course is observed. 4. The proficiency averages slightly above moderate.

NEWTOWN (R.C.)—General inspection, 2nd September.

Numbers present:—Boys, 51; girls, 44; total, 95.

1. The school is conducted in a room below the R.C. church. Good accommodation is afforded, and the school is very fairly appointed. 2. Except as regards punctuality the discipline is satisfactory. The pupils attend with tolerable regularity, are clean in appearance, quiet and respectful in demeanour and well conducted. 3. The prescribed school course is followed. The pupils are intelligently classified, the instruction is fairly arranged, and imparted with earnestness and painstaking. 4. The following is the proficiency of the classes:—First, fair; second, tolerable +; third, fair, nearly. The average ranges from tolerable to fair. The present teacher has but recently been appointed.

NEWTOWN (Wesleyan):—Regular inspection, 3rd November.

Numbers present:—Boys, 72; girls, 71; total, 143.

1. The schoolroom is commodious, very fairly ventilated, and in good repair. Its internal appointments are sufficient and suitable and properly arranged. Excepting a weathershed, all necessary

necessary outbuildings have been provided. 2. About seven-ninths of the pupils attend regularly; they are also reasonably punctual, neat in appearance, and very fairly behaved. The government is mild, and although somewhat deficient in vigour, is productive of very fair order. 3. The instruction is of full range up to the requirements of a third class, is regulated by the usual documents, and imparted by appropriate methods. The teaching is marked by earnestness, painstaking, and very fair ability. 4. The following is the proficiency of the several classes:—First, fair; second, fair to very fair; upper second, very fair; third, very fair, nearly. The average lies between fair and very fair.

PADDINGTON (C.E.):—Regular inspection, 30th August.

Numbers present:—Boys, 33; girls, 16; total, 49.

1. Substantially the school building is a good one, but the fences and windows are broken, and the latter especially are in a very discreditable state. The school has not a supply of water. 2. The attendance fluctuates greatly; ordinarily it averages four-sevenths of the enrolment. The children present were pleasing in appearance and were fairly orderly. 3. The subjects prescribed for a school having third class are taught with energy and suitable method, but progress is greatly hindered by the irregularity of the attendance. 4. The proficiency reaches tolerable +.

PADDINGTON (R.C.):—Regular inspection, 12th February.

Numbers present:—Boys, 29; girls, 35; total, 64.

1. The schoolroom is commodious, well-lighted, and very fairly furnished. The playground is properly fenced, and the out-offices are now of satisfactory character. The organisation is of passable worth. 2. Under the recently appointed teacher the discipline has become more effective. 3. Up to the requirements of a third class the lesson guides bear upon the prescribed subjects, but the range taken in each branch of instruction is low. The ability to think has been feebly developed in the pupils, and the results of the instruction correspond. 4. The average proficiency does not exceed moderate.

PARRAMATTA-STREET (C.E.):—Regular inspection, 9th and 10th August.

Numbers present:—Boys, 119; girls, 86; total, 205.

1. The school premises are in good repair, and well adapted to teaching purposes. There is a sufficiency of working material; all necessary out-buildings are provided; the organisation as a whole may be pronounced good. 2. The school is numerously attended, and with very fair regularity; the pupils are also punctual, clean, and in good order; judgment and tact characterise the government; the moral atmosphere of the school is healthy. 3. All the prescribed subjects are taught; the instruction is arranged with very fair ability, and imparted with earnestness, vigour, and painstaking. 4. The proficiency of the several classes may be described thus:—First, fair; second, very fair to good; third, fair; fourth, very fair. The average approaches very fair.

PARRAMATTA-STREET (C.E. Infants):—Regular inspection, 9th August.

Numbers present:—Boys, 90; girls, 68; total, 158.

1. The condition of the premises is satisfactory, and the organisation of the school correct. 2. A good attendance is secured; the children are very fairly punctual; they are tidily dressed, and are well behaved. 3. The instruction is of the full infants' school range, and the methods employed are reasonably educative. 4. The average proficiency slightly exceeds tolerable.

PARRAMATTA-STREET (R.C.—Boys):—Regular inspection, 22nd and 23rd April.

Number present:—92.

1. The fences need repair, and the out-office accommodation is insufficient; the schoolroom is of good size, but it is not well lighted; so far as the circumstances permit, the school is fairly organised. 2. The government is effective, and the tone of the school pleasing. 3. In addition to the ordinary subjects elementary Latin and algebra have been introduced in the fourth class. 4. The average proficiency is fair nearly.

PARRAMATTA-STREET (R.C.—Girls):—Regular inspection, 21st and 22nd April.

Number present:—55.

1. The schoolroom is in a dilapidated state; nearly all the windows are broken, and the interior presents a dingy, uninviting appearance. There is a sufficiency of working material, and the records are correctly kept. 2. The falling off in the attendance is attributable to the prevalence of measles, and is considered to be but temporary. Many of the pupils attend irregularly, and their punctuality is not more satisfactory. The other features of the discipline have improved. Very fair order is maintained, and the government has apparently improved in firmness and vigour. 3. All the prescribed branches are taught up to the requirements of a third class. The instruction is very fairly regulated, and imparted by tolerably suitable methods. 4. The proficiency of the several classes is shown thus:—First, fair to very fair; second, very fair; third, barely tolerable. The average is about fair.

PARRAMATTA-STREET (R.C.—Infants):—Regular inspection, 21st April.

Numbers present:—Boys, 46; girls, 57; total, 103.

1. The school is conducted in the girls' schoolroom. There are few proper appliances for infants' school teaching, and the organisation is very defective. It is proper to state, however, that the teacher is in no way responsible for this. 2. Of late the attendance has been much reduced by the prevalence of measles. The numbers are gradually improving. The pupils are but tolerably regular and punctual; they are, however, fairly clean and in very fair order. The government is mild and judicious. 3. The usual infants' school course is followed as closely as possible. The instruction is well arranged, and imparted by suitable methods. 4. The proficiency of each of the classes is very fair; the school is in a fair state of efficiency, but the range of instruction is low.

PYRMONT (C.E.):—Regular inspection, 12th May.

Numbers present:—Boys, 104; girls, 60; total, 164.

1. The building is a good one, but in other respects the material condition of the school is only moderate. The general organisation is of fair worth. 2. The pupils are clean, fairly orderly and attentive, and on the whole regular and punctual in attendance. The government is mild, but wanting in firmness and decision. 3. The prescribed subjects are taught with care and method. The highest class is a third. 4. The average class of proficiency is fair.

PYRMONT (R.C.):—General inspection, 8th February.

Numbers present:—Boys, 48; girls, 36; total, 84.

1. With the exception of the state of the lavatory-shed the school premises are in a satisfactory condition. The work of the school has been unfairly apportioned—the assistant having charge of some sixty-five pupils, and the head teacher but nineteen. 2. The children are under healthy and effective discipline. 3. All the subjects prescribed for a school of three classes are included in the course. 4. The proficiency as a whole reaches fair nearly.*

* Note.—This school was re-examined in the month of November. The defects in the organisation were remedied, and the proficiency of the classes reached very fair.

RANDWICK (C.E.) :—Regular inspection, 2nd November.

Numbers present :—Boys, 33 ; girls, 30 ; total, 63.

1. The school has neither lavatory nor playshed, otherwise the premises are good and the appointments suitable. The organisation is of fair worth. 2. Ordinarily the attendance reaches three-fourths of the enrolment. The pupils are clean, reasonably orderly, and well-behaved. 3. The instruction is that prescribed for a school having a third class. The teaching is careful but not remarkably skilful. 4. The proficiency ranges between tolerable and fair.

REDFERN (C.E.) :—Regular inspection, 3rd and 4th August.

Numbers present :—Boys, 90 ; girls, 45 ; total, 135.

1. The material condition of this school is good, and it is fairly organised. There is no lack of working material, and all necessary out-buildings are provided. 2. The discipline is very fair. The pupils attend with fair punctuality and regularity, are reasonably subdued in demeanour and well behaved. 3. All the prescribed subjects are taught up to the requirements of a third class ; the instruction is fairly regulated and imparted by modern methods. 4. The following is the proficiency of the several classes :—First, fair ; second, fair ; upper second, fair ; third, tolerable. The average ranges from tolerable to fair.

REDFERN (C.E.—Infants) :—Regular inspection, 3rd August.

Numbers present :—Boys, 90 ; girls, 58 ; total, 148.

1. The schoolroom is commodious, in good repair, and very fairly found in necessary appliances. The material state of the school is therefore satisfactory. 2. A fair attendance is maintained. The pupils attend with tolerable regularity, are fairly punctual, reasonably clean, and very fairly behaved. The government is mild, fairly judicious, and effects very fair order. 3. The course of instruction is that prescribed, is fairly devised, and imparted by tolerably suitable methods. 4. The proficiency of the classes may be described thus :—First, fair ; second, fair nearly ; third, fair nearly.

ST. ANDREW'S (C.E.) :—Regular inspection, 11th October.

Numbers present :—Boys, 42 ; girls, 22 ; total, 64.

1. A weathershed has been provided since last inspection, and the playground is about to be drained. When the latter work shall have been done, the material state of the school will be very good. 2. Only about eight-thirteenths of the pupils attend regularly. They are fairly punctual, and clean in appearance. Their conduct is far from satisfactory. The elder pupils are sullen, perverse, and disobedient. The government is feeble and ineffective. 3. In some instances the classification is injudicious. The prescribed course of instruction is followed. The methods are of modern cast, but fail through bad discipline to produce adequate results. 4. The proficiency of the several classes is as follows :—First, moderate ; second, moderate to tolerable ; third, tolerable to fair—the average being barely tolerable.

ST. ANDREW'S (C.E.—Infants) :—Regular inspection, 11th October.

Numbers present :—Boys, 51 ; girls, 45 ; total, 96.

1. The material condition of the school is satisfactory ; it is well organised and the records are properly kept. 2. The attendance is of fitful character, this is attributed to neglect and indifference on the part of the pupils. On the whole the children are clean, tidy, and punctual. The discipline is very fairly effective. 3. A full ranged course of instruction is followed, and the methods are well suited to the capacities of the children. 4. The average proficiency reaches very fair.

ST. JAMES'S (C.E.—Boys) :—Regular inspection, 25th August.

Number present :—109.

1. The schoolroom is a good one, and the whole material aspect of the department is highly satisfactory. 2. The pupils attend with reasonable regularity ; they are punctual, orderly, and industrious. 3. The instruction is educative in its methods. It includes all the subjects prescribed for a school having a fourth class. 4. The average proficiency reaches very fair, nearly. The results in the fourth class are good.

ST. JAMES'S (C.E.—Girls) :—Regular inspection, 24th August.

Number present :—81.

1. The school is pleasingly situated, airy, well furnished, and in good repair. All necessary out-buildings are provided. 2. Fully three-fourths of the pupils attend regularly. Their punctuality is also satisfactory. They are neat in appearance, modest and subdued in demeanour, and well behaved. The government is mild but firm, and secures an excellent moral tone. 3. The instruction includes all essential branches, is regulated with good judgment, and imparted by skilful methods. 4. The following is the proficiency of the several classes :—First, very fair ; second, very fair to good ; third good +. The school is in a good state of efficiency, and reflects credit on the teacher.

ST. JAMES'S (C.E.—Infants) :—Regular inspection, 24th August.

Numbers present :—Boys, 87 ; girls, 97 ; total, 184.

1. The school premises are good. The schoolroom is spacious and well furnished. 2. A satisfactory attendance is secured, but the children are wanting in habits of punctuality, and they are far from being attentive when under instruction. 3. The teaching bears upon all the subjects prescribed for infants' schools. 4. The average proficiency reaches fair.

ST. LEONARDS (C.E.) :—Regular inspection, 26th August.

Numbers present :—Boys, 53 ; girls, 13 ; total, 71.

1. The schoolhouse is fairly suitable, in good repair, and provided with a sufficiency of working material. The school is satisfactorily organised. 2. About five-sevenths of the pupils attend regularly. They are also reasonably punctual and clean. The government is mild, but firm and effective. Good order is maintained, and the moral aspect of the school is pleasing. 3. Fair judgment is shown in the classification of the pupils ; the instruction is judiciously arranged, and imparted with earnestness and diligence. The proficiency of the several classes is as follows :—First, very fair ; second, very fair+ ; third, very fair.

ST. LEONARDS (R.C.) :—Regular inspection, 16th February.

Numbers present :—Boys, 47 ; girls, 22 ; total, 69.

1. Viewed materially the school is in a fairly satisfactory state. It is reasonably well appointed, and all necessary out-buildings are provided. The organisation in general may be described as fair. 2. The attendance is much smaller than usual, owing to the prevalence of measles. Ordinarily the pupils attend with fair regularity ; they are punctual, clean, and quietly behaved. The government is mild, but tolerably firm, and productive of very fair order. 3. There is a tendency to subdivide the classes

classes unnecessarily. The instruction accords with the prescribed course, is arranged with fair ability, and imparted with earnestness and a fair degree of skill. 4. The following is the proficiency of the several classes :—First, fair ; second, fair ; third, tolerable. After making due allowance for all drawbacks, fair work has been done. The school was examined again in November, and found in a state of efficiency approaching good.

ST. MARY'S (R.C.—Boys) :—General inspection, 26th and 27th July.

Number present, 103.

1. The schoolroom is spacious and, in a general sense, is in good repair. The furniture is old and very unsuitable. In other respects the school is well found in appliances. The external requirements are a lavatory and a playshed. The school is satisfactorily organised. 2. The discipline promises to be effective, but at present its influences are not abiding, and it is difficult to secure the attention of the children. The present teacher has had charge of the school but a very short time. At present the discipline has an unfavourable aspect. 3. The instruction bears upon all matters laid down for a school of three classes. 4. The proficiency of the pupils is about fair.

ST. MARY'S (R.C.—Girls) :—Regular inspection, 26th and 27th July.

Number present, 122.

1. The school buildings are in good repair and well adapted to teaching purposes. Except that the desks are old and cumbersome, the furniture is suitable. There is a sufficiency of other working material. 2. The attendance is marked by much irregularity. The pupils are also unpunctual ; they are reasonably clean in person ; in conduct and demeanour they are not sufficiently subdued. The government would need to be more firm and vigilant. The order approaches fair. 3. All the prescribed subjects are taught ; the instruction is regulated by passable judgment, and imparted by tolerably suitable methods. 4. The following is the proficiency of the several classes :—First, tolerable ; second, fair to very fair ; third, moderate to tolerable ; fourth, fair. The average reaches tolerable +.

ST. MARY'S (R.C.—Infants) :—Regular inspection, 26th May.

Numbers present :—Boys, 67 ; girls, 64 ; total, 131.

1. The schoolroom is fairly suitable, but the gallery is too steep, and the desks are of cumbersome construction. The other furniture is of a less exceptionable kind. There is a sufficiency of apparatus. 2. A fair attendance is maintained, but it is marked by much irregularity. With few exceptions the pupils are tolerably clean in person ; in demeanour they are boisterous. Tolerable order is only secured at the expenditure of much labour. The government is deficient in tact and firmness. 3. The course of instruction includes the prescribed branches, geography excepted ; it is regulated by moderate judgment and imparted by passable methods. 4. The following are the results of examination :—First class, tolerable ; second, fair ; third, fair. The average lies between tolerable and fair.

ST. PHILIP'S (C.E.—Boys) :—Regular inspection, 17th and 18th August.

Number present, 134.

1. The school premises are good, and the several features of the organisation sound. 2. The attendance is uniformly good, and on the whole the children are punctual. The pupils are effectively controlled ; they are orderly, well-behaved, and industrious. The moral tone of the school is healthy. 3. The highest class is a fourth. In addition to the prescribed branches, elementary Latin is included in the course of instruction. The teaching is based on modern methods, and these are applied with intelligent care. 4. The proficiency in the several classes ranges between very fair and good.

ST. PHILIP'S (C.E.—Girls) :—General inspection, 17th and 18th August.

Number present, 141.

1. Since last inspection the school has been enlarged to double its width ; it is now very commodious and extremely well ventilated ; its immediate proximity to the road is a serious drawback. All necessary out-buildings have been provided. The whole premises are in good order and well kept. There is a sufficiency of working material, and the school is very fairly organised. 2. The attendance has largely increased. The pupils are fairly regular and punctual, clean in person, modest and respectful in demeanour, and very fairly behaved. The government is mild, but reasonably firm, and effects a healthy moral tone. 3. Fair judgment is shown in the classification. The instruction is of full range, fairly systematised, and imparted by appropriate methods. 4. The following is the proficiency of the several classes :—First, fair, nearly ; second, very fair ; third, very fair ; fourth, fair. The average is fair +.

ST. PHILIP'S (C.E.—Infants) : Regular inspection, 18th and 19th August.

Numbers present :—Boys, 201 ; girls, 117 ; total, 318.

1. The schoolroom is an excellent one, and the organisation is very satisfactory. 2. The attendance is large and increasing ; reasonable punctuality is secured, and very fair order is maintained. 3. The course includes all the subjects of instruction prescribed for infants' schools. The teaching is based on methods suited to infantile minds, and is prosecuted with earnestness and painstaking. 4. The average proficiency of the classes reaches fair +.

SURRY HILLS (C.E.) : Regular inspection, 1st September.

Numbers present :—Boys, 59 ; girls, 39 ; total, 98.

1. The school premises are well-conditioned, but somewhat small. The furniture and working appliances are both suitable and ample. A proper organisation obtains. 2. The attendance is about three-fourths of those enrolled. The children are very fairly punctual, becomingly dressed, and very fairly orderly and industrious. 3. The highest class is a third, and so far the course of instruction is of full range. The teaching is appropriately regulated and painstakingly prosecuted. 4. The proficiency of the pupils stands between fair and very fair.

SURRY HILLS (C.E.—Infants) :—General inspection, 1st September.

Numbers present :—Boys, 47 ; girls, 63 ; total, 110.

1. The schoolroom is in very fair repair, and affords good accommodation ; it is sufficiently found in educational appliances. The organisation is of fair worth. 2. The school is tolerably well attended. The pupils are fairly punctual and regular, neat in appearance, and well-conducted. The government is mild and very fairly effective. 3. All essential branches are taught. The instruction is fairly arranged, and imparted with earnestness and zeal. 4. The following is the proficiency of the several classes :—First, very fair ; second, fair to very fair ; third, fair to very fair.

SURRY HILLS (R.C.—Boys) :—Regular inspection, 14th October.

Number present :—149.

1. As stated in previous reports, the position of the school is very objectionable. The class-room into which some eighty infants are packed is badly lighted and ventilated. The closet accommodation

accommodation is altogether inadequate to the wants of so large a school. So far as circumstances permit, the organisation is correct. 2. A good average attendance is secured, but the punctuality is very unsatisfactory. The order is good, and in most respects, the tone of the school is healthy. 3. The highest class is a third, and so far the prescribed course of instruction is observed. 4. The average proficiency of the pupils reaches very fair.

SURRY HILLS (R.C.—Girls) :—Regular inspection, 14th October.

Number present :—91.

1. The school is still conducted in the room under the church. Owing to the presence of massive stone pillars, proper organisation is impossible. The light is bad, and the ventilation but passable. There is a fair supply of working material. 2. The pupils are tolerably regular and punctual, with few exceptions clean, and they are fairly conducted. The government is mild but fairly judicious, and promotive of a healthy moral tone. 3. All the prescribed subjects are taught up to the requirements of a third class. The instruction is properly regulated; the methods are appropriate and diligently applied. 4. The following is the proficiency of the several classes :—First, fair; second, tolerable +; third fair. The average approaches fair.

SURRY HILLS (Wesleyan) :—Regular inspection, 27th May.

Numbers present :—Boys, 67; girls, 34; total, 101.

1. The schoolhouse is an excellent building, commodious, airy, and well furnished. There is an ample supply of apparatus and books. The whole property is well kept, and the school well organised. 2. Rainy weather considerably reduced the attendance. With few exceptions, the pupils are reasonably regular and punctual. They evince a modest, respectful demeanour, and are well behaved. The tone of the school is cheerful and healthy. 3. Fair judgment is shown in the classification. The instruction is of full range and properly regulated. The methods are appropriate, and are applied with earnestness, diligence, and skill. 4. The following is the proficiency of the several classes :—First, very fair; second, very fair +; lower third, fair to very fair; upper third, very fair to good. Under examination the pupils exhibit a thoughtful attention, very fair intelligence, and a commendable desire to acquit themselves well.

SURRY HILLS (Wesleyan—Infants) :—Regular inspection, 27th May.

Numbers present :—Boys, 37; girls, 30; total, 67.

1. The building is in good repair. It affords sufficient accommodation; the supply of working material is ample; the whole property is well kept; and the organisation is sound. 2. Five-sevenths of the pupils are regular and punctual. Those present are becoming in appearance and are fairly orderly. 3. The regular infants' school course of instruction is observed. The methods are reasonably skilful, and the teaching has been industriously prosecuted. 4. The proficiency ranges between fair and very fair.

TRINITY (C.E.) :—Regular inspection, 26th April.

Numbers present :—Boys, 59; girls, 50; total, 109.

1. The schoolroom is a suitable one; it is in very fair repair, and appropriately furnished. The general organisation is of correct character. 2. About two-thirds of the pupils enrolled attend regularly and punctually. The discipline is of fair worth. 3. Up to the requirements of a third class, the course of instruction is of full range. The methods employed are modern, and the teaching is prosecuted with energy. 4. The proficiency averages very fair, nearly.

TRINITY (C.E.—Infants) :—Regular inspection, 26th April.

Numbers present :—Boys, 69; girls, 65; total, 134.

1. The schoolroom is in good repair, commodious, and suitably furnished; it is well provided with proper working materials. The records are correctly kept. 2. A very fair attendance is maintained, but the pupils are rather irregular and but moderately punctual; they are, however, neat in appearance, tolerably subdued, and fairly behaved. The government is mild and fairly effective. 3. The usual infants' school course is followed. Fair judgment is evinced in the classification of the pupils and in the arrangement of the lesson documents. The methods are appropriate and painstakingly applied. 4. The attainments of the several classes may be stated thus :—First, moderate; second, fair; third, fair.

VICTORIA-STREET (R.C.—Girls) :—Regular inspection, 29th July.

Number present, 69.

1. The premises, furniture, and school appliances are thoroughly good. The organisation is effective. 2. The pupils are orderly and well behaved. The moral tone of the school is excellent. 3. All the prescribed branches of instruction are treated in an intelligent and careful manner. 4. The average proficiency approaches very fair. In the upper class it is good.

VICTORIA-STREET (R.C.—Infants) :—General inspection.

Numbers present :—Boys, 77; girls, 54; total, 131.

1. New and suitable desks are being provided, and it is not improbable that the construction of the existing gallery will before long be also improved. The school is very fairly found in all needful appliances, and its organisation is as good as could be expected in the circumstances. 2. A large increase has been made to the attendance. The pupils are very fairly regular, fairly punctual, very clean, and in very fair order. The government is mild, but sufficiently firm and effective. 3. The usual infants' school course is followed. The methods are appropriate, and applied with diligence, earnestness, and skill. 4. The following is the proficiency of the several classes :—First, fair to very fair; second, very fair to good; third, good. The average lies between very fair and good.

WATERLOO (C.E.) :—Regular inspection, 19th May.

Numbers present :—Boys, 56; girls, 45; total, 101.

1. Excepting the condition of the fences and the want of weathersheds, the material state of the property is satisfactory. 2. On the whole, the pupils are regular and punctual in attendance, clean, orderly, and attentive. The discipline is fairly effective, and the moral tone of the school healthy. 3. The highest class is a third, and the course of instruction is in accordance with rule. The teaching evidences care and skill. 4. The average proficiency reaches very fair, nearly.

WATERLOO (C.E.—Infants) :—Regular inspection, 18th May.

Numbers present :—Boys, 53; girls, 46; total, 99.

1. In most respects the material state of the school is good. The organization is correct in its details. 2. The pupils are regular and punctual, and their conduct evidences that they are under healthy control. 3. The usual infants' school course of instruction is observed. The methods are fairly successful. 4. The average proficiency of the classes reaches fair.

WATERLOO

WATERLOO (R.C.) :—Regular inspection, 23rd February.

Numbers present :—Boys, 65 ; girls, 39 ; total, 104.

1. This school is still conducted in a church ; the organisation is therefore to a large extent of a makeshift character. There is a fair supply of tolerably suitable furniture, and a sufficiency of apparatus. All necessary outbuildings are provided, but a more rigid supervision needs to be exercised over them. 2. For some time past the attendance has been unfavourably affected by sickness. Ordinarily about five-sevenths of the pupils are regular. The punctuality is susceptible of improvement. The remaining features of the discipline are fairly satisfactory. 3. The instruction embraces the prescribed subjects, is regulated with fair judgment, and imparted with tolerable earnestness and ability. 4. The attainments of the several classes may be described thus :—First, fair ; second, fair to very fair ; upper second, moderate to tolerable ; third, tolerable.

WAVERLEY (C.E.) :—Regular inspection, 18th February.

Numbers present :—Boys, 39 ; girls, 45 ; total, 84.

1. The material condition of the premises is good. The school is both well equipped and organized. 2. In a general sense the government is effective. 3. The subjects prescribed for a school of three classes are taught. The teaching lacks penetrativeness, and in some branches the range taken is low for the time the pupils have been under instruction. 4. The proficiency averages tolerable.

WAVERLEY (R.C.) :—Regular inspection, 31st August.

Numbers present :—Boys, 53 ; girls, 44 ; total, 97.

1. The school buildings are in very fair condition, and the organisation is of passable worth. 2. The pupils are reasonably regular in attendance ; they are on the whole punctual, tidily dressed, and fairly orderly. 3. Up to the requirements for a third class, the course of instruction is of full range. The teaching evidences care and earnestness. 4. The average proficiency ranges between tolerable and fair.

WAVERLEY (Presbyterian) :—Regular inspection, 12th May.

Numbers present :—Boys, 37 ; girls, 33 ; total, 70.

1. The schoolroom is a weatherboard building in fair repair ; it is tolerably suitable. The furniture is sufficient in quantity, but poor in quality. Of apparatus and books there is no lack. The organisation is passable in the circumstances, but it is seriously hampered by limited playground accommodation. 2. Four-fifths of the pupils attend regularly. The punctuality is also satisfactory. The children are neat in person, modest and respectful in demeanour, and well behaved. The government is judicious and effects good order. 3. All the prescribed subjects are taught up to the requirements of a third class. The instruction is properly regulated and imparted with industry and skill. 4. The proficiency averages good. The pupils acquit themselves well under examination.

WOOLLOOMOOLOO (Presbyterian) :—Regular inspection, 29th April.

Numbers present :—Boys, 70 ; girls, 58 ; total, 128.

1. The schoolroom is in good repair, commodious, well lighted, and fairly ventilated ; but the site on which it stands is small, and interposes difficulties to proper playground organisation. A room under the main schoolroom has been utilized for teaching purposes, but it is damp and unhealthy. In this room a large class of infants is taught. The school is abundantly provided with suitable educational appliances. 2. Of late the attendance has been much interfered with by juvenile sickness. It is fast recovering. Ordinarily the attendance is irregular, although marked by fair punctuality. The pupils are neat in appearance, fairly subdued, and well behaved. The government has improved in firmness and secures very fair order. 3. The course of instruction is complete up to the requirements of a third class, is regulated with very fair ability, and imparted by modern methods of average merit. 4. The following is the proficiency of the several classes :—First, very fair ; second, very fair ; upper second, fair ; third, very fair. The average attainments lie between fair and very fair.

YASS DISTRICT.

DETAILED Statement of the condition of Certified Denominational Schools in the Yass District, inspected during the year 1875.

YASS (C.E.) :—Visited 19th, 26th, and 27th August. Regular inspection.

Enrolled, 135 ; present, 108.

The material condition, except in working appliances, is disgraceful, and no improvement is expected. The discipline is sound and healthy. The instruction is properly regulated, and the attainments are satisfactory, except that this being a Denominational School the Council is precluded by the eleventh clause of the Public Schools Act from introducing the general religious instruction contained in the Scripture Lessons, which form a part of the Public School curriculum ; and in order to meet the constant and increasing cry of the people here for a Public School, the Denominational character of the school is wholly abandoned in the actual working of the school, no religious instruction of any kind being given ; and this lack cannot be supplied by the visits of the religious teachers of other Denominations as is allowed in Public Schools. The working spirit of the whole school is pleasing. No local supervision exists. Judging from the results of last inspection, progressive influence is manifest.

YOUNG (C.E.) :—Visited, 24th September. General inspection.

Enrolled, 50 ; present, 37.

The material condition is fair. The discipline is sound. The attainments are low. The local supervision is confined to the clergyman.

BURROWA (R.C.) :—Visited, 10th and 11th August. General inspection.

Enrolled, 68 ; present, 55.

The material condition is unsatisfactory, the discipline is healthy, and the instruction is now properly regulated. The attainments are not up to the standard, but the signs of progress under the present teacher are hopeful. The local supervision is active but not methodical.

GRENFELL (R.C.) :—Visited 6th December. Regular inspection.

Enrolled, 83 ; present, 58.

The material condition is, under the circumstances, as good as can reasonably be expected. The discipline is good. The local supervision is confined to the Chairman, who resides 36 miles away.

YASS

YASS (R. C.) :—Visited 21st and 22nd August. General inspection.

Enrolled, 103 ; present, 70.

The material condition, upon the whole, is moderate. The discipline lacks precision. The regulation of the instruction needs improvement. The attainments are between tolerable and fair. The local supervision is, to the extent it is exercised, beneficial.

YOUNG (R. C.) :—Visited 23rd and 24th September. Regular inspection.

Enrolled, 90 ; present, 54.

The material condition is, with a few exceptions, fair. The discipline is sound, and the instruction tolerably well regulated. The attainments are low. The local supervision is confined to the clergyman's visits and influence.

J. H. MURRAY, Inspector,
Yass District.

SUMMARIES of Reports furnished on Certified Denominational Schools, during the year 1875.

I.—CHURCH OF ENGLAND SCHOOLS.

CANBERRA :—Regular inspection, 26th April, 1875.

Enrolled :—Boys, 22 ; girls, 22 ; total, 44. Present :—Boys, 12 ; girls, 14 ; total, 26.

1. Additional desks have been provided since last inspection, and the material condition is now reasonably good. 2. About half the pupils are regular. The government is kind but sufficiently firm, and the discipline throughout is fair. 3. The mark for writing, dictation, and geography is above the average, that for reading up to the average, and that for other subjects below. The general proficiency is *tolerable*.

II.—ROMAN CATHOLIC SCHOOLS.

BUNGENDORE :—Regular inspection, 4th May, 1875.

Enrolled :—Boys, 24 ; girls, 12 ; total, 36. Present :—Boys, 14 ; girls, 6 ; total, 20.

1. The building is in a satisfactory condition, and there is a sufficient supply of all requisites. 2. The children are attentive, obedient, and well under control. 3. The mark for reading is up to the average, but that for all other subjects is below. The general proficiency is *tolerable*.

QUEANBEYAN :—General inspection, 19th April, 1875.

Enrolled :—Boys, 27 ; girls, 17 ; total, 44. Present :—Boys, 24 ; girls, 14 ; total, 38.

1. The building is suitable, and there is a satisfactory supply of all requisites. 2. The children are more regular in attendance than they were, and more punctual in the morning. The discipline has improved in every respect, and is now fair. 3. The attainments are still unsatisfactory, the mark for every subject being below the average. The general proficiency is between *moderate* and *tolerable*.

J. C. MAYNARD, Inspector,
Braidwood District.

1875.

NEW SOUTH WALES.

PUBLIC SCHOOLS ACT OF 1866.

(AMENDED REGULATIONS UNDER.)

Presented to Parliament pursuant to Act 30 Vic. No. 22, sec. 7.

Council of Education Office,
The 29th day of November, 1875.

In pursuance of the powers conferred on the Council of Education by the "Public Schools Act of 1866," the following Regulations have been framed and are hereby established, to take effect on the 1st day of January next; and the Regulations made on the eighth day of March, 1869, are hereby from that date repealed. In testimony whereof the Council has caused its Corporate Seal to be hereunto affixed, at Sydney, the day and year first above written.

By order of the Council,
(L.S.) WM. WILKINS,
Secretary.

REGULATIONS.

CONDUCT OF BUSINESS.

- 1.—The Council shall meet for the transaction of business, unless otherwise ordered, on every Monday, at 3 o'clock. Special Meetings also will be held at such other times as the President, in his discretion, or on the requisition of two other Members of the Council, expressing the object of the Meeting, may require.
- 2.—Every Meeting of the Council, whether Ordinary or Special, shall be convened by Circular signed by the Secretary. Should any Meeting lapse for want of a Quorum, the fact shall be recorded in the Minute Book, with the names of the Members present.
- 3.—At every meeting, the Secretary shall make a record of the proceedings, to be afterwards entered in the Council's Minute Book. The Minutes so recorded shall be read over at the next subsequent Meeting; and after such corrections as may be found necessary, shall be signed by the President, or Member acting in his stead.
- 4.—The order of business at each Meeting shall be arranged by the Secretary, subject to the direction of the President; and shall be clearly stated on a Business Paper, for the use of each Member.
- 5.—The President shall be entitled to vote on all questions as a Member; and, in the event of an equality of votes, shall have a casting vote as President.
- 6.—In case of inability to attend any Meeting, the President shall so inform the Secretary before the hour of Meeting, and another Member shall be elected to the chair for that occasion.
- 7.—The President, or some Member acting for him at his request, shall attend at the office of the Council, at least once weekly, to dispose of routine business, or any cases of urgency; and he shall have power thereupon to take such steps as may be considered necessary, submitting the matter for the consideration of the Council at its next Meeting.
- 8.—It shall be the duty of the Secretary forthwith to report to the President, or to the Council, if sitting, all acts of misconduct or irregularity on the part of any Officer, Clerk, or other person in the service of the Council.
- 9.—The custody of the Council's Corporate Seal shall be in the President; and all Conveyances or Certificates, Diplomas, and other Writings ordered by the Council to be executed or issued, shall have such Seal affixed thereto by the Secretary.

ELECTION OF PRESIDENT.

- 10.—At the first Meeting in January in each year the Council shall proceed to the election of the President; who shall hold office until the election of his successor.
- 11.—In the event of the office becoming vacant in the course of the year by death, resignation, or otherwise, the Council shall proceed, within one month, to the election of a President for the remainder of the year.

12.—The President shall be elected in the following manner:—(a.) The names of the Members shall be printed on five cards, one of which, initialled by the Secretary, shall be by him enclosed in a blank envelope, *unscaled*, and delivered or sent to each Member, who shall erase all the names, except that for which he votes, and return the card in the envelope, *sealed*, to the Secretary. (b.) On the day of election, the Secretary shall produce the cards in the original envelopes, *sealed*; which shall be opened by the President or other Chairman, and the Member having the largest number of votes shall be declared elected. (c.) If any two Members be found to have equal votes, the election shall be determined by lot, to be then drawn by them.

ESTABLISHMENT AND ORGANIZATION OF SCHOOLS.

Classification of Schools.

13.—The Council will establish, maintain, or assist, four descriptions of Schools, namely:—(a) Public Schools; (b.) Provisional Schools; (c.) Half-Time Schools; and (d.) Denominational Schools. Of these, the first class is for cases falling within Section 8 of the Public Schools Act, and the second for cases embraced by Section 13 of that Act. Half-Time Schools are such as have been or may be established under Section 12,—and Denominational Schools are such as have been or shall be Certified under Section 9 or 28 of the same Act.

Assistance to Schools.

14.—Where the site is vested in the Council, the necessary buildings for a Public School will be erected, so far as the available funds admit, and the salaries of all necessary Teachers be paid by the Council. In other cases, the Council's assistance will ordinarily be limited to the payment of Teachers' salaries, and the supply of School Books and Apparatus.

Schools on Leased Land.

15.—Applicants for the establishment of a Public School, on land not vested in the Council, must provide the requisite buildings, and execute a lease of the premises to the Council at a nominal rent. Before accepting such lease, the Council will satisfy itself that the buildings are in good repair, sufficient for the purpose, and suitably furnished.

Plans and dimensions.

16.—Plans for the erection of Public Schools will be supplied by the Council; but plans locally provided may be adopted, if submitted to the Council and approved of. No schoolroom ought to be less than 16 feet in width, and 10 feet in height; and at least 8 square feet of floor should be allowed for each child in ordinary attendance.

Provisional Schools.

17.—In applying for aid to a Provisional School, the Promoters must satisfy the Council that it is reasonably required in the locality, that the building and furniture provided are suitable for the purpose, and that an average attendance of at least fifteen children can be guaranteed.

Half-Time Schools.

18.—Half-Time Schools under Itinerant Teachers may be established, wherever twenty children of the school age reside within an estimated radius of ten miles from a central point, and can be collected in groups of not less than ten children in each.

Denominational Schools.

19.—Applicants for a Certificate to a Denominational School must provide a school-house sufficient for the purpose, and suitably furnished. A Teacher may be nominated by them, but must be approved of and appointed by the Council.

Withdrawal of Certificates.

20.—The Certificate will ordinarily be withdrawn from a Denominational School, should the statutory number of children not be maintained. It may also be withdrawn should the building become dilapidated, or otherwise unsuitable, or the supply of furniture become inadequate, or the Regulations of the Council be infringed.

As to the term "Statutory" Number.

21.—The statutory number of children shall, within the meaning of the preceding Rule, be deemed not to have been maintained, whenever less than thirty children on the average of the two previous quarters shall have been in attendance—unless the deficiency be shown to have been the result of some prevailing epidemic, or of floods, or other temporary impediment.

Inscription.

22.—In the case of every Public School, whether the property be vested in the Council or not, the inscription PUBLIC SCHOOL shall be conspicuously put up, and no other, on the outside of the building.

Uses of Public School Buildings.

23.—No use shall be made of any Public School building tending to cause contention—such as the holding of political meetings, or bringing into it political petitions or documents for signature. And no such building shall be used as a place of Public Worship, unless built and kept in repair without aid from the Council:—nor in such case, if objected to in writing by one-fourth of the Parents of the Children attending the School.

Grants of School Books, &c.

24.—Grants of School Books and apparatus will be made from time to time, as may be deemed expedient, to Schools under supervision of the Council, in proportion to the average number of children in attendance. A full supply will be granted to all Schools newly established.

Character

Character of School Books.

25.—Such books only as are supplied or sanctioned by the Council shall be used in any School for ordinary instruction.

Apparatus.

26.—The term Apparatus will include maps, diagrams, pictures, black-boards, easels, and ball-frames.

Registers, &c., to be kept.

27.—The undermentioned Registers and Forms shall be kept, according to directions supplied with them, by every Teacher; (a) an Admission Register, (b) a Class Roll, (c) a Daily Report Book, (d) a School Fee Account Book, (e) a Lesson Register, (f) a Time-table, and (g) a Programme of Lessons for each Class.

Returns.

28.—Quarterly and Annual Returns shall be furnished from every School. Each Quarterly Return must be neatly made out in duplicate immediately after the close of the quarter; one copy to be furnished to the Inspector, and the other retained by the Teacher as a record. No salary accruing at the end of any quarter will be paid until such Return has been received by the Inspector, and certified to be correct. The Annual Return must be forwarded, with the Quarterly Return, immediately after the close of the December quarter.

Default in sending Returns.

29.—Negligence in compiling or sending Returns, or in keeping School Registers, will render a Teacher liable to a fine, or, if repeated, to a loss of classification. Any Teacher guilty of fraudulently making false entries in any Register or Return will be instantly dismissed.

Training of Teachers.

30.—Every Applicant for employment as a Teacher must undergo a course of training before being permanently appointed, unless he shall have previously been trained in some recognized Training School. He must sign an undertaking to accept such employment in any locality indicated by the Council.

Appointment and Dismissal.

31.—The appointment and dismissal of Teachers in all Schools under the Council's supervision will rest solely with the Council; but, in Denominational Schools, subject to the provision contained in Section 10 of the Public Schools Act.

General Qualifications.

32.—As a general rule, no person will be appointed as a Teacher unless he has been examined and classified. In some cases a Teacher may be appointed provisionally who has not undergone examination; but his appointment will not be ratified until his competency has been tested in that manner.

Examination and Classification.

33.—The attainments of Teachers will be tested by oral and written examinations, and their skill in teaching by inspection of their Schools; and according to such attainments and skill they will be classified in the following grades:—The first or highest Class will have two grades, distinguished as Class I, A and B; the second will also have two grades, distinguished as Class II, A and B; and the third will have three grades, distinguished as Class III, A, B, and C.—The relative degrees of ability requisite for holding these Classifications, respectively, will be indicated by numbers; of which the first Class, in its two degrees, may be considered represented by 10 and 9; the second Class by 8 and 7; and the third by 6, 5, and 4.

Commencement of Duty.

34.—When a Teacher is appointed to a School he must report to the Inspector of the District the fact of arrival at his post, and the date of commencing duty.

Resignation of Teachers.

35.—Teachers are required to give not less than one month's notice of their intended resignation, which will take effect on the last day of the month indicated. Before receiving salary for the last month, they must hand over to the local Board all School property belonging to the Council, and make out, in duplicate, an inventory of the same—one copy, signed by two of the Board, to be forwarded to the Council, the other to be retained by the Board.

Teachers' Occupations.

36.—Teachers in the service of the Council are prohibited from engaging in any occupation not having a distinctly educational character, unless the sanction of the Council has been previously obtained.

Duties of Teachers.

37.—The duties of Teachers are the following:—

To observe faithfully the Regulations of the Council.

To carry out the suggestions of Inspectors to the best of their ability.

To teach according to the course of Secular Instruction.

To maintain the Discipline prescribed in the Regulations.

To keep the School Records neatly, and to furnish Returns punctually.

To see that the undermentioned documents are kept posted in a conspicuous place in the School-room, namely:—(a.) Regulations of the Council; (b.) Notice to Visitors; (c.) Course of Secular Instruction; (d.) Time Table; (e.) Programme of Lessons; (f.) Names of Members of the School Board; (g.) Scale of Fees.

To take charge of the School Buildings, and all property belonging to the Council, and to be responsible for keeping the School premises in good order and tenantable repair; reasonable wear and tear excepted.

To consult the Board, and receive their instructions, on all matters relating to the School, not affecting its internal management.

Teachers'

Teachers' Wives.

38.—In Schools containing female children, but no female Teacher, it will be the duty of the Teacher's wife to be present at the assembling and dismissal of the pupils, and to take charge of the discipline of the female children. She is also required to teach needlework to the girls during at least four hours in each week. In forming an estimate of the efficiency of Schools, the competency and usefulness of Teachers' Wives, and the time they devote to school duties, will be taken into account.

Assistant Teachers.

39.—Assistant Teachers may be appointed to Schools in which the average daily attendance exceeds seventy. They will be entitled to a proportion of the School fees, and such salary as shall be determined by the Council. Assistants may be (a) persons who have served for three years at least as Pupil-Teachers, or, (b) persons who have been regularly trained in a Training Institution. But no person will be permanently appointed an Assistant Teacher, unless examined and classified.

Pupil-Teachers.

40.—Pupil-Teachers may be employed, to serve for not less than three years, in any School in which the average attendance has been not less than fifty for the three months preceding: Provided that the Teacher holds a classification not lower than Class II, and that the School is adequately supplied with furniture, books, and apparatus.

TEACHERS' EXAMINATION, PROMOTION, AND REMUNERATION.

Subjects of Examination.

41.—The subjects on which Teachers will be examined are divided into two classes—Ordinary and Alternative; and are specified in the Appendix to these Rules marked A. The former class embraces those elementary branches with which every Teacher must be acquainted. Reading, Writing, Arithmetic, Grammar, Geography, and Knowledge of the School Books, are of this kind; to which must be added the principles of School Management, and, if possible, the Rudiments of Music and Linear Drawing. The subjects styled Alternative are those in which an examination is entirely optional with the Teacher.

Alternative Subjects.

42.—The following are the Alternative Subjects in which Teachers may be examined:—Latin; Mathematics; Natural Science; French; and German.

Applicants for Employment.

43.—By the word Teachers, in the two last preceding Rules, it is intended equally to include Applicants for employment in that capacity, not previously examined. But no such Applicant will be awarded a First Class Certificate, unless proved to be possessed of the requisite practical skill.

Annual Examinations.

44.—Examinations of Teachers will be held annually in each Inspector's District. Teachers who desire to be examined, with a view to a higher Certificate, must apprise the Inspector of their wish, and furnish him with a list of the Alternative Subjects upon which they are prepared for examination.

Promotion by Examination.

45.—In order to obtain a First or Second Class Certificate, Teachers must pass an examination in one or more of the Alternative Subjects mentioned in Rule 42, in addition to the ordinary subjects. But no Teacher will be admitted to examination, with a view to admission into a higher Class than that held by him, unless the Examiner certify that he possesses the necessary practical skill and efficiency.

Promotion for Good Service.

46.—Teachers can only be promoted from one Class to another by examination. But in each Class, a Teacher may without examination be advanced to a higher grade for good service; that is to say, if his School, in the last three years during which he has held the Classification, has increased in efficiency, if the Inspector's reports throughout that period have been satisfactory, and the Report for the third year indicates that the applicant's practical skill is equal to that required for the grade sought, according to the scale specified in Rule 33, if the Local Board report favourably, and if his general conduct has merited the Council's approval.

Promotion by Removal.

47.—Teachers desirous of being promoted to more important Schools must intimate their wishes to the Inspector of the District, in writing. A list of such Teachers will be kept in the Council's office; and, except in special cases, promotions will be made in accordance with the principle of classification and seniority.

Teachers' Salaries.

48.—The Salaries of Male Teachers in charge of Schools, other than Provisional, if married and assisted by their wives, will be according to the following scale:—

Class I, A.	£156	per annum.
" B.	£144	" "
Class II, A.	£132	" "
" B.	£120	" "
Class III, A.	£108	" "
" B.	£102	" "
" C.	£96	" "

The Salaries of unmarried Male Teachers, married Teachers not assisted by their wives, and Female Teachers in charge of Schools, will be £12 per annum less than the foregoing rates.

Reduction

Reduction for Small Attendance.

49.—The above rates will be liable to reduction in cases where the average attendance falls below thirty, and the teacher is unable to satisfy the Council that this has arisen from causes beyond his control.

Teachers in Provisional Schools.

50.—The payment of Teachers in Provisional Schools will be regulated by the average attendance, according to the following scale:—

21 but under 25	£6 per month.	
18 "	"	21	...	£5 " "
15 "	"	18	...	£4 " "
12 "	"	15	...	£3 " "

Distribution of Fees.

51.—If there be more than one Teacher employed in a School, the fees will be distributed in such proportions as the Council shall in each case direct. Pupil Teachers will not be entitled to any share in fees.

Model Schools.

52.—In Model Schools special salaries may be awarded to the Teachers, at the discretion of the Council.

Mistresses.

53.—Mistresses in charge of separate departments will be paid two-thirds of the salaries allotted to their classification.

TRAINING SCHOOL.

Classes of Candidates.

54.—The Council will receive into the Training School, established in connection with the Sydney Model Public School, or in such other Training School as the Council may establish, three Classes of Candidates, namely: *First Class*—Pupil Teachers whose term of service has expired, and Teachers who have already been trained elsewhere. *Second Class*—Untrained Teachers who have been in charge of Schools. *Third Class*—Persons entering the teaching profession for the first time.

Qualifications.

55.—Candidates must apply for admission in a form prescribed by the Council. They must, except in the case of Pupil Teachers, be not less than twenty years of age, and, as a general rule, not more than thirty; they must be free from any bodily infirmity likely to impair their usefulness as Teachers; and be persons of active habits and unblemished reputation. They must also satisfy the Council as to their previous history, and undergo an examination in the subjects specified in the Appendix to these Rules marked D.

Conditions of Admission.

56.—Before admission, every candidate must make a declaration that he intends in good faith to follow the profession of a Teacher in Schools under the Council, and that he will accept a situation in any District, as the Council may see fit. He must also procure a guarantee from two responsible persons, that the whole expense of his training in the School will be refunded if, from any cause whatever, he shall not enter the service of the Council, or shall leave it in less than a period to be agreed upon at the time of such admission.

Term of Training.

57.—Entrance Examinations will be held half-yearly, in June and December; and the periods of training will be six or twelve months, as may be found necessary.

Allowances during Training.

58.—The following allowances may be made to Students who satisfy the above-mentioned conditions, and pass successfully the prescribed examinations:—To married couples, £7 per month; to unmarried persons, £5 per month. When the School is prepared to receive Students into residence, these allowances may be withdrawn; board and lodging being provided instead.

Course of Study.

59.—The course of studies in the School will include the subjects specified in the Appendix to these Rules marked D.

Practical Training.

60.—The Students will be trained in the practical management of Schools by attendance at the Model School, or such other School as the Council may determine.

Examinations.

61.—Oral examinations of the Students will be held monthly, to test their attention and progress; and written examinations will take place half-yearly, in June and December—when classifications will be awarded according to attainments and teaching skill. The Council will not award to any Student a higher Certificate than Class II; and no Certificate will be given until the Inspector's Report shows that the Student is successful in the management of a school.

Female Candidates and Students.

62.—These Rules apply equally to the case of Female as of Male Candidates and Students.

PUPIL-TEACHERS.

Conditions of Appointment.

63.—Candidates for the office of Pupil-Teacher must be not less than thirteen, nor more than sixteen years of age, and free from any bodily infirmity likely to impair their usefulness. They must also pass an examination in the subjects specified in the Appendix to these Rules marked B, Part 1.

Remuneration.

64.—The remuneration of Pupil-Teachers will consist partly of instruction to be given by the Teacher, for at least one hour on every school day, and partly in a yearly salary. But such salary will not be paid unless the Teacher shall certify as to their efficiency and good conduct, nor unless they pass the prescribed examinations in a satisfactory manner.

Course of Study.

65.—The subject of Study for Pupil-Teachers will be those specified in the Appendix marked B, Part 2.

GOVERNMENT OF SCHOOLS.

Public School Boards.

66.—The Council reserves to itself the power of controlling, through its Officers, the internal management of Schools. But the Council, for other purposes, will avail itself of the assistance of Public School Boards, whenever suitable persons are found to fill the office. The Council will not submit for appointment to any such Board the name of any person whose habits are intemperate, or whose character is in any respect exceptional.

Duties of Boards.

67.—In addition to the powers conferred on such Boards by the Public Schools Act, the Council entrusts to them the following duties:—(a) To make provision, as far as may be, for keeping the School Buildings in repair. (b) To take care that they are not used for any improper purpose. (c) To see that a sufficient quantity of suitable furniture and apparatus is provided. (d) To take precautions for excluding from the School, during its ordinary business, all books not sanctioned by the Council. (e) To inspect periodically the School Registers and Records, and countersign the Returns made to the Council. (f) To see that the School is open on all the usual school days, and that the Teacher is present at his work. (g) To observe whether the Teacher discharges his duties; to report his conduct to the Council when he is in fault; and to protect him from vexatious complaints. (h) To suspend a Teacher from office, pending the decision of the Council, upon reasonable evidence of gross irregularity or immoral conduct. (i) To sign the Teacher's Monthly Abstract of Salary, if they are of opinion that his duties have been duly performed.

The like, and Board Meetings.

68.—Every such Board, by its Honorary Secretary or Chairman, will be the medium of communication with the Council on behalf of the School; and, as the Council trusts, will use every reasonable effort to induce Parents to send their children there regularly—not withdrawing them at any time, except in case of necessity. Every Board should meet periodically, and especially in the last week of March, June, September, and December, for the purposes specified in the preceding Rule, and for conference generally on matters connected with the School.

Exemption from School Fees.

69.—It will also be the duty of the Board to inquire into all applications for the gratuitous instruction of children; and to see that no child be admitted free of charge, unless the inability of the parent to pay school-fees be satisfactorily proved. The Board should, at the end of each Quarter, report to the Council the names of children so admitted, and the names and occupations of the parents, with the grounds of exemption.

Other Local Boards.

70.—The Council will correspond with all other duly recognized Local Boards of Denominational Schools, Provisional Schools, and Half-time Schools. It is hoped that the Boards of such Schools will perform the same duties as are by these Rules entrusted to Public School Boards.

Inspectors of Schools.

71.—Inspectors, and other persons deputed by the Council to visit any School, will be furnished with credentials under the Corporate Seal. Every Teacher is required to treat such persons with deference; to carry out their suggestions for the improvement of the School; and to obey their instructions in all matters relating to the Public Schools Act and the Regulations of the Council. The Local Board, in each District visited, will of course afford them every assistance that may be required in the execution of their duty.

Duties of Inspectors.

72.—Inspectors are to enforce observance of the provisions of the Public Schools Act, and of the Regulations; but their decisions are subject to appeal to the Council. They are to examine into the condition of Schools, and inquire into all matters which it may be expedient to report to the Council. They are authorized to determine all questions of School management, and to take the teaching of a Class or of the School into their own hands for a time, to show the Teacher how defective methods may be improved.

Annual Inspections.

73.—Once at least in the year every School in each Inspector's District shall be visited by him, and the pupils be examined as to their proficiency in the several branches of instruction which are prescribed by the Council. He will, as soon afterwards as may be practicable, send a Report thereupon to the Council; together with such observations on the state of the School, generally, as shall appear to him to be called for. The Local Board must be invited to be present at such examination; and, for this purpose, the Inspector will take care to give the Chairman, or Honorary Secretary, due notice of the intended day of his visit.

Conduct of Inspectors.

74.—In their intercourse with Teachers, Inspectors should be guided by feelings of respect for the Teacher's office, and of sympathy with his labours. They will exhibit towards Teachers every possible courtesy; treating them at all times with the consideration and kindness which the difficulties of their position demand.

Observation Book.

75.—The Inspector's remarks upon the state of a school visited by him will be entered in the Observation Book of the school; which as a record is to be carefully preserved. Entries therein are not to be erased or altered.

SCHOOL ROUTINE AND DISCIPLINE.

Punctuality.

76.—With a view to the proper training of their pupils, Teachers must conduct the operations of their Schools with punctuality and regularity.

Cleanliness.

77.—Habits of personal neatness and cleanliness are to be encouraged among the pupils, not only by precept but by the personal example of the Teachers; and, if necessary, may be enforced. Teachers are also responsible for keeping the schoolrooms and furniture clean, and arranged in an orderly manner.

Order and Conduct.

78.—Teachers are to instil into the minds of their pupils the necessity for habits of orderly and modest behaviour, as well as of obedience to Teachers, and to the rules of the School. Pupils should also be trained to exhibit respect for the property of others, whether public or private; to regard the feelings of their fellows; to be honest and truthful, diligent under instruction, and conscientious in the discharge of every duty.

Government of Pupils.

79.—In the government of the pupils all degrading punishments are to be avoided. The Teacher's discipline should be mild but firm, his manner kindly, his demeanour cheerful, and his language marked on all occasions by strict propriety. While overlooking no offence, his aim should be to prevent the necessity for punishment by effecting the improvement of the offender.

Corporal Punishment.

80.—Corporal punishment may be inflicted; but by the Principal Teacher only, or by an Assistant with his approval. It should be restricted as much as possible to extreme cases; and the Teacher must keep a record of the time and place of punishment, its amount, and the nature of the offence.

Expulsion of Pupils.

81.—No pupil shall be expelled from any School, unless by the direction or with the express concurrence of the Local Board, in writing; subject in every case to appeal to the Council.

Suspension.

82.—A pupil may, nevertheless, for gross insolence, persistent disobedience, profanity, or immoral conduct, be by the Teacher forthwith removed from the school: provided that, in every such case, the matter shall be reported without delay to the Board; and, until its disposal by them, the pupil shall not be readmitted.

Playground Supervision.

83.—The conduct of pupils in the playground must be carefully supervised by the Teacher; and he must see that, in proceeding to School and returning from it, their behaviour is orderly.

Religious Views of Pupils or Parents.

84.—Nothing must ever be said or done by any Teacher, in a pupil's hearing or presence, calculated to offend the religious views of that pupil, or of any other in the School—or of the parents of any such pupil.

Daily Routine.

85.—In all Schools maintained or aided by the Council, the Daily Routine shall be that specified in the Appendix marked E: Provided that, by permission of the Local Board, the District Inspector, or the Council, the time of assembling may be half an hour later than that so specified; in which case the several times stated will be later in the same proportion.

Time

Time-Table.

86.—The Time-Table to be observed in the Schools is the following:—except that, in cases within the Proviso to the preceding Rule, the time in each instance will be half an hour later than that specified.

From 9 to 10. Special Religious Instruction; or, in Public and Provisional Schools, when no Religious Teacher is in attendance, Ordinary Instruction.

From 10 to 12. Ordinary Instruction.

From 12 to 1:30. Recess for dinner and re-assembling.

From 1:30 to 3:30. Ordinary Instruction.

Special Religious Instruction.

87.—Should the hour appropriated to Special Religious Instruction be in any case inconvenient, the Council may sanction an alteration on sufficient cause being shown.

Vacations and Holidays.

88.—The Vacations sanctioned by the Council are—three weeks at Christmas, and a fortnight at Midwinter. The Holidays allowed, other than those occurring in Vacation, are—the Anniversary of the Colony, and of the Queen's Birthday, Good Friday, and Easter Monday.

Teachers are to state on their Time-Tables these Vacations and Holidays.

Closing Schools.

89.—No School is to be closed upon any School day without the written direction of the Local Board, who must satisfy themselves that circumstances warrant that step; and in no case for more than one day, without the sanction of the District Inspector, or the Council.

Infectious Diseases.

90.—The attendance of any pupil suffering from any contagious, offensive, or infectious disease, may be temporarily suspended by the Teacher. But he is, as soon as possible thereafter, to report the case to the Local Board. The like action may be taken by a Board with any Teacher similarly suffering.

INSTRUCTION IN SCHOOLS.

Course of Instruction.

91.—The course of Secular Instruction, as [the term is defined in Section 30 of the Public Schools Act, shall, for each class, be the course specified in the Appendix to these Rules marked C. But, in Denominational Schools, it shall not be necessary to use the Scripture Lessons there mentioned.

Provisional Schools.

92.—The last preceding Rule, with all others respecting Routine, Discipline, and Inspection, applies equally to Provisional as to other Schools; it being the condition of the Council's continuance of aid to any such School that it shall in all respects be conducted as if it were a Public School.

Special Religious Instruction.

93.—During an hour of each day, indicated in the Time-table, children whose parents desire that they should receive Special Religious Instruction from approved Religious Teachers of their respective Communion, may receive such instruction, so far as the Buildings admit of distinct Classes being formed for the purpose. Every Public School should be so arranged as to admit of the formation of one such Denominational Class at the least; and, if the simultaneous teaching of more than one be impracticable, Classes of the different Denominations may be formed on different days of the week.

The like in Denominational Schools.

94.—In Denominational Schools, the occupation of the pupils during the hour allotted to Special Religious Instruction is left entirely to the direction of the Local Board.

Denominational Books.

95.—The Teacher, in all Schools under the superintendence of the Council, shall see that the religious books employed in the Denominational Classes are confined to the time and place of Denominational instruction, and not left in the way of children whose parents may object to them.

Methods of Teaching.

96.—Every Teacher is required to make himself acquainted with improved methods of teaching, and to practise them in his school. And as the efficiency of Teachers will be judged of by the attainments as well as the moral improvement of their pupils, results as well as the mode of instruction should be kept in view.

Teaching power to be justly distributed.

97.—Teachers are to provide for the equitable distribution of their time through all the Classes; so that the instruction of no pupil shall be neglected.

VISITORS.

Persons Visiting Schools.

98.—Visitors shall have access to every School maintained or aided by the Council, during the hours of Secular Instruction—not to take part in the business, or interrupt it; but, simply, to observe how it is conducted.

Duty of Teachers to Visitors.

99.—Every Teacher is required to receive courteously Visitors seeking to inspect his School, to afford them access to the schoolroom, and liberty to observe what books are in the hands of the children or on the desks, what tablets are on the walls, and what is the method of teaching. But Teachers should not permit any person to interrupt the business of the School, by asking questions of the children, examining Classes, calling for papers, or in any way diverting attention from the usual business.

Official Visits.

100.—The restriction expressed in the preceding Rule will, of course, not interfere with the provision in Section 19 of the Public Schools Act, whereby access is afforded to Religious Teachers for the purpose of communicating Special Religious Instruction; nor does it apply to the visits of Local Boards, or of Members of the Council of Education.

Visitors' Book.

101.—Every Teacher is required to have the Visitors' Book lying upon his desk, in which Visitors may enter their names, and, if they think proper, any remarks. Teachers are by no means to erase or alter any remark so made.

APPENDICES.

APPENDIX A.

*Examination for Classification as Teacher.**For a Third Class Certificate.*

Grammar: Including Punctuation, Paraphrasing, Parsing, and Analysis of Sentences.
Geography: General and Descriptive.
Arithmetic: As far as Decimal Fractions and Square Root. *Female Teachers*—As far as Proportion and Practice.
School Management: Including the Organization, Discipline, and Instruction of Schools.
School Books: The Reading Books from the First to the Fourth, inclusive.
Reading: Prose and Poetry from the Lesson Books.
Writing: Specimens of Copy-setting, in text, round and small hands.
Vocal Music and Linear Drawing.
Female Teachers: Needlework—Domestic Economy.

For a Second Class Certificate.

Grammar: Including Punctuation, Paraphrasing, Composition, Parsing, Derivation, and Analysis of Sentences.
Geography: Physical and Descriptive.
Arithmetic: As far as Cube Root, Duodecimals, and Elementary Mensuration. *Female Teachers*—As far as Decimals.
Art of Teaching: The Organization, Discipline, and Instruction of Schools, in greater detail.
School Books: The Series of Reading Books.
Reading: Prose and Poetry, from the Literary Class Book.
Writing: Specimens of Copy-setting in three hands, and of Letter-writing.
Vocal Music and Linear Drawing.
Female Teachers: Needlework—Domestic Economy.
Algebra: As far as, and inclusive of, Quadratic Equations, but omitting Surds.
Geometry: The First, Second, and Third Books of Euclid's Elements.
Latin: Cæsar; De Bello Gallico: Grammar. (In lieu of the two preceding Subjects.)
For Female Teachers: *French*: Grammar: Translation from an easy author.

*For a First Class Certificate.**Ordinary Subjects.*

Grammar: Punctuation, Paraphrasing, Parsing, Analysis of Sentences, Composition, Style, Derivation, and Prosody.
Geography: Physical, Political, and Commercial, with Popular Astronomy and Mathematical Geography.
Arithmetic: The whole Theory and Practice as laid down in text-books in common use.
School Books: The whole of the Reading Series.
Reading: Prose and Poetry.
Writing: Specimens of Copy-setting and Letter-writing.
Vocal Music and Linear Drawing.
Female Teachers: Needlework—Domestic Economy.
Principles of Teaching: Including a knowledge of the mental faculties.
English Literature.

Alternative Subjects.

Latin: Virgil or some author of equal difficulty: questions on Grammar.
French: Charles XII or some work of equal difficulty: Grammar.
German: Fouqué's Undine or some work of equal difficulty: Grammar.
Mathematics: Algebra, to Quadratic Equations, including Surds; Geometry, Euclid, Books I, VI; Plane Trigonometry; Elements of Mechanics.
Natural Science: Experimental Physics, Chemistry, Geology, Zoology, Botany, and Physiology.

NOTE.—A Classification may ordinarily be acquired, notwithstanding failure in Vocal Music and Linear Drawing, provided the Candidate can show that his failure resulted from physical inability, or from the impossibility of obtaining the necessary instruction.

APPENDIX B.—PART I.

*Subjects of Study for Pupil Teachers.**Before Appointment—Candidates.*

Reading: To read the "Fourth Reading Book" sanctioned by the Council with ease, fluency, and expression; to spell well; and to understand the meaning of the passage read.
Writing: To write from dictation, in a neat hand, a simple prose narrative, with correct spelling and punctuation.
Arithmetic: To know the Arithmetical Tables, and to work the rules as far as Vulgar Fractions.
Grammar: To parse and analyze correctly a passage taken from the Fourth Book.
Geography: To understand the Geographical Terms, to be acquainted with the Map of the World, and to have a knowledge of the Geography of Australia.
Drawing: As prescribed for a Fifth Class in the Course of Secular Instruction.
Vocal Music: As prescribed for a Fifth Class in the Course of Secular Instruction.
Skill in Teaching: To teach a Junior Class in the presence of an Inspector.

PART II.

Class IV.

- Reading* : To read the "Fifth Reading Book" sanctioned by the Council with fluency and expression, give synonymous words and phrases, and answer upon the subject matter; to repeat from memory fifty lines of poetry.
- Writing* : To write neatly and correctly from dictation, or from memory, a passage from the Fifth Book.
- Arithmetic* : To work questions in Decimal Fractions.
- Grammar* : To parse and analyze a passage from the Fifth Reading Book.
- Geography* : The Geography of New South Wales in detail, and Europe in outline.
- Drawing* : More difficult subjects.
- Vocal Music* : Increased proficiency.
- Algebra* : To Least Common Multiple.
- Geometry* : Euclid, Book I, Prop. I to XXX.
- Latin* : Smith's "Principia Latina," to Exercise XXIV inclusive.
- French (for females)* : De Fivas' "Grammaire des Grammaires," to Exercise XXX inclusive.
- Skill in Teaching* : To discipline one of the lower classes, and give a Reading Lesson.

Class III.

- Reading* : To read the Fifth Book with improved intonation and expression; to paraphrase the sentences, and give the derivation of prominent words.
- Writing* : To write, in a neat and flowing hand, an abstract of an Object Lesson.
- Arithmetic* : To Square Root.
- Grammar* : Parsing of Difficult Sentences; with a good knowledge of Syntax, and the Analysis of Sentences.
- Geography* : Australia, Great Britain and Ireland, in detail; Asia in outline.
- Drawing* : More difficult subjects.
- Vocal Music* : Increased proficiency.
- Algebra* : Fractions and Simple Equations.
- Geometry* : Euclid, Book I, with easy deductions.
- Latin* : Smith's "Principia Latina," to Exercise XXXIII.
- French (for females)* : "Grammaire des Grammaires," to Exercise LX.
- Skill in Teaching* : Management of the Second Class, and giving a Lesson on Elementary Geography or Grammar.

Class II.

- Reading* : A standard author, with correct intonation and emphasis, paraphrasing, and derivation.
- Writing* : To write an account of the organization of the School, or of the methods of teaching adopted.
- Arithmetic* : To Cube Root.
- Grammar* : Increased skill in Parsing, and in the Analysis of Sentences.
- Geography* : Palestine, in detail; America, in outline.
- Drawing* : More difficult subjects.
- Vocal Music* : Increased proficiency.
- Algebra* : Simple Equations and Surds.
- Geometry* : Books I and II, with easy Deductions.
- Latin* : Smith's "Principia Latina," to Exercise XLVIII.
- French (for females)* : "Grammaire des Grammaires," to Exercise XC.
- Skill in Teaching* : Ability to discipline the Third Class, and give an Object Lesson.

Class I.

- Reading* : To read with ease and expression a standard author, and reproduce, either verbally or in writing, the passage read.
- Writing* : To write an essay on some subject connected with the Art of Teaching.
- Arithmetic* : Applications of rules and principles.
- Grammar* : Prosody—Analysis of Sentences.
- Geography* : Physical Geography in detail—The World generally.
- Drawing* : More difficult subjects.
- Vocal Music* : Increased proficiency.
- Algebra* : Quadratic Equations.
- Geometry* : Books I and II, with Deductions.
- Latin* : Smith's "Principia Latina."
- French for Females* : "Grammaire des Grammaires," to Exercise CXXXII.
- Skill in Teaching* : Increased skill in the management of Classes, and in giving Object Lessons.

NOTE.—Needlework and Domestic Economy are to be taught to females in place of Algebra and Geometry.

APPENDIX C.

First Class.

- Reading* : The "First Reading Book," sanctioned by the Council.
- Writing* : On slates, from copies and monosyllables from dictation.
- Arithmetic* : Notation, to three places of figures—Simple Addition, on slates—Mental operations involving results not higher than 60.
- Object Lessons* : Domestic Animals and Common Objects.
- Singing* : Simple Melodies by ear, or by Tonic-Sol-fa Method.

Second Class.

- Reading* : The "Second Reading Book," sanctioned by the Council.
- Writing* : On slates, from memory and dictation; in books, from copies.
- Arithmetic* : Notation—Simple Rules—Tables.
- Grammar* : The Parts of Speech.
- Geography* : Local Geography—Uses of a Map—Definitions—New South Wales in outline.
- Object Lessons* : Domestic Animals—Common Objects.
- Singing* : Simple Melodies by ear, or by Tonic-Sol-fa Method.
- Drawing* : Simple Rectilinear Figures, on slates.

Third Class.

- Reading* : The "Third Reading Book," sanctioned by the Council.
- Writing* : On paper, from copies; and on slates, from dictation.
- Arithmetic* : Compound Rules and Reduction—The easier Rules of Mental Arithmetic—Tables.
- Grammar* : Parsing, Syntax, Analysis of Simple Sentences, and Elementary Composition.
- Geography* : Australia and New Zealand, in detail—Outlines of Europe.
- Object Lessons* : Common Minerals, Vegetables, and Animals—The simpler Manufacturing processes.
- Singing* : Part Singing, Tonic-Sol-fa Method.
- Drawing* : Fowles' Elementary Drawing Books, I, II, and III, or some equivalent books.
- Scripture Lessons* : Old and New Testaments, No. 1 of the Irish Board of National Education.

Fourth

Fourth Class.

Reading: The "Fourth Reading Book," sanctioned by the Council.
Writing: On paper, from copies and dictation.
Arithmetic: Proportion and Practice—Fractions—Mental Arithmetic.
Grammar: Etymology and Syntax, with Analysis of Sentences—Composition.
Geography: Europe and Asia in detail—America in outline—Elements of Physical Geography.
Object Lessons: Natural History, Manufactures, Elementary Mechanics; Science of Common Things; The Mechanical Powers.
Singing: Tonic-Sol-fa Method.
Drawing: Fowles' Drawing Books, IV, V, and VI, on paper.
Geometry: Definitions and Axioms; Euclid, Book I to proposition XVI.
Scripture Lessons: Old and New Testaments, No. II of the Irish Board of National Education.

Fifth Class.

Reading: The "Fifth Reading Book," sanctioned by the Council.
Writing: On paper, plain and ornamental.
Arithmetic: Decimals—Roots—Mensuration.
Grammar: Syntax—Prosody—Analysis of Sentences—Composition.
Geography: The World—Physical and Descriptive.
Object Lessons: Arts and Manufactures—Laws of Health—Social Economy—Duties of a Citizen—The Laws—Experimental Physics.
Singing: Tonic-Sol-fa Method—Established Notation.
Drawing: Perspective—Drawing from Models.
Geometry: Euclid, Book I.
Algebra: To Simple Equations of two unknown quantities.
Latin: Smith's Principia Latina.
Scripture Lessons: As in Fourth Class.

APPENDIX D.

Examination for admission to Training School.

JUNIOR CLASS.

Reading: Fifth Class Reading Book adopted by the Council.
Writing: From dictation a passage from the same book.
Arithmetic: As far as Vulgar Fractions.
Grammar: Parsing and Analysis of a passage from the same School Reading Book.
Geography: Outlines of Europe, Asia, Africa, America, and Australia.
Vocal Music: Rudiments of the Tonic-Sol-fa Method.
Linear Drawing: In outline from copies.

SENIOR CLASS.

Reading: A standard author.
Writing: From dictation a passage from the same work.
Grammar: Parsing and Analysis of a passage from the same book, with questions on Syntax.
Arithmetic: Vulgar and Decimal Fractions and Square Root.
Geography: The matter contained in any ordinary school work on the subject.
Vocal Music: Rudiments of the Tonic-Sol-fa Method.
Linear Drawing: Outline from copies.
Mathematics: Euclid, Books I and II; Algebra to Simple Equations.
Latin: Grammatical questions and easy translations.
French: Grammatical questions and easy translations.

(This subject is to be taken by female candidates in place of Mathematics and Latin.)

Course of Study in Training School.

ORDINARY SUBJECTS.

Reading and Elocution, including *Repetition from memory*.
Writing, plain and ornamental.

 At 3:25. The Roll to be called and marked.
 At 3:30. The School to be dismissed.

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

EDUCATION.
(LIST OF DENOMINATIONAL SCHOOLS.)

Ordered by the Legislative Assembly to be printed, 18 November, 1875.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 23 June, 1874, That there be laid upon the Table of this House,—

“ A nominal list of the Denominational Schools which have been certified
“ by the Council of Education in each year since the 31st of December,
“ 1868.”

(Mr. Stewart.)

THE SECRETARY, COUNCIL OF EDUCATION, to THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION.

Council of Education Office,
Sydney, 15 September, 1875.

SIR,

With reference to your letter, dated 27th June, 1874, No. 74-3,742, I am directed by the Council of Education to transmit herewith, for the information of the Honorable the Minister of Justice and Public Instruction, the return respecting Denominational Schools therein asked for.

I have, &c.,
W. WILKINS,
Secretary.

1869. }
1870. } No certificates were granted during these years.
1871. }
1872. }
1873. Four certificates were granted, viz. :—
Adelong, Roman Catholic.
Grenfell, Roman Catholic.
Hill End, Roman Catholic.
Petersham, Church of England.
1874. Two certificates were granted, viz. :—
Gulgong, Roman Catholic.
Lambton, Roman Catholic.

1875.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

EDUCATION.
(CASE OF JEREMIAH CRONIN.)

Ordered by the Legislative Assembly to be printed, 18 November, 1875.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 2 August, 1875, That there be laid upon the Table of this House,—

“Copies of all Correspondence and Papers, in the possession of the Council
“of Education, having reference to the dismissal of Mr. Jeremiah Cronin,
“late teacher of the Public School at Wilcannia.”

(*Mr. Wisdom.*)

THE SECRETARY, COUNCIL OF EDUCATION, TO THE UNDER SECRETARY, DEPARTMENT OF JUSTICE
AND PUBLIC INSTRUCTION.

Council of Education Office,
Sydney, 18 October, 1875.

SIR,

I am directed by the Council of Education to state, for the information of the Honorable the Minister for Justice and Public Instruction, that the Council has had under consideration your letter of the 5th August last, No. 95/5638, transmitting a copy of an Order from the Legislative Assembly, for the production of "all Correspondence and Papers, in the possession of the Council of Education, having reference to the dismissal of Mr. Jeremiah Cronin, late teacher of the Public School at Wilcannia."

2. In reply, I am to observe that, if the Council were to adhere to the literal wording of the above order, there would be no correspondence to produce, inasmuch as Mr. Cronin was not *dismissed* from the position as teacher of the Public School at Wilcannia, but was merely removed from the temporary appointment he held when the time arrived for making permanent arrangements for the conduct of the school.

3. As it is assumed, however, that a mistake has been made in the wording of the motion, the Council has instructed me to forward herewith copies of the Correspondence bearing on the subject of Mr. Cronin's removal from the school named, in order that Mr. Docker may take such steps as he may deem desirable in the matter.

I have, &c.,

W. WILKINS,
Secretary.

SCHEDULE of Correspondence, relating to Wilcannia Public School, called for by the Legislative Assembly,
on 2nd August, 1875, on the motion of Mr. Wisdom.

NO.	PAGE.

EDUCATION.

No. 1.

MR. J. CRONIN TO THE SECRETARY, COUNCIL OF EDUCATION.

Wilcannia Public School,
6 June, 1874.

SIR,

In reference to my letter of resignation addressed to you, under date 1st May, 1873, and your acceptance of the same, dated 16th May, 1873, I have the honor to request your favourable re-perusal of those documents in connection with the following statement, with a view to my being appointed the Public School teacher at Wilcannia.

1. I did not pass through the Insolvency Court, having paid my liabilities. My perplexity arose in great measure owing to the informalities of my solicitor.
2. I am now free, so far as pecuniary liabilities are concerned, and am in a fair position for resuming the duties of a Public School teacher, assisted as I am now by the industry of my wife.
3. That Mrs. Cronin, without soliciting aid from the Council of Education, conducted the school at Menindie for fifteen weeks after my resignation, until the arrival of the present teacher, rather than the young should go without tuition.
4. That now, entirely at the solicitation of many parents in Wilcannia and by the members of the School Board, I am engaged in teaching the children who attend the school in this town.
5. That I was on the 15th May last appointed provisionally as teacher of the school here by the Local School Board, pending the approval of the Council of Education, and that I have conducted the school since the 18th of May, the attendance of pupils being over fifty. My ability and fitness to teach are known to some extent by several of the Public School Inspectors. I have through life taken a deep interest in the education of youth, and it would not only be my duty, but my pride and study, to bring my school to a proper state of efficiency under the rules and standard laid down by the Council of Education.

I have therefore the honor to respectfully apply for the appointment as teacher of the Public School at Wilcannia.

Trusting that both myself and Mrs. Cronin may be retained under our awarded classification,—

I have, &c.,
JEREMIAH CRONIN.

No. 2.

THE PUBLIC SCHOOL COMMITTEE TO THE SECRETARY, COUNCIL OF EDUCATION.

Wilcannia, 12 June, 1874.

SIR,

We have the honor to inform you that a meeting has been convened here, on the 15th May ultimo, for the purpose of taking into consideration the desirability of re-opening the Public School under the care of Mr. Jeremiah Cronin, late teacher of Menindie.

It was resolved:—

That the school be given into the charges of Mr. J. Cronin and his wife. A suitable schoolroom and teacher's residence has been rented at 30s. per week, and Mr. Cronin commenced his duties on the 18th May.

We have the pleasure of stating that the average number of scholars reaches forty-five, which is considerably above what it has been under the care of the former teacher.

At the time of the meeting and appointment of the teacher our Local Secretary was absent from Wilcannia.

We regret the delay in forwarding the advice of our action.

Yours obediently,
CHAS. NEAM VAUGHAN.
WM. HATTEN.
ED. O'DONNELL.

President, 8/7/74. Mr. Cronin may be appointed temporarily—J.S.

No. 3.

THE SECRETARY, COUNCIL OF EDUCATION, TO THE INSPECTOR.

B.C., Inspector of Albury District. For advice.—W.W., 26/6/74.

B.C., Secretary.

Wilcannia P. : Mr. Cronin's application for office of teacher in.

UNDER ordinary circumstances I should deem it inexpedient to advise Mr. Cronin's re-admission to the Council's service, on the following grounds, viz. :—

1. Because of his eccentric manner, which will always militate against his success as a teacher, and
2. Because of the want of due forethought and economy he has displayed in the management of his private affairs, whereby he was (during the time I knew him as teacher of the Menindie Public School) in embarrassed circumstances, resulting in his arrest and imprisonment for debt. His release was due to an act of kindness performed by one upon whom Mr. Cronin had no claim for consideration.

In other respects he would no doubt be eligible for appointment; and should the Local Committee at Wilcannia offer a formal recommendation for his appointment, I would suggest that it be entertained. To this end I beg to recommend,—

That the Local Committee at Wilcannia be furnished with a copy of Mr. Cronin's application, and be requested to state whether they are desirous of retaining his services.

E. H. F.
3/7/74.

No. 4.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. J. CRONIN.

(74-12,491.)

Council of Education Office,
Sydney, 10 July, 1874.

SIR,

I have the honor, by direction of the Council of Education, to acquaint you that you have been appointed teacher of the Public School at Wilcannia (temporarily), to be assisted in your duties by your wife, in accordance with the provisions of Article 42 of the Regulations of the 8th March, 1869.

2. The Council has awarded you salary at the rate of £66 per annum, the rate attached to your classification, to take effect from the date of your entry on duty.

3. Before entering upon your duties it will be necessary for you to exhibit this letter to the Members of the Public School Committee, whose names are noted in the margin, in evidence of your appointment by the Council.

I have, &c.,
W. WILKINS,
Secretary.

Messrs. E. T.
Bonney; J. C.
Woore, P.M.; C.
N. Vaughan;
F. Martin; E.
O'Donnell; W.
Hatten; A.
Tewksley.

No. 5.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. A. TEWSLEY.

(74-12,492.)

Council of Education Office,
Sydney, 10 July, 1874.

SIR,

I am directed to acquaint you, for the information of the Public School Board, that the Council of Education has appointed Mr. Jeremiah Cronin to be teacher of the Public School at Wilcannia (temporarily), to be assisted in his duties by his wife, in accordance with the provisions of Article 42 of the Regulations of the 8th March, 1869.

2. The Council has awarded Mr. Cronin salary at the rate of £66 per annum, to take effect from the date of entry upon duty.

3. Mr. Cronin has been instructed, before entering upon his duties, to exhibit to you his letter of appointment, in testimony of his official recognition by the Council.

I have, &c.,
W. WILKINS,
Secretary.

No. 6.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. C. N. VAUGHAN.

(74/12,493.)

Council of Education Office,
Sydney, 10 July, 1874.

SIR,

I am directed to acquaint you, for the information of the Public School Committee, that the Council of Education has appointed Mr. Jeremiah Cronin to be teacher of the Public School at Wilcannia (temporarily), to be assisted in his duties by his wife, in accordance with the provisions of Article 42 of the Regulations of the 8th March, 1869.

2. The Council has awarded Mr. Cronin salary at the rate of £66 per annum, to take effect from the date of his entry on duty.

3. Mr. Cronin has been instructed, before entering upon his duties, to exhibit to you his letter of appointment, in testimony of his official recognition by the Council.

I have, &c.,
W. WILKINS,
Secretary.

No. 7.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. J. CRONIN.

(74/12,494.)

Council of Education Office,
Sydney, 10 July, 1874.

Your letter of 6th June ultimo, applying for appointment.

With reference to my letter of this date, in which it is notified that the Council has appointed you to act temporarily as teacher of the above school, I am to point out that this arrangement is intended to be *provisional* only, pending the appointment of a permanent teacher.

W. WILKINS,
Secretary.

No. 8.

MEMORANDUM TO INSPECTOR.

(B.C. 74/12,495.)

THE Council has appointed Mr. Jeremiah Cronin temporary teacher of the Public School at Wilcannia, with salary at the rate of £66 per annum from the day of the date of his entry on duty, provided his wife perform the duties required by Article 42 of the Regulations.

This arrangement is intended to be *provisional* only, pending the appointment of a permanent teacher.

Council of Education Office,
Sydney, 10 July, 1874.

W. WILKINS,
Secretary.

No. 9.

MR. J. CRONIN TO THE SECRETARY, COUNCIL OF EDUCATION.

Public School, Wilcannia,
23 July, 1874.

SIR,

I have the honor to acknowledge the receipt of your letter and memorandum, dated 10th July instant, appointing me *temporarily* and *provisionally* as teacher of the Public School at Wilcannia, and in reply I beg to submit the following for the consideration of the Council of Education.

In December, 1867, I resigned my office of teacher of the St. Francis School, Sydney, and in November, 1868, I was appointed to the Menindie Public School, but was not on that occasion thrown back on my then classification. My letter to you of the 6th June ultimo contained an application for the appointment of myself and Mrs. Cronin to be teachers under our awarded classification, viz., Class III, Section A. You will therefore easily understand my amazement in now finding myself as a probationer, and why this reduction should have been made is incomprehensible to me. I am quite satisfied to fulfil the office, *pro tem.*, until the first class teacher of Greek, Latin, German, French, Music, and other accomplishments, apparently required by at least one member of the School Committee, arrives; but in so remaining it must be under my awarded classification of 17th August, 1870.

By my last quarterly return you will notice that I have been fortunate enough in raising the average attendance from twenty-six to over forty; that I have organized a good school, which is kept strictly under the Regulations, and is giving general satisfaction. And perhaps you will now pardon me for stating that I have a wife and six children to support; that provisions and clothing are 25 per cent. higher here than in Sydney; and that it will be incumbent upon me to adopt a more lucrative means of obtaining a livelihood in the same vocation in this town, unless my classification is allowed on that scale which the Council of Education once deemed me worthy of.

I have, &c.,
JEREMIAH CRONIN.

President.—10/7/75.

Allow salary of classification from 1st September.—J.S.

No. 10.

(74-17,296.)

Council of Education Office,
Sydney, 11 September, 1874.

MEMORANDUM from the Secretary to Mr. J. Cronin, temporary teacher of the Public School at Wilcannia.

Your letter of 23rd July, respecting salary.

THE Council has consented to pay you salary at the rate of £102 per annum, as temporary teacher of the above school, from 1st September instant, provided your wife perform the duties required of teachers' wives by Article 42 of the Regulations.

W. WILKINS,
Secretary.

No. 11.

MR. D. HAGENS TO THE SECRETARY, COUNCIL OF EDUCATION.

Wilcannia, 28 April, 1875.

SIR,

I have the pleasure of sending you, according to instructions from the members of the Local Board of the Wilcannia Public School, a copy of the minutes of the first meeting, held on the 24th April, 1875.

I have, &c.,
D. HAGENS,
Secretary.

A meeting of the Local Board of the Public School in Wilcannia was held on the 24th April, 1875, at which nominations of members for new Board were read; those present accepted their offices, their names being—

Messrs. Edward Smith Bonney
John Chadwick Woore,
Charles Neam Vaughan,
Edward O'Donnell,
Daniel Hagens,

Arthur Tawsley.

Those not present being—
Messrs. Edward Martin,
Edward Quine.

Proposed

Proposed by Mr. Vaughan, seconded by Mr. Bonney, That Mr. Woore be appointed Chairman.—Carried.

Proposed by Mr. Bonney, seconded by Mr. O'Donnell, That Mr. Daniel Hagens be Secretary.—Carried.

Proposed by Mr. Hagens, seconded by Mr. Vaughan, That Mr. Wilhems Le Brun Brown be recommended as a member of the Board, *vice* Mr. J. Kennedy, deceased.—Carried.

Proposed, That regular meetings be held quarterly on the last Saturday of each quarter, dating from March 1875, by Mr. Bonney, seconded by Mr. Woore. Carried.

Proposed by Mr. O'Donnell, seconded by Mr. Hagens, That the new Public School buildings, &c., be taken over from the contractor by the Board, on behalf of the Council of Education, according to instructions received by the Secretary, and upon the recommendation of Messrs. Bonney, Woore, O'Donnell, Vaughan, and Tewsley, who inspected the same. Carried.

Proposed by Mr. Bonney, seconded by Mr. O'Donnell, That the Secretary be requested to write to the Council of Education, asking for the removal of the present schoolmaster (Mr. J. Cronin), as the school is not flourishing under the management, and many parents refusing to send their children to him.

Proposed by Mr. Hagens, seconded by Mr. Tewsley, That the Secretary be instructed to write to the Council of Education, asking for the appointment of a first-class married teacher, and the Local Board are prepared to guarantee fees for seventy pupils at one shilling per week for a really able man. Carried.

JOHN C. WOORE,
Chairman.

No. 12.

THE SECRETARY, COUNCIL OF EDUCATION, to THE INSPECTOR.

B.C.—Inspector of Albury District.

In accordance with the Public School Board's desire, the Council has agreed to cancel Mr. Cronin's temporary appointment as soon as the services of a suitable successor can be secured. Be good enough, therefore, to state if you can arrange for the appointment of a qualified married teacher.

Urgent. 20/5/75.

No. 13.

THE INSPECTOR to THE SECRETARY, COUNCIL OF EDUCATION.

Wilcannia Pub. : appointment of teacher to.

B.C. Secretary.—See my B.C. 75-130 of this day's date.—E.H.F.

No. 14.

MR. D. HAGENS to THE SECRETARY, COUNCIL OF EDUCATION.

Wilcannia, 28 April, 1875.

SIR,

I beg to inform you that I have been instructed by the Members of the Local Board of the Wilcannia Public School to ask for the removal of the present schoolmaster, Mr. J. Cronin.

A charge directly cannot be laid against the schoolmaster, the same time he is not what a schoolmaster should be. The school is not flourishing under his management, and the majority of the parents refuse to send their children to him.

You will admit it is of the greatest importance to have a proper teacher for the welfare of the rising generation; for that reason the Local Board came to the conclusion to ask for the removal of the present schoolmaster.

I have, &c.,
D. HAGENS,
Secretary.

President, 13/5/75. Provl. appointment may be cancelled as soon as another teacher can be secured.—J.S.

No. 15.

MR. EDWD. S. BONNEY to THE SECRETARY, COUNCIL OF EDUCATION.

Momba, River Darling,
New South Wales,
4 May, 1875.

SIR,

You would receive last mail a letter from the Secretary of the Local Committee, Wilcannia, with copy of resolutions calling your urgent attention to the very small attendance at the Wilcannia Public School on account of the unfitness of the master; the fact that not half the children attend speaks for itself—at the same time the parents will not bring any stated charge against the master. If they would put down in writing what they have told me I feel sure the man would not be allowed to stop a day, but sooner than do that they keep the children away. Before I went to England I took great interest in getting the school built; on my return I had hoped to have found it doing well, instead of that I find it a disgrace to the district.

My object in writing you is to ask you to do all you can towards getting us a good man. I have promised to make up any money that may be deficient towards giving him a good salary. If the Council of Education will send such a one we will be only too glad to help him.

Not more than thirty attend. I have not the least doubt a good man would get over eighty. There are children on my own stations old enough to attend, but I am unable to advise the parents to send them until the school is in a more satisfactory state.

I remain, &c.,
EDWD. S. BONNEY.

No. 16.

No. 16.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. D. HAGENS.

(75,9088.)

Council of Education Office,
Sydney, 19 May, 1875.

SIR,

I am directed by the Council of Education to acknowledge the receipt of your letters, dated 28th April instant, in which you request that Mr. Cronin may be removed from the charge of the Public School at Wilcannia, and that a "first class married teacher" may be appointed to succeed him.

2. In reply, I am instructed to state that, as it appears from your letters that Mr. Cronin does not conduct the school in a satisfactory manner, the Council will be prepared to cancel his temporary appointment as soon as the services of a suitable teacher can be secured.

3. I am to point out, however, that a "first class" teacher, in the sense of one holding the "first or highest class certificate," would not be willing to accept appointment to a school such as that at Wilcannia. It is hoped, however, that arrangements will soon be effected whereby a qualified married teacher may be provided for this school.

I have, &c.,
W. WILKINS,
Secretary.

No. 17.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. E. S. BONNEY.

(75,9087.)

Council of Education Office,
Sydney, 23 May, 1875.

SIR,

With reference to your letter of 4th May instant, I am directed by the Council of Education to acquaint you the Council has agreed to cancel Mr. Cronin's temporary appointment as teacher of the Public School at Wilcannia, as soon as arrangements can be made in order to secure the services of a qualified married teacher to succeed him.

I have, &c.,
W. WILKINS,
Secretary.

No. 18.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. D. HAGENS.

(75,9667.)

Council of Education Office,
Sydney, 1 June, 1875.

SIR,

With reference to my letter, dated 20th May, ultimo, No. 75,9087, I am now directed by the Council of Education to acquaint you that Mr. Edward MacDonnell has been appointed to take charge of the Public School at Wilcannia. He holds a certificate of classification, is recommended by the District Inspector, and proposes to be married before entering on duty, which he is expected to do on 1st August next.

2. Mr. Cronin has accordingly been informed that his services as temporary teacher will terminate upon the arrival of Mr. MacDonnell.

I have, &c.,
W. WILKINS,
Secretary.

No. 19.

MEMORANDUM to INSPECTOR.

Wilcannia Pub.: your B.C., No. 75/130, as to provision of a teacher for.

(B.C. 75-9,666.)

THE Council has agreed to appoint Mr. E. M'Donnell as teacher of the above school, on the terms mentioned in your B.C. No. 75/130.

Mr. Cronin has, therefore, been informed that his services as temporary teacher will terminate on the arrival of Mr. M'Donnell.

Council of Education Office,
Sydney, 1 June, 1875.

W. WILKINS,
Secretary.

No. 20.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. J. CRONIN.

(75-9,691.)

Council of Education Office,
Sydney, 1 June, 1875.

SIR,

I am directed by the Council of Education to acquaint you that, in accordance with the request of the Public School Board, the Council has decided to discontinue your services as temporary teacher of the Public School at Wilcannia.

2. When, therefore, the newly appointed teacher, Mr. M'Donnell, has arrived, which he is expected to do on the 1st August next, payment of salary to you will cease.

I have, &c.,
W. WILKINS,
Secretary.

No. 21.

No. 21.

MR. J. CRONIN TO THE SECRETARY, COUNCIL OF EDUCATION.

Wilcannia Public School,
17 June, 1875.

SIR,

I am in receipt of your letter, No. 75/9,691, dated 1st June instant, in which you are directed to acquaint me that, in accordance with the request of the Public School Board, the Council has decided to discontinue my services as teacher of the Public School at Wilcannia as soon as Mr. M'Donnell arrives, which he is expected to do on the 1st August next.

2. With reference to this notification, I beg very respectfully to state that it took me very much by surprise, unaccompanied as it was by any further reasons than my removal is at the request of the Public School Board.

3. The abruptness of my removal and my virtual dismissal from the office of teacher led me to read once more carefully Article 30 of the Regulations, adopted by the Council of Education on 8th March, 1869; and while no teacher under that Council can be found more obedient, nor more precise in carrying out the duties incumbent upon him, I did, and do now, feel somewhat hurt that my removal should have been so decisive.

4. I have been not ignorant that from the first day of my appointment as temporary teacher there was a prejudice in the minds of some against me; and though I had friends in my favour, I endeavoured to live down that prejudice by pursuing a course of conduct becoming in a teacher—not leaving myself open to the reproach of any man, either for inattention, immorality, or bad associations. The surprise is greater to me, therefore, because no member of the Public School Board ever visited my school, never witnessed my manner of teaching, never complained to me; and to-day, on inquiring, a member of the said Board assures me that he attended every meeting but never dreamt anything being done prejudicial to my interest, and most assuredly nothing against either my character or fitness was ever discussed within his hearing.

5. Under my temporary engagement, followed by a salary under my classification, and in view of a meeting of the Local School Board in November last, at which the District Inspector was present, it was decided, as I was led to understand, that I was to be allowed a twelve months' trial in the new school, with better school appliances, and I have no doubt one reason for such a decision was that under the then existing undesirable arrangements I had increased the daily average attendance to 30 per cent.

6. Under these circumstances, whilst bowing to the decision of the Council of Education, I beg respectfully to inquire whether I could not be appointed as teacher of another Public School; and for the necessary attainments I need only refer to the classification under which I have for many years received salary.

I have, &c.,

JEREMIAH CRONIN,

Teacher.

President, 29/6/75. No appointment to offer.—J.S.

No. 22.

RESIDENTS OF WILCANNIA TO THE COUNCIL OF EDUCATION.

Wilcannia, 29 June, 1875.

GENTLEMEN,

We, the undersigned parents in Wilcannia, who send children to the Public School to be taught by the present teachers, Mr. and Mrs. Cronin, and residents in the same township, having heard with much regret of the Council's decision to dispense with their services at the end of July next, respectfully submit to your favourable consideration the following reasons against the conclusion at which you have arrived:—

1. That no complaint against the present teachers has been made by those parents who send children to school, the average daily attendance being, as we think, about forty, a greater average than ever attended the local school under previous teachers.

2. That no complaint against the present teachers has been made by those parents who send children to school; they have had no reason, as we believe, and have not complained to your Council.

3. That no Member of the School Board has visited the Public School during school hours, to enable him to judge of the ability or otherwise of the present teachers to teach according to the Public Schools Act and the Regulations thereunder, approved by His Excellency the Governor and Executive Council.

4. That it appears to be more reasonable to us that the question of fitness and of attainments of teachers depends more on the official and responsible report of the Public Schools' Inspector of this district than on the opinion of any particular member of the School Board, whose opinion may, perhaps, be arrived at without due consideration, and probably from some hasty and inconsiderate sectarian prejudice.

5. That it seems to us to be unjust to displace Public School teachers or public servants, as a rule, until they have been furnished with a copy of any accusation that may have been made against them, and until their defences have been heard.

6. For these reasons, we beg respectfully that you will reconsider the decision at which you have arrived, and cause such steps to be taken as will elicit further inquiries, in order that no injustice may be done to the present Public School teachers who, we believe, are giving satisfaction to the great majority of parents who send their children to school.

We beg to subscribe ourselves, &c.,

BARRY COTTER.

NOTE.—5 children belonging to the teacher are not included, as it was deemed better not to ask him to sign this list, and I am informed about 12 children have left the district since the present teacher commenced.

BARRY COTTER.

No. 23.

MR. BARRY COTTER TO THE SECRETARY, COUNCIL OF EDUCATION.

Wilcannia, 30 June, 1875.

SIR,

Permit me please to forward to you, at the request of a deputation that waited upon me yesterday, the accompanying letter, with a request that you will be kind enough to lay same before the Council of Education.

I may perhaps be permitted to state from my personal knowledge of Mr. and Mrs Cronin, of their diligence in duty and general assiduity as teachers, both in Menindie and especially in Wilcannia for many years, the latter place nearly twelve months in a temporary school in premises partly occupied by myself. I have noticed their attentiveness and heard expressions of satisfaction from parents.

Very faithfully yours,
BARRY COTTER.

THE SECRETARY, COUNCIL OF EDUCATION, TO MR. BARRY COTTER.

(75-14,026.)

Council of Education Office,
Sydney, 22 July, 1875.

SIR,

I am directed by the Council of Education to acquaint you that the Council has had under notice the communication forwarded with your letter, dated 30th June ultimo, from certain residents of Wilcannia, requesting that, for various reasons therein specified, the Council will reconsider its decision to dispense with the services of Mr. J. Cronin as teacher of the Public School at Wilcannia, at the termination of the present month.

2. In reply, I am instructed to state that, having given full and careful consideration to the matter, the Council sees no sufficient reason for departing from the decision already arrived at in regard to the discontinuance of Mr. Cronin's services.

I have, &c.
W. WILKINS,
Secretary.

EDUCATION.

No. 1.

E. HOLAHAN AND OTHERS TO THE COUNCIL OF EDUCATION.

German's Hill, 26 April, 1872.

GENTLEMEN,

We, the undersigned residents on the German's Hill, respectfully request the Council of Education will be pleased to grant a salary to Miss M. Morony, who is at present engaged in teaching the children. We are very poor, and we fear the teacher may not long remain if the Council of Education long delays the granting of a salary. We propose to build a suitable house as soon as we hear from the Council of Education. Our little ones sorely need the assistance of a teacher, and we think we can easily keep up the number required for a Provisional School.

Trusting that you will take our request into immediate consideration,

We remain, &c.,

Edward Holahan,	Thomas Byrne,
John Britt,	James Byrne,
Patrick Walsh,	Patrick Finneran,
Michael Trefy,	John Finneran,
Bernard M'Keon,	John Lester,
John Carrol,	Jas. Gaspar,
James Carrol,	William Wilson,
John M'Keon,	John Kelly,
Florence Sullivan,	John Mitchell,
William Doolan,	James Mitchell,
John Monogue,	Michael Mitchell,
Martin Donohue,	James Eagan,
Daniel Press,	Mrs. Kelly,
Mrs. Doolan,	Edward Drew,
James M'Lean,	Martin Neil,
William Astill,	John Connolly,
Michael Noonan,	Patrick M'Keon,
Michael Neil,	Paul Cullen,
Michael Gough,	Neil Gallagher.

The number of children at present are eighteen.
Direct to Edward Holahan, German's Hill, near Dray.

No. 2.

MESSRS. M'KEON, WELCH, & PRESS TO THE COUNCIL OF EDUCATION.

13 May, 1872.

GENTLEMEN,

We beg to request that you will grant assistance to the Provisional School established by us at the German's Hill, in accordance with the 13th section of the Public Schools Act.

We submit the name of Miss Mary Moroney as teacher of the school, knowing her to be a person of good moral character, and believing her to be competent to perform the required duties.

We have, &c.,
BERNARD M'KEON.
PATRICK WELCH.
DANIEL PRESS.

INFORMATION to be supplied by applicants.

1. Describe the position of the proposed school? Is healthy—on the crown of hill. Water close by.
2. What other schools, maintained or aided by the Council of Education, are within 2 miles of the site of the proposed school? None.
3. If none are within 2 miles, what is the distance of the nearest school? The Meadow is the nearest, 4 miles about, from the proposed school. The distance to Orange is
4. Are there any Primary Schools not aided by the Council of Education within 2 miles of the proposed school? If so, of what character and how attended? None.
5. State the number of children, from four to fourteen years of age, living within a radius of 2 miles of the site of the proposed school, e.g. :—

Boys	13
Girls	14
										—
									Total	27
Religious Denominations :—										
Church of England	3
Roman Catholic	23
Presbyterians	1
Wesleyans	0
Others	0
										—
									Total	27
										—

6. Describe the school buildings as regards—(1) material ; (2) dimensions ; (3) accommodation afforded ; (4) state of repair ?

FORM to be filled up by Teachers of proposed Provisional Schools.

Name.	If married.	Age.	Place where born.	Religious Denomination.	Where trained.	Where employed, and during what length of time, as teacher in the Colony.
Mary Moroney...	Single	18	Goulburn	Roman Catholic..	Public School, Lucknow.	Never was employed as teacher anywhere.

No. 3.

(B.C., 72-817.) MEMORANDUM to THE SECRETARY, COUNCIL OF EDUCATION.

The German's Hill: Application for aid to Provisional School at.

WITH reference to this application, forwarded to me from the Council's Office on the 17th instant, I would beg to point out that I cannot visit and report upon the matter until after returning from my present tour. The report thereon will therefore be necessarily delayed until some time in July.

The German's Hill is situated on or near the road from Orange to Cargo. A school is needed somewhere in that locality, but it may be a question whether a Public School may not be requisite. On this, however, I cannot express an opinion without visiting.

The applicants say, "We propose building a suitable schoolhouse as soon as we hear from the Council of Education." Would it not be well to acquaint them that "a suitable schoolhouse" must be provided before the question of granting aid can be considered by the Council?

J. M'CREIDIE,

Inspector, Bathurst District.

Binalong, 30 May, 1872.

Address given:—Mr. Ed. Holahan, The German's Hill, near Orange.

Names of applicants:—Messrs. B. M'Keon, Patrick Welch, Daniel Press.

No. 4.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. E. HOLAHAN.

(72-6,030.)

SIR,

Council of Education Office,
Sydney, 7 June, 1872.

Referring to the formal application for aid to a Provisional School at the German's Hill, I am directed by the Council of Education to acquaint you that the Council will not be in a position to arrive at a decision in the matter until the Inspector has had an opportunity of visiting the locality.

I have, &c.,

W. WILKINS,

Secretary.

MEMORANDUM to THE INSPECTOR OF SCHOOLS, BATHURST DISTRICT.

(B.C., 72-6,031.)

The German's Hill: Your B.C., No. 72-817, dated 30th ultimo.

THE applicants for the school have been informed that no decision can be arrived at until the receipt of your report.

Be good enough to furnish your report as soon as practicable.

Council of Education Office,
Sydney, 7 June, 1872.

W. WILKINS,
Secretary.

No. 6.

MR. B. M'KEON to THE COUNCIL OF EDUCATION.

Orange, 11 June, 1872.

SIR,

I beg to make application for the grant of 1 acre of land at the foot of German's Hill, Naninia, near Orange, for the purpose of erecting a building to be used as a Provisional School under the Council of Education.

I am, &c.,
BERNARD M'KEON.

B.C., Inspector of Bathurst District.—W. W., 18/6/72.

B.C., Secretary,—The proposed site appears to be central, and is in other respects suitable. I would beg to recommend that two (2) acres be applied for as a site for a Public School. The following is the description:—2 acres of ground at German's Hill, Cargo Road; bounded on one side by Michael Teefy's free selection; on another by the Cargo Road; and on the third side by a stream known as Press's Creek.—J. M'CREDIE, Inspector, Bathurst District, 13/7/72.

No. 7.

MR. B. M'KEON to THE COUNCIL OF EDUCATION.

Orange, 3 July, 1872.

GENTLEMEN,

We beg to request that you will grant assistance to the Provisional School established by us at German Hill, in accordance with the 13th section of the Public Schools Act.

We submit the name of Mary Morony as teacher of the school, knowing her to be a person of good moral character, and believing her to be competent to perform the required duties.

We have, &c.,
BERNARD M'KEON.

INFORMATION to be supplied by applicants.

1. Describe the position of the proposed school? It is situated in a very healthy place—high ground, and well watered.
2. What other schools, maintained or aided by the Council of Education, are within 2 miles of the site of the proposed school? None.
3. If none are within 2 miles, what is the distance of the nearest school? No school within 4 miles of it.
4. Are there any Primary Schools, not aided by the Council of Education, within 2 miles of the proposed school? If so, of what character, and how attended? None.

No. 8.

MEMORANDUM TO THE INSPECTOR OF SCHOOLS, BATHURST DISTRICT.

Council of Education Office,
Sydney, 6 July, 1872.

To be returned with the reply written on it when necessary.

German Hill: Application for aid to a Provisional School.

3rd July, 1872. FOR your inquiry and report. It is presumed that this is merely a renewal of the application which was referred to you on the 17th May last.

W. WILKINS,
Secretary.

This is merely a renewal of the application of the 13th May last, to the report on which I would beg to refer for information.—J. M'CRENIE, Insp., Bath. Dist., 13/7/72.

No. 9.

MEMORANDUM TO THE INSPECTOR OF SCHOOLS, BATHURST DISTRICT.

Council of Education Office,
Sydney, 17 May, 1872.

To be returned with the reply written on it when necessary.

The German's Hill: Application for aid to a Provisional School.

13th May, 1872. FOR your inquiry and report.

R. E. WEBSTER,
Pro Secretary.

1. Upon visiting German's Hill on the 11th instant I found six children present. About sixteen were said to be the usual attendance, but it is not possible that such a number could be properly taught in the hut in which I found the school conducted. This hut is at the residence of Mr. B. M'Keon, and is utterly unsuitable for a schoolroom.

2. The population should be sufficient to warrant the establishment of a Public School, but in the absence of compulsory attendance it is doubtful if the necessary average for a Public School could be maintained, and it may be as well to test the matter by granting aid to the school as a Provisional one.

3. As soon as a site has been secured, the erection of a suitable schoolroom will be proceeded with. A separate report on the matter of the site is herewith forwarded.

4. I do not think the proposed teacher should be aided unless on probation. She is young, untried, has but slender attainments, and seems to possess only indifferent natural aptitude for the work.

5. I would beg to recommend that aid be promised as soon as a suitable building has been erected and provided with furniture, and the necessary outhouses on the site for which application is proposed to be made. Herewith is a list of school materials, &c.

Bathurst, 13 July, 1872.

J. M'CRENIE, Insp., Bath. Dist.

No. 10.

No. 10.

INFORMATION to be supplied by Inspectors when reporting upon applications for aid to Provisional Schools
Proposed Provisional School at German's Hill.

1. Who are the persons signing the application as promoters of the school? State their occupations and respective religious denominations? Bernard M'Keon, farmer, R.C.; Patrick Welch, farmer, R.C.; Daniel Press, farmer, C.E.
2. Are they suitable persons to act as a local committee? I only saw Mr. B. M'Keon; the others were from home. Mr. Press is said to be unable to sign his name, and is therefore unsuitable. Mr. M'Keon is a decent man of his class, but is little fitted to supervise a school.
3. Is the information supplied by the applicants correct as regards the distance of other schools? Yes; it is about 5 miles from the Canoblas Public School.
4. Is the information supplied respecting the number of children living within 2 miles of the proposed school correct? No. Under query 5 of "Information to be supplied by Applicants," the number of children guaranteed in the annex to attend the school is given—not the number in the locality. From notes taken at the time of my visit I find that there are 40 children fit for school within 2 miles, and 53 (if not more) within 3 miles of the proposed school. The large majority are Roman Catholics.
5. Is the number of children residing within a reasonable distance of the proposed school insufficient to warrant the establishment of a Public School (*Public Schools Act, sec. 8*)? No; they are sufficient if anything like regularity of attendance could be depended upon; but this, from the character of the country, the scattered population, and the class of people, cannot be relied upon.
6. State the number of children expected to attend the school, distinguishing males and females:—Boys, 14; girls, 13; total, 27. These are guaranteed to attend.
7. What do you consider will be the average attendance of pupils? Probably over 20, when a suitable schoolroom is built.
8. Is the district likely to be permanently inhabited? Yes, the people around are all free selectors.
9. Describe the school buildings as regards—(1) materials; (2) dimensions; (3) accommodation afforded; (4) state of repair? There is no school building yet erected, but I am informed that about thirty pounds (£30) have been collected to build it and provide furniture. When I visited, on the 11th instant, I found Miss Moroney with six (6) children (all, except one, M'Keon's) at Mr. Bernard M'Keon's. These six children were being taught in a little hut, about 9 feet square, the walls of which were barely (6) six feet in height. It was unfloored, and without chimney, window, or furniture, except a small form. It is totally unsuitable for teaching.
10. Has sufficient school furniture been provided? If not, will the local committee engage to provide it? (a) None. (b) Yes, Mr. B. M'Keon says.
11. State what information you have obtained relative to the teacher's character and qualifications:—Miss Moroney's father lives at Lucknow, the Public School at which place she formerly attended. So far as I can gather from information received at that place, she bears a good character. Answers to the printed questions are delayed on account of the want of testimonials, which she is to obtain and forward to me. So far as I had time to test her qualifications, they are of an indifferent character, and I should not recommend her to be aided unless on probation.
12. Are the local committee aware that all Provisional Schools must be conducted as Public Schools? Yes.
13. In addition to the matters before mentioned, state any other circumstances within your knowledge connected with the application, which you may consider material for the information of the Council.

No. 11.

THE SECRETARY, COUNCIL OF EDUCATION, TO THE PRINCIPAL UNDER SECRETARY.

(72/7,832.)

Council of Education Office,
Sydney, 16 July, 1872.

SIR,

I am directed by the Council of Education to request that an application may be made to the Honorable the Minister for Lands for a grant of the undermentioned portion of land for Public School purposes, viz. :—

2 acres at German's Hill, Cargo Road, bounded on one side by Michael Teefy's free selection—on another by the Cargo Road; and on the third side by a stream known as Press's Creek.

I have, &c.,
W. WILKINS,
Secretary.

No. 12.

THE SECRETARY, COUNCIL OF EDUCATION, TO MR. B. M'KEON.

(72/7,833.)

Council of Education Office,
Sydney, 16 July, 1872.

SIR,

In reply to your letter of the 11th ultimo, I am directed by the Council of Education to acquaint you that the Council has now made application to the Government for a grant of 2 acres of land for school purposes at German's Hill.

2. A further communication will be made to you when the decision of the Government has been notified to the Council.

I have, &c.,
W. WILKINS,
Secretary.

No. 13.

MEMORANDUM TO THE INSPECTOR OF SCHOOLS, BATHURST DISTRICT.

(B.C., 72/8,043.)

The German's Hill: Your report upon application for aid to a Provisional School. YOUR report is not complete, as you have failed to furnish the information regarding the teacher referred to in my circular memorandum No. 72/4,370, dated 25th April last, to which your attention is invited. Papers herewith returned for completion of report.

Council of Education Office,
Sydney, 22 July, 1872.

W. WILKINS,
Secretary.

No. 14.

INSPECTOR'S Report upon Mary Morony, applicant for the office of teacher in the Provisional School at German Hill, 11th July, 1872.

1. Apparent age?—About 18. 2. Married or otherwise?—Single. 3. Personal appearance?—Rather slovenly. 4. Constitution?—Healthy. 5. Bodily infirmities?—None. 6. Apparent character?—Steady and industrious, but not apparently possessing much energy. 7. Reputation as evinced by testimonials?—Good. 8. Estimated value of testimonials?—Good as to character. One testimonial (Mr. Flanagan's) expresses the opinion that "she will make a good teacher," from his knowledge of her in the Roman Catholic school, Orange, for six months. This opinion is, I think, of considerable value. 9. Ability to read and write?—Reading fair; writing moderate. 10. Popular estimate of applicant's character in the locality? — 11. Inspector's general opinion of applicant? I. As to information?—Moderate. II. As to intelligence?—Tolerable. III. As to industry?—Fair. IV. As to carefulness and discretion?—Tolerable. V. As to aptitude for teaching?—Indifferent, judging from what I saw of her teaching at German Hill, but from the small number present, and the miserable surroundings of the school, she did not appear to advantage. It was a cold rainy day, and the hut miserably damp, so that both teacher and children (6) were shivering with cold. VI. If recommended for appointment?

Inspector's Office, Bathurst,
24 July, 1872.

No. 15.

MEMORANDUM TO THE SECRETARY, COUNCIL OF EDUCATION.

(B.C., 72/1,089.)

German's Hill: Information required from teacher.

It will be observed that in this document, hereto appended, under "Present condition," there are two blank spaces,—Miss Moroney not having any testimonials, and being unable to name referees.

The testimonials, now obtained and forwarded, supply for the most part therein the information omitted.

Bathurst, 24th July, 1872.

J. M'CREDIE,
Inspector, Bathurst District.

No. 16.

INFORMATION REQUIRED FROM APPLICANTS FOR THE OFFICE OF TEACHER IN PROVISIONAL SCHOOLS.

Past History.

How long have you resided in New South Wales? Eighteen years.

How has your time been occupied during this period? Going to school fourteen years.

If you have resided in other countries, state how your time has been employed since you were 18 years of age? Never been out of New South Wales.

Present Condition.

State your reasons for quitting your last situation? I have never been in any situation.

What is your present means of subsistence? Teaching.

Give a list of the testimonials as to moral character you have produced? I have none at present, but will try to obtain some.

What opportunities of knowing you intimately have those had who now sign your testimonials?

State explicitly opposite the names of your referees how long each has known you, and at what time they last saw you.

Mention your pecuniary circumstances, whether solvent or otherwise?—Solvent.

If you are a member of any Christian Church, state the Pastor's name, how long he has known you, and whether he has given you a certificate of character? Roman Catholic—Pastor's name, Father Walsh, having known me for seven months, and given me a certificate of character.

Previous experience in Teaching.

If you have ever been engaged in teaching, state explicitly where, how long, and under what circumstances? Teaching school for one month. It being private at German Hill.

Has your last employer given you any testimonial?—If so, append it? Never been in any employment before.

Have you ever been trained as a teacher?—If so, state the particulars? Never been trained.

If you have not, state what evidences of aptitude for teaching you can adduce? Have always been engaged as monitor in school. If

If you have abandoned teaching, state your reasons for so doing? Teaching school since I first opened at German Hill.

State what you think the moral qualifications of a teacher should be—for instance, as regards industry, conscientiousness, uprightness, temperance? Should be able to sew and do all kinds of fancy work; should bear a good character and be very temperate; should be able to keep good order in school, and show the pupils a good example.

Education.

Enumerate the particulars of your early education? Have been going to private schools for three years, and learnt all that the person engaged in teaching could teach. Have been going chiefly to the Lucknow Public School.

What works have you studied more recently? Gleig's Grammar; parsing and analysis; Wilkins' Geography of New South Wales; Irish National School Books, third and fourth; object lessons on tea, coffee, sugar, &c.

How are your evenings at present spent? Sewing.

If ever in a Court of Law, state under what circumstances. I have never been in a Court of Law.

MARY MORONY,
11th July, 1872.

This form was filled up in my presence and under my supervision.—J. M'C., 11/7/72.

No. 17.

MEMORANDUM TO THE SECRETARY, COUNCIL OF EDUCATION.

(B.C., 72-1,090.)

The German's Hill: Your B.C., No. 72-8,043.

Miss Moroney's statement and my report were delayed on account of her inability to furnish any testimonials. In the case of Condobolin Provisional School Teacher's papers, I was censured for forwarding them without the necessary testimonials, and told that it would have been better to have retained them until I could furnish the Council with full and definite information, and since, I have acted accordingly.

In the absence of any definite instructions on this point, I should have thought myself not doing my duty in withholding the general report on the application, because of the absence of the part relating specially to the teacher. In future, however, I shall act as it appears is desirable, whatever delay may take place in consequence.

Bathurst, 24th July, 1872.

J. M'CREIDIE,
Inspector, Bathurst District.

No. 18.

THE SECRETARY, COUNCIL OF EDUCATION, TO MR. B. M'KEON.

(No. 72-8,229.)

Council of Education Office,
Sydney, 25 July, 1872.

SIR,

I am directed by the Council of Education to acquaint you that the Council has had under consideration the formal application for aid to a Provisional School at German's Hill, dated the 13th May last.

2. In reply, I am instructed to acquaint you that the Council will be prepared to deal favourably with the application on receiving information that a suitable building has been erected, and provided with furniture and the necessary outhouses, on the site for which application has been made to the Government.

I have, &c.,
W. WILKINS,
Secretary.

No. 19.

APPLICATION FOR AID TO A PROVISIONAL SCHOOL AT GERMAN HILL.

Orange, 23 April, 1873.

GENTLEMEN,

We beg to request that you will grant assistance to the Provisional School established by us at German Hill, in accordance with the 13th section of the Public Schools Act.

We submit the name of Susan Mara as teacher of the school, knowing her to be a person of good moral character, and believing her to be competent to perform the required duties.

We have, &c.,
BERNARD M'KEON.
PATRICK WELCH.
DANIEL PRESS.

INFORMATION to be supplied by applicants.

1. Describe the position of the proposed school? Built on rising ground, near water.
2. What other schools, maintained or aided by the Council of Education, are within 2 miles of the site of the proposed school? None.
3. If none are within 2 miles, what is the distance of the nearest school? 6 miles.
4. Are there any Primary Schools, not aided by the Council of Education, within 2 miles of the proposed school? If so, of what character, and how attended? There are none nearer than 6 miles.
5. State the number of children, from four to fourteen years of age, living within a radius of 2 miles of the site of the proposed school, *e. g.* :—

Boys	26
Girls	29
Total ...									55

Religious Denominations :—

Church of England	10
Roman Catholic	42
Presbyterians	3
Wesleyans	0
Others	0
Total									55

6. Describe the school buildings as regards—(1) material; (2) dimensions; (3) accommodation afforded; (4) state of repair.

FORM to be filled up by teacher of proposed Provisional School.

Name.	If married.	Age.	Place where born.	Religious Denomination.	Where trained.	Where employed, and during what length of time, as teacher, in the Colony.

No. 20.

MEMORANDUM to INSPECTOR OF SCHOOLS, BATHURST DISTRICT.

(73-5,097.)

German's Hill: Application for aid to a Provisional School.

For your inquiry and report. The probable attendance appears to warrant the establishment of a Public School.

Council of Education Office,
Sydney, 30 April, 1873.

R. E. WEBSTER,
pro Secretary.

No. 21.

MEMORANDUM to THE SECRETARY, COUNCIL OF EDUCATION.

German Hill: Annexed application for aid to a Provisional School.

GERMAN Hill is a free selectors' settlement, situated about 7 miles from Orange, 17 from Cargo, and about 5 miles from the Public School at Canobolas.

2. There are not fewer than seventy children of a school age in the locality, but many of these are kept almost constantly at work on the farms, and hence the number to attend a school will not, for the present, be over forty; and probably it will not exceed thirty-five.

3. A rough schoolhouse has been erected by the residents on a 2-acre site of Crown land, granted (or promised) to the Council for school purposes. The Local Committee promise that if the Council will at present grant aid to the school as a Provisional one, sufficient furniture shall be provided, suitable out-offices shall be erected, the land shall be fenced, and further, that as soon as practicable they will take the necessary steps to establish the school as a vested Public School.

4. There are at present thirty-one pupils enrolled in the school, and the average attendance is twenty. The teacher, Susan Mara, is a young person of excellent character, and she has fair aptitude for teaching. She has also had some experience under the Council in having, during ten months of last year, had charge of the Provisional School at Sally's Flat.

Recommendation.

I would recommend that the school be aided as a Provisional one up to the end of the current year, upon condition that the Local Committee engage that they will then make an earnest effort to establish it as a vested Public School.

Young, 9/6/73.

J. HUFFER,
Inspector.

No. 22.

INFORMATION to be supplied by Inspectors when reporting upon applications for aid to Provisional Schools.

Proposed Provisional School at German Hill:—

1. Who are the persons signing the application as promoters of the school? State their occupations and respective religious denominations? Mr. Bernard M'Keon, free selector, R.C.; Mr. Patrick Welch, free selector, R.C.; Mr. Daniel Press, free selector, C.E.
2. Are they suitable persons to act as a Local Committee? Yes.
3. Is the information supplied by the applicants correct as regards the distance of other schools? Not exactly. The applicants state that the nearest existing school (Canobolas) is 6 miles distant, whereas it is only $4\frac{1}{2}$ or 5 miles.
4. Is the information supplied respecting the number of children living within 2 miles of the proposed school correct? The number is larger than the applicants have stated. As nearly as I could ascertain, there are seventy children of a school age in the locality, viz., forty boys and thirty girls.
5. Is the number of children residing within a reasonable distance of the proposed school insufficient to warrant the establishment of a Public School (*Public Schools Act, sec. 8*)? No. The number ought to be sufficient, with tolerably regular attendance, to give a minimum average of forty.
6. State the number of children expected to attend the school, distinguishing males and females? At present forty-one are expected, viz., 19 boys, 22 girls. Boys over 10 or 11 years old are kept much at work on the farms.
7. What do you consider will be the average attendance of pupils? If aid be granted an average attendance of from twenty to twenty-five will at present be obtained. The average attendance since Miss Mara opened the school in the current year has been about twenty.
8. Is the district likely to be permanently inhabited? Yes.
9. Describe the school buildings as regards—(1) materials; (2) dimensions; (3) accommodation afforded; (4) state of repair? (1.) Slab walls, with interstices plastered, bark roof, and boarded floor. (2.) The whole building is 30 ft. x 16 ft. x 8 ft. Of this 8 ft. x 16 ft. are partitioned off for a teacher's bedroom. (3.) From thirty-five to forty pupils can be accommodated. (4.) The building is new, but the floor has not yet been properly nailed down.
10. Has sufficient school furniture been provided? If not, will the Local Committee engage to provide it? Sufficient furniture has not yet been provided; but the Local Committee have materials ready, and they will engage to provide the furniture required.

11.

11. State what information you have obtained relative to the teacher's character and qualifications? The teacher, Susan Mara, is a person of excellent character. She attended the Kirkconnell Public School for nearly 12 years, and was afterwards for about 9 months in a private school in Sydney. During 10 months of 1872 she was teacher of the Provisional School at Sally's Flat, and she has had charge of her present school since January in the current year. She has fair aptitude for teaching, and her attainments are tolerable.

12. Are the Local Committee aware that all Provisional Schools must be conducted as Public Schools? Yes; and they promise that if the school be now aided as a Provisional one, they will, as soon as practicable, take steps to have it converted into a vested Public School.

13. In addition to the matters before mentioned, state any other circumstances within your knowledge connected with the application, which you may consider material for the information of the Council? The schoolhouse at German Hill is erected on a site which has been promised, if not granted (to the Council, I believe), for a school. The number of children in the locality ought to be sufficient to warrant the establishment of a Public School; at present, however, the attendance is not sufficient. The attendance of forty-one children has been promised, but the present enrolment is only thirty-one, and the average attendance twenty. If aid be granted to the school as a Provisional one up to the end of the current year, I think it is probable the attendance will increase, and that at the beginning of next year the establishment of a Public School will be practicable.

J. HUFFER,
Inspector.

No. 23.

THE SECRETARY, COUNCIL OF EDUCATION, to MISS SUSAN MARA.

Council of Education Office,
Sydney, 18 June, 1873.

MADAM,

See also Circular
as to attendance.

I am directed by the Council of Education to acquaint you that the Council has agreed to recognize you as Teacher of the Provisional School at German's Hill, and has granted you salary at the rate of £48 per annum, payable from 1st June instant, on condition that a daily average attendance of not fewer than twenty pupils be maintained.

I am further desired to forward herewith, for your guidance in the discharge of your duties as teacher, copy of the Public Schools Act and Regulations of 8th March, 1869. The Provisional School under your charge should be conducted in all respects as a Public School, especially in the matter of religious instruction, and any departure from this course will render it liable to the immediate withdrawal of the aid afforded by the Council. The various documents by which the instruction is regulated should also receive your careful attention, and copies of the standard of proficiency, time-table, and programmes of lessons are accordingly transmitted to you with this letter.

3. A stock of registers, books, and other requisites for the use of the school, will be furnished to you by the Council's agent, and will be placed in your charge.

4. A sufficient number of returns for the current year is also supplied to you, together with salary abstracts. The circular now forwarded, describing the manner in which these vouchers should be furnished, will afford you information on this point.

I have, &c.,
W. WILKINS,
Secretary.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. B. M'KEON.

Council of Education Office,
Sydney, 18 June, 1873.

(73-7,382.)

SIR,

I have the honor by direction of the Council of Education, to acquaint you that having considered the application dated 23rd April last, for aid to the Provisional School at German Hill, the Council has granted salary to the teacher, Miss Susan Mara, at the rate of £48 per annum, to take effect from the 1st June instant. This sum has been fixed by the Council on the understanding that twenty pupils will be in regular attendance at the school. The Council has also granted a supply of books and other school requisites, which will be forwarded in due course.

2. I am further instructed by the Council to transmit herewith for your information and guidance copy of the Public Schools Act and Regulations of 8th March, 1869, and to point out that the Provisional School at German Hill should be conducted in all respects as a Public School. The necessary directions on this head will be issued to the teacher.

I have, &c.,
W. WILKINS,
Secretary.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. B. M'KEON.

(73-7,385.)

SIR,

Council of Education Office,
Sydney, 18 June, 1873.

Adverting to my letter of even date herewith, informing you that the Council of Education had granted aid to the Provisional School at German Hill, I am further directed by the Council to intimate that such aid is temporary, and will be continued to the end of the year only, by which time the Local Committee ought to have matured arrangements for the establishment of a vested Public School, as pointed out by the Inspector.

I have, &c.,
W. WILKINS,
Secretary.

No. 28.

MR. B. M'KEON to THE SECRETARY, COUNCIL OF EDUCATION.

German Hill, Orange,
15 December, 1873.

SIR,

I am in receipt of your letter of the 8th December, in which you state that the aid granted to the Provisional School at the German Hill by the Council of Education will terminate on the 31st instant, and asking whether arrangements have been matured for the establishment of a Public School in the locality.

In reply, I beg to say that no new arrangements have been matured for the establishment of a Public School in this locality; in fact, the committee look upon any such arrangement as simply absurd. The building which has been erected with such difficulty without any aid from the Council is sufficient in their opinion in every respect to satisfy the needs of the locality, and they are of opinion also that the teacher could do no more for the children if a Public School were established than she does now for them in the present Provisional School.

If the Council of Education, however, desire to erect a Public School they will, of course be thankful, but they think it would be the merest folly to throw down the present building erected with such difficulty and expense only a few months ago, and which they think is equal, if not superior, to many Public School buildings in the district; they are satisfied with the school and the instruction imparted by the present teacher, and failing to see how she could impart a superior education if a Public School were erected, they respectfully submit that it would be injudicious to meddle with the present arrangements.

I have, &c.,
BERNARD M'KEON.

No. 29.

MEMORANDUM to THE INSPECTOR OF SCHOOLS, BATHURST DISTRICT.

(Extremely urgent.)

(73-17,522.)

German's Hill: Mr. B. M'Keon's letter, dated 15th instant.

For your perusal and further report.

In your report of the 9th June last you stated as follows:—The Local Committee promise that if "the Council will at present grant aid to the school as a Provisional one, sufficient furniture shall be provided, suitable outoffices shall be erected, the land shall be fenced; and further, that as soon as practicable they will take the necessary steps to establish the school as a vested Public School." You also recommended "that the school be aided as a Provisional School up to the end of the current year, upon condition that the local committee engage that they will then make an earnest effort to establish it as a vested Public School."

When aid was granted by the Council, the committee were told that it would be continued to the end of the current year only, by which time arrangements for the establishment of a Public School ought to be matured.

You will observe that the committee now repudiate the promise they made to you.

Council of Education Office,
Sydney, 24 December, 1873.

W. WILKINS,
Secretary.

No. 30.

No. 30.

MEMORANDUM to THE SECRETARY, COUNCIL OF EDUCATION.

German Hill: Mr. B. M'Keon's annexed letter and your B.C. No. 73-17,522.

THERE are eighty children between the ages of four and fourteen years residing *within a 3-miles radius* of the German Hill Provisional School; the establishment of a Public School with an average attendance of, at least, 50 pupils, ought therefore to be practicable.

During the time the Provisional School has been aided by the Council the number of pupils enrolled for it has been about forty, and only for the last two quarters the average attendance has been twenty-eight. About forty of the school population in the locality have not yet been enrolled for school attendance.

I am of opinion that at the time the Local Committee promised they would take the necessary steps to establish the school as a vested Public School, they intended to keep their promise, and I also think they would have kept it had they not been *otherwise influenced* with regard to the matter. The letter signed by Mr. M'Keon does not appear to have been written by him.

The school-building now used is erected on Government land, which has, *I think*, been conveyed to the Council. With a little improvement the building would do very well for temporary use as a *Public School-building*, and the teacher now in charge is fairly well qualified for her work.

I would advise that the Committee be informed that, as the German Hill locality has a *school population of eighty children*, they cannot under the Council's Regulations obtain aid for *any other than a Public School*.

On Friday last, the 19th instant, I visited the German Hill Provisional School for the annual inspection, but I found it had been closed on the 18th instant for the 'Xmas vacation.

J. HUFFER,
Inspector.

No. 31.

MISS S. MARA to THE COUNCIL OF EDUCATION.

Provisional School, German Hill, Orange,
17 January, 1874.

GENTLEMEN,

I beg most respectfully to make application to you for appointment to the office of teacher in this school, in the event of its being made a Public School.

I have, &c.,
SUSAN MARA.

B.C., Inspector of Bathurst District for your advice.—W.W., 21/1/74.

No. 32.

THE INSPECTOR, BATHURST DISTRICT, to THE SECRETARY, COUNCIL OF EDUCATION.

I BELIEVE Miss Mara to be industrious and trustworthy, and she has fair aptitude for the work of teaching. I am of opinion that it would be advisable to appoint her to a Public School at German Hill.

J. HUFFER,
Inspector.

31/1/74.

No. 33.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. B. M'KEON.

(No. 74-1,681.)

Council of Education Office,
Sydney, 23 January, 1874.

SIR,

I am directed by the Council of Education to acquaint you, that the Council has had under consideration your letter of the 15th ultimo, wherein you state that no arrangements have been made by the Local School Committee at German's Hill for the establishment of a Public School, and that in fact the Committee look upon any such arrangement as simply absurd.

2. In reply, I am instructed to express regret that you should have thought fit to write in such terms to the Council. You are reminded that the Committee, in June last, promised the Inspector that they would take the necessary steps to establish the School as a Public School. On the faith of that the Council granted aid to a Provisional School from the 1st June last, on the condition that by the end of the year the Committee would have taken steps to carry out their promise; when appealed to by the Council to fulfil it, they reply to the effect that not only have they taken no steps to carry out their promise but they consider it would be "absurd" to do so. By the 8th section of the Public Schools Act, a Public School "may be established in any locality where after due inquiry the Council shall be satisfied that there are at least twenty-five children who will regularly attend such school on its establishment." The average attendance at the school at German's Hill has exceeded twenty-five, and there are over eighty children in the district fit for school. The district is therefore not remote and thinly populated; and consequently the Council cannot legally grant aid to a Provisional School under the 13th section of the Public Schools Act.

3. Such being the case, the school in question can be aided only as a Public School, and to prevent the immediate withdrawal of the Council's aid, the Committee must cause the accompanying form of application for a Public School to be properly filled up under each separate heading, duly signed and returned to this office.

15

4. I am further to point out that when the school has been established as a Public School the Council will be in a position to grant pecuniary aid towards such improvements to the premises as may be deemed necessary by the Inspector, and that the teacher will be entitled to receive a higher salary.

5. Will you be good enough to reply at your earliest convenience to this communication.

I have, &c.,
W. WILKINS,
Secretary.

No. 34.

MEMORANDUM to MISS SUSAN MARA.

(No. 74-1,682.)

I AM to point out to you that by the contemplated conversion of the school under your charge into a Public School, your position as a teacher would be much improved, inasmuch as you would be entitled to receive higher salary, and would be afforded an opportunity of undergoing examination with a view to gaining a classification.

Council of Education Office,
Sydney, 23 January, 1874.

W. WILKINS,
Secretary.

No. 35.

THE LOCAL COMMITTEE to THE SECRETARY, COUNCIL OF EDUCATION.

German Hill,
2 February, 1874.

SIR,

We are in receipt of your communication of the 23rd ultimo, in which you express regret that we, the members of the Local Committee, should have thought fit to write in the terms that we did to the Council of Education. We beg to say, in reply, that we are sorry to discover that the Council should have found matter for regret in the very simple and certainly sensible and truthful remarks, that we esteemed it our duty to make in our last. We beg to say moreover that we think the Council must be in error regarding a supposed promise given to the District Inspector in June last, 1873, relative to the conversion of the Provisional School into a Public one. We have no recollection of ever making to your Inspector any such promise; on the contrary, we were all of one mind, that if we succeeded in erecting a building suitable for a Provisional School we should be extremely thankful and contented, more especially as we are of opinion now that though possibly there may be eighty children fit for school in the district, yet as the Council will see by last returns not even one-fourth of that number frequent the school, the monthly average being about 19. In either case if it were lawful for the Council of Education to grant a provisional salary then to the teacher when her average attendance was more than 25, it can hardly be lawful to give her now, without classification, a Public School salary, with an average attendance of only 19, the law requiring an attendance of at least 25 children for a Public School. Without in any way seeking or desiring to interfere with the Council's Regulations, we cannot help thinking that the Council seek to deprive us, without any reasonable ground on their part, and with strong reasons against on our part, of a sure means of educating our little ones. We think (we may be wrong) that a Public School would never be supported in this locality, and if a Provisional School satisfies the persons concerned, who pay their taxes as others do, we respectfully submit that the Council ought not to interfere with the present arrangement, which has worked to the satisfaction of the people generally, and as we are led to believe to the satisfaction of the Council representative. With regard to the 4th paragraph we merely wish to say that having accomplished so much without aid from the Council, we respectfully submit that we ought not to be deprived of pecuniary assistance for the necessary improvements to the present substantial building, simply on the ground of its not being called a Public School.

Believing the Council will see the justice of our few remarks, and that they will not permit any such detrimental change as proposed in your last letter to be made. Signed on behalf of the Local Committee.

We have, &c.,
BERNARD M'KEON.

(74/2,202.)

German's Hill: Mr. B. M'Keon's letter, objecting to proposed conversion into a Public School. For your perusal and further report.

Council of Education Office,
Sydney, 6 February, 1874.

W. WILKINS,
Secretary.

No. 37.

No. 37.

MEMORANDUM TO THE SECRETARY, COUNCIL OF EDUCATION.

German's Hill: Mr. B. M'Keon's letter, dated 2nd inst., your B.C., No. 74-2,202.

FOR seven (7) months of last year (from 1st June to 31st December) the school at German's Hill was aided as a Provisional School.

At the time aid was granted to the school the average attendance of pupils was 21. In the first month after receiving aid the school had an enrolment of 32, and an average attendance of 22; and for the last six months of 1873 the enrolment was 49, and the average attendance 28.5. When I visited the locality in May, 1873, for inquiry relative to the school, the Local Committee distinctly promised me that they would take steps to establish a Public School in the locality if the Council would grant temporary aid to a Provisional School, and when temporary aid was afterwards granted by the Council the committee were informed of the condition upon which such aid would be given.

The annexed letter (signed by Mr. M'Keon) has evidently been written by a person who would, under any circumstances, object to a Public School being established at German Hill.

The following are the facts connected with this matter:—

- (a.) There are 80 children of a school age in the locality.
- (b.) The Local Committee obtained temporary aid to a Provisional School by promising that they would take action for the establishment of a Public School.
- (c.) The average attendance in the Provisional School for the last six months of 1873 was 28.5, *i. e.*, 3.5 above the minimum for a Public School.

J. HUFFER,
Inspector.

No. 38.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. B. M'KEON.

(74-2,661.)

Council of Education,
Sydney, 13 February, 1874.

SIR,

I am directed by the Council of Education to acquaint you that the Council has had under consideration your letter of the 2nd instant, again objecting to the proposed conversion of the Provisional School at German's Hill into a Public School.

2. In reply, I am instructed to state that the Council, having made further inquiry into the circumstances of the case, sees no reason to depart from the decision already arrived at, and made known to you in my letter of the 23rd ultimo. Therefore, inasmuch as, for the reasons explained in that communication, the Council cannot legally continue aid to the school, it will be withdrawn at the termination of the current month (February), and the teacher has been informed accordingly,

I have, &c.,
W. WILKINS,
Secretary.

No. 39.

THE SECRETARY, COUNCIL OF EDUCATION, to MISS SUSAN MARA.

(74-2,660.)

Council of Education Office,
Sydney, 13 February, 1874.

MADAM,

I am directed by the Council of Education to invite your attention to the following statement as to certain portions of the Public Schools Act affecting Provisional Schools, and especially that at German's Hill, under your charge.

2. By section 8 of that Act it is provided that a Public School may be established in any locality where, after due inquiry, the Council shall be satisfied that there are at least twenty-five children who will regularly attend such school on its establishment. Further, section 13, which relates to Provisional schools, provides that in "remote and thinly-populated districts, where no Public School may exist," the Council may grant assistance to other schools established by private persons under Regulations to be framed by such Council.

3. The average attendance at the Provisional School at German's Hill during the past quarter has been 28.3, that is 3 in excess of the number required in terms of the Act for the establishment of a Public School. Such being the case, a school of that kind ought, in compliance with the terms of the Act, to be established at German's Hill. It is clear also, from the number of children attending, that the district in which the school is situated is not remote and thinly populated, and as such is not a locality in which, by the provisions of section 13, a Provisional School can legally be aided. Moreover, the district is not one in which no Public School may exist, the number of children in actual attendance being sufficient to meet the requirements of section 8.

4. Therefore, on these two grounds, *viz.*,—(1) that the district is not remote and thinly populated, and (2) that it is not one in which no Public School may exist, the Council is precluded from continuing aid to the Provisional School at German's Hill; and as the aid hitherto afforded cannot legally be continued, I am instructed to give you notice that it will cease at the termination of the current month (February), after which date you must look for remuneration to the persons by whom you were appointed.

5. The blank forms necessary to be filled up by you on leaving the school are herewith enclosed.

I have, &c.,
W. WILKINS,
Secretary.

German Hill: Your memo., dated 7th instant.

Aid will be withdrawn from the Provisional School at the above place at the end of the current month, the attendance being sufficient to warrant the establishment of a Public School.

The reasons why aid is to be discontinued have been fully explained to the Local Committee and the teacher.

W. WILKINS,
Secretary.

No. 41.

THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION, to THE SECRETARY,
COUNCIL OF EDUCATION.

(74-1,126.)

Department of Justice and Public Instruction,
Sydney, 25 February, 1874.

SIR,

In reply to your letter of 17th January last, and previous correspondence respecting application for a grant of land at German's Hill, Cargo Road, for Public School purposes, I am directed by the Minister of Justice and Public Instruction to inform you that a communication has been received from the Lands Department, intimating that this matter is under reference to Mr. Licensed Surveyor Machattie, whose attention will be drawn thereto.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 42.

MEMORANDUM to THE SECRETARY, COUNCIL OF EDUCATION.

German's Hill: Respecting a proposed school site.

I BELIEVE the Council made application in 1872 for a grant of land for a school site at German's Hill, near Orange. The residents belonging to the different religious denominations in the locality afterwards erected a building on the land, and it was used for a Provisional School during a part of 1873. At the beginning of the current year the provisional aid was withdrawn by the Council, because the residents (or rather the Local Committee) would not take the necessary steps for the establishment of a Public School for the large school population (80) in the locality.

2. Having recently heard that those residents who prevented the establishment of a Public School for the locality are now taking action to endeavour to induce the Government to refuse to grant the land to the Council for school purposes, I deem it my duty to bring the matter under the Council's notice.

3. If the Council could obtain a grant of the site I believe there would be no difficulty in establishing a Public School. There is now no other available land in the locality suitable for a Public School site.

24/11/74.

J. HUFFER,
Inspector.

No. 47.

MEMORANDUM to THE SECRETARY, COUNCIL OF EDUCATION.

German's Hill: Land granted for Public School purposes at. Your B.C., No. 75-3,330, dated 18th February last.

1. Papers handed to me for report returned herewith.
2. Copy of letter addressed by me to the Rev. T. J. Walsh.

WITH reference to the above, I have to report that I visited German's Hill on Friday, the 21st instant. Having verified the land and schoolhouse thereon, with the conditions on the tracing handed me by the Council, I presented myself at the schoolhouse, and found that it was occupied by certain ladies—nuns of a religious order in connection with the Roman Catholic Church.

In reply to my inquiries the sister, who presented herself at the door, stated that she thought that the school was not under the Council of Education, and that the attendance at the school fluctuated between twenty-five and sixty.

In reply to my statement that the property belonged to the Council of Education, the sister said that she knew nothing about it.

I afterwards visited a Mr. Daniel Press, who assisted in erecting the school, and who was one of a committee that had collected the money for its erection as a Provisional School, and I informed him that I claimed the school land, and all that was erected on it, in the name of the Council of Education; and I gave him to understand that it was incumbent on him, as one who was aware that the schoolhouse was built for a Public School, to see that the original building, and the one (a kitchen) that had been recently erected on the land, were not removed. Mr. Press promised me that he would see to it, and he informed me that he and others would take steps to induce the Council to send them a teacher at once. On my return to Orange I addressed the Roman Catholic clergyman of the parish, the Rev. T. J. Walsh, relative to the occupancy of the schoolhouse at German's Hill by ladies who were members of a religious order, and were not under the Council's supervision. To my communication I have received no reply, but I may reasonably assume that some sort of information will be sent to the Council. It now devolves upon me to advise the Council in terms of its memorandum, and I beg to recommend that a teacher be appointed to the school forthwith, who should be directed to seek the assistance of the local committee—Messrs. Daniel Press, Patrick Welsh, and Bernard M'Ewen—should entry on the school premises be resisted. I would further recommend that, in deference to the religious views of the majority of the residents, a member of the Roman Catholic Church be appointed as teacher.

J. W. ALLPASS,
Inspector of Schools.

Bathurst, 29/5/75.

No. 48.

THE INSPECTOR OF SCHOOLS, BATHURST DISTRICT, to THE REV. T. WALSH.

"Royal Hotel," Orange,
21 May, 1875.

REVEREND SIR,

I have been requested by the Council of Education to advise them respecting the course they should take to assume possession of the land at Fern Creek, German's Hill, which has been conveyed to the Council of Education for Public School purposes.

I

I have this day made it my business to visit the site, and I find that the premises thereon are occupied by teachers not under the Council's control, and as these teachers are Sisters of a Religious Order, belonging to the Roman Catholic Church, it has occurred to me that I might ascertain from you with whom the Council of Education should communicate respecting the removal of those ladies from the premises in question.

As I am leaving Orange on Monday (the 24th), any reply you may be pleased to give may be addressed to me at the "Royal Hotel," Bathurst.

I have, &c.,

No. 55.

MR. J. C. M'LACHLAN to H. L. NELSON, Esq., M.L.A.

Orange, 7 July, 1875.

DEAR NELSON,

Father Walsh has just called on me with reference to a matter which I understand has already been under your notice, and he seems to be very anxious about the affair.

It appears that a number of his people some time ago erected a building which he has been using for church purposes, and which had also been used for a school.

One of his congregation (Mr. Patrick Welsh), who was also a member of the School Committee, has just received a letter from Mr. Wilkins, of which I enclose you a copy herewith.

This has taken Father Walsh by surprise, as he understood from a letter which he received from you some time ago that the matter was all right, and that an application which had been made for a grant of the land in question to his church had been allowed.

He cannot understand how a grant of the land to the Council of Education can have issued as stated in Mr. Wilkins' letter.

They never built or assisted in building the church, and it does seem most unjust that the land and buildings should be given to them and taken from the persons who are fairly entitled to them.

I enclose herewith a memo. of description of the land. Father Walsh would feel obliged if you would kindly ascertain without delay how the matter stands, especially as to whether the land has been granted—and, if so, on what representation it was obtained.

Also, whether Father Walsh and his people can get a grant of the land, and if not, whether under the circumstances the Government would not grant compensation for the loss they have sustained in erecting a building for the Council of Education.

Hoping that you are well, and that I shall hear from you as soon as possible,

I remain, &c.,
JNO. CHAS. M'LACHLAN.

SIR,

I am directed to acquaint you that the Council of Education has had under consideration a letter addressed to Mr. H. Nelson, M.L.A., by Mr. J. C. M'Lachlan, in which he invites attention to certain matters in connection with the school premises at German's Hill.

2. In view of the statement contained in that letter, and also of the circumstances of the case the Council has resolved to offer the Local Committee the sum of £52 10s. (fifty-two pounds ten shillings) for the building which they have erected on the Council's site.

3. The Council would be glad to be informed whether the Committee agree to accept these terms.

I have, &c.,

W. WILKINS,
Secretary.

No. 60.

MEMORANDUM to THE SECRETARY, COUNCIL OF EDUCATION.

German Hill: Respecting site granted to the Council for Public School purposes at. Your B.C., No. 75/12,123 and No. 75-3,330.

The site granted for a Public School at German Hill has on it a rough wooden building, which was erected from funds contributed by residents (of different religious denominations) for providing school premises. It was in such building that the German Hill Provisional School was carried on under the Council up to February, 1874; and the school requisites then granted by and still belonging to the Council remain in the building.

At present the premises are occupied for school purposes by ladies of a "religious order" in connection with the R. C. Church. As, however, no persons have a right to occupy the premises without the Council's permission, I would suggest that the Local Committee of the late Provisional School be informed that the land and buildings are now the Council's property, and that they are required for Public School purposes. The Council should also be requested to notify to the persons now residing on the premises that they are on the Council's property, and that therefore it is necessary they should vacate the premises.

Should no answer be returned to the Council's communication, or should the persons now occupying the premises refuse to vacate them when requested to do so, I am of opinion that the Council should obtain possession of the property by legal proceedings.

Until I received your B.C., No. 75/12,123, I understood that Mr. Inspector Allpass had attended to this matter during his recent visit to the locality.

J. HUFFER,
Inspector.

No. 61.

No. 61.

MR. PRESS TO THE SECRETARY, COUNCIL OF EDUCATION.

German Hill, near Orange,
16 July, 1875.

SIR,

Having been informed that the school buildings erected here were paid for by Roman Catholic subscriptions only, I beg to state that the following Protestant persons subscribed, and that they did so understanding that it was for a Public Provisional School:—

- | | |
|---|---------------------------------------|
| 1. Henry Press, 10s. | 8. Robinson, 5s. |
| 2. Thomas Press, 10s. | 9. Geo. Antill, 10s. |
| 3. John Stubbard, 10s.
<i>Canobolas.</i> | 10. Isaac Astill, 10s. |
| 4. James Stubbard, 10s. | 11. Wm. Job, 5s.
<i>Canobolas.</i> |
| 5. Wm. Astill, 10s. | 12. Fas. M'Lean, 20s. |
| 6. Wm. Cantall, 5s. | 13. Daniel Press, 20s. |
| 7. Thos. Cantril, 5s. | |

I have not the lists, and cannot remember any more names, though I feel confident that several other Protestant persons gave small sums.

As one of the Local Board, I can safely say that there was no mistake when the land was applied for. I state this because I have been told that it was a mistake on the part of the Board in applying for the land for a school instead of on behalf of the Roman Catholic Church.

If you think it necessary, I will get the other Protestant inhabitants to corroborate these facts. Hoping that you will speedily send us a teacher,

I am, &c.,
DANIEL PRESS.

No. 62.

THE REV. F. B. BOYCE TO THE SECRETARY, COUNCIL OF EDUCATION.

Parsonage, Orange,
17 July, 1875.

DEAR SIR,

I should feel obliged if you would represent to the Council the necessity of re-opening the school at German's Hill.

Although the Roman Catholic children, who form the majority, may not attend, there will be sufficient Protestant children within a radius of 2 miles to keep up a Provisional School.

I would suggest, however, that you send a Roman Catholic master of tact, and then no doubt one good strong school would be formed.

I am, &c.,
F. B. BOYCE.

No. 63.

THE SECRETARY, COUNCIL OF EDUCATION, TO MR. D. PRESS.

(No. 75-13,808.)

Council of Education Office,
Sydney, 20 July, 1875.

SIR,

In acknowledging the receipt of your letter, dated the 16th instant, submitting names of Protestants who contributed towards the cost of the erection of the school-buildings at German's Hill, I am directed by the Council of Education to refer you to my letter of the 15th instant, stating that the Council is prepared to grant a sum of £52 10s. to the Local School Committee as the value of the buildings erected on the school site.

2. It is now competent for you to arrange for the refund of the subscriptions towards the cost of the buildings, or of a proportionate part of them, should the subscribers so desire.

I have, &c.,
W. WILKINS,
Secretary.

No. 64.

THE REV. F. B. BOYCE TO THE SECRETARY, COUNCIL OF EDUCATION.

Parsonage, Orange,
20 July, 1875.

SIR,

As one much interested in the school at German's Hill, near here, I wish to make a few remarks with reference to a statement made in the Legislative Assembly by Mr. Nelson, to the effect that the Protestant portion of the community only subscribed about £5 towards the buildings.

It should be borne in mind that Mr. Press could not send down all the names because he did not know them. The contract price of the buildings, not including doors, windows, and flooring, was only £22. A large part of the money was raised by a well attended tea-meeting, at which all sections were represented. From this it would appear the Protestant interest in the building at that time was perhaps nearly one half.

Improvements

Improvements were made afterwards at the expense of all; for instance, a closet was built costing £6.

When the Provisional School was closed, and the buildings seized and occupied by the Roman Catholics, other improvements were made I think then at their sole cost. The total value of the buildings now is no doubt about £52 10s., the sum offered.

Some Protestants gave labour—Mr. Press, for instance, mainly cleared the land of fallen and grubbed up timber.

I consider the Protestants should have *at least* £15 of the compensation offered handed to them in payment for their share in the cost of erecting and improving the buildings.

I beg however to remark that in view of all the circumstances of the case, I can see no real ground for any payment being made to any one. I feel sure the school was erected on the understanding that it was to be a Provisional one—non-sectarian—and to be the property of the Council of Education. It was in time handed over to the Council, and why should it pay for its own property?

As I have not been in the district more than six months I cannot speak from my own knowledge; my opinion is formed by the many *facts* which parties have brought under my notice.

I am, &c.,
F. B. BOYCE.

No. 65.

THE REV. F. B. BOYCE TO THE SECRETARY, COUNCIL OF EDUCATION.

Parsonage, Orange, 27 July, 1875.

DEAR SIR,

Referring to the matter of the German's Hill School, I should esteem it a favour if you would inform me on what grounds the Roman Catholics claim the buildings. The people here are anxious to reply fully to any statements that may have been made, but cannot do so until they know what those statements are.

Referring to another school in this district, that at Broken Shaft Creek, not yet opened, it has been reported to me that it is intended to put the "Sisters of Charity" in shortly. I trust that the Council will see that the transfer of the ground is duly completed, and take what steps it can to open a Provisional School.

I am, &c.,
F. B. BOYCE.

No. 66.

MR. G. ASTILL TO THE SECRETARY, COUNCIL OF EDUCATION.

Cargo Road, near German's Hill,
Orange, 27 July, 1875.

SIR,

As I have been informed that an attempt is being made by the Roman Catholics to claim and keep the school buildings at German's Hill, I as a subscriber, and having children who ought to go to the school, hope the Council will resist a claim so unjust.

I was the contractor for the building, with another, John Stibbard, and know all the circumstances from the commencement. It was built as a Provisional School, to be placed under the Council—to be entirely non-sectarian.

I never heard that Father Walsh had anything to do with the school, or had anything to do with the matter, until Bernard M'Ewen happened to call on him to ask him to fill up a form for a Public School; from that time religious matters were introduced. The Provisional School had up to that time been open about six months.

I am, &c.,
GEORGE WILLIAM ASTILL.

No. 67.

MESSRS. B. M'KEON AND WELCH TO THE SECRETARY, COUNCIL OF EDUCATION.

German Hill,
Orange, 27 July, 1875.

SIR,

We have the honor to acknowledge the receipt of your letter of the 15th July, 1875 (No. 75-13,460), referring to the school premises at German Hill, and in which you state that the Council has resolved to offer the Local Committee the sum of £52 10s. for the building erected at German Hill by us.

In reply, we have the honor to say, that we have resolved to accept the terms offered by the Council, and that we will be prepared to give possession of the building on receipt of the compensation money from the Council (£52 10s.), and that we have authorized Mr. H. L. Nelson, M.L.A., to receive on our behalf this sum of £52 10s. as compensation money.

We have, &c.,
BERNARD M'KEON.
PATRICK WELCH.

No. 63.

MR. D. PRESS to THE SECRETARY, COUNCIL OF EDUCATION.

German's Hill, near Orange,
28 July, 1875.

SIR,

In reply to your letter of the 15th instant (No. 75-13,459), I beg to say that I saw one of the other members of the Local Committee—Patrick Welsh—who read your letter offering the £52 10s., and who said that “he could see from that letter that the Council had nothing to do with the land.” He would give me no satisfaction about the refusal or acceptance of the £52 10s. The other committeeman—Bernard M'Ewen—would not attend, though requested.

Personally, I should be willing to accept the offer, provided a fair share of the money—£25, or even less—was given to the Protestant portion of the community; but as the Roman Catholics are so bent on having the land and buildings I have no hope of your offer being accepted.

I would remark that, as regards the money raised for building the school, much was gathered by a tea-meeting, at which all parties attended, both Protestants and Roman Catholics, and my wife helped largely in providing the eatables. No clergymen attended. It was looked upon as a common affair, and at that time there was no idea that any claim would ever be made by any Roman Catholic for the land and buildings. The first time religion was introduced, at all was when the question of turning the Provisional School into a Public School was mooted. It arose in this way:—Mr. B. M'Ewen took the forms of application to the Roman Catholic Denominational schoolmaster in Orange, and asked him to fill them up. He sent him to Father Walsh, who told him to go home and mind his own business. Father Walsh from that time took an interest in the affairs, and not before, and, directly he could, put in the Sisters of Charity, who now occupy the buildings. Mr. M'Ewen told me this. The three members of the Local Committee were quite willing to have the Provisional School turned into a Public one until Father Walsh interfered.

I am, &c.,
DANIEL PRESS.

No. 69.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. B. M'KEON.

(75-14,608.)

Council of Education Office,
Sydney, 29 July, 1875.

SIR,

I am directed by the Council of Education to acknowledge the receipt of your letter, dated the 27th instant, signed also by Mr. Patrick Welsh, in which you, as individuals, agree to accept the offer of £52 10s. for the building erected on the Council's land at German's Hill.

2. In reply, I am to state that the Council requires to be furnished with a written acceptance of its offer by the *Local School Committee*, and that it is necessary that Mr. Press's signature be affixed to such acceptance.

3. I am to add that the Council claims possession of the property altogether, irrespective of any payment for the buildings erected on the land.

I have, &c.,
W. WILKINS,
Secretary.

No. 70.

THE SECRETARY, COUNCIL OF EDUCATION, to THE REV. F. BOYCE.

(75-15,220.)

Council of Education Office,
Sydney, 6 August, 1875.

REV. SIR,

In acknowledging the receipt of your letter, dated 30th July last, I am directed by the Council of Education to refer you to my communication of this date, in reply to your letter of 27th ultimo, respecting the school buildings at German's Hill.

2. I am further to observe that, in view of all the circumstances of the case, and of the possibility of losing the site entirely, the Council deemed it advisable to make an offer to the Local School Committee for the building erected by them upon the land granted for Public School purposes.

I have, &c.,
W. WILKINS,
Secretary.

No. 71.

THE SECRETARY, COUNCIL OF EDUCATION, to THE REV. F. BOYCE.

(75-15,221.)

Council of Education Office,
Sydney, 6 August, 1875.

REV. SIR,

I am directed by the Council of Education to acknowledge the receipt of your letter, dated 27th July last, in which you request to be informed on what grounds the Roman Catholics claim the buildings erected upon the Public School site at German's Hill.

2. In reply, I am to invite your attention to the statement made by Mr. Nelson, in the Legislative Assembly, on the 27th July ultimo, and reported in the *Sydney Morning Herald* of the following day, bearing upon this subject. You will perceive that Mr. Nelson's statement, containing, in addition to a *précis* of the facts known to the Council, an opinion given by the Honorable the Minister for Lands, in the following words:—"If the Roman Catholic inhabitants of the place erected the building, I think the Council of Education should agree to compensate them for the taking of the building. If the Council decline to do this, I may consider it my duty to resume the land, and afterwards grant the Council a less or other area, excluding the site upon which the building in question is erected." Your attention is also invited to Mr. Surveyor Fisher's report, quoted by Mr. Nelson.

I have, &c.,
W. WILKINS,
Secretary.

EDUCATION.

No. 1.

(A.)

Application for the Establishment of a Public School at Waverley Post Town, Waverley.

THE MAYOR OF THE BOROUGH OF WAVERLEY TO THE COUNCIL OF EDUCATION.

10 June, 1875.

GENTLEMEN,

We, the undersigned residents at Waverley, request that you will be pleased to establish a Public School at that place, under the provisions of the "Public Schools Act of 1866."

We have, &c.,

Local Committee,—The Borough Council, Waverley,
per JOHN MACPHERSON,
Mayor.

Information to be supplied by Local Committee.

1. Describe the position of the proposed school? Near the Borough Chambers.
2. What other schools, maintained or aided by the Council of Education, are within 2 miles of the site of the proposed school? Episcopalian, Presbyterian, and Roman Catholic.
3. If none are within 2 miles, what is the distance of the nearest school?
4. Are there any primary schools, not aided by the Council of Education, within 2 miles of the proposed school? If so of what character, and how attended? Preparatory school for boys conducted by Miss Hall with average attendance of 40.
5. State the number of children, from four to fourteen years of age, living within a radius of 2 miles of the site of the proposed school, *e.g.*—

Boys, about	220
Girls, "	160
Total						380

Religious Denominations:—

Church of England, about	100
Roman Catholic	80
Presbyterians	60
Wesleyans	100
Others	40
Total						380

6. Give a technical description of the proposed site, according to the dimensions and bearings of its boundaries by survey. If possible annex a plan of the ground?
7. By whom is the site granted, and on what terms? No site granted, but plenty land available in a central and elevated position, near the Council Chambers, at about £100 per acre.
8. Is a right-of-way to the site secured?
9. Is the ground level or otherwise? Level.
10. What is the nature of the ground upon which the building is to rest? Is it of a rocky, clayey, or sandy character? How drained? How affected by floods? Sandy and well drained.
11. Of which of the following materials are the proposed buildings to be constructed?
 - Hewn masonry.
 - Rubble.
 - Brick? Brick.
 - Studs and weatherboards.
 - Sawn or split slabs.
12. Are these materials suitable in all respects? Yes.
13. Of what materials are the public or best buildings in the neighbourhood constructed? Stone and brick.
14. What is the cost of building stone, and of what description?
 - Ashlar or rubble? About 16s. per perch.
 - Of bricks, per 1,000? £3 5s.
 - Of stone or shell lime, per bushel? From 16d. to 18d.—or per ton—stone lime, 70s.
15. State the price of hardwood, cedar, and pine, per 100 feet, and of shingles, per 1,000? Hardwood 15s., cedar 50s., pine 25s., shingles (16 inches) 50s., per 1,000.
16. What timber in the locality is most suitable for shingles and flooring boards? What is the usual length of the shingles? There is no suitable wood in the locality; shingles, 16 inches.
17. Do the rates mentioned include carriage to the school site? If not, state cost of carriage? Yes.
18. What is the current rate of wages paid in the district to workmen employed in building? Stonemasons, per diem, 11s.; bricklayers, per diem, 11s.; plasterers, per diem, 10s.; shinglers, per diem, 10s.; labourers, per diem, 7s. 6d.
19. Is there a natural supply of water, or will a tank or well be required? If a well at what depth will water be obtained? A well. Water can be found at a depth of 10 or 12 feet.
20. State the quantity and quality of fencing required, and the cost per rod? Quantity according to size of ground. Cost; fencing 6 feet palings, per rod, 20s.
21. Add any other circumstances deemed desirable for the information of the Council.

[Enclosure.]

[Enclosure.]

Annex to Application for establishment of a Public School at Waverley.

We the undersigned Parents (or Guardians) of children residing within the undermentioned distances from the site of the proposed Public School at Waverley, hereby undertake that our children, whose names are inserted below, shall attend the said school.

No. 2.

THE SECRETARY, COUNCIL OF EDUCATION, TO THE MAYOR OF WAVERLEY.

Council of Education Office,
Sydney, 15 June, 1875.

SIR,

I am directed by the Council of Education to acquaint you that your formal application for the establishment of a Public School at Waverley is now under consideration, and that a further communication respecting it will be addressed to you as soon as the Council has arrived at a decision thereon.

I have, &c.,
W. WILKINS,
Secretary.

No. 3.

MEMORANDUM FROM THE SECRETARY, COUNCIL OF EDUCATION, TO THE INSPECTOR OF SCHOOLS, SYDNEY DISTRICT.

Council of Education Office,
Sydney, 15 June, 1875.

Waverley: Application for a Public School at.

FOR your report and inquiry.

W. WILKINS,
Secretary.

I HAVE visited Waverley and made careful inquiry respecting this application.

It will be observed that the local committee offer no local contribution in aid of the erection of a school. The school site will also have to be purchased by the Council. I append a place which indicates three satisfactory school sites.

Mr. Yeend's land contains rather more than 1 acre; of this I have not been able to learn the price. Mr. O'Brien's land measures 100 square feet; his price is 200 guineas.

Mr. Flood's land will be sold on 12th July instant by Messrs. Richardson and Wrench. The two allotments fronting to an unnamed street at its junction with Paul-street is in every respect the more desirable site of the three, as it would be central to pupils coming from upper Woollahra and from Bondi. A school there will be sufficiently remote from Randwick, and will not interfere with its prospects for a school. The Mayor of Waverley states that he is of opinion that Mr. Flood's land will fetch 20s. or 25s. per foot. With reference to the prices of land Mr. Macpherson also states that he finds he has understated the price of land in the application. In analysing the names of children contained in the annex I find that nearly forty are mere infants, and 140 are of the prescribed school ages. Some (more than twenty) of the forty who are below the school age are not more than two years of age, and I am of opinion that they should not be counted in the probable attendance. Analysing the remaining 160 names, forty-four are between the ages of three and five, and the remainder between six and fifteen years.

I beg to commend the application to the Council's consideration. If school-buildings are erected I would suggest that they provide for a primary department, capable, with a class-room, of accommodating 120 pupils, and an infant's room for say eighty yeast.

J. W. ALLPASS.

[Enclosure.]

Queries to be answered by Inspectors when reporting upon applications for aid in the establishment of Public Schools. (A.)

1. Where is the school to be situated? At Waverley.
2. What is the nearest Post Town--mention its distance? Waverley has a post office.
3. Have you inspected the proposed site? Is it suitable? Yes. It is suitable.

4. Is the proposed site the property of the public, or of a private individual. In the latter case is the owner willing to convey the site to the Council? It is the property of _____, and can be purchased at _____

5. What schools are in the neighbourhood? Three: The Certified C.E., the Certified R.C., and the Certified Presbyterian School. There is also a private school for boys.

6. Do a majority of the residents favour the establishment of a Public School? I am informed that such is the case.

7. Who are the local committee? State their professions or occupations, and religious denominations? The local committee is the Borough Council. The members are—Mr. John M'Pherson, ironmonger, Wesleyan; Mr. Charles Kelso Moore, draper, Wesleyan; Mr. William Henderson, draper, C.E.; Mr. John Hubert Newman, photographer, Cong.; Mr. Stephen Dixon, soap manufacturer, Baptist; Mr. Richard Watkin, builder, Wesleyan; Mr. Llewellyn Baglin, builder, C.E.

8. Have they chosen one of their number to act as secretary, and another as treasurer? John M'Pherson, Esq., secretary.

9. What is the population of the school district? About 1,500.

10. Is the district likely to be permanently inhabited? Yes.

11. State the gross and average number of children expected to attend the school, distinguishing males and females.

			Probable average.
Of the school age...	Males	71	Males 40
	Females	73	Females 50
		144	Total 90
Children under four years: Males, 26; females, 12		38	
		182	

12. State any information you may have received relative to the circumstances of the people likely to require the school? Many of the parents are business men engaged in the city; others are labourers.

PLAN OF LOCALITY. (*Vide* p. 12.)

No. 5.

MINUTE OF THE COUNCIL OF EDUCATION, at a meeting held on 5th July, 1875.

Waverley: Read an application dated 10th June, for the establishment of a Public School; also the Inspector's report thereon.

The Council resolved that the applicants be informed that the case is not regarded as urgent; and that it will be considered when a site has been secured.

No. 6.

THE SECRETARY, COUNCIL OF EDUCATION, to THE MAYOR OF WAVERLEY.

(75-13,078.)

Council of Education Office,
Sydney, 12 July, 1875.

SIR,

I am directed by the Council of Education to acquaint you that the Council has had under consideration an application dated 10th June ultimo, signed by yourself on behalf of the Borough Council of Waverley, for the establishment of a Public School at that place.

2. In reply I am to state that having caused inquiry to be made into the circumstances of the case, the Council does not regard it as an urgent one, and has therefore deferred its decision until a suitable site for the school buildings has been secured.

3. When, therefore, the local committee notify to this office that a suitable site has been secured, the Council will be prepared to again take the application into consideration.

I have, &c.,
W. WILKINS,
Secretary.

No. 7.

MEMORANDUM FROM THE SECRETARY, COUNCIL OF EDUCATION, to THE INSPECTOR OF SCHOOLS, SYDNEY DISTRICT.

Council of Education Office,
Sydney, 12 July, 1875.

Waverley: Application for a Public School—your report on.

MR. MACPHERSON has been informed that the Council does not regard the matter as urgent; but that, when the local committee notify to this office that a suitable site has been secured, the application will again be considered by the Council.

W. WILKINS,
Secretary.

No. 8.

THE MAYOR OF WAVERLEY TO THE SECRETARY, COUNCIL OF EDUCATION.

Borough Chambers,
Waverley, 10 August, 1875.

SIR,

Referring to your letter of 12th July (No. 75/13,078), respecting an application sent to you by the Borough Council of Waverley for the establishment of a Public School at this place, I have the honor to state, for the information of the Council of Education, that the demand for land has increased so much and the price advanced in this suburb the past few weeks that the local committee has had great difficulty in getting an offer of a suitable site.

There is now, however, a block of land (with a frontage of 120 feet and a depth of 160 feet) in the market, which the committee consider every way suitable for the purpose; it is in the most central position in Waverley and fronts two streets, and the price is 40/- (forty shillings) per foot; another site is offered not more suitable, but the price is 80/- per foot.

The committee would therefore respectfully urge upon the Council of Education the desirability of securing the land referred to without delay; it is now in the hands of the auctioneers (Messrs. Threlkeld & Co.) for sale, and if the opportunity of securing it is allowed to pass it is a question whether a suitable site can be secured at any price.

I enclose a plan showing block referred to, marked A.

I have, &c.,
JOHN MACPHERSON,
Mayor.

Urgent.—B.C., Inspector of Sydney District,—Is the proposed site suitable and the price reasonable?—J.M., for Sec., 12/8/75.

The site is a very suitable one and the price is reasonable.—J.W.A., 13/8/75.

Since writing the above I have been informed that lots 2, 3, and 4 can be obtained at the same price. They are more suitable for building even than lots 5, 6, and 7, and I would recommend that they be purchased.—J.W.A., 14/8/75.

No. 9.

COUNCIL'S MINUTE UPON LETTER NO. 75-12,906.

17/8/75.

THE Council resolved that the Inspector should be instructed to inspect the Presbyterian School premises at Waverley, with a view to report as to the eligibility of the site for Public School purposes, especially as regards centrality and ground rent.

No. 10.

MEMORANDUM FROM THE SECRETARY, COUNCIL OF EDUCATION, TO THE INSPECTOR OF SCHOOLS, SYDNEY DISTRICT.

Waverley: Question of Public School site.

(12,906. B.C., No. 75-16,124.)

Council of Education Office,
Sydney, 19 August, 1875.

THE Council desires that as early as practicable you will inspect the Presbyterian School premises at Waverley, with a view to report as to the eligibility of the site for Public School purposes, especially as regards centrality and ground rent.

W. WILKINS,
Secretary.

No. 11.

MEMORANDUM FROM THE INSPECTOR OF SCHOOLS, SYDNEY DISTRICT, TO THE SECRETARY, COUNCIL OF EDUCATION.

Waverley: Question of Public School site at.

(Your B.C., No. 75-16,124.)

Sydney, 21 August, 1875.

THE site of the Presbyterian School premises is not central to the population, and measuring but about 30 feet by 160 feet it does not afford sufficient space for school purposes.

The Rev. Mr. Milne states that about fifteen years of a ninety-nine years lease have expired; that the ground rent does not exceed £6 per annum; and that the adjacent allotments can be obtained but at what rate of rental he does not know. The school-house standing on the land is a wooden building, and for these premises the Council will be expected to pay £160.

Keeping in view the perishable nature of these buildings, and the fact that at no distant date proper school premises must be erected at Waverley; that such should be decidedly central to the population; that a freehold site is infinitely preferable to one of a leasehold character, and that whereas it may in a short time be very difficult to obtain a site—a suitable one can now be bought—I would strongly advise the Council not to purchase the premises offered.

For the sum expected by the Presbyterian Church authorities a proper freehold can be obtained, and this effected, the existing schools at Waverley could be continued until the Council deems it advisable to build.

J. W. ALLPASS,
Inspector of Schools.

No. 12.

No. 12.

COUNCIL'S MINUTE UPON LETTER No. 75-12,906.

6 September, 1875.

THE Council resolved that the site herein mentioned is objectionable on account of its dampness ; and that as the case is not urgent, the purchase be declined ; and that the applicants be informed that in such cases it is expected that sites will be provided free of expense to the Council.

No. 13.

THE SECRETARY, COUNCIL OF EDUCATION, to THE MAYOR OF WAVERLEY.

(75-18,119.)

Council of Education Office,
Sydney, 10 September, 1875.

SIR,

I am directed by the Council of Education to acquaint you that the Council has under consideration your letter dated 10th ultimo, suggesting that the Council should purchase certain land at Waverley as a site for the proposed Public School at that place.

2. In reply I am instructed to state that the Council is of opinion that the land referred to is objectionable on account of its dampness, and therefore deems it inexpedient, as the question of establishing the school is not urgent, to purchase it.

3. I am also to acquaint you that in cases where the Council will bear the whole cost of the erection of school buildings the Council expects that a site will be provided free of expense to it.

I have, &c.,
W. WILKINS,
Secretary.

No. 14.

THE COUNCIL CLERK, WAVERLEY, to THE SECRETARY, COUNCIL OF EDUCATION.

Borough Chambers, Waverley,
14 October, 1875.

SIR,

Referring to your letter No. 75-18,119, I am requested by the Mayor, as Chairman of Local Committee of proposed Public School at Waverley, to ask if the " Council of Education " would grant an interview to the committee ; if so, will you have the goodness to appoint a time for that purpose ?

I have, &c.,
JOHN WILEY,
Council Clerk.

No. 15.

EXTRACT FROM MINUTES OF THE COUNCIL OF EDUCATION,

At a meeting held on the 18th October, 1875.

Waverley : Read a letter from Mr. J. Wiley, dated 14th October, requesting an interview on behalf of the local committee of the proposed Public School.

The Council agreed to receive the deputation on Monday next, the 25th October, at 4 o'clock p.m.

No. 16.

THE SECRETARY, COUNCIL OF EDUCATION, to THE COUNCIL CLERK, WAVERLEY.

(75-20,899.)

Council of Education,
Sydney, 21 October, 1875.

SIR,

In reply to your letter of the 14th instant, I am directed by the Council of Education to state that the Council will be prepared to receive a deputation from the local committee of the proposed Public School at Waverley, at this office, on Monday next, the 25th idem, at 4 o'clock p.m.

I have, &c.,
W. WILKINS,
Secretary.

THE MAYOR, WAVERLEY, to THE MINISTER OF JUSTICE AND PUBLIC INSTRUCTION.

Borough Chambers,
Waverley, 11 December, 1875.

SIR,

The inhabitants of Waverley having appointed a deputation to wait upon the Honorable the Minister of Justice and Public Instruction, for the purpose of bringing before him certain matters connected with the proposed Public School in that place, I have the honor to ask that you would be pleased to grant an interview to the deputation and fix a time when it would be convenient for you to receive it.

I have, &c.,
JOHN MACPHERSON,
Mayor.

Appoint Friday, the 17th instant, at 11 o'clock.—J.D., 14/12/75.

No. 20.

THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION, to THE MAYOR OF WAVERLEY.

Department of Justice and Public Instruction,
15 December, 1875.

SIR,

Referring to your letter of 11th instant, in which you mention that a deputation of the inhabitants of Waverley desire an interview with the Minister of Justice and Public Instruction on the subject of the proposed Public School in that locality, and asking when it would be convenient to receive the deputation, I am directed to inform you that Mr. Docker will be happy to receive the deputation on Friday next at 11 o'clock a.m.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 21.

THE MAYOR OF WAVERLEY to THE MINISTER OF JUSTICE AND PUBLIC INSTRUCTION.

Borough Chambers,
Waverley, 17 December, 1875.

SIR,

I have the honor to inform you, that some nine months ago the inhabitants of this borough, through the "Municipal Council," petitioned the "Council of Education" to provide the necessary premises and establish a Public School in this locality. An attendance of about 200 children was guaranteed.

After correspondence, both with reference to the urgency of the case and the provision of a site, the Council courteously agreed to receive a deputation. The deputation accordingly waited at the office of the Council, but no quorum being present, the Hon. Dr. Smith and Mr. Duncan, who were present, heard what the deputation had to say, and reported the same subsequently to a full meeting of the Council. As the result we received a letter (a copy of which I have the honor to enclose), in which the Council express their willingness to place Waverley on the list of places in which schools are urgently required, and to instruct their architect to prepare plans, if the residents will provide a site. With respect to this demand of a site at private cost we beg to urge—

1st. The Council have not, nor ever had, any legal authority to demand sites at private expense, as a condition of building Public Schools.

Regulation No. 2, under the head of school administration, required private contribution to school buildings, but we respectfully submit that school sites are not school buildings.

2nd. On the motion of Mr. Parkes, on the 20th April last, the Assembly, by a unanimous resolution, declared its opinion "that so much of regulation No. 2, under the head of school administration, as required the contribution from private sources of one-third of the cost of erecting and furnishing school buildings, ought not in future to be enforced."

As this was the only requisition, the Act, or the regulations under the Act, gave the Council power to make, the Assembly by saying such requisition ought not to be enforced clearly enunciated the opinion that no requisition should be made on private resources, and that the whole cost of providing school

school premises should come out of the public fund; hence this demand of a site from us, in clear opposition to the will of the Assembly, the proper guardian of the national purse. We cannot think it right for a department of the Public Service to pursue a policy in direct antagonism to the declared will of the Assembly.

3rd. In asking a site from Waverley, while they purchase sites for other places, the Council appear to us to exercise an unjust partiality against people who contribute equally with others to the general revenue.

We do not complain that sites should be purchased for such places as Balmain and Sussex-street, but what we desire is equal treatment.

4th. The Council admit that there would be urgent need for a school at Waverley if a site were provided at private cost. We submit that if the need be not urgent without the site, the provision of a site would not make it so. By saying the case would be treated as urgent if a site were provided the Council do practically admit the case to be already urgent, and therefore they should establish a school.

In clause 6 of the "Public Schools Act of 1866," we read that "the Council of Education" shall in all matters be subject to the like control by the Governor and Executive Council as any other department of the Public Service. Thus it would appear that the Governor and the Executive Council have authority over the Council of Education.

Therefore we respectfully petition you as Minister of Justice and Public Instruction either to induce the Council of Education as early as possible to purchase a site, and erect a Public School at Waverley, or that you will represent our case to the Governor and Executive Council.

I have, &c.,
JOHN MACPHERSON,
Mayor, Borough of Waverley.

[Enclosure.]

The Secretary, Council of Education, to The Mayor, Waverley.

Council of Education Office,
Sydney, 13 November, 1875.

Sir,

The President having reported to the Council of Education that a deputation had waited upon the Council on Monday, the 25th ultimo, for the purpose of urging the erection of Public School buildings at Waverley, I am now directed to state that if the Local School Committee will at once cause a suitable site to be provided, free of expense, the Council will place Waverley on the list of places where Public School buildings are urgently required, and instruct its architect to proceed with the preparation of the necessary plans.

I have, &c.,
W. WILKINS,
Secretary.

The Council of Education.—J.D., 21 Dec., 1875.

No. 22.

THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION, to THE SECRETARY,
COUNCIL OF EDUCATION.

Department of Justice and Public Instruction,
Sydney, 22 December, 1875.

SIR,

In transmitting to you the accompanying copy of communication received from the Mayor of the Borough of Waverley, having reference to the purchase of a site and erection of a Public School thereon at that place, I am directed by the Minister of Justice and Public Instruction to request that you will have the goodness to invite the Council of Education to favour with such observations thereon as may appear to them desirable.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 23.

THE SECRETARY, COUNCIL OF EDUCATION, to THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND
PUBLIC INSTRUCTION.

Council of Education Office,
Sydney, 1 February, 1876.

SIR,

The Council of Education directs me to acknowledge the receipt of your letter dated the 22nd December last, in which you convey the request of the Minister of Justice and Public Instruction that the Council will make such observations as may appear to the Board to be desirable upon a communication from the Mayor of Waverley, of which you enclose a copy, respecting the suggested purchase of a site in that Borough, and the erection of a Public School thereon.

2. In the communication thus referred to the Council the Board is distinctly charged with having pursued a policy antagonistic to the declared will of the Assembly, and in dealing with the Waverley application contrasted with certain others, is alleged to have been guilty of partiality and injustice. It will not be expected that the Council should do more in reference to imputations of this character than simply call the attention of the Government to them.

3. The facts affecting the Waverley case are those which I am now to state: There have been established in that township for many years the following schools, all certified under the Council of Education, periodically inspected by its officers, and up to this day in working order and reported efficiency. First, the Church of England School, having on its roll for the quarter preceding the date of the Mayor's letter, 146 children; secondly, the Roman Catholic, having 141 enrolled; thirdly, the Presbyterian school, with 105; making a total of 392. Now, the number of children of school age resident within 2 miles of the Borough Chambers, near to which the Public School was proposed to be erected, is represented by the applicants themselves as being about 380. This may be taken to be a fair estimate, one indeed rather under the truth; but if so, every educable child included in that radius (the three Denominational schools being within it) was already at the time of the Mayor's application an enrolled pupil, and consequently receiving, or in a position to receive, the same elementary instruction which the applicants professed to desire.

4. In point of fact it has been ascertained that all these children, with a few exceptions, were and are so enrolled. The Mayor states in his letter that an attendance at the proposed school was guaranteed of about 200 children. The exact number guaranteed was 182; but of these there were 38 mere infants, and of the remaining 144 no less than 118 attended (or were enrolled in) the three certified schools mentioned; twelve went to the Paddington school; and thirteen to neighbouring private schools.

5. The Inspector, in his last report to the Council, puts the number of infants at 25 only; this would raise the number of school children to 157. But nine have left the district, or gone to work since the application was sent; in July five children appeared to be at no school, and for these, if required, there are the means of instruction at hand.

6. Up to the 10th day of June last, the state of education in the district being that which is here described, there had arisen no complaint, no suggestion in any quarter that a new school was required. When therefore so closely following the Assembly's resolution of the 20th April, the Council, already overburdened by applications for buildings, for improvements, and for repairs exclusively at the Public cost, found itself asked to undertake so serious an outlay at Waverley as that not of merely erecting a large Public School but purchasing a site on which to place it, the Board thought it a duty to consider whether there were not cases much more urgent. Accordingly on 5th July, after a careful review of the circumstances, and bearing in mind that there were places in which no schools existed but sites had been provided, or the inhabitants were willing to present them, the Council decided that the case was not an urgent one, and deferred compliance until a site should have been secured. On the 12th July the Mayor was officially so informed.

7. The Council of Education, I am instructed to observe, although perhaps in strictness bound by its existing regulations which had the force of law until altered, has never hesitated to give effect to the Assembly's resolution; but the desire to share speedily in the proffered gift, a desire not always justified by the educational want, has certainly unduly multiplied applications of this nature. The Council, therefore, was soon compelled to form two separate lists, one of preferential or urgent, and the other of secondary or postponed claims; and to place applications in one or the other class according to the circumstances. If in any instance, other things being equal, the Council has placed in the former a case actually of less necessity, but in which the parties prove the sincerity of their representation by contributions in money or in kind, the object as well as the effect has been to save the Public money, leaving a greater surplus for cases of unquestionable need.

8. It was on this principle that the Council acted in the matter of the Waverley application. Whenever it becomes known that the Council is a probable purchaser in any locality, or intends to build a school there, the price asked for land rises inordinately. Thus on the 10th August the Mayor, who had in June sanctioned a representation that an acre could be obtained for £100, tells the Council that prices had greatly advanced within the past few weeks. He adds that a site which he recommends, of 120 feet by 160, would cost £240. And in answer to this the Mayor was informed on the 10th of September (an examination of the ground having in the meantime been directed by the Council) that the obtaining of a site was expected in cases of this kind free of expense to the Council.

9. The simple question is whether in so deciding the Council of Education was under the circumstances justified, or in other words, was right, in its view of the case or not. The Council never refused compliance with the application. The intimation amounted to this, that the Board declined to erect a school not urgently required, and also purchase a site for it, in preference to and for a time to the exclusion of other claims more deserving; but on the principle explained the Council agreed to place the Waverley case on their preferential list, if the applicants would themselves so far assist as to procure a suitable site for the building. After an interview between certain of the members of the Municipality and of this Board the Council, on the 11th November, directed the Mayor to be so apprised.

10. The exact nature of the course proposed, and its effect, if adopted finally by the Council, were points discussed and explained at that interview. Instead of postponing its decision, or declining to sanction the application at all, the Council, in accordance with its previous intimation, agreed to erect the school at an earlier date than some others. The condition thus imposed on applicants whose case was not urgent, was at least in aid of those other cases from which the amount contributed would otherwise be taken. All this must have been understood by the gentlemen who attended the meeting. The Council regrets therefore that it should have been thought becoming to take advantage of an expression in my letter to the Mayor of the 13th November, by endeavouring to make it appear that the Council regarded the Waverley case as urgent or not urgent, according as the applicants should or should not accept that condition.

I have, &c.,

W. WILKINS,

Secretary.

Inform the Mayor of Waverley of the observations of the Council of Education.—J.D., 5/2/76.

No. 24.

THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION, TO THE MAYOR OF WAVERLEY.

Department of Justice and Public Instruction,

Sydney, 8 February, 1876.

SIR,

Referring to your letter of 17th December last, respecting the site for a Public School at Waverley, applied for by the Borough Council at that place, I am directed by the Minister of Justice and Public Instruction to inform you that a report has been received from the Council of Education on the subject, a copy of which is forwarded for your information.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

EDUCATION.

(CORRESPONDENCE BETWEEN DR. BADHAM AND THE COUNCIL.)

Ordered by the Legislative Assembly to be printed, 11 April, 1876.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 10th March, 1876, That there be laid upon the Table of this House,—

“Copies of all Correspondence between Dr. Badham and the Council of Education, on the question of Public Education.”

(*Mr. Dibbs.*)

THE SECRETARY TO THE COUNCIL OF EDUCATION TO THE UNDER SECRETARY OF JUSTICE AND PUBLIC INSTRUCTION.

Council of Education Office,
Sydney, 17 March, 1876.

SIR,

In reply to your letter of the 14th March instant, No. 76/2036, transmitting an order of the Legislative Assembly for the production of copies of all correspondence between Dr. Badham and the Council of Education on the question of Public Education, I am directed by the Council to state, for the information of the Honorable the Minister of Justice and Public Instruction, that on searching the registers of this office for the past nine years, no record can be found either of the receipt of any communication from Dr. Badham or of the despatch of any letter to him on the subject of Public Education.

I have, &c.,
W. WILKINS,
Secretary.

DR. BADHAM TO THE UNDER SECRETARY OF JUSTICE AND PUBLIC INSTRUCTION.

Sydney, March 28th.

SIR,

It is probably already well known by the gentlemen referred to in your letter of March 22nd that no correspondence has taken place between the Council of Education and myself.

The observations which I have had to make on the quality of education in primary schools have been made in three different ways. I. I have spoken repeatedly to Dr. Smith for several years past upon this subject, and indeed, it was the refusal of that gentleman to interfere with the Inspectors, conveyed to me at our last conversation, which decided me upon taking the step of addressing a letter to the Colonial Secretary, which letter was read in the Legislative Assembly. I have also on several occasions urged this matter upon the Hon. Thomas Holt, and called the attention of Mr. Duncan to the subject, as also of another gentleman who has long ceased to be a member of the Council. II. In conjunction with the other Examiners of the University, I have, in reports of the public Examinations of the years 1871, 73, 75, expressed myself very strongly on the defective teaching of English in the Public Schools. III. I held the same language when examined before Captain Onslow's Committee, with regard to the Civil Service. Moreover, my allusions to this topic in addressing public meetings, and the comments made on a speech of mine by the Editors of a "Journal of Education," which was conducted by members of the staff of officers employed by the Council of Education, cannot but have made it notorious to any one who cared ever so little for the subject, that I was altogether dissatisfied with the Council for leaving the choice of books and method to their subordinates.

If some members of the Council were unacquainted with these facts, and never thought it worth their while to inspect the school books used, they must have trusted to their colleagues; and this reliance of one upon another, and the ignorance arising therefrom, are, in my opinion, as strong an argument as can be alleged against the efficiency of a Board, however well constituted.

I have, &c.,
CHARLES BADHAM.

1875-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EDUCATION.

(APPLICATIONS FOR THE ESTABLISHMENT OF A PUBLIC SCHOOL AT EAST DAPTO.)

Ordered by the Legislative Assembly to be printed, 9 May, 1876.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 28 January, 1876, That there be laid upon the Table of this House,—

“Copies of all Documents in the possession of the Council of Education
 “relating to applications for a Public School at East Dapto, in the years
 “1874 and 1875.”

(*Mr. Buchanan.*)

EDUCATION.

No. 1.

MR. J. BROWN to THE COUNCIL OF EDUCATION.

Dapto, 11 January, 1875.

GENTLEMEN,

I have the honor to inform you that at a meeting of the Committee appointed to take the necessary steps to establish a Public School at East Dapto, I was directed to write to you, requesting to know if you would be pleased to appoint a teacher to the present school until such time as the Committee can see what is to be done respecting a Public School.

I have also been directed to bring under your notice the enclosed memo. from the Trustees of the Certified Presbyterian Denominational School at East Dapto, offering to lease that school to you on your own terms.

I have, &c.,
JOHN BROWN,
Hon. Sec. to the Committee.

[Enclosure.]

WE, the Trustees of the East Dapto Cert. Pres. Denom. School, do hereby give our consent to the leasing of the said school to the Council of Education, and to do so upon their own terms.

Jan. 5, 1875.

JOHN A. STUART—Witness.

ALEX. M'KENZIE,
GEORGE M'PHAIL.

Inadmissible. Act on Inspector's suggestion.—A.S.

Inspector of Camden District. For advice.—W.W., B.C., 13/1/75.

B.C., Secretary, No. 75/40.—The C.E. and R.C. Schools at Dapto are sufficient to meet the educational wants of the place at present, so that the application is not in any respect of an urgent nature. To open the Public School in the Presbyterian Church before the usual initiatory steps have been taken would be illegal and objectionable, because the residents would then make no effort for a length of time to establish a Public Vested School. When the necessary arrangements have been made to erect Vested Public School buildings it will be soon enough to consider the necessity for opening the school in temporary premises. The residents at Dapto should make their application on the usual printed form, which should be supplied to Mr. Brown.—W.M., 16/1/75.

No. 2.

MR. J. BROWN to THE COUNCIL OF EDUCATION.

Dapto, 11 January, 1875.

GENTLEMEN,

I have the honor to inform you that, at a Public Meeting of the inhabitants of Dapto, a Committee was appointed to take such steps as may be necessary to establish a Public School at East Dapto, and an offer of 1 acre of land as a site for the proposed school has been made by Mr. John Brown, of Dapto, which has been approved of by the Committee.

I beg to know whether you will kindly supply the Committee with the necessary forms to make the application for the proposed school.

I have, &c.,
JOHN BROWN,
Hon. Sec. of the Committee.

No. 3.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. J. BROWN.

No. 75,2002.

Council of Education Office,
Sydney, 30 January, 1875.

SIR,

I am directed by the Council of Education to acknowledge the receipt of your letter dated 11th January, instant, in which you inquire if the Council will be pleased to appoint a teacher to the present school at Dapto, until such time as the Committee can see what is to be done respecting a Public School.

2. In reply, I am instructed to state that the Council deems it inexpedient at present to adopt the course suggested by the Local Committee. When, however, the necessary arrangements have been made for the erection of Vested Public School buildings, the Council will be prepared to consider the question of opening a Public School in temporary premises.

3. The requisite printed form is transmitted herewith, in order that application may be made for ^{Form A} the establishment of a Public School.

I have, &c.,
W. WILKINS,
Secretary.

No. 4.

No. 4.

MR. J. BROWN TO THE COUNCIL OF EDUCATION.

Dapto, 12 February, 1875.

GENTLEMEN,

In accordance with your letter of the 13th ultimo, 567, No. 75, I now have the honor to enclose the necessary application, filled up in due form, for a temporary Public School at East Dapto.

I have, &c.,

JOHN BROWN,
Hon. Sec. of the Committee.

No. 5.

B.

Application for the establishment of a Public School at East Dapto.

MR. R. J. MARSHALL AND OTHERS TO THE COUNCIL OF EDUCATION.

Dapto, 12 February, 1875.

GENTLEMEN,

We, the undersigned residents at Dapto, request that you will be pleased to establish a Public School at that place, under the provisions of the "Public Schools Act of 1866."

For this purpose we have provided the requisite buildings, as hereafter described; and we are prepared to execute a lease of these premises for a term of five years at a nominal rent.

We have, &c.,

Local Committee - {
ROBERT J. MARSHALL.
WILLIAM SMITH THOMPSON.
DAVID PAINE.
DUNCAN M'RAE.
GEORGE M'PHAIL.
WILLIAM BROWN.
JOHN CALDWELL.
JOHN BOVARD.

Information to be supplied by Local Committee.

1. Describe the position of the proposed school. Situate on the east side of the main road to Kiama, near the Dapto Post Office, and being the building that was recently occupied as a Certified Presbyterian Denominational School, together with the cottage containing three rooms and also a kitchen.

2. What other schools, maintained or aided by the Council of Education, are within 2 miles of the site of the proposed school? None.

3. If none are within 2 miles, what is the distance of the nearest school? Between 2 and 3 miles.

4. Are there any primary schools, not aided by the Council of Education, within 2 miles of the proposed school. If so, of what character, and how attended? None.

5. State the number of children, from 4 to 14 years of age, living within a radius of 2 miles of the site of the proposed school, e.g. :—

Boys	41
Girls	25
One boy, C.E., 16 years of age	1
Total	67

Religious Denominations:—

Church of England... ..	26

No. 6.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. J. BROWN.

Council of Education Office,
Sydney, 19 February, 1875.

SIR,

I am directed by the Council of Education to acknowledge the receipt of your letter of the 12th instant, transmitting an application for the establishment of a Public School at East Dapto, to be conducted in a building to be leased to the Council for five years.

2. In reply, I am to state that the form on which the application is made is not applicable to the circumstances of the case, inasmuch as it is understood that a *Vested* Public School is to be established. Will you therefore be good enough to fill up and return to this Office the form A, forwarded in my letter of the 30th ultimo, No. 75/2,002, when the Council will take further action in the matter. As you were informed in that letter, the Council will consider the question of opening the school in temporary premises when the necessary arrangements have been made for the erection of *Vested* Public School buildings.

I have, &c.,
W. WILKINS,
Secretary.

No. 7.

MR. R. J. MARSHALL TO THE SECRETARY, COUNCIL OF EDUCATION.

Daisy Bank, Dapto,
17 March, 1875.

SIR,

Since the withdrawal of the certificate from the Presbyterian Denominational School, East Dapto, a public meeting was convened of the inhabitants, for the purpose of establishing a Public School. At this meeting the site offered by Mr. John Brown not being approved of by all parties at the meeting, it was moved by the Rev. J. H. Rowsell, "That this meeting stand adjourned for a fortnight, until a better site may be determined upon." This not meeting Mr. Brown's views, or the party acting in concert with him, the motion in consequence was lost. A working Committee was then appointed, of which I was a member. At the first meeting of the Committee it was moved, "That Mr. P. H. Osborne be written to, requesting him to give two acres of land for the site of a Public School." This motion was also lost, in consequence of Mr. Brown's party not liking it. I determined, therefore, not to let Mr. Brown have all his own way, so I therefore wrote to Mr. P. H. Osborne, and obtained an answer granting two acres for the purpose as requested. The site given by Mr. Osborne adjoins the main road, about two hundred yards from the old Presbyterian Denominational School now closed, three miles from the Avondale P. School, about the same distance from the Church of England School, and about two miles from the Roman Catholic School, West Dapto. Mr. Brown's site is about four miles and a half from the Avondale P. School, and scarcely two miles from the Church of England School, and one from the Roman Catholic School, West Dapto. As regards situation, being more central and convenient generally, and less liable to come into injurious competition with the other schools, the site offered by Mr. Osborne is by far a better one than Mr. Brown's. Mr. Brown's is only one acre of land, Mr. Osborne's is two acres. Mr. Brown's donation of £25 I hold not being at all equivalent to Mr. Osborne's additional acre. Some correspondence has already taken place between Mr. Brown as Secretary to the Committee before mentioned; my object in writing is to acquaint the Council of Education of the fact that we have the offer of another and a more eligible site for a Public School than the one offered by Mr. Brown. It would have been useless to have asked Mr. Brown to do it—I therefore have to request that all matters with reference to the establishing of a Public School at East Dapto may be held in abeyance for some time, until the respective merits of the two sites may be determined. The local Inspector could very soon do it.

I am, &c.,
ROBERT J. MARSHALL.

B.C.—Inspector of Camden District, for your perusal and report.—W.W., 20/3/75.

B.C. No. 75/234.—I have inspected the land proposed by Mr. Marshall as a site for the proposed Public School at Dapto. I am of opinion it is in all respects suitable for the purpose, but I am not prepared to advise the Council finally on the subject. A public meeting of the residents must be held to determine the matter.—W.M., 13/4/75.

Let a tracing be prepared showing the existing schools and proposed sites. The inhabitants of the district, assembled in public meeting, should state their views to the Council.—J.S., 16/4/75.

No. 8.

MEMORANDUM FROM THE SECRETARY, COUNCIL OF EDUCATION, TO THE INSPECTOR OF SCHOOLS,
CAMDEN DISTRICT.

Dapto, East: Question of site for a Public School at.—Your B.C., No. 75/234.

Papers herewith.
To be returned.

Will you be good enough to prepare a tracing showing the existing schools at the above place, and the proposed site for a Public School. When the tracing is completed and furnished by you, the inhabitants of the district, assembled in public meeting, will be requested by the Council to state their views in the matter.

Council of Education Office,
Sydney, 22 April, 1875.

W. WILKINS,
Secretary.

No. 9.

No. 9.

MEMORANDUM from THE INSPECTOR OF SCHOOLS, CAMDEN DISTRICT, to THE SECRETARY OF THE COUNCIL OF EDUCATION.

Dapto, East: Question of Public School site.—Your B.C. No. 75/7,172.

Burraborang, 1 May, 1875.

I ENCLOSE a tracing,* as requested, showing the positions of the existing schools at West Dapto. As *Tracing attached. regards the proposed sites, I am of opinion Osborne's is the most suitable, for the following reasons:—

1. There are 2 acres.
2. There must shortly be a Public School at Charcoal Creek, and Brown's site is too near.
3. There must also be a Public School for West Dapto, near the Church of England School, and Brown's site is too near.
4. Osborne's site is to accommodate the settlers in the directions of Avondale, Marshall Mount, Albion Park, and Brown's site.

W. M'INTYRE,
Inspector, Camden District.

No. 10.

Application for the establishment of a Public School at Brown's, East Dapto.

MR. J. BROWN to THE COUNCIL OF EDUCATION.

Dapto, 1 May, 1875.

GENTLEMEN,

We, the undersigned residents at Dapto, request that you will be pleased to establish a Public School at that place, under the provisions of the "Public Schools Act of 1866," the total cost of which we estimate to be £800.

For the Local Committee,
JOHN BROWN,
Hon. Secretary of the Committee.

Information to be supplied by Local Committee.

1. Describe the position of the proposed school. The site of the proposed school is situate at Brown's, East Dapto, on the Main South Coast Road.
2. What other schools, maintained or aided by the Council of Education, are within two miles of the site of the proposed school? The Roman Catholic Denominational School at West Dapto.
3. If none are within 2 miles, what is the distance of the nearest school?
4. Are there any primary schools, not aided by the Council of Education, within 2 miles of the proposed school?—If so, of what character, and how attended? None.
5. State the number of children, from four to fourteen years of age, living within a radius of 2 miles of the site of the proposed school, e.g. :—

Boys	44
Girls	37
Total	81

Religious Denominations:—

Church of England	35
Roman Catholic	19
Presbyterians	9
Wesleyans	18
Others	0
Total	81

There are 101 children on the list in all, of whom 45 are Church of England, 21 Wesleyans, 13 Presbyterians, and 22 Roman Catholics.

6. Give a technical description of the proposed site, according to the dimensions and bearings of its boundaries by survey. If possible, annex a plan of the ground.

7. By whom is the site granted, and on what terms? The site is granted by Mr. John Brown.

8. Is a right-of-way to the site secured? It is partly bounded by the Main South Coast Road.

9. Is the ground level or otherwise? It is well situated for building purposes.

10. What is the nature of the ground upon which the building is to rest? Is it of a rocky, clayey, or sandy character? How drained? How affected by floods? It is of a rocky character, well drained, on high ground, not affected by any floods.

11. Of which of the following materials are the proposed buildings to be constructed:—

- Hewn masonry.
- Rubble.
- Brick.
- Studs and weatherboards.
- Sawn or split slabs?

The buildings might be constructed either of brick or studs and weatherboards, hardwood.

12. Are these materials suitable in all respects? Either of the above would be suitable, but brick would be the most suitable.

13. Of what materials are the public or best buildings in the neighbourhood constructed? The best buildings in the neighbourhood are constructed of brick. Nearly all the buildings at Brown's are constructed of brick.

14. What is the cost of building stone, and of what description?

Ashlar or rubble?

Of bricks, per 1,000?

Of shell-lime, per bushel? About 10d. per bushel, delivered.

15. State the price of hardwood, cedar, and pine, per 100 feet, and of shingles, per 1,000.

Hardwood, about 18s. to 20s. per 100 feet—delivered.

Cedar, about 25s. to 30s. per 100 feet—delivered.

16. What timber in the locality is most suitable for shingles and flooring-boards? What is the usual length of the shingles? Shingles are usually 16 inches long; the best are black butt or peppermint. Stringybark flooring-boards are the best; sawn timber is scarce in the locality.

17. Do the rates mentioned include carriage to the school site? If not, state cost of carriage.

18. What is the current rate of wages paid in the district to workmen employed in building?

19. Is there a natural supply of water, or will a tank or well be required? If a well, at what depth will water be obtained? A tank will be required.

20. State the quantity and quality of fencing required, and the cost per rod. A three-railed fence of hardwood split timber would cost about 6s. per rod.

21. Add any other circumstances deemed desirable for the information of the Council? Bricks could be made on Mr. Brown's land, close to the proposed site, and would cost about 45s. to 50s. per 1,000, delivered.

Annex to Application for establishment of a Public School at Brown's, East Dapto, to be erected on a site offered to the Council by Mr. J. Brown.

WE the undersigned Parents (or Guardians) of children residing within the undermentioned distances from the site of the proposed Public School at Brown's, East Dapto, hereby undertake that our children, whose names are inserted below, shall attend the said school.

No. 11.

MR. J. BROWN to THE COUNCIL OF EDUCATION.

Dapto East, 1 May, 1875.

GENTLEMEN,

I have the honor to inform you that, at a meeting of the East Dapto Public School Committee, held at the Council Chambers, Dapto, yesterday, I was instructed to forward to you the enclosed form of application for the establishment of a Public School at Brown's, East Dapto, signed by twenty-three parents and guardians, representing 101 children, eighty-one of whom are from 4 to 14 years of age.

I am also directed to state that, owing to a resolution of Parliament, recently passed, it is understood that the Government will in future provide for the erection of all Public School buildings without the assistance of private individuals by subscription.

The Committee have therefore considered it unnecessary to fill in that part of the form which relates to local subscription.

I am further instructed to call your attention to the urgent necessity of having the proposed school erected, and to request that you will be pleased, at your earliest convenience, to take such steps as you may deem to be the most expedient to have the necessary buildings erected.

I have, &c.,
JOHN BROWN;
Hon. Secretary.

No. 12.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. J. BROWN.

Council of Education Office,
Sydney, 5 May, 1875.

SIR,

I am directed by the Council of Education to acquaint you that your formal application for the establishment of a Public School at Brown's, East Dapto, is now under consideration, and that a further communication respecting it will be addressed to you as soon as the Council has arrived at a decision thereon.

I have, &c.,
W. WILKINS,
Secretary.

No. 13.

MEMORANDUM FROM THE SECRETARY, COUNCIL OF EDUCATION, TO THE INSPECTOR OF SCHOOLS, CAMDEN DISTRICT.

Brown's, East Dapto : Application for a Public School at.

FOR your report.

W. WILKINS,
Secretary.

B.C., Secretary (No. 75-345),—

I beg to inquire if it is necessary, as hitherto, that a Local Committee should be nominated in connection with applications for schools when the buildings are to be erected wholly at the public cost. For various reasons, I think that applications for the erection of school buildings should, as far as practicable, be signed by at least one member of each religious denomination in the locality, and by not less than three persons.

Council of Education Office,
Sydney, 5 May, 1875.

W. M'INTYRE,
Inspector of Camden District,
11/5/75.

I see no reason for changing the practice at present.—J.S.

No. 14.

MEMORANDUM FROM THE SECRETARY, COUNCIL OF EDUCATION, TO THE INSPECTOR OF SCHOOLS, CAMDEN DISTRICT.

(No. 75/8,922.)

Brown's, East Dapto : Application for a Public School at.—Your B.C. No. 75/345.

FOR your report. In reply to the inquiry contained in your memorandum, I am to state that the Council sees no reason for changing the practice at present in regard to the signing of formal applications for new schools.

Council of Education Office,
Sydney, 18 May, 1875.

W. WILKINS,
Secretary.

B.C., Secretary (No. 75/465),—

In considering this application, it is necessary to remember that Public Schools are required at Charcoal Creek and at Dapto West, and as Brown's is only about a mile and a half distant, a school there is not required. The majority of the children promised to attend a school at Brown's can more conveniently attend the schools at Charcoal Creek and West Dapto. Mr. Brown has no children of his own to educate, and the few children belonging to his tenants can easily attend the Public School on Osborne's site.

I convened a public meeting of the inhabitants of Dapto, on the 26th May last, to consider this matter, when it was decided that the selection of the site should be left to the Council. (See extracts from local newspaper appended.)

Recommendation :—I cannot advise the establishment of a school at Brown's, because it is too near the Public Schools required at Charcoal Creek and West Dapto.

Sydney, 17 June, 1875.

W. M'INTYRE,
Inspector.

(No. 75/466.)

(Published in "Illawarra Mercury" of 25 May, 1875.)

Public School, Dapto.

I HEREBY request a meeting of the inhabitants of Dapto, on Wednesday next, the 26th inst., at 3 p.m., at "Brown's Hotel," to consider matters relative to the proposed Public School. I shall be present to hear the representations of the people.

W. M'INTYRE,
Inspector of Schools.

(Extract from "Illawarra Mercury" of 28 May, 1875.)

"DAPTO.—A public meeting was held in the Council Chamber, Dapto, last Wednesday afternoon, respecting the proposed establishment of a Public School in that neighbourhood. The meeting was tolerably well attended, and was presided over by Mr. R. J. Marshall. After a lengthy discussion respecting the eligibility of the site offered for such school by Mr. John Brown and that offered by Mr. P. H. Osborne, further south, along the main road; a resolution was moved to the effect that Mr. Brown's site be accepted. On this an amendment was moved and carried by a slight majority, to the effect that the matter of deciding the site for the proposed school be left in the hands of the Council of Education. Mr. M'Intyre, the Inspector for Schools, was present at the meeting, noting all that was put forward by the parties interested in the proposed school."

No. 15.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. J. BROWN.

(No. 75/11,701.)

Council of Education Office,
Sydney, 24 June, 1875.

SIR,

I am directed to acquaint you that the Council of Education has had under notice the formal application, dated the 1st ultimo, for the establishment of a Public School at Brown's, East Dapto.

2. In reply, I am to state that the Council, having caused careful inquiries to be made into the circumstances of the case, has decided to decline the application, on the ground that the site of the proposed school is too near the existing schools at Charcoal Creek and West Dapto. Moreover, it appears that the majority of the children whose parents promised that they shall attend the school applied for can more conveniently attend the schools at those places.

I have, &c.,
W. WILKINS,
Secretary.

No. 16.

APPLICATION FOR PUBLIC SCHOOL.

Dapto, 22 May, 1875.

To the Council of Education,—

GENTLEMEN,

We, the undersigned residents at Dapto, request that you will be pleased to establish a Public School at that place, under the provisions of the "Public Schools Act of 1866," and we hereby engage to raise, by local subscriptions, the sum of £ , for the erection of school-house, teacher's residence, out-buildings, and fences, for providing furniture and apparatus, and for other necessary purposes, the total cost of which we estimate to be £600. We further submit the following as the names of persons by whom payment of the sum of £ will be guaranteed, viz. :—

We have, &c.,
Local Committee { KENNETH MACKENZIE.
JOHN BOVARD.
DUNCAN M'RAE.

Information to be supplied by Local Committee.

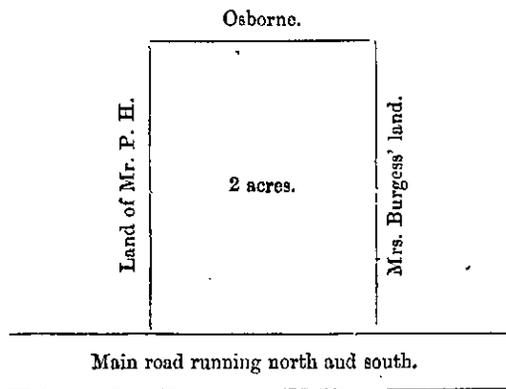

1. Describe the position of the proposed school. Fronting the main road from Wollongong to Kiama and Shoalhaven.
2. What other schools, maintained or aided by the Council of Education, are within 2 miles of the site of the proposed school? None.
3. If none are within 2 miles, what is the distance of the nearest school? 3 miles.
4. Are there any primary schools, not aided by the Council of Education, within two miles of the proposed school? If so, of what character, and how attended? None.
5. State the number of children, from 4 to 14 years of age, living within a radius of 2 miles of the site of the proposed school, e.g. Eighty-nine.

Boys	52
Girls	37
Total								89

Religious Denominations :—

Church of England	35
Roman Catholic	35
Presbyterians	12
Wesleyans	7
Total								89

6. Give a technical description of the proposed site, according to the dimensions and bearings of its boundaries by survey. If possible, annex a plan of the ground. Bounded on the west by the main road through the district; on the north by land of Mr. P. H. Osborne; on the east by the same land; on the south by land of Mrs. Burgess.

7. By whom is the site granted, and on what terms? Mr. P. H. Osborne, for ever.
8. Is a right-of-way to the site secured? Secured.
9. Is the ground level or otherwise? A gentle rise from the main road.
10. What is the nature of the ground upon which the building is to rest? Is it of a rocky, clayey, or sandy character? How drained? How affected by floods? A clayey soil, resting upon rock; drains itself; not affected by floods in any manner.
11. Of which of the following materials are the proposed buildings to be constructed:—
Hewn masonry.
Rubble.
Brick. Of bricks, with stone foundation, roughly hewn or dressed with the hammer.
Studs and weatherboards.
Sawn or split slabs.
12. Are these materials suitable in all respects? Suitable.
13. Of what materials are the public or best buildings in the neighbourhood constructed? Some of bricks—some of weatherboards.
14. What is the cost of building-stone, and of what description? Cannot be properly ascertained; must employ men by the day to quarry it in the neighbourhood; stone is of good description.
Ashlar or rubble?
Of bricks, per 1,000? £3 per M.
Of stone or shell-lime, per bushel? 1s. per bushel.
15. State the price of hardwood, cedar, and pine, per 100 feet, and of shingles, per 1,000? Hardwood, 16s. per 100 feet; cedar, 25s.; no pine to be had; shingles, £1 per M.
16. What timber in the locality is most suitable for shingles and flooring-boards? What is the usual length of the shingles? Stringy-bark, woolly butt, peppermint; usual length of shingles, 16 inches.
17. Do the rates mentioned include carriage to the school site? If not, state cost of carriage? Carriage included.
18. What is the current rate of wages paid in the district to workmen employed in building? About £3 per week.
19. Is there a natural supply of water, or will a tank or well be required? If a well, at what depth will water be obtained? A tank will be required.
20. State the quantity and quality of fencing required, and the cost per rod? About 40 rods of three-rail fencing will be required; the land is already fenced on two sides with a new three-rail hardwood fence. 6s. per rod.
21. Add any other circumstances deemed desirable for the information of the Council. The Local Committee think it more desirable, and more consistent with true economy in the end, to have a substantial brick building, which will be more durable, and less liable to destruction by fire, than a wooden one, and hope the sum asked for may not be deemed excessive by the Council of Education.

ROBERT J. MARSHALL,
Hon. Sec.

Annex to Application for establishment of a Public School at Dapto.

WE the undersigned Parents (or Guardians) of children residing within the undermentioned distances from the site of the proposed Public School at Dapto, hereby undertake that our children, whose names are inserted below, shall attend the said school.

No. 17.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. K. M'KENZIE.

(No. 75/9,510.)

Council of Education Office,
Sydney, 28 May, 1875.

SIR,

I am directed by the Council of Education to acquaint you that your formal application for the establishment of a Public School at Dapto is now under consideration, and that a further communication respecting it will be addressed to you as soon as the Council has arrived at a decision thereon.

Signed also by
John Bovard
and Duncan
M'Rae.

I have, &c.,

W. WILKINS,
Secretary.

No. 18.

MEMORANDUM from THE SECRETARY, COUNCIL OF EDUCATION, to THE INSPECTOR OF SCHOOLS, CAMDEN DISTRICT.

B.C., No. 75/9,511.

Dapto: Application for a Public School at.

REFERRED for your inquiry and report.

Council of Education Office,
Sydney, 28 May, 1875.W. WILKINS,
Secretary.

B.C., Secretary (No. 75/463).—

Dapto is a postal village on the Main South Road, 8 miles south from Wollongong. There are two Denominational Schools at West Dapto. The proposed school is to supply the means of education to the settlers at East Dapto. The urgent necessity for this school has arisen in consequence of the Council having withdrawn the certificate from the Presbyterian School in December last. The gross attendance of scholars will be about 50, and the average between 30 and 40. A Public School will be much better attended than the Pres. School. The site is offered by P. H. Osborne, Esq., free of cost. It contains 2 acres, and is suitable in all respects. It is central, being about 3 miles from the Public School at Avondale, about 3 miles from the proposed Public School at Charcoal Creek, and about $2\frac{1}{2}$ miles from the proposed Public School at West Dapto.

I am of opinion that the buildings should be of brick with freestone dressing.

The schoolroom should be sufficient in size to accommodate fifty scholars, and the residence should consist of five rooms, with a kitchen and storeroom.

Recommendation:—I am of opinion that this application should be entertained.

Sydney, 17 June, 1875.

W. M'INTYRE,
Inspector.

QUESTIONS to be answered by Inspectors when reporting upon applications for aid in the establishment of Public Schools. (A.)

1. Where is the school to be situated? Dapto.
2. What is the nearest post town? Mention its distance? Dapto.
3. Have you inspected the proposed site? Is it suitable? I have inspected the site. It is suitable.
4. Is the proposed site the property of the public, or of a private individual? In the latter case is the owner willing to convey the site to the Council? It is the property of Mr. P. H. Osborne, and he is willing to convey the land to the Council.
5. What schools are in the neighbourhood? Dapto C.E. and R.C. Schools.
6. Do a majority of the residents favour the establishment of a Public School? They do.
7. Who are the Local Committee? State their professions, or occupations and religious denominations? Kenneth Mackenzie, Pres., storekeeper, John Bovard, Pres., farmer, Duncan M'Rae, Pres., wheelwright.
8. Have they chosen one of their number to act as Secretary and another as Treasurer? Mr. Kenneth Mackenzie is Secretary.
9. What is the population of the School District? About 150 persons.
10. Is the district likely to be permanently inhabited? It is.
11. State the gross and average number of children expected to attend the school, distinguishing males and females? Estimated attendance—26 males and 26 females; estimated average—17 males and 18 females.
12. State any information you may have received relative to the circumstances of the people likely to require the school. The people are all in comfortable circumstances.
13. What amount of local subscription has been raised, or is likely to be raised, towards the erection of the school buildings? None.
14. Has the amount subscribed been remitted to the Secretary, as required by Article 6 of the Regulations? No subscriptions have been raised.
15. If not, are you of opinion that the Council may rely upon the guarantee offered? The applicants do not intend to raise any local contributions.
16. Have the Local Committee considered the necessity for fencing and out-buildings in estimating the expense of the school buildings? Yes.
17. How is it proposed to keep the building in repair? This question was not considered.
18. Have you given the Local Committee any information as to the articles of furniture usually deemed indispensable to the proper conduct of the school; and will they be provided? I have not considered it necessary to give any information on these matters.
19. In addition to the matters above referred to, state any other circumstances within your knowledge connected with the application, which you may consider material for the information of the Council. The certificate of the Presbyterian School at Dapto having been withdrawn on the 31st December, 1874, a school is required. The site contains an area of 2 acres, and it is suitable in all respects. It is central, being about 3 miles from the Public School at Avondale, nearly 3 from the proposed Public School at Charecoal Creek, and about 2½ miles from the proposed Public School at West Dapto.

Sydney, 17 June, 1875.

W. M'INTYRE,
Inspector.

Council of Education Office,
Sydney, 9 July, 1875.

SIR,

In continuation of my letter of even date herewith, informing you that the Council of Education has resolved to establish a Public School at Dapto, I am directed by the Council to request that you will be good enough to forward to this Office the deeds relating to the title, together with a description (surveyor's), of the land offered by Mr. P. H. Osborne, in order that the Council's solicitors may be instructed to prepare a transfer of the same to the Council.

2. A plan and specification of the proposed school buildings will be prepared by the architect, and transmitted to you in due course, with a view to the Local School Committee procuring tenders for the works.

I have, &c.,
W. WILKINS,
Secretary.

No. 25.

MR. W. WILSON to THE COUNCIL OF EDUCATION.

Brown's, Dapto, 28 May, 1875.

GENTLEMEN,

I have been informed that an application, sent to your Council for a Public School at East Dapto, on a site at Daisy Bank, offered by P. H. Osborne, Esq., contains the names of myself and children. Should such be the case, I beg to state they have been placed there without my knowledge or consent, or that of my wife, as I am in favour of the site for a Public School offered by Mr. John Brown, at Brown's, East Dapto.

I have, &c.,
his
WILLIAM + WILSON.
mark.

Witness—JOHN CALDWELL.

B.C., Secretary,—Mr. Wilson has been misinformed. His name is not among the applicants for a Public School on Osborne's site.—W.M., 4/5/75.

B.C., Inspector, Camden District,—For your inquiry and report in connection with former papers transmitted to you as above.—W.W., 2/6/75.

B.C., Secretary,—See my B.C., inadvertently written on the other side.—W.M., 4/6/75.

No. 26.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. W. WILSON.

Council of Education Office,
Sydney, 9 June, 1875.

SIR,

Referring to your letter of the 28th ultimo, stating that you have been informed that your name has been added to an application for a Public School on a site offered by P. H. Osborne, Esq., at Dapto East, I am directed by the Council of Education to acquaint you that your name is not among the applicants for a Public School on the site mentioned.

I have, &c.,
W. WILKINS,
Secretary.

No. 27.

No. 27.

MR. R. ABBOTT to THE COUNCIL OF EDUCATION.

Brown's, Dapto, 28 May, 1875.

GENTLEMEN,

I have been informed that my name and the names of my children have been put down in an application for a Public School at East Dapto, on a site offered by Mr. P. H. Osborne. I beg to state that, should such be the case, it has been done without my knowledge or consent, or that of my wife, as I am in favour of the site offered by Mr. John Brown, at Brown's, East Dapto.

I have, &c.,
his
ROBERT + ABBOTT.
mark.

Witness—GEO. WM. BROWN.

B.C., Inspector, Camden District,—For your inquiry and report in connection with former papers transmitted to you.—W.W., 3/6/75.

B.C., Secretary,—Mr. Abbott has been misinformed. His name is not among the applicants for a Public School on Osborne's site.—W.M., 4/6/75.

No. 28.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. R. ABBOTT.

Council of Education Office,
Sydney, 9 June, 1875.

SIR,

Referring to your letter of the 28th ultimo, stating that you have been informed that your name has been added to an application for a Public School on a site offered by P. H. Osborne, Esq., at Dapto East, I am directed by the Council of Education to acquaint you that your name is not among the applicants for a Public School on the site mentioned.

I have, &c.,
W. WILKINS,
Secretary.

No. 29.

MR. J. GRAHAM, SEN., to THE SECRETARY, COUNCIL OF EDUCATION.

Avondail, Dapto, 1 June, 1875.

SIR,

As I have been these twenty years a hard struggler in support of education in this locality and elsewhere, I take liberty to make a few remarks on the proposed Publick School in Dapto.

First, the sight offered by Mr. Osborn is too near both Avondale and Marshalmount Publick Schools. The distance is only about two and a half miles from Avondale P. School. I think in a thinly populated district Publick Schools should be not much less than four miles apart, unless a range of mountain divides them. If the Dapto school is put on Mr. Osborn's site it will take away eight childer from the Avondale school, as it will then be nearer to them as soon as the Dapto school is opened, or will be opened.

We have at present lost two families that had each of them large families of childer at the Avondail school, and no childer is coming to fill their place, and if we were to lose eight childer more by having the Dapto school to near us our school would be sew reduced that perhaps the Board would not be willing to support a good teacher. You might ask me why I am sew auncious about these schools, and to this I will answer I have been the only one that set about asking my friends and neibours to establish the National Education in the locality, thoe all my own childer was educated at the time.

And both these schools cost me great labour and thought, and besides when I take a view of the account, I see the Avondale school cost me £35 and some odds, and the Marshalmount school something more than £15 fifteen pounds, sew that is something better than fifty pounds in the whole, and besides the please they want to bild on is only a few rods from where the Presbyterian School was, that was closed for the want of peoples some time ago, and if you build on the sight Mr. Osborn is given you will have to keep the three schools still in Dapto.

But if you build on the other site Mr. Brown is giving, the R. C. school will soon disappear, and one other school will onley be needed. The Church of England school is, I think, in a place, will sute for the other school that will be required to sarve Dapto.

When two Publick Schools is near other there is no tacher able to please every one, and the least offense will cause them to lave the one and guv to the other one.

And now I will spake plean, the onley reason I can see for putting the school on Mr. Osborn's sight is to keep it sew far from R. C. school that it will not be ingered. I could say more on the last subject but perhaps it is not nessarey at present.

Perhaps I should tell you that a great change came while we were building the Avondail School, and the people that subscribed to assist to pay our one-third was not able, and the consiquence was, H. H. Osborn, Esq., had to pay, insted of £50 he promised, he had to pay £100, and I thirty-five instead of £10 I promised.

I have, &c.,
JOHN GRAHAM, SEN.

No. 30.

MEMORANDUM from THE SECRETARY, COUNCIL OF EDUCATION, to THE INSPECTOR OF SCHOOLS,
CAMDEN DISTRICT.

Dapto East: John Graham's letter respecting proposed Public School at.

For your inquiry and report, in connection with former papers transmitted to you.

Council of Education Office,
Sydney, 3rd June, 1875.

W. WILKINS,
Secretary.

B. C. Secretary (No. 75-439),—

A Public School at Dapto will not in any way injuriously affect the Public School at Avondale, which is about 3 miles distant. I shall carefully bear in mind the matter of Mr. Graham's letter when reporting upon the proposed school at Dapto.—W. M'INTYRE, Inspector, 10/6/75.

No. 31.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. J. GRAHAM, SEN.

Council of Education Office,
Sydney, 14 June, 1875.

SIR,

I am directed by the Council of Education to acknowledge the receipt of your letter of the 1st instant, respecting the proposed Public School at East Dapto, and disapproving of the site offered by Mr. Osborne.

2. In reply, I am to state that the Council having caused inquiries to be made into the circumstances of the case, has instructed me to inform you that a Public School at Dapto will not in any way injuriously affect the Public School at Avondale, which is about 3 miles distant.

3. I am to add that the representation contained in your communication respecting the proposed site of the Public School at Dapto will be carefully borne in mind when the Council is in a position to consider the matter.

I have, &c.,
W. WILKINS,
Secretary.

No. 32.

MR. J. BROWN to THE COUNCIL OF EDUCATION.

Dapto, 5 June, 1875.

GENTLEMEN,

I have the honor, by direction of the East Dapto Public School Committee, to state that at the meeting of the inhabitants of Dapto, convened by Mr. W. M'Intyre, the Inspector of Schools, it was stated by that gentleman that some nine or ten or perhaps a dozen persons had signed both applications, viz., one for the site offered by Mr. John Brown, and the other for the site offered by Mr. P. H. Osborne.

I have been directed to ask if you will kindly favour the Committee with a list of the names of persons who have signed both applications.

I have, &c.,
JOHN BROWN,
Hon. Secretary.

Decline.—It seems a matter of no consequence.—J.S.

No. 33.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. J. BROWN.

Council of Education Office,
Sydney, 17 June, 1875.

SIR,

Referring to your letter of the 5th instant, requesting to be furnished with the names of persons who have signed both applications for the establishment for a Public School at Dapto East,—I am directed by the Council of Education to state that the Council deems it inexpedient to accede to the request contained in your communication.

I have, &c.,
W. WILKINS,
Secretary.

No. 34.

W. BROWN AND OTHERS to THE COUNCIL OF EDUCATION.

Dapto, 9 June, 1875.

GENTLEMEN,

With reference to a Public School meeting called by Mr. W. M'Intyre, the Inspector of Schools, on Wednesday, the 26th ultimo, at 3 o'clock, p.m., and held at the Council Chambers, Dapto, to consider matters relative to the proposed Public School,—we the undersigned beg to state that we were prevented

from attending the meeting in consequence of the short notice and inconvenient hour at which the meeting was called.

We further beg to state that we are in favour of the site offered by Mr. John Brown, at Brown's, East Dapto.

We have, &c.,

WILLIAM BROWN.
EDWARD GIBSON.
JOHN HEWITT.
ROBERT M'PAUL.
J. B. HARVEY.
WILLIAM LINDSAY.
WILLIAM CONNOLLY.

Witness—GEORGE WILLIAM BROWN.

his
WILLIAM + WILSON.
mark.

Witness—GEORGE WILLIAM BROWN.

his
THOMAS + CLIFFORD.
mark.

B.C., Inspector, Camden District,—For your inquiry and report in connection with former papers transmitted to you.—W.W., 10/6/75. B.C., Secretary, No. 75/467.

As six of the persons who sign this letter reside nearer to other schools than Brown's, I suppose it may be taken for granted that they signed more to oblige Mr. Brown than to serve their own convenience.—W.M., 17/6/75.

No. 35.

MR. P. O'REILLY to THE SECRETARY, COUNCIL OF EDUCATION.

Dapto, 14 June.

SIR,

As regards the proposed Public School at Mr. Brown's, I beg most respectfully that the Council of Education delay their decision as to the proposed site, until a petition, which is being got up by the inhabitants of Charcoal Creek and West Dapto, reaches the Council's Office.

I remain, &c.,

PATRICK O'REILLY.

No. 36.

MR. R. J. MARSHALL to THE SECRETARY, COUNCIL OF EDUCATION.

Dapto, 21 June, 1875.

SIR,

Mr. M'Intyre sent word to me to let him know the distance between the two proposed sites for a Public School at Dapto, and as I am not certain of Mr. M'Intyre's address, I therefore write to you, as the matter will eventually, I presume, come before the Council of Education. The exact distance is 20 yards over a mile and a quarter. I ascertained it by counting the telegraph posts.

I am, &c.,

ROBERT J. MARSHALL.

No. 37.

(Received, 25th June, 1875.)

PETITION FROM C. HOW AND OTHERS to THE COUNCIL OF EDUCATION.

GENTLEMEN,

We the undersigned inhabitants of Dapto and Charcoal Creek most respectfully beg to acquaint the Council of Education that the proposed school at Brown's would not meet the educational wants of these localities, but would in some measure injure the usefulness and efficiency of the schools in these places.

That when legislation renders it necessary, West Dapto and Charcoal Creek are the proper places for Public Schools, and they will not in any way interfere with the proposed school at Osborne's.

We therefore pray the Council of Education will not establish a school at Brown's.

No. 38.

MR. J. GRAHAM TO THE SECRETARY, COUNCIL OF EDUCATION.

Avondale, Dapto,
26 June, 1875.

SIR,

I beg to acknowledge the receipt of your letter of the 14th inst., relating to the proposed P. School at East Dapto, assuring me that it will not materially injure Avondale P. School by being on the site offered by Mr. Osborne, the distance being 3 miles. Suppose the distance to be 3 miles, which I and others doubt, from Avondale P. School to Mr. Osborne's site, still it will be $\frac{1}{2}$ of a mile or $\frac{3}{4}$ nearer than Avondale to eight of the pupils who are attending school for two years past in Avondale; and it will be quite as near to two or three other families, as Avondale is the farthest that any of these has come to. Avondale school is not more than 2 miles, but if they get a school nearer no blame to them to take it. I fear schools will never be so plenty in New South Wales that some will not have to go to them 2 miles on a public road.

Avondale is enclosed by a range of mountains in close proximity on all sides but Dapto, and hence the necessity for leaving 4 miles between the said schools. And I also may tell you that Mr. H. Osborne has taken a few of the farms that were formerly let to tenants into his own hands, and if one of the tenants wishes to leave his next neighbour is taking his farm, so the population is decreasing, and likely to decrease.

The number of children for the school rolls in Avondale after this quarter will be about thirty-eight; and if eight of these get Dapto $\frac{1}{2}$ or $\frac{3}{4}$ of a mile nearer, and if twelve others get it as near with a better road, I do not see how Avondale can escape injury.

The old Presbyterian school in East Dapto could not be so much injury to Avondale Public School as a Public School will, for all the parents, as far as I can judge, preferred the Public School to a Denominational one. Mr. Osborne's run extends along the road, with the exception of a few plots to within a short space of the site offered by Mr. Brown; and there is no reason for choosing the spot shown to the Inspector, but the selfishness of Mr. Marshall and one or two others who wish to have the school at their own doors, and the wish of others to keep it away from the Denominational School in West Dapto.

I believe Mr. Brown's site is the best for the good of the public in that locality; but if the school was built as near Mr. Brown's site as Mr. Osborne's run will admit it might answer the same end, as I think there is not more than about $\frac{1}{4}$ of a mile distance between them. I think Mr. Osborne will not refuse to give the site any place on the run, and all the differ it will make to the Board will be the few trees that would be to cut down and clear off, and there is only few on it.

I have been under the impression this few years past that the Board was wishful to do away with small Denominational Schools as soon as the opportunity would answer. You have it now in your power to do a little in that way. If you build the schoolhouse where it will be most useful, then the public money will be spent to most advantage.

I heard there was a petition sent you from the Denominational School, Dapto, and I also heard that it was brought to the Chapel on Sunday, and when there it was sure to get names to it. I may tell you that I have no interest but the good of the public at large, and will leave the whole affair in your hands. If you have any question to ask me, I will answer it truly, according to my judgment.

I have, &c.,
JOHN GRAHAM.

Read.—W.M., 19/7/75.

No. 39.

MR. W. BROWN AND OTHERS TO THE COUNCIL OF EDUCATION.

Dapto, 6 July, 1875.

GENTLEMEN,

We, the undersigned, members of the East Dapto Public School Committee, have the honor to acknowledge the receipt of your letter of the 24th ultimo, and to state that we have learned with regret that you have not approved of the site at Brown's, as it is, in our opinion, and in the opinion of a large majority of the public, the most eligible site.

We beg to call your attention to the fact that the application we sent in for a Public School at Brown's is signed by 28 parents and guardians, representing 101 children, 79 of which are Protestants and 22 Roman Catholics; and the refusal of the application for a Public School at Brown's is virtually to compel this large number of Protestant children to be educated at the Roman Catholic School at West Dapto and Charcoal Creek, the schools to which these children are directed in the latter part of your letter as being the most convenient for the majority of them to attend.

We feel assured, however, that it is not your intention to inflict so grievous a wrong on these people, and we therefore most respectfully beg to ask the favour of your kindness to reconsider the matter; and we also beg to request that a person other than the present School Inspector may be specially sent to view the two sites, and collect such other information concerning the same as may be necessary to guide you in determining which site is the most eligible for the proposed school.

We are induced to make this request from the fact that we are so thoroughly impressed with the preference of the site at Brown's to that at Mr. Osborne's that we are led to believe that the information you obtained is not so reliable as it ought to be in guiding you to decide rightly between the two sites; and from circumstances that have come under our notice, we are of opinion that this most eligible situation for a Public School has not been fairly and impartially laid before you.

We also beg to bring under your notice the fact that the site at Brown's has not been pointed out to the Inspector of Schools, and we consider it to be most extraordinary that that officer has not applied to any member of the Committee or the Honorary Secretary for information respecting this site.

We

We therefore, in justice to all parties, beg most respectfully to urge upon you the necessity of a reconsideration of the matter and the appointment of a person specially to report on the two sites.

We have, &c.,

WILLIAM BROWN.	JOHN CALDWELL.
EDWARD GIBSON.	H. G. IRVIN.

No. 40.

MEMORANDUM from THE SECRETARY, COUNCIL OF EDUCATION, to THE INSPECTOR OF SCHOOLS, CAMDEN DISTRICT.

6/7/75. Brown's, East Dapto: Local Committee's letter, requesting re-consideration of application for a Public School.

For your report. Urgent.

Council of Education Office,
Sydney, 15 July, 1875.

W. WILKINS,
Secretary.

B.C., Secretary (No. 75/618),—My report is appended.—W. M'INTYRE, Inspector, Camden District, 19/7/75.

No. 41.

MEMORANDUM of THE INSPECTOR OF SCHOOLS, CAMDEN DISTRICT, to THE SECRETARY, COUNCIL OF EDUCATION.

Sydney, 19 July, 1875.

Brown's, Dapto: Local Committee's letter dated 6 July, 1875.

I CAN assure the Council that I have given the matter more care and attention than Mr. Brown and his friends desire, and I know the positions of the sites in question perhaps too well. Brown's site was pointed out to me by Mr. Brown long before the application was made. Nearly all the persons who sign this letter, and the twenty-three parents and guardians who signed the application for the school at Brown's, reside nearer to Charcoal Creek, West Dapto, and Mr. Osborne's estate, than Brown's. Mr. David Paine, for example, who signs this document, resides more than 3 miles from Brown's, and informed me that he could not send his children to a school there; so it is with nearly all the others. If these persons are so very anxious for a Public School is it not singular that they do not ask for one near their homes, at Charcoal Creek or West Dapto, and not at Brown's? If Brown's is such a central place for a school, is it not remarkable that in this old settlement a school has not been established there long ago? The Protestant children need not attend the Roman Catholic schools named, because there are two Certified Denominational Schools of other denominations (Church of England and Presbyterian) in the localities, and the proposed Public School at Dapto is only 1 mile and a quarter from Brown's. It appears to be forgotten that it is proposed, when necessary, to establish Public Schools at West Dapto and Charcoal Creek, where the population is concentrated, and for this very reason a Public School is not necessary at Brown's. Brown's site is not central to the majority of the inhabitants. I have consulted many intelligent persons relative to this matter, including Magistrates of the territory, old residents in the neighbourhood, and Members of Parliament, and they concur in this view.

It is very possible that a Public School at Brown's would increase the value of his property, be instrumental in getting a post office at Brown's, for which he is and has been so very anxious, and bring some business to a store and an inn; but these are not matters of such vital importance to the public as to necessitate the building of a Public School where it is not required. In justice to the public I cannot advise the Council to alter the decision in the matter, because a school at Brown's would be too near the Public Schools required at Charcoal Creek and West Dapto. (See tracing furnished, showing the relative positions of the schools and sites in question. See also memo. on memorial.)

W. M'INTYRE,
Inspector, Camden District.

No. 42.

W. BROWN AND OTHERS to THE COUNCIL OF EDUCATION.

The Memorial of the undersigned parents or guardians of children, residing at Dapto,—

RESPECTFULLY SHOWETH:—

That an application was made to your Council for a Public School to be erected on a site offered by Mr. John Brown, at Brown's, East Dapto, which your memorialists regret to learn has not been approved of, but that another site, offered by Mr. P. H. Osborne, near to the Certified Presbyterian School, which was closed a few months back, has been accepted by your Council and that at Brown's disapproved of,

of, on the ground that it is too near to the schools at West Dapto and Charcoal Creek, and that the children of your memorialists can more conveniently attend those schools.

Your memorialists most respectfully beg to state that your Council must have been misinformed as to the residences of some of your memorialists, inasmuch as that the site at Brown's is the most central and consequently the most convenient for the majority of the children to attend.

That a Public School erected on the site offered by Mr. Osborne could not be attended by a large majority of the children who require a school, and your memorialists are borne out in this statement from the fact that the certified Presbyterian School now closed in the same locality was carried on to all intents and purposes as a Public School, but notwithstanding this fact it was closed for want of attendance after dragging out a lingering existence for a long time, thus showing that a Public School erected in that locality must of necessity share the same fate.

That to erect a Public School on the site offered by Mr. Osborne would be to deprive a large majority of the children of the benefit of school accommodation, or to compel a large number of your memorialists to send their children to schools in which they have no faith.

Your memorialists therefore most respectfully pray that your Council will reconsider the matter and erect a Public School on the site at Brown's; and your memorialists, as in duty bound, will ever pray.

William Brown.	Mark Howell.	his
Edward Gibson.	John B. Harvey.	Thomas + O'Brien.
Daniel M'Coullough.	Napoleon Hurry.	mark.
William Miller.	his	J. Arthur Hewitt.
James Piper.	William + Wilson.	Peter Ryan.
W. S. Thompson.	mark.	Christopher Clynych.
H. G. Irvin.	Robert M'Paul.	his
J. F. Griffin.	William Connolly.	Robert + Abbott.
Joseph Taylor.	William L. Musgrave.	mark.

Henry Harris.	George Brown.	

Dapto, 16 July, 1875.

B.C., Inspector of Camden District.—W.W., 17/7/75.

B.C., Secretary (No. 75,610).—

With regard to this memorial, I have to state that the Council has been carefully and correctly informed as to this matter. The site at Brown's is not central for the majority of the inhabitants at Dapto. The Public School on Mr. Osborne's site will supply education to a large number of children who could not attend school at Brown's, and all the children at Brown's can conveniently attend the school at Osborne's. If the persons who sign this memorial had to contribute towards the erection of a school at Brown's there would be very few signatures attached thereto. There are too many schools already near Brown's. I cannot therefore advise the Council to alter the decision in this case. (See petition against the proposed school at Brown's).—W.M., 19/7/75.

No. 43.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. W. BROWN.

Council of Education Office,
Sydney, 22 July, 1875.

SIR,

I am directed by the Council of Education to acquaint you that the Council has had under notice two petitions, dated respectively 6th and 16th instant, from certain residents of Dapto, in which it is requested that the Council will reconsider its decision with regard to the establishment of a Public School at that place.

2. In reply, I am instructed to state that the Council is of opinion that no sufficient cause has been shown in these petitions for establishing the school on Mr. Brown's site at East Dapto in preference to that of Mr. Osborne. The Council therefore has resolved to adhere to its former decision in the matter, which was communicated to Mr. John Brown in a letter dated 24th ultimo.

I have, &c.,
W. WILKINS,
Secretary.

No. 44.

MEMORANDUM FROM THE SECRETARY, COUNCIL OF EDUCATION, to THE INSPECTOR OF SCHOOLS, CAMDEN DISTRICT.

Dapto (Brown's): Petitions requesting reconsideration of decision as to establishment of Public School—
Your memo. of 19th instant.

THE Council has resolved to adhere to its former decision to establish the Public School on the site given by Mr. Osborne, no sufficient cause for a change having been shown by the Petitioners.

Council of Education Office,
Sydney, 22 July, 1875.

W. WILKINS,
Secretary.

No. 45.

MR. R. J. MARSHALL, to THE SECRETARY, COUNCIL OF EDUCATION.

Dapto, 14 July, 1875.

SIR,

As the Council of Education has now finally decided upon establishing a Public School at Dapto upon the site granted by Mr. P. H. Osborne, it has occurred to the Local Committee, a considerable number of children in the neighbourhood being at present unprovided with school instruction, except at an inconvenient distance, that the old Presbyterian school premises, convenient to the intended site, might be made available as a temporary Public School while the new one is in building. There are all the appliances

appliances suitable for a school upon the spot lying idle, school furniture, books, &c., the premises are in good repair, teacher's residence included, and the trustees of the premises have no objection to the proposed use of the school. I have, therefore, to request that a teacher may be appointed, as it will confer a great boon upon at least thirty children that are obliged now to stay at home for the want of a school, and a considerable number now going to other schools will attend if the temporary school is opened.

I am, &c.,

ROBERT J. MARSHALL,

Hon. Sec., Dapto Public School Local Committee.

B.C., Inspector of Camden District, for advice.—W.W., 17/7/75.

B.C., Secretary (No. 75-607).—As the Council has finally resolved to establish a Public School at Dapto, I see no objection to the school now being opened in temporary premises at once. There are from thirty to forty children in the locality growing up without education. The Presbyterian Church is suitable for school purposes, and there is a residence for the teacher. The furniture is not of a suitable kind, but there is a supply of apparatus and books. I am of opinion it would be beneficial to the public if the school were opened and carried on in the premises offered until the new buildings are ready for occupation.—W.M., 17/7/75.

No. 46.

THE SECRETARY, COUNCIL OF EDUCATION, to MR. R. J. MARSHALL.

Council of Education Office,
Sydney, 23 July, 1875.

SIR,

I am directed by the Council of Education to acquaint you that the Council has had under consideration your letter of 14th instant, requesting that the Public School at Dapto may be opened in the old Presbyterian School premises, pending the erection of the Public School buildings on the site given by Mr. Osborne.

2. In reply, I am to state that the Council has agreed to open the school in the premises mentioned, provided the Local Committee furnish written evidence that the proprietors thereof have no objection to such a course. A teacher will be appointed as early as practicable after the receipt of such evidence.

I have, &c.,

W. WILKINS,

Secretary.

No. 47.

MEMORANDUM FROM THE SECRETARY, COUNCIL OF EDUCATION, to THE INSPECTOR OF SCHOOLS, CAMDEN DISTRICT.

Dapto: Your B.C. on Mr. Marshall's letter, requesting opening of school in old Presbyterian School premises.

THE Council has agreed to open the school in the premises mentioned, pending the erection of Public School buildings on the site given by Mr. Osborne, provided the Local Committee furnish written evidence that the proprietors of the premises have no objection to such a course.

Council of Education Office,
Sydney, 23 July, 1875.

W. WILKINS,

Secretary.

No. 48.

MR. R. J. MARSHALL to THE SECRETARY, COUNCIL OF EDUCATION.

Dapto, 28 July, 1875.

SIR,

In compliance with directions contained in your letter of the 23rd instant, I hereby furnish the Council of Education with the written sanction of the Trustees of the Presbyterian School premises to the temporary use of the school, pending the erection and completion of the new Public School, with the proviso of its being used as a place of worship on Sundays. I may observe that it was always used as such when a Certified Denominational School, and trust that the evidence produced may be deemed satisfactory.

I have, &c.,

ROBERT J. MARSHALL,

Hon. Sec., P.S.L.C.

[Enclosure.]

Wollongong, 27 July, 1875.

THIS is to certify, that we have no objection to the schoolroom at East Dapto (formerly the Certified Presbyterian Denominational School) being used by the Council of Education until such times as the new Public School, about to be erected there, be completed. With this proviso, that the schoolroom be open to the Minister of the Presbyterian Church for the purpose of holding religious service during the Sabbath-day.

JOHN A. STUART, Minister.

• GEORGE M'PHAIL.

In verification of the above, we the undersigned members }
of the Local Committee hereby attach our signatures,— }

KENNETH MACKENZIE.

JOHN BOVARD.

DUNCAN M'RAE.

No. 49.

THE SECRETARY, COUNCIL OF EDUCATION, TO MR. R. J. MARSHALL.

Council of Education Office,
Sydney, 2 August, 1875.

SIR,

I am directed by the Council of Education to acknowledge the receipt of your letter, dated 28th ultimo, forwarding the written consent of the Trustees of the old Presbyterian School premises at Dapto to the temporary use of those premises by the Council, pending the erection of the proposed Public School buildings at that place.

A teacher will be appointed as soon as possible.

I have, &c.,
W. WILKINS,
Secretary.

No. 50.

W. THOMPSON AND OTHERS TO THE COUNCIL OF EDUCATION.

Dapto, 10 September, 1875.

GENTLEMEN,

We, the undersigned members of the East Dapto Public School Committee, beg most respectfully again to bring under your notice the site for a Public School at Brown's. There are 113 children residing within a radius of 1 mile of this site, as shown by the list attached hereto, marked A, whilst there are thirty children only residing within a radius of 1 mile of the site on Mr. Osborne's land. (See list attached hereto, marked B.)

With these facts before us we again beg most respectfully to ask you to reconsider the matter, and should you decide on erecting a school on the site at Brown's, a temporary school could be opened at once in the "Dapto Steam Mills," the use of which for the purpose has been kindly offered to us by Mr. John Brown, together with the cottage attached thereto as a teacher's residence.

If a temporary school were opened at this mill we would guarantee that not less than sixty children, of the ages from 4 to 12 years, would at once attend, that is, in the course of a week from the time the temporary school is opened.

We are therefore of opinion that we would not be doing our duty as the Committee appointed at a public meeting, were we to allow the matter to pass over without again most respectfully asking you to reconsider the matter, and send a person specially to report for your information on the facts of the case.

We are induced to ask you to send a person specially to report, because we are desirous that the facts may be fairly and impartially laid before you without prejudice.

We beg to bring under your notice that a meeting of the inhabitants was called by Mr. M'Intyre, the Inspector of Schools, and held at Dapto on Wednesday, the 26th May last, to consider matters relative to the proposed school; the advertisement calling such appeared in the *Illawarra Mercury* newspaper on the day previous, which was not sufficient notice for the inhabitants of this locality to know of the intended meeting; and as there was an important cattle sale at West Dapto on the same day a large number of persons were prevented from attending who would otherwise have been present. The hour for which the meeting was called, 3 o'clock, p.m., was also most inconvenient.

The Inspector attended at the place of meeting in company with the Rev. P. O'Rielly, the Roman Catholic priest of West Dapto. The two arrived together in the priest's buggy, the Inspector being the guest of the priest during the time of his stay at Dapto, and at all times when he visits this district he makes the priest's house his home. Previous to the hour of the meeting the priest and Mr. M'Intyre together called in the Rev. J. H. Rowsell, Church of England minister, at the parsonage, Dapto, and as these two clergymen are opposed to a school being erected on the site at Brown's, it appeared to us to be strange that the Inspector should be with them at the parsonage previous to the meeting. Mr. R. J. Marshall was voted to the chair, and the meeting was conducted in a most extraordinary way. The Inspector was very offensive in his manner and remarks to some of our Committee and others who were in favour of the site at Brown's.

When Mr. Irvine, a member of our Committee, was addressing the meeting, he was contradicted in a most offensive manner by Mr. M'Intyre as to the distance of his residence from the schools at Charcoal.

A motion approving of the site at Brown's was moved, but an amendment to the effect that it be left to the Council of Education to decide as to the site was moved by one of the opposite party; and on the motion about to be put to the meeting, Mr. M'Intyre stated that every person who voted must put his name on the back of the resolution. As other motions had been decided at the meeting by a show of hands in the usual way it appeared to us that this new mode of voting insisted on by the Inspector was objectionable, as there were several persons belonging to the Roman Catholic Church present who were in favour of the site at Brown's, whilst the priest, who is opposed to the site, was also present, and sitting on the right of the Chairman.

Mr. M'Intyre objected to several persons present voting who were in favour of the site at Brown's. Mr. Paine, a member of our Committee, was one of those objected to; and amongst other questions he was offensively asked by the Inspector, "what Church he belonged to?" We must say that we were not previously aware that it is necessary, before voting for a site for a Public School, a person should publicly make known to the Inspector the Church to which he belongs. Mr. Paine, however, answered that he belonged to a Christian Church.

At the meeting seventeen persons present signed in favour of the site at Brown's, and sixteen in favour of leaving to the Council of Education to decide; but in order to carry the amendment in favour of the Council, the Chairman added to the list the name of a person who was absent, and struck one of those off who had signed for the site at Brown's; thus by this singular movement he arrived at the conclusion that the amendment in favour of leaving it to the Council of Education to decide was carried by a majority of one, and declared accordingly.

We

We also beg to inform you that the Inspector has not applied to any member of our Committee to have the site at Brown's pointed out to him, whilst, on the other hand, he has inspected the site on Mr. Osborne's land.

We therefore feel that we have reasonable grounds for again asking you to reconsider the matter, and we trust you will take the same into your favourable consideration.

We have, &c.,

MEMORANDUM FROM THE SECRETARY, COUNCIL OF EDUCATION, TO THE INSPECTOR OF SCHOOLS, CAMDEN DISTRICT.

(B.C. No. 75/18,377.)

(Urgent.)

Dapto: Mr. S. Thompson's letter requesting reconsideration of application for a Public School on Brown's site, and complaining of your conduct.

10/9/75. Signed also by nine others.

FOR your perusal and report. Be good enough to furnish your report in time for the Council's meeting on Monday next.

Council of Education Office, Sydney, 16 September, 1875.

W. WILKINS, Secretary.

B.C., Secretary (No. 75/752).—My report is enclosed.—W. M'INTYRE, Inspector. 10/9/75.

No. 52.

MEMORANDUM FROM INSPECTOR OF SCHOOLS, CAMDEN DISTRICT, TO SECRETARY, COUNCIL OF EDUCATION. No. 75/751. Dapto: Mr. W. S. Thompson's letter, dated 10th September, 1875.

THERE is no new phase of this case now advanced not already considered, but there are some misrepresentations calculated to mislead the Council. I understand this letter has been prepared by Mr. J. Brown, who is very anxious to have his estate improved by the erection of a Public School at East Dapto; but very properly he refrains from signing the document. He, however, gets Mr. W. S. Thompson to sign it for him. Mr. Thompson resides about 2 miles from Brown's; he is a young unmarried man; his name was not attached to the formal application, and he can have no interest in the matter beyond obliging Mr. Brown with his signature. As regards the other signatures, they are all but one the names of persons who reside nearer the existing schools than Brown's. Mr. D. Paine, who has not signed the formal application, resides more than 3 miles from Brown's; and he informed me that he could not send his children to a school there. From this analysis of the signatures, I have no doubt the Council can see that the applicants have no valid reasons for asking for a school at Brown's.

2. Mr. Thompson states there are 113 children residing within 1 mile of Brown's. It is not necessary for me to say anything in refutation of this gross misrepresentation. Upon reference to the formal application for the school, the annex shows and the parents are the witnesses that there are only sixteen children of the school ages within 1 mile of Brown's. Nearly all the 113 children referred to reside at and near West Dapto and Charcoal Creek, and attend the Denominational Schools there. Mr. Thompson admits there are thirty children within 1 mile of Osborne's site; and I say there are thirty more within a radius of another mile, making a total of sixty children, a sufficient number to support a Public School. The school at Osborne's does not interfere much with any of the existing schools, and it brings education within the reach of many poor families whose children could not travel to Brown's.

3. It is very possible, as Mr. Thompson states, that a number of children would attend a school at Brown's, but as these children would be removed from the four Denominational Schools convenient, injuring their usefulness, making them less efficient than at present, I consider a school at Brown's decidedly objectionable. I cannot advise the multiplication of small schools by placing a fifth school in a situation where it is not required. The facts are that two schools properly placed at West Dapto and Charcoal Creek would fully meet the educational wants of the locality. I am of opinion that it is by no means advisable to destroy the usefulness of Denominational Schools until it may be found necessary to replace them with Public Schools. There is no need for a school at Brown's, because there are two schools too many in the immediate neighbourhood already. Old residents of the place, the Editor of the local newspaper, Magistrates of the territory, and the Member of Parliament for the district, all concur with me in this view.

4. As regards my conduct in this matter I must say a few words in conclusion. I considered it my duty to call on the clergyman of the place; I did request the persons who voted for the sites to put their names on the backs of the resolutions, and I think it was a very good idea. I asked Mr. Irvine how far he resided from Charcoal Creek, and Mr. Paine how far he resided up the mountain beyond the Church of England School, and if he could send his children to School at Brown's. I wanted information on these points, but I did not ask his religion. I make it a matter of duty to be careful never to be offensive to any one, and by doing so I generally secure respect from others. I can assure the Council I have taken great pains over this matter; I have carefully considered every phase of the case; I have advised the Council honestly and faithfully to the best of my ability, and I very much regret that the Council's time and mine should be taken up with a matter that has already been so carefully considered. I cannot advise the Council to alter its decision in this case, and I beg to bring under the Council's notice the petition herewith appended against the school at Brown's.

Sydney, 18 September, 1875.

W. M'INTYRE, Inspector, Camden District.

No. 53.

THE SECRETARY, COUNCIL OF EDUCATION, TO MR. W. S. THOMPSON.

(75/19,906.)

Council of Education Office, Sydney, 8 October, 1875.

SIR,

I have the honor to acquaint you that the Council of Education has had under consideration your letter of the 10th September last, requesting that the question of the site for a Public School at Dapto may be reconsidered, and also complaining of the conduct of the Inspector, Mr. M'Intyre. The grounds

grounds upon which the Council is asked to reverse the decision already arrived at in this matter are,—
1st. That 113 children reside within a radius of 1 mile of the site at Brown's. 2nd. That, if a school were opened at that place, sixty children would be in attendance within a week. It does not appear that the allegations respecting Mr. McIntyre affect in any way the question as to the relative superiority of the sites proposed.

2. In reply, the Council directs me to point out that in the formal application for a school the number of children residing within a mile of the site at Brown's, and guaranteed to attend the school, if established at that place, is eighteen only. If there be, as you represent, 113 children of the school age within the same limits, the parents must have had some substantial reason for withholding their names from the application. It may be probable that sixty children would attend a school at Brown's, but it appears to be certain also that a large majority of these would be withdrawn from the other schools already existing in the locality. The reasons advanced by you in favour of a change of site do not therefore seem to the Council to warrant compliance with that request; and it may further be remarked that the considerations which induced the Council to prefer the site chosen retain the same force as when the original decision was arrived at.

3. As the Council fails to perceive that any useful purpose would be served by sending a person specially to report upon the facts of the case, I am to acquaint you that the Council deems it inexpedient to take that step.

I have, &c.,
W. WILKINS,
Secretary.

No. 54.

MR. W. S. THOMPSON to THE SECRETARY, COUNCIL OF EDUCATION.

Dapto, 22 October, 1875.

GENTLEMEN,

No. 75/19,906.

We have the honor to acknowledge the receipt of your letter of the 8th instant, in which you state that, "in the formal application for a school, the number of children residing *within a mile* of the site at Brown's, and guaranteed to attend the school, if established at that place, is eighteen only."

If by this statement you refer to the application for a school we forwarded to you on the 1st of May last we most respectfully beg to state that you are in error, as by referring to that application you will find that twenty-three parents and guardians have signed, representing 101 children, forty-three of whom are entered as residing 1 mile from the site, thirteen a half-mile, thirteen a quarter of a mile, and six an eighth of a mile, making seventy-five children guaranteed, residing at a distance of 1 mile and under, and of this number fifty-nine are from four to fourteen years of age.

You will therefore observe that your remarks with reference "to the parents of the 113 children (named in our letter of the 10th September) having some substantial reasons for withholding their names from the application," are fully answered (at least so far as relates to seventy-five of the children) by the corrections to which we have drawn your attention as to the number of children named in the application residing within a mile of the site at Brown's.

With reference to the probability of sixty children attending a school at Brown's, we beg to remind you that we have already guaranteed that number to attend within a week of the ages of from four to twelve years; and as to a large majority of them being withdrawn from the other schools already in existence in the locality, we are sure that if those existing schools are as conveniently situated and as acceptable to the parents of the children as a Public School at Brown's would be, no children would be withdrawn from them; but your remarks on this point apply more effectually to the temporary Public School recently opened at the Presbyterian building, near the site on Mr. Osborne's land, as some of the children attending that temporary school have been withdrawn from the Public Schools at Marshall Mount and Avondale, without whom a sufficient number of children would not be in attendance to give it an existence.

We regret that you do not consider the reasons we have advanced are sufficient for a change of site, as we are of opinion that the proper place for a school is where the largest number of children reside, and this we have shown beyond all doubt to be the site at Brown's. The erection of a Public School on Mr. Osborne's site cannot be regarded otherwise than a serious mistake; and although tenders have been invited for the erection of a school on that site, we yet entertain a hope that you will take a more favourable view of the reasons we have from time to time advanced in support of the application for a Public School on the site at Brown's, and cause the school to be erected on that most eligible situation.

We have, &c.,
W. S. THOMPSON,
(For the Committee).

Inspector of Camden District, 28 October, 1875.—W.W., B.C., Secretary, No. 75,885.

In Mr. Thompson's letter, dated 10th September last, he stated that there are 113 children within a mile of Brown's. In this communication he has reduced the number to thirty-two within that distance, and I have no doubt that upon further inquiry he will find that the Council is quite correct in the statement that in the formal application for the school at Brown's the number of children guaranteed to attend within a mile is only eighteen. During my recent visit to Wollongong I ascertained that the Council has been well advised in this matter. The new school at Osborne's has withdrawn no children from other schools, excepting three who reside nearer Dapto than Marshall Mount, but every effort is used by Mr. Brown and his supporters to prevent children from attending that school. I have no doubt however but it will be well attended when this matter has been finally settled. I had a conversation with Mr. W. S. Thompson on this subject on Monday last. He said he was very glad that Mr. Brown's application was not entertained, as he (Mr. Brown) had no object in view but to increase the value of his property, and that he (Mr. Thompson) merely supported Brown because he had promised to do so. Mr. Thompson said he concurred in my opinion, that the proper places for new schools were West Dapto, Charcoal Creek, and Osborne's. I think I need not say more to prove that nobody is much interested in a school at Brown's excepting Mr.

Mr. John Brown. The settlers at Charcoal Creek are now making arrangements for the establishment of a Public School there, instead of the Presbyterian and Roman Catholic schools at that place. That is what I expected the people there would do, and under the circumstances I cannot advise the Council to alter the decision on the application for a school at Brown's.

W. MINTYRE,
Inspector, Camden District.

PUBLIC SCHOOL FOR CHARCOAL.

Sydney, 11 November, 1875.

THE undersigned hereby call a public meeting, to be holden at the "Farmer's Hotel," on Wednesday, the 17th November instant, at 7.30 p.m., for the purpose of considering and determining upon the desirability of taking the necessary steps to have a Public School established at Charcoal.

EDUCATION.

(NUMBER OF CHILDREN ON SCHOOL ROLLS.)

Ordered by the Legislative Assembly to be printed, 18 July, 1876.

RETURN (*in part*) to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 25th April, 1876, That there be laid upon the Table of this House, a Return showing,—

“ The number of Children of the different ages on the Rolls of each of the Schools under the Council of Education for the first quarter of the present year.”

(Mr. W. H. Suttor.)

THE SECRETARY, COUNCIL OF EDUCATION, TO THE UNDER SECRETARY FOR JUSTICE AND PUBLIC INSTRUCTION.

Council of Education Office,
Sydney, 12 July, 1876.

SIR,

With reference to your B.C. memorandum of the 7th instant, and to my reply thereto, I am directed by the Council of Education to state that, from the returns from the Schools under the Council's supervision already received, it appears that the numbers of pupils of the different ages who were entered on the rolls of such Schools during the first quarter of the current year were as shown hereunder:—

3 but under 4 years.....	1,885	15 but under 16 years.....	1,103
4 " 5 ".....	4,777	16 " 17 ".....	215
5 " 6 ".....	6,944	17 " 18 ".....	76
6 " 7 ".....	8,349	18 " 19 ".....	26
7 " 8 ".....	8,544	19 " 20 ".....	5

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC SCHOOLS ACT AMENDMENT BILL.
(PETITION—MAYOR AND ALDERMEN OF THE BOROUGH COUNCIL OF GRAFTON.)

Ordered by the Legislative Assembly to be printed, 3 March, 1876.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Mayor and Aldermen of the Borough Council of the city of Grafton,—

HUMBLY SHOWETH :—

That your Petitioners have learned that it is the intention of the Government to introduce a measure for the purpose of amending the Public Schools Act of 1866.

That your Petitioners are fully impressed with the importance of making ample provision for the promotion of elementary instruction by the establishment of schools in the more thinly populated portions of the Colony, and would look upon any measure introduced for such purpose with great favour.

At the same time, your Petitioners would desire to point out the establishment of colleges, grammar or higher class schools in all the principal cities of the Colony, into which children may enter and be educated thereat, and thence after matriculation in the University of Sydney, free of cost.

Your Petitioners would therefore humbly pray that, in the amendment of the present system of public instruction, such provision be made, and that the city of Grafton be appointed as one of the cities in which such college or grammar school be established.

And your Petitioners, as in duty bound, will ever pray.

S. W. CHAPMAN,

Mayor.

For and on behalf of the Grafton Borough Council.

1875-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLIC SCHOOLS ACT AMENDMENT BILL.

(PETITION OF INHABITANTS OF RYDE AND HUNTER'S HILL.)

Ordered by the Legislative Assembly to be printed, 15 March, 1876.

To the Honorable the Speaker and the Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The Petition of the undersigned Inhabitants of the Municipalities of Ryde and Hunter's Hill and the
vicinity,—

HUMBLY SHOWETH AS FOLLOWS :—

Your Petitioners have heard with concern that a Bill to amend the Public Schools Act of 1866 has been introduced into your Honorable House, and that the amendment proposed is a still further restriction upon your Petitioners' performance of that part of their religion as Christians which enjoins upon them to instruct their children in the love and service of Almighty God their Creator and Redeemer, and in their duty to their neighbour and to the Civil Authorities consequent thereupon.

Such of your Petitioners as have migrated to this Colony from other Countries did so in the firm belief that they were coming to a free Country, where they would not only not be hindered in the practice of their religion, but would be protected in the free exercise thereof. Nevertheless, for ten years past, under the operation of the present law, your Petitioners have laboured under the disadvantage of being unable to secure for their children the services of State-paid teachers of their own creed, except upon building the school-houses at their own expense, and afterwards submitting to have their children instructed by the same method and from the same books as those used in the Public Secular Schools. And now it is still further proposed to exclude a large number of the Smaller Denominational Schools from State support, and to prohibit such State support to any new ones in the future.

Your Petitioners hold the practice of their religion to be dearer than life itself, and consequently, even though they are mostly poor persons of the labouring class, they would feel compelled, after having first contributed, by payment of taxes, their quota towards the support of the schools wholly maintained out of the State Treasury, to maintain again, at their own private charges, both the schools proposed to be now deprived of State-aid, and those that may become necessary in the future.

Wherefore, your Petitioners humbly pray that your Honorable House will not sanction any further infringement upon that civil and religious liberty which your Petitioners had reckoned to be secured to them on their coming to this Colony.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 152 signatures.]

1875-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC SCHOOLS ACT AMENDMENT BILL.
(PETITION OF MAYOR AND ALDERMEN OF ORANGE.)

Ordered by the Legislative Assembly to be printed, 28 March, 1876.

To the Honorable the House of Legislative Assembly of New South Wales.

The Petition of the Mayor and Aldermen of the Borough of Orange,—

RESPECTFULLY SHOWETH :—

That your Petitioners, whilst acknowledging the importance of making ample provision for the promotion of elementary instruction by the establishment of schools throughout the Colony, are deeply impressed with the necessity which exists that provision should be made for imparting a higher class of education than that afforded under the present Public School system.

Your Petitioners would respectfully submit that the facilities which are afforded to the residents of the metropolis to secure this are placed beyond the reach of the majority of country residents, and that whilst contributing to the support of such institutions as the Sydney Grammar School, they are precluded from availing themselves of any advantage which might thereby be secured.

That, in the absence of such establishments in country towns, a large portion of the youth of the Colony is precluded from attaining that high standard of education which otherwise might be secured.

That your Petitioners are aware that a measure has been introduced by the Government of the Colony, and which has passed its second reading, and referred to Committee, for the purpose of amending the Public Schools Act of 1866.

Your Petitioners would therefore pray that your Honorable House would see fit to introduce into the said Bill such clause or clauses as your Petitioners desire, to secure the establishment of Grammar Schools in Orange and towns of equal importance in the Colony, in which the youth of both sexes may receive instruction in the higher branches of education than those included in the Public School curriculum, and may after a due course of study be eligible to enter the University of Sydney, there to continue their studies free of costs if desired.

And your Petitioners, as in duty bound, will ever pray.

(L.S.)

JOSEPH WINDRED,
Mayor of Orange.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLIC SCHOOLS ACT AMENDMENT BILL.

(PETITION OF MAYOR AND ALDERMEN OF YASS.)

Ordered by the Legislative Assembly to be printed, 21 June, 1876.

To the Honorable the House of Legislative Assembly of New South Wales.

The Petition of the Mayor and Aldermen of the Municipal District of Yass,—

RESPECTFULLY SHOWETH:—

That your Petitioners, whilst acknowledging the importance of making ample provision for the promotion of elementary instruction by the establishment of schools throughout the Colony, are deeply impressed with the necessity which exists that provision should be made for imparting a higher class of education than that afforded under the present Public School system.

Your Petitioners would respectfully submit that the facilities which are afforded to the residents of the metropolis to secure this are placed beyond the reach of the majority of country residents, and that whilst contributing towards the support of such institutions as the Sydney Grammar School, they are precluded from availing themselves of any advantage which might thereby be secured.

That, in the absence of such establishments in country towns, a large portion of the youth of the Colony is precluded from attaining that high standard of education which otherwise might be secured.

That your Petitioners are aware that a measure has been introduced by the Government of the Colony, for the purpose of amending the Public Schools Act of 1866.

Your Petitioners would therefore pray that your Honorable House would see fit to introduce into the said Bill such clause or clauses as your Petitioners desire, to secure the establishment of Grammar Schools in Yass and towns of equal importance in the Colony, in which the youth of both sexes may receive instruction in the higher branches of education than those included in the Public School curriculum, and may after a due course of study be eligible to enter the University of Sydney, there to continue their studies free of costs if desired.

And your Petitioners, as in duty bound, will ever pray, &c.

(L.S.)

H. J. SAMPSON,
Mayor,

For and on behalf of the Council for the Municipal District of Yass.

Dated this 1st day of June, 1876.

1875-6.

NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.
(REPORT FOR 1875.)

Presented to Parliament, pursuant to Act of Incorporation, 14 Vic. No. 31.

REPORT of the University of Sydney, for the year ended 31st December, 1875.

1. In accordance with the provisions of the Act of Incorporation, 14 Victoria No. 31, the Senate has the honor to submit for the information of the Governor and Executive Council a report of its proceedings during the year 1875.

2. Twenty-two students were admitted to Matriculation. Two undergraduates from other Universities were admitted "*ad eundem statum*," and were allowed exemption from attendance on lectures after special examination, as provided by the By-laws.

3. Three hundred and sixty-two candidates presented themselves for the Public Examinations in Michaelmas Term. The report of the Examiners on the result, together with the list of Honors and other matter connected therewith, is appended (A).

4. The successful candidates for Scholarships were—"Cooper" (for proficiency in Classics), T. Butler; "Barker" (for proficiency in Mathematics), E. Barff and C. E. Forster, *æq*; "Deas-Thomson" (for proficiency in Physical Science), T. Butler; for "general proficiency"—"Lithgow"—B. Allen; "University," W. Russell, G. Renwick, W. H. Wilkinson, L. Whitfield; "Levey," J. D. S. M'Lardy.

5. At the Examination for B.A. the following Honors were obtained:—

Classics—

1st class—T. Butler C. Forster	} Prize (University).	2nd class—R. Roger.
-----------------------------------	-----------------------	---------------------

Mathematics—

1st class—E. Barff C. E. Forster	} Prize (University). (Prof. Pell's Medal).	2nd class—Thalton.
-------------------------------------	--	--------------------

Physics—

1st class—T. Butler J. Carruthers	} Prize (University).
--------------------------------------	-----------------------

6. The "Belmore" Medal (for Chemistry, with especial reference to Agriculture), O. O'Brien, Professor Smith's prizes (for Physics at the class examinations), C. Maher.

7. The following candidates passed for B.A. in Michaelmas Term (the names are in order of merit):—

Classics.	Mathematics.	Physics.
E. Barff, } J. Thalton, } <i>æq</i> .	— Lord,	O. O'Brien.
J. Carruthers,	R. Roger,	
E. Nathan, } G. Lord, } <i>æq</i> .	T. M. Kendall,	
O. O'Brien,	R. Waugh,	
T. M. Kendall,	E. Nathan,	
— Waugh.		

8. The Degrees conferred during the year were as follows:—

M.D.—C. Taylor, M.B.

M.A.—W. M. Thompson, B.A., R. D. Pring, B.A., H. J. Kent, B.A., A. G. Gibbes, B.A., A. Backhouse, B.A., D. D. Rutledge, B.A., D. Fisher, B.A., A. T. Innes Liddell, B.A., J. Thompson, B.A., M. Clune, B.A., W. A. Manning, B.A.

B.A.—J. Oliver, W. Chisholm, G. E. R. Jones, J. J. M. Beatty, H. F. Barton, A. Dawson, W. Lee.

LL.B.—J. J. M. Beatty.

9. The task of remodelling the By-laws has engaged the attention of a sub-committee for some time. To enable the Senate to deal with certain important matters which required immediate legislation, a short series of By-laws was submitted to the Government for approval, and having received official assent was at once brought into operation (a copy is appended—B). These laws provide in the main for a change of the academic year and of the times of the Examinations, which have been adjusted so as to secure a greater continuity of study and a longer course of instruction. Other matters of detail respecting discipline are also dealt with. The Senate hope to submit a complete code for approval at an early period.

10. Vacancies were caused in the Senate by the death of the Honorable William Munnings Arnold, and by the absence of Mr. Francis L. S. Merewether from the Colony. A Convocation was holden on the 15th May, at which Mr. William Macleay, F.L.S., was elected to fill the seat of Mr. Arnold, and, at a second Convocation, holden on the 1st of December, Henry C. Russell, Esq., B.A., F.R.A.S., was elected to fill Mr. Merewether's seat.

11. The Senate has much pleasure in notifying the following munificent donations to the University:—
 1. £2,000 from the Honorable John Frazer, M.L.C., represented by Queensland Government debentures, for the endowment of two Bursaries, under conditions similar to those of the Maurice Alexander Bursary, to be called the "John Ewan Frazer" and "Ernest Manson Frazer" Bursaries, in memory of his deceased sons. 2. £1,000 from Mrs. Burdekin, to found a Bursary, under conditions similar to the foregoing. 3. £1,000 from Mrs. Hunter Bailie, represented by ten N.S.W. Government debentures of £100 each, under similar conditions. 4. £2,000 from Mr. Fitzwilliam Wentworth, for the foundation of two Bursaries in memory of his late father, and to be called after him the "William Charles Wentworth Bursaries."

12. The Senate has received from the executor of the late Edward Dalton, Esquire, a notification that the sum of £10,000 or thereabouts has been bequeathed after the death of his wife to the University—such amount to be appropriated for the foundation of Scholarships in memory of the late Professor Woolley, for the cultivation of such branches of knowledge as he chiefly inculcated.

13. In accordance with the provisions of the Act, plans for laying out the grounds and for the sub-soil drainage of the land were submitted for the approval of the Senate by the Directors of the Prince Alfred Hospital. They were approved, subject to the condition that whatever system of sewerage should be ultimately adopted, proper precautions should be taken to preserve the purity of the water in the creek.

14. An account of the receipts and disbursements of the University, duly certified by the Auditor, is appended (C).

This Report was adopted at a duly convened meeting of the Senate, held on the 1st March.

HUGH KENNEDY,
Registrar.

APPENDIX A.

UNIVERSITY OF SYDNEY.—BY-LAWS.

PUBLIC EXAMINATIONS.

106. Two Public Examinations shall be held every year; the one to be called the Junior Public Examination, and the other to be called the Senior Public Examination, and shall be open to all candidates, male or female, who may present themselves.

107. The Public Examinations shall be held at such times and at such places as the Senate may from time to time appoint.

108. The subjects of the Junior Public Examinations shall be the English Language and Literature, History, Geography, the Latin, Greek, French, and German Languages, Arithmetic, Algebra, Geometry, and such other branches of learning as the Senate may from time to time determine.

109. The subjects of the Senior Public Examination shall be those mentioned in the foregoing section, together with Trigonometry, Conic Sections, Natural Philosophy, Chemistry, Experimental Physics, and Geology.

110. Every candidate who shall pass either of these Examinations, or such portions of either of them as may be required by the Rules or Orders of the Senate in force for the time being, shall receive a certificate to that effect, specifying the subjects in which he shall have passed, and signed by the Dean of the Faculty of Arts and by the Registrar.

111. No person shall be admitted to either of the Public Examinations until he shall have paid such fees as may be required by the Rules or Orders of the Senate in force for the time being.

112. The Professors and Assistant Professors not engaged in tuition, except publicly within the University, together with such other persons as the Senate may from time to time appoint, shall form a Board for conducting the Public Examinations; and of this Board the Dean of the Faculty of Arts, or, in his absence, the Professor next in seniority, shall be Chairman.

113. At the conclusion of each Examination the Board shall transmit to the Senate a report of the result, signed by the Chairman and at least one other member.

114. Subject to these By-laws, the Public Examinations shall be conducted according to such Rules or Orders as the Senate may from time to time establish.

DIRECTIONS FOR CONDUCTING THE PUBLIC EXAMINATIONS.

1. The Public Examinations shall be held annually at the University, in the month of November, commencing on the first Monday in that month.

2. The fee for admission to the Junior Public Examinations shall be £2, and to the Senior Public Examinations £3. Candidates holding certificates of having passed the Junior Public Examination shall be admitted to the Senior Public Examination upon payment of an additional fee of £1.

3. A candidate holding a certificate of having passed the Junior Examination, and being a candidate for matriculation, shall be admitted to any subsequent Junior Examination in any of the sections in which he has not already passed, without the payment of any additional fee; and in case of his passing in any such sections he shall receive a certificate to that effect. The same rule shall apply to candidates holding certificates of having passed the Senior Examination; but no such candidate shall be allowed to compete for Honors in any section in which he has already passed. These exemptions shall extend to one additional examination only.

4. Candidates who shall have failed to pass the Examination may be admitted to any subsequent Examination without the payment of any additional fee, but this exemption shall not extend to more than two Examinations.

5. In addition to the regular Examination in November, the Board of Examiners are authorized, at their discretion, to hold Junior Public Examinations in Sydney at such other times as they may consider desirable, provided that not more than one such Examination shall be held in the same term.

6. No candidate shall be admitted to either of the Public Examinations, unless he shall have notified to the Registrar his intention to become a candidate, specifying the subjects in which he elects to be examined, and shall have paid to the Registrar the required fee, fourteen days before the commencement of the Examination.

7. The Examination shall be conducted by means of written or printed papers and *visâ voce*, at the discretion of the Examiners.

8. Public Examinations may be held at any place within the Colony, where a person, approved by the Senate, can be found to conduct the Examination; provided always that the aggregate amount of fees paid by candidates at any such place shall be sufficient to defray the expenses of such Examination.

9. Local Examinations, as provided for in clause 8, shall be held at the same time as those at the University, and shall be conducted as follows :—

- (a) Copies of the papers to be set at the Public Examinations at the University, together with such additional papers as the absence of *viva voce* Examination may render necessary, shall be transmitted under seal to the person appointed by the Senate to conduct the local Examinations.
- (b) Candidates shall write out answers to the questions set, in the presence of the person appointed to conduct the Examination, or of some person deputed by him, and in accordance with such detailed instructions as may be furnished by the Chairman of the Board of Examiners.
- (c) The written answers shall be transmitted to the Board of Examiners, who shall examine them and report thereon to the Senate.
- (d) The person conducting the local Examination shall receive such remuneration for his services as the Senate may in each case determine.

10. The Senate may, at their discretion, send an Examiner or Examiners to conduct the local Examinations at any place within the Colony.

JUNIOR EXAMINATION.

11. The subjects for the Junior Public Examinations shall be those comprised in the following sections :—

Section I.

Writing from dictation.

The rudiments of English Grammar.

The first four rules of Arithmetic—simple and compound, and the Rule of Three.

Geography.

The outlines of English History since the Conquest ; that is, the succession of Sovereigns, and the chief events of each reign.

All candidates will be required to pass in this section.

Section II.

English.—Language, Grammar, and Composition,

Book recommended :—Latham's smaller Grammar.

Section III.

Latin.—Passages for translation from Cæsar's Commentaries, B. I. Easy passage for translation from some other Latin author. Short sentences for translation into Latin. Questions on historical and other allusions, and parsing.

Section IV.

Mathematics.—Arithmetic, Euclid, B. I, Algebra to simple equations, without surds.

Section V.

Mathematics.—Euclid, B. II, excepting Props., 8, 9, 10, and B. III. Algebra to proportion, including quadratic equations of one or two unknown quantities and surds.

Section VI.

English History.—From the Norman Conquest to the Accession of Queen Victoria. An acquaintance with Dr. Smith's smaller History of England, or any similar work, will be sufficient to enable a candidate to pass in this section.

Section VII.

Geography.—Physical features and political divisions.

Section VIII.

French.—Passages for translation from Voltaire's Life of Charles XII, B. I and II, with a further examination similar to that in Latin.

Section IX.

German.—Passages for translation from Lessing's Fables, with a further examination similar to that in Latin.

Section X.

Greek.—Passages for translation from Xenophon, Anabasis, B. I, with a further examination similar to that in Latin. Every candidate, in addition to section I, will be required to pass in two at least of the remaining sections, of which one at least must be II, III, IV, or V ; and in the case of female candidates, II, III, IV, V, or VIII.

SENIOR EXAMINATION.

12. The subjects for the Senior Public Examination shall be those comprised in the following sections :—

Section I.

The same as for the Junior Examination. All candidates will be required to pass this section, except those who hold certificates of having passed the Junior Examination.

Section II.

English.—Grammar, analysis, and composition. Book recommended :—Latham's smaller Grammar.

Section III.

Latin.—Passages for translation from Livy, B. XXI, and Horace, Odes, B. III. Questions on historical and other allusions, and grammar. Passages for translation from other Latin works. A passage of English for translation into Latin prose.

Section IV.

Arithmetic and Algebra, including logarithms. A satisfactory knowledge of arithmetic and of algebra to the binomial theorem inclusive, shall entitle a candidate to pass in this section.

Section V.

Geometry.—Euc., B. I, B. II, Propos. 1-7, 11-14 ; B. III, B. IV, Propos. 1-9, 15 ; B. V, Definitions ; B. VI, Propos. 1-3, 4-16, 19-21, 23, 33 ; B. XI, Prop. 1-21. A satisfactory knowledge of the portions required of books I-IV shall entitle a candidate to pass in this section.

Section VI.

History.—Political and Constitutional History of England, from the Norman Conquest to the Accession of Queen Victoria.

Section VII.

Geography.—Political, Physical, and Commercial.

Section VIII.

French.—Passages for translation from Guizot's Histoire de la Révolution d'Angleterre, and Racine's Athalie, with a further examination similar to that in Latin.

Section IX.

German.—Passages for translation from Schiller's *Thirty Years' War*, B. II and III, with a further examination similar to that in Latin.

Section X.

Greek.—Passages for translation from the *Ion* of Euripides, with a further examination similar to that in Latin.

Section XI.

Mathematics.—Trigonometry, Analytical Geometry, Elementary Mechanics. A satisfactory knowledge of either of these three subjects shall entitle a candidate to pass in this section. Books recommended:—Trigonometry, Todhunter's larger work; Analytical Geometry, Todhunter's; Mechanics, Parkinson's.

Section XII.

Chemistry.—Inorganic Chemistry, Organic Chemistry. A satisfactory knowledge of Inorganic Chemistry shall entitle a candidate to pass in this section.

Section XIII.

Geology.—General description and classification of rocks. Distribution of organic remains.

Every senior candidate, in addition to Section I, will be required to pass in two at least of the remaining sections, of which one at least shall be II, III, IV, X, or XI; and in the case of female candidates, II, III, IV, VIII, X, or XI, but no candidate will be examined in more than six sections in addition to the first.

13. The names of those candidates who shall pass the junior examination shall be arranged alphabetically.

14. The names of those candidates who pass the senior examination shall be arranged in classes, the names in each class being arranged alphabetically. Separate lists shall be made of those who may specially distinguish themselves in either of the following divisions:—English Language and History, and Geography; Classics; Mathematics, including Mechanics; Modern Languages; Experimental Physics and Geology; and in these lists the names shall be arranged in classes and in order of merit.

15. After the name of each candidate in the above lists shall be added the school or other educational establishment (if any) from which he comes to attend the Examination, and the name of his schoolmaster or tutor.

16. A separate account shall be kept of all receipts and disbursements on account of the Public Examinations.

17. The fees shall be collected by the Registrar, and paid into the general fund of the University, and shall be appropriated in the first place to the payment of all expenses incurred, including printing, stationery, and fees paid to Examiners, other than the Professors and Assistant Professors. The residue, if any, shall be appropriated amongst the subjects of examination in proportion to the number of candidates for examination in each, the portions so appropriated to be divided amongst the Professors and Assistant Professors who shall have examined in those subjects respectively.

CIVIL SERVICE EXAMINATION.

Colonial Secretary's Office,
Sydney, 6 October, 1871.

His Excellency the Governor, with the advice of the Executive Council, and in accordance with an Address of the Legislative Assembly of the 17th February last, directs it to be notified for general information, that from and after the 1st proximo, all persons seeking appointment to a clerical office in the Public Service of the Colony must produce a certificate signed by the Dean of the Faculty of Arts and by the Registrar of the Sydney University, showing that they have passed a satisfactory examination in Section I of the subjects appointed by the University of Sydney for the Public Examinations held by the University, viz. :—

Reading aloud a passage from some standard English author.

Writing from dictation.

The rudiments of English Grammar.

The first four rules of Arithmetic, simple and compound, and the rule of Three.

Geography.

The outlines of English History since the Conquest—that is, the succession of Sovereigns, and the chief events of each reign.

JOHN ROBERTSON.

DIRECTIONS TO CANDIDATES FOR THE PUBLIC EXAMINATIONS.

[Candidates are directed to read these Rules carefully and to observe them strictly. They are further required to take notice that, in the event of any violation of the Rules respecting the mode of sending up their papers, by omission to fix the right number, or otherwise, their work will not be looked over until after the declaration of the result of the Examination, nor will their names appear in the published lists.]

No books or manuscripts allowed to be brought into the Examination Room, or into the building where the Examination is held. No communication, by word or otherwise, between candidates, or with any one, except the person presiding and the attendants, is allowed during the Examination.

No candidate to leave his place during the Examination without permission; but if he wishes to leave the room, or to communicate with the person presiding, he may stand up; and, in the event of his being allowed to retire for any necessary purpose, he shall remain under sufficient supervision during his absence.

Any candidate violating any of the above regulations is liable to be immediately expelled from the Examination Room.

Each candidate is directed—

To write upon *half-sheets* of foolscap paper, and upon *one side* only.

To lay his papers, when finished, close beside him, with the *face downwards*. Any candidate violating this rule, and so enabling his work to be seen by his neighbour, will be liable to be considered as conniving at copying.

To place his distinctive *number* (which will be privately communicated to each candidate before the Examination) at the *head* of every paper which he sends up.

To attach to each answer the *letter* corresponding with the question and *nothing else*.

To write on the *outside* of his papers, when folded up, the name of the subject, his distinctive number, and the *letter S. J. or P.*, according as he is a candidate for the Senior, the Junior, or the Preliminary Examinations.

No candidate to write upon his papers his name or initials, or anything else whatever, except the answers to the questions, and what is directed by these Regulations.

Candidates are forbidden to communicate to *any one* the numbers by which they are distinguished, until the result of the Examination has been publicly declared.

In answer to the mathematical questions, *the whole* of the work must be sent up. No marks will be given for *answers only*.

INSTRUCTIONS TO PERSONS APPOINTED TO CONDUCT PUBLIC EXAMINATIONS IN COUNTRY PLACES.

The person conducting the Examination, or some responsible person appointed by him, to remain in the room with the candidates during the whole time of the Examination.

Arrangements to be made so that in case a candidate is allowed to leave the room for any necessary purpose, there may be security that he remain under sufficient supervision during his absence.

The seal of the envelope containing the Examination Paper for the day to be broken at the appointed hour, and in the presence of the candidates. This regulation is recommended particularly to the notice of those whom it concerns, inasmuch as any deviation from this rule will render the Examinations throughout the Colony null and void.

The printed passages furnished for dictation to be read *slowly* to the candidates by the person presiding, at any convenient time during the first day's Examination.

Before reading for dictation, the passage to be read to the candidates in order that they may understand its meaning.

At the conclusion of the dictation, the candidates to be allowed a few minutes to read over and correct what they have written.

In the Civil Service Examination, the candidates are required to read aloud a short passage from some standard English author; and the person presiding is requested to transmit to the Examiners his opinion of their performance.

The attention of the person presiding is particularly directed to the rule which provides that candidates when they have finished their papers shall turn them with the *face downwards*.

At the conclusion of each day's Examination, the answers sent in by the candidates to be transmitted by post, as a book parcel, to the Chairman of the Board of Examiners, University.

All persons conducting the Examination to furnish *while* foolscap paper and other necessary stationery, and to provide for sufficient table accommodation, so that the candidates may be kept at a reasonable distance from one another. Alphabetical arrangement to be observed, except in the case of members of the same family, who must not be allowed to sit together.

All expenses for telegrams, postage, stationery, hire of tables, &c., to be charged to the University.

No persons except the attendants or the assistants of the person presiding to be allowed access to the Examination Room during the Examination.

A copy of this paper to be posted up in the Examination Room.

A FEW HINTS TO CANDIDATES PREPARING FOR THE JUNIOR PUBLIC EXAMINATION IN SECTION II.

THE subjects pertaining to this section on which questions will be asked may be classed under four heads: I. Parsing.—In naming the parts of speech, the candidate is not bound to use the same words as are to be found in Dr. Latham's Grammar. Any words employed in other grammars will equally satisfy the Examiners. For instance, if in parsing the sentence "Seeing believing," he were to call the first or the last word a participle, this would be marked as a blunder, but he would be free to call it a participial noun, or an infinitive, or by any other *name* which showed that he did not confound it with a participle. In like manner, there are certain words which appear in some grammars as adverbs and in others as conjunctions; here, also, it would not be imputed as a fault to the candidate if he followed one grammar rather than another, but it will save the student's time to understand that, neither in parsing, nor in answering any other question, will it be necessary for him to know the classes of adjectives, or adverbs, or conjunctions, as given in certain grammars; the ordinary divisions of the noun substantive and the verb are the only ones which will be required of him. With regard to the moods, it will save a student much trouble if he treated the so-called conditional and subjunctive moods as merely artificial uses of the potential, but, if he has been taught otherwise, he can answer as he has been taught, without fear of its being imputed to him as a fault. The errors against which he has to guard, under the head of parsing, will appear in the following examples:—When *like* is used as an adverb, and he calls it an adjective, when *down* is used as a preposition and he calls it an adverb, or when he treats such words as *that*, *far*, or *half*, or *more*, etc., otherwise than he is warranted by the sentence in which this occurs, or when he confounds the past tense with the past participle, or calls a neuter verb active, or *vice versa*, or when he fails to detect what governs or what is governed.

II. A knowledge of the meaning of words. It is obvious that no student can be entitled to pass in the English section if he is unable to give a fair explanation of words in common use, or of such as are found in the reading books, or in authors suited to his age. The endeavour of the Examiners has been to select a number of words, not with the hope that they will all be answered, but with the expectation that every diligent student will be able to explain a fair proportion of them. The Examiners have met with answers which showed that the candidate had confounded *ambiguous* with *ambitious* or *ambitious*, *elicit* with *illicit*, *deprecate* with *depreciate*, *valid* with *invalid*, *paramount* with *paramour*. To *eliminate* was interpreted to take the *elements* of; to *invalidate*, to *make strong*; to *denounce*, as to *renounce*; to *enervate* as to *refresh the nerves*; to *imprecate*, as to *implicate*. A hundred other instances might be added, but these will suffice to put the student on his guard. It is reported that some candidates have wasted their time in reading up the dictionary, as a preparation for answering this class of questions. The only preparation that is of the least value for such a purpose, is to mark carefully what is heard or read, and to acquire a definite conception of its meaning. Without attention and thought, nothing can be learnt that is worth the learning.

III. Etymology. It would be unfair to expect that the boys who come from schools where neither French nor Latin is taught should be able to give the derivation of English words which are borrowed from those languages. Nevertheless, as there is more than one manual of etymology intended expressly for the use of schools of the above description, and as this branch of knowledge ought to be encouraged, the Examiners will set questions which involve a knowledge of a few of the most obvious Latin roots from which English words in every-day use are derived. On that part of etymology which traces the connection between one English word and another, it is reasonable to expect that candidates should be able to give satisfactory answers.

IV. Analysis. Many schemes are published in books of education according to which the learner is expected to place in certain squares, arranged for the purpose, the extensions or limitations of the principal subject, or of the predicate, or of the object, and other contrivances are adopted in order to separate the principal sentence from its subordinate sentences, or to distinguish subordinate from co-ordinate clauses. The Examiners, in setting sentences for analysis, require *no performances of this kind*. Their only drift is to ascertain whether the candidate can distinguish the subject from the predicate, or, in other words, the thing of which the writer or speaker is thinking from that which he has to tell us concerning it. For example, if a candidate is asked to analyse the following sentence; "It is better to trust in the Lord than to have any confidence in princes!" all that the questioner cares to ascertain is, whether the candidate has sufficiently exercised his common sense, and thereby acquired a sufficient reliance upon it, to reason thus: "Something (A) is said to be better than something else (B); I have only to find (A) my subject, and whatever is affirmed of it is (B) my predicate." If this is done in two or three instances, the Examiners will give as full marks for this species of answers as for any of a more elaborate kind.

It is not expected that every candidate should acquit himself equally well in these four divisions; careful parsing, and a fair amount of proficiency in II and III, or II and IV, of the subjects above enumerated, will be sufficient for passing with credit. The advice of the Examiners on this, and on all other subjects, is one that every teacher has to repeat continually to his pupils. It is laziness not to exercise your memory, it is worse laziness to burden your memory in order to save yourself the trouble of understanding and reflecting on what you learn. Half the battle in an examination is courage, and courage never fails him who has mastered his subjects by thought.

REPORT OF THE EXAMINERS FOR 1875.

The Public Examiners have the honor to submit their report on the Examinations held in Michaelmas Term, University, 1 March, 1876.

362 candidates presented themselves, among whom they were 51 senior males, 14 senior females, 237 junior males, and 60 junior females.

The following towns were constituted local centres, viz.—Armidale, Grafton, Young, Mudgee, Bathurst, West Maitland, Kiama, Shoalhaven, Goulburn, Gunning, Tumut, Yass, Albury, Singleton.

Upon passing in review the papers sent up by the candidates in different sections, the Examiners have on the whole reason to be satisfied with the results, and think that they are justified in drawing favourable conclusions as to the education of the Colony; but this remark does not apply to the French language, in which very few candidates either male or female came up to the standard required. Many seem to have trusted entirely to the translation of the subjects prescribed; but it has been a rule with the Examiners in this and all other languages not to take into account the marks due for translation unless a certain proportion of marks has been gained in the questions intended to test their grammatical knowledge; for the purpose of ascertaining the amount of such knowledge, the candidates have not been required to repeat the rules to be observed in given cases, but simple sentences in English have been given for translation, and it has been left to the candidate to see what rules are involved and to follow them accordingly. Any one who knows how common it is for schoolboys to repeat grammatical rules with the greatest accuracy and to violate them in the very next exercise that they perform, will see that this is the only method of testing real attainments, and that the prospect of an examination of this kind is a great means of counteracting the natural tendency of students to charge their memories to the utmost possible extent, rather than give themselves the trouble of thinking. The English section presents the same results as the Examiners have adverted to on previous occasions. A knowledge of the meaning and right use of words is certainly one of the practical results of English teaching which the Colony would have a right to expect from its Public Schools; and in comparison with this it will regard the minute and subtle analysis of sentences—in which a sentence is divided into clauses with various

various

various technical names, and each clause is ranged under seven or more heads—as a cruel waste of teachers' and pupils' time. Your Examiners regret to say that, while the answers of the candidates showed that much time had been bestowed, though not very successfully, upon this barren counterfeit of scientific grammar, the knowledge of the English language itself, of its etymologies and modes of formation, was surprisingly weak and scanty; so that, had it not been for the parsing—which was upon the whole creditably done—many candidates would have been rejected for insufficient marks. The Examiners believe that this evil is mainly due to the position of the Public Schoolmasters, who would fain to teach in a more rational method, but are afraid to displease their Inspectors, whom they suppose to be strongly in favour of this kind of teaching. Whether this supposition be correct or not the Examiners have no means of ascertaining, but they submit that the Senate of the University would not be exceeding its duty if it brought the knowledge of this serious evil under the notice of the Council of Education, in the hope that that body will either undeceive the teachers if they are wrong, or protect them if they are right.

In the meantime, the Examiners recommend that a few practical hints for the use of teachers and pupils on the nature and scope of the English examination should be appended to the Manual and to the copy of the By-laws and Regulations about to be published. That the Senate may have an opportunity of judging of the nature of the analysis above alluded to, the Examiners desire to submit for its inspection certain extracts. "*Analysis of Sentences*," *F. Gardiner, Sydney, 1873, pp. 51 and 67, and Morell's Grammar, pp. 25 and 70.*

The candidates for examination in Natural Science, though but few in number, have evinced a marked improvement, and their work testifies that a better system of teaching obtains in the schools.

M. B. PELL,
CHARLES BADHAM,
ARCHIBALD LIVERSIDGE, } Examiners.
HUGH KENNEDY,

PUBLIC EXAMINATIONS.

In the following lists the numbers after the candidates' names represent the following subjects, viz. :—

- II. English Language.
- III. Latin.
- IV. (*For Juniors.*) Easy Mathematics. (*For Seniors.*) Arithmetic and Algebra.
- V. (*For Juniors.*) Higher Mathematics. (*For Seniors.*) Euclid.
- VI. History of England.
- VII. Geography.
- VIII. French.
- IX. German.
- X. Greek.
- XI. (a) Trigonometry. (b) Analytical Geometry. (c) Mechanics.
- XII. Chemistry.
- XIII. Geology.

SENIORS.

General Proficiency.

(The names are in alphabetical order in the classes.)

FIRST CLASS.

- * Allen, Reginald Charles (Sydney Grammar School), II, III, IV, V, VII, VIII, X, XIa, XIb, XIc, XII.
† Moore, William Lyttle (Sydney Grammar School), II, III, IV, V, VI, VIII, X, XIa, XIb, XIc, XII.

SECOND CLASS.

- Bohrsmann, Christian (Sydney Grammar School), II, III, V, X, XII.
Brown, Samuel (Sydney Grammar School), III, VII, X, XIa, XIb, XIc, XII.
Bucknell, Walter Adrian (Mr. Kinloch), II, IV, V, VII, XIa, XIc.
† Everett, Minnie Martha (Mr. Fäche), II, VI, VII, VIII.
Fletcher, Frank Edgar (Mr. Sly), II, III, IV, VII, VIII, X.
Fosbery, Eustace Edmund (Mr. Bowyer), II, III, IV, V, VII, X, XIa.
Vickery, Joseph (Sydney Grammar School), V, VII, X, XIa, XII.

THIRD CLASS.

- Blair, Edward (Mr. Frazer, West Maitland), IV, VII.
Bradley Joseph (Fort-street School), II, IV, V, VII, XIa.
Brennan, Francis (St. Patrick's College, Goulburn), II, IV, V, VI, VII.
Buchanan, Arthur Semerville (Fort-street School), IV, V.
Cameron, Annie Eliza (Mrs. Tait), II, VII, VIII.
Campbell, Mary Louise Thérèse (Belmore College), VI, VII, VIII.
Casey, Frederick Arthur (Fort-street School), II, IV, V.
Coghlan, Frederick Albert (Fort-street School), II, IV, VI.
Coleman, George Patrick, (St. Stanislaus' College, Bathurst), II, IV, V, VIII, X.
Cohen, John Jacob (Dr. Sly), II, IV, V, VII, XIa.
Cotterhill, George (West Maitland Public School), IV, V, VII.
Crane, Arthur William (Sydney Grammar School), II, IV, V, VI, VII.
Cummings, John Joseph (St. Stanislaus' College, Bathurst), II, IV, V, VI.
Davies, John James (Grafton Public School), II, IV, VII.
Dwyer, Patrick Vincent (St. Stanislaus' College, Bathurst), II, III, IV, V.
Edwards, Martin Montague (St. Patrick's College, Goulburn), II, IV, VI, VII.
Fletcher, Arthur Polglase (Newington College), II, III, IV, V, VI, VII.
Fletcher, Joseph Alfred (Newington College), VI, VIII, X.
Foster, Thomas Chichester James (Camden College), II, III, VII, X.
Gilles, James (private), II, III, IV, V, VII.
Horgan, Mary (Mrs. Macintosh), VI, VII, VIII.
Hughes, Ethel Maude (Ladies' College), VII, VIII.
James, Henry (West Maitland Public School), II, IV, V, VII.
Jones, Adolphus Percy (West Maitland Public School), II, IV, VII.
Jones, Alfred (West Maitland Public School), IV, V, VII.
Kent, Annie Emma (Belmore College), VI, VII, VIII.
Kent, Alice (Belmore College), II, VI, VII, VIII.
Mann, Herbert (Fort-street School), II, VII.
Mayne, William Macintosh (St. Stanislaus' College, Bathurst), II, VI, VII.
Moore, Samuel John H. (Dr. Sly), II, III, VI, VII, X.
O'Dwyer, James Edmund (Fort-street School), II, IV, V.
Perry, Ada (Ladies' College), II, VII, VIII.
Piddington, Albert Bathurst (Goulburn Public School), II, IV.
Rubie, Ignatius Joseph (St. Stanislaus' College, Bathurst), II, III, V, VIII, X.
Sultz, Charles (Balmain Public School), II, IV, V, VII.
Trivett, John Burt (Camden College), II, IV, V, VII.

Distinguished

* University prize of £20, and "West" medal.

† Special prize of £10, given by the Hon. G. W. Allen.

‡ "John Fairfax" prize of £20.

 M'Lelland, Hugh Dawson (Presbyterian School, Shoalhaven), II, IV, V, VI, VII.
 Nathan, Amy Eliza (Ladies' College), II, VII.
 Newman, Charles (Gunning Public School), IV, VII.
 Nott, Sydney Philip (Sydney Grammar School), II, VI.
 O'Donnell, Benjamin (St. Patrick's College, Goulburn), III.
 Owen, Henry Percy, (Sydney Grammar School), III.
 Oxley, Henry Molesworth (Sydney Grammar School), II, III, IV, V, VII.
 Paige, William (Fort-street School), II, IV, V, VI, VII.
 Paterson, Edward Favence (Sydney Grammar School), II, IV, VI.
 Paxton, Elizabeth Bennett (Ladies College), II, VII, VIII.
 Pursor, Marian Eliza (Miss Baylis), II, IV, VI, VII.
 Reeve, Henry (Dr. Sly), II, IV, V, VI.
 Reid, Alexander Coughrane (Kiama Public School), IV, V, VI.
 † Rennie, George Edward (Sydney Grammar School), II, III, IV, V, VI, VII, X.
 Rennie, Grace Malcolm (Miss Baxter), III, IV, VII.
 Robberds, John Earnest (Armidale Grammar School), II, III, IV, VI, VII.
 Ross, Thomas H. (Mr. Frazer, West Maitland), II, IV, V, VII.
 Ross, Vernon Percy (Burwood Public School), IV, VI, VII.
 Rudd, Henry (Gunning Public School), IV, VII.
 Russell, James (Sydney Grammar School), II, III, IV, VI.
 Ryan, Michael J. (St. Patrick's College, Goulburn), III, VI.
 Samuel, Lydia (Lady Murray), II, VIII.
 Selkirk, William (Mr. F. H. Hole), II, III, IV, VI, VII.
 Selman, Henry Charles (Burwood Public School), II, IV, V, VI, VII.
 Shaw, Alfred Moss (Botany-street Denominational School), II, IV, VI.
 Shaw, Malcolm (Newington College), II, IV, VI, VII.
 Short, George Robert (Kiama Public School), II, IV, VI, VII.
 Sloman, Thomas Biddulph U. (All Saints' College, Bathurst), II, III.
 Small, Herbert Henry (Ryde Public School), IV, VII.
 Smith, Archibald (Gunning Public School), V, VI.
 Smith Wallace Arabin (King's School), II, III, IV.
 Solomon, Hannah (Lady Murray), II, VI, VII.
 Somerville, George Bennett (Windsor Public School), II, IV, VI, VII.
 Sullivan, Reginald (Mr. Clarke, Mudgee), V, VI.
 Tanner, Alfred (All Saints' College, Bathurst), II, III, IV.
 Tawyer, Mary Anne (Mrs. Armstrong, Young), II, VI.
 Taylor, Arthur Wellesley (William-street Public School), II, IV, VI.
 Taylor, Walter (West Maitland Public School), IV, V.
 Teale, William Henry (Windsor Public School), II, IV, VI, VII.
 Thompson, Eva (Ladies College), II, VI, VII, VIII.
 Thompson, Harold Clarke (Sydney Grammar School), IV, V, VI, VII.
 Thomson, James Ambrose (Kiama Public School), II, III, IV, V, VI.
 Thorpe, Frederick Ashley (William-street Public School), IV, VI, VII.
 Traill, Cecil Grahame (King's School), II, III.
 Vickery, Elizabeth (Ladies College), II, VI, VII, VIII.
 Wade, Charles (All Saints' College, Bathurst), II, III, IV, VII.
 Wakeford, Mary Eliza (Kiama Public School), IV, VI, VII.

* "John Fairfax" prize of £10.

† University prize of £10.

‡ Proxime accessit, special prize of £6, given by Professor Pell.

Walsh, Thomas Massey (Fort-street School) IV, V, VI, VII.
 Watkins, Rebecca (Miss Baxter), II, VI, VII, VIII.
 Webb, Sydney William (Bathurst Public School), II, IV, V, VI, VII.
 Webster, George Frederick (Fort-street School), IV, V, VII.
 Williams, Vivian William (private), II, III, IV, VI, VII, IX.
 Wilkinson, Frederick Hattam (King's School), IV, VII.
 Wueling, Frederick William (St. Clement's School, Yass), II, IV, VI, VII.
 Wilson, William Baldrige (Gunning Public School), IV, VI, VII.
 Woodward, Walter Matthew (Gunning Public School), IV, VI, VII.
 Walford, Sydney Rundle (King's School), IV, VI.
 Warden Charles Forfar (Newington College), IV, VI, VII.

The successful candidates were educated as under:—

PUBLIC EXAMINATION PAPERS.

ENGLISH—SECTION II.—JUNIORS.

Thursday, November 4th, 9½ a.m. to 12½ p.m.

- (a) Analyse the following sentences:—
 (A) The half of my goods I give to the poor.
 (B) What I will not, that I cannot do.
 (C) It is a poor excuse to say I forgot it.
- (b) Parse the words in italics in the following sentences:—
 (A) *Seeing is believing.*
 (B) He spells *much worse than* he did a year ago.
 (C) "*As when the sun, new ris'n,*
Looks through the horizontal misty air,
Shorn of his beams, or from behind the moon,
In dim eclipse, disastrous twilight sheds
O'er half the nations."
- (c) Write down the etymology of the following words:—Elbow, thoroughly, brand, thrift, amazement, sore, liason, riddle.
- (d) Give instances where the noun and the verb differ in one or more of the same particulars, as the following:—
 (A) Present (noun) and present (verb).
 (B) Use (noun) and use (verb).
 (C) Advice (noun) and advise (verb).
- (e) Bough of a tree, bow a salutation, bows of a ship; show that all these contain one and the same idea; and mention other words belonging to the same root as these.

Current means several things, but there is the same idea in each. Civil has two principal meanings; but in both of these there is the same primary idea. Show this clearly.

(f) Explain the meaning of the following words, and give the etymology wherever you know it:—To eliminate, To disseminate, Collusion, Alternation, To vindicate, Rudiment, Supplement.

(g) Express the following thoughts in a paraphrase of your own:—

"If I am traduced by tongues which neither know
My faculties nor person, yet will be
The chronicler of my doings,—let me say,
'Tis but the fate of place, and the rough brake
That virtue must go through. We must not stint
Our necessary actions, in the fear
To cope malicious censurers; which ever,
As ravenous fishes, do a vessel follow
That is now trimm'd; but benefit no further
Than vainly longing."

LATIN—SECTION III.—SENIORS.

Tuesday, November 2nd. 9½ a.m. to 12½ p.m.

A. Translate into Latin—

- I do not know from what author you learnt these things, but I have no doubt that you will find you have been deceived.
- I hear that he has been put on his trial for theft, but I believe he will be acquitted.
- If Caesar is a better general than Scipio, he must necessarily be thought a better one than any other of the Romans.
- If the Roman writers had understood the Etruscan language, we should have learnt many things about Rome itself which are now buried in oblivion.
- I value the philosophy of Plato more than that of Cicero, because the former spent his life in investigating the truth, the latter his hours of leisure in adorning this or that subject.
- All men are agreed that Pompey's friends would have used victory much more harshly than Caesar did after he became the master of the world.
- There was nothing which impelled me more to recommend this law than the calamities which I saw must follow, if a scarcity should come upon us unawares.

B. Turn the following sentence into the oratio obliqua:—

Cur indignum eam sortem quæ omnibus communis erit? Ego eadem patiar quæ vos tantopere formidatis; proinde date operam ut quem in re gerenda semper adjuvistis eundem in calamitate perferenda, quoniam ita Dis placuit imitemini.

C. Translate into English a passage.

LATIN—SECTION 3—JUNIORS.

Tuesday, November 2nd. 9½ a.m. to 12½ p.m.

A. Write down the genders of amnis, cardo, decor, fides, gurgis, imago, mensis, pestis, ros, sal, tribunal, vallis.

B. Give the perfect and supine of—ardeo, caveo, divido, findo, mordeo, pungo, rodo, subdo, vello, verto.

C. Translate into Latin:—

- I will go into the country to see my friends.
- Two thousand men were sent out of the camp.
- We enjoy a most beautiful harbour.
- If he were a good citizen he would obey the laws.
- He who flatters the rich hopes that others will not see why he does it.
- In building the city, Romulus took into account a larger multitude than was likely to dwell in the city during his lifetime.
- Did you never hear why he pretended to value the farm so highly? and did you not suspect that he was enticing others to offer him a great sum of money for it?
- To think that I should be accused of broken faith!

D. Translate into English a passage.

ARITHMETIC AND ALGEBRA—SECTION 4—SENIORS.

Wednesday, November 3rd. 9½ a.m. to 12½ p.m.

A. What is the rule for the addition of vulgar fractions?

B. Add together—

$$\frac{1}{6} + \frac{2}{5} + \frac{1}{2} + \frac{1}{10}$$

C. Find the amount, at compound interest, of £430 in three years, at 4 per cent.

D. Gold being worth £3 17s. 10½d. per ounce, find the weight of the sovereign as a decimal of an ounce, correct to two places.

E. Write down the expansion of $(a + b + c)^2$.

F. Deduce from the above the value of—

$$(2 + x - 3x^2) + (2 - x + 3x^2)^2.$$

Simplify—

G. $\frac{a^2 + ax + x^2}{a^2 - a^2x + ax^2 - x^3} \times \frac{a^2 - ax + x^2}{a + x} \times \frac{a^4 + x^4}{a^4 + x^4}$

H. $\frac{a}{a-b} + \frac{b}{a+b} - \frac{2ab}{a^2-b^2} + \frac{a^2-b^2}{a^2+b^2}$

I. $\sqrt{125 a^3 b}$

J. $\sqrt{8} + \sqrt{18} + \sqrt{50}$

K. $\sqrt[3]{81 a^4 b^3}$

Solve the equations—

L. $\frac{4x+3}{9} + \frac{7x-29}{5x-12} = \frac{8x+19}{18}$

M. $3x^2 - 22x + 7 = 0$

N. $x^2 - ax + x - 2a + 2 = 0$

O. If $\frac{a}{b} = \frac{c}{d} = \frac{e}{f}$, show that

$$\frac{a}{b} = \frac{a+c+e}{b+d+f}$$

- P. State and prove the formula for finding the sum of an arithmetical progression.
 Q. The first term of an arithmetical progression is 3, and the sixth term is 28; find the third term.
 R. Expand $(a^2 - ab)^7$.
 S. Write down the general logarithmic formulae by which multiplication and division can be effected.
 Given $\log 2 = .30103$, $\log 3 = .47712$, find the logarithms of—
 T. $\sqrt[3]{\frac{3}{4}}$
 V. $\frac{36 \times 81 \times 486}{3 \sqrt[5]{\frac{81}{81}}}$

MATHEMATICS—SECTION 4—JUNIORS.

Wednesday, November 3rd. 9½ a.m. to 12½ p.m.

- A. Find the value of $\frac{2}{3}$ ths of $\frac{3}{4}$ ths of $4\frac{1}{2}$ acres; and reduce the result to square yards.
 B. What are the wages of 36 men for 7 months, if the wages of 50 men for 12 months amount to £1,080?
 C. Find the simple interest upon £530 17s. 6d. for 11 years, at 5 per cent.
 D. Express .00625 of an acre in square inches.
 E. Find the value of—
 $(a^2 - ab + b^2)(a^2 + ab + b^2) - (a^2 - b^2 - ab)(a^2 - b^2 + ab)$ when $a = 2$ and $b = -3$

F. Divide—

$$\frac{x^4 - 4x^3 + 8x^2 - 16x + 16}{x^2 + 4}$$

G. Find the least common multiple of

$$a^2 - b^2, (a - b)^2 \text{ and } a^3 + b^3.$$

Solve the equations—

H.

$$\frac{x - 7}{11} - \frac{3x - 5}{7} = \frac{125}{77} = 2x - 17.$$

I.

$$ax^2 + a^3 = (ax + b^2)(a + x)$$

J. If the angles at the base of a triangle are equal, show that the sides opposite to them are equal.

K. Show that straight lines drawn from the extremities of the base of an isosceles triangle to points in the opposite sides, equally distant from the vertex, are equal.

L. If the squares on two of the sides of a triangle taken together are equal to the square on the remaining side, show that one of the angles is a right angle.

M. Show that the square described on the straight line drawn from one of the angular points of a given square to the middle point of one of the opposite sides is greater by one fourth than the given square.

GEOMETRY—SECTION V.—SENIORS.

Wednesday, November 3rd. 2 to 5 p.m.

A. Show that triangles which have three sides of the one equal to those of the other, each to each, are equal in every respect.

B. Show that the straight lines joining the middle points of the sides of a parallelogram form a parallelogram.

C. If P Q R be a triangle, of which all the angles are acute, and P S perpendicular to the base, show the square on P R, together with twice the rectangle contained by Q S and Q R, is equal to the squares on P Q and Q R.

D. Divide a square into three equal parts by straight lines drawn from the middle point of one of the sides.

E. Prove that any straight line drawn from the extremity of a diameter, and not at right angles to it, cuts the circle.

F. Two straight lines joining the extremities of equal and parallel chords in a circle are diameters.

G. Find three points in the circumference of a circle such that the lines joining them may form a triangle equiangular to a given triangle.

H. If four straight lines be proportional, show that the rectangle contained by the means is equal to that contained by the extremes.

I. Describe two equilateral triangles whose areas shall have to one another the ratio of 9 : 16.

J. Show that straight lines perpendicular to the same plane are parallel to one another.

MATHEMATICS—SECTION V.—JUNIORS.

Wednesday, November 3rd. 2 to 5 p.m.

A. If a straight line be divided into any two parts, show that the rectangles contained by the whole line and each of the two parts are together equal to the square of the whole line.

B. Describe a square equal to a given parallelogram.

C. In the same circle show that angles at the circumference standing on the same arc are equal.

D. If from an external point two tangents be drawn to a circle, show that the line bisecting the angle between them passes through the centre.

Simplify—

E.

$$\sqrt{2} \times \sqrt{6} \times \sqrt{12} \times \sqrt{18}$$

$$\sqrt{a^3 - b^3} + \sqrt{\frac{a - b}{a^2 + ab + b^2}} \sqrt{\frac{a - b}{(a - b)^3}}$$

F.

G. Solve the equations—

$$\sqrt{x + 11} - \sqrt{x} = 1$$

$$\text{If } 4x^2 = 4x = 80$$

$$\text{I. } x^2 + y^2 = 50$$

$$xy = 7$$

J. If $\frac{a}{b} = \frac{c}{d}$ show that $\frac{2a - 3b}{2a + 3b} = \frac{2c - 3d}{2c + 3d}$

K. The sum of the squares of two numbers is 100, and their ratio is 3 : 4, find the numbers.

L. Solve the equations—

$$x + 4 + (x + 4)^4 = 12$$

$$x^2 - 3ax + 2a^2 - ab - b^2 = 0$$

FRENCH—SECTION VIII.—SENIORS.

Tuesday, November 2nd, 2 p.m. to 4½ p.m.

A. Translate into French—

- a. However great your loss may have been, mine has not been less.
 b. I should never have suspected that he would have abandoned his friends.
 c. Have you not heard enough of it, or must I point to you all the misfortunes that followed?
 d. Does it not seem to you that he goes too often to the play?
 e. I recognised those ladies, for I had seen them the day before yesterday.
 f. I beg you not to think of it any more.
 g. The more we speak of it the less we understand each other.
 h. I kept them at home for fear they should learn the illness of their father.

B. Write down the past subjunctive and the past participle of—Résoudre, Fondre, Mettre, Acquérir, Moudre, Joindre, Médire, Concevoir, Conclure, Paraître.

C. Translate into English.

FRENCH

FRENCH—SECTION VIII.—JUNIORS.

Tuesday, November 2nd, 2 p.m. to 4½ p.m.

 A. She says that she is his mother.
 B. I know that I am no worse than the others.
 C. He did not know what they would say.
 D. They asked him where his brother was.
 E. Do not say who I am, or where I come from.
 F. Let us depart, that nobody may see us.
 G. They fled, that they might not be taken.
 (d) Translate into English a passage.
 (e) Translate into English a passage.

APPENDIX B.

UNIVERSITY OF SYDNEY.

BY-LAWS ADOPTED BY THE SENATE AT THE MONTHLY MEETING ON THE 1ST SEPTEMBER, 1875.

ALL By-laws heretofore in force notwithstanding the following By-laws, shall be and are hereby declared to be By-laws of the University of Sydney, and all By-laws heretofore in force, so far as they are contradictory or repugnant to the following By-laws hereby enacted, are repealed.

XXI.—Terms.

- The Academic year shall contain three Terms, that is to say :—
 TRINITY TERM—Commencing on the first Monday in June, and terminating with the last Saturday in August.
 MICHAELMAS TERM—Commencing on the first Monday in October, and terminating with the third Saturday in December.
 LENT TERM—Commencing on the first Monday in March, and terminating with the third Saturday in May.
- Candidates for matriculation must make application to the Registrar before the commencement of Trinity Term.
- The matriculation examination shall take place during the first fortnight of Trinity Term, commencing on the second day of that Term, but the Examiners, in special cases, with the sanction of the Chancellor or Vice-Chancellor, are authorised to hold such examinations at such other times as may be deemed expedient.
- Lectures shall commence on the first day of Term, excepting in the first or Trinity Term, when they shall commence on the Monday after the conclusion of the matriculation and other examinations hereinafter provided for.
- Clause 15, Chapter XIII, of the By-laws is hereby repealed, and in lieu thereof it is enacted that candidates for degrees shall during their first year attend the University lectures on the following subjects :—
 1. Greek, except when exempted under clause 47, Chapter XIII, of the By-laws.
 2. Latin.
 3. Mathematics.
 4. Chemistry or Experimental Physics.
- Candidates for degrees during their second year shall attend the following lectures :—
 1. Greek, except when exempted as aforesaid.
 2. Latin.
 3. Mathematics and Natural Philosophy.
 4. Chemistry or Experimental Physics, for two Terms.
 5. Geology and Mineralogy, for one Term.
- Lectures shall be given during the third year on the following subjects :—
 1. Classics.
 2. Mathematics : on the additional subjects required for honors.
 3. Practical Chemistry, Mineralogy, and Geology.
- The yearly examination shall be held during the first fortnight of Trinity Term.
- The final examination for the degree of B.A. shall take place once a year, during the first fortnight of Trinity Term.
- Clause 42, Chapter XIII, of the By-laws is hereby repealed, and in lieu thereof it is enacted that to obtain the degree of B.A. candidates shall attend lectures and pass satisfactory examinations in two at least of the following schools :—
 1. Classical—The Greek and Latin Languages, and Ancient History.
 2. Mathematical—Mathematics and Natural Philosophy.
 3. Natural Sciences—Chemistry and Experimental Physics, Practical Chemistry, Geology, and Mineralogy.
- Candidates who pass the second yearly examination in the mathematical school shall not be required to pass any further examination in that school. Those who fail to pass shall be required again to attend the second year course of lectures, and to pass the next succeeding yearly examination in that school.
- The provisions of the last clause shall apply also to the Natural Science school.
- Candidates who shall have obtained at least a second-class place at the second yearly examination in the Classical School may elect to be exempted from further attendance upon Lectures, and from further examination in that School. Provided always that any Candidate so exempted shall during the ensuing year be required either to attend the third year Course of Lectures and to pass the consequent Examination in the Mathematical School, or to attend the third year Course of Lectures and to pass the consequent Examination in Natural Science.
- Any Candidate who at the second yearly Examination exhibits a marked proficiency in either of the three Schools, may on the recommendation of the Examiners be allowed to attend Lectures during his third year and to be examined in that School only.
- There shall be a Yearly Examination for the Degree of M.A. during Lent Term, or at such other times as the Examiners, with the sanction of the Chancellor or Vice-Chancellor, may appoint.

16. The Examination for Scholarships shall be concurrent with the Matriculation and Yearly Examinations, additional papers and questions being set where required.
17. To prevent serious inconvenience to the present Under-graduate members of the University, and to those who may be hereafter admitted *ad eundem* to the same status as those members, in the years 1875, 1876, and 1877, the examination for the Degree of B.A. shall be held as heretofore at the end of Michaelmas Term, and the subjects of the Yearly Examination shall be those upon which Lectures shall have been given since the preceding Yearly Examination, except that in the Mathematical School, the Second Yearly Examination shall be in those subjects which are required for the ordinary Degree of B.A.; and that Scholars of the first and second years shall continue to hold their Scholarships until the next succeeding Scholarship Examination; and that third year Scholars hereafter elected shall receive the full year's emolument in all cases.
18. Any person at present an Undergraduate member of the University, or hereafter admitted as aforesaid, who at the end of his first or second year, according to the By-laws heretofore in force, shall signify to the Registrar in writing that he *bono fide* intends to leave the University, and that it is of importance to him to receive the Certificates under Chapter XIII, Clauses 26, 27, may claim to be and shall be examined in the subjects upon which Lectures shall have been given since the last Yearly Examination at the end of Michaelmas Term, or at such convenient time afterwards as the Examiners may appoint, and if he pass the Examinations shall receive his Certificates accordingly.
19. Full and complete Tables of Lectures and subjects of Examination shall be printed in the Calendars, and posted at the University from time to time.
20. A journal shall be kept by the Registrar, in which he shall keep a daily record of the Lectures delivered by each Professor, the number of Students present, and also the names of the Students reported by the Professor to be absent. This journal to be laid on the table at the Monthly Meetings of the Senate.
21. Undergraduates shall appear in Academical costume when attending Lectures, and on all public occasions in the University.
- (B.) 22. The concluding paragraph, commencing with the words "Every Candidate in addition", of Clause 13 of the General Regulations Public Examinations is hereby repealed, and in lieu thereof it is hereby enacted that—Every Candidate in addition to Section I shall be required to pass in two at least of the remaining Sections of which, in the case of male Candidates, one at least shall be II, III, IV, or V, and in the case of female Candidates, one at least shall be II, III, IV, V, or VIII.
- (23.) The concluding paragraph of Clause 14 of the General Regulations Public Examinations, commencing with the words "Every Senior Candidate in addition", is hereby repealed, and in lieu thereof it is hereby enacted that—Every Senior Candidate in addition to Section I shall be required to pass in two at least of the remaining Sections of which, in the case of male Candidates, one at least shall be II, III, IV, X, or XI, and in the case of female Candidates II, III, IV, VIII, X, or XI.
23. Nothing in these By-laws shall affect Clauses 17 and 18 of Chapter XIII of the By-laws.

APPENDIX C.

1875-6.

NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.
(BY-LAWS.)

Presented to Parliament, in pursuance of the Act of Incorporation, 14 Vict. No. 31, sec. 21.

BY-LAWS OF THE UNIVERSITY.

[Passed by the Senate on the 2nd day of February, and assented to by the Governor and the Executive Council on 28th February, 1876.]

All By-laws heretofore passed by the Senate, and now in force, are hereby repealed, and in lieu thereof, the following By-laws shall be, and are hereby declared to be, the By-laws under which the University of Sydney shall henceforth be governed: Provided always, that nothing herein contained shall be deemed to revive any By-law previously repealed, or to prejudice any matter already done, or commenced, under any By-law hitherto in force.

CHANCELLOR.

1. The election to the office of Chancellor shall take place at a duly convened meeting of the Senate to be held in Lent Term.
2. The Chancellor shall be elected for a period of three years (except as hereinafter provided) to be computed from the date of election, but shall be eligible for re-election.
3. In the event of the office of Chancellor becoming vacant by death, resignation, or otherwise, before the expiration of the full term of office herein prescribed, the election of a successor shall be proceeded with at the next ensuing regular meeting of the Senate; and the Chancellor so appointed shall hold office until the Lent Term next after the expiration of three years from the date of such election.

VICE-CHANCELLOR.

4. The election of the Vice-Chancellor shall take place at a duly convened meeting of the Senate, to be held in Lent Term, except as in cases otherwise provided for by the Act of Incorporation.

SENATE.

Meetings and Rules of Procedure.

5. The Senate shall meet on the first Wednesday in every month, or on the nearest convenient day, should such first Wednesday be a Public Holiday, and may adjourn from time to time to conclude any unfinished business.
6. At any time in the interval between such monthly meetings, it shall be competent for the Chancellor, or, in his absence, the Vice-Chancellor, in any case of emergency, to call a special meeting of the Senate, to be held as soon as conveniently may be, for the consideration of any business which he may wish to submit to them.
7. Upon the written requisition of any three members, the Chancellor, or, in his absence, the Vice-Chancellor, or in the absence of both, the Registrar, shall convene a special meeting of the Senate, to be held as soon as conveniently may be after the expiration of seven days from the receipt of such requisition.
8. Except in any case of emergency, as aforesaid, no motion initiating a subject for discussion shall be made but in pursuance of notice given at least seven days previously; and every such notice shall be entered in a book, to be kept by the Registrar for that purpose.
9. The Registrar shall issue to each member of the Senate a summons, with a written specification of the various matters to be considered at the next meeting of the Senate, whether such meeting be an ordinary or a special one; and such summons, except in any case of emergency as aforesaid, shall be issued at least three days previously to such meeting.
10. In the event of a quorum of the Senate not being present at any monthly or other meeting, within half an hour after the hour appointed, the meeting shall lapse, but the members then present may adjourn the meeting to any convenient future day, of which at least three days notice shall be given by the Registrar in the usual manner.
11. All the proceedings of the Senate shall be entered in a journal; and, at the opening of each meeting, the minutes of the preceding meeting shall be read and confirmed, and the signature of the Chairman then presiding shall be attached thereto.
12. If any Fellow shall, without leave from the Senate, be absent from their meetings for six consecutive calendar months, his fellowship shall *ipso facto* become vacant.

Election to vacancies.

13. At the first meeting of the Senate, after the occurrence of a vacancy among the Fellows, a day shall be fixed for a Convocation for the election of a successor, such day to be within sixty days from the date of such Senate meeting, and to be announced at least thirty days previously to such Convocation, by notice posted at the University, and by advertisement in one or more of the daily newspapers: Provided that no Convocation for the election of a Fellow be held during the month of January.

14. No person shall be eligible for election to fill any vacancy among the Fellows unless his name shall have been communicated to the Registrar by some *legally qualified voter at least ten clear days before the time of Convocation; and it shall be the duty of that officer to cause the name of such person, and the fact of his candidature, to be forthwith advertised in one or more of the daily papers published in Sydney, and to be posted in a conspicuous place in the University for eight clear days at least before such Convocation.

15. The Convocation for the election of a Fellow shall be held in the University, and shall be presided over in the same manner as if it were a meeting of the Senate. Every candidate submitted for election must be proposed and seconded by legally qualified voters. If one candidate only be so proposed and seconded, then such candidate shall be declared by the President to be duly elected, but if more than one candidate be so proposed and seconded, an election shall be made by ballot. Before proceeding to such ballot, two members of Convocation shall be chosen by the members present to act as scrutineers, and such scrutineers shall report the result of the ballot to the President, who shall declare the candidate having the majority of votes to be duly elected, and in the event of an equality of votes, the election shall be decided by the casting vote of the President.

16. At the time fixed for Convocation for the election of a Fellow, the Registrar shall prepare for the President's use a complete list of all persons entitled to vote under the provisions of the law, and a copy of such list shall be posted in a conspicuous place in the University for two days at least before the time of Convocation.

17. None but legally qualified voters shall be allowed to be present during the taking of a poll.

Ex-officio Members.

(24 Victoria, No. 13.)

18. The Senior Professor of Classics, the Senior Professor of Mathematics, and the Senior Professor of Chemistry and Experimental Physics, shall be *ex officio* members of the Senate, under the provisions of the "Sydney University Incorporation Act Amendment Act of 1861."

SUPERIOR OFFICERS.

(24 Victoria, No. 13.)

19. The Registrar is hereby declared to be a Superior Officer of the University, entitled to the rights and privileges conferred by the "Sydney University Incorporation Act Amendment Act of 1861."

20. The Solicitor to the University is hereby declared to be a Superior Officer of the University, entitled to the rights and privileges conferred by the "Sydney University Incorporation Act Amendment Act of 1861."

REGISTRAR.

21. The Registrar shall keep all necessary records of the Proceedings of the University, conduct all necessary correspondence, and keep such registers and books of account as may be required.

22. All fees, fines, or other sums received by the Registrar in his capacity as such, shall be paid into the Bank of the University, in order that the same may be applied, accounted for and audited in such manner as the Senate may from time to time appoint.

SEAL OF THE UNIVERSITY.

23. The Seal of the University shall be placed in the charge of the Chancellor or Vice-Chancellor, and Registrar, and shall not be affixed to any document except by order of the Senate.

FACULTIES.

24. There shall be three Faculties in the University, viz. :—

1. Arts.
2. Law.
3. Medicine.

LIMITATION OF THE TITLE OF PROFESSOR.

25. The Title of Professor shall be distinctive of those Public Teachers in the University upon whom the Senate shall have conferred that title; and no person in or belonging to the University, or any College within it, shall be recognized as Professor, without the express authority of the Senate.

PROCTORIAL BOARD.

26. The Chancellor, the Vice-Chancellor, the Senior Professor of Classics, the Senior Professor of Mathematics, and the Senior Professor of Chemistry and Experimental Physics, shall form a Board, to be called the "Proctorial Board," to which shall be confided the duty of enforcing the observance of order on the part of the Undergraduates of the University. This Board shall make such regulations as it may deem expedient for the maintenance of discipline amongst the Undergraduates, and shall have the power of inflicting, or authorizing to be inflicted, all such academic punishments as are sanctioned by the present usage of British Universities, including fines to an amount not exceeding five pounds (£5) for any one offence: Provided, however, that the Board shall not proceed to the expulsion of any Undergraduate, or to his suspension for a period exceeding one Term, without the express authority of the Senate.

27. No question shall be decided at any meeting of this Board unless three Members at the least shall be present.

28.

* The legally qualified voters are Fellows of the Senate for the time being, Professors, Public Teachers, and Examiners in the Schools of the University, Principals of Incorporated Colleges within the University, Superior Officers of the University, declared to be such by By-law, and Graduates who shall have taken any or either of the degrees of M.A., LL.D., or M.D., in this University.

28. At meetings of this Board, the Chair shall be occupied by the Chancellor, or in his absence by the Vice-Chancellor, or in the absence of both, by the Dean of the Faculty of Arts; and in the event of an equality of votes at any meeting, the Chairman shall have a casting vote. At meetings of this Board, the Registrar of the University shall attend and record the proceedings, and it shall be his duty to collect all fines imposed by or under the authority of, the Board. It shall be the duty of the Registrar to convene the Board, on the requisition of any one of its members, at such time, within seven days from the date of the requisition, as may be directed by the Chancellor, or in his absence by the Vice-Chancellor, on whom it shall be incumbent to give such direction on the Registrar's application. In the event of the absence of the Chancellor and Vice-Chancellor, the time of meeting shall be fixed by the Dean of the Faculty of Arts.

BOARD OF STUDIES.

29. The Chancellor, the Vice-Chancellor, and the Professors of the three several Faculties shall form a Board, to be called the Board of Studies, for the consideration of all general questions relating to the studies of the University, which may be referred to them by the Senate.

DEANS OF FACULTIES.

30. A Dean for each of the Faculties in the University shall be elected by the Senate from time to time for a term of three years.

31. In the event of the office of Dean becoming vacant, by death, resignation, or otherwise, before the expiration of the full term of office herein prescribed, the election of a successor shall be proceeded with at the next ensuing regular meeting of the Senate; and the Dean so appointed shall hold office until the first regular meeting of the Senate in the Term next after the expiration of three years from the date of such election.

TERMS.

32. The Academic Year shall contain three Terms, that is to say:—

TRINITY TERM—Commencing on the first Monday in June, and terminating with the last Saturday in August.

MICHAELMAS TERM—Commencing on the first Monday in October, and terminating with the third Saturday in December.

LENT TERM—Commencing on the first Monday in March, and terminating with the third Saturday in May.

FACULTY OF ARTS.

Subjects of Study.

33. Professors and Lecturers, appointed by the Senate, shall give instruction in the following subjects:—

1. Greek Language and Literature.
2. Latin Language and Literature.
3. Ancient History.
4. Mathematics.
5. Natural Philosophy.
6. Chemistry.
7. Experimental Physics.
8. Geology.
9. Mineralogy.

Board of Examiners.

34. The Professors in the Faculty of Arts, together with such other persons as may from time to time be appointed by the Senate, shall form a Board of Examiners for conducting the Examinations in the Faculty of Arts; and of this Board the Dean of the Faculty, or, in his absence, the Professor next in seniority, shall be Chairman.

35. The Board of Examiners shall, from time to time, and in accordance with the provisions of the By-laws for the time being, frame rules, and appoint times and places for the several Examinations in the Faculty of Arts.

36. At the conclusion of each Examination the Board shall transmit to the Senate a report of the result, signed by the Chairman and by at least two other members.

Matriculation.

37. Candidates for Matriculation must make application to the Registrar before the commencement of Trinity Term.

38. The Matriculation Examination shall take place during the first fortnight of Trinity Term, commencing on the second day of that Term, but the Examiners, in special cases, with the sanction of the Chancellor or Vice-Chancellor, are authorized to hold such Examinations at such other times as may be deemed expedient.

39. The examination shall be conducted by means of written or printed papers; but the Examiners shall not be precluded from putting *viva voce* questions.

40. The names of Candidates who have passed the Matriculation Examination shall be arranged alphabetically; but it shall be competent to the Examiners to place in a separate class the names of those who may have specially distinguished themselves.

41. Students who shall have passed the Matriculation Examination, and shall have paid a fee of Two Pounds to the Registrar, may be admitted by the Senate as Members of the University.

42. The Examination for Matriculation shall be in the following subjects:—

- The Greek and Latin Languages.
- English Grammar and Composition.
- *Elementary Chemistry, Physics, or Geology.
- Arithmetic.
- Algebra, to simple equations, inclusive.
- Geometry, first book of Euclid.

Lectures.

* Text-books—Science Primers published by Macmillan & Co.

Lectures.

43. Lectures shall commence on the first day of Term, excepting in the first or Trinity Term, in which they shall commence on the Monday after the conclusion of the Matriculation and other Examinations hereinafter provided for.

44. Lectures of an hour each shall be given by the Professors in Classics, Mathematics, and Natural Science, at such times, and in such order as the Senate may, from time to time, direct.

45. Before the admission of a student to any course of Lectures, he shall pay to the Registrar of the University such fee as shall have been appointed by the Senate.

46. Full and complete tables of Lectures and subjects of Examinations shall be printed in the Calendars and posted at the University from time to time.

47. Candidates for Degrees shall during their first year attend the University Lectures on the following subjects :—

1. Greek, except when exempted under clause 72.
2. Latin.
3. Mathematics.
4. Chemistry or Experimental Physics.

48. Candidates for Degrees shall during their second year attend the following Lectures :—

1. Greek, except when exempted as aforesaid.
2. Latin.
3. Mathematics and Natural Philosophy.
4. Chemistry or Experimental Physics, for two Terms.
5. Geology, for one Term.

49. Lectures shall be given during the third year on the following subjects :—

1. Classics.
2. Mathematics : on the additional subjects required for Honors.
3. Practical Chemistry, Geology, and Mineralogy.

Exemption from Lectures.

50. Any Undergraduate not holding a Scholarship in the University, nor being a Member of a College established under the provisions of the Act 18 Victoria, No. 37, may be exempted from attendance upon any or all of the above-named Lectures, upon producing evidence which shall satisfy the Senate that there are sufficient reasons for such exemption : Provided that no such exemption shall be granted for more than one year at any one time.

51. Any person may be exempted from attendance upon the University Lectures, under section 50 of the By-laws who shall satisfy the Senate that he is prevented from attending by the necessities of his position : Provided always that no application for such exemption shall be entertained until the applicant shall have passed the Matriculation Examination, and the Examiners shall have specially certified to the Senate that his abilities and attainments are such as to enable him in their opinion, taking into consideration all the circumstances of the case, to keep up with the usual course of study at the University without attendance upon Lectures. Undergraduates admitted *ad eundem statum*, and who are not required to pass the matriculation examination, shall nevertheless be required to pass a special examination to be certified by the Examiners as above, before obtaining exemption from attendance upon Lectures.

Yearly Examinations.

52. The Yearly examinations shall be held during the first fortnight of Trinity Term, and no Undergraduate shall absent himself therefrom except under medical certificate.

53. The Undergraduates of the first and second year shall be examined in the subjects of the Undergraduate course upon which Lectures have been given during the year.

54. No Undergraduate not exempted under section 51 from attendance upon Lectures shall be admitted to these examinations who, without sufficient cause, shall have absented himself more than three times during any one Term from any prescribed course of Lectures.

55. Every Undergraduate exempted from attendance upon Lectures under section 51 shall, before being admitted to any yearly examination, pay to the Registrar a fee of two pounds. If any such candidate fail to pass the examination, the fee shall not be returned to him, but he may be admitted again to examination without the payment of any additional fee.

56. Candidates who pass the second yearly examination in the Mathematical School shall not be required to pass any further examination in that School. Those who fail to pass shall be required again to attend the second year course of Lectures, and to pass the next succeeding yearly examination in that School.

57. The provisions of the last clause shall apply also to the Natural Science School.

58. Candidates who shall have obtained at least a second-class place at the second yearly examination in the Classical School may elect to be exempted from further attendance upon Lectures, and from further examination in that School : Provided always that any candidate so exempted shall during the ensuing year be required either to attend the third year course of Lectures and to pass the consequent examination in the Mathematical School, or to attend the third year course of Lectures and to pass the consequent examination in Natural Science.

59. After examination, the names of the Undergraduates shall be arranged in classes, and in order of merit.

60. Prize Books, stamped with the University Arms, shall be given to each student who shall be placed in the first class in each year.

61. Such Undergraduates as absent themselves from the examinations, except under medical certificate, or fail to pass them in a satisfactory manner, shall, at the discretion of the Senate on the report of the Examiners, be required to keep additional terms before proceeding to the B.A. Degree.

62. Undergraduates who shall have passed the yearly examinations shall receive certificates to that effect, signed by the Dean of the Faculty of Arts and by the Registrar.

Admission

Admission ad eundem statum.

63. Undergraduates who have kept Terms at other Universities may, at the discretion of the Senate, be admitted *ad eundem statum* in this University, without examination: Provided always that they shall give to the Registrar, to be submitted to the Senate, sufficient evidence of their alleged *status* and of good conduct.

Bachelor of Arts.

64. The examination for the degree of B.A. shall take place once a year, at the beginning of Trinity term.

65. No candidate shall be admitted to this examination unless he produce a certificate from the Dean of the Faculty of Arts of having complied with the regulations. This certificate shall be transmitted to the Registrar before the day appointed for the commencement of the examination.

66. The fee for the degree of B.A. shall be three pounds. No candidate shall be admitted to the examination unless he have previously paid this fee to the Registrar. If a candidate fail to pass the examination, the fee shall not be returned to him; but he shall be admissible to any subsequent examination for the same degree without the payment of an additional fee.

67. The examination shall be conducted, in the first instance, by means of printed papers; and at the termination of such examination, each candidate shall undergo a *viva voce* examination, if the Examiners think fit.

68. To obtain the degree of B.A., candidates shall pass satisfactory examinations in two at least of the following schools:—

1. Classical—The Greek and Latin Languages, and Ancient History.
2. Mathematical—Mathematics and Natural Philosophy.
3. Natural Science—Chemistry, Experimental Physics, Practical Chemistry, Geology, and Mineralogy.

69. All persons who have passed the ordinary examination for B.A. shall be admissible for Honors in the Classical, Mathematical, and Natural Science Schools.

70. The candidates in each School shall be arranged in classes, and the first class in order of merit.

71. The most distinguished candidate for honors in each of the aforesaid Schools shall, if he possess sufficient merit, receive a prize of Ten Pounds.

Exemption from Greek.

72. Any candidate for matriculation, or candidate for the degree of B.A., shall, on application to the Senate, be exempted from examination in Greek at any of the examinations provided for in these By-laws, and from attendance on lectures in that subject; but any person so exempted shall be required to show a greater proficiency, in Latin, and no such candidate shall be eligible for any scholarship for general proficiency nor for classical honors at the examination for the degree of B.A. Undergraduates so exempted shall be required during their third year to attend lectures in Latin, Mathematics, and Natural Science, and to pass the examination for the degree of B.A. in those subjects.

Master of Arts.

73. There shall be a yearly examination for the degree of M.A. during Lent Term, or at such other times as the Examiners, with the sanction of the Chancellor or Vice-Chancellor, may appoint.

74. Every candidate for this degree must have previously obtained the degree of B.A., and two years must have elapsed since the time of his examination for such degree. He will also be required to furnish evidence of having completed his twenty-first year.

75. The fee for the degree of M.A. shall be £3. No candidate shall be admitted to the examination unless he have previously paid this fee to the Registrar. If a candidate fail to pass the examination, the fee shall not be returned to him; but he shall be admissible to any subsequent examination for the same degree, without the payment of an additional fee.

76. Candidates for the degree of M.A. shall elect to be examined in one or more of the following branches of knowledge:—

1. Classical Philology and History.
2. Mathematics and Natural Philosophy.
3. Logic: Moral, Mental, and Political Philosophy.
4. Natural Science.

The candidate most distinguished in each branch at the examination shall, if he possess sufficient merit, receive a Gold Medal.

77. The Senate may, at their discretion, admit to examination, for the degree of Master of Arts, any person who shall have obtained, at least two years previously, the degree of Bachelor of Arts, or equivalent first degree in Arts, in any other University approved by the Senate. Every candidate for admission under this By-law must make application in writing to the Registrar, and supply satisfactory evidence of his qualification as aforesaid; and that he is a person of good fame and character; and, upon the approval of his application, shall pay to the Registrar a fee of Five Pounds. Every candidate, before he is admitted to his degree, shall be required to furnish evidence of having completed his twenty-first year.

Scholarships.

78. In addition to such Scholarships as the Senate may from time to time determine to award, the Foundation Scholarships, tenable for one year, shall be awarded, after examination, in the following manner, namely:—

To Undergraduates of the *first* year:—

For general proficiency—The *Levy Scholarship*.

To Undergraduates of the *second* year:—

For general proficiency—The *Lithgow Scholarship*, founded in 1864.

To

To Undergraduates of the *third* year :—

1. For proficiency in Classics—the *Cooper Scholarship*, founded in 1857.
2. For proficiency in Mathematics and Natural Philosophy—The *Barker Scholarship*, founded in 1853.
3. For proficiency in Chemistry and Experimental Physics—The *Deas Thomson Scholarship*, founded in 1854.

79. None of the above scholarships shall be awarded except to such candidates as exhibit a degree of proficiency which shall be satisfactory to the Examiners.

80. The examination for scholarships shall be concurrent with the Matriculation and Yearly Examinations, additional papers and questions being set where required.

FACULTY OF LAWS.

Bachelor of Laws.

81. Until Professorships are established, there shall be a Board of Examiners appointed by the Senate to test the qualifications of candidates desirous of obtaining a degree in Laws. The examination for the degree of LL.B shall take place at such times as the Examiners, with the sanction of the Chancellor or Vice-Chancellor, may appoint.

82. Every candidate for the degree of LL.B. shall lodge with the Registrar satisfactory evidence of having taken the degree of B.A., or some equivalent degree, at least one year previously, in this or in some other University approved by the Senate. Every such candidate shall also furnish satisfactory evidence that he is a person of good fame and character, and that he has completed his twenty-first year.

83. The fee for the degree of LL.B shall be Ten Pounds. No candidate shall be admitted to the examination unless he have previously paid this fee to the Registrar. If the candidate fail to pass this examination, the fee shall not be returned to him, but he shall be admissible to any subsequent examination for the same degree without the payment of an additional fee.

84. Candidates for the degree of LL.B shall be examined in the following subjects :—

Roman, Civil and International Law.
Constitutional History, and Constitutional Law of England.
General Law of England.

Doctor of Laws.

85. The degree of LL.D shall not be conferred until after the expiration of seven academic years from the granting of the LL.B degree. Every candidate shall be required to pass an examination in the Civil Law in the original Latin, with especial reference to such particular works as the Examiners may from time to time determine. The fee for the degree of LL.D shall be Ten Pounds sterling.

86. The Senate shall have power to admit to examination for the degree of LL.D any person who shall have obtained, at least two years previously, the degree of LL.B, at any other University approved by the Senate, and who shall also have obtained the degree of Bachelor of Arts, or an equivalent first degree in Arts, at any such University, or shall pass an examination similar to that prescribed for the degree of Bachelor of Arts in this University. Every candidate for admission, under this By-law must make application in writing to the Registrar, and supply satisfactory evidence of his qualifications as aforesaid; and that he is a person of good fame and character; and upon the approval of his application he shall pay to the Registrar a fee of Two Pounds for the entry of his name in the University Books, in addition to the prescribed fee for his degree.

FACULTY OF MEDICINE.

Bachelor of Medicine.

87. A Professor, appointed by the Senate, shall give Lectures in Chemistry.

88. Until other Professorships in the Faculty of Medicine be constituted in the University, there shall be a Board of Examiners, appointed by the Senate, to test the qualifications of candidates who may apply for Medical Degrees, to be granted in accordance with the provisions contained in the Act of Incorporation.

89. Such candidates must lodge with the Registrar of the University satisfactory evidence of having taken the degree of B.A., or some equivalent degree, in this or in some other University approved by the Senate. Candidates who have not taken such degree must pass an examination similar to that prescribed for the B.A. degree in this University.

90. The Candidate must also furnish evidence that he is of good fame and character, that he is not under twenty-one years of age, and that he has diligently pursued a course of medical studies extending over a period of four years, at some Medical School approved of by the Senate. His certificates must show that he has attended the following eight classes, each for a course of six months—Anatomy, Practical Anatomy, Physiology, Chemistry, Materia Medica, Surgery, Practice of Medicine, Midwifery; and the following five classes each for a course of three months—Botany, Practical Chemistry, Medical Jurisprudence, Clinical Medicine, and Clinical Surgery; also, that he has attended for eighteen months the medical and surgical practice of a Hospital containing not fewer than eighty beds; and that he has been engaged for six months in compounding and dispensing medicines.

91. Medical or Surgical Diplomas from regularly constituted Examining Boards in Europe or America may, at the discretion of the Senate, be accepted as equivalent to the whole or part of the above-mentioned certificates.

92. As soon as the required documents have been declared satisfactory to the Senate, the Registrar shall notify to the candidate the day on which his examination will commence.

93. Before being admitted to examination, the candidate must deposit with the Registrar a fee of Ten Pounds, which will not be returned in the event of the candidate not passing the examination; but such candidate may be admitted to any future examination without any further charge.

94. Upon compliance with the above regulations, and on the report of the Examiners that the candidate has passed a satisfactory professional examination, the Senate shall confer upon him the degree of M.B.

Doctor

Doctor of Medicine.

95. The degree of M.D. shall not be conferred until after the expiration of two academic years from the granting of the M.B. degree.

96. The candidate must produce evidence that, after having obtained the degree of M.B., he has spent two years in hospital practice, or three years in practice, either private or in the public service. He shall also be required to produce a certificate from the Superintendent of a public Lunatic Asylum of diligent attendance at such Asylum for three months, such attendance being either before or after his obtaining the degree of M.B. Further, he shall be required to prepare and defend a thesis on some medical subject, to be selected by himself; such thesis shall be in the Latin or English language, and, if approved by the Senate, on the report of the Board of Examiners, may be printed; and he shall be required to pass an examination in Psychological Medicine, provided he has not previously passed such an examination in proceeding to the degree of M.B.

97. The fee for the degree of M.D. shall be Ten Pounds.

98. The Senate shall have power to admit to examination for the degree of Doctor of Medicine any person who shall have obtained, at least two years previously, the degree of Bachelor of Medicine or some corresponding first degree in Medicine at any other University approved by the Senate. Every candidate for admission under this By-law must make application in writing to the Registrar, and supply satisfactory evidence of his qualifications as aforesaid, and also that he is a person of good fame and character. Upon the approval of his application, he shall pay to the Registrar a fee of Two Pounds for the entry of his name in the University Books, in addition to the prescribed fee for his degree. Before the granting of the degree, every passed candidate will be required to furnish evidence of having completed his twenty-third year.

REGISTER OF GRADUATES.

99. A Register of the Graduates of the University shall be kept by the Registrar in such manner as the Senate shall from time to time direct; and such Register shall be conclusive evidence that any person whose name shall appear thereon as holding the degree of Master of Arts, Doctor of Laws, or Doctor of Medicine, at the time of his claiming to vote at a Convocation for the election of a Fellow of the Senate, is so entitled to vote; and that any person whose name shall not appear thereon, at the time of his claiming to vote in Convocation, is not so entitled to vote.

SUBSTITUTES FOR OFFICERS.

100. Any act required by the By-laws to be performed by any officer of the University may, during the absence or other incapacity of such officer, unless otherwise provided, be performed by a person appointed by the Senate to act in his place.

ACADEMIC COSTUME AND DISCIPLINE.

101. The Academic Costume shall be: for—

The Chancellor and the Vice-Chancellor—a robe and cap similar to those worn by the Chancellor of the University of Oxford. In undress, the silk gown worn by other Members of the Senate—black velvet cap, and gold tassel.

A Member of the Senate—the habit of his degree, or a black silk gown (of the description worn by civilians holding degrees from Oxford and Cambridge), with tippet of scarlet cloth edged with white fur, and lined with blue silk,—black velvet trencher cap.

Doctor of Laws or Medicine—the gown worn by Graduates of the same rank in the University of Oxford,—hood of scarlet cloth lined with blue silk,—black cloth trencher cap.

Master of Arts—the ordinary Master's gown of Oxford or Cambridge, of silk or bombazine, with black silk hood lined with blue silk,—black cloth trencher cap.

Bachelor of Laws or Medicine—the black gown worn by civilians in Oxford or Cambridge holding degrees, with hood of blue silk lined with white fur,—black cloth trencher cap.

An Officer not being a Graduate—a black silk gown of the description worn by civilians not holding degrees,—black cloth trencher cap.

Bachelor of Arts—a plain black stuff gown, with hood similar to that worn by the B.A. at Cambridge,—black cloth trencher cap.

Undergraduate—a plain black stuff gown,—black cloth trencher cap.

Scholar—the same gown, with a velvet bar on the sleeve,—black cloth trencher cap.

102. Members of the University shall, on all public occasions when convened for academic purposes, appear in their academic costume.

103. The Undergraduates shall appear in academic costume when attending lectures, and on all public occasions in the University; and whenever they meet the Fellows, Professors, or other superior officers of the University, shall respectfully salute them.

104. A journal shall be kept by the Registrar, in which he shall keep a daily record of the lectures delivered by each Professor, the number of students present, and also the names of the students reported by the Professor to be absent. This journal to be laid on the table at the monthly meetings of the Senate.

NON-MATRICULATED STUDENTS.

105. Any person desirous of attending University Lectures may do so without matriculation, upon payment of such fees as the Senate may from time to time direct.

PUBLIC EXAMINATIONS.

106. Two Public Examinations shall be held every year; the one to be called the Junior Public Examination, and the other to be called the Senior Public Examination, and shall be open to all candidates, male or female, who may present themselves.

107. The Public Examinations shall be held at such times and at such places as the Senate may from time to time appoint.

108. The subjects of the Junior Public Examinations shall be the English Language and Literature, History, Geography, the Latin, Greek, French, and German Languages, Arithmetic, Algebra, Geometry, and such other branches of learning as the Senate may from time to time determine.

109. The subjects of the Senior Public Examination shall be those mentioned in the foregoing section, together with Trigonometry, Conic Sections, Natural Philosophy, Chemistry, Experimental Physics, and Geology.

110. Every candidate who shall pass either of these examinations, or such portions of either of them as may be required by the Rules or Orders of the Senate in force for the time being, shall receive a Certificate to that effect, specifying the subjects in which he shall have passed, and signed by the Dean of the Faculty of Arts and by the Registrar.

111. No person shall be admitted to either of the Public Examinations until he shall have paid such fees as may be required by the Rules or Orders of the Senate in force for the time being.

112. The Professors and Assistant Professors not engaged in tuition, except publicly within the University, together with such other persons as the Senate may from time to time appoint, shall form a Board for conducting the Public Examinations; and of this Board the Dean of the Faculty of Arts, or, in his absence, the Professor next in seniority, shall be Chairman.

113. At the conclusion of each examination, the Board shall transmit to the Senate a report of the result, signed by the Chairman and at least one other member.

114. Subject to these By-laws, the Public Examinations shall be conducted according to such Rules or Orders as the Senate may from time to time establish.

1875-6.

NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.

(BY-LAW.)

Presented to Parliament, pursuant to Act of Incorporation, 14 Vic. No. 31.

(Passed by the Senate on the 3rd May, and confirmed by the Governor and Executive Council on 29th May, 1876.)

To prevent serious inconvenience to the present Undergraduate members of the University, and to those who may be hereafter admitted *ad eundem* to the same *status* as those members, in the years 1876 and 1877, the examination for the Degree of B.A. shall be held as heretofore at the end of Michaelmas Term, and the subjects of the Yearly Examination shall be those upon which Lectures shall have been given since the preceding Yearly Examination, except that in the Mathematical School, the Second Yearly Examination shall be in those subjects which are required for the ordinary Degree of B.A.; and that Scholars of the first and second years shall continue to hold their Scholarships until the next succeeding Scholarship Examination; and that third-year Scholars hereafter elected shall receive the full year's emolument in all cases.

Any person at present an Undergraduate member of the University, or hereafter admitted as aforesaid, who at the end of his first or second year, shall signify to the Registrar in writing that he *bonâ fide* intends to leave the University, and that it is of importance to him to receive the Certificate under Clause 62, may claim to be and shall be examined in the subjects upon which Lectures shall have been given since the last Yearly Examination at the end of Michaelmas Term, or at such convenient time afterwards as the Examiners may appoint, and if he pass the Examinations shall receive his Certificate accordingly.

1875-6.

NEW SOUTH WALES.

SYDNEY GRAMMAR SCHOOL.

(REPORT FOR 1875.)

Presented to Parliament, pursuant to Act of Incorporation, 18 Victoria.

THE SECRETARY TO THE TRUSTEES, SYDNEY GRAMMAR SCHOOL, to THE MINISTER OF JUSTICE AND
PUBLIC INSTRUCTION.Sydney Grammar School,
5 June, 1876.

SIR,

I have the honor, by direction of the Trustees of the Sydney Grammar School, to transmit to you, for the purpose of being laid before the Parliament, the following Report of their proceedings and the progress of the School during the year 1875.

At a meeting of the Trustees, held on the 4th January, Professor Pell was unanimously re-elected Chairman of the Board for the current year.

At the February meeting the Trustees unanimously re-elected the Honorable George Allen Vice-Chairman of the Board. At this meeting a letter was received from the Head Master, announcing the resignation of Mr. Backhouse and Mr. Wolrige, and informing the Trustees that he had, by their authority, proceeded to Melbourne, and had secured the services of Mr. C. H. Francis, of Brasenose College, Oxford, as successor to Mr. Wolrige, also enclosing an application from Mr. Edwin Bean, B.A. of Trinity College, Oxford, and recommending his appointment as successor to Mr. Backhouse. The Head Master reported to the meeting that there were 375 pupils in attendance, and that if more were admitted, additional accommodation would be required; also, informing the Trustees that the three scholarships obtainable at the Matriculation Examination of the University have, for a second time, been won by the pupils of the Grammar School.

At the adjourned June Meeting, the Head Master reported that the School accommodation is barely sufficient for the number of pupils.

Authority was given to the Chairman and Head Master to appoint an additional Assistant Master, at a salary at the rate of £200 per annum; and it was decided that the office of Lecturer of Latin should be abolished. It was also decided that the accounts should be audited half-yearly.

The propriety of increasing the School accommodation was considered, and it was arranged that the number of pupils should be limited to 400.

At a Meeting of the Trustees held on the 9th August, a Report was read from the Head Master, dated 2nd August, stating that, in order to carry out their instructions that the number of pupils should be limited to 400, he was compelled to reject about fifteen of the applicants for admission, and that he had admitted those whose proficiency, relatively to their age, seemed most satisfactory. That he had acted upon their resolution of the 14th June, authorizing the appointment of an additional Master, and had provisionally appointed Mr. Alfred de Lisle Hammond, scholar of Christ's College, Cambridge. The Trustees approved of Mr. Alfred de Lisle Hammond's appointment.

At the November Meeting, a request from Mr. Edwin Bean that he might be recognized as Second Classical Master was acceded to.

The Trustees have much pleasure in reporting that they are quite satisfied with the state of discipline and efficiency of the School.

The number of pupils in attendance during the year averaged 392½, being an increase of 76½ over the previous year, and the maximum yearly average since the foundation of the Institution.

The account of the whole income and expenditure of the School during the year will be found in the annexed Appendix.

I have, &c.,
W. H. CATLETT,
Secretary.

APPENDIX.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SYDNEY GRAMMAR SCHOOL.

(SUBJECTS TAUGHT IN 4TH, 5TH, & 6TH FORMS, AND NAMES OF TEXT-BOOKS.)

Ordered by the Legislative Assembly to be printed, 17 March, 1876.

The subjects taught are—

In the IVth Form—English Language, English History, Geography, French and Latin Grammar, Composition and Translation, Greek Grammar and Composition, Mensuration, Physics, Arithmetic, Algebra, Euclid.

In the Vth Form—English Language, English History, Geography (Political and Physical), French, Latin, and Greek Grammar, Composition and Translation, Mensuration, Physics, Arithmetic, Algebra, Euclid.

In the VIth Form—English Language, History, Comparative Geography, French, Latin, and Greek Composition and Translation, Arithmetic, Algebra, Euclid, Trigonometry, Conic Sections, Mechanics.

The Text-books used are—

In the IVth Form—Latham's English Grammar, Milton's "Comus," Berkley's History of England, Hughes' Classbook of Modern Geography, Robertson's French Grammar, Charles XII, Dr. Smith's Smaller Latin Grammar, Thue's Latin Syntax, Cæsar, Dr. Smith's Smaller French Grammar, Todhunter's Mensuration, Balfour Stewart's Physics, Colenso's Arithmetic, Colenso or Todhunter's Algebra, Euclid.

In the Vth Form—Latham's English Grammar, Seeley and Abbott's English Lessons for English People, Shakspeare, Berkley's History of England, Hughes' Classbook of Modern Geography, Hughes' Physical Geography, Robertson's French Grammar, Charles XII, Easy Latin Authors, Dr. Smith's Student's Latin Grammar, Thue's Latin Syntax, Curtin's Student's Greek Grammar, Arnold's Greek Prose Composition, Xenophon, Todhunter's Mensuration, Colenso's Arithmetic, Colenso or Todhunter's Algebra, Euclid.

In the VIth Form—Seeley and Abbott's English Lessons for English People, Shakspeare, C. Ritter's Comparative Geography, Robertson's French Grammar.

Latin authors (have been reading during the quarter Virgil, Horace). Dr. Smith's Student's Latin Grammar, Dr. Abbott's Latin Prose, Through English Idiom, Curtin's Student's Greek Grammar.

Greek authors (have been reading during quarter Homer, Odyssey, Æschylus, Agamemnon). Colenso's Arithmetic, Colenso or Todhunter's Algebra, Euclid, Todhunter's Trigonometry and Conic Sections.

1875-6.

NEW SOUTH WALES.

SYDNEY FREE PUBLIC LIBRARY.

(REPORT FROM TRUSTEES, FOR 1875.)

Presented to Parliament by Command.

THE TRUSTEES OF THE FREE PUBLIC LIBRARY, SYDNEY, TO THE MINISTER OF JUSTICE AND
PUBLIC INSTRUCTION.

Sydney, 11 February, 1876.

SIR,

I have the honor to transmit to you the Fifth Annual Report of the Trustees of the Free Public Library for the year 1875.

Since the institution was first opened to the public, on the 30th of September, 1869, the work of checking the number of the books and ascertaining their condition has from time to time been performed by the officers under great disadvantages; for they were expected to carry out this important duty while the Library was still open to the public, so that their daily duties were not suspended, and every addition to the number of the books made their work more laborious. When therefore it was found at the beginning of this year that the bound volumes had increased to 26,380, and that the total number of books, including 1,442 pamphlets, amounted to 27,822, the Trustees thought fit to close the institution for the 2nd and 3rd of January, so that the condition of every book might be inspected and the actual contents of the Library be compared with the entries in the records.

The result of the enumeration and individual checking of the volumes has exceeded the most sanguine expectations of the Trustees; the only bound volumes missing being the tenth volume of Wilson's "Tales of the Borders," value 1s., taken from the Library on the 15th May; and the third volume of Dickens's "Oliver Twist," value 3d., taken from the Library in December. The portrait of Mr. Parkes, M.L.A., was also torn out of his Poems, in the month of January. During the year a few other volumes have been taken away, but they have been invariably returned soon after. Some have been tacitly replaced after a reward had been offered for the detection of the offending parties; others have been brought back by persons who had found them in public places, and who had no motive for restoring them except the sense of public duty. A few leaves are missing from parts of the unbound periodicals, but this is rather to be ascribed to accident than to mischief or dishonesty. It would be impossible to check losses of this kind except by specially appointing two persons to issue and receive periodicals; but the Trustees think that it would be bad economy to recommend such a measure for the prevention of a loss which is in itself trifling and can be replaced at little cost. While the Trustees regard the results thus obtained as highly creditable to the Colony, they likewise consider them as in a great measure due to the system of record and check adopted by the Librarian, and to the great judgment and zeal which that officer has bestowed upon the institution ever since its commencement. The vigilance of the staff has also been the means of controlling and preventing an abuse which, if not early checked, would soon increase to a serious evil: whenever they have seen a tendency to use books roughly or carelessly, they have pointed out the impropriety of such a course, and in most cases (as will readily be believed by those who are acquainted with the public of Sydney) a single remonstrance has sufficed.

Although two days were sufficient at the beginning of this year for the inspection and counting of the contents of the Library, the Trustees fear that in 1877 the performance of this work will make it necessary for them to close the institution to the public for a still longer time.

By a reference to Appendix A it will be seen that the institution was open to the public on 303 days, and that the total average number of volumes used in that period was 152,106, giving a daily average of 502 volumes, or an increase of 47 volumes for each day upon the reading of last year. The number of signatures (66,990) attached to the visitors' sheet also shows an increase on last year, and gives an average of 221 daily. The Library has been increased during the year by 1,271 volumes, including 151 volumes of donations; and there is now a large shipment of books on the way out, already purchased with the amount sanctioned by the Parliament for 1875.

The value of the Library having largely increased through the additions which have from time to time been made to it, the Trustees thought it desirable to bring under your notice the necessity for effecting an insurance; and, acting upon your authority for payment of the money, they have effected, from the 2nd April last, an insurance on the books against fire in the undermentioned Offices, viz. :—

Sydney Insurance Company	£2,500
United Insurance Company	2,500
Victoria Insurance Company	2,500
Standard Fire and Marine Insurance Company of New Zealand	2,500

It will be advisable to increase this amount again next year, the value of the books being now estimated at £18,000.

In July last a deputation was appointed by the Board to bring under your notice a suggestion to establish a Lending Branch in connection with the institution. The same deputation took occasion to remind you of the unsuitableness of the present building, both as regards its position and accommodation; and their further experience warrants them in again inviting your attention to the necessity for a new building being commenced with as little delay as possible. The present Library is inconveniently situated, badly ventilated, and much too small for the number of students attending it.

An amount having been set down in the Estimates for 1876, now before the Parliament, for the establishment of a Lending Branch,—the Trustees on further consideration of the matter found that at a trifling cost the apartments under the Library, at the north end of the building, could be converted into a commodious and suitable room for this purpose; and, with a view to economy, they withdrew their recommendation to rent a house in another part of the city. By this change not only will a considerable saving in the expenditure of money be effected, but the initiation of the system will be more immediately under the control of the Trustees, and under the direct supervision of the Librarian. In addition to these advantages a large amount of shelf-room, now much needed for the storage of new books, will be provided.

The alterations have already been commenced, under the direction of the Colonial Architect, and the work will probably be completed and the room ready for use by the end of May.

The Trustees have prepared such regulations and forms as they believe to be necessary and suitable for properly conducting the Lending Branch. These will be submitted for your approval at an early date.

As the Trustees cannot recommend that any of the books be taken for issue from the Reference Library, except a few duplicates, and the English Specifications of Patents, it is proposed to purchase about 2,000 volumes to commence with; and the Trustees have prepared a list of useful and suitable books, for transmission to their agents in London so soon as the proposed Lending Library shall have received the sanction of the Parliament; but as it will be necessary to prepare and print catalogues, and to make other arrangements for the proper issuing of the books, it will probably be late in the year before the Branch can be opened to the public.

The Specifications of Patents presented by the Patent Commissioners of Great Britain have not yet been placed in the Library beyond the year 1861, because the Trustees have no funds at their disposal for the work of casing the volumes and arranging them according to dates; but as there is a sum of money on the Supplementary Estimates now before the Parliament, steps will be taken by the Government Printer to proceed with the work so soon as the money shall be granted, and it is then proposed to remove the Patents to the Lending Department, for issue to the public.

A Catalogue of the Reference Library, containing all the books received up to the 31st December, 1871, was printed and issued in the year 1872. The number of volumes at that date was about 20,000; but no supplement has been issued since then; and the Trustees have directed a supplementary catalogue to be prepared of books received from 1st January, 1872, to 31st December, 1875, which will contain nearly 8,000 additional volumes. These will be entered under the authors; and an inventory of the whole Library, arranged under subjects and titles, with a general index, will be printed at the same time. The manuscripts are now in the hands of the Government Printer, and as soon as he can complete the work it will be issued to the public.

I have, &c.,
CHARLES BADHAM,
 Chairman.

APPENDIX A.

RETURN of the number of Volumes in the Library on the 31st December, 1875,—showing additions during the year, with *average* number of Books of each Division used by Readers, and replaced on the shelves by the Attendants.

Presses.	Synopsis of Arrangement.	Number of Books on 31st December, 1874.	Number of Books on 31st December, 1875.	Average number of Books used during 1875.	Daily average of Books used.	Number of days open to the Public.	Number of Signatures obtained during the Year.

APPENDIX B.

ARRANGEMENT of the Books in the Free Public Library, Sydney.

THE presses of the Library are numbered in consecutive order,—the divisions to which the books belong being specified on the top thereof. The shelves of the presses are lettered with the alphabet, and the books upon the shelf of every press are numbered from J upwards. Every book bears a small label with the number of the press, letter of the shelf, and its number on the shelf.

An inventory is provided for each division, arranged according to subjects, with authors added,—cross references being given to books containing information appertaining to the same division but necessarily placed in a different compartment. The books so referred to are shown in the volume column by a cypher.

Guide to find a Book.

If a reader wants "The Early Years of H.R.H. the Prince Consort," (by Lieut.-Gen. C. Grey), he will find the work under "Biography," in press 8, shelf A, book 12. In the general Catalogue of Authors, under ALBERT, and also under GREY.

APPENDIX C.

LIST OF OFFICERS:—

Trustees:—

The Rev. Charles Badham, D.D., Professor of Classics and Logic in the University of Sydney (*Chairman*).

The Rev. W. B. Clarke, M.A.

The Honorable W. B. Dalley, M.L.C.

W. A. Duncan, Esq.

The Rev. J. D. Lang, D.D.

Sir William Macarthur, Knt.

William Macleay, Esq.

The Honorable Robert Owen, M.L.C.

W. J. Stephens, Esq., M.A.

John Stewart, Esq.

*Librarian:—*Robert Cooper Walker.

*Assistant Librarians:—*D. R. Hawley; Edward O'Brien.

APPENDIX D.

1875-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EDUCATION.

(RETURN RESPECTING MECHANICS SCHOOLS OF ARTS AND FREE PUBLIC LIBRARIES.)

Ordered by the Legislative Assembly to be printed, 10 February, 1876.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 3 August, 1875, That there be laid upon the Table of this House, a Return of the number of Mechanics' Schools of Art in New South Wales for the year 1874, showing for each Institution respectively,—

- “ (1.) The amount of subsidy voted, and paid by the Government.
 - “ (2.) The number of members.
 - “ (3.) The total amount of receipts from subscriptions, &c.
 - “ (4.) The number of volumes in the Library, and the number of works issued.
 - “ (5.) The number of works of fiction.
 - “ (6.) The names of any evening classes, the number of pupils, and the fees charged.
 - “ (7.) The number of lectures delivered in connection with it.
 - “ (8.) The number of mechanics and apprentices who were members.
 - “ (9.) The amount of yearly subscription.
 - “ (10.) The estimated value of the property of the Institution.
 - “ (11.) The names of the Committee of Management.
 - “ (12.) The number of volumes added to the Library, distinguishing novels.
 - “ (13.) The total amount voted towards building Schools of Art since the introduction of Responsible Government.
 - “ (14.) The total amount of subsidy for same period.
 - “ (15.) The total number of reports respecting Schools of Art, under the ‘Public Charities Inspection Act’ since it came into operation.
- Also, a Return showing the number of Free Libraries established under the Municipalities Act, the number of volumes in each such library, and the average monthly attendance of readers in each case, for the last six months.”

(Mr. Dibbs.)

1875-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(REPORT FROM TRUSTEES, FOR 1875.)

*Ordered by the Legislative Assembly to be printed, 1 June, 1876, A.M.*REPORT OF THE TRUSTEES OF THE AUSTRALIAN MUSEUM, FOR THE YEAR ENDING
31st DECEMBER, 1875.

To HIS EXCELLENCY THE GOVERNOR-IN-CHIEF.

1. The Trustees of the Australian Museum have the honor to submit to your Excellency this their twenty-second Annual Report.

2. The Museum has been open to the public daily (Sundays excepted) during the past year, and has been visited by 62,888 persons. (*Appendix 3.*)

3. Correspondence has been maintained with Foreign Scientific Institutions, and satisfactory arrangements made for exchanges of specimens of Natural History.

4. The Trustees consider it of the utmost importance that a Collector of specimens of Natural History should be appointed, for the purpose of rendering more complete the present collection of Australian Genera, and for providing a stock of duplicate specimens for exchange with other Museums, and they have therefore (by letter of March 7th) requested the Minister of Justice and Public Instruction to place on the Estimates for that purpose the sum of £250.

5. The list of donations which is appended shows an increase in the number of contributors over those of the previous year. (*Appendix 5.*)

6. The First Part of the Catalogue of Australian Birds, containing a descriptive list of the Australian Diurnal Accipitres in the Museum Collection has been prepared by the Curator, Mr. E. P. Ramsay, and published at the Government Printing Office, by authority of the Minister of Justice and Public Instruction.

7. Two Taxidermists have been occupied during the year in preserving, mounting, and remounting specimens, and in keeping in order the extensive collection now in the Museum.

8. Two vacancies at the Board have occurred during the year, by reason of the absence for more than six months of Dr. Fortescue and H. C. Russell, Esq., B.A., and the same have been filled up by the election of Commander Stackhouse, R.N., and the re-election of Mr. Russell on his return to the Colony.

9. On the 7th, 8th, and 9th September, the motion for a new trial in the case *Krefft versus Hill* was argued in the Supreme Court. The Chief Justice refused to sit, on the ground that he was one of the official Trustees of the Institution, and the application was therefore argued before Mr. Justice Hargrave and Mr. Justice Faucett. Mr. Justice Hargrave delivered a judgment, in which he supported Mr. Justice Cheeke's ruling, to the effect that the Trustees had no power to dismiss Mr. Krefft; and Mr. Justice Faucett ruled entirely the other way. The Court being divided, the result is that the verdict for £250, delivered on the trial before Mr. Justice Cheeke, remains unimpeached. The amount in question being under £500, the Trustees had no right of appeal to the Privy Council, or of obtaining a stay of procedure, without a special application to the Appeal Court, and they were therefore compelled to pay the amount recovered, which, together with costs on both sides, amounted to the total sum of £761 19s. 1d.

10. As the Trustees felt that they had done all that could be reasonably expected of them to protect the interests of the Institution, they did not feel themselves called upon to prosecute an appeal to Her Majesty in Privy Council, but in order to enable the Government of the Colony to do so, they wrote to the Minister of Justice and Public Instruction the letter of which a copy is appended. (*Appendix 7.*)

The Appendices contain the following:—

No. 1. An Abstract of the Receipts and Payments of the Trustees on behalf of the Museum for the year ending December 31st, 1875.

No. 2. A list of the Books purchased during the year.

No. 3. A tabulated Statement of the number of Visitors for each month.

No. 4. Particulars of work done by the Taxidermists.

No. 5. List of Donations.

No. 6. Specimens forwarded to Foreign Institutions for exchange.

No. 7. Letter of date September 15th, 1875, addressed to the Honorable the Minister of Justice and Public Instruction.

The Trustees have the honor to submit this their Report for the year 1875, and in testimony thereof have caused their corporate seal to be hereunto affixed, this 31st day of May, 1875.

A. W. SCOTT, 'M.A.,
Chairman.

APPENDIX No. 1.

Curator.

APPENDIX No. 5.

APPENDIX No. 5.

LIST OF DONATIONS.

MAMMALS.

	PRESENTED BY
Three skulls of Natives of New Caledonia	Dr. A. Roberts.
The skull of an Aboriginal from Port Stephens	Mrs. Glover.
Two skulls of Natives, from Fiji and Tonga	D. A. Corrie, H.M.S. "Pearl."
A Monkey (<i>Semnopithecus</i> sp.)	Chas. Moore, Esq., F.L.S., Botanic Gardens, Sydney.
A young Leopard (<i>Leopardus varius</i>)	
A Nasua (<i>Nasua monarcha</i>)	E. S. Hill, Esq., J.P., C.M.Z.S.
Six Flying-foxes (<i>Pteropus poliocephalus</i>)	
A Bat (<i>Scotophilus nigrogriseus</i>)	E. Pierson Ramsay, F.L.S., &c.
A large Bat (<i>Rhynolophus</i> sp. non.)	
The Skull of a Lion (<i>Leo barbarus</i>)	Mrs. Robinson.
A Flying Mouse—Opossum (<i>Acrobates pygmaea</i>)	Mr. G. Streatfield.
A Flying Opossum (<i>Petaurista taquanoides</i>)	Master J. Findlater.
A Woolly Opossum (<i>Phalangista laniginosa</i>)	Mr. A. Fathers.
A Striped Opossum (<i>Dactylopsila trivirgata</i>)	Mr. J. Montgomery, of Cardwell, Queensland.
A Ring-tailed Opossum (<i>Phalangista laniginosa</i>)	Mr. G. M'Colley.
A Cook's Opossum (<i>Phalangista cooki</i>) (in spirits)	Mrs. Glover.
A young Kangaroo (<i>Macropus major</i>)	Chas. Moore, Esq., F.L.S., Botanic Gardens, Sydney.
A Kangaroo, young (<i>Macropus major</i>)	
A Wallaby, young, from the pouch	Mrs. Glover.
Two skulls of Halmaturus ruficollis	Dr. J. C. Cox, F.L.S.
Two specimens of a new genus of Rat-kangaroo (<i>Hypsiprimnodon moschatus</i>)	E. Pierson Ramsay, F.L.S.
A Bandicoot (<i>Perameles nasuta</i>)	Hon. S. D. Gordon.
A Bandicoot (<i>Perameles nasuta</i>)	Mrs. Glover.
A Native Cat (<i>Dasyurus viciarius</i>)	Mr. R. Williams.
An Antechinus sp. ?	Mr. J. Unwin.
The skeleton of a large Seal (<i>Stenorhynchus leptonyx</i>)	Mr. J. A. Thorpe.
A live Seal (<i>Zalophus</i> sp.)	Mr. M'Leod.
The skull of a Porpoise (<i>Delphinus</i> sp.)	D. A. Corrie, H.M.S. "Pearl."
The skull of a Killer (<i>Orca capensis</i>)	
The skull of a Dolphin (<i>Delphinus</i> sp.)	Mrs. Robinson.
The mandibles of a small sp. of Orca	
The skeleton of a small and rare species of Sperm Whale (<i>Euphysetes</i> sp. ?) probably new	Mr. J. Smith.
The lower jaw of the above (<i>Euphysetes</i> sp. ?)	Dr. J. C. Cox, F.L.S.
The tooth of an aged male Meopiodon (<i>M. layardi</i>)	Mr. Heaton.
The skeleton of a large Dolphin (<i>Tursio catalania</i>)	Mr. J. Holland.
A Black Rat (<i>Mus</i> sp.)	Dr. J. C. Cox, F.L.S.
A Water Rat (<i>Hydromys leucogaster</i>)	Hon. H. D. Gordon.
A Water Rat (<i>Hydromys leucogaster</i>)	C. Windeyer, Esq.
A White Mouse (<i>Mus musculus</i>)	Hon. H. D. Gordon.
Seven specimens of <i>Mus musculus</i>	Mr. Sidney Martin.
One specimen of a <i>Mus</i> sp.	Mrs. Glover.
One Rat (<i>Mus</i> sp.)	
A Spiny Echidna (<i>E. hirtia</i>)	Chas. Moore, Esq., F.L.S., Botanic Gardens, Sydney.
An Ornithorhynchus (<i>O. anatinus</i>)	
Oil from a Gray's Whale ? (<i>Kogia</i> sp.)	Mr. Heaton.

BIRDS.

A Straw-necked Ibis (<i>Geronticus spinicollis</i>)	Mr. S. A. Wilson.
A Heron (<i>Herodias pacifica</i>)	Mr. Budd.
A Fijian Parrot (<i>Platycercus personatus</i>)	Master Robert Pearce.
A young Emu (<i>Dromaius nova-hollandia</i>)	Dr. J. C. Cox, F.L.S.
A young Lyre-bird (<i>Menura superba</i>)	Chas. Moore, Esq., F.L.S., Botanic Gardens, Sydney.
A Pheasant (<i>Euploconus nyctemerus</i>)	
A Torres Strait Pigeon (<i>Carpophaga spilorrhoea</i>)	
A Sea-eagle (<i>Haliaeetus leucogaster</i>)	
A Fruit Pigeon (<i>Carpophaga</i> sp.)	
A Night Heron (<i>Nycticorax caledonicus</i>)	
A young Black Swan (<i>Cygnus atratus</i>)	
A White Swan (<i>Cygnus olor</i>)	
A Peacock Pheasant (<i>Polyplectron chinquis</i>)	
A Letter-winged Kite (<i>Elanus scriptus</i>)	
A Port Phillip Lyre-bird (<i>Menura victoriae</i>)	
A White Gos-hawk (<i>Astur nova-hollandia</i>)	
A Crow (<i>Corvus australis</i>)	Mr. H. Newcombe.
A Grebe (<i>Podiceps gularis</i>)	Mr. K. Broadbent.
A White Gos-hawk (<i>Astur nova-hollandia</i>)	Major P. L. Shepherd.
A Crested Hawk (<i>Baza suberistata</i>)	Mr. J. A. Thorpe.
A black-shouldered Kite (<i>Elanus axillaris</i>)	Mr. A. Newton.
Two specimens of <i>Chthonicola minima</i>	Mr. G. E. Shaw.
Two Australian Grebes (<i>Podiceps australis</i>)	Mr. J. A. Thorpe.
A Bittern (<i>Butoroides flavicollis</i>)	Mrs. Fathing.
A boobook Owl (<i>Athene boobook</i>)	Mr. Hardstaff.
A Petrel (<i>Prion ariel</i>)	Mr. J. Blaxland, junr.
A black Cockatoo (<i>Calyptorhynchus funereus</i>)	Mr. W. Baldwin.
A black-shouldered Kite (<i>Elanus axillaris</i>)	Mr. H. Newton.
A Cormorant (<i>Phalacrocorax carbooides</i>)	Mr. J. Clarke.
A green-backed Oriole (<i>Oriolus viridis</i>)	Master Tost.
A small Trichoglossus (<i>T. pusillus</i>)	E. S. Hill, Esq., J.P., &c.
Two Spinebills (<i>Acanthorhynchus tenuirostris</i>)	Mrs. Glover.
A Silver-eye (<i>Zosterops carulecans</i>)	Mr. R. Williams.
A Flycatcher (<i>Bhipidura albiscapa</i>)	
A Thrush (<i>Colluricincla harmonica</i>)	
A Wattled Honey-Eater (<i>Anthochaera carunculata</i>)	
A Cormorant (<i>Phalacrocorax carbooides</i>)	Mr. Tost.

BIRDS—continued.

PRESENTED BY

A Ground Parrot (<i>Psephotus hamatorhous</i>)	G. King, Esq.
A Golden Plover (<i>Charadrius longipes</i>)	Dr. J. C. Cox.
A Swamp Cuckoo (<i>Centropus ateralbus</i>)	
A Powerful Owl (<i>Hieracoglaux strenuus</i>)	J. Blaxland, junr., Esq.
A Silver Pheasant (<i>Euplocomus nycthemerus</i>)	J. M'George, Esq.
A Golden Pheasant (<i>Chrysolophus picta</i>)	Charles Moore, Esq., Botanic Gardens.
A white-tailed Toucan (<i>Tocou</i> sp.)	Lieut. Nowel, R.N., H.M.S. "Sandfly."
An Emu-wren (<i>Stipiturus malacurus</i>)	Mr. J. W. Rothwell.
A Californian Quail (<i>Callipepla californica</i>)	Mr. Pier.
A Fruit-pigeon (<i>Treron</i> ? sp.)	Dr. A. Corrie, H.M.S. "Pearl."
Two Tanyiptera sylvia	Mr. J. A. Thorpe.
A Thickhead (<i>Pachycephala rufiventris</i>)	
A Thickhead (<i>Pachycephala gutturalis</i>)	Inspector Robert Johnstone, Queensland.
Two Bee-eaters (<i>Merops ornatus</i>)	
One Tanyiptera sylvia	Mr. J. A. Thorpe.
Two Craspedophora magna	
A Parrot from New Guinea (<i>Eclectus polychlorus</i>)	Dr. A. Corrie, H.M.S. "Pearl."
A Furstomus (<i>E. crassirostris</i>)	Licut. Rendell, H.M.S. "Beagle."
A Dendrochelidon mystaceus	
A Cardinal Parrot (<i>Domicella cardinalis</i>)	Mr. J. Ahwell.
A Megapodius sp. from "Savo"	
A Finch (<i>Estrelda bella</i>)	Mr. J. Gannon.
A black-backed Gull (<i>Larus pacificus</i>)	
A letter-winged Kite (<i>Elanus scriptus</i>)	

NESTS AND EGGS OF BIRDS.

Nest and two Eggs of the Swallow Dicæum (<i>Dicæum hirundinaceum</i>)	Mr. J. A. Thorpe.
The Egg of a species of Chionis from Kerguelan's Land	Mr. Wharton Cox.
Two Eggs of the smaller blue Jay (<i>Graculus mentalis</i>)	
Two Eggs of the Couch-whip Bird (<i>Psophodes erepitanus</i>)	Ralph Hargraves, Esq.
Two Eggs of a species of Kiwi (<i>Apteryx</i> sp.) from New Zealand	Mr. Westgarth.
Four Eggs of a new species of Megapodius, from the Island of "Savo," Solomons Group	Lieut. Rendell, H.M.S. "Beagle."
The Nest and Egg of a species of Sun-bird (<i>Arachnechthra</i> sp.), from New Georgia...	

FISHES.

A rare Fish (<i>Monacanthus convexirostris</i>)	Dr. J. C. Cox, F.L.S.
A Sea-perch? (<i>Plectropom</i> sp.)	W. H. Stephens, M.A.
Cestracion philippi, Egg of	Mr. J. Pearce.
An Eel (<i>Muraena australis</i>)	Messrs. Kenedy and Newton.
A Horned Box-fish (<i>Ostracion cornutus</i>)	Dr. J. C. Cox, F.L.S.
A rare Fish (<i>Monocentris japonicus</i>)	Mrs. Glover.
Twenty-five small Fish	
A small Electric Ray (<i>Hypnos subnigrum</i>)	Mr. C. Muller.
The rostrum of a large Saw-fish (<i>Pristis</i> sp.)	Sir James Martin.
Two specimens of a large Trigger-fish (<i>Monocanthus hippocrepis</i>)	Dr. A. Corrie, H.M.S. "Pearl."
A Toad-fish (<i>Tetodon virgata</i>)	Inspector Seymour.
A Fish (<i>Platax leira</i>)	J. W. Dargin, Esq.
A rare species of Sole (<i>Synaptura</i> sp.)	Mr. Thos. Parker.
A rare sp. of Chætodon	W. H. Hargraves, Esq.
A Saw-fish (<i>Pristiophorus cirratus</i>)	Mr. Wm. Burgess.
A sp. of Saurus	
A Red-fish (<i>Beryx affinis</i>)	E. Kirchner, Esq.
An Ostracion (<i>O. renardi</i>)	Dr. Phiffer.
Portion of the inner skin of a King-fish (<i>Elacate nigra</i>)	E. P. Ramsay, F.L.S.
A new Fish (<i>Naseus Johnstonei</i>) type specimen of ♀	J. G. Hay, Esq.
A Fish (<i>Cristiceps australis</i>)	E. S. Hill, Esq., C.M.Z.S.
An Albicore (<i>Scomber</i> sp.)	Mr. J. Holland.
The jaw of a large Shark (<i>Crossorhinus barbatus</i>)	D. J. C. Cox, F.L.S.
A rare species of Sole (<i>Solea</i> sp.)	Mr. J. Smith.
A Rock-fish (<i>Labrichthys</i> sp.)	Dr. J. C. Cox, F.L.S.
A collection of seventeen species of Port Jackson Fish	Mr. J. A. Thorpe.
A Diodon (<i>Dicotylichthys punctatulus</i>)	Mrs. Glover.
Three species of Monacanthus	
Two Eels (<i>Anguilla</i> sp.)	Dr. J. C. Cox, F.L.S.
A Cat-fish (<i>Plotosus</i> sp.)	
A Rock-cod (<i>Scorpana</i> sp.)	Dr. J. C. Cox, F.L.S.
A rare species of Fish (<i>Triglidæ</i>)	
A new species of Tetodon, allied to <i>T. reticularis</i>	E. P. Ramsay, F.L.S.
Four specimens—two species of Rock-fish (<i>Labrichthys</i> sp.)	Mr. J. A. Thorpe.
A Dog-fish (<i>Silurus</i> ? sp.)	Mr. Corbitt.
A species of Carp	Mr. J. A. Thorpe.
Two Solea sp. (<i>Pardachirus</i> sp.)	Dr. J. C. Cox, F.L.S.
One Sygnathus sp.	
Two Leather-jackets (<i>Aleuterus</i> sp.)	Dr. J. C. Cox, F.L.S.
One Saurus myops	
A fine specimen of a Sun-fish, new species? (<i>Orthogoriscus</i> sp.)	Mr. J. A. Thorpe.
Six Yellow-tail (<i>Caranx declivis</i>)	
Six Rock-fish (<i>Julidæ</i>)	Inspector Seymour.
One Seriola sp.	
Two Red-bream (<i>Pagrus unicolor</i>)	E. K. Cox, Esq., M.L.C.
Three young of a species of Flying-fish (<i>Exocoetus</i>)	Mr. J. Sealet.
An Electric Ray (<i>Hypnos subnigrum</i>)	E. S. Hill, Esq., C.M.Z.S.
A Box-fish (<i>Ostracion fornasini</i>)	Dr. J. C. Cox, F.L.S.
Two Eels (<i>Anguilla</i> sp.)	
A Black Rock-cod	Dr. J. C. Cox, F.L.S.
A Rock-fish (<i>Labrichthys</i> sp.)	
A Red-bream (<i>Pagrus unicolor</i>)	Dr. J. C. Cox, F.L.S.
A Black-bream (<i>Chrysophrys</i> sp.)	
A Leather-jacket (<i>Monacanthus hippocrepis</i>)	Dr. J. C. Cox, F.L.S.
A Flounder (<i>Pseudorhombus russelli</i>)	
An Aulopus purpurissatus	

REPTILES.

PRESENTED BY

A Frog (*Litoria aurea*)..... Mrs. Glover.

BATRACHIANS.

SNAKES AND LIZARDS.

Four Snakes (<i>Diemenia</i> sp.).....	H. Bradley, Esq.
A Diamond Snake (<i>Morelia spilotes</i>).....	Mr. J. Kuhn.
An Amphibœna (<i>Typhlops ruppelli</i>).....	Mr. J. Ritchie.
A Diamond Snake (<i>Morelia spilotes</i>).....	Mr. M. Norrie.
One Hoplocephalus variegatus.....	} H. Bradley, Esq.
One " ep.	
A Whip Snake (<i>D. reticulata</i>).....	Mrs. Glover.
A Turtle-headed Sea-snake (<i>Emydocephalus tuberculatus</i>).....	Lieut. Nowell, H.M.S. "Sandfly."
An Amphibœna (<i>Typhlops</i> sp.).....	J. J. Calvert, Esq.
A Carpet Snake (<i>Morelia variegata</i>).....	Dr. J. C. Cox, F.L.S.
A Snake from India (<i>Trimeresurus</i> ? sp.).....	Mr. McCann.
A Black Snake (<i>Pseudechis porphyriacus</i>).....	Mr. Williams.
A Brown Snake, young (<i>Hoplocephalus curtus</i>).....	D. Vernon, Esq.
A Blind Snake (<i>Typhlops ruppelli</i>).....	Messrs. Fagan Bros.
A Ringed Snake (<i>Vermicella annulosa</i>).....	Mr. G. Halloran.
A Black-bellied Snake (<i>Hoplocephalus signatus</i>).....	F. Hill, Esq.
A Black-headed Snake (<i>Aspidiotes melanocephalus</i>).....	Mr. E. R. Row.
A Black Snake (<i>Pseudechis porphyriacus</i>).....	Mr. Alfred Parsons.
A Ringed Sea-snake (<i>Platurus scutatus</i>).....	Mr. E. Kirchner.
Two Carpet Snakes (<i>Morelia variegata</i>).....	Mr. Henderson.
A Blind Snake (<i>Typhlops ruppelli</i>).....	Mr. J. Kline.
A Ringed Snake (<i>Vermicella annulosa</i>).....	Mr. J. Flaherty.
A Whip Snake (<i>Diemenia reticulata</i>).....	Mr. Warren.
Two Pythons (<i>Enygrus triboni</i> ?).....	Mr. E. Kirchner.
Three specimens of a species of <i>Typhlops</i> , from Fiji.....	Mr. J. Johnstone.
A new species of Hoplocephalus.....	J. Penzer.
A Snake (<i>Typhlops ruppelli</i>).....	His Honor Judge Josephson.
A Green Tree-snake (<i>Dendrophis punctatula</i>).....	E. S. Hill, Esq., C.M.Z.S.
A Lizard (<i>Phyllurus platurus</i>).....	Hon. J. Buchanan, M.L.A.
A Lizard (<i>Hinula</i> sp.).....	Mrs. Glover.
A White's Lizard (<i>Hinula whitei</i>) with two tails.....	Mr. J. Greer.
A Slow-worm or Grass Lizard (<i>Pygopus</i> sp.).....	J. L. King, Esq.
A Lace Lizard (<i>Hydrosaurus</i> sp.).....	Lieut. Nowell, H.M.S. "Sandfly."
A skin of a large Lizard (<i>Hydrosaurus varius</i>).....	Mr. O. Thornber.
A Lace Lizard, from Solomon Islands (<i>Monitor</i> ? sp.).....	Dr. A. McKinlay, H.M.S. "Nymphc."
A Grass Lizard (<i>Pygopus lepidopus</i>).....	Mr. Burgess.
A Gecko (<i>Phyllurus platurus</i>).....	G. Thornton, Esq.
A Lizard (<i>Hinula whitei</i>).....	Mr. Alfred Parsons.
An Australian Crocodile (<i>Crocodylus biporcatus</i>).....	Mr. Dalhanty.
Two Lizards from the New Hebrides (<i>Hinula</i> sp.).....	Dr. A. Corrie, H.M.S. "Pearl."
An Australian Crocodile (<i>Crocodylus biporcatus</i>).....	Thos. Cook, Esq.
A Lizard (<i>Tropidolepisma</i> sp.).....	Dr. J. C. Cox, F.L.S.
A Gecko from Fiji (<i>Phyllurus</i> sp.).....	} Mr. Charles Pearce.
A Rock Lizard (<i>Trachydosaurus</i> sp.).....	

SHELLS OF MOLLUSCOUS ANIMALS.

Type specimens of the following new shells:—

2 Pupina angasi.....	} Mr. John Brazier.
1 " nucleayi.....	
1 Liotia angasi.....	
3 Bithinia hyalina.....	
4 Helicina sophie.....	} Mr. G. Worrington.
6 species—300 specimens of Australian Land Shells.....	
A small collection of Shells from the sea-shore near Hobart Town.....	
The Nidus of a Molluscous animal.....	
2 Cypræa sp. (four specimens).....	
12 Trigonias (<i>T. lamarchi</i>).....	
1 Magas eumingi.....	
2 Scala philippinarum.....	
2 Natica filosa.....	
1 Cypræa umbilicatus.....	
2 " bicolor.....	
2 " flavicola.....	
1 " caput-anguis.....	
8 Clathurella reticosa.....	} Dr. J. C. Cox, F.L.S.

4 Beetles (<i>Hylotrupes</i>)	Dr. J. C. Cox, F.L.S.
A King Beetle (<i>Lamprina rutilans</i>)	Mr. J. Nobbs.
3 Beetles (<i>Hylotrupes</i>)	Mr. Wm. Johnston.
4 Buprestis sp.	} Lieut. Rendell, H.M.S. "Beagle."
4 Schizorhina sp.	
HEMIPTERA, ORTHOPTERA, NEUROPTERA.	
1 Locusta sp. from the New Hebrides	} Dr. A. Corrie.
10 Scutellera sp. "	
A Phasma (<i>Exatostoma tiaratum</i>)	— Christian, Esq.
Two Phasma sp. (<i>Exatostoma tiaratum</i>)	Mr. Douglas Oakes.
A Dragon-fly (<i>Libellula</i> sp.)	Mr. A. Spencer.
LEPIDOPTERA.	
A Moth (<i>Sphinx luctuosa</i>)	Mr. A. Spencer.
37 specimens, 11 species Lepidoptera from Newcastle	Mr. Gross.
CRUSTACEA.	
A Cray-fish (<i>Pandalus</i> ? sp.)	Inspector Seymour.
35 specimens of small Crabs, &c. (<i>Pagurus, Thalamites, &c.</i>)	Mrs. Glover.
A Hermit-crab	} Mr. G. Worrington.
A small decapod Crustacean	
ARACHNIDÆ.	
A Spider (<i>Mygale</i> sp.)	A. J. Daintree, Esq.
A Spider (<i>Epiara</i> sp.)	Mr. Warren.
A Spider's Nest and Eggs, found at sea	Mr. G. Packer.
ECHINODERMATA.	
Crinoidea.	
A Cromatula	Mr. G. Worrington.
"	Dr. J. C. Cox, F.L.S.
Asteroidea.	
A Star-fish (<i>Asterias</i> sp.)	Mrs. Glover.
Three specimens of a sp. Star-fish (<i>Asterias</i> sp.)	Mr. G. Worrington.
Echinoidea.	
A Spatangus	Mr. G. Worrington.
Errantia.	
Two Sea Centipedes (<i>Chatopterus</i> sp.)	Dr. J. C. Cox, F.L.S.
Holothuroidea.	
A Holothuria sp. from S.S. Isles	E. S. Hill, Esq., C.M.Z.S.
Polypi, Zoophites, &c.	
A Penatula (<i>Sarcoptilus grandis</i>)	D. Lord, Esq.
Two Penatula (<i>Sarcoptilus grandis</i>)	} Mr. G. Worrington.
A collection of 20 varieties of Sponges	
Three species of Zoophites (<i>Polyzoa</i>)	
FOSSIL REMAINS.	
Molar tooth of a Diprotodon	} J. Ryrie, Esq., Burwood.
Lower incisors of a species of Mucropus	
Valves of two fossil seeds (<i>Pentane</i> sp.)	
GEOLOGICAL SPECIMENS.	
Minerals, Rocks, &c., and Fossils.	
Obsidian, from New Britain	} Mr. F. Schmidt.
Ball of Clay and Ironstone from New Guinea	
Samples of Copper from the Wallaroo Mines, South Australia	} Dr. A. Corrie, H.M.S. "Pearl."
Samples of Lead	
Large specimens of Clay, with Dendritic markings, from Whru, county Rodney ..	D. D. Reid, Esq.
Tin, from the Palmer River	Mr. J. Grummo.
Coal from seam at Bundaberg	Mr. R. Lamond.

GEOLOGICAL SPECIMENS—continued.
Minerals, Rocks, &c., and Fossils—continued.

PRESENTED BY

Specimens of Lode Tin, from Snowy River	} C. O. Orchard, Esq.
Copper Carbonate from Bomballa	
Green Carbonate Copper	Mr. Solomon Uren.
15 fossil Shells from Shoalhaven	Mr. J. Smith.
2 specimens of Coal plants	Mr. J. Holland, sen.
50 specimens fossil Corals, &c., from limestone rocks near Yass	The Rev. W. H. Yarrington, Yass.
A large Ammonite, and slab containing Bellemnites and Shark's Teeth, &c., from Yamba, near Rockhampton	} R. N. Bell, Esq., Queensland.
Three specimens Shells (<i>Spirifer sp.</i>)	
Tin from Warwick	Hon. John Fairfax.
Antimony, Coppers, Agate, Obsidian, Mica-schist	} Mr. O. Thornber.
Copper Ore, and Lead with Iron Pyrites, from Merimbla	
Specimens of Tin ore	Mr. ———
Specimens of Lead, Tin, Copper Ores, and Agate, &c.	Mr. Peppercorn.
	Mr. Wm. Jaeger.

BOTANICAL SPECIMENS.

"Native bread" a fungus (<i>Mytilina australis</i>), ploughed up at Kangaloon.....	Messrs. Hawken & Vance.
Two "Vegetable Caterpillars" a species of fungus (<i>Cordiceps robertsii</i>)	Julian E. Salomons, Esq.

BOOKS AND PAPERS, &c.

Flora Sylvatica. Pt. xxvi	The Hon. Colonial Secretary.
A Portrait of Lord Nelson at ten years of age	W. G. Murray, Esq.
A paper on the genus <i>Fenestella</i> (by J. E. T. Woods, F.L.S., &c., &c.)	} Rev. Mort Hobart.
A paper on the Fresh-water Shells of Tasmania, by the same author	
Proceedings of the Royal Society of Tasmania, 1874	} The Hon. the Colonial Secretary.
Fitzgerald's Australian Orchids	

ETHNOGRAPHICAL SPECIMENS, COINS, &c.

Figure of an Aboriginal's hand on sandstone, from Cave near Mudgee.....	Dr. J. C. Cox, F.L.S.
An oval Chinese copper Coin	Mr. E. Jones.
A brick from the Great Wall of China	Mr. George Roberts.
A Boomerang	Mr. Charles Muller.
A collection of samples of Cloths made by various Tribes in the South Sea Islands, collected in 1770 by Captain Cook	T. Augustus Forbes Leith, Esq.
A Cartridge from the battle field of Sevastopol	Captain H. Fox.
A Necklace of human teeth from the Solomon Islands	Mr. H. Heil.
A Torch of Candle-nuts (<i>Aleuterus triloba</i>)	Lieut. Rendell, I.M.S. "Beagle"
A stone Hatchet from Wilton	Mr. J. Henry.
A Harpoon, and portion of the teredo-bored planking of the ship "Niantic" excavated in the city of San Francisco	Mr. J. Crawford.
Bronze Medal struck in honor of Lord Nelson's victories	W. G. Murray, Esq.
A Ten-dollar Note issued during the late American War	Mr. John Pull.

APPENDIX No. 7.

Copy of letter forwarded to the Minister for Justice and Public Instruction, in reference to the verdict in the case Krefft v. Hill.

The Australian Museum,
Sydney, 15 September, 1875.

Sir,

I am requested by the Trustees of the Australian Museum to invite your attention to the correspondence which took place between the Museum and your department in the month of October, 1874, in reference to the defence of the action Krefft *versus* Hill, and to inform you of the result.

I may be permitted to remind you that, on the 20th August, 1874, Mr. Gerard Krefft, the then Curator and Secretary of the Museum, was dismissed by the Board from his office, and that that fact was reported to the Honorable the Minister for Justice and Public Instruction, by a letter from the Acting Secretary, dated on the same day.

Mr. Krefft having refused to quit the Museum buildings, a letter was written by the Acting Secretary to the Under Secretary to your department on the 8th September, 1874, transmitting a resolution of the Trustees to the effect that an immediate application be made to the Minister of Justice to authorize the police to give effect to the decision of the Board by removing Mr. Krefft from the Museum buildings. To that letter a reply was received on the 14th of September, 1874, from the Under Secretary to your department, intimating that the services of the police could not be authorized for the purposes desired by the Trustees, and that the Government did not feel called upon to assume the responsibility of giving effect to a decision to which they had been no party. In consequence of the refusal of the assistance of the police, the Board had no alternative but to employ a bailiff for the purpose of ejecting Mr. Krefft from the premises.

In order to prevent any unnecessary violence, Mr. Edward S. Hill was requested by the Board to be present when Mr. Krefft was removed. On the 24th September, 1874, Mr. Krefft was removed from the premises by the bailiff appointed by the Board, in the presence and with the concurrence of Mr. Edward Hill.

Mr. Krefft therefore brought an action against Mr. Hill personally, and the result of the proceedings in this form was that all inquiry into the conduct of Mr. Krefft, and of the causes which led to his dismissal, were necessarily excluded.

On the 2nd October, 1874, the Honorable the Minister of Justice was requested by the Trustees to direct the Crown Solicitor to defend the action on the part of the Trustees, seeing that any verdict which might be recovered by the plaintiff would have to be satisfied out of the endowment, or in default levy might be made by the Sheriff upon the public property committed to the care of the Trustees. On the 7th October, 1874, the Trustees were informed by letter from the Under Secretary of your department, that he was directed by the Minister for Justice to state that the action appeared to be against Mr. Hill, and not against the Trustees in their corporate capacity, and that neither the endowment nor the public property committed to the care of the Trustees could be rendered available for any verdict which might be recovered in the action. To that letter the Trustees replied on the 28th October, that they inferred that the Minister declined to direct the Crown Solicitor to defend the action, and pointed out that the Minister of Justice and Public Instruction did not appear to be acquainted with the fact that Mr. Hill acted on the occasion in question on behalf and by the instructions of the Trustees in their corporate capacity. To this communication no reply was received, and the Board therefore instructed their own solicitor to defend the action; and the same came on for trial on the 13th, 16th, 17th, and 18th of November, 1874, before Mr. Justice Cheeke and a Jury of four.

Mr. Cheeke ruled that Mr. Krefft was a superior officer under Government, and that therefore, under the 37th clause of the Constitution Act, no one had power to remove him but the Governor, with the advice of the Executive Council. Under this ruling the Jury found a verdict for the plaintiff in the sum of £250.

A *rule nisi* for a new trial, on the ground, among others, of misdirection, was obtained from the Supreme Court, and the same came on for argument on the 7th, 8th, and 9th September, 1875. His Honor the Chief Justice being, by virtue of his office, a Trustee of the Museum, declined to sit on the hearing of the motion for a new trial, and consequently it was heard before their Honors Mr. Justice Hargrave and Mr. Justice Faucett alone.

Immediately on the close of the argument Mr. Justice Hargrave pronounced his judgment, entirely upholding Mr. Justice Cheeke's ruling, and refusing a new trial; but the judgment of Mr. Justice Faucett was in favour of a new trial being granted. The result of the difference is that the motion for a new trial has failed, and that the verdict will stand.

As the amount of the verdict is under £500, the defendant cannot appeal, except by making a special application to the Privy Council for leave to do so. The plaintiff therefore cannot be restrained from enforcing the verdict which he has obtained, and it is possible that in the course of the present month the Board of Trustees will be called upon to pay £250 for the verdict, and a further sum of about £150 for the taxed costs of the plaintiff.

It is necessary here to state that Mr. Hill, in being present at the expulsion of Mr. Krefft, acted on behalf of the Board generally, and did not in any way exceed his authority. The Board guaranteed him against any verdict which might be obtained against him. The costs of the defendant for the first trial have therefore been paid by the Board, and they will be called upon to pay a further sum, amounting probably to £100, to cover the defendant's costs of moving for a new trial.

The Trustees feel that, under all the circumstances of the case, they have done the utmost that can be expected of them for the defence of the property entrusted to their custody; and as the amount which will be immediately payable in satisfaction of the verdict and costs will be inevitably lost, they feel themselves precluded from taking any steps for prosecuting an appeal to the Queen in Council. As, however, in consequence of the failure of the Trustees to obtain a new trial, Mr. Justice Cheeke's ruling is at present undisturbed, and Mr. Krefft may therefore claim to be still Curator, and may possibly demand payment of his salary till dismissed by the Government, the Board feel bound to report the present position of the institution at the earliest possible moment, in order that the Law Officers of the Crown may advise whether it is necessary for the Government to take any steps in the matter.

It is scarcely necessary for me to point out that the opinions of the Crown Law Officers under the various Governments of the Colony, including Sir James Martin when Attorney General, and now Chief Justice of the Supreme Court, and the Hon. William Bede Dalley, presently Attorney General, have been invariably given in favour of the Trustees of the Museum having the sole power of appointing and removing their Curator, notwithstanding the supposed conflict of the 37th section of the Constitution Act with the Museum Act.

I may further state, that the course which the Board adopted in dealing with Mr. Krefft was so adopted in reliance on the opinions before mentioned; and the Trustees considered that they were entitled to rely confidently on those opinions, because although the complete control of the Museum property was vested in them, they were in fact only Trustees for the Colony generally, and in administering the affairs of the institution they were virtually, though not legally, nothing more than unpaid officers of the Government.

The endowment of the Museum is, as you must be well aware, very far from sufficient to enable the Trustees to make it an institution in any way worthy of the Colony; and the results of the late action will be that the funds will be encroached upon to such an extent as to make it almost necessary to close the Museum to the public, unless some further assistance be given to the Trustees. It is therefore hoped that the Government may see their way to give some further assistance, to enable the Museum to tide over its present extraordinary and unforeseen difficulties,

I have, &c.,
A. W. SCOTT,
Chairman.

1875-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

AUSTRALIAN MUSEUM.

(CORRESPONDENCE, INCLUDING POLICE REPORTS, RESPECTING ROBBERY OF GOLD SPECIMENS THEREFROM, IN DECEMBER, 1873.)

Ordered by the Legislative Assembly to be printed, 15 August, 1876.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 4 July, 1876, That there be laid upon the Table of this House,—

“Copies of all Police Reports having reference to the reported theft of
“Gold specimens from the Sydney Museum, in the early part of 1874.”

(Mr. Driver.)

SCHEDULE.

NO.	PAGE.
1. Curator of Australian Museum to the Honorable Colonial Secretary, requesting that reward for information respecting robbery of gold specimens from institution be offered; minute thereon. 6 February, 1874	2
2. Report of Inspector General of Police, with enclosure, upon subject. 16 February, 1874	2
3. Acting Under Secretary, Colonial Secretary's Department, to Curator of Australian Museum, in reply to No. 1. 17 February, 1874	2
4. Curator of Australian Museum to Acting Under Secretary, Colonial Secretary's Department, in reply to No. 3. 21 February, 1874	2
5. Further report of Inspector General of Police; minute thereon. 26 February, 1874	3
6. Under Secretary of Justice to Curator of Australian Museum, in reply to No. 4. 6 March, 1874	3
7. Curator of Australian Museum to Acting Under Secretary, Colonial Secretary's Office, with enclosure, in reply to No. 6. 10 March, 1876	3

AUSTRALIAN MUSEUM.

No. 1.

THE CURATOR, AUSTRALIAN MUSEUM, to THE HONORABLE THE COLONIAL SECRETARY.

Australian Museum,
Sydney, 6 February, 1874.

SIR,

I am directed by the Trustees of the Australian Museum to request that you will be pleased to offer £50 (fifty pounds) reward for such information as will lead to the conviction of the offender, together with a free pardon to an accomplice not being the actual thief, who robbed the Museum of about 70 pounds sterling worth of gold specimens on or about the 23rd December, 1873, between the hours of twelve and five o'clock.

I have, &c.,
GERARD KREFFT,
Secretary and Curator.

Inspector General for report.—H.P., 11/2/74.

No. 2.

THE INSPECTOR GENERAL OF POLICE to THE PRINCIPAL UNDER SECRETARY.

Police Department, Inspector General's Office,
Sydney, 13 February, 1874.

THIS appears to be a case in which a reward should be offered. A draft notice is submitted herewith for the approval of the Honorable the Colonial Secretary, and for publication in the *Government and Police Gazettes* and fifty posters.

JNO. McLERIE,
Inspector General of Police.

£50 approved.—H.P., 16/2/74.

(Draft Notice.)

£50 REWARD.

WHEREAS on or about the 23rd December last, a number of valuable crystallized quartz and gold specimens were stolen from the Australian Museum, Sydney, the property of the Trustees: Notice is hereby given, that a reward of fifty pounds will be paid by Government for such information as shall lead to the apprehension and conviction of the guilty person or persons. In addition to the above reward His Excellency the Governor will be advised to extend a free pardon to any accomplice, not being the person who actually stole the specimens, who shall first give such required information.

No. 3.

ACTING UNDER SECRETARY, COLONIAL SECRETARY'S DEPARTMENT, to CURATOR, AUSTRALIAN MUSEUM.

Colonial Secretary's Office,
Sydney, 17 February, 1874.

SIR,

In reply to your letter of the 6th instant, I am directed by the Colonial Secretary to state, for the information of the Trustees of the Australian Museum, that a notice has been published in this day's *Government Gazette*, offering a reward of £50 and a free pardon to any accomplice not being the actual offender, for such information as will lead to the apprehension and conviction of the person or persons who, on or about the 23rd December last, robbed the Museum of gold specimens of the value of about £70.

I have, &c.,
For the Under Secretary,
W. GOODMAN.

No. 4.

CURATOR, AUSTRALIAN MUSEUM, to ACTING UNDER SECRETARY, COLONIAL SECRETARY'S DEPARTMENT.

Australian Museum,
Sydney, 21 February, 1874.

SIR,

I have the honor to acknowledge the receipt of your letter of the 17th instant, informing the Trustees that a Notice has been published in the *Government Gazette* offering £50 reward and a free pardon to any accomplice, not being the actual offender, for such information as will lead to the apprehension and conviction of the person who, on or about the 23rd December last, robbed the Museum of gold specimens of the value of £70. In reply, I beg to point out to you that the specimens lost consisted of about 15½ ounces of "gold crystals" without any quartz, chiefly nuggets of from ¼ oz. to 4 or 5 ozs. in weight, the rest being composed of 8 samples of common alluvial gold of ¼ oz. each sample. The gold was contained in three bottles with glass-stoppers, having a ring inside the stopper, short and thick in make in the foot and shoulder,—bottles which are solely imported for Museum purposes, and only by the Trustees. These three bottles contained the crystallized gold.

The

The common alluvial gold was exhibited in wooden boxes, made of Maryborough pine, the size of Seidlitz-powder boxes, with washing-stuff at the bottom, covered by a piece of glass on which rested the gold, and this again was closed by a glass fitting into a groove.

I consider it necessary to mention this, because the description of the gold as consisting of crystallized quartz "and gold" may lead people astray. I also think that a description of the bottles should be added, as they may have been retained by the thief or carelessly disposed of, and these bottles may yet assist in tracing the robber.

I have, &c.,
GERARD KREFFT,
Curator and Secretary.

No. 5.

THE INSPECTOR GENERAL OF POLICE TO THE PRINCIPAL UNDER SECRETARY.

Police Department, Inspector General's Office,
Sydney, 25 February, 1874.

EVERY possible inquiry has been made by the Detective Police for the gold stolen from the Museum, as described by the Curator, also for the bottles and boxes which contained the same, but up to the present time no clue has been obtained to lead to the discovery of the offenders or the recovery of the gold.

JNO. McLERIE,
I.G.P.

The Under Secretary, Law Department, for the information of the Minister of Justice, &c.,—B.C.,
26th Feb., /74.—For the U.S., W.G.

No. 6.

THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND PUBLIC INSTRUCTION, TO THE CURATOR,
AUSTRALIAN MUSEUM.

Department of Justice and Public Instruction,
6 March, 1876.

SIR,

With reference to your letter of 21st February last to the Under Secretary of the Colonial Secretary's Department, respecting specimens of gold, &c., stolen from the Museum, I am directed by the Minister of Justice and Public Instruction to inform you that the matter was referred to the Inspector General of Police, who reports that every possible inquiry has been made by the Detective Police for the gold, also for the bottles and boxes which contained same, but up to the present time no clue has been obtained to lead to the discovery of the offenders or the recovery of the gold.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 7.

THE CURATOR, AUSTRALIAN MUSEUM, TO THE UNDER SECRETARY, DEPARTMENT OF JUSTICE AND
PUBLIC INSTRUCTION.

Australian Museum,
Sydney, 10 March, 1874.

SIR,

I have the honor to acknowledge the receipt of your letter of March 6th, informing me that no clue has been obtained to lead to the discovery of the offenders who stole certain gold specimens from the Museum, nor has the gold itself been recovered. I regret very much to hear that the gold or the persons who stole it cannot be found, and I take this opportunity to forward a statement by Messrs. H. Buckland and Walter Beavis (dated 24 December), to the effect that they did not notice the gold specimens exhibited and mentioned in the catalogue,* as nearly all the men in the Trustees' employ are ready to swear that the gold was safe in the case on Wednesday evening the 24th of December. This testimony by two highly respectable young men, one of whom is a Public School teacher, will I hope, have due weight with the Honorable the Minister for Justice and Education, and assist to refute some of the awful charges brought against me by these unprincipled men employed by the Trustees of this institution.

*15½ ozs. of
Kiandra Gold
Crystals.

I have, &c.,
GERARD KREFFT,
Curator and Secretary.

[Enclosure.]

At Mr. Krefft's request, we beg to state that when we visited the Museum on Wednesday afternoon, 24th instant, we did not notice the gold specimens mentioned in the catalogue.

H. BUCKLAND.
WALTER BEAVIS.

MESSRS. Buckland and Beavis stated to me when I produced bottles similar to those which contained the Kiandra gold with the blue tissue paper inside of them on which the gold rested, and exhibited these bottles in the position in which they were when I last saw them, on Tuesday (23rd) morning, that they were certain the space in the second gold case was as empty as it is now. Messrs. Buckland and Beavis purchased a Mineralogical Catalogue, and paid special attention to the gold collection.

31 December, /73.

GERARD KREFFT.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SYDNEY CITY AND SUBURBAN SEWAGE
AND HEALTH BOARD.

FOURTH PROGRESS REPORT

OF THE

BOARD APPOINTED ON THE 12TH APRIL, 1875,

TO INQUIRE INTO AND REPORT AS TO THE BEST MEANS OF DISPOSING OF THE
SEWAGE OF THE CITY OF SYDNEY AND ITS SUBURBS,
AS WELL AS OF PROTECTING THE HEALTH OF THE INHABITANTS THEREOF;

ADOPTED BY THE BOARD ON THE 25TH AUGUST, 1875.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
16 *November*, 1875.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1875.

THE SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD.

FOURTH PROGRESS REPORT.

To the Honorable the Colonial Secretary,—

SIR,

1. We have the honor in this our Fourth Progress Report to inform you, that whilst the Board have been engaged upon matters of more general importance and more difficult to deal with, as requiring in some cases Legislative interference, a Committee appointed on the 25th May last have been inquiring into the best means of removing some of the more flagrant nuisances in connection with the Glebe Island Abattoirs. They were directed especially to report as to the best means of disposing of the blood which at present is discharged into the harbour. Many other important matters however have been forced upon their attention, some of which require further inquiry and consideration, and some from various causes cannot be immediately dealt with. Upon those therefore we cannot report at present.

2. The Report of the Committee, with the evidence which they obtained, together with some additional evidence taken before the Board, is appended.

3. There are some evils in connection with the Abattoirs of a very flagrant kind, to which attention has been repeatedly drawn, and which, as it now appears, may be so easily, quickly, and effectually removed, that it is really extraordinary that they should have been so long tolerated. The object of this Report is to draw your attention to those evils in particular, and foremost amongst them are those connected with

THE DISPOSAL OF THE BLOOD.

4. It is well known to those conversant with these subjects, though perhaps not generally known, that blood in a putrid state is many times more offensive than any other kind of animal matter, even in its most disgusting forms. This is practically illustrated as follows:—Whilst the matter dredged up from the mouths of the various Sydney sewers has been used in reclaiming land at the Botanical Gardens and Blackwattle Swamp without creating any particular nuisance, and what comes from the mouth of the Tank Stream, the foulest of all, is welcome at the Gardens as a valuable manure, the matter dredged up near Glebe Island where the blood is discharged was found so intolerably offensive as to be rejected with disgust both from Blackwattle Swamp and the Gardens. The wide spread abominations arising from the discharge of the blood into the waters of the harbour are well known to the inhabitants of the neighbourhood, and are described in the evidence of Mr. Chapman, of Mr. Mansfield, and of others, which will be found appended to our Second Progress Report.

5. Eventually, no doubt, the blood and other refuse will in some way be utilized; but any scheme for carrying out such an object would involve considerable expense and much delay. It is obvious that the consideration of any such scheme should be deferred until the much vexed question whether the Abattoirs are to be allowed to remain at Glebe Island is finally determined; and upon this we are not yet sufficiently informed to justify us in expressing a positive opinion.

6. For the present the blood of each animal, as it is slaughtered, should be received at once, as recommended by the Committee, into a vessel provided for the purpose, and be transferred to a properly prepared vehicle for its immediate removal. It appears from the evidence that these operations would not require the services of more than three additional labourers. When slaughtering is not in operation, they
might

might be usefully employed in keeping the whole establishment in a more thoroughly cleanly state. One, or at the most two vehicles would be required to remove the blood, as there is a suitable place of deposit, the property of the Government, within a short distance from the Abattoirs. A labourer would be required to prepare trenches, and to bury the blood, so as to prevent any local nuisance. This of course would require supervision, and we therefore recommend that an additional Assistant Inspector should be employed, whose services on other accounts, it is quite clear from the evidence, are urgently required. It appears then that this, which is one of the grossest sources of pollution of the harbour of Port Jackson, may be removed at a trifling expense within a few weeks.

THE SUPPLY OF WATER.

7. The evidence shows that the only supply of fresh water is that collected from the roofs in tanks, whose total storage capacity is 7,200 gallons. This cannot be considered as more than a good supply for a large private establishment, and it is all that is available for watering the cattle, for washing the carcasses, and for other purposes. It is not surprising then that the supply generally fails, that the floors are always washed with salt water to the great detriment, it is said, of the stone work; that the meat is washed with salt water contaminated with putrid blood; that the cattle are always on a scant allowance of water, and that frequently in dry weather they are allowed to remain forty-eight hours, sometimes more, entirely without water. We hardly know which to insist upon most strongly,—the cruelty to the animals who must before slaughtering be tortured with thirst, or the danger of supplying the inhabitants of Sydney with the flesh of animals slaughtered in such a feverish and unwholesome condition.

8. This want of water may be easily and promptly removed, as appears by a Report dated October, 1873, forming Appendix No. 3 to that of our Committee. We recommend—

- (1.) That the City water be at once laid on to the Island, so that the existing tanks may be kept full.
- (2.) That arrangements be made for keeping the animals supplied with a sufficient quantity of water.
- (3.) That the high-level tank, mentioned in the above Report, be completed as soon as possible, and filled from the City main. It is estimated that this tank will contain three months' supply in case it should be found necessary to cut off the City water. Salt water might, if necessary, during a long drought, be used for washing the floors. We do not therefore quite see the necessity of the additional works recommended in the Report of October, 1873, for increasing the water supply. At all events their further consideration may be deferred until it has been determined whether the Abattoirs are to remain in their present position during any lengthened period.

THE DISPOSAL OF THE OFFAL.

9. The offal under existing arrangements is the property of the butchers, and they are bound to remove it. It is chiefly used in feeding pigs, mostly, we believe, in the immediate neighbourhood of the Abattoirs, giving rise to the gross nuisances in the Municipality of Leichhardt, described in the evidence attached to our Second Progress Report. We are informed that under the existing law if properly enforced, these nuisances, when occurring within the boundaries of a Municipality, may be greatly mitigated, but not entirely removed. In order to place the Government in a position to put an end to these nuisances, we recommend that in future leases of the slaughter-houses and in the regulations it be provided that all the offal, blood, and other refuse shall be the property of the Government. The total quantity is so small, and the value attached to it appears so trifling (Appendix 1), that it may be either taken to a distance or be otherwise disposed of without creating any nuisance, at a moderate cost.

THE FLOORING.

10. We quite concur in the opinion of the Committee that with so porous a material as Sydney sandstone the floors can never be kept clean. As the Colonial Architect is confident that asphalt would form a suitable flooring, we recommend that a sufficient quantity of that material for laying the floors and for keeping them in repair be procured as soon as possible.

FILTERING

FILTERING TANKS.

11. We concur in the recommendation of the Committee that after the blood has been otherwise disposed of, the water used in washing the meat and the floors be filtered before being discharged into the harbour, according to a plan which has not been exactly described to us, but which the Colonial Architect considers efficient. This would hardly seem to be of much use whilst so many other sources of contamination exist independently of the Abattoirs. The expense however will not be great, and it will afford the opportunity of making an experiment on a rather large scale of a process of filtration which, if it proves efficient, may be applied in many other places.

12. In conclusion we beg to inform you that since the date of our last Progress Report our inquiries have been directed chiefly to the state of the sewers, with the object of ascertaining, in accordance with your instructions, whether anything can be done within the next few months to mitigate the evils which have long existed in connection with the sewers, especially at their mouths; and it seems to us certain, and must be obvious to any one having any knowledge of the subject, that no comprehensive scheme for effectually removing these evils can possibly be carried out for several years to come, and that any such effective scheme will involve a very large expenditure. The temporary expedients even which we have in contemplation, cannot be definitely recommended without much consideration, and if adopted will require considerable outlay.

Board Room,
Sydney, 25th August, 1875.

M. B. PELL,
Chairman.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD.

TUESDAY, 10 AUGUST, 1875.

Present:—

HON. J. B. WILSON,
CHAS. WATT, Esq.,
F. BELL, Esq.,

W. C. BENNETT, Esq.,
E. O. MORIARTY, Esq.,
DR. ALLEYNE.

M. B. PELL, Esq., B.A., IN THE CHAIR.

The Chairman of No. 3 Committee (Dr. Alleyne) brought up his Report on the Glebe Island Abattoirs,—

The Report having been read,—

James Barnet, Esq., Colonial Architect, was further examined:—

1. *Chairman.*] You are aware, I think, of the plan suggested as a temporary expedient to remedy the nuisance existing at the Glebe Island Abattoir—to remove the blood in carts, and to bury it? Yes.
2. I presume that to carry out that plan would not involve any serious expenditure? No, I think not; there were some 300 casks provided for that purpose, which have been on the Island for the last three or four years.
3. Wooden casks? Yes.
4. Adapted for catching the blood? No, for transporting it.
5. You proposed then that it should be received in other vessels in the first place, and removed in these casks? Yes, provision was made for receiving the blood in iron reservoirs.
6. Were those reservoirs provided? No, the system was never carried out.
7. Would any great expense be incurred in providing those reservoirs? No, they were to be simply galvanized iron.
8. Were they to be portable? Yes, so that two men could lift them and empty them into the casks, which were to stand on a platform.
9. And the casks were to be placed in a cart? Yes—a cart specially constructed for the purpose.
10. And you think that no considerable expense would be attached to the carrying out of this arrangement? No; the casks, I dare say, are considerably out of condition by this time, as they have been in stock for three or four years.
11. Still you think that altogether the plan could be carried out without any considerable expenditure? Oh, yes.
12. You do not think there would be any difficulty in bringing it into operation in a short time? No; of course the labour will be required, and a strict adherence to rules.
13. It is suggested by the Committee in the report you have just heard read that it is desirable to re-pave the slaughter-houses with some durable non-absorbing rock;—is it possible to do that? Yes, they might of course be paved with granite—there is plenty of it, but that would make it very expensive, or with asphalté if it could be had.
14. Would that involve any considerable expense? I don't think asphalté is to be got in Sydney at the present time.
15. Then the recommendation could not be carried out? Well, it would take time to procure the asphalté.
16. Could not flags of some kind be obtained which would answer the purpose? No; we tried flags, but they did not answer.
17. What do they use now? Sandstone pitching, which answers very well; but some of it wants renewing, as it has been used for three or four years. I should prefer asphalté, if it could be obtained, but I don't think it can.
18. *Mr. Moriarty.*] Would not concrete answer? No; we tried that in one of the houses—concrete and cement—but it was found not to answer. In killing the cattle in the pithing-pound they stick a piece of wood or iron in the floor as a prop, and they would not be able to do that with a concrete floor. We had to take it up and lay down planks.
19. *Chairman.*] Does not the sandstone used at present absorb the blood and other foul matter? No, the blood does not get to it; it only gets into the pithing-pound; the fat houses outside the pithing-pound are laid with cement; the blood runs from the pithing-pound into the receptacles provided for it.
20. Could not some arrangement be made to obviate the difficulty of supporting the carcases, by placing iron rods or something of that kind on the cement floors? I don't think so; the carcases lie all ways, and the men put props under them, and stick them into the wood.
21. But I think the Report of the Committee refers to the general flooring of the slaughter-houses—to the whole place; and that is laid now, you say, with sandstone;—do you think that is sufficient? I should like to see it covered with asphalté.
22. The general flooring of the place? Yes.

J. Barnet,
Esq.
10 Aug., 1875.

- J. Barnet, Esq.
10 Aug., 1875.
23. Would not that be an expensive undertaking? Not very expensive, but I don't think asphalté can be obtained in Sydney at present. Of course it is only a question of time to import it. Granite would be the best, but it is very difficult stone to work. I may say that the pithing-pounds are laid with 2-in. planks, and one or two of them are in a bad state and want renewing, and I intend to renew them with concrete below and planking above, the same as a ship's deck. No other plan answers so well, as otherwise the rats get in and undermine the floor. The mutton-houses were all laid with cement, and it answered very well, but one or two of them are out of repair.
24. *Dr. Alleyne.*] During our last visit to the Abattoir, just as we were leaving, Mr. Playfair called our attention to a place in which he was slaughtering pigs, the flooring of which was certainly excessively broken and full of blood and dirt; that appeared to have been laid with cement or asphalté, or something of the kind? With cement—there is no asphalté there.
25. It was broken up a good deal;—what is the state of the flooring on the mutton side of the Abattoir? I cannot say, as I have not inspected it lately. I was there yesterday, but I did not go into the mutton-houses. The floors of those houses were laid with cement; but that was three or four years ago, and no matter what material is used it will want renewing. I think asphalté would be the best now.
26. *Chairman.*] On account, I suppose, of its presenting an impervious surface? It is not so brittle.
27. *Mr. Watt.*] The paving in one of the mutton-houses was certainly very bad—on the left hand as you go in? Yes, I noticed that one yesterday—that will be repaired; we propose to take the water taps outside.
28. Do you think it is possible to keep these mutton-houses clean with such floors as they have at present? No; that particular house certainly could not.
29. Does that arise from the fact that it is out of repair, or from the nature of the flooring? It has got out of repair, I think; there seems to be rats under it.
30. *Chairman.*] Should you be prepared, considering the possibility of the Abattoir being removed from its present position altogether, to recommend the Government to go to the expense of relaying these floors on an entirely new system? I think they ought to be kept in repair at any rate.
31. But you are not prepared to recommend any large expenditure in renewing the floors upon an improved system? Not if it is intended to remove the buildings.
32. But, taking things as they are, with the possibility of the Abattoir being removed? Certainly, I should recommend their being renewed.
33. On a better plan with asphalté flooring? Covered with asphalté.
34. *Mr. Watt.*] Would not wooden blocks steeped in tar answer the purpose? I don't think they would be as good as the present floors.
35. *Chairman.*] Now, in respect to the supply of water appended to the Report of the Committee, there is a Report from yourself, Dr. Alleyne, and Captain Hixson, dated 1873, recommending some improvements in the water supply there;—was it contemplated that the supply should be sufficient, not only to water the cattle and to wash the meat, but also to wash out the premises? Yes; salt water was not to be used afterwards.
36. You don't think it is desirable to use salt water to wash out the buildings? No, it is the salt water that causes these buildings to decay.
37. Would you recommend that this supply should be made if the Abattoirs were only likely to remain there for a few years? Yes, I would certainly recommend it to be done at once.
38. You would use fresh water for all purposes? For all purposes.
39. It would be a comparatively inexpensive matter to furnish a supply of water for watering the cattle and washing the meat? I think you will find an estimate of the expense in the Report you referred to.
40. The total expense is given but it is not divided; I suppose the great bulk of the water is used for washing the floors? Well, there would not be such a quantity used if the blood were removed as it is proposed.
41. At the time that Report was made it appears that there was a sum of money—£4,000—voted;—is that still available for the purpose? Yes.
42. Was it placed on the Estimates this year? It was on the Loan Bill, I believe.
43. It is still available then? Yes.
44. And you do not see any reason since the date of your former Report to alter your opinion that these measures should be carried out? No, I certainly think they should be carried out.
45. In such case do you recommend that the refuse water, the blood having been otherwise disposed of, should be filtered before passing into the harbour? Yes, the water used for washing down the houses, for washing the carcasses, and so on.
46. You have some particular plan I believe for filtering the water, have you not? Simple filtration is all that is required; the water would go through a succession of filters.
47. Would the filtration be downwards? Downwards and horizontal.
48. Ordinary filters, through charcoal? Yes.
49. You understand that we are not going into the whole question of slaughtering. We are merely recommending to the Government steps which may be taken during the next six months or so. Would it take long, supposing the money is available, and the order is given, to make these tanks? I suppose about three or four months.
50. And, with the exception of renewing the flooring, the arrangement could be carried out in a very short time? Yes, in a few weeks.
51. But the construction of these tanks for storing water would take some time longer? Yes.
52. I suppose the work could be carried out promptly;—it would not be one job, and you would be able to get water enough for watering the cattle in a very short time? Yes. I dare say we could get some water from the Corporation at once, and the tank supply could be obtained afterwards.
53. And you think it would be desirable to incur this expense even if the Abattoirs were to be removed? Yes, because even if a new Abattoir were decided upon it would take some years before it was completed.
54. *Dr. Alleyne.*] I presume that the filtration referred to in your Report was calculated to remove not only matters offensive to the senses but to remove organic matter? I think so; it would make the water comparatively pure.
55. *Mr. Watt.*] Do you think one of the proposed pneumatic carts would answer as well as the casks for removing the blood? These casks were not intended for the same purpose. The idea at that time was that the market gardeners would come and take the blood away and return the empty casks; but for the purpose for which you require it, any receptacle such as you have at the various gaols and asylums for night-soil would answer—they are made of wrought iron.

56. *Chairman.*] Are they hermetically sealed? They are covered with a proper covering. I should say a cart of that description for each house would be sufficient. J. Barnet,
Esq.
10 Aug., 1875.
57. Would you require a cart for each house to convey the blood a mile and a half? Yes, I think so. The men would expect a cart to be waiting for them.
58. We were under the impression that a couple of carts would be sufficient? No; because then you would have to take the receiving tanks some distance and from place to place. If it were put into casks they would be headed up.
59. Would not wooden casks become very offensive after a time? I suppose there is some method of cleaning them by steaming. The iron receivers become offensive unless they are kept clean.
60. *Mr. Bennett.*] Does this £4,000, which has been voted, include asphalt for the flooring? Oh no; there are plenty of means available for repairs to the Abattoir without that.
61. Then if asphalt were recommended it would have to be provided out of a separate fund? Yes, I think there would be no difficulty about that.
62. How long would it take to put it down? That would depend upon the difficulty in getting the asphalt. We had some once before from New Caledonia, which was imported by the French Government. I am expecting a quantity now for the new buildings at the top of this street; we might use that and get some more out.
63. How soon do you expect to receive it? I cannot say. The contractor came to me months ago with a sample; but I don't think it is come yet.
64. *Hon. J. B. Wilson.*] Do you know exactly how much money voted for the Abattoir is now available? Yes; the Abattoir vote was taken in 1873—Water supply for Abattoir, Glebe Island, £4,000, and in 1874 a further sum of £2,000 was voted, making altogether £6,000, the whole of which is available at present.

H. G. Alleyne, Esq., M.D., examined in his place:—

65. *Chairman.*] I understand that your Committee have visited the Garryowen Estate lately? Yes. H. G. Alleyne,
Esq., M.D.
10 Aug., 1875.
66. And you found on Government land, at a short distance from the Abattoir, a place which you consider entirely suitable for burying the blood? Yes, I think it is very well suited as a temporary resource; there is sufficient depth of soil, and a sufficient area to answer the purpose for a considerable time.
67. You recommend that the blood should be received into receptacles provided for it direct from the neck of the animal? I do certainly.
68. Is there any provision of that sort at present? No.
69. Where does it flow to now? It flows from the animal on to the stone floor, and it is then swept into a concavity in the surface of the floor.
70. I understand then you recommend that it shall be received in portable vessels at once, without going on to the floor, and that these vessels be emptied into the casks or cylinders in which it is to be eventually removed? Yes; the reason we recommend this is because the floors of the slaughter-houses are all sandstone, which is a very absorbent material, and it is impossible to keep them clean and sweet if the blood is allowed to flow over them.
71. And you still think, in spite of what Mr. Barnet has said, that this sandstone, from being an absorbent material, is unsuitable for the purpose? I think so—no doubt of it.
72. But the evil would be much mitigated, in your opinion, if the blood were made to flow into receptacles, as you propose, instead of on to the floor? Yes.
73. *Chairman to Mr. Bell.*] Would there be any difficulty on the part of the City Council in supplying one or two million gallons of water in the year for the use of the Abattoir? None at all.

[No. 3 COMMITTEE.]

REPORT

OF THE

COMMITTEE APPOINTED BY THE SYDNEY CITY AND SUBURBAN
SEWAGE AND HEALTH BOARD,

on the 25th May, 1875,

"To inquire into the Disposal of the Blood from the Glebe Island Abattoirs."

LIST OF APPENDICES.

No. 1. Return of blood and offal for year ending 31 December, 1874.....	16
No. 2. Orders and Regulations, Public Abattoirs, Glebe Island	16
No. 3. Report to the Government on Glebe Island Abattoir. 29 October, 1873	17

[No. 3 COMMITTEE.]

REPORT

OF THE

COMMITTEE APPOINTED BY THE SYDNEY CITY AND SUBURBAN
SEWAGE AND HEALTH BOARD,*on the 25th May, 1875,*

“To inquire into the Disposal of the Blood from the Glebe Island Abattoirs.”

ADOPTED BY THE COMMITTEE, 30 JULY, 1875.

SIR,

The Committee appointed to examine into and to report upon the state of the Abattoirs at Glebe Island have agreed to the following Report:—

1. We paid a visit to the establishment, as a preliminary to our inquiry, with the view of ascertaining what steps had been taken to remedy the evils which have for years been complained of by the people living in the neighbourhood, and were told by the officer in charge that no attempt had been made to improve the arrangements for the removal of nuisances since the inspection made by a Board appointed by the Government to examine into and report on the subject in 1873. (*Vide Appendix No. 3.*)

2. We found too that the extent of the nuisances more especially complained of had by no means been exaggerated as, on the day of our visit, blood was flowing in full stream into the harbour, and in sufficient quantity to discolour the water of the bay for some distance from the land. There was also abundant evidence that much of it was left by the retreating tide to putrify on the adjacent shores. This, with the addition of the great accumulation of the contents of the stomachs and intestines of slaughtered animals stored at the rear of the premises, must at once be admitted to be a fertile source of disease, as well as an offence to the senses.

3. The establishment was not in other respects in that cleanly state which should be insisted on, from the deficiency, we were told, of labour to do the necessary work. The want of a sufficient supply of fresh water also was very evident.

4. As the many objections to the location of Abattoirs in the midst of a dense population, and other matters connected with the supply of butcher's meat to the metropolis and suburbs, will probably engage the attention of the Board at another stage of its inquiry, we shall here refer only to those evils existing at Glebe Island which may be at once mitigated or entirely removed; and chief of these is the almost daily discharge from the Abattoirs into the harbour of a large quantity of blood, the pernicious effect of which on the public health cannot be over-estimated.

5. We learn from the evidence of Mr. Sutton and the Hon. Saul Samuel, that the blood from slaughter-houses may be dealt with in such a manner as not only to render it innocuous and inoffensive, but to convert it into a profitable article of commerce; and Mr. Oatley, Inspector of Glebe Island Abattoirs, Mr. Jagers, Assistant Inspector, and Mr. Barnet, the Colonial Architect, incline to the same view. Mr. Samuel further proposes that not only the blood but the offal, and all that may be called “waste products from the Abattoirs,” should be similarly utilized, as the operation could not be a commercial success with such a small quantity of material as the blood alone would supply; and his proposal would secure the additional advantage of putting an end to the present highly objectionable practice of disposing of the greatest portion of the offal and its contents by using it as food for pigs.

Both Mr. Samuel and Mr. Sutton are of opinion that no one will be found to undertake to relieve the public of the nuisances caused by the slaughtering of stock at Glebe Island Abattoirs by the methods they respectively suggest, unless the Government give pecuniary and other aid; and we do not think that the extent to which they propose that assistance should be given is excessive, considering the great benefit that would be derived by the enterprise being carried to a successful issue. But to bring into operation any process of converting the blood and other abominations of slaughter-houses into a marketable article, buildings must be erected, machinery procured, works constructed, and alterations made in the conditions of existing leases of the houses, which would involve much loss of time, while the evil to be removed is urgent and demands immediate action.

6. Intimately connected with the state of cleanliness of the Abattoir with the health and well-being of the stock waiting for slaughter, and the consequent quality of the meat sent to the market, is the supply

of fresh water to the establishment, and the present scarcity should no longer be tolerated. All that can be had at present for all purposes is the small quantity that can be collected from the roofs in a few 300-gallon tanks, and the assistant inspector states that in dry weather there is positively no fresh water to use for any purpose whatever although it is urgently required for watering the cattle and washing the carcasses.

7. With the view therefore of providing a temporary but immediate remedy for the most prominent evils arising from the Abattoir at Glebe Island, we recommend,—

1st. That in order to prevent the pollution of the water of the harbour and to maintain the slaughter-houses in a sufficiently cleanly state, rules Nos. 15 and 16 of the Orders and Regulations issued by the Government, copy of which we append, be strictly enforced. (*Vide Appendix No. 2.*)

2nd. That a few acres of land in the neighbourhood of Glebe Island be at once procured by renting it or otherwise, to which the blood and other filth may be removed and buried; and that, as the evidence of Dr. Joseph states, a small portion of the Callan Park Estate is at present available for such purpose, steps should be taken to secure the temporary use of it.

3rd. That the blood should no longer be washed into the drain leading to the water, but that it should be received into vessels as it flows from the neck of the animals and placed in barrels or tanks provided for its reception, and be at once carted away with all other waste to the place of final deposit.

4th. That for the more effectually preventing the contamination of the harbour, the water used for washing the houses and carcasses should be passed through filter tanks, as suggested by the Colonial Architect, allowing only clean and inodorous liquid, free from organic matter, to escape.

5th. That the slaughter-houses, and the passages leading to them, be without delay re-paved with some durable non-absorbing stone, as in their present state cleanliness is impossible.

6th. That as the plan suggested in the report to the Government in October, 1873, to which we have previously referred (*vide Appendix No. 3*), seems to point to the most ready source of obtaining a supply of fresh water, the Government be urged to give the subject their immediate attention.

8. In conclusion, as it is evident that the stock kept in the pens are at present subject to much preventible suffering from want of the supply of water necessary to their health, we urge that it should be the special duty of some officer connected with the establishment to see that this want is duly attended to.

H. G ALLEYNE,
Chairman of Committee.

Sydney, 30 July, 1875.

Evidence taken before No. 3 Committee.

FRIDAY, 4 JUNE, 1875.

Present:—

C. WATT, Esq., | F. BELL, Esq.

H. G. ALLEYNE, Esq., M.D., IN THE CHAIR.

Mr. Frederick Oatley, Inspector of Glebe Island Abattoirs, called in and examined:—

1. *Chairman.*] We wish to ask you a few questions, Mr. Oatley, and first of all we should like to know the number of animals slaughtered at the Glebe Island Abattoirs, of all kinds, including oxen, sheep, pigs, and all other animals? I have made out a return for you, for the year 1874, of the cattle, calves, sheep, and pigs slaughtered at the Abattoirs, which I will read—cattle, 38,810; calves, 591; sheep, 257,481; pigs, 17,285; and, I think, about 12 lambs, during the year. Mr. F. Oatley.
4 June, 1875.
2. The blood belonging to these animals is at present thrown away, is it not;—it is not claimed as the property of the proprietors of the animals? No; sometimes they make use of a small quantity of it for black puddings, or for some purpose of that kind, but the rest of it runs away into the Bay.
3. No claim is raised by the owners of the animals as to their right to sell it? No.
4. What is done with the intestines of the animals—the offal? That is carried away to the premises of certain people who keep pigs.
5. Who takes it away;—do the owners of the cattle claim it as their property? Yes; some of them dispose of it on the spot, and others cart it away.
6. But supposing you were to attempt to take it away yourself, in order to get rid of it, would they be likely to make a claim to be paid for it? Yes, I dare say they would; they would ask perhaps 4s. or 5s. for the refuse of a bullock.
7. Then it belongs to them as a right? Oh yes, decidedly.
8. Is it always taken away? Yes.
9. Either by the owners of the cattle, or by some persons to whom they have sold it? Yes; it is taken away each day.
10. Is that the case also with the heads and the feet? Yes, it is all removed daily—the head and feet.
11. Every part belonging to the animal? Yes.
12. And every part belonging to the animal is the property of the person bringing the animal to be slaughtered? Yes, the carcase butchers, or the owners of the stock.
13. At present, if I understand you aright, they have not got customers for all this offal? No, not at all times, and then they have to give it away. I am now speaking of the carcase butchers. There is a class of men who come to us, who perhaps bring a single calf or lamb to be slaughtered. Well in that case the Government remove the offal; they pay so much a week to have it taken away.
14. Then the Government favour these persons in that way, because they can have no more right to leave the offal than the other men? Well, I recommended the Government to do so. You could hardly expect a person who brought—say a calf or a sucking pig, to take the offal back to his shop. It is done with the view of giving the retail butchers every opportunity; but it is always removed daily.
15. There is nothing then of this debris from stock of any kind killed there, that we could claim from the owners? No; what is called the pluck, such as the heart, liver, and so on, they sell.
16. But there is nothing the Government could claim as their property? No, not at present. The owners of the cattle are bound, under present regulations, to remove this stuff daily, dispose of it as they may—they are bound to get it away daily.
17. They did not seem to have got it all away the day we were there? Well, they are allowed till 6 o'clock to clear it away, and they do it chiefly in the afternoon.
18. Have you sufficient attendants there for keeping the place clean? Yes. I think we could do with another labourer; in fact I am going to suggest to the Government that they should give me another.
19. Then, I presume, you cannot keep the place clean without an additional labourer? Not as clean as I could wish, but another man, I think, would be quite sufficient. Since your visit to the Island I had an additional one allowed me, and I think I could do with another.
20. Then with another you think the place could be kept absolutely clean? Yes; all that is necessary could be done.
21. But I mean as clean as human hands could make it? Yes. I think it could be kept as clean as possible, as it could be washed over with an additional hand.
22. *Mr. Bell.*] Do you know, Mr. Oatley, what becomes eventually of the offal? Well, I think they take it some half a mile away from the Island to some piggeries; that is the principal use they make of it.
23. Is any of it taken to the glue manufactories there? They take the trotters there, I believe.
24. Because I have frequently seen dray loads going down with what appeared to be offal shaking about in the drays? That would be the intestines. I know the persons you speak of; they take the heads and feet.
25. But the offal principally goes to feed pigs a little way above? Yes, that is where most of it goes to. Frequently they take it away over Cook's River to feed pigs. It is not confined to one person.
26. *Mr. Watt.*] Do you think the butchers remove this offal under compulsion, or do they make a profit out of it? I think they make a profit out of it.

- Mr. F. Oatley, 27. So that if any proposition were made to deal with it otherwise than through their hands, the Sydney butchers would claim some compensation, and affirm their right to it? I think so—no doubt of it.
- 4 June, 1875. 28. Have you ever had to compel the Sydney butchers to remove it? Oh, yes; and to fine them also for not removing it.
29. Has that been done at all recently? Not recently.
30. Is the work on the Island—the slaughtering—increasing with any great rapidity? It is increasing, but not to a very great extent.
31. Do you know of any circumstances which should cause it to decrease to any considerable extent? No, only when there is a scarcity of cattle. Last year the cattle were very scarce.
32. You know of no other private arrangements which are likely to produce that result? No.
33. Could you form any opinion as to the bulk of blood to be dealt with per week in any system of treating it for manurial purposes? I could not exactly, without calculating what amount each animal would yield, but I will supply that information.
34. Even if the blood were removed and treated for manurial purposes, there would still be some blood and water to be disposed of in some way? Yes.
35. There is a large quantity of faecal matter also from the animals. Is that also removed regularly? Oh, yes. The Government remove that from every part of the place, and it is then disposed of to market gardeners. Sometimes a little of it remains; we term it dung.
36. That is excrement? Yes.
37. You say a little of it remains sometimes. Is that allowed to remain for any length of time? Yes, until they come for it—until it is sold.
38. And you say the Government remove it? The Government do not remove it themselves; it is sold to persons who take it away. Sometimes there is a rush for it, and at other times there will be a lull. But I never find any offensive smell from it.
39. Have you any power to compel persons having a contract to remove it? There is no contract; it is sold at so much a ton to any person who likes to come for it.
40. Then it is a mere chance whether anyone comes for it or not? Yes.
41. During a period of stormy weather does not this stuff accumulate? Oh, yes, it would then sometimes. The roads would be bad for three or four days perhaps and they would not come for it.
42. Don't you think it would be an improvement to have some regular contract so as to be able to compel persons to remove it? Yes; and I dare say there are persons who would take it away for nothing, and it would be a good way of disposing of it; at present it is sold for one shilling a ton.
43. Then there are no matters of any kind that you know of which are not readily removed? None sir, only this dung, which may remain a little longer at times.
44. *Chairman.*] Have you a sufficient supply of fresh water? No; we want fresh water very badly.
45. Do you want it to a very great extent? Yes; we want it for washing the stock, cleaning the carts, and other matters, for which salt water is not fit.
46. Have any steps been taken to increase the supply? Not up to the present time; but the Government are about to construct reservoirs, for which a sum of money has been voted.
47. Have you any water-closets or privies on the premises? Yes; there are four closets—two double closets.
48. Those are privies not water-closets? Yes.
49. How are the contents disposed of? Well that goes into the bay as well; it falls into a sewer below, and is carried away with the blood.
50. It falls into the same sewer which takes away the blood? Yes.
51. How many people are generally employed or living there from day to day? I should say about sixty people.
52. I mean including the officials and people whom the butchers send out? Including them there would be seventy or eighty.
53. Has there ever been any epidemic illness there? Never. We have always had the best of health on the Island—men, women, and children as well. Strange to say when people have been sick around us, at Balmain for instance, we have had no sickness on the Island; I have frequently noticed that.
54. Would you be able to make an estimate for the last twelve months, of the monthly quantity of blood from all classes of animals; and of offal and everything that is taken away by the butchers to the butchers' shops? Oh yes, I could do that. In fact there is very little of the intestines that are taken to the butchers' shops, excepting the heart and liver. (*Vide Appendix No. 1.*)
55. Have any complaints been made by any persons in the neighbouring municipalities, or in the neighbourhood of the Abattoir, as to its being a nuisance? Yes; I have heard several complaints of that kind personally and through the papers.
56. What do they complain of principally? Of a nuisance.
57. But what do they complain of—do they indicate the nature of the nuisance? They complain of the blood going into the harbour.
58. Do they complain of the smell of the Abattoir being offensive? I have not heard complaints of that; I believe most of the offensive smell complained of comes from the Blackwattle Swamp and the adjacent piggeries.
59. Do they complain of being made unhealthy by it? I have heard that spoken of casually. I may say that the person employed by Mr. Barnet, the Colonial Architect, to deodorise the blood from the Glebe Abattoir, has made some very successful experiments with it. He mixes the blood with peat charcoal, and dries it on the open rocks. That has been done now for two years, and it is perfectly good. I have seen it myself. I would strongly recommend the Committee to examine Mr. Sutton, as he will be able to give you some valuable information on the subject.

TUESDAY, 8 JUNE, 1875.

MEETING OF NO. 3 COMMITTEE.

Present:—

C. WATT, Esq., | F. BELL, Esq.,
H. G. ALLEYNE, Esq., M.D.

Mr. William Henry Sutton called in and examined:—

60. *Chairman.*] With reference to a proposition made by you, Mr. Sutton, to the Government, to deal with the blood to be obtained from the animals slaughtered at the Glebe Island Abattoir, the Committee will be glad if you will suggest how you intend to proceed with it afterwards, in order to make a profit out of it, and the means you possess of doing so. The reason we ask you for this information is that unless you can show us that there is a fair chance of your being able to dispose of it at a profit, it would be simply impossible for you to carry out any contract which you might make with the Government? I am fully prepared to explain my views to the Committee. I do not expect to dispose of it in the Colony, but to export it to England. The value of manure generally is little understood in this Colony, and therefore I should not look for any sale for it out here; but the value of blood as a manure has been calculated by a French chemist to be nearly equal to that of the best Peruvian guano. Now the table on which this gentleman, M. Braconnot, bases his calculations, shows that the value of the best Peruvian guano, compared with the value of 100 tons of stable manure, is 3°0 and the value of pure dried blood 3°2, so that supposing Peruvian guano to be about £14 per ton,—which is below the selling price, for it is very scarce now, and indeed it is almost impossible to get it,—the value of dried blood would be £13 10s., or somewhere thereabouts. The calculation is easily made, but I have not reckoned it exactly.

Mr. W. H. Sutton.

8 June, 1875.

61. £13 10s. per ton? Yes, that would be about the value, supposing the Peruvian guano to be worth about £14 or £15 per ton.

62. Have you ever been engaged in preparing this product? No sir; I have stated in the memorial which I sent to the Government the motive which first induced me to go into the matter. It was in consequence of a conversation I had with Mr. Sutherland.

63. At present then you have no mercantile connection in England or elsewhere which would enable you to carry out the undertaking with a prospect of success? No, none at all. It strikes me that the way this undertaking could be best carried out would be to get 50 or 60 tons of the blood prepared and ship it Home. Then you could have the manure analyzed by Professor Voecckler, and of course it would sell, perhaps by auction, or in such a way as the agent employed might think fit, according to the value he might place upon it.

64. Where do you propose the buildings to which you refer in your memorial to the Government should be erected. You propose that the Government should go to the expense of erecting certain buildings necessary for these operations;—where do you propose that this establishment should be? There is plenty of ground immediately adjoining the Abattoir, so that the buildings could be close to it. You probably know the place I mean. There is a level piece of ground at the back of the Abattoir, which would answer admirably, and allow the conveyance of the product by punt either to Sydney or on ship-board, if it were exported direct.

65. Do you remember how long it is since M. Braconnot made this statement as to the comparative value of these manures? No; but I will tell you where it can be found—that is the table itself. In the last edition of the *Encyclopedia Britannica*, under the head of "Agricultural Chemistry," there is a table in which it is compared with 100 tons of stable manure. That is the standard from which he calculates the value of the manure. The stable manure would be 100 and the proportionate number for the value of Peruvian guano would be 3; that is 3 tons of Peruvian guano would be equal to 100 tons of stable manure, and 3½ tons of dried blood would be of similar value. He estimates the value of the manure according to the amount of nitrogen contained in it.

66. *Mr. Bell.*] Have you any scheme for pumping up the blood into cisterns, or otherwise to make use of it in this process? I propose in that memorial that the Government should form a system of drainage, distinct from the present system, but not doing away with it—a separate system of drainage, to convey the blood to a certain point, of course near the Abattoir buildings. The system that I should propose is one which I may say was designed by Mr. Jagers, the Assistant Inspector at Glebe Island. If you wish I will explain to you roughly what my ideas are of this drainage.

67. *Mr. Watt.*] Do you add anything to the blood in drying it? Yes.

68. Does the substance you add increase by its own property the manurial value of the blood? Not at all; it is merely a substance to absorb, and partially, I may say, to deodorise. The more correct term for it would be an antiseptic. It is a substance well known. It is simply pulverised peat.

69. Is it charcoal peat? No, it is simply pulverised peat, and that, when thoroughly dried, is quite as efficacious as charcoal.

70. Have you any objection to state to the Committee the proportion you would have to use for this purpose? Well, I cannot state absolutely, because that would be perhaps a matter for experiment, but I should say about 5 per cent., compared with the amount of dried blood, not liquid blood—that is to say, every 100 lbs. of the dried blood would contain about 5 lbs., there or thereabouts, of the substance which is put in with it.

71. Do you propose to deal with any other residuary matters from the Abattoir besides the blood? Well, when I first went into the matter I was placed in communication with the Inspector of the Glebe Island Abattoir, and he told me there was nothing else to deal with except the blood—that all the other refuse materials were taken off the premises daily and conveyed away, some to one place and some to another, and converted to different uses.

72. Then you do not propose to deal with any other materials? I would do so if required.

73. Do you know whether in any other parts of the world the process of treating the blood in a manner similar to that which you have described is carried on? I do not know; I have seen nothing of the kind at all events.

74. Have you any knowledge, Mr. Sutton, as to the value of this product—dried blood—other than that which you have obtained from M. Braconnot's statement? Yes, I have proceeded upon the amount of albumen

Mr. W. H.
Sutton.

8 June, 1875.

albumen and fibrine contained in it. I believe it contains—that is the general acceptance—a sufficient quantity of fibrine and albumen to yield about 15 per cent. of nitrogen, which is equivalent, as you are aware, to about 17 or 18 per cent. of ammonia.

75. Have you any idea as to the amount which it would be requisite to lay out in order to carry on the operations you describe at the Glebe Island Abattoir? Do you mean the working expenses or the amount necessary to erect the plant?

76. I mean for the plant? The sum I have mentioned in that paper includes the plant which would be required, supposing the blood only were dealt with. The estimate I give was £1,000 for the building and plant; and £65 a month for the working expenses. That was my estimate; I did not make any inquiries as to the actual cost.

77. And you think your product would realize about £14 per ton in London? Of course that has to be tried; it is a matter of experiment. I give that as the absolute value of it; that is what I imagine would be its value if analyzed. I am speaking now of pure blood, without any admixture.

78. *Chairman.*] We are obliged to you, Mr. Sutton, for your evidence, and if you wish to add anything to it in the form of an appendix, you will have an opportunity of doing so.

APPENDIX.

In reference to my being able to dispose of the product at a profit, so as to carry out any contract I might make with the Government, the following recent facts relative to the supply and consumption of Peruvian guano may assist the Board in coming to a decision on this point: The information is obtained from "Hutchinson's Two Years in Peru" and may be relied on, as it is derived from official sources, Mr. H. having discharged the duties of British Consul during his residence there. The supply of guano from the Chinca Islands was exhausted in 1871. The quantity remaining on other islands off the coast of Peru in November, 1872, was estimated at 2,000,000 (two million) tons; and a deposit on the Mainland, about 91 miles from Callao, at 1,000,000 (one million); giving a total of 3,000,000 tons for future supply. The amount of consignments to Europe during the year 1871, was 393,726 tons, of which 111,456 tons were absorbed by Great Britain alone. The amount of exports and consignments in progress of supply during the year 1872, up to 31st August, was 471,737 tons. At this rate, in a few years, the supply of guano from Peru will be exhausted. It needs but little foresight to anticipate that as the supply of guano decreases the value of manures as substitutes for it will be enhanced, and the demand become more urgent. I submit there would be little difficulty in disposing of (comparatively) so small a quantity of a really valuable manure, as about 400 tons yearly, where the annual consumption of Peruvian guano is over 111,000 tons, and that of artificial manures perhaps much greater. I may here remark on the plan I would suggest for carrying out the commercial part of the design: Some mercantile house in Sydney should be employed as agent for exportation and sale of the manure. It should be authorized to pay the proceeds as they accrue into the Treasury, and to furnish an "account sales" of each transaction in duplicate—one for the guidance of that department and the other for myself—so as to afford no pretext for collusion. I need scarcely observe, that official interference with the trade transactions should be as slight as possible, in order to promote the success of the project. When the repayments to the Treasury have been made in full of course the direction of commercial matters would revert to me; and the Government would be saved all further trouble but that of inspection to secure the work being carried out efficiently.

And next, as to the value of *dry* blood as a manure: I look upon the tabular values assigned to manures by M. Bracounot as approximations only, yet sufficiently accurate for my purpose, and as affording an easy method of comparison; and I considered also that his name would carry some weight with it. All the chemical authorities I have consulted assign about 80 per cent. of organic and 20 per cent. of inorganic matter in dry blood. The organic matters consist almost entirely of albumen and fibrine; the inorganic of various salts. The albuminous matters (including the fibrine) are capable of yielding about 15 per cent. of nitrogen, equivalent to about 18 per cent. of ammonia; and the inorganic salts are all necessary to the perfect development of plants. The purest samples of Peruvian guano which have been analyzed do not yield more than 17 per cent. of ammonia, so that I am not far wrong in assigning to dry blood a commercial value not much inferior to the former. The quantity of pulverised peat mixed with the blood would of course proportionally detract from its value as a manure; but this I should endeavour to reduce to its minimum in practice, and I do not think it would exceed the quantity mentioned in my examination in chief.

With regard to the treatment of the blood, I may say it depends as much on the process of manipulation employed as on the materials mixed with it; and if it be required to deal with the solid residuary matters at the Abattoir, mechanical aid would be necessary, and consequently there would be an addition to the cost of the plant.

In conclusion, I beg respectfully to submit that, although I may be considered over-sanguine in my anticipations of the result, yet sufficient evidence has been afforded that the Government, having absolute control over the financial arrangement in the earlier stages of the undertaking, will possess a guarantee that may cover any advances required to carry it on (I mean monthly payments for working expenses), and at the same time receive a fair return of 10 per cent. per annum on their permanent outlay.

The Honorable Saul Samuel, M.L.C., examined:—

The Hon.
S. Samuel,
M.L.C.

8 June, 1875.

79. *Chairman.*] The Committee have been informed, Mr. Samuel, that you have a great deal of knowledge, or a considerable amount of information at all events, as to the manner in which the blood and offal, and all the debris from abattoirs, are disposed of in other countries advantageously, and without loss? I cannot say that I am in possession of a large amount of information on the subject, but I have been in communication with some friends in the United States, and I know that there the blood and offal are utilized as fertilising agents, and that machinery is used for this purpose to a great extent, and that it is employed profitably, and I know of no reason why the same thing should not be done here. I have, I may say, been in communication with Messrs. Elliott Brothers, of Sydney, who are disposed to go into the matter; but the difficulty they experience is that the outlay would be large, and they are not quite clear that a market for the product would be found. To enter upon an enterprise of this sort a considerable capital would be required if anything like an efficient plan is to be carried out. I do not know

know whether I am correct in my estimate of the number of bullocks and sheep slaughtered at the Glebe Island Abattoir; but if so, the blood alone would not produce a very large quantity of dry manure,—that is, a paying quantity, suitable as a fertiliser. I am informed that the number of bullocks slaughtered weekly at the Glebe Abattoir is 800, and the number of sheep 4,500. Each bullock would yield about 5 gallons of blood, and 13 sheep would give the same quantity, which would give in all 5,750 gallons, equal to 57,500 lbs., or about 250 tons of dried blood in the year.

The Hon.
S. Samuel,
M.L.C.

8 June, 1875.

80. *Mr. Watt.*] It reduces about four-fifths, I believe? Yes, that is about what I calculate. Well, that is worth in England about £6 per ton. Taking the same value here, that would only give £1,500 a year, realized from the blood alone. You will see, therefore, that that alone is not a very tempting investment for a capitalist, and that it would be scarcely worth his while to take the matter in hand unless there was a probability of getting the whole or a portion of the offal as well. The offal might be utilised as well by means of the machinery I have referred to, the particulars of which I am not at liberty to disclose. I can only say it is successfully used in the United States, though I cannot state the details of the process. I know it is in operation.

81. Do you know whether this process is mentioned in the *Scientific American*? I cannot say, because I have not seen the *Scientific American*, but if you can tell me what patent is referred to I can tell you. This is a patent which has proved very profitable, but without the permission of the parties I represent I do not feel at liberty to mention it. I am, however, as I have stated, in communication with Messrs. Elliott Brothers, who are prepared to take the matter up under certain conditions. Of course persons embarking in an undertaking of this sort, with the intention of carrying it out in good faith, would require some assistance from the Government. They could not be expected to take in hand a project which is entirely an experiment so far as this market is concerned, for the success of the process, though sufficiently proved elsewhere, is so far an experiment here that a market has to be created for it, and unless they received some aid from the Government—even if they succeeded in finding a market for it—the demand for some time would be so limited that the remuneration would not be sufficient to induce capitalists to incur the heavy outlay necessary to bring the scheme into operation. They would therefore expect to be assisted in some way. I may mention that some time ago the Government placed upon the estimates a sum of money for deodorising waste products at the Glebe Island Abattoirs; and I think if money could be applied in assisting persons other than the Government to do this, who would take the matter into their own hands, it would be desirable, because the Government could hardly undertake such a work as this, and would probably be unable to dispose of the product so advantageously as a business firm. They would also have a difficulty in finding a market for it, and it is not the sort of undertaking in which a Government should embark.

82. *Chairman.*] Have you any idea what the cost of the necessary plant would be—would it be of an expensive character? I would not suggest that the Government should aid the projectors of such an undertaking by the erection of buildings, but that their assistance should be contingent upon success. If any persons undertook the matter, and succeeded in utilising all the waste products from the Glebe Island Abattoir, then, I think, the Government might give them a certain sum per annum for (say) three years or for some fixed period, and a right to the blood and offal for a long period, say fourteen years. I would also suggest that the Government should give the use of such land as might be required for the purpose. I think if the Government gave them £1,000 per annum for three years, contingent upon the success of the undertaking, it might induce some persons to take the matter in hand. I mention £1,000, but I have not made any calculation as to the amount that might be deemed fair. I think it should be about that, looking to the fact that for the first three years there would be great difficulties to contend with in an enterprise of this kind, involving extensive works and considerable risk. Of course the parties who made this arrangement with the Government would have to be bound under heavy penalties to erect suitable machinery and buildings for the purpose of carrying out their undertaking, and then if they succeeded at the end of a year they would be entitled to this bounty or bonus.

83. To be paid only in the event of success? Only in the event of success.

84. *Mr. Watt.*] And on the understanding that they did not create a nuisance? Well, I imagine that although there would, of course, be a certain amount of disagreeable odour, it would be much less than you expect.

85. *Chairman.*] But would there be any necessity to have decomposed matter lying about? No, I imagine that it would all be got rid of. The appliances should be sufficiently extensive to get rid of it all, so that no blood or offal would accumulate.

86. *Mr. Watt.*] That would be done daily? Yes. That is where the assistance would be required. The works would have to be on an extensive scale. Any one could put up a small plant for mere experimental purposes, but what I suppose would be required would be plant and machinery sufficient to dispose of the whole of the waste products; otherwise, if only a portion of them was suffered to remain, the nuisance would still exist.

87. *Chairman.*] You think it would be necessary that the persons who entered into a business of this kind should have not only the blood but the whole of the offal—everything in fact, excepting the meat? Well, I think it would be desirable that they should have a right to it, but a difficulty presents itself to me with regard to that part of the question—there are a large number of pigs fed at the Glebe Abattoir, are there not?

88. No; the offal is taken away and sold to different people? I think it would be desirable to secure the offal if possible, because the blood alone would only yield about 200 tons of dried material during the whole year, and that would be a small quantity to export and to supply our own market as well. The great object would be to create a market for the product, and while that was being done a loss would be sustained. In short, I don't think you would find many persons who would take the matter in hand without receiving help in some form or other. I know that has been the objection which has presented itself to every one who has considered the subject, and I have spoken to several persons competent to judge about it. The risk is too great, even supposing the Government were to give the blood and the offal. I know that Messrs. Elliott Brothers applied to the Government for it, and I don't think they have received any reply as yet; that the Government have not come to any decision about it. I am quite certain that no one would undertake the erection of such extensive plant as would be necessary without some further inducement than the profits likely to accrue from operations of this kind; it is altogether too uncertain.

89. *Mr. Watt.*] Do you know the date of Messrs. Elliott's application to the Government? I do not. Some guarantee would be necessary, I am convinced, to persuade persons in this country to embark in such a business; there is no great disposition here to use fertilisers, and we must therefore look elsewhere for a market, or else we must create one here.

The Hon.
S. Samuel,
M.L.C.

8 June, 1875.

90. Can you give us a rough idea of the probable cost of the plant and machinery? I am sorry I cannot tell you. I had some calculations sent to me but they are mislaid.
91. Do you think £5,000 would be about the amount? I should not like to say exactly; I should think from £3,000 to £5,000—probably not less than £5,000—supposing the works to be sufficiently extensive to get rid of all the blood and offal; and then the Government would have to give a piece of land for the purpose, which would make no difference to them as there is sufficient to spare on the Island.
92. *Mr. Bell.*] The offal, under present arrangements, belongs to the carcase butchers? I believe it does; but an arrangement might be made to secure it to the Government in the conditions of the leases.
93. *Chairman.*] Are you acquainted with any parties in Sydney who would take this matter in hand and commence in a very short time? Messrs. Elliott Brothers seem disposed to take it up; I have had a conversation with them on the subject.
94. *Mr. Bell.*] Would a product be made from the offal? Yes, the machinery I spoke of would reduce it to a fine powder.
95. The offal as well as the blood? Yes, everything, except the bones. If the representations made to me be correct it completely pulverises the whole of the waste material.
96. In order to be sold afterwards as manure? Yes.
97. *Mr. Watt.*] Would not such manure be very much improved by the addition of some proportion of bone-dust? Yes, I think if the bones were ground and mixed with the manure it would be improved; but that might be combined with the other process. The bones might be purchased—I suppose they belong to the butchers—and ground at the same establishment. That would involve a bone-mill of course, and they might be mixed together. I believe they do that in America, from what I have heard of the process. I am told that in Boston, where this machinery is used, it is a complete success.
98. *Mr. Bell.*] But there they have an outlet for the sale of the manure? Yes, that would be the great difficulty here. Any person undertaking the same thing in this Colony would require some encouragement from the Government, until he could create a market for his produce. Now dry blood is worth in England £6 or £7 a ton—that is the price they can export it for. But as we should have to find a market for ours outside the Colony, we should have to export it at a lower price.
99. *Mr. Watt.*] That is blood which has been dried without the addition to it of any other substance? Without the addition of anything else—simply dried blood. I am not speaking of the value of manure as exported from England, but merely the value of dried blood. Of course, if you mixed bones with it you would increase its value, but you would also increase its cost.
100. It would increase its value in one way, and decrease it in another? It might. There would be the expense of grinding the bones, but that would not be much.
101. *Chairman.*] Have you ever seen the works you describe in operation? No, but I have seen plans of them.
102. With regard to the smell arising from the works, would that be a serious objection? No, I think not. It is all done in a huge iron cylinder, and therefore there is not likely to be any nuisance arising from it.
103. *Mr. Watt.*] Everything would be burned, I suppose? Yes. Everything is reduced to dry powder, and therefore there is nothing left to create a nuisance. Compared with the disagreeable results from the decomposing matter on the Island now, it would be very trifling.
104. A proposition has been made to the Government to dry the blood from the Glebe Island Abattoir in shallow vessels, in the ordinary way;—do you think that would be an efficacious way of dealing with it, from what you know of the matter? I am quite certain it would not. The extent of the vessels alone would be something enormous, and the results would be very slight; it would never do. The plan I spoke of is quite different. Unfortunately the certificates of result of trials I had are mislaid, or I could have shown you its advantages. The most satisfactory results have been obtained from it, and I am quite certain it would succeed. There is no difficulty about it, except the one great difficulty of finding a market for the produce. If it were not for that I should have no hesitation in going into it myself, and I should feel confident of success. Considering the large outlay necessary to start such a scheme, and that it is an object to the Government to find some means of disposing of the refuse which accumulates at the Abattoir, I think some aid should be given to the persons who initiate the undertaking, while they, on the other hand, should give ample guarantee of their good faith and ability to carry it out.
105. *Mr. Bell.*] Do you think you would be able to find a market for this product? I think it would be possible to find a market for it in the Mauritius, and perhaps in Java and Ceylon; but it would take time. We should have to induce people to try it, and while we were doing this there would be a loss instead of profit, unless the Government give some aid to the projectors of the undertaking, who took upon themselves the risk of the experiment. I do not know that a market could be found in those places, but there might be, and a trial could be made. I need not tell you that there is a limited demand for manure at present. By and by the demand will probably increase. They will be requiring it in Queensland for their sugar plantations as soon as the new soil becomes worn out a little. But that is all in the future—there is no market for it there now.
106. Will you think the matter over, and if any further suggestions should occur to you, perhaps you will add them as an appendix to your evidence? I will give you any further information which may occur to me with pleasure.

FRIDAY, 11 JUNE, 1875.

MEETING OF NO. 3 COMMITTEE.

Present:—

CHAS. WATT, Esq., | F. BELL, Esq.

H. G. ALLEYNE, Esq., M.D., IN THE CHAIR.

James Barnet, Esq., Colonial Architect, called in and examined:—

- James Barnet, Esq.
11 June, 1875.
107. *Chairman.*] The Committee are aware that you have paid considerable attention to the subject of supplying a sufficiency of water for all purposes, not only for watering the cattle slaughtered at the Abattoir, but water used for other purposes, such as washing and cleansing the carcasses and so on; and that you have also directed your attention to the mode of purifying such water as may have been used for

for such purposes, before it is discharged into the harbour. We shall be glad of any information you can give us on the subject. What you propose to do in reference to the Abattoir on Glebe Island? With regard to the water supply, it would of course be obtained from the roofs and from the city main—that was the intention. The water from the roof and the higher surface of the Island outside the Abattoir was to be collected in underground tanks, and pumped into an upper tank and supplied by gravitation. It would be supplemented by the city water.

James
Barnet, Esq.
11 June, 1875.

108. You are satisfied that sufficient water could be obtained from those two sources? Oh, yes.

109. Sufficient for all necessary purposes? Yes. It was in October, 1873, I think, that our report was made. It is in the Treasury, I believe.

110. Yes; but there is nothing in it as to the mode in which you propose to do it? Do you mean the mode of obtaining the water?

111. The mode of obtaining it by making tanks? I think the report states that the water shall be collected in underground tanks and pumped up by windmills into an upper tank, and supplemented by city water; I think it also specified the number of gallons.

112. How do you propose to deal with the water used for the purpose of cleansing the place, in order that no impurities may be carried with it into the harbour? That was to be done by filtration; the blood was to be deodorised, and the offal, which is the property of the butchers, was to be cleared out daily, if I recollect aright; and the only remaining substance was the water used for cleansing the Abattoir, which was to be passed through a filter and purified before it went into the Bay.

113. Would that be a very expensive process? Oh no—very inexpensive.

114. Can you give us a rough idea of the cost of making such a filter? I cannot say what it would cost to make, but it could not be very expensive. I see that this process is adopted in France and England. It is in operation here in fact, and has been for the last two years. You can see a filter of this kind at the School of Industry.

115. Does it answer your expectations? I think so; I have heard no complaints about it. Certainly I have not seen it for the last eight or nine months.

116. What are the impurities which have to be taken from the water at the School of Industry? There is the fecal matter from fifty children, and the house drainage water, and so on.

117. After being subjected to this treatment where does the water go to—into the Parramatta River? No, it goes into the street gutters.

118. Do you know what the regulations are for conducting operations at the Glebe Island Abattoir. I have a copy of the Act, but I find there is no Schedule of Regulations attached to it? There are printed regulations, I believe, which the officers at the Abattoir will be able to explain to you; I do not know what they are myself.

119. I wanted to know whether the offal belongs absolutely to the butchers or owners of the cattle, or whether they are allowed to take it away merely because they will not take the trouble to make use of it? According to the regulations I believe the offal is the property of the butchers. If I recollect right that was stated in the regulations. Then all we have to deal with is the blood, which might be made very valuable, there is no doubt of it. They are utilizing it in some way in Chicago at the present time, and they use all the offal as well. Mr. Jagers will be able to tell you something about that.

120. You have no personal knowledge of the mode in which this material is treated and disposed of for commercial purposes at Chicago, have you? No, none whatever, but I believe they do it. We made an experiment of that kind here; we deodorised some of the blood from the Abattoir, and it succeeded very well.

121. *Mr. Bell.*] You said that the fecal matter and house drainage passed through the filter at the School of Industry? Yes.

122. Can you give us any idea of the construction of that filter? It is vertical and horizontal, and composed of various substances.

123. The upper portion of it has to be cleaned out very frequently, I suppose? Yes, it is cleaned out periodically. It has been in operation now for two years—two years last month.

124. And all the liquid goes away apparently clear? Yes, it has no smell or color. Of course the filter will require renewing; it is a mere experiment, and I do not know how long it will last.

125. But it quite comes up to your expectations? Yes, I have heard no complaints of it, but, as I said before, I have not seen it for the last nine months.

126. *Mr. Watt.*] Is it proposed in your plan, Mr. Barnet, to wash down the Abattoir with salt water or with fresh water? I do not know.

127. Because that would influence the quantity of water required? You do not want so much water; it is a mistake to suppose that so much water is wanted.

128. It is wanted to wash the carcasses with? The fresh water which would be required to wash the carcasses with would all go into these tanks and be filtered, and the offal would be carted away.

129. What do you think would be the cost of laying on water by the main? It is laid down to the bridge on the Island side now, and we had a contract for laying it to Pyrmont, but the Corporation refused to give the water, and the matter fell through; that is in the report.

130. How was it proposed to carry the water across the Glebe Island Bridge? I believe there was to be a tap on the city side, and couplings to connect the pipes when it was turned on. There was to be a large tank provided on the Island in case of anything happening to these pipes.

131. Then the Glebe Island Bridge is a drawbridge? Yes, a swing bridge; and there was to be a large tank on the top of the hill, to be filled from this source. At that time the people of Balmain were anxious to have the main continued to Balmain—the Mayor, I believe, called to see me about it—and the pipes were actually laid down from the bridge to the Abattoir—a four-inch main—and the whole of the pipes were on the ground. But the contractor, I think, failed, and they were either taken away or sold for his creditors.

132. Do you think a filter of such a simple character as that you have referred to would be sufficiently effective for the purification of the water from the Glebe Island Abattoir? The water used there would not contain much blood; it should drain off in a proper direction. When a beast is killed the blood ought to flow into proper receptacles instead of into the drains, as it does at present; but that is only temporary.

133. I thought that perhaps it might be desirable to add a small quantity of some substance, such as sulphate of alumina, to the water itself used, for the purpose of washing out the Abattoir, to make it more soluble,

James
Barnet, Esq.
11 June, 1875.

soluble, so that no foul or sanguineous fluid should enter the harbour at all? Yes, that could be done. Of course the regulations for the conduct of the Abattoir must be strictly enforced to make them work well at all.

134. You mentioned that the water from this Industrial School, after filtration, was discharged into the gutters? Yes.

135. Where do those gutters drain into? Into the harbour at Rushcutter's Bay.

Mr. Joseph Jagers, Assistant Inspector, Glebe Island Abattoir, called in and examined:—

Mr. J. Jagers.
11 June, 1875.

136. *Chairman.*] Will you tell us what are the rules and regulations, approved by the Governor and Executive Council, for carrying out the Act of Parliament relating to the Abattoir at Glebe Island? I have not a copy of them with me. I could not lay my hand upon one unfortunately; but if you require any particulars with regard to the offal, or anything of that kind, I can give them.

137. Do you know what the regulations are with respect to the offal—as to whom it belongs? It is supposed to belong to the party occupying the house.

138. Occupying what house? The slaughter-house.

139. Do you mean occupying the house at that particular time? Yes. We give them a house for their special use. Some of them are leaseholders, and they have the exclusive right to certain buildings.

140. Where are these buildings? I am speaking of the row of buildings which form the slaughter-houses.

141. You call the places in which the beasts are killed, houses? Yes, slaughter-houses.

142. These houses then, as you call them, are let to different tenants, some of whom may only require them for a day or a week, and others for six weeks at a time? There is no term of occupation fixed; they are put up for sale once a year—six beef-houses and six mutton-houses. All the beef-houses are rented, but only three of the mutton-houses are let.

143. For how long are they let? For twelve months.

144. Then the man who leases a house has the exclusive right to that house for twelve months? Yes; and the other butchers who do not rent houses—the retail butchers—make use of one of the other houses whenever they want to kill, which are reserved from lease. There are twenty-four houses altogether. The butchers who slaughter regularly are left in undisturbed possession. Some of them have occupied the same houses for months.

145. Then half of the slaughter-houses are not let? No, they are reserved for the retail butchers.

146. Is the accommodation for slaughtering, in respect to the room and number of houses, sufficient? Yes. To give you an idea of how much work can be done, I may tell you that only yesterday there were thirty-six bullocks brought to one of the leased houses. The men commenced slaughtering at 7 o'clock in the morning, and the whole of the beasts were slaughtered and dressed by 4 o'clock.

147. Do you recollect what the regulations say as to the proprietorship of the blood? There is nothing said about it.

148. Are you quite sure? Yes. Nothing beyond the offal.

149. What do you call the offal? The intestines.

150. Is anything said about the contents of the intestines? The dung. There is nothing said about that. The butchers are allowed to empty the intestines, and we cart the stuff away with our own carts and horses.

151. Do you think that is a good plan;—have you a sufficient staff to remove this stuff? We have to remove it for the purpose of cleanliness, and put it in a place by itself, until it is fetched away for manure.

152. Don't you think it would be an improvement, as far as cleanliness was concerned, if the butchers were compelled to take away the contents of the intestines as well? No. I am afraid it would operate unfavourably on the slaughtering altogether.

153. Don't you think it is much worse to have this dung accumulate, when you have no staff to take it away from the premises, and have to depend upon market gardeners to remove it? Well, it is the best mode we could think of of dealing with the difficulty; when I entered the service, a little over eight years ago, all the contents of the stomach were thrown into the drains.

154. Why was that practice done away with—were the regulations different in those days? Yes, they were different then; the alterations were made when I entered the service, under Sir James Martin (then Mr. Martin), who was head of the Government. The object of the alterations was to prevent all blood and other matters from going into the drains. That was the key-note of the great outlay at that time. The branch drains leading from the houses to the main sewer was much larger then, and allowed these contents to pass, and they were all taken up, and smaller drains put down, to allow nothing but the blood to go into the gutter.

155. Were the regulations for carrying out these alterations approved by the Governor and Council? No, the real intention of Sir James Martin was never carried out, and there were no regulations made. The whole matter dropped, and the blood was allowed to go through the drain, and everything went on in the usual way, with the exception that the contents of the stomachs were not allowed to go into the drains. We then provided for removing them in another way. Having a man and horse and cart we took it from the slaughter-houses and stored it up in a place by itself for the convenience of market gardeners.

156. It appeared to us the other day, when we visited the place, that it was very undesirable to have so much of this refuse remaining on the premises;—does this quantity accumulate because you store it up for the use of the gardeners? Our arrangements for the storing up of this stomach matter are very unsatisfactory.

157. I ask you whether it accumulates because you store it up for the market gardeners, or because you have no staff to remove it yourself? All the material that is emptied from the stomach is taken away and put in one place.

158. But my question is: Why is this storing done? Is it done that you may give the stuff to the market gardeners, or because you have not a sufficient staff to keep the place clean? Before this was done the market gardeners used to come and take it away, and it was allowed to lie about for a day or two. But it was found better to take it and store it in one place, where they could come and remove it when they wanted.

wanted it. Before that it was left just where it was emptied from the stomach, and that was found very inconvenient. Mr. J. Jagers.

159. Do you think that is the best arrangement that could be made? I think it is the best we could adopt at present, unless the removal is thrown upon the owners of the beasts. 11 June, 1875

160. You are quite sure there is nothing in the regulations in reference to this matter? I do not think so; I will forward a copy of the regulations.

161. You are very short of water I believe for watering the cattle, washing the carcasses, and for other necessary purposes, at the slaughter-house? The only supply we have is salt water.

162. For everything? For everything.

163. You do not mean to say that you give the cattle salt water to drink? We get some water for them from the tank occasionally. Every provision is made for the water; we simply want the water itself.

164. Then the cattle must be sometimes cruelly distressed for water, as it appears to be only a mere chance whether they get it or not? Yes.

165. How often are cattle kept there as a general rule before they are slaughtered? I think not longer than 48 hours.

166. But they may be kept there a good deal longer? No, I don't think they are kept longer than 48 hours.

167. I suppose they are sometimes kept there the whole of a Sunday? Very seldom; they are sometimes, but not often.

168. Don't you think that when these cattle have been driven a very long way from the interior during hot summer weather, even 48 hours is a long time for them to be without water, and that it must be very distressing to them? Very much so.

169. Have you ever had any experience in what may be called veterinary surgery? No, except such as ordinary persons among cattle and horses would have—no professional knowledge.

170. Don't you think such a state of things in which an animal is debarred from a necessary and healthy supply of water must necessarily have the effect of deteriorating the flesh? No doubt of it.

171. *Mr. Bell.*] Have you any idea what those tanks contain which are supplied with fresh water from the roof? Yes, about 300 gallons.

172. Is that the total quantity of water? That is the quantity from each house.

173. I suppose in dry weather that soon runs out? Yes, very soon—it is used for washing the carcasses.

174. Then in dry weather there is positively no water for some time? Positively no water. I may say that with regard to leaving the cattle without water in hot weather we can generally find a few buckets when they want it. One of the last things I say to the men, if I know a beast is going to be left, is, give that beast a drop of water. Sometimes a bullock has been very unruly and troublesome to get in, and they don't care about letting him out again.

175. *Mr. Watt.*] Is there any one on the Island whose duty it is to see that the cattle are watered, or is it merely left to chance? There is no one who is charged with that duty.

176. Is there any inspection made of the cattle slaughtered at the Glebe Island Abattoir with reference to their state of health? Well, they come under my observation. I am up the first thing in the morning—at 7 o'clock during the winter months—inspecting and taking the brands of the cattle; and then, as I have time during the day from my other duties I pass in and out through the slaughter-houses, keeping an eye upon the carcasses hung up.

177. Have you any powers in reference to diseased cattle? Oh yes, we have power to condemn them and to have them removed from the place. We deface the carcasses in such cases by scoring them with a knife, and see that they are taken away in the offal cart.

178. Do such cases occur frequently? Not very frequently.

179. Do you remember when the last case occurred? Some three months ago we had a beast cut down; it had an enlarged spleen; in fact the beast, when it was brought in, was dying of diseased spleen, of what is commonly called the Cumberland disease. Of course when I saw it I knew at once what was the matter with it, and from the manœuvres that went on I was convinced the butchers were quite aware of it; in fact I had cautioned them about it. A bullock diseased in this way presents unmistakable symptoms of the disease while it is being bled.

180. It is impossible for you to make this inspection carefully in connection with your other duties? Impossible. I will just run over my other duties: I commence in the morning at 6 o'clock in the summer, and 7 o'clock in the winter. I reckon all the cattle in the various yards and take their brands. I have all the accounts to keep, and I keep all the books in connection with all the animals coming to the Island. I make out all the receipts in the proper books and collect all the revenue derivable from fees. I take account of all the spleens daily, and take note of all meat that has to be condemned and defaced. In the evening I note the number of beasts that have been killed, and I expect so many spleens.

181. *Chairman.*] Do you depend entirely upon seeing the spleen of the animal killed to form your diagnosis? Not in every case.

182. But it appears to me from what you have stated that you merely take a cursory view of the animals as they stand in the pens? Only such a cursory view as I can take in numbering them and taking their brands. When we get a fresh brand, or a fresh lot of cattle, I am more watchful than at other times, and then I watch when one of these animals is killed, as the condition of one of them will tell pretty well what the others are. I give them such inspection as I can.

183. *Mr. Watt.*] Still this diseased meat may be sold to the butchers; you don't burn it? No, we only condemn it and send it away in the offal carts after it has been scored and defaced.

184. Now with reference to the sheep what do you do? Well, the only thing in the way of disease would be fluke, and it is very rarely there is fluke; and according to our regulations we are not to regard that as a disease, because the meat may be very choice. I should like to make a statement about the very subject you have been asking me about—the supervision of the animals received: It is my opinion that there should be an officer with a professional status wholly devoted to the inspection of all animals slaughtered, particularly the carcasses slaughtered in that establishment, as food for the public. That is my opinion, and I am glad to have an opportunity of placing it on record.

185. His duty would include the inspection of sheep as well as cattle I suppose? Yes, his whole and sole duty should consist in that, so that the public might have the highest guarantee against diseased animals being slaughtered and sold as food.

- Mr. J. Jagers. 186. *Mr. Bell.*] Are there many pigs slaughtered at the Abattoir? About an average of 400 weekly.
 11 June, 1875. 187. There are numbers slaughtered in the suburbs that never come there, are there not? Yes, large numbers.
 188. *Mr. Watt.*] Are you aware of the use to which the offal and refuse from the Abattoir is put? To feed pigs.
 189. Is that the case almost exclusively, as far as you know? Yes; there is a portion of it I am aware used in making manure, but the greater portion of it goes to feed pigs.

MONDAY, 21 JUNE, 1875.

Present:—

CHAS. WATT, Esq., | F. BELL, Esq.

H. G. ALLEYNE, Esq., M.D., IN THE CHAIR.

Mr. Frederick Oatley, Inspector, Glebe Island Abattoir, called in and further examined:—

- Mr. F. Oatley. 190. *Chairman.*] We have been furnished with a copy of the Orders and Regulations in force at the Glebe Island Abattoir;—are those orders and regulations sanctioned by the Governor and Executive Council?
 21 June, 1875. Yes.
 191. When did they come into force? On the first of this year. These are amended orders and regulations.
 192. The 13th regulation states that sheep and cattle will not be permitted to remain in the Abattoir-pens for more than forty-eight hours from the time they are brought in;—is that rule strictly adhered to? Oh yes.
 193. Are they never left in longer than that? No—very seldom; they are generally slaughtered and taken away the day they come in. The sheep are generally taken out to graze and to water.
 194. If they are kept in longer than forty-eight hours they get no water to drink? Not at present; only at times when there is water in the houses, which does not last very long; as a general rule they have not.
 195. The 14th rule states that no person shall expose diseased meat, or refuse or neglect to remove such diseased meat when ordered to do so by you or your assistant. What steps are taken to ascertain whether the meat is diseased or not? Well, in the first instance when my assistant gets on the rails of the cattle-pens to inspect the cattle he observes directly whether any of them are ill or sickly; and then after they are slaughtered the melts or spleens of the animals are hung up in the slaughter-house for inspection, and these are examined.
 196. Is your assistant competent to express an opinion on the health of the animals? I think so; he has had many years experience among cattle before he was appointed to his present office; he has been among cattle driven from stations in the country, and I should think he was in every way qualified to give an opinion.
 197. Is the examination of the spleen the sole test of the health of the animal? Yes, that and the examination of the lungs for pleuro-pneumonia.
 198. Are the animals examined before they pass into the cattle-pens or while they are being slaughtered? After they are slaughtered and dressed.
 199. And the lungs are inspected as well? Yes, the lungs and the spleen—more particularly the spleen.
 200. And when you detect by the carcass that the animal is diseased, what is your mode of procedure? We immediately score and scarify it and disfigure it so that it cannot possibly be sold to the butchers, and then it is taken away in the offal cart to be boiled down.
 201. Do you know as a fact that these carcasses are sent to the boiling-down establishments? Yes; they are put into the offal carts and taken away at once.
 202. Do you frequently have these unhealthy animals brought to the Abattoir? Not frequently. A month or two ago it was much worse in that respect than it is at present.
 203. What becomes of the unhealthy cattle before they arrive at the Glebe Island Abattoir—how are they disposed of? I am not aware that the unhealthy cattle are selected from the others; they are all sold indiscriminately at the different sale-yards; at least I should imagine so. They are driven down from the station in a mob without any distinction being made between the healthy and unhealthy animals.
 204. The 15th regulation provides that all blood, filth, and offal shall be removed, and the slaughter-house thoroughly cleansed by the lessee, to the satisfaction of the Inspector or Assistant Inspector, daily. Now, when we were there the other day, there was a good deal of what I call filth lying about, such as the contents of the intestines and other matters; the blood we saw going into the harbour. What I wish to know is to what extent is this regulation carried out, and why was the filth we saw the day we visited the Abattoir allowed to accumulate? That clause is inoperative as far as the disposal of what we call manure is concerned. That used formerly to pass through a large pipe under the floor, down the main sewer, and into the harbour, with the blood. The Government at that time intended to have the blood deodorised if practicable, and they made alterations in the drainage of the houses, so that it would not permit of the manure passing away to the harbour. Since then we have collected it, and shot it down in the place where you saw it, in order to dispose of it to the market gardeners; the blood runs into the bay as it did formerly.
 205. But this rule (15th) says distinctly that all such filth must be removed by the lessee or person occupying the slaughter-house;—don't you think it would be proper to call the attention of the Government to the fact that it is allowed to remain on the premises? Yes, I think so; but as I observed before, since the alteration was made in the drainage the paunch stuff cannot be carried away with the blood into the bay, and that clause is inoperative.
 206. Will you explain why you have not compelled the lessees to carry out this clause in its integrity? The Government take charge of this stuff themselves, and the lessees take away the offal.
 207. But I presume these orders and regulations are the only instructions you have to go by, and they say positively "All blood, filth, and offal shall be removed, and each slaughter-house thoroughly cleansed by the lessee or person occupying the same"? It would not be possible for the carcass butchers to do that, and the Government have taken the matter into their own hands.

208.

Mr.
F. Outley.

21 June, 1875.

208. But as these orders and regulations came in force less than six months ago, do you not think it would be prudent for you to report to the Government at once that this regulation is not carried out? Yes, I intend to do so.
209. The Government, so far from taking the duty upon themselves, state here distinctly that it shall fall upon the lessees? Yes, but still the Government have done it themselves ever since the alterations in the drainage were made. They remove the manure daily from the back of the premises to the dung pit for the market gardeners to take away.
210. But they had not removed it when we were there? Yes; there was none at the back of the premises where the paunches are emptied. The Government move it from there to the dung pit, where you saw it.
211. Have you reported to the Government that the lessees do not remove it themselves? Yes, I have done so, some six years ago.
212. Have you done so since these orders and regulations came in force—I mean remove it from the establishment altogether, and not merely from one place to another? No, I have not.
213. Were these rules embodied in former regulations? Yes; that clause was precisely the same in the old regulations.
214. When you speak of removing this matter, you mean that it is merely taken out of the compartment where the animal is killed, and deposited at the rear of the slaughter-house, where we saw it? Yes.
215. Do you consider that is the removal which is implied by this 15th section of the Regulations? I think so as regards the dung. It is evident that the Government lay claim to it, because they sell it for one shilling a ton to the market gardeners.
216. Clause No. 18 provides that no hide, carcass, or spleen of any horned cattle, not having been previously inspected, shall be removed until it has been inspected by you or your assistant;—is that regulation strictly adhered to? Yes, by me and my assistant.
217. The next clause, No. 19, states that no meat shall be blown in any slaughter-house, and if any meat be found blown, the owner shall be liable;—is that attended to very strictly? Oh yes, sir. That is a most filthy practice to blow filthy human breath into the meat.
218. Well then, clause 22 says that all hides, skins, heads, feet, and offal shall be removed from the Abattoirs only by the road at the rear of the buildings;—is that rule strictly adhered to? No, not at present; we permitted them to take the offal away by the front road, while the other was being repaired—it was in such a filthy state they could not get out by it.
219. Did not we see a lot of trotters piled up there? Yes, but that was a thing which I have never noticed before.
220. It is certainly a very bad practice? Yes, it is not allowed at all. There are some people who clean the trotters and send them to the butchers' for sale, and they have been rather neglectful and allowed them to remain for a day or two, and during my absence and that of Mr. Jagers they cast them over the bank; that is how they came there. But the trotters sell readily.
221. It appears to me that these regulations are calculated to keep the place thoroughly clean, and to make it perfectly inoffensive if they were properly carried out. Have you any difficulty in that respect—do you require any assistance to enable you to carry these out strictly? No, except that we require another man, and I have applied to the Government for one.
222. Are the proprietors of the animals which are killed in what we termed the leased houses subjected to any fees? Yes, 3d. per head for horned cattle.
223. Is that in addition to the £175 per annum? Yes, in addition to the rental.
224. Then the butchers who slaughter in the other houses are only subject to certain fees per head, without any rental? Just so.
225. Can you tell us the whole income received from the Glebe Island Abattoir? Yes, the revenue from the Abattoir and Glebe Island Bridge for 1874 was £3,996 2s. 10d., and the expenditure, exclusive of repairs to the roads leading to the Bridge and Abattoir, and the repairs to the Abattoir and Bridge, was £1,070. I have also, at the request of the Secretary, prepared a statement showing the nature of these outside slaughter-houses within the police district of Sydney, which I will now read:—"The number is eleven other than the Glebe Island Abattoir, and they are situated at Cook's River, Petersham, Canterbury, Five Dock, and Homebush. These places the police attend for the purpose of inspecting the brands of cattle intended for slaughter, but I am informed they do not examine the carcasses to ascertain their fitness or otherwise for human food; in fact anything like a proper inspection is rendered impossible by the slaughter-houses being scattered over so large an area, unless an inspector is present at each place during the time of slaughtering. This matter I brought under the notice of the Government during the administration of Sir James Martin, and a Bill was about to be introduced to meet the case, when his Ministry went out of office, and the matter has since remained in abeyance. At the places above enumerated there are large numbers of cattle and sheep slaughtered, which I consider ought, for the safety and protection of the public, to undergo the same supervision as that exercised at the Glebe Island Abattoir. I consider it desirable that these slaughter-houses, instead of being scattered as at present, should be confined to one locality, and at a distance of not less than six miles from the city boundary, and by this means one inspector would be enabled to effectually discharge the duties that would devolve upon him.
226. *Mr. Watt.*] Can you tell us the number of cattle and sheep slaughtered at all these places—the total number? That I am not prepared to give you; it must be a large number.
227. Can you give us a rough estimate of the number? Well, I should think about 200 head of cattle and about 500 sheep.
228. *Chairman.*] In your statement of the revenue and expenditure of the Glebe Island Abattoir does the item of £1,070 for expenditure include salaries and wages? Yes.
229. *Mr. Watt.*] And the removal of the dung and other expenses of that kind? Yes, it includes everything, except repairs to the roads and bridge.
230. Rent and everything? Yes; rent, fees, and everything. I have given the whole income and expenditure of the Abattoir.
231. *Mr. Bell.*] Who inspects the cattle after they are cleaned and hung up—your assistant or yourself? He and myself.
232. He inspects the brands, does he not? Yes, and the carcasses also; in fact he occupies nearly his whole time in that way.
233. But you examine them also yourself? Yes.

- Mr. F. Oatley.
21 June, 1875.
234. With regard to taking away the dead animals—is it not possible for these condemned carcasses to be washed and cleaned afterwards and exposed for sale? It is just possible; but they are so scarified and disfigured that I don't think there is any fear of it.
235. *Mr. Watt.*] They might be cut up for sausages? I don't think so; the law is too strict for that. I don't think there need be any apprehension of that.
236. *Mr. Bell.*] What is the law in that respect? They give two years imprisonment for it.
237. For what? For exposing for sale diseased meat. There was no law of the kind in force at all when I took office, and it was in consequence of my reports to the Government that a very stringent law was passed.
238. *Mr. Watt.*] Do you think the inspection now enforced at Glebe Island in respect to the health of the cattle previous to their being slaughtered is sufficient? I think so, judging from my own experience—twenty-six years ago in May last—and I have had some 25,000 or 30,000 beasts every year to inspect.
239. What I wish to ascertain by that question is, whether your duties and those of your assistant are so numerous as to prevent you from giving the cattle what you consider proper and sufficient inspection? I don't think so. I think we have plenty of time. My assistant gives nearly all his time to it.
240. Then you think that, as a matter of fact, the butchers, knowing the inspection to which they are subjected, are not likely to bring any diseased cattle to your establishment? No, they leave them behind rather than bring them on; they leave them behind to see if they will get well or not.
241. Have you heard of any particular cases in which cattle on the road have been otherwise disposed of? I have heard butchers say that they have drafted cattle on the road and disposed of them to persons at some other slaughtering establishment where there was no inspection—but that is only hearsay. With regard to the difficulty in ascertaining whether cattle are diseased, I may say that I have been used to them so long that I can detect a diseased animal at once, but of course I can say nothing about the outside slaughter-houses. I certainly think something should be done to protect the public in connection with those places.
242. *Chairman.*] Are there any regulations which apply to the other slaughter-houses of which you have spoken, similar to these which are printed for the guidance of the officers of the Glebe Island Abattoir? I don't think so, and I think it is very necessary that there should be, most decidedly. They are just as necessary in the one case as the other.
243. What steps, in your opinion, should be taken to render the Abattoirs at Glebe Island more efficient and less a nuisance than they are at present? Well, the first thing I would advise should be done would be to deodorise the blood; that is a most important thing. I think it should be preserved and utilized in some way; that is a matter which I think the Government should consider and take in hand. Then fresh water is very much required for watering the cattle—that should be supplied as soon as possible. They could get as much water as they chose for that purpose from the roofs of the houses.
244. Don't you want water for washing the meat also? Yes, for washing the carcasses and also for the carts and other things about the place.
245. Would it not be advisable also to give the men engaged in this work greater facilities for cleanliness? I think if a place were fenced off in the bay where they might go and bathe it would be the best thing that could be done.
246. *Mr. Watt.*] Would they bathe in cold weather? Oh; I think so.
247. Have you seen any cause for complaint in reference to the cloths which are used to cover the meat? Yes, the regulation which refers to them and to the carts in which the meat is carried away was inserted at my suggestion; in fact all the regulations were the result of my suggestions, as I found out what was necessary from time to time. They want a different sort of cart for the meat.
248. With reference to clause 31 have you any reason to complain of the butchers for non-compliance with the instructions you give them from time to time? Sometimes when they do not comply with the regulations to my satisfaction I call their attention to that clause, and threaten to summon them.

WEDNESDAY, 30 JUNE, 1875.

Present:—

CHAS. WATT, Esq., | F. BELL, Esq.

H. G. ALLEYNE, Esq., M.D., IN THE CHAIR.

Thomas Morgan Joseph, Esq., Assistant Medical Officer, Gladesville Asylum, called in and examined:—

- T. M. Joseph, Esq.
30 June, 1875.
249. *Chairman.*] Having in view the temporary disposal of the blood from animals slaughtered at the Glebe Island Abattoirs, otherwise than by allowing it to run off into the harbour, the Committee wish to know if any objection, and if so, what objection, exists to the proposal to dispose of it for the present by burying it on some portion of the Callan Park Estate? I know of no objection, with the exception of want of room; that, I think, would be the difficulty.
250. How much land do you think could be placed at our disposal for that purpose if the proposition were entertained? I am not much of a judge of land; but I should think an acre or two perhaps. It has been enclosed by the Balmain Municipality—the portion that would be available for the disposal of blood there.
251. Are they making use of it all? No, they are only using a very small portion of it.
252. What extent of ground do you think is enclosed altogether? I should say from 1 to 2 acres, as near as I can judge.
253. Are you any judge of area? No, I am not, at all.
254. Have you let the ground to the Balmain Municipality? No, they have simply been allowed to deposit their night-soil there. They asked for permission to do so, and Dr. Manning gave it to them.
255. Do you know how far the Callan Park Estate is from Balmain? No, I really cannot say. I have never been from Callan Park to Balmain, by land; I always go by water.
256. Is it contiguous to the Balmain Municipality? That I cannot say.
257. Do you know of any other land in that locality which would be suitable for the purpose? No, except that there seems to be a good deal of unused land on the boundaries of Callan Park. From the high ground in the Park you can see a good deal of waste land. 258.

258. Have you been on the piece of land you refer to, yourself? No, I have not.
259. Then you are unable to speak as to its quality? Yes.
260. Is the unused land adjoining it private property, do you know? I do not; it is not enclosed.
261. How often do you go to Callan Park;—are you in the habit of going there frequently? Yes, every fortnight or three weeks, or perhaps every month.
262. Do you go anywhere in the immediate neighbourhood of that portion of it which is used by the Balmain municipal authorities? Yes, I have been to see it once.
263. Did you observe anything offensive arising from it? No, I did not, but they have not carried out their contract as they should have done; they have not covered the soil properly, and they have dug their pits too near to a little creek there, on purpose to let some of the matter run away. I went there to see whether there was any effluvia arising from it, but there was none.
264. Notwithstanding this neglect in covering the soil properly there was no nuisance in any respect? No, I did not perceive any unpleasant effluvia at all, and I think, that with carefully dug pits, if they are properly covered, that sort of night-soil may be deposited there for the present, without any nuisance to the neighbourhood. Of course when the buildings are up they will be much closer than any houses there now.
265. Do you know whether the water in the creek to which you have referred is used for drinking water? No, certainly not.
266. Where does it run to? Into the Iron Cove, about 100 or 150 yards below the place where the night-soil is deposited.
267. What is the nature of the soil on the Callan Park estate? It is gravelly for the most part—iron-stone gravel.
268. Ferruginous clay? No, it is not clay so much as gravel; but in the lowest portion of the land I think there is a mixture of clay with it.
269. Are you aware of the depth of this gravelly soil? Do you mean in that portion of it where they are depositing this night-soil, or generally?
270. Generally? I cannot say, but I know that rocks crop up pretty frequently.
271. What depth are the holes in which the soil is deposited? They are supposed to be 6 feet deep, but, as I said before, the contract is not being carried out as it ought to be.
272. Do you know what depth of earth they put over the night-soil? I do not know; but it was understood that they were to cover it so that it should be dry—that is in dry weather of course.
273. That was the agreement you made with them? Yes.
274. Was the agreement in writing? I do not know whether it was in writing or verbal. I fancy Dr. Manning made a verbal arrangement with them.
275. Is the soil deposited there the contents of earth-closets or of cesspits also? What I saw was from cesspits—ordinary fluid night-soil.
276. Was your agreement with the Balmain Municipality that they should deposit only the stuff from earth-closets, or the stuff from cesspits as well as earth-closets? I do not know; I was not present when the agreement was made, and the little I know of it I learned in conversation with Dr. Manning.
277. But notwithstanding what you have seen of this cesspit matter there was no offensive effluvia from it in your opinion? Not in my opinion; and I reported to that effect to the Colonial Secretary.
278. *Mr. Bell.*] What is the extent of land in the estate? I think it is between 106 and 107 acres.
279. Have you a plan, or have you seen a plan of it? Yes.
280. With the new buildings which are to be erected on it? Yes. I know very nearly where they are to be erected—on a ridge that runs nearly through the estate, from south-east to north-west.
281. Do you think we could get a copy of that plan at the Surveyor General's Office or elsewhere? Yes, I am almost sure you could, because they surveyed recently and took levels, with the view of putting buildings upon it.
282. *Mr. Watt.*] Is the ground level or not? No; if it were level there would be a much larger area suitable for your purpose—that is the difficulty.
283. *Chairman.*] But you think that at all events there would be 1 or 2 acres of suitable land to be disposed of? Yes, I think about that. There is this piece of level ground where they are depositing the night-soil, and then there is a hill, and you would have to go down a long way on the other side of it to find another level spot, and that would be too far. The only suitable piece of ground is the piece I have mentioned.

Mr. Frederick Oatley, Inspector, Glebe Island Abattoir, called in and further examined:—

284. *Chairman.*] In the original plan of the Abattoir at Glebe Island, was there not some arrangement for receiving the blood? No, not that I am aware of. Mr. F. Oatley.
285. Not in the slaughter-houses? No. There was then a drain formed to let it run off into the harbour.* 30 June, 1875.
286. Was that in the original plan? Yes.
287. Was it intended in the original plan that the blood should go into the harbour? Yes, in the original plan there was a drain under the floors of the slaughter-houses, which took the blood into the sewer.
288. I think I saw some shallow basins when we visited the Island? Yes, they have been added since.
289. There are receptacles for the blood now then? Yes.
290. Would they be sufficient to contain all the blood which comes from the slaughtered animals? Oh, no; they are only intended to hold a small portion of it—10 gallons or so—to receive the blood from each fall.
291. Only sufficient to hold the blood of one animal? About three.
292. Would there be any difficulty in making these receptacles of sufficient size to hold the blood of five or even ten animals? No, it would be very easy to enlarge them.
293. It would not be very expensive to do that? Oh, no.
294. And it would not require much time to enlarge these reservoirs? No, I don't think it would take long to make the necessary alterations, and to have the pans any size you require.

295.

NOTE (on revision):—There was a large stone tank to receive the blood from the sewer, which was let to two different persons, but they failed to remove the contents as per agreement, in each case, and the use of the tank was abandoned.

- Mr. F. Outley. 295. It might be done in fact in two or three days? Yes.
- 30 June, 1875. 296. How many animals are generally driven in at one time to the slaughter-yards? Sometimes five or six, and sometimes two or three.
297. Seldom more than five, I suppose? No, not so many; generally not more than three.
298. Now, supposing it was arranged that the blood from these animals should be taken away in vessels placed in these reservoirs, instead of being allowed to run into the harbour, what additional labour do you think such an arrangement would entail? I should say two extra men would be sufficient, or three at the outside.
299. You think two or three would be sufficient to take it away rapidly? Yes, as soon as the pans were full.
300. And before other cattle were brought into the yard to be killed? Yes.
301. Would two men be able to carry that quantity of blood easily? Oh, yes, I think so; there might be a small tramway formed if necessary.
302. You think that additional amount of labour would be sufficient to remove the blood from all the slaughter-houses, taking one after the other? I think three men would be sufficient to do it.
303. I presume that if the blood were collected in that way it would be necessary to remove it daily? Yes, I think so, more particularly in the summer time.
304. *Mr. Bell.*] What time does it take to clear away the animals which have been killed, before fresh animals are brought in for slaughter? I should say about an hour, dressing and all.
305. Then that would give ample time for the three men to pass from one slaughter-house to another? Yes, I think so.
306. Was it intended originally that the blood should be taken away in these vessels? I think not; it is only since the recent alterations were made that this has been thought of.
307. Have you ever suggested that this should be done? No, but I have once or twice brought under the notice of the Government the necessity of doing something to prevent the blood from going into the harbour.
308. Do you know whether there is a good road from the Abattoir to the Garryowen Estate? Yes, I think so.
309. What is about the distance? I should not take it to be more than a mile or a mile and a-half at the furthest.
310. And do you think one horse and dray would be sufficient to carry all the blood away? I think so.
311. Daily? Yes, daily.
312. I presume this horse and dray would be able to make several trips between the Abattoir and the Garryowen Estate? No doubt of it. It is not more than a mile or a mile and a-half.
313. You have been to that estate yourself? Oh, yes.
314. Do you know any Government land near there? I am not aware of any Government land thereabouts.
315. We heard it stated that there was some Government land there—a common, or something of that kind? I think the piece of land you referred to would be on the Parramatta River, opposite Five Dock, and not near the Abattoir; at least I am not aware of any Government land there.
316. How many loads of blood do you think there would be daily? I should think about half-a-dozen loads would take it all away; some days, of course, they kill more than others.
317. *Chairman.*] Do you know of any suitable land there that could be had at a rental? I think there are plenty of lots that could be leased for this purpose. There is plenty of vacant land there of which no use is made, and I should think the owners would gladly let it.
318. *Mr. Watt.*] Would the blood run into the harbour if no water were used to wash it down the sewer? No, it would stop and choke up the sewer and there rot; it could not be done without water to flush the sewer.
319. *Mr. Bell.*] Is there easy communication from one slaughter-house to another? Yes; you have to go up one lane about twenty or thirty yards and down the next—that would be the only delay.
320. Could not a tramway be laid down from one house to the other, going through the fence? Yes, that might be arranged, but you would require to have secure gates to keep the cattle from getting out; then it would be only a few feet from one house to the other.
321. *Chairman.*] Would not that tramway interfere with the cattle going in and out? Yes, but they could be closed while the cattle were being killed.
322. *Mr. Bell.*] You stated in your former evidence that you had applied to the Government for additional assistance;—have you obtained that assistance? No, it was only put on the Estimates for 1876.
323. How many men did you ask for? Only one.
324. Would that man be sufficient with another to enable you to carry out the arrangement we have been discussing? No, we should require two or three men independently of that one. I should like to mention, in support of my previous suggestions in reference to licensed slaughter-houses in the police district of Sydney, that since my appointment as Inspector I have condemned several hundreds of carcasses of beef and mutton; and on one occasion, at Parramatta, I obtained a warrant from the Police Magistrate to seize and destroy a flock of sheep infected with catarrh, which at the time were being slaughtered and dressed in that locality, and some of which had been sent by rail to Sydney. I have also frequently taken proceedings and obtained convictions against several butchers for exposing for sale diseased and blown carcasses.

FRIDAY, 2 JULY, 1875.

Present:—

C. WATT, Esq., | F. BELL, Esq.

H. G. ALLEYNE, Esq., M.D., IN THE CHAIR.

James Barnet, Esq., Colonial Architect, called in and examined:—

325. *Chairman.*] Would there be any difficulty in making a reservoir in each of the slaughter-houses at the Glebe Island Abattoir, sufficient for the reception of the blood of from three to five head of oxen, or their equivalent in sheep, with the view of removing it immediately? That has already been done; it was done about eight years ago; stone receptacles were constructed from which the blood was to be put into casks and sold. There were also upwards of 300 casks provided, which are there yet. I have recommended the Government to sell them, because the house they were in has tumbled down.

Jas. Barnet,
Esq.
2 July, 1875

326. It would, of course, be necessary to have some kind of vessels provided to fit into these receptacles, which could be taken up in order to carry the blood away? That was all contemplated; there were to be square galvanized iron vessels, which two men could lift and empty into the casks and take away; there is a place provided for the casks.

327. Some of the members of our Board were of opinion that it would, perhaps, facilitate the removal of the blood, if a tramway were constructed at the back of the slaughter-houses? I hardly think that could be done; at one time I entertained the idea of removing the blood by pneumatic power.

328. From these receptacles in which it is caught? Yes.

329. Don't you think the blood would soon coagulate, being a sticky substance? I don't think so, but that was only an idea I had at the time; it has never been acted upon. The plan which was proposed was very simple—anybody could work it.

330. There would be no difficulty, in your opinion, in carrying out an inexpensive mode of removing the blood from these receptacles, either by the hydraulic process you have referred to or in some other way? Of course it could be done by mere hand labour; there would be no difficulty whatever about it. It was all provided for, but the arrangement fell through in consequence of the Corporation not giving us the water.

331. We want to avoid mixing water with it? Yes, I am aware of that. The whole scheme fell through for want of water. It was proposed to have 365 casks, 300 of which were provided, and should be there now, properly hooped and all.

332. If I understand you these receptacles are in the slaughter-houses now? Yes, they are there now, and there is a drain there through each of these receptacles which leads into a main drain; but that was only to be used for the purpose of washing the place out, not for carrying off the blood. The square galvanized iron tanks were to fit into these receptacles with a handle on each side, so that two men could take them up and empty them into the casks. There was a proper stand made for the casks. I reported upon this arrangement and showed how it could be done; that was eight years ago.

333. *Mr. Watt.*] These tanks would be easily moved by two men? Oh, without any difficulty at all.

334. After each fall? Yes. I suppose there would not be more than three beasts killed at a time; but even so it would be easy to remove the tank when it was full and substitute an empty one for it. There were 300 casks provided, and last week it was reported to me that the house they were in had tumbled down, and I recommended the Government to sell the casks unless they were going to use them in some other way.

335. *Mr. Bell.*] It has been suggested that a tramway should be made alongside the slaughter-houses so that these iron tanks could be lifted upon it and conveyed away easily;—do you think that would be an improvement? Well, you would have to go through the various houses, but I don't think that is necessary, because there is a stand outside for the casks, and it is easy enough to take them away. The idea at that time was, of course, to sell the blood to the proprietors of vineyards and market gardeners. It was thought they would take it away and bring back the empty casks. Since then it has been in contemplation to deodorise the blood on the premises by drying it with charcoal and dry clay, and other processes; there have been lots of schemes in fact; some of them have been pretty successful, and, I believe, there is now an offer to the Government to deal with it, which has been standing over for some years.

336. But if we determined to take away the blood daily—as soon as the cart could be filled with it, and place it in the ground at once, could this cart get close enough to the back of the slaughter-house to receive the contents of these iron tanks? Yes, the cart could go right up to each house.

337. There is a cart-way there? Yes.

338. That would not interfere with the cattle which were being slaughtered? No; the arrangement is that there is a place where a man can slip through from one house to another, but it would not do to have it open for carts to go through, as the bullocks would knock it to pieces.

339. *Chairman.*] Do you know anything of the Garryowen Estate? Yes.

340. Is there any public land or reserved land about there? No.

341. *Mr. Bell.*] Would there be sufficient land on the Garryowen Estate—say 8 or 10 acres—available for the disposal of this blood? No; I believe some of it has been used lately for depositing night-soil.

342. It would fertilize the land? Yes, but it would not do where there was any building going on.

343. *Chairman.*] There must be plenty of land about there which the owners are not making any use of? Yes, there is plenty of unoccupied land and also unenclosed.

No. 3 COMMITTEE—APPENDIX.

No. 1.

RETURN showing the quantity of the Blood and Offal from the animals slaughtered at the Glebe Island Abattoirs, during the year ended 31 December, 1874 :—

Blood—241,399 gals. Of this 10,400 gals. is disposed of for trade purposes to the butchers : The balance being 230,999 gals., which at present passes into Johnston's Bay.

Offal from the animals slaughtered during the same period, free from fat or excrement is, 1,232 tons 1 cwt. 110 lbs. Of this 97 tons 4 cwt. 43 lbs. is disposed of to the butchers for trade purposes : The balance, being 1,134 tons 17 cwt. 62 lbs., is taken to piggeries and other places at the expense of the butchers.

The trotters, sheeps' heads, &c., are readily disposed of to glue manufacturers.

The sheep carcase butchers are willing to give up the sheep offal without any consideration.

The beef carcase butchers will probably require some little compensation for giving up their right to the offal.

FRED. OATLEY,
Inspector.

No. 2.

PUBLIC ABATTOIRS, GLEBE ISLAND.

Orders and Regulations.

1. The Abattoir shall be opened daily (Sundays excepted) for the despatch of business, from the 1st October to the 31st March, from the hours of 5 o'clock a.m. to 7 o'clock p.m. (except on Mondays and Saturdays, on which days the Abattoir will be opened from 2 o'clock a.m. to 7 o'clock p.m.), and from the 1st April to the 30th September, from 6 o'clock a.m. to 6 o'clock p.m. (Fridays excepted, on which day the Abattoir will be open from 6 o'clock a.m. to 7 o'clock p.m.) ; and no slaughtering of cattle will be permitted during any other hour or day than the days and hours above-mentioned. Pigs, however, may be slaughtered and dressed at the Abattoir during the whole of Friday nights, between the 1st November and the 1st March, in any year. During Sunday it will be permitted to drive in and yard cattle.

2. The slaughter-houses shall, with the exception of six beef and six mutton slaughter-houses, be retained in the hands of the Government for the use of persons slaughtering therein.

3. Six beef and six mutton slaughter-houses shall be submitted to public competition, by lease, at an upset price of £175 per annum for the beef, and £110 per annum for the mutton, slaughter-houses.

4. An inspection fee of threepence per head shall be charged upon every head of cattle slaughtered in the leased houses.

5. Parties desirous of using the slaughter-houses reserved by the Government shall be permitted to do so on payment of the following fees :—

	s.	d.
For every ox, cow, bull, heifer or steer (including an inspection fee of 3d.)	1	0
For every calf (including an inspection fee)	0	6
For every sheep or lamb	0	1½
For every head of swine	0	6

6. No person or persons shall slaughter or attempt to slaughter in any of the reserved houses, without the sanction of the Inspector or Assistant Inspector of Abattoirs.

7. All fees shall be paid to the Inspector or Assistant Inspector of Abattoirs on demand, who shall pay the same into the Colonial Treasury under such directions as he or they shall from time to time receive from the Secretary for Finance and Trade.

8. Printed receipts shall be demanded by and given to all parties paying any fees.

9. The hours during which cattle may be driven in and yarded for slaughter, shall be from 5 a.m. to 8 a.m. between the 1st October and 31st March ; and from 6 a.m. to half-past 8 a.m. between the 1st April and 30th September in each year ; and cattle shall in all cases be inspected before slaughter. Milch cows and stall-fed cattle may be driven in between the hours of 2 and 4 p.m.

10. In all cases where cattle are brought to the Abattoirs in carts to be killed or dressed, notice shall be given to the Inspector or Assistant Inspector before such cattle are killed or dressed, and the hours for killing and dressing the same shall be from 9 a.m. to 4 p.m.

11. Should any cattle die while in the cattle-pens connected with the slaughter-houses, the owner of the same or person occupying the cattle-pen at such time shall immediately remove the same from the Island and destroy such cattle.

12. All animals on which fees are chargeable, shall be reported to the Inspector or Assistant Inspector of Abattoirs, at his office without delay, and the fees paid forthwith.

13. Sheep and cattle will not be permitted to remain in the Abattoir-pens for more than forty-eight hours from the time of being brought in.

14. No person or persons using any of the slaughter-houses shall expose for sale diseased meat, and no such person shall refuse or neglect to at once remove and destroy any diseased carcase or carcasses of cattle, when ordered to do so by the Inspector or Assistant Inspector of the Abattoirs.

15. All blood, filth, and offal shall be removed, and each slaughter-house be thoroughly cleansed by the lessee or person occupying the same, to the satisfaction of the Inspector or Assistant Inspector of Abattoirs, daily, before 6 p.m.

16. The premises attached to and the roadways in front and rear of each slaughter-house shall be kept clean by the lessee or person occupying or using the same, to the satisfaction of the Inspector or Assistant Inspector of Abattoirs.

17. The lessees of Abattoirs in which sheep or pigs may be slaughtered, shall furnish to the Inspector or Assistant Inspector, at their respective offices, a monthly return of all such animals as shall have been slaughtered at such Abattoirs, on or before the 4th day of each month.

18. No hide, carcase, or spleen of any horned cattle (not having been previously inspected), shall be removed from any slaughter-house until after the same has been inspected by the Inspector or Assistant Inspector of Abattoirs.

19. No meat shall be blown in any slaughter-house ; and if any meat be found blown in any slaughter-house the owner of such meat shall be held to be the person liable.

20. No person or persons shall yard or attempt to yard at the reserved beef or mutton slaughter-houses any animal without the sanction of the Inspector or Assistant Inspector of the Abattoirs.

21. Cattle as they are brought in for slaughter shall be kept separate from those already in the yards until the brands of those so brought in shall have been inspected.

22. All hides, skins, heads, feet, and offal shall be removed from the Abattoirs only by way of the road at the rear of the buildings.

23. The hours fixed for driving animals into the pens of the reserved mutton slaughter-houses shall be from 6 a.m. to 6 p.m. between the 1st October and 31st March in each year ; and between the 1st April and 30th September the hours shall be from 7 a.m. to 4 p.m. in each year.

24. It is strictly prohibited to place candles or lights of any description upon or against the walls, or upon or against any portion of the woodwork of the Abattoirs or stables, or any other building or buildings in connection therewith ; and the lessee or person occupying the Abattoir or stable where such prohibited candle or light is found will be held responsible for the same.

25. In cases where water is found running to waste in any Abattoir, the lessee or occupant will be held responsible for such waste.

26. Gambling is prohibited on Glebe Island.

27. Any person wilfully or negligently causing injury to any Government property of any description whatever on Glebe Island will be held responsible for the same.

28. The Inspector or Assistant Inspector, or any other officer connected with the Glebe Island Abattoir, may at any time enter to view any of the slaughter-houses connected with the Abattoir, whether leased or otherwise; and no person or persons shall obstruct, molest, or assail with abusive language either the Inspector, Assistant Inspector, or any other officer connected with the Abattoir, while in the execution of his or their official duties.

29. It shall be competent for the Inspector of the Abattoir at any time, should any person or persons occupying any of the houses reserved by the Government be found breaking or continuing to break any one or more of the regulations made concerning the Public Abattoirs at Glebe Island, to refuse to allow such person or persons to use any of the houses reserved by the Government.

30. The owner or person in charge of any cart or vehicle used for the transmission of meat from the Abattoir shall keep the same, and the awnings used therewith, in cleanly and proper condition, to the satisfaction of the Inspector or Assistant Inspector of the Abattoir. The Inspector may, when he considers it necessary, order any of the carts or vehicles used as aforesaid to be properly painted, and any such cart or vehicle shall not be used for the transmission of meat from the Abattoir until such order shall have been complied with to his satisfaction.

31. Any person or persons offending against any of the orders and regulations contained in paragraphs 1, 6, 7, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, shall for each and every offence forfeit and pay a sum not exceeding five pounds, nor less than twenty shillings.

No. 3.

Sydney, 29 October, 1873.

Sir,

In accordance with the instructions contained in your letter of 18th August, requesting our advice and suggestions as to the improvement of the present state of the Glebe Island Abattoir, more particularly on three points, which appear to be of the greatest urgency, namely:—

1st. The best means of obtaining a copious supply of fresh water.

2nd. A practical mode of deodorising or otherwise disposing of the blood and offal.

3rd. Efficient arrangements for preventing the drainage from the Abattoir passing into the harbour.

Having visited the Island and inspected the Abattoir, with this object in view, we do ourselves the honor to submit the following Report:—

In regard to the first-named requirement, that of water supply, we were informed by Mr. Oatley, the Inspector, that the daily consumption of salt water was 12,800 gallons, and a small supply of fresh water that was obtained from the roof, and stored in each house in iron tanks; at this rate, about 4,000,000 gallons of water would be required per annum.

We would therefore suggest that the rain water that falls on the roofs of the buildings, and on the surface of the ground outside the Abattoir, should be collected in underground tanks, and from thence pumped by action of the wind to a large tank (now partially excavated) on the highest part of the Island; from thence it should be distributed by gravitation to the buildings as required.

It is estimated that 1½ million gallons annually would be obtained in this manner. To carry out this plan a low-level receiving tank, to hold ¼ million gallons, will be required, and the tank on the hill, partially constructed, must be enlarged to hold 1¼ million gallons. This will leave 2½ million gallons to be provided, which we would suggest should be applied for from the Corporation, who by their letter of 17th September, 1867, offered to furnish a supply at 2s. 6d. per thousand gallons; that rate would make the cost of the quantity needed £312 10s. per annum.

The large tank when full will afford a supply for the establishment for three months, and would consequently suffice, without any other source of supply, for a drought of that duration.

With regard to the second point raised in reference to disposing of the blood and offal: At present the blood is allowed to run through the drains into the harbour; this, we would suggest, should be prevented, and the blood caught in receptacles provided for that purpose; be put in casks and sold for manure, or be deodorised by a process proposed to us by a Mr. Sutton of mixing the blood with pulverized clay, so as to form a portable article, and a valuable manure which would no doubt find a ready market. He has proposed to take the whole of the blood for ten years, upon condition that the Government find him £500 capital to start with. We do not approve of this, but would recommend that a trial should be made by the Government of deodorising by means of dry clay or earth, and that the necessary buildings and operations be provided for the purpose. We have no doubt as to the success of this method for deodorising the matter, and that it may be made to pay by per centage on proceeds, or otherwise, to parties to undertake the sale of the product.

The offal is the property of the butchers, and according to the regulations should be removed daily; to prevent nuisance from this source, all that is needed is the strict enforcement of these regulations, and that the Abattoir be kept perfectly clear of offal and paunch matter, by daily removal and the thorough cleansing of the premises be properly attended to.

As to the third point—for preventing drainage from passing into the harbour—when the blood is removed the slushing water only will run into the bay. With regard to this, we would suggest that it be passed through simple filter tanks, allowing only clean and inodorous liquid to escape, which would not be a nuisance. The drains should be flushed daily.

With regard to the mode of slaughtering and the means provided for that purpose, we have nothing to suggest, but we are of opinion that greater cleanliness throughout the establishment is much needed, and the regulations for that purpose should be strictly enforced; and we would recommend that additional assistance should be placed at the disposal of the inspector, with all proper appliances and materials for that purpose, as recommended by the Colonial Architect's letter of 2nd November, 1869.

To carry out our suggestions it is estimated that a sum amounting to £6,000 will be required. £4,000 is now available, and an annual outlay of £1,000 will be necessary, which we have no doubt will, after a time, be re-imbursed by the sale of manure.

We have, &c.,

JAMES BARNET,
Colonial Architect.

H. G. ALLEYNE,
Health Officer.

FRANCIS HIXSON,
President, Marine Board.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SYDNEY CITY AND SUBURBAN SEWAGE
AND HEALTH BOARD.

FIFTH PROGRESS REPORT

OF THE

BOARD APPOINTED ON THE 12TH APRIL, 1875,

TO INQUIRE INTO AND REPORT AS TO THE BEST MEANS OF DISPOSING OF THE
SEWAGE OF THE CITY OF SYDNEY AND ITS SUBURBS,
AS WELL AS OF PROTECTING THE HEALTH OF THE INHABITANTS THEREOF;

ADOPTED BY THE BOARD ON THE 18TH OCTOBER, 1875;

TOGETHER WITH THE

MINUTES OF EVIDENCE.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
16 *November*, 1875.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

THE SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD.

FIFTH PROGRESS REPORT.

To the Honorable the Colonial Secretary,—

SIR,

1. We have the honor to draw your attention to the accompanying Reports of two Committees appointed to inquire into the best means of disposing of night-soil from the metropolis, and the question of filtering the sewage at Blackwattle Swamp.

THE DISPOSAL OF NIGHT-SOIL.

2. We concur in the conclusions arrived at by the Committee. A letter of the 4th instant from the Chairman (Appendix C), together with the evidence appended, will explain the circumstances under which, during your absence, the Committee purchased on their own responsibility 20 acres of land for the required purpose, which is sufficient for the present, and places the Board in a position to recommend that the Nuisances Prevention Act be brought into operation by Proclamation, on or about the 15th day of November next, for Sydney and the Suburban Municipalities.

3. It may be as well to mention that Suburban Municipalities are not compelled to make use of this place of deposit in order to carry out the provisions of the Act. Clause 22 enables them to purchase or rent land for that purpose elsewhere if desirable.

BLACKWATTLE SWAMP.

4. The Chairman and other Members of the Board have repeatedly visited this place, and have anxiously considered whether anything can be done immediately to abate existing nuisances. There is one thing which it is obvious should be done. The stagnant pools, partly on the reclamation and partly on private property, should be filled up without delay, leaving room only for the temporary discharge of the sewage. This operation has been most vexatiously but unavoidably delayed for some time past, but we are informed that steps have now been taken by which the evil will be so far remedied without further unnecessary delay.

5. We endorse the recommendations of the Committee, but we further advise that silt pits should be constructed near the mouth of the existing sewer, to prevent as far as possible the silting up to which the proposed extension will be liable, on account of the want of fall, and we think it desirable that they should be so arranged and of dimensions suitable for trying some of the precipitation systems by which perhaps the sewage matter may be to some extent purified.

6. It might appear at first sight that, in adopting the recommendation of this Report, the Board were proposing to continue the existing evil of discharging sewage matter into the harbour. It must be borne in mind, however, that whatever arrangements may be ultimately made for the better disposal of the ordinary dry weather sewage, it is obvious that, in order to provide for the discharge of the flood waters, this as well as the other large sewers must discharge into the harbour. To divert the storm waters, if not exactly impossible, cannot but be regarded by any one who has any knowledge of the subject as impracticable.

7. In conclusion, we beg to advise the Government most strongly not to alienate any portion of this reclaimed land. From its low situation and the nature of the subsoil it can never be fit for human habitation. No doubt it would be found readily saleable, for certain classes of people seem willing to live anywhere, however obviously unhealthy the situation. If this area were to become populated, it would no doubt be soon converted into another of the hot-beds of disease so much complained of in the neighbourhood of the city. It cannot we think be turned to any really useful purpose except as a park or recreation ground for the inhabitants of the neighbourhood. A portion of it may not improbably be required for general sewage works which, if adopted, may we hope be carried on without creating any local nuisance.

*Board Room,
Sydney, 18th October, 1875.*

M. B. PELL,
Chairman.

[No. 5 COMMITTEE.]

REPORT

OF THE

COMMITTEE APPOINTED BY THE SYDNEY CITY AND SUBURBAN
SEWAGE AND HEALTH BOARD,*on the 9th June, 1875,*

"To find a suitable locality for the deposit of Night-soil."

ADOPTED BY THE COMMITTEE, 4 OCTOBER, 1875.

1. We have the honor to report that we have at length brought this inquiry to a close, having found and partly secured a place for the deposit of night-soil from Sydney and the suburbs, which appears to us unexceptionable, and is more easily accessible and more remote from human habitations than we had any hope of finding.

2. We endeavoured, knowing the difficulty and delay usually involved in dealing with private proprietors, to find some Crown land within a reasonable distance suitable for the purpose, but, after much inquiry and consideration, we were obliged to abandon the attempt. There are suitable places on the Church and School Lands on the Bunnerong watershed, but to pollute a running stream even temporarily is obviously undesirable. There is plenty of room on the permanent reserve in the neighbourhood of La Perouse's Monument for throwing the refuse away in an almost totally uninhabited district, but the ground is shallow, or hard and rocky, and it would be impracticable to bury or utilize the manure. Moreover, the distance, especially from some of the suburbs, is too great. Turning our attention to alienated land, we found that a sandy tract at the mouth of Cook's River, on its southern side, consisting partly of 300 acres, known as Webb's grant, is an unexceptionable place of deposit, appearing to combine all possible requisites in a higher degree than would have been expected within so short a distance of a large city.

3. The neighbourhood is almost entirely uninhabited, except for a very few residences on the opposite side of Cook's River, which at this point is about 400 yards wide.

4. The proposed site is bounded on three sides by the waters of Cook's River and Botany Bay, and on the fourth side chiefly by an insignificant and useless creek and by swamps. However much then the city and suburbs may extend, it may be made to remain for an indefinite period almost isolated.

5. There is no possibility of any watercourse being polluted.

6. The soil is deep and sandy and may be easily cleared, and with the application of night-soil under proper management might be made highly productive.

7. At a meeting of the inhabitants of the Municipality of West Botany, in which Webb's grant is situated, convened for the purpose of considering this matter (Appendix B), it was resolved by a majority that there was no objection to the deposit of night-soil in the proposed place. They very reasonably required that the roads over which they erroneously supposed that it was intended to convey this large quantity of matter—about 30 tons a day—should be formed and maintained at the public expense. We do not however contemplate using any of the roads referred to in their resolution. We are informed by the Mayor and by the Council Clerk of the Municipality that the inhabitants are almost entirely market gardeners, and dependent for manure upon Sydney; and that the introduction of an abundant supply would be a great boon.

8. The proposed locality may be made readily accessible from all parts of the city and suburbs on this side of the water. It may be approached by the Botany Road to within about half a mile of the waterworks; thence by a formed road to a new Government wharf at the mouth of Cook's River; thence by a punt to the 100 feet reserve along Webb's grant; thence by a road of a few hundred yards in length, to be formed along the reserve, to the place of deposit. The whole distance from the General Post Office is about 6 miles.

9. There is a suitable punt, the property of the Government, immediately available, and all the necessary arrangements may be made within a very short time.

10. At the proposed locality the blood and other refuse from the Abattoirs, indeed all the offensive refuse from the metropolis, may be permanently and usefully disposed of for an indefinite time to come.

11. If it should be finally determined that the sewage of Sydney shall be diverted from the harbour—partly by gravitation and partly by pumping—the proposed neighbourhood is very suitable for the formation of a sewage farm, should such an undertaking be decided upon, upon which all the sewage of the metropolis could be disposed of for many years to come without creating any nuisance.

12. We have not thought it necessary to cause surveys to be made for the purpose of determining the exact area which it would be desirable that the Government should resume, but we think, considering the highly favourable position of this land, and the great prospective requirements of the metropolis, that the Government should take steps immediately to resume about 500 acres in the proposed locality.

13. The Board have already expressed an opinion that it is obviously desirable that sanitary arrangements affecting the whole metropolis, and not the city alone, should be eventually under one central authority of some kind. The Committee, therefore, venture to suggest that the Government keep the management of the place of deposit within their own control for the present, pending the consideration of future and final sanitary arrangements for the city and suburbs.

14. It appears to the Committee of the very greatest importance that this first step towards a systematic arrangement of the disposal of refuse should be satisfactorily carried out, under the supervision of the Director of the Botanical Gardens.

Board Room,
Sydney, 4 October, 1875.

M. B. PELL,
Chairman of Committee.

Evidence taken before No. 5 Committee.

FRIDAY, 16 JULY, 1875.

No. 5 COMMITTEE MEETING.

Present:—

E. O. MORIARTY, Esq., | P. F. ADAMS, Esq.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Edward Lord, Esq., City Treasurer, called in and examined:—

1. *Chairman.*] We have understood that there is a piece of land marked on this plan (*producing tracing*) E. Lord, Esq. which belongs to Mr. Lord, or a large part of it. This is the Cook's River Dam; this is the 9-mile Beach, and this is a sort of peninsula (*indicating positions on tracing*) which we are told belongs to Mr. Lord? Yes, a portion of it belongs to Mr. George Lord. 16 July, 1875
2. It is marked on the plan as 300 acres? Yes; I don't think he has more than 50 acres of it; he only bought a portion of it.
3. Do you know at all to whom the rest belongs? No, I do not.
4. Do you know anything of Mr. John Webb who has some land in that locality? I only know him as an old colonist, but I do not know the proprietor of the land at the back of my brother George's ground.
5. Do you know the land yourself? Yes, very well.
6. What is the nature of the ground? It is a flat piece of sandy ground about 3 feet above the level of the river—low sandy scrub.
7. Not swampy? No. I think there is some swampy ground at the back of the peninsula.
8. Does it rise in the middle at all, or is it a dead level? It is almost a dead level; in fact the character of the country about there would indicate that sometime or other the salt-water has passed across the neck of the peninsular.
9. It is lower at the neck of the peninsular? Yes, but there is very little perceptible difference.
10. And you cannot say to whom this piece of land belongs? No.
11. Could you give us any information which would enable us to find out? I should think it could be readily found out in the Register Office; I do not know that my brother George knows more about it than I do, but I will ascertain. I own Rutledge's piece of 170 acres on Cook's River, just below Walker's ground, on the upper side of Shea's Creek; that is all a flat piece of ground, and no percolation could take place from it except into the creek; in fact the spring tides rise up to the bottom part of it. I have also 200 acres further on, but that would be objectionable as it is too near houses.
12. There is some population between this piece of Rutledge's and the Dam? Yes. With regard to this 170 acres I don't think the water which supplies Sydney would be affected in any way by making it a place of deposit for night-soil.
13. You would have no objection to allow it to be used for that purpose? No, I should be very willing to see it appropriated to that purpose.
14. Would you be willing to sell it? Yes.
15. Is it covered with scrub? No.
16. What is the character of the vegetation upon it? There is a sort of low broom stuff growing on it.
17. And it is about 170 acres you say. How much of it is swampy? The lower portion of it, but none of it would be if a drain were cut through it, because the water would drain into Cook's River.
18. For what purpose could you use it if it were drained? For feeding stock upon it and for other purposes.
19. A good deal of it is sand I suppose? No, there is a great deal of black peaty deposit.
20. Is it accessible from the road? Yes, easily accessible.
21. How far is it from the main road? I should think about half a mile.
22. I suppose there is no direct road to it, only a track? Only a track—the road has not been made. If you were to go along the Mudbank Road, where they are making a wharf, and make a road diverging from that, it would not be more than half a mile.
23. That would not be the Cook's River Road? No, about half a mile would take you into what is called the Mudbank Road.
24. Would not that be a long way round from Sydney? No, I don't think so.
25. Is the lot adjacent to your land occupied? Yes.
26. And the next lot? My brother's house is upon that.
27. Would there be any objection to the use of your land for such a purpose? I think not; as I apprehend the ground would be trenched and the soil covered over.
28. Are these lots (*indicating certain portions*) belonging to Walker and Byrnes valuable, in case they would have to be bought out? This piece (Walker's grant) could be purchased, I believe, but my brother would not sell his. On Walker's grant there is a residence occupied by a gentleman in Mr. Henderson's employment.
29. I suppose it is the house which is chiefly of value, not the land? The land is very good for market gardens; in fact most of the land about there fit for anything is worth about £50 an acre.

- E. Lord, Esq. 30. Can you get to your land by water, or would it be better to go to it by road? It would be better to go by road.
- 16 July, 1875. 31. You say that your ground is 3 feet above the level of the water;—what height above the level of the water is the highest part of it? It would not be more than 5 feet at the highest point. The great difficulty in depositing this night-soil is the possibility of percolation into wells that were near the place, but with such a frontage to Cook's River there would be no fear of that in this case, and if the ground were trenched and the soil covered over, I don't think it would be a nuisance to anyone.
32. This land to the north—Thomas Torkenden's—is cut up into allotments, is it not? There are some small houses on it belonging to market gardeners.
33. *Mr. Moriarty.*] Is the land owned by them, or is it merely rented? I think it is owned by them. I have a man occupying part of my land—a market gardener—but if it were desirable for him to leave, I could make arrangements for that. If you were to determine upon taking it, I should be glad to give you the land for four or five years, while you were clearing it and making your arrangements, without any charge, and I should consider the improvement the land would undergo would be quite sufficient return.
34. Would you be willing to sell it? Yes, or I would sell it.
35. Would you be disposed to let it for a longer period than four or five years? Yes, but then I should require some return for it, because my object would have been effected; the land would in this first five years be improved, and I should be able to get a higher price for it.

Arthur C. Betts, Esq., Staff Surveyor, called in and examined:—

- A. C. Betts, Esq. 36. *Chairman.*] Do you think this piece of land—this 300 acres of Mr. John Webb's—would be a suitable place for the deposit of night-soil? Yes, I do.
- 16 July, 1875. 37. Is it dry sandy soil? Yes.
38. Not so much inclined to be swampy or muddy as these lots further down (*indicating certain portions on tracing*)? No, it is more sandy.
39. It is covered with thick scrub? Yes, with low scrub.
40. Small trees? No, mere bushes.
41. It would be easily cleared? Very easily.
42. Has it much fall to the sea, or is it a dead level? It is not a dead level; there is a sort of hollow or indentation running through the centre; it slopes inland, and the water runs into Muddy Creek (*indicating locality on tracing.*)
43. Do you mean that there is a creek along the centre of the peninsula? No, it has a depression inland, and from this creek there is a slope towards the sea.
44. What is the greatest height of any part of it above the level of high water? I suppose it would not be more than 25 or 30 feet.
45. Would there be any difficulty in making a road from the Cook's River Dam to this piece of land? No, you would have to go across this piece of swampy ground here (*indicating locality.*)
46. And to cross the creek? Yes, an embankment, and a first-class culvert would do it, I believe. A survey would have to be made.
47. Can you show us on the map where the nearest existing main road is;—the road, for instance, to Sans Souci? (*Witness pointed out the position of the road on the map.*)
48. What other road is there;—is there any other road going nearer to this dam? There is another road to the eastward, passing Bechag's place, which goes within half a mile of this 300 acres.
49. Then you would have to make a new road for about half a mile? Yes.
50. And that would go through private property, apparently? Yes.
51. Is there any right-of-way by land to that 300-acre block? I believe not; none that I could find on the plan or on the ground.
52. *Mr. Adams.*] You said that you did not think the highest part of that ground was more than 25 or 30 feet above high-water-mark? Yes, that is the general height of it; I did not go up to the highest point, which is probably a good deal higher.
53. Is there any portion of it which approaches the sea-level, or is it all higher? It is all higher.
54. How much higher is the lowest portion of it than the sea-level? The lowest portion is about 7 feet above the sea-level.
55. *Chairman.*] Is any portion of it rocky? No, none of it; I did not see any rocks upon it.
56. *Mr. Adams.*] You think it would be suitable for trenching in night-soil? Yes.
57. Did you ascertain anything about the ownership of this piece of land? I made inquiries, and from what I could find out it belonged to Mr. George Lord; but there seemed to be some doubt about it, and I have since been told that he only owns 20 acres on this point (*indicating locality.*)
58. *Chairman.*] Are there many people living on the allotments adjacent to it? No, I think there are four residences.
59. They are mostly huts, I suppose? Bechag has a nice house, and it has a frontage to the creek; the others are huts, but there are two or three small stone cottages going up.
60. Is there any rock or stone about there for making a road? Oh yes; at Bechag's it is all a rocky hill—sandstone of course.

MONDAY, 6 SEPTEMBER, 1875.

Present:—

E. O. MORIARTY, Esq., | W. C. BENNETT, Esq.
M. B. PELL, Esq., B.A., IN THE CHAIR.

G. W. Lord, Esq., M.L.A., examined:—

61. *Chairman.*] We wish to take some evidence from you, Mr. Lord, in reference to the disposal of night-soil. We understand that you have some land near Shea's Creek which might be suitable for the purpose? G. W. Lord,
Esq., M.L.A.
Yes. 6 Sept., 1875.
62. Can you point out the position of your land on this map (*producing map*)? Yes. (*Witness pointed out certain localities and explained the position of the old Botany Road, the existing Botany Road, and the Mud Bank and Cook's River Road which goes down to a wharf.*) This is Webb's grant of 300 acres. I have about 150 acres altogether on this peninsula (*indicating locality on map*).
63. Then you have nearly the whole of the peninsula? Yes.
64. Is there anyone living there? There is a small hut, belonging to a boat-builder.
65. Would you be willing to sell that piece of land? I am not anxious to sell it, because I bought in order to keep people away from me; still I think it would be a good place for the deposit of night-soil. I think, however, you would find plenty of land for your purpose in the neighbourhood of the old Botany Road. There is some land here (*indicating position*) where the late City Engineer, Mr. Edw. Bell, recommended some pits for night-soil, but the Corporation did not agree with him, and it was not used for that purpose. I don't think there would be any fear of percolation there, and I think you would have no difficulty in getting a piece of suitable ground, as it is all raw sand.
66. Is there much population there? No, very little; there are some market gardeners, and they purchase this night-soil as it is, and leave it uncovered on their ground until it becomes a perfect nuisance.
67. We propose that it should be trenched into the ground at once, but I am afraid the locality you mention is too near the road? I do not think there would be any fear of percolation.
68. What is the price of land about there? About £25 to £30 an acre.
69. Would you be disposed to sell the whole of your 150 acres on this peninsula? Well, I should not like to have the night-soil deposited too near my house; it would not perhaps be objectionable if you went a little way back from the frontage.
70. It would be taken across in close carts and covered over at once (*exhibiting photograph of iron cart proposed to be employed*). Would there be any difficulty in punting the carts across? Oh no, not the least; they could be taken over at all times—the place is so sheltered.
71. What would you be disposed to take for your land? I could not say at present.
72. It would not fetch much now if it were put up to auction? No, except where this creek goes into it.
73. Could you name a price to us? Not at present; I should have to consider it.
74. When can you give us an answer? The day after to-morrow.
75. For the whole block? Yes. (*Vide Appendix A.*)

WEDNESDAY, 15 SEPTEMBER, 1875.

Present:—

E. O. MORIARTY, Esq., | W. C. BENNETT, Esq.
M. B. PELL, Esq., B.A., IN THE CHAIR.

Mr. Thomas Wilmot called in and examined:—

76. *Chairman.*] You are Council Clerk to the Municipality of West Botany, are you not? Yes. Mr.
Thos. Wilmot.
77. Do you reside within the Municipality? No; I reside on the Newtown Road, but I have some property there. 15 Sept., 1875.
78. Are you well acquainted with the municipality? Yes, I know every piece of land in the neighbourhood.
79. It is very sparsely populated, is it not? Yes, there are very few people living there.
80. Can you give us information as to the number of residents—owners of land—in the municipality? Yes, I can point them out to you on this map (*producing map of West Botany Municipality*).
81. What was the last sale of which you are aware in the neighbourhood of this block—Webb's grant of 300 acres? A sale from the Crown, at the rate of £3 per acre or £3 10s., I am not sure which.
82. What is the assessment upon land in the West Botany Municipality? It is assessed upon a valuation of £20 per acre in the vicinity of Webb's grant, and £10 per acre in the vicinity of Sans Souci.
83. Can you tell us how much land—how many acres—you have on your books under Webb's grant? I have only 240 acres on the books. The information I obtained about this land was from Thomas Drewell, who lives on the spot. We knew nothing about its being sold until twelve months after the sale, and then he gave me the particulars.
84. Will you state the names of the purchasers as they appear in your books? George Lord has 40 acres; Matthew Doyle, 10 acres; Wilson, 20 acres; R. Lynch, 20 acres—he is a butcher, I think; Statham, of Bank Chambers, 50 acres; executors of Clarke, 50 acres—that is on the bank of Muddy Creek; Thomas Drewell, 20 acres; N. Cooper, 30 acres;—in all, 240 acres.
85. Are you acquainted with these persons' addresses? I can furnish them if you wish.
86. They are not residing in the municipality? No; Drewell excepting, most of them reside in town. Wilson, who was an engraver, died lately, I believe.
87. About how many householders are there residing in the whole Municipality of West Botany? There are (*referring to book*) seventy-six in the West Botany ward.
88. Are there two wards then? Yes; one lies on the other side of the Rocky Point Road altogether.
89. There are seventy-six on the western side of the Rocky Point or Sans Souci Road? Yes, extending from the dam to the Sans Souci Hotel.
90. What occupations do these people follow? They are market gardeners, all of them with one exception, I believe. There is a boiling-down establishment opposite to that road (*indicating locality on map*).

- Mr. Thos. Wilmot. 91. Has any night-soil ever been taken out there? I don't think so; I never heard of any.
92. Do you think these market-gardeners would be glad to have some? Yes; if they could get it cheap I should think they would be very glad of it.
- 15 Sept., 1875. 93. As a matter of fact they do not get any at present? No; they use what they get from their own premises.
94. I suppose they obtain stable-manure from Sydney? Yes.
95. Then it is a great want in that neighbourhood? Yes; wherever there is sand they would be very glad of it; it requires a great deal of sand mixed with it to use it as manure.
96. Do you think any objection would be made to the deposit of night-soil there by any of the inhabitants? No, I think not, because I remember one night, when there was a meeting, and there had been some mention of it in the papers, some of the ratepayers said they would not object if it were brought out and shot down into a hole alongside of the Council Chambers; but I think it would be well to get an expression of opinion from the residents in the municipality.
97. They would be glad to have it so long as they could obtain it at a reasonable price? Yes, and if it were not too far to haul it.
98. What do you suppose they would give for it if it were brought to their own places? Well, I could not put a price upon it; I know they would be very glad to get it, but I could not say what they would give.
99. Have you any idea how this piece of land—Webb's grant—is cut up? No, I have no information, except what Drewell gave me. The whole of it was sold about three years ago, I believe, by Richardson and Wrench.

WEDNESDAY, 22 SEPTEMBER, 1875.

Present:—

E. O. MORIARTY, Esq., | W. C. BENNETT, Esq.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Mr. Thomas Drewell called in and examined:—

- Mr. T. Drewell. 100. *Chairman.*] I believe you have some land at Botany which you wish to sell, Mr. Drewell? Yes; I should be willing to sell it.
- 22 Sept., 1875. 101. We are in want of a few acres in that neighbourhood? I have 20 acres there.
102. *Mr. Bennett.*] I thought you said to us the other day that you had only seventeen;—have you sold some of it? I have, but I can get it back by paying what I receive for it.
103. *Chairman.*] What are you willing to sell it for? I would sell the whole 20 acres for £300.
104. That would be at the rate of £15 an acre? Yes.
105. We are not exactly in a position to close with you at once;—will you make us an offer to sell it at that price? Yes, I will sell it at that price.
106. Would you mind signing an agreement to that effect? No; but I should require an advance of money to pay off the persons I have mentioned before I could sell it to you.
107. Yes, that would be necessary before the purchase was closed; but just while we are considering the matter—whether it will suit us to take it—we require a little time, and we wish to know whether we can have the land under offer to us for that time: I merely wish you to agree to sell it at a certain price; otherwise we may have all our trouble for nothing? What time would you require?
108. You see there are other persons besides ourselves to be considered;—would you be inclined to place it under offer to us for a month; most likely we shall be able to give you an answer long before that? Well, I should like to conclude the business as soon as possible.
109. So should we, and in all probability we should be able to do so in a short time, but in case of any obstacle presenting itself it would be as well to have a month? But that would prevent me from accepting any offer I might get for it elsewhere. I would like to close the matter at once, because I want to get away from the place. I could sell the land easily enough; Mr. Lord has offered to take it.
110. *Mr. Bennett.*] You have the title direct from the Crown,—have you not? No; I bought it from the grantee, Mr. Webb, 38 years ago.
111. The title is all correct, I suppose? Yes; I bought an allotment of 20 acres from John Webb, the grantee, 38 years ago; he was an old friend of mine; I was acquainted with him in England, and when I immigrated here I met him again.
112. How long would you be willing to let the offer stand open? Do you agree to give me £300 for the 20 acres?
113. We want a little time to consider; but we wish to know whether we can have your land at that price, so that we need not be looking about for other land? Well, you are placing me in a curious position, because you are keeping me in suspense, and you may throw me over after all.
- (*Witness retired for a short time while Committee deliberated, and returned.*)
114. *Chairman.*] We have determined not to make any further delay, but to accept your offer. I have drawn up an agreement for the sale, which I will read to you. (*Agreement read.*) You have your title deeds I suppose? When I went down there I left my title deeds with Mr. Dawson, of Pitt-street; they can be had at any time.
115. Will you sign this agreement? Well, I could not complete the sale unless I paid the others I have sold to. I have received money from them—£5 from one and another—about £15.
116. But you can arrange with these people? Oh, there will be no difficulty about that; but I have not got the money to pay them with. I would sign a receipt for the money and it could be deducted from the price.
117. Supposing you sign an agreement to sell your land at £15 an acre, would that meet the difficulty; then if you could not make an arrangement with these people you could sell us the rest of the land; are you quite sure you can arrange with them? Oh yes; I have already arranged with one of them.
118. *Mr. Moriarty.*] Cannot you get an offer from them to sell the land to you? I can get the receipt back at once that I have given them when I give them the money.
119. *Chairman.*] Have you transferred any of it? No, sir. I have merely given receipts for the money I received.

120. Then if you sell the land to us they will only have to recover the money from you; how much will you have to pay to get quit of them? I could do it for about £15.
121. Altogether? Yes. I would give a receipt for it as part of the bargain, the money to be deducted from the £300. I would also give you an order to get the deeds from Mr. Dawson.
122. If you will deposit the deeds with us we will give you a receipt for them, and will also give you the £15. (*Witness went out and returned in half-an-hour with the deeds, when the agreement was completed and signed.*)
123. Do you know any one else who is willing to sell land in the same neighbourhood? Yes; I think the Wilsons would be willing to sell their land; it is nearer the Point than mine; they have 20 acres.
124. I thought your land was next to Mr. Lord's? No, the Wilson's go between me and Lord.
125. Mr. Wilson lives in Pitt-street, does he not? No, the father is dead; I think he used to live in York-street.
126. Who owns the land now? The three sons and the daughter he has left; they own the 20 acres between them.
127. Where do they live? One lives in Campbell-street, one lives at Wollongong, and the Rev. Mr. Wilson, of Grenfell—F. S. Wilson—is another son.
128. Who is next to you on the other side? Cooper; at least he purchased from Webb about the same time that I did.
129. Where does he live? I don't know; the last time I saw him he was going down either to Goulburn or one of the Southern Gold Fields.
130. How long is that ago? About five years.
131. And you have seen nothing of him since? No.
132. What is the width of your 20 acres? It is 22 chains across on the eastern line and 28 chains on the western line.

Mr.
T. Drewell.
22 Sept., 1875.

APPENDIX.

A.

Kirkoton, Darlinghurst,
8th September, 1875.

Dear Sir,

I must decline to sell my land on the Seven-mile Beach; I am afraid that night-soil deposited there would become a nuisance to my residence at Botany.

I remain,
Yours faithfully,
GEO. W. LORD.

Professor Pell.

B.

Next to Shepherd's Nursery,
Newtown Road,
23 September, 1875.

Dear Sir,

I have the honor to inform you that a meeting of the residents of the Municipality of West Botany was held this evening, for the purpose of obtaining their opinion relative to the deposit of night-soil in their neighbourhood. The Mayor was in the chair; and the following resolution was carried by fourteen against five:—"That the residents are willing that night-soil be deposited on Webb's grant, providing that the Government vote to the Municipal Council of West Botany the sum of £4,000, for the purpose of making a good substantial road from the junction of West Botany-street and Rocky Point Road round to Webb's grant, and also allow £100 per year to keep the said road in repair."

The other five residents were opposed to its being brought in the neighbourhood at all.

I have, &c.,
THOMAS WILLMOT.

C.

Sydney City and Suburban Sewage and Health Board,
(Office, Colonial Secretary's Department),
Sydney, 4 October, 1875.

Sir,

I have the honor to inform you that a Committee, consisting of Mr. Moriarty, Mr. Bennett, and myself have been engaged for some time in endeavouring to find a suitable place for the deposit of night-soil from the metropolis, with the object of placing the Board in a position to recommend the Government to bring the "Nuisances Prevention Act" into force at an early date.

After much trouble we have found that the only unexceptionable place within a reasonable distance is a sandy tract of 300 or 400 acres at the mouth of Cook's River on the southern side. It is not the object of this letter to report formally on the subject; so that it is sufficient to state that it may be made immediately and easily accessible.

We were deterred for some time from recommending this place from the circumstance that the whole of it is, except a reserve of 100 feet above high-water-mark, private property held by a number of proprietors; and we found that so great a delay would occur in dealing with these people as to prevent the Act referred to from being brought into operation during the ensuing summer. Fortunately during your absence we found an opportunity of purchasing 20 acres at a moderate price from a Mr. Drewell; and the Committee on their own responsibility took the rather unusual course of closing the bargain at once, being unwilling to incur even the chance of losing so excellent an opportunity. This has been informally reported to the Central Board, and is highly and unanimously approved by them.

We found it impossible to obtain the requisite information regarding this land without disclosing the object of our inquiry; and if we had failed to make ourselves independent for the time, and to set a value on the land by the purchase we have effected, most exorbitant demands would probably have been made, and our object possibly defeated, as will be inferred from the evidence enclosed.

The spot selected may be approached as follows:—By the Botany Road to within about a mile of the waterworks; thence by a formed road to a new Government wharf at the mouth of Cook's River; thence by a punt to the 100-ft. reserve around Webb's grant; and thence by a few hundred yards of road to be made along the reserve to the place of deposit.

The Committee have satisfied themselves that all the arrangements may be made within a very short time, and at a moderate expense, there being a suitable punt, the property of the Government, now available.

All the usual legal formalities were observed in making the contract of purchase.

Hoping that the course pursued will meet with your approval,—

I have, &c.,
M. B. PELL,
Chairman.

The Honorable the Colonial Secretary.

Mr. Bennett acted in the absence of Mr. Adams, who was a member of the Committee.

[No. 8 COMMITTEE.]

REPORT

OF THE

COMMITTEE APPOINTED BY THE SYDNEY CITY AND SUBURBAN
SEWAGE AND HEALTH BOARD,

on the 21st September, 1875,

“To devise a scheme, and to cause plans and specifications to be prepared for filtering
the Sewage at Blackwattle Swamp.”

ADOPTED BY THE COMMITTEE, 5 OCTOBER, 1875.

1. We have the honor to report that we have visited and examined Blackwattle Bay and the mouths of the sewer and of the open drain discharging into the bay. We regret to say that we are convinced that no filtering operations are practicable without resorting to pumping.

2. The sewer from its mouth upwards has a rise of 1 in 248, and the open drain which joins the stream from the sewer a few yards below its mouth has a rise of only 1 in 600.

3. The bottom of the existing sewer at its mouth is only 2·80 feet above low-water and its distance from the shore is 1,684 feet. This is a very insufficient fall leaving no margin for a filtering experiment. Any such attempt therefore must be abandoned.

4. It appears to us that the only remedy which can be applied within a moderate time to the intolerable nuisances at present existing in this locality is to construct a sewer with the least possible delay, to carry the whole of the sewage entering what was formerly the head of the bay, down to the water's edge. At the mouth of the proposed sewer, arrangements should be made to carry the ordinary dry weather sewage into deep water as has been proposed at Fort Macquarie. In order that the sewage may be drawn off as soon as possible, the invert and sides of the sewer might be first constructed and brought into use.

Board Room,
Sydney, 5th October, 1875.

M. B. PELL,
Chairman.

1875.

LEGISLATIVE ASSEMBLY.

THE SYDNEY CITY AND SUBURBAN SEWAGE AND HEALTH BOARD.

SIXTH PROGRESS REPORT.

To the Honorable the Colonial Secretary,—

SIR,

1. We are informed that in accordance with a letter of the 7th August, from the Chairman, you have given instructions that an arrangement proposed some years ago for carrying, by means of iron pipes, the every-day dry-weather sewage which is discharged from the main sewer at Fort Macquarie into deeper water, should be carried out.

2. We have now the honor to report that we have agreed to recommend that similar works, designed by Mr. Moriarty, of which plans and specifications have been prepared, and of which the total estimated cost is £3,200, be constructed without delay at the mouths of the Tank Stream and the Queen's Wharf sewers, as the only measure immediately available for effecting any mitigation of the evils at the outlets of those sewers, so much complained of last summer. The storm-waters under these arrangements will escape as usual, as they inevitably must under any possible arrangement. The particulars will be found appended. We think, however, that it would be well that this work should not be undertaken immediately at the Woolloomooloo Bay sewer. In its present condition, as described further on, we doubt whether the proposed plan would be found to work well there. Near the mouth of the Hay-street sewer at the head of Darling Harbour elaborate silt-pits have been constructed by the Corporation, and it would be well that their effect should be more thoroughly tested by experience before complicating the question by these additional works.

3. Similar arrangements are contemplated in connection with the smaller sewers emptying into Darling Harbour, but the plans and estimates have not yet been prepared. Mr. Moriarty recommends that a change should be made in the wharfage arrangements at this part of the harbour, by which the accumulation of offensive deposit under and between the jetties may be effectually prevented. It is only by some such measure that the disgusting state of the water frontage in Darling Harbour can be radically amended, but we have not yet had time to collect sufficient information to make any definite recommendation on the subject.

4. As much misapprehension has arisen as to what is meant, or what is intended, by our proposal to carry the sewage into deep water, we must here remind you that we do not consider this as in any sense a solution of the difficulties connected with the sewage question. We believe, however, that a great improvement will be effected if our proposals be carried out. When the sewage is discharged into deeper water, and at a lower level, it will be at once mixed with a larger quantity of salt water, and be thus to a greater extent diluted and disseminated, being more exposed to the action of the tide, instead of being discharged upon the fore-shore, where it festers in the sun and air, and becomes offensive; or spread over the surface of the water with almost equally bad effect.

5.

5. We should have hesitated in recommending so large an expenditure upon what we propose as a measure of mitigation only, if we were not convinced that the proposed works will be of use under any possible system of sewerage which may be adopted. There appear to be only three ways, other than the one already in operation, of dealing with the every day sewage :

- (1.) It might be to some extent purified by filtration, but there is not at the mouth of any of the large sewers a sufficient fall for carrying out such an operation effectually, and even if pumping were resorted to in order to gain a fall, we are not aware of any method of filtration which can be relied upon as even approximately perfect. We by no means intend in this Report to give any decision upon filtration methods, but merely to point out that if such a method were adopted the works now recommended would still be of use in case the method of filtration should prove imperfect, or from accident should become at any time inoperative.
- (2.) The same remarks apply almost exactly to the many precipitation processes so much talked of in England, except that they do not require so much fall and might therefore be more easily tried.
- (3.) The only remaining method is the thorough-going one of diverting the every day sewage which creates the offence altogether away from the harbour. The storm waters, as we have more than once remarked, must discharge as they do now into the harbour. In full flood the sewage would be so much diluted as to cause no offence, but in the earlier stages of a flood the waters would be much contaminated, and it would therefore be an advantage that the first scourings of the sewers which could not in all cases be diverted with certainty, nor perhaps even with advantage, should be carried, as in the other cases, into deeper water.

6. Under the proposed arrangements the mouths of the sewers will be always closed to the air, except during floods, which will be a great improvement. It will prevent the escape of noxious gases offensive to the neighbourhood, and will also prevent the wind when in a certain quarter from causing a current up a sewer and driving the sewer gases through any opening which may occur into house, street, or yard. We may remark also that it is the approved practice to close the mouths of sewers with traps somewhat in the manner which we propose.

SILT-PITS.

7. Much has been said about the supposed efficiency of silt-pits as a remedy for certain evils; and the two evils, the contamination of the shores and water, and the silting up of the harbour, which are totally and absolutely distinct, have been so curiously confounded together that the popular mind has become completely mystified about what is really a perfectly simple matter.

8. The substances which are conveyed into the harbour by the sewers, and which it would be desirable, if possible, to dispose of otherwise, may be roughly classified as follows :—

- (1.) The light organic contaminating matters, partly in suspension and partly in solution, which create the nuisance, and which are the distinctive characteristics of sewage.
- (2.) The fine sand, comminuted clay, and other finely divided earthy matters, which are at all times brought down by the sewage water, and in large quantities during heavy rains. This matter is carried over every part of the harbour, and even far out into the ocean, and slowly settles to the bottom.
- (3.) The coarser sand which is brought down in times of flood, a part of which is deposited at the bottoms of the sewers, generally near their mouths, and a portion at and about the outlets, forming, in some cases, sand banks, which become polluted by the offensive organic matter.

9. Of the first class it is generally admitted that ordinary silt-pits intercept very little. A large portion of the organic matter, especially in fresh sewage, is in solution, and cannot therefore be intercepted, and of the remainder a large portion is generally light and floats away. Near the mouth of the new sewer at the head of Darling Harbour very well-constructed silt-pits have been formed, and it is admitted that

that they have no perceptible effect in purifying the sewage. It appears to be of about the same quality as that from the sewer at Woolloomooloo Bay, and much worse than that from the main sewer at Fort Macquarie, at the mouth of neither of which is there any such contrivance.

10. It has been found that even an elaborate system of settling tanks on a large scale, where the sewage is subjected to chemical processes to secure the precipitation of the offensive matters, has only partially succeeded in purifying the sewage. It would be idle therefore to expect any sensible improvement in this respect from an ordinary silt-pit.

11. The discharge into the waters of the finely divided matter described in the second class is an ordinary operation of nature which appears to have been going on since the world began, and which no efforts of man can arrest. It has no doubt been greatly increased here by the breaking up of the natural surface of the ground in the various ways incidental to settlement, but it is doubtful whether it has been in any important degree increased by the construction of the sewers. A very small proportion of this matter is arrested by a silt-pit. This slow deposition at the bottom of the harbour cannot possibly be prevented or sensibly diminished. It is satisfactory therefore to learn from Mr. Moriarty, that dredging to a depth of 30 feet can be easily and cheaply carried on, and that there is no danger of the navigation of our harbour being impeded by this cause.

12. The coarser matter forming our third class, brought down chiefly by storm waters, may to a considerable extent be intercepted by silt-pits. It is still, however, very doubtful whether they are in this respect even, of any real advantage in ordinary cases. This matter, if it is brought down at all, must either be retained in the sewer or silt-pit, or pass into the harbour, where it tends to impede navigation. It must be got rid of in some way; and it is evident that the cheapest way, so long as it is effectual, is the best. Now it appears from the evidence of Mr. Moriarty, who however is anxious that as much as possible of this matter should be intercepted, and of Mr. Bell, that in general the cheapest way of removing it is by dredging. In some cases, however, where there are jetties close together, and ordinary dredges cannot act, as is the case in Darling Harbour, the expense of dredging is much increased, and silt-pits are no doubt desirable. The silt-pit at the bottom of Market-street has in this way we believe done good service. We recommend that similar silt-pits be constructed near the mouths of the other smaller sewers along the eastern side of Darling Harbour.

13. There are circumstances also, as we shall have occasion further on to explain, under which it is desirable to construct silt-pits to prevent the silting up of the lower part of the sewer itself.

14. The best way, if it were possible, of keeping the silt, whether fine or coarse, out of the harbour, would be to keep it out of the sewers. This may to some extent be effected—

(1.) By keeping the streets and yards and others places where surface drainage enters the sewers well swept and clean.

(2.) By catch pits at the gully-shafts where the water from the street gutters enters the sewers. We cannot however expect any great improvement from such arrangements. At Birmingham they were troubled in this way even more than we are, for the main sewer empties into a small but navigable river. The following is an extract from a most valuable Report of 1871, by a Committee appointed to inquire into the sewerage of that town:—

Birmingham is a macadamised and not a paved town, and the consequence is an immense amount of road detritus; the greater part of this is swept up and carted away, but in wet weather a portion is washed through the street gulleys into the sewers, and so carried to the outfall at Salfley, and constitutes, on a rough estimate, about one-half of the total quantity of 120 tons per day of solid matter there deposited.

Various gully-traps have been tried with a view of excluding this from the sewers, but as the Borough Surveyor is of opinion [see report on this point in Appendix IV] that those now in use are as efficient as possible, there is little hope that the quantity can be materially diminished with the present system of macadamised roads.

The following is an extract from the Appendix referred to:—

As to the desirability and possibility of preventing the passage into the sewers of mud, silt, and other products, the Borough Surveyor considers that the best way of effecting this would be by a systematic paving of yards, courts, footpaths, and carriage-ways; efforts may be made to intercept road drift before entering the sewers, but with our present macadamised roads, steep gradients, large area, and great traffic, it could not be done effectively, even at a very much greater cost than the present system.

ALLEGED

ALLEGED EFFECT OF THE DISCHARGE OF SEWAGE INTO THE HARBOUR ON THE HEALTH OF THE CREWS OF H.M.S. SHIPS ANCHORED IN FARM COVE.

15. Certain letters from the Imperial naval authorities, complaining of the unhealthiness of the anchorage-ground reserved for men-of-war in this harbour in consequence of its proximity to the mouth of the main sewer and the filthy state of the anchorage are appended. It appears that in the early part of this year enteric or typhoid fever broke out on board one of the men-of-war at anchor there, and that it was attributed to noxious gases from the mouth of the sewer at Fort Macquarie.

16. On this subject we have taken the evidence of Dr. Alleyne, the Government Health Officer, who enquired minutely into the subject, and who has proved, so far as such a matter is capable of proof, that the sewer is quite innocent in this case.

- (1.) At the time when the fever occurred on board the "Barracouta" Dr. Alleyne visited the merchant ships about the various wharfs, some of them lying close up to the mouth of the Tank Stream and to those of other sewers—far more offensive than that at Fort Macquarie, and in far less airy situations, and found not a single case of illness on board any of them.
- (2.) At the same time no case of enteric fever from any of the merchant ships was admitted into the Infirmary, although that disease was prevalent in the city.
- (3.) On board the training-ship "Vernon," whose place of anchorage was near that of the men-of-war, enteric fever also appeared.
- (4.) The men-of-war and the "Vernon" drew their water from a plug at Fort Macquarie connected with the city mains, and the merchantmen drew their supply from other branches of the city mains.
- (5.) Complaints were made on board the "Vernon" of the bad quality of the water.
- (6.) When the "Vernon" was taken to a different anchorage, and water obtained from a different source, the sickness disappeared.
- (7.) There seems no reason to doubt that the sickness on board the men-of-war and the "Vernon" was caused by a faecal contamination of the water, by which means it is well known that enteric fever is readily communicated. It is satisfactory to know that the most prompt and vigorous measures are being taken by the city authorities to prevent the possibility of such contamination for the future.

17. In order to ascertain whether the state of the bottom at the anchorage-ground at Farm Cove is in such a state as to be dangerous to the health of the crews of vessels lying there, samples were taken up by a light dredge in the presence of three members of the Board. Though of dark colour, they had, when taken up, no offensive smell as of sewage matter, and did not differ much in appearance or smell from mud dredged up on the same occasion from Neutral Bay, which is out of reach of contamination from the sewer. It is probable that the dark colour is owing partly to the nature of the clay and partly to the decomposition of various marine plants and animals.

18. The samples were submitted to Professor Liversidge, whose report is appended. The samples taken from the anchorage-ground, after having been kept for a day or two, became slightly offensive, but no indication of sewage contamination could be detected. It seems to us hardly possible that the health of the crew of a man-of-war, where all the sanitary conditions are so favourable, should suffer from this cause.

CONSTRUCTION AND CONDITION OF THE SEWERS.

19. In order to ascertain the state of the sewers, we engaged the services of Mr. Davies, a competent person employed in the Harbours and Rivers Department. He examined them so far as they are large enough, that is where the height is not less than $3\frac{1}{2}$ feet. His report and his evidence given before the Board will be found appended.

20. Our object in instituting this survey was not only to discover whether there is anything which requires immediate attention, but to gain certain information of much importance towards coming to a decision on the main subject of our enquiry.

We

We need make no remark as to cases in which the sewers have been found to be out of repair, for no doubt the City authorities will give attention to the matter to prevent serious dilapidation.

21. To the state of a portion of the Tank Stream we must, however, draw your attention. We observe that it has frequently of late been confounded with the main sewer discharging at Fort Macquarie. We remark, therefore, that it has no connection with that sewer, but discharges at the Circular Quay. The following quotation from Mr. Davies's report discloses a state of things which should not be suffered to continue. It may have been long known to some, but probably not to many; in any case we hope that giving full publicity to the facts will lead to a speedy remedy:—

" 9. At a point about 80 feet below Queen's-place the old Tank Stream culvert commences. Its sides are of stone, with cross beams planked over, and the culvert is 12 ft. x 5 ft. in the clear.

This portion is in a foul and dilapidated condition. There is a deposit of large ballast stones, street metal, and sand, mixed with fetid sewage matter, forming a mass varying in depth from 18 inches to 2 feet.

In some places the sides have partly fallen in, and a dam is made across the bottom of the culvert, thus hindering the flow of the sewage.

The effluvia escapes in all directions, most especially through several large holes in the roof.

At Queen's-place there is an uncovered man-hole about a foot above the bottom of the culvert; through this man-hole the sewage escapes, in flood time, along the front of some small houses, and occasionally finds its way into them.

On each side of the man-hole referred to is a bank of stone, gravel, and other material washed down from the neighbourhood; this heap is trimmed down inside the sewer by the people of the adjoining houses, so as to allow the surface drainage to enter the man-hole.

In this portion of the sewer there are six connecting pipes with traps, and eight square holes unconnected. The flaps of the traps are in good order.

10. Under Hunter-street, a hole 15 in. x 12 in. is cut in the bottom of the cylinder, which carries the Hunter-street sewage across the Tank Stream. Through this hole the sewage rushes with great violence to the Tank Stream, especially in wet weather.

Under No. 15, Hunter-street, there is a chamber, 30 ft. x 30 ft., formed in the sewer, the only covering of which is the flooring-boards of the house. Near this also are several large holes in the sides which show daylight, through which the foul gases escape.

At 60 feet further on a large hole, about 3 feet in depth, is scooped out of the bottom of the sewer; this hole is filled with very offensive matter. At this point the new sewer joins. There is a large hole in the roof, 12 ft. x 4 ft., showing daylight, over the junction. Through this hole the stench rises and infects the atmosphere of the neighbourhood."

22. Our recommendation with respect to this matter, is that what has already been done, and done well and effectually in other parts of the same line of sewerage, should be done here; and this disgusting "elongated cess-pit" in the heart of the City should be converted into a properly formed sewer.

23. It is obvious that it would be desirable, so long as the dry weather sewage is allowed to discharge in its present state into the harbour, that the sewage from the Tank Stream should be diverted into the main sewer which discharges under much more favourable conditions at Fort Macquarie. There would be better opportunities there for carrying on filtering or other purifying operations if they should be decided upon. The levels, however, show that such a diversion is impossible, except to a very limited extent.

24. The condition of the upper parts of the Pitt, Elizabeth, Castlereagh and Macquarie streets sewers at their heads is very bad. On account of there being no head of water there is a great accumulation of filth. There seems no remedy, except to clean them periodically by hand labour until such time as sufficient water and the necessary appliances are available for keeping them well flushed.

25. The main sewer and its branches at Woolloomooloo Bay, near its mouth, present great difficulties. The main sewer is too large, badly designed, and for a considerable distance back from the water where it passes through the reclaimed land, it has a very slight fall. The same may be said of the branch sewers in the same locality. Before reaching the flat the sewers have a good fall, so that in times of heavy rain they bring down coarse sand, which the diminished current on the low ground cannot carry off. The consequence, as described by Mr. Davies, is that in the main sewer there are large and to some extent consolidated deposits of silt, and that the branch sewers are so filled up as to be almost or entirely useless. In some cases the connections, if there are any, are completely closed by the silt, and in some there are large accumulations of offensive matter. We are informed that the sewers were cleaned out about eighteen months ago.

26. It appears from Mr. Davies' report that in a great many cases the connections have become stopped, either by an accumulation of filth or by the traps having become fixed. What becomes of the drainage from premises thus supposed to be connected we do not at present know.

VENTILATION OF SEWERS.

27. One of the most important points to be attended to in the construction of sewers is ventilation. Unless this is efficiently secured very serious consequences to the health of the inhabitants may and probably will follow. Great pressure under certain circumstances is produced in a sewer, and if some easy exit is not provided for the sewer gases it is found that they will force their way through the connections into streets, yards, and houses.

28. We gather from the evidence, although no definite information has yet been obtained, that a large proportion of the house connections are either without traps at all, or very imperfectly trapped. Some of the gully-shafts in the streets are in a similar state. Where there are water-traps the water in dry weather frequently entirely evaporates, and a free communication is established between the sewer and the outer air. From these causes there appears to have been very little accumulation of offensive gases in the Sydney sewers, as they are allowed to escape freely and gradually in all directions. This is of course a most improper condition of things, but under all the circumstances it is no doubt fortunate that a general system of traps has not been introduced. There is no provision for ventilation, except the shaft in Hyde Park, which is connected with one system of sewers only, and which cannot produce any important effect, except in the immediate neighbourhood. If good traps had been generally in use an accumulation of excessively foul sewer gases would have taken place. It is well known that no traps can be relied upon when there is any considerable pressure within the sewer. If then such pressure had been produced by the wind blowing up the sewer, or by a sudden influx of water into it, the foul gases accumulated would have been forced through house connections with a poisonous effect; for instead of being generally diffused as they are now they would have been concentrated in places where the traps happened to be least efficient.

29. Before anything be done with regard to traps it is essential that the sewers should be properly ventilated. It is now established, both on theoretical grounds and by the results of experience, that it is absolutely impossible to ventilate a sewer except by ventilators at frequent intervals. On this subject we refer you to Mr. Bennett's evidence. The tallest shaft, even if a fire be kept burning in it, cannot produce any effect in ventilating a sewer or system of sewers, except in its own immediate vicinity. If the draught is great, instead of drawing gases from the remoter parts of the sewers, it draws air through the traps or open connections in its immediate neighbourhood. This is not a theory merely but has been proved by careful observations.

30. There are many plans which have been suggested for ventilating sewers, but the only one which we can recommend is by street ventilators fixed in the man-holes, or at sufficiently frequent intervals. These are made so as to hold pans of charcoal, through which the gases pass and are rendered harmless and inodorous if the charcoal be changed at intervals of a few months. This requires attention and involves expense, but expense and care are necessary if sewers are to be a benefit instead of a nuisance.

31. In ordinary weather the street pipes connected with the sewers would share the advantage of the proposed ventilation. In heavy rains however, when great pressure is caused in the drains, and the greatest danger arises, the lower part of a street drain may become gorged and the sewer gases in its upper part be left without any legitimate outlet. To provide against this the highest part of each street drain should have a separate ventilator.

32. To the extent indicated at all events the ventilation of the sewers should be carried out as soon as possible, and when this is done and not before it will be desirable to enforce an efficient system of trapping all connections.

33. We sent to London some months ago for samples of street and other ventilators and they may be expected to arrive shortly. The proposed ventilators are placed even with the roadways, and when properly attended to are said to create no offence.

offence. It would perhaps be desirable if it were practicable to carry ventilating pipes to the tops of the chimneys, but to do this efficiently and at sufficiently frequent intervals would involve an enormous expense.

34. We believe that the public health was much more endangered during last summer by the general escape of sewer gases in various parts of the city than by the condition of the outlets of the sewers, the offensive smell and appearance of which created such an outcry.

35. In calling the attention of the city authorities to certain defects in the sewers requiring attention, and in recommending that expensive works should be undertaken in connection with them, it cannot but occur to us as it must occur to anyone, that it is very unjust that the owners of houses, who derive the chief benefit from the sewers, should pay nothing towards their management or maintenance. In our Second Progress Report we recommended that the cost of the removal of night-soil should be charged to the owners of houses, and this recommendation was adopted in the "Nuisances Prevention Act." We suggest, therefore, that a like charge in the shape of a rate should be levied in the case of houses so situated that the refuse from them may be removed by means of the sewers.

SUGAR COMPANY'S WORKS.

36. In the very earliest stages of our inquiry our attention was called to certain nuisances said to exist upon these premises. A Committee was therefore appointed, of which Mr. Watt was Chairman, to inquire into the matter. Their Report is appended, and, in the conclusions at which they arrived, the whole case is stated in so lucid and concise a manner as to render any further statement of the facts by us quite unnecessary.

37. In consequence of the Report of the Committee and the subsequent action of the Board it was arranged that the Company should thoroughly clean out their pond, the city supplying them in the meantime with water for carrying on their ordinary operations, without charge. Negotiations were also set on foot, by which it was hoped that it would be arranged that the Company should altogether cease to make use of what is in reality sewage water, and be supplied exclusively from the city mains. Unfortunately, through some disagreement as to the price to be charged for the water, this negotiation led to no good results.

38. The Company may have a right to store on their premises this pond full of sewage water kept at a high temperature by the nature of their operations. This is a point of law on which of course we can offer no opinion, but it involves a growing nuisance in a populated locality, which cannot be long suffered to continue. There can be no radical remedy until the Company obtain a supply of water from some purer source.

39. After the pond had been cleared out and the Company had determined to continue the use of the creek water they formed a filter-bed for the purpose of purifying the water at its entrance upon their premises. In order to ascertain what improvement had been effected by this arrangement Mr. Watt was instructed to visit the premises and to report upon the subject. From their evidence it appears that the results are very far indeed from being satisfactory. The water is clarified by the filter-bed, but is not in any sensible degree deprived of its offensive character, and the constant discharge of hot water into the open drain leading from the Company's premises still continues. A memorandum on this subject is appended (*vide* Appendix D). We feel great difficulty in making any recommendation on this subject. The Company have an undoubted right to the use of the water. It is not contaminated by them to any sensible extent, but the effects of the contamination arising from the occupation of the area drained by the upper part of the creek are to some extent aggravated by the nature of the Company's operations. Those operations were carried on long before the creek was contaminated by the settlement of population upon its banks. We can only recommend that the influence of the Government may be exerted to effect an arrangement under which the Company may use the city water exclusively, and that the sewage entering their premises may be diverted, as suggested by Mr. Bell, into the Abercrombie-street sewer.

40. The Committee draw attention to the gross state of the watercourse altogether independently of the Sugar Company's works. Between Parramatta-street and Blackwattle Bay is one of those low lying areas quite unfit for human habitation, which can never be efficiently drained except by pumping from reservoirs at a low level. The construction of the sewer alluded to in our last paragraph will however effect an improvement, and we are informed that the Mayor of Sydney has undertaken in conjunction with the Government to replace the present open drain by a properly formed sewer. The existing evils will no doubt to some extent be mitigated by the proposed works, but we must confess that we feel the greatest misgivings. A great part of this area is very little above high-water-mark. No sewer can possibly be efficient. The whole place must continue to be a hot-bed of disease. Nobody should be allowed to dwell there. The most effectual remedy would be to resume the whole, pull down the houses, and convert the area into a park.

41. The condition of the creek above the Company's works is no doubt very bad, but constitutes only one of a number of similar cases about the metropolis, which cannot be dealt with until some general system of sewage has been decided upon.

BOILING-DOWN ESTABLISHMENTS.

42. Many complaints are made of the excessive nuisance occasioned at times by boiling-down establishments in the neighbourhood of Glebe Island and other places. It will probably be found necessary to cause all such establishments to be removed to a greater distance from the city. This could not be effected without further legislation, but we understand that the Government have full power with respect to the establishment on Glebe Island, a portion of the refuse from which discharges into the harbour, and is such a nuisance to the inhabitants of some parts of Balmain and the Glebe. We recommend therefore that this nuisance be removed with the least possible delay.

THE STATE OF THE WATER SUPPLY.

43. As far back as the 25th May a Committee was appointed, of which Dr. Smith was Chairman, to examine into the state of the Botany watershed and the appearance of the water. In the conclusions at which they arrived, as expressed in their Report, we entirely concur, supported as they are by the results of Professor Liversidge's analyses. We do not think that there is any appreciable contamination of the water collected on the Botany watershed at present. It is obvious, however, and scarcely needs to be remarked, that the watershed being so near Sydney, and so large a portion of it being private property, there will be an ever increasing difficulty in maintaining its purity. The quantity and quality of the silt which collects in the Crown-street and Paddington reservoirs indicate clearly that the water supplied from Botany, though wholesome when not contaminated after its passage into the mains, cannot be considered of the very first quality.

44. The cause of the excess of the organic matter in the Crown-street reservoir over that in the engine pond at Botany has not yet been ascertained. We are of opinion that this contamination, although requiring investigation, is not such as to justify any immediate anxiety.

45. With respect to the supply from the Lachlan Swamp we cannot report so favorably. Dr. Smith's Committee point out clearly the immediate sources of contamination, and the observations of the Committee and the conclusions of Professor Liversidge support each other.

46. At the suggestion of Dr. Smith Professor Liversidge analysed samples taken on the 27th of July from dams Nos. 1 and 2 on the Lachlan Swamp, and from the mouth of the Bore. His report is appended, in which he states his conclusions that the water in No. 1 dam is of about the same quality as that in the engine pond at Botany; that No. 2 dam is seriously contaminated, and that the water at its entrance into the Bore appears to be a mean between the two, being contaminated to almost exactly the same extent as indicated in former analyses, of which particulars were furnished in his first report.

47. In remarking upon the difference of opinion which appears in the evidence between Dr. Smith and Mr. Watt on the one side, and Professor Liversidge on the other, we must observe in the first place, in order to prevent misapprehension, that this
disagreement

disagreement such as it is extends only to cases such as that of the Lachlan Swamp water, where the contamination is very slight. As to the grosser cases of water contaminated in the mains as exposed in Professor Liversidge's report, it is impossible for any two persons having any knowledge whatever of the subject to disagree.

48. There is no dispute as to the correctness of Professor Liversidge's results, but doubts have been raised whether the conclusions which he draws from them as to sewage contamination can be considered as proved. We think, however, it may be conceded that his conclusions, if not absolutely proved, are at all events invested with such an amount of probability as to justify any reasonable man in acting upon them.

49. The sources of contamination are obvious and close at hand. Indications known to appear when contaminated waters are analysed appear in this case, as shown by Professor Liversidge, and admitted by the other chemists. On this point there is no disagreement—there seems no room for rational doubt.

50. It having been clearly shown that the principal sources of contamination to the Lachlan Watershed are the drainage from the Municipalities of Woollahra and Waverley and the Sheep Quarantine ground, we are of opinion that every available means should be adopted not only to divert the present drainage from those Municipalities, and other sources of pollution, but also that steps should be taken to guard the watershed from any additional ones being created; as although it is admitted by all the scientific witnesses that the water is not at present contaminated to any injurious extent, yet that conditions might arise which would render the water unsafe to use for domestic purposes should these sources of contamination not be removed.

51. We believe that it is inevitable that the water from this source must—at any rate for a few years—be used for supplying a portion of Sydney, and we therefore think that the City authorities have done well in making every effort in order to preserve its purity as far as possible for the time; and no doubt the Government, now that their attention has been called to the subject, will take early steps to remove the Sheep Quarantine Station. But it should be kept steadily in mind, and the public attention should be kept continually directed to the fact, that this as well as the whole watershed must be regarded as a temporary source only, and that we must look elsewhere for a more abundant and a purer supply.

52. We must now direct your attention to the condition of the Bore itself, by which the Lachlan water is conveyed to Sydney. It is described by Mr. Davies, who examined it recently under our instructions.

General remarks.

6. The tunnel throughout is most irregularly driven, being in a zigzag without any apparent lines. There is no fixed gradient, but the bottom consists of a succession of bars and hollows, so that the silt fills up the hollows from bar to bar with a depth of from 3 to 15 inches.

The roof varies from 4 feet to 9 feet in height; the lowest parts are always in full bore when the lock is open, thus confining the foul air in the high chambers formed in the roof.

If there were three or four ventilators on the shafts they would tend greatly to purify the water as well as the air.

The sides are not trimmed but form so many shelves and nooks with a sediment of fine peaty matter lodging on them, from $\frac{1}{2}$ to 1 inch thick.

53. The accuracy of this description is fully borne out by the evidence of Mr. Bell and Mr. Stacey (appended to our Second Progress Report), who examined it and cleared it out in the year 1872. It is obviously, from its internal configuration, an entirely improper channel by which to convey water to the City. It is liable to great accumulations of peaty deposit, and can only be cleansed with great difficulty.

54. On the 28th of May a Committee was appointed to visit and examine the line of Busby's Bore. The object of this inquiry was to ascertain how far it is probable that the water in the Bore itself is contaminated by soakage from the inhabited areas through which it passes. The Committee point out certain places where they considered it probable that such contamination might take place. The evidence of Mr. Bell and Mr. Stacey shows that no soakage was perceptible at one of those places, the Ice House shaft, when the Bore was cleared in the year 1872, and this is confirmed by the report and evidence of Mr. Davies who examined it recently, and further states that there is no soakage whatever between Hyde Park and Park Road, but that a considerable quantity of water flows into the shaft at that place. We must beg you however to consider that on both occasions on which the

the Bore was emptied and examined the weather for several months had been unusually dry. What takes place at this point in wet weather there is no direct evidence to shew. It is obviously improper that any open filthy drain, without an artificially formed bottom, should be allowed to cross the line of the Bore, although the Bore at this point is at a considerable distance below the surface. It would be desirable, to prevent danger of percolation, that the bottom of the drain referred to should be formed with impervious materials. That the Committee were right in their conclusion that sewage from the houses to the west of the Barracks, and from the Barracks, finds its way by percolation into the Bore, is confirmed by Mr. Davies's observations :—

No. 1, Park Road.

2. In this shaft water percolates freely through a fissure in the rock 12 feet below the surface.

There is only surface drainage to the houses in Park Road, and the surface water and sewage matter finds its way to the old quarry-hole, and is there absorbed by the made ground. I have no doubt that it afterwards reaches the shaft, since there is nearly the same volume of water running off the drainage area as there is running into the tunnel through the shaft.

55. The sewage from the Barracks and the immediate neighbourhood should be conducted in the first instance along the road by formed gutters, and thence by pipes and proper channels until entirely clear of the Bore. This proposed arrangement of course is a very imperfect one, as it would conduct the sewage into the almost stagnant ponds in Moore Park, between the Randwick Road and the Rifle Range; but anything is better than to allow it to find its way by percolation into the tunnel which directly supplies a large part of Sydney with water.*

56. The sewage from this neighbourhood might be carried away by a sewer to replace the upper part of Shea's Creek. We cannot, however, recommend that any additional sewage should be diverted into that creek until such a sewer has been formed; its upper part, passing through Surry Hills, being already in a very bad state. There is a very slight fall, and the sewage collected in it is in an almost stagnant condition, producing a very great nuisance, which certainly should not be increased.

57. In drawing this Progress Report to a close, we beg to assure you that although primarily engaged according to your instructions upon matters of less magnitude but pressing importance, our attention has been steadily directed to the main subject of our inquiry—the disposal of the sewage of the metropolis.

58. By far the greater part of the dry weather sewage may be intercepted at such a level as to be discharged by gravitation, either by a tunnel to the ocean or by tunnel pipes and conduits to some tract of land suitable for sewage farming. For some time plans have been in preparation for elucidating this question, and we have recently given instructions for surveys to be made with the object of obtaining the information necessary to enable us to give an opinion as to the merits of the two proposals.

59. The treatment of the sewage of Sydney presents peculiar difficulties, on account of the number of outfalls occurring sometimes in places which are fully occupied, as at the Circular Quay, Queen's Wharf, and along Darling Harbour. To deal with the whole of the sewage in detail at the several outfalls by any filtration or precipitation process, which cannot be carried on without creating to some extent a local nuisance, seems impracticable. With the extension of the sewerage system, the increase of the population, and with an improved water supply, a large increase in the amount of the sewage discharged must be anticipated. It can hardly be considered therefore as doubtful that the sewage should be diverted by gravitation altogether away from the harbour, so far as that is possible.

60. Whether the remaining sewage collected at too low a level to admit of its being carried away by gravitation should be pumped to a higher level and thus disposed of in the same way as the rest, we cannot say at present. It is obvious, however, that there is no possibility of dealing satisfactorily with the sewage of the low-lying districts—such as the heads of Woolloomooloo Bay, Sydney Cove, Darling Harbour, Blackwattle Bay—in any way whatever without raising the sewage to some extent by pumping. We cannot recommend an experiment on anything like an extensive scale of any filtration or precipitation process at the outlets

NOTE.—We are informed that the works suggested in this clause are in progress.

outlets of the sewers, until we have ascertained by survey and calculations the probable cost of diverting the sewage from the higher levels, as we have suggested, by gravitation. We use the word experiment advisedly, for the climatic and other conditions upon which the practicability of dealing with the sewage by filtration or chemical processes greatly depends are so different from those of Europe, that the results obtained there are by no means a certain guide for us.

61. If we appear to you to have been long in deliberating without arriving at a final decision on any main question, it must be borne in mind that in Europe these questions have been hotly discussed for years, and are not yet by any means finally disposed of. And even if it should appear that the weight of argument in Europe is strongly on any one side, it would still have to be carefully considered whether anything in the widely different circumstances of this climate and situation might not perhaps incline the balance the other way.

Board Room,
Sydney, 8th November, 1875.

M. B. PELL,
Chairman.

APPENDIX.

A.

REPORT FROM MR. WM. DAVIES

ON THE

CONDITION OF THE MAIN SEWERS IN SYDNEY.

Ordered by the Board on the 13th August, 1875.

MAIN SEWER, FORT MACQUARIE.

1. From outlet to flood-gates of this sewer there is a sediment of sand and sewage matter 18 inches deep, which is backed up by the tide. Outlet of sewer to flood-gates: sewer, 6ft. high.

The tunnel is in good condition.

The highest water-line at flood-gates is one (1) foot below the crown of arch, but the present line is 18 inches above invert.

2. Under the Domain the tunnel on the whole is good. Surface-water percolates the crown of arch in the places where the old shafts were at one time. Flood-gates to Elizabeth-street.

In front of the junctions of Macquarie, Phillip, and Elizabeth Streets the invert is damaged by the great force of water which rushes down these steep gradients; and at the outlet of each a bank of street metal, gravel, and sand, varying from 6 to 9 inches in depth, has been formed, but no sewage matter.

In this length there is but one connection of 9-in. piping, without trap; this connection leads from Fort Macquarie.

The highest water-line at the junction of the Elizabeth-street branch is 3 feet 6 inches above invert; the present water-line is 9 inches above.

3. In this part there is a deposit of fine sand 6 inches in thickness. On the whole the tunnel is in good condition; but the invert is damaged and the centre brickwork worn away. Elizabeth-street to Bridge-street.

There is no offensive matter deposited along the bottom of tunnel.

On the left side there are three 9-in. pipes from the Government Offices in Bridge-street, and five on the right from Macquarie-place. None of these connections have traps.

In front of the Exchange there is a very flat piece of bottom, along which there is a deposit of street metal, sand, and sewage matter, 9 inches deep; this deposit is formed principally by the material washed down Pitt and Bridge Streets during wet weather.

The brickwork is generally good; but the rendering is in some places both badly done and irregularly put on.

4. This branch is much damaged; 40 feet from George-street the invert is gone, and in some places both rings of brick for about 12 feet. Lower down there is a hole in the side of the tunnel 8 feet long and 2 feet high to the spring of the arch; both rings are gone, laying bare the rock in places. From junction of Pitt and Bridge Streets. Branch ovaliform sewer, 3 feet diameter.

The material washed out of these holes is lodged on the bottom, and with street metal, sand, and sewage matter forms an obstruction 18 inches deep in one place. This requires immediate attention.

On the right are three 9-in. pipes, but only one connected; on the left are five 9-in. pipes without traps and unconnected.

The brickwork in this length, taken as a whole, is good; so is the rendering, except in one part, where the water percolates, stripping the rendering off the sides.

5. There is a marked difference in the materials and workmanship in this length; the bricks are soft, the mortar very poor, and the rendering very thin and irregularly put on. From junction of Bridge-street to Hunter-street.

The centre course of invert is much worn by the scouring; the cement is washed from the joints of the sides to a height of 6 to 9 inches.

There is no sediment and the tunnel is clean throughout.

Clear water soaks through the sides in places at the springing course, but none through the arch.

There are six connections on the left and three on the right, which, with two exceptions, are in good condition; the two defective traps are Commissioners', one of which has the hinge of the flap broken; the other has the flap fixed open.

I beg to note here that nearly all the old traps (called the Commissioners) do not answer the purpose for which they were intended. The flaps are too heavy, and so closely fitted on the hinges that they do not open and shut freely.

Hunter-street to
Market-street.

6. In this length, like the last, the materials and workmanship are inferior.

The centre course of bricks is much worn, the rendering of bottom washed away, laying the joints open and bare on the sides to a height of 9 inches.

The water freely passes through the sides and arch in many places.

There is no sediment, and the tunnel is clear.

In this length there are eighty-nine connections, nearly equally divided on either side. All the traps used are the "Commissioners," but not a third of them are doing their work properly. The flaps were either fixed open or closed; the closed ones were forced open with crowbars, and the pipes were found filled with very offensive sewage matter. This length requires immediate attention, as it is in a very bad state.

In the sides there are three square holes not connected, so that the sewage matter can escape to the back of the brickwork, and saturate the whole.

Market-street to
Bathurst-street.

7. This length is better constructed than any in Pitt-street. The tunnel, on the whole, is good, but there are places where the rendering is badly done.

Water percolates the arch in three places. At the centre course the invert shows signs of considerable wear, owing to the softness of the bricks.

The tunnel is free from sediment.

In this length there are fifty connecting pipes, nearly equally divided on each side. Thirty-three of these are connected and have the old or "Commissioners'" traps. Eight 12-in. pipes have traps, but are not connected, while nine 12-in. pipes are let in without traps.

As noted above, the flaps on the traps do not act properly; all of them are either fixed open or closed; many are kept open by wooden wedges placed between the flap and trap. All the improved flaps act well.

Near the junction of Bathurst-street there is a sediment of offensive sewage matter, 4 inches thick. There is also at this point a depression in the invert.

The branch to the ventilating shaft is in good working order and clean.

This ends the main sewer.

THE TANK STREAM.

Circular Quay
to Queen's-place.

8. From the Circular Quay to near Hunter-street the stone sewer is on the whole in good condition; but in some places the invert has settled.

For a distance of about 150 feet back from the outlet the tunnel is filled to the bore, so that the sewage is backed up by the tidal water, and the offensive matter held in solution is deposited, causing an obstruction of from 3 to 9 inches in thickness, along the sides and bottom of the invert.

The arch itself is in good order, though there is but little mortar in the joints.

On the left side of the tunnel there are ten pipe connections, six of which are without traps; there are also nine square holes in the sides unconnected. On the right there are thirteen pipe connections, seven of which are without traps; besides these there are eight square holes not connected.

What few traps there are in this length are of a different design to those used by the Commissioners; the flaps are fitted with chain hinges and act well.

Noxious gases escape through the square holes and the pipes that are not connected.

Queen's-place to
Hunter-street.

9. At a point about 80 feet below Queen's-place the old Tank Stream culvert commences. Its sides are of stone, with cross beams planked over, and the culvert is 12 ft. x 5 ft. in the clear.

This portion is in a foul and dilapidated condition. There is a deposit of large ballast stones, street metal, and sand, mixed with fatid sewage matter, forming a mass varying in depth from 18 inches to 2 feet.

In some places the sides have partly fallen in, and a dam is made across the bottom of the culvert, thus hindering the flow of the sewage.

The effluvia escapes in all directions, most especially through several large holes in the roof.

At Queen's-place there is an uncovered man-hole about a foot above the bottom of the culvert; through this man-hole the sewage escapes, in flood time, along the front of some small houses, and occasionally finds its way into them.

On

On each side of the man-hole referred to is a bank of stone, gravel, and other material washed down from the neighbourhood; this heap is trimmed down inside the sewer by the people of the adjoining houses, to as to allow the surface drainage to enter the man-hole.

In this portion of the sewer there are six connecting pipes with traps, and eight square holes unconnected. The flaps of the traps are in good order.

10. Under Hunter-street a hole 15 in. x 12 in. is cut in the bottom of the cylinder, which carries the Hunter-street sewage across the Tank Stream. Through this hole the sewage rushes with great violence to the Tank Stream, especially in wet weather. Hunter-street to King-street.

Under No. 15, Hunter-street, there is a chamber, 30 ft. x 30 ft., formed in the sewer, the only covering of which is the flooring-boards of the house. Near this also are several large holes in the sides which show daylight, through which the foul gases escape.

At 60 feet further on a large hole, about 3 feet in depth, is scooped out of the bottom of the sewer; this hole is filled with very offensive matter. At this point the new sewer joins. There is a large hole in the roof, 12 ft. x 4 ft., showing daylight, over the junction. Through this hole the stench rises and infects the atmosphere of the neighbourhood.

It is hardly necessary to remark that the portion of the sewer just described is in a most filthy state.

The remaining portion, as far as King-street, is the best that I have examined; the materials and workmanship are good in every respect.

Prepared invert blocks have been used in this sewer, and exhibit no signs of wear.

The rendering is good throughout, the sides and arch are dry, and there is no deposit of sewage matter on the bottom.

On the left are thirty-six connections, all with flaps and traps on, and in good order; one pipe is connected without a trap, and three pipes are not connected at all.

On the right are thirty-four connections with traps and flaps on, all efficient, and seven connections that have no traps; also four pipes not connected.

Though the traps act well, sewage matter has accumulated, on account of the flushing being neglected, and in some cases the flaps are unable to work.

11. From King-street an old sewer runs in a southerly direction as far as the Victoria Theatre, where it is blocked up. With this sewer there are only three connections, none of which are fitted with traps. Old Sewer, King-street to Victoria Theatre.

The bottom flagging is in places washed away, and the sides undermined. Altogether this part of the sewer is in a dangerous condition.

WOOLLOOMOOLOO BAY.

12. This is a 3-feet x 6-feet flat arched stone sewer. At its junction with the main (Forbes-street) sewer it is silted up to half its depth with gravel, sand, and sewage matter; owing to this it could only be examined for a short distance. Branch sewer, Nicholson-street junction to Dowling-street, from main sewer.

I entered the man-hole in Dowling-street and found the sewer silted up in the same way. 20 feet from this man-hole the sewer ends in two 18-in. pipes leading from the street above. Both the pipes are clean and in good order.

It appears that when these pipes are flushed the silt from the neighbourhood is swept down with great force as far as the flat level sewers, where the tidal waters, which fill all the sewers, bank up the silt to within 1 foot of the arch.

13. This is a 3-ft. by 6-ft. flat sewer silted up to about half its depth, so preventing me from going up it. Dowling-street branch.

14. This is a 2-ft 6-in. sewer silted up to within 1 foot of arch; I was unable to go up. Crown-street Junction.

There is a deposit of offensive sewage matter 10 inches deep along the bottom for about 80 feet, up to where the 8-ft. x 5-ft. stone sewer ends; and a 6 feet oviform brick sewer begins.

15. This branch is in the same state as the one abovementioned; it is silted up to 1 foot of the arch, and I was unable to examine it. I entered all the man-holes in this length, and found all the branches in a like condition. Forbes-street branch.

16. This branch is in a like condition.

On

On the left hand side there are ten pipes connected without traps and five with traps ; there are likewise twelve pipes unconnected.

On the right there are six pipes connected but not having traps, three pipes connected with traps ; three of the flaps are damaged and hinge-chain broken.

Whatever connections there are in these branch sewers are of no service as they are blocked up by silt. I cannot say what effect a heavy flood would have on them.

Main sewer from
Cowper Wharf to
Woolloomooloo-
street.

17. This is an 8-ft. by 5-ft. flat sewer of stone, in good order, but the invert has settled a little in some places. At high-water this sewer is in full bore for 200 feet back from its mouth, as are also all the branch sewers on this flat.

At the outlet of the sewer there is a deposit of sand and sewage matter decreasing in depth from 2 feet at that point to 6 inches about 100 feet up. At Yurong-street the bed of silt disappears.

Main Sewer—
Woolloomooloo-
street to
William-street.

18. At a point 35 feet above Crown-street junction the 7-ft. stone sewer ends and a 6-ft. oviform brick sewer commences.

This sewer is well constructed, the materials and workmanship are good, the rendering is very good, and the invert good and free from silt. The sides and roof are dry.

There are on the left side five pipes connected with traps, two pipes connected without traps, fifteen not connected with traps ; five of the flaps are damaged.

On the right there are four pipes connected with traps, three pipes connected without traps, ten pipes not connected with traps ; seven of the flaps are damaged.

General
remarks.

19. The links on the flaps are too weak and are not welded, thus being easily wrenched off when the sewers are in flood. Two of these flaps are forwarded as sample.

It will be seen from the above remarks that not one-half of the pipes are connected although there are traps and flaps on most of them.

William-street
to Stanley-
street.

20. This length is of the same construction as the last, *i.e.*, a 6-ft. oviform brick sewer of good materials and workmanship.

The invert is worn in some places owing to the great scour on it when the sewer is flooded. There is no deposit along the bottom. The rendering is good on the sides and no water percolates.

On the left there are fourteen pipes connected with traps on, ten pipes connected without traps on, twelve pipes not connected with traps on.

On the right there are seventeen pipes connected with traps on, nine pipes connected without traps, thirteen pipes not connected with traps on, nine flaps with links broken.

All the connections require to be flushed oftener to keep them clear so that the flaps may act well.

Branch Sewer.

21. A 2-ft. round brick sewer joins on the right. It is clean and in good order.

The 6-ft. sewer ends here and the 4-ft. 6-in. commences.

Stanley-street to
Francis-street
across to the
termination at
Riley-street.

22. This is an oviform brick sewer. It is on the whole in good condition, though the invert shows a good deal of wear through the continual scouring, the bricks being too soft to stand the scour.

Wherever the prepared invert blocks have been used there is not the least sign of wear.

At 100 feet below Francis-street there is a 3 ft. square culvert about 60 ft. long ; it is clean and in good order.

At Francis-street, where the 4 ft. 6 in. sewer comes in again, there is a hole in the invert and both rings are gone from centre course for a length of 10 feet. This requires immediate attention.

A 3-ft. arched stone culvert runs up Riley-street ; it is in good order and terminates in two 18-inch pipes leading from the streets above.

There are on the left side—

6 pipes connected with traps on.

5 „ without traps on.

12 pipes not connected with traps on.

On the right side there are—

7 pipes connected with traps on ;

6 „ without traps on ;

10 pipes not connected with traps on ;

5 flaps damaged.

MAIN SEWER, DARLING HARBOUR, FROM OUTLET TO ELIZABETH-STREET.

23. This is a 7-ft. stone sewer, well constructed throughout. Some of the centre stones of invert Condition. are settled from 2 to 6 inches in places ; the sides and arch are good.

There are 3 ft. of silt on the bottom at outlet and diminishing to nothing at the George-street sut. junction ; from thence to Elizabeth-street is quite free from silt, and the sides are clean.

This sewer never fills to full bore ; the highest water-line, 100 feet up from outlet, is 4 ft. 6 in. Water-line, above invert ; present flow 9 inches. When this part is connected with the new sewer and the obstruction removed from the present temporary outlet, I have no doubt that the present deposit of silt will be all washed away.

There are in this length, on the left, nine traps connected, four not connected, fifteen pipes without Connections. traps on connected, and thirty pipes not connected. At George-street junction there is a branch running up to Christ Church, and another towards the Carters Barracks, both ending with an 18-in. pipe and no trap on ; there are no side connections in these branches.

BRANCH SEWER FROM HAY-STREET UP BRICKFIELD-HILL AND ALONG GOULBURN-STREET.

24. This is a 6-ft. oviform brick sewer, in good order, free from silt ; the invert and rendering is Condition. good. 50 feet below the Goulburn-street junction, an old sewer comes in on the right, 4 feet square, Connections. covered with timber, and is in a very decayed state.

On the left, in Goulburn-street, is a branch leading to an old circular brick sewer, which ends in a 2-ft. drain ; there are no side connections to these old sewers. In this length there are on the left eight traps connected, four traps not connected ; three pipes no traps on connected, and three pipes not connected. On the right there are five traps connected, twelve not connected, four pipes connected. At the junctions of George and Goulburn Streets there is a bell-mouth and 18-in. pipe with trap on connected. There are very few connections on this length, considering the thickly populated part it goes through.

FROM HAY-STREET UP ELIZABETH-STREET AND ALONG FOVEAUX-STREET.

25. This is a 6-ft. oviform brick sewer up to the junction of Foveaux-street, thence a 4-ft. ; the Condition. whole in good condition, free from sediment ; the invert is laid with the prepared invert blocks. A short Connections. branch turns up Albion-street, and runs to daylight in an old ditch. At the corner of the old Burial ground the Elizabeth-street sewer ends with an 18-in. pipe leading in ; there are in this length,

On the left,—

15 traps and flaps on connected.
33 „ „ not connected.

On the right,—

9 traps and flaps on connected
19 „ „ not connected
3 pipes without traps.

All the traps and flaps in these sewers are what is called the “Improved Corporation” traps ; the only fault in them is that the connecting links are not strong enough to stand the pressure of water when the sewers are in flood.

FROM ELIZABETH-STREET UP GIPPS-STREET.

26. This is a 4-ft. 6-in. oviform brick sewer of good material and workmanship, with invert of Condition. prepared blocks, rendering good, and no sediment on the bottom.

This sewer goes through a densely populated district with only a few of the traps connected to the houses. The traps and flaps are in good order. At the junction of Mary-street is an 18-in. pipe on each side, but not connected ; at the junction of Macquarie-street is a double bell mouth, with an 18-in. pipe on each side—one connected, the other not.

On the left there are,—

10 traps connected,
22 „ not connected.

On the right,—

13 traps connected.
14 „ not connected.

The highest water-line shown is not one half of the bore—present flow, 6 inches.

FROM

Connection.

FROM ELIZABETH-STREET UP GOULBURN-STREET TO MACQUARIE-STREET.

Condition.	27. This is a 6-foot oviform brick sewer of good materials and well made, with traps and flaps on in good order. It passes like the last through a thickly-populated district, but only a few connections in comparison to the number of houses on each side.
Connection.	On the left there are,— 30 traps connected. 28 „ not connected. On the right,— 32 traps connected. 26 „ not connected, and five flaps damaged.
Remarks.	I find that the sewers on the Darling Harbour watershed are by far the best in the city, with the exception of outlet (noted on in another place); they are all well made and clean from silt. The traps are regularly laid from 25 to 30 feet apart on either side; the highest flood-lines show only half way up the bore. When the man-holes are open there is plenty of air in most of them.

MAIN SEWER, BLACKWATTLE SWAMP, FROM OUTLET TO PARRAMATTA-STREET.

Condition.	28. This is a 6-ft. oviform brick sewer, of good materials, and well constructed. At the outlet there are 9 inches of fine sand deposit on the bottom for 200 feet in. The sides, arch, and invert are in good order. Traps are laid every 60 feet apart on either side ready for connection. Several of the flaps are wrenched off. When the sewer is in flood from the links being bad there are no connections in this length. From Parramatta-street to Tooth's Brewery water percolates sides and arch freely, owing to the pressure of water retained in the surrounding ground. The sides are coated with a black slimy matter, but, on the whole, it is not offensive. There is no sediment of sewage matter lodging in any part.
Connections.	On the whole length there are,— On the left,— 17 traps connected. 74 „ not connected. On the right,— 5 traps connected. 56 „ not connected. 35 flaps damaged by being wrenched off the hinges during flood time, as reported previously, through the links being defective.

MACQUARIE-STREET SEWER, FROM JUNCTION WITH MAIN SEWER TO KING-STREET.

From Junction to Bent-street.	29. This is an oviform brick sewer 3-ft. 6-in. high, well constructed, and in good order on the whole. The gradients here are very steep, which causes a great scouring on the invert; in some places the bricks are worn half through the inner ring, and the rendering gone for 9 in. up the sides. Sides and roof are dry, and no sediment at bottom.
From Bent-street to King-street.	The gradient changes here and becomes very flat; between Bent and Hunter Street there is a sediment of coarse gravel and sand from 6 in. to 8 in. deep, and backs up the sewage from the Legislative Chambers to the Mint from 10 in. to 12 in. deep. Most of this sewage matter comes from the Infirmary. This part of the sewer requires to be flushed often, as there is no inflow of water at its head to carry away the large flow of sewage that enters at this part.
Connections.	On the left side there are,— 6 traps connected. 10 pipes connected. 21 „ not connected. On the right side,— 6 pipes connected. 22 „ not connected. 13 traps connected. All the traps here are the improved traps, and are in good order. Highest mark on sides 1 ft. 8 in., present 3 inches.
Water line.	

PHILLIP-STREET SEWER, FROM THE JUNCTION OF MAIN SEWER TO KING-STREET ;—OVIFORM, 3 FT. 6 IN. HIGH.

30. This part is like Macquarie-street, the invert much worn below Bridge-street, three bricks have been washed out of invert and should be replaced, as a heavy flood may do a great damage here, as the gradients are very steep. The rendering is much damaged for 12 inches up the sides, laying the bricks bare and the joints open, the roof and sides dry, and no sediment on bottom. From Junction to Bent-street.

The gradients change here and the fall is very slight. Opposite Watts' old Tannery there is a Commissioner's trap fixed, shut and must have been in that state for some time, as the sewage matter had percolated side from bottom to arch and formed a lining of a very offensive matter. When the flap was forced open the connecting pipe was filled with hard foul matter. The rendering is very indifferently laid on here, in some parts the bricks are bare and water percolates the sides freely. The invert is good and no sediment except at the head near King-street; here a 12-inch pipe leads in from the "Oxford Hotel" and the adjoining houses; around the pipe there was a deposit of refuse of all kind, mixed with decayed vegetables, &c. From Bent-street to King-street.

I went to the "Oxford Hotel" and saw Mr. Curran the proprietor, and asked his permission to examine the trap in his yard. I found the sink-hole without a trap nor grating on; and it appears that every refuse was thrown down this hole indiscriminately. From Hunter-street to King-street.

This sewer ends at King-street, with a 12-in. pipe leading into it.

All the traps on this length are Commissioners', except three the flaps were all fixed, open or closed as the case may be; all that were closed were forced open with a crowbar to ascertain whether they were connected or not. At the Government Printing Office the flap was fixed with only 2 inches of an opening, the pipe was nearly full of very foul matter, got it cleaned out—asked Mr. Richards to get the pipe flushed. Connections.

There are on this length,—

Left side,—

21 traps connected.
16 „ not connected.
5 pipes connected.

Right side,—

14 traps connected.
25 „ not connected.
6 pipes connected,
and 3 flaps damaged.

Highest mark on sides 1 foot 8 inches, present flow 3 inches.

Water-line.

ELIZABETH-STREET, FROM JUNCTION OF MAIN SEWER TO BATHURST-STREET.

31. This is an oviform brick sewer, 3 ft. 6 in. high. The materials and workmanship are good in this length, the sides and roof are dry, the rendering good on the whole; the gradients are steep here, and the invert is much worn in places. 30 feet from outlet there is a hole in the invert, three bricks washed out, and further up there is a hole 3 feet long, with both rings gone; this requires to be attended to at once, otherwise a heavy flood may do much damage here. From Junction to Bent-street.

This length is in good order. Roof and sides dry, and no sediment at bottom. Rendering good, invert good on the whole. From Bent-street to King-street.

The sewer in this length is not in so good order; water percolates sides freely in many places. The rendering is very thin and indifferently laid on, and patches left without being rendered at all. As this part passes through a porous ironstone clay it would account for it making so much water. There is no deposit of foul matter on sides, and the bottom is free from silt, except a short distance opposite the New Synagogue; there is 6 inches of deposit, but not offensive. From King-st. to Park-street.

This length is in a very bad state; a deposit of offensive sewage matter, 3 inches at Park-street, and increases gradually to 1 foot 9 inches at Bathurst-street; here is a 9-inch trap leading from the Hyde Park Hotel and adjoining houses; all the sewage that comes from these houses lodges along the bottom of sewer, as there is no head-water to carry it away. If there was a pipe in the head, so that it could be flushed occasionally, it would prevent the silting up to such an extent. I had great difficulty to get through this part. From Park-street to Bathurst-street.

The highest mark shown on sides is 1 foot 9 inches, present flow 3 inches.

Water-line.

There

Connections.

There are very few connections on this length, considering the number of houses that are on it.

On the left there are,—

- 13 traps connected.
- 3 „ not connected.
- 14 pipes connected.
- 4 „ not connected.

On the right there are—

- 18 traps connected.
- 8 „ not connected.
- 8 pipes connected.
- 5 „ not connected.

The pipes connected are street gullies, and no traps on.

CASTLEREAGH-STREET FROM JUNCTION OF MAIN SEWER TO BATHURST-STREET.

From junction
to Park-street.

32. This length is not in a very good order; the gradients are more even, and the bottom free from silt up to Park-street. Water percolates the roof and sides but leaves no sediment; the rendering in some part has been washed off or what is termed "blown" owing to water percolating sides. The invert shows very little sign of wear. The traps are all "improved traps," with only two flaps damaged.

From
Park-street to
Bathurst-street.

This length is silted from 3 in. at Park-street to 1 ft. 4 in. at the end in Bathurst-street; here again is a pipe with trap on leading from Mr. Dowd and adjoining houses, discharging great quantity of scwage, and there being no head flow to take it away, it has accumulated a deposit of very offensive matter; the pipe was partly choked up; the silt was cleared temporarily. I called the attention of Mr. Doharty to this place and he went down to examine it. These three sewers—that is Elizabeth, Castlereagh, and Pitt-street, ends at Bathurst-street; and there being no inflow of head water to carry the sewage matter away causes it to accumulate in these three points.

Connections.

Up to Park-street the "improved" traps are used, and in very good order. From Park-street to Bathurst-street the old "Commissioners" traps are used, and like all the rest of them the flaps are fixed, open or shut as the case may be.

On the left side there are,—

- 41 traps connected.
- 4 „ not connected.
- 12 pipes not connected.

On the right there are,—

- 25 traps connected.
- 5 „ not connected.
- 8 pipes connected.
- 4 of the flaps were damaged.

Sydney, 8 October, 1875.

W. DAVIES.

BUSBY'S BORE.

Hyde Park to Shaft No. 4 at Ice Works.

1. From the iron mains at Hyde Park to near Riley street the culvert is of stone, 9 feet x 2 ft., covered with flagging. Along the bottom for the whole length there is a deposit, varying in depth from 9 to 21 inches, consisting of fine earthy matter. (Sample No. 1.)

No water was observed percolating any part of this culvert.

At Riley-street the tunnel is through shale rock. The roof and sides are dry; there is sediment along the bottom from 6 to 9 inches in depth. The shaft at this place is dry.

Above Riley-street the tunnel is through hard sandstone. At the Court House shaft a little water passes through the bottom of shaft; it is clear and sweet.

Between the Court House shaft and the Ice Works there is a pipe connecting with the gaoi, branching off about 18 inches above bottom of tunnel. This pipe was perfectly clean.

After a minute examination of the tunnel between the Court House and the Sand Hills I was unable to discover traces of contamination by sewage matter.

The Ice Works shaft and the roof and sides of tunnel were dry.

From this shaft to the Provost's there is an accumulation of matter which, owing to the unevenness of the bottom, varies from 3 to 9 inches in thickness. There is a slight soakage of wholesome water through the roof and sides of tunnel, but this leakage only amounts to what is called "bleeding."

No. 1, Park Road.

2. In this shaft water percolates freely through a fissure in the rock 12 feet below the surface.

There is only surface drainage to the houses in Park Road, and the surplus water and sewage matter finds its way to the old quarry-hole, and is there absorbed by the made ground. I have no doubt that it afterwards reaches the shaft, since there is nearly the same volume of water running off the drainage area as there is running into the tunnel through the shaft.

The tunnel is sound and good, and no water runs in at any point except at the shaft alluded to above.

The sample bottle (No. 5) is filled with water from this shaft.

From Provost Buildings there runs an old drain discharging into the quarry-hole opposite the shaft.

Sample No. 2 was taken from the bottom of tunnel, where there is a deposit from 3 to 9 inches thick.

As far as could be ascertained the air in this portion of the tunnel was pure. The highest water-line shown on sides is 8 feet, but at the time of examination, owing to the irregularities at the bottom, there was a depth of 9 inches of water on the bars and 4 feet 6 in the holes of the bottom of tunnel.

Shaft No. 1, Park Road to Pound Paddock.

3. This length is in good order. The roof is dry with a slight filtration of clear water through the sides.

The sediment is much the same as in other parts, varying in depth according to the unevenness of the bottom. At No. 12 shaft there are three culverts 4 ft. x 2 ft. with a lodgment of sand and fine earthy matter at the entrance, and on the bottom from 12" to 15" in depth.

Pound Paddock Shaft to No. 20 Shaft at Rifle Range.

4. In this length pure water freely passes through roof and sides. I was unable to go further than Shaft No. 16, as the water was up to full bore. At this shaft there is a culvert.

At No. 17 Shaft I found 3 ft. of water. At No. 20 the bottom is uneven, and the tunnel is silted for a depth of 12 to 15 inches in the holes.

Shaft No. 20 to the mouth of Tunnel.

5. From No. 20 to 24 the roof of the tunnel is very low, and the water is to full bore. On the roof and sides, clusters of vegetable matter (sample No. 4) are found, which emit an offensive peaty smell. Clear water percolates the roof and passes freely through the roof and sides.

Along the bottom there is a sediment from 3 to 9 inches in thickness. Sample No. 3 was taken from here.

There is a strong and offensive odour of decayed vegetable matter along the whole of this length.

General Remarks.

6. The tunnel throughout is most irregularly driven, being in a zigzag without any apparent lines.

There is no fixed gradient, but the bottom consists of a succession of bars and hollows, so that the silt fills up the hollows from bar to bar with a depth of from 3 to 15 inches.

The roof varies from 4 feet to 9 feet in height; the lowest parts are always in full bore when the lock is open, thus confining the foul air in the high chambers formed in the roof.

If there were three or four ventilators on the shafts they would tend greatly to purify the water as well as the air.

The sides are not trimmed but form so many shelves and nooks with a sediment of fine peaty matter lodging on them, from $\frac{1}{2}$ to 1 inch thick.

Percolation.

7. From Hyde Park to Pound Shaft the percolation is very slight, only what is termed "bleeding," and the water is clear and sweet with exception of No. 1 Park Road. From Pound Paddock to No. 24 the percolation is stronger, but the water is in all cases sweet and clear.

W. DAVIES.

C.

The Engineer-in-Chief for Harbours and Rivers to The Under Secretary for Public Works.

Respecting discharge of the sewage at Fort Macquarie.

HAVING, in attention to your memo. of the 27th ultimo, carefully considered the subject of the best means of mitigating the nuisance arising from the discharge of the sewage at Fort Macquarie, I have now the honor to submit the accompanying plan for the approval of Mr. Secretary Sutherland.

The arrangement I propose, which is somewhat similar to that which has been tried with a considerable degree of success at Brighton, consists in trapping, as it is technically called, the outfall of the sewer, or, in other words, conducting the sewage matter, by means of a cast-iron pipe, to such a distance out into the harbour as will ensure its being discharged some 12 feet below the surface of the salt water at low tide, so that the sewage which at present, by reason of its less specific gravity, floats on the salt water, giving out its poisonous and offensive gases into the air, will be diffused amongst, and in great measure deodorized by, the large body of salt water with which it will become mixed.

I believe by this means a great deal of the offensiveness of the sewer will be removed, but I do not wish to be understood as implying that this or any other make-shift plan will be effectual in wholly removing the nuisance. The present system, which makes the harbour the receptacle for the sewerage, is radically wrong, and no time should be lost in taking up and dealing in a comprehensive manner with the whole subject of its proper disposal.

In the plan now proposed I only contemplate dealing with the ordinary or dry weather discharge from the sewer, which would be conducted out a distance of about 120 feet, and to about 12 feet below the low-water-mark, and discharge at the edge of the reef, which it will be observed at this point falls away into deep water, the solid matter, street detritus, and such like, can be removed from time to time by the dredge and sent out to sea.

I do not propose to interfere with the discharge of the storm waters; to do so would involve the construction of a cast iron culvert of the full size of the sewer, which, besides being very costly, would be unnecessary, as the sewage is so diluted in time of heavy rain as to be almost inoffensive; the valves in the upper part of the cast iron plate would allow of the free discharge of the storm water, as they would have the same sectional area of opening as there is through the inner valves, which were placed near the outlet of the sewer at the time of its construction, but which have since fallen into disrepair.

If found advisable the sewage might be impounded in the sewer (by means of the valves) during the period of flood tide, and be allowed to discharge only at the beginning of the ebb tide; it would thus be swept well down the harbour, and would not as at present oscillate backwards and forwards with the flood and ebb tide.

I would here suggest that the attention of his Worship the Mayor be called to the condition of the valves to which I have referred, and which are now lying unhinged in the bottom of the sewer.

The cost of the work herein recommended will be about £950. There are no funds at present available for carrying it out; I would therefore recommend that the sum required be placed on the Additional Estimates for this year.

The plan showing the proposed works is transmitted herewith.

E. O. MORIARTY, 14/1/73.

D.

MEMO. respecting the Sugar Co.'s premises.

ACCORDING to instructions, we visited the Sugar Works on the 31st August, and, as requested on the 9th instant, we submit the following observations respecting our inspection:—

We found that the water retained in the Company's dam had been subjected to a sufficient filtration to arrest the greater portion of the suspended matter, and that in this respect, at any rate, some improvement had been effected since our previous visit.

We noticed that the water in the creek is arrested in its progress until it rises to a sufficient height to pass into the dam; this takes place just as the water enters the Company's property. We fear that when there is little water coming down the creek, and in hot weather that this is likely to give rise to complaints.

We observed that there was still a collection of old sugar bags in the paddock, although the engineer told us that he could burn them, and indeed showed us the furnace which had been used for that purpose.

We examined a small drain which collects the house-slops from about twenty-three dwellings at the corner of the Newtown Road. This drain passes through the Company's works, being covered for a portion of the way, and into it, during its course to the creek, the Company discharge a great quantity of hot water. We found this mixture of hot water and house-drainage just as it leaves the Company's works to have a temperature of 102°, which we need hardly state is a very favourable temperature for the putrefaction of such matters as the drains are likely to convey from the houses.

We think that these fluids should be kept apart, and that the Company should try to circulate this hot water so as to use it again, and pass it into the water-way at a lower temperature. We mentioned this to the engineer.

E.

DREDGINGS FROM FARM COVE.

(Received 19th October, 1875.)

The University,
21 October, 1875.

To the Chairman, Sydney Sewage and Health Board,—

Sir,

I have the honor to inform you that in accordance with your request of the 18th instant I inspected certain samples of mud, in the possession of Mr. Moriarty, Engineer-in-Chief for Harbours and Rivers, which had been dredged up from the bottom of Farm Cove.

The samples were afterwards forwarded to me here at my request, and after due consideration I came to the conclusion that it would be unnecessary to make a chemical analysis of them, one of the chief reasons being, that should sewage matter have been detected it would have been almost impossible to have correctly estimated its amount, owing to the many organisms naturally present in such deposits, viz., small varieties of mollusca, cirripeds, serpulæ, &c., besides microscopic forms of animal life. It would have been almost impossible to separate even the major part of such, and those which were left would have yielded animal matter, and thereby have wrongly figured as sewage contamination.

I, however, submitted the samples to a careful microscopical examination—the results of which I beg to enclose—from which I was unable to obtain any direct evidence to show that the dredgings had been contaminated by sewage discharged from the sewer at Fort Macquarie.

I may mention that as I only received numbers with the samples I have left blank space for the localities to be filled in.

I have, &c.,

ARCHIBALD LIVERSIDGE.

Sample No. 1.

Taken about 200 feet from red buoy, in the direction of Lady Macquarie's Chair.

This sample consisted mainly of sand and comminuted shells, together with a few unbroken shells of small ostrea, serpulæ, cirripeds, and others—with a certain proportion of a bluish grey clay.

It possessed a strong 'sea-shore' smell; by this term I mean the smell which one perceives along most sea-shores where there is sea-weed and other marine objects exposed at low tide.

No smell of sewage could be detected.

Under the microscope I was unable to identify any faecal or other sewage matter.

Sample No. 2.

Taken on edge of reef on the above line, about one quarter the distance across.

Consisted solely of a few small barnacles.

Sample No. 3.

From the same line, about one-third the distance across.

At the top, where this dredging had been exposed to the air, it was of a light brown colour, but underneath it had a bluish grey colour mottled with black streaks and blotches—which had the appearance of being due to the presence of more or less decomposed organic matter.

It consisted principally of clay, sand, and comminuted shells, mixed with which was a considerable quantity of string and small shreds of coarse canvas, also a few woody fibres.

This specimen emitted a smell of decaying matter—similar to that given off by the slime from the bottom of stagnant ponds; it is, perhaps, worthy of note that the smell although similar was by no means so strong as that given off by the deposits obtained from the Crown-street and Paddington reservoirs.—(Vide Report on the Water Supply.)

No actual sewage matter could be detected.

Sample No. 4.

From same line, about three-quarters the distance across.

Very similar to the last—but with much less fibrous matter, such as yarn and canvas; smell also less perceptible; black mottling also present in less quantity.

Nothing seen characteristic of sewage contamination. This sample contained rather fewer comminuted shells, and less and than some of the former.

Sample

Sample No. 5.

Taken off Lady Macquarie's Chair.

Of about the same character as No. 4, but no yarn or fibrous matter observed. Smell of decomposing matter very faint.

Sample No. 6.

From abreast of Lady Macquarie's Chair.

Bluish grey clay, containing rather more comminuted shells than No. 5, but with less black mottlings. No yarn or other fibrous substances present. Had a slight smell of decomposing organic matter.

The quantity of decomposing organic matter in Nos. 3, 4, 5, and 6 could by no means be considered large. It may or may not have been derived from sewage; there is not sufficient evidence to show its origin.

Sample No. 7.

From centre of Farm Cove.

A bluish grey clay, containing fresh sea-weed and unbroken shells, red worms, and other forms. No bad smell—only the usual "sea-shore" smell. A very small amount of the black mottling, which may in this case be solely due to the decomposition of sea-weed. No yarn or other similar substances.

Sample No. 8.

From 100 yards below Fort Denison.

Of a uniformly brown colour, apparently made up solely of sand and comminuted shells. No bad odour.

Sample No. 9.

From centre of entrance to Neutral Bay.

A bluish grey clay, containing a few whole shells and some broken-up ones. No sea-weed present, and no bad odour. A few black streaks and spots, probably solely due to decaying sea-weed.

This, in common with the others, contained a few diatom frustules, sponge spicules, and other similar objects. The clay too, by exposure, changed colour, as mentioned under No. 3.

It was remarked that forms of life which are usually abundant where there is much decaying matter present were totally unobserved.

ARCHD. LIVERSIDGE.

The University, Sydney,
October 21, 1875.

F.

ANALYSES OF WATER.

Sydney, October 23, 1875.

To the Chairman of the Sydney Sewage and Health Board,—
Sir,

In accordance with your request, I have looked over the evidence given by the Hon. J. Smith and Mr. Chas. Watt during my absence from Sydney, and beg to avail myself of the opportunity afforded me to meet the objections therein raised against certain portions of my Reports upon the quality of that part of the Sydney Water Supply which is obtained from the Lachlan Swamp.

It is only with very great reluctance that I make any comment, but I feel that I am constrained so to do both for the information of the Commission and to prevent any discredit which might for a time be thrown upon my investigation.

In answer to question No. 1987, Dr. Smith seems to think that the greater quantity of albumenoid ammonia yielded by the water from pond No. 2, viz.,—30 against 10 from pond No. 1, may be due solely to the greater quantity of vegetable matter which it has dissolved—owing to the absence of a sluice in the dam and the consequent stagnant condition of the water.

I am extremely sorry that I cannot regard this explanation as a sufficient one, for several reasons, one of which Dr. Smith mentions, viz.:—That although the houses draining into pond No. 2 are fewer in number than those draining into pond No. 1 they are in closer proximity; this is a very material difference, for the sewage finding its way into pond No. 1—the purer of the two—may undergo considerable purification both by filtration, by oxidation, and by the vegetation with which it comes into contact during its more lengthened passage.

Then too, the amount of animal refuse which is derived from and has accumulated in the soil around the soap and candle works may be very great,—no proper estimate can readily be formed of this important source of impurity to the water of pond No. 2.

Neither do we know how much of this contamination is due to other old deposits of refuse. There is another point in favour of pond No. 1, and that is, its capacity is about twice as great as that of pond No. 2. (*Fide* Mr. Bell's map, June, 1875. Dam No. 1—9,500,000 gallons. Dam No. 2—5,300,000 gallons). Hence any given amount of impurity finding its way into the ponds would be twice as much diluted in pond No. 1 as it would in pond No. 2. The periodical opening of the sluice of No. 1 must also greatly tend to purify it.

I agree with Dr. Smith in thinking that further examination might be made with advantage.

In the latter part of answer No. 1988, Dr. Smith refers to analysis No. 1, Lachlan Swamp water, which contains 20 parts of albumenoid ammonia, and it is assumed that this 20 parts of albumenoid ammonia may be derived solely from vegetable matter. I do not think that we have anything to lead us to suppose that is the case.

If that quantity—20 parts of albumenoid ammonia contained in the Lachlan Swamp—be derived principally from the decay of vegetable matter, how is it that we do not find the same amount in the Botany water? Both areas are similar, both are covered with the same kind of vegetation, and both waters are discoloured by peaty matter to about the same extent; but the Lachlan Swamp is well-known to receive a much greater contamination from sewage than the Botany Swamp, yet this sewage contamination is almost ignored, and it is suggested that the greater impurity of the water may be merely due to a greater quantity of dissolved vegetable matter. I am really very sorry to have to confess that I cannot agree with Dr. Smith and Mr. Watt in this opinion. I do not think it would be right to shut one's eyes to the known sources of evil.

If the quantity of 20 parts albumenoid ammonia in the Lachlan water be principally due to decaying vegetation, then there certainly should be, to my mind, the same or a greater amount found in the Botany water.

If we compare the amounts of albumenoid ammonia contained by various waters we shall see that the amounts increase with the proximity of their sources to contamination.

	Albumenoid ammonia.	Parts per million.
1. Broughton Creek	·05	·05
2. University Tank, underground	·06	·06
3. Loddon River	·07	·07
" " free from turbidity	·065	·065
4. Botany water, May 26, /75	·10	·10
" " May 31, /75	·11	·11
5. Lachlan water, May 11th, /75.....	·20	·20
" " July 28th, /75.....	·21	·21

Nos. 13 and 3 show how much ammonia is contained in an unpolluted natural water, for we may regard sewage contamination as nil, and the albumenoid ammonia as derived solely from natural sources. The University tank-water is similarly naturally pure, the Botany water receives a slight amount of sewage contamination, and the Lachlan an increased quantity.

I may, perhaps, be here permitted to mention that when I state in my first Report that I do not consider the Lachlan Swamp water "a good wholesome water," I mean that it is not a first-class water. I by no means wish it to be inferred that I consider it to be absolutely noxious, and that the organic matter which it contains, as indicated by the yield of albumenoid ammonia, really represents so much specific poison;* but I certainly do think that a water derived from a more or less contaminated area as that is should be looked upon with suspicion until all sources of impurity are effectually removed. I do not consider it to be a first-class water; still it may not have any injurious effects upon the consumers; but a water containing much organic matter may, by some of those mysterious and subtle changes which we know to take place at any moment, become deleterious. A water containing much organic matter affords everything necessary for the support and propagation of those minute growths and organisms which are found in decomposing organic matter, which growths in many cases are known to be active in setting up putrefaction, and may perchance in some cases carry disease with them.

No calculations can be made with any degree of accuracy which are based upon the loss on ignition. It is not usual now for chemists to estimate this loss. My only reasons for making the determinations was to see how far they agreed with previous analyses made in this Colony, and I thought that as all the waters of each batch were collected on the same day some information might be obtained, but the results were comparatively valueless, and I attach no importance to them.

In answer to question No. 2013, Mr. Watt says that he doubts that chlorine when present in considerable quantity is an indication of contamination, owing to our proximity to the sea. This cannot refer to samples Nos. 5, 9, 18, 26, 28, 22, 23, which were obtained from the mains and reservoirs.

Question No. 2021: "Would you, therefore, consider that the proportion of albumenoid ammonia could safely be taken in this country as a criterion of the wholesome or unwholesome condition of the water? I really do not think so, and it is my impression that this is a growing opinion in England at the present time. I find that Dr. Lethely in his reports is dropping the question of albumenoid ammonia altogether."

Question 2022. *Chairman.* Can you support your statement by any authorities? [*Witness quoted from a report by Dr. Lethely in the Journal of Gas Lighting, Water Supply, and Sanitary improvements, in which he gives 'nitrogen as nitrates, and nitrogen determined as ammonia.'*"]

I very much regret that I am obliged to differ from Mr. Watt in this opinion.

This method, known as the "ammonia process," was elaborated by Professor Wanklyn, Dr. Chapman (since dead), and Mr. Miles H. Smith. At first it did not find much favour, but it gradually gained supporters, and in November, 1872, Professor Wanklyn, in a communication to the *Chemical News* mentions that many authorities upon water analysis have declared in its favour, amongst them being Mr. Way, Dr. Frankland's predecessor as Government chemist, the late Dr. W. Allen Miller, F.R.S., Professor of Chemistry at King's College, London, and water analyst to the Privy Council, Dr. Angus Smith, F.R.S., Chief Inspector under the Alkali Act, and Dr. Lethely.

Since that time there has grown up in England a very strong and decided opinion in its favour; it is by many even considered superior to Dr. Frankland's method, which is altogether beyond the manipulative skill of many chemists. From the current scientific literature it will be seen that this "ammonia process" is used by almost every modern scientific chemist of any repute, as a water analyst. It is not only given but spoken highly of in nearly all recent works on Quantitative Chemistry. (*Vide* Professor Thorpe's *Quantitative Analysis*, 1874; Church's *Laboratory Guide*, 1874; Sutton's *Volumetric analysis*, 1872; and others.)

The book is very highly extolled in a review in the *Chemical News* for June, 1874, where it is said, "Essential to every chemist whose duties by any possibility include the examination of water," also "the appearance of a third edition of this manual is a proof at once of the sustained interest felt in sanitary science, and the confidence felt in the ammonia process, which has rendered the analysis of water, as to its effect on public health, practicable and trustworthy."

This favourable notice is of the greater value, because when the book first appeared in 1868 it was very much cut up in the *Chemical News*; but since then chemists have been induced to give the process a fair trial, and it has gained a well deserved reputation.

The process is used by the officers of the Indian Water Commission; it is taught at the Netley Army Medical School; it is employed by Dr. Russell, by Dr. Hodge, and many others. It is also growing in estimation in America and Germany. The above will perhaps suffice. I could multiply proofs if necessary, but I have neither the time nor the inclination so to do.

No one contends that the process is perfect in every respect, or that it cannot be improved upon, but it is almost universally admitted that (leaving out Dr. Frankland's process) it is the best and most accurate at present known.

I have, &c.,
ARCHIBALD LIVERSIDGE.

G.

Sydney, 6 November, 1875.

To the Chairman of the Sewage and Health Board,—

Memo.

In Professor Liversidge's letter, addressed to the Chairman of the Sewage and Health Board, and published as Appendix F, it seems to be implied that I have advocated the "ignition process" for the determination of the organic matter in water. With reference to this I merely wish to state that in the examination of certain waters—of which the Sydney supply may be taken as a good illustration—I am of opinion that the process mentioned is capable of giving useful and fairly approximate results; provided such waters be analysed without matters in suspension, *i. e.*, after they have been allowed to settle. At the same time I am quite aware that there are many waters, and notably those of London, which yield results by this process which may be properly termed worthless. It appears to me that Professor Liversidge has mistaken the meaning of my answer to question No. 2021, which had evident reference to a debated point, *i. e.*, whether a water is to be condemned because it yields a certain amount of albumenoid ammonia, even if its source be purely vegetable. I think that this is clear, because I had endeavoured to show that I considered this to be the case in the instance we had been discussing. I cannot see that my answer should have led Professor Liversidge to imply—by quoting authorities in favour of the "ammonia process"—that I attach a less value to it than he does. To my mind the questions are quite distinct—as distinct as a process for detecting a substance is from the uses to which that substance may be applied. My object in quoting Drs. Lethely and Whitmore was to show that those authorities in their water reports state the "Nitrogen determined as ammonia" as a whole, making no distinction between free and albumenoid ammonia; and in certain respects this plan seems preferable, as in some of the analysis that I have seen I suspect that a certain portion of the ammonia which may be fixed in the water, probably by an organic acid, makes its appearance in the analysis as albumenoid ammonia.

CHAS. WATT.

II.

The Principal Under Secretary to The Secretary of the Sydney City and Suburban Sewage and Health Board.

Colonial Secretary's Office,
Sydney, 29 April, 1875.

Sir,

13 April, 1875.

I am directed by the Colonial Secretary to transmit to you, for the information of the Sewage and Health Board, the enclosed copy of a letter addressed to His Excellency the Governor by Commodore Goodenough, respecting the large number of cases of enteric fever that have recently appeared in two ships of the Australian Squadron, traceable, as it appears, in part to the foul state of the harbour in Sydney Cove and Farm Cove.

I have, &c.,
HENRY HALLORAN.

Commodore

* I have never meant it to be understood that I thought this water to be injurious.
CORRECTION:—In my evidence p. 78,—for "would be just as injurious" read "might become, &c."

Commodore Goodenough to Governor Sir Hercules Robinson.

Her Majesty's ship "Pearl,"
Sydney, 13 April, 1875.

Sir,

I have the honor to ask Your Excellency's attention to the large number of cases of enteric fever which have recently appeared in two ships of this Squadron during, or immediately after, their remaining at an anchor in Farm Cove, Sydney.

2. I have been for some time in doubt as to whether the probabilities were in favor of the disease having been contracted on shore when men were on leave or on board and at the anchorage; the early cases seeming to show that the men might well have contracted it on shore, as they were traced to have slept in low and poisonous parts of the town, while the officers, who almost invariably slept on board their ships, were not attacked.

3. But as this fever has now attacked a man of the "Pearl," who has not yet put his foot on shore at Sydney since the arrival of that ship from Adelaide on the 22nd February, it seems that there can be no doubt that in some cases the fever has been contracted on board the ship; and I have no doubt that in such cases it is due to the very foul state of the harbour in Sydney Cove and Farm Cove.

4. There can be no question that this condition of those anchorages is due to the fact that the drainage of a great part of Sydney is delivered into the harbour all around the head of Sydney Cove, where the water is always in a black and stinking state; and also off the end of Fort Macquarie, where a strong smell is nearly always apparent by day, and constantly by night.

5. It seems highly probable that the unhealthy parts of the town, where seamen sleep, have also contributed to produce these fevers, which, beyond the shadow of a doubt, have had their origin in Sydney.

6. The cases of fever which have appeared in the ships whose crews have been attacked, are as follows:—

H.M.S. "Pearl" arrived at Sydney, 25th October, 1874. Left Sydney for South Australia, 15th January, 1875. Returned to Sydney, 22nd February, 1875.

Cases of Fever.

Date of appearance.		Result.
26 January	1 case	invalided.
27 "	1 "	died, 14 February.
3 February	1 "	died, 11 February.
4 April	1 "	sent to hospital.

H.M.S. "Barracouta" arrived at Sydney from Brisbane, 9 February, 1875. Left Sydney for Hobart Town, 13 March, 1875. Returned to Sydney, 10 April, 1875.

Cases of Fever.

Date of appearance.		Result.
25 February	1 case	} Sent to Sydney Infirmery, where one patient died.
8 March	1 "	
31 "	1 "	
29 March	2 "	} Cases all on board "Barracouta" in quarantine at Sydney.
30 "	1 "	
2 April	1 "	
1 "	1 "	
4 "	1 "	
5 "	1 "	
6 "	3 "	
7 "	1 "	
8 "	6 "	
9 "	3 "	
9 "	1 "	
10 "	1 "	

Two additional cases which appeared during "Barracouta's" passage to Hobart Town were left in hospital at the latter place.

I have, &c.,

J. G. GOODENOUGH,

Captain and Commodore 2nd Class Commanding Australian Station.

I.

The Under Secretary to The Secretary of the Sydney City and Suburban Sewage and Health Board.

Colonial Secretary's Office,
Sydney, 29 April, 1875.

Sir,

I am directed by the Colonial Secretary to transmit to you, for the information of the Sewage and Health Board, the enclosed copy of a document which has been forwarded by the Principal Secretary of State for the Colonies to His Excellency Sir Hercules Robinson, namely, the copy of a letter from the Admiralty, inclosing extracts of a report from Captain Nares, of Her Majesty's ship "Challenger," in regard to the sanitary condition of the Sydney Harbour.

I have, &c.,

HENRY HALLORAN.

Robert Hall to The Under Secretary of State, Colonial Office.

Admiralty, 18 January, 1875.

Sir,

I am commanded by my Lords Commissioners of the Admiralty to transmit, for the information of the Secretary of State for the Colonies, extracts from a report, dated 19th November last, from Captain Nares, of H.M.S. "Challenger," in regard to the sanitary condition of Sydney harbour, New South Wales, with reference to the contemplated Commissariat Store and Military Hospital at that place.

I am, &c.,

ROBERT HALL.

EXTRACT from letter of Hydrographic proceedings of H.M.S. "Challenger," dated from Hongkong, 19 November, 1874,
Captain G. E. Nares.

I found the anchorage in Farm Cove to be far less healthy than it was during my last visit in 1867, and I attribute the number of cases of sickness which occurred amongst the ship's company on our first arrival there in the "Challenger," to the effluvia arising from the drain which is constantly discharging its contents in the harbour at Fort Macquarie. I believe it is contemplated to build a new commissariat store on Garden Island, and to establish a hospital there; if so, I should wish to warn the authorities against choosing that site. It is astonishing how quickly the floor of the anchorage in the neighbourhood of Farm Cove is being covered with the refuse and filth of the town, carried off by the drain and spread over the anchorage by the ebb tide.

The moorings in Farm Cove have already had to be moved in consequence of the unhealthiness of the previous position, and even at the moorings off Lady Macquarie's Point the smell is frequently offensive.

Considering the ever advancing bank of filth and the compound rate of increase in the amount of the discharge of the drain in consequence of the increase of the population, it is certain before another twenty years have elapsed, unless the drain is diverted, the whole anchorage extending from Fort Macquarie to Garden Island will be in an unhealthy state, and that the island itself, however conveniently situated, will not be a healthy building site.

On the other hand, considering that the whole drainage of the city is well known to be in the most shameful state, requiring only an epidemic to awake the authorities up to a better scheme, and that the Governor's family living at Government House already feel the effects of the present arrangement nearly as much as the navy do—it is most probable that before the time I have mentioned has elapsed the drainage will be diverted from its present outfall, in which case no better or more convenient site could be chosen than Garden Island.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SYDNEY CITY AND SUBURBAN SEWAGE AND
HEALTH BOARD.

MONDAY, 28 JUNE, 1875.

Present:—

Hon. J. B. WILSON,
F. BELL, Esq.,
F. H. GRUNDY, Esq.,G. F. DANSEY, Esq.,
E. O. MORIARTY, Esq.,
CHARLES WATT, Esq.,

Dr. ALLEYNE.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Chas. Watt, F. H. Grundy, and F. Bell, Esqrs., Members of the Board, examined in their places:—

1151. *Chairman to Mr. Watt.*] Have you any remarks to make in reference to the report of No. 2 C. Watt, Esq. Committee, of which you are Chairman, now before the Board? I may state that we did not consider it necessary or even advisable to take evidence from any persons resident in the immediate vicinity of the Sugar Company's premises, in reference to the alleged nuisance, because we learned from Inspector Seymour that attempts had previously been made by the City Corporation to interfere with it, and that those attempts had failed. 28 June, 1875.

1152. Do you mean on the Sugar Company's premises? Yes; evidence was given by residents in the neighbourhood which was all in favour of the Company, and the prosecution consequently failed; no evidence, in fact, could be obtained to prove a nuisance in the locality. Under those circumstances we thought it would be more prudent to use our own judgment in the matter.

1153. You have no evidence on the subject then. Your report is based upon your own inspection. From your observation of the pond and the creek which flows into it, and the state of things existing in connection with them, you consider the whole thing a nuisance? The creek is a decided nuisance, and the pond is a nuisance, I have no doubt, at certain times, especially if the mud is allowed to accumulate at the bottom of it; but at the time when we visited it it did not seem to me to be anything like a serious nuisance. There are no houses immediately around it, and it is some distance from the road. The weather was cool, and there was plenty of water.

1154. Supposing that waterhole and dam were filled up, and the whole of the matter which comes into them were allowed to pass away, without any storage of water, do you think, from what you saw and heard, that the nuisance would be much diminished? I did not observe much nuisance with reference to the pond and dam; but with regard to the creek itself it is a great nuisance throughout its whole length and breadth. At this time of the year there is not much nuisance in the pond or in the dam.

1155. You observed a certain quantity of organic matter in the water in the dam? Yes; the mud which settles in it is undoubtedly a great nuisance; but when we visited the place it was cool weather, and there had been heavy rains, and it was not perceptible.

1156. Do you imagine that this pond would be likely to be a great nuisance if not attended to properly? Yes, I think it would in hot weather. I may mention that I saw Mr. Ross, and spoke to him on Saturday last, and he said the Company would be willing to do anything which we might recommend in the way of filtration or otherwise, and would give immediate attention to it.

1157. You are satisfied the Company would be glad to do anything they could to prevent any foul matter from getting into this pond? I feel sure they would do everything they could.

1158. What is done with the refuse—solid matter—left by the Company's operations? There does not seem to be much refuse—only a few bags.

1159. What do they use this water for? Only for condensing purposes.

1160. They use it over and over again, do they not? Yes; they let a good deal of the water run off after rain, and store it when they require it. They have a good deal of condensed water.

1161. I gather from your report that if a covered drain were laid down, so as to carry off all the drainage of the neighbourhood, and divert the water from the Company's premises, it would be a great hardship to the Company? Yes, they seem to have some rights, but we could not find out how that pond originated—whether it was a natural waterhole or not. We were told by one witness that it had been known to exist there for some fifty years.

1162. The dam is entirely artificial, is it not? Yes, there is no doubt that has been added; it has probably been enlarged into the present dam. We could not find out its origin.

1163. You say in the report that the cost to the Company of obtaining sea water, or water supplied by the Corporation for the purposes for which this water is now used, would be excessive? Yes, at the present rate.

1164. But they use the same water over and over again. Supposing they had this pond thoroughly cleansed of all sewage or drainage matter from the creek, and had town water introduced into it, I should imagine from your report that they would not require such a large amount of water? The water would become too warm if they had not plenty of it. If I rightly understand the matter, they cannot use water of a higher temperature than 100°, and in summer they require a large quantity. 1165.

C. Watt, Esq. 1165. But in weather like this the surface temperature must be sufficient to cool it. In dry weather there can only be a small quantity of water coming in from the creek? I have not seen it in dry weather, but
 28 June, 1875. I should think so.

1166. Can they carry on their operations in dry weather? I suppose they would start with their dam full, and after running off any surplus they would get it filled again constantly after a thunderstorm.

1167. It appears to me that as this water is used for refrigerating only, and is not consumed or polluted, a large daily supply would not be required. It might get a little too hot, and some of it might have to be let off; but as there is a large surface area for cooling it, it appears to me that a small quantity would be sufficient? If I recollect right, we were told, although it is not in evidence, that if the present supply did not answer it would cost the Company £3,000 a year to obtain a supply of town water, and that they had refused to give that sum.

1168. I cannot see that the Company can require such a large daily supply, because they do not obtain it in dry weather, and yet they carry on their operations all the same? As I stated, they would start with the dam full, and it would be replenished after each thunderstorm.

1169. You think then that the Sugar Company are inclined to carry out anything, within moderate limits, which we might consider necessary to be done? I am sure of it.

1170. Do you think the evil would be remedied to a considerable extent if the water were filtered? Yes; I think so.

1171. Have the Company room for filtering works on their premises? Yes; there may be some little difficulty about the level—there may not be sufficient fall—but that could be got over somehow or other.

1172. Has any plan been considered for carrying out such works? No, it rests entirely with the Company.

1173. And you think there would be no particular difficulty about it? They were under the impression at one time that they would have to lift the water by pumping, but I believe they consider now that that will not be necessary; there would be no real difficulty. (*Addendum by Mr. Grundy.*) I think it is in evidence that Mr. Pohlman, when asked the question whether anything could be done to secure the water from contamination by means of filtering, said at first that he was not certain whether it could be done without the application of pumping power, but afterwards he said that perhaps a sufficient fall might be obtained outside the creek. The difficulty seemed to him to be whether the Company could do what they required,—whether they had sufficient power to go upon private property to do it.

1174. *Chairman to Mr. Watt.*] You are satisfied then that no preventible nuisance exists on the Company's premises—as to storage of bones, for instance, or anything of that kind? Nothing of the sort; we had no evidence of anything of the kind. All we observed was some old bags, which, we were told, would in future be burned more rapidly; that was all we saw there.

1175. Would such a system of filtration as would allow the Company to use the water without creating any nuisance be compatible with any system of sewerage that might be necessary. It seems, as far as we can gather from the evidence, that some kind of sewerage is absolutely necessary;—would the two systems be compatible? No; I think the moment a system of sewerage was carried out there would be an end to the Company's supply of water from the creek.

1176. Then there would be a point of law to be determined? Yes.

1177. You say that the temperature of the water in the pond is raised to 100°? Yes.

1178. Would not that greatly increase the nuisance if it existed? Yes.

1179. Then from that point of view the Company are creating a nuisance by aggravating an existing evil? Well, they make the temperature higher than it would otherwise be, and in that respect no doubt they create a nuisance. (*Addendum by Mr. Grundy.*) We were told that in summer time, when, as you rightly observe, there is very little water coming down the creek, the Company supplement the supply from a well they have constructed on their premises, from which they can pump so many gallons—25,000, I think, per day.

1180. *Chairman to Mr. Bell.*] I will ask you one question, Mr. Bell, although it is perhaps rather irregular. It appears from the evidence taken before this Committee that the City would not be able to supply the extra quantity required by the Sugar Company from the mains without unduly diminishing the supply to the Globe? Oh, that is not the case now.

1181. You are quite sure that you could give the Company an ample supply now? Oh, yes.

1182. *Chairman to Mr. Watt.*] Do you think from what you have seen of this creek and its neighbourhood, and the necessity which appears to exist for some covered drain to carry off the drainage of that locality, that it would be desirable to encourage the Sugar Company to go to the expense of this temporary filtering arrangement? I think such an arrangement would not be very expensive, and it would be some time before any system of sewerage was carried out.

1183. You think then it would be worth while, and would not be too expensive? I think so.

1184. *Chairman to Mr. Grundy.*] Do you concur in that opinion? Yes, so far as I can do so without any further calculations, and without having taken any levels.

1185. *Chairman to Mr. Watt.*] If a system of filtration were adopted, such as has been suggested, could the matters contaminating the water which would be removed by the filter create a nuisance, or could they be rapidly collected and removed? If a proper system were carried out all those matters could be very easily removed and no nuisance need be created.

1186. Is it a fact that in the filtration of water—in some systems of filtration at all events—a portion of the contaminating matter becomes oxydized and ceases to contaminate? Yes, it becomes oxydized.

1187. Did it strike you, in looking at the whole question, that the population in the neighbourhood of the Company's premises is becoming too large to have such an establishment there at all? Yes, as a distinct fact, apart from this particular question, I should like manufactures of all kinds to be removed from town.

1188. Would the Company be disposed to carry out this cleansing—periodical cleansing—of the bottom of the pond, if they were called upon to do so? I believe they would do anything they were called upon to do, and I feel sure if that pond were kept clean, and no mud allowed to collect in it, the nuisance arising from the storage of water would be very slight.

1189. *Hon. J. B. Wilson to Mr. Watt.*] How often would it require to be cleaned out? That would depend entirely upon the efficacy of the filtering arrangements.

1190. *Chairman to Mr. Watt.*] And you think nothing can effectually be done to remedy the evils which exist in this locality, except a proper system of sewerage be carried out? No, and that is a very serious question, and involves a heavy expenditure as you will find.

1191. You see no possible way of disposing of the surface drainage from the various yards of houses, stables, and cowsheds, &c., except by a system of sewerage somewhere through that watercourse? I do not like to say that; there may be some means of branching off somewhere. I do not feel competent to give an opinion upon that point. The great evil is that there are a number of small houses in that neighbourhood, packed closely together, with cesspits and wells almost immediately adjoining. Filthier places I have never seen. C. Watt, Esq.
28 June, 1875.

1192. *Chairman to Mr. Grundy.*] Have you any information, Mr. Grundy, to add to that which Mr. Watt has given us? There is one matter which is not mentioned in the report. The drainage from the Asylum for the Deaf and Dumb and Blind evidently goes into this creek down a declared road. They have earth-closets there for day use; but at night the children, all the inmates in fact, use a closet, supposed to be a water-closet, within the building, which is emptied by a pipe into a well on the premises; which well, as far as the Superintendent could inform us, is not lined or cemented in any way. Then they have absolutely provided a system for pumping this closet matter from that cesspit, when it gets full, into the street which leads directly into the creek. There is certainly a small piece of garden ground, but it is so narrow that the contents of the cesspool must find their way into the creek which flows direct into the Sugar Company's pond. (*Addendum by Mr. Watt.*) I may remark in reference to that question that, considering the distance this building is from the creek, I think in hot weather the organic matter in this drainage would probably be decomposed before it reaches the creek, and the fluid itself absorbed.

1193. *Chairman to Mr. Bell.*] Am I right in understanding that the whole or a considerable portion of the drainage which now runs into the Sugar Company's works could, at the point where it enters those works, be diverted and directed into the Abercrombie-street sewer? Yes, it could.

1194. And that would to a very large extent remedy the evils on and below the Sugar Company's Works? It would.

1195. This Abercrombie-street sewer after it passes Parramatta-street is above the level of the natural drainage into Blackwattle Swamp, is it not? Yes, considerably above it.

1196. Is this Abercrombie-street sewer of sufficient capacity and is there sufficient fall to carry off the drainage that way? Yes. I have not gone into any particular calculations in connection with it, but I think so.

1197. *Hon. J. B. Wilson to Mr. Bell.*] How long do you know do these men live who are employed emptying the sewers in Blackwattle Swamp—what is their average term of employment before they become disabled? I think I have heard Mr. Seymour say that they do not last for more than four years before they have to go to the Infirmary.

1198. *Chairman to Mr. Watt.*] To return to this filtering process: If I understand you, when a storm comes on, at present they divert the water at first and let it run off, and after it has become partially purified and all the worst impurities have been carried away, they let it into the dam. How would that act with the filtering arrangement? I suppose that if the filtering arrangements were properly placed, the main portion of the water might be run off through the bye-wash as it is now.

1199. The Company would not want to save the storm water? Only so much as they would require.

1200. You think they would be able to pass enough through the filter to meet all requirements? Yes, I think so.

TUESDAY, 29 JUNE, 1875.

Present:—

HON. J. B. WILSON,
F. BELL, Esq.,
B. PALMER, Esq.,

E. O. MORJARTY, Esq.,
DR. ALLEYNE,
M. CHAPMAN, Esq.

M. B. PELL, Esq., B.A., IN THE CHAIR.

John Wetherill, Esq., Mayor of Leichhardt, called in and examined:—

1201. *Chairman.*] We understand that a report has been prepared at your request by Mr. Seymour, upon certain nuisances in your municipality. We are perfectly aware of all the circumstances connected with it, and we understand that you are also aware of them and consider that they ought to be remedied? Yes, no doubt all these things are quite true and correct as explained in the report. J. Wetherill,
Esq.
29 June, 1875.

1202. You are personally aware of the truth of the report? Yes, I have seen these nuisances several times myself.

1203. And you think it would be to the advantage of the residents in your municipality if they were abated? Yes, there are continually complaints about them by the residents in the neighbourhood. I myself live close to the Parramatta Road and do not personally experience them, but reports are constantly made to the Council, and we have not hitherto been able to put a stop to them. Our by-laws have been useless for that purpose, but we have had new ones framed, and I think we shall now be able to remedy the evils.

1204. We understand that although you cannot prosecute the parties, yet private individuals can do so, and that they have done so on more than one occasion? Yes, I believe that has been done in reference to two or three nuisances in the neighbourhood.

1205. Other municipalities, it appears, have not found any difficulty in prosecuting persons for nuisances of this kind;—they have been hunted out of the Municipality of Balmain, for instance? Yes, I believe that has been done on the Balmain side.

1206. How is it you cannot hunt them out of your municipality? Well, we have not been established as a municipality so long as they have at Balmain. The Glebe Island Abattoir is the great inducement; that is where the greatest nuisance is created.

1207. You think now that you will have no difficulty in prosecuting these people? I think not; we have passed new by-laws, and we shall be able to do so for the future.

1208. What has been the great difficulty hitherto? We have had no Inspector of Nuisances.

1209. But it is not necessary to have an Inspector of Nuisances in order to prosecute; private individuals can do so without? No; but private persons have always a great objection to prosecute. It is our intention.

J. Wetherill,
Esq.
23 June, 1875.

tion to appoint an Inspector of Nuisances, and then we shall take proceedings at once. Several gentlemen from the Glebe have called at our office, and complained of nuisances on our side as well. It appears that all these nuisances run into Johnson's Creek, and of course they find the same nuisance at the Glebe as we do.

1210. They have not any of these pig-feeding establishments at the Glebe, but they feel the effect of those in your municipality? Yes, they are in very near quarters.

1211. Is there anything which you would wish to be done to assist you in this matter;—or do you think you have full powers to deal with it? I think we have full powers to act.

1212. And do you think your Municipal Council are willing to act in abating these nuisances? Yes; at our last municipal election we had two new aldermen who were connected with them, but we have a majority now.

1213. You think then that difficulty is overcome? Yes.

1214. In what time do you think you will be able to take action in the matter? We intend to do so without delay; we are going to advertise for an Inspector of Nuisances at once.

1215. Do you mean to put a stop to the feeding of pigs upon offal within the municipality? I am afraid we cannot do that.

1216. Then what can you do? We can make the people keep their places clean; it is the stench from these establishments which annoys people so.

1217. Can you prevent persons from feeding pigs with offal on their premises in any municipality? I am afraid not, except within a certain distance from a street or road.

1218. Still if a nuisance exists you can put a stop to it, no matter how far it may be from a road? Yes. The boiling-down establishments are the greatest nuisance, especially when they remove their coppers, which is generally done at a certain time in the night.

1219. Can you put a stop to that? I do not know; it is our intention to try if we can do so.

1220. Do you think it would be desirable to prohibit persons from feeding pigs upon offal within a certain distance from Sydney? I think it would be desirable to put a stop to it altogether; the pigs should be fed on something very different if the pork is to be sold and eaten.

1221. You don't think pork fed on offal is fit for human food? No; the offal has a most disgusting appearance when it is thrown down in the yard for the pigs to eat.

1222. Are dead horses brought there as well? Sometimes; pigs are very fond of anything of the kind.

1223. Can you suggest anything that could be done to assist you in putting a stop to these abominable nuisances? I don't think so; I think we have now the power in our own hands to stop them.

1224. We understand that in a certain part of the Garryowen Estate, which is within your municipality, the refuse matter from closets in Balmain is buried? It was, but I believe that has been stopped.

1225. It must be very recently then? Within the last month, I think.

1226. Why was it done away with, do you know? I am not quite sure; but I think it was in consequence of our writing to inquire about it. I think my clerk told me it had been stopped a week or two ago, and that some man had taken a contract to keep the closets clean, and that he used the matter on a piece of ground in the Balmain Municipality.

1227. Were you aware of any complaints being made of its being a nuisance in your municipality? I am not aware that it was a nuisance, but the matter was reported to us, and of course it was our duty to take notice of it.

1228. Do you think the close proximity of the Glebe Island Abattoir is a nuisance? Yes, that is the great inducement to the people in our municipality to keep pigs. As long as that slaughter-house is there I am afraid there will be some difficulty in getting rid of these places.

1229. Are there many of these establishments in your municipality? There are several of them. I forget how many.

1230. Your clerk told us there were eleven. Are many people employed on them? Not many—the families of the people connected with them chiefly.

1231. Do you think the people in your municipality generally would be glad to get rid of these places? Yes, except the proprietors themselves, who live by them.

1232. Does the discharge of blood from the Glebe Island Abattoir create any nuisance in your municipality? Well, I don't think we shall notice that; there are very few houses near the water in our municipality. There is, I am told, sometimes at low water a great smell from it.

1233. When do you expect to act decisively against these people? At once. I believe an advertisement for an Inspector of Nuisances has gone in this evening.

1234. Then all you will be able to do will be to make these people keep their places clean? Yes, that is all we can do.

1235. But you will not be able to prevent them from feeding their pigs upon offal, except within forty yards from a road? No, that would be of no use, because it would be very easy for them to take the offal some distance further from the road and feed their pigs with it there; it appears to be a profitable business.

1236. And the boiling-down establishments;—how do you propose to deal with them? They are not a very great nuisance, except when they are removing their coppers; they usually do that about 11 or 12 o'clock at night.

1237. Is there any remedy for the horrible stench which this causes at night? I am afraid there is not.

1238. Have you any other information to give us bearing upon these matters? No, I think not. I am one of those who live on the Parramatta-road, quite out of the way of these nuisances; we have a great many letters sent to the Council complaining of them, but they are not in my neighbourhood.

Michael Chapman, Esq., Alderman of the City, examined in his place:—

M. Chapman,
Esq.
29 June, 1875.

1239. *Chairman.*] You reside at the Glebe, Mr. Chapman, I believe? Yes.

1240. Have you experienced any of the nuisances supposed to arise from the piggeries and boiling-down establishments in the Leichhardt Municipality? I have noticed a strong stench from that direction, but I am not sure whether it proceeds from the Glebe Island Abattoir or from Leichhardt.

1241. Did you observe the direction of the wind when you noticed that stench? It was almost northerly; I imagine

imagine that it works round Johnson's Bay—I live just at the entrance to the Glebe side of Johnson's Bay—and that we get the force of it on our side. I have no doubt that a portion of the stench proceeds from the Leichhardt Municipality.

M. Chapman,
Esq.
29 June, 1876.

1242. From these different establishments? Yes.

1243. Do you think it would be desirable that the feeding of pigs upon offal or dead animals within a certain distance—say ten miles—from Sydney, should be prohibited? Yes, I certainly think so. I would do away with feeding pigs upon dead animals and offal altogether; but under any circumstances it ought not to be allowed within eight or ten miles of the city.

1244. *Hon. J. B. Wilson.*] Or within the boundaries of a municipality? Certainly not within the boundaries of any municipalities.

1245. With regard to the boiling-down establishments, do you think they should be forbidden within a certain distance of the city? Yes, because the stuff they boil down is so bad that it stinks and creates a nuisance before it is boiled down.

1246. You have none of these establishments in the Glebe now? No.

1247. Have you observed any nuisance to arise from the discharge of blood into the harbour at Glebe Island? I have.

1248. Do you think it an excessive nuisance? I have seen nasty slimy deposits left on the sand and in the water, which have had all the appearance of being caused by blood.

1249. Where have you observed these deposits? At Johnson's Bay and at Blackwattle Swamp.

1250. You have reason to believe that these deposits were caused by the discharge of blood into the harbour, and that they cause an offensive smell? Yes, I am sure of it.

1251. And you think the nuisance should be put a stop to at once? I am certain it should.

1252. To turn to a rather different subject: We have taken evidence as to the slaughtering of small animals—lambs, calves, and sucking pigs—in the city. There appears to be no doubt—in fact it is not disputed—that a very large number of these animals are slaughtered in Sydney;—it is perfectly impossible to prevent it, and a very great nuisance arises from this practice, in consequence of the offal, blood, and refuse being clandestinely disposed of in the sewers, in cesspits, and kept in the back yards and other places on the premises for the sake of secrecy a longer time than would otherwise be necessary, until putrefaction is produced and it becomes a great nuisance. We also have it in evidence, that if it be desirable to get the meat of these animals in the best possible condition, especially that of lambs and calves, it is very undesirable to slaughter them at the Abattoirs. There are certain difficulties in the way which have been explained to us; and it is stated that the nuisance would be much abated if the slaughtering of these smaller animals in the city were recognized and carried out under proper supervision and at proper places. This would remove the temptation which now exists, to dispose of the blood and offal clandestinely; and it has been suggested by the butchers that it would be desirable to license places in the city for this kind of slaughtering. What is your opinion, and what do you think would be the feeling of the inhabitants of Sydney in the matter? I believe there is a certain amount of difficulty in getting lamb and young meat ready and fit for market if it is carried any great distance; it gets knocked about in the carts and injured. I am in favour of having a place within the city licensed, but not more than one place for slaughtering calves and lambs—some central place, such as for instance, the Haymarket, where there is a good sewer and plenty of water, and where the animals would be slaughtered under the supervision of the Corporation.

1253. You think there should only be one place? Only one place. I think it is quite possible to do it in one building. There should be a man to supervise the slaughtering and see that everything was properly cleared away, and the place kept clean.

1254. It appears to be the opinion of persons capable of judging, that it would be possible to prevent this kind of slaughtering, by prohibiting persons from having any of these small animals in the city, but they say that if regulations were made of such a stringent character the result would be that there would be next to no slaughtering at all of these animals—that in short there would be scarcely any veal or lamb sold. Do you think it would have that effect? I believe the butchers will supply veal and lamb under any circumstances. I think we should have a much better chance of keeping the city clean, and the meat properly prepared for market, by providing a central place for slaughtering. A reasonable charge only should be made, just sufficient to cover the cost.

1255. What animals would you propose to have slaughtered there? Lambs, and calves, and sucking-pigs, but not large pigs or porkers.

1256. You would not propose to give licenses to butchers to kill on their own premises? No. I would have all the animals slaughtered under the supervision of a proper officer, which could never be done if you allowed the butchers to kill on their own premises. They would slaughter in their back yards and sheds, and all sorts of places. If you gave them permission to slaughter on their own premises you would do away at once with the supervision which ought to take place, and besides that you would require an enormous staff to go round to all these different places to watch what was done. Whereas if you had one central place, such as the Haymarket or any other equally suitable place, the meat would not be knocked about so much in being carried to the shops as it is now in the carts, when it is brought down from the Abattoirs frequently with the men sitting on the top of it.

1257. You don't think this licensed slaughtering within the city would create any feeling of unpopularity? No, I don't think it would.

1258. When you say one place, I suppose you would not object to two or even three, if they were found necessary, for the city and suburbs. We are speaking of the whole of the metropolis? I would not object to two or three if the suburbs are included. I don't believe myself you will ever be able to put down slaughtering in back yards and sheds until the Magistrates inflict fines sufficiently high to deter the butchers from doing it.

1259. Now I will ask you one or two questions on another subject. We have the report of a Committee which has been inquiring into a nuisance said to exist on the Sugar Company's premises in Parramatta-street. It appears that the nuisance is occasioned chiefly by the matter which enters the creek above the Company's works—the ordinary drainage from any populous neighbourhood—and flows into and remains in the pond. We do not gather that the Company contribute to the nuisance by having this pond there for storing the water as it were. They do not contaminate the way in any sensible way themselves. This is the pond (*indicating position on diagram*), and this is where the water is supposed to enter the Company's works; this is the dam, and this is the bye-wash through

M. Chapman, Esq.
29 June, 1875.

through which the surplus water is allowed to run off during flood times. Now we are informed that it would be possible to carry off this drainage matter from the creek just above where it enters the Company's works, by constructing a branch drain to the Abercrombie-street sewer, so that this pond would not be contaminated at all. The flood water, which would be comparatively pure after its first flush had run off, might be allowed to enter this pond, while the surplus water, instead of being a nuisance to the people on the other side of Parramatta-street, would serve to flush the sewer and prevent accumulation of matter in the flats about Blackwattle Swamp, and the new sewer would take the ordinary drainage to the Abercrombie-street sewer? Yes, I think that would be quite possible. I do not believe the Company contribute anything to the nuisance in that neighbourhood, except by storing the water.

1260. We learn from the Committee that the Sugar Company are disposed to do anything in reason to abate the nuisance, and that they are inclined to accede to anything we might propose. Would the city authorities go to the expense of constructing a branch sewer to divert the drainage into this direction. This is private property (*indicating on diagram line of proposed drain*)? I am satisfied there would be no objection to do so. I may say with reference to the Sugar Company that during the time I was Mayor of Sydney, in '71 and '72, I found them most anxious to do everything in their power to avoid a nuisance. Mr. Pohlman, their engineer, was always willing to give the Corporation all the assistance he could. The only nuisance we were anxious about in connection with the Company's works was the burning of bones on the premises, and we commenced a prosecution against them, but the people residing in the neighbourhood came forward and said it was no nuisance at all. Since then it has been very much lessened.

Benjamin Palmer, Esq., Mayor of Sydney, examined in his place:—

B. Palmer, Esq.
29 June, 1875.

1261. *Chairman.*] You have heard Mr. Chapman's evidence, Mr. Palmer, and the conversation we have had on different subjects. I presume you concur, generally, in what he has said on these matters relating to the city and suburbs? Yes, and I fully concur in the view he has taken on the question of slaughtering. I certainly think it would be desirable to make some arrangement to permit the slaughtering of smaller animals within the city under proper supervision, but I would not recommend that the blood should be allowed to go into the sewers; I would have it collected and removed.

1262. Would you recommend that very stringent regulations should be enforced to prevent clandestine slaughtering in the city? Yes, I would.

1263. *Dr. Alleyne.*] I presume you confine your recommendations to some separate place—you would not license each butcher to kill on his own premises? No. I would suggest that the Municipal Corporation should erect a place for the purpose, to which lambs and calves might be brought, and where they might be slaughtered under proper supervision, and taken away at once, and the blood and offal removed.

1264. You would have a place built by the Municipal Council for that purpose? Yes.

1265. *Mr. Moriarty.*] Do you not think it would be advisable, Mr. Palmer, that the sale of these animals should take place in the same locality, and be also under the supervision of the officers of the Corporation, so as to make it a sort of central market? Well, the great difficulty which would arise would be in the fact that a great number of lambs and calves come to Sydney coastwise, and a good many of them by rail. In Melbourne they have a kind of cattle sale-yard, where people can buy whatever animals they require, and take them away to the City Abattoir. One man will buy ten and another twenty lambs or calves—where they are slaughtered under the supervision of the city official in charge. They pay a very small price per head, and then cart them away.

1266. My question arose out of that circumstance. When these animals which arrive coastwise, or by rail are kept, there must necessarily be more or less a nuisance from the dung which comes from them. Now would it not be better to have all this under one establishment—sale-yard, slaughterhouse and all—and have the animals kept there until they were killed and taken away? I think it would answer very well, and I am sure it would be a great advantage to shippers, because if a boat arrives, say at 6 o'clock at night, with thirty or forty animals, they are left on the wharf till the morning, and that is likely to create a nuisance. I have seen that happen repeatedly.

1267. Whereas if there were a central establishment such as I have described, under the control of the officers of the Corporation, these animals would be taken care of at once, until they were sold or killed, and the fees would go to the Corporation;—you think that would be a good arrangement? Yes, I think it would. I may mention that we have a large and a valuable piece of ground near the Market Wharf now only used for breaking stones on. A produce merchant, who has large consignments of lambs and pigs applied to me to see if this piece of ground could not be utilized in this way; but at the time the funds of the Corporation were not in a flourishing condition, and we could not take any steps in the matter. Otherwise, the place would be very suitable for the purpose; there is a good sewer there, and it is of sufficient area. It is also close to the steamers of both the old and new Companies.

1268. *Chairman.*] You would require more than one place—that would not be sufficiently central? Yes, I think if we had one at the Haymarket and another at the Market Wharf they would answer very well. They need only be sheds, roofed and paved with flagstones, with a good sewer and an unlimited supply of water, and tanks to catch the blood from the animals; they need not be expensive buildings.

1269. *Dr. Alleyne.*] And nothing whatever from the place should be allowed to go into the harbour? Certainly not. Mr. Bell, a large produce merchant, told me that he visited one of the large establishments in Dublin, where everything belonging to the animals was saved. I may mention that I was in Melbourne some time ago, and I made it my particular business to make inquiries about the Melbourne Cattle Sale-yard. That building cost the Corporation £40,000, and they received £8,000 for the first year's income. The Melbourne Corporation have a meat market in Melbourne, where you can either attend or send, and buy a single lamb, or anything else you require.

THURSDAY, 1 JULY, 1875.

Present:—

HON. J. B. WILSON,
 W. C. BENNETT, Esq.,
 E. O. MORIARTY, Esq.,
 DR. ALLEYNE,

B. PALMER, Esq.,
 M. CHAPMAN, Esq.,
 F. BELL, Esq.,
 C. WATT, Esq.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Joseph Grafton Ross, Esq., General Manager, and Samuel Pohlman, Esq., Engineer to the Colonial Sugar Refining Co.'s Works, called in; Mr. Ross examined:—

1270. Before we go into the proposed arrangement which we discussed yesterday, Mr. Ross, I should like to ask you whether it would meet the convenience of the Company to clear out this pond at once, as it appears that the month which you suggest—January—would not be a very desirable time, especially as during that month water is scarce —? It would be exceedingly inconvenient. J. G. Ross,
Esq.
1 July, 1875.

1271. One moment, if you will hear me out: If the City Council would give you an ample supply of water gratis while the operation was carried on, which they could do now without inconvenience? Yes; I should have no objection to do it at any time under those conditions.

1272. We are given to understand that the filtering arrangements you propose could be carried out without any great lapse of time;—is that so? They could be commenced at once. The only time that would be occupied would be in building the cisterns.

1273. It would not be desirable to clean out the pond until the arrangements for filtering were completed, so that the water would not become impure again? Certainly not.

1274. And I understood you to say that the Sugar Company would be willing to allow the City Council to construct and to maintain a sewer on the Company's ground from the entrance of the watercourse into their works to the Abercrombie-street sewer, for the purpose of carrying off the more offensive portion of the water which comes down, and which at present you are in the habit of diverting into your bye-wash? Not always. When we believe the water is bad we allow it to run off. For instance, from Saturday last till Tuesday we let it all run away. And with regard to the sewer, it would be necessary to have a clear understanding that the sewer should not be carried on in the creek above us, for in that case we should never have any water at all. If it were merely from the Abercrombie sewer across to our inlet, we should require to have a voice in the matter to say what was pure water and what was not; it would not do to have that decided arbitrarily against us.

1275. That would be a question for after consideration? What I mean is this: Supposing you formed a sewer through our ground, it would have to be on the condition that it should not be the commencement of a sewer which would have the effect of depriving us of the water supply we have been entitled to for so many years. I could not consent to anything which would have the effect of taking away all our water, for that would virtually shut up our refinery.

1276. This arrangement would not have any such effect—it would leave things as they are; whether you have a right to prevent the construction of a sewer which would be partly within the city boundary and partly outside is another question. This is merely a question of getting rid of the water after it gets on to your premises. You allow it to go away now into a bye-wash. We propose that it should go away in a different direction? What you propose is that the waste water should go to the Abercrombie-street sewer, whereas now it goes down the old creek. Well, of course we could have no objection to that; but we do object to have a sewer in our ground which is to be the commencement of a sewer which may eventually take away the whole of our water supply.

1277. I do not see that this would compromise you in any way. Your rights would remain just as they are. You do not want to obtain, and I do not think the Board would recommend that you should have, any additional rights; so long as your rights were not infringed by this arrangement you would be satisfied? So long as it is clearly understood that this shall not be regarded as a concession of any rights—that we are not to be considered as waiving or conceding any rights. That is a matter which the Board must understand clearly, and we must have a distinct agreement with the Corporation to that effect. If they want to make a sewer down that creek they will find a great difficulty in connecting with the Abercrombie-street sewer. Our property is so situated that the Corporation could easily make a sewer through it, but elsewhere, the cross roads being at right angles to the sewer, they would have to go through private property. I may mention that we have commenced arrangements for filtering the water, and I would suggest that a trial should be made of the effect of that filter; and if it is found to answer well, and the water is kept pure, it will be unnecessary to make this sewer. This matter is of such vital importance to us that you can easily understand why I am rather chary of committing myself upon a question I have had so little time to consider.

1278. We should propose then that if the construction of this sewer is allowed by you it should be on the understanding that the Sugar Company waive no existing rights by reason of that sewer, leaving all legal rights exactly as they are? That would be only reasonable; but if this system of filtration is sufficient what will be the use of having the sewer?

1279. The use of that sewer will be to prevent these foul matters which now go through your bye-wash from creating a nuisance at a low level; that is the city view of the question; it would go by a higher level, and not create such a nuisance; that is the advantage the city would gain by it? Provided the sewer is sufficiently large to carry off the very large body of water which occasionally comes down.

1280. The first flush of water after rains requires occasionally a very large sewer to carry it off? Yes, it does.

1281. Then the question is this: Would the Sugar Company be willing to allow this sewer to be made, with the other arrangements we have spoken of, if it were understood that they waived no rights whatever to this water? Would the Corporation require to have any roadway over that sewer?

1282. I presume not, after it was made? I think that, on the terms I have mentioned, there would be no objection on the part of the Company.

1283. It is very doubtful whether an action would not lie against the Sugar Company for throwing continually heated water into the stream—whether they would not be considered as increasing the nuisance in doing so; but if they agreed to the construction of this sewer, and to the filtering and other arrangements

J. G. Ross,
Esq.
1 July, 1875.

ments, that is a matter which the city would probably waive? All the hot water at the present time and all the waste water does not go anywhere near the sewer; it runs down the Blackwattle Creek.

1284. Still it creates a nuisance; it has a tendency to create a nuisance? I do not think so; still I have no objection to such water being carried into the sewer, but that is a question of levels; some of our waste water is run away, I think, from a level that would not permit of its going into the Abercrombie-street sewer—it must go into the creek.

1285. I presume that is inevitable; the hot water must go into that natural watercourse? Yes.

1286. I think you told me you were endeavouring to obtain a supply of water by increasing the depth of your well? We are.

1287. And you hope to obtain a sufficient supply from that source alone, without using this creek water at all? Our object in sinking that well was to get a supply of water at the time the Corporation intimated to us that they were unable to supply us on reasonable terms. We found we could get a considerable supply, and we hope to get more. If we do get sufficient, of course we shall be very careless about the creek supply, for we are anxious to be on friendly terms with the Corporation, and with all our neighbours.

1288. Do you yet that water by pumping? By pumping.

1289. Can you say how many gallons per day, on an average, is necessary to you for refrigerating purposes? About 3,000 gallons.

1290. 3,000 gallons per day? No, per hour.

1291. Is that for the whole of the twenty-four hours, working continuously? For about twenty-three hours.

1292. That is when you are using the pond? Yes; purely for refrigerating purposes. Then of course we require a large quantity of water for other purposes.

1293. If I understand you—if you had a supply of 3,000 gallons per hour from some other source, you could dispense with the water from the creek altogether? Yes. If we were assured of an adequate permanent supply of clean water from some other reliable source, and at reasonable cost, we would, I am sure, give up our right to the Blackwattle Creek supply, for we wish to assist this Board in every way in our power. I would like to be permitted to hand in to the Board two analyses of our dam water, to show that we have not been indifferent as to the quality of the water we have been storing. Both report that the quantity of organic matter contained was so small as to be quite harmless.

Report upon the Sugar Refining Company's Water.

	Grains per gallon.	Milligrammes per litre.
Organic matter (including nitrates, &c.)	5.74	82.00
Hydrated peroxide of iron	1.52	21.78
Sodium chloride	22.49	321.48
Magnesium chloride, sulphate of lime, &c.	5.72	81.54
	<u>35.74</u>	<u>506.80</u>

Sydney University, March 8, 1873.

(Signed) ARCHD. LIVERSIDGE.

Government Analytical Laboratory,
February 5, 1873, Melbourne.

The Manager, Sandridge Sugar Company,—

Sir,

Sample of Water from Sydney submitted to me for analysis has been examined with the following results:—
One Imperial Gallon contains,—

	Grains.
Chloride of sodium	27
Sulphate of sodium	5
Carbonate of sodium	5
Carbonate of magnesia	3.6
Carbonate of calcium	3.1
Vegetable matters	4.3
Clayey matters	3
	<u>51</u>

With the exception of the first substance, common salt, there is nothing objectionable in this water for the manufacture of sugar, and even this is not present in a very excessive degree.
The carbonate would be beneficial, and the other ingredients inert.

WM. JOHNSON,
Government Analyst.

Mr. Pohlman examined:—

S. Pohlman,
Esq.
1 July, 1875.

1294. *Mr. Watt.*] What is the average temperature of the dam? I suppose it is never above 90°.

1295. What is the mean temperature? About 90° in the winter and 110 in the summer is the highest we ever send the water back. At the present time it is 93° leaving the pumps.

1296. *Dr. Alleyne.*] 90° is about the average temperature? In winter, yes.

1297. *Mr. Moriarty.*] The water from the pond is used frequently, I suppose—again and again? Yes.

1298. What is the area of the pond? Over a million gallons.

1299. And the superficial area? I could not tell you from memory.

1300. About half an acre is it not? Fully that.

1301. Then the pond contains about ten days supply of water? Yes.

1302. *Mr. Chapman.*] If the Corporation decided upon allowing you to use the water from Busby's Bore gratis during the time you were cleaning out this pond, would the supply from the pipe from that bore be sufficient for all your purposes? It would take at least a 4-inch pipe.

1303. Would a 4-inch pipe be sufficient? Yes, if there is a sufficient pressure.

1304. *Mr. Bell.*] I should like to know whether when the water in the pond reaches a temperature of 110°, you wait until it is cooled, or do you take a fresh supply from another source? The whole of the water

- water is never heated to anything like 110°—only a portion of it; it runs back into the pond at the far end, and by time it gets again to the pumps it has become cool enough for refrigerating purposes. S. Pohlman, Esq.
1305. *Chairman.*] Do I understand you that if you started with a full pond of cool pure water you would require an additional supply of 3,000 gallons per hour for refrigerating purposes alone? Yes. 1 July, 1875.
1306. Would you require a constant supply of 3,000 gallons per hour? We should.
1307. *Mr. Moriarty.*] If I understand you, you have a million gallons of water in the pond, which you use over and over again for weeks together, and the other water is used for refrigerating purposes only? No, the pond water is used for refrigerating purposes.
1308. *Chairman.*] Then if this water is used for refrigerating purposes only, the matter is very simple. If you once get your pond full of clean water there would be no waste? There is always some waste with water.
1309. How much would you require to keep up the supply? About one-third of the quantity.
1310. 1,000 gallons per hour? Yes, but I cannot speak positively as I have not made the calculation.
1311. How would that be wasted? With our present arrangements the ground takes it up.
1312. It goes away by soakage and evaporation? Soakage, leakage, and evaporation.
1313. It would cost a large sum, I suppose, to make a watertight reservoir for that purpose? Yes, I should think it would to contain the quantity required.
1314. *Mr. Palmer.*] Have you any plan at your office in reference to this proposed sewer, showing where it is to be laid down? No, I have only just heard of this sewer.
1315. *Hon. J. B. Wilson.*] Provided it were intimated to the Company that the Corporation would give them the necessary supply of water while they were cleaning out the pond, how long would it take you to make the necessary preparations; what notice would you require before commencing to clean out the pond? About four days to get ready.
1316. And how long would it take to clean it out? About a fortnight after that.
1317. Would you require to pump the water out of this pond? No, we should let it run off.
1318. Have you conveniences for doing so? Yes, we have two points of egress.
1319. *Mr. Moriarty.*] Is there any other serious waste of water in the reservoir itself except that which you have mentioned;—do your operations embrace any other waste? We use a large quantity in washing out our filter-beds.
1320. I wish to know whether, besides soakage, leakage, and evaporation, there is any other waste of water in the reservoir itself? No.
1321. *Mr. Bennett.*] Then a perfectly watertight tank, if sufficiently large, would answer your purpose;—there is no waste of water in the operation itself? You cannot use water without some loss, though you cannot always point out where the waste is. You must lose some by evaporation. If we become dependent upon the city for all the water we use, we shall require a greater quantity than 1,000 gallons per hour, for that used in washing filters and bags would have to be drawn from the city supply, and that all goes to waste.

FRIDAY, 9 JULY, 1875.

Present:—

Hon. J. B. WILSON,		W. C. BENNETT, Esq.,
E. O. MORIARTY, Esq.,		F. BELL, Esq.,

DR. ALLEYNE.

M. B. PELL, Esq., B.A., IN THE CHAIR.

Francis Bell, Esq., City Engineer, further examined:—

1322. *Chairman.*] I think you have some plan, Mr. Bell, for preventing some of the solid portions of the sewage matter from entering the harbour at the mouth of the sewers? I have. F. Bell, Esq.
1323. Has that method been brought into practice in any case? Yes, at Market Wharf (*producing a drawing of silt-pit.*) 9 July, 1875.
1324. Was that constructed under your directions? Yes, it was. This is the ground plan (*indicating position.*)
1325. There is a silt-pit at the foot of the Market-street sewer? Yes, there is.
1326. What are about the cubic contents of that silt-pit? It contains, when full, about 83 cubic yards, or 100 tons.
1327. How is it constructed? With brick and cement.
1328. Is it covered over? Yes, there are two compartments in it, and there is a man-hole in each to enable it to be cleaned out.
1329. Is this pit always full of matter in a liquid state? No; it gets quite firm.
1330. It is full of something? The first compartment is full of sand, which comes down the gully-shafts; the second compartment has more manure—it has not so much gritty substance in it.
1331. Lighter matter? Yes.
1332. How are the two compartments separated? There is a 14-inch brick wall between them.
1333. And the liquid matter flows over the wall? The outlet is about 3 inches below the inlet, and there are openings on the top of the wall at that level to allow the fluid matter to pass over.
1334. Do you think this silt-pit has been effectual in preventing much solid matter from passing? Yes; the wharfinger tells me there is a great difference since it was constructed.
1335. So far as relates to the offensiveness of the sewage matter? Yes, and as far as the silting up. We have had it cleaned out twice since we built it.
1336. How long does it take to fill it up? Between five and six months.
1337. Can you inform us what area is drained by this sewer? About 10½ acres.
1338. It is only a small area? Oh, yes, very small—320 yards by 160. It is a very small sewer—only an 18-inch pipe.
1339. But it has a considerable fall? Yes.
1340. How is this silt-pit when full cleaned out? By manual labour.

- F. Bell, Esq.
9 July, 1875.
1341. The stuff is taken out from the man-holes at the top? When we clean out the first compartments we have a wooden shoot which we place across from the inlet pipe of the sewer and over the dividing wall to divert the sewerage whilst the operation of cleaning out is going on. The cleaning out of the second compartment is done in the same way.
1342. How do you get the stuff out of the man-hole? Two men go down with buckets or skips, which are filled and hoisted up by a man at the top.
1343. Then what is done with it? It is carted away at once.
1344. Where is it taken to? We sent the last lot to Belmore Gardens.
